OPINIONS AND DECISIONS

OF THE

Railroad Commission of Wisconsin

VILLAGE OF SHARON
vs.
UNITED HEAT, LIGHT AND POWER COMPANY.

Submitted July 28, 1913. Decided Nov. 4, 1913.

The petitioner alleges that the respondent charges it an excessive rate for pumping water into the village water system from the well which supplies the water; that the respondent has increased the cost of this service, contrary to the provisions of an agreement between the petitioner and the respondent; that the petitioner has to bear the cost of depreciation, upkeep, etc., in addition to the contract price; and that the petitioner is not receiving a just compensation for the use of its power house and equipment by the respondent. The petitioner owns a joint gas and water utility for which the respondent for some time past has pumped the water used. The reasonableness of the terms of the agreement under which the respondent undertook to perform this service, and is still performing it, is in question. Investigations were made of the operating conditions of both the water and gas departments, and of the revenues and expenses of the water department. The contract price of 30 cts. per thousand gallons pumped appears to be slightly higher than the cost to the respondent of performing the service but it is lower than the cost to the village was when the village did the pumping. The difference between the cost to the respondent and the contract price seems to be made up of savings arising from the lower cost of fuel, from improved efficiency of equipment and from other economies.

Held: The terms under which the respondent performs the service of pumping for the petitioner do not appear to be unreasonable. The evidence shows that the respondent has not increased the cost of pumping water, as alleged, and that the petitioner, under the agreement, should assume the burden of depreciation and upkeep of the equipment in question. It appears further that the respondent should not be required to pay a rental, in addition to operating the gas plant, for the portion of the station used for the respondent's electrical equipment. The petition is therefore dismissed.

The petition in the above entitled matter alleges that the respondent charges the village an excessive rate for pumping water; that the respondent has increased the cost to the village of pumping the water, contrary to the provisions of an agreement with the respondent; that the village with its own equipment can furnish service at less cost; that the village has to bear the cost of depreciation, upkeep, etc., in addition to the contract price; and that the village is not receiving a just compensation for the use of the power house, equipment and accessories.

A hearing was held July 28, 1913, at the office of the Commission in the city of Madison. *Leon C. LeBaron* appeared for the petitioner and *Geo. M. Cantwell* for the respondent.

It appears that the respondent company entered into an agreement with the village to pump all water used in the village water system from the well which supplies the water. This agreement, which contained the rate against which complaint is made, provided in substance as follows: (1) that the company should pump the water for the village into the mains and tank, for a compensation of 30 cts. per thousand gallons, meter measure; (2) that the company should have the right to use the boilers and pumping apparatus of the village during the life of the agreement, the village to keep the well and pumps in good repair at its own expense, and the company to keep the boilers in repair at its expense during the period; (3) that the company should have the use of the village pumping station during the period of the agreement, and of the boilers, pumping apparatus, and machinery installed up to the time of signing the agreement, without rent or any other payment whatever; and (4) that, in case the village was required to repair wells or pumping apparatus, the company should furnish labor and repairs for this work at actual cost.

It further appears that when the respondent company was given a franchise to operate an electric light system at Sharon it was understood that within two years of the date of the franchise grant there should be completed and in operation a transmission line from Delavan to Sharon to supply the latter village with a twenty-four hour electric service. It also appears that representatives of the company stated that when the company had completed this transmission line the company would

do the water pumping for 75 per cent of what it was costing the village to pump. The village board, evidently feeling that their pumpage costs were high, made the above described agreement with the company. The representatives of the company state that the company entered into the agreement in order to get data on the expense of operating the plant under present conditions, so that upon completion of the transmisssion line it could figure closely on the cost of pumping with automatic electrically operated pumping apparatus to do the work.

OPERATING CONDITIONS.

The village of Sharon, up to the time the agreement referred to went into effect, operated a joint utility for the production and sale of gas and water, the gas manufactured being a gasoline gas. The gas and pumping stations are combined in a brick building located several blocks from the center of distribution, the arrangement of the plant being such that the boiler room is separated from the engine room, pumping and gas equipment.

With the permission of the village authorities, the United Heat, Light and Power Company installed a Westinghouse Junior, 10x92-cylinder engine and a 60 kw. generator in the boiler room, to handle the electric street lighting, etc., the engine to be operated from the boilers of the village plant.

The pumping equipment at Sharon consists of an air lift which raises the water from the well to a reservoir at the station, and a triplex pump which in turn elevates the water to the standpipe. The air lift is a simple arrangement of piping whereby the water is raised by means of compressed air. There are no working parts, and no valves are employed except to regulate the supply of air. The device consists of a partially submerged water pipe and an air-supply pipe. Compressed air forced into the water pipe at or near the bottom forms a series of bubbles or "pistons" which displace an equal volume of water. The successful operation of this device depends upon the ratio of the depth of submersion to the total lift, and the ratio of the area of the air pipe to that of the water pipe.

It appears that the well is 610 feet deep, the diameter 8 inches. The static head or water level is about 50 feet. The

drop, it is estimated, is close to 150 feet, making a total lift of 200 feet. It is not known what the total actual submergence is, but it is believed that the total submergence of the air pipe is close to 90 feet. From the air inlet, then, to the top of discharge the distance will approximate 290 feet. The quantity of air needed with efficient working conditions would, it appears, be close to 79 cubic feet per minute. To meet this demand of the air lift service and the gas plant, an air compressor having a piston displacement of from 90 to 100 cubic feet per minute would appear necessary. As a matter of fact, the air compressor is delivering about 106 cubic feet of air per minute at a speed of 116 r. p. m.

The data available indicate that the air lift pump is operated at an efficiency of about 86 gallons per minute. From the reservoir into which the air lift forces the water it is pumped by a triplex pump to the stand pipe. This pump, it appears, has been overhauled since the agreement mentioned went into effect and its efficiency has been increased from about 70 gallons to 109 gallons per minute. The pump, it is estimated, requires about six horse power to operate. A small blower is operated when the air compressor is connected direct to the well, giving, it is claimed, about 1½ lb. pressure upon the gas tank. The total load upon the engine, including friction of line shafting, etc., seems to be close to its full rating of 32 h. p. Since the agreement between petitioner and respondent has been in force considerable money has been expended upon the pumping engine and the air compressor and their efficiency has been considerably improved thereby. The steam pipes from boilers to engine have also been changed and certain defects have been eliminated.

GAS OPERATION.

Althought the petitioner in the present proceeding made no formal complaint concerning gas service, verbal statements made to the Comission during the investigation as to the operation of the gas plant under the agreement mentioned above make it appear advisable to investigate certain matters connected with the operation of the gas plant. The statements

referred to allege that under the system of operation now in force, both the pressure and the quality of the gas have varied and that the gas supply has failed completely at times.

The Commission has established standards for gas and electric service in Wisconsin but it has not been considered practicable to establish such standards for gasoline gas plants. Elements which go to make up adequate service: reliability, uniformity, safety, convenience, and intelligent utilization, are almost impossible of realization with this type of plant. The Commission has stated: "Adequate service is not necessarily the best service which it is possible to give, but rather the best service which can be given with due regard to economy to the consumer and to the company." (*In re Standards for Gas and Electric Service,* 1908, 2 W. R. C. R. 632, 642). It may be stated in general, other things being equal, that that gas is of the greatest value which has the greatest number of heat units per cubic foot. A gasoline gas of 800 or more B. t. u. per cubic foot is more costly, however, to the consumer than one of a lower B. t. u. rating, on account of the disproportionate expense of securing the high heating value. Tests made at several gasoline plants by inspectors of the Commission show that the average heat value is about 400 B. t. u. per cubic foot. During a large part of the year a gas having a heat value of 600 or more can be distributed, but it is believed this cannot be done without too greatly increasing the cost, while during the coldest weather it would probably be impossible. The heating value must be such as will enable gas to be sold to the consumer at the most reasonable cost.

The heating value of a gas, because of condensation, decreases to some extent with the distance that it is transmitted. The Sharon plant not being centrally located, it appears probable, although no tests have been made, that the gas supplied decreases in heating value considerably at points on the opposite side of town from the plant. A gas which fluctuates in heating value through too wide a range, which is a characteristic of gasoline gas, is almost as unsatisfactory as one which has an abnormally low heating value.

Almost as important as the calorific value is the pressure at which the gas is delivered. When gasoline gas is distributed the matter of pressure presents difficulties. With very low

pressures the distribution system of a gasoline plant, it is probable, would be inadequate so that high pressures are the rule with this type of plant. Instead of operating with pressures somewhere between 1½ to 6 inches of water, the pressure with gasoline gas is considerably greater than this. Burners and appliances in general use may be adjusted to consume gas most efficiently at the pressure at which a water or coal gas is delivered. Adjustments of burners using gasoline gas, it appears, are very frequent, resulting in a corresponding variation in the efficiency and satisfaction given by the gas. A certain range of variation is allowed in the operation of coal and water gas plants, and for plants supplying gasoline gas it is impracticable to set any standard.

It was stated by the engineer at Sharon that upon taking charge of the plant, he was instructed to use part of the material pumped from the drips to dilute the gasoline in the carburator of the gas machine. This it appears was unsatisfactory. In addition to what we have said in regard to the usual fluctuation of the gas pressure in this type of plant, the engineer stated that a three-quarter inch plug was found missing from a main opening, which relieved the pressure in a short time.

At the present time no gasoline gas plants are being installed in the state, this obsolete type being superseded in most instance by water gas machines. As we have indicated, to secure first class operation of a gasoline gas plant is almost impossible and to secure even fair results requires a degree of skill and a knowledge of the chemistry of hydro-carbons not possessed by the employes of these small plants.

In a village of the size of Sharon it is inexpedient to have more than one man at the plant, so that it is necessary to leave the apparatus to take care of itself during considerable periods of time. The cost of this kind of gas is already high and if and additional employe were required in the operation of the plant, the resulting cost would be prohibitive. However, the situation is such that it is a difficult matter to make recommendations.

The question to be determined in a case of this nature is how to get the best service practicable at a reasonable cost to consumers. The interests of the consumers must be conserved as far as possible without injustice to others. The taxpayers and

the consumers of the service rendered by the Sharon municipal plant are primarily interested in getting the service at the lowest possible cost, in order to secure as low rates as possible and at the same time to operate, if not at a profit, with as small a deficit as possible.

INCOME ACCOUNT.

The Sharon municipal gas and water plant submitted a report for the fiscal year ended June 30, 1913, in which it shows the following income account statement for the water department for the year:

OPERATING REVENUES:	
Commercial sales	$844.80
Municipal hydrant rentals	500.00
Total operating revenues	$1,344.80
OPERATING EXPENSES:	
Pumping	$793.95
Maintenance	62.21
Total pumping	$856.16
Distribution	98.19
Commercial	32.09
General	1.30
Undistributed	6.37
Total expenses	$994.11
NET OPERATING REVENUE	$350.69

The foregoing statement is manifestly incorrect in certain items. During February, March, April, May, and June, 1913, the United Heat, Light and Power Company, who was doing the pumping under the agreement previously noted, pumped 2,646,500 gallons of water, according to the report of the Sharon municipal plant. At 30 cts. per thousand gallons this would result in a charge for pumping of $793.95, which corresponds to the item noted in the foregoing expense statement. With this as a basis, it is evident that the expense resulting from the water pumped by the municipality itself during the other seven months of the year has been omitted from the report entirely.

The United Heat, Light and Power Company for the period ended June 30, 1913, reports earnings of $954.15 for pumping water at Sharon. Under the contract price of 30 cts. per thou-

sand gallons this would indicate that some 3,180,500 gallons were pumped from February to July, 1913, or 534,000 gallons more than were reported by the Sharon plant.

The other items noted in the income account are for this five month period. On the basis of the water pumped during the period noted, the indications are that with all consumers metered, approximately 7,646,400 gallons of water were pumped during the entire year. In an opinion of the Commission issued January 11, 1912, in the case of *Lothrop et al. v. Village of Sharon* (8 W. R. C. R. 479, 486) it was estimated, with no station meter to check the figures, that 11,000,000 gallons were pumped during the period considered. At that time, it might be noted, only 80 per cent of the consumers were metered, while at present all consumers are on a meter basis.

ACCOUNTING PROCEDURE AND BALANCE SHEET.

From the available reports and records of the utility it appears that for a time an attempt was made to comply with the provisions of the Commission for installing proper forms of accounts. Present examinations show, however, that the accounts prior to about March 21, 1913, were kept up properly, so that the desired information can be obtained only with difficulty.

Because of the fact that the books of the Sharon plant have never been balanced since the beginning of operation, no balance sheet has been submitted in any of the reports received by the Commission. A balance sheet, if properly presented, shows the actual condition of the business at the moment it is taken, giving information as to the solvency of the business and, to a certain extent, indicating profits which have been made. In the present investigation, however, such a statement is not available.

If we assume that 7,646,400 gallons of water are pumped during the year, at a cost of 30 cts. per thousand gallons, the total pumping expense, on the basis of the agreement previously mentioned, will amount to $2,293.92. The total expenses for the year, excluding depreciation and interest upon bonds and city equity would be about $2,431.87. It is evident from an

examination of the report, that the operating revenues reported are the actual receipts collected and not the amount earned. The municipal hydrant rental should be $1,000 and commercial sales, in all probability, will equal, if not exceed, $1,100.

APPORTIONMENT OF EXPENSES.

It was asserted by the representatives of the petitioner during the progress of this investigation, that in the investigation made by the Commission in the case of *Lothrop et al. v. Village of Sharon,* 1912, 8 W. R. C. R. 479, the Commission obtained a bare cost of 16.4 cts. per thousand gallons for pumping alone. It is evident that there is a misunderstanding in the minds of those representing the petitioner as to what was meant, in the opinion referred to, by the statement that "the total expense, including depreciation and interest, amounting to $3,744.19, is then distributed, $1,808.04 to output and $1,936.15 to capacity" (p. 486, case cited). This apportionment being misunderstood, the later statement, "Assuming a pumpage of 11,000,000 gallons with a total output charge of $1,808.04, gives a cost per thousand gallons pumped of about 16.4 cents" (p. 486, case cited), is also incorrectly interpreted. To make clear what is meant by "output" and "capacity" expenses, a short explanation appears advisable.

Cost of service is made up of different kinds of expenses. It must be clear to all that expenses incurred in the production and distribution of a service are not all of the same nature; as, for example, the expense of steam generation differs from interest on the investment. Such expenses as depreciation, interest, taxes, and certain *portions* of other expenses, are indirect expenses, and may be said to be determined by the investment necessary to provide for the consumers' demand. It logically follows that there are certain other expenses which are directly dependent upon the output of the plant, varying directly with the output.

For the purpose of cost analysis a system of accounts should be used that shows the direct operating expenses of the utility grouped into accounts covering the different steps of production in chronological order. Thus, the direct expenses of a water

utility are grouped into: Pumping, distribution, and commercial. The items included in these accounts can be charged directly to the various steps in the furnishing of water. The indirect expenses, also called "overhead" or "fixed", are grouped into general, undistributed, interest, depreciation, and taxes. These expenses cannot be charged to any particular operation, but must be distributed on some basis over the different units of the product. It is obvious that the indirect or capacity expenses do not vary with output, but, on the other hand, they are occasioned in supplying that output, hence output should bear its proportionate part.

The cost of supplying water is composed of three elements, the consumer, capacity, and output costs—the first two, however, sometimes being combined in utility accounts—and it is inequitable to assess the indirect expenses entirely to any one or two of these elements. Each element must bear its proper share.

These facts suggest that the rates charged for a service, in order to bear the proper relations to the cost of furnishing it, should be made up of a fixed charge, based, if possible, upon the consumer's demand, and of a variable charge for each unit used. In determining equitable water rates, no accurate demand data being generally available, the capacity expenses may sometimes be apportioned over the total number of consumers. The variable charge per unit used, which in the present case is one thousand gallons, is obtained by dividing the sum of all those expenses charged to output by the number of gallons of water consumed.

The output cost per thousand gallons *pumped* amounting to the 16.4 cts. above mentioned, is in no way comparable to the "Pumping expense" cost per thousand gallons pumped. The table of income accounts included in the opinion in the case of *Lothrop et al. v. Village of Sharon,* 1912, 8 W. R. C. R. 479, 485, shows, under "Operating expenses" (the first heading being "Production" instead of "Pumping" because of the fact that expenses of the gas plant are included in the table), that the water department in 1911 expended $2,048.84 for the mere pumping of water. At the time the opinion cited was issued, it was estimated—there being no station meter from which data could be obtained—that at least 11,000,000 gallons of water

would be pumped. It now appears from an examination of the monthly pumpage records since the station meter was installed that this estimate of 11,000,000 gallons was high and that at the time the estimate was made, as well as at the present time, not more than 7,000,000 to 8,000,000 gallons were being pumped yearly. On a 11,000,000 basis the *"pumping"* cost is 18.6 cts. per thousand gallons, while on the 7,646,400 gallon basis, which now appears to be nearer the correct figure, the "pumping" cost is 26.8 cts. per thousand gallons.

COST OF PUMPING.

The following statement has been compiled from data obtained from an audit of such accounts as could be secured from the books and records of the utility:

SHARON MUNICIPAL WATER & GAS PLANT

"PUMPING" EXPENSE ACCOUNT

Water Department.

For the period from June 1, 1912, to March 21, 1913.

Steam expense	$1,599.58
Power "	483.06
Misc. "	17.35
Total	$2,099.99

Pumpage during this period, as nearly as we can determine, was approximately 6,040,000 gallons, giving a cost of 34.7 cts. per thousand gallons. Deducting from the above items those expenses incurred during February and March, when the plant was being operated under the agreement, the balance equals about $1,868.24, which with a pumpage of 5,320,000 gallons gives a cost of 35 cts. per thousand gallons pumped, indicating a slight average reduction in costs soon after respondent began operations. The foregoing figures would indicate that the bare cost of pumping has increased considerably over the showing made in 1911. Adding to the above expenses allowances for water used for cooling the air compressor and for use in the boilers, totaling about $200 from June 1 to February 1, 1913, increases the unit costs to 38.8 cts. per thousand gallons.

It is of interest to note that for 18 class C water plants reporting for the year ended June 30, 1912, from villages varying

from 700 to 1,400 population, the average cost of pumping was $1,091.18, the median being $1,128.85. The average of all class C plants was $1,702.36. These figures would indicate that the costs at Sharon are considerably above normal. With a pumpage, we will say, of 8,000,000 gallons at the average expense of $1,702.36 the cost per thousand gallons would be 21.3 cts. At an expense of $1,091.18, on the other hand, the cost would be 13.6 cts. per thousand gallons.

An examination of the apportionment of expenses made by the United Heat, Light and Power Company between water pumping and generation of electric current at Sharon would indicate that the company has charged to the latter an amount in excess of what might reasonably be so charged when the coal and the labor required by each and other items are carefully considered. Reapportioning the items, however, results in increased pumping expenses that leave very little difference between the cost per thousand gallons and the rate of 30 cts. per thousand gallons received by the respondent.

It was admitted by both parties during the progress of this case that the engine which operates the triplex pump and air lift system had been in such a bad state of repair that it required practically all the steam it was possible to generate in a nearly new 110 h. p. boiler. Inasmuch as this was true during part of the life of the agreement previously mentioned, it is evident that the company, with inefficient apparatus, was able to pump the water and deliver it to the standpipe at a lower cost per thousand gallons pumped than was the village of Sharon when the latter did the pumping with the equipment in supposedly good condition. However, the remedying by the company of the inefficient condition of the engine no doubt contributed more than anything else to the lessening of the costs.

To obtain cost figures which would be at all accurate, it was necessary to carefully examine the expenses for the period during which the plant was operated by the United Heat, Light and Power Company and to make apportionments between electric generation and pumping. The company reports $733.16 as expenses incurred during the period February 1 to June 30 in pumping 3,180,500 gallons of water. This gives a unit cost of 23 cts. per thousand gallons. It appears that the company

has charged to electric generation an amount in excess of what should have been so charged. For this reason we have reapportioned the pumping expenses between the different classes of service.

These apportionments indicate that from February 1 to June 30, 1913, some $899.22 was chargeable to pumping water. In addition to this it appears that the company should be assessed for water used for cooling the air compressor and for steam generation.

Present indications point to a consumption for these purposes of about 3,000 gallons a day. Assuming that this water is paid for by the respondent at the regular rates, this expense will amount to about $124.75 for the period in question, making the total expenses $1,023.97. Without a charge for this water the unit cost per thousand gallons pumped, on a basis of 3,180,500 gallons, is 28.3 cts. With this charge included the cost will amount, it appears, to about 32.2 cts. per thousand. The revenue received during the period amounts to $954.15, which results in a surplus of $54.93 on the first basis and a deficit of $69.82 on the second.

For the period from June 30 to September 30, 1913, we have apportioned $500.37 to pumping. During this period 2,208,900 gallons of water were pumped. This gives a cost of 22.7 cts. per thousand gallons. If we now add the cost of water used for cooling etc., amounting to about $69.75, the unit cost per thousand gallons is increased to 25.9 cts. It will be seen that under the respondent's operation for a number of reasons which will be pointed out later, the costs are decreasing.

Of the expenses, amounting to $1,928.56, incurred by the United Heat, Light and Power Company during the entire period from February 1 to September 30, 1913, $1,399.59 are apportionable to cost of pumping. During the period named, 5,389,400 gallons of water were pumped by the company. This gives an average cost of 26 cts. per thousand. If, however, there is added to the $1,399.59 the cost of the cooling water and the water used for steam generation, which amounts to about $194.50, the total expense is increased to $1,594.09 and the unit cost to 29.5 cts. per thousand.

It might be said in connection with the apportionments outlined above, that when the total expenses charged to electric gen-

eration are deducted from revenues received from electric service, very little is left to offset lamp renewals, taxes, depreciation and interest.

It does not seem unreasonable to allow the respondent the margin, equivalent to the slight difference between its cost of pumping and the contract price, resulting from more efficient operation and the consequent saving in certain items to be noted later.

Although the contract price of 30 cts. per thousand gallons pumped is slightly higher than the figures indicate the cost to be to the United Heat, Light and Power Company, this price of 30 cts. is lower than the cost was when the village did the pumping, when items noted herein are taken into consideration.

The indications are that if the pumping apparatus were to be maintained in its present fairly efficient condition, and other factors promoting efficient operation were to continue as they are, the pumping cost to the village might be considerably reduced, if the village were to do the pumping. The air lift system of pumping water as now installed by manufacturers of such equipment is not an uneconomical method of pumping water from deep wells. Results obtained with improper methods of well piping in connection with inefficient compressors, from which satisfactory results cannot be expected, are no indication that efficient, low cost operation cannot be obtained at Sharon. That there is some defect in the well, either in the casing or in the submergence of the air pipe, a deficiency of water or a clogging of the suction appears probable from the tentative examination made.

Air compressors as now manufactured operate with much less fuel for a given power than was formerly required. So many successful plants are now at work under widely different conditions of volume and lift that the designing of air lifts has been reduced to a scientific basis. It appears in the present instance that the well and its equipment need considerable overhauling to insure that efficiency which should be secured with the type of apparatus used.

As regards the triplex pump and 32 h. p. engine at Sharon, it appears that the slip in the pump, which was above normal, has been remedied, that the engine, which was in such poor condition that an abnormal amount of steam was required to oper-

ate it, has been overhauled and that the leaky valves in the engine have been repaired.

The low maintenance expenses noted in the accounts under village operation may be reflected in poor physical condition of the plant, which would cause the costs to the village to increase abnormally at some time in the future. There are many items in addition to those mentioned above which help to contribute to greater efficiency. Expert supervision results in attention to many small details which have a marked bearing on the cost per thousand gallons of water pumped.

An examination of the coal bills incurred by the village during its operation of the plant shows that the price paid for coal varied from $5 to $6 per ton at the plant. The United Heat, Light and Power Company, however, during the period from February 1 to September 30, 1913, paid on an average $3.00 per ton at the plant for all coal used. The difference in the cost of coal alone will about cover the difference in the pumping costs.

It appears, then, that the variation between the contract price per thousand gallons for pumping and the cost to the respondent is made up of savings in the cost of fuel, improved efficiency of equipment, etc.

As regards compensation to the village for the use of the municipal power house boiler equipment, etc., for electric generation, no provision whatever was made in the agreements between the interested parties. It is hardly possible that a provision for compensation can be read into the agreement, but it appears that it was understood that in return for the privilege of installing and operating an engine and generator in part of the station, the United Heat, Light and Power Company was to operate the municipal gasoline gas plant. The agreement does not specify as to what is to be understood as included in the operation of the gas plant and for this reason dissatisfaction has arisen, certain citizens claiming that the village now has to pay for certain gas operation expenses which should be borne by the respondent. It may have been verbally understood that the respondent was to perform these operations, but inasmuch as nothing was incorporated in the agreement, it is not clear how the village can expect the United Heat, Light and Power Company to pursue any but the course now followed.

The view is held by certain citizens of Sharon that the village is bound to supply only the gasoline for the operation of the gas plant. They maintain that the accounts of the village show expenditures of considerable amounts which should have been taken care of by the respondent. It appears to us, upon examining these items and the agreement under which the respondents was operating, that the assumption that the United Heat, Light and Power Company should bear these costs is erroneous.

From what has been said it is obvious that the conditions disclosed by the investigation made by the Commission are such that no readjustment of the rate for pumping is required. This conclusion is supported not only by the facts here presented and discussed, but also by a great deal of other and equally important data which, for lack of space, could not be given in detail. The purpose in the present report of the situation at Sharon has been to point out some of the leading features of the case which, among other things, throw light on the conditions which primarily caused the complaint in the present proceeding; the practices which brought about these conditions, the probable result of the controversy if the agitation is permitted to go on, and what in the light of the facts obtained appears to be the proper mode of procedure in order that normal conditions may be restored.

The fact that the present case was brought before the Commission upon the stipulation of all parties concerned, that the Commission decide the difference between the parties as to the efficiency of operation under the pumping agreement and the value of the agreement, and determine the liability of the village and company in view of all the facts and circumstances, leads us to believe that the reasonableness of the agreement is a proper subject for consideration by the Commission.

One of the important questions to be disposed of, in this view of the case, relates to the legal rights of the village of Sharon as owner of the plant and the legal rights of the United Heat, Light and Power Company as owner and operator of certain equipment installed in the plant in connection with equipment belonging to the village.

The United Heat, Light and Power Company contends that, regardless of the question of fact as to whether damage has resulted to the village from the change in operation of the water

works, the village, notwithstanding the expiration of the pumping contract, is precluded from setting up any claim for refunds or rebates, by reason of its acquiescence in the use of the plant by the United Heat, Light and Power Company and its payment of all bills presented to it from May. 10, 1913, to October 13, 1913.

The village board has manifested no intention of instituting such proceedings, except that the president has stated that if the Commission finds the rate for pumping too high the village would expect a refund. The village board is willing to pay the contract rate for the water pumped by the United Heat, Light and Power Company if that rate is found to be equitable. The only question is whether the company shall receive for the service performed since the expiration of the contract the same compensation which it received while the contract was in force. With respect to the management of the plant there is no evidence to show that the service has been deficient or that there has been a laxity in operation causing the plant to deteriorate to a greater extent than under the previous conditions of operation.

SUMMARY.

Investigation indicates that the petitioner's contention that the respondent has increased the cost of pumping the water for the village water system, contrary to the agreement, is not well founded, as no clause requiring the total expenses to be kept within certain limits appears in the agreement.

The contention that the village with its own equipment can furnish service at less cost, is not borne out by the facts, as it appears from the data now available that the village was never able to accomplish this in the past.

As regards the contention that the village has to bear the cost of depreciation, upkeep, etc., it should be noted that the contract involved in the present proceeding specifically provided that the United Heat, Light and Power Company should keep the boilers in repair and that the village of Sharon should maintain the other equipment installed by the village. Under the terms of the contract depreciation was, therefore, left to be provided for by the village.

It is not believed that equitable treatment of the village requires that the respondent should pay a rental in addition to operating the gas plant for the use of a portion of the station for its electrical equipment.

The Commission, after careful consideration of the facts which have been discussed above, is of the opinion that the terms under which the United Heat, Light and Power Company is operating in the village of Sharon, insofar as matters concerned in the present proceeding are involved, are not unreasonable and the petition will therefore be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition be dismissed.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RULES, REGULATIONS AND PRACTICES OF THE CHIPPEWA VALLEY RAILWAY, LIGHT AND POWER COMPANY IN FORCE IN THE CITY OF EAU CLAIRE, WISCONSIN.

Decided Nov. 4, 1913.

The Commission, on its own motion, further investigated the matter of the electric rates charged by the Chippewa Valley Ry. Lt. & P. Co. for service in the city of Eau Claire, for the purpose of considering the advisability of revising the order issued Nov. 11, 1912 (10 W. R. C. R. 692). This order, which gave the utility a choice between two schedules designed to eliminate discriminatory practices previously followed, was suspended prior to the date on which it was to go into effect, on the ground that the utility had additional facts to present to the Commission.

Held: The adoption of either of the schedules proposed in the order of Nov. 11, 1912, would result in many increases in rates which do not seem warranted at the present time. The order in question is therefore revoked and the utility is ordered to place in effect on Dec. 1, 1913, a new schedule of rates determined by the Commission.

SUPPLEMENTARY ORDER.

The Commission issued a decision in the above entitled matter on November 11, 1912 (10 W. R. C. R. 692), giving the utility a choice between two schedules which eliminated some of the practices which were the subject of complaint. This order, however, was suspended prior to the date on which it was to go into effect, on the ground that the utility had additional facts to present which had not been before the Commission.

Further investigation of the entire rate situation in Eau Claire discloses the fact that the putting into effect of either of the two schedules proposed in our former order would result in a great many increases in rates which do not seem warranted at this time.

IT IS THEREFORE ORDERED, That the order in the decision dated November 11, 1912, shall be and hereby is revoked.

IT IS FURTHER ORDERED, That the Chippewa Valley Railway, Light and Power Company shall abandon its persent schedule of rates for electric light and place in effect the following:

LIGHTING SCHEDULE.

Residences.

In all residences the rate shall be 15 cts. per month for each 50 watt unit, or its equivalent, of active connected load, and 3 cts. per kw-hr. for all current consumed. The active load shall be based on the lamps connected, excluding appliances, and shall be assessed as follows:

60 per cent of the first 500 watts.
33⅓ per cent of the next 3,000 watts.
20 per cent of all in excess of 3,500 watts.

Business.

Commercial lighting shall include retail and wholesale mercantile establishments, saloons, restaurants, depots, and all other consumers not herein otherwise specifically provided for. Such lighting will be done by means of approved incandescent lamps, or by six ampere a. c. arc lamps, at the option of the consumer, and the prices for such lighting shall be as follows:

Incandescent Lighting: The rate for business incandescent lighting shall be 15 cts. per month for each 50 watt connected capacity, or its equivalent, and 3 cts. per kw-hr. for all current consumed; provided that to all consumers not using more than 100 per cent nor less than 10 per cent of their total connected interior capacity for window display purposes, all lights so used shall be considered and paid for as nonactive lights at the rate of 3 cts. per kw-hr. for the current consumed; and the maximum rate to all consumers who shall come within the terms of this proviso shall not exceed 6 cts. per kw-hr. for the total current used. In case the capacity of the window lights exceeds the interior lights, such excess shall be paid for under the meter rate for window lighting.

Arc Lighting: The rate for business arc lighting shall be 45 cts. per month for each six ampere a. c. arc lamp connected, plus 3 cts. per kw-hr. for all current consumed; the maximum rate per month, however, in such case shall not exceed 6 cts. per kw-hr. for the total current used each month.

Window, Sign and Advertising Lighting, where not connected with interior lighting, shall be paid for under either of the following schedules:

A. Flat rate for unmetered window, sign and advertising lighting contracted to burn according to the schedule tabulated below on yearly contracts. Lights to be turned on and off by the company.

Lighting Schedule.

40	3.28	150	12.28
50	4.10	250	20.50

B. Meter rate 10 cts. per month per 50 watt connected capacity plus 3 cts. per kw-hr. for all current consumed. The maximum rate for this class of service shall be 6 cts. per kw-hr.

Hotels, Clubs and Boarding Houses: The rate shall be 15 cts. per month for all active lights and 3 cts. per kw-hr. for all current consumed. In this class 55 per cent of the connected load shall be deemed active.

Auditoriums, Dancing Halls, Opera Houses, Lodge Rooms, Churches, Y. M. C. A., Warehouses, Warerooms or Wholesale and Jobber's Houses, and Manufacturing Plants. The rate shall be 15 cts. per month for one-third of all connected units of 500 watts or its equivalent and 3 cts. per kw-hr. for all current consumed, provided that all lights in general offices and clerical rooms of this class shall be rated as active lights.

Equipment and Renewals.

In all foregoing rates, unless otherwise specifically stated, the consumer shall furnish and renew all lamps, except arc lamps, and all switching and wiring on the premises, and the company shall furnish arc lamps, transformers, meters and sufficient wiring, pole line and other equipment necessary to deliver the current to the premises.

Flat Rates.

The company shall not be required, at its own expense, to furnish or install meters for any consumer using less than five 50 watt units, or the equivalent thereof, in any one building, and shall be authorized to charge consumers using three or more such units a flat rate of 30 cts. per month per unit in residences and 50 cts. per month per unit in business places; or the company may, at its own option, install a meter for any such consumer, in which event the rate shall be as specified in the above classification.

Minimum Rate.

The company shall be authorized in every case where a meter is installed to make a minimum charge of $1.00 per month, and to flat rate customers a minimum charge of 90 cts. per month in residences and $1.50 per month in places of business.

Maximum Rate.

The maximum rate, except where authorized by the minimum charge heretofore provided for, shall in no instance exceed 9 cts. per kw-hr.

These rates shall go into effect December 1, 1913.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SERVICE OF THE ELDERON TELEPHONE COMPANY.

Submitted July 19, 1912. Decided Nov. 5, 1913.

The Commission, on its own motion, investigated the service of the Elderon Tel. Co. after receiving informal complaint that the said service is inadequate.

Held: The service rendered by the utility is inadequate. Although the Commission is formulating definite standards for telephone service to apply to all telephone companies, the situation in the present case seems to warrant a special order, pending the establishment of such standards, to insure prompt attention to the betterment of the service. The utility is therefore ordered: (1) to make such improvements and additions to its equipment as are necessary to establish adequate service on its lines and thereafter maintain adequate service; and (2) to furnish the Commission, until further notice, before the 10th day of each month, with a statement of the causes and durations of all interruptions in service during the preceding month and the remedies therefor.

Informal complaint having been made that the service of the Elderon Telephone Company is frequently interrupted and is inadequate and unsatisfactory, the Commission, on its own motion, ordered an investigation of the matter. A hearing was held on July 19, 1912, at Eland Junction, at which the Elderon Telephone Company was represented by *A. J. Plowman.*

It appears from the testimony that the Elderon Telephone Company has its central office at Eland and operates telephone lines from Elderon to Eland, Galloway, Wittenberg, and other places in the vicinity. The chief complaint brought out at the hearing is that patrons whose telephones are connected with the Galloway line are unable to hear distinctly persons speaking from other points on the Elderon Telephone Company's lines or from points on lines with which it connects. Long distance service was said to be particularly poor in this respect. It was also stated that the service is frequently interrupted. The director of the Elderon Telephone Company attributed the poor long distance service to conditions on the connecting lines, and stated that local interruptions in service are sometimes the result of wires coming in contact with green trees.

Subsequent to the hearing other informal complaints were received, and the inspectors of the Commission investigated the conditions on the company's lines. These investigations show that at many points the lines have been broken by falling trees and reconnected by splicing in short pieces of wire. In some instances as many as twelve joints were observed in a single span. It was also found that "trouble" is not taken care of promptly and that no records of "trouble" and the delay occasioned by it have been kept. The Commission's inspectors made use of the service and at several different places experienced difficulty similar to that described by witnesses.

In the light of the testimony and of the reports of our engineers it is our judgment that the service rendered by the Elderon Telephone Company is inadequate. The Commission is formulating definite standards for telephone service to apply to all telephone companies, but the situation in this case seems to warrant a special order, pending the establishment of such standards to insure prompt attention to the betterment of the service. The equipment and lines should be so constructed and maintained as to insure reasonably continuous service, and the construction should be reasonably free from interference from the limbs of trees. Sufficient tests and inspections should be made by the utility to determine the condition of all lines, and a complete record kept, showing the nature of each complaint and each case of "trouble", the duration of the "trouble" and how it was overcome.

IT IS THEREFORE ORDERED, That the Elderon Telephone Company make such improvements and additions to its equipment as are necessary to establish adequate service on its lines and thereafter maintain adequate service.

IT IS FURTHER ORDERED, That said company furnish the Commission, until further notice, before the 10th day of each month, a statement of the causes and durations of all interruptions in service during the preceding month and the remedies used therefor.

ETTRICK TELEPHONE COMPANY
vs.
LA CROSSE TELEPHONE COMPANY.

Submitted Oct. 16, 1913. Decided Nov. 6, 1913.

The petitioner requests that the respondent be compelled to grant it the same terms for toll service over the respondent's toll line from Galesville to La Crosse that the respondent grants to the Western Wisconsin Tel. Co. The respondent collects from the petitioner 75 per cent of the tolls received by the petitioner from its subscribers for use of the toll line in question. The respondent and the Western Wisconsin Tel. Co. own the toll line jointly and each company retains all toll revenues originating on its own lines. The Western Wisconsin Tel. Co. charges all subscribers who desire toll line service a flat rate of $12.50 more per year than it charges subscribers who do not desire this service. For individual messages it charges the same toll rate as the petitioner.

Held: The request of the petitioner cannot be granted. The respondent and the Western Wisconsin Tel. Co. were acting entirely within their right in making the present apportionment of revenues between themselves and, so long as this appportionment does not result in prejudicing the rights of subscribers or patrons of either company, the action of the two companies in this matter is not subject to revision or modification by public authorities. Even where physical connection of lines is enforced under the statute, it is contemplated that the companies shall agree upon the apportionment of the joint tolls, and it is only in case of failure of agreement that the Commission has authority to make the apportionment. Moreover, in making the apportionment the Commission is bound both by statutory and by constitutional requirements to provide for such reasonable terms and conditions as will avoid the taking of property without compensation. Under the circumstances the apportionment of the toll revenues between the respondent and the Western Wisconsin Tel. Co. is no criterion for judging the reasonableness of charges exacted of a connecting company desiring the toll line facilities but having no proprietary interest in these facilities. The petition is therefore dismissed.

The petitioner alleges that physical connection between its system and the toll lines of the La Crosse Telephone Company is made through the Western Wisconsin Telephone Company's toll board at Galesville; that the La Crosse Telephone Company collects 75 per cent of the tolls received by the petitioner from its subscribers for use of the toll line to La Crosse, but makes no charge to the Western Wisconsin Telephone Company for

messages going from Galesville to La Crosse. Wherefore, the petitioner asks that it be placed on the same basis as the Western Wisconsin Telephone Company. It demands that if the La Crosse Telephone Company continues to exact a charge of 75 per cent on all revenues received by the petitioner for toll line service to La Crosse, it be required to exact the same charge of the Western Wisconsin Telephone Company, or, if the La Crosse Telephone Company renders such service free to the Western Wisconsin Telephone Company, that it be required to furnish the same service free to the petitioner.

The respondent, answering the petition, admits that it exacts of the petitioner 75 per cent of all tolls as alleged, and that such is the usual or universal charge to all companies or stations having connection with the respondent's toll system, excepting the Western Wisconsin Telephone Company. It alleges that the Western Wisconsin Telephone Company allows revenue to it in other ways than by exacting 75 per cent on tolls; that the Western Wisconsin Telephone Company owns and operates nine exchanges, and has in effect two rates, one covering the entire system outside of toll line service, and another rate to subscribers who desire toll service to La Crosse and Winona; that if the respondent were to charge the Western Wisconsin Telephone Company at the message rate, it would involve a change of rates of the entire system of the Western Wisconsin Telephone Company; that the respondent does not give the Western Wisconsin Telephone Company free calls to La Crosse, because the respondent retains all receipts for messages originating on its system and passing to the nine exchanges of the Western Wisconsin Telephone Company, which receipts are in lieu of the 75 per cent of all tolls over the toll line to La Crosse.

The matter came on for hearing October 16, 1913. The petitioner was represented by *John Norgaard,* its president, the respondent by *W. F. Goodrich,* its president, and the Western Wisconsin Telephone Company by *John C. Gaveney,* its attorney.

The petitioner is a mutual company and maintains an exchange in Galesville and another in Ettrick. Connected with these exchanges are its rural lines. Each subscriber owns one share of stock of the par value of $40, and is obliged to pay annually an assessment of $5 for the maintenance and operation of the plant.

The Western Wisconsin Telephone Company owns and operates nine different exchanges in Trempealeau and Buffalo counties, which are connected by metallic toll lines. It has exchanges in Galesville and Ettrick. The total number of its subscribers is approximately 1,700, of which 1,100 are rural subscribers. In Galesville and in Ettrick its exchanges compete with those of petitioner. The charges to its subscribers are $12.50 for service over the entire system, and $25.00 for service over the entire system including toll line service to La Crosse and to Winona, Minn. The toll line extending from La Crosse to Galesville is owned in part by the Western Wisconsin Telephone Company and in part by the La Crosse Telephone Company. The former owns and maintains that portion of the line running between Galesville and Hunters Bridge over the Black river. The La Crosse company owns and maintains that portion of the line between Hunters Bridge and La Crosse. The Western Wisconsin Telephone Company also owns the toll line leading from Galesville to Winona, where it connects with the North Western Telephone Company.

The Western Wisconsin Telephone Company charges all subscribers who are not upon the flat rate of $25.00 per annum the same toll rate per message which is paid by the subscribers of the petitioner. Its arrangements with the La Crosse Telephone Company is such that each of the companies retains all toll revenues originating on its own lines. This arrangement between the companies seems to be satisfactory to both. In making such apportionment of the joint tolls the companies were acting entirely within their right and so long as the apportionment does not result in prejudicing the subscribers or patrons of either company, their action in the matter is not subject to revision or modification by public authorities. Even where physical connection of lines is enforced under the statute, it is contemplated that the companies shall agree upon the apportionment of the joint tolls, and it is only in case of failure of agreement that the Commission has authority to make the apportionment.

The petitioner insists that it be placed upon the same basis as the Western Wisconsin Telephone Company respecting the division of tolls with the La Crosse company. This seems impossible, as the petitioner is a mutual company, has no interest

in the toll line, and desires the connection merely for the convenience of its patrons. If the petitioner were not required to exact toll charges of its subscribers and patrons, the Western Wisconsin Telephone Company, in order to protect its business, would be obliged to refrain from charging its subscribers either the $12.50 additional annual rate for toll service, or 15 cts. per message, according to its schedule. Manifestly, this would be unfair to the Western Wisconsin Telephone Company, because its toll line facilities in such event would be used to prejudice its revenues. A telephone company, no more than an individual, can insist that a connecting telephone company furnish its toll line facilities free of charge, for that would be clearly taking property without compensation and would meet the condemnation of constitutional provisions. In compelling physical connection between two telephone systems, it must be remembered that the statute provides for reasonable terms and conditions. It could not validly provide that one company should give another the use of its toll lines without compensation.

In the instant case, as has already been shown, the La Crosse company and the Western Wisconsin company are the owners of the toll line in question. Under the circumstances the apportionment of the toll revenues between them is no criterion for judging the reasonableness of charges exacted of a connecting company desiring the toll line facilities but having no proprietary interest therein.

If the La Crosse company did not require the petitioner to exact a toll from its subscribers for toll service, the result would be that the subscribers of the petitioner would receive toll service free, while the subscribers of the La Crosse company would be obliged to pay a toll service charge to communicate with the subscribers of the petitioner. This results from the fact that the petitioner is a mutual company. We fail to see any unjust discrimination against the petitioner as charged in the petition. Under the circumstances the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition be and the same is hereby dismissed.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE JANESVILLE WATER COMPANY BY THE CITY OF JANESVILLE FOR THE TAKING OF THE PROPERTY OF SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC.

Decided Nov. 6, 1913.

Objection to the jurisdiction of the Commission is made by the Janesville W. Co. in the proceeding instituted by the city of Janesville for the purpose of acquiring the company's water plant. The objection, by consent of the parties, is to be determined before the proceeding is further continued.

It is contended by the company that the city has never determined, as required by law, to acquire the water plant or property of the company, inasmuch as the question submitted at the general spring election in 1912 was as follows: "Shall the city of Janesville purchase the Janesville Water Company?"

It is further contended that the matter of the payment of just compensation for the property proposed to be taken has never been considered, voted upon or determined by the electors or by the common council of the city, as required by law; that no fund has been provided out of which payment may be made, as required by law; that no provision for such payment has been made; and that the city is without power, under sec. 3 of art. XI of the state constitution, to incur the indebtedness proposed to be incurred in the making of such payment.

Held: The questions here raised were decided by the Commission in the *Racine* case (1912, 10 W. R. C. R. 543) and the position of the Commission was affirmed by the supreme court in the case of *Janes v. City of Racine* (143 N. W. 707). The objections are therefore overruled.

On January 23, 1913, the city of Janesville filed its notice with the Commission setting forth that the said city had determined to acquire the water plant of the Janesville Water Company, which determination was made by the votes of a majority of the electors of the city of Janesville, voting on said question at the general spring election held in the said city on April 2, 1912, at which election the question of the purchase of such plant was duly submitted, and that the Janesville Water Company was at the time of said election and determination operating under an indeterminate permit under and in accordance with the provisions of the Public Utilities Law, and has by reason of the acceptance of such permit consented to the taking over of such plant by the said city of Janesville.

Upon the filing of said notice the hearing was fixed for May 8, 1913, and due notice of such hearing given to all parties interested, in accordance with the provisions of ch. 499, laws of 1907, and acts amendatory thereof and supplementary thereto.

The Janesville Water Company on February 28, 1913, filed with the Commission objection to the proceeding, on the ground that the Commission has no jurisdiction thereof, for the reasons:

1. That the city of Janesville, at the general spring election held in said city on April 2, 1912, did not determine to acquire the water plant of Janesville Water Company, nor the property of said company and public utility, but that, on the contrary, the question that was submitted to the voters at said election, and the only question then or at any other election voted upon, was as follows, to-wit: "Shall the city of Janesville purchase the Janesville Water Company" and that the matter of the acquisition or purchase by said city of the water plant or property of said company has never been submitted to a vote of the electors of said city of Janesville, as required by law.

2. The matter of payment by the city of the just compensation to which the Janesville Water Company would be entitled for the property proposed to be taken has never been considered, voted upon, or determined by the electors, or by the common council of the city, as required by law.

3. No fund has been provided by law, or by vote of the electors or of the common council of the city, out of which just compensation may be made to, or secured by, the Janesville Water Company for the property proposed to be taken, as required by law.

4. The city of Janesville has not at any time, either before or since the giving of notice of its option to purchase and acquire the property of the Janesville Water Company, made provision for the payment of just compensation therefor, required to be made by sec. 13 of art. I, and by sec. 3 of art. XI of the constitution of the state of Wisconsin.

5. The city of Janesville, at the time the election herein referred to was held and at the time of the adoption by its common council of the resolution and notice served upon said Janesville Water Company as above stated, was without power, under sec. 3 of art. XI of the constitution of the state of Wisconsin, and now is without power to incur the indebtedness it proposed to incur in this proceeding.

By stipulation of the parties, the hearing was continued until June 10, 1913. At the time of the hearing it was agreed that the objections should be considered before the offering of any testimony in the proceeding.

The city of Janesville was represented by *W. A. Dougherty,* city attorney, and the Janesville Water Company by *M. G. Jeffris* and *O. A. Oestreich,* its attorneys.

The objection interposed to the jurisdiction of the Commission raises the same questions that were presented in the *Racine* case (10 W. R. C. R. 543). In the decision rendered on Oct. 28, 1913, in the case of *David G. Janes v. City of Racine et al.* (143 N. W. 707) the supreme court of this state affirmed the position of the Commission and disposed of the objection adversely to the contention of the Racine Water Company. The reasons assigned by the court are here applicable, and the ruling in that case is controlling here.

Under the circumstances the objection is overruled and further hearing and investigation will take place at the office of the Railroad Commission, in the city of Madison, at 10 o'clock a. m. on November 24, 1913.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE CROSSINGS SOUTH OF MUKWONAGO ON THE LINES OF THE MILWAUKEE LIGHT, HEAT AND TRACTION COMPANY, AND THE MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Nov. 12, 1913.

The Commission, on its own motion, investigated three highway crossings near Mukwonago, Waukesha county, located two on the M. St. P. & S. S. M. Ry. and one on the line of the M. L. H. & T. Co. The M. St. P. & S. S. M. Ry. Co. has agreed to install bell protection at the crossing located on its line three-fourths of a mile south of Mukwonago. Two crossings, therefore, remain for consideration. Both railway companies approve of a plan to eliminate the Rochester road crossing on the M. St. P. & S. S. M. Ry. and to protect the remaining crossing, at Front st. on the M. L. H. & T. Co's line by diverting the Rochester road into Front st. and enlarging the Front st. subway, first, to accommodate the increased traffic and, second, to provide a better view of the interurban cars. The M. St. P. & S. S. M. Ry. Co. is willing to bear the entire expense of the proposed alterations. The village authorities oppose this plan and request that a subway at the Rochester road crossing be ordered.

Held: Each of the two crossings under consideration is dangerous. The interests of all will be best subserved by relocating the highway. The M. St. P. & S. S. M. Ry. Co. is therefore ordered to construct, and maintain for a period of three years, a suitable highway connecting the Rochester road and Front st., to acquire the land necessary therefor, and to enlarge the subway on Front st., plans to be submitted. The portion of the Rochester road lying within the railway right of way is to be closed.

The Commission, on its own motion, investigated three highway crossings near Mukwonago in Waukesha county. They are designated as follows:

1. A crossing on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company located three-fourths of a mile south of Mukwonago;

2. A crossing on the line of the Minneapolis, St Paul & Sault Ste. Marie Railway Company at the Rochester road, nine-tenths of a mile south of Mukwonago;

3. A crossing on the line of the Milwaukee Light, Heat and Traction Company located at Front street, immediately west of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company's trestle over the electric line.

Hearings were held as follows:

1. December 29, 1911, at Madison. Appearances: For the M. L. H. & T. Co., *Van Dyke, Rosecrantz, Shaw & Van Dyke,* by *James D. Shaw;* for the M. St. P. & S. S. M. Ry. Co., C. N. *Kalk.*

2. November 13, 1912, at Mukwonago. Appearances: For the village of Mukwonago, *J. A. Sheridan;* for the M. L. H. & T. Co., *R. B. Stearns;* for the M. St. P. & S. S. M. Ry. Co., *C. N. Kalk.*

3. August 4,. 1913, at Mukwonago. Appearances: For the village of Mukwonago, *C. F. Hunter;* for the M. L. H. & T. Co., *A. H. Pinkley;* for the M. St. P. & S. S. M. Ry. Co., *C. N. Kalk.*

Subsequent to the second hearing the Minneapolis, St. Paul & Sault Ste. Marie Railway Company agreed to install bell protection at the crossing on its line located three-fourths of a mile south of Mukwonago. This decision will therefore refer only to the crossings at the Rochester road and at Front street.

Rochester Road Crossing.

The testimony shows that the Rochester road runs approximately east and west and the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company northwest and southeast, the angle of crossing being about 30 degrees. The highway ascends to the tracks on a grade varying from 6 to 12 per cent from the east, and on about a 3 per cent grade from the west. From the east approach the view in both directions is very limited on account of the steepness of the grade and the acuteness of the angle of crossing.

The Rochester road is one of the principal streets in the village of Mukwonago and passes through a thickly settled farming community between Mukwonago and Waterford. A witness estimated that from forty to fifty teams and about the same number of automobiles cross at this point during the day. Another witness estimated the vehicular traffic at from one hundred to one hundred and fifty. Fifteen school children walk along this road four times a day and about fourteen cross the tracks twice a day in rigs. A traffic count made for the Minneapolis, St. Paul and Sault Ste. Marie Railway Company from 7 a. m. December 22 to 8 a. m. December 23, 1912, shows that during those twenty-five hours fifty-one vehicles used the crossing. A

count for the village of Mukwonago for two days from 6:30 a. m. to 8:30 p. m. shows the following results:

	Automobiles	Teams	Pedestrians
May 18, 1913	51	41	87
May 19, 1913	40	31	125

A count was also made on May 26, 1913, from 7:30 p. m. to 10:30 p. m., showing 16 automobiles, 35 teams and 36 pedestrians during those three hours. Traffic observations taken by the Milwaukee Light, Heat and Traction Company for two twenty-four hour periods show the following results:

	Automobiles	Teams	Motorcycles and Bicycles	Pedestrians
August 2, 1913	50	49	1	37
August 3, 1913	81	64	9	75

One fatal accident, two serious ones, and several narrow escapes at this crossing were described by witnesses.

Front Street Crossing.

Front street runs northeast and southwest, passing under the tracks of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company about three hundred feet southeast of the Rochester road crossing. The interurban line of the Milwaukee Light, Heat and Traction Company runs parallel to and southeast of Front street south of the crossing. It crosses Front street about one hundred feet southwest of the under-crossing and passes under the steam railway tracks northeast of Front street. Front street intersects the Rochester road a short distance northeast of the under-crossing.

The chief danger is from interurban cars approaching from the north under the trestle to travelers approaching on Front street from the southwest. On account of the embankment, southbound cars cannot be seen from the southwest until they are almost under the "Soo" tracks. The extreme acuteness of the angle of crossing also makes it difficult to observe cars approaching from the southwest. A witness for the interurban railway company testified that cars are necessarily operated at low speed over this crossing on account of a switch located northeast of the intersection, and a regular stop located south of it in the village.

A traffic count was made at Front street for the village of Mukwonago for two days from 6:30 a. m. to 8:30 p. m. with the following results:

	Automobiles	Teams	Pedestrians
May 18, 1913	27	36	50
May 19, 1913	13	29	53

A count was also taken on May 26, 1913, from 7:30 p. m. to 10:30 p. m., showing 3 automobiles, 12 teams and 7 pedestrians during those three hours. The results of a count made by the interurban railway company for two twenty-four hour periods are as follows:

	Automobiles	Teams	Pedestrians
August 2, 1913	17	49	17
August 3, 1913	33	45	16

A large part of the testimony was devoted to a discussion of a proposed relocation of the Rochester road, carrying it parallel to and west of the tracks of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company to an intersection with Front street, using the subway at Front street for both highways. The plan contemplates the enlargement of the subway to allow for the increased traffic and to provide a better view of interurban cars from the southwest Front street approach. It appears that to carry out this proposal would eliminate the Rochester road crossing with the steam road and also the Rochester road crossing with the interurban line, leaving only the Front street crossing with the interurban line. This solution was approved of by both railway companies, but was opposed by the village authorities, for the reason that in their opinion the new road would be on a heavy grade, would be low and difficult to maintain, and would have all of the dangerous features which were pointed out with reference to the Front street crossing. The village authorities desire a subway at the Rochester road as at present laid out, which would mean a diagonal structure.

An estimate of the cost of a subway at the Rochester road was submitted at the hearings by the chief engineer of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company. This estimate includes the cost of a pile bridge which would last for a number of years, the cost of a permanent subway and the cost of wrecking the temporary pile bridge at the end of its life, totaling $49,107. Of this amount the cost of the permanent subway was placed at $31,610. The Commission's engineer esti-

mates the cost of a permanent subway at the Rochester road at $33,700. The larger cost of the latter estimate is due to the fact that it includes excavations which are included in the company's estimate for the pile bridge. The cost of diverting the highway as proposed, not including the enlargement of the subway at Front street, was estimated at about $12,500 by the company's chief engineer. Objection was made to constructing a subway at the Rochester road only three hundred feet distant from the existing Front street bridge, because of its weakening effect on the tracks. The representative of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company expressed the willingness of the company to bear the entire expense of the proposed relocation of the highway and the enlargement of the Front street subway.

From a careful examination of the testimony we find that each of the crossings under consideration is unusually dangerous. Having in mind the testimony and the reports of several members of our engineering staff, including our present and our former chief engineer, it is our judgment that the proposed relocation of the highway offers the best solution of the question before us. The enlargement of the Front street subway will render it ample for the traffic of both highways and will overcome the worst features of the interurban crossings at that point. It will also eliminate two dangerous grade crossings. The new road will have a better grade than the existing approaches at the Rochester road crossing, and it should be properly surfaced and maintained by the company after its construction until it is properly solidified. The company has volunteered to bear the entire expense of this relocation, but if an order were issued requiring the construction of a subway at the Rochester road, as requested by the village, the expenses would have to be apportioned between it and the company, as required by law. With these facts in mind, we believe that the interest of all concerned will be best subserved by carrying into operation the proposed plan for the relocation of the highway.

1. It is Therefore Ordered, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company construct, and maintain for a period of three years, a suitable highway southwest of its track connecting the Rochester road and Front street in the village of Mukwonago, acquire the land necessary therefor, and

enlarge the subway on its line at Front street in such a way as to provide sufficient space for the combined traffic on Front street and the Rochester road and a suitable view of approaching interurban cars, plans to be submitted to the Commission for approval.

2. IT IS FURTHER ORDERED, That upon the completion of the alterations and improvements ordered herein, the portion of the Rochester road lying within the railway right of way shall be closed; and the Minneapolis, St. Paul & Sault Ste. Marie Railway Company is hereby directed to enclose said roadway with continuous fences so that it cannot be used by the public.

Nine months is considered a reasonable period of time within which to comply with this order.

MACE LIME COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted March 14, 1913. Decided Nov. 14, 1913.

The petitioner alleges that certain rates on lime, granted in the case of the *Waukesha Lime & Stone Co. v. C. & N. W. R. Co.* (1913, 11 W. R. C. R. 419) for shipments from Waukesha, unduly discriminate against the petitioner, and prays that the rates for shipments of lime from Rockfield, at which point the petitioner is located, to Racine, Kenosha, and other points be made the same as the rates granted by the Commission for shipments from Waukesha to these points. The petitioner is in competition with the Waukesha Lime & Stone Co. and, prior to the issuance of the order mentioned, enjoyed the same rates to Racine, Kenosha and other points as did the Waukesha company. Except in a few instances, the distances from Waukesha and Rockfield to the points in question differ considerably. To some of these points, however, the rate under the prevailing group rate system on lime should, perhaps, be the same from both places.

Held: To more nearly equalize conditions, some adjustment of the present rates is necessary. The respondent is therefore ordered to put into effect rates prescribed by the Commission for shipments of lime in carloads from Rockfield to the stations named in the order, these rates to be subject to the same minimum weights and rules of transportation as are now in effect.

On February 8, 1913, the Mace Lime Company, a concern engaged in the manufacture of lime and crushed stone and located at Rockfield, a station on the line of the C. & N. W. Ry. in Washington county, brought a complaint against that carrier alleging that certain rates on lime made effective by the Commission's order of February 4, 1913, in the case of the *Waukesha Lime & Stone Co. v. C. & N. W. R. Co.* 11 W. R. C. R. 419, unduly discriminates against the petitioner. It is desired that the Commission grant the same rates to Racine, Kenosha, and other points as have been granted from Waukesha by the order mentioned; also that the rate from Rockfield to West Bend be made comparable with the rate for the same distance from Waukesha.

Prior to the establishment of rates ordered in the decision of the case of the Waukesha Lime & Stone Company, the petitioner enjoyed the same rates from Rockfield to Racine, Kenosha, and

other points as did the Waukesha concern. That order changed the rate to 4¼ cts. from Waukesha to Racine and 4½ cts. to Kenosha without changing the rate from Waukesha to Milwaukee. It appears that the petitioner is in competition with the Waukesha firm at Kenosha and Racine particularly, to which points approximately one-fourth of his product is shipped.

P. W. Kraemer, secretary, appeared for the Mace Lime Company, and *C. A. Vilas* for the C. & N. W. at the hearing before the Commission on March 14, 1913. Mr. Kraemer stated that should the rates remain as they are at present, his firm would be eliminated from the Racine and Kenosha markets altogether. No testimony was offered as to shipments to other points, although the petition asks for changes in the rates to other points. Following is a table comparing the distances from Waukesha and Rockfield to certain points in the state of Wisconsin, together with the former rates from Waukesha, the rates as changed by the Commission's order of February 4, 1913, and the present rates from Rockfield:

To	Waukesha.			Rockford.	
	Miles.	Former rate in cents per 100 lb.	Ordered 2—4—13	Miles.	Rate in cents per 100 lb.
Wales	8	4	3.5	48	6
Dousman	13	4	3.5	53	6
Sullivan	19	4.5	3.5	59	6
Helenville	24	5	4	65	6
Sussex	28	4.5	4	27	4.5
County Line	29	6	4	36	6
Jefferson Jct.	30	4	4	70	6
Keesus	33	4.5	4	31	4.5
Mequon	33	5	4	21	5
Granville	34	5.5	4	7	4
Lake Mills	36	5.5	4.5	77	6
Racine	37	6	4.25	44	6
Racine Jct	38	6	4.25	45	6
Rockfield	40	6	4.5	0	0
Ulao	40	6	4.5	28	5
Berryville	42	6	4.5	49	6
London	42	6	5	82	6
Pt. Washington	45	6	5	33	5
Deerfield	45	6	5.5	86	6
Jackson	46	6	4.5	5	3
Kenosha	47	6	4.5	54	6
Belgium	53	6	5.5	41	5
West Bend	53	6	5	12	4
Barton	54	6	5.5	14	4
Milwaukee	20	3½	0	21	4

It is apparent that the distances from Waukesha and Rockfield to the same points are approximately the same in a very few instances only. The specific rates from Waukesha made by the Commission are based, primarily at least, on the general distance rates on lime ordered from that point in the case of the *Waukesha Lime and Stone Company v. C. & N. W. R. Co.* and *C. M. & St. P. R. Co.* 9 W. R. C. R. 87, decided April 25, 1912. The specific rates named to points other than those south of Milwaukee were governed somewhat by group rates in force prior to the order.

The general distance rates on lime as promulgated above are based on cost figures, so that it is a natural consequence that with a substantial difference in distance there is also a difference in rate. The difference in distance between Waukesha and certain points and between Rockfield and the same points named in the table above is so great that they are not comparable. To other points where there is a more or less substantial difference in distance the rate under the prevailing group rate system on lime should, perhaps, be the same from both places. This would apply to the rates from Rockfield to West Bend, Barton, Granville, and Milwaukee, which should be 3⅓ cts., for the reason that this is the prevailing rate from Waukesha to other points where the mileage and conditions appear to be approximately the same as from Rockfield.

Full consideration of the circumstances in this case and the cases cited above makes it obvious that some of the rates complained of are not in accord either with the general group plan covering rates on lime or with the distance tariff promulgated by the Commission's order of February 4, 1913. To more nearly equalize conditions some change is necessary. As to the rates from Rockfield to other points than those named in the table below, it is not our purpose to change them at this time as they conform to the general group plan of the rates on lime or to the distance tariff as promulgated by the Commission in the *Waukesha* case.

IT IS THEREFORE ORDERED, That the respondent Chicago & North Western Railway Company discontinue charging the present rates on lime in carloads between Rockfield and the stations given below and substitute therefor the following rates, subject

to the same minimum weights and the same rules of transportation as those now in effect:

RATES ON LIME IN CARLOADS.

Between Rockfield and the following stations	Rate in cents per 100 lb.
Sussex	4
County Line	4.20
Keesus	4
Mequon	4
Granville	3⅓
Racine	4.35
Racine Junction	4.35
Ulao	4.5
Berryville	4.5
Kenosha	4.65
West Bend	3⅓
Barton	3⅓
Milwaukee	3⅓

PABST BREWING COMPANY ET AL.
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, CHICAGO AND NORTH WESTERN RAILWAY COMPANY, MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted July 17, 1913. Decided Nov. 14, 1913.

The petitioners allege that the rate of 12½ cts. per 100 lb. on beer from Milwaukee to Fond du Lac and Oshkosh is unjust, unreasonable and exorbitant. This rate is a fifth class rate applying to beer in carloads. Certain other points in Wisconsin situated similarly to Fond du Lac and Oshkosh are given a commodity rate of 10 cts. per 100 lb. on beer from Milwaukee.

Held: There is no reason apparent for refusing to grant Oshkosh and Fond du Lac the commodity rate enjoyed by other stations similarly situated. The respondents are therefore ordered to put into effect a commodity rate of 10 cts. per 100 lb., subject to the minimum weight of 30,000 lb. per car, on shipments of beer from Milwaukee to Oshkosh and Fond du Lac.

This petition, filed June 23, 1913, on behalf of the Schlitz, Pabst, Blatz, and Miller brewing companies of Milwaukee, by the respective traffic managers of each concern, alleges that the rate on beer of 12½ cts. per 100 lb. between Milwaukee and Fond du Lac and Oshkosh is unjust, unreasonable and exorbitant for the following reasons:

That the rate from Milwaukee to Manitowoc via both the C. & N. W. and the "Soo" line is 7½ cts. per 100 lb.; that the rate to Madison, Watertown, Jefferson Junction, Janesville, Beloit and Evansville is 10 cts. per 100 lb. The distances to these points from Milwaukee are in some instances greater than the distances from Milwaukee to Fond du Lac or Oshkosh. The rate to Manitowoc is a commodity rate made to compete with water carriers; but, on the other hand, the rate to Frankfort, Mich., which is a competitive point because of water transportation, is the regular fifth class rate of but 11 cts., although the distance is comparable to the distances to Fond du Lac or Oshkosh. The petitioners submit a table showing that to other stations in the state of Wisconsin from both Milwaukee and Chicago a group

rate of 10 cts. is applied on beer; but that from both Milwaukee and Chicago to Fond du Lac and Oshkosh the regular fifth class rate is applied. Believing that the rates to the last two named stations are entirely out of proportion, the petitioners ask that the rates be reduced to at least 10 cts., with a possible 9 ct. rate to Fond du Lac, should the question of distance enter into the determination.

The three carriers interested filed separate answers to the complaint, denying that the rates were unjust and exorbitant.

A hearing in the case was held on July 17, 1913, in the school board room at Milwaukee, at which *Charles Zielke* and *C. J. Bertschy* appeared for the petitioners; *C. M. Davis* for the C. M. & St. P. Ry. Co.; *R. H. Widdecombe* and *H. C. Cheyney* for the C. & N. W. Ry. Co.; and *Kenneth Taylor* for the M. St. P. & S. S. M. Ry. Co.

On behalf of the petitioners Mr. Zielke testified that the sales of beer in Oshkosh came in competition with the beer from two local breweries. These local concerns are able to sell at approximately 50 cts. per barrel and 5 cts. to 25 cts. per case cheaper than do the Milwaukee shippers and, in addition, when the customer's sales exceed 200 barrels per annum the local concerns give a rebate of 50 cts. per barrel. He was unable to state whether there was a local brewery at Fond du Lac, but was of the belief that such was the case. The rates under complaint and the competitive conditions referred to have been in existence for many years. The Milwaukee breweries are able to sell beer at Fond du Lac and Oshkosh at from $6.80 to $7.50 per barrel, according to the grade of the beer, while the value of the empty packages is about $6.25 per barrel and $3.75 per half-barrel. The wholesale selling price of beer in Milwaukee is approximately $5.00 per barrel, and the retail selling price at Oshkosh and Fond du Lac referred to are understood to include the cost of transportation, commissions and incidental expenses, so that the net amount received is somewhat less, probably around $5.00 per barrel. Eighty barrels or one hundred and sixty half-barrels constitute a carload shipment, and the Pabst and Schlitz brewing companies each ship annually between fifty or sixty carloads of beer to Oshkosh alone.

Mr. Davis, on behalf of the Chicago, Milwaukee & St. Paul Railway Company, testified that the rates under discussion were the regular fifth class rates that have been in force without

change for many years; that petitioners had done business without complaint against the rates until the past few months; that a reduction of the rates to Fond du Lac and Oshkosh would mean reduction at eleven intermediate stations between Milwaukee and Fond du Lac and twenty-four intermediate stations between Milwaukee and Oshkosh on the C. M. & St. P.; that there was no difference in the commercial conditions at Madison, Janesville, Freeport, etc.; that a 10 ct. rate at those points would not affect the price of beer at Fond du Lac and Oshkosh and that under these conditions a reduction in the rates complained of was unnecessary either from a commercial or a traffic standpoint.

Mr. Cheyney of the Chicago & North Western Railway Company stated that the objection of his railroad to establishing additional commodity rates on beer is that it discriminates in favor of Milwaukee as against small beer producing points; that the beer traffic of practically the entire state is carried on the fifth class basis; and that there has been a general request from small breweries for the establishment of commodity rates which his road has had to deny because of the necessity of putting in effect such rates elsewhere should those requested be granted.

Appearing in behalf of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, Mr. Taylor stated that he did not believe that the rates to Fond du Lac and Oshkosh were unjust or unreasonable; that Fond du Lac was the first point in a group that extended as far as Fremont and that the rate under complaint was in line with the rates on beer generally throughout the state.

The petitioners rely wholly upon the comparisons of the rates shown in the table they submitted to show the unreasonableness of the rates to Oshkosh and Fond du Lac. On the other hand, the respondent roads do not attempt to justify the rates in any way except by stating that they have been in force for many years; that beer generally is subject to fifth class rates, and that the establishment of additional commodity rates from Milwaukee would be discriminative against small beer producing points and would result in a general demand for commodity rates from such points. Furthermore, they maintain that any change in rates to Oshkosh and Fond du Lac would involve a change in rates to a large number of intermediate points.

The table submitted by the petitioners showing the rates and distances to certain points from Milwaukee and Chicago contains some errors in mileage. We are including herewith the same table showing the correct mileages on the three lines involved in the complaint, together with the rates on beer from Chicago and Milwaukee to those points:

To	From Chicago, Ill.					From Milwaukee, Wis.				
	Distance.			Rate.		Distance.			Rate.	
	C. & N. W.	C. M. & St. P.	Soo.	Commodity.	Fifth class.	C. & N. W.	C. M. & St. P.	Soo.	Commodity.	Fifth class.
Madison	130	140	.....	10	14	82	82	.....	10	14
Watertown	130	130	.....	10	14	60	45	.....	10	11
Baraboo	167	.....	.....	15	16	119	.....	.....	.....	14
Jefferson Jct	119	.....	.....	10	14	49	.....	.....	10	10
Janesville	91	99	.....	10	13	77	71	.....	10	10
Beloit	91	97	.....	10	13	91	84	.....	10	10
Evansville	107	.....	.....	10	14	93	.....	.....	10	14
Fond du Lac	147	160	159	.....	15	62	75	66	.....	12.5
Oshkosh	165	188	177	.....	15	80	102	84	.....	12.5

The commodity rate of 10 cts. to Madison, Watertown, Janesville, Jefferson Junction, Beloit, and Evansville from both Milwaukee and Chicago, is a group rate that applies generally as a maximum rate on single line north or westbound shipments of carloads of beer between all stations on the C. & N. W. and C. M. & St. P. roads within the territory bounded by the following lines: Chicago to Milwaukee by the C. & N. W.; Milwaukee to Madison on the C. M. & St. P. via Watertown; Madison to Beloit on the C. & N. W. via Afton; and Beloit to Chicago by way of Rockford; also the line from Janesville to Dill on the C. M. & St. P. In addition the rate is locally applied jointly from the Chicago suburban stations demanding Chicago rates to all points within the territory described. The greatest distance intrastate is 115 miles, from Milwaukee to Dill, while the greatest single line distance within the territory covered by the group is 140 miles, from Chicago to Dill. This rate, insofar as Wisconsin intrastate traffic is concerned, is subject to the minimum weight provision of the western classification of 20,000 lb. on shipments of beer in wood and 26,000 lb. on other shipments.

That the carriers have generally conceded the reasonableness of transporting beer at less than fifth class rates is amply evidenced by other commodity rates which are effective. It will be noted that a commodity rate from Chicago to Baraboo is shown in the table. This is also a group rate that applies generally as a maximum in either direction between stations taking the Chicago, St. Louis, La Crosse, or Winona rates as provided in the tariff. There are several thousand of such stations on the various lines in the states of Illinois, Indiana, Iowa, Missouri, Minnesota and Wisconsin. The application of this rate in Wisconsin would include only points in the southern half of the state between which the distance is more than two hundred miles and the fifth class rate 18 cts. per 100 lb. The minimum weight in connection with this last named rate is 30,000 lb. Several other instances might be cited to show that the carriers have made special provision for the transportation of beer on lower than a fifth class basis. The prevailing minimum in these instances is 30,000 lb., which petitioners and respondents admit to be reasonable.

The reasonableness of the classification of beer in carloads as fifth class and the reasonableness of the fifth class rate in and of itself from Milwaukee to Fond du Lac and Oshkosh are not specifically attacked in this case and, therefore, need not be considered. As before noted, the complaint of the reasonableness of the rate is only as it compares with the rates to other points, mileage and conditions being approximately the same, and on this ground alone is the rate complained of shown to be out of proportion. We see no reason why the stations of Oshkosh and Fond du Lac should not enjoy the same rate as do the other stations. Why a concession for a commodity rate has been denied to Oshkosh and Fond du Lac from Milwaukee and Chicago is not apparent. The amount of traffic from Milwaukee to these points would make such a concession seem logical, as the traffic compares favorably with the traffic from Chicago and Milwaukee to other points in the territory where the commodity rates are now effective.

THEREFORE, IT IS ORDERED, That the respondent carriers discontinue charging the fifth class rate of 12½ cts. per 100 lb. on beer in carloads from Milwaukee to Fond du Lac and to Oshkosh and substitute therefor the commodity rate of 10 cts. per 100 lb., subject to the minimum weight of 30,000 lb. per car.

B. L. MARCUS ET AL.
vs.
POSTEL & SWINGLE.

Submitted July 3, 1913. Decided Nov. 14, 1913.

The complainants allege that the rates charged by the respondent for the use of its toll bridge over the Wisconsin river at Muscoda are excessive and discriminatory. A valuation was made and the revenues and expenses were investigated.

Held: A slight reduction of revenue is justified. The present rate schedule, however, shows no marked inequality, except that existing between the charge for a single trip for a double team or automobile and the ticket rates for vehicles making 10 or more trips. A reduction of the single trip rate for this class of business is, therefore, the only change which is considered advisable. The respondent is accordingly ordered to reduce the present rate of 25 cts. for a single trip for two horse teams and automobiles to 20 cts. and to retain all other rates as they are at present.

Complaint in this matter was filed with the Commission May 14, 1913. Complainants are twenty-six persons or firms of Muscoda, Wis., and vicinity. The firm of Postel & Swingle owns and operates a toll bridge across the Wisconsin river at Muscoda. The complainants allege:

1. That all of the rates, tolls, and charges of the utility are unreasonable, in that they are two high for the service rendered and produce more than is reasonably necessary for a fair return upon the investment.

2. That the tolls are discriminatory as between different classes of traffic.

3. That the tolls are discriminatory as between cash fare and ticket business.

The complaint states that the tolls are as follows:

Cash.	
Automobiles	25 cts.
Two horse vehicles	25 "
Each additional horse	10 "
Single rigs	10 "
Horse and rider	10 "
Cattle, less than 5 each	5 "
" more " "	2½ "
Hogs and sheep in droves	5 "
Pedestrians	5 "
Tickets.	
Two horse vehicle—100 trips for	$15.00
" " 50 "	8.00
" " 25 "	4.25
" " 10 "	1.90

Mail carriers and stage drivers pay 12½ cts. per trip. All of these are round trip rates, except in the case of animals in droves.

Certain corrections of the above schedule, which were introduced at the hearing, will be considered later.

Hearing in this matter was held at Madison, July 3, 1913. Appearances were: For complainants, *John J. Blaine;* for respondent, *F. W. Burnham.*

The testimony related principally to the manner in which the bridge was constructed and to various matters concerned with its operation and maintenance, all of which have been carefully considered in connection with the decision in this case.

Rates as stated in the complaint appear to be correct, except that the charge for hogs and sheep in droves of from 5 to 500 is 2 cts. each, and in droves of over 500, 1 cent each.

Mail carriers and stage drivers are placed on a yearly contract basis.

There are two matters to be considered in the present proceeding. First, is the total revenue of the utility unnecessarily or unreasonably high, and second, are the tolls discriminatory?

A valuation of the property to be considered in this case has been made by the Commission as of July 30, 1913. This valuation shows the cost new to be $31,225, and the present value $19,892. No complete records of the cost of the bridge have been kept, but the estimate of owners places the value of the bridge at approximately $26,000.

The following table, showing the receipts and expenditures for operation and maintenance of the utility, has been compiled from the cash book submitted at the hearing. A period covering 5½ years, from January 1, 1908, to June 30, 1913, has been deemed of sufficient length to show the trend of the earnings and expenses in recent years. Some difficulty arose in distributing items common to both construction and maintenance because of the meager information furnished by cash book entries, but this has been partly adjusted with substantial accuracy.

One item, "Miscellaneous", calls for explanation. The charges to this account are almost without exception donations to local "Fourth of July" and "Booster Week" committees.

RECEIPTS AND EXPENDITURES.

MUSCODA TOLL BRIDGE.

	1908.	1909.	1910.	1911.	1912.	1913.

Total operating expenses	$710 75	$705 72	$720 07	$851 31	$861 37	*$294 01
NET EARNINGS	$2,854 60	$2,580 56	$2,782 36	$2,541 98	$2,855 37	$1,280 2

*Covers 6 months period from January 1, 1913, to June 30, 1913.

From this it appears that net earnings have ranged from a little over $2,500 to something over $2,800 during the period shown, but the cash book apparently does not show the revenues from mail teams and stages, on a yearly contract basis. This would apparently be about $150 per year.

Considerable emphasis was laid, in the testimony introduced on behalf of the utility, on the irregularity with which maintenance expenses must be met. In view of all available facts it does not appear that the average net return over a long period of years would be more than $2,600 per year.

No provision appears to have been made in the expenses recorded for a salary to the member of the firm who is in active charge of the bridge, although the testimony shows that a considerable part of his time is devoted to supervision of the utility. Considering the investment in the property, the volume of business and the risks to which the investment is exposed, together with the actual time spent by this member of the firm upon business of the utility, it appears that allowance should be made for a reasonable salary for this supervision. This is a practice which is considered reasonable in the case of other classes of utilities and there seems to be no reason why it should not be followed in this case.

With such provision made for supervision, the average annual amount available to provide for depreciation and interest would not be much in excess of $2,200.

The composite life of the property is estimated at thirty-five years. Adequate allowance for depreciation will not be less than $600 per year, and if allowance is made for contingencies and losses due to extraordinary causes, $600 appears to be a very conservative figure.

The average amount available for interest and profit, therefore, is about $1,600 per year if allowance is made in operating expenses for the salary of the member of the firm who is in active charge of the bridge, and not over $2,000 per year even with no allowance for such salary.

A reasonable value for the purposes of this case appears to be about $22,000, including whatever allowance should be made for working capital and going value.

The rates of return which these amounts would yield upon different valuations of the property are shown below:

	Cost new.	Present value.	Estimated value.
	$31,225	$19,892	$22,000
$1,600 return	5.1%	8.1%	7.3%
2,000 "	6.4%	10.1%	9.1%

Although the return of 7.3 per cent on a valuation of $22,000 can hardly be considered excessive, it must be remembered that the amount available for return on investment is partly a matter of estimate and it is believed that the estimates are sufficiently conservative to justify a slight reduction of revenue. An examination of the rate schedule does not show any marked discrepancy except that existing between the charge for a single trip for a double team or automobile and the ticket rates, and a reduction of the single trip rate for this class of business is the only change which is considered advisable. The scale of prices for tickets of different denominations does not appear unreasonably adjusted. The rates for stage drivers and mail carriers are fixed on a yearly contract basis. If the utility holds itself in readiness to make similar contracts with all parties requiring similar service there is no unjust discrimination in the application of this portion of the rate.

A reduction of the single trip rate, as indicated above, to 20 cts. on the basis of the available facts relating to the volume of this traffic, would apparently effect an annual reduction of revenue of about $250 per year, part of which may be made up by additional business. The total reduction does not appear unreasonable.

IT IS THEREFORE ORDERED, That the respondents, Postel & Swingle, owners and operators of the toll bridge referred to, shall discontinue their present rate of 25 cts. for two-horse teams and automobiles for a single trip and substitute therefor a rate of 20 cts.

IT IS FURTHER ORDERED, That all other rates remain as at present.

This order shall take effect and be in force on and after December 1, 1913.

IN RE APPLICATION OF THE NESHKORO LIGHT AND POWER COMPANY FOR AUTHORITY TO INCREASE RATES.

Decided Nov. 14, 1913.

The Neshkoro Lt. & P. Co. applies for authority to increase its rates for electric service in Neshkoro, Lohrville and Red Granite. A valuation was made and the revenues and expenses were investigated. The records of the utility have been improperly kept and it is therefore necessary to estimate normal and reasonable costs on the basis of the record information available and data obtained with respect to the operation of similar plants. The expenses thus estimated were apportioned between capacity and output expenses and further apportioned among street lighting, commercial lighting, and power expenses.

The smallness of the plant cannot be accepted as an excuse for keeping lax operating and accounting records. An accounting system such as the Commission is now installing in other plants should be introduced, as in this way only can expenditures be properly classified and apportioned.

In order to arrive at a schedule of reasonable rates, a basis of normal and reasonable costs must be established. In the present case the probable cost of generating electricity at a steam plant furnishing current under conditions similar to those existing in Neshkoro was investigated and it was found that the operating costs would be no lower if steam were substituted for the hydraulic generation now used. The applicant's costs under hydraulic operation are therefore used, with data secured from other sources, as the basis for the determination of the rates ordered.

A straight meter rate can be satisfactory only when all consumers have about the same demand or installation and use the current about the same length of time each day.

The Public Utilities Law (sec. 1797m—90) provides that a public utility shall not give a lower rate to a consumer who owns his meter than to another consumer whose meter is owned by the utility. This means that public utilities, unless excused by the Commission, must acquire by purchase or lease all meters used by them but not now owned by them and cease charging meter rentals to consumers who do not supply their own meters.

To adhere closely to the table of costs is not always advisable. In some cases it may be profitable to retain short hour users of electric current, who could not otherwise be retained, at less than the full cost of the service, provided these consumers are charged rates which cover a part at least of the overhead charges and thus lighten the burden of expense to other consumers, and provided that the rates charged do not result in unjust discriminations.

Held: In the absence of definite information, due to the applicant's failure to keep such a system of accounts as is required by the Public Utilities Law, it is impossible to reach final conclusions at this time. If experience shows that some of the conclusions

tentatively reached in the present case should be altered, modifications can be made when necessary. The applicant is therefore authorized to put into effect rate schedules fixed by the Commission at such time as the applicant shall have adopted and installed a system of accounts in accordance with the Commission's classification.

This is an application by the Neshkoro Light and Power Co. for authority to increase its rates for electric service in Neshkoro, Lohrville and Red Granite.

A hearing in the case was set, but as no appearances were made either for the applicant or in opposition, no testimony was taken and the case was submitted on the application and the facts ascertained in the investigation made by the Commission.

The lawful rates of the applicant, as filed with the Commission, are at present as follows:

Commercial Lighting and Power Rates:

Meter rates:

1st 100 kw-hr. per month 10 cts. per kw-hr.

All over 100 kw-hr. per month 5 cts. per kw-hr.

Discount 2 cts. per kw-hr. on first 100 kw-hr. if paid by the 15th of the month.

Meter rent 25 cts.

Street lighting:

22 a. c., enclosed multiple 6 amp. 110 v. arcs. $60 per lamp per year.

40 100-watt tungsten (series system) $15 per lamp per year. Operated on moonlight schedule.

The rates given for street lighting, it now appears, are incorrect.

At the time of the investigation the following lamps were in use.

Neshkoro, 7 400-watt tungstens.....$300.00 per year
Neshkoro, 2 60-watt tungstens.....$24.00 per year
Red Granite, 40 250-watt tungstens.....$1200.00 per year
Lohrville, 40 100-watt tungstens.....$600.00 per year

The greater percentage of consumers are at present on a flat rate basis.

The plant of the Neshkoro Light and Power Company is situated on the Lunch river at Neshkoro. The hydraulic power available is used jointly by the Light and Power Company and the Neshkoro Milling Company, the latter company owning the water power site, flowage lands, dam, spillway, head race, wheel

pits, tail race, and power plant buildings. The Neshkoro Light and Power Co. transmits current to Lohrville and Red Granite, a distance of about nine miles from Neshkoro, and is at present taking steps to construct an additional transmission line to Wautoma.

The company keeps part of its books and records at Princeton, and part at Red Granite, at which place it has a material and supply department.

Section 1797m—90 of the Public Utilities Law reads in part as follows:

"It shall be unlawful for any public utility to demand, charge, collect or receive from any person, firm or corporation, less compensation for any service rendered or to be rendered by said public utility in consideration of the furnishing by said person, firm or corporation of any part of the facilities incident thereto; provided nothing herein shall be construed as prohibiting any public utility from renting any facilities incident to the production, transmission, delivery or furnishing of heat, light, water or power or the conveyance of telephone messages and paying a reasonable rental therefor."

The Commission has repeatedly had occassion to refer to this provision of the law. It is clear that under this provision a company cannot give a lower rate to a consumer who owns his meter than to another consumer whose meter is owned by the company. That the divided ownership of parts of the equipment of public utilities shall cease is clearly contemplated. The management should be responsible for the installation and maintenance of the whole of the equipment, which means undoubtedly that both private and municipal plants must acquire, by purchase or lease unless excused by the Commission, all meters used in connection with their respective works, and cease charging a meter rental.

The application of the company is for the establishment of a rate of 10 cts. net per kw-hr. straight meter rate. A straight meter rate can be satisfactory only when all the consumers have about the same demand or installation and use the current about the same length of time each day. To determine equitable rates it will be necessary to examine the income accounts of the utility for past years and to ascertain the value of the property. The following table shows the summary of the engineer's ap-

praisal of the physical property of the Neshkoro Light and Power Company:

VALUATION AS OF JUNE 1, 1913.

	Cost new.	Present value.
A. Land	$11,889	$8,904
B. Transmission and distribution		
C. Buildings and miscellaneous structures	4,350	4,056
D. Plant equipment	118	63
E. General equipment		
Total	$16,357	$13,023
Add 12 per cent (see note below)	1,963	1,563
Total	$18,320	$14,586
F. Paving		
Total	$18,320	$14,586
H. Materials and supplies	927	676
Total	$19,247	$15,262
J. Non-operating	3,866	966
Total	$23,113	$16,228

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

An examination of the reports of the utility to the Commission must be made to determine whether the present net earnings of the plant are assured; whether they are high enough to warrant keeping the rates as low as at present and whether the net earnings for some of the more recent years have exceeded the average net earnings for the entire period considered. Where clear and logical reports are available for examination, these points may be determined with ease and accuracy.

From a review of the reports submitted to the Commission it is evident that the expense accounts have not been kept in such form as to be clear in an investigation of this kind. It is therefore necessary to examine the accounts closely to determine equitable cost from the limited data available. The following table summarizes the operating expenses for the year ended June 30, 1912:

DETAILED INCOME ACCOUNT

NESHKORO LIGHT AND POWER CO.,

Year ended Jan. 30, 1912.

OPERATING REVENUES:	
Commercial lighting earnings	$4,803.27
Municipal lighting earnings	1,338.64
Commercial power earnings	887.50
Total	$7,029.41
OPERATING EXPENSES:	
Power	.....
Distribution	
Distribution system labor	$900.00
Maintenance of meters	100.00
Total	$1,000.00
Consumption—Lamp supplies	$286.65
Commercial	.....
General:	
General office salaries	$120.00
General office supplies and expenses	25.00
Maint. genl. off. equip. bldgs. and grds	2,760.45
Total	$2,905.45
Undistributed	.....
Total above expenses	$4,192.10
Depreciation	$3,000.00
Contingencies—Bad debts	1,480.42
Taxes	133.33
Total	$4,613.75
Total operating expenses	$8,805.85
Deficit	$1,776.44
Interest on funded debt	139.50
Dividends	780.00
Deficit for year	$2,695.94

There are many items in the above statement that are not clear. The Neshkoro Light and Power Company generates current by hydraulic power, which it rents from the Neshkoro Milling Company on a flat rate which is at present $100 per month. It was stated by the company that this charge was to be increased to $150 per month on July 1, 1913. The item "Maint. of general office equipment, buildings and grounds" amounting to $2,760.45, should, it appears, be divided as follows:

Hydraulic power purchased	$1,200.00
Genl. office salaries (manager)	600.00
R. R. fare, tel., teleg., and exps. on road, etc	180.00
Lighting arresters, trans., and exps	780.45
	$2,760.45

That a part of the item $780.45 consists of either construction or extraordinary maintenance, appears plain.

The item "Depreciation," $3,000.00, shown in the income account, is altogether too high for a single year. This appears to be a charge to offset all depreciation on the plant since the beginning of operation, as reports for previous years show no depreciation charge.

The following table shows the comparative income accounts for the years ended June 30, 1910, 1911, 1912, and 1913. The income account for 1912 has been reapportioned, on the basis of the data available, to correspond more closely to the accounts of the previous years.

Grand total	$3,257 57	$3,582 22	$3,682 11	$8,230 33
Book value	$17,000 00	$20,661 00	$23,320 00	.....
Amount available for depreciation and interest	$3,225 55	$3,976 21	$3,347 30	.....
Rate return on book value	19%	19.2%	14.3%	.....

The foregoing statement shows a remarkable uniformity in the expenses from year to year of certain items, which would indicate an arbitrary apportionment of many of the amounts listed. With the expenses as shown, it is noted that there is available for depreciation and interest an amount each year large enough to allow a sustantial return for these items, amounting to 19 per cent on the book value of the plant in 1910, 19.2 per cent in 1911 and 14.3 per cent in 1912.

From an examination of the 1913 report, it appears that the item "Hydraulic power generation," amounting to $6,626.19, contains certain expenditures properly chargeable to plant instead of operation. Until the utility keeps the cost of renewals, replacement and new construction separate from operating expenses, it will be impossible to determine the exact needs of the company in the way of revenue. The company has paid dividends, it appears, but has not provided for depreciation. At any rate, the explanations of the conditions which exist are so clouded and the situation with respect to obtaining correct financial statements so questionable that it seems inadvisable to pass upon the questions involved until these matters have been cleared up.

When the abnormal and incorrect items are deducted from the income account for the year ended June 30, 1913, a financial condition is revealed which would indicate that, unless the charge for "Hydraulic power purchased" is increased from $1,200 to $1,800 per year as contemplated, no general increase in rates will be needed.

It is possible that some of the different classes of service supplied by the utility are not yielding enough revenue to pay the cost of such service. In view of these facts as careful an investigation has been made as was possible under the circumstances.

Normal Operating Costs.

In order to arrive at a schedule of reasonable rates, a basis of normal and reasonable costs must be established. It is not enough merely to take an average of expenses for a given period, but expenses must be obtained in detail for a sufficiently long period, and the details must be studied and analyzed and compared with the costs of similar plants. When such analyses and comparisons are properly made, the results are of marked value as indi-

cating what are normal costs and the extent to which these costs are influenced by conditions peculiar to the locality.

In this case it has seemed advisable to investigate the probable cost of generation by a steam plant furnishing current under conditions similar to those existing in Neshkoro. The investigation made shows that, under the conditions existing here, advantage of lower operating costs would not be gained by substitution of steam for hydraulic generation. The interests of the consumers will not be adversely affected, therefore, if the applicant's expenses of hydraulic operation are used as a basis for the determination of rates. Although the data secured from the records of the utility are rather meager, other circumstances have made it possible to construct an income account, as shown below, which is believed to be fairly representative of the facts.

INCOME ACCOUNT

NESHKORO LIGHT AND POWER COMPANY.

Year ended May 31, 1913.[1]

OPERATING EXPENSES	
Power—Hydraulic generation	
Operating labor	$900.00
Hydraulic power purchased	[2]1,800.00
Misc. pr. plant sups. and exps	18.92
Maint. hyd. pr. wks. bldgs. fixts. grounds	75.91

Lamp supplies	260.79
Misc.	84.02
Maint.	25.00
Total	$476.81

[1] Based on data obtained from books of company.

[2] Company is to pay $150 per month from July 1, 1913, hence above amount has been used in all computations.

Commercial	
Total	$60.00
Total direct expenses	$3,674.81
General	960.31
Undistributed	34.69
Total above expenses	$4,669.81
Taxes	$133.33
Depreciation (5% on $23,113)	1,155.65
Interest (8% on $16,228)	1,298.24
Total above items	$2,587.22
Grand total	$7,257.03

The Commission has discussed fully in previous decisions the importance of the separation of operating expenses into capacity and output cost and this subject, therefore, will not be taken up here.

Of the total expenses, amounting to $7,257.03, it was found that an apportionment between capacity and output resulted in a charge of 65.5 per cent or $4,754.70 to capacity, and 34.5 per cent or $2,502.33 to output.

Electric service is being furnished by the petitioner to three classes of consumers, viz: commercial lighting, street lighting, and power. That each of these branches of service should be charged, as far as practicable, with the expenses for which it is responsible, is obvious.

Operating Statistics.

The smallness of the plant cannot be accepted as an excuse for keeping lax operating and accounting records. Some definite procedure should be adopted. The plan of operating without station records or meters results in a lack of reliable data on the output, demand or costs of generation and must be condemned. The applicant, however, has announced its intention of securing a station meter when the larger generator which is to be installed has been placed. With a station meter and simple station records, not only will reliable data be secured as to the amount of current actually produced, the peak load, etc., but the utility can also determine with more accuracy the actual cost per unit. The present location of the accounting department might well be changed so that the books would be kept at the plant. An ac-

counting system, such as the Commission is now installing in other plants, and designed to meet the needs of the local plant, should be introduced at Neshkoro. In this way only can expenditures be classified properly and apportioned to the proper accounts.

It appears that there are about 32 active consumers in Lohrville, 110 in Red Granite and 32 in Neshkoro. Of these consumers 7 in Lohrville and 53 in Red Granite are on a meter basis. 84 meters are stated as being in use, but it appears that because of a strike in the quarries a great many people have left and discontinued the light service. The balance of about 111 consumers are on a flat rate basis.

Because of the fact that the utility has no records showing the division of the peak demand among the different services which the plant supplies, it has been necessary to divide the demand upon the basis of the most reliable information which could be obtained from the company's operating experience.

No generation statistics are reported as the company had no station meter at the time of this investigation. For this reason it has been necessary to estimate the kilowatt hours delivered at the switchboard and the kilowatt hours sold and accounted for. The amounts given were ascertained partly from records of the metered portion of the output, and partly from estimates based upon other data available.

In order that each branch of service shall be charged with the expenses which it causes, an apportionment of the capacity and output expenses over these classes of service has been made. The basis of this apportionment is the same as has been followed in other cases which have been before the Commission and will not be discussed here. The result of this apportionment is as follows:

	Total.	Capacity.	Output.
Street lighting	$2,113 18	$1,113 39	$999 79
Commercial lighting	4,607 07	3,276 26	1,330 81
Power	536 78	365 05	171 73
Total	$7,257 03	$4,754 70	$2,502 33

It might be said here that it is possible that some of these classes of service are not yielding enough revenue to pay the cost

of the service. If this is the case, it would seem that the rates for these classes might be raised and rates which are yielding more than the cost of service might be correspondingly lowered, but until the records of the utility are so kept as to furnish a more accurate basis of determining the cost of each class of service, any entirely correct readjustment of rates as among different classes is impossible.

When the commercial lighting expenses shown in the preceding table are apportioned over the demand and output, the unit costs of operation are obtained. The capacity cost for commercial lighting is $45.44 per kw. per year, or 12.4 cts. per day; the output cost is 1.8 cts. per kw-hr.; and the resulting cost curve is as follows:

Hours use per day.	Capacity cost, cts.	Output cost, cts.	Total cost, cts. per kw-hr
1	12.40	1.8	14.20
2	6.20	1.8	8.00
3	4.10	1.8	5.90
4	3.10	1.8	4.90
5	2.50	1.8	4.30
6	2.06	1.8	3.86
7	1.03	1.8	2.83
8	0.69	1.8	2.49

A rate approximating the above cost curve would be somewhat as follows: 9 cts. net per kw-hr. for the first 60 kw-hr. used per month per kw. of active load; 7 cts. net per kw-hr. for the next 40 kw-hr. used per month per kw. of active load, and 4 cts. net per kw-hr. for all current used in excess of 100 kw-hr. per month per kw. of active load. As noted later, some reduction is equitable for current sold in Neshkoro as no transmission and transformation expenses can be charged to this business.

To adhere closely to the table of costs is not always advisable. The reason for distributing the fixed cost over the three steps, in the present case as well as in many other instances, contrary to the cost curve, and thus charging the short hour user less than his pro rata share, is that there are a great many short hour users who cannot be made to contribute the full amount of this share. These consumers are profitable, however, when they help bear a part at least of the overhead charges, and, even though they do not carry their full share, thus lighten the load to the other consumers.

Street lighting expenses have been reapportioned to the various communities supplied with street lighting. The cost per tungsten lamp of 400 watts rating per year in Neshkoro was found to be $35.75. For 250-watt tungsten lamps burning on a 2,200 hour schedule at either Red Granite or Wautoma, a cost of $22.40 was obtained. For 100-watt tungstens as installed in Lohrville, the cost was found to be about $9.00. In view of these costs the street lighting rates do not appear excessive.

The power service is somewhat intermittent. The total gross earnings from this service do not appear much higher than they should be. The Commission has pointed out in many cases the advantages of a power load, so that further comment here is superfluous. All that need be said here is that off-peak long-hour power business which, for competitive and other reasons, cannot be had on better terms, might be accepted at less than the regular rates, provided, of course, that the yield therefrom leaves something for fixed charges and, provided further, that it can be so taken without unjust discrimination. For various reasons it is customary everywhere to grant much lower rates for power than lighting. In view of these facts the following schedule suggests itself as reasonable for power service:

$1.25 net per active h. p. of capacity plus 4 cts. per kw-hr.

The determination of the effect of the proposed schedule upon sales and change in revenues is extremely difficult in the absence of more record information. Under a system of flat rates the amount to be paid depends almost wholly upon the fixtures and not upon the amount of current used. It is the duty of the utility, the Commission has ruled, to sell to all consumers through meters unless exempted from so doing by the Commission. When the utility has completed the installation of meters the situation may be such that a review of the facts may necessitate further adjustments.

It has been mentioned before that, owing to the lack of definite information at almost all points of this investigation and the necessity of making estimates, it is by no means certain that the conclusions reached are in all respects accurate. When the applicant can present to the Commission such information as the Public Utilities Law requires it to have available so that a careful analysis of actual instead of estimated operating conditions can be made, some definite conclusion can be reached. Account-

ing systems prescribed by this Commission for utilities have been in use throughout the state for over two years. Why the applicant should not from this time forth keep its accounts as required by law, and as accounts are kept by electric companies throughout the state, is not clear. The Commission is now and has been rendering accounting assistance to utilities requiring such assistance and, if requested, will give similar assistance to the applicant in the present proceeding.

The findings and order in this case are chiefly based upon such reports and other facts as could be obtained from the applicant. If experience shows that some of the conclusions reached should be altered, modifications can be made when necessary.

NOW, THEREFORE, THE APPLICANT, the Neshkoro Light and Power Company, IS HEREBY AUTHORIZED to discontinue its present schedule of rates and charges for electric light and power service, and to place in effect, as a substitute therefor, the following rate schedules deemed just and reasonable, as provided under ch. 499, sec. 1797m—46, laws of 1907:

SCHEDULE OF RATES FOR INCANDESCENT LIGHTING SERVICE.

For all lighting service furnished residences and businesses hereinafter specifically referred to as classes A, B, C, etc., and passing through the same meter and measured by a meter or meters owned and installed by the company. This lighting service will include: electric energy furnished for lamps and other appliances utilized for illumination purposes; motors and appliances other than lighting equipment, when motors are of 1 h. p. rated capacity or less.

Primary rate: 9 cts. net or 10 cts. gross per kilowatt hour for current used equivalent to or less than the first 60 kilowatt hours used per month per active kilowatt.

Secondary rate: 7 cts. net or 8 cts. gross per kilowatt hour for additional current used equivalent to or less than the next 40 kilowatt hours used per month per active kilowatt.

Excess rate: 4 cts. net or 5 cts. gross per kilowatt hour for all current used in excess of the above 100 kilowatt hours used per month per active kilowatt.

The active load in kilowatts shall in every case be a fixed percentage of the connected load in lamps installed upon consumers' premises.

Class A. Residences, dwellings, flats and private rooming houses. When the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active. When the installation exceeds 500 watts nominal rated capacity, 33⅓ per cent of such part of the total connected load over and above 500 watts shall be deemed active.

Class B. When the total connected load is equal to or less than 2½ kilowatts nominal rated capacity, 70 per cent of such total connected load shall be deemed active. When the installation exceeds 2½ kilowatts nominal rated capacity, 55 per cent of such part of the total connected load over and above 2½ kilowatts shall be deemed active; provided that lamps used exclusively in space devoted to the storing of goods shall be placed at 20 per cent active and shall not be included in the 2½ kilowatts specified above.

Class B shall consist of banks, offices, business and professional (including studios, dressmaking parlors, massage parlors, millinery and hair dressing establishments, and photograph galleries), wholesale and retail merchandise establishments, such as bakeries, barber shops and stores of all kinds, saloons (including pool and billiard halls and adjoining card rooms), theaters, dance and public halls, restaurants, depots and public places for the conduct of railroad, express and telephone business (excluding freight warehouses) and all other consumers not herein otherwise specifically provided for.

Class C. 55 per cent of the total connected load shall be deemed active. Such class shall consist of federal and county buildings; churches and missions, hotels and clubs; factories (including small industrial establishments such as machine shops, carpenter shops, blacksmith shops, tin shops and cigar factories), closing not later than 6 p. m., private and parochial schools, grain and stone elevators and warehouses, freight and storage warehouses, stables and garages, both private, boarding and livery, and all interior lighting for the villages of Neshkoro, Red Granite, Lohrville and Wautoma, including schools, police and fire stations, libraries, hospitals and other city or village buildings.

Class D. The total connected load shall be deemed active. Such class shall consist of unmetered lighting for signs, outlines and windows, contracted for upon a yearly basis.

The minimum bill for general commercial and residence lighting shall consist of a charge of $1.00 net per month for 1,000 watts or less of connected load, plus 5 cts. for each additional 50 watts of connected load.

POWER.

This service will include electric energy utilized for motor and miscellaneous lighting service, where the demand arising from such miscellaneous lighting service shall not be in excess of 20 per cent of the total simultaneous demand for lighting and power service. Stereopticons, moving picture machines, photographer's arcs and rectifiers shall be billed at the power rate when separately metered from the lighting.

For current used for electric power purposes, as measured by meters owned and installed by the company, a maximum charge of $1.25 net per active horse power capacity per month, plus 4 cts. net or 5 cts. gross per kilowatt hour. Active horse power shall consist of a fixed percentage of the nominal rated capacity of motor as indicated on the manufacturer's name plate.

The following percentage of such capacity shall be deemed active:

The first 10 h. p. installed.....90 per cent.
The next 20 h. p. installed.....75 per cent.
The next 30 h. p. installed.....60 per cent.
All over 60 h. p. installed.....50 per cent.

Minimum bill shall be $2.50 net per month.

DISCOUNT.

Lighting and power.

The company shall bill all consumers at the gross rate and the difference between the gross and net rates, or one cent per kilowatt hour, shall constitute a discount for prompt payment. Fifteen days from date of bill is considered as the limit of time discount privilege is effective.

MUNICIPAL LIGHTING CONTRACT.

Neshkoro:

For 400-watt tungsten lamps operated on a moonlight schedule $43 per lamp per year.

For 60-watt tungsten lamps, same burning schedule as above, $12.00 per lamp per year.

Red Granite or Wautoma:

For 250-watt tungsten lamps burning on a moonlight schedule, $30.00 per lamp per year.

Lohrville:

For 100-watt tungsten lamps burning on a moonlight schedule, $15.00 per lamp per year.

All consumers shall be placed upon a meter basis; a canvass shall be made of the connected load upon the installation of each meter; and all bills rendered by the company to the electrical consumer shall state plainly the connected load of each consumer and the percentage which is considered active in computing the rate.

These rates shall not be put in effect until the utility shall have adopted and installed a system of accounts in accordance with the Commission's classification.

CITY OF FORT ATKINSON
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Sept. 11, 1913. Decided Nov. 14, 1913.

The petitioner alleges that three highway crossings on the C. & N. W. Ry. in the city of Ft. Atkinson are dangerous.

Held: The crossings require further protection. The respondent is ordered: (1) to station a flagman, to be on duty from 7 a. m. to 8 p. m., or until such time as the last passenger train has gone by, at each of the two crossings located respectively at Madison ave. West, and Sherman ave. West; (2) to install and maintain at each of these crossings and at the crossing at South Fifth st. an electric bell with illuminated sign; and (3) to install annunciators at Madison ave. West, and Sherman ave. West. Plans for track circuits are to be submitted to the Commission for approval.

If the rule requiring trainmen to flag all train movements at the South Fifth st. crossing is not rigidly enforced the Commission will modify the present order to require the respondent to station a flagman at this crossing also.

The petitioner, a municipality in Jefferson county, alleges in substance that three highway crossings in the city of Fort Atkinson, located on the line of the Chicago & North Western Railway Company at Madison avenue West, Sherman avenue West and South Fifth street, are dangerous to public travel. It is alleged that no protection is provided at South Fifth street and that the safety devices now installed at Madison avenue West and Sherman avenue West are imperfect, inadequate and out of repair. The Commission is therefore asked to require the respondent to provide adequate protection at these crossings.

The respondent, in its answer, alleges that the gates at Madison avenue West and Sherman avenue West have been thoroughly repaired and are now properly adjusted and in first class working condition. It further alleges that trains are now flagged over the South Fifth street crossing by trainmen and that in view of the light amount of travel no additional protection is necessary. It therefore asks that the petition be dismissed.

A hearing was held at Fort Atkinson on September 11, 1913.

A. L. Stengel appeared for the petitioner and *C. A. Vilas* for the respondent.

The representative of the respondent at the bearing admitted that each of the crossings under consideration is dangerous, and the only question for consideration is whether the protection now provided is adequate.

Sherman Avenue and Madison Avenue Crossings.

It appears from the testimony that Madison avenue and Sherman avenue are located about 550 feet apart. Gates are installed at each crossing, but they are controlled by a single operator from a tower about 350 feet from Sherman avenue and 200 feet from Madison avenue. These gates were installed subsequent to the issuance of an order of the common council in 1895. A good view of trains in both directions may be had from the gateman's tower, but westbound traffic on Sherman avenue and eastbound traffic on Madison avenue is not visible from that point. At Sherman avenue there is a sidetrack about 90 feet east of the main track which is not included between the gates. Witnesses for the city testified that the gates do not operate satisfactorily. Numerous specific instances were cited of times when the gates had failed to work properly. It was said that the gate-arms do not move together, which causes confusion in the mind of travelers. One arm will sometimes fall fifteen seconds later than the other. The gates are very slow in their movement, taking about thirty seconds for raising or lowering. Instances were mentioned of trains passing when the gates were up, and it was said that often one arm lowers only a part of the way. The mayor and another witness testified that on a number of occasions they had found the gates down at night when no trains were passing, and had personally gone to the tower and raised them. It was also stated that the gateman had been found asleep in the tower. Both Sherman avenue and Madison avenue are important city streets and carry a large amount of traffic. One witness estimated that several hundred school children cross at Madison avenue. There are four regular passenger trains and four regular freight trains in each direction operated over these crossings. Trains run about six miles an hour southbound and about twelve miles an hour northbound.

The company's superintendent stated that in his opinion the existing gates can be repaired and operated in a satisfactory

manner. He objected to stationing a gateman at each crossing or to placing flagmen there, for the reason that at Sherman avenue a view of trains to the north can be had for about 300 feet only, on account of the curve in the tracks. He expressed the opinion that to make protection by flagman efficient, the flagman should be able to see a quarter of a mile in each direction. It was also stated that at other crossings on the North Western line two sets of gates are operated from the same tower where a view of traffic on the highway is no better than at the crossings under consideration. He said that the towerman whose negligence was referred to by witnesses has been discharged and an efficient operator secured.

A number of narrow escapes at these crossings, due to the imperfect operation of the gates, were described by witnesses, and since the hearing the Commission has been informed by the officials of the company that on October 24, 1913, at 11:30 p. m. a wagon was struck on the Madison avenue crossing, fatally injuring one occupant and seriously hurting the other.

The Commission's engineer has examined the conditions at these crossings. He reports that the gates are in poor condition; that they sometimes do not come completely down; that the pump is difficult to work and that it is often hard to raise the gates. He states that they are slow to respond to the air pressure of the pump, with the result that the gateman sometimes cannot get both sets of gates lowered before the train passes. During his inspection on November 12, 1913, the gateman was absent from his post for 22 minutes, during which time the tower was locked.

South Fifth Street Crossing.

The testimony shows that South Fifth street runs east and west and crosses a main track and three sidetracks which run north and south. The crossing is so situated with reference to certain industries and the yards of the company that a large amount of switching is done over it. The view is badly obstructed in one quarter by a tobacco warehouse, and cars are allowed to stand on the sidetracks in such a way as to further limit the view, a condition which the superintendent said could not be changed. Traffic over South Fifth street is heavy and includes many employes in factories and also about forty school children who are obliged to cross four times a day. Many

farmers have to drive over the crossing in hauling hogs to a near-by sausage factory. Four passenger and four freight trains in each direction are operated in addition to the frequent switching movements. The regular passenger trains were said to move at a speed of about ten miles an hour at this point.

From the report of our engineer it appears that the limits of vision from the east highway approach are as follows:

Distance of point of observation in highway from main track.	View south.	View north.
East 25 feet	2,000 feet	600 feet.
" 50 "	350 "	300 "
" 75 "	2,000 "	1:0 "
" 100 "	2,000 "	80 "
" 200 "	450 "	40 "
" 300 "	100 "	0 "
" 400 "	40 "	0 "
" 500 "	20 "	0 "

The engineer reports that the view from the west approach is comparatively open.

The company's superintendent testified that trainmen are instructed to flag all switching movements over the crossing. However, several witnesses cited numerous instances when switching trains crossed without being flagged by trainmen, and a number of "flying switches" were reported. It was pointed out that even though all switching movements were flagged over the crossing, sixteen regular trains would still cross unprotected.

In the light of the testimony we find that each of the three crossings referred to in the petition is dangerous, and that each requires some further protection. It is apparent that the gates at Sherman avenue and Madison avenue are not in satisfactory operating condition, and it is doubtful whether they can be remodeled so as to afford adequate protection. If the present mode of protection is to be retained, therefore, it will necessitate the installation of new gate equipment. But it seems inadvisable to retain the present system, for the gateman is not able to see approaching traffic on the streets in two quarters, which makes the operation of gates from this tower a source of danger. Moreover, these streets are important thoroughfares near the center of the city and the traffic conditions are such as to make protection by flagmen more effective than the operation

of gates. It is our judgment that these crossings should be guarded by flagmen during the hours when passenger trains are operated. Two regular freights and occasional extra trains cross during the night, and it appears that traffic on the streets continues until a late hour, as is indicated by the recent fatal accident at Madison avenue. These conditions make necessary protection at night and this can be furnished by the installation of electric bells and lights. These bells should be disconnected during the day and connected by the watchmen before leaving at night. An annunciator should be provided to warn the flagmen of the approach of trains from the north, in which quarter the view of the tracks is limited. At South Fifth street switching is frequent in addition to the regular movements over the main track. The street traffic is heavy during the day and includes a considerable number of school children. However, the amount of travel is not so great as at the other crossings under consideration, and does not continue into the night to any large extent. If all switching movements over the crossings are properly flagged by trainmen, we believe that the main track movements can be adequately safeguarded by the installation of a bell and light. The rule requiring trainmen to flag all movements has not been strictly adhered to in the past, and if the railway officials do not enforce the rule rigidly, the Commission will modify this order and require the company to station a flagman there.

1. IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, station a flagman at each of the two crossings on its line located at Madison avenue West and Sherman avenue West in the city of Fort Atkinson, who shall be on duty from 7 a. m. to 8 p. m. or until such time as the last passenger train has gone by.

2. IT IS FURTHER ORDERED, That said respondent railway company install and maintain at each of the crossings on its line at Madison avenue West, Sherman avenue West and South Fifth street in the city of Fort Atkinson an automatic electric bell with an illuminated sign for night indication; and install an annunciator at Madison avenue West and Sherman avenue West to warn the flagmen of the approach of trains from the north, plans for track circuits to be submitted to the Commission for approval.

Ninety days is considered to be a resonable time within which to comply with the second paragraph of this order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF A HIGHWAY CROSSING ON THE LINE OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY AT CHESTNUT STREET IN THE CITY OF EAU CLAIRE.

Submitted Oct. 3, 1913. Decided Nov. 14, 1913.

The Commission, on its own motion, investigated a crossing on the C. M. & St. P. Ry. at Chestnut street in Eau Claire. The railroad crosses two intersecting streets and a street railway at the point in question.

Held: The crossing requires further protection. The respondent is ordered to station a flagman at the crossing to be on duty from 7 a. m. to 6 p. m. daily.

The Commission, being satisfied that sufficient grounds existed to warrant an investigation of the conditions at the Chestnut street crossing on the line of the Chicago, Milwaukee & St. Paul Railway Company in the city of Eau Claire, a hearing was duly ordered and held on October 3, 1913, at Eau Claire. *Arthur H. Shoemaker* appeared for the city of Eau Claire and *J. N. Davis* for the Chicago, Milwaukee & St. Paul Railway Company.

The testimony shows that Chestnut street intersects with Second avenue and Fifth avenue at the crossing in question. Chestnut street runs east and west and Second avenue and Fifth avenue, one of which is practically a continuation of the other, run north and south. The railway runs northeast and southwest. A city street car line runs along Chestnut street, crosses the steam railway tracks and turns south on Fifth avenue. From the east approach on Chestnut street or the south approach on Fifth avenue the view to the northwest is obstructed by a bank to such an extent that a traveler has to be very close to the track before a train becomes visible. From the west approach on Chestnut street or the north approach on Second avenue the view to the southwest is obstructed by a house.

A traffic count was taken by the Chicago, Milwaukee & St. Paul Railway Company continuously for forty-eight hours on September 23 and 24, 1913. These data have been summarized as follows:

Period of observation.	Motorcycles and bicycles.	Teams	Automobiles.	Street cars.	Pedestrians.	Regular trains.	Switching movements.
7 a. m. to 7 p. m.							
Sept. 23, 1913	65	210	94	98	1,238	4	13
" 24, 1913	37	184	40	96	989	4	11
7 p. m. to 7 a. m.							
Sept. 23, 1913	5	23	15	39	316	.....	.....
" 24, 1913	10	12	10	39	241	.....	.....
Total 48 hrs	117	429	159	272	2,784	8	24

One of the men who helped to take this count testified that about 75 per cent of the pedestrians reported were school children. He also stated that bicycles crossed more frequently than motorcycles. It appears that the street railway company has a rule requiring its conductors to flag their cars over the crossing, and the witnesses who made the traffic count testified that the rule was adhered to while they were on duty. Trains are accustomed to whistle for the crossing and ring their bells while approaching it. No protection other than a standard crossing sign is now provided. No accidents were reported.

In the light of the testimony we find that the crossing in question is more than ordinarily dangerous. While the regular train movements are not frequent, there are a number of irregular switching movements which occur at times when the traffic on the streets is heaviest. The fact that street cars carrying a number of passengers cross every fifteen minutes should also be considered, for while the conductors of the street cars are required to flag their cars across, it will be an additional protection to have an employe of the steam railway company also on guard. The streets which are crossed are important ones and the traffic includes an unusually large proportion of children of school age. These conditions make further protection necessary, and it is our judgment that the maintenance of a flagman on the crossing from 7 a. m. to 6 p. m., which is recommended by our engineer, will adequately safeguard the traveling public for the present.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company station a flagman at the highway crossing on its line at Chestnut street in the city of Eau Claire who shall be on duty from 7 a. m. to 6 p. m. daily.

VILLAGE OF BALDWIN
vs.
CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted June 18, 1913. Decided Nov. 14, 1913.

The petitioner alleges, in effect, that the Hammond road crossing on the C. St. P. M. & O. Ry. in the village of Baldwin, St. Croix county, is dangerous and that the bell protection which the respondent is planning to install would be inadequate.

Held: The crossing is dangerous. Because of difficulties arising from the nature and amount of traffic, the proximity of the station building to the crossing, and the large number of school children who use the crossing, protection in addition to that afforded by a bell is necessary. The respondent is therefore ordered: (1) to station a flagman at the crossing to be on duty daily from 8:00 a. m. to 9:30 p. m.; and (2) to install and maintain a bell with an illuminated sign to operate during the hours the flagman is not on duty. Plans for track circuits are to be submitted.

The petitioner, a municipal corporation in St. Croix county, Wis., alleges in substance that the respondent maintains highway crossings in the village of Baldwin which are exceedingly dangerous to travelers, and that the installation of bell protection would be wholly inadequate at such crossings. The Commission is therefore asked to require the respondent to install a system of gates or some other protection more effective than bell signals.

The respondent, in its answer, alleges that it is perfecting plans for installation of automatic crossing bells and signals at the crossings in question, and denies that such protection is inadequate or that gates or overhead viaducts are necessary.

A hearing was held on June 18, 1913, at Baldwin, Wis. *E. B. Kinney* appeared for the petitioner and *F. E. Nicoles* for the respondent.

From the testimony it appears that the complaint refers entirely to the Hammond road crossing. The respondent has expressed its willingness to provide bell protection at this crossing, and therefore evidently regards the conditions there as danger-

ous. The highway runs north and south and the railway east and west. The two main tracks and a sidetrack cross the street, and they are so located that a large amount of switching is done over the crossing. The tracks are on a down grade to the west, and westbound trains are operated at high speed through Baldwin. From the north highway approach the view to the west is limited by rising ground so that trains cannot be seen more than four hundred feet west until a traveler is very close to the tracks. From the south highway approach the view in both directions is obstructed by houses, so that trains cannot be seen until a person is within about one hundred feet of the track, and cars standing on the sidetrack further obstruct the view to the east.

The testimony shows that the Hammond road is the most heavily traveled highway in Baldwin. It is largely used by through traffic to and from St. Paul and Eau Claire and intermediate points. About two-fifths of the residences and the village school are located north of the tracks, while the business section and about three-fifths of the residences are south of the railway. Thus a large proportion of the school children are obliged to cross the tracks several times a day. A witness estimated that when school is in session about one thousand crossings are made by the children going to or from school or on errands. The results of a count made on May 27, 1913, for the petitioner were introduced at the hearing. On that day 230 adult pedestrians and 600 children crossed the tracks. There were 249 teams carrying 412 persons, 92 automobiles carrying 256 persons, and 55 bicycles recorded in the count. It was stated, however, that the number of teams was augmented by the fact that two teams were constantly crossing during the day, and that the number of children was less than usual because several classes were not in session on that day. An engineer of the Commission observed the traffic at the Hammond road on October 9, 1913, from 6:30 a. m. to 5:45 p. m., and his record shows that during that period 580 children, 198 adult pedestrians, 149 teams, 33 automobiles and 8 bicycles crossed the tracks. Twenty-one train movements were noted. The testimony of the respondent's superintendent shows that the regular train movements occur as follows:

12:41 a. m.	6:25 a. m.	9:13 a. m.	1:00 p. m.	7:12 p. m.	9:27 p. m.
1:35 "	8:02 "	9:56 "	2:15 "	8:24 "	10:08 "
2:40 "	8:36 "	11:16 "	2:50 "	8:58 "	11:25 "
5:46 "	9:00 "	12:20 "	3:56 "	9:08 "	11:55 "

The switching at Baldwin is done entirely by two local freight trains which arrive at 1:00 p. m. and 2:15 p. m., respectively, and conduct switching operations during periods of from thirty minutes to two hours. Thus a through freight at 2:50 p. m. and a local passenger at 3:56 p. m. pass at a time when one of the local freights may be switching. In addition to the regular trains the superintendent said that a good many extra trains are operated. The speed of through trains from the east was estimated by a witness for the petitioner at from 60 to 80 miles an hour. The company's superintendent admitted that trains pass the crossing at from 30 to 35 miles an hour. He said that trainmen are instructed not to leave cars standing on the sidetrack near the crossing, and to flag all switching movements.

The Commission's engineer has carefully examined the situation at Baldwin and recommends that a flagman be stationed at the Hammond road crossing between the hours of 8 a. m. and 9:30 p. m. daily, and that a bell and light be maintained there during the period when the flagman is not on duty.

In the light of the testimony and of the report of our engineer we find that the crossing is more than ordinarily dangerous and that further protection is required. At a crossing such as this one, where the highway is so located that practically all switching movements cross it and where the depot at which a number of trains stop is within the circuit, protection by an automatic bell offers more difficulties than at points where these conditions are not present. Such difficulties may be overcome to a large extent by suitable operating regulations, but the protection is likely to be less effective than under less complicated circumstances. In the present case a very large number of children use the crossing, and for this reason particular care should be taken that the devices adopted for protection are not in the least confusing to travelers. With these conditions in mind, it is our judgment that a flagman should be stationed at the crossing at least during the hours when children are going to and from school and when switching is being done. If protection by

flagman is afforded from 8:00 a. m. to 9:30 p. m., as recommended by our engineer, it will provide for all but seven of the twenty-four regular trains and will cover the period when the switching is done and when the traffic on the highway is heaviest. This protection, in conjunction with an automatic electric bell which shall be disconnected during the hours that the flagman is on duty, will in our opinion render this crossing reasonably safe under the existing conditions of traffic.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, station a flagman at the highway crossing on its line at the Hammond road in the village of Baldwin, who shall be on duty daily from 8 a. m. to 9:30 p. m., and install and maintain at said crossing an automatic electric bell with an illuminated sign for night indication, which shall operate during the hours in which the flagman is not on duty, plans for track circuits to be submitted to the Commission for approval.

W. A. HUME ET AL.
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted June 6, 1913. Decided Nov. 14, 1913.

The petitioners allege that the passenger train service rendered by the C. M. & St. P. Ry. Co. between Elkart Lake and Green Bay is inadequate and ask that the railway company be required to extend the operation of train No. 23, leaving Milwaukee at 5:10 p. m. or earlier, from Elkhart Lake to Green Bay, or to change the time of its passenger train No. 9 so that it shall leave Milwaukee at 5:10 p. m., or earlier, and arrive in Chilton before 7:50 p. m. Prior to July 14, 1912, a passenger train was operated between Milwaukee and Green Bay on a schedule under which it arrived at Chilton at 7:50 p. m. On that date a new train, known as No. 9, was put on between Milwaukee and Green Bay and scheduled to arrive in Chilton at 9:37 p. m., and the earlier evening train was discontinued north of Elkhart Lake. No. 9 is a through train running from Chicago to points in upper Michigan. The chief cause of complaint appears to be that it is impossible under the present schedule for persons at Chilton to reach points north of Chilton for evening engagements without taking the morning train and thereby losing an entire day.

Held: Train schedules must be arranged for the convenience of the patrons of the entire line taken as a whole even though in serving the larger purpose the schedules work some hardship on a few communities and individuals. The service rendered by the respondent at Chilton is reasonably adequate. The petition is therefore dismissed.

