Experience has fully demonstrated the advantage of employing man and wife as teachers at these camp schools, each taking an interest in the work accomplished by both and commanding more obedience and respect of Indians than ladies alone. There are not any returned pupils competent or reliable enough for this service.

These day schools continue to have the desired effect of being the foundation of civilization among the distant camps where they are located, the schoolroom exercises forming but a small fraction of the good accomplished; the home life and example ever before them, and the necessity of their remaining at home to enable their children to attend school, almost entirely breaking up the roving disposition of the Indians, which is their greatest characteristic and failing.

The usual school exhibition was held at the agency at the close of the school year, consisting of a number of children and the teachers from each school. The exercises were witnessed by a large number of Indians from all parts of the reserve, as also by all white people in the vicinity, and a marked improvement was noticed over the previous year.

It is to be regretted that those claiming to be interested in the work of educating the Indians and at all times criticising the waste of time and money spent on reservation schools, though never having seen these schools in operation on this reservation and witnessed the beneficial effect on the whole people, could not be present at one of these gatherings, which would enable them to at least do them partial justice.

**Boarding school.**—There is still no Government boarding school on this reservation, though one of the most important in the Northwest, and where Indians, though strongly objecting to sending their children away, are constantly asking for a boarding school, which is provided at all other agencies. Although sites have been repeatedly selected and contracts made for construction, the promise long ago and repeatedly made these Indians, that they should have a school, appears as far from fulfillment as ever.

**Traders.**—There are two licensed traders at this agency who have conducted their business in a satisfactory manner, no complaint having been made to me. By reason of the proximity to border towns, where Indians go for freight, they are not dependent upon these traders for supplies. The subsistence houses located in different parts of the reserve obviate the former necessity of frequent visits of Indians to the agency; consequently the reputed fortunes made by licensed traders formerly are a thing of the past, at this agency at least.

**Conclusion.**—The many radical changes made during the past year, notably the establishment of five subsistence houses in different localities; the erection of an equal number of slaughterhouses and placing all beef on the block, heretofore issued on hoof to be chased and shot by mounted Indians; the dividing of the whole reserve into districts supervised by a farmer; the construction of additional schools, making a total of 18 day and 2 mission schools; the surveying of a number of townships and preparations now being made to allot land; all denote no little advancement among the people and a corresponding amount of labor to those having the work in charge. It also indicates the individualizing and therefore the civilization of the Indian.

The change which has taken place among these people during the past ten years can only be realized by those having seen them then and now. Notwithstanding the late troubles, I believe that with honest, fair, and yet firm treatment a greater advancement will be developed within the next few years.

To all employes, who have labored harmoniously and faithfully in the performance of duty assigned them, my thanks are extended.

For the courteous and liberal support received at all times from the Office of Indian Affairs in the administration of affairs at this agency I beg to express my appreciation.

I have the honor to be, sir, very respectfully, your obedient servant,

J. GEO. WRIGHT,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF MISSIONARY AT ROSEBUD AGENCY.

ROSEBUD AGENCY, S. DAK., September, 1892.

SIR: I have the pleasure of giving you herewith a concise statement of facts regarding our mission work for the past year, ending June 30:

Number of missionaries, including native workers (9 males, 5 females) .....	14
Number of Indians who are now communicants .....	262
Baptized during the year .....	206
Total number baptized .....	1,633
Number of formal marriages:	
By myself .....	24
By Rev. William Saul .....	2

We have during the past year added one to our number of church buildings—a very substantial frame building for chapel and dwelling rooms.

So far as I can report the contributions of missionary societies and individuals which have been expended here amount to \$3,720 for education and \$3,235 for religious purposes generally. These figures tell nothing of the growing influence and increasing energy of our native helpers, many of whom are becoming a power for good among their people and leaders and instructors in such things as tend to progress.

Respectfully yours,

AARON B. CLARK,  
Missionary in Charge.

Maj. J. GEO. WRIGHT,  
U. S. Indian Agent.

REPORT OF MISSIONARY AT ROSEBUD AGENCY.

ROSEBUD AGENCY, S. DAK., September 22, 1892.

SIR: There is little to report concerning our missionary work during the past year. In October, 1891, we organized a new church at Ponca Creek where we have been working for seven years. This and our other church on White River have grown in membership, and from time to time I can see a marked growth in Christian living and thinking. The Indians observe Sunday better; they respect the legal marriage relation; forsake the conjuring of the medicine men and the dances; and grow into an understanding of Christian morality and righteousness. This comes slow, because those who have changed from heathenism are few, surrounded by friends and relatives who are still heathen in practice and belief.

One difficulty in the way is the lack of amusement or occupation. All amusements are either heathen, as the dances and feasts, or are associated with gambling, as horse racing, ball and card playing. And yet our Christians have been remarkably firm in breaking away from them and living up to their profession.

As all boundary lines are now settled and the people are for the most part where they will take their land, I hope during this year to push out into new fields. During the winter I hope to spend the time in company with Mr. F. B. Riggs in doing general educational work, lecturing and using a stereopticon.

Very respectfully,

JAMES F. CROSS,  
Missionary of American Missionary Association.

J. GEO. WRIGHT,  
U. S. Indian Agent.

REPORT OF TEACHER OF A ROSEBUD AGENCY DAY SCHOOL.

ROSEBUD AGENCY, S. DAK., September 1, 1892.

SIR: I am pleased to have, at your personal request, the honor to submit this report—"What we do in a camp school." If it helps in anyway to increase your estimation of this branch of the educational work I shall be content.

I took charge of this school September 1, 1890. The children had a very slight knowledge of English words and used none whatever; due in part to the natural difficulties, in part to the methods in school work. The most advanced pupils were able to creditably imitate a copy; they could call several words at sight; they could read (?) some easy phrases, but it conveyed about the same idea to their minds as "ab, eb, ib" would to a white child.

I was so impressed with this mechanical training that I resolved to be very careful and never teach a word without the idea. I resolved upon a systematic and thorough course in laying the foundation of the language I was about to teach, letting each lesson convey its own teaching and bear some relation to the one preceding and to the one following:

First morning—Policeman on hand. A responsibility thrust itself upon me. If I were to be generous it was essential that these Indian children should have a liking for the work in which they were about to engage. Pupils or children at the threshold of knowledge anticipate their difficulties; they must not flounder along in the dark. After these thoughts I laid on my table the following: Give ideas; be systematic; be thorough; hold to what is taught until it is a part of their thoughts. The bell rings. Children come in; shy glances cast at each other, then at me. "All sit," I said; but they stood. One boy who had been to school at a boarding school and could make fair use of English, told them in Dakota: "The teacher wants you to sit." My next command was "stand," and again it had to be interpreted.

Yes, they could read in the First Reader, but Joe said "they did not know what the words said." The difference in the efficiency of the boarding school and the day school was so great, I asked Joe where he learned to talk English. "At Cheyenne boarding school," he said. "No doubt you had a good teacher," I remarked. "Yes," he said, "but she did not learn me to talk. When I heard something in English I asked the other boys on the sly what it meant and they told me. We did not tell on each other for we were not allowed to talk Indian." Good thing then, to have a number of mixed bloods in school for a start. New pupils can learn from those who can already talk English.

The correct plan.—Prevent the native language, give ideas in English. Let the teacher be to his pupils what the English-speaking pupils are to them in the boarding school—a good example of civilized life. Some industrial training can be given, but without the children can be taught to understand and use English all other school work must be a sham.

I divided my school in three grades: Advanced grade (those who could write and name the letters); intermediate (children from 8 to 12 years old); primary (the beginners). I have kept a record of my "plans or schemes" for class work. A few sample lessons with the notes below will give some idea of what we do in this line. At first the school was the class until I found the development of each child's mind. ALL SCHOOL ATTENTION!

*Do the things.*

Stand—sit.  
Walk—run.  
Come—go.  
Read—sing.  
Play—work.

*Show the object.*

Hat—cap.  
Cat—dog.  
Boy—girl.  
Slate—paper.  
Book—box.

- (1) Write the words on the board.
  - (2) Five to ten new words a lesson.
  - (3) All call the words, printed and written at sight; then individuals.
  - (4) Pupils write the words on slate and paper.
  - (5) Read the words promptly at next recitation.
  - (6) Drill thoroughly, then the words pass into the permanent list.
  - (7) Review frequently until the words form a part of their thoughts.
- Force the words in reading and conversation:

*Lesson—**I see.*

I see a hat.  
I see a cap.  
I see a dog.  
I see a cat.  
I see a boy.

*I have.*

I have the slate.  
I have the paper.  
I have the book.  
I have the box.  
I have the bell.

- (1) One thing at a time. Get the pupils to think.
  - (2) Build sentences from the words. Pupils form similar sentences.
  - (3) Every morning or at the recitation children stand and give a statement, or ask a question and others answer.
  - (4) In same manner teach the idioms: It is, that is, this is, I see, I hear, I touch, I feel, I taste, I smell, I want, I have, give, take, etc.
- Illustrate the word and give the form:

*Lesson—**On.*

A bell is on the book.  
A hen is on the nest.  
A boy is on the sled.  
A girl is on the bed.  
A duck is on the water.

*In.*

The corn is in that box.  
The tobacco is in that pipe.  
The ink is in that bottle.  
The coffee is in that cup.  
The sock is in that boot.

*Spelling lesson—*

Book.  
Box.  
Sled.  
Bed.  
Water.

Box.  
Pipe.  
Bottle.  
Cup.  
Boot.

In same manner make use of by, under, over, at, to, etc. Simplify the work; make it easy. Repeat the new words. They must not pass through the mind like sand through a sieve; they must stick like steel to a magnet. Learning the language is a task upon memory.

*A review lesson—*

I see a cat.  
It is a big cat.  
That cat has a long tail.  
The cat is black and white.  
It has very soft hair.

Prepare for the Primer and First Reader.—Use the words contained therein before the book is put in their hands. In connection with the lesson in the book teach the pupils to talk, ask questions and answer questions about the picture and the lesson. It is difficult to get Indian children to talk even when they can. I give them a plan at first in writing, thus:

*Lesson I, page 15. (Swinton's Primer.)—*

What do you see? I see a cat.  
Is it a cat? No; it is a picture of a cat.  
Is it a big cat? Yes; it is a very big cat.  
What can the cat do? The cat can scratch.  
Can the cat eat? Yes; it will eat mice and rats.

Dispense with the written plan as soon as possible. Require the pupils to write their own questions and answers about the lessons, or answer promptly any questions asked. Use the words now familiar to form.

*Easy exercises for speaking.*

*The bird*—I see a bird in a tree. (Gesture.)  
 Can it fly? There it goes. (Gesture.)  
 Up, up, Oh, so high! (Gesture.)

Gestures assist greatly in memorizing and increase the interest in what is spoken.

*The wolf*—See that wolf sitting over there on that high hill! (Gesture.)  
 Ah! see him now as he sneaks in the grass! (Gesture.)  
 He wants to get my hen. I will get my gun.  
 Ready—bang—and Mr. Wolf is dead. (Gesture.)

*The train*—I saw a train at Valentine; the wheels turned round so fast it ran like the wind. The black smoke rolled out of the locomotive. I saw a boy at the car window when it stopped. "Oh, see that little pony!" he said. I think the boy was from the East and never had seen a pony before.

These are a few samples of what has been learned; have gone from the easy to the difficult. They have learned compositions about occupations, such as farming, stock-raising, housekeeping, butter-making, cooking, etc., which are more or less interesting as speaking and language exercises, at the same time getting the idea or rule how the things are to be done.

In the advanced and the intermediate grade the work has been about the same; shorter and easier words were chosen for the intermediate grade, selecting words that were contained in the lessons in the book, which afterwards they read.

In the primary grade I combine the word method and the phonic method—the words are chosen with that in view; before they are ready, however, for printed words, phonics, or the alphabet, I get their attention. I make them think; I make them understand. I am teaching them a language different from their own; that for every word they have, I have one to give them; I proceed about the same as I would to learn their language, or as an infant begins. I give them a slate and pencil; after a lively language drill I print a few letters each time on the board (examples X, A, E); this gives them seat work to make the letters with sticks and pencils. They soon learn the letters unconsciously—to make them is a play, to write a pleasure and an easy transition to script—A, B changed a little makes the script.

Children at six years of age have accomplished as much literary knowledge in nine or ten months as white children usually do in six or seven; they can read, count, print, or write and use more words in expressions in conversation in English than they have been taught picking it up from older ones. After they comprehend what it is to learn, they are willing and eager to learn, and it has been a pleasure to teach them. Without a decidedly systematic plan is carried out, however, their learning is difficult.

RECAPITULATION OF PROGRESS.

*First year.*—Nouns singular and plural; use of the articles; adjectives, their relation and position to the nouns; use of pronouns. Verbs—principally in the present tense; modifying words in positive degree; a few propositions in conjunctions. Language, reading, spelling, and writing exercises, with due regard for numbers, general exercises, etc.

*Second year.*—Vocabulary increased; letter writing; drill on degrees of comparisons and forms of the verbs. (This is the tough part of our language for them, and it is the stopping place for many.) It is easy for them to learn "The boys go," but harder for them to conceive the idea went, gone, has gone or have gone; they have but one word, *ēō*, for all our forms of the verb go. Numbers and general exercises continued.

*Third year.*—I think we will complete a 1 that is anticipated in four years' work in the course of study, 1890. The children can carry on an ordinary conversation in English. They talk English in their plays at school and at home. They can interpret readily such language as we find in the first and second readers.

Four boys have become of age and quit school; they have been earning \$20 per month since, working for ranchmen; to get employment usually they must talk English.

The industrial work for the boys has been care of the garden, sawing and splitting wood, etc. The girls are given instruction in cooking, general housework, washing and ironing, cutting and fitting garments for themselves, made from material furnished by the Government and a great deal which they buy and bring to school to have it cut and made in "style." The large girls who have quit school continue to wear "white woman's dress;" they are clean about their persons and their homes. The garden attached to the school has been diligently attended to until July 1 each year, then abandoned to the weeds and bugs; by leaving the soil loose and free from weeds, however, it did fairly well. The products include sweet corn, popcorn, beans, musk melons, watermelons, pumpkins, carrots, parsnips, turnips, beets, potatoes, and tomatoes.

In conclusion, let me say it is possible to make a camp school a practical, lasting success, and to extend its good results to the homes of the Indians on the reservation; that there are some obstacles in the way, many things in favor. The camp school is nearer to the homes and to the hearts of the parents.

Yours respectfully,

A. D. HARFOLD.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF PRINCIPAL OF ST. MARY'S SCHOOL.

School was reopened September 4, 1891, and by the 10th we had 42 children here. We had decided to limit our number to 45, as more than that overcrowded dining and sitting rooms. During the year we had 46 names on our roll. Two were withdrawn by the agent and returned

to the school to which they belonged. The parents declared when they brought them that they did not belong to any other school. One was sent home in the spring, and one in the early summer by advice of the physician on account of illness, Notwithstanding these losses our average was 423.

The health of the children was unusually good—there being no serious illness except the two children sent home. Both of these were chronic scrofula cases.

The children did their work cheerfully and a better spirit prevailed than ever before. During the spring and summer the house has been thoroughly cleaned and put in order; papering, painting, whitewashing, etc., has been done wherever needed.

The teachers who had given such efficient service and contributed to the success of the school were not able to return for another year, but two of the new corps of helpers are efficient, experienced workers in Indian schools, and we hope for still further prosperity the coming year.

The farm last year yielded an abundant supply of grain and vegetables for the use of the school, and we have promise at present of all that we shall need for the coming year.

The relations between the agency and the school have been most cordial and friendly, though so far separated that there could be but little intercourse.

Respectfully submitted.

AMELIA IVES,  
*Principal.*

### REPORT OF SUPERINTENDENT OF ST. FRANCIS MISSION SCHOOL.

ST. FRANCIS MISSION,  
*Rosebud Agency, S. Dak., August 26, 1892.*

SIR: I have the honor to submit my fourth annual report of St. Francis Mission boarding school.

The work in both the schoolrooms and the industrial branches has been carried on with good results. Periodical examinations and occasional entertainments given by the pupils on legal holidays would prove to the observer that the Sisters in charge are experts in the field of education and teaching, and gave evidence of their self-sacrificing and untiring patience and devotedness. Parents of the pupils being allowed to be present at such entertainments, though they could not understand the English, were proud of their children's progress and felt encouraged to send and to keep them at school. Whilst in the first years of the school the running away of pupils was a great drawback to their steady progress, and parents would not allow to punish an unruly boy, they now in this regard have decidedly changed for the better. By and by we will be able to grasp them tighter, which in the beginning we could not have done without alienating their minds and losing their confidence.

To enforce the speaking of English among themselves a little bell was introduced, calling those that had spoken Sioux out of their plays to the schoolroom for English exercises. The good effect was a marked one.

Some of the girls who showed inclination and talent for music were given lessons on the harmonium, more so as a reward for their faithfulness in the discharge of their duties than to make artists out of them. They were able at the close of the year to accompany some patriotic and other songs sung by the choir.

Our main endeavor it is to teach and have them practice all required for housekeeping, as stated in my last report. The boys, besides helping on the farm under the supervision of an expert teacher, have a piece of land set apart for themselves alone, with the promise that all they will raise on it would be their own or their parents'. Thus their interest to work was encouraged.

A large water tank, holding nearly 2,000 barrels and fed by a windmill, has been erected this spring and supplies school and surrounding Indians with plenty and very good water. I did not, however, succeed, as I had intended, to build a new playhall and dormitory for the boys. The many and late snowstorms—the last having been May 20—prevented us from getting the necessary material to the place in time. The excellent health of our boys all these last years proves, however, that the present apartment is in good sanitary condition and will do full justice to the purpose until, by next spring, the new building will be ready for use.

Very respectfully,

J. GEO. WRIGHT,  
*U. S. Indian Agent.*

P. F. DIGMANN, S. J.

### REPORT OF MISSIONARY AT ROSEBUD AGENCY.

ST. FRANCIS MISSION,  
*Rosebud Agency, S. Dak., September 23, 1892.*

SIR: With regard to our missionary work I may say that for this past year it has been successful one. From July 1, 1891, to June 30, 1892, I recorded 199 baptisms, 84 of which were of adults, and 25 Christian marriages. These numbers show that the interest of these Indians for religion is on the increase. An officer of the Army made last year the remark to me: "It seems to be easier to make this people Christian than to make them self-supporting." My view of the question for the past six years I am among these Indians ever has been that true Christianity never will take solid root in them unless we succeed in getting them used to judicious work. Basing on this principle it has been our constant effort to encourage them to work by word and example and aid.

The first Catholic congress of Sioux at Standing Rock Agency in July, 1891, gave start to a new life among these Indians. About 20 that had gone from here to witness the proceedings carried home the most wholesome impressions. Seeing how the Dakotas of the North had broken with their old heathen habits and were thrifty and happy, they came to the conclusion that they could do the same.

Those of the same disposition formed an association, called St. Joseph's Society, intended to replace their old Indian league with its war dances and other childish entertainments. In their meetings they encourage one another to do away with their old habits and to follow the white man's ways. The women on their part formed also an association, called St. Mary's Society.

Though yet in the beginning, the fruits of these societies are remarkable. Their members oblige themselves to dress like white men, to take good care of their families, not to admit the medicine men to the sick, and to help one another. The non-progressive Indians are now faced and opposed by a party in their own midst, which I hope will steadily grow, attract the sound elements, and by making public opinion draw the rest.

Here I wish to express my thanks to you, dear sir, for your ready assistance. It ever has been my conviction that the harmony existing between the agent, his officials, and the missionaries, can have but one final result—success.

If I had to express a wish it would be only this one, that our Indians, at least those who are longing for it, would get soon their land in severalty and the necessary equipment to start their farms in places they may select. This will break up more effectually camp life, this great obstacle of a steady progress.

Very respectfully,

P. FLOR. DIGMANN, S. J.

J. GEO WRIGHT,  
U. S. Indian Agent.

REPORT OF SISSETON AGENCY.

SISSETON AGENCY, S. DAK., *September 26, 1892.*

SIR: In compliance with instructions I have the honor to submit my annual report of affairs at this agency.

Arriving here about May 1, we began listing the public property, and, much of it being old, worn out, and scattered, one month was taken up in completing the invoice, after which, on June 1, 1892, I assumed charge of the agency, and having only had control thirty days at the end of the fiscal year, I must confine my report principally to statistics up to June 30, and will have to run into the present year for observation and experience.

**The Reservation and Indians.**—The Sisseton and Wahpetons no longer hold their land in common, having taken allotments in severalty, and on April 15 of the present year this reservation was thrown open for settlement under the homestead law, and to-day the houses of white settlers dot the prairie in every direction, while a number of towns have sprung into existence, and the red and the white men will hereafter harvest their crops and herd their stock side by side, and when, as the wheels of progress roll on and churches and schoolhouses take the place of the old time dance houses—which last are already unpopular among these honest people—it will be forgotten they were once classed with savages. It is true that on occasions like the Fourth of July a few of the older and middle aged Indians like to celebrate, and no other amusement for them is encouraged by their white neighbors who flock here by the hundreds to witness the strange custom. The grass dance is indulged in as it was this year not far from the agency grounds, but aside from the quiet, weird manner of the dance, peace and harmony prevailed throughout. I would recommend that in the future the Department invest a few hundred dollars on our National holiday for fireworks and a big dinner, omitting the old custom, and show these people that the Government appreciates their loyalty in celebrating the National birthday.

In this connection I desire to say that there is with the introduction of whites on this reservation, yet a worse enemy to the red man than the dance. It is alcohol. Its evil effects were manifest during the payment of two weeks ago. As it likewise was at the beginning of the pending annuity payment, and not having been granted a sufficient police force to meet and put down the evil, I was obliged to call for volunteers who are doing their duty well and ought to be paid for it. And I do not see why an agent should not have the same protection during a payment this year that a special disbursing agent received last year.

Although not occurring in the fiscal year 1892, I can not refrain from making honorable mention of the death August 26, 1892, of the noted chief, Gabriel Renville, who was leader of the friendly Indians at the time of the outbreak in 1862, and whose loss will be felt greatly both by the Sissetons and white people.

**Census.**—The census taken for 1892 shows—

Indians and mixed bloods.....	1, 831
Females.....	919
Males.....	912
Males above 21 years.....	403
Females above 21 years.....	406
Children between 6 and 16 years of age.....	505
Children under 6 years of age.....	331
Births during fiscal year.....	73
Deaths during fiscal year.....	75

**Buildings.**—The agency proper consists of 130 acres of land, one warehouse (in which is the agent's and clerk's offices), 8 residences (occupied respectively by agent, physician, carpenter, clerk, interpreter, blacksmith, wheelwright, and teamster), 1 blacksmith shop, 1 carpenter shop, 1 old grist mill, and 1 barn and sheds. The buildings occupied can, with a few hundred dollars' expense, be made comfortable for the winter. The mill I have recommended to be condemned and sold, being of no use here.

The school building is an elaborate, well-ventilated structure, heated by steam, with capacity to accommodate 125 pupils, beautifully located and well furnished with good spring water conducted by hydraulic pressure through pipes from a distance of nearly 100 yards at an elevation of about 60 feet. The other improvements consist of a laundry and bakery, a boys' lodging house in which is located the industrial rooms for harness and shoe making and woodwork lessons.

A frame dwelling, a small carpenter shop, a spring house, and a good bank barn, in addition to those named above comprise all of the buildings.

The school grounds consist of 320 acres, mostly fenced—35 acres under cultivation and balance used for pasture. The meadow land—160 acres in addition to the above—is situated about 6 miles east of the school, making in all 610 acres of land.

**School work.**—The discipline and progress of the school under the efficient management of Dr. Shelland with his splendid corps of teachers is manifest, and with a continuance of his services I predict success. And it is regretted here that part of his best help have been called to another field of Indian educational work. I allude to the Misses Patterson.

On my first visit to the school it seemed strange to me that cultured ladies, coming here from pleasant homes to educate and refine these forest waifs, should be assigned to rooms with bare floors, when a few dollars spent for carpets by our flourishing Government would not only add to their comfort but would throw a glow of brightness around the halls of this new home for the boys and girls, and encourage their search for knowledge and civilization.

The contract school, conducted by the Presbyterian Board of Home Missions, is at Goodwill, near the Government school, 2 miles from the agency, and accommodates about 125 pupils. It is an industrial school, and has done good work under the able direction of W. B. Robe.

Attendance and enrollment for fiscal year 1892 is as follows:

	Enrollment.	Average attendance.
Sisseton Indian industrial school .....	104	55
Goodwill Mission .....	95	48 $\frac{2}{3}$
Pupils away at school .....	23	.....
Total .....	222	103 $\frac{2}{3}$

**Missionary work.**—Rev. M. N. Adams, in charge of work at Goodwill Mission, reports as follows: 6 regularly organized native Presbyterian churches, viz: Ascension, Goodwill, Buffalo Lake, Long Hollow, Mayasan, Mountain Head. Contributions liberal. There are connected with these 6 churches 450 communicants, and each church has a regularly ordained and installed pastor. Three of these churches have good substantial houses of worship. A new church building is in course of erection at Long Hollow.

Rev. Mr. John Robinson, in charge of the Protestant Episcopal Church, reports as follows:

Church buildings .....	3
Missionary .....	1
Communicants .....	171
Marriages solemnized .....	3

I have had no report of marriages from Rev. Mr. Adams. In this connection I wish to say that I do not know to what extent the marriages on this reservation have been solemnized, but notwithstanding that the large majority of the Indians are practically civilized and have adopted civilized manners and customs, yet there seems to have been a prevailing idea among the minority that it is all right on slight pretext for a man to leave his wife or a woman her husband and marry some one else, and all goes well until a payment is to be made, then a contest ensues to see who owns the children of the first marriage. I believe, however, that the efforts of our schools and churches to educate and

christianize them out of these immoral tendencies are having a good and wholesome effect.

**Farming.**—Many of the Indians are engaged in farming and stock-raising, and there is much complaint by them that they do not receive the interest due them. A large portion do not farm much, and I do not see how they will get through the winter without further help.

In taking charge of this agency I had only slight misgivings as to my fitness for the place, but a few months' experience has convinced me that to make a good agent of the Sissetons, while they are citizens here and Indians at Washington, one must be possessed of an abundance of the following commodities: law, charity, fairness, endurance, patience, and fortitude, combined with a willingness to abandon personal interests and neglect of family in the untiring endeavor to protect his Indian wards; and while I may have a fair share of the above qualities, I have deemed it best to tender my resignation, which, through the kindness of the Department and President, has been accepted, and on completion of the annuity payment now pending, I will retire from the service, giving over the agency as directed to Special Agent George P. Litchfield, whom I regard in every sense a good man and one who knows how to protect the rights of the Indians.

Very respectfully, your obedient servant,

D. T. HINDMAN,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF SISSETON SCHOOL.

SISSETON INDIAN INDUSTRIAL SCHOOL, S. DAK., *July 5, 1892.*

SIR: In accordance with the instructions of the Department, I respectfully submit my first report. As I have been here only a part of the year, the report covers only what I have data for—the last quarter ending June 30, 1892.

It is, however, a matter of history that the opening of the term, in September, 1891, found the Sisseton Sioux greatly demoralized, their minds excited with the new condition of things, and their heads completely turned with so much money. This school, then under the care of the thoroughly educated and experienced Prof. Wood, opened with 7 pupils. Every scholar had to be brought in by the school team at a large outlay of time and coaxing. But a hard winter, with returning poverty, came to the aid of the school. It gradually developed into more respectable proportions. The last quarter had a total enrollment of 90, with an average attendance of 71. There has also been a marked improvement in the discipline of the school.

Much of my time has been spent in removing causes of dissatisfaction and restoring an era of good feeling, especially between the school and the parents of the pupils, and I am happy in a degree of success so much larger than anyone then dared to think possible.

Under the regular administering of remedies prescribed by the agency physician illness has departed.

The pupils have increased not only in numbers but also in obedience and a general manifestation of cheerfulness. The teachers have worked with great fidelity and success. The spirit which says, "I love them and give myself for them," has proved master of the situation. His love has softened tones, made hands more gentle, hearts more tender, and work of every kind more faithful. During the last quarter the school has experienced quite a religious awakening, from which several of the mission churches have received accessions.

Though called here so unexpectedly, both to myself and to the faculty of the school, all but one of the employes have remained, and have given that tireless effort without which no success is possible. I have to return thanks to the agent and to the honorable Commissioner of Indian Affairs, for kindly retaining in the service several ladies and gentlemen without whose skill and experience no such degree of success would have been possible.

The future of an industrial school for a rapidly waning tribe must be either abandoned buildings, or such increased worthiness of the school, with increased numbers of pupils through transfer from other reservations, as shall make success practicable. A comparatively small sum would make this property available for a training school. The location is good. The larger part of these employes are worthy of such a relation.

Very respectfully,

J. C. SHELLAND,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF YANKTON AGENCY.

YANKTON AGENCY, S. DAK., *August 25, 1892.*

SIR: In compliance with the regulations of the Indian Department and your instructions, the thirty-third annual report of the affairs of this agency is respectfully submitted. Accompanying the same will be found the usual statistical tables and census of the tribe, also certain other tabular statements that may be of interest.

**History.**—This agency was established in the year 1859, since which time fifteen different persons have administered its affairs. During some of these administrations good progress was made toward the civilization of these Indians, whilst during others there has undoubtedly been a standstill if not an actual retrograde. During the whole time, however, there has been a marked change in the habits, appearance, and in the character of these people. This change is almost imperceptible to those who are constantly in their company, but it can not be considered otherwise than remarkable to those who deliberate on the alterations brought about in the habits of a people in one generation.

The Dakota Indians were regarded by early explorers as the most savage and warlike of the aboriginal races. They lived almost exclusively by hunting buffalo, and roamed about on their vast domain without check or license. None had the temerity to encroach on their mighty dominion. They performed the most horrid rites and barbarous practices on themselves so that they might obtain that endurance and prowess so necessary to the life of a hunter and warrior. The arts of peace even of the rudest sort were scarcely known to them one generation ago. They were so superstitious that every thunder cloud was a winged demon whose anger must be appeased, and every storm of wind an avenging spirit which must be placated. Unusual droughts, the absence of buffalo, etc., were caused by the anger of some supernatural power that required the strongest efforts of the most formidable medicine men to propitiate. Their only religious observances were to perform the debauching rites of the medicine feast or the horrid sun dance or other similar hideous performances. The only mental training was the rude oratory at their councils and the restraining influences of their chiefs and head men.

So far as the Yankton branch of the Dakota family is concerned there has been a great change in their habits since the treaty of 1858. They are now tractable, peaceful, and yielding. None of them have weapons to hunt with and there seems to be no ambition to engage in any kind of warfare. They remain quietly on their reservation, seldom going away except to visit relations at the other Sioux agencies or to attend the annual church gatherings that have been instituted by the missionaries. They are a social people and delight in attending "feasts" given by some relative or some person who invites them to execute a job of work. The most of these people have a plowed field of some size where they raise corn and garden vegetables and some of them have very nice farms. Their greatest fault is indolence, and greatest weakness an inability to appreciate the value of time. The majority of them are members of one or the other of the religious societies, and the old superstitious notions are rapidly being dissipated.

**Population, etc.**—The population of the Yankton tribe is as follows:

Total number of families .....	558
<b>Males:</b>	
18 years old and upwards .....	466
6 to 17 years, inclusive .....	203
Under 6 years .....	132
<b>Females:</b>	
18 years old and upwards .....	555
6 to 17 years, inclusive .....	215
Under 6 years .....	144
<b>Total population .....</b>	<b>1,715</b>
<b>Of whom there are:</b>	
Mixed bloods .....	464
Full bloods .....	1,255

**School enrollment.**—

Reservation boarding school .....	147
St. Paul's mission boarding school .....	45
Presbyterian mission day school .....	22
Attending non-reservation schools .....	116
<b>Total .....</b>	<b>330</b>
School attendants over 18 years .....	26
School age not enrolled .....	114

Percentage of the last are diseased, blind, etc.

Changes.—

Population of 1891.....	1,716
Gains by births (males 31, females 27).....	58
Gains by return to tribe.....	12
Losses by deaths (male 33, females 29).....	62
Losses by removals from tribe.....	9
	-----
Of the total population there are absent at school.....	116
Army enlistments and their followers.....	38
Present on reservation.....	1,561
	-----
Total.....	1,715

Allotments.—All the members of this tribe have received their allotments of land in severalty. The number of allotments are as follows:

	Acres.
Under act of 1887 (1,484 allotments).....	166,040
Under act of 1891 (1,128 allotments).....	96,762
Unallotted land on reservation.....	167,603
	-----
Total acreage of reservation.....	430,405

About one-half of the allotments made under act of 1891 are additions to equalize former allotments.

More than three-fourths of the Indian families now reside on their allotments. They are gradually making farms; the old habit of working in bands is giving way to the more thrifty plan of each man working his own farm. There is, however, a sad deficiency in farm tools among them and in working stock, which compels some of them to double up when plowing or harvesting.

The most intelligent among the Indians have some dread of the day when the unallotted parts of the reserve shall be opened to white settlers. The Yanktons have always regarded their tribe as the main or primal stem of the Dakota Indians and they look upon the proposition to part with their reserve as a move toward the extinction of the race, which alarms them.

Farming.—Within the last few years there has been a noticeable increase in the interest attending farming operations among these Indians, and close observers state that this interest is still more apparent this year than ever before. The excellent crops of wheat and other grains raised by them last year and the remunerative prices paid for their products in the neighboring towns is undoubtedly one of the principal causes of the increased interest displayed this year; but there are other causes, such as the reduction of the ration issued which compels them to work in order to live. The allotting of lands in severalty, the opening up of small individual farms all over the reservation, and the building of houses on these farms, start the idea of home, a word and idea unknown in their old camp life; but in my opinion the real cause of the increased interest in farming industries results largely from the employment of competent and trustworthy men to superintend and direct farming operations among them. Such men when engaged as "additional farmers" not only prevail upon the Indians to work, but by the exercise of a little tact, induce them while in their councils to drop the discussion of political questions and to discontinue their perpetual fault-findings against the Government and to engage in the discussion of farm topics.

The crop for this year is not as good as 1891, which was exceptionally good, whilst small grains have done fairly well; corn, owing to droughty weather, is a partial failure.

The following is an estimate of this year's crop:

	Acreage.	Estimated amount.	Estimated value.
		<i>Bushels.</i>	
Wheat.....	2,060	24,720	\$12,566
Oats.....	710	14,200	3,550
Corn.....	1,049	26,940	4,188
Potatoes.....	102	6,240	5,120
Garden crops.....	40	-----	400

In addition to the foregoing there has been new breaking of prairie sod 561 acres, the main part of which was planted to corn; but on account of the drought the crop is a failure.

The Indians last year purchased ten twine-binders and as many mowers; this year they have purchased ten additional twine-binders and several new mowers and horse-rakes. I do not think it will be necessary for the Government to purchase any more farm machinery for these Indians, for they have demonstrated to themselves that they can supply themselves with articles of this character.

Mr. Lance, the agency farmer, with his corps of additional farmers is entitled to much credit for faithful service.

**Shops and shopwork.**—Ever since the establishment of this agency it has been the policy of the Indian Office to keep several Indians employed at the mill and shops as apprentices or employes under a competent superintendent; to supply the shops with all necessary material, and to have the work done for the Indians free of any expense. In this way there have been maintained blacksmith, tin, shoe and harness, and carpenter and wagon repair shops, also a flour and sawmill. Some years ago the steam boiler broke down, and since then the mills have not been operated.

In consequence of this free-of-cost business, the shops have been overrun with work of all kinds; all sorts of old wagons, implements, etc., which the Indians are induced to buy of white people, every imaginary sort of a household article or farm tool, has been brought to the shops for repair.

Additional to the repair work, the following is a partial list of new articles manufactured at the shops during the last fiscal year and issued to Indians:

Hayracks .....	99	Camp kettles .....	68
Wagon boxes .....	44	Coffeepots .....	183
Harrows .....	3	Tin pans .....	345
Tables .....	8	Tin cups .....	103
Doors and frames .....	80	Stovepipe joints .....	676
Wagon seats .....	19	Tin pails .....	56
Corn markers .....	4	Iron chimneys .....	82
Coffins .....	67		

In accordance with your suggestion last spring a price was set upon shopwork of some kinds, with a view to obtain from the parties mainly benefited by the work a sufficient sum to cover the cost of the material used. The Indians at first objected strongly to the innovation but now seem reconciled to the change, and I think the most of them approve of it.

The new building for shops which was authorized late in the season has recently been completed and will be occupied in a few days.

Mr. Tyler, who has superintended the shops for the past two years, is entitled to much credit for the faithful and untiring energy he has manifested as well as the uniform courtesy with which he treats the Indians even under provocation.

**Schools and school buildings.**—The schools on this reserve consist of the Government and St. Paul's mission boarding schools and the Presbyterian mission day school.

At the Government school children of both sexes are admitted, but the sexes are kept apart, so that they are almost as distinct as if in separate schools. This school has been in operation for about ten years. It was enlarged and improved two years ago, so that there is now a capacity for 130 pupils. There were enrolled in this school during the past year 76 males, 71 females. The average attendance during the year was 103. The cost to the Government for maintaining this school, including salaries, repairs on buildings, and expenditure on school farm, during the year was \$19,366.98, equal to \$188 per pupil. Mr. Matson, who has been the superintendent for the past two years, having been transferred to another school, Mr. Wood, the new superintendent, has just entered upon the duties of his office.

The St. Paul's mission school is an institution established here many years ago; it was built and is maintained by the Protestant Episcopal Church Missionary Society. It receives boys only. The society has expended a large sum of money at this agency to establish its missions and schools. The location of its buildings is well chosen, and the houses are substantial and durable. This society seems to work on the plan of making a cheerful home for their inmates, and in this they are eminently successful at this agency. Mrs. Johnston, who has had the management of St. Paul's school for some years, possesses every requisite to enable her to train up these Indian boys to a useful manhood. The

average attendance at St. Paul's during the past year has been about 37 boys. The only expense to the Government is the ration issue which amounted to \$969.75 during the past year, or about \$26 per pupil.

The Presbyterian Mission Society also established day schools on this reserve many years ago. They have all been absorbed into the boarding schools, with the exception of one day school which is kept at the agency. Most of the pupils of this school are those who from misfortune or disease cannot be admitted into boarding schools. The work of this school is excellent in character, and it deserves to be encouraged, Miss Abbie L. Miller has had charge of it for some years; attendance during the past year 12 to 18. This school is no expense to the Government.

Reports from these school superintendents will be found added to this report.

**Nonreservation schools.**—There are now so many Indian schools instituted or supported by the Government that considerable difficulty is encountered in properly filling them. Every year there is a strife on the part of the nonreservation government and contract schools to secure pupils at the agencies. This is demoralizing to the reservation schools, whose best pupils are induced to go away as soon as they have become useful to the school. Some of these nonreservation schools, in order to fill up, will accept the transfer of grown people who ought to be earning their own living. I have seen them take young men of 28 to 30 years and young men who have graduated at prominent Eastern schools will be accepted in other schools as pupils.

I will add in this connection that I have succeeded this season in inducing several young men to go into the white settlement and work on farms. If they prove to be successful and satisfy their employers as farm laborers I believe that it will be better for the young men than enlisting in the Army or attending schools.

**Missions and missionaries.**—The Protestant Episcopal and the Presbyterian churches established missions at this agency at an early day, and have not only maintained them, but have gradually increased their influence and fields of labor until now each of these societies has three churches on the reservation, all of which are well attended. The breaking up of the old village system by the erection of comfortable houses on their individual allotments may have a tendency to decrease the size of worshiping congregations at the agency churches, but at the same time it breaks up the crowds that formerly met to dance and practice their old heathen rights.

For many years Rev. Joseph W. Cook has had charge of the Episcopal missions and Rev. John P. Williamson that of the Presbyterians. For the past year Mr. Williamson has been engaged at Pine Ridge, leaving his home mission in charge of Miss A. L. Miller and Miss Agnes Pond, assisted by Rev. Henry Selwyn and other native missionaries, under whose efficient management the good work has made excellent progress. Mr. Cook, who has devoted the better part of his life to the diffusion of religion and charity among these people and in endeavors to prevail upon them to adopt the habits of civilized people, is still here working without cessation. Attention is invited to their reports appended hereto.

**Indian houses.**—During the year there were built for the Indians on their allotments 35 new houses. Eight of these were frames 12 by 18 feet, 27 of them frames 14 by 16 feet. There were also 64 log houses repaired. Many of them were supplied with new roofs and floors and windows and doors. Most of this work was done by white carpenters, although several Indian mechanics were employed to assist. The total number of Indian dwelling houses on this reserve is as follows:

Frame houses with shingle roofs, floors, windows, doors, etc.....	74
Log houses with same.....	143
Log houses with decent floors, but with dirt roofs.....	48
Log houses with dirt floors and dirt roofs (huts).....	181
Government buildings occupied by Indian families.....	4
Number of families who live in lodges or who are quartered with other families.....	49

Huts with dirt floors or dirt roofs, heated with stoves and having no chimneys, make wretched dwelling places for man or beast, more especially for people having scrofulous or consumptive tendencies, for the abundance of filth makes rich pasturage for the germs of these diseases. Formerly when they dwelled in tents they moved them so often that no filth could accumulate. Is it surprising that an Indian "can not stand civilization" when he leaves his well-ventilated tent to live in a tightly sealed log hut, amidst squalor and filth?

The court of Indian offenses continued to operate as the best medium for settling private difficulties between Indians and as a moral influence to prevent the commission of crime. I find its influence extends to all classes. The decisions are uniformly fair and equitable, and the adjustment of cases involving damage to growing crops are always thoroughly investigated.

The police allowed at this agency are 1 officer and 7 privates. Their duties require them not merely to preserve order and apprehend runaway school children, but they do a great deal of work about the agency and the reserve, repairing bridges, roads, etc.

**Rations.**—The issue of subsistence at this agency amounts to about 20 per cent of the amount required to support a workingman; the remainder of food required must be obtained by themselves, either by labor on their farms or earnings in freighting and other civilized pursuits. A small percentage of their living is obtained by root-gathering, etc., while quite a number of the old and infirm are compelled to beg of the employes and of their white neighbors in the settlements. The distribution of the ration was formerly equal to all the members of the tribe; it was recently changed so as to give to the old and infirm a double quantity, and when winter comes again it is probable that the old people will get even a larger share than now, so as to prevent actual want and a repetition of the distress that occurred two years ago.

The buildings at agency are in fairly good condition. Dwellings for employes are decent and comfortable, although not very commodious. The chalk-rock dwelling for farmer and warehouse at Lake Andes are now completed, and when a blacksmith shop is opened there it will add very much to the convenience of those who reside in that vicinity. The new shop recently completed at the agency is well adapted for the mechanical work done here. A new ice house was built last fall with a capacity to store 300 to 400 tons of ice. The warehouse needs some repairs. The issue house, which was built some years ago of chalk rock, is an excellent building, but unfortunately it was built on a weak and badly laid foundation of surface boulders, which have settled and caused the chalk-rock walls to crack open in several places; iron rods have been placed to strengthen the walls, and it is now thought to be safe. All other buildings have been kept in fairly decent condition. A few small and inexpensive dwellings are needed, however, for the accommodation of Indian employes and their families. An artesian well is needed here also, not only to supply water for ordinary household purposes, but to furnish a protection against fire for the school and agency buildings, and to supply a power to run the flour mill, turning lathes and other machinery. The engine and much other machinery belonging to the old mill ought to be removed from here or sold, for steam can not any longer be economically used as a motive power.

**Army enlistments.**—In July, 1891, Lieut. Samuel Seay, of the Twenty-first Infantry, stationed at Fort Randall, came here with authority to recruit a company of Indian soldiers. He secured from this agency 23 enlistments, which, with the 14 others from Lower Brulé, has nearly filled his quota. These recruits, under the firm but kindly discipline enforced by Mr. Seay, have changed materially since their enlistment. The change is specially noticeable in their demeanor and improved physical appearance. They are said to make good garrison soldiers and no doubt will in time make excellent soldiers for all purposes, if they are fortunate enough to be under the command of officers possessing the same ardor and sense of justice as signalizes their present commander.

**Trading.**—There are three licensed traders on this reservation; two of them are mixed bloods of the tribe and the other a white trader. None of the stores have been kept very well supplied during the past season, so nearly all the trading has gone to the surrounding towns off the reservation. In my opinion it is unnecessary to exact a license for trading on this reservation. This restriction, I believe, could be advantageously removed.

**Brass band.**—The employes of the agency and shops organized a brass band last winter, and by patient practice have become quite proficient. The music is listened to with close attention by all the Indians, who will abandon their most exciting dances to get close to the band wagon.

**Sanitary.**—There seems to be no abatement in the ravages of consumption and its kindred malady, scrofula, among these people. Children apparently sound and healthy take consumption, decline rapidly, and die soon. This fateful disease gives a depressed, almost a gloomy feeling to the people, who often attribute it to confinement at school, and when I point to their own badly ventilated, dirt-covered, and dirt-floored huts, I am always asked why I don't build them a good house. Dr. May has worked arduously and faithfully among these people and is entitled to a better compensation than he receives.

Cash disbursements, etc.—The following is a statement of cash disbursements at this agency, and other expenditures made on account of the Yankton Indians:  
Cash disbursements:

Agent's salary.....		\$1, 600. 00	
Regular employes, agency and school:			
Whites.....	\$12, 598. 84		
Indians.....	9, 687. 36		
			22, 286. 20
Irregular employes, agency and school:			
Whites.....	2, 391. 05		
Indians.....	694. 30		
			3, 085. 35
Open market purchases:			
Whites.....	3, 974. 58		
Indians.....	3, 629. 72		
			7, 604. 30
Freighting (Indians).....			832. 48
Balance of per capita on railroad rights of way (Indians).....			24. 75
Traveling expenses.....			204. 85
Total.....			35, 637. 93

Other expenditures for the tribe (contract goods):			
Subsistence stores for Indians, beef, etc.....			23, 443. 04
Annuity goods, clothing, etc.....			11, 240. 25
Miscellaneous articles, farm machinery, etc.....			2, 846. 05
Subsistence, maintenance, etc., Government school.....			10, 765. 99
Subsistence for mission schools.....			969. 75
Transportation Indian supplies (estimated).....			2, 081. 20

\* No record.

**Recommendations.**—I again urge the sinking of an artesian well at this agency for water supply and for motive power for the mill and other machinery, now lying idle.

That sufficient cash from their annuities be distributed to enable these Indians to assist in the purchase of their clothing, farm machinery, etc., instead of buying such articles under contract as heretofore. That all surplus money be invested in building material and that comfortable houses, barns, granaries, etc., be built on their allotments.

That all restrictions on trading with Indians at this agency be abolished.

That the erection of a few small but neat and comfortable cottages be authorized at the agency for employés.

That some restrictions as to age be placed upon the admission of Indians at the Government and contract schools to protect the Government from useless expense.

**Conclusion.**—In closing this report I wish to assure you of my appreciation of the generous support and valuable counsel given me by your office, and I wish also

to express my obligations to the employés of the agency for their faithful performance of duties.

I have the honor to be, very respectfully yours,

E. W. FOSTER,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF PHYSICIAN AT YANKTON AGENCY.

YANKTON AGENCY, S. DAK., August 1, 1892.

SIR: I have the honor to submit the following report of medical work done at this agency during the year beginning July 1, 1891, and ending June 30, 1892:

	Males.	Females.
Taken sick.....	352	364
Recovered.....	304	316
Died.....	33	29
Deaths and causes:		
Consumption.....	16	12
Tuberculosis scrofula.....	3	4
La grippe.....	4	6
Cerebro spinal meningitis.....	2	1
Lung fever.....	1	1
Diarrhea, acute.....	3	3
Infantile convulsions.....	2	
Inflammation of bowels.....	1	
Whipped.....	1	
Drowned.....		1

Two boys and one girl were taken sick at the Government school with consumption, were taken home, and after two or three months' sickness died. No deaths took place at the school or among the pupils other than these three, although every one, with the exception of two or three, was sick abed with la grippe.

Lung troubles, complications arising from the effects of la grippe, have been more prevalent than common, and there has been considerable malarial fever—something uncommon for this climate.

The work at this agency is very laborious for the physician. These people are so far advanced in civilization that they require to be visited at their homes when sick. They are widely scattered, and would keep one physician busy visiting them if they could have the proper medical attention. This could be done by having an assistant, or some one to stay in the office, but as it is when he is at home the office work is a constant drudgery.

The Indians are slowly improving, and are beginning to see the necessity of having better houses, of cleanliness, and a great many things they did not have long ago.

The third year of my labors among these people is drawing to an end, and I certainly think it has been the most successful of any. I can treat their diseases better than at first, and the people are becoming more willing all of the time to do better, and take better care of their health.

I wish to thank the Indian Office for the favors it has shown me, and also my appreciation for the help extended to me by the agent and other employés at this agency.

Respectfully submitted,

C. A. MAY,  
Agency Physician.

E. W. FOSTER,  
U. S. Indian Agent.

REPORT OF SUPERINTENDENT OF YANKTON SCHOOL.

GOVERNMENT SCHOOL, Yankton Agency, S. Dak., August 19, 1892.

SIR: Owing to the brief space of time that I have been connected with this school, I am unable to make a definite report of the work of the past fiscal year, from my personal knowledge, and my communication must necessarily be the result of observation, to which I will add some information received from reports of employés.

I can speak with pleasure of the delightful location of the school, situated near the bank of the Missouri River, affording an excellent view of that stream for several miles, with its border of timber on either side, and the hills and ravines rising so beautifully to the prairies beyond. The grandeur of the scenery, the supply of fuel and pure water and the nearness to rich farming lands, all combine to make the location a natural one for an Indian school.

The school buildings, although not large, are conveniently arranged, and all space has been utilized. The girls' home, erected two years ago, has been well cared for, and is in good condition. The main building, I believe, is inadequate to the necessities of the school, and the interior is in need of some repairs. The floors in the halls are much worn, and should be relaid with hard wood. Many of the rooms need replastering. I find the school well supplied with clothing and bedding.

The average daily attendance of pupils during the past year was 103, the number of boys and girls being about equal. The teachers report good progress in the studies pursued. The matron of the boys' building states:

"We have much to encourage us. Our boys have a bountiful supply of comfortable clothing, and they enjoy their Sunday suits. They have made great improvement in table manners and general deportment. They have quite outgrown their disinclination to assist in general work, and now take kindly to whatever is required of them. We can also see a growing ambition to rise above the old life, to learn trades, and engage in remunerative occupations. The time and patience spent with them is not lost."

From the report of the matron in the girls' home, I quote the following:  
 "This department is in a flourishing condition, being much better equipped than it was two years ago. We now have a comfortably furnished building. We have plenty of clothing for the girls, which has been made by them under the supervision of the seamstress. In this they have made rapid progress, girls of 12 and 14 years cutting and making their own dresses in a very creditable manner. The girls are fond of sewing, and seem to take to it naturally. Particular attention has been given to all branches of industrial work, also to dress and manners, in which there has been great improvement. Taking the work as a whole, the results have been very gratifying."

From the report of the industrial teacher I take as follows:

"The school farm contains 417 acres, of which 90 acres have been under cultivation during the past season. The remaining 327 acres are used for pasturage. The crops grown consist of corn, oats, potatoes, sugar beets, and garden vegetables. The lack of sufficient rainfall during June and July was injurious.

"Situated near the school grounds is an orchard containing 350 apple trees, 400 mulberry trees, several hundred blackberry, raspberry, and dewberry bushes. The trees are young and thrifty; the shrubbery is doing finely, and the prospect of having fruit for the use of the school in the near future is very encouraging.

"The garden contains 3,000 cabbages, 100 hills of cucumbers, carrots, parsnips, turnips, beans, peas, onions, sweet corn, asparagus, and pieplant. Belonging to the school are 6 horses, 13 head of cattle, and 23 hogs.

"The labor on the farm has to be done mainly by the industrial teacher and his assistants, as there are but few large boys in attendance at school."

**Needs of the school.**—I recommend the erection of a new laundry, size 24 by 36, two stories high, the upper story to be used as a drying-room. The present laundry is too small, and could be advantageously used for either a boys' bathroom or an infirmary.

In the boys' building there is but one sitting room (20 feet square) for all of the boys. I think the small boys should be provided with a separate play room.

A reading room for the school would be very beneficial.

I think the erection of a building to be used as a chapel and reading room, as suggested by you, desirable and what the necessities of the school demand.

A new tread power and two circular saws are required. The old frame is also worthless.

The erection of a poultry house, and the keeping of fowls would be in accordance with the suggestions of the Indian Office, and where tried has been attended with practical results.

The keeping of swine has resulted in much destruction of crops, owing to the inability to keep them within the wire inclosure. A good board fence around the hog yard and pasture is an urgent necessity.

I recommend the purchase of a harvester. In conclusion I can say that I see where many improvements have been made during the past two years, and on every hand I find evidences of your untiring efforts in building up the school. Trusting that you may be liberally aided by needed appropriations, and assuring you of the hearty support of myself and the employes under my charge, I am,

Very respectfully, yours,

E. W. FOSTER,  
 U. S. Indian Agent.

E. D. WOOD,  
 Superintendent.

## REPORT OF PRINCIPAL OF ST. PAUL'S SCHOOL.

ST. PAUL'S SCHOOL, *Yankton Agency, August 19, 1882.*

SIR: The progress of St. Paul's School during the past year has been satisfactory. During the first of the term there were some misunderstandings in regard to boys being taken to outside schools without the knowledge of the principal while enrolled as pupils in this school. However, after getting fully organized and in running order, the boys improved in their school work. They were instructed regularly in reading, spelling, writing, language, arithmetic, and geography, the more advanced in United States history, grammar, composition, and physiology; and all were taught music. Their improvement in this branch was gratifying to their teacher, who was competent and earnest in her work. English was exacted of the pupils on the grounds and in the house.

There were two cases of discipline where I was obliged to ask the agent to have the boys put in the guard house for one night. One ran away for the second time to enlist in the U. S. Army, the other to attend an Indian dance. Offenses of this kind did not occur again. We have had no serious sickness. One boy, Daniel Whitteley, 9 years old, came back last fall with his knee injured by falling from a horse, which he was attempting to break to the use of saddle and bridle. Dr. May, the agency physician, treated him, but the child has a frail constitution, inheriting scrofula from his mother, and I fear is for that reason an incurable case. I had a pair of nice light crutches made for him, which he soon learned to manage fairly well.

We had some runaways, but our agent was prompt in having them returned. I am indebted for this and other courtesies extended me in the work. The clothing issued to us for our boys was very satisfactory.

Boys assisted in planting the crops, corn, oats, potatoes, and garden vegetables, but owing to the heat and lack of rain, I fear a shortage in vegetables.

The boys returned to their homes June 27 for their vacation. The closing exercises or entertainment which is customary at the close of the school year was given June 25. Bishop Hare spoke to the boys of the importance of acquiring a familiar use of English, etc. Col. Foster also spoke words of encouragement to pupils and teachers. Refreshments were served to the

parents and friends, and after the entertainment the Yankton agency band assisted in our exercises. All enjoyed the good music they furnished.

Our agency has been much improved by the building of sidewalks, making it much more comfortable to get to and from the schools and churches.

Respectfully,

E. W. FOSTER,  
U. S. Indian Agent.

JANE H. JOHNSTON,  
Principal St. Paul's School.

REPORT OF MISSIONARY AT YANKTON AGENCY.

YANKTON AGENCY, S. DAK., August 12, 1892.

SIR: Please find below a record of the status of the missionary work of the Protestant Episcopal Church among the Yanktons. It covers the twenty-third year of the work and the twenty-second year of my incumbency:

	Church of the Holy Fellowship, Yankton Agency.	Chapel of the Holy Name, Choteau Creek.	Chapel of St. Philip, White Swan.
Number of families .....	94	43	49
Number of souls .....	335	178	185
Baptisms:			
Infant .....	10	10	5
Adults .....		1	4
Confirmations .....	3	7	8
Present number confirmed persons .....	173	80	94
Communicants lost by death .....	4	2	2
Communicants on register .....	165	79	92
Married during year .....	126	78	85
Marriages .....	2		2
Burials .....	18	9	7
Sunday school teachers .....	11	2	
Sunday school scholars .....	117	39	
Average attendance at chief services on Sundays .....	125	51	53

There are three church buildings valued at \$4,500, and two parsonages valued at \$1,400. There is one white missionary in charge, one native deacon and one catechist.

Amount of aid received:

From the Board of Missions, Protestant Episcopal Church .....	\$1,606.00
Evangelical Educational Society .....	150.00
From individuals for special objects .....	154.40
Contributed by the three congregations for incidental expenses and various objects at home and abroad .....	363.44

St. Paul's boarding school for Indian boys is a part of our work here. The principal will doubtless report separately.

There has been nothing especially noteworthy in our mission work the past year. The Sunday congregations at the chapels have been excellent throughout the year and increased. The people formerly living at or near the agency have gradually settled more or less permanently on their allotments, some quite distant, which has affected the attendance at the agency church. Still even in vacation of the schools, attendance has been very good, though not as large as in former years.

The failure of crops year before last, with the consequent scarcity of food and its attendant sufferings, and the fuller realization that they can not live upon the reduced rations of the Government, and that there is no hope of an increase of them, have, I think, stirred the people to more strenuous efforts to help themselves. The finishing of the allotments and the patents of the Government in hand have tended to make the people feel secure in the possession of their claims, and have stimulated them to make breakings or to increase their breakings in order to live permanently upon their lands. The generous help in the way of seed, and in the improvement of their houses, or new ones, have all helped to hopefulness and to efforts to help themselves. The almost impossibility this spring and summer of hiring any active man for any special labor seems to show that each one had all he could or wished to attend to at his own place. In fact that has been the excuse almost invariably given.

The agent, who has been enabled to procure the means to help materially and to stimulate this spirit of self-helpfulness, has doubtless through exhortation and encouragement, and the management of his subordinates, personally contributed largely to the result. Much credit is due him on this account.

It is unfortunate that the people thus aroused are threatened with discouragement in the loss by drought of those crops upon which the larger number most depend, their corn, potatoes, and other vegetables.

The most critical time for this people is fast approaching when by the sale of their surplus lands white settlers will come among them and hem them in more closely on every side. The result will depend largely upon the class of white people who will be brought into neighborly contact and intimate relations with them. We hope for the best, and that it may be a blessing to them. If it shall bring to the Indians the opportunity to find labor at hand by which they can add to their self-support, to learn more English, to learn more of civilized ways of doing things of economy and thrift, to learn more of the value of truthfulness and honesty and honor

and morality, then it will, contrary to their fears, bring to them a great blessing. If, on the contrary, it shall lead the Indians to begging and poaching upon their neighbors and dependence upon others for support without effort, then it will be a curse to both parties. Could the stimulation to self-support be continued longer the danger it would seem might be avoided.

Respectfully yours,

E. W. FOSTER,  
*U. S. Indian Agent.*

JOSEPH W. COOK.

#### REPORT OF MISSIONARY AND SCHOOL TEACHER AT YANKTON AGENCY.

SIR: The Presbyterian day school is located at the agency. The expense of maintaining it is borne by the Presbyterian Board of Foreign Missions. The employes are: Teacher, 1. Number pupils who can be accommodated, 20; whole number who have been enrolled past year, 24. The average attendance has been 12. Cost of maintaining school: Salary of teacher, \$300; all other expenses, \$100; total, \$400. The greater number of our pupils are such as are, from reason of disease or other misfortunes, not admitted at the boarding schools.

The mission sustains 3 churches at the Yankton Reserve. They are largely supported by the communicants themselves, and native ministers preach.

##### Statistics.—

Missionaries employed.....	2
Native preachers.....	2
Church organizations and buildings.....	3
Communicants.....	341
Communicants received during the year.....	26
Christian marriages solemnized.....	12

##### Contributions received from—

Indians.....	\$650
Board of missions.....	700

1, 350

##### Expended:

Education.....	450
Religious purposes.....	900

1, 350

Respectfully,

A. L. MILLER,  
*Missionary in charge.*

E. W. FOSTER, Esq.,  
*U. S. Indian Agent.*

#### REPORT OF AGENT IN UTAH.

##### REPORT OF UINTAH AGENCY.

UINTAH AGENCY, August 16, 1892.

SIR: As directed by you in office circular of June 23 last, I have the honor to submit this my third annual report of affairs at this agency.

##### UINTAH AND OURAY AGENCIES, CONSOLIDATED.

**Condition.**—The year has been one of unusual activity in all departments of agency work, including schools, and I am gratified to be able to note a marked advancement in the condition and disposition of the entire tribes under my charge. I mean they are surely if slowly getting into closer touch with the customs, laws, and methods of civilization. Especially are they beginning to realize that civilization or eventual annihilation is the question that confronts them. To this end I have steadily instructed them, and many of the more intelligent seem able to grasp the subject and to urge it upon their fellows. But the longer I am with them the more thoroughly am I convinced that sudden strides over the deep chasm that separates them from the higher nineteenth century civilization is not to be expected. "Here a little and there a little" will well apply to the Indian for some time to come.

I entirely agree with Dr. Dorchester that the universal "reservation school" is the true and economical method of elevating the masses of the Indians. In their superstitious minds the returned and educated Indian of an Eastern school is a "prodigy" not to be emulated but rather feared and put through the gauntlet of ostracism and ridicule. I have found these Indians bitterly opposed to sending their children off the reservation to any school. To any and all appeals

of that kind they have the ready answer, "We don't want to send our children to some distant school to die."

Many superstitions still cling to these Indians, but they are slowly overcoming them. No house-burning has occurred during the year, and few, if any, ponies have been killed at the graves of friends.

Uintah Agency is beautifully located on the table-land slope of Uintah Mountains, about 10 miles from the base, and is surrounded by tillable lands, abundantly watered by the "ever-rushing" mountain streams.

This reservation contains about 2,000,000 acres and comprises the entire watershed of the Uintah and Duchesne rivers. It was set apart for the perpetual use of the Utes by President Lincoln in an executive order October 3, 1861, and subsequently by four several acts of Congress, the latest of which dates May 24, 1888, and is occupied by two tribes, the Uintah and the White River Utes.

Population by tribes:

	Uintahs.	White Rivers.
Total population .....	452	384
Males .....	245	206
Females .....	207	178
Males, 18 years and over .....	125	110
Females, 14 years and over .....	140	107
Males, 6 to 16 ye.rs .....	74	58
Females, 6 to 16 years .....	64	57

The Uintahs have been on this reserve much longer than the White Rivers, and are as a tribe further on in industry and civilization, better patrons of schools, etc., though a very perceptible improvement in the White Rivers is noticeable in the last year. Sow-a-wick, their chief, and a man of excellent parts, good friend of schools, and loyal to the Government, for some reason did not please them; he was considered an usurper. They said that one Saws-no-cut was their rightful chief, and that if he were made chief they would bring their children to school. I reported to the Commissioner, and by his consent Saws-no-cut was recognized chief, and, true to their promise, they brought in some twenty new scholars the following Monday.

**Schools.**—Two fine and commodious schoolhouses were erected at this agency last summer, by contract, which at last furnishes a comfortable home for this school, although many improvements must yet be added. The location is superb. A fine lawn stretches for 60 rods in front, in which I have set an orchard of choicest fruit of great variety, now two years old; also the school garden of 5 acres is cultivated among the trees, and abundance of water flows in ditches close to the houses.

School opened October 5, but the houses not being completed until December 1, the attendance for the first quarter was small, but during the entire nine months reached an average of 41. Very satisfactory progress was made by all the pupils. I have erected two fine flag poles, one at school buildings and one at agency plaza, though as yet we have but one flag, made by the agency ladies two years ago.

I will say that the extra work incident to the fitting up in detail of an entire new school premises, which included the clearing of a dense growth of young bushes and trees from 15 acres of ground, building of vegetable cellar, henhouse, cow barn, and other necessary outbuildings, ditches, etc., taxed the time and energies of superintendent and industrial teacher to their utmost.

**Farming.**—I note a decided advance in farming on the entire reserve; more farms are opened and closer attention is paid to details on the part of older farmers. The subjoined statistics will show a gratifying increase in all kinds of produce, as well as in the building of houses. The harvesting is now being done with a prospect of a good yield. It would be nearly impossible to make actual measurements of grain and vegetables, as consumption is going on all the time, many crops being partly and some largely consumed before thrashing time.

**Issues and annuities.**—Regular weekly issues, consisting of flour and net beef, are made to these Indians, and irregular issues of sugar, salt, baking powder, soap, coffee, and bacon, amounting to nearly half their subsistence, as also clothing, blankets, gingham, flannels, shawls, shoes, boots, hose, pants, vests, coats, overcoats, and duck suits; full supplies of all these for every school child.

An annual cash per capita payment is made to these tribes from the interest of funds held in trust by the Government. This amounted this year to \$13.93 for Uintahs and \$8.62 for White Rivers, \$3,500 being deducted from the White River annuity to pay what is known as the Meeker pension.

**Agency dwellings.**—The agency dwellings are a rather rude type of lumber house, weather-boarded perpendicularly, with rough lumber, no battens, and only whitewashed; the plaster, also, being of the rudest sort. I have in the past year repaired the plastering on all, and added new dressed siding to the physician's dwelling and squared up, lathed, and plastered the two rooms, making it fairly presentable and quite comfortable. The agent's house should be sided up with lapsiding, and painted. I have also made additions to the dwellings of the farmer, engineer, and issue clerk, making them very good and neat. Since the finishing of the new school buildings, the old one (made habitable by considerable work) has been occupied partly as a dwelling by the blacksmith and carpenter, and partly as a storage-room for goods and supplies.

**Improvements.**—During the last fiscal year I have added to the great improvements noted in the last year's report, a fine gristmill, 30 by 40 feet, and 20 feet eaves; all the lumber, flooring, and shingles being dressed by our agency machinery. This adds greatly to the appearance of the agency, and will be of untold benefit to the Indians.

The two handsome schoolhouses, with outbuildings, so finely situated 60 rods north of the agency dwellings, also mainly completed within the last year, and inclosed by a five-wire fence, add much to the general appearance. One new bridge, 30 feet span, and two others completely overhauled, also belong to the year's work.

The greatest step in advance in agriculture was the purchase and distribution of some 1,200 fruit trees, and as much small fruit, which were carefully set out on both reservations by the farmers, who report all of 90 per cent living and doing well. As a civilizing agent no one thing can excel tree culture.

Several Indian dwellings have been built. My plan is to require the Indian to build and chink a log house, then my carpenter adds floor, roof, windows, and doors. The roof of dirt, being at once cheaper and more comfortable in this dry climate, both winter and summer, is the one in general use.

**Irrigation.**—Situated as is this reserve in the very heart of the great intermountain plateau of this continent, its future in an agricultural sense, in common with this entire area, depends entirely on the treatment and development of irrigation. Happily the water for that purpose is in such great abundance and the descent of same so great that irrigation is comparatively simple; yet some ditching too costly for Indians to undertake ought to be done, because the best lands of the reserve would thus become available for farming, and the important matter of allotments be furthered by the ambition of the Indian to secure the most eligible locations. As remarked in my last year's report, it was the almost universal opinion that the law of March 3, 1891, concerning ditches on Government reservations applied to Indian reservations, and one company was formed in Uintah County to take out a ditch from White Rock Creek across some 12 miles of Indian lands on to public lands beyond, which would have been of great benefit to the Indian lands as well as a profit to the county. A decision by the honorable Commissioner that the said law did not apply in that manner put an end to the movement.

I would recommend that in cases like the above, where the water is shown to be abundant, that a special permit be granted by the honorable Secretary of the Interior, to the end that the Indians gain the benefit of these fine lands, and the example of progress be thus set them.

**Grazing.**—Next in importance to irrigation comes the matter of grazing. This reserve may be said to constitute one vast range, and these Indians have many cattle and horses, but not enough to consume the grasses. Hence these fine grazing districts become the coveted prizes of numerous sheep and cattle owners; and to prevent trespassing, and to collect proper fines from those who do, has been a matter of no small importance in the management of the reserve.

Within the last year I have been authorized to and have made definite arrangements to rent some 675,840 acres of surplus grazing lands on the western end of this reserve. Having been duly advertised, the bids were opened on June 22 last; but it was decided by the honorable Commissioner that the bids were all too low, whereupon I was directed to solicit informal bids by correspondence, which I proceeded to do. Although the bids have been materially raised, none has as yet been accepted, hence the renting is yet incomplete.

The liquor traffic still continues to baffle the best efforts of police, United States

marshals, and courts, alike. At my special request United States Marshal E. H. Parsons detailed two deputies, in addition to local deputy U. M. Curtis, to look after the whisky sellers on this reserve and vicinity, with the excellent help of my agency police. Many arrests were made, some for selling liquor to the Indians and others for having it on the reserve; but owing to the great cost and difficulty of getting Indians to court, distant 150 miles, and the indifference of courts in the matter and the disposition to discredit Indian testimony, it has to be said that the penalties, when conviction was obtained, were shamefully inadequate. Yet the liquor-selling community are convinced that they can not carry on their nefarious traffic with impunity. For definite figures see statistics.

**Crimes** among the Indians have been almost unknown during the past year. Some quarrels and difficulties, usually the result of liquor, have been uniformly settled by three arbitrators appointed by the agent; their decision is usually so fair and just as to need no alteration. This is the course I am taking to teach them some of the principles of self-government and to prepare them for the higher step of "courts of Indian offenses."

**Police.**—My police have done their duty faithfully during the past year.

**Allotments.**—No allotments of lands in severalty have yet been made on this reservation, although much talked of by the more progressive. I am of the opinion that this important matter deserves close attention by the Department, and should be made the subject of careful inquiry by all inspectors. My own view is that the matter of making more extensive ditches will have much to do in inducing Indians to seek allotments. The rearing of fruit trees and small fruits is also a good incentive to seeking a permanent home. At no distant future these Indians will remember with gratitude the day when they were induced to cultivate orchards.

**Industries.**—I note a decided improvement in all industrial lines. There are fewer positively idle Indians. No sooner do they hear of any authorized work than more Indians offer their services than can be hired. Indians haul all agency freight (with slight exceptions in very bad weather), accompanied by a white person to transact the business. For this service they receive \$2 per hundred weight.

**Missions.**—As a missionary field these agencies still remain unoccupied. I had a letter of inquiry from the Rev. Theo. Hartwig, of the missionary board of the Lutheran Synod of Wisconsin, proposing to make a tour of inspection, preliminary to establishing a mission here, to which I replied favorably. I received a card stating that my letter would be laid before their board at its next meeting. I am hopeful that some favorable action will come of it, and that this long-neglected field will be supplied. The want is seriously felt by the fifteen or more employes and their families, who are members of orthodox churches, and who have faithfully maintained a Sabbath school under the careful leadership of Superintendent Binford.

#### UNCOMPAHGRE UTES.

The Uncompahgre Utes are one of the "Confederated bands of Utes," separated and located in Utah by a commission acting under authority of an act of Congress in 1881, having formerly owned and occupied lands lying immediately east of them in the State of Colorado, where they still claim some reserved rights, mainly that of taking up lands there under United States law, same as other citizens, and also the right to hunt on parts of their former domain. This latter is still an open question, and its exercise leads to considerable friction with the local authorities of the adjoining counties and no little annoyance to the agent and employes, who are yearly called upon to return absent Indians and practically to guard a frontier line of about 100 miles in length, with hungry Indians on one side and tens of thousands of deer just on the other, a feat which implies a subserviency to orders and regulations on the part of the Indian seldom attained by white men.

**Situation.**—This reservation lies nearly east of and joins the Uintah. It contains 2,000,000 acres, about two-thirds lying on the east side of the Green River. A considerable amount of farm lands (enough for all the Indians) lies along the Lower Duchesne River, but little of which has yet been brought under irrigation, owing to the expense it would involve, more than can be done without extra Government aid.

The portion lying east of the Green River is little more than a hopeless desert over which the Indian might roam and tend his few flocks and hunt for all time and his condition never be improved. This fact alone is slowly but surely sepa-

rating these Indians into progressive and nonprogressive bands; those on the west learning to farm, to plant fruit trees, to haul freight, in fact, to do all kinds of work, and to favor schools; those on the east to oppose all these.

The agency buildings, situated on a gravelly beach at the junction of the Duchesne and Green Rivers, were chiefly built by the military when this was Fort Thornburg. They are log and stockade, with no value attached; in fact valueless, with the exception of the agent's dwelling, which is good, and another used for an office, which is only fair. There is no tillable land within 2 miles. Some hay for agency use is cut on a piece of overflow bottom land; in case it fails to overflow there is no hay.

**School buildings.**—Thanks to the energetic policy now prevailing at the Indian Office, there are now being erected near the junction of the Uintah and Duchesne Rivers, on this reservation, three substantial brick buildings for school purposes, the first that have ever been attempted for these Indians. Of course, it remains to be seen how well this school will be sustained with children. It must be said to the credit of these Indians that, although having no schools nor religious teachers, they are not behind their fellow Utes in the use of civilized ways.

**Irrigation.**—The future of these Indians depends so entirely upon the matter of irrigation that it is the one subject uppermost in the management of their affairs. Especially is this so in regard to the school; and I am now having a canal surveyed (by authority) that will, when built, bring under water some 8,000 to 10,000 acres of good land, and that immediately adjoining the school buildings. On this land I hope to settle the majority of the farming Indians at no distant day. Other tracts equally good and in close proximity could be opened up at comparatively small outlay, and this should be done as occasion requires.

**Farming.**—Increased attention to this important branch is noticeable, and in the few places where ditching is practicable at moderate expense, new farms are opened up. On several of such I saw a few days ago the fruit trees set out last spring, growing in fine order. Some fifteen or more farmers set out trees, 90 per cent of which are doing finely. From personal examination I am satisfied that the estimates of grain raised are within the facts.

**Allotments.**—A few of these Indians have requested to have their lands allotted to them; though any attempt at general allotment would encounter bitter opposition, especially on the part of those living east of the Green River. One man, Red Moon, a subchief, living in the extreme southeast corner of the reserve, may be fairly denominated a "malcontent," often using threats of violence toward his white neighbors, claiming much more territory than the well-ascertained boundaries will warrant, and is often very sullen and fault-finding at the agency; a regular reactionist, in fact.

**Police.**—The police of this agency are quite efficient, obeying all orders promptly, and are fairly enlightened and progressive men. No crimes are recorded on this reservation this year. One case of disturbance between two brothers on account of some lands, owned jointly, was nearly leading to violence. Taking my farmer, I met the two parties on the ground with Chief Chav-a-nau, and effected a division and amicable settlement on just terms, since which time all has gone well.

**Herd.**—By reference to tables it will be seen that these Indians have considerable stock interests, aggregating 6,550 horses, 2,700 sheep, 1,100 goats, 425 cattle, 150 domestic fowls. The cattle noted above are the product of former issues, which have been well cared for.

**The agency herd.**—I receipted to ex-Agent Byrnes on July 17, 1890, for 1,200 head of cattle; 53 head of these were slaughtered for issue (by authority). A year ago there were 1,365 head on hand. Chief herder McAndrews is now making a complete roundup, the result of which I will be able to report soon. He advised me that the cattle are in prime condition.

No missionary or evangelical work has ever been attempted on this agency, nor could I say that the field is a promising one; but venture the hope that our new school may be given a distinctively Christian character.

**Population.**—

Males .....	520
Females .....	514

Total .....	1,034

Females .....	138

Very respectfully,

ROBERT WAUGH,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORTS OF AGENTS IN WASHINGTON.

REPORT OF COLVILLE AGENCY.

COLVILLE INDIAN AGENCY, WASH., August 26, 1892.

SIR: In compliance with instructions contained in circular letter from the honorable Commissioner of Indian Affairs, under date of June 23, 1892, I have the honor to submit herewith my fourth annual report in reference to the affairs pertaining to this agency.

The Indians connected with this agency and living on the Colville, Spokane, and Cœur d'Aléne reservations are composed of the following tribes or bands: Cœur d'Alénes, Lower Spokanes, Lakes, Colvilles, Okanagans, Columbias, Joseph's Band of Nez Percés, Nespilems, and the San Puells. The Calispels and Upper Spokanes are under the charge of this agency, although they do not at present live on any reservation. The following table gives the number of Indians by tribes attached to the agency:

Name of tribe.	Males above 18 years.	Females above 14 years.	Children between 6 and 16 years.	Persons not otherwise enumerated.	Total.
Cœur d'Aléne .....	138	157	58	74	427
Lower Spokane .....	132	150	91	70	443
Lake .....	120	117	73	42	352
Colville .....	108	90	64	39	301
Okanogan .....	112	135	104	54	405
Columbia .....	139	150	69	32	390
Nez Percés .....	43	65	16	14	138
Nesplem .....	24	22	10	6	62
San Puells* .....	135	165	-----	-----	300
Calispel* .....	80	120	-----	-----	200
Upper Spokane* .....	75	95	-----	-----	170
Total .....	1,106	1,266	485	331	3,188

\* Estimated.

**Agriculture.**—Agricultural pursuits are observable among these Indians, as many of them have enlarged their fields by inclosing more land, thus increasing the acreage already under fence and cultivation. Several new farms have been opened during the past year. The Cœur d'Aléne tribe has had a very large acreage of new land fenced and broken during the past spring, which they intend to sow in grain during the coming fall and winter. Among the different tribes of Indians under my charge, the Cœur d'Alénes take the lead in farming and agricultural pursuits, and they will compare favorably with the white farmers of that section of the country. There are only a limited number of Indians living on the different reservations who do not live in houses, and nearly all dress in citizen's dress.

Joseph's band of Nez Percés are about the only exception to this rule. They appear to be particularly fond of gathering in the Indian village and living in their tepees the greater portion of the year. Although many of them have comfortable houses, but few occupy them. A number of these Indians wear blankets, notwithstanding the fact that the Government furnishes them full

suits and an excellent supply of clothing. They are very fond of gambling, playing cards being the principal game. I have talked to them quite often relative to this matter, and they promise they will quit; but when I am absent they will commence again.

There are only a few Indians who lounge around and do nothing; but most of them depend upon their own efforts for a living, and are engaged in cultivating the soil, raising stock, or performing some kind of labor. I am proud to say these Indians are steadily moving forward in the paths of civilized life, and but a few years will elapse until they will be in a self-supporting condition and entirely free from the help of the Government.

**Freighting.**—The Indians hauled 109,567 pounds of freight for this agency during the past year, and received therefor the sum of \$743.25. It is to be regretted that the Government freight is not received until late in the season, for then it is impossible to get the Indians with their small teams to undertake to transport freight from Wilbur, Wash., the nearest railroad station, to the Tonasket school, which is a distance of over 100 miles over a rough, hilly, and mountainous road. The Indians are anxious to deliver all the freight consigned to this agency, and they would be able to do so, provided the freight was received at the railroad station before the rainy season set in.

**Treaty.**—The treaty or agreement which was made with the Indians residing on the Colville Reservation in June, 1891, has been ratified, or the modified agreement has. The original agreement made with the Indians was nothing more than a farce; for when it was modified by the delegation in Congress from this State the Indians were ignored. The Government evidently thought the Indians had some right to the Colville Reservation when the Commission was appointed to treat with them; but after the Commission had concluded its labors and when the agreement had been placed before Congress for final action, then the question came up as to whether the Indians had a legal right to the reservation or not. The action taken by Congress in ratifying something in which the Indians had not been given an opportunity to be heard would plainly indicate that they had nothing to say as to the disposition to be made of the Colville Reservation, and that the work of the Commission was labor and money thrown away.

The action on the part of Congress has in no way increased the confidence of the Indians in the Government, but has, on the other hand, had a tendency to lessen it. I was instructed to accompany the Commissioners and assist them in making an agreement looking to the cession of a part of their reservation, and did so; but I can not see wherein I distinguished myself with the Indians, or gained their confidence, only at the time negotiations were being made. They asked me what I thought of the agreement, and I told them in my judgment it was a fair one, and that I thought they were realizing a fair price for the land they were about to sell to the Government. They tell me now that they have been informed that a new agreement has been made, and that their wishes were not consulted in the matter. They are not pleased at the way they have been treated. These Indians evidently have some voice in the Colville Reservation, or else they have none. I regret exceedingly at having taken any part in the late agreement made with these Indians, for by doing so I have given them an opportunity to censure me. I have at all times been honest with the Indians, and have never given them an opportunity to doubt my word except in this agreement. They have at all times put implicit confidence in what Washington, the great father, has had to say to them, but they seem to think something is wrong with the agreement, and many have expressed their regrets at having signed it. They look upon their having signed the agreement as being binding on their part, and therefore can not see how it could be broken or changed without the consent of both parties.

**Trespassers.**—Much annoyance and extra work has been thrust upon me and my employés on account of white people entering the ceded portion of the Colville Reservation before it is open to white settlement, and making locations thereon. This has had a tendency to cause the Indians much uneasiness; and some of the Indians living on the ceded portion of the reservation have put in much time in traveling back and forth to the agency to ascertain the exact status of affairs. Many of those who entered the reservation as boomers knew they had no legal right to do so, and that the Indians were suspicious of their actions and trouble and bloodshed might ensue.

**Whisky drinking.**—There is a low order of white people to be found near the reservation under this agency, who clandestinely supply the Indians with intoxicating drinks, for which they are well paid. The Indians very rarely give

information which will lead to the arrest of the party or parties furnishing them these intoxicants. When questioned as to where or from whom they purchased the liquor, they will usually say they do not know who the white man was. I have had to punish a number by confining them in the agency jail before they would inform on the guilty parties.

The law does not seem adequate to the proper punishment of these criminals. Many are sentenced to pay a small fine, which they can easily do, and then return and follow their old trade. It is quite a difficult matter to convict on Indian evidence, and it does seem that when a conviction is had they should receive at least a term in State's prison. The whisky traffic among these Indians has given me much trouble and will continue so long as the offenders are dismissed with a benediction. If the law-abiding citizens would lend a helping hand in assisting in the suppression of this illicit traffic it would only be a short time until it could be checked and in a manner stamped out of existence. Parties living in British Columbia and adjoining the Colville Reservation have furnished the Indians a great deal of whisky until recently, when, by cooperating with the British authorities, the whisky traffic is now on the decline.

**Crimes.**—There have been two Indian murders committed on the Colville Reservation and among the Okanagan tribe of Indians during the past year. Intoxication was supposed to have been the cause.

**Indian soldiers.**—On September 4, 1891, I left the agency on a tour of inspection through the Colville Reservation, and was accompanied on the trip, which covered a period of twelve days, by Capt. J. M. Lee, of the U. S. Army, and also Robert Flett, the agency interpreter. Capt. Lee was visiting the different tribes of Indians connected with this agency for the purpose, if possible, of inducing them to form a company of Indian soldiers to be stationed at Fort Spokane, Wash. I found Capt. Lee to be a most excellent gentleman and particularly well posted on Indian affairs, he having had many years' experience with them. At every meeting held with the Indians he gave them good advice and encouraged them to adopt the white man's ways. He succeeded in getting them interested in the matter of enlistment, and the Lower Spokanes were the first to furnish some recruits. The company could, I am satisfied, have been filled had Capt. Lee not been crowded for time. The number enlisted up to date is 16.

At first I thought it would be of great good to these Indians; but I am free to confess that I have not a very exalted opinion of Indian soldiers after having seen what I have during the past ten months. They have been permitted to enjoy the unrestricted freedom of the post canteen the same as the white soldiers; and the consequences are they have squandered every dollar of their salary, are in debt, and are fast becoming addicted to a life of drunkenness. The Spokane Reservation and the military reservation at Fort Spokane are divided by the Spokane River. The Indians on the reservation call my attention frequently to the way the Indian soldiers drink, and ask why they are permitted to drink whisky and are not punished while the reservation Indians are. I am of the opinion it would be a wise plan on the part of the Government to disband the Indian company, for they certainly will do no good for themselves, and much harm to the reservation Indians.

**Per capita payment.**—During the month of last April, assisted by United States Indian Inspector Robert S. Gardner, nearly \$500,000 was paid per capita to the Cœur d'Aléne tribe of Indians, arising from the agreement made with these Indians in September, 1889, ratified by an act of Congress on March 3, 1891, by which they sold to the Government about 240,000 acres of their reservation. As a rule these Indians expended their money judiciously. The first act performed by them after receiving their money was to pay their debts, after which they purchased a number of good draft and saddle horses, farm wagons, spring wagons, buggies, and all kinds of farming implements. Many of these Indians made time deposits covering a period of from six months to one year, at the rate of 6 per cent per annum, in the banks of Farmington, Tekoa, and Rockford, Wash. A few of the young men squandered their money, however, in drinking whisky, gambling, and riotous living. Taking these Indians as a tribe, I am satisfied they have taken as good care of their money as a like number of whites.

**Education.**—There are 5 boarding schools under this agency, 4 of which are operated and managed by the Jesuit Fathers and Sisters of Charity, and are under contract with the honorable Commissioner of Indian Affairs and the superintendents of these schools. Two of these schools are located at De Smet Mission, Cœur d'Aléne Reservation, Idaho, and 2 at the Colville Mission, in the State of Washington.

The schools at De Smet Mission are restricted to 70 pupils, at a cost to the

Government of \$108 per capita per annum. The average attendance during the school year just closed was 70. The progress made by the scholars in these schools for the past year has been very satisfactory. The Fathers furnish the boys every possible facility for acquiring a practical education in the school-room, the workshops, and also in the proper management and care of the school farm. A visit to and inspection of the school conducted by the Sisters of Charity would convince the most skeptical that they understand their business thoroughly, and know how to conduct the affairs of the school in a satisfactory manner. They devote every care and attention to the welfare and training of the pupils. Everything about the school is kept neat and clean. In fact it would be a difficult matter to visit the several rooms and departments connected with this school and observe anything disorderly. The pupils have improved greatly in their studies during the past year. The Sisters teach them music, and in this connection I wish to add that many of the full-blood Indian girls can sing and play as well as their white sisters. They also teach them all kinds of fancy work, such as knitting, crocheting, and embroidering. The girls are also taught the art of cooking, butter-making, gardening, and the care of flowers, and in fact they are taught all the household duties that it is necessary for a woman to know.

The same number of pupils (70), the same per capita, and the same daily average attendance exists at the Colville Mission as at the Cœur d'Aléne Reservation. These schools are in a prosperous condition, and the pupils show signs of great improvement. The exhibition given at the close of the schools by the pupils was well attended, and reflected great credit on the teachers as well as the pupils. The schools at the Colville and De Smet missions have ample facilities for the accommodation of a larger number of pupils than are now allowed them. These schools reflect great credit on the Fathers and Sisters, and they are deserving of much praise.

The Tonasket school is poorly located, there being no available land for a school farm. The supply of water in certain seasons of the year is almost totally unfit for use. The average attendance of pupils at this school during the past school year was 63. The scholars made very good progress in their studies. This is the only school operated by the Government under this agency. Taking everything into consideration, the Tonasket boarding school has done fairly well, although there were many obstacles in the way of its success. \* \* \*

The lack of suitable land for a school farm for this school is very discouraging, and is a serious drawback to the prosperity and welfare of the school. It is plain to be seen that the Tonasket school was not selected for its agricultural advantages. Potatoes and other vegetables could be raised if the school was provided with a school farm which would have a tendency to curtail the expenses in operating and maintaining the school, and would also add to the variety and quality of food furnished the pupils. The lack of a school farm is also materially felt in the instruction of the boys in manual labor, and in the proper use and care of agricultural implements.

This school ought to be made a bonded school, owing to the great distance it is located from the agency, it being between 140 and 150 miles. It is impossible for me to give it the attention which it so badly needs, owing to the great distance and the many other duties which I am called on to perform. It is asking too much of an agent to assume the responsibility under his official bond for the proper care of the Government property at that place, when he is unable to look after and visit the school to exceed six or eight times a year. I hope the time will soon come when better educational facilities will be afforded this agency, and every Indian child of school age placed in school.

The abandonment of the military post at Fort Spokane for school purposes would be a move in the right direction. When Indians like the Lower Spokanes and others are willing and anxious to send their children to school, they should be encouraged, and the necessary facilities furnished them for the education of their children. There are 485 children of school age under this agency, and out of this number less than half have seen the inside of a school building during the past year. If they are wards of the Government the Government certainly ought to provide school facilities, and not permit them to grow up in ignorance and vice.

**Missionary work.**—There are two Indian missions furnished the Lower Spokane Indians by the Presbyterian Board of Home Missions. These Indians have two very good church buildings on their reservation, and services are now held every Sunday with a large average attendance. The missionary work on the Colville and Cœur d'Aléne reservations is principally under the charge of the

Catholic Church, and they are earnest and zealous in their labors, and are making steady progress among the Indians, whose confidence they have to a marked degree.

**Marriages.**—A great change in the marriage relations of these people has taken place in the last two years. I have endeavored to put a stop to all Indians living in adultery by punishment in the agency jail. Those who wish to live together as man and wife either come to me to perform the marriage ceremony, or have it performed by the church. A great many marriages have taken place since they have been permitted to come to the agency to be married. I think in time adultery and bigamy will be a thing of the past among these Indians.

**Allotments.**—I am not prepared to say that a majority of the Indians under this agency are ready to have their lands allotted to them in severalty, but many of them are. The Lake and Okanagan tribes live on the ceded portion of the Colville Reservation, and they claim they are ready to have their lands allotted to them, as they do not want to forfeit their old homes upon which they have lived so long, and where their friends and relatives have been laid to rest. Before allotments can be made the reservation should be surveyed. Nearly all the heads of families are occupying and cultivating separate tracts.

**Traders.**—Mr. P. A. Ellis is the only white trader conducting a store on the Colville Reservation. There are one or two full blood Indians of the Cœur d'Aléne tribe who have small stores at their village at De Smet Mission, Idaho. Their stock consists principally of groceries, canned goods, etc. Mr. Ellis carries a very respectable stock of general merchandise, which he disposes of to the Indians at reasonable rates.

**Inspection.**—This agency was visited last September by United States Special Indian Agent Parker, and by United States Indian Inspector B. H. Miller, during the month of January.

**Indian police.**—Eighteen Indian police and two officers are now allowed this agency. They exert an influence for good government among the Indians, and perform the duties required of them in a very satisfactory manner. Nearly all of the policemen have labored faithfully in keeping order among the Indians, and in running down and ejecting white prospectors and trespassers who have come on the Colville Reservation without authority of law, and made locations thereon. The difficulty is that the employés are not sufficiently remunerated for the services they are expected to perform.

**Court of Indian offenses.**—This court is composed of the same judges as last year. They have been faithful and very attentive to the discharge of their duties and have never been absent on any regular court day. They take a deep interest in all cases coming before the court for adjudication. The judges are of great assistance to the agent in passing upon the numerous cases coming before the court. Fifty-eight cases were tried by the judges during the past year, and I am pleased to state that they have rendered very efficient service and their decisions have in almost all cases been fair and impartial. The following is a summary of the workings of the court during the past year :

Causes.	Number of cases.	Number of days in jail and performance of labor.
Wife beating .....	5	60 days each.
Larceny .....	3	One 30 days, two 60 days each.
Adultery .....	6	Two 15 days each, four 30 days each.
Drunkenness .....	41	Four 15 days each, fifteen 30 days each, twenty-two 60 days each.
Robbery .....	3	30 days each.

**Road making and repairing.**—There was 71 days' labor performed by 135 Indians in repairing 41 miles of roads during the past year. It required much persuasion to get them to see the necessity of repairing and putting their roads in better shape, but now that a start has been made, I feel confident before the close of the present fiscal year many miles of new road will have been made, and the old roads repaired and placed in proper condition.

**Employés.**—The list of white employés allowed this agency is as follows: 1 clerk, 4 physicians, 2 sawyers and millers, 3 blacksmiths, 1 farmer, 1 additional farmer, 1 carpenter, 1 superintendent, 1 matron, 2 teachers, 1 industrial teacher, 1 seamstress, 1 laundress, and 1 cook. Of Indian employes: 1 interpreter, 1 additional farmer, 3 laborers, 1 blacksmith apprentice, 18 policemen, 2 officers, and 3 assistants at the Tonasket school. The employés generally have given good satisfaction during the past year, the exception being at the Tonasket

school, where it seemed they could and would not get along together in harmony.

**Removal of the Upper Spokanes.**—The removal of the upper band of Spokane Indians to the Cœur d'Aléne Reservation will, in all probability, take place in the near future, as the agreement made with them in March, 1887, has been ratified by Congress. This is a godsend to these poor degraded people, who have had no houses, and have been hanging around the city of Spokane, leading lives of shame and beggary.

**Conclusion.**—I wish to express my sincere thanks to the honorable Commissioner and to all the officers of the Department for their kind assistance and strong support in all matters pertaining to the proper management of affairs at this agency.

Very respectfully, your obedient servant,

HAL. J. COLE,  
*Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF PHYSICIAN AT COLVILLE AGENCY.

NESPELIM, *Colville Reservation, Wash., July 15, 1892.*

SIR: I have the honor to present you herewith an annual report for the fiscal year ending June 30, 1892. At the beginning of this report I can think of no better subject than to describe in a few brief words the country and the different tribes of Indians I am expected to look after and treat.

My office is located in the beautiful valley of Nespelim, and the territory directly under my charge extends from the mouth of the Okanogan River at the southwest corner of the reservation, along the Columbia River to the mouth of the Sanpuell, a distance of about 70 miles, and from the Columbia back into the interior from 20 to 30 miles. In this territory there reside 800 or 900 people, consisting of a few of the Okanagan tribe, Joseph's band of Nez Percés, Moses' band of Columbias, the Nespelim and Sanpuell tribes. Indirectly, and subject to the call of the people and order of the agent, my territory extends from the south of the Sanpuell River up the Columbia River to the British line, a distance of 150 miles, and as much as 50 miles into the interior. This country is occupied below the Kettle River by the Colville tribe, and above the Kettle River to the British line by the Lake tribe, numbering 600 or 700. Besides all this vast territory, I have indirectly under my charge the entire Spokane Reservation, occupied by the Lower Spokanes, numbering 400 or more. In all I have between 800 and 2,000 people to look after, who are scattered over a distance of 300 miles.

I have no complaints to make. I am ready and willing at all times to respond to the calls of the Indians, and I feel sure you will support me, when I state that I have done all within my power to alleviate the suffering of these poor people. Yet I feel and know that I am not doing them justice. Should I spend my entire time in riding over this vast territory, I could not possibly make more than seven or eight trips during the year. This would require at least four good horses, two saddle horses, and two pack horses; and the actual necessary traveling expenses would amount to at least one-half the pay of a physician.

I have written the above to show in a brief manner the great need of at least one more physician to look after these people. There are buildings already erected at the agency headquarters for a physician, and after deducting the necessary traveling expenses of one physician, the additional expense to the Government would be but a trifle.

The moral and sanitary condition of the different tribes.—The few of the Okanagans located on the Okanagan River near its mouth, who come directly under my charge, are well advanced in civilization. They are mostly all Catholics, and are very much devoted to their religion. Their moral condition is good and their sanitary condition is also good. They are willing at all times to take the advice of the physician, and try to follow his directions. They mostly have good log houses and seem to take pride in keeping them neat and clean. They all wear citizens' clothes, and the males all have short hair. They take quite an interest in the school, and their little ones, as a rule, are very polite.

The Nespelims are mostly located in the Nespelim Valley and surrounding mountains. They are a peculiar class of Indians, having a religion of their own. They, as a rule, will receive no aid from the Government. They are very industrious, living in fairly good houses; and their moral and sanitary condition is good. Yet they are hard to become acquainted with. Still, with kind treatment and patience, I am happy to be able to state that I have succeeded in gaining their confidence, and now they are all my friends. To use their own language, I am their "tillicum," which means the same as brother. One case connected with these people, which has been one of great interest to me and by means of which I have gained their gratitude and confidence, I will relate:

Quil-quil-toch-in, a few years since, while hunting deer in the mountains, was pierced in the right eye by a sharp thorn, from which he suffered greatly, and finally lost the eye entirely. Last August, while he was again hunting deer, he was pierced in his left eye by a thorn. While on one of my trips through the mountains I came upon a small tent. I stopped and entering found this man suffering the most intense agony. He related the circumstances to me. I examined the eye carefully, finding it in a terrible condition. The eye had the appearance of a mass of blood. He could see nothing, and was very despondent, saying he would much rather die than lose his sight. I wanted to take him home with me, promising to do all I could for him. But no, he said he had no money to pay me. I went to his friends and talked two days with him and them, but it was always the same answer. He could not pay for the services rendered. I tried all means of persuasion I could think of, even threatening to arrest him, but to no avail. Finally I promised to use my own medicine, and persuaded him he could pay me when he got well by acting as guide in the mountains, which would be the same to me as money. Finally he consented to this. I took him to my office, where for two weeks I watched

over him both night and day. We were fortunate enough to have a supply of ice, and I had among my own medicines a supply of pure hydrochlorate of cocaine. It was a hard fight for two weeks. During this period all I could possibly do was to keep the inflammation from increasing. At the expiration of this time improvement set in, and from that time on he gained rapidly. The eye finally got well with a cloudy appearance, which has gradually been disappearing, and a short time since he borrowed my gun, saying he thought his sight was restored enough to shoot. He went to the mountains, and the next day returned with two fine deer, I think the happiest man I ever saw. Since that time these people have called on me a number of times.

The Sanpuell Indians are the worst people that I have anything to do with. They reside mostly on the Sanpuell River. They are surly, ignorant, and filthy, cultivating little land and living almost entirely by fishing and hunting. They have the same religious prejudice as the Nespelees about receiving aid from the Government. As to their morals I can not say. Their sanitary condition is not good.

**Moses' Band of Columbias.**—These people reside mostly in the Nespele valley and surrounding mountains. They are true, genuine Indians in every sense of the word. Still they are very easy to get along with, and very pleasant if kindly treated. Old Chief Moses is very much of a gentleman. During the past year he has had good health, with the exception of trouble in one eye, which I will relate further on. As a class I think these people are the most robust and healthy Indians on either reservation. They seem to be more free from consumption, scrofula, and syphilis than any of the other tribes. Some of them have good houses, and most all of them have farms, cultivating small tracts of land. Their moral condition is not very good. As to religion, neither Moses nor his people profess any.

**Joseph's Band of Nez Percés** reside in the Nespele valley, and with very few exceptions live in tents the year through. They are not industrious. Their moral and sanitary condition is not good. They profess no religion. Scrofula and constitutional syphilis is very prevalent yet I think there has been a decided improvement during the last year, as a number of them have brought logs to the mill, which have been sawed into lumber, with which they wish to build houses; and I firmly believe they would be in a better condition if the Government would stop issuing their rations.

The Colville and Lake tribes, residing in the north, are good people, well advanced in civilization. They are religious, belonging to the Catholic Church. Their moral condition is good. They have beautiful farms, well cultivated, live in good houses, all wear citizens' clothes, and I do not remember to have seen a long-haired Indian among the males. Their children are neatly dressed and many talk English. Yet they are not a healthy class of people. The seed of consumption and scrofula seems to be widely sown. While among the Colvilles I visited their church and the burying ground the Lakes requested me to report their condition to the Department, and to intercede in their behalf that a physician be appointed to reside among them.

**The Lower Spokanes.**—Of these people I can only speak with praise. They are all Christians, belonging to the Presbyterian Church. Morally they are good. They are very industrious, living in good houses, on finely cultivated farms with their irrigating ditches. Yet, like the Lakes and Colvilles, their health is not good. The same diseases, consumption and scrofula, are widely spread. They also earnestly requested me to ask that a physician be appointed to reside among them.

**Hospital.**—In all this vast reservation there is no hospital of any kind. The various epidemics that visit the Indians and the poor facilities that an agency physician has to combat disease are very strong arguments in favor of a hospital being erected. One is needed very badly. Here is a large field for eye surgery, but for want of a suitable place to perform the operations in, little can be done, as it would be dangerous to attempt any delicate operation in an Indian house or tepee. Also, a great many cases that do not come under the notice of the physician until they have passed into the chronic stage or death has set its seal already upon the patient would be seen and treated in the first stages, as I feel sure that the Indians would in a short time avail themselves of the great benefits they would derive from a hospital.

As to the location of a hospital, right here in the Nespele valley, within 1½ miles of the mill, there is a most desirable location. There is a full half section of beautiful level land located at the base of the mountain, so situated that the sun shines upon it from the time it rises until it sets; and on the side of the mountain, five or six hundred feet above, there gushes forth the finest spring of clear, cold water that I have ever seen. I think it equals the great spring located at Huntsville, Ala. Here, with little expense, could be made a paradise. There are no mosquitoes, and during the day the wind comes up the valley from the Columbia, and at night it reverses and comes down the valley from the mountains. This spring will supply water sufficient for hospital, school, fountains, and much to spare. Also, the entire tract of land can be irrigated from the Little Nespele. I earnestly call your attention to the importance of this matter.

**The medicine man.**—Speaking of this individual, I will briefly refer to my first acquaintance with these people. It was in January, 1890, that I first came among them. Within a very short time an epidemic of influenza and pneumonia broke out. They were all afraid to trust me. The medicine man was king of all he surveyed, telling the people it was a Boston (their term for white man) sickness, and I had brought it amongst them. The sweat house and cold bath were in full sway. The mortality became very great. Finally I succeeded in getting control of a few cases that were given up to die and abandoned by the great medicine man, and with the assistance of Mr. Bouska, the miller, who could converse fluently with them, I was fortunate enough to save them, while their own doctor's cases were dying almost daily. Finally this individual became frightened. He informed them that the sickness was Boston sickness and siwash medicine would not cure it. After that time I had my hands full, Mr. Bouska, acting as interpreter, going with me, and often seeing as many as 50 patients in one day. One of their medicine men and his family was taken sick. He sent for me, and fortunately they all recovered. Since that time I have had no trouble, and to-day their chief doctor, Timpasket, is one of my warmest friends. I have, during the past year, visited his family several times. To be sure they still practice a little in a certain way, but give me no trouble and never try to interfere with my cases. The sweat house is a great drawback, nearly every house having one, and the practice of indulging in these enervating sweats has been and is being discouraged as much as possible.

During the year I have treated 330 full-bloods, 8 half-breeds, and 2 whites, making in all 340 cases. I am happy to state there has been no epidemic of any kind, and the death list has been very low. Of the cases that I have been able to follow out but 7 have died, 4 children under 5 years of age; 1 from acute dysentery, 1 from hereditary syphilis, 1 from scrofula, and 1 from pneumonia; 3 cases over 5 years of age, 2 from consumption and 1 from progressive muscular

atrophy. These deaths have all taken place here in the Nespelim valley amongst the Moses and Joseph Indians, except the case of progressive muscular atrophy, which occurred in the Spokane Reservation. The number of deaths that have taken place among the Colvilles, Lakes, and Lower Spokanes it is impossible for me to state, as I can not follow them to a termination.

**Births.**—Here in the Nespelim country, as far as I have been able to learn, there have been 9 children born, 4 males and 5 females. The Indian women are very superstitious in regard to this branch of the profession, and would die before they would submit to a white doctor attending them in confinement.

**Medicines.**—I do not like to enter complaints in this report, but I must say that the medicines sent are not in all cases what I would wish. The estimate I have made has not been followed out; some things that I wished very badly having been omitted; for instance, the hydrochlorate of cocaine, without which I am satisfied I never could have gained the confidence of these people. There are great sufferers from catarrhal conjunctivitis, which when neglected, in many cases has resulted in pterygium, from which Chief Moses is a sufferer, and within a year or two will lose the sight of one eye. Conjunctivitis, which is so widely spread amongst them, is due to smoke and alkali dust, and the proper use of cocaine gives wonderful relief. During the past year I have paid out \$20 for this medicine alone. Some have called me a fool for doing it, but I feel well repaid, as I am sure I have saved two or three from blindness and given great relief to many. I sincerely hope this article will not be again overlooked when the next supply of medicines are shipped.

In conclusion, I desire to thank both you and Mr. A. M. Anderson, your clerk, for the assistance you have both rendered me in the prosecution of my duties; also the employes generally, for their uniform courtesy and affable manner.

I am, very respectfully,

E. H. LATHAM,

*Agency Physician, Nespelim, Colville Reservation.*

Maj. HAL J. COLE,  
*Indian Agent.*

## REPORT OF NEAH BAY AGENCY.

NEAH BAY AGENCY, *August 19, 1892.*

SIR: I have the honor to submit herewith my third annual report of affairs at this agency, together with statistics for the fiscal year ending June 30, 1892.

**Location.**—The Makah Indians live in four separate villages, one village at Neah Bay 2 miles; one at the mouth of Wa-atch River, 5 miles; one at the mouth of Suez River, 6 miles, and one at the mouth of Osett River, 18 miles from the agency. All of the above villages, with the exception of the one at Neah Bay, are located south of Cape Flattery on the Pacific Ocean.

**Lands.**—Of the 23,000 acres comprising the Makah Reservation there are between 2,000 and 3,000 acres that could be brought into cultivation; most of this, however, is tide land subject to overflow by the ocean tides, and would have to be diked and ditched before it would be of any value except for grazing. The balance of the bottom land is mostly sandy beach, very thin, and would require fertilizing every year to raise a crop of vegetables.

The character of the remaining 20,000 acres is mountainous, and is covered with a heavy growth of hemlock and spruce, is utterly unfit for agricultural purposes, and is absolutely of no value to the Indians.

**Allotments.**—The survey petitioned for January 30, 1891, is now in operation. My recommendation to the Department that the land fronting on Neah Bay, on the Straits of Juan de Fuca, on the Pacific Ocean, and on the Wa-atch and Suez River bottoms be subdivided so that each Indian would receive 10 acres frontage on the bay, ocean, straits or one of the rivers, has been approved and the survey so ordered.

This has been entirely satisfactory to the Indians, as it insures an equitable allotment of all the best agricultural land, as well as what is far more important to them, a fair distribution of the most desirable location on the water front.

**Agriculture.**—It is perhaps necessary for me to explain that the number of Indian families reported by me as engaged in agriculture (and I have so reported all the families) are engaged only to the extent of a patch of potatoes and other vegetables. This meager showing is not due to any lack of enterprise on the part of the Indians, but rather to the limited quantity and very inferior quality of the soil coupled with climatic conditions that make it utterly impossible to successfully grow either wheat, oats, barley, rye, or corn.

Commencing from the establishment of the reservation by treaty, in 1855, up to the present time there has not been a bushel of the above-named cereals raised on the reservation. To make my statement more easily understood, I append hereto report of mean temperature and rainfall for each month of the year 1891, kindly furnished me by Mr. Charles Adie, the Weather Bureau officer stationed at Neah Bay:

	Temperature.	Rainfall.		Temperature.	Rainfall.
		<i>Inches.</i>			<i>Inches.</i>
January .....	45.0	15.93	August .....	68.3	2.11
February .....	36.5	6.64	September .....	62.6	10.78
March .....	42.5	9.80	October .....	52.2	10.06
April .....	48.0	11.84	November .....	48.2	23.06
May .....	53.2	.91	December .....	43.4	23.91
June .....	55.4	6.17			
July .....	59.2	1.08	Total .....		122.29

Though the Indians under my charge have not made a very creditable showing in the agricultural line, I have no reason to be ashamed of their success in other and more congenial pursuits.

**Fish.**—The Makah Indians caught this season 1,931 seals; quoting the price offered, \$11 per skin would amount to the respectable sum of \$21,241. There were five schooners engaged in seal hunting owned and manned by Indians, an addition of two to the number of schooners owned by Indians last year. Since the sealing season has closed they have purchased two more, making in all seven schooners owned by the Makah Indians. These Indians have captured 3 whales up to date. The blubber they render into oil. The balance is cut into thin strips and dried for winter use. The oil that is not needed for home consumption is readily disposed of to the coast Indians at \$1 per gallon.

These Indians have caught, and are still catching, great quantities of halibut, cod, sea bass, and salmon. A new market has been opened to them for the disposal of their surplus fish. The steamer *Francis Cutting* owned by the Puget Sound Fish Company, at Tacoma, makes two trips to Neah Bay each week. This steamer up to date has purchased from the Indians and white fishermen each trip from 6 to 30 tons of fish. The fish are packed on ice and are taken to the company's cold-storage house in Tacoma, and from there shipped to New York.

The Makah Indians have not only made a success of what might be considered their legitimate business, hunting seals, whales, and fishing for halibut and other food fishes; they have branched out the past year in other lines, and the two stores on the reservation are owned by Indians of the full blood. One of them purchased last January the stock of the white trader for \$3,000, in cash, and has been doing a very nice business ever since. We have also a hotel, run by a full-blooded Indian, who stated to me that he had saved \$1,000, which he proposed to invest in the erection of a more pretentious building for the accommodation of his guests.

To the absolute prohibition of "potlatching" (giving away) I attribute the material prosperity of the Makah Indians, and if this prohibition can be continued a few years longer, I have no doubt but that they will be the richest Indians west of the Rocky Mountains.

**Quillayutes.**—I regret to state that the Quillayute Indians, who live 35 miles south of this agency, are not so prosperous and happy. The delay in the settlement of the land contest (now pending before the honorable Secretary of the Interior), involving as it does the site of their village, their frontage on ocean and river, as well as all their improvements, has had a most discouraging effect on them. It is to be hoped that a just and equitable decision (which in my opinion must necessarily be in favor of the Indians) may be speedily reached.

A number of the Quillayute Indians have severed their tribal relations and have filed homestead entries on public land. Their conduct subsequently, however, has not been what their friends and well-wishers would desire. From the reports I receive from time to time it would seem to me that in making citizens of those half-civilized Indians without any safeguards or previous training, we only hasten their destruction. It would appear that many of them in becoming citizens had no higher object in view than to gain their freedom from agency control, so as to free themselves from an objectionable wife or to gain the white man's privilege of getting beastly drunk. The evil does not stop here. Whisky is sold to the reservation Indians by the newly emancipated wards of the Government, and to facilitate the speedy demoralization and utter extinction of this tribe of Indians a whisky mill, with license from the Government to sell intoxicating liquors in not less quantities than a quart, has been established within a quarter of a mile of the Quillayute Reservation.

The question arises, What are we to do with the citizen Indians? Their friends on the reservation who receive the whisky will not testify against them;

besides they are not the real culprits. They are simply the "go-between" of some miserable white scoundrels who are too lazy to work and too cowardly to steal, and who therefore resort to this vile and contemptible method of augmenting their ill-gotten gains.

**Schools.**—There are two schools at this agency. One, an industrial boarding school located at the agency, is well conducted, and the pupils receive excellent care. I think the school will compare favorably with any Indian school of like grade, both for proficiency and discipline, in the United States. I give it as my opinion that more good can be accomplished and better results obtained at this particular school than at the higher training schools where it is made necessary to remove the children from their homes for years. They become more civilized and better educated at the training schools, it can not be denied; but on the other hand, when they return after years of absence, they are not in touch with their people. Fisherman's fare is distasteful to them, and when it comes to earning their own living, as they will be obliged to do, their brothers taught at the agency school will outstrip them in the battle of life.

I respectfully call your attention to report of superintendent herein inclosed, which is made a part of this report.

The Quillayute day school, located 35 miles south of the agency, I was obliged to close June 30, 1892, on account of an epidemic of influenza and whooping-cough. The average attendance for the year, on account of sickness, was small, being 39 $\frac{1}{3}$ %. The whole number of pupils enrolled was 60. I am in hopes the children will be all right when the school opens in October.

**Court of Indian offenses.**—The court of Indian offenses comprises three judges, who formerly were pupils of the agency schools. They are intelligent, speak, read, and write the English language, dress like white men, and two of them are subscribers for weekly newspapers. I find the court of great assistance to me in the settlement of difficulties which otherwise would require considerable of my time to attend to. The decisions, as a rule, are just, and in no case have the decisions of the court been appealed from.

The police force at the agency consists of 1 captain and 7 privates. They are prompt in the discharge of their duties, reliable, and efficient. I have them distributed among the different villages, the same as reported in my last annual report.

**Inspectors.**—United States Inspector Benjamin H. Miller was here two days, the 1st of last February, and made a careful inspection of everything connected with the agency and school. W. T. Leeke, supervisor of Indian schools, paid us a visit in June and expressed himself well satisfied with the discipline and progress made by the pupils of the industrial boarding school. Mr. Leeke visited the Quillayute day school also.

**Census.**—The census for the year ending June 30, 1892, shows the number at the agency to be 685, divided as follows:

	Makahs.	Quilla-yutes.
Whole number.....	442	243
Males above 18 years of age.....	141	73
Females above 14 years of age.....	162	83
School children between 6 and 16 years.....	59	42

In conclusion I take pleasure in acknowledging the official courtesy extended to me during the past year by the officers of the Indian Department.

Very respectfully submitted.

JOHN P. MCGLINN,  
*U. S. Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF PHYSICIAN AT NEAH BAY AGENCY.

NEAH BAY AGENCY, July 1, 1892.

SIR: I have the honor to submit herewith, in accordance with the rules of the Department, my third annual report of the sanitary condition of the Neah Bay Agency and industrial school for the year ending June 30, 1892.

During this period we have been visited by three epidemics—that of measles in July and August, 1891; in March and April, 1892, la grippe fastened itself on nearly every one living here; whilst in May whooping cough arrived, and is still present with us. No death resulted from

measles, but it has left several of the children with very defective conditions of their lungs. Three children and one old man died from influenza; but I do not in any way lay claim to being the cause of this happy state of affairs, for I was one of the first to become affected, and was confined to my bed for several weeks during the time it was at its worst. We were in a very helpless condition, with no one to look after us, and are to be congratulated at the fortunate sequence of events. The whooping cough has been more fatal, particularly so at Quillayute, where 13 children succumbed to it, whilst only 1 has died here.

In company with Mr. Leeke, the school supervisor, I visited the Quillayute Village on June 22 and found things there from a sanitary point of view in a very deplorable condition. Influenza and whooping cough were rampant; many children had died and several were dying, and the filthy condition of the houses was beyond description. I gave orders to the police to wash out the houses and whitewash the walls, and suggested that the school be closed.

When sick these Indians are in a very helpless condition for most of the year. They can obtain no medical assistance, the sea, as a rule, being so rough that it is impossible to get anywhere, which was realized by Mr. Leeke, who experienced the trip of 40 miles in a "dug-out" at a time when we consider it easy traveling. There can be but one opinion as to the necessity for a physician to permanently reside at Quillayute, and I believe at a small expense one could be induced to live there if he were allowed to augment his salary by private practice amongst the four or five hundred settlers in the vicinity.

From a surgeon's standpoint very few interesting cases have come under my notice, one being a case of partial periostitis and caries of the temporal bone; a case of necrosis of head of tibia and upper half of lower third of femur, and a case of intussusception. I operated in the first two cases with complete success, but could not obtain permission to do it in that of the last.

I am glad to state that I have next to no trouble in getting them to carry out my instructions, more particularly when relief is quietly obtained, in which manner they are very like their white relations.

I am, respectfully, yours,

H. A. RUNNALLS,  
M. E. C. S., S. S. A.

JNO. P. MCGLENN,  
U. S. Indian Agent.

REPORT OF SUPERINTENDENT OF NEAH BAY BOARDING SCHOOL.

NEAH BAY AGENCY, August 12, 1892.

SIR: I have the honor to submit the following annual report of the Neah Bay industrial boarding school. I took charge of the school October 17, 1892. School had not then opened, but the children returned October 26. During vacation the children and their parents go up Sound to work in the hop fields, and owing to this they were a little slow coming into school; but aside from this the average attendance has been very good.

The enrollment and average attendance for the year by quarters has been as follows:

	Enroll-ment.	Average attend-ance.
First quarter .....	61	50 $\frac{1}{2}$
Second quarter .....	63	52 $\frac{1}{2}$
Third quarter .....	65	58 $\frac{1}{2}$
Fourth quarter .....	64	58 $\frac{1}{2}$
For the year .....		55 $\frac{1}{2}$

**Buildings.**—The buildings are all wood, old and very poorly arranged. The dormitories are much too small for the number of children who are compelled to sleep in them. We also need another schoolroom and another sitting room for the boys. We will have another schoolroom as soon as a cottage can be erected for the superintendent, as the quarters he now occupies will be changed and fitted up with school furniture. When Supervisor W. T. Leeke visited us he said he would recommend that a sitting room be built for the boys, and I earnestly hope that such an addition will be allowed. It can be made with little expense, and by making it two stories high it would give more space in the boys' dormitory.

**Industrial work.**—The industrial work has been carried on in accordance with the rules of the Department as far as possible. Owing to the excessive rains during the winter and the short, cool summers little farming can be done. The apprentices and school boys, under directions from the industrial teacher and superintendent, during the winter months, slashed about 5 acres of dense underbrush and cut the trees on the same. This has been burned off, and will add to our pasture next year. There are not more than 11 acres cleared suitable for cultivation near the school. This has been put in timothy, potatoes, carrots, turnips, onions, and garden vegetables. We have a splendid garden, which furnishes at present all the vegetables we can use. The children are well fed, comfortably clothed, and are happy. A fact that leads one to believe they are contented is that there has not been a runaway the past year.

Most of our hay is put up on a prairie about 4 miles from the school. This year the school-boys and apprentices have put up about 75 tons of hay, 10 tons of this being timothy.

Five boys were allowed to go out sealing for a few days with their fathers. They caught 30 seals all together.

The industrial work of the girls is very satisfactory. They are taught to sew, cook, nurse the sick, and are given instruction in all branches of housekeeping. All the details are carefully made out each month, and the duties rotated so that each pupil has a change of work.

**Literary.**—I think the course of study, as outlined for Indian schools, is a good one. We have followed it as closely as possible. The lack of proper books has operated against us. Very few of the books actually needed are on hand, but I have estimated for all the books needed to fully carry out the work in the grades we have represented. Taking into consideration the books we have had to use, I am well pleased with the year's work.

One feature of our work especially which met with considerable success was the effort to overcome the timidity of the children. This was done by frequent socials, where the boys and girls met and enjoyed games under the direction of a teacher, dialogues, public recitations, etc.

During this year the talking of the Indian language was forbidden. The old Indians took kindly to it and the plan worked admirably, especially among the younger children.

I am very thankful for the hearty support of the agent in all matters pertaining to my work. Education on this reservation is compulsory to the fullest extent. Every child of suitable age and health is in school.

Sincerely thanking you for your kindness during the year, I am,  
Very respectfully,

JOHN P. MCGLINN,  
*U. S. Indian Agent.*

L. M. COMPTON,  
*Superintendent.*

## REPORT OF PUYALLUP AGENCY.

PUYALLUP AGENCY,  
*Tacoma, Wash., August 26, 1892.*

SIR: I have the honor to submit herewith my twenty-second annual report.

There have been no marked changes in the condition of any of the Indians connected with this agency during the past year. Their general health has been fair, their morals, habits of industry, and general deportment much the same as heretofore, and their development into the exercise of the full rights of citizenship gradual but progressive. I will mention in detail the several reservations connected with this agency, giving a few of the more salient features of each.

The Puyallup Reservation is situated between the city of Tacoma and the town of Puyallup, bordering on each, and contains over 18,000 acres, all but about 585 of which, being that part reserved for school and agency purposes, has been allotted and patented to the Indians residing thereon. Owing to their contiguity to a large and growing city the lands are extremely valuable. The daily intercourse of these Indians with enterprising and thrifty white men has developed them in intelligence and energy, while on the other hand the special temptations to which they are exposed has demoralized them, so that we have here the brightest as well as the most debased Indians of the agency.

Not more than one-third of the land in the reservation is occupied by the Indians, and the rest should be put upon the market and sold. How best to do this so as to protect the Indians from being imposed upon and assist them in the enjoyment of the proceeds is the problem which is now in the hands of Congress to decide. Quite a number of Indians have rented part of their land to white men to cultivate, which brings them in good returns.

There is a large boarding school on this reservation, with an attendance of about 140 pupils. The children in their attainments will compare favorably with children of white parents living in neighboring country districts. Six have graduated this year from the grammar grade, three of whom have been transferred to the Indian training school at Carlisle, Pa. Since the Indians have become citizens it is difficult to secure the same regularity in attendance which we had while they were under the control of the Government.

There is a justice of the peace and constable among them, who were elected under the State laws, and who perform their duties as competently and faithfully as white officers generally do.

The court of Indian offenses still exists and acts as a board of arbitration in cases where the Indians are too poor to try their causes before the justice of the peace.

There are two churches on the reservation, one Catholic and one Presbyterian, in which services are usually conducted every Sabbath. There is no resident missionary.

Most of the Indians are either farmers or carpenters, and are hardly as thrifty or industrious as they were a year ago. Drunkenness and idleness is rather on the increase. The population is about 600.

The S'kokomish Reservation is situated on Hood's Canal and comprises about 5,000 acres, most of which, with the exception of 320 acres reserved for a school farm, has been allotted and patented. A small portion, which was added on after the treaty was made by executive order, has been allotted, but the patents have not yet been issued. Not more than one-fourth of the land on the reservation is fit for agriculture; being far from market, but little farming is done. Considerable logging is done by many of the Indians.

The court of Indian offenses has been their only court of arbitration; but a short time since the reservation was made a precinct by the county commission-

ers. Precinct officers, both full blood Indians, have been nominated, and the justice of the peace will probably take the place of the Indian court and do its business during the coming year.

There is a boarding school of about 50 scholars which is well conducted, three having graduated from the grammar grade this year.

There is a Congregational missionary resident on the reservation, who conducts services every Sabbath in the Government schoolhouse, there being no separate church building.

The Chehalis Reservation is situated on the Chehalis River at the mouth of Black River, and is about 2½ miles from Gate City on the North Pacific Railroad. It originally comprised something over 4,000 acres, but not being a treaty reservation, and at the time there being no other way for the Indians to obtain titles to their allotments, the reservation was abandoned, declared open for settlement, when the Indians all filed on their places under the general Indian homestead act and so hold their land in that way.

About 400 acres was reserved for a school farm, which is still a reservation. These Indians are mostly farmers. There is a court of Indian offenses here, but it has scarcely anything to do.

The boarding school which is conducted here has had about 50 pupils in attendance the past year, and has graduated three or four from the grammar grade. These Indians have become rather more a part of the white settlement than those on either of the above-mentioned tribes.

There is no missionary doing anything for these Indians, but nearly all attend the Government Sabbath school. There is also among them a kind of religious society called "Shakers," which has a remote resemblance to the "Messiah craze." Many are very sincere in their belief and earnest in the performance of the duties imposed by the sect. Their code of morals is very good, and they are a very temperate tribe of Indians—much the best, in this respect, connected with this agency. At a gathering of several hundred held on this reservation about the 4th of July, which lasted about a week, it is said not a drunken Indian was seen, although there were saloons within a very few miles of there.

The Nisqually Reservation is situated on the Nisqually River, about 20 miles west from Tacoma. It comprises about 4,700 acres, and is all allotted and patented. There are no white employes on this reservation. Most of the Indians send their children to the Puyallup Reservation school.

There is a court of Indian offenses here, and it divides the business about equally with the neighboring justice of the peace.

The reservation is all inclosed with a good fence. Perhaps four-fifths is good pasture, and most of the rest fair bottom land fit for agriculture. The Indians are all farmers and stock-raisers, but not very thrifty.

There are two small church buildings on the reservation, one a Catholic and the other a Presbyterian. There is no resident missionary, but services are held occasionally when some one visits them. The Indians are quiet and peaceable and are becoming more and more identified with the whites.

The Squakson Reservation is situated on an island about 12 miles north from Olympia, and comprises nearly 1,500 acres, being the whole of the island. There are no white employes on this reservation, and the Indians send their children to the Chehalis and S'kokomish schools.

The court of Indian offenses exists, but does very little business. Very few of them spend much of their time on the reservation, though most of them have homes there. The land is all poor and covered with scrubby timber.

Most of the Indians make their living gathering oysters in a bay several miles distant. Some work at logging. But very little farming is done by them.

This settlement of Indians is where the "Shaker" religion first started. One of the Indians fell into a trance, had a vision of the other world, had communication with the spirits, and was informed what his people must do to gain an entrance into the blest abode. This was many years ago, but the sect has still held together, and the past year have built quite a neat church.

But very little missionary work has been done among them of late years. They are quite temperate, but not as intelligent or thrifty as those belonging to either of the above-mentioned tribes.

Allotments.—All of the above, having received their lands in severalty, are citizens of the United States and of the State of Washington. They vote, pay taxes on personal property, and are not subject to the authority of the Indian Department. They need advice and instruction, and would be better if they had more earnest missionary work done among them. They naturally drift in among and coalesce with the lower orders of society, and are of course affected by their en-

vironment. They are not vicious, but lack energy and moral tone. As they more and more have to rely on themselves these defects become more and more apparent. The restrictions in a great measure having been removed, they are drinking with more frequency than formerly.

The Quinalt Reservation is situated on the shore of the Pacific Ocean, about 25 miles north of Grays Harbor, and comprises about 224,000 acres, with a resident population of perhaps 250 Indians. Nearly all of it is an uninhabited wilderness and a great portion unexplored. It has been supposed until late years that it was worthless, but later investigation has shown that there is much good land on it. It is, however, very inaccessible. What few settlements there are are at the mouth of the rivers near the ocean, where they can catch fish and clams, hunt sea otter, and go up and down the beach freighting for the whites, who of late years are coming into the country bordering on the reservation.

They do but very little farming, cut a little hay, and raise a few potatoes and vegetables. The land near the coast is poor and hard to clear and this accounts for it. The good land is farther inland.

There are no roads, and all transportation has to be up the river in canoes, which is difficult and expensive. The younger men would go up there and open up places if it were not so inaccessible. They also complain that there not having been any subdivisional surveys if they clear up land it may come on someone's else claim when surveyed and they lose their work. The contract is now let for surveying the boundary lines of the reservation, and the work will probably be done during the current fiscal year.

They are not a healthy tribe and seem to be diminishing more rapidly than any of the others.

They have a court of Indian offenses which works well.

There is a boarding school on the reservation with a usual attendance of 30 scholars. Three pupils graduated from the eighth grade this year. No missionary work has been done here, except what is done by the superintendent of the school in his Sabbath school work, which is conducted in the same way that the Chehalis school is.

The Georgetown Reservation is situated on the north side of Shoalwater Bay. It contains 335 acres and is not allotted. Many years ago there was quite a village here, and the land bordering on the water front was laid out into town lots of a few acres each; was surveyed and plotted under the direction of the agent, and they given deeds for each a lotment. They built good houses, fenced their gardens, and had a schoolhouse built for them, in which a day school was taught. Later a village was built some 15 miles across the bay and the oyster industry developed so as to furnish them with employment at profitable wages, and most of them moved away. Some purchased town lots and built houses in the new town, but the old village and reservation has been nearly deserted.

