The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

**What's new
in the treatment of
iron deficiency and
nutritional anemias?**

**Concomitant use of
large oral doses of
vitamin C to increase
iron absorption**

It has been demonstrated¹ that with daily doses of 500 mg. of ascorbic acid, the absorption of ferrous sulfate in the gastrointestinal tract increased an average of 48%.

In its 1966 edition of *New Drugs*, the Council on Drugs of the American Medical Association² states: "Unless ascorbic acid is added in rather large quantities (500 mg.), iron ab-

sorption is not facilitated appreciably."

To insure optimal absorption, Iberet-500—the only hematinic to do so—provides 500 mg. of ascorbic acid along with 105 mg. of elemental iron. The iron is in controlled-release form because it has been shown³ that Gradumet® iron minimizes side effects, even in cases intolerant to conventional oral iron. This permits Iberet-500 to be taken on an empty stomach (when absorption is greater⁴) with virtually no gastric irritation.

In addition to high potency vitamin C and controlled-re-

lease iron, Iberet-500 provides therapeutic amounts of the B-complex. This comprehensive hematinic helps to insure maximal therapy for your patients.

Dosage is once a day.