The petition alleges in substance that the passenger train service rendered by the Chicago, Milwaukee & St. Paul Railway Company on its Superior division between Elkhart Lake and Green Bay is inadequate. The Commission is therefore asked to require the respondent to operate its passenger train No. 23 through from Milwaukee to Green Bay, leaving Milwaukee at 5:10 p. m., or earlier; or to change the time of its passenger train No. 9 so that it shall leave Milwaukee at 5:10 p. m., or earlier, and arrive in Chilton before 7:50 p. m.

The respondent submits for its answer letters from its operating officials in which the position is taken that the extension of train No. 23 from Elkhart Lake to Green Bay as requested

by the petitioners would result in a loss to the company. The dismissal of the complaint is therefore asked.

A hearing was held on June 5, 1913, at Elkhart Lake, Wis. *L. P. Fox* appeared for the petitioners and *J. N. Davis* for the respondent. The hearing was continued at Green Bay on June 6, 1913, *J. N. Davis* representing the respondent.

The testimony shows that prior to July 14, 1912, a passenger train was operated between Milwaukee and Green Bay which was scheduled to arrive in Chilton at 7:50 p. m. On that date a new train, known as Number 9, was put on between Chicago, Milwaukee and Green Bay, scheduled to arrive in Chilton at 9:37 p. m. At the same time the earlier evening train was discontinued north of Elkhart Lake. The schedule of passenger trains on this division, as shown by the company's time table for October, 1913, is as follows:

Northbound.

Station.	[1] No. 3.	[1] No. 9.	[2] No. 21.	[2] No 31.
Milwaukee	12:35 a. m.	7:20 p. m.	4:05 p. m.	7:10 a. m.
Elkhart Lake	2:20 "	9:07 "	6:05 "	9:09 "
Chilton	2:47 "	9:37 "	.....	9:45 "
Green Bay	3:50 "	10:50 "	.....	11:00 "

Southbound.

Station.	[1] No. 2.	[2] No. 36.	[1] No. 10.	[2] No. 6.
Green Bay	12:45 a. m.	.....	7:00 a. m.	3:20 p. m.
Chilton	2:06 "	.....	8:06 "	4:36 "
Elkhart Lake	2:41 "	7:30 a. m.	8:41 "	5:14 "
Milwaukee	:5 "	9:35 "	10:40 "	7:25 "

[1] Daily. [2] Daily except Sunday.

It was pointed out by the petitioners that no northbound train service is provided at Chilton from 9:42 in the morning to 9:37 at night, an interval of approximately twelve hours, with the exception of the way freight which is slow and operates on a very irregular schedule. Residents of Chilton and other points north of Elkhart Lake who have occasion to meet evening engagements at Appleton, Neenah or other centers north of Chilton testified that the present schedule is inconvenient for them. To keep such appointments they are compelled to take

the morning train, thereby losing an entire day, or drive about eight miles to the "Soo" line. It was also shown that prior to the change in schedule the evening mail at Chilton was delivered on the day of its arrival, whereas under the present arrangement residents of Chilton are obliged to wait until morning for the mail which comes in on the 9:37 p. m. train. Chilton is the county seat of Calumet county. It has a population of about 2,000, and is the business center for a thriving agricultural district. Among its business establishments are a milk condensing plant, a malting house, a brewery, several cheese factories, a sash, door and blind factory, two grist mills, three banks, and a printing office. A witness estimated that on the average there are from 7 to 18 passengers boarding and about the same number alighting from the morning and evening trains.

Operating officials of the company testified that the change in the time of trains was made after due consideration of the interests of all patrons of the road. It was thought best to start the "Copper Range Limited", or No. 9, from Chicago at about 5 p. m., so that it would arrive at Calumet, Michigan, about 7:30 a. m. With this new train in operation it was regarded as unnecessary to continue to run a train as far as Green Bay only about two hours ahead of it. The train formerly known as No. 23 was therefore discontinued north of Elkhart Lake. It now handles the local business between Milwaukee and Elkhart Lake, and north of that point the later train makes the local stops. Witnesses for the company expressed the opinion that in the interest of through passengers the time of No. 9 should not be changed. They also asserted that the extension of the earlier train to Green Bay as desired by the petitioners would result in a loss to the company. The additional operating cost of the extension asked for was estimated by the company's superintendent as $761.32 per month, or $9,135.84 per year. Subsequent to the hearing the company submitted a statement of tickets sold during the month of August for points on the Superior division from Milwaukee, which shows a total of 3,492 tickets, of which 273, or 7.8 per cent, were destined for Chilton.

An examination of the testimony and the schedule now in force on the line under consideration does not disclose a condi-

tion, in our opinion, which fails to meet the requirements of reasonably adequate service. Residents of Chilton can take a northbound train at 9:45 a. m. arriving in Green Bay at 11:00 a. m., and can leave Green Bay at 3:20 p. m., thus having more than four hours there for the transaction of business. For points south of Chilton residents of that city can leave at 8:06 a. m., arriving in Milwaukee at 10:40 a. m., and can return on a train leaving Milwaukee at 7:20 p. m. Thus they have ample time to transact business at Milwaukee or an intermediate point and return the same day. In addition to these four trains, a night train in both directions is available for use at Chilton. The chief cause of complaint appears to be the inability of persons to reach points north of Chilton for evening engagements without taking the morning train, thereby losing an entire day. This is no doubt inconvenient for a number of persons, but it cannot be regarded as indicative of inadequate train service; for train schedules must necessarily be arranged for the convenience of the patrons of the entire line taken as a whole, and in serving this larger purpose they inevitably work some hardship on a few communities and individuals. In the present case three passenger trains in each direction are provided, and these trains are so timed that other communities are accessible to residents of Chilton for business purposes. This service we regard as reasonably adequate, and the petition must therefore be dismissed.

RHINELANDER PAPER COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Nov. 11, 1913. Decided Nov. 15, 1913.

The petitioner alleges that it was erroneously charged for the transportation of three carloads of car stakes over the respondent's line from Rhinelander to Armstrong Creek. The car stakes were furnished and shipped by the petitioner for the use of the respondent in moving pulp wood for the petitioner. When the shipments moved the respondent's tariff relating to shipments of saw logs between points within the state provided that car stakes so transported should be returned and delivered to consignee without charge.

Held: The charges exacted of the petitioner were unusual. Refund is ordered.

The petitioner is engaged in the manufacture of paper and pulp at Rhinelander, Wis. It alleges that on or about May 19, June 19, and August 22, 1913, it shipped from Rhinelander to Armstrong Creek, Wis., over the respondent's lines three carloads of car stakes, which were to be used for the purpose of loading carload shipments of pulp wood to be transported for the petitioner by the respondent; that charges were assessed and collected on such car stakes to the amount of $91.50; that the said car stakes were furnished and shipped by petitioner for the use of the respondent in moving pulp wood on flat or gondola cars; that in respondent's tariff G. F. D. 16868, relating to shipment of saw logs between points in this state, it is provided that car stakes so transported shall be transported and delivered without charge; that the charge of $91.50 upon the three cars of stakes in question was erroneous, unusual, and exorbitant.

Wherefore petitioner prays that the respondent be required to refund to it the sum so charged.

The respondent did not file an answer to the petition.

The hearing was held November 11, 1913. The petitioner was represented by *Walter Drew,* its attorney, and the respondent by *Kenneth Taylor,* its attorney.

The facts in the case are briefly these: The petitioner, after receiving shipments of pulp wood over respondent's lines, returned the stakes, which had been used in such shipments, to the petitioner. There were three cars in all and respondent assessed freight charges thereon as follows:

Car	Weight	Rate	Frt. charges
Miss. C. 1211	46,200	7½ cts.	$34 65
Soo 1779	38,800	"	29 10
W. C. 50579	37,000	"	27 75
Total			$91 50

When the shipments in question moved, respondent's tariff G. F. D. No. 16868, relating to shipments of saw logs between points within the state, provided that car stakes so transported should be returned and delivered to consignee without charge. It seems to be conceded that the custom of railroads has been and is to return car stakes to the shipper free of charge. The respondent made no such provision in its tariffs until September 30, 1913. Under the circumstances we find and determine that the charges exacted of the petitioner on the aforesaid shipments of car stakes were unusual, and that such stakes should have been returned to the shipper free of charge.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the Rhinelander Paper Company the aforesaid sum of $91.50.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE PROPOSED RELOCATION OF A HIGHWAY WHICH CROSSES THE TRACKS OF THE CHICAGO, BURLINGTON AND QUINCY RAILROAD COMPANY SOUTHEAST OF CASSVILLE.

Submitted Sept. 26, 1913. Decided Nov. 15, 1913.

The Commission, on its own motion, investigated the public necessity of relocating a highway which crosses the C. B. & Q. R. R. near the village of Cassville, Grant county. The highway runs southeast from the village, crosses the railroad, follows the banks of the Mississippi river for about 1.15 miles, then turns north and crosses the railroad again. The railway company is willing to eliminate both crossings by relocating the highway connecting them north of, and parallel to, the tracks and to bear the entire expense of the change. This plan is opposed by three witnesses who own property south of the tracks.

Held: Public safety requires the relocation of the highway. The company is therefore ordered: (1) to construct and maintain for a period of three years a highway, as specified, connecting the crossings; (2) to provide suitable private crossings at these points for the use of owners of property south of the railroad; and (3) to close the present crossings to public travel.

The Commission being satisfied that sufficient grounds existed for an investigation of the public necessity of relocating a highway southeast of the village of Cassville, Grant county, a hearing was duly ordered and held at Cassville, on September 26, 1913. *L. H. Okey* appeared for the village of Cassville and *Woodward & Lees,* by *Andrew Lees,* for the Chicago, Burlington, & Quincy Railroad Company.

The present highway runs southeast from the village north of the tracks, crosses the railway line at a very acute angle about 550 feet west of the village line, follows the bank of the Mississippi river for about 1.15 miles south of the tracks, turns north and crosses the railroad line again at right angles. At the hearing the representative of the Chicago, Burlington & Quincy Railroad Company suggested a plan which would eliminate both of the crossings by relocating the highway connecting them north of and parallel to the tracks. He stated that the railway company is willing to bear the entire expense of the proposed change. This plan was favored by the village president and a number of other witnesses at the hearing, and was opposed by three witnesses who own property south of the tracks.

The testimony shows that the crossing nearest the village, known as the "village crossing", is at a very acute angle. On the northwest approach a good view along the tracks to the southeast may be had, but a train from the northwest is obscured by trees and usually by freight cars standing on the sidetrack, so that a traveler cannot see the train until within about two hundred feet of the tracks. From the southeast highway approach the view to the northwest is limited by high ground so that trains are not visible until one is within a few feet of the railway right of way. To the southeast trains can be seen at a distance of about one hundred fifty feet, when the traveler is near the edge of the right of way, the view being obstructed by trees. Two main tracks, a sidetrack, and a passing track are crossed. It was stated that when the double track system is completed long freight trains will wait on the passing track and will have to be cut to allow traffic to pass, thus obstructing the view of trains on the main tracks. A number of narrow escapes at the crossing were described by witnesses.

The second crossing is known as "Grim's crossing". It is approximately at right angles, the road turning to the northeast north of the tracks and to the northwest south of the tracks. From the northeast highway approach the view to the northwest is fairly open, but to the southeast it is obstructed by trees, so that a traveler must be within one hundred feet of the tracks to see a train five or six hundred feet from the crossing. From the south the road ascends to the tracks and a view of trains is not afforded in either direction until one is on this ascent within one hundred feet of the tracks. The view to the southeast is obstructed by trees near a farm house. An accident in which a team of horses was killed at this crossing was reported.

Traffic over both crossings is substantially the same. One witness estimated the average travel at about twenty vehicles a day. Another expressed the opinion that twenty would fairly represent the minimum traffic, but that as many as fifty vehicles often cross in one day. Ten automobiles are owned in Cassville, and the road is used to some extent for motoring. It leads from Burton to Potosi. A number of children use the crossings on their way to and from school.

Two of the persons who appeared in opposition to the proposed change in the highway live south of the tracks and east of Grim's crossing, but only one has a direct connection with the

present highway. Their chief objection to the plan was that it would shut them off from the public road. They said, however, that if the crossing were allowed to remain as a private crossing, without a fence and gates, they would not be opposed to the change. The third person owns a gravel pit southeast of the village crossing. He stated that if that crossing were allowed to remain as a private crossing it would not materially interfere with his access to the property.

The Commission's engineer has investigated the situation under consideration and recommends that the plan for relocation proposed by the railway company be adopted.

From a careful examination of the testimony and of the report of our engineer we find that each of the crossings under consideration is more than ordinarily dangerous. The plan suggested by the company will eliminate both crossings and provide a shorter route for the great majority of travelers on the highway. The owners of property south of the tracks who have access to the existing highway will no doubt be slightly inconvenienced, but if private crossings are provided for them, they will not be greatly discommoded. In any case the safety and convenience of the great majority of those who use the road must outweigh the inconvenience to which a few persons are subjected. It is our judgment, therefore, that public safety requires the relocation of the highway as proposed by the railway company. The road should be maintained by the company until it is properly solidified and in approximately as good condition as the existing highway.

IT IS THEREFORE ORDERED, That the Chicago, Burlington & Quincy Railroad Company construct, and maintain for a period of three years, a properly surfaced highway fifty feet wide with a crown twenty feet in width parallel to and north of its tracks, connecting the "village crossing," located 550 feet west of the east line of the village of Cassville in Grant county, Wis., and "Grim's crossing," located 1.15 miles southeast thereof; and provide a suitable private crossing near the "village crossing" and at "Grim's crossing" for the use of owners of property south of its tracks.

IT IS FURTHER ORDERED, That upon the completion of the work ordered herein the "village crossing" and "Grim's crossing" shall be closed for public travel.

Six months is considered a sufficient time within which to construct the new highway and open it for the use of the public.

CITY OF WAUKESHA
vs.
THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY, MILWAUKEE LIGHT HEAT AND TRACTION COMPANY.

Submitted Jan. 10, 1913. Decided Nov. 15, 1913.

The petitioner alleges: (1) that the limitation of stops made by the cars of the respondent companies within the city of Waukesha results in inadequate street railway service and in danger to public travel at street intersections; (2) that the cars used are inadequate; and (3) that adequate service demands the erection of a suitable waiting room at the junction of the respondents' line and the line of the "Soo" railway company, as required by sec. 1862g of the statutes. In the past the cars have stopped at all street intersections to take on and let off passengers, but under a new schedule which, the respondents allege, was adopted for the purpose of improving the service, the cars stop only at certain designated points. The petitioner alleges that the franchise under which the respondents use the streets in Waukesha requires them to furnish street railway service as distinguished from interurban service and that they have no right to operate interurban cars through the city.

Held: 1. The right of respondents to operate interurban cars upon the streets of Waukesha is a judicial question and not within the power of the Commission to determine, but so long as the respondents render such service it is subject to the supervision and regulation of the Commission. In view both of the requirements of the interurban service and the franchise obligations which the respondents may have assumed with respect to the rendering of street railway service, it is deemed advisable to tentatively increase the number of stops made within the city of Waukesha. If it is found impossible under the new schedule to maintain the running time between Milwaukee and Watertown it will be necessary for the Commission to reduce the number of stops. The respondents are therefore ordered to stop their cars in the city of Waukesha to receive and discharge passengers at points designated by the Commission.

2. It would be impracticable to abandon the cars in use and substitute new cars in their places. The respondents should, however, remedy the defects in the present equipment when ordering or constructing new equipment.

3. The waiting station now provided by the respondents in the city of Waukesha is reasonably adequate to meet the convenience of the public, and it is not necessary to construct a waiting station at the "Soo" line crossing.

The city of Waukesha, in its petition after the usual formal allegations, sets forth in substance: that on July 27, 1897, the city of Waukesha issued a franchise for a street railway to the

Waukesha Electric Railway Company, authorizing it to operate street cars over certain streets within that city; that about 1900 the Milwaukee Light, Heat and Traction Company, designated as the owning company, purchased this franchise; that since that time The Milwaukee Electric Railway and Light Company, designated as the operating company, has been running cars over the streets of the city, giving a combination of street car and interurban service, stopping at all street intersections to take on and let off passengers, and, for some years past, using the same cars for both street car and interurban service; that on or about November 11, 1912, the operating company refused to stop its cars to take on or let off passengers except at specified points, the distance between which is in one instance nearly one-half mile and in many instances nearly one-quarter of a mile; and that this practice is unreasonable, unjust and discriminatory, and does not promote the railway service or the convenience of the public; that the city of Waukesha has never granted to any corporation any franchise to operate an interurban railway or railroad system within its limits, and that the present operation of interurban cars is without the permission of the city; that before the recent changes were made, notice of the proposed changes was published, with the statement that the action was in accordance with instructions issued by the Railroad Commission; that the petitioner is informed and believes that the operating company did not have such authority or instructions from the Railroad Commission; and that without such authorization it violated the provisions of subdivision "e" of sec. 1797—4, of the revised statutes of Wisconsin, as amended by ch. 335, laws of 1909; that public convenience demands that the respondent's cars stop at all street intersections to discharge and take on passengers; that as the cars are now operated they cross the principal streets of the city, without stopping on either side, at a rate exceeding fifteen miles an hour, thereby endangering life and property on the streets; that the cars which are operated are inadequate and inconvenient for the use of the public; and that adequate service demands the erection of a suitable waiting room at the junction of the respondents' line and the line of the "Soo" railway, as authorized by sec. 1862g of the revised statutes of Wisconsin as amended by ch. 366, laws of 1911.

The petitioner therefore prays that the respondents be required: (1) to stop their cars on the near side of each street intersection in the city of Waukesha to receive and discharge passengers; and that this practice, as in force before the recent change, be restored pending the hearing and investigation of this matter; (2) to provide cars which are adequate for the nature and character of the traffic demands; and (3) to provide a suitable waiting station at the "Soo" line crossing.

The respondents, in their answer, admit that they operate in Waukesha under the franchise referred to in the petition. They allege, in substance, that the change complained of in the method of operating cars was made after reasonable notice had been given to the public and after the matter had been submitted to the Railroad Commission and the proposed change approved by that body; that the change is reasonable, just and proper, and that it promotes the railway service and the convenience of the public; that it was made solely for the purpose of enabling the respondents to more efficiently perform their duty of affording proper transportation to the public; and that the public service does not demand that their cars be stopped at each street intersection as desired by the petitioner. They further deny that the failure to stop cars at certain street intersections endangers public travel at those crossings or that the cars operated are inadequate and inconvenient for the use of the public. They allege that they are constructing a waiting room near Clinton street, as approved by the Railroad Commission, and that the traffic in and through the city of Waukesha does not warrant the construction of any other waiting room, shelter or station within the city. The dismissal of the petition is therefore asked.

A hearing was held on January 10, 1913, at the city hall in Waukesha. *E. D. Walsh* appeared for the petitioner, and *C. M. Rosecrantz* for the respondents. A conference was also held before the Commission on February 10, 1913, at its Milwaukee office, at which the same appearances were entered.

The testimony shows that prior to November 11, 1912, all of the cars operated by the respondents in Waukesha were stopped at all street intersections in the city for the purpose of receiving and discharging passengers. About November 11, 1912, a rule was put into force by the respondents that their cars should stop only at the following points: East city limits (Waukesha

Steel Works), Oakland avenue, Hartwell avenue, "Soo" line railway crossing, West street, Clinton street (Public waiting station), North street, Delafield and Bidwell streets, Washington avenue, and the West city limits. The city engineer testified that the distance between these stops is as follows:

East city limits (Waukesha Steel Works) to Oakland ave.	2,214 feet
Oakland ave. to Hartwell ave.	1,621 feet
Hartwell ave. to "Soo" line crossing	906 feet
"Soo" line crossing to West (Gaspar) st.	1,285 feet
West (Gaspar) st. to Clinton st. (Washington station)	1,030 feet
Clinton st. (Washington station) to North st.	673 feet
North st. to Delafield and Summit ave. (Bidwell st.)	2,400 feet
Delafield and Summit ave. (Bidwell st.) to Washington ave.	2,265 feet
Washington ave. to west city limits	1,230 feet

The action of the respondents in limiting the number of stops within the city to those mentioned above was said by witnesses to have resulted in inconvenience to residents of the city. Especial reference was made in the testimony to the inconvenience occasioned by the failure of cars to stop at the Five Points, Whitney street, Bell street, Lake street, and Hyde Park avenue. It was stated that the Five Points is in the heart of the business district, and is more accessible to a large number of people than is Clinton street, which is the nearest stop under the present arrangement. Bell street and Lake Street are about three hundred feet apart and are located between Oakland avenue and Hartwell avenue. The district near these streets is closely settled, and passenger traffic there has doubled within the past two or three years. A witness testified that when the cars were allowed to stop at these streets they seldom passed without letting off or taking on passengers, and that about six persons regularly boarded the 7:30 a. m. car at Lake street. The passenger traffic at each of these streets was said to have been greater than that at Oakland avenue prior to the limitation of the stopping points. Whitney street is located about midway between North street and Delafield and Bidwell streets where the cars now stop. It was formerly a stopping point and was used by a considerable number of people for boarding and alighting from cars. Witnesses testified that a pond and an ice house are so located as to make it inconvenient for residents of the section

near Whitney street to go to North street to take the cars, and that to reach North street persons are obliged to walk down a steep hill which is often icy and, for feeble persons, impassable. Hyde Park avenue is located between the stop at Delafield and Bidwell streets and Washington avenue. It was stated that more people would be accommodated by a stop at this point than by the present stop at Washington avenue.

A count of the passengers boarding and leaving cars at the present stops was made by the respondents for January 8 and 9, 1913. Tables I, II and III, following, incorporate the results of this count:

Certain provisions of the franchise under which the respondents operate through the city of Waukesha are as follows:

"SECTION 2. The said company, its successors and assigns are hereby authorized to lay and maintain and operate said single track for a street railway with all necessary turnouts, sidetracks and switches in and along the following named streets in this city: * * *"

"Section 9. The said company, its successors and assigns, shall not operate its lines of railway for any other purpose other than a passenger railway within the streets of the city of Waukesha and such company shall be permitted to carry such personal effects as are usually carried by passengers on street railways."

The city claims that this franchise permits only street car service, as opposed to interurban service, and that the respondents by operating their interurban cars as street cars, stopping at every street intersection, have construed the franchise in this way. Testimony was introduced by the petitioner to show that the respondents, in certain legal actions brought against them some six or seven years previous to the hearing to recover damages due to the introduction of interurban service, maintained the position that the dominant purpose of the service they were rendering was street car service and that they had in the past stopped their cars at all street intersections within the city and that they would continue to do so in the future. It was stated by a witness that this promise had averted the payment of damages in a number of cases. Moreover, a witness residing near Hyde Park avenue testified that the documents for giving

the respondents their right of way in that section were signed with the understanding that cars were to stop at Hyde Park avenue.

With regard to the danger to public travel alleged to be occasioned by the failure of cars to stop at all crossings, it was stated by city police officers at the hearing that under the present arrangement cars cross the Five Points, a densely traveled intersection, at a speed of from fifteen to twenty-five miles per hour. The police officer stationed at the Five Points testified that a number of accidents had been narrowly averted there. He suggested that for the safety and convenience of the public the westbound cars should stop for this crossing at Nickle's corner, and the eastbound cars at Kenton's corner.

The "Soo" line crossing is not more than four hundred or five hundred feet from the passenger station of the "Soo" line, and a considerable number of persons board and leave the interurban cars at this point in traveling to and from the "Soo" station. The interurban cars are often late at this crossing. A witness stated that he had frequently waited twenty-five or thirty minutes for the 1:30 or 6:30 cars, and that as many as fifteen people had to his knowledge waited as long as twenty-five minutes for a car at this point. It was shown that no shelter is provided, and that passengers are necessarily exposed to the weather if obliged to wait for a car there. A count of the traffic at the "Soo" line crossing was taken from January 3 to 9, 1913, inclusive. The results of this count appear in Table VI following:

TABLE VI.

PASSENGERS BOARDING AND ALIGHTING FROM CARS AT THE "SOO" LINE CROSSING.

BY DATE AND DIRECTION OF TRAVEL.

DATE.	PASSENGERS BOARDING CARS.			PASSENGERS ALIGHTING FROM CARS.		
	Eastbound.	Westbound.	Total.	Eastbound.	Westbound.	Total.
January 3, 1913	23	.....	23	58	1	59
January 4, "	39	5	44	48	2	50
January 5, "	46	7	53	45	9	54
January 6, "	15	2	17	48	1	49
January 7, "	17	3	20	48	.....	48
January 8, "	33	8	41	53	5	58
January 9, "	26	1	27	46	2	48
Total	199	26	225	346	20	366

The count taken by the respondents for January 8 and 9 shows a daily average of 76 on and 85 off at the "Soo" line crossing. The count taken by the petitioner for January 23, 24 and 25 shows a daily average of 36 on and 58 off at the "Soo" line crossing. (See Tables I, II, III and IV.)

The franchise provisions relating to street car service may obligate the respondent companies to furnish purely local intra-urban service, but upon this we express no opinion. We understand that the petitioner in the present proceeding is asking, not that the interurban cars be stopped at every street crossing for the purpose of rendering local service, but that the cars be operated for the convenience of those persons who desire to board the cars for points on the line beyond the city limits. Consequently the problem before us involves the interurban service only, and in dealing with this problem we must consider the line from Milwaukee to Watertown as a whole.

The right of the companies to operate interurban cars upon the streets, which was challenged by the city, is a judicial question and not within the power of the Commission to determine. So long as the companies render such service, however, that service is subject to the supervision and regulation of the Commission.

It is our opinion, after considering the reports of our engineers, that to compel the respondents to reëstablish their former practice of stopping at all street intersections within the city of Waukesha would probably result in extending the running time of their cars between the Milwaukee terminal and Watertown. This opinion is based upon observations of the density of traffic upon the streets of the city of Milwaukee over which the cars are now operated and over which they were not operated under the former schedule. Within the past two years street car traffic in the city of Milwaukee over the streets in question has been increased greatly, and there has also been a large increase in vehicular traffic. However, in view of the fact that there are no local cars operated within the city of Waukesha, we deem it advisable that certain additional stops should be made in the city, unless, after a fair trial, it should appear that the present schedule of time between Milwaukee and Waukesha or Watertown can not be maintained because of these additional stops, in which case it would be necessary for the

Commission to reduce the number of stops. It must, of course, be conceded that good practice upon interurban railroads requires certain definite stops or stations along the line for the receiving and discharging of passengers. Unless this plan is followed, the usefulness of the service is destroyed and the public as a whole is inconvenienced. *City of Racine v. T. M. E. R. & L. Co.* 1913, 12 W. R. C. R. 388.

The city of Waukesha does not require a purely local street car service, thereby differing from the cities of Kenosha and Racine, in which the Commission authorized the stops on the interurban line to be limited to a number of specified crossings.

We hesitate to enforce upon the respondents a practice which can not be generally approved; however, in view of the obligations the respondents may have assumed in their franchise, we deem it advisable to experiment with the situation by increasing the number of stops made within the city of Waukesha. If, after a fair trial, it appears that the running time between Milwaukee and Watertown, and between Milwaukee and Waukesha, cannot be maintained under the new schedule, it will be necessary to limit or reduce the number of stops.

In addition to the stops now made in the city of Waukesha, a stop should be made by the westbound cars at Nickle's corner, and by the eastbound cars at Kenton's corner. These points are located at what is known as the "Five Points". Stops should also be made at Whitney street and Hyde Park avenue. It would seem that, with the addition of these stops, some of which are more important than others, the convenience of the traveling public in Waukesha will be fairly well accommodated.

Relative to the complaint as to construction of cars, we fully agree with the city attorney that it would be impracticable to abandon the equipment now on the road and substitute new equipment in its place. In the future, however, the respondents should keep in mind the inconvenience of the present equipment, and in ordering or constructing new equipment should remedy the defects of which complaint is made.

The respondents have now provided a suitable station in the city of Waukesha, and we do not deem it incumbent on them to provide another waiting station at the "Soo" line crossing. On interurban lines it is impossible to construct waiting stations at every stopping point within cities. The cost of acquir-

ing the necessary land and building structures would be so great as to make the expense of rendering such service prohibitive; furthermore, the convenience of the public may require the changing of stopping points from time to time, and in such event new stations would have to be erected and old ones abandoned.

NOW, THEREFORE, IT IS ORDERED, That the respondent railway companies stop their cars to receive and discharge passengers at the points above mentioned, in addition to those at which stops are now made in the city of Waukesha.

CITY OF WAUKESHA
vs.
WAUKESHA GAS AND ELECTRIC COMPANY.

Submitted Oct. 2, 1913. Decided Nov. 18, 1913.

The petitioner alleges that the rates charged by the respondent for electric and gas service in the city of Waukesha are excessive and that the service rendered is inadequate. The respondent operates a joint utility composed of three individual utilities engaged in the manufacture and sale of gas, electricity and heat. A valuation of the property of the utilities was made and the unit physical investment in the gas and electric utilities was compared with the unit physical investment in similar utilities valued by the Commission. The revenues and expenses were investigated and apportionments of expenses were made between consumer and output expenses for the gas utility and between capacity and output expenses for the electric utility. For the electric utility a further apportionment was made among commercial lighting, commercial power, and street lighting expenses.

The rates of the heating utility are not under review in the present proceeding, the heating utility being investigated only in connection with the apportionment of expenses for the gas and electric utilities. It appears, however, that the rates of this utility are too low to cover reasonable costs of operation.

Although the cost of reproducing paving over mains and services must be taken into consideration when determining the cost of reproducing the plant of a utility, this item should not be included in a valuation for rate-making purposes unless the utility has paid for the paving in question. *City of Ripon v. Ripon Lt. & W. Co.* 1910, 5 W. R. C. R. 1, 10.

Companies holding indeterminate permits, whether for single or joint utilities, have assumed responsibility for the highest reasonable development of their business as well as for adequate distribution and sale. For this reason the Public Utilities Law does not make an indeterminate permit entirely exclusive but allows the Commission to grant similar rights to competing plants where conditions warrant the establishment of such plants.

In making an allowance for going value in valuations for rate-making purposes it would be an injustice to force the consumer to bear costs resulting from the failure of the utility's management to properly stimulate the sale of the utility's product. In the present case, the electric utility has suffered heavy losses partly, perhaps, because of the fact that the controlling company, being primarily interested in the sale of gas, has made little effort to increase the sales of electricity. The gas utility, though one of the best developed businesses in the state, has also suffered losses and is at present earning less than enough to provide adequately for interest and depreciation, because of

fixed charges which are heavy in comparison with the volume of business done.

In the electric utility the maximum or peak load occurs in summer and in the daytime and is therefore to be attributed almost entirely to the power business. It would be clearly unjust, however, to assess on the basis of peak responsibility the entire capacity portion of generation and fixed costs to the power business.

The undeveloped condition of the business of the electric utility is in large part due to the fact that the commercial lighting consumers have been compelled to pay rates high enough to include costs which should have been borne by the power consumers. Fully 90 per cent of the power consumption is paid for at rates which are less than the cost of rendering power service, and the losses thus incurred are recouped, so far as recouped at all, from the rates charged commercial lighting consumers.

Several reasons are usually assigned for the giving of rates to power service which are lower than the rates given to lighting service. Among these reasons are the low demand of power service at the time of the maximum load upon the station, and the desirability of building up the day load. In the case of large installations, however, the reason is largely to be found in the necessities of competition. To get and retain the business the utility is forced to supply current at a cost no higher than that at which the individual large consumer could supply himself from a private plant. In many instances this means that the unit costs of the utility must be considerably lower than the unit costs of the private plant to compensate for the fact that the owner of the private plant is often able to use the exhaust steam as a by-product for heating purposes and thereby effect a saving in other of his business expenses.

The probability that taxing officers will use the value placed by the Commission upon the property of a utility as the basis for assessing higher taxes against the utility should be taken into consideration in fixing rates for the services of the utility. Taxes are a legitimate expense of production and must be met from the revenues of the utility.

The controlling company of the utilities involved in the present case charges against these utilities a sum equal to 2 per cent of their gross receipts to cover the expense for the services of the general officers of the company, the services of a centralized purchasing department and the creation and maintenance of an insurance reserve. Under a system of scientific accounting this expense would be apportioned more accurately among the various utilities owned by the controlling company, but in the present case it appears that the expense charged is, on the whole, a fair one and any adjustments which are necessary will be made in the rate of return.

Held: Neither the gas nor the electric utility is earning excessive profits. The gas utility is operating at a loss. The rate schedules of both utilities, however, require revision for the purpose of eliminating certain regressive or otherwise discriminatory features. The respondent is therefore ordered to put into effect schedules determined by the Commission for the sale of both electricity and gas. The schedule of electric rates ordered by the Commission is designed to be developmental and it therefore does not provide sufficient revenue at present to pay a fair return on the investment. The order in this case is tentative and will be modified when the necessity for modification appears.

The petition in the above entitled matter was filed with this Commission on October 24, 1911, by the city of Waukesha. The city alleges in its petition that the rates assessed by respondent for its electric and gas service are excessive and that the service is inadequate.

A hearing was held pursuant to notice on October 1 and 2, 1912, at the office of this Commission. *E. D. Walsh* appeared for the petitioner and *M. A. Jacobsen* for the respondent.

The rates now in effect at Waukesha are as follows:

ELECTRIC RATES.

Commercial Lighting

Meter Rates:

Minimum monthly bill, 50 cts.

Up to 3,300 watts, 50 cts. per mo. min. bill.

3,300	to	50,000	watts	15 cts.	per kw-hr.
50,000	"	100,000	"	14 "	"
100,000	"	500,000	"	12 "	"
500,000	"	1,000,000	"	10 "	"

1,000,000 and over, 9 cts. per kw-hr.

10 per cent discount on above rates, except minimum monthly bill, for payment by the 10th of the month.

Flat Rates:

16 c. p. lamp, $1.50 per month.
10 " " 75 cts. per month.
Commercial arc lamps, $5.00 per month.

Lamps rated at 110–112 volts are handled by the utility. The first installation of carbon lamps is not furnished free of charge. Carbon lamps are renewed free when returned blackened but unbroken. 16 c. p. lamps are sold at 25 cts. Tungsten and tantalum lamps are sold at about 20 per cent above cost, and a discount of 10 cts. is allowed on burnt-out tungsten lamps. The smallest size tungsten lamp handled is 25 watt. Information regarding these matters is printed and attached to electric bills. Inspection is made only on complaint.

Commercial Power

Meter Rates:

Up	to	5	kw-hr., 50	cts. per	month min. bill.
5 "		50	" 10	" "	kw-hr.
50 "		150	" 9	" "	"
150 "		300	" 7	" "	"
300 "		500	" 5	" "	"
500 "		1,000	" 4	" "	"
1,000 and over			" 3	" "	"

10 per cent discount on above rates except minimum bill for payment by the 10th of the month in which bill is presented.

Street Lighting

13—6.6 ampere, 70 volt, a. c. series enclosed arcs burning about 4,000 hours per annum on an all night every night schedule. Rate $78.00 per lamp per year.

... ... 16 c. p., 110 volt, a. c. multiple carbon lamps, same burning schedule as above. Rate $12.00 per lamp per year.

... ... 25 c. p., 110 volt, a. c. multiple carbon lamps, same burning schedule as above. Rate $16.50 per lamp per year.

... ... 32 c. p., 110 volt, a. c. multiple carbon incandescent lamps, same burning schedule as above. Rate $18.00 per lamp per year.

RATES FOR GAS.

Illuminating and Fuel Gas

Meter rate per M cu. ft. $1.30.

Discounts for payments by the 10th of the month:

10 cts. per M cu. ft. for 25,000 cu. ft. or less.
20 " " " 25,000 " to 50,000 cu. ft.
30 " " " 50,000 " " 75,000 "
40 " " " 75,000 " " 100,000 "
50 " " " 100,000 " and over.

Power Gas

Meter rate per M cu. ft. $1.30.

Discount 30 cts. per M cu. ft. if paid by the 10th of the month.

VALUE OF THE PLANT.

The property under review in this case consists of three utilities—gas, electric, and heating. The American Gas Company has had possession of the franchise in the city of Waukesha since 1887 for the gas and electric utilities. The heating department was added recently as an adjunct to the electric utility. The engineers of the Commission have made an appraisal of the physical properties, and their tentative figures are given in Table I:

TABLE 1.

TENTATIVE VALUATION OF THE PROPERTIES.

WAUKESHA GAS AND ELECTRIC COMPANY,

As of June 30, 1912.

	GAS.		ELECTRIC.		HEATING.		TOTAL.	
	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.

[1] Addition of 12% to cover engineering, superintendence, interest during construction, contingencies, etc.

[2] Paving disturbed by company.

At the time of the hearing several exceptions were taken to this valuation. Engineers for the company pointed out that omissions had been made in the item of materials and supplies account of the gas department. A supplementary report was filed subsequent to the hearing and the value of the omitted materials was added in the summary given in Table I, as was also the sum of $250 for a silica setting which was not included in the first inventory.

The respondent has also submitted a report upon the cost of reproducing such paving as is now in existence over the mains and services of the utility. This amounts to $19,200 according to the figures produced. Although the amounts as a whole seem to be fair for the several kinds of paving, there is no evidence that the respondent in this case has disturbed all of this pavement or any considerable part of it. Notwithstanding the fact that consideration must be given to these items when determining the cost of reproducing the present plant, it does not necessarily follow that in a matter of rates such items should be allowed. The city of Waukesha in constructing this pavement over the mains and services of the respondent assessed the costs for such construction upon the very persons who might be affected as consumers of this utility's product by an increase in rates due to the increase in the valuation of the property upon which the company is entitled to earn.

The item, for rate-making purposes, can be considered only in the light of public requirements. This Commission, in the case of the *City of Ripon v. Ripon Light & Water Co.* 1910, 5 W. R. C. R. 1, 10 said:

"Every legitimate expenditure in adapting the utility to the demands of progress and community growth is a proper charge to construction, and as such the investment therefor is entitled to participate in the distribution of the earnings from operation. Obviously expenditures for pavement incurred by the utility in response to assessments levied therefor by the city, or the cost of cutting through such pavement for construction purposes and its replacement, are proper capital charges. It does not necessarily follow that the utility is to capitalize expenses for municipal betterment in which it has not participated and where such accruing benefits to the utility are remote and incidental, and thus compel the subscribers for utility service to pay increased rates because of public improvements. The improvement is not a proper element of value where the pavement has

not been paid for by the utility, nor any expense in connection with it directly incurred, in determining a value which shall serve as the basis for an adjustment in rates."

The respondent has not disputed the value placed upon the pavement which has been actually disturbed by it in the laying of its mains and services. This being the case, it will not be necessary to consider the paving costs further for the purpose of establishing just and equitable rates.

The respondent has also argued in connection with this case that the 12 per cent allowance for overhead expense during the progress of construction is not sufficient and that 16½ per cent would probably more nearly represent the cost of such items as are included under this head. This item has been discussed in considerable detail in several of the recent decisions of the Commission and it is not deemed necessary at this time to consider the relative merits of the contentions upon this point.

Testimony was also had upon the value of the land now in the possession of the respondent. The Commission has placed a value of $10,000 upon the various parcels in use at the present time and the testimony along these lines gave a value not in excess of $10,500. The value of an easement over certain land for the purposes of reaching a water supply was also discussed but no definite statement as to the probable value of this easement could be secured. The company claims to have actually paid $9,918.87 for the land in its possession. These facts seem to indicate that, although there may be cause for a slight increase in the value of the land as arrived at by the Commission's engineers, such an increase would not materially affect the cost of service.

Several other items, such as switchboard and piping in connection with the valuation of the electric utility, were claimed by the respondent's engineer to be too low. These items have been gone over very carefully and the result substantiates approximately the value placed upon them by the engineers of the Commission.

Since the original inventory was made considerable time has elapsed and it has been thought best, all things considered, to carry the valuation forward to June 30, 1913, and to use the

resulting figures as a basis to arrive at the fair value upon which the utilities are entitled to earn. The additions in total for the three utilities from June 30, 1912, to June 30, 1913, as shown by the respondent's annual report to the Commission, were as follows:

Gas	$4,032.21
Electric	13,623.04
Heating	1,598.09
Total	$19,253.34

The following table shows the unit physical investment of the gas department as compared with similar figures for other utilities which have been valued by the Commission. Such items as paving, overhead, and materials and supplies have been omitted from the compilation. The results were obtained by using the inventory as of June 30, 1912.

TABLE II.

UNIT INVESTMENT IN PHYSICAL PROPERTIES OF 12 WISCONSIN GAS UTILITIES.

	Land			Buildings			Plant			Holder		
	Per M sales	Per consumer	Per mile of main	Per M sales	Per consumer	Per mile of main	Per M sales	Per consumer	Per mile of main	Per M sales	Per consumer	Per mile of main

	Distribution			Office Furniture and Appliances			Total		
	Per M sales	Per consumer	Per mile of main	Per M sales	Per consumer	Per mile of main	Per M sales	Per consumer	Per mile of main
Average	$2,467	$48.51	$3,827	$0.074	$1.38	$129.80	$4.408	$87.79	$6,785
Minimum	1,349	34.96	2,192	.029	.66	39.26	2.626	59.88	3,500
Maximum	4,663	61.36	6,580	.236	3.59	201.85	7.548	146.94	12,953
Median	2,301	47.24	3,840	.056	1.27	93.40	3.944	76.10	6,510
Waukesha	3,000	61.54	4,645	.026	.53	39.67	5.534	113.51	8,567

The following table shows a summary of the investment per kilowatt of capacity for forty-one Wisconsin electrical utilities. These figures are based upon valuations made by this Commission and are for the cost new only.

Descriptive term	Cost new per kw. capacity
Minimum	$98
Average	216
Median	204
Maximum	403
Waukesha	168

It will be noted from these data that the investment in the Waukesha gas property is somewhat higher than the average or median for the other utilities in the state. The electric property, however, is considerably lower. An explanation of these facts will be taken up later in this report.

GOING VALUE.

The company has submitted figures upon the cost of developing the business from 1892 until the present time. These are calculated on several different bases and range in amount from $42,950 to $71,250 for the gas business and from $38,000 to $91,000 for the electric utility. The financial records of the company have not been kept in such shape as to aid us materially in analyzing the costs of developing the business in each department. However, such exhibits as are on file indicate that the losses from operation in the gas and electric departments have been very heavy.

In the electric department it appears from the respondent's exhibits that the losses have been almost continuous, there having been but few years in which the utility was able to earn much over operating expenses. In analyzing the causes for these losses it might be mentioned that the controlling company in this property is primarily interested in gas holdings. Up to the time of taking out an indeterminate permit under the Public Utilities Law in April, 1908, the company had done little to further the sale of electricity. Figures which will be shown later in connection with the development of business and saturation of territory indicate that the effort of the management has, until the last few years, been largely directed toward the extension of the gas business and little if any toward the exten-

sion of the electric business. As will be shown, the gas utility has one of the best developed businesses in the state while the electric has, all things considered, one of the poorest.

Although such a state of affairs might not be due wholly to the fact that the gas and electric utilities are held jointly under one management, yet it seems that under ordinary circumstances, considering the development in neighboring cities, had the electric utility been forced to compete against the sale of gas by other parties the results would have been much more favorable to the former as regards the number of consumers connected. Companies holding indeterminate permits, whether for single or joint utilities, have assumed the responsibility for the highest reasonable development of their business as well as for adequate distribution and sale. For this reason the Public Utilities Law does not make an indeterminate permit entirely exclusive, but allows this Commission to grant similar rights to competing plants where conditions warrant the establishment of such competing plants.

That the respondent has lately recognized its obligation to develop the electric business is evidenced by the fact that the electric plant has within the past three years been practically rebuilt and by the further fact that during the year ending June 30, 1913, its gross earnings were for the first time sufficient to provide an adequate return on the investment.

These facts must be given consideration in attempting to establish a fair amount to be allowed for building up the business. Obviously it would be an injustice to force the consumer to bear the costs resulting from what might be termed the neglect of the management to properly stimulate the sale of the utility's product.

The gas business has fared better as regards losses than has the electric utility. This can be accounted for by the fact that the use of gas in Waukesha has been stimulated to such an extent that the number of consumers per 100 population has practically reached the limit to be expected. Due, however, to the fixed charges which are heavy in comparison with the volume of business, it has been practically impossible for the company to accumulate a surplus. It might be pointed out here that the gas utility is not at the present time earning enough to provide adequately for interest and depreciation on a fair value.

WORKING CAPITAL.

The respondent claims that in addition to materials and supplies there is needed $1,500 in the electric department and $2,000 in the gas department for working capital.

This contention seems on the whole to be justified by the facts at hand. Certain economies arise from the operation of utilities jointly, due to the fact that the dates for payments can be so arranged as to reduce the amount of working capital required to a minimum.

TOTAL VALUE OF THE PLANTS.

When all of the various factors involved in the determination of a fair value are given due weight, it appears that the respondent should be allowed to earn a reasonable return on about $233,000 for the gas plant and $156,800 for the electric plant.

Table III shows the balance sheet of the three utilities separately for the past three years. These are for the year ending June 30 and are the same as given in the annual report of these utilities to this Commission.

6.74	8.33	2.27	6.78	6.13	9.85	4.52	7.28

$4,763.65 although an adequate provision for replacements would have been about $12,411.16. This amount includes depreciation for the property as a whole and has been computed for each utility separately. When this fact is taken into consideration the amount available for interest and profits on the property as a whole would be but $24,400.35 or 5.54 per cent on a total fair value.

The per cent return on fair value which is available in each department is given below for the years 1912 and 1913:

Year ending June 30.	Gas dept.	Electric dept.	Heating dept.	Total.
1912	5.42	5.02	[1].20	4.67
1913	5.01	7.22	2.69	5.54

[1] Deficit.

The above results were arrived at by using the apportionments made by the company in all cases except for the item of depreciation, in which case we have apportioned the expense according to the depreciation of each utility's property.

It will be noted that except for the electric utility's earnings of some 7 per cent in 1913 none of the utilities have been receiving an adequate return on the money invested in the plants.

APPORTIONMENT OF EXPENSES.

Before accepting as final the results obtained in the foregoing computations it will be necessary to analyze the apportionments made by the company.

Steam generation expense has been apportioned on the basis of the actual amount of steam used in each department. All of the steam used by the gas department is measured by a steam flow meter and all steam furnished the heating department is measured through consumers' meters and line drip meters. The difference between these accounts and the total expense is charged to the electric department. It appears from this that all losses up to the meters are charged to the electric utility.

In order to ascertain what the normal steam generation expense would be in Waukesha we have assumed a fuel consumption of six pounds per kilowatt hour. This would mean an expenditure of $13,457.17 for fuel delivered at the plant during the year. Operating labor within the boiler room has been charged ¾ to the electric utility and ¼ to heating. Steam supplies are divided evenly between the two departments, while all maintenance items are charged to the electric utility direct.

It must be understood, however, that, outside of the items of labor and steam materials expense, this distribution is not for the purpose of determining the proportion of expense chargeable to the separate departments, but merely to determine what the normal steam expense for the electric department should be. With an output of some 1,400,000 kilowatt hours and a load factor such as obtains at Waukesha, we believe that six pounds of coal per kilowatt hour is a fair performance to expect of an efficient plant. The company is at the present time installing apparatus which will, in all probability, bring the fuel efficiency up to the point indicated. These improvements, which are necessary at the present time, would bring the cost of steam generation for the electric utility to $15,914.69 instead of $17,172.01 as reported. Although a computation such as this in a way places the heating business on a residual basis, the fact must not be overlooked that in all probability the saving in expense which will be effected by the installation of new equipment will about wipe out the difference between the amount which we have charged to the electric utility and that which the company has charged to it. With this correction made, it appears that the cost of generating current at the switchboard is in the neighborhood of 1.5 cts. per kilowatt hour, which is a fair figure when compared with figures for other plants in the state.

In making its reports to the Commission the company has apportioned general expenses over the utilities on the basis of sales. Although practice has indicated that the separation of such expense should be made on the basis of the direct expense, it is not clear, especially in the instant case, that this method would produce results more nearly correct than the one used.

Taxes have been apportioned by the company on the basis of plant charges on the books of the company. In making a separation for our purposes, however, we have considered our valuation of the various utilities as a more equitable basis for the division of this expense than the one now used.

At the time of the hearing in this matter it was pointed out that the valuation of the Commission might be used as a basis for taxation. In justice to the company it is necessary to point out here that, taxes being a legitimate expense of production,

any increases chargeable to such expense must be reflected in the rates of the utility. As has been shown previously, the net earnings of the Waukesha utilities combined are some $24,000. With this as a basis, the ratio of assessed to true value and the tax rate remaining the same, the increase in the expense for taxes will probably be about $1,200 or $1,300. Although we cannot, at this time, make any predictions as to the actual taxation expense for the future, the fact that an increase in such expense is a probability should be taken into consideration. In view of this uncertainty we have not made any allowances in the expense distributions but shall take this into account at the time of making the schedules of rates for the various utilities.

Another matter brought up at the time of the hearing was that of the Philadelphia office expense. As has been explained, the controlling company of the Waukesha utilities is the American Gas Company. It appears that this company receives 2 per cent of the gross receipts of the business.

The purpose of this assessment is to cover the expense for salaries of the president, secretary, treasurer, and directors for their supervision over the company, and for the services of a centralized purchasing department. A part also of this expense is used to build up an insurance reserve.

Due to the fact that outside of the electric utility the company is making less than 7 per cent on fair value, this question does not become of primary importance except insofar as the rate of return in each of the utilities is affected by any adjustments made. It should be said, however, in this connection that scientific accounting procedure would probably dictate the separation of the various accounts going to make up the whole amount for which the assessment is made, and the allocation of these accounts over the various utilities under control of the parent company.

In the matter of executive salaries, for instance, the amount charged could be apportioned back on some scientific basis over the various utilties owned by the American Gas Company. The same would be true of the insurance reserve.

It is not clear, however, that all of the benefits derived from a centralized purchasing department should accrue to the management. Neither can it be said that all such benefits should accrue

to the consumer, for in such a case there would be no incentive to induce concentration for the purpose of economy.

From the facts at hand it appears that the expense chargeable to the Philadelphia office is on the whole a fair one. Any adjustments which are necessary in this connection will be reflected in the rate of return as has been noted above.

In the study of the rate problems involved in this case the gas utility will first be reviewed.

OPERATING STATISTICS.

Table V shows the gas manufactured, sold and unaccounted for, for the last five years. The decrease in the manufacture of gas since 1909 is due to the fact that the company is not at the present time transferring gas for use in its electric utility.

Percentage.....	5.52	6.59	6.95	9.7	14.01

Table VI gives an account of the development of the business and saturation of territory in a number of Wisconsin cities, including Waukesha. It will be noted that the Waukesha utility has a saturation which compares favorably with the best class A utility in the state. The number of consumers per 100 population was 17.9 for 1910, 19.7 for 1911, 20.1 for 1912, and 21.1 for 1913. Not only is this true, but the consumption per capita per annum as well as the consumption per consumer is highly favorable when compared with the average of the other class

A utilities throughout the state. Attention should probably be called to the fact that Waukesha is somewhat smaller in population than the cities with which it is compared. In consumers per mile of main the gas utility falls somewhat short of the average. This would indicate, in a general way, that the utility is making extensions wherever advisable.

TABLE VI.

DEVELOPMENT OF BUSINESS AND SATURATION OF TERRITORY.

Class A utilities, 1910.	Consumers per 100 population.	Cu. ft. sales per capita per annum.	Cu. ft. sales per consumer per annum.	Feet of mains per 100 population.	Consumers per mile of mains.
Minimum	5.3	694	13,003	302	48.6
Maximum	20.0	7,103	38,836	1,474	172.2
Average	12.7	2,778	20,732	817	84.6
Median	12.8	2,355	19,090	800	76.1
Waukesha (1910)	17.9	3,807	21,316	1,385	70.
" (1911)	19.7	4,079	21,386	1,399	72.
" (1912)	20.1	4,131	20,515	1,409	75.
" (1913)	21.12	4,279	20,257	1,452	76.

Apportionment of Gas Expenses.

The gas expenses have been apportioned on the basis outlined in previous decisions of this Commission. Taxes and interest have been apportioned between consumer and output expenses upon the basis of the actual property to which such expenses are attributable. Depreciation is separated over the above headings upon the basis of the actual amount which must be set aside to replace the property distributed as to consumer and output investment. Table VII shows the result of this apportionment:

TABLE VII.

SUMMARY OF APPORTIONMENT OF WAUKESHA GAS EXPENSES.

For the Year Ending June 30, 1913.

Classification.	Consumer expense.		Output expense.		Total expense.
	Amount.	Per cent.	Amount.	Per cent.	
Total production	.....	.....	$33,304 15	100	$33,304 15
Total distribution	$1,651 46	53.86	1,414 48	46.14	3,065 94
Total commercial	1,186 65	100	.....	.....	1,186 65
Total direct expenses	$2,838 11	7.56	$34,718 63	92.44	$37,556 74
Total general	284 94	7.56	3,484 09	92.44	3,769 03
Total undistributed	27 25	7.56	333 17	92.44	360 42
New business	47 14	7.56	576 39	92.44	623 53
Total foregoing	$3,197 44	7.56	$39,112 28	92.44	$42,309 72
Deduct residuals	.....	.....	14,807 55	100	14,807 55
Total of foregoing less residuals	$3,197 44	11.63	$24,304 73	88.37	$27,502 17
Taxes	640 92	43.70	825 72	56.30	1,466 64
Depreciation	1,967 99	42.50	2,662 58	57.50	4,630 57
Interest and profit	7,127 47	43.70	9,182 53	56.30	16,310 00
Total expense	$12,933 82	25.91	$36,975 56	74.09	$49,909 38

The following table shows the foregoing results placed upon a unit basis:

TABLE VIII.

UNIT COSTS OF THE CONSUMER AND OUTPUT EXPENSE.

For the Year Ending June 30, 1913.

Class of expense.	Unit.	No. of units.	Total cost.	Unit cost.
Consumer	Meter months	21,277	$12,033 82	$0.608
Output	M cu. ft.	37,395	36,975 56	.989
Total	M cu. ft.	37,395	$49,909 38	$1.3346

In order to determine the cost of supplying gas in various quantities, the foregoing unit costs have been used to construct the cost curve given in Table IX;

TABLE IX.

VARIABLE COST PER UNIT OF CONSUMER, OUTPUT AND TOTAL EXPENSE

WAUKESHA GAS UTILITY.

Year Ending June 30, 1913.

M cu. ft.	Consumer cost	Output cost $0.989 per M.	Total cost	Total cost per M cu. ft.
1.....	$0.608	$0.989	$1.597	$1.597
2.....	"	1.978	2.586	1.293
3.....	"	2.967	3.575	1.192
4.....	"	3.956	4.564	1.141
5.....	"	4.945	5.553	1.111
10.....	"	9.890	10.498	1.050
25.....	"	24.725	25.333	1.013
50.....	"	49.450	50.058	1.001
100.....	"	98.900	99.508	.995
250.....	"	247.250	247.858	.991
500.....	"	494.500	495.108	.990
1,000.....	"	989.000	989.608	.9896

An inspection of this curve will show that the respondent is actually selling gas at a loss as far as the consumers who are using less than 2,000 cu. ft. per month are concerned. This might not seem significant, but when it is considered that 66.15 per cent of all gas consumed falls within this group the importance of the low rate given for this class of service will be understood. From the saturation figures given in Table VI it will be seen that the respondent has not suffered any decrease in consumption because of high rates.

If the gas utility is to develop its business to the maximum, the cost curve given in Table IX cannot be followed rigidly. Were it not for the fact that the schedule now in force at Waukesha has some regressive features which must be eliminated, the Commission would be inclined to make little if any adjustment in the rates. Since this condition exists, however, it will be necessary to revise the rates to some extent, although the new schedule will keep intact the company's present revenue as a whole.

Table X gives the distribution of gas consumption by consumption groups. It will be noted that fully 87½ per cent of the consumption falls within the first 5000 cu. ft. The grouping here shows the same tendencies as have been found to prevail in other gas utilities throughout the state.

APPORTIONMENT OF ELECTRIC EXPENSES.

The electric expenses in this case have been apportioned along lines explained in previous decisions of this Commission. The capacity and output expense have been separated and each of these has been in turn apportioned between commercial lighting, commercial power, and street lighting.

Table XI shows the result of separating these expenses between capacity and output expense:

TABLE XI.

APPORTIONMENT OF EXPENSES BETWEEN CAPACITY AND OUTPUT EXPENSE.

Year Ending June 30, 1913.

Classification.	Capacity expense.		Output expense.		Total expense.
	Amount.	Per ct.	Amount.	Per ct.	
Total power generation	$7,489 31	36.54	$13,004 32	63.46	$20,493 63
Total distribution	1,704 25	76.46	524 66	23.54	2,228 91
Total consumption	783 84	49.78	790 70	50.22	1,574 54
Total commercial	895 31	78.36	247 22	21.64	1,142 53
Total direct expense	$10,872 71	42.74	$14,566 90	57.26	$25,439 61
Total general	1,635 31	42.74	2,190 87	57.26	3,826 18
Total undistributed	320 73	42.74	429 69	57.26	750 42
Total foregoing expense	$12,828 75	42.74	$17,187 46	57.26	$30,016 21
Total fixed expense	8,020 44	42.74	10,745 22	57.26	18,765 66
Total expense	$20,849 19	42.74	$27,932 68	57.26	$48.781 87

The separation of the capacity and output expense between the different classes of service has been complicated by the fact that the maximum or peak load on the station occurs in summer in the daytime. This means that for practical purposes the power load is the only one contributing to the peak, it being highly improbable that during the months of May and June the lighting load would "come on" much before seven or eight o'clock. The peak load for the year ending June 30 was 440 kw. and occurred on May 26 at 5:30 p. m. For the year ending June 30, 1913, it was 600 kw. and occurred both on June 19, at 4:30 p. m. and June 22, at 10:30 a. m. We cannot escape the conclusion, on the basis of the above facts, that the power business is almost entirely responsible for the peak.

This condition must reflect itself in the distribution of expense over the various services. It would be clearly unjust to assess on the basis of peak responsibility the entire capacity portion of generation and fixed costs to the power business. It is obvious that the use of the investment theoretically caused by the peak load should also be taken into consideration. As the service demands through their load factors are the best determinants of such use it is considered fair in this case to separate the expenses above mentioned on this basis.

The results obtained by the foregoing method are shown in Table XII:

TABLE XII.

SUMMARY OF APPORTIONMENT OF DEMAND AND OUTPUT EXPENSES BETWEEN INCANDESCENT, POWER, AND STREET LIGHTING SERVICE.

WAUKESHA ELECTRIC UTILITY,

Year Ending June 30, 1913.

CLASSIFICATION.	CAPACITY EXPENSE.

Total direct expense	$2,298 46	15.78	$8,337 57	57.24	$3,930 87	26.98	$14,566 90
Total general	345 72	15.78	1,254 05	57.24	591 10	26.98	2,190 87
Total undistributed	67 81	15.78	245 95	57.24	115 93	26.98	429 69
Total of foregoing	$2,711 99	15.78	$9,837 57	57.24	$4,637 90	26.98	$17,187 46
Total fixed expense	2,718 54	25.30	6,490 11	60.40	1,536 57	14.30	10,745 22
Grand total	$5,430 53	19.44	$16,327 68	58.45	$6,174 47	22.11	$27,932 68

These figures have been used in computing the cost curves given below. We have also given a cost curve based upon a theoretical plant operating under normal conditions with a night and winter peak contributed to more largely by lighting than by power service. We have introduced this to indicate in some measure what the costs would be if normal conditions, obtaining in other places, existed in Waukesha.

TABLE XIII.
UNIT COSTS FOR COMMERCIAL LIGHTING.
WAUKESHA ELECTRIC UTILITY.
For Year Ending June 30, 1913.
Cents per Kw-Hr.

Hours daily operation.	Capacity cost.	Output cost.	Total cost.	Hypothetical cost curve.
½	9.60	3.74	13.34	19.95
¾	6.40	3.74	10.14	14.19
1	4.80	3.74	8.54	11.31
2	2.40	3.75	6.14	6.99
3	1.60	3.74	5.34	5.55
4	1.20	3.74	4.94	4.83
5	.96	3.74	4.70	4.40
10	.48	3.74	4.22	3.53
20	.24	3.74	3.98	3.10

TABLE XIV.
UNIT COSTS FOR POWER SERVICE.
WAUKESHA ELECTRIC UTILITY.
For Year Ending June 30, 1913.
Cents per Kw-Hr.

Hours daily operation.	Capacity cost.	Output cost.	Total cost.	Hypothetical cost curve.
1	5.29	2.02	7.31	6.86
2	2.65	2.02	4.67	4.57
3	1.76	2.02	3.78	3.81
4	1.32	2.02	3.34	3.43
5	1.06	2.02	3.08	3.20
10	.53	2.02	2.55	2.75
20	.27	2.02	2.29	2.52

It will be noted that the curves based upon the actual conditions of operation at Waukesha show that the initial cost for one hour's use of the active load is not greatly different for the power and lighting services, the expense being 7.31 cts. per kw-hr. in the former case and 8.54 cts. in the latter.

DEVELOPMENT OF BUSINESS.

Before proceeding further with the discussion of the cost curves and the rates to be installed, a study of the actual conditions existing at Waukesha is necessary. During the year ending June 30, 1913, the respondent sold current to the several services as follows:

Commercial lighting	145,032	kw-hr.
Commercial power	809,730	"
Street lighting	322,647	"
Total	1,277,409	"

It will be seen from these data that over 5½ times as much current is sold for power purposes as for commercial lighting purposes.

Low rates have been in the main responsible for the large power business which has been built up. The company reports that for the year ending June 30, 1913, the average power rate was 2.74 cts. per kw-hr. On the basis of a consumer load factor of 20 per cent the costs show that a rate of at least 3 cts. should be paid. Fully 90 per cent of all power consumption is paid for at rates below this figure, while over 62 per cent of the same consumption is paid for at a rate less than 2.5 cts. per kw-hr. The average cost per kw-hr. for power energy based upon our computations is 3.48 cts. Practically all of the power consumption is paid for at less than this figure.

Several reasons are usually assigned for the giving of lower rates to power service than to lighting service. Among these reasons have been the low demand of power service at the time of the maximum load upon the station, and the desirability of building up the day load. In the case of large installations, however, the reason is largely to be found in the necessities of competition. The central station is forced to meet the costs to the isolated plant of generating current if it is to get the business. But the costs of the central station must be considerably lower on the unit basis than the costs of the isolated plant, for the latter can in many cases use the exhaust steam for heating purposes. This forces the central station, in order to get the business, to supply energy at a rate per kilowatt hour figured on the basis of the actual cost to the isolated plant of generating a unit of electricity minus the saving effected by using the exhaust steam for heating purposes. By far the larger portion of the power consumption in the present case is attributable to industries which cannot use the exhaust steam for the above mentioned purpose; so we must assume that the respondent has endeavored only to meet the cost to these industries of generating their own current. Respondent admits that in several cases this is true.

It must be remembered, however, that where one service does not pay its costs some of the other services must contribute to make up the loss in the form of higher rates if the utility as a whole is to receive a fair return on its investment. The ques-

tion as to how much of these deficits can be equitably charged to the other services, such as street lighting and commercial lighting, must be the issue in this case. This involves a study of the commercial lighting situation at Waukesha.

Lighting Statistics.

The average rate for electric lighting in Waukesha for the year ending June 30, 1913, was 11.5 cts. as contrasted with the average power rate of 2.74 cts. noted above. In Waukesha, despite the heavy sales for power, the commercial lighting service alone contributes 36 per cent of the revenue, the commercial power service contributes but 45 per cent, and the street lighting service contributes the balance or 19 per cent. In other words, the power service, with a consumption of over 5½ times that of the lighting service, contributes only 9 per cent more toward the total revenue of the utility.

The effect of this heavy burden upon the lighting service is shown by the following figures:

TABLE XV.

DEVELOPMENT STATISTICS, COMMERCIAL LIGHTING CONSUMPTION, CLASS A ELECTRIC UTILITIES, 1912.

	Population.			Consumer.		Kw. Connected.
	Consumption per 100 pop.	Consumers per 100 pop.	Kw. connected per 100 pop.	Consumption per consumer.	Kw. connected per consumer.	Consumption per kw. connected.
Weighted av.....	40.73 kw-hr.	6.52	8.83	6.24 kw-hr.	1.36	4.53 kw-hr.
Arithmetic av...	41.64 "	8.96	8.97	4.94 "	1.08	4.93 "
Maximum	85.58 "	16.54	19.67	11.43 "	2.29	13.70 "
Minimum.....	28.62 "	3.49	1.03	2.50 "	.43	2.58 "
Median.....	39.90 "	8.64	8.14	4.48 "	1.06	4.57 "
Waukesha, 1912..	17.98 "	4.61	7.33	3.90 "	1.59	2.45 "
Waukesha, 1913..	16.59 "	5.78	8.15	2.87 "	1.41	2.04 "

It will be seen from these figures that not only has the Waukesha electric utility a smaller number of lighting consumers per 100 population than the average or median class A plant, but the consumption, when compared to the population, is still more unfavorable. The average or median plant in this state has from 2 to 2½ times more sales per 100 population than has the Waukesha plant. In kilowatts connected per 100 popula-

tion the electric plant under review makes a favorable showing with the average utility in the state and the same is true as regards the connected load per consumer, but in regard to consumption per consumer and consumption per kilowatt connected the calculations show than an average plant will sell about twice the energy sold at Waukesha. In other words, the possibility of sale as represented by the connected load is present but the sales have not developed.

We are of the opinion that this condition of affairs is directly attributable in large degree to the rates at present in force. Actual computations show that generally a residence consumer will use his active installation or maximum demand from 1 to 1.5 hours per day. In Waukesha the same service taker will use his active installation only 0.8 of an hour a day on the average. The entire lighting installation, when placed upon an active load basis, shows an average use of only 1.32 hours per day, as contrasted with from 1.5 to somewhat over 2 hours per day for an average plant.

The figures above take into consideration the load factor of the consumer. The schedule in force at present, however, does not consider this important feature of any electric schedule. Leaving aside the regressive features of the company's present rate schedule with their consequent discriminations, it is interesting to note that over 86 per cent of the lighting consumption is paid for at the company's primary rate of 13.5 cts. It would appear that this rate is in itself prohibitory, for consumers will not use such electric appliances as heaters, cookers, irons, fans, etc., where practically no consideration is made in the rate schedule for such use. Not only does such a high rate reflect itself in the matter of securing additional consumers but the consumers already connected will not use, even for ordinary lighting purposes, the normal amount of current. This has already been shown to apply from the figures given in Table XV.

As has been pointed out before, the problem in this case is to determine how much, if any, of the costs ordinarily chargeable to power service should be shifted to the lighting service. As a result of our investigations we are led to believe that because of the peculiar local conditions obtaining at Waukesha a rate based upon a hypothetical cost curve, as shown in Tables XIII and XIV, would be the most equitable.

There can be no doubt but what the large power business now

held by the company will be a material factor in future rate adjustments should the lighting load be built up in the meantime. It can easily be seen that the company by encouraging lighting consumption can build up an excellent load factor.

We must point out that the rate schedule which is made a part of the order in this case does not provide sufficient revenue to pay a fair return on the investment. From our discussion of going value it will be seen that this is still the developmental stage of the electric industry in Waukesha and our rates are really developmental rates. The schedule is designed to take cognizance of the load factor of the consumer.

The following tabulation shows the number of kilowatt hours used for commercial lighting chargeable to the primary, secondary, and excess classes on the basis of hours' use of the active load.

The primary class is based upon the first 30 hours' use per month of the active load; the secondary class is based upon the next 60 hours' use of the active load; and the excess class is based upon all use over 90 hours.

DISTRIBUTION OF COMMERCIAL LIGHTING CURRENT
ACCORDING TO HOURS' USE OF ACTIVE LOAD.

	Primary.	Secondary.	Excess.	Total.
Kw.-hr.	66,213	47,948	30,471	145,032
Per cent.	45.93%	33.06%	21.01%	100%

The following table shows the number of power consumers distributed according to size of installation, the number of connected horse power months, the number of active horse power months and the consumption:

TABLE XVI.
DISTRIBUTION OF POWER INSTALLATION.
WAUKESHA ELECTRIC UTILITY.

Size of installation.	Number of consumers.	Horse power connected.	Total h. p. months.	Per cent active.	Active h. p. months.	Consumption in kw.-hr.
Less than 10 h. p.	43	131.33	1,216.00	90	1,094.40	24,086

20 h. p. to 49 h. p.	9	255.20	2,511.40	60	1,506.84	46,612
50 h. p. to 100 h. p.	6	443.40	3,291.16	55	1,810.11	219,164
100 h. p. to 400 h.p.	2	246.50	2,954.40	50	1,477.20	160,220
Over 400 h. p.	1	851.30	9,190.60	40	3,676.24	335,190
Total	66	1,990.98	19,802.56	50.55	10,012.09	809,988

Table XVII shows the net earnings to be derived from the proposed gas rates:

TABLE XVII.

ESTIMATED REVENUE UNDER PROPOSED SCHEDULE.

GAS DEPARTMENT.

35,522 M	cu. ft.	at	$1.20	per	M	cu. ft.	$42,266.40
1,364.9	" "		1.00	"	"		1,364.90
306.6	" "		.90	"	"		275.94
258.1	" "		.80	"	"		206.48
243.1	" "		.70	"	"		170.17
Total gas revenue							$44,283.89
Revenue from minimum bill							1,500.00
Total operating revenue							$45,783.89
Add non-operating revenue							623.58
							$46,407.47

Table XVIII shows the estimated revenue to be derived from the proposed electric schedule:

TABLE XVIII.

ESTIMATED REVENUE UNDER PROPOSED SCHEDULE.

ELECTRIC DEPARTMENT.

Commercial Lighting Revenues		
Primary consumption 66,213 kw-hr. at 12 cts. per kw-hr.	$7,945.56	
Secondary consumption 47,948 kw-hr. at 9 cts. per kw-hr.	4,315.32	
Excess consumption 30,417 kw-hr. at 6 cts. per kw-hr.	1,825.02	
Total com'l. lighting		$14,085.90
Commercial Power Revenues		
Readiness to serve 10,012.09 active h. p. months at $0.75 per active h. p. mo.	$7,509.07	
Output charge—270,017 kw-hr. at 2.5 cts. per kw-hr.	6,750.42	
539.971 kw-hr. at 1.6 cts. per kw-hr.	8,639.54	
Total com'l. power		22,899.03
Street Lighting Revenues		
118 arcs at $74 per arc per year	$8,732.00	
Incandescent lamps present rate	444.80	
Total street lighting		9,176.80
Total revenue from electric sales		$46,161.73
Add:		
Additional revenue from minimum bills		300.00
Non-operating revenue		824.28
Total revenues		$47,286.01

It will be noted from these estimates that while the total revenue of the gas department will have increased some $1,250 over that of the fiscal year ending June 30, 1913, because of the installing of a minimum charge, the electric department will suffer a loss of revenue of some $2,000 because of the rearranging of the schedule in that department. As the company must probably pay increased taxes due to the valuation of its property, we cannot say what the exact loss of revenue will be. We are also uncertain as to the probable increases in revenue arising from increased sales which we anticipate will result from the reduction of the electric lighting rate. In similar rate readjustments in other cities the revenues from increased sales have been considerable.

The order in this case is tentative and if experience shows that certain modifications will be necessary, the necessary adjustments will be made when conditions warrant. At the present time, however, the respondent is not earning sufficient to provide an adequate return on the entire investment and this fact must be borne in mind by all parties to the case.

Because of the fact that one of the complaints in the matter is against the charge made for energy used by the municipality we have endeavored to compute the charge to be made under our ruling in order to compare it with the existing charge. As regards city pumping, although we have no data upon which to base an accurate estimate, such information as we have points to the conclusion that the present rate will be materially reduced. This reduction is attributable to the fact that the load factor of city pumping is relatively high.

The street lighting rates have also been reduced. The rate of $74 per arc per year which is made a part of our order appears to be very nearly the cost of the service but any change in the present system, either by the addition of new lamps or the substitution of a different type of lamp, may affect the charge so made.

HEATING DEPARTMENT.

The heating department has been investigated only in connection with the apportionment of expenses. Since the rates of this utility are not under review, it is not considered necessary to go into detail regarding its operation. As has been shown before, the rate of return in this department is 2.69 per cent and the results in general show that the department is being operated at a loss.

Table XIX gives a summary of the heating sales according to the number of pounds of steam consumed:

TABLE XIX.
DISTRIBUTION OF HEATING CONSUMPTION.
WAUKESHA HEATING UTILITY.
Year Ending June 30, 1913.

	Lb. in first 5,000.	5,000 to 10,000 lb.	10,000 to 20,000 lb.	20,000 to 30,000 lb.	30,000 to 50,000 lb.	50,000 to 100,000 lb.	100,000 to 300,000 lb.	Total.

SUMMARY.

The valuation of the gas and electric utilities as determined by the Commission's engineers has been accepted by the respondent with few exceptions. These have been discussed in some detail and the valuation, in general, upheld. Going value computations have been made exceedingly difficult due to the local conditions surrounding the operation of the plant.

An analysis of the operating statistics and expenses of the gas and electric plants show that neither of the plants is earning excessive profits, in fact, the gas utility is actually losing some $4,000. The schedules of both utilities have been rearranged so as to eliminate all discriminatory features. The resulting schedule in the electric department has been designed to develop business in the way of increased lighting consumption. Such principles as load factor and assessed demand have been given consideration.

The Commission has added to the above schedules a minimum of 75 cts. per month in the electric department and a variable minimum in the gas department.

ORDER.

IT IS ORDERED, That the respondent, the Waukesha Gas and Electric Company, discontinue its present schedule of electric and gas rates and substitute therefor the following:

ELECTRIC RATES.

Schedule of Rates for Incandescent Lighting Service.

For all lighting service furnished residences and business places (hereinafter specifically referred to as classes A, B, C, and D) including such incidental use of appliances for heating or power used on lighting circuits and passing through the same meter and measured by a meter or meters owned and installed by the company, a charge of

Primary rate

12 cts. net or 13 cts. gross per kilowatt hour for current used equivalent to, or less than, the first thirty hours' use per month of active connected load.

Secondary rate

9 cts. net or 10 cts. gross per kilowatt hour for additional current used equivalent to, or less than, the next sixty hours' use per month of active connected load.

Excess rate

6 cts. net or 7 cts. gross per kilowatt hour for all current used in excess of the above ninety hours' use per month of active connected load.

Active connected load shall in each case be a fixed percentage of the total connected load, consisting of lamps, appliances, etc., installed upon the consumer's premises.

In class A are included residences, dwellings, flats, and private rooming houses. Where the total connected load is equal to, or less than, 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active; where the installation exceeds 500 watts nominal rated capacity, 33⅓ per cent of such a part of the total connected load over and above 500 watts shall be deemed active.

In class B, where the total connected load is equal to, or less than, 2.5 kilowatts nominal rated capacity, 70 per cent of such total connected load shall be deemed active; where the installa-

tion exceeds 2.5 kilowatts nominal rated capacity, 55 per cent of such a part of the total connected load over and above 2.5 kilowatts shall be deemed active; provided that lamps used exclusively in space devoted to the storing of goods shall be placed at 20 per cent active and shall not be included in the 2.5 kilowatt hours specified above. Class B shall consist of banks, offices, business and professional (including studios, dressmaking parlors, massage parlors, millinery and hair dressing establishments, and photograph galleries), wholesale and retail merchandise establishments, such as art stores, bakeries, barber shops (including shoe-shining parlors and public baths), book stores, cigar stores, coffee and tea stores, commission stores, confectionery stores (including ice cream parlors), crockery and china stores, dry good stores, drug stores, electrical supply houses, flower stores (including greenhouses), furniture and house furnishing stores, gents' furnishing stores (including hat stores and haberdasheries), grocery stores, hardware stores, harness shops, hay, grain, feed and coal offices and stores, jewelry stores, meat markets, millinery stores, milk depots, paint and wall paper shops, piano and music stores, picture stores, plumbing shops, saloons (including pool and billard halls and adjoining card rooms), shoe stores and shoe repair shops, stationery stores, tailor shops (including dyers, cleaners and clothes pressing establishments), undertakers, upholsterers, and wine and liquor stores, theaters (including nickelodeons, shooting galleries, and similar amusement places), corridors and halls in office and apartment buildings upon separate meter, dance and public halls (including lodge and society rooms), restaurants (including eating places and lunch wagons), depots and public places for the conduct of railroad, street railway, express and telephone business (excluding freight warehouses), and all other consumers not herein otherwise specifically provided for.

In class C 55 per cent of the total connected load shall be deemed active. Such class shall consist of federal, state and county buildings; churches and missions; hotels and clubs; factories (including small industrial establishments such as machine shops, carpenter shops, blacksmith shops, tin shops and cigar factories) closing not later than 6 p. m., private and parochial schools; freight and storage warehouses, and stables and garages, both private, boarding and livery.

In class D 55 per cent of the total connected load shall be deemed active. Such class shall consist of all interior lighting for the city of Waukesha, including commercial alternating current for schools, police and fire station, libraries, hospitals and other city buildings.

Minimum Bill

The minimum monthly rate to be charged under this schedule shall be 75 cts. In cases where the company is unable to read meter after reasonable effort, this fact should be indicated on the monthly bill, the minimum charge assessed, and differences adjusted at the time of the next meter reading.

Discount

The difference between the gross rate and the net rate, or 1 ct. per kilowatt hour shall constitute a discount for prompt payment. The discount period shall be the same as at present.

Lamp Renewals

The same rules regarding lamp renewals as now apply are deemed reasonable under the new schedule.

Reconnection Meters

For the reconnection of meters for the same consumer upon the same premises a charge of $1.00 is deemed reasonable.

Power Rates.

A readiness to serve charge of $0.75 per active horse power shall be assessed to all power users except small installations provided for in the lighting schedule. The percentages used in Table XVI of this decision shall be used to determine the active load of each installation.

The energy charge under this schedule shall be 3½ cts. gross or 2½ cts. net per kilowatt hour for the first 3,000 kilowatt hours used per month, and 1.6 cts. net or 2.6 cts. gross for all over 3,000 kilowatt hours per month.

The difference between the gross and net rate shall constitute a discount for prompt payment.

The minimum and reconnection charges shall apply also to power users.

Street Lighting.

The rate of $74 per arc per year on the present burning schedule seems on the whole to be fair. The rate for such incandescent lights as are now in use should remain as at present.

GAS RATES.

For the first	10,000	cu. ft. per	month or less	$1.20	per	1,000	cu. ft.
" next	15,000	"	"	1.00	"		"
" "	25,000	"	"	.90	"		"
" "	50,000	"	"	.80	"		"
All over	100,000	"	"	.70	"		"

All bills are to be rendered at 10 cts. per M cu. ft. above the foregoing rates and subject to a discount of 10 cts. per M for payment before last day of discount.

Respondent's present discount period shall continue under this rate.

The minimum payment in any one month shall be as follows:

For a	3	light meter	$0.40	For a	60	light meter	$1.00
"	5	"	0.40	"	80	"	1.50
"	10	"	0.50	"	100	"	2.00
"	20	"	0.60	"	200	"	4.00
"	30	"	0.70	"	300	"	6.00
"	45	"	0.85				

The assessment of this minimum shall be according to the rules laid down in the electric portion of this order.

A reconnection charge of $1.00 is deemed reasonable.

LOUIS F. YANKO ET AL.
vs.
PORTAGE AMERICAN GAS COMPANY.

Submitted Nov. 18, 1912. Decided Nov. 18, 1913.

The petitioners allege that the rates charged by the Portage American Gas Co. in the city of Portage are excessive. A valuation was made and the revenues and expenses were investigated. The expenses were apportioned between consumer and output expenses and were further apportioned between commercial and municipal lighting. The business of the utility appears to have about reached its maximum development from the point of view both of the number of consumers and the total sales of gas. Comparison of the unit costs of the utility with those of other coal gas plants in Wisconsin indicates that the utility is efficiently managed.

Although the Commission has no power to determine the taxes to be paid on the property of a utility the Commission must take these taxes into consideration in fixing rates for the services of the utility. Such taxes are a necessary cost of operation and must be provided for out of the revenues of the utility. In the present case the property of the utility has been under-assessed, apparently because of the inability of the city officers to ascertain its true value. Since the value of the property is now determined, however, it appears reasonable to allow a considerably larger amount for taxes than the amount paid in 1912.

The minimum bill should be so constructed as to cover (1) consumer expense and (2) the cost of gas used in small quantities. The respondent now makes a minimum monthly charge of 13 cts. Analysis of costs shows that the respondent should adopt a schedule providing for a minimum bill of 25 cts. for a 3 light meter, and larger amounts for meters of larger size.

Held: The rates charged by the respondent for commercial service require revision. The respondent is therefore ordered to put into effect a schedule of rates determined by the Commission. Power service, which is of little or no importance in the business of the respondent, is to be charged for at the same rates as commercial service. The present rates for street lighting are reasonable and will be left unchanged.

The complaint in the above entitled matter was filed with the Commission September 15, 1911, alleging excessive rates for gas sold in the city of Portage and praying that the Commission order such rates as may be found to be just and reasonable.

Hearing was held at the office of the Commission at Madison, November 18, 1912, and the following appearances were entered:

William O. Kelm for petitioners, and *M. A. Jacobson* for respondent.

The rates on file with the Commission are as follows:

Illuminating and Fuel Gas.

Minimum monthly bill, 13 cts.

1,000 to 15,000 cu. ft.	$1.30	per M cu. ft.
15,000 to 25,000 cu. ft.	1.25	" "
25,000 to 50,000 cu. ft.	1.15	" "
50,000 to 100,000 cu. ft.	1.00	" "
100,000 cu. ft. and over	.80	" "

Power Gas.

Minimum monthly bill 13 cts.

100 to 5,000 cu. ft.	$1.30	per M cu. ft.
5,000 cu. ft. and over	1.00	" "

Street Lighting.

84 Welsbach street lamps, $23.81 per lamp per year, all night and every night.

VALUE OF PLANT AND BUSINESS.

A valuation of the physical property of the Portage American Gas Company was made by the engineering staff of the Commission, as of date June 30, 1912.

TABLE I.

VALUATION OF PHYSICAL PROPERTY.

PORTAGE AMERICAN GAS COMPANY.

June 30, 1912.

Classification.	Cost new.	Present value.
A. Land	$4,000	$4,000
B. Transmission and distribution	54,438	42,773
C. Buildings and miscellaneous structures	7,793	4,937
D. Plant equipment	31,447	25,015
E. General equipment	2,536	1,733
Total	$100,214	$78,458
Add 12 % (see note below)	12,026	9,415
Total	$112,240	$87,873
F. Paving		
Total	$112,240	$87,873
H. Material and supplies	5,863	5,215
Total	$118,103	$93,088

NOTE:—Addition of 12 % to cover cost of engineering, superintendence, interest during construction, contingences, etc.

The chief question considered at the hearing was that of the determination of the cost of developing the business. No objection was raised by either party to the final valuation of the

physical property as made by the engineering staff of the Commission. It was brought out that the development cost could not be determined on the investment basis because of abnormal items which would bring such costs far above normal and make the computations worthless for the determination of a fair value of the property. A value based upon the cost of reproduction is likewise affected by certain abnormal items of the same character and hence is subject to the same objections. It appears, however, that when all phases of operation are considered a fair value of approximately $105,000 will be reasonable for the purposes of this case.

OPERATING STATISTICS.

The gas produced is coal gas. The following table shows the comparative gas accounts for several years:

TABLE II.
GAS ACCOUNT.
PORTAGE AMERICAN GAS CO.

	1909-1910	1910-1911	1911-1912
Gas on hand first of year	28,000	54,000	63,000
Gas made during year	20,109,700	21,733,100	22,167,900
Total gas to account for	20,137,700	21,787,100	22,230,900
Gas on hand close of year	54,000	63,000	64,000
Gas delivered to mains	20,083,700	21,724,100	22,166,900
Gas sold	18,799,800	20,876,200	21,174,000
Gas used by company	267,100	271,400	335,000
Total gas used and sold	19,066,900	21,147,600	21,509,000
Gas unaccounted for	1,016,800	576,500	657,900
Per cent unaccounted for	5.05	2.94	3.00

The following table will serve as a basis for determining the extent to which the business has been developed:

TABLE III.

Year.	Cubic feet commercial sales per annum.	Commercial consumers.	Cubic feet sales per consumer per annum.	Cubic feet sales per consumer per month.	Consumers per 100 population.
1910	17,185,000	1,067	16,106	1,342	19.2
1911	19,292,000	1,141	16,908	1,409	20.6
1912	19,582,000	1,177	16,637	1,387	21.2

From the facts in this table it appears that there is little possibility of a much more extensive development of the business from the standpoint of the number of consumers. The average number of consumers per 100 population for all class A gas utilities in the state is slightly over 12, while in this case the number per 100 population has been practically 20 for the past three years.

The sales per consumer, however, are below the normal. The average sales per consumer per month for the class A gas utilities of the state is approximately 1,700 cu. ft., while the sales of the Portage American Gas Company average 1,387 cu. ft. The explanation of this difference may be found in the number of consumers. The large number of consumers per 100 population, as pointed out above, naturally means the inclusion of a greater number of small users and causes the average sales per consumer to be correspondingly less. From these facts it seems that the total consumption of gas cannot be expected to increase materially, either because of the utility securing a larger number of consumers or by increasing the annual consumption of the users being served.

REVENUES AND EXPENSES.

TABLE IV.

COMPARATIVE INCOME ACCOUNT.

PORTAGE AMERICAN GAS COMPANY.

	Year Ending June 30,		
	1910	1911	1912
Operating revenues.			
Commercial earnings	$22,319 55	$25,272 52	$25,487 67
Power earnings	52 21		
Municipal contract lighting earnings	2,079 81	2,060 46	2,066 83
Total earnings from gas	$24,451 57	$27,332 98	$27,554 50
Earnings from residuals	7,014 34	8,643 15	7,799 19
Total operating revenues	$31,465 91	$35,976 13	$35,353 69
Operating expenses.			
Production	$17,353 51	$16,903 64	$17,030 45
Distribution	1,071 04	1,533 66	1,436 00
Municipal contract lighting	661 63	725 28	775 36
Commercial	889 52	782 92	570 91
General	2,393 26	3,007 22	3,609 45
Undistributed	56 78	108 96	189 13
Total of above items	$22,425 74	$23,061 68	$23,611 30
Taxes	520 00	510 02	520 18
Total above expenses	$22,945 74	$23,571 70	$24,131 48
Net above	$8,520 17	$12,404 43	$11,222 21
Non-operating revenues	211 51	137 74	404 97
Total remaining for interest, profits and depreciation	$8,731 68	$12,542 17	$11,627 18

It will be noted that the total operating expenses fluctuated but slightly during the three years under consideration. For the purpose of determining the efficiency of operation of the company a comparison of the operating costs per M cu. ft. of gas sold has been made with that of other companies. This comparison is shown in the next table. In arriving at the minimum, maximum, average, and median for each item shown in this table the costs of 13 gas utilities, 9 of which are class A and 4 class B, were considered. The selection was made in this manner for the purpose of securing a sufficient number of coal gas utilities to serve as a basis for a fair comparison.

TABLE V.

UNIT COSTS GAS UTILITIES.

	Sales per annum in cubic feet.	Costs in Cents per M Cubic Feet Sold.									Residuals per M cu. ft. made.	Yield per pound of coal in cu. ft.	Cost per ton of coal.	Per cent of gas un-
		Production.	Distribution.	Municipal contract lighting.	Commercial.	General.	Undistributed	Total without deducting residuals.	Total deducting residuals.	Taxes.				
Minimum	8,780,800	0.680	0.022	.....	0.011	0.062	0.009	0.951	0.547	0.025	0.061	4.49	3.34	3.0
Maximum	90,779,600	1.061	.115	.....	.102	.201	.053	1.347	1.147	.107	.491	5.30	4.85	15.8
Average	35,873,900	.844	.064	.....	.051	.140	.028	1.133	.762	.066	.333	4.87	4.13	10.1
Median	27,732,000	.812	.068	.....	.052	.151	.026	1.116	.700	.064	.352	4.76	4.18	10.3
Portage, 1911	20,876,200	.810	.073	0.0	.038	.144	.005	1.105	.735	.024	.414	4.8	4.375	2.9
1912	21,174,000	.805	.068	.037	.027	.170	.009	1.116	.747	.025	.352	4.8	4.35	3.0

The results of the comparison seem to indicate that the Portage American Gas Company is being managed efficiently. All costs per M cu. ft. of gas produced are normal for both 1911 and 1912. It is to be noted particularly that the gas unaccounted for by this company amounts to only 3 per cent. This is the minimum for the utilities under consideration. From this low percentage of loss in distribution it might, at first, appear that a larger amount of gas was produced and delivered to the mains than is actually recorded, thereby decreasing the percentage of gas unaccounted for. If this were the situation, however, the effect would be reflected in the production costs and also in the yield of gas per pound of coal. The production cost per M cu. ft. of gas sold would be less than the apparent cost, and the yield of gas per pound of coal would be greater than the apparent yield. This, however, does not appear to be the situa-

tion. The cost of "Production" for the two years 1911 and 1912 is lower than both the average and median for the coal gas utilities shown in the table. Furthermore, the yield per pound of coal is also normal, being 4.8 cu. ft. for each of the last two years. The total operating expenses, both before and after deducting residuals, compare favorably with the average and median. It is to be noted that the production costs as well as the total expenses are normal even though the cost of coal is considerably higher than the average and median.

The Portage American Gas Company pays the minimum amount of taxes per M cu. ft. of gas sold. The amount paid in 1912 was $520.18. The reason for such low taxes apparently was the fact that the city officers were unable to ascertain the true value of the property. It appears that it is the intention of the city officials to make the utility pay taxes in conformity with the other assessed values of the city. Since the value of the property has been determined, it seems only equitable that this should be done. Although the determination of what the taxes shall be is a matter over which the Commission has no jurisdiction, the Commission must consider the amount of taxes a utility is required to pay in determining rates which are fair to both the consumer and the utility. Taxes constitute one of the necessary costs of operation, and must be provided for out of the revenues of the utility. From the value of the property and the local assessment policy it appears that a reasonable allowance for taxes in this case would not be far from $1,400.

Depreciation has been computed on the cost new of the utility. The annual allowance required to meet the element of depreciation is $2,244. This is equal to 2 per cent on $112,240 cost new as shown in Table I.

Interest and profits computed at 7½ per cent on the fair value of the property amount to $7,875. This is deemed a reasonable allowance under the operating conditions as found in the city of Portage.

The following table shows the net expenses together with an allowance for interest, taxes and depreciation. The net operating expenses are determined from the operating costs of the company for the fiscal year ending June 30, 1912.

TABLE VI.

Production expenses		$17,030.45
Distribution expenses		1,436.00
Municipal contract lighting		775.36
Commercial expenses		570.91
General expenses		3,609.45
Undistributed expenses		189.13
		$23,611.30
Deductions		
Earnings from residuals	$7,799.19	
Gas used by company	302.76	
Non-operating revenues	404.97	
		8,506.92
Net expenses		$15,104.38
Taxes		1,400.00
Depreciation		2,244.80
Interest		7,875.00
Total operating expenses		$26,624.18

The revenues derived from the consumers of gas must be sufficient to meet the total operating expenses as shown here. This amount includes both municipal and commercial lighting.

The total operating expenses were first apportioned between consumer and output expenses in the usual manner and then distributed between commercial and municipal lighting. From the operating conditions as found in Portage it appears that the revenues from municipal contract lighting are not unreasonable at present, from the viewpoint either of the city or the company. The total expenses to be met by commercial earnings amount to $24,557.35. Of this amount $5,325.83 were found to be consumer expenses and $19,231.52 output expenses.

The following table shows the unit costs for commercial consumption, based upon the consumer and output expenses as shown above:

TABLE VII.

UNIT COST OF COMMERCIAL CONSUMPTION.

M cu. ft. per month	Consumer cost per consumer	Output cost 0.9821 per M	Total cost	Total cost per M cu.ft.
1	$0.45	$0.9821	$1.43	$1.43
2	.45	1.9642	2.414	1.207
3	.45	2.9463	3.396	1.132
4	.45	3.9284	4.3784	1.095
5	.45	4.9105	5.3605	1.072
10	.45	9.821	10.271	1.027
25	.45	24.553	25.003	1.000
100	.45	98.21	98.66	.987
250	.45	245.525	245.975	.984
300	.45	294.63	295.08	.983

From an analysis of the sales statistics of other plants operating under similar conditions and an analysis of the cost curve as shown in Table VII, it appears that the schedule which properly meets the conditions would consist of a rate of $1.30 per M for the first 2 M cu. ft. used per month, $1.20 per M for the next three M, $1.10 for the next 5 M, $1.00 per M for the next 10 M, and $0.90 per M for all gas sold in excess of 20 M.

TABLE VIII.

ESTIMATE OF REVENUE FROM GAS SALES UNDER PROPOSED RATES.

Groups.	M cu. ft.	Per cent of total gas sold.	Rate per M.	Estimated revenue derived.
First 2 M cu. ft. per month.....	13,707,960	70	1.30	$17,820 35
Next 3 " " " "	3,916,560	20	1.20	4,699 87
Next 5 " " " "	783,310	4	1.10	861 67
Next 10 " " " "	1,174,970	6	1.00	1,174 97
All over 20 " " "	.....	.....	.90	.....
Total.....	19,582,800	100	.....	$24,556 86

The foregoing estimate shows what revenues might be expected under the proposed rates when applied to the consumption statistics for the year ending June 30, 1912. Exclusive of revenues from minimum bills, the estimated revenue from gas sold approximately equals the total commercial gas cost for the year under consideration. The revenues from minimum bills may be expected to amply cover any deficiency in the estimated revenues as shown above.

MINIMUM BILL.

The rate schedule of the respondent now in effect provides for a minimum monthly charge of 13 cts. The minimum bill should be so constructed that it will cover consumer expense and the cost of gas used in small quantities. In considering these facts, it seems that the charges for this purpose may be placed as follows:

Size of meter.	Amount to be charged each month.	Size of meter.	Amount to be charged each month.
3 light.....	$0 25	60 light.....	$1 00
5 "	25	80 "	1 50
10 "	35	100 "	2 00
20 "	50	200 "	4 00
45 "	60		

Power Gas.

The records of the company show earnings from this source amounting to $52.21 for 1910. No power earnings are reported for 1911 and 1912. It does not appear necessary to establish a separate rate schedule for power gas under these conditions. All charges which may be necessary for this class of service may be included under the rates outlined for commercial gas.

Street Lighting.

From the analysis of the operating expenses, and consideration of the operating conditions as found in Portage, it seems that the street lighting rates should be left as now established and in effect.

ORDER.

It is Therefore Ordered, That the Portage American Gas Company discontinue its present schedule of rates in the city of Portage and put into effect the following schedule of rates:

Gas for All Purposes (except Street Lighting).

First	2,000	cu. ft. of gas per month	.....	$1.30	per M.
Next	3,000	" " "	.....	1.20	"
Next	5,000	" " "	.....	1.10	"
Next	10,000	" " "	.....	1.00	"
All over	20,000	" " "	.....	.90	"

The minimum bill shall be as follows:

Size of meter.	Amount to be charged each month.	Size of meter.	Amount to be charged each month.
3 light.....	$0 25	60 light.....	$1 00
5 "	25	80 "	1 50
10 "	35	100 "	2 00
20 "	50	200 "	4 00
45 "	65		

Street Lighting.

The street lighting rate shall remain as it is now established and in effect, that is, the rate shall be $23.81 for each Welsbach street lamp for all night and every night service.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE MILL STREET CROSSING AT LA CROSSE, WISCONSIN.

Submitted Aug. 11, 1913. Decided Nov. 19, 1913.

The Commission, on its own motion, investigated the advisability of revising the order issued Jan. 2, 1912 (8 W. R. C. R. 422), in the matter of the Mill street crossing at La Crosse. This order required the construction at Rose street of a viaduct conforming to certain specifications and provided for the division of the expense between the C. M. & St. P. Ry. Co. and the city of La Crosse. Actual work under the order has been deferred from time to time upon request of city officials who have proposed various means other than the remedy ordered by the Commission for eliminating the dangerous conditions now existing at Mill street. The means proposed include: the construction of a subway at Rose street; the construction of a viaduct at Mill street; the construction of a subway and the elevation of the railroad tracks at Mill street; a general elevation of the railroad tracks and the construction of subways at Mill and certain other streets; and the relocation of the railroad to avoid the present crossings with the streets of the city.

Held: In view of the present and future needs both of the city and the railway company and the relative expense of making the various alterations proposed, it is advisable to construct a viaduct at Rose street as originally ordered. The apportionment of the expense in the original order, however, appears, in the light of more accurate estimates now available, to be unfair to the city. It also appears desirable to reapportion the work of construction, if the cost is reapportioned. It is therefore ordered that the viaduct be constructed in accordance with specifications set forth and that the C. M. & St. P. Ry. Co. bear 60 per cent, the city, 25 per cent, and the Wisconsin Ry. Lt. & P. Co. 15 per cent of the expense incurred. The Wisconsin Ry. Lt. & P. Co. is, with the permission of the city, to change its distribution system so as to operate its cars over the new viaduct instead of over Mill street. The city is to assume responsibility for damages to adjacent property or business arising from the issuance or enforcement of the order or from the proper prosecution of the work ordered. The C. M. & St. P. Ry. Co. is to maintain such portion of the bridge and its approaches as lies within its right of way limits except the planking and pavement on the roadway and the sidewalk, which the city is to maintain. The remainder of the structure is to be maintained by the city. The Wisconsin Ry., Lt. & P. Co. is to maintain its tracks and power distribution system, including those portions upon the viaduct and its approaches.

MODIFICATION OF THE ORDER OF JANUARY 2, 1912, REQUIRING THE RECONSTRUCTION OF THE ROSE STREET VIADUCT.

An order was entered in the above entitled proceeding on January 2, 1912. (8 W. R. C. R. 422.) Actual work under this order has been deferred from time to time upon request of city officials, who have proposed various means other than the remedy ordered by this Commission for eliminating the dangerous conditions now existing at Mill street. A hearing was held in the city hall at La Crosse on August 11, 1913, at which the following appearances were entered:

O. J. Sorenson, mayor, *G. P. Bradish,* city engineer, and *J. E. Highbee,* city attorney, for the city of La Crosse; *C. A. Lapham,* dist. engineer, for the C. M. & St. P. Ry. Co.; *P. Valier* for the Wisconsin Railway, Light and Power Company (La Crosse City Railway Company).

The following methods have been suggested for providing a safe crossing over the tracks of the Chicago, Milwaukee & St. Paul Railway at North La Crosse:

1. Renew the Rose street viaduct with a permanent structure designed to accomodate the street railway and with easy approach grades to attract vehicular traffic. This is the remedy already ordered by the Commission.
2. Construct a subway at Rose street.
3. Construct a viaduct at Mill street.
4. Construct a subway at Mill street, raising the railroad tracks four feet above their present elevation at that street.
5. Make a general raise of track on the Chicago, Milwaukee & St. Paul Railway and construct subways at Mill street, Caledonia street, Avon street, and Berlin street.
6. Change the line of the Chicago, Milwaukee & St. Paul Railway to a position south of the present location, crossing the bottom of the La Crosse river and avoiding all of the present crossings with the streets. Mill street would be crossed at a point south of the present crossing and at that point a subway should be provided.

In choosing between these methods, consideration must of course be given to the cost of the proposed work and to the effect each of these methods would have upon the future plans both of the city and of the railway company. From the city's viewpoint, it may be assumed that further separation of grades, probably by means of subways, will be required at some time in

the future. From the viewpoint of the railway company it may be desirable to improve the approach to the Black river bridge, probably by raising the tracks. The aim should be to choose a method that will not hamper either of these plans and at the same time will be economical.

Subway at Rose street. Method 2 may be eliminated from consideration at the outset. Rose street has natural advantages that would recommend it as the site for an overhead crossing, but it is not so favorably situated as Mill street for the construction of a subway. If a subway is to be constructed it should be at Mill street, as it would probably be used to a greater extent if located there than if built at Rose street and the cost would be less.

Viaduct at Mill street. Method 3 is not regarded with favor by any of the representatives of the city. A viaduct would be visible as an obstruction from a long distance away on Mill street, resulting, probably, in the diversion of a considerable portion of the traffic to other crossings. It would shut off light from adjacent property and probably cause high property damages. Mill street has not the natural advantages in favor of a viaduct that are possessed by Rose street and the cost of the structure would be about $30,000 more than the cost of a viaduct at Rose street.

Relocation of Chicago, Milwaukee & St. Paul Railway. Method 6 was mentioned at the hearing. There is little to recommend the idea at present. The cost would be great, as it would involve buying new right of way, filling in the low lands, and the removal and reconstruction of a number of buildings and several miles of track. In addition there would be crossings between the new line and the existing railroads; probably more or less trouble in crossing the La Crosse river or changing its bed; and finally there would still be a crossing with Mill street to take care of, although it would be in a new position. It is claimed for this method that it would settle permanently the crossing problem at North La Crosse, but this conclusion does not appear to be justified by the conditions. It is true, that as the streets exist at present, it might be possible to relocate the railway so as to avoid all street crossings except the one with the Mill street causeway, but it seems reasonable to assume that the growth of the city will make additional causeway or cause-

ways necessary at some time in the future and that such causeway or causeways will again bring up the crossing problem. Furthermore, it is probable that after the railway had relocated its tracks and had filled in a large portion of the low lands for its yards, the streets would gradually creep up to the tracks and a demand be made for crossings. In short, while this scheme would require large expenditure and take a long time to carry out, it would result merely in a postponement of the crossing problem and not in its final solution.

General track elevation. Method 5 would settle the crossing problem permanently and at the same time give the railway company a chance to improve the approach to the Black river bridge. It would be the proper method to adopt if conditions justified the expense that would be involved.

This scheme was investigated by the engineering staff of this Commission and the following statement is taken from the report made upon the matter:

"The * * * plan is feasible but is not to be recommended at the present time. The cost of track elevation through this district would be enormous. The drawings show that the damage to adjoining property resulting from track elevation would be very heavy. The railway company would suffer severely if the tracks were elevated. The roundhouse, coal shed, coal trestle, boiler house, water tank, hose house, oil house, stockyard and depot, in fact all of the railway company's terminal buildings would be completely bottled up. Grades on all tracks leading to the roundhouse, coal sheds, boiler house, etc., would necessarily be very heavy in order to connect with the elevated tracks."

The above statement indicates that track elevation at this point would not be a simple matter, but would involve reconstruction of the railway company's plant in addition to the raising of the track. This would add greatly to the expense involved and to the time necessary for the completion of the work.

No detailed estimate has been worked out for this scheme, but a rough estimate indicates that the cost would closely approach the sum of $1,000,000. It may be stated positively that present conditions do not justify any such expenditure, the interest on which at 5 per cent would be $50,000 per year. This interest in two years would more than pay the cost of building a

permanent bridge at Rose street, and in four years would pay for a subway at Mill street. From an estimate based upon traffic studies made at Mill street and Rose street, it appears that about 2,000,000 people cross the tracks in one direction or the other each year. This estimate includes the traffic on all of the streets that are open. The interest charges therefore amount to 2½ cts. per person every time one crossed the track.

There is only one connecting highway between La Crosse and North La Crosse, namely the Mill street causeway. This is ample to accomodate all of the traffic between the two portions of the town at present, and probably will be ample for some time to come. With the traffic thus restricted to one causeway it follows that one safe crossing over or under the tracks should be sufficient. The only reason for additional crossings at the present time would lie in the convenience they would be to people living in the immediate vicinity of such crossings. Combining the traffic of Mill street and Rose street we have:

Pedestrians	3	every	2	minutes
Bicycles	1	"	2	"
Teams and autos	1	"	1	"
Street cars	1	"	4	"

While this traffic is sufficient to demand a separation of grades, it is not heavy enough to congest a single crossing. From an economic standpoint, it would be an extravagance to provide more than one crossing at this time.

Mill street subway. The choice narrows down to the two projects that have received the most consideration, namely, a viaduct at Rose street or a subway at Mill street. From the standpoint of cost the two projects compare as follows:

1. Mill street subway with a raise of railway tracks of 4 feet at Mills street and using 4 per cent grades on the subway approaches	$182,000
2. Rose street viaduct designed for double track street railway and with 4 per cent grades on the approaches	83,000

These figures are based upon the best information available at this time. Both the city and the railway company have submitted estimates which have been checked and compared with the Commission's figures in order to arrive at as close an estimate as possible.

The arguments for the subway at Mill street are: (1) the street crossings at Mill street and Rose street are so close together that eventually, as grade separation proceeds, one or the other will probably be closed and it will be advisable to close Rose street rather than Mill street; (2) a greater portion of the traffic would use the Mill street subway than could be induced to use a viaduct at Rose Street; (3) the subway would settle the crossing problem at Mill street permanently.

In regard to the first point, it will be shown later in this discussion that if the general track elevation does not come within fifteen years it will be more economical to build the viaduct at Rose street and abandon it when the tracks are elevated than to build the Mill street subway now and pay interest on the $100,000 extra investment for fifteen years.

The second point is discussed in the previous opinion of the Commission, 8 W. R. C. R. 427. Up to the time it was closed, the old Rose street viaduct, in spite of its heavy approach grades, carried a traffic that compared better than would be expected with the traffic at Mill street, and it is only reasonable to suppose that a more substantial structure with easier approach grades would increase the traffic on Rose street. The street railway traffic, which is the element of greatest danger, can be removed entirely from Mill street to Rose street and with the street railway removed the probabilities of accident at Mill street will be reduced to such an extent that the danger at Mill street will be no greater than at the majority of grade crossings.

It is argued that a subway at Mills street would "force" at least 80 per cent of the travel, between the north side and the south side, under the tracks and that this dangerous crossing would be "eliminated" altogether, whereas a viaduct at Rose street would merely reduce the danger at Mill street. In answer it may be stated that there always will be a certain portion of the traffic that cannot be diverted either over the viaduct or through the subway. To this class belong the vehicles loaded to capacity and bicyclists, which traffic naturally avoids grades and seeks a level route. If a viaduct is built at Rose street this class of traffic will likely seek the level route across Mill street. If a subway is built at Mill street it will likely seek the level crossing at one of the streets lying to the east.

There is another class of traffic that would probably use a

viaduct at Rose street, but which would not use the subway at Mill street. This class would include the people who, on account of the street railway operating through the subway, would not care to drive their teams and automobiles through the comparatively narrow roadway that would be necessary in this particular subway. This class would be apt to contain the women drivers and is in greater need of a safe crossing than any other class.

It is plain, therefore, that while a subway at Mill street would certainly "eliminate" the grade crossing itself, it would not necessarily eliminate the possibility of accident which really is the vital thing concerned. The possibility of accident to that portion of the traffic that, for one reason or another, refused to use the subway, would not be eliminated but would be merely transferred to another crossing.

Although a viaduct at Rose street will not "eliminate" the Mill street crossing, it will reduce the possibility of accident at that crossing to a normal degree, at the same time affording a safe crossing for all classes of traffic that desire safety.

Taking up the third point, it should be borne in mind that the subway we are now considering is much more of a hole in the ground than the subways that would be necessary if the scheme of general elevation were carried out. The four foot raise of track is really not enough if subways are to be constructed. It puts the subway so deep into the ground that it is hard to drain and to keep dry, and furthermore, it requires long approaches. These long approaches with their heavy grades will be a handicap to the traffic so long as the subway exists. If general track elevation comes later the other subways will, or at least should, be less deep, and the traffic will naturally abandon Mill street and flow through the newer and less objectionable subways. The Mill street subway as proposed is, in fact, a very expensive *temporary* expedient.

Rose street viaduct. There is a difference in cost between the Rose street viaduct and the Mill street subway of almost $100,000 in favor of the Rose street viaduct. At 5 per cent the annual interest on the Rose street investment would be less by $5,000 than the interest on the investment necessary at Mill street. Without compounding the interest, the saving on the interest charges would pay for the viaduct in seventeen years.

In other words, if it were a certainty that conditions at the end of seventeen years would demand that the Rose street viaduct be removed and a general track elevation carried out, there would be, even under such conditions, no loss involved by the building of a viaduct rather than a subway. If the interest be compounded and a salvage value assumed for the steel work of the viaduct, the period indicated will be reduced considerably, which will be still further to the advantage of the Rose street plan. It seems safe to assume that the Rose street viaduct would answer all needs for at least fifteen years. If it were not removed for twenty or twenty-five years, there would be a decided economy in the adoption of the viaduct plan.

The only conclusion that can be drawn from these facts and figures is that the proper thing to do at this time is to carry out the original order of this Commission insofar as it relates to the construction of a viaduct at Rose street.

Early figures that were submitted to this Commission indicated that an equitable division of the cost of this work could be made by apportioning to the Chicago, Milwaukee & St. Paul Railway that portion of the work lying within its right of way limits, and to the city that portion of the work lying outside of the right of way limits. The more accurate estimates now available make this division unfair to the city, and the apportionment will therefore be made upon a percentage basis. Because of the change in the apportionment of the cost it has seemed best to reapportion the work also.

IT IS THEREFORE ORDERED, That the viaduct, or overhead bridge, across the tracks of the Chicago, Milwaukee & St. Paul Railway Company at Rose street be reconstructed in conformity with the following general requirements:

SECTION 1. *Specification:* Specifications for *Steel Work, Plain* and *Reinforced Concrete* and *Creosoted Timber* will conform to the recommended practice of the American Railway Engineering Association, except in regard to *Loading*. *Paving* will be laid in accordance with the standards of the city of La Crosse insofar as such standards are available, otherwise in accordance with the best present day practice.

SECTION 2. Paragraph 1. The loading on the sidewalks shall be assumed to be 100 lb. per square foot.

Paragraph 2. The loading on the roadway shall be assumed

to be a line of fully loaded street cars on each track, or one 15 ton traction engine on any part of the roadway. The space not occupied by the above alternative loads shall be assumed to be loaded with 100 lb per square foot. Each street car will weigh, fully loaded, 40 tons, measure 9′ by 46′ over all and rest upon two trucks spaced 22′ center to center. Each truck will have two axels spaced 4′6″ center to center. The traction engine is to have axles spaced 12′ center to center and gauge of 7′. Three quarters of the load will be on the rear axel.

Paragraph 3. Impact will be computed by the equation:

$$I = S \frac{150}{L + 300} \text{ where}$$

I = Impact increment to be added to the live load stresses.
S = Computed maximum live load stress.
L = Loaded length of bridge in feet that produces maximum stress in the member.

SECTION 3. *Roadway:* Paragraph 1. Provision shall be made for a double line of tracks for the street railway, spaced 11′ center to center. This spacing shall be increased where there is a center truss between the tracks, so as to give at least six inches clearance between the car and the truss.

Paragraph 2. The width of the roadway on the bridge and approaches shall be 36′0″.

SECTION 4. *Sidewalks:* There shall be an 8′ sidewalk on each side of the structure.

SECTION 5. *Grades:* Paragraph 1. The elevation of the roadway on the new bridge shall be the same as the elevation on the old structure, namely, 22.1 feet above the present top of rail on the westbound main line track of the Chicago, Milwaukee & St. Paul Railway at the center line of Rose street.

Paragraph 2. The grades on the roadways of the approaches shall be 4 per cent; vertical curves, 40 feet long, shall be used to connect grades.

Paragraph 3. The sidewalks shall descend from the ends of the span on whatever grade may be necessary in order that they may intersect the present established sidewalk grades at the south line of Island street and at the north line of St. Andrews street.

Paragraph 4. Island street and St. Andrews street will not have direct connection with the approaches to the viaduct.

SECTION 6. *Construction:* Paragraph 1. The plans for the entire work shall be prepared by the Chicago, Milwaukee & St. Paul Railway Company and shall be submitted to the Commission for approval before any work is commenced.

Paragraph 2. The construction of the viaduct and its approaches, including filling and grading, shall be done by the Chicago, Milwaukee & St. Paul Railway Company.

Paragraph 3. The paving upon the viaduct and its approaches shall be laid by the Chicago, Milwaukee & St. Paul Railway Company. The paving disturbed in tearing up and relaying the street railway tracks shall be replaced by the Wisconsin Railway Light and Power Company. Any other paving that may be necessary shall be done by the city of La Crosse.

SECTION 7. Paragraph 1. The Wisconsin Railway, Light and Power Company, with permission from the city of La Crosse, shall make the necessary changes in its distribution system so that it may operate its cars over the new viaduct instead of over Mill street. This shall include the laying of track and the construction of the necessary power distributing system upon the viaduct and its approaches.

Paragraph 2. The city of La Crosse shall grant permission to the Wisconsin Railway, Light and Power Co. to make the necessary changes in its tracks and power distributing system so that it may operate its cars over the new viaduct instead of over Mill street.

SECTION 8. The city of La Crosse shall assume responsibility for any alleged damages to adjacent property or business, caused by the issuance or enforcement of this order or by the proper prosecution of the work herein ordered.

SECTION 9. The city of La Crosse shall do all that part of the work made necessary by this order that is not specifically laid upon the Chicago, Milwaukee & St. Paul Railway Company or upon the Wisconsin Railway, Light and Power Company.

SECTION 10. *Maintenance:* Paragraph 1. The Chicago, Milwaukee & St. Paul Railway Company shall maintain such portion of the bridge and its approaches as lies within its right of way limits, except that the city of La Crosse shall maintain the planking and pavement on the roadway and the sidewalks.

The remainder of the structure shall be maintained by the city of La Crosse.

Paragraph 2. Nothing herein contained shall be held to interfere with any arrangements that have been made or that may be made between the city and the Wisconsin Railway, Light and Power Company in regard to the maintenance of pavement.

Paragraph 3. The Wisconsin Railway, Light and Power Company shall maintain its tracks and power distributing system, including those portions upon the viaduct and its approaches.

SECTION 11. *Apportionment of cost:* All expense incurred in carrying out the provisions of this order shall be apportioned among and borne by the three parties concerned as follows:

Chicago, Milwaukee & St. Paul Ry. Co	60 per cent.
City of La Crosse	25 per cent.
Wisconsin Ry., Light & Power Co	15 per cent.

except that the cost of any materials used in carrying out the changes ordered under sec. 7 shall not be considered a part of the expense to be apportioned, but shall be borne by the Wisconsin Railway, Light and Power Company at its own expense.

SECTION 12. Nine months is deemed a reasonable length of time within which to comply with the provisions of this order.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE ANTIGO WATER COMPANY BY THE CITY OF ANTIGO FOR THE PROPERTY OF SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC.

Submitted Feb. 13, 1913. Decided Nov. 19, 1913.

This is a proceeding to determine the just compensation to be paid in the purchase of the property of the Antigo W. Co. by the city of Antigo. Valuations made by the engineers of the Commission and by the city are considered. The water company submits no valuation of the property as a whole, but introduces testimony tending to show the existence of a high going value or developmental cost and contends that the unit prices placed on the items of physical property in the valuation should be higher than the prices used by the engineers of the Commission. The city's valuation is, on the whole, somewhat lower than the Commission's tentative valuation.

Both the actual investment and the cost of reproduction should be considered in finally fixing the value of a utility, but it is hardly to be expected that physical valuations designed to show two materially different sets of facts should coincide very closely. The valuation submitted on behalf of the city is indicative of what the investment was or might normally have been, but it does not show what it would actually cost to reproduce the property. The tentative valuation made by the engineers of the Commission, on the other hand, is based on averages of prices for a number of years prior to the date of the valuation and therefore indicates the cost of reproducing the property rather than the actual amount which the property has cost.

The actual investment in the property under consideration is indicated by the records of construction, a part of which were made a matter of record in the case of *Hill v. Antigo W. Co.* 1909, 3 W. R. C. R. 623. Inasmuch, however, as the company has not provided a depreciation reserve nor disclosed in its reports the method employed in accounting for reconstruction work, it appears that reconstruction must have been handled as a charge to property and plant, and that the actual cost of the plant is overstated by the amount of such reconstruction. This fact must be considered in accepting as an indication of the value of the property the original cost of the property as shown by the company's records.

In addition to the physical property, the cost of developing the business must be given consideration. In the present case this cost is computed separately for interest rates of 6 and 7 per cent upon the original cost of the plant as shown by the records and upon a hypothetical original cost obtained by deducting the amount of the reported extensions from the cost of reproduction of the property. It appears that with an interest rate somewhere between 6 and 7 per cent the net losses incurred in developing the business would be practically nothing, and that even if

interest is finally included at 7 per cent and allowance made for the overstatement of losses due to improper charges to construction, the full extent of the losses need not necessarily be accepted as the cost of developing the business. Losses may be due to causes other than the actual developmental costs and may even continue after the normal developmental period is past. Whether in the present case the investment in the utility was somewhat ahead of the needs of the community may, perhaps, be a question.

Held: The just compensation to be paid to the water company for the taking of the property used and useful for the convenience of the public, exclusive of the stock and material on hand and additions made to the plant since Jan. 1, 1913, is $128,800. The city is ordered to pay this sum to the water company within six months from date, together with such price as may be agreed upon between the parties or, in the event that the parties are unable to agree, fixed by the Commission, for the materials and supplies on hand at the date of the taking of the plant and for new additions made to the plant since Jan. 1, 1913, with interest at 6 per cent per annum until the compensation is fully paid.

This is an action by the city of Antigo to acquire the property of the Antigo Water Company. Notice of the city's intent to acquire the property was filed with the Commission on November 13, 1912. The Antigo Water Company has been operating under an indeterminate permit since January 29, 1910. The acquisition of the property of the Antigo Water Company was determined upon at the election of November 5, 1912, at which election it appears that 986 votes were cast in favor of municipal purchase, and 302 votes in opposition.

A valuation of the physical property of the company was undertaken by the Commission and hearing upon all matters relating to the case was held at Madison, February 13, 1913. Appearances were:

For the city of Antigo, *Geo. W. Hill,* mayor, *Roy V. Smelker,* city attorney, and *Geo. W. Latta,* counsel for the city. For the Antigo Water Company, *C. B. Bird,* of *Kreutzer, Bird, Rosenberry & Okoneski,* and *W. G. Maxcy,* general manager.

Testimony introduced on behalf of the city tended to show a somewhat lower cost of physical property than that shown in the Commission's tentative valuation, particularly in the items of cast iron pipe and of pipe laying.

For the water company the testimony tended to show the existence of a high going value or developmental cost and also higher unit prices on items of physical property than those employed by the Commission. So far as the testimony affects

the conclusions to be reached in this case, it will be considered later. Briefs introduced by the parties to this action consisted principally of a summary of the conclusions which the parties sought to establish at the hearing. The brief for the water company dwelt almost entirely upon the matter of the non-physical elements which should be recognized in the valuation as finally fixed in this case. For the city of Antigo the argument of the brief was that the unit prices applied to the inventory of the water works property should not be any higher than the prices actually paid by the water company at the time the property under consideration was installed. Objection was made also to the allowance of 12 per cent of the valuation of physical property for engineering, supervision, interest during construction, etc., as in the case of *Hill v. Antigo Water Co.* 1909, 3 W. R. C. R. 623, 685, only a 10 per cent allowance was included.

In determining the value of the property under consideration it may be as well to fix the valuation in this case as of January 1, 1913, which is the date of the tentative valuation of the physical property, and to exclude all stores and supplies from the amount determined. Stores and supplies and additions to the property and plant from January 1, 1913, to the date of the transfer can be inventoried and valued separately.

Physical Property. A tentative valuation of the physical property, as of January 1, 1913, was reviewed at the hearing. This valuation, as prepared by the Commission, with the omission of stores and supplies, is summarized below:

Classification.	Cost new.	Present value.
Land	$7,712	$7,712
Transmission and distribution	75,256	72,598
Buildings and miscellaneous structures	18,923	15,599
Plant equipment	8,274	6,655
General equipment	532	272
Total of above	$110,697	$102,836
Add 12 per cent	13,284	12,340
Total	$123,981	$115,176

A careful review of the tentative valuation showed that the following items had not been been included:

I.	Two parcels of land with a value of	$1,250
II.	Fire alarm gong at pumping station	150
III.	Change in creek channel and building of dam estimated at 2,800 cu. yds. of excavation at 35 cts	980
	Dam	100
IV.	Meters owned by company in excess of amount in tentative valuation	124
V.	Additional cost of small W. I. mains	98
VI.	Add 12 per cent for engineering, etc	324
VII.	Paving	1,079

The revised valuation, including the allowance for paving, is as follows:

Classification.	Cost new.	Present value.
Land	$8,962	$8,962
Transmission and distribution	76,558	73,873
Buildings and miscellaneous structures	18,923	15,599
Plant equipment	8,424	6,805
General equipment	532	272
Total of above	$113,399	$105,511
Add 12 per cent	13,608	12,661
Total of above	$127,007	$118,172
Paving	1,079	1,057
Total	$128,086	$119,229

It appears that none of the paving listed in the valuation has actually been disturbed, but it is shown above in order that the statement may cover completely the cost of reproducing the physical property.

Testimony for the water company was to the effect that the unit prices used in the Commission's valuation were substantially the same as the prices which the utility had actually paid during a period of about five years immediately preceding the date of the valuation, but that the prices paid by the water company for materials during the earlier years were, in general, about 10 per cent higher than those used by the Commission.

Upon this point witnesses for the company and for the city differed very materially. On behalf of the city, a valuation of the property was prepared by Arthur M. Morgan, an engineer experienced in water works construction. This valuation was considerably less than the tentative valuation of the Commission. Mr. Morgan appears to have based his valuation quite largely upon the prices paid for materials in other cities as of the same years as those during which construction work was done at

Antigo, with allowance made for differences in freight charges. A rather detailed statement of the bases used was presented in the testimony of Mr. Morgan. Following is a summary of the valuation introduced on behalf of the city.

Classification.	Cost new.	Present value.
Land		
Transmission and distribution	$62,348	$59,648
Buildings and miscellaneous structures	21,073	18,527
Plant equipment	6,595	4,594
General equipment	500	500
Total of above	90,516	83,269
Add 10 per cent	9,052	8,327
Total	$99,568	$91,596

It will be noted that Mr. Morgan has not placed any value upon the land, but there appears to be no objection to the value placed by the Commission upon this item. The allowance for engineering, supervision, contingencies, interest during construction, etc., has been placed at 10 per cent, which Mr. Morgan stated in his testimony he considered about a minimum allowance for these items. The principal point of difference, aside from those mentioned above, between the valuation prepared by Mr. Morgan and the tentative valuation prepared by the Commission, is found in the value placed upon the distribution system. The difference in this item of the valuation appears to be due to differences in the unit prices used for mains and to differences in the assumed cost of laying mains.

The method followed by Mr. Morgan, of using unit prices based upon conditions prevailing at the time the work was done, would tend to show what it actually cost or would normally have cost at such time. The use of prices based on an average for a number of years prior to the date of the valuation, as made by the Commission, on the other hand, indicates the cost of reproducing the property rather than the actual amount which the property has cost. Both the actual investment and the cost of reproduction should be considered in finally fixing a value, but it is hardly to be expected that physical valuations designed to show two materially different sets of facts should coincide very closely. The valuation submitted on behalf of the city is indicative of what the investment was or might normally

have been, but it does not show what it would actually cost to reproduce the property.

With regard to the costs of laying pipe, including trenching and back filling, as used in the Commission's valuation of January 1, 1913, it should be said that since the valuation of 1908 was made we have had an opportunity to see actual pipe laying in progress at Antigo and to obtain a better understanding of the cost of this work. The allowances for excavating and back filling trenches have been somewhat increased in the recent valuation and the allowances for lead and yarn combined therewith.