Nothing has been done for them for many years now. The better class have become absorbed into the white settlement, and the more worthless element roam about, getting work, as they can and need, and return to the reservation for a few months in the year. Their employment is principally fishing and oystering.

The S'Klallam tribe of Indians have no reservation, but own some 200 acres of land near Dungeness, where they have a village and in which is kept a day school of some 25 scholars. They have a court of Indian offenses, which operates in connection with the justice of the peace. There is a church organization, and a Sunday school is kept up by the teacher. A missionary visits them several times a year. They are farmers and citizens. About 100 make this village, which is called Jamestown, their home.

Near Port Gamble is another Indian village called Boston, where about the same number make their headquarters and get work at the sawmill, loading vessels and doing other mill work. There is a day school here of about 25 scholars. There is a Catholic church building here in which the Indians hold services quite regularly, and they are visited by the priest on stated occasions. They are well to do, but are very intemperate, being so near to the mill where there is a saloon, and coming in contact as they do with so many of the low class of whites.

There are other villages along the Straits occupied by members of this tribe, but these are the principal ones. There are many other Indians scattered about the country, some of whom have homestead claims, some roam about, some send their children to Government schools, some to district schools, and some to none at all. All are self-supporting, but do not accumulate much property. They work when they feel like it and take life easily.

All the Indians of this agency are partly civilized, many of them wholly so. All wear citizen clothes, and most speak English. With them absorption into the body politic seems to be the solution of the Indian problem, and it is very nearly accomplished. Education and the influence of surrounding whites have been the chief factors.

Very respectfully submitted.

EDWIN EELLS,  
*U. S. Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SUPERINTENDENT OF S'KOKOMISH SCHOOL.

S'KOKOMISH RESERVATION, WASH., *July 1, 1892.*

SIR: I have the honor to submit my first annual report of the condition of affairs at this school.

The school work began October 12, 1891, after a vacation of about six weeks.

During the vacation the buildings were overhauled and thoroughly repaired. The grounds were cleaned and put in shape and everything made as neat as possible for the commencement of school.

**The farm.**—The school farm embraces about 20 acres of meadow, 3 acres of garden, and 4 acres of orchard, making a total of 27 acres under cultivation, which yielded 350 bushels apples, 50 bushels beets, 100 head cabbage, 50 bushels carrots, 50 tons hay, 200 bushels potatoes, and 500 bushels turnips, and which supplied sufficient vegetables for the school tables and feed for the stock, except that 100 bushels of potatoes were purchased for the school, owing to the loss here by decay.

**Stock.**—The school herd consists of 8 head of horses, 3 hogs, and 23 cattle, including calves and yearlings. During the year, 287 pounds of butter have been made, and the children supplied with abundance of milk. The school stands in need of a dairy house, the cost of which would not exceed \$100. From the herd of cattle, 11 have been butchered during the year for the use of the school, making a total of 2,831 pounds of beef, net.

**Buildings.**—There are 18 buildings, all frame and well adapted to the various uses. A boarding house affords plenty of room for girls' dormitory, kitchen, and dining room. The laundry is large enough for every purpose. The boys' sitting room and dormitory is in a separate building and is entirely too small to accommodate the numbers we now have. The school building, consisting of two rooms, will accommodate 80 pupils. There is a carpenter and blacksmith shop, roothouse, apple-house, and commissary, each large enough to serve their purpose. Three dwellings are occupied by the missionary, physician, and assistant seamstress, respectively. There are also a barn, a horse stable, a tool house, storehouse, and two unoccupied cottages.

**Industrial.**—On the farm the boys take a great interest in the work. It is their pride to have the crops cultivated and looking well. Each of the large boys in his turn takes charge of a gang of his fellow workers and directs the work. Splendid work is being performed not only on the farm but on the buildings, and, under the guidance of a teacher, skilled not only as a farmer but as a carpenter, better progress is being made in this department than heretofore.

In the kitchen and sewing room excellent work has been performed. Both departments are under the charge of experienced workers. The amount and quality of work that is turned out of the sewing room is wonderful considering that 5 large girls with the assistance of the seamstress and assistant perform the sewing for a school of 56 pupils. The smaller girls render what help they can, and do exceedingly well for their age and strength.

**School.**—At the beginning of the fiscal year the school had an attendance of 35 pupils. From that time the numbers have been steadily growing until at the close of the year we count 56 in good standing, 32 male and 24 female, the highest number, I believe, that this school has ever reached. I took charge of the schoolroom work January 1, 1892, Miss N. E. Southworth having had charge from November 11, 1891, to that date. I found the school graded according to the course of study prescribed by the Commissioner of Indian Affairs.

The primary department enrolls 36 pupils, and is crowded to its full capacity. The advanced department enrolls 20 pupils. Excellent work on the part of the pupils has been performed. No promotions have yet been made, but all the grades except the first and second will be ready for advancement to the next grade by October next.

The course of study as now laid out seems well adapted to this school, and while it is not high enough for some, yet it seems to fit the average pupil perfectly. One trouble has been the scarcity of text-books, the supply here having been sufficient for only 25 pupils. At the close of the year's work I intend to hold examinations for promotion, and expect that good work will be done, especially in the lower grades, as one can readily see that the younger children are advancing more rapidly than did the classes of 1890-'91.

**Employés.**—The employés have labored throughout the year for the advancement of the school, doing good work during the past year, and feeling confident that still better work can be performed the next.

**Health.**—The health of the pupils has been very good. La grippe had full sway during its time, but nothing serious occurred, and all regained full strength and health. No deaths have occurred at the school and very little sickness except as above mentioned.

**Water.**—The supply of water from the hills having been stopped it is necessary to use the river water, which, in summer, when the incoming tide flows to and above this point, is unfit for laundry purposes. I would suggest that pipes be extended far enough up the river to reach fresh water at all times, and that some force be applied to draw and force it to the school. Such a power could be obtained in the windmill and force pump, and could be purchased and set in place at a reasonable expense.

**Drainage.**—The drainage is being improved on from year to year, a sewer now leads down to a slough or arm of the bay in the rear of the buildings, through which all the refuse is washed and there connects with the salt water.

**Religious.**—The religious instruction is conducted by the missionary, Rev. M. Eells. The Bibles furnished the school are placed in the hands of the pupils. Thursday evening is set apart for

prayer meetings for employes as well as pupils. This meeting is presided over by the missionary, and in his absence by the superintendent.

Sunday school is held each Sunday in the church, and a large number of young people from the reservation sometimes attend. The school church is Congregational. At the religious services of the Sabbath all the pupils and employes attend. The Indians seem very much interested in the religious work and attend very regularly.

Very respectfully,

R. S. GRAHAM,  
Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERINTENDENT OF QUINAIELT SCHOOL.

QUINAIELT SUBAGENCY, WASH., August 1, 1892.

SIR: In compliance with instructions I hereby submit my third annual report of the Quinaielt boarding school and Quinaielt subagency.

Attendance.—At the beginning of the year just closed there were 28 pupils attending this school—16 boys and 12 girls—and during the year 1 boy was transferred from the Chehalis school and 3 more were added from the camp, making the total enrollment 32. During the same time 1 boy was transferred to the Puyallup school; 1 girl was allowed to leave, and was employed as assistant cook, and 2 pupils died—1 boy and 1 girl—which left an enrollment of 28 at the close of the year. The average attendance for the year was 28.

School work.—The school has been carefully graded and the course of study adopted for reservation boarding schools followed out, all the grades having pupils excepting the fourth and seventh. Though sickness during the latter part of the year kept many of the pupils from attending the schoolroom exercises, yet I found all well prepared to advance to the next higher grade, so the year we have just entered upon finds pupils in all the grades (there being some new pupils just brought in for the first grade) excepting the fifth and eighth. The pupils (3 boys) that have just completed the work of the eighth grade will be transferred to some industrial school, I hope.

The new text-books, reading and music charts and other new school aids that have been in use here during the past year we have found very helpful indeed, and we hope to still improve our school along on this line.

Industrial work.—While we have had a successful year in schoolroom work the industrial work has not been neglected but rather been carried on with a high degree of success, which is pleasing to note. The farm and garden has been greatly improved. The bottom land here being very hard to clear I find that we can not enlarge our farm very rapidly, our time being taken up in keeping what we have cleared in a good state of cultivation. During the winter season drift logs, brush, etc., are floated over a large portion of the farm by the high tides and the strong winds of last winter blew down many large trees that were growing in and around our clearing which cost a great deal of labor to remove. However, the soil is very productive, and though we are obliged to expend this additional labor, we are fully repaid for it. As will be seen by the accompanying statistics, our farm only contains 10 acres and I estimate we will harvest this year 300 bushels of vegetables and 20 tons of hay.

Under the direction of the industrial teacher the boys have been carefully instructed in doing farm and garden work as well as caring for the stock. They do their work cheerfully, and willingly and have made excellent progress in this part of their education. We have only 3 large girls in the school and they have gained great proficiency in the making of their own garments and in doing the work of the kitchen, dining room, dormitories, and laundry, which work they are regularly detailed to do by the matron. The smaller girls are required to do the mending, some plain sewing and ironing, which work, together with that of cutting and sewing rags for mats, keeps them employed in the afternoons.

Improvements.—The buildings are greatly improved. Upon taking charge here, three years ago, I found the buildings all in a "tumble-down" condition. Only one room (employe's) was papered on the side walls and not on the ceiling. The floors of the boarding house were made of rough planks, the rafters and shingles answering for the ceilings of the dining rooms, kitchens, and dormitories, and in some of the rooms rough shakes were nailed on the walls. Though there was a good supply of paint on hand, yet not a drop had been used. New floors have been put in dining, sewing, and school rooms, as well as new ceilings, and the side walls of all rooms are papered. The outside of the schoolhouse has been painted, and the boarding house and fences whitened, which improvements, together with flower gardens, gravel walks, etc., just completed last spring, add greatly to the general appearance of the place.

Land.—The Indians here are not citizens. The reservation contains about 24,000 acres, which as yet is not surveyed. A contract was let last year to have the outside lines run, but the contractor failed to complete the work. I have surveyed, by running inaccurate lines, 45 claims of 160 acres each along both sides of the Quinaielt and Queets Rivers. These claims have been taken up by Indians, and each man has his small garden and hay field. The Indians are very anxious to have the bottom lands along these rivers surveyed as soon as possible and so have their claims definitely located, which if done will greatly stimulate them to move on and improve their farms. At present they are slow in making improvements, fearing that their work might prove to be on some other claim than their own after the official survey is completed. I would urge that at least the boundary lines and river bottoms be surveyed as soon as possible.

Fish and game are becoming scarce and the hunting of the sea otter, which has been a very profitable business for these Indians, can no longer be considered a leading industry with them, there being many more white men hunting now than in the past.

The Hoh Indians, living about 30 miles north of the agency, of the reservation, have not taken claims, and the whites have taken up all the desirable claims in the Hoh River Valley, leaving these Indians in a small village of their own at the mouth of this river. It has been hard times with them during the past year and I think when the reservation is surveyed they will gladly come in and take up claims.

The Georgetown tribe have a small reservation on Shoal Water Bay and will not likely come to Quinaielt, but all other Indians living on and near the Quinaielt Reserve are looking forward anxiously for the survey to be completed when they are ready to settle on farms. These Indians, though not citizens, wear citizens' dress in full and many of them can use very good English—in fact, I think I am safe in saying that all these Indians under 30 years of age can use English enough for ordinary conversation. They will make good and peaceable citizens and therefore should be given the right to become such in the near future.

**Roads.**—There are no roads on the reservation except one about one-quarter of a mile long over Point Granville, which point extends so far into the ocean that teams can not get around it at low tide. The only way to get to the agency is to travel the beach at low tide, or on the ocean to the mouth of the Quinalt River by sail boat or canoe.

**Missionary.**—We are in the same need of a missionary that we were in a year ago. I have heard three sermons during the past three years, and we have employés here that have not heard even one during that time. We have Sunday school and Bible study every Sabbath conducted by the school employés and myself. Would like to have more work done along this line, but we have not the time to devote to it. On three sides of the reservation there are 400 settlers, and on the reservation 164 Indians, besides school and agency employés, and not a missionary within 40 miles of the school. A good field in which to labor for the Master. Who will come to us? Thanking my superiors in the service for courtesies extended and encouragement given,  
I remain, very respectfully, your obedient servant,

E. W. AGAR,  
*Superintendent.*

EDWIN EELLS,  
*U. S. Indian Agent.*

REPORT OF SUPERINTENDENT OF THE CHEHALIS BOARDING SCHOOL.

CHEHALIS BOARDING SCHOOL,  
*Puyallup Consolidated Agency, Gale City, Wash.*

SIR: I herewith present my second annual report.

As much of the history of this school as is possible for me to get was embodied in my last report. The school is located about 45 miles west of south of the agency. The reservation consists of only about 4,500 acres, all of which, except the school farm of 471 acres, is allotted to 40 families. Only one-half of our pupils are of the Chehalis tribe, the others being drawn from nine different tribes. This diversity of language renders the teaching of English comparatively easy.

The capacity of the buildings, when we have an equal number of boys and girls, is 50, or 25 of each sex. More than this number crowds us beyond the limit of health.

We have enrolled this year 69 pupils, and our average attendance has been 48. Our largest average attendance during any one month was 52. We held this average for four months.

The health of the school during the year has been remarkably good, except la grippe, which took down 35 of our number. Some were quite sick, but all recovered.

The work of the school, both literary and industrial, has been very satisfactory. The school has been graded for years, and the work of the year has been on the same line of thorough, systematic progress that has been a marked characteristic of my predecessor's work.

**Industrial work.**—The industrial teaching has been eminently successful. The girls have been well taught in all branches of housekeeping, butter-making, and the like. In the sewing room five girls have been taught to cut and fit dresses, and all the girls, except the very smallest, have been taught to sew, knit, darn, and mend. Besides the usual amount of mending there have been made 805 garments and 29 yards of rag carpet.

The industrial teacher has taught the boys practically by putting in and caring for 31 acres of small grain, 8 acres of potatoes, and other vegetables, harvesting 21 acres of hay, cutting and hauling wood for 14 stoves and one fireplace, caring for 7 horses and colts, milking 10 to 15 cows, caring for hogs, poultry, etc., keeping in repair 12 old wooden buildings and 5 miles of fence.

Requests for all necessary improvements were made in my last report. I have repeated these requests in reply to the Commissioner's circular letter in reference to fire protection, and have also made formal statements to Supervisor Leeke and Special Agent Leonard. Hence I deem it well to omit these requests from this report.

Very respectfully, your obedient servant,

ANDREW H. VIELS,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF TULALIP AGENCY.

TULALIP AGENCY, WASH.,  
*August 17, 1892.*

SIR: This, my second annual report of the Tulalip Agency, including the Tulalip, Lummi, Swinomish, Muckleshoot, and Madison reservations, for the fiscal year ending June 30, 1892, is respectfully submitted.

Census of June 30, 1892—

	Tulalip.	Lummi.	Swinomish.	Muckleshoot.	Madison.	Totals.
Males above 18 years .....	147	114	79	51	51	442
Males under 18 years .....	83	81	53	37	29	283
Females above 14 years .....	176	128	88	53	58	503
Females under 14 years .....	54	78	37	20	23	212
Total of all ages .....	460	401	257	161	161	1,440
Children between 6 and 16 .....	83	94	51	40	24	292

The census for some years past has been made up by deducting the deaths and adding the births of one fiscal year as such were reported from and to the census of the preceding year, and to such unsatisfactory method is due the apparent discrepancy between the census of 1891 and 1892, which latter was compiled by a careful personal canvass of each reservation.

The court of Indian offenses is composed of 7 judges, who receive a salary of \$8 per month each from the Government, and who are located as follows: 3 at Tulalip, 2 at Lummi, and 2 at Swinomish. These judges are civilized and progressive, and there is a noteworthy improvement in the attitude of the court and the conduct of cases.

## Criminal offenses:

	Cases.
Adultery .....	5
Assault .....	8
Intoxication .....	62
Perjury .....	2
Ta-man-no-us .....	2
<b>Total</b> .....	<b>79</b>
Civil suits: Number of cases .....	40

The police force comprises 1 captain and 5 privates stationed at Tulalip, 2 privates at Swinomish, 2 at Lummi, 1 at Muckleshoot, and 1 at Madison.

For the most part the police have done good work and but few changes in the personnel have been necessary.

## Indian lands.—

	Tulalip.	Lummi.	Swinomish.	Muckleshoot.	Madison.
Number of allotments .....	97	75	48	None...	34
Unoccupied allotments .....	12	15	5	None...	20
Number on definite unallotted tracts .....	10	9	5	17	6
Applications for allotments .....	85	17	15	24	22

The effect of the allotment system, so far as a title to a separate tract of land goes, is most beneficial, and incites the Indian to greater industry, gives him more individual independence, and tends greatly to weaken the tribal relation. The allottees generally appreciate their privileges in the ownership of land in severalty, and effort is being made to so inform them that they may exercise the right of suffrage in an intelligent and conscientious manner.

No allottees have leased their land, though to some it would be of great advantage so to do, as many have neither the necessary knowledge or money to enable them to clear and cultivate their heavily timbered holdings. The duration of a lease as provided in the amended allotment act of 1887 is too short for a lessee to derive any benefit therefrom. Given a lease for seven years the lessee could put a tract of land in good condition for the Indian owner of same to farm and would have a sufficient occupancy to repay him for time, money, and labor expended.

During the year seven Indians at Tulalip have cut the timber on portions of their land for purposes of cultivation, the amount cleared being in the aggregate 40 acres. The timber so cut has been sold by these Indians and the proceeds therefrom used to improve their farms and add to their stock. Heretofore the Indians have never, unaided, cleared any of their timber tracts, and that they have done so this year is encouraging as showing a tendency to greater individual effort and progress.

Acres cultivated, crops raised, and other results of farming.—

Number of—	Tulalip.	Lummi.	Swinomish.	Muckleshoot.	Madison.	Total.
Acres broken.....	100	75	5		3	188
Acres cultivated.....	600	560	400	400	130	2,090
Rods of fencing made.....		75	100			175
Bushels of wheat.....		50		200		250
Bushels of oats.....	200	500	15,150	3,000		18,850
Bushels of potatoes.....	3,500	1,000	200	2,000	500	7,200
Bushels of other vegetables.....	4,316	1,180	180	530	490	6,696
Tons of hops.....				3		3
Tons of hay cut.....	400	214	25	150	15	804
Pounds of butter made.....	500	1,000				1,500
Cords of wood cut.....	800	50	150	500	17	1,517
Feet of timber marketed.....	600,000					600,000
Horses.....	400	192	130	100	19	841
Mules.....	1				3	4
Cattle.....	460	500	90	50	31	1,131
Swine.....	250	400		10	3	663
Sheep.....	104	700	150	20		974
Domestic fowls.....	1,000	1,200	300	500	400	3,400

Improvements.—At Tulalip the road between the agency and Marysville, the nearest town, has been materially shortened by the construction of 3 miles of new road. Four bridges have been built, at an aggregate cost of \$575, \$204.22 of which being proceeds from fines of the court of Indian offenses and the balance made up by subscription from the Indians. The entire 8 miles of road between the agency and Marysville has been put in good repair by the voluntary labor of these same Indians and they now have comparatively easy access to the market afforded them by the proximity of a town. One mile of good walk has been built connecting the agency with the Tulalip boarding school, which enables those living at these points to associate with each other more frequently and easily than has heretofore been possible, and the consequent exchange of courtesies serves to increase the harmonious relations existing at all times between the agency and school.

A good drainage system connected with all the agency buildings has been constructed, thereby lessening the danger of malarial diseases to which the before-time lack of drainage was conducive.

At Lummi the day-school building has been put in good repair and an addition been built for the use of primary classes.

The agency house has been made habitable for the resident farmer; fences now surround the Government buildings; the several sloughs on the road between the reservation and the nearest town have been bridged, in contemplation of a proposed county road to be made across the reservation, and, in short, a general spirit of progress pervades and is made evident by the improvements noted.

At Swinomish a county road has been made crossing the reservation and connecting same with the town of Anacortes, and to that end the Swinomish Slough has been substantially bridged. The agency house has been repaired, and here, as also at Lummi and Muckleshoot, contrary to the custom of past years, the farmer employed by the Government resides on the reservation, has no interest other than the work for which he is paid, and is required to attend strictly and conscientiously to such work.

At Muckleshoot, 2½ miles of road have been made, the farms have been generally improved, and it is intended to request authority from the Indian Office for the building, during the ensuing fiscal year, of a suitable dwelling for the farmer, as well as a jail for criminal offenders.

At Madison an irregular farmer was allowed for the months of May and June, 1892, and though the time was too short to enable me to report any specific improvement, still the general condition of the Indians is not a little improved, and should they be allowed a regular farmer will, by an increase of product and by other results of practical work, give evidence of the benefit derived from having a competent head to direct them in their labor.

Education.—Effort has been made to enlarge the Tulalip boarding school so as to accommodate 150 pupils, to be taken from the Tulalip, Muckleshoot, and Madison reservations; also for the establishment of a Government boarding school at Lummi, for 100 pupils to be taken from Lummi and Swinomish, and in this way to provide for the proper education of the Indian children of this agency; but

lack of funds prevents the carrying out of this proposed educational plan, at least for the present.

During the year the agency has been favored by the visit in turn of Inspector Benj. H. Miller, School Supervisor T. W. Leeke, and Hon. Darwin R. James, of the Board of Indian Commissioners, and to these gentlemen the agent is greatly indebted for advice and encouragement given him in his plans for the betterment of the condition of the Indians and for the proper discharge of the duties of his office.

In conclusion permit me to thank the Department for the consideration shown me throughout the year.

I am, sir, very respectfully,

C. C. THORNTON,  
*U. S. Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF PHYSICIAN AT TULALIP AGENCY.

TULALIP AGENCY, August 31, 1892.

SIR: I have the honor to submit herewith my annual report for the fiscal year ending June 30, 1892.

The general physical condition of the D'Wamish and allied tribes has been fairly good. No epidemics or contagions have prevailed. The principal diseases are, as they have been for many years, consumption, rheumatism, scrofula, and constitutional syphilis; to the latter trouble the majority of their diseases can be traced. Very few cases of primary venereal diseases have been reported.

During the year 430 Indians received medical treatment; of this number 219 were males and 211 females. These represent the actual cases treated, and do not include the many persons to whom domestic or simple remedies were furnished.

Many teeth have been extracted among the younger generation; sufficient indeed to justify me in requesting you to estimate for a dental chair; but this I will not do. The teeth of many of the very old Indians are beautiful in their solidity and evenness, doubtless due to the simple character of the food to which they have always been accustomed. There were 60 births; 32 males and 28 females. Deaths 53; 28 males and 25 females.

I have visited at irregular intervals during the year the four reservations connected with this agency, and have sent them occasional supplies of simple remedies. More money should be allowed for traveling expenses, so that the physician could visit these people more frequently.

Hospital.—I earnestly call your attention to the great need that exists at this agency for the establishment of a hospital. I am confident that the Indians would avail themselves of its benefits and that lives could be saved. Many cases that now become chronic through neglect or improper treatment in their homes, could be cured before they reach that stage. The sick on the other reservations could be removed here for treatment, whereas many of them now die for lack of intelligent nursing and medical assistance. It is especially important in treating surgical cases that hospital facilities be allowed.

Thanking you for your uniform courtesy and assistance rendered, I am  
Very respectfully,

E. BUCHANAN,  
*Agency Physician.*

C. C. THORNTON,  
*U. S. Indian Agent.*

### REPORT OF TEACHER OF LUMMI SCHOOL.

LUMMI INDIAN RESERVATION, WASH. August 26, 1892.

SIR: In compliance with your request, I have the honor to submit my first annual report as teacher of the Lummi day school.

Attendance.—After a lapse of some ten or twelve years this school was reopened on October 1, of last year, upon the recommendation of Dr. Dorchester. As considerable doubt was entertained as to the number of pupils that would attend, no new buildings were erected. The old one (20 by 30) having accommodation for about 40 children, was thought to be sufficiently large; but in this respect the first quarters attendance of 75 proved that nothing like room enough had been provided, while during the year the enrollment reached as high as 80 with an average attendance of over 60. I have endeavored to the best of my ability to give to each pupil the care and training most needed, but owing to the great number of children, and the many different grades, I have been required to teach I found it impossible to do all I would wish in this regard, especially with the primary grades that require so much personal attention; but as an assistant teacher has been appointed for the coming year, I look forward to a much greater advancement in those grades.

School work.—The work accomplished by the school in general has far exceeded my expectation. The scholars have proven their appreciation of the establishment of this school by their industry, good behavior, progress, and regular attendance.

The senior grade have completed the practical arithmetic, history, and geography of the United States, and have made marked progress in English grammar, their most difficult subject. A daily talk of from ten to fifteen minutes on some interesting subject, has been given, and the pupils required to reproduce the same in writing at home each evening. This practice has been the means of acquainting them with a great many subjects of which they knew nothing before, and greatly aided in improving their knowledge of the English language.

Each of the national holidays has been fittingly observed, and every effort has been made to induce their parents to visit the school at such times and occasionally assist at the exercises. A temperance literary society has been formed in which both the scholars and their parents have taken a very great interest, the membership reaching nearly 200.

Marked improvement is noticeable in the courtesy and politeness which the different sexes extend to each other, and this is due, I think, to the wise and proper method of having the boys and girls taught in common and allowed to mingle with each other in a social manner.

One of the greatest needs of this reservation in regard to the future advancement of the Indian children is a boarding school. It is impossible to give them the necessary training in a school of this kind. In addition to "book knowledge" they need practical lessons in manual labor. Naturally lazy, it is undoubtedly just as necessary that they be taught to plow and reap as to read and write. On this reservation their homes are so widely scattered that many of them are compelled to travel as far as 5, 6, and even 7 miles to school. This, of course, can not be done by the smaller children and they are obliged to remain home during the long rainy season.

Fishing being one of the main means of support among this tribe I have experienced no little difficulty in preventing them from taking their children from school when they go on their fishing trips in June and July. Had we a boarding school this and many other troubles would be averted, much to the interest of the children. I can safely say that 125 pupils could be secured from this reserve alone, and should the children from the Swinomish tribe be sent here the attendance would not fall short of 175.

The present schoolhouse has been improved by the addition of a small room for the assistant teacher; but the building being situated in a low, marshy spot, nearly half the year we are surrounded by water, which makes it exceedingly disagreeable and unhealthy.

In conclusion permit me to thank the honorable Commissioner and yourself for the very courteous treatment I have received during the year, and hoping by perseverance to instill into the minds of my Indian pupils the principles of true Americanism,

I am, your obedient servant,

D. H. B. EVANS.

C. C. THORNTON,  
*U. S. Indian Agent.*

### REPORT OF SUPERINTENDENT OF TULALIP SCHOOL.

ST. ANN'S MISSION, *Tulalip, Wash., August 31, 1892.*

SIR: Complying with your desire, I have the honor to submit to you the annual report of the Tulalip industrial boarding school.

Though during the first two months of the scholastic year, we had great difficulties in collecting the children, after the "hop-picking" season, yet the past year has been for the school one of admirable success and progress in every respect. True, indeed, the average contract number of our pupils was again reduced, thus preventing us from making many greatly needed improvements, especially in the industrial line; still, through the closest economy, great self-denial on the part of the eight good Sisters of Charity, who have been managing the institution with me, and some small charitable donations, we have succeeded in keeping the school running in a very flourishing way during the entire year. Our pupils have always been over the contract number, numbering at times 140, though the contract was only for 105. Never have we refused admittance to any child seeking admittance here.

The school management has been in general the same as given you in my report of last year. Schoolroom exercises were held in the forenoon and industrial work in the afternoon, the boys being placed in charge of the industrial teachers, who instructed them in farming, shoemaking, baking, carpentering, and other manual labors, while the girls were in charge of their matron, seamstress, cook, and laundress, who instructed them in general household duties, several of the girls using the sewing machine with ease and skill.

Knowing well that upon the efficiency of teachers depends in a great part the progress of Indian civilization, we have always made it one of our principal points to secure the services of the best teachers.

Towards the middle of the scholastic year we bought a first-class piano, in order to give music lessons to those that show talent in that department of education.

Apart from the lessons the pupils receive in all kinds of vocal music, we have also an appointed hour every day, during which all are obliged to take part in learning to sing national songs. The national songs I have noticed not only help in themselves to Americanize them, but also give them a love for the study of United States history.

We have been free during the whole year from any kind of sickness. It must be here added that Dr. Buchanan, the agency physician, has been very devoted to the school, giving it almost daily visits.

In conclusion, allow me to express my sincere thanks to yourself, Mr. Thornton, for your great kindness to us during the whole year.

Yours, respectfully,

N. J. POWER,  
*Superintendent*

C. C. THORNTON,  
*U. S. Indian Agent.*

### REPORT OF YAKIMA AGENCY.

FORT SIMCOE, WASH., *Yakima Agency, August 23, 1892.*

SIR: I have the honor to submit my second annual report of this agency. The reservation contains about 800,000 acres of land, mostly dry sage brush land, except along the heads of creeks. In the mountains there are probably 50,000 acres of fairly good pine timber, where the Indians obtain wood, posts, rails, and lumber. Very little has been done in the way of irrigation, and as grain or produce of any kind can not be raised without irrigating the land, advancement in the way of farming is very slow and unsatisfactory except in a few cases where they are favorably located bordering on some small water course or creek.

A few of the Indians are doing well raising stock. Most of them still cling to the Indian pony, which is very unprofitable and almost impossible to find a market for. About 300 of them have been sold during the past year and shipped to Eastern markets. Prices of ponies vary according to size, selling from \$6 to \$10 each. They are raising more cattle than heretofore, and most of them are desirous of increasing the stock of cattle. On account of the scarcity of water nearly all the stock are kept in the mountains during the summer months and are brought into the lower valleys during the winter. Most of the Indians manage to put up a little hay, which grows wild along the creeks, for feed during the winter. This land has been fenced by the Indians for winter pasture and for the hay, and I estimate that about 20,000 acres have been so fenced, which has no doubt been included in former reports as improved farms, which do not produce anything but wild rice grass, and are claimed and owned by a few of the more wealthy Indians.

**Allotments.**—Col. John K. Rankin, of Kansas, appointed as special agent to do this work, arrived here about the first of May. He has allotted up to this date 25,000 acres of land to 305 Indians. So far nearly all have taken arable land, or what can be made so with little expense by taking water from creeks in ditches. At first the old chiefs and many of the leading Indians were opposed to allotting the lands, but by patient effort and explanations the work is progressing nicely and without any serious trouble. Many of the Indians will have to select lands that are worthless without water, with the view and expectation of being able to irrigate their lands in the near future. There is plenty of water in the creeks and streams in and bordering the reservation to irrigate a large portion of the lands, but it can only be obtained by quite a large expenditure of money, which the Indians are not able to furnish. I would recommend that the Indians be induced to sell a portion of their surplus lands and that a sufficient amount of the proceeds be used to build dams and irrigating ditches to furnish water for the lands allotted, which would also increase the value of the surplus lands.

**Census.**—The census is as yet not completed, and at this time of the year so many of the Indians are away in the mountains and at the rivers hunting and fishing that it is impossible to obtain an accurate census, and no funds are allowed for the purpose. When the allotting agent's work is completed his books will show a very accurate census of all the Indians on the reservation. As far as the work has progressed he has recorded 500 names, and I do not believe the whole number will exceed 1,200 Indians, including half and quarter breeds.

**Intoxicants.**—Nearly all the trouble on the reservation is caused by whisky or something of an alcoholic nature which the Indians seem to be able to procure in the surrounding towns. I have discharged several policemen for drunkenness, who had been recommended by the best Indians, and many others have been punished and fined by the Indian court; some placed in the agency prison; 20 white men have been convicted and sentenced to the United States penitentiary by the United States courts for selling liquor to the Indians, and many others fined by the civil authorities under the State law, but still the traffic continues. The majority of persons convicted are tramps, who seem to be as well contented in prison as any place.

**Indian doctors.**—A great many of the Indians still adhere to and believe in the Indian doctor and his power for good or evil. Indians have applied to me for permission to kill Indian doctors whom they believed had "witched" some of their friends or children and caused them to die, and it seems impossible to disabuse their minds of this notion. This practice seems to be about as hard to suppress as the whisky business.

**Boundary lines.**—As referred to in my last annual report the Indians are very much dissatisfied in regard to the survey of the western boundary line of the reservation made in 1890 and are not willing to accept it as a final established line, as it cuts off from the reservation three or four townships that they have always claimed and been led to believe belonged to them.

**Industries.**—There is a very good sawmill at this agency; about 500,000 feet of lumber was sawed this year. The work of hauling logs and sawing was all done by Indians except one white man employed as engineer. There is also a gristmill with a white man employed as miller; but the mill is very old and makes a very poor quality of flour. One blacksmith shop has an Indian employed as blacksmith with two Indian boys as apprentices. One harness shop has an Indian harness and shoemaker employed with two Indian boys as apprentices; also a carpenter and wagon shop has a white carpenter and wagonmaker employed with two Indian boys as apprentices. These shops do a great deal of work repairing wagons, plows, machines, harnesses, saddles, and all kinds of tools for the Indians; but as the amount allowed for salaries for agency employes for another

year has been reduced \$1,500 from the amount allowed during the past year I will not be able to continue the work at the shops and mills as heretofore.

There is also a herd of about 300 head of cattle belonging to the Government on the reservation, an Indian being employed as herder. I have asked for authority to sell the herd, as I do not consider it economy to retain it, and I trust the authority will be granted.

**Indian police.**—We have a force of eight Indian police, including a captain. This police force is a great help to the agent, but their pay is so small that few care to accept the position, and it is very difficult to procure the service of capable Indians who are willing to devote their time to the business, at a salary of but \$10 per month. The same may be said of the Indian court; the salary of a judge is only \$5 per month.

**Statistics.**—The table of statistics accompanying this report will present in a concise form the result of our work during the year, so far as it is possible to correctly present the same at this early date. Much of the data is from necessity simply estimated, yet I have been very careful to refrain from rose-colored statements. The Indians as a rule are willing to work for a reasonable compensation when they can secure employment, and those that have a supply of water have good gardens and small fields of wheat and oats.

**Schools.**—The attendance of pupils at the agency boarding school, the past year, was nearly double that of the previous year; 123 were enrolled, while the average attendance was 103. Many of the children were brought in from the camps of the wild Indians and could not speak or understand a word of English, and at the end of the term there was a marked improvement, and I consider the school quite a success and hope to be able to report still more improvement another year. I submit herewith a report from the school superintendent, as a part of my report, also the school statistics for the year.

**Recommendation.**—I would most earnestly recommend, that a liberal allowance from the irrigation appropriation, be granted for the purpose of irrigating the lands on this reservation: also that a practical and experienced farmer be employed, to assist and instruct the Indians in properly irrigating, and laying out and repairing roads, and such other work as is very necessary in assisting and advising the Indians in taking care of their grain and hay.

Indians belonging to but not residing on this reservation are variously estimated at from 1,000 to 2,000. As a rule they continue to live in aboriginal style. They buy from the "Boston man" (white man) a little flour, coffee, calico, and occasionally a blanket, and live in small villages, a few families in a place, along some of the mountain streams, where fish can be obtained. In summer they always go to the mountains; the men lie around the camps, perhaps occasionally hunting, while the women are laying in a supply of roots and berries for winter use. The camas root is their staple food, and it takes the place of our bread, and grows in great abundance on the marshy flats in the mountains; a great many of the reservation Indians depend largely upon this root for their food. The plant resembles an onion in size and shape, is dried in the sun, then baked in the ashes; sometimes being ground and mixed with flour. In the fall the Indians again return to the lower valleys to spend the winter, participating in their various dances. Often their supply of provisions is exhausted, and the spring finds them, many of them, in a starving condition. Many of the children are scrofulous and consumptive, and die very young, and very few healthy children can be found among them. The same is true of about one-half of the reservation Indians.

Very respectfully,

JAY LYNCH,  
*U. S. Indian Agent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF FIELD MATRON AT YAKIMA AGENCY.

YAKIMA INDIAN RESERVATION,  
*Fort Simcoe, Wash., August 19, 1892.*

SIR: I have the honor to present the following statements and observations in regard to the field-matron work on this reservation:

Number of Indian families visited .....	115
Number of above families previously visited .....	95
Number of persons in above families .....	300
Number of families living in houses .....	97
Number of families living in tepees, hogans, or other Indian habitations .....	18

In addition to the days occupied in visiting I have had Indians at my home on forty-seven days, who came for help, counsel, and sympathy, in fact, for whatever they felt in need.

It is impossible to tell how many have been induced to adopt civilized practices in their households in my short time of service as field matron, as many have had more or less instruction by others, and but for the preceding eleven months of my work as missionary I should have found it difficult to accomplish anything in many cases. I have been under the necessity of running after women, even into the fields (as they are shy with strangers, and sometimes afraid), but now they welcome me wherever I go, simply because they have become acquainted and learned to know me. Old women come to me if they are destitute of food, or a young woman comes for help in making a dress for her baby; one comes for me to prepare broth for a sick child (expecting me to furnish material) or to put an alleviator on a sore tooth or eyes; to cut a pattern or dress; to write a note; to hear complaints, or to explain many things which they do not understand. Young women and girls come and I teach sewing or a bit of fancy work, giving them the materials, or the use of patterns in dressmaking—anything that they are willing to learn. Some come just to see me and my house. I am obliged to do this work whenever they come (if I am at home), as the setting apart of a day in the week does not cause them to come on that day. Even when they wish to learn (which is often not the case) they are in no hurry, as, for instance, I went five times to teach one woman to make biscuit before she was ready to learn, though I had given her flour and baking powder.

I have made the fire at church and rung the bell for service, tolled the bell for burials, led prayer meetings, held funeral service, preached, and one couple came to me to perform the marriage ceremony, which service I had to decline.

The number of families visited is not commensurate with the number of visits made, as one visit counts for but little, and it is often necessary to make several before any apparent progress is made. A few families have been visited but once, many of them a number of times, and at one home I visited a sick woman twice a day for several successive days, furnishing and preparing all her food and looking after her comfort in various ways. This is possible in but few cases as most of the Indians live at a distance varying from 3 to 40 miles.

In visiting I frequently find two or more families in one house, sometimes living as one family; in other cases each family providing for itself. For this and other reasons it is difficult to tell the exact number belonging to each family. Many have vague ideas in regard to degrees of relationship, and seem suspicious of many questions, and yet some very old women have given me the most information on the subject. The difficulty arising from different languages I have been able to so far overcome that I get along in most cases without an interpreter.

While most of our people have houses of some sort, it is also true that nearly all live outside of them all summer. I am myself glad to be camped by the creek, instead of being shut up in the house when the mercury goes up to 110° (as it has done), and not a shower all summer. Consequently there is not the same incentive to the care of houses that there is in the East. The houses are small and very scantily furnished, as most of the Indians are poor and find it hard to get money enough for necessary food and clothing.

So far as my opportunities for observation go, most of the women cook well whatever they can get to cook, though they sometimes serve the food in "the good old-fashioned way," *i. e.*, by spreading a mat on the ground and using it for a table. They do this even when there is a table in the house; Indians being so made like white people that they prefer (oftentimes) the old accustomed ways to foreign innovations; and it is only by patient and persevering, yet kind and loving, efforts that they are led to gradually adopt "Boston" ways.

In order to teach "regularity in meals" it would be necessary to supply food material, to a great extent, in many of the homes, as the familiar saying that "with Indians it is either feasting or famishing," fits those on this reservation as well as others.

While many are industrious, and in a sense provident (and a few are able to buy whatever they need), many more are very poor, scarcely able to provide for a day, begging food from the agent or from those who have a little surplus, or going to eat wherever they know there is food. Those who are better off never refuse to feed the poor or the lazy ones; and if a man "kills a beef" or brings a load of salmon from the Columbia, the probability is that he will give away the greater part of it to the numbers who flock to him like chickens to the corn basket. I have eaten with six different families, and have seen the food from many homes as prepared for our Fourth of July dinner, and I think the cooking equal to the average in the country homes.

Many women keep their scant stock of clothing clean, though, sometimes, I do not see how they do it unless the children go to bed until their clothes are washed. It is impracticable for laundry work to be done systematically, and I am glad to see so many "pieces" on the line, whether it is on regulation Monday or some other day.

The same poverty (and nomadic habit) interferes with teaching the "adorning of homes with pictures, curtains, etc." When people find it difficult to get sufficient food they have nothing to spare for adornment, and my stock of supplies is limited. I have, however, given many pictures and other small articles of household or personal adornment, as friends in the East have from time to time kindly sent to me. Indian women make mats of rushes and of rags; baskets of twine and husks, and they are generally industrious.

Our work with them is, of necessity, slow work; yet not for that reason to be neglected. I do hope the field matrons will not be discouraged at difficulties, but putting hearts of love into the work, and remembering that "our Master" said "Ye have done it unto me," may they go on and help prepare them for the time when, instead of Indian tribes, we shall recognize individuals who are subject to and protected by the same laws as their white brethren; and instead of reservations we shall see not only farms, but villages and cities, wherein good schools shall furnish instruction alike to white and Indian children.

Wherever water is obtainable they plant trees near the houses; but in this country, where it never rains, no grass, flowers, or anything else can be grown without irrigation, except on some low lands along the streams and near the river, where a good deal of hay is produced. This, however, gives revenue to but very few individuals. Most of the land is "sage brush"—desert and worthless without water, of which the only source is the small streams and springs, with limited facilities for distributing the small supply. Yet, many manage to raise vegetables and fruit; and if our Indians had thousands of dollars to pay for an irrigating canal, with the business ability to manage such an enterprise, they might have orchards and grain fields, instead of desert lands.

This also renders impracticable the keeping of milk cows to any great extent, and the stock is mostly "on the range," getting its own living. It is impossible to get milk, except in a few instances, where the Indian is so fortunate as to have pasturage near home. This is one of my great regrets, when I see children poorly fed, and families which would be so much better off if

they had milk, butter, and cheese; but they can not feed the cows at home, and the cows will not come home to be milked. I get along by keeping a supply of condensed milk.

Beekeeping is impossible, as everything is barren and dry in summer, except along the water courses, many of which run dry, while the cattle stay in the mountains.

If it be borne in mind that our reservation has an area of 1,250 square miles, and that the homes of the Indians are scattered over this large tract without regard to anything but to be located near water, and that there is no such thing as a village or even three houses near together, it will enable one to understand the difficulty in the way of organizing societies, or of getting together at stated times.

We have had a weekly prayer meeting, and I have had a weekly sewing class (in which I furnished materials and gave the women all the articles made), but with the same result—sometimes a few attend, at other times not one, and never a really good attendance. In addition to the long distances most of them must travel to reach any place of meeting, their habit of going to the mountains in spring for edible roots, in summer for berries, to the Columbia for salmon, to the hop fields in September, and sometimes to the mountains again for hunting, makes so many breaks that no organized work can prosper under such conditions.

This also interferes with proper care of the sick, as they are often out of reach of the physician or anyone else who can help them. No one can go everywhere that they go, and as we do not always know when they are away, the field matron has driven many miles only to find closed houses in many instances. Even when away from their homes they are scattered so that the children of different families are not much together except at school.

They do not seem to need instruction in play, but I have given scrapbooks of pictures, dolls, and other things to the little girls, and have tried to do whatever I have had opportunity for.

It is not only impracticable to enumerate all the directions in which a field matron can lend her aid, but it is impossible to limit the good that must result from the loving service of Christian women who live among Indian women and seek to lend a hand in His name. I would most respectfully suggest and recommend that instead of one field matron for a brief time we have two or more all the year round, that the work may be more quickly and thoroughly done.

My work as field matron has been for but a few months, and I have been able to reach only a part of the reservation; but in my humble position as missionary I shall, by the dear Lord's help, continue my work, though I may not know how much I have been able to help until the great books are opened.

Very respectfully submitted,

EMILY C. MILLER.

#### REPORT OF SUPERINTENDENT OF WILBUR SCHOOL, YAKIMA AGENCY.

FORT SIMCOE, WASH., August 30, 1892.

SIR: In compliance with official instructions I have the honor to present this, my first annual report of Wilbur boarding school for the fiscal year ending June 30, 1892.

School has been in session nine months, with a total enrollment of 126. Average attendance, second quarter, 80; third quarter, 112; fourth quarter, 117; average for the year, 103.

Although the sanitary condition of the school premises is none of the best, the general health has been excellent. But four deaths have occurred, three from lung diseases and one from fever.

The building for the girls' department is an excellent one, but all the other school buildings are in a bad state of repair.

The water supply is inadequate during the dry season. This serious defect, I think, can be remedied by an artesian well, since the conditions appear favorable for securing a good flow at no great depth. If the sinking of an artesian well be considered too costly an experiment I would recommend the erection of a windmill. Abundance of water can be secured at a depth of 20 feet.

In the schoolrooms excellent work has been done. The teachers, three in number, are faithful and progressive, and the results of their labors compare favorably with similar grades in white schools. The employes all seem to be alive to the great importance of faithful work in preparing these young people for American citizenship, and are anxious that the school shall record greater advancement the coming year than ever before.

For a number of years past the farm has produced little, but we are able to report good results at this time, owing to an extremely early spring and an unusually large amount of rain. Twelve acres of oats yielded over 400 bushels; 4 acres of potatoes, not dug yet, about 300 bushels; one-half acre peas, over 100 bushels in pods; five-eighths acres carrots, 2 tons; one-fourth acre turnips, 100 bushels; besides plenty of beans, beets, radishes, lettuce, and onions.

The boys of the school have done the farming and gardening, besides doing a considerable amount of repairing and improvement of buildings and grounds.

Finally, I desire to recognize the hearty cooperation of the agent, Mr. Lynch, in all my efforts to advance the school, and to express my hearty appreciation of the very considerate treatment I have received at the hands of the Department of Indian Affairs.

Respectfully submitted,

STOKLEY C. ROBERTS,  
Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS,

## REPORTS OF AGENTS IN WISCONSIN.

## REPORT OF GREEN BAY AGENCY.

GREEN BAY AGENCY,  
*Keshena, Wis., August 31, 1892.*

SIR: In obedience to instructions and official regulations, the following report of affairs and occurrences at this agency for the year ending June 30, 1892, is respectfully submitted:

**Location.**—The Oneida Reservation, containing 65,540 acres, situated between the counties of Brown and Outagamie; the Menomonee Reservation, consisting of 10 townships of land (3 of which are in Oconto County and 7 in Shawano County); and the Stockbridge Reservation, containing 18 sections of land adjoining the Menomonee Reservation in Shawano County, form the territory constituting the Green Bay Agency. The agency office is at Keshena, 8 miles from the railway station in Shawano.

**Oneida Indians.**—Allotments of land in severalty to Oneida Indians were practically completed when I took charge of the agency a little more than two years ago, but the announcement of official approval has not yet been made. The Oneidas are well advanced in civilization, many of them possessing good farms and buildings, using improved machinery, and having comfortable surroundings and appliances in their homes equal to their white neighbors off the reservation. Some members of this tribe are also very poor, living precariously in badly conditioned cabins, with little hope of improvement.

A large number of children have been taken from this reservation to different Government training schools, more than 300 having been in such schools during the past year. Upon this reservation, on land set apart for a school farm, two brick buildings are in process of construction for use as a Government school, with the expectation that such school will be opened for pupils this fall. Six day schools are maintained by the Government.

Upon this reservation there are three church buildings: A large stone edifice erected a number of years ago by Episcopalians, a new and large edifice of wood, nearly complete, by the Methodist denomination, and a smaller one by Roman Catholics.

**The Stockbridge Indians** had land allotted to them in severalty in 1874, which allotments seem never to have been perfected to the extent of placing each allottee in possession of his own allotment. Conflicting claims under treaties and acts of Congress appear to have kept these people in a state of unrest for quite a number of years, and little progress is visible in the development of farms. There is no church upon this reservation, but religious services have been held a large portion of the time in their schoolhouse, conducted chiefly by Congregational missionaries. A school is maintained at an annual expense for a teacher of \$500 from the annuity of the tribe.

In my opinion these people are as nearly civilized as they are likely to become in another score of years with present surroundings, and as well qualified to take care of themselves as they will be if their land is deeded to them in fee simple.

**Menomonee Indians.**—Upon the Menomonee Reservation there are no schools other than the Government boarding school, with a capacity for accommodating 150 pupils, and the Catholic contract school, with accommodations for about the same number of children.

One new building, 40 by 72 feet, two stories high besides the basement, has been completed during the past year, adding largely to the convenience as well as increase of accommodations at the Government school. Also, an addition of 36 feet to the main building for larger laundry, bathroom, and room for baking oven, are valuable improvements. The main Government school building has for two winters been warmed by steam, proving much more satisfactory than the former method by use of stoves. The new building was designed for steam heating, but apparatus has not been ordered. In connection with these buildings there are three wells; one of them for a wind motor, pumping water to a 75-barrel tank over the laundry; another is for a power pump with hose, as a protection in case of fire.

There has also been erected a good building, 40 by 60 feet, two stories, and warmed by steam, for use as a hospital for the sick among Menomonee Indians, which proves very satisfactory in all respects.

The Menomonees have a good roller process flouring mill, at which flour is manufactured for school and agency use as well as grist grinding for members,

of the tribe free from tolls. A sawmill capable of cutting 10,000 feet per day, at which lumber is manufactured for any one building upon the reservation who desires it, is also a valuable property, the power for operating both mills being furnished by the Wolf River.

**Timber.**—This tribe also has a valuable property in standing timber on the reservation of hemlock, oak, maple, and pine, the latter being estimated at about 300,000,000 feet. Under the law, approved June 12, 1890, by banking and sale of this pine a fund is being accumulated of great importance for the future of these Indians. The winter before the enactment of this law, 1889-'90, 25,691,568 feet were banked and sold, realizing the sum of \$218,178.32, of which \$21,817.33 was deposited in the United States Treasury for the support of the poor and sick of the tribe with other incidental expenses, and the sum of \$194,801.19 was paid to the persons who banked the logs.

In the winter of 1890-'91, under the new law, there were banked 22,769,560 feet of logs, which were sold for \$232,262.78. After paying individual Indians a stipulated price under contract for banking said logs, the sum of \$155,135.90 was left in the United States Treasury to the credit of the Menomonee tribe.

In the winter of 1891-'92, under similar contracts with individual Menomonees, 20,000,000 feet of logs were banked, which were sold for the sum of \$211,600 (\$10.58 per thousand), and after paying expense of banking, etc., as before, there was left in the United States Treasury the sum of \$138,622.33 to the credit of the tribe. Of the money so held in United States Treasury, four-fifths of the amount, or \$237,006.59 for the two seasons' logging, is to be upon interest at the rate of 5 per cent per annum; while the sum of \$56,751.64 is held to be used for the benefit of the tribe, under direction of the honorable Secretary of the Interior.

In the first-named payment, where all money received for logs sold, excepting only 10 per cent reserved for support of sick and poor members of the tribe, there was a failure to pay indebtedness incurred by those engaged in logging to an amount estimated at from \$60,000 to \$75,000.

In the season of 1890-'91, under the new law, 133 Menomonees entered into contracts for banking logs, and from poor management of some of them after payment it was ascertained that an indebtedness of about \$2,800 had been unpaid.

In last season's logging, 1891-'92, with 83 contractors for banking logs, an unpaid indebtedness is reported of about \$400.

From this it would appear that these people are adopting better methods of management, and therefore secure better results in logging. Some of them, by industry and proper care, have in each winter earned good wages, with a fair balance when paid.

**Schools.**—Upon the Menomonee Reservation two schools have been maintained during the past year, one a Government boarding school, with a capacity for 100 pupils, and the Catholic contract school, caring for 140 or 150 pupils. Upon the Stockbridge Reservation one day school has been maintained; the salary of the teacher being \$500, being payable from interest of funds of the tribe. Upon the Oneida Reservation 6 day schools have been maintained at the expense of the Government.

These schools exert a healthful influence in giving tone to the character of pupils and to the families of the pupils. But at several of the Oneida day schools the attendance is so small as to hardly warrant continuance. Nonreservation schools secure so many pupils from these day schools as to leave little encouragement for teachers. In my opinion much better results are obtained in boarding schools, because pupils are kept more constantly in school and under supervision of teachers.

**Census.**—The number of Oneidas on the reservation is returned as 1,762. Children of school age, 597, of which more than 300 have attended nonreservation schools during the past year. Number of Stockbridge tribe is 143, with 42 children of school age. Whole number of Menomonees reported on the reservation is 1,335, with 343 children of school age.

For detailed statements of products and other statistics, I would respectfully refer to accompanying reports.

**Indian court.**—This tribunal has been of much service, not only in the cases where judgments have been rendered, but in influencing settlement of difficulties out of court. During the last fiscal year judgments were rendered by this court in six criminal cases and in twenty-four civil actions. The three judges of this court are old and influential members of the tribe, who have been continued in office for several years because of good character and fitness for the position.

**Agriculture.**—There have been continuous efforts to inspire in these people an interest in agricultural work as the surest means of bettering their condition, ac

counting the timber interest as a deposit with the Government which will soon be paying annual dividends of increasing value. More acres have been plowed this season than in any previous year, with a more promising yield of growing crops at the present time, which gives great encouragement to the workers.

Farming is farthest advanced among the Oneidas, they having engaged in this pursuit at an earlier period than Stockbridges or Menomonees. The Stockbridges do not attend to farm work with much energy, and little improvement is observable on that reservation. The great drawback to advancement of these Indians in moral stamina and industry is the indulgence in alcoholic drinks, affecting the Oneidas least, but is strong with the Stockbridges and Menomonees.

Very respectfully,

CHAS. S. KELSEY,  
*U. S. Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF PHYSICIAN AT GREEN BAY AGENCY.

GREEN BAY AGENCY, *Keshena, Wis.*

SIR: I have the honor to submit the annual sanitary report of the Menomonee Indians of Green Bay Agency, Wis.

Being situated in a generally healthful locality, we have been quite exempt from zymotic diseases. During the past fiscal year these people have been free from invasion of any epidemic. At present there are a few sporadic cases of pertussis. During the winter months several cases of la grippe were reported. The cause of the greatest fatality among the Menomonees is consumption. Scrofula, as regards the number of cases, specially among the children, ranks second.

Little can be done to battle these two great constitutional diseases so long as those suffering from these disorders continue to live as at present. It is the object of the agency physician to render all possible aid to families situated thus, endeavoring to put into effect and simplify the fundamental principles of hygiene and sanitary science. In a number of instances large families are living in one small room; this, coupled with a lack of clean and nutritious food, is a barrier to results to be expected from therapeutics.

There has been noticed an uncommonly large number of eye disorders, conjunctivitis (A) being the most prominent pathological condition. It is believed, however, the diet in a great majority of instances is the cause.

Early in the spring the Menomonees completed a thoroughly substantial and spacious hospital. Here the sick are cared for and everything done for their comfort. Yet I am pained to say in many cases it requires a deal of coaxing and stratagem on the part of the physician to get them to enter. Gradually this dread will vanish, and ere long, if progression in this line continues, anyone will enter cheerfully when occasion demands.

I can say with certainty nearly every Menomonee employs the agency physician or some regular physician, as they prefer. Some still cling to their herb and root doctrine, and yet at the same time they are learning rapidly to have faith in the regular physician. When one thinks of the many domestic remedies the civilized people employ, is it not asking too much of the Indian to abandon his time-tried, cherished root and herb and pin his trust immediately in the regular doctor?

A number of cases requiring surgical attention have occurred during the year, a majority of which, when the cause was ascertained, was due to whisky.

During the year ending June 30, 1892, there were 31 births and 22 deaths.

Respectfully submitted.

GEO. W. HORTON FITCH,  
*Agency Physician.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF LA POINTE AGENCY.

LA POINTE AGENCY, *Ashland, Wis., August 29, 1892.*

SIR: I have the honor to submit herewith my fourth annual report of the affairs of this agency.

In the La Pointe Agency are seven reservations; four of them are found in the State of Wisconsin and three in the State of Minnesota.

The following table gives the name, location, and area of each of the reservations:

Name of reservation.	County and State.	Acreage.
Red Cliff	Bayfield County, Wis	11,457
Mad River	Ashland County, Wis	124,333
La Courte d'Oreilles	Sawyer County, Wis	66,136
La Courte du Flambeau	Oneida County, Wis	69,824
La Courte du Lac	Carlton County, Minn	92,346
Million Lake	St. Louis and Itasca Counties, Minn	131,629
La Courte du Portage	Cook County, Minn	51,840

The Red Cliff Reservation is located 5 miles from Bayfield, a town on the Chicago, St. Paul, Minneapolis and Omaha Railway. A good wagon road connects Bayfield with the Indian village on Buffalo Bay.

The Bad River Reservation lies a few miles east of the city of Ashland. The principal settlement is at Odanah, a station on the Milwaukee, Lake Shore and Western Railway, 10 miles east of Ashland.

The Lac Courte d'Oreilles Reservation is located in Sawyer County, Wis. The nearest railway town is Hayward, a station on the Chicago, St. Paul, Minneapolis and Omaha Railway. The principal Indian villages, Lac Courte d'Oreilles and Pah-quauh-wong, are distant from Hayward 22 miles and are connected with the last mentioned town by means of a fair wagon road.

Of Lac du Flambeau Reserve, the principal village is located at the foot of the lake bearing the same name and 25 miles from Minocqua, a station on the Valley division of Chicago, Milwaukee and St. Paul Railroad. A fair wagon road winding through the woods connects these places.

The Fond du Lac Reservation is found about 24 miles west of Duluth. The Indian village of Fond du Lac is situated 2 miles from Cloquet, a station on the lines of the Duluth and Winnipeg and Duluth and St. Paul Railways. Another village on this reservation is located 10 miles west from Cloquet and 1 mile from Sawyer, a station on the Northern Pacific Railroad.

The Vermillion Lake Reservation is situated 3 miles from the town of Tower, a station on the Duluth and Iron Range Railroad. The Boise Forte Indians have a number of settlements in St. Louis and Itasca Counties, in the State of Minnesota, beside the one at Vermillion Lake, but the farmer, teachers, and blacksmith are established at Vermillion Lake.

The Grand Portage Reservation is situated about 200 miles from Ashland on the north shore of Lake Superior. The village is built on Grand Portage Bay about 10 miles west of the mouth of Pigeon River, a stream that, for a number of miles, forms the boundary line between the United States and the Dominion of Canada.

Census.—The aggregate population of the reserve of this agency is 4,816, and is apportioned among the several reservations as follows:

Red Cliff .....	500
Bad River .....	609
Lac Courte d'Oreilles .....	1,214
Lac du Flambeau .....	669
Fond du Lac .....	735
Vermillion Lake .....	774
Grand Portage .....	315

Total ..... 4,816

The following table gives the several classes of persons as required by section 211 of the Indian regulations:

Name of band.	Males above 18 years.	Females over 14 years.	School children between 6 and 16 years.
Red Cliff .....	130	141	179
Bad River .....	220	211	136
Lac Courte d'Oreilles .....	364	415	319
Lac du Flambeau .....	213	253	143
Fond du Lac .....	178	237	220
Vermillion Lake .....	230	234	169
Grand Portage .....	75	97	70
Total .....	1,410	1,588	1,236

Condition of Indians.—A decided improvement is manifest in the condition of these Indians during the past year. This is especially true of the Indians on the reserves in Wisconsin. They have taken a greater interest in farming than they have shown at any former period. A larger area has been brought under cultivation, the crops have been well cultivated, and the abundant crops harvested have opened the eyes of the natives to great wealth slumbering in the soil.

The teams and utensils in the possession of the Government farmers have been constantly employed in the clearing of lands and preparing them for planting.

The farmers report a general improvement in the disposition of the Indians in the direction of farming.

The Indians were able to provide for their wants during the past winter, and it was not necessary to call upon the Government for assistance. This fact goes to demonstrate that the lessons of thrift and industry which the farmers have labored to impress upon the Indians have been productive of excellent results.

The industry of these people has improved in other directions. Many of them have spent several months in the logging camps at remunerative wages, while others have been engaged in clearing lands for cultivation, and have realized a fair income from the sale of ties, posts, poles, and cord wood, removed in the work of converting the forest into a farm.

The farmers have expressed themselves as highly gratified at the general improvement in the industrial affairs of the Indians, and particularly at the zeal and energy manifested in the cultivation of the soil.

Many of these people speak some English. They all dress like their white neighbors, and a blanket Indian is a rare spectacle among them.

A large majority of them reside in houses constructed of hewn logs or sawed lumber. Some are still found in wigwams, covered with the bark of the cedar or birch. Many of these houses are provided with the kitchen and household furniture usually found in the abodes of civilized men. The better houses are occupied by the most advanced and progressive of the Indians. The condition of the house is an index and a measure of the civilization of its occupants.

**Employees.**—The following table contains the names of the employés of this agency, the position of each, and the places at which they are engaged :

Name.	Position.	Where employed.
R. G. Rodman, jr .....	Clerk.....	Agency.
J. K. McDonald .....	Additional farmer .....	Vermillion Lake.
Daniel Sullivan.....	do .....	Lac du Flambeau.
Wm. J. Walker.....	do .....	Bad River.
J. W. Morgan.....	do .....	Lac Courte d'Oreilles.
Roderick MacLennan .....	do .....	Fond du Lac.
J. P. Cox.....	Physician .....	Lac Courte d'Oreilles.
George E. Wheeler .....	Blacksmith.....	Vermillion Lake.

These employés have been zealous and energetic in the discharge of the several duties assigned to them.

The clerical labor of this office is too great to be imposed upon one clerk. During the three years that I have had charge of the office the present clerk has had no vacation. He has been at his desk constantly, often pursuing his labors far into the night to complete official business. The preparation of the rolls for the payment of the cash annuity to the Minnesota Chippewas has greatly increased the duties of the clerk. Three years ago the assistant clerkship which had been allowed this office from time immemorial was discontinued. A prompt and satisfactory performance of the duties of this office requires that an assistant clerk should be added to its clerical force.

**Farming.**—The past year has witnessed a decided improvement in the art of farming among the Indians of this agency. The teams provided by the Department in the spring of 1891 enabled the farmers to break up new lands and to improve the cultivation of those that had been tilled heretofore.

Notwithstanding the unfavorable season a fair crop was harvested. During the past year the Indians were so well provided with the products of their own industry that it was not deemed necessary to call upon the Department to afford them special relief, as it has been heretofore. The following statement shows the result of the agricultural labors of the Indians during the year:

Hay.....	tons.....	1, 197
Potatoes.....	bushels.....	27, 500
Turnips.....	do.....	6, 125
Onions.....	do.....	200
Cabbage.....	heads.....	6, 000
Beans.....	bushels.....	105

These farm products have been supplemented by the natural productions of this region, wild rice, blueberries, blackberries, cranberries, raspberries, strawberries, and plums. Wild rice is found in great quantities in some of the lakes and streams of this region. It is harvested by the Indians and stored for winter

use or sold to their neighbors. The wild berries are found in great abundance and a ready market is provided in the neighboring cities and towns.

The Indians are not successful in the care of domestic animals. These animals require both forage and protection to enable them to survive the severe winters of this latitude, and the Indian is too indolent to make the necessary provision for their comfort. The following statement shows the number of domestic animals owned by the Indians of this agency:

Horses .....	214
Cattle .....	594
Hogs .....	113
Fowls .....	2, 840

The progress made by the Indians in the field of agriculture during the past year is very encouraging both to the Indians and to the Government farmers. The Indians have manifested an unusual interest in the care and cultivation of their little fields. All the ground that could be prepared by the teams has been cultivated. Where the men are shiftless the women can always be relied on to cultivate and harvest the crop. Farming has become a matter of necessity. From the reserves in the State of Wisconsin the game has disappeared and the Indian finds himself confronted with the alternative either to follow some civilized occupation or to suffer the pangs of hunger.

The conditions surrounding the reserves in Minnesota are quite different. In the vast wilderness extending from the shore of Lake Superior to the Canadian boundary, the moose, caribou, and black bear are still found. The lakes and rivers of that region are still supplied with fish. On account of the abundance of fish and game the Indians of that region, especially the Bois Fortes, pay but little attention to the cultivation of the soil. While they can eke out a meager subsistence by hunting and fishing, their progress in civilization will be slow.

**Sanitary condition.**—During the past year the Indians have not suffered from the attack of any epidemic disease. A majority of the deaths occurring among them are due to pulmonary consumption.

The Government furnishes no medical attendance for the reserves of this agency except Lac Courte d'Oreilles. Dr. J. P. Cox, the agency physician, resides on that reservation and devotes his time to the improvement of the sanitary condition of that community. The reserves are so widely scattered that it is not practicable for the doctor to give any attention to the medical needs of the other reserves.

**Allotments.**—No allotments have been made on the reserves of this agency during the last five years. Arrangements have been made to allot lands to the Chippewas of Minnesota, and allotments to these Indians will probably be completed within the next two years.

The Wisconsin Chippewas are all anxious for their allotments, and they are greatly disappointed at the failure of the Government to permit them to take their lands in severalty either under the treaty of 1854, or under the provisions of the general allotment act.

By direction of the Indian Office schedules of allotment for a number of Indians on Bad River and Lac du Flambeau were sent to the Department in October of 1890. These selections have not yet been approved by the Department. These people claim that their selections hitherto made under the treaty of 1854 have invariably been approved by the Department, and they are at a loss to understand why the policy of the Government has been changed. These people are all willing and eager to take their lands in severalty.

The condition of these Indians would be improved by the general allotment of their lands and a final disposition of any surplus lands that might remain after the allotments are completed. The sooner the tribal estate is settled the sooner the influence of the so-called chiefs will be dissipated, the tribe disbanded, and each individual be permitted to work out his own temporal salvation. The presence of tribal property and tribal interests seem to perpetuate the influence of the chiefs and medicine men, and to bring the individuals under their control. The final disposition of the tribal property will emancipate the individual and leave him free to pursue his chosen industry without interference on the part of the self-styled chiefs.

The following table indicates the number of allotments made on each of the reserves of this agency to date, the number of allottees, male and female, and the number of acres allotted:

Name of reservation.	No. of allotments.	Sex of allottees.		Number of acres allotted.
		Male.	Female.	
Lac Courte d'Oreilles .....	477	315	162	37,582.45
Bad River .....	357	246	111	27,437.79
Fond du Lac .....	99	56	43	7,805.75
Lac du Flambeau .....	89	57	32	7,086.32
Red Cliff .....	35	28	7	2,535.91
Total .....	1,057	702	355	82,448.22

**Schools.**—Connected with this agency are 11 day and 2 boarding schools. Of the day schools 7 are maintained by the Government and 4 by religious denominations.

The following table contains the names of the several schools, their location, the names of the teachers, and the annual compensation paid through this office:

Name of school.	Reservation, where situated.	Average attendance.	Name of teacher.	Salary per annum.
<i>Day schools.</i>				
Lac du Flambeau .....	Lac du Flambeau .....	28	{Cordelia Sullivan .....	\$600

			{Sister A. Werckmann .....	
			{Sister Celestine .....	
			{Sister Athanasia .....	
			{Sister Seraphia .....	
			{Sister V. Steidl .....	

The boarding school at Bayfield, the day school at Red Cliff, both day and boarding school at Bad River, and the day school at Lac Courte d'Oreilles are conducted by Catholic Sisters.

Until October, 1891, the Round Lake Mission day school was taught by the Misses Dougherty, under the auspices of the Presbyterian Board of Foreign Missions. This school has been transferred to Pelican Lake, in the country of the Bois Fortes, in northern Minnesota. It is conducted by the Misses Dougherty, who find in their new location a wider field for the exercise of their philanthropic efforts to elevate the untutored savage out of the ignorance and superstition that envelop him.

The Catholic Sisters receive from the Government \$7.50 per quarter for each pupil in the day schools and \$27 per quarter for each pupil taught in the boarding schools.

Instruction is also imparted to Indian children in two public schools of the State of Wisconsin; one of these schools is located near Round Lake, in Sawyer County, and the other is at Odanah, in Ashland County. The school authorities in the district in which these schools are maintained receive from the Government \$10 per quarter for each pupil taught during the quarter.

The pupils in each and all of these schools have made commendable progress during the past year. The teachers have been zealous in their efforts to improve the mental and moral character of the children submitted to their care, and their labors have been rewarded by a measure of success which is encouraging.

But few people appreciate the difficulties attending the management of an Indian day school. The Indian child commences his literary training in utter ignorance of the English language. His first lesson is to learn a new language

under the most unfavorable circumstances. He hears English during six hours of the day for five days in the week, and during the rest of the time he is immersed in his own vernacular. His attendance is irregular. During the season of sugar making, rice harvest, and berry picking he is removed entirely from the influence of the school, and loses much of the progress that he has already made. Physical comforts are not provided for him, and he suffers from want of proper food and clothing. To secure success under such unpropitious surroundings, the teacher of a day school on these reserves must possess an inexhaustible fund of patience and perseverance, and must bring to the work a zeal and devotion that know no flagging.

All the teachers agree that the noon lunch is a powerful incentive to promote attendance in the day schools. It often happens that some of those attending school have no food during the day except that which is provided by the teacher at noon.

During the past year a schoolhouse was built at Normantown to accommodate a number of the Fond du Lac Indians. A dwelling house was also provided at that place for the use of the Government teacher. This school has been in operation during the last quarter of the year under the direction of Miss Macaulay the teacher furnished by the Department. This school has been well attended and has proved a success from its commencement. A teachers' residence has also been provided for the school at Pahquauhong and for the school at Vermillion Lake. These dwellings were very much needed. They serve to relieve the teachers from many discomforts attending a residence in a school building. The condition of the pupils is also improved by the consequent enlargement of the schoolroom.

The following table shows the number of persons of school age on the several reserves of this agency, the number enrolled in the schools, the average attendance for the year and for the last quarter of the year:

Name of reservation.	Number enrolled in schools.	Average attendance for year.	Persons of school age.	Average attendance for last quarter of year.
Lac Courte d'Orielles.....	162	83	319	93
Vermillion Lake.....	86	37	169	35
Fond du Lac.....	80	38	220	43
Lac du Flambeau.....	73	28	143	37
Bad River.....	144	70	136	97
Red Cliff.....	52	35	170	32
Grand Portage.....	30	8	79	(*)
Total.....	627	305	1,236	337

\* No school during last quarter.

**Missionary work.**—The work of the Christian missionary is being prosecuted with an encouraging degree of success on all these reserves. On six of the reserves the Catholic Church has erected chapels, and religious exercises are held in them at stated intervals. The Presbyterian Church maintains three missionaries on as many reserves. During the past year it established a mission among the Boise Fortes, and is making excellent progress among these people, who have hitherto adhered resolutely to their pagan superstitions.

**Claims.**—It is claimed by these people that there is due to them under the provisions of the treaty of 1854 about \$120,000, and that a still larger amount is due to them under treaties of an earlier date. These claims should be investigated at the earliest date practicable, and if it is determined that the Indians are entitled to arrearages under old treaties, the sums due should be paid to them. If it should be found that the claims are imaginary the Indians should be so informed. The Indians waste a great deal of time in the discussion of these old claims. Controversies on these tribal matters serve to perpetuate the influence of the so-called chiefs, many of whom are opposed to all progress and civilization. The fact that these claims are outstanding affects injuriously the industry of these people. They are anticipating settlement and payment and neglect the work they have at home. The Indian is more disposed to wait than to work. The best interests of these Indians would be subserved by the final settlement of all the old claims against the Government.

**Highways.**—These reserves are not yet provided with public roads. There is

No law governing the location of highways over them. It has heretofore been recommended that the local road laws be extended over the reserves. If the authority to procure the right of way and to construct public roads across the reserves were conferred upon the local State or county officers roads would soon be provided. In some cases such roads have become a matter of necessity to connect white settlements and they would be promptly built if a way were provided to establish them legally.

The Indians are beginning to perceive the necessity for public roads, but they have not the means to construct them. The Indians at Fond du Lac, appreciating the necessity for a road across their lands, have requested the Department allow them to expend for this purpose \$400 of the money coming to them for right of way of the Duluth and Winnipeg Railroad. The action of these Indians demonstrates the marked progress they have made in the way of civilization.

Public roads are indispensable in the settlement of any country. These Indians can make but little use of their lands until roads are provided. In the summer season the greater portion of this country within and without the reserve is inaccessible except over roads constructed at large expense. The country is covered with timber, broken with swamps, rivers, and creeks, and in its natural condition traversable only on foot. In his wild state the Indian utilized the streams and lakes as avenues of communication, but these are of very little use to him in his civilized condition. He needs roads and must have them in order to improve the lands which the Government is setting apart for his use. The road laws of the State should be extended over the reserves.

**Railroads.**—The Northern Pacific Railroad runs across the southern border of the Fond du Lac Reservation for about 12 miles, and occupies a strip of land 200 feet in width. The Indians claim that they have never received any compensation for the right of way taken and used by this railroad corporation across their lands. This claim should be investigated, and if there is any compensation due to the Indians for right of way it should be paid to them. On the other hand, if the claim has no foundation they should be so advised.

During the past year arrangements have been made with the Red Cliff Indians in the State of Wisconsin for the right of way of the Bayfield Transfer Railway Company along the lake front of said reservation. The contracts for this right of way have received the approval of the Department.

The Duluth, South Shore and Atlantic Railroad was constructed across the southern border of the Bad River Reservation five years ago, and the Indians and the railway company have not yet been able to agree upon the compensation for the right of way. Compensation for the right of way has recently been the subject of negotiations between the Indians and the railway authorities, and it is probable that this vexed question will soon be settled in a manner satisfactory to all concerned.

**Policemen.**—During the past year 13 policemen have been employed on these several reservations. These policemen have been distributed as follows: 1 at Bad River, 3 at Lac Court d'Oreilles, 3 at Lac du Flambeau, 3 at Fond du Lac, and 3 at Vermillion Lake.

The police have performed excellent service in preventing the introduction of whisky upon the reserves. As a rule the Indians are peaceable and law-abiding, but when under the influence of intoxicating liquor they are liable to become violent and dangerous. By excluding liquor from the reserves the tranquillity of the community is assured.

**Courts of Indian offenses** have not been introduced into this agency. The rights of the Indians are determined by the State and national courts. Crimes and misdemeanors are punished in the local courts. The Indians holding allotments understand that they have a right to appeal to the courts for the settlement of personal and property rights, and they act accordingly.

**Cash Annuity.**—The first annual payment provided by the treaty of 1889 was made to the Minnesota Chippewas in the autumn of 1890. The payment due in the fall of 1891 was unavoidably delayed and was not made until the winter of 1892.

These payments should be completed by the 15th of October. The Grand Portage reserve can be reached only by boat, and the navigation of Lake Superior late in the fall is both difficult and dangerous. The payment to the Boise Fortes should be made by the middle of October or postponed until the winter roads are opened. Payment in the early fall is desirable, as it is then much more convenient for the Indians to congregate at the place of payment. Payment in winter is attended with more or less hardships and suffering from the intense cold of this region and should be avoided if possible.

All these people have received their cash annuity except a band of the Boise Fortes living on the Deer Lake Reservation and another band living near Nett Lake. The Deer Lake band has not received any of the payments due under the treaty, nor has it assigned any reason for its failure to appear and accept payment.

The Nett Lake Indians failed to appear at Pelican Lake last February to receive its share of the annuity, claiming that it is entitled to payment at Nett Lake. Under the order of the Indian Office, I offered them their pay at Pelican Lake on the 11th of June. A number of the leading Indians appeared but refused to accept the money until it should be tendered to them at Nett Lake. They claim that the treaty of 1889 provided for payment at Nett Lake. This claim does not, however, appear to be sustained by the terms of the treaty.

**Conclusion.**—On a general survey of the situation it appears that the art of agriculture has made commendable progress among these people, and a livelier interest has been manifested in the education of their children in the schools. In the lines of civilized industry they have developed a degree of interest hitherto unknown among them.

The prospect is decidedly encouraging to those who desire to see these Indians relieved from the further guardianship of the National Government, the autonomy of the tribe destroyed, the individuals invested with all civil and political rights, and absorbed in the community as citizens by the State and National Government.

The foregoing is respectfully submitted.

M. A. LEAHY,  
*U. S. Indian Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF AGENT IN WYOMING.

### REPORT OF SHOSHONE AGENCY.

SHOSHONE AGENCY, WYO.,

*August 24, 1892.*

**SIR:** In compliance with office instructions I have the honor to submit my third annual report of the condition of the affairs of this agency. Nothing of an unusual nature has passed during the year. The Indians have been contented and more inclined to work and improve their ranches. They did not get any seed last spring, and as a consequence have only a small acreage of grain and garden vegetables planted. Some bought seed with their own funds, and their grain and vegetables are looking well.

**Industries.**—By authority of the War Department the post quartermaster at Fort Washakie was authorized to purchase in open market, in all 1,600 cords of wood from the Indians; which amount they have now delivered, receiving \$5 per cord in pole lengths. They also delivered at this agency and school 125 cords at the same price, the delivery being completed in one day. They have also delivered at Fort Washakie 250 tons of hay, for which they were paid \$10 per ton, and 30 tons for the agency, for which they received the same price, and have considerable hay left which they are putting up for their own use. In addition to this they have freighted their flour, 340,000 pounds, from Lander, distant 15 miles, for which they were paid 15 cents per 100 pounds, making a total earned by them of \$12,275. The principal part of this work was done since the 1st of June.

This money received by them for wood, hay, and freighting flour, enables them to supply themselves with many of the necessities of life which under other circumstances they could not have done. Were it possible to have the Indian freight forwarded to the railroad stations of Casper or Rawlins as early as the grass is sufficiently grown in the spring to support their horses they would freight it all to the agency before the close of the season in the fall. I earnestly recommend that this be done and the freight given them next year.

**School.**—The Government school at this agency has been successfully managed by Superintendents Roberts and Lovejoy. Mr. Roberts, on account of the health of his family, felt it to be his duty to resign the position of superintendent, which he did on the 14th of October, 1891, after getting the school in good shape. Dr.

Lovejoy assumed the duties of his position on October 15, 1891, and carried it forward very successfully the remainder of the year. Unfortunately during the latter part of May diphtheria made its appearance among the pupils, and the first case proved fatal on the seventh day after the child was taken sick. The school was temporarily closed, and every precaution was taken to prevent the spread of the disease. There were six other cases, all of which I am pleased to say recovered.

Arrangements had been perfected to reopen the school on June 13, when one of Dr. Lovejoy's little boys was taken ill with the disease, and by the advice of the agency physician and the post surgeon at Fort Washakie, the reopening of the school was again deferred, and the annual vacation being close at hand it was not again opened. The school building has been thoroughly cleansed and the interior whitewashed, using corrosive sublimate, carbolic acid, and salt in the whitewash as a precaution against diphtheria; yet the old building is musty and damp and should be abandoned for school purposes as soon as possible.

The Indian pupils made good progress in their studies and schoolroom exercises and in their industrial training. The boys have taken interest in their outdoor work; the girls have assisted in cooking, laundry work, and in the sewing room. The most difficult obstacle to overcome is that of inducing them to speak English. It may appear strange, yet it is nevertheless true there is a larger percentage of the pupils that can read English plainly and distinctly than there is that can or do speak the English language.

The school employes have all taken deep interest in their work; they have been harmonious and agreeable to each other and readily obeyed the orders given by the superintendent. The showing would have been better had it not been for the drawback caused by the appearance of diphtheria.

The construction of the three new brick school buildings is progressing very favorably at present; the brickwork of the school building is completed and the roof is being put on. The first story of the brick is laid on the boys' dormitory and will be completed in a short time. All the material needed for carrying the work forward is on the ground. The boilers for the steam-heating apparatus and other fixtures are on the road and will arrive in a short time. The boilers will then be placed in the girls' dormitory, which has been prepared to receive them. The girls' dormitory will then be completed as soon as possible consistent with good workmanship. The material used in the construction of these buildings is all first class and the work is well done.

The St. Stephen's Roman Catholic Mission School has been conducted more to my satisfaction during the past fiscal year than the year previous; still, a disturbing element existed that kept the school from attaining the success that it would have otherwise attained. This disturbing element has been removed and the school will be more satisfactorily conducted in the future.

The agency physician, Dr. F. H. Welty, has furnished me the following data showing births, deaths, and cases treated and in what months la grippe and diphtheria prevailed:

	Births.		Deaths.	Number of cases treated per month.
	Male.	Female.		
1891.				
July.....				68
August.....	3	2	4	59

\* La grippe prevailed.

† Only three cases remained in April.

‡ Six cases of diphtheria, one fatal.

There are many minor cases of which no report has been made. The prevailing diseases resulting in death are consumption and scrofula.

**Buildings.**—The agency employes' houses are sadly in need of repair. These buildings should be sided and new doors, windows, and floors put in. The roofs are in very bad repair, leaking badly even when a very light rain is falling, damaging the plastering and causing dampness throughout the buildings. They should be reroofed with tin or metal slating, from the fact that the roofs are so flat that wooden shingles (with which they are now covered) would not last but a short time without leaking.

The roof of the stone warehouse is faulty, leaking in many places. The old shingles have warped and are shrunken badly, and much dust passes in during high winds and dust storms so as to cover the goods and boxes with dust, making them very disagreeable to handle. This building should also be covered with tin or slate-metal roofing.

The blacksmith shop is in good repair; though small it is convenient and well lighted. The sawmill is in running order. It has been supplied with a new carriage track and otherwise improved. A sawyer is needed for a part of the year. The Indians would get in logs and shingle stuff provided they could get them sawed up.

The slaughterhouse and cattle corrals are in first-class order, the latter being commodious and strong. The wildest range cattle are easily held in it.

The new barn and hay shed combined, 30 by 100 feet, and shed for agricultural implements, 30 by 100 feet, located 140 feet distant from the barn with stockade 10 feet high between the two buildings, are now completed in good shape. The exterior and shingle roofs have been given a coat of mineral paint to protect them from the weather, and adds much to their appearance and neatness. The barn is provided with strong stalls and mangers for 14 horses. A floor of matched lumber is laid over the stable, giving a large, commodious granary, 30 by 30 feet, where feed can be securely kept. The gates of the stockades and doors of the barn are strong, and the entire structure can be locked up, securing safety for all articles placed therein. The fences surrounding have been reset and provided with strong, substantial gates. The school fences have been repaired and no trouble has been experienced from trespassing stock this season.

The construction of the four new buildings for the Arapaho issue station is progressing very favorably. The stone foundations are all completed. The blacksmith and carpenter shops are roofed in and the slaughterhouse is being pushed forward and will shortly be inclosed. Then the woodwork of the warehouse will be commenced; the material is nearly all on the ground. These buildings are advantageously located and will when completed be very convenient; the workmanship has been well done.

I would respectfully call your attention to the fact that an appropriation is absolutely needed for the erection of a new building for an office, to secure safety for the books and papers; the room at present occupied is small and inconvenient, being 9½ by 18 feet. The dispensary is in a small room in the same building, and is very insecure and liable to take fire at any time.

**Population.**—The number of Indians of both tribes located on this reservation, as per census completed June 30, 1892, is as follows:

Whole number of both tribes	1,719
Shoshones: Males 436; females 454	890
Arapahoes: Males 394; females 435	829
<hr/>	
School age:	
Shoshones: Males 124; females 123	247
Arapahoes: Males 124; females 120	244
<hr/>	
Total of school age	491
<hr/>	
Shoshones:	
Males over 18 years of age	241
Females over 14 years of age	284
Arapahoes:	
Males over 18 years of age	185
Females over 14 years of age	285

**Crime.**—There has not been so much of horse and cattle thieving going on this past summer as was formerly done. There were some cattle branded in advance of the round-up this spring, but no owner could be found to claim the brand. The

parties suspected of being engaged in this business have all been ordered to leave the reservation and those who do return are very sly and are seldom seen.

Whisky-selling to Indians has been carried on by white men to an alarming extent. On the 5th of November last, on the North Fork of the Popoagie River and within the limits of the reserve, a Shoshone Indian named Poe-he-wah, while drunk, shot and instantly killed another Shoshone named Par-mo-ditse and tried to kill other Indians, who disarmed him. He then fled to Fort Hall Agency, where he was apprehended by Agent Fisher, was brought back to this State, given a preliminary examination, and confined in the Laramie County jail at Cheyenne. At the April term of the United States court held at Cheyenne the grand jury found a bill of indictment against him for murder in the first degree. He secured a continuance until the November term, 1892, and is now confined in jail.

At the April term of the same court four parties, two of whom were colored, were sentenced, three of them to one year's imprisonment each; the other, a boy, was sentenced to 90 days' imprisonment in the Laramie County jail; another party secured a continuance until the November term and was released on bond. Indictments were also found against other parties, two of which fled the country and will probably not again return. Convictions were secured in each case that was tried. Due credit for working up these cases is hereby given the members of the Indian police force.

Frequent complaints have reached this office that parties on Green River and tributaries distant about 60 miles from the agency are selling whisky to Indians, labeled lemon extract, Jamaica ginger, etc. I have frequently urged citizens to make complaint to the proper court and have the guilty parties punished, but can not induce them to do so, they fearing retaliation from the whisky-sellers. This is an inducement for the Indians to leave the reservation, which they would not do were this evil removed, which endangers the lives and property of innocent citizens.

The escaped murderer, George Wesaw, who killed the boy Dry Mouth, referred to in my last annual report, has not yet been recaptured, although a strict watch has been kept for him by the chief of police and the deputy United States marshal.

The judges of the court of Indian offenses of both tribes have been zealous, and have rendered good service in their way of adjusting matters of dispute between parties in their respective tribes. Their decisions have always been respected by the Indians. The court has been the means of relieving the agent of many annoyances.

The Indian police have performed their duties well in keeping order in their respective tribes. They have taken interest in trying to break up whisky-selling to Indians, and have rendered good service, considering the amount of money they receive for their labor.

The agency employés have discharged their duties satisfactorily. Their relations are agreeable and pleasant. They have done their work well, and have the confidence of the Indians generally.

Allow me to state, in conclusion, that during the past three years that I have been in charge here I have reasons to be proud of the improvements made at the agency. I desire to express my thanks to the honorable Commissioner and all connected with the Indian Office for the uniform courteous treatment shown me in official relations, and desire a continuance of the same.

Very respectfully, your obedient servant,

JOHN FOSHER,  
U. S. Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF SUPERINTENDENT OF SHOSHONE BOARDING SCHOOL.

WIND RIVER INDIAN SCHOOL,  
Shoshone Agency, Wyo., August 15, 1892.

SIR: I herewith tender to you my first annual report of Wind River boarding school. On the 15th of October last I took charge, vice the Rev. John Roberts, resigned, he having been intimately connected with Indian educational work since the first establishment of schools among the Shoshones and Northern Arapahoes at this agency. The principal reason for his resignation was the ill health of a little daughter, no doubt caused by the very bad sanitary condition of the present school building, whose hygienic conditions are the worst I have met with in an experience of seventeen years as a teacher.

During the winter just past the health of the Indian children in school was very good, a result I attribute, first, to the rigid enforcement of the wearing of warm flannel next to the skin (a thing most Indian children dislike very much to do); and second, to a dining room well supplied with thoroughly cooked, healthy, digestible food. I strongly advocate the idea that the

cooking department of all boarding schools should be in the hands of an efficient lady cook, and especially should this be the case in schools where little Indian girls are being educated.

The average daily attendance during the time school was in session was very good, but I think the standard should be much higher than it has been during the past year. The parents have often come and asked that their children might go home, giving generally as a reason the plea of sickness, either of the child or some relative at home, and we often gave a ticket of leave of absence. But from past experience I believe now the child should be retained in school in all save very exceptional cases; for where there is irregular attendance advancement is an impossibility, and the granting of leaves of absence has a tendency to bring discontentment into the school.

It has been asserted that the growth of an Indian child stops when it is confined in school. My experience so far shows differently; during the past year those children whose attendance was most perfect made as rapid strides in growth and were fully as healthy as any on the reservation.

So far we have made no changes in the daily work, our object being if possible to keep the condition of the school up to the standard to which it had been raised by our predecessor.

The advancement made in all the departments was very satisfactory until the unfortunate breaking out of diphtheria in the latter part of May, when the school was peremptorily closed. The employes as a rule have been very thorough, efficient workers, carrying on their various departments in a most commendable and praiseworthy manner.

The industrial work on the school farm was practically through before we came in charge last fall, but under the management of the teacher, Mr. E. C. Major, it could not have been otherwise than excellent.

The completion of the newschool buildings now in process of erection and the removal of the school thereto will be hailed with delight by the Indian children, and with heartfelt thanks by all the employes of the force, who stand in constant dread of spending another winter in the old, disease-laden adobe building.

Thanking you sincerely for the aid and assistance you have given me while commencing so important a work as Indian instruction.

I remain, dear sir, very respectfully, yours,

JOHN FOSHER,  
*U. S. Indian Agent.*

WALTER LOVEJOY, M. D.,  
*Superintendent.*

## REPORT OF SUPERINTENDENT OF INDIAN SCHOOLS.

IN THE FIELD, *August 16, 1892.*

SIR: I have the honor to submit herewith my fourth annual report. As in previous years, I have followed out the wishes of the Office by continuing in the field, inspecting the schools at remote points. On my present tour, since February 15, I have visited Fort Yuma, Cal., Pima, Phoenix, Colorado River, Fort Mojave, Williams (the nearest point to the Supai in the winter), the Moqui and Fort Defiance, in Arizona; and the three boarding schools in Santa Fé, one at Bernalillo, and one at Albuquerque, the Mescalero and Jicarilla Apaches, and eighteen of the nineteen Pueblos, in New Mexico.

As in my previous reports, and in accordance with instructions from the Department, in addition to inspecting the schools, the school force, etc., I have studied the environments, the moral and social condition of the agencies, the indications of progress among the Indian tribes, the evils militating against their advancement in civilization, and what can be done to promote their welfare.

Early in April, I received the following letter of specific instructions from your office:

WASHINGTON, *March 31, 1892.*

SIR: \* \* \* I write to ask that you will make a critical, comprehensive, and, so far as practicable, exhaustive study of the situation in New Mexico among the Pueblo Indians, something after the manner of your investigations among the Dakota Sioux.

I inclose for your information a tabular statement. \* \* \* After you have made a study of the situation, I would be glad to have you submit to me, along with the specific facts upon which you base your conclusions, your generalizations on the following points among others:

First. The general condition—moral, intellectual, economic, social, and political—of the Indians.

Second. The present facilities for education.

Third. Recommendations as to the immediate future.

(a) How can their present schools be improved?

(b) Should there be any new schools established? If so, where?

(c) How can the attendance be increased?

(d) What hindrances are there in the way of the successful progress of the Government schools?

(e) Is it desirable to place any considerable number of these Pueblo Indians in schools outside of the Territory? If so, where?

Fourth. Of course I should be glad for you to submit detailed reports in reference to each of the schools, Government and contract, which you visit; and I think it would be best to make those reports first, and then, as a summary of your observations, make the report to which I have referred above.

In your report upon the individual boarding schools, I would be glad to have your views, particularly with reference to the present facilities for industrial training, and suggestions from you as to any improvement, either in kind, number, or quality of the industrial education.

I regard the present condition of the New Mexico Indians as particularly interest-

## REPORT OF SUPERINTENDENT OF INDIAN SCHOOLS

ing, owing to the fact that, while they are not recognized as citizens of States, they have by some courts been declared to be such, and they are under the control of the Indian Office as to enable it to put into operation benefit, the law of compulsory attendance. It must, therefore, depend upon persuasion for increasing the attendance at the schools.

Very respectfully,

T. J. MORRIS  
Com.

DR. DANIEL DORCHESTER,  
*Superintendent of Indian Schools, Gallup, N. Mex.*

It is my purpose to comprise in this report:

First. Results of my investigations in New Mexico, in accordance with office letter of March 31.

Second. A similar exhibit of results relating to Arizona.

Third. Important phases of the Indian problem.

### NEW MEXICO.

New Mexico comprises the Mescalero and Jicarilla Apache and the Pueblo Indians. Fort Defiance, the agency headquarters of the Navajo reservation, being in Arizona, the Navajoes will be treated as a part of that Territory. There are some other scattering Indian Navajoes, long separated from the tribe, and a few Pueblos, no longer identified with any village—of whom there are not many and who are too few in number to be an appreciable quantity.

### PUEBLOS.

**History.**—The historical status of the Pueblos is a matter of considerable importance. The theory that the Spanish adventurers discovered the Pueblos of New Mexico a wild and barbarous race, and that they reduced them to subjection, placed them in villages, and taught them the arts of civilized life, does not accord with the best evidence. On the other hand, it is indisputable that the Pueblo Indians, when the Spanish army first appeared in New Mexico, were a peaceful and industrious people, living by the cultivation of the soil. They were living in villages often located upon high, rocky bluffs, for protection against wild, warlike tribes. Many are the historic evidences of their villages, localities, habits, and pursuits of this people are substantially the same as when first discovered by Europeans. They were brought them under subjection, treated them with cruelty, introduced the Roman Catholic religion among them, and introduced a few elements of civilization. These kind and peaceable people became victims of Spanish cupidity and despotism. The cruel domination of the Spaniards and the meek obedience of the Pueblo Indians continued till 1670, when the latter rebelled against their masters and expelled them from New Mexico. Eighteen years later the Spaniards appeared with sufficient force to subdue and chastise them. A few years subsequent, the conquerors executed to the various legal titles to their lands.

For centuries these people have lived in fixed communities, each with its own municipal government; and since the Spanish conquest they have had a Roman Catholic church, with its forms of worship and a priest as their spiritual adviser. Recently this church has become somewhat, and in some of the Pueblos it has ceased to have influence. During immemorial periods, this primitive people maintained

## REPORT OF SUPERINTENDENT OF INDIAN SCHOOLS.

their blankets, clothing, agricultural and culinary implements. Taking of many elements peculiar to civilized nations, they are less Indians in features, hair, habits, and complexion. In complexion, they are in striking contrast with all the Indians of the region, though living on the same parallel of latitude. The Pimas, Papagos, Apaches, Mohaves, and Yumas are exceptionally the darkest of the American Indians; but the Pueblo Indians, like those of the Colorado and Salt Sound regions, have a decidedly Mongolian complexion. The mysteries of the Pueblo people have never been unveiled. A peculiar and curious interest centers in them. Their ancestors are supposed to have built, in some indefinite past period, the solid structures the ruins of which, like those of Casa Grande, Arizona, are scattered here and there. Ethnologists also have attempted to identify the Pueblo Indians with the cave dwellers of the regions a little to the west, the pottery of those caves having a remarkable resemblance made by this peaceable people. They are presumed to have been built for shelter from savage intruders. These ancient people are often referred to as Montezumas, whose followers they claim to be, extending south into Chihuahua and west into Arizona. They are evidently, at one time, advanced in arts and sciences beyond any other American Indians, though of late retrograding. Once they had a complete system of government, a fragment of which remains. Their political system of government have disappeared. The remains of ancient ditches and a system of irrigation before the days of our fathers, and they were an agricultural people, with flocks of sheep and goats, and herds of horses and cattle, attended by *pastores*, who drive the flocks in the morning and return in the evening. The pueblos are located 250 miles up and down the valley of the Rio Grande, and extend west of Albuquerque along the line of the Atlantic and Pacific Railroad, as far as Zuni, on the border of Arizona. The dialects of the villages differ much, though confined chiefly to the Rio Grande pueblos speaking the Tequa, others the Tano, and others

The pueblos are bodies corporate. The patent of the land is held by the pueblo as an incorporated community. There is much individual property in most of the pueblos, and there are cases of very large estates in some villages.

The history of this pueblo people certainly dates back beyond the time of Coronado to New Mexico. Mr. A. de F. Bandelier has identified 97 pueblos, as existing about the year A. D. 1600 in New Mexico and Arizona, 50 of them in the valley of the Rio Grande and the Colorado, with a probable population of 30,000, just before the reconquest of 1680. He thinks that at a later period, as a protection against the Navajoes and Apaches, the Pueblos built their larger communities. Since the time of the conquest, they seem to have been increasing in numbers, though perhaps the statistics of former periods are quite reliable. The best data collated by those who have written Pueblo history, show variable estimates of the population.

In the seventeenth century, the policy of consolidating these pueblos was adopted, which brought together small adjacent groups into a central village, where there were a church, a priest, and local civic authorities.

From 1680 to 1696 the work of reduction and consolidation proceeded forward rapidly. In 1742 the list of the pueblos in New Mexico stood as it now stands, except that Pecos and Galisteo have become detached and Sandia was added in 1748.

**Statistics of population.**—These are largely estimates, the Pueblos looking with much suspicion and superstition upon any attempts at enumeration. The “dumb secrecy of the red men” baffles the census taker. They look upon the knight of the pen, ink and book as a sagamore who has come to question them with evil intent; and they secrete their children and confuse their questioner. Quite recently the figures have been more definite and exact. Infectious diseases play fearful havoc in the ill-ventilated pueblo houses, from which the germs of smallpox, measles, etc., can not be expelled. Close intermarriage is another cause of decline in numbers, both together leading to a gradual diminution of the population.

The following are the most available figures of the total population of the pueblos since 1600. The figures for that year and for 1660 probably embrace the Moqui.

Year.	Population	Authority.
1600.....	30,000	A. de F. Bandelier.
1660.....	23,000	Do.
1796.....	9,453	Franciscan missionaries.
1798.....	9,732	Do.
1805.....	8,172	Governor Alencaster.
1840.....	10,000	Ladd's History of New Mexico.
1846.....	8,000	Do.
1858.....	8,000	Surveyor-general of New Mexico.
1869.....	8,000	Chief Justice Watts.
1870.....	7,683	Gen. E. A. Walker.
1874.....	10,905	Hon. E. P. Smith, Commissioner Indian Affairs.
1874.....	9,500	Superintendent of Indians in New Mexico.
1889.....	7,683	Commissioner's Report, 1880.
1885.....	7,762	Commissioner J. H. Oberly.
1890.....	8,285	Report of Commissioner of Indian Affairs.

The population by pueblos is as follows:

Name.	1805.	1890.
Taos.....	508	382
Picuris.....	205	91
San Juan.....	194	374
Santa Clara.....	186	204
San Ildefonso.....	175	151
Nambe.....	143	*86
Pojoaque.....	100	†19
Tesuque.....	131	102
Cochiti.....	656	285
Santo Domingo.....	333	969
San Felipe.....	289	499
Sandia.....	314	145
Jemez.....	264	483
Zia.....	254	110
Santa Ana.....	450	271
Isleta.....	419	1,007
Acoma.....	731	597
Laguna.....	940	963
Zuñi.....	1,470	1,547
Total.....	7,807	8,285

\*The very latest figures are 70.

†The very latest figures are 14.

Lands held by Pueblo Indians in New Mexico are given in the table below. The figures usually given are 906,845 acres. It is possible that some portions have been sold, but these figures are taken from the report of the United States Land Office, for 1880. Allowing the population to be 8,000, here are 134 acres plus, for each individual.

Much of it is fit only for pasture, and some is wholly waste land, but rich, fertile, well-watered valleys are extensive:

Name.	Date of grant by Spain.	Date of confirmation by United States.	Number of acres.	When patented.
Jemez .....	1689	1858	17, 510. 45	1864
Acoma .....	1689	1858	95, 791. 66	1877
San Juan .....	1689	1858	17, 544. 77	1864
Picuris .....	1689	1858	17, 460. 69	1864
San Felipe .....	1689	1858	34, 763. 86	1864
Cochiti .....	1689	1858	24, 256. 50	1864
Santo Domingo .....	1689	1858	74, 743. 11	1864
Taos .....	1689	1858	17, 360. 55	1864
Santa Clara .....	1689	1858	17, 368. 52	1864
Tesuque .....	1689	1858	17, 471. 12	1864
San Ildefonso .....	1689	1858	17, 292. 64	1864
Pojoaque .....	1689	1858	13, 520. 38	1864
Zia .....	1689	1858	17, 514. 63	1864
Sandia .....	1748	1858	24, 187. 29	1864

Laguna .....	1689	(?)	125, 225. 18	1864
Santa Ana .....	1689	1876	17, 581. 25	(?)
Zuñi .....	1689	(?)	215, 040. 00	(?)
Zia, Jemez, and Santa Ana .....	1766	(?)	*382, 849. 00	(?)
Total .....			1, 056, 211. 24	

\* Held jointly by these pueblos.

These Pueblo grants are widely separated. Taos, the most northerly, is 85 miles northeast of Santa Fé and 355 miles from Zuñi. Laguna is 160 miles southwest from Santa Fé, and Jemez is 60 miles west, and Isleta is 97 miles south. They are all, save Zuñi and Acoma, in the valley of the Rio Grande and its tributaries, occupying much of the best land in New Mexico, with large facilities for irrigation.

**Joint tenement houses.**—The architecture of the pueblos is peculiar. The material of which their houses are made is adobe or stone, laid in adobe mortar, seldom hewn or matched stones. Bandlerer very aptly describes their houses as a "honeycombed, communal, agglomeration of many-storied dwellings, with the stories retreating like steps of a staircase, from the bottom to the top." Formerly there was no entrance to the first story, except by ascending a ladder, and descending another ladder through a hole in the roof. Nor were there any windows, until, after the price of glass was reduced, the people learned its use.

In those days, instead of a wooden door with hinges, there was a robe or mat hung in the open doorway. Now, with a sense of security not formerly enjoyed, there are numerous entrances on the ground floor; but the antique wall ladder still helps to reach the upper stories. The pueblos are not as many-storied as formerly, generally only one or two, except Zuni and Taos, which have four or five stories. The rooms are also larger than in former times.

The roofs are covered with logs, reeds, brush, and hay, and then with a layer of mud, which usually hardens and becomes waterproof, but often needs repairs. The floors are constructed of beaten earth "slicked over" with soft mortar. The interior of each apartment is roughly plastered with clay mortar, and whitewashed with calcined gypsum. The women do this work, often with their hands. These communal houses are located at some point within the pueblo grant, convenient to water; and the lands for cultivation and for pasture are widely extended around the village.

It is the current opinion of men for a long time familiar with these people, that during the last quarter of a century they have not increased in numbers. About forty years ago there were 22 pueblos. Three have disappeared entirely; 1 of the remaining 19, Pojoaque, had only 14 inhabitants at the time of my visit, and two others less than 200. The Pueblo mothers are said to be fertile in offspring, but many children die in tender years. The people as a whole impress me as not being very strong physically. The old adobe houses, ill ventilated, and occupied continuously for centuries, must be very unhealthy. Measles, diphtheria, and small-pox sweep off many each year, and leave self-perpetuating germs in the miserable dwellings.

It is impossible to forecast the future of this people, if they are permitted to remain in these oldtime abodes, constructed, with such radical disregard of vital hygienic conditions. Could they be moved out, into houses erected on severalty allotments, their future prospects would doubtless be enhanced. Dynamite would perform a benevolent work if applied under these old pueblos, unless our antiquarians and ethnologists too strongly insist upon preserving and setting apart some of them, as curious relics and reminders of the olden times. If the pueblos were simply villages like American villages, the case would be different; instead of that, they are a conglomeration of abodes built directly against, and in numerous cases over, each other, with few windows, sometimes none.

**Character of the people.**—Governor Prince (History of New Mexico, p. 39) describes this people as “industrious, frugal, honest, and hospitable.” Mrs. Lew Wallace says:

As a class the Pueblos are the most industrious, useful, and orderly people on the frontier, at peace with each other and the surrounding Mexicans. They raise large crops of grain, plowing with a crooked stick, the Oriental implements in the days of Moses, and frequently stirring the soil with a rude hoe, for where irrigation is necessary, constant work is required.

Prof. Ladd (Story of New Mexico, p. 210) says:

The Pueblo people, in comparison with other Indians, are very interesting to observers. They are generally finely formed and of noble appearance. In stature their height is medium, their bodies muscular, and their chest large. \* \* \* They are very hospitable and courteous to strangers, with a gracious speech to their guests.

Agriculture was and is the chief reliance. It was carried on in a very primitive way; the soft, rich soil of the valleys was cultivated with a large hoe and a wooden plow—a section of a tree, 2 feet long, pointed at one end, running flat like a shovel-plow, and guided by a projecting branch for a handle. Not a particle of iron was used in the construction of these plows or of the great lumbering *carretas*, or Mexican ox-carts, whose wheels were made of sections of great trees, supported by rude axles which creaked hideously under their loads. (Ladd, p. 233.)

It is of this people, with their large landed interests, granted by Spain, confirmed by the Mexican Republic, and reconfirmed by the United States, with rites, institutions, and peculiarities which have survived three modern governments, of whose relations to modern progress and to the laws and Government of the United States I am to write. The education and civilization of this people are questions closely tied up with their old-time institutions and customs, hitherto warring sharply against the ideals of advancement cherished in our times.

Our enterprising ethnologists, enthusiastically studying the Pueblo people from the standpoint of archæology, have expressed great interest in their quaint primeval types. Prof. John Fisk (Introduction to “The Song of the Ancient People,” by Edna Dean Proctor) says:

The Pueblo Indians of New Mexico and Arizona are still surviving examples of this advanced aboriginal society. \* \* \* Of the Pueblo Indians the principal surviving

groups are those of the Rio Grande Valley, the Zuñis of New Mexico, and the Moquis (or Hopi) of Arizona. \* \* \* In many respects the Zuñis are the most characteristic and interesting of all. But the Pueblos least modified by contact with white men are surely those of the Moquis. \* \* \* Few Americans realize how highly our country is favored in having within its limits such communities as those of the Moquis and Zuñis. Our land is certainly lacking in such features of human interest as the ruins of mediæval castles and Grecian temples. But we may be to some extent consoled when we reflect that within our broad domains we have surviving remnants of a state of society so old-fashioned as to make that of the Book of Genesis seem modern by comparison.

I raise no issue with the ethnologists; but it has been made my duty to study these peculiar people, under the direction of a paternal government, from the standpoint of education, civilization, etc., in the interest of progress.

#### INDIAN EDUCATION IN NEW MEXICO.

Far back in the colonial era the Franciscans taught the Pueblos simple industries, the use of tools, and some methods of agriculture; and they introduced a few domestic animals—the horse, cow, sheep, goat, etc. But the missionaries did not learn the Pueblo language, nor did they attempt to teach sciences. Hence little progress was made, nor were the Pueblo methods of cultivating the soil much changed. They are today, as agriculturists, substantially as the Franciscans found them.

In 1872 Gen. F. A. Walker said: "During the past two years efforts have been made for schools, and five schools have been conducted." In 1873 six schools were reported by the agent as in successful operation. In the first quarter of 1874 there were eight schools, with an enrollment of 298, average attendance 170. Agent Edwin C. Lewis reported "a fair improvement observable," but said "a central training school is much needed."

In 1874 Dr. Benjamin M. Thomas, the present Secretary of the Territorial government, a gentleman of the highest character and respectability, who had demonstrated his ability by three years' service among the Navajos and Southern Apaches, was appointed agent for the Pueblo Indians, which position he held for ten years. He states that he found three or four day-schools in the pueblos, and made vigorous efforts to establish others. He tried to establish an industrial branch in one, but failed. During his administration he went personally into all the pueblos again and again, attempting to establish schools, and the result was that in the ten years the day-schools ranged from three to seven, all Government schools. Dr. Thomas says: "There were no denominational schools until later. The teachers' salaries were \$720 annually. Only one school was continuous, the others running from one to four years each; and the number of pupils in each ranging from seven to twenty, rarely more. The Roman Catholics opposed the schools, the parents were indifferent, and early in the spring took away their boys to herd the cattle. When the children returned from these schools, the old fellows, as at this day, worked hard to pound out of them all they had learned."

The Presbyterians have been active in the educational work for the Pueblo Indians. Rev. John Menaul, M. D., at Laguna, Rev. M. Palmer, at Zuñi, and Rev. J. M. Shields, M. D., at Jemez, all began their labors before 1878, teaching in Government schools, until, at a later date, the contract system was introduced.

In 1878 the Indian agent reported the total number of pupils as 243, with an average attendance of 78.

The first Indian boarding school in the Territory was started in Albuquerque, June 1, 1881, under contract with Rev. Henry Kendall, D.D., secretary of Presbyterian Board of Home Missions. The school site was bought in 1882, in part a contribution of the citizens of Albuquerque. This school was subsequently bought by the United States Government, and had in the fiscal year 1892 an enrollment of 304 pupils.

In 1879 twenty-two Pueblo youths were received into St. Michael's College, Santa Fé; but the institution failed to receive Government support, and the young Indians were returned to their villages.

In 1885 an Indian boarding school was opened on the Mescalero Reservation.

The Ramona school was opened in 1885, as a department of the University of New Mexico, for Indian girls; but it has since been opened to both sexes.

In 1886 the Bernalillo school, under the Sisters of Loretto, entered the list, with two departments, boys and girls.

In 1887 the boys' department of the Bernalillo school was transferred to Santa Fé, and the St. Cathérine's boys' school was opened.

The same year the Presbyterians opened a boarding school for Indian youth of both sexes at Albuquerque, under Rev. Dr. Coltman, but this school was suspended in 1891.

In 1891 the Dawes Institute, a Government training school, was opened in Santa Fé, and now has 166 pupils.

Hon. John H. Oberly, in 1885, reported the following for New Mexico:—

	Enroll-ment.	Average attend-ance.
Pueblo Agency:		
Mescalero Boarding School .....	15	11
Albuquerque Boarding School .....	178	87
Ramona, at Santa Fé .....	67	33
Isleta Day School .....	37	15
Jemez Day School .....	76	24
Laguna Day School .....	76	27
San Juan Day School .....	35	5
Santa Clara School .....	24	11
Zufii School .....	56	31
Total .....	564	244

Since the above date these Indian schools of the Territory have more than doubled in number and attendance.

	Number schools.	Enroll-ment.	Average attend-ance.
1885 .....	9	564	244
1892 .....	20	1, 274	834
Increase .....	11	710	590

The following table will show the gain in detail:

\* Discontinued.

† Changed to St. Catharine's.

‡ Closed.

**New Mexican pupils in school.**—The preceding table shows the growth of attendance upon Indian schools in New Mexico; but it does not tell the whole story, or at least not as discriminatingly as is desired. In the Government boarding schools at Santa Fé and at Albuquerque are many pupils from Arizona; and many New Mexican pupils are in schools outside the Territory. Another exhibit will therefore be necessary to show how the work of education is going on in New Mexico, and particularly among the Pueblos.

*Children from Pueblos and other New Mexico tribes.*

	Pueblos.	Other tribes.
In day schools.....	505	.....
In boarding schools in New Mexico:

Total.....	949	155

Aggregate. 1,104.

\* Tame Navajoes.

† Jicarilla Apaches.

‡ Mescalero Apaches.

It has been said that there are in the New Mexico Indian Boarding Schools a large number of pupils from Arizona. The following table will show this class:

In Albuquerque Government School:		
Pinas.....		90
Papagoes.....		15
Hualpais.....		4
San Carlos Apaches.....		46
White Mountain Apaches.....		24
In Santa Fé Government school: San Carlos Apaches.....		39
In Ramona contract school: San Carlos Apaches.....		5
Total.....		223

The Indian School Population in New Mexico may be analyzed as follows:

	Total population.	Of school age.	Pupils.	
			In school.	Not in school.
Pueblos.....	8,285	1,624	949	675
Jicarilla Apaches.....	824	164	33	131
Mescalero Apaches.....	531	106	88	18
Total.....	9,640	1,894	1,070	824

Besides the above, there are scattered bands of the Navajo tribe, long separated and isolated, in various parts of the Territory, sometimes called "Tame Navajoes"; and 34 children of these are in the schools. But as the parents are not included in any of the above sta-

tistics of population, the children are not reckoned as counting in the above table.

There are in the Territory accommodations for 1,475 Indian pupils. Deducting the 1,070 pupils now in the schools, it shows accommodations for 405 more children; but in the 1,070 are the 123 pupils who are at schools outside the Territory, and therefore not using any accommodations in the New Mexico schools. Adding 123 to 405, we have 528 accommodations unused as yet, or room for 528 of the 824 children not now in any school. If we take out of the New Mexico schools the 223 Arizona pupils, we should have 528 plus 223 accommodations, or 751—enough room for all the New Mexico pupils of school age. It is probable, however, for reasons I need not dwell upon, that the Indian Office will think it wise to continue the policy of mixing in the schools the youth from various tribes.

Pursuing the question of school accommodations further, it is important that a weak point in the statistics for the day schools be noticed. By referring to the table, it will be seen that the enrollment very greatly exceeds the average attendance; and it is well known to those familiar with said schools, that the enrollment is only slight evidence of what is being done educationally. There is no means of enforcing regular attendance. Pupils come once, twice, or thrice a week as they please; sometimes they remain for half a day, sometimes for an hour or two, and then leave without let or hindrance. The teachers say they mark the pupils as present, if they are there at all during the day. There is absolutely no power to enforce attendance by teacher, parents, priests, or pueblo governor; and very few people in the village care to have the children educated. Most are opposed to schools.

Furthermore, in order to understand the degree in which the pueblo children are provided with school facilities, it will be necessary to look at some individual pueblos.

Zuñi, with 300 children of school age, has one school which will accommodate 75 pupils. Last year the enrollment was 21, with an average attendance of 12. Not a child from Zuñi is in any other school; and I could find no record of more than 4 who had ever been to an outside school (Carlisle), save 2 who went to Albuquerque and immediately ran home again.

Santo Domingo, with a school population of 190, has school accommodations for 50, with 30 enrolled in the local boys' day school, and 12 in St. Catharine's. Not a boy in any other school. Not a girl in any school anywhere.

Acoma, with a school population of 120, has accommodations for 50 pupils. In this local day school are 27 pupils enrolled, and in all outside schools there are only 10 more.

Sandia, close to Albuquerque, with a population of 28 children who should be pupils, has no school and only 10 pupils in the boarding schools.

Santa Ana, with 54 of school age, has no school and only 7 children in any boarding school.

Taos, with a school population of 80, has an enrollment of 38 in its local day school and only 12 in boarding schools.

San Ildefonso, with 30 children who should be in school, has no local school and only 10 in any school.

San Juan, with a school population of 75, has only 37 in its local school and 14 in other schools.

San Felipe, with 100 who should be students, has no local school (it once had one, see table) and only 13 of its children are now in school anywhere.

I need not specify further. Think of day schools with the following exhibits:

Enrolled.....18-29-30-86-30-26-53, etc.  
Average attendance..... 8- 8- 8-11-12-11-15, etc.

And these pupils all live within a half mile, mostly within a quarter of a mile, of the school. Some of the day-school teachers have often told me that they go after their pupils, morning and afternoon, to secure their attendance. Teachers in Government schools, in Presbyterian schools, and in Roman Catholic schools have all told me the same story; and yet these same schools have only a meager attendance.

Why is it?

First. There is no police power to put and keep children in day schools, as in the well-regulated agencies at Rosebud and Standing Rock, S. Dak.

Second. Pueblo children know nothing of discipline. Discipline is a thing unknown in the pueblos, except in enforcing pagan and tribal customs, which are all against education.

Third. The parents literally have no desire to see their children educated. Ofttimes, when these pueblos express a desire for a school in their village, what we mean by education has not once been in their minds; but their thoughts have been of some material advantage, in the form of perquisites, occasional gifts, etc., which might come from the school.

Fourth. There is, therefore, no latent sentiment for education, to sustain the school and help the attendance, but opposition.

It is not surprising that only meager results are gained. But even under such unfavorable circumstances, about one-third of the day schools I have found are good schools; and, under the circumstances, I could not find it in my heart to criticise the hard workers in about another third of these schools. Of the others I have no extenuation to offer. The best teachers are good object lessons in the midst of the penest pagan darkness.

The boarding schools are all doing much better work than the day schools, because their possibilities are much better; and, with one exception, they are all doing better than they were two years ago.

#### RECOMMENDATIONS.

What can be recommended?

First. The continuance of all existing schools. They are advanced outposts of civilization, and stand for progress. Like many other small beginnings, it is to be hoped that good will come out of them.

Second. That a day school for girls be established in the Santo Domingo pueblo. Let the day school for boys remain. I have elsewhere said that not a girl from this pueblo of 190 children of school age is in any school anywhere. I would send there two good women, for no woman ought to be in this pueblo alone, one of whom shall be an assistant, and teach sewing. Build for this school a house like those for day schools on the Rosebud Reservation, S. Dak. Two separate houses would not be as well here. These teachers might not succeed at once, but in time they would triumph. This post would need some of the best of women. Santo Domingo is only 2 miles from Wallace, a railroad station.

Third. Open another school at San Felipe. There was a school at this pueblo in 1886, '87, and '88, which had an average attendance rang-

ing from 10 to 40. Why it was discontinued I have never heard. Here are 100 children of school age.

Fourth. A day school should be opened at Acoma, in the center of the old pueblo. Here are a great number of children, 120 in the whole pueblo, of whom a small part are at Acoma, where a school is located.

Fifth. I would also make a move on Zuñi, hard though it is. Let Miss De Sette continue, but with enlarged possibilities, if possible. But start a bonded industrial school on a limited scale. Put in a superintendent who can do what is being done at Moqui, and start the old people on advanced lines of civilization. Such a superintendent will need the strong support of the Government, and should have powers similar to an Indian agent's. Here are 1,547 people, probably more, with a school population of 320, and only 21 enrolled in any school last year. None in schools outside the pueblo.

Sixth. I have thus recommended four new schools. This is no time for retreat. We should push on this work with a firm hand.

Seventh. The Department should require that the contract day schools of New Mexico be placed on a higher level. There should be a better class of teachers, a better supply of schoolbooks, maps, and blackboards. Kindergarten materials are of prime importance in day schools. There are some excellent teachers in contract day schools but others are of the poorest class that I have ever found, with low ideals, ragged clothing, and teaching in rooms anything but attractive. Indians are not likely to be improved by such instructors.

Eighth. In your letter you inquire—

Is it desirable to place any considerable number of these Pueblo Indians in schools outside of the Territory? If so, where?

I would have these pupils in schools inside the Territory, where their parents can come and see them and get some benefit from the schools for themselves, and where the pupils can go home every year, under suitable regulations. Of course, some might go to more remote eastern schools, but the majority of these pupils will do better nearer home. Eastern schools may teach the trades as well, though not better, than they are being taught at Albuquerque, and, we hope very soon, at Santa Fé; but eastern schools can never teach agriculture to New Mexican Pueblos, *i. e.*, an agriculture which will much improve upon their methods, in that peculiar field.

Ninth. I would have a Pueblo agent who will not be hampered with the Jicarillas. These Apaches are a tribe of 824 persons, and Dulce, their agency, is 224 miles northwest from Santa Fé, the headquarters of the Pueblo and Jicarilla agent. They should have an agent who can live with them and do more for them than one can do who has the nineteen Pueblos to look after. The farthest Zuni is 255 miles from Santa Fé, southwest. The Pueblos are enough for one agent, and he should be a man of nerve, who will push matters to the verge of his authority. It is hoped there may yet be legislation to help out this work of civilization among these dark centers.

Tenth. In the meantime, I would have the superintendents of Fisk and Dawes institutes, draw many more pupils from the pueblos into their schools. These great schools are primarily for the Pueblo Indians, and need not be filled from Arizona.

Eleventh. More should be done for the Jicarilla Apaches. They have 160 children of school age, of whom 33 have been at Dawes Institute during the past year. A portion of this tribe is off the reservation, in Mora county—perhaps 40 families—whether or not permanently absent, I do not know. But even these are not beyond reach. These

Apaches are too scattered for a day school, and they are very convenient to Fort Lewis, which has the same climatic conditions. I think the dislike to that school may yet be overcome. The Jicarilla Apaches are among the most virtuous Indians in the United States, though yet quite wild. They are very poor and live where self-support is a hard problem, yet all the white people around there desire their land. They have been grossly abused and neglected.

Twelfth. It is very important that the industrial work at Fisk and Dawes institutes be kept up to the maximum of their possibilities; and St. Catharine's school should develop lines of work in some useful industries. Simple machines for spinning and weaving, not expensive or elaborate, it would seem possible to find; and through these schools, spinning and weaving could be introduced into all the pueblos, and into the Navajo and Apache tribes. This would be a great achievement. I hope by due inquiry to find such machines.

#### DIFFICULTIES.

I have thus freely stated what seem to me to be the needs of Indian education in New Mexico at the present time. I am aware that it is comparatively an easy task to state them on paper, but during the time of writing there have pressed upon my mind some great difficulties which are in the way of the progress we desire.

In your letter of March 31 you ask—

What hindrances are there in the way of the successful progress of the Government schools?

This inquiry opens up the most important part of the discussion in the present paper.

The difficulties, as I apprehend them, are radical and inhere in the Pueblo genius, the Pueblo religion, and the Pueblo organism. When I speak of the Pueblo religion, I do not mean the influence which the Roman Catholic Church exerts in opposition to the Government schools. It is well known that there has been much of this, but it is confined to a few pueblos. In some of these, if there is anything of the kind, the influence is scarcely perceptible; and in others it has been waning yearly, until quite recently, when has been revived and intensified. Few Pueblo Indians are likely to champion the interests of any religious denomination very zealously, though possibly the hierarchy may at times skillfully manipulate some of them. The principal religion of the Pueblos is the darkest of superstitions, a pagan fetishism which controls the whole life.

The Roman Catholics have quite as much difficulty in getting pupils for their schools as have the Government or the Presbyterians. The main source of the difficulties, therefore, is in the peculiarities of the pueblo people, which will be more fully stated further on.

During my stay in New Mexico, I visited all the pueblos but one, Picuris, a small pueblo of 100 people, all of whose children are in school. During these visits, aided by an interpreter, I held interviews with the governors and *principales*. The audiences numbered from a half dozen to forty at a time, and the interviews continued from a half hour to three hours. These Indians were always courteous, and in some degree interested in the topics presented. I made many inquiries into pueblo matters, always avoiding questions pertaining to their native religion, upon which topic assurance had been given by those long acquainted with Pueblo Indians that they would be so reticent no satisfaction could be obtained.

These very peculiar people are slow to speak to outsiders about their native customs and history. They possess a sort of native shrewdness, but in small, narrow ways. They are dwarfed mentally, the result of centuries of indifference to the outside world. Not one in five hundred can read at all, and those very little. There is nothing stimulating in their dark paganism, but far the reverse. Their close, ill-ventilated homes, and a system of existence which allows of no ventilation of ideas, has stifled life and thought. Moreover, their social habits have sapped physical strength and mental energy, and made them a small, obtuse people. Though more industrious than the wild Indian, the Pueblo is no match, in acuteness and breadth of intellect, with the Navajo, the Apache, the Comanche, the Cheyenne, the Nez Percé, or the Sioux.

I presented the compliments of the Government in each interview, and stated what is being done all over the country for the education of the Indian, and how he is advancing along the line of civilization; but all this talk fell dead upon their dull ears. The idea of progress has no place in their minds. They face toward the olden times, save as they hope for the coming of Montezuma; but I could not convince them that education is the real Montezuma. I told them that educated young Indians were earning a better living than formerly, and that some were rising to positions of respectability and usefulness; but again I found myself treading, to them, an unknown domain, for they have no idea of respectability and usefulness, as we use the terms. They listened attentively, curiously, modestly. I tried to reason with them, and draw them out. Sometimes they would follow a little way; but they soon fell into their old circle of ideas, around which they traveled in their long beaten tracks.

They said they were glad I came, were thankful "Washington takes notice of us." I replied, "Washington thinks a great deal of the Pueblo people. You have always been true to the Government, have never made war and caused Washington trouble, as the Apaches and Navajoes have; and therefore Washington wants to do the very best possible for you. And Washington thinks the very best thing that can be done for you is to educate your children." They looked up complacently, half smiled, and subsided again into the old impassive stolidity, saying, "Our fathers never went to school, and we must do as they did." In all my interviews I failed to discover their inner heart life, so completely is it walled in with a dumb secrecy. In one or two instances I succeeded in getting a response in favor of a school, but the apparent motive was a narrow selfishness—a hope that some material benefit might accrue.

I studied the Pueblos in their government, their history, their social life, their religion, their agriculture, etc., and, as the result, I see difficulties not easily overcome in the way of their education and civilization. They are shut in by ramparts of conservatism, such as I never met elsewhere, fortified within and without. Some of the inherent difficulties will now be shown in detail.

The question of the civil status is mixed, and embarrasses progressive action. Some persons have very confidently pronounced the Pueblo Indians as *de jure* citizens; nevertheless they are recognized by the General Government as "wards," and they themselves refuse to accept the relation of *de facto* citizenship.

The civil status of the Pueblo Indians under the old Mexican régime is a matter of much interest and importance, being recognized as citi-

zens and entitled to the highest official positions. From about 1690 downward the titles to their lands were never questioned, a high authority says, either under Spanish rule or under the Republic. According to the decree dated Iguala, February 24, 1821 (sec. 12), the Pueblo Indians were made citizens of New Spain, which afterwards became the Republic of Mexico. The section reads:

All the inhabitants of New Spain, without distinction of Europeans, Africans, or Indians, are citizens of this monarchy, with eligibility to every office according to their merits and virtues.

The term "habitantes," says a legal authority, is limited by Mexican usage to persons having a place of abode, not vagrants or nomads. The Pueblo Indians, having fixed abodes, came within this section and were made citizens by it. According to Galvani's collection of decrees of the Mexican nation, the term *propiedades*, in Mexican law, applies to the Pueblo people or town Indians, classifying them as citizens. When the Mexican nation changed their monarchy of New Spain into the Republic of Mexico, the status of these citizens as to person and property was affirmed; nor was it changed or curtailed down to the treaty of Guadalupe Hidalgo, nor was any discrimination made against them in respect to the rights of citizenship.

This being the previous status of the Pueblo people prior to the aforesaid treaty, how was their condition affected by the treaty?

Justice Nelson has said (*United States vs. Ritchie*, 17 How., 525):

They were made citizens of the United States, inasmuch as not one of them elected to retain the title and rights of Mexican citizens, but acquired under the treaty those of the United States.

This is clearly in accordance with articles 8 and 9 of said treaty, which guarantees that "the persons and property transferred by Mexico to the jurisdiction of the United States shall have the same rights as are enjoyed by citizens of the United States."

Such was the condition of the Pueblo Indians under Spanish and Mexican rule, and according to the obligation of 1848 they came under the Government of the United States, holding titles to lands and eligible to all the rights of citizenship. They were *de jure*, and should have been made *de facto*, citizens of the United States, entitled to vote and hold office. The supreme court of New Mexico has twice (1867, 1874) so decided.

The first Territorial legislature of New Mexico passed an act incorporating the Pueblos, in accordance with the previous acts of the Mexican Republic and the old Spanish laws. The statute provided—

That the Pueblo Indians living in towns and villages built on lands granted to such Indians by the laws of Spain and Mexico, conceding to such inhabitants certain lands and privileges to be used for the common benefit, are severally thereby created and constituted bodies politic and corporate, and shall be known in law by the name of the "Pueblo de —," and by that name they and their successors shall have perpetual succession, sue and be sued, plead and be impleaded, bring and defend, etc., in any court of law or equity. (*See Compiled Laws of New Mexico.*)

Such was the property status of the Pueblos recognized by the first Territorial legislature, prior to the adoption of the constitution in 1850.

Nevertheless, acting under the seventh section of the constitution, the legislature of New Mexico, February 16, 1854 (sec. 70), defined the electoral rights and privileges of this people as follows:

That the Pueblo Indians of this Territory, for the present and until they shall be declared by the Congress of the United States to have the right, are excluded from the privilege of voting at the popular elections of the Territory, except at the elections for overseers of ditches to which they belong, and, in the elections proper of their own pueblos, to elect their officers according to their ancient customs.

Such legislation was subject to the approval or disapproval of Congress. Inasmuch as it has never been disapproved by Congress, it must be regarded as in force in New Mexico. Thus was the right of the people to exercise the elective franchise first limited. It was done without any previous attempt to fix their status as wild Indians, which they never have been from time immemorial. Under the plan of Iguala, the treaty of Cordover, and the decrees of the Mexican Congress they were known as *naturales*, in contradistinction from *salvages*. As such, under the treaty of 1848, they became citizens of the United States.

The action of the New Mexican courts has been quite uniform—that the Pueblo people are citizens so far as the right of property is concerned. As to voting, the courts have ruled that if they should rise up and demand the right to vote, the court would decide in their favor. This people, however, have never been inclined to this extension of their electoral privileges, being afraid, it is said, of taxes; nor have they ever protested against any curtailment of their rights.

At this point I desire to call attention to an important matter which has received considerable notice from leading jurists in New Mexico, who have said: "What right has the Government to reduce this people to the condition of 'wards' and place them under the management of an Indian agent?" Chief Justice Watts, of the supreme court of New Mexico, January, 1869, officially said:

No person has ever been authorized by Congress to be appointed agent for the Pueblo Indians, nor has anyone ever been commissioned as agent for them; and the designation of an agent for the Pueblos by the Indian department is without any authority of Congress or the decision of any judicial tribunal authorized to pass upon the question; and the transfer of 8,000 of the most honest, industrious, and law-abiding citizens of New Mexico to the provisions of a code of laws made for savages, by the simple stroke of the pen of an Indian Commissioner, will never be assented to by Congress or the judicial tribunals of the country, so long as solemn treaties of human laws afford any protection to the liberty and property of citizens.

Again he says:

For the Indian department to insist, as they have done for the last fifteen years, upon the reduction of these citizens to a state of vassalage, under the Indian intercourse act, is passing strange. A law made for wild, wandering savages, to be extended over a people living for three centuries in fenced abodes, and cultivating the soil for the maintenance of themselves and families, and giving an example of virtue, honesty and industry, to their more civilized neighbors, is wholly inapplicable to the Pueblo Indians of New Mexico.

The same authority adds:

Because the Secretary of the Interior and the Commissioner of Indian Affairs construed the Pueblos as tribal Indians and not citizens, by sending an agent to them, argues nothing, unless it argues an intention on the part of the Government simply to become advised with reference to them and to assist them by the direction of their energies to a higher degree of civilization and enlightenment. As they own their homes, are in a degree civilized and Christianized, and are entirely self-sustaining, an agent can do little more for them than what has just been mentioned. (See *United States vs. Ritchie*, 17 How., 539, 540; also decree of the Mexican Congress, Appendix, Eschriche, p. 194, Ar. 19; also *United States vs. José Juan Lucero*, Supreme Court, Jan., 1869. C. J., Watts.)

The action of the Territorial legislature in 1854, referred to in a preceding paragraph, declaring that the Pueblo Indians are "excluded from the privilege of voting at the popular elections of the Territory," and restricting them to the local Pueblos, seems to have been the first legal limitation imposed upon them; and it is a very significant fact, which should not escape notice, that the same year was the date of the appointment of the first Indian agent to the Pueblos. Since then they have been treated *de facto* as wards, while according to the law of na-

tions they were *de jure* citizens. This policy has been continued unquestioned, so far as I have been able to ascertain, until the present time, and the Indian Agents for the Pueblos have been confirmed by the action of the United States Senate. But the agents who have held this position have often felt embarrassed by the want of authority. If, in peculiar exigencies which have sometimes arisen, the agent has exercised more arbitrary power than usual, it has been regarded by many as fortunate for him that he was dealing with an unresisting people. The fact, however, that the agent is an officer of the General Government will be sufficient, probably, to sustain him in all but extreme cases. It is clear, from these foregoing considerations, that one of the difficulties in the work of advancing the Pueblos is that their agent is embarrassed and hindered in attempting to carry out effective measures, owing to the dubious civil status of this peculiar people.

**The Mexican environment.**—There is nothing helpful, but the contrary, in the social environment of the Pueblos. The original Spaniard possessed a restless energy, the Moor quick perceptions, and the roving Apache great cunning, strength, and alertness; but these sources, out of which the modern New Mexican sprang, have transmitted little of the primitive types to the existing descendants. Sluggish currents lazily beat in the Mexican population of the Territory.

Children show some comeliness at the age of 15, but seldom at the age of 25 is a vestige of freshness left. On the elevated, bleak plateaus of New Mexico, "where the dryness is so intense that meat is cured without smoke or salt, the juices of the human body evaporate, leaving early wrinkles." Dirt and low diet help the stupidity and decay.

The typical New Mexican lives in a condition of body and mind not easy for a New Englander to appreciate. It is a kind of present endurance of life, as a matter of course, under fatalistic ideas, that robs the past and future of significance, and gives no impulse to noble deeds. One who for several years dwelt among them described the people as—

small, lank, dark-browed fellows, with high cheek bones, betraying Indian blood; hair long, straight, black; eyes dark, suspicious, wavering; habitually silent, and, when speaking, with gloomy indifference, in a voice sad as memory. Elsewhere they would go as tramps: but tramping is a grand fatigue. They prefer to sit around instead. Think you such men care for advantages, natural or political?

Look at their homes along the sandy *arroyos*. The houses are from 6 to 9 feet high, of adobe and stone, covered with mud, and with an earth floor. Puppies, cats, pigs, and burros wander freely around. In the door sits the wife, wrinkled and dressed in black, and near by is the husband, with slouched sombrero, ragged clothes, and emaciated form. They can not read. Books and newspapers are unknown to them. Small patches of wheat, oats, beans, and chili are cultivated in unfenced fields.

Near by, a burro soliloquizes:

"I can go a day on a sardine can,  
And two on a scrap of leather;  
I have lived a week on a Chinese fan,  
And 'tis even plain that I sometimes gain  
On only a change of weather."

Entering the house, we find the floor swept by a handleless rush broom. Around the conical, corner fireplace there are no andirons, no shovel, no tongs. A chest and a few pieces of crockery on a rough deal table complete the family outfit. There is often no window, and seldom more than one small one. A famishing donkey brings wood on

his back from the mountains. The family washing, consisting of three or four pieces, is done in the *acequia* not far away.

Death finds these people just where he found their parents, in the peaceful depths of contented poverty, and they often go into the grave shroudless. This class of Mexicans, the major class, I judge, do not wait for "better times." To them there is no day but the present. What inspiration or aid towards civilization or education can the Pueblo Indians get from this kind of social environments?

Another class of Mexicans is brighter, well-to-do, more ambitious, but utterly unscrupulous. They labor hard to acquire wealth and extend their fields and flocks. The Pueblo Indian knows this to his sorrow. His best fields have been swept away by the rapacity of these greedy Mexicans. Pueblo Indians have been to me for help and sympathy. I have been with them to the authorities, and have been told that the United States Government can not take the case into the courts for these Indians; that the courts are open to Pueblo Indians, as well as to other people; but the Pueblos must get lawyers and fight the battles on their own account. Many of these Indians are barely able to live, and are harrassed with lawsuits. They are much afraid of the courts, and the average citizen, knowing this, imposes upon them. If forced to employ council their lands will soon be swept away. I am not complaining of this. Perhaps I should; but it is easy to see what will be the outcome. Some of the pueblos are being reduced in area. What will this kind of environment do for the advancement of the Pueblo people in education and civilization?

Besides those named there is one more element in the social environment of the Pueblos. It is the bad, unscrupulous, overreaching American white population—"squaw men," or, worse than "squaw men," "cattle men"—encroaching upon the Indian reservations, making trouble on the slightest pretext, driving off the Indian's stock, monopolizing the Indian's springs, devouring the Indian's ripening grain, and illustrating a style of ideas and habits far below those of the Indians themselves. There is no agent within reach who can be appealed to for help, or possibly he has no money for traveling expenses.

Nor is there any opportunity for the Pueblo children to go into the local public schools of the Territory. There is no public school which is conveniently near any of the Pueblos, if there were no other objection. The public schools are probably in as good hands as they can be at present, and are being managed with as much of the progressive spirit as the people of the Territory can bear, but the schools started from a very low plane, except perhaps in a few of the best cities, like Albuquerque, Deming, etc.

The unscrupulous management of some of the public schools by the local rings, which out-Tammany even Tammany, is a grievous evil. I cite one specimen. At an election legally called for a local school committee one Mexican and two Americans were chosen, and the returns were duly sent, as the law provides, to the county superintendent. He, for no reason given, discarded the elected committee and appointed another, consisting of two Mexicans and one American. There was money enough to pay a teacher \$75 per month and keep the school going nine months. The committee ran the school only six weeks and pocketed the balance of the funds. If I should mention the character of the committee, everyone would say such men are capable of performing such an outrage.

This Territory reports 523 public school districts, with 22,599 pupils enrolled, an average of 41 and an average attendance of 27 each. Be-

sides these, the Presbyterians have 24 schools for Mexican children, with 963 pupils; the Methodist Episcopal Church 12 schools, with 311 pupils; the New West Educational Commission 7 schools, with 701 pupils, partly Mexican; and the Roman Catholics 13 schools, with 1,495 pupils. The latter have also 5 private schools. I am quite certain that there are no Pueblo children in any of these schools—not in the public schools. Current sentiment would scarcely allow them in these schools even if they were conveniently situated to attend them. The Pueblos, in almost every case, except possibly Taos, are too remote from the public schools. Almost all the population of the Territory is very sparse. The Pueblo children, if ever educated, must be instructed in local schools in the pueblos or in boarding schools outside.

Such are the unfavorable environments which militate against the true progress of the Pueblos.

**The traditional opposition of the Pueblo people to education.**—Among the old traditions which have been and still are instilled into the minds of the Pueblo Indians, from childhood up, repeated over and over in their estufas, is one powerfully calculated to foster and strengthen opposition to education and to all desirable progress. The story says that, far back in the olden times, a representative of the white race and one of the Indian race were called into the presence of the gods. These representatives were told that the gods had a gift for each race, and that these men might choose which gift his race should have. One gift was knowledge and wealth in this life, but misery in the life to come; and the other was ignorance and poverty in this world, but happiness in the next world. The white man chose for his race knowledge and wealth for the present and misery in the future; but the far-seeing Indian choose ignorance and poverty in this life and happiness hereafter.

These ideas seem to be ingrained in the Pueblo mind, constituting a basis of dogged resistance to efforts to educate their offspring; and when, in some cases, their children are removed to schools for a while, on their return home they do all they can to pound out of them what they have learned.

But this is not the most serious impediment.

**The stolid unreasoning conservatism of the Pueblos.**—The unswerving adherence of the Pueblo Indians to their ancient ideas and usages, amounting to granite obstinacy, is another obstacle to progress. For this peculiarity they have ever been noted. One of the first conquerors of New Mexico, Vargas, complained that they refused to work, even for wages, and said: "I have been obliged to raze whole villages to the ground to punish their obstinacy." The early chroniclers dwelt at length upon the grievances (sometimes ludicrous) their conquerors were obliged to bear from them (Pueblos), how they "refused to accept slavery as their best estate," and to worship the god "whose ambassadors' march was tracked by the smoke of cities sacked and burnt, lands made desolate, widows' cries, and orphans' wails." The Pueblos were slow to accept the religion of those who, when told by their confessors to forgive all enemies, could say, "Bless your heart, father, I have none. I have killed them all."

Now, as then, the Pueblos are sun-worshippers. It took a succession of reconversions and rebaptisms, through scores of years, to perfect their surrender to the new faith, so often did they fall away from the mere quasi assent yielded under constraint. Under Vargas's cruel conquests, the cross became an object of bitter hatred to these pagan red men, and Vargas resorted to severe measures. Writing to the

viceroy in Mexico for more troops, he said, "You might as well try to convert Jews without the Inquisition as Indians without soldiers." Forced before a large cross in the plaza, "the red sinners" were absolved from their sins, and on pain of death forbidden their idolatrous dances, taught to pray to the saints, to reverence the priests, to keep crosses over their doors, etc. Gradually the Pueblos yielded outwardly, but inwardly they remained pagans, as to this day, submitting to the situation, but at heart unchanged. What matters it, said one, if we "add a few hundred gods to the thousands we already have?" But the old gods were the ones really worshiped, and the new ones received only a quasi recognition.

This pagan religion is industriously instilled into the minds of their children, in the estufas, where old legends are repeated over and over, and pressed upon young, susceptible hearts. Their beliefs are sustained by prophetic hopes. As "Sons of Montezuma," so they call themselves, they believe that "in the fullness of time" their Messiah will come—will leave his bright Sun-house, to right the wrongs and soothe the woes they have suffered since the days of the Spaniards. Their ideas are vague; their legends, treacherous as memory, are growing fainter with the lapse of years; and even their wise men are without "open vision."

When the Pueblo Indians adopted Christianity they hoped, primarily, for material benefits—having no conception of spiritual things. They received the new religion as another kind of magic, which might prove superior to the old religion, bringing greater protection from enemies, larger crops, less wind, and more rain upon the arid fields. When it was seen that the new faith did not produce this effect, they turned against it, as not worth their support. To this Bandelier ascribes the rebellion of 1680. They nevertheless retained a residuum of Christianity; but it was distorted and overshadowed by the old fetishism and polytheism. Thus they have remained to this day, by the confession of all who have become familiar with them; but this is more apparent in some pueblos than in others, Zuni, Acoma, etc. The effects of former efforts to enlighten the Pueblo Indians have largely disappeared, and Bandelier admits that "there are many and very plain tokens of a relapse into barbarism, after the experience of a lift towards higher development." Though nominally Christians, they are only baptized heathen. Even those Indians who now show in the fullest degree the effects of Christianity, and who are most attentive to the feast days and other religious observances of the Roman Catholic Church, still hold to the ceremonies of the former religion. Though in some of the Pueblos these ceremonies are observed more secretly, yet in others they are observed as openly as ever. The Pueblos have always performed their pagan rites in secret, and they did not refrain even when the priests were among them and stigmatized their estufas as "temples of sin." Bandelier says:

They are still in that state of transition from stone to metal in which they found themselves three centuries ago, after the Spaniards began to introduce the arts of life and husbandry of the Eastern world.

To say there have been no changes, after the lapse of centuries, is not true. There are abrasions along any rocky bank. It would be idle to deny that the antique wooden stick is partly supplanted by the plow; the old two-wheeled cart by the Studebaker wagon; that iron implements have taken the place of stone; that wool has partly supplanted cotton; and the rifle, the bow and arrow. The manufacture of blankets long ago passed from the Pueblo to the Navajo. All this

has enlarged the scope of knowledge. But these changes are very slight, pertaining little to the life, not touching their ideas, nor materially affecting their race peculiarities.

Governor Prince (History of New Mexico, p. 39) says of the Pueblos:

They still retain the characteristics which were noticeable in the time of Cabeza de Vaca and Coronado, and remain, in the midst of the surrounding changes, the most interesting illustration of the higher aboriginal type of the native American people.

Mrs. Wallace says:

Even the dress of the women (Oh, happy women!) has remained unchanged—the same to-day as described by Coronado's secretary in 1541.

She describes a Pueblo belle as wearing—

loose moccasins, "shoes of silence" which cannot hide the delicate outline of her shapely feet, leggings of deerskin, a skirt reaching below the knee, and a cotton chemise. Her head has no covering but glossy, jet-black hair, newly washed with *amole*, banged in front, and is tricked off behind the ears, in the shape of a wheel which resembles the handle of a cup—the distinguishing fashion of maidenhood now, as it was 300 years ago.

Without writing or even hieroglyphics, and with a total absence of all recorded law, there is yet such perfect devotion to traditions and customs as carries their poor civilization forward, century after century, just as it was long, long ago. Mrs. Wallace (Land of the Pueblos, p. 43) describes their old-time customs:

Thrashing is done by herds of goats or flocks of sheep, the floor being a plastered mud ring inclosed in upright poles. The wheat is piled up in the center; the animals are turned into the pen and driven round and round, until the grain is all trampled out. Then the mass is thrown into the air; the wind carries away the broken straw, leaving the grain, mixed with quantities of gravel, sand, etc.

The age of flails has not reached these people, to say nothing of thrashing machines. I, myself, have often seen what is described above. Such people certainly are not likely to advance very fast in ideas of education and civilization.

We are accustomed to say that the age of fable has passed away; that the delusions of olden times have vanished with the darkness to which they belonged; that goblins no more appear; and that centuries of credulity have given place to an age of clear-eyed men, unawed by phantoms. But this is not true of the Pueblos. They are laggards in the world's march. They still find goblins with "leathery wings like bats" hovering over cactus thickets and mesquite jungles; ghosts, demons, genii still linger among them, though silent; and there yet remain foul fiends which can be exorcised only by incantations.

The practical point is that the Pueblo Indian is still unchanged in his old ideas and customs, and stubbornly intent upon maintaining them. He reads nothing; scarcely hears anything, nor cares to, outside his old lines. He entertains not even a thought of making a change in his ideas or life. The word "progress," as related to society, has no place in his meager vocabulary. When one penetrates beyond their outside of gentle courtesy, he encounters a conceited, sullen obstinacy, which stoutly resists effort to introduce an education which means change, new customs, etc. One long familiar with the Pueblos said:

They can not be instructed, because they know everything; nor surprised, because their fathers had all wisdom before you were born. Show them the most curious and beautiful article you possess, they survey it with stolid composure, as an object long familiar. \* \* \* Like the Chinese they so much resemble, nothing can be named which they did not have years ago; and having so long possessed all knowledge, they steadily resist your efforts to show them their ignorance. They think themselves the envy of the civilized world.

The recent attentions they have received from curious visitors and archæologists have doubtless confirmed their conceit; and they are contented to still travel the old, deeply worn, rocky footpaths that lead in and out of their villiages, beaten by centuries of wayfarers, far back in unrecorded ages. This persistent adherence to the old Pueblo system of ideas is baleful in its workings, retarding all efforts from without to help them to better conditions. It promotes a constant clash with American government, civilization, and education, and suggests the inquiry whether such an autonomy should be tolerated under an intelligent, representative government.

**The Dark Religious Fetichism of the Pueblos.**—This is another impediment to progress. It is all-pervading, extending to every phase of life, and utterly uncompromising.

Elsewhere I have spoken of the relation of the Pueblo people to the Roman Catholic Church. Many of them are outwardly more Roman Catholic than pagan, but more sincerely pagan than Roman Catholic, for the pagan is the innermost and, in some Pueblos, it is the only religion. While some are baptized, confessed, and buried in the Roman Catholic Church, they have another set of secret observances of their own for all these events, which are more rigidly observed. Do some Pueblo Indians go to mass; they also go thence to their "feathered prayer-sticks" in the estufa or in the mountain cave. Have they a Christian priest; they have also a large array of caciques, religious and semi-religious officials, to meet every minute affair in life, even to the propagation of the species.

In his complex religion every mountain and field is a community of deities. The ancient Greek had one Olympus; the Pueblo has many. His mythology comprises the forces of the universe, the processes of nature, spirits of every attribute, form, and shape—a countless host of deities. His religious ceremonies are also countless, endless.

In the winter the main industry of the Pueblos is practicing the religious dances, a training pursued with rigid care under the direction of the priesthood dedicated to that duty. These dances have been described as "full of contortions and fantastic leaps, ending in a jerky trot." Of the nude night dances, held in the deepest secrecy, when every avenue to outsiders is closed and watched, the uninitiated may not speak, but some who have learned of them say that every propriety of life, even chastity, is discarded.

Says Dr. Menaul, who for many years resided in the Laguna pueblo:

Religion enters into everything they do; that is, everything is done according to ancient custom. The new-born babe comes into life under its auspices, is fed and clothed or not clothed according to custom. It is hushed to sleep with a custom song, gets custom medicine, and grows up in the very bosom of religious custom. The father plants and reaps his fields, makes his moccasins, knits his stockings, carries the baby on his back, in fact does all that he does in strict conformity to custom. The mother grinds the meal, makes the bread, weaves her clothing, keeps her house, makes her water pots and paints them with religious symbols, according to custom. The whole inner and outer life of these Indians is in strict devotion to religious, custom and in obedience to their faith."

This rigidity of the Pueblo religious organism makes sad waste of our education and religion. It is not an easy task to teach the Pueblo youth to desire to be better than their fathers, who are only slightly changed since Columbus discovered America. J. Walter Fewkes says (*Journal of American Ethnology and Archæology*, vol. 1, p. 5):

Almost everything in the life of a Zuñian has a religious side or is to be met by something which, for want of a name, we may call a religious observance. So superstitious is he that he fears any trifling event of an unusual nature, and has

devised obligatory methods of sacrifice to prevent impending danger. If his hair is cut without a certain ceremony he fears death within a year, and must preserve a lock of it to guard against harm. He will not sing certain sacred songs out of season for fear the corn will not grow. Every action is controlled by fear, and he fortifies himself from the supernatural agents about him, by the most complicated system of formulas and prayers.

Bandelier (American Series, 111, Final Report, 1, p. 41) says: "The Indian strains all his faculties to soothe nature by worship." Again he says (p. 301, 302):

The daily life of the Pueblo Indian is a succession of performances that may be called religious, inasmuch as they are intended to keep him on good terms with the supernatural world. He craves the good will of that world for purposes of material welfare, not for his moral good, except so far as the latter is conducive to prosperity. Therefore his existence is, in reality, a miserable one, in constant dread and fear of things and forces around him, whose immediate connection with spiritual powers he exaggerates or misconceives.

Among the Zuñi are various secret orders sacredly maintained. Capt. John G. Bourke, U. S. Army, describes the "urine dances" of the "Nehue-Cue," which show that these people still preserve some of the most ancient heathen rites, linking them with the old idolatrous Canaanites of earliest recorded history. I quote this revolting description to show what abominable practices are allowed among people protected by the United States Government, but who fight against the education of their youth and all efforts to advance them in civilization. Archæologists have searched out the facts in the interest of science. I quote the loathsome details in the interest of moral progress. After speaking of some preliminary exercises Capt. Bourke says:

They then squatted upon the ground and consumed with zest large "ollas" full of tea and dishes of hardtack and sugar. As they were about finishing this a squaw entered, carrying an olla of urine, of which the filthy brutes drank heartily.

I refused to believe the evidences of my senses, and asked Cushing if that were really human urine. "Why, certainly," he replied, "and here comes more of it." This time it was a large tin pail full, not less than 2 quarts. I was standing by the squaw as she offered this strange and abominable refreshment. She made a motion with her hand to indicate to me that it was urine, and one of the old men repeated the Spanish word *mear* (to urinate), while my sense of smell demonstrated the truth of their statements.

The dancers swallowed great draughts, smacking their lips, and amid the merriment of the spectators remarked that it was very, very good. The clowns were now upon their mettle, each trying to surpass his neighbor in feats of nastiness. One swallowed a fragment of corn husk, saying he thought it very good and better than bread. His vis-a-vis attempted to chew and gulp down a piece of filthy rag. Another expressed regret that the dance had not been held out of doors in one of the plazas. There they could show what they could do. There they always made it a point of honor to eat the excrement of men and dogs.

To this outline description of a disgusting rite I have little to add. The Zuñi in explanation state that the Nehue-Cue are a medicine order, which hold these dances from time to time.\*

This religion is fetichism of the grossest kind, complicated with all natural phenomena, and the atmospheric elements are its symbols. It places animals on an equality with mankind, sometimes recognizing them as man's superiors. This religion assumes man's utter helplessness within the natural realm and excuses crime. There is no greater slave than the Pueblo Indian. Every motion is guarded by superstitions. Do we wonder at his lack of truthfulness, consistency, and moral consciousness? The crimes for which we would punish him he commits without any regret. Nature, deified by him to innumerable personalities, exacts from him the conduct we blame. He is a timid, feeble, fettered being.

\* Compilation of notes and memoranda bearing upon the use of human ordure and human urine in rites, etc. By Capt. John G. Bourke. Washington, D. C., 1888.

If this everywhere-present religion made better characters and improved the life, the case would be more hopeful; but it is far otherwise, notwithstanding the verdicts of some superficial observers. The religion of the Pueblos has no connection with morals, as we commonly understand the term. It certainly does not promote morals, but fosters immorality. Ladd (Story of New Mexico, p. 209) says:

There were marriage customs among the primitive Pueblo tribes which were of little avail to prevent sexual looseness. The children were brought up in utter disregard of modesty or chastity.

[p. 214:] The custom of marriage is established as an official act; but within the same tribe or clan there is a positive disregard of its moral obligations. There is no prevailing rule of chastity which preserves personal virtue between the sexes. As the perpetuation of the clan or tribe is of the first consequence, and the children are regarded as belonging to the clan of the mother, the social system of these communities is founded on the necessity of child-breeding, and recognizes no higher law in conflict with this idea; and some of the dances and religious rites are the unrestrained expression of the social privilege and duty.

Though their domestic life has been said to be protected by strict laws, as related to those out of the tribe, there is great carelessness in the training of children; and the promiscuous life of these communities, as well as some of their heathenish dances, tends to great licentiousness.

Mr. J. Walter Fewkes (Journal, pp. 22 and 24, vol. 1) speaks of the "obscene jokes" in the religious dances of the Zuñi, which no one attempts to repress. Bandelier says of the Pueblo rites (Final Report, part 1):

[p. 152:] Obscenity and public immorality enter into Indian belief and creed as symbolism. The "Ko-sha-re dance" is one which consists in the representation of particularly obscene rites.

[p. 299:] Among the more private dances of the Pueblos there are several from which the reproach of gross obscenity can not be withheld.

The Pueblo dance is not a diversion, like a dance among our own race; it is a sacrifice and invocation, an incantation, a *religious* performance. The number of these dances is very great.

[p. 141:] Marriage was an act of the clan, and therefore the parties stood to each other in relations of greater independence. Chastity was an act of penitence; to be chaste signified to do penance. \* \* \* There was the utmost liberty, even license as toward girls. Intercourse was almost promiscuous with members of the tribe.

[p. 142:] Among the Rio Grande villages at least cohabitation often precedes marriage; and promiscuity, as in favor of the "village boys," is an established fact.

Need I speak further of moral shortcomings among people in whose substratum there is no such thing as moral principle? The object of their religion is not to impart such a quality, but to provide incantations which may protect them from evil genii and keep them in favor with wind and water. Were I to speak of lying and thieving, they are ignorant of the moral significance of the words. They perpetually steal from each other and can not trust their gardens and fields against each other's rapacity in harvest time. As for faith, they seldom trust any one. A Pueblo never seems to have faith even in his wife, for his idea of virtue, if he has any, does not require such faith. I know this is a terrible indictment; and it is probably not true of the better Pueblo people, but it accurately describes many, very many. Bandelier is scarcely behind me when he says (p. 317):

The Indian frequently becomes a criminal in the eyes of modern law, but in the great majority of cases his is unconscious guilt, resulting from natural aberration of mind.

Or, may I not say, resulting from a religion void of moral convictions and distinctions, and which defies animal appetites.

**Their Peculiarly Constituted Political Autonomy**, whose source is their pagan priesthood, and whose chief function is to perpetuate and enforce their old customs and religion, is another difficulty.

First of all, I ask attention to a statement by Governor Prince of New Mexico in his annual report to the Secretary of the Interior for 1892.

Their local government is probably as perfect as any that exists in the world. While its methods would be impracticable in large communities, they are admirably adapted to the circumstances of these people. This system has come down from time immemorial, and has been perfected by the experience of ages. But now it sometimes comes into rough conflict with the laws established by the territorial authority. By custom each pueblo is permitted to elect its officers and govern itself, as it has done for centuries past, but by law it is simply a part of some precinct, and under the jurisdiction of the local justice of the peace, in whose election the Indians take no part. It is a very rare thing for a Pueblo Indian to defy the authorities of his people and appeal to the alien justice of the peace; but he has the right to do so, and in such a case much friction and difficulty naturally occurs.

I dislike to dissent from an opinion expressed by one so competent and so familiar with the affairs of New Mexico, but I think that when the following facts are considered the reader will agree with me that Governor Prince has indulged in an excessive eulogy when he said, "Their (the Pueblo) local government is probably as perfect as any that exists in the world." It is indeed a perfect despotism, and well organized to prevent any progress towards the customs and enlightenment of civilized society. This will appear further on.

Unlike the wild Indians, the Pueblos have no tribal organization. It is a familiar fact that the word tribe, as used with reference to Indians in the United States, applies to nations of savages or uncivilized people having tribal organizations, treated by the Government as independent political communities, and with the right of self-government, by chiefs under the protection of the United States. The wild Indians are not regarded as the owners of the land they occupy, but it belongs to the United States, the Indians having the right of occupancy. Over the lands the United States exercises authority for the benefit of the occupants. Unlike the wild Indians, the Pueblo Indians hold their lands in common, in fee, under patents, first issued by Spain, confirmed by the Mexican Republic, and subsequently confirmed by the Government of the United States.

The Pueblos do not participate in the Territorial Government. Though giving a quasi assent to it, and never directly fighting against it, yet they stand wholly aloof, pay no taxes, and take no perceptible interest in Territorial affairs. The pueblos also stand aloof from each other, having no organic connection, as pueblos, and taking little interest in each others' affairs. In local government, these pueblos have always been practically independent, electing their own officers—an *imperium in imperio*.

In showing the political constitution, I will give two lists of pueblo offices, from villages widely separated, but to which all the other pueblos closely correspond. I gathered the data from interviews with persons who have long dwelt in or near pueblos, and have the confidence of the Indians.

In Taos the highest officer is the cacique. He is the highest priest or religious head of the pueblo. His office is hereditary. When a vote is to be taken in the council, he is chairman; when new officers are to be elected, he nominates them and also gives them the badge of office. The governor, or alcalde, is elected by the votes of the males who have been designated by the cacique as *principales*, and are entitled to vote. He is nominated for governor by the cacique, to be voted for by the *principales*.

The governor is a sort of justice of the peace, settles difficulties,

directs labor, etc., and there is no appeal from his decision. When he is deciding important matters he consults the cacique and the *principales*. The question of allowing the children to go to school, especially to a school outside of the pueblo, is decided by the governor and his advisers. If they say no, the children can not go. Parents and children seldom resist. If they do they are put under discipline and punished.

There is a lieutenant-governor, and there is also a war captain who attends to matters outside the pueblo relating to land, stock, etc., and who grants leaves of absence from the pueblo. He has charge, also, of the dances. There are twelve deputies, or police, who report irregularities, arrest bad Indians, etc., under the direction of this war captain.

In Zuñi, another leading pueblo, the governor is appointed by the cacique every year, and not merely nominated by him, as in some other pueblos. The governor, or *alcalde*, decides all questions of business, consulting duly with his associate officials, settles difficulties, and protects the reservation against encroachments. He superintends and directs the building and repair of roads. He has four *tenientes* appointed by the cacique to wait upon the governor.

There are six estufas, or sacred shrines, and there are caciques or priests in each estufa. All the caciques hold office for life.

Estufa No. 1: Here are the head caciques, 2 men and 1 woman.

Estufa No. 2: 4 men caciques and 1 girl, the latter usually appointed when 16 years of age.

Estufa No. 3: 5 men caciques and 1 woman.

Estufa No. 4: 4 men caciques and 1 woman.

Estufa No. 5: 2 caciques, "priests of the bow," with 13 or 14 subordinates.

Estufa No. 6: 1 cacique of the sun.

These six estufas represent six religious orders, and there are a given number of religious dances in each one every year. There are thirteen dances between July 1 and November 1. Dances are frequent all winter till planting time in spring; then again in midsummer. This tribe has thirteen clans, the largest numbering 150 Indians.

Such are Taos and Zuñi, at two extremes in respect to locality, but in government approximated by all the other pueblos, with little variation in spirit and intent, though some are much smaller, and do not afford the scope which such large organizations like Zuñi do. Some pueblos are a little better and some a little worse, viewed from the standpoint of American civilization. But doubtless the same radical wrongs exist in all of them, untouched by their peculiar governments.

What an intensely interesting pueblo is Zuñi, with its ceaseless ceremonies; and yet, in this pueblo, is the grossest corruption. There is constant stealing, not only from cattlemen and Navajos, but stealing and selling each others' cattle, each others' crops, etc. Several cases of murder of Mexicans passing through the reservation were reported to me as having occurred within a few years, unprovoked, purely for plunder; and the murderers are well known and at large in the pueblo. Bastardy is a frequent occurrence, occasioning no comment. Boys and girls mingle freely, out on the sands, till late at night. Married life imposes no restrictions. Men are allowed to wear women's costume, and work with the women in the house.

These are some irregularities which, it would be presumed, men, intrusted with governing a population of over 1,500 people, would feel compelled to restrain. But discipline and punishment, for the purpose

of promoting moral and social welfare, are unknown. Government has nothing to do with such matters. This is true of all the pueblos. The slightest deviation, however, from their old time customs and religious observances, is severely punished.

An enthusiastic admirer of the Pueblo Indians, in a recent number of a popular magazine, gushingly said: "The pueblo social organism is essentially democratic, the first republican institution in America." To me it is more like a limited monarchy, or an absolute theocracy. The cacique, or high priest, holds office, usually hereditary, for life. This officer either nominates or appoints the governor, and no governor dares proceed a step, even after popular consultation (councils) which are frequent, without the advice or consent of the cacique; and the cacique has unlimited influence over the assemblies. Indeed, this officer is the absolute head. Thus the church is united with and controls the state. The Pueblo Indians do not talk freely with outsiders about the cacique, but ominously close their mouths when inquiries are made about this officer. I found, however, opportunities to learn from inside testimony the functions of the cacique. The elections and the general policy of the pueblo are shaped under his behest. The magazine writer just quoted makes a frank confession, however, which utterly explodes his theory that they are "essentially democratic," and admits that they are virtually an absolute theocracy. He truly says:

There is a congress \* called a junta of *principales*, which is the civil law making body, but can not touch matters of religion. The governor is chairman of its sessions. The cacique selects its members; but he retains or impeaches and ousts them at will. Around these factors of government, and including some of them, cluster four great orders—the Mothers (three caciques and shamans of war), the Warriors, the Hunters, and the Medicine Men again and again intertangled with them, but below them, a dizzy array of still potent groups which figure in the political economy. [The italicizing is mine. D. D.]

Thus does this magazine writer explode his own poetic figment of a democracy. "The dizzy array of still potent groups," of which he speaks as "intertangled" with the higher orders, shows the strong imagination of the writer. This will appear when it is considered that ten out of the nineteen pueblos have each less than 300 population, several less than 200, and four 14 to 100 inhabitants each. The same writer gives way to fancy when he speaks of the laws and administration of the Pueblos. He says:

The laws of the Pueblos are simple but admirable. Crime is practically unknown, and for occasionally minor lapses the offender is induced to jail by a handcuff more civilized than our own, since it fits about the neck, and the culprit can neither be tortured by it nor reach nor pull back upon his captors. The gentleness of officials and laymen is always notable. A resister is never clubbed nor choked into acquiescence; but is overpowered without a scratch.

The statement that "crime is practically unknown among the Pueblos" should be considered in connection with the fact that a multitude of acts condemned as offenses in the code of civilized people do not come at all within the scope of Pueblo morals, and hence pass unnoticed. As for the "gentleness of officials and laymen" towards offenders, I ask attention to the well-verified examples which are cited in the next few pages. It has been customary for some prominent New Mexicans to highly compliment the morality of the Pueblo Indians and to dwell upon the fact that they are seldom brought into the courts for crime.

It is true that the Pueblo Indians are seldom brought into the courts for crime, but not because there are no crimes committed by them.

---

\*This is commonly called a council.

There are now in prison in Albuquerque, N. Mex., two Zuñi Indians who are accused of killing a white boy last August by the most brutal tortures—a purely unprovoked murder. Recently in the pueblo of Isleta an Indian was killed by another in a drunken row, under the influence of the strong wine they manufacture extensively in that pueblo. This is one of a succession of murders committed yearly for five years, it is said, in that pueblo, and in no case has a murderer been adequately, if at all, punished. In many cases no legal inquiry has been instituted in the civil courts of the Territory. The guilty men are at large.

About twenty years ago Chief-Justice Watts, of New Mexico, in rendering an opinion in the supreme court, extravagantly said:

After eighteen or twenty years of acquaintance with the conduct and habits of the Pueblo people I challenge a comparison of 1,000 of the best Americans in New Mexico and 1,000 of the best Mexicans in New Mexico with 1,000 of the worst Pueblo Indians; and believe that there will be found less, vastly less, murder, robbery, theft, and other crimes among the 1,000 worst Pueblo Indians than among the 1,000 best Americans or Mexicans in New Mexico.

Such a statement is certainly not complimentary to either the American or Mexican population of New Mexico, nor in point of fact can it be accepted as true by those who have closely studied the interior facts of the situation. I am persuaded, after spending much time in eighteen pueblos, that Judge Watts took a superficial view of the case. Within themselves their own low standard of morals and social order generally does not call for much discipline. In their estimation offenses against the religious ceremonies, dances, etc., are the most serious and call for severer punishments. Their customs are all linked with these observances, incantations, etc., and the power of their government must be exercised to preserve them intact. The grossest immorality exists among themselves, but it is no offense and calls for no interference.

Bandelier (Final Report, part 1), says:

[P. 36.] What the Indian fails to understand he assigns at once to the domain of the supernatural. Events which are striking and yet inexplicable to him pass over into the realm of mythology.

[P. 35.] Any disaster of magnitude, like droughts, epidemic diseases, or a flood, is quickly attributed by the Pueblos to witchcraft. In consequence of this suspicion sets in and many crimes are committed which are kept secret, but contribute slowly but surely to depopulate the village. Certain pueblos, like Nambé, Santa Clara, and Cia, owe their decline to the constant interkilling going on for supposed evil practices of witchcraft.

I will cite a few cases. In March, 1855, the Indians of Nambé butchered three men and one woman of their village, in the most horrible manner, for alleged witchcraft. (Bandelier, p. 206.) Rev. T. F. Ealy, M. D., of Schellsburg, Pa., for some years missionary among the Zuñi, writes:

The Zuñi witchcraft notions are as old as the tribe and as deeply seated as their heathen religion. One case I remember when I was with them in 1880. From my bedroom all night I heard a harangue. At sunrise I went into the village and found they had just released a man who had been tied up by his wrists behind his back and lifted thus, so that his feet could not touch the ground. While in that condition he was made to say what was not true—but anything to get out of misery—that he had planted owl's feathers and brought sickness and death to the tribe.

The man was cut down and hurried out of my sight. I demanded that they show me where he was, but they would not do it. So I reported the case to the Indian Agent, Dr. B. F. Thomas, at Santa Fé, and asked that some action be taken in regard to it. He came to Zuñi and we held a council. The Indians replied, "We have our government and laws, and what has happened is all right. We do not want you to interfere, but we want you to allow us the same privileges as you white people claim." And they added, "If you will tend to your own business we will tend to ours." We could get no further with them. When I tried to find out

what they did with their victim they said, "Quat-i-nek-yah." They took him to the lake west of Zuñi and made him kneel and say his prayers. While he prayed they said, with a significant gesture, "Quat-i-nek-yah"—*he went in*.

The Zuñi believe this lake is full of their people, and they go annually and catch tortoise out of the lake and dance, holding the animals alive in their hands.

The Indian agent, Dolores Romero, in 1866 reported:

During the past year a Zuñi Indian killed an Indian woman of the same pueblo, believing her to be a witch and that she had caused the death of his children. He was arrested and tried in the district court and set at liberty for the want of sufficient evidence on the part of the prosecution.

In August, 1889, accusations of witchcraft were agitated because the rains failed to come. It was said that someone must be keeping away the rain. A poor old man (wealthy, influential ones are never troubled) was accused. They hung him up by his wrists tied behind his back. Under the torture he confessed and they let him down. After more threatenings the man left the pueblo and a Mexican took pity on him and gave him a home. The drought continued and the witch excitement spread, and in October an old woman was hung up in like manner, as a witch, until she confessed. She then implicated her nephew, a boy of 16 years, a common thief. He was hung in the same way; was let down once or twice; was beaten about his head with sticks; was then hung again, remained hanging all night—all day—and the next night he died. A dozen Americans saw the hanging. One gentleman tried to cut the boy down, but was forbidden to interfere and told, "none American's business." There have been hangings of witches in Zuñi since.

This evil still goes on. The victims are often those who depart from the old pueblo customs and incline to the ways of civilized life. In the estimation of the ruling Zuñis, what we call progress is the most criminal of offenses, and must be trodden out by the most summary and vindictive tortures. While this report was waiting the printer, early in December, two Zuñi Indians with whom I talked freely last July were seized and subjected to the witch torture methods. They were probably the most progressive of any people in the pueblo. Seized, violently seized, strung up by their wrists, beaten with war clubs, and kept hanging all night, all the next day, and till 10 o'clock the second night—let down occasionally for a few moments to induce confession—they suffered indescrivable torture. To end these suffering they finally confessed that they were witches, and were let off when life was almost gone. Some perish in these tortures. I asked an intelligent gentleman, a resident in this pueblo for twelve years, "How often do these witch cases occur?" He replied:

One nearly every year, either resulting in death or being run off from the pueblo, sometimes followed and killed. Some years more than one. Half a dozen Americans have witnessed some cases. No Zuñi Indian has been brought to justice and punished for these outrages; but now three men are arrested for the late offenses and in jail awaiting trial. They are undoubtedly not the guilty parties. The real offenders, men of influence in managing the affairs of the pueblo, turned over to the authorities three poor men who were unable to help themselves, and expect thus to clear their own skirts.

The pueblo system is communistic in its character—not in respect to property, though the patent of each pueblo is held in an undivided form. Each family holds the lands it cultivates by a common, unwritten understanding. The crops and flocks are individual property, but there is no individuality, no independence in ideas, in personal plans, or in action. All must follow the old traditions, beliefs, and customs,

and no variation is tolerated. Bandelier says this is "the great exterior stumbling block in the path of the Indian towards civilization." The rigid enforcement of these communal customs is the hardest blow to educated youths. In many of the pueblos no one leaves the village without the consent of an officer. Said one who has long studied the pueblos both from within and without:

The Pueblo Indians are the most helpless and hopeless of any Indians I have seen, and I have been among many tribes. They are dead, standing on their feet. The stamina of life has been killed out of them by the lack of individuality, by their blind conservatism, and by their degrading sexual practices.

The governor of one of the smallest pueblos came to me with the complaint that the young men who had been away to school would not dance now as formerly, *i. e.*, in their religious dances. I could not comfort him, but could only say, "Things are changing." This made him open his eyes, for the idea of change he did not comprehend, nor liberty of action. I told him this was what is coming, and he had better adjust himself to the inevitable. Then he looked sadder still.

A young Pueblo boy at Carlisle joined the Presbyterian Church. When he returned to his home he kept away from the Presbyterian mission. When asked why, he replied, "I am obliged to do so. If I did not I could have no peace."

About ten years ago, in the Zia pueblo, two elderly people were put to death. I have their names. The offense was that they departed from the old communal customs. Both were clubbed to death in the most inhuman manner. The murderers were never arrested or punished in any way.

One girl, returned from an Eastern school this year, was stripped of her clothing by the governor and in this nude condition was compelled to dance before him. One who has intimately known this pueblo for years, a very careful intelligent gentleman, says:

Since some students have returned from outside schools the sharpest opposition to civilization has been developed. In the cases of these students the Pueblos have seen what is the tendency of education, and that if it goes on it will revolutionize their old customs. Hence they have set upon the returned students with great severity. Sometimes the first thing done is to put a young man in bed with one of their women and a girl in bed with a man. This is done to break them down and bring them under the old control.

The moral level of this pueblo may be judged as this same gentleman states:

I have seen an Indian man and woman, in open daylight, go through the whole operation of copulation in the open plaza. The heathen dances at midnight are even worse oftentimes.

The results of persecution of returned students are the worst I have anywhere found. It is no fault of the schools, but the innate cussedness of that pueblo. In another pueblo, only last winter, two boys, by the consent of their parents, but without the consent of the governor, left home for the Albuquerque Government school. For this offense the parents were obliged to move out of the pueblo into a deserted old house. In another pueblo a young man just returned from Carlisle was whipped because he received a letter from Carlisle. The governor said, "I am determined to make you an Indian again." In still another pueblo a father went to Santa Fé and made arrangement to have his children taken into the Ramona school. When he returned home he was seized, tied hand and foot, and left without food for five days.

## Governor Prince recently said (Annual Report 1892):

Some friction has arisen in Cochite and San Inefenso between ancient customs and modern ideas, and some very difficult questions have arisen between individual rights and communal authority. Such questions will be more likely to increase than to decrease as the years go by.

In a pueblo within 20 miles of Santa Fé a governor, Pinto by name, who let his children go to the Ramona school, was beaten and abused. When the annual election came another governor was elected, and Pinto was immediately set upon and beaten almost to death. His assailants were brought before the court at Santa Fé and let off with payment of costs and a promise to do better. When the time for spring planting came he was not allowed to plant the fields his family had planted for more than a generation. His enemies planted the fields and have lately harvested the crop and taken it to pay the costs of the suit. The assailants of Pinto said in justification of their brutal conduct, "Pinto has departed from the long-established customs of the Pueblos, and it was our duty to chastise him."

Within a year or two, in one pueblo, the officers told the returned students, "You have got to be Indians again. You must dance with us in our religion." The students objected and some were fined. They continued to disobey and the officers brought influence to bear upon the parents and put some students in jail, when the remainder yielded. The boys and girls went to a white person living near for sympathy and advice. Then the officials forbade the pupils visiting this person and threatened them so strongly and continuously that they broke up the visiting. These officials care not for the Indian agent. It is harder now for the returned student than it ever was before. The old fellows are determined to keep up the old customs. A young Indian who belongs in one of the smaller pueblos said to me:

The old Indians complain because I do not follow their customs and dances. I have learned better. In some of the dances they strip off all their clothes; in others a part. They say foul words to women and call it fun. I can not bear the dances. In the naked dances they are careful that no white men are present. These dances occur often. The old men teach the young men that they were taught by God to lead the others. The middle-aged men believe what these old men say. We young men do not believe what they say, but some have been frightened and yielded. I have not yielded. The old men threaten to take my land away if I do not obey them and practice the dances; told me I would have no right to my property if I did not; but I have held my land, fenced and planted it.

In one of the larger pueblos this young man could not have held his ground of independence. He has been at one of the Government schools, and for four or five years has been back in the pueblo. He and his wife both wear citizens' clothes.

In another pueblo where bastardy goes unrebuked five girls and two boys, returning from an Eastern school within three years, were stripped of the waist and flogged because they insisted upon wearing "American clothes" and refused to participate in the indecent religious dances. After flogging, the old time pueblo costume was put upon the girls. The fathers also were tied up and beaten because they sustained the children in this action. One of the pupils came near dying as a result of the whipping.

The following statement will show what a student returned from a school has to encounter if he tries to improve his condition on agricultural lines. A returned student in one of the pueblos went to the mountains and cut and brought down several hundred posts for fencing. With the aid of his father, a former governor of the pueblo, he put the posts around a piece of ground which had always been cultivated by

his family so far back as can be remembered. Wire was also stretched upon the posts. The present governor came one day and ordered the young man to remove the fence. He replied, "I have built the fence and shall not pull it down. You can do it if you please." Next the young man and his family fenced in a piece of meadow land for hay. When the governor heard that the meadow was fenced in he called all the people together and told them about it, asking their opinion about the matter. A part of the people said the fence ought to come down. The governor sent the sheriff to notify the builders of the fence that they must pull it down. They answered, "We have built the fence because we need it; but if the governor wants to tear it down he can do it." The fence still stands. But it is not every young man who can stand up and hold his ground. This young man has pluck and family influence.

That I may still further show the difficulties of our work in the pueblos I insert two more testimonies, one by a Protestant missionary, who has been some fifteen years in the Territory, and the other by an old Roman Catholic resident and official, long identified with this region, whose high intelligence is evinced by the style of his letter. His certainly is not a biased statement, though very emphatic. The missionary wrote as follows:

There remains that one great difficulty, which is the influence of the old Indians, and the bad, bad influence of Indian life in general. So much time is taken up and so much excitement kept up by the dances, etc., that the wonder is anything can be done with the children. Then, to make all worse, there is one grand round of feasts, saint days, and horse races. The imagination can hardly picture a darker, harder spot for a school or anything else than this pueblo.

The children are gentle and really lovely, and under favorable circumstances would come to be an intelligent, useful people: The older Indians make but little open objection to the children's attending a day school here; but they seem to be doubling and redoubling their efforts to keep the children up to the point of being out-and-out Indians. We can have quite a good influence over the children until they come to be 13 or 14 years old, and then they are taken from us and every vestige of civilization is eradicated. This is done by the government of the pueblo, the main business of which is to keep up all Indian customs. Under the tribal rule there is no liberty for the people, neither in religion nor anything else. While this is so but little can be done to better their condition.

Peter Sanchez, Indian agent, himself a Roman Catholic, after thirty years of experience and observation among the Pueblos, said, in 1884:

They are debased and idiotized by the effects of ignorance, indolence, and superstition, to which they abandon themselves to excess. They never think of their future nor that of their children. They do not think of their children, because, for these Indians, their family is simply the consequence of the union of the sexes and by no means the basis for future societies. As regards the actual society of the whites, instead of identifying themselves with it, they hate and fear it, because it attacks their superstitions, loathes their vices, and punishes them for their crimes. To this indigenous race the conquests of civilization are unknown and the law of progress utterly void. Resigned as they are in their condition, they prefer to be the slaves of ignorance rather than come in contact with the white race; hence the reason why they avoid educating their children. They are afraid the light of intelligence might make them give up their habits and customs, become ashamed of their abjection, and side with those whom they consider as the cause of their misfortune since they were conquered.

Their children, in their conception, are not those dear beings that nature gives man to perpetuate his species and contribute to his happiness; they are an element of material life, and in course of time the fuel to their brutal passions. Many an Indian hires his children to the whites in the capacity of servants, not that they may thus contribute to the current expenses of the family, not that they may be useful to themselves, but that, with the exiguous product of their work they may encourage and help to keep up their father's odious vice of inebriety. I reckon there are, more or less, 1,500 boys and girls in the nineteen pueblos who attend no school, but are growing in idleness, in indolence, in superstition, and amusing themselves with the most obscene and repugnant dances to the eyes of civilized society;

and this they call a "sacred tradition" that they must carry on to their posterity untouched. Shall an American Congress be willing to tolerate any longer such a state of things among their poor Indians? And will it, even in the presence of these facts, assume such a slow gait as will not insure the happiness of these pueblos for a whole generation to come?

This gloomy and sad picture, but true, has a way of being avoided, by declaring, by law, that the education of the Indian children is *obligatory* for every one of them between the ages of 8 and 18 years, under correctional pain; otherwise this matter will always be a question of time and money, a burden which the people may not always be willing to carry on their backs all the days of their life. Compulsory and industrial education, as I said before, among the Indians is what we need mostly to improve the poor condition they lie in after having traveled through three distinct Governments. So long as absolute discretion is given to indolent parents to abandon the education of their children, so long as the law in this respect is not compulsory, just so long will the Government and the people be unguaranteed in the noble end they have proposed to themselves; i. e., the civilization and education of the Indian. The boys and girls who return from the Carlisle school, as well as those who attend the Albuquerque school, are the pride of every man who appreciates education and desires the welfare of these Indians; but when they return home they have to join hands with the agent and thus deal with the gross ignorance of their people. \* \* \*

Some one of my predecessors has said that these Indians are independent and that their councils for the administration of justice are composed of wise men. I ask the American people what independence can there be in men whose true pictures I have depicted above. It is only the civilized, educated, and energetic man that is independent. What wisdom is there in men who have lived for centuries among civilized people and are not yet ashamed to go naked?

I have thus sketched the Pueblos, as found by personal visitation and close inquiry. Names are kept back, that I may not involve any person in trouble. Statements have been slowly accepted, questioned, over and again, lest injustice be done some parties. I have been careful to seek information from persons who have had years of inside knowledge of the situation. I am aware there is an opinion, as already stated, among certain classes in the Territory, that these Pueblo people are simple, innocent, industrious in the season of crops, and remarkably free from crime. I have often heard it said: "I never knew one brought into court." "They are seldom indicted in the courts." But such people forget the fact that, according to the civil arrangements of the Territory, the Pueblos are an autonomy, a law unto themselves; and that in the Pueblos there is no conscience in regard to many matters which, among civilized people, furnish the principal business of the courts. I am sure I have not drawn a darker picture than that given by Peter Sanchez, once the Pueblo Indian agent, an honorable citizen, and an old-time resident of New Mexico.

#### POLICY SUGGESTED.

If I say I am puzzled to know what can be done to improve the situation, I only repeat what many wise men have said. It is a problem to be studied; and if recommendations are made which prove impracticable, others have done so before me, but it will all help to keep up the agitation until some effective measure is developed.

Sometimes, when the Pueblos are confronted with outside condemnation of their acts by an officer of the General Government, they have replied, as before quoted, "That is our business; you 'tend to your business and we will 'tend to ours." It has not been infrequent that Zuñi Indians, when pressed by threats of interference from Washington, D. C., have answered, "It is none of Washington's business. Washington has nothing to do with us." Nevertheless they are all cowards and tamely back down when strongly confronted. They are not likely to go into the courts, unless some badly disposed white

man persuades them and engineers their case, which is extremely rare.

It is an important practical question of civil administration how long can the General Government allow such independent political autonomies to remain—nineteen in one Territory or State. Each one is an *imperium in imperio*, wholly separated from Territorial law in social, economic, educational, and police matters, and sustaining no legal relation to the counties in which their anomalous populations are situated. Seldom, except in cases of homicide or severe cases of assault, are the Pueblos in the courts, and even then the old plea is made, "We govern ourselves."

The question, Are the Pueblo Indians wards of the General Government is answered "Yes" and "No." Can it not be answered clearly and unequivocally? Allow me, sir, to say that your discussion, in your last annual report, impressed me as being on the right line, and pushed the inquiry further than the ordinary discussion has carried it. I am not an adept in matters pertaining to the courts, but I venture the suggestion whether the question can not be carried a little further, so as to find a way out of the complication and settle the wardship of the Pueblos. Possibly, in connection with the adoption of Statehood, the solution may come.

I can not resist the conviction that the Pueblo Indians should be wards of the General Government for some time longer. They are an exceedingly ignorant and stultified people. They have always and so completely shut out from themselves the outside world, its ideas, its currents of thought, etc., that their minds are blanks upon many matters which are the common inheritance of American minds. In acquirements they are far behind the Sioux, the Nez Percés, the Yakimas, the Umatillas, the Osages, the Omahas, etc.; and more than this, Pueblo intellects are stagnant and feeble, in consequence of the torpid condition in which they have long lived. Let the educational work, of which I have already spoken and will soon speak more fully, be pushed; and let other civilizing methods be wisely and persistently introduced for a term of years, and then these Indians may reach a condition fit for citizenship. I am sure we do not wish to swell our torpid, monad, ignorant voting population.

Sometimes, in studying the condition of the Pueblos, the question is presented in a slightly different form. Should the Government of the United States wholly withdraw her supervision over them and completely dissolve the quasi relation of wards? It will not be denied that while, under the treaty of Guadaloupe Hidalgo, they are *de jure* citizens, nevertheless they are, in their actual condition, *de facto* wards. So they have been treated by the Government ever since New Mexico was added to the Union. This is a somewhat mixed and complicated relation, and the question has arisen, again and again, what shall be done? Shall the Pueblo Indians be formally declared citizens? Shall their quasi wardship be dissolved wholly, and all protection, advice, and aid be withdrawn? Shall they be taxed like other citizens? Shall the pueblo governments be dissolved and the people be brought under the ordinary municipal laws pertaining to cities, towns, and counties?

Such action has been agitated and attempted. Prior to 1874 efforts were made, at various times, to secure the passage of an act of Congress formally declaring the Pueblos to be citizens and thrusting them forth entirely upon the civil usages of citizens. In 1874 the Pueblo Indian agent said:

The motive for such action was the removal of the protection of an agent, in order that no barriers might remain between the Mexicans and the Indians, to prevent

the former from encroaching upon the lands of the latter, and perpetrate any and all outrages with impunity. In the event of the removal of the protection of the Government many of the Indians would be deprived by fraud of their lands and reduced to pauperism and compelled to follow the life of savage tribes. This would unavoidably follow.

Hon. E. P. Smith, Commissioner of Indian Affairs, in 1874, said:

They are subjected to great hardships by reason of frequent depredations and encroachments upon their lands and water rights by Mexicans, for which they can obtain no redress in Mexican courts, and they look to the agent as the sole protector of their interests.

As nearly as I have been able to ascertain, in conversation with one of the highest jurists of New Mexico, about eighteen years ago, after a decision of the Supreme Court in a certain suit of the citizens of Taos County, to the effect that the Pueblos were citizens, some of the Indians of the Taos pueblo voted in the Territorial elections. Thereupon they were taxed. After this action they ceased to vote.

In 1885 many pueblo grants were taxed by local assessors, and this action was supported by the boards of county commissioners. This caused the Indians of Isleta to appoint three of their number to go to Washington, D. C., to see what steps the Government would take in their favor; and the governor of Santo Domingo also went at the expense of the pueblos of Santo Domingo, Santa Ana, and San Felipe on the same errand. I have not the necessary documents at hand for following out what was done in their case; but no attempt to tax these Indians has since been made.

It is certain that the Pueblo people have never accepted citizenship, and they stand aloof from the polls; but sometimes the Pueblo officers appear in the courts, as representatives of the pueblos, which stand in the position of bodies corporate.

Before the Government throws the Pueblos wholly upon their own status it will, of course, take into consideration the facts that since the acquisition of the Territory of New Mexico by the United States nearly a half century has passed; that but few of those living at the date of the treaty of Guadaloupe Hidalgo now survive; that two generations of the Pueblos of to-day have been taught and treated as wards, and are consequently entirely unprepared for so great a change. Would it not, therefore, be an act of justice on the part of the Government to notify the Pueblos of the contemplated change, and in a manner assist them to meet the responsibilities attached to such action, by placing them in actual possession of their lands as individuals, and otherwise place them upon a proper footing, by some such provisions as I hereby respectfully suggest?

(1) Provide a special attorney and interpreter to visit in person each pueblo and see and examine into the numerous depredations being committed by squatters and others upon their lands, timber, etc., and prosecute and eject the offenders from the Pueblo possessions. This would require probably two or three years.

(2) Let the bulk of their annual appropriations be expended in purchasing barbed wire for fencing, a few wagons, harness, hoes, axes, and helves. Likewise provide sufficient rations of bread, meat, sugar, coffee, salt, and hay as would be necessary for those Indians only who come to the agency on business. Let this be done instead of giving the present assortment of annuity goods from which they virtually derive no benefit.

(3) Provide a day school and residence building in each pueblo, save in the smaller of less than 150 inhabitants, with a teacher and assistant

teacher, so that some new industries can be taught. Authorize the Indian agent at Sante Fe to employ in each pueblo having a school, contract or Government, a policeman, whose duty it shall be to secure the attendance at school of pupils of suitable age, said policeman to be at the schoolhouse during the school hours, subject to the direction of the teacher. The teacher shall report each week to the agent how the policeman discharges his duties. Let this police be appointed by an amicable arrangement, if possible, between the Indian agent and the governor of the pueblo. If the governor refuses, let the agent appoint the police under the authority of the United States. I do not believe any person will take the matter into the courts. Let each teacher be required to make out a list of children in the pueblo of school age, and let pupils be transferred, by grade, from day schools to the boarding schools in the Territory or elsewhere.

(4) Let the Indian agent be instructed to use his influence to have each head of a family build a house on or conveniently near to the land cultivated by that household, with a view to finally abandoning the present pueblo buildings, which are very unhealthy, and to the breaking up of many of their communal practices. In my opinion, many families could be induced to move into such houses, providing the Government would furnish the building materials—lumber for roofs and floors, doors, windows, etc.—aside from the adobe and stone for walls, which the individuals could provide for themselves, as is being done so successfully among the Moqui.

These people should be assisted and interested in fencing their fields and raising crops of alfalfa, etc., to be cut and stacked for winter use. The men should cut, cart, and set the posts for fencing. The great necessity for this is that the pasture lands are almost barren from being overrun by animals not their own. Crops are also exposed to the cattle of the Indians and of ranchmen, and require much time in watching. Without fencing it is impossible to guard against being overrun.

I desire to call attention to an important change which has been going on in the pueblo of Laguna during the last twelve years. The old pueblo has been breaking up into subordinate villages. The following are the villages now existing: Laguna proper, Parajo, Ensinal, Pajuati, Mesita, Seama, Casa Blanca, Santa Ana.

Other families are located outside the villages. Some of these villages are 8 or 9 miles from the old center. One effect has been that many of the old communal observances have waned. The tendency to separate is increasing; there is more farming done and the Indians live more neatly and comfortably. Some of the old conservatives, noticing these improvements or departures from the old ways, are jealous, and within two or three years have been laboring hard to stop these innovations upon the tribal customs. Hence Laguna proper is very bad now, worse than for some time. Especially are these conservatives vindictive toward the returned students. But it is probable that a new era is dawning, though slowly, and the skies are still very murky.

Acoma also has two quite large outside villages, Acoma and Mc-Carteys, and some small groups, where in summer families go to cultivate their fields. If these families could be induced to remain in these summer homes during the year it would help them in many ways. Zuni has three very fine out districts—Ojo Caliente, Nutria, and Pescado—15 and 20 miles from the pueblo, where are splendid copious springs and the

best of land. Many families go to each place for the summer to raise crops. If they could be prevailed upon to permanently locate at these villages and at other desirable places a new era would be inaugurated. Other pueblos could be named—Santa Ana, Zia, Jemez, San Filepe, Santo Domingo, etc.—where such moves ought to be made.

To properly inaugurate this system, the present Pueblo agent should take up his residence permanently with the Jicarilla Apaches, where the presence of an agent is sorely needed on account of the great responsibility, the large disbursements, and the demoralized condition of those Indians, so near to Amargo whisky, and there should be appointed an agent for the Pueblos with funds to allow him to travel freely among these pueblos.

By some such system of preparation these Pueblos could be brought into a condition where it would be safe to throw them upon their own resources, with some confidence that they could subsequently hold their own. At the same time they would be brought to a more advanced condition of domestic civilization than could be reached for a half century or more if they stay in the old fetid communal houses. All this, provided the right man is selected as Indian agent.

### ARIZONA.

I have visited almost all parts of this great Territory, studying the schools and the condition of the Indians. The following reservations have been personally visited: San Carlos, Papago, Pima, Maricopa, Gila Bend, Colorado River, Fort Mojave, the Hualapai, the Moqui, and the Navajo. I was at Williams, the nearest point to the Supai, when snow made any nearer approach impracticable; but I had long, close talks with old residents about the peculiarities of those Indians and their situation. I have also several times looked into the condition of the Mojaves and the Chimehuevis at The Needles, and of the Pah Utes, on the Nevada side of the Colorado River, in close proximity to Fort Mojave. Fort Apache, a distant part of the San Carlos Reservation, I was unable to visit, and it was the more to be regretted, as the Indians at that post are of an excellent type. I have closely inquired into the condition of the Indians from the Gulf of California to Yuma City, at and around Yuma, and all along the Colorado River, from Yuma City up to a point 100 miles above Fort Mojave.

In studying the condition of many of these tribes, I have proceeded upon the principle of philanthropy, which recognizes that as the highest benevolence which stoops to those lowest in the scale of being, and that people as most urgently demanding our assistance who can do the least for themselves. The wants of the Arizona Indians, as compared with those of more northern climes, are few and inexpensive; but in some sections of the Territory, even these are very scantily supplied by nature. In that torrid climate and in those arid regions, often swept by devastating torrents, these supplies are sometimes precarious. It may therefore be said that many of the Indians of Arizona, in respect to the supply of food and raiment, are kept pretty near the dead level of the lowest human existence. But for certain valuable compensations, often found in human conditions, we might not be able to account for some remarkable phases in their history and character.

Probably no Indians in the United States can accomplish greater feats of travel over the roughest and ruggedest mountain trails than

the Apaches. There are no better laborers with pick and shovel than the Chimehuevis, the Mojaves, and the Yumas. The Cocopas and Yumas make the very promptest and most efficient steamboat crews. The Moqui are extraordinary farmers for their regions. The Navajoes are sharp traders, unexcelled herdèrs, and skillful weavers. The Papagoes are noted for docility, industry, patience, and chastity. As a whole, the physique of the Arizona Indians is unequaled by any of the North American tribes, except possibly the Sioux. It is seldom that taller, better-proportioned men are found than the Mojaves and Yumas. The Navajoes and Apaches are slighter, but perhaps more wiry and elastic.

The country knows more about the Apaches than any other of the Arizona tribes, because they have been so prolific in renegades who have horrified the frontiers. But these hostiles are only a small part of the great tribe, though they have succeeded in keeping many companies of military actively employed for many years. It is now about twenty-four years since the Navajoes caused much trouble to the Government. Next come the Hualpais, who for a time were on the war-path in northwestern Arizona, but have for years been settled quiet. But only a very few old frontier men can tell when the Mojaves, the Yumas, the Maricopas, and the Pimas were hostile to the whites; and no one dares affirm that the Moqui, the Supai, and the Papagoes ever bore arms against us. Indeed, we may well say that the last seven tribes mentioned have been, from very remote years, the true friends of the whites.

Why, then, may I not ask, have the Arizona Indians received so little attention from the Government—I do not mean in rations, the bestowal of which I deprecate, and which it has been the good fortune of most of these Indians not to add to the list of their woes—but in the direction of such efforts for their civilization as schools, missionaries, implements of agriculture, instruction in house building, aid in obtaining facilities for irrigation, etc.? The answer, I suppose, is not difficult. They are a long way off; not much is known about them; they have obtained a bad reputation on account of the Apache renegades with whom many are accustomed to associate all the Arizona Indians; and finally because they have few "friends in court."

For this reason I have been glad to visit this far-off, arid region, have traveled for hundreds of miles among the Arizona Indians, have seen them in their homes and fields, tested their true character, and am prepared to speak of their needs.

Another thought should not be forgotten—that the Arizona Indians are not so far advanced in civilization as the Sioux, and some other more northern Indians is owing to the type of civilization with which they have come in contact—the Mexican—which is vastly different from that which has surrounded and permeated the more northern tribes.

#### SCHOOL STATISTICS OF INDIANS IN ARIZONA.

It will be surprising to some to learn that the number of Indians in Arizona much exceeds those of any other State or Territory except the Indian Territory. We are accustomed to think of the Dakotas as having large bodies of aboriginal population, but both North and South Dakota have only 27,000 Indians, while Arizona has over 35,000, and they have cost the United States Government not a tithe as much as

have the Dakota Indians. No one will think of paralleling the cost of Apache wars with those of the Sioux.

The Yumas, sometimes reckoned in Arizona, are left out of this calculation, notwithstanding 200 or 300 are supposed to be east of the Colorado River, because their reservation and their headquarters are in California. The Navajoes, having their headquarters and the major part of their reservation in Arizona, are reckoned in that Territory. The Mojaves about the Needles are both in Arizona and California; so also with the Chimehuevis at the Needles and below on the river. They are counted in Arizona because we have no means of dividing them.

We frankly admit that, as in all Indian statistics, no one can vouch for the accuracy of the data on which the tables are based. It has not been possible in many cases for enumerators to tabulate the roving tribes as thoroughly as they do the more stable populations. This statement is especially true of the Papagoes, the Cocopas, the Chimehuevis, the Hualpai, the Apaches, and the Navajoes. Often the Indian agent, after many unsuccessful efforts at exact figures, has given an approximate estimate. Many of the Papagoes are much of the time in Mexico, or far toward the west all over the long stretch of country between their usual home and the Colorado River. The agents of the Pimas and of the Navajoes explained to me the methods by which the census was taken on their agencies, and it was done so carefully that it is thought that the figures now given are more reliable than those for many years. An exception was made in case of the figures for the Papagoes, as Agent Crouse said they were estimates because he could do no better. The figures given for the Moqui were furnished by Allotting Agent Mayhew, whose tables I saw and looked over, just as he was completing them. He claims to have taken them carefully from house to house. On the whole, the statistics for 1891 are more satisfactory than for any former period.

The number of children of school age is an estimate by computation upon a definite basis adopted by the Indian Bureau. It has been customary to call the school age from 6 to 16 years, inclusive, and to calculate the number of pupils as 20 per cent of the total population. More recently the school age has been changed to from 5 to 18 years. For reasons about to be given, this change will not help much in Arizona, though it is not customary to exclude Indian boys or girls from any school, even when they are far past 20 years of age. So long as they behave well and seek to improve their opportunities, we are glad to see these older ones in school. It is their last chance for regular schooling.

Arizona is a region of warm climate, in which every form of life, vegetable and animal, matures early. The state of matrimony also is reached earlier than in cold regions. Multitudes of young Indians consummate this relation at 12 to 16 years of age. Among the San Carlos Apaches the marriageable age is from 12 years upwards. In the other tribes, from 14 years upwards. Thus pupils, reaching this age, are cut off from further advantage of the school, save with few exceptions. If, therefore, when we calculate the children of school age, by taking 20 per cent of the whole number of the Indian population, we proceed a step further and reckon 60 per cent of that number, we shall arrive at the probable number of children who are available for school in the warm climates. I shall adopt this method for Arizona.

Here is approximately a considerable increase in the Indian population of Arizona, in eleven years. There has certainly been nothing of a marked character to interfere with the growth of the population, in any of the foregoing groups, except possibly those in the San Carlos Agency, not including the White Mountain Apaches, belonging to Fort Apache. In the last ten or twelve years, many of the San Carlos Apaches have become desperate renegades, and they and their families have suffered death or transportation; and social diseases have swept off many others. It is not strange therefore that they were reported as 4,876 in 1880, and 4,819 in 1891.

In respect to getting the means of subsistence and clothing, the various classes of Mojaves, while yet very poor, are gaining a little every year. The same is true of the Chimehuevis. The Pimas and Maricopas are certainly doing somewhat better, though not as well as they

could, if the Government would allow more expenditure for irrigation, so as to put these Indians in a better condition. Of the Papagoes I think it safe to say they are holding their own numerically, though at a hard rate of subsistence. On the whole I think it probable that the 3,276 increase of the Indians in Arizona, since 1880, is not far from correct.

\* A school building was ready at Moqui, and at Colorado River Agency, and one was in course of erection at San Carlos; nothing else, then, in Arizona.

The foregoing table shows that in 1880 there were only 73 children of Arizona Indians, out of a total of 3,860 children, who were in school, anywhere, or only 1 in 53. In 1892 there were 1,202 children, out of 4,280 children, who were in school, or about 1 in  $3\frac{1}{2}$ —a surprising relative advance. Nevertheless, it appears that 3,078 children available for schools are not in any school.

The school accommodations are yet small in number, though increasing every year. For the fiscal year 1893 the accommodations will be about as follows:

Navajo.....	100
Moqui.....	
Keams Canyon.....	110
Day school.....	50
Fort Mojave.....	150
Colorado River.....	75
Phoenix.....	125
Pima.....	125
Tucson.....	175
San Carlos.....	60
White Mountain Apa.....	50
Total.....	1,070

Here are accommodations for 1,070 pupils in Arizona. Allow the same number—403—to remain in school outside Arizona, and we still have 2,807 children of school age unprovided for.

The Pimas and Maricopas, in Group No. 1, numbering about 9,000 to 10,000, have two schools for their children. One is at the Pima Agency, and the other at Phoenix, both of about equal capacity. The Papagoes have only one school which sustains any relation to their tribe, viz, the Presbyterian contract school at Tucson, just off from their reservation. This excellent school, with accommodations for only 175 pupils, affords a small opportunity for a tribe of 4,000 to 5,000 people. Including 124 pupils, from this group, in school outside of Arizona, only 485 children have been hitherto provided for, out of 1,162 in the group.

It is understood that appropriations have been made allowing for a large increase in accommodations at the Phoenix school; I hope this addition will bring the capacity of this school up to 250 or 300 pupils. The school is splendidly located, is in good hands, and so centrally located that it should become the great industrial training school of Arizona. But the question remains, as it met me when I visited the people two and a half years ago, why can not the Papagoes have a school?

Looking at Group No. 2, I am glad to say that there is now a comfortable new school house at Colorado River Agency, supplying a long-felt want. Though 50 per cent larger than the old house, it is not large enough. Instead of accommodating 75, there should be room for 100 pupils. At Fort Mojave the old military buildings have been turned to good account; and the agricultural lands on the river bottom are being made productive. But buildings for 125 pupils are not enough for about 1,300 Mojaves within reach around the fort and at The Needles; for 200 Chimehuevis; for 700 Hualpais; and for 200 Supai, all of whom are now under the care of the superintendent of Fort Mojave. Then there are the Pah Utes just across the river in Nevada.

In Group No. 3 are the great Navajo and the Moqui tribes, the one with accommodations for 150 pupils, and the other, including the new day school, with room for 160 more. About 310 accommodations for

2,168 children of school age. There should be another boarding school among the Moqui. Fort Lewis, situated just above the north line of Navajo Reservation, in Colorado, could be supplied with 300 Navajo children, and still leave pupils enough for one or two more good-sized schoolhouses.

In Group No. 4 are the San Carlos Apaches, comprising also those about Fort Apache. It is pleasant to know that a school is to be started at the latter place. The old shaky building at San Carlos, with very limited accommodations for even 60 pupils, should be demolished, and a new building for 200 pupils erected in its place. With 253 children in schools outside of Arizona, there will be an ample number for the accommodations I have indicated. Let the question be settled by full and fair trial, whether "the intractable, fierce Apache" can be most effectually civilized by bayonets or by schools.

It is a questionable policy to take children from the warm, arid climate of southern Arizona, and transplant them to the far north, or to altitudes much higher than their homes, where the climatic conditions have hitherto proved very trying to them. Let schools be multiplied in Arizona, and then strengthen, multiply and clarify the influences so much needed for the transformation of these frontiers in which progress to better styles of living has been so slow.

Having considered the educational needs of the Arizona Indians, I will now state more fully their present condition as related to the possibilities of self-improvement, self-support, and advance in civilization.

#### APACHES.

These Indians have a bad name and are victims of a prejudice not easily overcome. The Apache Indians have been denominated "the savagest of savages, the red man incurably wild." Much has been said and written of their treacherousness. The military commander at San Carlos said to me, "It is the unexpected that happens with these Indians. We never know we are in danger till we are in it." It is certain that for a long period this tribe swept the plains and held the mountain fastnesses, carrying terror and torture from the upper waters of the Pecos far down into Old Mexico. The deserted cities whose ruins are crumbling along the shallow waters of the Gila must have been the homes of a people who long maintained their supremacy in the face of savagery. The Casa Grandes on the west were an alluring borderland between an ancient civilization and barbarism.

Much has been said of the shocking tortures to which the hostile Apaches subjected their victims. Many blood-curdling descriptions have been given me, which seem to exhaust the most fertile invention in the arts of cruelty. But when we make these terrible indictments against the Apaches we forget the barbarity of our own ancestry. Sir Walter Scott said (Ivanhoe, p. 189):

The descriptions given by the author of the Saxon Chronicle of the cruelties exercised in the reign of King Stephen by the great barons and lords of castles, who were all Normans, afford a strong proof of the excesses of which they were capable when their passions were inflamed. "They grievously oppressed the poor people by building castles: and when they were built, they filled them with wicked men, or rather devils, who seized both men and women whom they imagined had any money, threw them into prison, and put them to more cruel tortures than the martyrs ever endured. They suffocated some in mud and suspended others by the feet or the head or the thumbs, kindling fires under them. They squeezed the heads of some with knotted cords till they pierced their brains, while they threw others into dungeons swarming with serpents, snakes, and toads." But it would be cruel to put the reader to the pain of perusing the remainder of this description.

It is not many months since the papers of the Southwest contained an account of savage atrocities inflicted by white men upon Apaches themselves. As between the Apaches and the whites, there is doubtless a heavy balance against the latter, if we may accept acknowledgments from some of the more candid of the early pioneers in Arizona. They declare that in their first travels through the Apache country they found the Indians inoffensive and not given to theft and immorality. The records of the Indian Department contain a statement of United States Commissioner Collyer, which will be read with interest:

The Apache Indians were friends of the Americans, when they first knew them, and they have always desired peace with them. When placed upon reservations in 1858-59, they were industrious, intelligent, and made rapid progress in the arts of civilization. The peaceable relations of the Apaches with the Americans continued until the latter adopted the Mexican theory of extermination, and by acts of inhuman treachery and cruelty made them our implacable foes; and this policy resulted in a war that in ten years, from 1861 to 1870, cost \$40,000,000 and 1,000 lives.

Hon. Edw. P. Smith, Commissioner of Indian Affairs, in his annual report for 1874, p. 59, referring to "the Southern Chiricahuas or Pinery Indians, Cochise's band of Apaches, and the Nimbe, Magolon, and Coyetero Apaches," in the southeastern part of Arizona, said: "Theft, lying, and immorality are unknown among them."

The Apaches were at that early period quite free from low sexual vices, but contact with the whites, and often with the military, have debauched them and infected them with loathsome diseases. These diseases, in our day, have become so common that boys, and especially girls of 12 to 15 years, are often the victims, and the most rigid examination of San Carlos Apaches is now necessary, in selecting pupils for the large training schools to protect them from these diseases. The responsibility for this terrible curse rests upon white people. The following extract from the annual report of the San Carlos Indian Agent, in 1883, fixes the responsibility where it belongs:

The most common ailment is due to licentious habits, and it is a fact worthy of notice that the immoral habits which lead to this infliction, are more common among those bands that are on the most friendly and intimate terms with the whites than among the more warlike. The Yuma, Tonto, and Mojave tribes (these formerly lived in the Verde valley, and were removed to the San Carlos Agency) who have been subdued to the point of servility, are the most notoriously profligate of all the Indians on the reservation; and it is claimed by persons long resident among them that the White Mountain Apaches, who, next to the Chiricahuas, are the most warlike, are freest from the besetting sin of all the reservation Apaches.

Much has been said of the fierce raids made upon the whites by Victorio and his slaughtering band. In justice it should be stated how this great chief was driven to such desperate acts. Ladd (Story of New Mexico, p. 363) gives the facts:

The Chiricahua Apaches, when the reservation at Bosque Redondo was broken up, in 1868, by the Peace Commissioners, were placed upon Ojo Caliente Reservation, in Grant County, N. Mex. Here they lived peaceably for ten years, till 1877, under the restraints of their chief Victorio, one of the most remarkable Indian characters that ever lived in the Southwest. Victorio and his people had learned agriculture on the Pecos and were content with the quiet life that was opened to them in this occupation. Excellent buildings had been erected for him and his people at Ojo Caliente; irrigating ditches had been constructed, and some progress made in cultivating the soil. "Let the Government leave me here alone," said Victorio, when it was again proposed to remove his people. But his lands were coveted by the white men. The Interior Department ordered the Chiricahuas to be removed to San Carlos Reservation in Arizona. The military officers in New Mexico remonstrated at this unjust and needless offense against this tribe. Victorio declared he would never go there with his people to stay; but the orders from Washington were imperative, and the removal was accomplished, under the military guard sent to enforce it. Twice Victorio broke away from San Carlos and returned to Ojo Caliente, only to be or-

dered or driven back. In April, 1879, Victorio, in despair and rage, since all his protests to the Government were in vain, took the warpath in desperate resolve never to leave it.

Is complaint made that the Apaches do not settle down to agriculture? Three-fourths of their country consists of barren volcanic rocks and sterile ridges, where no plow can be driven and no water found, where campaigning exposes to the severest privations and dangers. Even the valleys of the Gila and other streams near San Carlos are subject to fierce torrents, which pour down the mountains and sweep away ditches and the fertile lands of the adjacent valleys. This has been a frequent occurrence.

The Apache children received into the training schools of Albuquerque, Santa Fé, Grand Junction, and Carlisle have shown aptness in the scholastic as well as in the industrial departments. Capt. Pratt says that among the farmers of Pennsylvania the Apaches are regarded as the very best of laborers, on account of their agility and strength. Those in Albuquerque and Santa Fé schools have not been exceeded by any other pupils in the rapidity with which they learned to read and to handle tools. The removal from the low grounds and hot climate of San Carlos to the higher altitudes and cooler climate of the mountain regions has unfavorably affected many of these Apaches. Why can not better educational facilities be afforded them on their own reservation? There are enough pupils living in the same climate to fill one school.

#### THE PIMAS AND MARICOPAS.

They live in a dreary, arid, inhospitable country. Some one has said of it, "This is not a jolly place." Another said, "The days are as hot as the desert where the White Nile rises; so hot the very lion's manes are burnt off. The nights are heavenly." Mrs. Wallace describes the rivers as "tricksey streams—sometimes wet, sometimes dry—but give enough water to irrigate meager cornfields. Occasionally they rise in the very center of barrenness, flow a mile or so, and are lost in the sands; then rise unexpectedly and run again."

The Pimas are a very ancient people. They were here three hundred and fifty years ago, when Capt. Diaz and Saldiban, with twelve intrepid men, found their way along the Gila to the great Colorado desert. Now, as then, they are the same good Indians. Their Casa Grandes is one of a chain of ruins of once great cities extending from Utah to the City of Mexico. The Pimas were once good fighters, and a wall of defense against hostile Indians, the only protection, it is said, for travelers between Fort Yuma and Tucson.

A dire monotony characterizes the lives of the Pimas. In this hot region, a "lofty scorn of work" seems not wholly without excuse. But the old time, when an Indian gloried in his laziness and the squaw in her servitude, is passing away, even without the aid of "Woman's Rights Conventions." Nor is this seeming advance wholly a modern product. The Spaniards who visited this region three hundred years ago, found the Pimas irrigating the lands and raising two crops of grain a year. The valley of the Gila is very fertile, and in this section from two to ten miles wide.

The typical Pima house is a snug hut or den, constructed by bending over a few poles stuck in the ground, lashing them together, covering with reeds or straw, and plastering over the whole with mud. At a distance it looks like an inverted bowl-shaped mound of earth. In one

side is a low hole through which ingress and egress are gained on all fours. These huts are too low for a man to stand erect in, and are without a chimney for ventilation. In winter, when a fire is burning, it is necessary for the inmates to keep close to the ground, to avoid smoke, which would stifle a white man. In summer the huts are mostly abandoned for summer residences in the fields, consisting of sticks set on the ground covered with poles, brush, and straw, to protect from the sun. One great obstacle to civilization has been, and still is the character of these dwellings. They are a bar to progress.

Within the last three years, however, over sixty better houses have been built by the Pimas, under the direction and advice of Agent Crouse. These houses are of adobe, averaging from 15 to 24 feet, with perpendicular walls, and containing two or three and occasionally four rooms and several windows. The roofs are of logs covered with ribs of the giant cactus, arrowweed and mud.

On this reservation are a goodly number of young people who have returned from the Fisk Institute at Albuquerque. These young people have made the best and neatest houses, and are ambitious to have more furniture than the old Pimas use. In fact they want their houses well furnished. But the old "kea," the Pima term for house, still predominates.

Excellent school buildings of adobe have been erected during the last three years, and with a good class of employés, progress is being made. Albuquerque Government school boasts of 90 Pimas, and Genoa, Nebr., of about 20, as among their best and most reliable students; and the home school has an enrollment of 130. The work of education is well started in this tribe.

These Indians, says the agent, "have never had any aid from Government in providing facilities for irrigation. Without any assistance whatever, they produce from 3,000,000 to 6,000,000 pounds of wheat annually, and, in addition, many thousand bushels of barley, as well as some vegetables. For irrigating purposes, they make rude dams of logs and brush, to raise and divert the water of the river; then they make canals and ditches to convey it to the fields. They have no head gate, being too poor to buy the necessary lumber."

#### THE PAPAGOES.

They live in a region of scorching deserts, alkali plains, sage brush, and greasewood wastes along the Mexican line. There is beautiful scenery in the distance—the shifting outlines of the Tucson Mountains and the rugged peaks of others; but there are also sterile mesas and sandy plains where desolation reigns.

The Papago Reservation is very fertile and well watered, but it contains only 27,566 acres for the 4,000 or 5,000 people—just a few acres each. Owing to this limited area the Papagoes spread over a strip of country along the Mexican lines, 150 miles long by 100 miles wide—a mountainous land with desert slopes.

I cite the following testimony, given a few years ago, to the high character of the Papago Indians:

Neighboring settlers who used to make their whole livelihood out of the Indians by selling them liquors, find it a very difficult matter to make so much of a success as formerly. The other day a party of traders visited one of the Papago towns, having for sale whisky, calico, and sugar; but when the captain of the village learned of it, he immediately requested them to leave, and would not let them expose for sale even the calico and sugar. While an improvement has been going on in this, the worst of all evils, they have also become very diligent and careful in hunting in loose or stray stock. This is a great accommodation and saving to the adjoining

ranchmen, as when one of their cattle stray into the Papago country, there need be no anxiety or pursuit; they need only wait patiently a few days for the Indians to find and bring the stock to the agency, to be claimed and taken away by the owners. In this way, during the past year, more than one hundred animals, lost to their owners to all intents and purposes, have been restored.

These are the only Indians in Arizona who wear short hair, save the small tribe of Chimehuevis. The Papagoes dress almost wholly in citizens' clothes, and receive no support from the Government.

Some of the Papagoes, about 363 in number, have received lands in severalty—but what of the remainder who have no reservation lands, who are homeless and compelled to wander? Formerly they were cattle-raisers, but the ever encroaching whites have appropriated the most favorable localities, and it is every year more difficult for these poor Papagoes to live. In June the fruit of the giant cactus is gathered, and that with the mesquite beans constitutes the food for months. One, knowing their country, is filled with amazement to think that human beings can subsist in such a region. A company of white people placed there and compelled to remain, would die out in two years. It is a sandy desert, and nothing can be raised by cultivation of the soil. Cactus fruit, mesquite beans, roots, gophers, and a few rabbits make the inventory of food. White people are monopolizing the few springs of water. Mesquite is being exhausted. What would 160 acres of such desert land amount to?

Whenever a spring is found, usually temporary, or a marsh or low lands, which supply food and water for the stock, the Indians settle and remain so long as the supply of water holds out, and then push west towards the Colorado River, or south into Mexico. Some Papagoes supply Tucson with wood and hay, brought in in small bunches on the backs of burros, and others work for settlers, as they find opportunity. The Supai, of whose destitution we have heard much, are in a paradise as compared with the Papagoes.

The Papagoes have no school. In 1874 89 pupils were reported in school. The United States Government had repaired a wing of the old church of San Xavier, and the school was held there. Now at Tucson the Presbyterians have an excellent school with accommodations for 175 pupils, but there are 85 Pimas in the school. The Papagoes number 86 in this school, and there are 15 more at Fisk Institute at Albuquerque, N. Mex., 101 in all. This, out of a tribe estimated at 4,000 or 5,000 people, and they too some of the poorest, most industrious, and chaste Indians in the United States. A school should be established among this tribe.

#### INDIANS ALONG THE COLORADO RIVER.

During my trip on the steamer *Gila*, about 300 miles up the river, there was a good opportunity to study the river Indians of Arizona. Towards the mouth of the river, in Mexico, and, for the most part, 60 miles below Yuma, are the Cocopas, probably numbering 800, who frequently visit Yuma City for employment and trade. They have always been inoffensive in their relations with the whites. Belonging to the same family as the Yumas, they are fully as dark as the Yumas, and speak almost the same language. Being ambitious to earn money, they gladly improve all opportunities to labor.

Next come the Yumas, about 1,000 on both sides of the Colorado, but three-fourths of them are in California. These Indians also have been noted for friendly relations with the whites. Since 1863 it is

said that only one white man has been killed by the Yumas, and that was in a drunken row, when the Indians were infuriated with whisky furnished by a white man. Prior to 1863 the Yumas were drawn into trouble by Texas rangers, who sought Indian scalps for the bounty paid by the Mexican Government. The rangers began upon the Apaches and drew in the Pimas and Yumas. In this time of trouble Fort Yuma was established to protect emigrants going to California. Many depredations charged upon the Yumas are said to have been perpetrated by Mexicans and white desperadoes. The Yumas have fine physiques, tall, straight, strong, and well adapted to do the hard work of this region, being able to endure heat well. They are good workers, cheerful, and quarrels among them are rare. Hats are not thought necessary, as they are well protected by a heavy body of long, black hair, which hangs in artificial ringlets down their back, often for 2 feet. Only six years ago neither men nor women wore much clothing, but now all are fairly dressed.

The Mojaves form the next tribe, living 125 to 300 miles above Yuma. These Indians are similar to the Yumas in physique, habits, and disposition, and they number more than 2,000 on or near the Colorado River Reservation, at and around the Needles, and in the vicinity of Fort Mojave. No Indians work more cheerfully when an opportunity offers, but it is seldom there is a chance for productive labor, save on the Atlantic and Pacific Railroad. This region is so dry there is little inducement to try to raise crops, except after the summer floods are over, when melons, squash, etc., will grow on the bottom lands. These products, when other supplies of food are not too scarce, are sometimes preserved in dry sand till midwinter. Like the Yumas, so with the Mojaves, the Chimehuevis, and the Hualpais, the mesquite bean is the main reliance for people, cattle, dogs, etc. It contains sugar and starch in large proportions and makes good, sweet, nutritious bread.

These Indians realize a small income from cutting and selling wood to the steamers and carrying hay from the distant mesas to the Indian agent, miners, etc. Sometimes an early crop can be raised on the low lands, but often both the early and the later crops are cut off by overflows; hence the people are kept very poor. There are many half-clad members of this tribe, but all are fat and strong and can easily carry from 200 to 300 pounds.

Among the Cocopas, Yumas, and Mojaves there are few half bloods. In the Colorado River agency school of 77 pupils there is but one, a half Jew, a rare sight here. The women are very squarely and strongly built, and all the people are healthy, except some who became victims of scrofula and social diseases.

None of the River Indians have many cattle or horses. In the long fields beside the river, for scores of miles at a time, one will see no stock. This scarcity is accounted for in part from the custom, in case of death, of burning the body of the deceased with all his possessions. Formerly horses and cattle, if any, were placed on the funeral pile for cremation. The people still cremate, but seldom kill more than a single animal on the occasion.

The houses of the lower River Indians are made of brush and a few logs, the roof being plastered with mud. In the warm season they sleep under an overhead shelter or hovel. Inside the houses the floor is sand, on which they sleep in winter, occasionally changing it for a fresh supply. Fifteen or twenty persons huddle together in a house 10 by 20 feet, with no table, chairs, bedsteads, and only a few mats. Their dishes are tin cans, skillets, home-made pottery, reed baskets, and ollas for water.

In this hot, even climate these Indians need few clothes and their wants are small, save for food. They are natural farmers, but without irrigation little can be done. Rain can not be depended upon, three, four, and five months often passing without a shower. These River Indians are teachable and desire to work, but without irrigation there is little inducement. A large irrigation ditch has just been opened.

About 25 miles below the railroad bridge at the Needles there is another tribe, a small body of about 200, Chimehuevis, from whom the valley is named. They are lighter in complexion, more slender in form, and of greater acuteness than the Mojaves. The valley which bears their name is beautiful and very wide, but with no greater facilities for agriculture than that of the Mojaves for want of water. These people perform much labor for the Atlantic and Pacific Railroad, are in good circumstances, and well clothed. They wear the hair short, are acute and sprightly, and try to be like white people. It is said that some of the women have sewing machines. This tribe is a branch of the Pah Utes, in Nevada, and speak their language. Above Fort Mojave they are found in larger numbers.

The Hualpais are another tribe on the Arizona side of the Colorado, to the east and northeast of Fort Mojave. They are inferior to the other tribes just described, more rough, savage, and filthy, and not much inclined to industry.

For the River Indians there are three schools. One for the Yumas, opposite Yuma City, with nearly sufficient capacity for all that tribe. These belong in California and the school is on that side of the river. For the river tribes above the Yumas, including the Hualpais, altogether numbering more than 2,800, there are only two schools, one at Colorado River Agency and one at Fort Mojave.

#### THE SUPAI.

This small tribe of 225 Indians, in a deep cañon of the Colorado River, near Williams, Ariz., if we may judge by linguistic connections, is of a mingled Apache and Mojave origin. Their habits are decidedly peaceful, but intellectually they are dull. In this deep cañon are strips of land of great fertility, of which some 2,000 acres are estimated as arable. The walls of the cañon are nearly perpendicular, making the climate very equable. Access to their homes is by a terrible gorge, on horseback, down a passage of rocky steps, so narrow that loads wider than the horse's body can not be borne.

As compared with the Papagoes, the Mojaves, and the Hualpai, the Supai are well provided for by nature, but individuals looking at the Supai alone, without comparison with other tribes, would think them very poor, and indeed they are not rich. The juniper berry, the piñon nut, mescal, etc., abound there. Besides natural products, the Supai raise corn, beans, melons, and large quantities of peaches. Pure water flowing from never failing springs is plentiful for domestic purposes and for irrigation. Wood is also abundant; and there is game, such as deer, antelope, bear, turkey, and rabbit.

The Government has given the Supai this year a farmer, with a supply of tools and seed, to lead them out further in the direction of self-support. His wife is a field matron. He has written me: "I consider them well supplied with food and clothing. They make buckskin clothing, and sell to other tribes for blankets."

They have lived for a long period isolated from the remainder of the world in this deep cañon, maintaining a fair condition of morals and with little polygamy. The Supai have no school and detest the idea

of education; but they desire to learn to write and are good imitators. A schoolhouse (called by another name, so as not to arouse their prejudices) could be cheaply built of stone; and under tactful guidance these Indians may yet be proud of a school in their midst.

#### THE NAVAJOES.

This largest of all the Indian tribes on a single reservation presents the gravest problem of any in respect to education. They are also the wealthiest, except the Osages, and self-supporting ever since 1876. The Navajoes are among the most widely and favorably known of the American Indians. For more than twenty-four years this tribe has shown no hostility against the Government, though there have been many brief skirmishes with ranchmen on account of petty quarrels in regard to stock. In their way, the Navajoes are very industrious, tending the numerous flocks and weaving valuable blankets.

Since the return of the Navajoes, in 1868, from Bosque Rodondo to their own reservation, they have had a remarkable growth in numbers and in property. A comparison of two years is instructive.

	1868.	1891.
Population .....	10,000	16,102
Horses .....		118,798
Sheep and goats .....	15,000	1,583,754
Cattle .....	500	9,188

The population has sometimes been estimated at 20,000, which is probably too large. The above figures, for 1891, are the best available, and the census for that year is probably the best ever taken of the Navajoes, though exactness can not be claimed. Of the above number, 9,241 are reported as living off the reservation. In 1874, Hon. Edw. P. Smith, Commissioner of Indian Affairs, gave this tribe as numbering 11,068, of whom 2,000 were off the reservation, "seldom or never coming to the agency." The sheep and goats were then reported at 130,000 and horses at 10,000. Commissioner Smith said "they raise crops sufficient for their own support, and need assistance only in the way of civilization and house-building, with some instruction in regard to improved methods of farming."

At that early date Mr. Smith recommended an addition of a strip of land on the south, 6 by 60 miles, which was subsequently given them. In the same year the superintendent of Indians for New Mexico and Arizona also recommended the establishment of the agency in the valley of the San Juan, on the north side of the reservation. The removal of the agency to some other locality has always been felt to be desirable. It is difficult to conceive why it has been allowed to remain in its present location through all these years. Fort Defiance is a most unfortunate place for an agency in every respect, especially as to the maintenance of any regularity in the attendance of the pupils upon the school. There is little, very little, tillable land in the vicinity, nor is there any other feature which makes it desirable for permanent residence by any Indian families.

At an early period the Navajo Agency affairs must have been more effectively organized than of late years, for the commissioner above quoted said: "A police force, consisting of 200 of the chiefs and principal men, organized last summer, has been very effective in the arrest

and punishment of Indian thieves, and in the return of stolen stock to their owners."

Two questions of urgent importance soon become uppermost in the minds of those who study the condition and needs of the Navajoes—provision for their education, and provision for future maintenance.

**The Education of the Navajoes.**—The Navajoes seem never to have taken to education. In accordance with the treaty of 1868 they were to have day schools for every 30 pupils, and some schools were immediately started. In the year 1874 we find this report: "Though day schools have been maintained ever since their removal from the Bosque Rodondo, five years ago, the agent reports almost no benefit therefrom, owing to irregularity of attendance. Of 2,963 children on the reservation 86 have been reached during the year." He calls for a boarding school. In 1878 the agent said:

The failure of the Department to carry out the provisions of section 3 of the existing treaty with these Indians has doubtless had much to do with the successive failures of teachers and agents in the matter of education. Had comfortable and attractive schoolhouses been erected at proper points, and at once, as provided for by treaty, and necessary discretion given to agents to enable them to encourage the attendance of children at the schools by the liberal but discreet use of agency supplies and annuities, at least something might have been accomplished for education, whereas the lamentable spectacle presents itself of an almost expired treaty, and expenditure of thousands of dollars upon transient teachers and more transient scholars, and not a solitary Navajo who can either read or write. That some such course as that indicated above was not pursued from the commencement with regard to the education of this people is a matter profoundly to be regretted, inasmuch as only through the education of the young can the eradication of superstition from the tribe be effected—superstitions which are the great obstacle in the way of their advancement to a higher plane of civilization, and operate as a fruitful source of crime and contention.

In 1880 the present boarding-school building was erected. So wild, however, were the Navajoes at that time that, as a protection, iron shutters were placed over all the windows of the school edifice. Later an agent said, "It seems impossible to build up a school here. I have argued, coaxed, begged, bribed, and threatened, but it has been of little avail." Within two years the capacity of the school has been enlarged from 75 to 150 by the erection of two excellent buildings.

What is the present situation? This question should be considered in connection with the fact that educational efforts among this tribe date far back in their history. As already stated immediately after their return from Bosque Rodondo, in 1868, a school was started for them at Fort Defiance. During the twenty-four years since there has been some kind of a school at the agency. With such a record, we should naturally expect to find greater progress in education; but the results are exceedingly meager in the tribe at large, in the number and quality of returned students, and in the condition and scholarship of the present school. In scholarship this school ranks among the very lowest of the Indian schools; in the knowledge of trades, excepting the very good work done in the shoe shop, it has nothing to show, notwithstanding the Navajoes are a people of great mechanical ingenuity and skill in silver work, saddle-making, weaving, etc., and in the acquisition of English speech the people are almost wholly wanting.

These small results are not the fault of the Navajo children, for they are bright, quick to learn, and responsive. The Navajoes are among the most acute of Indians, a people of ideas, much inclined to criticize, and to be independent in their opinions and actions. This people are also quite conservative, with great reverence for the past, its traditions and usages.

I was surprised to find the enrollment of this school only 75. Notwithstanding the capacity of the school has been doubled in two years the enrollment has not increased ten. This small number of pupils in a tribe of more than 16,000 Indians, is a matter of deep concern. If many pupils were in schools outside the reservation, one might be reconciled; but in all the outside schools there are only 20 Navajo children, making 95, the full number anywhere in school. I had long talks with leading Indians about putting their children in school, but found them strongly disinclined to do so. Only 12 Navajo girls are in school from this great reservation.

The difficulty is chiefly the prevalence of polygamy, which seems not to be checked by the agents. Putting with this the fact that girls are given in marriage at 12 to 16 years of age, and we have one of the most formidable obstacles in the way of schools and the civilization of this people, or any other people where this practice prevails. Until agents administer the Indian service in accordance with the rules and regulations of the Indian office this evil will go on. So long as Indian judges and Indian police take wives when they please, as has been and still is the case on this reservation, what hope is there?

Knowing that the Department is already impressed with the importance of more schools for the Navajoes, I made inquiries in regard to new locations. The fact that the present school is only half full, and that the Navajoes seem very reluctant to send their children to school, is a gloomy outlook for more schools. Being on the ground, however, and knowing the question would come up in some form, I made due inquiries.

China a Lee has been frequently mentioned as a desirable place for a school. The fact that it is quite central in the reservation is in its favor. A location at the mouth of Cañon de Chelly is described as very romantic. It is near what would be a large farming district if irrigation could be obtained. There is wood upon the mountains not far away. The spot is 50 miles for the agency, 75 from Gallup, and the same distance from the lowest bend of the San Juan River by mountain trail.

The vicinity of the San Juan River is another desirable place, but until Fort Lewis school, only 50 miles above, in Colorado, is filled no school on the San Juan can be thought of.

I visited Cottons, 35 miles west from the agency and 45 from Navajo Station on the Atlantic and Pacific Road. It is generally admitted that there are more Indians near Cottons than anywhere else on the reservation, and they are described as the better class of the Navajoes. The stream at this point never runs dry, and water can be easily brought out by a ditch to irrigate the broad bench of excellent land along the river. Wood is plenty. These Indians say they would send their children to the school and fill it up; 30 went from this vicinity to Fort Defiance last fall. Messrs. Cotton and Hubbell, traders here, have talked a great deal to these Indians about the education of their children, which has prepared the way for a school.

But I do not advise the erection of another school for the Navajoes until the schools at Fort Defiance and Fort Lewis are filled.

**Provision for the future maintenance of the Navajoes.**—I do not presume that this wealthy tribe will become dependent upon the Government. That is not the question, but how it will find sufficient scope for its large population and its numerous flocks without encroaching upon surrounding settlers.

As early as 1874, 20 per cent of the Navajoes were said to be outside the reservation; subsequently, 30 per cent; later, 58 per cent, and in 1892 about 58 per cent, or 9,241 out of the total 16,105. Many of these are permanently outside, others only during a certain season. All the country between the Navajo Reservation and the Atlantic and Pacific Railroad is full of Navajoes; and they are often found 100 miles south of the railroad. I found them and their flocks all along the traveled way from Gallup to Zuñi—40 miles; and I saw Navajoes passing through Zuñi, as they said, to visit friends south of the Zuñi Reservation. West they fill the country to the Little Colorado. The Moqui Reservation of two and a quarter millions acres has been overrun by Navajoes, close up to the Moqui villages, their flocks exhausting the springs and ravaging the grain fields of that timid people. Within two years Supt. Collins, at Keam's Cañon, interposed in behalf of the docile Moqui, and a 16-mile radius limit has been placed around the central group of villages, within which the Navajo flocks do not come now.

The Navajoes have always exercised the right which they say was given them by the terms of the treaty of 1868, to go and live wherever they choose. But the nonconfinement to the reservation has become an important issue. Many white settlers have moved into the vicinity, who do not believe the Indian has any business off his reservation—men who have no love for the Indian and think they should be made to take back tracks. It is impossible for the Navajoes to understand our land laws or the system of public surveys; and harder still for them to comply with the requirements of the homestead laws. On the 4th of July, 1884, Congress passed an act designed for their benefit, but the Navajoes were too ignorant to comprehend the requirements. Generations of nomadic ancestors have made these Indians very unstable.

After seeing a portion of the Navajo Reservation and holding conversations with several white men of intelligence who have traveled all over it, I am much impressed with the idea that the large flocks owned by this tribe can not be supported within legal limits. This reservation has, indeed, an area of 8,250,000 acres, but that is only 5 acres each on the average for their sheep and horses. We must not judge this reservation by other portions of the country. Here are thousands of acres of barren sand, sandstone cliffs, and vast plains without water, greatly reducing the area of available land. I give three testimonies. As early as 1878 the agent said:

From the best information I have been able to gather on the subject I incline to the belief that the natural resources of the reservation are totally inadequate to the support of the tribe, in which opinion I am sustained by all intelligent persons who are conversant with its features. \* \* \* Hundreds of acres of the best grazing lands are rendered valueless by their great distance from water courses and springs.

Agent Riordan, after two years of traveling all over the reservation, in his report to the Commissioner of Indian Affairs, August 14, 1883, called it—

The most worthless land that ever laid outdoors. It is wholly a sandstone country, with occasional patches of barren land susceptible of cultivation by the rude Indian methods. It is almost waterless—in fact, a barren, rocky desert. What water does exist is alkaline, and nearly all of it is such as any well-regulated animal east of the Rockies would refuse to drink. Still, it is the only kind available for these people and for the white workers among them. The face of the country is almost entirely rock—rock everywhere. No soil, as such; simply the sand and debris accumulated in the lowest spots by ages of erosion and the action of water since the "early days" when the world was new. An Illinois, Iowa, or Kansas farmer would laugh to scorn the assertion that you could raise anything in the sandy beds which form the planting grounds of this people. Seventeen thousand Indians manage to extract their

living (in addition to the mutton which forms the staple article of food) from these spots, and that, too, without any Government aid. If they were not the best Indians on the continent they would not do it.

Ex-Agent John H. Bowman, in 1884, said:

This reservation is about my ideal of a desert, and although very large it might have been much larger without covering any land of the least value. It is merely a space on the map of so many degrees and parallels. Three-fourths of it is about as valuable as so many acres of clear sky. As there are no running streams, it can only be irrigated with buckets. Nearly all the water is alkali. The valleys are composed of sand formed by wash and erosion; no soil worthy of the name. About three-fourths of the whole tract is covered by rock and barren mesas. Where springs do exist the water has usually found a channel through the débris under the surface and is lost.

Messrs. Riordan and Bowman are gentlemen of good business capabilities, in charge of large interests. They know the whole reservation, and know it well, after months of horseback riding over it.

What shall be done? There are two propositions. One is to enlarge the Navajo Reservation to the Little Colorado River on the west, to the Atlantic and Pacific Road on the south, and perhaps 20 miles farther east. The other is to dig out old springs, sink wells in desirable localities, take water out of the San Juan, etc.

Grave objections, I am aware, will be offered to both these schemes. In July, 1888, a council of Navajoes was held by Special Agent Welton, at which 200 leading Indians were present. The council made the proposition that if the Government would give them land on the south side of the reservation, reaching to the railroad, 10 miles on the east side, and on the west side reaching to the Little Colorado River, they would bring their people on the reservation. But the policy of extension is contrary to that long pursued by the Government, which looks toward contracting rather than enlarging.

It may be alleged that the wells will involve much experimenting with doubtful results. The latter method, however, is strongly recommended by Ex-Agent Bowman, who has had large experience in sinking wells for his flocks in the vicinity of Holbrook, Ariz. He says that there are waterless areas 30 to 40 miles in diameter in most of which water is within a short distance of the surface, as, for instance, in the Chin a Lee Valley—a large, wide, plain-like valley, between mountain ranges, 60 to 80 miles in length. The watershed settles into this valley, producing in some seasons a creek faintly traced on some maps. During the greater part of the year no water runs in the creek, but it can be found a short distance below the surface through almost all that large plain. Indians have no skill or disposition to dig wells. There are numerous other localities like the Chin a Lee Valley, though not as extensive. What is needed is to have the agency reënforced by a wide-awake, progressive official, who will take the initiative. Then, in due time, Indians may follow their example.

It is certain that the Government can not long postpone efforts to solve this problem. Unless some great calamity sweeps off a large part of the tribe and its flocks, or a great change takes place in stock-raising circles, this question will soon assume serious proportions.

One fact should not be omitted. It is well known that horses, sheep, and goats, gnaw very closely where they feed, and if they continue year after year in the same pastures, the roots of the grasses become seriously injured and produce but little feed. It is widely confessed in this region that the great grazing ranges have been overstocked and overcropped, and that something must be done to improve the lands or the flocks must be greatly diminished. But the Navajo flocks have

been steadily increasing, as seen by Government statistics, and confirmed by the personal observation of ex-Agent Bowman, who thinks the Navajos have a third more sheep and goats than they had seven years ago, when he was agent.

Doubtless the wise method would be to improve the water supply, the irrigation, and the farming, to teach the Navajos how to raise alfalfa, oats, etc., in the districts favorable to such work. In this way their flocks could be maintained in smaller areas, and at the same time improved greatly in quality and value. This method would tend to cure the roving habits of the Navajoes and advance them in civilization. The San Juan Valley affords great opportunities, with a strong river from which to take water for irrigation. If this tribe is to be restrained within the reservation, all the portions available for agriculture must be made productive. To carry out such a policy as this will require an agent with the best business capacity and good executive ability. It is time forward steps were taken, instead of retrograde, as of late.

Had the amount of attention which has been bestowed upon the Dakota tribes, the Santees, the Omahas, the Winnebagoes, and other tribes, been devoted to the Navajoes, what would have been the result as respects education and civilization? While the 26,000 Dakota Indians are represented in schools by 4,600 children, the more than 16,000 Navajoes have only 95 children enrolled as pupils in any school, on or off the reservation. Even the 4,000 Pimas in Arizona are represented by more than 350 children in schools. If the Sioux would as industriously devote themselves to flocks and herds as do the Navajoes, they would soon be as self-supporting, and would save the Government an outlay of more than \$1,000,000 a year for rations. Is it said that the Sioux live in a dry arid land, with little water and precarious agriculture? Having traversed both regions, I believe the chances for self-support, under proper direction, are as good for the Sioux as for the Navajoes, and I may add even better. And what do the Sioux women, as compared with the toils of the Navajo women, in preparing wool, weaving blankets in their slow rude looms, and tending their flocks? I know the Sioux and highly esteem them, but now I must plead for the Navajoes?

#### THE MOQUI.

The Moquis are a curiosity—racial, historical, architectural, and sociological. They live in honeycombed communal homes, of adobe and stone, perched like eagles' nests on lofty, scarred, seamed cliffs of volcanic rock, 400 to 600 feet above the plains. The fires that lifted those formidable mesas long since became extinct, and the country around is barren, arid, inhospitable, and worthless to white men.

To us their homes on the escarped cliffs look lonely and cheerless; yet they are not desolate, but filled with a busy population of a unique peculiar people, of whose beginning and end we know nothing. From their lofty perch they overlook broad areas which to all but themselves seem wastes of sand, over which the winds wage perpetual war on such shrubs and grass as they can not uproot. Across the waterless plains are scrubby trees, crouching on the remote edges and furnishing fuel for the fires of the Moqui.

Here on these lofty eyries the Moqui are fighting out the battle of existence. In nooks and on terraces along the steep sides of the flinty mesas are orchards of peaches and patches of corn, and below, in the

bleak sands, larger fields of corn, beans, and melons are raised by that industrious people, for just underneath the sand ample moisture is found. In favorable seasons large crops are garnered and wisely held in store each year for the needs of another year, if drought should come upon the land. These cultivated patches may be found from 10 to 15 miles around the mesas. All keep some sheep, burros, and a few horses. None have large flocks. They are quite skillful in making pottery, weaving their own blankets, belts, and a coarse woolen cloth, worn by women and girls.

The past history of this people, up to the time of the Spanish conquest, is as little known as their future. They have a few vague traditions, but nothing more definite than the ruins of ancient pottery and Aztec pueblos, which indicate a once populous and powerful people. It has been well said, "If their future is to be a happy and progressive one, it must be the result of wise legislation and heroic Christian effort."

The Moqui live in seven villages, on three mesas.

First mesa: Walpai, Teichumnivi, Tewa.

Second mesa: Cimopavi, Cipaulivi, Mushonginivi.

Third mesa: Oriba.

These villages, within a circle of 15 to 20 miles, and with 1,976 inhabitants, have been isolated from the remainder of the world for centuries. They are not estranged from each other, as some have said, but mingle much together, though sometimes temporarily alienated by petty jealousies. There is little difference in their language. What mutations have taken place in the world around them, while they have remained the same through long ages! These strange men, diminutive, low set, wrapped in blankets, sitting passively in the sun, on the scarred rocks, are the demure proprietors of a reservation once the scene of busy activities, for all around within a day's journey are evidences of dilapidated cities, now utterly desolate.

How were they wasted? By wars and revolutions? No; worn out. Their system of communism preyed upon its own vitals. The old blood stagnated for the want of new elements. Effete in ideas, customs, sustenance, there has long been a quiet decline, as of one stricken in years. There is blood degeneration. Already many pueblos in Arizona and New Mexico are gone, and our maps bear the significant designations, "Ruins," "Ruins."

In Moqui and in Zuñi I found some of those anomalies, so seldom seen in the United States—Albinos, with eyes of pinkish hue, eyelashes and hair white as snow, with skin so delicate that the hot sun gives the cheek and hand a color much like erysipelas. Some of those I saw are dull of intellect, though not all. A girl in the school at Keam's Canyon is as bright as any of the pupils. The parents, both of those at Moqui and at Zuñi are full-blood Indians; but poverty of blood through long lack of alien infusion, and marriage successively repeated in a narrow circle, are the supposed causes.

Among the Moqui the textile art belongs exclusively to the men, who weave the women's dresses, with which they supply the pueblos in New Mexico. Among the Zuñi are a few Moqui men who have married into that tribe and continue the practice of weaving the female dress—a black, heavy woolen fabric of about 4 yards. The Moqui carry on an extensive traffic in these garments.

The old dingy houses which the Moqui have occupied for centuries are very filthy and perpetuate diseases. One can not climb over those mesas without wondering that habitations exalted so high in the air, exposed to fierce winds and storms and scorching sun, should emit such

foul odors. The very rocks, on all sides, seem impregnated with the filth which has penetrated into the seams and interstices, the offal of numerous centuries which the most powerful storms have failed to wash away. One seldom sees a clean garment on that people. When water has to be carried on the heads of women up mesas 400 to 600 feet high, from springs often some distance from the base of the mesa, cleanliness becomes a most expensive luxury. In those nooks and crannies in which infectious diseases flourished long before our quadrocennial period began, are perpetuated germs of disease which have constantly warred against the growth of this people.

Living in communal houses, marrying in close circles, with no ideas of morals as civilized people hold them, men and women of the same clan given to promiscuous sexual intercourse, and even the youth also, it is not strange that the Moqui have steadily deteriorated, that they are intellectually feeble, small of stature, and prematurely old while young.

The need of some change in the situation of the Moqui, from the old mesa cliffs to open fields, to the vicinity of rivers, and to individual homes separated by spaces, has long been felt by those who have had the interests of these Indians in charge. About eighteen years ago an effort was made to induce the Moqui to remove to a reservation on the Chiquita River, where were good agricultural lands. But these timid people declined, through fear of the Apaches. In 1878 the Indian Agent Mateer tried to persuade them to remove to a point on the Little Colorado River, between meridians 110 and 111, and gave seven reasons for the change. But traditions and local attachments prevailed, the chief elements of strength exhibited by the Moqui. Only on the conservative side of their being are they strong. How weak in the direction of new movements. An Indian agent said of them:

Not much dependence can be placed upon the Moqui. They will promise one thing and in ten hours a complete change will come over them. Thus have they often deceived me.

As might be expected the Moqui are a weak people, and the weakness has become constitutional. In 1882 Agent Fleming said:

They are children in understanding; sometimes they act like spoiled children. \* \* \* I have never yet attended any of their dances and can not speak from personal knowledge; but judging from reliable authority the great evils in the way of their ultimate civilization lie in these dances. The dark superstitions and unhallowed rites of a heathenism as gross as that of India or Central Africa still infect them with its insidious poison, which, unless replaced by Christian civilization, must sap the very life-blood.

The health of the tribe is far from being all that could be desired, owing to the manner of living. Nor can we expect to see a radical change until they are induced to leave the mesas and build their houses on the plains away from the filth and foul air of their present abodes. If it were not for the high altitude of these Pueblos sickness and death would prevail much more among them than at present. Venereal diseases comprise the general disorder, being the result doubtless of their promiscuous lodging together in small, dark, ill-ventilated rooms, without regard to sex or condition. If this people are to be saved from ultimate extinction they must be induced to change their abodes to where they can breathe a pure air.

In 1882 a missionary of the Reformed Church came to them and engaged in the preparatory work of building a house and studying the language. He was soon stricken down by death, and the work was never resumed.

But a new day is coming to Moqui—has already dawned. New houses are being built on the plains, and the denizens of the cliffs are moving down. Over twenty families have already taken the new abodes, and one hundred more houses are started. Superintendent Collins, of the

Keam's Cañon Indian school, has the work well in hand, and means that every boy and girl going forth from the school at the close of their term of study shall go into a new home on the plains. He is also sinking wells and putting in pumps and pipe. The Government furnishes boards, tin and paint for roofs, the floors, doors and windows, and a practical mechanic employed by the Government, superintends and aids the building. The Moqui erect the walls of adobe or stone. A few of the old conservatives hesitate and shake their heads, but the work goes quietly on.

The Oriba village, on the third mesa, 30 miles from Keam's Cañon, has always been the farthest removed from the whites and the most conservative. About one-half the village is reported as hostile to education to white men's ways and to the United States Government. But even this proportion indicates very great progress within a few years. The hostile ones say to white men "We want you to keep away." The other half are friendly and say "We want to do what Washington tells us." They are all heathens of the worst type, and exceedingly selfish with one another, as well as with outside persons. Like many white people, the main aim of the better class, in relation to Government, is to make all they can out of it. The more advanced are tenacious for their old customs. They favor new houses, say they want them, but have no idea of giving up their old religion, by going into the new buildings. But greater changes will come later. In brief, I may say, that their social and religious ideas and customs are almost identical with those of the Pueblos in New Mexico, particularly the Zunis, paganism of the darkest type, and the consequent moral laxity.

I found the Oribas very sullen, and they would not come into a council, but talked a great deal at a distance. This village has always been hostile, up to the time that five men went to Washington. That visit had a good influence upon them. When Lo-lo-lo-mi, the leading man of those who went to Washington, came back, he made a move to put his children into the boarding school. The hostiles opposed him, seized him, put him in jail, and threatened to kill him.

Superintendent Collins went out there with two other white men. They arrested two of the hostiles, heads of religious orders, and sent them to Fort Defiance, where they were confined about thirty days. When turned loose these men came home, stirred up opposition anew. Matters became more violent every day until it was dangerous to go there alone. Superintendent Collins sent for troops from Fort Wingate on authority from the Indian Office. One company came instructed to quiet the disturbance at Oriba. The natives were scared and ceased their hostility. They wanted their children to go to school. Superintendent Collins put them in line and carried them off. After this the Oribas were quiet for a time.

When the grass grew the next spring these Indians again became abusive, severely threatened the Indian helpers of the United States surveyor, and tore down part of their marks and bounds. Superintendent Collins went out to see about that, accompanied by a lieutenant and a troop of ten cavalry, who were at that time located at Keam's Cañon. When they reached the foot of the mesa runners came and said, "The people are mad now and will kill you; they have 50 men in the village armed with guns and they will kill the soldiers." Superintendent Collins and the lieutenant regarded the threats as bluff, and sent up for the head men of the hostiles to come down to the plains. They refused, and said, "If you want to see us, come up here." Collins and his party went up on the mesa, and the war chief stepped out in

front on the second story of one of the houses with a 6-shooter in his belt and one of the best long range Winchester rifles in his hands. He commenced a harangue, saying, "What are you doing here, you American dogs; this is our country; we want you and all white men to keep out of it; we are ready to fight you now; we see your soldiers and can whip you." They dared the whites to fight. When Collins tried to talk with them, they listened to nothing that was said, but berated the visitors. This chief was fiercely dressed in war paint. Next, the head medicine man came out, and with great display made medicine to kill the visitors. He wore a part of a raw sheepskin dripping with blood. Blood was smeared all over his body and limbs, and he indulged in the most frenzied gesticulations. The Indians were thoroughly impressed with his conduct. The visitors afterwards learned that there was one more medicine man to appear before the hostiles opened fire.

Just then, as a matter of discretion, Mr. Collins and his party retired. He telegraphed to Washington, and five troops of cavalry were sent to arrest the head men of the disturbance. The military arrested ten in all, though one got away; the other nine were taken to Fort Wingate. Last winter five were sent home on recommendation of Agent Shipley and Superintendent Collins. Superintendent Collins told these men of the purpose of the Government, and asked if they would cooperate. They assured him they would do whatever he said, and all were allowed to go home. In a short time Lo-lo-lo-mi came in and said that the five men came home with this report from one of the principal men still remaining at Fort Wingate:

Tell the people that I, old medicine man, sent you home; that my medicine is still good; that I have made friends with the soldiers, who have nothing to do with the white people at Keams Cañon; that I am going to stay at Fort Wingate a while longer and find out more about the white men; and after a while I will come home with some soldiers, who will kill our enemies, and settle things as they were at first. Tell my people to be patient, and be ready for my coming.

The five men who returned have not kept their word. Four are still prisoners at Fort Wingate.

Those who supposed that the object of the military was to put children in the school are mistaken. The military were brought in to uphold the Government. The unfriendly Oribas were violently assailing the families which had allowed their children to go to school. Lo-lo-lo-mi, the leading man, was the first who brought his children to school, with four others, belonging to his relatives. He kept sending some pupils every few days. The hostiles threatened his life, arrested him, and put him in an estufa, where they kept him in confinement. The hostiles opposed all his measures for progress, and proceeded so far as to threaten the lives of his friends. A Moqui, working for the Government surveyor, was also whipped with a heavy horsewhip. It was under such circumstances that Lo-lo-lo-mi asked for protection, and the troops were sent to restore order and vindicate the Government. Since those occurrences the hostile Oriba party is sullen, and refuse to come into any council.

The friendly Oribas, who constitute full one-half of that village, stand very firm for the school and for the Government. We have now reason to think that the backbone of the opposition in Oriba is broken. There has never been much opposition in the other six villages. Fifty Oriba children have been in the Keams Cañon school during the past year, and they are wonderfully happy and contented. This school, which formerly had an attendance ranging from 30 to 50, has had 106 pupils during the last term, its full capacity. When a vacancy occurs

by sickness or otherwise there have been many applications for the place. A day school building is finished on the plain near Oriba, which will still further accommodate this largest of all the villages—826 people.

There is room for another boarding school among the Moqui.

### IMPORTANT PHASES OF THE INDIAN PROBLEM.

My recent six months' studies in Arizona and New Mexico, following a previous tour of investigation in those regions two years ago, have brought me face to face with the question of Indian civilization in some of its darkest phases. In this southwest section, and in contact with the low order of Mexican civilization, these less favorable environments enhance the difficulties and hinder progress. Among the white population of this region I have encountered the intensest and most outspoken skepticism on the subject of Indian elevation, stimulating me to a renewed study of the red man's chances. This skepticism is not peculiar to a single section; it pervades the public mind quite extensively. It is surprising how slow are many intelligent people to see their privileges and duties to the Indian.

While my official work is specifically connected with the education of Indian youth, I find that phase of the Indian problem closely tied up with the whole question of the civilization and Christianization of the Indian races, for the schools and pupils are much dependent upon environments. Therefore questions relating to Indian school take in all the leading phases of the Indian problem.

That great philosopher, Hegel, whose clear, broad, historical generalizations have commanded wide respect, had little faith in the physical and psychical possibilities of the red race of the American continent. He said (*Philosophy of History*, Bohn's Library, p. 85):

America has always shown itself physically and psychically powerless, and still shows itself so. For the aborigines, after the landing of the Europeans in America, gradually vanished at the breath of European activity. In the United States of North America all citizens are of European descent, with whom the old inhabitants could not amalgamate, but were driven back. \* \* \* A mild submissiveness towards a creole, and still more towards a European, are the chief characteristics of the native Americans; and it will be long before the Europeans succeed in producing any independence of feeling in them. \* \* \* The original native having vanished, or nearly so, the effective population comes for the most part from Europe; and what takes place in America is but an emanation from Europe.

The most sanguine friend of the red men must admit that there is an element of truth in these lines of Hegel, sufficient to at least modify the often extravagant expectations of some "advanced" Indian reformers, though the reckless skepticism of many frontier whites is without justification.

The nonfaith in Indian elevation is variously expressed. One puts the case in this way, that "in no instance has an Indian tribe, as a whole, been reclaimed from its native condition; some, generally many, still remain in their old low level." Another, with slight variation of the statement, says that "while individual savages have been educated with a fair degree of success the tribe, as a whole, has remained savage." Another declares that "their culture is a failure unless they can be detached from their tribe, for if returned to their people they lapse into the customs of their fathers." One of the most intelligent friends of the Indians, and one of the staunchest advocates of the most advanced measures—educational, civil, and economic—of the

present Indian Bureau, Philip C. Garrett, esq., of Philadelphia, after a long tour of visitations among the Indian reservations during the past season, said:

Another impression I have received is that it is true, to a much greater extent than we have hoped, that young Indians returned to the reservation after a thorough education, relapse into a barbarous mode of life; especially is this so of the girls, who are bought of their fathers by some admirer for so many ponies, and, not entirely loth, accept marriage under the old conditions, and soon become drudges for lazy young bucks. I do not mean to say that no result whatever flows from their education. I believe it does, and that the children of these educated mothers are in the way to learn better things than their fathers. But this is very slow and very sad. The difficulty is, how can it be prevented? Boys and girls go back to their parents in tepees or huts, with few of the accompaniments of civilized life. They have, in the camps, absolutely no application of the industries they have learned. Their parents will not let them introduce the better way and deride them as "white folks." After awhile they despair of being able to carry out the life they were taught to live at school, and in utter discouragement give themselves up again to the barbarism around them. They know better, but are unable in this environment to apply their knowledge.

This subject has continually been in my thoughts during the more than three years of my travels among the Indians. In my annual report of last year I gave an extended consensus of opinions on this subject from persons who had been constant witnesses for years of the conduct and character of returned Indian students. Their utterances were, on the whole, quite favorable, though discriminatingly stated, giving due prominence to the difficulties of the situation, such as the lack of opportunities for remunerative labor, the impossibility of raising crops on many reservations, the rigid conservatism of the old Indians, etc. These observers frankly stated that some students had sadly lapsed (as many white graduates have done), that others were doing fairly, and others still doing very well.

As for myself, I can cite many bright examples of successful achievement among the returned students. Many are creditably occupying good positions, and others, in the native fields, are successfully raising crops and erecting homes much better than their fathers have known. In some cases these young people have had severe contests with the old order of affairs; a few have been brutally borne down; and others have fought the battle well and are still standing as consistent examples of the better civilization in which they have been trained. Others have lapsed badly, the result partly of native weakness of character, which schools can not wholly remedy, and partly because of the fearful gravitation which has pressed upon them from all sides.