The soil at Antigo is such that the top width of trenches is necessarily much greater than 36 inches, as assumed by the city's engineer. The yardage of material to be excavated per foot of trench is such that it would be impracticable for an average laborer to cast it all out without having a considerable portion rehandled at the surface of the street. In addition to this element it is necessary to allow for back filling and for the wages of non-productive labor such as a foreman, a water boy, and a time keeper and a watchman, as well as for tools and a moderate profit to a contractor. In this case the original system was installed by a contractor, but the extensions are understood to have been made by laborers employed by the water company.

In view of the conditions stated above, it seems that, as far as the cost of reproduction should guide in the final determination of this case, the cost of reproduction as determined by the Commission is substantially the valuation which should be used.

The actual investment in the property is indicated by the records of construction, a part of which were made a matter of record in the case of *Hill v. Antigo Water Co.* 1909, 3 W. R. C. R. 623. The cost of the original plant appears to have been $64,727. Up to January 1, 1913, the total of reported extensions and additions was $66,420, so that the total amount which had been invested in the property up to January 1, 1913, as shown by the records on file with the Commission, was $131,147. The company has not provided a depreciation reserve and its reports do not disclose the method employed in accounting for reconstruction work, but apparently no considerable amount of reconstruction was handled as an operating expense. In the absence of a reconstruction account or a depreciation account,

it seems that reconstruction must have been handled as a charge to property and plant, and that the actual cost of the plant is overstated by the amount of such reconstruction. Just the extent of this reconstruction is not shown by the records, but in accepting the original cost as shown by the company's records, as an indication of the value of the property, the likelihood of an overstatement of the original cost must be considered.

Non-physical Property. Aside from the physical property, the cost of developing the business must be given consideration. Respondent's Exhibit A, introduced at the hearing, purports to be a computation of the losses incurred by the company up to July 1, 1912. It is, in effect, a modified "Going value" computation with an assumed interest rate of 7 per cent but without any allowance for depreciation. According to the data set forth in this exhibit the accumulated deficits had brought the total investment in the property, on July 1, 1912, to $188,660. The most serious objection to the use of the exhibit as an indication of the cost of developing the business is probably the fact that the financial statistics presented do not agree with those reported to the Commission in the several annual reports of the utility nor with the records of extensions and of net earnings which were used in the case of *Hill v. Antigo Water Co., supra.* Without showing in detail the discrepancies, which are a matter of record, it may be said that they are so pronounced that little use can be made in this case of the results shown in the exhibit. A number of computations have been made by the Commission, with a view to ascertaining as closely as practicable the actual extent of the losses, if any, to which the company has been subjected in the development of its business. These computations were based upon the facts with regard to additions to property and to net earnings, as shown in *Hill v. Antigo Water Co., supra,* and in the annual reports filed by the utility in accordance with the Public Utilities Law. The computations, so far as they may be affected by the inclusion of reconstruction and replacements in the property account, overstate the losses which the company has incurred, but they throw considerable light upon the cost of developing the business.

In making the computations, depreciation has been included at the rate of approximately 0.63 of 1 per cent, which was the rate used in the computations in the earlier decision involving

the rates of this company. Separate computations have been made for interest rates of 6 and 7 per cent. In addition, computations have been based upon an original cost of the plant, of $64,727, as shown by the records, and upon a hypothetical original cost of $61,843, obtained by deducting the amount of the reported extensions from the cost of reproduction of the property. The results of these computations are indicated below:

1. Based on $61,843 original value, 6 per cent interest, extent of apparent losses—none—$16,766 gain.
2. Based on $64,727 original value, 6 per cent interest, extent of apparent losses—none—$9,943 gain.
3. Based on original value of $61,843, 7 per cent interest, extent of apparent losses—$19,317.
4. Based on original value of $64,727, 7 per cent interest, extent of apparent losses—$28,831.

The computations have been carried to June 30, 1912, the last date for which the necessary data were at hand. It will be seen that on a 6 per cent interest basis all of the losses have been returned to the company and that there has been an actual gain. When the computations are made upon a 7 per cent basis, there is an apparent loss. To the extent that reconstruction has been charged to the property account the inclusion of an allowance for depreciation in the gain or loss computations causes an understatement of the apparent gains and an overstatement of the apparent losses. It seems clear, however, that with an interest rate of somewhere between 6 per cent and 7 per cent the amount of apparent losses would be practically nothing.

Even if interest is finally included at 7 per cent and allowance made for the overstatement of losses due to improper charges to construction, it is not certain that the full extent of the losses should be accepted as a cost of developing the business. Losses may be due to causes other than the actual developmental costs, although in this case witness for the company testified that the management had been economical and, in his judgment, wise.

Losses may even continue after the normal developmental period is past. In this case it appears that in 1904 there were only 371 taps, and that by 1912 there were 715, indicating that that greatest development has occurred in recent years. Whether

this means that the investment was somewhat ahead of the needs of the community may, perhaps, be a question, but witness for the company stated that in his judgment the investment was wisely made. The witness stated that the business of water utilities usually grows rather slowly and that the losses are likely to continue longer, even in a well planned investment, than in the case of some other classes of utilities. This, however, is probably offset to some extent by the fact that a water utility usually has a rather large part of its revenue, that derived from hydrant rentals, definitely fixed at the start.

Any attempt to estimate what it would cost to reproduce the business of a utility is open to serious objections, some of which have been discussed in *Common Council of the City of Green Bay v. Green Bay Water Co.* 11 W. R. C. R. 1913, 236–243. With proper allowance made for these objections, however, some light can be obtained upon the cost of developing the business by estimates of the cost of developing a paying business for a utility which is assumed to start operation in a city comparable to Antigo.

The decision which we have cited above, *Hill v. Antigo Water Co.*, contains a very full discussion of the various non-physical elements to be considered in a valuation of a public utility property and it is not considered necessary to embody any further discussion in this case. The facts which have been reviewed indicate that the fair value of the property of the Antigo Water Company, used and useful for the public service, as of January 1, 1913, exclusive of materials and supplies on hand, with proper allowance made for all elements to be considered, was as stated in the following order:

IT IS THEREFORE ORDERED, That the just compensation to be paid to the Antigo Water Company for the taking of the property of said company actually used and useful for the convenience of the public by the city of Antigo, which property consists of the items above described, excepting, as stated, the stock and material on hand and the additions to the plant that have been made since January 1, 1913, be and the same is hereby fixed at one hundred twenty eight thousand eight hundred dollars ($128,800).

IT IS FURTHER ORDERED, That, in addition to the above compensation, the materials and supplies on hand at the date of the

taking of the said plant and the new additions to the plant that have been made since January 1, 1913, be paid for by the said city of Antigo at such price as may be agreed upon by the parties themselves, or in case the parties fail to agree upon the price, at such price as the Commission shall fix by supplemental order.

IT IS FURTHER ORDERED, That the said city of Antigo pay to the said Antigo Water Company the compensation herein fixed and the price of said materials and supplies and said additions to said plant within six months after date hereof, with interest at the rate of 6 per cent per annum from the date of taking possession of said plant by said city until the same is fully paid.

IN RE PROPOSED EXTENSION OF THE LINE OF THE CLINTON TELEPHONE COMPANY.

Submitted Nov. 7, 1913. Decided Nov. 10, 1913.

The Clinton Tel. Co. filed notice with the Commission, pursuant to ch. 610 of the laws of 1913, of its intention to extend its telephone line a distance of 80 rods in the town of Clinton, Rock county, to reach a former subscriber at his new place of residence. The Bergen Tel. Co., which operates a line running past the house in question, objects to the proposed extension.

Held: Where adequate service at reasonable rates can be obtained from the company whose lines already occupy the field, encroachments of the kind contemplated by the applicant should not be permitted. The Commission therefore finds that public convenience and necessity do not require the construction of the extension proposed by the applicant.

This matter was brought before the Commission by notice filed October 22, 1913, by the Clinton Telephone Company pursuant to chapter 610 of the laws of 1913, describing a proposed extension in the town of Clinton, Rock county, Wis., for a distance of about 80 rods along the line between sections 22 and 27 in that town, in order to reach the residence of Mr. Charles Doering. Upon filing of objection to the proposed extension by the Bergen Telephone Company, which was operating a line for local service in the town of Clinton, the matter was set for hearing.

At the hearing, which was held at the office of the Commission November 7, 1913, the Clinton Telephone Company was represented by *Iver Jacobson* and the Bergen Telephone Company by *H. S. Anderson.*

It appears from the testimony taken at the hearing that the residence into which Mr. Doering has recently moved was served by the Bergen Telephone Company until a short time after his arrival, but that he then ordered the telephone removed and asked the Clinton Telephone Company to extend its line to his house. The telephone formerly installed in the house was upon a line of the Bergen Telephone Company which runs past the house to a number of subscribers beyond. Mr. Doering form-

erly resided some distance north of Clinton, where he had the Clinton Telephone Company's service, and upon his removal to his present residence south of Clinton he desired to continue that service in order to reach his relatives and friends in and near Clinton. It was testified that Mr. Doering had the Bergen telephone in his house for several days after he moved into it, but he claims to have had a great deal of trouble in obtaining satisfactory service during these days, and he therefore ordered the telephone removed.

The Clinton and Bergen telephone companies have a physical connection at Bergen, and the charge for messages passing from one line to the other is 2 cts. each. This rate was fixed by the Commission and is presumptively reasonable for the service performed. Mr. Doering's objections to taking service from the Bergen line which runs past his house seems to be partly due to this 2 ct. charge and partly due to deficiencies of service during the few days he had the Bergen telephone. This trouble, however, was explained by the representative of the Bergen Telephone Company as having been due to mischievous interference with this line on the part of a few new subscribers beyond Mr. Doering's house, and it was testified that this disturbance had been stopped when the Bergen Telephone Company threatened to disconnect the offending subscribers. Unless these disturbances on the Bergen line are chronic, as we have no reason to suspect they are, it seems that Mr. Doering can be adequately served at a reasonable rate by taking the Bergen telephone. If Mr. Doering reconnects with the Bergen system and is unable to get satisfactory service, this Commission has the power, when its attention is called to the trouble, to require reasonably adequate service.

As to the rate of 2 cts. per message, it may seem a hardship to Mr. Doering to have to pay this amount to talk with his old neighbors or with other subscribers of the Clinton Telephone Company, but that is one of the incidents of his removal from the territory of the Clinton Telephone Company into that of the Bergen Telephone Company. It is true that in this case the residence in question is not far from the present terminus of the Clinton Telephone Company's line and the extension required would be rather short, but the fact remains that the road upon which the residence is situated is occupied by the line of

the Bergen Telephone Company, and to permit competition at this point would make it difficult to prohibit a further extension to the next farm house, and so on until the entire Bergen line along this particular road was paralleled. Permitting the extension in question would also open the door to the Bergen Telephone Company to make similar inroads upon the territory of the Clinton Telephone Company at certain points where, as was pointed out at the hearing, requests have been made of the Bergen Telephone Company for service. We believe it was the intention of the legislature in passing chapter 610 of the laws of 1913 that in the absence of extraordinary conditions encroachments of the kind here contemplated by the Clinton Telephone Company should not be permitted where adequate service at reasonable rates can be obtained from the company whose lines already occupy the field.

WE THEREFORE FIND AND DETERMINE, That public convenience and necessity do not require the extension of the line of the Clinton Telephone Company in the town of Clinton, Wis., in the manner described in the notice filed with this Commission by said company October 22, 1913.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE BEAVER DAM WATER COMPANY BY THE CITY OF BEAVER DAM FOR THE TAKING OF THE PROPERTY OF SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC, IN ACCORDANCE WITH THE PROVISIONS OF CHAPTER 499 OF THE LAWS OF 1907 AND ACTS AMENDATORY THEREOF AND SUPPLEMENTARY THERETO.

Submitted June 25, 1913. Decided Nov. 21, 1913.

This is a proceeding to determine the compensation to be paid in the purchase of the property of the Beaver Dam Water Co. by the city of Beaver Dam. The tentative valuation made by the engineers of the Commission is accepted by the parties to the proceeding as a fair valuation of the physical property except in respect to certain particulars which are considered in detail and given proper revision.

Held: The just compensation to be paid to the water company for the taking of its property used and useful for the convenience of the public, exclusive of the stock and material on hand and additions made to the plant since Nov. 1, 1913, is $133,000. The city is ordered to pay this sum to the water company within six months after the transfer of the property to the city, together with such price as may be agreed upon between the parties to this proceeding or, in the event that the parties are unable to agree, fixed by the Commission, for the materials and supplies on hand at the date of the taking of the plant and for new additions made to the plant since Nov. 1, 1913, with interest at 6 per cent per annum until the compensation is fully paid.

Notice was filed with the Commission by the city of Beaver Dam that, at an election held on April 1, 1913, for the purpose of determining whether the city of Beaver Dam should purchase the property of the Beaver Dam Water Company, a majority of the votes cast at such election were in favor of the acquisition of the said property.

The hearing on the valuation of the plant was held at Madison on June 25, 1913. The city of Beaver Dam was represented by *J. M. Murlock,* mayor, and *J. C. Healy,* city attorney. The Beaver Dam Water Company was represented by *E. L. Street,* its general manager.

The physical valuation of the property made by the engineers of the Commission was accepted by the parties as a fair valua-

tion of the physical property, except in certain particulars to be hereafter considered. The valuation bears date June 1, 1913, and of course does not include extensions and additions made thereafter. These will be considered subsequently. The following tables contain the summary and details of the property and value assigned to same.

FINAL SUMMARY.

Classification.	Cost new.	Present value.
A. Land	$335	$335
B. Transmission and distribution	79,678	78,106
C. Buildings and miscellaneous structures	17,209	12,987
D Plant equipment	10,114	9,316
E. General equipment	330	211
F. Paving	5,003	4,903
Total	$112,669	$105,858
Add 15 per cent[1]	16,900	15,879
Total	$129,569	$121,737
H. Material and supplies (approx.)[2]	1,200	1,000
Total	$130,769	$122,737
J. Non-operating	960	55
Total	$131,729	$122,792

[1] Addition of 15 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

[2] Company proposes to immediately deepen one of the drilled wells and cover the steam piping. The expense for this work is not included above. It will probably involve approximately $200 additional.

[1] Above figures include all existing paving. The company has been at no actual paving expense in connection with construction of mains.

By direction of the Commission, the engineers of the Commission reviewed the valuation in the light of certain claims made by the company. They also estimated the improvements and additions which have been made since June 1, 1913. As a result, certain corrections were made in the first five subdivisions in "Group B, Transmission & Distribution." Also certain changes have been made in "Group C, Buildings & Miscellaneous Structures," and "Group D, Plant Equipment." The following table shows the changes in Group B:

Item.	Unit.	Quantity.	Unit price.	Cost new. Items	Cost new. Total.	Scrap value	Condition, per cent.	Present value.

An examination of the vouchers submitted by the company, together with the invoices, shows that the figures of our engineers on the special flanged pipe and appurtenances, making up the new discharge and suction piping at the pumping station, were too low. Therefore the present values of B–1 and B–5 have been increased as shown above, to correct this error. In the tentative valuation of June 1, 1913, the hydrant specials were omitted through error. Including them increases the present value of Group B–2 by $647.00. The omission was due to the fact that the engineers understood that no part of the services were furnished by the company, but that all were furnished by the consumers. The fact is, however, that the company furnishes the corporation cock and pays for the labor of inserting it into the main. As a result B–3 is increased $1,790.00. The increase in B–4 is chiefly due to the installation of a new 2 inch meter by the company.

Certain repairs and improvements have been made to the pumping station buildings. These include a complete re-shingling of the roofs of the pumping station proper, the dwelling in connection therewith, and also the barn. Further, the old con-

crete floors of the boiler and engine rooms were replaced with new concrete floors. The engine room has been newly painted, and the boiler room newly whitewashed. These repairs have raised the per cent condition placed on these particular parts in the former valuation to 100 per cent condition, and the present value of the buildings has been raised somewhat in consequence. There have also been some slight additions, such as the installation of a ventilator over the engine room, and the placing of gutters and leaders for roof drainage. The depth of one of the 6 inch drilled wells has been increased 90 feet. As a result of such improvements and additions, the present value of Group C has been increased by $500.

The present value of Group D has been increased $106. This increase was due to the replacing of the old boiler pump by a new pump, and the covering of the new steam piping with asbestos.

As the result of the above mentioned repairs and additions to the plant and corrections to the previous valuation, the present corrected valuation shows the present value of the plant as of date November 1, 1913, to be $126,651.

The corrected final summary, therefore, appears as follows:

Classification.	Cost new.	Present value.
A. Land	$335	$335
B. Transmission and distribution	82,483	80,879
C. Buildings and miscel aneous structures	17,479	13,487
D. Plant equipment	10,179	9,422
E. General equipment	330	211
F. Paving	4,980	4,880
Total	$115,736	$109,214
Add 15 per cent (see note b low)	17,360	16,282
Total	$133,096	$125,596
H. Material and supplies (approx.)	1,200	1,000
Total	$134,296	$126,596
J. Non-operating	960	55
Total	$135,256	$126,651

NOTE: – Addition of 15 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The financial report for the year ending June 30, 1913, shows that the total operating revenues were $20,942.34; that the interest paid on mortgages amounted to $3,060 and that all operating expenses amounted to $15,463.16. It may be noted that the item for general law expenses is placed at $5,000. This is evidently excessive, as there is nothing, as far as we

have been able to ascertain, to warrant such expenditure. Nevertheless, this item is immaterial as far as the deductions from the financial report are essential to the purpose in this case.

Considerable evidence was offered on the question of going value. In view of the extensive consideration given to this subject in former decisions of the Commission, it is unnecessary to reiterate what has been said by the Commission in such cases.

After a careful consideration of the elements of value involved in the appraisement and all the facts and circumstances disclosed from the investigation, and contained in the records herein, it is the judgment of the Commission that $133,000 is just compensation to the owner of the property in question for the taking of this property by the city of Beaver Dam.

The possession of the property should be transferred to the city at the beginning of the next quarter for assessment of rates. This will prevent any complications arising in the matter of apportionment of accounts between the city and the utility.

IT IS THEREFORE ORDERED, That the just compensation to be paid to the Beaver Dam Water Company for the taking of the property of said company, actually used and useful for the convenience of the public, which property consists of the items above described, except the stock and material on hand and additions to the plant that have been made since November 1, 1913, be and the same is hereby fixed at one hundred and thirty-three thousand dollars ($133,000).

IT IS FURTHER ORDERED, That in addition to the above compensation, the materials and supplies on hand at the date of the taking of the said plant, and the new additions to the plant that have been made since November 1, 1913, be paid for by the said city of Beaver Dam at such price as may be agreed upon by the parties themselves, or, in case the parties fail to agree upon the price, at such price as the Commission shall fix by supplemental order.

IT IS FURTHER ORDERED, That the said city of Beaver Dam shall pay to the said Beaver Dam Water Company the compensation herein fixed and the price of said materials and supplies and said additions to said plant within six months after the transfer of the possession of said plant to the said city, with interest at the rate of 6 per cent per annum, until the same is fully paid.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SERVICE OF THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY ON ITS MILWAUKEE STREET RAILWAY LINES.

WASHINGTON PARK ADVANCEMENT ASSOCIATION,
NORTHWEST NEIGHBORHOOD CIVIC CLUB
vs.
THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

Decided Nov. 25, 1913.

The Commission, on its own motion, investigated the service on the T. M. E. R. & L. Co's system of street railways in the city of Milwaukee. The matter of the formal complaint made by the Washington Park Advancement Association and the Northwest Neighborhood Civic Club with respect to the service on the National ave.-Walnut st. line in Milwaukee is included in the present proceeding. The Commission investigated traffic conditions on the company's lines during the summer of 1912 and the winter, spring and summer of 1913. Traffic data were also submitted by the company and by the city of Milwaukee. The company contends that the revenue yielded by the rates provided for the company by the order of the Commission in the *Fare Case* (*City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 1, 369), is not sufficient to meet reasonable expenses under present conditions without the making of any further improvements in service. A valuation was computed and the revenues and expenses were investigated, data presented in the *Fare Case* being used with new data as the basis for further analyses. Necessary apportionments are made between T. M. E. R. & L. Co. and the M. L. H. & T. Co. In the study of expense for maintenance of equipment consideration is given to comparative data on the unit costs of street railway companies in other large cities.

A public service corporation which undertakes to supply street railway service should furnish sufficient equipment to afford seats for all passengers who desire such service, unless there exist operating or financial conditions which make it impossible or impracticable to do so. The evidence offered in the present proceeding discloses no conditions which warrant a deviation from this standard except during the morning, noon and evening rush hours of the day and at times when conditions are abnormal.

Under present conditions it is impracticable during rush periods to supply all passengers with seats. To enforce such a standard of service with the present track facilities would result in unreasonable congestion in traffic in the down-town districts and would also necessitate vast expenditures for additional equipment, facilities and labor which would have to be borne in some manner by the public. Moreover it is doubtful, in view of the importance of speed when people are going to and from their work, if patrons of the street cars would be willing to wait for cars with vacant seats when cars with comfortable standing room available were passing.

To render reasonably adequate service in Milwaukee the T. M. E. R. & L. Co. must operate a sufficient number of cars to supply: (1) during any half hour in the non-rush period an average of at least 133 seats per 100 passengers demanding transportation in a given direction at any point on the line; and (2) during the maximum half hour in rush periods a similar average of at least 67 seats per 100 passengers, making provision for a gradual transition between the two standards.

It does not seem fair to allow a continuously operating property an expense for financing depreciation on a straight line basis. A company as large as the T. M. E. R. & L. Co., with a number of joint utilities and subsidiary properties under its control and with numerous opportunities for commercial investment, can readily invest any offsetting assets of the depreciation reserve liabilities at an average of 4 per cent return or better. To assume that under these conditions the company would allow money to remain idle within its business would be to question the capability of the company's administration. The straight line basis adopted in the *Fare Case* was justified on the ground that the 12 per cent overhead expense item was not included in the property upon which, in the first instance, depreciation was computed. It appears, however, that about half or more of the overhead does not ordinarily depreciate, inasmuch as a number of the expenses which are grouped in the item "overhead" do not have to be repeated except when there is total supersession of the plant. In view of this fact the 4 per cent basis for financing depreciation with about one-half of the overhead included as depreciable property seems to be the most equitable basis for the present case. Upon this basis the annual depreciation is 4.32 per cent on the wearing value plus one-half of the overhead costs.

Under normal conditions a rate of return of 7.5 per cent for interest and profit on such a valuation as that allowed in the *Fare Case* and under such other conditions as obtained in that case, is ordinarily sufficient to bring the necessary capital into the service.

The placing of the present value of the company's property in the *Fare Case* upon a 4 per cent sinking fund basis instead of upon a straight line basis gives the company the benefit of a high value.

For growing utilities where rate adjustments can not, in the very nature of things, be of very frequent occurrence and for which the net earnings are gradually increasing both absolutely and relatively, fairness often demands that the returns allowed for the first year or at the time the rates are adjusted should be below rather than above the normal returns.

Held: The service rendered by the company is inadequate in that it has failed to comply with the standards of service set forth above. Investigation of the costs of rendering service conforming to these standards shows that the costs can reasonably be met from the revenue yielded by the rates ordered by the Commission in the *Fare Case*. The company is therefore ordered to operate its lines in Milwaukee in accordance with the standards of service set forth, subject to certain modifications, and with other regulations prescribed by the Commission. Because of the fact that the traffic on some lines is so light at times that if only 133 seats per 100 passengers were supplied there would be an unreasonably great time interval between cars, minimum headway requirements are made. The standards of service prescribed are also subject to the following exceptions: (a) No service is to be required on the 12th st.-Viaduct line during the non-rush hours; and (b) suburban service within the city limits is not to be subject to the standards stated unless

the cars used are operated as an integral part of the city schedule. During rush hours the company is to station traffic officers with authority over trainmen at important transfer intersections and at other points where these officers can materially assist in the movement of traffic and the maintenance of schedules. The traffic officers, among other things, are, so far as practicable, to limit the loads on individual cars to the maximum comfortable carrying capacity of the cars. The company is also to station fare collectors at important loading points to admit passengers through the front doors of prepayment cars and otherwise facilitate the movement of cars and assist in the handling of passengers. Lists of traffic officers and fare collectors with their stations are to be submitted to the Commission for approval. The company is further ordered: to submit plans for all new passenger cars and for the remodeling of all old passenger cars to the Commission for approval with respect to details affecting the adequacy of service; to remove the dividing rails on the platforms of the rebuilt cars, and the chains attached to the dividing rails on the rebuilt and 600 type cars; and to display separate route and destination signs on the front and a route sign on the side of each car in service, any proposed changes in the type and manner of handling of signs to be submitted to the Commission for approval.

The Commission having received numerous informal complaints with reference to the service on the various city lines of The Milwaukee Electric Railway and Light Company, it was decided to institute an investigation, on motion of the Commission, of the service on the entire system of street railways operated by the company in Milwaukee. Pursuant to due notice of investigation and hearing with reference to each separate line, the following hearings were held:

The complaint of the Washington Park Advancement Association and the Northwest Neighborhood Civic Club with reference to the service on the National avenue—Walnut street line, which was heard on June 6, 1912, and in which no order has been issued, has been given consideration in the proceedings on motion of the Commission, and will be closed by the decision herein.

TRAFFIC DATA.

In the course of these hearings traffic data covering each of the company's lines and resulting from an extended series of observations made by members of the Commission's engineering staff during the summer of 1912, and the winter, spring and summer of 1913, were introduced by C. M. Larson, chief engineer of the Commission, who explained in detail the methods of investigation used by the staff. In order to ascertain the points of maximum travel, several trips were made over each line and a record kept of the number of passengers in the cars at various points. The points at which these records show the loads on the cars to have been the greatest, were selected for making traffic counts. Men were stationed at the designated street corners and instructed to record for each passing car on the line under observation, the car number, the run number, the time of arrival or departure, the line and destination, and the number of passengers riding. The number of passengers was ascertained by actual count or by estimate. The observers were informed as to the seating capacity of each type of car in operation, and with this information they were able to estimate very accurately the number of passengers on a car, either at light, medium or heavy load. In order to ascertain the accuracy of those taking the count, tests were made by having two men observe the same car, one counting the number of passengers exactly, and the other estimating the number on the basis of his knowledge of the seating capacity, adding the number of persons standing, or deducting the number of vacant seats. It was found that the observers were very accurate in their estimates, continual observation training them in such a way that the errors made were slight.

The data gathered as described above have been compiled in

the form of a series of charts, and as such were introduced at the hearings. The charts are plotted on cross-section paper in such a way as to show the point of observation, the spacing of cars, the time at which each car passed, and the number of passengers it carried. Each car is represented by a vertical line which is long or short, as the number of passengers is large or small. These vertical lines are spaced on a base horizontal line so as to indicate the time elapsing between cars. Thus any distortion of headway causing cars to be bunched, or causing long intervals between cars is easily noticed. Similarly, the number of persons standing can be readily ascertained by noting the vertical lines which extend above a horizontal line representing the number of seats provided on the cars. From the extensive series of charts plotted in this manner, the average conditions have been computed. The average number of passengers riding and the average number of seats provided in each fifteen minute period have been computed. The results of these calculations have been plotted in the form of a straight line curve, so that the average conditions are clearly shown, and so that an accurate comparison between the seats provided and the number riding can be made. The observations upon which these charts are based have been supplemented in each case by general observations made by those in charge of the investigation, in order that first-hand information of actual conditions on the street might be added.

In addition to the data gathered by the Commission's staff, the company and the city both offered the results of traffic counts on various city lines. The company's observations, which were usually for a one day period only, were made by their employes and the results were submitted in evidence in the form of charts comparable with those introduced by the Commission. The counts taken by the city were made under the assumption that each car has a seating capacity of 48. The results were submitted in tabular form showing the car number, line and destination, time and number of passengers carried for each car passing the points of observation. In using these data corrections have been made to allow for the proper seating capacity.

It is obviously impracticable to present here in detail the mass of traffic data which is before the Commission. However,

a clear idea of the conditions of loading during the morning and evening peak periods may be had from the following tables which are compiled from the observations of the company and the Commission. The data gathered by the city were not taken at the points of maximum loading and for this reason are not strictly comparable with the counts made by the company and the Commission. On account of this fact they are not presented in this connection. In studying the tables which follow, the seating capacity of the various types of cars operated by the company should be borne in mind. There are about 374 rebuilt and old type cars (numbered from 1 to 500) and these have a seating capacity of 42 in the summer which is reduced, because of the space occupied by the stove, to 40 in the winter. There are 100 cars numbered from 501 to 600, which are known as the "500" type and have seats for 50 passengers at all seasons. The cars numbered 601 and over are known as the "600" type, and there are about 60 of them. They seat 50 passengers in summer and 48 in winter. Tables I to XVIII, inclusive, show the loading conditions during the morning peak period on the various lines as disclosed by the counts made by the Commision.

The foregoing tables show clearly that on a number of the company's lines excessive crowding has occurred day after day during the rush hours. Many cars with seats for only 40 passengers were observed carrying 80, 90, 100 or 110 persons. Conditions of loading such as those disclosed in the evidence are certainly unreasonable, and must be improved if the public is to be adequately served. It is, therefore, necessary to determine how much improvement is required to render the service reasonably adequate, and to this end it is essential that the standards of rush hour and non-rush hour service, which this Commission regards as necessary for adequate service, should be accurately fixed.

STANDARDS OF SERVICE FOR THE NON-RUSH HOURS.

A public service corporation which undertakes to supply street railway service should furnish sufficient equipment to supply seats for all passengers who desire such service, unless there exist

operating or financial conditions which make it impossible or impracticable to do so. The testimony and the numerous exhibits offered in this proceeding disclose no conditions which warrant a deviation from this standard, except during three relatively short periods of the day, which may be designated as the morning, noon, and evening rush hours. The limits of these rush hours and the standards of service applicable to them will be discussed later. For the remainder of the day adequate service should contemplate the operation of a sufficient number of cars so that all passengers desiring to occupy seats may reasonably expect to do so, except under abnormal conditions.

The traffic data before the Commission show that on some of its city lines the company has voluntarily provided for a considerable part of the non-rush period more service than is necessary to comply with this standard and still maintain a reasonably frequent movement of cars. On other lines passengers have been obliged to stand day after day during the non-rush hours, when the traffic demand could have been readily foreseen and provided for. It appears from the testimony that the company has used as a basis for its non-rush hour schedules a load factor of 100 per cent for hourly periods. In other words, it has been its aim to supply as an average a number of seats equal to the number of passengers riding in any hour. At the hearings and in its brief the position was taken that this standard is consistent with reasonably adequate service. It was argued that the flow of traffic is naturally uniform, and that variations in the flow causing crowded conditions on cars are due almost entirely to distortions of headway which are the result of bridge and railroad crossing delays not subject to the company's control. In support of this contention the company in its brief cites traffic chart A-7 of Exhibit 1301 and points out that the heaviest load in a chosen hourly period occurred after the longest time interval. The conclusion drawn is that there is a direct relation between the loads of cars and the intervals elapsing between them. The data referred to are as follows:

Passengers per car.	Time interval preceding car.	Passengers per car.	Time interval preceding car.
44	5 minutes	19	1 minute.
48	2 "	58	5 "
52	6 "	27	4 "
36	2 "	35	3 "
54	4 "	46	5 "
52	4 "	48	2 "
73	6 "	35	6 "
29	4 "		

It is true that in the hour covered by these data the heaviest load came after an interval of 6 minutes, which was the greatest interval during the hour. But there were two other cars which came after a 6 minute interval, one of which had a load of 52 and the other only 35. Grouping the loads with relation to the time interval, results as follows:

Time interval preceding car.	Number of cars with specified interval.	Loads carried by cars.	Percentage variation max. from min.
6 minutes.	3	73, 52, 35	108%
5 "	3	58, 46, 44	32%
4 "	4	54, 52, 29, 27	100%
3 "	1	35	.....
2 "	3	48, 48, 36	33%
1 "	1	19	.....

These data show that for this chosen period there is no fixed relation between the load on a car and the time interval preceding it, and the further study of other traffic charts fails to disclose any such relation. It is, therefore, evident that the variation in the loading of cars cannot be attributed entirely to distortions of headway, although this factor undoubtedly has some influence in the matter. The company has, in our opinion, emphasized too strongly the importance of railroad crossing and bridge delays as affecting headway distortion. Little specific testimony was introduced with regard to this point. An examination of the official records of bridge openings kept by the city, however, shows that in the non-rush hours delays from this source are almost negligible. Delays of only a few minutes duration should not seriously impair schedules, since the time lost can be easily made up when travel is light, and relatively few delays of more than five minutes duration occur. The fol-

lowing table shows for four of the most important bridges: the total number of openings, the number of openings lasting five minutes or over, and the average duration of the openings which last five minutes or more during the non-rush hours for three representative winter months and two representative summer months. It should be noted that in the winter when the street car traffic is the greatest, the bridge openings are at a minimum.

Delays at railroad crossings continue throughout the year and undoubtedly cause considerable distortion of headway at times, but within the next year or two it is expected that the grade crossings which cause the greatest complaint will be eliminated. The company has argued at length that delays from these sources and the consequent distortion of headway are not within its control, and that it should not be *penalized* by the requirement that sufficient service be provided to give all persons a seat under such conditions. It is apparent, however, that these conditions are within the company's control, to a considerable extent at least. For example, if the two branches of the National-Walnut

line were separated, each operating from the center of the business district, delays from bridges would be entirely eliminated on the Walnut street end of the line. Rerouting on other lines would make possible a further mitigation of the delays from bridges and railroad crossings, and a thorough study of this matter should be made by the company with a view to overcoming such difficulties. But even though some causes of distortion should exist which cannot be changed by the company, it should not regard itself as *penalized* if some additional service is required to alleviate such conditions. The traffic data show clearly that there is a wide variation in the loading of cars during the non-rush hours, and whatever the cause of this condition may be, while it exists it must be given consideration in determining the amount of service necessary.

With this variation of loading in mind, it is obvious that if on the average in a given period only 100 seats are provided for every 100 passengers riding, a large number of persons will be obliged to stand day after day. The traffic data submitted by the company, as well as that gathered by the city and the Commission, show that this has been the case in the past under schedules drawn on the basis of a load factor of 100 per cent. This standard is, in our opinion, too low for adequate service. A greater number of seats per passenger on the average must be supplied in order that all passengers may be properly accommodated. What the proportion should be, can be ascertained approximately by a study of the actual conditions of travel as shown by the traffic data.

Such a study has been made by our engineering staff. The average loads for hourly periods on each line in the non-rush hours were computed by dividing the total number of passengers carried in each period by the number of cars operated. For each such period the representative maximum load was then selected by inspection of the traffic charts. In order to eliminate unusual conditions from the study, the actual maximum load was not chosen if it was very large on account of abnormal conditions; and in a number of cases one or two other unusually large loads were not considered for the same reason. Where conditions throughout any hourly period appeared to be very abnormal, the period was eliminated entirely from the calculation. The ratio between the representative maximum load for

each hourly period used in the calculation and the average load for the same period was computed, and from these the average ratio for all observations made on all of the lines was calculated. An extensive investigation was made to determine the proportion of passengers who stand by preference, the results of which were introduced in evidence, and an allowance for the condition disclosed was made in fixing upon the number of seats per 100 passengers which should be supplied in order that those passengers who desire a seat may be able to have one. As a result of these calculations, which cover thousands of observations on all of the Milwaukee lines, and from which abnormal conditions have been eliminated, it appears that during the non-rush hours an average of 133 seats for every 100 passengers demanding service should be provided in order to fulfill the requirements of adequate service.

The traffic charts show that on several of the city lines the amount of travel at some periods of the day is so light that if only sufficient cars were operated to supply 133 seats for every 100 passengers riding, the time interval between cars would be too great to properly accommodate the public. For this reason it is necessary to specify what shall be the minimum headway at such periods. Careful consideration has been given to the character of the travel during the various periods of the non-rush hours in formulating the minimum headway requirements specified in the order, and in our judgment they are necessary for the maintenance of adequate street car service in a city of the size of Milwaukee.

STANDARDS OF SERVICE FOR THE RUSH HOURS

Traffic conditions in Milwaukee, as in other cities, vary greatly during the day, according to the habits of the patrons of the various lines. From the traffic data introduced in this proceeding, it appears that three general rush periods should be recognized, namely, morning, noon, and evening. The morning rush at present occurs some time between 6 and 9 a. m., varying on the different lines. The noon rush is of short duration on most lines and occurs at or near 12 noon. The evening rush is greater than the other two, and varies on the different lines;

but the half hour of maximum loading in most cases occurs between 4:30 and 7 p. m.

The testimony shows that at the peak of the evening rush period the company now operates about 242 per cent as many cars as are used normally in the non-rush hours. This great increase in the number of cars is necessary to supply 50 seats for every 100 passengers on the average during the period of maximum strain. If the standard which we have fixed for the non-rush hours in order to provide a seat for each passenger, namely 133 seats for every 100 passengers on the average, should be applied to the evening peak period, it is obvious that the number of cars operated would have to be about two and two-thirds times as great as at present. It would be impossible to operate this number of cars through the center of the city on the existing tracks without very seriously congesting the street traffic; and it is doubtful whether, even with additional track facilities, it would be practicable from an operating standpoint to so increase the service. To enforce such a standard, if it were possible, would necessitate vast expenditures for additional cars, new tracks, increases in the capacity of power plants, substations, and the distribution system, and for the employment of a large force of men to run the cars for a few hours only. This expense burden would necessarily have to be borne by the public in some manner. But aside from all financial considerations it is improbable that the residents of Milwaukee would ever be satisfied with such an arrangement during the rush hours. Speed is an important consideration when people are going to and from their work, and comparatively few persons would be content to see cars go by in which there is comfortable standing room available and to be obliged to wait until a car with some vacant seats in it arrived. Observations in Milwaukee show that many passengers insist on boarding the first car which comes along, even though it is crowded, rather than wait for the next car, although one bound for the same destination is in sight. This habit, however, may be accentuated by the fact that in the past passengers have had no reason to believe that the next car would be less crowded than the one they were trying to board; and the operation of more cars may mitigate this tendency. With these operating, financial and social considerations in mind, it is, in our opinion, impracticable, if not absolutely impossible,

to supply every passenger with a seat during the period of maximum loading, and any order requiring such service would not be reasonable under the existing conditions. However, we believe that a much larger proportion of the passengers riding in the rush hours can be supplied with seats than was the case at the time the traffic data were taken. It is unreasonable to crowd passengers into the cars to such an extent that they are subjected to serious inconvenience and discomfort, and the movement of the cars is impeded by the slowness of loading and unloading. The standard of service for the rush hours must therefore fall somewhere between these two extremes.

Considerable testimony was introduced with regard to the comfortable maximum load of cars. The company's assistant general manager testified that he regards as proper, fair and equitable, and not a crowded condition for the peak period, a load in which one-half of the passengers are obliged to stand. He asserted that on some of the Milwaukee cars an even greater load than this can be carried without serious discomfort to passengers. The company introduced the report of the Chicago Board of Supervising Engineers, in which an average load for half-hour periods in the rush hours of 70 passengers for cars having a seating capacity of 40, or a load factor of 175 per cent was recommended as a basis for rush hour schedule making in Chicago. The company also placed in evidence and quoted with approval the report of Ford, Bacon and Davis to the Pennsylvania railroad commission in 1911, in which four square feet of aisle and platform space per standing passenger was recommended as furnishing comfortable standing room. Tests were made by employes of the company on cars of each type in order to ascertain whether this standard would apply to the Milwaukee cars, and several of these employes testified that when the standing room was filled on this basis, there was ample room for the comfort and free circulation of passengers. These tests, however, were made in the summer when light clothing is worn and at the place of employment of those standing in the cars, many of whom were not dressed as they would have been on their way to or from work. The cars used for the tests were not in operation at the time, and the seats were unoccupied.

The Commission's engineers later conducted a series of observations in order to ascertain how many passengers can com-

fortably stand in the various types of cars, and still allow for the free movement of persons boarding and alighting from cars under ordinary operating conditions. These observations, which were placed in evidence, were made on cars in regular operation during the morning and evening peak periods, and the passengers observed include various classes of people such as mechanics, clerks, business men and shoppers. The observers passed through the cars during the various stages of loading and noted the number of persons in each part of the car when, in their opinion, the inclusion of any more would seriously retard the free circulation of passengers. This estimate of a reasonable standing load is based upon an even distribution of standing passengers throughout the various parts of the car. If this even distribution is not maintained, fewer passengers can be allowed to stand without causing material delay because of the retardation of the movement of passengers boarding and alighting from cars.

The following table shows the standing capacity of the various types of cars, on the basis of four square feet of aisle and platform space per standing passenger, as estimated by the company, and as estimated by our engineers on the basis of the tests conducted on cars actually in operation.

TABLE XL.

Showing number of passengers who can comfortably stand in the various types of cars, according to the estimates made by the company and the Commission.

Portion of car.	Rebuilt type.		500 type.		600 type.	
	Company's estimate.	Commission's estimate.	Company's estimate.	Commission's estimate.	Company's estimate.	Commission's estimate.
Front platform...	8	6	11	10	9	8
Front reservoir..	6	6	9	7	9	10
Aisle.....	9	7	10	10	10	9
Rear reservoir....	6	6	9	7*	9	10
Rear platform....	8	5	11	9	8	8
Total.....	37	30	50	43	45	45

*Reduced to 5 in winter when the stove is installed.

The total capacity of the various types of cars as estimated by the company and by our engineers is shown in the following table:

TABLE XLI*

Type of car.	Company's estimate.			Commission's estimate.		
	Seating capacity.	Standing capacity.	Total capacity.	Seating capacity.	Standing capacity.	Total capacity.
Rebuilt	44	37	81	42	30	72
500	52	50	102	50	43	93
600	52	45	97	50	45	95

*NOTE:—It will be observed that the Commission's estimate of seating capacity does not agree with the company's estimate. It is conceded that it is possible to seat passengers according to the company's estimate by crowding the short longitudinal seats, but our observations show that when cars are crowded the number occupying the seats is more often 40, 48 and 48 respectively. The Commission's estimate of 42, 50 and 50 is therefore an average between the two extremes. Under winter conditions there are two seats less in the rebuilt and 600 type cars, making the average 40, 50 and 48, respectively.

In considering the comfort of passengers and efficiency in the movement of cars in Milwaukee, the conditions on cars of different types in other cities and recommendations with regard to them has been given very little weight. The testimony does not show that the cars used in Philadelphia or Chicago are comparable with the cars used in Milwaukee in this regard, and without a careful comparison of dimensions and the arrangements of platforms and seats, any conclusions drawn from such sources would be unsafe. We regard the total capacity of the various types of Milwaukee cars as ascertained by our engineers from actual observations on cars in operation, as the maximum loads which cannot normally be exceeded without subjecting passengers to unreasonable discomfort and delay. These maximum loads for winter and summer are as follows:

Type of car	Maximum comfortable load	
	Winter	Summer
Rebuilt and open platform	70	72
500	93	93
600	93	95

Having thus determined the maximum loads, it becomes necessary to ascertain what average loading should be adopted in drawing schedules in order that under normal conditions few cars, if any, shall exceed the maximum. The company throughout this proceeding has taken the position that the flow of traffic in the rush period is naturally uniform and that most of the variation in loading which is shown by the traffic charts is due to bridge and railroad crossing delays, and the consequent dis-

tortion of headway, which are not subject to the company's control. As noted with reference to non-rush standards, it is expected that delays at railroad crossings will soon be largely eliminated by the process of grade separation. It also appears that too much importance has been given by the company to bridge openings as affecting distortion of headway in the rush hours. The official records of bridge openings kept by the city show that during the rush hours the number of lifts which last five minutes or over is relatively small, especially in the winter when the heaviest street railway traffic occurs. The following table shows the characteristics of the bridge delays at four of the most important bridges during the rush hours for three representative winter months and two representative summer months:

TABLE XLII.

Showing characteristics of bridge delays during the rush hours from 6 to 9 a. m., and from 4:30 to 7 p. m.

	Month.	Total No. of lifts.	Number of lifts lasting 5 min. or over.	Ave. duration of lifts lasting 5 min. or over.
				Minutes.
East Water street bridge.....	Dec. 1912.....	272	23	6.7
	Jan. 1913.....	151	3	5.3
	Feb. "	110	1	5.0
	June "	481	37	6.3
	July "	752	54	6.6
West Water street bridge.....	Dec. 1912.....	139	14	6.6
	Jan. 1913.....	76	4	5.0
	Feb. "	41	2	5.5
	June "	327	40	6.2
	July "	365	44	6.7
Grand avenue bridge	Dec. 1912.....	87	3	6.0
	Jan. 1913.....	55	1	5.0
	Feb. "	47	2	5.0
	June "	169	9	6.6
	July "	205	11	5.4
Michigan street bridge.....	Dec. 1912.....	82	5	7.4
	Jan. 1913.....	52	0	.0
	Feb. "	30	1	5.0
	June "	207	10	5.9
	July "	236	12	5.3

It should also be noted that many of the trippers operated in the rush hours start from the business district and are not affected by either bridges or railroad crossings. Furthermore, as pointed out with reference to the non-rush hours, the effect of such delays can be mitigated to a considerable extent by changing the routing of a number of lines.

The company argues, on the presumption that the flow of traffic is naturally uniform, that it is reasonable to use the maximum comfortable loading as an average for arranging schedules. In other words, it maintains that if a load of 100 passengers on a car with seats for 50 is fixed upon as the maximum load consistent with the comfort and free movement of passengers, that it is reasonable to schedule only enough cars to supply on the average 50 seats for every 100 passengers riding in a given period. In support of this position reference was made to the report of Ford, Bacon and Davis to the Pennsylvania railroad commission, which was introduced in evidence. An examination of the full report, however, shows that Ford, Bacon and Davis recognize a distinct variation in the flow of traffic in the rush hours. The use of the maximum comfortable load based on four square feet of aisle and platform space per standing passenger as an average load for schedule making purposes was recommended only as a temporary expedient pending the construction of additional equipment, as is shown by the following quotation from the report:

Improved Service Practicable Immediately.

"As the present rush-hour service is considerably less than the standard recommended, this plan cannot be put into effect until additional cars and power are secured.

"During the time of construction of this equipment we recommend that the company operate a service as far as the number of present cars and the capacity of its power system will permit, which will provide on each line during the busiest half-hour an *average* car loading equal to the recommended standard of maximum car capacity. This standard of service immediately practicable would require the operation of 1,987 cars, an increase of 315, or 19 per cent over the winter schedule, and of 205 cars, or 11 per cent over the summer schedule. Although this would result in a considerable improvement of car loading there would still be carried regularly maximum loads up to the crowding limit of the car."

Upon the completion of the equipment needed for the additional service, a standard was recommended which made an allowance for the recognized variation in the loading of cars, as is shown by the following quotation from the report:

"From a large number of observations, both in Philadelphia and elsewhere, we find that the maximum carloads on any line in a half-hour approximate 25 per cent more than the *average* loading for that half-hour. Thus, for example, if 76 is fixed as the maximum load of the Pay-Within car, the *average* loading for the heaviest half-hour would be 61 passengers. Consequently, our recommendation for standard service would require approximately 25 per cent more cars to pass the maximum point of loading on each line at the busiest half-hour than would be required for the *average* loading just referred to, and this as calculated for the entire system would result in an additional number of large cars in operation of about 14 per cent."

The Commission's engineering staff has made a comprehensive study of all of the traffic data submitted in this case in order to ascertain how much variation in the flow of traffic exists in Milwaukee during the rush hours under normal conditions. From this study it is very clear that the flow of passengers during the peak period is far from regular. Its irregularity, in fact, appears to be so great that under normal conditions it will be difficult to prevent some cars being loaded beyond their comfortable carrying capacity without placing an absolute restriction upon the load which any car may carry, or without much more complete supervision than is now afforded by the company. Taking into consideration all of the circumstances connected with the operation of cars in Milwaukee, it is our judgment that the minimum standard for the rush hours consistent with adequate service is a standard under which for the half-hour of maximum travel in each rush period, an average of 67 seats shall be provided for each 100 passengers demanding service.

THE TRANSITION BETWEEN THE RUSH HOURS AND THE NON-RUSH HOURS.

The company's assistant general manager, in discussing standards of service for the rush hours in his testimony, expressed the opinion that the maximum load factor should apply only to the 15 minute period representing the peak of the traffic curve. From this point, he said, the ratio of seats to passengers should gradually increase so as to conform to the non-rush standard at the beginning and end of the rush hours. This principle, we

believe, is substantially correct. It is certainly true that no more passengers should be required to stand than is necessary, and the standard applicable to the period of maximum strain should not be applied when the strain is less great immediately before and after the peak. However, it is practicable to maintain the non-rush standard of 133 seats for every 100 passengers over a part of the rush hours without materially increasing the cost of service. This can be accomplished by adding sufficient cars, as the traffic increases, to maintain the non-rush standard until the full quota of cars necessary for the rush hour standard in the peak half-hour is in operation. These cars can then be run until the traffic falls off to such an extent that the non-rush standard is being complied with, after which they can gradually be taken off until at the end of the rush hours only the normal non-rush equipment will be in operation. This arrangement will increase the period during which trippers are used and will make necessary the operation of a somewhat greater total number of cars during the entire rush period than would be necessary to give the required service for the maximum half-hour. It will therefore increase the platform duty of tripper crews, but, as pointed out by the company, these crews are now employed for such a short period that in order to secure sufficient men a somewhat higher wage than would be needed for a longer spread of duty is required. However, this method of transition between the two standards will make appreciably shorter the period during which some passengers must stand.

SUPERVISION.

The testimony shows that the supervision of street car traffic in Milwaukee has not been adequate to cope with the situation, and in our opinion, a considerable part of the distortion in headway and crowding of cars noted in the traffic data might have been avoided with a more comprehensive system of supervision. The supervisors now employed are apparently efficient, but their number is not sufficient to render effective service on the entire system. The enforcement of the standards of service ordered herein will make even more imperative an improvement in this regard. From a careful study of the situation as it

now exists and of the probable effect of an increase in the number of cars operated, it appears that traffic officers with authority over trainmen should be stationed at the important transfer intersections and at such other points as will materially assist in the movement of traffic and the maintenance of schedules during the rush hours. These officers should, insofar as practicable, limit the loads on individual cars to the comfortable carrying capacity of the various cars, namely for the open platform and rebuilt cars, 70 in the winter and 72 in the summer; for the 500 type cars 93 throughout the year; and for the 600 type cars 93 in winter and 95 in summer. From 40 to 45 such traffic officers as a minimum will be necessary to properly supervise the Milwaukee system.

The fare collectors now stationed at a number of important loading points to allow passengers to enter at the front door of cars have added much to the efficiency of the service by facilitating the movement of cars. The number of fare collectors should be increased so that at all important loading points passengers may enter the cars at the front door as well as at the rear door in the rush hours.

SCHEDULES.

In its brief and in its oral argument, the city of Milwaukee has taken the position that, to be effective, the order of the Commission should specify definite schedules for each city line in addition to fixing standards of service for rush and non-rush periods, for the purpose of accurately checking the service. The company, on the other hand, has laid great stress upon the necessity of a flexible schedule, and has taken the position that schedule making is a managerial detail which should be left for the company to control. The company's position in this regard we believe to be correct. Conditions of traffic vary from year to year and with the seasons of the year, and to meet such changes schedules must be flexible. Should the Commission specify the headway on each line, it would be necessary for it to make a constant study of changes in the volume of traffic and modify its orders from time to time. In short, the Commission would, by so doing, place itself at the service of the company, filling

a need which should rather be met by an efficient traffic study department. The order has been carefully drawn, and we believe that it will be possible for the city or individuals to prove a violation thereof by making a count for the same period on three successive days at any point where the standards are apparently not being fully complied with.

OTHER FEATURES OF SERVICE.

Much testimony was introduced with regard to car construction as affecting the comfort and convenience of passengers. It was claimed that the seats in the new 600 type cars are too narrow from window to aisle to allow two medium sized persons to occupy a single seat together in comfort, and that the steps are too high for the convenience of passengers, especially women. The arrangement of signs and their wording was criticised. It was shown that not all lines are equipped with dash-board route signs, that the illuminated roof signs do not in all cases designate accurately the actual destination of the cars, and that they are not changed at both ends of the car after each trip. These conditions were said to result in some confusion to passengers. Criticism was also directed against the bar and chain which are placed on the small platforms of the rebuilt cars, presumably for the purpose of separating incoming from outgoing passengers. The testimony and the observations of our staff show that, owing to the presence of this bar and chain, passengers cannot ordinarily board and alight at the same time from the rear platform, and their usefulness in this regard is therefore not apparent. On the other hand, they offer an obstruction to passengers, especially those with grips or parcels, and are a source of considerable delay at heavy loading points. The chains have often been stretched across the exit when persons have desired to leave the cars and they have been forced to pass out on the entrance side of the bar. Since these bars and chains cause much inconvenience to passengers and serious delay in loading and are in no sense beneficial to passengers, they should be removed. With regard to signs, the company's assistant general manager stated at the hearings that changes in the wording of a number of the destination signs have been deferred pending the renaming of

certain streets. For this reason no action will be taken at this time with reference to this matter. However, all cars in service will be required to carry both dash-board route signs and roof destination signs. In view of the complaints relative to the width of seats, the height of steps, and other features of car construction, we regard it as necessary that in the future all plans for new passenger cars and for the remodeling of old passenger cars shall be submitted to the Commission for approval with regard to such matters as are, in its opinion, important as affecting adequate service. Proposed changes in signs on the cars now in service should also be submitted to the Commission for approval.

DOUBLE TRANSFERS.

The question of double transfers in Milwaukee has been considered by the Commission in previous decisions. On January 30, 1912, an order was issued requiring double transfers on the Twelfth street and Eighth street cross-town lines. (*City of Milwaukee v. T. M. E. R. & L. Co.* 8 W. R. C. R. 535). Later in a case of the same title (10 W. R. C. R. 352) the further extension of the double transfer system was considered. On page 357 of that decision, the following language was used:

"Under the present circumstances, it does not appear necessary to extend the use of the double transfer. Circumstances may arise in the future when the large amount of cross-town travel through what is at present the outskirts of the city will have developed to such an extent as to make further use of the double transfer desirable. It does not appear, however, that such an extension is reasonable at the present time."

On the basis of the investigation made by the staff in this case, it is our opinion that in order to facilitate travel and relieve congestion in the downtown district, it is now necessary that this matter should receive general consideration. The company should make a study of the matter and extend the double transfer system where it is necessary to secure the desired results, and if this is not accomplished in a satisfactory manner, it will be necessary for the Commission to make further investigations and formally consider this question.

NEW EQUIPMENT.

At the hearings on March 21 and April 1, 1913, the company's assistant general manger testified that in 1909 the company ordered 100 new cars which were received in 1910 and 1911, and that during December 1912, and January and February 1913, 30 additional cars, the first of the 600 type, were received. At the hearing April 19, 1913, he stated that another lot of 30 new cars had been ordered and that they would be in operation by August 1, 1913. At the same hearing he also stated that the company would provide still another lot of 30 new cars of the 600 type to be available for service some time in the fall of 1913, and this statement was corroborated by counsel. Later testimony shows that 30 new cars were placed in operation in August, so that at present 60 cars of the 600 type are in use. The 30 additional cars, which the company volunteered to provide, should in the near future be ready for operation. Our engineering staff has estimated the number of cars which are necessary to comply with the standards of service ordered herein, under the traffic conditions shown by the exhibits in this proceeding, and it appears that, with the addition of the 30 new cars this fall, a sufficient number will be available to care for the traffic conditions disclosed by this investigation. The flow of street car travel has probably been augmented since these traffic counts were taken, and it will unquestionably continue to increase with the growth of population and the extension of the city boundaries. This constant growth will be automatically provided for by the application of the standards which we have prescribed and which are the result of a long and painstaking study by our engineering staff. To comply with these standards the company will be obliged to add more equipment as the traffic conditions demand it.

EARNINGS, OPERATING EXPENSES AND FIXED CHARGES.

Counsel for the company argued that under the rates provided for it by this Commission in the order issued August 23, 1912, in the so-called *Three-Cent Fare Case, (City of Milwaukee v.*

T. M. E. R. & L. Co. 1912, 10 W. R. C. R. 1) the earnings of the said respondent company will not be sufficient to cover reasonable amounts for operating expenses, including depreciation and interest and profit on the fair value of the property devoted to the service under existing conditions, or without any further improvements in the service. A great deal of testimony to the same effect was also introduced in the present case. If these arguments and testimony are sound and well-founded, then it not only follows that the company would be justified in asking for higher rates, but that under the law it would be the plain duty of this Commission to authorize proper and necessary increases in rates. Under the constitution, as well as under the statutes, a public service company is ordinarily entitled to rates that will yield reasonable amounts for operating expenses, including depreciation, and for interest and profit on the fair value of the property employed. Of this, in the long run, such companies cannot be deprived even if the Commission were short-sighted enough to attempt it. The alleged failure of the rates provided in the *Fare Case* in question to yield reasonable returns is partly attributed to the increased cost of operation since 1910 and partly to the alleged fact that the valuation of the property and the rate of return that was allowed in the case cited are too low. These allegations, it appears to us, are not well-founded. In order to show that this is the case, it will be necessary to point out and examine some of the leading items both in the operating expenses of the company and in the value of the property.

In discussing the groups of expenses which have entered into the income accounts The Milwaukee Electric Railway and Light Company will, for convenience, be referred to as "the city company" or merely as "the company" and the Milwaukee Light, Heat and Traction Company will be referred to as "the traction company". Likewise, the proceeding before the Commission in the matter *City of Milwaukee v. The Milwaukee Electric Railway and Light Company* cited above, will be designated as the *Fare Case.* In apportioning and revising the expenses, no changes have been made in the expenses for power, conducting transportation, expense burden, or injuries and damages over those reported by the company and with the exception of the last named item will be excluded from the discussion.

Maintenance of Way.

Up to January 1, 1912, it was the company's practice to divide the above expense on a car-hour basis, but at this date the direct charge method was employed. However, an analysis of the monthly charges indicates quite clearly that on March 1, 1912, the old car-hour basis was again adopted and carried through for the remainder of 1912. The first six months of maintenance of way expenditures by months illustrate the change in charges to the city and traction companies:

1912.

	City Co.	Traction Co.
January	$11,083.35	$6,710.94
February	13,261.81	7,456.99
March	18,596.66	2,788.64
April	19,155.37	2,857.24
May	18,313.18	2,875.27
June	13,233.38	2,421.37

It will be noted that the charge to the city company increases from $13,261.81 in February to $18,596.66 in March, while the reciprocal effect for the traction company shows a decrease from $7,456.99 in February to $2,788.64 in March. This change is still more marked in the following percentage analysis.

Year 1912.	City Co.	Traction Co.	Total.
	Per cent.	Per cent.	Per cent.
January	60.21	[1] 39.79	100.00
February	61.21	[2] 38.79	"
March	86.96	13.04	"
April	87.02	12.98	"
May	86.49	13.51	"
June	84.53	15.47	"
July	84.19	15.81	"
August	84.17	15.83	"
September	84.50	15.50	"
October	86.92	13.08	"
November	86.88	13.12	"
December	87.16	12.84	"

[1] Includes 3.34% Racine.
[2] Includes 4.37% Racine.

In the above table the per cent charge to the city company increased from 61.21 in February to 86.96 in March and practically remained as high as this for the balance of the year. On

the other hand, the charge to the traction property decreased about 25 per cent after the month of February.

These data indicate that in order to obtain a fair division of those expenses an apportionment on a unit basis must be resorted to. In the *Fare Case* the maintenance of way for 1911 was divided as follows:

Total	$212,146.54	100.00 per cent
City company	118,427.69	55.82 "
Traction company	93,718.85	44.18 "

Approximately 56 per cent of this expense was charged to the city company in the *Fare Case,* while the city company's division allocated 85.24 per cent to the city company. Comparing 1912 with 1911 we find that the city company charged as follows:

Company Basis.

1911—Total	$212,140.54	100.00 per cent
City company	180,822.33	85.24 "
Traction company	31,324.21	14.76 "
1912—Total	224,922.17	100.00 "
City company	183,199.70	81.45 "
Traction company	41,722.37	18.55 "

The decrease from 85.24 to 81.45 in the percentage charge to the city company is caused mainly by the direct charges employed during January and February of 1912, but the percentage to the city company for 1912 is still too high.

To find a proper basis for apportionment it is necessary to take into consideration the relative percentage increases in car-miles and miles of track as these units of apportionment were used to determine the charge to the city company.

Car-Miles.

	City Co. per cent	Traction Co. per cent	Total per cent
1911	81.49	18.51	100
1912	82.28	17.72	100
1913*	82.25	17.75	100

Miles of Single Track.

1911	38.26	61.74	100
1912	38.61	61.39	100
1913*	38.72	61.28	100

* Ended June 30.

The per cent of car-miles and miles of track have slightly increased for the city company as shown in this table, and therefore the per cent apportionment for 1912 should be slightly higher than that used for 1911 in the *Fare Case*. It would seem that 58 per cent for the city company for 1912 is a fair basis. The segregation follows:

Total	$224,922.07	100 per cent
City company	130,454.80	58 "
Traction company	94,467.27	42 "

Beginning with January 1, 1913, the city company again inaugurated the direct charge method of segregation. Data for nine months of this year, January 1 to September 30, show the following amounts and percentages:

Total	$195,571.57	100.00 per cent
City company	114,935.31	58.77 "
Traction company	80,636.26	41.23 "

The above divisions on a direct charge basis substantiate the allocations made upon unit bases in the *Fare Case*. The division is approximately 59 per cent to the city company and 41 per cent outside.

Taking maintenance of way per mile of track for the first six months of 1912 and 1913, we have the following figures:

Maintenance of Way Per Mile of Single Track, January to June.

	City Co.	Traction Co.
1912	$661.56	$118.80
1913	549.17	238.39

According to these figures maintenance per unit for the traction company shows an increase from $118.80 in 1912 to $238.39 in 1913, or 100 per cent increase. However, placing the six months of 1912 entirely on a car-hour basis causes the unit to be $65 for the traction company or an increase in 1913 of about 180 per cent. For the city company the decrease per unit is shown as from $661.56 in 1912 to $549.17 in 1913, but the corrected figure for 1912 is $720, making the decrease here approximately 24 per cent.

The above figures indicate that it is safe to assume a percentage of 60 to the city company and 40 to the traction company for the fiscal year 1913. Apportionment on this basis for year ending June 30, 1913, is as follows:

Total	$237,353.80	100 per cent
City company	142,412.28	60 "
Traction company	94,941.52	40 "

MAINTENANCE OF EQUIPMENT.

Due to the inter-use of repair equipment by both companies it will be well to treat this item of expense combined. A history of the last sixteen years shows that this expense varied considerably in total and per car-mile, and has seldom been normal. Especially is this true for the past five or six years. The following table is illustrative. Maintenance of way has been included because of its relation to the degree of maintenance of equipment required.

MAINTENANCE OF WAY AND EQUIPMENT PER CAR-MILE WITH PER CENT INCREASE.

T. M. E. R. & L. Co. and M. L. H. & T. Co.

Years ended Dec. 31.	Maintenance of Way.		Maintenance of Equipment.	
	Cts. per car-mile.	Index base 1897, per cent.	Cts. per car-mile.	Index base 1897, per cent.
1897	1.1617	100.00	1.1019	100.00
1898	1.1573	99.63	0.9087	82.46
1899	1.2118	104.31	0.9629	87.38
1900	0.9384	80.78	0.8624	78.26
1901	0.8109	69.82	0.9072	82.33
1902	0.8504	73.20	0.8495	77.09
1903	0.9230	79.45	0.9099	82.57
1904	1.0471	90.14	1.1466	104.05
1905	0.7824	67.35	1.0428	94.64
1906	0.9313	80.17	1.0680	96.93
1907	1.1083	95.41	1.2651	114.81
1908	0.9395	80.87	1.2829	116.42
1909	0.9351	80.50	1.3472	122.26
1910	[1]1.4823	127.60	1.5089	136.93
1911	[1]1.2303	105.91	1.1371	103.19
1912	1.2709	109.40	1.9022	172.62
1913[2]	1.5269	131.43	2.3568	213.88
1913[3]	.....	.....	2.1455	194.71

[1] Different from figures reported in 11 W. R. C. R. Table 59, p. 198.
[2] January to June 1913.
[3] Year ending June 30.

Granting that maintenance costs have increased recently due to rises in the prices for labor and materials and that larger cars, air brakes, folding doors, signal and sign systems, and new heating system have been added, it does not seem reasonable that the maintenance cost per unit can under normal conditions show such variations. The cost per car-mile has varied from 0.8495 cts. per car-mile in 1902 to 2.3568 cts. in the first six months of 1913. In 1910 it was 1.5089 cts.; 1911, 1.1371 cts.;

1912, 1.9022 cts. The reasons for these increases are not entirely clear. The high unit for 1913 is in part caused by a decrease in car mileage over 1912. The expense of 1.5089 cts. in 1910 was thought to be abnormally high in the *Fare Case,* 10 W. R. C. R. 207. This alleged abnormal expense in 1910 was in part attributed to improper charges to operating expenses connected with the changing of city cars to the P. A. Y. E. type. In this connection it is significant that of the larger items making up the maintenance of equipment expense it appears, from a memorandum of the company submitted September 16, 1913, that the largest increase occurs in the items of car body repairs, being about 0.4 cts. per car-mile higher in 1912 and 1913 than in 1910 and 1911. Painting and varnishing has increased only about 0.05 cts. per car-mile in the same years, car truck maintenance per car-mile has actually decreased since 1910. Maintenance of electrical equipment has increased about 0.15 cts. or 0.25 cts. per car-mile in these years, while "Miscellaneous expense" has shown an increase of about 0.2 cts. per car-mile.

In attempting to establish the reasonableness of the large recent increases in the unit maintenance of equipment expenses some comparative figures of other companies are cited by the company as follows:

Company	Year	Maintenance of equipment per car-mile cts.
International Ry. Co. of Buffalo.....	1910	2.55
Metropolitan St. Ry. Co. of New York	1910	3.00
Third Ave. St. Ry. Co. of New York..	1910	2.61
The Brooklyn Heights R. R. Co. Brooklyn	1910	3.03
The Brooklyn Electric R. R. Co.....	1910	2.69
Cleveland Ry. Co., Cleveland.....	1909	2.72
Seattle Electric Co., Seattle.....	1910	2.42

It will be noted that the first five companies are in the state of New York. Their expense accounts are kept in accordance with the New York Public Service Commission classification of accounts which includes under the account maintenance of equipment the following: Repairs to steam power plant and substation equipment and superintendence of the same, and depreciation of equipment. Not any of these items are classified under maintenance of equipment in the classification of the Wisconsin Railroad Commission. The Wisconsin Commission's depreciation allowance in 1910 for rolling stock and equipment

and power plant equipment for the city and traction companies combined amounted to 1.3293 cts. per car-mile. If this expense alone be added to the reported costs of the two companies we would get the following unit costs.

Year.	Maintenance and depreciation of equipment per car-mile.
Year ended Dec. 31, 1910	2.8382
" " " 1911	2.4664
" " " 1912	3.2315
" " June 30, 1913	3.4748
January–June 1913	3.6861

These unit costs for 1912 and 1913 exceed any of the comparative costs cited by the company and contained in the previous table, and for 1910 exceed all but two of those unit costs. It is evident from these facts that due to differences in classification the unit costs cited by the company as obtaining in New York state are of no value for comparative purposes to establish a criterion of equipment maintenance per unit.

In attempting to obtain data for comparative purposes the Commission has gathered the following unit costs from state and municipal reports, financial manuals and technical journals, and by correspondence:

COMPARATIVE UNIT COSTS OF MAINTENANCE OF EQUIPMENT PER CAR-MILE.

Expenses classified, so far as possible, to correspond to the classification of the Wisconsin Railroad Commission.

(1) Adjustments made partially at least correcting differences in classification.

(2) Accounts kept in accordance with interstate commerce commission classification. No knowledge concerning inclusion of depreciation expenditurs.

(3) "Repairs of rolling stock" or "maint. of rolling stock."

(4) Depreciation reported to be not included.

The unit costs in the above table have been based upon rolling stock and shop maintenance as far as possible, but some of the units (as per foot notes) still include other expenses than those provided for in maintenance of equipment by the Wisconsin classification. The higher units in the table are due either to this fact or to abnormal maintenance, or to the fact that they prevail in cities with more than a million population such as New York and Brooklyn. Comparing the above figures with those of a few similar railways cited by the Milwaukee company, we note that for one city in the Red Book 1910, the unit is given as 2.42 cts., while by letter to the Commission the comparable unit is 1.76 cts. for 1910, 1.40 cts. for 1911, and 1.27 cts. for 1912. Taking the Buffalo figures, the Milwaukee company cited 2.55 cts. for 1910, while the New York state commission reports show the more comparable costs to be 1.47 cts. for 1910, and 1.58 cts. for 1911. For the Brooklyn Heights Company a similar revision results in costs of 2.4 cts. in 1910, and 2.41 cts. in 1911, as against 3.03 cts. cited by the Milwaukee company.

Taking the unit costs of both companies combined by months for the year 1913 we have the following figures:

MAINTENANCE OF EQUIPMENT, RAILWAY.

Jan.-Sept. 1913.

Arithmetic average			2.13			2.05

Although the average for the nine months of 1913 given in the foregoing table is over 2.1 cts. per car-mile for both companies combined and slightly above 2 cts. for the city company

on a direct charge basis, it is quite apparent that these high averages have been caused directly by the extremely abnormal figures prevailing in February, March and April of 3.25 cts., 2.73 cts., and 2.77 cts. for the combined properties, respectively, and 3.16 cts., 2.56 cts., and 2.68 cts. for the city company property, respectively. It was shown in the preceding history since 1897 of the car-mile costs for the Milwaukee companies that the average for the first six months of 1913 was even higher than for any preceding period, namely 2.3568 cts. and this is of course directly due to the abnormal costs cited above. In the table just given it is noticeable that the cost of 1.5 cts. or lower occurs during July and August, and that 1.8 cts. is quite common. In this connection it is important to call attention to the prevalence of costs less than 1.8 cts. in the comparative data obtained from other cities and it also should be noticed that costs above 2.4 occur only in five instances and that no costs reach 3 cts., even in cities of over one million population.

In order to obtain an average of maintenance cost which will be a criterion for a normal cost, an average of the past three years, 1910, 1911 and 1912, and an average of these three years combined with the nine months of 1913 are taken as an equitable basis. The arithmetical average for the three-year period is 1.5161 cts. per car-mile, while the average for the three years and nine months is 1.6695 cts. This latter average gives the figures for the nine months during 1913 the same relative weight as that given to the figures for the previous years. In this connection it should be noted that an average based upon these later years is liberal. Prior to 1911, no additional cars were placed in operation by the company for five years, which no doubt caused a more intense use of the equipment on hand, as the total passenger traffic increased over 30 per cent during this period. This, together with a growing demand for better shop facilities, resulted in a gradual cessation in regularity and thoroughness of overhauling.

The company has placed its final estimate of the minimum cost of maintenance of equipment at 2.006 cts. per car-mile. This, it will be noted, is higher than the actual cost incurred in 1912. Now, considering the low maintenance costs in 1911 and in the years preceding 1910, it is certain that the higher costs are due to deferred maintenance and probably also due

to liberal interpretation of what constitutes maintenance charges. The former statement is partly substantiated by the company in its report by stating that 11 cars were overhauled in 1911 while 318 cars were overhauled in 1912. Although the company intends to overhaul its cars regularly in the future, it is evident that when the deferred maintenance has been provided for the cost per car and per car-mile will be decreased, because of the fact that regular maintenance is always less expensive than deferred maintenance. In view of the history of the company's maintenance by years, and also by months for 1913, the revised comparative data, the averages stated, and other facts, a unit cost of 1.8 cts. per car-mile is the maximum amount that can be fairly allowed for such maintenance under normal conditions. On this basis $262,102.64 for 1912, and $261,755.73 for 1913, are attributed to the city company as compared with the company's charge of $287,667.29 and $311,273.54 for the same years, respectively. The differences between the company's charge and the Commission's charge are due in part to the revision in the cost per car-mile, and in part to a revision in apportionment made to correct an error made by the company in separating ten months of 1912 and six months of 1913 upon a car-hour basis between the city and traction properties.

INJURIES AND DAMAGES

An unusual increase has occurred in injuries and damages reserve charges within the last few years. The apportioned debits show that the actual outlays increased from approximately $93,000 in 1908, to $257,000 in 1912. The company has increased its credit to the reserve by raising its allowance for injuries and damages from 4 per cent of gross earnings in 1911, to 4.5 per cent in 1912, and to 5 per cent in 1913. These allowances equaled about $186,000 for 1912, and $198,000 for the fiscal year ending June 30, 1913, thus falling short of the actual total expense of releases during these years. However, when allowing for miscellaneous credits allocated to the city company, the credits exceed the charges during the past five years by $29,759.24 upon the company's basis. In the *Fare Case* the allowance was based upon 3.5 per cent of gross earnings for the four years 1908–1911, and the charges on this basis exceeded the credits by $63,725.26 after segregating miscellaneous credits and allow-

ing 4 per cent for 1912. These facts indicate that the allowance for this expense should be increased to a certain extent over that in the *Fare Case,* and it is deemed that 4.5 per cent for 1912, and 5 per cent for the first six months of 1913 would be adequate. These percentages of gross earnings conform with the company's allowances and therefore this item is accepted as per company's statement.

Other Reserves and Special Accounts

Under "Other reserves" are included the miscellaneous reserves kept by the company in addition to the depreciation and injuries and damages reserves such as the insurance, law expense, promotion of business, contingency, utility equipment, relief and pension reserves. Some of these reserves are directly chargeable to the railway property while others, again, are common to railway and lighting. An examination of the credits and debits to these reserves during 1912 and their balances at the end of that year place a fair allowance at $70,000 for the city company. This figures seems liberal when it is considered that the allowance in the *Fare Case* ranged from $26,000 to $40,000, and that $25,849.83 was allowed in 1911. However, as the special accounts are in the nature of reserves, it is thought best to facilitate matters by making the adjustments due to these accounts from the allowance for other reserves. The profits in these special accounts amounted to $1,961.47 and the fixed charges to $48,250.61, making a total of $60,212.08. During the six months for 1913 the total equaled $34,582.27. Inasmuch as no disposition has been made by the company of the profits and as the fixed charges must be considered as duplications in this proceeding, an adjustment is advisable. It is thought best to make the deduction here for the excess charges to "Special accounts." A detailed apportionment of these excesses places the duplication in the city railway expenses at $38,352.54 and the net allowance for 1912 for other reserves after deducting the duplications would be about $35,000. No reserve analysis has been made for the fiscal year 1913, but conditions for this year do not differ materially from those of 1912 and the same allowance for these reserves would seem reasonable as the special accounts duplication for the city railway equals $27,390.06 for the first six months of 1913.

TAXES

Taxes paid by the city company in total were $270,548.39 in 1911, and $296,572.99 in 1912. Taxes payable the coming December amount to $325,392.02. An apportionment to obtain the amount of taxes applicable to the income account of the fiscal year ending June 30, 1913, shows $310,987.50 to be a fair allowance upon the basis of one-half of each of the calendar-year taxes for 1912 and 1913. A further segregation is necessary between railway and lighting. A weighted percentage of net earnings for 1912 and the first six months of 1913, gives 68.82 per cent as the railway proportion. In view of the fact, however, that the percentages for gross earnings and physical value are somewhat higher than this percentage, it is considered equitable to allot 70 per cent to railway. Upon this basis the taxes for the calendar year 1912 will amount to $207,601.09 and for the fiscal year ending June 30, 1913, $227,774.41.

DEPRECIATION

In the *Fare Case* the allowances for depreciation were placed upon a straight line basis and after the deductions for special accounts were made the following net totals were included as operating expenses:

	Depreciation straight line.	Special account deduction.	Total net depreciation.
1908	$400,682	$21,600 36	$379,082
1909	408,533	30,815 98	377,717
1910	439,810	30,912 00	408,898
1911	465,479	30,912 02	434,567

It does not seem fair to allow a continuously operating property an expense for financing depreciation on a straight line basis. A company as large as the one in question with a number of joint utilities and subsidiary properties under its control and with numerous opportunities for commercial investment can readily invest any offsetting assets of the depreciation reserve liability at an average of 4 per cent return or better. Furthermore, it would be questioning the capability of the company's administration to assume that it allowed money to remain idle

within its business. In fact in the *Fare Case,* 10 W. R. C. R. 1, 159, the statement is made that the reserve liability is partly offset by securities and partly by property. Under such conditions the straight line basis does not seem justifiable.

The straight line basis in the *Fare Case,* page 239, was justified on the grounds that no inclusion had been made of the 12 per cent overhead. Now it seems that about half or more of the overhead is permanent, does not depreciate, and, therefore, will not be required in reconstruction. For instance, it is held that only in total supersession do all overhead charges depreciate and that a normal depreciation allowance should not be based upon such an assumption. It is held that certain charges for engineering and supervision do not depreciate and that the cost of contingencies and losses during construction do not necessarily have to be replaced in their entirety. Also, that interest during construction is in the same category, while preliminary organization, promotion development, administration and legal expenses do not usually have to be repeated in replacement.

With these facts in mind, the 4 per cent basis for financing depreciation with about one-half of the overhead included as depreciable property seems to be the fairest to the public and the company. Upon this basis the per cent of depreciation is 4.32 per cent on the wearing value plus one-half the overhead costs. The fund for financing for 1912 and 1913 at the beginning of the year plus one-half the addition is $444,554 for 1912 and $473,389 for 1913.

VALUATION AND RATE OF RETURN.

In the absence of an appraisal it is necessary to obtain a present value for January 1, 1912, by building upon the basis of the appraisal as of date Jan. 1, 1910. Upon this date the unadjusted cost of reproduction of the property used and useful for railway purposes was $9,802,807 and the present value was $7,239,632. In the computations to establish a fair value for January 1, 1912, all adjustments, additions and renewals reported by the company since January 1, 1910, have been included. Adjustments from non-operating property for 1910 were included at 90 per cent condition, as this was relatively new property at that time.

Although the total renewals have been added to the present value each year to credit the property with that amount of upkeep which the company expended during the year to retain operating efficiency, it must be said that the company's accounting policy is to charge certain costs of new construction to the depreciation reserve, thus including them as renewals. The addition of the total charges, therefore, takes care of any new construction which may have been erroneously debited to the depreciation reserve.

Deducting depreciation per annum the final present value as of date January 1, 1912, foots up to $8,991,000. When the tangible value thus established, plus one-half the additions during 1912, is made the basis for the intangible additions allowed the city company in the *Fare Case,* together with the depreciation provided for, the resultant value is approximately $11,600,000. Assuming the same per cent condition, 73.85 of the cost new, as determined in the appraisal of 1910, the present value on January 1, 1912, amounts to $8,913,000, and, allowing for intangibles and depreciation, the final value of $11,600,000 as given above is substantiated. Similar computations place the present value of January 1, 1913, at $9,948,000, and the final value, allowing for intangibles and depreciation, at $12,000,000.

It has been contended that to assume the same per cent condition for the property on January 1, 1912, as existed at the time of the 1910 appraisal would be misrepresentative of the conditions. However, this does not seem to be true when certain factors are considered which, when analyzed, tend to establish the percentage at about the same figure. In the first place it must remembered that the present value of 1910 has gone through two full years of depreciation up to January 1, 1912, and through three years up to the first of the same month for 1913. This decreases the old present value to a little over an average of 59 per cent condition on January 1, 1913,—much lower than the one established in 1910. Although the new additions coming in during the succeeding three years at a 100 per cent condition would obviously raise the condition in the aggregate, the weight of depreciation of the old property at over nine million dollars, the figures show, would tend to more than offset the weight of the new additions at three million dollars during the last three years. This is quite clearly substantiated by com-

putations which show that the present value on a cumulative basis is about equal to the present value obtained on the basis of 73.85 per cent condition. It must also be borne in mind that the additions during 1910, for instance, have up to January 1, 1913, depreciated on an average of two and one-half years and are therefore below a 100 per cent condition.

Again, the renewals which the company has made during this three-year period have not been very extensive and consequently have not increased the per cent condition materially. And finally, it may be said that the placing of the present value upon a 4 per cent fund basis in 1910 instead of a straight line basis gives the company the benefit of a high final value.

In view of the facts outlined above it is quite certain that the per cent condition of 73.85 is not very far out of the way.

Another matter which requires explanation is the omission in the preceding computations of the adjustment made in the *Fare Case*, 10 W. R. C. R. 97 (Table 17) and 239, of $756,244.55 of new equipment erroneously charged to depreciation reserve. The depreciation reserve credit balance was adjusted by this amount in the *Fare Case* and increased from $1,082,909.04 for January 1, 1910, to $1,839,153.59. This adjusted reserve was added to the present value in order to obtain a fair value for rate-making purposes. As this equipment was included in the engineer's appraisal of 1910, the adding of the adjustment to the present value duplicated this equipment in the final value and therefore should properly be excluded in these computations as the resulting accounting adjustments in the *Fare Case* to the depreciation reserve and the book value were mere corrective entries and had no bearing upon the plant value for rate-making purposes.

As stated previously, the 4 per cent sinking fund present value has given the company the benefit of a high figure. It seems that it would be fair to show what the present value would be upon a straight line basis. Computations show that the present value with straight line depreciation is approximately $8,443,924, date January 1, 1912, as against $8,991,471 on a 4 per cent basis. Taking the intangibles and the depreciation provided for as a proper inclusion in arriving at a final value, we have $11,048,000 as compared with $11,600,000 on a 4 per cent sinking fund basis. For 1913 the present value upon a straight

line basis totals $9,341,000 and the fair value $11,402,000, while the fair value on a 4 per cent basis could not exceed about $12,000,000 when working capital as well as going value are included in the valuation.

A rate of return of 7.5 per cent for interest and profit on such a valuation of the property as that allowed in the *Fare Case* and under such other conditions as obtained in that case is ordinarily sufficient to bring the necessary capital into the service, except, perhaps, in cases where the public service companies are grossly overcapitalized. This statement is based upon careful inquiries into such matters covering many years and all kinds of conditions. There are, of course, times, mostly of comparatively short duration, when the state of the money market is such that few securities can be marketed no matter how sound they may be. Such conditions, however, are, as a rule, abnormal and cannot fairly be made the ground or basis for what constitutes necessary and fair returns. It is also obvious that fairness demands that overcapitalization be eliminated for the most part in most cases from those factors upon which reasonable returns are based. Any other rule would not only be inequitable as against the public but would make effective regulation of any kind impossible. The elements which enter into the fair rate of returns are now quite well understood and information on the subject is easily accessible to those who desire to obtain light on it. For these and other reasons the issues involved in this question ought not to be open to much of anything in the way of doubt or uncertainty.

WAGE ALLOWANCE

In the *Fare Case*, 10 W. R. C. R., 1, 246, the following statement was made in regard to wages:

"In the disposal of this total surplus, the claim that trainmen's wages are inadequate demands first attention. The petition presented upon behalf of these employes has been carefully examined and our conclusions are based upon the recommendations of the industrial commission, that present wages are somewhat below the standard and that a readjustment of time schedule is desirable. It is not necessary to refer in detail to the extended report of the industrial commission. The net amount

of the changes recommended will aggregate about 4 cts. per car-hour, platform time, and would have amounted to $62,443.76 for the city company in 1911.

"Since July 1, 1912, respondent company has made partial compliance with these recommendations and the increase in wages upon its readjusted basis will not exceed $35,000 during the first year. Company has in partial operation extended plans involving the employes welfare, comprising various coöperative and profit-sharing features, the extended expenditure for which it is difficult to estimate at this time."

Over one-half of the allowance made in this instance is reflected in the 1912 income account as the new schedule was effective June 1, 1912. This entire amount has been included under "Conducting transportation" for the fiscal year ended June 30, 1913. The company has, however, made another increase in the trainmen's wages which became effective during the summer of 1913. The increase amounted to one cent per hour for all trainmen and approximately the same amount for car house repairmen. As the change is comparatively small, involving no abnormal increase in operating expenses in the immediate future, it probably would not be necessary that any allowance be made in the expenses for the immediate future. However, it is considered advisable to make an allowance for this increase as it will in a measure be reflected in the income accounts of the next few years. About $35,000 seems adequate to cover the increases thus occasioned in the wages of all trainmen and of car house repairmen.

PAVING ALLOWANCE

Since the decision in the *Fare Case*, 10 W. R. C. R. 1, the state supreme court has affirmed the decision of the circuit court requiring the company to pave within its track zone in the city of Milwaukee upon all streets which the city has paved permanently. An allowance in 10 W. R. C. R. 246, for *interest* and *depreciation* on the paving obligations thus imposed upon the company of $150,000 to $200,000 was given. These figures, it was stated, were based upon a carefully prepared report of the engineer. But an examination of this report which was submitted August 13, 1912, shows that the *construction* costs as well

as the interest and depreciation were included in the allowance of $150,000 to $200,000, per annum. The propriety of including construction costs as a deduction from income seems questionable. In matters before this Commission concerning rate values or purchase values it is the policy to allow paving actually constructed. It would seem more equitable in this case to consider these construction costs as capital expenditures. In fact, the company, in making adjustments regarding new paving erroneously charged to depreciation reserve, has adopted the policy of charging these costs to capital account. Upon this basis the allowance for paving can not be charged to both the income and the capital account. Furthermore, in charging the construction cost to expenses, as was done in the *Fare Case*, the depreciation and interest charges must obviously be eliminated. Taking the attitude of the Commission on paving values and the company's accounting policy as a basis, it is deemed that construction costs of paving logically belong in the capital account.

In the estimates of the engineer for the Commission the future costs of paving were extended to the year 1924, while in a later estimate submitted on June 11, 1913, by the company the costs were extended to 1921. It does not seem necessary to provide for these costs in the distant future as conditions at that time may have changed considerably, and to provide for the paving work which may reasonably be expected within the near future, say, four or five years, no doubt is all that can be reasonably expected here. The estimates of the Commission's engineer place the construction of paving during 1913 in the neighborhood of $200,000, during 1914 at about $125,000, and the annual construction thereafter at an average of from $60,000 to $70,000. The later estimate of the company includes paving for both urban and suburban track zones. Construction for 1912 is placed at $20,100. For 1913 the estimate is over $539,000 for both city and suburban track and approximately $100,000 per annum thereafter. The actual paving constructed for The Milwaukee Electric Railway and Light Company during the fiscal year ending about April 1913, is reported by the company to slightly exceed $156,000. Thus the actual paving has fallen considerably below the estimate of the company for the year

1913, which was about $270,000 for city work, and also below the estimate of the Commission's engineer for 1913.

In arriving at a rate for depreciation the Commission's engineer establishes the average life of granite paving at twenty-one years, brick twelve years, asphalt twelve years, and creosote block in excess of twelve years. Experience tables of Milwaukee paving laid as early in some instances as 1894 and 1895 were used to establish the life of asphalt and brick pavement and the other lives were established after a complete study. The final average of paving under Milwaukee conditions was placed at twelve and one-half years where track renewals were the determining feature while a life of twenty-one years was placed upon granite block. Comparing the rates based upon these lives with those given by the company in its estimate, 10 per cent for stone block and 20 per cent for asphalt, it seems that the former are more acceptable. The allowance for returns by the company was placed at 8 per cent instead of the 7½ per cent used by the Commission.

Using the estimates on depreciation and returns per annum the report of the engineer of the Commission shows that these costs in total average about $46,000 annually on a cumulative basis up to the year 1918. The depreciation and returns upon the amount of paving as actually constructed during the fiscal year ending April 1913 will amount to $24,960. Considering that the costs for each additional year will be cumulative—the degree of accumulation depending upon the amount of paving—and that the later years will most likely show a decrease in construction costs, it is deemed that an allowance of $50,000 per annum for the next four or five years is liberal to meet the average annual expense for returns, depreciation and taxes. The maintenance cost, it is believed, should properly be included in the normal increase in expenses and therefore be taken care of by the normal increase in business. In the following table the total maintenance expense for all paving for each company and in total since 1908 are exhibited. The entire maintenance expense of The Milwaukee Electric Railway and Light Company has averaged about $17,000 per annum for all paving during this period.

MAINTENANCE OF PAVING.

1908–1913.

The Milwaukee Electric Railway & Light Company and Milwaukee Light, Heat & Traction Company.

	T. M. E. R. & L. Co.	M. L. H. & T. Co.	Total.

ALLOWANCE FOR REDUCTION CAUSED BY THE SALE OF 13 TICKETS FOR 50 CENTS

In the *Fare Case* the allowance for the reduction caused by the ordering of thirteen tickets for 50 cts. was placed at $171,734. Actual reductions which have taken place during the fiscal year ending September, 1913, amount to about $87,000, according to the reserve which the company has established to cover the tickets unredeemed or outstanding. In view of this fact and the fact that the proposed rate is indefinitely postponed by an injunction and now pending the decision of the United States supreme court, an allowance for the actual reduction as stated above appears to be sufficient for the purposes of the income accounts in this proceeding. If within the near future the actual reductions per annum should exceed this allowance, the

provisions for such a difference may be found in the present margin after making all deductions. Accordingly, the allowance for 1912 is based upon an approximate three months reduction, while for 1913, a nine months' allowance is included.

SINGLE FARE EXTENSION ALLOWANCE

In the *Fare Case,* 10 W. R. C. R. 246, the following statement was made in regard to the reduction in revenues due to single fare extensions:

"The claim of suburban passengers to a single fare privilege, all of which are passed upon in the separate cases decided upon this date, will necessitate an extension of the present single fare limits to approximately five miles from the Grand avenue bridge. The losses in revenues sustained by reason of such an extension during 1911 would aggregate $131,883, and this amount will be relatively increased rather than diminished in the future, owing to the increased proportion of long haul or least profitable passengers stimulated by such an extension of single fare limits."

Actual experience since the decision in the *Fare Case* shows that this allowance is too high by about $77,000.

In order to get a criterion of the decrease in revenues due to the single fare extensions the following table is submitted showing the suburban passenger earnings for the first six months of 1913, as these months show the decreased earnings for that period:

SUBURBAN EARNINGS FOR SIX MONTHS 1913, JANUARY—JUNE.
AFFECTED BY SINGLE FARE EXTENSIONS.
MILWAUKEE LIGHT, HEAT AND TRACTION COMPANY.

1913.	Wauwatosa—Walnut	Wauwatosa—Wells.	Suburban only.		West Allis—Fond du Lac.	West Allis—Burnham.	Suburban portion of I. U.		
			North Co'lege Ave.	West Allis—Wells.			Burnham.	Fond-du Lac.	Total.
Jan.....	$888 51	$2.134 63	.....	.....	$568 91	$324 31	$918 74	$1,448 90	$6,284 00
Feb.....	771 89	1,935 10	.....	.....	481 05	295 09	739 10	1,371 73	5,593 96
March.....	856 43	2,349 56	.....	.....	553 58	346 58	819 94	1,521 11	6,447 20
April.....	982 97	2,435 70	.....	.....	560 15	359 19	922 28	1,539 02	6,799 31
May.....	1,133 53	2,656 14	.....	.....	664 03	442 44	1,333 91	1,920 17	8,150 22
June.....	1,069 96	2,521 82	.....	.....	1,296 07	428 00	1,864 71	2,339 97	9,520 53
Total...	$5,703 29	$14,032 95	.....	.....	$4,123 79	$2,195 61	$6,598 68	$10,140 90	$42,795 22

This table shows that the total earnings during the first six months amounted to $42,795.22. Taking these earnings and doubling them so as to obtain the approximate earnings for 1913, or a full year, and comparing the result with the earnings on these lines for 1910 and 1911, we have the table below:

SUBURBAN PASSENGER EARNINGS ON WAUWATOSA AND WEST ALLIS LINES.
MILWAUKEE LIGHT, HEAT & TRACTION COMPANY.
Suburban only.

	WAUWATOSA.		WEST ALLIS.				SUBURBAN PORTION I.U.		Total.

[1] Route in 1910 over Hawley road—West Allis.
[2] Hawley road—West Allis route $3,545.16, and 53d ave.—West Allis route $20,298.00.

As the year 1912 in the table just shown has been affected by a reduction in the revenues due to extensions for about four months, an average of 1910 and 1911 will serve as a better basis. Deducting the earnings of the first six months of 1913, doubled, from the arithmetical average of 1910 and 1911, we have a computed reduction of somewhat more than $53,000. Taking the reduction of 1912 over this average as an indication of a four months reduction, we have a total reduction on this basis of $57,000. It is fair to assume from these data that the reduction in suburban revenues due to the single fare extensions ordered in connection with the *Fare Case* will not exceed $55,000. Comparing this with the allowance made in the *Fare Case,* $131,883, it is apparent that the latter figure is too high by $77,000, as stated above.

But now the question arises as to the validity of making deductions arising out of single fare extensions from any excess which may exist in the income account of the city company. These reduced revenues affect the suburban earnings which belong to the Milwaukee Light, Heat and Traction Company's

income account, and have only a slight bearing upon the city company's income account. These extensions affect the city expenses in that the car haul and passenger haul is increased upon the lines in question, but no deductions occur in the city earnings from these extensions, in fact, the tendency would be, and most likely is, to increase the latter earnings slightly. The result is that the deduction from the city income account surplus in the *Fare Case* might well be corrected. That no deduction should have been made for these extensions from the city surplus is corroborated by the company by including a rental of $52,000.02 in its expense account under "Undistributed" for the fiscal year 1913, to cover the use of the Milwaukee Light, Heat and Traction Company's tracks in the single fare area by city cars.

At this time the rental given above is accepted tentatively and no adjustments will be made in the expense burden for this reason. A proportionate rental is also included for 1912.

However, at some subsequent time it will be necessary to make a detailed study of the costs of inter-operation and determine whether this rental is a fair figure, especially in view of the fact that the city company is receiving a single fare for every interurban passenger hauled in and out of Milwaukee.

REVISED INCOME ACCOUNTS

Income accounts in which the earnings, operating expenses and valuation of the company have been adjusted in accordance with the preceding analysis show respectable surpluses available for improvements in the services and for other purposes. Such income accounts for the years 1912 and 1913 are given in the following table:

	1912.		[1] 1913.	
Revenues		$4,131,811 34		$4,181,016 84
Total expenses		2,827,012 80		2,983,213 24
Maintenance of way & structures.	$130,454 80		$142,412 28	
Maintenance of equipment	262,102 64		261,755 73	
Power	390,333 87		364,688 99	
Conducting transportation	1,064,844 26		1,094,745 93	
Expense burden	106,190 62		184,973 10	
Injuries & damages	185,931 52		198,473 80	
Other reserves	35,000 00		35,000 00	
Taxes	207,601 09		227,774 41	
Depreciation	444,554 00		473,389 00	
Surplus available for return on investment		$1,304,798 54		$1,197,803 60
Fair value		$11,600,000 00		$12,000,000 00
Return on fair value at 7½ %		870,000 00		900,000 00
Excess above return		$434,798 54		$297,803 60

[1] Year ended June 30, 1913.

A glance at the preceeding income account shows that the surplus above operating expenses, including depreciation and 7½ per cent on the value of the property for interest and profit, amounted to $297,803 for 1913 and $434,798 for 1912. These surpluses have been gradually decreasing from year to year. This is shown by the fact that they amounted to $691,819 in 1911, $559,534 in 1910, $619,897 in 1909, and $477,903 in 1908. The reasons for these decreases in the surplus above the charges in question are many. The operating expenses have increased more rapidly than the earnings, partly because of gradually increasing prices in material and labor, although these increases have been less since 1907 than they were for an equal period preceding that year, and partly because of expenditures for deferred maintenance. The charges for interest and profit during the past few years have also been above normal, due to the fact that the company had reached the point where increases in the business required greater than the ordinary expenditures for new property or extensions. During the three years preceding January 1, 1910, for instance, the city company expended $1,208,630 in new additions for railway purposes, while during the three years following this date it expended $3,173,969, or two and one-half times the former amount. Such periods for every growing utility are reached from time to time. When so reached the interest charges become relatively large for some time; but as business develops, the ratio of these charges to the

earnings as a rule gradually decreases until the next period is reached when the capacity of the plant is again outgrown and further extensions are required. For growing utilities there are thus years when the interest charges are relatively high as well as years when they are relatively low. The present value of the property, as given or used herein, is also about $600,000 greater than it would have been had it been determined on the straight line rather than on the sinking line basis. The straight line basis for this purpose is often supported in logic or reason. For growing utilities where rate adjustments can not, in the very nature of things, be of very frequent occurrence and for which, owing to the law of increasing returns, the net earnings both actually and relatively are gradually increasing, fairness often demands that the returns allowed for the first year or at the time the rates are adjusted should be below rather than above the normal figures. As the Commission in its order in the *Fare Case* allowed something above 7.5 per cent for returns on what may be regarded as a high value of the property used, it is a question whether on facts now before it the Commission was not more liberal toward the company than it should have been. From the facts at hand it also appears that the reductions in the earnings by the said order will be offset by the natural increase in the gross earnings of the company within a little more than one year after the said reduction in the rates in question went into effect. When these facts are considered in connection with the above income accounts and the explanations which relate to the various items therein, it is difficult to see in what respects the Commission went further in the reductions provided in the rates in the *Fare Case* than was its plain duty under the circumstances.

The surpluses above operating expenses and returns on the investment which have thus been pointed out and explained, however, should be reduced by about $35,000 for increases in wages; by about $50,000 for interest and depreciation on the paving which the company must put in under the late decisions of the courts; by about $21,000 in 1913 and about $63,000 in 1912 for reductions in earnings due to the order in the *Fare Case,* which reductions as thus given are based upon the company's experience during the past year and are somewhat lower than the estimates made by the Commission at the time the

Fare Case was decided; and by certain rentals for 1912 arising out of the extension of single fare limits in the *Fare Case*. These reductions from the surplus, when taken together, amount to about $106,000 for 1913 and $161,000 for 1912. When these amounts have thus been deducted from the surplus of $297,803.60 for 1913 and $434,798.54 for 1912, the balances which remain for improvements in the service and other purposes amount to $191,803.60 for 1913 and $273,798.54 for 1912. These surpluses, even if somewhat overstated because of the fact that the experience of the company during the past year may not fully show the effect of the reductions in the rates by the order in the *Fare Case*, are considerably greater than the additional cost of needed improvements in the service. In view of these facts, as well as in view of the other facts mentioned and explained herein, it does not appear to us that the allegations of the company, to the effect that the order of the Commission in the *Fare Case* is unreasonable and unjust, are sustained by the facts.

COST OF ADDITIONAL SERVICE

In a brief submitted by the company the contention was made that the cost of each additional car for peak hour service would be $2,804.50. This figure requires revision, as it is based upon the assumption that each car added will cause a pro rata increase in all operating expenses and investment costs. For instance, it is contended that an increase of $1,000 for housing facilities and $3,200 for power plant capacity will be incurred for each additional car; that the allowance for general expenses per car added would be $226.01, and that all expense of superintendence and supervision would be proportionately increased.

Now it is certain that in a street railway plant as large as the one in question there is a considerable margin between the rendition of a minimum and maximum amount of service with a given plant capacity and a given operating expense budget, and that with a disproportionately small increase in the investment costs and operating expenses the service can be increased to a certain extent for a few hours during each peak hour day. In other words, in this instance the economic law of increasing output per unit capacity holds almost as forcibly in the street

railway business as in the steam railroad business. Upon this premise the Commission has proceeded to determine to what extent the investment costs and operating expenses must necessarily be increased in order to furnish additional service during the peak hours. This has been done with the view of separating those costs varying with an increase in peak hour traffic and those not varying with such traffic.

In regard to investment costs, a memorandum submitted by the engineering staff based upon a field investigation held that new additions to car houses would not be required because of the installation of about a 10 per cent addition to rolling stock. As to power plant capacity, the memorandum contains the following statement:

Power. Concerning the capacity of 600 volt direct current machines serving the city system it appears that the 600 volt capacity of the stations serving the outlying districts is more than sufficient to meet an increased demand of 10 per cent. The question of capacity of 600 volt machines is largely in connection with the stations serving the downtown sections, namely: Commerce street and Oneida street. No doubt the equipment in these stations, when all in normal operating condition, will be sufficient to handle the increased demand by an addition of 10 per cent of the cars operated, but it is considered good practice to have a greater reserve and it appears to us that an allowance of approximately $15,000 should be made for the installation of a 1000 kw. rotary and its accessory apparatus in the Oneida street station. With this addition it is believed that the situation will be handled in a satisfactory manner as far as any increase of cars which the Commission may order on the basis of our service investigation.

The company is at the present time installing one 500 kw. rotary converter at the Oneida street station. This machine has been the property of the company for some time and is not a new purchase. In the event that a 1000 kw. rotary were installed at Oneida street, it will be necessary to remove the 500 kw. machine now being installed but the foundations are designed to fit a 1000 kw. machine or one of 2000 kw. capacity. It will therefore not be necessary to make any allowances for additional buildings to house the additional rotary capacity referred to.

Considering the Kilbourn power as tied in, it appears that the present steam generation and prime mover capacity is sufficient to supply all the rotary converters operating on this system and it does not appear that any additional investment in steam generating equipment is necessary.

With these facts regarding investment costs in view, an outlay of $15,000, exclusive of rolling stock, appears to be the requirement. The brief of the company placed the cost per car at $6,500 and this figure will be accepted for the computations in this study.

In regard to operating expenses, it is considered that the depreciation on buildings, fixtures, poles, feeders, underground and overhead transmission, paving and telephone system, which is primarily due to weather, will not be affected by an increase in traffic, while the depreciation due to wear on track, trolley, cars, generators, and prime movers will be affected. Allowing for depreciation in total on the new equipment in cars and the rotary, the depreciation on all other equipment was accordingly placed at 35 per cent variable and 65 per cent non-variable. These percentages were established by a detailed examination of each group of property contained in the appraisal of January 1, 1910, and subsequent appraisals. The items here were separated as to those affected and those not affected, and the various rates of depreciation applied. For instance, it was found that of the depreciation of total transmission and distribution 25.39 per cent was variable and 74.61 per cent non-variable, and that the percentages for plant equipment were 93.46 and 6.54, respectively.

Regarding other expenses the same policy was pursued. A detailed study was made of the company's classification of accounts and a segregation was made on the basis of the three years, 1910, 1911 and 1912. These studies resulted in placing the percentages for the three years as follows:

	Variable	Non-variable
1910	75.58 per cent	24.42 per cent
1911	79.82 "	20.18 "
1912	79.41 "	20.59 "

The above percentages exclude power and a separate study of this item placed the variable proportion at 90 per cent and the remainder, 10 per cent, non-variable with peak hour service. In arriving at the divisions such expenses as "Superintendence of way, equipment, transportation and traffic," together with "Maintenance of paving," "Removal of snow and ice," "Maintenance of buildings, fixtures and grounds," "Tickets," "Transfers," "Maintenance of overhead and underground transmission

systems,'' ''Miscellaneous and general expenses'' were for obvious reasons, considered non-variable within the limits of this study.

In computing the cost per car per annum for peak hour service in the first instance, 3.77 hours were taken as the average duration of peak service, and this with 250 peak service days and a speed of 8 m. p. h. resulted in 7,540 car-miles per annum per car. After making allowance for the fact that about 10 per cent of the cars would be shopped continually for overhauling, and after revising the total expenses upon a normal basis with proper apportionments between the city and traction companies, the variable costs per car-mile for operating expenses amounted to an average of 13 cts. The total variable expenses per car per annum upon the above basis totals $980. The investment costs, after allowing 5 per cent for depreciation, 1.8 per cent for taxes and 7½ per cent for returns, average $935 per car per annum. The total cost, when allowing for 7,540 car-miles per peak car is a little over $1,900 per car per annum. Assuming an addition of thirty cars for peak service, the total annual outlay would be about $57,000, and upon the addition of fifty cars the total cost would approximate $95,000. Assuming an average of 275 peak days, the annual cost for thirty additional cars would slightly exceed $60,000; and for fifty cars would equal about $100,000. Upon the basis that the additions for service will require about 1,600 car-miles additional per day, the total cost would equal about $99,000 with 250 peak days, and $104,000 with 275 peak days.

With the total costs outlined above it will be seen that the car service requirements which are ordered herein will necessitate the expenditure of but a portion of the excess available for additional service, leaving a considerable margin for other purposes.

ORDER

IT IS THEREFORE ORDERED, That The Milwaukee Electric Railway and Light Company operate its system of street railway lines in the city of Milwaukee in compliance with the standards of service and other regulations specified in the following paragraphs, and provide sufficient power, cars and other equipment and a sufficient number of supervisors, fare collectors and other employes to comply with this order.

1. *Definition of a line.* In the application of the standards of service each line within the limits of the city of Milwaukee shall be treated as an independent unit. All lines except 27th, 35th, North, Center and 12th-Viaduct shall be considered as terminating in the downtown district.

2. *Rush Periods.* In general, three daily rush periods shall be recognized, namely morning, midday and evening. The morning and evening rush periods may be either inbound or outbound, or both, and the midday rush period outbound only; each rush period shall be treated independently.

For the application of standards of service the rush periods shall be designated as follows:

a. For weekdays, including Saturdays, the morning rush period shall be considered to exist for that portion of the day between 6:00 a. m. and 9:00 a. m. when the traffic demand in a given direction is distinctly greater than the demand in the same direction for the two hours from 9:00 a. m. to 11:00 a. m.

b. For weekdays, Monday to Friday inclusive, the midday rush period shall be the thirty minutes of maximum traffic demand for outbound service taken by fifteen minute periods as hereinafter described whenever this demand is distinctly greater than the demand for outbound service from 10:30 a. m. to 11:30 a. m., or from 12:30 p. m. to 1:30 p. m.

c. For Saturdays the midday rush period shall be considered to exist for that portion of the day between 11:30 a. m. and 1:30 p. m. when the traffic demand in a given direction is distinctly greater than the demand in the same direction for the two hours preceding; that is 9:30 a. m. to 11:30 a. m., or for the three hours following, from 1:30 p. m. to 4:30 p. m.

d. For weekdays, including Saturdays, the evening rush period shall be considered to exist for that portion of the day between 4:30 p. m. and 7 p. m. when the traffic demand in a given direction is distinctly greater than the demand in the same direction for the preceding three hours, 1:30 p. m. to 4:30 p. m.

Sundays and all other periods not included in the above specified rush periods shall be considered non-rush periods, except holidays and special occasions when the travel is distinctly greater than normal.

3. *Demand for Service.* The half-hour maximum demand in each rush period shall be used as the basis for the application of the standard of loading for such period, and shall be desig-

nated as that half-hourly period beginning on the hour or any fifteen minutes thereafter during which the greatest number of passengers is carried in a given direction. The standard of loading for all other hours of the day shall be applied by half-hourly periods. The half-hourly periods may consist of any two consecutive fifteen minute periods beginning on the hour or any fifteen minutes thereafter. The demand for service for any given half-hour shall be determined separately for weekdays, Monday to Friday inclusive, Saturdays, and Sundays. The average count of passengers for three consecutive week days, excluding Saturday, shall be considered as the demand for service for week days exclusive of Saturday. The average count of passengers for three consecutive Saturdays shall be considered as the demand for service on Saturdays. The average count of passengers for three consecutive Sundays shall be considered as the demand for service on Sundays. These averages shall be drawn from the actual count of passengers for corresponding fifteen minute periods during the specified days.

4. Standards of Service for Non-Rush Periods. During all non-rush periods a sufficient number of cars shall be operated so that there shall be supplied during any half-hourly period an average of at least 133 seats for each 100 passengers demanding transportation in a given direction at any point on the line, subject to the following exceptions under which all cars are to be operated the full length of the line;

a. Between 6:00 a. m. and 11:00 p. m. cars shall be scheduled to leave the terminals at intervals not to exceed ten minutes, and between 11:00 p. m. and 1:00 a. m. cars shall be scheduled to leave the terminals at intervals not to exceed twenty minutes, unless otherwise specified.

b. The schedule time interval between cars on the 27th street and 35th street, Center street and North avenue lines shall not be greater than ten minutes between 6:00 a. m. and such time after 11:00 p. m. as is necessary to make connections with cars on intersecting lines leaving downtown districts at about 11:00 p. m. and thereafter at not greater than twenty minute intervals, until such time after 1:00 a. m. as is necessary to make connection with cars on intersecting lines scheduled to leave the downtown district at about 1:00 a. m.

c. Between 6:00 a. m. and 1:00 a. m. twenty minutes shall be the maximum scheduled time between cars operated on the

Farwell ave. line between Mineral road and the downtown district.

Subject also to the following exceptions:

d. No service shall be required on the 12th st.-Viaduct line during the non-rush hours.

e. Suburban service within the city limits shall not be subject to the standard stated above unless such cars are operated as an integral part of the city schedules.

5. *Standard of Service for Rush Hours.* During the maximum half-hour of any rush period, there shall be supplied an average of at least 67 seats for every 100 passengers demanding transportation in a given direction at any point on the line.

For other half-hours of the same rush period the same actual number of seats shall be supplied as in the maximum half-hour, except that not more than an average of 133 seats shall be required per 100 passengers demanding transportation in any half-hour.

The application of the maximum half-hour standard shall be limited so that the number of seats supplied per half-hour in the morning rush period shall not be less than the number of seats required under the non-rush standard in the same direction for either of the two half-hours immediately following the rush period, and that the number of seats supplied per half-hour in the evening rush period shall not be less than the number of seats required under the non-rush standard in the same direction for either of the two half-hours immediately preceding the rush period.

The number of seats supplied during any half-hour of the midday rush shall not be less than the number of seats required under the non-rush standard in the same direction in either of the two half-hours immediately preceding or following the midday rush.

During the rush hours, cars to or from Wauwatosa and North Milwaukee which are operated as an integral part of the city schedules shall be preceded at an interval of not more than two minutes by a local car on the same line between the downtown district and the city limits.

6. *Standard of Service for Holidays and Special Occassions.* For holidays and special occasions at such times as the traffic is distinctly greater than normal, the company shall use all rea-

sonable efforts to supply such service as will meet the standard hereinbefore specified for rush periods.

7. Supervision. During rush hours traffic officers with authority over trainmen shall be stationed at important transfer intersections and such other points as will materially assist in the movement of traffic and the maintenance of schedules.

It shall also be the duty of these officers, as far as practicable, to limit the loads on individual cars to the maximum comfortable carrying capacity of the various cars as shown by the following table:

	Winter	Summer
Open platform and rebuilt cars	70	72
500 type cars	93	93
600 type cars	93	95

A list of these traffic officers and their stations shall be submitted to the Commission for approval.

8. Fare Collectors. Fare collectors shall be stationed at important loading points to admit passengers through the front doors of prepayment cars and otherwise facilitate the movement of cars and assist in the handling of passengers. A list of these collectors and their stations shall be submitted to the Commission for approval.

9. Approval of Car Designs. Plans for all new passenger cars and for the remodeling of all old passenger cars shall be submitted for the approval of the Commission regarding width of passage ways, height of steps, type and location of seats, platform arrangements, and such other details as in the opinion of the Commission are important as affecting the adequacy of service.

10. Dividing Rails on Platforms. The dividing rails on the platforms of the rebuilt cars, and the chains attached to the dividing rails on the rebuilt and 600 type cars, shall be removed.

11. Car Signs. All cars in service shall display separate route and destination signs on the front and a route sign on the side of the car. Any proposed changes in the type and manner of handling of signs shall be submitted to the Commission for approval.

This order supersedes all previous orders relating to street car service in the city of Milwaukee, insofar as such orders conflict therewith.

Sixty days is considered a sufficient time within which to comply with this order.

IN RE APPLICATION OF A. E. MONROE ET AL. FOR PHYSICAL CONNECTION BETWEEN THE CLINTON TELEPHONE COMPANY AND THE BERGEN TELEPHONE COMPANY.

Submitted April 23, 1913. Decided Nov. 26, 1913.

This is a rehearing, on motion of the Commission, of matters involved in an order issued October 19, 1912 (10 W. R. C. R. 598) directing the Clinton Tel. Co. and the Bergen Tel. Co. to establish physical connection between their systems and prescribing a 2 ct. toll charge for completed calls between the two systems. The questions considered are: (1) the effect of the 2 ct. toll upon the business and service of the two companies; (2) the possibility of improving the long distance toll service to points beyond Clinton and Bergen; and (3) the legality of the action of the Bergen Tel. Co. in maintaining direct connection with certain private telephones within the village of Clinton.

The Bergen Tel. Co. is opposed to the exaction of a toll for service between the two systems. The Clinton Tel. Co. favors the retention of the 2 ct. toll ordered by the Commission. It appears that the exaction of this toll has reduced the number of messages transmitted between the two exchanges, largely, it is probable, through the elimination of unnecessary conversation.

Held: The effect of the 2 ct. toll is in the interests of good service and there are no valid reasons for abandoning the charge. The terms of the former order with respect to the 2 ct. toll and the division of the revenue accruing from it will therefore remain unchanged.

The Clinton Tel. Co. has refused to receive or transmit long distance messages from or to the Bergen Tel. Co. over the iron line connecting the Clinton and Bergen exchanges. The Clinton Tel. Co. has also refused to receive long distance messages from Bergen over the copper line owned by the Bergen Tel. Co. and connecting with the Clinton to Janesville line of the Badger Teleg. and Tel. Co. As a result the Bergen Tel. Co. is compelled to route its long distance business for Clinton by way of Sharon, which considerably increases the expense and thereby, the Bergen Tel. Co. contends, destroys that company's long distance business with Clinton. The Bergen Tel. Co. therefore asks for authority to use either the iron line or the copper line, as may be most convenient, for the transmission of long distance messages between Bergen and Clinton. The Clinton Tel. Co. objects to the use of the iron line for long distance business and suggests that a Waterloo jack be installed at the Clinton exchange to connect the Bergen Tel. Co's copper line with the Clinton to Janesville line of the Badger Teleg. and Tel. Co. and that the copper line be used for long distance messages between Bergen and Clinton.

Held: The interests of good service at a reasonable rate demand a change in the methods of handling long distance business at the Bergen and Clinton exchanges. Under ordinary conditions

the installation of a Waterloo jack at Clinton would improve the service, but in view of the strained relations which have existed between the Clinton and Bergen companies the Commission does not deem it best to order a change at this time from the direct connection between the copper line of the Bergen Tel. Co. and the Clinton to Janesville line of the Badger Teleg. and Tel. Co. If, however, the Clinton and Bergen companies can come to a reasonable agreement as between themselves and the Badger company for the installation of the Waterloo jack or any other construction which will improve the service, the Commission will welcome the adoption of such an agreement. It is therefore ordered: that the Clinton Tel. Co. and the Bergen Tel. Co. route all long distance messages passing between the two systems directly from Clinton to Bergen or from Bergen to Clinton, as the case may be; that the iron line extending from Bergen to Clinton and owned jointly by the two telephone companies be available for long distance calls between the two exchanges as well as for local business and that the two companies be prepared to render long distance service over this line at a toll charge of 5 cts. in addition to all other toll charges, for all completed calls between the two systems, the revenue so accruing to be divided equally between the two companies. All calls passing over the line which do not originate in the exchange of one company and terminate in the exchange of the other company are to be considered as long distance calls.

The Bergen Tel. Co. has maintained direct connection with three private telephones installed within the village of Clinton.

Held: The practice in question is clearly illegal, as has been held by the attorney-general, and must be discontinued. No order of the Commission, however, is necessary in the matter.

REHEARING.

The Commission issued an order October 19, 1912 (10 W. R. C. R. 598), directing that the Clinton Telephone Company and the Bergen Telephone Company, whose exchanges are located in Rock county, at Clinton and Bergen, respectively, establish physical connection between their systems; that a toll charge of 2 cts. per call be made for all completed calls from one system to the other, the company on whose lines the call originates to collect the revenue from such charges; and that all such toll revenue be divided equally between the two utilities.

Upon motion of the Commission a rehearing was held at Madison, April 23, 1913. *F. W. McKinney* appeared for the Clinton Telephone Company and *H. S. Anderson* for the Bergen Telephone Company.

The essential portions of the testimony relate to three principal questions: (1) the effect of the 2 ct. toll upon the business and service of the two companies, to determine which was the primary purpose of the rehearing; (2) the possibility of

improving the long distance toll service to points beyond Clinton and Bergen; and (3) the legality of the action of the Bergen Telephone Company in maintaining direct connection with with certain private telephones within the village of Clinton.

THE TWO CENT TOLL.

The representatives of the two utilities were divided in their attitude with respect to the 2 ct. toll. The representative of the Clinton Telephone Company stated that his company desired to have the toll continued. The exaction of the charge, he said, helped to eliminate unnecessary conversation over the the line between Clinton and Bergen and the revenue from the charge was sufficient to cover the expense of collecting it and dividing it between the two companies. Witness had discussed the matter with business men in Clinton and had found that they preferred to have the 2 ct. toll retained.

The representative of the Bergen Telephone Company testified, on the other hand, that his company was opposed, as it had been at the previous hearing, to the exaction of any charge for service between Clinton and Bergen. The revenue from the 2 ct. toll, he said, was not sufficient to meet the expense of collecting it and the additional labor thrown upon the telephone operator by the necessity of making out toll tickets was so great as to interfere with the efficiency of the service. Moreover, witness said, the exaction of the 2 ct. toll had caused serious loss of business to merchants in Clinton as former customers in Bergen went elsewhere to make purchases rather than submit to the imposition of the toll. The number of messages transmitted from Bergen to Clinton, witness stated, had been reduced to one-third of the number formerly transmitted when the service was free.

The exact number of completed calls between the two telephone systems for each month since the Commission's order of October 19, 1912, went into effect was reported as follows by the representative of the Clinton Telephone Company:

Month.	Total number of calls between the two systems.	No. of calls Clinton to Bergen.	No. of calls Bergen to Clinton.
December 1912	579	239	340
January 1913	498	252	246
February 1913	504	230	274
March 1913	600	287	313
Total	2,181	1,008	1,173

The total revenue which should accrue from the tolls reported for the months named amounts to $43.62. Of this each telephone company, according to the terms of the order, should have received one-half, or the sum of $21.81.

It is impossible to accurately determine the effect of the 2 ct. toll in reducing the number of calls between the Bergen and Clinton systems for the reason that no adequate records of the amount of business done under free service are available. The only record of calls passing between the two systems under free service is a record which was submitted at the hearing in the previous case (1912, 10 W. R. C. R. 600), and which shows that during the ten day period from April 1, 1912, at noon, to noon of April 11, 1912, the total number of calls from Clinton to Bergen was 299, and from Bergen to Clinton 293. According to this record the average number of calls passing between the two systems each day of the period in question was 59. The average number of calls per day for the four months reported since the 2 ct. toll went into effect is 18. A comparison of the two records is not, of course, conclusive, but it indicates that a considerable reduction has been made in the number of messages transmitted between the two systems. The reduction seems to be due to a large extent to the elimination of unnecessary conversation and to be, therefore, in the interest of good service—a consideration which is of special importance in view of the fact that the order of the Commission in the present proceeding, as will appear later, will require the iron line to be used for long distance as well as for local service.

A careful review of the testimony at the rehearing and of other evidence of the facts in the situation at present existing in the business of the two utilities fails to reveal any valid reason for abandoning the 2 ct. toll or for changing the basis

upon which the revenue from this toll is divided. The order of October 19, 1912 (10 W. R. C. R. 598), will therefore remain unaltered insofar as these features are concerned.

THE LONG DISTANCE TOLL SERVICE.

Bergen and Clinton are directly connected by two telephone lines. One of these is an iron line over which the 2 ct. toll messages ordered by the Commission are sent between the two exchanges. This line is owned jointly by the Clinton Telephone Company and the Bergen Telephone Company. The other line is a copper line owned entirely by the Bergen Telephone Company and extending from Caledonia, Ill., through Bergen to the north village limits of Clinton, where it connects with the line of the Badger Telegraph and Telephone Company, giving service from Clinton to Janesville.

The iron line is used solely for local business between Bergen and Clinton, the Clinton Telephone Company having refused to transmit or receive long distance messages over this line. The copper line appears to be used only for messages going the full distance from Bergen to Janesville. Over this line the Bergen Telephone Company is able to "ring Janesville direct". When, however, the Bergen exchange has long distance messages—that is, messages from points south of Bergen—for Clinton, it is obliged to give them a roundabout routing by way of Sharon because of the refusal of the Clinton Telephone Company to accept long distance messages over either the iron or the copper line. The representative of the Clinton Telephone Company stated at the hearing that with respect to the iron line, this refusal was made on the ground that the Commission intended that line to be used only for the 2 ct. toll business. He also stated that the refusal to send long distance messages over the direct lines to Bergen was made in compliance with instructions contained in a letter from the general manager of the Badger Telegraph and Telephone Company at Janesville "prohibiting" the Clinton Telephone Company from taking messages from the south or sending messages to the south over the lines in question. According to these instructions the Clinton Telephone Company must route all of its messages to Caledonia by way of Sharon. The authority of the general manager of the Badger

Telegraph and Telephone Company to give such instructions is derived, the witness said, from certain contracts between the Badger company and the Clinton Telephone Company requiring the latter to route long distance calls as directed by the former.

The representative of the Bergen Telephone Company testified that the requirement that his company route all its long distance messages for Clinton by way of Sharon had resulted in an almost complete loss of the company's long distance business with Clinton. The company is compelled, witness stated, to charge a toll of 25 cts. for messages from Caledonia to Clinton routed by the roundabout way through Sharon, whereas it formerly charged but 15 cts. for messages from Caledonia sent directly to Clinton. The charge of 25 cts. is made up of a 15 ct. charge to Sharon plus a 10 ct. charge from Sharon to Clinton. The line from Sharon to Clinton is owned by the Badger Telegraph and Telephone Company, a fact which may explain the instructions given to the Clinton Telephone Company by the general manager of the Badger company. The representative of the Bergen Telephone Company asserted that the 25 ct. charge is prohibitory and, in support of this statement, called attention to the fact that the distance from Caledonia to Clinton is but thirteen miles when measured through Bergen directly to Clinton.

The Bergen Telephone Company desires better routing of long distance messages from Bergen to Clinton and authority to use either the copper line or the iron line for these messages as may be most convenient.

The representative of the Clinton Telephone Company took exception to the proposal that the iron line be used for the transmission of long distance messages, on the ground that such action would interfere with adequate service in the local business and suggested, as an alternative proposal, that a Waterloo jack be installed at Clinton in connection with the copper line and the line from Clinton to Janesville. Under present conditions, he said, it is impossible for Clinton to use the line to Janesville when Bergen is using the line either to Janesville or to Clinton, and it would also be impossible for Janesville to use the line to Clinton if Bergen were talking to Clinton over it. If a Waterloo jack were installed at Clinton, Clinton could send

messages to both Bergen and Janesville at the same time. Bergen and Janesville could continue to ring each other "direct" except when the line was busy between Clinton and Janesville or between Bergen and Clinton. Witness said further that it was immaterial to his company whether the jack were put in or not, but that the Janesville company, that is, the Badger Telegraph and Telephone Company, wanted the jack installed and was willing to pay for having it done.

The representative of the Bergen Telephone Company objected to the installation of the jack under any arrangement which would give the Clinton Telephone Company an opportunity to handle the long distance business of the Bergen company. If such an arrangement were in operation he feared that the Clinton company would take advantage of the Bergen company.

There seems to be no question but that the interests of good service at a reasonable rate demand a change in the methods of handling long distance business at the Bergen and Clinton exchanges. The first essential, in the opinion of the Commission, is the establishment of a rule requiring all long distance messages passing between the two systems to be routed directly from Clinton to Bergen or from Bergen to Clinton, as the case may be, instead of being sent by the more expensive, roundabout route through Sharon, as is done at present.

Although some objection was made to the proposal that the iron line be made available for long distance service between the Bergen and Clinton exchanges, the proposal seems to be one which is entirely reasonable. In this connection it should be noted that records kept for the four months December, 1912, to March, 1913, inclusive, summarized on a previous page, show that for the period covered the local business transacted between the Bergen and Clinton exchanges averaged but 18 calls per day. Satisfactory data with respect to the average number of long distance calls which might be transmitted between the two systems over the iron line, if it were open to long distance business passing between Bergen and Clinton, cannot be obtained in advance. It is the belief of the Commission, however, that the amount of the long distance business in question would not be sufficient to seriously interfere with the handling of the amount of 2 ct. toll business now carried on between the two

exchanges. The order of the Commission will therefore direct that the iron line between Bergen and Clinton be kept available for long distance as well as for local calls passing between the two points.

The advisability of installing a Waterloo jack at Clinton is a question which probably should be decided by the telephone companies interested. Under ordinary conditions a Waterloo jack would be some improvement over the present construction, for the reason that it would considerably increase efficiency in the use of the two parts formed in the Bergen to Janesville line by the insertion of the jack. The Commission, however, in view of the strained relations which have existed between the Clinton and Bergen companies, does not deem it best to order a change at this time from the direct connection between the copper line of the Bergen Telephone Company and the Clinton to Janesville line of the Badger Telegraph and Telephone Company. The introduction of the Waterloo jack at Clinton would place the Clinton company in control of the entire line from Bergen through to Janesville and would give the Clinton company the opportunity to cut the line into two parts at will. Whether or not the Clinton company actually made use of this opportunity to interfere with the business of the Bergen company, it is probable that the mere existence of the opportunity would serve but to increase the suspicion and friction already present in the relations of the two companies. If, however, the two companies can come to a reasonable agreement as between themselves and the Badger Telegraph and Telephone Company for the installation of the Waterloo jack or any other construction which will improve the service rendered the public, the Commission will welcome the adoption of such an agreement.

In considering a situation like the one involved in the present proceeding it should always be borne in mind that any method of connection which may be proposed will demand a certain amount of coöperation between the telephone companies affected if satisfactory service is to be given the public and the rights of each company are to be respected. In the case at hand the Commission cannot compel the two companies in controversy to develop a spirit of coöperation, but the Commission can and will insist, as a protection to long distance users of the line connecting the two exchanges, that there be no unnecessary or

improper interference by either company in the operation of the line when the line is in use by the other company.

With respect to the amount and distribution of the revenue which should arise from the use of the iron line for long distance service the Commission is of the opinion that a toll of 5 cts. should be charged for every long distance message transmitted between the two exchanges and that the amount of such tolls should be divided equally between the Clinton Telephone Company and the Bergen Telephone Company in the same manner as that in which the 2 ct. tolls are now divided. Definite data as to the amount of long distance traffic which will be handled over the iron line are of course unobtainable at this time. Cursory investigation, however, indicates that the 5 ct. toll charge will about cover the cost of handling the traffic.

The difference between the toll rate charged for the Bergen–Clinton service and the rate charged for long distance service is not believed to constitute an unjust discrimination. The 2 ct. toll was not intended to cover the entire cost of the service, for the 2 ct. toll business partakes largely of the nature of local business and its expense need be met only in part by the exaction of tolls. Moreover, the retention of the 2 ct. toll is in the interests of the long distance users of the iron line, because the toll, as has been previously stated, discourages the unnecessary use of the line in local business and thus makes it possible to employ the line to greater advantage for long distance business. There is no reason, however, for making the toll for long distance service less than the cost of rendering the service.

TELEPHONES IN CLINTON SERVED BY THE BERGEN TELEPHONE COMPANY.

The Bergen Telephone Company has maintained direct connection with three private telephones installed within the village of Clinton which is the district served by the Clinton Telephone Company.

The facts in this matter were presented by the Commission to the attorney-general and the latter rendered an opinion under date of February 27, 1913, to the effect that the Bergen Telephone Company was maintaining the service mentioned in violation of sec. 1797—74 of the Public Utilities Law and that the

company was therefore subject to the penalty imposed by section 1797m—95 of the same law. The fact that the number of subscribers given direct service is small and the further fact that some or all of these subscribers have furnished their own equipment are immaterial. The practice in question is clearly illegal and must be discontinued. No order of the Commission is necessary in the matter.

IT IS THEREFORE ORDERED: 1. That the Clinton Telephone Company and the Bergen Telephone Company shall route all long distance messages passing between the two systems directly from Clinton to Bergen or from Bergen to Clinton, as the case may be;

2. That the iron telephone line extending from Bergen to Clinton and owned jointly by the Clinton Telephone Company and the Bergen Telephone Company shall be available for long distance calls between the exchanges of the two companies as well as for local business and that the Clinton Telephone Company and the Bergen Telephone Company shall be prepared to render long distance service over this line;

3. That a toll charge of 5 cts. per call in addition to all other toll charges shall be made for the use of the line on all completed long distance calls exchanged between the two systems over the line, the company on whose lines or connecting lines the call originates to collect the revenue from such charges;

4. That all such toll revenue shall be divided equally between the two utilities; and

5. That, for the purposes of this order, all calls passing over this line which do not originate in the exchange of one utility and terminate in the exchange of the other utility shall be considered as long distance calls.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RATES, RULES AND REGULATIONS OF THE MADISON GAS & ELECTRIC COMPANY.

Decided Nov. 28, 1913.

The Commission, on its own motion, investigated the rates of the Madison G. & El. Co. A valuation was computed on the basis of the fair value used in a previous investigation of the utility (1911, 7 W. R. C. R. 152) and subsequent additions to property, the revenues and expenses of the electric department were analyzed and the expenses were apportioned among the different classes of service.

Held: Though no alteration should be made in the gas rates at this time, because of changes which the utility is making in its methods of production, it appears that a substantial reduction in the rates for incandescent lighting is possible. It is therefore recommended[1] that the utility put in effect for this class of service a schedule of rates prescribed by the Commission.

The Commission has on two former occasions investigated and reduced the rates of the Madison Gas and Electric Company. The first order was the result of an investigation on the petition of the State Journal Printing Company et al. and was issued on March 8, 1910 (4 W. R. C. R. 501). In this decision the form of the electric rate schedule was changed so as to conform to scientific principles, certain discriminatory features were eliminated, the maximum rate was reduced from 16 to 14 cts. per kw-hr., and the minimum rate was reduced from 7 to 5 cts. per kw-hr. In the gas rates the number of thousand feet taking the primary and secondary rates were changed and the maximum rate was reduced from $1.25 to $1.15 per thousand cu. ft.

The second order was the result of an investigation by the Commission on its own motion and was issued July 5, 1911 (7 W. R. C. R. 152), reducing the primary rate for electricity from 14 to 12 cts., the secondary from 8.5 to 8 cts. and the excess from 5 to 4 cts. per kw-hr.

[1] Inasmuch as the findings of the Commission in this case are the result of an informal proceeding, no formal order is issued at this time.

The present investigation was started in February 1913 after the calendar year report was issued, at which time it was ascertained that still another reduction in rates was possible. No order, however, was issued at the time; because the city was contemplating quite an extensive change in the street lighting which might necessitate the shifting of some of the expenses, particularly so if the rate offered by the company deviated from the costs as shown by our analysis. It seems that the question of street lighting is now so nearly settled that we can tell what the effect is going to be; consequently there is no need of waiting longer.

In the 1911 decision (7 W. R. C. R. 152) $650,661 was used as the fair value of the electric plant for rate-making purposes, including working capital, material and supplies, and going value. Since that time the net additions to property have amounted to $179,343, making a total of $830,004. In this total is included the Williamson street steam station which is valued at about $100,000. This station is maintained wholly as a reserve at the present time. There is some doubt as to the necessity for such a reserve in view of the equipment available for that purpose in the turbine plant. It, however, is true that should the peak load increase this year about as much as it has increased each year during the past five years, the steam station would have to be put into operation if the large 1,500 kw. turbo-generator in the turbine station became disabled during such peak. On the other hand, it would seem that reserve equipment equal to that in the steam station could be added in the turbine station at much less than the steam plant costs. Such being the case, it seems only fair and reasonable that some recognition be given to this fact. In doing so, however, something should be included for the amortization of that part of the steam plant which is excluded but which is not covered by the depreciation reserve.

Following are the condensed income accounts of the electric plant for the year ending March 31, 1911, which was used as the basis of the 1911 decision, and for the year ending June 30, 1913:

Classification.	March 31, 1911		June 30, 1913.	
	Amount.	Per kw-hr. sold.	Amount.	Per kw-hr. sold.
Revenues	$235,898	$0.0630	$284,790	$0.0493
Expenses	113,943	.0305	139,613	.0242
Available for depreciation, interest and profits	$121,955	$0.0325	$145,177	$0.0251

A comparison of the revenues per kw-hr. sold shows the effect of the reduction in the lighting rates in 1911 and the subsequent addition of an a. c. power rate. The latter, however, covers such a small part of the total sales that its effect would not be very great. Of course, it might be argued that this decrease in unit revenue is the result of more current being used in the secondary and excess classes, but an analysis of the current consumed during the fiscal year 1913 shows that, while the use of current under the excess rate has grown, it has not been sufficient to make up this difference.

The operating expenses, excluding the fixed charges, have decreased from 3.05 to 2.42 cts. per kw-hr. sold. This has been partly due to the installation of turbo-generators and partly to the increased efficiency of management. We note that the company pays $2.92 per ton of 2,000 lb. for coal that yields 11,400 B. t. u. per pound, which is a much lower price than is paid by many other companies similarly located. A comparison of the pounds of coal used per switchboard kw-hr. by this company with that of other utilities also shows that, though the B. t. u. of the coal is low, this company is getting as much out of it as many other companies are getting out of the better grades.

It is to be noted also from the above table that, while the total net revenue has increased, the net revenue per kw-hr. sold has decreased from 3.25 cts. to 2.51 cts.

An apportionment of expenses including interest, depreciation and taxes between the different classes of consumers following in general the methods used in other decisions, is shown in the next table:

Class.	Capacity.	Output.	Total.
Incandescent	$90,866 40	$54,545 47	$145,411 87
Power	27,259 30	22,403 23	49,662 53
Arc	7,846 54	7,310 80	15,157 34
Traction	13,307 92	17,633 35	30,941 27
Total	$139,280 16	$101,892 85	$241,173 01

Comparing the totals in this table with the revenues received from the respective classes, we find that the greatest difference is in incandescent lighting, the earnings being $189,872.66 as compared with a cost of $145,411.87. In the power business, however, expenses are $49,662.53 as compared with a revenue of $43,329.31. This difference is due to the fact that in the above apportionment power has been treated as a coördinate branch of the business. Ordinarily power is considered as off-peak service with the result that it is not assessed with all the costs that it bears under the other method. This is an instance where the value of the service plays a part either in the apportionment of the expenses or in the subsequent adjustment that must be made in fixing on a rate schedule. In arc lighting the cost is $15,157.34 as compared with a revenue of $17,928.13. If the city contracts to burn its lights all night at the rate offered by the company this excess will be wiped out. The traction cost has been placed at the same figure as the revenue; because traction can be had only as additional business and therefore can be assessed with only so much of the cost as it can bear. The justification of this practice is so well established that it is not necessary to go into an explanation of it at this time.

The next table shows a comparison of the cost of incandescent lighting per kw-hr. sold for the various hours use per day, in the present and in the 1911 case:

Average No. of hours current is used per day.	*June 30, 1913.*						*March 31, 1911.*		
	Excluding steam station.			Including steam station.					
	Capacity.	Output.	Total.	Capacity.	Output.	Total.	Capacity.	Output.	Total.
	cts.	cts.	cts.	cts.	cts.	cts.	cts.	cts.	cts.
1	8.90	2.25	11.15	9.29	2.34	11.63	7.21	4.18	11.39
2	4.45	"	6.70	4.64	"	6.98	3.61	"	7.79
3	2.97	"	5.22	3.10	"	5.44	2.40	"	6.58
4	2.22	"	4.47	2.32	"	4.66	1.80	"	5.98
6	1.48	"	3.73	1.55	"	3.89	1.20	"	5.38
8	1.11	"	3.36	1.16	"	3.50	.90	"	5.08
10	.89	"	3.14	.93	"	3.27	.70	"	4.88
12	.74	"	2.99	.77	"	3.11	.60	"	4.78

It will be noted that the present cost for the first hour's use is higher than that in 1911. This is entirely due to the fact that a different method was used in the apportionment of expenses between capacity and output as will be seen by a comparison of the output costs. The effect is that the cost per kw-hr. under the present apportionment decreases much faster with the increase in the number of hours use per day, than it does under former apportionments, the range in cost for the present year, excluding the steam station, being from 11.15 cts. to 2.99 cts. per kw-hr., and including the steam station from 11.63 cts. to 3.11 cts. per kw-hr., while in 1911 the range was from 11.39 cts. to 4.78 cts. per kw-hr.

A study of the above costs, both including and excluding the Williamson street steam station, suggests the following schedule for incandescent lighting.

10 cts. per kw-hr. for the first 30 hours' use per month of the active connected load.

6 cts. per kw-hr. for the next 60 hours' use per month of the active connected load.

2 cts. per kw-hr. for all additional current consumed.

During the year 2,136,547 kw-hr. were sold for incandescent lighting. The amounts consumed under each step of the rate schedule are as follows: primary 771,127 kw-hr., secondary 739,620 kw-hr. and excess 625,800 kw-hr. Applying to each step the rate suggested, we find that $77,112.70 probably will be the revenue from the primary, $44,377.20 from the secondary, and $12,516.00 from the excess, or a total of $134,005.90. In

addition to this there probably will be about $6,500 revenue from minimum bills. If the output charge of the sign lighting rate is reduced to the suggested rate for excess current, the revenue from this source will be about $3,142.12; as the active load in this class last year was 62.25 kw. and the current consumed 123,391 kw-hr. During the first four and one-half months of the fiscal year 1913 the University took 71,584 kw-hr. from the incandescent lighting circuits. The cost of this current is included in the expenses apportioned to incandescent lighting, but the revenue so far has not been included. The University no longer is supplied with this class of service; consequently it is necessary to make some adjustment, and this has been done by adding the $4,042.02 actually received for this service to the probable revenue. Adding the sums that it is estimated will be received from the various sources, we find that the total probable revenue for this class is $147,672.05, as compared with a cost shown in the apportionment of expenses above $145,411.87, leaving an excess of $2,260.18. The probable revenue from power service, including traction, will be about $74,270.66 as against a cost of $80,603.80, leaving a deficit of $6,333.14. As stated above, the change in street lighting coupled with the reduced rate is likely to leave no margin for that class of service. The non-operating revenues for 1913 amounted to $2,077.75, which gives a total probable revenue for the entire plant about $1,995.21, less than a reasonable return on a fair value of the plant when the steam station is included.

From our analysis it appears that a substantial reduction can be made in the rates for incandescent lighting. No change however, seems advisable in the gas rates at this time because the company is changing the method of production from water gas to coal gas. When normal operating conditions are again reached under this new method, it probably will be found that the cost of production has been cheapened, in which event a reduction in the gas rates also may be possible.

IT IS THEREFORE RECOMMENDED,[1] That the Madison Gas and Electric Company amend its present schedule of electric rates by placing in effect the following rates for incandescent lighting, beginning with its charges for current consumed during the month of December, 1913:

[1] Inasmuch as the findings of the Commission in this case are the result of an informal proceeding no formal order is issued at this time.

SCHEDULE OF RATES FOR INCANDESCENT LIGHTING SERVICE.

For all lighting service furnished residences and business places (hereinafter specifically referred to as classes A, B and C) including such incidental use of appliances for heating or power used on lighting circuits, and passing through the same meter and measured by a meter or meters owned and installed by the company, a charge of

Primary rate.

10 cts. net or 11 cts. gross per kilowatt-hour for current used equivalent to or less than the first thirty hours' use per month of active connected load.

Secondary rate.

6 cts. net or 7 cts. gross per kilowatt-hour for additional current used equivalent to or less than the next sixty hours' use per month of active connected load.

Excess rate.

2 cts. net or 3 cts. gross per kilowatt-hour for all current used in excess of the above ninety hours' use per month of active connected load.

For all interior lighting furnished the city of Madison (hereinafter specifically referred to as class D) a minimum charge equivalent to the rate specified above for classes A, B and C.

For all signs, outlines and window lighting, on a yearly contract basis (hereinafter specifically referred to as class E), a charge of 4.5 cts. net per active 50 watt equivalent per month, plus 2 cts. net or 3 cts. gross per kilowatt-hour for current consumed as estimated according to the schedule of hours of lighting now in use by the company.

Active connected load shall in each case be a fixed percentage of the total connected load, consisting of lamps, appliances, etc., installed upon the consumer's premises.

In class A are included residences, dwellings, flats and private rooming houses. Where the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active; where the installation exceeds 500 watts nominal rated capacity, 33⅓ per cent of such a part of the total connected load over and above 500 watts shall be deemed active.

In class B, where the total connected load is equal to or less than 2.5 kilowatts nominal rated capacity, 70 per cent of such total connected load shall be deemed active; where the installation exceeds 2.5 kilowatts nominal rated capacity, 55 per cent of such a part of the total connected load over and above 2.5 kilowatts shall be deemed active; provided that lamps used exclusively in space devoted to the storing of goods shall be placed at 20 per cent active and shall not be included in the 2.5 kilowatt hours specified above. Class B shall consist of banks, offices, business and professional (including studios, dressmaking parlors, massage parlors, millinery and hair dressing establishments, and photograph galleries), wholesale and retail merchandise establishments, such as art stores, bakeries, barber shops (including shoe-shining parlors and public baths), book stores, cigar stores, coffee and tea stores, commission stores, confectionery stores (including ice cream parlors), crockery and china stores, dry goods stores, drug stores, electrical supply houses, flower stores (including greenhouses), furniture and house furnishing stores, gents' furnishing stores (including hat stores and haberdasheries), grocery stores, hardware stores, harness shops, hay, grain, feed and coal offices and stores, jewelery stores, meat markets, millinery stores, milk depots, paint and wall paper shops, piano and music stores, picture stores, plumbing shops, saloons (including pool and billiard halls and adjoining card rooms), shoe stores and shoe repair shops, stationery stores, tailor shops (including dyers, cleaners and clothes pressing establishments), undertakers, upholsterers, and wine and liquor stores, theaters (including nickelodeons, shooting galleries, and similar amusement places), corridors and halls in office and apartment buildings upon separate meter, dance and public halls (including lodge and society rooms), restaurants (including eating places and lunch wagons), depots and public places for the conduct of railroad, street railway, express and telephone business (excluding freight warehouses), and all other consumers not herein otherwise specifically provided for.

In class C 55 per cent of the total connected load shall be deemed active. Such class shall consist of federal, state and county buildings; churches and missions; hotels and clubs; factories (including small industrial establishments such as

machine shops, carpenter shops, blacksmith shops, tin shops and cigar factories) closing not later than 6 p. m.; private and parochial schools; grain and tobacco elevators and warehouses, freight and storage warehouses, and stables and garages, both private, boarding and livery.

In class D 55 per cent of the total connected load shall be deemed active. Such class shall consist of all interior lighting for the city of Madison, including commercial alternating current for schools, police and fire stations, libraries, hospitals and other city buildings.

In class E the toal connected load shall be deemed active. Such class shall consist of unmetered lighting for signs, outlines and windows, contracted for upon a yearly basis.

Minimum bill.

The minimum bill shall be $1.00 net per month.

Where the company is unable to read meter after reasonable effort, the fact should be plainly indicated upon the monthly bill, the minimum charge of $1 assessed and differences adjusted with the consumer when meter is again read.

Discount.

Company shall bill all consumers at the gross rate, and the difference between the gross and net rates above specified, or one cent per kilowatt-hour, shall constitute a discount for prompt payment.

Company's present regulation that discounts shall not be granted after the 13th day of the month following the last date of meter reading is deemed reasonable.

Free maintenance of lamps.

Company shall renew burned-out or badly dimmed carbon filament lamps of the type originally furnished or installed by the company when returned unbroken to its office. Charges for the maintenance and replacement of other illuminants shall be reasonable and in accordance with the schedule of charges filed with the Railroad Commission.

Reconnection of meters.

For the reconnection of meters for the same consumer upon the premises a charge of $2 is deemed reasonable.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY
vs.
MILWAUKEE NORTHERN RAILWAY COMPANY.

Decided Dec. 1, 1913.

The T. M. E. R. & L. Co. petitions, under ch. 62, laws of 1913, for joint use of the tracks, wires and poles owned by the M. N. R. Co. on Wells st, between Fifth and Sixth sts., in the city of Milwaukee. The M. N. R. Co. denies that public convenience and necessity require such joint use of facilities and contends that the Commission is without power to grant the relief asked for prior to the construction by the T. M. E. R. & L. Co. of its tracks on Wells st. from Eleventh st. to Sixth st. The M. N. R. Co. operates in Milwaukee under an ordinance of the city of Milwaukee which reserves to the city the power to grant to any interurban railway or suburban street railway rendering service of like nature to that rendered by the M. N. R. Co. the right to use the tracks, roadway and motive power of the M. N. R. Co. within the limits of the city. Acting under the rights thus reserved to it, the city passed another ordinance on April 14, 1913, directing the T. M. E. R. & L. Co. to extend its tracks on Wells st. from West Water st. to Fifth st. and from Sixth st. to Eleventh st., connecting with the tracks of the M. N. R. Co. from Fifth st. to Sixth st. The two companies entered into negotiations looking toward an agreement under which the requirements of the ordinance could be fulfilled, but failed to come to such an agreement.

Although it is true that the joint use of tracks in the present case will mean increased risk to both companies and that the earnings of the M. N. R. Co. from such joint use for a period of many years might be wiped out by the losses arising from a single accident, this is not a sufficient reason for placing all of the burden of responsibility for accidents upon the T. M. E. R. & L. Co. Public policy would appear to forbid the relieving of a railway company of its natural responsibilities and it is also believed that the safety of operation will be promoted if each company is obliged to assume a liability in proportion to its responsibility for any accidents that may occur. Moreover, the joint use of the tracks is being forced, in a measure, upon both companies for the benefit of the public whose streets they occupy and there is no reason for discriminating between the two companies in the matter of liability for personal injuries.

The sliding scale car-mile basis proposed by the T. M. E. R. & L. Co. for the calculation of the compensation to be paid by that company to the M. N. R. Co. for the use of its tracks and overhead equipment is defective for the reason that the use of this basis will not permit an accurate adjustment of rates to costs under varying conditions of traffic and with different types of cars. The Commission therefore provides in the present order for the division of costs upon a ton-mile basis under which the

T. M. E. R. & L. Co. is to pay such proportion of the costs as the ton-miles operated by it over the portion of track in joint use bear to the total ton-miles operated over this portion of track.

Because of the practical impossibility of determining the weight of passengers carried and the danger of doing one company or the other an injustice if the weight of merchandise and express matter is included in the ton mileage while the weight of passengers is excluded, the weight of the load may well be disregarded for the sake of simplicity in the determination of ton mileage, whether the load be passengers or merchandise. This method of calculating ton mileage may not result in exactly the same proportioning of expenses as would be made if the load were included but it is believed that the results will be substantially the same. The contention that the use of this method will result in unjust discrimination where one company operates heavy interurban cars, which are, as a rule, but moderately loaded, while the other company operates light city cars, which are often crowded with passengers, is supported by no data offered in the present case, and it is believed that even if the traffic of the two companies is of a different nature the omission of the weight of passengers will not affect to any great extent the justice of the division of expenses proposed by the Commission.

The proposal made by the M. N. R. Co., that the monthly compensation to be paid by it to the T. M. E. R. & L. Co. for the use of electric energy, which it seems advisable to have the T. M. E. R. & L. Co. supply for the M. N. R. Co. over the portion of track to be subject to joint use, be equal only to the output cost of the M. N. R. Co. seems fair to both companies. In view, however, of the difficulties which would probably arise if the amount of the charge were left to the two companies to determine, the fact that the amounts involved are too small to justify an investigation by the Commission and the further fact that the rate of 1 ct. per kw-hr. offered by the T. M. E. R. & L. Co. is admittedly not excessive, it seems best to adopt the rate last mentioned.

Even though the joint use of tracks by competing lines may have an adverse effect upon the earnings of the company owning the tracks, the Commission must reject any proposal which would restrict such full and free use of the tracks as the needs of the community may demand. The Commission will, however, require such competition only in cases of urgent necessity. In the present case it appears that the M. N. R. Co. in accepting the franchise under which it uses the streets bound itself, when required by the city, to permit the operation over its tracks of such competing cars as those operated by the T. M. E. R. & L. Co.

Held: Public convenience and necessity require the joint use of the facilities in question, for the purpose of providing part of the additional trackage and greater flexibility in car routing necessary to prevent the overloading of the cars of the T. M. E. R. & L. Co. and permit the company to render adequate service. Such joint use will not prevent the M. N. R. Co. from performing its public duties nor result in irreparable injury to it or in any substantial detriment to the service.

It is therefore ordered that the M. N. R. Co. permit the joint use of that portion of its system located on Wells st. between Fifth st. and Sixth st. by the cars of the T. M. E. R. & L. Co., and by the cars of any other company or companies which the T. M. E. R. & L. Co. may operate over its own tracks, subject to terms and

conditions prescribed by the Commission. As a condition precedent to the obligations of the M. N. R. Co. under this order, however, the T. M. E. R. & L. Co. is to give substantial evidence of its acceptance of, and intention to comply with, the terms of the ordinance of April 14, 1913. The terms and conditions prescribed by the Commission relate chiefly to the observance of the prior, paramount and preferential right of the M. N. R. Co. to the use of its tracks and power in the city of Milwaukee; the duties, responsibilities and rights of each company with respect to the making of the necessary changes, new construction and connections required to render possible the joint use of tracks ordered, the maintenance of this construction, and its removal or alteration in case the joint use of tracks is, for any valid reason, terminated; the furnishing of the electric energy required for the operation of cars over the portion of track subject to joint use; the payment of licenses and special taxes on the cars so operated; the responsibility of each company for the fulfillment of its lawful obligations with respect to the tracks in question and for losses, damages and expenses sustained by reason of personal injuries resulting from the operation of cars over the portion of track in joint use; the compensation to be paid by the M. N. R. Co. to the T. M. E. R. & L. Co. for the electric energy used by the M. N. R. Co. in operating its cars over these tracks; and the compensation to be paid by the T. M. E. R. & L. Co. to the M. N. R. Co. for the use of the said tracks and other property of the M. N. R. Co.

This case is brought before the Commission by petition of The Milwaukee Electric Railway & Light Company dated June 3, 1913, and under the provisions of ch. 62, laws of 1913 which reads:

"Section 1. There is added to the statutes a new section to read: Section 1797–61. Whenever, upon complaint of any person, firm, corporation, or association, or any mercantile, agricultural or manufacturing society, or any body politic or municipal organization, after hearing heard pursuant to sections 1797—45, 1797—46, and 1797—47 of the statutes, the commission shall find that public convenience and necessity require the use by one or more street or interurban railroads of the tracks, wires, or poles, or any part thereof belonging to another street or interurban railroad or city, over or on any street, highway, bridge or viaduct in any city, village or town, upon which such street or interurban railroads have a right to operate, and that such use will not prevent the owner or other users thereof from performing their public duties nor result in irreparable injury to such owner or other users of such tracks, wires or poles, or in any substantial detriment to the service, and that such street or interurban railroads or such railroads and such city have failed to agree upon such use, or the terms and conditions or compensation for the same, the commission may by order direct that such use be permitted, and prescribe a reasonable com-

pensation and reasonable terms and conditions for such joint use; and for such purpose the commission shall have all the powers conferred on it by sections 1797–39 to 1797–60, inclusive, of the statutes, and if such service is not extended after such order, the commission shall have the power to order the service extended in accordance therewith.

Section 2. This act shall take effect and be in force from and after its passage and publication."

The petitioner alleges in substance that it has been authorized by an ordinance of the city of Milwaukee to extend its tracks on and along Wells street in the said city from West Water street to Eleventh street and to operate its regular street car service over such tracks; that public convenience and necessity require the use by the petitioner of the tracks, wires and poles of the respondent company on Wells street from Fifth to Sixth street; that such use will not prevent the respondent or other users of these facilities from performing their public duties nor result in irreparable injury to the respondent or other users, or in any substantial detriment to the service furnished; and that the petitioner and the respondent have failed to agree upon joint use and the terms, conditions and compensation for such use. The petitioner therefore prays that the Commission issue an order directing the respondent to permit the joint use desired by the petitioner upon such terms and conditions as may be reasonable.

The respondent in its answer makes general denial and specifically denies that public convenience and necessity require the joint use of the tracks, wires and poles in question and that such use will not result in irreparable injury to the respondent or other users, or in substantial detriment to the service furnished; and alleges that the public convenience and necessity claimed by the petitioner cannot arise and that the petitioner can have no grounds for appeal to the Commission and the Commission itself no jurisdiction in the matter until the petitioner has actually constructed its tracks upon Wells street from Eleventh street to Sixth street as indicated in the ordinance to which the petitioner refers.

Hearings were held in city of Milwaukee on July 14, 1913, and later dates, at which the following appearances were entered: *Miller, Mack & Fairchild* by *Edwin S. Mack* and *J. B.*

Blake for The Milwaukee Electric Railway & Light Company; *E. H. Bottom* and *F. W. Walker* for the Milwaukee Northern Railway Company; *Clifton Williams* for the city of Milwaukee.

The Milwaukee Northern Railway Company operates in the city of Milwaukee under authority of an ordinance passed March 22, 1906, which provides, among other things, that "said city of Milwaukee reserves the right to grant to any person, company or corporation owning or operating any interurban railway, or suburban street railway, whose business is of like nature as said railway company mentioned in this ordinance, the right to use such tracks, roadway and motive power if required of said railway company within the limits of said city. * * * Provided, however, that before using any portion of said railway tracks or roadbed upon or over which the said railway company shall acquire a franchise by this ordinance, said person, company or corporation shall pay or secure to be paid to said railway company its successors or assigns, a just and adequate compensation for the use of said tracks, power and roadbed."

Acting under the rights reserved to it in the ordinance above quoted, the city of Milwaukee, on April 14, 1913, passed the following ordinance:

File Number 3991.

AN ORDINANCE

Directing The Milwaukee Electric Railway & Light Company to extend its tracks on Wells street, from West Water street to Fifth street and from Sixth street to Eleventh street.

The Mayor and Common Council of the City of Milwaukee do ordain as follows:

"SECTION 1. There exists a reasonable necessity for the convenience of public travel that the tracks of The Milwaukee Electric Railway & Light Company should be extended from West Water street on Wells street to Fifth street and connecting with the tracks of the Milwaukee Northern Railway Company, and from Sixth street at a point connecting with the tracks of the Milwaukee Northern Railway Company on Wells street to Eleventh street and connecting with the tracks of The Milwaukee Electric Railway & Light Company thereat.

"SECTION 2. The Milwaukee Electric Railway & Light Company is hereby directed under the provisions of section 4 of a

certain ordinance passed January 2, 1900, granting certain franchise rights to said company to extend its tracks from and connecting with its tracks in West Water street, on and along Wells street to Fifth street and connecting thereat with the tracks of the Milwaukee Northern Railway Company, and from Sixth street on Wells street connecting at said Sixth street with the tracks of the Milwaukee Northern Railway Company to Eleventh street, connecting thereat with the tracks of The Milwaukee Electric Railway & Light Company; provided, that if said company finds any tracks in said Wells street between Second street and Fifth street, which may be adapted to its use, permission and authority is hereby given and granted to said grantee to use any such tracks, provided satisfactory arrangements can be made with the owners thereof, and the use by said company of such tracks is hereby legalized and considered an extension of its own tracks within the meaning of the ordinance of January 2, 1900, above referred to.

"SECTION 3. The tracks hereby directed to be laid shall be completed within six months after the passage and publication of this ordinance; and it is further provided, that The Milwaukee Electric Railway & Light Company is hereby given and granted the right, permission and authority, subject to the prior, paramount and preferential right of the Milwaukee Northern Railway Company to its tracks and other equipment on said Wells street, between Fifth street and Sixth street, to use said tracks and other equipment for the operation of its regular street car service from Fifth street to Sixth street upon such terms as may be agreed upon with said Milwaukee Northern Company, or otherwise determined according to law, and such use by said grantee is hereby legalized and approved.

"SECTION 4. This ordinance shall take effect and be in force from and after twenty days following its passage and publication."

The two companies entered into negotiations looking toward an agreement under which the requirements of the ordinance of April 14, 1913, could be fulfilled; but, as stated in the petition, they "have failed to agree upon such use and upon the terms and conditions and compensation for the same."

CONVENIENCE AND NECESSITY.

In its answer to the petition, the Milwaukee Northern Railway Company denies the existence of a public convenience and necessity that requires the proposed use of its tracks.

In the case, *City of Milwaukee v. T. M. E. R. & L. Co.* de-

cided Jan. 24, 1913 (11 W. R. C. C. R. 388, 342), it is stated that:

"The Commission recognizes the fact that the cars are very heavily loaded during the evening rush period and that relief is imperative. To order more cars on at this time will result in still greater congestion at certain intersections in the downtown district with corresponding delays in moving all cars to their destinations unless some means is provided to meet this situation. This order is issued and these recommendations made for the purpose of improving the situation to such an extent that the Commission can order more cars operated during the rush period without unduly increasing the congestion at busy corners."

The need exists for additional cars if overloading is to be abolished; but, as shown in an investigation made by this Commission through its engineers during the winter of 1912–1913, additional cars cannot be handled expeditiously during the evening rush hours on the downtown tracks as they exist at present. Continued observation of traffic conditions has confirmed this conclusion and has shown further that the conditions which make necessary additional trackage and more flexibility in car routing are general and that they are not intermittent but exist continuously.

Quoting further from the case above mentioned, page 338:

"A great deal of study has been made of the situation in the city of Milwaukee with a view of ascertaining the best means of furnishing adequate street car service. As a result it has been found advisable to require the construction of tracks in certain streets upon which the company now has no franchises. The Commission has recognized for some time that permanent good service necessitates changing the routing of some of the present car lines and the establishment of other lines. To this end recommendations were made some months ago to the city administration that certain franchises be granted to The Milwaukee Electric Railway & Light Company."

Among the franchises so recommended by this Commission was one covering tracks on Wells street between West Water and Eleventh streets, a portion of which is involved in the present controversy.

This Commission, therefore, is of the opinion that the facts before it warrant the belief that public convenience and necessity

do require the use of Wells street and the tracks in question by the cars of The Milwaukee Electric Railway & Light Company, if adequate service is to be provided.

It should be understood, however, that it is not the intention to use Wells street and that portion of the system of the Northern company located therein merely to relieve the Electric company of its peak load; the expectation is that in relieving the congestion that occurs during rush hours certain lines will be routed over the tracks in question and will operate over those tracks continuously throughout the day and not merely during rush hours.

No serious attempt is made to show that the proposed joint use of the property in question will prevent the owner or other users thereof from performing their public duties nor result in irreparable injury to such owner or other users of such property, or in any substantial detriment to the service.

Upon request of this Commission each of the interested parties has submitted a form of agreement embodying its ideas regarding the various points which it believes should be covered. There is substantial agreement upon many points. Discussion will be confined to certain matters concerning which there is difference of opinion.

Liability for Accident.

The matter of liability for accidents due to the operation of the cars of The Milwaukee Electric Railway & Light Company, hereinafter called the Electric company, over the tracks of the Milwaukee Northern Railway Company, hereinafter called the Northern company, appears to be considered of first importance, and upon this matter there is a decided difference of opinion. The Northern company proposes that "the Electric company will indemnify and save harmless the Northern company from any and all liability, claims, demands, cause or causes of action growing directly or indirectly out of the operation of cars or equipment operated by the Electric company under the terms of this agreement over said tracks on said portion of Wells street between Fifth street and Sixth street," the intention being to place upon the Electric company the liability for all accidents in which its cars might be involved, whether the ac-

cidents were due to the acts of its own employes or officials or to the acts of employes or officials of both companies, or even to the acts of employes or officials of the Northern company alone.

In support of its contention on this point the Northern company advances the following arguments: The operation of the cars of the Electric company over the tracks of the Northern company on Wells street will create two danger points in the terminal loop of the latter company: one at each end of the stretch of joint track. What the risk is cannot be predicted with any degree of accuracy, but it is quite possible that at some time during the joint operation there will be an accident of greater or lesser magnitude. Considering that this stretch of track is in the heart of the city where the cars are well filled, it is plain that an accident might easily be the cause of damage claims of considerable magnitude. Admitting that the Northern company operates under a franchise that reserves to the city the privilege of granting to other companies the right to use the tracks, roadway and motive power of the Northern company, attention is called to the fact that there is to be paid for the use of such tracks, power and roadbed a "just and adequate" compensation. It is argued that "no compensation can be adequate which would cause the Milwaukee Northern Railway Company to bear an additional expense by reason of the operation of the cars of The Milwaukee Electric Railway & Light Company over this piece of track." The length of track involved is so short that "no compensation per car-mile on one-tenth of a mile of track would be paid by The Milwaukee Electric Railway & Light Company that would reimburse the Northern company and save it harmless" from the damages for personal injuries for which it might have to settle. And it is further argued that "it is improper for such loss, if any, to be placed upon the Milwaukee Northern Railway Company and to be paid by the public that travels on its lines as patrons who are uninterested in the right of The Milwaukee Electric Railway & Light Company to operate over the tracks on Wells street except as such operation shall not be a basis which will permit of an increase in fare for passengers on the Milwaukee Northern Railway Company's line, and in the event that the compensation paid by The Milwaukee Electric Railway & Light Company

for the use of said tracks did not reimburse the Milwaukee Northern Railway Company for its actual expenses in connection with said use, then these actual expenses [that] go unpaid by the compensation received from The Milwaukee Electric Railway & Light Company must be paid by the patrons of the Milwaukee Northern Railway Company and must be taken into consideration at the present and in the future, as to what is a reasonable rate of fare on the Milwaukee Northern Railway," and, quoting further from the testimony, "if liability is to be assumed by the Milwaukee Northern Railway Company in addition to what it now has for the operation of its cars on Wells street between Fifth and Sixth streets by reason of the operation of The Milwaukee Electric Railway & Light Company's cars over said track, that sooner or later it will suffer irreparable injury by reason of said use by The Milwaukee Electric Railway & Light Company."

This Commission realizes that the joint use of these tracks will mean increased risk to both companies. It further realizes that the compensation which the Northern company will receive for the use of its property will be a comparatively small amount and that the earnings from this source for a period of many years might be wiped out by the losses and claims due to a single accident. It does not believe, however, that this is sufficient reason for taking all of the burden of responsibility for accidents from the Northern company and laying it upon the Electric company. In the first place, it would appear to be against public interest so to relieve a company of its natural responsibilities, and it is believed that it will add to the safety of operation if each company is obliged to assume a liability in proportion to its responsibility for any accidents that may occur. And further, it must be noted that the Electric company seeks the use of these tracks in order to fulfill its obligations under the ordinance of April 14, 1913. The joint use of the tracks is something that is being forced, in a measure, upon both companies, for the benefit of the public whose streets they occupy. They stand on equal footing and no reason exists for discriminating between them in the matter of liability. It is the view of this Commission that the Northern company is entitled to a "just and adequate compensation" for the use of its property, but that it cannot be relieved from its proper responsibilities.

COMPENSATION FOR USE OF TRACKS AND OVERHEAD EQUIPMENT.

Coming to the matter of compensation, the Electric company proposes "for the use of the Northern company's said tracks and property under the terms and conditions hereinbefore set forth, the Electric company shall and will pay to the Northern company for each car-mile operated over said tracks on Wells street between Fifth and Sixth streets by said Electric company at the rate of:

Six cents per car-mile for each of the first 5,000 car-miles or fractional part of car-mile per year operated over said tracks on Wells street between Fifth and Sixth streets by said Electric company;

Four and one-half cents for each of the next 5,000 car-miles, or fractional part of car-mile operated by said Electric company thereover per year;

Three cents for each of the next 5,000 car-miles or fractional part of car-mile operated by said Electric company thereover per year.

Two and one-half cents for each car-mile or fractional part of car-mile over 15,000 car-miles operated by said Electric company thereover per year."

In arriving at this rate of compensation the Electric company assumes that, as the use of the track and trolley only is contemplated, the lessor's expense incident thereto will consist of track maintenance, depreciation, taxes and return upon investment. Quoting from petitioner's "Exhibit C":

"These costs should aggregate as follows:

"*A. Operating expenses.*

"The portion of way and structures accounts containing the maintenance items in question and their cost per unit car-mile operated, as based upon the experience of The Milwaukee Electric Railway & Light Company for the calendar years 1911 and 1912 * * * amounts to 1.08 cts. per car-mile.

"*B. Fixed charges.*

"These costs are estimated as a percentage of the investment, viz.:

Depreciation (R. R. C. basis trolley & track)	7.60%
Taxes	1.97%
Returns upon investment	7.50%
	17.07%

"The investment involved * * * will aggregate $38,559.84 per mile of single track. Upon such a value, fixed charges will aggregate $6,582.16 per annum.

"*C. Total compensation.*

"Assuming various annual car-miles per mile of track, the rental will amount as follows:

Car-miles per mile of track.	Operating expenses per car-mile.	Fixed charges per car-mile.	Total.
100,000	$1 08	$6 58	$7 66
150,000	1 08	4 39	5 47
200,000	1 08	3 29	4 37
250,000	1 08	2 63	3 71
300,000	1 08	2 19	3 27

"Where both joint users provide a traffic density of 300,000 car-miles per mile of single track during the year, a reasonable compensation for such service will approximate 3.27 cts. per car-mile."

Upon the basis outlined above, the proper rate of compensation per car-mile would, of course, vary with the number of car-miles operated, the rate increasing as the number of car-miles decreases. The table in section C is offered as showing, under the column marked "Total", what the rate would be for various amounts of car mileage ranging from 100,000 to 300,000.

Three hundred thousand car-miles per mile is assumed to be the maximum that can be operated to advantage on a single track, the statement being made by the vice president of The Milwaukee Electric Railway & Light Company that "at present we operate on Grand avenue a schedule which equals approximately 304,700 car-miles per annum per mile of single track. That merely by way of illustrating that the 300,000 car-miles isn't probably far away from the use to which that track will probably be ultimately put and might be said to represent, we will say, 100% use of the track."

In arriving at the sliding rate of compensation proposed by the Electric company, the aim was to get an average rate of 4 cts. per car-mile, which average rate would correspond to a use of the track amounting to 225,000 car-miles per mile per annum, or, on this one-tenth of a mile of track to 22,500 car-miles per annum. The following table was prepared using the proposed sliding rate of compensation and assuming that various

total car mileages are distributed between the two companies in varying proportions:

1	2	3	4	5	6
Total car-miles on this 1/10 mile of track.	Car-miles operated by the Electric company.	Car-miles operated by the Northern company.	Average rate per car-mile paid by the Electric company.	Rate per car-mile paid by the Northern company.	Reasonable compensation per car-mile according to section C above quoted.
10,000	10,000	.....	$5 25	.....	$7 66
	5,000	5,000	6 00	$9 32	7 66
	.....	10,000	.....	7 66	7 66
20,000	20,000	.....	4 00	.....	4 37
	15,000	5,000	4 50	3 98	4 37
	10,000	10,000	5 25	3 49	4 37
	5,000	15,000	6 00	3 82	4 37
	.....	20,000	.....	4 37	4 37
30,000	30,000	.....	3 50	.....	3 27
	25,000	5,000	3 70	1 12	3 27
	20,000	10,000	4 00	1 81	3 27
	15,000	15,000	4 50	2 04	3 27
	10,000	20,000	5 25	2 28	3 27
	5,000	25,000	6 00	2 72	3 27
	.....	30,000	.....	3 27	3 37

Assuming that the rate of compensation shown in column 6 is a reasonable rate, then it is evident from the table that for a moderate use of this piece of track, the compensation paid by the Electric company under the sliding scale which it proposes would not be adequate. If the total use of the track is 10,000 car-miles, all due to operation of the cars of the Electric company, the Northern company will receive a gross income from this piece of track of $525, whereas $766 would be necessary to cover operating expenses and fixed charges. If 5,000 car-miles are due to operation of the cars of each company then the Electric company will pay $300, leaving $466 to be made up by the Northern company.

This discrepancy changes, as the car mileage increases, until the advantage rests with the Northern company, as indicated by the table. There appears to be no condition under which each company bears a share of the burden exactly proportionate to its use of the tracks.

In the opinion of this Commission a proper basis for such compensation involves consideration of (a) the cost of maintaining the property in good condition and repair, (b) net cost of renewals, replacements, and reconstruction necessary to

keep the property at all times in good condition and repair, (c) the taxes paid upon the property and (d) a reasonable rate of return upon the investment in the property. In this case it seems reasonable that the above items should be apportioned between the companies according to the use made by them of the track.

Inasmuch as some of the above items of cost vary for different railways, for different parts of any given railway and even from month to month for the same piece of track, it would seem preferable that, insofar as possible, the actual costs on the particular piece of property in question should be determined, rather than average costs for an entire system.

Certain of the above items are affected by the amount of traffic over the tracks. It is plain, therefore, that no definite rate of compensation per car-mile can be fixed that will be equitable to both parties under all conditions of traffic. To be equitable, the rate per car-mile would have to vary constantly with the traffic.

In a general way the proposition of The Milwaukee Electric Railway & Light Company is based upon the foregoing general principles; but it is open to the following objections:

A. A portion of the figures used represent average costs on The Milwaukee Electric Railway & Light Company's property instead of actual costs on the Milwaukee Northern Railway Company's property.

B. Although a sliding scale is provided it would not result in an equitable division of the costs between the two companies under all conditions of traffic.

C. The use of the car-miles as a unit would not give so equitable a division of the costs as the ton-mile, where two companies are involved, since the types of cars used by the different companies may differ considerably in weight and capacity. For example, one company might operate 100 cars, each weighing 20 tons and carrying 40 passengers, while the other company operated 100 cars, each weighing 40 tons and carrying 80 passengers. If the car-mile is taken as the unit, each company would bear an equal portion of the costs, which is manifestly unfair since the company using the light cars has not had as much use of the track as the other company. The ton-mile as a unit would give better results.

For the above reasons the Commission has provided in the following order for an exact accounting of costs on this piece of property, and for a division of the costs upon an approximate ton-mile basis, following closely the proposal of the Northern company in regard to this point.

Determination of Ton Mileage.

The discussions of this point have brought out some differences of opinion in regard to the method of determining tonnage. The Northern company proposes that "The ton-miles operated over said tracks by either company shall be computed upon the basis of the total number of tons of 2,000 lb. each passing thereover, except that in the case of passenger cars, the weight of any passengers, merchandise and express matter shall not be included in the tonnage." The Electric company proposes a clause that is similar except that it limits the space devoted to the carriage of merchandise or express in the case as passenger cars, the clause reading, "The ton-miles operated over said tracks by either company shall be computed upon the basis of the total number of tons of 2,000 lb. each passing thereover, except that in the case of passenger cars the weight of the passengers and the weight of merchandise or express, carried by either company in such cars, shall not be included in the tonnage, provided that the space devoted to the carriage of merchandise or express shall not be in excess of 16 square feet of floor space, but in the case of all cars used by either party for the transportation of merchandise or express exclusively and in the case of passenger cars in which the space devoted to the transportation of such commodities shall be in excess of 16 square feet of floor space, the actual weight of car and contents shall be included."

An accurate determination of the tonnage would require that the weight of the load carried should be taken into account as well as the weight of the car itself, whether the load consisted of passengers or of merchandise. The reason that both of the proposed clauses are so drawn as to omit the weight of passengers, although taking into account the weight of merchandise, is because the weight of the passengers is so variable and uncertain a quantity as to be practically impossible of exact determi-

nation. On the other hand, to omit the weight of the load in the case of passengers and to include it in the case of merchandise, would, under certain conditions, result in unjust discrimination. For example, the two companies might operate exactly the same tonnage over these tracks, taking into account both the weights of the cars and the weights of the loads; but if the business of one company were all passenger business while the business of the other company were largely freight or express, the latter company would suffer under such a provision. Its tonnage would include the weight of the cars and their loads, while the tonnage of the first company would include merely the weight of the cars, and since the cost of electrical current, of maintenance and of replacements, etc., would be divided in proportion to the ton mileage operated by each company, the company handling merchandise would have to pay the greater proportion of such cost even though its actual consumption of current and the wear and tear on the track and other property caused by its cars were exactly the same as that of the first company.

It is the opinion of this Commission that the weight of the load may well be omitted for the sake of simplicity, whether the load be passengers or merchandise. It should be kept in mind that the object aimed at in determining the ton-miles is the securing of a basis for proportioning between the two companies the cost of the electrical current, of maintenance, and of replacements, etc. The division of these costs should be in proportion to the use made of the property by each company and this use is assumed to be in proportion to the ton-miles operated over the tracks. It is not necessary, however, to know the exact tonnage in order to determine, with sufficient accuracy, the proportion each company should bear.

To illustrate, assume that company A operates 20-ton cars each carrying 40 people, and that company B operates 40-ton cars each carrying 80 people, and assume further that both companies operate the same number of cars over this piece of track. Then, if the weight of the passengers be excluded the expenses would be prorated 20 to 40, or 1 to 2. If the passengers are included at 150 each, the ratio will be 23 to 46 or, again, 1 to 2. In other words, if it be assumed (and the assumption is, approximately, true) that the capacity of the car varies in proportion to its weight, then, for the object arrived at in this in-

stance, the weight of the load may be omitted whether the load be passengers or merchandise. It is not contended that the omission of the load will result in exactly the same proportioning as there would be were the loads included, but it is believed that the results will be substantially the same and, because of the great difference in ease of application, the method of using only the weight of the cars themselves is to be preferred.

It has been suggested that this method will result in unjust discrimination where one company operates heavy interurban cars that, as a rule, are but moderately loaded, while the other company operates light city cars that are often crowded with passengers. No data were offered to support this contention. It is the opinion of the Commission that even in case the traffic of the two companies is of a different nature, as suggested, the omission of the weight of the passengers would not affect to any great extent the justice of the division of expenses. While the lighter city cars would be crowded on some of their trips, they would carry but a light load at other times. When the inbound cars are heavily loaded the outbound cars are often nearly empty and vice versa. Again, there are times during the day and night when the cars are but moderately loaded. It seems probable, even in this case, that the average loads will be in proportion to the weights of the cars.

Compensation for Electric Energy.

Because of the greater reliability of its energy output it is considered advantageous to have the Electric company supply the current over the stretch of track in question, and as compensation therefore the Electric company proposes that "the Northern company shall pay to the Electric company in monthly installments on or before the 20th day of each calendar month the sum of 1 cent per kilowatt-hour for all current actually consumed during the preceding calendar month by said Northern company."

The Northern company proposes that "the Northern company shall pay to the Electric company the Northern company's energy or output cost per kilowatt-hour for all such electrical energy consumed by it for the operation of its cars thereover."

It is argued in support of the Electric company's proposal

that 1 cent per kilowatt-hour is a lower rate than is paid by any other consumer. The Northern company does not criticize the rate as being excessive, but objects to the proposed method of determining the compensation as being an improper basis, arguing that "the Milwaukee Northern Railway Company should not be put to any additional expense in using the power of The Milwaukee Electric Railway & Light Company in operating its said cars over its tracks on Wells street between Fifth and Sixth streets over the expense it would be put to in operating its cars over said tracks on its own power."

No figures were offered to show what the cost to the Northern company would be under its own proposal so that no comparison of the rates under the two methods is possible at this time.

It is the opinion of this Commission that the contention of the Northern company is sound and that it would be fair to both companies if the Northern company were to pay to the Electric company a rate equal to its own output cost for energy, such cost not to include the total power house costs, but only such portion of the costs as might be affected by the decrease in the power requirements made on the Northern company's power plant under the proposed arrangement. It seems evident, however, from the discussion in connection with this point, that if the matter be left to the companies themselves, any attempt to fix a rate in conformity with the Northern company's proposal will be likely to result in dispute and dissatisfaction; on the other hand, it does not seem that the amounts involved in this case justify the time and expense necessary for an investigation into this matter on the part of this Commission, and since the rate offered by the Electric company admittedly is not excessive, it will be adopted.

COMPETING CARS.

The Northern company proposes that "the Electric company shall have no right hereunder to operate over said Northern company's tracks on said portion of Wells street any car or cars competing for traffic either within or without the city of Milwaukee with any car or cars operated by the Northern company."

It is the contention of the Northern company that its cars are at present in competition with the Third street and Eighth street lines of the Electric company.

The Northern company argues "if such competing cars [that is, the Electric company's cars] were permitted to be operated over the tracks of the Milwaukee Northern Electric Company on Wells street, it would * * * work irreparable injury to the investors in the Milwaukee Northern Company."

It is quite possible that the routing of any one of the lines mentioned over the tracks in question might have an adverse effect upon the earnings of the Northern company. On the other hand, it is also possible that public convenience and necessity may require that so-called competing lines be routed over these tracks and the Commission must reject any proposal that would act as a restriction to such full and free use of those tracks as the needs of the community may demand. The Commission believes that, in accepting the franchise under which it operates, the Northern company bound itself to permit the operation of even such competing cars under the terms and conditions as laid down. Only under urgent conditions, however, would the Commission feel justified in requiring such competition and in that event the question of compensation might require adjustment.

The Commission finds that public convenience and necessity require the use by The Milwaukee Electric Railway & Light Company of the tracks, wires, and poles of the Milwaukee Northern Railway Company on Wells street between Fifth and Sixth streets in the city of Milwaukee and that such use will not prevent the owner or other users thereof from performing their public duties nor result in irreparable injury to such owner or other users of such tracks, wires or poles or in any substantial detriment to the service.

IT IS THEREFORE ORDERED, That the Milwaukee Northern Railway Company, hereinafter called the Northern company, permit the joint use of that portion of its system located on Wells street between Fifth street and Sixth street in the city of Milwaukee, by the cars of The Milwaukee Electric Railway & Light Company, hereinafter called the Electric company, and by the cars of any other company or companies which said electric company may operate over its own tracks, said joint use being subject to the following terms and conditions, which terms and conditions shall be subject to modification in whole or in part at any future time by order of this Commission.

SECTION 1. As a condition precedent to the obligations of the Northern company under this order, the Electric company shall give substantial evidence of its acceptance of and intention to comply with the terms of the ordinance of April 14, 1913.

SECTION 2. That portion of the system of the Northern company of which joint use is hereby ordered is indicated on the plan shown in the figure on the preceding page.

SECTION 3. To the Northern company is expressly reserved the prior, paramount and preferential right to the use of its said tracks and power in the city of Milwaukee, anything herein to the contrary notwithstanding, and in no event shall the operation of cars by the Electric company over and upon said tracks under this order be permitted to interfere materially with the operation of the cars of the Northern company nor of the cars of any other company or companies which the Northern company may from time to time operate over its said tracks, nor the furnishing by the Northern company of adequate service to the public. The Electric company shall not have the right to operate cars over said tracks on any schedule or schedules that shall interfere with the Northern company's operation.

SECTION 4. To the Northern company is expressly reserved the right to make, from time to time, such reasonable rules and regulations governing the operation of all cars over and upon said tracks as may be necessary or desirable, such rules and regulations not to discriminate unduly in favor of the cars of any company. The Electric company will abide by said rules and enforce the observance thereof by its employes.

SECTION 5. *Paragraph 1.* The Northern company shall make the necessary changes in the arrangement of its tracks and shall complete the construction of its double track and the corresponding overhead installation, on that portion of Wells street between Fifth street and Sixth street, but shall not be required to make any changes nor complete any construction except on the piece of track limited on each end by the new special work that is hereinafter required in section 6 to be installed by the Electric company at Fifth street and at Sixth street, or, where no such special work will be required, by the west block line of Fifth street and the east block line of Sixth street, said limits being indicated on the plan shown above. Said construction

shall be of a type at least equal to that now existing on said portion of Wells street.

Paragraph 2. The Northern company shall make said changes and complete said construction and shall have the same ready for the use of the Electric company by the time the latter company is ready to operate thereover, and, should the Northern company fail so to complete said construction, then the Electric company shall have the right and is hereby given the right to enter upon said street and to complete said construction and the Northern company will repay the Electric company all the cost and expense thereof.

Paragraph 3. The difference between the value new of the proposed arrangement of tracks and the value new of the present arrangement will be considered an increase or decrease in the value of the physical property of the Northern company, to be entered accordingly in the accounts of said company. The difference between the total cost of making said changes and extensions and the increase in value of the physical property, or the sum of said total cost and the decrease in the value of the physical property, will be considered an operating expense. The amount so apportioned to operating expenses, less any credits due to value of material removed from existing tracks, will appear in the accounts which the Northern company is to open for said tracks as a maintenance expense, and will be apportioned between the two companies as hereafter provided in A (1) and A (2), paragraph 1, section 15. In the present case the value of the south track, after the changes and extensions, will be taken as being $792.00 less than the value of the track as it now exists.

SECTION 6. The Electric company shall, at its own expense, connect said double track of the Northern company by suitable frogs and switches with its own double track to the east and west thereof, as shown above upon the plan, but nothing herein contained shall be construed as curtailing the Northern company's rights and franchises or affecting its title to and control of a continuous track in its terminal loop, and if at any time operation under this order shall be lawfully terminated and in the opinion of this Commission the joint use of said portion of the Northern company's system shall be no longer required, it shall be the duty of the Electric company to remove

said frogs and switches and to replace them with the necessary rails and splices and to do such other work and make such other changes as may be necessary to provide a continuous track for the Northern company of a type of construction equal to that existing at the time said removal is made.

SECTION 7. *Paragraph 1.* The Electric company shall, at its own expense, make the necessary connections between its own system of poles, wires and fixtures and the poles, wires and fixtures of the Northern company so as to permit the Electric company to transmit its power to the Northern company's overhead system for the operation of all cars which may from time to time use that portion of the Northern company's tracks.

Paragraph 2. Neither of the companies shall be required to erect a second set of trolley wires; but, except as hereinafter specifically set forth, only one set of trolley wires shall be erected and maintained, which trolley wires shall be used in common by all cars which may operate upon said tracks.

Paragraph 3. If, however, either company should change its power or its method of transmission of power so as to require changes in the operation, appliances or rolling stock of the other company, or to hamper or impede materially the operation of the cars of the other company, then and in that event, if reasonably practicable without unduly interfering with the operation of the Northern company's overhead system and cars, the Electric company may, at its own expense, attach to and suspend from said poles and overhead system of the Northern company, such wires, cables, feeders and fixtures as may be necessary for the successful operation of its cars by means of its own power.

Paragraph 4. Nothing herein contained shall be construed as curtailing the Northern company's rights and franchises or affecting its title to and control of a continuous overhead system in its terminal loop, and if at any time operation under this order shall be lawfully terminated and in the opinion of this Commission the joint use of said portion of the Northern company's system shall be no longer required, it shall be the duty of the Electric company to remove said connections and to do such other work and to make such other changes as may be necessary to provide a continuous overhead system for the Northern company of a type of construction equal to that existing at the time such removal is made.

SECTION 8. *Paragraph 1.* From and after the commencement of the joint use of said tracks, the Northern company shall, at its own expense, maintain, replace and renew the double tracks and overhead system mentioned in section 5, so that the same shall be kept, at all times, in good condition and repair; and the Electric company shall, at its own cost and expense, maintain, replace and renew the frogs and switches mentioned in section 6 and the connections between its overhead system and the overhead system of the Northern company and the wires, cables, feeders and fixtures mentioned in section 7, so that the same shall be kept at all times in good condition and repair.

Paragraph 2. Should either company fail or refuse, upon written notice given by the other company, to make such repairs or renewals as may be necessary to keep said property in good repair and condition, and should such failure continue for an unreasonable time after receiving such notice specifying the defect and requesting the same to be remedied, then the company giving such notice shall have the right and is hereby given the right to enter upon the property of the other company and remedy such defect by making the necessary repairs and renewals forthwith and the other company shall repay it the cost of all materials and labor actually employed in making such repairs and renewals, together with the overhead expenses properly chargeable thereto.

SECTION 9. The Electric company shall furnish all the electrical energy required for the operation of cars over said portion of Wells street between Fifth street and Sixth street for a period of three years beginning at the time the Electric company shall commence the operation of its cars thereover, and at the expiration of said three year period, upon application of either company, this Commission will determine which party shall thereafter furnish said electrical energy and the conditions under which the same shall be supplied.

SECTION 10. Each company shall, at all times, keep its track, overhead system and rolling stock in first class operating condition.

SECTION 11. Each company shall pay and discharge all car licenses or special taxes legally imposed on the cars operated by it, or under its authorization, over said tracks on Wells street.

SECTION 12. *Paragraph 1.* The Northern company shall hold the Electric company harmless from any liability arising from any failure of the Northern company to comply with and fulfill its common law duties and the terms and conditions of its franchises, licenses and permits, and of any lawful ordinances, resolutions and regulations having reference to said tracks on Wells street and to the street between and adjacent to said tracks.

Paragraph 2. The Electric company shall hold the Northern company harmless from any liability arising from any failure of the Electric company to comply with and fulfill its common law duties and the terms and conditions of its franchises, licenses and permits, and of any lawful ordinances, resolutions and regulations having reference to said tracks on Wells street and to the street between and adjacent to said tracks.

Paragraph 3. In case either company shall fail to comply with or fulfill any of said duties, terms and conditions within thirty days after receiving written demand therefor from the other company, then and in that event the company making said demand may itself, at its option, do what is necessary to comply with or fulfill said duties, terms and conditions, and the reasonable cost thereof shall, on demand, be repaid to said company so complying with or fulfilling said duties, terms and conditions by the company so failing as aforesaid.

SECTION 13. *Paragraph 1.* The Northern company shall indemnify and save the Electric company harmless from any loss, damage or expense which said Electric company may sustain to its own property or to property in its custody or by reason of injuries to its agents, employes, or passengers, when said loss, damage or expense is caused by the operation of cars or equipment of the Northern company or the cars or equipment of any other company which said Northern company may have in its custody.

Paragraph 2. The Electric company shall indemnify and save the Northern company harmless from any loss, damage or expense which said Northern company may sustain to its own property or to property in its custody or by reason of injuries to its agents, employes, or passengers when said loss, damage or expense is caused by the operation of cars or equipment of the

Electric company or the cars or equipment of any other company which said Electric company may have in its custody.

Paragraph 3. Provided that, when said loss, damage or expense is caused by the fault or negligence of both companies, their servants, or employes, in the operation of cars or other equipment over said tracks, then and in that event, each company shall bear one-half of such loss, damage or expense, excepting attorney's fees.

Paragraph 4. In case any claims are made or actions brought against one of the companies, based solely upon the operation of the cars or equipment of the other company, then the company against which such claim is made or action brought may give written notice thereof to the other company and the other company shall, at its own cost and expense, settle such claim or defend action brought thereon.

Paragraph 5. In case action is brought against either company and the company against which such action is brought shall claim that the other company is liable for one-half of the damages demanded in said action, and they do not agree concerning such liability, then the company against which the action is brought shall notify the other company of such action, and the latter shall have the right to appear in said action and participate in the defense thereof, and shall have the right to defend said action to the court of last resort in the name of the company sued, in the event that the company sued shall fail, neglect or refuse so to defend or prosecute said action.

SECTION 14. *Paragraph 1.* On or before the last day of each month the Northern company shall pay to the Electric company as compensation for the electrical energy provided by the Electric company and consumed by the Northern company during the preceding calendar month in operating its cars over the tracks in joint use, a sum equal to the electrical energy so consumed multiplied by the rate of one cent per kilowatt-hour. This rate shall be subject to revision at the end of any fiscal year upon application to this Commission by either company.

Paragraph 2. The total amount of energy drawn from the overhead system on Wells street between Fifth street and Sixth street by all of the cars operating over the tracks on said portion of Wells street shall be measured by suitable recording meter or meters located on said portion of Wells street and con-

nected to said overhead system, said meter or meters to be installed, maintained, replaced and renewed at the expense of the Electric company. Said meter or meters shall be read at noon on the last day of each calendar month and each company shall have a right to have a representative present at the time of said reading.

Paragraph 3. The amount of energy consumed by the Northern company shall be considered as having the same ratio to the total energy drawn from the overhead system on said portion of Wells street, as the ton-miles operated over said tracks by the Northern company bear to the total ton-miles operated over said tracks, the ton-miles to be determined as hereafter provided in section 16.

Paragraph 4. If either company shall have reason to believe that the meter registers inaccurately, it shall have the right to require that a test be made of said meter, and shall make a request therefor in writing upon the other company, whereupon such meter shall be tested and calibrated in the presence of duly appointed representatives of both companies, and if, as a result of such test, the meter shall be found to be inaccurate, it shall be restored to an accurate condition or a new meter shall be substituted. Any meter tested and found not more than two per cent either above or below normal shall be considered correct.

Paragraph 5. If as a result of such test the meter shall be found to register in excess of two per cent either above or below normal, then the reading of said meter previously taken shall be corrected according to the percentage of inaccuracy found, but such correction shall not be applied to readings taken previous to the beginning of the calendar month preceding that in which such inaccuracy shall have been so discovered.

Paragraph 6. In the event that such a test, made upon written request of the Northern company, shall show that the meter does not register in excess of two per cent above normal, the Northern company shall pay the entire cost of making said test, otherwise the cost of such test shall be borne by the Electric company.

Paragraph 7. Each company shall have the right to maintain a seal upon each and every meter.

SECTION 15. *Paragraph 1.* On or before the last day of each month, the Electric company shall pay to the Northern company

as partial compensation for the use, during the preceding calendar month, of the Northern company's said tracks and other property the following amounts:

A (1) Such proportion of the monthly cost to the Northern company of maintaining that part of its system (including paving) that is located on the south side of the center line of said portion of Wells street and is used by the Electric company, in good condition and repair, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

A (2) Such proportion of the monthly cost to the Northern company of maintaining that part of its system (including paving) that is located on the north side of the center line of said portion of Wells street and is used by the Electric company, in good condition and repair, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

A (2) Such proportion of the monthly cost to the Northern ern company of so renewing, replacing and reconstructing that part of its system, (including paving) that is located on the south side of the center line of said portion of Wells street and is used by the Electric company, that the same is kept at all times in good condition and repair, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

B (2) Such proportion of the monthly net cost to the Northern company of so renewing, replacing and reconstructing that part of its system (including paving) that is located on the north side of the center line of said portion of Wells street and is used by the Electric company, that the same is kept at all times in good condition and repair, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

Paragraph 2. The net costs to the Northern company of renewals, replacements and reconstruction shall be determined as follows: Upon the date when the cars of the Electric company begin to operate over said tracks, the total accrued depreciation as of that date, hereafter called the *initial accrued depreciation,* on said portions of the Northern company's system (including paving) located on the south side and on the north side of the

center line of Wells street, shall be determined by this Commission, and at such time as operation under this order shall be lawfully terminated, the *final accrued depreciation* shall be determined according to the same methods employed in finding the initial accrued depreciation. The difference between the initial and the final accrued depreciations shall be added to or subtracted from the cost of all renewals, replacements and reconstruction made during the life of this order to said portions of the Northern company's system, said difference being added if the final accrued depreciation is greater than the initial accrued depreciation and subtracted if smaller, and the result so obtained shall be considered the *total net cost.*

Paragraph 3. The said *monthly net costs* to the Northern company of renewals, replacements and reconstruction on said portion of its system (including paving) shall be that portion of said costs falling due and payable each month. The said difference between the initial and the final accrued depreciation shall be considered as falling due and payable at such time as operation under this order shall be lawfully terminated.

Paragraph 4. The initial accrued depreciation as of the date above specified shall be taken as $175 for that portion south of said center line and $417 for that portion north of said center line, said depreciations being based upon the data and computations contained in paragraph 6 of this section.

Paragraph 5. On or before the last day of each July, the Electric company shall pay to the Northern company as partial compensation for the use during the preceding fiscal year of the Northern company's said tracks and other property:

D (1). Such proportion of the annual taxes paid by the Northern company upon that part of its system (including paving) that is located on the south side of the center line of said portion of Wells street and is used by the Electric company, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

D (2). Such proportion of the annual taxes paid by the Northern company upon that part of its system (including paving) that is located on the north side of the center line of said portion of Wells street and is used by the Electric company, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

C (1). One-twelfth of such proportion of an annual return of 8 per cent of the value new of that part of the Northern company's system (including paving) that is located on the south side of the center line of said portion of Wells street and is used by the Electric company, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

C (2). One-twelfth of such proportion of an annual return of 8 per cent of the value new of that part of the Northern company's system (including paving) that is located on the north side of the center line of said portion of Wells street and is used by the Electric company, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

Paragraph 6. Said values new shall be taken as $3,240 for that portion south of said center line and $2,930 for that portion north of said center line, said values being based upon a consideration of all the factors entering into the case, and being, in the opinion of this Commission, proper values to use in this instance.

SECTION 16. In the determination of the number of ton-miles operated over said tracks, only the weights of the cars themselves operated thereover shall be considered; the weight of any passengers, freight, express matter or other loads shall not be taken into account. The term "ton" shall be taken to mean the short ton of 2000 lb.

SECTION 17. *Paragraph 1.* On or before the 20th day of each month, each company shall render a statement to the other company, showing the ton-miles operated by the company rendering the statement, during the preceding calendar month over the tracks on said portion of Wells street. The Northern company shall include in its statement to the Electric company the amounts it has paid during the preceding calendar month for maintenance and for renewals, replacements and reconstruction in connection with said portion of its system, showing separately the amounts paid in connection with the track lying on the south side of the center line of Wells street and the amounts paid in connection with the track lying on the north side of said center line. Such statements shall be the bases upon which are computed the monthly payments hereinbefore specified.

Paragraph 2. On or before the 20th day of each July, the Northern company shall render to the Electric company a statement showing the amounts it has paid for taxes in connection with said portion of its system during the preceding fiscal year, showing separately the amounts paid in connection with the track lying on the south side of the center line of Wells street and the amounts paid in connection with the track lying on the north side of said center line, and such statements shall be the bases upon which are computed the annual payments specified in paragraph 7 of section 15.

Paragraph 3. Each company shall give the other company access to its books and records for the purpose of verifying the accuracy of any and all reports, statements rendered, or claims made pursuant to the terms of this agreement.

Paragraph 4. Any overpayment or underpayment shall be adjusted and paid yearly. The 30th day of June shall be considered the end of the fiscal year for the purposes of this order and the payment and adjustment shall be made on or before the 1st day of September following.

SECTION 18. All notices provided to be given by either company to the other under this order should be given in writing and served by registered mail on the president, or vice-president, or general manager for the time being.

SECTION 19. Thirty days shall be considered a reasonable length of time within which to comply with the terms and conditions of this order.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY
vs.
CHICAGO AND MILWAUKEE ELECTRIC RAILWAY COMPANY.

Decided Dec. 1, 1913.

The T. M. E. R. & L. Co. petitions for joint use of the tracks, wires and poles owned by the Chi. & Mil. El. Ry. Co. on Wells st., between Second and Fifth sts., in the city of Milwaukee. The Chi. & Mil. El. Ry. Co. denies that public convenience and necessity require such joint use of facilities and contends that the T. M. E. R. & L. Co. is not in a position to ask for an order for such joint use until that company has constructed its tracks on Wells st. according to the terms of the ordinance alleged to grant the company the right to use the street named. The Chi. & Mil. El. Ry. Co. also contends that the Commission has no legal or constitutional power to assume jurisdiction in the matter. The Chi. & Mil. El. Ry. Co. operates in Milwaukee under franchises which reserve to the city the right to grant to the T. M. E. R. & L. Co. permission to use the tracks of the Chi. & Mil. El. Ry. Co. under certain terms and conditions. Acting under the power thus reserved to it the city passed an ordinance on April 14, 1913, directing the T. M. E. R. & L. Co. to extend its tracks as specified on Wells st. and authorizing the company, in effect, to make use of the Chi. & Mil. El. Ry. Co's tracks on Wells st. between Second and Fifth sts. The two companies entered into negotiations looking toward an agreement under which the requirements of the ordinance might be fulfilled but failed to come to such an agreement.

That the joint use of tracks will increase the possibility of accident is obvious. The possibility of accident from defective equipment, for example, other things being equal, will be in proportion to the number of cars operated. Likewise the possibility of accidents involving pedestrians or vehicles will be greater with an increase in the street railway traffic. There is no evidence in the present case, however, to show that the joint use of tracks will increase the possibility of accident to abnormal proportions. It is the expectation of the Commission, moreover, that the standards maintained by the two companies with respect to the upkeep of rolling stock and the discipline of employes will be such as to reduce the number of accidents under joint use of tracks to a minimum.

The objection of the Chi. & Mil. El. Ry. Co., that the joint use of its tracks will diminish the value of its property through the adverse effect upon its business of the delays arising from such use and because the possession by the T. M. E. R. & L. Co. of the right to such use would be an encumbrance upon the property, does not appear to be well founded. The franchise under which the Chi. & Mil. El. Ry. Co. claims to operate provides for a joint use such as that now proposed, and, moreover, it

seems probable that this joint use will result in financial gain rather than injury to the company.

With respect to the matter of liability for accidents, the position taken by the Commission in *T. M. E. R. & L. Co. v. M. N. R. Co.* 1913, 13 W. R. C. R. 268, is cited and followed.

Both companies consider that a compensation based upon a rate per car-mile for the use of the tracks and overhead system in question would be satisfactory, but the two companies fail to agree upon what that rate shall be. The Commission, however, for reasons set forth in *T. M. E. R. & L. Co. v. M. N. R. Co., supra,* adopts the ton-mileage basis used in that case.

Each of the two companies claims the privilege of supplying power for the operation of cars over the portion of track to be subject to joint use. If the two companies could come to an agreement as between themselves to string two sets of trolley wires over this portion of track the Commission would probably approve such an arrangement, but in view of the friction and suspicion likely to arise from the creation of an opportunity for the theft of power by one company from the other the Commission is not inclined to order the installation of two sets of trolley wires. Ordinarily it would seem that the company owning the tracks should be permitted to furnish the power, if it desires to do so and is in a position to give adequate power service. Under the circumstances of the present case, however, it seems necessary to have the T. M. E. R. & L. Co. furnish the power.

Held: The Commission has power to act in this matter under the authority given by ch. 62, laws of 1913. The joint use of the facilities in question is required by public convenience and necessity, for the purpose of providing part of the additional trackage needed to permit the T. M. E. R. & L. Co. to reroute certain lines and thus relieve congestion of traffic during rush hours. Such joint use will not prevent the Chi. & Mil. El. Ry. Co. from performing its public duties nor result in irreparable injury to it or in any substantial detriment to the service.

It is therefore ordered that the Chi. & Mil. El. Ry. Co. permit the joint use of that portion of its system located on Wells st. between Second st. and Fifth st. by the cars of the T. M. E. R. & L. Co., and by the cars of any other company or companies which the T. M. E. R. & L. Co. may operate over its own tracks, subject to terms and conditions prescribed by the Commission. These terms and conditions relate chiefly to: the observance of the prior, paramount and preferential right of the Chi. & Mil. El. Ry. Co. to the use of its tracks and power in the city of Milwaukee; the duties, responsibilities and rights of each company with respect to the making of the necessary changes, new construction and connections required to render possible the joint use of tracks ordered, the maintenance of this construction and its removal or alteration in case the joint use of tracks is, for any valid reason, terminated; the furnishing of the electric energy required for the operation of cars over the portion of track subject to joint use; the payment of car licenses and special taxes on the cars so operated; the responsibility of each company for the fulfillment of its lawful obligations with respect to the tracks in question and for losses, damages and expenses sustained by reason of personal injuries resulting from the operation of cars over the portion of track in joint use; the compensation to be paid by the Chi. & Mil. El. Ry. Co. to the T. M. E. R. & L. Co. for the electric energy used by the Chi. & Mil. El. Ry. Co. in operating its cars over these tracks; and the compensation to be paid by the T. M. E. R. & L. Co. to the Chi. & Mil. El. Ry. Co. for the use of the said tracks and other property of the Chi. & Mil. El. Ry. Co.

This case is brought before the Commission upon petition of The Milwaukee Electric Railway & Light Company, dated June 3, 1913. The petitioner alleges, in substance, that it has been authorized by an ordinance of the city of Milwaukee to extend its tracks on and along Wells street in the said city from West Water street to Eleventh street and to operate its regular street car service over such tracks; that public convenience and necessity require the use by the petitioner of the tracks, wires and poles of the respondent company on Wells street from Second to Fifth street; that such use will not prevent the respondent or other users of these facilities from performing their public duties nor result in irreparable injury to the respondent or other users, or in any substantial detriment to the service furnished; and that the petitioner and the respondent have failed to agree upon joint use and the terms, conditions and compensation for such use. The petitioner therefore prays that the Commission issue an order directing the respondent to permit the joint use desired by the petitioner upon such terms and conditions as may be reasonable.

The respondent, in its answer, makes a general denial and specifically denies that public convenience and necessity require the joint use of the tracks, wires and poles in question and that such use will not result in irreparable injury to the respondent or other users, or in substantial detriment to the service furnished; and alleges that the petitioner has constructed no tracks which connect with the tracks of the respondent and is therefore in no position to request an order for joint use of tracks. The respondent also alleges that there is "no legal and existing right or any constitutional law of the state of Wisconsin" which gives the Commission authority to make any order in the subject matter of the petition.

Hearings were held on July 23, 1913, and subsequent days, at which the following appearances were entered: For the Milwaukee Electric Railway & Light Company, *Miller Mack & Fairchild*, by *E. S. Mack* and *Jas. B. Blake*; for the Chicago & Milwaukee Electric Railway Company, *Bull & Johnson*, by *F. W. Bull.*

The Commission has power to act in this matter under the authority given by ch. 62, laws of 1913.

The Chicago & Milwaukee Electric Railway Company claims to operate in Milwaukee under franchises granted by the com-

mon council on February 26, 1906, and October 14, 1907, which franchises reserved to the city the right to grant to The Milwaukee Electric Railway & Light Company permission to use the tracks under certain terms and conditions.

An ordinance, passed by the common council of the city of Milwaukee, on April 14, 1913, imposes the following obligations upon The Milwaukee Electric Railway & Light Company:

"SECTION 2. The Milwaukee Electric Railway & Light Company is hereby directed under the provisions of section 4 of a certain ordinance passed January 2, 1900, granting certain franchise rights to said company to extend its tracks from and connecting with its tracks in West Water street, on and along Wells street to Fifth street and connecting thereat with the tracks of the Milwaukee Northern Railway Company, and from Sixth street on Wells street connecting at said Sixth street with the tracks of the Milwaukee Northern Railway Company to Eleventh street, connecting thereat with the tracks of The Milwaukee Electric Railway & Light Company; provided, that if said company finds any tracks in said Wells street, between second street and Fifth street, which may be adapted to its use, permission and authority is hereby given and granted to said grantee to use any such tracks, provided satisfactory arrangements can be made with the owners thereof, and the use by said company of such tracks is hereby legalized and considered an extension of its own tracks within the meaning of the ordinance of January 2, 1900, above referred to."

The two companies have been in negotiation looking toward an agreement under which the terms of the ordinance of April 14, 1913, might be fulfilled. Although there appears to have been substantial agreement between them in regard to the greater part of the terms and conditions involved, it has been impossible to bring the negotiations to a successful issue, owing to decided differences of opinion upon certain important points, chief among them being the questions of liability for accidents, the compensation for the use of the tracks and the furnishing of power for that portion of the tracks in joint use. Discussion will be confined to certain of the points that are in dispute, it being assumed that the remainder of the terms and conditions that have been considered during the negotiations aforesaid, and which will form a part of this order, are satisfactory to both companies.

Attention is called to the case of *The Milwaukee Electric Railway & Light Company v. Milwaukee Northern Railway Com-*

pany, decided December 1, 1913 (13 W. R. C. R. 268), which is similar in many respects to the case in hand. Several of the matters about which there are differences of opinion in the present case, are discussed at length in the opinion issued in connection with the former case and will not be taken up here.

PUBLIC CONVENIENCE AND NECESSITY.

So far as public convenience and necessity are concerned, the situation as regards the tracks in question is similar to that involving the tracks of the Milwaukee Northern Railway Company on Wells street between Fifth street and Sixth street, which is discussed in the case of *The Milwaukee Electric Railway & Light Company v. Milwaukee Northern Railway Company,* above cited.

Conditions are such that the cars on certain lines of The Milwaukee Electric Railway & Light Company are overcrowded during rush hours. Investigation by this Commission has shown that it is not desirable to try to relieve the overloading by putting on more cars, because of the fact that the lines in question are already congested with traffic. It is necessary to provide additional trackage facilities in order to permit a rerouting of certain lines, thus relieving the congestion to such an extent that more cars can be operated. Among the additional tracks required, is the line on Wells street between West Water street and Eleventh street. In order that The Milwaukee Electric Railway & Light Company may construct such tracks and operate cars on that portion of Wells street it is essential that permission be granted for the joint use of any tracks already existing thereon.

DETRIMENT TO SERVICE OF RESPONDENT COMPANY.

It is the contention of the Chicago & Milwaukee Electric Railway Company that the proposed joint use of its tracks will result in substantial detriment to its service and, in support thereof, it presents the following claims and arguments:

The business of the company is increasing.

The increase is believed to be due largely to the regularity of service as compared with service on T. M. E. R. & L. lines and anything that affects this regularity will have an adverse effect upon the business of the company.

The possibility of accidents occurring on this piece of track, and resulting in blockades and delays that will affect the regularity of service over the entire system of the C. & M. E. Ry., will be increased by the proposed joint operation because—

1. Such joint operation of the same track by different companies tends to create confusion.

2. The men of different companies, in their rivalry, take increased risks in the operation of their cars in order to gain some fancied advantage over one another.

3. The increased number of cars operating over these tracks will mean increased possibility of break-down and consequent delay.

4. The increased number of cars will mean increased possibility of rear-end collisions.

5. The points of connection between the tracks of the two companies at Second street and Fifth street will be especially dangerous on account of possibility of derailments at the switches and of collisions between cars on the straight track and cars turning into the straight track.

6. The increase in the traffic on these tracks will result in increased possibility of accident and consequent delay at Fourth street where fast moving street traffic crosses these tracks at right angles.

In case of accident on this piece of track there is no chance for the C. & M. E. Ry. to reroute its cars so as to reach its terminus on Second street, and thus avoid the delays incident to such accident.

On the part of The Milwaukee Electric Railway & Light Company it is contended:

(a) That, in the opinion of the petitioner, the joint use of tracks by different companies, instead of resulting in increased possibility of that sort of accident that is due to error or carelessness on the part of the men in charge of the cars, would have an opposite effect, due to the fact that the men would naturally expect increased danger and would therefore operate with extraordinary care.

(b) That experience has shown that the danger from rear-end collisions is small.

It does not appear that the operation of additional cars over the track in question would, in itself, be detrimental to the service of the respondent company. The track is not used to its full capacity at present and it is therefore possible to devise schedules that will accommodate additional traffic without interfering seriously with the present service. The alleged difficulties would

be due to possible accidents or to the delay caused by such accidents.

That the possibility of accident will be increased to some extent under the proposed conditions, is apparent. The possibility of that class of accident caused by defective equipment, for example, if other conditions are equal, will be in proportion to the number of cars operated. Likewise the possibility of accidents involving pedestrians or vehicles increases with the increase of either the pedestrian and vehicular traffic or the street railway traffic. Other classes of accidents may follow the same law. The extent of such increase will be largely a matter of opinion until actual operation has furnished actual facts and figures. Nothing has been presented, however, that would justify the assumption that the proposed joint use will be surrounded by such conditions as to increase the possibility of accident to abnormal proportions.

While it is admitted that the possibility of accident will be increased, the actual number of accidents that occur will depend, to a large extent, upon the standards maintained by the two companies in such matters as the upkeep of the rolling stock and the discipline of the employes. It is the expectation of this Commission that those standards will be such that the number of accidents occurring on this piece of track under the proposed joint use will be a minimum, and that the delays arising therefrom will be practically negligible.

Injury to the Respondent Company.

It is claimed by the Chicago & Milwaukee Electric Railway Company that the proposed joint use of these tracks will diminish the value of its property, through the anticipated adverse effect upon its business of the delays arising from such use and because the possession of the right to such use by The Milwaukee Electric Railway & Light Company would be an encumbrance upon the property.

On behalf of the petitioner it is claimed that in view of the fact that the Chicago & Milwaukee Electric Railway is not using the tracks in question up to their full capacity and apparently has no immediate prospects of so using them, the proposed joint use of its tracks, instead of being an injury to the Chicago & Milwaukee Electric Railway Company, will be a benefit to the ex-

tent of the additional revenue derived therefrom, and that the property of the company will be worth more under such conditions to the purchaser who buys the road, not for the speculative value of possible strategic advantages it may possess, but as a business investment.

It would seem that the respondent company has little ground upon which to base its claims of injury. It is to be supposed that in accepting the franchise under which it claims to operate, which franchise provides for a possible joint use of its property such as is now proposed, the company accepted also the increased risk of accident which, being inherent in such use, it must have foreseen. Furthermore, from a purchaser's viewpoint, that proviso in the contract might well be as much of an encumbrance as the actual joint use for which it provides.

Under the law (ch. 62, laws of 1913) the proposed joint use is permissible unless such use will result in irreparable injury to the owner or in substantial detriment to the service, always provided, of course, that such use is required by public convenience and necessity. It appears clear that there will be neither irreparable injury to the owner nor substantial detriment to the service by the proposed joint use. On the contrary, there seems to be a probability that the respondent will obtain a financial advantage from the arrangement rather than an injury.

For these reasons and under these circumstances, this Commission can not allow the claim of injury to stand in the way of the proposed joint use of these tracks.

Liability for Accident.

In the preliminary negotiations between the two companies, substantial agreement was apparently reached in regard to the matter of liability for damages, what is spoken of as the "standard" damage clause being satisfactory to both companies. Later, the Chicago & Milwaukee Electric Railway Company indicated that its agreement to the "standard" clause was dependent upon the rate of compensation that was finally fixed for the use of its property.

This matter of liability for accident is discussed in the case of *The Milwaukee Electric Railway & Light Company vs. Milwaukee Northern Railway Company,* decided this day (13 W. R. C. R. 268), which involves the joint use of the tracks of the

latter company on Wells street between Fifth street and Sixth street. Quoting from that case:

"This Commission realizes that the joint use of these tracks will mean increased risk to both companies. It further realizes that the compensation which the Northern Company will receive for the use of its property will be a comparatively small amount and that the earnings from this source for a period of many years might be wiped out by the losses and claims due to a single accident. It does not believe, however, that this is sufficient reason for taking all of the burden of responsibility for accidents from the Northern company and laying it upon the Electric company. In the first place, it would appear to be against public interest so to relieve a company of its natural responsibilities, and it is believed that it will add to the safety of operation if each company is obliged to assume a liability in proportion to its responsibility for any accidents that may occur, and further, it must be noted that the Electric company seeks the use of these tracks in order to fulfill its obligations under the ordinance of April 14, 1913. The joint use of the tracks is something that is being forced, in a measure, upon both companies for the benefit of the public whose streets they occupy. They stand on equal footing and no reason exists for discriminating between them in the matter of liability. It is the view of this Commission that the Northern Company is entitled to a 'just and adequate compensation' for the use of its property, but that it can not be relieved from its proper responsibilities."

COMPENSATION FOR USE OF TRACKS AND OVERHEAD SYSTEM.

Both companies appear to consider that a compensation based upon a rate per car-mile would be satisfactory, but fail absolutely to agree upon what that rate should be. The Milwaukee Electric Railway & Light Company proposes a rate that will vary from 2½ cts. to 6 cts. per car-mile, depending upon the number of car-miles it operates over these tracks, while the Chicago & Milwaukee Electric Railway Company proposes a fixed rate of 25 cts. per car-mile.

The Commission's objections to attempting to fix a compensation based upon a rate per car-mile are set forth in the case before referred to—*The Milwaukee Electric Railway & Light Co. v. Milwaukee Northern Railway Co.* The ton-mileage basis determined upon for use in that case will apply also to the case in hand.

Supplying the Electrical Energy.

There is a decided difference of opinion between the two companies as to which shall supply the power for the operation of the cars over this piece of track, each company claiming that privilege.

The Milwaukee Electric Railway & Light Company advances as its reasons for believing that it should furnish the power, first, that it is willing to supply the power at a lower rate per kilowatt-hour than the cost to the Chicago & Milwaukee Electric Railway Company for power delivered to its trolley wire under present conditions, and second, that it can furnish a more reliable supply than the other company, because of the following conditions:

1. Its source of supply in this district will be very close, so that it can furnish current of good voltage.
2. It has several feeder cables available so that the supply would not be dependent upon a single cable.
3. The Chicago & Milwaukee Electric Railway Company purchases the power it uses in Milwaukee from The Milwaukee Electric Railway & Light Company, the power being generated at a power station near Wells street and transmitted underground and overhead a distance of three and one-half or four miles to a substation of the Chicago & Milwaukee Electric Railway Company at the extreme south limits of the city. It is there transformed from alternating to direct current and discharged into the feeder system of the Chicago & Milwaukee Electric Railway Company and carried back a distance of some three and one-half miles over a single feeder cable, crossing two branches of the river by submarine cable; thus the power is of low potential, or voltage, compared to the power that can be furnished by The Milwaukee Electric Railway & Light Company.

For its part the Chicago & Milwaukee Electric Railway Company insists upon its right as owner of the tracks in question, to furnish the necessary power and in addition contends:

(a) That, under its present contract for power, provision is made for a minimum consumption. If The Milwaukee Electric Railway & Light Company furnishes the power for this piece of track and charges the Chicago & Milwaukee Electric Railway Company for the proportion the latter uses, the condition might arise wherein the consumption of power by the Chicago & Milwaukee Electric Railway, on the remainder of its system, would drop below the minimum provided for in the contract,

in which case the Chicago & Milwaukee Electric Railway Company would have to pay for power it had not been able to consume because it was not allowed to supply its own power on Wells street and at the same time it would have to pay for the power which it took from The Milwaukee Electric Railway & Light Company on Wells street. In other words, the Chicago & Milwaukee Electric Railway Company might have to pay double for a portion of its power.

(b) The Chicago & Milwaukee Electric Railway Company does not suffer from power trouble at present, and is in a position to furnish reliable power on the piece of track in question.

This Commission believes that it is within its authority to decide which company shall supply the power.

It would be possible, in order to avoid dispute as to which company shall furnish the power, to string two sets of trolley wires over the tracks in joint use so that each company could use its own power. If such an arrangement were satisfactory to the companies interested, the Commission would probably offer no objection to the arrangement. Such an arrangement would simplify the matters of bookkeeping and compensation, but it is open to the criticism that the opportunity would then exist for cars of one company to take power from the wires of the other company by merely shifting the trolley pole from one wire to the other. On a short piece of track there would be but little incentive, perhaps, for the car men to make use of the opportunity, but on a long piece of track, under such joint usage, the opportunity might, for a number of reasons, be used. A mistaken sense of loyalty to the employing company or a personal grudge against the other company might be causes, or if there existed an appreciable difference in the potential of the two power supplies, there would be a temptation to take power from the wire that permitted easier and faster operation of the cars. Such a theft of power would be difficult to detect and to guard against, and even though no theft, intentional or otherwise, actually occurred, the situation would create an opportunity for suspicion and recrimination between the companies. For these reasons the Commission does not feel inclined to order the installation of two sets of trolley wires.

The Commission is inclined to the view that in cases such as the present, where joint use of tracks is proposed, the company owning the tracks should be permitted to furnish the power if it so desires, provided it is in a position to furnish a power that

will be reliable in character and adequate in quantity and quality. But when conditions are such that the owning company cannot furnish a satisfactory power, other provision must be made. It would be ridiculous for the Commission to order the joint use of a piece of track and at the same time permit the use of a power supply that was manifestly inadequate for the operation of cars thereover. Furthermore, the company that furnishes the power must be in a position to meet adequately the requirements of the traffic under both normal and emergency conditions.

Investigation on the part of the Commission has developed the following facts:

(a) The Chicago & Milwaukee Electric Railway Company buys a. c. power from The Milwaukee Electric Railway & Light Company and transforms it to 625 volt d. c. at its substation situated at the southern city limits. The substation capacity is 2,000 kw. in rotary converters which is sufficient to handle any probable demand arising from the proposed joint use.

(b) The current is transmitted from the substation to the trolley over one 750,000 c. m. feeder cable which extends to a point on Wells street within 45 feet of Second street. There are two places where submarine cable is used. Each of these submarine cables is in duplicate so that current can be switched from one to the other in case of trouble. The company's records show that there has never been any trouble on account of these cables. The distance from the substation to Wells street is approximately 3¼ miles. This feeder cable has given satisfactory service to date.

(c) The matter of minimum consumption under the Chicago & Milwaukee Electric Railway Company's contract for power need not be considered since the Chicago & Milwaukee Electric Railway is able to use to advantage on other portions of its system the small amount of current it may save on Wells street.

(d) The Milwaukee Electric Railway & Light Company could supply power from either the Oneida street station or the Commerce street station, both of which are nearby, so that plenty of current at good voltage can be supplied. A feeder cable from the Oneida street station would be between 1,000 and 1,500 feet in length.

(e) The Milwaukee Electric Railway & Light Company has a number of feeder cables available to serve this piece of track.

(f) While the Chicago & Milwaukee Electric Railway Company could probably take care of the power requirements arising from joint use under normal conditions, it is not equipped to supply the current that may occasionally be required under

emergency conditions. With one 750,000 c. m. feeder cable 3¼ miles long two 3/0 trolleys and a double track rail return, the total resistance in the feeder circuit, under the best conditions, would be at least 0.21125 ohms. In case of a blockade eighteen cars might be concentrated on one of the tracks between Second and Fifth streets with possibly seven or eight cars on the other track. Tests made with certain city-type cars of The Milwaukee Electric Railway & Light Company indicate that the cars, in starting, take from 100 to 130 amperes of current. It is almost certain that many of the cars will take current simultaneously when they begin to move. Assuming that fifteen cars are taking current on the first point of the controller, or say 120 amperes per car, the demand will be 1,800 amperes. These 1,800 amperes, flowing through a resistance of 0.21125 ohms produces a drop of 380 volts, which is excessive and exceeds the continuous safe carrying capacity of trolley and feeders. Such a voltage drop would not be considered good practice under the conditions. These calculations omit from consideration any other cars which might be on the remainder of the line of the Chicago & Milwaukee Electric Railway within the city limits. The current demands of such cars would of course increase the voltage drop beyond the 380 volts above mentioned.

(g) The actual cost of transmitting alternating current to the Chicago & Milwaukee Electric Railway Company's substation at the city limits, transforming it and carrying it back to Wells street, will be greater than the actual cost of supplying the current direct from the Oneida street or the Commerce street stations.

A consideration of these facts leads to the conclusion that the Chicago & Milwaukee Electric Railway Company can not meet the demand for current that may arise in cases of emergency, whereas The Milwaukee Electric Railway & Light Company is able to meet all demands, and furthermore can furnish the power in a much more economical manner. The Milwaukee Electric Railway & Light Company, therefore, should furnish the power.

Compensation for Electrical Energy.

The Milwaukee Electric Railway & Light Company proposes to furnish power for the tracks under joint use, charging the Chicago & Milwaukee Electric Railway Company a rate of 1 ct. per kilowatt-hour for the energy consumed by the latter company. The statement was made during the hearing that the Chicago & Milwaukee Electric Railway Company, under its pres-

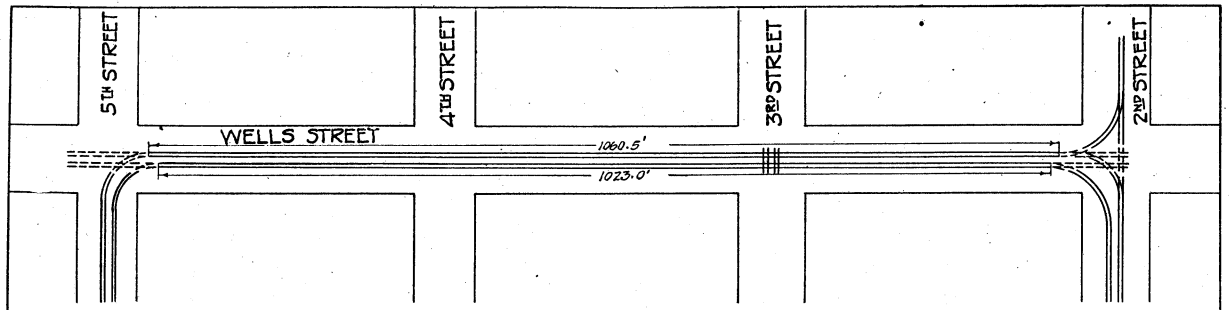
ent arrangement for power, pays from 1.4 cts. to 1.7 cts. per kilowatt-hour. This statement has not been refuted. Apparently, therefore, the proposed rate of 1 ct. per kilowatt-hour will not result in putting the Chicago & Milwaukee Electric Railway Company to any additional expense for power. Under the circumstances it appears better to use the proposed rate rather than to fix a rate based upon what it now costs the Chicago & Milwaukee Electric Railway Company to furnish power on these tracks.

The Commission finds that public convenience and necessity require the use by the Milwaukee Electric Railway & Light Company of the tracks, wires and poles of the Chicago & Milwaukee Electric Railway Company on Wells street between Second and Fifth streets in the city of Milwaukee and that such use will not prevent the owner or other users thereof from performing their public duties nor result in irreparable injury to such owner or other users of such tracks, wires or poles or in any substantial detriment to the service.

IT IS THEREFORE ORDERED, That the Chicago & Milwaukee Electric Railway Company, hereinafter called the Chicago company, permit the joint use of that portion of its system located on Wells street between Second street and Fifth street in the city of Milwaukee, by the cars of The Milwaukee Electric Railway & Light Company, hereinafter called the Electric company, and by the cars of any other company or companies which said Electric company may operate over its own tracks, said joint use being subject to the following terms and conditions which terms and conditions shall be subject to modification in whole or in part at any future time by order of this Commission.

SECTION 1. That portion of the system of the Chicago company of which joint use is hereby ordered is indicated on the plan shown in the figure on page 313.

SECTION 2. To the Chicago company is expressly reserved the prior, paramount and preferential right to the use of its said tracks and power in the city of Milwaukee, anything herein to the contrary notwithstanding, and in no event shall the operation of cars by the Electric company over and upon said tracks under this order be permitted to interfere materially with the operation of the cars of the Chicago company nor of the cars of any other company or companies which the Chicago company may from time to time operate over its said tracks, nor the furnishing by the Chicago company of adequate service to the pub-



DOTTED LINES SHOW TRACK AND SPECIAL WORK TO BE INSTALLED BY T.M.E.R.&L.CO.

LENGTH OF NORTH TRACK TO BE USED IN FIGURING TON MILEAGE = 1060.5'

LENGTH OF SOUTH TRACK TO BE USED IN FIGURING TON MILEAGE = 1023.0'

lic. The electric company shall not have the right to operate cars over said tracks on any schedule or schedules that shall interfere with the Chicago company's operation.

SECTION 3. To the Chicago company is expressly reserved the right to make, from time to time, such reasonable rules and regulations governing the operation of all cars over and upon said tracks as may be necessary or desirable, such rules and regulations not to discriminate unduly in favor of the cars of any company. The Electric company will abide by said rules and enforce the observance thereof by its employes.

SECTION 4. The Electric company shall, at its own expense, connect said double track of the Chicago company by suitable frogs and switches with its own double track to the east and west thereof, as shown upon the plan shown above, but nothing herein contained shall be construed as curtailing the Chicago company's rights and franchises or affecting its title to and control of a continuous track, and if, at any time, operation under this order shall be lawfully terminated and in the opinion of this Commission the joint use of said portion of the Chicago company's system shall be no longer required, it shall be the duty of the Electric company to remove said frogs and switches and to replace them with the necessary rails and splices and to do such other work and make such other changes as may be necessary to provide a continuous track for the Chicago company of a type of construction equal to that existing at the time said removal is made.

SECTION 5. *Paragraph 1.* The Electric company shall, at its own expense, make the necessary connections between its own system of poles, wires and fixtures and the poles, wires and fixtures of the Chicago company so as to permit the Electric company to transmit its power to the Chicago company's overhead system for the operation of all cars which may, from time to time, use that portion of the Chicago company's tracks.

Paragraph 2. Neither of the companies shall be required to erect a second set of trolley wires; but, except as hereinafter specifically set forth, only one set of trolley wires shall be erected and maintained, which trolley wires shall be used in common by all cars which may operate upon said tracks.

Paragraph 3. If, however, either company should change its power or its method of transmission of power so as to require changes in the operation, appliances or rolling stock of the other

company or to hamper or impede materially the operation of the cars of the other company, then and in that event, if reasonably practicable without unduly interfering with the operation of the Chicago company's overhead system and cars, the Electric company may, at its own expense, attach to and suspend from said poles and overhead system of the Chicago company, such wires, cables, feeders and fixtures as may be necessary for the successful operation of its cars by means of its own power.

Paragraph 4. Nothing herein contained shall be construed as curtailing the Chicago company's rights and franchises or affecting its title to and control of a continuous overhead system, and if at any time operation under this order shall be lawfully terminated, and in the opinion of this Commission the joint use of said portion of the Chicago company's system shall be no longer required, it shall be the duty of the Electric company to remove said connections and to do such other work and to make such other changes as may be necessary to provide a continuous overhead system for the Chicago company of a type of construction equal to that existing at the time such removal is made.

SECTION 6. *Paragraph 1.* From and after the commencement of the joint use of said tracks, the Chicago company shall, at its own expense, maintain, replace and renew that portion of its double tracks and overhead system in joint use, so that the same shall be kept at all times in good condition and repair; that the Electric company shall, at its own cost and expense, maintain, replace and renew the frogs and switches mentioned in section 4 and the connections between its overhead system and the overhead system of the Chicago company and the wires, cables, feeders and fixtures mentioned in section 5, so that the same shall be kept at all times in good condition and repair.

Paragraph 2. Should either company fail or refuse, upon written notice given by the other company, to make such repairs or renewals as may be necessary to keep said property in good repair and condition, and should such failure continue for an unreasonable time after receiving such notice specifying the defect and requesting the same to be remedied, then the company giving such notice shall have the right and is hereby given the right to enter upon the property of the other company and remedy such defect by making the necessary repairs and renewals forthwith and the other company shall repay it the cost of all materials and labor actually employed in making such repairs

and renewals, together with the overhead expenses properly chargeable thereto.

SECTION 7. The Electric company shall furnish all the electrical energy required for the operation of cars over said portion of Wells street between Second and Fifth streets for a period of three years, beginning at the time the Electric Company shall commence the operation of its cars thereover, and at the expiration of said three year period, upon application of either company, this Commission will determine which party shall thereafter furnish said electrical energy and the conditions under which the same shall be supplied.

SECTION 8. Each company shall, at all times, keep its track, overhead system and rolling stock in first class operating condition.

SECTION 9. Each company shall pay and discharge all car licenses or special taxes legally imposed on the cars operated by it, or under its authorization, over said tracks on Wells street.

SECTION 10. *Paragraph 1.* The Chicago company shall hold the Electric company harmless from any liability arising from any failure of the Chicago company to comply with and fulfill its common law duties and the terms and conditions of its franchises, licenses and permits, and of any lawful ordinances, resolutions and regulations having reference to said tracks on Wells street and to the street between and adjacent to said tracks.

Paragraph 2. The Electric company shall hold the Chicago company harmless from any liability arising from any failure of the Electric company to comply with and fulfill its common law duties and the terms and conditions of its franchises, licenses and permits, and of any lawful ordinances, resolutions and regulations having reference to said tracks on Wells street and to the street between and adjacent to said tracks.

Paragraph 3. In case either company shall fail to comply with or fulfill any of said duties, terms and conditions within thirty days after receiving written demand therefor from the other company, then and in that event, the company making said demand may itself, at its option, do what is necessary to comply with or fulfill said duties, terms and conditions, and the reasonable cost thereof shall, on demand, be repaid to said company so complying with or fulfilling said duties, terms and conditions by the company so failing as aforesaid.

SECTION 11. *Paragraph 1.* The Chicago company shall indemnify and save the Electric company harmless from any loss, damage or expense which said Electric company may sustain to its own property or to property in its custody or by reason of injuries to its agents, employes, or passengers, when said loss, damage or expense is caused by the operation of cars or equipment of the Chicago company or the cars or equipment of any other company which said Chicago company may have in its custody.

Paragraph 2. The Electric company shall indemnify and save the Chicago company harmless from any loss, damage or expense which said Chicago company may sustain to its own property or to property in its custody or by reason of injuries to its agents, employes, or passengers when said loss, damage or expense is caused by the operation of cars or equipment of the Electric company or the cars or equipment of any other company which said Electric company may have in its custody.

Paragraph 3. Provided that, when said loss, damage or expense is caused by the fault or negligence of both companies, their servants, or employes, in the operation of cars or other equipment over said tracks, then and in that event each company shall bear one-half of such loss, damage or expense, excepting attorney's fees.

Paragraph 4. In case any claims are made or actions brought against one of the companies, based solely upon the operation of the cars or equipment of the other company, then the company against which such claim is made or action brought may give written notice thereof to the other company and the other company shall at its own cost and expense settle such claim or defend action brought thereon.

Paragraph 5. In case action is brought against either company and the company against which such action is brought shall claim that the other company is liable for one-half of the damages demanded in said action, and they do not agree concerning such liability, then the company against which the action is brought shall notify the other company of such action, and the latter shall have the right to appear in said action and participate in the defense thereof, and shall have the right to defend said action to the court of last resort in the name of the company sued in the event that the company sued shall fail, neglect or refuse so to defend or prosecute said action.

SECTION 12. *Paragraph 1.* On or before the last day of each month the Chicago company shall pay to the Electric company as compensation for the electrical energy provided by the Electric company and consumed by the Chicago company during the preceding calendar month in operating its cars over the tracks in joint use, a sum equal to the electrical energy so consumed multiplied by the rate of one cent per kilowatt-hour.

Paragraph 2. The total amount of energy drawn from the overhead system on Wells street between Second street and Fifth street by all of the cars operating over the tracks on said portion of Wells street shall be measured by a suitable recording meter or meters located on said portion of Wells street and connected to said overhead system, said meter or meters to be installed, maintained, replaced and renewed at the expense of the Electric company. Said meter or meters shall be read at noon on the last day of each calendar month and each company shall have the right to have a representative present at the time of said reading.

Paragraph 3. The amount of energy consumed by the Chicago company shall be considered as having the same ratio to the total energy drawn from the overhead system on said portion of Wells street, as the ton-miles operated over said tracks by the Chicago company bear the total ton-miles operated over said tracks, the ton-miles to be determined as hereafter provided in Section 14.

Paragraph 4. If either company shall have reason to believe that the meter registers inaccurately, it shall have the right to require that a test be made of said meter, and shall make a request therefor in writing upon the other company, whereupon such meter shall be tested and calibrated in the presence of duly appointed representatives of both companies, and if, as a result of such test, the meter shall be found to be inaccurate it shall be restored to an accurate condition or a new meter shall be substituted. Any meter tested and found not more than 2 per cent either above or below normal shall be considered correct.

Paragraph 5. If as a result of such test the meter shall be found to register in excess of 2 per cent either above or below normal, then the reading of said meter previously taken shall be corrected according to the percentage of inaccuracy found, but such correction shall not be applied to readings taken previous

to the beginning of the calendar month preceding that in which such inaccuracy shall have been so discovered.

Paragraph 6. In the event that such a test, made upon written request of the Chicago company, shall show that the meter does not register in excess of 2 per cent above normal, the Chicago company shall pay the entire cost of making said test, otherwise the cost of such test shall be borne by the Electric company.

Paragraph 7. Each company shall have the right to maintain a seal upon each and every meter.

SECTION 13. *Paragraph 1.* On or before the last day of each month the Electric company shall pay to the Chicago company as partial compensation for the use during the preceding calendar month, of the Chicago company's said tracks and other property, the following amounts:

(a) Such proportion of the monthly cost to the Chicago company of maintaining that part of its system (including paving) that is located on said portion of Wells street and is used by the Electric company, in good condition and repair, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

(b) Such proportion of the monthly net cost to the Chicago company of so renewing, replacing and reconstructing that part of its system (including paving) that is located on said portion of Wells street and is used by the Electric company that the same is kept at all times in good condition and repair, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

Paragraph 2. The net costs to the Chicago company of renewals, replacements and reconstruction shall be determined as follows: Upon the date when the cars of the Electric company begin to operate over said tracks, the total accrued depreciation as of that date, hereafter called the *initial accrued depreciation* on said portion of the Chicago company's system (including paving) located on Wells street shall be determined by this Commission and at such time as operation under this order shall be lawfully terminated the *final accrued depreciation* shall be determined according to the same methods employed in finding the initial accrued depreciation. The difference between the initial and the final accrued depreciations shall be added to or subtracted from the cost of all renewals, replacements and reconstruction made, during the life of this order, to said portions of

the Chicago company's system, said difference being added if the final accrued depreciation is greater than the initial accrued depreciation and subtracted if smaller, and the result so obtained shall be considered the *total net cost*.

Paragraph 3. The said *monthly net costs* to the Chicago company of renewals, replacements and reconstruction on said portion of its system (including paving) shall be that portion of said costs falling due and payable each month. The said difference between the initial and the final accrued depreciations shall be considered as falling due and payable at such time as operation under this order shall be lawfully terminated.

Paragraph 4. The initial accrued depreciation as of the date above specified shall be taken as Two Thousand Four Hundred and Thirty Eight ($2,438) Dollars.

Paragraph 5.

(c) One-twelfth (1-12) of such proportion of an annual return of 8 per cent of the value new of that part of the Chicago company's system (including paving) that is located on said portion of Wells street and is used by the Electric company, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

Paragraph 6. Said value new at the date of this order shall be taken as Seventeen Thousand Six Hundred and Fifty Four ($17,654) Dollars, said value being based upon a consideration of all the factors entering into the case and being, in the opinion of this Commission, a proper value to use in this instance.

Paragraph 7. On or before the last day of each July, the Electric company shall pay to the Chicago company as partial compensation for the use during the preceding fiscal year, of the Chicago company's said tracks and other property:

(d) Such proportion of the annual taxes paid by the Chicago company upon that part of its system (including paving) that is located on said portion of Wells street and is used by the Electric company, as the ton-miles operated thereover by the Electric company bear to the total ton-miles operated thereover.

SECTION 14. In the determination of the number of ton-miles operated over said tracks, only the weights of the cars themselves operating thereover shall be considered; the weight of any passengers, freight, express matter or other loads shall not be taken into account. The term "ton" shall be taken to mean the short ton of two thousand (2,000) pounds.

SECTION 15. *Paragraph 1.* On or before the 20th day of each month, each company shall render a statement to the other company, showing the ton-miles operated by the company rendering the statement during the preceding calendar month over the tracks on said portion of Wells street. The Chicago company shall include in its statement to the Electric company the amounts it has paid during the preceding calendar month for maintenance and for renewals, replacements and reconstruction in connection with said portion of its system. Such statements shall be the bases upon which are computed the monthly payments hereinbefore specified.

Paragraph 2. On or before the 20th day of each July the Chicago company shall render to the Electric company a statement showing the amounts it has paid for taxes in connection with said portion of its system during the preceding fiscal year and such statements shall be the bases upon which are computed the annual payments specified in paragraph 7 of section 13.

Paragraph 3. Each company shall give the other company access to its books and records for the purpose of verifying the accuracy of any and all reports, statements rendered or claims made pursuant to the terms of this agreement.

Paragraph 4. Any overpayment or underpayment shall be adjusted and paid yearly. The 30th day of June shall be considered the end of the fiscal year for the purposes of this order and the adjustment and payment shall be made on or before the first day of September following.

SECTION 16. All notices provided to be given by either company to the other under this order shall be given in writing and served by registered mail on the president, vice president, or general manager for the time being.

SECTION 17. Thirty days is considered a reasonable length of time within which to comply with the terms and conditions of this order.

JOHN HOFFMAN & SONS COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, CHICAGO AND NORTH WESTERN RAILWAY COMPANY, GREEN BAY AND WESTERN RAILROAD COMPANY.

Submitted May 6, 1913. Decided Dec. 4, 1913.

Complaint is made that the respondent railway companies have failed to comply with the order issued in this matter on Aug. 15, 1912 (9 W. R. C. R. 530), requiring them to so arrange their schedules that goods shipped in less than carload lots from Milwaukee to Seymour, Black Creek and Shiocton shall reach their destination within 84 hours from the time of delivery to the carrier at Milwaukee. The advisability of modifying the provisions of this order is under consideration. It appears that if a shipment does not reach its destination in 66 hours, it is inevitably delayed another 24 hours and it was suggested by the respondents that the order be modified to allow 90 hours in transit instead of 84, since a limitation to 84 hours is in effect a limitation to 66 hours.

Held: A 66 hour limit allowing 36 hours, after 6 p. m. of the day on which the goods are received, for transportation over the C. M. & St. P. Ry. or the C. & N. W. Ry. from Milwaukee to Green Bay and 30 hours for the Green Bay & Western R. R. Co. to sort the goods and carry them from Green Bay to the points designated, is reasonable. The respondents are therefore ordered to so arrange their schedules as to comply with this limit.

REHEARING.

An order was issued in this matter on August 15, 1912, requiring the respondent railway companies to so arrange their schedules that goods shipped in less than carload lots from Milwaukee to Seymour, Black Creek and Shiocton shall reach their destination within a period of eighty-four hours from the time that the said goods are delivered to the carrier at Milwaukee (9 W. R. C. R. 530). Subsequently the Commission received several complaints from the petitioner to the effect that two of the respondents, the Chicago, Milwaukee & St. Paul and the Green Bay railway companies had failed to comply with the order. The matter was placed before the railway companies, and in view of the representations made by them it was deemed

advisable to order a rehearing for the purpose of ascertaining whether any conditions exist which warrant a modification of the former order.

This rehearing was held on May 6, 1913, at Madison, with the following appearances: For the petitioner, *E. W. Hoffman;* for the C. & N. W. Ry. Co., *C. A. Vilas;* for the C. M. & St. P. Ry. Co., *J. N. Davis;* for the G. B. & W. R. R. Co., *J. B. Call.*

It appears from the testimony that goods delivered in Milwaukee in the afternoon for shipments to the points designated in the order over the line of the Chicago, Milwaukee & St. Paul Railway Company, leave Milwaukee at an early morning hour and are scheduled to arrive at Green Bay between 3 p. m. and 7 p. m. on the same day. The superintendent of the Chicago, Milwaukee & St. Paul Railway Company testified that under ordinary circumstances 36 hours would be ample time for the shipment of goods from Milwaukee to Green Bay and for the delivery of such goods to the Green Bay & Western Railroad Company. The superintendent of the Chicago & North Western Railway Company stated that the time required on his road is substantially the same as that required on the Chicago, Milwaukee & St. Paul Railway Company's line. Since the distance from Green Bay to Shiocton, the most distant point involved, is only 31 miles, it is obvious that the chief source of delay lies in the sorting of goods at Green Bay after they are received by the Green Bay & Western Railroad Company.

It was developed at the hearing that if a shipment does not reach its destination in 66 hours, it is inevitably delayed another 24 hours. For this reason it was suggested that the order be modified to allow 90 hours in transit instead of 84, since a limitation to 84 hours is in effect a limitation to 66 hours. Under a 66 hour limit, if an allowance of 36 hours is made for the shipment over the line of the Chicago, Milwaukee & St. Paul Railway Company or the line of the Chicago & North Western Railway Company, 30 hours will be left for the Green Bay & Western Railroad Company to sort the goods and carry them from Green Bay to the points designated. In our judgment 30 hours should be ample for this operation, except under very abnormal conditions.

Our former order herein is therefore modified; and

IT IS HEREBY ORDERED: 1. That the respondents, the Chicago, Milwaukee & St. Paul Railway Company and the Chicago & North Western Railway Company, so arrange their schedules that goods shipped in less than carload lots from Milwaukee to Seymour, Black Creek and Shiocton shall be delivered to the Green Bay & Western Railroad Company at Green Bay within 36 hours after six p. m. of the day upon which the goods are delivered to the carrier in Milwaukee.

2. That the respondent, the Green Bay & Western Railroad Company, so arrange its schedule that goods in less than carload lots destined for Seymour, Black Creek and Shiocton, from Milwaukee via the Chicago, Milwaukee & St. Paul Railway Company, or the Chicago & North Western Railway Company, shall reach their destination within 30 hours after their delivery to said Green Bay & Western Railroad Company at Green Bay.

IN RE APPLICATION OF THE MANITOWOC GAS COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Aug. 26, 1913. Decided Dec. 4, 1913.

The Manitowoc Gas Co. applies for authority to put into effect a schedule of increased rates. The present rates are the result of a series of rate amendments made voluntarily by the utility since 1907 and effecting successive reductions, apparently for the purpose of developing business. The utility now compares favorably, in respect both to number of consumers and sales per consumer, with other gas utilities in the state operating under similar circumstances, and it is unlikely that anything more than a gradual, normal development of the business will be experienced in the future. A physical valuation of the property was made and the total value, including all elements, established as between $196,000 and $200,000, a final statement of the value of the property not being necessary to the decision of the case. The utility offers no valuation of the property as a whole but submits a brief enumerating amounts claimed for various elements of value. This brief is considered in detail. Investigation of the earnings and expenses of the utility for the past two fiscal years shows that when proper charges are made to operating expenses for promotion of business, general expenses and depreciation the amount available under the present rates for interest and profits is insufficient to provide even a 6 per cent return on the value of the property when taken at the lower figure stated above. To arrive at a schedule of rates which will yield a fair return, tentative apportionments of expenses between consumer and output expenses are made upon an assumed valuation of $200,000 for interest rates of 6 and 7 per cent, respectively, and estimates are made of the revenues which, as shown by the experience of other gas plants investigated by the Commission, would probably result from a number of different rate schedules.

It is clear that the par value of the bonds of the utility is much in excess of the value of the property by which they were secured and that the bonds were issued to take the place of outstanding liabilities. Under these circumstances very little, if any, allowance can be made in the valuation for the item of bond discounts.

Held: Although some increase in revenues is needed under existing conditions, the increase asked for by the utility is unnecessarily large. The utility is therefore authorized to put into effect a rate of $1.05 per thousand cubic feet, net, or $1.15 gross, for fuel and illuminating gas. All other rates are to remain as at present.

This is an application under date of December 23, 1912, by the Manitowoc Gas Company for authority to increase its rates

for gas. As set forth in the application the applicant's lawful rates are as follows:

1. *Minimum bill:* 25 cts. per month.
2. *Charge for resetting meters:* 75 cts. when consumer has ordered meter removed within one year previously, on the same premises.
3. *Commercial gas:* $1.25 per 1000 cu. ft. with a discount of 25 cts. per 1,000 cu. ft. if bill is paid by the 10th of the month following that in which gas is used.
4. *Industrial gas:* $1.00 per 1,000 cu. ft. for first 10,000 cu. ft. consumed in any one month and 80 cts. per 1,000 cu. ft. for the excess.
5. *Engine gas,* for installation up to 50 h. p.: When the consumption falls below 500 cu. ft. per h. p., $1.00 per 1,000 cu. ft; when the consumption is between 500 and 2,000 cu. ft. per h. p. per month, $1.00 per 1,000 cu. ft. for the first 10,000 cu. ft. and 80 cts. for the excess; when the consumption exceeds 2,000 cu. ft. per month per h. p., $1.00 per 1,000 cu. ft. for the first 10,000 cu. ft., 80 cts. per 1,000 for the next 20,000, and 60 cts. per 1,000 for the excess.

The application sets forth at some length the reasons for asking for an increase. These reasons have been carefully considered and inasmuch as all of the material facts are referred to later in this decision, it is not considered necessary to review the reasons given, at this point.

Applicant asks for authority to put into effect the following schedule, covering the sale of gas for all uses:

Minimum bill, to remain as at present.
Resetting meters, to remain as at present.

Charge for gas.

			Gross	Net
First	1,000 cu. ft. per month	.....	$1.35	$1.25
Next	2,000 " "	.....	1.25	1.15
"	2,000 " "	.....	1.15	1.05
"	5,000 " "	.....	1.10	1.00
"	10,000 " "	.....	1.00	.90
"	10,000 " "	.....	.90	.80
All over	30,000 " "	.....	.70	.60

Discount, a discount of 10 cts. per 1000 cu. ft. to be allowed to consumers who pay their bills on or before the 10th day of the month following the month in which the gas was consumed.

In addition to asking for a schedule of rates as outlined above, the applicant asked for authority to put in effect from

January 1, 1913, a schedule of rates similar in form to the schedule shown, but somewhat lower, which schedule should be temporary, pending the decision of the Commission upon the schedule shown above. The Commission did not authorize the adoption of the temporary schedule asked for and the matter before it in the present case is the schedule of rates which the applicant seeks to have authorized as permanent rates.

Hearing in this matter was held at Milwaukee, August 26, 1913. Appearances were: For the Manitowoc Gas Company, *A. L. Nash* and *R. C. Douglas*, and for the city of Manitowoc, *H. F. Kelly*.

Relatively little in the way of testimony was introduced at the hearing, the attitude of the applicant being that the necessity for an increase at least equal to that asked for in the application was so clear that evidence to substantiate its contentions was unnecessary. So far as the testimony introduced bears upon the issues of this case, it has been carefully considered.

Both the applicant and the city submitted briefs which have been carefully studied in connection with the decision of the case, and reference will be made later to the material portions of them.

Something of the history of the rates which have been charged by the applicant should probably be shown here, as it has a bearing upon the extent to which the business has been developed and upon the causes which have led the utility to make application for an increase at this time.

The rates of the Manitowoc Gas Company were first filed with the Commission on August 27, 1907. On October 4, 1907, an amendment was filed, establishing a uniform minimum charge of 25 cts. per month.

On September 28, 1908, the utility filed with the Commission an application for authority to equalize rates. As indicated in this application, the rates in effect on April 1, 1907, were as follows:

Illuminating gas—Gross $1.50, net $1.25.
Fuel gas—Gross $1.25, net $1.00.
Industrial gas—$1.00 to 80 cts.
Power gas—$1.00 to 60 cts.

The company asked for authority to put into effect the following schedule for gas for illuminating and fuel purposes:

Service charge—25 cts. per month, and a rate for gas of $1.25 gross and $1.00 net.

In its opinion (1908, 3 W. R. C. R. 163—178) the Commission suggested a schedule more nearly in line with the cost of the service than that asked for by the company, but concluded that the schedule asked for should be authorized as a temporary rate.

On June 29, 1909, the Manitowoc Gas Company filed an amendment to its rates for fuel and illuminating gas, making gross rate for both $1.25 per 1,000 cu. ft., with a discount of 20 cts. for prompt payment, making the net rate $1.05 per 1,000 cu. ft. At the same time the company dropped its service charge of 25 cts. per month and filed a minimum bill of 25 cts. per month. These amendments were authorized by the Commission, to take effect July 1, 1909.