The practical question is how can we best conserve the interests of students graduating from our Indian training schools? Mr. Garrett answers the question:

I see no remedy but either in Capt. Pratt's plan of school graduates hiring out among white people and remaining away from reservations, or, what seems to me better, colonizing young couples in congenial communities of their own, apart from degenerating influences. These may be either on the borders of a reservation or at a distance from it. But without some such device, actually and practically carried into effect, I do not see before us anything but the slow and very imperfect development of many unwilling generations.

Here are two propositions—the first is what may be called Capt. Pratt's plan, locating his graduates in Pennsylvania or elsewhere in the East, among good people who will be interested in the boys and girls. This plan has had my unequivocal indorsement ever since I became acquainted with it. By all means, locate them or as many as possible in the eastern communities. The Carlisle "outing system" is a grand preliminary; but in many frontier communities neither the

outing system nor the plan of permanent location of the pupils of western training schools is practicable. Possibly some places can be selected by wise and careful discrimination which will prove helpful and safe, but for the most part I have found in the middle and far West the predominant sentiment towards Indians to be repugnant and scornful. A state of nonfaith and nonsympathy, shall I say? No; positive antagonism and hate. It is difficult to express the intensity of this feeling all through the West, with some exceptions. With too many the common idea is that the Indian is a creature to be cheated, debauched, and kicked out of decent society. Young Indians from the schools can not be safely located among such people; they had better go to the wildest reservations and take chances there. It also seems quite certain that the young Indians from the western training schools can not be brought to the Eastern States to be located. The scheme is too large and impracticable. Such pupils must therefore return to their own reservations, unless some other plan can be devised.

This brings us to Mr. Garrett's second plan, "colonizing young couples in congenial communities of their own, apart from degenerating influences." Something of this kind was thought of by the first general superintendent of Indian schools, Mr. Haworth, when over 9,000 acres of the best land was set apart for the Chilocco school; but I am not aware that the scheme has yet been inaugurated. That is a good place to start one colony; Fort Lewis might be another, if the area is left sufficiently large; and if the elevation, 8,500 feet, is not too high for the health of pupils, Phoenix, Ariz., might possibly be another, or some place in the vicinity, if the land question can be satisfactorily arranged. I also suggest Perris, Cal., or vicinity, Fort Stevenson, Fort Shaw, etc. I make the suggestions knowing there will be some difficulties about the land. The good Indians at Flandreau, S. Dak., would be a favorable nucleus for another colony.

A colony has already been started about 2 miles from Ukiah, Cal., on a tract of land bought by an enterprising Indian, who, with his friends, were worn out and disgusted with the long series of outrages perpetrated upon them at the Round Valley Reservation and resolved to seek relief. About 120 of them settled upon this land and urgently pressed me for a school. They are a self-supporting people and progressive. The school is started and a missionary labors among them.

There are many questions which enter into such a colonizing scheme. There must be a head, wise, sympathetic, and tactful. Compatibility and a common purpose are other elements, and after all there remains to be considered the fact that communities are growths and not the products of human carpentry.

We come now to what I regard as the main point in the problem of Indian civilization. I do not see how the friends of the Indian can resist the conviction that the lever of uplift must be applied nearer the base of Indian life—directly on the reservations. This conviction I have repeatedly expressed, and I find it is growing in other minds, especially among those familiar with the Indian reservation. It is the most important work to be done, and will go farther towards the solution of the Indian problem than the removal of a few pupils now and then, to distant schools, can ever accomplish. The reservations must be lifted and made more tolerable and helpful places. Schools must be multiplied on the reservations and made more effective in the very centers of Indian life. It is true that the children can not be lifted as fast or as high as can be done by taking them away to outside schools, but the reservations are lifted year by year by every well-conducted

school. The employés, if well selected, will make the schools interesting and instructive object lessons in the eyes of the old Indians.

There is this great advantage from reservation schools. The young Indians are kept in touch with their parents, and when at last they drop out of school there is no feeling of revulsion, jealousy, or opposition, and very little lapse. At the same time some elements of better life have every year been carried out into the Indian homes, and the ideas and customs of the tribe have been modified and elevated. This is the bottom line of the Indian problem; it applies our civilization most effectively where it is most needed. This kind of work carried on effectively in the reservations will in time make them tolerable homes for students from the outside schools. The reservations which have the best agents, most capable and most interested in educational work, and within which the best educational work has been performed for a term of years, are those in which we find returned students, illustrating most fully and consistently the benefits of their educational training.

The reason why there is so much complaint that Indian tribes, as a whole, remain in their own low level, while a few are educated and civilized, and that the few educated ones often lapse, is because attention has been directed too exclusively toward a few youth who have been isolated and civilized abroad, while the tribe has been left untouched at home. We should reverse the process and apply our education and civilization to the midst of the tribes. The Sioux reservations which are most advanced are those in which, while some youth have been sent abroad, the major part of them have been educated in schools long maintained at home; and, furthermore, while this educational work has been going on in the reservations, the Riggsses, the Williamsons, the venerable Adams, and the missionaries of Bishop Hare, and in a few instances field matrons, have been going their incessant rounds from house to house and from tepee to tepee over the reservation, scattering the good seeds of a better life.

But there are some who will say that I have not touched the most radical phase of the difficulty; that there is an inherent incapacity in the Indian for culture and development into civilization; that "it is as difficult to train a young Indian into new ways as to teach the bird a new note or the beaver a new method of building a dam;" that "it is impossible to re-create either the head or the heart of the red men;" that "he desires no change, but wishes his wild freedom, his tribe, and his old-time customs;" and "that there has been scarcely any perceptible progress in the Indian tribes." And Holmes has been quoted, I hope erroneously, as saying: "There is no history to the red race; there is scarcely an individual in it. A few instincts on legs and holding a tomahawk—there is the Indian of all time"—a specimen of the grossest fatalism.

Taking up these latter expressions of the most radical skepticism, I freely admit that the rigidity of the Indian organism, the result of ages of hardening, makes sad waste with educational, civilizing, and Christianizing efforts. Many strong men and women, after years of enthusiastic, self-sacrificing labors, have returned to their native hills discouraged and broken in health. All this we freely confess, but slow progress is not peculiar to efforts for the good of the American aborigines. Such discouragements characterized the first uplifts of all uncivilized races, in all ages.

For example, we need not go far from home. In the enjoyment of our boasted civilization we are liable to forget the depths from which our Anglo-Saxon race has been raised. It will do us good to briefly

review the low condition of our ancestry, and the slow progress through long centuries.

In the year 596 Pope Gregory sent Augustine with 40 monks to Britain to convert the Saxons to Christianity. When these emissaries reached Provence they heard so much of the savageness of the Saxons, then supposed to surpass all other barbarians "in wild stubbornness and appalling cruelty," that they lost heart and halted in their way. Augustine returned to Rome to repeat the tales of horror to the Pope, and did not return until provided with interpreters from among the Franks.

Our forefathers in their primeval home are described by Taine as—

Pirates at first, and of all kinds of hunting regarding the man-hunt as the most profitable and most noble. They left the care of the land and flocks to the women and slaves. Seafaring, war, and pillage was their whole idea of a freeman's work. They dashed to sea in their two-sailed barks, landed everywhere, killed everything; and having sacrificed the title of their prisoners in honor of their gods, and leaving behind them the red light of their burnings, went further on to begin anew. "Lord," says a certain litany, "deliver us from the fury of the Jutes." Of all the barbarians, these were the strongest of body and heart, the most formidable.

And, we may add, the most cruelly ferocious.

Later—

When King Aella was slain, his ribs were divided from the spine, and his lungs drawn through the opening, so as to represent an eagle. Harold Harefoot (as late as A. D. 1035), having seized his rival Alfred, with 600 men, had them maimed, blinded, hamstrung, scalped, or disemboweled.

In the seventeenth century, Theodore prohibited the sale of children by their parents after they were 7 years of age; but in the ninth century men and women were bought, in all parts of England, and carried to Ireland for sale. In the tenth century, armies were terrified by a solar eclipse, and hastily dispersed. In the same century the two chief things desired by men were, "not to be slain, and to have a good leathern coat."

Richard the Lion Heart (A. D. 1190), while in Palestine, wanted some pork. There being none at hand, a young Saracen was killed, cooked, salted, and served to him. He ate with relish, and desired to see the head of the pig. The cook produced it with trembling. The king laughed and said, "The army, having provisions so convenient, has nothing to fear from famine."

In the twelfth century, as a restriction upon gambling, it was enacted that the clergy should not be allowed to lose more than 20 shillings in one day at games. As late as the fourteenth century, the English houses consisted of only two rooms, with no chimney, the smoke passing out through the roof, after the manner of the present Indian wigwam. There were three other customs similar to many of our Indians of the present day; having no forks, they ate with their fingers; all took the food with their fingers from a common dish; and all drank from one cup.

Until within two hundred years the labor class were tied to the soil, and were not allowed to leave the parish under penalty of imprisonment. In the sixteenth century a poor man caught begging, for the first offense was whipped at the cart's tail; for the second, his ear was slit or burned through with a hot iron; for the third, he suffered death as a felon. Criminals were disemboweled or quartered.

How preposterous the assertion that there has been scarcely any perceptible progress among the Indian tribes. None are so blind as those who, "having eyes, see not," and often do not care to see. What remarkable results—educational, industrial, and religious—attended the labors

of Eliot, with his Indian Bible and his schools for Indian boys, in Cambridge and Natick; his dozen substations, extending far into the center of Massachusetts, and his Indian successor, Takawambit. The same may be said of the success of the contemporary missionaries, down along Massachusetts Bay, and the long succession of Mayhews, on Martha's Vineyard. These laborers, after a few years, so tranquillized the Indians of eastern New England that they more effectually guarded the frontier than a cordon of forts could have done, the only hostile Indians assailing the colonies being predatory bands from the Canadas. Contemporary were Dutch missionaries on the Mohawk, whose influence with the red men in a short time effectually conserved the welfare of settlers in eastern New York. It was Canadian Indians who attacked Schenectady and other settlements.

Edwards and Sargeant, among the tribes at Stockbridge, Mass., near the middle of the last century, laid foundations visible to this day among those Indians in their present home in Wisconsin. The story of Wheelock and his Indian assistant, Occum, at Lebanon, Conn.; the Indian school at that place, and its removal to Hanover, N. H., to constitute the nucleus of Dartmouth College, with its scholarships for Indian boys still available; and the precious influence exerted by that institution among the red men, in its early days, are full of interest. The labors of the Moravians among the Delawares above Cincinnati, and later of Finley among the Wyandottes on the Upper Sandusky, have passed into well-attested history.

It would require a large chapter to give even a slight sketch of the labors and beneficent results therefrom of the Baptists, the Presbyterians, and the Methodists, among the Cherokees, Choctaws, Creeks, Chickasaws, and others, both in their eastern homes and in Indian Territory; the organization of their civil autonomy and its successful administration; the founding of their large system of schools and churches, and their civil order, far advanced towards the best forms of civilization.

The Nez Percés in northern Idaho are an interesting tribe of bright, active, strong Indians, among whom the Presbyterians have four churches with 850 native communicants, or one communicant for every two inhabitants, with native pastors, raised among them by the wise labors of an intelligent woman, herself a college and a theological school. This denomination, so tenacious for high character in its membership, has here Indian communicants who are good illustrations of Christianity in its concrete, practical bearings upon the ordinary relations of life.

The Riggses, the Williamsons, the Adamases, Bishop Hare, and others are names already embalmed in the history of the Sioux, naturally one of the strongest, fiercest, and most intractable of tribes. "Scarcely any perceptible progress" among these Indians? This is not the view taken by those who know the situation past and present. The more than sixty schools, besides the missions, tell in part at least how the great modification in the ideas, the customs, and the common life of the Sioux has been brought about, since the time their fierce slaughters were so common through all the great regions they traversed, from St. Paul into Montana and Wyoming. The Episcopalians, Presbyterians, and the Congregationalists have 3,500 communicants, or 10,600 Sioux adherents, and the Roman Catholics have 4,640 more adherents; and there are 4,600 pupils from among the Sioux, who are at schools in or outside the Dakotas. The practical, solid character of the change which has come over this warlike tribe was tested in the recent uprising, when only a handful of Christian Indians proved disloyal to the

Government. It is a conspicuous fact that the hostiles belonged to the pagan, nonprogressive party.

I will speak in greater detail of one body of Indians, the Santee Sioux, at Flandreau, S. Dak. About twenty-four years ago, a body of Christian, progressive Sioux left the Santee reservation and took up claims for themselves, of 160 acres each, to the northeast of Sioux Falls. These Indians took the land under the homestead act, as white people do, relinquishing all claim upon Government for rations, but receiving for a time a few annuities, in the form of clothing, wagons, etc. Thrusting themselves out mainly upon their own resources, they have tested what Indians can do. What have they done? They now live in houses similar to those of their white neighbors, wear similar clothes, ride in similar wagons, buy the same kind of provisions, have short hair, and discard paint and feathers. They pay taxes cheerfully, though taxes are high. They go to the ballot box with their white neighbors and exercise the right of suffrage in a manner that commands respect. Nearly all can read in their own language and many in the English language. They have two churches, Presbyterian and Episcopalian, and probably two-thirds of the Indians are communicants in one of the churches; and on the Sabbath nearly every person may be found at church.

To show how far the moral sentiments of Indians may be purified and elevated, and their ability to make moral discriminations, I cite an interesting example from the action of an annual meeting of the Presbytery within which the Flandreau Presbyterian Indian Church is comprised. After discussing the evils of "the Grass-Wisp dance," the subject was referred to a committee of Indians to report thereon, and they reported as follows:

I. The Grass-Wisp dance works evil in the case of the flesh, chiefly in these respects:

- a. Giving away wives.
- b. Killing oxen they have received from the Government, and giving away horses.
- c. Giving away clothing and starving themselves.
- d. Losing two or three days' work every dance.
- e. They dance in the Indian costume, and they talk war stories in the dance.
- f. They hunt women at night.

II. The Grass-Wisp dance makes the soul dirty.

- a. Many church members are drawn away.
- b. The Sabbath day is disregarded.
- c. They pray to idols.
- d. They besmirch their households.

And so we regard the Grass-Wisp dance is equal to the custom of gambling. We have been enjoined by Presbytery to give judgment concerning the Grass-Wisp dance, and we decide that the custom is not to be kept up among us.

But we are not able to put a stop to it ourselves; therefore the Commissioner of Indian Affairs and the agent, our Father, we pray you to stop it for us.

PAUL MAZAKUTEMANI (Walking Shooter),

PAUL MAKACEGA (Jugg),

JONAH READAY,

Rev. DAVID GREYCLOUD, *Scribe,*

*Committee of Presbytery.*

Does some one ask, "Won't they sell out as soon as they can and go back to old Indian life?" They could have done this long years ago, and many people have been looking for such action for more than twenty years, but it has grown less probable until it is now a moral certainty that they will never relapse. In 1890, when a large amount of money was paid them by the Government, this money was spent in buying more land and stock and in repairing their houses. The Flandreau Sioux have had enemies, white and red; they have fought hard battles with whisky, and perhaps still harder battles with taxes; there have been numerous complications settled, and many efforts to

scatter their people withstood; they have overcome strong inherent tendencies to the old ways; they have resisted pauperism and today walk erect, commanding respect wherever they are well known.

Is it said that these Indians were exceptionally well situated? That is true; they had good soil, plenty of water, and an excellent class of white neighbors. A better class of white neighbors would improve the chances of other Indians all over the country.

Is it said that these were an exceptionally good stock of Indians at the start? They were some of the famous Sioux who participated in the bloody massacres of Minnesota and were for a time confined at Fort Snelling. But while in the fort they were taught to read the Bible and were converted to Christianity. Here was a little community of less than 100 families, who, without any care for rations, struck out, each man for himself, scattered on separate quarter sections for 20 miles or more, and have attained a good degree of civilization, education, and christianization, exceeding many white communities. These are a few facts out of many which could be cited.

Look at the Indians as a whole and compare them with what they were fifteen, twenty, thirty years ago. Then there were forts all through the Indian countries and on all the frontiers, to check frequent uprisings. Of late years the forts have been steadily abandoned, some every year. During the past year the only outbreaks calling for the military, have been among whites, at Cœur d'Aléne, in Wyoming, Pittsburg, Buffalo, and in Tennessee, except the slight affair in the Oriba village of the Moqui, which I have mentioned elsewhere.

It is a long time since the military were needed to suppress Indians in California, Oregon, Washington, Colorado, Nevada, Wyoming, Minnesota, and in Arizona, except in the one tribe of Apaches. The closest observers see a great improvement among the Indians of Minnesota, Montana, Washington, Oregon, Arizona, Dakota, Nebraska, and Oklahoma, as compared with twenty years ago. There are still idle, squalid, wandering Indians, as well as whites; but homes are taking the places of the tepees; citizens' dress is supplanting the old Indian costumes; the medicine superstition is wearing away; paint and feathers are disappearing; cultivated fields, still too small, are enlarging their areas; cattle and sheep, still too few in number, are multiplying; Indian offenses are diminishing; industry, especially among the men, is increasing; polygamy is declining; Indian women are becoming less burdensome; Government rations are much less, only 20 per cent of the whole Indian population receiving rations; and 20,000 children are in schools, where there were only 15,000 in 1889.

It is true that the red men have not been transformed into Anglo-Saxons; no friend of the Indian wishes this; but some of these true native Americans have developed characters that put many Anglo-Saxons to the blush. Few, if any, have become conspicuous leaders in civilization, for they have had a hard fight with pseudo-civilization and with white renegades from civilization, sometimes found in official positions. Few Indians have become jurists or legislators, but they have exhibited a sufficient sense of justice to scorn whites who have outraged solemn treaties, debauched their families, and despoiled their lands. It is no wonder that the Indian can not easily overcome his aversion to a civilization in whose name such outrages have been committed.

When we talk of education, civilization, and Christianity, what do we mean? It is plain that these terms must certainly be generally used comparatively and relatively. The perfectly educated, the perfectly

civilized, the perfectly christianized people are where? No one is ready to answer, much less to assume, the high profession. Civilization is a thing of more or less, existing in degrees. It is a complex condition, somewhat vague and elastic in its outlines. The distinction between barbarians and civilized people is not, however, an imaginary one, although civilized life may be penetrated and disgraced by elements of barbarism, and, on the other hand, gleams of civilization may be discovered among people we call barbarians. We apply the term civilization to all uplifts of men to better types of character and living, to all advances toward possibilities of sublimer achievement.

Industry, we all allow, is one of the characteristics of a civilized people. Do we mean that the Indian is never to be rated as civilized until he has not only abandoned his old roving habits but has settled down to perfect industry? If so, how large a part of our white communities must be reckoned as uncivilized? How many, even besides the hordes we stigmatize as tramps. Capability of self-support is another accepted condition of true civilization. But how many, long favored with the training of civilized society, have not attained that virtue. What large dependent classes we have. The power of self-reliance, self-direction, and of continuity in new and difficult tasks are among the conspicuous traits and most valuable qualities developed by our best civilization. But how small a percentage of our white population have these qualifications in such a degree as to make them effective leaders in complex schemes.

The wild Indian in his old life, on the chase, in the hunt, in the old style of warfare, knew just what to do at every turn and was successful in that sphere, for he was at home. Are we not often unreasonable when we express wonder and disgust because he can not at once enter into the new and strange conditions of our civilization and raise crops, maintain connected lines of work, prove self-reliant in emergencies, and promptly meet them? The most advanced Indians on our reservations, it must be confessed, continue to show some of these defects and are likely to for many years. The exceptions are those whose lot in childhood fell among a good class of white people, and who had the benefit of long-continued training in the formative period of life.

This peculiarity in the case needs fuller attention, for any attempt to make a wholesale transfer of any people from one type of civilization to another type of civilization will necessarily place them at a disadvantage for a long season. Under the pressure of the new demands they will appear to lack capacity. It is not, however, a defect in the constitution but a lack of aptitude, for aptitude is a matter of growth, requiring time. In the new form of living the old conditions in which they were self-reliant have been removed, and they are standing, as it were, in the air.

The instinct, skill, knowledge, whatever we may call it, of the Indian, as a hunter, trapper, woodsman, is wonderful. He knows everything in those fields. The faintest trace of a footprint in the leaves or in the snow, a broken twig, a slight scar on a tree, a seemingly indefinable sound, convey instantly to his mind important indications, from which he draws certain conclusions. A white man, with knowledge only of civilized phenomena, would travel those wilds in vain. A mere child in the wilderness, he seeks guidance from an Indian or a woodsman who has had the training of an Indian. How absurd the theorizing which makes all races children, because they do not know the particular things which we pride ourselves upon knowing, but which came to us chiefly as an inheritance.

If the Indian fails to meet our present demands, it will not be for the want of brains, but because centuries of habit have made the artificial life to which we would introduce him difficult to learn in his old age. We propose to take his children and train them for the new life, and thus coming generations will solve the problem.

In the matter of Christianity, I have found very fine examples of Christian Indians—people who are honest, kind, forgiving, and spiritual. But I discerned in them a residuum of old pagan superstitions, unconsciously retained. Has not the Christian Church, also, long been conscious of elements of paganism retained in her creeds and current ideas? I have witnessed assemblies of Christian Indians which, for devoutness and apparent sincerity, are seldom exceeded; and individual Indians resisting great provocations and temptations to wrong-doing, while many others—like weak white Christians—have easily yielded.

In respect to the education of Indians the pessimists have been very pronounced, and have indulged in loud denunciations. The schemes of the Indian Bureau for the intellectual culture of the youth have been derided as sentimental, impracticable, and sure to fail. Having myself made 200 visits to Indian schools all over the country, except in small portions of Utah, Wyoming, Wisconsin, Michigan, and Indiana, I am prepared to state briefly what I have seen.

It should be taken into consideration at the outset, and kept in mind, that almost all Indian pupils are under the necessity of learning English before they can get fairly started in any study. How soon this acquisition can be made depends upon the aptness of the pupil and the skill of the teacher—two uncertain and variable quantities. With white pupils it is the same. I have found Apache children, usually regarded as the farthest removed from civilization, among the brightest and quickest to learn. I found some White Mountain Apaches—the first that ever entered school—in the Fisk Institute, Albuquerque, N. Mex., who, in four months, had made surprising progress in learning to read and in the use of mechanical tools. I have found, however, many Indian pupils very dull at books, and so timid that they always appeared at a disadvantage in the class room.

The majority of Indian pupils are not yet beyond the first and second readers. Almost all can count to 100 in the first year, often in six months. After attending school two years a large number of pupils, beside learning some English, can perform simple arithmetical operations on the blackboard. By far the greater part of all the pupils are studying the fundamental rules of written arithmetic; some are in fractions and beyond; some have worked through Ray's Practical Arithmetic, and a few the second time—thus had gained a good knowledge of the study. In one school, which had been in existence seven years, the teacher, as I went into the class room, was writing the following examples in decimals on the blackboard:

16.25	divided by	.25	equals	?
8.49	divided by	.00003	equals	?
67500	divided by	.002	equals	?
.2433	divided by	.000003	equals	?
.1125	divided by	.5	equals	?
4.4	divided by	1.1	equals	?

I requested the pupils to bring me the full work on paper, and three-fourths of the class brought accurate work. I then gave the class the following example in complex fractions, requiring the same full work on paper:

$$\frac{271\frac{1}{2}}{394\frac{3}{4}}$$

Two-thirds of the class performed the work correctly. This class was quite proficient in arithmetic. Examples in interest were performed mentally, discarding the use of the slate. In a written examination in physiology all the class passed 90 per cent plus. Their knowledge of English grammar was quite extensive, the reading was with good expression, and the class had just taken up physical geography.

In another school the pupils are quite the equal of those just mentioned, in the same studies; and in addition to these exercises, pupils put upon the board a "noun tree," a "verb tree," etc., with no prompting from the teacher. In still another school the class in United States history, 25 pupils, was asked for points on the life of Columbus; and one after another, in rapid succession, the points were given, until the whole 25 had mentioned at least one fact. The teacher asked for points overlooked, when a half-dozen hands came up. Two more early explorers were handled in the same way. There was but little repetition.

Of course the three schools just mentioned are above the average; but there are many about as good.

As to the industries, there are Indian schools where what is done in the fields by the boys makes the best showing for the school. Large crops are raised and good herds of cattle well cared for. In other schools the trades are conspicuous, particularly carpentry, shoe, harness, and saddle making, tailoring, blacksmithing, wagon-making, etc. I can cite cases where, in the erection of school buildings, the boys have done a large part of the work. Buildings which would have cost the Government \$15,000 or \$25,000 actually cost but \$8,000 or \$13,000, because the boys did all the work except that of the masons. Such examples are in the older training schools, but there are some reservation schools which approximate such results; and numerous schools during the last three years have been started upon lines which, if followed out, will soon bring them to this advanced condition.

Unfortunately, the girls are much fewer in the schools than the boys, and their industries are less conspicuous; but they are making much progress upon their lines of work. If the home-cottage system could be generally introduced, the girls would learn practical lessons in house-keeping of much greater value to them than what is now learned.

Such is the improvement perceptible in the general condition of our Indians, in the condition of many reservations, and also in many individual Indians; and such are the brightening prospects which open before our Indian youth. Do any complain that the progress is no faster? Let us not forget the long centuries through which the English people have been rising to their present position, and considerately allow the red man, at least, a couple of generations to approximate our condition more nearly. At the same time let us render them all the aid in our power. Until recently the white influence felt by the Indians has been anything but helpful, and very much of it is still bad.

The new policy in the treatment of Indians which for some time has been struggling to the front, is looming up more and more conspicuously and gaining wider approval. It has been my fortune on the frontier to hear a reiteration of the old policy, *ad nauseum*. Especially is this the case in ambitious young towns and cities near Indian reservations. The few goodly fields or streams or springs on Indian land are eagerly coveted, collisions with the red men are precipitated, and then the venal penny-a-liner works up a sensational article, telling about the naughty Indian who "ought to be wiped from the face of the earth."

Almost all ruthless aboriginal wars have grown out of a hereditary

love of land and the supposition of the white man that he has the primary claim. This has been the magnet which has drawn white men and red men into frequent bloody collisions. Rapacity for land has been the impulse and acquisition of land the determinative principle of white civilization. It has been well said, "the surveyor's chain should be wrapped around the rifle as a symbolic epitome of pioneer history." It was for land that the whites first assailed the Indians and then turned from the Indian upon one another and wrangled, cheated, and lied.

The Indian has always been attacked on the wrong side and held at a disadvantage by the unscrupulous frontier whites and the lower class of our military. The following description of the case, from the pen of Hon. E. A. Hayt, Commissioner of Indian Affairs for 1878, is very appropriate:

The theory that Indians must be regarded as irreclaimable savages, to be restrained only by brute force, is the mental outgrowth of the policy formerly pursued towards them. Brought into contact with only the barbarous elements of white society, learning of such exemplars only new vices, defrauded of their dues, driven from their lands, their women debauched, and themselves crazed by drink, every base instinct of their savage natures was aroused and intensified, brute force was resorted to as their only means of defense, and in turn they were met by brute force as the only means of correction.

Under the old policy, bullets met bullets. Under the new policy we meet the Indian with forbearance, education, and elevating influences. Thus a new side of his nature is addressed, better sensibilities are awakened, ambition is aroused, and new ideals are created. Great and beneficent changes follow. Let me recite two frontier States in illustration of the great good that has come from this change of policy.

North Dakota had five military posts: Fort Totten, Fort Stevenson, Fort Berthold, Fort Lincoln, and Fort Yates. But twenty Indian schools have been doing their work; bands of missionaries—Roman Catholic, Episcopalian, Presbyterian, and Congregationalist—have been instilling the principles of peace; and the Indian agency service has been improved. What is the result? Four of the forts have been abandoned, and from all North Dakota, save Sitting Bull's band, far to the southwest, no Indians were numbered among the hostiles during the late trouble; and it should be added that the four forts were abandoned before the Pine Ridge hostilities occurred.

Turning to the extreme southwest we find that in Arizona, including Fort Yuma on the border, there were, only a few years ago, seven more military forts than there are at present. In 1880 there were only two schools and 73 pupils in the whole territory. In 1892 there are eleven schools, and 1,202 pupils from Arizona are in schools. All the forts now used by the military in Arizona are on and around the San Carlos Apache Reservation.

I quote the following from a recent paper by Rev. C. C. Painter:

The statement is that the returned students make the worst Indians on their several reservations. Of course this must be shown by an increase of Indian troubles, held in check, if at all, by an increase of military control. The records of the War Department show that since 1878, when this educational work, it might almost be said, had its beginning, fifty-eight military posts, established in remote places solely for the purpose of controlling Indians and very expensive to maintain because of their remoteness, have been abandoned. The aggregate strength of these posts the year before their abandonment was 4,772 men. There have been, during the same time, established in the Indian country thirteen posts, with an aggregate of 2,653 men. Three of these have also been abandoned, so that at the present time we have less than one-half as many troops located with reference to control of the Indians as were deemed necessary when this educational process began, and ten posts now occupy the field once occupied by seventy-one. When it is remembered that it costs over \$1,000 annually to support each soldier, there seems to be an argument in favor

of economy in keeping these wards of the Government in school, rather than allowing them to run wild on the plains; and the question remains to be answered, In what way does it appear that the educated Indian is worse than the uneducated one? Certainly these records seem rather to corroborate the testimony of many witnesses as to the improvement made by education. The fact is, our troops are now being called in from the Indian country and located with reference to our large cities, and we are using our Indians to keep down the whites; and testimony accumulates as to the value of our school training.

The forts were given up because the Indians had outgrown them intellectually, morally, and socially, and the existence of the forts was a brutal-menace to a people well behaved and controlled by moral means.

A gentleman of intelligence and long observation, having lived in close contact with the Indians over a large field for twenty-six years, writes clearly and explicitly upon the question of progress:

In the year 1866 I joined a party of emigrants bound for the gold fields of Montana. When we reached what is now known as the Sisseton Reservation I saw my first live Indian, and my experience among them began. From that date to the present time I have been constantly with them, covering the territory from the Rocky Mountains to the Minnesota boundary, witnessing the many changes they have undergone in their gradual development from the life of a savage to the position now occupied by many of the more progressive Indians on this reservation. The experience has taught me that, while it only requires a few short months to make an Indian of a white man, it will, as a rule, require two generations to make a white man of an Indian; but it can be and is being accomplished. \* \* \*

To sum up, I am satisfied that the Indian is capable of becoming civilized, and that the general policy now being pursued by the honorable Commissioner is the proper course to accomplish that end. But we must ever bear in mind the fact that it is what our Scandinavian friends would call a "big job."

In closing, I respectfully ask attention to the following suggestions from a letter addressed to me by the intelligent gentleman just quoted. In view of his long personal acquaintance with Indian reservations and Indian schools and his large ability as a business man, I think his suggestions worthy of consideration and deserving of a place here:

The policy adopted by the honorable Commissioner in abolishing the sectarian and contract system is, in my opinion, highly commendable. The question at issue is not that we should make a given number of Catholics or Presbyterians or Methodists or Baptists, but that we shall qualify as many of the rising generation as possible to go out into the world and be able to take care of themselves and fulfill the duties of good citizenship. No man can be a good citizen and desirable neighbor unless he possesses the principles of Christian morality. Hence if we desire to make a good citizen of an Indian we must teach him the principles of morality as an adjunct to his practical knowledge of farming, tailoring, carpentering, or any other trade or profession he might wish to engage in, and permit him to choose his particular creed or church for himself after he has reached the years of discretion. Hence the Commissioner is bound to use his influence in securing the services of good, sound, practical, moral men to fill the positions of agents, superintendents, and other offices where they come in daily contact with the Indian.

Having got rid of the sectarian and contract system he should next locate and organize his nonsectarian industrial schools upon the reservations or in as close proximity thereto as possible. The superintendents should have sole charge of all matters pertaining to their respective schools, and be placed entirely beyond the jurisdiction of the agent, in order to avoid any possible conflict of authority. I am of the opinion that Mr. ———'s idea of forming a board of visitors for the schools is a good one, and I suggest that a fair way for their appointment would be as follows: One member to be nominated by the agent, one by the superintendent, and the third to be chosen by the first two appointed, all to be confirmed by the honorable Commissioner. The duties of the board should be to visit the schools and shops at least once each quarter and report their finding to the Commissioner. Wherever practicable and the Indians of the reservation are sufficiently intelligent, the nominations should be made from their number. When no suitable person can be found upon the reservation to which the school belongs I would then appoint the members of the board from the more advanced Indian schools or from other reservations.

Next, where industrial schools are located upon reservations I should transfer the agency physician, carpenter, and blacksmith to the training school, where a hospital could be maintained for the care of the sick of both the school and of the reser-

vation. The object of the transfer of the carpenter and blacksmith is, first, to save the duplication of their salaries; second, it throws all the repairing, etc., into the school shops, where it can be done by and with the assistance of the pupils who are learning those trades, thereby giving them a more varied experience than they could ever gain in the shops where everything was being cut new from whole cloth. No successful mechanic was ever wholly matured by his experience in a single shop or in a single line of work; his success depends upon his ability to combine the knowledge of two or more instructors. A schedule of prices for repairs for harness, wagons, plows, etc., could easily be arranged, and the cost of such repairs could then be credited to the schools and debited against the treaty fund from which the Indians were being supported. The repairs should be done upon the written requisition of the agent.

Another reason why this transfer should be made is this: It will not be many years before the Indian will have to go down to his individual pocket and pay for all such work, and the sooner he begins to realize the fact that he can not go to the agency shops to loaf free of expense, and at the same time have the results of his carelessness rectified, the better for him. Teach him that the shops are intended to be places of industry and business, and that when he has occasion to visit them it is for a definite purpose, and not simply to idle away time. Still another object of the transfer is to lessen the headquarters duties of agents and head farmers, as, under the present system, the time of the agent is almost wholly consumed by the correspondence and routine work of the office; while, as a rule, head farmers have degenerated to assistant issue clerks and foremen of shops, and, incidentally, to boarding-house keepers, seldom, if ever, seeing an Indian at work upon his farm.

I believe that farmers should be retained at all reservations, including those where lands have been allotted in severalty, as there is all any one man can do in managing the police, paying annuities, settling disputes between whites and Indians, and encouraging the Indian in his farming operations.

Having gotten the industrial schools and shops organized, I think that the Commissioner will have to be very careful in selecting superintendents, if he expects to find men who can manage them successfully and economically.

Having thus relieved the agents and farmers of the principal share of petty detail work about the immediate vicinity of headquarters, the Commissioner should require them to strictly attend to their legitimate duties, viz: Visit the Indian at his home, advise him as to the location of his house and stables, the shape of his fields, to see that his stock is free from contagious diseases, to direct him in regard to the care and breeding of stock generally, to familiarize themselves with the surroundings of each individual Indian family, and make an honest effort to prove to the Indian that the Government has an object in view, and that it is entitled to some practical return for its vast expenditures.

Of course, there are some of the larger agencies where this general plan might not be consistent with treaty obligations; but, in my opinion, it will fit a large majority of cases, and will, I believe, have a tendency to encourage the "red man" in his difficult travels over the "white man's road."

It is my opinion that what the Department is most in need of is more agents and farmers who will take an interest in caring for and instructing those under their charge, instead of spending their time in devising schemes to secure larger appropriations to be expended in such manner as to advance their personal political ambition or financial condition. Do not, could you have been here during the past two weeks and witness the spending, by the Indians of this reservation, of the \$25,000 paid to them in cash, you would no longer be in doubt as to the capability of the Indian to become civilized.

I have the honor to submit herewith the annual report of Mrs. Merial A. Dorchester, appointed as a special agent to aid me in my work.

Respectfully,

DANIEL DORCHESTER,  
*Superintendent of Indian Schools.*

THE COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SPECIAL AGENT, INDIAN SCHOOL SERVICE.

IN THE FIELD, *October —, 1892.*

SIR: I have the honor to present my fourth annual report of work in the Indian schools, with special reference to the condition, training, habits, etc., of the girls.

A wise man, when asked, "When would you begin the education of a child?" replied, "A hundred years before the parents are born." With this thought in mind, and also the thought of the condition of the red men during the last one hundred years, we ought to understand better the causes which thwart so many endeavors at Indian education, and to sympathize more fully with the results attained.

Until recently the factor of heredity seems not to have entered into plans for the education of Indian youth, especially Indian girl youth. With little reference to the condition of the homes or the degree of civilization among the parents, with few thoughts of the past and little exact knowledge of the present, Indian educators have looked too steadily towards future reservation conditions which loom up before the mind's eye out of ideal theories. Having given several years of training at a good school to a few children from some reservations, it was expected of them that they go back and introduce just such homes and styles of living among their people as the teachings of the schools required. When thus thrust out of civilization these pupils were just beginning to grow in all those ideas which go towards making true and helpful men and women. We forget that such growth can not mature in three or five years, and that the parents and homes to which these pupils were sent had remained in nearly the same state for centuries. The force of gravity between bodies of such unequal potency, the few educated pupils, the large uneducated tribe, has drawn the children downward while little uplift was given the parents and tribe.

### FIELD MATRONS.

Within a few years a new method has been introduced into the work of Indian civilization. Field matrons are now sent out to labor among the mothers and homes of the reservation, just as for years farmers have been sent out to help the fathers provide for the homes. While the number of these matrons is altogether out of proportion to the multitude of the homes or even of the farmers, still it is cause for rejoicing that the movement is inaugurated. A person unacquainted with reservation and Indian life has little idea of the amount of good which may be accomplished through the efforts of a wise field matron. There is no limit, save the strength limit, to the helpfulness of such a woman in the homes, and small limit to the influence she may acquire among the tribe. But let her not deceive the people, for no one reads character more quickly or accurately than an Indian and none have better memories. With a tactful, unselfish matron, it will not be long before a perceptible change may be noticed in the homes and surroundings of many an Indian family—the mother will become a more intelligent and womanly adviser, and the tepee or cabin will begin to take on the look of a neat country home. That these field matrons are a valuable auxiliary to the work of civilization can not be doubted, and no one seems inclined to condemn the new departure.

But a special reason why these matrons should now be introduced into the reservations in large numbers is seen in the fact that at present there are many returned students at the agencies, camps, and pueblos, and these young people need assistance from white people. In studying this subject an interested person can not fail to notice the limited opportunities and possibilities of the returned student, restricted as he is to the reservation by custom, by consanguinity, and by lack of knowledge of the outside world. What will be the future value of the knowledge brought from the schools? In a few years, if help is not

given soon, how much can be counted upon the results of his education? What fruitful chances and what responsibilities has a field matron in the midst of such cases!

The number of educated young people has slowly but steadily increased in the tribes, though nowhere are they yet in sufficient numbers to form an influencing community: but the possibilities of remunerative labor on the reservations has not increased, while the hardships and persecutions in many places are just as difficult to bear now as they were years ago, and now, as then, the girls have the hardest chance.

In 1887 Agent Williams, Pueblo Agency, wrote as follows:

Some of the pupils educated at the East have returned and are pursuing the trades learned there, and are doing well, while others, notably the girls, are not doing so well. They returned to the pueblos with good clothes and rather higher ideas of life than the average Indian has, hence they are rather looked upon as strangers and derided by their people. No suitable occupation is opened to them in the village, and as soon as the clothing they had upon arrival is worn out they relapse into the habits of their associates.

Gen. Armstrong said in a report made several years ago:

There is not the regular employment for girls there is for boys. The lot and chance of the former are much harder than of the latter. The intelligent, decent Indian girl is a problem.

Again Gen. Armstrong said:

There is absolutely no position of dignity to which an Indian [girl], after three years of training, can look forward with any reasonable confidence. There is nothing for her but to enjoy and suffer as best she may.

And how much she may suffer no one save those acquainted with reservation life may know. While under present conditions there is some improvement, the following testimonies tell a sad tale. A bright young Pueblo boy, who from experience and observation understands the trials and hindrances which beset the pupil returning to his village, said to me, "You think it is hard for us boys, but I tell you it is much harder for the girls."

A day-school teacher who also does the work of a field matron writes:

The question of what to do with the girls troubles me greatly. The boys as they grow out of the school will find employment among white people. But the girls, what can they do for a living? I could get a place for them in — or —, but that would never do. There are always bad men on the watch for such girls, and to send them to the city would be to send them to ruin. I can think of nothing better than to teach them some work they can do in their own homes. They must have something to do by which they can earn money, or they will be tempted to follow in the steps of their older sisters.

One of the impressions made upon Mr. Philip C. Garrett, while visiting several reservations during last year, is given in the following words:

It is true to a much greater extent than we had hoped that young Indians returning to the reservation after a thorough education relapse into a barbarous mode of life; especially is this so of the girls, who are bought of their fathers by some admirer for so many ponies, and not entirely loath, accept marriage under the old conditions, and soon become nothing but drudges to some lazy young buck. \* \* \* The difficulty is, how can it be prevented? Boys and girls go back to their parents in tepees and huts, with few of the accompaniments of civilized life. They have in the camps absolutely no application of the industries they have learned. Their parents will not let them introduce the better way, and deride them as "white folks." After awhile they despair of carrying out the life they were taught to live at school, and in utter discouragement give themselves up to the barbarism around them. They know better, but are unable in this environment to apply their knowledge.

In the April Word Carrier, under the title "Needs of the Indian Home," a description of such a home is given, from which I will condense:

The first need is the home. The houses in which the Indians live can scarcely be called by that name. Since the roving life was given up the tent has given place to the log house—a small, sod-roofed, floorless hut, with one or two dirty windows. In the center of the room is the stove, nearly red hot. Around the sides are bedsteads, boxes, trunks, and parcels of all descriptions. On the walls hang all the clothing the family are not wearing. In the corner is a cozy place for a family of puppies. Near by the ration of meat is piled on the floor and covered with a dirty blanket.

At night each person takes his pillow and blanket, if he has a pillow, and curls up in his own corner on the floor. Instead of undressing each one rolls up in a blanket. The air in these houses day and night can scarcely be imagined. It is vile in the daytime, but frequent passing through the door admits some oxygen. But at night the atmosphere is nothing but poison. Pack eight or ten comparatively clean people in a small room for an hour and you notice the impoverished condition of the air. But think of the consequences when the room is full of people who have seldom if ever bathed, who sleep in garments worn for weeks, in bedding stiff with grease and dirt, and between walls that have never been washed. Then heat this air to 80° and you have a combination which makes one wonder how any Indian ever lives. Besides, a large per cent of the people are consumptives and add their disease-laden breath to the stench of the room.

Can we help these women to realize what the word "home" really means? Can we teach them the need of soap and water and fresh air? Is there anything that an Indian home does not need to make it what it should be?

Is there not need of scores and hundreds of field matrons sent by Government or by Christian societies for this work of educating the mothers, uplifting the

homes, and thus saving many of these returned students, the first fruits, from despair and ruin? In my opinion it is as important to save what has been educated as to educate more.

Among the Pueblos there are some girls who have gone into the villages and farm houses, and are doing as well as could be expected. But what is there to stimulate a girl to noble actions in an old pueblo? There is much to drag her to ruin. Among all the tribes there are a few girls of marked ability who have fitted themselves for assistant teachers or to fill positions in other capacities in the boarding schools. Some girls have found good places in families, some have married educated young men, and started a civilized home; but for the majority there is absolutely nothing to do but to follow the steps of their mothers and older sisters.

In some places, as the young people return from the schools, they find a friend who gives immediate and constant help so long as needed. I have known it to be an agent who will take time, though other matters wait, to look after and care for these returned pupils, and convince them that he is and will be their friend; but woe to that agent whose friendship is ruin. I have known it to be a missionary who is not so bound by forms and ceremonies as to lose sight of these best reservation helps in the work of Indian civilization and Christianization. It may be a trader and his wife, who for love of humanity hold out the helping hand, and by its warm grasp convey the needed stamina to keep these young people in ways of truth and righteousness; and it often is some teacher in the school whose heart is broader than the classroom, and who at the expense of rest and recreation finds time to become acquainted with these lonesome, homesick ones, and give them the help and counsel needed. Often all that an Indian girl needs to keep her pure and true is to know that near her is a kind-hearted white woman ready with sympathy, advice and help. If from henceforth all the people in the Indian service were unselfish, with what a stride civilization would take up its onward march.

Another year among the girls in the Indian schools only emphasizes the thought of the opening words of last year's report, and now, still more than then, it seems as if the most important work to be done for the schools, or at least for the girls in the schools, is to improve reservation home life and raise the mother to a higher and broader plane of existence. Not till then will it be safe to send these partially-educated girls back to their semi-civilized homes, though it has to be done. This labor of home improvement among the tribes is the surest way of saving the fruits of the present schools. And so, in behalf of the girls now in school, as well as of those partially educated girls now out in the camps and pueblos, I appeal to our Government for more matrons among the homes, to the missionary societies for more women workers on the reservations, and to the people of wealth all over the country to come or send some qualified women-helpers into the great field.

The success of the past year only proves what opportunities on a reservation are before a woman of health, strength, and abundant common sense—all consecrated to the uplifting of her kind. Such women, going out officially or unofficially, are laying good foundations for better homes and wiser mothers; and this work will surely save morally, socially, and spiritually many a boy and girl who are now looking out upon life through the "sheltering bars" of some Indian school. It will be much easier to see a bright girl take the train for her distant home if upon that reservation there is a field matron who will guard the young life as a choice plant in her vineyard.

Remembering how discouragingly all friends of the race have spoken of the possibilities of Indian girls finding any employment upon a reservation, allow me to ask a question. Who supposes that a live field matron, with ordinary brain and common sense, will remain five or ten years upon a reservation without finding or devising something for the girls of that agency to do? Already they can cook, wash, sew, make rugs, crochet, etc., and the only question is regarding remuneration. Every matron has one hand upon some civilized community with whom she is in sympathy; and then there are communities, more or less civilized, around nearly all reservations. This matron, with her knowledge of affairs—and no woman without that knowledge should be appointed as field matron—will soon be able to make a market for all manufactured articles, especially now while helpfulness is in the air and the Indian is interesting, and beyond this time we hope there will be no need. The girls can be taught weaving, spinning, the care of poultry, of bees, of pigs, of a dairy, etc. There is work enough, only it will require the hand of a woman with these girls, and the patience of Job—I have always thought Job was a woman.

A letter from one reservation says, "I have secured \$112 worth of work for my women this season." Such a sum, with the simple needs of these women,

will bring comfort into many homes. Allow me to again quote from Mr. Garrett:

I would fain encourage the Indian associations, especially the distinctive woman's associations, to send into the field an army of field matrons. Their work is of the very best kind, and in the hands of women of great tact, wisdom, and discretion may be productive of infinite good.

In speaking of the Sioux houses, he writes words which are applicable to the houses of any tribe:

The houses contain many evidences of contact with civilized life, among which were pictures which generally adorned (?) the walls. I would suggest to the field matrons the elevation of the character of these pictures from the cigarette-box and Police Gazette type to that of Prang's chromos, as a step towards higher things.

It is very gratifying to state that there are now more matrons employed for field work than ever before; that during the year the number of women missionaries has increased, and that several women, for no remuneration save that from kindly deeds performed, are now doing good service upon some reservations. All friends of the red race hope the number of these carefully selected women will be speedily increased.

#### IMPROVEMENT IN INDIAN SCHOOLS.

If it were possible to produce an average reservation boarding school of three years ago, and place it alongside one of to-day, the contrast would be quite marked. While the number of schools and their accommodations have increased, so that now there are 5,000 more children in attendance, the character of the schools has made perhaps a greater gain.

**Style of buildings.**—The style of buildings and their comfort-producing ability is greatly improved. The æsthetic element is creeping into the construction of edifices, and it now seems to be considered a part of the civilizing work to care for and teach the pupils in rooms where some idea of the beautiful enters into architecture and finishing. Besides, many people think the Government owes it to the community to use their money in the construction of such buildings as will add to the beauty and well-being of the country. Now, in Northern climes we seldom find boys sleeping in fireless dormitories situated over shops or warehouses, for the sake of economy, and reached by snow paths running through the yard. We do not find the girls' dormitories so badly boarded that one can thrust a hand through between the boards to the outside world, nor in rooms where the sills are so badly rotted that only a part of the space can be used. And it is to be hoped that no one can now find a dormitory so dangerous, although much propped, that in night wind storms the white-robed forces must be dressed and marshalled in the yard for roll call. We are learning that humanity is worth more than economy.

**Facilities for teaching industries.**—In the matter of helps for teaching industries, especially girls' industries, the gain is encouraging. Now all laundries are furnished with either steam boilers, washing machines, or both, with good drying and ironing rooms, and the larger schools have steam laundries. I know of no washing machine in the service three years ago; all the rubbing was done on the old-fashioned board.

There have been many helps added to the kitchen service. The work is done much more easily and quickly, and thus time is saved in which to teach the girls not only the cooking of ordinary dishes but of simple side dishes. I have found the kitchen pantries as well stocked with culinary furnishings, and by the Indian Office, too, as a cook would wish. It depends upon the superintendent or the agent. In the larger training schools there are rooms fitted up and furnished so the girls may be taught how to cook for an ordinary family. This new departure is very popular, and in some schools is carried on even when the teachers have to furnish the cooking materials.

The improvement in the sewing rooms consists in better furnished rooms, better material, and better instruction. Most of the rooms are light and cheery, more help is given in instruction, the girls are taught to cut and fit by work, and many styles of rug-making, picture-framing, and other kinds of fancy work are taught, and the first steps towards teaching spinning and weaving have been taken.

Each year some girls are learning the care of poultry, and in other ways as well are becoming more and more self-reliant, while a few push on for training in hospitals and normal schools. The work for the girls looks encouraging. But we need more people who will interest themselves in individual cases.

**Cooking.**—In many schools there has been great improvement in the cooking for the children's table, because better cooks are employed at better wages. It is supposed that the Department furnishes all schools with the same "rations

list," but between that list and the menu the transformations have been so different that one would scarcely recognize the food as coming from the same materials. If wisely expended the cost and amount of a ration is sufficient to support a child. In schools where there is no waste or other leaks the cook's allowance is ample, but oftentimes the scarcity of food upon the tables is explained by the statement that all the rations for the week upon certain lines have been used. At some schools the large garden furnishes so much food that the table is always well supplied, and at some other schools, with small garden help, the wise management of the raw material makes a great variety of dishes, gives the children good fare, and still keeps within the rations limit.

One of the best cooks in the service can show a list of dishes numbering a half-dozen dozen, from which is selected the kinds of food to be prepared at any one meal, and two successive meals are never alike. This school showed a greater variety of food during a week than I have seen at any other school, and yet the garden is not worth much, and the cook has rations to spare. This cook says truly that if a dinner is commenced with soup the children do not eat so much food as when the soup is omitted; but some employes think it is too much trouble to cook so many varieties. This school has a good supply of milk.

It is still my opinion that it is better for the health of the children to have more fruits and cereal food, and not allow so much meat eaten.

When a school has a competent cook, this cook should be consulted in the selection of foods from the rations list. The cook ought to know better than any other employe what foods are healthiest and most enjoyed by the children. The cook and the matron should make out this list of foods, subject, of course, to the approval of the superintendent.

**Dining-room service.** - There has been a great improvement along the line of dining-room service since I knew the schools. It is not the rule but the exception (found in some of the smaller schools in the Southwest) to find a dining room where meats are served in tin pans, beans in washbowls, and bread in baking tins. Usually this fault is chargeable to a lack of persistence by the proper authority. I think that eating from tin plates has wholly disappeared from the Government school; but there is one agent who does not allow the children to have much crockery in the dining room lest they break some pieces. There is crockery enough in the warehouse. Much civilizing it will do there!

In the best schools, and they are not a few, the style of service is equal to that in families of many well-to-do farmers and mechanics. The crockery, though not beautiful, educates in the use of most dishes and gives confidence to the young people, when they are seated at a private table. Each child has a chair, not a bench; a neat and clean napkin, though perchance made from a sack; a knife, fork, spoon and tumbler, and, may be, an individual salt. The girls take great delight in arranging the tables, and one often finds a bouquet of wild flowers at each table. It is needless to say that linen and not oilcloths are used upon such tables. These matters may not seem essential, but experience teaches that, other instruction being equal, the pupils who have the best teaching in the ways of educated life are the ones who make the best appearance before the public, and the ones who can be trusted farthest. One can not teach the use of the knife, fork, or napkin to these young people from the tepees, hogans, or keys without giving reasons, and reasons set young Indians to thinking.

At a small school in Arizona the teachers prefer to care for their own table silver. Accident or a Christmas box brought a set (knife, fork, and spoon) of small silver table ware to the matron, and she gave it to the smallest pupil. It was amusing and instructive to see the pleasure with which this Indian mite used her silver knife and fork, then rose with great dignity, cleaned her cutlery, and put it away, as the teachers did theirs. Several sets have since been introduced, some by parents themselves, and with good effect, helping in many ways.

It is sometimes said that we ought not to teach the Indian children beyond what their white neighbors are taught; but I do not see why this reasoning should apply to the dining-room service and not to the baseball service. It seems as important that the young Indians be taught how to entertain their friends at the table as to teach them how to entertain from the bandstand or organ. More pupils can learn the first lesson, and therefore more friends be entertained. Besides many workers among the red children think that the standard of society around some of our schools is not the one we wish the Indian to recognize as the white man's standard of living. The pupils will be much more ready to listen to a talk upon morals, given by the superintendent or matron, if previously an endeavor has been made to add to the comfort or pleasure of the children's dining-room service.

In many schools more help is needed to carry out this plan. A dining-room matron is a necessity in most schools. There is always someone in the dining room during meals; and in the best schools this person is around helping the pupils to more food or better manners. There is little need of a disciplinarian, as such, in most dining rooms, unless it be to show him off as a piece of the machinery; but the children do need to be taught how to eat, what to eat, and how much. The natural habit of the Indian leads the boy or girl to eat all that is within reach, lest a time of hunger may come; and many a small child has injured its health, because not instructed in the matter of quantity to be eaten.

The new surroundings of a red child in a school tend to make him more quiet than a white child would be under similar circumstances, but the red child's manners are never boisterous. I have seen children brought in from the tepees or hogans, with no knowledge of civilized ways, who, in a few days, mastered, by imitation, all the elements of education contained in eating with a fork instead of the fingers, cutting food with a knife instead of the teeth, drinking from a tumbler, and falling into line with the etiquette of the table service.

**Dormitories.**—In the matter of dormitory service, it is also the exception now to find a school where beds have but one sheet, the boys no nightshirts and the girls no nightdresses. These important hygienic matters are fast receiving attention. But in one school, at the time I was there, no sheets could be made as the supply of thread had been exhausted, and the agent declined to buy it in open market, saying he had estimated for the thread, and, though it did not come, the Department was in fault, and not he.

At the best schools one will find in the dormitories a single bed covered with a white spread for each girl, a chair, washstand, bowl and pitcher, towel, brush and comb, and in some dormitories a sliding half curtain between each two beds, making a retired place for each girl, which helps her on the line of modesty. This is much better than to see a long dormitory with only beds, though placed in line by square and compass and immaculate in their make-up. In some such dormitories the space between the beds is so small that the night dresses are rolled under the pillow during the day, which is very unhygienic; and in other rooms the day clothes are put on the bed at night for want of space to hang them up, or for want of brains to drive a nail or allow one to be driven. With no chair, nail, or hook of any kind, what can a girl do but put her clothes on the bed? In such cases there can be little instruction in keeping one's room clean and healthful, or in adorning it as most girls delight in doing. In many schools the dormitories are now divided into small rooms, and the girls are taught how to arrange and beautify them in a pretty and hygienic manner. This is true education for the Indian girl upon that line, education in individuality, in the desirableness of several rooms in one home, in neatness, order, and beauty.

**Sitting rooms.**—The fact that many schools now have sitting rooms and reading rooms for both boys and girls, and several schools have small but growing libraries for the pupils, is another evidence of progress. It is also suggestive of what outside friends can do to encourage the pupils in securing the best possible education. The people of the United States would be convinced that the money used for Indian civilization is not wasted if they could see the pleasure manifested by the pupils receiving these helps towards the higher types of civilization. The good care taken of their rooms, the sense of ownership, the efforts to brighten the walls by work of their own, the quieting effect of the rooms especially upon the boys, all help on the work of education.

**Employes.**—The style and character of the employes are surely changing for the better, and the principle of the "survival of the fittest" underlies this change. As there are exceptions to all rules operated by man, so here a first-class employe is sometimes dropped, but many not first class are also dropped, and the result of even the imperfectly worked rule is to increase the efficiency of the service. I think profane and immoral superintendents and matrons are people of the past, and now the moral influence upon the pupils of nearly all employes is good. Every year increases the amount of instruction given by superintendents and matrons upon morality, sociality, and civilized living, and the physician adds lectures upon anatomy, physiology, hygiene, and simple medical practice. The best matrons now teach the girls under their care upon all subjects relating to life, health, and happiness, especially upon the duties of these girls as daughters, wives, and mothers, just as these matrons would teach their own daughters upon the same subjects, and the results are very encouraging and will be more and more as the years go by. In my opinion Indian children need instruction in regard to social living, more than they need it in regard to the history of their own country or any other. Both are necessary, but history should not come first.

**Methods of instruction.**—The system and methods of teaching are also improving. It is now thought by most teachers in the Government schools that if we are to do the teaching in the English language, we must first teach the language so the pupils can speak and understand in English. The marked improvement of the pupils so taught over those taught in the old way stamps with approval this method of teaching Indians, at least. If we could give instruction in the speech of their youth, it might be better to put in some other studies before language. The educators of Indian youth are also seeing the especial advantage of object-lesson teaching with these pupils, because from the earliest recollection the fathers and mothers have used this kind of instruction for all the teaching given their children. Tact, patience, wisdom; wisdom, patience, tact, that is the gamut to be used in this work, and it must be practiced "forever and ever, amen."

**What shall be taught the girls?**—First the care of their own persons. This means something more than daily bathing, cleaning hair and head, and the brushing of teeth; but even in order for so much, a matron should be with the girls from the time of rising till they march to the breakfast table, to see that each one takes proper care of herself in the morning. This work should never be left to a "captain," unless she is a thoroughly trusty employé; and the instruction and watchcare should be continued until fixed habits are formed. Matrons say there is much gained with these girls by beginning the day aright. Given a fertile-brained matron and incentives to progress among the girls will not be wanting.

One of the most difficult tasks is to teach the girls how to care for their health, how to avoid colds and other sickness; but I have seen persistence in this line accomplish the desired result. This instruction and persistence is of the first importance, not only for this generation but for the healthfulness of the coming Indian. The girls should also be taught how to use their strength, how to save it, and how to increase it. Simple gymnasium drills and calisthenics are not beyond the reach of superintendents of reservation schools.

Labor-saving machines have been introduced into the work for the schools, and in detailing for this work the pupils are divided by number and age rather than by sex, so that now the girls are not so overworked as formerly. For this reason the relative number of girls has much increased, their enjoyment of the schools has expanded, while the whittling energies of the boys are now partly applied to caring for their own dormitories and doing the hardest work in kitchen and laundry. This gives the girls more time to have cooking, sewing, and laundry taught as industries. Just after our visit to one reservation the school cook left and the new appointee did not arrive for ten days; all the cooking for employés and pupils during that time was done by two boy assistant cooks, and as well done as usual.

It is quite refreshing to know that at most of the training schools cooking is to be taught as an industrial art and provided for as such. There should be a room or rooms with all proper appointments, a cook with all requisite knowledge, and as much time given to this industry as is given to teaching a boy shoe-making. But while we have not yet reached such grand attainments, the day of cobbling at this industry, giving a girl meat enough to roast for 100 pupils, and expecting that from the drippings she will extract wisdom sufficient to enable her to cook for three people—has gone by. The first steps of industrial teaching in this department have been taken.

Sewing should be taught the girls with reference to their future homes and future needs. Cutting and fitting by chart, with the right to own a chart when the lesson is well learned, is also a necessity, if we wish the girls to continue wearing citizen dress after leaving school. Knitting, crocheting, rug-making, picture-framing, simple wood work, etc., should be taught the girls in order to help them make the most out of their rude surroundings towards furnishing comfortable homes. Any simple device for producing a convenience, any fancy work which will fill the hands and minds of many but-little-educated girls, any help in obtaining plants for the windows or seeds for flower or garden culture, is so much towards saving the education given in the class room and keeping these girls from falling into the ways of the less-cultivated people around them.

Laundering should be taught all girls, so they may be able to wash for a family and do it well. Then any girl who shows special aptness and so desires should be given added lessons in "clear starching and ironing." This industry may furnish a means of support for some girls.

Any girls who seem fitted for work in any department in the school or in families should be helped in gaining all-needed knowledge of their trade, and then, so far as may be, assisted in obtaining places of work inside or outside of the school. This duty is not required by the rules and regulations, but humanity requires it.

Housekeeping is an art almost as difficult to teach in an Indian school as is cooking; and there should be a "house mother" in every large school, giving her whole time to teaching the girls by precept, example, and experiment, etc., how, as daughters, wives, and mothers they can make a home pleasant, neat, cheery, and homey. We are still hopeful of the time when a "model home" will be considered as necessary at the training schools as is a carpenter's shop. When that time comes a house mother will be found in every model home. She will teach the girls what questions enter into the subject of selecting house sites and how to decide them, what kind of a house to have built by the fathers and lovers, and of what material it shall be constructed, the direction towards which it shall face, its size, the arrangement of rooms, and the conveniences to be introduced, and its furnishings and beautifying.

We do not wonder at the style and kind of houses on the reservation, when we know the force of superstition among the Indians and the lack of instruction regarding architecture. For example, in his present state of mental and spiritual darkness, the Navajo can not be expected to build himself a house at any considerable expense. He firmly believes that certain death will overtake the individual who recklessly enters where a human being has died; therefore when the death palor settles upon the brow of the expiring Navajo his friends put out his fire, pull the props from under the hogan, and his house becomes his tomb. Most of the Indians who live in tepees burn the tent at the death of the individual owner, with all the belongings of that owner. And the instruction given by the Government through its employes has been of such a desultory and changeable character, because of changes in employes, that not much impression has been made upon most tribes.

But education is helping to better houses. The Pima girls who have been in school at Albuquerque and have seen the good adobe houses of that city, return to their homes upon the reservation to demand better houses for themselves than those in which the fathers live; the Pima boys also are not now satisfied with the old style of furniture, but want more and better. This means more work for both husband and wife, and will be an incentive to better living. The Moqui people are very filthy, and their mesa houses are a stench in the nostrils of Arizona; but the superintendent of the Government school has made the fathers realize that they must not expect the pupils who are learning different ways of living to come home and live in those little houses on the mesa. And it is thought by those acquainted with the reservation that every father with a child in school has commenced building a new house on the plain below the mesa. Evidently this superintendent believes that planting trees in Arizona, but giving them no future care, will not quickly grow a forest.

The girls should also be taught something concerning their relations to the other people of their tribe and neighborhood, to the church, to society, and to the world at large. Put yourself in their place and think what you would like to be taught, and then try to carry out your thoughts as best you can, is good advice for all those who labor among Indian children or their parents.

If there is one drawback to Indian civilization more difficult to overcome than any other, is to convince the Indian man that he ought not to put the hardest work upon the Indian woman. But even in this respect there has been progress since the days of which J. Fenimore Cooper wrote:

"Easy 'nough spile squaw," rejoined the Chippewa. "What she good for, don't make her work? Can't go on war-path, can't take scalp, can't shoot deer, can't hunt, can't kill warrior, so muss work. Dat what squaw good for."

But better times for the Indian woman have surely come. We saw a Yuma man carrying the baby while his wife walked by his side. We also saw a Yuma man carrying a load of wood upon his back, a sight seldom seen in former years; then the women carried all the wood from the forests across the bridge into Yuma City, and sold it for 15 or 20 cents a back-load. Among the Mojave Indians there seems to be more equality in regard to work, and the man is as often seen working as is the woman. During the summer we saw two Pueblo families going to a circus; the wives were riding the ponies and carrying the babies, while the men walked behind. One of the same young men was going to church the day before; they walked, but the husband carried the baby, and the parasol over the head of his wife.

The native Indian is naturally polite, but until touched by civilization it never occurred to him to be polite to his wife. There are many white natives living near reservations whom civilization has not yet struck hard enough to make of them good examples, and too often in the schools the examples are unintentionally of an inferior kind. The best opportunity which an Indian has of

seeing the methods of work employed by white men and women when they work together is at the boarding schools on or near reservations, but unfortunately for the example, in too many of these schools the women work much harder than the men. I have seen this illustrated very forcibly in many schools. Most of the women are hard workers, so are some of the men, but as a class the women are the hardest workers. This is true in schools where we are trying to teach the boys a greater respect for women and a greater readiness to do the hard jobs themselves. The Pueblo woman makes the adobes, the man lays up the walls of the house, and then the woman plasters them; is that any harder than for a woman employé to whitewash the dormitories? How long will it take to change this particular idea of the Indian's when he sees the women of a school painting walls and ceilings and cleaning stovepipes? How deep an impression have we made upon the minds of the girls in our efforts to teach them equality when they see such management in the schools?

#### DISCIPLINE.

Many of the good Government schools are like large families in their intercourse with each other; the pupils are treated like children in the family and are under no restraints save those of good breeding. During the short resting times before and after work hours the teachers and other employés are seen talking with the pupils in dignified helpful conversation, and such conversation aids the pupils more than most people realize—aids them in acquiring English, but better far, it aids in acquiring confidence and character.

But some schools are still too much governed, and the pupils have too little help in acquiring self-government. "Why do you mind your superintendent?" was asked of a boy of seventeen. "Mr. ——— stronger than I" was the reply, which gave all the information needed as to the government of that school. In a Sunday school at which I was present the teacher asked a class of little girls "To whom do you go when you have done wrong?" "Jesus," was the response. "What does he do?" "Tells God." "What does God do?" said the teacher, still desirous of impressing the lesson of forgiveness. "Spanks 'em," came promptly from a little girl who had been in school but eighteen months. Whether she, reasoning from the known to the unknown, was speaking from experience, I can not say; but this method of governing is still practiced in a few schools.

No head of a department should lay out more work than can be accomplished in the stated time, it so discourages children not to finish what was intended. The most successful schools finish up each day what was intended for that day. This is not only good for the work of the school, but it fosters a habit which will be of great help to the pupils in after life. Work seldom drags under that rule, and as seldom drives. While under supervision, each child should be held responsible for some part of the work, and made to feel that the well or ill doing of that part will make or mar the beauty of the whole.

#### HONESTY.

The first effect of civilization as usually presented to the Indian, especially the Indian woman, is degradation. And it often takes years to bring these women back to the same moral level at which civilization found them. After that the uplift is more rapid. The following instances prove that there is both inherent honesty and acquired honesty among the Indians. A day-school teacher wrote:

The men are all going away Monday to shear sheep. The shearing bands used to be followed up by professional gamblers, but I think if they follow this year they will find poor material for dupes among our young men.

This shows the influence of a day-school teacher. Another extract from a letter written by a day-school teacher shows the material of which many of these teachers are made:

If my strength holds out I hope to have a half-day's school during the summer vacation for these young people who can not attend the regular school. July and August are months when our Indians have little to do, and I can give them a half day five days in the week and still have some time left to rest.

Says a Western paper:

About eight months ago an Indian named O-we-o, of the Umatilla tribe, was killed by a railroad train. Sometime previous to his death he had borrowed \$20 from a bank in Pendleton, giving his note secured by the name of another Indian, She-wawa. O-we-o's wife skinned sheep found dead on the range during the winter and spring and hustled hard in other ways until she had scraped together about \$25. Recently she went to the bank and paid her husband's note, and also insisted on paying the interest, but the bank refused to accept the interest.

Perhaps some white women in such poverty might not have felt called upon to skin sheep to square up a husband's account.

#### RELAPSING OF STUDENTS.

Allow me to refer again to the letter written by Mr. Phillip Garrett and requote a portion. He says:

It is true to a much greater extent than we had hoped that young Indians returning to the reservation after a thorough education relapse into a barbarous mode of life. Especially is this so of the girls, etc.

I do not know what reservations were visited by this gentleman, or how many young people with a "thorough education" he found, but I know that Indian pupils, even the best returned students, who have a "thorough education" are very rare in the reservations over which we travel. Without giving a broad significance to the phrase, there are very few young Indians of my acquaintance to whom the phrase will apply. It is a mistake to suppose that three, five, or even ten years at an Indian boarding school gives one a thorough education. No white child receives such an education in that number of years; even a common English education; and the white child has the advantage of the language, of heredity, of stimulating impulses, of the help of parents, and of good libraries. Most of these helps are beyond the reach of the Indian child.

Among all the people who may be put under the head of thoroughly educated young Indians I know of none who have relapsed or in any way disgraced the name or disappointed the expectations of friends. One might mention Dr. Chas. Eastman, Dr. Montezuma, Rev. John Eastman, Henry J. Kendall, etc. Have these young men relapsed? "Especially is this true of the girls." Especially is this so of Dr. Susan La Flesche, Anna Dawson and Eva Henderson? And these young ladies have only a medical or normal training; not so very thoroughly educated. A dozen more might be mentioned.

#### SCHOOLS ON RESERVATIONS.

After making nearly two hundred visits to Indian schools, day schools, reservation boarding schools and training schools, and learning something by personal observation upon more than seventy-five Indian reservations, I desire in closing this report to speak of my very decided conviction regarding the value of educational work on the reservations. Allow me to do so by calling attention to the valuable utterances of Mr. T. W. Blackburn, before the Mohonk conference in 1890, which fully express my opinions. Speaking of day schools, he says:

They are often the sole evidences of civilization in their localities, and the nearest white person other than the teacher is 15, 25, 50, or perhaps 100 miles distant. The environment is not encouraging and the progress of the pupils slow; but the camp school is invaluable as a civilizing force in the Indian country. Agent McLaughlin, of Standing Rock Agency, says the day or camp school has a marked influence for good upon the old people as well as the young, and that a drive among the tepees or huts will reveal its presence. A cloth spread over a board or box for a table, a wash basin outside the door, the suggestion of an apron, a white handkerchief, or perhaps a picture cut from a pictorial paper on the wall, are small things in themselves, but these seen in an Indian settlement speak volumes of praise for the faithful day school teacher. The day schools are despised by casual visitors. Official inspectors condemn them as worthless; but the most intelligent agents favor them for their influence upon the adults, for their usefulness in breaking the way for attendance at the boarding schools, and because at many of them conscientious, earnest and competent teachers have achieved really remarkable results.

The reservation boarding schools are the genuine leaven which will leaven the whole lump of barbarism. They are the common schools of the Indian country, bearing the same relations to the training schools that primary grades sustain to the grammar and high schools of our cities. They are the inspiration of the child for something better, and lie at the very foundation of the general plan of elevating the race by educating its children. They perform their work faithfully, and the best results to the whole body of Indians will be just as certainly achieved, through these home schools on the reservations, as the intelligence of a white community is increased by its common schools rather than its colleges and high schools. It is my firm personal conviction, with all respect to those who think otherwise, that the salvation of the Indian is in the reservation boarding school, where the great majority must be trained, if trained at all. These reservation schools are distant from public view. The teachers have none of the stimulus of popular applause, none of the special advantages incident to an environment of sympathetic civilization, yet theirs is far the most responsible duty, and they merit your active, effective, philanthropic cooperation.

Respectfully submitted,

MERIAL A. DORCHESTER,  
*Special Agent Indian School Service.*

The COMMISSIONER OF INDIAN AFFAIRS.

## THE CARE OF INDIAN SCHOOLS.

The labor, anxiety, and responsibility involved in the establishment and carrying on of boarding schools for Indians is very great, perplexing, and wearing. None but those intimately acquainted with the facts involved can have any true appreciation of the burden. I have thought that it would be well to set forth some of these in order that those engaged in the work may have fuller sympathy and support, and that their labors may be more completely recognized.

### ADMINISTRATION OF INDIAN SCHOOLS.

The position of superintendent of an Indian boarding school is no sinecure. The superintendent needs to be a man of much more than ordinary ability, since his position calls for business ability, intelligence, integrity, industry, patience, and other high qualities of manhood. In the first place if it is a bonded school, of which there are now about twenty-five, the superintendent is required to give bonds for the faithful performance of his duties and is held responsible for its financial administration.

In some instances, the expenditures for the school during the year approximate a hundred thousand dollars. All that passes through the hands of the superintendent must be accounted for by him with great particularity. He can make no expenditures whatever without the authority of the Indian Office, and must render a strict account, accompanied with proper vouchers, for every dollar that he disburses. In making his recommendations for expenditures of the amount of money available for the maintenance of the school during the year, he must take into consideration the necessities of the school in all its parts, and so distribute his funds that no interest shall suffer. If new buildings are required, he must determine their number, character and cost. He is expected to see to necessary repairs of all kinds. He must also anticipate all the wants of the school in the matter of clothing, subsistence, books, apparatus, stock, and all needed tools of every character, whether for farming or for the various branches of industrial work.

Where, as is often the case, the appropriation for the school is meagre, it requires a great deal of planning in order to make the wisest distribution of the money available. Congress conditions the outlay for each school for current expenses upon the average attendance, which necessitates on the part of the superintendent foresight and vigilance in order that his expenditures may not exceed the per capita allowance. The requirements of the Indian Office in the settlement of accounts are so rigid, and the regulations concerning money so exacting, that the financial care devolving upon a superintendent is very great and oftentimes very trying.

In the next place, the superintendent is required to organize his school. The success of the institution depends very largely upon the perfection of its organization. He must decide as to the number and kind of industries that will be carried on; as to the various grades into which the pupils can be classified; must select for the head of each department of work or instruction a competent employé; adjust their duties to each other so as to avoid friction; supervise the matter of details of pupils for industrial work; so arrange study and labor that there will be no conflict, and must make such an assignment of duties and of employés as will equalize their burdens and secure the best possible result.

All friction can not by any possibility be avoided, and under any circumstances the labor must be heavy and often excessive. The friction can, however, be minimized and the tedium of labor reduced by a satisfactory organization. If the superintendent be wanting in system, lacking in knowledge of human nature, deficient in firmness, or defective in good manners, it is very easy for the machinery of his school to get out of gear and to run very unsatisfactorily. If, on the other hand, he is skillful as an organizer and has tact as well as good judgment in his administration he may secure the largest amount of work with the least amount of friction.

In the next place, the responsibility of daily administration devolves upon him. While each of his subordinates is supposed to have specific duties and to be responsible for his own department and the daily oversight of the pupils under his special care, the administration as a whole devolves upon the superintendent, and final appeal in all cases of dispute, misunderstanding, or uncertainty is to him. So that he must be always ready to answer questions, give directions, enforce rules, and interpret and modify regulations, so as to keep matters running efficiently and smoothly.

It is not always easy to bring together a body of men and women in the capacity of employes of an Indian school, coming as they do from different parts of the country, each with his own idiosyncrasies, and lead them to unite harmoniously in the performance of the onerous and trying duties of their positions. The isolation of an Indian school, separated, as it ordinarily is, from close contact with civilized life and confining its employes largely to the society of each other and limiting the range of their experience to the ordinary routine of school life, together with the almost total lack of opportunities for suitable recreation and diversion, has a tendency to create unrest, to foster gossip, and to breed jealousy.

The superintendent is required to supervise the matter of instruction. He must direct as to the formation of classes, the grading of pupils, their promotion from one class to another, and from a lower to a higher school. It has only been of late years that special efforts have been made in the direction of systematizing the work of instruction in the schoolrooms, and it has been found more than ordinarily difficult to secure system and satisfactory classification. The superintendent must also give direction regarding the industrial work in all its branches.

In some of the institutions like that at Genoa or at Albuquerque, the industries are many and diverse, including farming, gardening, dairying, harness making, shoemaking, broom making, etc., for the boys, and housekeeping, sewing, laundering, etc., for the girls. The superintendent is expected to have a personal acquaintance with each of these branches of industry; see to it that a competent instructor is in charge of each department; that his work is done efficiently, promptly, economically, and intelligently. He must, if possible, so manage the industrial work that it shall not only be advantageous to the pupils as a means of instruction, but also reasonably profitable to the Government in contributing, in part at least, to the support of the institution under his charge.

Upon the superintendent devolves the chief burden of the work of recruiting pupils for his school. He needs to keep in mind the number of pupils that he can accommodate, anticipate vacancies, be prepared to send home at the proper time those who ought to go home, and be on the alert as to places from which new pupils can be obtained to keep good his decreasing numbers. This involves of necessity much work, care, responsibility, and oftentimes anxiety. The schools are so widely scattered and the difficulties of procuring pupils are so many, that unless the superintendent gives to these his constant forethought, his school is in danger of becoming very rapidly depopulated.

Maintaining proper discipline among Indian pupils is a very important matter. Accustomed as they are to the freedom of the camp, they sometimes submit themselves reluctantly to the restrictions of the school. A wise superintendent will, if possible, provide games, amusements, and occupations so varied and interesting that the pupils will not feel too keenly the restrictions of school life nor long too eagerly to return to their homes. The economy of the Government as to providing gymnasiums, play rooms, recreation grounds, and other facilities absolutely required to render the school life attractive for the pupils, makes this part of the superintendent's work oftentimes extremely embarrassing.

In many instances the provision made by the Government is so meager that nothing but the most exhaustless ingenuity on the part of the superintendent can make amends for the deficiency. His school can not be made a prison, but should be made a place of intense interest to his pupils, attractive rather than repellant, holding the pupils that it gains and drawing others by its own inherent attractions.

The superintendent is expected not only to maintain ordinary discipline and secure the advancement of the pupils intellectually and industrially, but he is called upon to provide for their moral training. He must, through the Sunday school, public talks, private admonition, and all the various ways in which a public sentiment is created, seek to put around the school such an atmosphere of truth, candor, devotion to duty, gentleness, manliness, that every pupil that enters within its precincts is moved to strive to live a pure and noble life. Sometimes the most able and conscientious superintendent finds his best efforts

neutralized by influences which he can not control. The presence of a few determined, vicious spirits among the pupils, the subtle influence of immoral or indifferent employes, or other forces, sometimes hidden, sometimes seen, work against him so strongly as to be very discouraging.

One of the sorest trials and gravest difficulties that present themselves to him is that of sickness among the pupils. Like all others, Indian children are liable to common complaints of childhood, which sometimes become epidemic among them; and in addition they seem especially liable to diseases of the eye and other ailments which oftentimes, by their extent and virulence, threaten the very existence of the school. There have been some very sad experiences during the present administration growing out of epidemics of scarlet fever, sore eyes, and diphtheria in the Indian schools.

It is probable that, with the exception of eye troubles, the amount of sickness in Indian schools is no greater than in other boarding schools; but owing to the isolation of the school and to the fact that the entire burden of the care of the sick rests upon those immediately connected with it, and that additional help can not readily be obtained when needed, illness in the school becomes a very serious matter. It should be added that in very many of the Indian schools there is either an entire lack of hospital accommodations, or, at best, most inadequate provision for taking care of the sick.

And then again, the school superintendent must see to it that the school is properly adjusted to the community that surrounds it; defend it from unjust criticisms; create for it oftentimes a proper respect in the minds of the community; push its demands for recognition as an institution of learning, and vindicate the claims of his pupils to respect as human beings capable of culture; and, in general, must stand as the head and representative, the friend and protector, the foster-father of a large family of helpless children that look to him for protection, guardianship, defense, instruction, leadership, and example.

There is practically little cessation in the superintendent's labors. The school is in operation from year to year and oftentimes without vacation. The superintendent's duties do not terminate with Saturday night, but are continuous every day in the week. They begin early in the morning, continue oftentimes late into the night, and he is liable to sudden and extraordinary calls upon his time. There is absolutely no release from the sense of responsibility which presses upon him like an atmosphere throughout his term of service.

Where the "outing system" is in operation, as at Carlisle, Pa., the difficulties attaching to the administration of the school are very largely increased.

In view of the nature of the work of a superintendent it is not surprising that some of them find it too burdensome to bear. The public knows how sad has been the breaking down of one of the great superintendents in this country, Gen. Armstrong, whose strong physical powers have yielded to the incessant and relentless exactions of his office. Other superintendents are finding their work no less onerous, and with difficulty are able to resist the strain upon their physical and mental endurance.

No man should be put into such a position who has not had such experience and qualifications as fit him for its duties and responsibilities. Those that are in the service who have shown ability should be kept there. These men, because of their self-denying labors, are entitled to ample compensation, to the strong support of the Government, to the sympathy of the public, to the especial recognition of the community in the midst of which their work is done, to the coöperation of their subordinates for the sake of the common welfare, and to the lasting gratitude of the pupils for whom they do so much.

#### RECRUITING PUPILS FOR INDIAN SCHOOLS.

The records of the Indian Office show that during the past three years the attendance at Indian schools was increased by 4,000 pupils, an increase of more than 25 per cent.

This simple statement conveys to the ordinary reader little idea of the immense labor involved in securing the result. Recruiting pupils for Indian schools is beset with innumerable difficulties. The obstacles are not only numerous and formidable but, in some cases, are absolutely insurmountable. An enumeration of some of them will be of interest to all who desire to be informed in regard to the progress and success of the great educational movement among the Indians.

One of the most serious obstacles encountered is the ignorance of the Indian parents. Strangely enough, the great mass of the Indians, although living for

all these years in more or less close contact with us, are almost entirely ignorant of our language. They still maintain the use of their own tongues, and comparatively few are found among them able to speak the English language with fluency or to understand it intelligently when they hear it. Indeed, it is sometimes difficult to find interpreters who are competent to explain to the Indians the meaning of the agents and other Government officials who desire to communicate with them, and who are also able to express, in intelligible English, the thoughts and desires which the Indians wish to communicate to the Great Father.

I have been most painfully impressed with this wide gulf separating these people from ourselves, when I have met delegations in the Office at Washington or when I have stood in the presence of assembled councils on various reservations. This ignorance of the English language on the part of the Indians makes access to them exceedingly hard, and when agents and others go among them to secure their children for the schools, they are met at once by the great difficulty of making clear to them the precise purpose of asking for their children.

Moreover, the great mass of the adult Indians have never themselves had the opportunity of attending school, and consequently have no conception of what school life signifies, and can have no intelligent appreciation of the immense advantages offered to their children by the Government in the institutions of learning which it has established for their benefit.

Not only so, but the ultraconservatism of the Indians, which leads them to cling to their language, their manners, and their customs, stands as a great barrier to hinder them from putting their children into schools where they will learn a foreign language, imbibe foreign ideas, become used to foreign manners and customs, and be thus far alienated from their parents and divorced from the life of which they form a part. It requires a very high order of intelligence on the part of the parents of any race to lead them to be willing to put their children under influences which will of necessity separate them from their parents and beget in their minds a desire for a condition of things wholly different from that which surrounds them in their homes.

There is, too, in the minds of the Indians, generally, though not universally, not only a strong prepossession in favor of their own language, habits of life, and religious ideas, but also, unfortunately, a prejudice varying from mere suspicion and dislike up through all the grades to animosity and furious hatred against the white race and its characteristics. Many Indians hate the very name "white man," and the severest taunt that can be thrown by one Indian at another is to charge him with being a white man, or desiring to become such. They cherish the recollection of all that they have suffered in the past by the advance of our civilization, rehearse again and again their version of broken treaties and invasion of their rights, and recount for a thousand times the story of war and cruelties practiced upon them by the whites, and their own heroic resistance. So that there has grown up, from generation to generation, this wall of separation between them and us. When they are approached on behalf of the Government with requests to put their children in school, they take refuge at once behind this wall and oftentimes refuse absolutely to be dislodged from it.

In many cases they seem to look upon the effort on the part of the Government to put their children into school as covering a hostile purpose. They regard it as an unfriendly effort to take from them their children—an invasion of their rights which is to be resisted at all hazards. They think that there must be some ultimate purpose of evil concealed in the effort, and that their duty to themselves and their offspring requires them to thwart it if possible.

It is very common among them to hear expressions which indicate with great clearness that they regard the surrender of their children to the white man as a special favor to the Government, and one which, if acceded to at all, should only be for the sake of corresponding gain, so that it is not unusual for them to say that they will not allow their children to go unless they are paid for it. They regard it as a great sacrifice on their part, which has in itself no compensation and which should be made only in exchange for some equivalent to be rendered by the United States.

A very potent influence which still exists in many parts of the Indian country is that exerted by the so-called "medicine men." These people, grossly ignorant both of the structure of the human body and utterly unacquainted with any except the crudest and most elementary knowledge of disease, knowing nothing whatever of science as applied to medicine and oftentimes having no knowledge of even the most ordinary hygienic laws, and using in their practice only grotesque ceremonies and ludicrous remedies, nevertheless exercise a great influence

over their deluded patients and manage to secure from them large pay for very little service. They naturally dread the inroads of education, as it is always followed, of necessity, by a lessening of their influence and a cutting off of their resources.

Then, too, the Indians are very superstitious in regard to death. The custom obtains very widely among them of destroying even the house in which death occurs as well as all that the house contains. When, therefore, a child has died in school, there at once arises in their minds a strong prejudice against the school building and a superstitious dread of sending any more children to the place where death occurred. Ignoring the fact that a much larger proportion of children die at home than at school they insist, with strange lack of logic, that the school is responsible for the deaths which occur there.

The affection which Indian parents have for their children is strong, and leads them naturally to desire to keep them at home unless it can be made evident that it is for their decided advantage to have them taken away. In most cases this leads them to protest against the effort to take their children off to school, and if necessary to resist it by force.

To this it should be added that the minds of multitudes of Indians have been poisoned against the public schools by statements that they are hostile to their religious faith; that they are hot-beds of corruption; that immoral practices are common; that their children are mistreated; that they will return to them deproved; and that if they die in the Government schools while away from home their souls will go to perdition.

It is also true that false stories circulate among the Indians, frequently emanating from those who have been at school and have run away, regarding deprivations, suffering, and cruelties alleged to be practiced upon pupils by the school authorities.

When, therefore, school supervisors and others delegated by the Indian Office to gather up children for Indian schools go among them they are met at once by these various objections and protests.

Another more serious matter which is encountered is the condition of the health of Indian children. It is not generally known to the public, but the fact is painfully patent to the Indian Office that there is among Indian children a vast amount of inherited disease, and in some tribes healthy children are apparently the exception rather than the rule. Owing to the prejudice above referred to of the Indians against schools on account of sickness and death within them, it has been thought desirable to exclude those who are manifestly unfit physically for the strain of school life. Consequently, a rigid medical examination is insisted upon before the children are received as pupils. This reveals the existence of disease and physical weakness to such an extent as to materially decrease the percentage of children of suitable age who have the necessary physical qualifications for enrollment in school.

Another difficulty is the early marriages which are common among Indians. Girls especially are frequently allowed to marry at 14 years of age or even younger, so that it is exceedingly difficult to procure girls of this age or to keep them in school beyond this period when they have been admitted at an earlier age. One of the most beneficial results of Indian education as at present carried on is the rescuing of young girls from early marriages and the retaining of them in school until they have reached a suitable age and until both their physical condition and their mental training has been carried far enough to fit them in some degree for the burdens of married life.

In many cases Indian children of very tender years are required to work, and their services in the present state of life among Indians are absolutely necessary to keep the older people from suffering. I found, for instance, among the Navajoes that the sheep are often guarded by little boys and girls. I saw one day a boy certainly not over 6 years of age who was being trained by his father to care for their sheep, and I saw on another occasion a large flock under the care of little girls that apparently were not over 12 years old. In many other cases I came into personal contact with this state of things, in which little children were required to work for the support of the family. Parents, especially those who are old or infirm or unwilling themselves to work, are very loath to allow their children to leave home to go to school and thus be deprived of their services.

When we add to the difficulties that have been mentioned the fact that Indians are loath to have their children subjected to the ordinary restraints of school life, such as requiring them to bathe and take proper care of their persons, and to devote themselves regularly to stated employments, and when they protest

against the cutting of their hair as an infringement of their rights and an indignity imposed upon them. the difficulties of the case become greater. I witnessed down in Arizona. at Kearn's Cañon, the reception of a group of Moqui boys, brought in by Chief Lololomi. The boys had beautiful, glossy, black, long, straight hair, but unfortunately it did not bear close examination, and when they had submitted their hair to the scissors and their locks were thrown into the fire there was, in the language of one present, a great destruction of the innocents. The superintendent of the boarding school at Fort Yuma told me that she found it practically impossible to keep the older boys in school, because she insisted, for good and sufficient reasons, on cutting their hair. The same difficulty has been met elsewhere.

It should be borne in mind also that in many cases the Indians live on immense reservations like the Navajo, covering 12,000 square miles, or on others which, though not so extensive, are still very great. Transportation is difficult. Supervisors are sometimes obliged to go on horseback or in wagons, traveling many hundreds of miles, in quest of children. Oftentimes they are met with the statement that there are no children, that they are all dead, or that they are not at home. It is quite common for children when they see a white man approaching to make for the brush and hide themselves like quails, as I witnessed on the Fort Hall Reservation, or to be concealed by their parents under blankets or in out-of-the-way places, where they lie until after the white visitor has disappeared.

These facts are given to illustrate the extreme difficulty of recruiting pupils for the Indian schools. Others might be mentioned, but these are sufficient to show that nothing but the most systematic, persistent work on the part of the Indian Office, the most faithful carrying out of orders on the part of agents, and the most enthusiastic efforts on the part of school superintendents and others charged with the responsibility will succeed in gathering these little ones into the schools so amply and beneficently provided for them.

Nevertheless, it should be recognized that many Indians are eager for the educational advantages afforded their children and are even demanding that schools should be provided for their benefit; and it is worthy of being repeated that, notwithstanding all the difficulties in the way, rapid progress is being made in the matter of filling the schools with pupils. Especially is this the case among those tribes which have longest enjoyed educational advantages. For instance, it is a comparatively easy matter to secure pupils from the Oneidas, in Wisconsin, or from the New York Indians.

One very gratifying fact is that usually students returned from schools to their reservations throw the weight of their influence in favor of education, and one of the pleasant experiences of superintendents and teachers is the welcoming into school of relatives or friends of those who have formerly been pupils. In fact, if educational work for the Indians can be prosecuted for the next few years as it has been in the last few the great mass of Indian children will be in school.

#### INDIAN SCHOOL DISCIPLINE.

There are practical difficulties connected with the management of Indian boarding schools which those unacquainted with them little understand, and it is impossible to estimate correctly the work of the schools without a knowledge of these difficulties. One of them is connected with the retention and discipline of the pupils.

There are now in active operation 14 Government industrial schools in Pennsylvania, Oregon, Nebraska, Kansas, and other States situated at a considerable distance from the reservations. There are also a considerable number of boarding schools, known as contract schools, such as those at Hampton, Va.; Philadelphia, Pa.; Wabash and Rensselaer, Ind.; and others in Minnesota, New Mexico, and elsewhere. These contract schools, both Protestant and Catholic, are, so far as the present statement is concerned, on precisely the same footing as the Government schools and are called upon to contend with exactly the same difficulty.

It seems desirable that Indian children taken from their homes to these distant institutions should remain there for a series of years without returning to their parents. In the first place, the expense involved in taking them from their homes to the schools and returning them again, is a large item. Congress appropriates for their transportation \$40,000 a year, and this is substantially required in keeping the schools filled, even where those received remain for a con-

tinued residence of several years. If the pupils were allowed to return to their homes at public expense every year, the cost of transportation would be very largely increased.

The Government permits this in cases of emergency, when, for instance, their services are imperatively needed in the care of aged or sick parents or dependent relatives, or when their own health would clearly be promoted by a vacation; but it is the policy of the Government, ordinarily, to retain the pupils for periods varying from three to five years, at the end of which time they are sent home at public expense. If they desire to return to the schools for further course of training the expense of transportation is again met by the Government. The policy of retention is the same for all; whether a Government school, as at Carlisle; a contract school, as at Hampton; a Catholic school, as at Rensselaer, or a Protestant school, as at Wabash, there is no distinction made; all are treated alike.

Another reason for retaining the pupils in these institutions for a considerable length of time is that the influences of the school, which are necessarily cumulative, may have their full force in breaking up the bad habits acquired on the reservation, and in establishing correct habits of regularity, industry, thrift, etc., in their stead. It is no easy matter to change the habits of any class of people after they have become at all fixed, and it is particularly difficult in the case of those who, like the Indians, have been accustomed to ways so entirely foreign to those which it is desirable for them to adopt as they pass from barbarism to civilization. Unless there were some settled method of dealing with this matter there would be endless confusion, and the schools would be in many cases largely depopulated.

If the pupils were allowed to go home whenever they desired, or whenever their parents insisted that they should do so, the work of the schools would be necessarily interrupted, their influence greatly lessened, and the per capita expense of maintenance greatly increased. It should be borne in mind, in this connection, that Congress limits in every case the per capita annual expense of these schools; and the amount of money allowed, either for a Government or a contract school, is based upon the average attendance. If this is not in some way maintained, the expense must be correspondingly reduced; and, in many cases, this can only be done by the dismissal of necessary employes, or the limitation of needed expenditures, which very seriously interferes with the efficiency of the schools, if it does not actually cripple them.

In pursuing this policy the Government meets at once with very serious and perplexing difficulties. In the first place, the parents very naturally object to this prolonged separation from their children. They have, fortunately, a regard for their offspring, desire their companionship, and feel reluctant to submit to so long a separation as seems desirable when they are placed in boarding schools so far removed from the reservations.

The pupils also, especially those boys and girls who are taken from their homes, as many of them are, after reaching the age of young manhood or womanhood, feel very keenly the change from the freedom of the camp to the necessary restrictions of the school. It is well known that Indian parents generally exercise very little control over their children and allow them the utmost freedom. They usually have no regular hours for retiring or for meals, no stated occupation, and are permitted to roam at will during the day, amusing themselves in such ways as they see fit. Under this sort of regime they acquire not only a taste for liberty, and a love for idleness, but become to a certain extent lawless.

When they are subjected to the restrictions of a boarding school, are required to retire and rise at fixed hours, to take their meals at stated times, to prepare and recite their lessons according to a programme, and to engage daily in manual labor, performing, as a matter of education systematically and continuously, the light tasks set for them, they resent, inwardly at least, this enforcement of rules and curtailment of liberty, and oftentimes become quite discontented and long for the return to their parents and their old-time freedom. They often complain by letter to their parents and friends, asking earnestly to be allowed to leave the school and return to the camp.

Sometimes, and very frequently indeed, in order to make a strong case they exaggerate the restrictions and quite frequently invent stories of punishment, cruelty, hunger, or other hardships, which work upon the sympathies of their parents and friends and lead them to join in demanding their return. It is not infrequently the case, too, that the parents plead poverty, sickness, helplessness on their part, and urge upon the authorities the return of their children, in order that they may be not only a comfort to them, but a help in the performance of the necessary duties of life.

Another difficulty pertaining to the discipline of the schools arises from the fact just stated, that at home the Indian children are not accustomed to labor, and the idea is instilled into them, particularly the boys, that it is dishonorable to work, that whatever labor is performed should be performed by the women, and that it is the business of the boys to hunt and fish and to fight, if necessary, and not to work. They are to be warriors, lords; the women are to be the drudges and the slaves. This practical philosophy of life is not confined to the Indian men, but is accepted in good part by the women themselves, so much so that they are the most merciless in ridiculing the men when found at work, calling them "squaws" and applying other opprobrious epithets; and thus by ridicule, the most dreaded of all things by an Indian, the women succeed in perpetuating their own bondage, and in keeping the men in idleness.

The whole underlying thought of the industrial school, however, is that intelligent, systematic labor by both men and women lies at the basis of civilization, and that if Indians are ever to be lifted on a higher plane it must be through the training of boys and girls alike to the performance of whatever manual labor may be essential for their welfare. They must be led to self-help and instructed in the various trades and household duties, so that they can compete with white men and women in all the varied industries connected with civilized life. And every pupil in these boarding schools is expected to perform some stated task each day, with the view of acquiring habits of continued industry. The pupils find this so different from their wild life as to be irksome and complain of it to the parents, who naturally sympathize with them and sometimes object strenuously to such requirements. They say that they send their boys to school to learn books and not to learn to work: that they do not care to have them labor and that if they do so they must work at home for them and not at school for the Government.

Another perplexing fact is that many youth bring with them to the boarding schools habits of impurity or of vice, and are oftentimes guilty of acts for which white boys and girls are sent to reform schools. The influence of such characters is necessarily evil and destructive of discipline, but how to deal with them is not easy of determination. Sometimes, when plainly incorrigible, they are sent back to the reservation, which is always to be deplored if anything can be done to reform them. Sometimes they are subjected to punishment with the view of correcting their habits and reforming their characters.

In many instances the more hardened, those who are naturally brutish and whose training has developed their animal and left their higher nature undeveloped, do not respond to moral appeals, are indifferent to the milder forms of punishment, and can be reached apparently in no other way than by corporal punishment, confinement, deprivation of privileges, or restriction of diet. The regulations of the Indian Office and the uniform practice of school superintendents, so far as is known, is in such cases to exhaust moral measures and milder punishments and to resort to the severer only when absolutely necessary for the maintenance of the discipline of the school, the proper punishment of wrongdoing, and the reformation of the guilty.

The means necessary to maintain proper discipline and to promote the physical, intellectual, and moral well-being of the pupils in these boarding schools are such as are necessitated by the character of the pupils, the nature of their surroundings, and the end sought; namely, their complete reformation if vicious, their training to civilized habits, and the development of sturdy moral characters.

It should be said that, year by year, the work of school discipline becomes easier and more satisfactory, and the results attained more gratifying. This is brought about by a process of selection of the best material from the reservation schools for promotion and transfer to the nonreservation schools, by the elimination of the incorrigible and depraved, and by the growing appreciation of educational privileges, both on the part of the pupils and their parents, as well as by the increased wisdom, tact, and skill in management which comes from an increasing knowledge of Indian character and experience in dealing with it. At best, the effort to civilize and elevate a savage or even semibarbarous people through the means of schools is slow, tedious, vexatious, and perplexing; and it needs to be carried forward with great patience, ceaseless vigilance, thorough intelligence and unvarying firmness, as well as with the utmost sympathy and interest.

Notwithstanding these and other hindrances the work of Indian education moves grandly forward. More than 20,000 children are now in school, and an increasing number, year by year, finish their training and take their places in life with a fair preparation for its duties. There is being developed among

them some fine specimens of womanhood and manhood, together with a growing aspiration for better things. In some instances these are manifestations of aptitude for higher studies and a desire for professional pursuits, and everywhere there is an increased sense of self-respect and of independence. Some of those who have been most difficult to deal with in the earlier stages of their training have shown capacity and will power, and have developed into strong and noble characters.

The prejudice against education on the part of their parents is passing away; there is growing up an increased appreciation of the immense value of the education provided, and a more ready acquiescence in the discipline to which they are subjected in the course of their preparation for usefulness and citizenship. Those engaged in this important work are entitled to public sympathy and encouragement.

T. J. MORGAN,  
*Commissioner.*

WASHINGTON, D. C., *January, 1893.*

## REPORTS OF SUPERVISORS OF EDUCATION.

### REPORT OF SUPERVISOR OF EDUCATION, FIRST DISTRICT.

*August 31, 1892.*

SIR: I have the honor to submit the following report in accordance with your recent letter of instructions, to include "all matters that have come under my observation as Supervisor of Indian Education for the first district, with a résumé of the educational outlook therein."

I may state here, for the benefit of the uninformed, that the first district comprises Michigan, Minnesota, North Dakota (excepting Standing Rock), Sisseton in South Dakota, and Iowa.

I will try to embrace herein all the information requested, so far as I can do so and keep this report within proper limits, including, as far as possible, the condition and needs of each school as to school room and industrial work, buildings, etc. I fear I must do this generally, for to present the facts in the case of each school at length would make my report too long.

The annual report of the Commissioner of Indian Affairs gives the number of Indians on each reservation, with the number and location of the Government schools; and the reports of the several superintendents give the condition and character of the buildings, the attendance, studies pursued, various kinds of labor performed, progress made, deportment of pupils, and all other matters pertaining to school work. In the Commissioner's report will also be found the number, location, and general features of the many excellent denominational Indian schools scattered through not alone this district, but through the whole field of Indian life, and devoted to the education and Christianization of Indian youth. In all of these schools are to be found competent and faithful teachers, conscientious personal care of the children, and the true missionary spirit that has always animated those engaged in this beneficent undertaking.

I believe the test of the real absorption of the Indian into civilization is not so much his book learning as his having abandoned his pagan customs, quit dancing, cut his hair, dressed white fashion, and gone to work. Without both the ability and the will to take care of himself by his own labor, I would not give much for his claim to being a Christian. But I desire (myself not a professing Christian) to bear this testimony: Unless the Christianization of the Indian is coupled with and made a part of his education, the harvest will be only Dead Sea apples, fair sometimes upon the surface, the bitterness of ashes inside.

Concerning the teaching, it is good in all the schools. The teachers are efficient and painstaking, and compare well with those who occupy similar positions in white schools. I have sometimes heard it said that in some of the contract schools (and, to speak plainly, this shot is usually aimed at the Catholic schools) "that in some of the contract schools about all the children learn is the catechism and a little music and fancy work;" but the charge is false, and is the offspring of ignorance and prejudice. They are as good spellers, as good readers, as good writers, as well taught in grammar, geography, arithmetic, history, and physiology; as well drilled in music and calisthenics, as polite in manners, as conversant with English, and as graceful in recitation and declamation as can be found elsewhere. What more can be required?

Taking into consideration the many hindrances that exist, the teaching of Indians, as it now is, is entitled to words of encouragement and praise. It is far from presenting a gloomy or a disheartening prospect. Still, although it has reached the dignity of a system, it is, for many reasons, a very defective one, visible quite as plainly and as painfully to those at work within and for the system as to those who stand outside and criticize it so severely. I wish hereafter in this report to state some two or more of these defects, and suggest what I believe to be the remedy.

I may say here concerning the "educational status" in this district that while

marked differences exist upon the different reservations the same general impediments also exist throughout. For instance, the Oneida people appear to value education as fully as do white people. They have constantly a large number away at school. They have six day schools, four of which are taught by Oneidas. They have also a beautifully situated and handsome boarding school in which they are deeply interested and which will be filled to overflowing as soon as opened. Not far away are about 700 Chippewas on Lake Flambeau Reservation. They are poor and ignorant. They have one day school with a good average attendance, but of the 30 who attend to-day 15 will be absent to-morrow and still another 15 will keep the average number good, and next day the same shifting process will be repeated, and so on through the week. The two teachers, Mrs. Sullivan and Miss Curran, are faithful and persevering in the face of many hindrances.

But presenting these two instances as contrasts I think the same general impediments exist throughout the district. One of the most serious, I may safely say the most serious, is this very evil of irregularity in attendance, increased and made worse by the apathy and often indeed the hostility of the adult Indian. His unwillingness to send his children to a far-away school I can in some measure understand, and I do not believe a law to compel him to do this could be enforced; but a law to compel him to send to the reservation schools could be enforced and beyond question ought to be enacted. To see a well-equipped reservation boarding school, with good accommodations for a hundred pupils, with perhaps less than half that number in attendance, and the whole force of employes engaged in a daily struggle for the school against the indifference and often the hostility of the Indian is to say the least unpleasant. Such, however, is the frequent situation.

I would cite as an instance of what exists generally (though not generally I think to so marked a degree) the two excellent schools at Sisseton, namely: the Government boarding school and the Presbyterian Mission school, established years ago and christened by the venerable missionary, Dr. Riggs, "Goodwill." They are both provided with excellent and ample buildings, and everything needed for personal comfort, fine water, high, healthy location, and just as good people as can be found anywhere, in or out of the Indian school service. Now, these Sisseton Indians are reputed to be "well advanced." In inventing all sorts of frivolous and false and malicious objections against these schools, and in defeating the object for which they were established, they are "advanced!" In other respects I have not found them so. The wonder is, that with such impediments, the schools—I speak of them now generally—are as good as they are. They would not be were not the employes (as a rule) most faithful and patient and persevering in the performance of their duties.

Irregularity of attendance, scanty attendance, insufficient attendance, call it how you will, is the chief evil; the lion in the path. There is but one way to overcome it, one way and no other, namely: by the enactment and enforcement of a compulsory law, limited in its operation to the reservation schools. I speak feelingly for I have seen quite enough to make me feel deeply on the subject. Its salutary effect would be felt in the great training schools equally as in the reservation schools, for regular attendance would soon so improve scholarship and "grade," that whole classes, fit for transfer (and not as now, unfit), could be told off to the far-away schools as easily as classes or parts of classes are now told off from our high schools to the university.

One word more in this connection. Indian children are, as a rule, tractable and amiable, and those who have them in charge usually become much attached to them; but they are not, as a rule, diligent in study. While some of them are, most of them are not, and for this, as indeed sometimes for other reasons, it becomes necessary to punish them. If the child is punished it is quite likely to run away, and its parents will ordinarily be the last persons in the world to bring it back. Often the superintendent is in doubt, which is better; to punish, with the certainty thereafter of an unpleasant and often an unsuccessful trip after a runaway, and a disagreeable encounter with an angry and insolent Indian; or, not to punish. The remedy for all this, the substitution of a full, steady, and regular attendance for the present scanty, gypsylike, vagabondish condition, is compulsion. Its enactment and enforcement will solve "a little bit" of the Indian problem: and the solution of "a little bit" of it is all any man should venture on, unless he is, or imagines himself to be, omniscient.

In estimating the qualities of Indian school children, one thing must be remembered; a large proportion, I think fully one-half, are practically white. They are perhaps as bright and capable as other white children of their age,

but that a "full-blood" is, no fair-minded person will for a moment insist. The Ida Warrens, the John Carls, the Chester Corneliuses, and the blue-eyed, brown-haired Belle Lamberts, Laura Wakefields, and Lily Clinches can not properly be classed as Indians at all, and should be counted for what they are.

The uncertainty of tenure is another serious impediment. The application of the civil-service rules to a few of the school places will perhaps better this condition; but the contentions that often occur over even a poorly paid place make such a position very uncomfortable for the holder. The member of Congress claims his prerogative clear through the pay roll, and even the United States Senator does not always disdain to interfere.

Bad feeling, too, sometimes exists between the Indian agent and the superintendent, originating oftener than otherwise in the interference of the agent in school matters that are properly none of his business. Experience shows that the agent can, and occasionally does make it unpleasant for the superintendent and for any of the employes who side with him. But, he says, "I am responsible on my bond for all the thousands of dollars worth of property used in this school, and I have a right to interfere." To a proper extent, yes, he has. The trouble is that he does not always confine his interference within the proper limit. For this evil, and it is a serious one, the remedy is to bond all the schools. Many are bonded now; those that are not ought to be, and then their management intrusted to the superintendents and supervisors of the several districts.

Given a finely equipped school with large comfortable buildings; with wells and windmills and cisterns; with plenty of land about it, though not of the best; with barns and stock; beautifully situated on a slightly eminence and embowered in tall shade trees; with a force of excellent employes and a not especially ill-disposed Indian community, and a captious, fault-finding agent; and here is its history. It has had four superintendents in eighteen months, and is now, as far as I know, waiting for its fifth. The last two, after a few months of unpleasant experience, were transferred to other schools. If fit for the places they now occupy (and I well know they are) they are equally so for the place they were transferred from. But the agent did not like them, and they had to go.

Fortunately it is not always thus. Sometimes the agent and the school people cooperate cordially. But it is not necessary to depend upon the accident of harmony between these officials. The remedy is ample and easily applied: it is, to bond the schools. If the agent is what he ought to be he will cooperate as kindly with a bonded as with a nonbonded superintendent; if he is not what he ought to be his power for mischief is at least curtailed.

Concerning the day schools. Some of them are doing good work; others not so good, and this mostly for reasons for which the teacher is not to blame. Amongst these are the long distance many of the children live from the school, the lack of decent clothes, bad roads, severe weather, sometimes the lack of a noonday meal, and more, and worse than all, the utter indifference or unwillingness of the Indian himself. Often the children come without breakfast and remain without dinner. They start at about 9 o'clock to walk to school and they get in at any time between 10 and 12, or, equally likely, do not get in at all. If the teacher punishes next day the room is nearly empty. All she can do, or rather all she dare do, is to coax. All these impediments and many more the Indian day-school teacher has to face.

The taking of a camp Indian into a boarding school usually involves its transmutation from a dirty, ragged, uncombed, vermin-infested child, into a clean, well washed and combed, well clothed and, oftener than not, a remarkably nice, sweet-faced little boy or girl; and when the change has been effected it can be maintained. But the day school-teacher can not do this. To be sure she can, and all good day school-teachers do, provide basins, soap, combs, towels, and plenty of water, and the children use them daily; but the night's lodging in the tepee or equally filthy cabin undoes the day's renovation, and it becomes after all something like Sisyphus and his stone. Still the teacher perseveres, and the labor is not all lost. I know it for I have seen it.

Concerning the educational outlook in this district, it is but the truth to say that it is encouraging. I believe the school service is steadily growing better. While the indifference and opposition of the adult Indian may be decreasing (as I know it is claimed) there is still enough of it to keep the attendance far below what it should be. What is needed, and what must in some way or other come, is an approximation at least to that steady, dependable, daily attendance that exists in white schools, instead of the haphazard, vagabondish habit that now exists upon the reservations. Without this no teacher, no number of teachers, no system can succeed.

The next best thing to success is to deserve it, and if the schools are not all successes the teachers, although always held accountable, are often but little to blame. I present this as the truth in my (late) district (and as my supervision of it has ended I certainly have no motive for overstating the case), that with few exceptions every Indian school therein is well conducted in all respects, so far as it can be with the means afforded; and that where anything is lacking it is not usually because of carelessness or inattention on the part of employes, and the "lack," whatever it may, would be supplied if the means therefor were furnished; and, furthermore, that as to the personnel of the employes, as to faithful and efficient teaching, as to care and kindness for the children, as to food, lodging, and raiment, as to cleanliness, as to proper supervision during recreation, as to care and attendance, food, medicine, and nursing in sickness, and as to the daily lesson of Christian character, by both precept and example, the schools will bear inspection, and they deserve the confidence and supporting sentiment of all good people.

I do not limit this tribute to the Government schools, but include in it all, both Catholic and Protestant. The "few exceptions" are confined to two or possibly three. Still, the "good ones" are not all equally good. Some are more capably managed than others, for, depend upon it, it requires capability to manage an Indian school; and, besides, some are liberally provided for in many ways, while others are niggardly supplied, and with many things that are merely plain, everyday necessities of life some are not supplied at all.

When I say they are all, or nearly all, "good," I do not wish to be understood as saying that any of them are good enough. They can, and I believe they will, all be made better, and still better than they now are. This will come about through more carefully considered appointments, through more thorough supervision, through much candid, face-to-face, and kindly criticism and profitable conference between supervisors and employes, and between employes themselves, and, finally, by an awakened understanding that the Indian school system requires both intelligent legislation and liberal treatment.

The reservation boarding schools in this district provide but little opportunity for properly learning the mechanical arts. Of "manual labor" there is commonly an abundance, to wit: household work for the girls and door-yard and barn work for the boys. There are a few exceptions, notably the Fort Totten school and the large agricultural school at Clontarf, Minn. There are a' so regularly and without fail each season at the White Earth school, under Mr. Hume's excellent management, 7 acres of the finest garden in the State worked entirely (not partially, but entirely) by the pupils under Mr. Hume's direction. It furnishes an abundant supply of all kinds of vegetables for the use of the school during the entire year.

I do not believe that the mechanical arts can be taught to advantage in the reservation schools, nor do I believe that they are taught to the best advantage at any of the schools. The candid truth appears to me to be that the best place for a youth, white, black, or red, to learn a trade is in a white community with a practical master mechanic. If the boy wants to learn a trade let him go into a "workshop" and learn it! Let him rise at 6, go to work at 7, work his ten hours instead of three or four; let him see with his own eyes and take part with his own hands in the daily busy income and outgo of the shop; let him be industrious and diligent to learn, and in four years he will have become a capable mechanic. Confine him for the same time to a (so called) "industrial pursuit" in a Government (so called) industrial school, and at the end of four years he will hardly have learned enough to earn a dollar a day. I am not insensible to the value of "trade schools," nor entirely ignorant of the important work they are accomplishing; but, as between the practical, wage-earning workshop of the town or village and the industrial department of the Indian training school, as at present conducted, I am sure I would not for one moment hesitate were the subject my own son.

It can easily be gathered from the tenor of this report that the writer is a believer, not only in Indian education, but that he regards as of the greatest importance (among others) four things connected with it, namely:

First. The proper place to educate the Indian is upon or near his home, unless indeed the more proper way is to arrange for his education so as to "remove him from Indian life to white civilization, never to return," a proposition that is both foolish and cruel.

Second. The facilities for teaching the mechanical arts should be either much increased or else entirely done away with. It is true that "the Indian makes a fairly good mechanic," but it is equally true that the dominant characteristics

of the race point to another line of employment more forcibly than to mechanics, to wit, to agriculture and stock-raising, to a pastoral life.

But lest I be misunderstood, I would say here, that I regard a judicious amount of manual labor as necessary to the welfare of the pupils in every Indian school. The work of the schoolroom is excellent: but this matter of labor needs readjustment; it needs overhauling; it needs to be so arranged that each boy and girl shall have every day a certain number of hours of manual labor, and it should be so performed, no matter what it be, whether emptying slops, washing dishes, sweeping halls, or setting a table neatly, or making beds and airing and sweetening a dormitory, or arranging articles of furniture, curtains, ornaments, pictures, flowers, etc., in a living room, as to confer a benefit on him or her who performs the labor. I need not say how this benefit is to come; thorough work is always a benefit; slipshod work is a harm. I do not for a moment doubt that "industrial training produces a bodily condition helpful to study and does more to tone up the morals of the school than any other influence except religious exercises." But all this seems so self-evident as to make it unnecessary to state it.

Third. The schools should all be bonded.

Fourth. The present miserable attendance should be (as it surely can be) remedied by a compulsory law.

All of which is respectfully submitted.

T. S. ANSLEY.

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERVISOR OF EDUCATION FOR SECOND DISTRICT.

BROOKINGS, S. DAK., *August 24, 1892.*

SIR: I have the honor to submit my annual report of school work from February to June 30, 1892.

The second supervisor district consists of six agencies of the Dakotas, Montana, Wyoming, and Nebraska; in all, fifteen agencies.

Of the eleven different tribes represented the Sioux are by far the most numerous. The Santee, Yankton, Lower Brulé, Crow Creek, Pine Ridge, Rosebud, Standing Rock, and the greater portion of the Fort Peck are Sioux. In Nebraska are the Winnebagos and Omahas, in Montana are the Assinaboines, Gros Ventres, Blackfeet, Flatheads, Crows, and Northern Cheyennes, and in Wyoming the Arapahoes and Shoshones.

Within the district are 85 schools, 2 of which are nonreservation schools, Genoa, Nebr., and Pierre, S. Dak.; 1 nonreservation contract school, St. Peter, Mont.; 15 Government boarding schools, 20 contract boarding schools, and 47 Government boarding schools; in all, 85.

These different tribes are widely scattered and differ among themselves in language, morals, habits, customs, and religion, as well as environment. All these different conditions materially affect their advancement in the march towards civilization. Three reservations I could not visit, Pine Ridge, Rosebud, and Cheyenne River.

Successful school work has been begun upon every reservation. Some of the schools have not been as successful as we hoped to have them; most of them have been very successful, while a few have attained grand successes. The schools are the great civilizers; where we find the best schools there we find the greatest advancement in civilization. Let a person go from Tongue River to Crow Reservation, and a marked difference can be seen, and yet the Crow Indians are considered low in the scale; but the schools on Crow Reservation are getting in their successful work, and the Crows are rising. Go from the Crow Reservation to the Flathead, or from Blackfeet to Standing Rock, or Santee, and the wonderful changes educational and religious work is accomplishing will be seen. The doubter will be convinced. But there is plenty of darkness and ignorance yet to combat even among the most successful. Great obstacles must yet be overcome before success can be wholly ours.

One of the greatest obstacles to overcome among some of the tribes is polygamy. Wherever that exists the Indian places a low estimate upon his wife and daughters. He will resist the efforts to place them in school and educate them. The practice of marrying young girls of 12, 13, or 14 years of age, often to men who already have wives, is still terribly prevalent among some tribes, and wherever that practice is prevalent we usually find the poorest schools. The strong hand of the law should be stretched to stay this evil.

Just as great care must be taken to gather in the girls and educate them as the boys. An educated Indian youth married to an ignorant camp girl is weighted down so that he can not possibly rise. The case can be illustrated by the progress of the Sioux. They are a high type of Indian, proud, brave, self-respecting, and rather progressive. It is worthy of note that those that were hostiles a few years ago are now among the most progressive among them. They are now the largest tribe in the United States, numbering nearly 26,000, or more than one-tenth of all the Indians in the United States.

The mothers and daughters of these Sioux are usually the rulers of the homes. The marriage relation is respected and the women are reputed virtuous. The only cases of polygamy among them now are old cases. The Sioux women are constantly rising in the social and domestic scale. I have visited the Sioux homes and found them neat, with wooden floors to their houses, with cook stoves, good beds, pictures upon the walls, and in some cases sewing machines of their own buying. This state of affairs has been brought about by the work of the schools and the missionaries. The girls have learned to cook, sew, laundry, and do housework at the school, and they have taught their mothers. They have married and carried their education into their homes. The girls of the Sioux are generally in school. What may be said of the Sioux may be said with equal truth of the Omahas and Flatheads. The Flatheads, though not so pugnacious, are more advanced in civilization. Polygamy is unknown among them.

A striking evidence of the progress the Indians are making is the constantly increasing number of them who are filling responsible places. They are becoming preachers, doctors, teachers, mechanics in all positions. Sixteen of the teachers in this district are either full or mixed blood Indians, two are agency physicians, many are preachers, and a large number are filling other positions, and in most all cases with credit.

The duties of the supervisor are outlined by the honorable Commissioner of Indian Affairs:

Each (supervisor) should be a trained school expert, charged with the duty of visiting, reporting upon, and advising with the teachers of all the schools within a definite area, and should have such relation to Indian schools as is generally sustained by county superintendents in the States. They should be required to devote their entire time to the work, should be subject to orders from the Commissioner of Indian Affairs, and be ready to proceed wherever necessary upon telegraphic instructions to any part of the field. Their services should be invaluable in determining building sites, selecting employes, investigating charges, establishing new schools, and in generally building up the educational work.

This outline has generally been followed. Assistance and advice have been freely given, and in some cases important changes in schoolroom work have been made.

The greatest defect found in many of the schools, especially the Government boarding schools, is the defective English and low voices of the pupils. In April a circular letter was issued by the supervisor outlining a course of language work for day and evening work. In some cases marked changes resulted. If English is deficient a school is apt to be deficient in other things. If good English is acquired, then other school studies come easily.

Most of the superintendents and teachers bring to the work enthusiasm and love of the work, but in some cases their efforts have been somewhat misdirected, and their aims have been too high. They sometimes have seemed to forget that the Indian child has everything to learn. But greater uniformity has been gained, and good results gained.

#### DAY SCHOOLS.

Of these I have seen only eleven, nine of which were doing good work, and could be called successful, and two that were failures. The scope of these schools is necessarily very limited. I am not prepared to discuss their merits as yet. It is certain that on some reservations they can be of little use for several years.

#### INDUSTRIES AT BOARDING SCHOOLS.

Most of the industries for the girls, whether in contract or Government schools, are the same, and an honest and successful effort has been made in every school to give the girls a thorough knowledge in all domestic pursuits. The girls in the schools take kindly to cooking and sewing, and readily learn all branches of housework. In many cases they become expert in butter-making and in taking care of poultry. When a girl has completed the reservation school course she is usually competent in domestic pursuits.

For the boys the industries must necessarily be varied to suit environment. The leading industry for Montana, Wyoming, and the Dakotas must necessarily be stock; in Nebraska agriculture and fruit-raising. In all cases a thorough knowledge of gardening should be acquired. The caring for cows is an industry that has to be cultivated. Poultry, too, is one of the most profitable industries that can be placed in possession of the Indians. This properly belongs to the girls. In some of the schools this has been carried on with great success.

#### MORALS.

More than one-half the reservation boarding schools are under the charge of some religious denomination. Of course in these schools special religious instruction is given and usually with excellent results. In nearly all the Government schools a Sabbath school and prayer meeting is sustained and moral instruction has never been neglected.

#### SIZE OF GOVERNMENT BOARDING SCHOOLS.

The Episcopal people seem to prefer small schools, about 50 pupils, arguing that the small school is more like a family. There is reason in their plan, but as the Government plan contemplates a great graded system, it seems to me that the larger school is better. And if a graded school is better than an ungraded, then the more grades the better. There is little danger of any Indian school on any reservation being too large. I would not advocate the establishing any new school of less size than 100.

#### RESERVATION SCHOOLS.

**Fort Peck.**—The Indians upon the reservation are mostly Sioux, with a portion of Assinaboines. They had, October, 1891, 200 pupils gathered into one school. In November a fire broke out and all the large buildings were burned to the ground. About 85 of these children were gathered into the old log buildings that formerly had been used for school. From the schoolroom work now found in this school, it must have been, under more favorable circumstances, in the first rank of schools. I found no language work in any school so good. Other schoolroom and industrial work is of a superior character. The fire was a real disaster to this people, for a large portion of the young people have gone back to camp and are drifting back to heathenism. When the new buildings are erected it will take time to bring it back to its old position.

Eight acres of garden, irrigated by pumping water from the Missouri River, is all the agricultural work they can carry on. If Poplar Creek could have an irrigating ditch a great part of this people could be provided with a portion of arable land. Until that time they must depend almost wholly upon the Government ration and stock-raising. That has not been neglected at the school.

**Fort Belknap.**—The Gros Ventres and Assinaboines compose this reservation. There are two boarding schools here. The St. Paul's Mission (Catholic contract), an old school with capacity of 160, and the new Government school built last year.

The St. Paul's is located 35 miles from the agency in a pleasant little nook in the Little Rocky Mountains. It is a very successful school, the language and arithmetic work being particularly meritorious. Rains seem to fall here sufficient to make a favorable showing on the farm. They have a good farm and large herds. Good instruction in both pursuits is given. The buildings are mostly log, but they are roomy and comfortable.

The new Government school has two fine brick structures for dormitories and schoolrooms, with a good outfitting of other buildings. They are capable of accommodating 100 pupils. Last year there were 59 boys and 29 girls. Polygamy is practiced on this reservation and the girls are hard to get. Fifteen more girls should be put into this school. The work of this school has necessarily been pioneer work. They have made a good start and will start off on the new year with bright prospects. They are now dependent upon the Milk River for their water. It is the worst stream in Montana for domestic purposes, alkaline at all times and sometimes stagnant and fetid. The water at Snake Butte would supply this want and would be sufficient to irrigate the gardens. As these people must depend upon stock growing, instruction will be shaped in that direction. This school could profitably be increased to 100 pupils.

**Blackfeet.**—The Blackfeet Indians are not progressive, and they are polyga-

mous. School work has dragged here, but two good-sized schools are now established here, the Government boarding school, and the Holy Family Mission school (Catholic contract).

This latter school has just completed its second year. It is located 5 miles from the agency on Two-Medicine Creek and is very complete, with a capacity of 100. At the time of my visit there were 51 boys and 51 girls. The school has gained an excellent start. The schoolroom work was good and the industrial work received its share of attention. They are adding largely to their stock and they aim to instruct well in gardening and in stock-raising, and at some future time add mechanical work.

The Government school is the older school, having been organized within the old stockade several years ago. For about six years it has been running with one teacher, and does not seem to have been a success in any direction. Two new buildings have been erected during the past year, 22 miles from the agency, and in January the school was moved from the agency to these buildings. Not an outbuilding of any kind had been built. The school was raised in numbers from 40 to 75. There was much confusion and disorder for several weeks; the children became discontented and many ran away. If often happened that they were gone several days before being returned. These things were detrimental to the school. But at its close it was running smoothly and another year will see a good school here. The new buildings will accommodate 100 easily and there are a plenty of children here. Here, too, the girls are kept out of school. The farm contains 1,200 acres of good land, and stock-raising should be taught as a specialty.

**Flathead Reservation.**—This is the finest reservation in Montana. The lands are more productive and the climate less rigorous. Grain and vegetables grow here in luxuriance, and fruit can be raised very successfully. Irrigation has to be depended on mainly. The people are mainly Flatheads.

The only school upon this reservation is the Catholic contract school, St. Ignatius Mission. This is probably the best reservation boarding school in the service. During the past year 330 pupils have been enrolled, equally divided between boys and girls. There is a kindergarten department numbering 75. The schoolroom and industrial work are of a high order; that for the girls extending beyond that usually taught, by fancy and ornamental needlework, butter and cheese making, etc. The industries for the boys are varied and extensive beyond agriculture and stock-growing. The saddle and harness making at this school are superior. Shoemaking, blacksmithing, printing, painting, sawing, milling, and engineering are successfully taught. The kindergarten is a great success. The children are healthy and happy. They learn the English quickly, and in some cases have forgotten their native tongue. At the age of 5 or 6, when they enter the regular school, they are ready to enter the second or third year's work. The buildings are capacious, comfortable, and pleasant. The children do not return to their homes in vacation.

A new school is soon to be started near the agency.

**Crow Reservation.**—The people of this reservation are all dark Crows. They have three good schools upon this reservation, viz: The Government boarding, the Catholic contract ("St. Xavier industrial"), and Unitarian contract ("the Montana industrial").

The Government boarding school has been enlarged during the past year so that its capacity now is about 125. It is located at the agency, and with its increased facilities will be one of the best schools in the service. The schoolroom work last year was honest and of a high order. Industrial work, both for boys and girls, is very successful. They have an excellent farm which is perfectly irrigated, and all their vegetables are raised, with good fruit prospects. Butter-making is carried on successfully. Considerable attention is paid to stock-raising. The outlook for this school is very encouraging, although polygamy is very common on this reservation.

The St. Xavier school is located 24 miles from the agency upon the Big Horn River. The plant has been extensively enlarged by the completion of a fine new brick building, which is used for schoolrooms and boys' dormitory. The capacity of this school is easily 200. Although a comparatively new school it is a very good one, and the schoolroom work was very satisfactory. The language work and general exercises were particularly fine. No irrigating ditch has been constructed yet in this valley, so that as yet little can be done in agriculture. A small ditch for use of school farm has been constructed, which will be a great benefit next year. An attempt to raise fruit will be made at this school also. If the experiments at fruit-raising prove successful at these two schools, it will open up a new industry for this people.

The little Montana industrial school is situated 5 miles from Custer station on the Northern Pacific Railroad. It is not a new school. It has a capacity of 50. It is a model school on a small scale. The building is really a large cottage, rather crowded but having a home-like appearance. The school is doing excellent work, both schoolroom and industrial. They have a good farm and quite good progress is made in wood shop work.

**Tongue River Reservation.**—About 800 Cheyenne Indians occupy this reservation. They are a wild and unprogressive lot. There are two schools, the Government day at the agency on Lame Deer Creek, and the Catholic contract, St. Labre, on Tongue River. The latter school was discontinued at the time of my visit on account of lack of attendance. The attendance at the day school was very irregular and small. The Indians send to school or not just as they choose. There needs to be a good Government boarding school erected, and the strong hand of authority stretched out and those children gathered into school. They will be a menace upon the safety of their neighbors if it is not done.

**Winnebago and Omaha Reservations.**—The Winnebago school has been in hard luck. For some years it seems to have been woefully mismanaged, and just as it was gaining a good position and doing excellent work, a fire broke out (March, 1892) and burned it to the ground. It was a disaster, for this people are in great need of the school. They are immoral and unprogressive, but the school was doing good work for them.

A portion of the school has been reassembled in other buildings, but nothing like the former efficient work can be done. The school property here is very valuable, the farm being one of the best in Nebraska. Grain and vegetables of all kinds can be raised, as well as fruit. These people are self-sustaining and are good workers, but they need to have their children in school to fit them for the duties of citizenship, which they will soon come to. The school, when rebuilt, should be raised to 100.

The Omaha boarding school is an old and prosperous school, excellently managed; it is doing excellent work. It is located in the most desirable part of Nebraska, and agricultural industrial pursuits are advantageously taught. Both these tribes are now allottee citizens, and as such assume the privilege of keeping their children from school too much. There are many out of school because of lack of school accommodations. This school would be benefited by being increased to 100.

The Omaha Mission industrial school is a Presbyterian contract school. The attendance during the past year has been small. The capacity of the school is about 50. The location is on the west bank of the Missouri River. All the schoolroom and industrial work was of a satisfactory character, and it is to be regretted that they had no larger attendance.

**Santee.**—Upon and connected with the reservation are the following schools: Agency boarding, Santee normal training (Congregational contract), Ponca and Flandreau day, and Hope (Episcopal contract).

The Santee agency school is a fine plant, having a capacity for 125 pupils. The school and dormitory buildings are good, but the outbuildings are poor and inadequate. The farm is excellent although too small. The school is well equipped and is doing good work both in the schoolroom and farm. No attempts have been made to carry other industrials except shoe-repairing.

The Santee normal training school is a fine school and deserves the high reputation it has gained. It is not like any other school. While following the course of study and rules laid down for the Indian schools, it aims to go farther. Earnest and faithful work is done in all departments, and many who leave this school are fitted to become teachers. A school of theology is a part of the institution. It is an industrial school in the fullest sense. For the girls, the course in cooking and sewing is more thorough than ordinary, and for the boys, a very complete knowledge of wood and iron shop work, shoe and harness making is given. The dormitories are comfortable and homelike, being separated into several separate buildings with a matron for each. This is one of the oldest and best schools in the Indian service.

The Hope school is across the river from the reservation in the town of Springfield, S. Dak. Like all the Episcopal schools, it has a capacity of only 50. It is a model little school. The enrollment has been 21 boys, 26 girls. Instruction in schoolroom and industrials excellent. Could not visit the day schools.

**Yankton.**—The Yankton industrial boarding and the Episcopal contract school for boys, "the St. Paul's," are the only schools on this reservation that receive Government support.

The Government school was started in 1882 and for several years had a ca-

capacity for only 75. Two years ago another building was erected, bringing it up to 140. It still needs a good building, which might be used for school and audience room. A few years ago the school suffered from gross mismanagement, the ill effects of which it has scarcely recovered from. As a consequence of that trouble the boys and girls have been educated entirely in different school-rooms, and the two buildings are denominated "boys' school" and "girls' school." There has been a consequent loss in power by so doing. The time has now arrived when it is best to regrade the school and educate the sexes together. The school has gained a good standing. The industrial work has been very successful. They have a fine farm and ordinarily they can raise grain, hay, and vegetables in abundance. A large number of fruit trees have been set out and give promise of fruit in the near future.

The St. Paul's school of 38 boys has done well during the past year. It is quite complete in its appointments and is a well-conducted and profitable school. It has capacity for 48. They have a good farm and special attention is paid to agricultural industrials. Good progress in schoolroom work was shown.

**Lower Brulé.**—The census shows that there are nearly 300 children of school age upon this reservation. The Government boarding school accommodates 70. There has been less than 40 in the two day schools at Driving Hawk's Camp, and at the mouth of the White River. A few are away in other schools. It will be seen that the greater number are in no school. The buildings at the Government school are old and poor; but until the Lower Brulés are fully settled it may be best to do little to them. Notwithstanding these drawbacks the school made an excellent record during the past year both in school-room and industrial work. It should be raised to 100.

The Indians who formerly lived near the day school at mouth of White River, have nearly all moved away. The school has not been a success during the past year.

**Crow Creek.**—The children upon this reservation are closely picked up. The Government boarding, with its 120 pupils, Grace Howard Mission with 22, and the Catholic contract, Immaculate Conception, with 90 pupils, and 20 at other schools, has drawn closely upon the 300 shown by census.

The Grace Howard Mission is a small but choice school 7 miles southeast of the agency. It is composed mostly of girls. The management and schoolroom work has been satisfactory. Reading and number work excellent. Careful attention paid to the industrial work for the girls. Not much attempted with boys as they are small.

Immaculate Conception Mission, 15 miles north of agency, is a very complete plant, capable of accommodating 125 pupils. The buildings were built by the Misses Drexel. The work here is of a high order, especially that of the school-room, which is excelled by few. The outfit of the school is very complete. The long-continued drought has been against them for agricultural work, but they have paid special attention to stock-raising. They have a good band of 10 pieces.

The Crow Creek Industrial School has been largely increased during the year, and has made great progress. Most of the schoolroom work has been particularly fine. Extensive outdoor work has been carried on, and the industrial work has been thoroughly taught. The buildings are in fair condition, and a good hospital building has been erected during the year. In addition to stock and swine, a fine lot of poultry has been added. This is one of the progressive schools.

**Standing Rock.**—Over 750 children are enrolled in school upon this reservation out of the 900 shown by census. All the schools, twelve in number, are Government schools—three boarding and nine day. The school work, as a whole, is superior here to any I have seen elsewhere.

The day schools are surprisingly good, with a very regular attendance. All the children came to school dressed neatly, all the boys having their hair cut. Many of the children attend from a distance of 5 miles. The attendance has been very regular, and considerable progress in language, numbers, and local geography has been gained. The Indians become accustomed to seeing the school, and the idea of education becomes implanted. The Indians visited the schools freely, and really seemed interested and proud of the schools. Twelve young people from the day schools voluntarily went from one day school to the boarding school. Seven of the teachers of the day schools are mixed bloods or full-blood Indians, and all are doing well.

Another boarding school is being built at the Little Eagle camp. The boarding schools are the St. Elizabeth, and the Agency Boarding, and Agricultural Boarding.

St. Elizabeth's school is owned by the Episcopal Society, who employ teachers and other employes, but the Government furnishes rations and clothing. The buildings are new and very nice. They have a capacity for about 50. The school is in its second year and has made a good start in all except industrial work outdoors. The school and industrial work inside was very satisfactory.

Agency and agricultural boarding schools.—Only one reservation school excels these two schools in this district. The agency school excels the agricultural school somewhat in the schoolroom, but the agricultural excels the agency in industries. Both schools need another teacher. Each school has an enrollment of over 100. The schoolroom work in either school compares favorably with many graded white schools. At the agency school special attention is paid to industrial work for girls and instrumental and vocal music. At the agricultural, where the boys predominate in numbers, special attention is paid to industrial work for boys, mostly agricultural. They have a fine young band of 18 pieces, which adds greatly to the interest of the school.

The schools, missionaries, and good management of the agent are doing rapidly the work of civilization upon this reservation. I saw no blanket Indians upon this reservation. They are raising stock and considerable grain. They live in good houses with floors. They have cook stoves, furniture, pictures upon the walls, and sometimes sewing machines, bought by the Indians themselves. No polygamy allowed. The general school work is the best of any I have seen.

Shoshone.—This has been a neglected corner in the educational field. My visit was the first and only one since 1887. About 900 Arapahoos and about the same number of Shoshones are upon this reservation. They are a rather wild lot in some respects. The Arapahoos are called immoral, but they are willing to put their children in school. The Shoshones are not considered immoral, but they are unwilling to put their children in school. As a consequence, most of the children in school are Arapahoos and only about 20 Shoshones are in any school. There are 575 children of school age upon the reservation and less than 200 in any school. The Government school at the agency has a present enrollment of 83. The Catholic school, St. Steven's, at the mouth of the Little Wind River, has had about 70. The Indians have not yet realized that a steady attendance is necessary, and they are accustomed to take their children from school quite often.

The old Government buildings are adobe, and are unfit for school purposes. In past years the school has not made great progress. New buildings are in process of erection which will accommodate 150 pupils. This will be the finest lot of buildings in the district. When these are completed the school will start on an era of prosperity.

The St. Steven's school has not been a great success as yet, but they have a fine brick building and another one will soon be built.

There are plenty of children here to fill both schools. A firmer policy will be inaugurated another year, and the authorities will run the schools. Both schools have fine farms which produce well. They both have good irrigating ditches. Unless additional school facilities are furnished most of the Shoshones will stay out of school, as there seems to be nearly enough Arapahoos to fill both schools, and I think that most of the children of both schools will be from that tribe. There needs to be still more school accommodations here. The old adobe building is unsafe to live in. They have had one epidemic of diphtheria, and at the time of writing this report have another.

#### NEW NONRESERVATION SCHOOLS.

One with a capacity of 150 is in process of erection at Flandreau, S. Dak. It will be ready for occupation some time during the coming year.

The military reservation at Fort Shaw, Mont., having been turned over to the Indian office for school purposes, a school is to be started there September 1, 1892.

#### NONRESERVATION CONTRACT SCHOOL.

The St. Peter (Catholic) is located near the center of Montana. No Government officer had ever visited the school before me. The school is accommodated in two stone buildings, which are capacious enough for 300 pupils. Both buildings together are reported to have cost over \$62,000. The boys' dormitory was built two years ago of rough stone. The girls' building is a beauty, built of hewn stone. I found in attendance 101 boys and 102 girls. There had been much sickness among the boys' teachers, and their schoolroom work could not be shown off to good advantage, but enough was shown to show that there had

been no neglect in that. Some instruction has been given in wood shopwork, but most of the instruction had been devoted to stock, of which they have an extensive herd. The schoolroom and industrial work at the girls' building was of a superior character throughout. The sewing-room work and art work were surprisingly good. Special attention has been paid to dairying. The school has gained an excellent start, and is doing good work.

#### GOVERNMENT NONRESERVATION SCHOOLS.

**Pierre Industrial.**—Located 1 mile from the city of Pierre is a comparatively new school, this being their second year of school. All of the principal buildings are of brick, and 180 pupils can be accommodated easily. Like most new schools it has had many things to contend with, but last year it was prosperous and got fairly started. Unfortunately the school had to be dismissed in June on account of lack of funds. The plant is quite complete as far as schoolrooms and dormitories go; but it is now in need of shops, for, from its location, it can not become largely agricultural or stock-growing. Two hundred acres belong to the school, but 160 acres are 5 miles from the school. It is high and dry prairie and too far away either for pasturing or tillage. I think it should be traded for something nearer the school. On a limited scale a shoe and carpenter shop have been maintained. They both should be enlarged and made successful. Except for this lack the outbuildings are quite complete. The facilities for industrial work for the girls are good and they have been well improved. A good system of steam heating and waterworks adds greatly to the comfort and convenience of the school.

**Grant Institue, Genoa, Nebr.**—This fine school is located in eastern Nebraska, about 50 miles from Omaha or Sioux City, in a westerly direction. The whole plant has been greatly enlarged during the past year, and now has a capacity of about 500. The school is so well known, and has been reported upon so often, that I shall make brief report of it. It has a strong and competent corps of teachers and employes, and is a rival to the best schools of the kind in the country. The schoolroom work is good.

As an industrial school it has been a great success. Their 320 acres of land are as good as any in the country, and afford the boys a good opportunity to learn practical agriculture. Last year most of the farm work was done by the boys, and the productions amounted to over \$21,000. Brooms to the value of over \$6,000 were made from the broom corn raised last year. Harnesses to the value of \$6,000 were made almost wholly by the boys. Beside the broom factory and harness shop, they have a tailor shop, where all the mending, repairing, and manufacturing of clothing is done by boys. The cutting and fitting for the whole school is done by them. Nearly all the shoes for the entire school are made in the shoe shop. The "Pipe of Peace" is published weekly by the boys. It has a circulation of about 1,000, at 10 cents per year. They have good carpenter, paint, blacksmith, and wagon shops. It will be seen the boys have a good chance for choice of trades. The girls are as well provided for in the sewing room, bakery, laundry, and cook room.

A good system of military training and a really excellent band add greatly to the interest and efficiency of the school. Church and Sabbath school services are sustained at the school.

#### CONCLUSION.

##### In conclusion—

First, I say that nonreservation schools are being established in advance of their needs. For some years the main reliance must be upon the reservation boarding school. If the nonreservation school is to be the advanced school in the service, time should be given the reservation to do its work in grading. At present both schools are doing much the same work.

Second, Attendance in school should be obligatory upon all reservations. Because an Indian becomes a citizen he should not be freed from the necessity of educating his children any more than a white man should. In some cases Indian children are entering the common schools and doing well, but the conditions are rare in which that can be done at present. During the next twenty years the education of the Indian youth should be so pushed that the necessity for the maintenance of separate schools would cease.

Respectfully submitted.

O. H. PARKER,  
*Supervisor, District No. 2, Indian Education.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERVISOR OF EDUCATION, THIRD DISTRICT.

IN THE FIELD,  
Reno, Nev., August 20, 1892.

SIR: I have the honor herewith to submit my first annual report of the third supervisor's district, United States Indian schools.

## SCHOOLS IN NORTHERN CALIFORNIA.

**Round Valley Agency.**—Here a boarding school is being erected that will accommodate 80 pupils. It is pleasantly located, and will be provided with an ample water supply under 200 feet pressure. The original boardingschool building at Round Valley was burned in July, 1883. Since that two small day schools have been in operation. There are 80 pupils of school age on the reservation, and it is estimated that there are 40 more living in the mountains contiguous to the agency that are desirous of attending school. The school farm is of ample size and great fertility, and affords excellent facilities for the instruction of these Indian youth in hop growing and horticulture as well as in general farming. These Indians are in favor of the education of their children, and from their contact with the whites have learned to esteem the knowledge acquired in schools.

**Hoopa Valley Agency.**—The withdrawal of the military from Fort Gaston will enable the Department to utilize the buildings of the military post for the establishment of a large industrial boarding school. It is estimated that on the agency and in the region of the Klamath River extending as far east as Yreka, there are at least 250 children that should be gathered into this school. These Indians are quiet, industrious, and self-supporting, and are anxious for the education of their children.

**Day schools.**—The day schools in the region of Ukiah, Cal., are doing excellent work, and are well attended.

At Upper Lake there is a band of 229 industrious Indians, including 34 children of school age. These Indians are erecting a schoolhouse at their own expense, and have applied to the Government for a teacher.

The Indians of Inyo County, Cal., have been entirely without educational facilities until February last, when a day school was opened at Bishop. This school has been very successful from the beginning. In April 56 children were enrolled. While visiting the school I was impressed with the apparent eagerness to acquire knowledge that was manifested by the pupils. The children came to the school neatly dressed. Many of them brought lunches nicely put up in bright pails. It is estimated that there are at least 1,000 Indians in Inyo County, including 200 Indian children of school age. These Indians are self-supporting, and are very desirous of educating their children. The school at Bishop should be increased to two departments and two teachers employed. At Big Pine the Indians have erected and furnished a day-school building and have requested that a teacher be sent them. Should the Stewart Institute be enlarged to meet the necessities of the case it would find here a large field from which to gather pupils.

The Pit River Indians, in the region about Alturas, Cal., and extending west for 100 miles into Shasta County, number over 800, including 190 children of school age. They have no reservation, but are widely dispersed throughout the country. Many of them have visited the schools of the Klamath Reservation in Oregon, and are so much pleased with the results of Indian education there that they deserve the establishment of a boarding school for their children. The citizens of Modoc County, Cal., offer to donate to the United States an excellent farm and school site of 320 acres for that purpose. These Indians are quiet, industrious, and moral, and are considered by the whites as a valuable factor of the population of the country. The children are more than ordinarily bright and healthy.

## SCHOOLS IN OREGON.

**Klamath Agency.**—The schools of the Klamath Reservation have accomplished a great work in the civilization and enlightenment of the Indians. These Klamaths and Modocs have abundant faith in the schools, and deem it a dire misfortune if any of their children are refused admittance.

The agency boarding school is in excellent condition. A new building, comprising class and assembly rooms, has recently been erected. An additional building is needed for the boys, to include dormitories and sitting room, and a system of water supply under pressure is desirable. The facilities for industrial training are good and the results are excellent.

The Yamax boarding school continues to merit its high reputation. The building is overcrowded. A new dormitory is needed. A system of waterworks, including tower and windmill, is also desirable. The fine farm of 500 acres and the carpenter shop, afford good facilities for instruction in these departments.

**Siletz Agency.**—The boarding school has an enrollment of 65 pupils, which equals its capacity. Twenty-five from this reservation are attending Harrison Institute. Six children are not attending school. The buildings are fair. An addition to the boys' dormitory is needed.

**Grand Ronde Agency.**—The Grand Ronde boarding school has a capacity of 75. Seventy-four pupils are enrolled. Twenty children of school age have not attended school. The building for girls is in good repair. The boys' building is old, worthless, and dangerous. The school barn is old, decayed, and of no value. A new building for boys, to include dormitories and sitting room and a school barn, are sadly needed.

**Warm Springs Reservation.**—The agency boarding school has an enrollment of 76 pupils. The school building is old and worthless. The erection of a new building with a capacity of 100 pupils has been planned. The Sinamasho boarding school has a capacity for 65 pupils. The buildings are badly constructed and of little value. A new building similar to the one planned for the agency school is needed. A system of waterworks for supplying the school with spring water under pressure is desired. There are 224 children of school age on this agency; 9 are attending the Harrison Institute.

**The Umatilla Reservation.**—The Umatilla boarding school has an enrollment of 72. There are 195 children of school age on the reservation. This school now has three fine buildings, including one for class and assembly rooms just completed. It can accommodate 100 pupils.

#### SCHOOLS IN WASHINGTON.

**Puyallup Agency.**—The number of children of school age belonging to the Puyallup Consolidated Agency is as follows:

Reservation.	Males.	Females.	Total.
Puyallup .....	81	73	154
Chehalis .....	13	17	30
S'kokomish .....	15	17	32
Squaxon .....	9	10	19
Nisqually .....	10	9	19
Sklallam Indians .....	38	34	72
Quinalt .....	33	22	55
Total .....	199	182	381

The Puyallup boarding school has an enrollment of 149. It is in fine condition, and excels both in literary and industrial instruction. The buildings are mostly new, are well planned, and of sufficient capacity.

The Chehalis boarding school has 51 enrolled. The instruction in farm work and dairying is especially good. The buildings are of fair capacity, but are old and need considerable repairing.

The S'kokomish boarding school has 56 enrolled. The school has done efficient work in all its departments. Considerable attention is paid to fruit growing. The building for girls is of sufficient capacity and in good repair. The boys' building is old and of little value; it is much too small. A new building for boys is needed.

The Quinalt boarding school is doing excellent work. The buildings are poor and old. Some repairs, and an addition to the boys' dormitory are needed. The day schools at Jamestown and Port Gamble, with an attendance of 24 and 22, respectively, are doing well.

**Tulalip Agency.**—The children of school age in this agency are as follows :

Tulalip.....	100
Lummi.....	90
Madison.....	35
Swinomish.....	58
Muckleshoot.....	30
<b>Total.....</b>	<b>313</b>

The contract boarding school at Tulalip has an enrollment of 120, and the day school at Lummi 60, leaving 133 not attending any school. A boarding school is needed at Lummi of sufficient capacity to accommodate the children of both Lummi and Madison, these reservations being only about 30 miles apart. Since the erection of new buildings at Puyallup the children of Muckleshoot can be accommodated there; Muckleshoot is only about 20 miles distant from Puyallup. The school buildings at Tulalip, with some repairs and additions, can accommodate the children of the Tulalip and Swinomish reservations.

**Neah Bay Agency.**—The boarding school has an enrollment of 69, which includes all the children of school age on the agency. The buildings are old and poor. The boys' building is overcrowded. No sitting room for boys is provided. An addition is needed for a boys' dormitory and a sitting room.

The day school at Quillayute has an enrollment of 52. It is well conducted.

**Yakama Agency.**—The boarding school has a capacity of 110, with 106 enrolled. The building for girls is nearly new. The boys' building is old and of little value. There are 260 children of school age on the agency, and it is estimated that at least 100 children belonging to this reservation are dispersed through the contiguous mountain valleys. Seventy-three are enrolled in the North Yakama contract school, leaving 181 unprovided for. A new building is needed to increase the capacity of the agency boarding school to 250 pupils.

**The Colville Reservation.**—By the last census the total Indian population is 3,195, children of school age 462. The Colville contract school has an enrollment of 79, and the Cœur d'Aléne contract 72. The Tonasket boarding school has a capacity for 80, making a total of 231 provided for, and leaving 231 without school accommodations. I would recommend the erection of a boarding school on the tableland overlooking the agency, where a fine site can be secured.

The Tonasket boarding school is located about 140 miles from the agency. It has neither farm nor shops. The location is extremely unpleasant. The water supply is alkaline, and during a portion of the year is utterly unfit for use. It is desirable that the school be removed to a more suitable locality, where a good farm can be secured. Its capacity should be materially increased.

SCHOOLS IN IDAHO.

**Nez Percé Agency.**—The agency boarding school is filled to its capacity with an enrollment of 60. The building is in good condition. But little industrial work is attempted, the pupils being quite young.

The Fort Lapwai boarding school has 150 enrolled. The school is well graded and the classroom work is very fine. The building for girls is in good repair, and can accommodate 100. The new school building of four class rooms and an assembly room is a fine structure. The kitchen and dining room is an old condemned building. The boys' quarters are temporary, and wholly inadequate to their use. A building for boys of a capacity of 150 is needed. Also a new dining room and kitchen, and shops for mechanical training. I would recommend that this school be raised to the grade of a training school of the second class, and that transfers of pupils to this school be made from the highland schools of Washington and Oregon. There are 300 children of school age under this agency.

**Fort Hall Agency.**—Number of children of school age on the reservation, 190. The Fort Hall boarding school has a capacity for 175, with an enrollment of 117. The main buildings are good, substantial structures of recent erection. The excellent facilities for instruction in mechanical pursuits and in farming and stock-raising are especially noteworthy.

SCHOOLS IN NEVADA.

**Pyramid Lake Reservation.**—Number of children of school age under the agency, 85. The Pyramid Lake boarding school, with a capacity for 60 pupils, has an enrollment of 65. The buildings are in good condition. The day school at Wadsworth has 25 pupils enrolled, with an average attendance of 22.

**Walker River Reservation.**—Children of school age, 156. The only school accommodation is a day school with a capacity for 24 pupils and an enrollment of 35. The buildings are very poor. These Indians are progressive and anxious for the education of their children. I would recommend the erection of a boarding school at this place to accommodate 100 pupils.

## SCHOOLS UNVISITED.

I have not as yet visited the Lemhi, nor the Western Shoshone Agency.

## TRAINING SCHOOLS.

**The Stewart Institute** at Carson, Nev., has been filled to its capacity with an attendance of 105 pupils. There are at least 100 additional children asking admission to this school. Were it possible to accommodate them the attendance could easily be increased to 250. I would recommend the erection of additional school buildings to increase the capacity of the Institute to 250 pupils. Blacksmith, harness, and shoe shops are also needed.

**The Harrison Institute**, located near Salem, Oregon, has had a prosperous year; 270 pupils have been enrolled. Extensive improvements in buildings have been completed during the year, including the erection of a superintendent's residence, employes' building, hospital, boys' dormitory, and additions to the main buildings, increasing the capacity of the school to 275. The grounds and drainage have been greatly improved.

## TRANSFER OF PUPILS.

The number of pupils in this district recommended for transfer to training schools is as follows:

School.	Males.	Females.	Total.
Yakama boarding.....	7	3	10
North Yakama contract.....	2	2	4
Klamath boarding.....	3	5	8
Yainax boarding.....	3	5	8
Warm Springs boarding.....	6	8	14
Sinemasho boarding.....	8	9	17
Chehalis boarding.....	2	—	2
Puyallup boarding.....	2	1	3
Neah Bay boarding.....	6	—	6
Tulalip contract boarding.....	6	4	10
Lummi day.....	8	5	13
Total.....	53	42	95

## ATTITUDE OF THE INDIANS TOWARD EDUCATION.

With the exception of the band of Bannacks at Fort Hall, and the small bands of San Puells and Nespilems on the Colville Reservation, the Indians of this district are greatly in favor of schools. This is true of most of the old Indians and especially so of the young members of the tribes both on and off the reservations, and they highly appreciate the advantages of education for their children. The desire for education appears to be rapidly increasing, and is especially noted among the nonreservation Indians.

## CONCLUSION.

In this district the educational outlook is very encouraging. During the year school attendance has materially increased, several new buildings of large capacity have been erected, and others have been planned. The class-room work generally is excellent, and is not surpassed by the best schools of equal grade in the adjacent country. The industrial instruction is very practical and of the kind best adapted to the material advancement of the Indians in civilization.

Respectfully submitted.

WILLIAM T. LEEKE,  
*Supervisor of Education, Third District.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERVISOR OF EDUCATION, FOURTH DISTRICT.

IN THE FIELD, *November 1, 1892.*

SIR: In obedience to instructions from the Indian Office I have the honor to submit the following report for the fiscal year ending June 30, 1892.

The fourth supervisor district comprises Kansas, Oklahoma, and Indian Territory. It contains a population of 16,800 souls, 3,200 of whom are of school age. This population is under the jurisdiction of seven agencies, a number of which are consolidated, containing several reservations which were formerly under the supervision of different agents.

There are nineteen reservation schools in operation in the district, ten contract schools, and two industrial training institutions. Of the contract schools but four receive per capita funds for the children in attendance. The others merely receive rations for the Indian pupils in their schools. There is one reservation day school, three having been closed at the end of the fiscal year. One contract school closed the 1st of April and merged into the Government school near by.

One reservation boarding school was established during the year and will soon be in operation. A second one, for the Citizen Pottawatomies, has been partially established, the site chosen, and the preliminary measures taken, looking toward immediate operation, in connection with the Absentee Shawnee school on the reservation under the jurisdiction of the Sac and Fox Agency in Oklahoma.

I was appointed to the position of supervisor July 14, 1891, and at once entered upon the discharge of duty.

As a rule I found the schools in good condition, but readily discovered that the system of inspection which had previously prevailed was not such supervision as the interests of the schools demanded. Inspectors and special agents are not always school men, and the business of the agency, as a rule, demands the greater portion of their time, and the inspection of the school is rather incidental. The information usually obtained regarding the various interests of the schools was secured from the agent, and as agents are not practical school men, the inspection was not always what the real conditions indicated. Superintendents, as a rule, were not consulted, and often matters that should have received the attention of the representative of the Government went unnoticed and without correction. Superintendents of the Government schools, without exception, have cordially coöperated with me in bringing about desired changes and are heartily in sympathy with the policy of supervision inaugurated by the Indian Office.

I found a lack of uniformity in grading, practical methods and systematic promotions and transfers in reservation schools. Some contract schools were not properly equipped and were not able to comply with the terms of their contract with the Government. I found some employes who had crept into the service who were not holding their positions because of efficiency of service, nor by the approval of superintendents; but from the nature of circumstances their incompetency had not been brought to the attention of the Indian Office.

I have endeavored to bring about a uniformity of grading, and we now have a system of promotion and transfer that will add very materially to the efficiency of all the schools. The work of employes has been inspected with a view to securing the very best service; often errors have been corrected, and by a few timely suggestions employes who otherwise were not doing good work have been assisted to a better comprehension of the service desired, and are now doing acceptable work. No mere inspection could bring about these results.

I mention these facts because the duties of supervisors do not seem to be well understood in some quarters.

## EDUCATIONAL CONVENTION.

That a more perfect uniformity of methods might be established, harmony of effort among the schools be secured, and that opportunity might be given for the discussion of the numerous important questions which arise in the operation of Indian educational institutions, the honorable Commissioner of Indian Affairs granted authority to hold an educational convention at Arkansas City, Kans., December 29 and 30, which was well attended and much good accomplished for the Indian school service. I have noticed the excellent effects of that convention in the work of all the schools throughout the district.

The convention was conducted under three departments for the day session, viz, superintendents, teachers, and matrons. Each division discussed various topics suggested from a programme previously prepared and published for the occasion. Two evening sessions were devoted to lectures by prominent gentlemen in the service. The last evening session was held in the opera house, when a large and appreciative audience listened to the presentation of a literary and musical programme by the pupils of Haskell Institute, Chilocco training school, and Ponca Reservation school. The object of the exercises was to indicate, in part, what was being done for these children in the schools in a literary way. The result was highly gratifying to the friends of the cause, and many who were somewhat skeptical on the subject of Indian education were convinced of its ultimate success as a medium of civilization.

In addition to the work of the convention already indicated, there was an exhibit of industrial and schoolroom work that was a surprise to many who do not realize what is being done for these people through the instrumentality of the schools. The daily Arkansas City Traveler contained the following notice of this department, which I think indicates the sentiment of the public, relative to the work which these children, with the most degrading home environments, are able to be taught. The article says:

It was designed by this department of the convention of Indian school workers to indicate to some extent the character of the work now being done by the pupils in the schools. The display was very gratifying to the friends of Indian education and converted many "doubting Thomases" to the educational policy as the only way to civilize the Indian and make him an intelligent citizen, contributing to the wealth of the country, instead of remaining a ward of the nation and a menace to his neighbor.

The exhibit was in two lines—articles from the shops and sewing-rooms and a display of schoolroom work proper. Haskell Institute had a magnificent display, occupying one large room with an exhibit of articles made in their shops and various departments. Their display of school work consisted of maps, examination papers, drawings and the like, and was very fine and greatly admired. Chilocco Institute also had a splendid exhibit, there being a good display of work performed in every department of that institution. Ponca Reservation school had an attractive exhibit in fancy work, which was very highly complimented. The Mennonite contract school at Halstead, Kans., made a display of the more practical things pertaining to household training, the exhibit being in the line of kitchen and dairy work: samples of bread, butter, and the like were very fine. While much praise has been given the teachers and superintendents (and justly, too) assembled in this interesting convention, the work of the pupils is none the less meritorious. William Pollock, a Pawnee boy, has several specimens of his paintings here which show remarkable talent considering the limited instruction that he has received in this art. A number of examination papers are exhibited which would be a credit to any grammar department in our school on account of the excellent penmanship and neat appearance. Children of the primary department from Haskell Institute have prepared original stories, bound in the form of booklets, that are certainly creditable to the little ones. The little ones of six years of age, being too small to learn crocheting or difficult needlework, have been taught to sew carpet rags, and the rag carpet on exhibition was sewed entirely by them. The shoes on display from Chilocco were made mostly by boys who have only been under Mr. Robinson's care a short time. Frank Purdy, after only three months' experience, makes excellent shoes, as does also William Lone Wolf, a Kiowa boy. The suit of ladies' underclothing which was so greatly admired was made entirely by Anna Smith, an Iowa girl. In fact every branch of industry deserves special mention.

Various committees were appointed at the first session of the convention, and their reports indicate the sentiment of the body; and as the gathering was composed of over a hundred of active Indian school workers, the result of their thoughtful deliberation, touching the various interests of Indian education, it seems to me, would be proper to record in this report. The resolutions and recommendations of these committees, contain the "conclusion," so to speak, of their deliberations, and they are as follows:

**Gradation and promotion.**—Recommend that a committee of five be appointed to prepare questions for examination for promotion in all the schools in the fourth district, the examinations to be given semiannually by the principal teacher, under direction of the superintendent.

Recommend that no promotions be made to industrial training schools until the fourth primary grade work has been completed, and at the completion of the primary course pupils be reported to the district supervisor for promotion to industrial training schools.

**Reservation boarding schools.**—Recommend that, as the reservation boarding schools have the burden and the honor of the education of a large majority of Indian children, and as these schools are the greatest medium for the introduction of education and civilization into the Indian communities, it is suggested that these schools be given as complete an organization and equipment as possible.

That the recommendation of Special Agent Mrs. Daniel Dorchester in regard to the appointment of field matron be indorsed, with this amendment, that the field matron be attached to the reservation school force, with the additional duty of cooperating with the superintendents, in reference to the attendance of

children at the reservation schools, and exercise a motherly oversight of them when visiting their homes.

That the Department be asked to furnish all reservation schools with an enrollment of thirty children under the age of 8 years, the material required for kindergarten instruction, and create the position of kindergarten teacher for the school.

*Attendance.—Resolved,* That it is the sense of this convention that an uncompromising, effective compulsory education law is absolutely necessary to the satisfactory maintenance of attendance at reservation boarding schools.

*Resolved,* That it is our unanimous conviction that through the proper means such compulsory law can be effectually applied and enforced.

*Resolved,* That in our judgment the means now existing on reservations and already at the command of Indian agents are sufficient to accomplish the end sought, viz, the manipulation of rations and annuities and the police force.

The committee on resolutions made the following report:

*Resolved,* That the convention is in hearty coöperation with the honorable Commissioner of Indian Affairs in his indefatigable efforts for the improvement of Indian education and its entire harmony with the policy of the present Administration for the rapid civilization of the Indian people.

*Resolved,* That the convention express its appreciation of the untiring efforts of Supervisor Richardson in beginning and bringing to complete success this the first general meeting of the Indian school workers of the fourth district.

*Resolved,* That it is the sense of this convention that all grades of schools, whether on or off the reservations, are integral parts of the present system of education, and while it receives our hearty support, we welcome the day when this system shall blend into the school system of the land.

*Resolved,* That it would be for the best interests of the Indian school service that the superintendents of reservation boarding schools be allowed to assume complete control of their schools at a time when they may furnish to the Department a satisfactory bond for the proper discharge of their duties.

This committee also made a recommendation relative to attendance similar to the recommendation of the committee on attendance. It was agreed that Indian agents had sufficient means at their command to enforce attendance, if properly used.

Before adjourning, on the recommendation of the committee on organization, the convention effected a permanent organization and requested that the meetings be held annually, if authority could be obtained.

#### DETAILED COURSE OF STUDY.

In order that the schoolroom work may be systematized and uniformity secured, I have prepared a detailed course of study, based upon the curriculum of the Government for Indian schools, and will soon ask the Indian Office for its adoption. This will secure better results from teaching effort and aid very materially in securing regular promotions and transfers from the reservation to the industrial training schools.

The foregoing is a brief outline of what has been done in this district the past year in the way of supervision, and in part indicates that the work of a supervisor can be made to contribute very materially to the advancement of the interests of Indian education. I deem it proper that some such statement should be made, inasmuch as certain distinguished churchmen have deemed it necessary to unjustly pass severe criticism upon the honorable Commissioner of Indian Affairs for appointing supervisors of education, and going so far as to foolishly charge that these officials were spies of the Commissioner to work detriment to certain contract schools. There was never a more unjust and uncalled-for accusation. The facts are, these contract schools had never had an inspection, properly, and it is from a sense of their inferiority that this seeking to shut out expert investigation and supervision comes.

These schools have received fair and impartial inspection and their actual worth as an educational medium has been properly and fairly presented, and no desire has ever been intimated that other than fair and honorable treatment be extended all of these contract schools. They are part of the Indian educational system as now carried on by the Government, and they should stand or fall on their own merit. The facts are, there will be needless contention so long as the Government maintains this perilous system of uniting church and state, and the sooner appropriations for this sectarian purpose are abolished the better for the peace and harmony of the country.

## PRESENT EDUCATIONAL CONDITIONS IN THE DISTRICT.

**Quapaw Reservation.**—The school population under the jurisdiction of this agency is 401. Of this number some are married, others are attending the various industrial training schools, while there are those whose physical condition is such that incapacitates them for school. The actual available school population does not exceed 300.

There are two reservation boarding schools now in operation, the Seneca, Shawnee, and Wyandotte, with a capacity of 175, and the Quapaw, with a capacity of 110. If the last-named institution had a four-room school building and a boys' dormitory combined its capacity would easily reach 150. This would furnish ample accommodations for all the Indian youth on this reservation. The schools are now operated to their fullest capacity.

**Pottawatomie and Great Nemaha.**—Two hundred and seventy-five children of school age are on the three reservations under the supervision of this agency. The school operated for the Pottawatomies, near the agency, will have a capacity sufficient to accommodate the children of this tribe when the buildings now in process of erection are completed. The school for the Sac and Fox and Iowa tribes is sufficiently enlarged to minister to the educational demands of these tribes.

The capacity of the school for the Kickapoos, however, is not sufficient to accommodate these people, and the buildings are old and dilapidated; in fact, not suitable for the purpose for which they are used. The Kickapoos are slow in their advancement, and do not cooperate in the education of their children. It would be wise, I think, to erect a building with a capacity to accommodate at least 75 children and put every child of school age and suitably qualified in school and keep him there until something can be done for him that will be perceptibly felt by these people.

**Cheyennes and Arapahoes.**—There are 701 Indian children of school age under the jurisdiction of this agency. To accommodate this large school population there are three boarding schools, with a capacity of 375; two contract schools, able to accommodate 145. Not considering those of school age who are married, or those who are attending nonreservation schools, or those incapacitated for school, there will remain at least 100 children of school age who can not be accommodated. There will be a considerable number transferred to nonreservation schools this year; yet there will be quite enough children whose educational interests are not provided for on the reservation to fill another school. And if there is a people in all the Indian country, who need the training, to prepare them for the new life recently thrust upon them, it is these Cheyennes and Arapahoes.

The capacity of the Arapaho school should be increased to at least 150 by erecting a four-room school building. Should another school be established, it should be located about 75 miles west of the agency, near the settlements of White Shield's and White Chief's bands.

**Kiowas and Comanches.**—There are three boarding schools now in operation under the supervision of this agency, and a fourth to open in a short time. In addition to the four Government schools, there are four churches in operation. These schools, with a combined capacity of not to exceed 550 children, are the facilities at present provided for the accommodation of about 700 children of school age. It is very difficult to ascertain the actual school population of these people, as the great mortality among their children recently greatly demoralized them, and only an approximate idea can be formed as to the number of children who have died since the enumeration was taken.

By erecting additional dormitory buildings at the Kiowa school and a four-room school building at both the Kiowa and Wichita schools the capacity of both institutions would be greatly increased. It may become necessary to make some additions to the Rainy Mountain school, as it is excellently located for health and will be a desirable school, I think, for the Kiowas.

**Osage Reservation.**—With the boarding school at the agency recently enlarged and the Government school at Kaw, together with a number of church schools on the reservation, ample facilities are provided for the accommodation of all the children of school age on this reserve.

The council of the Osage government has voted that it was their desire that a number of their young men should attend some of the white colleges and obtain a thorough education. As the expense of the same is to be paid by the tribe from their immense wealth, it seems to me that they should be granted the opportunity. I see no better cause to which a portion of their vast funds could be

dedicated than that of educating about twenty of their most promising young men. As it would be no expense whatever to the Government, it seems to me that it would be wise to make the experiment.

**Ponca, Otoe, Pawnee, and Oakland Reservations.**—Under the jurisdiction of these consolidated agencies is a school population of 401. Ample facilities have been provided in the erection and successful operation of three boarding schools and one day school. Nearly every child of school age among these tribes is now in school. There have been several transfers made from all these reservations this season to Haskell Institute, Chilocco, and other nonreservation schools.

**Sac and Fox Agency.**—A boarding school at the agency, with a capacity of 130, one near old Shawneetown, with a capacity of 90, and a contract school near Sacred Heart, in the Pottawatomie country, afford the facilities for the education of 500 Indian children that are on these reservations, or, more properly speaking, under the jurisdiction of the Sac and Fox Agency, as the country was opened up for settlement last year and these Indians suddenly thrown upon their own resources.

It is proposed to establish a school for the Pottawatomies, to be operated in conjunction with the Absentee school. This will furnish facilities for at least 150 additional pupils, as the arrangement will increase the capacity of the Shawnee school on the plan proposed for erecting a new school building.

The Kickapoos, with a school population of nearly 100, have practically given but little encouragement to any effort that has hitherto been put forth to establish schools for their people. The Friends' church has made several attempts, I believe, to secure their cooperation in school matters, but with very little success. There is a desire, however, among these people to do something towards educating their children, and I think it would be wise to erect a building that would accommodate not less than 75 and put their children in school. They are a nonprogressive Indian and unless something is done looking forward to bettering their condition they will remain dependents.

#### INDUSTRIAL TRAINING SCHOOLS.

**Haskell Institute.**—Those of us who are conversant with this institution, who have been acquainted with its work from its earliest history, readily acknowledge that it now enjoys a prosperity hitherto unknown to this school. There are now 550 pupils in attendance, and the work in the various departments has reached the highest standard attained by Haskell since its foundation.

It seems to me that the time has come when the work of these institutions might be more definitely particularized; that is to say, there are special lines of training for which each school may be especially adapted. As, for example, Haskell might emphasize the trades, in her industrial training, with farming, gardening, and stock-raising, on a more limited scale. An advanced literary course might be followed by a normal course of training, which would prepare Indian young men and women for teaching among their people and furnish them with a profession by which they might be able to earn a livelihood anywhere that their lot may be cast.

It seems to me that the capacity of this institution should be increased to accommodate a much greater number of pupils. Near the Indian country, the item of transportation alone is important. The climate is not unlike a great portion of the Indian country, contributing a large per cent of children and youth who will attend these industrial institutions. The school is located amid the very best civilizing influences. Under the shadow of the Kansas State University, ambitious young Indians will have the mental stimulus which an institution of the character of the university will give, together with the ever striking example of the great civilizing influences which cluster around Haskell, and make its environments such that its possibilities as an industrial training school for Indian youth are very great.

**Haworth Institute.**—This institution is familiarly known as Chilocco industrial training school and is located near Arkansas City, Kans., on the Cherokee Strip. The institution has an immense tract of excellent land, to the amount of 8,640 acres. This can be made the "great farm school" of the service. All branches of agriculture should be taught here. It seems to me that the industrial training at this school should emphasize farming, gardening, fruit-growing, dairying, stock-raising and the like, while the trades should receive only incidental attention. The location of Chilocco is all that can be desired for the kind of school suggested. The conditions in farming here are very similar to those with

which the Indian pupils from the great scope of Indian country will have to contend in the development of their farms.

On the completion of the buildings now in process of construction, the capacity of the school will be about 350. It should be increased to at least 500, it seems to me. The proceeds of this magnificent farm will contribute quite an important item in defraying the expense for operating the school.

**Returned students.**—One of the important factors in the Indian educational problem, is, "How shall the fullest measure of practical results be secured?" "What policy should be inaugurated towards the returned students?" The 20th of last January I received a communication from the Indian Office bearing date of the 15th of the same month and containing the following paragraphs:

Under the system of Indian education now in operation, provision is made for the training of a large number of Indian youth in schools off reservations, both in Government and contract schools. More than one-fourth of all the Indian pupils enrolled last year were in such schools. This method of education has been in operation during a sufficient length of time, perhaps, to furnish a partial basis for estimating its efficiency.

Conflicting opinions have been expressed as to its ultimate net value. Some claim that the "returned student" retains the habits and principles acquired during his school life away from home and becomes an uplifting force among his people. Others insist that upon his return home he is dragged down by his surroundings, and sometimes "relapses" into even a worse condition of civilization than is found among those who remain at home. It is also affirmed that at schools distant from home the health of the students becomes undermined, and that a considerable portion of them return home only to die. On the other hand, it is claimed that in general the health of students improves while they are away at school. Other opinions on the subject fill all the space between these extremes.

The office should be in possession of information from which a trustworthy opinion can be formed as to the worth and permanency of the training given in such schools.

In the letter above mentioned supervisors are instructed to give such information as can be obtained from facts and specific instances rather than opinions and generalizations.

Since receiving the instructions from the Indian Office, as stated above, I have given the subject special investigation and am gratified to state that the result of my labors in this important direction is very satisfactory, and in the light of information, reliably obtained, I can safely assert that the result of Indian education, off reservations, is much more favorable than many are inclined to acknowledge. In short, the per cent of those who succeed is as great as is found among whites, whose environments are decidedly in opposition to their advancement, and whose culture, received at school, is no greater.

The facts are, there is a misconception as to the grade of these industrial training schools relative to the character of mental training given. We hear them often spoken of as "Haskell College," "Carlisle University," and the like, which indicates that the work that is expected of these institutions is not well understood. When it is remembered that the course in mental development in these schools is very much limited, not extending beyond the grammar grade, for the most part, a modified opinion of these schools will be formed.

In the investigation of the record of "returned students," I have the following, and mention these specific cases as an indication of the results that may be expected from the training that these Indian children receive from the schools off the reservations:

I find Thomas Alfred, a full blood Shawnee Indian, a Hampton student, formerly county surveyor of one of the new counties in Oklahoma, lives near Tecumseh, has a neat home, and is respected as an efficient, faithful officer and earnest Christian gentleman. A Miss Johnson, educated at Carlisle, has been in the Government service for a number of years and is now taking a more advanced course in the high school at Carlisle; she is an excellent teacher. Her sister is now doing very acceptable work as teacher in the Quapaw boarding school. Both are Wyandotte girls. Robert Burns is Government interpreter at Cheyenne and is doing well. Miss Jackson, a Seneca young lady, I believe, is an accomplished stenographer and is making good wages as instructor in a shorthand school. Special Agent Litchfield informs me of two Shawnee boys, Alfred and William Shawnee, who assisted him in making a large payment, doing all the clerical work, and he says that he never had better assistants in all his experience of over twenty years in the Indian service. Mr. Walker, a Wyandotte, is a successful teacher at the Quapaw school, and his brother is also engaged in school work at the same place, both doing well. A young Modoc who came to the Modoc Reservation, near Seneca, Mo., less than twenty years ago, with the remnant of Capt. Jack's band, after the terrible battle of the Lava Beds, is Government interpreter and is one of the most trusty and progressive Indians that I have met. He claims to have loaded the guns for Capt. Jack during the unfortunate encounter, but is now a Christian, earnestly de-

voted to the work of the Friends' Church, of which he is a consistent member. He received his only literary training at the Quapaw Reservation boarding school.

I met returned students at Kaw, who are doing well and represent the advanced element among their people. On this reservation we have an illustration of what we may expect of the second generation of educated Indians. The superintendent of the Government school at Kaw, Uriah Spray, has been with these Indians for nearly a quarter of a century, and has in school the children of parents who attended his school twenty years ago in Kansas, before the removal of the Kaws to their present reservation. He tells me that the improvement is very marked: that they have no trouble in keeping their children in school, and that they talk with more freedom and learn with much greater ease, and in every way indicate what we may reasonably expect from the second generation of these people whose children are now in training.

Wichita Reservation school has a former Carlisle student as laundress, and she is acknowledged to be the best that institution has ever had. Cora Pickering, a Modoc girl, from Hampton, is cook at the Seneca and Wyandotte school, and Superintendent Hall says that she is an excellent employé. John King, also a Hampton boy, is a successful merchant at Tecumseh, Okla. I have a list of over a hundred returned students from Haskell, Carlisle, Hampton, and White's Institute, all making excellent records.

I have found some "who have fallen by the wayside," but the per cent of those who have succeeded is much greater than one would think, judging from the adverse criticism on this class of students which we are subject to hearing from those who have not given the matter a fair investigation. I find the one prevailing excuse of those who do not succeed to be that they found no work to do, and having no employment, they had no means of support, and "the Indian way was the cheaper way."

There are two thoughts that, it seems to me, should be kept in view in considering this feature of Indian education, viz, a plan for directing the efforts of these "returned students," as soon as they reach their homes. I think the Government should retain jurisdiction over them, and to this end would suggest that each student should be required to take a "post-graduate course" in farming or at work at some trade, learned at school, with a course of reading.

This should require not less than three years for the completed course. This arrangement would be a source of support during the "trial period" of the struggling young Indian. Each reservation should have an authorized superintendent of post-graduate students. This might be one of the superintendents of the reservation schools, and he should be required to make detailed reports relative to these students and should be armed with authority that would guarantee him control of this class of pupils, and he should be held responsible for their advancement. Of course their farm training should be on their own farms and they should receive abundant assistance in developing for themselves a farm and building a home. If some such course was pursued, instead of "dumping" them out into the reservation, subject to all the discouraging environments that meet them at the very beginning of their better life, the results would be much greater.

Another important fact is worthy of consideration. I found that the per cent of those who had succeeded upon their return to their homes was much greater among those whose literary advancement or mental development was most pronounced. I fear that in the past the matter of a rigid mental development has not been considered with that importance which it demanded. The effort has largely been in the direction of industrial training. That the latter may be made to serve the student in a practical test, it is very necessary that it be supported by an aroused ambition, such as culture and mental training alone will surely give.

I have dwelt at considerable length on all these subjects, which seem to me are important and which should be discussed for the benefit of the cause.

I desire to express my cordial appreciation of the earnest coöperation of superintendents and agents in the work of the year. It has been a year which has crowned the cause of Indian education with great success. If the policy inaugurated by the present Commissioner of Indian Affairs can be kept in operation for a reasonable time the solution of the problem will be a matter of the past. There is no doubt that the only successful solution is in the education of the Indian youth, that they may become self-supporters, contributing to the wealth of the country and enjoying the blessings of a happy civilization.

I am truly grateful to the honorable Commissioner of Indian Affairs, and in fact to the Indian Office—to the gentlemen who have so ably presided over the

various divisions of the Indian Bureau—for uniform kindness and consideration, for forbearance in the attempt to acquaint myself with the new duties of an untried position.

Very obediently,

JNO. W. RICHARDSON,

*Supervisor of Education, District No. 4.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SUPERVISOR OF EDUCATION—FIFTH DISTRICT.

IN THE FIELD, *August 30, 1892.*

SIR: I have the honor to submit my first annual report as supervisor of Indian education for district No. 5, comprising Arizona, Colorado, New Mexico, and Utah.

During the past year I have been a close student, studying the Indian question very carefully, and I confess that I know very little about it now. We deal with a strange class of people. Many of them, though aged, are mere children, and how to reach them and do them most good should be the first question with every one in the service. We must do all in our power to win their confidence and then prove by word and deed that we are worthy of the same, and we can accomplish something with them.

Since the object of the Government is to educate and civilize the Indians, it is necessary to bring them to school. After we have them in school the instruction needed is entirely different from that given in schools for white children. We take them with practically no language. They do not have a name for many of the most common things around them, for the simple reason that they never used anything like those objects in their camps. Many of them never saw what we call a table or a bed! It is a new life for them in every respect, and we can not be too careful in starting them, and after they are started all of them require careful and patient guidance. I am pleased to report, however, that most of them are very willing to learn. Many of them are quite apt, and nearly all are quiet and peaceful. I am convinced that they give their teachers less trouble in this respect than the same number of white children would.

It did not take me long to see that only about one-third of the children of proper age and health belonging to this district were in school: that the capacity of our reservation schools is not equal to the number of pupils; that the pupils in the nonreservation schools advanced more rapidly than those in the home schools, and that the nonreservation schools were better prepared to teach different industries than those at home. On account of these reasons and in compliance with instructions from the Indian Office I gave the greater part of my time during the past year to the securing of pupils for the nonreservation schools.

At first thought it would seem very cruel to gather a number of children, take them away from home and parents, and place them amongst people of whose language and customs they know nothing for a number of years; but when you are amongst those people; see how poor they are; see their surroundings; know that you take the children to people who will take better care of them than their own parents can, and in a short time see that those children are happier at school than they were in camp, you begin to feel that in transferring them you did a very humane act.

Having given so much of my time to the gathering of pupils, it was impossible for me to visit all the schools in the district, but those which I did visit were subjected to a rigid inspection. Whenever I saw anything wrong in the school proper or in the shops, dining room, or dormitories, I made it my business to assist the proper person to make the necessary changes and improvements.

One of my special duties is to cheer up and encourage the different employes and children, and it affords me pleasure to state that my suggestions were usually carried out very nicely.

### DIFFERENT KINDS OF SCHOOLS.

**Contract schools.**—In this district we have contract schools of two kinds—boarding and day. The former bring about the more satisfactory results, but with one exception the contract schools do not do as good or thorough work as

is done in Government schools of the same grade. I admit that in some of the contract schools the children receive very good care and training, but as a rule the teaching force in these schools is not near so strong as it is in the Government schools. Consequently I find that a pupil who attended a contract school for four years is not so far advanced as one who attended a Government school for the same time. Again, the contract schools are not equipped to give the industrial training which the Indian needs so much.

**Government day schools.**—The one at McCarty's was closed because the Indians refused to send their children, and a new one was opened at Fort Apache. These schools are having a hard struggle to get along. In too many cases the parents do not take interest enough in the welfare of their children to see that they attend school. It is very often necessary for the teacher to send some one for the children in the morning and at noon, and even then the attendance is very irregular. Again some children might be willing to attend but they have absolutely no clothing that is fit to wear. These schools could be greatly improved by clothing the children and by paying an Indian policeman to see that all the children of the village in which the school is are in regular attendance.

**Reservation boarding schools.**—Arizona has four Indian agencies and at each one we have a boarding school. The work done at each one is quite satisfactory, but the capacity at each one should be enlarged and then the schools kept filled. The Pima school has the best buildings and the largest attendance. The San Carlos school is doing good work, but has poor quarters; since my last visit the buildings were thoroughly repaired. The school at Fort Defiance should have a much larger attendance. There are between 3,000 and 4,000 school children among the Navajos and less than 100 attend school! There are several hundred children who attend no school on each of the other reservations.

The only reservation boarding school in New Mexico is at Mescalero. Agent Rhodes had this school filled to its utmost capacity. About one-half the school children were in attendance. I transferred 26 to the school at Fort Lewis to make room for those not then in school. After the school is filled again the school population on the Mescalero Reservation will be nearly all in school. The school buildings at this agency are poor and very poorly arranged.

There is no school on the Jicarilla Reservation, and I am inclined to think that a school there would have a hard struggle to eke out an existence. The parents are very shiftless, decidedly opposed to schools and advancement, and deem it their duty to visit a neighboring town very frequently. At least 200 children of school age, not attending any school, are on this reservation. Their home is close to the Fort Lewis school, and the Government should compel the parents to place their children in that school.

The Southern Utes in Colorado have at least 225 school children. Of these only 16 attend any school. When I was with these people they were urged by the whites, who desire to take possession of the land on the reservation, to oppose the plan of the Government and not allow their children to go to school, and they actually succeeded in making the Indians believe that the Government was doing wrong in asking them to place their children in any school. I would recommend that the same course which I suggested for the Jicarillas be followed on this reservation.

The new buildings for the Uintah school in Utah not being ready in time for the opening of the school interfered very much with the enrollment and attendance at that school during the year, but with the comfortable quarters which we have now we entertain bright hopes for the future.

**Bonded or training schools.**—Of these we have three in Arizona, two in New Mexico, and two in Colorado. The second one in Colorado is at Fort Lewis, and was opened in March. This is a delightful place for a school, and it has the grounds, buildings, and other accommodations to make it one of the large Indian schools of the country. The work done in this class of schools is very satisfactory, but we are all the time trying to do still better. It is really surprising to watch the progress that the pupils make, especially in the different industrial departments.

#### RECOMMENDATIONS.

Establish a reading room for the children at every school and supply it with suitable reading matter.

Either compel all contract schools to follow the course of study prepared by the Indian Office or close them.

The Indians are the wards of the nation. All of them should be educated and for many reasons the Government should do that.

The matrons at all the Indian schools should be trained nurses.

The Government should open a day school in every one of the pueblos and compel the children to attend that school.

The Government should take steps to compel every Indian child of proper age and health to attend school. At present, in this district, not more than half the school population is in school. When the children return from school their former companions will assist in bringing them back to their old habits. By compelling all to attend school a great deal of that retrogressive tendency will be conquered.

Very respectfully, your obedient servant,

DAVID S. KECK,  
*Supervisor, Fifth District.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORTS OF SUPERINTENDENTS OF SCHOOLS.

### REPORT OF SCHOOL AT FORT MOJAVE, ARIZ.

FORT MOJAVE, ARIZ., *July 20, 1892.*

SIR: I have the honor to submit herewith my second annual report of the affairs of the Herbert Welsh Institute, located at Fort Mojave, Ariz.:

**Attendance.**—I was sent here to organize this school two years ago last June, and the school was opened on the 8th day of October following with 27 pupils in attendance. This number soon increased to 101. The total enrollment for the fiscal year 1892 has been 122. Unlike the first year, the children were eager to reënter school. Nearly everyone who attended school the first year was anxious to return, and I could have taken in more had our capacity been greater. The pupils have been much better satisfied this year than last, as is evidenced by the fact that while we had 18 runaways last year we have had but 5 this year. Three of these five afterwards wished to return and I accepted one of them. During the year I found it necessary to discharge two of the larger boys for bad conduct. In January we sent 11 of our larger and more advanced pupils to the Genoa industrial school.

Not only has it been much easier to persuade the children to come to school, but the parents have been much more favorable, even bringing their children in some cases 100 miles on foot to attend. As these old Indians gave me a great deal of trouble last year, this change of heart on their part is very gratifying indeed.

I might state here, that I have had no rations to give these Indians, and no policemen to force them to send their children to school. The children came because they wanted to, and stayed because they preferred the school to their homes. With greater facilities this year we have added very much to the attractiveness of our rooms, and by means of evergreen mottoes, pictures neatly framed, cards, illustrated papers, picture books, games, rugs, carpets, etc., have made them places of comfort and beauty. These little things appeal mightily to the untutored hearts of these little ones, and tend very strongly to foster in them a desire for better things.

I desire here to thank those excellent Christian ladies, Mrs. M. E. Dorchester and Frances E. Sparhawk, for their many valuable gifts of pictures, books, papers, etc., to this school.

**Literary.**—Our literary work has been conducted along the line of the regular course of study adopted by the Indian Office. We have been blessed by having with us three most excellent teachers, painstaking and enthusiastic. The pupils have been docile and studious. Twice the advancement has been made this year than last, and with less wear and tear.

The pupils have grown fond of talking to each other in English when by themselves, and like to sing our English songs. They are still backward about showing a knowledge of our language before white strangers. They take their books to their rooms with them at night for study. Even when at work some of them like to have a book at hand, and very often we will see a boy or girl acting "teacher" with a class of noisy little ones around "spelling down."

**Industrial work.**—This school has been an "industrial school" in name only so far. We have never had but a carpenter and blacksmith until last April, when we let the carpenter go and engaged a farmer. We have had from 4 to 8 boys working in the carpenter shop every day, and with marked success. Four boys have been working in the blacksmith shop and from 2 to 12 on the farm. In all cases they learn quickly. In fact an Indian boy can be taught to do anything that a white boy can, although the white boy will do the work easier, because he thinks while he works.

Our girls are taught cutting, fitting, sewing, crocheting, knitting, cooking, etc. Every Friday afternoon, during the past year, I have had a cooking class conducted by the lady teachers. Here the girls are taught how to make bread, pies, cakes, cookies, and various other articles of diet. Each has her book and writes in it her recipe after using it. These books they take home with them for use.

The progress made by our girls the past year has been more than satisfactory. They have outstripped the boys. Last year they wouldn't talk. They were bashful and awkward in the extreme. We didn't have a girl who could walk across a room without falling over a bench or tripping somebody down. While free and comparatively graceful in their homes, get them in a schoolroom and they were the quintessence of everything awkward and ungainly. They were terribly conscious of their own awkwardness, and had we laughed at or ridiculed them nothing could have been done with them. But by being with them all the time, kindly showing them something better, not harshly reproving, but gently encouraging, we have them now so they will chatter with you by the hour; they can walk across the room without getting their feet tangled; they can make progress forward instead of sideways; they can look you in the face when they speak, and can use their handkerchiefs instead of their sleeves.

**Crops.**—Since writing my last report the Department has sent us a most excellent irrigating plant, consisting of two Smith & Valle compound duplex pumps, each with a capacity of 1,200 gallons per minute, with boiler and pipe complete. They reached Fort Mojave on the 16th of March last, too late to be of much service this year. We have fenced in about 20 acres of bottom land, cleared the land of its thicket of mesquite trees, grubbed out the stumps, and have about 8 acres planted. From this small farm we have already raised and growing—

Hay (4 tons, at \$30 per ton) .....	\$120.00
Hay (growing, 10 tons, estimated at \$30 per ton).....	300.00
Potatoes (100 bushels, at \$2 per bushel).....	200.00
Melons (estimated 2,000, at 10 cents).....	200.00
Pumpkins (estimated at 1,000, at 10 cents).....	100.00
Sweet potatoes (estimated at 25 bushels, at \$2.50).....	62.50

982.50

Besides onions and small vegetables.

The farm is a success and in time will make money for the school.

**Health.**—The health of the school could hardly be better. In the two years of its existence there has not been a death. The doctor has given medicine to 169 pupils the past year. In the winter we had a slight attack of "grip" in the school, and the girls had quite a siege of sore eyes. I attribute the continued good health of the pupils to the fact that the Department has supplied us very liberally with flannels, and to the further fact that our matron watches the children very closely, not allowing a boy out in his shirt sleeves in January nor with a flannel shirt, vest, and coat in June. The excellent good health of the school has done much to dissipate the former lively opposition of many of the old Indians.

**Missionary work.**—Nothing has been done by others than school workers along this line. Each Sunday we have a Sabbath school and song service. These are attractions new not only to the pupils, but to the older Indians as well. Every Sabbath we have from 25 to 75 old Indians in attendance. When Dr. Dorchester visited us in March and spoke at our Sunday school, he had the very respectable audience of 78 old Indians and 120 pupils. We are going to do more Sabbath school work this year than ever before. By giving our little ones a knowledge of our Bible I hope to remove their old superstitious myths and fancies. This is true education. It is superstition that keeps the savage races down. Remove the cause and the effect can not help but be satisfactory.

The longer I remain in the Indian service the more I realize the great need of moral training among the pupils. We want every American citizen to be a man, and we can not have a man without first endowing him with the elements of manhood. What makes a red man a savage but his responsibility to no one and nothing, except his superstition? If we can train his moral sensibilities so that he will feel responsible to an inward monitor, and hearken to its warnings of right and wrong, we are certainly giving him an education in every way proper and necessary.

**Patriotism.**—The older Uncle Sam becomes the more of dignity he acquires. Every year adds a wrinkle, and every wrinkle begets respect. As the quad-

renial approaches we can see his long Yankee form straighten up, the stubby chin raised a little higher in the air, his fine, fatherly old face grows still finer and nobler, the kindly eyes sparkle with the luster of yore, and even the quaint old swallow-tail and striped pants set themselves with a jaunty air and acquire a beauty that silk and velvet could never attain.

If the preparations for our great anniversary were stopped to-day more permanent good has been accomplished than man's wildest visions ever pictured. In every heart in every part of our great land is awakened a new feeling. Patriotism is born anew and is here for all ages. The love of "home and native land" was never so strong as now. A new study has been added to the curriculum of our schools, and every district has its national flag.

We have adopted this study into the regular course at the Herbert Welsh Institute. I want every Indian heart filled with the love of the flag. They already have patriotism in a selfish, narrow way. They will fight for the few square miles of territory immediately around them, but while we are striving to bring them to a realization of the fact that they are Americans, we are trying also to instill the belief that the same flag that floats so airily from the pole in the parade at old Fort Mojave is the same that floats from the dome of the Capitol. We try to teach them the symbol of the flag. Every evening the bugle is brought into play, the flag saluted by the pupils and hauled down amid a chorus of "Hurrah for our flag! We give our heads and our hearts to thee. Hurrah! Hurrah for our flag!" This is an amusing and senseless ceremony to them now, but the time will come when the seed thus planted will bear glorious fruit.

**Public interest.**—The feeling in the community regarding the school has materially changed. Failure is no longer predicted, success is acknowledged, and with this acknowledgment come kind words and encouragement.

I desire to thank you most earnestly for your very cordial support and encouragement.

Very respectfully,

S. M. McCOWAN,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT ON YAVA SUPAI INDIANS.

FORT MOJAVE, ARIZ., *June 25, 1892.*

SIR: In forwarding the report of John F. Gaddis, farmer among the Supai Indians, I have the honor to inclose one of my own.

June 18 I started to inspect once more the condition of these Indians, as well as to see what had been done by Mr. Gaddis as farmer.

I considered the season of the year as especially favorable for a true, unbiased statement of facts concerning the condition, resources, etc., of these Indians, inasmuch as the present year's crops are not matured, the last year's crops should be almost gone, and if starvation ever stared them in the face it would most likely be at this time.

I have taken particular pains to make my report complete and accurate, so that the Department would have on file a permanent answer to mistaken petitioners, and I will vouch for every statement as being absolutely correct.

**Present food supply.**—I visited every camp in the village. Their food consisted of corn (last year's), dried peaches, mescal, kesi, pine nuts, venison, ripe apricots, and flour. These things I saw, some in one camp, some in another. The corn, dried peaches, and pine nuts are stored away in holes in the rocky cañon walls, from 100 to 200 feet high. They have plenty to do them until harvest, and some to sell. Mescal is inexhaustible all around their homes, and is really a very appetizing and strength-giving food. They have about twenty apricot trees, the fruit of which is just ripening. Deer and antelope are very abundant.

**Census.**—I counted 150 Indians. Mr. Gaddis has counted as high as 189. There may be 200 all told, but I doubt it. There are about 40 children of school age.

**Health.**—I did not see a single case of sickness. I saw one child deformed from his birth and one blind man.

**Prospective food supply.**—I personally examined every patch of ground they had planted or cleared. It is difficult to get the exact number of acres from so many small, irregular "patches," but I estimated it at 63 acres. The crop consists of corn, beans, melons, pumpkins, potatoes (a few), and pease. Everything was in excellent condition, and as they have an abundance of water there is no doubt

about a plentiful harvest. The number of acres planted should really be doubled, because every acre has a double crop—pumpkins or melons being planted between the hills of corn, etc.

When I visited them two years ago they did not have over 20 acres planted. You can easily pick out every acre that has been plowed. Mr. Gaddis has planted about 2 acres of alfalfa which is looking very well.

**Fruit trees.**—I actually counted 1,295 peach trees, and I did not get them all by several hundred. All the trees I counted are old and in full bearing. The trees this year are literally loaded with fruit. I am very sure the 1,295 trees will average 5 bushels to the tree. They have also about 20 apricot trees in full bearing and a number of small ones.

In places the ground is covered with wild grapes.

**Tools.**—I actually counted 78 hoes. As there are only about 43 families this makes almost 2 to a family. I am not sure I saw all they have. As Mr. Gaddis has issued but 18 hoes they must have had on hand 60 of these useful implements, which does not agree very well with the "2 or 3 old hoes and axes" reported to your office. I saw 20 axes, 6 hatchets, and 6 spades.

**Clothing.**—As it has been reported to you that these Indians were destitute of clothing and liable to freeze to death in winter, I took particular pains to see what they had in this line.

I did not see a naked Indian in the camp, man, woman, or child. Every man was well dressed, and I counted fifty pairs of pants hanging in the different wickiups. There were also shirts, vests, coats, dresses, shoes, boots, muslin, calico in abundance, some flannel, and some linen. I counted 200 Navajo blankets of the best make. These would average over \$5 apiece in the market. I counted 150 deer skins, and they had just taken over a hundred to the Moqui villages to trade. These skins are worth from \$1 to \$5 apiece.

**Suggestions.**—If the work is continued with these Indians next year, I would respectfully suggest the purchase of 200 or 300 well-bred Angora goats. I am sure they would do well. Also, 500 tame grapevines, 200 Adriatic fig trees, and 50 plum trees.

I would recommend the retention of Mr. Gaddis, and would suggest that Mrs. Gaddis be employed as field matron at not less than \$25 per month. She is a good cook, a good seamstress, kind, pleasant, and capable, I think. She was before marriage a school-teacher.

If no farmer is employed for these Indians next year I desire instructions as to the disposal of the team, harness, and wagon purchased for the use of the farmer, and suggest that they be transferred to this school.

The reports of my stealings from the Suppais has now reached quite respectable proportions. In round numbers it is now \$7,000, which is doing fairly well, I think, from a total appropriation of \$700. The next report will probably be \$70,000, and I will be able to retire.

As I took this trip for the reasons herein stated, and without obtaining previous authority from the office, I inclose vouchers for your approval. I did not have on hand quite enough money to bear all expenses, but am perfectly willing to bear the extra amount myself.

Very respectfully,

A. M. McCOWAN,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

#### REPORT OF FARMER FOR YAVA SUPPAI INDIANS.

WILLIAMS, ARIZ., June 7, 1892.

SIR: Having just returned from the Suppai villages, where I have been since April 10, assisting the Indians in preparing their land and planting their crops and repairing their ditches, I hereby make the following statement as report to date. Prior to leaving Williams my instructions were as follows: To purchase necessary tools and provisions and deal them out to the Indians as pay for work as far as possible, thereby encouraging a spirit of industry; repair their ditches, prune their trees, and in general develop a knowledge of agricultural pursuits among them.

I left Williams April 4, and arrived at the reservation April 10. My first work was to plant some corn and sow some alfalfa. We kept the plow going as much as possible and Indian men and women at work grubbing and preparing land until about 100 acres were planted in seeds (part white man's way and part Indian way) and some more prepared for a fall crop. I repaired all their ditches and built some new ones to supply all land under cultivation.

**Condition of Indians.**—As to food, I consider these people well supplied and always have been. Mescal grows plentifully all over the country. They have abundance of peaches and many other

substitutes within easy reach. As to clothing, I consider them very well supplied. They make buckskin clothing and sell to the Navajos. They have blankets to sell and buckskins to sell. As to shelter, they have no houses. They live in little wickies or willow huts. It is never very cold and very little rain, so they do not suffer for shelter. Moral condition of these people seems to be good. There seems to be no depravity and very little polygamy.

Condition of land.—The land is a rich sandy loam. I should judge at one time or times 200 acres have been under cultivation, but only about 15 acres were cultivated last year. The rest had been given up to weeds and willows.

Difficulties.—I experienced many difficulties in getting them to work for supplies "as instructed." They had been so instructed by unscrupulous whites, that they had come in possession of the idea that when I should come all earthly wants would be fully gratified from an inexhaustible supply which the United States Government had on hand for all Indians, and they expected me to deal out to all their various wants for no recompense on their part. But I have labored to convince them that I wished to be just, to deal by them as fairly as they would by me, exchange work with them and pay them honestly for what they did. As to prices on their work, I will recount. For a day's lazy work they want me to give them from one to three sacks of flour. For bringing a sack of flour from the hill top they want me to give it to them and throw in a can of baking powder and a little sugar and coffee. But I have labored to impress on them as far as possible the equity of values, and think in a measure I have accomplished this.

There are 47 families, about 200, or possibly 250, souls in all. So far I have been unable to get a correct census of them. I am satisfied I have done them real good, although if the work should drop with this fiscal year no permanent good would result from present outlay. They have land enough and water enough so their acreage could be greatly increased. All they need, in my judgment, is about two or three small plows and as many sets cheap harness. They are very well supplied with hoes and shovels. I think it would be wise for the Department to furnish them with seed wheat and rye. Also about 100 pounds alfalfa seed. There is plenty of water to run a mill which would grind their meal and flour. They raise good corn. I think this an excellent fruit country. Their trees are in very poor condition for fruit raising, as they are in a thicket growth. I think if some of the more intelligent ones were taken to California and shown the proper way of planting and caring for trees, it would help to advance their ideas very much. They have a desire to raise stock; sheep and goats would do well there. It might be well to give them a small start in these lines.

They detest the name of a school, but an institution under any other name would do well. The goal of their ambition is to write; they are great imitators and will sit for hours and work with a pencil on a written copy. My wife has shown them how to cut and fit dresses; they take wonderful interest in it. I would encourage the building of a schoolhouse on the reservation. I think it could be built out of stone at a very small cost to the Government. They are very much opposed to going away to school on account of having been so prejudiced by unscrupulous men for the purpose of accomplishing other ends.

I am, very respectfully, yours,

JOHN F. GADDIS.

S. M. McCowan,  
Superintendent Indian Schools, Fort Mojave, Ariz.

#### SUPPLEMENTAL REPORT ON YAVA-SUPAI INDIANS.

FORT MOJAVE, ARIZ., July 20, 1892.

SIR: So little seems to be known of these Indians, and so many false reports have been sent to the Indian Office regarding them, that I desire to make as complete a report as possible, based upon actual and personal knowledge of them, their home, habits, resources, etc. Upon orders from your office I have personally, in the past two years, visited them in their wonderful and almost inaccessible cañon home, and my report is based upon what my own eyes perceived.

Their origin is somewhat clouded. Judge Sanford, of Williams, Ariz., believes them to be a blending of the Mojave and Apache tribes. Others incline to the belief that they were persecuted outcasts from the Hualapai tribe, whose language is very similar.

Their villages are in Cataract Cañon, about 75 miles north of Williams. This cañon ranges from 3,000 to 5,000 feet in depth and ranks next to the Grand Cañon in natural beauty and grandeur. Their homes are not more than 8 or 10 miles from where the Cataract Cañon joins the Grand Cañon, and in this distance the depth of the cañon is increased many hundred feet by a series of magnificent cascades and waterfalls. Nowhere in the world has nature been more lavish in her demonstrations of power and exquisite beauty. It hardly seems possible that a race of people, however savage, could live for even one generation where the Book of Nature is always invitingly open before them without imbibing at least a few of its primary lessons. But I can not see that these Indians have learned any of its teachings.

I saw them two years ago, when the Messiah craze was at its height, and they were dancing day and night for the coming of their Savior. To make these dances more impressive to the uninitiated, certain members would pretend to receive messages from the Messiah, and, suddenly breaking away from the circling dancers, would rush into the center of the circle, throw themselves upon the ground, writhing, shrieking, moaning until utterly exhausted. Their superstition is wonderfully dense, their every act being guided by signs and symbols.

Their women appear to be chaste. The tribe, which numbers about 200 souls, has always been peaceable.

They are well armed with Winchester rifles, and are great hunters. They are seldom without deer or antelope meat, and their rude shacks are filled with skins. Besides deer, antelope, rabbits, and other small game, nature produces every year, without cultivation, an abundance of juniper berries, piñon nuts, mescal, and tunis roots—all of which, and especially the piñon nuts and mescal, are exceedingly rich and nutritious.

Surrounding their homes is from 600 to 1,000 acres of the richest kind of soil. Just above their villages the Cataract Creek emerges from its sandy bed and flows onward to the Grand Cañon in a glorious stream, 12 to 20 feet wide and 3 to 4 deep. There is such an abundance of water, and the land slopes so gradually, that irrigation is as easy and simple as play. This soil will produce an abundance of almost every kind of semitropical vegetable or fruit.

Last year they cultivated 15 or 20 acres, and this year they have in between 60 and 70 acres. Their crop consists of corn—a very large, generous variety, very sweet—melons of all varieties, beans, a few pease, onions, and potatoes.

They have either a splendid variety of peach trees, or the soil and lovely climate impart to the fruit a most delicious flavor. During my visit to them in June I counted 1,295 trees, old and in full bearing. The trees are literally loaded to the earth with fruit. They will not have less than 4,000 bushels of peaches this year. This fruit they halve and dry in the sun. It is then "cached" in the cañon walls many feet above, and used as wanted. The merchants at Flagstaff and Williams are always eager to buy this dried fruit, and it is a source of very considerable revenue. Besides peaches they have a few—I counted 20 in full bearing—apricot trees, and an abundance of wild grapes.

The Government provided a farmer for these Indians on February 1, 1892, which accounts for the increase of cultivated land over last year. It also authorized the purchase of tools, seeds, etc.

Very respectfully,

S. M. McCOWAN,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

---

### REPORT OF SCHOOL AT KEAM'S CAÑON, ARIZ.

KEAM'S CAÑON, ARIZ., *August 25, 1892.*

SIR: I have the honor to submit my annual report.

This school was in continuous session during the twelve months of the fiscal year 1892.

**Attendance.**—The total enrollment was 115; 8 pupils were transferred to Lawrence, Kans., and average attendance was 103. We had no trouble in getting new pupils to take the places of those transferred, but the transfer of pupils was accomplished only by the determined fight of the pupils themselves for their parents' permission, and the Moquis, as a tribe, are unanimous in their opposition to having their children taken away for education. When I dismissed school for vacation in July, 95 of the parents gave their promise that their children should be returned on the day appointed, willingly and spontaneously, and some were a little indignant that I should even ask them for a promise, thinking that I ought to know from their actions and words that they were well pleased with the school and wanted to keep their children here; but 7 of the Oreibas were reported to me as being opposed to the school, and hence I made them give me their hands in promise that their children should be returned before letting them go.

**School work.**—The work has been carried on regularly and without interruption. The pupils can understand nearly everything their teachers try to tell them, and I have little trouble in having common things interpreted into Moqui. At one time I used one of the pupils to interpret in a general council, and she did well in translating from English into Moqui, and pleased the Indians greatly; but none are competent to translate from Moqui into English for general conversation, although they can use simple English sentences, impromptu, by the hour. They show a great liking for books and papers, and everything is eagerly read to the extent of their ability.

**Industrial work.**—The girls show considerable efficiency in domestic work. Each girl, many only 6 and 7 years old, made herself two dresses, two skirts, and two suits of underclothes, doing all the sewing of seams, hemming, and buttonholes by hand. They also do good darning and mending, and the larger ones will soon be able to cut garments, as several have made dresses for themselves during vacation unassisted. Much pains has been taken to teach all forms of politeness and good table manners, and these are noticed by all visitors.

The boys have kept a plentiful supply of good seasoned wood ahead throughout the year. The school farm, of 30 acres, was mostly planted in rye, wheat, and oats, since a crop of these is of more value, in furnishing forage, than any other crop we can produce here. We have plenty of hay for all our stock, and perhaps 100 bushels of grain for seed.

All the national holidays were observed with appropriate exercises by the pupils, in which they took great delight, and acquitted themselves well. The total expense of maintaining the school has been \$181.82 per pupil for twelve months.

**Condition of Moquis.**—The Moqui Indians are at present in their usual condition. The rains have been light, but I think their average crops are secure, so that their maintenance for the next year is not endangered.

I can see little change in the habits and customs of the tribe. Their religious ceremonies are kept up just as usual, in fact one ceremony occurred this year which had not occurred before for seven years, and the snake dance is coming off in three of the villages this week.

However, they are building new houses much faster than the Government can furnish roofs for them, and the most of those having new houses completed are living in them during the summer; but after the crops are in I think many will spend most of the time during the winter in the villages. Three families, however, spent last winter in their new houses, and have moved everything from the villages. The Indians have built the walls, and we have put roofs, floors, windows, and doors to twenty-six new houses during the year, at an expense to the Government of \$145 each. These are good substantial one-story stone houses, averaging about 16 by 26 feet in size, mostly of one room. Several have commenced additions for kitchens and storerooms, and nearly every new house has several more new ones started close to it, where relatives of the owner wish to build and live; all of which seems to indicate that they intend in the future to change their habitation permanently; but the force of their customs, and especially of their religious ceremonies, will make the change slow, as many of them oppose the whole movement, and it is giving rise to a strife among them, which becomes more bitter as the departures increase. I think the majority of the tribe is in sympathy with the efforts of the Government, but there is a large faction who keep out of all councils, and never fail to strike a blow in the back when an opportunity offers.

**Water supply.**—We have improved ten of the springs and made the water much better and more available, and have material on hand for improving fifteen or twenty more. There is a well auger here which works splendidly, and we have sunk two wells, but found no water. We have engaged men to operate this auger, and expect soon to have it running continually, when we can dig three wells per week. In this way I expect soon to discover whether or not water can be developed within ordinary distance of the surface. While I have little hope of finding much water, yet it is of such value in this country that the discovery of only one or two good wells would be worth all the expense.

The fall planting of wheat and rye succeeded on the school farm, where it was planted during a rainy time, but failed where planted after the fall rains, and we expect to try again this fall, for if it can be made a success, it will be of more value to these people than any other crop. The Indians are doing some plowing now for this purpose. The plans adopted by your office for the advancement of this people have been kept steadily in view, and nothing else presented to change the purpose of the Indians, and I think that substantial, hard won, progress has been made.

Very respectfully,

RALPH P. COLLINS,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT PHOENIX, ARIZ.

PHOENIX INDIAN SCHOOL,  
Phoenix, Ariz., September 10, 1892.

SIR: I have the honor to submit herewith my annual report of this school for the fiscal year ending June 30, 1892.

The school was opened for the reception of pupils on the 3d of September last in a 2-story brick structure situated in the west end of Phoenix, and leased for the use of the school until buildings could be erected on the school site situated 3 miles north of the city. The house was not well adapted to the requirements of the school, but the prevailing conditions in many respects were highly favorable and the school prospered from the outset.

**Attendance.**—During the first day of the term 31 boys were enrolled. On the following Monday, the 6th, 10 additional boys were received. A few days later another boy was admitted, making 42 in all, and the maximum number that could be fairly accommodated in the building. Owing to the arrangement of the house pupils of both sexes could not be properly cared for. Hence boys only were received.

Six of the boys had attended school for several years and made considerable advancement in certain of the elementary English branches. They were quite intelligent, and gentlemanly in their bearing and conduct. During the first quarter 5 of them were appointed assistants in the school. Throughout the year they have been faithful and helpful workers. Four of the pupils had attended the Pima Agency boarding school for a few months and made a mere beginning in their course of education and training. The remainder, 32, were raw recruits that could neither speak nor understand English.

With a single exception all were remarkably well formed and healthy. The majority were large boys or full-grown young men. They were well-disposed and eager to learn and proved to be willing, handy workers, and apt students.

**Industrial work.**—For nine months, until girls were admitted to the school, in addition to the work usually done by boys in an Indian training school, they rendered all the assistance required in conducting the domestic affairs of the establishment. Under the direction of the several employés they kept the house clean and neat, set and cleared the tables in the dining room, washed the dishes and cooking utensils, made bread and pies, and cooked meats, vegetables, and other sorts of food. They washed and ironed their own clothing and the sheets, pillow slips, table linen, and towels belonging to the school. They displayed surprising aptitude for these lines of domestic work.

**School work.**—In the school room they were attentive and diligent, and under the tuition of their excellent teacher, Mr. Hugh Patton, a Pima Indian, made rapid progress in their studies. As a rule, in all the departments of the school they rendered prompt and willing obedience to those exercising authority over them.

While the school remained in town they attended the Presbyterian Sabbath School and church services. In the Sabbath school they were divided into classes, taught by prominent members of the church, and in other respects treated on an equal footing with the white pupils of the school.

**Sunday observances.**—Each Sabbath afternoon we had exercises in the school room, consisting of singing, Scriptural recitations by the pupils and addresses by visitors. Usually the room was crowded by citizens and strangers. Frequently Indians from the reservation were highly interested spectators.

The large pupils attended quite a number of public meetings held in the city, visited the constitutional convention several times and availed themselves of other favorable opportunities for improvement.

Under all circumstances their deportment was admirable. No complaints were ever alleged against them. I never heard of any unfavorable criticisms in regard to them. On all hands their manly bearing, correct deportment, and rapid improvement were recognized in terms of praise.

During the two months that have elapsed since the school was transferred to its present admirable quarters it has been improved decidedly. Its tone has been elevated, its efficiency increased. We have had Sabbath school each Sabbath morning and preaching each Sabbath afternoon. The ministers of Phoenix and its vicinity have, in accordance with a schedule of appointments, preached at the school. These church services have been attended by citizens of Phoenix and of the neighborhood in which the school is situated.

Persistent and systematic efforts have been made from the outset to secure the hearty coöperation of all worthy people, including Indians, in this section of

Arizona, in carrying forward our educational enterprise. It is my privilege to state that these efforts have been eminently successful. The school is popular with the Indians as well as with the whites, and is necessarily exerting a strong, growing, and salutary reflex influence on both.

**New location of school.**—Owing to delays in consummating the purchase the school site did not come under my charge until the first of last August. Since then much work has been done on the place by the school farmer and the carpenter, aided by the Indian assistants and pupils. The old fences have been repaired, and hundreds of rods of new fencing built. The irrigating ditches have been cleaned and otherwise improved. The place has been entirely freed from noxious weeds. A substantial frame building, containing a storeroom and an office, a laundry, a stable, sheds, and the necessary outbuildings, have been constructed.

Last March 450 fruit trees and 120 shade and ornamental trees were set out. These trees have received careful attention, and with few exceptions are doing well. A building site of 12 acres has been broken and carefully cultivated. Platforms and walks have been laid and many other minor improvements have been made.

**Buildings.**—On the 9th of December last a contract was closed with Edwin Sunderland for the erection on the school site of a large two-story frame school building designed to accommodate 125 pupils and the requisite force of employes, in accordance with the plans and specifications approved by the Commissioner of Indian Affairs, save that the first floors only of the porches were to be completed. Porches are an essential part of every good dwelling and lodging house in this climate. The great majority of people here, during the hot season, sleep either on porches or in the open air. The plans embraced 400 feet of two-story porches 10 feet wide. They were designed for employes and pupils to sleep on and to use in place of sitting rooms during the long, hot summer. But at the time the contract was let there were not sufficient building funds to complete the building and the entire porches at the same time. The contract price for the erection of the building and the construction of the first floor of the porches was \$18,380. The house was completed as per contract on the 30th of June. The materials used and the labor performed in its construction were fully up to the requirements of the plans and specifications.

During the progress of the work on the building it was ascertained that there was a sufficient balance of the appropriation made for the school for the fiscal year ending June 30, 1892, that might be used in finishing the porches. In view of the climatic conditions prevailing here, the Secretary of the Interior and the Commissioner of Indian Affairs deemed the porches an indispensable part of the building. I was therefore authorized by the latter, on the 24th of April, to expend a sum not to exceed \$2,500 in open market in the purchase of material and the employment of labor necessary for their competition. In pursuance of this authority they were finished on the 25th of June, at a cost of \$2,499.48. They were constructed of the best materials, in the most careful and workmanlike manner and at the lowest possible cost. They add greatly to the appearance, convenience, comfort, and capacity of the building.

The house is commodious, airy, and comfortable. It presents a fine appearance, and is admired by all who see it. Competent judges pronounce it the cheapest public building in Arizona.

The school was transferred to its permanent quarters on the 6th of May. The employes and pupils were delighted with the change. The house having been thoroughly cleaned and the several departments placed in good running order, steps were taken to secure more pupils.

**New pupils.**—On the 25th of May, in pursuance of authority received from the Commissioner of Indian Affairs, I visited Sacaton, Pima Agency, to obtain 20 or 25 advanced pupils from the boarding school at that place. With the hearty co-operation of C. W. Crouse, United States Indian agent, the superintendent of the school, and the agency physician, I readily secured 25 healthy pupils, 17 girls and 8 boys. These pupils had attended the boarding school from one to three years each and were a valuable accession to our school. After their arrival the enrollment and average attendance of our school to the close of the term was 69.

As my request for another teacher was not complied with, and as Mr. Patton could not properly instruct so large a number of pupils, Charles Blackwater, an Indian and the assistant disciplinarian of the school, was detailed to perform the duties of assistant teacher. His work was quite satisfactory to all concerned.

The only cash revenue realized from the school site was \$317, received for pasturing cattle.

The school stock consists of 8 good milch cows, 4 calves, a very fine short-horn Durham bull, 4 valuable horses, 12 hogs, and 36 chickens.

This is a most favorable point for a large Indian industrial training school. The school plant, in my judgment, should be so enlarged during the fiscal year ending June 30, 1894, as to afford suitable accommodations for 350 pupils—200 boys and 150 girls.

As a rule the employés of the school have performed their duties satisfactorily.

I am grateful for the liberal support given me in my efforts to build up this school by the Indian Office.

Very respectfully,

WELLINGTON RICH,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT FORT YUMA, CAL.

FORT YUMA SCHOOL, *July 26, 1892.*

SIR: In compliance with instructions received I have the honor to submit my annual report for the Fort Yuma school, California, for the year ending June 30, 1892.

During the past year marked improvement has taken place in the manners and conduct of the pupils; especially is this the case where children have attended several terms.

**Attendance.**—Reference to school records shows an increase of attendance over previous years, with fewer absentees. This is very encouraging and tends to create the impression that the Yuma Indian begins to appreciate the advantages of education and set a value on the benefits to be derived therefrom. I regret to add that there are yet many parents who think they ought to be paid for giving their children a chance to be taught the ways of the white man. Their ideas of the fitness of things are so vague that they imagine they are doing us a personal favor by giving their children to the Government to support and educate, and seek reward for their generosity in the storerooms of the school, in several cases soliciting flour as their due for bringing their children to school.

A rigid enforcement of a compulsory school law would do much towards reforming this, and by creating thoughts other than the mere gratification of his animal nature the Yuma Indian in time may be taught that there is some higher aim in life than that of eating and sleeping.

It is a matter of no small surprise to many of our visitors, ignorant of the Indian nature, that any difficulty should be experienced in securing a full attendance of children from the reservation, the contrast between the comfort and cleanliness of the schoolrooms and the dirt and squalor of the reservation is so plain. Until the Indian is educated and his thoughts lifted to a higher plane to enable him to attach a value to that which to him at present is an enigma this state of affairs will remain unchanged. That there is an increased interest in the school work displayed by the adult Indians during the past year is beyond question. I feel assured that next year will witness an increase of attendance of pupils with renewed interest in school work.

**School.**—A general inspection of the household management, dormitories, kitchen, sewing room, and workshops will convince the most skeptical that good work is being done and that a great reformation in some respects has already been secured.

During the month of January this school met a severe loss in the complete destruction of superintendent's quarters by fire. The fire was of mysterious origin and, occurring at night, was controlled and confined to this one building by the herculean efforts of the citizens of Yuma, Ariz., and the employés, having nothing but buckets of water to pour on blazing porches. Not an Indian from the reservation came to offer aid or render assistance. The urgent need of fire apparatus was strongly felt at this time; an estimate of the cost of same has been furnished the Department.

**Improvements.**—Considerable expense has been incurred during the past year in the repair of adobe walls of school buildings to prevent further erosion by the weather. At present this work is all complete. Several of the buildings having adobe or dirt roofs had new ones of tin replace the unreliable and unsat-

isfactory dirt covering. This, with the building of porches, putting in of new floors where necessary, making tables, cupboards, and the doing of necessary repair work has furnished the desired training of the carpenter's four apprentices.

**Industrial work.**—A shoe shop having been added to the branches of industrial training at the school furnishes pleasing and agreeable work to four apprentices, who display great aptitude for this class of work. Under the direct supervision of their instructor they have each made for themselves a pair of shoes of which they seem proud.

Creditable work has been done in the laundry, the older girl pupils ironing and taking care of the clothing of the pupils of the school.

In the kitchen the girls have made good progress in the attainment of habits of cleanliness, in cooking, and in the care of table and kitchen ware.

Decided improvement is noticeable in the sewing room, where the older girl pupils are taught to cut and make their garments. Many of them show great liking for machine sewing, and the character of the work turned out here in this department is first class. The skill of many of the pupils in knitting and crochet work is a matter of comment to visitors, who all express surprise to see the Indian girls from the reservation assiduously plying the needle.

The formation of a company of cadets has proved of additional interest to many of the boys and has had a tendency to retain many who would otherwise have sought on the reservation occupation for many idle hours.

In conclusion, I desire to add that, all things considered, the work of the past year has been very encouraging. The capacity of the Yuma Indian, his power of education, and aptitude for a few of the trades, is no longer a question, but a conceded fact: it but remains to furnish means to continue the reform inaugurated in the schoolroom into the future life of the school boy or girl, and thereby complete the work making the Indian a self-supporting, intelligent, and conscientious citizen.

With the expression of my appreciation and thanks for the many courtesies extended to me by the Office of Indian Affairs, I remain,

Very respectfully,

MARY O'NEIL,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT GRAND JUNCTION, COLO.

TELLER INSTITUTE, *Grand Junction, Colo., August 20, 1892.*

**SIR:** In reviewing the year's work, though it is as a whole quite gratifying, it has not been unmixd with unsatisfactory and trying conditions.

**Runaways.**—The year was ushered in by the running away of 7 boys whose return I failed to secure, though every effort was made to intercept them by writing and telegraphing civil officials along their line of travel, and a persistent and continued chase after them over the mountains. Two of them reached the reservation in safety and reported having seen me hunting them in the mountains. A third enlisted in the Army. Continuous correspondence has failed to elicit any information concerning the other four, though every clue has been followed up by acting Agent Capt. Lewis Johnson, at one end of the line and by myself at the other. An article in the *Arizona Enterprise* describes the finding of the remains of an Indian boy and a horse, both of which must have perished of thirst in a desert region near the "Vulture" mines. Among the effects were a number of letters showing conclusively to the minds of the readers that the boy was Arthur Ducat, one of the runaways; but as Arthur Ducat reached the reservation and is now in the Government school at Albuquerque, N. Mex., this judgment is erroneous. It is possible the remains were those of one of the boys, if so, Arthur Ducat knows which one. Several statements made by him have been followed up and found not to contain one iota of truth.

Other than this and an epidemic of la grippe that prostrated a large number of our pupils and so weakened the lungs of some as to cause them to break down under the attacks of inherited tuberculosis, and thus rob us of three children by death, the year has been probably the most prosperous in the history of the school.

**Buildings.**—Excepting the commissary, which is an inadequate, dilapidated

box-structure, and the laundry, which is condemned and is being replaced as rapidly as the house can be constructed, the buildings are excellent 2-story brick structures in excellent repair. The barn is ample and comfortable for the present supply of live stock; but the barn, milk house, meat house, bee house, coal house, roof of the ice house, and some farm implements are much in need of paint; but as all this has been provided for by estimates submitted I doubt not but the remedy will be soon at hand. A new commissary, an extension of the bee shed, and a shed for calves and farm implements are the unsatisfied wants.

**Farming.**—The adobe farm yields slowly to our most persistent efforts. I am this year experimenting with black-eyed peas, the most nearly never failing of all bean products. As forage I am trying sorghum, black Caffre corn, red Caffre corn, and am successfully raising alfalfa. As pasturage I am trying, by the kindness of yourself and the Department of Agriculture, *Alopecurus pratensis*, *Lolun perenne*, *Bromus inermis*, and some other grasses, none of which promise well at present.

**Irrigation.**—The old annoyance of lack of water for irrigation has been aggravated by a threat of the canal company to cut off our supply entirely. This elicited an investigation that has placed a record of the present status of the question in this office, as well as a letter from the general manager of the company to the effect that the Government is entitled to a contract granting supply because of stock surrendered. As the title of the company was a subject of litigation at the time the letter was written such contract could not be issued, and the matter can not be taken up, in the judgment of the United States district attorney, until after final settlement between present litigants. Immediately after such settlement I shall insist upon pressing the matter vigorously till something in the way of definite adjustment is obtained.

**Stock.**—The stock owned by the school, and which is a source of pride, consists of four work horses, two 2-year old colts raised on the school farm and weighing 1,108 and 1,270 pounds, respectively; also nine Holstein cows, which, besides feeding the calves, yielded 2,463 gallons of milk and 263 pounds of butter between January 12 and June 30; 57 colonies of bees will add a valuable product for table use for the coming year. All are cared for by the boys under the direction of the farmer and industrial teacher, Mr. William H. Palmer, except the bees, which are cared for by myself and two of the boys.

A hundred hens should be added as soon as possible after making provision for caring for them properly.

**Industrial.**—That the results from the farm are so unsatisfactory is more because of the stubborn adobe soil of the farm than lack of labor or willingness on the part of the farmer or the boys. We have succeeded in adding about 12 acres to our hay-producing lands as the result of an earnest effort to subdue and render productive 22 acres. Preliminary work is being done for seeding 57 acres to oats, alfalfa, and sorghum next year, which will, with only such results as were obtained the past year, raise us beyond the necessity of buying forage. The experiments of this year are convincing that squashes, beets, and black-eyed peas will yield a fair return when cultivated in this soil.

As the statistical table which is attached shows the product of the shops, including the buildings erected by the boys, it only remains to speak of the character of the work, of which too much can hardly be said in commendation. The product of the harness shop which has found sale has brought forth only commendation from purchasers, and the same is true of the product of the carpenter shop. The products of the shoe shop and sewing rooms are consumed on the place, but are certainly not outranked by the products of other shops. There is nothing in the school work more gratifying than the application and persistency of the children apprenticed to trades. The two boys learning cooking are able to do the entire work of the kitchen save alone the apportionment.

In all the industrial work the apprentices work half a day, which I think accounts for the close application both in the schoolroom and in the industrial arts.

**Literary.**—The advancement of the pupils in the schoolroom, notwithstanding the vicissitudes occasioned by necessary changes, has been fully up to the requirements of the course of study, while some of the work in drawing and vocal music has been most satisfactory.

**Sanitary.**—Every possible precaution has been taken to avoid the results of bad sanitation. Cleanliness has been insisted upon and secured in every department. Sewerage is impossible because of the fact that we can not drain into the river just above the city waterworks, and I have sunk three large cesspools and required all waste to be deposited therein. Although the results have proven

satisfactory this, the first season, I fear that in the future, after the ground has become thoroughly saturated, this will not prove a wholesome procedure.

**Enrollment and attendance.**—Nothing in the course of the year has been less satisfactory than the enrollment and attendance. The conditions were only the more aggravating because of the fact that there was no individual who could be charged with the evils. The appropriation was large enough to support more pupils, but not large enough to provide schoolrooms, though the dormitory room was at hand.

**Needs.**—A schoolhouse is our first and greatest need. With our present school-room facilities it is impossible to accommodate a sufficient number of children to enable us to draw our entire appropriation at a per capita of \$175. This is a most trying condition and was aggravated the past year by the fact that the children were offered by the Indians and had to be refused because of lack of room.

The necessity of a hospital for the isolation of pupils affected with contagious diseases needs no display of rhetoric to win appreciation.

A commissary large enough to hold the supplies and protect them certainly should be allowed and a man made responsible for the care of the property. The barn is not a desirable place to store crockery, queensware, and molasses, particularly as these articles crowd provender and tools out of doors; nor was the guard house intended for the reception of subsistence in wagon-load lots, while the blacksmith shop is by no means the best storeroom for bacon; but all of these have been used as indicated and time in issuing consumed accordingly.

Notwithstanding the labors of the friends of the cause only the schoolhouse and hospital are among the remote possibilities for the coming year.

Furniture for the dormitory erected last year and for the laundry now being built are imperative demands for this year.

Land for summer grazing must be set apart or all hope of sustaining a beef herd abandoned forever.

Very respectfully,

THEO. G. LEMMON,  
*Superintendent.*

## REPORT OF SCHOOL AT FORT LEWIS, COLO.

FORT LEWIS INDIAN INDUSTRIAL SCHOOL,  
*Fort Lewis, Colo., September 1, 1892.*

SIR: In compliance with instructions from your office, I have the honor to submit the following as the first annual report of the Fort Lewis Indian industrial school:

**School opened.**—I arrived here on the 17th of March last, and opened school with 5 Navajo children, which I brought with me from the Navajo school. We found the place in a somewhat dilapidated condition, but soon began to get it in shape for the reception of more pupils. On April 23 Supervisor Keck arrived at the school with 16 children from the Southern Ute Reservation. Our number has since been increased by the addition of 4 Navajos and 26 Mescalero Apaches, the latter being brought by Supervisor Keck from the Mescalero school. This gives us an enrollment of 51, and we hope to very largely increase this number at an early date.

**Site.**—Fort Lewis is laid off on the military plan. A large rectangular plaza 2,000 by 500 feet, surrounded on all sides, and crossed in two places by double rows of cottonwood trees, with a drive or walk between and a stream of water flowing by each row, forms the center of the ground. Around this center are arranged the principal buildings. In front of them and surrounding the plaza is a plank walk almost a mile in length. On the west are ten double residences with from ten to fourteen rooms each, built for officers' quarters. On the opposite side are the company barracks, which with little repairs and changes afford rooms for dormitories, kitchen and dining room, schoolrooms, play rooms, drilling rooms, etc. At the middle of this row of buildings, a little back and at the end of a short shaded avenue, is a two-story building of eight rooms, surrounded entirely by a wide veranda. This was built for the offices of the military officials and will be fitted up by the school for reading rooms and apartments where quiet games, such as checkers, authors, etc., can be enjoyed. Marbles and more boisterous games can be indulged in near by in a room 80 feet long with a porch 80 by 10 feet in front. Another one of these barracks has been fitted up for a boys' dormitory. It contains twenty-seven small apartments and six larger ones, all on one floor. I doubt if there is a better dormitory in the service.

At the upper end of the grounds are the superintendent's office, a large commissary, and a stone guard house, a neat-looking building with a porch on two sides. At the lower end of the plaza are the two hospital buildings and two neat cottages. These buildings are very suitable for girls' department, and I hope to use them for this purpose when we have a sufficient number of girls to occupy them. One of the hospital buildings is frame, the other brick. The frame building is surrounded by a veranda above and below, the two aggregating 560 feet in length. The brick building is the best on the grounds. It has a veranda 10 feet wide on three sides.

There are also on the premises four large storehouses, each about 100 feet in length. The buildings are sufficient, with a comparatively small outlay, in the way of repairs and modifications, to easily accommodate 500 pupils.

**Character of country.**—The surrounding country, which belongs to the Fort Lewis military reservation, affords splendid pasture, while the soil on the school farm is well adapted to the production of hay and oats. There are at the fort an abundance of barns and hay sheds to shelter a large number of cattle and store feed for them. Thus the school's facilities for stock-raising are all that could be asked for. We will have 4 miles of pasture fence constructed within a short time, and if we do not get authority to buy quite a large herd of cattle next spring it will not be because we do not ask for it. Cattle-raising can certainly be carried on successfully and profitably here.

With the rich, mellow soil and plentiful supply of water, the various kinds of vegetables needed by the school can be raised in abundance, and for storing them we have a stone storehouse with a basement story 30 by 100 feet, where a very large quantity can be put away safe from frost.

**Location.**—The location of the school is high and dry, with pure water and cool summers. The average fall or declivity of the grounds is almost 2 feet to the hundred, giving us splendid drainage. The buildings are large and airy, so there is no need of crowding; they are so numerous that cases of contagious sickness can be easily isolated. A large 14-room house has been fitted up for a hospital, so that the sick can be well cared for. What more could we ask for in the way of good sanitary conditions?

We have this year under cultivation about 50 acres of ground, and expect to have 100 acres ready for cultivation by next spring.

**Water supply.**—There is in place an extensive waterworks plant, including mains, large and small pipes, and a reservoir. After we get the engine, boiler, and pump, which have been estimated for, we will not only have a good system of waterworks, with good fire protection, but will also have power for a steam laundry, or for other purposes for which power may be needed.

Taking into consideration all these things, together with the fact that this is the nearest training school to the large number of Indians in Colorado, New Mexico, and Arizona, I see no reason why Fort Lewis should not soon become one of the largest and most successful schools in the service.

Very respectfully,

LOUIS MORGAN,  
*Superintendent and Special Disbursing Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT FORT HALL, IDAHO.

FORT HALL INDIAN INDUSTRIAL SCHOOL,  
*Blackfoot, Idaho, September 27, 1892.*

SIR: In compliance with instructions, I have the honor to submit the following annual report:

Having taken charge of this school August 5, 1892, and finding only 13 pupils in attendance, all except that number having been dismissed the latter part of June, this report will of necessity deal with the conditions as I found them rather than the work done last year.

**Location.**—This school is delightfully located in a valley among the foothills of the Rocky Mountains, 10 miles southeast of Blackfoot, Bingham County, Idaho, the nearest railroad point. Here is an abundance of fine agricultural and grazing land for the use of a large school, and being sheltered by the hills and well watered, it is unusually well adapted to stock-raising.

**Buildings.**—The buildings, 24 in number, are nicely arranged around a rectangular-shaped campus. By using for dormitory for small girls the building erected last year and intended to be used for shops, the school will have a capacity of 250 pupils, 100 girls and 150 boys. Five of the buildings are new and in first-class condition. The large girls' quarters and large boys' quarters both need considerable repairing. The dining room and kitchen are old and in very bad condition, and should be replaced by a new building. The hospital is inconvenient; rooms are badly arranged. Employés' quarters are unusually commodious and exceptionally well furnished.

**Farm.**—The farm consists of 2,000 acres, under fence, of which 65 acres were under cultivation the past year, 25 acres each to wheat and oats and 15 acres to potatoes and other vegetables. The yield is estimated as follows:

Wheat .....	bushels	400	Hay .....	tons	200
Oats .....	do	500	Cabbage .....	heads	640
Corn .....	do	30	Onions .....	bushels	150
Potatoes .....	do	850	Beans .....	do	12
Turnips .....	do	150	Other vegetables .....	do	432

There is water to irrigate 250 acres of land. It is my plan to cultivate this year a much larger tract than last year, sufficient to raise grain and alfalfa for the stock, wheat enough to bread the school, vegetables, etc.

The major portion of the farm is used for pasture for a herd of 160 head of cattle. This is ample pasture for a much larger herd. On account of its natural advantages stock-raising should be made a prominent feature of the work of this school.

**Industrial work.**—In the industrial department a harnessmaker, blacksmith, and carpenter are employed. I am not able to give a report of the work done in these shops the past year. With better equipment this work will be both excellent training for the pupils and a source of profit to the school.

**Health.**—Although remarkably well located, with pure air, good drainage, and other natural advantages, the health of the pupils has been very bad. There has been a great deal of sickness and a large number of deaths. The only serious

defect in the sanitary condition that I have been able to discover so far is in the water supply, which is entirely inadequate to the needs of the school, and, on account of the present system, is impure by the time it reaches the buildings.

The Indians of this reservation are bitterly opposed to this school, owing principally to the sickness and death of their children. Enrolling pupils will be the difficult work of the year. This was the case last year, as the records show the average attendance for the year to be only 69 $\frac{3}{4}$ . The capacity of the school was over 200.

In overcoming this opposition it is my aim to remove every reasonable objection of the Indians. So far I have met with nothing but discouragement. Filling this school will be hard, tedious work, but I believe it can be accomplished in time without the use of military force.

Very respectfully,

GEORGE P. GREGORY,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SCHOOL AT FORT LAPWAI, IDAHO.

FORT LAPWAI, IDAHO, *August 26, 1892.*

**SIR:** In compliance with circular instructions I have the honor to forward herewith my second annual report of the Fort Lapwai Indian industrial school.

Since my last report the school has made considerable advancement in all branches, and I am well pleased with the progress made, although I expect to improve upon this another year.

The pupils seem content and happy, many of them remaining during the vacation months. Such a thing has never before been known here, as pupils volunteering to stay at the school in the summer when their schoolmates were starting for their homes. We have had from 10 to 15 through the vacation, and sometimes more.

**School.**—School opened September 1 with 35 pupils, and others soon came in, so that by November 1 the attendance was 148.

The progress of schoolroom work was somewhat hindered by changes in the corps of teachers at the beginning of the term. The school was without a principal teacher for nearly three months, and the position of primary teacher was temporarily filled by advanced Indian pupils for two months. Since January 1, there has been no interruption in this department, and the children have made rapid progress in their studies.

Each teacher had been faithful and untiring in her efforts to advance the pupils in her charge, and all have succeeded admirably, as has been shown at the social gatherings given each month, where each teacher shows the work of her own pupils.

Two singing clubs, one of Indian employes and larger pupils, and one of young boys were organized and instructed by the principal teacher with the assistance of an organist; they practiced twice each week and furnished some excellent music for our entertainment and social gatherings.

While the general condition of the school has been greatly improved during the last year there is still room for much improvement.

**Band.**—The brass band under the leadership of Silas Whitman (an Indian graduate of Chemawa, Oregon) has been a source of great pleasure to the pupils and a benefit to the school in keeping them content and happy. It is also a means of attracting children to the schools who have never before taken interest in schools or education.

**Fourth of July.**—The entire school was invited to spend the 4th of July in Lewiston, Idaho, and to assist in the exercises of the day, while the band furnished the music for the occasion. The band, followed by the school boys in uniform marching, and the girls riding, and carrying banners of the different States of the Union, made a display of which I was very proud. They received compliments and praise on all sides and merited the good will and respect of the public, by their gentlemanly and lady-like conduct. Dinner and supper were given them by the citizens of Lewiston and most of the prizes for the "sports for boys" in the afternoon were awarded to the light-footed little red boys.

I think many of the people of the surrounding country were astonished to find

that there was an Indian school in their midst worthy of their notice, and a kindly feeling of interest never before manifested is now shown the school by them.

The shoe shop has a detail of 4 boys in the morning and 3 in the afternoon under the instruction of a graduate of Chemawa, Oregon. The work has all been in the line of a repairing owing to the lack of material for making shoes. Some of the boys show great aptness for the work and do quite creditable work. They have done the repairing for the entire school.

The carpenter shop has been in the charge of an Indian carpenter. The work has been done by him with the aid of 4 boys regularly detailed for the purpose. They have built outhouses, fences, a washhouse, meathouse, and repaired the laundry, sidewalks, porches, doors, windows, and roofs of buildings, made hayracks, wood boxes, tables, benches, and stands, put shelving in the warehouse and performed various other labor.

Blacksmith shop.—Four boys have been employed in this shop, and the work has been mostly repairing, putting up stoves, riveting stovepipe, shoeing horses, and general job work. The work has been very creditably performed considering that it was under the supervision of an Indian boy who learned the trade on the reservation.

Tailor shop.—Much work has been accomplished in the tailor shop, about 625 articles having been manufactured, such as boys' and men's shirts, girls' jackets and cloaks, heavy aprons for kitchen work, and uniform suits for boys, in addition to the repairing of boys' clothing.

Assistance in this department has been limited, owing to the small number of large girls and the demand upon them from other departments.

Sewing room.—The report of the sewing room is very creditable, showing over 900 articles fabricated, besides the usual weekly darning and mending of girls' clothing. The girls in this department have also been taught to do many kinds of fancy work, such as making rugs, shelf lambrequins, quilt pieces, crocheting, and tissue-paper flowers.

Kitchen and dining room.—The detail in the kitchen has been two in the morning and two in the afternoon, and as we are still confined to a kitchen 12 by 14 feet, with an old broken range 3 by 8 feet, and a sink the entire length of the kitchen for washing dishes, the amount of work in this department is more than would reasonably be expected. Meals are served from the kitchen three times daily, and the food is excellent, even under the existing condition of things, and I wish to give great credit to the cook, who has faithfully and patiently performed her duties under all these disadvantages; like the rest of us, she is living in the hope of something better.

The dining room has been in the charge of an Indian girl, and the neatness and cleanliness of this department reflects credit upon her management. One male and two female white employes are present in the dining room at each meal, so that the table manners of pupils are carefully watched, and all are cared for alike.

The bakery is in charge of a Chemawa graduate, and with the help of four boys, two in the forenoon and two in the afternoon, all the bread for the school is made by him. They keep the bakery clean and neat, and the bread is excellent.

The laundry work is performed by an Indian laundress with the assistance of four female pupils each half day. The work has been greatly delayed by having to haul all the water, and has also delayed that of other departments by causing them to wait for the clothes for repairing.

The new system of waterworks recently put in will entirely do away with this difficulty as it is carried directly into the laundry by iron pipes. This latter is a convenience of which we have long felt the need, as the services of one team of horses have been constantly required to supply the school with water.

The farm and garden have been the source of great benefit to the school, and have furnished a large supply of all vegetables and cereals both for summer and winter use. The entire work of the garden is done by the boys under the direction of the farmer. The season has been unusually favorable and considering the damage done by grasshoppers the yield has been very good, that from farm and garden about as follows:

Hay .....	tons ..	50	Onions .....	bushels..	40
Wheat .....	bushels..	200	Beans, string .....	do.....	20
Potatoes .....	do.....	75	Other vegetables .....	do.....	20
Turnips .....	do.....	40			

About 300 rods of fencing have been built and 40 acres of land broken, 1,300 fruit trees planted and the pipe laid for irrigating orchard and school inclosure.

**Stock.**—We have increased the school stock by the purchase of a span of horses suitable for hack driving, making the total number 8. The cattle consist of 10 shorthorn Durham milch cows, 10 calves, and 1 thorough-bred bull.

**Needs.**—I would respectfully urge the necessity of having more and better buildings, for with those buildings erected which would comfortably accommodate those now in attendance in the matter of kitchen and dining room and boys' dormitory, the school could easily accommodate 300 pupils.

Authority to let the contract for buildings to be used as kitchen and dining room and as boys' dormitory has been granted, but the plans have been delayed. The necessity for these buildings will be seen when I state that in the boys' present sleeping rooms, one 30 by 35 feet contains 20 double beds and one 30 by 30 contains 18 beds, while these rooms must also be used as sitting rooms for the boys.

We are also greatly in need of the proper drainage system to properly attend to the sanitary condition of the school; but this waits also upon the new buildings, for from them should the permanent drainage be laid instead of those now in use temporarily.

**Visitors.**—The school has been favored with visits by several distinguished personages during the year.

W. T. Leeke, supervisor of district No. 2, made us an extended visit in January for the purpose of looking over the ground and conferring with me as to improvements, etc. He strongly recommended the erection of dining room and dormitory, as above recommended.

Hon. D. R. James, with his estimable wife, also visited the school in June and passed many flattering remarks upon our school, besides speaking words of cheer and encouragement to pupils which they will not soon forget.

Mr. J. A. Leonard, United States special Indian agent, was a guest of the school in June and July, and advised with me concerning the welfare of the school.

In conclusion, I desire to thank the Indian Office for prompt and kind consideration of all business matters.

I am, very respectfully,

ED. MCCONVILLE,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF HASKELL INSTITUTE, LAWRENCE, KANS.

LAWRENCE, KANS., *September 1, 1892.*

SIR: I have the honor to forward, in obedience to your instructions, my third annual report of Haskell Institute for the fiscal year ending June 30, 1892.

**Present condition.**—The material condition of Haskell Institute is not up to my expectations of a year ago. On the 1st of April eastern Kansas was visited with a wind of unusual severity. Its velocity was for a time 86 miles an hour and was accompanied by an extraordinary electrical disturbance, but without fall of rain. Had the storm been cyclonic in its nature many of us might not now be living to tell the tale. Gutters and downspouts were very generally destroyed, chimneys damaged, cattle sheds blown down, and the trembling of the buildings beneath the severity of the blasts caused large quantities of plastering to fall from the walls and ceilings. A large coal and wood shed, 96 by 30, in process of erection, was almost entirely demolished. A part of the hospital was carried away, and it was only by the greatest of exertions that the building was saved from destruction.

As soon as possible repairs were begun which will not be completed for some time to come. Were it not for this storm, I could report the material condition of Haskell Institute better than at any time in the past. Nearly all of the different kinds of work required in repairing the damages resulting from the storm have been performed by Indian pupils under the direction of the heads of departments, thus reducing the cost to the minimum.

The moral and spiritual condition differs little from that a year ago. I feel, however, that there is an improvement, for certain offenses of an aggravated nature have occurred less frequently than heretofore. There is, on the part of

many of the pupils, a commendable desire to live better lives and to recognize their obligations to God and man.

The grounds are in better condition than ever before, and the neatly mown lawns and campuses occasion, on the part of visitors and residents of the city, frequent and favorable comments, and, generally, the farm and cattle present a better appearance than ever before.

The health of the children is excellent, due to the good management of the hospital and better sanitary conditions throughout the entire institution, and improvement in the quality of food. There is noticeable an improvement in the quality of the supplies, especially flour.

**Needs.**—There are various wants to be supplied before Haskell Institute can be squarely on its feet and fitted to do the grand and extensive work for which it was founded. Nearly all of the employes and their families, who do not reside in town, live in the dormitories, and three schoolrooms are also located in dormitories.

The rooms occupied by the employes and their families and for school purposes should be given up at once to the children, so as to prevent crowding and allow all proper conveniences for carrying on the work. The assembly room in the school building can comfortably accommodate only 300 pupils, and yet over 500 pupils and employes have been obliged to crowd into it. A building should be at once erected as a residence for the superintendent, and a larger building for the employes. The erection of an assembly building is also equally urgent. This assembly building should contain a large hall, and be so constructed that there will be a deep basement to be used for recreation and purposes of physical training. The assembly room in the school building can then be cut up into four spacious, well-lighted, and airy schoolrooms, and the superintendent and employes reside in the buildings suggested, thus leaving the dormitories entirely for the use of the children.

Safety to life and property urgently demand the abandonment of the use of coal oil for illuminating purposes and the substitution thereof of electricity. A few months ago one of our large dormitories barely escaped destruction by the explosion of a lamp. Several lamps have exploded during the year. The presence and timely use of fire buckets barely saved the loss of thousands of dollars' worth of property. This occurred at 8 o'clock in the evening. Had it occurred an hour later it might have resulted not only in the loss of thousands of dollars' worth of property, but of many lives.

There is still need of additional milch cows. A milk house should also be constructed so that dairying can be carried on in the most economical and practical way. I have found that Indian children do not naturally like milk, but they can acquire the taste, and during the past year there has been a marked change in this respect. They are now not only quite fond of it, but of cottage cheese; and the herd of milch cows should be increased so that there will be an abundant supply of all dairy products.

The basement floor of the girls' dormitory should be concreted. A suitable place for play and recreation in stormy weather and winter can then be provided.

A hennery, well stocked and put under the care of several of the large girls, I believe could be made remunerative, aside from teaching an additional and important industry that might prove an important factor in their future household life.

There should be a good, well-selected library in connection with the school, containing both books for reference and for general reading.

I have not seen my way clear yet to establish a printing office, but as soon as other more necessary improvements are made I shall take action to this end.

A sidetrack should be constructed from the Southern Kansas Railway to the boiler house. The expense would be not far from \$1,000, but in two or three years, or less, this would be paid by the saving made in reducing rates on coal, and the delivery of contract goods near the storehouse instead of the neighboring city of Lawrence.

Another urgent demand is the abolishing of the large wards in both the boys' and girls' dormitories. My aim is to develop the individual rather than the mass, but the living of many pupils in one large ward does not contribute to this end. It is very urgent that these large wards should be cut up into small rooms as soon as possible.

There is ample outside protection against fire, but only slight protection inside the buildings. There should be a system of standpipes in all the larger buildings with hose attached on each floor ready for use night and day in case of emergency.

**Closing exercises.**—The closing exercises of the school occurred on June 28. Last year there was an industrial exhibit, but this year the exercises were entirely of a literary nature, occupying quite a portion of the afternoon. Never have closing exercises at Haskell Institute been so largely attended as on this occasion. It became apparent a few days before the appointed date that the public would attend and in large numbers. The school hall was far too small to accommodate both the public and the pupils. On the evening before the exercises were to be presented to the public they were given in the school hall for the benefit of the school, and on the final afternoon only those pupils that took part were present. At least 200 people went home disappointed, unable to obtain admittance, and there were at least 150 teams hitched to the fences surrounding the grounds. At the close of the exercises the visitors lingered for an hour or more witnessing a display of the year's work that had been arranged in one of the rooms. Much credit is due the pupils and employes who assisted so heartily in making the exercises successful. In addition to the literary exercises, a band concert was given on the campus before and after the exercises by the Institute band.

**Results.**—The material results of the year's work, which are tabulated below, are tangible and easily weighed, measured, counted, and their value in dollars and cents computed. These, though important, are by far less important than the grander results in development of character, moral fiber, and spiritual growth. These latter can be accurately told only by their fruit, which must be borne in years to come. As the leaf bud and the flower bud are positive evidences of growth and fruitage later on, so, I believe, there are evidences on all sides to prove that this formative period has given unmistakable evidences of a better and nobler manhood and womanhood for the present generation of Indian youth than the past.

The acreage under cultivation has been increased, and the character of the tillage improved. Cockleburrs and sunflowers are seldom met with, and unsightly corners, hedgerows, and ravines have been cleared up. In a year or two more there will be an utter absence of objectionable features on the farm. In connection with the farming operations I ought to call attention to the vegetable garden. It comprises about 12 acres, and has provided vegetables of all kinds in great abundance, and to such an extent that more has been raised than could be consumed by the children.

**Promotions.**—I desire to express my sympathy with your system of promotions from reservation to nonreservation schools. This plan was laid down some two or three years ago, and from many years of experience in school matters, I un-

derstand that a change to this present method can not be brought about in a moment or a year. It is, however, beginning to bear fruit, as shown by the promotion in June of 13 pupils from nonreservation schools to Haskell Institute. After this has had a fair trial of a few years I believe it will prove highly satisfactory. One important advantage will be the awakening, on the part of pupils of nonreservation schools, of a desire to go to higher schools and obtain a more advanced education, thus fitting them better for life's duties.

**Intellectual growth.**—It is sometimes remarked that all Indian boys and girls need is to be taught how to work and to read and write. I agree with this in the main for the present generation of Indian boys and girls. I am not, however, ignorant of the causes that have led to the present high standard of general education in our land. The early settlers of Massachusetts in the establishment of Harvard College soon after coming to the new world wisely recognized the principle that it is impossible to have good schools of a secondary grade unless there is an institution of sound education of a much higher grade to act as a stimulus upon all the grades below. I do not recommend for many Indian youth a university training. I do however believe that a young man or young woman, who has the desire to obtain a higher education and the requisite ability, can not justly be denied this privilege because of Indian blood. There must be opportunity for intellectual growth if the Indian is to be saved from his degradation.

**Reservation and nonreservation schools.**—It is very gratifying to observe that the reservation and nonreservation schools are coming to understand each other better and that there is a kindlier feeling between them. I have met employes when, in obedience to your orders, I have been soliciting Indian pupils who seem to feel that if the pupils went to a nonreservation school it would kill the reservation school. There are those now living who remember when there was but one normal school in the State of New York. Demands were made upon the legislature to establish others. The argument was brought up that the then existing school was not well patronized, and why establish others? Several others were established and the result was that not only was new life infused into the half-lifeless body of the old, but all came to be large and prosperous. The promoting of pupils from reservation to nonreservation schools gives new life to the reservation school and gives place for other children on the reservation deprived of school privileges. I have been gratified during the past year by conversation with numerous superintendents to hear them say they felt that the bond between their school and the nonreservation schools was strong and growing stronger, and that the nonreservation schools were reacting favorably upon their own and that they could not do their own work without them.

**Attendance.**—There have been 692 pupils enrolled during the past year. The largest attendance at any one time has been 551 and the average 513. This is the largest number in the history of the institution, and when we consider that with this large enrollment there were only four deaths during the year, and that for nearly six months there has been no death, there is proof that the sanitary and climatic conditions are very favorable and that those in charge of the sick and convalescent have been faithful in the performance of their duties.

**School tramps.**—Now and then I meet Indian young men and young women that have spent a term of two or three years in one institution, a like term in another, and a like term in still another, and then wish to enter Haskell. In conversing with other superintendents I find that they have had experiences quite similar, and so I have come to feel that there is a class of young Indians that we may well denominate "school tramps." As a rule they are the least industrious, the least inclined to observe necessary rules and regulations, and the least disposed to learn a trade. I have come to believe that pupils who leave reservation schools and enter nonreservation schools should be required to spend the remainder of their school life in the nonreservation school that they enter, unless there should be, as would not frequently happen, sufficient reason for being transferred to some other institution. A white young man does not take a part of his course at Ann Arbor, another part at Harvard, and another part at Yale. He decides upon the institution that he will enter and then completes there his course of study. Indian young men and women do not, it is true, enter an educational institution with the same purpose and aim that the white do. This could not be expected. It is, however, a mistake to allow these changes to be made, except rarely and for good cause. A pupil enters a certain school and becomes acquainted with its management, its method of discipline and its entire surroundings. He will make much more of himself to continue until graduation than if he stops a little while and then goes elsewhere.

**Religious instruction.**—A Sunday school is held every afternoon between the hours of 3 and 4, and a social meeting of praise and song Sunday evening from 7 to 8. There is a Young Men's Christian Association properly officered and this, under the direction of its officers, has frequent prayer meetings. Mr. David Bunker, the wagon-maker, has, with commendable kindness, conducted a volunteer Bible class on Wednesday evenings during the year. On Sunday pupils are allowed and urged to attend religious services in town at churches of the same denomination to which they belong or where their parents desire them.

**Outing system.**—A larger number of pupils of both sexes than heretofore have been placed on the outing system in families, and I purpose to increase the number in the year to come. This system is helpful in the solution of the Indian problem, but is not a panacea for the ills of the Indian question. This system is correct in theory and no valid objection can be brought against it. I have, however, observed widely on Indian reservations the last two years, and my eyes have not been shut to the fact that in repeated instances returned pupils, who had been on the outing system and returned pupils who had not been on the outing system, were doing equally well. The chief advantage of the outing system is in lessening the expense to the Government of educating a given number of Indian youth. If all the children could be kept away from the reservation and scattered throughout the country it would be a very satisfactory solution of the problem; but the attitude of parents against it, the pull of the reservation to draw them home and their own natural instincts and inclinations, with an unfavorable public sentiment prevent it. There must be, on the part of the Indian, self-determination and self-dependence before there can be any marked and permanent change in his condition. There must also be the creation of wants on his part, that he may be led to exertion for the supplying of those wants.

**The outlook.**—The prospect for pupils, judging from the large amount of correspondence, was never better. With reference to the great work that we are attempting, I feel that the year upon which we have entered is very hopeful. There is more willingness on the part of parents for their children to come, and there seems to be a better understanding on the part of the Indians of the desires and purposes of the Government with reference to the education of their children. There is a better understanding on the part of the service in general of the unity and plan of the present system of work which augurs only good. Amid all the petty discouragements that come up in the work I feel that the future is full of hope and promise, and that there is an awakening on the part of the public which is of the utmost importance in order that the work may be sustained. When the leading magazine in the English speaking language, and a great metropolitan daily newspaper print long articles on Indian education and comment favorably on the present methods of work and speak approvingly of the results already obtained, it surely is the dawn of a new era.