On July 1, 1909, the utility withdrew the above mentioned schedule and proposed the following schedule, which was authorized:

Minimum monthly bill—25 cts. Where 400 cu. ft. or less are used per month, $1.50 gross per 1,000 cu. ft., $1.25 net. If more than 400 cu. ft. are used, $1.25 per 1,000 cu. ft. gross, and $1.05 net.

The next amendment to the general schedule became effective September 1, 1911. Under the terms of this amendment the schedule for fuel and illuminating gas became as follows:

Minimum monthly bill, 25 cts. $1.50 gross per 1,000 cu. ft., and $1.25 net when the consumption is less than 400 cu. ft. per month.

$1.25 gross and $1.00 net, when the consumption is more than 400 cu. ft. per month.

This was still further amended as of November 1, 1911, so that the gross rate of $1.25 and the net rate of $1.00 applied to all consumption, regardless of the amount of gas used.

All of these amendments effecting successive reductions in gas rates were made voluntarily by the utility, apparently in the hope that there would be a resulting development of the

business. The following statement of the number of consumers and the amount of gas sold shows the extent to which the business was actually developed:

Year.	No. of consumers.	M cu. ft. sold.
1909	1,809	36,341.5
1910	1,929	37,502.8
1911	2,017	40,950.8
1912	2,087	41,653.5
1913	2,152	41,967.1

It will be noted that there has been a rather steady increase in the number of consumers, but that the amount of gas sold, after increasing rather rapidly for a few years, increased very little during the past year. The amount of gas sold per consumer during this period varied from 19,440 cu. ft. in 1910 to 20,300 in 1911. Both the number of consumers and the sales per consumer compare very favorably with the development reached by other gas utilities in the state which are operating under conditions sufficiently similar to those which prevail at Manitowoc to be comparable. From this it seems probable that whatever the effect of the reductions of rates may have been, it can hardly be expected that anything more than a gradual, normal development of the business will be experienced in the future. This brings us to a consideration of the issues involved in this case.

VALUATION.

A valuation of the physical property of the utility was made by the Commission, as of January 1, 1913. Inasmuch as the financial report for the year ending June 30, 1913, is used as a basis for most of the computations in this case, a valuation of the physical property as of January 1, 1913, may be used as indicative of the average physical value for the year. Following is a summary of that valuation:

Classification.	Cost new.	Present value.
Land	$6,500	$6,500
Transmission and distribution	112,412	97,498
Bldgs. and misc. structures	10,492	8,631
Plant equipment	35,467	29,078
General equipment	7,553	6,043
Total	$172,424	$147,750
Add 15 per cent*	25,864	22,162
Total	$198,288	$169,912
Paving	8,052	7,247
Total	$206,340	$177,159
Material and supplies	7,168	7,048
Total	$213,508	184,207
Non-operating	1,200	500
Total	$214,708	$184,707

* 15 per cent for interest during construction, superintendence, engineering, etc.

It appears that none of the paving has actually been cut through by the utility in laying pipes. With the exclusion of this item and the item of non-operating property, the cost new is $205,456, and the present value $176,960.

In the testimony which was introduced and in the brief which was submitted on its behalf, the utility assumed a rather unusual attitude, that although it considered the value of its physical property to be very much in excess of the amount determined by the Commission, the increase asked for in this case would be required even on the basis of a lower valuation than the utility is willing to accept as final. Although little testimony bearing upon the question of valuation was introduced, the brief which was submitted enumerated the amounts claimed for various elements. In presenting this the utility appears to have taken the position that somewhat greater additions to the physical value could be substantiated by the introduction of testimony, but that it considered the amounts set forth in the brief as indicative of the minimum valuation which should be established for the purposes of this case. Following is a statement of the elements and amounts discussed in the brief as constituting additions which should be made to the value of the physical property as determined by the Commission's engineers:

Materials and supplies	$2,061.00
Services	5,050.00
Distribution system and misc.	932.00
Engineering, supt., int. during construction	15,459.00
Piecemeal construction	13,327.00
Contractors profit 7½ per cent	16,525.00
Bond discount	27,378.00
Working capital	9,000.00
Preliminary investigation	1,000.00
Securing franchises	1,500.00
Incorporating and bond expense	1,000.00
Going value	130,832.00
Total	$224,064.00

The nature and extent of these additions are such that it will probably be best to discuss each of the items for which additions are claimed. Some of the amounts asked for are so unusual as to appear to furnish some basis for the contention of the city that "the method evidently has been to fine-comb the cases for every element of value ever allowed by any court or commission; take each of these elements, pad it up, round it out, throw in some for good measure, and add the results to the staff's figures." Taking up the various elements in detail, we find the following facts:

Materials and supplies: This item was placed at $7,168, cost new, and $7,048, present value, in the engineers' inventory. According to the company's brief a statement of $7,136, submitted in February, 1913, as the value of materials and supplies, did not include $984 for materials at the gas works and certain other items, amounting in all to something over $2,000. This includes a correction of about $1,200 in the coke stock. A letter from the company, dated March 20, 1913, purported to give the value of stores and supplies as of March 1, 1913. If the stores and supplies were greater on March 1 than on January 1, this was never called to the attention of the Commission until the company's brief was filed. It appears that the supplies on hand January 1 were greater than the amount shown in the valuation. It should be noted, however, that the company's balance sheet as of June 30, 1913, shows the value of materials and supplies to be only $6,493.72. Although the value of materials and supplies as of January 1, 1913, may have been more than the amount included in the Commission's valuation, the amount included therein appears to make reasonable provision for this item in view of the fluctuations in the item.

Services: The company's contention that about $5,050 should be added to the value of services has been carefully reviewed and it does not seem that any increase should be made in the Commission's valuation of this item. The Commission's allowances for the cost of services fully cover all costs shown by the company's records. The only basis on which it seems that the company can attempt to support its claim to a higher value than that placed upon this item by the staff is by an apportionment to this construction of a part of the general expenses of construction which should be covered by the allowance made specifically for such expense.

Distribution system and miscellaneous: The company claims that omissions in the Commission's valuation total $932, including certain mains and a number of miscellaneous items. These have been checked over and found to have been included in the valuation as prepared by the Commission.

Engineering, etc., during construction: Under this head may be considered engineering, superintendence, and interest during construction, contractor's profit, cost of preliminary investigation, cost of securing franchises, and incorporation and bond expense. The addition claimed by the company for these items totals $35,484. It is believed that the 15 per cent allowance for various overhead expenses during construction is all that should be made to cover these expenses, with the exception of an allowance for contractor's profit, and the unit prices used in valuing the property include all the allowance which should be made for this item.

Piecemeal construction: For this item the company claims an added value of $13,327. This claim has also been carefully examined and we see no reason for adding to the unit prices used in the valuation of physical property because of this item.

Bond discount: For this the company claims an added value of $27,378. According to the last report of the utility the date of issue of the bonds was June 1, 1907, and the date of maturity is June 1, 1924. The total amount of bonds authorized is $300,000 par value, of which bonds with a par value of $241,000 are outstanding. The total amount realized from the sale of these bonds, according to the report, was $205,277.50. The interest rate is 5 per cent.

The Commission has held that reasonable and necessary bond discounts are an element to be considered in arriving at the

value of a public utility property for rate-making purposes. Some of the facts to be considered in deciding when bond discounts are reasonable and necessary are the interest rate at which the bonds are issued, the relation of the par value of the bonds to the value of the property against which they are issued, and whether the bonds are an original issue to secure money to start utility operations or a refunding issue.

In this case it is clear that the par value of the bonds which were issued is much in excess of the value of the property by which they were secured. The effect of this discrepancy upon the discounts at which bonds were sold is not fully shown, but it seems only reasonable to suppose that the circumstances mentioned bore some relation to the extent of the discount. Also it is doubtless true that, under conditions identical in every other respect, a different rate of interest would have resulted in a different discount. The financial history of the plant, prior to the bond issue of June 1, 1907, is not in the record in this case, but it seems clear that, no matter what the nature of the actual transactions, the new bonds took the place of liabilities of the plant, which in some form had been outstanding previously. Under all these circumstances, it seems that very little if any allowance should be made in our valuation of the property for the item of discounts on bonds.

Working capital: The utility claims an allowance of $9,000 for this item. The exact amount of working capital which should be included is difficult to determine, but we believe that $6,000 is adequate for the purposes of this case.

Going value: The amount claimed by the company for this item is $130,832. We fail to see how such a claim can be supported. Computations of the losses which have been borne by the present company have been made somewhat difficult because of the fact that the amount paid for the property in 1907 is not entirely clear.

If the additions reported by the company since the acquisition of the property are deducted from the valuation of the physical property as made by the Commission for January 1, 1913, and a computation of cumulative gains or losses since 1907 is made, starting with this basis, we find that, on a 6 per cent interest basis, the cumulative gains amounted on June 30, 1913, to $22,799, and on a 7 per cent interest basis, to $10,180.

If the computations are based upon an initial value of $168,092, which, as nearly as the records in this case show, was the cost of the plant in 1907, the accumulated gains on a 6 per cent basis amount to $2,552, and on a 7 per cent basis the accumulated losses were $12,235. The practice of the utility appears to have been to charge all promotion of business expenses to construction, which has made the net earnings for each year appear greater than they would have been if accounts had been kept in compliance with the Commission's classification. This has tended to an overstatement of actual accumulated gains and an understatement of losses. It is clear, however, that no such going value as that claimed by the company can be substantiated.

It may not be necessary in this case to make a final statement of the value of the property. It appears to us to be something less than $200,000. For the purpose of our interest computations we will use $200,000 as a basis, as representing the upper limit of the value of the property, the actual value of which is probably $3,000 or $4,000 less.

Income account: Following is a statement of earnings and operating expenses of the utility for the past two fiscal years as reported by the utility:

	1912	1913
Earnings from gas	$42,032.56	$42,059.06
Earnings from residuals	16,827.80	19,148.09
Miscellaneous operating revenue	7.50	7.50
Non-operating revenue	1,556.26	1,365.90
Total revenue	$60,424.12	$62,580.55
Total expenses excluding interest and depreciation	42,827.54	44,545.55
Available for interest and depreciation	$17,596.58	$18,035.00

It would appear at first sight that the utility has been earning enough to provide for depreciation and a reasonable return on the investment. The utility has followed certain accounting practices, however, which have made its gross income appear greater than it actually was. It seems to have been the practice of the company to charge all promotion of business expenses to construction instead of treating them as operating expenses, as provided by the Commission's classification. These expenses amounted to $2,033.23 in 1912 and to $2,400.02 in 1913. In

1913 the company also charged against construction, general expenses to the amount of $2,730. No objection can be offered to charging a reasonable amount of general expenses to construction, but the amount so charged by the company during 1913 seems unnecessarily large. However, it does not seem reasonable to go to the other extreme suggested by the company in connection with this case, and charge all of the general expenses against operation. Promotion of business expenses should be charged against operation, but it seems that $2,400.02, the amount incurred during the last year, is an unreasonably large allowance. Gas sales were increased only 313,600 cu. ft. during the year, although seventy consumers were added. An allowance of $1,000 per year in operating expenses to cover the costs of promoting business seems to be all that should reasonably be made. Of the general expenses charged to construction during the past year, about $1,500 should be transferred to operating expenses. That is, the bookkeeping methods followed by the utility have resulted in charging about $2,500 less to operation during the past year than should have been so charged in accordance with our classification of accounts. The gross earnings, then, with the addition of $2,500 to operating expenses, are $2,500 less than reported, or $15,535.

The amount available for a return on property will, of course, be to some extent dependent upon the amount which should be reserved to provide for depreciation. The attitude of the company with regard to depreciation is a rather unusual one. Its officials are somewhat inclined to question the necessity of any provision for depreciation, beyond the making of ordinary repairs. Whether this attitude is due in any degree to the fact that the necessity of providing for depreciation lessens the apparent gross earnings, is a matter which need not be determined here. In a letter written to the Commission under date of October 25, 1913, the president of the company suggests an allowance of $2,500 per year for depreciation. The amount which should be set aside to provide for depreciation will depend to some extent on the nature of the items handled by the company as "current repairs," under the head of "Maintenance." An examination of the maintenance charges reported does not show that the policy of the company with regard to these has been such as to enable it to dispense, at least to any considerable ex-

tent, with a reserve to cover depreciation. It is believed that a fair annual reservation is $4,000. Computed strictly upon a sinking fund basis a somewhat smaller annual reservation might suffice, but an allowance of $4,000 per year seems only fair.

With an annual provision for depreciation amounting to $4,000, the amount available for interest and profits would be $11,535 on the basis of the adjusted income account for the past year. Upon a valuation of $200,000 this would be equivalent to a return of a little less than 5.8 per cent, and on a valuation of $196,000 to a return of 5.9 per cent. In order to obtain a 6 per cent return on the valuations mentioned, additional earnings of $465 and $225, respectively, would be required. To obtain a 7 per cent return the required increases would be, respectively, $2,465 and $2,185 per year.

This brings up the question of the nature of the adjustments which should be made if the utility is to be permitted to have certain increases. A tentative apportionment of expenses, with interest, for the purposes of these computations, upon an assumed valuation of $200,000 shows that with interest at 6 per cent consumer expenses are $8,719.18, and output expenses are $33,812.38. On a 7 per cent interest basis these expenses are $9,319.18 and $35,212.38, respectively. Following is a cost curve resulting from the above mentioned apportionment:

6 PER CENT BASIS.

Cu. ft. consumed per mo.	Consumer cost per consumer per month.	Output cost $0.8056 per M.	Total cost.	Cost per M. cu. ft.
1,000	$0.3427	$0.8056	$1.1483	1.1483
2,000	"	1.6112	1.9539	.9769

25,000	"	20.975	21.341	.853
50,000	"	41.950	42.316	.846
100,000	"	83.900	84.266	.843

This shows, in general, the limits of a rate schedule constructed upon a cost basis. Below is a statement of the estimated revenues resulting from a number of rate schedules shown. The distribution of sales assumed has been taken from the records of a number of gas plants for which complete consumer analyses have been made by the Commission. It is believed that this distribution is close enough to the actual distribution of sales in Manitowoc to make its use fair for purposes of this case. If the distribution at Manitowoc is different from that assumed, it will probably be because larger amounts fall in the first increments of use which would make the actual revenue somewhat greater than that estimated. The company has reported revenue from minimum bill charges during the past year, of $410.14, which seems to include all revenue collected from the application of the minimum charge, and not merely the revenue from that portion of the minmum bill which was in excess of the charge for uses of gas which fell within the minimum. Under these circumstances, as our computations which follow apply the rates as shown to all gas sold, only a portion of the revenues reported from minimum bill charges should be considered in estimating revenues under the rates outlined.

The company also reports an earning of $448.33 from the application of the penalty for failure to pay bills promptly. The penalty in use is rather heavy and it is difficult to estimate how much revenue would be produced by the application of a less severe penalty. Refunds, corrections, etc., amount to $223.92. Without an examination of the elements which made up this item it is impossible to state how much should be deducted from apparent earnings because of it. All things considered, it seems

reasonable to expect about $400 per year as net revenue from that part of the minimum bill charges which is in excess of the charge for gas, and from the imposition of a reasonable penalty. This estimated item is shown in the following computations of probable revenue. Aside from earnings from residuals and non-operating revenues as reported for the past year, the total revenue necessary on a 6 per cent interest basis is $42,531.56, and on a 7 per cent interest basis, $44,531.56.

Probable revenues from rates as indicated.

" 10 M "	2,098,355 " .90 "		1,888.52
" 10 M "	839,342 " .80 "		671.47
All over 30 M "	1,259,013 " .60 "		755.41
Total gas sales			$47,632.66
Discounts and minimum bills			400.00
Total			$48,032.66

Following is a statement of the surplus or deficit, on a 6 per cent and a 7 per cent interest basis, resulting from the application of the five schedules shown above:

	6% Basis	7% Basis
Rate No. 1	$486.03	*$1,513.97**
Rate No. 2	800.79	*1,199.21**
Rate No. 3	3,402.74	1,402.74
Rate No. 4	1,514.22	*485.78**
Company's rate	5,501.10	3,501.10

* Deficit.

In all of the above computations an assumed valuation of $200,000 has been used. If a valuation of $196,000 had been used, surpluses shown above on a 6 per cent basis would have been each $240 greater than those shown, and on a 7 per cent basis surpluses would each have been $280 larger, and deficits each $280 smaller.

The deficit under the present rate, with a $200,000 valuation, is $465 on a 6 per cent basis, and $2,465 on a 7 per cent basis. With a valuation of $196,000 the deficit on a 6 per cent basis, with present rates, is $225, and on a 7 per cent basis $2,185.

From the foregoing analysis it is clear that some increase in revenue is needed but that the increase asked for by the utility is unnecessarily large. The extent of the increase which should be authorized may be to some extent dependent upon the possibility of further development of the business. If there should be a marked development of the business, either by increased general use of gas or by the sale of gas to the municipality, the development might make a readjustment of rates possible at some later time. Under conditions as they are, however, it seems clear that an increase of rates should be authorized. The permanency of such increase may be to some extent determined by the growth of the business and of the volume of sales.

THE APPLICANT, The Manitowoc Gas Company, IS THEREFORE AUTHORIZED to discontinue its present rate for fuel and illuminating gas and to substitute therefor a rate of $1.05 per 1,000 cu. ft. net, or $1.15 gross. The difference between the gross and net rates shall constitute a discount for prompt payment. The discount period shall remain as at present. All other rates shall remain as at present. This order shall take effect for the month preceding the next regular bills rendered.

IN RE APPLICATION OF THE TOMAHAWK LIGHT, TELEPHONE AND IMPROVEMENT COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Oct. 2, 1913. Decided Dec. 5, 1913.

The Tomahawk Lt., Tel. & Improvement Co. applies for authority to put into effect for telephone service in the city of Tomahawk a schedule of rates under which subscribers whose telephones are located beyond an exchange radius of ¾ of a mile will be charged rates increased by 25 cts. per month for every ⅛ of a mile or fraction thereof of the distance beyond the exchange radius. Since the hearing the utility has filed, as an alternative plan, a proposed rule requiring subscribers to pay for all extensions in excess of 1,000 feet. A valuation of the telephone property was made and the revenues and expenses of the telephone utility were investigated. It appears that the schedule of rates might perhaps be improved by providing for two party or four party service at a rate lower than that asked for single party service but that no revision of the general rate schedule is necessary at this time.

Ordinarily a city should probably be considered as a unit for purposes of telephone service, but in the present case, inasmuch as the city limits are out of all proportion to the population of the city, it seems reasonable to restrict the exchange radius to the area occupied by persons living under city conditions, even though some persons living within the city limits are thereby excluded.

Held: The additional distance charge proposed by the utility is unnecessarily high, and the exchange radius proposed cannot be approved. The applicant is therefore authorized to amend its rate schedule by providing that its present rates shall apply only within a radius of one mile from the central office, and that for distances beyond this radius an additional charge of 25 cts. per month per one quarter mile of line or fraction thereof shall be made, such additional charge to be divided equally among all telephones on the line.

Application in this matter was filed with the Commission February 3, 1913. The applicant, the Tomahawk Light, Telephone and Improvement Company, is a public utility operating a telephone exchange and electric plant in the city of Tomahawk. As is stated in the application, the lawful rates of this utility for telephone service are $1.00 per month for residence telephones and $2.00 per month for business telephones. It is alleged in the application that because of the additional cost of maintaining telephone lines beyond the exchange radius it is

necessary to have an increased rate based upon the distance which the telephone utility is required to build beyond the exchange radius in order to reach subscribers. The schedule which the utility asks authority to put in effect for this purpose provides a charge of 25 cts. per month for every one-eighth mile or fraction thereof beyond the exchange radius. The distance included within the exchange radius is not stated in the application.

Hearing was held at Madison, on October 2, 1913. *V. E. Extron* appeared for the applicant. There was no appearance in opposition.

At the hearing it was shown that the exchange radius beyond which the applicant desires to have a distance charge put in effect is three-quarters of a mile. It was suggested at the hearing that instead of a rate based upon the distance from the central office, the utility might put into effect a rule specifying that a certain maximum length of line would be built for each new subscriber, and that in cases where a greater length of line was required the subscriber should pay the cost of the additional extension.

After the hearing the utility filed a proposed rule that subscribers should be required to pay for all extensions in excess of one thousand feet, and this rule is before us for consideration in the present proceeding.

A valuation of the property made by the Commission shows that the cost of reproduction new is about $18,235, and that the present value is about $11,586. These valuations apply to the telephone property only. According to the report of the utility for the year ended June 30, 1913, total revenues, including non-operating revenues, amounted to $5,622.61 for the telephone utility. Expenses as reported, exclusive of any allowance for depreciation or for return on property but including an allowance for bad debts and the amount paid for taxes, were $2,770.95. The total number of telephones installed, exclusive of extensions, was 317, so that the reported expense amounted to very nearly $9.00 per telephone. Practically all of these instruments were on single party lines and, so far as the record in this case shows, a good grade of service is being furnished. It has not appeared necessary to take up in detail the division of the operating expenses between the telephone and electric departments. The

methods followed by the utility appear to have been rather arbitrary, but the amount charged to the telephone department for cost of operation and maintenance does no appear to be unreasonable nor to be very much different from the amount which would probably have resulted from an accurate apportionment of expenses. A comparison of these expenses with the cost of operation of telephone exchanges furnishing similar service does not disclose the necessity of any modification of the total for purposes of this case.

With expenses and revenues as reported by the utility for the past year the amount available for interest and depreciation was $2,851.66, which is ample to cover a reasonable allowance for interest, profits and depreciation, and leave a sufficient margin to protect the company from any error arising from an incorrect apportionment of expenses. This being true, it does not appear that the utility is in need of any further revenue. The schedule of rates is perhaps not as well adjusted as it should be in that it does not take into consideration the fact that many subscribers would choose two party or four party service if such service were offered at a lower rate than that which is asked for single party service.

There appears, however, to have been no complaint on the part of subscribers regarding the present rates, and in view of the fact that the gross earnings of the utility are fully sufficient to cover all expenses, including proper allowance for interest, taxes and depreciation, it does not seem necessary at this time to revise the general rate schedule. It undoubtedly costs much more to furnish service to the individual who happens to live at a considerable distance from the central office than to the individual whose telephone is located close to the central office, if the cost of building the individual line is to be charged entirely to the subscriber to be reached by that line. Under the circumstances in this case, however, we are inclined to believe that an exchange radius of three quarters of a mile should not be approved. Ordinarily it would probably be true that a city should be considered as a unit for purposes of telephone service, but in the present case the conditions appear to be so exceptional as to justify some departure from this policy. The city limits seem to be very much out of proportion to the population of the city and to the area which is really built up. An exchange radius

of one mile would, to all intents and purposes, it appears, include all persons who are within the city. That is, it would include all persons living under city conditions, even if it did not include all those who happen to be within the very extensive city limits. Because the city limits happen to be out of all proportion to the size of the city itself it hardly seems reasonable to require the telephone utility to serve all patrons within those limits if such patrons are not really city subscribers in a practical sense.

The Commission has had some occasion to investigate the additional cost of service beyond a given exchange radius and such investigation as we have made indicates that a rate of 25 cts. per one-eighth mile is unnecessarily high. A rate of 25 cts. per month per one-quarter mile or fraction thereof appears to be not unreasonable. In the case of two party lines this 25 cts. per month should be divided between the two parties on the line.

From our investigation of this matter we conclude, therefore, that an exchange radius of one mile is reasonable in view of all the circumstances in this particular case, and that a rate of 25 cts. per month per one-quarter mile or fraction thereof for distances beyond the exchange radius is reasonable.

IT IS THEREFORE ORDERED, That the applicant in this case, the Tomahawk Light, Telephone and Improvement Company, be and hereby is authorized to amend its schedule of rates for telephone service by providing that its present rates shall apply only within a radius of one mile from the central office, and that for distances beyond this radius an additional charge of 25 cts. per month per one-quarter mile of line or fraction thereof shall be made, such additional charge to be divided equally among all telephones on the line.

IN RE APPLICATION OF THE DARLINGTON ELECTRIC LIGHT AND WATER POWER COMPANY FOR AUTHORITY TO INCREASE ITS RATES.

Submitted Feb. 21, 1912. Decided Dec. 5, 1913.

The Darlington El. Lt. & W. P. Co., since succeeded by the Darlington El. Co., applied for authority to increase its rates for electric current. A valuation was made, the revenues and expenses were investigated and the expenses were apportioned between commercial lighting and street lighting.

The city of Darlington opposes the application of the electric company upon the ground: (1) that the decision in a former proceeding (1910, 5 W. R. C. R. 397) is a bar to the present proceeding; (2) that the electric company is not a public utility; and (3) that with proper operation the present rates will be sufficient to pay all operating expenses and provide a reasonable profit. The city alleges also that the service rendered by the electric company is inadequate. The service, however, has been improved to such an extent that the complaint of the city on this point need not stand in the way of a consideration of the petition in the matter of rates.

Inasmuch as an application similar to the one involved in the present proceeding was made to the Commission in 1909 by the petitioner company and later dismissed (1910, 5 W. R. C. R. 397), it is thought advisable to restate briefly at this time the principles which underlie the revision or determination of rates for service rendered by public utilities in this and similar cases, to the end that the grounds upon which the Commission's orders are based may be more widely as well as more clearly understood. The purpose of the Public Utilities Law, which gives the Commission authority over public utilities, is to insure to communities as such and to the people who compose them adequate service at reasonable rates from those corporations or individuals whom the state or the community has by grants of special privileges commissioned to perform such services. In administering the law the Commission is compelled by economic and legal necessities to recognize the fact that investments are made in public utilities not through philanthropy but through a desire for gain and to regard the demand for a reasonable return upon the actual investment as fundamental in establishing and maintaining adequate service for the community—on the assumption, always, that ordinary intelligence and honesty have been shown in establishing the utility. Charges for the service of a public utility should, as a rule, be determined upon cost based upon a reasonable and just value of the property used and useful in giving the service. In determining this value the Commission gives heed to all factors which seem to enter into the composition of a plant and its product, but pays no attention to fancy values claimed by owners, whether they appear in the form of an over-issue of securities or in inaccurate account keeping.

Careful consideration has been given in the present case to the relation between the investment in non-operating property and the costs of operation when current is generated by the utility and when purchased for resale, and allowance is made in the appraisal for the non-operating property upon the basis of its value for stand-by or reserve purposes. Allowance is also made in the consideration of operating expenses for the amortization of the investment in the non-operating property held for stand-by service.

In determining the amount of the minimum bill for commercial lighting it is necessary to make provision for a minimum charge sufficient to cover, in addition to the cost of current used under the minimum, those operating expenses which vary with the number of consumers and which seem to have little relation to the amount of current sold, such as meter, collection and consumer's premises expenses, taxes, depreciation and interest on the utility's investment in consumers' meters and services. The order of the Commission therefore provides for a minimum charge of 50 cts. net per month for 500 watts or less of connected load, plus 5 cts. for each additional 50 watts of connected load.

Held: 1. The Darlington El. Co. is a public utility. 2. Revision of the company's rates is necessary. The company is therefore ordered to put into effect a schedule of rates determined by the Commission for incandescent lighting, street lighting and power service. This schedule is tentative and it may be necessary to revise it after a year's operation under it.

Inasmuch as an application similar to the one involved in this proceeding was made to the Commission in 1909 by the petitioner company and dismissed a year later (5 W. R. C. R. 397), it may be well at this time to restate briefly the principles which underlie the revising or determining of rates for service rendered by public utilities in this and similar cases, to the end that the grounds upon which the Commission's orders are based may be more widely as well as more clearly understood.

The title of the Public Utilities Law imports the fundamental purpose of the measure, which is to insure to communities as such, and to the people that compose them, adequate service at reasonable rates from those corporations or individuals whom the state or the community has by grants of special privileges commissioned to perform such services. These services are for the most part of a character which it would be impracticable, for individuals at least, to adequately render to themselves. The law in Wisconsin is made operative through this Commission, which is clothed with the power to hear complaints and make thorough investigations, or on its own initiative to make investigations and order changes where they appear necessary. The law is thus made flexible and immediately adaptable to any

case wherein the rendering of public service for compensation is called in question.

It is hardly necessary to say that the corporations or individuals who exercise public service functions are neither benevolent nor philanthropic institutions. The desire for gain lies at the foundation of their existence. They will continue to perform the service under ordinary conditions only so long as it is profitable for them to do so. If it becomes unprofitable their failure may take the form of gradually deteriorating service, culminating in more or less complete extinction, or it may be a more sudden lapse, but whatever form it comes in, failure to give the service must result if the returns are insufficient.

The first and chief duty of a controlling body like this Commission is to protect the community and the individuals who compose it from encroachments upon their rights or property, through excessive charges or inadequate service on the part of the public utility. That being true, it naturally follows that in the exercise of its protecting powers the Commission must have a care not to impair the ability of the utility to maintain at a just standard the character of the services and meet the steadily growing demands of the community for more and better service as time passes. In other words, it devolves upon the Commission to regard the demand for a reasonable return upon actual investment and for services rendered on the part of the utility, as fundamental in establishing and maintaining adequate service for the community—on the assumption, always, that ordinary intelligence and honesty have been shown in establishing the utility. More than the welfare of any given utility or community under consideration is involved in this. If the principle were unwisely disregarded in any one case, it would be an effectual bar to the securing of funds to develop new utilities or improve existing ones throughout the entire state.

It is not alone a condition of continuous and improving service that a public utility shall receive reasonable compensation for services rendered, it is a sound economic principle, and one which the courts of last resort of nearly all the states, as well as the United States supreme court, have repeatedly affirmed. If the principle were disregarded by any controlling body, such as the legislature, or a city, or this Commission, an appeal to the courts would bring relief to the utility thus unjustly dealt with.

If therefore there were no higher motive to guide the Commission in determining this question of reasonable compensation to utilities, the desire to have its orders effective through judicial affirmation would be sufficiently impelling.

It should be clear to every one, then, that this Commission in passing upon any utility case, whether it be a petition of the utility for permission to increase its charges, or the complaint of a private consumer or a community that rates are too high or the service inadequate, must give a large share of attention to the question of the ability of the utility to maintain its service.

As the question of the actual value of a utility plant and the cost of service bear a direct and close relation to that of charges for service, scrupulous attention is given in this and other similar cases to valuation and cost. The measure of that attention will be appreciated if the succeeding tables which separate the utility plant into its several elements of value are carefully read. While the Commission gives heed in determining values to all factors which seem to enter into the composition of a plant and its product, no attention is paid to fancy values claimed by owners, whether they appear in the form of an over-issue of securities or in inaccurate account keeping. Charges for service should as a rule be determined upon cost, based upon a reasonable and just value of the property used and useful in giving the service.

STATEMENT OF CASE.

The petition in this matter was filed with the Commission on September 30, 1911, and alleges that the Darlington Electric Light and Water Power Company is entitled to an increase in its rates for electric current for the reason that the amount now charged and received by it is inadequate and insufficient to meet the proper returns upon its investment after payment of expenses and fixed charges. The petitioner desires authority to put in effect the following schedule:

COMMERCIAL LIGHTING.

12	cts.	per	kw-hr.	for	1st	100	kw-hr.	per	month.	
10	"	"		excess	over	100	kw-hr.	and up to	200	kw-hr.
8	"	"		"		200	"	" "	300	"
6	"	"		"		300	"	" "	600	"
5	"	"		"		600	"			

Minimum charge of $1.00 per month. Additional charges of 25 cts. per glower per month for nernst lamps, and of $1.50 per month for enclosed arc lamps, the company to furnish lamp renewals of eight, ten and sixteen candle power carbon filament lamps.

POWER RATES.

Up to 100 kw-hr. per month—8 cts. per kw-hr.

For excess over	100	kw-hr. and up to	200	kw-hr.	..	7	cts.	per	kw-hr.
" "	200	" " "	300	"	..	6	"		"
" "	300	" " "	600	"	..	5	"		"
" "	600	"				4	"		"

Minimum rate of $1.00 per month per horse power or fraction thereof, for motors of one horse power or over, based on nominal rated capacity of motors. 10 per cent to be added to all bills for current if not paid on or before the tenth day of the month following that during which the charges were incurred.

STREET LIGHTING.

Arc lights $80 per lamp of 1,200 candle power per year.

For 60 candle power 6.6 ampere, 75 watts, mazda (or equivalent) lamps, $25 per lamp per year.

Incandescent lights $16 per lamp of 30 candle power per year.

The proposed charges under this head are for service supplied on an all-night moonlight schedule and for a minimum installation of 9 arc lamps and 106 incandescent lamps. It is further proposed by petitioner that if street lighting lamps of higher candle power are required by the city of Darlington a higher rate shall be paid, and that this rate shall be determined by the Commission upon application of the city of Darlington or the company. Petitioner requests that its previous petition, which was dismissed without prejudice to removal, be made a part of this petition.

The city of Darlington, in its answer filed on November 27, 1911, contends that the former proceeding (1910, 5 W. R. C. R. 397) is *res adjudicata* and a bar to this proceeding. The city denies that petitioner is a corporation organized and doing business under the laws of the state of Wisconsin and states that if it be a corporation the petitioner is not a public utility. The city alleges that no grant, directly or indirectly, was ever made from the state of Wisconsin to the petitioner to own, operate manage or control any plant or equipment within the state of Wisconsin for the production, transmission, delivery or furnishing of heat, light, water or power either directly or indirectly to or for the public, at any time or for any period. It is further claimed by the city that the rates are more or less irregular and are not charged as set forth in the petition; that with

proper operation the rates will be sufficient to pay all operating expenses and provide a reasonable profit. The city also alleges that the quality of service is poor and the plant out of repair, poorly managed and inadequate. It therefore prays that the petition be dismissed.

Hearing in this matter began at the county court house in the city of Darlington, February 21, 1912. *E. J. Henning* and *Carey & McDaniel,* by *J. K. Carey,* appeared for petitioner; *Orton & Osborne* for the city of Darlington.

The evidence presented at the hearing related principally to the expense account as shown by the utility's annual reports to the Commission, and to the valuation of the physical property made as of November 1, 1911.

Since the hearing in this case negotiations have been completed between the Darlington Electric Company, successor to the Darlington Electric Light and Water Power Company, and the Interstate Light and Power Company of Galena, Ill., whereby the former company is to purchase all electric energy to be supplied to its consumers in Darlington from the Interstate company. On January 8, 1913, a copy of this contract was filed with the Commission. As a result of this transaction, certain changes took place in the amount and kind of equipment needed in the business. This necessitated a revaluation of the property which has been made as of March 1, 1913.

Improvement in service has also been made to such an extent that the complaint of the city on this point need not stand in the way of a consideration of the petition in the matter of rates. That the plant in question is a public utility and subject to the provisions of the Public Utilities Law appears to be clear. Whether the rates applied for are reasonable is the question to be determined.

VALUATION OF PLANT.

The following table shows the summary of the physical valuation of the plant and material as of March 1, 1913:

TABLE I.

TENTATIVE VALUATION.

As of March 1, 1913.

	Commercial lighting.		Street lighting.		Total.	
	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.
A. Land	$428	$428	$22	$22	$450	$450
B. Transmission and distrib'n	7,631	6,016	2,506	1,314	10,137	7,330
C. Bldgs. and miscellaneous structures	646	646	34	34	680	680
D. Plant equipment	289	289	184	184	473	473
E. General equipment	551	474	45	31	596	505
Total	$9,545	$7,853	$2,791	$1,585	$12,336	$9,438
Add 12 per cent (see note)	1,145	942	335	190	1,480	1,132
Total	$10,690	$8,795	$3,126	$1,775	$13,816	$10,570
F. Paving	.....	.....	.....	.....	.....	.....
Total	$10,690	$8,795	$3,126	$1,775	$13,816	$10,570
H. Material and supplies	688	665	135	74	823	739
Total	$11,378	$9,460	$3,261	$1,849	$14,639	$11,309
J. Non-operating	.....	.....	.....	.....	22,466	14,006
Total	$11,378	$9,460	$3,261	$1,849	$37,105	$25,315

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

According to the above, the total value of the petitioner's operating property, when reproduced new, excluding non-operating property, amounts to $14,639, with a present value of $11,309. A fair apportionment of this between the two classes of service rendered charges about 80 per cent to commercial lighting and 20 per cent to street lighting.

The non-operating property is valued at $22,465, cost new, and $14,006 present value. Careful consideration has been given to the relation between the investment in non-operating property and the costs of operation when current is generated by the utility and when purchased for resale. As careful and complete a study of the conditions involved in this case as it has been practicable for us to make indicates that the amount of non-operating property which can be recognized in the appraisal may be placed at $6,126 present value, that being its value for stand-by or reserve purposes.

INCOME ACCOUNTS.

The following table gives the utility's income accounts for three years:

TABLE II.

[2] $566.29 material used during past year on reconstruction—fire loss.
[3] Deficit.

The item, "Steam generated," in the preceding table was abnormally large for the year ending June 30, 1912, as compared with the same item for 1910 and 1911, or with data from other utilities similarly operated. It is reasonable to suppose that the amounts reported for maintenance cover at least some renewals to plant, and that excessive amounts so charged to operation should be considered in estimating the allowance for depreciation of the plant.

In order to determine the normal costs an income account has been prepared from reports and from information obtained from the books of the company. From these data a statement of operating expenses for the year ended March 31, 1913, has been constructed. These expenses serve as a basis for the apportionments and computations required for the determination of fair and equitable rate schedules. The statement follows:

TABLE III.

OPERATING EXPENSES.

Year Ended March 31, 1913.

OPERATING EXPENSES	
Power	
Electricity purchased	$4,743.25
Maint. transformer station, etc	19.25
Total	$4,762.50
Distribution	
Labor	$120.00
Dist. sys. sups. and exps	72.00
Maint. dist. system	120.00
Maint. meters	60.00
Total	$372.00
Consumption	
Trimming and inspecting lamps (mun.)	$36.50
Lamp supplies (mun.)	180.00
" " (incandescent)	140.00
Customer's premises expense	50.00
Maint. of lamps (mun.)	96.00
Total	$502.50
Commercial	$285.00
Total direct	$5,922.00
General	900.00
Undistributed	145.00
Total above	$6,967.00
Taxes	$128.82
Depreciation	658.75
Interest	904.72
Total above items	$1,692.29
Grand total	$8,659.29

EXPLANATION OF PRECEDING TABLE.

These expenses have been divided between commercial and street lighting service as shown in the summary below. Because the amount of power business was negligible for the period under consideration no attempt is made to treat this class of service separately.

Class of expense.	Class of service.		
	Commercial lighting.	Street lighting.	Total.
Output	$3,646 98	$1,250 75	$4,897 73
Capacity	2,983 02	778 54	3,761 56
Total	$6,630 00	$2,029 29	$8,659 29

The character of each item or group of expenses has naturally been considered in finding the division set forth above. Those expenses that are occasioned by one class of service only have been allotted entirely to that portion of the business while other expenses that are common or incidental to the supply of both classes have been apportioned on bases that furnished common divisors. The expenses have also been grouped, as the foregoing table shows, according to their dependence on the capacity of the equipment or the amount of energy furnished, and these groups have been denominated capacity and output expenses.

For commercial lighting the expenses that are dependent upon the quantity of energy furnished amount to $3,646.98. This is equivalent to 4.03 cts. per kw-hr. as the quantity of current delivered for the year to the commercial customers was about 90,000 kw-hr. But to this cost there must also be added the expenses that depend upon the capacity of the equipment or upon the demand of the commercial devices connected to the system. This added expense is equal to $2,983.02 and brings the entire cost of commercial service to $6,630.00. The average cost of all commercial energy sold is, therefore, 7.34 cts. per kw-hr. which is not much less than the maximum charge under the existing schedule. This involves nothing on account of the value placed on such equipment of the old plant as is no longer useful for furnishing service under present conditions. It is quite apparent, therefore, that if the cost of supplying service to some consumers under favorable conditions runs below the average cost, it is equally true that the cost under less favorable conditions runs higher than the average. This fact is clearly shown in the following table of decreasing costs, where we find that, if a consumer uses his active load only

one hour per day, the average cost of supplying him with service is 10.56 cts. per kw-hr.; but if the active load is used as much as four hours daily, the average cost amounts to only 5.66 cts. per kw-hr.

TABLE IV.

DECREASING COSTS.

Hours' use per day.	Capacity cost.	Output cost.	Total cost per kw-hr.
	cts.	cts.	cts.
1	6.53	4.03	10.56
1½	4.35	4.03	8.38
2	3.26	4.03	7.29
3	2.17	4.03	6.20
4	1.63	4.03	5.66
5	1.30	4.03	5.33
6	1.09	4.03	5.12
8	.81	4.03	4.84
10	.65	4.03	4.68
12	.54	4.03	4.57
15	.44	4.03	4.47
20	.33	4.03	4.36
24	.27	4.03	4.30

With a better load factor the output cost will undoubtedly be lowered considerably below 4 cts., which will further reduce the cost of service. The average yearly cost of current purchased from the Interstate Light and Power Company under the new arrangement and delivered at the Darlington plant, it appears, the average will be about 3.386 cts., assuming that the company purchases 140,000 kw-hr. With certain maintenance and labor charges added, this figure, of course, would be increased.

In view of the facts disclosed by the analysis, it appears that an allowance of about $600 per year for amortization of investment in non-operating property now being held for stand-by service will be equitable under the circumstances.

The unit operating costs shown above were determined without consideration of allowance for non-operating property or property discarded when the company ceased to generate current and began to purchase it. Reasonable allowance for this element would increase the foregoing units by a small amount.

ESTIMATE OF REVENUE

Based on a 9 Cent Maximum Rate.

There is given below an analysis and discussion of the probable effect upon the petitioner's business of a 9 ct. maximum rate per kw-hr. for commercial lighting and a corresponding increase in rates for street lighting:

ESTIMATED REVENUE FROM COMMERCIAL LIGHTING

	Annual kw-hr.	Suggested rate per kw-hr.	Total estimated revenue.
Primary	54,168	9 cts.	$4,875 12
Secondary	27,084	7 "	1,895 88
Excess	9,028	4 "	361 12
Total	90,280		$7,132 12

The total commercial revenue indicated above is about equal to the expense apportioned to this class of service.

The petitioner's application proposes to modify the existing minimum monthly electric lighting bill by increasing it from 50 cts. to $1.00 per consumer per month. It is necessary that provision be made for a minimum charge sufficient to cover those operating expenses which vary with the number of consumers and which seem to have little relation to the amount of current sold. When meter, collection and consumer's premises expenses are added to taxes, depreciation and interest on the petitioner's investment in consumers' meters and services, and when further allowance is made for cost of current likely to be used under the minimum charge, it appears that a minimum charge of $0.50 net per month for 500 watts or less of connected load, plus 5 cts. for each additional 50 watts of connected load, is not unreasonable.

Under the old street lighting contract of November 17, 1896, the city was to pay $1,400 per year. This amount covered 6 arc and 55 incandescent lights lighted until midnight, and in addition covered cost of pumping water. This amount, it appears, was apportioned to the services performed, as follows:

6 arc lights at $5.00 per month	$360.00
55 incandescent lights at $1.00 per month	660.00
Pumping	380.00
Total	$1,400.00

Under the second contract, it appears, the aggregate price paid was $2,140 for the pumping, 7 arcs, and 70 incandescent street lights. No apportionment of this total is given in the contract, but from the records and from statements of the manager it would appear that this total was to be divided as follows:

For all night service—additional per year	$500.00
7 arc lights at $60.00 per year	420.00
70 incandescents at $12.00 per year	840.00
Pumping	380.00
Total	$2,140.00

At $380.00 per year the cost of pumping would be $31.67 per month. From respondent's exhibit No. 5 it appears, however, that the monthly charge was made up as indicated below:

106 incandescent lamps, $1.00 each	$106.00
9 arcs—$5.00 each	45.00
Pumping city water	75.00
Total	$226.00

From this apportionment it appears that the $500 supposedly paid for all night lighting service, under the last contract, has been added to the price of pumping instead of lighting. An examination of the contract dated May 3, 1898, shows no provision for a fixed price per light except the provision that the city is to pay $1.00 per month for each 30 c. p. street light installed in addition to the 70 such lights provided for in the contract. The city denies that any special price is imposed for midnight as distinguished from all night service.

The cost of the street lighting service was found to be about $2,170.29. For the year ended March 31, 1913, the city actually paid to the electric company $1,920.60, although the bills called for a total of $2,292.30 for the period. This $1,920.60 includes a small allowance per month for seven 16 c. p. lamps used for lighting the fire department and pump station, as well as $50 for special lighting during fair week. On the basis of the lamps in service the regular street lighting service provided a

revenue to the electric company of about $1,870 which is $300 less than the cost of this service.

The utility is installing G. E. 220–250 volt, 60 cycle a. c. multiple compensation type lamps, with an adjustment range giving a secondary or arc circuit current of 6 amperes with 220 volts and a primary current of approximately 2.7 amperes.

The output costs of the street lighting service amounts to about 4.98 cts. per kw-hr. The capacity costs per arc amount to about $34.60, while the capacity costs per incandescent lamp total about $7.20. Adding the output and capacity costs, the total cost per year for the arc is found to vary from $80 to $100, depending upon the hours assumed operated per year. For the tungsten lamps the total cost is about $13 for 40 watt and $18 for 75 watt lamps.

At the present time there are only two power consumers connected with loads of 3 h. p. and 2 h. p., respectively. There are two consumers with moving picture arcs which might perhaps be classed with the power consumers. In view of the facts brought out in connection with this case, it appears that rates which will be equitable for power service will be about as follows: 75 cts. net per active h. p. of capacity per month, plus 4 cts. per kw-hr.

It is difficult to predict exactly what the earnings and expenses of the utility will be under the new method of operation. With the improved service the company is now supplying, and the development of a motor load, the earnings should increase at a much greater rate than in the past. The agreement with the Interstate Light and Power Company with the addition of new business will improve the load factor and decrease the cost per unit.

THE NEW RATE.

When all the facts before us are considered, it appears that the rate that should be established for commercial lighting is a charge of 9 cts. per kw-hr. for the first 40 hours' use per month of active connected load, 7 cts. per kw-hr. for the next 60 hours' use per month of the active connected load, and 4 cts. per kw-hr. for all in excess of the first 100 hours' use per month of the active connected load.

While the rates proposed are not as high as the utility has asked for, they are as high as can be given under the present circumstances. The adjustments made under the proposed schedule will make it a comparatively simple matter to further adjust the rates in the future. A fair trial of the proposed schedule will indicate closely the future rates and policy of the plant. The situation is such that it will probably be necessary for the Commission to review the facts after a period of a year's operation under the new schedule, and further adjustments may then be made.

ORDER.

IT IS ORDERED, That the Darlington Electric Company discontinue its present schedule of rates for electric light and power service, and substitute therefor the following schedule of rates:

RATES FOR INCANDESCENT LIGHTING SERVICE.

For all lighting service furnished residences and businesses hereinafter specifically referred to as classes A, B, C, etc., and passing through the same meter and measured by a meter or meters owned and installed by the company. This lighting service will include electric energy furnished for lamps and other appliances utilized for illumination purposes; motors and appliances other than lighting equipment, when motors are of 1 h. p. rated capacity or less. When the aggregate rated capacity of such appliances does not exceed 1.5 kw. they will be included in this class when used in connection with lighting equipment and when the connected load of such motors and appliances does not exceed the aggregate rated capacity of lighting equipment. Service for heating, cooking and power, when metered separately from the light service, rates as hereinafter specified.

Primary rate: 9 cts. net or 10 cts. gross per kilowatt-hour for current used equivalent to or less than the first 40 kilowatt-hours used per month per active kilowatt.

Secondary rate: 7 cts. net or 8 cts. gross per kilowatt-hour for additional current used equivalent to or less than the next 60 kilowatt-hours used per month per active kilowatt.

Excess rate: 4 cts. net or 5 cts. gross per kilowatt-hour for all current used in excess of the above 100 kilowatt-hours used per month per active kilowatt.

The active load in kilowatts shall in every case be a fixed percentage of the connected load in lamps installed upon consumer's premises.

Class A. Residences, dwellings, flats and private rooming houses. When the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active. When the installation exceeds 500 watts nominal rated capacity, 33⅓ per cent of such part of the total connected load over and above 500 watts shall be deemed active.

Class B. When the total connected load is equal to or less than 2½ kilowatts nominal rated capacity, 70 per cent of such total connected load shall be deemed active. When the installation exceeds 2½ kilowatts nominal rated capacity, 55 per cent of such part of the total connected load over and above 2½ kilowatts shall be deemed active; provided that lamps used exclusively in space devoted to the storing of goods shall be placed at 20 per cent active and shall not be included in the 2½ kilowatts specified above.

Class B shall consist of banks, offices, business and professional (including studios, dressmaking parlors, massage parlors, millinery and hair dressing establishments, and photograph galleries) wholesale and retail merchandise establishments, such as art stores, bakeries, barber shops (including shoe shining parlors and public baths), book stores, cigar stores, coffee and tea stores, commission stores, confectionery stores (including ice cream parlors), crockery, china, dry goods and drug stores, electrical supply houses, flower stores (including green houses), furniture and housefurnishing, gents furnishing stores (including hat stores and haberdasheries), grocery stores, hardware stores, harness shops, hay, grain, feed and coal offices and stores, jewelry stores, meat markets, millinery stores, milk depots, paint and wall paper shops, piano and music stores, picture stores, plumbing shops, saloons (including pool and billiard halls and adjoining card rooms), shoe stores and shoe repair shops, stationery stores, tailor shops (including dyers, cleaners and clothes pressing establishments), undertakers, upholsterers, and wine and liquor stores, theaters (including nick-

elodions, shooting galleries and similar amusement places), corridors and halls in office and apartment buildings upon separate meter, dance and public halls (including lodge and society rooms), restaurants (including eating places and lunch wagons), depots and public places for the conduct of railroad, street railway, express and telephone business (excluding freight warehouses), and all other consumers not herein otherwise specifically provided for.

In Class C 55 per cent of the total connected load shall be deemed active. Such class shall consist of federal and county buildings; churches and missions, hotels and clubs; factories (including small industrial establishments such as machine shops, carpenter shops, blacksmith shops, tin shops and cigar factories), closing not later than 6 p. m., private and parochial schools, grain and tobacco elevators and warehouses, freight and storage warehouses, stables and garages, private, boarding and livery, all interior lighting for the city of Darlington including schools, police and fire stations, libraries, hospitals and other city buildings.

In Class D the total connected load shall be deemed active. Such class shall consist of unmetered lighting for signs, outlines and window, contracted for upon a yearly basis.

The minimum bill for general commercial and residence lighting shall consist of a charge of 50 cts. net per month for 500 watts or less of connected load plus 5 cts. for each additional 50 watts of connected load.

RATES FOR POWER.

This service will include electric energy utilized for motive and miscellaneous lighting service, where the demand arising from such miscellaneous lighting service shall not be in excess of 20 per cent of the total simultaneous demand for lighting and power service. Stereopticons, moving picture machines, photographers' arcs and rectifiers shall be billed at the power rate when separately metered from the lighting.

For current used for electric power purposes, as measured by meters owned and installed by the company, a maximum charge of 75 cts. net per active horse power capacity per month, plus 4 cts. net or 5 cts. gross per kilowatt-hour. Active horse power

shall consist of a fixed percentage of the nominal rated capacity of motor as indicated on the manufacturer's name plate.

The following percentage of such capacity shall be deemed active:

The first 10 h. p. installed	90 per cent.
The next 20 h. p. installed	75 per cent.
The next 30 h. p. installed	60 per cent.
All over 60 h. p. installed	50 per cent.

Minimum bill shall be $1.50 net per month.

Lighting and Power.

The company shall bill all consumers at the gross rate and the difference between the gross and net rates, or one cent per kilowatt-hour, shall constitute a discount for prompt payment.

The company's present regulation in regard to last day of payment of monthly bills shall apply as the limit of time discount privilege is effective.

All bills rendered by the company to the electrical consumer shall state plainly the connected load of each consumer and the percentage which is considered active in computing the rate.

Municipal Lighting.

For all 40 watt tungsten or 32 c. p. carbon lamps, operated on a moonlight all night schedule, $13.00 per lamp per year.

For all 75 watt tungsten lamps, same schedule, $18.00 per lamp per year.

For all 6 ampere a. c. multiple enclosed arc lamps, same schedule, $80.00 per lamp per year.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE REFUSAL OF THE LARSEN TELEPHONE COMPANY TO EXTEND ITS SERVICE.

Decided Dec. 5, 1913.

The Commission, on its own motion, investigated the refusal of the Larsen Tel. Co. to extend its lines to certain applicants for its service unless such applicants would buy stock in the company or build the necessary extension and turn it over to the company. The costs of making the extension and rendering the service requested were ascertained.

Held: The telephone company may reasonably be expected to put in the extension if nine new subscribers can be obtained or if any number less than nine desiring service will advance to the company the amount by which the cost of the extension exceeds the amount upon which the revenues from the business acquired will yield a reasonable return, such advances to be repaid if new subscribers are obtained within a reasonable time.

It is therefore ordered: (1) that the telephone company shall extend its lines and furnish service at regular rates to the parties residing in the neighborhood of the original applicant in this case, when nine or more of such parties shall agree to take service; and (2) that in case less than nine of the parties concerned agree to take service the company shall, upon demand of a less number, extend its lines and furnish service to those desiring it upon payment by the latter of $45 for each party by which the number subscribing for service is less than nine, such advances to be repaid without interest for each new subscriber added within three years, up to the number for whom the advances were made by the original subscribers.

On October 3, 1912, A. C. Jorgensen filed a complaint against the Larsen Telephone Company, stating that the company refused to extend its lines to furnish service to a number of farmers, unless they would either buy stock in the company or build the line and turn it over to the Larsen Telephone Company. After some correspondence with the parties it became apparent that the case could not be settled informally and this investigation was undertaken.

The facts in the case appear to be about as shown in the following statement.

According to a statement filed with the Commission there are ten farmers, including A. C. Jorgensen, the original peti-

tioner in this case, who would take telephone service if the company would extend its lines as asked for in the petition. The utility contends that there would not be ten additional subscribers who could be taken on by putting in the extension in dispute. An examination of the conditions involved was made by the Commission's engineers and the estimated cost of putting in the line, on the basis of ten additional subscribers being secured, with a type of construction considered adequate to meet the needs of the situation, was found to be $597, or $59.70 per phone. Interest and depreciation, at 14 per cent, would amount to $8.36 per year per phone. With the cost of operation and maintenance at from $5.50 to $6.50 per year per phone the total cost per phone per year would be from $13.86 to $14.86. Assuming that $6.00 per year per phone will be required for operation and maintenance, the cost would be $14.36.

The situation appears to be such that the cost of the extension would be reduced very little, aside from the cost of subscriber's equipment, if less than nine or ten subscribers were to be added. If nine phones were to be installed, the cost of the extension would be about $585. Interest and depreciation would amount to $81.90. Operating expenses would probably be about $54, so that the total would be $135.90 or $15.06 per year per phone. From this it appears that the Larsen Telephone Company may reasonably be expected to put in the extension if nine new subscribers can be obtained. In case less than nine subscribers can be obtained, and those who desire service are willing to subscribe for service under such conditions, it may be a proper settlement of the matter to provide that the utility shall extend its lines to supply so many of the parties interested in this case as shall subscribe for service, provided those parties will advance to the utility the amount by which the cost of the extension exceeds the amount upon which the revenues from the business acquired will yield a reasonable return, such advances to be repaid if new subscribers are obtained within a reasonable time. An amount equal to $45 for each subscriber less than nine who subscribe for service on the extension, appears to be a reasonable advance. Three years seems to be a reasonable time within which repayments should be made as new subscribers are added.

IT IS THEREFORE ORDERED:

1. That the Larsen Telephone Company shall extend its lines as contemplated in the original petition and furnish service at regular rates to the parties residing in the neighborhood of the original applicant in this case, A. C. Jorgensen, when nine or more of such parties shall agree to take service. Sixty days from the time when nine or more of the parties shall agree to take service is considered a reasonable time to comply with this section of the order.

2. That, in case less than nine of the parties concerned shall agree to take service, the Larsen Telephone Company shall, upon demand of a less number, extend its line and furnish service to those desiring it, if the parties desiring service shall advance to the Larsen Telephone Company $45.00 for each party by which the number subscribing for service is less than nine. For each new subscriber thereafter added upon this extension, within three years, up to the number for whom the advances were made by subscribers, the Larsen Telephone Company shall promptly repay $45.00, without interest, to the parties who made the advance payments. Sixty days from the time when parties desiring service shall comply with the provisions of this section of the order, in case less than nine subscribers are obtained, is considered a reasonable time within which the Larsen Telephone Company shall carry out the requirements of this section of the order.

ALEX. LOCKE
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided Dec. 5, 1913.

The petitioner alleges that the rates charged by the respondent for the transportation of scrap iron between Sheboygan Falls and Sheboygan and between Sheboygan and Milwaukee are unjustly discriminatory and excessive.

Held: Although the Commission will not undertake to adjust rates for the purpose of removing competitive disadvantages due to location nor to determine the reasonableness of rates by mere comparison with other rates, the rates complained of must be regarded as excessive when the costs of performing the service and the return on the investment are considered. The respondent is therefore ordered to put into effect a rate of 2¾ cts. per cwt. on scrap iron and other scrap metals moving between Sheboygan and Sheboygan Falls and a rate of 4 cts. per cwt. on scrap iron and other scrap metals moving between Sheboygan and Milwaukee.

The petitioner, Alex. Locke, is and has been for a long time a dealer in scrap iron and other metals. His main office is at Sheboygan but he buys extensively in the territory north and west of Sheboygan as well as in that city. The scrap is shipped first to the petitioner's yards at Sheboygan where it is sorted and then forwarded to the most favorable market.

Mr. Locke alleges that rates on scrap iron between Sheboygan Falls and Sheboygan and from Sheboygan to Milwaukee are unreasonable, unjustly discriminatory, unusually high and excessive, out of proportion to rates for the same service charged by the Chicago & North Western Railway Company along other portions of its lines, and that such rates are in excess of the reasonable value of the service. Pursuant to notice, hearing was held at which both petitioner and respondent were represented. It appeared upon the examination of tariffs, and at the hearing, that the rate on scrap from Sheboygan to Milwaukee was the same as that from Fond du Lac, Oshkosh or Appleton to Milwaukee, and that the rate was generally in effect throughout the region in which the petitioner met competition

in buying. It also appeared that the petitioner customarily shipped from point of purchase to Sheboygan where the scrap was sorted, before forwarding to destination. The sum of the rates from origin to Sheboygan and from there to Milwaukee is, of course, greater than the rate from Sheboygan to Milwaukee. Mr. Locke's competitors follow much the same procedure, though in general the shipment from purchase point to sorting point is shorter for them and less expensive. The cause of this competitive disadvantage is that of location and this Commission will not undertake to adjust rates for the sole purpose of permitting a dealer to expand his territory indefinitely and enabling him to compete with all dealers who are included therein. It does appear, however, that the rate of 5½ cts. per cwt. now in effect between Sheboygan and Milwaukee, and the rate of 3 cts. per cwt. now in effect between Sheboygan and Sheboygan Falls are excessive when the costs of performing the service and the return on investment are considered.

Although the Commission will not undertake to determine the reasonableness of rates by mere comparison with other existing rates, it would point out that the respondent, the Chicago & North Western Railway Company, has now in effect carload rates on scrap on hauls up to 150 miles for the same rate as now in effect on the 52 mile haul here under consideration.

The Commission finds that the reasonable rate on scrap moving between Sheboygan and Milwaukee is 4 cts. per cwt. and between Sheboygan and Sheboygan Falls 2¾ cts. per cwt.

NOW, THEREFORE, IT IS ORDERED: 1. That the respondent, the Chicago & North Western Railway Company, discontinue its present rate on scrap iron and other scrap metals between Sheboygan and Sheboygan Falls and substitute therefor the rate of 2¾ cts. per cwt.

2. That the respondent, the Chicago & North Western Railway Company, discontinue its present rate on scrap iron and other scrap metals between Sheboygan and Milwaukee and substitute therefor the rate of 4 cts. per cwt.

WAUKESHA LIME AND STONE CO.

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY, CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Dec. 5, 1913.

The complainant alleges that it was overcharged for the transportation of a number of carloads of gravel and crushed stone, from Waukesha to various points, through the action of the C. & N. W. Ry. Co. in: (1) failing to absorb switching charges out of a $15 line haul earning; (2) applying the marked capacity of the car as the minimum weight for carload shipments; and (3) applying rates on file at the time, but subsequently reduced as unreasonable by the Commission, to shipments moving prior to July 27, 1912.

Held: 1. The absorption of switching charges by the C. & N. W. Ry. Co. out of line haul earnings, insofar as possible without reducing the latter below $15, is correct according to the company's tariffs and is reasonable.

2. The application of the marked capacity of the car as the minimum weight for carload shipments, though correct according to the company's tariff put into effect for carload shipments of sand and gravel in compliance with the Commission's order of June 24, 1912, 9 W. R. C. R. 347, was unreasonable and is contrary to the present practice of the respondent company and other carriers in fixing the minimum weight at 90 per cent of the marked capacity of the car, which would have been reasonable in the incident case.

3. The rates ordered by the Commission on June 24, 1912, 9 W. R. C. R. 347, were reasonable at the date of the earliest movement of carloads of stone and gravel over which the Commission has jurisdiction under the present complaint.

Refund is therefore ordered. Inasmuch, however, as the original records of the shipments in question have not been submitted, the Commission cannot undertake to compute the amount of reparation due the complainant, unless the parties submit their original records to the Commission for the determination of these amounts. The C. & N. W. Ry. Co. is accordingly authorized to refund to the complainant an amount equal to the excess of the actual charge over the proper charge, as calculated upon the basis of the above holdings, for every carload of stone and gravel moved for the complainant over the C. & N. W. Ry. from Waukesha to West Allis, Cudahy, Milwaukee, Racine, Racine Jct. or Layton Park at any time during the period beginning April 3, 1912 and ending April 2, 1913.

The complainant, the Waukesha Lime and Stone Company, is engaged in the stone, gravel, sand and lime business as pro-

ducers and wholesalers, with certain plants located at Waukesha and general offices located at Racine.

The complainant alleges the shipment of a number of cars of gravel and crushed stone, from Waukesha to various points, as set forth in exhibits attached to and made a part of the complaint on which charges were made in a manner and to an amount constituting an overcharge.

Three things are complained of:

(1) The failure of the Chicago & North Western Railway Company to absorb switching charges out of a $15 line haul earning.

(2) The application by the Chicago & North Western Railway Company of the marked capacity of the car as a minimum.

(3) The application by the Chicago & North Western Railway Company of the rates on file at that time, but subsequently reduced as unreasonable by this Commission, to shipments moving prior to July 27, 1912.

Taking up the specific items of complaint in order, it appears that the absorption of switching charges by the Chicago & North Western Railway Co., insofar as it was possible to do so out of their line haul charges without reducing them below $15, is correct, as provided in their tariffs and reasonable from the standpoint of custom and the value of the business to the carrier.

For these movements, the minimum weight of carload shipments of sand and gravel was the capacity of the car previous to the order of this Commission naming a distance tariff on these commodities, which tariff was made effective July 27, 1912, by the Chicago & North Western Railway Company. The order above referred to, 1912, 9 W. R. C. R. 87, 99, and 1912, 9 W. R. C. R. 347, 353, states that the minimum then in effect would not be changed thereby. Therefore it appears that the Chicago & North Western Railway Company was not technically in error in naming the capacity of the car as the minimum in its tariff G. F. D. 14432 effective July 27, 1912. There remains still the question of the reasonableness of the prescribed minimum. Since December 20, 1912, the Chicago & North Western Railway Company has had in effect a minimum of 90 per cent of the capacity of the car on stone and gravel moving in this state. The investigation conducted by the Commission

previous to ordering the present rates on stone and gravel disclosed such average weights as indicate the reasonableness of a minimum of 90 per cent of the marked capacity of the car. Since this minimum is reasonable and in line with the present practice of the respondent and other carriers, the Commission holds reparation is due the complainant for such amounts as it may have been charged in excess of the amounts which would have been charged had the minimum applied been the reasonable one of 90 per cent of the marked capacity of the car.

Considering, now, the third allegation of this complaint, the Commission holds that the rates promulgated under its order of June 24, 1912, and embodied in C. & N. W. G. F. D. 14432, effective July 27, 1912, were reasonable at the date of the earliest movemnt of carloads of stone and gravel over which the Commission has jurisdiction under the present complaint, and cites its decision of April 25, 1912, 9 W. R. C. R. 87, 99. Reparation is therefore due this complainant on the basis of the difference in rates as shown in C. & N. W. G. F. D. 11600–A and C. & N. W. G. F. D. 14432.

Attached to and made a part of the formal complaint in this case is a list of movements on which reparation is asked. Some of these movements occurring more than a year prior to the date of the complaint cannot be considered by this Commission as ch. 66, laws of 1913, enlarging the time in which to file claims from one year to two years did not become effective until April 16, 1913, and in the case of those movements over which the Commission has jurisdiction it cannot undertake to compute without the original records the amount of reparation due to the complainant. The order will, therefore, state only the basis of reparation, but should the parties be unable to reach an agreement in the matter, they may submit their records for the determination by the Commission of the amounts to be paid under this order.

NOW, THEREFORE, IT IS ORDERED, That the respondent Chicago & North Western Railway Company be and hereby is authorized to refund and repay to the complainant, the Waukesha Lime & Stone Company, an amount to be determined as follows: On each and every carload of stone and gravel consigned by the Waukesha Lime and Stone Company from Waukesha to any of the following stations on the Chicago & North Western

Railway, viz.: West Allis, Cudahy, Milwaukee, Racine, Racine Jct. and Layton Park, and moving from Waukesha to destination over the tracks of the Chicago & North Western Railway, at any time during the period beginning April 3, 1912, and ending April 2, 1913, charges shall be computed by applying rate and minimum as prescribed in respondent's G. F. D. 14432–A. Connecting lines switching charges shall be absorbed by the respondent Chicago & North Western Railway Company, insofar as it may be done out of line haul earnings without reducing same below $15. The difference between the charge for any car, so computed, and the charge as paid by the complainant shall constitute the amount of reparation in that case.

WAUKESHA LIME AND STONE COMPANY
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Dec. 5, 1913.

The complainant alleges: (1) that it was overcharged on a number of shipments of slab wood, kiln wood and cordwood moving from points in Wisconsin on the "Soo" line to Waukesha and there turned over to the C. M. & St. P. Ry. Co. for delivery to the complainant at its plant on the C. M. & St. P. Ry. Co's tracks; and (2) that the local switching charge exacted by the C. M. & St. P. Ry. Co. is excessive.

The complaint with respect to the alleged overcharges appears to be based primarily upon a misunderstanding of the rule in the "Soo" line's tariff for the absorption of switching charges of connecting lines. This rule provides for the absorption by the "Soo" line at junction points on its Chicago division of "the switching charges of connecting lines, or such portion of them as will not reduce charges below $15 per car, if from or to stations on its line, or $20 per car if from or to stations on connecting lines". The term "charges", as used in the rule, evidently means the line haul charges of the issuing line and not the total charges including both the line haul charges and the switching charge.

Held: (1) The absorption of the switching charges as made by the "Soo" Ry. Co. on the cars named in the complaint was reasonable and correct insofar as may be determined from the record of weights and charges presented by the complainant. (2) The C. M. & St. P. Ry. Co's switching charge of $4 per car is reasonable.

The petition is therefore dismissed.

The complainant deals in stone, gravel, sand and lime in carload lots. It has various plants at Waukesha and its main office is located at Racine. This complaint arises from alleged overcharges on a number of shipments of slab wood, kiln wood and cordwood moving from points in Wisconsin on the "Soo" line to Waukesha and there turned over to the Chicago, Milwaukee & St. Paul Railway Company for delivery to the complainant, at its plant on the last named railway company's tracks. The practice first complained of is that of the "Soo" line, in refusing to absorb the switching charges of the second

respondent to the extent desired by the complainant, which based its claim on certain tariffs the wording of which seems open to more than one interpretation. Of the fifty-two cars on which this overcharge is alleged only ten are within the jurisdiction of this Commission, the others having moved more than one year before the filing of the complaint, which was filed previous to April 16, 1913, when ch. 66, laws of 1913, enlarging the time in which to file claims from one year to two years, became effective. During the period within which these ten cars moved the following provision was in effect in "Soo" line tariffs Nos. 14135, 14827, 15677, and 16671, substantially as here stated.

"This company will absorb at Junction points on the Chicago division of its lines, the switching charges of connecting lines, or such portion of them as will not reduce charges below $15 per car, if from or to stations on its line, or $20 per car if from or to stations on connecting lines."

The point at issue seems to rest with the interpretation of the word "charges" in this rule. The complainant maintains that the term means total charges, including in this case the line haul on the "Soo" to Waukesha and the switching charge of the "St. Paul" for delivery there. It seems quite evident, however, that the intent of this rule, when applied to movements such as are here under discussion, is that the carrier having the line haul shall contribute toward the completion of the transportation movement, that is toward the switching charges of the delivering carrier, insofar as it is able to do so out of its own line haul charges without reducing them below $15. This interpretation is in line with that made by this Commission in the case of *W. E. Morgan v. M. St. P. & S. S. M. R. Co.* 1912, 9 W. R. C. R. 165. It is held there that, in the absorption rule here applying, the issuing line's own charges are meant and that the charges as collected on the ten cars complained of and within the jurisdiction of this Commission are correct as shown by tariffs of the respondent companies.

Complainant further alleges that the switching charge of $4 per car exacted by the Chicago, Milwaukee & St. Paul Railway Company is excessive. No evidence was introduced to show that this charge was excessive when compared with the cost to the carrier of rendering the service. It does appear, however,

that the charge is greater than certain charges in effect elsewhere for similar service. It should be noted, however, that this charge is in the nature of reciprocal rate and the existence eleswhere of lower reciprocal rates is in itself no proof of the unreasonableness of this rate. In C. M. & St. P. G. F. D 4900—C, effective Feb. 28, 1912, the switching rate between industries on the St. Paul's tracks at Waukesha and between industries and connecting lines is given as $4 per car, with this exception, that the rate on stone to or from the plant of the Waukesha Lime and Stone Company is $2. Later, in supplement 13 to this tariff, effective April 17, 1913, this exception is extended to include fuel wood as well as stone. This was a voluntary reduction on the part of the Chicago, Milwaukee & St. Paul Railway Company and one based on traffic conditions affecting the "St. Paul" and the "Soo" lines and as such does not admit the unreasonableness of the previous rate.

This Commission finds the absorption of switching charges by the "Soo" line on the cars named in this complaint and the switching charge of the Chicago, Milwaukee & St. Paul Railway Company for the delivery of the cars to be reasonable and correct insofar as may be determined from the record of weights and charges presented by the complainant.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

PETER W. WOLF
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Dec. 5, 1913.

The petitioner alleges that the rate of 4 cts. per 100 lb., charged by the respondent for carload shipments of grain from Richfield to Milwaukee, is erroneous, illegal, unusual and exorbitant and asks that the rate of 3½ cts. applying over the M. St. P. & S. S. M. Ry. for shipments from Duplainville, Templeton and Colgate to Milwaukee be established, and that refund be authorized on certain shipments made by the petitioner. Since the hearing the rate on grain to Milwaukee from the points named and other nearby points competing with Richfield has been changed from 3½ cts. to 4 cts. by all railroads passing through these points, and the petitioner is satisfied with this adjustment. Only the matter of reparation, therefore, remains to be determined by the Commission.

Held: The petitioner is entitled to reparation. Refund is accordingly ordered on the basis of the 3½ ct. rate.

The petition, as amended, after the usual formal allegations, sets forth that the respondent has charged and is still charging an erroneous, illegal, unusual and exorbitant rate of 4 cts. per 100 lb. on grain in carloads from Richfield to Milwaukee; that the lawful rate on grain, carloads, from Duplainville, Templeton and Colgate to Milwaukee over the Minneapolis, St. Paul & Sault Ste. Marie Railway is 3½ cts. per 100 lb.; that such grain is hauled via Rugby Junction and through Richfield to destination and that grain in the vicinity of Richfield comes in direct competition with grain in the vicinity of the other points named; wherefore, the Commission is asked to establish a rate of 3½ cts. on grain, carloads, from Richfield to Milwaukee and to issue an order authorizing the respondent to refund to the petitioner the sum of $57.60 on nineteen shipments of grain from Richfield to Milwaukee, as listed in the petition and shown by the freight bills filed with the petition.

In answer to the petition the respondent denies that the rate complained of is erroneous, illegal, unusual and exorbitant or that respondent is required by law to meet the rates over other

lines; and alleges that the rate complained of is in and of itself reasonable and that it involves no discrimination as compared with other rates furnished by respondent at other points on its line.

Hearing was held March 11, 1913, at which *Geo. A. Schroeder* appeared for the petitioner and *J. N.* and *J. M. Davis* for the respondent.

The petitioner testified to the effect that his business is buying grain and shipping it from Richfield; that competition in buying grain in the vicinity of Richfield is stronger than it was ten or twelve years ago; that almost half of his grain comes from the locality of Colgate and Hubertus; that he could not compete with prices paid at these points when the rate from them is lower than the rate from Richfield; that he was not asking for a lower rate from Richfield than from Colgate and Hubertus, but for the same rate from each of these points; that a difference of one-half cent per 100 lb. in the buying of grain was of importance; that having competed with buyers at the points named where the lower rate was in force, he was damaged to the extent of one-half cent per 100 lb., for which he asks reparation; that his competition at points having lower rates than Richfield, with the exception of Colgate and Hubertus, was not important and that if the rates from the latter points were advanced to 4 cts. and the refund asked for was made, it would be a satisfactory adjustment of the complaint. The petitioner stated that he made no money on his grain business last year because, to a large extent, of the difference in rates of which he complains.

On behalf of the respondent a proposition to advance the rates from 3½ cts. to 4 cts. on grain from Duplainville, Pewaukee, Templeton, Sussex, Colgate and Hubertus to Milwaukee was submitted and it was stated that any refund authorized by the Commission would not be contested.

Pursuant to this proposition the rates on grain from Duplainville, Pewaukee, Templeton, Sussex, Colgate and Hubertus to Milwaukee were changed from 3½ cts. to 4 cts. by all lines passing through these points. The 4 ct. rate, which is the rate from Richfield complained of, is now lawfully in force from the other points named to Milwaukee, and this part of the complaint is therefore adjusted to the satisfaction of all

concerned, leaving the matter of reparation only to be adjusted by the Commission.

Reparation is asked on the shipments of grain from Richfield to Milwaukee listed below:

Date.	Car No.	Weight.	Rate.	Charges paid.	Rate.	Charges.	Excess charges.
2-10-12 ...	81950	86,560	4	$34.62	3.5	$30.30	$4.32
2-19-12 ...	67470	61,240	"	24.62	"	21.54	3.08
3-14-12 ...	25473	50,280	"	20.11	"	17.60	2.51
4- 9-12 ...	18850	63,900	"	25.56	"	22.37	3.19
4-24-12 ...	2372	35,010	"	14.00	"	12.25	1.75
4-24-12 ...	52940	54,000	"	21.60	"	18.90	2.70
5-10-12 ...	34598	37,000	"	14.80	"	12.95	1.85
5-24-12 ...	55841	36,140	"	14.46	"	12.65	1.81
10-11-12 ...	65140	60,380	"	24.15	"	21.13	3.02
10-15-12 ...	67854	67,140	"	26.86	"	23.50	3.36
11-14-12 ...	5292	68,340	"	27.34	"	23.92	3.42
11-22-12 ...	61475	54,000	"	21.60	"	18.90	2.70
12- 5-12 ...	83024	89,000	"	35.60	"	31.15	4.45
12- 2-12 ...	140639	77,490	"	31.00	"	27.13	3.87
2- 6-13 ...	57048	60,040	"	24.02	"	21.01	3.01
2-14-13 ...	11273	63,750	"	25.50	"	22.31	3.19
2-15-13 ...	14670	38,660	"	15.46	"	13.53	1.93
2-15-13 ...	204345	84,340	"	33.74	"	29.52	4.22
3- 7-13 ...	60758	64,380	"	25.75	"	22.53	3.22
		Total excessive charges.....					$57.60

From the foregoing it appears that the petitioner suffered a loss in the amount of $57.60, due to the fact that the rate paid on the shipment listed above was higher than the rate from points in the vicinity of Richfield. Refund of this amount will be authorized.

NOW, THEREFORE, THE RESPONDENT LINE, the Chicago, Milwaukee & St. Paul Railway Co., IS HEREBY AUTHORIZED to refund to the petitioner the sum of $57.60.

WESTBORO LUMBER COMPANY
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Dec. 6, 1913.

Complaint is made that excessive charges were exacted by the M. St. P. & S. S. M. Ry. Co. for the transportation of twelve carload shipments of tanbark from Westboro to Milwaukee. The shipments in question were loaded in box cars, for the purpose of making a test for the information of the Commission in deciding the case of *Barker & Stewart Lbr. Co. v. C. M. & St. P. R. Co.* 1913, 11 W. R. C. R. 537, of the amount of tanbark that could be loaded into this class of cars. Charges were assessed on the basis of the minimum rated capacity of the cars used, although the actual weight of the shipments, when the cars were loaded to full capacity, was less than the minimum weight applied.

Held: The charges complained of should have been assessed on the basis of the rule which provides for the use of two cars for one when one car cannot be furnished to accommodate the minimum weight provided by tariff. *Barker & Stewart Lbr. Co. v. C. M. & St. P. R. Co., supra.* Refund is therefore ordered of the excess of the charges paid above what the charges would have been if based on the actual weight of the shipments.

Complaint in this case is against certain charges alleged to be excessive in the amount of $35.10 paid on twelve carload shipments of tanbark from Westboro to Milwaukee, March 1, 1913. These twelve shipments were loaded in box cars for the purpose of making a test of the amount of tanbark that could be loaded in this class of cars. The test was made for the information of the Commission in the case of *Barker & Stewart Lumber Co. v. C. M. & St. P. R. Co.* 11 W. R. C. R. 537, decided March 14, 1913. A representative of the Commission examined these shipments, weighed them at Westboro and again examined them at destination. The result of this test is fully set forth in the case referred to. In that case the Commission found that western trunk line rule No. 2820, which provides for the use of two cars for one when one car cannot be furnished to accommodate the minimum weight provided by tariff, was properly applicable to the shipments complained of. The same

rule is properly applicable to the shipments involved in the instant case. A list of these shipments, as made up from the paid freight bills submitted with the petition, is given herewith:

SHIPMENTS OF TANBARK, MARCH 1, 1913, FROM WESTBORO TO MILWAUKEE.

Car number	Actual weight.	Weight charged (minimum).	Rate, cts.	Charges paid.
104016	18,300	20,000	10	$20.00
103102	15,880	20,000	10	20.00
24498	19,160	20,000	10	20.00
29080	19,580	24,000	10	24.00
10120	16,480	20,000	10	20.00
29164	19,200	24,000	10	24.00
25206	19,980	20,000	10	20.00
31816	21,640	21,640	10	21.64
5838	19,760	20,000	10	20.00
29236	17,500	24,000	10	24.00
29184	19,600	24,000	10	24.00
29252	19,460	24,000	10	24.00
Total	226,540	261,640	.....	$261.64

From the report of the cars listed in the above table, as given in the *Barker & Stewart* case cited, it appears that each of these cars was fully loaded. It is evident, therefore, that these shipments are entitled to charges based on actual weight subject to a one-car minimum for each two cars used. As the one-car minimum is exceeded in each instance by the actual weight of any two cars in the list, the charges on all of these shipments should have been assessed on actual weight. The total actual weight of the twelve shipments is 226,540 lb. This total at 10 cts. per 100 lb., the rate applicable, makes charges of $226.54. Charges paid amount to $261.64. The difference, $35.10, is excessive and should be refunded. Inasmuch as the report of the findings in *Barker & Stewart Lbr. Co. v. C. M. & St. P. R. Co.* are applicable to the present case, it is unnecessary to discuss these details here.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Co., refund to the petitioner the sum of $35.10.

SOUTHERN WISCONSIN SAND AND GRAVEL COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sept. 17, 1913. Decided Dec. 6, 1913.

The petitioner complains that the respondent exacted charges for the transportation of certain carload lots of sand and gravel from Janesville to points within Wisconsin which were higher than the rates prescribed by the Commission in *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co.* 1912, 9 W. R. C. R. 86 and 347, and asks for refund and such further order as the Commission may deem necessary. It appears that the present case arises out of a misunderstanding, on the part of both the petitioner and the respondent, of the facts involved, inasmuch as the orders cited above prescribe rates for shipments from Waukesha only, although the Commission recommended that the rates ordered be made effective generally on the intrastate traffic of the railway companies affected. The present case, however, being brought in good faith and upon what appear to be substantial grounds, is considered on its merits. The shipments in question moved before the order of Nov. 29, 1912, 11 W. R. C. R. 98, applying the rates prescribed for shipments of sand, gravel and crushed stone from Waukesha to similar shipments from all points on the respondent's line in Wisconsin, went into effect.

Held: Inasmuch as the rate upon which the claim for reparation is based has already been held by the Commission, 11 W. R. C. R. 98, to be unreasonable and inasmuch as the respondent gave the petitioner reasonable assurance, upon which the petitioner relied, that the lower rate of the respondent's competitor would be met, refund should be granted. The respondent is therefore ordered to refund to the petitioner all sums wrongfully collected in excess of the reasonable sum of $3,827.07 for the transportation of the carload shipments listed.

The Southern Wisconsin Sand and Gravel Company is a corporation engaged in the business of quarrying and shipping sand and gravel at Janesville, Wis. Its petition alleges that pursuant to the provisions of certain orders of the Railroad Commission of Wisconsin, entered and issued on April 25, 1912, and reaffirmed after suspension on June 24, 1912, the respondent Chicago, Milwaukee & St. Paul Railway Company was directed to discontinue its then existing higher rates on sand, gravel and crushed stone, shipped in carload lots within the state of Wisconsin, and to substitute therefor a schedule of rates prescribed in the orders. The petitioner further alleges that during the months of August, September, October and

November, 1912, it shipped large amounts of sand and gravel in carload lots from Janesville via the line of the respondent to various destinations within the state of Wisconsin and complains that upon these shipments the Chicago, Milwaukee & St. Paul Railway Company charged and collected rates higher than those in the schedule of rates prescribed by the Commission. The petitioner therefore prays that the railway company be ordered to refund to the petitioner the sum of $1,003.18, or such part thereof as may seem reasonable to the Commission, and that such further orders be made as the Commission may deem necessary and just in the premises.

The respondent, in an informal answer to the petition, states that if the facts related in the petition are correct all of the shipments moving during the months from August to November, 1912, were overcharged, as the charges made were not in accordance with the published tariffs of the respondent. The tariff upon the basis of which the respondent appeared to agree to be ready to refund is its tariff G. F. D. No. 10,853–B. However, before consenting to a final settlement of the claim, the respondent suggested that inasmuch as the only question at issue seemed to be in regard to the time and quantity of freight movement, formal proof of those facts be made by the petitioner acting under oath. Upon application, the petitioner accordingly furnished a detailed abstract of the shipments upon which refund was claimed, together with affidavit covering the statement, and these were made a part of the records in the case.

Hearing in the matter was held September 17, 1913, at the office of the Railroad Commission in Madison. *James A. Wagoner* appeared in behalf of the petitioner and *J. N. Davis* in behalf of the respondent.

At the hearing it became apparent that the facts involved had been misunderstood by both the petitioner and the respondent. The orders entered by the Commission in *Waukesha Lime and Stone Co. v. C. M. & St. P. R. Co. et al.* on April 25, 1912, and June 24, 1912 (9 W. R. C. R. 87 and 347), while establishing rates on gravel, crushed stone and sand in carloads lower than those previously effective, did not make the lower rates applicable on all traffic moving within the state on the lines of the respondents, the Chicago, Milwaukee & St. Paul Railway Company and the Chicago & North Western Railway Company, but re-

stricted the rates to traffic moving from Waukesha. However, the decision rendered June 24, 1912, recommended that the respondent companies establish the rates named for all shipments of sand, gravel and crushed stone moving between all points on their respective lines within the state of Wisconsin where lower rates were not then in effect. The pleadings of the plaintiff are, therefore, based upon a wrong assumption. The respondent, in its informal answer, likewise misconstrues its own tariff 10883 A which was issued in compliance with the order and became effective on intrastate business in Wisconsin July 14, 1912. That tariff read from Lannon and Waukesha, Wis., to stations in Wisconsin generally. At the time these shipments moved, therefore, the rates upon the basis of which the petitioner asks for reparation were not the regularly published rates. Consequently, if a refund is to be granted, a reparation order from the Commission will be necessary.

It does not appear from any of the facts brought out in the testimony, or from the circumstances surrounding the case generally, that the petitioner acted in bad faith making his application for reparation. While the original grounds upon which reparation was asked rested upon a mistake as to the facts, the respondent company, though in a much better position to know what the orders referred to contained, also appeared at first to be acting upon a similar mistake. In the absence of bad faith and because the case appears to have been brought upon substantial grounds, the Commission will consider the complaint upon its merits.

In the decision rendered June 24, 1912, (9 W. R. C. R. 347, 350–352) after a rehearing and further investigation of the rate situation surrounding the shipment of sand, gravel and crushed stone, the Commission makes the following comments:

"No facts were presented at the hearing tending to show that the distance tariff of rates on gravel and crushed stone as fixed by the Commission are unreasonably low or are not as fairly applicable from other shipping points as from Waukesha. In fact, all the circumstances surrounding this tariff are of the kind that ordinarily make for the establishment of very low rates. The value of these commodities is so low that only a short haul, under the most favorable circumstances, can be had before the transportation cost exceeds the intrinsic value of the shipment. The loading per car is exceedingly heavy, averaging about 44 tons, and thus the amount of weight in the car

paying a revenue to the railway company is much greater in proportion to the weight of the car itself than is the case with light loading commodities. The traffic is handled with a minimum of difficulty and the commodities are practically immune from liability to damage in transit. All of these factors conduce to a very low cost of transportation, and no reason has been suggested why the situation in these respects at other gravel pits and stone quarries should not be the same as that at Waukesha." * * *

"The present proceedings grew out of the complaint of a single shipper of gravel and crushed stone. The investigation of the Commission, however, was general. It covered the conditions for the state as a whole as well as for Waukesha. The rates at issue herein are also based on the facts which obtain for the intrastate traffic in general. At the rehearing other shippers besides those who are interested in the Waukesha traffic were also present and offered testimony. While there is every reason to believe that the facts are such as to have justified the Commission in making the order general, it is thought best, under the circumstances, to confine further action at this time to a recommendation that the rates herein ordered for Waukesha be made effective generally on the respondent's intrastate traffic. This leaves the matter open to further proceedings on complaint of shippers or on motion of the Commission in case the railway companies do not see fit to comply with the Commission's present recommendation."

This recommendation was followed by the Chicago & North Western Railway Company and the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, though the latter had not been a party to the case. The respondent in the instant case, the Chicago, Milwaukee & St. Paul Railway Company, appeared to be unwilling to put into effect the Commission's distance scale at once because the order also contained a provision that all commodity rates lower than the Commission's rates should be retained. A number of shippers on the respondent's lines complained informally to the Commission that the rates of the "Soo" and "North Western" lines on these commodities were lower than similar rates over the respondent's lines. While the petitioner in this case was not one of the parties making informal complaint, the petitioner appears to have brought the matter to the attention of the Chicago, Milwaukee & St. Paul Railway Company and to have been given assurance that the company would comply with the petitioner's request.

Meanwhile the Commission, upon its own motion, investigated

the question of whether the Commission's distance rates should be made effective generally on the line of the respondent company in this state, and, after due hearing, entered its order dated November 29, 1912, *In Re Investigation, on Motion of the Commission, of the Rates on Sand, Gravel and Crushed Stone on the Line of the Chicago, Milwaukee & St. Paul Ry. Co.* 11 W. R. C. R. 98, directing that the respondent make effective between all points on its line in Wisconsin the tariff of distance rates on sand, gravel and crushed stone fixed by this Commission in its orders of April 25, 1912, and June 24, 1912, *supra.* In this decision the Commission made the following reference to the reasonableness of the proposed schedules:

"Since the only obstacle to the establishment of the Commission's rates by the respondent is the existence of a comparatively small number of lower rates which can easily be dealt with by themselves, it seems inadvisable to delay longer the effectiveness of the Commission's rates on the respondent's line. These rates were made after a careful investigation which not only covered the situation at Waukesha but was made broad enough to warrant the establishment of a state-wide system of sand, gravel and crushed stone rates."

It has been repeatedly held that a refund may be granted when a competing line has a lower rate in effect and the respondent could not have participated in the traffic upon its lawfully published rate. *(Geo. T. Rowland & Son v. C. & N. W. R. Co.* 1912, 9 W. R. C. R. 163; *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co.* 1912, 9 W. R. C. R. 167.) This principle would apply in the case of shipments from Janesville to points that are also stations on the Chicago & North Western railroad. While it is undoubtedly true that the authority of a local agent to quote rates does not go beyond the rates in the regularly published tariffs of the company, nevertheless, the circumstances in the present case were such as to influence the shipper to abandon his option of shipping the commodities over the line of a competing carrier quoting a lower rate, upon a reasonable assurance that these lower rates would be met.

It is to be remembered that the reasonableness or unreasonableness of this particular rate was decided upon considerations quite apart from any of the special considerations arising out of this case. There is a well established principle that refunds may be granted upon any shipments where the rates charged have been found unreasonable on the basis of the cost of the service

and the value of the service. In the present case this Commission holds that there are other considerations in addition to the general unreasonableness of the rate which make the claims for reparation valid; that these considerations arise out of the competitive nature of some of the traffic which would have made the shipments in question unavailable to the respondent except upon the conditions that these lower rates would be met.

The respondent had expressed its willingness to put the lower rates into effect provided it be allowed to raise certain lower commodity rates. The adjustment of the lower commodity rates had been delayed so long by the respondent that a special order was entered making effective these rates which the respondent was willing to accept. No valid reasons which would defeat a reparation order in this case have, therefore, been advanced. On the other hand, there appear to be a number of reasons which justify the granting of the petition for a refund. In the first place, the rate upon which the claim for reparation is based has been held by this Commission to be unreasonable and the justice of this holding has not been denied by the respondent. In the second place, a competitive carrier upon recommendation of the Commission had already established the rates upon the basis of which refund is asked. The respondent company participated in the traffic of the petitioner upon its reasonable assurance, relied upon by the petitioner, that the competitor's lower reasonable rate would be met, a practice which is not only common but in line with good economic policy. For either of the above reasons the petition for refund should be allowed.

Expense bill No. 1341, covering a shipment from Janesville to Waupun, dated June 17, 1912, and moving before the Commission's order recommending the lower rates was entered, cannot be considered in this claim for reparation. Expense bills Nos. 584, 257, 734, and 583 covering the movement of four cars from Janesville to Watertown were charged out under a commodity rate lower than the rate contained in the Commission's order and recommendation of June 24, 1912, *supra*. The application of the distance tariff contained in the above named order would give a rate of 2.61 cts. per 100 lb., while the rate actually charged was only 2.25 cts. per 100 lb. Inasmuch as the Commission ruled that all commodity rates lower than the Commission's distance tariff should be retained, the charges upon the expense bills enumerated above are correct and proper, and cannot be considered in this case. Upon the remaining shipments

the reparation order should be made effective and should be based upon respondent's tariff G. F. D. 10883 B.

It appears upon examination of the expense bills submitted and the petitioner's detailed abstract of shipments that there are errors in the computations which can not in all cases be corrected from the evidence submitted. Nor does it seem that the total charges named have in all cases been paid by the petitioner. There are several very evident overcharges which may or may not have been adjusted, and the uncertainty on this point renders it impossible for the Commission to determine upon the exact amount of the refund.

The following is a summary of the freight bills which should properly be included in the refund:

Seventeen freight bills covering the movement of seventeen cars from Janesville to Appleton, the rate upon which should have been 3.6 cts. per 100 lb. and the total charges $613.23.

Seventy-two freight bills covering the movement of seventy-two cars from Janesville to Beaver Dam, the rate upon which should have been 3.1 cts. per 100 lb. and the total charges $1,689.23.

Twenty-eight freight bills covering the movement of twenty-eight cars from Janesville to Edgerton, the rate upon which should have been 1.5 cts. per 100 lb. and the total charges $352.38.

Five freight bills covering the movement of five cars from Janesville to Madison, the rate upon which should have been 2 cts per 100 lb. and the total charges $109.84.

Three freight bills covering the movement of three cars from Janesville to Oshkosh, the rate upon which should have been 3.6 cts. per 100 lb., and the total charges $98.64.

Twenty-nine freight bills covering the movement of twenty-nine cars from Janesville to Waupun, the rate upon which should have been 3.3 cts. per 100 lb. and the total charges $963.75.

The total corrected charges as determined above upon 154 cars are $3,827.07.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, refund to the petitioner, the Southern Wisconsin Sand and Gravel Company, the difference between the amounts actually paid after all corrections not arising out of the wrongful application of the rate have been made and the sum of $3,827.07, the corrected charges as determined above, and as shown in the following statements:

EUGENE HAYDEN
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Nov. 11, 1913. Decided Dec. 8, 1913.

The petitioner alleges that the service of the respondent at Apollonia, Rusk county, is inadequate by reason of the discontinuance by the respondent, on Sept. 24, 1913, of its former practice of stopping passenger trains No. 84 and No. 85 at this point. The respondent formerly maintained a station at Apollonia but closed it in 1910 and the Commission, 1911, 6 W. R. C. R. 526, refused to order a restoration of station facilities.

Held: In view of the cost of operation, the close proximity of Bruce station to Apollonia, the fact that the people have practically abandoned the station at Apollonia, and the fact that the farming community surrounding Apollonia, as shown by the petition, does not require trains to stop at this point, the Commission would not be justified in requiring two interstate trains to stop there for the purpose of accommodating the very few persons who desire to avail themselves of their services. The petition is therefore dismissed.

The petitioner is the town clerk of Big Bend, Rusk county, Wis. He alleges that the respondent railway company's line between Minneapolis, Minn., and Sault Ste. Marie, Mich., passes through the unincorporated village of Apollonia in said town of Big Bend; and that prior to September 25, 1913, passenger trains No. 84 and No. 85 passing through Apollonia at 2:02 p. m. and 12:33 p. m., respectively, made regular stops at said station, but that since said date such stops have been discontinued. He further alleges that by reason of the failure of respondent to stop said trains No. 84 and No. 85 at Apollonia, the service of respondent at said station is inadequate and that in order to furnish adequate service at said station the stopping of said trains, at least upon signal, should be restored.

Respondent railway company, answering the petition, alleges that Appollonia is located only one mile from Bruce in the state of Wisconsin, and that there is not sufficient business at said station to warrant the stopping of trains, as the service furnished at Bruce fully takes care of passengers living in that vicinity.

The matter came on for hearing on November 11, 1913. The petitioner appeared in his own behalf, and respondent by *Kenneth Taylor,* its attorney.

Prior to November 14, 1910, the respondent maintained a station at Appollonia, which was in charge of a station agent. On that day it closed the station and withdrew the agent. Nevertheless, it continued to stop trains at the station until September 24, 1913. In *Heaverin v. M. St. P. & S. S. M. R. Co.* 1911, 6 W. R. C. R. 526, the question of requiring the company to restore station facilities at Apollonia was under consideration. The Commission held that because of the decline of business at this station, the necessity for a station agent no longer existed. It then appeared that Apollonia, which had formerly been a thriving and prosperous village, had gradually declined in population until not more than 150 people remained. All business houses had been closed. The village of Bruce became the business center of the territory tributary to Apollonia. Upon the present hearing it appears that there has since been no material change in the population of Apollonia.

From the report of the cash fares paid by passengers boarding the train in question at Apollonia from May 1 to September 24, 1913, it is apparent that practically all of the people who formerly boarded trains at this point now go to the Bruce station to take the trains. Train No. 84 during the period mentioned probably did not average one passenger daily at Apollonia. One-fourth of the stops were made without receiving any passengers. Train No. 85 did not average over seven passengers monthly. Three-fourths of its stops were made without receiving any passengers.

The total revenue derived from passengers taking these trains at Apollonia did not exceed $15 per month during the period mentioned. For the year ending September 30, 1913, the total freight revenue derived from less than carload shipments going out of Apollonia station amounted to $8.64. This amount accrued in the month of July, 1913. In no other month during the year was there any revenue from less than carload shipments made from this station. The revenue derived from less than carload shipments received at this station during the same year amounted to $7.73. These figures clearly indicate that Apollonia as a station on the respondent's line is little more than a memory.

Taking into consideration the cost of operation, the close proximity of Bruce station to Apollonia, the fact that the people have practically abandoned the station at Apollonia, and the fact that the farming community surrounding Apollonia, as shown by the petition, does not require trains to stop at this point, it seems that we would not be justified and could not lawfully require two interstate trains to stop there for the purpose of accommodating the very few persons who desire to avail themselves of the same.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

KRAFT, RADTKE AND QUILLING COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided Dec. 9, 1913.

The petitioner alleges that it was overcharged for the transportation of a carload of twine from Waupun to Menomonie through the assessment of charges on a weight of 30,000 lb. instead of the correct weight of 28,000 lb. and the movement of the shipment by the most expensive route. The shipment moved from Waupun to Camp Douglas over the C. M. & St. P. Ry. and from the latter point to Augusta over the C. St. P. M. & O. Ry. The shipment should have moved as directed by the petitioner from Waupun to Burnett Jct. by way of the C. M. & St. P. Ry. and thence to Menomonie by way of the C. & N. W. Ry. and the C. St. P. M. & O. Ry. It appears that the actual weight of the shipment was 27,000 lb.

Held: The petitioner is entitled to reparation on the basis of the actual weight of the shipment and the rate over the cheaper route. Refund is therefore ordered on this basis.

The petitioner is a corporation engaged in retailing implements at Augusta, Wis. It alleges that on June 12, 1913, it shipped a carload of twine weighing 28,000 lb. from the Wisconsin state prison at Waupun to Menomonie, Wis., over the respondents' lines and was charged therefor on a weight of 30,000 lb.; that instead of routing said shipment by the shortest and cheapest route with the privilege of stopping over at Augusta for partly unloading, the respondents shipped the same by the most expensive route, and as a result there was an overcharge, which the petitioner asks that authority of the Commission be granted to the respondents to refund.

The respondent Chicago, Milwaukee & St. Paul Railway Company, answering the petition, alleges that as the particular facts are not set forth in the petition, it neither admits nor denies the same, but asks that the petitioner be required to produce strict proof thereof.

The respondent Chicago, St. Paul, Minneapolis & Omaha Railway Company alleges that the shipment mentioned in the

petition weighed but 27,000 lb. instead of 28,000 lb., as alleged. It admits that the petitioners are entitled to a refund based upon a minimum weight charge of 24,000 lb. It also admits that the petitioner is entitled to the rate in effect by the shortest route, and claims that its co-respondent, the Chicago, Milwaukee & St. Paul Railway Company, routed the shipment in question.

The claim was submitted on the pleadings, papers, documents, and correspondence on file.

The shipment moved from Waupun to Camp Douglas over the Chicago, Milwaukee & St. Paul railroad, and from the latter point to Augusta over the Chicago, St. Paul, Minneapolis & Omaha railroad. The same should have moved as directed by shipper from Waupun to Burnett Junction by way of the Chicago, Milwaukee & St. Paul railroad, and from the latter point to Menomonie by way of the Chicago & North Western and the Chicago, St. Paul, Minneapolis & Omaha railroads.

The rates applicable by the latter route is 5 cts. per cwt. from Waupun to Burnett Junction, and 20 cts per cwt. from Burnett Junction to Menomonie, making a through rate of 25 cts. per cwt. The shipment was stopped at Augusta in transit to partly unload, for which the charge is $5. The charges actually paid by the petitioner were $107. The charges assessed on the actual weight of 27,000 lb. at 25 cts. per cwt. would be $67.50, and adding thereto the charge of the transit privilege of $5, would make the total charge $72.50, or $34.50 less than was actually paid by the petitioner.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company and the Chicago, St. Paul, Minneapolis & Omaha Railway Company be and the same are hereby authorized and directed to refund to the petitioner, the Kraft, Radtke & Quilling Company, the said sum of $34.50.

CITY OF GRAND RAPIDS

vs.

GREEN BAY AND WESTERN RAILROAD COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted June 24, 1913. Decided Dec. 9, 1913.

The petitioner alleges that the highway crossings formed by the intersection of Fourth avenue North and Third avenue North with the tracks of the G. B. & W. R. R. Co. and the C. & N. W. Ry. Co. in the city of Grand Rapids are dangerous.

Held: The crossings require further protection. The respondents are therefore ordered to flag all switching movements on their respective lines over the crossings and to store no cars within the platted width of the streets or within 80 ft. west of Fourth avenue North on the second spur track south of the main line. The G. B. & W. R. R. Co. is also ordered to limit the speed of trains on its main line over the crossings.

The petitioner, a municipal corporation in Wood county, Wis., alleges in substance that the highway crossings formed by the intersection of Fourth avenue North and Third avenue North with the tracks of the Green Bay & Western Railroad Company and the Chicago & North Western Railway Company in the city of Grand Rapids are dangerous to public travel. The Commission is therefore asked to require the respondents to properly safeguard these crossings.

The Green Bay & Western Railroad Company, in its answer, enters a general denial that the crossings with its line are dangerous. The Chicago & North Western Railway Company, in its answer, alleges that it has a spur track crossing the two streets in question, but that it operates only two trains a day over this track, which movements are flagged by the train crews. It denies that the crossings are unusually dangerous and asks that the complaint be dismissed.

A hearing was held on June 24, 1913, at Grand Rapids, Wis. *George P. Hambrecht* appeared for the petitioner, *R. B. Goggins* for the Green Bay & Western Railroad Company, and *C. A. Vilas* for the Chicago & North Western Railway Company.

Third Avenue North Crossing.

Third avenue North runs north and south. It is intersected at right angles by the main line of the Green Bay & Western Railroad Company, and about two hundred feet south of that crossing by a spur track of the Chicago & North Western Railway Company which leads to a paper mill east of Third avenue. The testimony shows that from the south highway approach the view of trains to the west on the spur track is obstructed by a house and the surrounding trees and shrubbery. The east view along the spur is also limited by trees and shrubs. After crossing the spur, the view to the east along the main line of the Green Bay & Western Railroad Company is obstructed by trees. From the north highway approach the view of the main line to the east is hindered by trees. After crossing the main line, the view to the east on the spur is obstructed by trees and shrubbery, but the west view is open. The limits of vision on the main line are reported by our engineer as follows:

Distance of point of observation in highway from track.	View of trains west.	View of trains east.
South 50 feet	500 feet	150 feet
" 100 "	500 "	100 "
" 200 "	400 "	100 "
" 300 "	250 "	75 "
North 50 "	⅛ mile	150 "
" 100 "	¼ "	100 "
" 200 "	400 feet	⅛ mile
" 300 "	300 "	200 feet

Third avenue North connects with roads leading into the country districts north of the city and is used extensively by farmers going to and from the city. A count taken in the interest of the petitioner shows that the combined traffic on both Fourth avenue and Third avenue from 9:20 a. m. to 4:55 p. m. amounted to 294 teams on March 1, 1913, and to 270 teams on March 8, 1913. Our engineer counted the traffic over the main line crossing at Third avenue on October 15, 1913, and during that twelve hour period there were two regular trains, four switching movements, 140 pedestrians, 25 bicycles, 44 teams and 20 automobiles using the crossing. The count made for the petioner shows the following train movements over Third avenue on the specified dates:

Date.	G. B. & W. train movements.	C. & N. W. train movements.
Feb. 7, 1913	19	2
" 8, "	10	4
" 9, "	16	8
" 10, "	10	6
" 28, "	16	.....
June 18, "	14	5
Mar. 8, "	16	4
" 10, "	13	4

Fourth Avenue North Crossing.

Fourth avenue North runs north and south and crosses the main track of the Green Bay & Western Railroad Company, the Chicago & North Western spur leading to the paper mill, and two connecting tracks between the two lines. The testimony shows that cars have been allowed to stand on the cross-over tracks in such a way as to limit the view of the main line from the south approach, and the view of the Chicago & North Western Railway Company's spur from the north approach. When no cars are on the spur tracks the view was said to be fairly open. The limits of vision on the main track of the Green Bay & Western Railroad Company, as reported by our engineer on the day of his inspection when some cars were standing on the spur track, are as follows:

Distance of point of observation in highway from track.	View of trains west.	View of trains east.
South 50 feet	1800 feet	500 feet
" 100 "	1000 "	450 "
" 200 "	400 "	400 "
" 300 "	150 "	300 "
North 50 "	3000 "	800 "
" 100 "	2000 "	500 "
" 200 "	600 "	300 "
" 300 "	700 "	400 "

Traffic over this street is very similar to that over Third avenue North. Our engineer made a count on October 15, 1913, at the main line crossing, which shows that from 6 a. m. to 6 p. m. two regular trains, four switching trains, 168 pedes-

trians, 29 bicycles, 97 teams and 15 automobiles crossed the tracks. The count of train movements taken by the petitioner's witness, the results of which are given above with reference to Third avenue, also applies to Fourth avenue. Several narrow escapes at this crossing were reported.

The superintendent of the Chicago & North Western Railway Company testified that he had issued instructions to train crews to flag all train movements over the crossings under consideration. The general manager of the Green Bay & Western Railroad Company expressed the willingness of his company to adopt a similar rule. He suggested that the obstructing trees be trimmed and that the spur tracks be kept clear of cars. He pointed out that on the main line the speed of trains is necessarily limited at these crossings on account of the proximity of the Chicago, Milwaukee & St. Paul railway crossing.

In the light of the testimony and of the report of our engineer, we are of the opinion that these crossings can be rendered reasonably safe under the existing traffic conditions by rigidly enforcing the rules that all switching movements must be flagged over the crossings, and that cars are not to be allowed to stand where they seriously obstruct the view of trains, and that the speed of trains over these crossings be limited to six miles an hour.

IT IS THEREFORE ORDERED, That the respondent Green Bay & Western Railroad Company limit the speed of trains on its main line over the crossings designated in the complaint, flag all switching movements on both the main track and the spur tracks over the crossings, and store no cars within the platted width of the streets or within eighty feet west of Fourth avenue North on the second spur track south of the main line.

IT IS FURTHER ORDERED, That the respondent Chicago & North Western Railway Company flag all switching movements on its line over the crossings designated in the complaint, and store no cars within the platted width of the streets or within eighty feet west of Fourth avenue North on the second spur track south of the main line.

IN RE REFUSAL OF THE FARMERS' UNION TELEPHONE COMPANY TO FURNISH SERVICE TO WILLIAM LEMCKE.

Decided Dec. 9, 1913.

The Commission, on its own motion, investigated the refusal of the Farmers' Union Tel. Co. to continue its service to William Lemcke at his residence near Middleton, Dane county. Mr. Lemcke made deductions from bills rendered him for service on account of materials and labor furnished by him at the time his telephone was installed. The company refused to accept the sums offered as full payment and partially discontinued its service.

The refusal of the telephone company to accept as full payment for its services a sum less than the full rate which other subscribers are required to pay for similar services was in accord with the plain duty of the company under sec. 1797m—90 of the statutes. It is the intent of this section that the payment for services rendered by a utility shall be uniform without reference to any contractual relations existing between the utility and its subscribers.

It is the duty of a public utility to establish rules and regulations having for their purpose the enforcement of prompt payment of all accounts due for services rendered. *Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 150.

Held: Though the telephone company was justified in discontinuing service to Mr. Lemcke upon his refusal to pay his bill in full, the company is not justified by the existence of his previous indebtedness in refusing to give him present service if he is ready and willing to give the company reasonable security for the payment of future bills. 1 Wyman on Public Service Corporations, 451.

The company is therefore ordered to restore its telephone service to Mr. Lemcke upon the tender by him of payment in advance for a reasonable period at the rates now charged, or the deposit by him with the company of a sufficient sum of money to secure the prompt payment of rentals which may become due in the future for services rendered in accordance with such rules and regulations as the company may publish and file with the Commission. Ten days is deemed a reasonable time for the formulation of such rules and their submission to the Commission.

Following an informal complaint that the Farmers' Union Telephone Company had refused to continue its service to William Lemcke, who resides near Middleton in Dane county, an investigation was ordered by the Commission on its own motion to determine the matter.

Hearings were held on August 1, and November 12, 1913. The Farmers' Union Telephone Company was represented by *Fred Schulenberg,* its president. *Mr. Lemcke* appeared in his own behalf.

It appears from the testimony that when the telephone was installed in the house of the complainant in 1911 certain materials and labor were furnished by him to provide facilities for the stringing of wires to his house. The president of the telephone company testified that it is the company's usual practice to require persons desiring service to provide the necessary poles, or properly trimmed trees, on their premises for stringing telephone wires, after which the company strings the wires and installs the instruments. The complainant insisted that the company had agreed to provide the labor and poles which he had furnished, and for this reason he made a deduction of $3 from the first year's rental bill rendered him. Notwithstanding this deduction the company continued the service for another year, at the end of which complainant again refused to pay the annual bill for service and deducted therefrom $2.70 for the poles which he claimed to have furnished. Thereupon the company discontinued his service in part by refusing him connection with telephones not on his own party line.

The company refused to accept as full payment for its services to Mr. Lemcke a sum less than the full rate which other subscribers are required to pay for similar services. This was its plain duty under sec. 1797m—90 of the statutes, which provides that:

"It shall be unlawful for any public utility to demand, charge, collect or receive from any person, firm or corporation less compensation for any service rendered or to be rendered by said public utility in consideration of the furnishing by said person, firm or corporation of any part of the facilities incident thereto, * * * ".

It is evidently the intent of the statute that the payment for services rendered by a utility shall be uniform without reference to any contractual relations between it and its subscribers. Under the circumstances, if the company is indebted to a subscriber for services rendered to it, it has no right to charge such subscriber a lower rate for that reason. Such indebtedness is an exterior matter and cannot be offset against the indebtedness

of the subscriber to the company for rentals. Should a disagreement arise as to the contractual relations involving the payment of rentals or the payment of any indebtedness owing by the company to a subscriber, the rights of the parties can be adjusted in court.

It is the duty of a public utility to establish rules and regulations having for their purpose the enforcement of prompt payment of all accounts due for services when rendered. This matter was fully considered by the Commission in the case of *Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 150, 159. After carefully reviewing a number of authorities upon the subject, the Commission said:

"From the authorities above quoted the following rules for the protection of a public utility against loss of operating revenues because of uncollectible accounts, and for the securing of prompt receipt of all moneys due for services performed or protection furnished, may be deduced as reasonable regulations which may be lawfully prescribed and enforced by a public utility:

"1. It may require of any patron the deposit of a reasonable sum of money as security for the prompt payment of bills when due. In determining the reasonableness of the amount thus to be deposited, the probable amount of the indebtedness that may be incurred during the month or other stated period at the end of which bills are made out and rendered, is an important factor. No more than a sum sufficient to furnish adequate security for the credit extended may be legally exacted.

"2. It may require satisfactory security to be furnished in lieu of such deposit.

"3. It may allow a discount upon bills paid on or before a stated day, or exact a penalty for failure to make payment within a certain time.

"4. For neglect or refusal on the part of any patron to comply with any of the legal rules and regulations established, it may discontinue service to such patron."

In the present case the company has not established any rule for the enforcement of prompt payment of rentals. However, in the absence of such rule it could not be compelled to furnish to a subscriber service free of charge, for that would be a violation of the statute quoted. Consequently, when a patron refuses to pay the full amount of rental at the end of the period when the rental becomes due, the company should discontinue his service. In this case the company, in the absence of any rule protecting it against loss of revenue from the refusal of patrons to meet

their obligations, discontinued complainant's service when he refused to pay the bill in full, and its act in the premises cannot be questioned.

Notwithstanding the discontinuance of the service the complainant now appears in the position of a new subscriber and asks that service be given him. The question before the Commission, therefore, is whether a telephone company has the right to refuse service on the ground that previous bills have not been fully paid. A telephone company, as has been shown, may, by establishing proper rules, require its patrons to pay in advance for a reasonable period for the desired service, and if a patron who is in arrears to the company offers payment in advance for future service, we do not think that it is consistent with its public duty for the company to refuse such service. The rule is stated in 1. Wyman on Public Service Corporations, 451, as follows:

"As one in public service may always demand prepayment, having given credit, the company must be content as other creditors must be to collect its back bills by legal means. To attempt to make such collections by refusing present service for ready money would seem to be in the face of the public duty."

In the instant case the president of the telephone company testified that the service was discontinued because the complainant deducted $2.70 from the bill rendered him in 1913 and refused to pay more than $9.30 for previous service, the full charges for which were $12.00. If the complainant was ready and willing to secure the company the full amount of $12.00 for its succeeding year's service, then, in our judgment, the previous indebtedness was not an excuse absolving the company from its duty to supply the service. The company should at once publish and file with the Commission a rule covering the subject in controversy.

IT IS THEREFORE ORDERED, That the Farmers' Union Telephone Company restore its telephone service to William Lemcke upon the tender by him of payment in advance for a reasonable period at the rates now charged, or the deposit by him with the company of a sufficient sum of money to secure the prompt payment of rentals which may become due in the future for services rendered in accordance with such rules and regulations as the company may publish and file with the Commission.

Ten days is deemed a reasonable time within which the company shall formulate and submit to this Commission such rules.

TOWN OF FITCHBURG

vs.

ILLINOIS CENTRAL RAILROAD COMPANY.

Submitted Sept. 6, 1913. Decided Dec. 11, 1913.

The petitioner alleges that the "Fergin" highway crossing over the I. C. R. R. in the town of Fitchburg, Dane county, is dangerous.

Held: The crossing requires protection. The respondent is ordered to install and maintain an electric bell, with illuminated sign, plans to be submitted for approval.

The offer of the respondent to protect the crossing by stopping all of its trains at the crossing cannot be entertained, for the reason that this method of protection would not only impair the service but would also involve much greater expense than the installation of proper safety devices.

The petitioner, a regularly organized town in Dane county, alleges in substance that the "Fergin" highway crossing located on the line of the Illinois Central Railroad Company, about one and one-fourth miles south of the station at Summit, is dangerous to public travel on account of the surrounding physical conditions. The Commission is therefore asked to require the respondent to provide adequate protection at this crossing.

The respondent, in its answer, denies that the crossing is unreasonably dangerous, and therefore asks that the complaint be dismissed.

A hearing was held on September 6, 1913, at the office of the Commission in Madison. *E. Barry* appeared for the petitioner, and *Jones & Schubring* for the respondent.

The testimony shows that at the "Fergin" crossing the highway runs east and west, and the railroad north and south. The railroad lies in a cut which was said to be from ten to twenty feet in depth, the deepest part being south of the crossing. Witnesses testified that a person driving a team cannot see a train approaching from the south until his horses are within six or eight feet of the track. The view to the north is somewhat better, but it also is badly obstructed by the banks of the cut.

The limits of vision are reported by our engineer as follows:

Point of observation in highway from track.	View south.	View north.
East 50 feet	150 feet	250 feet
" 100 "	200 "	200 "
" 200 "	500 "	600 "
" 300 "	500 "	600 "
West 50 "	350 "	250 "
" 100 "	300 "	200 "
" 200 "	250 "	100 "
" 300 "	200 "	100 "

A schoolhouse is located about ten rods west of the track, but only one child regularly crosses to and from school. A count was taken by a witness for the petitioner for three days from 5 a. m. to about 9 p. m. with the following results:

September 1, 1913	20 vehicles
September 2, 1913	17 "
September 3, 1913	32 "

Two passenger trains and two freight trains, in each direction, are operated over this line. A number of narrow escapes from accident were described at the hearing.

Counsel for the company took the position that the crossing is not unusually dangerous in view of the fact that train movements are infrequent. He stated, however, that if further protection is deemed necessary by the Commission, the company would prefer to stop all of its trains at the crossing rather than install some protective device. Such a practice, however, except at points very near a regular stop, would seriously impair the service. If stops were made at all crossings along the line, it would be impossible to maintain a schedule that would be consistent with reasonably adequate passenger service.

This proposed method of protection would not only impair the service but would be less economical from an operating standpoint than the installation of safety devices. On the basis of the testimony of railroad officials with regard to the number of trains operated on this division, it appears that during the year there are approximately 2,608 train movements over the crossing under consideration. The actual cost of stopping and starting a passenger train under ordinary circumstances has been estimated by railway officials in their testimony before the Commission at from $0.25 to $1.00 per stop, varying with the size of the train

and other conditions. Assuming a conservative estimate of $0.30 per stop for freight and passenger trains in this case, the cost of stopping all trains at the crossing under consideration would be $782.40 per year. It is clear, therefore, that this expense for one year would far exceed the initial cost of installing a modern electric bell and light on the crossing.

From an examination of the testimony and the report of our engineer, we find that the crossing in question is unusually dangerous and that the installation of an electric bell and light is necessary to adequately safeguard the public under the existing traffic condition.

IT IS THEREFORE ORDERED, That the respondent, the Illinois Central Railroad Company, install and maintain at the "Fergin" crossing, located on its line one and one-fourth miles south of Summit in the town of Fitchburg, Dane county, Wis., an automatic electric bell with an illuminated sign for night indication, plans for track circuits to be submitted to the Commission for approval.

Ninety days is considered a sufficient time within which to comply with this order.

H. S. HUGHSON
vs.
DULUTH, SOUTH SHORE AND ATLANTIC RAILWAY COMPANY.

Submitted July 24, 1913. Decided Dec. 12, 1913.

The petitioner alleges that the train service furnished by the respondent at Winnibijou, Douglas county, is inadequate and discriminatory because of the respondent's failure to stop its Sunday excursion train at that point. The train in question is operated during the summer months from Duluth, Minn., to Bibon, Wis., and return, and stops at all stations in Wisconsin between Superior and Bibon except Winnibijou. The respondent advances as its reason for refusing to stop the train at Winnibijou the fear that the practice of stopping at this point would be detrimental to the interests of the Winnibijou Fishing Club and ultimately to its own interests.

Held: The reason given by the respondent for its refusal to render the service desired cannot be accepted. The failure of the respondent to stop its Sunday excursion train at Winnibijou, while making stops at other stations of equal or less importance, is unjustly discriminatory. The respondent is therefore ordered to arrange the future schedule of its summer Sunday excursion train between Superior and Bibon to provide a stop at Winnibijou.

The petition alleges in substance that the train service furnished by the Duluth, South Shore & Atlantic Railway Company at Winnibijou, Douglas county, is inadequate on account of the respondent's failure to stop its Sunday excursion train at that point. It further alleges that this excursion train is stopped at other stations which are similar to Winnibijou, and that this is a discriminatory practice. The Commission is therefore asked to require the respondent to stop its Sunday excursion train at Winnibijou.

No answer was filed by the respondent.

A hearing was held on July 24, 1913, at Superior, Wis. *J. A. Little* appeared for the petitioner and *W. W. Walker* for the respondent.

The testimony shows that the Duluth, South Shore & Atlantic Railway Company operates, during the summer months, a Sunday excursion train from Duluth, Minnesota, to Bibon, Wis., and return, on the following schedule:

	Westbound	Eastbound
Duluth	7:45 a. m.	9:20 p. m.
Superior (Union Sta.)	8:20 "	8:40 "
Lake Nebagamon	9:30 "	7:15 "
Wills	9:52 "	6:50 "
Bibon	11:00 "	5:45 "

This train stops at all stations in Wisconsin between Superior and Bibon except Winnibijou, both outbound and inbound. One regular train in each direction stops at Winnibijou on Sundays, leaving there for Superior at 8:28 a. m. and arriving from Superior at 8:23 p. m. During the week a morning and evening train in each direction stop at Winnibijou daily.

The petitioner, who lives at Superior, testified that he owns a summer home about a mile from Winnibijou at which he spends his Sundays during the summer. He is now obliged to go by the way of Brule, a station on the line of the Northern Pacific Railway Company about two and one-half miles from Winnibijou, but he would prefer to use the respondent's Sunday excursion train if it were stopped at Winnibijou. It appears that there are about eight or ten families comprising about forty persons living within one mile of Winnibijou. A witness who lives about five miles south of this station testified that within from five to eight miles of Winnibijou to the south there are living about fifty or sixty persons for whom this is the nearest railway station. The land immediately surrounding the station is owned by the Winnibijou Fishing Club, the members of which usually spend the week end there. The station, however, is connected by means of a path on the railway right of way with a public highway, over which access is afforded to several tracts of land which are a part of the state forest reserve, and are open to the public. Witnesses stated that on the average about eight or ten persons use each regular train at Winnibijou, and that other stations on this line are substantially similar to Winnibijou with regard to the tributary population, and the amount of passenger business.

The respondent's general passenger agent testified that the train which the complainant desires to have stop at Winnibijou was put on as an excursion train to accommodate, primarily, persons desiring a Sunday outing from Duluth or Superior, and was not intended to serve the needs of residents along the line. The reason for refusing to stop this train at Winnibijou is that it would be detrimental to the interests of the Winnibijou Fish-

ing Club and ultimately to the company. He stated that the train would have been run only to Lake Nebagamon if there had been facilities for turning it there. He asserted that the traffic beyond Lake Nebagamon is not sufficient to justify running the train on to Bibon, if there were no operating reasons for doing so. Subsequent to the hearing the company submitted traffic data which show the business done by the excursion train up to the second Sunday in July for 1912 and 1913 as follows:

	1912.		1913.	
	No. of passengers.	Revenue.	No. of passengers.	Revenue.
Sundays in May:				
3d	.....	.....	136	$86.28
4th	.....	.....	110	75.12
Sundays in June:				
1st	145	$78.29	214	158.51
2d	150	110.68	158	108.61
3d	100	78.65	148	102.21
4th	212	144.28	147	104.08
5th	111	96.53	120	69.60
Sundays in July:				
1st	165	129.08	202	154.64
2d	192	158.30	130	110.33
	1075	$795.81	1365	$969.38

The reason advanced by the company, namely, that the Winnibijou Fishing Club objects to the stopping of the respondent's Sunday excursion train at Winnibijou, cannot be recognized by the Commission as a justification for depriving other patrons of a service to which they are equally entitled, and which is now rendered at other stations of equal or less importance than Winnibijou. It is our judgment that the failure to stop the Sunday excursion train at Winnibijou is unjustly discriminatory and that the prayer of the complaint should be granted.

IT IS THEREFORE ORDERED, That the respondent, the Duluth, South Shore & Atlantic Railway Company, arrange the future schedule of its summer Sunday excursion train between Superior and Bibon to provide a stop at Winnibijou.

MADISON GAS AND ELECTRIC COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Nov. 26, 1913. Decided Dec. 13, 1913.

Petition is made for an order requiring the respondent to install a spur track for the use of the petitioner under the terms of sec. 1797—11*m* of the statutes. The petitioner alleges that the spur track desired is practically indispensable to the successful operation of its plant as improved by the installation of a mono-rail system for the handling of coal; that neither the construction nor the operation of the spur track will be unusually unsafe or dangerous or unreasonably harmful to public interest; that an existing spur track which is now useful only to the petitioner and which will cease to be useful even to the petitioner upon the completion of the petitioner's new coal handling system, can be changed to meet the requirements of the petitioner; and that the respondent refuses to cause the change to be made unless the petitioner signs a contract containing a provision imposing all liability growing out of the construction, maintenance or operation of the track upon the petitioner, except liability for personal injuries.