I wish to acknowledge the helpfulness of supervisors, special agents, and inspectors. The time was when a Government officer was considered a detective or a spy and his presence was for the purpose of discovering something wrong. There has been a great change in this. These officials, I believe, do not come with a desire to see if they can not find out that we are criminals, but with a spirit of helpfulness and with a desire to do those things that shall assist in carrying on the work with the greatest degree of success.

A large number of periodicals, magazines, etc., have been furnished by friends in both the East and West through the instrumentality of Miss Frances C. Sparhawk, of Newton Center, Mass., whose services in this direction are highly appreciated and gratefully acknowledged. Early in the spring a large number of shade and ornamental trees of several varieties were given to Haskell Institute by Mr. A. H. Griesa, a nurseryman of Lawrence. They were set out on the campus in front of the hospital and in a few years will materially improve that section of our grounds.

I wish to thank you and the Indian Office for the prompt and kindly consideration of all business matters during the year, and also to recognize thus publicly the loyal and efficient service rendered by the employes of Haskell Institute.

I have the honor to be, very respectfully, your obedient servant,

CHARLES FRANCIS MESERVE,  
*Superintendent and Special Disbursing Agent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## DESCRIPTION OF DANCE AMONG CHEYENNES AND ARAPAHOS.

HASKELL INSTITUTE, LAWRENCE, KANS., *June 21, 1892.*

SIR: In compliance with your request of the 11th instant, I send you the following description of the ghost dance as I recently witnessed it.

At 11 o'clock on Friday forenoon, May 27, I approached a camp of Arapaho Indians with their tepees, to the number of 75, pitched a short distance from the north bank of the South Canadian River, some 12 or 15 miles from the agency at Darlington, Okla. I heard their shouting and the noise of their drums when I was half a mile from the camp. As I approached the camp they were in the midst of their dance. They were arranged by twos, the males by themselves and the females by themselves. There were probably at this time engaged in the dance not less than 50 persons. Black Coyote, one of the Arapaho chiefs, with another Indian of large stature, were leading the line. The line was at first straight and reached out for quite a distance, though later on they formed in a circle. In the center of the circle was a staff from which floated a United States flag, and from another staff near by a white and blue flag. In the center of the circle was a withered old woman who was holding onto the staff with one hand and with the other outstretched was looking up to the sky, at the same time uttering mournful incantations. Those that were in line were keeping step to the beat of a drum made by stretching raw hide over an ordinary wooden tub. All the dancers were engaged either in conversation or in incantations and were nearly all of them at this time smiling and at times engaged in loud laughter. Presently their appearance changed and their attitude was that of reverence rather than mirth. Soon their dancing stopped and all, young and old, stood in line and erect. Black Coyote, the chief, held both his hands forward with the palms outstretched and fingers apart.

Presently from the tepee near by there emerged a large, powerful Indian who advanced to within 5 or 6 feet of Black Coyote and raised his hands in the same position as those of Black Coyote and spread out his fingers in the same way; he then threw his hands forward to Black Coyote as though he would grasp them. Black Coyote tried to grasp his, but failed. They kept this up for a few minutes until they had firmly grasped, when they both let go and each grasped the other around the waist and engaged in a violent wrestling contest. This pleased the Indians very much, and whenever it appeared that Black Coyote was getting the worst of it those who were behind pushed him on. During this wrestling contest the two behind put their hands upon the shoulders of the two forward, and as Black Coyote and the wrestler moved from side to side the object of all the others was to keep directly behind those in front of them. This continued for ten or fifteen minutes, Black Coyote holding his ground and his contestant unable to gain any advantage over him. Finally Black Coyote made one tremendous effort to throw his assailant, and nearly all of those that were behind, keeping their hands upon those in front, were also thrown, and some of them, especially a number of women, rolled end over end. After they had gathered themselves up there was a great clapping of hands, loud talking, much hilarity, and all seemed in the happiest frame of mind.

This ended the dance for the forenoon. There was nothing about it that was any way objectionable so far as I could see, or so far as I could learn by inquiring what their various movements signified. There were two or three tepees that were pitched near together, and were open on the south side. The ground covered was sufficiently large to accommodate comfortably forty or fifty people. I went into this large tent and sat down on the ground in the only place that seemed vacant in the circle around which they were seated. As soon as I had taken a position on the ground, two or three of the chiefs hurriedly came to me and motioned me to take a seat elsewhere. I soon saw the mistake that I had made, for no sooner had I seated myself on the new piece of ground where I was invited than Black Coyote, at the front, and all the others behind, smiling and evidently applauding his success, entered, and Black Coyote took the seat that I had previously been occupying. If such a mistake as this had been made among the same number of white people, I presume that I should have been the butt of ridicule and received the derisive laughter of all. As it was, the Indians understood that I had made a mistake and had sufficient regard for my feelings not to allude to it by any act or sign. After Black Coyote had entered the tepee and his followers all were seated on the ground they began to talk with each other. I looked around to see if there was anyone that I knew, so that I might have an interpreter and ascertain the significance of this performance. I soon spied Jesse Bent, who talks very good English, and when I asked him what they were talking about he said they were congratulating Black Coyote upon his success and that Black Coyote was aiming some pleasant rillery at the one he threw down. Jesse Bent said they were doing and acting just as the friends of a baseball nine would when their favorite had won the game. Pipes and cigarettes were soon lighted and after awhile the entire company broke up and went to their various tepees to take dinner.

Just before the company broke up, in the center of the circle where the dance had been carried on and between the two flagstaves several large fried cakes, made from wheat flour, were carried out, placed on the ground, and one of the Indians came out and held his hands over them and looked up to heaven. I asked Jesse Bent what he was doing. He said: "White folks, when they eat, pray. He is praying over the food." Before Jesse went to dinner I had quite a long chat with him in regard to the dance and its effect upon the people. He said that they have changed their habits very materially in the last few years, and that most of their practices in the ghost dance are in reality in the line of true religion. He says they have given up the practice of burying their dead in trees and now dig a grave in the ground and bury them as white folks do and have some service. He stated further that the Arapahoes have given up the sun dance, the war dance, the squaw dance, the buck dance, and a number of other dances, and it can hardly be expected that after giving up these practices that were esteemed so highly in the past they can at once fall into the white man's ways. He says that the Arapahoes believe in religion; that at their dances they pray to God that He may teach them the white man's ways; that He will show them how to work and will make them more industrious; that they frequently say worship Him, and learn more of Christ and the Christian's Bible. He said it is true the Indians are lazy and indolent to a great degree, but that in their habits, their customs, and their practices there is really nothing objectionable, and that they are in reality making progress toward the true religion.

I had with me Louis Miller, a returned Haskell student, who is now a soldier in Lieut. Wheeler's squad at Fort Reno. At about 2 o'clock in the afternoon there gathered together in the large tepee as many Indians as could be accommodated. I managed to crawl in under the tent flap and was an interested though part of the time disgusted spectator of the proceedings. Black Coyote, Pushing Bear, and Bear Feather were the chiefs present. As soon as they had all gathered they began to make preparations for painting their faces. I noticed that Pushing Bear seemed to be the leader in this, though most of the men entered into it with a

great deal of relish. They painted first their own faces and then the women's. I noticed that the best-looking women were called for first, and the most time was given to setting out their complexions in the highest perfection of the chief's decorative art. They took out from their box a quantity of paint, put it in the palm of the hand, spat on it, and then, with the finger, mixed the paint and spit together, and with the finger with which they had been stirring the mixture they began their work. It seemed that a good deal more time was occupied in this work than was necessary, and I was quite sure of the fact when at the end of the performance the unpainted women were called forward, all of whom were exceedingly homely. Not much time was spent upon them. The faces were covered entirely, even to the eyelids, and the parting of the hair was also deeply dyed. While this process was going on there were two or three women that stood out in the broiling sun in the center of the circle engaged in incantations or prayer. One of them was a visiting Caddo woman, who stood with arms outstretched, with face upturned to the sun and eyes wide open, apparently, in her incantations, in great agony and deeply in earnest. She remained there for some time, probably fifteen minutes. It seemed to me that she must have lost her eyesight from gazing directly at the sun as she did. After she left an Arapaho woman took her place and continued for some time in prayer. When the chiefs and others had gotten through their smoking, Black Coyote, a chief, came out and stood by her side. While she stood in the same attitude as the visiting Caddo woman, I could see that she had sense enough to keep her eyelids shut. I was quite amused at the shrewdness of Black Coyote. He evidently had come out to engage in prayer and worship. He held up his hands, looked up into the sky, but the sun troubled his eyes so he took off his hat and at arms' length held it out, still looking upwards in such a position as to shield his eyes. After this ceremony of prayer was over they all came out and began to engage in the dance in the same manner as in the forenoon. As it was now getting late in the afternoon and there was a long drive ahead of us, I left the Indians, after bidding them good-bye and shaking hands with them, and started for the agency.

On the following Monday, while I was in Agent Ashley's office, the Arapaho chiefs who were the leaders in the dance of the Friday before came in and asked him if they could not have another dance in four weeks. He told them that they must not dance again until six weeks had passed away, that their corn was now growing, and that the weeds were also growing, and that they must go and cultivate it and attend to their other farmwork. They went away satisfied, saying they would work for six weeks.

I presume it is safe to say that the dance I saw is a vast improvement over the dances of years gone by, and while it is something that you and I would look upon as silly and childish, yet it is doubtless a step in advance. There was nothing intellectual about it to my mind, very little that was spiritual, and yet I presume that it is best that they be indulged in it, hoping that they will entertain more sensible ideas concerning true religion and a proper form of worship. It would doubtless be considered a severe punishment if they were obliged to give up these dances altogether, and as they have given up so much and have really made some improvement the ghost dance as practiced by the Arapahoes should be considered as not entirely divested of elevating influences.

Very respectfully,

CHAS. F. MESSERVE,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT CHILOCCO, OKLA.

HAWORTH INSTITUTE,  
*Chilocco, Okla., September 5, 1892.*

SIR: I have the honor to submit my third annual report, being the ninth in course of the school.

**Location**—The 8,640 acres embraced in the school reserve were set aside for the uses of the school by executive order on July 12, 1884. After much inquiry and observation this site was selected from the vast area of available land in the Indian Territory by the first superintendent of Indian schools, Hon. James M. Haworth, whose name the institution now bears. The school land lies for 4½ miles against the thirty farms on the Kansas line, only 4 miles from the Arkansas River, the timber-fringed Chilocco Creek passing diagonally through it with its living water for stock and gushing springs for house supply, and composed of soil unexcelled in fertility, rolling gently backward in open prairie on both sides of the creek. It offers a rare combination of natural advantages for cultivation of cereals, garden products, trees, and for raising stock. We touch the pulse of our best civilization; 5½ miles brings us into Arkansas City, Kans., with its splendid schools, its elegant buildings, its numerous stores, banks, express, railroad and telegraph offices; its printing rooms, factories, street cars, gas, and electric lights, showing a full exhibit of high civilization.

From our buildings eastward we see the trains on the Santa Fé for 6 miles as they roll over the prairie on their way between Kansas and Texas. In full view, lying against the school line eastward and westward as far the eye can reach, are seen the dwellings, orchards, and improvements of the Kansas farmers. This is one of the healthiest localities in the Indian Territory. It is centrally located as to ease of travel by railroad to all the agencies and schools in the Territory, and sufficiently remote from all reservations to be quite free from adverse influences, yet near enough for ease of communication.

Being in the Territory, we are enabled to exert an influence on the parents and farming communities of Indian farmers that will be strengthening to returned pupils and to all Indians who aspire by self-exertion to self-support and independence.

**History.**—The present main building was erected in 1883, and school was opened on January 15, 1884, under the supervision of W. J. Hadley.

The school has since passed under the care of H. J. Minthorn, T. C. Bradford, G. W. Scott, and the subscriber. Each has found his full share of difficulties. The most trying ones encountered in the early work of the school are removed by the extension of railroads nearer the agencies, and the opening up of Oklahoma.

In 1885, six cheap buildings were erected for workshops and cottages for employes; in 1886 a bakery and cattle shed; in 1887 an ice house and barn. A stone storehouse was put up in 1888. In 1890 and 1891 two cottages, a hospital, a farmer's hortic, a granary, milk and tank house, a slaughterhouse, and a building for workshops were added. In 1892 an implement house, a cattle shed, an employes' cottage, a school building, a girls' home, a building containing dining room, kitchen, laundry, and power-house.

A garden was opened in 1884, and in 1885 a farm was broken from the prairie, many miles of fence were built inclosing plow land, meadows, and pastures. Cattle, horses, mules, and hogs were procured. Instruction in the industries was commenced during this same period. The record of the three years following is practically a blank. In 1889 vigorous efforts were made to reclaim the farm from weeds, to repair the building, to improve the stock, and to fill the school with scholars, since which time the attendance has been larger and more regular, and improvements have been added each season. The facilities are better than ever before, and double the number of pupils originally provided for can now be accommodated.

**Description of Chilocco plant.**—Viewed from the Santa Fé Railroad, or any farm on the State line, the buildings present an attractive and commanding appearance. They face the east, and are so arranged as to completely sex the grounds, the boys, and whatever pertains to their care and instruction, being on one side of an axial line, and the girls with what pertains to them on the other side. On this line, and at the front facing eastward is the school building, containing also the chapel. In its rear on the same line is the dining room, kitchen, bakery, laundry, and power-house.

These buildings are approached on opposite sides by boys and girls. At their rear is a grass-covered court flanked by a cross line of neat cottages for employes, while at the front of the school building is a large campus designed for a park and play-ground. At the north of the schoolhouse is the girls' building, at the rear of which is the tank and milk house, stretching away from which are the orchards and poultry yards. To the south of the schoolhouse is the boys' building, the shops in the background. The corn cribs, the horse barns, a cattle shed with a feed lot extend down the ridge southeast of the main building. To the southwest and beyond the shops are the springs, the inexhaustible source of our water supply. Near the Chilocco Creek, which flows to the eastward, beyond the crib, at a point southward from the shops and over the creek, will be located the new dairy barn. From this eastward, or down the creek, is the slaughterhouse. Looking eastward and southward across the campus from the main building we see on a ridge the farmer's home, grouped with which is the implement house and granary. To the left of the campus and extending eastward is the school nursery. The plowed land is mostly north of the school buildings, reaching a mile both east and west toward the State line. The pastures and meadows are west and south from the buildings, and across the creek.

**Class rooms.**—Excellent work has been done under the teachers. The grading has been closer than heretofore. The habit and power of study and mental analysis shown by pupils is better, and a student ambition has been well maintained. Examination tests show careful training. The grade and scholarship of the school has been advanced the past two years. Besides, a number of the best pupils of the schools in the Indian Territory have been promoted to this; so that we will soon be able your purpose to follow, which is to leave out primary work and yet have pupils sufficient for proper grades in an industrial school.

**Industrial work.**—The tailor, and ten apprentices, have made clothing and underwear for the boys. They do rapid, neat, strong work.

The shoemaker and twelve apprentices have made the shoes and done needed mending of same for the school, and have repaired harness as required. They do strong and creditable work.

The blacksmith, and three apprentices, have shod the teams, sharpened plows and harrows, repaired breakages and kept the metal part and much of the wood-work of the school vehicles, tools, and implements in fit condition for use. The boys get just the training needed to fit them for doing farmers' smith-work.

The carpenter and five boys have worked on the construction of implement house, cattle shed, employes' house, and on the ceiling, wainscoting, and finishing of the shops. They have made numerous minor repairs and improvements and done much plain painting. Their gain in skill is quite marked. Our shop facilities for teaching boys trades are good. The chances for the girls will be better the coming year.

In the sewing room the girls, with their instructors, have made their own clothing, a portion of the boys' underwear, new sheets, pillow slips, and towels for the school, darned stockings, and mended all clothing. They have also cut and sewed rags for one hundred yards of carpet, and made some progress in cutting and fitting dresses.

Under the cook the girls have cooked for the school, cared for the dining room, and milk room, making butter and cottage cheese. With the laundress and a small detail of boys, the girls have washed and ironed for the school. With the matron and her assistants they have kept house, learned to scrub, mop, sweep, make beds, and do a good variety of fancy needlework, crocheting, outlining, knitting, with drawn work, and patch work. The patience, skill, and judgment shown in this class of work is a constant surprise to on-lookers.

**Nursery.**—A new feature of the work this year was the opening of a nursery. I am delighted with it and the promise it contains of usefulness to the pupils and the Indian homes. The wet season has been favorable for growth of all plants. During the winter and spring the boys took much interest in grafting and trimming grape vines and preparing cuttings. We have growing 15,000 grafts of apple, 15,000 of plum, 15,000 grape cuttings, 10,000 peach seedlings, 2,000 cherry seedlings, 1,000 pear seedlings, 2,000 catalpa seedlings, 1,000 Russian mulberry and 500 raspberry and blackberry, with three-fourths of an acre of strawberries.

Our fruit orchard contains 500 apple trees, 500 peach trees, 250 cherry trees, 150 apricot trees, with plums and pears.

**Farm.**—The past year has been one of unusual rains and storms, yet the various farming operations have not been seriously interrupted. The yield of different crops has been good. We have threshed 5,240 bushels of oats. The wheat now in stack we estimate at 4,000 bushels; corn in the field at 4,500 bushels, potatoes at 500 bushels. We have received for sale of haying privilege \$450, and have put up about 600 tons of hay for school use. We yet have pasturage in great abundance.

**Gardens.**—We have raised an abundance of radishes, onions, lettuce, string beans, potatoes, beets, roasting ears, tomatoes, and cabbage, with smaller amounts of other vegetables. All these vegetables have been prepared for the table and have been greatly enjoyed and appreciated by the pupils. They have not only been afforded instruction in raising vegetables but the girls have had an opportunity to prepare them for table use in many different ways, thus gaining a knowledge of cooking they otherwise could not have obtained. Potatoes, onions, and beets in quantities to afford us much aid have been put away for winter use. A nice supply (about 10 bushels) of sweet corn has been dried and stored away safely for use of pupils next winter.

**Stock.**—We have worked our horses and mules all season. They are daily companions of schoolboys, who in their use have become proficient in plowing, harrowing, and rolling ground, in grain-drilling, grain-reaping, and corn-planting. We have 12 horses, 11 mules, and 3 ponies. They are not enough for our work.

Of our hogs we have slaughtered enough for school use and still have 75 head on hand.

We keep 35 cows in our milk herd and get about as many gallons of milk daily. During more than half of the year we have had a pint of milk per pupil per diem.

Our stock herd from which our beef has been supplied has been the pride of the school. We suffered considerable loss during the winter by death in two of our feed lots from some unknown disease. But with the coming of pasture good health and growth have restored our herd. We have 175 calves. I have recently bought 45 head of choice (Durham grade) cattle at low rate. Our herd of 500 is not yet large enough for its increase to supply all our beef. It is cheaper and the beef we get is fresher and better to buy cattle and feed them awhile, then slaughter, than to buy net beef delivered.

**Health.**—The general health of our school community has been good. One death has occurred during the year. Five have been sent home on account of

chronic ailments, increased in severity by measles and tonsillitis. We had no sickness until after the holidays, when measles, mumps, and tonsillitis claimed our attention for a month with about one hundred cases, since which general health has been good again; no one sick in bed during the past three months.

**Attendance.**—A number of vacation pupils were slow about returning. The influence of the "Indian Messiah craze" and dance associations affected us somewhat adversely, but pupils as they came in soon became remarkably contented and industrious. The Y. M. C. A. and the Y. W. C. A., the school Christian associations, were active, aggressive, Biblical and spiritual forces aiding greatly in securing a settled, satisfied, yet courageously active spirit of enterprise in right directions. The main activity and force was with the pupils themselves. They secured from their number the hearty consent to Christian endeavor of every Indian employé or sergant and the more advanced and influential pupils of the school.

Most of the year we were crowded full; the last five months we averaged 200, with an average for the year of 187.

The following table gives the attendance by tribes:

Tribes.	Males.	Females.	Total.
Apache .....	2		2
Arapaho.....		2	2
Comanche.....	1		1
Cheyenne.....	1	1	2
Caddo.....	10	8	18
Delaware.....	4	3	7
Iowa.....	1		1
Iroquois.....	1		1
Kiowa.....	5	2	7
Kickapoo.....	1		1
Kaskaskia.....	1		1
Miami.....		1	1
Otoes.....	9		9
Ottawa.....		1	1
Pawnee.....	28	17	45
Pottawatomie.....	7	8	15
Ponca.....	10	4	14
Peoria.....	1	1	2
Quapaw.....	1		1
Shawnee.....	15	17	32
Sac and Fox.....	14	13	27
Tonkawa.....	3	1	4
Wyandotte.....	1	4	5
Wichita.....	2		2
Winnebago.....	3	4	7
Total.....	121	87	208

**Buildings and improvements.**—The three large new stone buildings for school, girls' home, and dining room, kitchen and laundry, are well under way. We hope to occupy them by February 1 next. They are to be warmed by steam. Part of our cooking will be done by steam and steam appliances will be used for laundry work. I am building and will soon have completed another employés' cottage.

During the year I fitted up a nice schoolroom in the stone building for shops; plastered and wainscoted the carpenter, tailor, and shoe shops; repaired the barn and added several stalls; erected a stone cattle shed 24 by 400 feet, including wings; built an implement house 32 by 60 feet; and made various minor repairs on buildings.

**Employés.**—The best test of the ability and faithfulness of employés is the contentment and improvement of pupils, the strength and uplift of the moral and social tone of the school, and the register of manufactured products, growth of vegetables, field crops, and condition of stock. Haworth has had a good and prosperous year. Intellectually, industrially, and morally, the pupils have done well. The employés have held and utilized the school plant in securing efficient, practical, educational results for the pupils intrusted to them, while the capacity of the plant has been nearly doubled for next year's work. I am surrounded by a company of able, trained, and faithful employés.

**Remarks.**—As a result of the year's labor we have a contented, homelike, family feeling, constant use of the English language, literary schooling, training in housework, cooking, laundrying, trades, and farm work, as indicated by manufactured shoes and clothing for boys and girls, a large supply of vegetables, wheat

and corn for bread, pork, lard, milk, butter, and most of our beef, and cash receipts from sales of surplus of \$2,093.22.

I feel gratified at the many evidences appearing through the year of good feeling and fellowship between this school and the Indian agents whose pupils are under our care, and the various reservation schools whose coöperation is so needful and helpful to us. Most cordial relations exist between this school and other industrial schools. Indian parents give us confidence. People in the State and in Arkansas City have yielded encouragement, support, and advice as the occasion affords and abundant aid to the children for Christmas festivities. Officers and pupils are permitted the comfortable feeling that we are a part of the community, a part of the State, neighbors one of another, and fellow-citizens as well of a great country. We are not aliens; we have a home.

In closing I express my gratitude to yourself and the office for forbearance and aid in my efforts to make Indian education a success at Haworth.

Respectfully submitted.

BENJAMIN S. COPPOCK,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

### REPORT OF SCHOOL AT GENOA, NEBR.

INDIAN INDUSTRIAL SCHOOL,  
*Genoa, Nebr., August 29, 1892.*

SIR: I have the honor to herewith submit my fourth annual report for the year ending June 30, 1892.

**Improvements.**—Two fine large brick buildings were erected this year; the girls' dormitory, located west of Morgan Hall, in line with the main building, is a fine edifice 132 by 41 feet. Two hundred girls can easily be provided accommodations in this building. On the first floor is located the bath room, assembly, and wash rooms; on the second floor, music room, 4 reception rooms, and 14 rooms for sleeping purposes. The third floor contains 17 rooms, one of which is a sewing room 15 by 30 feet; the fourth floor has 10 nice large rooms, all used as dormitories. The second building erected will be used for a chapel, dining room, and kitchen. It is located just west of the new dormitory. It is of brick, a 48-by-98, 2-story structure, with 40-by-50, 1-story ell. The chapel will be furnished with seats in the most approved style, and the building throughout finished and furnished in a suitable manner.

**Girls' work.**—In the girls' department during the past twelve months more improvement has been manifested than during any of the previous years of the school's history. The girls have numbered about 150, ranging from 5 or 6 years up to 20 years of age. All have been detailed to the different works of the household, and as a general thing have performed their duties to the best of their ability, are easily governed, and are always willing to try again and learn to do as they are taught.

Under the direction of a competent music teacher many of the girls have made excellent progress, both in vocal and instrumental music. Some have marked taste and ability and are able to play the organ in Sunday services, and also add very creditably to the schoolroom entertainments. Another advantage has been the sending by friends of the Indians of books, papers, and magazines, furnishing good reading, for which there is an increased demand, showing that the minds of the children are being enlarged, and that they are learning to grasp new ideas and subjects which were unknown to their ancestors.

Three circles of the "King's Daughters" formed last year are still in a healthy condition. One for the large girls, called the "Golden Rule;" one for the medium-sized, designated as the "Watch Circle," and another for the small ones known as the "Little Pick-ups." The desire to become members, procure suitable badges, and pay dues, has spurred them on to industrious efforts in the way of beadwork, fancy work, etc., the sale of which articles will procure the money for the desired object. Last year the girls had but one small room as a sitting room, the same being furnished at their own expense. This year they have four sitting rooms and a music room.

Improvements are seen in the keeping of the dormitories, the private rooms of the larger pupils, and in the personal appearance of the girls. Quite a num-

ber of the girls have private rooms, and they take great care in keeping them neat and clean. Considerable taste has been displayed by them in the decoration of the walls with pretty pictures and engravings, some of these having been bought at their own personal expense, or given to them by kind friends. Good English is being rapidly acquired, and the report "yes" at Indian roll call is growing remarkably less. The girls care for about four hundred chickens, and take pleasure in doing so.

**Laundry.**—One of the pressing needs of this school is a respectable laundry. The one we now have is not worthy of the name. The building is simply a shell. The whole outfit is old and useless, and should be replaced by a steam laundry with modern conveniences. There are six girls detailed for the morning and the same number for the afternoon. Boys are detailed for the heavy work in the laundry.

**Sewing room.**—The average attendance in the sewing room is 15 or 20 girls. They cut, fit, and make their own garments, besides making all sheets, pillow slips, boys' shirts, and underwear. The sewing room this year makes a very creditable showing of over 600 well-made garments, in addition to the usual weekly mending and repairing. The girls are taught how to cut, fit, and make dresses, so that they will be able to make their own clothes when they have returned to their homes. Many of these girls have accomplished much in the way of crochet work and knitting tasteful lamp mats, worsted and lace being the work of their own hands. The smaller girls are taught to mend clothing, darn stockings, sew carpet rags, and are kept busy doing the many little things connected with the sewing room.

**Kitchen.**—There are four assistants in the morning and four in the afternoon. Under the instruction of the cook they are taught to prepare food for the table and have the cleaning of the kitchen and the utensils used for cooking. We have our girls cook especially for a few, so that they will be able to cook for a smaller household if it becomes necessary. The dining room is in charge of a dining-room matron who has the supervision of the dish-washing, and sees that the waiter girls are in attendance at the proper time and have their tables suitably arranged for meals. Besides this the dining-room matron teaches table manners, instructs the girls how to clean knives and forks—in fact, the dining-room matron has full charge of the dining room at all times.

**Blacksmith and wagon shop.**—This shop has a detail of 3 boys each half day. They made 5 three-spring wagons for agency use, 2 large lumber wagons, and did all the repairing of implements etc., used at the school. We could have made 20 or 30 wagons, but the iron and wood asked for on our annual estimate was not sent to us, so we were without material with which to work.

**Bakery.**—We have just completed an oven 8 by 12 feet capable of baking 400 loaves of bread at one time. We have a detail of 6 girls, 3 in the morning and 3 in the afternoon; most of the girls bake well and are capable of making just as good bread as white people. Since the new oven has been completed the bread has been excellent.

**Harness shop.**—This shop has produced 196 sets of plow harness; 277 sets good harness, a large amount of strap work, besides doing considerable repairing. The harnesses were sold to the Government for \$6,215.58. We could have turned out more work but the goods we estimated for failed to arrive until late in November, so we only had seven months in which to work. The harness shop has an average of 20 boys, 10 in the morning and 10 in the afternoon.

**Broom factory.**—Last year we furnished to the Government 1,300 dozen of brooms and 142 dozen of whisk brooms. We raised our own broom corn. The proceeds of the broom factory amounted to \$4,409.75. This shop has a detail of 11 boys each half day.

**Tailor shop.**—The boys are taught cutting and fitting and the trade in detail. The following articles were made in the tailor shop; 501 coats, 700 pair of pants, besides the necessary mending required in a school of this character. The detail consists of 12 boys each half day.

**Shoe shop.**—This shop has had an average of ten boys during the entire year. They have made 422 pairs of shoes and repaired 1,146 pairs. The boys on this detail are taught to cut, fit, and make the entire shoe. We have quite a number of boys who are good shoemakers.

**Carpenter shop.**—Four boys under the direction of a competent instructor are detailed to perform the carpenter work. They are taught how to handle and care for tools and the carpenter trade in general. This detail has erected several buildings on the school premises and have done a great deal of repairing about the premises.

**Paint shop.**—Two boys each half day on this detail; they are taught to mix paint, apply the same, and to hang wall paper.

**Printing office.**—Three boys each half day make up this detail. The school paper, the Pipe of Peace, is neatly and creditably printed, despite the usual obstacles, and has already reached a circulation of nearly 2,000.

**School farm.**—The farm and garden have been a source of great profit to our school. The children have had a bountiful supply of beans, potatoes, corn, radishes, peas, carrots, etc., and I attribute the continued good health of the pupils largely to the fact that we have an ample and varied vegetable diet. To teach the Indian youth, despite his natural carelessness and indifferent disposition, how to properly care for his farm tools and implements is neither a small or enviable task. Yet it can be done. We take great pains in instructing the boys most thoroughly in this important matter, and they are never allowed to neglect or slight their duties in this respect, in the least. When through with any farm tool, implement, or machine they are required to put it in its place, and clean, or sharpen, or repair the same, as the case may be, if found necessary. All implements and machines are kept housed when not in use, and such things as need it are annually given one or two coats of paint.

The following is a statement of the acreage of our crops on our farm for the past year and present year, together with a fair estimate of yields and value of the same:

1891.

Product.	Yield.	Value.	Acres.
Broom corn..... tons.	25	\$2,500.00	85
Millet..... do	40	160.00	40
Prairie hay..... do	75	225.00	50
Beans, wax..... bushels	15	30.00	1
Sweet corn..... do	160	320.00	8
Cabbage..... heads	10,000	500.00	-----
Beans, white..... bushels	65	97.50	6½
Peas..... do	37½	93.75	2½
Radishes..... do	20	50.00	-----
Parsnips..... do	40	100.00	-----
Cucumbers..... do	8	32.00	-----
Tomatoes..... do	50	75.00	-----
Beets..... do	100	100.00	1
Potatoes..... do	1,612½	806.25	21½
Turnips..... do	400	80.00	-----
Grapes..... do	20	40.00	-----

1892.

Indian corn..... bushels	2,000	\$800.00	40
Broom corn..... tons	30	5,200.00	90
Prairie hay..... do	75	225.00	50
Beans..... bushels	15	30.00	1
Sweet corn..... do	200	400.00	10
Cabbage..... heads	8,000	400.00	-----
Peas..... bushels	40	100.00	3
Radishes..... do	20	50.00	-----
Parsnips..... do	40	100.00	-----
Cucumbers..... do	10	40.00	-----
Tomatoes..... do	50	75.00	-----
Beets, sugar..... tons	1,000	500.00	101
Potatoes..... bushels	800	400.00	-----
Turnips..... do	400	80.00	-----
Grapes..... do	30	60.00	-----

**Outing system.**—The system of "outing" so successfully carried on at Carlisle and Hampton has been introduced during the last year. Over 100 boys were placed out at wages, varying from \$30 per month down to \$10 per month. No boy was sent out unless he wanted to go, and was satisfied with the wages and place. Only two of the above number were reported as failures; not because they would not work, but because they had stolen money or property belonging to others. The students earned about \$1,500, \$500 of which is to their credit on their savings account.

**Buildings and repairs.**—During 1892 we erected a warehouse; put in a complete waterworks system, at a cost of \$2,000; erected two large brick buildings; laid

a board walk around main building; painted, papered, and repaired where needed; erected a hennery; the total cost of repairs, \$2,882.77.

**Sanitary.**—The health condition of the school from July, 1891, to February, 1892, compared favorably with other years. We had but few acute, serious cases. In February our school was increased by about 140 Southern Indian children. Soon after their arrival an epidemic of measles broke out; it spread rapidly through the school, and all, apparently, that had not been previously affected, came down with them. At one time there were 105 in bed at once; unfortunately it was a cold and backward spring, very unfavorable for convalescing. As a sequel we had numerous cases of lung fever, ten of which died. With two exceptions the deaths were all confined to two tribes, Apaches and Arapahoes. Of those that died all except one were full-bloods. The records of this school go to show that half-breeds or mixed-bloods resist disease and death from pulmonary troubles much better than the children of full-bloods. Two large and commodious buildings have been erected this year, both being solid brick structures, so that our facilities for caring for the pupils of the school are better than ever before.

Extending thanks to the Department for prompt consideration of business matters, and with kindly acknowledgment to the employés of this school for faithful performance of the duties assigned them,

I am, sir, your obedient servant,

W. B. BACKUS,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT CARSON CITY, NEV.

STEWART INSTITUTE,  
*Carson City, Nev., September 10, 1892.*

SIR: In conformity with instructions I have the honor to submit this my second annual report of the workings of this school and school farm for the fiscal year of 1892.

**Improvements.**—In addition to the buildings reported in my last annual report I have built a blacksmith shop, wagon shed, smokehouse, hog corral, 200 by 600 feet long, and have now in course of construction an addition to the south end of main school building which when completed will have a room on first floor 36 by 36 feet for boys' sitting and reading room, with same dimensions on second floor for dormitory for boys. This will add greatly to the capacity and general appearance of the school and comfort of the pupils. A like addition to the north wing of main school building is contemplated and will no doubt be completed during the coming winter. This will give ample accommodation for 125 pupils at this school.

The material is already on the ground for building a stone root house 32 by 32 feet, 8 feet in height, over which will be built a frame storehouse 12 feet in height. This room, in connection with the present room, will give us space for storing winter vegetables and supplies for many years to come. Besides this work and the many repairs incident to a place of this kind, we have built a belfry on main school building; put a new floor in the old root house; laid a floor in the stable on the north side of the barn; also constructed a flume to carry water for irrigating purposes; made about 20 irrigating boxes to distribute the water over the farm; excavated and removed 200 yards of earth from a hard bank to make place for a new root house, and made walks, etc.; all of which has been done by pupils, with the assistance and under the direction of the regular employés.

**Agriculture.**—The yield of vegetables this year has been exceedingly good. The pupils had and are having, at the present writing, all the fresh summer vegetables they can consume, including melons. We will have an abundance of winter varieties to carry us through the present year.

We have stacked and placed in hay mow 40 tons of excellent hay, consisting of alfalfa, oats cut in the milk, and alfalfa and timothy mixed. This, with beets, carrots, and rutabagas, will carry the horses and cattle through the year. Besides these vegetables we have raised enough barley, field peas, and corn to fatten enough hogs to make all the pork the pupils will require.

**School.**—On July 1, 1891, all of the pupils but 23 left for their homes to spend vacation. On the 9th of the following month the smallpox made its appearance in this school. Two boys, 17 years of age each, broke out with the disease on this date. Immediately upon the school physician pronouncing the disease smallpox I caused the other pupils to be removed to the lower story of the building in a room as far from the disease as possible.

We immediately quarantined ourselves, hoisted yellow flags in conspicuous places and commenced the building of a pesthouse, which was completed and occupied by the two patients within thirty hours from the first appearance of the disease. We next burned the clothing and school bedding of the deceased boys; then fumigated all of the dormitories by burning sulphur, besides using other disinfectants. Every possible precaution was taken to stop the spread of the disease. The instructions of the school physician were strictly followed, which together with the prompt and generous action of the Indian Office in allowing me to handle the case without unnecessary restrictions had the effect to check the disease, so it was confined only to the two original patients, who, although badly pitted, soon recovered and were again admitted to the school.

On August 24 the quarantine was raised and on September 1 the regular session of school commenced. The parents of pupils were very timid about sending their children to school on account of our having had the smallpox, which made our opening attendance quite small. Then scarlet fever and diphtheria broke out in the surrounding country, and by the advice of our school and other physicians I did not crowd the school for fear I would be obliged to close it, as the schools in the surrounding towns had been obliged to do, on account of these contagious diseases; this course of mine partially accounts for the small average attendance during the year, which was but 79, with an enrollment of 173 pupils.

**Attendance.**—On account of the school being located in an Indian country where nearly all of the pupils can reach their homes in from one to six hours' travel, it is hard to hold them in attendance with the ordinary force of employés. I found during the last month of the year, when I asked for and was allowed four pupils to act as sergeants, that it was much easier to hold the children in attendance. As the same number of sergeants has been allowed me this year, I expect less trouble with truants than heretofore. I also expect a fuller and more regular attendance.

The pupils as a rule behaved themselves very well. They were industrious, obedient, and studious, and have advanced in their studies and industrial knowledge fully as much as the same number of white children would have done under similar circumstances. All appeared satisfied with the school, contented and happy.

**Employés.**—The employé force all took an active interest in the school from the first of the session until the month of December, when some unpleasantness cropped out between the principal and industrial teacher. From the commencement of their disagreement until both passed in their resignations affairs were not as harmonious with a portion of the employés as they should have been; however, all were required to attend to their respective duties. We are now relieved from this discordant element. To those employés that attended to the duties for which they were employed and assigned I am grateful, and with pleasure renominated them to fill their present positions.

**Sanitary.**—With the exception of the two cases of smallpox before mentioned, I doubt if there is a place in the country where so many children have been collected together and enjoy such good health as at this school during the past year. We certainly have a very healthy location.

**Stock.**—The stock belonging to this school is in excellent condition and are increasing rapidly. The stock purchased for this school and the increase now growing will compare very favorably with any stock in this part of the country, excepting where a specialty is made of raising blooded stock.

In conclusion, I again thank the Indian Office for its continual kind treatment.

Very respectfully,

W. D. C. GIBSON,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT ALBUQUERQUE, N. MEX.

FISK INSTITUTE. *Albuquerque, N. Mex., August 10, 1892.*

SIR: In accordance with instructions from the Indian Office, I herewith submit my annual report of Fisk Institute, Albuquerque, N. Mex.

No year in the history of this or probably any other Indian school can show more evidences of material progress made than has been made this year in this school.

**Advancement.**—Every department has made such advancement that it seems to be a school wholly different from the one that existed here last year. In many of the industries the pupils have become skilled in the trade sufficiently to carry on the department without the aid of a white person to oversee the work. Some of the industries have been carried on a portion of the year wholly by Indian pupils. But whatever success has been attained by the various departments is largely due to the faithful, earnest work of the employés associated with me. The employés at the head of the departments have worked so faithfully and studied the needs of the school so closely that they have surpassed my expectations.

**Literary department.**—The literary department was under the charge of Mrs. D. S. Keck as principal teacher, whose qualifications from scholastic training and from experience fit her admirably for this work.

She was assisted by five lady teachers, each of whom was much interested in the work and in every way very loyal to the service. The results of the labors of these earnest workers were very gratifying when it is known what disadvantages confronted them. Our school building proper consisted of three rooms; hence the necessity of fitting up rooms that had been built for other purposes. Recitation rooms were fitted up in other buildings, which were necessarily poorly arranged for schoolroom purposes. Besides, these class rooms were scattered, no two of them being under a single roof. This state of things continued until May 30, when the new building was dedicated.

The school work was retarded very much by two epidemics among the pupils, one of la grippe, the other of measles. Nevertheless, the advancement was indeed gratifying.

The school was graded at the beginning of the year, and the work for each grade was clearly outlined. Each teacher could easily know just what was expected of her grade. Each comprehended fully her task, and set to work with an earnestness of purpose to accomplish it. They knew no such word as fail, neither would they permit their pupils to get such an idea. The teachers, without exception, did earnest, faithful, conscientious Christian work. Children that were brought from the camps the last of December, 1891, can now speak and read English. Some of them can write their own letters to their parents.

Our system of grading and promotion has resulted in great good, and is destined to do much more than was realized this year.

Our new school building, with its spacious class rooms, will give the school an inspiration next year never before enjoyed. It satisfies a long-felt need. We face the future with much better preparation for great results than ever before. Viewed from the school environments, these children have a bright future.

Enrollment by grades:

Highest grade.....	50
Intermediate grade.....	58
Second primary grade.....	59
First primary grade.....	147

**Carpenter shop.**—There were detailed regularly to the carpenter shop 26 boys, who received daily instructions in this trade. They showed an aptness that is seldom if ever excelled by anybody. Most of them are now good carpenters. The most of the carpenter work of the school is done by the Indian boys. Very nearly all of the carpenter work on the girls' quarters and on the few school buildings was done by the Indian boys.

I think I am not overestimating their ability when I say that they do better work than three-fourths of the carpenters in the Southwest. The work on the buildings on the school premises speaks for itself, as does also work done for contractors in town.

Jacob H. Schweitzer, who was the instructor in this industry, is an excellent carpenter; in fact, I think he is the best in the service. He is painstaking and thoroughly systematic in his work. There is no man more valuable to the service than he. The amount of carpenter work done at the school exceeds

that done in any two years before. The repairing extended to all the buildings and included very nearly all the rooms in the buildings. The new work shows great skill and the cabinet work done by the boys is most excellent.

**Shoe shop.**—This shop was in charge of an instructor until November 7, after which time it was run exclusively by the Indian boys. One of the boys acted as foreman and instructor. As to work done, I have been unable to see any cessation in it. They turned out as much after the shoemaker left as they did before. There are 18 boys in this shop, and all are becoming very proficient. These boys can take the measure of a person's foot and make a shoe to fit it much more nicely than many of the white shoemakers. The advancement they have made is to be commended in the highest terms. These boys have made 608 pairs of new shoes and mended more than that many old ones. It is very evident that they can make all the shoes needed by the institution.

**Harness shop.**—The harness shop was under the charge of a very competent instructor. So thoroughly were the boys instructed and drilled in this department that they were capable of making harnesses that took the premium at the Territorial fair over competitors from Albuquerque. The harness-makers among the boys of the school took the premium both on heavy draft and light driving harness. We did not have a sufficient supply of harness material to keep the boys employed during the entire year. Running out of material in May, we were compelled to close the shop until the beginning of the new year. In addition to all the repairing necessary for the school, the boys made the following sets of harness:

Double breeching .....	24	Bridles .....	number.. 105
Double plow .....	13	Halters .....	do..... 180

**Tailor shop.**—The tailor shop has employed 14 boys half a day each during the entire scholastic year. Besides doing quite an amount of mending, they have done the following new work:

Coats .....	107	Vests .....	187
Pants .....	204	Drawers .....	349

**Sewing room.**—The school has had a seamstress only a portion of the year. From November 7 to January there was no one in the school who held the position of seamstress.

After the girls were placed in charge of the seamstress, Mrs. Elzadah Huston, they made progress that was second to no other department of the school. The seamstress, with the girls detailed to her, made all the wearing apparel for the girls besides making some shirts and drawers for the boys. So thoroughly is the work being done in this department that ere long we shall have several girls that will be competent to manage this department. The sewing is as well done as can be found anywhere. Mrs. Huston is an excellent seamstress and a good teacher of the work. Her control of the girls is most excellent and their progress is remarkable.

The following is a record of the garments made during the year:

Dresses .....	553	Towels .....	133
Drawers .....	48	Tablecloths .....	46
Chemises .....	108	Drawers, red flannel .....	64
Sheets .....	255	Drawers, canton flannel .....	68
Pillowcases .....	177	Aprons .....	288

**Laundry.**—All the laundry work of the school is done by the pupils. We have a steam laundry which enables about 6 girls and as many boys to do the laundry work of the entire institution.

Although we have a steam laundry, yet not all of the work is done by it. The girls have been taught to wash by hand as well as to use the machinery. The objection has been urged that to teach the girls to wash with a steam laundry does not give them the practical knowledge that they must have at their homes or when they live among white people. The reason always given is that instead of steam laundries the tub and washboard would be used. A visit to the laundry of this institution while the laundry work is being done will convince the most prejudiced as to the practicability of our laundry work. Here the pupils get the most practical knowledge of laundry work, because they get not only the knowledge that is practical on the reservation and at the farmhouse but a knowledge of the work in all classes and conditions of society.

We have girls and boys that can do good work in the steam laundries of our largest cities, as well as use the more common methods of laundering.

**Farm.**—Although the farm is thoroughly impregnated with alkali, yet the farm boys, by their patient, careful work in constantly stirring the ground and flooding it with muddy water from the river, were successful in making it produce beyond their own expectations as well as the expectation of others who had examined the farm. Several boys here have learned just how to prepare the ground to secure the best results, and have a practical knowledge of irrigation. In the management of the ground and the manipulations of running the water over it they now display considerable skill.

During the first part of the year they were under the tutorage of Mr. John G. Creager as farmer, who has lived the last seventeen years in a country where agriculture is carried on by means of irrigation. He has a thorough, practical knowledge of the science of irrigation and was competent to give the boys valuable instruction in this most important industry.

As the farm is small and the stock few in number, the school was without a farmer from September until the last of January, the farm work being done by the boys under the direction of the industrial teacher. After January 21 Mr. J. N. Huston was farmer and gave the boys good instruction during the remainder of the year.

The farm boys are to be commended for their persistence and energy in battling with poor soil and an abundance of alkali. The same amount of earnest and energetic work put forth on other farms would have produced much greater results in products; but as many of these boys have to live on this kind of land, it is possible that on land where they would have produced more they would not have received the instruction that will be so valuable to them through life. It is the knowledge that will enable them to make this land of theirs produce them a living that is most valuable to them. To know how to farm in agricultural countries is not of as much value to them as to know how to make this land produce if this country is to be their home.

There are many good farmers in agricultural countries who would be very poor farmers in New Mexico. To be farmers in New Mexico it is absolutely necessary to know how to counteract the alkali and to understand the science of irrigation. The boys of this school are to gain this knowledge. The poor soil and the abundance of alkali of the farm furnish ample opportunities for object lessons in this important industry. When they have redeemed this farm so as to have it produce well they will have gained knowledge sufficient to cause any spot of land in the Rio Grande valley to produce abundantly.

The following list is what was produced from 25 acres during the year:

Hay .....	pounds..	24, 000	Radishes .....	pounds..	900
Corn .....	do.....	3, 000	Lettuce .....	do.....	3, 000
Beets .....	do.....	3, 100	Melons .....	number..	800
Turnips.....	do.....	300	Cabbage .....	heads..	4, 000
Onions.....	do.....	1, 750			

**Kitchen.**—There has been a regular detail made to the kitchen and bakery. The boys and girls so detailed have shown quite an aptness in the culinary work. The boys detailed to the bakery have gained sufficient knowledge to enable them to go into a bakery and make the stock yeast, sponge, mix the dough, and bake the bread without the aid of a baker or any other person to superintend the work.

**Sanitary.**—The sanitary conditions of the school are as good as can be made under the circumstances. The ground having no drainage whatever, it becomes absolutely necessary to have all slop and waste water hauled away each day.

The school has no hospital, but has used a room 16 by 24 feet for that purpose. The school needs a good hospital more than anything else at present. Plans have been submitted to the Indian Office for such a building. Although there has been quite an amount of sickness during the year, yet it was caused mostly by two epidemics, viz, measles and la grippe.

The following is the report of the physician of this school:

During the year there were 432 cases of sickness, 286 boys and 146 girls. The influenza made its appearance among the pupils in the latter part of November, the symptoms growing more severe, with an increasing number of cases, until April, when it gradually subsided. There were 164 cases of influenza during the month of January. In the midst of the influenza an epidemic of measles broke out. During January and February there were 119 cases. There have been during the year 30 cases of pneumonia, all caused by the influenza or measles. We have had 3 cases of typhoid fever, two traceable, directly or indirectly, to the influenza, and 1 was sick when he came here with Superintendent Backus.

There have been 25 cases of phthisis pulmonalis, the most of them being developed by last winter's sickness. There have been 14 cases of syphilis (12 of them were Apache children) brought to the school during the year. We have had 9 surgical cases. A large share of the remaining cases of sickness were caused directly or indirectly by the epidemic.

During the months of January and February there was so much sickness that the hospital, two dormitories, and two storage rooms were so crowded that some single cots held two patients. At one time there were hardly well ones enough to care for the sick and do the work. The employes watched with the sick night after night until worn out.

There have been 22 deaths—phthisis pulmonalis, 10; syphilis, 1; pneumonia, 7; typhoid fever, 2; measles, 1; scrofula, 1. When the crowded condition of the sick is taken into consideration, the wonder is that the death rate is so small. The effect of the epidemic of the past winter still shows upon the children by their complainings and lack of vitality.

The crowded condition of the boys' dormitories, as they were last winter, is not conducive to good health. The drinking water is pure. The food furnished the pupils, on the whole, has been wholesome and good. The children have been suitably clothed to prevent sickness, except in the case of the Apache girls, there being no clothes to fit some of them when they arrived here, but they were supplied as soon as clothes could be made. There should be some system of sewerage in connection with the girls' water closets if possible.

There is needed at once a large and commodious hospital, with all conveniences suitable in such a building.

Respectfully, yours,

CHAS. E. WINSLOW,  
*Physician at School.*

**Office work.**—The work of the office, under my management, has doubled, brought about by the needs of the school, demanding that the school be better equipped and pushed to the front rank of training schools. In many exigencies open-market purchases had to be made, boards of survey had to be convened, all of which have entailed an extra amount of work. In the office I have been ably assisted by Miss Bertha A. Macy, who, I think, is one of the most competent and efficient clerks in the service. The correspondence has so increased that I have been compelled to purchase a typewriter, and unless supplies reach us promptly the office work will still increase. The office should have a safe and a large bill and letter file.

**General remarks.**—The life of a superintendent of this institution can not be a happy one if he is capable of becoming exercised over misrepresentations and malignant attacks. There is a sect in this country whose avowed purpose seems to be to continue the ignorant in ignorance; to amass all the money and property possible, regardless of the method of doing it; to thwart, if possible, the plans and purposes of the Government in the education and uplifting of the Indian; and to check the christianizing influences that are making inroads on their battle grounds.

If a superintendent is magnanimous enough to easily forgive vicious attacks, to bear scandalous reports, to endure personal and malignant insults, to be thoroughly self-sacrificing, and to forego personal pleasure, he can make this school a success, even though circumstances and environments be unfavorable.

**Public interest.**—The citizens of Albuquerque have become much interested in the school, and there seems to be no prejudice whatever against the school among them, but, on the contrary, a deep interest in its welfare is very noticeable. At the dedication of the new school building on the 30th of May, there were in attendance over five hundred people from Albuquerque at the exercises. In many ways the better class of citizens of the town have demonstrated their great appreciation and interest in the institution.

I wish to thank the honorable Commissioner of Indian Affairs and the officers of the Indian Bureau for the assistance and kindly words of encouragement given me. The moral support given me by your office has been very beneficial and has been thoroughly appreciated.

Respectfully submitted.

WM. B. CREAGER,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

---

## REPORT OF SCHOOL AT SANTA FÉ, N. MEX.

DAWES INSTITUTE, *Santa Fé, N. Mex., August 27, 1892.*

SIR: I have the honor to submit herewith the third annual report of the school under my charge.

That the work of the past year may be the better understood a brief history of the school from its organization should be given.

**History.**—The school was opened November 15, 1890, with 9 pupils. This number has gradually increased until the enrollment reached 186 the past year.

Until last November the chief obstacle in the way of building up the school

was the difficulty of securing children; since that date this task has been a comparatively easy one; in fact, 43 more pupils were ready to come to school, but had to be refused admittance for want of room. Of the number of children received into the school, about 70 per cent of them were direct from the camps, with practically no idea of civilization.

When the school opened the main building was the only structure on the school premises. Although this building is large and commodious the school has been crowded for room in several departments. No place was provided for a hospital, a storeroom, a laundry, workshops, nor sufficient dormitory room. A carpenter shop and a temporary barn were erected the first year.

**Improvements.**—During the past year the following improvements have been made: A bakery and flour room, with a clothing room overhead, 2-story laundry building, the second story for shoe shop and tailor shop; the front part of the main building has been raised by the erection of a second story; a large building for employes' quarters has been inclosed; a steam laundry has been put into operation; porches have been built around the main building and wings, and the school farm has been fenced.

**Needed improvements.**—In my opinion the following improvements are needed: A hospital, a storeroom, a school building and assembly hall, a permanent barn, two large cisterns, steam heat and electric light, and some means of fire protection.

There is no place upon the school premises where cases of contagious disease may be isolated nor where the sick may be properly cared for. It is my purpose to use part of the building for employes' quarters for a hospital as soon as the same is completed; but this arrangement should be only temporary. A permanent hospital should be erected as soon as possible.

By the erection of a school building, with at least six schoolrooms and an assembly hall, the present schoolrooms may be converted into dormitories and 250 to 300 children comfortably accommodated.

All the available space about the buildings in vacant rooms and on porches has been used for storeroom. The result has been a great inconvenience in the constant moving of goods from place to place and a consequent loss and waste of subsistence supplies. A large storeroom with basement should be erected at once.

The barn we have is too small for even the present needs of the school. An addition to the present barn is greatly needed.

In the interest of economy, safety, and cleanliness, I want again to urge the necessity of heating with steam and lighting with electricity. In an institution of this kind, heated with stoves and lighted with kerosene lamps, and practically no fire protection, the importance of these improvements can not be overestimated.

At least two large cisterns should be constructed to collect rainwater to be used in cases of emergency.

Some adequate fire protection should be provided at once. I have advised that one or more large tanks should be erected at sufficient height to throw water over the highest building, sufficient pipe be laid in connection with the present system, and enough hose be purchased to reach all the buildings from at least two hydrants. I would also recommend that the school be connected with the city waterworks.

The cost of these improvements would be, approximately, as follows:

Hospital, with kitchen, dispensary, bath rooms, and quarters for nurse .....	\$2, 800
School building and assembly hall .....	13, 000
Storeroom, with basement .....	800
Permanent barn, built in connection with the present one .....	1, 000
Steam heat .....	5, 000
Electric light (using the present laundry engine) .....	2, 000
Two cisterns, at \$200 each .....	400
<b>Total .....</b>	<b>25, 000</b>

**Water.**—The school well has so far furnished sufficient water for domestic purposes, but I doubt the advisability of relying upon this source alone in the future. The question of water for irrigation is still the perplexing problem to be solved. Two unsuccessful attempts to cultivate a garden without water, except a small amount obtained from the Sante Fé River, convinces me that it is worse than useless to attempt to utilize any part of the school farm until an adequate supply of water is procured. I have been criticised by one official for not cultivating more of the school farm; another official criticises the condition of the

garden; another says we must raise more vegetables; still another wishes our garden looked better. All of these officials admit that farming without irrigation in New Mexico is out of the question, but not one of them is able to offer a favorable solution of the "water question."

I have suggested the sinking of a tubular well upon the school farm as one source from which to secure a supply of water. I have recently learned that a piece of land within the city limits of Santa Fé, with a spring upon it, may be purchased and the water piped to the school.

Another plan is to connect with the city waterworks and perhaps secure sufficient water to irrigate a few acres of garden and a considerable number of fruit trees. I will state in this connection that I have made several unsuccessful attempts to get rates from the water company. A new company has been formed which has given me the assurance that they will furnish water at reasonable rates.

A fourth plan to secure a limited supply of water for irrigation is to sink another well, such as we already have, near the laundry, and raise the water by means of a steam pump. The sinking of a tubular well would doubtless be accompanied with a great deal of uncertainty, both as to the cost of the same and the probability of securing a supply of water. Two attempts at sinking such well in this vicinity have been made and both unsuccessful. The first well was sunk in the plaza of Santa Fé, in 1852 or 1853. The other attempt was made about 8 miles southwest of the school, in 1890.

The cost of purchasing the piece of ground in the city of Santa Fé with the spring upon it, securing a right of way for a pipe-line, constructing a reservoir at the spring and laying the pipe to the school, would cost probably \$3,500 to \$4,000, and in my judgment would be the safest and surest plan of securing a supply of water. It is difficult to determine what quantity of water may be obtained from this source, but by storing the surplus in a reservoir, no doubt sufficient water may be procured to irrigate several acres of garden and orchard.

To sink a well, such as we have, and purchase pump and pipe for raising the water, would cost probably \$1,000.

**Industries.**—The industries taught in this school during the past year are carpentry, shoemaking, tailoring, baking, cooking, sewing, and laundry work.

**Carpenter work.**—In the carpenter shop 8 to 10 boys have been constantly employed. In addition to the new buildings that have been erected, a number of tables, cupboards, closets and shelving have been constructed. Most of the boys in this department have readily acquired the use of tools and have made rapid progress. Occasionally a boy has been assigned to the carpenter shop who was not adapted to this kind of work, or whose health would not permit him to continue at such arduous labor; in such cases a change was made at once. In connection with the regular carpenter work house-painting has been taught to a limited extent. It is my purpose to give more attention to this industry in the future.

**Shoe-making.**—The shoeshop was opened last September with a competent instructor in charge. The work began with 5 boys and the number was increased to 8. All have made good progress. At least 4 are capable of making a pair of shoes without any assistance. From September until the 31st of May 147 pairs of shoes were made and 500 pairs repaired. The shop was closed during the months of June for want of funds to carry on the work. It is my purpose to make all shoes needed for the school the present year.

**Tailoring.**—This department was opened December 1, 1891. Five boys were at first assigned to work and the number increased to 10 before the close of the year. The work done in this department is as follows: 30 coats, 184 pair of pants, 30 vests, 82 waists, and 56 pair of drawers, besides all the mending of the boys' outer clothing. With this, as with other industries, I find that the boys take up the work readily and are greatly interested in fabricating their own clothing. The boys who work in the tailor shop are more careful in the appearance of their dress than the boys who work in other shops.

**Sewing.**—During the latter part of the year this department has been in charge of a very capable and faithful employé. The work done in the sewing-room is as follows:

Aprons .....	200	Sheets .....	167
Curtains .....	46	Skirts .....	54
Drawers .....	201	Sunbonnets .....	8
Dresses .....	268	Tablecloths .....	4
Garters .....	156	Towels .....	113
Nightdresses .....	34	Waists .....	168
Pillowcases .....	193		

Besides all the mending of the girls' clothing and the boys' underwear. Several of the larger girls are capable of cutting and fitting dresses without any assistance.

**Baking.**—All the baking for the school has been done by the baker, with the assistance of two or three large boys. The bake oven, made of sheet iron, is too small for the present needs of the school. A brick oven of suitable size should be constructed at once. One of the boys who has worked in this department the past year, with a little more experience will be able to perform all the work connected with a well-regulated bakery.

**Cooking.**—The work in the kitchen has been well conducted the past year. Details have been made to assist the cook, generally every two months. The plan is to keep 4 boys and 2 girls in the kitchen all the time; some of whom have experience in this kind of work. Owing to the small number of girls in school it is necessary to detail boys to assist in the kitchen. The dining-room work is performed principally by girls.

**Laundry.**—The steam laundry was started last January. The washing is done more easily and more satisfactorily than by the old method. A laundress, with the assistance of six to eight boys and two girls, perform the work in this department. The details of girls are changed every month; the boys continue longer if they wish to do so.

The girls of the school are detailed in turn to work in the kitchen, laundry, and sewing room, unless their health will not permit such an arrangement. In all industrial work the pupils work half the day and attend school the other half, alternating between the forenoon and afternoon, as the details change.

**Farming.**—Practically this work has been a failure, for want of water for irrigation. Some gardening has been attempted, and a few vegetables have been raised, but not sufficient to pay for the labor bestowed upon it. The only real benefit derived from it is the experience gained by the boys who performed the work. The work in this department has been carried on under the direction of the farmer and industrial teacher. More has been accomplished in the general work necessary about an institution of this kind than in attempting to cultivate the soil.

**New industries.**—The following new industries have been authorized and provided for the present year: Harness-making, brick-making, and blacksmithing.

**Literary work.**—At the beginning of the fiscal year there were two teachers in charge; a third teacher was added November 21, and a fourth March 25. I flatter myself that the literary work, upon the whole, is above the average. Considering the fact that of the 177 enrolled 125 came direct from the camps, with little or no experience in school, the work must necessarily be of a primary grade. Notwithstanding this fact, most of the pupils have made good progress. One feature of the literary work has been specially encouraged; that of letter-writing. By this means a double purpose was served, informing the parents of the condition and progress of their children at school and training the pupils in the arts of composition and penmanship.

**Sanitary.**—From the opening to the present time one of the most pressing needs of the school has been a hospital. It was a mistake to open the school before providing a place for the proper care of the sick. During the past year four cases of scarlatina occurred. The only way to isolate these cases was to vacate the shoe-shop over the laundry and convert it into a hospital. One of the school rooms was used for a dormitory and hospital for the boys until the last of March when this room had to be taken for school purposes. One section of the girls' dormitory was then fitted up and used for a hospital for the boys. It is expected to have a portion of the new employes' building ready for occupancy as a hospital by the 1st of October. The prevalent diseases as reported by the school physician were: Measles, 48 cases; sore eyes, 82 cases; whooping-cough, 6 cases, and scarlatina, 4 cases. Three deaths have occurred during the year at the school, and one pupil was sent home who died soon afterwards; three of these were the result of lung trouble following measles, and the fourth death resulted from congestive chills accompanied by spasms. Notwithstanding the large number of cases of sore eyes, the sight has not been lost in a single instance.

**Amusements.**—Comparatively little has been done to provide instructive amusements and recreations for the children. No funds have been provided to purchase games, etc., except what has been contributed by the employes themselves. The chief games that were introduced are baseball, croquet, dissected pictures, and spelling games. It is my purpose to increase the games both in number and interest as fast as possible. All the employes have aided in providing and promoting games, etc. Owing to the great amount of sickness, social meetings have been held only occasionally. The sitting rooms are as pleasant

and comfortable as can be made with the limited amount of furniture at hand. Tables with suitable reading matter are provided for both boys and girls. The cheerfulness of these sitting rooms has been the common remark of visitors.

**Discipline.**—There have been but few cases that required severe discipline, and but few runaways. The boys have been organized into military companies and drilled regularly twice a week. The girls also had some drill in the lighter military exercises. The school is partially uniformed, and will be completely uniformed in a few weeks.

A Sunday-school conducted by several of the employés was maintained during the entire year, and every well pupil was required to attend. The result of this moral instruction has been apparent in the conduct of the children.

**Discouraging features.**—In organizing a new school there are necessarily many obstacles to overcome; but it seems to me that this school has had more difficulties to contend with than new schools generally have. The lack of water for irrigation; the need of a hospital and store rooms; the jealous opposition of contract schools; the machinations of the Catholic clergy; the malignity of incompetent employés, whom the superintendent has been compelled to discharge; the urgent and persistent efforts of some officials to secure positions in the school for their friends, regardless of fitness, have all been discouraging features of the work during the past year. I do not say that all the officials who have visited the school have tried to get their friends into positions; one official, who has visited the school but once, used his influence to secure positions for four of his friends, three of whom at least are not suitable persons for positions in the Indian service. It occurs to me that the Indian Office and the bonded officer should have control of this matter.

In reviewing the work of this school the following facts should be borne in mind, viz: that 70 per cent of the pupils have come direct from the camps, without any practical knowledge of civilization; that 53 per cent of the pupils have had but eight months of actual school work; that the average age of the pupils is but 12½ years. These facts alone make it impossible for this school to present as favorable showing as older schools where a majority of the pupils have been in school a number of years and the average is probably from 15 to 18 years.

In closing I desire to express my thanks for the courteous treatment and prompt action of your office in the transaction of business.

Respectfully submitted.

SAMUEL M. CART,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT FORT TOTTEN, NORTH DAKOTA.

INDIAN INDUSTRIAL SCHOOL,  
*Fort Totten, N. Dak., September 1, 1892.*

SIR: I have the honor to forward my second annual report as superintendent of the Fort Totten Indian industrial training school for the fiscal year ending June 30, 1892.

The school is conducted as two separate and distinct institutions; the school proper being at the abandoned military post, and a branch being conducted in the Government building, situated 1 mile distant, in which girls of school age and boys under the age of 12 are admitted. Sisters of Charity—the Grey Nuns of Montreal—are employed exclusively in all departments.

An average attendance of about 100 pupils is cared for in this department. The industries of cooking, sewing, knitting, weaving carpets, and gardening, are successfully carried on. All other industries are conducted at the school proper.

**Farm and garden.**—The military reservation, consisting of about 8,000 acres, has been set apart for the use of the school. The soil of the entire tract is a rich black loam; 1,500 acres could be cultivated. The remainder consists of grazing and meadow land, with scattering timber on portions of same. During favorable seasons 1,000 tons of wild hay can be obtained from the meadow lands. Only 32 acres of this reservation was under cultivation April 1. This tract was planted with potatoes, oats, corn, peas, beans, parsnips, carrots, onions, beets, cabbage, radishes, and cucumbers, and the present indications are that there

will be a large yield of each. During May and June 110 acres of prairie was broken, 26 acres of which was thoroughly pulverized and planted to oats, and from present prospects they will yield not less than 35 bushels per acre.

The entire work of the garden and farm has been performed by the pupils under the direction of the industrial teacher and farmer. In view of the fact that the great majority of the pupils attending this school live in an agricultural section and will, upon returning to their several homes, be compelled to follow the occupation of farming as a means of livelihood, I deem it very important that they should all be thoroughly instructed in this pursuit; to that end I require the apprentices in all of the shops to devote a portion of their time during the summer receiving instruction in this particular industry.

**Stock.**—I am able to report all stock in good condition, with an abundance of feed for the winter.

Horses .....	19
Cows.....	23
Cattle (other than cows).....	33

Besides the aforesaid stock, contract has been made for the delivery of 85 steers and 1 short-horn bull, and in a short time the school will be able to furnish its own beef.

**Harness and shoe shop.**—This department was put in operation December 1, 1891, both industries being under the direction of one employé. Eight pupils are employed in the harness department and two in the shoe shop. The articles manufactured and repairs made are as follows:

	Quantity.	Value.		Quantity.	Value.
Bridles, riding.....	3	\$3.00	Lines .....	3	\$8.00
Bridles, work.....	4	7.25	Shoes.....	4	6.00
Halters.....	23	22.75	Repairs in harness shop.....		69.30
Harness, double.....	21	497.15	Shoes, repaired.....	250	109.00
Harness, single.....	10	102.75			

The production of the harness shop, thus far, has been purchased by the reservation Indians and white farmers adjoining the reservation, who are highly pleased with the work done by these Indian apprentices, which is certainly excellent.

**Tailor shop.**—Eight apprentices are engaged in this department; the articles manufactured are, 100 coats, 176 pairs pants, 35 vests, 64 pairs overalls, besides the repairing of boys' clothes. The quality of the work is excellent.

**Sewing room.**—On an average 20 girls are detailed in this department; great improvement is noticeable in their workmanship. They have manufactured during the year—

Aprons.....	491	Tablecloths.....	28
Drawers.....	397	Towels.....	278
Dresses.....	514	Underclothing.....	807
Woolen hose.....	76	Skirts.....	15
Nightgowns.....	232	Bed comforts.....	8
Sheets.....	225	Pillowcases.....	105
Shirts.....	72	Window curtains.....	27

Besides this, doing all necessary repairing of girls' and small boys' clothing. Carpenter work has been continuous during the year. The fact that the buildings were not constructed for school purposes, involves a vast amount of labor in repairing, reclaiming, and remodeling in order that they may be convenient and comfortable. The work in this department has been almost entirely in the line of repairing. The apprentices have made excellent progress.

**Blacksmith shop.**—This department has done all the necessary repairing about the premises, besides doing some work for the reservation Indians, such as repairing plows, mowing machines, and other agricultural implements.

Two boys are employed in this department and they have become quite proficient, and are now capable of shoeing a horse and doing ordinary repairing in a very creditable and workmanlike manner.

**Paint shop.**—Four boys are detailed in this department who are taught how to mix and apply paint; also, to use kalsomine. They have done 4,000 yards of

painting and 2,000 yards of kalsomining, and have performed their work well. The greater part of the painting has been done on the exterior of the buildings, which has been rendered necessary from the fact that the brick used in their construction is of very soft quality, and must be kept well painted to prevent decay.

**Schoolroom work.**—The average attendance has been 180. The course of study as prescribed by the Indian Office has been followed as closely as possible. Students have made good progress in their studies, several having been promoted during the year. Thorough, practical instruction has been imparted and the pupils have been taught to think and reason (independent of rules and text-books) as well as memorize.

The advanced class in arithmetic and algebra, as judged by Supervisor Ansley and other prominent educators, will compare favorably with similar classes in the graded public schools of the State.

Much attention has been given to practical instruction in the English language in all the grades, it being the basis upon which the Indian's education must be extended. Teachers have labored faithfully in the performance of their duties, and the success in this department is very gratifying.

**Sanitary.**—The health of the pupils has generally been good. During the winter months there were about 30 cases of sore eyes. This disease appears to be particularly severe upon those afflicted in any degree with scrofula. These pupils all recovered. One death has resulted from tuberculosis; three pupils have been returned to their homes because afflicted with the same disease.

In conclusion, allow me to extend my sincere thanks to the Department for the prompt consideration of all matters pertaining to the welfare of the school.

I have the honor to be, very respectfully, your obedient servant,

WM. F. CANFIELD.

*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT FORT STEVENSON, NORTH DAKOTA.

FORT STEVENSON SCHOOL, NORTH DAKOTA,

*September 28, 1892.*

SIR: In sending this my first annual report, I wish to say that whatever success may have been attained, whatever good may have been accomplished, and whatever advancement may have been made in the cause of Indian education is due in a large measure to the hearty cooperation of your office in all things connected with our welfare and the assistance and kindly interest manifested by all representatives of the Department who have visited us within the past year. Then, too, the willingness of employes to do all and even more than just the duties of their positions has contributed very much to the prosperity of our school, and it is with much pleasure that I can say that at the close of the fiscal year, in the opinion of the superintendent, there was not an undesirable employe among our number.

I wish to express to all friends of Indian education our appreciation of their kindness in furnishing reading matter, both books and periodicals, for the children, and to Frances C. Sparhawk are we especially indebted for her interest in this direction.

**Attendance.**—It is with pleasure that I am able to report that while there were 94 children in actual attendance on my assuming charge a year ago last June, now, September 28, we have nearly 160. This remarkable increase in the number of our scholars has been the result of Agent Murphy's hearty cooperation, who believes thoroughly in the American plan of education.

**Work.**—The work accomplished during the past year in the schoolroom and out has been, I believe, of a substantial character and an everyday affair. Do something well to-day, something more to-morrow, and after a time much will have been accomplished.

It is well understood here that each day has its work to be performed, regularly and promptly. No one is bribed into rushing to-day in order to play to-morrow. And yet plenty of recreation is allowed in order to preserve a cheerful disposition and good bodily health. It is intended that all shall be properly fed and clothed and kept cleanly and wholesome, as these are the only conditions under which young life can thrive physically and mentally.

**Health.**—The health of the children was good during the year; not one death out of an enrollment of 132, and an average daily attendance of 124.5. Good order, promptness, and regularity in all departments has been easily maintained, and it is hoped that habits of promptness and regularity may be formed that will become part of themselves when through with the school.

To illustrate just what is meant by promptness here, let me say that to the best of my belief not one of the three meals on any day of the year has been one minute late. Any child that is not promptly on time, through his own neglect, goes hungry, and so well is this understood that very few meals are missed from this cause.

Our employé force has been increased by the addition of clerk, farmer, tailor, one teacher, and an assistant matron. This is one of the many instances where the Indian Office shows its willingness to grant all reasonable demands.

**Tailor shop.**—The tailoring department that has been added the past year is of great assistance in keeping the boys more tidy and at the same time in making new suits of a uniform pattern. These add very much to the personal appearance of the boys and have a tendency to make them more careful of their clothing. Then several of the boys who work in the shop take considerable interest in the work, and will in a few years become fair tailors themselves.

**Band.**—But of all the attractions that have been added the past year the band is chief. This was started about April 1, and in less than a month the members could play simple music, and from that time to this it has been the source of never-failing attraction and pleasure for both pupils and employés.

The other departments of work connected with the school are so well described in the report of this school for last year that perhaps it is unnecessary to take up each in detail here. I will close by expressing my firm convictions that there need be no doubt in the minds of anyone regarding the education of the Indian. I have lived in the Northwest for the last twelve years, and have had much experience among the "foreign-born" citizens on our frontier, and it is settled beyond a doubt in my mind that the larger part of the Indians of the Fort Berthold Reservation are as well fitted for American citizens to-day as are 50 per cent of the foreign-born population of the Northwest. At present we have about one-sixth of the entire population of the Fort Berthold Reservation in this school, and I believe that by the time the youngest of these children shall have completed their school life the old Indian with long hair and nothing but a blanket and a pair of moccasins to cover his nakedness will be as scarce as the American buffalo is to-day.

I have the honor to be, your obedient servant,

C. A. BURTON,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

---

## REPORT OF SCHOOL AT SALEM, OREGON.

CHEMAWA, OREGON, *July 20, 1892.*

SIR: This, my first annual report, covering only the fourth quarter, will necessarily be brief, and will not attempt to reproduce the statistics and information already on file in your office, but may in a measure aid in correcting some of them.

Upon assuming charge of the school on the 1st day of April last I discovered that much of the estimate of its excellence, formed from study of its reports, was erroneous, because the reports themselves overrated the condition of the school, *i. e.*, citing only two cases, the steam heating being noticeable for its failure, and a broken, disused boiler; while the sewerage system is able only to remove the slop basins a certain number of feet or rods from the buildings; not dispose of the contents, in fact.

The lack of competent care of buildings and property, as evinced by the need of many repairs to windows, doors, stoves, and the commonly used utensils about the school, was a suggestion of the work to be done. The looking up of property and arranging lists thereof, to be receipted for, required persistent effort during the quarter, nor is the case yet finished, there being much for the condemning process and considerable discrepancy for adjustment by my predecessor.

**School.**—Finding the school itself much below the supposed grades and standing was a further unexpected fact. A minimum or lowest grammar grade is manifestly not sufficient schooling and instruction for an institution of this kind.

The quarter's observations on the condition, together with a study of the needs and possibilities of the school, convince me of its full ability to reach and maintain a high-school grade, giving a good business education to those who complete the work, all as laid down and directed in the course of study provided by the Department. This, it is expected, will be brought about at the opening of school exercises in September, with the changes contemplated and the introduction of the best approved methods of instruction, as practiced in the older and stronger public schools.

**Garden.**—The clearing of 12 acres for addition to the garden has been completed, and the whole planted (nearly 40 acres), which promise sufficient yield to supply the school for the year.

**Trades.**—The several shops in their opportunities for trade-learning offer inviting chances, which will be improved by the introduction of systematic study of the principles and knowledge upon which an intelligent proficiency in them can be acquired. The shops will be (after a few changes) at the opening of school in competent and trustworthy hands, some of whom are especially commendable.

Specific reports will go from this office as circumstances require to acquaint you fully with affairs here.

I thank you for the considerate attention accorded to the needs of this school, and to the papers from my desk.

Very respectfully, yours,

CHARLES W. WASSON,  
*Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT CARLISLE, PA.

CARLISLE, PA., *September 22, 1892.*

SIR: This is the thirteenth annual report it has been my privilege to make for this school. In all my former reports I have so fully outlined the purposes and success of the school that it seems unnecessary, at this time, to repeat what has been so often stated.

**Growth.**—The progress and growth of the school during the past year has been a fair increase over that of last year. Our average under care during the year was 779. The students have enjoyed larger outing privileges than before, and the results have been correspondingly greater. Their earnings during the year, outside the school, were:

Boys .....	\$16, 698. 83
Girls .....	5, 170. 15
Total .....	21, 868. 98
Their savings at the end of June were .....	15, 723. 58

There has been an increased appreciation of the services of our students, and they have received, on an average, better pay than in any previous year.

**Advancement of Indians.**—In looking back over the thirteen years of our history, the most striking feature of it is the wonderful change that has been made in the conditions of the Indian during that time. In the beginning 49 out of 50 of our students were unable to speak any English whatever, and very few came to us in any other but their camp dress. These features have gradually faded away. Now we never receive students dressed in native costume. A very large proportion of them make some use of the English language and have been somewhat advanced in the home schools.

**Improvements.**—The liberal appropriation of Congress last year, accompanied with a corresponding liberality in the law making our appropriation, enabled us to greatly improve the facilities of the school. The girls' dormitories were enlarged and improved so that we may easily care for 275 girls, and we can now handle from 600 to 650 boys and girls at the school, and could care for 1,000 easily, using our outing system more liberally.

The work of the school rooms and shops has been more fully systematized, enlarged and improved, so that we are making better progress all along the lines.

The sudden death on August 13, 1892, of my principal clerk, Dr. Charles H. Hepburn, who had served the school most efficiently during a period of more than nine years, has been a great loss to the school and to the Indian service. Dr. Hepburn was one of the most competent, conscientious and industrious officers it has ever been my fortune to serve with.

The following table shows the composition and the statistics of our population during the year :

Tribes.	Connected with school at date of last report.		New pupils received.		Total during year.	Re-turned to agencies.		Died.	Remaining at school.			On farms during year for longer or shorter period.		
	M.	F.	M.	F.		M.	F.		M.	F.	Total	M.	F.

Very respectfully, your obedient servant,

R. H. PRATT,  
*Captain, Tenth Cavalry, Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL AT PIERRE, S. DAK.

PIERRE, S. DAK., *July 23, 1892.*

SIR: In compliance with your instructions of June 23, I respectfully submit my second annual report of the Pierre industrial school.

**Attendance.**—During the past year this school has made marked progress in many respects. From 82, the number in attendance last year, the enrollment has increased to 184. During the months of September and October so many additions and improvements to the school buildings were under way as to cause considerable annoyance and confusion in the school. Until the new buildings under construction were completed, the accommodations were insufficient for the numbers in attendance, and the crowded condition of the rooms in use was very trying to pupils and employes. The completion of the new schoolrooms and dormitories relieved this condition; additional help was engaged, and the work for the remainder of the year was very satisfactory. Many minor conveniences are still needed, but the hard pioneer work is finished and the school may now be considered well equipped for its work.

**Buildings.**—The buildings comprising this school plant are as follows:

	Feet.
Brick buildings, 2 stories:	
School .....	125 × 225
Hospital .....	44 × 65
Boiler house .....	38 × 42
Frame buildings, 2 stories:	
Laundry .....	40 × 40
Horse barn .....	26 × 40
Cow barn .....	37 × 66
Frame building, one story:	
Storehouse .....	40 × 60

Also granary, pig-pen, poultry house, tool shed, shop, and hosehouse.

The total cost of these buildings, with steam heating plant, water mains, 500-barrel cistern, plumbing system, and sewer was \$70,000. The buildings are plain, but neat and substantial, and all apparatus connected therewith is in excellent working condition. The premises are inclosed with a neat woven-wire fence. The plumbing system is connected with the city water mains, and an abundant supply of pure, fresh water is obtained at a cost of about \$300 per annum. The main school building is well supplied with fire hose, and a fire hydrant centrally located on the grounds, with 600 feet of 3-inch hose, furnishes additional fire protection. A number of the larger boys are organized into a fire company, with drills sufficiently frequent to insure efficient work.

**Schoolroom work.**—Creditable progress was made in all schoolroom work, the advancement of the younger pupils in learning English being especially satisfactory. Classes were formed from the first year in the primary to the second year in the advanced grade.

**Industries.**—Only 16 acres of crops have been planted this year, the rainfall in this locality being generally too light to insure successful farming. The spring of 1892 has, however, proven an exception to the rule. The rainfall has been heavy and all crops planted promise an abundant yield. The work on farm and garden is done by the boys under the superintendence of the farmer. Ten cows are kept at the school. This is hardly enough to furnish the milk needed by the children. I have recommended that this number be doubled during the next year.

Horses, swine, and poultry are also kept at the school. All work in the care of this stock is done by the school boys under the close supervision of the farmer. The region inhabited by the Sioux has unusual advantages as a stock-growing country, and the Sioux boys have special need of instruction in that industry.

A shoe shop and a carpenter shop have been maintained during the past year. The larger boys are detailed to assist here, working one-half of each day.

The girls help in the sewing room, kitchen, and laundry, none working more than four or five hours daily. In a few months they become, considering their previous lack of training, surprisingly good help. Nearly all over 14 years of age have learned during the first year to make their own dresses and to make them quite neatly.

**Sanitary.**—Sickness has been more than usually prevalent among the Sioux during the latter part of the winter and early spring. Notwithstanding their reputation as able warriors there are few among them that do not show indications

of scrofula or consumption. The cold, wet spring developed these diseases and caused an unusual amount of sickness among them. The school children inheriting the same weaknesses, suffered in a like manner, though, owing to more comfortable surroundings, in a less degree. Three deaths occurred at the school during the year, all caused by pneumonia or scrofula.

The sanitary arrangements of the school are excellent, the location being high and dry, and the ventilation and sewerage good.

**Public interest.**—A most helpful public sentiment prevails in the city of Pierre in regard to the school. Visitors filled with kindly interest are seen on the premises almost daily. The city authorities on several occasions have shown their disposition to advance the interests of the institution. The pupils are regularly welcomed at the churches and Sunday schools and are often invited to participate in public entertainments and amusements, all of which is of inestimable value to Indian children trying to learn the ways of their white neighbors.

**Needs.**—The plumbing system has not yet been extended to a few of the new buildings. This should be completed, which will leave very few other necessary improvements that can not be supplied with our own labor. The most urgent need of the school is for more employés. At present there are thirteen white employés on the pay roll. Several others are needed, some of whom will undoubtedly be provided during the present fiscal year. The "per capita" limit works a hardship to the smaller Government schools. It will be readily seen that it is much easier to conduct a school of 500 pupils on a per capita limit of \$167 than a school of 200 pupils.

Very respectfully,

CROSBY G. DAVIS, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF SCHOOL ON PAWNEE RESERVATION, OKLAHOMA.

PAWNEE AGENCY, OKLA., *Sept. 1, 1892.*

SIR: I have the honor to submit this my second annual report of Pawnee industrial school.

During the past year there have been many outside influences at work that have had a general tendency to retard the progress of the school. The greatest of these has been the ghost-dance craze, which vicious doctrine has not only permeated the older members of the tribe, but has greatly influenced the children in school. In the winter, when the craze was at its height, children were greatly excited, and it took the closest vigilance of every employé to keep them in school, as well as to keep them from coming under the influence of this peculiar belief, which has done more to revive the old barbarous customs of the Pawnee Indians than any other practice in the past quarter century. Not until this practice dies out or is stamped out by some enactment can the effects of school or other civilizing and moralizing influences be visible or perceptible in the lives and actions of this Indian tribe.

In making this, my second annual report for Pawnee school, I can give but few statistics that would give the Indian Office an intelligent idea as to whether the school had advanced or retrograded during the year 1892.

**School attendance.**—By strenuous efforts the attendance at Pawnee school during the past year has been kept up to a high grade. The attendance has been 96 per cent, which has been about equally divided between the sexes. One hundred and seven different pupils have been enrolled in Pawnee school during the past year, 52 males and 55 females.

There was no effort made to secure 20 or 30 others who were eligible but not in school, owing to the lack of room in our school buildings. Another year the attendance can be greatly increased, which fact is made possible by the completion of the new dormitory building now under construction and will be ready for occupancy October 1, 1892.

**Schoolroom work.**—During the school year 1892 the schoolroom work has been quite satisfactory, though not up to the standard of excellence that marked it for 1891. This has been brought about by outside influences over which teachers have had no control.

The first of these causes has been the seemingly apparent antagonism of the older Indians to the school while under the influence of the Messiah craze.

The second cause has been brought about by the almost daily contact of the older camp Indians of the tribe, with school children, at which times they would fill the minds of children with the wildest vagaries and most abject superstitions of an ignorant people while laboring under the peculiar hallucinations of a so-called religious frenzy.

The third cause which has militated against a higher grade of schoolroom work comes from a lack of thorough supervision on the part of the superintendent. The class of work that the superintendent was obliged to do during the year precludes the necessity of his having to make an apology for this lack of thorough supervision of the schools. This need not be a barrier to efficient supervision hereafter, as the Indian Office has seen the wisdom of authorizing for the year 1893 some one to do a part of the clerical work which has heretofore fallen upon the superintendent.

Teachers have labored earnestly and devotedly to advance their schools, and they have had reasonable success.

The strong moral influence of Christian ladies has been quite observable in the general conduct of school children and the purest example of moral ethics and discipline, both by precept and practice, has been constantly placed before them. Great stress has been laid upon the moral development of the child, and this not alone in the schoolroom, but in every department of this institution. Teachers have realized that good healthful discipline is one of the necessities of a thoroughly organized school.

They have also realized that much of the disorder which is common to many schools comes from the fact that the teacher fails to recognize the cause of such disorder. Mischievousness and restlessness come from the misdirected energy of the child. This pent-up energy when properly directed is fruitful of good results in the general tone of the school, mentally, morally, and physically. Calisthenics and gymnastic exercises have formed no small part in the general exercises of the school, and their beneficial results are quite observable in the general discipline of the school.

In the schoolroom the work suggested by the "Graded course of study" has been closely adhered to, and industrial and design drawing and vocal music have received special attention, accompanied by good results.

**Industrial work.**—During the year 1892 the industrial work has been quite general, owing to the building of the new dormitory at this place. In the early part of the year the boys, under the supervision of the farmer, assisted in husking 40 acres of corn, digging potatoes, thrashing oats, and other general work on the farm.

In the month of December, 1891, there was procured by school industrial help 500 loads of sand, aggregating 300 cubic yards. In the month of January was commenced, under the supervision of farmer and industrial teacher, the quarrying and hauling of stone for dormitory building. By the 1st of June, 1892, there had been hauled by school help more than 200 cords of stone for said building. In the same time, but under the supervision of the herder, all excavating for basement of new building and trenching for the proper drainage of the same were done by school help. Indian boys have also been detailed to wait upon masons and carpenters in the construction of the building, and the assistance they have rendered, as well as the knowledge they have acquired, has been considerable.

During the spring several acres of garden were planted by school help and tended by same with good results. There were planted on school farm, during spring of 1892, 120 acres of corn and 30 acres of oats. These crops were put in the ground by renters, who do all work (excepting the husking of the school share of the corn), and as rental for land give one-half the oats in half bushel and one half the corn on the hill. Owing to the favorable season corn and oats have yielded bountifully.

During school year boys cut for stove use 150 cords of wood in 4-foot lengths, besides assisting in sweeping dormitories and schoolrooms, assisting in laundry, bakery, and dining room, and in the general care of stock and surroundings.

The girls of the school have been regularly detailed to assist in the general work in the dining room, kitchen, laundry, sewing room, and dormitories, and it has been a source of encouragement to see how well many of them do their work and what zeal they manifest in the performance of the same. The sewing room has been under good supervision, and the girls detailed to that department have shown reasonable progress in their work.

The shoe shop was not organized until the 1st of April, 1892, and during the last quarter of 1892 only two boys were detailed as apprentices in that department. Good results may be expected from this department at the end of next

year, as it is under the supervision of a skilled workman, one who takes an interest in teaching boys the details of the trade. There will be four boys detailed during the coming year to work in shoe shops.

**Repairs and improvements.**—During the past year there has been no general system of repairing and improving that the surroundings of the place demand. This is due to the fact that the construction of the boys' dormitory has taken almost undivided attention of superintendent and others. The exterior of school buildings has been painted, floors repaired, and several hundred rods of fence built around school farm. The greater part of this work has been done by irregular labor. There are several improvements that are greatly needed, and the success of the school and the advancement of the same depend to quite an extent upon the same. The first and greatest need of the school is a good water supply.

The second need of the school surroundings is new fences to replace those already worn out and to put around new school ground now occupied by boys' dormitory building.

The third need of the school is more barn room for the protection of stock belonging to the institution. Plans of this work will be submitted to the Indian Office within a few days, and the necessities for these improvements will be fully shown.

**Health of school.**—The health of the school during the past year has been exceptionally good. The annual siege of pneumonia and sore eyes which has characterized this school for the past several years were not experienced during the past year. Two deaths from consumption were our only losses. By the aid of the agency physician and the school nurse the sick rate has been kept at a minimum, and this has been accomplished by a constant vigilance over the hygienic surroundings of the children, as well as a study of their peculiar and individual natures. The addition of more dormitory room will afford better hospital facilities, and will be greatly appreciated by those having charge of the sick.

The past year has been a busy year for all concerned, and while we have had many discouragements with which to contend, we have had fair success and can see in these wards placed under our control considerable advancement along the line of material progress. Our hope is for the future of this school, and we will not be content until its influence for good is felt and appreciated by the Pawnee people.

Respectfully submitted.

T. W. CONWAY,  
*Superintendent Pawnee School.*

The COMMISSIONER OF INDIAN AFFAIRS.

## REPORT OF NORMAL AND AGRICULTURAL INSTITUTE, AT HAMPTON, VA.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE,  
*Hampton, Va., September 13, 1892.*

SIR: I am compelled by bodily infirmity to make my report this year more than ever the report of those upon whom the work and management of the school's different departments have most directly fallen. All, both teachers and pupils, have realized fully the need and duty of the hour, and have labored, each one in his line of duty, in a way to make me feel justified in claiming that the work of the current school year, in shop and class room and in every respect, has been as good as that of any in the school's history. Our work for head, heart, and hand has gone on without any serious hindrance. I have keenly felt my inability to have any share in it and can but hope that the merciful Providence which has vouchsafed some return of strength will soon restore it all and grant me years of work in teaching the earnest class of negro and Indian youth who come here to make men and women of themselves and who have in the past twenty-three years given an excellent account of themselves as workers for God and country in the South and West. I trust that the published "Record of Hampton's Twenty-two Years of Work," soon to appear, will be considered and received as a satisfactory account and result of the great expenditure of effort and money at this place since the small beginnings in 1868.

There has been a constant effort to weed out poor student material to put in better, to avoid waste, to "stop leaks," and improve the work done. Only by the most careful economy can this large and expensive system be maintained.

I think it safe to say that public confidence in the capacity of the Indian for fine manhood and for useful citizenship, through education, was never so general and so strong as it is now. Ridicule of the ability of the returned Indian students to do good work among their people has nearly ceased. Our work for the Sioux of Dakota since 1878, especially for those of Standing Rock Agency, has had most satisfactory results. The death rate and sick rate of Indians at this school have marvelously decreased of late years.

#### STATISTICS OF THE INDIAN SCHOOL.

The number of Indians this year has corresponded very nearly with that of last—37 girls and 93 boys. We have had on our rolls since last October 43 girls and 97 boys, a total of 140, including 10 at the North, of whom 6 have graduated, or are no longer pupils of the school, but have remained under its supervision. Nineteen have returned to the West.

There has been no death during the term, but in August, 1891, one boy died at the North; in July, 1892, a girl died suddenly of typhoid fever in Massachusetts, and a lingering and complicated case found release at Hampton soon after.

The tribes represented are as follows: Sioux, 57; Oneida, 54; Winnebago, 8; Omaha, 4; Piegan, 1; Shawnee, 1; Seneca, 1; Wyandotte, 1; Sac and Fox, 3; Pottawattomie, 4; Otoe, 2; New York Oneida, 1; Mohawk, 1; Onondaga, 1; Penobscot, Me., 1.

The new party of the year arrived in September under the escort of the Rev. Mr. Freeland, composed mostly of Sioux and Oneidas, and in all numbering 40. Eight are former pupils who were anxious to return for further training. No Indian parents seem more thoroughly alive to the benefits of education for their children than the Oneidas.

#### WINONA.

Winona, the home of 37 girls, was finished and first occupied in 1882. The teacher in charge wrote at the time: "Years of instruction could not have done for the Indian girls what a building of their own has accomplished immediately." To "keep Winona clean" has been a wonderful inspiration to the young sweepers and scrubbers who through these ten years have carried on their crusade against dust and dirt with such success as to win words of warm commendation from the many visitors who inspect its light, airy halls and corridors and pleasant sleeping rooms. Not more than two girls usually share a room, and since they have their own belongings about them it is a miniature home. The bureau drawers and stationary curtained wardrobe contain the clothing made and mended, washed and ironed by themselves. Even her bedding is part of each girl's weekly wash (unless in the case of the very youngest), and she must keep an eye to her white spread, that it also goes into the tub when the occasion requires.

They take care of the teacher's rooms and for so doing are paid a small sum, and they also receive a small allowance out of the Government money to teach them the careful use of money for themselves. This allowance varies according to the willingness and ability they show in household duties, and negligence in the care of clothing which involves loss, must be made good from this sum. Winona laundry is a busy scene on the days when by "tens" the girls are washing and ironing, merrily singing and talking. They exhibit their simple print dresses and spotless underwear, made as well as washed and ironed by their own hands with pardonable pride.

It is a pleasant sight to watch them choosing their new spring gowns from an assortment of bright-colored percales just received for their use. Each girl is allowed two new dresses, though some have decided to take the value of one in new material for underwear which they are specially desirous of having very nice. Their taste in dress is well guided, for while allowed to choose what they like, only simple, refined patterns with well contrasted or harmonizing colors are provided. These dresses are made up by the pupils who are taught to cut and fit with dexterity and rapidity.

In one of the cottages are held cooking classes, where the object is to teach the girls to make the most out of very plain and simple materials. Having in view their return to conditions of life where household appliances are few and means small, they are given the sum of 50 cents a week out of which three sup-

pers must be provided each week for three girls and their teacher. For dinners 60 to 70 cents is allowed. Milk, flour, and fuel are given the school. In the little three-room cottages, the girls meet for their lessons in fire making, table setting, dish washing, etc. Not the least important is the responsibility of each girl for her own supper, the entertainment of her guest and the presiding at the table. Difficult as it may appear to provide variety with this small sum, the girls succeed very well. Muffins, corn bread, oatmeal, eggs in various forms, hash, codfish, potatoes in different ways make up a sufficiently varied bill of fare. They even make nice little pats of butter of their own churning, worked out in the churn made by one of the Indian boys. To the boys' skill in wood working they also owe their rolling pin. They keep their household accounts carefully, and are very proud of their success in uniting comfort with economy. The Indian girls are also members of the regular school cooking classes.

An Indian woman must also know how to drive a nail in the right place and to hit it squarely on the head. She should be able to make a box, a table, a book shelf, if she wants to have her Hampton surroundings about her; she must know how to put in a pane of glass, for she lives in a tepee no longer, and if the men are off "rounding up" or in the fields at work she must attend to domestic repairs. So five classes of five Indian girls each are taught in the simple rudiments of the carpenters' trade.

The Lend-a-Hand Circles are very helpful in the training of our girls. When a teacher has a little knot of her pupils gathered about her in her own room, fingers busy and tongues set free from the restraints of the class-room, she finds it easy to gain a new insight into character and needs, and many a chance to speak a word in good season to exert a molding influence over these young lives. At New Year's time one of these circles proposed that instead of the little breakfast party their teacher was planning to give them, they should be supplied with provisions to take to some poor old colored people across the creek. A very happy New Year's morning was thus spent as they distributed their gifts and read and sang in the little cabins, learning the sweet lesson that "it is more blessed to give than to receive."

But not only to the girls is Winona an "elder sister." Her little chapel gathers the boys also for the Thursday evening prayer meeting and the Indian Sunday school, of which Rev. Mr. Gravatt is the superintendent. Sunday morning there is a service for those who do not attend St. John's Church. This winter we have missed the presence and help of Gen. Armstrong, who for eight years has been wont to give a part of the morning to his Indian Sunday school. In his absence an effort has been made to throw more of the responsibility upon the scholars themselves. A prayer meeting has been held, often conducted by one of their number, and out of this has grown a Young People's Society of Christian Endeavor, with a Sac and Fox boy as president, a Winnebago girl vice-president, an Omaha boy treasurer, and a Sioux girl secretary.

Saturday evening the big hall often presents a festive scene as the boys and girls meet for a work evening, or a sociable, a musical and literary entertainment, or a debate.

It is a cause for congratulation that in the Indian work of this country, Dr. Dorchester, the superintendent of Indian schools, is accompanied in long tours of inspection from ocean to ocean and from Canada to the Gulf, by his brave-hearted wife, who devotes herself to the welfare of the women and girls. While visiting Hampton this winter she gave us a word of encouragement as to the practical worth of the little cottage where our girls take lessons in simple, every day housekeeping. She had felt the need of such a scheme in the Western schools, had already pleaded for a small house adjoining the main buildings where the girls could be trained, but now felt that she could urge it more strongly since, she said, she had actually seen her "model cottage." She is much interested in furthering the wise plan of appointing field matrons, earnest, practical Christian women with a true missionary spirit, to go out and live among the Indians, above all putting themselves in the touch with the Indian women, and teaching them how to improve their homes, to care for their children.

#### THE WIGWAM.

A pleasant sitting room, as cheerful as sunshine, flowers, pictures, and a warm welcome can make it, is here always open to the boys. Here they find the last daily paper, a few magazines, a weekly paper, provided by the kindness of a generous friend, and a supply of books for reference and reading.

At 9 o'clock all gather in the assembly room, summoned by the janitor, one

of their own number, a member of the Senior class, who conducts the closing exercises of the day. The roll is called, when Indian-speaking is reported, a verse or two of a hymn sung, and the Lord's Prayer reverently repeated. At this service any student is at liberty to speak of anything which, in his judgment, needs correction. These talks are quite frequent, are almost invariably listened to with respectful attention. This liberty of self-government, which is seldom abused, is a strong educative feature of the school.

As a rule the wigwam is quiet. The boys, while full of life and fun, are not boisterous. The older boys and young men are studious and manly in their deportment. Quarreling is almost unknown, even among the little boys, towards whom the older ones are remarkably gentle and forbearing.

The boys' bedrooms are furnished with only necessary articles. They are inspected by the janitors, but swept and kept in order by themselves. There is a growing fondness for pictures and other articles of taste, often purchased from their own scanty earnings.

A wigwam literary society has already succeeded in waking up the youthful orators in a manner to surprise themselves as well as their friends. A lady visitor, present one evening at their "town meeting," in commenting on their quickness in springing to their feet, their ready retorts, and easy flow of English, said: "If I had shut my eyes I should not have known I was among Indians."

#### INDIAN SCHOOL.

The pupils of this department divide their time between class room and shop, with the exception of the advanced class, which, preparing for the junior of the normal department, attends school all day four days and works two. In the Indian classes proper special effort has been made of late to draw out the conversational powers of the pupils, a task by no means easy, especially before visitors. Their shyness and reticence, added to the difficulty of expressing themselves fluently in a foreign tongue, proves one of their greatest drawbacks on entering the higher normal classes.

In describing the class work of the year the teacher reports:

**English.**—The fifth, or lowest division, began the study of our English tongue last fall with knives and forks, tables and chairs, a toy set of farming implements, etc., as object lessons, gradually acquiring the power to a simple sentence, though the listener may have to wait long and patiently before it is fairly "out." The fourth division also needed objects in every day use to increase their vocabulary, but as this grew larger sentence building grew easier. They have had the help of pictures, and, with the coming of spring, sweet spring flowers have been studied and enjoyed, as also spring birds.

Power of expression seemed the greatest need of the third division. To aid this they had the stories of Columbus, Balboa, and De Soto, also simple lessons in physiology, besides object lessons and dictation exercises, and are now able to make very creditable recitations. History stories have likewise been given the second division, with lessons on events of the day, as the famine in Russia, the utilizing of Niagara, etc. They are now at work at sentence building, trying to learn the uses rather than the name of the different parts of speech. Natural history at present forms the basis of language work for the first division, the pupils describing the habits and appearance of animals, aided by pictures, stuffed and living specimens. In the all-day advanced class some elementary science work was taken up at the beginning of the term. Occasional home letters, conversation lessons on general topics or matters of daily school life, poems, etc., have furnished constant drill in their language class, while each study in turn gives them English.

**Arithmetic.**— $1+1=2$ . This first principle was the starting point of our lowest division. The brightest ones in the class can now do combinations up to 20, the duller ones to 12. Simple problems, in simplest English, have also been given them, and a little fraction work. Visiting the other classes we shall find them working along the general lines; drill, both mechanical and with problems, in the elementary rules, in fractions and denominate numbers, until we reach the advanced class, where simple decimal work is also begun, the text book there being Sheldon's Arithmetic. One teacher in using toy money has sent her scholar on imaginary shopping tours, finding them very scrupulous in bringing back their change. The clearest method in teaching fractions has been to draw large disks on the board, divide them before the pupils, using colored crayons, and then to fit pieces of one size into another to get their relative proportions. Quick mental

exercises have been part of their drill. We are apt to find arithmetic the weak point in pupils coming from agency schools who may show excellent training in reading, spelling and writing; but with practice they quickly pick it up.

**Reading.**—Besides blackboard work, Appleton's Chart, Davis's Readers, The Story of the Bible, and the new "Normal Course in Reading," have been used, and some other supplementary reading. The Fourth Reader of the normal course has been found especially attractive and helpful, with its brief but clear outlines of the history and government of our country. These chapters, together with patriotic selections from various authors, have stirred the enthusiasm of our advanced class to such a pitch that on one occasion a burst of song from their recitation room took us quite by surprise, as boys and girls joined in the strains of "Our Country, 'tis of Thee." Physical exercises and vocal drill have also been given.

**Writing.**—This is a branch in which Indians are apt to excel, their powers of close observation and imitation standing them in good stead. The square paper for forming the letters correctly was used at the beginning of the term, and much blackboard work of the same kind was given to the writing classes. Free-hand exercises, both at the blackboard and on paper, have been found helpful. In all classes double-lined paper is much used for copying.

**Geography.**—This study is always a "step up" for our lower classes, and the second division has been thus promoted this year. The tall brave is frank to confess that to his mind it is by no means proved that the earth is round. New York and its wonders he is sure of (has he not seen them with his own eyes?), but as regards Boston he is a trifle incredulous. In general, however, they accept the teacher's dictum and diligently study about the earth as a whole, its forms of land and water, its different races; the size, surface and drainage of North America, particularly the United States; draw maps thereof, gain some idea of its cities, exports, imports, etc., besides some knowledge of its government. Another class have enjoyed lessons on Europe, and have reviewed much that they went over last year, learning more of mathematical geography, of winds and tides, and also of historical references, the early Norse explorers exciting much interest. Still another class have taken hasty flights through the grand divisions of the eastern hemisphere, returning home by way of South America. Some outside reading in books of travel has helped to broaden their views of other countries and nations.

**History.**—Eggleston's First Book of History has been used this year and the scholars have been much interested in its graphic sketches of the famous men of our country. Some of their reproductions of these history stories have been very good. The examples of steadfast purpose and achievement in the face of obstacles, set before them in these biographies, are very practical in their bearing on the Indian character.

**Physiology.**—The experiment has been tried this year of taking Martin's work in our advanced class, with the hope that thereby the pupils would become somewhat familiar with the scientific words and terms so hard for them to master.

**Music.**—The singing lessons given to the morning school in Holt's Method, though coming only once a week for twenty minutes, have shown excellent results. The latter part of the term the beginners in the afternoon school have had daily ten-minute lessons, and they, too, are making gratifying progress.

#### THE NORMAL SCHOOL.

This includes among its large number of colored students this year, 48 Indians, and comprises the work of a grammar and English high-school course, with the exception of the algebra and geometry, but with the addition of normal work, which fits directly for teaching.

**Science.**—These lessons are made the basis for expression in both oral and written language, and are invaluable for the training they give the students in thinking and in expressing themselves in an orderly and simple way. It is the constant aim of the teacher to simplify this work as far as possible, to eliminate technical terms, and to make practical applications.

In the junior year the students have an elementary course in geology. The composition work of the year is largely based on these lessons. The juniors have also a course in physiology and zoölogy. A knowledge of hygiene is the aim in the study of physiology. The consideration of practical subjects takes a part of the time. Among the subjects discussed are ventilation, food and proper ways of cooking it, cleanliness, exercise, first aid to the injured, and effects of alcoholic beverages upon the organs.

The middlers have a course in elementary botany. This, as well as geology, is in charge of the teacher of language and grammar, and all the lessons are carefully written by the pupils. In giving these lessons, the aim is not only to make them profitable to our students, but to give them the training that will enable them to plan and carry out similar work in the schools where they will soon be teaching.

The senior class has this year had weekly lessons in agriculture, at the same time pursuing a laboratory course, combining the elements of physics and chemistry. A laboratory manual has been prepared in which are no statements of fact, but only directions for experiments, a few questions and review topics. Each student has his own desk, and performs most of his experiments himself; always making his own observations and drawing his own conclusions, he writes both in his laboratory manual. The students are encouraged to sketch the apparatus as used, letting the picture tell the story of the experiment.

The object of the whole course in science is not to cover a certain amount of ground, or to crowd the student with facts, but to teach him to think, and to reason from what he observes to definite conclusions; in short, to develop in him a scientific habit of mind. During the past winter forty-minutes weekly lectures have been given a class of about 40 seniors in the normal school, and 3 seniors who could spare the time have met their teacher on Monday afternoons for general talks on agricultural science and some instruction in special lines of work; this apart from the practical training received by the boys regularly employed in farm labor.

**Geography.**—As a result of the elementary science lessons in the junior class, the middle class has a sound preparation for physical geography. The students are now observing for themselves the winds, clouds, and temperature, and the path of the sun. The whole school showed great interest during the winter in the total eclipse of the moon and in the aurora borealis. The frequent rains have furnished convenient illustrations in the mischief done to the roads, of transported soil, and the formation of river systems, deltas, and marshes.

The recent difficulty with Chile and the Bering Sea questions have been discussed in class as well as other current topics. Sometimes letters are called for describing imaginary journeys. By such methods, as well as by reference to books of travel and by the frequent use of pictures and scrap books collected for the purpose, an effort is made to give as much as possible, in the four weekly recitations, of what Herbert Spencer calls "Descriptive Sociology," with the hope that the students' minds may thus be somewhat broadened and deepened.

**History.**—The study of geography and history must always be combined. The localities that have a history significant in the world's progress are those most to be studied, and a historical event can not be grasped unless one understands the environment of the people under consideration, since it so largely determines their history. Our juniors read Eggleston's First Book in American History. It is a most attractive book, and the interest of our large classes never flags while they are reading it. This history has been prepared with special reference to the lives and deeds of great Americans, and it is of great value in stimulating students to read more of the men in whose lives they have become interested. The middlers study United States history during the entire year. The seniors take the outline of the world's history. They study ancient and mediæval history somewhat in detail, and take up briefly some of the greatest events of modern times.

The study of current history has been aided by the little paper, "The Week's Current." We availed ourselves of a special offer and subscribed for twenty copies for ten weeks. This paper contains a summary of the leading events of the week. Space is given to discoveries and inventions and to all important questions of the day. Twenty minutes following devotional exercises at the opening of school in the morning are given by the middle class to the discussion of current events of the week. The reports given at that time show that our students are reading the papers thoroughly and intelligently. The seniors study the paper in connection with political economy and civil government. These studies they always find exceedingly interesting. A text-book is used as a guide, but the daily paper is always brought into the class room and is referred to constantly.

Old Testament history is studied by juniors and middlers. The juniors take the history to the reign of David, the middlers finish. The objects of the work are to give the students a knowledge of the history, to make them familiar with the books of the Bible, and to teach them to study it and to draw their own conclusions without relying totally on aids to Bible study. The life of Christ, Acts, and the Epistles are studied in the Sabbath-school classes.

**Reading.**—It is our desire to arouse interest in the best reading, to enable the students to get thought from the printed page, and to train them at the same time to give it to others by distinct, expressive reading. In the junior year our students spend several weeks reading the history previously mentioned. This suggests many other things, and they read selections from famous speeches and historical poems. This year the juniors have read many of Whittier's and of Longfellow's poems with enjoyment and appreciation. Hawthorne's short stories have opened to many a new realm of literature, and Irving's always delightful "Rip Van Winkle" has held the classes spellbound. Before the end of the term the juniors will learn something of Bryant, Holmes, and Lowell. The middle and senior classes have also studied our American writers this year. They have kept notebooks in which they have written the outlines of the authors' lives and many quotations from their works. They have read Irving's "Legend of Sleepy Hollow," "Snow Bound," "Evangeline," some of Hawthorne's short stories, and sketches by Charles Dudley Warner and by Burroughs. Our middle-ers are reading English history. We have recently obtained a set of Phillips's Historical Readers and find them invaluable in this work. The seniors spent some time in reading Greek myths and the story of the Trojan war. The senior class have a course in English literature, in connection with which they have practice in composition writing.

**Language and grammar.**—Very little technical grammar is given to the juniors. They are taught to recognize the parts of speech, and much attention is given to what may be called "language grammar." The middle-ers have a course in technical grammar.

The aim of the work is to give such a knowledge of the structure of the language as will enable the students to speak correctly, to write correctly, and to read understandingly. It has been already stated that a large part of the language work of the juniors is based on lessons in geology, and a part of that of the middle class on lessons in botany. Lives of authors and the study of their works suggests interesting subjects on which to write.

**Writing.**—Lessons in penmanship are given to the junior and middle classes. Choice selections which the students have read and enjoyed are given to them in their writing classes, and these are carefully copied in blank books.

**Arithmetic.**—Arithmetic is studied throughout the course. While careful analysis is made a prominent feature of the work, more attention than ever has been given this year to rapid mental work. As far as possible objects are used. Students illustrate their examples by drawings, and handle weights, measures, etc. The aim of the teachers has been to train the pupils to do accurate, rapid work, such as would fit them for business as well as for the schoolroom.

The course in bookkeeping, which is given to the seniors, is also a preparation for business life and for the business transactions which everyone should be fitted for.

**Theory and art of teaching.**—During the last half of the year lessons on the theory and art of teaching are given to the middle class. They are first taught the fundamental educational principles; they then learn how they should be applied in teaching the elementary branches. Lessons are given to classes of children before the students, and they are required to prepare lessons, which they give to the class. The seniors have this year had especial work in methods of teaching geography and reading, with teachers in charge of those classes. They have spent one month in the Whittier School, a longer time than any preceding class has had there. They first observe the lessons given by the regular teachers; they then gave lessons under the direction of these teachers, and finally they were placed in charge of a room. The work was so arranged that they taught children of different grades. The principal of the school met them separately and in classes to plan their lessons and to criticize them.

**Music.**—The report of the music teacher is as follows: The Holt method of teaching music has this year been introduced throughout the school. Its aim is to teach and name the invisible in music. The ear, not the eye, is first appealed to. The student learns to think in sounds.

**Drawing.**—A systematic course in drawing has been carried on under much more favorable conditions than before, since a large room has been fitted up for the classes. The juniors have studied type models and similar objects to gain a knowledge of form. By modeling in clay the powers of observation have been cultivated, and after an intelligent knowledge of form has been gained the ideas have been expressed by drawing. Drill has been given in pencil-holding, quality of line, and the proper folding and cutting, and proper models have been made. The study of the elementary principles of correct decorative arrange-

ment and of harmony of color has resulted in pretty designs in colored paper. The students in the middle class and those in the senior class who studied drawing last year have made drawings on a large scale with charcoal from plaster casts of plant forms, fruit, and animals. Drawings have been made, too, from plants themselves.

**Mechanical drawing.**—One class from the machine shop meets every Saturday morning for three hours, and one class in the night school works under direction for two hours every Friday night. After a year's instruction in free-hand drawing they acquire a knowledge of drawing instruments by making five plates of geometrical problems, all of which are given some practical application for the purpose of easily and firmly memorizing. The results have been very satisfactory. Some have shown marked ability, and several have expressed a desire to take advanced courses after leaving Hampton.

**The library.**—The large and well-stocked library of the school has been thronged all the year with eager learners. Pictures and simple reading are provided for those unable to read much English and everything by way of reference books has been made readily accessible to the students.

The teachers require library work of their classes and the seniors spend their evening study hour there.

#### THE INDUSTRIES.

**Technical.**—The 91 boys find occupation at trades—half a day for those in the Indian school and two work days each week for those in the higher classes. Those who have any preference or show marked ability in any line are put at definite trades; others are given a technical training and later a trade if desired. The idea of the technical course is to give thorough instruction in the use of carpenters', wheelwrights', and blacksmiths' tools, in order that they may be able to make and repair everything that their knowledge of civilized life will make essential on their return home, where at a distance from towns they will be thrown on their own skill and resources. Each Indian boy receives his technical outfit.

**Trades.**—No contract work is now taken and each student has instruction in simple hand work before machine work is taken up. The harness shop instructs and employs 6 Indians; the shoe shop, 5; the tin shop, 2; the carpenter and paint shops, 22; the wheelwright, 7; the blacksmith, 5, and the farm shops, including both the latter trades, several others. The printing department has 6 apprentices, and besides paper, book and job work, these Indians publish and print a monthly paper, the "Talks and Thoughts of the Hampton Indian Students," on their own responsibility. The farm gives instruction to 22 Indian boys. Here they gain practical knowledge of work about a large barn, its machinery, stock and slaughter house, greenhouse, vegetable garden, and grain fields.

#### MEDICAL.

[By M. M. Waldron, M. D., resident physician.]

The health of the Indian school has been good. With the exception of Indian Territory students, the Indian pupils seldom show any signs of malaria. Two Indian Territory boys have had acute malarial attacks. No other acute malaria has appeared among the Indians. Pulmonary troubles have been less numerous and severe than usual. One Sioux Indian boy, from Crow Creek, has had an attack of pleurisy and pneumonia, from which he died in July. The history of Indians at this school shows that Indians from Crow Creek are peculiarly wanting in physical stamina, and recovery in this case was hardly expected.

In August last, an Indian boy, who had been sent north for the summer, being apparently in good health at the time, died of acute tuberculosis at the Massachusetts general hospital, Boston. In July, 1892, a girl, also in Massachusetts, died suddenly of typhoid fever.

The selection of Indian students for eastern schools is made more carefully than in past years. Unsound students have thus far been found among those passed as "sound" at the agencies, but the number of such cases is diminishing. In the last party of forty Indians, four were quite unsound, one from incurable disease of the eyes, three from pulmonary disease. One of the pulmonary cases has done well; the other two cases have remained the same as on arrival, unfit for school work, and were sent home with the first party going west.

The history of unsound Indians who have been brought from the West to this

school has often been encouraging. In case of pulmonary disease in an early stage the change seems, for a time at least, to be beneficial. Several of these cases have spent the entire period for which they were brought, and with the exception of excuses from military duty at times, or from work in bad weather, have been able to fulfill all the requirements of the school. The additional expense and care of such students is an important item, and yet in a few cases the result has fully justified the outlay. The physical strength of all Indians, however, in this their critical transition period, is put to severe tests, and as a rule only those who are apparently sound should be sent to eastern schools.

Even Indians who are born with apparently fine physique are often the victims of inherited disease, and many who have exceptionally fine muscular development are unsound from strain in foot-racing, ball-playing, wrestling, or other sudden excessive exertion. One broad-shouldered student, who suffers constantly from cardiac and pulmonary disease, says: "I run foot race, mile and a half; I take first prize." His trouble began with that foot race and his case is a typical one. A fatal hemorrhage has often been brought on by the violent exertion of these untrained athletes. Heredity counts fatally against them. Let anyone who wonders why Indians have little physical endurance read the account of the transportation of the Sioux from Fort Snelling, Minn., to Crow Creek, S. Dak., in 1863, during which river journey of one month 300 out of the 1,300 human beings crowded into one small steamer died, and let that and the immediate subsequent history of the Crow Creek Indians stand as a type of the whole undermining power by which the Indians of many localities have become physically degenerate.

The physical improvement of the Indians is dependent on the slow processes of education and civilization. When these processes have made a better home life easy and natural to him, we can reasonably hope that the children of each succeeding generation will be more sound. Indeed the realization of this hope has begun already in the homes of our graduates.

#### THE DEPARTMENT OF DISCIPLINE AND MILITARY INSTRUCTION.

The department of discipline has been especially satisfactory this year, from the fact that very little serious discipline has been necessary beyond the regular routine work of the department, consisting of a great many offenses arising daily from one source and another. These are visited with minor penalties, which are usually understood by the students.

The court-martial or "officers' court" and the Indian council have both been in operation during this year and have done very good and effective work. At the beginning of the year the officers' court was organized according to the U. S. Army Regulations. The members, fourteen in number, were appointed by the disciplinarian, with the approval of the principal, and represent the six companies of the battalion. They have tried less than a dozen cases this year, the decisions on which have been approved and the sentences executed, while last year they tried about sixteen. This decrease is partly due to the higher "tone" of the men and partly to precedent. If a case arises and the court has previously rendered a decision on a similar one, the same sentence, as far as practicable, is executed. It is well to say here, perhaps, that the penalties for minor offenses have been set by the court and are simply executed by us in the office.

The Indian council does work similar to that of the officers of court, only it is confined to the Indian boys who room in the "Wigwam." The council acts on cases that arise between the Indian boys and upon the conduct in their dormitory. The five members of the council are not appointed by the school officers, but are elected by the Indian boys themselves.

The building occupied by the young men is under the care of janitors, from the students, who are usually officers of the battalion. Each is responsible for the order of the men in his dormitory and for the condition of the dormitory itself. The janitors make daily inspections of the rooms, fire extinguishers, fire escapes, etc., and submit a written report every morning to the disciplinarian. The rooms are inspected during the week by some of the lady teachers. The students understand that their rooms are liable to inspection by a lady, or any school officer at any time. On Sunday morning a military inspection is made by some school officer, at which time the occupants of each room are expected to be present in the cadet cap and uniform. They take the "position of a soldier" and salute the inspecting officer, who acknowledges the same. They maintain this position till the officer leaves the room.

The military organization is the most important factor in the solution of the

daily problems that confront this department. It is not only helpful in the maintenance of the school discipline, but it tells on the physique and character of the students as well. The boys are enrolled in a battalion of six companies; three companies are composed of the members of the night school, while the other three are composed of the normal and Indian schools, the Indians forming a company by themselves with their own officers. The battalion is under the general command of the disciplinarian, who has the title of captain, and who also instructs the cadet officers in tactics Friday evenings. Frequent visits have been made to the artillery school at Fortress Monroe to give the officers object lessons in the practice of maneuvers. Each cadet captain in rotation is appointed instructor of the battalion for a week. This instructor is required to be prepared to command the battalion and instruct it from the U. S. Army tactics on battalion maneuvers. When he goes off duty at the end of the week he is expected to report to the disciplinarian upon the condition of the battalion, the manner in which the guards have performed their duty, and the condition of the grounds.

#### MORAL AND RELIGIOUS.

The object of the school is not so much to produce scholarship as Christian manhood and womanhood. The difficulty with these people, as with some others, is not so much to make them know what is right as to help them gain the power of doing it.

One of the first lessons in Christian civilization is the care of their rooms and their persons. When the Indians were first brought to the school they had to be instructed as to how to get into bed and how to dress. Although those who come to us now are somewhat further advanced, still the lessons which have to be given them as to the care of their persons and their rooms are very rudimentary. The school has to stand in the relation of parent to these children of the disinherited races in a very real sense. The girls frequently call their rooms their homes, and both girls and boys take much pride in them. A pretty sure index of the advancement in civilization which comes over these young people is the changed appearance of their rooms and persons as they advance from the lower to the higher classes of the school.

The social life of the school forms a very important part in the moral and religious education of its students. When the Indians first came to us, in order to give the boys that respect for the girls, in which they were somewhat deficient, upon their arrival at Old Point the girls were allowed to ride to the school, while the boys walked, a reversal of their former experiences. Thus the first lesson was given them in the respect due the weaker sex. Their whole school life is a series of lessons along this line. A book on morals and manners has been gotten up at the school with special reference to the needs of these young people. In no other department are there more diligent students than in this. Certain of the boys and girls are chosen, unknown to those about them, to observe and report the morals and manners of their fellows. Public discussions of these reports are held. In connection with the religious work of the school a committee is formed at the commencement of each term to study its social life, the relation of the sexes, of the upper and lower classes, of the different races, to give direction to the amusements, and to arrange the social gatherings. The past year has shown very great progress along these lines. Never before, I believe, have we had so orderly, respectful a company of young people. This improvement is due not only to the influences which have been brought to bear upon them here, but quite as much to the improved condition of their homes, which is in great part the result of work of our graduates.

The training in economics which these young people receive at Hampton is a most important part of their moral education. The knowledge which they gain on this subject in books, though valuable, is by no means the most important. At Hampton the Indian boy must lay up for the future. A part of that which he earns he can spend, as learning the right use of money is most important. A part he must lay by as a tool fund to give him an outfit when he returns. The system of accounts by which the student charges the school for labor he has rendered, by a bill made out in his own handwriting, giving the numbers of hours and the rate per hour, and on the other hand by which the school charges the student for his food, clothes, books, and everything which he receives, is in itself an important education. The merchants around the Indian reservations in the West, some of whom were accustomed to charge Indians twice as much as whites, have sometimes spoken slightly of this sort of education, which is not at all convenient for them.

At the same time that these students are learning to lay up for the future, they are obtaining entirely new ideas of labor. It is no longer mere drudgery. The class room, the workshop, and the farm have a very important connection with one another. The study of the natural sciences gives them a new interest in the preparation of the soil, and the planting of the crops. The introduction of drawing into the school has made it possible for the students to plan out their work in the shops. They see in the machinery in the mill, the shops, and the laundry the working of the principles in natural philosophy which they have studied in the schoolroom. Their work is thus lifted up into a higher position and they come to understand something of the dignity of labor.

Another very important part of the moral training of the students is the object lesson in government presented to them in the school. The Indian child has perhaps as little taste of government as any of God's creatures. The Indian parent dislikes to hear the children cry. Their young people are seldom obliged to do anything contrary to their will. The absolute necessity of obedience is one of the first lessons that the school life brings. The military discipline, which first teaches the students to obey and then to command, is most valuable. The officers' court, which tries cases, summoning its witnesses to give evidence and its jury to weigh evidence; the system of guard duty, which makes them feel that the care of the property on the place is a legitimate part of their work; the control of the students by those of their own number; the experience which the janitors of the cottages and other officers have in caring for the little details of everyday life, give them a share of responsibility which can hardly fail to make them better citizens.

The religious instruction of the students has reference continually to the fact that they are to be teachers and leaders of their people. They are expected before they leave, not only to learn the elements of religious truth, but to be able to impart them to others. An earnest endeavor is made to ground them in the teachings of the Bible. Commencing in the earlier years with the outlines of Bible history, the Life of Christ being the central point, they pass on in the later years to a more detailed study of the books of the Bible and their moral and religious teachings. Connected with this teaching, which is carried on by the regular teachers in the Sabbath day schools, is the preaching at the Sunday services which aims to bring to bear the Bible teachings, on the every-day school life. In the social meetings, which the students conduct, subjects taken from the Bible lessons and bearing on their daily life are discussed. They thus learn to communicate to others the truths which they have received.

The Dixie Hospital, of which an account is given elsewhere, is training some of the girls to be nurses, and is in itself an object lesson to the whole school.

The school church is undenominational, though earnestly Christian. An endeavor is made to show these students how people of different denominations can work together. Many of the Indians are Episcopalians, and attend one service each Sabbath at St. John's Episcopal Church. Rev. Mr. Gravatt, the rector, has charge of the Indian Sabbath school on the school grounds. All the school gathers for the afternoon service in the Memorial Chapel, where service is held in which the Lord's Prayer, the Apostles' Creed, and the Ten Commandments, hold a prominent part with chants, responsive readings, and the silent prayer of the Friends. Much prominence is given music in all the religious services of the school. Both races are not only very fond of it, but are raised and helped by it.

In addition to the regular services conducted by the chaplain there are a number of social meetings held by the students themselves. Circles of tens among the girls are held under the care of the teachers. Temperance societies for the Indians and colored students, a Lend-a-Hand Club and Society of Christian Endeavor, a Young Men's Christian Association, and circles for Bible reading help these young people on in their Christian life at the same time that they are taught how to organize similar work when they go out from the school.

Bishop Walker's account, given at a meeting of the Indian Commissioners at Washington not long since, of how he came upon a little cluster of returned students in a remote part of a Western reservation, representing different denominations, but working together for the help of the ignorant Indians, was most encouraging. Many such reports come back to us. An increasing number of cheerful, comfortable homes bear witness to the influence of the young missionaries. Better cooking, better agriculture, cleaner homes, a purer religion has followed where these young people have gone; but they need guidance and help.

## RETURNED INDIAN STUDENTS.

[By Cora M. Folsom.]

Since last year the record of the returned Indian students has not materially changed; we still see from the figures drawn from individual records that "four-fifths do well," or to be more exact, 85 per cent, according to the figures this year. The grading is probably as correct as it ever can be.

Last spring the Senate demanded a very full report of the returned students, covering their history not only since their return but before coming to Hampton. As no particular record has ever been kept of individuals previous to their coming, we were obliged to send out blanks, one or more of each returned student, living or dead, and ask agents, missionaries, and others best qualified to respond, to do so. To the official questions we added others to complete the record in regard to industry, character, influence, and marriage relations. In most cases these were quite fully and satisfactorily answered, though occasionally authorities disagreed in regard to facts and opinions, and the standards by which character was weighed were evidently widely different. To these official reports I added five months of personal investigation in the summer of 1891, making it a special point to look up doubtful cases, and to visit individuals as far as possible in their own homes, at their own tables, among their own friends, or wherever I could to the best advantage study their problem from the practical end.

The result was on the whole most encouraging. I saw much of poverty; much of sickness and lack of care; much of the degradation from a savage life restrained only by force of circumstances; somewhat of heathenism; somewhat of drink and other adopted vices, and a great deal of discouragement and hopelessness. And yet, on the other hand, I saw these young people, some of whom we had never suspected of such power, making a stand for what they believed right with a strength of purpose that goes to show that the Indian's traditional heroism is not a lost virtue after all.

We who are surrounded by a civilization that calls forth every ambition to be and to do according to the latest fashion in matters of everyday life find it difficult to see why the Indian boy or girl does not do just what we, in our ignorance of ourselves, think we would do under the same circumstances. And this is where we err in our judgment of them and fail to appreciate how strong a word "good" is when applied to the records these young people make. Many of our customs in dress and living do not commend themselves to our own best judgment; and yet these pioneers in civilization must adopt them themselves and urge them upon others. If they are so fortunate as to have grown into our civilization through several years of contact with it the matter is simple and easy; they will naturally gratify what has become a necessity or a taste; but where the children are well grown before coming into the new way of living and are permitted to remain only a short time in it, then life becomes a constant struggle between principle and inclination, and it is here that so many have shown true pluck and character.