The contention of the respondent that having once provided the petitioner with track facilities adequate to the then existing needs of the plant the respondent cannot be required either to change the existing tracks or to install additional tracks to meet new requirements of the industry, is not tenable.

In deciding whether a proposed spur track is practically indispensable to the successful operation of a public utility the mere physical possibility of operating the plant without the use of the spur cannot be taken as conclusive of the question, but consideration must be given to the needs of the plant when operated with the efficient and economical equipment which it is the duty of the public utility under the law (*Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 155) to install and maintain.

The problem of what constitutes the proper use of a street for railroad purposes under permission granted by a city depends for solution upon a number of facts and circumstances. What may be an unreasonable use of a street by a railway company in one locality may be a reasonable use in another locality. In the instant case the street involved, though not legally vacated, has been occupied almost entirely by the respondent under municipal grants for public teaming and industrial tracks and the street has never been required, and in all probability will never be required, for public use. The objection urged by the respondent on the ground that the track desired by the petitioner would have to be constructed and operated, and that cars would have to be spotted for unloading in a public street is therefore not sufficient to justify a refusal to grant the relief asked for by the petitioner.

Held: The spur track requested by the petitioner is practically indispensable to the successful operation of the petitioner's new plant for the manufacture of coal gas and it meets all other statute requirements in that it is less than three miles in length and will not in its construction and operation be unusually unsafe and dangerous nor unreasonably harmful to the public interest.

It is ordered: (1) that the respondent construct an adequate and suitable spur track as prayed for by the petitioner; and (2) that the petitioner deposit with the respondent the sum of $588, the estimated cost of the spur track, and give the respondent a bond to be approved by the Commission, securing the respondent against loss on account of any expense incurred beyond the amount of the deposit.

The petitioner is a public service corporation engaged in supplying the city of Madison and its inhabitants with gas and electric service. It has under construction at its plant, located in block 131 in said city of Madison, a mono-rail system for the handling of coal, the installation of which is not yet completed but will be completed within a few days.

It alleges that the installation of the mono-rail system was made necessary by the construction of a new gas plant, the modern design of which requires the elevation of coal used for charging purposes, and that the installation of said system also makes for great economy in the handling of coal required for use in the generation of electric current; that it is practically indispensable to the successful operation of the gas plant and of the said electric plant, that a spur track be constructed and maintained opposite said block 131, at the place more particularly designated in a certain ordinance granting municipal authority to said railway company to construct said track, which ordinance was duly adopted on October 25, 1913, and duly published as required by law; that neither the construction nor the operation of said spur track is, or will be, unusually unsafe or dangerous, or unreasonably harmful to public interest; that the spur track so required will be not to exceed five hundred feet in length, and will involve only the change of an existing spur track in Railroad street, in said city of Madison; that said spur track so to be changed is not now used to serve any industry or enterprise excepting alone the petitioner, and that upon completion of said coal handling system, the same will cease to be of any service whatever to the petitioner or to anyone else; that said railway company has heretofore informed the petitioner that the cost of changing such tracks, including the installation of said proposed spur, will not exceed the sum of

$588, which the petitioner has at all times been and is now willing to pay; that the railway company has advised the petitioner that it is willing to cause said change to be made, and said spur track to be installed, and that it is practical and feasible for said work to be done at once, but that it cannot proceed with said work unless the petitioner is willing to sign a blank form of contract provided by the legal department of said railway company; that the petitioner is advised and believes that the said railway company has no legal right, as a condition of installing said spur, to exact from the petitioner the signing of a contract according to said form, and especially one containing a provision purporting to subject the petitioner to all liability of every kind or nature growing out of either the construction, maintenance or operation of said track, save only of the petitioner to the public is such that it may not incur any liability for personal injuries, for the reason that the obligation such obligation; that said railway company has refused to install said spur track unless the petitioner will submit to said illegal exaction on the part of said railway company; wherefore, petitioner prays that, pursuant to sec. 1797—11m of the Wisconsin statutes, the said railway company be required to promptly install the said spur track.

The respondent, answering the petition, denies that it is practically indispensable to the successful operation of the electric plant of the petitioner that a spur track be constructed and maintained opposite block 131 at the place designated in the petition. The respondent admits that it maintains in Railroad street, opposite block 131, certain spur tracks, which tracks, it is alleged, were put in to serve the plant of petitioner, and in the manner required by the petitioner, but denies that said tracks are so located as not to meet the requirements of the petitioner, or to enable it to successfully operate its gas plant. The respondent admits that it declines to install the track for petitioner unless petitioner signs a proper agreement regarding such track, but denies that it is insisting upon any particular form of contract, although it has a form of contract for use in such cases, and admits that one of said forms was submitted to the petitioner with the request that the petitioner sign the same. The respondent further alleges that in the manufacture of gas, especially gas made from coal, there is great danger of fire occurring upon the premises, and that there is usually a dispute between the owner of the premises and the

railway company as to the cause of the fire; and admits that in serving the property of petitioner the respondent insists that it shall be relieved of any responsibilty or liability for fire occasioned or claimed to have been occasioned by its engines or by reason of the operation of said track, and that it is unwilling to install the track unless the petitioner execute and deliver to it an agreement indemnifying it against any claim for damage on such account. The respondent also alleges that the proposed location of the spur track is in a public highway in the city of Madison, an incorporated city of the state of Wisconsin, and denies that the Commission has any authority to require the respondent to install a track within the limits of, or longitudinally in, any public street or highway.

The matter came on for hearing on November 26, 1913. *Olin & Butler,* by *H. L. Butler,* appeared for the petitioner. *William G. Wheeler,* assistant general counsel, appeared for the respondent.

The allegations of the petition as to the construction, location, and purposes of the new gas plant of the petitioner are not in controversy. It is also admitted that the mono-rail system of handling coal and coke now under construction and designed to handle coal for the gas plant and the electric plant operated in connection therewith, will be a great convenience and lessen the cost of moving coal from the cars to the overhead storage bin in the plant. The mono-rail system is so arranged that with the construction of the proposed sidetrack in question, it will be possible to take coal directly out of the cars at a point adjacent to the plant on Railroad street and convey the coal to the place of storage. In order to successfully operate the gas plant, it is necessary that the coal be elevated, as the plant is operated by means of a charging and discharging machine, which requires the coal to be elevated about forty feet. Consequently, if an elevated mono-rail system were not employed, it would be necessary to remove the coal from the cars and haul it across the premises of the petitioner at grade and then elevate it to the place of storage. This would be an expensive method of handling the coal. The elevated mono-rail system is so arranged that the conveyor runs from the place of discharge to a point adjacent to the plant on Railroad street, where a cantilever is projected, by means of which the bucket is lowered directly to the cars, and when raised may be taken

from this point either to the electic plant or the gas plant for unloading.

The proposed track is located in Railroad street, where the existing track is located. The portion of Railroad street in which the proposed track is projected is not used for teaming or travel by pedestrians. It is given over entirely to the railroads for teaming and industry tracks.

The railway company opposes the installation of the proposed track. It maintains in the first place that as there are now three tracks serving the plant, two of which are located on petitioner's premises and one in Railroad street, which were adequate for all purposes of the plant until petitioner discontinued the manufacture of water gas and erected a new plant for the manufacture of coal gas, no further duty rests upon it, either to change the existing tracks or to install additional tracks to meet any new requirements of the industry. According to this contention, it follows that the petitioner, having once been supplied with sufficient industrial track facilities, its right in the premises, under the statute, has been exhausted, and any other such facilities, however essential, must result from negotiation and agreement between the parties and cannot be imposed upon the railway company against its will. Obviously, if this position is maintainable under any proper interpretation of the statute, the benefits contemplated by the enactment would in many instances fail of realization. No extension, improvement or alteration could be made in any industry involving a relocation or change in its industrial or sidetracks, or requiring additional sidetrack facilities, except at the peril of the owner being obliged to yield to any terms that the railway company might see fit to impose as a condition of its consent to the new arrangement. This would tend to retard the development of industrial enterprises, and therefore cannot be accepted as a permissible construction of the statute, unless the terms of the statute are so clear as to warrant no other construction. A careful reading of the statute is sufficient to convince one that no such interpretation is permissible. Furthermore, when we consider that the narrow construction sought to be placed upon the statute merely emphasizes an evil which the statute was designed to remedy, we cannot charge the legislature with the absurdity involved in the position taken by the railway company. The protracted negotiations incident to the furnishing of side-

track facilities to industries and generally accompanied with more or less strife, resulting at times in failure of agreement and at times in the formation of contractual relations of questionable expediency, were causes which led to the enactment of the statute. No interpretation or construction of the statute may be indulged in which will defeat its purpose. The contention of the railway company upon this point is not, in our judgment, tenable.

It is also objected by the respondent that as the proposed track is to be located in a public street, the spotting of cars for unloading would be unlawful use of the street for railway purposes. In support of this contention the following cases are cited: *Bussian v. Milwaukee, L. S. & W. R. Co.* 1882, 56 Wis. 325; *Fay v. M. St. P. & S. S. M. R. Co.* 1907, 131 Wis. 639; *Depow v. C. & N. W. R. Co.* 1912, 151 Wis. 109. Each of these cases involved the negligence of the railway company in leaving either a locomotive or car standing in a highway or on a crossing for an unreasonable length of time, causing horses to become frightened and run away, and injure the plaintiff. The court recognized and applied to the facts of each case the well established rule that,

"Under our statutes a railway company has a right to use the streets on which its tracks are lawfully laid for legitimate purposes, but it has no right to leave its cars standing upon the street for an unnnecessary and unreasonable length of time". *Depow v. C. & N. W. R. Co., supra.*

While a city may grant a right to a railway company to construct a track in a street, the railway company in constructing, maintaining and operating such track must not unreasonably interfere with the concurrent right of the public to use the street for public travel. Subject to this limitation any necessary and reasonable use of the street for railway purposes is permissible. The question of proper use in any case, when a particular use is under consideration, is generally a question depending for solution upon a number of facts and circumstances. What may be an unreasonable use of a street by a railway company in one locality may be a reasonable use in another locality. Standing engines, or cars for loading or unloading, for any length of time in a public street which is extensively used by the public for vehicular traffic may be unreasonable, while permitting such engines or cars to stand for the same length of time in a street which is not at all required or used by the

public for travel may be quite reasonable. So long as there is no impairment of the public use of the street upon which a railway track is lawfully maintained and operated by a railway company, any proper railway purpose, such as the placing of cars alongside a warehouse, dock or manufacturing or mercantile industry of any kind for the purpose of loading or unloading, is not to be condemned as an infringement on the public right in the street. Under the police power vested in the municipality reasonable rules and regulations may be enacted at any time by the city to govern the use of the track in question, if it becomes necessary to protect the public right in the street. We cannot assume that the track in question, when constructed, will be operated illegally or used for unlawful purposes.

The respondent railway company applied to the common council of the city for a grant of the right to lay the proposed track in the street, which grant was duly made by the council and accepted by the respondent. Since then no opposition has arisen from abutting property owners. This is probably due to the fact, as has already been stated, that the street in question, though not legally vacated, has been occupied almost entirely by the railway company under municipal grants for public teaming and industrial tracks, and also to the fact that the street has never been required, and in all probability will not be required, for public use. The property abutting on either side of the street and adjacent to the proposed track belongs to the petitioner and the respondent, respectively. There is nothing in the situation presented that would justify our refusal to grant the relief asked in the petition upon the ground that the track would be constructed and operated in a public street.

Relative to the claim that there is no evidence to support a finding that the proposed spur track is practically indispensable to the successful operation of respondent's plant, it may be said that the mere physical possibility of operating the plant without the use of the mono-rail system, as shown by the testimony and emphasized by the counsel for respondent in his argument, is not conclusive of the question. Nor is it the proper criterion by which the necessity required by the statute as a condition of the installation of the spur track is to be determined.

"Necessity is recognized as a matter of degree. A thing may be necessary, more necessary and *indispensably* necessary.

(Cotton et al. v. The Co. Commissioners, 1856, 6 Fla. 629). When a thing is necessary, therefore, it may be merely 'convenient or profitable', or it may be 'indispensable to the accomplishment of a purpose.' *(St. Louis R. R. Co. v. Trustees,* 1867, 43 Ill. 307). In other words, 'indispensable' is recognized as the superlative of 'necessary'. To define necessary in its most rigid sense, would be to say it is synonymous with indispensable—that without which a certain purpose cannot be accomplished. Webster's definition is 'absolutely necessary or requisite', 'impossible to be omitted or spared'." *Hurst v. N. P. Ry. Co.* 1909 3 W. R. C. R. 283, 286–287.

Applying the language of the statute as thus explained to the facts and circumstances disclosed by the investigation, the resolution of the question is not at all intricate. The petitioner is a public service corporation engaged in supplying the public with gas and electric current. The measure of its duty to the public has been expressed by the Commission as follows:

"Every public service corporation is required by law to furnish adequate and efficient service to the public according to the development and state of the art at the time the service is performed, and to exact therefor only reasonable compensation. Thus, to fulfill its public duty, it must at all times keep and maintain its plant in a proper state of repair and in an efficient operating condition, adopt new inventions as they arise, make extensions and improvements of its plant when necessary and required for the convenience of the public, and continue its services without cessation whether profitable or unprofitable. It is by statute subject to public supervision as to the extent and quality of its service as well as to the charges it may lawfully exact therefor." *Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 155.

In accordance with its public obligations, the petitioner constructed a new gas plant for the manufacture of coal gas. It formerly manufactured water gas, but the increase of business made it necessary to extend the plant. As a matter of economy the manufacture of water gas was almost entirely discontinued, and the old plant is now operated merely as an auxiliary to the new plant. In designing and constructing the new plant every economy was considered. Chief among these is the mono-rail system, which was designed to reduce operating cost in unloading coal from cars and conveying it to the places of storage. Without the use of the mono-rail system the cost of handling the coal will be greatly increased. To abandon the mono-rail

system, which cost approximately $20,000, and to change the arrangement of the plant so as to permit of handling the coal in another and more expensive way, would cast a burden upon the petitioner not warranted by the situation. Such a handicap ought not to be imposed if it can be avoided. Certainly the plant as at present constructed cannot be successfully operated without the use of the mono-rail system, and the spur track in question is essential to such use. Upon the facts disclosed upon the investigation we are satisfied that the case comes within the meaning of those terms of the statute requiring a railroad company to construct, connect, maintain, and operate a reasonably adequate and suitable spur track wherever the same is "practically indispensable to the successful operation" of any industry.

There is not, and under the circumstances there could not be, any serious contention that the construction and operation of the proposed track would be unusually unsafe and dangerous or unreasonably harmful to public interest. It is the judgment and finding of the Commission that the proposed spur track mentioned and described in the petition is less than three miles in length, is practically indispensable to the successful operation of petitioner's new plant for the manuafacture of coal gas, and its construction and operation is not unusually unsafe and dangerous and is not unreasonably harmful to public interest.

NOW, THEREFORE, IT IS ORDERED, That the respondent Chicago & North Western Railway Company construct an adequate and suitable spur track as prayed for by the petitioner herein along the route designated by the blue print attached to respondent's application to the common council of the city of Madison for permission to construct the spur track on Railroad street in said city.

IT IS FURTHER ORDERED, That the petitioner herein deposit with the said Chicago & North Western Railway Company the sum of $588, the estimated cost of said spur track; and also give the said railway company a bond to be approved by the Commission as to form, amount and surety, securing the said railway company against any loss on account of any expense incurred beyond the amount of said deposit.

Thirty days is deemed a reasonable period of time within which compliance with the provisions of this order shall be made.

P. J. FORD
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted June 20, 1913. Decided Dec. 13, 1913.

The petitioner alleges that the respondent's freight and passenger station facilities at Belle Plaine, Shawano county, are inadequate and asks that the respondent be required to construct a suitable depot for the accommodation of passengers and the storing of freight and to construct and maintain a yard and loading facilities for stock. The respondent agreed at the hearing to add a waiting room for passengers to the existing building and to employ a caretaker to keep it clean and heated. The respondent has also installed a portable stock chute. Permanent stock yards are available at Embarrass, a point 4½ miles distant.

Held: The present station facilities, though adequate with respect to the shipment of stock, are in need of improvements in certain other respects. The respondent is therefore ordered to provide the station with a stove and suitable lights and to employ a caretaker who shall keep the station clean and properly lighted and heated.

The petition alleges in substance that the freight and passenger station facilities at Belle Plaine, Shawano county, are inadequate. The Commission is therefore asked to require the Chicago & North Western Railway Company to construct a suitable depot for the accommodation of passengers and the storing of freight, and to construct and maintain a yard and loading facilities for stock.

The respondent, in its answer, alleges that its station at Belle Plaine is adequate for the accommodation of all freight business done there. It states its intention to provide an addition to the depot for the use of passengers and to furnish a portable stock chute for the use of shippers. The dismissal of the petition is therefore asked.

A hearing was held on June 20, 1913, at Belle Plaine; *C. F. Dillett* appeared for the petitioner and *C. A. Vilas* for the respondent.

The testimony shows that the station at Belle Plaine consists of a shed sixteen feet long and ten feet wide which is used

as a shelter for both freight and passengers. Counsel for the company stated that it would add a waiting room for passengers, the same size as the existing building and employ a caretaker to keep it clean and heated. Witnesses for the petitioner stated that this arrangement would be satisfactory as to passenger facilities, but asserted that the existing shed is not sufficiently large to accommodate the freight business. It was said that when the three cheese factories which are tributary to this station receive empty cheese boxes at the same time the depot is not large enough to shelter them, and that some losses have resulted from their exposure. Witnesses testified that other freight is sometimes left on the platform even though there is room in the depot. The inconvenience in shipping or receiving goods at a prepaid station was also commented on. The company's superintendent expressed the opinion that the existing building would be ample for storing freight, and stated that train crews are instructed to put freight under shelter. He said that a box would be provided in which shipping bills could be left for the conductor's signature.

Subsequent to the hearing the company submitted a statement of its freight and passenger earnings which has been summarized in the following table:

Year ending May 31, 1913.

	Total for year	Average per month
Revenue from carload freight....	$3,302.67	$275.22
Revenue from L. C. L. freight...	815.07	67.92
Total freight revenue.....	$4,117.74	$343.15
Total passenger revenue.....	$863.10	$71.92

The company's superintendent testified that portable stock chutes, such as the one to be installed at Belle Plaine, are used at more important shipping points, among which Wabeno and Laona were mentioned. He expressed the opinion that the cattle shipping business at Belle Plaine would be insufficient to justify additional facilities. It appears that stock from this district is now shipped from Clintonville, a distance of nine miles from Belle Plaine. However, investigation shows that facilities for loading stock including a yard are provided at Embarrass only four and one-half miles from Belle Plaine,

which is connected with it by a fairly good wagon road. Witnesses for the petitioners testified that the portable stock chute would be sufficient if a yard is provided. Such a yard would cost between $200 and $300, according to the estimate of the superintendent, but a witness for the petitioners estimated the cost at under $100.

From an examination of the testimony and the report of our engineer it is our judgment that with the addition of a passenger waiting room, the employment of a caretaker to keep the station clean and properly heated and lighted, the installation of a bill box for the convenience of shippers of less than carload freight, and the enforcement of the rule that all less than carload freight should be unloaded into the shed, the station facilities at Belle Plaine will be adequate for the present. The respondent agreed at the hearing to make these improvements, but investigation shows that up to this date it has not provided a caretaker or suitable means of heating and lighting the depot.

It is contended in the company's brief, and has been verified by the investigation of our engineer, that the permanent stockyards located at Embarrass, four and one-half miles from Belle Plaine and connected with it by a fairly good road have not been used for three years. If, with these facilities available, shippers living in the vicinity of Embarrass and Belle Plaine now drive their stock a greater distance to Clintonville for shipment instead of using the stockyards at Embarrass, there is good reason to believe that a large proportion of it would continue to be shipped as at present, even though permanent stockyards were provided at Belle Plaine. It is practicable to load stock by means of the portable stock chute which the company has voluntarily installed, and until the actual stock shipments at Belle Plaine demonstrate that additional facilities are necessary, we do not feel justified in requiring the erection of a yard as prayed for.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, provide a stove and suitable lights at its station at Belle Plaine, and employ a caretaker who shall keep the station clean and properly lighted and heated.

F. G. CROSS ET AL.
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Nov. 5, 1913. Decided Dec. 13, 1913.

Petition is made that the C. & N. W. Ry. Co. be required to construct and maintain an adequate depot at Allenville, Winnebago county. The railway company now maintains a box car shelter for freight but provides no shelter for passengers.

Held: The business transacted by the railway company at Allenville is sufficient to warrant the erection of a building for the accommodation of passengers and proper protection of freight. The company is therefore ordered to provide a building suitable for these purposes and to place it in charge of a caretaker who shall keep it clean and properly lighted and heated. Plans are to be submitted for approval.

The fact that passengers have been permitted to wait for trains in a store near the depot does not relieve a railway company of its duty to provide adequate station facilities.

The petition, which is signed by fifty-five persons living in the vicinity of Allenville, Winnebago county, on the line of the Chicago & North Western Railway Company, alleges in substance that Allenville has been a station on the respondent's line since it was constructed in 1879, but that no depot has been provided there for the convenience of passengers and the storing of freight and express. The Commission is therefore asked to require the respondent to construct and maintain an adequate depot at Allenville.

No answer was filed by the respondent.

A hearing was held at Allenville on November 5, 1913, at which *F. G. Cross* appeared for the petitioners and *C. A. Vilas* for the respondent.

The testimony shows that the Chicago & North Western Railway Company maintains a box car shelter for freight at Allenville, but that no shelter is provided for passengers. Persons who are obliged to wait for a train ordinarily stay at a general store which the superintendent stated is between four hundred and five hundred feet from the stopping place. One of the proprietors of this store acts as an agent of the company, selling

passenger tickets and signing receipts for outgoing freight. Other than this the service at Allenville is that of a prepaid station. It was admitted by the company's superintendent that passengers trains are somewhat irregular at Allenville, and witnesses for the petitioner stated that when trains are late it is very inconvenient to wait at the store, especially in inclement weather, because of the uncertainty of the time of arrival of trains. Occasionally a freight train is mistaken for the overdue passenger train, and in such cases passengers must return to the store or wait on the exposed platform. Witnesses complained that the existing freight shed is in poor repair and that the roof leaks.

Allenville has been a stopping place on this line since the road was built. It now contains a store, a blacksmith shop, a post office, an elevator, a church and a school and is the shipping point for several cheese factories. A witness estimated that fifty people live within a radius of a quarter of a mile of the station and that about three hundred live within a mile of it. The company maintains facilities for shipping stock and other products in carload lots. Two passenger trains in each direction are operated. The passenger traffic consists largely of persons traveling to and from Oshkosh which is about eleven miles distant from Allenville. One witness estimated the passenger traffic at from two to twenty-five per day. Another testified that he had seen as many as twenty-five persons board a single train at this station. Subsequent to the hearing the company submitted with its brief a statement showing the passenger earnings for the year ending September 30, 1913, to be $681.60. When it is considered that the fare to Oshkosh is only 22 cts. and that most of the travel is to and from that city it becomes apparent that the actual number of passengers carried is considerable. The company's statement also shows that the freight earnings for the same year were $4,263.93, making the combined freight and passenger earnings $4,945.53 or an average of $412.17 per month. During the period covered, the record shows that seventy-four cars were shipped from Allenville and forty-four cars received there.

Several minor matters relating to the method of delivering less than carload freight, the placing of cars for loading, and other details were discussed at the hearing, but investigation shows that they have now been satisfactorily adjusted.

With respect to station facilities we are of the opinion that the business transacted by the respondent at Allenville is of sufficient importance to warrant the erection of a building for the accommodation of passengers and the proper protection of freight. The existing box car shed is in poor repair and there is some doubt as to whether it could be satisfactorily remodeled, if it were considered desirable to do so. But in view of the fact that we deem it necessary to erect a shelter for passengers, it appears to be advisable to construct a building of sufficient size to provide for the needs of both the freight and passenger traffic. In its brief the company contends that a shelter for passengers is unnecessary because persons are now allowed to wait at the general store. The practice of requiring passengers to wait in a store which may not be open at all times nor have sufficient seating room and in which they may be subjected to petty annoyances cannot be regarded with approval. It is the duty of the railway company to provide adequate station facilities and it should not expect an individual whose business is near the depot to assume this duty.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, provide a suitable building for the protection of passengers and freight at Allenville, and place it in charge of a caretaker who shall keep it clean and properly lighted and heated, plans to be submitted to the Commission for approval.

The building ordered herein should be ready for occupancy within sixty days.

IN RE APPLICATION OF THE CITY OF MENASHA FOR AUTHORITY TO INCREASE ITS ELECTRIC RATES.

Submitted Oct. 29, 1912. Decided Dec. 19, 1913.

Application is made by the city of Menasha for authority to increase its rates for commercial electric lighting and power service. The rates asked for were put into effect by the city in February, 1912, but not filed with the Commission, when the city began to furnish regular commercial service to consumers in the city in competition with the privately owned utility doing business there. The rate formerly in effect was for a small amount of service supplied from the municipal street lighting system to private parties at such times only, it appears, as the equipment was in operation for municipal purposes.

Held: It is probable that the rates asked for by the applicant might have been accepted without hearing as rates for a new service had they been so filed with the Commission. The rates in question do not meet entirely with the approval of the Commission, but no alteration will be made under the present proceeding. The applicant is therefore authorized to put into effect the schedule of rates described in its application.

This is an application of the city of Menasha for authority to increase its rates for commercial electric service. Application was filed with the Commission July 2, 1912.

Hearing was held October 29, 1912, at the Commission's office in Madison. *D. K. Allen,* city attorney, and *S. S. Little,* city clerk, appeared for the applicant. No one appeared in opposition to the application.

The rate formerly in effect was 6 cts. per kw-hr. This was for service rendered to private parties from the municipal street lighting system. The schedule of rates that the city now desires to have authorized for service from a regular commercial system is as follows:

LIGHTING RATES.

First	50	kw-hr.	per	month	to	one	consumer	... 8	cts. per kw-hr.
Second	50	"	"	"	"			... 7	" "
Next	100	"	"	"	"			... 6	" "
Next	200	"	"	"	"			... 5	" "
All over	400	"	"	"	"			... 4	" "

Minimum charge: 50 cts. per month per meter.

POWER RATES.

First 100 kw-hr. per month to one consumer .... 6 cts. per kw-hr.
Next 100 " " " " .... 4 " "
All over 200 " " " " .... 3 " "
Minimum charge: $1.00 per h. p. installation for total h. p. of motor used by one consumer.

DISCOUNTS.

Discount of 10 per cent on all bills paid on or before the 10th day of the month in which payable. All meters will be furnished and installed free by the city.

For several years the city of Menasha has furnished its own street lighting service from an electric plant operated in connection with the municipal water works. During at least part of this time a small amount of service was supplied to private parties from the street lighting system at such times, we understand, as the equipment was operated for municipal purposes. The bulk of the commercial electric business was carried on by the Wisconsin Traction, Light, Heat and Power Co. About February, 1912, the applicant began to furnish regular commercial service to consumers in Menasha in competition with the private utility doing business there. The applicant's right to do so was sustained later by the circuit court of Winnebago county. The rates that the city began to charge in February, 1912, were those named in its application. These rates did not come to the Commission's notice until some time after they were put in force by the city on account of applicant's failure to file the schedule. The city was advised to make formal application for authorization of rates.

While at first it appeared that the new rates of the municipal utility constituted an increase over former charges and therefore required a formal application and hearing on the question, further facts seem to show that the new rates might have been accepted without hearing as rates for a new service had they been so filed. Although the utility did actually have in force a 6 cts. per kw-hr. rate for service to private users, it is very doubtful if this should have been taken as a precedent for rates when the city later came to furnish service of a different character from a commercial system. The order in the case will be made in accord with this view, because no objection has been made to the rates proposed by the applicant.

At the time that the hearing was held and investigation was made, the municipal utility had not been long in operation. The evidence and testimony adduced concerning the cost of operation were not as conclusive, therefore, as might be desired. This evidence will not be reviewed here for it does not appear to be very material in view of the basis upon which the proceeding is to be disposed of. We are inclined to the belief that the character or form of the schedule should be different from that proposed in the application, but under the circumstances no alteration will be made at this time. Should these rates again come before us under another proceeding, occasion might be taken to revise the schedule both as to form and amount of charge.

IT IS THEREFORE ORDERED, That the applicant, the city of Menasha, be and the same hereby is authorized to place in effect the schedule of rates described in its application, for lighting and power service in the city of Menasha.

AUGUST PUKALL ET AL.
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Sept. 19, 1913. Decided Dec. 19, 1913.

The petitioners allege that the station facilities on the respondent's line at Shepley, Shawano county, are inadequate, in that no station agent is maintained there. Shepley is a prepaid station and the service rendered appears to be similar to that ordinarily afforded at a prepaid station. The passenger traffic is light, and the greater part of the freight consists of forestry products in carload lots.

Held: Conditions at Shepley do not warrant the issue of an order requiring the respondent to maintain an agent at that point. The petition is therefore dismissed. The respondent should, however, arrange to designate the consignees of empty cars and remove the causes of other minor complaints made by the petitioners.

The petition, which is signed by twenty-seven residents of Shepley in Shawano county, alleges in substance that the traffic at Shepley warrants the employment of a regular station agent, and that the station facilities there are inadequate because no agent is maintained. The Commission is therefore asked to require the maintenance of an agent at Shepley.

In its answer, the respondent denies that the traffic at Shepley is sufficient to warrant placing an agent in charge of the station, and therefore asks that the petition be dismissed.

A hearing was held at Eland on September 19, 1913, at which *Chas. F. Smith, Jr.,* appeared for the petitioners and *C. A. Vilas* for the respondent.

Shepley is a prepaid station located 6.17 miles from Eland and 5.7 miles from Bowler. It is admitted that the depot is sufficiently large for passengers and freight and that it is properly maintained and heated. It also appears from the testimony that the service rendered is similar to that ordinarily afforded at a prepaid station. Shippers have to arrange for cars with the way freight conductor, and make out their own shipping bills. When empty cars are supplied there is no way

of ascertaining for whom they are intended, and if an insufficient number are sent to supply all who desire them, the first shippers to begin loading get the cars. Shippers of less than carload lots have to make out the bills of lading and wait for the way freight which runs very irregularly. Goods shipped into Shepley are usually put in the freight room. The key of this room is kept by the section foreman who is not in the vicinity of the station all of the time, and occasionally persons have been inconvenienced because they could not get their goods from the freight room. The company's superintendent said that he would arrange to have a key left at the section foreman's house all of the time so that this cause of complaint would be obviated.

A witness estimated that Shepley draws traffic from six miles to the north, two miles to the south, three and one-half miles to the west and three miles to the east. Most of the freight shipments are forwarded in carloads and consist chiefly of forestry products, such as poles, wood, lumber and sawdust.

Subsequent to the hearing the company submitted a list of the carload shipments from Shepley, showing by months the shippers, kinds of goods and number of cars, from September 1912 to October 1913. These data, which are summarized below, are in substantial agreement with the exhibits introduced by the petitioner. All of the shipments were forestry products.

Month.	Number of shippers.	Number of cars.
September, 1912	5	32
October, "	7	23
November, "	7	31
December, "	7	34
January, 1913	13	65
February, "	10	48
March, "	11	51
April, "	11	58
May, "	6	110
June, "	7	20
July, "	5	11
August, "	8	32
September, "	6	13

At the hearing the company submitted a statement showing that its freight earnings at Shepley for the year ending September 16, 1913, were as follows:

Received	$633.82
Forwarded	11,629.29
Total	$12,263.11

Passenger earnings for three years ending May 31, 1913, were as follows:

Year	Number of passengers	Revenue
1911	782	$213.26
1912	965	257.86
1913	1,370	317.80

The superintendent testified that a number of stations on the respondent's line at which the business transacted is larger than at Shepley do not have regular agents.

In the light of the testimony it is our judgment that conditions at Shepley do not warrant an order requiring the company to maintain a regular agent. Passenger traffic is light, and the greater part of the freight consists of forestry products in carload lots, which appear to be handled as expeditiously as they would be if a regular agent were employed. The company should arrange to designate the consignees of empty cars and remove the causes of the other minor complaints mentioned at the hearing. The prayer of the petition for a regular agent must, however, be dismissed.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

VILLAGE OF UNITY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Aug. 15, 1913. Decided Dec. 20, 1913.

The petitioner alleges: (1) that the respondent's passenger train service at Unity is inadequate; (2) that there are not enough highway crossings over the respondent's line in the village; and (3) that the crossing at Clark st. is not properly graded.

Held: 1. The petitioner's request that the respondent be ordered to stop passenger trains number 103 and 104, which form part of the respondent's limited service between Chicago and Ashland, at Unity cannot be granted for the reason that the train service now rendered at Unity is reasonably adequate.

2. The Commission can take no action in the matter of the crossings desired by the petitioner at Cook, Wood and Church sts. until the streets named have been legally opened by the village over the railroad right of way and petition is made to the Commission for the determination of the mode and manner of crossing, as provided in sec. 1797—12*e* of the statutes.

3. The crossing at Clark st. is dangerous in its present condition. It is the respondent's duty under sec. 1299*h*—1 of the statutes to remedy this defect by proper treatment of that part of the highway which lies within the railroad right of way.

The respondent is therefore ordered to provide a properly drained roadway within its right of way lines at Clark st., which shall be surfaced and graded in substantially the same manner as the adjacent portions of the highway, and which shall have a crown as wide as the full traveled roadway in the adjacent portions of the highway.

The petitioner, a municipal corporation lying partly in Clark county and partly in Marathon county, alleges in substance that the train service at Unity is inadequate, that there are not enough highway crossings over the respondent's line in the village, that the crossings are unprotected, and that the crossing at Clark street is not properly graded. The Commission is therefore asked to open a crossing at Cook and Wood streets and another at Church street, and to require the respondent to properly grade the Clark street crossing, install bells at the above mentioned crossings and stop its passenger trains No. 103 and No. 104 at Unity on signal.

The respondent, in its answer, denies that its train service at Unity is inadequate or that the traffic warrants the stopping of

the trains in question. With regard to the designated crossings it states that it will appear and go into the merits of the situation at the hearing.

The matter was heard on August 15, 1913, at Unity. *E. C. Pors* appeared for the petitioner, and *Kenneth Taylor* for the respondent.

The testimony shows that Cook and Wood streets and Church street have not been legally opened by the village over the railroad right of way. Until this action is taken the Commission is without jurisdiction in the matter, but after the proper legal proceedings to open these crossings have been taken the Commission will, upon petition, determine the mode and manner of crossing as provided in sec. 1797—12*e* of the statutes. The questions for consideration are, therefore, whether the Clark street crossing requires improvement and the installation of some safety device, and whether the train service at Unity is adequate.

Train Service.

The time table of the respondent's line dated June 1, 1913, which was placed in evidence, shows that the train service then afforded at Unity was as follows:

	Southbound.			
	Train No. 112	Train No. 144	Train No. 6	Train No. 104
Leave Ashland	7:30 a. m.	.....	.....	7:20 p. m.
Unity	12:29 p. m.	2:37 p. m.	8:32 a. m.	.....
Spencer	12:42 p. m.	3:15 p. m.	8:50 a. m.	12:10 a. m.
Milwaukee	7:30 p. m.	.....	3:30 p. m.	6:55 a. m.
	Northbound.			
	Train No. 111	Train No. 143	Train No. 5	Train No. 103[1]
Leave Milwaukee	7:30 a. m.	.....	12:10 p. m.	8:50 p. m.
Spencer	1:55 p. m.	6:30 a. m.	6:48 p. m.	3:15 a. m.
Unity	2:06 p. m.	7:20 a. m.	7:01 p. m.	.....
Ashland	6:55 p. m.	.....	.....	8:00 a. m.

[1] Does not stop at Unity.

Since the hearing trains No. 143 and No. 144 have been withdrawn from service. It was stated that under the schedule then

in force it was impossible to reach Wausau or Neillsville, the county seats of the two counties in which the village of Unity lies, and return the same day, with sufficient time for the transaction of business. An examination of the time tables shows that to reach Neillsville a passenger must leave Unity at 8:32 a. m. ariving at Marshfield at 9:10 a. m., changing there to the Chicago, St. Paul, Minneapolis & Omaha Railway Company's line, leaving at 10:40 a. m. and arriving in Neillsville at 11:29 a. m. To return the same day he must leave Neillsville at 1:35 p. m. arriving at Marshfield at 2:30 p. m., and wait there until 6:30 p. m. for the respondent's train which reaches Unity at 7:01 p. m. To reach Wausau from Unity a passenger can leave at 12:29 p. m. arriving at Marshfield at 1:04 p. m., connecting with the Chicago & North Western Railway Company's train at 2:45 p. m., arriving in Wausau at 5:20 p. m. He cannot return the same evening. The next day he can leave Wausau on the Chicago, Milwaukee & St. Paul Railway Company's line at 10:30 a. m., arriving at Junction City at 11:50 a. m., changing there to the respondent's train which leaves at 12:56 p. m. and reaches Unity at 2:05 p. m. The earliest connecting train from Wausau on the Chicago & North Western Railway Company's line leaves there at 2:45 p. m., arriving in Marshfield at 4:10 p. m., when a passenger must wait until 6:30 p. m. for the respondent's train which arrives at Unity at 7:01 p. m. If trains Nos. 103 and 104 stopped at Unity, passengers would have to leave there at about midnight reaching Neillsville at 4:18 a. m., and returning would have to leave Neillsville at 1:35 p. m., arriving in Marshfield at 2:30 p. m. and would have to wait there four hours for the respondent's train which leaves at 6:30 p. m. and arrives at 7:01 p. m. in Unity. Or if they so desired they could remain in Neillsville until 11:55 p. m., arriving in Marshfield at 12:45 a. m., and waiting there two hours for the repondent's train which connects with train No. 103 at Spencer, leaving Marshfield at 2:45 a. m. and arriving in Unity about 3:30 a. m. With the service of trains No. 103 and No. 104 a passenger for Wausau could leave Unity at about midnight, arriving in Marshfield at 1:04 a. m., but would have to wait seven hours for the Chicago & North Western Railway Company's train at 8:30 a. m., arriving in Wausau at 10:05 a. m. He could return at 2:45 p. m. or 10:18 p. m., arriving in Unity at 7:01 p. m. or about 3:30 a. m.

Witnesses for the petitioner also complained that a business trip to the Twin Cities from Unity consumes three days. To make such a trip on the respondent's line a passenger must leave Unity at 8:32 a. m., reaching Minneapolis at 4:40 p. m., too late for business purposes. If he remains there the following day until after 7:45 a. m. he cannot reach Unity until 2:06 p. m. on the third day.

Upon cross-examination of witnesses for the petitioner it was shown that residents of Unity can use train No. 104 by taking the train which passes Unity at 7:01 p. m. and waiting at Colby or Abbotsford, for about four hours until train No. 104 arrives. They stated, however, that persons desiring to use the night trains usually drive to Colby or Spencer. A liveryman testified that he makes about fifteen trips a week to and from Spencer or Colby to carry passengers for trains No. 103 and No. 104, who would take these trains at Unity if they stopped there. He estimated that he carries about half of those who drive to these stations to take the night trains.

Trains No. 103 and No. 104 are operated only between Ashland and Spencer, but carry through sleeping cars between Chicago and Ashland. The company's train master testified that these trains are operated as an integral part of its limited service between Chicago and Ashland. Day coach passengers, baggage and freight are transferred at Spencer. A period of 37 minutes elapses between the scheduled time of arrival at Spencer of trains No. 104 and No. 4. Witnesses for the petitioner urged that this waiting period allows sufficient time in which to make the stop at Unity, but the company's train master testified that this amount of time is necessary for the transfer of baggage and the shifting of the sleeping car to a position where it may be attached to the main line train.

The testimony shows that the village of Unity has a population of about 363 persons and is surrounded by a prosperous farming community. It was estimated by a witness that about 2,000 people are naturally tributary to this station for railway service. The station is located 6.7 miles from Spencer, 6.6 miles from Abbottsford, and 3.9 miles from Colby, the latter being a flag stop for trains No. 103 and No. 104.

A careful examination of the testimony and of the railway time tables bearing on this case shows that the relief prayed

for would not materially improve the service between Unity and the county seats at Wausau and Neillsville, though it would increase the convenience of longer trips to the Twin Cities or to Milwaukee or Chicago. The use of these trains in going to and from the county seats would probably be very slight, since it would involve long waits at unusual hours of the night. A few persons in times of necessity might use such service, but many people would prefer to make a two day's trip than to travel at night with long waits at junction points. It should also be noted that the inability of persons to reach the county seats and return the same day with sufficient time for the transaction of business is not primarily due to poor service on the respondent's line, but rather to the lack of close connections with the lines of other companies. Furthermore, such trips would yield a very slight revenue to the respondent, since it would transport passengers only to Marshfield, a distance of 15.5 miles from Unity. It is not clear that there would be sufficient travel to the Twin Cities or other distant points from Unity to warrant stopping these trains.

The trains which it is now sought to stop are a part of the limited service of the respondent between Chicago and Ashland and should therefore not be subjected to unnecessary delays for local stops. It is our judgment, therefore, that the train service now rendered at Unity is reasonably adequate.

Clark Street Crossing.

Clark street runs east and west, crossing the respondent's single track at right angles. From the west highway approach the view to the north is obstructed by a feed store located about eighty feet from the track and by some small buildings on the company's right of way. To the south the banks of a cut which vary in height from seven to fifteen feet partially obstruct the view of trains. From the east highway approach the north view is somewhat obstructed by the depot buildings and by other buildings nearer the highway. To the south the vision is limited by a building and by the banks of the cut. However, these obstuctions are not very serious and the view in general is fairly good. Our engineer reports that at a point in the highway seventy-five feet west of the track a north view is afforded eight hundred or one thousand feet from the crossing and that

from a similar point east of the track a traveler can see from seven hundred to eight hundred feet to the north. The testimony shows that the village has improved the street up to the railway property and that the company has not graded the highway over its right of way as desired by the village. Clark street is sixty feet wide and has a traveled driveway of forty-six feet in width. The culvert on the right of way allows for only a twenty feet roadway, making the highway dangerously narrow at this point.

Unity is the business center for a prosperous farming community and most of the traffic to it crosses the track at Clark street. The school is located east of the railroad and about seventy-two children live west of the track in the village in addition to those who come in from the country. A count was made for the petitioner on August 12 and 13, 1913. On August 12, 803 crossings, including pedestrians, teams, automobiles, etc., were noted. Au August 13, the traffic was segregated as follows:

Pedestrians	729
Double teams	48
Single rigs	68
Automobiles	25
Bicycles	30

There are now six regular passenger trains and four regular freight trains scheduled over this crossing, in addition to which some extra freights are run. All trains except Nos. 103 and 104, which pass at a late hour of the night, two time freights and the extra freights stop at the depot, and consequently pass the crossing at comparatively low speed. Several narrow escapes from accidents were reported.

Our engineer has investigated the conditions at Clark street and recommends that the highway within the limits of the right of way be properly surfaced and graded to conform in width and condition to the adjacent portions of the street. This will make necessary the use of a wider culvert than the one now installed.

It is the plain duty of the respondent, under the statutes, to place that part of the highway which lies within its right of way lines in substantially as good condition with respect to surfacing and grading as the adjacent portions of the highway (sec. 1299*h*—1, ch. 102, laws of 1907). If the highway is improved

to comply with these conditions it will, in our opinion, be reasonably safe under the existing traffic conditions without further protection.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Railway Company, provide a roadway within its right of way lines at Clark street in the village of Unity which shall be surfaced and graded in substantially the same manner as the adjacent portions of the highway, which shall have a crown as wide as the full traveled roadway in the adjacent portions of the highway, and which shall be properly drained.

IT IS FURTHER ORDERED, That the portions of the complaint which refer to crossings other than the Clark street crossing, and to the train service, be and the same are hereby dismissed.

Four months is considered a reasonable period of time within which to comply with this order.

TRI-STATE TELEPHONE AND TELEGRAPH COMPANY

vs.

ST. CROIX FARMERS' MUTUAL TELEPHONE COMPANY.

Submitted Nov. 8, 1913. Decided Dec. 22, 1913.

The petitioner alleges that the respondent on Aug. 16, 1913, commenced to build telephone lines into the village of Grantsburg for the purpose of competing with the petitioner for local business contrary to the provisions of ch. 610, laws of 1913. The respondent admits that it connected the telephone of one of its shareholders in the village of Grantsburg with its lines but contends that this act was not in violation of ch. 610, laws of 1913. The telephone involved has since been disconnected.

The contention of the respondent that it is entitled to enter the village and compete with the petitioner by virtue of a franchise granted by the village is untenable, for the authority to operate a telephone utility is, under the statutes, derived from the state and not from any local branch of the government. *State ex rel. Smythe v. Milwaukee Ind. Tel. Co.* 133 Wis. 588.

The fact that the persons to whom the respondent desires to extend its service are shareholders, is immaterial, for service must be rendered to shareholders upon the same terms and conditions as to other subscribers.

Held: The respondent's action in extending its service to an individual within the limits of the village without previously obtaining authority from the Commission, as required by sec. 1797*m*—74 of the statutes, was illegal. Inasmuch, however, as the telephone installed in the village by the respondent has been disconnected, there is no present violation of the statute. The instant complaint is therefore dismissed, but should any extensions be made in the future without the procedure proper under the statutes it will become the duty of the Commission to report such violations to the attorney-general for prosecution.

The petitioner, a corporation operating a telephone business in the village of Grantsburg, Burnett county, alleges in substance that on August 16, 1913, the respondent, the St. Croix Farmers' Mutual Telephone Company, commenced to build telephone lines into the village of Grantsburg, which, petitioner is informed and believes, are for the purpose of competing with its local business; that such construction is in violation of ch. 610 of the laws of 1913, and that the petitioner is furnishing and is willing to furnish switching service and connections to all

rural line telephone companies desiring the same at reasonable rates. The Commission is therefore asked to order the respondent to refrain from building or operating any telephone lines in the village of Grantsburg, and if desired by the respondent, to order the establishment of a connection between the two companies at the corporate limits of the village.

The respondent, in its answer, alleges that it did extend its lines into the village of Grantsburg during the month of May, 1906, pursuant to a franchise granted it by the village under date of May 14, 1906. It denies that it has made any extension of its lines in the village of Grantsburg subsequent to July 10, 1913, except to connect the telephone of a shareholder of the respondent company, which act, it believes, was not in violation of ch. 610 of the laws of 1913. The dismissal of the complaint is therefore asked.

A hearing was held on November 8, 1913, at Grantsburg. *Harlan P. Roberts* appeared for the petitioner, and *F. R. Huth* for the respondent.

It appears from the testimony that in November 1912 the St. Croix Farmers' Mutual Telephone Company strung a wire to the village hall in the village of Grantsburg, but that it has not installed a telephone there. In August 1913 it constructed a line to and installed a telephone in a barn belonging to one of its shareholders in Grantsburg. This telephone was subsequently disconnected. Respondent's officials testified that it is its intention to connect with its line such of its shareholders as reside in Grantsburg. They asserted that they have a right to make such connections, and to establish an exchange in Gransburg if they so desire, by virtue of a franchise granted them by the village, a certified copy of which was offered in evidence. No evidence was introduced to show that the respondent had done a local telephone business in Grantsburg prior to August 1913.

The president of the petitioning telephone company testified that his company operates a switchboard in Grantsburg with which are connected 128 telephones, including 13 rural telephones. It also has connection with a number of rural lines, and is willing to grant a similar connection with other rural lines which may desire it.

The contention of the respondent, that it is entitled to enter the village and compete with the petitioner by virtue of a franchise granted by the village, is certainly untenable, for the authority to operate a telephone utility is, under the statutes, derived from the state and not from any local branch of the government. *State ex rel. Smythe v. Milwaukee Ind. Tel. Co.* 1907, 133 Wis. 588, and cases cited in opinion of court. Furthermore, under sec. 1797*m*—74 of the statutes it is made unlawful for any telephone company to extend its service into a territory already occupied by another company without bringing the matter before and obtaining authority of the Commission. The petitioner in this case is clearly in possession of the field in the village of Grantsburg, since no similar service had been rendered there by the respondent or any other telephone company prior to the passage of the statute in question. The respondent's action in extending its service to an individual within the limits of the village, without previously complying with the provisions of the statute, was therefore illegal. It is immaterial that the persons to whom it desires to extend its service are shareholders, for such service must be rendered them on the same terms and conditions as to the other subscribers. It appears that the telephone installed by the respondent in the barn of one of its shareholders in the village has been disconnected, and there is therefore no present violation of the statute. Should any extensions be made in the future, however, without the procedure proper under the statutes, it will become the duty of the Commission to report such violations to the attorney-general for prosecution.

IT IS THEREFORE ORDERED, That the complaint herein be and the same is hereby dismissed.

TOWN OF LA PRAIRIE
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Sept. 5, 1913. Decided Dec. 22, 1913.

The petitioner alleges that two highway crossings on the respondent's line in the town of La Prairie, Rock county, known, respectively, as the "South Janesville crossing" and "Woodman's crossing," are dangerous.

Held: The crossings are dangerous. The respondent is ordered to station a flagman at the South Janesville crossing who shall be on duty from 7 a. m. to 9:15 p. m. daily from May 1 to Nov. 30, and from 7 a. m. to 7 p. m. daily, for the remainder of the year; and to install and maintain at the crossing, subject to plans submitted to the Commission for approval, an electric bell with illuminated sign which shall operate during the hours when the flagman is not on duty. The respondent is further ordered to replace the board wing fence at Woodman's crossing with a suitable woven wire fence. It is suggested that the town authorities remove the obstructing brush and trees along the highway at this point.

The petitioner, a regularly organized town in Rock county, alleges in substance that two highway crossings on the respondent's line are dangerous to public travel. They are designated as follows:

1. The South Janesville crossing, located about two and one-half miles southeast of the respondent's Janesville station.

2. Woodman's crossing, located about three miles northwest of the station at Shopiere.

The Commission is therefore asked to take such action as it deems proper in the premises.

The respondent, in its answer, alleges that at the South Janesville crossing the view of approaching trains in either direction is clear; and that at Woodman's crossing the view is unobstructed except for a few scattered trees in the southeast corner which do not materially interfere with the view. It therefore asks that the petition be dismissed.

A hearing was held on September 5, 1913, at the city hall at Janesville. *S. G. Dunwiddie* appeared for the petitioner and *W. G. Wheeler* for the respondent.

South Janesville Crossing.

The testimony shows that at this crossing the railway runs southeast and northwest and the highway north and south. The road crosses two main tracks and two sidetracks, the latter leading to the South Janesville yards. From the south highway approach the view to the southeast is obstructed by a low bank and by corn growing in the adjacent field. To the northwest the view is limited by a low bank and by trees outside of the right of way. From the north highway approach the view in both directions is comparatively clear. The limits of vision from the south highway approach are reported by our engineer as follows:

Distance of point of observation in highway from northbound main tracks.	View southeast.	View northwest.
South 50 feet	500 feet	800 feet
" 75 "	200 "	200 "
" 100 "	200 "	400 "
" 200 "	200 "	500 "

The highway is a main traveled road leading from Janesville to Beloit, and is used to a considerable extent by automobiles, especially during the summer months. No specific estimates of the highway traffic were made by witnesses. A count was made by the Commission's engineer on December 19, 1913, from 6:00 a. m. to 9:30 p. m., during which period there were noted 41 teams, 9 automobiles, 16 pedestrians, 14 passenger trains, 4 freight trains and 41 switching movements. After 6:00 p. m. only 3 teams and one automobile crossed. It is probable that the traffic at the time this count was taken was below the average. There are thirty regular trains operated over this crossing of which thirteen move after dark. None of the thirteen passenger trains stop at the South Janesville yards. In addition to the regular trains a large amount of switching is done, and this was said by witnesses to add materially to the danger since the movement of switch engines is apt to divert the attention of travelers from main line trains. The acute angle of crossing also increases the danger to highway traffic. The town

chairman expressed the opinion that a bell would not furnish satisfactory protection because of the noise of switching and the confusion occasioned by it. Several serious accidents and narrow escapes were described at the hearing.

Our engineer, after an investigation of the situation, recommends that a flagman be stationed at the crossing during the day, and that an automatic electric bell with illuminated sign be installed to operate when the flagman is not on duty. He suggests that the circuits of this bell and light should be comparatively short on the two yard tracks and should not include the engine house or repair tracks, since the movements over these tracks are slow, and almost exclusively during the period when the flagman would be on duty.

Woodman's Crossing.

The testimony shows that at Woodman's crossing the single track line of the respondent runs northwest and southeast, crossing a north and south highway. The chief obstructions to the view are a low bank, a board wing fence and weeds northwest of the crossing. There is also a bank southeast of the highway, and the view is further limited in season by corn growing in the adjacent fields. Our engineer states in his report that trees and brush along the highway and the board wing fences on the railway right of way add to the obstruction of the view. He reports the limits of vision as follows:

Distance of point of observation in highway from track.	View northwest.	View southeast.
South 50 feet	2 miles	1 mile
" 75 "	1000 feet	¼ "
" 100 "	400 "	400 feet
" 200 "	1 mile	½ mile
North 50 "	1 "	1 "
" 75 "	1 "	¼ "
" 100 "	½ "	½ "
" 200 "	2 "	½ "

No specific estimates of the traffic over this crossing were given at the hearing, but witnesses stated that the road is well

traveled. There are twenty-one regular train movements over the crossing, of which nine pass at night. Several narrow escapes at this point were described.

From a careful consideration of the testimony and of the reports of our engineering staff, we find that each of the crossings under consideration is more than ordinarily dangerous. At the South Janesville crossing we regard the combined protection afforded by the bell and flagman, recommended by our engineer, as necessary for the proper protection of public travel. From May 1 to November 30 the flagman should be on duty from 7:00 a. m. to 9:15 p. m., but during the remainder of the year we believe that the highway traffic passing after 7:00 p. m. will be sufficiently safeguarded by the bell and light. Conditions at the Woodman's crossing can be made reasonably safe, in our judgment, by removing the brush and trees along the highway and replacing the board wing fence by a woven wire fence. We suggest, therefore, that the town authorities take the necessary steps to remove the obstructing brush and trees.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, station a flagman at the South Janesville crossing about two and one-half miles southeast of its Janesville station in the town of La Prairie, who shall be on duty from 7 a. m. to 9:15 p. m. daily from May 1 to November 30, and from 7 a. m. to 7 p. m. daily for the remainder of the year; and install and maintain there, subject to plans submitted to the Commission for approval, an automatic electric bell with an illuminated sign for night indication, which shall operate during the hours when the flagman is not on duty.

IT IS FURTHER ORDERED, That the said respondent railway company replace the board wing fence at Woodman's crossing about three miles northwest of its station at Shopiere in the town of La Prairie with a suitable woven wire fence.

Four months is considered to be a reasonable time within which to install the bell and light ordered herein.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RULES, REGULATIONS, AND PRACTICES OF THE CHIPPEWA VALLEY RAILWAY, LIGHT & POWER COMPANY IN FORCE IN THE CITY OF EAU CLAIRE, WISCONSIN.

Decided Dec. 30, 1913.

The order issued Nov. 4, 1913, 13 W. R. C. R. 19, in this matter was suspended for one month upon application of the utility to enable it to so adjust conditions that the regular commercial lighting schedule could be put into effect. This adjustment has now been made and as the regular lighting schedule appears to be reasonable and as it abolishes certain discriminatory features which have existed for some time it appears that this schedule with certain modifications should be placed in effect. The order of Nov. 4, 1913, is therefore revoked and the utility is ordered to put into effect the schedule in question as prescribed by the Commission.

SUPPLEMENTARY ORDER.

On November 4, 1913, an order was issued in the above entitled matter (13 W. R. C. R. 19) eliminating to some extent certain discriminatory features of the old schedule which provided a lower rate in case electricity was used exclusively for lighting purposes. Upon application of the company this order was suspended for one month to enable the company to so adjust conditions that the regular commercial lighting schedule could be put into effect. As this adjustment has now been made and as the regular lighting schedule appears upon examination to be reasonable, and as it abolishes certain discriminatory features which have existed for some time, it appears to us that this schedule with certain modifications should be placed in effect.

IT IS THEREFORE ORDERED, That the order in the decision dated November 4, 1913, shall be and hereby is revoked.

IT IS FURTHER ORDERED, That the Chippewa Valley Railway, Light and Power Company shall abandon its present schedule of rates for electric lighting and place in force the following

LIGHTING SCHEDULE.

Residences.

In all residences the rate shall be 15 cts. per month for each 50 watt unit, or its equivalent, of active connected load and 3 cts. per kw-hr. for all current consumed. The active load shall be based on the lamps connected, excluding appliances, and shall be assessed as follows:

60 per cent of the first 500 watts.
33⅓ per cent of all in excess of 500 watts.

Business.

Commercial lighting shall include retail and wholesale mercantile establishments, saloons, restaurants, depots and all other consumers not herein otherwise specifically provided for. Such lighting will be done by means of approved incandescent lamps, or by six ampere a. c. arc lamps, at the option of the consumer, and the prices for such lighting shall be as follows:

Incandescent Lighting: The rate for business incandescent lighting shall be 15 cts. per month for each 50 watt connected capacity, or its equivalent, and 3 cts. per kw-hr. for all current consumed; provided that to all consumers using not more than 100 per cent nor less than 10 per cent of their total connected interior capacity for window display purposes, all lights so used shall be considered and paid for as non-active lights, at the rate of 3 cts. per kw-hr. for the current consumed. In case the capacity of the window lights exceeds the interior lights, such excess shall be paid for under the meter rate for window lighting.

Arc Lighting: The rate for business arc lighting shall be 45 cts. per month for each six ampere a. c. arc lamp connected, plus 3 cts. per kw-hr. for all current consumed.

Window, Sign and Advertising Lighting, where not connected with interior lighting, shall be paid for under either of the following schedules.

A. Flat rate for unmetered window, sign and advertising lighting contracted to burn according to the schedule tabulated below on yearly contracts. Lights to be turned on and off by the company.

Lighting Schedule.

25	2.04	100	8.16
40	3.24	150	12.24
50	4.08	250	20.52

B. Meter rate: 10 cts. per month per 50 watt connected capacity plus 3 cts. per kw-hr. for all current consumed.

Hotels, Clubs and Boarding Houses: The rate shall be 15 cts. per month for all active lights and 3 cts. per kw-hr. for all current consumed. In this class 55 per cent of the connected load shall be deemed active.

Auditoriums, Dancing Halls, Opera Houses, Lodge Rooms, Churches, Y. M. C. A., Warehouses, Warerooms or Wholesale and Jobbers' Houses and Manufacturing Plants: The rate shall be 15 cts. per month for one-third of all connected units of 50 watts or its equivalent and 3 cts. per kw-hr. for all current consumed, provided that all lights in general offices and clerical rooms of this class shall be rated as active lights.

Equipment and Renewals.

In all foregoing rates, unless otherwise specifically stated, the consumer shall furnish and renew all lamps, except arc lamps, and all switching and wiring on the premises, and the company

shall furnish arc lamps, transformers, meters and sufficient wiring, pole line and other equipment necessary to deliver the current to the premises.

Flat Rates.

The company shall not be required, at its own expense, to furnish or install meters for any consumer using less than five 50 watt units, or the equivalent thereof, in any one building, and shall be authorized to charge consumers using three or more such units a flat rate of 30 cts. per month per unit in residences and 50 cts. per month per unit in business places; or the company may, at its own expense, install a meter for any such consumer, in which event the rate shall be as specified in the above classification.

Minimum Rate.

The company shall be authorized in every case where a meter is installed to make a minimum charge of $1.00 per month, and to flat rate customers a minimum charge of 90 cts. per month in residences and $1.50 per month in places of business.

Maximum Rate.

The maximum rate, except where authorized by the minimum charge heretofore provided for, shall in no instance exceed 9 cts. per kw-hr.

These rates shall go into effect January 1, 1914.

IN RE APPLICATION OF THE ENDEAVOR ELECTRIC LIGHT AND POWER COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Sept. 30, 1913. Decided Dec. 30, 1913.

The Endeavor El. Lt. & P. Co. applies for authority to increase its rates for electric current. The plant is operated in connection with a creamery and in fixing the rates the management underestimated the cost of conducting the electric business. A valuation was made and the revenues and expenses were investigated. It was found that the utility is operating at a loss under the present rates and that even the rates proposed by the utility will fail to yield a fair return and will probably be insufficient to cover depreciation and other operating expenses.

Held: Though a somewhat different schedule of rates might be recommended, the schedule proposed by the utility is not unreasonable. The utility is therefore authorized to put this schedule into effect.

Application in this case was filed July 5, 1913. Applicant is a public utility engaged in the management and operation of a light and power plant in Endeavor, Wis. As stated in the application, the present rates for electric current are 10 cts. per kw-hr. for the first 20 kw-hr. per month and 8 cts. per kw-hr. for the excess. The rates filed with the Commission indicate that the 8 ct. rate applies to 10 kw-hr. per month only, but according to the application in this case this rate applies to all consumption above 20 kw-hr. per month.

The applicant states that the existing rates are only sufficient to cover actual cost of fuel and repairs, without meeting the cost of labor, or providing for interest on investment. The applicant further states that it knows of no objection on the part of its patrons to the increase asked for, and it asks for authority to put into effect the following schedule of rates:

15 cts. per kw-hr. for the first 30 kw-hr. per month.

10 cts. per kw-hr. for the excess.

Hearing was held at Madison, September 30, 1913. *Wm. H. Burwell* appeared for the applicant. There was no appearance in opposition.

Testimony dealt with the conditions of plant operation and

the losses sustained by the utility. The electric plant is operated in connection with a creamery. It appears that when the electric business was started the owners expected to be able to operate with very little expense above the cost of carrying on the creamery business by using a storage battery system. It has been found, however, that the conditions of operation have not been such as were anticipated and the cost of conducting the business has been considerably greater than was expected.

The reports which have been filed by the utility do not show the actual total expense chargeable to the electric department. Following is a statement of the earnings and expenditures of the Endeavor Electric Light and Power Co. for the year ending June 30, 1913, as prepared by the Commission's accounting inspector:

Earnings.		
Street lighting earnings	$58.31	
Other earnings	651.21	
Total earnings from operation		$709.52
Expenses.		
Labor expense	$637.50	
Material and other expenses		
Coal and oil	510.00	
Materials and supplies	152.40	
Total operating expenses		1,299.90
Net deficit from operation		$590.38
Interest on funded debt and notes payable		132.00
Deficit for year		$722.38

In the annual report submitted to the Railroad Commission for the fiscal year ending June 30, 1913, the amount reported as street lighting earnings is the amount subscribed for that purpose for the period from December 1, 1912, to Dec. 1, 1913. Figuring these earnings on a monthly basis, $58.31 is the amount that should be credited to earnings for the year ending June 30, 1913, and the remainder $41.69 to earnings for the year ending June 30, 1914.

Labor expense was not reported in the annual report, for the reason that the proprietors did all the work themselves. A reasonable labor cost was arrived at in the following manner: From the records kept the total number of hours the generator

was run was obtained. To this was added an hour and a half per day for the purpose of raising steam, hauling fuel, and making necessary repairs on boiler and generation equipment. Besides this amount of time two days per month were allowed for reading meters, figuring bills, collecting same, and making all necessary repairs to the distribution system. The total hours so obtained figured at the rate of 25 cts. per hour, give an amount which was considered reasonable for operating labor expense.

Approximate hours generators were run	1,762
Hours allowed for power house labor	548
Hours allowed for reading meters and dist. system labor	240
Total hours	2,550

2,550 hours at 25 cts. per hour—$637.50

The fuel cost was arrived at on the hour basis. Tests had been made of the fuel consumption with the result that approximately 100 lb. of coal were burned for each hour the generators were on. This amounted to approximately 100 tons for the year. Rated at about $5 per ton the fuel cost was about $500. Oil cost about $10.

The amount of $152.40 was other material cost not reported in the annual report. These figures were obtained from an analysis of bills on file. These bills were the only ones available at the time of the examination.

With these modifications the utility shows a deficit of $722.38 instead of a surplus of $109.21.

The methods described above for determining operating expenses are not all methods which would be followed if adequate records had been kept continuously of the finances and operation of the utility, but with the lack of utility records which existed in this case, the methods used by the inspector appear to have been the only ones feasible, and the final results not far in error.

No further analysis is needed to show that the business is an unprofitable one. Even the schedule of rates which the applicant asks to have approved would fail to yield a profit, and would probably be insufficient to meet all expenses properly chargeable against the electric business and enable the utility to make provision for depreciation.

A somewhat different schedule than the one suggested might be recommended, but it does not seem that the proposed schedule is unreasonable. No objection to it has been offered and there seems to be no objection sufficiently serious to make it advisable to reject the schedule asked for.

The cost new of the physical property of the applicant as of June 30, 1913, was placed at $6,362 in the Commission's inventory, and the present value at $5,376. Interest and depreciation, at rates which would be reasonable and adequate would be approximately $650 per year. It is evident that, unless there is an unexpected development of the business, the rates asked for will not yield even a fair return after all expenses properly chargeable to the department, have been met.

In some instances it appears that meters have been out of working order and the meter rates have been applied to an estimated consumption of current. These meters should be promptly repaired and the regular rates applied.

THE APPLICANT, the Endeavor Electric Light and Power Company, IS AUTHORIZED to discontinue its present schedule of rates for electric current and to substitute therefor the following schedule:

15 cts. per kw-hr. for the first 30 kw-hr. per month.
10 cts. per kw-hr. for the excess.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE MANITOWOC ELECTRIC LIGHT COMPANY BY THE CITY OF MANITOWOC FOR THE PROPERTY OF SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC.

Decided Jan. 2, 1914.

This is a proceeding to determine the compensation to be paid in the purchase of the property of the Manitowoc El. Lt. Co. by the city of Manitowoc. Valuations made by the engineering staff of the Commission and by the city are considered and compared in detail. The company submits no valuation of the property as a whole but attacks the reasonableness of the values placed on certain items in the valuation made by the Commission. Some of the land used in the operation of the utility is owned by a private individual, Mr. John Schuette. The city has agreed with Mr. Schuette to purchase part of this land and to lease part, and also to lease certain equipment used in connection with the plant.

The contention that the smoke stack and certain other equipment located on the land mentioned should be charged to a feed and flour mill to which the electric plant sells mechanical power, on the theory that, if it were not for the power supplied to this mill the equipment in question would not have to be so large or extensive, is not sustained by the facts. It appears that all of this equipment is necessary to meet the maximum demands of the plant during the winter months, and that during the maximum peak demand no power is supplied to the mill.

In obtaining the cost of reproducing equipment which is no longer on the market, consideration must be given to the cost new of modern equipment designed to do the same work. The present value, however, of obsolete equipment which is still in use and rendering fair service would seem to be something above scrap value.

Some consideration must be given in fixing the fair value of the utility to the fact that continuous construction under contract may be less expensive than piecemeal construction, but it does not seem that this fact can be properly considered as an element in determining the cost of reproducing the physical plant.

Correct accounting demands that there be set aside each year for depreciation an amount equal to the decrease in the value of the property due to wear and tear, obsolescence, inadequacy, etc., in order that the capital be kept intact and the present value of the property be correctly shown.

In arriving at the fair value of the property of a utility for purposes of purchase there are several elements besides the original cost, the original cost less depreciation, the cost of reproduction, and the cost of reproduction less depreciation which must be taken into consideration. These include, among other things, the outstanding indebtedness, the gross and net earnings of the plant, and its going value.

Held: The compensation to be paid to the electric light company and Mr. Schuette for the taking of property used and useful for the convenience of the public, exclusive of the stock and material on hand and additions made to the plant since Jan. 1, 1913, is $137,500, of which $600 is to be paid to Mr. Schuette upon delivery by him to the city of a deed to certain land owned by him but necessary to the operation of the utility. The city is ordered to pay the just compensation fixed within three months from date and, in addition, to pay to the company such price as may be agreed upon between the parties or, in the event that the parties are unable to agree, fixed by the Commission, for the material on hand at the date of the taking of the plant and for new additions made to the plant since Jan. 1, 1913, with interest at 6 per cent per annum until the compensation is paid. The agreement entered into by the city with Mr. Schuette for the lease of certain land and equipment is approved.

On November 29, 1912, the city clerk of Manitowoc, in accordance with a resolution passed by the mayor and board of aldermen, notified the Commission that the city of Manitowoc had determined, by a vote of the majority of the electors voting on the question at the general election held in and for said city on November 5, 1912, to acquire by purchase the electric light plant of the Manitowoc Electric Light Company located and existing in said city, which company had consented to the taking over of its plant by the municipality by the acceptance of an indeterminate permit under the provisions of ch. 499 of the laws of 1907 and acts amendatory thereof and supplementary thereto.

Upon receipt of the above notice a valuation of the physical property of the utility was made and a hearing was set for February 17, 1913, at the office of the Commission at Madison. At this hearing the parties appeared and requested a continuance until a later date. This request was granted and the hearing was set for and held on May 16, 1913, at the school board room of the city hall, Milwaukee. *H. F. Kelley* appeared for the city of Manitowoc and *Emil Baensch* for the Manitowoc Electric Light Company. On August 9 *Mr. Kelley* submitted a brief for the city and on August 14 *Mr. Baensch* submitted one for the company.

After the Commission determined the value of all the property actually used and useful for the convenience of the public, it became necessary for the city to enter into negotiations with Mr. John Schuette for the purchase or lease of a part of said property which belonged to him individually, and upon enter-

ing into agreements with him respecting the same, the city applied to the Commission for a rehearing for the purpose of obtaining the approval of said agreements by the Commission, which application was duly granted. By stipulation of the parties the matters involved upon the rehearing were submitted on January 2, 1914, for determination.

A valuation of the physical property of the Manitowoc Electric Light Company was made by the engineering staff of the Commission as of date January 1, 1913, and revised in the month of April, 1913. A summary of the revised valuation follows:

Classification.	Cost new.	Present value.
A. Land	$5,000	$5,000
B. Transmission and distribution	78,698	63,976
C. Buildings and miscellaneous structures	10,765	9,048
D. Plant equipment	55,086	35,493
E. General equipment	1,298	966
Total	$150,847	$114,483
Add 12 per cent (see note below)	18,102	13,738
Total	$168,949	$128,221
F. Paving		
Total	$168,949	$128,221
H. Materials and supplies	4,759	4,549
Total	$173,708	$132,770

NOTE:—Addition of 12 per cent to cover cost of engineering, superintendence, interest during construction, contingencies, etc.

The city entered a general objection to the cost of reproduction and present value of the whole plant as set forth in the valuation of the engineering staff, alleging that the results obtained were excessive, and entered specific objections to certain items which will be taken up in detail. In support of its contention the city submitted a valuation made by Mr. S. H. Martin of Chicago, a summary of which is given below. Mr. Martin did not undertake to place a value on the items land, general equipment, and materials and supplies, but accepted the engineering staff's figures for the purpose of obtaining a total that would be comparable with our engineering staff's total, as is noted in the following summary:

VALUATION OF S. H. MARTIN.

Classification.	Cost new.	Present value.
A. Land (Commission's value)	$5,000 00	$5,000 00
B. Transmission and distribution	72,800 00	58,240 00
C. Buildings and miscellaneous structures	9,500 00	7,500 00
D. Plant equipment	48,050 00	29,027 50
E. General equipment (Commission's value)	1,298 00	966 00
Total	$136,648 00	$100,733 50
Add 12 per cent (see note below)	16,397 76	12,088 02
Total	$153,045 76	$112,821 72
H. Materials and supplies (Commission's value)	4,606 00	4,422 00
Total	$157,651 76	$117,243 72

NOTE:—Addition of 12 per cent to cover cost of engineering, superintendence, interest during construction, contingencies, etc.

The company offered no testimony as to the cost of reproduction and present value of the physical property, but confined its attention to certain items of the engineering staff's valuation, maintaining that they were too low. The contentions of both parties are set forth in the following consideration of the various groups of items in the valuation.

Land:—The value of the land occupied by the company's plant is given in the staff's appraisal as $5,000. This covers lot 5 of block 218 which is owned by the company and valued at $4,400. It also includes a portion of lot 6 which is occupied by the stack and part of the building of the company but which is owned by Mr. John Schuette. Counsel for the city in his written argument contends that the value placed on land is too high and cites the assessed value of the adjoining lots. These lots were assessed at $3,100 and $3,300. The value of lot 5 has been placed at $4,400 resulting in a ratio of assessed to actual value of about 75 per cent, which is the usual ratio. The price placed on land by the tax assessor is not a satisfactory measure of value, for the reason that it attempts not to show the full value, but to maintain a just proportionate value between different pieces and classes of property. The method used by the Commission need not be given here as it is described fully in *State Journal Printing Co. et al. v. Madison Gas & Electric Co.* 1910, 4 W. R. C. R. 501, 528. From the facts presented we can see no reason for changing the value as fixed by the staff.

The power station occupies all of the front of lot 5, so that in delivering coal to the boiler room it is necessary to cross either

lot 4 or lot 6. The flour and feed mill owned by Mr. John Schuette is located on lot 6, whereas the mill warehouse is located on lot 4. It appears from this that it would be to the mutual advantage of both properties to have a continuous driveway over and through lots 4, 5, and 6 about as follows: along and over the west ten feet of lot 4 from Quay street to the Manitowoc river, thence west along the north ten feet of lots 5 and 6 to 9th street.

Distribution System.—The engineering staff placed the cost new of the distribution system at $78,698 and the present value at $63,976. In the city's valuation the cost new was placed at $72,800 and the present value at $58,240. At the hearing Mr. Martin explained that he used $2,600 per mile as a unit price and estimated from the city map that there were 28 miles in the distribution system. He, however, claims no exactness for the number of miles. In determining the unit price he used as a basis the cost in one of the plants in the construction of which he and his associates were interested. That being an a. c. plant he "added a few hundred dollars to make up for the additional wire in the d. c. system of Manitowoc". The staff in making its valuation listed every piece of material, fixed a price for each separately and determined from inspection the extent of the depreciation of each item. Compared with such a method, it does not seem to us that the one used by the city can be seriously considered, for though satisfactory for comparative purposes, it is intended merely to represent an average condition. The number of consumers per mile of wire, the exact number of miles or units, the size of the poles, the character of the construction, and any number of other factors might cause the system at Manitowoc to deviate from the average. We cannot see how such a figure can represent the cost of reproducing the system under consideration, except in a rough way which is not at all satisfactory for the purpose at hand.

The city at the hearing objected to the price placed on poles but offered no testimony to support its contention. It might be explained here that the price of poles new is based on lake port figures, tested by local inquiry.

From the facts presented we cannot see any reason for changing the value placed on the distribution system.

Buildings and Miscellaneous Structures.—In the staff's valuation the cost new of the buildings and miscellaneous structures

is placed at $10,765 and present value of $9,048. In the city's valuation the figures given are $9,500 and $7,500, respectively. No explanation or reason is offered for this difference. The staff's figures were based on careful measurements and detailed computations which would seem to give them considerable weight, especially in this case, because Mr. Martin seems to have made a rather hurried valuation. At the hearing he stated that his examination of the plant did not take more than an hour or two. While, of course, it is possible to gather sufficient information regarding a plant in such a short time to make a satisfactory valuation for some purposes, yet it would seem that in instances similar to this one a little more time is needed.

The smoke stack and part of the building of the plant, as explained above, are located on an adjoining lot which is not owned by the utility. Counsel for the city assumes that this part of the plant is not the property of the utility and that therefore the city does not want to purchase it. The books of the company, however, show that this stack and the addition to the boiler room were built by the company in the fall of 1908. It might be argued that some of this equipment should properly be charged to the Oriental Mills to which the electric plant sells mechanical power, on the theory that, if it were not for the power supplied to the Oriental Mills, this particular equipment would not have to be so large or extensive. The facts of the case, however, seem to indicate that all of this equipment is necessary to meet the maximum demands of the plant during the winter months, and that during such maximum peak demands no power is supplied to the Oriental Mills. In other words, power supplied to this mill is in the nature of off-peak service. Such joint operation indicates very good business judgment.

Plant Equipment.—The engineering staff has placed the cost of reproducing this part of the property at $55,086 and the present value at $35,493. The corresponding figures in the city's valuation are $48,050 and $29,027.50 respectively, resulting in a difference of $7,036 in the cost new and $6,465 in the present value. The testimony offered at the hearing by both the city and the company pertained chiefly to this part of the plant.

The city contends that the six Edison bipolar generators, which the staff placed at $5,500 cost new and $1,404 present value, are valued too high, because they have been in service over twenty years and are obsolete. Mr. Martin made the

point that the cost of reproduction of machines that are obsolete and no longer on the market should be taken as the cost new of modern up to date machines. Accordingly, he places the cost new of these particular machines at $2,400, which is less than one-half the figure used by the staff. He further holds that these generators have reached such a state of inefficiency through depreciation and obsolescence that their use should be discontinued; and that, consequently, their present value is only so much as can be gotten for them as scrap. This amount he places at $280, which is exactly one-half of the scrap value found by the staff.

In obtaining the cost of reproducing equipment that is no longer on the market it would seem that the contention of the city should be given consideration. The present value, however, of such equipment, if it is still used and is rendering fair service, though not of high efficiency, would seem to be something above scrap value. The mere fact that a machine has been in operation over twenty years is not necessarily a sign that it has no value greater than what can be gotten for it as junk to the plant that is using it. In the instant case the staff has estimated that two of these generators are in 20 per cent and four in 15 per cent condition. Accepting this estimate as a basis and computing the present value from the cost of reproduction of machines of equal efficiency on the market at the present time, we get a present value of about one-half that used by the staff, which, under the circumstances of this case, would seem to be reasonable.

The city also contends that the three other d. c. generators should be given a present value equal only to their scrap value, claiming that they are obsolete. The staff has placed one of these at 69 per cent condition, another at 60 per cent, and the third at 27 per cent. No evidence was offered at the hearing which would justify any change in the figures used by the staff.

The original plant at Manitowoc was a direct current plant. Within the last few years the outlying districts have been changed to alternating current, thus dividing the city into a. c. and d. c. areas. The city claims that the design was to include the whole city in the a. c. area, and that the plant should be materially depreciated on that account. No testimony was offered at the hearing to show that such a change was about to

take place when this proceeding was started, nor that such a complete change was necessary or even feasible. In many of the larger cities we find that the business section is supplied with direct current and the outlying districts with alternating current as a matter of economy and certainty. Authorities, however, are not agreed as to the advisability of thus dividing a city into areas to which different kinds of current are supplied. It would seem that in the case at hand no great amount can reasonably be deducted from the present value because of such a contemplated change.

At the hearing attention was called to the fact that only 3 per cent has been deducted in the tentative valuation for depreciation on equipment that was about two years old. This should have been 7 per cent, and a proper adjustment has been made accordingly.

The company objected to the valuation made by the staff, particularly to the prices fixed on plant equipment. The staff allowed $240 for installing a 300 kw. turbine. This the company claims is not enough and submits as evidence two invoices of labor and material expended on this machine. An inspection of one of these invoices shows that of the total of $1,803.15 for labor only about $210 would be properly chargeable to the installation of this turbine, the balance being wages paid to draftsmen, pipe fitters, and other labor of this sort which is included in the price of other equipment. The other invoice shows a total of $97.63 for labor and material but is not divided so as to give the amount of each. From these invoices we are inclined to believe that the amount allowed by the staff is ample.

The staff placed the cost new of a certain 78″x18′ boiler at $1,750. The company maintains that this is $600 below the price actually paid and offers as evidence a bill for $2,350 dated October 10, 1910. It must be borne in mind that we are trying to fix the cost of reproduction and not the original cost. No doubt the company paid the price it claims. Investigation shows, however, that the amount allowed is ample to cover the cost of reproducing the boiler and its installation, which, of course, is all that can be reasonably included in the cost of reproduction of the plant. We note that the price paid by the company covers the cost of breeching connections to the stack, which is not included by the staff as a cost of the boiler. It may

be that there are other items which in the same manner are accounted for by the staff in other places.

Attention was called by the company to the fact that three 66″ x 16′ boilers were listed as 60″ x 16′. This necessitates an addition of $255 to the cost new value and $64 to the present value.

The company takes exception to the value of $360 cost new and $120 present value placed on the foundations of the four old boilers and to substantiate its objection submits exhibits from its books showing that in 1896 one boiler was installed at a cost of $419.05 and another in 1902 at a cost of $531.49. Using these costs as a basis the company claims that $1,901 should be allowed for the cost new value of this item. Apparently the company is not familiar with the Commission's classification of property. The foundation is a separate item, whereas the cost of installation is included in the price of the boiler. In this instance $475 was allowed as the cost of the foundation and installation of each boiler, making a total for the four of $1,900, which is virtually the amount claimed by the company. In a similar manner the company shows from its books that the cost of installing an 18″x42″ Allis Corliss engine was $848.97, which it compares with the $360 allowed for foundations by the staff. But here again we find that the company has made no division between cost of the foundation and cost of installation. The amount actually allowed for these two items together is $736. While this amount is less than that shown by the company, we are not sure but that the company's figure covers more items than that of the staff. At least the facts presented do not show that this is not the case.

The Commission's engineers have fixed the cost new of piping at $3,052 and the present value at $2,063. The company claims that the present value is $2,234 too low. In reaching its conclusion it takes the total of an invoice, already referred to in connection with the installation cost of the 300 kw. turbine, amounting to $3,845, which sum it depreciates 3 per cent for the two years that the equipment has been in use. To this amount it adds the present value less 7 per cent of piping as it appears in the valuation of this plant as of date July 7, 1908. This gives a total of $4,297 which the company claims as a proper allowance for the present value of piping. Several fallacies are apparent in this computation. First, the 3 per cent deduction for

depreciation for two years on equipment with a life of 20 years seems to us too little; similarly, 7 per cent for 4 years is too little. We find, also, that when the new piping was put in, about $600 worth of old piping was scrapped, yet no deduction was made by the company of this amount. If those items of labor and material pertaining only to piping, which are listed in the invoice mentioned above, are added to the old piping still in use, we get $3,495 as the maximum amount that the company could reasonably claim. As with some other items already considered, there is no certainty that the items taken from this invoice do not cover other things than piping, which the staff has included in other places. At least the evidence does not seem to warrant any material change in the figures as shown in the engineers' summary.

The engineers placed a present condition of 65 per cent on piping. To this the company objects on the ground that a great deal of this piping had been installed only two years before the valuation was made. Further investigation of this item indicates that it should have been placed at 75 per cent condition, which increases the present value about $300.

The company called attention to the omission of certain overflows and wells from the valuation. A careful checking up shows that about $400 should be added on this score. The company also claims that 4 c. c. transformers were omitted. Two of these were included with the switchboard. The other two apparently were omitted, for which $59 should be added.

The company maintains that from 10 to 15 per cent should be added to the physical property because continuous construction under contract is less expensive than piecemeal construction. This point has been discussed in *Hill et al. v. Antigo Water Co.* 1909, 3 W. R. C. R. 623, 634–635, and also in *State Journal Printing Co. et al. v. Madison Gas & Electric Co.* 1910, 4 W. R. C. R. 501, 546–549; consequently there appears to be no need of repeating that discussion here. Some consideration should be given this item in determining the fair value of the utility, but it does not seem that it can be properly considered as an element in determining the cost of reproducing the physical plant.

A summary of the evidence presented shows that the cost of reproducing the plant new, exclusive of materials and supplies, should be about $166,668 and the present value $127,301.

In establishing the fair value of a plant for the purpose of mu-

nicipal acquisition, the original cost of construction together with all additions to the property down to date must be considered as an important element. If the books of the company have been accurately kept and if correct methods of accounting have been followed, the books should show the total amount expended for construction and also the extent of the depreciation of the property. Frequently we find that the book value as reported differs very much from the cost of reproduction as determined by our engineering department. Some difference is naturally to be expected, because of the variation in price. In the instant case, however, the difference is relatively small.

The following table shows the condensed balance sheets of the company for the fiscal years 1909 to 1913:

CONDENSED BALANCE SHEETS.
MANITOWOC ELECTRIC LIGHTING COMPANY.
Fiscal Years 1909—1913.

	1909	1910	1911	1912	1913
Assets:					
Cost beginning of year.....	$91,330 14	$102,892 17	$108,909 21	$161,127 19	$169,970 65

The next table is based upon the company's annual reports to the Commission and also on a statement supplied by the company showing the original cost of the plant with the annual additions. It will be noted that in the year 1911 there was an addition of $52,159. This amount was spent in the reconstruction of the plant and distribution system and represents the difference between the total amount expended for that purpose and the cost of the old property taken out of service. If the property that was scrapped had not been deducted it would, of course, be included in the construction account twice, and would misrepresent the actual increment in the value of the plant by that amount. The additions during the other years do not seem to be abnormal, hence no explanation of them seems necessary.

STATEMENT OF ORIGINAL COST AND ADDITIONS TO PROPERTY.
1890-1913.

Year.	Cost new and additions from statement submitted by the company.			Cost new and additions taken from Company's annual reports submitted since 1907.		
	Cost beginning of year.	Additions.	Cost close of year.	Cost beginning of year.	Additions.	Cost close of year.

[1] Report covers 8 months.
[2] Report covers 6 months ending Jan. 1, 1913.
[3] Report covers fiscal year ending June 30, 1913.

The utility began selling electricity in the month of December, 1889, at which time the plant has cost $32,224.98. The cost shown in the above table for the years following, up to and including the year 1907, are based upon a fiscal year ending November 30. In 1908, this practice was changed to conform to the Commission's classification of accounts which specifies that the fiscal year shall end on June 30. The company's statement included only six months of the fiscal year 1913, showing a total cost new at the end of that period of $172,899.13. It will be noted that the figures as taken from the annual reports of the company and as shown in the balance sheets above do not correspond exactly each year with the figures as reported in the company's statement. No explanation is offered for this discrepancy. The total cost, however, is the same in each for the year ending June 30, 1912.

The inventory of the physical property as of January 1, 1913, made by the engineering staff, and as altered herein, shows a total cost of reproduction, excluding materials and supplies, of

$166,668. The book value of the company of the same date shows a cost of $172,899.13, which differs from the preceding value by only $6,231. In this instance it might be expected that the cost of reproduction would be a little larger than the original cost, if the accounts have been properly and accurately kept. That it is not, can probably be explained by the fact that apparently in earlier years it was the practice of the company not to credit the construction account with the equipment that was replaced. If such was the practice there would naturally be some duplication in the property account.

It will be noted from an inspection of the balance sheets shown above that a depreciation reserve liability of only $5,000 has been established. This amount was all set aside in the year 1913. Correct accounting demands that an amount be set aside each year equal to the decrease in the value of the property due to wear and tear, obsolesceence, inadequacy, etc., in order that the capital be not impaired, and also in order to show the present value of the property. If such depreciation is not shown, either as a reserve or a deduction from plant value, the fixed assets of the company are misrepresented. In the instant case we find that the effect of not charging depreciation has been to increase the surplus of the company. A study of forty-two physical valuations of plants varying from one to twenty-four years in age, shows the following descriptive data of the ratio of present value to cost new: minimum 64.6 per cent, average 76.6 per cent, medium 74.7 per cent, and maximum 97.7 per cent. From these data it is seen that a plant that has been in operation for some time is likely to have depreciated about 25 per cent. That this is the case at Manitowoc can be verified by a glance at the engineers' appraisal. Applying this percentage to the cost of the plant as shown in the balance sheet for 1913, we find that about $43,745 should have been recorded as depreciation. Only $5,000, however, was charged for this purpose, which means that the surplus is about $38,745 larger than it would have been had proper accounting been made for the decrease in plant value. Following is shown the balance sheet for the year ending June 30, 1913, adjusted according to the foregoing views:

ASSETS.		LIABILITIES.	
Cost beginning of year	$169,970.65	Capital stock	$75,000.00
Additions during year	5,011.20	Depreciation reserve ..	43,745.46
Cash	2,960.56	Notes and bills payable	35,000.00
Accts. receivable	7,794.30	Surplus	35,901.48
Materials and supplies	3,569.68		
Prepaid insurance	340.55		
Total assets	$189,646.94	Total liabilities.	$189,646.94

The cost of the plant as shown in the above balance sheet is $174,981.85. If the amount in the depreciation reserve is deducted, we get $131,236.39 as the present value of the plant at the end of the fiscal year 1913. The appraisal of the engineers was made as of January 1, 1913. Since that time the books show that $2,082.75 worth of equipment has been added. If this amount is subtracted from the present value as shown above, the result is $129,153.64 as the present value for January 1, 1913, which is comparable with that shown in the staff's valuation. Of course, it is to be remembered that the correctness of the figures shown above depends upon the correctness of the plant cost as reported by the company and also upon the validity of the assumption that the ratio of present value to cost new is the same at Manitowoc as it is in most plants in this state. While there may be a legitimate doubt about this assumption, yet all the facts in the case seem to indicate that it is not far from representing the actual condition.

There are several elements besides the original cost, the original cost less depreciation, the cost of reproduction, and the cost of reproduction less depreciation that should be taken into consideration in arriving at a fair value of the property under appraisement. These include, among other things, the outstanding indebtedness, the gross and net earnings of the plant, and the cost or value of the business the plant has acquired or its going value. Considering these elements and all other factors that must be considered under the law in arriving at a fair and just value, it seems that $137,500 would be a just compensation to be paid by the city of Manitowoc to the Manitowoc Electric Light Company and Mr. John Schuette for the property of said company and Mr. John Schuette, actually used and useful for the convenience of the public.

In order to acquire title to a part of the real estate included in this appraisal the said John Schuette has agreed to accept therefor the sum of $600, the value fixed by the Commission and

has executed a warranty deed therefor and is ready to deliver the same if approved by the Commission. The land thus to be conveyed to the city is described as follows:

Commencing at a point upon the lot line between lots 5 and 6 in block 218 in the city of Manitowoc, Wis., 63 ft. north of Quay street, thence west 25 ft., thence north 11 ft., then east 6½ ft., thence north 27 ft., thence east 18½ ft., thence south along said lot line 38 ft. to the point of beginning.

The parties have also entered into a lease of certain premises and equipment used in connection with the plant, the material parts of which are as follows:

I.

John Schuette hereby

1. Leases to said city the engine room basement of the Oriental Mills, being a tract 12x63 feet and located in the southeast corner of lot 6 in block 218 in said city, together with the 150 h. p. Corliss engine contained therein.
2. Leases to said city that part of said lot 6 now occupied by boiler No. 1 of the electric light plant, together with sufficient room in front thereof so that the same can be properly fired and operated.
3. Grants to said city the right to use the driveway now extending along the west side of lot 4 and across lot 6 in said block 218.

In consideration whereof the city of Manitowoc

1. Grants to said John Schuette the right to use the driveway now extending across lot 5 in said block.
2. Agrees to furnish power to the Oriental Mills at the rate of 10 cts. per barrel for the first 10,000 barrels of flour per year, and 8 cts. per barrel in excess thereof, and 50 cts. for each ton of feed ground, the number of barrels and tons to be determined by the sworn report of the operator of said mills, and payment to be made semiannually.
3. Promises to pay to said John Schuette the sum of $275 per year.
4. Promises to deliver up, at the termination of this agreement, said Corliss engine in as good condition as it now is, reasonable wear and tear excepted.

The foregoing agreement shall be for the term of one year from January 1, 1914, and continue from year to year, but may be terminated by either party giving the other one year's notice. Provided, that in case any of the buildings or fixtures above mentioned be destroyed, then either party may terminate this

agreement by giving notice to the other within thirty days after such destruction.

II.

In case the foregoing agreement be terminated, then and in that case, said John Schuette agrees to buy boiler No. 1 at the present value of $306, less depreciation, the city agreeing to leave all the connections of said boiler and said engine as they now are. He further agrees that while the city owns and operates the electric light plant, as now located, he will permit it to use the ground in front of boiler No. 2, the city agreeing to permit him a right of way through its boiler room so that both said boilers may be fired and operated as now.

IT IS THEREFORE ORDERED, That the just compensation to be paid the Manitowoc Electric Light Company and Mr. John Schuette for the taking of the property of said company and Mr. John Schuette by the city of Manitowoc, which property consists of the items described herein, excepting any stock and materials on hand and excepting further the additions to the plant that have been made since January 1, 1913, which have not been included in the said items, be and hereby is fixed at $137,500.

IT IS FURTHER ORDERED, That $600 is the portion of the above sum that is to be paid by the city to Mr. John Schuette, upon delivery by him to the city of the aforesaid deed.

IT IS FURTHER ORDERED, That the aforesaid lease be and the same is hereby ratified and approved.

IT IS FURTHER ORDERED, That in addition to the price stated in the first paragraph, the material on hand at the date of the taking possession of the said plant by the said city and any new additions to the said plant that have been made since January 1, 1913, which have not been included in the aforementioned items, be paid for by the city of Manitowoc at such price as may be agreed upon by the parties themselves; or in case the parties fail to agree upon a price, at the price to be fixed by the Commission.

IT IS FURTHER ORDERED, That the said city of Manitowoc shall pay the just compensation herein fixed within three months from the date hereof, at such bank or banks in Manitowoc as the parties may agree upon, with interest at the rate of 6 per cent per annum from the date of the taking possession of the said plant by the city of Manitowoc until the same has been fully paid.

NORTHERN MILLING COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 14, 1913. Decided Jan. 2, 1914.

The complainant alleges that the respondent charged it an unjust and unreasonable rate for the transportation of hay in carloads between certain points in Wisconsin. The rate complained of was declared excessive in *Wausau Advancement Association v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 438. The shipments in question were involved in the complaint in the case cited but refunds were not authorized for the reason that the petitioner in that case was not a "person aggrieved" within the meaning of the law.

Held: The shipments should have moved at the rate of 10 cts. per 100 lb., found to be reasonable in the case cited above. Refund is ordered on this basis for such shipments as moved within the then statutory period of one year previous to the time the complaint was filed.

The complainant, the Northern Milling Company, is a corporation engaged in the general business of buying, selling, and milling grain and grain products. The offices of the company are located at Wausau, Wis.

It is alleged in this complaint that the respondent, the Chicago & North Western Railway Company, has collected from the complainant for the transportation of hay in carloads, as indicated more specifically by certain expense bills attached to and made a part of the complaint, certain charges based on a rate which was unjust and unreasonable inasmuch as and to the extent that it exceeded 10 cts. per 100 lb. The complaint cited the decision of this Commission rendered Aug. 2, 1913, in the case of the *Wausau Advancement Association v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 433, 438.

Hearing was held October 14, 1913, at Madison. *A. E. Solie* appeared for the complainant and *C. A. Vilas* and *H. C. Cheyney* for the respondent. The representative of the complainant asked that the case be decided by the Commission upon the evidence adduced in the case above referred to, 12 W. R. C. R. 438.

The counsel for the respondent entered no objection and introduced no evidence.

A brief summary of the case cited is here given:

The petitioner, the Wausau Advancement Association, alleged that the respondent's, the Chicago & North Western Railway Company's, rates of 10.5 and 11 cts. on hay in carloads from stations on its line Marshfield to Wausau, inclusive, to stations on its line Bolton to Van Buskirk and Saxon to Bear Trap, inclusive, were unreasonable and discriminatory insofar as they exceeded the 10 ct. rate from the points of shipment named to Hurley and Ashland, points on respondent's line beyond the destinations named, and asked for reparation on certain shipments.

It was held that the 11 ct. rate complained of was an erroneous and illegal rate insofar as it had been applied to the stations Bolton to Bear Trap, inclusive. No order or authorization from the Commission was required to permit refunds of the excess of the erroneous and illegal charges involved above the lawful rate of 10 cts. It was ordered that the respondent desist from charging a higher rate than the lawful rate of 10 cts. per 100 lb. on carload shipments of hay from points on its line Marshfield to Wausau, inclusive, to points on its line Bolton to Bear Trap, inclusive. The 11 ct. rate was the legal rate to the other points to which it had been applied but it was found to be an excessive charge for shipments to Winchester and Fosterville. It was therefore ordered that the respondent substitute a rate of 10 cts. per 100 lb. for the present rate of 11 cts. per 100 lb. on carload shipments of hay from points on its line Marshfield to Wausau, inclusive, to Winchester and Fosterville. The refunds asked for could not, however, be authorized since the petitioner had no direct interest in and did not pay the charges on the shipments in question and was not, therefore, a "person aggrieved" within the meaning of the statute. (Sec. 1797—37*m*.)

It is apparent that the present complaint is a part of the complaint in this previous case so restated as to name the "person aggrieved" as the complainant.

Only two of the cars involved in the complaint moved within a period of one year previous to the complaint, hence, under the statutory limitation in force at the time the complaint was filed,

only these two can be considered here. The reasonable rate under which these cars should have moved has already been determined by this Commission, 12 W. R. C. R. 438, to be 10 cts. per 100 lb., and refund will therefore be ordered on that basis as shown below.

Date	4—11—13	5—20—12
W. B. No.	132	1246
Car initial	?	St. Paul
Car number	77454	64506
From	Stratford	Wausau
To	Fosterville	Winchester
Wt.	22,100	23,700
Rate charged	11 cts.	11 cts.
Charges paid	$24.31	$26.07
Correct rates	10 cts.	10 cts.
Correct charges	$22.10	$23.70
Difference	$2.21	$2.37

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, be and hereby is authorized to refund and to repay to the complainant, the Northern Milling Company, the sum of $4.58, this being the amount charged on certain carloads of hay in excess of the reasonable charge.

WAUKESHA LIME AND STONE COMPANY,
FRANK B. FARGO, AGENT

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY,
ILLINOIS CENTRAL RAILROAD COMPANY,
GREEN BAY AND WESTERN RAILROAD COMPANY,
MINERAL POINT AND NORTHERN RAILWAY COMPANY,
FAIRCHILD AND NORTHEASTERN RAILWAY COMPANY,
CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted Dec. 9, 1913. Decided Jan. 2, 1914.

Petition is made for the establishment of joint rates on limestone used for agricultural purposes shipped from Waukesha to stations on the respondents' lines.

It is urged in support of the petition that the movement of the commodity in question should be encouraged because of the benefit to the state arising from increased fertility. The Commission heartily concurs in the theory that increased productivity of agricultural lands is of large benefit to the community, but it is inclined to doubt that the movement of any commodity should, except under unusual circumstances, be encouraged by a rate so low as to fail to return to the carrier the costs of the service, thus throwing a burden on the transportation of other commodities. In the instant case, however, it is possible to put into effect joint rates which will be remunerative to the carrier and still be such as to encourage the movement throughout the state of the commodity in question.

The respondents are ordered to put into effect for interline shipments of limestone for agricultural purposes from Waukesha to points on their lines a tariff of joint rates determined by the Commission. This tariff is based on the distance tariff for carloads of sand, crushed stone and gravel shipped from Waukesha ordered in *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 1912, 9 W. R. C. R. 87–99 and 347–353, and *In re Investigation Rates on Sand etc. on C. M. & St. P. R.* 1912, 11 W. R. C. R. 98–100, but is modified by the addition of a charge to cover the expense of transfer at junction points.

The Waukesha Lime and Stone Company is a corporation engaged as manufacturer and dealer in handling stone, gravel, sand, lime and similar materials. The general offices of this company are at Racine, Wis., but certain of its plants are located at Waukesha and it is with regard to respondent carriers' charges on certain products shipped from these plants that this

complaint is brought by Frank B. Fargo, agent. The complaint states that the petitioner is engaged in the production of limestone for agricultural purposes and it wishes joint rates on this commodity from Waukesha, Wis., to stations on the lines of the respondent carriers in Wisconsin.

Hearing was held at Madison, December 9, 1913. *J. J. O'Laughlin* and *Frank B. Fargo* appeared for the petitioner; *Kenneth Taylor* and *E. G. Clark* for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and *W. D. Burr* for the Chicago, St. Paul, Minneapolis & Omaha Railway Company.

The testimony covered in brief the prayer of the petitioner for joint rates and the present difficulty of moving the crushed limestone to various points in the state not on the lines of the carriers touching Waukesha, on account of the freight charges when computed as the sum of existing locals. Considerable emphasis was placed on the increased fertility which would result from a general distribution and application of the limestone to the soil. The carriers represented at the hearing indicated their willingness to make joint rates, provided these rates were fairly remunerative.

In 1912 this Commission, 9 W. R. C. R. 99 and 353, established a commodity distance tariff on carloads of crushed stone, gravel and sand from Waukesha, Wis., to points on the Chicago, Milwaukee & St. Paul and the Chicago & North Western railroads. Following this order, the Chicago & North Western Railway Company made these rates general on all local Wisconsin shipments of crushed stone, sand, and gravel and the Chicago, Milwaukee & St. Paul Railway Company made these rates general following an order of this Commission given November 29, 1912, 11 W. R. C. R. 100. The Minneapolis, St. Paul & Sault Ste. Marie Railway Company also adopted this distance tariff between all points in Wisconsin on its lines. At the present time, then, there is in effect locally in Wisconsin on the Chicago & North Western, the Chicago, Milwaukee & St. Paul and the Minneapolis, St. Paul & Sault Ste. Marie railroads on carloads of sand, crushed stone and gravel the following tariff:

Miles.	Cts. per 100 lb.	Miles.	Cts. per 100 lb.
5	1.20	80	2.61
10	1.30	85	2.68
15	1.40	90	2.75
20	1.50	95	2.82
25	1.60	100	2.90
30	1.70	110	3.00
35	1.80	120	3.10
40	1.90	130	3.20
45	2.00	140	3.30
50	2.10	150	3.40
55	2.20	160	3.50
60	2.30	170	3.60
65	2.40	180	3.70
70	2.47	190	3.80
75	2.54	200	3.85

The petitioner suggests two alternative methods of making the joint rates requested. The first proposes the application of the present commodity distance tariff as shown above to the short line joint mileage from Waukesha to destination, plus a transfer charge of $2.00 per car. The second method proposes to make the joint rate the sum of the locals and to base these local charges on the tariff given above and now in effect on the lines of three of the respondent carriers. It is urged by the petitioner that the movement of ground limestone for agricultural purposes should be encouraged because of the benefit to the state arising from increased fertility. This Commission heartily concurs in the theory that increased productivity of agricultural lands is of large benefit to the community, but it is inclined to doubt that the movement of any commodity should, except under unusual circumstances, be encouraged by a rate so low as to fail to return to the carrier the costs of the service, thus throwing a burden on the transportation of other commodities. In the present instance, however, it is quite possible to put into effect joint rates which will be remunerative to the carrier and still be such as to encourage the movement throughout the state of the commodity in question. The distance tariff on crushed stone, sand and gravel in carloads above quoted will be extended as follows for purposes of making joint rates to a distance of 360 miles and it is suggested that this extension be made also by the carriers now using this tariff for local shipments.

Miles.	Cts. per 100 lb.	Miles.	Cts. per 100 lb.
220	4.00	300	4.60
240	4.15	320	4.75
260	4.30	340	4.90
280	4.45	360	5.05

Certain expenses incident to the transfer at junction points are incurred by the carriers on joint hauls. To meet these expenses an arbitrary of ½ ct. per 100 lb. should be added to the rate as determined on the basis of the distance from origin to destination by applying the commodity distance tariff. In the following order the tariff as given is arrived at by adding ½ ct. per 100 lb. to the rate per 100 lb. as given in the original order naming a commodity distance tariff on crushed stone for distances up to 200 miles, and for distances greater than 200 miles the tariff is determined by adding ½ ct. to the rate as given above for distances from 220 to 360 miles.

IT IS THEREFORE ORDERED, That the respondents, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, the Illinois Central Railroad Company, the Green Bay & Western Railroad Company, the Mineral Point & Northern Railway Company, the Fairchild & Northeastern Railway Company, and the Chicago, St. Paul, Minneapolis & Omaha Railway Company, discontinue their present rates on interline shipments of limestone for agricultural purposes from Waukesha to points on their lines in Wisconsin and substitute therefor the following rates, subject in each case to the same minimum rates as are in effect at the present time:

LIME STONE FOR AGRICULTURAL USES; CARLOADS.

Miles.	Cts. per 100 lb.	Miles.	Cts. per 100 lb.
5	1.70	100	3.40
10	1.80	110	3.50
15	1.90	120	3.60
20	2.00	130	3.70
25	2.10	140	3.80
30	2.20	150	3.90
35	2.30	160	4.00
40	2.40	170	4.10
45	2.50	180	4.20
50	2.60	190	4.30
55	2.70	200	4.35
60	2.80	220	4.50
65	2.90	240	4.65
70	2.97	260	4.80
75	3.04	280	4.95
80	3.11	300	5.10
85	3.18	320	5.25
90	3.25	340	5.40
95	3.32	360	5.55

ROBERT S. SCHMIEDER ET AL.

vs.

MILWAUKEE LIGHT, HEAT AND TRACTION COMPANY.

IN RE PETITION OF THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY AND THE MILWAUKEE LIGHT, HEAT AND TRACTION COMPANY WITH REFERENCE TO THE SINGLE FARE LIMITS IN WAUWATOSA.

TOWN OF CALEDONIA

vs.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

O. R. TOWER

vs.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

ALLAN D. STEARNS

vs.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

IN RE APPLICATION OF THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY FOR THE DETERMINATION OF REASONABLE UNIFORM RATES FOR SUBURBAN AND INTERURBAN SERVICE.

Decided Jan. 2, 1914.

The T. M. E. R. & L. Co. and the M. L. H. & T. Co. ask that the Commission determine and prescribe reasonable uniform tariffs and schedules of rates for the suburban and interurban transportation service rendered by the two companies. The companies take this action at the suggestion of the Commission in order to dispose in one proceeding of the formal complaints covered in the present opinion and decision and a number of informal complaints which have been made and to avoid future complaints by eliminating the discriminatory features of the suburban and interurban rate schedules now in effect. The remaining formal petitions listed in the title to this proceeding relate respectively to: (1) the round trip rates between Calhoun and West Allis and Calhoun and Milwaukee, which are alleged to be discriminatory as compared with more favorable rates over the same line between Waukesha and the same points; (2) the single fare limits in Wauwatosa, as recommended by the Commission and as required by the franchises under which the M. L. H. & T. Co. operates in Wauwatosa; (3) the alleged necessity of extending the limit for commutation tickets between the city of Racine and points in the town of Caledonia from Thielen stop to Four Mile road, a point about one-half mile north of Thielen stop, in order to make certain public places available as waiting stations; and, (4) and (5), the reasonableness of the suburban fares in effect between Milwaukee and West Allis, especially with respect to certain single fare limits which are alleged to discriminate

unjustly against certain districts and to cause congestion of traffic and hence inadequate service in other districts.

The so-called five-cent zone system of suburban and interurban rates in use on many interurban electric railways is unscientific and inequitable because of the unequal zone distances used, the concessions made to favored localities and favored classes of passengers at the expense of other localities and other classes of passengers and the consequent shifting of costs, in the form of excessive rates, onto patrons in the localities or classes discriminated against. In the instant case the one-way fares charged for different trips over the suburban and interurban lines of the two companies vary widely when compared on a passenger-mile basis. This discrimination has given rise to other discriminations such as those involved in the granting of overlapping zones and special and round trip rates to favored points.

The application of the railway companies in the present proceeding for authority to abandon the five-cent zone system and place the rates on a more uniform basis is in line with similar action taken by other interurban electric railway companies in Wisconsin and in neighboring states.

A basic rate of two cents per passenger-mile upon a cash basis, with a flat fare for Milwaukee, Waukesha, Watertown, Racine and Burlington, is considered as best meeting the requirements of the instant case. This rate is less than the cost of service under present traffic conditions, but it is expected to increase the passenger density to a point where the revenues will yield an adequate return.

The contention that the patrons of those lines or sections of lines which have a higher traffic density and operate upon a better revenue basis than other lines or sections of lines should be granted fares lower than the fares computed upon a mileage basis is opposed to the more modern theory of transportation rates which takes into account, among other things, the demand for simplicity, uniformity and stability in the rates to be put in force, for the purpose of avoiding uncertainty and personal and local discrimination.

Held: The rates of fare charged by the T. M. E. R. & L. Co. and the M. L. H. & T. Co. for the suburban and interurban service involved in the present proceeding are unjustly discriminatory. The companies are therefore authorized to put into effect for this service schedules of rates determined by the Commission. These schedules include: (1) rates for suburban passenger service to and through the cities of West Allis and Wauwatosa and on the Wanderer's Rest Cemetery line, to and through the city of North Milwaukee, Whitefish Bay and Fox Point, South Milwaukee and Tippecanoe, and rates for local suburban hauls originating and terminating beyond the single fare limits of the city of Milwaukee; (2) rates for through interurban passenger service upon the Milwaukee-Waukesha-Oconomowoc-Watertown line, the Milwaukee-Muskego Lakes-East Troy line, the Milwaukee-Waterford-Burlington line and the Milwaukee-Racine-Kenosha line; and (3) provision for the sale of tickets in packages for the payment of fares between points within the single fare limits of the city of Milwaukee and Marquette Boulevard in the city of South Milwaukee and for the sale of mileage books for the payment of interurban and suburban fares. Single fare limits for the city of Milwaukee are prescribed and all overlapping fare zones are to be abandoned. "Through interurban passenger service" upon the Milwaukee-Waukesha-Oconomowoc-Watertown

line, the Milwaukee-Muskego Lakes-East Troy line and the Milwaukee-Waterford-Burlington line is defined as passenger service between any point within the single fare limits of Milwaukee and points beyond Woodlawn Stop, and upon the Milwaukee-Racine-Kenosha line as passenger service between any point within the single fare limits of Milwaukee and points beyond South Limits, South Milwaukee. The rates prescribed for suburban passenger service are based upon the city fare with an addition of 2 cts. for each 2 ct. zone, as determined by the Commission, traveled beyond the single fare limits of the city of Milwaukee. Passengers paying these rates are to be entitled to the privilege of the usual transfers within the single fare limits of the city of Milwaukee and upon the several suburban lines. The rate prescribed for through interurban passenger service is a uniform charge of 2 cts. per mile computed to the nearest 1 ct. for the actual mileage, except the mileage included within the single fare limits of Milwaukee, for which the charge is in every case to be computed at 4 cts., and the mileage included within certain limits in Waukesha, Watertown, Burlington and Racine. The rate of fare per passenger for interurban service between points without the single fare limits of the city of Milwaukee is to be the difference between the through rates to these points. The minimum fare for any haul is to be 5 cts. Every interurban fare from or to Milwaukee, Racine, Kenosha, Burlington, Waukesha, Oconomowoc and Watertown is to entitle the passenger to the usual transfer privilege within the single fare limits of such cities where such privilege exists. The sale of all commutation and reduced round trip tickets which may now be in force is to be abandoned. The tickets to South Milwaukee authorized by the present order to be sold in packages are to be sold in packages of 20 for $2.50 and each ticket is to be good for one continuous ride between the points named, with privilege of transfers within the distance included. These tickets are to be sold for one year after date of installation. The mileage books authorized are to be for 300 miles at 1.8 cts. per mile, or $5.40 per book, and are to be good for the payment of any interurban or suburban fare, provided that the minimum fare thus payable shall amount to a five mile "tear". All complaints and petitions named in the present proceeding are dismissed insofar as they are not satisfied or granted by this order and insofar only as they relate to rates of fare for suburban and interurban passenger service. It is recommended, however, that the companies provide for a single fare of five cents to apply within the city limits of West Allis. The order is in no wise to affect or alter the rates now in effect for private, funeral, or chartered car service, or the present reduced "party rates" for passenger service, or rates for any service other than the carrying of passengers.

These cases and petitions involve the reasonableness of and alleged discriminations in existing fares of The Milwaukee Electric Railway and Light Company and the Milwaukee Light, Heat and Traction Company for suburban and interurban service.

The detailed matters concerning these complaints are as follows:

Robert S. Schmieder, et al. vs. Milwaukee Light, Heat and Traction Company.

The Calhoun petition, filed on December 17, 1912, and signed by Robert S. Schmieder and thirty-two other residents of Calhoun, Wis., alleges that the existing round trip rates between the points Calhoun-West Allis and Calhoun-Milwaukee on the respondent's Milwaukee-Watertown line are discriminatory as compared with the round trip rates between Waukesha-West Allis and Waukesha-Milwaukee on the same line. Prayer is made that the Commission establish just round trip rates for Calhoun.

Pursuant to notice a hearing was held on January 20, 1913, at the city hall in Milwaukee. *Robert S. Schmieder* represented the petitioners, and *Clarke M. Rosecrantz* the respondent.

In a brief filed March, 1913, the respondent denied the application of the petition on the grounds of cost of service and volume of traffic as measured in passengers.

Wauwatosa Single Fare.

The Wauwatosa petition was presented on behalf of the Milwaukee Light, Heat and Traction Company as a result of certain recommendations made by the Commission to extend the present single fare limits.

The petition was filed on March 20, 1913, and alleged, in brief, that petitioners operate, under joint agreement, two lines of electric railway between the city of Milwaukee and Wauwatosa and that the westerly single fare limits on these lines have been fixed with respect to the decision of the Commission in *Koenig v. T. M. E. R. & L. Co.* and *Gillett v. T. M. E. R. & L. Co. and M. L. H. & T. Co.* 1912, 10 W. R. C. R. 337, on the Wells-Farwell line at Wells and 59th streets in Wauwatosa and on the Walnut-National line at Spring and Pabst avenues in Milwaukee county; that on January 31, 1913, the Commission recommended that the single fare limits be extended on the Walnut-National line to its terminus in Wauwatosa at N. Main and State streets, and on the Wells-Farwell line to a point across the C. M. & St. P. Ry. Co. tracks; that transfers are given in Wauwatosa between these two lines; that the lines are operated within the city of Wauwatosa under certain franchises granted

by the town of Wauwatosa, village of Wauwatosa and city of Wauwatosa, which franchises it may be claimed can be interpreted to require the company operating these lines to carry passengers from any point in the city of Wauwatosa to any other point in that city for a single fare; that the earnings of the company do not permit the single fare limits to be so extended and arranged as to comply both with the Commission's recommendations and the franchise requirements; and that if it is deemed practical and reasonable to extend the single fare limits, the Commission provide that such extensions shall not operate to require the company to transport passengers for a single fare from or to points north or east of the single fare limits to or from points west or south of such limits.

Hearings upon this petition were held at Milwaukee on April 28, 1913, and July 16, 1913. The following appearances were entered: *Miller, Mack and Fairchild,* by *Edwin S. Mack* and *J. B. Blake,* on behalf of the petitioner; *Clifton Williams,* assistant city attorney for the city of Milwaukee; *Chas. B. Perry* on behalf of the village of Wauwatosa.

Town of Caledonia vs. The Milwaukee Electric Railway and Light Company.

The Caledonia petition, which was filed April 9, 1913, alleges that the town of Caledonia has granted The Milwaukee Electric Railway and Light Company a franchise to extend interurban tracks and operate cars along certain highways of the town; that the company is now operating under such franchise; that the company has for some time sold commutation tickets good between any point in the city of Racine to Thielen stop, less than half a mile south of Four Mile Road; that there is no shelter at Thielen stop for passengers; that at Four Mile Road there are two public places which take the place of a waiting station; that an extra fare of 5 cts. is charged for transportation between the Thielen stop and the Four Mile Road, a distance of less than half a mile; and that the Four Mile Road is a natural traffic point. The prayer is made that the Commission extend the limits for the commutation tickets now good to or from Thielen stop from or to the city of Racine to apply to or from Four Mile Road. Hearing was set for July 16, 1913, but no appearances were made.

O. R. Tower vs. The Milwaukee Electric Railway and Light Company.

Allan D. Stearns vs. The Milwaukee Electric Railway and Light Company.

The petitions of O. R. Tower and Allan D. Stearns et al. relate to the reasonableness of suburban fares between Milwaukee and West Allis and were filed April 19, 1913, and June 5, 1913, respectively. They allege in substance that the Commission has by order extended the single fare point to 62nd and Greenfield upon the Wells-Farwell line and Fond du Lac-National line, while the single fare limits upon the Burnham-Third line remains at 51st avenue and Burnham; that this irregularity is a discrimination against the latter line and is unjust and unwarranted; that the present single fare limits are inaccessible to a great number of passengers; that the operation of interurban cars is a burden and hardship, because of their limited stops; that the irregularity in fare limits causes a diversion of traffic to other lines serving West Allis and results in their congestion; and that the service and rates are unreasonable. The Milwaukee Electric Railway & Light Company, in its answer, denies all allegations of unreasonableness of fares and service.

Hearings in the above matters were held at Milwaukee on July 22, 1913, and July 30, 1913. The following appearances were noted: *F. C. Weed* and *Andrew Agnew* on behalf of petitioners, and *Miller, Mack and Fairchild*, by *James B. Blake*, on behalf of respondent.

Application of The Milwaukee Electric Railway and Light Company and Milwaukee Light, Heat and Traction Company.

The general petition filed by the companies on August 15, 1913, refers to the joint operation of the two companies, the franchises under which they operate and, in brief, alleges that the tariffs and schedules on file with the Commission for suburban and interurban transportation service contain many inequalities with respect to fares and distances which the companies desire to eliminate by substituting therefor new tariffs and schedules which shall be uniform. The prayer is made that the Commission investigate the rates for such suburban and interur-

ban service and determine and by order prescribe such uniform tariffs and schedules of rates as shall be just and proper under the circumstances.

Hearings in the above matters were held in Milwaukee on September 4 and 15. The following appearances were noted: *Van Dyke, Rosecrantz, Shaw & Van Dyke,* by *Clark M. Rosecrantz,* for The Milwaukee Electric Railway and Light Company and the Milwaukee Light, Heat and Traction Company; *Geo. Gabel* for the village of East Milwaukee; *Christ Wochsner,* mayor, and *Geo. C. Dutcher,* city attorney, for the city of Cudahy; *F. C. Weed* for the city of West Allis; *A. S. Green* for the village of North Milwaukee; *Chas. Franke,* mayor, and *Wm. J. Riley,* city attorney, for the city of South Milwaukee; *H. A. Kerler,* chairman, and *Robert Wild* for the town of Franklin and Hales Corners; *W. H. Goodall,* president, *Julius Len* and *E. V. Etton,* trustees, and *Frank C. Klode* for the village of Whitefish Bay; *Wm. Stabelfeldt,* chairman, for the town of Milwaukee; *H. D. Taylor* and *G. F. Kent* for the Bucyrus Company of South Milwaukee; *W. H. Churchill* for the town of Milwaukee; *A. M. Campbell,* traffic secretary, for the Merchants' and Manufacturers' Association of Milwaukee; *E. W. Lamberton,* supervisor, and *Frank Bursch* for Caledonia; *Otto Strache* for Ixonia; *Henry Carey,* chairman, for Waterford; *C. R. Guthrie,* chairman, for the town of Big Bend; *F. V. Brownell* for the Keystone Glue Company, South Milwaukee; *W. C. Quarles* for the Power and Mining Machinery Company, the Federal Rubber Company, and the Cudahy Packing Company, all of Cudahy, and for the Bucyrus Manufacturing Company, the Stowell Manufacturing Company, and the Conant Basket Company, all of South Milwaukee; *Thos. Winzenburg* for the town of Oconomowoc; *E. R. Burgess,* city attorney, for city of Racine; *Geo. Luchring* for the Obenberger Drop Forge Company of Cudahy; *Fred A. Vogel* and *Fred C. Ellis* for the Pfister & Vogel Leather Company, and the United States Glue Company, South Milwaukee; *E. H. Tichenor* for the city of Waukesha and the Waukesha Real Estate Dealers' Association.

Subsequent to the hearings on the last named application the following petitions were presented to the Commission.

The village of East Milwaukee through its attorney, George H. Gabel, petitions that the single fare limits on the Oakland

avenue line be extended from Newton avenue to Mineral Spring road.

Thirty residents of Big Bend by petition allege that the rate of fare from Mukwanago to Big Bend of 15 cts. is excessive and discriminatory, in that the distance is seven miles and that East Troy is granted a round trip rate to Mukwanago of 25 cts., while its one-way fare is 15 cts., the same as for Big Bend.

A resolution by the common council of the city of South Milwaukee instructs a committee to prevent an increase in the fare from Milwaukee to South Milwaukee and, if possible, to bring about a reduction in the present rate of 10 cts.

The Advancement Association and certain manufacturers of South Milwaukee by resolution petition for a reduction in the present rate to Milwaukee.

The petition of the railway companies, filed August 15, 1913, covers the entire field of suburban and interurban rates on the systems owned and operated by the Milwaukee Light, Heat and Traction Company and The Milwaukee Electric Railway and Light Company. Each of the other petitions and complainants summarized above refer principally to certain provisions of the same rate system and therefore will be disposed of in the decision upon the general petition of the companies to establish uniform rates.

The general petition of the respondents was filed at the suggestion of this Commission. The complaints cited above, other informal complaints, and the general experience with the five-cent zone system of fares in this and other states led the Commission to believe that the interests of all patrons would be more adequately served and that a large number of future complaints could be avoided by passing at the present time upon the discriminatory features of the entire suburban and interurban rate schedules.

DISCRIMINATORY FEATURES OF FIVE-CENT ZONE.

In selling any product it is customary to employ a standard unit of measurement. For instance, in this country milk is sold by the quart, meat by the pound, cloth by the yard, and coal by the ton. Similarly, in selling transportation to persons the adopted standard unit of measurement is the passenger-mile—one passenger carried one mile. Although steam lines in

general have adhered to this standard, the electric interurban systems in many cases have used the so-called five-cent zone system of rates. This system is merely an extension of the flat five-cent city fare and has no scientific basis for suburban or interurban operation. The resulting inequalities which exist under this system of rates may well be illustrated by measuring the different fares charged by the unit of measurement—the passenger-mile. No better examples can be cited than can be found upon the suburban and interurban systems involved in the present proceeding and the following facts are an indication of these inequalities.

On the Milwaukee-Kenosha line a 5 ct. fare is charged for local and through traffic between South Milwaukee, south limits, and Ryans, a distance of 1.57 miles, or 3.18 cts. per mile, while the same fare holds between Oaklahoma avenue and South Milwaukee, south limits, a distance of 7.17 miles, or a rate per mile of 0.69 cts. Five cents is charged on the Milwaukee-Watertown line for 0.99 of a mile between Calhoun and Moorland, for 1.64 miles between Buena Vista and Nagowicka, and for 3.33 miles between Delafield and Nashotah, resulting in rates per mile of 5.05 cts., 3.05 cts. and 1.49 cts., respectively. On the Milwaukee-Burlington line the charge is 5 cts. from Rochester to Waterford, 1.66 miles, 5 cts. from Rochester to Burlington, 3.89 miles, and a ten-cent minimum between Waterford and Norway or any part of the distance, resulting in rates per mile based upon the maximum haul of 3.01, 1.28 and 2.98 cts., respectively. Similarly, on the East Troy line the rate per mile varies from 3.09 cts. between Beulah Lake and Army Lake to 1.34 cts. between Muskego Lake and Big Bend. The Burlington and East Troy lines both have the added feature of discrimination of several double five-cent zones, or so-called ten-cent zones, which for short hauls to intermediate stops may charge as high as 10 cts. per mile.

The suburban zones adjacent to the single fare limits of Milwaukee city show variations such as 1.44 miles for Wanderer's Rest, 3.86 miles for Whitefish Bay, and 7.17 miles for South Milwaukee, including the overlap between Oklahoma and St. Francis. Thus the suburban rates per mile for the maximum haul varies from 0.69 cts. to 3.47 cts.