A boy who plods on at a trade or on a farm with poor pay and little encouragement, when in the more congenial work of herding he could double his salary; who persistently refuses to indulge in any of the less objectionable Indian customs because he is not willing to throw his influence at all on that side, and who is patient and kind and considerate to those with whom he disagrees may not shine on the "excellent" list or make a striking record on paper, but he is none the less truly brave, and with a bravery that tells, too, in the long run.

The girl, too, who insists upon keeping a good home when its goodness is not in the least appreciated, and who wears the uncomfortable dress, shoes, hairpins, and hat of civilization when all the fashion of the place is to be comfortable in loose gown, moccasins, and hanging braids, with head unhampered by the breeze-blown hat, is to a certain extent, a martyr to principle also, and deserves to be appreciated accordingly. These may seem little things—mere trifles—but great or small, they are the real tests of character, and like the proverbial straw show us what to expect.

In going over the ground in Dakota, that I had gone over almost as carefully three years before, I was struck with the improvements that met me everywhere. First of all in the towns adjoining the reservations. Some, to be sure, have dried up entirely in the fearful drought of the preceding years, and seem to have blown away, but others, strong enough to stand the storm, are flourishing. Railroads are rapidly coming nearer and nearer the reservations. Individual allotments have been in most cases made to the Indians and the surplus land taken by the

white settlers. Civilization is making long strides toward the center of the forbidden country. The Indians have scattered out upon their own places more rapidly than was at one time thought possible. Many have their little homes and farms and herds well started.

The "progressives," as those who have taken a stand for civilization are called, have in most cases formed little nuclei of civilization at different points, planning and working together. They have organized societies for mutual help and encouragement, and have clubbed together to buy expensive farm implements and valuable stock by which to improve their own. It is in these progressive settlements that the returned students are found in full force; at Standing Rock, Crow Creek, and Lower Brulé in the Dakotas, and Omaha in Nebraska, this encouraging feature is most noticeable. In these places the sentiment is so strongly progressive through the large number of students returned, that there is now little danger of the much dreaded "return to the blanket." As Hampton students they help and encourage each other; when one falls the rest go to his rescue and help him on his feet again. In these communities Hampton students are teachers, preachers, and leaders generally, and fortunately in most cases have wise helpers in agent or missionary.

Their homes are of the better class. The one-roomed log house is still the unit of comparison on the reservation, and must be until the railroad brings lumber nearer; but in many cases rooms have been added or new frame cottages put up. The family life and home comforts have greatly improved, too. The children—and there are such hosts of them—are almost as well kept and fairly trained. This is really the most encouraging sign for the future, for no matter how poor or how careless are the parents, the children are generally clean and always dressed in garments of civilized pattern and make.

In the churches one also sees progress in the general appearance of the congregation. The men are better dressed, and the women and babies show similar signs of progress. There are more hats on the woman's side of the church than there used to be, and it is not unusual to find a whole family occupying one pew, regardless of the unspoken rule which divides the congregation according to sex.

A representative of the school who appears at any place where there are returned students finds not only a warm welcome for old times' sake and his own, but many urgent requests to take back with him relatives and friends for whom the ex-student desires advantages similar to those he himself has received. The feeling of the old people in regard to education has changed very much and there is now very little opposition to education even among the older element. This change in public sentiment has made the returned student's life much easier and his record better in many ways. He has been permitted to remain longer in school, and increasing his advantages has also improved the general record. This is shown, too, by the fact that 55 have returned for a second term here, and that 71 have attended other schools West or East since leaving Hampton.

The record of each individual student was given to the Senate in December, and has since been printed by the Government. The same will be published in a less official way in the Twenty-two Years' Work of Hampton Institute. Both these books will so soon be available, that it seems hardly necessary to go into details here. Summing up these records, we grade them as usual, as excellent, good, fair, poor, or bad. The excellent are either those who have had exceptional advantages and use them faithfully, and those who by great earnestness and pluck have won an equally wide and telling influence for good. The good, the great majority, are those who are doing their best and exerting a decidedly good influence, even though it may not be very wide. They must marry legally, be honest, industrious, and temperate, and live a life which we can point to as an example for others to follow and improve upon. The fair are the sick and unfortunate, those who have had few advantages and from whom no better could be expected. The poor are those who have not done as well as they should; have married after the Indian custom while knowing better; have fallen from weakness rather than from vice, and some who are recovering themselves after more serious falls. The bad are those who have done wrong while knowing better, yet, with two exceptions, those from whom no better was expected. It is also a significant fact that not one is a full-blood Indian. According to this grading the record stands:

Excellent.....	78	} Satisfactory.....	296	} Total.....	347
Good.....	162				
Fair.....	58	} Disappointing.....	49		
Poor.....	39				
Bad.....	10				

From this record we say that 85 per cent are doing as well as we could expect.

The returned students, 31 of whom are full graduates from the normal course, are employed regularly as follows:

Teachers, 9; school employés, 9.....	18
Attending other schools.....	17
Attending higher schools in the East.....	5
Supporting themselves at the East.....	6
Regular missionaries, 3; catechists, 12.....	15
United States soldiers, 6; scouts, 3; postmaster, 1; mail carrier, 1.....	11
Agency employés, viz:	
Physicians, 2; interpreters, 4; issue clerk, 1; police, 4; district farmers, 2; in charge of stables, 3; herders, 2; carpenters, 16; wheelwrights and blacksmiths, 7; harness-makers, 2; tinsmith, 1; miller, 1.....	45
Independent workers, 116, viz:	
Engineers, 2; surveyors, 2; lawyers, 2; merchants, 4; clerks, 6; carpenters, 5; printer, 1; painter, 1; freighter, 1; loggers, 4; laborers, 7; house servants, 2; ranchers, 6.....	43
Farmers.....	73
Girls married and in good houses.....	46

We have this year 7 students supporting themselves in the North and 5 attending higher schools. There will always be a few who are specially fitted for some particular branch of training in advance of what we can give them here, and success with such in the past has encouraged us to continue this course, helping only those who are enough earnest to work the greater part of their own way. This experience has proved to be a broadening and character-building one, of real value to the individual and to the work at large. This year we have a young man preparing for a medical course; one, entirely independent of Government or charity, for a college course, and a young girl perfecting herself in a branch of art for which she is specially fitted; and this coming year we hope to add 4 others the number.

In all work for returned students we feel specially strong in the fact that we have such wise and able helpers at the administrative head of affairs. In every possible way they have lent their aid, encouragement, and interest, and but for them much that is now success must have been a failure. To many missionaries, agents, and other friends on the reservations the returned students and the school owe deep gratitude for counsel and help freely and wisely given them, and upon which both have learned to depend in any emergency or difficulty.

For the encouragement of the friends and supporters of Indian education, who through their interest and aid have made this increasingly valuable work possible, and through whom public sentiment, both East and West, will always depend, we point to the record these returned students have made and expect them to join us in saying with all earnestness, "Yes, it pays; I'm glad I've done what I have. I'll do more in the future."

Respectfully submitted.

S. C. ARMSTRONG,  
*Principal.*

The COMMISSIONER OF INDIAN AFFAIRS.

INDIAN LEGISLATION PASSED DURING THE FIRST SESSION OF THE FIFTY-SECOND CONGRESS.\*

CHAP. 2.—An act providing for the completion of the allotment of lands to the Cheyenne and Arapahoe Indians. January 28, 1892  
27 Stats., p. 1.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the sum of fifteen thousand dollars or so much thereof as may be necessary, is hereby appropriated to be paid out of any money in the Treasury not otherwise appropriated, for the purpose of completing the allotment provided for in the agreement with the Cheyenne and Arapahoe Indians in Oklahoma, ratified by Act approved March third, eighteen hundred and ninety-one, including the pay and expenses of the necessary special agents and the necessary re-surveys, which sum shall be immediately available and be expended under the direction of the Secretary of the Interior for the purposes herein expressed. Cheyenne and Arapahoe Indians. Appropriation for allotting lands.  
Vol. 26, p. 1023.

Approved, January 28, 1892.

CHAP. 3.—An act to amend an act entitled "An act granting the right of way to the Hutchison and Southern Railroad Company through the Indian Territory." February 3, 1892  
27 Stats., p. 2.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the act entitled "An act granting the right of way to the Hutchison and Southern Railroad Company to construct and operate a railroad, telegraph, and telephone line from the city of Anthony, in the State of Kansas, through the Indian Territory, to some point in the county of Grayson, in the State of Texas," approved September twenty-sixth, eighteen hundred and ninety, be, and the same is hereby, amended as follows: Hutchison and Southern Railroad Company, right of way.  
Vol. 26, p. 486, amended.

"That said railroad company be, and they are hereby, authorized to extend and operate said road, telegraph and telephone line with like powers and privileges and under like limitations and conditions as are provided in said original act, in a south-easterly or southerly direction from the terminus of said road under said original act, to wit: From its connection with the Santa Fe Railroad at or near the city of Guthrie, in the Territory of Oklahoma, or some point north of there within a distance of twenty miles to the southern boundary of said Indian Territory, at or near a point north of the city of Denison, in the State of Texas. Extension of road from Guthrie, Okla., authorized.

SECTION 2. That said original act described in section one of this act, and the amendment thereto, shall extend and be in full force and effect for the period of three years from the approval of this amendment or act. Time for construction extended.  
Vol. 26, p. 488.

Approved, February 3, 1892.

\*This does not include items of appropriations for the Indian service unless they involve new legislation.

Approved, June 17, 1892.

CHAP. 139.—An act to authorize the Secretary of the Interior to carry into effect certain recommendations of the Mission Indian Commission, and to issue patents for certain lands.

July 1, 1892.

27 Stat., p. 61.

Whereas the act approved January twelfth, eighteen hundred and ninety-one, entitled "An act for the relief of the Mission Indians in the State of California," made it the duty of the commissioners therein authorized to be appointed "to select a reservation for each band or village of the Mission Indians residing within said State, which reservation shall include, as far as practicable, the lands and villages which have been in the actual occupation and possession of said Indians, and which shall be sufficient in extent to meet their just requirements;" and

Preamble.

Vol. 26, p. 712.

Whereas said commissioners were authorized to appraise the value of the improvements belonging to any person to whom valid existing rights had attached under the public-land laws of the United States, where such improvements were situated, within the limits of any reservation selected by the commissioners, subject to the approval of the Secretary of the Interior; and

Whereas it was further provided in said act that, in case any land should be selected to which any railroad company should be entitled to receive a patent, such railroad company should, upon releasing all claim and title thereto, and on the approval of the President and Secretary of the Interior, be allowed to select an equal quantity of other land in lieu thereof; and

Whereas no provision was made whereby lands claimed by private persons through titles derived or sought to be derived from railroad companies or other sources than the public-land laws could be so released and exchanged; and

Whereas the commissioners appointed under said act have reported, among other things, that certain lands are in the occupation of Indians, and are needed for their use, which certain persons have improved, and on which they have developed valuable water rights, expecting to obtain title from the railroad companies, or to which they had obtained title from the State of California, and that said persons are willing to exchange said lands for other lands heretofore reserved for the use of the Mission Indians, but which lands are no longer needed for such purpose; and

Whereas the report and recommendations of said commissioners have been approved by the Secretary of the Interior and the President, "except so much thereof as relates to the purchase of lands from and exchange of lands with private individuals which is also approved subject to the condition that Congress shall authorize the same:" Therefore,

Mission Indians, Cal.

Exchange of lands occupied by private persons.

Appropriation to purchase lands for Indians.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Interior be, and he hereby is, authorized and empowered to carry into effect the recommendations of the said Mission Indian commissioners relating to the exchange of lands with private individuals, as the same has been approved by the President, and to cause patents in the usual form to issue for the lands recommended to be given to such individuals in exchange for lands and improvements released and relinquished for the use of the Indians.

SEC. 2. That the sum of five thousand dollars, or so much thereof as may be necessary, is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to enable the Secretary of the Interior to purchase certain lands and improvements for the use and benefit of said Mission Indians, as approved by said Secretary and the President, and to be applied to such purposes in accordance with the said report of said Mission Indian commissioners as the same has been approved by the President.

Approved, July 1, 1892.

Colville Indian Reservation, Wash., opened to settlement.

Lands set apart for Colvilles.

Proclamation to issue.

CHAP. 140.—An act to provide for the opening of a part of the Colville Reservation, in the State of Washington, and for other purposes.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That subject to the reservations and allotment of land in severalty to the individual members of the Indians of the Colville Reservation in the State of Washington herein provided for, all the following described tract or portion of said Colville Reservation, namely: Beginning at a point on the eastern boundary line of the Colville Indian Reservation where the township line between townships thirty-four and thirty-five north, of range thirty-seven east, of the Willamette meridian, if extended west, would intersect the same, said point being in the middle of the channel of the Columbia River, and running thence west parallel with the forty-ninth parallel of latitude to the western boundary line of the said Colville Indian Reservation in the Okanagon River, thence north following the said western boundary line to the said forty-ninth parallel of latitude, thence east along the said forty-ninth parallel of latitude to the northeast corner of the said Colville Indian Reservation, thence south following the eastern boundary of said reservation to the place of beginning, containing by estimation one million five hundred thousand acres, the same being a portion of the Colville Indian Reservation created by executive order dated July second, eighteen hundred and seventy-two, be, and is hereby, vacated and restored to the public domain, notwithstanding any executive order or other proceeding whereby the same was set apart as a reservation for any Indians or bands of Indians, and the same shall be open to settlement and entry by the proclamation of the President of the United States and shall be disposed of under the general laws applicable to the disposition of public lands in the State of Washington.

SEC. 2. That the net proceeds arising from the sale and disposition of the lands to be so opened to entry and settlement shall be set apart in the Treasury of the United States for the time being, but subject to such future appropriation for public use as Congress may make, and that until so otherwise appropriated may be subject to expenditure by the Secretary of the Interior from time to time, in such amounts as he shall deem best, in the building of schoolhouses, the maintenance of schools for such Indians, for the payment of such part of the local taxation as may be properly applied to the lands allotted to such Indians, as he shall think fit, so long as such allotted lands shall be held in trust and exempt from taxation, and in such other ways as he may deem proper for the promotion of education, civilization, and self-support among said Indians.

Disposition of proceeds.

SEC. 3. That each entryman under the homestead laws shall, within five years from the date of his original entry and before receiving a final certificate for the land covered by his entry, pay to the United States for the land so taken by him, in addition to fees provided by law, the sum of one dollar and fifty cents per acre, one third of which shall be paid within two years after the date of the original entry; but the rights of honorably discharged Union soldiers and sailors, as defined and described in sections twenty-three hundred and four and twenty-three hundred and five of the Revised Statutes of the United States, shall not be abridged, except as to the sum to be paid as aforesaid.

Settlement under homestead laws.

Rights of Union soldiers, etc. R. S., secs. 2304, 2305, p. 422.

SEC. 4. That each and every Indian now residing upon the portion of the Colville Indian Reservation hereby vacated and restored to the public domain, and who is so entitled to reside thereon, shall be entitled to select from said vacated portion eighty acres of land, which shall be allotted to each Indian in severalty. No restrictions as to locality shall be placed upon such selections other than that they shall be so located as to conform to the Congressional survey or subdivisions of said tract or country, and any Indian having improvements may have the preference over any other person in and to the tract of land containing such improvements, so far as they are within a legal subdivision not exceeding in area the quantity of land that he or she may be entitled to select and locate. All such allotments shall be made at the cost of the United States, under such rules and regulations as the Secretary of the Interior may from time to time prescribe. Such selections shall be made within six months after the date of the President's proclamation opening the lands hereby vacated to settlement and entry, and after the same have been surveyed, and when such allotments have been selected as aforesaid and approved by the Secretary of the Interior, the titles thereto shall be held in trust for the benefit of the allottees, respectively, and afterwards conveyed in fee simple to the allottees or their heirs, as provided in the act of Congress entitled "An act to provide for the allotment of land in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and Territories over the Indians, and for other purposes," approved February eighth, eighteen hundred and eighty-seven, and an act in amendment and extension thereof, approved February twenty-eighth, eighteen hundred and ninety-one, entitled "An act to amend and further extend the benefits of the act approved February eighth, eighteen hundred and eighty-seven, entitled 'An act to provide for the allotment of land in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States over the Indians, and for other purposes:'" *Provided*, That such allotted lands shall be subject to the laws of eminent domain of the State of Washington, and shall, when conveyed in fee simple to the allottees or their heirs, be subject to taxation as other property in said State.

Allotments in severalty to Indians.

Selection of  
other lands by  
Indians.

Appropriation for making  
allotments, etc.

Reimbursable.

Indian title  
not recognized.

SEC. 6. That the land used and occupied for school purposes at what is known as Tonasket school, on Bonaparte Creek, and the site of the sawmill, gristmill, and other mill property on said reservation, is hereby reserved from the operation of this act, unless other lands are selected in lieu thereof: *Provided*, That such reserved lands shall not exceed in the aggregate two sections, and must be selected in legal subdivisions conformably to the public surveys, such selection to be made by the Indian agent of the Colville Agency, under the direction of the Secretary of the Interior and subject to his approval: *Provided, however*, That said Indians may, in lieu of said sites or either of them, select other lands of equal quantity, for such purposes, either on the vacated or unvacated portions of said reservation, the same to be designated in legal subdivisions by said Indian agent, under the direction of and subject to the approval of the Secretary of the Interior, in which case said first-designated tracts shall not be exempt from the operation of this act; such selection to be made and approved within six months after the survey of said lands and the proclamation of the President.

SEC. 7. That for the purpose of making the allotments and selections in this act provided, including surveys of the lands provided to be vacated and restored to the public domain, thirty-five thousand dollars, or so much thereof as may be necessary, is hereby appropriated out of any money in the Treasury of the United States not otherwise appropriated, which said sum shall be reimbursable from the proceeds of the lands when sold as hereinbefore provided.

SEC. 8. That nothing herein contained shall be construed as recognizing title or ownership of said Indians to any part of the said Colville Reservation, whether that hereby restored to the public domain or that still reserved by the Government for their use and occupancy.

Received by the President June 20, 1892.

[NOTE BY THE DEPARTMENT OF STATE.—The foregoing act having been presented to the President of the United States for his approval, and not having been returned by him to the house of Congress in which it originated within the time prescribed by the Constitution of the United States, has become a law without his approval.]

CHAP. 150.—An act to authorize the Marinette and Western Railroad Company to construct a railroad through the Menominee Reservation, in the State of Wisconsin.

Marinette and  
Western Rail-  
way Company  
granted right of  
way through  
Menominee In-  
dian Reserva-  
tion, Wis.

Location.

*Provisos.*

Location.

Width.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the Marinette and Western Railway Company, a corporation created under and by virtue of the laws of the State of Wisconsin, be, and the same is hereby, invested and empowered with the right of locating, constructing, equipping, operating, using, and maintaining a railroad, telegraph, and telephone line, running in an easterly and westerly direction, in, on, upon, and through the Menominee Indian Reservation, comprised of township thirty, in ranges thirteen, fourteen, and fifteen, in Shawano County, and township thirty, in range sixteen, Oconto County, State of Wisconsin, with the right to construct, use, and maintain such tracks, turnouts, and sidings as said company may deem it to their interest to construct along and upon the right of way and depot grounds of said railroad herein provided for: *Provided*, That the company shall have the right to adopt the most feasible and practicable route in following the general direction hereinbefore specified: *Provided further*, That said route or right of way shall be located within one and one-half miles from the north line of townships hereinbefore mentioned.

SEC. 2. That said corporation is authorized to take and use for all purposes of a railroad, telegraph, and telephone line, and for no

other purpose, a right of way one hundred feet in width through said Indian Reservation and to take and use a strip of land two hundred feet in width, with the length of three thousand feet, in addition to the right of way, for station purposes, not to exceed one station for every six miles of road, with the right to use such additional ground where there are heavy cuts or fills as may be necessary for the construction and maintenance of the roadbed, not exceeding one hundred feet on each side of said right of way, or so much thereof as may be included in said cut or fill; but no part of the lands herein authorized to be taken shall be leased or sold by the company, and they shall not be used except in such manner and for such purposes only as shall be necessary for the construction and convenient operation of said railroad, telegraph, and telephone lines; and when any portion thereof shall cease to be so used such portion shall revert to the nation or tribe of Indians from which the same was taken.

SEC. 3. That before said railroad shall be constructed through any lands held by individual occupants according to the laws, customs, and usages of any of the Indian members of said Menominee tribe or tribes through which it may be constructed, full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of said railroad. In case of failure to make amicable settlement with any occupant, such compensation shall be determined by the appraisalment of three disinterested referees, a majority of whom shall be a quorum for the transaction of business, to be appointed, one by the President, one by the Menominee Indians in general council to which said occupant belongs, and one by the railroad company, who, before entering upon the duties of their appraisalment, shall take and subscribe an oath that they will faithfully and impartially discharge the duties of appraisalment, which oath, duly certified, shall be returned with their award to and filed with the Secretary of the Interior within twenty days from the completion thereof, and a majority of said referees shall be competent to act in case of the absence of a member, after due notice; and upon the failure of either party to make such appointment within thirty days after the appointment made by the President, the vacancy shall be filled by the judge of the district court for the eastern district of Wisconsin upon application of either party. The person appointed by the President shall be chairman of said board, and shall appoint the time and place of all hearings within the nation to which said occupant belongs. Each of said referees shall receive for his services the sum of four dollars per day for each day they are engaged in the trial of the cause submitted to them under this act, with mileage at 5 cents per mile. A majority of the board, where all can not agree, may make the award. Either party being dissatisfied with the finding of the referees shall have the right, within ninety days after the making of the award and notice of the same, to appeal by original petition to the district court for the eastern district of Wisconsin, having jurisdiction over the place where the land lies, which court shall have jurisdiction to hear and determine the subject matter of the petition according to the laws of the State of Wisconsin for determining damages when property is taken for railroad purposes. If, upon the hearing of said appeal, the judgment of the court shall be for a larger sum than the award of the referees or sum equal to said award, the costs of said appeal shall be adjudged against the railroad company. If the judgment of the court shall be for a less sum than the award made by the referees, then the costs shall be adjudged against the party claiming damages. All proceedings of said district court upon appeal from the award of the referees shall be conducted in the same manner as an original action brought therein, except that the court may direct formal pleadings to be made and served: *Provided*, That all costs of appraisements by referees shall be paid by the railroad company.

SEC. 4. That said railroad company shall pay to the Secretary of the Interior, for the benefit of the particular nation or tribes through whose lands said line may be located, the sum of fifty dol-

- Annual rental. lars per mile for each mile of road constructed and maintained in said Indian reservation, in addition to the compensation provided for in this act for property taken or damages done individual occupants by the construction of said road, to be paid as each five miles of the railroad is graded, and also fifteen dollars per mile per annum, so long as such reservation shall be used and occupied as a reservation by said tribes. If, however, the general council of the Menominee tribe of Indians through whose lands said railroad may be located shall, within four months after the filing of maps of definite location as set forth in section five of this act, dissent from the allowance hereinbefore provided for, and shall certify the same to the Secretary of the Interior, then all compensation to be paid to such dissenting nation or tribe under the provisions of this act shall be determined as provided in section three for the determination of the compensation to be paid to the individual occupants of lands, with the right of appeal to the court upon the same terms, conditions, and requirements as therein provided: *Provided*, That the amount awarded or adjudged to be paid by said railroad company for such dissenting nation or tribe shall be in lieu of the compensation the said nation or tribe would be entitled to receive under the foregoing provision: *Provided*, That the title to all timber on the right of way herein granted shall remain in the Menominee tribe of Indians, and shall be sold and disposed of for the benefit of said Indians, under the direction of the Secretary of the Interior, all such timber to be removed within a reasonable time after the filing of maps of definite location of the right of way by said company, and the approval thereof by the Secretary of the Interior, to the end that the company shall not be hindered or delayed in the construction of its road: *Provided*, That all merchantable pine timber on the right of way and depot grounds shall be carefully estimated and appraised by a competent person appointed by the Secretary of the Interior, and said railroad company shall pay or cause to be paid the sum of not less than six dollars per thousand feet, board measure, for each and every thousand feet, together with the expense of estimate and appraisal, said money to be paid to the Secretary of the Interior before the building of said road has been commenced: *And provided*, That after paying the expense of the estimate and appraisal, the balance of the money derived from the sale of said timber shall be expended by the Secretary of the Interior for the benefit of the Menominee tribe of Indians.
- Appeal to Secretary of the Interior by general council. SEC. 5. That said company shall cause maps, showing the route of its located line through said territory, to be filed in the office of the Secretary of the Interior, and also to be filed in the office of the chief or chiefs of said Menominee tribe of Indians through whose land said railroad may be located, and after the filing of said maps no claim for subsequent settlement or improvement upon the right of way shown by said maps shall be valid against said company: *Provided*, That when a map showing any portion of said railroad's located line is filed as herein provided for, said company shall commence grading said located line within one year thereafter or such location shall be void.
- Provisos.*  
Award to be in lieu of compensation. Title to timber. Payment for pine timber. Proceeds from timber sales. Maps to be filed with Secretary of the Interior and chiefs. *Proviso.* Grading to begin in one year from filing map. Employees may reside on right of way. Crossings and bridges. Condition of acceptance.
- SEC. 6. That the officers, servants, and employees of said company necessary to the construction and management of said road shall be allowed to reside while so engaged upon such right of way, but subject to the provisions of the Indian intercourse laws and such rules and regulations as may be established by the Secretary of the Interior in conformity with said intercourse laws.
- SEC. 7. That said railway company shall construct and maintain continually all road and highway crossings and necessary bridges over said railroad, wherever such roads and highways do now or may hereafter cross said railway's right of way or may be by the proper authorities laid across the same.
- SEC. 8. That said Marinette and Western Railway Company shall accept this right of way upon the express condition, binding upon itself, its successors, and assigns, that they will neither aid, advise nor assist in any effort looking towards extinguishing or changing the present tenure of the Indians to their lands in said reservation, and will not attempt to secure from the said Indians any further

grant of land, or its occupancy, than is hereinbefore provided: *Provided*, That any violation of the conditions mentioned in this section shall operate as a forfeiture of all rights and privileges of said railroad under this act.

*Proviso.*  
Violation to  
forfeit.  
Record of  
mortgages.

SEC. 9. That all mortgages executed by said railroad company conveying any portion of its railroad, with its franchises, that may be constructed in said Indian reservation, shall be recorded in the Department of the Interior, and the record thereof shall be prima facie evidence and notice of their execution, and shall convey all rights and property of said company as therein expressed.

SEC. 10. That Congress may at any time amend, add to, alter, or repeal this act, and the right of way herein and hereby granted shall not be assigned or transferred in any form whatever prior to the construction or completion of said road, except as to mortgage or other lien that may be given or secured thereon to aid in the construction thereof.

Amendment,  
etc.  
Not assignable  
prior to con-  
struction.

SEC. 11. That said railroad company shall not charge more for the transportation of freight or passengers through said reservation than for like services outside of same.

Charges.

Approved, July 6, 1892.

CHAP. 151.—An act supplementary and amendatory to an act entitled "An act to refer to the Court of Claims certain claims of the Shawnee and Delaware Indians and the freedmen of the Cherokee Nation and for other purposes," approved October first, eighteen hundred and ninety.

July 6, 1892.  
27 Stas., p. 86.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the Shawnee tribe or band of Indians, whose claims and demands against the Cherokee Nation and the United States were referred to the United States Court of Claims for adjudication under the act of Congress passed and approved October first, eighteen hundred and ninety, entitled "An act to refer to the Court of Claims certain claims of the Shawnee and Delaware Indians and the freedmen of the Cherokee Nation, and for other purposes," shall present to the said court all their claims against the United States and the Cherokee Nation, or against either or both of them, of every description whatsoever, arising out of treaty relations with the United States, rights growing out of such treaties, and from contracts, expressed or implied, under such treaties, made and entered into by and between the said Shawnees and Cherokees, and between them, or either of them and the United States.

moving to the Coeur d'Aléne Reservation, in the erection of houses, assisting them in breaking land, purchase of cattle, seeds, agricultural implements, saw and grist mills, clothing, subsistence, and so forth. Removal to Coeur d'Aléne Reservation, etc.

Sale and allotment of Umatilla Reservation, reimbursable: To carry into effect sections one and two of "An act providing for allotment of lands in severalty to the Indians residing upon the Umatilla Reservation, in the State of Oregon, and grant patents therefor, and for other purposes." approved March third, eighteen hundred and eighty-five, eight thousand dollars, or so much thereof as may be necessary, said amount to be reimbursed to the United States out of the proceeds of sale of Umatilla lands. Umatilla Reservation, Oreg. Sale and allotment. Vol. 23, pp. 341, 342.

Repayment to Menomonee Indians: To repay to the Menomonee tribe of Indians in Wisconsin the sum of twenty-seven thousand four hundred and fifty-three dollars and forty cents, amount covered into the Treasury, being the balance of proceeds of sales of logs cut on their reservation during the years eighteen hundred and ninety and eighteen hundred and ninety-one, to be used in the same manner as other moneys received as proceeds of sale of logs from said reservation. Menomonee Indians, Wis. Repayment for logs sold. Vol. 26, p. 146.

RELIEF OF FOND DU LAC CHIPPEWA INDIANS.

This amount to be expended under the direction of the Secretary of the Interior for the benefit of the Fond du Lac Chippewa Indians, of the State of Minnesota, being the sum recovered by the United States in compromise of suits against certain parties for timber deprecations upon the Fond du Lac reservation, in Minnesota, and which sum has been deposited in the United States Treasury as a miscellaneous receipt, twenty thousand four hundred and forty-six dollars and fifty-two cents. Fond du Lac Chippewas. Payment to, of amount recovered from timber deprecations.

That the President of the United States is hereby authorized to appoint a commission to consist of three persons familiar with Indians affairs, not more than two of whom shall be of the same political party, who shall negotiate with the Turtle Mountain band of Chippewa Indians in North Dakota for the cession and relinquishment to the United States of whatever right or interest they may have in and to any and all land in said State to which they claim title, and for their removal to and settlement upon lands to be hereafter selected and determined upon by the Secretary of the Interior upon the recommendation of the proposed commissioners, subject to the approval of Congress. Said commissioners shall also report to the Secretary of the Interior the number of the said Chippewa Indians and the number of Mixed Bloods, if any, who are entitled to consideration by the United States Government; and the sum of six thousand dollars, or so much thereof as may be necessary, is hereby appropriated for the purpose of defraying the expense of the proposed negotiations. Turtle Mountain band, Chippewas. Commission, for lands, removal, etc. Number of Indians, etc., to be reported.

FOR SUPPORT OF SCHOOLS.

For support of Indian day and industrial schools, and for other educational purposes not hereinafter provided for, including pay of draftsman to be employed in the office of the Commissioner of Indian Affairs, one million and seventy-five thousand dollars: for construction, purchase, and repair of school buildings, one hundred thousand dollars, of which sum not exceeding five thousand dollars shall be expended for a school building and furnishing same complete on the Sac and Fox Indian Reservation in Iowa; and for purchase of horses, cattle, sheep, and swine for schools, twenty thousand dollars, five thousand dollars of which shall be immediately available: *Provided*, That the entire cost of any boarding-school building, exclusive of outbuildings, to be built from the moneys appropriated hereby, shall not exceed fifteen thousand dollars, and the entire cost of any day-school building to be so built shall not exceed six hundred dollars; in all, one million one Day and industrial schools Building and repairs. Sac and Fox Reservation, Iowa. Horses, etc. Provisos. Cost of buildings.

Expenses per pupil. Location of new buildings. hundred and ninety-five thousand dollars: *Provided*, That not more than two hundred dollars shall be expended for any one pupil, and that all school houses erected under this appropriation, shall be built on reservations or as near the boundary lines as practicable, but this provision shall not affect schools in course of construction in any county where a reservation exists or the construction of schools where land has been already purchased in such county as a site.

\* \* \* \* \*

Vol. 27, p. 143. Children of Indians taking lands in severalty not excluded. That hereafter in the expenditure of money appropriated for any of the purposes of education of Indian children, those children of Indians who have taken lands in severalty under any existing law shall not, by reason thereof, be excluded from the benefits of such appropriation.

Rules to secure attendance. That hereafter the Commissioner of Indian Affairs, subject to the direction of the Secretary of the Interior, is hereby authorized and directed to make and enforce by proper means such rules and regulations as will secure the attendance of Indian children of suitable age and health at schools established and maintained for their benefit.

Approved, July 13, 1892.

July 23, 1892. 27 Stats., p. 260. CHAP. 234.—An act to amend sections twenty-one hundred and thirty-nine, twenty-one hundred and forty, and twenty-one hundred and forty-one of the Revised Statutes touching the sale of intoxicants in the Indian country, and for other purposes.

Indians. R. S., sec. 2139, p. 373. Introduction of intoxicating liquors in Indian country forbidden. Penalty. Authority from War Department. Complaints. Arrests. Trial. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That section twenty-one hundred and thirty-nine of the Revised Statutes be amended and re-enacted so as to read as follows:

“SEC. 2139. No ardent spirits, ale, beer, wine, or intoxicating liquor or liquors of whatever kind shall be introduced, under any pretense, into the Indian country. Every person who sells, exchanges, gives, barter, or disposes of any ardent spirits, ale, beer, wine, or intoxicating liquors of any kind to any Indian under charge of any Indian superintendent or agent, or introduces or attempts to introduce any ardent spirits, ale, wine, beer, or intoxicating liquors of any kind into the Indian country shall be punished by imprisonment for not more than two years, and by fine of not more than three hundred dollars for each offense. But it shall be a sufficient defense to any charge of introducing or attempting to introduce ardent spirits, ale, beer, wine, or intoxicating liquors into the Indian country that the acts charged were done under authority in writing from the War Department, or any officer duly authorized thereunto by the War Department. All complaints for the arrest of any person or persons made for violation of any of the provisions of this act shall be made in the county where the offense shall have been committed, or if committed upon or within any reservation not included in any county, then in any county adjoining such reservation, and, if in the Indian Territory, before the United States court commissioner, or commissioner of the circuit court of the United States residing nearest the place where the offense was committed, who is not for any reason disqualified; but in all cases such arrests shall be made before any United States court commissioner residing in such adjoining county, or before any magistrate or judicial officer authorized by the laws of the State in which such reservation is located to issue warrants for the arrest and examination of offenders by section ten hundred and fourteen of the Revised Statutes of the United States. And all persons so arrested shall, unless discharged upon examination, be held to answer and stand trial before the court of the United States having jurisdiction of the offense.”

Approved, July 23, 1892.

CHAP. 256.—An act to legalize the deed and other records of the Office of Indian Affairs, and to provide and authorize the use of a seal by said office.

July 26, 1892.

27 Stats., p. 272

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the recording of all deeds and papers heretofore made and done in the office of the Commissioner of Indian Affairs be, and is hereby, confirmed, approved, and legalized; and said record heretofore made shall be deemed, taken, and held to be good and valid and shall have all the force and effect and be entitled to the same credit as if it had been made in pursuance of and in conformity to law. But shall have no effect whatever upon the validity or invalidity of the deed or paper so recorded, and shall be no evidence of constructive notice to any persons not actually knowing the contents.

Indian Department.

Recording of deeds, etc., in Indian Office, legalized.

Validity of deed, etc., not affected.

SEC. 2. That the Commissioner of Indian Affairs is hereby empowered and directed to continue to make and keep a record of every deed executed by any Indian, his heirs, representatives, or assigns, which may require the approval of the President of the United States or of the Secretary of the Interior, whenever such approval shall have been given, and the deed so approved returned to said office.

Records of all deeds by Indians to be kept

SEC. 3. That the Commissioner of Indian Affairs shall cause a seal to be made and provided for the said office, with such device as the President of the United States shall approve, and copies of any public documents, records, books, maps, or papers belonging to or on the files of said office, authenticated by the seal and certified by the Commissioner thereof, or by such officer as may, for the time being, be acting as or for such Commissioner, shall be evidence equally with the originals thereof.

Seal to be made.

Certifications.

SEC. 4. That the Commissioner of Indian Affairs shall have the custody of said seal, and shall furnish certified copies of any such records, books, maps, or papers belonging to or on the files of said office, to any person applying therefor who shall comply with the requirements of said office, upon the payment by such parties at the rate of ten cents per hundred words, and one dollar for copies of maps or plats, and the additional sum of twenty-five cents for the Commissioner's certificate of verification, with the seal of said office; and one of the employés of said office shall be designated by the Commissioner as the receiving clerk, who shall give bond in the sum of one thousand dollars, and the amounts so received shall, under the direction of the Commissioner, be paid into the Treasury of the United States: but fees shall not be demanded for such authenticated copies as may be required by the officers of any branch of the Government or by any Indian who shall satisfy the Commissioner by satisfactory legal evidence that he or she is not able, by reason of poverty, to pay such fees, nor for such unverified copies as the Commissioner in his discretion may deem proper to furnish.

Furnishing certified copies of records.

Fees.

Receiving clerk.

No fees for copies for official use, etc.

Approved, July 26, 1892.

CHAP. 329.—An act to authorize the Denison and Northern Railway Company to construct and operate a railway through the Indian Territory, and for other purposes.

July 30, 1892.

27 Stats., p. 336.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Denison and Northern Railway Company, a corporation created under and by virtue of the laws of the State of Texas, be, and the same is hereby, invested and empowered with the right of locating, constructing, owning, equipping, operating, using, and maintaining a railway and telegraph and telephone line through the Indian Territory, beginning at a point to be selected by said railway company on Red River, near Den'son, in Grayson County, in the State of Texas, and running thence by the most practicable route through the Indian Territory in a northerly direction to the southern boundary of the State of Kansas,

Denison and Northern Railway Company may construct railway, etc., line through Indian Territory. Location.

Branch line.	at or near Coffeerville, in said State, with the right to construct and operate a branch line of railway, beginning at a point about twenty miles north of Red River, on the main line; thence in a north-westerly direction to a point on the western line of the Indian Territory, at or near where it is crossed by the Canadian River, with the right to construct, use, and maintain such tracks, turn-outs, branches, sidings, and extensions as said company may deem it to their interest to construct.
Right of way.	SEC. 2. That said corporation is authorized to take and use for all purposes of a railway, and for no other purpose, a right of way one hundred feet in width through said Indian Territory, and to take and use a strip of land two hundred feet in width, with a length of three thousand feet, in addition to right of way, for stations, for every ten miles of road, with the right to use such additional ground where there are heavy cuts or fills as may be necessary for the construction and maintenance of the roadbed, not exceeding one hundred feet in width on each side of said right of way, or as much thereof as may be included in said cut or fill: <i>Provided</i> , That no more than said addition of land shall be taken for any one station: <i>Provided further</i> , That no part of the lands herein authorized to be taken shall be sold by the company, and they shall not be used except in such manner and for such purposes only as shall be necessary for the construction and convenient operation of said railway, telegraph, and telephone lines, and when any portion thereof shall cease to be used, such portion shall revert to the nation or tribe of Indians from which the same shall have been taken.
Addition for stations, etc.	
<i>Provisos.</i> Limit. Lands not to be sold, etc.	
Damages.	SEC. 3. That before said railway shall be constructed through any lands held by individual occupants according to the laws, customs, and usages of any of the Indian nations or tribes through which it may be constructed, full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of such railway. In case of failure to make amicable settlement with any occupant, such compensation shall be determined by the appraisal of three disinterested referees, to be appointed one (who shall act as chairman) by the President, one by the chief of the nation to which said occupant belongs, and one by said railway company, who, before entering upon the duties of their appointment, shall take and subscribe, before a district judge, clerk of a district court, or United States commissioner, an oath that they will faithfully and impartially discharge the duties of their appointment, which oath, duly certified, shall be returned with their award to and filed with the Secretary of the Interior within sixty days from the completion thereof; and a majority of said referees shall be competent to act in case of the absence of a member, after due notice. And upon the failure of either party to make such appointment within thirty days after the appointment made by the President, the vacancy shall be filled by the district judge of any United States court in the Indian Territory, upon the application of the other party.
Referees.	
Substitution on failure to appoint.	
Hearings.	The chairman of said board shall appoint the time and place for all hearings within the nation to which such occupant belongs. Each of said referees shall receive for his services the sum of four dollars per day for each day they are engaged in the trial of any case submitted to them under this act, with mileage at five cents per mile. Witnesses shall receive the usual fees allowed by the courts of said nations. Costs, including compensation of the referees, shall be made a part of the award, and be paid by such railway company.
Compensation.	
Costs.	
Appeal.	In case the referees can not agree, then any two of them are authorized to make the award. Either party being dissatisfied with the finding of the referees shall have the right, within ninety days after the making of the award and notice of the same, to appeal by original petition to any district court in the Indian Territory, which court shall have jurisdiction to hear and determine the subject-matter of said petition. If, upon the hearing of said appeal, the judgment of the court shall be for a larger sum than the award of the referees, the cost of said appeal shall be adjudged against the railway company. If the judgment of the court shall be for the same sum as the award of the referees, then the costs
Costs on appeal.	

shall be adjudged against the appellant: If the judgment of the court shall be for a smaller sum than the award of the referees, then the cost shall be adjudged against the party claiming damages. When proceedings have been commenced in court, the railway company shall pay double the amount of the award into court to abide the judgment thereof, and then have the right to enter upon the property sought to be condemned and proceed with the construction of the railway.

Work may be given on depositing double award.

SEC. 4. That said railway company shall not charge the inhabitants of said Territory a greater rate of freight than the rate authorized by the laws of the State of Texas for services or transportation of the same kind: *Provided*, That passenger rates on said railway shall not exceed three cents per mile. Congress hereby reserves the right to regulate the charges for freight and passengers on said railway, and messages on said telegraph and telephone lines, until a State government or governments shall exist in said Territory within the limits of which said railway, or a part thereof, shall be located; and then such State government or governments shall be authorized to fix and regulate the cost of transportation of persons and freights within their respective limits by said railway; but Congress expressly reserves the right to fix and regulate, at all times, the cost of such transportation by said railway or said company whenever such transportation shall extend from one State into another, or shall extend into more than one State: *Provided*, however, That the rate of such transportation of passengers, local or interstate, shall not exceed the rate above expressed: *And provided further*, That said railway company shall carry the mail at such prices as Congress may by law provide; and until such rate is fixed by law the Postmaster-General may fix the rate of compensation.

Freight charges

*Provisos.*  
Passenger rates Regulation.

Maximum.

Mails.

SEC. 5. That said railway company shall pay to the Secretary of the Interior, for the benefit of the particular nations or tribes through whose lands said line may be located, the sum of fifty dollars in addition to compensation provided for in this act for property taken and damages done to individual occupants by the construction of the railway for each mile of railway that it may construct in said Territory, said payments to be made in installments of five hundred dollars as each ten miles of road is graded: *Provided*, That if the general council of either of the nations or tribes through whose land said railway may be located shall, within four months after the filing of maps of definite location as set forth in section six of this act, dissent from the allowance provided for in this section, and shall certify the same to the Secretary of the Interior, then all compensation to be paid to such dissenting nation or tribe under the provisions of this act shall be determined as provided in section three for the determination of the compensation to be paid to the individual occupant of lands, with the right of appeal to the courts upon the same terms, conditions, and requirements as therein provided: *Provided further*, That the amount awarded or adjudged to be paid by said railway company for said dissenting nation or tribe shall be in lieu of the compensation that said nation or tribe would be entitled to receive under the foregoing provision. Said company shall also pay, so long as said Territory is owned and occupied by the Indians, to the Secretary of the Interior the sum of fifteen dollars per annum for each mile of railway it shall construct in the said Territory. The money paid to the Secretary of the Interior under the provisions of this act shall be apportioned by him in accordance with the laws and treaties now in force among the different nations and tribes according to the number of miles of railway that may be constructed by said railway company through their lands: *Provided*, That Congress shall have the right, so long as said lands are occupied and possessed by said nations and tribes, to impose such additional taxes upon said railway as it may deem just and proper for their benefit; and any Territory or State hereafter formed through which said railway shall have been established may exercise the like power as to such part of said railway as may lie within its limits. Said railway company shall have the

Additional compensation to tribes.

*Provisos.*  
Appeal by general councils.

Award to be in lieu of compensation.

Annual rental.

Taxation.

Survey.

- right to survey and locate its railway immediately after the passage of this act.
- Maps to be filed. SEC. 6. That said company shall cause maps showing the route of its located lines through said Territory to be filed in the office of the Secretary of the Interior, and also to be filed in the office of the principal chiefs of each of the nations or tribes through whose lands said railway may be located; and after the filing of said maps no claim for a subsequent settlement and improvement upon the right of way shown by said maps shall be valid as against said company: *Provided*, That when a map showing any portion of said railway company's located line is filed as herein provided for, said company shall commence grading said located line within six months thereafter, or such location shall be void; and said location shall be approved by the Secretary of the Interior in sections of twenty-five miles before construction of any such section shall be begun.
- Proviso.*  
Grading to begin on filing map. Employees to reside on right of way. SEC. 7. That the officers, servants, and employees of said company necessary to the construction and management of said railway shall be allowed to reside, while so engaged, upon such right of way, but subject to the provisions of the Indian intercourse laws, and such rules and regulations as may be established by the Secretary of the Interior in accordance with said intercourse laws.
- Construction. SEC. 8. That said railway company shall build at least fifty miles of its railway in said Territory within three years after the passage of this act, or the rights herein granted shall be forfeited as to that portion not built; that said railway company shall construct and maintain continually all fences, road and highway crossings, and necessary bridges over said railway wherever said roads and highways do now or may hereafter cross said railway's right of way, or may be by the proper authorities laid out across the same.
- Crossings, etc. Condition of acceptance. SEC. 9. That the said Denison and Northern Railway Company shall accept this right of way upon the express condition, binding upon itself, its successors and assigns, that they will neither aid, advise, nor assist in any effort looking toward the changing or extinguishing the present tenure of the Indians in their lands, and will not attempt to secure from the Indian nations any further grant of land or its occupancy, than is hereinbefore provided: *Provided*, That any violation of the condition mentioned in this section shall operate as a forfeiture of all the rights and privileges of said railway company under this act.
- Proviso.*  
Violation to forfeit. Record of mortgages. SEC. 10. That all mortgages executed by said railway company conveying any portion of its railway, with its franchises, that may be constructed in said Indian Territory shall be recorded in the Department of the Interior, and the record thereof shall be evidence and notice of their execution, and shall convey all rights and property of said company as therein expressed.
- Amendment, etc. No assignment before construction. SEC. 11. That Congress may at any time amend, add to, or alter this act; and the right of way herein and hereby granted shall not be assigned or transferred in any form whatever prior to the construction and completion of the railway except as to mortgages or other liens that may be given or secured thereon to aid in the construction thereof.

Approved, July 30, 1892.

August 4, 1892.

CHAP. 376.—An act for the relief of the Eastern Band of Cherokee Indians.

27 Stat., p. 348.  
Eastern Cherokee, North Carolina.  
Payment of taxes.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the Secretary of the Interior is hereby authorized to use so much of the fund to the credit of the Eastern Band of Cherokee Indians located in the State of North Carolina on the books of the Treasury as may be necessary for the payment annually of taxes upon such of their lands as are held in common, and also for the payment of the taxes that have already accrued, and for which the said lands were sold,

together with costs incurred upon conveyance of purchasers of said lands to said Eastern Band of Cherokee Indians.

All orders or provisions for the sale of timber on said lands to pay the accrued taxes and incumbrances on the same are hereby revoked. Sales of timber revoked.

Approved, August 4, 1892.

RESOLUTION.

[No. 6.] Joint resolution construing article four of the agreement with the Citizen Band of Pottawatomie Indians in Oklahoma Territory and elsewhere. April 6, 1892.

27 Stats., p. 394.

Whereas the provisions of the articles of agreement by and between the United States and the Citizen Band of Pottawatomie Indians, residing in Oklahoma Territory and elsewhere, ratified by Congress March 3, 1891, requires that large sums of money be paid to them in said tract of country which is construed to mean said Territory of Oklahoma: and

Preamble.

Whereas many members of said band of Indians reside in Kansas who through age, poverty, and sickness suffer great hardships by being compelled to go to said Territory to receive their payments: Therefore,

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That article four of said agreement be, and the same is hereby, construed so as to authorize the Secretary of the Interior in his discretion to direct the proper officers of the Department of the Interior to make the payments, as they fall due, to the members of said band residing in Kansas at some point in their original reservation in said State as will accommodate the greatest number of said Indians.

Citizen Band, Pottawatomie Indians. Payments may be made to them in Kansas. Vol. 26, p.1018.

Approved, April 6, 1892.

PRIVATE ACT.

CHAP. 244.—An act for the relief of P. B. Sinnott, late Indian agent at Grand Ronde Agency, State of Oregon. July 23, 1892.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, directed to refund to P. B. Sinnott, late Indian agent at Grand Ronde Agency, State of Oregon, out of any moneys in the Treasury not otherwise appropriated, the sum of two thousand one hundred and forty-six dollars and thirty-nine cents, being the amount of two judgments recovered against him and his sureties on his official bonds as such agent by the United States in the district court of the United States for the district of Oregon, on the fifteenth day of January, anno Domini eighteen hundred and eighty-six, and which amount was subsequently paid to the United States by said Sinnott pending the consideration by Congress of a bill for his relief, and is now covered into the Treasury.

P. B. Sinnott, refund to.

Approved, July 23, 1892.

# PROCLAMATIONS.

[No. 22.]

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

## A PROCLAMATION.

April 11, 1892.

Preamble.  
Vol. 15, p. 503.

Agreements  
with Lake Traverse  
Indians.

Whereas, by the third article of the treaty between the United States of America and the Sisseton and Wahpeton bands of Dakota or Sioux Indians, concluded February 19, 1867, proclaimed May 2, 1867 (15 U. S. Statutes, p. 505), the United States set apart and reserved for certain of said Indians certain lands, particularly described, being situated partly in North Dakota and partly in South Dakota, and known as the Lake Traverse Reservation; and

Whereas, by agreement made with said Indians residing on said reservation, dated December 12, 1889, they conveyed, as set forth in article one thereof, to the United States, all their title and interest in and to all the unallotted lands within the limits of the reservation set apart as aforesaid remaining after the allotments shall have been made, which are provided for in article four of the agreement, as follows: "that there shall be allotted to each individual member of the bands of Indians, parties hereto, a sufficient quantity, which, with the lands heretofore allotted, shall make in each case one hundred and sixty acres, and in case no allotment has been made to any individual member of said bands, then an allotment of one hundred and sixty acres shall be made to such individual"; and

Whereas, it is provided in article two of said agreement, "That the cession, sale, relinquishment, and conveyance of the lands described in article one of this agreement shall not take effect and be in force until the sum of \$342,778.37, together with the sum of \$18,400, shall have been paid to said bands of Indians, as set forth and stipulated in article third of this agreement"; and

Vol. 25, p. 1033.

Whereas, it is provided in the act of Congress approved March 3, 1891 (26 U. S. Statutes, pp. 1036-1038, Sec. 30), accepting and ratifying the agreement with said Indians:

"That the lands by said agreement ceded, sold, relinquished, and conveyed to the United States shall immediately, upon the payment to the parties entitled thereto of their share of the funds made immediately available by this act, and upon the completion of the allotments as provided for in said agreement, be subject only to entry and settlement under the homestead and townsite laws of the United States, excepting the sixteenth and thirty-sixth sections of said lands, which shall be reserved for common school purposes, and be subject to the laws of the State wherein located: *Provided*, That patents shall not issue until the settler or entryman shall have paid to the United States the sum of two dollars and fifty cents per acre for the land taken up by such homesteader, and the title to the lands so entered shall remain in the United States until said money is duly paid by such entryman or his legal representatives, or his widow, who shall have the right to pay the money and complete the entry of her deceased husband in her own name, and shall receive a patent for the same," and

Whereas, Payment as required by said act, has been made by the United States; and

Whereas, Allotments as provided for in said agreement, as now

appears by the records of the Department of the Interior will have been made, approved, and completed, and all other terms and considerations required will have been complied with on the day and hour hereinafter fixed for opening said lands to settlement.

Now, therefore, I, Benjamin Harrison, President of the United States, do hereby declare and make known that all of the lands embraced in said reservation, saving and excepting the lands reserved for and allotted to said Indians, and the lands reserved for other purposes in pursuance of the provisions of said agreement and the said act of Congress ratifying the same and other, the laws relating thereto will, at and after the hour of twelve o'clock noon (central standard time) on the fifteenth day of April, A. D. eighteen hundred and ninety-two, and not before, be opened to settlement under the terms of and subject to all the terms and conditions, limitations, reservations, and restrictions contained in said agreements, the statutes above specified, and the laws of the United States applicable thereto.

Lands on Lake Traverse reservation, North and South Dakota, open to settlement April 15, 1892.

The lands to be opened for settlement are for greater convenience particularly described in the accompanying schedule, entitled "Schedule of lands within the Lake Traverse Reservation opened to settlement by proclamation of the President dated April 11, 1892," and which schedule is made a part hereof.

Schedule.

Warning, moreover, is hereby given that until said lands are opened to settlement as herein provided, all persons, save said Indians, are forbidden to enter upon and occupy the same or any part thereof.

No persons permitted to enter until day of opening.

And further notice is hereby given that it has been duly ordered that the lands mentioned and included in this proclamation shall be, and the same are attached to the Fargo and Watertown land districts, in said States, as follows:

Lands attached to land districts.

1. All that portion of the Lake Traverse Reservation, commencing at the northwest corner of said reservation; thence south 12 degrees 2 minutes west, following the west boundary of the reservation to the new seventh standard parallel, or boundary line between the States of North and South Dakota; thence east, following the new seventh standard parallel to its intersection with the north boundary of said Indian reservation; thence northwesterly with said boundary to the place of beginning, is attached to the Fargo land district, the office of which is now located at Fargo, North Dakota.

Fargo district, N. Dak.

2. All that portion of the Lake Traverse Reservation, commencing at a point where the new seventh standard parallel intersects the west boundary of said reservation; thence southerly along the west boundary of said reservation to its extreme southern limit; thence northerly along the east boundary of said reservation to Lake Traverse; thence north with said lake to the northeast corner of the Lake Traverse Indian Reservation; thence westerly with the north boundary of said reservation to its intersection with the new seventh standard parallel, or boundary line between the States of North and South Dakota; thence with the new seventh standard parallel to the place of beginning, is attached to the Watertown land district, the office of which is now located at Watertown, South Dakota.

Watertown district, S. Dak.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington this eleventh day of April, in the year of our Lord one thousand eight hundred and ninety-  
[SEAL.] two, and of the Independence of the United States the one hundred and sixteenth.

BENJ. HARRISON.

By the President:  
JAMES G. BLAINE,  
*Secretary of State.*

[No. 23.]

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA:

## A PROCLAMATION.

April 12, 1892.

Preamble.

Whereas, by a written agreement made on the \_\_\_\_\_ day of October, eighteen hundred and ninety, the Cheyenne and Arapahoe tribes of Indians ceded, conveyed, transferred, relinquished and surrendered all their claim, title and interest in and to the lands described in article two of said agreement, as follows, to wit :

Cession of  
lands by Chey-  
enne and Arap-  
ahoe Indians.

"Commencing at a point where the Washita River crosses the ninety-eighth degree of west longitude, as surveyed in the years eighteen hundred and fifty-eight and eighteen hundred and seventy-one; thence north on a line with said ninety-eighth degree to the point where it is crossed by the Red Fork of the Arkansas (sometimes called the Cimarron River); thence up said river, in the middle of the main channel thereof, to the north boundary of the country ceded to the United States by the treaty of June fourteenth, eighteen hundred and sixty-six, with the Creek Nation of Indians: thence west on said north boundary and the north boundary of the country ceded to the United States by the treaty of March twenty-first, eighteen hundred and sixty-six, with the Seminole Indians, to the one hundredth degree of west longitude; thence south on the line of said one hundredth degree to the point where it strikes the North Fork of the Red River; thence down said North Fork of the Red River to a point where it strikes the north line of the Kiowa and Comanche Reservation; thence east along said boundary to a point where it strikes the Washita River; thence down said Washita River, in the middle of the main channel thereof, to the place of beginning; and all other lands or tracts of country in the Indian Territory to which they have or may set up or allege any right, title, interest or claim whatsoever": *Provided*, That every member of said tribes shall have an allotment of one hundred and sixty acres of land, as in said agreement provided, to be selected within the tract of country so ceded, except land in any part of said reservation now used or occupied for military, agency, school, school farm, religious, or other public uses, or in sections sixteen or thirty-six in each congressional township; except in cases where any Cheyenne or Arapahoe Indian has heretofore made improvements upon and now uses and occupies a part of said sections sixteen and thirty-six, such Indian may make his or her selection within the boundaries so prescribed so as to include his or her improvements; and except in that part of the lands by said agreement ceded, now occupied and claimed by the Wichita and affiliated bands of Indians described as follows, to wit :

Vol. 14, p. 886.

Vol. 14, p. 758.

Lands re-  
served.

"Commencing at a point in the middle of the main channel of the Washita River where the ninety-eighth meridian of west longitude crosses the same, thence up the middle of the main channel of the said river to the line of ninety-eight degrees forty minutes west longitude, thence up said line of ninety-eight degrees forty minutes due north to the middle of the main channel of the main Canadian River, thence down the middle of the main Canadian River to where it crosses the ninety-eighth meridian; thence due south to the place of beginning:" *And provided*, That said sections sixteen and thirty-six in each congressional township in said reservation shall not become subject to homestead entry, but shall be held by the United States and finally sold for public school purposes; and that when the allotments of land shall have been selected and taken by the members of the Cheyenne and Arapahoe tribes as aforesaid and approved by the Secretary of the Interior, the title thereto shall be held in trust for the allottees respectively for the period of twenty-five years in the manner and to the extent provided for in the act of Congress approved February eighth, eighteen hundred and eighty-seven (24 Stats., 388); and

Vol. 24, p. 388.

Whereas, it is provided in the act of Congress accepting, ratifying, and confirming the said agreement with the Cheyenne and Arapahoe Indians, approved March third, eighteen hundred and ninety-one (26 Stats., pp. 989 to 1044), section sixteen :

Vol. 26, p. 1022.

“That whenever any of the lands acquired by either of the \* \* \* foregoing agreements respecting lands in the Indian or Oklahoma Territory shall by operation of law or proclamation of the President of the United States be opened to settlement they shall be disposed of to actual settlers only, under the provisions of the homestead and townsite laws (except section twenty-three hundred and one of the Revised States [Statutes] of the United States, which shall not apply): *Provided, however,* That each settler on said lands shall before making a final proof and receiving a certificate of entry, pay to the United States for the land so taken by him, in addition to the fees provided by law, and within five years from the date of the first original entry, the sum of one dollar and fifty cents per acre, one-half of which shall be paid within two years; but the rights of honorably discharged Union soldiers and sailors as defined and described in sections twenty-three hundred and four and twenty-three hundred and five of the Revised Statutes of the United States shall not be abridged except as to the sum to be paid as aforesaid, and all the lands in Oklahoma are hereby declared to be agricultural lands, and proof of their non-mineral character shall not be required as a condition precedent to final entry”; and

Whereas, allotments of land in severalty to said Cheyenne and Arapahoe Indians have been made and approved in accordance with law and the provisions of the before-mentioned agreement with them; and

Whereas, the lands acquired by the said agreement hereinbefore mentioned have been divided into counties by the Secretary of the Interior, as required by said last mentioned act of Congress, before the same shall be opened to settlement, and lands have been reserved for county seat purposes as therein required, as follows, to wit:

For county C, the south one-half of section nineteen, township sixteen north, range eleven west. For county D, the north one-half of section thirteen, township eighteen north, range seventeen west. For county E, the south one-half of section fifteen, township seventeen north, range twenty-two west. For county F, the south one-half of section eight, township thirteen north, range twenty-three west. For county G, the north one-half of section twenty-five, township thirteen north, range seventeen west. For county H, the south one-half of section thirteen, township nine north, range sixteen west; and

Whereas, it is provided by act of Congress for temporary government of Oklahoma, approved May second, eighteen hundred and ninety, section twenty-three (twenty-six Statutes, page ninety-two), and there shall be reserved public highways four rods wide between each section of land in said Territory, the section lines being the center of said highways; but no deduction shall be made where cash payments are provided for in the amount to be paid for each quarter section of land by reason of such reservation; and

Vol. 26, p. 92.

Whereas, all the terms, conditions, and considerations required by said agreement made with said tribes of Indians and by the laws relating thereto, precedent to opening said lands to settlement, have been, as I hereby declare, complied with:

Now, therefore, I, Benjamin Harrison, President of the United States, by virtue of the power in me vested by the statutes hereinbefore mentioned, also an act of Congress entitled “An act making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes, for the year ending June thirtieth, eighteen hundred and ninety-two, and for other purposes,” approved March third, eighteen hundred and ninety-one, and by other of the laws of the United States, and by said agreement, do hereby declare and make known that all of said lands hereinbefore described, acquired from the Cheyenne and Arapahoe Indians by the agreement aforesaid, saving and excepting the lands allotted to the Indians

Lands ceded by Cheyenne and Arapahoe Indians, Okla., open to settlement April 19, 1892.

Vol. 26, p. 989.

as in said agreement provided; excepting also the lands hereinbefore described as occupied and claimed by the Wichita and affiliated bands of Indians, or otherwise reserved in pursuance of the provisions of said agreement and the said act of Congress ratifying the same, and other the laws relating thereto, will, at the hour of twelve o'clock noon (central standard time) Tuesday, the nineteenth day of the present month of April, and not before, be opened to settlement under the terms of and subject to all the conditions, limitations, reservations, and restrictions contained in said agreement, the Statutes above specified, and the laws of the United States applicable thereto.

## Schedule.

The lands to be so opened to settlement are for greater convenience particularly described in the accompanying schedule, entitled "Schedule of lands within the Cheyenne and Arapahoe Indian Reservation, Oklahoma Territory, opened to settlement by proclamation of the President."

## Entries.

Each entry shall be in square form as nearly as applicable, and no other lands in the Territory of Oklahoma are opened to settlement under this proclamation, the agreement with the said Cheyenne and Arapahoe Indians, or the act ratifying the same.

No person permitted to enter until day of opening.

Notice, moreover, is hereby giving that it is by law enacted that until said lands are opened to settlement by proclamation, no person shall be permitted to enter upon and occupy the same, and no person violating this provision shall be permitted to enter any of said lands or acquire any right thereto, and that the officers of the United States will be required to enforce this provision.

Lands attached to land districts.

And further notice is hereby given that it has been duly ordered that the lands mentioned and included in this Proclamation shall be, and the same are attached to the Western land district, office at Kingfisher, and the Oklahoma land district, office at Oklahoma City, in said Territory of Oklahoma, as follows:

Western district, Okla.

1. All of said lands lying north of the township line between townships thirteen and fourteen north, are attached to the Western land district, the office of which is at Kingfisher, in said Territory.

Oklahoma district, Okla.

2. All of said lands lying south of the township line between townships thirteen and fourteen north, are attached to the Oklahoma land district, the office of which is at Oklahoma City, in the said Territory.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington this twelfth day of April, in the year of our Lord, one thousand eight hundred and [SEAL.] ninety-two, and of the Independence of the United States the one hundred and sixteenth.

BENJ. HARRISON

By the President:

JAMES G. BLAINE,  
*Secretary of State.*

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA:

### A PROCLAMATION.

Whereas, by a written agreement\* made on the eighth day of December, eighteen hundred and ninety, the Crow tribe of Indians, in the State of Montana, agreed to dispose of and sell to the United States, for certain considerations in said agreement specified, all that portion of the Crow Indian Reservation, in the State of Montana, lying west and south of the following lines, to wit:

"Beginning in the mid-channel of the Yellowstone River, at a point which is the northwest corner of section number thirty-six, township number two north, of range twenty-seven east, of the

\*For text of the agreement with the Crow Indians see page 748.

principal meridian of Montana, thence running in a south westerly direction, following the top of the natural divide between the waters flowing into the Yellowstone and Clarke's Fork Rivers upon the west and those flowing into Pryor Creek and West Pryor Creek on the east, to the base of West Pryor Mountain. Thence due south and up the north slope of said Pryor Mountain on a true meridian line to a point fifteen miles due north from the established line between Montana and Wyoming; thence in a due easterly course on a parallel of latitude to a point where it intersects the mid-channel of the Big Horn River, thence following up the mid-channel of said river to a point where it crosses the Montana and Wyoming State line;" and

Whereas it is stipulated in the eleventh clause or section of said agreement that all lands upon that portion of the reservation by said agreement ceded, which, prior to the date thereof, had been allotted in severalty to Indians of the Crow tribe, shall be retained and enjoyed by them; and

Whereas, it is provided in the twelfth clause or section of said agreement, that, in accordance with the provisions of article six of the treaty of May seventh, Anno Domini eighteen hundred and sixty-eight, said cession of lands shall not be construed to deprive without his or her consent, any individual Indians of the Crow tribe of his or her right to any tract of land selected by him or her in conformity with said treaty, or as provided by the agreement approved by Congress April eleven, Anno Domini eighteen hundred and eighty-two; and

Whereas, it is further provided in said twelfth clause or section, that in ratifying said agreement the Congress of the United States shall cause all such lands to be surveyed and certificates duly issued for the same to said Indians, as provided in the treaty of May seventh, eighteen hundred and sixty-eight, before said ceded portion of the reservation shall be opened for settlement; and

Whereas, by the thirteenth clause or section of said agreement of December eighth, eighteen hundred and ninety, it is made a condition of said agreement that it shall not be binding upon either party until ratified by the Congress of the United States, and when so ratified that said cession of lands so acquired by the United States shall not be opened for settlement until the boundary lines set forth and described in said agreement have been surveyed and definitely marked by suitable permanent monuments, erected every half mile, wherever practicable, along the entire length of said boundary line; and

Whereas, said agreement was duly ratified and confirmed by the thirty-first section of the act of Congress, approved March third, eighteen hundred and ninety-one; and

Whereas, it is provided in section thirty-four of said act of March third, eighteen hundred and ninety-one;

"That whenever any of the lands acquired by the agreement with said Crow Indians hereby ratified and confirmed shall by operation of law or the proclamation of the President of the United States be open to settlement, they shall, except mineral lands, be disposed of to actual settlers only, under the provisions of the homestead laws, except section twenty-three hundred and one of the Revised Statutes, which shall not apply: *Provided, however,* That each settler, under and in accordance with the provisions of said homestead laws, shall, before receiving a patent for his homestead, pay to the United States for the land so taken by him, in addition to the fees provided by law, and within five years from the date of the first original entry the sum of one dollar and fifty cents for each acre thereof one-half of which shall be paid within two years; and any person otherwise qualified who has attempted to, but for any cause failed to secure a title in fee to a homestead under existing law, or who made entry under what as known as the commuted provision of the homestead law, shall be qualified to make a homestead entry upon any of said lands in conformity with the provisions of this section. That any person who may be entitled to the privilege of selecting land in severalty under the provisions of article six of the treaty of May seventh, eighteen hun-

dred and sixty-eight, with the Crow Indians, and which provisions were continued in force by the agreement with said Indians ratified and confirmed by the act of Congress, approved April eleventh, eighteen hundred and eighty-two, or any other act or treaty, shall have the right for a period of sixty days to make such selections in any part of the Territory by said agreement ceded, and such locations are hereby confirmed: *Provided, further*, That all white persons who located upon said Crow Reservation by reason of an erroneous survey of the boundary and were afterwards allowed to file upon their location in the United States Land Office, shall have thirty days in which to renew their filings, and their locations are hereby confirmed, and that in all cases where claims were located under the mining laws of the United States, and such location was made prior to December first, eighteen hundred and ninety, by a locator qualified therefor who believed that he or she was so locating on lands outside the Crow Indian Reservation, such locator shall be allowed thirty days within which to relocate the said mining claims so theretofore located by them, within the limits of the ceded portion of said Crow Indian Reservation, and upon such relocation such proceedings shall be had as are conformable to law and in accordance with the provisions of this act;” and

Whereas, the boundary lines of said ceded lands have been duly surveyed and marked as stipulated in the thirteenth clause or section of said agreement; and

Whereas, a written agreement was concluded with said Crow Indians on the twenty-seventh day of August, eighteen hundred and ninety-two, under and by virtue of the following clause in the Indian appropriation act of Congress, approved July thirteenth, eighteen hundred and ninety-two, to wit: “\* \* \* To enable the Secretary of the Interior in his discretion, to appoint a commission to negotiate with the Crow Indians of Montana, for a modification of the agreement concluded with said Indians, December twenty-eighth, eighteen hundred and ninety, and ratified by Congress March third, eighteen hundred and ninety-one, and to pay the necessary and actual expenses of said commissioners: *Provided*, That no such modification shall be valid unless assented to by a majority of the male adult members of the Crow tribe of Indians, and be approved by the Secretary of the Interior.” Which said agreement was assented to by a majority of the male adult members of the Crow tribe of Indians, as attested by their signatures thereto, and has been duly approved by the Secretary of the Interior; and

Whereas, it is stipulated and agreed in the first clause or section of said agreement of August twenty-seventh, eighteen hundred and ninety-two, that the persons named in a schedule attached to and made a part of said agreement, marked “schedule A,” include all the members of said Crow tribe who are entitled to the benefits of the eleventh section of said agreement of December eighth, eighteen hundred and ninety, and that each of said persons is entitled to the land therein described as his selection, in full satisfaction of his claim under said section; and that the persons named in a schedule attached to and made a part of said agreement of August twenty-seventh, eighteen hundred and ninety-two, marked “schedule B,” include all the members of said tribe who are entitled to the benefits of the twelfth section of said agreement of December eighth, eighteen hundred and ninety, and of the proviso of the thirty-fourth section of the act of Congress approved March third, eighteen hundred and ninety-one, extending the privilege of making selections on the ceded lands for a period of sixty days, and that each of the said persons therein named is entitled to retain the tract of land theretofore selected by him within the limits of the tract of land therein described as containing his selection of his claim under the said section (or the said proviso); and

Whereas, it is stipulated and agreed by the second clause or section of said agreement of August twenty-seventh, eighteen hundred and ninety-two, that all lands ceded by said agreement may be opened to settlement, upon the approval of the said agreement, by proclamation of the President: “*Provided*, That all lands within

the ceded tract selected or set apart for the use of individual Indians, and described in the aforesaid schedules 'A' and 'B,' shall be exempt from cession and shall remain a part of the Crow Indian Reservation, and shall continue under the exclusive control of the Interior Department until they shall have been surveyed and certificates or patents issued therefor, as provided in the agreement of December eighth, eighteen hundred and ninety, or until relinquished or surrendered by the Indian or Indians claiming the same: *Provided, further.* That such lands shall be described as set forth in Schedules 'A' and 'B,' and shall be exempted from settlement in the proclamation of the President opening the ceded lands, and that where lands so set apart are not described by legal subdivisions then the township or section, or tract of land, within whose limits such Indians' selections are located, shall not be opened to settlement until the Indian allotments therein contained shall have been surveyed and proper evidence of title issued therefor."

Now, therefore, I, Benjamin Harrison, President of the United States, by virtue of the power in me vested by the agreements and statutes hereinbefore mentioned, and by other the laws of the United States, do hereby declare and make known that all of the lands within that portion of the Crow Indian Reservation in Montana ceded to the United States by the said agreement of December eighth, eighteen hundred and ninety, and hereinbefore described, except those hereinafter mentioned and described, are open to settlement, under the terms of and subject to all the conditions, limitations, reservations, and restrictions, contained in the thirty-fourth section of the act of Congress approved March third, eighteen hundred and ninety-one, and hereinbefore quoted, and other laws applicable thereto.

The lands exempted from the operation of this proclamation being those embraced in Schedules "A" and "B," attached to the agreement of August twenty-seventh, eighteen hundred and ninety-two, are described as follows:

#### 1. SURVEYED LANDS.

*In township one north, range twenty-six east.*—Fractional section twenty-four; the north half; the east half of southeast quarter and west half of southwest quarter of fractional section twenty-five; fractional section twenty-six; lot five of fractional section thirty-four; the north half of northeast quarter and the northeast quarter of northwest quarter of section thirty-five; and the northeast quarter of northeast quarter of section thirty-six.

*In township one north, range twenty-seven east.*—Fractional section seven; lots one, two, three, four, five, and six, the southwest quarter of northeast quarter; the southeast quarter and the south half of the southwest quarter of fractional section eight; the south half of northwest quarter of section nine; the north half of the northwest quarter and the southwest quarter of the northwest quarter of section seventeen; fractional section eighteen; the north half and the southwest quarter of section nineteen.

*In township three south, range twenty-four east.*—The north half of the southwest quarter of section three; the southeast quarter of the northeast quarter, and lots two, three, and four of section four; fractional section five; the southeast quarter and the south half of the southwest quarter of section six; section seven; west half of section eight; the east half of the northwest quarter; and the southwest quarter of the northwest quarter of section seventeen; lots one, two, three, four, five, and six; the northeast quarter of the northeast quarter; the south half of the northeast quarter; and the southeast quarter of the northwest quarter and the south half of section eighteen; lots one, three, four, and five; and the east half of southwest quarter section nineteen; and lots one, two, three, and four in section thirty.

*In township four south, range twenty-three east.*—Lots four, five, six, seven, eight, nine, and thirteen, the south half of northwest quar-

ter; the southeast quarter of southeast quarter; and the northeast quarter of the southwest quarter section one; section two; the north half; the southeast quarter and the north half of southwest quarter section three; section four; the east half and the southwest quarter of section eight; the north half and the southwest quarter of section nine; the east half and the southwest quarter of section eleven; section twelve; the north half; the south half of the southeast quarter; the east half of the southwest quarter; and lots one, two, and three of section thirteen; the north half; the southeast quarter and the south half of the southwest quarter of section fourteen; the north half of section seventeen; the north half; the east half of the southeast quarter; and the north half of the southwest quarter of section eighteen; the northwest quarter of section nineteen; the east half and the northwest quarter of section twenty; the south half of the northwest quarter of section twenty-two; all of section twenty-three, except the northwest quarter of northwest quarter; section twenty-four; lots two and three in section twenty-five; the north half of northeast quarter; the northwest quarter; the north half of the southwest quarter; and lots one, two, five, six, seven, and eight of section twenty-six; the south half of the southeast quarter of section twenty-seven; the northwest quarter of section thirty-three; the fractional east half and the southwest quarter of section thirty-four; lots two, three, four, five, six, seven, nine, and ten of section thirty-five.

*In township five south of range twenty-three east.*—Lot five and southwest quarter of northwest quarter of section two; lots one, two, six, seven, eight, nine, twelve, and fourteen and southeast quarter of southeast quarter of section three; the fractional east half; the south half of northwest quarter; and the southwest quarter of section four; the south half of the northeast quarter; and the north half of the southeast quarter of section seven; the south half of the north half and the south half of section eight; lots one, two, three, four, six, seven, and eight; and the west half of section nine; lots one, two, three, and four; the west half of the northeast quarter and the south half of section ten; the northwest quarter of section fifteen; section sixteen; the east half of the northeast quarter; and the south half of section seventeen; the northwest quarter of the northeast quarter; the southeast quarter of the southeast quarter; the west half and lots one, two, four, and five section twenty; the southwest quarter of section twenty-one; the west half of southwest quarter section twenty-six; the south half of section twenty-seven; the west half of the northeast quarter; the northwest quarter and the south half of section twenty-eight; lots one, two, three, four, six, and seven; the northwest quarter; the south half of the southeast quarter; and the west half of the southwest quarter of section twenty-nine; the northeast quarter of northeast quarter; the northeast quarter of the southeast quarter and the south half of the southeast quarter section thirty; the northeast quarter; the northeast quarter of the northwest quarter; and the southeast quarter section thirty-one; lots three, four, five, six, nine, and ten; the southwest quarter of the southeast quarter; and the southwest quarter of section thirty-two; lot one, the north half of the northeast quarter; and the northwest quarter of section thirty-three, and the west half of the northeast quarter and the northwest quarter of section thirty-four.

## 2. UNSURVEYED LANDS WHICH WHEN SURVEYED, WILL BE DESCRIBED AS FOLLOWS:

*In township one north of range fifteen east.*—The southwest quarter of the northwest quarter; the northwest quarter of the southwest quarter; and the south half of the southwest quarter of section twenty-seven; the southeast quarter of the northeast quarter; and the east half of the southeast quarter of section twenty-eight; the east half of the northeast quarter of section thirty-three; the north half; the north half of the southeast quarter; and the northeast quarter of the southwest quarter of section thirty-four; the south

half of the north half; and the south half of section thirty-five; and the southwest quarter of the northwest quarter; the southeast quarter; the north half of the southwest quarter; and the southwest quarter of the southwest quarter of section thirty-six.

*In township one north, range sixteen east.*—The southwest quarter of the southwest quarter of section thirty-one.

*In township one south of range fifteen east.*—The north half of the north half; and the southeast quarter of the northeast quarter of section one.

*In township one south of range sixteen east.*—The north half of the northeast quarter and the southwest quarter of northwest quarter of section six; and the southeast quarter of the northeast quarter of section twenty-four.

*In township one south of range eighteen east.*—The southeast quarter of the southwest quarter of section twenty-seven; the northwest quarter of the southeast quarter and the south half of the southeast quarter of section twenty-eight; the north half of the northeast quarter of section thirty-three; and the northeast quarter and the east half of the northwest quarter of section thirty-four.

*In township one south of range seventeen east.*—The east half of the northeast quarter; the east half of the northwest quarter; the southwest quarter of the northwest quarter; the northwest quarter of the southeast quarter; and the northeast quarter of the southwest quarter of section nineteen; the south half of the southeast quarter and the southeast quarter of the southwest quarter of section twenty-eight; and the north half of the northeast quarter and the northeast quarter of the northwest quarter of section thirty-three.

*In township one south of range twenty-five east.*—The northeast quarter of the southeast quarter; the south half of the southeast quarter; and the southeast quarter of the southwest quarter of section twenty-five; and the northeast quarter of the northwest quarter and the west half of section thirty-six.

*In township one south of range twenty-six east.*—The south half of the southeast quarter of section nineteen; the southeast quarter; the northeast quarter of the southwest quarter; and the south half of the southwest quarter of section twenty; the west half of the southwest quarter of section twenty-one; the west half of the northwest quarter of section twenty-eight; the north half; and the northwest quarter of the southwest quarter of section twenty-nine; the north half of the northeast quarter; the southeast quarter of the northeast quarter; the southwest quarter of the northwest quarter; the north half of the southeast quarter; and the southwest quarter of section thirty.

*In township two south of range thirteen east.*—The southwest quarter of the northwest quarter and the northwest quarter of the southwest quarter of section twenty-seven; the southeast quarter of the northeast quarter and the east half of the southeast quarter of section twenty-eight; and the east half; the east half of the northwest quarter; the northeast quarter of the southeast quarter and the northeast quarter of the southwest quarter of section thirty-three.

*In township two south of range eighteen east.*—The southeast quarter and the east half of the southwest quarter of section one.

*In township two south of range twenty east.*—The east half; the east half of the northwest quarter; the southwest quarter of the northwest quarter and the north half of the southwest quarter of section twenty-eight; the northeast quarter; and the north half of the southeast quarter of section twenty-nine; the south half of the northeast quarter; the north half of the southeast quarter; and the southeast quarter of the southeast quarter of section thirty-four; the south half of the north half and the south half of section thirty-five; and the southwest quarter of the northwest quarter; the northwest quarter of the southeast quarter; the south half of the southeast quarter; and the southwest quarter of section thirty-six.

*In township two south of range twenty-one east.*—The west half of the northeast quarter; the northwest quarter of the southeast

quarter; the east half of the west half; and the southwest quarter of the southwest quarter of section thirty-two.

*In township two south of range twenty-four east.*—The northeast quarter of the southeast quarter, and the south half of the southeast quarter of section twenty-one; the northeast quarter; the north half of the southeast quarter; and the southwest quarter of section twenty-two; the west half of the northwest quarter of section twenty-seven; the northeast quarter of section twenty-eight; and the northeast quarter; the southeast quarter of the northwest quarter; the north half of the southeast quarter; and the southwest quarter of section twenty-nine.

*In township three south of range eighteen east.*—The west half of section fourteen; the west half of the northeast quarter and the east half of the northwest quarter of section twenty-three; the southwest quarter of the northeast quarter; the southeast quarter of the northwest quarter; the northwest quarter of the southeast quarter; and the northeast quarter of the southwest quarter of section thirty-one; the northeast quarter; the south half of the northwest quarter and the north half of the southwest quarter of section thirty-two; the south half of the northeast quarter and the southeast quarter of section thirty-three; the southwest quarter of the northeast quarter; the south half of the northwest quarter; the west half of the southeast quarter; and the southwest quarter of section thirty-four; the south half of section thirty-five; and the southeast quarter of the northeast quarter; and the southeast quarter of section thirty-six.

*In township three south of range nineteen east.*—The northeast quarter; the north half of the southeast quarter; the southwest quarter of the southeast quarter; and the east half of the southwest quarter of section twelve; the northwest quarter of section twenty-nine; the east half of the northeast quarter; the southwest quarter of the northeast quarter; the southeast quarter of the northwest quarter; and the south half of section thirty; and the southwest quarter of the northwest quarter and the west half of the southwest quarter of section thirty-one.

*In township three south of range twenty east.*—The northeast quarter; the north half of the northwest quarter; the southeast quarter of the northwest quarter, and the northeast quarter of the southeast quarter of section one; the north half of the northeast quarter and the northeast quarter of the northwest quarter of section two; the north half of the northwest quarter; the southwest quarter of the northwest quarter, and the west half of the southwest quarter of section five; the southeast quarter of the northeast quarter; the southeast quarter, and the southeast quarter of the southwest quarter of section six; and the west half of the northeast quarter and the northwest quarter of section seven.

*In township three south of range twenty-one east.*—The northwest quarter of the southwest quarter and the south half of the southwest quarter of section five; the east half of the southeast quarter and the west half of section six; the northeast quarter of the northeast quarter of section seven; and the north half of the northwest quarter of section eight.

*In township three south of range twenty-three east.*—The southeast quarter of the northeast quarter and the east half of the southeast quarter of section twelve; the east half of section thirteen; the southeast quarter of the southeast quarter of section twenty-three; the southeast quarter of the northeast quarter; the east half of the southeast quarter, and the southwest quarter of the southwest quarter of section twenty-four; the east half of the east half; the west half of the northwest quarter, and the southwest quarter of section twenty-five; the northeast quarter of the southeast quarter and the south half of the southeast quarter of section twenty-six; the south half of the south half of section thirty-four; the northeast quarter; the north half of the southeast quarter; the southwest quarter of the southeast quarter, and the south half of the southwest quarter of section thirty-five; and the northwest quarter of section thirty-six.

*In township four south of range eighteen east.*—The northwest quarter of the northeast quarter and the north half of the northwest quarter of section three; the north half of the northeast quarter of section four; the southeast quarter of the southwest quarter of section thirteen; the west half of the northeast quarter; the east half of the northwest quarter; the southeast quarter; and the northeast quarter of the southwest quarter of section twenty-four; the northeast quarter; the north half of the southeast quarter; the southwest quarter of the southeast quarter; and the southwest quarter of section twenty-five; the south half of the southeast quarter of section twenty-nine; the northwest quarter of the northeast quarter and the northeast quarter of the northwest quarter of section thirty-two; the northeast quarter of the northeast quarter; the northwest quarter; the northeast quarter of the southeast quarter; and the south half of the southeast quarter of section thirty-five; and the west half of the northeast quarter; the northwest quarter; and the northwest quarter of the southwest quarter of section thirty-six.

*In township six south of range eighteen east.*—The east half of the southeast quarter and the southwest quarter of the southeast quarter of section twenty; and the west half of the northeast quarter; the northeast quarter of the northwest quarter; and the south half of the northwest quarter of section twenty-nine.

*In township six south of range nineteen east.*—The northeast quarter; the east half of the northwest quarter; the southwest quarter of the northwest quarter; the north half of the southeast quarter; and the northwest quarter of the southwest quarter of section fifteen; the southeast quarter of the northwest quarter; and the northeast quarter of the southwest quarter of section sixteen; the south half of the northeast quarter and the north half of the southeast quarter of section nineteen; and the south half of the northwest quarter and the north half of the southwest quarter of section twenty.

*In township six south of range twenty-three east.*—The north half of the northwest quarter and the north half of the southeast quarter of section five; the south half of the southeast quarter of section eight; section seventeen; and the west half of the northwest quarter of section sixteen.

3. TOWNSHIPS, SECTIONS, OR TRACTS OF LAND WITHIN WHICH INDIAN SELECTIONS ARE LOCATED.

*Tract 1.*—Beginning at a point in the mid-channel of the Yellowstone River one and one-half miles below the mouth of the Clark's Fork River; thence running in a southwesterly direction along a line parallel to and one and one-half miles distant from the mid-channel of the Clark's Fork River to the south line of township two south of range twenty-four east; thence west along said township line to the mid-channel of the Clark's Fork River; thence northeast along the mid-channel of the Clark's Fork River to the mid-channel of the Yellowstone River; thence northeast along the mid-channel of said river to the point of beginning.

*Tract 2.*—All that part of township two south of range twenty-four east lying south of the Yellowstone River and west of the Clark's Fork River.

*Tract 3.*—Sections twenty-nine, thirty-one, and thirty-two, township five south of range twenty-one east; sections five, six, seven, eight, seventeen, and eighteen, township six south of range twenty-one east; and sections one, two, eleven, twelve, thirteen, and fourteen, township six south of range twenty east.

*Tract 4.*—Beginning at a point in the mid-channel of the Yellowstone River opposite the mouth of Duck Creek; thence running in a southwesterly direction along the mid-channel of the Yellowstone River to a point one and one-half miles below the mouth of the Clark's Fork River; thence in a southwesterly direction along a line parallel to and one and one-half miles distant from the mid-channel of the said Clark's Fork River to a point one and one-half

miles due south of the mid-channel of the said Yellowstone River; thence running in a northeasterly direction along a line parallel to and one and one-half miles distant from the mid-channel of the Yellowstone River to the mid-channel of Duck Creek; thence in a northerly direction along the mid-channel of Duck Creek to the point of beginning.

*Tract 5.*—All that part of townships two and three south of range twenty-three lying south of the mid-channel of the Yellowstone River and north of a line running parallel thereto and one and one-half miles distant therefrom.

*Tract 6.*—Beginning in the mid-channel of the main, or West Fork of Red Lodge Creek at the point where it intersects the line known as the line of the Blake Survey, and which was formerly supposed to be the south boundary of the Crow Indian Reserve; thence running due east along the lines of said Blake Survey for a distance of one mile; thence running northeasterly along a line parallel to and one mile from the mid-channel of the said West Fork of said Red Lodge Creek for a distance of ten miles; thence due west to the mid-channel of the said West Fork of said Red Lodge Creek; thence southwesterly along the mid-channel of the said West Fork of said Creek to the place of beginning.

*Tract 7.*—Townships four south of ranges twenty-one and twenty-two east.

*Tract 8.*—All that part of the east half of township one south of range 26 east, lying south of the Yellowstone River; and all that part of the west half of township one south of range twenty-seven east, lying south of the Yellowstone River.

*Tract 9.*—Section fourteen, township three, south of range nineteen east.

*Tract 10.*—Beginning in the mid-channel of the main or West Fork of Red Lodge Creek, at the point where it intersects the line known as the line of the Blake Survey, and which was formerly supposed to be the south boundary of the Crow Indian Reserve; thence running due east along the line of said Blake Survey for a distance of one mile; thence running northeasterly along a line parallel to and one mile from the mid-channel of the said West Fork of said Red Lodge Creek for a distance of ten miles; thence due west to the mid-channel of the said West Fork of said Red Lodge Creek; thence southwesterly along the mid-channel of the said West Fork of said Red Lodge Creek to the place of beginning.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this fifteenth day of October, in the year of Lord one thousand eight hundred and ninety-two, and of the Independence of the United States the one hundred and seventeenth.

BENJ. HARRISON.

By the President:  
JOHN W. FOSTER,  
*Secretary of State.*

## DECISION OF SUPREME COURT ON VALIDITY OF INDIAN CONVEYANCES.

[Supreme Court of the United States, No. 342.—October Term, 1891. U. S. Reports, vol. 145, p. 310.]

Aquila H. Pickering, plaintiff in error, vs. John A. Lomax *et al.*, in error to the Supreme Court of the State of Illinois.

[May 16, 1892.]

This was an action of ejectment brought by Pickering against John A. Lomax and William Kolze to recover two parcels of land in Cook County, Ill., which had originally been granted by the United States to certain Indians under the treaty of Prairie du Chien of July 29, 1829. A jury was waived, the case tried by the court, and a judgment rendered in favor of the defendants. The plaintiff thereupon sued out a writ of error from the Supreme Court of Illinois, which affirmed the judgment of the lower court.

Upon the trial, in order to establish his title, the plaintiff offered in evidence article 4 of the treaty of Prairie du Chien (7 Stat. 321), which, so far as the same is material, reads as follows:

“There shall be granted by the United States, to each of the following persons, (being descendants from Indians,) the following tracts of land, viz: To Claude Laframboise, one section of land on the Riviere aux Pleins, adjoining the line of the purchase of 1816; \* \* \* to Alexander Robinson, for himself and children, two sections on the Riviere aux Pleins, above and adjoining the tract herein granted to Claude Laframboise. \* \* \* The tracts of land herein stipulated to be granted, shall never be leased or conveyed by the grantees, or their heirs, to any persons whatever, without the permission of the President of the United States.”

Plaintiff then offered in evidence a copy of the patent issued December 28, 1843, signed by President Tyler, under the provisions of the above treaty, granting the lands, including those in litigation, to Alexander Robinson for himself and children. The patent also contained the provision: “But never to be leased or conveyed by him, them, his or their heirs, to any person whatever, without the permission of the President of the United States.”

The next instrument in plaintiff's chain of title was a decree in a suit in partition instituted February 22, 1847, in the Cook County court of common pleas, between Alexander Robinson and his children, and evidence to show that the lands in question were set out to Joseph Robinson, one of the children.

The following deeds were then put in evidence:

Deed dated August 3, 1858, from Joseph Robinson and wife to John F. Horton, which had indorsed upon it the approval of the President of the United States, which approval was dated January 21, 1871.

Deed from Leon Straus, administrator, etc., of the estate of John F. Horton, deceased, to Moses W. Baer, dated October 6, 1863, and made in pursuance of an order of sale by the county court of Cook County for payment of debts.

Several intermediate conveyances of the premises, down to a deed dated November 10, 1866, from Henry H. Dyer and wife to Aquila H. Pickering, the plaintiff.

The defendant introduced no evidence, but at the close of the plaintiff's case moved that the plaintiff's testimony be excluded, and the case dismissed, upon the ground that the deed of August 3, 1858, from Joseph Robinson and wife to John F. Horton was made in direct violation of the terms of the patent as to obtaining the approval of the President to the conveyance.

This motion was sustained, the court being of the opinion that Robinson had no authority to convey without obtaining the permission of the President beforehand; that the subsequent sanction obtained by persons claiming title under Robinson was invalid; and that even if such sanction would have the effect of giving force to the deed, yet, as the grantee under that deed was dead, the administrator's deed would not carry any title to the purchaser from the administrator, but that if any title accrued by reason of the sanction of the President it would be to the heirs of Horton.

Thereupon the court rendered judgment for the defendant, which was affirmed by the supreme court of Illinois (120 Ill., 293), and the plaintiff sued out a writ of error from this court.

Mr. Justice Brown delivered the opinion of the court:

This case turns upon the question whether the act of Congress prohibiting Indian lands from being conveyed, except by permission of the President, is satisfied by his approval indorsed upon a deed thirteen years after its execution, and after the death of the grantee and the sale of the land by his administrator.

(1) A preliminary question is made by the defendant in error, as to the jurisdiction of this court. By Revised Statutes, section 709, our authority to review final judgments or decrees of the highest courts of a State extends to all cases "where is drawn in question the validity of a treaty or statute of, or an authority exercised under, the United States, and the decision is against their validity." The argument of the defendant in this connection is that as the title to the lands did not pass by the treaty, which contained only an agreement to convey, the proviso ceased to be operative when the patent was issued in 1843: that the same restriction upon alienation contained in the patent was one which the supreme court of Illinois had considered; and that their construction, that no title passed from Robinson and Horton for want of permission of the President of the United States, could not be reviewed by this court. There are two sufficient answers to this contention. First, the proviso in the treaty did continue by its express terms to be operative, so long as the land was owned by the grantees or their heirs, and the object of carrying this proviso into the patent was merely to apprise intending purchasers of the restrictions imposed by the treaty upon the alienation of the lands. Second, the case raised the question of the validity of an authority exercised under the United States, viz, the authority of the President to approve the deed thirteen years after its execution, and the decision of the supreme court of Illinois was against its validity; so that the case is directly within the words of the statute.

(2) So far as the main question is concerned, we know of no reason why the analogy of the law of principal and agent is not applicable here, viz, that an act in excess of an agent's authority, when performed, becomes binding upon the principal, if subsequently ratified by him. The treaty does not provide how or when the permission of the President shall be obtained, and there is certainly nothing which requires that it shall be given before the deed is delivered. (*Doe v. Beardsley*, 2 McLean, 412.) It is doubtless, as was said by the supreme court of Mississippi in *Harmon v. Partier* (12 S. and M., 425, 427), "a condition precedent to a perfect title" in the grantee; but the neglect in this case to obtain the approval of the President for thirteen years only shows that for that length of time the title was imperfect, and that no action of ejectment would have lain until the condition was performed. Had the grantee the day after the deed was delivered sent it to Washington and obtained the approval of the President, it would be sticking in the bark to say that the deed was not thereby validated. A delay of thirteen years is immaterial, provided, of course, that no third parties have in the meantime legally acquired an interest in the lands.

If, after executing this deed, Robinson had given another to another person, with the permission of the President, a wholly different question would have arisen. But, so far as Robinson and his grantees are concerned, the approval of the President related back to the execution of the deed and validated it from that time. As was said by this court in *Cook v. Tullis* (18 Wall., 332, 338), "the ratification operates upon the act ratified precisely as though authority to do the act had been previously given, except where the rights of third parties have intervened between the act and the ratification. The retroactive efficacy of the ratification is subject to this qualification. The intervening rights of third persons can not be defeated by the ratification." (See also *Fleckner v. Bank of the United States*, 8 Wheat., 338, 363.) In *Ashley v. Eberts* (22 Ind., 55) a similar act of the President approving a deed was held to relate back and give it validity from the time of its execution, so as to protect the grantee against a claim by adverse possession which arose in the interim between its date and the confirmation. "Otherwise," said the court, "a mere trespasser, by taking possession after a valid sale and before its consummation, would have power to defeat a bona fide purchaser." This case was approved in *Steeple v. Downing* (60 Ind., 478, 497). In *Murray v. Wooden* (17 Wend., 531), a conveyance of land by an Indian which, subsequent to its date, had been ratified by a certificate of approbation of the surveyor-general in the form prescribed by law, was held to be inoperative upon the ground that, previous to the granting of such certificate, the Indian had conveyed to a third person, and the deed to such person had been approved in the mode prescribed by law previous to the indorsement of the certificate of approbation of the deed first executed. This was a clear case of rights intervening between the execution of the first deed and its approval. In *Smith v. Stevens* (10 Wall., 321) the right to convey the lands reserved for the benefit of the Indians was expressly vested in the Secretary of the Interior, upon the re-

quest of any one of the Indians named, and it was held that there being no ambiguity in the act which had provided the way in which the lands could be sold, by necessary implication it prohibited their being sold in any other way. "The sale in question not only contravened the policy and spirit of the statute, but violated its positive provisions." In that case there was no pretense that the requirements of the act had been fulfilled.

Nor do we consider it material that the grantee had in the meantime died, since if the ratification be retroactive it is as if it were indorsed upon the deed when given, and inures to the benefit of the grantee of Horton, the original grantee—not as a new title acquired by a warrantor subsequent to his deed inures to the benefit of the grantee, but as a deed, imperfect when executed, may be made perfect as of the date when it was delivered. This was the ruling of the court in *Steeple v. Downing* (60 Ind., 478).

The object of the proviso was not to prevent the alienation of such lands *in toto*, but to protect the Indian against the improvident disposition of his property, and it will be presumed that the President, before affixing his approval, satisfied himself that no fraud or imposition had been practiced upon the Indian when the deed was originally obtained. Indeed, the record in this case shows that the President did not affix his approval until affidavits had been presented showing that Pickering was the owner, and that the amount paid to Robinson was the full value of the land, and that the sale was an advantageous one to him.

We are constrained to differ with the supreme court of Illinois in its view of the treaty, and to hold that so far as this question is concerned plaintiff's claim of title contained no defect.

The judgment of the supreme court is, therefore, reversed and the case remanded for further proceedings not inconsistent with this opinion.

#### AGREEMENT WITH SPOKANE INDIANS.\*

Articles of agreement made and concluded at Spokane Falls, in the Territory of Washington, the 18th day of March, eighteen hundred and eighty-seven, by and between John V. Wright, Jarred W. Daniels, and Henry W. Andrews, Commissioners duly appointed and authorized, on the part of the United States, and the undersigned, Chiefs, Head-man and other Indians of the Upper and Middle bands of Spokane Indians, they being authorized to act for said bands by them.

##### ARTICLE 1.

The aforesaid bands of Spokane Indians hereby cede to the United States all right, title, and claim which they now have, or ever had, to any and all lands lying outside of the Indian reservations in Washington and Idaho Territories, and they hereby agree to remove to and settle upon the Cœur d'Aléne Reservation in the Territory of Idaho.

##### ARTICLE 2.

It is further agreed by the parties hereto, that said Indians will be permitted to select their farms and homes on a tract of land to be laid off and surveyed and the boundaries marked in a plain and substantial manner under the direction of the Secretary of the Interior, on said Cœur d'Aléne Reservation, provided that in laying out said tract of land, the lands taken and occupied by the Indians now on said Cœur d'Aléne Reservation shall not be interfered with; and it is further agreed that said Spokane Indians will take lands in severalty under and according to an act of Congress entitled "An act to provide for the allotments of land in severalty to Indians on the various reservations and to extend the protection of the laws of the United States and the Territories over the Indians, and for other purposes," which act was passed and approved during the second Session of the Forty-ninth Congress, and is known as the Allotment act.

##### ARTICLE 3.

It is further agreed that the homes and lands selected, as provided for in the foregoing article, are to be and remain the permanent homes of the Indians, parties hereto, and their children forever.

\* Ratified by Indian appropriation act of July 13, 1892. [See Vol. 27, p. 139, U. S. Stat., and page 720 of this report.]

## ARTICLE 4.

It is further agreed that in case any Indian or Indians, parties hereto, have settled upon any of the unoccupied lands of the United States outside of said reservation, and have made improvements thereon with the intention of perfecting title to the same under the homestead, pre-emption, or other laws of the United States, and residing on the same at the date of the signing of this agreement, he or they shall not be deprived of any right acquired by said settlement, improvement, or occupancy by reason of signing this agreement or removal to said Cœur d'Aléne Reservation, and said tract or tracts of land shall continue to be held by said parties, and the same patented to them by the United States.

## ARTICLE 5.

In consideration of the foregoing cessions and agreements the United States agrees to expend for the benefit of said Indians, parties hereto, the sum of ninety-five thousand dollars, as follows, to wit: For the first year, thirty thousand dollars; for the second year, twenty thousand dollars, and for each succeeding year thereafter for eight (8) years, five thousand dollars, said money to be expended under the direction of the Secretary of the Interior in the removal of the said Indians to the Cœur d'Aléne Reservation, in erecting suitable houses, in assisting them in breaking lands, in furnishing them with cattle, seeds, and agricultural implements, saw and grist mills, thrashing-machines, mowers, clothing; provisions; in taking care of the old, sick, and infirm; in affording educational facilities, and in any other manner tending to their civilization and self-support: *Provided*, That in case any of the money herein provided for is not used or expended in any year for which the same is appropriated, said money shall be deposited in the Treasury of the United States to the credit of the Indians, parties hereto, to be used for their benefit under the direction of the Secretary of the Interior.

## ARTICLE 6.

It is further agreed that in addition to the foregoing provisions the United States shall employ and furnish a blacksmith and a carpenter to do necessary work and to instruct the Indians, parties hereto, in those trades.

## ARTICLE 7.

It is further agreed that in the employment of carpenters, blacksmiths, teamsters, farmers, or laborers, preference shall in all cases be given to Indians, parties hereto, who are qualified to perform the work or labor.

## ARTICLE 8.

In order to encourage said Indians in taking allotments of land, and in preparing the same for cultivation, it agreed that when all of said Indians shall have selected and shall have broken five acres or more on each farm, the sum of \$5,000 in money shall be given them out of the funds herein provided and distributed pro rata among them, provided that in the discretion of the Secretary of the Interior and the Commissioner of Indian Affairs, a pro rata payment out of said fund may be made to any ten families who shall have complied with the provisions of this article as to breaking land.

## ARTICLE 9.

In consideration of the ages of Chiefs Louis, Spokane Garry, Paul Schulhault, Antarchan, and Enoch, the United States agrees, in addition to the other benefits herein provided, to pay to each of them for ten years the sum of \$100 per annum.

## ARTICLE 10.

In case any Indian or Indians, parties hereto, shall prefer and elect to remove either to the Colville or Joeko Reservations, instead of the Cœur d'Aléne Reservation, and shall give reasonable notice of the same, after the ratification of this agreement by Congress, he or they shall be permitted to do so, and shall receive a pro rata share of all the benefits provided for in this agreement.

ARTICLE 11.

This agreement shall not be binding on either party until the same is ratified by Congress.

In testimony whereof the said John V. Wright, Jarred W. Daniels, and Henry W. Andrews, on the part of the United States, and the chiefs, head-men, and other Indians, on the part of the Indians, parties hereto, have hereunto set their hands and affixed their seals this 15th day of March, A. D. 1887.

## REPORT OF COMMISSION TO CROW INDIANS.

(Act July 13, 1892, 27 Stats., p. 137.)

LIVINGSTON, MONT., *September 14, 1892.*Hon. T. J. MORGAN,  
*Commissioner of Indian Affairs.*

SIR: The Commission appointed to negotiate with the Crow Indians of Montana for a modification of the agreement concluded with said Indians December 8, 1890, and ratified by Congress March 3, 1891, have the honor to submit the following report:

We met at the Crow Agency August 24, 1892. After several preliminary talks with the Indians, the agreement herewith transmitted was entered into with them August 27. Nearly every male adult Indian of the Crow tribe took part in the council. According to the last census there are 666 adult male Crows. The inclosed agreement is signed by 436 Indians. The council ratified the treaty unanimously, and the signature of every adult male Crow could doubtless have been secured by following the Indians to their homes, to which they scattered as soon as the council broke up. The Indians were allowed to choose their own interpreters, and the treaty was carefully explained to them, and seemed to be thoroughly understood. The three days subsequent to the conclusion of the treaty were spent by the Commission in making out and delivering to each Indian named in schedule B, a certificate declaring him entitled to the tract of land, or to a selection within the limits of the tract of land, with which his name is connected in said schedule B. Before the unsurveyed selections in schedule B can be surveyed the public land surveys must be extended over a wide tract of country, involving much time and expense. With the limited means at the command of the Commission, this was impracticable. The Commission is of the opinion that the rights of the claimants named in Schedule B are fully protected by the provisions of the first and second sections of the agreement herewith transmitted. The tracts of land described in Schedule B are so bounded by natural boundaries, or township or sectional lines, as to be readily identified on the ground. There can be no excuse for trespassing upon them should any one be so disposed.

Schedules A and B were compiled from the Crow Land Book; from List A of claims, surveyed by Samuel Bundoock, in January, 1891; from List B of allotments made in August, 1890, by J. G. Hatchitt, special allotting agent, and from List C of "Indians who made selections on the ceded part of the Crow Reservation in August, 1890," under the supervision of J. G. Hatchitt.

The following persons assisted in the preparation of said schedules: M. P. Wyman, Crow agent; C. C. Kreidler, additional farmer, district No. 5, which district includes the ceded part of the reserve; Bernard Bravo, the interpreter who accompanied Mr. Hatchitt when the allotments and selections were made, and who is thoroughly familiar with the owner and location of each allotment or selection; and George R. Davis, who has lived among the Indians on the ceded part for many years. When there was the slightest doubt as to the proper location of any Indian claimant, the Indian himself was called before the Commission and questioned through the interpreters.

Schedules A and B were carefully interpreted to the Indians in council, and they were invited to make such alterations or additions as they deemed right.

At the request of the Indians the Commission, after due investigation, added the following names to schedule B: Sees the Lion, Snake Bull, He is a People, Medicine Brings Things, Brings Things Always, Grabs the Knife, Big Eyes, Strikes Her Painted Face, Falls Towards Her, Hunts to Die, Her House is Pretty, The Bird Everywhere, Takes the Rider of a Yellow Horse, The Swallow Bird.

The following-named Indians, included in list C, referred to above, were omitted from Schedule B for the reason that they are dead. The first seven are reported dead by Special Agent Leonard: Gives Things Everywhere (No. 17), Went by the Side of the Enemy (No. 26), Goes to the Camp (No. 30), Kills One Man (No. 42), Little Eyes (No. 86), Walks to the Water (No. 88), Little Old Man (No. 91), Charley Bravo (No. 119), Charley Fisher (No. 120).

Antelope, No. 101, list C, is omitted from schedule B, as her name appears on schedule A, No. 98.

No such person as Mrs. Peter Hibbart, No. 122, list C, could be found. If there be any such Indian her rights, if any, are, it seems to us, fully protected by section —, severalty act of 1887.

The names of Lucy Morrison, Mary Morrison, Hannah Morrison, and Al. Morrison, jr., Nos. 1 to 4, List C, are omitted from Schedule B for the reason that the survey of the boundary of the reduced reserve disclosed the fact that their claims were on the retained part of the reserve, and not on the ceded portion.

The name of A. M. Quivey was added to Schedule A at the request of the Indians.

Schedules A and B were adjusted to the entire satisfaction of the Crow tribe, and the individual Indians interested therein. They were especially pleased with the issuance of certificates to the Indians named in Schedule B.

By reference to the certificate attached to Schedule B it will be seen that that list meets with the approval of the persons most familiar with the location of the unsurveyed claims on the reserve.

It is the opinion of the Commission that the inclosed treaty equitably adjusts the long-standing dispute as to the number and location of the Indian claims on the ceded part of the reserve, and leaves no room for further controversy in the matter.

The Indians are anxious to have their retained reserve irrigated to the best advantage, and were perfectly willing to transfer the necessary funds from the annuity to the irrigation fund.

They readily comprehended the advantages to be derived from clause 4 of the treaty with regard to interest.

The Indians insisted that all work, whether done by contract or otherwise, should be confined to themselves and the few whites intermarried with them. They seemed to fear that a general contract would be let to some large contractor who would employ mostly white labor.

They also wished the privilege of employing white men to act as foremen.

With the assistance of the educated Indians and mixed-bloods, and the few whites intermarried with them, the Commission believes that the Crows can do all the work required in constructing the proposed ditches.

The Commission presumes the cost of the work could be somewhat lessened by the employment of white labor, under the contract system. It is to be remembered, however, that the money spent belongs to the Indians themselves. Moreover, they are benefited, not only by the money earned, but by the habits of industry acquired. The Commission, therefore, believes that the material advancement of the entire tribe, caused by the employment of Indian labor in the construction of these ditches, will more than compensate for any extra cost.

The mixed-bloods on the ceded part of the reserve expect to remain there permanently, and to become citizens of the United States. They therefore requested that they be permitted to receive the cash value of the various annuity goods to which they may be entitled.

The plats of the survey made in 1891 by Samuel Bundock, for Thomas Kent *et al.*, were of great assistance to the Commission. We recommend that the Government approve the same, and that thereupon Mr. Kent be paid the actual and reasonable cost thereof.

It was found that the selections of nine Indians, alleged to have been made during the sixty days subsequent to March 3, 1891, conflicted with the claims of certain white settlers alleged to be protected by the provisions of section 34 of the act ratifying the treaty of December 8, 1890. These Indians agreed to relinquish their claim to these disputed selections, and take others on the ceded strip in lieu thereof, provided they were paid \$50 each as damages for hay and improvements alleged to be owned by them on the disputed claims. The other Indians and the Commission assented to this. The new selections are very much better than the original ones, and the Indians interested are pleased at the exchange.

The Commission trusts the Indian Office will approve of this arrangement, as it removes the last vestige of conflict between whites and Indians as to disputed claims on the ceded strip.

The Indians claim that the former Commission promised that a fence should be built on the west line of the retained reserve to keep out unauthorized stock, and insisted that a provision to that effect be placed in the present treaty.

The members of the Commission were agreeably surprised at the success attained by a number of the Crows in the cultivation of irrigated land. A number of educated Indians and mixed-bloods were noticed fully capable of filling subordinate positions at the agency.

The Commission would respectfully recommend to the Indian Office that these persons be given employment, not so much for the personal benefit of the individuals employed as an inducement for the rising generation of Indians to qualify themselves for like employment.

The Indians complain that the stipulations of the treaty of December 8, 1890, have not been complied with. They especially request that a subagency be built at Pryor Creek and blacksmith and teacher be placed in the shop and school-house already built there. They are also dissatisfied that the ditches are not being built more rapidly. Many Indians and mixed-bloods who desire to take their teams to work on the ditches are unable to do so because the superintendent can not give them employment.

The Commission most respectfully recommends that the stipulations of the treaty of December 8, 1890, be complied with as rapidly as possible, and that the superintendent in charge of irrigation on the Crow Reserve be instructed to push the work of building ditches. If the Department can not conveniently furnish him with sufficient skilled employes or plow teams to block out more work, the Commission would recommend that small contracts be let to educated Indians and mixed-bloods, or whites intermarried with them. The Indian contractors could then obtain the necessary help, and teams, and implements themselves.

The Commission is under many obligations to the Crow Agent, Maj. M. P. Wyman, and his corps of assistants, as well as to the interpreters employed.

Respectfully submitted.

ELBERT D. WEED,  
FELLOWS D. PEASE,  
FRED. H. FOSTER.

#### AGREEMENT WITH THE CROW INDIANS.\*

CROW AGENCY, MONT., August 27, 1892.

We, the undersigned, adult male Indians of the Crow tribe, now residing on the Crow Indian Reservation in the State of Montana, do, on this 27th day of August, A. D. 1892, hereby consent and agree that the agreement entered into by and between J. Clifford Richardson, C. M. Dole, and R. J. Flint, commissioners on the part of the United States, and said Indians, on the 8th day of December, A. D. 1890, which agreement was ratified and confirmed by the act of Congress approved March 3, 1891, shall be amended and modified as follows:

First. It is hereby stipulated and agreed that the persons named in the accompanying schedule, marked "A," hereto attached and made a part of this agreement, include all the members of said tribe who are entitled to the benefits of the eleventh section of said agreement of December 8, 1890, and that each of said persons is entitled to the land therein described as his selection, in full satisfaction of his claim under said section, and that the persons named in the accompanying schedule, marked "B," hereto attached and made a part of this agreement, include all the members of said tribe who are entitled to the benefits of the twelfth section of said agreement of December 8, 1890 (and of the proviso of the thirty-fourth section of the act of Congress approved March 3, 1891, extending the privilege of making selections on the ceded lands for a period of sixty days), and that each of said persons therein named is entitled to retain the tract of land heretofore selected by him within the limits of the tract of land therein described as containing his selection of his claim under the said section (or the said proviso); *Provided, however,* that any of such Indians named as above in said schedules "A" or "B" shall have the right, at any time within three years from the 1st day of July, A. D. 1892, to surrender his or her allotment or selection, or the right to make such allotment or selection, and select a new allotment within the limits of the retained reservation upon the same terms and conditions as were prescribed in selecting the first allotment.

*It is further provided,* That every Indian who shall surrender an allotment or selection within the time specified, having improvements upon it, shall have like improvements made for him upon the new allotment within said retained reservation.

Second. It is hereby stipulated and agreed that all the lands ceded by said agreement may be opened to settlement upon the approval of this agreement by proclamation of the President: *Provided,* That all lands within the ceded tract selected or set apart for the use of individual Indians, and described in the aforesaid schedules "A" and "B," shall be exempt from cession and shall remain a part of the Crow Indian Reservation, and shall continue under the ex-

\*For proclamation opening to settlement lands ceded by this agreement see page 732.

clusive control of the Interior Department until they shall have been surveyed and certificates or patents issued therefor, as provided in the agreement of December 8, 1890, or until relinquished or surrendered by the Indian or Indians claiming the same: *Provided further*, That such lands shall be described as set forth in said schedules "A" and "B," and shall be exempted from settlement in the proclamation of the President opening the ceded lands, and that where lands so set apart are not described by legal subdivisions then the township or section, or tract of land within whose limits such Indian selections are located, shall not be opened to settlement until the Indian allotments therein contained shall have been surveyed and proper evidence of title issued therefor: *Provided, however*, That whenever all of the Indians entitled to selections within the limits of a particular township or section or tract of land, described in said schedule "B," shall have relinquished the right to take selections therein, as above provided, then that particular township or section or tract of land shall be thrown open to settlement: *Provided further*, That whenever any of the Indians named in schedule "A" shall have relinquished the allotment therein described as belonging to him, the said allotment so relinquished shall be subject to settlement in the same manner as other lands upon the ceded part not exempted from this session.

Third. It is hereby stipulated and agreed that the sum of \$200,000 may be taken from the funds of \$552,000 set aside as an annuity fund by the eighth section of the agreement of December 8, 1890, and added to the fund of \$200,000 set apart by the first section of said agreement, to be expended under the direction of the Secretary of the Interior in the building of dams, canals, ditches, and laterals for purposes of irrigation in the valleys of Big Horn and Little Horn Rivers, and on Pryor Creek, and such other streams as the Secretary of the Interior may deem proper, and that not exceeding \$100,000 may be expended annually for such purpose: *Provided*, That in case that less than \$100,000 has been, or may be, expended for such purpose in any one year, the difference may, in the discretion of the Secretary of the Interior, be expended in any year or years thereafter in addition to the said sum of \$100,000: *Provided further*, That in the construction of such dams, canals, ditches, and laterals, no contract shall be awarded, or employment given, to other than Crow Indians or whites intermarried with them, except that any Indian employed in such construction may hire white men to work for him if he so desires: *Provided*, That nothing herein contained shall be construed to prevent the employment of such civil engineers or other skilled employés as may be necessary.

Fourth. It is hereby stipulated and agreed that the balance of the annuity fund provided for in section 8 of the agreement of December 8, 1890, remaining unexpended at the date of the approval of this agreement shall be placed in the Treasury of the United States to the credit of the Crow Indians, and bear interest at the rate of 5 per cent per annum, which interest, together with a sufficient portion of the principal to give each Indian an annual annuity of \$12, shall be paid to said Indians per capita in cash semiannually.

Fifth. It is hereby stipulated and agreed that all persons of mixed blood named in the said schedules "A" and "B" shall, if they so desire, have the privilege of receiving, instead of the annuities to which they may be entitled as members of the Crow tribe, the cash value thereof directly from the Secretary of the Interior.

Sixth. It is hereby stipulated and agreed that the Secretary of the Interior may, in his discretion, out of any moneys appropriated or set apart for the purpose of surveying allotments upon the Crow Indian Reservation, or the part thereof ceded by the treaty of December 8, 1890, pay to one Thomas H. Kent, of the State of Montana, the sum of money, not exceeding the sum of \$2,007.20, actually expended by the said Kent in causing to be made the survey known as the Bundoock survey, made at the solicitation of the said Kent and others by one Samuel Bundoock during the month of January, 1891, within the limits of townships 1 north and 1, 2, 3, 4, 5, and 6 south, of ranges 13 to 21 east, inclusive, in the State of Montana, a map or plat of which survey has been filed in the office of the Commissioner of Indian Affairs, and marked as follows: "11622. Indian Office. Inclos. No. 1892."

Seventh. It is hereby stipulated and agreed that in consideration of the relinquishment by the following-named Indians of their claim to selections on Stillwater and Fish Tail Creeks, each of said Indians shall be paid the sum of \$50 out of the fund provided for in the eleventh section of the agreement of December 8, 1890: The Woman, Bird comes from afar, The Sheep's Child, Pretty Woman, Mother's Baby, Black Bull, Falls Towards Her, Strikes Her Painted Face, and Charley Bravo.

Eighth. It is hereby stipulated and agreed that the Secretary of the Interior may, in his discretion, furnish to the Crow Indians the necessary wire and staples with which to fence the western boundary line of the Crow Indian Reservation, and deduct the cost of the same from any moneys received by said Indians from grazing leases on said reservation.

Ninth. The existing provisions of all former treaties and agreements, not inconsistent with this agreement, are hereby continued in force.

Tenth. This agreement shall take effect upon its approval by the Secretary of the Interior.

Done at Crow Agency, Mont., this 27th day of August, A. D. 1892.

## CONSTITUTION OF THE SENECA NATION.

(Adopted in 1862.)

[Copied from the original document by Harrison Halftown, late clerk of the Seneca Nation.]

SECTION I. Our government shall have a legislative, executive, and judiciary departments.

SEC. 2. The legislative powers shall be vested in a council of five members, who shall be termed the councilors of the Seneca Nation of Indians, of whom three councilors shall be elected annually for the Cattaraugus Reservation and two councilors shall be elected annually for the Allegany Reservation. Said councilors shall be elected annually on the first Tuesday of May in each year, two-thirds of whom, assembled in regular session and duly organized, shall constitute a quorum, and be competent for the transaction of business. But to all bills for the appropriation of public moneys the assent of two-thirds of all the members elected shall be necessary in order that the bill should become a law. The names of the councilors voting for or against any appropriation shall always be recorded.

SEC. 3. The executive powers shall be vested in a president, whose duty it shall be to preside at all meetings of the council, having only a casting vote therein, and to see that all laws are faithfully executed, and to communicate to the council at every session a statement of the condition of the national business, and to commend for the action of the council such matters as he may deem expedient. In the absence of the president the council may choose a president or presiding officer *pro tempore*.

SEC. 4. The judiciary power shall be vested in three peacemakers on each reservation (Cattaraugus and Allegany), any two of whom shall have powers to hold courts, subject to an appeal to a court of referees to be appointed by the council or to the council; in which latter case the appellant shall in the first instance pay all the expenses of the council for the time occupied during the progress of the proceedings in the examination or inquest and final decision of the case. The council shall in their final decision award the costs of such suit as in their judgment they shall seem proper and just. There shall be elected at the next general election on the first Tuesday in May, A. D. 1856, three peacemakers for each of the reservations (Cattaraugus and Allegany), of whom one shall serve for the term of three years and one shall serve for the term of one year. There shall be written or printed on each ballot at the said election the names of the candidates and the term such candidate shall serve.

At the general election in May, A. D. 1857, and annually thereafter, one peacemaker shall be elected for each reservation (Cattaraugus and Allegany) who shall hold their office for the term of three years.

The jurisdiction, forms of process, and proceedings in the peacemakers' court shall be the same as in the courts of the justices of the peace in the State of New York, except in the proof of wills and the settlement of deceased persons' estate, in which cases the peacemakers shall have such power as shall be conferred by law.

SEC. 5. The power of making treaties shall be vested in the council, but no treaty shall be valid or binding upon the nation until the same shall be submitted to the people and approved by three-fourths of all the legal voters and also by three-fourths of all the mothers in the nation in legal council assembled.

SEC. 6. There shall be a clerk and a treasurer for the nation and one overseer of the poor, and two assessors and one overseer of the highways for each reservation (Cattaraugus and Allegany), whose duties shall be regulated by laws.

SEC. 7. Every officer, who shall be authorized to receive public money, shall be required to give such security as the president and the attorney for the Seneca Nation of Indians shall approve.

SEC. 8. There shall be one marshal for each reservation (Cattaraugus and Allegany) who shall execute all processes issued by the courts, and do such other duties as shall be prescribed by law.

SEC. 9. All officers named in this constitution or charter, shall be chosen at the same time, in the same manner, and for the same term as members of the council; and vacancies occurring in any office shall be filled in the manner to be prescribed by law; and every male Indian of the age of 21 years and upwards of the Seneca Nation, either residing on one of the reservations, the Cattaraugus, Allegany, or Oil Spring, or owning or possessing and occupying any land upon either of

the reservations, who are of the Seneca Nation, and which lands may have been taxed for highway or other purposes, shall be entitled to vote at all elections.

SEC. 10. Any legal voter shall be eligible to any office named in this constitution, and all officers elect shall be inducted into office, and, if necessary, shall be impeached by the use of such forms and regulations as shall be prescribed by law.

SEC. 11. The compensation of members of the council shall be \$1 each per day, and they find themselves; but no member shall receive more than \$20 during any one year.

The compensation of all the officers shall be prescribed by law, but the salaries of the present officers shall not be diminished.

SEC. 12. The council shall meet annually on the first Tuesday of June, and extra sessions may be convened by the president at any time he shall think proper.

SEC. 13. The council shall have power to make any laws not inconsistent with the Constitution of the United States or of the State of New York.

SEC. 14. All offenses which shall not be punishable by the laws of the United States, or of the State of New York, shall be tried and punished in the peace-makers' courts, or before the council as shall be prescribed by law.

SEC. 15. The rights of any member of the ancient confederacy of the Iroquois to the occupancy of our lands, and other privileges shall be respected as heretofore, and the council shall pass laws regulating for the admission of any Indian of other tribes or nations to citizenship and adoption into the tribe of the Seneca Nation of Indians, by his or her application for himself or herself, or his or her family.

SEC. 16. The laws passed by the Legislature of the State of New York, for the protection and improvement of the Seneca Nation of Indians, and also all laws and regulations heretofore adopted by the legal council, shall continue in full force and effect as heretofore, until repealed or amended by the council; and except so far as they are inconsistent with the provisions of this constitution.

SEC. 17. The present officers of this nation shall hold their respective offices (unless removed by impeachment) until at the general election on the first Tuesday of May, A. D. 1862.

SEC. 18. The salary of the president and clerk shall be \$25 per year; and the salary of the treasurer shall be \$20 annually; and the salary of the marshal shall be 25 cents per day while in attendance of council.

SEC. 19. This constitution shall not be altered or amended in less than two years from and after the date of its adoption. After the expiration of the said term of two years the constitution may be altered or amended by a council of the people, convened for that purpose on three months' previous notice, by a vote of two-thirds of the legal voters present at such convention, but such notice calling a constitutional convention shall always be duly authorized by the council.

SEC. 20. This constitution shall be in full force from and including the 18th day of March, in the year of our Lord 1862, except as herein otherwise provided.

Done in convention, at the council house on the Cattaraugus Reservation, in the county of Erie and State of New York, and adopted and approved by the unanimous consent of the reservation represented, the 18th day of March, A. D. 1862.

In witness whereof we have hereunto subscribed our names.

#### AMENDED CONSTITUTION OF THE SENECA NATION OF INDIANS

[Made and adopted in convention assembled, duly called, and organized in accordance with the provisions of the constitution of said nation, convened at the council house at Coal Springs, on the Allegany Reservation, on the 22d day of October, A. D. 1868.]

We, the people of the Seneca Nation of Indians, residing at Cattaraugus, Allegany, and Oil Spring Reservations, in the State of New York, grateful to the Almighty God for our national preservation and freedom and mindful blessings heretofore by us enjoyed in order to perpetuate the same, do make and establish the following constitution:

SECTION 1. Our government shall have a legislative, executive, and judiciary department.

SEC. 2. The legislative power shall be vested in a council of sixteen members, who shall be called the councillors of the Seneca Nation of Indians, of whom

eight shall be elected annually for the Cattaraugus and eight for the Allegany Reservation : such annual election shall be had on first Tuesday of May, in each and every year, from and after the adoption of this constitution. Ten of whom, assembled in session, regularly organized, shall constitute a quorum for the transaction of business. In all appropriations of public moneys an affirmative vote of at least ten of whole number elected shall be necessary. It shall not be lawful for the council to make appropriation of public money exceeding the sum of \$500 in any one year other than what shall be necessary to discharge all debts and liabilities of the nation heretofore made and incurred, unless the required additional appropriation shall first have been submitted to the electors of the nation for their approval, to be determined for or against by a majority vote of the electors voting therein at a meeting called for that purpose by the clerk of the nation, by order of the president.

SEC. 3. The executive power shall be vested in a president, whose duty it shall be at all times to preside over the deliberations of the council, having only a casting vote therein, who shall from time to time give to the council information of the state of the nation and recommend to their consideration such measures as he shall judge necessary and expedient, not inconsistent with the true spirit and intent of the laws of the State of New York. He shall take care that the laws applicable to the nation be faithfully executed. He shall have power to fill all vacancies by appointment that may occur in the council by death, resignation, or impeachment of any of the members, until such vacancy shall be filled by election. In case of death or absence of the president, the council shall choose from among their number a presiding officer *pro tempore*.

SEC. 4. The judiciary power shall be vested in a court to be known by the name of peacemakers, to be composed of three members and to be two in number, one to be established upon the Cattaraugus and the other upon the Allegany Reservation. The members of each to be elected from residents of the respective reservation, on the first Tuesday of May, A. D. 1869. The whole number of peacemakers for each reservation shall be elected in a like manner, one for one year, one for two years, and one for three years, one for each reservation in each and every year thereafter. Term of office, three years.

The jurisdiction forms of process and proceedings, under the law applicable to this court, shall be the same as in courts of justice of the peace of the State of New York. Two peacemakers on each reservation shall have power to hold courts differing from courts of justice of the peace in possessing the further jurisdiction in the proving of wills, settlement of estates of deceased persons, questions, and other relating to real estate and of granting divorces heretofore conferred by the statute.

All determinations and decisions of this court shall be subject to appeal to the council, such appeal to be heard by at least a quorum of the council. All cases of appeal shall be decided by the council upon the evidence taken in peacemakers' court. In every case of appeal it shall be the duty of the peacemakers, before whom the action or proceeding was had, to certify the evidence in the case taken before them to the council.

The council shall then decide the case upon the evidence before them, and the decision of the council shall be final between the parties. Upon the hearing, either party at interest shall have the right to appear, either in person or by council, and argue the merits of the case. In every action in peacemakers' court either party at interest shall have the right of trial by jury, and every action shall be brought in the name of the real party at interest.

SEC. 5. The power of making treaties shall be vested in the council subject to the approval of at least three-fourths of the legal voters and the consent of three-fourths of the mothers of the nation.

SEC. 6. There shall be a clerk and treasurer for the nation, the rights, duties, and liabilities of such shall be as heretofore defined by statute.

SEC. 7. There shall be two marshals for the nation, one to reside on the Cattaraugus and one upon the Allegany Reservation, the rights, duties, and liabilities of each shall be as heretofore defined by statute.