Directly due to the inequitable nature of the five-cent zone

system, as outlined in the above discriminations of one-way fares, is the practice of granting overlapping zones, special and round trip rates to favored points. When overlapping zones are injected into the five-cent zone system we have a rate scheme which places every locality in competition with its neighbors. For instance, it is usually contended that if a company extends the limits of an interurban zone for one-half mile so as to reach a certain locality and thereby grant a lower fare to this locality to all points through the overlap, it logically follows that the next locality a quarter or half mile distant should be granted a similar concession. The result is that this necessity of granting overlaps causes the rate schedules to become even more discriminatory, and, carried to its logical conclusion, the entire schedule ultimately must fall to the ground. A typical example of this tendency may be shown upon the Milwaukee-Racine-Kenosha line. The company, through a special rate of 5 cts., has granted an overlap from the city of Racine north to Thielen stop. The Caledonia petition given herein contends that the overlap should be extended to Four Mile Road, a distance of less than a half mile, giving as a reason the fact that there are two public places used as waiting stations there. An overlap also exists on this line between Oklahoma avenue and St. Francis, and it has been contended that this ought to be extended to Cudahy and even to South Milwaukee. If these concessions should be granted other localities adjacent would immediately ask to be included in the overlap, and finally, with all localities satisfied, the outcome would be that a single five-cent fare would exist between Milwaukee and Racine, a distance of 22.3 miles.

Upon the suburban lines extending from Milwaukee a number of overlapping zones have also been established. The zones were originally of proper distance but have become extended with the extension of municipal limits, the idea being in most cases to have the unequal zone conform with the political boundary line, and the result has been that zones immediately adjacent to the municipalities have been narrowed and the passengers originating in such zone discriminated against.

In any equitable system of fares for suburban and interurban service the overlapping zone cannot be justified except under very extreme conditions.

Regarding the matter of special ticket and round trip fares, we find that more than sixty of these concessions are granted from the one-way fares. Of the inequalities in the matter of special tickets may be cited the special fare between Racine and Ives which is as low as 0.79 of a cent per mile while the cash fare is 1.58 cents per mile. A special fare is charged between Milwaukee and Carrolville at 0.8 of a cent per mile on the Milwaukee-Kenosha line and at 1.3 cents per mile between Milwaukee and County Line on the Milwaukee-Watertown line. Round trip fares are granted upon the four interurban lines and are the cause of a good deal of local discrimination. On the Milwaukee-Kenosha line, for example, a rate per mile of 1.09 cts. prevails between Racine and Kenosha, and 1.14 cts. between Milwaukee and Racine, while on the Watertown line the round trip fare between Waukesha and Delafield sells at 2.06 cts. per mile and that between Waukesha Beach and Delafield at 2.31 cts. On the Burlington line the round trip rates per mile vary from 1.5 cts. to 1.82 cts. and on the East Troy line from 1.2 cts. to 2 cts. It will be observed from these facts that the round trip rates on the entire interurban system vary from a minimum of 1.09 cts. to 2.31 cts. per passenger mile or a variation of about 112 per cent above the minimum.

Petitions have repeatedly been filed by representatives of different localities along the lines in question demanding round trip concessions on the basis that the existing round trip fares were discriminatory. An analysis of conditions on the Watertown line, for instance, shows that Calhoun with no round trip fares is entitled to such fares when its claim is compared with those of some of the other stations enjoying concessions. Upon the basis of tributary revenues, or tributary business for 1912, Calhoun ranks twelfth out of twenty-four stations. Other stations such as Pipersville, Nagawicka, Silver Lake, North View, Ixonia, Sullivan Road, Meadowbrook, and River Road, all ranking lower in point of tributary revenues—the last four ranking the lowest of all stations—enjoy one or more reductions over the one-way fare. In view of these facts alone Calhoun is entitled to similar reductions. A further analysis shows that Calhoun with 294 passengers per capita per annum ranks highest while Nashotah with 208 ranks second, Delafield with 153 ranks third, Pipersville with 111 ranks fourth, Waukesha with

41 ranks fifth, Oconomowoc with 32 ranks sixth and Watertown with 10 ranks seventh. The unit of passengers per capita per annum shows the average number of rides per unit of total population, or the average frequency of riding during the year, and is a factor of considerable importance when granting reduced rates. Accordingly Calhoun, in view of its standing upon this basis, is entitled to as many points as any other station, with Milwaukee excepted. Another fact favoring a concession for Calhoun is that the first five-cent zone east towards West Allis and Milwaukee is 0.99 of a mile, requiring over five cents per mile through this zone. These facts regarding Calhoun are given to exemplify the discriminatory nature of the present rates, with respect to one locality and a similar analysis for other stations on this line and the other interurban lines would disclose conditions more or less discriminatory. A few more examples will suffice. As shown previously, Ives on the Milwaukee-Kenosha line received a special fare concession to Racine at a rate of 0.79 of a cent per mile. In rank of tributary revenues Ives stands ninth out of twelve stations on that line and those stations such as Kenosha, North Limits, Central Park, Milwaukee, South Limits, ranking higher than Ives, and with no concessions would be entitled to reductions in their rates per mile. On the East Troy line Verona Center, ranking lowest in point of tributary revenues, is granted a round trip fare to Milwaukee while Greenwood and East Troy Road, ranking ninth and tenth, respectively, have no fare reductions. Mukwonago on the same line, ranking fourth with 7.07 per cent of the revenues, has a round trip fare to Milwaukee and to East Troy, while Muskego Lakes, with almost twice the tributary revenues, namely 13.99 per cent, has only one round trip fare. St. Martins on the Burlington line, ranking fifth with 5.82 per cent of the revenues, is granted no reduction in fares although other stations with a smaller amount of business enjoy substantial reductions.

Assuming that round-trip concessions should be granted on the basis of tributary business we find that, returning to the Watertown line, if River Road, ranking lowest in tributary business, is granted a round trip fare to Milwaukee it is only fair that all other stations along this line be granted a reduction to Milwaukee. If Pipersville, ranking fourteenth in point of tributary business, is granted round trip fares to Milwaukee, Water-

town and Oconomowoc, it follows that upon the above theory all stations ranking higher than Pipersville should be granted as many as three round trip fares. Upon the theory that Waukesha, with a frequency of rides per capita per annum of 41, is entitled to round trip fares to Milwaukee, West Allis, Waukesha Beach, Delafield, Oconomowoc, and Watertown, it seems that those stations with a higher frequency should receive about the same concessions. Upon the theory that all excessively high rates per mile are unlawful it would be necessary to reduce the rates for those stations with such excessive rates to a lawful level through the granting of special or round trip fares. And consequently, after all legitimate claims for reductions had been met the special and round trip rates would, no doubt, far exceed the number of regular rates, the basic five-cent zone rate as applied by the company would be practically nullified, and the difficulty of collection and the prohibitive expense of the large number of special and round trip fares would most certainly warrant the abandonment of the entire system.

In establishing a revised system of interurban and suburban fares it is fully realized that the present fares will be considerably disturbed in some sections of the tributary territory, but this is not due to the application of any radical or untried theory of rates. It is due principally to the fact that the existing fares, as shown previously, do not rest upon any scientific basis but are based upon unequal zone distances and concessions to favored localities. The results of such a schedule are obvious. Invariably one or more localities are built up at the expense of others. Patrons favorably situated are granted extremely low fares, part of the cost of which have to be borne by those less favorably situated and paying excessive rates. With these facts in mind, a revision is here undertaken with the sole aim of removing as much of the discriminations as possible and placing a schedule of fares in force, upon a uniform rate per passenger mile, which will equalize opportunity for local growth and expansion, insure equitable treatment of individuals, and reasonably preserve the amount of traffic upon the various lines.

DISTANCE BASIS FOR FARES.

It is deemed that a basic rate of 2 cts. per passenger mile upon a cash basis, with a flat fare for the terminal and the subterminals, will best meet the requirements of the interurban service. That such a rate is not a new departure in electric railway operation is shown by conditions in this and other states. A gradual change is taking place from the old five-cent zone basis to some form of mileage basis. In this state the Sheboygan Electric Railway Company, running between Sheboygan, Plymouth and Elkhart, changed over some six years ago; the Milwaukee Northern Railway Company, running between Milwaukee and Sheboygan, adopted the mileage system when it began operation in 1908; the Rockford and Interurban Railway Company, running between Rockford, Ill., and Janesville, changed over to a distance basis last year; and the three interurban lines operating between Oshkosh, Fond du lac, Neenah and Omro in the region of Winnebago Lake have filed an application with the Commission to change their five-cent zone rates to a mileage basis. The application of the railway companies in the instant case for authority to abandon the five-cent zone system and place the rates on a more uniform basis is in line with this general change. In this state and in the states of Minnesota, Iowa, Illinois, Michigan, Indiana and Ohio returns show that of eighty-three electric interurban companies more than one-half now operate under some form of mileage rate. And it may be stated that the Pennsylvania and New Jersey state railroad commissions have declared in favor of the mileage basis.

It has been contended that the basic rate in this case should be placed upon a cost-of-service basis. Computations in the matter *City of Milwaukee vs. The Milwaukee Electric Railway and Light Company,* 1912, 10 W. R. C. R. 1, 282–283, Table 82. show that the rate of return upon the total interurban physical property amounted to 3.10 per cent in 1908, 3.05 per cent in 1909, 1.84 per cent in 1910, and 2.35 per cent in 1911. Similar computations for 1912 show the per cent return to approximate 1.6 per cent. These facts indicate that when 7.5 per cent is considered a fair return the rates of return as quoted for the past five years have fallen considerably below an adequate return. To bring the revenues to the point where they would yield such

a return for 1912, for instance, it would be necessary—assuming that the probable decrease in traffic would not occur—to establish the basic rate at about 2.75 cts. per passenger mile. When the conditions prevailing on the interurban system are considered as indicated by the passenger density per car-mile, increasing only from 2.09 in 1908, to 2.13 in 1913, (case cited, 10 W. R. C. R. pp. 266–267, Table 77) it seems best to place the rate at a lower figure than the cost of service would demand so as to encourage the passenger density with this lower rate to increase sufficiently to bring the revenues to the point where they will bring an adequate return above all expenses. It should also be stated that a rate of 2.75 cts. per passenger-mile would result in a large number of increases upon the entire system while a rate of 2 cts., although increasing certain low rates, reduces a considerable number and thus equalizes the conditions on a more satisfactory basis.

It has also been the contention of representatives of localities along certain lines, and even along sections of such lines, comprising the entire interurban system, that the patrons of those separate lines or sections of lines having a higher traffic density and operating upon a better revenue basis should be granted fares lower than the fares computed upon a mileage basis. It is difficult, however, to see the justice of establishing such fares, especially when it is the object of this revision of existing rates to abolish, so far as practicable for the present, all special fares involving local discrimination. It is also the object of this revision of rates to bring about simplicity, uniformity and stability in the rate schedules applying to these lines by disregarding any differences in revenues or operating conditions. This is in line with the more modern theory of transportation rates. Take, for example, the regular passenger fares upon the steam lines within the state. The basic rate is 2 cts. per passenger mile and with few exceptions the fares are computed accordingly whether the company is large or small, whether the haul is long or short, whether the traffic is profitable or unprofitable, or whether the service is poor or excellent. If all these factors cited should be reflected in full force in the rates the probability is that the rates would vary all the way from 0.5 of a cent per mile to 50 cts. per mile. But the nature of the transportation business is such that the demand for simplicity, uniformity and stability is necessarily controlling be-

cause even a slight variation in basic rates would open the way to uncertainty in the minds of the riding public and would result in personal and local discrimination.

As stated previously, the fares authorized will cause both increases and decreases in the present fares. For example, the cash one-way fare from Milwaukee to Waukesha, which is 35 cts. at present, will be reduced to 31 cts. The one-way fare from Waukesha to Waukesha Beach, which is now 15 cts., will be reduced to 14 cts., a decrease of 1 ct. The one-way fare from Milwaukee to Waukesha Beach will be reduced from 50 cts. to 40 cts.; that from Milwaukee to Delafield, from 65 cts. to 50 cts.; that from Milwaukee to Oconomowoc from 80 cts. to 66 cts.; and that from Milwaukee to Watertown from $1.10 to 94 cts. When the fares for rides between various intermediate points on the Milwaukee-Watertown line are considered it is found that the one-way fare between Waukesha and Delafield is reduced by 6 cts.; that between Waukesha and Watertown by 7 cts.; that between West Allis and Nashotah by 12 cts.; and that between Oconomowoc and Watertown by 2 cts. The fare between Delafield and Oconomowoc is increased by 1 ct. In fact, the major portion of one-way fares on this line are decreased. On the East Troy line the one-way fare from Milwaukee to important points such as St. Martins is reduced from 25 cts. to 24 cts.; that from Milwaukee to Muskego Center is reduced from 35 cts. to 32 cts.; that from Milwaukee to Big Bend from 40 cts. to 39 cts.; that from Milwaukee to Mukwanago, from 55 cts. to 52 cts.; and that from Milwaukee to East Troy from 70 cts. to 65 cts. On the Burlington line the one way fare from the terminal to Durham is reduced from 30 cts. to 29 cts.; the fare to Norway is reduced from 45 cts. to 43 cts.; that to Waterford form 55 to 49 cts.; and that to Burlington from 70 to 66 cts.; but the fare from Waterford to Burlington is increased from 15 to 17 cts. Both on the Burlington and East Troy lines the major portion of the fares authorized are also reductions from the existing schedule. On the other hand, due to the present low fares on the Milwaukee-Kenosha line, the proposed fares are, to some extent, increases. The one-way fare from Milwaukee to Racine is increased from 40 to 45 cts.; and the fare to Kenosha, north limits, from 50 to 60 cts. The fare between Racine and Kenosha is increased from 15 to 20 cts.; the fare between South Milwaukee and Kenosha is increased from 40 to 46 cts.; and the fare from South Milwaukee to Racine is increased from 30 to 31 cts.

Inasmuch as a general reduced rate, as compared with the cash fare in the form of a coupon book at 1.8 cts. per passenger-mile is ordered in the authorization and is made contingent thereto, it is proper to make a comparison between the present round trip fares and the fares upon the basis of the 1.8 cts. mileage coupons. Out of thirty-three round trip fares on the Watertown line practically only five are increased. These increases are small when compared with the one-way decreases. The round trip fare between Delafield and Watertown is increased from 75 to 79.2 cts.; that between Oconomowoc and Pipersville from 25 to 28.8 cts.; that between Delafield and Oconomowoc from 25 to 28.8 cts.; that between West Allis and Waukesha from 40 to 50.4 cts.; and that between Milwaukee and Waukesha from 50 to 57.6 cts., while the decreases for 28 stations range from 1.6 cts. to 10 cts., and the fares for five stations remain practically the same. The two fares cited for Waukesha show increases above the other stations because the existing fares are relatively very low. The same is true upon the Kenosha line as regards the present low fares to Racine and Kenosha. On this line the round trip fares between Milwaukee and Racine will be increased upon a mileage basis from 60 to 82.8 cts., and those between Milwaukee and Kenosha from 85 cts. to $1.08. Between South Milwaukee and Racine the increase is 7.6 cts. per round trip and 7.8 cts. between the former city and Kenosha, north limits. However, a comparison on the East Troy and Burlington of the present round trip fares with the proposed mileage coupons shows that only 3 out of 19 fares will be increased, or approximately 16 per cent. A slight increase of 2 cts. is caused in the round trip fare between Milwaukee and Big Bend, the present fare being 70 cts. and the proposed fare 72 cts. A similar change will take place in the fare of 70 cts. between Milwaukee and Wind Lake, and an increase of 7.4 cts. will occur in the fare of 25 cts. between Waterford and Burlington.

Comparing the total of 60 round trip fares now in force upon the respondent's interurban lines with the mileage coupon of 1.8 cts., it appears that 17, or about 28 per cent, will be increased, while 43, or 72 per cent, of the fares will be reduced or will remain the same. Of this 72 per cent 9 fares—20 per cent—will remain the same while 34 fares—80 per cent—will be reduced.

In a preceding paragraph the statement is made that a rate

of 2 cts. per passenger-mile with a flat fare for the terminal and subterminals would best meet the requirements. In adopting this fare scheme Milwaukee is considered as the terminal and Waukesha, Watertown, Racine and Burlington are considered as subterminals. The flat fare within the single fare limits of the terminal is placed at 4 cts., with privilege of transfer, while the subterminal fare is placed at 5 cts. with privilege of transfer where such exists. In this respect the entire fare scheme differs from that of a steam road. The electric interurban car-stops per mile are numerous within a city. To apply a strict rate per mile to each stop would be highly impracticable and the flat rate as stated above becomes a necessity. With this modification the *actual* rate per mile is somewhat below 2 cts. for an interurban ride when it includes a terminal and subterminal charge. Thus uniformity in the terminal charge for all lines, and uniformity in the subterminal charge for each line, together with a uniform rate per mile for the interurban component of any such ride, causes the rate per mile to vary below 2 cts. On the Milwaukee–Watertown line the terminal ride from the Public Service Building to the single fare limits is 5.34 miles; on the Burlington and East Troy lines it is 5.81 miles, and on the Kenosha line 4.22 miles. The subterminal distance for Waukesha is 2.55 miles; for Watertown it is 2.43; for Burlington 2.29 miles, and for Racine 4.11 miles. Accordingly the actual rates per mile for fares herein authorized must necessarily vary, as the following examples show. From the Public Service Building in Milwaukee to Racine, south limits, the distance is 26.41 miles, the one-way fare proposed is 45 cts. and the resultant rate per mile is approximately 1.7 cts. From the same point in Milwaukee to Waukesha, west limits, the distance is 18.43 miles, the fare is 31 cts., and the rate per mile 1.65 cts. For the cash fare of 94 cts. between Milwaukee and Watertown the rate per mile is 1.86 cts. These examples indicate the condition that the rate per mile is a variable approaching 2 cts. as the length of ride increases, when the ride includes a terminal and subterminal charge. This is true in general because the influence of the flat rate upon the rate per mile grows less as the fare increases. But uniformity is established under the proposed system in the rate per mile for those points equidistant from the Public Service Building. Thus the distance to Oconomowoc, East Troy and Burlington is 36.40, 36.26 and

36.38 miles, respectively, while the corresponding rates per mile are 1.81, 1.79 and 1.81 cts. For equal distances for rides not including a terminal or subterminal charge the rate per mile is also approximately uniform. In this connection it should be taken into consideration that the rate per mile is even lower when the patron takes advantage of the transfer privilege offered to all interurban patrons. This allows a maximum haul of over ten miles within the city of Milwaukee in addition to the interurban ride.

A still lower rate per mile is obtained with the mileage-coupon fares. Here again the actual rate for interurban rides including a terminal and subterminal charge approaches 1.8 cts. From Milwaukee to Waukesha the actual rate is 1.52 cts.; to Racine it is 1.56 cts.; to Waukesha Beach it is 1.56 cts.; and to Delafield it is 1.58 cts. If a maximum haul of ten miles when the transfer privilege is used is assumed, these rates will obviously be reduced to a slight degree.

DISPOSAL OF INTERURBAN PETITIONS.

Taking up the petitions relating to interurban fares included in this decision the following facts with respect to the fares authorized will answer the contentions of the petitioners.

In the matter *Robert S. Schmieder et al. vs. Milwaukee Light, Heat and Traction Company,* prayer was made for a lower fare from Calhoun to West Allis and to Milwaukee, to be obtained by round trip concessions. The present fare from Calhoun to West Allis at 62nd and Greenfield is 20 cts. while the fare herein authorized is 13 cts., a reduction of 7 cts. The present fare from Calhoun to Milwaukee is 25 cts. and the proposed fare is 17 cts., a reduction of 8 cts. These fares will be further reduced by the use of the mileage book.

In the matter *Town of Caledonia vs. The Milwaukee Electric Railway and Light Company,* prayer is made that the Ives commutation ticket be extended to apply to Four Mile Road. This ticket, together with all other special and round trip fares, will be superseded by the fares authorized in the following order and no extension can be granted. The fares between Racine and Four Mile Road will be placed upon a distance basis, which is deemed the most equitable. The petition is therefore dismissed.

Thirty residents of Big Bend filed a petition requesting a round trip fare of 25 cts. to Mukwanago. The present one-way fare is 15 cts. This has been reduced to 13 cts. in the authorized fare, making the round trip 26 cts. The mileage coupons, when effective, will reduce the fare below 26 cts.

SUBURBAN FARES.

In bringing about uniformity in the suburban fares by applying the distance basis it is found that, due to the shortness of some lines, the existence of private rights of way and the concentration of traffic at certain points, a modification of distances is required. The fares as authorized herein are placed as near as possible upon an equitable basis by the establishment of consecutive two-cent zones, that is, the basic rate is placed upon a copper instead of a nickel basis. This scheme of fares is far less discriminatory than the existing five-cent zones with the accompanying overlaps. The present system is discriminatory partly because the suburban zones vary all the way from 1.44 miles, for the Wanderer's Rest line and Wauwatosa–Walnut line, to 7.17 miles for the South Milwaukee line. Next to the South Milwaukee zone the Whitefish Bay zone is the longest, with 3.86 miles. When cognizance is taken of the fact that 5 cts. is charged for these varying distances the inequalities as between suburbs become apparent. For example, the rate per mile to South Milwaukee and Whitefish Bay is extremely low when compared with the rates to other suburbs. To remedy these differences it will be necessary to employ shorter zones upon a copper basis. A charge of two cents per zone as applied will necessarily raise the low rates and decrease the higher ones. The rates so adjusted will result in an approximate average rate for each line which will to some degree place all suburbs upon an equal basis.

In view of the above facts the West Allis–Burnham line is divided into two zones; the first extending from 51st avenue and Burnham to 77th avenue and George street, and the second from 77th avenue and George street to Woodlawn stop. On a cash basis the fare in the first zone is reduced from 10 cts. to 7 cts. and in the second zone from 10 cts. to 9 cts. With a city ticket at 4 cts. the present fare to the first zone is 9 cts. and the proposed fare 6 cts., a decrease of 3 cts., and to the second zone this present fare of 9 cts. is reduced to 8 cts. The proposed fare

with a four-cent city ticket to the first zone is a reduction from the present West Allis commutation—20 for $1.50—at 7.5 cts. of 1.5 cts. and to the second zone the proposed fare results in the slight increase of one-half cent. On the West Allis–Fond du Lac suburban line the first two-cent zone extends from 62nd and Greenfield avenues to 77th avenue and Summit, and the second from Summit to Woodlawn stop. The same number of reductions and one increase in the fares occur here as noted for the West Allis–Burnham line.

On the Wauwatosa-Walnut line one suburban zone is established from Pabst and Spring avenues to the terminus of that line. This places the proposed fare upon a cash basis at 7 cts., and in connection with a four-cent city ticket at 6 cts., thus reducing all present cash and commutation fares by amounts as noted for the first zone on the West Allis-Burnham line. The Wauwatosa-Wells line is divided into two zones; the first extending from 59th avenue and Wells to Wauwatosa avenue and Watertown Plank Road at a point opposite the terminus of the Walnut line, and the second zone extending from the latter point to the County-Buildings terminus. All present cash and commutation fares are reduced within the first zone, and in the second zone the same number of reductions and one increase of one-half cent take place as cited for the second zone on the Burnham line.

On the Wanderer's Rest line two zones are established. The first extends from North and Lisbon avenues to Spring and Lisbon, while the second extends from the latter point to the end of the line. The present fare is 10 cts. and the proposed fares are all reductions of from 1 to 3 cts., depending whether a cash or ticket fare is paid for the city ride.

The North Milwaukee suburban zone is divided into two zones. The first reaches from 27th and Pease to Hampton avenue in North Milwaukee, while the second reaches from Hampton avenue to the end of the line at Wallace avenue. The fare within the first zone is 7 cts. cash, and 6 cts. when a four-cent city ticket is used, thus reducing the present cash fare of 10 cts. by 3 cts., the city ticket plus a cash suburban fare by 3 cts., and the commutation fare of 7.5 cts. by 1.5 cts. In the second zone all present fares will be reduced with the exception that the lowest zone fare will be an increase of one-half cent over the 7.5 ct. commutation.

The Whitefish Bay and Fox Point line with two five-cent zones at present is divided into six two-cent zones. This will cause decreases for all fares in the first zone. The second zone including Whitefish Bay will be benefited by a reduction in the cash fare from 10 to 9 cts. and a reduction from 9 to 8 cts. when a city ticket at 4 cts. is used, while the commutation fare of 7.5 cts. will be increased by one-half cent, considering the lowest fare on a zone basis. In the third zone the present cash fare will be increased by 1 ct. and the same is true when a ticket is used for the city part of the ride. The present fare to the third zone when the commutation is used is 7.5 cts. and this is increased by 2.5 cts. upon the basis of the lowest zone fare. All fares in the fourth zone are increased by 2 cts. more than in the third. In the fifth zone the present cash fare is 15 cts. and the proposed cash fare will be the same. In the sixth zone the present cash fare is also 15 cts. and the fare proposed will increase this by 2 cts. When the present commutation ticket is used as part payment for a ride to the sixth proposed zone the fare is 12.5 cts. and the lowest fare on a two-cent zone basis will increase this by 3.5 cts.

For the South Milwaukee suburban zone of 7.17 miles a division is made similar to the one for the Whitefish Bay line. Because of the extreme length of this zone it is divided into seven two-cent zones. The first extends from Oklahoma avenue and Kinnickinnic to Thompson avenue. The southern boundary of the second zone is at Cudahy depot, for the third this boundary is at Underwood avenue, for the fourth it is at Thrintheimer's Park and for the fifth it is at Beach street. Due to the existence of two lines within South Milwaukee the sixth zone has two southern boundaries; one at Marquette avenue and Chicago road, and the other at Marquette and Fifth avenues. Two seventh zones exist, both have their southern boundaries at the south limits of South Milwaukee. Under present conditions an overlap exists from Oklahoma avenue to St. Francis. Under the proposed method, in order to bring about uniformity, this overlap, it is believed, should be abolished. The fare to St. Francis with this method will be increased by 2 cts., the ticket fare from 4 to 6 cts., and the cash fare from 5 to 7 cts. However, all present fares applying to the section between St. Francis and Thompson avenue will be

reduced. The second zone extends into Cudahy to the depot. The cash fare for Cudahy within the second zone will be reduced from 10 to 9 cts., the fare upon the basis of a city ticket plus a suburban cash fare will be reduced from 9 to 8 cts. and the present commutation at 7.5 cts. will be increased by one-half cent. For the third zone the present cash, cash and ticket fares as outlined above will be increased by 1 ct., while the commutation will be increased by 2.5 cts. over the lowest zone fare. For the fourth zone the existing fares will be increased by 3 cts., for the fifth zone by 5 cts., for the sixth by 7 cts., and for the seventh by 9 cts. Because of these increases, especially in the sixth zone, and because of the fact that a large number of patrons use this line daily, it is considered that the proposed fares should not be put into effect within a short time, but that the increases should be gradual and that they should be extended over a period of at least one year by the issuance of a ticket which will cover about one-half of the average of increases proposed. It is the opinion that a ticket at 12.5 cts., which is an increase of 2.5 cts. over the present cash fare and 3.5 cts. over the suburban-cash-and-city-ticket fare, will best meet the needs of the situation.

The Tippecanoe line operates at present under a single fare. However, in order that the proposed system of fares may be uniformly applied the tributary territory of the line south of Oklahoma and Howell avenues must necessarily be considered as suburban. Upon this basis the line is divided into two copper zones; the first extending from Oklahoma and Howell to Tippecanoe, and the second from the latter point to the end of the line. This will increase the fares to Tippecanoe proper by 2 cts., as Tippecanoe is situated near the southern boundary of the first copper zone.

SUBURBAN PETITIONS.

In the matters of *O. R. Tower and Allan D. Stearne vs. The Milwaukee Electric Railway and Light Company,* prayer is made that the single fare limits on the West Allis-Burnham line be extended from 51st aveuue to 62nd avenue. In this decision authorizing uniform suburban fares the present charges are reduced as cited previously both in the first and second zone on the Burnham line, with the exception of a one-half cent in-

crease over the present commutation fare within the second zone. Under this revised system of fares the extension of single fare limits is not as urgent as under the present system, because of the fact that patrons riding short distances within the suburban zone will pay a fare approximately proportionate to the length of haul, thus causing less discrimination. However, in the interests of a uniform policy upon the lines serving West Allis as regards single fare limits, it is recommended that the present single fare limits upon the West Allis-Burnham line be extended from 51st avenue to 62nd avenue. The extension of the single fare limits to 62nd avenue on the three lines serving West Allis causes this city to be divided into part Milwaukee urban and part suburban territory. The charge for a local ride, therefore, ranges from 4 to 9 cts. under the system of rates authorized herein. This is only a slight improvement over the present fares where the maximum charge for a local ride is 10 cts. In view of the condition cited it is further recommended that the companies provide for a single fare of 5 cts. to apply within the city limits of West Allis. Matters pertaining to service in West Allis will be taken up in separate proceedings.

In the matter of the single fare extension for the city of Wauwatosa it is deemed best that under the revised system of fares the limits should remain as at present. It is the opinion of the Commission that with the proposed rate of 6 cts. within the first two-cent zones on both lines serving Wauwatosa the fare, considering all circumstances, is equitable. The fares ordered herein are to supersede all other acts of the Commission pertaining to fares to the city of Wauwatosa.

ORDER.

IT IS THEREFORE ORDERED, That The Milwaukee Electric Railway and Light Company and the Milwaukee Light, Heat and Traction Company be and they hereby are authorized to abandon their present rates of fare for suburban and interurban passenger service and to substitute therefor the following rates of fare deemed just and reasonable as provided in ch. 362, laws of 1905, and acts amendatory thereto:

1. SUBURBAN.

a. For suburban passenger service to and through the city of West Allis:

Wells Street—West Allis. City fare from any point within the single fare limits of the city of Milwaukee to 62nd and Greenfield, plus 2 cts. for any distance from 62nd and Greenfield to 77th avenue and Summit, plus 2 cts. for any distance from 77th avenue and Summit to Woodlawn stop; and vice versa.

National Avenue—West Allis. City fare from any point with-the single fare limits of the city of Milwaukee to 62nd and Greenfield, plus 2 cts. for any distance from 62nd and Greenfield to 77th avenue and Summit, plus 2 cts. for any distance from 77th avenue and Summit, to Woodlawn stop; and vice versa.

Burnham—West Allis. City fare from any point within the single fare limits of the city of Milwaukee to 51st avenue and Burnham, plus 2 cts. for any distance from 51st avenue and Burnham to 77th avenue and George street, plus 2 cts, for any distance from 77th avenue and George street to Woodlawn stop; and vice versa.

b. For surburban passenger service to and through the city of Wauwatosa.

Wells-Wauwatosa. City fare from any point within the single fare limits of the city of Milwaukee to 59th ave. and Wells, plus 2 cts. for any distance from 59th avenue and Wells to Wauwatosa ave. and Watertown Plank Road, plus 2 cts. for any distance from Wauwatosa ave. and Watertown Plank Road to the present terminus at County Building; and vice versa.

Walnut—Wauwatosa. City fare from any point within the single fare limits of the city of Milwaukee to Pabst and Spring avenue, plus 2 cts. for any distance from Pabst and Spring avenue to the present terminus on Wauwatosa avenue; and vice versa.

c. For suburban passenger service on the Wanderer's Rest Cemetery line:

Walnut—Wanderer's Rest. City fare from any point within the single fare limits of the city of Milwaukee to North and Lisbon, plus 2 cts. for any distance from North and Lisbon to Spring avenue and Lisbon, plus 2 cts. for any distance from

Spring avenue and Lisbon to the present terminus; and vice versa.

d. For suburban passenger service to and through the city of North Milwaukee:

12th—North Milwaukee. City fare from any point within the single fare limits of the city of Milwaukee to 27th and Pease, plus 2 cts. for any distance from 27th and Pease to Hampton avenue, plus 2 cts. for any distance from Hampton avenue to the present terminus at Wallace avenue; and vice versa.

e. For suburban passenger service to and through Whitefish Bay and Fox Point:

Oakland Avenue—Fox Point. City fare from any point within the single fare limits of the city of Milwaukee to Oakland and Newton, plus 2 cts. for any distance from Oakland and Newton to Glendale, plus 2 cts. for any distance from Glendale to Whitefish Bay Park, plus 2 cts. for any distance from Whitefish Bay Park to Lake View, plus 2 cts. for any distance from Lake View to the present north limits of Whitefish Bay, plus 2 cts. for any distance from north limits of Whitefish Bay to Daisy Fields, plus 2 cts. for any distance from Daisy Fields to the present Fox Point terminus; and vice versa.

f. For suburban passenger service to and through South Milwaukee:

Public Service Building—South Milwaukee. City fare from any point within the single fare limits of the city of Milwaukee to Kinnickinnic and Oklahoma avenue, plus 2 cts. for any distance from Oklahoma avenue to Thompson avenue, plus 2 cts. for any distance from Thompson avenue to Cudahy Depot, plus 2 cts. for any distance from Cudahy Depot to Underwood avenue, plus 2 cts. for any distance from Underwood avenue to Thrintheimer's Park, plus 2 cts. for any distance from Thrintheimer's Park to Beach street, plus 2 cts. for any distance from Beach street to Marquette avenue and Chicago Road or Marquette avenue and 5th avenue, plus 2 cts. for any distance from Marquette avenue to the present south city limits of South Milwaukee; and vice versa.

g. For suburban passenger service to and through Tippecanoe:

Howell Avenue—Tippecanoe. City fare from any point within the single fare limits of the city of Milwaukee to Howell avenue and Oklahoma avenue, plus 2 cts. for any distance from

Oklahoma avenue to Tippecanoe, plus 2 cts. for any distance from Tippecanoe to the present terminus of the line; and vice versa.

h. For any local suburban haul originating and terminating beyond the single fare limits of the city of Milwaukee the fare shall be computed in like manner as the suburban components of the above rates of fare. The minimum fare for any such haul shall be 5 cts.

i. Children under three years of age shall be carried free. Children between the ages of three and ten years, inclusive, shall be carried for one-half the full fare.

j. Passengers paying the fares herein authorized shall be entitled to the privilege of the usual transfers within the single fare limits of the city of Milwaukee and to transfers upon the several suburban lines, provided, however, that no such transfer shall operate to compel the companies to carry a passenger on the suburban lines for less than the regular fare for each 2 ct. distance or fraction thereof on each line, as hereinbefore prescribed, within which such passenger rides.

k. The single fare limits of the city of Milwaukee shall be as set forth herein, and all so-called "overlapping fare zones" shall be abandoned.

II. INTERURBAN.

a. For "through interurban passenger service" upon the Milwaukee–Waukesha–Oconomowoc–Watertown line a uniform rate of 2 cts. per mile computed to the nearest 1 ct. for the actual mileage except the mileage included within the single fare limits of the city of Milwaukee to 62nd and Greenfield for which the charge shall in every case be computed at 4 cts., and the mileage between the Steel Works stop, Waukesha, and present west limits of Waukesha, and between Humboldt street, Watertown, and present end of line in Watertown, for which the charge shall in each case be computed as 5 cts. For all through interurban passenger service to or from the city of Milwaukee the rate per passenger service shall be:

No.	Stops or zone points.	Total distance, miles.	Through rate per passenger in cents.
0	Public Service Building	0	0

43	West End of Line, Watertown	50.40	94

"Through interurban passenger service" as here used is defined as passenger service between any point within the single fare limits of Milwaukee and points beyond Woodlawn stop.

For passengers riding locally between the city of Milwaukee and Woodlawn, the charge shall in every case be the same as the rate of fare for suburban service previously authorized herein.

The rates of fare per passenger for all interurban service between points without the single fare limits of the city of Milwaukee shall be the difference between the through rates to those points. The rates thus computed are shown upon the table of rates below.

The rates of fare for any intermediate point not listed herein shall be computed in like manner as above, provided, however, that if such intermediate point lie between 62nd avenue and Woodlawn the rate of fare shall be computed as to the zone boundary next nearest to the city of Milwaukee.

The minimum fare for any haul shall be 5 cts.

"Through interurban passenger service" as here used is defined as passenger service between any point within the single fare limits of Milwaukee and points beyond Woodlawn stop.

For passengers riding locally between the city of Milwaukee and Woodlawn, the charge shall in every case be the same as the rate of fare for suburban service previously authorized herein.

The rates of fare per passenger for all interurban service between points without the single fare limits of the city of Milwaukee shall be the difference between the through rates to those points. The rates thus computed are shown upon the table of rates below.

The rates of fare for any intermediate point, not listed herein, and between any such point and any other point shall be computed in like manner as above, provided, however, that if such intermediate point lie between 51st avenue and Woodlawn the rate of fare shall be computed as to the zone boundary next nearest to the city of Milwaukee.

The minimum fare for any haul shall be 5 cts.

c. For "through interurban passenger service" upon the Milwaukee–Racine–Kenosha Line, a uniform rate of 2 cts. per mile computed to the nearest 1 ct. for the actual mileage, except the mileage included within the single fare limits of the city of Milwaukee to Oklahoma avenue for which the charge shall in every case be computed at 4 cts., and the distance between Gould street and 23rd and Mead street in the city of Racine for which the charge shall in every case be computed at 5 cts. For all through interurban passenger service to or from the city of Milwaukee the rate per passenger shall be:

"Through interurban passenger service" as here used is defined as passenger service between any point within the single fare limits of Milwaukee and points beyond South Limits, South Milwaukee.

For passengers riding locally between the city of Milwaukee and South Limits, South Milwaukee, the charge shall in every case be the same as the rate of fare for suburban service previously authorized herein.

The rates of fare per passenger for all interurban service between points without the single fare limits of the city of Milwaukee shall be the difference between the through rates to those points. The rates thus computed are shown upon the table of rates below.

The rates of fare for any intermediate point not listed herein shall be computed in like manner as above; provided, however, that if such intermediate point lie between Oklahoma avenue and South Milwaukee, South Limits, the rate of fare shall be computed as to the zone boundary next nearest to the city of Milwaukee.

The minimum fare for any haul shall be 5 cts.

THE MILWAUKEE ELECTRIC

d. Children under three years of age shall be carried free. Chilren between the ages of three and ten years, inclusive, shall be carried for one-half the full fare.

e. Every interurban fare from or to Milwaukee, Racine, Kenosha, Burlington, Waukesha, Oconomowoc and Watertown shall entitle the passenger to the usual transfer privilege within the single fare limits of such cities where such privilege exists.

III. Ticket Fares.

The sale of all commutation and reduced rate round trip tickets which may now be in force shall be abandoned. Such tickets shall be honored, when presented, for thirty days from the date of the adoption of this order, after which they shall be void upon the cars. All such tickets or portions thereof as shall be unused at the expiration of the thirty days shall be redeemed on demand at a pro-rata portion of the cost.

The Milwaukee Electric Railway and Light Company and the Milwaukee Light, Heat and Traction Company shall sell through their conductors on cars operating between Milwaukee and South Milwaukee tickets in packages of twenty for $2.50, and each ticket shall entitle the purchaser to one continuous ride between any point within the single fare limits of Milwaukee and Marquette Boulevard in the city of South Milwaukee with privilege of transfers within this distance. These tickets shall be non-transferable and shall be limited to sixty days from date of sale. Refunds for unused tickets shall be made to the extent of the difference between the full purchase price and the sum of the maximum cash fares for which tickets were substituted. Said tickets shall be sold for one year after date of installation.

The respondent companies are further ordered to sell through their conductors on cars in "through interurban passenger service" and at all their ticket offices non-transferable 300 mile books at 1.8 cts. per mile, or $5.40 per book, good for the payment of any interurban or suburban fare, provided, however, that the minimum fare thus payable shall amount to a 5 mile "tear". The number of miles torn for a ride shall be the number obtained by dividing the cash fares herein authorized by two. When the cash fare is odd the next highest even fare shall be the dividend. Refunds for unused coupons shall be made to the extent of the difference between the full purchase

price and the sum of the cash fares for which coupons were substituted.

IV. Miscellaneous Provisions.

It is Further Ordered, That all complaints and petitions herein named, insofar as they as they are not satisfied or granted herein, and insofar only as they relate to rates of fare for suburban and interurban passenger service, be and they hereby are dismissed.

Thirty days is deemed sufficient time within which the said companies may adopt the provisions of this order and file their amended rate schedules.

The order shall in no wise affect or alter the rates now in effect and being charged by the companies herein named for private, funeral, or chartered car service, or the present reduced "party rates" for passenger service, or rates for any other service than the carrying of passengers.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE REFUSAL OF SERVICE BY THE MADISON GAS AND ELECTRIC COMPANY TO F. M. WYLIE.

Submitted Dec. 16, 1913. Decided Jan. 2, 1914.

The Commission, on its own motion, investigated the refusal of the Madison G. & El. Co. to furnish gas and electric service to F. M. Wylie. Mr. Wylie was in arrears on certain bills rendered him during the course of several years for past service, part of the amount of the bills being in dispute, and the company, upon his removal to a new place of residence, refused to furnish him service unless he would pay this past indebtedness. Mr. Wylie admits being in arrears 52 cts. for service rendered him since the making by him of a special deposit of $5.00, required in accordance with a rule of the company as security for the payment of bills due the company, prior to receiving service at his last place of residence. The company contends that the deposit may be applied to the payment not only of the 52 cts. but also of indebtedness incurred prior to the making of the deposit, and that Mr. Wylie may be required to liquidate in full any remaining indebtedness and to make a new deposit before the company can be required to serve him at his new place of residence.

When a consumer moves from one place of residence to another he may doubtless be treated as a new consumer and be obliged to comply anew with the rules and regulations then in effect before receiving service at his new place of residence. The acceptance of the application for service at the new place of residence then constitutes a new and independent contract distinct from the contract for service at the former place of residence.

Held: 1. A public utility may refuse to furnish service unless the charges for such service are prepaid, or a sum of money sufficient to secure the payment for services rendered during any future interval for which credit is extended, or a bond to secure such payment is deposited with the utility, but the utility may not condition the furnishing of service upon the liquidation of indebtedness to the utility for past service.

2. A public utility which requires a deposit of money to secure the payment of bills for future service before rendering service to an applicant cannot apply the deposit to the payment of indebtedness previously incurred by the applicant, but must look for its remedies to the courts of law.

3. The applicant's contract with the utility in the instant case permits the application of his deposit only to the payment of indebtedness incurred by him after the contract became effective.

It is ordered that upon payment by F. M. Wylie of all sums due to the Madison G. & El. Co. for gas furnished him at his last place of residence the company accept his application and serve him with gas and electric current at his present place of residence

and retain the $5.00 now held by it as security for the payment of bills for such service when they become due, according to the published rules and regulations of the company.

F. M. Wylie, a resident of the city of Madison, filed a complaint with the Commission setting forth that he had made application to the Madison Gas and Electric Company for gas and electric service and had complied with all the rules and regulations of the company, but that the company refused to furnish him service. The Commission deemed the complaint of sufficient general importance to order an investigation upon its own motion.

The hearing was held on December 16, 1913. *F. M. Wylie* appeared in his own behalf and the Madison Gas and Electric Company appeared by *Olin, Butler & Curkeet,* its attorneys.

It appears that the complainant during the past seven years has at different times and at different places of residence in the city of Madison, been a patron of the Madison Gas and Electric Company, hereinafter referred to as the company, and that when giving up his dwelling at any particular place he has neglected to pay for the service rendered during the last month of his residence at such place. The company claims that he is now in arrears for electricity for the month of March, 1907, at 309 State street, $2.17; for gas for the month of April, 1907, at 543 State street, $3.94; for gas for the month of November, 1910, at 644 East Johnson street, 50 cts.; for gas for the month of September, 1913, at 1214 Jenifer street, 52 cts.; also for three hours' labor 80 cts. The total amount of arrearage thus claimed is $6.93. A part of this amount is in dispute.

The complainant is now a tenant residing in an apartment building at 114 North Henry street, and has been receiving service from the company through and upon the responsibility of his landlord. On August 30, 1913, prior to moving from his late residence on Jenifer street, he filed a written application with the company asking that service be furnished him at his intended abode on North Henry street. On November 15, 1912, he applied to the company for service to be rendered at his house on Jenifer street, and deposited with the company, pursuant to its published rule the sum of $5.00 as a special deposit to secure the payment of all bills which might become due to the company. Since this application was made it is admitted that 52 cts. has not been paid the company for services

rendered at the premises on Jenifer street during the month of September, 1913. When he requested the company to furnish him service at his present residence, the company refused to do so unless he would pay his past indebtedness incurred at other places where he had been served. The ground of its refusal is stated by its counsel as follows:

"The application was made by Mr. Wylie for gas and electric service at a new place of residence from where he had been furnished service before that; and service was refused because he was in arrears on service he had obtained at other residences at which he had been living in the past two or three years. That was the sole ground for refusing the service."

At the time of making the deposit the company gave the complainant a written receipt therefor, the material parts of which read:

"Received of F. M. Wylie $5.00, being a special deposit as security for the payment of all bills which are, or may at any time become due to the Madison Gas and Electric Company from the above named party. This deposit is not to be applied to the payment of the above named bills except in case of default of payment as provided in the rules and regulations of the Madison Gas and Electric Company. The above amount of deposit is to be refunded with interest at the rate of 4% per annum on final settlement or termination of the contract between the parties hereto upon the surrender of this receipt. It is further understood and agreed that the amount of this deposit may be applied by this company as far as needed to the payment of any indebtedness to it at the final settlement without the presentation and surrender of this receipt."

The rule of the company upon the subject is as follows:

"Gas and electric meters are set on written application without charge, providing the applicant's credit is good. If his credit is questionable, or the applicant unknown, a deposit sufficient to cover the payment of one month's bill is required."

The main question arising upon the conceded facts of this case is whether the company may refuse to grant service at any premises to an applicant who has become in arrears for service at other places, until such arrearage is paid. The company takes the position that it may apply the deposit made under the rule to any past indebtedness of the applicant, wherever incurred when he ceases to be a consumer at any particular premise, and may require him to liquidate in full such indebted-

ness, if the deposit is not sufficient for such purpose, and make a new deposit when he applies for service at a new place of residence, before it can be required to serve him. Doubtless when one moves from one dwelling to another he may be treated as a new consumer when applying for service at such other dwelling and may be obliged to comply anew with the rules and regulations then in effect. The acceptance of such application, upon compliance with the regulations, constitutes a new and independent contract. In the instant case the company evidently regarded the application of August 30, 1913, as a proposition for a new contract, for at that time it was serving the complainant at his residence on Jenifer street and continued to serve him there until in September, 1913, when he moved to his present dwelling. It would not accept the new application on the terms on which it was then serving him, but conditioned its acceptance upon the payment in full of all past indebtedness incurred on premises previously occupied by him.

The authorities are not in accord as to the obligation of the company to serve an applicant who is in arrears at other premises, although he tenders ready money for present service, but the best considered cases take the view that it is inconsistent with public duty to refuse service under such circumstances. The authorities holding that one who is owing for past service cannot insist on future service until default has been made good, seem to consider the matter from the standpoint of the convenience to the company in making its collections. They extend the right of the private trader to the one engaged in a public calling, notwithstanding the apparent conflict between the right of the former and the public obligation of the latter. But in opposition to this doctrine it has been said:

"To show that the policy of requiring payment of arrearages is a helpful device to the company in making its collections is not enough, if the method used is inconsistent with public duty. As to any hardship upon the companies in prohibiting them from collecting back charges in this way, it is enough to say that they need not have have given any credit at the outset. As one in public service may always demand prepayment, having given credit the company must be content, as other creditors must be, to collect its back bills by legal means. To attempt to make such collections by refusing present service for ready money would seem to be in the face of the public duty." 1 Wyman on Public Service Corporations, sec. 451.

The company owes a duty, not only to itself, but to its patrons as a whole, to collect promptly all indebtedness due for services rendered, for

"In conserving the revenues of such corporation and preventing reductions in the same from loss of accounts, the public is as much interested as the directors and stockholders of the company, for any material reduction in revenues, however caused, generally results, and often necessarily so, in increasing the cost of the service to the patron and diminishing the return to the stockholder. The burden thus occasioned is invariably cast upon and must be borne by both the public and the shareholders, in varying proportions, depending upon the circumstances for each particular case." *Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 150, 155–156.

Because of such duty a company is permitted to demand prepayment of present service where the charge may be determined in advance; or in case of metered service may require a deposit of a sum of money sufficient to secure payment for the service rendered during stated intervals for which credit is extended, or may require a bond to secure such payment. Failing to establish or to enforce a rule to secure the prompt collection of bills when due, the company stands in the position of any other creditor and must resort to the courts to compel payment of such indebtedness. It may refuse to furnish service in the future unless prepayment is made, but because of its public duty it can not condition such service upon the liquidation of past charges.

A further question is presented by the record which must be disposed of in order to settle the controversy between the parties. This arises out of the contention of the company that it may now apply the special deposit to all past defaults of complainant at premises other than those at which he was last served. If this contention is sound it would be necessary for the complainant to make another deposit before his right to service at his present dwelling should exist. It is conceded that the deposit has been impaired to the amount of 52 cts. which is the delinquency for services rendered under the contract to secure the performance of which on his part the deposit was made. Assuming then that he should tender payment of such amount, the question is would he be entitled to a return of the deposit, or, which would be the equivalent in effect, could he direct that such deposit be held by the company under its rule as security for bills that

might become due and unpaid on the proposed contract which was rejected? In determining the legal relation existing between the parties, it is necessary to consider the application, the rule, and the receipt. The application contains a request that service be rendered upon certain premises and an agreement to pay for the service and to abide by the rules and regulations of the company. The rule here involved permits the company to demand a deposit of sufficient amount to secure the payment of one month's bills, which in the instant case has been fixed by the company at $5.00. The receipt, although broad in its language, must be treated in connection with the application and rule and as therewith forming the contract between the parties. The terms of the receipt, thus considered, show clearly that the deposit is a security for the payment of all bills which are or may at any time become due under the particular contract. This is made very clear when we observe the terms of the receipt, which provided that the deposit "is to be refunded with interest at the rate of 4 per cent per annum on final settlement or termination of the contract between the parties hereto upon the surrender of this receipt", and that the same "may be applied by the company as far as needed to the payment of any indebtedness due it at the time of final settlement without the presentation and surrender of the receipt." The "payment of any indebtedness" evidently means any indebtedness under the contract. One clause of the receipt thus provides for a return of the deposit with interest on final settlement or termination of the contract, providing all bills due under the contract have been paid, and the other, that when bills under the contract have not been paid, the company may then on the final settlement apply the deposit to the payment of such indebtedness. No other interpretation of the language of the receipt would be permissible under the circumstances. The purpose of the deposit under the rule is to secure prompt payment of current bills when due, and the rule cannot be extended beyond its terms so as to permit of the application of the security to a purpose not therein expressed, otherwise the rule might in certain cases not only defeat itself but allow the company to do by indirection what it would be unlawful to do directly.

Unfortunate as the company may find itself in this case because of its inability to collect what may be a just debt without resorting to legal means, it seems to us that in the absence of

any statutory authority to that effect, service cannot be withheld from one who is willing to comply with the rules and regulations requiring the furnishing of security for the payment of current bills when due, although he may be owing the company for past service at the time. While this rule may seem to work a hardship upon the company at times it should have the effect of greater scrutiny of credits on the part of the company in the future and a more extensive application of the rule relating to deposits.

It follows from what has been said that if the complainant pays the amount due for service rendered on the premises on Jenifer street, he will be entitled to service at his present place of residence, and the deposit now in the hands of the company may be retained by it as security under its rule for the payment of any service it may render him there.

NOW, THEREFORE, IT IS ORDERED, That, upon payment by E. M. Wylie of all sums due to the Madison Gas & Electric Company for gas furnished him at 1214 Jenifer street in the city of Madison, the said company accept his application and serve him with gas and electric current at his residence, 114 North Henry street, in said city, and retain the $5.00 now held by it as security for the payment of bills for such service when the same become due, according to its published rules and regulations.

DAVID GANTENBEIN
vs.
CHICAGO, BURLINGTON AND QUINCY RAILROAD COMPANY.

Submitted Sept. 23, 1913. Decided Jan. 3, 1914.

The petitioner alleges that the passenger train service rendered by the respondent at the village of Diamond Bluff is inadequate and asks that the respondent be required to stop its trains No. 51 or No. 47, northbound, and No. 48 or No. 58, southbound, at this point.

Held: For reasons discussed in *Kemp v. C. B. & Q. R. Co.* 1909, 3 W. R. C. R. 350, the present service cannot be condemned as inadequate. The petition is dismissed.

The petitioner is a lumber merchant and fish dealer at the village of Diamond Bluff, Wis. He alleges that the said village is situated upon the line of the respondent railroad company; that five northbound and six southbound passenger trains pass through said village daily; that three northbound trains, known as Nos. 91, 53 and 51, and two southbound trains, known as Nos. 92 and 54, stop at said village, train 51 stopping only to leave revenue passengers from Rachelle, Ill., or stations east thereof, or from Clinton, Iowa, or stations south thereof; that the service rendered by the stopping of only the trains above mentioned at Diamond Bluff is inadequate, especially in view of the fact that the two southbound trains are scheduled to reach said village less than an hour apart, and that one northbound train, namely No. 91, is an accomodation train and operates upon a schedule too slow for adequate passenger service; that in order to render the passenger train service of said respondent company reasonably adequate it will be necessary that said company stop its trains northbound No. 51 or No. 47 and southbound No. 48 or No. 58.

No answer was filed by the railway company.

The matter came on for hearing on September 23, 1913. The petitioner appeared in person and the railway company by *Woodward & Lees,* its attorneys.

Diamond Bluff is a village of less than 200 population. The

facts presented at the hearing are similar to those considered in *Kemp v. C. B. & Q. R. Co.* 1909, 3 W. R. C. R. 350. The matter was so fully considered in that case that it becomes unnecessary to again comment upon the inconvenience suffered by certain residents of Diamond Bluff because of their inability to travel upon other trains than those stopping at Diamond Bluff in going north and south. We would not be justified under the facts in this case in condemning the present service as inadequate. Furthermore, the legislature has established a minimum of service at all stations having a population of 200 or more. Although Diamond Bluff has less than this population, it nevertheless has been given service in excess of the minimum of the statute. Under the circumstances the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition be and the same is hereby dismissed.

WAUSAU ADVANCEMENT ASSOCIATION

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted July 17, 1913. Decided Jan. 3, 1914.

The petitioner alleges that the respondent's rates for the transportation of beer in carloads from Wausau to Tomahawk and Minocqua are unreasonable and unjustly discriminatory when compared with rates enjoyed by Milwaukee competitors of Wausau brewers.

The objection made by the respondent to a reduction in the rates complained of on the ground that a reduction in these rates would necessitate reductions in rates to intermediate points cannot be advanced to sustain rates which are unreasonable in themselves. *Wis. Box Co. et al. v. C. M. & St. P. R. Co.* 1909, 3 W. R. C. R. 605, 619.

Mere rate comparisons alone do not always afford a safe basis for rate making. Consideration must also be given to the cost of service and to established competitive conditions.

Held: The respondent's present rates on beer in carloads from Wausau to Tomahawk and Minocqua are unreasonably high, whether considered in relation to the cost of service or in comparison with similar rates elsewhere. The respondent is ordered to put in effect a rate of 9 cts. per 100 lb. for shipments from Wausau to Tomahawk and 11 cts. per 100 lb. for shipments from Wausau to Minocqua.

The petitioner in this case, the Wausau Advancement Association, is a voluntary association of corporations and citizens of the city of Wausau, Wis., organized to promote the business of that city. On behalf of one of its members, the Ruder Brewing Company, the above named association complains that the respondent is charging unjust and unreasonable rates for the transportation of beer in carloads from Wausau to Tomahawk and Minocqua, Wis., when compared with the rates charged on the same traffic from other points in Wisconsin to the same destinations. By reason of such unjust and unreasonable charges, the petitioner alleges that its carload beer traffic is subjected to unjust discrimination and to an undue and unreasonable disadvantage, thereby greatly handicapping its own producers in competing with similar industries at other points in this state in the sale of its product and in meeting competitors' prices in

the two towns mentioned above. Wherefore, the petitioner prays that the respondent be required to answer the complaints alleged and that, after due hearing and investigation, the Commission make such orders as it may deem necessary and just in the premises.

The respondent in its answer, after admitting the usual formal allegations of the complaint, denies specifically that it is exacting unjust and unreasonable charges for the transportation of beer in carloads from Wausau to Tomahawk and Minocqua, or that it is subjecting complainant to unjust discrimination and asks that the complaint be dismissed.

The hearing was held in the school board room of the city hall at Milwaukee on July 17, 1913. *A. E. Solie* appeared for the petitioner and *J. M. Davis* for the respondent.

The testimony developed the fact that in marketing its product at Tomahawk and Minocqua the Ruder Brewing Company meets the competition of the Miller Brewing Company of Milwaukee and, in the case of Minocqua, the competition of the Gund Brewing Company of La Crosse in addition. It appeared further that of all the carload shipments of beer into Tomahawk, about 60 per cent are derived from the Wausau Brewing Company, while in the case of Minocqua about 55 per cent of the carload shipments of beer are furnished by that company. There was some evidence though not very clear or definite that the commodity may be supplied at Minocqua to some extent by brewers shipping over the line of the Chicago & North Western to Woodruff Junction, a distance of two miles from Minocqua. On the whole it would seem, however, that these two towns are regarded as the natural market for the surplus product of the Ruder Brewing Company of Wausau.

The petitioner introduced considerable testimony to show that on the materials required in the production of beer, the Ruder Brewing Company was paying rates considerably in excess of the rates paid by its competitors; that the chief source of malt supply is Lomira and towns in that vicinity, the carload rate upon malt being 16 cts. per 100 lb. to Wausau, while to Milwaukee it is only 7 cts. The Ruder Brewing Company derives its coal chiefly from Milwaukee and Sheboygan, the carload rate being 5 cts. The chief market for the various other materials required is Milwaukee, and upon these materials the com-

pany pays rates which materially increase its cost of production over that of its competitors.

By means of exhibits, portions of which are shown later, comparing existing rates on beer in carloads between Milwaukee and Tomahawk and Minocqua, between Wausau and Tomahawk and Minocqua and between various other points in Wisconsin on the Chicago, Milwaukee & St. Paul railroad, the petitioner attempted to prove that the charges were discriminatory against Wausau shippers. The rate per ton-mile was computed in each case and seemed to lend color to the contention of the petitioner that the rates from Wausau to Tomahawk and Minocqua were unusually high. The petitioner undertook also to test the reasonableness of the rates complained of by making comparison with the rate per ton-mile on the Chicago & North Western railroad for beer moving between Milwaukee and points to the north on Lake Michigan.

The respondent, on the other hand, denied the validity of such rate comparisons as proof of the discriminatory nature of the rates on the ground that Wausau brewers are not actively competing in all the markets to which rate comparisons have been made. Further, the respondent contended that inasmuch as all the rates under consideration are class rates and no commodity rates enter into competition, all traffic is moving upon the same basis. In answer to the petitioner's claim that Wausau brewers must buy their raw materials in distant markets, the respondent called the petitioner's attention to the fact that they could procure their barley for malting at Minneapolis and bring it into Wausau at the same price per bushel as paid by their Milwaukee competitors. The final objection raised by the respondents to a reduction in the carload rate on beer from Wausau to Tomahawk and Minocqua is that this reduction would, in effect, lower the rate to thirteen intermediate points in the case of Tomahawk and to seven in the case of Minocqua. It appears, however, that this is an overestimate of the result, inasmuch as Merrill is the only town that has any very considerable beer traffic.

The issue in this case, it would seem, is the absolute reasonableness of the rates from Wausau to Tomahawk and Minocqua which at present are 11 cts. and 13 cts. respectively, for distances of 41.6 and 72.8 miles. The petitioner contends that the reasonable rate should be fixed at 6 cts. per 100 lb. in the case

of a haul from Wausau to Tomahawk and 10 cts. in the case of a haul from Wausau to Minocqua.

The petitioner bases his case upon the rate comparisons referred to above. This Commission, however, has repeatedly declared that the comparative basis alone is not always a safe basis for rate making, that when the absolute reasonableness of a rate is questioned, the best answer is usually found in the cost of the service, including operating expenses, allowance for depreciation and return on investment. In addition to these general considerations of cost, a rate to be reasonable should take into account any special conditions which may operate to either increase or decrease the cost of handling above the average of all traffic, such as the amount of terminal handling required, the kind of equipment required, the regularity and amount of such traffic, and many other considerations. After the costs enumerated above have been given due weight, one other matter enters into the question of reasonableness of rates, namely, competitive conditions. Not infrequently the regular rate of transportation would entirely prevent commodities from moving and it may often be to the best interests of the carriers and the community alike that these conditions be taken into account in the final rate adjustment.

In the light of these general principles we have examined into the reasonableness of the particular rates complained of in this case. Upon investigation it appears that the cost of moving freight and handling it at terminals has increased. This fact is of considerable importance in this case where one of the parties is relying upon past cost estimates. Special reference was made by the petitioner to a decision of this Commission in the case of the *Milwaukee-Waukesha Brewing Co. v. C. & N. W. R. Co.*, decided Aug. 26, 1910 (5 W. R. C. R. 546). In view of the increase in the cost of handling traffic such figures, if given any weight at all, should be used as comparative data only, and like all evidence of that character they should be applied with caution.

The following table was substituted by the petitioner to show the rates on beer in carloads, the distances between points named, and the rate per ton per mile:

SCHEDULE OF RATES ON BEER IN CARLOADS.

From	To	Distance, miles.	Rate per cwt., cents.	Rate per ton per mile, mills.
Milwaukee	Wausau	226.6	16	14.09
"	Tomahawk	268.2	18	13.43
"	Minocqua	299.2	18	12.04
"	Eau Claire	302.7	17	11.23
"	Woodruff	249.5	18	14.43
Wausau	Tomahawk	41.6	11	52.88
"	Minocqua	72.8	13	35.71

The facts contained in this table have not been controverted by the respondent and on the whole they appear to approximately reflect the general rate situation at the points involved. It should be observed that the rate per ton per mile for the short hauls from Wausau to Tomahawk and Minocqua is about four times as high as the rate per ton-mile from Milwaukee to the same points. In general it is true and in line with correct principles of rate making, that the rate per ton-mile for short hauls is higher than the rate for long hauls. The reason for this is to be found in the fact that, terminal expenses remaining constant, the total cost in the case of short hauls must be borne by a smaller number of ton-miles, thus increasing the cost per unit. It should be remembered, too, that upon long haul traffic moving between points where competition is intense, rates have been reduced to meet these conditions in accordance with one of the principles referred to above. Rate schedules, therefore, frequently show a considerable variation from the normal schedule in which the distance principle is applied with approximate mathematical exactness.

In the case of the rates under consideration, it does not appear that this difficulty exists. There is some ground, therefore, for questioning the present adjustment of the rate schedule as to its reasonableness in the case of the short hauls from Wausau to Tomahawk and Minocqua.

No evidence was submitted as to the actual weight of beer per car. The minimum weight for straight carloads in wood is 20,000 lb. and for other shipments 26,000 lb. From evidence in the hands of the Commission, however, the actual loading seems to be considerably above the minimum, averaging about 36,000 lb. The value of a carload of beer, including the value of the

container, is somewhere in the neighborhood of $700 or $800. Under ordinary conditions, therefore, beer is a commodity which can bear rates considerably above the average of all traffic.

Some evidence was introduced by the petitioner tending to show that the amount of terminal handling required in the case of shipments to Tomahawk was very small. The respondent, however, claimed that the matter was of small importance, so far as the minimum service required in spotting the cars at the warehouse for unloading is concerned, and we are inclined to agree with him. In addition to testing the reasonableness of the rates from Wausau to Minocqua and Tomahawk, we have also examined the rates from Milwaukee to these points, particularly because the suggestion is contained in the complaint that they are unreasonably low. We are not prepared, however, to say whether this is the case. The rates from Wausau to Tomahawk and Minocqua, however, are unreasonably high and should be reduced.

That a reduction in the rates from Wausau to Tomahawk and Minocqua would have the effect of lowering the rates to intermediate points, as argued by the respondent, does not constitute a valid objection. As we have already observed elsewhere in this opinion, the testimony seemed to indicate that Merrill was the only town with any considerable beer traffic. The distance from Wausau to Merrill being 19.3 miles, the fifth class rate would be 7 cts. per 100 lb. and therefore lower than the rate ordered herein. Accordingly, in the case of Merrill it would not seem that this objection of the respondent will hold. But granting that a reduction might have the effect indicated by respondents, we hold, nevertheless, that such circumstances cannot be relied upon to sustain rate arrangements unreasonable in themselves. In the case of the *Wisconsin Box Co. et al. v. C. M. & St. P. R. Co. et al.* 1909, 3 W. R. C. R. 605, 619, this Commission, in commenting upon the general effect a lowering of the rate at one point would have at other points where industries of the same kind are located, says:

"In considering this matter, however, it appears to us that in this particular case the conditions are such that this fact alone should not be permitted to prevent the lowering of the rates complained of, if such action is warranted on such other grounds as would otherwise be accepted as good reasons for the reductions. The opposite course would simply mean that no change

in these rates, no matter how necessary, could be made except upon investigations that are comprehensive enough to cover all rates directly or indirectly affected by such changes. If this view was consistently taken in all cases of this kind, regulation might be found to be so inelastic as to subserve no practical purpose, and so out of line with public policy as to be directly harmful."

From the facts in this case we have reached the conclusion that the present rates on beer in carloads from Wausau to Tomahawk and Minocqua over the line of the Chicago, Milwaukee & St. Paul Railway Company are unreasonably high, from the point of view of the cost of the service as well as in comparison with similar rates elsewhere; that a reasonable rate for such traffic, sufficient to pay all the operating costs and to yield a substantial return upon the investment, should not exceed 9 cts. per 100 lb. in the case of a haul from Wausau to Tomahawk and 11 cts. in the case of a haul from Wausau to Minocqua.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, discontinue its present rates on beer in carloads from Wausau to Tomahawk and Minocqua and substitute therefor a rate of 9 cts. per 100 lb. for shipments from Wausau to Tomahawk and 11 cts. for shipments from Wausau to Minocqua.

WAUKESHA LIME AND STONE COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted May 27, 1913. Decided Jan. 3, 1914.

The complainant alleges that excessive and unreasonable charges were exacted from it for the movement of 31 cars from one of its plants located on the M. St. P. & S. S. M. Ry. in Waukesha to another plant located on the C. M. & St. P. Ry. in Waukesha. Only one of the 31 cars moved less than a year prior to the filing of the complaint, which was filed before ch. 66, laws of 1913, increasing the time in which such complaints may be filed from one year to two years, went into effect and therefore the charge on this car only can be considered. The charge in question was $7, made up of $5 for the services of the M. St. P. & S. S. M. Ry. Co. and $2 for the services of the C. M. & St. P. Ry. Co. The latter rate was according to tariff, but there is no tariff authority for the $5 charge, which should have been $4.

The practice followed for many years by railroad companies in making switching movements for each other at rates less than those charged the public for similar services is likely to result in the imposition of unjust burdens on shippers in order to recoup losses thus sustained. Inasmuch, however, as the practice in question is one of long standing and as business has adjusted itself to it, such changes as are necessary in the interests of justice between the parties concerned should be made slowly.

Held: The charge exacted was excessive. Six dollars would have been a reasonable charge and refund is ordered on that basis.

The complainant, the Waukesha Lime and Stone Company, deals as producer and wholesaler in stone, gravel, sand and lime. The general offices of this company are in Racine, and certain of its plants are located at Waukesha. This complaint alleges excessive and unreasonable charges on thirty-one cars moving from one of these plants, located on the tracks of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, to another on the tracks of the Chicago, Milwaukee & St. Paul Railway Company. Only one car of the thirty-one, the charges on which are complained of, moved less than a year prior to the date of the filing of this complaint, which was filed before ch. 66, laws of 1913, increasing the time in which such complaints may be filed from one year to two years, went into effect, hence that one alone, C. & N. W. 76379, can be considered.

A hearing was held at Milwaukee, May 27, 1913, at which the petitioner and the several respondents were represented.

The agent of the "Soo" line charged $7 for the movement under consideration, quoting a rate of $5 for the services of his line and $2 for the services of the delivering carrier. Tariff authority for the $2 charge can be found, but it appears that the $5 rate was without authority.

"Soo" line traiff No. 10950, with supplements thereto, was in effect and quoted a general rate between industries on the "Soo" line at Waukesha and the Chicago, Milwaukee & St. Paul Railway, of $4 per car, with an exception in the case of stone on which the rate of $2 would apply. Since then sand and gravel have been included in this rate of $2. The contention of the carrier that this rate of $2 per car was intended to apply only on those cars on which there was a line haul is not supported by the tariff itself. It is, however, plain that this rate has been generally regarded as a reciprocal rate similar to that quoted by the Chicago, Milwaukee & St. Paul Railway Company for handling carload traffic between industries on its tracks in Waukesha and its junction with the "Soo" line.

In case the agent of the "Soo" line believed that the rate of $2 per car should not apply on the movements here under consideration, he should have applied the distance tariff, and let the shipper seek reparation in the usual manner.

The correct charge as determined from tariffs on file with the Commission should have been $4, made up of a $2 charge by each of the roads involved. This charge of $2 is in each case the result of the application of a reciprocal rate and very plainly it was never intended that the charges on any car should be found by adding two reciprocal rates.

The charge of $2 by the Chicago, Milwaukee & St. Paul Railway Company for delivery may be entirely reasonable, but it must not be inferred therefrom that a charge of $2 by the "Soo" line for the movement of the car from point of loading to the point of interchange between the roads is likewise reasonable, even if the distance may be no greater in the case of the second movement than in that of the first.

It has been the custom for many years for railroads to make certain switching movements for each other at rates somewhat less than those charged the general public for similar services.

These are generally referred to as reciprocal rates. When the earnings on a car from its line movement are above a certain minimum the carrier having the line haul will absorb all or a part of the switching charge. This absorption rests on the belief that the traffic is of sufficient profit to make it good business for the carrier to encourage its movement in this way.

It is not entirely plain why as reciprocal rate should differ from the rate to the individual shipper for the same service. If it is argued that the two carriers are sometimes in one relation and sometimes the other as debtor and creditor, and that in the long run the cancellation of debits and credits is practically complete, it must then be admitted that the amount of the interchange rate is immaterial insofar as the roads are concerned. However, it will be apparent that the relation between the shipper on one hand and the carriers on the other is always the same, the shipper being the debtor. If the rate under discussion is so low as to be unremunerative the carrier must recoup its losses elsewhere, which is a form of discrimination, while, on the other hand, if the rate is too high, the discrimination is more obvious but no more real. In those cases where, as between two carriers, there is such a general trend of traffic as renders the debtor and creditor positions of the carriers constant, it is evident that with too low a rate the creditor road is harmed, and with too high a rate the debtor is harmed. In either case, the attempt of the road to recoup elsewhere puts a burden where it does not justly belong. Further, the situation of the shippers using the rate is not different in this case from their situation in the previous one where the railroads were able to balance their switching obligations.

It seems, then, that a reciprocal rate, or the charge as between carriers for switching service, should not differ from that rate quoted the individual shipper for the same service, and that either rate should be sufficient to pay the costs incurred and contribute in some part, large or small, depending upon other conditions, to the return of the carrier upon its investment. It is no doubt true that any general change in the basis of reciprocal rates would necessitate an adjustment of the rules covering absorption.

While the foregoing statements are manifestly true, it must not be forgotten that the present system of rates is of long

standing and that business has adjusted itself to these rates. It follows, then, that what changes must be made in the interests of justice between all parties concerned, must be made slowly and with due regard to relationships and values created in the past by the rates which in themselves contain the elements of discrimination.

In the instant case a study of the situation indicates that the charge of $7 per car for the movement from an industry on the "Soo" line to an industry on the "St. Paul" line, both industries being within the city of Waukesha, is somewhat excessive and this Commission finds, in the light of the cost of service and the commercial and industrial conditions which obtain at Waukesha, that a total charge of $6 per car is reasonable under the circumstances. Of this $6 the Chicago, Milwaukee & St. Paul Railway Company is entitled to $2.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, be and hereby is authorized to refund and repay to the complainant, the Waukesha Lime and Stone Company, the sum of $1, this amount being the difference between the actual charge on C. & N. W. 76379, moving May 22, 1912, between industries in the city of Waukesha, and the reasonable charge for this service.

CURTISS AND WITHEE TELEPHONE COMPANY
vs.
OWEN TELEPHONE COMPANY.

Submitted Oct. 21, 1913. Decided Jan. 5, 1914.

The petitioner asks for an order requiring the respondent to restore the physical connection and service formerly maintained between the two companies in the village of Owen. The connection was severed by the respondent upon the refusal of the petitioner to accede to new terms which the respondent sought to impose for its services to the petitioner.

The respondent is ordered to restore the connection between its lines and the line or lines of the petitioner within ten days of date. Service is to be furnished upon the terms which prevailed prior to the disconnection of the lines until such time as a supplementary order, finally fixing terms for connection, is issued.

The petition in this matter was filed September 2, 1913. The petition sets forth that the petitioner is supplying telephone service in and around the village of Curtiss, and that the Owen Telephone Company is engaged in the telephone business at Owen; that a number of years ago petitioner had telephone lines extended into the village of Owen; that when the Owen Telephone Company was incorporated and began to furnish local service and connection with long distance lines, the Curtiss & Withee Telephone Company and the Owen Telephone Company entered into an agreement, the terms of which are set forth in some detail in the petition and in other portions of these proceedings, but of which the essential parts, for the purpose of this case were: that the Owen Telephone Company should take over all the property of petitioner within the village of Owen, that the Owen Telephone Company should furnish connection to petitioner by means of which petitioner's patrons could reach any telephone upon the Owen Telephone Company's system and also obtain long distance service; that petitioner's patrons should choose one of two methods of paying for this service, these methods being a flat rate of 25 cts. per month or a message rate of 10 cts. per message, aside from regular long distance tolls. In the case of subscribers who chose to pay 25 cts. per month, the Owen Telephone Company received the entire amount, but of the 10 ct. message fees the Owen Telephone Company paid two-thirds to petitioner. For long distance service peti-

tioner received nothing for outgoing messages, but for the use of its lines for incoming messages, it received 6⅔ cts. per message.

The petition also shows that on or about July 16, 1913, the Owen Telephone Company notified the petitioner that thereafter a charge of 25 cts. per month for switching service would be demanded by it for each of petitioner's subscribers and that the message rate would be discontinued, that if this demand were not complied with within thirty days, the connections between the lines of the two companies would be cut; that petitioner refused to comply with this demand and that the Owen Telephone Company, on or about August 18, 1913, severed the connection.

Petitioner therefore asks for an order requiring the Owen Telephone Company to restore the connection and service between the lines of the parties to this case, and fixing the terms for such connection and service.

Hearing was held at Madison, October 21, 1913. Appearances were: for the Curtiss & Withee Telephone Company, *A. J. Dillett;* for the Owen Telephone Company, *John Moran.*

Because of the conditions existing in this case it is considered unnecessary to review the testimony at any length at this time. If the lines were actually connected and service being exchanged at present, the terms upon which such connection should continue could be fixed by this order, but until lines are connected and service furnished we will not be able to state what basis for charging should finally be adopted. When the connection has been resumed a study of the conditions surrounding the furnishing of service to petitioner will be made and a definite basis for charging determined. Until such time it is not believed that a resumption of service and connection upon the terms formerly governing will be an unreasonable requirement. That portion of the order in this case which fixes the terms upon which connection shall be continued is held in abeyance until a study of actual traffic conditions can be made.

IT IS ORDERED, That the Owen Telephone Company restore the connection between its lines and the line or lines of the Curtiss & Withee Telephone Company. Such connection shall be restored within ten days of the date of this order and service shall be furnished upon the terms which prevailed prior to the recent disconnection of the lines until a supplementary order of the Commission, finally fixing terms for such connection, is issued.

IN RE APPLICATION OF THE FARMERS' TELEPHONE COMPANY OF BEETOWN FOR AUTHORITY TO INCREASE ITS RATES AND FOR OTHER RELIEF.

Submitted April 16, 1913. Decided Jan. 7, 1914.

The Farmers Tel. Co. of Beetown applies (1) for authority to increase its rates and (2) for such action by the Commission as may seem just and reasonable with respect to: (a) the refusal of the C. & N. W. Ry. Co. to pay for a telephone installed in its depot at Lancaster; (b) the proposal to have a full metallic line built between Lancaster and Platteville and the division of the cost of constructing such line between the applicant and the Platteville, Rewey and Ellenboro Tel. Co.; (c) the furnishing of service by the Peoples Tel. Co. within the city of Lancaster; and (d) the service rendered over the lines of the Fennimore Mut. Tel. Co. extending from Lancaster to Fennimore. The Farmers' Tel. Co. operates a total of nine exchanges in Grant county and serves about 400 square miles of territory. The Commission investigated the organization of the company, the quality of its service, its switching connections with foreign lines and its revenues and expenses, and made traffic studies to determine (1) the extent and cost of switching service for foreign lines, (2) the possibility of improving various phases of the service rendered by the applicant and (3) proper toll charges for calls between central offices. In connection with the determination of the cost of switching service for foreign lines, and for other purposes, the valuation made in 1909 of the physical property of the applicant was revised and brought up to date as of April 1, 1913, and the value of the property used by foreign lines was determined. For the purpose of fixing reasonable toll rates between the various central offices connected to the applicant's so-called "Fennimore lines" between Lancaster and Fennimore an approximate valuation of these lines was made and used in connection with the results obtained in the traffic study in determining the cost of service. With respect to organization the applicant company was found to be practically without a real head. There is a board of seven directors chosen one from each of the principal exchanges, but this board has little to do as a unit with the affairs of the company as a whole, for in practice each director is responsible only for the affairs of the company at his particular central. The records of the applicant are incomplete. It was therefore necessary to construct income and expense accounts upon the basis of such record information as could be obtained, supplemented by other data in the possession of the Commission.

The practice followed generally by telephone companies in Wisconsin in refusing to place village subscribers on rural lines is, in most instances, in the interest of good service. The applicant has allowed certain farmers who have moved into town to connect with their old rural lines, instead of insisting that they be

placed on separate lines, because of objections these subscribers have made to the quality of service furnished over the village lines and the charge of 25 cts. exacted from them in certain exchanges for service after 9 p. m., and because they desire immediate connection with their friends and relatives on the rural lines. This is believed to be detrimental to the service as a whole and the order therefore authorizes the applicant to place such subscribers on separate lines, providing changes are made in the organization and operating methods which are satisfactory to the Commission.

It is the duty of telephone companies, under sec. 1797m—90 of the statutes, to own the telephone instruments connected to their lines. The Commission will therefore require that the applicant purchase and maintain all telephones now owned by subscribers.

Held: 1. The service rendered by the applicant is below the standard which should be maintained by it. This is due in part to the fact that practically every line serving subscribers directly is of grounded construction and to the further fact that many of the lines have an abnormally high number of subscribers. The poor construction and the present poor condition of the lines appear, in turn, to result largely from the nature of the organization and plan of operation of the company. The alteration of the articles of organization and the by-laws, so as to provide for a general manager giving all of his time to the work, a board of directors to act as a unit in controlling the affairs of the company, and a competent bookkeeper is deemed necessary. 2. The giving of unlimited free service between the applicant's nine exchanges and to most of the connecting companies is unjust to those subscribers who do not avail themselves of this service and it results, moreover, in considerable congestion of the lines. 3. The traffic over the applicant's lines from Lancaster to Fennimore is congested and measures should be taken to reduce the number of calls per day passing over these lines. In view of the fact that the rates in force are not such as to warrant the construction of additional free lines, it is deemed best to place a toll charge on messages going over these lines. In addition it is strongly recommended that the Annaton and Preston Tel. Co., which is at present connected to one of the lines in question, cut its line, which now extends through Preston to Montfort, in two and terminate it at Preston. This it is believed will improve the service over the applicant's line without working a hardship on the Annaton and Preston Co. 4. A toll charge may reasonably be made for service over the trunk line between Lancaster and Platteville, owned jointly by the applicant and the Platteville, Rewey and Ellenboro Tel. Co., when the line is made "full metallic" as contemplated.

It is ordered that the applicant be authorized to put into effect a schedule of rates determined by the Commission, at such time as the applicant shall have made such changes in its management, organization, accounting methods, and procedure as meet the requirements of the Commission. The applicant is also authorized, upon the adoption of this schedule, to place on separate lines all telephones which are located within the city or village limits and are now connected to rural lines running directly into an exchange belonging entirely to the applicant. It is further ordered that the applicant proceed to make "full metallic" its half of the trunk line between Platteville and Lancaster, construction to begin as soon as the Platteville, Rewey and Ellenboro Tel. Co. shall have agreed to build its

half of the line, and that upon the completion of the work the present free service shall be suspended and a toll charge of 7 cts. per call substituted, the revenue therefrom to be divided equally between the two companies, unless they shall agree upon some other basis of division. The Annaton and Preston Tel. Co. is given authority, if the toll charges authorized are put in effect for service over the trunk lines between Lancaster and Fennimore, to connect its Stitzer exchange, at its option, to the grounded trunk line of the applicant running from Lancaster to Fennimore.

The schedule of rates authorized covers business, residence and rural telephones and switching service for foreign lines and provides toll charges for calls passing between different exchanges of the applicant or between exchanges of the applicant and foreign exchanges and toll charges to be adopted in place of the present free service over the company's trunk lines from Lancaster to Fennimore. Subscribers connected to lines entering two of the applicant's exchanges are to have unlimited service to both exchanges; subscribers connected to lines entering but one of the applicant's exchanges are to have the option of taking unlimited service to the one exchange at a specified rate, or unlimited service to that exchange and their choice of any one additional exchange of the system which may be called directly from the exchange to which their line is connected, at a higher rate. All calls passing between two of the applicant's exchanges are to be routed over the trunk lines where such lines exist and are to be charged for at the rate of 5 cts. per call, except calls made under the provisions for unlimited service. All calls passing between one of the applicant's exchanges and an exchange of any foreign company made a party to the instant case, are to be routed over through lines where such lines exist and to be charged for at the rate of 5 cts. per call, except for Lancaster-Platteville, Lancaster-Fennimore, and Lancaster-Preston calls, which are provided for elsewhere in the order, and the total revenue from calls of this class going over trunk lines owned entirely by one company is to be divided as follows: 70 per cent to the owner of the line and 30 per cent to the company connecting with the line. In cases where there is no trunk connection between two exchanges of the applicant and it is necessary to route calls over loaded lines, a toll charge of 4 cts. per call is to be made, except for calls made under the provisions for unlimited service. In cases where there is no trunk connection between one of the applicant's exchanges and a foreign exchange and calls are routed over loaded lines belonging to the applicant or to a foreign company, a toll charge of 4 cts. is to be made and the total revenue from such calls is to be divided as follows: 30 per cent to each company performing switching service and 40 per cent to the owner of the line.

No part of the schedule authorized is to be adopted unless the entire schedule is adopted. If the schedule is not adopted the rate for switching service for foreign lines is to be $1.00 per telephone per year for telephones on lines connecting with a second exchange and $1.50 per telephone per year for telephones on lines not connecting with a second exchange.

The Farmers' Telephone Company of Beetown, on March 11, 1913, filed application with this Commission seeking authority to increase its rates and other relief.

The rates in effect at the time of the application as given in the petition were as follows:

$9.00 per year if patron furnishes instrument.
12.00 per year if company furnishes instrument.
4.00 per year for extension phones.
10.00 per year for depots.
Switching Services:
$27.00 per year per line for independent lines with no other switchboard.
20.00 per year per line—Fennimore Farmers' Telephone Company.
115.00 per year for 11 lines of The Peoples Telephone Company.

The applicant states that the present rates are inadequate and inequitable as among various classes of users and service, and prays for relief by the authorization of such schedule of rates for exchange service and switching service as the Commission shall find just and reasonable and for such toll rate and division of toll earnings on the line from Lancaster to Fennimore as may appear just and reasonable.

The applicant also prays for such orders as may appear just and reasonable covering the following matters:

A. The refusal of the Chicago & North Western Railway Company to pay for telephone installed in its depot at Lancaster.

B. The proposal to have a full metallic line built between Lancaster and Platteville and the division of the cost of constructing such line between the applicant and the Platteville, Rewey and Ellenboro Telephone Company.

C. The practice of the Peoples Telephone Company of furnishing service to subscribers within the city of Lancaster.

D. The service rendered over the lines of the Fennimore Mutual Telephone Company extending from Lancaster to Fennimore.

The applicant further states that the following are the names of telephone companies and lines affected by the provisions of the application:

Lancaster exchange	Fennimore Mutual Tel. Co.,	Fennimore,	Wis.
	Becker Liberty Tel. Co.,	Lancaster,	"
	Annaton & Preston Tel. Co.,	"	"

	" "	No. 13,	"	"
	" "	No. 14,	"	"
	" "	No. 15,	"	"

Formal hearing on this case was held at the office of the Commission at Madison on April 16, 1913. *J. A. Jamison,* president, and *C. W. Hampton,* secretary and treasurer, of the Farmers Telephone Company of Beetown appeared for the applicant and *F. G. Whitmore,* president, and *Wm. Leighton,* secretary of the Peoples Telephone Company of Mt. Hope, and *Wm. Billings* of Independent Line No. 139 appeared representing their respective companies.

From the testimony offered at the hearing and through several reports in this matter made by members of the Commission's staff the following facts have been brought out.

Extent of Operation.

The Farmers' Telephone Company of Beetown operates a total of nine exchanges, one at each of the following villages and cities of Grant county, namely: Lancaster, Hurricane, Potosi, Beetown, Burton, Cassville, Glen Haven, Bagley and Bloomington. The exchanges in the latter two places are operated jointly with the Peoples Telephone Company of Mt. Hope. The territory supplied with telephone service by the Farmers' Telephone Company comprises about four hundred square miles and extends from Lancaster and vicinity on the east to the Mississippi river on the west and from the Mississippi river on the south to Lancaster, Bloomington and Bagley on the north. On January 1, 1913, there were approximately 876 stockholders or members, each owning his own phone, and 214 nonstockholders or nonmembers, of whom 132 owned their phones and 82 used phones supplied by the company. This gives a total of 1,090 phones owned and operated by the company. The lines supplying service directly to these subscribers are practically all of grounded construction, including the local lines within the village limits of each exchange. The accompanying map gives, in general, the location of all exchanges and lines which connect two central offices of both the Farmers' Telephone Company and connecting companies, and Table I supplements the map with

somewhat more detailed information bearing on the same subject. Besides the lines shown in this table there is the rural construction, both foreign and that owned by the Farmers' Telephone Company, which connects with but one central office, and there are also the local lines at each exchange serving the subscribers within the village or city limits. The number of foreign lines connecting with an exchange of the Farmers' Telephone Company and not running to a second exchange is nine, while the number of applicant's rural lines connecting with but one exchange is approximately forty-seven.

[1]Connecting Potosi and Dubuque is a full metallic line owned by the Interstate Independent Telegraph and Telephone Co.

[2]Owned jointly by Farmers' Telephone Company of Beetown and the Platteville, Rewey and Ellenboro Tel. Co.

ORGANIZATION.

The company was organized in 1898 as a stock company with a capitalization of $4,500, consisting of three-hundred shares of $15 each. In 1901 the articles of incorporation were amended changing the company from a stock to a non-stock corporation, reserving the right to pay dividends. At present there are approximately 876 members of the corporation who have paid from $15 to $25 each for their memberships. On January 1 of each year as many of these members as are able to do so meet to consider all matters pertaining to the general policy of the company and hear and pass on financial reports made to them by each of its seven directors. Since Beetown is the most centrally located of any of the exchanges, the annual meetings are held at this place. However, there are no railway facilities at Beetown and it is not at all surprising to learn, when we take into consideration the extent of the territory served by the company, that it is extremely difficult to get a majority of the members present at these annual meetings.

The above mentioned directors are chosen one from each of the principal exchanges. Together they form a board of directors for the company. This board as a unit has very little to do with the affairs of the company. On the other hand, each member of the board is held personally responsible by the stockholders at the annual meeting for the affairs of the company at his particular central office. In general he takes care of all trouble work and new construction, makes collections and expenditures as he sees fit and at the end of the year prepares a statement of receipts and disbursements which he presents at the annual meeting of the stockholders. These statements are entered in a memorandum book by the secretary, together with other miscellaneous records of receipts for telephone rent and material and labor disbursements, and this book constitutes the entire records of the company. Besides making the above reports each director, as he sees fit during the year, reports to the secretary any telephones which may have been installed or discontinued or other miscellaneous matters. Inasmuch as the making of these reports is not obligatory neither the secretary nor the president has an authentic record of the total number of telephones installed.

SERVICE.

It is often difficult to determine definitely the quality of service rendered by a telephone company because, as a rule, the personality of the observer enters largely into the result obtained by him. However, in most cases there are a number of factors that tend to indicate whether or not the company has the ability to furnish good telephone service.

In the present case, general observations which were made during the time the traffic study—referred to later—was being conducted at Lancaster and Potosi indicate that the service is below the standard that can be required under the circumstances. These observations show that there is a very great amount of cross-talk on practically all lines. This is due to the fact that practically every line serving subscribers directly is of grounded construction, even including lines serving local subscribers within the village or city limits of the various exchanges. Investigation shows that not only are practically all local lines grounded but that upon many of them the number of subscribers is abnormally high. In the Lancaster exchange there are within the city limits of Lancaster eight local lines serving from five to ten subscribers each. It is also a common practice to allow certain subscribers who move from their farms to take up their residence in a village to connect their telephones to the rural lines to which they were previously connected. At present there are on the system a total for forty-five telephones thus connected. It is understood that the company stands ready to install private lines for these subscribers but that they prefer to be on their old rural line. This unfortunate state of affairs is probably due in a measure to the lack of appreciation on the part of these subscribers of the value of a single line. However, the fact cannot be overlooked that their attitude is an indication that the service given by the company at these various central offices is below standard.

As may be noted by the foregoing map and by Table I, there are a large number of heavily loaded country lines connected to two central offices, and these are used as through lines between the exchanges thus connected. It seems impossible that adequate telephone service can be rendered over these lines.

Other facts concerning the organization of the company and the duties of the individual directors seem to have an important

bearing on the quality of service rendered by this utility. The articles of organization of the company provide that the directors shall each receive only $2 per day plus actual expenses for time spent working for the company. Most of the directors carry on private business of their own besides taking care of the telephone work at their various exchanges. The low wage, and the fact that the telephone work may in certain cases be a secondary consideration to private business interests, very likely contribute to the lax manner of construction and upkeep of the property evidenced by the low average condition per cent of the property as given in the Commission's valuation. It is believed that the organization of the company is at fault on this point and should be altered.

[1] The Peoples Tel. Co. also owns one trunk line from Lancaster to Mt. Hope and Mt. Ida.

The foreign lines paying switching fees to the Farmers' Telephone Company all enter either through the Lancaster or the Potosi exchange. The above table is a summary of data relating to these lines.

The Peoples Telephone Company is a mutual corporation operating in territory lying immediately north of the territory of the applicant and comprising the villages of Patch Grove, Bridgeport, Millville, Woodman, Werley, Mt. Ida, Mt. Hope,

Bagley and Bloomington. As has been stated, the exchanges at Bagley and Bloomington are operated jointly with the Farmers' Telephone Company of Beetown. The total number of phones operated by the Peoples Telephone Company is approximately 765. Of the 12 lines owned by this company entering the Lancaster switchboard, 8 connect with a second exchange. The lines connecting with a second exchange together with the exchanges which they connect are shown in Table I. The testimony shown in the case develops the fact that from 1898 to 1900 the applicant and the Peoples Telephone Company operated the exchange at Lancaster jointly, each company paying half the expense and receiving half the profits from rents. In 1900 an agreement was reached between the two companies whereby the Peoples company turned over to the applicant its interest in that part of the Lancaster system lying within the city limits of Lancaster. The only consideration in the matter, it appears, was a promise on the part of the Farmers' Telephone Company to do the switching service required at the Lancaster exchange by the Peoples Telephone Company for a total of $115 per year.

The facts in the case do not disclose whether or not this is at present a binding contract. However, if it is not binding at the present time the rate per telephone for switching service in this case will be the same as the general rates for this service hereinafter provided.

The Fennimore Mutual Telephone Company has two lines entering the switchboard of the applicant at Lancaster with a total of 37 directly connected phones. For switching these lines the applicant gets a total of $40 per year. The Fennimore Mutual Telephone Company operates an exchange in the city of Fennimore and serves part of the surrounding rural territory. The total number of phones owned and operated by this company as given in its 1913 report is 377.

The Grant County Telephone Company is a mutual corporation of farmers operating an exchange of 145 telephones in and around the village of Livingston, Grant county. This company owns one loaded rural line connecting with the Lancaster exchange on which there are 16 subscribers and for which the company pays a switching fee of $25 per year.

The Annaton and Preston Telephone Company operates exchanges at Stitzer, Preston and Montfort and has a total of ap-

proximately 312 phones connected. This company has one loaded rural line of 15 phones running between Lancaster and Stitzer for which it pays to the applicant a switching fee of $15 per year.

In addition to the above mentioned connecting companies, there are three independent lines running into the Lancaster exchange; two of these, lines Nos. 117 and 139, each pay $27 per year switching fee while the third, No. 111, pays $25, as shown in the above table.

The seven foreign lines entering the Potosi exchange are all independent and each pays $27 per year switching fee.

PLATTEVILLE LINE.

A grounded trunk line runs between Lancaster and Platteville, half of which is owned by the applicant and half by the Platteville, Rewey and Ellenboro Company. A discussion of this line appears elsewhere in this opinion.

LONG DISTANCE CONNECTIONS.

The applicant has two long distance outlets. The Wisconsin Telephone Company owns a line from its exchange at Lancaster to the exchange of the applicant at Beetown. All long distance calls from the applicant's lines to the Wisconsin Telephone Company must go over this line. The second outlet is over the lines of the Interstate Independent Telephone and Telegraph Company, which operates a toll system in northern and central Illinois. This company owns a full metallic line running from the applicant's exchanges at Potosi and Cassville to Dubuque. In several of the small exchanges of the applicant the practice is to allow the operators to collect and keep as part of their pay the per cent of revenue from long distance calls which the toll line company allows the connecting company to retain.

COMPETITION.

Practically the only vital competition which exists for the Farmers' Telephone Company is at Lancaster. The Wisconsin Telephone Company has an exchange installed at this point which gives service to approximately 165 subscribers. Although there are a number of other companies entering into and oper-

ating in the territory served by the applicant, competition can hardly be said to exist, inasmuch as most of these companies are connected directly or indirectly to some part of the Farmers' Telephone Company's system and free service is established.

PHYSICAL VALUE OF PROPERTY.

In 1909 a valuation of the physical property of the Farmers' Telephone Company of Beetown was made by the Commission. This valuation was later revised and brought up to date as of April 1, 1913. The following is a summary of this valuation as of the latter date:

PHYSICAL VALUATION OF FARMERS' TELEPHONE COMPANY OF BEETOWN

BEETOWN, GRANT COUNTY, WIS.

	City.		Rural.		Total.	
	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.

Miscellaneous construction	25.00	18.00
Total	$53.00	$48.00
Add 12 per cent (see note)	6.00	5.00
Total	$59.00	$53.00
Total foreign	$441.00	$359.00

NOTE:—Addition of 12 per cent to cover cost of engineering, superintendence, interest during construction, contingencies, etc.

Estimate of value of total property included in the Lancaster exchange:

	Cost of reproduction	Present value
City of Lancaster	$5,654	$4,161
Rural (24 per cent of total rural)	9,010	3,672
Total	$14,664	$7,833

Estimate of value of total property included in Potosi exchange:

	Cost of reproduction	Present value
Village	$347	$288
Rural (11 per cent of total rural)	4,130	1,683
Total	$4,477	$1,971

The above percentages of rural property assigned to the Lancaster and Potosi exchanges have been determined by taking an average of the results obtained by the use of the following two methods:

1. Rural property was divided according to the number of rural phones paying rental to the various exchanges.

2. From data at hand the total wire mileage of each exchange was estimated and the percentage to be apportioned to each exchange was computed.

The results obtained by the two methods were very nearly

identical and it is believed that an average of these results represents a fair division of the rural property.

Income Account (Total System)

The entire financial records of the company consist of one memorandum book made up into a subdivided statement of receipts and disbursement. This book is closed on January 1 each year for the purpose of taking off the published annual statement of the secretary to the stockholders. Since the cash book contains a statement of actual receipts instead of revenues, the only way of arriving at the revenues for any particular period is to check up and classify the number of subscribers receiving telephone service during the period. This has been done for the year ending Jan. 1, 1913, and the revenues shown in the income account have been computed from the following classified statement of subscribers receiving service on that date:

TABLE III.

Location of exchange	Stockholders (each has own phone).	Nonstockholders.	
		Company's phone	own phone.
Lancaster	296	70	44
Beetown	181	7	36
Potosi	93	.....	5
Hurricane	55	4	2
Burton	45	.....	2
Bloomington	100	1	15
Cassville	106	.....	28
Total	876	82	132

In the above list the subscribers of the Glen Haven exchange have been included with Beetown and those of Bagley with Bloomington. As stated elsewhere, owing to the manner of keeping the records, it is impossible to determine positively the number of subscribers, but it is believed that the above list is approximately correct. Using this statement as a basis the following revenue account has been constructed. Each item is fully explained by foot note.

1.	876 members at $9.00 per year	$7,884.00
2.	82 nonmembers at $12.00 per year (with company's phone)	984.00
3.	132 nonmembers at $9.00 per year (own phone)	1,188.00
4.	22 extra phones at $4.00 per year	88.00
5.	Extension phones and part time subscribers	109.50
6.	Pay station earnings	183.35
	Total exchange telephone earnings	$10,436.85
7.	15% commission on Wis. Tel. Co. outgoing calls	$7.88
8.	20% commission on Interstate Tel. & Teleg. Co. outgoing calls	22.46
	Earnings from switching service:	
9.	Lancaster exchange	276.00
10.	Potosi exchange	189.00
	Total earnings from connecting lines	$495.34
	Total operating revenues	$10,932.19

Exnlanatory Notes:

1. The rate per telephone per year for members is $9.00. This amount is cut down to $7.25 by allowing members what is called a $1.75 dividend. This dividend is really an arbitrary rebate to the members since it is allowed on the monthly bill and is not a dividend declared at the end of the year, nor does its amount depend upon the financial condition of the company. The total amount if this rebate for the 876 members at $1.75 per phone is $1,533.00, but as the nominal rate is $9.00, the total is shown in item No. 1.
2. Nonmembers with phones which are owned by the company are charged at the rate of $12.00 per year.
3. Nonmembers owning their own phones are charged $9.00 per year.
4. A number of stockholders in the various exchanges have more than one phone. The rate for the extra phone is $4.00 per year.
5. This amount represents earnings from extension phones and part-time subscribers for the systm.
6. This amount is the total paystation receipts.
7. Partly because of the competition existing between this company and the Wisconsin Telephone Company, and partly because of the fact that at some of the central offices the 15 per cent commission from the Wisconsin Telephone Company toll calls has been turned over to the operators as part of their pay, the actual earnings to the company from this source are very small.
8. As stated elsewhere, the Interstate Telegraph and Telephone Company connects with this company's system at Potosi and Cassville. This item is the 20 per cent commission allowed on outgoing calls.
9. For the details of this item see Table II.
10. For the details of this item see Table II.

EXPENSE ACCOUNT.

In order to obtain a statement of expenses it has been necessary to distribute to maintenance and operation, item by item, the details of disbursements as given in the secretary's report. During the year 1912 switchboards were purchased at Lancaster, Beetown and Cassville and one-half of a jointly owned switchboard was purchased at Bloomington, making a total for this item for the year of $1,306.36. Inasmuch as a fair allowance will be made for depreciation on the whole plant and as the cost of replaced switchboard equipment is an item properly chargeable to the depreciation reserve account rather than to maintenance, the cost new of the replaced switchboards has been withheld from the maintenance item for the year. The difference between the cost of the old equipment and the new has been taken into consideration by additions in the Commission's valuation.

Considerable reconstruction of lines has also been done during the period in question. Since all of this reconstruction is included in the company's report of wire plant expense for the year and as it was impossible to separate out the exact amount of this reconstruction, it has been deemed advisable to use an average figure per phone for wire plant expense. The reports of seven companies operating lines and exchanges similar to those of the applicant were investigated and the results seem to show that $1.75 per phone per year to cover wire plant expense is a fair average figure. For the 1,090 phones owned or

controlled by the company the wire plant expense then will amount to $1,907.50.

The following is a statement of expense for the year ending January 1, 1913:

EXPENSE ACCOUNT (Total System)

For year ending Jan. 1, 1913.

Central office expense	$3,598.77	
Wire plant expense	1,907.50	
Substation expense	928.41	
Commercial expense	601.67	
General expense	422.98	
Total of above items		$7,459.33
Depreciation of 6.5 per cent on cost new		2,971.93
Taxes		50.46
Total expense		$10,481.72
Total revenues		$10,932.19
Total expense		10,481.72
Gross income		$450.47

EXPENSE ACCOUNT (Lancaster Exchange)

Central office operating labor	$900.00	
Central office supplies and expenses	254.97	
Maintenance of central office	86.76	
Wire plant expense	668.00	
Substation expense	350.00	
Commercial expense	226.00	
General expense	158.50	
Total of above items		$2,644.00
Depreciation at 6.5 per cent on cost new		953.00
Taxes		15.64
Total expense		$3,612.64
Total revenues		$4,417.00
Total expense		3,612.64
Gross income		$804.36

EXPENSE ACCOUNT (Potosi Exchange)

Central office operating labor	$360.00	
Central office supplies and expenses	49.66	
Maintenance of central office	24.56	
Wire plant expense	179.00	
Substation expense	83.50	
Commercial expense	54.10	
General expense	38.00	
Total of above items		$788.82
Depreciation at 6.5 per cent on cost new		291.00
Taxes		4.95
Total expense		$1,084.77
Total revenues		$1,108.50
Total expense		1,084.77
Gross income		$23.73

APPORTIONMENT OF EXPENSES TO SWITCHING SERVICE.

Traffic Studies.

For the purpose of determining the extent and cost of switching service furnished to connecting lines a traffic study was made at Lancaster and Potosi, the only exchanges of the system which perform switching service for foreign lines. A two-day peg count was taken at the Lancaster exchange on August 4 and 6, 1913, and a one-day peg count at Potosi on August 5, 1913, a record being kept in each case of each number calling and called for the full twenty-four hours. The results of these studies are shown in the following tables:

TABLE IV.

TRAFFIC STUDY—SUMMARY OF RESULTS.

Class of service.	Explanation of classes of service.	Lancaster.					Potosi.

The compilation of the results shown in the above tables comprised the following steps:

1. The "Classes of service," as given in Table IV were determined and each class was given a number.
2. The line numbers on each of the two switchboards were checked up and each line was listed under its proper class of service.
3. The peg counts for each exchange were gone over and at the side of each switchboard number was placed the number of the class of service to which that line belonged.
4. Totals were made of the number of calls from each class of service to every other class. These total calls appear in columns marked "T" in Tables VI and VII.
5. Obviously calls between certain classes of service take more time to complete than calls between certain other classes. Owing to the bridging construction of all rural lines, all calls, whether for central or for parties on the same line, come into the central office and require a certain amount of extra supervision by the operator which does not enter into the local call. Also the operator must spend more time with these rural calls on account of the code-ringing system and the requirement that she "listen in" to ascertain whether or not the line is already in use by other parties. In view of these facts it was necessary to introduce a certain factor called "loading factor" or "coefficient," by which to multiply the total number of calls between the various classes of service in order that the results obtained would show a proper division of the operators' time to these various classes of service. Giving the local to local call a coefficient of 1.0 the leading factors for the calls between the various other classes of service have been tentatively determined at figures shown in Table V. These loading factors were determined by as careful a study as possible of the conditions of operation and it is believed that they represent substantially accurate ratios of time required.
6. The next step was to divide each call into two parts, viz.: the part properly belonging to the class of service making the call and the part belonging to the class of service receiving the call. Relative to this division an analysis was made of data available in the Commission's files and the results obtained indicate that approximately 60 per cent of the total amount of time devoted by the operator to each call should be charged to the calling number and 40 per cent to the called number. These percentages support the contention that on the average the completed call is of more value to the person making the call than to the person called, and seem for the purposes of this case to

form a fair basis upon which to apportion the operators' time to calling and called classes.

7. In this step the above percentages together with the loading factors were applied to the total calls as given under "T" in Tables VI and VII, and the columns "A" and "B" were obtained. The numbers in column "A" represent the part of the total calls between any two classes of service, weighted by their loading factors and chargable to "originating" or "incoming" service. Numbers in column "B" (horizontal) represent the part of the total calls between any two classes of service, weighted by their loading factors and chargeable to "outgoing" or "receiving" service. The sum of A and B for any particular class of service gives the total relative amount of time given by the operator to that class, and this sum divided by the total of A and B for all classes gives the percentage of operators' time to each class of service. These percentages appear at the bottom of Tables VI and VII, also in summary, Table IV.

Expenses for Switching Service.

In the following tables (VIII and IX) the total expenses for the Lancaster and Potosi exchanges have been apportioned so as to show the cost of switching service:

TABLE VIII.

The percentages applied to the "Central office operating labor" are those given in the traffic study for these classes of service. The apportionment of "Central office supplies and expenses and maintenance" is made on the basis of the total number of lines of each class connected to the switchboard. The "Wire plant expense" apportionment is made on the basis of the relative value of the equipment owned by the Farmers' Telephone Company and serving the various classes. The "Commercial" expenses are apportioned according to the ratio of the number of foreign lines for a particular class of service to the total number of Farmers' Telephone Company's subscribers served by the exchange. This basis assumes that the bills for switching service will be rendered to each foreign company for each line connected to the switchboard of the Farmers' Telephone Company. The "General" expenses were apportioned as overhead to the other expenses. The apportionment of the total expenses for lines connecting with a second exchange to the subscribers on these lines and to the second exchange is made on the basis of the division of operator's time between these two classes of service.

It would appear from the foregoing analysis that the cost per telephone for switching for lines connecting with a second exchange is considerably less for both the Potosi and Lancaster exchanges than the cost per telephone for switching for lines not connected to a second exchange. Also the analysis indicates that with the present plan of organization and inefficient management of the company a switching rate of $1.00 per phone per year for lines connecting with a second exchange and $1.50 per phone per year for lines not connected to a second exchange are fair rates. However, a reorganization of the plan of operation of the company is to be recommended. This will mean a revision of the above expenses chargeable to switching service. This revision of the expense account will be taken up later in this discussion.

Fennimore Lines.

There are five lines connecting the applicant's Lancaster exchange with the exchange of the Fennimore Mutual Telephone Company at Fennimore. (See map.) Three of these lines are foreign, two of which are the property of the Fennimore Mutual Tel. Co. and the other the property of the Peoples Tele-

phone Company of Mt. Hope. All three lines are grounded and loaded[1] and have, respectively, 20, 17 and 11 phones directly connected. The other two lines are owned by the applicant. One is a grounded trunk[1] line running directly to Fennimore; the other is a full metallic line which, besides running to the switchboard of the Fennimore Company, connects with the Annaton & Preston Telephone Company at Stitzer. Also at a point between Stitzer and Fennimore, called Willow Corners, there is bridged onto this line a full metallic line connecting with the Annaton and Preston Telephone Company's exchanges at Preston and Montfort, and owned by the Annaton and Preston Company. Thus there are five central offices all connected to one line, namely: Preston, Montfort, Stitzer, Lancaster and Fennimore. The situation is a rather complex one and the various points of view which may be taken with regard to a betterment of service over the lines, taking into consideration a proper return to the owners, have been carefully studied. The average of the two-day traffic study over these lines shows the following:

Lancaster to Fennimore	31	calls
Lancaster to Stitzer, Preston, Montfort	17	"
Fennimore to Lancaster	43	"
Stitzer, Montfort and Preston to Lancaster	8	"
Calls between Fennimore, Stitzer, Preston, Montfort	36	"

Of the total calls between Lancaster and Fennimore (74) probably 75 per cent, or 55 calls, go over the grounded line connecting the two offices. All other calls listed above, or about 80 calls per day between all offices, go over one metallic line. This load appears to be higher than a normal load for this line should be; hence any plans which may be proposed as a remedy for the situation should look to a decrease in the number of calls per line per day in order that the traffic be less congested. Either more lines may be put up or a toll charge may be imposed upon calls going over these lines for the purpose of eliminating unnecessary calls. The former method will involve considerable extra expense and, it is believed, would unduly burden the companies concerned. Were these companies charging a rate for telephones commensurate with the extending of free telephone service to neighboring towns, the question of having more

[1] The term "Loaded lines" as used in the discussion of this case means lines to which rural telephones are connected. The term "Trunk lines" means lines between central offices to which there are no phones connected.

free lines at the disposal of the service might be considered. However, in the present instance such a rate is not in force. This, and the fact that there is a congestion on present lines, seems to make a toll charge per call the only fair solution of the problem.

An approximate valuation placed on these lines gives a cost new of $1,650 and a present value of $660. Depreciation at 6.5 per cent on the cost new amounts to $107.25. Interest at 6 per cent on $725 which, it would seem, represents a fair value of the present property, is $43.50. Assuming a wire plant maintenance for the lines of $3 per pole-mile, this expense, for the 15 miles of line, is $45. The sum of the above items amounts to $195.75 and represents the approximate earnings per year to which the owners are entitled for the use of the lines themselves.

Since the amount of traffic which will pass over these lines after a toll rate has been put into effect is more or less a matter of conjecture, it is difficult to arrive at a proper toll rate and apportion this rate to the various companies concerned.

The total average number of completed calls per day for the two-day traffic study at Lancaster is approximately 1,250. The total central office expense for this exchange is $1,241.73 per year, or $3.41 per day, and the average central office expense per call, 0.272 cts. However, this amount represents the cost to complete a free call and not a toll call. The toll call will involve the making out of a toll ticket, and extra supervision and collection not necessary for the free call. It is believed that this extra labor will in this case bring the cost of completing a toll call up to about 2 cts. per call.

Using this figure as a basis, the following schedule of tolls and apportionment of tolls to the various companies concerned has been constructed:

Calls between	Charge per call.	Per cent to Farmers' Tel Co.	Per cent to Fennimore Mutual Tel. Co.	Per cent to Annaton & Preston Tel. Co.
Lancaster and Fennimore	$0.07	70	30	.....
Lancaster and Stitzer	.05	60	.....	40
Lancaster and Preston	.07	65	.....	35
Fennimore and Stitzer	.05	20	40	40
Fennimore and Preston	.05	10	40	50
Stitzer and Preston	.05	10	.....	90

With the above schedule in effect, the Farmers Telephone Company will earn a fair return (about $200) upon its investment, provided the number of calls going over the lines is approximately 25 per cent of the present traffic. From data at hand it would appear that this is about what the actual traffic will be with a toll rate in force.

It will be noted that in the above schedule the Montfort exchange of the Annaton and Preston Company, which is at present connected to the line in question, has been omitted. It is believed that it will work no particular hardship to the Annaton and Preston Telephone Company to cut this line in two at its Preston Exchange and have its operator at that point handle calls originating at Montfort and terminating at Lancaster, Preston, Stitzer or Fennimore. Calls between Montfort and Preston with the present construction make the use of the line impossible between any of the other exchanges, hence the cutting in two of the line will considerably increase its efficiency. It is therefore strongly recommended that the full metallic line owned by the Annaton and Preston Telephone Company now connecting to the full metallic line running between Lancaster and Fennimore, and terminating at Montfort, be cut in two and terminated at Preston.

In addition it seems fair and in the interests of better service that the Annaton and Preston Company be allowed to connect its Stitzer exchange also to the grounded line of the applicant running between Lancaster and Fennimore if it so desires.

Service Over Fennimore Mutual Telephone Company's Loaded Lines.

Investigation was made of the service over the loaded lines between Lancaster and Fennimore. As has been stated elsewhere in the discussion of this case, there are three lines on which there are, respectively, 20, 17 and 11 telephones connected. Two of the lines belong to the Fennimore Mutual Telephone Company and the third is the property of the Peoples Telephone Company of Mt. Hope.

Investigation showed that the service over these lines was rather unsatisfactory. However, since the necessity of routing calls between Lancaster and Fennimore over loaded lines will be removed by certain parts of the order in this case and inas-

much as there has been no complaint relative to the service in question by the subscribers on these lines, the Commission will not at this time issue an order covering this point.

The Platteville Line.

The applicant owns one-half interest in a No. 12 iron wire trunk line between Lancaster and Platteville, the other half being owned by the Platteville, Rewey and Ellenboro Telephone Company. It has been proposed by the applicant that this line be made full metallic. The following is an estimate of the cost of the necessary construction.

FARMERS' TELEPHONE COMPANY OF BEETOWN.
LANCASTER TO PLATTEVILLE, WIS.
Additional Investment for Metallic Line.

	Unit.	Quantity.	Unit price.	Cost of reproduction.
No. 12 galvanized iron wire in place	Mile	16	$11.78	$188
No. 9 pony glass insulators	Each	640	.018	12
4 pin cross-arms complete in place	"	640	.50	320
Gaining and boring pole and transferring present wire to new cross-arm	Mile	16	2.00	32
Total above				$552
Add 12 per cent				66
Total cost				$618
½ to be borne by each company				309

A further estimate places the total apportioned cost of reproduction of the line at $950 and the present value at $536. Depreciation at 6.5 per cent of cost new, interest at 6 per cent on $600, which seems to represent a fair value of the property, and wire plant maintenance of $2.50 per circuit mile, make up a total of $137.75. This total would appear to be sufficient to meet operating expenses including a fair return to the owners for the use of the property.

The traffic study showed that the number of calls going over this line in both directions was 47 for the first day and 62 for the second. The average traffic for the two days was 54 calls. If we assume that the number of calls is decreased by 75 per cent by the application of a toll charge per call, we have 13.5 calls per day. Allowing 3 cts. per call to cover return on investment gives $147.82, which is fairly close to the amount computed above as necessary for this purpose. Assuming that it

will cost 4 cts. per call for switching at both ends of the line we have a total toll charge of 7 cts. per call. This seems to be a fair charge. The applicant and the Platteville, Rewey and Ellenboro Telephone Company will be authorized, upon the completion of a full metallic line between Platteville and Lancaster, to discontinue the free service now in effect and substitute therefor a toll charge of 7 cts. per call, which shall be divided equally between the two companies unless some other method of division shall be agreed upon.

TELEPHONES LOCATED WITHIN VILLAGE LIMITS AND CONNECTED WITH RURAL LINES.

It appears that the applicant has, until recently, allowed farmers who moved into town to connect their telephones directly onto their old rural lines instead of insisting that they be placed on separate lines. As has been stated elsewhere in this discussion, this has been carried on until, at the present time, there are located within the city or village limits of the various exchanges a total of 34 of this class of telephones belonging to the Farmers' Telephone Company and a total of 11 which are the property of foreign lines. Considerable correspondence has been carried on with the applicant and various subscribers in regard to this question and an inspection was made of the situation at Cassville by a representative of the Commission. The principal objections of these subscribers to being put on separate lines may be summed up as follows:

1. Poor service over single village lines due to grounded construction, poor condition of lines and inefficient system of "trouble shooting."

2. 25 cts. charge in certain exchanges for all calls after 9 o'clock, p. m.

3. Friends and relatives served by old rural lines.

On the other hand the company contends that many of the rural lines to which these subscribers connect their phones are already overloaded and that the interests of good service require that they be disconnected from the rural lines and connected to a separate line.

It appears to be a rather general practice of telephone companies throughout the state not to place village subscribers on rural lines. There is no doubt that in the majority of cases the service is, on the whole, improved by this requirement. It is

believed, however, that in the present instance the organization and operation of the company is somewhat responsible for the attitude of this class of subscribers in that it does not in all instances provide reasonable assurance to the subscribers that the lines will be kept in good repair.

The applicant will therefore be authorized to discontinue furnishing service by means of rural lines to subscribers within the village limits of each of its exchanges at such time as it has satisfied the Commission that it stands ready to keep its lines in first class repair.

The exaction of a 25 ct. charge for all calls after 9 o'clock at night for certain exchanges of the system seems exorbitant and will be lowered to 15 cts. per call for this service at these exchanges, provided the general rate schedule as authorized by the Commission is adopted by the company.

Telephone in Depot.

With regard to the refusal of the Chicago & North Western Railway Company to pay for a telephone installed in the depot at Lancaster it would seem that the proper course to follow, if telephone rental is not paid within a reasonable time, would be to take out the telephone. Then the telephone company may install a pay station in the depot as provided in *In re Free and Reduced Rate Telephone Service*, 1908, 2 W. R. C. R. 521, 543. In case a pay station does not seem to answer the requirements the telephone company may then apply to the Commission for an order requiring the railroad company to install adequate telephone facilities.

Toll Rates.

The development of the telephone industry in various parts of the state seems to have brought with it, especially among locally and mutually owned companies, a desire on the part of telephone users for extensive free service, which is probably a natural outgrowth of the telephone business as it has been developed by these companies. The subscriber first has been given unlimited service to other subscribers of the exchange to which he is connected; then the necessity for connection with a neighboring exchange has arisen and he has demanded free connection with that exchange also. Connections have been made

with other neighboring exchanges under the same conditions until a net work of interconnecting lines has been established and often free service can be had about as far as the physical condition of the lines will permit. These connecting lines must be maintained and, at the end of their useful life, rebuilt. In order to do this the owners must, since this class of service is free, derive enough return from the system as a whole for the upkeep of the network of lines. Traffic studies show that there are certain individuals in each of these exchanges who use the interconnecting lines much more than do others. It would seem, therefore, that these individuals should pay more toward the upkeep of connecting lines than those who do not use them. Free lines between central offices are often congested by unnecessary messages to such an extent that more important messages are held up and the service is thus rendered more or less inadequate.

These statements seem especially applicable to the conditions existing on the system of the Farmers' Telephone Company of Beetown. As has been stated elsewhere in this discussion, the applicant operates nine exchanges, all of which are connected by one or more trunk or loaded lines. Service is free between these exchanges as well as to practically all connecting companies except the Wisconsin Telephone Company and the Interstate Telephone Company. Also the traffic studies at Lancaster and Potosi indicate that the present service in general over these free lines is rather congested.

In the light of the above, there seem to be no valid reasons for requiring every subscriber on the system to help to maintain a part of the equipment which he may not use at all. It is also evident that some means should be employed to reduce the congestion upon many of these lines.

A careful study of the situation has been made and as a step in the direction of the curtailment of the unlimited free service over the whole system the following schedule of rates will be authorized:

1. Subscribers connected to lines entering two of the applicant's exchanges shall have unlimited service to both of such exchanges.

2. Subscribers connected to lines entering but one of the applicant's exchanges may have the option of taking unlimited service to the one exchange at a certain rate to be specified later

or may have unlimited service to their choice of one additional exchange of the system, providing this exchange may be called directly from the exchange to which their line is connected, at a somewhat higher rate. This rate will also be specified later.

3. All calls passing between two exchanges of the Farmers' Telephone Company shall be routed over the trunk lines where such lines exist and shall be charged for at the rate of 5 cts. per call, except such calls as are provided for in sec. 2, above.

4. All calls passing between an exchange of the Farmers' Telephone Company and an exchange of a foreign company which has been made a party to this case shall be routed over through lines where such lines exist. The toll charge over these trunk lines shall be 5 cts. per call except Lancaster-Platteville, Lancaster-Fennimore, and Lancaster-Preston calls, provision for which is made elsewhere in this case, and the total revenues from calls of this class going over trunk lines owned entirely by one company shall be divided as follows: 70 per cent to the owner of the line and 30 per cent to the other company connecting with such line.

5. In cases where no trunk connection between exchanges of the Farmers' Telephone Company exists and calls must be routed over loaded lines connecting the two exchanges, a toll charge of 4 cts. per call shall be made except for such calls as are provided for in sec. 2, above.

6. In cases where no trunk connection exists between one of the exchanges of the applicant and a foreign exchange and calls are routed over loaded lines belonging to the applicant or to a foreign company a toll charge of 4 cts. shall be made. The total revenue shall be divided as follows: 30 per cent to each company performing switching service and 40 per cent to the owner of the line.

CHANGES IN ORGANIZATION OF COMPANY.

From the study which has been made of the organization and operation of the applicant company, the following points seem to indicate that a reorganization of the plan of operation of the company is imperative.

1. There is apparently no real head to the organization, that is, no person who has complete authority.

2. Although the by-laws of the company provide that the board of directors shall have general charge of the control and

management of the company, it appears that this board as a unit does not exercise this control to any great extent.

3. On the other hand, each director acting independently is supposed to carry out the will of the members as expressed at the annual meeting.

4. Because only a limited number of subjects can be brought up and discussed thoroughly at this meeting, owing to the comparatively short time that the meeting is in session, each director is thrown upon his own resources to attend to the affairs of the company at his exchange.

5. All officers and managers of the company are allowed to, and it is understood that nearly all do, have a private business to attend to aside from the telephone business.

It is believed that the nature of the organization of the company is responsible in great part for the poor construction of the company's lines, the poor condition of its lines at the present time and the comparatively poor service which the company is rendering the public. Further, it is believed that a general reorganization of the company is the best means of obtaining adequate telephone service to the subscribers of the company.

Alterations in the articles of organization and the by-laws which would effect the following changes are suggested:

1. A general manager shall be appointed by the board of directors and shall, subject to the by-laws and articles of organization of the company and the board of directors as a unit, have complete charge of the affairs of the company.

2. A president, a vice president, a secretary-treasurer and four directors shall be elected by the stockholders at their annual meeting. The president, the vice president, the secretary and treasurer and four directors shall constitute a board of directors for the company which shall have, as a unit, general charge of the affairs of the company.

3. The general manager may appoint, subject to the approval of the board of directors, such assistants at the various exchanges as he may see fit, providing not more than two of these assistants shall be members of the board of directors.

4. The general manager shall not also be a member of the board of directors.

5. The general manager shall be required to devote all his time to the company's work.

6. A competent bookkeeper shall be engaged, who shall keep the books of the company in the manner prescribed by the Commission.

Ownership of Telephones.

Sec. 1797m—90, ch. 499, laws of 1907, ch. 213, laws of 1909, provides that all telephone companies in the state of Wisconsin must own the telephone instruments connected to their lines. Investigation shows that the applicant owns only 82 telephones, while 1,008 telephones are owned by individuals. The Commission will therefore require that the applicant take over and maintain all telephone instruments connected directly to its lines. In the revised income account allowance will be made for depreciation and maintenance of this extra investment. An estimate of this investment is as follows:

1,008 telephone instruments at $6, $6,048.

Revised Income Account.

The various changes in the plans of operation of the applicant company which will be authorized will alter the income account to a certain extent. The total expenses for the year ending Jan. 1, 1913, were $10,480.72. Additions which will be made to these expenses, when the authorized changes in the company are put into effect, are estimated as follows:

1. Extra cost of general manager plus expense incident to better maintenance of line	$1,500.00
2. Part time bookkeeper plus additional commercial expense incident to the putting into effect of a toll rate per call between central offices	460.00
3. Depreciation on $6,048 of additional investment in telephones to be purchased from individual owners at 6.5 per cent	393.00
4. Maintenance and operation of above telephones, 1,008 at $1.10	1,108.80
5. Additional cost for central office labor incident to the establishment of the toll rate between central offices	400.00
6. Depreciation on increased investment incident to rearranging of party line service and other construction	150.00
Total of above items	$4,011.80
Expense for year ending Jan. 1, 1913	10,480.72
Total	$14,492.52
Interest at 6 per cent on $32,000	1,920.00
Total	$16,412.52

The $32,000 shown in the above table represents, it would seem, a fair amount upon which the company should be allowed a return. It consists of the present value of the property as given in the engineers' valuation plus the increased investment in telephones and other equipment incident to the bettering of the service and such other elements of value as should be considered.