SEC. 8. All officers of the nation above-named in this constitution, except peacemakers, shall be elected annually for one year. All officers of the nation named in this constitution for such cause as now recognized by may be impeached and removed from office in such manner and form as prescribed by law, for the impeachment and removal from office of the legislative, executive, judiciary, and other like officers of the State of New York.

SEC. 9. Every male Indian of the Seneca Nation of the age of 21 years and upwards, residing upon either of the reservations of the nation, and who shall not have been convicted of a felony, shall be competent to vote at all elections and

meetings of the electors of the nation, and shall be eligible to any office in the gift of the people of the nation.

SEC. 10. The compensations of all officers of the nation named in this constitution shall be such as prescribed by law, and the salaries shall not be enlarged or diminished during their term of office.

SEC. 11. The council shall meet annually on the first Tuesday of June in each year, and every year the president shall have power to convene the council in extra session as often as the interest of the nation in his judgment required.

SEC. 12. The council shall have power to make any laws not inconsistent with the Constitution of the United States, or of the State of New York, or of this constitution.

SEC. 13. The laws heretofore enacted by the Legislature of the State of New York for the protection and improvement of the Seneca Nation of Indians; also, all laws and regulations heretofore adopted by the council of the nation shall continue in full force and effect as heretofore until the statutes of the State of New York shall be repealed or amended by the Legislature thereof, or the laws and regulations heretofore adopted by the council shall be repealed or amended by the council of councillors to the extent and in the manner as the attorney of the nation shall deem lawful and proper.

SEC. 14. The present officers of the nation shall hold their office respectively until the 1st day of May (Tuesday), 1869, or until others are elected in their places, in accordance with the terms of this constitution and no longer, subject to be sooner removed by impeachment.

SEC. 15. The salary of the officers of the nation not heretofore defined by statutes shall be prescribed by the council of councillors.

SEC. 16. This constitution shall not be altered or amended within three years from the date of its adoption. At any time after the expiration of three years subsequent to its adoption it shall be lawful for the council when in session, in their discretion, by at least a quorum vote, to appoint a committee of three on revision of the constitution, one of whom shall be the attorney for the nation; the duty of the committee shall be on ten days' notice of their appointment to prepare amendments to the constitution such as in their judgment of the constitution shall be necessary and proper, and report the constitution as amended to the council, whereupon it shall be the duty of the council to submit the same to the electors of the nation for their approval or rejection to be determined by a majority of voters of the qualified electors at a meeting called by the council for that purpose on the Allegany and Cattaraugus Reservations, such to be held on the same day.

In case the amendments of the committee be rejected, no action shall be taken by the council of electors relative to amending this constitution within one year from the date of said meeting and rejection.

SEC. 17. This constitution shall be in force from and including the 22d day of October, A. D. 1868, except as herein provided.

Done in convention at the council house in Cold Spring, on the Allegany Reservation, in the county of Cattaraugus and State of New York, on the 22d day of October, in the year of our Lord 1868.

In witness whereof we have hereunto subscribed our names.

SAMUEL JIMESON,

*President of the Convention.*

HARRISON HALFTOWN,

*Secretary.*

## LEGAL STATUS OF INDIAN ALLOTTEES.

DEPARTMENT OF THE INTERIOR, -  
OFFICE OF INDIAN AFFAIRS,  
Washington, November 21, 1892.

ELIHU COLMAN, Esq.,  
U. S. Attorney, Fond du Lac, Wis.:

SIR: I have received your letter of November 9, 1892, stating that you are informed that patents have been issued under the allotment act of 1887 to Oneida Indians in Wisconsin, whereby they have become citizens of the United States; that it would seem to you, that although for some purposes they are under the authority of the Indian agent until the expiration of the twenty-five years, by becoming citizens and also by the provisions of the act they are subject and amenable to the laws of the State of Wisconsin, and therefore it can be no longer an offense to sell liquor to them and you have no right to prosecute for the same; and asking that you be advised as to the understanding of this office as to their condition during the twenty-five years until they receive their final patents, particularly with reference to section 2139 of the Revised Statutes of the United States.

You also ask that you be furnished with the views of this office as to the application of section 5388 to cases of timber trespass on Indian allotments.

In reply, I have to say that whether or not the Indians who have received allotments of lands in severalty under the act of February 8, 1887 (24 Stats., 388), as amended by the act of February 28, 1891 (26 Stats., 794), are still under the protection of section 2139 of the Revised Statutes, is a question which can, of course, only be authoritatively determined by the courts. I am of the opinion, however, that in the light of the decision of the Supreme Court in *United States v. Holliday* (3 Wall., 407), so long within the trust period as it may be deemed necessary by the Secretary of the Interior and the Commissioner of Indian Affairs for Indian allottees to remain under the charge of an Indian agent, the statute will apply to punish any one selling or giving them any intoxicating beverages.

The Attorney-General, in an opinion of January 26, 1889 (19 Opinions, 232), advised the Secretary of the Interior that—

“The Indians when organized as tribes, under the former policy of the Government, have been treated as domestic dependent nations under the guardianship of the United States. \* \* \* In this contemplated new mode of life the guardianship which heretofore has been exercised over the tribe is to be transferred to the individual allottees provided for in this act. The separate manhood of each Indian is to be recognized, but still subject for a time to the care and supervision of the Government as a trustee or guardian. The real estate falling to each allottee is not intended to be used during the period of guardianship for speculative purposes, but is so conditioned that in their period of wardship or tutelage the Indians shall not be subject to the danger of entering into an unequal competition with the whites in the field of traffic and general business outside of agriculture and grazing.”

In the case against *Holliday*, above quoted, the Indian to whom the intoxicating liquors had been given or sold was a citizen of the United States, having been made so by treaty which provided for the dissolution of his tribal relations. He was a voter in the State of Michigan; but the Secretary of the Interior and the Commissioner of Indian Affairs had decided that for certain purposes the tribal relations of these citizen Indians should be recognized, and an agent was appointed over them. In passing on the case the court held *inter alia* that—

“No State can by either its constitution or other legislation withdraw the Indians within its limits from the operation of the laws of Congress regulating trade with them; notwithstanding any right it may confer on such Indians as electors or citizens.”

It also held that—

“Whether any particular class of Indians are still to be regarded as a tribe, or have ceased to hold the tribal relation, is primarily a question for the political departments of the Government and if they have decided it this court will follow their lead.”

The Indian allottee remains for a time as shown above in a state of tutelage and wardship, and the Indian agent placed over him is continued for the purpose of executing the duties of the Government as his guardian. The fact that he is a citizen does not take him from under the operation of the laws of Congress made for his protection and benefit, and anyone who sells or gives him liquor is liable to punishment. The district court of the United States for Washington I believe, ruled contrary to this view in a case tried by it in the spring of 1890. I have not seen that decision and I do not believe that it has been published; but from the correspondence of the Indian agent on the subject, I believe the decision of the court was in error, because instead of following the decision of the political departments of the Government as to the condition of the Indians the court decided for itself how the particular class of Indians affected should be regarded, and holding that as they were citizens of the United States the action of Congress and the Executive in maintaining an agency over them was unauthorized, and that the Indians were not under an Indian agent within the meaning of the statute. This seems to me to be contrary to the rule laid down by the Supreme Court. The Indians affected by this decision below were those of Puyallup Agency, Washington.

In connection with this subject your attention is also invited to the opinion of Attorney-General Miller of March 12, 1890 (19 Opinions, 511), which has a most important bearing on the questions as to how the Indian allottees should be regarded and as to the duty of the Government to continue for a time its guardian care over them and their lands.

With regard to the application of section 5388 of the Revised Statutes to the unlawful cutting of timber on Indian allotments, I have to say that, as construed by the Attorney-General, the law clearly is that Indian allottees do not have the right to cut green merchantable timber on their allotments for the purpose of sale alone (19 Opinions, 232), but that—

“The cutting or destroying of timber on lands which have been patented to individual Indians is not an offense punishable under the act of June 4, 1888, chapter 340, amendatory of section 5388, Revised Statutes.” (*Ibid*, 183.)

Depredations committed upon timber on allotments can, it seems, only be sued for by the United States as trustee of the allottee.

Very respectfully,

T. J. MORGAN,  
Commissioner.

#### DECISION OF SUPREME COURT OF MICHIGAN REGARDING TAXATION OF CERTAIN INDIANS.

[Supreme court. The auditor-general, petitioner and appellant, vs. Sarah Williams, defendant. Filed December 22, 1892.]

DURAND, J.

The petition was filed in this case by the auditor-general under section 52 of act No. 195 of the session laws of 1889, praying for a decree in favor of the State of Michigan against certain lands in Isabella County for the taxes of 1889, among which lands are those of the defendant, being the southwest quarter of the southeast quarter of section 24, in township 15 north, range 4 west.

The defendant, who is an Indian woman of the Chippewas of the Saginaw, Swan Creek, and Black River Indians, filed her objections to the tax, claiming that her land was not taxable for the reason that it was patented to her on February 9, 1885, under and by virtue of the treaties of August 2, 1855, and October 18, 1864, between the United States and the Chippewas of Saginaw, Swan Creek and Black River, in which she was denominated as a “not so competent,” and which contained a clause that the land shall never be sold or alienated to any person or persons whomsoever, without the consent of the Secretary of the Interior for the time being. It is admitted that she is the patentee, under such patent, and that the Secretary has not removed the disability of “not so competent,” mentioned therein; that he has not authorized the alienation of the land; that she has not applied to him for the removal of such disability, and that this land is a part of the lands set apart by the United States for the Indians, under the treaties referred to.

The treaty of October 18, 1864, among other things contains the following: “So soon as practicable after the ratification of this treaty, the agent for the said Indians shall make out a list of all those persons who have heretofore made selections of lands under the treaty of August 2, 1855, aforesaid, and of those

who may be entitled to selections under the provisions of this treaty, and he shall divide the persons enumerated in said list into two classes, viz: 'competent' and 'those not so competent.' Those who are intelligent and have sufficient education and are qualified by business habits to prudently manage their affairs, shall be set down as 'competents,' and those who are uneducated or unqualified in other respects to prudently manage their affairs, or who are of idle, wandering, or dissolute habits, and all orphans, shall be set down as 'those not competent.' The United States agrees to issue patents to all persons entitled to selections under this treaty as follows, viz: To those belonging to the class denominated 'competents' patents shall be issued in fee simple, but to those belonging to the class, 'those not so competent,' the patent shall contain a provision that the land shall never be sold or alienated to any person or persons whomsoever without the consent of the Secretary of the Interior for the time being."

The act of Congress of July 17, 1787, entitled an ordinance for the government of the territory of the United States northwest of the river Ohio, provides that the States which may afterwards be formed therein "shall never interfere with the primary disposal of the soil by the United States in Congress assembled, nor with any regulations Congress may find necessary for securing the title in such soil to the bona fide purchasers thereof, and no tax shall be imposed on land the property of the United States."

This clause of the ordinance of 1787 was retained and embodied in the fifth proposition of the act of Congress of June 15, 1836, providing for the admission of the State of Michigan into the Union, and one of the conditions imposed by this portion of the act was "that the legislature of the said State, by virtue of the powers conferred upon it by the convention which framed the constitution of the said State, shall provide by an ordinance irrevocable without the consent of the United States, that the said State shall never interfere with the primary disposition of the soil within the same by the United States, nor with any regulations Congress may find necessary for securing the title in such soil to the bona fide purchasers thereof, and that no tax shall be imposed on land the property of the United States."

The assent to these propositions by the legislature of Michigan was given in an act passed by it and approved July 25, 1836, an excerpt from which reads as follows:

"For the purpose of complying with the conditions of the proviso to the fifth proposition contained in the above-recited act, and by virtue of the powers conferred upon the said legislature of said State by the convention aforesaid, the following ordinance is declared to be irrevocable without the consent of the United States:

*"Be it ordained by the senate and house of representatives of the State of Michigan, That the said State shall never interfere with the primary disposal of the soil within the same by the United States, nor with any regulations Congress may find necessary for securing the title in such soil to the bona fide purchasers thereof and that no tax shall be imposed on land the property of the United States."*

This compact thus solemnly entered into between the United States and the State of Michigan, after much discussion and after important concessions made upon both sides, must be recognized as of the very highest character, and a full and honest compliance with the spirit as well as the letter of its terms is demanded. So far as we have been able to discover, this State has never by legislative action attempted to ignore any portion of the obligations imposed by the clause referred to, nor to put a narrow or illiberal construction upon it; and so far as taxation is concerned, it has by express enactment, exempted all public property of the United States from State taxation.

In view of the several acts and ordinances referred to, it will be conceded that at the time the complainant obtained her patent, the land mentioned in it was not subject to State taxation, and the question now presented is whether the United States by that instrument disposed of all its control and interest in the land to the patentee, or whether the condition against alienation is such a regulation as the State has a right to ignore or interfere with, when the scope and effect of the above-mentioned compact is given consideration.

If so, there can be no doubt of the right of the State to impose taxes upon it, but if on the other hand, the restriction against alienation contained in the patent is in pursuance of a regulation which the Government had authority to make in the exercise of its watchful care for the Indian to whom the conveyance was made then the land would not be amenable to taxation, for the reason that the State, by the legislation quoted, is bound never to interfere with the primary disposition of the soil within the same by the United States, nor with any

regulation necessary for securing the title in such soil to the bona fida purchasers thereof. That the restriction against alienation contained in the patent is reasonable, and one which the Government had a right to reserve when making a primary disposition of the land to the Indian of the class known as "those not so competent," we have no doubt. And it may well be inferred that this right was understood by the high contracting parties to the compact, relating to the admission of Michigan to the Union to have been inherent in the United States, and one which States subsequently established within the limits of the Northwest Territory would be bound in honor to maintain, for it is provided in article 3 of the ordinance of 1787, that "The utmost good faith shall always be observed toward the Indians; their lands and property shall never be taken from them without their consent; and in their property rights and liberty they shall never be invaded or disturbed unless in just and lawful wars, authorized by Congress, but laws founded in justice and humanity shall from time to time be made for preventing wrongs being done them."

In the case of *Goodell vs. Jackson* (20 Johns, 715) Chancellor Kent says that in the early days of the Republic the Government watched with great anxiety over the property of the Indians intrusted to its care, whether owned by tribes, or families, or individuals. If it was Indian property in land it had a right to protection from us against our own people. And the Supreme Court of the United States, in *United States vs. Kagama* (118 U. S., 375), asserted, as they have practically done in many other cases, that the Indians are wards of the nation and under the paternal superintendence of the Government.

It was in the faithful observance of this duty that the Government made a distinction between the Indians, denominating some as "competent," and others as "those not so competent," and in order to protect the latter class from their own folly, inexperience and weakness, as well as to guard them against the schemes of designing men, it placed a restriction against the alienation of the interest in the land conveyed by the patent.

It is contended that while this restriction is a proper exercise of power for the protection of the helpless class in whose behalf it is exercised, and that while it is effectual to prevent the patentee from making a disposition of the land unless authorized by the Secretary of the Interior to do so, yet that the alienation can be accomplished through the machinery of State taxation. If this is so, the whole purpose and object of the restriction will count for nothing, for by neglecting to pay the tax assessed against the land, either through his own lack of capacity to comprehend that his land may be taken away from him by a tax sale if he does not pay, or because he may be advised by interested parties not to pay them, so that the same result may be accomplished, the alienation which the Government, by the restriction placed in the patent, has sought to avoid, is as certainly affected as though made by a deed given by the Indian under his own hand, and he would thus be able to perform by indirection that which he could not directly do.

The case of *Pennock vs. Commissioners* (103 U. S., 44) is unlike this, for the reason that in that case there was no restriction against alienation, and although the patentee was an Indian and kept up her relation with the confederate tribes of the Sacs and Foxes, of which she was a member, the court held that inasmuch as her title was absolute the land was subject to taxation under the laws of Kansas, and in rendering the opinion Mr. Justice Field says that under her patent she took "Not an imperfect title to be held under the guardianship of the Secretary of the Interior, to be disposed of only to the United States under regulations to be prescribed by him, but a title carrying with it absolute ownership with a right of free disposition at her will," and it was therefore held that under those circumstances her property had come under the control of the State, and subject to its laws entitled to its protection, and bound to bear a portion of its burdens.

For the reasons stated the same rule could not apply as was applied in the case of the Kansas Indians reported in 5 Wall., 737, where it was held that the State of Kansas has no right to tax land held in severalty by individual Indians of the Shawnee, Wea, and Miami tribes under patents issued to them by virtue of treaties made by those tribes respectively in 1854. The tribal organization of these tribes had to a certain extent been broken in upon by intercourse with the whites, in the midst of whom the Indians were, and by their enjoyment to some extent of the social and other advantages of the white people.

The patents issued in severalty to individual members of the Shawnee and Wea tribes, like the one in this case, contained a restriction against alienation unless with the consent of the Secretary of the Interior, and those issued to the Miamis also contained the same restriction, and in addition a provision exempting the lands from levy, sale, execution, and forfeiture. Although the facts

were somewhat different in each case because the treaties with these tribes were not all alike, yet Mr. Justice Davis held that in all three cases the land was exempt from State taxation. In doing so he says:

"It is insisted as the guaranties of the treaty of 1831 are not in express words reaffirmed in the treaty of 1854 they are therefore abrogated, and that the division of the Indian Territory into separate estates so changes the status of the Indians that the property of those who hold in severalty is liable to State taxation. It is conceded that those who hold in common can not be taxed. If such are the effects of this treaty they were evidently not in the contemplation of one of the parties to it, and it could never have been intended by the Government to make a distinction in favor of the Indians who held in common, and against those who held in severalty."

Enlarged rules of construction are adopted in reference to Indian treaties, and in speaking of these rules Chief Justice Marshall says: "The language used in treaties with the Indians shall never be construed to their prejudice, if the words made use of are susceptible of a more extended meaning than their plain import, as connected with the tenor of their treaty." (6 Peters, 582.)

While the circumstances are somewhat different in each case, yet a careful reading of the cases referred to will show that the courts have been zealous in sustaining the efforts put forth by the Government to prevent its "noncompetent" Indian wards from being deprived of the land granted to them in severalty, either through their own volition, through process of law, or by State taxation. While the question of whether or not the existence of a tribal organization is of importance was discussed in the case of the Kansas Indians, *supra*, yet we do not consider that, in any sense a controlling question here, and if it were so it may well be held that, in reference to the subject now being considered, that condition exists so far as this Indian defendant is concerned, for by the sixth article of the treaty of 1855, referred to, the tribal organization of the Indians is retained so far as may be necessary to give effect to the provisions of that treaty. It is not necessary to determine here the exact extent of the title conveyed by this patent, nor what the rights of those who may inherit it from the patentee may be at some time hereafter, nor whether or not this class of Indians are citizens of the State with the right to exercise the elective franchise. All these are questions outside of what we deem to be material to an adjudication of the rights of this parties in this case.

It is only necessary to say that under this patent from the United States the patentee has a right to the use, occupancy, and enjoyment of the land, but has not the right to alienate it either by direct or indirect means. The power to alienate is suspended, and the Government has reserved the right to say when and how an alienation may be effected. This is one of the rights the Government has authority to insist upon when in the exercise of a humane guardianship and watchful care of "noncompetent" Indians it prohibits the alienation of the land conveyed to that class in severalty; and having done so, it has a right to insist that such alienation shall not be brought about by the execution of State tax laws.

A concession of the right to affect an alienation in the manner contended for would, as we conceive it, be in direct violation of the ordinance of the legislature of this State of July 25, 1836, which contains an agreement that this State shall never interfere with the primary disposal of the soil within the same by the United States, nor with any regulations Congress may find necessary for securing the title in such soil to the bona fide purchasers thereof, and that no tax shall be imposed on land the property of the United States, and which provision, by the same act, is declared to be irrevocable without the consent of the United States.

We agree with the learned circuit judge that the land in question was not subject to taxation at the time of its assessment in 1889. It follows that the decree made by him must be affirmed.

The other justices concurred.

IN THE SUPREME COURT, CLERK'S OFFICE.

STATE OF MICHIGAN, ss:

I, Charles C. Hopkins, clerk of the supreme court of the State of Michigan, do hereby certify that the annexed is a true and correct copy of the opinion of the court this day filed in said court in said cause; that I have compared the same with the original, and that it is a true transcript therefrom, and the whole of said original.

In testimony whereof, I have hereunto set my hand and affixed the seal of said supreme court, at Lansing, this 22nd day of December, A. D. 1892.

[SEAL.]

CHAS. C. HOPKINS, Clerk.

## TRUST FUNDS AND TRUST LANDS.

The following statements show the transactions in the Indian trust funds and trust lands during the year ending October 31, 1892.

Statements A, B, C, D, and E show in detail the various stocks, funds in the Treasury to the credit of various tribes, and collections of interest. A statement is also given showing the condition of nominal State stocks enumerated in Table C.

A statement is given of all the interest collected, and a statement of interest appropriated by Congress on nonpaying State stocks for the fiscal year ending June 30, 1892.

A statement also will be found showing the transactions arising on account of moneys derived from the sales of Indian lands, all being sufficiently in detail to enable a proper understanding of the subject.

A.—List of names of Indian tribes for whom stock is held in trust by the Secretary of the Interior (Treasurer of the United States custodian), showing the amount standing to the credit of each tribe, the annual interest, the date of the treaty or law under which the investment was made, and the amount of abstracted bonds for which Congress has made no appropriation, and the annual interest on the same.

Tribe.	Treaty or act.	Statutes at Large.		Amount of stock.	Annual interest.	Amount of abstracted bonds.	Annual interest.
		Vol.	Page.

† Act of February 16, 1891.

EXECUTIVE ORDERS RELATING TO INDIAN RESERVATIONS FROM  
OCTOBER 17, 1891, TO NOVEMBER 28, 1892.

## NAVAJO RESERVATION, ARIZ.

EXECUTIVE MANSION, *Washington, D. C., November 19, 1892.*

It is hereby ordered that the Executive order of May 17, 1884, by President Chester A. Arthur, withdrawing from sale and settlement and setting apart as a reservation for Indian purposes certain lands in the Territories of Utah and Arizona, be, and the same hereby is, modified so that all the lands described in said order which lie west of the 110th degree of west longitude and within the Territory of Utah be, and the same hereby are, restored to the public domain, freed from the reservation made by said order.

BENJ. HARRISON.

## RED LAKE RESERVATION, MINN.

EXECUTIVE MANSION, *November 21, 1892.*

It is hereby ordered that the following tracts of land in the State of Minnesota, viz: Fractional section 33 in township 152 north of range 32 west, and fractional sections 4, 9, 16, 17, 19, and 20, and section 21 in township 151 north of range 32 west, be, and the same are hereby, reserved from entry and sale as public lands and added to the Red Lake Indian Reservation, as a part of the same for the use and benefit of the Indians thereof, with like tenure as the other lands now included within the reservation according to the terms of the agreement negotiated with said Indians by the Chippewa Commission in accordance with the provisions of the act of Congress approved January 14, 1889 (25 Stats., 642), which agreement was approved by the President March 4, 1890.

BENJ. HARRISON.

## FORT BERTHOLD RESERVATION, N. DAK.

EXECUTIVE MANSION, *June 17, 1892.*

It is hereby ordered that the following-described lands, situated and lying in the State of North Dakota, namely, all that portion of township 147 north, range 87 west, lying north of the Missouri River, in the State of North Dakota, not included within the Fort Stevenson military reservation, said State, be, and the same is hereby, withdrawn from sale and settlement, and added to the Fort Berthold Indian Reservation: *Provided, however,* That any tract or tracts, if any, the title to which has passed out of the United States, or to which valid legal rights have attached under the existing laws of the United States providing for the disposition of the public domain, are hereby excepted and excluded from the addition hereby made to the said Fort Berthold Indian Reservation.

BENJ. HARRISON.

## YAKAMA RESERVATION (FISHERY), WASH.

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,  
*Washington, November 21, 1892.*

SIR: On the 19th of July last, Jay Lynch, agent for the Yakama Indians, called attention to the tenth article of the treaty of June 9, 1855 (12 Stats., p. 954), which provides—

That there is also reserved and set apart from the lands ceded by this treaty for the use and benefit of the aforesaid confederated tribes and bands, a tract of land not exceeding in quantity one township of 36 miles square, situated at the forks of the Pisuquouse, or Wenatshapam River, and known as the "Wenatshapam fishery," which said reservation shall be surveyed and marked out whenever the President may direct, and be subject to the same provisions and restrictions as other Indian reservations—

and asked whether or not said tract of land had ever been surveyed and definitely located and marked out as therein provided.

The records of this office failed to disclose any information of such a survey or even the location of said tract, and from inquiry made of the Yakama Indians through Agent Lynch, respecting its status, it was evident that they had no knowledge of any action ever having been taken to definitely locate the said tract. Report was therefore made to the Department on the 27th of August last of the facts herein stated, and a request was made that authority be given Agent Lynch to visit the locality of said "fishery," supposed to be some 75 to 100 miles distant from the agency, and to locate said tract of land by metes and bounds or by natural objects, taking care not to interfere with the vested rights of any settlers or other parties that might be located thereon.

This authority and request being granted on the 29th of August, Agent Lynch was instructed on the 8th of September to visit said fishery, reserved and set apart by said treaty for the use of said Indians, and to fix and determine, as best he could, the boundaries of said tract of land by metes and bounds or by natural objects, that it might be surveyed and marked out, under directions of the President, as the treaty stipulated, and to submit an estimate of the probable cost to have such tract of land as he might designate properly marked out and surveyed. Agent Lynch was furnished the latest edition of the map of Washington issued by the General Land Office for his guidance in determining the location.

On the 24th of October last he submitted his report under said instructions, giving a description of the tract and of its proposed boundaries, with a plat thereof, and a letter from the surveyor-general of Washington, who stated the rates of survey in that State, which are herewith submitted.

In this report he estimated the distance from the agency to the fishery to be 150 miles by the nearest route, and that Lake Wenatchee, as now called, was 50 miles from the mouth of the Wenatchee River, and that the lake was really only "a widening out" of the river for the space of two or three miles in the valley, which was surrounded by mountains. He reported that there are two large creeks flowing into the river just below the lake, which he was of the opinion were forks of the river referred to in the treaty and known as the "fishery," although the map sent represented the "forks of the river" as *above* the lake, which he states is incorrect.

The tract recommended by the agent as the land to be set apart, is, I think, substantially the reservation provided for in the treaty, and is heavily timbered and in a mountain district and not agricultural in any sense of the word. This tract is only valuable, he states, for its timber and fishery privileges, and includes the lower end of the lake and both sides of the river for a distance of 10 miles below the lake, with the river as near the center thereof as practicable to make it so, and is described (the description given by the agent being somewhat different) as follows:

Commencing at a point on the right bank or west shore of Lake Wenatchee,  $\frac{1}{2}$  miles by the shore line from the right bank of the river Wenatchee, where it leaves (not enters) the lake, thence in a southwesterly direction to a point  $\frac{1}{4}$  miles due southwest from the mouth of the river, thence southeasterly, parallel to the general course of the river, 10 miles, thence in a northeasterly direction, and across said river 3 miles, thence in a northwesterly direction, parallel to the general course of the river to the lake, thence in a direct line across the lake to the place of beginning, provided the area does not exceed the quantity of 6 miles square, limited by the treaty.

Inasmuch as this provision of the treaty has remained unfulfilled over thirty-three years since the proclamation of the treaty, April 18, 1859, and the country is being rapidly settled and the Great Northern Railroad is extending its system in that direction, I have the honor to recommend that the matter be laid before the President for direction to have the survey of the tract of land reserved and set apart by the tenth article of the Yakima treaty of June 9, 1855, made and marked out at the earliest practicable period, and that the Commissioner of the General Land Office be directed to instruct the surveyor-general of Washington to make said survey under the supervision of the Indian agent in accordance with the suggestions herein contained, and the expenses thereof be paid out of the appropriation for "survey of Indian reservations for 1893."

The surveyor-general, in his letter to Agent Lynch, gives the rate for standard and meander lines not exceeding \$9 per mile; but for the survey of lands heavily timbered, mountainous, or covered with dense undergrowth there may be allowed, with the approval of the Secretary of the Interior, a rate not exceeding \$25 per linear mile. The agent in submitting his estimate fixes the rate at \$18 and the distance 30 miles, making the estimate of the cost in the aggregate \$540. I therefore recommend that in directing the surveyor-gen-

eral to make the survey that the expense be limited to the sum of \$540, or so much thereof as may be necessary.

It is not intended that the description herein given shall be followed strictly in making the survey, but that it should be considered in connection with the language of the treaty. The surveyor-general should be allowed, if necessary, to make such divergence from the outboundaries herein described as, in his judgment, the topography of the land may demand, provided that the lines surveyed and marked out when completed should embrace the whole of the land contemplated to be set apart by the treaty, and approximately near the area named therein.

Very respectfully, your obedient servant,

T. J. MORGAN,  
*Commissioner.*

Hon. SECRETARY OF THE INTERIOR.

DEPARTMENT OF THE INTERIOR,  
*Washington, November 26, 1892.*

**The PRESIDENT:**

The treaty of June 9, 1855 (12 Stats., 954), provides for a reservation of a tract of land not exceeding in quantity one township of 6 miles square for the Yakima Indians in the then Territory of Washington, to be known as the "Wenatshapam fishery," which "said reservation shall be surveyed and marked out whenever the President may direct, and be subject to the same provisions and restrictions as other Indian reservations."

The attention of the Indian Office was called to this provision in July last by the Yakima agent, and he was directed by the Commissioner to visit the locality of the said "fishery," and to locate said tract by metes and bounds, taking care not to interfere with the vested rights of any settlers or other parties that might be located thereon.

On October 24 he submitted his report herewith, in which he gives a description of the lands to be surveyed and marked, and states that said lands are heavily timbered and in a mountain district, and only valuable for the timber and fishery privileges.

The Commissioner of Indian Affairs states that this country is being rapidly settled, and the Great Northern Railroad is extending its system in that direction, and recommends said lands be surveyed for the purpose named in said treaty.

Concurring in the recommendation of the Commissioner, I have the honor to request that the Commissioner of the General Land Office be authorized to instruct the surveyor-general of Washington to make said survey under the supervision of the Yakima agent, and in accordance with his suggestions, allowing him, however, to make such divergence from the outboundaries described in the Commissioner's letter as in his judgment the topography of the land may demand, provided that the lines surveyed and marked out, when completed, shall embrace the whole of the land contemplated to be set apart by the treaty and approximately near the area named therein, and that your authority be indorsed hereon.

I have the honor to be, very respectfully, your obedient servant,

JOHN W. NOBLE,  
*Secretary.*

EXECUTIVE MANSION,  
*November 28, 1892.*

Approved:

## INDIAN SCHOOL SITES.

## FORT MOJAVE, ARIZ.

The military post of Camp Mojave was established in 1858, and is situated on a mesa on the left bank of the Colorado River, near the head of Mojave Valley, about 60 feet above the water, in latitude  $35^{\circ} 0' 24''$  longitude  $114^{\circ} 34' 40''$ , approximately, west of Greenwich. (See War Department descriptive list of military posts, 1872, p. 76.)

By proclamation of the President, March 30, 1870, there were attached to the post two reservations, one known as the military reservation and described as follows:

Commencing at the center of parade at Fort Mojave: thence N.  $83^{\circ} 31' 37''$  E. 69.99 chains to station I; thence S.  $33^{\circ} 8' 28''$  W. 240 chains to station II; thence N.  $56^{\circ} 51' 32''$  W. 232.60 chains to station III; thence N.  $33^{\circ} 8' 29''$  E. 240 chains to station IV; thence S.  $56^{\circ} 51' 32''$  E. 232.60 chains to station I, containing 5,582 acres;

the other known as the "hay and wood" reservation, and described as follows:

Commencing at the center of parade at Fort Mojave, thence S.  $10^{\circ} 43' 41''$  E. 347.52 chains to station I; thence S.  $1^{\circ} 4' 28''$  W. 272.50 chains to station II; thence S.  $76^{\circ} 17' 28''$  W. 228.50 chains to station III; thence N.  $23^{\circ} 1' 32''$  W. 302.70 chains to station IV; thence S.  $88^{\circ} 45' 32''$  E. 369 chains to station I, containing 9,114.81 acres,

making the total area 14,696.81 acres. About one-half of each of these tracts of land is tillable; all is suitable for grazing, and about half of the "hay and wood" reservation is valuable for timber. The bottom land, about three-fourths of the entire area, is exceedingly fertile and covered with mesquite and cottonwood. The Colorado River passes through the military reserve, and forms the west boundary of the hay reserve, about 1 mile distant.

This post and its buildings and reservations were transferred by the War Department to the Interior Department for Indian school purposes, May 2, 1890, and August 22, 1890, were formally turned over to S. M. McCowan, superintendent of the Indian school established there.

## KEAM'S CAÑON, ARIZ.

The Indian appropriation act of March 2, 1889, appropriated \$10,000, as follows:

To purchase for Indian industrial school purposes the buildings and other improvements in what is known as Keam's Cañon, within the reservation in the Territory of Arizona, established for the use and occupancy of the Moquis and other Indians by Executive order dated December 16, 1882. \* \* \* provided, that, upon payment therefor, the owner of said buildings and other improvements shall execute and deliver to the Secretary of the Interior a full relinquishment of all his right, title, and interest in and to any and all buildings and other improvements of whatsoever character owned by him within the limits of said reservation. (25 Stats., 1001.)

July 13, 1889, Mr. Thomas V. Keam quitclaimed unto the Secretary of the Interior, for the use of the Government of the United States and its assigns, "all that particular tract of land known and described as Keam's Cañon, within the Moqui Reservation, in Arizona, with all and singular the hereditaments and appurtenances thereunto belonging or in anywise appertaining, and all the estate, right, interest, claim, or demand therein," the consideration being \$10,000. This deed is recorded in Miscellaneous Indian Deed Record of the Indian Bureau, vol. 7, p. 87.

## PHOENIX, ARIZ.

An attempt was made in the fall of 1890 to establish an Indian industrial school for Arizona at Fort McDowell, but the place was found to be so unsuitable for such purposes that the undertaking was abandoned and effort made to establish the school in the vicinity of Phoenix, Ariz. A vacant hotel building there was rented for the temporary use of the school and the citizens of Phoenix bound themselves to donate a school site of not less than 80 acres within 3 miles of the town.

By the Indian appropriation act approved March 3, 1891 (26 Stats., p. 1013), Congress made an appropriation for the purchase of land or improvements not to exceed \$6,000. Under instructions from the Indian office, Superintendent Wellington Rich examined many sites offered, and on the 11th of April, 1891, he forwarded a deed from Frank C. Hatch, with water rights No. 52 and 53, in Grand Canal; also abstract of title, etc., for the SE.  $\frac{1}{4}$  of sec. 20, T. 2 N., R. 3 E., Gila and Salt River meridian, Arizona, offered for \$9,000. The deed was approved by the Attorney-General May 9, 1891, and the tract was purchased, \$6,000 being paid by the Government and the other \$3,000 being contributed by the citizens of Phoenix, Ariz. The deed was retorded in Maricopa County on the 16th of August, 1891. This tract of 160 acres is about 3 miles north of the town of Phoenix, is supplied with water from the Grand Canal, and is considered to be worth \$12,000.

## PERRIS, CAL.

The Indian appropriation act of March 3, 1891, appropriated \$25,000 for the erection of buildings for an industrial school for the Mission Indians near the village of Perris, in California, upon a tract of land of not less than 80 acres, to be donated for that purpose (26 Stats., p. 1012).

December 19, 1890, Agent Rust forwarded a deed from J. W. Nance to the United States for 80 acres of land, in San Diego County, viz, N.  $\frac{1}{4}$  of SW.  $\frac{1}{4}$  of sec. 28, T. 4 S., R. 3 W., S. B. M., and legal agreements as to water rights, etc., with abstract of title, water certificates, and diagram of land, the same having been donated to the Government by Mr. Nance for the proposed Indian school.

April 18, 1891, Mr. Nance offered a new site for the school from lands of the Perris Land Company, in block 17 of the "Riverside tract," being a subdivision of lot 11, of Rancho San Jacinto Nuevo, Cal., in the Perris irrigation district, San Diego County, Cal., as surveyed April, 1891. This exchange of site was approved by Agent Rust April 20, 1891, and June 2 Mr. Achilles Martin submitted a deed, executed May 29, 1891, by the Perris Land Company, by I. S. Castleman, president, conveying to the United States all of lots 1, 2, 3, 4, 5, 6, 7, and 8, in said block 17, containing 80 acres of land; consideration, \$4,000. June 10, he forwarded certificate of title to said block 17.

On the 1st of September Mr. Martin was advised that under section 355 of the Revised Statutes no public money could be expended upon any site or land purchased by the United States for the purpose of erecting any public building thereon until the written opinion of the Attorney-General was had in favor of the validity of the title to the land, nor until the consent of the legislature of the State in which the land might be situated had been given to such purchase. At the same time deed for block 17, as well as the Nance deed, were returned to him.

October 27 Mr. Martin filed a copy of the law giving the consent of the legislature of California to the acquirement of the land by the United States, and on the 4th of November he filed a new deed of that date for lots 1, 2, 3, 4, 5, 6, 7, and 8, in block 17, and on the 7th of December he forwarded the abstract of title and diagram of block 17.

The validity of title was approved by the Department of Justice February 10, 1892, and the deed was recorded in San Diego County, Cal., March 4, 1892.

## FORT LEWIS, COLO.

By Executive order of January 27, 1892, the following tracts of land were temporarily withdrawn from settlement and declared to be the military reservation of Fort Lewis, viz:

Sections 12, 13, 14, 15, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, and 35, in T. 35 N., R. 11 W.; sections 7, 8, 9, 10, 15, 17, 18, 19, 20, 21, 22, 27, 28, 29, 30, 31, 32, 33, and 34, in T. 35 N., R. 10 W.; also a strip of unsurveyed land lying contiguous to and north of the northern boundary line of the Southern Ute Indian Reservation.

By General Order No. 5, issued February 8, 1892, the boundaries of the Fort Lewis Reservation were announced as follows, viz:

Beginning as an initial point at a post marked "O. M., U. S. M. R." on the northern boundary of the Southern Ute Indian Reservation 9,269 feet due south from the southwest corner of section 35, township 35 north, range 11 west of the New Mexico principal meridian, thence S. 88° 20' W. along the said Ute line 4 miles, thence due north 5 miles, thence due east 5 miles, thence due north 1 mile, thence due east 5 miles, thence due south 5 miles and 3,766 feet to said Ute line, thence S. 88° 25' W. along said Ute line 3 miles, thence S. 88° 20' W. along said Ute line 3 miles to the initial point, excepting therefrom all school sections and parts of same, and all lands and parts of same now filed or entered, the titles to which have been, or may be, perfected by the present claimants, their heirs or assigns. All bearings are from the true meridian.

Area within extreme lines .....	square miles..	53.6
Area of excepted claims about .....	do.....	6.2

Remaining area of reservation.....	47.4
------------------------------------	------

The State of Colorado ceded jurisdiction to the United States by act approved March 28, 1885, with restriction as to civil and criminal process.

On recommendation of the Indian office, and request of the Secretary of the Interior dated October 28, 1891, this military post of Fort Lewis, Colo., then unoccupied with its buildings and appurtenances, was turned over to the custody and control of the Secretary of the Interior for Indian school purposes so long as it should not be required for military occupation. (See General Order No. 89, issued November 12, 1891.)

## FORT HALL, IDAHO.

The Fort Hall military post, established in 1870, is situated in latitude 45°, longitude 112°, township 3 north, range 38 east (see War Department descrip-

tive list of military posts, 1872, page 101), and is within the bounds of the Fort Hall Indian Reservation. The military reservation was proclaimed by Executive order of October 12, 1870, and consists of all the land lying within and bounded by the following lines, viz:

Beginning at a point 600 feet due east of the garrison flagstaff, marked by a red cedar post, thence S. 21° 15' W. (magnetic bearing) 3,000 feet; thence (at an angle of 90°) N. 68° 45' W. 1,200 feet; thence (angle 20°) N. 48° 45' 4,000 feet; thence (angle 30°) N. 18° 45' W. 1,200 feet; thence (angle 17°) N. 35° 45' W. 2,300 feet; thence (angle 13° 30') N. 22° 15' W. 4,800 feet; thence (angle 80° 32') N. 77° 13' E. 2,550 feet; thence (angle 90° 47') S. 13° 24' E. 2,700 feet; thence (angle 8° 45') S. 22° 19' E. 1,800 feet; thence (angle 10° 28') S. 32° 45' E. 3,200 feet; thence (angle 36°) S. 68° 45' E. 3,400 feet to point of beginning, and making with first corner an angle of 90°, and containing 646.50 acres of land.

Variation of needle. about 16° 45' east.

It was originally ordered to be located outside of any Indian reservation, but no such available place being found, after careful examination, the Secretary of War, on the 26th of September, 1870, requested that he be informed if, under the necessities of the case, there was any objection to the proposed establishment of the military reserve within the Fort Hall reserve; and reply was made that there was no serious objection thereto on the part of the Indian Office.

April 26, 1883, the military reservation and its buildings were turned over by the War Department to the Interior Department for Indian school purposes, and in the following fall the school in operation at the Fort Hall Agency was removed thither.

It is in a little valley lying nearly north and south, locally known as Lincoln Valley, which is about 5 miles in length by a half mile in width, well sheltered by hills. It is 15 miles east of Blackfoot Crossing, and 15 miles east by north of Fort Hall Agency. With the exception of the agency, this valley includes all the good soil for cultivation or pasturage within a distance of 40 miles. Lincoln Creek, flowing through it, has an average depth of 18 inches and average width of 5 feet, and affords a constant supply of water the year round.

#### LAWRENCE, KANS.

Early in 1883, citizens of Lawrence and vicinity proffered to the United States Government 280 acres of land on which to establish an industrial school for Indians (see Annual Report Indian Office for 1885, p. 228). The donation was accepted and the deed dated April 4, 1883, from Oscar E. Learnard and Mary S. Learnard, his wife, conveyed to the United States, for \$9,500, the SW.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$  and the W.  $\frac{1}{4}$  of the SE.  $\frac{1}{4}$  of sec. 7, and the NE.  $\frac{1}{4}$  of sec. 18, all in T. 13, R. 20 E., in Douglas County, Kans., containing 280 acres, less the right of way of the Leavenworth, Lawrence and Galveston Railroad, now called Kansas City, Lawrence and Southern Kansas Railroad. This deed, with abstract of title, was approved by the Attorney-General June 7, 1883, but was not recorded in the proper office of Douglas County, Kans., until February 2, 1887.

A contract was made in June, 1883, to erect school buildings upon this tract (see Annual Report for 1885, p. XCII), the cost of which was to be paid from an appropriation of \$150,000 for Indian schools contained in the Indian appropriation act of May 17, 1882 (22 Stats., p. 86). The applicability of this fund for the erection of these buildings was questioned, but a joint resolution passed February 25, 1884 (23 Stats., p. 268) and the Indian appropriation acts of July 4, 1884, and March 3, 1885 (23 Stats., p. 92 and 382), gave ample authority for the payment.

The Indian appropriation act of May 15, 1886 (24 Stats., p. 45), appropriated \$58,000 for the completion of buildings and the purchase of additional grounds for the use of this school. Under this authority the superintendent of the school was directed to receive offers of land. After doing so, upon his recommendation he was authorized to expend \$17,500 in the purchase from James W. Alderman of a tract of 200 acres adjoining the first land purchased, being the SE.  $\frac{1}{4}$  of the NW.  $\frac{1}{4}$  and the SW.  $\frac{1}{4}$  of sec. 7, T. 13, R. 20. The deed, dated January 12, 1887, with abstract of title, was approved by the Attorney-General May 19, 1887, and duly recorded in Douglas County May 31, 1887.

Another tract of 10 acres was purchased from Oscar E. Learnard for \$4,000, being the south 10 acres in the NW.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$  of sec. 7, T. 13, R. 20. The deed, dated March 7, 1887, for said land, subject to right of way of the Leavenworth, Lawrence and Galveston Railroad, with abstract of title, was approved by the Attorney-General June 3, 1887, and recorded in Douglas County, Kans., June 16, 1887.

By the Indian appropriation act, approved August 19, 1891 (26 Stats., p. 359), money was appropriated for the purchase of additional land for this school. The

NW. fractional  $\frac{1}{4}$  of sec. 18, T. 13, R. 20, containing 153.60 acres, was purchased from Oscar E. Learnard for \$7,680. The deed dated December 10, 1890, was duly approved by the Attorney-General February 6, 1891; and recorded in Douglas County, Kans., February 14, 1891.

For \$1,928 another piece of land was bought for this school from Fred. Messenger Lowe and wife. The tract, containing 9.54 acres, is described as follows, viz :

Beginning at the southeast corner of the northeast quarter of fractional northwest quarter of sec. 7, T. 13 S., R. 20 E., thence north along the center line of said section 5 chains, thence west 19.27 chains to a point on the west line of Vermont street, produced from the city of Lawrence, 15 chains south of the north line of said section. thence south along said west line of Vermont street produced 5 chains, thence east 19.25 chains to beginning.

This deed, dated January 31, 1891, with abstract of title, etc., was approved by the Attorney-General June 19, 1891, and recorded in Douglas County, Kans., July 3, 1891.

The consent for purchase of these lands by the United States for public purposes is given by the State of Kansas in special act of its legislature dated March 2, 1889, and by a general law of the State dated March 28, 1872. (See General Stats. of Kansas, 1889, sections 3555, 3556, and 3561.)

#### MOUNT PLEASANT, MICH.

The act of Congress approved February 16, 1891, directed the establishment of an Indian industrial or training school in Isabella County, Mich., and appropriated \$25,000 for the purchase of not less than 200 acres for the school and the erection of buildings thereon (26 Stats., p. 764).

Under instructions from the Indian Office of June 26, 1891, T. S. Ansley, supervisor of education, visited Isabella County and examined and reported on various sites offered and suggested for the school in several towns. His reports, with other offers of sites, were submitted to the Secretary of the Interior on the 27th of August, with recommendation that an inspector be sent to Michigan to examine the several locations proposed. Inspector Gardner was assigned to that duty, and on the 13th of October he reported against all the tracts offered except that known as the old "Mission Farm" and "Mowry tract," adjoining the city limits of Mount Pleasant, which contained 160 and 40 acres, respectively, and had several good farm buildings thereon. He strongly recommended the purchase of this site, with the understanding that the Government would pay but \$5,000 for the land, the remainder to be contributed by the citizens of Mount Pleasant.

Accordingly that site was accepted by the Secretary on the terms named. November 21, Mr. S. W. Hopkins on behalf of the citizens' committee of Mount Pleasant submitted a certified copy of an act of the Michigan legislature, approved May 13, 1891, ceding jurisdiction over the lands selected. He also forwarded two deeds for the tracts chosen—one dated November 6, 1891, from David H. Maurer and Abbie C., his wife, conveying to the United States, the east 40 acres of the east half of the SE.  $\frac{1}{4}$  of sec. 9, the other dated November 5, 1891, from Amelia S. K. May, to the United States for the NE.  $\frac{1}{4}$  of sec. 9. On account of defects in the May deed and abstract of title they were returned and a new deed executed December 1, 1891, by Mrs. May with abstract of title was substituted; additional papers as to title were forwarded December 21. The Maurer and May deeds with abstracts were approved by the Attorney-General January 27, 1892, and were duly recorded in Isabella County, Mich., February 2, 1892.

#### PIPESTONE, MINN.

The act of Congress approved February 16, 1891, authorized the establishment of an Indian industrial or training school on the Pipestone Reservation in Minnesota, and money was appropriated for the erection of buildings (26 Stats., p. 764).

By the eighth article of the treaty of April 19, 1858, with the Yankton tribe of Sioux (11 Stats., p. 743), it was provided that the Indians should have the free and unrestricted use of the Red Pipestone quarry, or so much thereof as they had been accustomed to frequent and use, and the United States agreed to cause said reservation to be surveyed and marked accordingly. It was located and surveyed in 1859, and consists of 1 square mile, situated in township 106 and 107 north, range 46 west, in Minnesota.

Under office instructions Superintendent Dorchester visited Pipestone in April, 1891, to select "the specific site" for the erection of buildings. He chose the

highest ground on the reservation in section 1 of township 106 on the north side of the reservation between the railroad and the county road, where they are about 660 feet apart.

On the 27th of July, United States Indian Agent E. W. Foster forwarded a petition purporting to be signed by 167 Yankton Indians, stating that the Indians had no knowledge of this proposed school prior to the visit of Superintendent Dorchester, and claimed the right to take allotments on this reservation, and protested against the erection of school buildings thereon until their consent had been obtained.

The matter was submitted to the Assistant Attorney-General, and his opinion of September 17, 1891, fully sustained the position taken by the Indian Office that the Indians had no right to allotments on the Pipestone Reservation and were not entitled to any compensation for the use of a portion of the land for the establishments of a school, for the very good reasons that they would not suffer any damage; that the title to the land was in the United States; and that it might be appropriated to the proposed use without consulting the Indians, if that use would not abridge or interfere with the exercise of the right guaranteed them by the treaty of 1858.

## GENOA, NEBR.

By the Indian appropriation act of May 17, 1882, the Secretary of the Interior was authorized to expend \$25,000 in establishing a school for 150 Indian children, either at some suitable point on the Sioux Reservation in Dakota, or "in the buildings on the late Pawnee Reservation" in the State of Nebraska (22 Stats., 85).

The latter location having been chosen, the General Land Office on the 26th of June, 1882, was requested to withhold from sale the northeast quarter of section 13, township 17, range 4 west, in Nebraska, being the portion of the Pawnee Indian Reservation (whose sale had been authorized by the act of 1876, 19 Stats., p. 28), on which was located the large vacated Pawnee school building. Reply was made that that tract had not been entered. October 29, 1885, the local land office was instructed to reserve it from sale until otherwise ordered.

By the sundry civil appropriation act of August 7, 1882, \$2,200 was appropriated for the purchase of 160 acres in addition to the amount then owned by the Government on the old Pawnee Reservation, provided the Indian school should be established upon that reserve (22 Stats., 329). With this money there was purchased the northwest quarter of section 18, township 17 north, range 3 west, in Nance County, Nebr. The deed therefor, dated December 20, 1882, given by Averes J. Draper and George C. Draper and Ida M., his wife, was approved by the Attorney-General February 10, 1883, and recorded in Nance County, Nebr. September 21, 1892.

Section 5 of article XIII, chapter 83, page 707, of Compiled Statutes of Nebraska, 1887, gives the consent of the State to the purchase of land by the United States for the erection of needful buildings.

## CARSON, NEV.

Under an act of the legislature of Nevada, passed January 25, 1887, a State commission, consisting of H. M. Yerington, ex-Governor J. W. Adams, and Dr. S. S. Lee, was appointed to secure a site of 300 acres for an Indian school. The act also authorized the issue of \$10,000 in bonds for the purchase of the site. This commission on the 31st of January notified the Indian Office that a site of 160 acres had been secured; but April 9, 1887, Mr. Yerington was informed that sufficient funds for putting up buildings and establishing a school were not then available.

By the Indian appropriation act of June 29, 1888, the sum of \$25,000 was appropriated for the purpose of constructing and completing suitable buildings for an Indian industrial school to be located at some point in Ormsby County, Nev., upon not less than 200 acres of land to be donated to the Government for that purpose. (25 Stats., 236.)

The same State commission finally purchased of S. C. Wright, for \$1,000, the southwest quarter of the southwest quarter of section 5 and the northwest quarter of section 8, in township 15 north, range 20 east, Mount Diablo meridian, containing 200 acres; and September 3, 1888, Mr. Yerington notified the Indian Office that a deed therefor had been executed, July 9, 1888, in favor of the United States.

October 16, Special United States Indian Agent Henry S. Welton was in-

structed to make a thorough examination of this tract of land, and of any others that might be offered in Ormsby County for an Indian school, and to report as to their desirability, accessibility, healthfulness, drainage, character of the soil, water supply, etc. On the 16th of December he reported that the above-described tract about 500 yards north of the north line of the city limits of Carson was nearly level and had good soil, but was unimproved, had neither grass nor timber, and being without water was deemed undesirable for school purposes.

The State commission then advertised for offers of desirable locations. Among those offered were (1) the farm of A. D. Treadway just west of Carson, with a very limited supply of water and no legal title to the land. (2) The farm of W. M. Cook, in sections 15, 22, and 23, township 15 north, range 20 east, on the Carson River, containing 280 acres of unimproved land and 40 acres improved land with a six-room dwelling, stable, barn, gates, and fences; but this tract was 1½ miles from any public road and was subject to overflow from the Carson River, and all dependence for water was upon the "Mexican Ditch Company," to which Mr. Cook could not and the company would not give a legal title. Neither of these tracts were considered desirable or adapted to school purposes.

The third site, with nine buildings thereon, estimated valuation \$6,375, belonging to Henry Ross and C. T. Miller, was recommended as the best offer. It was situated in section 23, township 15 north, range 20 east, immediately on the mainstage road connecting Carson City and Genoa, the county seats of Ormsby and Douglas Counties, about 3 miles from Carson and 10 from Genoa. It contained about 223 acres, 200 of which were under excellent cultivation, and by a decree of the district court, dated April 24, 1872, had nineteen one-hundredths of all the waters of Clear Creek, whose flow was not less than 300 inches, sufficient to irrigate 150 acres in ordinary seasons and 80 acres in the driest season.

Mr. Yerington, on the 18th of December, informed the Indian Office that this selection met the approval of the Commission, and the site was also approved December 27, 1888, by S. H. Albro, superintendent of Indian schools. January 29, 1889, Secretary Vilas, upon the recommendation of the Indian Office, authorized the acceptance of this site when proper deeds of conveyance to the United States should be presented.

February 28, 1889, Mr. Yerington transmitted United States land patent No. 317 and 7 for 200 acres of land, with six individual deeds, one bond for a deed, and abstract of water title and map, covering the lands purchased from Henry Ross and Charles F. Miller, with a deed executed January 31, 1889, by Charles F. Miller and Amelia, his wife, for \$3,000, conveying to the United States the east half of the southeast quarter and the southwest quarter of the southeast quarter of section 32, township 15 north, range 20 east, Mount Diablo meridian, except the following described tract:

Beginning at the southwest corner of the south half of the southeast quarter of said section 32; thence east along the township line between townships 14 and 15 north 14 chains and 95 links to the middle of the road on what is known as Penrod's Lane; thence along the middle of said road north  $24^{\circ} 50'$  east 14 chains 28 links; thence north  $57^{\circ}$  west along the line of fence on the south side of the road leading to Carson, 12 chains 86 links, to the intersection of the north boundary line of said tract of land; thence west along said line 10 chains to the northwest corner of said tract; thence (south) 20 chains to the place of beginning;

containing in all about 86 acres, together with all water, water rights, flumes, ditches and dams used upon, connected with or in anywise appertaining to or belonging to said above-described land. He also forwarded a deed executed the same day by Henry Ross and Ellen his wife, conveying to the United States, for \$5,000, the south half of the southwest quarter of said section 32; also so much of the southwest quarter of the southeast quarter as was excepted out of the Miller deed (containing about 34 acres), and also the following described tract of land, viz:

The northwest quarter of the northeast quarter of section 5, township 14 north, range 20 east, save and except the following described land, viz:

Beginning at station No. 1, a post at the northwest corner of the northeast quarter of the northeast quarter of section 5; thence west 11 chains to station 2, a post in the middle of the road leading to Carson; thence along the middle of said road south  $26^{\circ} 5'$  west, 7.51 chains to station 3, a post in the middle of the road; thence south  $47^{\circ} 30'$  east 5.58 chains across the road and along the fence on the north side of Penrod's corral to station 4, a post at the corner of said fence; thence south  $42^{\circ} 30'$  west 2.51 chains along the fence on the east side of Penrod's corral to station 5, a post at the corner of the fence; thence south  $64^{\circ} 30'$  east 6.66 chains along the fence to station 6, a post in the line of the fence and in the line of the west side of the northeast quarter of the northeast quarter of said section 5; thence north 15.27 chains to the place of beginning.

Also, 4 acres off the south side of the northwest quarter of the southeast quarter of said section 32,

containing in all about 148 acres, together with all the water, water rights, flumes, ditches, and dams used upon, connected with, or in any wise appertain-

ing to or belonging to said above-described lands, as shown by decree of April 24, 1872, in case of *Darigberg and Schulz vs. Henry Ross et al.*

June 4, 1889, the Attorney-General approved the validity of the title to the land conveyed by the Miller deed, and stated that the Ross deed was sufficient to pass a valid title to the property therein described, except the 4 acres off the south side of the northwest quarter of the southeast quarter of section 32. The record title to the aforesaid 4 acres appeared to be outstanding in Emanuel Penrod, who in 1870 granted to Ross 4 acres off the south side of the northeast quarter of the southwest quarter of said section 32; when it was supposed that Penrod intended to convey the 4 acres first mentioned. A quitclaim deed from Penrod to Ross would be necessary to remove all doubt as to the validity of the latter's title. June 14 the Department of Justice forwarded a deed dated May 21 and acknowledged June 4 from Emanuel Penrod, conveying to Henry Ross and wife the 4 acres off the south side of the NW.  $\frac{1}{4}$  of the SE.  $\frac{1}{4}$  of sec. 32, T. 15 N., R. 20 E., being all that parcel of land lying in said quarter quarter section, southwest of the road leading from Penrod's Lane to Carson City, and intended as a deed of correction of a certain deed dated November 15, 1870, from said Penrod to Henry Ross and wife, wherein was deeded 4 acres off the south side of northeast quarter of the southwest quarter of section 32 in place of the land therein conveyed.

The out boundaries of the 4-acre tract being a triangle, may be described as follows:

Beginning at the northwest corner of the southwest quarter of the southeast quarter; thence north 7.41 chains; thence south 57° east 13.62 chains; thence west 10 chains to the place of beginning.

The Miller, Penrod, and Ross deeds were recorded in Ormsby County, Nev., October 14, 1892. The deed from Ross was also recorded in Douglas County October 17, 1892.

As the land purchased by the State of Nevada, from S. C. Wright was not accepted by the Department, an act providing for the reconveyance of said land to the county of Ormsby, was approved October 1, 1890 (26 Stats., 652), but no demand has yet been made upon the Department for such reconveyance.

#### ALBUQUERQUE, N. MEX.

In his annual report for 1878 Agent B. M. Thomas, of the Pueblo Agency, proposed the establishment of a central boarding school, in which children from the various pueblos should be educated. At that time the only schools among them were three day schools. April 24, 1879, he was instructed to find a site for such a boarding school on the public domain. He reported June 19, 1879, that a survey would have to be made to ascertain whether or not a certain tract of land, situate on the Rio Grande about half way between the pueblos of Santa Domingo and San Felipe, was on the land grant of either of these pueblos. September 25, 1879, he was authorized to incur the expense of the survey and to advertise for proposals for the erection of a school building.

February 19, 1880, Agent Thomas reported that the location he had in view had been sold before he received the authority to have the same surveyed, and that he could not find any unoccupied public land suitable for a school site. He, therefore, submitted a proposition (with diagram of land) to lease for 99 years from the officers of the pueblo of San Felipe, a tract of 160 acres in the northeast corner of that pueblo. This proposition was not accepted.

August 5, 1880, Rev. Sheldon Jackson, of the Presbyterian Board of Home Missions, superintendent of mission schools in the Territories, reported that the Board of Trade of Albuquerque would probably offer a location in that city for a Pueblo boarding-school; and as nearly two years had passed since the Secretary had authorized the establishment of such a school, he offered to contract with the Department to start one in the fall and carry it on pending the securing of a site and the erection of the necessary buildings by the Government. This offer was accepted, and a few months later a contract boarding school was opened by the Presbyterians in Albuquerque in rented buildings. Mr. Jackson afterward advised against locating the school at Albuquerque, and suggested that an attempt be made to secure for it the practically abandoned military post of Fort Union. Agent Thomas disapproved that suggestion, owing to the remoteness of the fort from the pueblos and the lack of water there.

December 13, 1880, an offer of 20 acres about 3 miles from Albuquerque was made to the Government on condition that the contemplated school should be a Catholic school under the immediate management of the archbishop of the

Territory. This was declined owing to the smallness of the tract and the restrictions imposed.

February 7, 1881, Agent Thomas reported that the citizens of Albuquerque, after nearly completing a purchase of land for the school, had abandoned the enterprise, and that there remained but two methods for obtaining the land, either to purchase a good place on the Rio Grande, where there was a plenty of water for irrigation, or to reserve the necessary land near Santa Fé, where irrigation and a farm could never be expected. He inclosed a proposition from Franz Huning to sell for \$4,500 an improved tract about 5 miles from Albuquerque, and reported that the previous October Mr. Huning had offered to donate 40 acres about 10 miles south of Albuquerque, a situation "not good on account of severe winds and sand storms and the entire lack of improvements without any compensating circumstances."

For the purchase of lands the office had no funds.

March 7, 1881, Agent Thomas telegraphed that the town of Albuquerque had finally offered a donation of land, and asked if he should accept 40 or 60 acres conditioned on the Government putting up a school building thereon. The office replied that the acceptance of the offer did not seem expedient.

A year later the principal of the contract school reported to Agent Thomas that the citizens of Albuquerque had purchased for \$4,500 an excellent tract of land in Bernalillo County, well located, and one-fourth under cultivation, to be donated to the United States as the site of the school. July 28, 1882, Agent Thomas submitted a deed, dated June 7, 1882, given by Elias S. Clark, for 65.82 acres, with abstract of title, with the approval of the United States attorney for New Mexico, as to title indorsed thereon. The land is described as follows, viz:

Beginning at a stake at the northwest corner of the lands formerly owned by John H. McMinn, thence N. 4° 53' W. 731.7 feet to a stake at the northwest corner of the land hereby conveyed; thence N. 84° 52' E. 2,320.7 feet to a stake at the northeast corner of the land hereby conveyed; thence S. 3° 45' E. 720.4 feet to a stake; thence S. 7° 30' W. 793 feet to a stake at the southeast corner of the land hereby conveyed; thence N. 85° 50' W. 184.6 feet to a stake; thence N. 87° 42' W. 615 feet to a stake; thence N. 81° 52' W. 203 feet to a stake; thence N. 78° 44' W. 224 feet to a stake; thence N. 73° 19' W. 176.4 feet to a stake; thence N. 70° 14' W. 234 feet to a stake; thence N. 78° 38' W. 567.7 feet to a stake at the southwest corner of the land hereby conveyed; thence N. 6° 8' W. 234.4 feet to the point or place of beginning, containing 65.79 acres, more or less.

This deed was approved by the Attorney-General, September 19, 1882, and was recorded in Bernalillo County, N. Mex., October 13, 1884. Two buildings were erected on that tract by the Government, and were occupied in August, 1884.

An adverse claim to a portion of said land having been set up by one Baldasare, the citizens of Albuquerque presented him with a \$300 organ, when he executed a quitclaim deed, December 26, 1884, which was recorded in Bernalillo County, N. Mex., January 9, 1885. On the 8th of June, 1885, Superintendent Bryan submitted a plat of the land conveyed, with a view to quieting title to a certain road adjacent to and in front of school buildings.

#### SANTA FÉ, N. MEX.

April 9, 1884, the officers of the University of New Mexico, located in Santa Fé, chartered and organized May 11, 1881, urged upon the Indian Office the establishment by the Government of an industrial school for the education of the Pueblo, Ute, Navajo, and other Indian youth in that region. November 28, 1884, Horatio O. Ladd, president of the University, reported having secured from seven or eight of the most prominent citizens of Santa Fé, the donation of 60 acres of land finely situated a mile from the plaza of Santa Fé as a site for such a school.

By the Indian appropriation act of March 3, 1885, Congress appropriated \$25,000 for the purpose of establishing an Indian industrial school at Santa Fé. (23 Stats., p. 382.)

October 19, 1885, B. Seligman, president of the Santa Fé Board of Trade, transmitted four deeds for 75.07 acres of land, donated by the citizens of Santa Fé for the purpose of erecting Indian school buildings thereon, as follows:

1. Deed dated October 17, 1885, from Andres Tapia, conveying to the United States, for an industrial school for Pueblo and other Indians, 20.05 acres of land, situated in Precinct No. 4 of the county of Santa Fé, 8.33 acres of which are defined, bounded, and described as follows: On the north by the arroya of San Antonio, on the south by the public road leading from the city of Santa Fé to Pino's Ranch, on the east by lands of the heirs of Simon Apodaca, deceased, and on the west by lands of C. H. Gildersleeve. The remaining 11.72 acres are bounded as follows: On the north by the arroya of San Antonio, on the south

by the Albuquerque road, on the east by lands formerly owned by Aaron Gold, and on the west by land of R. Martenez.

2. Deed dated October 2, 1885, from Romulo Martinez, conveying to the United States, for said industrial school, 5.98 acres of land in same precinct, and bounded as follows: On the north by the arroya of San Antonio, on the south by the Albuquerque road, on the east by the lands of José Maria Sena, and on the west by lands of José Maria Roderiquez.

3. Deed dated October 15, 1885, from Clemente P. Ortiz and Joseta Conklin de Ortiz, his wife, conveying to the United States, for said industrial school, two tracts of land, containing 41.04 acres, in said precinct, the first being described and bounded as follows: On the north by the San Antonio arroya, on the south by the public road from Santa Fé to Pino's Ranch, on the east by lands deeded to the United States, by Charles H. Gildersleeve and wife, and on the west by lands owned by Guadalupe Sanchez; the other tract being bounded on the north by the arroya of San Antonio, on the south by the said public road, on the east by the lands of Guadalupe Sanchez, and on the west by lands formerly owned by Aaron Gold.

4. Deed dated July 10, 1885, from Charles H. Gildersleeve and Teresita M., his wife, conveying to the United States, for said industrial school, 8 acres of land in said precinct, bounded as follows: On the north by the arroya of San Antonio, on the south by the public road from Santa Fé to Pino's Ranch, on the east by land of Speigelberg Brothers, and on the west by land of Antonio Ortiz y Salazar.

The deeds for the remainder of the land donated, one tract containing 11.36 acres and the other containing 20.51 acres, were to be submitted thereafter.

The abstract of title to the lands conveyed by the aforesaid four deeds was forwarded in February, 1886, by T. B. Catron, and on the 10th of March the Indian Office submitted it with the four deeds for the opinion of the Attorney-General as to the validity of title. The title was approved by him June 17, 1886, and the four deeds were duly recorded in Santa Fé County July 13, 1886.

On the 18th of April, 1887, the Indian Office instructed Special Indian Agent Henry S. Welton to select another site for the school, because the tracts conveyed by the four deeds were divided into two parts by the intervening two tracts for which the board of trade had failed to furnish deeds according to its original agreement, and his attention was directed to a tract of 100 acres which the citizens of Santa Fé had also offered to the Government. Upon this tract he made an adverse report, May 14, 1887, while he reported favorably upon the first site since the board of trade had by that time expended \$400 in purchasing the intervening tracts. These with the former donations gave an unobstructed contiguous tract of 106.59 acres, having a half mile frontage (southeast) on a road 100 feet wide, passing the State capitol.

May 20 Special Agent Welton submitted with abstract of title a deed dated May 13, 1887, from Guadalupe Sanchez and Marcelina Baca de Sanchez, his wife, conveying to the United States 20.51 acres of land in Precinct No. 4, Santa Fé County, N. Mex, bounded on the north by the arroya of San Antonio, on the south by the public road to Pino's Ranch, on the east and west by lands donated to the United States by citizens of Santa Fé. This deed was approved by the Attorney-General September 3, 1887, and was recorded in Santa Fé County January 17, 1893.

When the deed for 20.51 acres was forwarded by Agent Welton he called attention to the fact that the title to the 11.36 acres known as the "Gold" tract, near the end of the main body of the land covered by the deeds furnished, must come from the University of New Mexico, which corporation had adopted February 1, 1887, a resolution to the effect that it would convey said tract to the United States as soon as they should have perfected their title thereto. Superintendent Cart was instructed November 10, 1892, to secure the deed for that tract from the University of New Mexico.

#### FORT STEVENSON, N. DAK.

This fort was established in 1867. The military reservation is situated in latitude 47° 30', longitude from Greenwich 101° 30', on both sides of the Missouri River, at the junction of Douglass Creek with the Missouri River, and 15 miles distant from Fort Berthold, partly in township 147 north, range 84 west. It contains an estimated area of 48,000 acres, and was announced and described in General Order No. 19, Headquarters of Dakota, June 10, 1868, and declared by the President June 30, 1868, as follows:

The initial point is on meridian of longitude  $101^{\circ} 30'$ , at the intersection of the wagon route from Fort Stevenson to Fort Berthold; thence north of east in a straight line 10 miles to a point at which the wagon route, known as "General Sully's," crosses the west branch of Douglass Creek; thence south of east 6.75 miles to the point at which the "General Sully wagon route" crosses Snake Creek; thence southwardly, following the right or west bank of Snake Creek, to its mouth; thence crossing the Missouri River and following the right bank of said river to a point 6 miles from the last-mentioned point; thence due west 15.50 miles; thence east of north 3.50 miles to the point of commencement (see plat in G. L. O.).

By General Order No. 75, issued October 31, 1870, the boundaries of Fort Stevenson were changed as follows:

The flagstaff is the initial point. The southwest corner is on the south bank of the Missouri River, 2 miles 420 feet south and 4 miles 2,500 feet west of the flagstaff. From this point the boundary line runs due north 4 miles 420 feet, thence due east 12 miles, thence due south to the west bank of Snake River, thence along the west bank of Snake River to the center of the channel of the Missouri River, thence down the center of said channel to a point due east of the southwest corner, thence to the southwest corner.

By General Order No. 91, issued December 2, 1870, General Order No. 75, diminishing the military reservation, was revoked, and accordingly the reservation, as originally announced, was maintained. A question as to the initial point having arisen from the vagueness of the original description and the uncertainty in closing the public surveys upon its outboundaries, it was reported by the War Department to be 9 miles and 463 feet west of the flagstaff of the post, and its southwest corner might be ascertained by running from the initial point south  $25^{\circ}$  west 3.50 miles. (See descriptive list of military posts, War Department, 1872, p. 238, and General Land Office annual report for 1891, p. 141.)

Fort Stevenson was finally abandoned by the military August 31, 1883, the post and reservation having been turned over to the Interior Department for Indian school purposes, August 7, 1883 (see letter from Secretary of War to Interior Department, December 8, 1883, in General Land Office files). The school was opened December, 1883.

The river divides the reservation into two unequal portions; a fringe of woodland skirts either bank—elm, cottonwood, ash, and a thick undergrowth of willows. Stones of the "hard head" variety are found on many parts of the reservation, which can be used for building purposes. Lignite coal abounds. The topography of the reserve is given; first, the river bottom proper, subject to overflow every spring, with a surface soil of light sand of but little value; second, the second bottom which lies mostly on the north side of the river, 1 to 2 miles in width, very little of which is subject to overflow, embracing the agricultural land at least 10,000 acres. Some parts, however, are so impregnated with earthy salts as to be of little use for agriculture or pasture. Back and north of this second bottom the land is quite broken and bluffy, but provides excellent pasturage for stock of all kinds. The Missouri River and several small creeks and numerous springs on the north side of the river afford plenty of water for stock. From three good wells at the buildings is derived the water for domestic use, which is very hard. Vegetables of all kinds can be grown in abundance.

#### FORT TOTTEN, N. DAK.

The Fort Totten military reservation was established in 1867, in latitude  $47^{\circ} 59' 6''$ , longitude from Greenwich  $98^{\circ} 54'$ , and contained about 100 square miles. Its outboundaries were as follows, viz:

The initial point is at a post in the center of a pile of stones on the south shore of Devil's Lake, 5 miles and 300 rods west  $1^{\circ}$  north from the center of the permanent post, thence S.  $30^{\circ}$  E. \* 9 miles and 196 rods to a post on north bank of Sheyenne River, thence southeasterly along said bank 9 miles and 182 rods to a post on said north bank, thence east  $30^{\circ}$  north 4 miles and 256 rods to a post, thence N.  $30^{\circ}$  W. 10 miles and 192 rods to a post on south bank of Devil's Lake, in the center of a pile of stone, thence westerly along the south shore of the lake, 29 miles and 316 rods to point of beginning. (General Order No. 55, issued June 30, 1869, and declared by the President January 11, 1870.)

By General Order No. 57, issued June 30, 1873, and by Executive order of October 7, 1873, this reservation was enlarged by the addition of all the islands in Devil's Lake.

By General Order No. 17, issued August 28, 1876 (upon order of the Secretary of War of July 28, based upon the recommendation of the Secretary of the Interior of February 29, 1876), the reservation was reduced so as to embrace only—

- (1) All the islands in Devil's Lake.
- (2) The tract of land bounded (according to the survey of the Devil's Lake Indian Reservation, made in 1875 by Charles H. Bates), on the east by the line

\* Points of compass in this description are magnetic, and not true ones.

dividing ranges 64 and 65 west, on the south by the Sheyenne River, on the west by the line dividing ranges 65 and 66, and on the north by Devil's Lake.

Owing to the diminution of water in Devil's Lake, the two islands, Graham and Rock, became peninsulas attached to the mainland, and by Executive order of February 10, 1881, which was issued in General Order No. 1, March 2, 1881, they were defined and set apart as a portion of the military reserve.

By General Order No. 49, issued July 5, 1883, the military reservation was still further reduced so as to include only the following described territory, all of which is within the Devil's Lake Indian Reservation:

Beginning at a point on south shore of Devil's Lake due north of the summit of "Sully's Hill," thence due south 2 miles, thence due west 1 mile, thence due south 5 miles, thence due west to the range line between ranges 65 and 66 (the present west boundary of the military reserve), thence north on said range line to a point due west of the southwest corner of the tract occupied by Devil's Lake Agency buildings, then due east to the said southwest corner, thence along the south and the east boundary of the agency tract to the northeast corner thereof, thence north to Devil's Lake, thence along the south shore of the lake to the place of beginning.

This description was subsequently modified by General Order No. 77, issued December 16, 1887, and the present outboundaries of Fort Totten military reservation are as follows:

Beginning at a point on the south shore of Devil's Lake, due north of the summit of "Sully's Hill," and running thence due south 2 miles, thence due west 1 mile, thence due south 5 miles, thence due west to the range line between ranges 65 and 66, thence north along said range line to a point due west from the old southwest corner of the tract occupied by the Devil's Lake Indian agency buildings, etc., thence due east to the said old southwest corner, thence due south 1.675 chains, thence N. 76° 10' E. 6.19 chains, thence N. 31° 33' E. 1.32 chains to the old southeast corner of the tract occupied by the Devil's Lake Indian agency, thence N. 31° 33' E. on the east boundary of the agency 11.70 chains to an elm tree, thence due north on the east boundary of the agency to the meander corner on the south shore of Devil's Lake 3.75 chains, thence along the south shore of said lake to place of beginning. Area not known, but estimated to contain about 9,000 acres of land.

By General Order No. 115, issued October 4, 1890, promulgating the order of the Secretary of War of the 1st of October, 1890, the unoccupied military post of Fort Totten and its buildings and appurtenances were set aside for Indian school purposes and turned over to the Secretary of the Interior under the act of July 31, 1882 (22 Stats., 181).

A school was opened in the buildings October 27, 1890, although the post was not finally abandoned until January 5, 1891. The agent of the Devil's Lake Agency and the superintendent of the school were advised January 11, 1892, that the control of the lands of said military post while used for an Indian school were to be and remain in the superintendent of that school until further orders. The relinquishment of the use and occupancy for military purposes by the War Department being temporary only, the post might be reoccupied for military purposes at any time on proper notice.

#### CHEYENNE AND ARAPAHO RESERVATION, OKLA.

*Arapaho School.*—A boarding school was established on the Cheyenne and Arapaho Reservation, Ind. T., in September, 1872, and was afterward known as the Arapaho school. No definite area of land was assigned to its use. August 28, 1891, Agent Ashley was instructed to designate and set apart for the exclusive use of this school 160 acres. September 9 he was further directed to set apart in addition thereto such other land for tillage, pasture, etc., as the school might need.

Accordingly the allotting agent selected and reserved for the school the southeast quarter of the southeast quarter of section 23, the west half of the southeast quarter of the southwest quarter, and the southwest quarter of the southwest quarter of section 24, the west half of the northeast quarter of the northwest quarter, the northwest quarter of the northwest quarter, the northwest quarter of the southeast quarter of the northwest quarter, and the north half of the southwest quarter of the northwest quarter of section 25, and the northeast quarter of the northeast quarter of section 26, all in township 13 north, range 8 west, containing 230 acres of land. This reservation for the Arapaho school was approved by the Department April 12, 1892.

*Cheyenne School.*—In December, 1879, another boarding school was established on the Cheyenne and Arapaho Reservation, near Caddo Springs, in the northeast quarter of the southeast quarter of section 12, township 13 north, range 8 west, and became known as the Cheyenne school.

April 26, 1890, Agent Ashley recommended that the following described land adjacent to the school be permanently reserved for its use, viz: Sections 6 and 7 and the north half of section 18, township 12 (13?) north, range 7 west, and sections 1 and 12 and the north half of section 13 in township 12 (13?) north, range

8 west; also that the north half of sections 13 and 18, comprising the natural Jack Oak Park of Caddo Springs, be also reserved for park purposes in connection with the school.

June 3, 1891, the superintendent of the school, through Allotting Agent M. D. Tackett, asked that section 31 of township 14 north, range 7 west, and section 36 of township 14 north, range 8 west, be set apart for the school in addition to the above described five sections. This met the approval of Inspector Junkin, who was then at the agency.

Allotting Agent Tackett and Agent Ashley were instructed to make the reservation recommended; and September 3, 1891, Agent Ashley submitted a plat showing the land finally selected for the Cheyenne school reservation, viz: All of sections 5, 6, 7, and 8, and the north half of sections 17 and 18, and the fractional part of sections 4, 9, and 16 west of the ninety-eighth meridian, in township 13 north, range 7 west, of the Indian meridian, and all of sections 1 and 12, and the north half of section 13, township 13 north, range 8 west, containing 4,831.64 acres. The reservation of these tracts for the Cheyenne school was approved by the Department April 12, 1892. The farming lands are in the northeast quarter of section 12.

*Seeger Colony School.*—John W. Richardson, supervisor of education, reported August 31, 1891, that under instructions from the Indian Office he had selected four sections of land for a school for the "Seeger Colony," a settlement of Indians upon the Cheyenne and Arapaho Reservation, Oklahoma.

September 9, 1891, Agent Ashley was instructed by the Indian Office to confer with Allotting Agent Tackett, and set apart out of the Cheyenne and Arapaho Reservation, for this school, such quantity of land in one body as might be advantageous for its use for tillage, pasture, etc. September 14, Agent Ashley reported that sections 15, 16, 21, and 22, T. 10 N., R. 14 W., were selected as the location for the school.

After some correspondence in regard to section 16, which was a school section, and in regard to the surrender of two allotments made to Indians within the selected tract, the lands which were finally set apart for the school and approved by the Department April 12, 1892, are sections 5, 15, 21, and 22, in T. 10 N., R. 14 W., containing 2,554.52 acres and situated in County H, Oklahoma.

This tract is in a little elevated basin, guarded by a spur of the Wichita Mountains and watered by a stream called by the Indians "Red House Creek." The site for the buildings is in a beautiful grove, and the natural facilities for drainage are excellent. The creek and a large spring near the site furnish an ample supply of water.

#### CHILOCCO, OKLA.

By the Indian appropriation act of May 17, 1882, the Secretary of the Interior was authorized to cause to be constructed a building suitable in size and convenience for the instruction and care of 150 Indian children, at a point in the Indian Territory adjacent to the southern boundary of the State of Kansas and near to the Ponca and Pawnee reservations, and upon a section of land suitable in quality and location for the industrial purposes of said school, which section of land was thereby reserved for that purpose (22 Stats., p. 85).

James M. Haworth, superintendent of schools, was instructed to select the location for the school, and October 19, 1882, he reported to the Secretary of the Interior that he had carefully examined the country described in the act, and found it difficult, if not impossible, to find upon one section of land all that would be required for an institution of 150 pupils. He had therefore selected a larger tract, a few miles from Arkansas City, Kans., containing 1,191.06 acres, being the E.  $\frac{1}{4}$  of sec. 14, sec. 15, N.  $\frac{1}{2}$  of the N.  $\frac{1}{2}$  of sec. 22, and the N.  $\frac{1}{4}$  of the NW.  $\frac{1}{4}$  of sec. 23, all in T. 29 N., R. 2 E., of the Indian meridian. This selection having been approved, the place was named Chilocco by Superintendent Haworth, and the school was established.

The Chilocco reservation was subsequently enlarged by the following Executive order, and now contains 8,598.33 acres:

EXECUTIVE MANSION, July 12, 1894.

It is hereby ordered that the following-described tracts of country in the Indian Territory, viz, sections 13, 14, 15, 16, 21, 22, 23, 24, 25, 26, 27, 28, and the east half of sections 17, 20, and 29, all in township No. 29 north, range No. 2 east of the Indian meridian, be, and the same are hereby reserved and set apart for the settlement of such friendly Indians belonging within the Indian Territory as have been or may hereafter be educated at the Chilocco Indian Industrial School in said Territory.

CHESTER A. ARTHUR.

Chilocco is within that part of the Cherokee country upon which the United States was authorized to settle friendly Indians under the sixteenth article of the treaty of July 19, 1866 (14 Stats., p. 804). By the terms of the agreement between the United States and the Cherokees, for the cession of land, etc., concluded December 19, 1891, now pending before Congress, the Chilocco reservation is not to be subject to public settlement, but it is to continue, until further action by Congress, to be reserved for the purposes for which it was set apart by the Executive order. (See Senate Ex. Doc. No. 56, 52d Cong., 1st sess., p. 32.)

## KIOWA RESERVATION, OKLAHOMA.

*Rainy Mountain School.*—Under instructions of July 27, 1891, from the Indian Office, Supervisor J. W. Richardson was instructed to select a site for a school on Kiowa Reserve. On the 15th of August he reported the selection of a site on an elevation 350 yards east of the place where the old military road from Fort Sill to Fort Elliot crossed Rainy Mountain creek; about 30 miles west of the Kiowa agency.

October 24, 1891, authority was granted by the Department to erect buildings on this site.

October 28 Agent Day submitted a description of the land selected for this school, being sections 13, 14, 23, and 24 of township 6 north, range 16 west. November 15 the Indian Office recommended that these four sections be reserved for the use of the Rainy Mountain school, and on the 22d of November the Secretary of the Interior made the order of reservation with instructions that when allotments should be made to the Indians upon ratification by Congress of the Kiowa, etc., agreement, those four sections should be respected as reserved for said school.

This tract, as reported by Agent Day and Superintendent Richardson, is one-fourth tillable and the remainder good grazing, the farming land being in the southern and western portion. Most of it is high prairie and the rest creek bottoms subject to overflow. Timber and building stone abound in the mountains 1 mile distant. In the peaks a half mile distant is an excellent spring.

## SALEM, OREGON (FORMERLY FOREST GROVE).

At the request of the board of trustees of the Pacific University, located at Forest Grove, Oregon, Lieut. M. C. Wilkinson, U. S. Army, was detailed in 1879 as military instructor for that university, with the full understanding that opportunity would be afforded him to start a training school for Indian youth of both sexes belonging to the Pacific coast tribes. In September of that year he wrote to the Secretary of the Interior that the Pacific University would set apart land sufficient for an Indian industrial school, but could not be at any expense in its establishment; that \$5,000 would be required to erect barracks, etc., and to commence the work and carry it on for that fiscal year; and that he was confident that so far as the location of Pacific University was concerned, its management and its opportunity to give Indian youth the proper ideas of work and study, it was all that could be desired.

The \$5,000 was allowed by the Government and 4 acres of its land were set apart by the University upon which three rough frame buildings—for boys, for girls, and for shops—were erected. The school was formally opened February 25, 1880. (See Annual Report of Indian Office for 1885, page CXVI.) In April, 1882, Lieut. Wilkinson was authorized to rent a farm of 45 acres for the use of the school. He frequently urged the buying of land for a school farm, also the purchase from the University of the four acres upon which the buildings stood, the price asked being \$375.

At the expiration of his three years' detail, Lieut. Wilkinson returned to his regiment, and H. J. Minthorn was appointed superintendent of the Forest Grove training school, which by that time had reached an enrollment of about 100 pupils.

May 18, 1883, he wrote to J. M. Haworth, superintendent of schools, about the needs of the school regarding land and permanent location, and recommended securing possession of the tract of 4 acres belonging to the Pacific University for which the price had been raised to \$800; the lease or purchase immediately, to save part of them from sale, of an adjoining tract of 8 acres belonging to a Mr. Marsh and a Mrs. Nailer, upon which a barn and stable for the school had been erected, and which furnished a play ground for the pupils; also the obtaining of a tract within convenient distance from the school suitable for a school farm. If

this could not be done he advised the removal of the school to some other location, and if the Government had no funds he proposed to use for that purpose some donations made to the school.

Superintendent Minthorn was authorized June 6 to purchase or lease the 8 acres out of private funds, with the consent of the donor. His annual report of August 17, 1883, states that he leased them.

On the 25th of June he inquired if the school would be moved to Salem in case the people of Salem donated a suitable site for its use; also whether a tract of 1,600 acres public land, located 4 miles from the school, could be set apart for its use. Later, September 7, he reported this 1,600 acres to be unsurveyed rough mountain land, available only for fruit raising, pasture, and timber, not farming. August 27 he reported a proposition made by parties at Newberg, 18 miles from Forest Grove, to donate 200 acres of good land to the school, provided it should be permanently located there.

The Indian Office replied, September 11, that there was no authority to remove nor funds to meet the expense of removal and erection of buildings, nor were any advantages shown to be gained by removal.

September 24 he urged removal to Newberg because of the good land, water and drainage offered there, all of which the school lacked at Forest Grove, and presented the offer of the citizens of Newberg to give 170 acres of land instead of the 200 acres as at first proposed, and to bear themselves the expense of removing the school, except its buildings. He also stated that the buildings at Forest Grove would not bear removal and were not worth the expense of it, and that their removal would not be allowed by the trustees of the Pacific University.

On the 18th of October he was advised that if the land was donated and a clear, valid title thereto made to the Government, the removal of the school to Newberg would be approved. Accordingly he forwarded a deed from Eli J. Hadley, executed February 2, 1884, conveying to the Commissioner of Indian Affairs, for the time being trustee for the Indian training school to be located at Newberg, Yamhill County, Oregon, a tract of 100 acres in said county, being a part of donation claim No. 68, notification No. 1476, in sections 20, 21, 28, 29, 32, and 33, in township 3 south, range 2 west Willamette meridian. The deed was recorded in Yamhill County recorder's office February 6, 1884.

At various times suggestions and propositions were made in regard to obtaining land at Forest Grove, among them the leasing and gradually paying for a small farm (with buildings) adjoining the 1,600 acres of Government land, to which the boys might be moved, leaving the girls where they were. June 24 Superintendent Minthorn forwarded a deed, dated June, 1884, and recorded in Washington County, June 20, 1884, from the Tualatin Academy and Pacific University, conveying to the United States the 4-acre tract on which the Indian school buildings were located, described as block No. 7, Nailer's addition to the town of Forest Grove, to be occupied by the United States so long as it should be used for the purposes of an Indian school; but he stated that he had been unable to secure any additional land suitable in quality or quantity near these 4 acres. Also fractional block No. 6 of Nailer's addition, containing 1 acre, was conveyed to the Commissioner of Indian Affairs for the time being, trustee for the Indian school and to his successors in office by deed from Joseph W. Marsh and Mary M., his wife, executed January 25, 1884, and recorded in Washington County, February 1, 1884. The title to this 1 acre appears still to vest in the Commissioner of Indian Affairs.

The Indian appropriation act of July 4, 1884, provided \$20,000 for the erection of buildings for the Forest Grove school on land to be selected by the Secretary of the Interior, if a suitable location and sufficient land for a farm should be donated for that purpose somewhere in Oregon (23 Stats., 91).

This changed the whole situation. The Hadley deed was returned to Superintendent Minthorn September 27, and the Commissioner of Indian Affairs executed a quit-claim deed to that land October 29. Offers were made by persons in different parts of Oregon and Washington to donate to the school building sites and farms containing from 20 to 800 acres. From Forest Grove came an offer of 75 acres suitable only for pasturage and  $4\frac{1}{2}$  miles from the school buildings, being SE.  $\frac{1}{4}$  of the NW.  $\frac{1}{4}$  and lot 1 of section 28, township 1 N, range 4 west, for which a deed was executed October 16, 1884, by William Hoxter and Mary E., his wife.

September 27 Superintendent Minthorn and Rev. Mr. Atkinson, of Forest Grove, were notified that neither the Newberg tract, which proved to be marshy and heavily timbered, nor the 75 acres at Forest Grove would meet the requirements of the act of Congress, and that unless the citizens of Forest Grove took prompt action to secure more eligible tracts, in conformity with the law, the school would have to be located elsewhere.

On the 4th of October Superintendent Minthorn forwarded a deed executed October 1, 1884, by G. C. Rider and M. E. Rider, his wife, conveying to the United States 23 acres of land near Pacific University, being parts of the donation claim of Elkanah Walker and wife in section 36, township 1 north, range 4 west; the land having been purchased by the citizens of Forest Grove to be donated for a building site for the school on condition that the old 4-acre site be vacated. He was notified October 14 that this was not such a tract as the law contemplated.

On October 4 Superintendent Minthorn also forwarded a proposition from the citizens of Salem to donate 184 acres and strongly recommended its acceptance. November 19 the Indian Office reported to the Secretary of the Interior that apparently the citizens of Forest Grove did not intend to make any further offer of land than the two tracts over 4 miles apart. Acceptance of the Salem tract was recommended.

On the 5th of February, 1885, Secretary Teller approved that recommendation and selected the land offered by the citizens of Salem as the most desirable tract of all locations offered for the school. Superintendent Haworth also favored this choice, and February 7 filed with his recommendation a letter from a member of the Oregon legislature, a contributor to the Newberg tract, who had visited the Salem land and reported favorably thereon. February 20 the superintendent of the school, then W. V. Coffin, took charge of the new site. It was situated 5 mi es north of Salem, on the Oregon and California Railroad, and at the suggestion of Superintendent Haworth was named Chemawa.

The following-named deeds for the 177.32 acres of land donated near Salem were furnished:

(1) Deed dated September 23, 1884, from the heirs of J. R. Moores to Wylie A. Moores, conveying a part of said tract of land; (2) deed dated September 23, 1884, from Wylie A. Moores to H. Price, Commissioner of Indian Affairs, and his successors in office, trustee for the Indian school, conveying the same; (3) deed dated December 10, 1884, from the governor, the secretary of state, and the treasurer of Oregon, conveying and confirming same tract of land to Wylie A. Moores; (4) deed dated December 12, 1884, from the administrator of the estate of J. R. Moores, deceased, conveying same land to Wylie A. Moores, under order of the county court; (5) deed dated February 7, 1885, from Wylie A. Moores to H. Price, Commissioner of Indian Affairs and his successors in office, trustee for the Indian school, conveying the same land. This deed was recorded in Marion County, Oregon, February 16, 1885. These deeds were accompanied by certified copies of the orders of the county court; one made October 25, 1884, decreeing the sale of the real estate of J. R. Moores, and the other made December 8, 1884, confirming the sale of the tract described in the foregoing deed.

June 6, 1885, Attorney-General Garland returned said deeds with a copy of a letter from United States Attorney James F. Watson, of Oregon, submitting an abstract of title and a new deed, dated April 21, 1885, from Wylie A. Moores directly to the United States, for the use of the Indian training school, in lieu of the deed to H. Price, and gave his opinion that a valid title to the said tract of land was thereby deduced to the said Wylie A. Moores, and that his deed of April 21, 1885, together with a deed of release from the successor in office of the said Price would vest such title in the United States for the use mentioned in the deed.

The land conveyed by said deed of April 21, 1885, for the school, containing 177.32 acres, is described as follows:

Beginning at a point 7.82 chains west of the center of sec. 36, T. 6 S., R. 3 W., Willamette meridian; thence south 50.06 chains along the east line of the land of S. G. Pugh to the north line of the Janet Pugh donation claim; thence east along the said north line of the Janet Pugh donation claim 27.22 chains, more or less, to the center of the tract of the Oregon and California Railroad; thence in a northeasterly direction along the center of said Oregon and California Railroad track to the north boundary of the SE.  $\frac{1}{4}$  of sec. 36, T. 6 S., R. 3 W.; thence west along the north line of the south half of said section 36 to the place of beginning.

This deed and the deed of release executed June 15, 1885, by J. D. C. Atkins, Commissioner of Indian Affairs, were both recorded in Marion County, Oregon, July 3, 1885. The legislature of Oregon on the 9th of February, 1885, passed a concurrent resolution (No. 12) giving its consent to the purchase by the United States of said land, or any other suitable tract that might be selected by the Secretary of the Interior, for the permanent location of the school.

In November, 1885, negotiations were entered into by Superintendent Coffin looking to the acquisition of additional land adjacent to the school tract without expense to the Government, the payment therefor to be made from proceeds of labor of the pupils when not engaged in school duties. His successor, Super-

intendent Lee, December 11, forwarded the bond of George Williams and William England to convey to the United States for the use of an Indian industrial school a good warranty deed for the following-described tract of land, viz:

Beginning at the northwest corner of the William B. Stephens's donation claim; thence south to the southwest corner thereof; thence south to the southeast corner of what is known as the Moores land, on the line of the Janet Pugh donation claim; thence west along the north boundary line of said Pugh's claim 27.30 chains to the center of the Oregon and California Railroad track, wheris driven an iron bar 18 inches long by five-eighths and 1 1/4 inches; thence north 18 1/2° east along the center of said railroad track 43.54 chains to a point directly west of the northwest corner of the W. B. Stephens donation claim; thence east 13.50 chains to the place of beginning, containing 84.92 acres, and located in sec. 31, T. 6 S., R. 2 W., sec. 36, T. 6 S., R. 3 W., sec. 1, T. 7 S., R. 3 W., and sec. 6, T. 7 S., R. 2 W., Willamette meridian (diagram therewith); consideration \$1,500 in gold coin, payment to be made in labor to be performed by the pupils in picking hops at a fixed scale of prices.

The question of the purchase of this land by this method was submitted to the Secretary of the Interior February 13, 1886, with the recommendation that legislation be invoked authorizing such purchase. Authority was granted by the Secretary of the Interior February 17, 1886, to purchase said land after the necessary legislation, under section 3736, Revised Statutes, should have been enacted by Congress. The Indian appropriation act of March 2, 1887, gave the Secretary of the Interior authority to make the purchase, payment therefor to be made in labor to be performed by Indian pupils (24 Stats., 465).

The deed from George Williams and Emma A., his wife, and William England and Olive S., his wife, dated April 27 and 29, 1887, conveys to the United States the following described tract of land, containing 84.92 acres, more or less:

Beginning in the center of the Oregon and California railroad track on the north boundary of said land in sec. 36, T. 6 S., R. 3 W., at a corner where is driven an iron bar 18 inches long by five-eighths by 1 1/4 inches; thence east 3.91 chains to the quarter section corner on the range line between sec. 31, T. 6 S., R. 2 W., and sec. 36, T. 6 S., R. 3; thence east 6.64 chains to the northeast corner of what is known as the Moores land; thence south 8.80 chains to the northwest corner of the W. B. Stephens donation claim; thence south 41.04 chains to the southwest corner of the said Stephens donation claim; thence south to the southeast corner of what is known as the Moores land on the line of the Janet Pugh donation claim; thence west on the south boundary of said land 27.30 chains to the center of the Oregon and California railroad track, where is driven an iron bar at a corner in said tract; thence north 18 1/2° east along the railroad track 52.82 chains to the place of beginning, saving and excepting therefrom 10.58 acres theretofore deeded to Josephine Beatty, described as follows, viz: Beginning at the northwest corner of the donation claim of W. B. Stephens and wife, Not. 236, Cl. 48, in sec. 31, T. 6 S., R. 2 W.; thence north 8.80 chains; thence west 10.55 chains to the center of the Oregon and California railroad track; thence south 18° 30' west 9.98 chains along said track; thence east 13.50 chains to the place of beginning.

This deed was approved by Attorney-General Garland on the 30th of January, 1889, and was recorded in Marion County, Oregon, May 4, 1887. The lands were paid for out of the proceeds of labor of the children in the school.

This school site therefore now contains 262.24 acres of land.

#### CARLISLE, PA.

The site of the Carlisle Barracks was selected in the first year of the Revolutionary war with Great Britain as a military rendezvous and encampment, and was established as a military post in 1777. After the taking of Trenton by Washington, this post was used as a place of confinement for the Hessian prisoners captured there. It was given free of rental to the province and the Commonwealth of Pennsylvania by the Penn proprietors from 1755 to 1801.

January 31, 1801, the reservation, comprising 29 acres 134 perches of land, was conveyed to the United States, by John Penn of Stoke Pogis, in the County of Bucks and kingdom of Great Britain, and Richard Penn of Queen Ann Street West, in the parish of St. Marylebone, in the County Middlesex, of the kingdom of Great Britain, by Edward Physick, of Philadelphia, their attorney in fact. It was described as follows:

Beginning at a post on the bank of Le Tort spring; thence by the land belonging to the heirs of Thomas Wilson, deceased, the four next following courses and distances, to wit: S. 80° E. 14 perches to a post; thence N. 19° E. 11.7 perches to a post; thence N. 1° W. 38 perches to a post, and N. 60° E. 52 perches to a post 4 perches from the old channel at the breast of the old mill dam; thence S. 30° E. 35.7 perches to a black walnut, corner to land sold by Jonathan Holmes to the United States and corner to land of Thomas Duncan, esq.; thence by the land of said Thomas Duncan, esq., S. 31 1/2° W. 58.5 perches to a heap of stone, corner to the said Thomas Duncan, esq., and John Hughes lot, — feet east of the magazine; thence by said Hughes's lot S. 1/2° W. 22 perches to a post; thence N. 84° W. crossing the lane hereinafter mentioned and by another lane of 2 perches wide (between this land and the lot of John Montgomery, esq., No. 91) 46 perches to a post on the bank of Le Tort spring; thence down the said spring to the place of beginning, containing 27 acres 108 perches, exclusive of the first mentioned land which is comprehended in this survey and contains 82 square perches.

In 1863 the buildings were destroyed by a detachment of rebel cavalry under Fitzhugh Lee. They were rebuilt in 1865-'66, and the barracks were occupied

as a cavalry school and depot until 1872, when the depot was transferred to St. Louis, and the place was practically unoccupied until 1879.

On the 23d of August, 1879, the Secretary of War transferred the Carlisle Barracks to the Interior Department for Indian school purposes, occupation thereof to be resumed by the War Department whenever needed for military purposes, or when required by Congressional action to be reserved. On the 6th of September, 1879, Capt. Pratt was ordered to take charge of the property and establish a school, and on the 1st of the following November the school was opened.

By the Indian appropriation act, approved March 2, 1887, Congress appropriated \$18,000 for the purchase by the United States of additional land for farming purposes for the Carlisle Industrial School, being the "Parker farm," so called, containing about 109 acres (24 Stats., 465). A deed was executed April 7, 1887, by Hadassah Parker, Richard M. Parker and Mary P. McKeehan, conveying to the United States for \$18,000 the following described tract of land in Middleton Township, Cumberland County, Pa., viz:

Beginning at a post at the intersection of the Poorhouse road and the road running to the Harrisburg and Chamberburg turnpike; thence along said Poorhouse roads 50° west 158 perches; thence by land of Alexander's heirs north 29½° west 91.6 perches to a dead walnut; thence by land of the United States north 13½° east 50 perches to a run; thence by the several courses and distances along said run, to wit: N. 59° 45' E. 3.1 perches, N. 34° 30' W. 7.7 perches, N. 59° 15' E. 65.8 perches, N. 81° 30' E. 7 perches, N. 53° 30' E. 5.2 perches, S. 61° 30' E. 3.7 perches, N. 36° 30' E. 2 perches, S. 53° 30' E. 6.6 perches, N. 42° E. 4.2 perches, S. 88° 45' E. 4 perches, S. 28° 15' E. 8.3 perches, N. 84° 30' E. 3.1 perches, N. 23° E. 5.8 perches, S. 51° E. 7.5 perches, N. 58° 30' E. 6 perches; thence N. 4° 30' E. 3.1 perches, N. 32° W. 4 perches, N. 28° E. 4 perches, N. 61° 45' E. 3 perches, N. 86° E. 6 perches, making by the several distances 167.1 perches, to the public road; thence along said road S. 5° 30' E. 14.8 perches to stones; thence by the same S. 27° 45' E. 73.5 perches to the place of beginning, containing 109 acres and 54 perches.

This deed, with an abstract of title and certified copy of act of the General Assembly of the State of Pennsylvania, approved April 6, 1887; granting the consent of the State for the purchase of said land, was approved by the Attorney-General April 26, 1887. It was recorded in Cumberland County, Pa., May 6, 1887.

The land is red clay or limestone, adapted for wheat, barley, oats, corn, potatoes, and garden products. The Le Tort spring is a small stream forming the northern boundary of the farm; a large spring rising on the east side affords an abundant supply of excellent water.

A farm of 157 acres just below the town of Middlesex, on the Philadelphia and Pittsburg pike, purchased by friends of the school and title vested in a board of trustees, is used by the Carlisle school and the Government pays therefor a rental of \$600 per annum.

#### FLANDREAU, S. DAK.

By the Indian appropriation act of August 19, 1890, Congress appropriated \$2,000 for the purchase of 160 acres of land for the establishment of an Indian industrial school near the village of Flandreau, S. Dak. (26 Stats., pp. 358, 359.)

Agent Helms and Rev. Hosea Locke, teacher, were instructed October 3, 1890, to select locations and secure options; and on the 29th of October, 1890, Agent Helms reported a fertile and satisfactory location, about one-half mile north of the village, in the NE. ¼ of sec. 21, T. 107, R. 48, owned by R. F. Pettigrew; also an option on the NW. ¼ of sec. 20, about 2 miles northwest of the village for \$10 per acre. He also reported that other desirable locations in the vicinity were held at \$3,000 and upwards. November 21 he forwarded an option from Senator Pettigrew for the first-named tract at \$2,000, and recommended the purchase of that tract as the most desirable one obtainable.

On the recommendation of the Indian Office an inspector was sent to examine the options submitted and the possibility of obtaining options for other lands. Inspector Cisney examined the two tracts named, and also the SE. ¼ of sec. 28, a valuable tract, but too flat for sewerage, which was owned by some one in California, and was held at \$2,000, possibly less. He strongly recommended the purchase of the Pettigrew tract for \$2,000.

The purchase was made accordingly, and the deed from Richard F. Pettigrew and Bessie V., his wife, dated March 30, 1891, with abstract of title and certificates as to taxes and other liens, etc., was approved by the Attorney-General June 8, 1891, and recorded in Moody County, S. Dak., August 8, 1891.

The legislature of South Dakota gave its consent to the purchase of land therein by the United States for public purposes by act of February 18, 1891.

PIERRE, S. DAK.

In December, 1885, Messrs. B. J. Templeton and J. C. McManima, executive committee of the Pierre Board of Trade, petitioned the Indian Office for the establishment of an Indian school at Pierre. The advantages of the place as being off, yet near, the Sioux Reservations were urged, and a letter from Herbert Welsh, secretary of the Indian Rights Association, favoring the matter, was inclosed.

This petition was sent to Special Indian Agent Wm. H. Parsons December 18, 1885, and he was directed to look over the ground and report the facilities afforded as to site, water supply, drainage, and farming land, and whether if such a school were established it should be located on the reservation or the Pierre side of the Missouri River. Agent Parsons's report, dated January 27, gave the preference decidedly to the Pierre side, recommended the establishment of a school there, and contained propositions from the town authorities to donate for the school one of three tracts in or near Pierre for a building site and also 160 acres "of good agricultural land;" about 3 miles from the town for a school farm. The first tract contained 9.39 acres, lying on the third bench from the river, near the boat landing, convenient to the waterworks and within the city limits; the second, of 15 acres, was on the second bench from the river, overlooking the city, midway between the courthouse and the Presbyterian Church, also within the city limits; and the third, containing 20 acres, was half a mile from city limits, on the line of the Chicago and Northwestern Railroad, level and well watered. He recommended acceptance of the 20-acre tract, together with the 160 acres for a farm.

The Indian Office and the superintendent of schools favorably reported the matter to the Secretary of the Interior February 11 and March 22, 1886. The Secretary's reply of May 14 stated that the proposed school could not be established at Pierre unless there were funds applicable to the erection of the necessary buildings, and suggested that an attempt be made to secure the transfer of Fort Randall and to establish a school there, primarily for the Sioux. When such request came before the War Department it replied that Fort Randall would probably not be abandoned by the military for some time to come.

On the 3d of January, 1887, without any letter of transmittal, a deed came to the Indian Office, dated December 11, 1886, from the South Dakota Live Stock Association, conveying to the United States the N.  $\frac{1}{4}$  of the NW.  $\frac{1}{4}$  of the NW.  $\frac{1}{4}$  of sec. 11, T. 110 N., R. 79 W., in Hughes County, Dak., for a site for an industrial school or college for the education of Indians; a deed, dated December 28, 1886, from Mason Pierce Martin, conveying to the United States the N.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$  of sec. 22, T. 111, R. 79 W., in same county; and a deed, dated December 28, 1886, from Henry W. Rathmell, conveying to the United States the S.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$  of said sec. 22, T. 111, R. 79 W., in all, 180 acres.

These deeds were submitted to the Secretary of the Interior January 19, 1887, with recommendation that the lands donated be accepted. The validity of the titles was approved by the Attorney-General March 23, 1887, and the deeds were recorded in Hughes County, Dak., April 22, 1887.

When the Rathmell deed was filed for record the fact was disclosed that Mr. Rathmell had subsequently sold the land and the title then vested in Mr. Martin, the grantor in the second named deed; accordingly a deed was executed April 23, 1887, by him, conveying said S.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$  of section 22, T. 111, 79 W. to the United States, thereby perfecting title therein to the United States. The deed was recorded in Hughes County, Dak., April 23, 1887.

Upon these sites Inspector Bannister made a favorable report October 14, 1887.

The Indian appropriation act of June 29, 1888, provided \$25,000 for the erection of suitable buildings for an Indian school near the city of Pierre, Dak., on the lands donated by the citizens of said city to the Government for that purpose (25 Stats., p. 236).

August 10, 1889, Special Indian Agent George W. Parker was instructed to inspect the site and ascertain whether or not it was suitable for an Indian industrial school, taking into account the nature of the ground, drainage, water supply, and surroundings of the school lot, also the soil, water supply, drainage, accessibility and adaptability for agricultural purposes of the farm tract. His report of August 27 disparaged the school building site and described the farm as over 4 miles distant by the way he had to go, "a nice quarter section, with the exception of about 25 or 30 acres on the northwest corner, which rises to a point and is rocky," but worthless on account of want of rainfall, so that there was no prospect that the soil ever would produce anything worth harvesting.

August 15, 1889, E. C. Patterson, superintendent of city schools of Pierre, re-

ported the 20-acre tract to be an excellent location, 1 mile from the banks of the Missouri River—the river bottom extending about three-fourths of a mile to the first bench, which is 10 or 12 feet higher than the bottom land, and the school site being a quarter of a mile farther on. On this site, in the fall of 1889, the Pierre school buildings were erected.

November 30, 1891, Superintendent Crosby G. Davis reported that the farm tract was much better adapted to grazing than to any other purpose, owing to the light rainfall; that none of the land was valuable for timber, and there was no stone suitable for building or fencing; that paying crops could not be raised without irrigation; that it had no running streams of water, and that well water could not be obtained except by artesian wells 1,400 feet deep, at a cost of \$3 per foot; that this land, of course, had never been put to any use, and that he had made fruitless efforts to secure in exchange for it other tracts 2 or 3 miles down the river. The 20-acre tract he reported as nearly level and answering well its purpose, except that the soil is largely mixed with "gumbo," requires a large amount of fertilizing material to be made productive, and is too dry to give very remunerative returns for tillage.

#### TOMAH, WIS.

The act of Congress approved February 16, 1891, directed the establishment of an Indian industrial or training school in Wisconsin, near some railroad from which all the reservations might be conveniently reached, and appropriated \$25,000 for the purchase of not less than 200 acres for the school, and the erection of buildings thereon. (26 Stats., p. 764.)

Several towns in Wisconsin urged the Government to locate the school in their midst, and T. S. Ansley, supervisor of education, under instructions of June 12, 1891, made a careful examination of the sites proposed. Seven towns were visited by him in the following order: Wittenberg, Wausaw, Marshfield, River Falls, Black River Falls, Tomah, and Merrill. He advised the acceptance of the Medd-Bigelow tract of 200 acres with several buildings thereon offered to the Government free of cost by the town of Tomah. Inspector Gardner, under instructions of August 25, 1891, also visited these places and gave Merrill the preference, but represented Tomah to be his second choice. Upon the recommendation of the Indian office dated the 17th of October, the Secretary authorized the establishment of the school at Tomah.

The deed from Charles A. Goodyear and Fannie A., his wife, dated November 25, 1891, conveys to the United States for \$1 the SE.  $\frac{1}{4}$  of the NW.  $\frac{1}{4}$  and the NW.  $\frac{1}{4}$  of the SW.  $\frac{1}{4}$  of sec. 27, the E.  $\frac{1}{4}$  of the SE.  $\frac{1}{4}$  of sec. 28, the NE.  $\frac{1}{4}$  of the NE.  $\frac{1}{4}$  of sec. 33, all in T. 18 N., R. 1 W., in Monroe County, Wis.

The deed, with abstract of title, etc., was approved by the Acting Attorney-General January 25, 1892, and was duly recorded in the register's office of Monroe County, Wis., February 3, 1892. For the consent of the State of Wisconsin see section 2, Rev. Stats. Wisconsin, 1878.

*Schedule showing the names of Indian reservations in the United States, agencies, tribes occupying or belonging to the reservation, area of each reservation (unallotted) in acres or square miles, and reference to treaty, law, or other authority by which the reservations were established.*

## Aggregate of the foregoing tables.

DISEASES, ETC.	Agencies.	Agency boarding schools.	Indian training and indus- trial schools.
<b>CLASS I.—SPECIFIC FEBRILE DISEASES.</b>			
<b>ORDER I.—INFECTIOUS.</b>			
Cerebro-spinal fever.....	13		
Chicken pox.....	176	165	35
Dandy fever (dengue).....	1		
Diphtheria (including membranous croup).....	31	3	3
Epidemic roseola (German measles, r6theln).....	469	23	158
Influenza (la grippe).....	3,770	808	773
Measles.....	451	417	313
Mumps.....	264	23	125
Scarlet fever.....	51	8	4
Small pox (variola).....			2
Tuberculosis (cutaneous, enteric, osseous, etc.).....	66	16	4
Tuberculosis, lymphatic.....	837	265	105
Tuberculosis, pulmonary.....	705	38	110
Typhus fever.....	2		
Whooping cough.....	430	180	62
<b>ORDER II.—INOCULATIVE.</b>			
Chancroid.....	43		
Erysipelas.....	161	34	19
Gonorrhoea (adenitic, buccal, etc.).....	631		2
Gonorrhoeal warts.....	2		2
Hospital gangrene (phagedena gangrenosa).....	1		
Septicæmia (pyæmia).....	14	1	
Splenic fever (malignant pustule).....	39	5	5
Syphilis, primary.....	112		1
Syphilis, secondary.....	183	6	29
Syphilis, tertiary.....	13	3	
Tetanus (lockjaw).....	5		
<b>ORDER III.—EXCREMENTITIOUS, OR FILTH-PRODUCED.</b>			
Cholera infantum (infantile diarrhoea).....	64	4	1
Cholera morbus (summer diarrhoea).....	198	20	41
Diarrhoea.....	2,264	152	184
Dysentery.....	1,015	29	31
Enteric fever (typhoid).....	44	1	27
Typho-malarial fever.....	44	6	68
<b>ORDER IV.—MALARIAL.</b>			
Intermittent fever (shaking ague).....	3,068	505	443
Remittent fever.....	1,528	161	110
Pernicious fever.....	2	1	
Other diseases of this class.....	22	4	6
<b>CLASS II.—ABNORMAL CONSTITUTIONAL DEVIATIONS.</b>			
<b>ORDER I.—DIATHETIC, OR PREDISPOSED.</b>			
Arthritis (articular rheumatism).....	437	6	23
Bronchocele (goitre).....	66		
Chlorosis (idiopathic anæmia).....	88	3	2
Dry gangrene (senile gangrene).....	1		
Gout.....	2		
Hydrocephalus (chronic).....	2		
Leucocythemia (leukæmia).....	1	1	
Lymphadenoma (Hodgkin's disease).....	1		
Noma (gangrenous stomatitis).....	1		
Purpura (spontaneous ecchymosis).....	2	1	4
Rheumatic fever (true rheumatism).....	1,888	30	47
Rickets (rachitis).....	10		
Other diseases of this order.....	61	6	
<b>ORDER II.—NEO-PLASMS, OR NEW FORMATIONS.</b>			
Adenoma (glandular tumor).....	11	2	3
Carcinoma (common cancer).....	12		1
Cystoma (cystic tumor).....	3	1	
Enchondroma (cartilaginous tumor).....	3		
Epithelioma (epithelial tumor).....	1		
Fibroma (connective tissue tumor).....	4		
Lymphoma (lymphatic tissue tumor).....	1	1	
Mixed tumors.....	1		
Osteoma (bony tumor).....	7		
Other new formations.....	8		1

Aggregate of the foregoing tables—Continued.

DISEASES, ETC.	Agencies.	Agency boarding schools.	Indian training and indus- trial schools.
<b>CLASS II.—ABNORMAL CONSTITUTIONAL DEVIATIONS—Continued.</b>			
<b>ORDER III.—DEVELOPMENTAL.</b>			
Atelectasis, pulmonary.....	1		
Difficult dentition.....	13		
Hernia (femoral, pudendal, etc.).....	39	2	1
Hydrocele.....	8		
Imperforate anus.....	1		
Paraphymosis.....	5		
Phymosis.....	1		
Other affections of this order.....	15	2	2
<b>CLASS III.—DISEASES OF FUNCTIONALLY GROUPED ORGANS.</b>			
<b>ORDER I.—THE NERVOUS SYSTEM.</b>			
Abscesses of brain.....	2		
Anæmia, cerebral.....	9	2	
Angina pectoris.....	1	1	1
Apoplexy (cerebral or spinal hemorrhage).....	13	1	
Catalepsy.....	2	1	
Convulsions.....	91	10	6
Chorea (St. Vitus' dance).....	29	7	3
Delirium tremens (alcoholism, acute).....	6	1	
Ecstasy.....	1		
Embolism, cerebral (embolic apoplexy).....	1		
Encephalitis (inflammation of brain).....	13		2
Epilepsy.....	22	1	5
Headache.....	1,501	135	131
Hemiplegia.....	4		
Hysteria.....	20	14	8
Insanity (affective, ideational, amentia).....	1		
Insomnia.....	10		3
Meningitis.....	13	2	2
Myelitis (acute inflammation of cord).....	2		
Neuralgia.....	1,603	58	101
Neuresthenia.....	6		
Neuritis.....	1		
Pachymeningitis (inflamed dura mater).....	1		
Paralysis (agitans, motor, portio dura, etc.).....	45	1	3
Sclerosis (chronic inflammation of cord).....	4		
Spasm (histrionic, etc.).....	5		
Thrombosis.....	1		
Vertigo.....	4		6
Other diseases of this order.....	54		3
<b>ORDER II.—THE ORGANS OF CIRCULATION.</b>			
Aneurism.....	13		
Carditis (inflammation of the heart).....	9		12
Debility, cardiac.....	10	1	
Degenerations (arterial, cardiac).....	1		
Failure, cardiac (syncope).....	1		
Functional cardiac derangement.....	20		
Grave's disease.....	4		
Occlusion.....	1		
Phlebitis.....	1		
Ulceration.....	1	1	
Valvular disease (aortic, mitral, pulmonic).....	51	2	4
Varix.....	5		
Other diseases of this order.....	9		
<b>ORDER III.—THE ORGANS OF RESPIRATION.</b>			
Aphonia.....	3		1
Asthma (bronchial spasm).....	55	1	6
Bronchiectasis.....	4	1	
Bronchitis.....	3,508	336	510
Catarrh, nasal.....	648	66	102
Congestion (bronchial, pulmonary, etc.).....	140	6	13
Deflection of nasal septum.....	2		
Dysphonia.....	1		
Emphysema.....	1		
Epistaxis.....	31	15	
Exostosis of nasal septum.....	1		
Foreign bodies (in hyoid fossa, œsophagus, etc.).....	5		1
Hæmoptysis.....	118	4	7

## Aggregate of the foregoing tables—Continued.

DISEASES, ETC.	Agencies.	Agency boarding schools.	Indian training and industrial schools.
<b>CLASS III.—DISEASES OF FUNCTIONALLY GROUPED ORGANS—Continued.</b>			
<b>ORDER III.—THE ORGANS OF RESPIRATION—Continued.</b>			
Hypertrophy (tonsils, turbinated bones, etc.)	22	2	1
Laryngitis	490	73	60
Ozœna		1	
Pharyngitis	69	26	87
Pleuritis (pleurisy)	148	12	22
Pneumonia	684	150	142
Rhinitis	2		
Tracheitis	1		
Ulceration of epiglottis, etc.	1		
Other diseases of this order	192	13	2
<b>ORDER IV.—THE GENITO-URINARY ORGANS.</b>			
<b>Section A.—Obstetrical.</b>			
Abortion	14		
Abscess, mammary	10		
Anorexia	9		
Convulsions, puerpural	1		
Embryotomy, foetal	1		
Fissure of nipple	7		
Hæmorrhage, post partum	5		
Inflammation, mammary	12		1
Morning sickness (vomiting of pregnancy)	8	1	
Placenta prævia	1		
Premature labor	3		
Presentations, faulty	3		
Presentations, natural	38	1	1
Prolapsus funis	1		
Retained placenta	2		
Still birth	11		
Other affections of this order	5		
<b>Section B.—Gynecological.</b>			
Abscess (pelvic, vulvo-vaginal)	1		
Amenorrhœa	59	13	10
Cellulitis (pelvic, periuterine)	1		
Degeneration (cervix, uterine, mucous membrane)		1	
Displacements (tubes, ovaries)	4		
Dropsy (ovarian, tubal)		1	
Dysmenorrhœa	78	19	15
Endometritis	56		
Granulations, cervical (cock's comb)	4		
Hæmorrhage, pudendal	17		3
Hydatids (ovarian, uterine)	1		
Leucorrhœa	65	3	1
Menopause	3		
Menstrual suppression	14	2	
Oophoritis	4		
Peritonitis, pelvic	3		
Prolapsus (uteri, vaginae)	11	1	
Retroversion	1		
Subinvolution, uterine	2		
Vaginismus	1		
Vulvitis	2	1	1
Other diseases of this order	13		1
<b>Section C.—Male and urinary.</b>			
Balanitis	7		6
Calculi (gravel)	6		2
Congestion of kidneys	34	1	
Cystitis	98	4	5
Diabetes	2		1
Epididymitis	23		2
Hæmaturia	7		1
Ischuria (suppression of urine)	7		1
Incontinence of urine	21	28	23
Nephritis (Bright's disease)	80	3	
Varicocele	2		1
Other diseases of this order	79		3
<b>ORDER V.—THE DIGESTIVE ORGANS.</b>			
Abscess (pancreatic, etc.)	2	1	
Ascites	19		

Aggregate of the foregoing tables—Continued.

DISEASES, ETC.	Agencies.	Agency boarding schools.	Indian training and industrial schools.
<b>CLASS III.—DISEASES OF FUNCTIONALLY GROUPED ORGANS—Continued.</b>			
<b>ORDER V.—THE DIGESTIVE ORGANS—Continued.</b>			
Cirrhosis (gastric, hepatic, etc.)	18		
Congestion, hepatic (nutmeg liver)	12		2
Dyspepsia (indigestion)	1,009	57	78
Enteritis	63	4	6
Fistula, salivary	4		
Gall stone	4		
Gastritis	106	23	12
Glossitis	2	1	
Hemorrhage (hematemesis, etc.)	23	2	1
Hepatitis, acute	23	5	1
Inflammations (of gums, hepatic ducts, etc.)	14		1
Jaundice	44	6	8
Obstruction (gastric, intestinal, etc.)	1,824	51	64
Parasites (round worms, tape worms)	607	17	1
Quinsy (tonsillitis)	811	155	149
Ranula	1		
Stomatitis, ulcerative	74	4	10
Thrush (aphthæ)	46	4	2
Ulcer (duodenal, gastric, intestinal, etc.)	13	1	
Other diseases of this order	381	53	24
<b>CLASS IV.—DISEASES OF SPECIAL ORGANS.</b>			
<b>ORDER I.—THE SKIN.</b>			
Abscess	288	39	61
Acne	39	3	
Bromidrosis	2		
Chloasma	1		
Comedo	12		
Dermatitis, exfoliate	5		5
Eczema	544	84	92
Erythema (chilblain)	17	1	
Furuncule (boils)	178	38	49
Herpes (circinatus, zoster, etc.)	123	17	7
Ichthyosis	1		
Lentigo	3		
Lichen	1		
Demphigus	1		
Phtheriasis (lice)	224	59	2
Pityriasis	1		
Porriago	25	1	
Pruritis (prurigo)	12		2
Psoriasis (dry tetter)	30		1
Scabies (itch)	683	187	40
Sclerema	1		
Scorbutus	8		
Scrofuloderma	47	3	8
Seborrhœa	1	1	8
Syphiloderma	2		
Trychophytosis	1	3	
Ulcer	360	68	41
Uticaria	20	4	2
Verruca	11		
Wen			1
Whitlow (onychia)	36	8	7
Other diseases of this order	921	47	27
<b>ORDER II.—THE EYE.</b>			
Abscess of caruncle	2		
Abscess of cornea	7		
Amaurosis	5		2
Amblyopia	6		
Cataract	14		
Cellulitis, orbital	2		
Conjunctivitis	4,842	1,382	942
Epiphora	1		
Fistula, lachrymal	1		
Foreign bodies in cornea, etc	3		
Glaucoma	3	1	
Hypermetropia	3		
Injuries (orbital)	3		
Iritis	1	1	
Kerato-conjunctivitis	64	5	8
	54	10	6

\* Note attached to H. C. Slavens's bid: Winter deliveries for northern agencies to be hay fed with privilege of putting up hay for same on reservations, and all deliveries to be of northern-raised cattle, and such as comply with your specifications as to length of time cattle are required to have been north of south line of the State of Kansas. Will fill Pine Ridge and Rosebud agencies contracts with spayed heifers and cows, to extent of one-fourth, the awards to be considered as steers at prices 5 per cent less than named above for said agencies, each or either, and at prices 10 per cent higher than named above, under second specifications, respectively, for Crow Creek, Lower Brulé, Cheyenne River, Standing Rock, Pine Ridge, and Rosebud agencies, each or either, will fill contracts for said agencies, or either of them, with corn-fed cattle for the last six months of the contract year, the amount of corn-fed beef offered to be not over 50 per cent of the entire contract amount for each agency, and not exceed at any agency the amount delivered at such agency during the first six months of the year, and to be taken each month in amounts equal to the current issues of the month only. Will also furnish corn-fed cattle for the May and June deliveries alone, as above offered, for Cheyenne River and Standing Rock agencies, at 5 per cent higher prices for each or either agency; same for Pine-Ridge and Rosebud agencies.

- a With semimonthly or monthly deliveries, as desired in amounts to cover current issues till about October 1; then balance to complete contract.
  - b With deliveries from November 1 till May to be monthly, and for the other six months of the year to be semi-monthly, if desired, in amounts to cover current issues.
  - c As required for May and June instead of offer first stated (\$3.07) as to final delivery in October.
  - d As required until October 1, 1892, then all in one delivery. All Colorado, Wyoming or Utah cattle.
  - e Monthly delivery. Hay fed during winter. Not subject to 25 per cent increase from December 1, 1892, to June 1, 1893.
  - f July to November, 1892, and as per section 3.
  - g May and June, 1893.
  - h Monthly deliveries from July 1 to November 1, then enough to last to May 1. First delivery July 1.
  - i May and June deliveries, but without award for \$3.17.
  - j As required from July 1 to November 1, then final delivery, or will deliver as required during May and June at \$3.35.
  - k As required. Cattle according to specifications.
  - l Monthly. Cattle according to specifications.
  - m As required from July 1 to November 1, then enough to May 1, during May and June as required. Cattle according to specifications.
  - n As required by the Department until November 1, then monthly until May 1, 1893; as required until July 1. Hay and corn fed during winter.
  - o As required until November 1, then monthly until May 1, 1893, then as required until July 1. Hay fed during winter.
  - p As required until November 1, then enough to last to May 1, 1893; during May and June, 1893, price to be \$3.98. Will not deliver May and June unless awarded entire contract. All cattle have been north of the north line of Nebraska for one year.
  - q As required.
  - r Monthly.
  - s As required from July to November 1, then sufficient to last to May 1; during May and June as required.
- If allowed to put in not exceeding 1,000,000 pounds spayed heifers, will reduce price 10 cents per 100 pounds. Cattle will have been at least 12 months in succession north of the south line of Kan-  
sas.

Wm. C. Nones, 273 wagons awarded (Kentucky Manufacturing Company, Louisville, Ky.); Clement Studebaker, 13 wagons awarded for the Pacific Coast (Studebaker Manufacturing Company, South Bend, Ind.); Geo. R. Hudson, 202 wagons awarded (Milburn Manufacturing Company, Toledo, Ohio); Lawrence School, 13 wagons awarded.

NOTE.—Prices of wagons must include brake, evener, lower box, neck yoke, single-trees, stay-chain, and tongue, and flat-iron strengthening bar under the whole length of axles. Separate prices must be given for bows, covers, spring seat and top boxes. Price of log trucks to comprise bunks, evener, hickory axle 4½ by 5 inches, hubs 11 by 13 inches, neckyoke, pole, singletrees, spokes 1½ by 3½ inches, 4 stakes 3 feet long for use in bolsters, and tires ¼ by 4 inches; bolsters and bunks to be 3½ inches thick, tops heavily plated with iron, and the latter even with the tops of wheels. All other woodwork, including evener, hounds, neck yoke, pole, reach, sand-board, and singletrees, to be in proportion, fully and firmly ironed. Bidders are requested to quote prices for wagons with California brakes; and also for wagons adapted to the Pacific coast climate, with California brakes, delivered at San Francisco.

awards were made on comparison of samples which accompanied bids.]