Part of the above additional expense is apportionable to cost of switching service at the Lancaster and Potosi exchanges. The items of which a part is apportionable to switching service are No. 1—$1,500, No. 2—$460, and No. 5—$400, making a total of $2,360.

In Table X this amount has been apportioned to the Lancaster and Potosi exchanges and reapportioned to switching service for foreign lines. This table shows the total expense of switching for lines not connected to a second exchange to be about $2.25 per phone per year, and for lines connected to a second exchange about $1.25 per phone per year for each of the above mentioned exchanges. That there should be in this case a difference in the charge for these two classes of service is quite apparent from the traffic study which shows that the per cent of operator's time per telephone for foreign lines connecting with a second exchange is, for both Lancaster and Potosi, between 60 and 65 per cent of the per cent of operator's time per telephone for foreign lines not connecting with a foreign exchange. The above rates for switching service seem equitable and will be authorized, provided the full schedule of rates as proposed by the Commission is adopted.

TABLE X.

APPORTIONMENT OF ADDITIONAL EXPENSE, INCIDENT TO BETTERMENT OF SERVICE, TO COST OF SWITCHING SERVICE.

	Total expense.	Total expense to foreign lines.	Expense to subscribers on foreign lines not connected with 2nd exchange.	Expense to subscribers on foreign lines connecting with 2nd exchange.	Expense to 2nd exchange.
LANCASTER EXCHANGE.					
Present expense	$2,644 23	$311 78	$98 46	$173 06	$40 55
Additional expense	861 00	101 00	39 20	56 40	13 20
Total	$3,505 23	$412 78	$137 66	$229 46	$53 75
Total phones		238	61	177	
Expense per phone		$1 73	$2 26	$1 30	
POTOSI EXCHANGE.					
Present expense	$788 00	$122 13	$83 98	$23 91	$14 28
Additional expense	272 00	42 10	29 00	8 25	4 78
Total	$1,060 00	$164 23	$112 98	$32 16	$19 06
Total phones		83	57	26	
Expense per phone		$1 98	$2 28	$1 24	

An equitable rate schedule must now be formed which will yield a return to the company approximately equal to the total expense as given in the above revised expense account.

It is difficult to foretell just what effect the establishing of a toll charge per call for part of the service between central offices will have upon this particular traffic, inasmuch as conditions differ widely for various exchanges and localities. Data at hand, however, indicate that, on the average, were a toll charge placed on every call passing between exchanges, this traffic would be in the neighborhood of 25 per cent of the present traffic. Using 25 per cent of the present traffic as a basis for computing traffic between exchanges with a toll charge for every call in effect and assuming that this class of service for the whole system will compare favorably with the traffic of the Lancaster and Potosi exchanges, a figure has been arrived at which indicates that the return from all toll traffic would be in the neighborhood of $3,000 per year.

The proposed schedule, however, as it will provide for a flat rate which will include certain free toll service, will probably reduce the return from this source by a considerable amount. We do not know just what the reduction will be, but it is be-

lieved that the total toll revenue under the proposed schedule will be reduced to a figure not far from $2,000. This figure will be used in the revised expense account.

Another factor to be considered in the forming of an equitable rate schedule is the relation between the rates to be paid by rural subscribers connected to loaded lines running between two exchanges when there is a trunk line between those exchanges and the rate for the same class of subscribers when there is no trunk line between the exchanges. In the first case the service over the loaded line will not be interfered with by calls passing between central offices over these loaded lines, as all calls will be required to be put through over the trunk lines. In the second instance calls passing between the two central offices will have to be put through over the loaded lines and will cause more or less interference with the use of those lines. It therefore seems reasonable and just to charge a somewhat higher rate per telephone for the first mentioned class of subscribers than for the second.

In the following schedule of rates the above mentioned points have been taken into consideration. The situation in general has been carefully studied and it is believed that the schedule as outlined will fairly adequately meet the needs of the applicant.

121	[1]Business telephones electing No. 1 class of service at $14.00 Business telephones electing No. 2 class of service at $13.00	$1,663.00
363	Residence phones electing No. 1 class of service at $12.00 Residence phones electing No. 2 class of service at $11.00	3,024.00
376	Rural telephones on lines connecting with but one exchange and electing No. 1 class of service at $13.00 Rural telephones on lines connecting with but one exchange and electing No. 2 class of service at $12.00	4,700.00
164	Rural telephones on lines connecting with two of applicant's exchanges between which exchanges there are one or more trunk lines, at $13.00....	2,132.00

[1] NOTE: No. 1 class of service shall mean in this connection that subscribers electing such service shall be entitled to free service to any one exchange of the applicant, in addition to that to which the subscriber is connected, providing this exchange may be called directly from the exchange to which subscriber's line connects.

No. 2 class of service shall mean in this connection that subscribers electing such service shall have free service only to the exchange to which he is directly connected.

	Brought forward	$11,519.00
188	Rural telephones on lines connected with two of applicant's exchanges between which exchanges there is no trunk line, at $12.00	2,256.00
	Extension and part time phones	110.00
	Switching Service:	
203	Foreign telephones on lines connected with a second exchange at $1.25	253.75
118	Foreign telephones on lines not connected with second exchange at $2.25	265.50
	Estimated toll and pay station earnings	2,000.00
	Total	$16,404.25

IT IS THEREFORE ORDERED, That the Farmers' Telephone Company of Beetown be authorized to suspend the rates for telephone service now in effect and substitute therefor the following schedule:

[1]Business telephones electing No. 1 class of service	$14.00	per	year
" " " " 2 " "	13.00	"	"
Residence phones electing No. 1 class of service...	12.00	"	"
" " " " 2 " " ...	11.00	"	"
Rural telephones on lines connecting with but one exchange and electing No. 1 class of service....	13.00	"	"
Rural telephones on lines connecting with but one exchange and electing No. 2 class of service....	12.00	"	"
Rural telephones on lines connecting with two of applicant's exchanges between which exchanges there are one or more trunk lines	12.00	"	"
Rural telephones on lines connected to two of applicant's exchanges between which exchanges there is no trunk line	12.00	"	"
Extension phone (additional)	.50	"	month
" bell "	.15	"	"

A penalty of 10 cts. per month for non-payment of telephone rental within 30 days of the time when due is authorized.

Rates for switching service:

1. Rural telephones on foreign lines which are connected with a second exchange $1.25
2. Rural telephones on foreign lines which are not connected with a second exchange 2.25

Bills for switching service may be rendered directly to the companies owning the line or lines for which switching service is performed.

Toll Rates.

1. All calls passing between two exchanges of the Farmers' Telephone Company of Beetown shall be routed over the trunk lines where such lines exist and shall be charged for at the rate of 5 cts. per call, except as provided in the above mentioned No. 1 class of service.

2. All calls passing between an exchange of the Farmers' Telephone Company of Beetown and an exchange of any foreign telephone company which has been made a party to this case shall

[1] See note on page 583.

be routed over trunk lines where such lines exist. A toll charge of 5 cts. per call shall be made for service over these trunk lines, except for calls between Lancaster and Platteville, Lancaster and Fennimore, and Lancaster and Preston, for which calls provision is made elsewhere in this schedule, and the revenue derived therefrom shall be divided, in case one company owns the entire line, 70 per cent to the owner of the line and 30 per cent to the other company connecting with such line.

3. In cases where no trunk lines exist between exchanges of the Farmers' Telephone Company of Beetown and calls must be routed over loaded lines between these exchanges, a charge of 4 cts. per call shall be made, except as provided by the No. 1 class of service.

4. In cases where no trunk lines exist between one of the exchanges of the Farmers' Telephone Company of Beetown and a foreign exchange and calls must be routed over loaded rural lines belonging to the Farmers' Telephone Company or to the foreign company, a toll charge of 4 cts. per call shall be made and the total revenue shall be apportioned as follows: 30 per cent to each company performing switching service; 40 per cent to the owner of the line.

5. The applicant is further authorized to suspend the present free service over its trunk lines from Lancaster to Fennimore and substitute therefor the following schedule of toll rates, with a division of revenue as indicated:

Calls between	Charge per call.	Division of Revenue.		
		Per cent to Farmers' Tel. Co.	Per cent to Fennimore Mutual Tel. Co.	Per cent to Annaton & Preston Tel. Co.
Lancaster & Fennimore	7 cts.	70	30	.....
" " Stitzer	5 "	60	.....	40
" " Preston	7 "	65	.....	35
Fennimore & Stitzer	5 "	20	40	40
" " Preston	5 "	10	40	50
Stitzer & Preston	5 "	10	.....	90

Providing accurate records of calls over these lines are kept by all companies concerned for six months following the adoption of this rate schedule, the above division of toll may be considerably simplified.

It is recommended that the Annaton and Preston Telephone Company cut in two and terminate at Preston its full metallic line which is connected onto the so-called "Fennimore lines" and now extends through Preston to Montfort.

IT IS FURTHER ORDERED, That, provided the above authorized schedule of toll rates is placed in effect on the trunk lines between Lancaster and Fennimore, the Annaton and Preston Telephone Company may, at its option, connect its Stitzer exchange to the grounded trunk line of the Farmers' Telephone Company running from Lancaster to Fennimore.

IT IS FURTHER ORDERED, That the Farmers' Telephone Company proceed to make full metallic its half of the trunk line between Platteville and Lancaster, construction on same to begin as soon as the Platteville, Rewey and Ellenboro Telephone Company shall have agreed to build its half of the line, and upon the completion of the work of making this line full metallic, the present free service shall be suspended and a toll charge of 7 cts. per call substituted. The total amount of revenue from this line shall be divided equally between the two companies unless they shall agree to some other basis of division.

IT IS FURTHER ORDERED, That the applicant be and hereby is authorized upon the adoption of this schedule to place on separate lines all telephones which are located within the city or village limits and are now connected to rural lines running directly into an exchange belonging entirely to the applicant.

IT IS FURTHER ORDERED, That the charge for calls after 9 p. m. at those exchanges where additional charges are now made for such service shall not exceed 15 cts. per call.

IT IS FURTHER ORDERED, That the above rate schedule may be adopted at such time as such changes in management and organization, including changes in accounting methods and procedure, are made as meet the requirements of the Commission, but no part of the schedule shall be adopted unless the entire schedule is adopted.

If the above rate schedule is not adopted as outlined, the rate for switching service for foreign lines shall be as follows:

1. Telephones on lines connecting with a second exchange, $1.00 per phone per year.

2. Telephones on lines not connecting with a second exchange, $1.50 per phone per year.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE USE OF SILENT NUMBERS BY THE WISCONSIN TELEPHONE COMPANY IN THE CITY OF MILWAUKEE.

Submitted July 21, 1913. Decided Jan. 9, 1914.

The Commission, on its own motion, investigated the use of the so-called "silent number phones" by the Wis. Tel. Co. in Milwaukee. The numbers of such telephones are not published in the directory and the usual practice of the company is not to connect other parties with the silent number telephone unless the subscriber having the telephone directs the operator to make the connection. It is alleged in the informal complaint which led to the present investigation that this practice constitutes an unjust discrimination against subscribers who are thus refused connection.

The contention of the complainant that his contract with the telephone company entitles him to connection with every telephone which can be reached through the Milwaukee exchange cannot be sustained. The contract in question provides that such connection shall be given subject to the rules and regulations of the telephone company and provision is made in the regulations of the company for the silent number service.

Sec. 1791—a of the statutes, which makes it the duty of every telephone company to connect the telephone of any subscriber, upon request of that subscriber, with the telephone of any other subscriber, without regard to the character of the messages to be transmitted, provided they are not obscene or profane, is in conflict with the Public Utilities Law, which was enacted subsequently, and must therefore be regarded as having been repealed by the latter which merely provides that "every public utility is required to furnish reasonably adequate service and facilities". Sec. 1797m—3.

Held: The maintenance of silent number service cannot be regarded as an unjust discrimination on the part of the telephone company and there is no other ground upon which the practice can be condemned. It is true that there is an element of discrimination in the action of the individual who has the silent number service in giving his number to his friends or acquaintances and withholding it from the general public, but this is a matter which is left to the discretion of the individual.

Mr. B. O. Fox, of the city of Milwaukee, complained to the Commission of the rules and regulations of the Wisconsin Telephone Company permitting subscribers to have telephones without publishing the number of the telephones in the telephone directory. Such telephones are known as "silent number phones."

After a preliminary investigation of the complaint, the Com-

mission deemed it of sufficient general importance to order an investigation upon its own motion. The matter came on for hearing on July 21, 1913. The complainant was represented by *Charles E. Hammersley,* his attorney, and the respondent by *H. O. Seymour* and *J. F. Krizek.*

It appears from the testimony that there are approximately 143 silent number telephones in use in the city of Milwaukee. The practice of the company with regard to these silent number telephones depends to some extent upon the wishes of the subscriber taking this class of service. Generally the practice is for the operator, in case a party having a silent number telephone is called for by name, to inform the party calling that there is no telephone in the name of the party called. As far as the records in the possession of the regular operating force are concerned, this is a correct statement, because this force has no record of the silent number telephones. The chief operator, however, has a record of the numbers of all these silent number telephones.

If the party calling, after having been notified by the operator that the party called has no telephone, calls for the chief operator, the chief operator informs him that the telephone called has a silent number, and that the party having the telephone does not wish to be called. If the party calling states that the message is very important, the chief operator will get into communication with the silent number telephone, and find out if the party called wishes to talk. If the party called expresses his willingness to talk, the connection is made. If not, the connection is refused. In some cases, however, persons having the silent number service have expressed a wish not to be called under any conditions by anyone who does not know the number of their telephone. In such cases the chief operator, in case the matter comes before her, informs the party calling that the connection can not be made under any circumstances.

The silent number telephone service appears to be in no way different from the regular telephone service except that the telephone is not listed in the directory, and that the telephone company will not give out the number to any one desiring it. It is the contention of the complainant that this class of service constitutes an unjust discrimination. He contends that his contract with the company gives him the right to connect with every telephone which can be reached through the Milwaukee exchange.

The contract referred to, however, contains a provision that the subscriber shall have such connection subject to the rules and regulations of the telephone company which, in turn, make provision for the silent number service.

The question then appears to be one of the reasonableness of the rules and regulations of the company rather than a question involving the contract between the company and the subscribers. This service is furnished to a class of people who do not wish to be called except by certain persons to whom they give their telephone number. If the party having the silent number service has given his number to only a few persons whom he is willing to have able to call him, and has thereby expressed his wish that no one else upon the system shall be able to call him, it does not seem that the telephone company is discriminating in letting him have this service.

The objection, if at all valid, must rest upon other grounds than that of discrimination of the company. With a better show of reason it has been contended that such service transgresses the fundamental relation existing between the patrons of the telephone exchange. Such an exchange renders a community service, and its value depends upon the number and coöperation of its patrons. Also the efficiency of the service depends as much upon the users of the telephones as upon the company. Under the circumstances it is claimed that a special service which enables the subscriber to obtain connection with the telephones of all his co-subscribers, and to deny his co-subscribers connection with his telephone is not consistent either with the public duty of the utility or the duty assumed by the subscriber on becoming a member of the exchange. While it may be conceded that there is some merit in this contention, and that it is at least not without a theoretical basis, yet as a practical question we fail to see how such duty of a subscriber, if at all existing, can be enforced, or how any subscriber can be prejudiced by the self-imposed limitation of another subscriber's service. Whether in the presence of each other or at the ends of a telephone line, men may refuse to speak to each other. Because one does not wish to speak with a particular person by telephone does not seem to be a valid reason for refusing him the privilege of thus speaking to those with whom he does desire to communicate. One has no right to impose a conversation upon another against his will, and no one

should be penalized because of his refusal to submit to such an imposition.

There may also be a personal side to the question, and there may be cases where people are in a public calling where they should permit themselves to be reached, but if they do not choose to permit themselves to be called by any subscriber of the exchange, it can hardly be urged that the telephone company is discriminating. If those parties having silent number service should disconnect their telephones entirely, as some of them probably would do if they had to permit anyone to call their telephones, the general body of telephone subscribers would be in the same position relative to calling these subscribers as they were when the silent number telephone was in use. If a non-subscriber will take telephone service only on condition that he has a silent number, it is hard to see where this discriminates against the general body of subscribers. The only possible discrimination arises from an act of the subscriber himself in giving his number to certain parties and withholding it from the general body of telephone users, but it is hardly to be charged that this is a discrimination for which the telephone company should be held responsible when the telephone company furnishes silent number service only at the express demand of the subscriber.

If there is a discrimination between the party who is able to call the silent number telephone and the party who is not able to call it, it is almost as much a discrimination due to the subscriber having the silent number telephone as would be the discrimination which would arise if all the telephone users could call that subscriber's telephone and he should then refuse to talk to those to whom he did not wish to speak. Practically, the subscriber having silent number service makes the telephone company his agent to tell other telephone subscribers that he does not wish to be called by them. As far as the service which these other subscribers are able to receive is concerned, the situation is practically the same as if the telephone company should ring the telephone desired and that subscriber should then refuse to talk. The only advantage which the calling subscriber would have in this latter case would be the satisfaction of placing the responsibility for refusal to talk a little more directly upon the party called.

It is contended in opposition to the practice of furnishing the silent number telephone that a party connecting to a telephone

system should become part of that system in exactly the same way as every other party does. This does not seem entirely logical. Those persons whose names appear in the telephone directory thereby advertise their willingness to be called on the telephone. The failure of their names to appear in the directory would probably cause them as much inconvenience as would be caused by the insertion of the silent number telephones in the directory to the parties who have such telephones. The annoyance connected with the regular telephone service might easily become so great as to practically compel patrons to discontinue service entirely. Because a patron wishes to be free from the annoyance which would result from permitting anyone to call his number, it does not necessarily follow that he should be deprived of telephone service altogether. Yet if the silent number practice is abolished, he will have three possible courses to follow: first, discontinue service entirely; second, take the regular class of service and permit anyone wishing to do so to call his telephone; third, throttle the bell on the telephone or locate the telephone in such a way that *no* incoming call can be received. The right of the subscriber to have his telephone so located that he could not hear the bell could not well be denied by other subscribers. If, instead of changing the location of the telephone, he instructs the telephone company not to call that telephone, the situation is not materially different, with the single exception that parties to whom he gives the number are able to call him, which they would not be able to do if the bell were throttled or the telephone so located that no ring could be heard.

The whole question, then, appears to be one of whether the action of the individual who has the silent number service in giving his number to his friends or acquaintances and withholding it from the general public, causes a discrimination by reason of which the telephone company should be ordered to refuse the silent number service. There is some element of discrimination here, but it seems to be rather a case in which the individual may determine for himself the parties whom he wishes to have call him, just as he would determine for himself with what parties he would speak if everyone could call him. The telephone company acts as his agent in carrying out his wishes, and in so doing, it does not deprive other subscribers of any service of which they would not be deprived if the individual having the silent number service were to discontinue the tele-

phone service entirely, or were to so locate his telephone that he would not get any incoming calls.

It is further contended by the complainant that sec. 1791—a of the statutes imposes upon the company the duty of furnishing connection with the telephone of every person, firm or corporation having a telephone connected with the exchange. The statute reads as follows:

"It shall be the duty of every telephone company, or person, firm or corporation engaged in the business of supplying the public with telephones and telephonic service or operating a telephone exchange to receive and transmit without discrimination messages from and for any other company, person or persons, upon tender or payment of the usual or customary charges therefor; and upon such payment or tender of the usual or customary rental sum it shall be the duty of every telephone company, person, firm or corporation engaged in the business of leasing telephones to the public or supplying with telephones and telephonic service or operating a telephone exchange to furnish, without unreasonable delay or without discrimination, and without any further or additional charge to the person, firm or corporation applying for the same, including all telegraph companies or other telephone companies, a telephone or telephones with all the proper or necessary fixtures, as well as connection with the central office or telephone exchange, if desired, and to connect the telephone of such person, firm or corporation with the telephone of any other person, firm or corporation having a connection with the same or a connecting exchange or central office, whenever requested to do so, without regard to the character of the messages to be transmitted, provided they are not obscene or profane; and every person or corporation neglecting or refusing to comply with any of the provisions of this section shall forfeit not less than twenty-five dollars nor more than one hundred dollars for each and every day such neglect or refusal shall continue, one-half of which sum shall go to the use of the person or corporation prosecuting therefor. (1882 c. 196; Ann. Stats. 1889 s. 1791a; 1893 c. 236; Stats. 1898 s. 1791a.)"

This statute is probably little more than declaratory of the common law as far as it defines the duty of a telephone company. This statute is in conflict with the Public Utilities Act passed subsequently, and therefore must be regarded as having been repealed by such act. Sec. 1797m—3 of the Public Utilities Act provides that:

"* * * Every public utility is required to furnish reasonably adequate service and facilities. The charge made by any

public utility * * * for any telephone message conveyed or for any service rendered or to be rendered in connection therewith shall be reasonable and just, and every unjust or unreasonable charge for such service is prohibited and declared unlawful."

It is the duty of the Commission to ascertain from all the facts and circumstances presented in any case the reasonableness of any rule or regulation respecting service, and if it shall determine that such rule or regulation is unreasonable it shall change the same or substitute a reasonable rule or regulation in place thereof. Under the circumstances we do not feel that we are at all constrained by a previous statute, even if the same should be applicable to the question in hand, which we seriously doubt, in rendering a judgment which upon the facts presented seems to us just and equitable.

For the reasons given we are unable to find any ground upon which the practice of the company in furnishing silent number telephone service can be condemned.

HEINEMAN LUMBER COMPANY
vs.
WELLS FARGO EXPRESS COMPANY.

Submitted Nov. 11, 1913. Decided Jan. 14, 1914.

The petitioner alleges that the respondent unjustly discriminates against it by refusing to deliver express to it at its offices which are located a few hundred feet beyond the corporate limits of the city of Merrill. The respondent delivers express to any point within the city limits, although these limits extend beyond the free delivery district of the United States post-office department which is fixed by sec. 1798 of the statutes as the minimum area in which express companies must call for and deliver express, but does not extend this service to any person or corporation located outside the city limits.

Held: There must be some limits to the area within which express companies may be required to deliver express and the boundaries of the municipality are most satisfactory for this purpose. *Strauss v. American Exp. Co.* 1909, 3 W. R. C. R. 556. The complaint is dismissed.

The petitioner, a corporation engaged in the lumber business at Merrill, in Lincoln county, alleges in substance that the respondent, the Wells Fargo Express Company, delivers express within five hundred feet of the offices of the petitioner, but refuses to extend its free delivery service to the petitioner's offices. The Commission is therefore asked to require the respondent to deliver express at the offices of the petitioner.

The respondent answers in substance that it calls for and delivers express without charge to and from all points within the corporate limits of the city of Merrill, and to and from all points within the free delivery limits established in the city of Merrill by the post-office department; that the petitioner's offices are located beyond the corporate limits of the city; that pursuant to an agreement with the petitioner it now delivers express for the petitioner at the offices of another corporation located near the corporate limits of the city; that the cost of delivering express matter to the petitioner as prayed for would be greater than the receipts therefrom; that any requirement that the respondent furnish free delivery to the petitioner would be un-

just and discriminatory and that the service maintained by the respondent in the city of Merrill is reasonably adequate.

A hearing was held on November 11, 1913, at the Capitol in Madison. *Miller, Mack & Fairchild,* by *W. F. Adams,* appeared for the respondent. The petitioner was not represented.

The facts in the case, as developed by the testimony and as stipulated by counsel subsequent to the hearing, are as follows. The corporate limits of the city of Merrill extend about two miles from north to south and about four miles from east to west. The office of the Wells Fargo Express Company is situated in the southeast part of the city. The petitioner's offices are located between 300 and 400 feet north of the corporate limits of the city and 4,700 feet distant from the respondent's office. The respondent now delivers express for the petitioner at the offices of the Grandfather Falls Paper Company which is located within the city limits about 1,000 feet distant from the petitioner's offices. Two hundred and ninety feet north of this point is a bridge over the Prairie river 560 feet long, the petitioner's offices being about 150 feet beyond the north end of the bridge. The respondent calls for and delivers express to or from any point within the corporate limits of the city, which enclose an area considerably greater than the free delivery district established by the United States post-office department. Service of this sort is not rendered to any person or corporation beyond the city limits. The respondent submitted a statement of the express business handled by it for the petitioner for seven months (April to October 1913 inclusive) as follows:

Period.	Forwarded.				Received.			
	Intrastate		Interstate.		Intrastate.		Interstate.	
	Shipments.	Charges.	Shipments.	Charges.	Shipments.	Charges.	Shipments.	Charges.
April, May and June	3	$1.30	2	$1.05	13	$17.21	35	$54.70
July	2	.65	2	1.50	16	35.74	14	14.73
August	2	.50	.....	.....	5	5.76	5	5.35
September	.....	.....	.....	.....	5	3.15	3	3.12
October	.....	.....	2	1.00	4	5.22	14	27.68
Total	7	$2.45	6	$3.55	43	$67.08	71	$105.58

The respondent's superintendent testified that it now owns but one delivery wagon in Merrill, and that a slight increase in the

work of delivering would necessitate the employment of draymen at an additional expense.

The question of free delivery limits for express companies was exhaustively discussed by this Commission in *Strauss v. American Exp. Co.* 1909, 3 W. R. C. R. 556. In that case the corporate limits of Milwaukee were fixed as the limits of free delivery for express in that city. The legislature of 1911 enacted a law (ch. 416, laws of 1911, sec. 1798m of the statutes) which requires all express companies to call for and deliver express to and from any point within the free delivery limits fixed by the post-office department in any city. In the present case the respondent has adopted the corporate limits of the city as the limits of its express delivery, and thus the service is somewhat in excess of the minimum prescribed by statute.

The petitioner claims that it is discriminated against in that the distance from the respondent's office to the petitioner's office is less than the distance from the respondent's office to certain sections of the city. Considerations of length of haul are obviously given little weight in the statute above referred to. The free delivery limits of the postal service in Merrill, for example, are even more irregular than the corporate limits of the city, and in no sense conform to the geographical equality of distance from the express office insisted upon by the petitioner. There must be some limits to the service in question, and these limits, in the very nature of the case, must be somewhat arbitrary, and must impose a seeming hardship upon those individuals whose business or residences are located just beyond the limits. The direct benefits of a city do not extend beyond its boundaries, —nor do the costs of maintaining its government fall upon business located outside of the city. The boundaries of the municipality are therefore the most satisfactory limits of express delivery service. This view was expressed in *Strauss v. American Exp. Co.* referred to above, as follows:

"While it is true that such inequalities of service cannot be entirely eliminated under all circumstances, yet they can be justified, according to our view of the matter, only where natural limits, such as the boundary lines of municipalities, are adopted as delivery service limits."

IT IS THEREFORE ORDERED, That the complaint herein be and the same is hereby dismissed.

EAGLE TELEPHONE COMPANY

vs.

STATE LONG DISTANCE TELEPHONE COMPANY,
WISCONSIN TELEPHONE COMPANY.

Submitted July 22, 1913. Decided Jan. 14, 1914.

The petitioner alleges that the physical connection maintained prior to July 1, 1913, between its telephone system in the vicinity of Lauderdale Lake and the Elkhorn exchange of the State Long Distance Tel. Co. is required by public convenience and necessity and asks that the Commission require physical connection to be restored and prescribe the conditions under which such connection shall be made. Both the petitioner and the State Long Distance Tel. Co. are sub-licensees of the Wis. Tel. Co., with which they have connecting agreements, and the Wis. Tel. Co. is therefore made a party to the present proceeding. The respondent State Long Distance Tel. Co. denies that the physical connection desired by the petitioner is required by public convenience and necessity, alleges that public convenience and necessity will be best served by allowing the said respondent to extend its lines so that telephone subscribers in the vicinity of Lauderdale Lake may be directly connected with its exchange at Elkhorn and asks that it be permitted to make such extensions of its lines. The said respondent further asks that if a physical connection is ordered, the point of connection be made where the two systems come together midway between the village of East Troy and the city of Elkhorn and that the terms and conditions, the rate of toll and the division of the revenue from the tolls be fixed in the order. The physical connection formerly maintained was severed on July 1, 1913, the State Long Distance Tel. Co. alleging that the petitioner had violated the terms of the contract for physical connection by connecting the subscribers served under the contract with the petitioner's La Grange exchange. Since July 1, 1913, these subscribers have been obliged to reach Elkhorn indirectly through the La Grange central, which is merely a rural exchange, and over a toll line owned in part by the Eagle Tel. Co. and in part by the Wis. Tel. Co., and complaint is made of the service rendered. The subscribers at Lauderdale Lake, who are for the most part summer residents from Chicago, use their telephones chiefly for communication with Elkhorn and Chicago, and receive slight benefit, if any, from their connection with La Grange. Messages for Chicago sent through the La Grange central go by a less direct route than those sent by way of Elkhorn.

There can be no doubt that the extension which the State Long Distance Tel. Co. proposes to make of its lines would result in more convenient service for the subscribers affected than would the physical connection desired by the petitioner or the toll line routing used at present. It is necessary, however,

under ch. 610, laws of 1913, before authorizing the extension to determine whether the existing service is adequate, and if not, whether it can be made adequate by establishing physical connection or by other means.

Held: The subscribers of the petitioner at Lauderdale Lake cannot be adequately served by the petitioner through its La Grange exchange, either under the existing arrangements or with a physical connection between the two companies, and it is regarded as desirable, in the interest of good telephone service, that the lines of the State Long Distance Tel. Co. be extended for a distance of about one and one-half miles north of its present terminus at the Sterlingworth Hotel, connecting with such subscribers as desire the direct service of the Elkhorn exchange.

The petition is dismissed.

The Eagle Telephone Company, a corporation operating a system of telephone lines in Walworth and Waukesha counties and having its principal office at Eagle, Wis., alleges that on April 21, 1911, it entered into a contract with the respondent, the State Long Distance Telephone Company, under the terms of which the petitioner allowed to connect twenty-four of its subscribers in the vicinity of Lauderdale Lake with the Elkhorn exchange of the State Long Distance Telephone Company, subject to certain conditions set forth, and that notice was served upon petitioner on May 21, 1913, by the said respondent that the contract was to be terminated on July 1, 1913. It further alleges that public convenience and necessity require physical connections between the petitioner's telephone system and that of the State Long Distance Telephone Company at Elkhorn and the toll lines operated by each of the companies. The petitioner states that both the State Long Distance Telephone Company and the Eagle Telephone Company are sub-licensees of the Wisconsin Telephone Company, having connecting agreements with it, and that for this reason the latter company is made a party to this proceeding. The Commission is therefore asked to require the physical connection of the telephone systems in question, and to prescribe the conditions of such connection.

The respondent State Long Distance Telephone Company, in its answer, alleges in substance that on May 17, 1913, prior to its termination of the contract between it and the Eagle Telephone Company, the latter company, in violation of the contract, so arranged its system as to take all of its subscribers connected under the contract into its La Grange central. It further alleges that public convenience and necessity do not require the physical connections prayed for by the petitioner, but that, on

the contrary, the public convenience and necessity will be best served by allowing the respondent telephone company to extend its lines so that telephone subscribers in the vicinity of Lauderdale Lake may be directly connected with its exchange at Elkhorn. It therefore asks that the State Long Distance Telephone Company be allowed to construct and maintain telephone lines in the territory lying north of the Sterlingworth property and adjacent to Lauderdale Lake for the purpose of furnishing telephone service to such persons residing in said territory as desire to have Elkhorn for a central. It further asks that if a physical connection should be ordered, the point of connection be made where the two systems come together midway between the village of East Troy and the city of Elkhorn, and that the terms and conditions, the rate of toll and the division thereof be fixed in the order.

The matter was heard at Madison, on July 22, 1913. *E. D. Walsh* appeared for the petitioner, *Page & Ferris,* by *Jay W. Page,* for the State Long Distance Telephone Company, and *J. F. Krizek* for the Wisconsin Telephone Company.

At the hearing it was stipulated by counsel for all of the parties in interest that the question of the public convenience and necessity of the of the proposed extension of the lines of the State Long Distance Telephone Company should be placed before the Commission in the present proceeding, all notice of hearing and other legal requirements precedent to such present consideration being waived and the existing arrangements to be maintained until a decision is rendered.

It appears from the testimony that the service rendered at Lauderdale Lake under the terms of the contract referred to in the pleadings was entirely satisfactory to the subscribers affected thereby, and a restoration of those conditions is apparently what the subscribers desire. However, both companies objected at the hearing to entering again into a similar contract. In view of the fact that the former arrangement under the contract is not likely to be restored by the voluntary action of the telephone companies, the question for decision is whether public convenience and necessity require the extension of the respondent's telephone lines into territory now occupied by the Eagle Telephone Company, or, if such an extension is not justified, whether a physical connection between the systems of the two companies is necessary.

The testimony shows that under the operation of the contract referred to in the petition about 20 subscribers of the Eagle Telephone Company, residing near Lauderdale Lake, were given direct connection with the Elkhorn exchange of the State Long Distance Telephone Company by means of three metallic circuits, which were maintained by the Eagle Telephone company to the limits of the city of Elkhorn, and from that point to its exchange by the State Long Distance Telephone Company. For this service, as a rental or switching charge, the petitioner paid to the connecting company $3 per year for each subscriber. Prior to notice of the termination of this contract by the State Long Distance Telephone Company the petitioner connected the subscribers served under this contract with its La Grange exchange. Physical connection between the lines of the two companies was severed on July 1, 1913. Since that date these subscribers have been obliged to reach Elkhorn indirectly through the La Grange central and over a toll line owned in part by the Eagle Telephone Company and in part by the Wisconsin Telephone Company. The toll over this line is 15 cts. per call of two minutes, which is divided equally between the two companies. Pending the conclusion of this proceeding the Eagle Telephone Company has assumed the toll costs of service between the subscribers at Lauderdale Lake and Elkhorn. To talk to a party in Elkhorn under the present arrangements the subscriber calls La Grange and gives the name of the party with whom he wishes to be connected. The operator at La Grange then calls the Elkhorn operator who puts the party on the line after which the La Grange operator connects with the subscriber who made the call. Under the former arrangement these subscribers called the Elkhorn exchange directly.

The Elkhorn exchange is in operation night and day and the service rendered is in conformity with the usual city standards. The La Grange exchange, on the contrary, is a typical rural exchange which is closed for a part of the night and at which the operator has duties other than those of the switchboard. Considerable complaint was made by witnesses that the service of the La Grange exchange is poorer than the usual rural service.

It is clear from the testimony that the subscribers at Lauderdale Lake, who are for the most part summer residents having homes in Chicago, use their telephones chiefly for communication with Elkhorn and Chicago. They trade at Elkhorn and use the

railway facilities there. On the other hand it appears that these subscribers receive but slight benefit, if any, from their connection with the La Grange exchange. There is no village at La Grange and the exchange serves only the residents of a rural district. Messages for Chicago through the La Grange central go by the way of Eagle and Milwaukee, which is less direct than the connections afforded at Elkhorn.

There can be no doubt that the individuals living in the territory into which the State Long Distance Telephone Company desires to extend its lines could, by virtue of their personal and business connections at Elkhorn and Chicago, be more conveniently served with the proposed extension than by physical connection of the two systems, or by the use of a toll line as at present. However, the proposed extension might result in a duplication of lines, and would probably deprive the petitioner of a large proportion of its subscribers in this district, thereby impairing the earning power of its equipment. In previous decisions the Commission has held that it is the intent of ch. 610 of the laws of 1913 that no such duplication should be allowed, unless it is clearly shown that the company already rendering service in the district in question is unable to render adequate service at reasonable rates. (*In re Proposed Extension of the Line of the Clinton Tel. Co.* 1913, 13 W. R. C. R. 166, and *In re Proposed Extension of the Line of the Ettrick Tel. Co.* 1913, 12 W. R. C. R. 744, 746. It is therefore necessary to determine whether the existing service is adequate, and if not, whether it is possible to render it adequate by establishing physical connection or by other means.

Under the existing arrangement the subscribers at Lauderdale Lake whose chief telephone business is with Elkhorn are subjected to the delays incident to the use of a toll line, and will be obliged to pay a toll rate of 15 cts. for each two minute conversation. Even if the service of the La Grange exchange were perfect, it would be unreasonable to subject these subscribers continually to this delay and expense for what is substantially local service.

Conditions would be much improved by a physical connection between the two companies, but it is questionable whether it is possible for the Eagle Telephone Company to provide, through its La Grange exchange, a class of service which can be regarded as adequate for the subscribers at Lauderdale Lake. These subscribers are accustomed to the use of a city exchange, and their

business is almost wholly with Elkhorn or Chicago. They formerly had a direct connection with the Elkhorn exchange and were in an identical position, in respect to service, with that occupied by subscribers of the State Long Distance Telephone Company. They constitute, as it were, an integral part of Elkhorn, although located geographically at some distance from that city. Adequate service for such group of patrons must be substantially city service, and to require such service to be rendered by the petitioner through its La Grange exchange would probably place an unreasonable burden upon its rural subscribers for facilities which are not required by their circumstances.

It is our judgment, therefore, that the subscribers of the Eagle Telephone Company at Lauderdale Lake who formerly enjoyed a direct connection with the Elkhorn exchange of the State Long Distance Telephone Company cannot be adequately served by the Eagle Telephone Company through its La Grange exchange, either under the existing arrangements or with a physical connection between the two companies; and we regard it as desirable, in the interest of good telephone service, that the lines of the State Long Distance Telephone Company be extended for a distance of about one and one-half miles north of its present terminus at the Sterlingworth Hotel, connecting with such subscribers as desire the direct service of the Elkhorn exchange. The petition herein, insofar as it applies to the matter of physical connection between the lines of the two companies for the benefit of the subscribers in question, should accordingly be dismissed.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

CERTAIN FREEHOLDERS, TAXPAYERS AND RESIDENTS OF DODGE COUNTY, AND MORE PARTICULARLY OF THE CITIES OF HORICON AND MAYVILLE, WISCONSIN,

vs.

G. A. McWILLIAMS, SUCCESSOR TO THE ROCK RIVER VALLEY LAND COMPANY.

Submitted Oct. 10, 1913. Decided Jan. 16, 1914.

The petitioners allege that the respondent, by dredging the Rock river in Dodge county below township 13, is changing the course, lowering the level and destroying the headwaters and navigation of the river and draining out the lake which forms its headwaters, thereby destroying the hunting, boating and fishing on the river and causing the river to become stagnant, and that all of these acts are unlawful and the cause of great injury and damage to the petitioners. The respondent is engaged in constructing a system of ditches for the purpose of draining the Horicon Marsh and, in furtherance of his plan, is deepening, widening and straightening the channel of the Rock river in the city of Horicon under authority granted in an ordinance passed by the city council. Investigations were made on the ground, by engineers employed by the Commission, for the purpose of ascertaining the present and probable future effects of the work undertaken by the respondent.

The Commission has power to regulate all river improvements so as to conserve all public rights in the rivers, promote the improvement of navigation and protect life, health and property, but has no jurisdiction over the authorization of contractors to do work or over their dealings with private parties.

Held: 1. The drainage work in question will insure deeper water in the river at Horicon at all times and thereby improve navigation. 2. Although the current in the river at Horicon may become extremely slow at times no disagreeable or unsanitary condition will result. 3. In view of the benefits which will accrue through the increased farming area tributary to Horicon and Mayville, the fact that the river may be made unsightly at some points in Horicon and the fact that the fishing and hunting interest on the marsh will be damaged, will not justify the condemnation of the project undertaken by the respondent as injurious to public rights or public safety.

The petition is therefore dismissed.

The petitioners allege that they are freeholders, taxpayers and residents of Dodge county, Wis., and more particularly of the cities of Horicon and Mayville; that the Rock River Valley Land Company is a foreign corporation, organized and existing under and by virtue of the laws of the state of Illinois, and having as its principal business the draining of swamp lands; that Rock

river below township 13 is a navigable stream; that G. A. McWilliams, as successor in interest to the said Rock River Valley Land Company, is now engaged and has for some time last past been engaged in dredging the said river below township 13; that he is changing the course, lowering the level, destroying the headwaters and navigation of said river; that he is draining out the lake which forms the headwaters of said river, thereby destroying the hunting, boating and fishing on said river, and causing the river to become stagnant; that all of said acts are unlawful and result in great injury and damage to the petitioners.

G. A. McWilliams, answering the petition herein, sets forth that the Rock river, as high up as township 14, range 15, is declared navigable by statute, and alleges that said river below said township 14 and north of the southern limits of the city of Horicon, Wis., never was navigable in fact for any purpose whatsoever during the usual and ordinary stages of water and otherwise than by hunting boats during high water; that he and fifty other individuals are the owners of a large tract of swamp land known as Horicon Marsh, and that they as such individuals are now engaged and have for about two years last past been engaged in the deepening of ditches through and upon said swamp lands so owned by them for the purpose of draining the same and putting the same under cultivation, and that they as such individuals for the purposes above set forth are now, with the consent and permission of the city of Horicon and of its common council, engaged in deepening and widening the channel of the Rock river through the city of Horicon in accordance with certain plans and specifications agreed upon by the said owners and said city. All other allegations of the petition material to the investigation he denies.

The matter came on for hearing on October 10, 1913. *E. G. Bennett* appeared on his own behalf and on behalf of the other petitioners. The respondent appeared by *Kearny, Thompson & Myers,* his attorneys.

The testimony in this case is extensive, but the facts are few and simple. G. A. McWilliams is now engaged and for the past two years has been engaged in constructing a system of ditches for the purpose of draining the Horicon Marsh. The area of the marsh is between forty-five and fifty square miles, and the plan is to dredge the main channel through the marsh together with a number of laterals running into it on the sides and to deepen,

widen and straighten the channel of the Rock river in the city of Horicon. Authority for the work in Horicon was granted in an ordinance passed by the city council. The validity of the ordinance has been challenged, but the question raised is immaterial so far as matters here under consideration are concerned.

During the progress of the drainage work an informal complaint was made to the Commission to the effect that the work was being performed without proper authority and furthermore that it was an injury to public welfare. This Commission has power to regulate all river improvements so as to conserve all public rights in such waters, promote the improvement of navigation and protect life, health and property, but has no jurisdiction over the authorization of contractors to do work or over their dealings with private parties.

On August 1, 1913, an investigation was made by an engineer of the Commission who reported that the complaint mentioned was not well founded; whereupon the petition dated August 6, 1913, now before us, and containing three-hundred signatures, was filed. Upon the receipt of this petition and prior to the hearing the Commission employed Mr. Seastone of Meade & Seastone, consulting engineers, to examine into the matter and to report the result of such examination to the Commission. Accordingly on August 20, 1913, he submitted a report. This report was unfavorable to the contention of the petitioners.

The report of the Commission's engineer shows that the drainage plans in the city of Horicon provided for a submerged dam near the railway bridge of the Chicago, Milwaukee and St. Paul Railway Company which would insure a depth of water of three feet in the river through the main part of the city at all times of the year. This report also expresses the opinion that the dredging will improve the river channel and the river banks and that the majority of the citizens of Horicon are in favor of the project.

Mr. Seastone's report agrees with that of the Commission's engineer as to the improvement of the river channel and banks, and, in addition, states that the back water from a dam at Hustisford extends up stream as far as Horicon, so that the level of the river at Horicon can not be reduced to any extent. This report also devotes considerable attention to the effect of the drainage work on the stream flow at Horicon and states in conclusion that both the minimum flow and flood flow will probably

be increased, but that the flood flow will not be increased to a dangerous extent. Upon the hearing a number of witnesses produced upon the part of the respondent sustained the reports of both engineers mentioned. Prof. L. S. Smith, engineer for the respondent, testified that the conditions and navigability of the river channel at Horicon would be improved and that there would be more water flowing at all times of the year than ever before. Other witnesses also brought out the facts that the river would be improved, that a large area of marsh land would be made useful for growing crops, that fishing had improved since drainage work had started, that conditions unfavorable to hunting would probably be created, that sewage would not be run into the river, and that the material dredged from the river bottom in Horicon is an unsuitable soil for growing grass or other vegetation.

Mr. Seastone and Prof. Smith both state that the minimum flow of the river at Horicon will be increased. This question involves the study of the effect on stream flow of the reduced marsh area subjected to evaporation of changed drainage conditions due to lowering the ground water level in the marsh and the study of the redistribution of run-off through the different periods of the year due to the ditching, so that it would appear that the results of these factors and their correlations can not be foretold with certainty. It should be noted that even though the minimum flow becomes larger than heretofore, the increase in the width and depth of the channel through Horicon will reduce the velocity of the stream so that the current will probably be as slow or slower than in previous years. It will always be a little slow, however, and inasmuch as sewage which has heretofore flowed into the river will be disposed of in another way, disagreeable or unsanitary conditions are not likely to result. The material excavated from the river channel in Horicon is being deposited along the shores of the stream in piles and will have to be leveled off and covered with good soil in order that the banks of the river may be suitable for growing grass. Where this is not done the banks will present an unsightly appearance. Some of the photographs submitted at the hearing indicate that there are places in Horicon where the material excavated from the river will not be sufficient to make sound banks, but will form only a ridge of mud on one or both sides of the channel separated from the shore line by a strip of shallow water or marsh.

Undoubtedly the conversion of certain marsh into farm land will do away with duck hunting, and although fishing has improved since drainage work has started, it is likely that this is a temporary condition only and will disappear when the breeding places in the wet marsh are done away with and only a system of canals and ditches is left.

It appears to be well established that the marsh is covered with good soil suitable for raising hay and other crops, and that all territory which can be drained will be a valuable addition to the farm lands tributary to Horicon. It will probably take a few years before these lands will come into requisition for the raising of cereals. They will, however, with proper care and attention, become capable, because of the richness of the soil, of producing many of the crops which can be raised in that territory.

The conclusion of our investigation has led to the following findings:

1. That the drainage work will insure deeper water in the Rock river at Horicon at all times and thereby improve navigation.

2. That although the current in the Rock river at Horicon may become extremely slow at times no disagreeable or unsanitary condition will result.

3. That in view of the benefits which will accrue through the increased farming area tributary to Horicon and Mayville, the fact that the river may be made unsightly at some points in Horicon and the fishing and hunting interest on the marsh will be damaged, will not justify the condemnation of the project undertaken by the respondent as injurious to public rights or public safety.

For the reasons stated, the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

TOWN OF MADISON

vs.

ILLINOIS CENTRAL RAILROAD COMPANY.

Submitted July 30, 1913. Decided Jan. 16, 1914.

The petitioner alleges, in three separate complaints, that the Tillotson crossing, the Tierman crossing and the Summit crossing on the I. C. R. R. in the town of Madison are dangerous.

Held: The crossings are dangerous. The railroad company is ordered:

(1) to protect the Tillotson crossing by flaring as specified the ends of the cut in which the railroad lies and by grading to its full width that portion of the highway lying within its right of way, providing proper drainage facilities;

(2) to install and maintain at the Tierman crossing an electric bell with illuminated sign, plans to be approved; and

(3) to remove the waste material from the banks of the cut in which its track lies at the Summit crossing for the entire length of the cut so that the elevation of the land within its right of way shall not be greater than the elevation of the adjacent ground on the same side of the right of way.

The petitioner, a regularly organized town in Dane county, alleges, in three separate complaints, that three highway crossings on the respondent's line in the town of Madison are dangerous to public travel. They are designated as follows:

1. Tillotson crossing, three miles southwest of Madison.
2. Tierman crossing, 800 feet south of Summit.
3. Summit crossing, one-fourth of a mile north of Summit.

The Commission is therefore asked to take such action as it deems proper in the premises.

The respondent, in its separate answers, denies that any of the three crossings designated in the complaints are unreasonably dangerous and asks that the complaints be dismissed.

These petitions were heard at Madison on July 30, 1913. *Fay Hammersley* appeared for the petitioner and *Jones & Schubring*, by *E. J. B. Schubring*, for the respondent.

Tillotson Crossing.

The testimony shows that at this crossing the highway intersects the north and south single track line of the Illinois Central

Railroad Company at right angles. The railroad lies in a cut, the banks of which are ten or twelve feet in height, and the highway descends to the tracks from both sides. Weeds grow on the banks in summer and snow accumulates there in the winter, thus increasing the obstruction of the view. A rail fence in the northwest angle further limits the view. From the east highway approach a traveler must be within twenty-five feet of the track to see a train in either direction. From the west approach a train can be seen to the north when a traveler is within one hundred feet of the track, but the view to the south is obscured until one is within twenty-five feet of the track. The limits of vision are reported by our engineer as follows:

Distance of point of observation in highway from track.	View north.	View south.
West 50 feet	100 feet	100 feet
" 100 "	30 "	30 "
" 200 "	30 "	3,000 "
" 300 "	60 "	600 "
East 50 "	100 "	60 "
" 100 "	60 "	20 "
" 200 "	150 "	20 "
" 300 "	600 "	15 "

The highway existed as a private road before the railroad was built, but was not formally opened as a public road until about 1906. It is a crossroad and is used as a short route to Middleton. Witnesses estimated that about twenty-five crossings are made on the highway, including automobiles, light rigs, farm wagons and motorcycles. Several school children use the crossing on their way to and from school. There are eight regular train movements over this crossing. A serious accident and a number of narrow escapes were reported.

The Tierman Crossing.

From the testimony it appears that at the Tierman crossing the respondent's single track line intersects the Madison–Verona road which runs northeast and southwest at an angle of about 50 degrees. Immediately southwest of the crossing the Madison–Verona road connects with an east and west town line road which runs to Middleton and Pine Bluff. South of the crossing the track lies in a cut which is about fifteen feet deep. South of the highway and east of the tracks is a row of maple trees on

privately owned land which add to the obstruction of the view. To the north the view of approaching trains is comparatively unobstructed from either highway approach. Witnesses stated that a traveler must be very close to the tracks on either approach before he can see a train to the south. The limits of vision are reported by our engineer as follows:

Distance of point of observation in highway from track.	View north	View south.
Northeast 50 feet	1,000 feet.	600 feet
" 100 "	800 "	300 "
" 200 "	½ mile	200 "
" 300 "	½ "	200 "
Southwest 50 "	½ "	1,000 "
" 100 "	½ "	500 "
" 200 "	½ "	250 "
" 300 "	½ "	175 "

Witnesses estimated the traffic over this highway at about 150 crossings a day, about a third of the vehicles passing being automobiles. A considerable number of children are said to use this crossing on their way to and from school. There are eight regular train movements at this point. Several narrow escapes from accident are reported.

The Summit Crossing.

The testimony shows that at the Summit crossing the north and south single track of the railway intersects an east and west highway approximately at right angles. The highway lies in a cut, the banks of which vary from six to fifteen feet in height. The track curves to the east about four hundred feet north of the crossing. The town chairman testified that on the east highway approach the view of trains to the south is fairly open, but that in all the other angles the view is such that a traveler must be within about twenty-five feet of the track before a train is visible. He said, however, that at a point about six hundred feet west of the track the road is on higher ground and northbound trains may then be seen. The limits of vision are reported by our engineer as follows:

Distance of point of observation in highway from track.	View north.	View south.
West 50 feet	100 feet	300 feet
" 100 "	150 "	200 "
" 200 "	800 "	400 "
" 300 "	800 "	400 "
East 50 "	120 "	800 "
" 100 "	300 "	1,500 "
" 200 "	500 "	½ mile
" 300 "	500 "	½ mile

The highway is a crossroad connecting with a road which leads to Verona and Mineral Point. The normal traffic was estimated to be about fifty crossings a day, including some automobiles. This number is augmented on stock days by about twenty-five stock teams. There are eight regular train movements. A narrow escape was reported. The town chairman complained that the highway is not properly drained.

The respondent's superintendent expressed the opinion that each of the three crossings under consideration can be made reasonably safe by grading away portions of the obstructing banks. He stated that his company would prefer to reduce the speed of all of its trains at these crossings or even bring them to a stop, rather than install electric bells. The town chairman expressed the opinion that bell protection is necessary at each of the three crossings.

As a result of investigation on the ground our engineer recommends that the banks of the cuts at the Tillotson crossing and the Summit crossing be graded in such a way as to give a better view of trains, that the highway within the right of way at the Tillotson crossing be properly widened, graded and drained, that the Summit crossing be properly drained and that an electric bell and light be installed at the Tierman crossing.

In the light of the testimony and of the reports of our engineering staff we find that each of the three crossings considered in these proceedings is unusually dangerous. The position of the company with regard to stopping trains at dangerous crossings has been discussed in a former decision and need not be further referred to here. (*Town of Fitchburg v. I. C. R. Co.* 1913, 13 W. R. C. R. 403.) It is our judgment that the improvements and installations recommended by our engineer will render these crossings reasonably safe under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the respondent, the Illinois Central Railroad Company, flare the ends of the cut at the Tillotson crossing, the flare to be the full width of the railway right of way at the highway lines and to taper out at points not less than one hundred feet north and south of the highway lines, allowing a three foot fence berm, the remainder of the earth obstructions to be removed down to an elevation of not over 3.5 feet above the rail; and grade to its full width that portion of the highway lying within its right of way, providing proper drainage facilities.

2. That the said respondent railroad company install and maintain at the Tierman crossing an automatic electric bell with an illuminated sign for night indication, plans for track circuits to be submitted to the Commission for approval.

3. That the said respondent railroad company remove the waste material from the banks of the cut in which its track lies at the Summit crossing for the entire length of the cut so that the elevation of the land within its right of way shall not be greater than the elevation of the adjacent ground on the same side of the right of way.

The bell and light at the Tierman crossing are to be installed and in operation within four months and the other improvements ordered herein are to be completed within six months.

TOWN OF MONTROSE
vs.
ILLINOIS CENTRAL RAILROAD COMPANY.

Submitted Dec. 5, 1913. Decided Jan. 16, 1914.

The petitioner alleges that a highway crossing, known as Cribbin's crossing, on the I. C. R. R. near Basco station in the town of Montrose, Dane county, is dangerous.

Held: The crossing requires further protection. The respondent is ordered to install an electric bell with illuminated sign, plans to be approved.

The petitioner, a duly organized town in Dane county, alleges in substance that a highway crossing on the respondent's line, located about one and one-fourth miles north of Basco station in the town of Montrose, is dangerous to human life on account of the surrounding physical conditions. The Commission is therefore asked to require the respondent to adequately safeguard this crossing.

The respondent, in its answer, denies that the crossing in question is unreasonably unsafe or dangerous to human life.

A hearing was held at Madison on December 5, 1913, at which *J. T. Lyle* appeared for the petitioner and *Jones & Schubring,* by *E. J. B. Schubring,* for the respondent.

The testimony shows that the crossing in question is known as Cribbin's crossing. The highway runs east and west and the railroad northeast and southwest. The track lies in a cut to the northeast, the crossing being located just at the end of the cut. Timber in the southeast angle of the crossing obstructs the view. There is also a cut to the southwest which begins about thirty rods from the crossing. The town chairman testified that on the west highway approach a traveler must be within twenty feet of the track to see a train to the north. A train from the southwest may be seen emerging from the cut about thirty rods from the crossing by a traveler after he comes within about ten rods of the track. On the east highway approach trains can be seen beyond the cut to the north until one is within ten or fifteen rods

of the track, after which no view is afforded to the north until the traveler is within twenty feet of the track. The view to the south from this approach is cut off by trees up to a point three or four rods distant from the track. The respondent's engineer testified that actual measurement shows the following limits of vision to the north:

Distance of point of observation in highway from track.	View north.	Distance of point of observation in highway from track.	View north.
East 18 feet	500 feet	West 15 feet	500 feet
" 23 "	300 "	" 21 "	300 "
" 25 "	200 "	" 22 "	200 "
" 42 "	100 "	" 50 "	100 "

The highway is the main traveled road from Paoli to Oregon. It is used chiefly by farm traffic, the travel being heaviest from 6 a. m. to 11 a. m. and during May, June and July. The town chairman estimated that about twenty teams a day use the crossing and the town clerk estimated the traffic at twenty-five teams a day. A number of children are obliged to cross at this point on their way to and from school. A narrow escape from accident was reported. The respondent's engineer testified that two passenger trains and two freight trains in each direction are operated over this line.

From the testimony it is very evident that the crossing in question is unusually dangerous, and in our judgment further protection is necessary. In view of the fact that the traffic is relatively light, it is unnecessary to inquire at this time as to the possibility or practicably of effecting a separation of grades. The installation of an electric bell and light should afford the public reasonable protection under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the respondent, the Illinois Central Railroad Company, install and maintain at the highway crossing on its line known as Cribbin's crossing and located about one and one-fourth miles north of Basco, an automatic electric bell with an illuminated sign for night indication, plans for track circuits to be submitted to the Commission for approval.

This installation should be made within four months from the date of this order.

MARY L. KNUTSEN

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 13, 1913. Decided Jan. 16, 1914.

The petitioner asks that the respondent be required to restore a spur track which it formerly maintained at Kingston, Oconto county, and alleges that if the spur track were replaced potatoes from 75 to 100 acres of land and some logs and pulp wood would be shipped over it. The spur was removed in 1912 because, the respondent alleges, the business originating at Kingston was insufficient to warrant the maintenance of the spur and the physical conditions were such as to make the presence of a switch a menace to safe operation. Facilities for shipping carload freight are now provided at Mountain, which is 2.8 miles by rail from Kingston.

Held: The traffic at Kingston is not sufficient to warrant an order granting the prayer of the petitioner. The petition is therefore dismissed.

The petition alleges in substance that the Chicago & North Western Railway Company has removed a spur track which it formerly maintained at Kingston, Oconto county, Wis., and that potatoes from seventy-five to one hundred acres and some logs and pulp wood would be shipped at this point if the spur track were replaced. The Commission is therefore asked to require the respondent to restore this spur track.

The respondent in its answer denies that there is any necessity for a sidetrack at Kingston, and asks that the petition be dismissed.

A hearing was held on October 13, 1913, at Kingston, Wis. The petitioner appeared in her own behalf, and *C. A. Vilas* represented the respondent.

The testimony shows that the railway line was built about 1896, and that the spur track at Kingston was installed at about that time. It was removed in 1912. Sidetrack facilities are now provided at Mountain which is 2.8 miles from Kingston by rail and connected with it by a fair wagon road. There is also a potato warehouse at Mountain. Witnesses testified that if the track were restored, about 5,000 bushels of potatoes from

about eighty acres would be shipped from Kingston, instead of being hauled to Mountain as at present. It was also stated that some logs and pulp wood would be forwarded from Kingston. About 20 per cent of the surrounding country is cleared for agriculture.

The respondent's superintendent testified that the switch was taken out because the business originating there was insufficient to warrant its maintenance, and because the physical conditions are such as to make the presence of a switch a menace to safe operation.

Subsequent to the hearing data were submitted by the company showing all carload shipments from Kingston during the past three years. In that period only twenty-three carloads were shipped. Of these, sixteen carloads of logs were handled in October 1910, six carloads of pulp wood in June 1911, and one carload of cattle in November 1911. No carload shipments were made between November 1911 and the removal of the switch in 1912.

It is evident from the testimony that the carload business which might originate at Kingston would at best be slight. The records of the company show that when the track was taken out, carload traffic had dwindled to a very small amount, and it does not appear that conditions since that time have materially changed. The surrounding country was formerly a timber shipping region, but little timber remains to be cut. Thus shipments originating at Kingston must in the future be largely agricultural. It appears that the chief benefits of the proposed spur track would accrue to a few potato growers who now haul their products from two to five miles to Mountain, where ample facilities for shipping carload freight are provided, and where there is also a potato warehouse. The question of the safety of a spur track at Kingston is not passed upon in this decision, since, in our judgment, the insufficiency of traffic is such that, even though the track were entirely safe, the prayer of the petitioner should not be granted.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

E. P. ROGERS

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Aug. 19, 1913. Decided Jan. 16, 1914.

The petitioner alleges that the station facilities supplied by the respondent at Finley, Juneau county, are inadequate and asks that the respondent be required to install an agent and provide suitable grounds and buildings. The respondent now maintains two small sheds at Finley serving respectively as a shelter for passengers and as a freight room. Persons desiring to secure empty cars at Finley can do so by notifying the agent at Babcock or Necedah by mail. Shippers of less than carload freight have to wait at the station for a local train and help to load their goods on to the cars.

Held: Though the freight and passenger business transacted at Finley does not warrant the establishment of that station as a regular agency, as prayed for by the petitioner, the existing facilities cannot be regarded as adequate. The respondent is therefore ordered to properly repair its freight and passenger sheds at Finley, to employ a competent caretaker who shall have charge of the sheds and see that they are clean and that the passenger room is properly lighted and heated at train times; and to erect a suitable raised platform for loading cream and other articles onto cars, or, at its option, to load such cream and freight.

The petitioner alleges in substance that the station facilities supplied by the Chicago, Milwaukee & St. Paul Railway Company at Finley in Juneau county are inadequate for the freight and passenger traffic which obtains there. The Commission is therefore asked to require the respondent to install an agent and provide suitable grounds and buildings to accommodate the existing traffic.

The respondent in its answer denies that its station facilities at Finley are inadequate, and alleges that the earnings at this station are not sufficient to warrant any further expense for station facilities. It therefore asks the dismissal of the complaint.

A hearing was held at Finley on August 19, 1913, at which the petitioner appeared in his own behalf, and *H. H. Ober* for the respondent.

The testimony shows that the respondent maintains two small sheds at Finley each about ten feet square. One is used as a shelter for passengers, and the other as a freight room. The passenger shed is furnished with a stove and two benches. The door is never locked and the building is used by tramps in such a way that it is often in an unsanitary condition. A witness asserted that it had not been cleaned for three months prior to the hearing. No lights are provided.

The shed used for sheltering freight is not kept locked and all persons have access to it. Witnesses complained that freight is not always unloaded at the shed and put under cover, but that it is often thrown off at other points at the convenience of the train crews. The platform is low and the lift from it into the baggage car is hard, yet witnesses asserted that trainmen have refused to assist them in loading cream.

Persons desiring to secure empty cars at Finley can do so by notifying the agent at Babcock or Necedah by mail. Shippers of less than carload freight have to wait at the station for a local train, which is usually late, and help to load their goods onto the cars. No serious complaints were made with regard to facilities for shipping stock and carload freight, except that difficulty has been experienced in securing empty cars suitable for hay, which is the principal product shipped in bulk from Finley.

A witness for the petitioner offered in evidence a record kept by himself of the shipments of less than carload freight at Finley for five months in 1913, as follows:

February	68 packages
March	158 packages
May	163 packages
June	101 packages
July	70 packages

The company submitted with its answer a statement of its freight earnings at Finley for the year ending April 30, 1913, which shows a total of $1,015.11, or $84.59 per month. At the hearing the company's superintendent stated that 1,657 cans of cream were shipped from Finley during 1912. According to the testimony the revenue from these shipments would amount to more than $250. Subsequent to the hearing the company furnished data showing that during the seven months from

January to July 1913, inclusive, a total of 1,112 passengers, or an average of five per day, made use of the train service at Finley. A witness for the petitioners estimated that about fifty people live within a mile of Finley and that about three hundred persons are naturally tributary to this station. It was pointed out that persons who live a long distance from the station have to wait there for late trains, or for relatives to drive them home, and that without a properly heated shelter, this is a hardship, since the winters in this district are very severe.

It is evident from the traffic data submitted that the freight and passenger business transacted at Finley does not warrant the establishment of that station as a regular agency, as prayed for in the petition. However, the existing facilities cannot be regarded as adequate. Our engineer reports that at the time of his inspection in December the sheds were in poor repair, both windows of the freight room being broken, no locks being provided, and the passenger room not heated. The sheds should be made reasonably comfortable for waiting passengers and adequate for the protection of freight. A caretaker should be employed to keep the buildings clean, to see that the passenger room is properly lighted and heated at train times, and to keep the key to the freight room readily accessible to persons who have business there. Train crews should place less than carload freight consigned to Finley under shelter and, in the absence of a raised platform, should attend to the loading of small freight shipments and cream.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, properly repair its freight and passenger sheds at Finley, employ a competent caretaker who shall have charge of the sheds, and see that they are clean and that the passenger room is properly lighted and heated at train time, and erect a suitable raised platform for loading cream and other articles on to cars, or, at its option, load such cream and freight.

ROSE J. DOYLE
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Sept. 20, 1913. Decided Jan. 16, 1914.

The petitioner asks that the respondent be required to restore the industrial track formerly maintained by it to the petitioner's warehouse at Stockton. The respondent alleges that it removed the track because the business done over it did not justify its maintenance and because it is impracticable to maintain the track on account of the elevation of the main line track at the point of connection. The track was originally constructed for a warehouse other than that of the petitioner and before the passage of the Railroad Commission Law.

Held: Inasmuch as the track in question was installed before the passage of the Railroad Commission Law and was not paid for in full by the owners of the industry to which it was originally built, nor in part by the petitioner or her predecessors, the removal of the track is not subject to the conditions imposed by sec. 1802 of the statutes and the Commission is without jurisdiction to order the restoration of the track as prayed for. The petition is therefore dismissed.

The petition alleges that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company has removed the industrial track leading to the petitioner's warehouse at Stockton in Portage county, with the result that the value of the warehouse for shipping purposes has depreciated. The Commission is therefore asked to require the respondent to restore it.

The respondent, in its answer, alleges that it removed the track in question because the business did not justify its maintenance, and because it is impracticable to maintain the track on account of the elevation of the main line track at this point. The respondent denies that the value of the petitioner's warehouse has been injured by the removal of the track, since the same rental is obtained now as before such removal. The dismissal of the complaint is therefore asked.

A hearing was held at Stockton on September 20, 1913. *James Tovey* appeared for the petitioner and *A. H. Lossow* for the respondent.

The owners of the warehouse, for which the spur was originally built, performed the necessary grading and paid the railway company $100 in order to secure the track. No evidence was introduced to show that the petitioner or her predecessors had any part in the original construction. Some time after the spur was constructed the warehouse for which it was built was burned, and has not been rebuilt. Since that time the only industries located on this spur have been the petitioner's warehouse and a potato cellar under a saloon. The track was removed in 1912.

The company maintains a spur track north of its main line for the use of a number of industries, and owns ample land on that side, which it is willing to lease upon reasonable terms for the establishment of other industries. The owner of the saloon and potato cellar south of the main line testified that the north spur track is entirely satisfactory for his purposes. The present lessee of the petitioner's warehouse testified that he intends to use it for storing seed potatoes and that his shipments will amount to about fourteen or fifteen carloads in a year. The former lessee used the warehouse primarily for storage purposes in connection with another warehouse located on the spur north of the main track. He testified that while he was in possession, the shipments from this warehouse varied from five to twenty cars per year according to the abundance of the crops. The respondent's station agent at Stockton estimated that about five or six cars a year were shipped from the petitioner's warehouse when the spur track was connected.

With regard to the petitioner's claim that the value of her property has been depreciated by the removal of the spur track, the testimony shows that some years ago the warehouse was leased for $150 per year. For a year previous to the removal of the track, however, the rental was the same as that paid by the present lessee, namely $60.

The respondent's train master testified that the cost of maintaining the sidetrack to the petitioner's warehouse and keeping it clear of snow amounted to $166.35 per year, an amount which he claimed is out of all proportion to the volume of business. He also stated that on account of the elevation of the main line the grade of the sidetrack was abrupt, and that the presence of a switch added to the danger of main line operation. He said that the company is endeavoring to remove all unneces-

sary switches from its main line in order to increase the safety of travel.

In the present case the Commission is without jurisdiction to order the restoration of the sidetrack as prayed for. The track was installed before the passage of the Railroad Commission Law and was not paid for in full by the owners of the industry to which it was originally built, nor in part by the petitioner or her predecessors. Its removal is, therefore, not subject to the conditions imposed by sec. 1802 of the statutes, which provides for the building of spur tracks at the expense of the industry desiring them and for the removal only upon due notice and for good cause shown. If the petitioner desires to have a new spur track constructed to serve her potato warehouse and is willing to bear the cost of building the same, a petition should be filed with the Commission under sec. 1797—11m of the statutes. In such a proceeding the Commission is empowered to order the construction of such a sidetrack if the location of the warehouse is within three miles of the company's line, if the connection is necessary for the warehouse or industry in question and if it is not unreasonably dangerous to public travel.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

TOWN OF RICHFIELD

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Nov. 28, 1913. Decided Jan. 16, 1914.

The petitioner alleges that the respondent refuses to provide cattle guards, signal posts, etc. at a highway crossing formed near Colgate by the intersection of the respondent's line with a public highway. The highway was laid out up to the lines of the respondent's right of way in 1910; but no evidence was introduced to show that the highway was legally opened across the railroad right of way.

Held: Until the proper legal procedure is taken to open the highway over and across the respondent's right of way no legal highway crossing will exist at the point in question and the respondent will be under no statute obligation to provide cattle guards or other crossing facilities. The complaint is therefore dismissed.

The town of Richfield, a municipal corporation in Washington county, alleges in substance that the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, refuses to provide cattle guards, signal posts, etc., at a highway crossing one and one-half miles north of Colgate, formed by the intersection of its line with a public highway which was laid out in 1910.

The respondent, in its answer, denies that a highway was ever duly laid out over its right of way at the point designated in the complaint. It alleges that the town board has repeatedly torn down the fences along its right of way and trespassed upon the company's property. It therefore asks the Commission to take such action as is appropriate to protect the public using its trains and the rights of the company.

A hearing was held at Colgate on November 28, 1913, at which *J. J. Aulenbacher* appeared for the petitioner and *W. A. Hayes* for the respondent.

The testimony shows that in 1910 the highway in question was laid out up to the lines of the respondent's right of way; but no evidence was introduced to show that the necessary

legal procedure was taken to open the highway over and across the right of way. Until such action is taken no legal highway crossing exists at the designated point, and the company is under no obligation to provide cattle guards or other crossing facilities under the statutes. When the highway is legally opened over the right of way, the Commission will, upon petition by the town or by the railway company, determine the mode and manner of the highway crossing. It follows that the complaint should be dismissed.

IT IS THEREFORE ORDERED, That the complaint herein be and the same is hereby dismissed.

ROBERT H. PRITCHARD

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted Nov. 7, 1913. Decided Jan. 16, 1914.

The petitioner alleges that the failure of the respondent to maintain an agent at its station at Brill in Barron county causes great inconvenience to the patrons of the respondent and asks that the Commission take such action as it deems just in the premises. The respondent has an agreement with a local merchant under which the latter meets all passenger trains to sell tickets and transact other business for the respondent at the depot, bills goods for shipment and transacts business for the respondent at his store at hours other than train times.

Held: The service now rendered by the respondent at Brill is adequate under the existing traffic conditions. The petition is dismissed.

The petition alleges in substance that the Chicago, St. Paul, Minneapolis & Omaha Railway Company does not maintain an agent at its station at Brill in Barron county, thereby causing great inconvenience to its patrons. The Commission is therefore asked to take such action as it deems just in the premises.

The respondent answers that it maintains a small depot, consisting of a freight room, office and one waiting room; that a merchant at Brill acts as ticket agent and attends to freight shipments and that these facilities are ample considering the volume of business transacted at Brill and the revenue derived therefrom.

A hearing was held on November 7, 1913, at Brill. The petitioner appeared in his own behalf and the respondent was represented by *R. L. Kennedy.*

It appears from the testimony that the chief cause of complaint is that the petitioner, who is a resident of Chicago owning a farm near Brill, had some difficulty in collecting damages for the injury of a can of paint in transit, for the reason that Brill is not a regular agency. The petitioner also asserted that the business of the community is large and is increasing in volume,

and that to properly serve this freight traffic an agent should be stationed there. He complained that inbound less than carload shipments are not delivered at Brill unless prepaid, but are carried on to the nearest open station. There are about one hundred people living within a mile of Brill according to his estimate. The owner of a potato warehouse at Brill testified that the station service was satisfactory as far as his business is concerned. No resident of the community, other than the keeper of the general store who acts as agent for the company, testified at the hearing. This storekeeper, who is the local postmaster, meets all passenger trains to sell tickets and transact other business for the company at the depot. He attends to the billing of goods, and can be reached at the store, which is located near the station, when anyone desires to transact business with the company at other hours than train times. Less then carload freight is billed to Rice Lake or Birchwood, and is not put off at Brill unless fully prepaid, or unless the storekeeper assumes the responsibility for the freight charges, which he often does for persons whom he knows, and which he said he would do for the petitioner. The storekeeper estimated that about 40 per cent of the land in the vicinity of Brill has been cleared. The company introduced the results of a census of the locality which shows that near the station there is a general store, a creamery, a blacksmith shop, a saloon, an implement store, two potato warehouses and a flour and feed warehouse, and that there are about 117 families, comprising a population of about five hundred persons, who are so situated that they might come to Brill for train service. The company also submitted a statement of its earnings at Brill which are summarized in the following table:

Month.	tickets.	Revenue from ticket sales.	Revenue from cash fares.	Revenue from freight.
September, 1912	241	$148 70		$641 71
October, "	288	122 65		1,098 96
November, "	354	175 21		2,336 34
December, "	308	158 66		1,791 77
January, 1913	254	95 43		1,954 81
February, "	190	73 24		988 68
March, "	236	101 91		979 09
April, "	286	133 79		478 29
May, "	216	112 79		822 09
June, "	273	146 95		627 60
July, "	272	204 74		499 73
August, "	305	199 87		564 63
Total	3,223	$1,673 94	$129 72	$12,782 70

It was pointed out by counsel that about 75 per cent of the freight revenue reported is interline, only about 40 per cent of which accrues to the respondent company.

In our judgment the testimony does not warrant an order requiring the respondent to establish a regular agency at Brill. The complaint of the petitioner with reference to damage claims is one which should not be attributed to the fact that Brill is a prepaid station, since such claims should be adjusted irrespective of the character of the station. In this case there is no general complaint from the community, and the service appears to be entirely adequate under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the petition be and the same is hereby dismissed.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF A HIGHWAY CROSSING ON THE LINE OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY AT CHESTNUT STREET IN THE CITY OF EAU CLAIRE.

Submitted Dec. 15, 1913. Decided Jan. 17, 1914.

This is a rehearing of a matter decided Nov. 14, 1913 (13 W. R. C. R. 74), held upon petition of the railway company which alleges that the highway crossing in question can be adequately protected by other and less expensive means than by a flagman and prays for a modification of the order issued.

Held: Though as a general practice the Commission does not approve of stopping trains at dangerous crossings in lieu of providing other methods of protection, it appears that trains in the instant case can be stopped as suggested by the railway company without materially impairing their schedules and that this will afford adequate protection at the crossing. The former order is therefore modified so as to require the railway company to station a flagman at the crossing to be on duty from 7 a. m. to 6 p. m. daily, or, at its option, to stop each of its trains at the crossing and protect the crossing by a trainman who shall precede the train to the street and remain there to warn travelers until the train has passed.

An order was issued in this matter on November 14, 1913, requiring the Chicago, Milwaukee & St. Paul Railway Company to maintain a flagman on the Chestnut street crossing in Eau Claire between 7 a. m. and 6 p. m. daily. The railway company petitioned for a rehearing alleging, among other things, that this crossing can be adequately protected by other and less expensive means than by a flagman. A rehearing was granted and held in Milwaukee on December 15, 1913. *J. N. Davis* appeared for the Chicago, Milwaukee & St. Paul Railway Company.

The company's superintendent testified that there are four regular train movements over Chestnut street daily, in addition to which there are about twelve switching movements, and during four weeks in the fall about one extra freight train daily. He stated that as it is a branch line and as trains move at slow speed at this point, the company would prefer to stop all trains at the crossing and send a trainman ahead to flag the crossing,

rather than station a regular flagman there. He said that the delay occasioned by such a practice would not seriously interfere with the maintenance of schedules. He pointed out that this arrangement would assure protection at all hours, whereas with a regular flagman no protection would be afforded when the flagman was not on duty.

As a general practice the Commission does not approve of stopping trains at dangerous crossings in lieu of other methods of protection. However, in this particular case it appears that trains can be stopped without materially impairing their schedules, and inasmuch as this practice will afford adequate protection, we see no important reason for refusing the modification in the order as prayed for.

Our former order herein is therefore modified and the Chicago, Milwaukee & St. Paul Railway Company

Is Hereby Ordered To station a flagman at the highway crossing on its line at Chestnut street in the city of Eau Claire, who shall be on duty from 7 a. m. to 6 p. m. daily, or, at its option, stop each of its trains at said crossing and protect the crossing by a trainman, who shall precede the train to the street and remain there to warn travelers until the train has passed.

IN RE PROPOSED EXTENSION OF THE LINES OF THE OWEN TELEPHONE COMPANY IN THE TOWNS OF HOARD AND GREEN GROVE, CLARK COUNTY, WISCONSIN.

Submitted Jan. 16, 1914. Decided Jan. 19, 1914.

The Owen Tel. Co. filed notice with the Commission of its intention to extend its telephone lines in the towns of Hoard and Green Grove in Clark county. The Curtiss & Withee Tel. Co. and the Abbotsford Lt. & Tel. Co. object to the proposed extensions. The unincorporated village of Curtiss, to which the applicant desires to make the extension proposed for the town of Hoard, is now served by both of the objecting companies. The region which the applicant desires to serve by the extension which it proposes to make in the town of Green Grove is without telephone service.

Held: 1. Public convenience and necessity do not require the proposed extension of the applicant's lines in the town of Hoard.

2. Since the proposed extension in the town of Green Grove cannot be regarded as unwarranted by public convenience and necessity, the applicant may proceed with the construction without any order from the Commission.

3. The contention of the objecting companies that the territory which the applicant desires to serve in the town of Green Grove is naturally tributary to Colby, Abbotsford and Curtiss rather than to Owen is not sufficient to compel a finding that the service of the applicant is not required by public convenience and necessity, for the territory in question is now without telephone service and several residents have already signified their desire for the applicant's service.

Notice of a proposed extension of the Owen Telephone Company in the towns of Hoard and Green Grove, Clark county, Wis., was filed with this Commission on December 29, 1913. Upon the filing of objection to the extension by the Curtiss & Withee Telephone Company and the Abbotsford Light & Telephone Company, the matter was set for hearing. At the hearing, which was held at Owen on January 16, 1914, the Owen Telephone Company was represented by *S. K. Clark,* the Curtiss & Withee Telephone Company by *J. M. Hanson* and others, the Abbotsford Light & Telephone Company by *A. H. Flaig,* and the Clark County Telephone Company by *H. H. Christofferson.*

This case involves two proposed extensions of the applicant's

line, one north to the unincorporated village of Curtiss, and the other south for two miles to reach a number of farmers in the the town of Green Grove. It appears that the village of Curtiss already receives telephone service from the Curtiss & Withee Telephone Company and the Abbotsford Light & Telephone Company. The Curtiss & Withee line has no central office of its own, but connects with the applicant's switchboard at Owen. Parties on any of the applicant's lines can reach Curtiss without charge by merely calling the applicant's switchboard and asking to be put onto the Curtiss line. Under these circumstances, it seems that not only are the people of Curtiss able to receive telephone service sufficient to satisfy their needs, but the people already on the applicant's line have sufficient facilities for reaching Curtiss without the entry of the applicant into that village. If it should be claimed that the Curtiss & Withee Telephone Company does not keep its line in condition to give good service between Owen and Curtiss, the remedy is to be sought through a proceeding before this Commission to compel adequate service.

Unnecessary duplication of telephone lines within the same territory was sought to be avoided when ch. 610 of the laws of 1913 was enacted. The inconvenience of having more than one telephone system is already being felt by the business people of Curtiss, and there seems to be no necessity of permitting any further duplication of lines in that village.

The only action required of this Commission by the law in cases of this kind is a finding that public convenience and necessity do not require the proposed extension. Where the Commission does not make such a finding, the statute itself operates to authorize the extension. In the case of extension in the town of Green Grove, therefore, since the Commission does not find the extension to be unwarranted by public convenience and necessity, the applicant may proceed with the construction without any order from this Commission. We shall proceed to state briefly, however, for the benefit of the parties, why the Green Grove extension is permitted to be made.

The extension south into the town of Green Grove will serve a region in which no telephone service is now being given. The applicant has actually solicited business in this territory and obtained four applications for service. The Abbotsford Light & Telephone Company and the Clark County Telephone Company

both extend about as near to the territory in question as does the applicant at the present time, and it was the position of these companies that the territory was naturally tributary to Colby, Abbotsford and Curtiss rather than to Owen. Since the territory is now unoccupied, however, and several persons have already signified their desire for the Owen Telephone Company's service, it is difficult to see how this Commission can make a finding that the service of that company is not required by public convenience and necessity. It is probable that had either of the other companies made the first move to enter the territory they would have been permitted to do so, but the question here is not whether the Owen Telephone Company is the only one that can adequately serve the territory, nor whether another company can supply its needs as well as the Owen Telephone Company, but whether the conditions are actually such that the Owen service is not needed. This finding we can not make from the evidence which has been presented.

We therefore find and determine that public convenience and necessity do not require the proposed extension of the Owen Telephone Company's lines in the town of Hoard into the unincorporated village of Curtiss.

PAINE LUMBER COMPANY, LTD.
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Dec. 9, 1913. Decided Jan. 20, 1914.

The petitioner complains of a bill presented to it for demurrage accrued on a number of cars loaded with logs. These cars petitioner was unable to unload into the river as usual because of the existence of a flood. He contends that the flood should be construed as an Act of God and that he should therefore be relieved from the payment of the demurrage. The demurrage rules in the respondent's tariffs make no exception for cases of delay caused by floods.

Held: The Commission cannot relieve a shipper from the payment of the lawful established tariff charges but can only authorize refunds after the payments have been made and have been found to be exorbitant, unusual, illegal or erroneous. If the petitioner considers the respondent's demurrage rules as unreasonable its proper course of action is to pay the demurrage and apply for a refund. The petition is dismissed.

The petitioner is a corporation engaged in the manufacture of sash and doors at Oshkosh, Wis. It alleges that a bill for demurrage for the month of April was submitted to it by the Wisconsin Demurrage Bureau for $356 for demurrage that accrued on a number of cars loaded with logs shipped to it from Mellen, Wis.; that its track for unloading logs is located on the river bank so that the logs dump from the cars into the river; that certain cars arrived and were placed on this track at a time when an unusually flooded condition of the upper Wolf and Fox rivers was in existence; that the water came rushing down, bringing with it hundreds of acres of bog, filling the river with this material and making it absolutely impossible to unload logs that had to be dumped into the river, and tore out piling ground and carried with it everything that was in its way, crushing more or less boats and boat houses along its path.

The petitioner further alleges that such flood should be construed as an Act of God, and contends that the petitioner should therefore be relieved from the payment of the demurrage.

The respondent railway company, answering the petition, sets

forth that the demurrage in question accrued and is collectible under and by virtue of its published tariffs; that there are no provisions in said tariff which would excuse the respondent from the collection of the demurrage in question by reason of any facts alleged in the petition, and that the respondent was not responsible for the conditions prevailing at the time.

The matter came on for hearing on December 9, 1913. There were no appearances.

The facts in this case are admitted. The petitioner has suffered a hardship through no fault of its own. Unfortunately, the demurrage rules make no exception for cases of delay caused by floods. Both petitioner and respondent are bound by these rules until challenged and found by the Commission to be unreasonable.

But, before the Commission could act in the premises, it would be necessary that an investigation be instituted upon proper complaint as to the reasonableness of the rule in question. In any event it would be necessary for the petitioner to pay the demurrage, and then seek a refund, if it should be found that the charge was unusual or exorbitant because of the unreasonableness of the rule in question. The Commission cannot relieve a shipper from the payment of the lawful established tariff charges. To do so would be the equivalent of suspending the operation of the statute, which is not within the power of the Commission. It only has authority to authorize refunds when the payments made are found to be exorbitant, unusual, illegal or erroneous. It follows that the Commission is without jurisdiction to grant the relief asked.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

H. W. SELLE & COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Jan. 20, 1914.

The petitioner alleges that the respondent charged it at the rate of 13½ cts. per 100 lb., subject to a minimum weight of 30,000 lb. per car, for the transportation of two cars of excelsior from Rice Lake to Waukesha, instead of at the rate of 11½ cts. per 100 lb., subject to a minimum weight of 20,000 lb. per car, provided in the respondent's tariff. The respondent admits these allegations and joins in the prayer for relief.

Held: The charge complained of was illegal and erroneous. Refund is ordered on the basis of the proper charge of 11½ cts. per 100 lb.

The petitioner is a corporation engaged in the manufacture of excelsior at Rice Lake, Wis. It alleges that on and between April 13 and June 4, 1913, it shipped two cars of excelsior from Rice Lake to Waukesha, Wis., on which the respondent assessed charges at the rate of 13½ cts. per cwt., subject to a minimum weight of 30,000 lb. per car, making total freight charges of $81.00 on the two cars; that the respondent had in fact, in connection with the Chicago & North Western Railway Company, as per freight tariff No. 5—E of the western trunk lines, at the time said shipments moved, a rate of 11½ cts. per cwt., subject to a minimum of 20,000 lb. per car, applicable to such shipments, and that as no routing was specified on shipping bills it was the duty of the carriers to forward the shipments by way of the routing over which the lower rate prevailed, and that their failure to do so resulted in an overcharge; that the actual total weight of the shipments was 107,064 lb., on which the freight charges at the rate of 11½ cts. would have amounted to $46.88, or an overcharge of $34.12, which petitioner asks to be refunded to it.

The respondent, answering the petition, admits the allegations thereof and joins in the prayer for the relief requested.

Although the shipment in question moved over the lines of the respondent railway company and also that of the Chicago & North Western Railway Company, and the latter company is not made a party to these proceedings, it seems that the respondent is willing to assume the responsibility of the refund. The overcharge was due to an error in applying tariffs. Under the circumstances we find and determine that the charge exacted of the petitioner on the aforesaid shipments of excelsior from Rice Lake to Waukesha was illegal and erroneous, and that the proper charge to have applied to such shipments was 11½ cts. per cwt.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to H. W. Selle & Company the aforesaid overcharge of $34.12.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SERVICE OF THE NESHONOC LIGHT AND POWER COMPANY.

Submitted Nov. 6, 1913. Decided Jan. 20, 1914.

The Commission, on its own motion, investigated the service of the Neshonoc Lt. & P. Co. in the village of West Salem and the town of Hamilton. In an order issued in a previous matter on Aug. 7, 1912, the Commission specified certain improvements which were to be made in the plant of the utility to enable the utility to comply with the requirements of the standards prescribed by the Commission for electric service. Since the issuance of this order the utility has accepted a number of applications for power service, solicited by engineers of the Commission for the purpose of developing a patronage sufficient to warrant the expenditure necessary to place the plant in the best serviceable condition, and it is therefore necessary that the required improvements be made as soon as possible. The engineers of the Commission recommend that the utility submit for approval complete plans for an hydro-electric power and light plant to be built at the site of the present plant in such a manner as to allow for additional units to be installed, and for a new dam to replace the present dam when operating conditions warrant, and suggest certain specific improvements which should be made in the equipment of the plant.

Held: The improvements recommended should be made. The utility is therefore ordered: (1) to submit for approval within three weeks complete plans and specifications for an hydro-electric power and light plant, as recommended by the engineers of the Commission; and (2) to have the said plant completed and the equipment recommended installed within six months after the approval of the plans and specifications.

This matter came on for hearing on November 6, 1913. *E. C. Swarthout* appeared for the Neshonoc Light & Power Company and *Otto Bosshard* for the village of West Salem.

An order was made on August 7, 1912, in the matter of *Village of West Salem et al. v. E. C. Swarthout* (not reported) requiring the respondent in that matter, who owns and operates an electric lighting plant in the town of Hamilton and the village of West Salem, La Crosse county, under the name of the Neshonoc Light & Power Company, to make certain improvements in his plant so as to comply with the standards for electric service prescribed by the Commission July 24, 1908 *(In re Standards for Gas and Electric Service,* 1908, 2 W. R. C. R. 627). The improvements ordered were as follows:

1. The repairing or replacing of the dam at the power house on the La Crosse river so as to put the dam in good condition, plans for the work to be submitted to the Commission for approval.

2. The replacing of the retaining walls when the dam is built.

3. The provision of new gates and guides and the repairing or replacing of the wheel pit.

4. The installation of a new switchboard carrying an oil switch, enclosed fuses and suitable instruments.

5. The installation of a water wheel governor.

6. The installation of lightning arresters in the plant and throughout the system together with proper connecting and grounding of the so-called ground wire above the transmission line.

7. The setting of new poles wherever those in service are unsafe and the general overhauling of the line to see that connections are soldered, the slack pulled up and broken insulators, ties and pins replaced.

8. The testing of all meters and the operation of the plant so as to conform with the general standards of service established by the rules of the Commission.

The utility was given six months from the date of the order as a reasonable time within which to comply with the above requirements. It was recommended in addition, though not required, that the utility install a 60-cycle generator, making the necessary readjustment of meters to allow for the change in frequency and replacing certain transformers, and increase the size of the main shaft so as to eliminate some of the difficulties caused by the slipping of pulleys.

Since the order of August 7, 1912, was issued, the improvements specified have been in progress but have not been fully completed. It seems from the testimony that the dam has been repaired and is now in as good condition as it is possible to make it. It is conceded, however, that sooner or later it will be necessary to construct a concrete dam in place of the present dam. It follows, therefore, that the improvements which will be ordered should have in view the ultimate construction of a new concrete dam. The company's chief difficulty in the past has been its inability to obtain a patronage sufficient to warrant the expenditure necessary to place the plant in the best serviceable condition. In order to overcome this difficulty the engineers of the Commission have solicited and obtained power consumers to the number

of about thirty, who have agreed to use an aggregate of 96 connected horse power in motors for at least one year after the establishing of that service. These applications have all been accepted by the president of the company. It therefore follows that the improvements necessary to meet the new requirements should be made at the earliest possible moment.

The engineers of the Commission recommend that the company submit to the Commission for approval complete plans and specifications for an hydro-electric power and light plant to be built at the site of the present plant in such a manner as to allow for additional units to be installed, and for the present dam to be replaced when the operating conditions warrant. All construction made at this time, with the exception of the head gates, should be of reinforced concrete and metal. A new intake flume should be constructed at the side of the present flume. A new wheel pit and tail race should be put in to allow for two turbines operating either separately or together. The pits should be separated so that work on one turbine need not interfere with the operation of the other. One of these wheels having sufficient capacity to drive a 75 kw. generator at full load should be installed the coming spring. In addition to the above equipment a water wheel governor, an automatic voltage regulator and a switchboard should be installed, the latter to include an automatic oil switch, ammeters, a voltmeter and an integrating wattmeter. Suitable lightning protection should be provided. All of the equipment should be high grade, efficient and up to date.

After careful consideration we approve of the recommendations of the engineers, and the order herein will require the company to make the improvements suggested. The new work can be prosecuted without interfering with the operation of the present plant. If the work is properly prosecuted, the day service could be furnished within six months.

NOW, THEREFORE, IT IS ORDERED, That the Neshonoc Light & Power Company furnish to the Commission for approval within three weeks after the date hereof complete plans and specifications for an hydro-electric power and light plant to be built at the site of the present plant in such manner as to allow for additional units to be installed, and that within six months after the approval of such plans and specifications by the Commission the said company shall have completed said plant and installed all of the equipment recommended by the engineers of the Commission as hereinbefore stated.

INTERNATIONAL HARVESTER CORPORATION
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Jan. 21, 1914.

The petitioner alleges that the respondent charged it an unusual and exorbitant rate for the transportation of certain carload shipments of slag from Milwaukee to Horicon. The rate in question, 5 cts. per 100 lb., was in accordance with the respondent's tariff at the time the shipments moved but has since been reduced to 50 cts. per ton of 2,240 lb.

Held: The rate complained of was unusual and exorbitant. Refund is ordered on the basis of a rate of 50 cts. per ton of 2,240 lb. which would have been adequate compensation for the service rendered.

The petitioner is a corporation engaged in the manufacture and shipment of harvester and other lines of machinery, with offices located at Chicago, Ill. It alleges that in the course of general business it made twenty-four carloads shipments of slag from Milwaukee, Wis., to Horicon, Wis., as is evidenced by the expense bills filed with the petition; that all of said shipments were transported by the respondent from the point of origin to destination and that for such transportation the respondent charged a rate of 5 cts. per cwt.; that the commodity shipped is of no practical value and that a rate of 5 cts. per cwt. under the circumstances is unusual and exorbitant; that subsequent to the time the shipments moved the respondent, as per its tariff G. F. D. 2400–G, established a reasonable rate of 50 cts. per gross ton of 2,240 lbs.; that had said rate been in force and effect at the time said shipments moved the petitioner would not have been subjected to the charge of the unusual and exorbitant rate of 5 cts. per cwt.; that by reason of the respondent's exacting from the petitioner said rate the petitioner has been charged an excessive amount of $268.55 on said shipments. Wherefore, the petitioner prays that the respondent be authorized and directed to refund to it said excessive amount.

The respondent railway company, answering the petition, sets

forth that at the time said shipments moved, according to the lawful published rates, the rate on the commodity was 5 cts. per cwt. between the points of origin and destination, and that subsequently, as alleged in the petition, it established a rate of 50 cts. per gross ton on said commodity from the point of origin to destination. It submits the matter to the determination of the Commission.

It is conceded that the rate of 5 cts. per cwt. charged petitioner on the aforesaid shipments was unusual and exorbitant. Taking into consideration the value of the commodity, the cost of transportation and all other factors involved in the question of the reasonableness of the charge, it seems that a rate of 50 cts. per gross ton was adequate compensation for the service rendered. Under the circumstances, we find and determine that the charge of 5 cts. per cwt. exacted of the petitioner on the aforesaid shipments of slag from Milwaukee to Horicon is unusual and exorbitant, and that the reasonable charge for such shipments is 50 cts. per gross ton, as provided in respondent's tariff G. F. D. 2400–G. The amount of the overcharge is $268.55, for which an order of reparation will be made.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby authorized and directed to refund to the International Harvester Corporation the aforesaid sum of $268.55.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE FAILURE OF THE DODGEVILLE ELECTRIC LIGHT COMPANY TO COMPLY WITH CERTAIN ORDERS OF THE COMMISSION, RELATING TO STANDARDS OF SERVICE.

Decided Jan. 21, 1914.

The Commission, on its own motion, investigated the practice of the Dodgeville El. Lt. Co. with respect to compliance with the orders of the Commission establishing standards for gas and electric service (July 24, 1908, 2 W. R. C. R. 632 and Aug. 9, 1913, 12 W. R. C. R. 418). Inspections made at various times from March, 1909, to Dec., 1913, showed continued failure to fully comply with the first of these orders but an inspection made in Nov., 1912, indicated that the utility was at that time complying with all the requirements of the order. An inspection made on Jan. 3, 1914, however, showed that the service rendered by the utility does not entirely meet the requirements of adequate service as defined in the order of Aug. 9, 1913.

It is ordered that the utility: (1) engage a competent, reliable engineer who thoroughly understands the needs of the utility's system, and notify the Commission of the securing of his services within 15 days after the serving of this order; (2) that plans and specifications covering new equipment and changes in the system be filed with the Commission within 30 days after the securing of the services of the said engineer; and (3) that the changes be made as promptly as possible, such work as can be begun before outdoor construction is possible to be started immediately after the plans and specifications submitted to the Commission are approved by it. Six months is deemed a sufficient time in which to comply with the standards of service included in this order.

On July 24, 1908, the Commission issued an order establishing standards for gas and electric service. This order stated specifically what meter practice would be required and what voltage regulation would be necessary in order to give adequate service and specified the records to be kept by electric utilities. It specified various other details in defining adequate service. An inspection of the conditions at Dodgeville made in March, 1909, showed that the meter testing rules were being violated, that records of interruptions were not being kept as required, and that in some other respects the service was not up to the standards ordered by the Commission. These various matters were taken up with the management. Another inspection made

in December, 1909, showed that the voltage regulation at one of the localities where records were taken was outside of the allowable limits, and that no steps had been taken to comply with the meter testing requirements. In May, 1910, two of the four voltage records taken were outside of the allowable limits, and still no steps had been taken in regard to the meter testing. These various matters were taken up thoroughly at each inspection and explained in detail to the manager of the utility, and considerable correspondence was carried on throughout this entire period regarding compliance with the various rules, particularly the meter testing. An inspection made in November, 1910, showed that all meters had been tested, but that those found outside the allowable limits of accuracy were not readjusted as required. Over one-half the meters were outside these requirements, this condition being due particularly to the fact that the frequency on the system had been changed without readjusting the meters. This is not only violation of the Commission's orders, but of the requirements of good practice almost universally complied with, independent of any governmental authority covering the matter. On account of these various conditions, the Dodgeville Electric Light & Power Company was required to appear before the Commission on February 20, 1911, at the capitol at Madison, and show why it should not be required to comply with the Commission's order. *Dr. W. J. Pearce,* manager, appeared for the company. He assured the Commission that steps would be taken at once to make the service entirely satisfactory as required, so decision in the matter was deferred pending progress. April 4, 1911, Dr. Pearce wrote the Commission that the company had practically all the meters corrected or replaced with new meters which were correct. An inspection made December 19–21, 1911, showed that the voltage regulation was very satisfactory, but indicated that a great majority of the meters had not received a test within the past year as required. On January 9, 1912, the company was informed that unless meters were tested as required before February 20 of that year it would be necessary for the Commission to take steps to cause the fine prescribed by law to be imposed. An inspection made May 27–28, 1912, showed satisfactory compliance with all meter testing requirements and also showed that the voltage was satisfactory in the three localities where records were taken. On November 23–25, 1912, another inspection was made which indicated full

compliance with the various requirements included in the Commission's order.

On August 9, 1913, after due hearing, the Commission revised its standards for gas and electric service, issuing a new set of rules, numbered 14 to 37, inclusive, covering the quality of service to be furnished by all electric utilities and superseding the rules issued in 1908. Shortly after the issuance of these rules, copies were sent to all utilities, including the Dodgeville Electric Light & Power Company. During the latter part of 1913 complaints were made informally to the Commission, stating that the service at Dodgeville was frequently interrupted and that it was very unsatisfactory.

On January 3, 1914, an inspector visited Dodgeville to investigate these various complaints and determine how far the Dodgeville company was complying with the Commission's revised standards for service. At this time a number of city officials and leading business men of the city were interviewed and all made practically the same statements to the effect that the service was very unreliable so that consumers were obliged to keep kerosene lamps ready for use at all times; that the service was frequently interrupted for several hours at a time; and that it was very necessary that electric consumers in Dodgeville be given better service. An inspection was made of the plant at this time and various parts of the distribution system were looked over. It was found that in a few places the wiring had not been kept in proper condition. The plant was very dirty. The generator is a three phase generator, but only one phase was being used, the peak load of 54 amperes putting a full load on that phase of the machine. Complaint was made that the trees interfered with the lines and that there were frequent discharges observed because of this interference, resulting in fluctuation of the voltage. It was learned that the commutator of the exciter gave way some time ago, disabling the plant until another machine could be obtained from Madison. From the investigation made, it would appear that this was due to carelessness on the part of the company. It further appears that the exciter now in use at the plant is not owned by the company, but is rented from the manufacturers, and that they intend returning it when the other armature is repaired and returned. A 125 h. p. boiler has recently been purchased from the Mt. Horeb Heat, Light & Power Company, and although it has been overhauled and repaired, the

inspector was of the opinion that the repairing had been well done and that the boiler might be satisfactory for use. The boiler now in use is a 75 h. p. boiler but it apparently is in bad condition. There is a duplex pump used for pumping feed water into a tank and another for pumping it from the tank to the boiler. There has been some trouble with these pumps and some provision should be made for a reserve pump or other means of getting water into the boiler when one of the pumps in service fails. The managment has stated from time to time that it was intended to overhaul the plant and system shortly, but that the matter had been deferred because of pending negotiations looking to either the disposal of the plant or the purchase of power for operating it.

From all the foregoing facts it appears that the service being furnished by the Dodgeville Electric Light & Power Company is not entirely adequate as defined by the Commission's order of August 9, 1913, (12 W. R. C. R. 418) prescribing standards for gas and electric service.

IT IS THEREFORE ORDERED, That the Dodgeville Electric Light & Power Company thoroughly overhaul its entire system promptly so as to give service that is in full compliance with the standards established by the order of August 9, 1913, which is attached hereto and made a part of this order.

IT IS FURTHER ORDERED, That the Dodgeville Electric Light & Power Company engage a competent, reliable engineer who thoroughly understands the needs of this system; that the Commission be notified regarding the securing of the services of such an engineer within fifteen days after the service of this order; and that plans and specifications covering new equipment and changes in the system be filed with the Commission within thirty days after the securing of the services of such an engineer.

IT IS FURTHER ORDERED, That the changes be made as promptly as possible and that such work as can be begun before outdoor construction is possible shall be started immediately after the plans and specifications submitted to the Commission are approved by it. Six months is deemed sufficient time in which to comply with every detail of the standards for service included in the foregoing order, making full and complete compliance with the order of August 9, 1913, attached hereto.

A. E. FREDERICK
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted July 9, 1913. Decided Jan. 22, 1914.

The petitioner alleges that the depot and station facilities maintained by the respondent at Elroy, Juneau county, are inadequate, unsightly and unsanitary and asks that the respondent be required to provide a new and adequate depot.

Held: The station facilities in question are inadequate and can be made adequate only by the construction of a new depot. The respondent is ordered to erect a modern and adequate depot, to be open for public use on or before Oct. 1, 1914, plans to be submitted for approval.

The petitioner, who is a resident of Kendall, Wis., alleges that the depot and station facilities maintained by the Chicago & North Western Railway Company at Elroy, Juneau county, are grossly inadequate, unsightly and unsanitary. The Commission is therefore asked to require the respondent to provide a new and adequate depot at Elroy.

The respondent, in its answer, denies that its station facilities at Elroy are grossly inadequate, unsightly and unsanitary, but states its intention to repair, paint and clean the station building and make it in all respects suitable to the mind of the traveling public. It therefore asks that the petition be dismissed.

A hearing was held on July 9, 1913, at Elroy. The petitioner appeared in his own behalf and *C. A. Vilas* represented the respondent.

At the hearing the respondent admitted that the existing station facilities at Elroy are inadequate and stated its intention of ultimately providing a new depot. Owing to the possible changes in the flow of traffic through Elroy on account of the establishment of the new line via Wyeville, the company asked for ample time for the construction of a station. Later during the hearing and subsequent thereto the position was taken that the existing structure can be satisfactorily remodeled and that a new building is therefore unnecessary.

The present depot, which is a two story structure, was built about 1872. The two waiting rooms and the ticket office are located on the first floor, the remainder of the building being used for hotel and restaurant purposes. The petitioner testified that the men's room will seat fourteen persons and the women's room twelve, making the total seating capacity twenty-six. The respondent admitted that these rooms are overcrowded at times. Elroy has a population of about 2,000, which includes a considerable number of railway employes who work in the shops and yards of the respondent. It is the junction of the Chicago & North Western railroad and the Chicago, St. Paul, Minneapolis & Omaha railroad on the main line of the North Western system between Chicago and Minneapolis. It is also an important transfer point from this main line to Sparta, La Crosse and other western points. It was pointed out that the schedule of trains is such that passengers are obliged to wait for a considerable time at the depot in making connections. The petitioner estimated that on the average about one hundred persons use the depot in a day, but stated that this is a very conservative estimate. The station agent at Elroy testified that there are usually about one hundred transfer passengers in a day. A member of the Commission's staff observed conditions at this station from 3 p. m. on October 29, 1913, to 10 a. m. on October 30, a period of nineteen hours, and noted as many as thirty-one persons using the waiting rooms at one time. Subsequent to the hearing the respondent submitted a statement of the number of tickets sold by it at Elroy:

Month.	Number of tickets.	Month.	Number of tickets.
December 1912	1,669	June 1913	1,930
January 1913	1,660	July "	2,258
February "	1,406	August "	2,039
March "	1,812	September "	1,735
April "	1,742	October "	2,362
May "	1,705	November "	2,015

It should be noted that this statement does not include tickets sold by the Chicago, St. Paul, Minneapolis & Omaha Railway Company. Moreover, it does not show the incoming passenger traffic which may be assumed to be substantially as great as the outbound traffic. Nor does it indicate the number of trans-

fer passengers using the station in a day which was estimated by the station agent at about one hundred.

The waiting rooms are heated by stoves and were said to be very poorly ventilated. Toilet facilities were described by witnesses as inadequate and unsanitary and the superintendent admitted that they are not fully adequate or in the best condition. The closets are separate from the main building, being connected with it by open walks, and are unheated. Witnesses asserted that they are so unsanitary as to create a public nuisance.

In explanation of the company's delay in providing better facilities at Elroy the superintendent stated that a considerable amount of traffic has been diverted from Elroy because of the construction of the new line through Wyeville, and that the character of the station needed at Elroy will depend upon the ultimate extent of this diversion. The new line was completed in March 1912. Upon cross-examination, however, the superintendent admitted that while a large part of the freight business has been taken from Elroy, only one passenger train has been rerouted, and that for a part of the year this train is operated in two sections, one via Elroy and one via Wyeville. The respondent's station agent testified that there has been no noticeable decrease in the passenger traffic at Elroy since the completion of the new route.

If the company seriously contemplated remodeling its depot, it should have formulated its plans and presented them at the hearing or very soon thereafter. Upon receipt of petitioner's brief the respondent, in a letter dated November 17, 1913, expressed a desire to submit such plans and requested that action in the matter be deferred until they could be presented. Thirty days were accordingly granted for this purpose. Two months have elapsed and no plans have been filed, but the respondent now asks for a further extension of time. In our opinion further delay in this matter is not justified.

From a careful examination of the testimony and from personal observation of the depot in question, it is our judgment that the station facilities at Elroy are inadequate and that the erection of a modern structure is necessary. The existing building, in our opinion, cannot be remodeled in such a way as to render adequate service at a junction station of the importance of Elroy. The new station should be built at or near the pres-

ent site in order to properly accommodate the passengers transferring at Elroy, who constitute a very considerable part of the traffic.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, erect a modern depot at Elroy which shall be adequate for the traffic at that station, plans to be submitted to the Commission for approval.

October 1, 1914, is regarded as a reasonable date at which the depot ordered herein shall be completed and open for public use.

WAUKESHA LIME AND STONE COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY, CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, MINNEAPOLIS, ST. PAUL, AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted May 27, 1913. Decided Jan. 22, 1914.

Complaint is made of certain charges which are exacted on carload shipments of slab wood, kiln wood and cordwood originating at Wisconsin points on the C. M. & St. P. and the C. & N. W. railroads and delivered to the complainant at its plant on the tracks of the C. M. & St. P. railroad at Waukesha. The complainant alleges: (1) that the charge of $4 per car for the service rendered by the C. M. & St. P. Ry. Co. and the M. St. P. & S. S. M. Ry. Co. in delivering cars brought into Waukesha by the C. & N. W. Ry. Co. is excessive by the amount that it exceeds $2; (2) that the switching charges of the C. M. & St. P. Ry. Co. and the M. St. P. & S. S. M. Ry. Co. should be absorbed by the C. & N. W. Ry. Co. out of a line haul charge of $15 per car instead of down to a net charge of $15 per car; and (3) that the charge of the C. & N. W. Ry. Co. and the C. M. & St. P. Ry. Co. for line haul should in every case be computed on the actual weight of fuel wood in the car at the lowest rate.

Held: 1. The switching charge of $4 is correct on the basis of the tariffs filed and is not unreasonable. 2. The absorption of switching charges down to a net line haul revenue of $15 is reasonable. 3. The custom of having a dual basis of computing charges on wood, using either a high rate and low minimum or a low rate and high minimum in order to obtain the lowest charge, is not entirely defensible, but inasmuch as the present rates when combined with the prescribed minimum are not excessive, the request that the minimum used with the low rate in the instant case be lowered cannot be granted. The complaint is dismissed.

The complainant in this case, the Waukesha Lime and Stone Company, does a general business in stone, sand, gravel, and lime, with general offices in Racine and certain plants in Waukesha.

It appears that the complainant has received at its plant on the tracks of the C. M. & St. P. Ry. at Waukesha, carload shipments of slab wood, kiln wood, and cordwood originating at various points in Wisconsin on the C. M. & St. P. and the C. & N. W. railways. It is necessary for the M. St. P. & S. S. M. Ry. Co. to transfer cars brought into Waukesha by the C. & N.

W. Ry. to the tracks of the C. M. & St. P. Ry. Cars originating on the C. M. & St. P. Ry. are, of course, handled direct to destination by that road.

The complainant contends:

(1) That the charge of $4 per car for the service rendered by the C. M. & St. P. and M. St. P. & S. S. M. railways in delivering cars brought into Waukesha by the C. & N. W. Ry. is excessive by the amount that it exceeds $2.

(2) That the switching charges of the C. M. & St. P. and the M. St. P. & S. S. M. railways should be absorbed by the C. & N. W. Ry. out of a line haul charge of $15 per car instead of down to a net charge of $15 per car as appears to have been the practice of the C. & N. W. Ry.

(3) That the charge of the C. & N. W. Ry. and of the C. M. & St. P. Ry. for line haul should in every case be computed on the actual weight of fuel wood in the car at the lowest rate.

Hearing was held in this case May 27, 1913, at Milwaukee. The petitioner and the several respondents were represented. The testimony taken indicates a substantial agreement between the contestants as to what the present practice of all parties are and the efforts of this Commission have been directed toward ascertaining the reasonableness of these practices. Considering the contentions of petitioners in order the Commission finds:

(1) That a switching charge of $4 per car for the service of the M. St. P. & S. S. M. Ry. and that of the C. M. & St. P. Ry. in effecting the delivery of a car brought into Waukesha by the C. & N. W. Ry. at an industry located on the tracks of the C. M. & St. P. Ry. is correct on the basis of the tariffs filed and is not unreasonable.

(2) That the absorption of switching charges down to a net line haul revenue of $15 is reasonable.

(3) The custom of a dual basis of computing charges on wood, using either a high rate and low minimum or a low rate and high minimum in order to obtain the lowest charge, is not entirely defensible. It has come about through the efforts of the roads to get as heavy a loading as possible of a commodity of low value and light weight. An investigation of rates and costs made in this case shows that, allowing a low rate of return to the carrier on its investment, the costs are such that the present rates when combined with the prescribed minima are not excessive, and any substantial lowering of the minima would necessitate

increased rates. It will perhaps be necessary to undertake to adjust the whole scheme of rates on fuel wood by the establishment of a single rate and a single minimum for each of the three or more general groups of sizes of box cars. In the instant case, however, the complaint does not ask this but only that the minimum used with the low rate be lowered. This the Commission cannot order in the light of the facts before it.

IT IS THEREFORE ORDERED, That this complaint be and hereby is dismissed in each particular.

IN RE APPLICATION OF THE MT. HOREB HEAT, LIGHT, AND POWER COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Oct. 1, 1913. Decided Jan. 23, 1914.

The Mt. Horeb Heat, Lt. & P. Co. applies for authority to increase its rates for electric current. A valuation of the physical property of the applicant was made and the revenues and expenses were investigated. The applicant has recently changed its method of generation from steam to producer gas, increased its investment and made plans to furnish its consumers with current during the daytime and to otherwise improve the service. Two computations are accordingly made of revenues and expenses, one being based upon conditions before the changes mentioned, the other upon estimates of what the expenses and sales will be under the new conditions.

Held: The applicant's rates require revision. The applicant is therefore authorized to put into effect a schedule of rates fixed by the Commission.

The application of the Mt. Horeb Heat, Light and Power Company for authority to increase rates, filed May 24, 1913, alleges that the lawful meter rates in effect are as follows: 12 cts. per kw-hr. for all current used; minimum monthly charge 50 cts. to customers owning meters and 75 cts. to customers to whom the company supplies meters. The petition further alleges that the company expects to invest considerable money in additional machinery, equipment and extensions; that it expects to furnish its customers with current during the daytime, and to otherwise improve the service; and that the present rates are too low to yield a reasonable return after providing for operating expenses and depreciation. For these reasons the company prays that it be given authority to put in effect the following schedule:

Incandescent Lighting.

For the first	10	kw-hr. used per month	16	cts. per kw-hr.
For the next	50	" " "	12	" "
All over	60	" " "	10	" "

Minimum charge $1.00 per month.

Meters will be installed and owned by the company.

A discount of 5% will be allowed on all bills paid by the 10th of the month.

The first service connection will be free but there will be a charge of $1.00 for reconnecting the same customer.

Power.

For the first	100 kw-hr. used per month	.....	8 cts. per kw-hr.
For the second	100 " " "	.....	6 " "
For the third	100 " " "	.....	5 " "
For the next	300 " " "	.....	4 " "
All over	600 " " "	.....	3 " "

Minimum charge 50 cts. per connected horse power per month.

A discount of 5 per cent will be allowed on all bills paid by the 10th of the month.

Meters will be installed and owned by the company.

Current for motors of 1 h. p. or less will be charged for at lighting rates.

A hearing was held at the office of the Commission at Madison on October 1, 1913. *A. G. Michelson* appeared for the applicant and *G. E. Michelson,* village president, appeared for the village of Mt. Horeb.

No opposition was made at the hearing to the granting of the application. Mr. G. E. Michelson stated that he was aware of the fact that the plant had always operated at a loss, and that he thought the general sentiment of the village was that it wanted the plant to operate and to pay a reasonable profit, also that the village would rely on the Commission to look after its interest in the matter.

The electric plant at Mt. Horeb began operating in the year 1903 under a franchise granted by the village, which specified that the meter rates should be 14 cts. per kw-hr. for all current consumed up to 26 kw-hr. per month, 12 cts. per kw-hr. when the current consumed was between 26 and 60 kw-hr., and 10 cts. per kw-hr. when the current consumed was over 60 kw-hr. In addition there was a provision that the minimum charge should be $1 per month. Since 1903 the ownership of the plant has changed hands several times and the rates have been reduced to what they are now. It appears that the present owners acquired the property about November 1, 1912. In May 1913 they began remodeling the entire plant and distribution system. The method of generation has been changed from steam to producer gas, and the kind of energy supplied has been changed from direct to alternating current.

A valuation of the physical property of the utility was made as of date Oct. 1, 1913, a summary of which follows:

Classification.	Commercial light.		Arc light.		Total.	
	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.
A. Land (leased)	.....	.....	.....	.....	.....	.....
B. Transmission and distribution	$3,778	$3,530	$881	$803	$4,659	$4,333
C. Bldgs., miscellaneous structures	2,103	2,053	183	179	2,286	2,232
D. Plant equipment	6,620	4,326	821	622	7,441	4,948
E. General equipment	421	324	14	9	435	333
Total	$12,922	$10,233	$1,899	$1,613	$14,821	$11,846
Add 12% (see note below)	1,551	1,228	228	194	1,779	1,422
Total	$14,473	$11,461	$2,127	$1,807	$16,600	$13,268
H. Materials and supplies	305	305	27	27	332	332
Total	$14,778	$11,766	$2,154	$1,834	$16,932	$13,600
J. Non-operative	.....	.....	.....	.....	2,358	942
Total	$14,778	$111,766	$2,154	$1,834	$19,290	$14,542

NOTE: Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The building and distribution system were not quite completed when this valuation was made. The valuation, however, includes everything as it will be when the remodeling is finished. The non-operative property, which is listed at $2,358, cost new, and $942, present value, is the old steam equipment that has been taken out. This has now been sold and consequently need not be considered. Excluding the non-operative property the valuation shows a cost of reproduction new of $16,932 and a present value of $13,600, including material and supplies. No direct evidence was introduced at the hearing relative to the value of the plant. The report of the company for the year ending June 30, 1913, however, was submitted as evidence. The balance sheet in this report shows that the cost of the plant at the beginning of the year was $5,600. This is the sum that the present owners paid for the property. The balance sheet also shows that $5,969.99 was expended on new construction during the year, making a total cost of $11,569.99 at the end of the fiscal year. The Commission's valuation, which was made as of October 1, 1913, and which included such parts of the plant and distribution system as were still in process of construction, shows a present value of $13,268, or $1,798 more than the company shows in its balance sheet for June 30. During the interval between the date of the company's balance sheet and the staff's valuation the company did considerable remodeling. We have, however, no in-

formation relating to the amount that was expended during this time, neither have we any information as to the total amount expended in rebuilding this plant. It seems reasonable to assume that the present value as shown in the Commission's valuation also represents quite closely the cost of this plant to the present company; consequently we will use this amount as the basis of our computations in this case.

The following table shows the revenues and expenses taken from various sources for the years 1910 to 1913, inclusive:

Year.	Source of information.	Revenues.	Expenses.	Available for depreciation, interest and taxes.	Deficits.
1910.....	Annual report.....	$2,430 01	$2,047 25	$382 76	.....
1910.....	6 W.R.C.R. 44-46.....	2,353 01	2,643 57	.....	$290 56
1911 (6 mos.)..	Annual report.....	2,092 77	2,424 58	.....	331 81
1912.....	Annual report.....	3,741 46	3,340 84	400 62	.....
1913.....	Annual report.....	3,170 76	3,254 80	.....	84 04
1913.....	(Testimony given at hearing).....	3,170 76	3,583 12	.....	412 36
1913.....	.....	3,170 76	2,696 03	474 73	.....

Apparently the accounts of this utility have not been kept very accurately. The annual report for 1912 shows net earnings of $382.76. An inspection of the books made in August 1910 by a representative of the Commission in connection with an application to increase the street lighting rate shows that there was a deficit of $290.56. The memorandum submitted at that time says (*In re Appl. Mt. Horeb El. Lt. Co.* 1910, 6 W. R. C. R. 44–46): "From records, uncertain because of incompleteness of entry and illegibility, the amount of business for the year ending August 1, 1910, has been taken as follows". The revenues and expenses as shown in the table are then given. Further on this memorandum says, "Owing to certain indebtedness of the owner of this utility to large consumers of electric current, no revenues are reported from these customers, but instead the personal account of the owner is credited to the amount of such revenue. There are at least two such instances".

Some time during the fiscal year 1911 the plant was sold and the annual report for that year, though it covers only six months, shows a deficit of $331.81. The next year we find net earnings of $400.62. As already explained, on November 1, 1912, the plant was again sold, at which time the present owners assumed

control. The report for the fiscal year 1912 shows a deficit of $84.04. The testimony given at the hearing, however, shows a deficit for the same period of $412.36. An itemized statement of the income account as exhibited in the last annual report and as presented at the hearing follows:

	Presented at the hearing.	Annual report.
Commercial lighting	$2,702 76	$2,702 76
Street lighting	468 00	468 00
Total revenues	$3,170 76	$3,170 76
Steam generation	.....	$1,787 01
Fuel, etc	$1,787 01	.....
Engineers' wages	443 55	.....
Distribution labor	221 77	.....
Maintenance labor	221 77	.....
Consumption:		
Street lighting	132 17	132 17
Commercial lighting	396 53	396 53
Commercial expenses	.....	558 77
General expenses	322 82	322 82
Taxes	57 50	57 50
Total expenses	$3,583 12	$3,254 80
Deficit	$412 36	$84 04

An inquiry by a representative of the Commission on a visit to Mt. Horeb disclosed the fact that the item "engineers' wages" as shown in the income account presented at the hearing is included in the item "steam generation" in the annual report. In the same manner the item "distribution labor" is included in "commercial lighting" and "maintenance labor" is included in "general expenses". As the items "commercial lighting" and "general expenses" are the same in both income accounts, and as the items "fuel" and "steam generation" also are equal, it would appear that the total of the expenses as presented at the hearing is overstated $887.09, and that instead of a deficit there is an excess of $474.73 available for depreciation and interest.

The annual report shows $558.77 under commercial expenses. This, as disclosed by inquiry, is merely the debit balance of the merchandise account which ordinarily should appear under non-operating revenues. We find, however, that material used in construction was charged to this account, which explains the large debit balance, and justifies the exclusion of this item entirely, as it should have been charged to capital and not revenues. We understand that it has been the practice of the company to

sell electric merchandise at a small profit; consequently the account non-operating revenues should show a credit balance. In 1910 there was such a balance amounting to $35 and in 1911 one amounting to $242.25. None appeared, however, in the 1912 report. From the foregoing we are inclined to believe that $474.73 represents quite closely the amount available for depreciation, interest, and profits for the year 1913. On the basis of a fair value of $13,600 this would be a return of 3.48 per cent which, of course, would not be enough to cover depreciation alone.

In determining what rate the company is entitled to charge we have made two computations, one based on revenues and expenses and conditions existing before the method of generation was changed from steam to producer gas, and the other based upon an estimate of what the expenses and sales will be under the new conditions.

The following table shows the expenses for the year ending June 30, 1913, as adjusted, divided between capacity and output expenses and between commercial and street lighting. The expenses shown include interest, depreciation and taxes on a fair value of $8,000 used by the Commission in passing upon the application made by this utility in 1910 for authority to increase its rates for street lighting (1910, 6 W. R. C. R. 44–46).

BASIS I.

	Capacity.	Output.	Total.
Commercial lighting	$1,243 91	$1,822 48	$3,066 39
Street lighting	202 50	347 14	549 64
Total	$1,446 41	$2,169 62	$3,616 03

As stated above, it is necessary to make an estimate of the kw-hr. sales and the operating expenses in order to determine a fair rate under the new method of generating current and the increased investment.

The company submitted a record of the current sold during the nine months ending July 31, 1913, which shows that 13,834 kw-hr. were sold to metered consumers during that time. On the basis of the average consumption per customer, it is estimated that about 2,786 kw-hr. would have been sold to the flat rate consumers if they had been on meters, making a total of

16,620 kw-hr. for the nine months. During the remaining three months of the year it is estimated that 3,902 kw-hr. more would have been used by the commercial consumers, making a total of 20,523 kw-hr. for the entire year if every customer were metered. At the time this record was compiled there were 162 customers who consumed an average of 127 kw-hr. per year. The president of the company stated that the company was quite certain of having 200 customers in a comparatively short time. Assuming that these 38 additional customers will use about as much current as the present customers do, it is estimated that the consumption by commercial consumers under the present operating period will be about 25,348 kw-hr. per year. The company, however, is going to give all-day service, that is, from 6 a. m. to 12 p. m., which will make the total for this class at least 26,148 kw-hr.

No power business as yet has been obtained. The president of the company, however, stated that he had done some soliciting which inclined him to believe that from 60 to 75 horse power was obtainable. Assuming that a connected load of 40 h. p. is actually obtained and that it is used on an average of one and one-half hours a day, we will have a power consumption of about 16,000 kw-hr. per year.

The street lighting at present is done by means of forty-two 75-watt series tungsten lamps burning on a moon-light schedule from dusk to 11 p. m. except Saturday nights when they burn to 11:30 p. m. The number of lamps is to be increased to fifty. When this increase is made it is estimated that the switchboard output to this class of service will be about 4,950 kw-hr. per year.

Assuming that there will be at least a 20 per cent loss in distributing the current to the commercial lighting and power customers and that the output to street lighting will be as stated above, it seems safe to estimate that about 57,635 kw-hr. will be generated.

During the month of October 1913 the plant under the new method of generation used about seven tons of buckwheat anthracite coal, and generated about 1,500 kw-hr. according to an estimate of the manager. Reducing this to a unit basis, we find that about 9.5 lb. of coal were used per kw-hr. generated. It seems safe to assume from the operation of this plant and other gas producer plants that when the operating period is extended to eighteen hours per day and the available power business is

taken on, that this plant will show a fuel efficiency of at least 6 lb. per kw-hr. generated. On the basis of 57,635 kw-hr. output at the switchboard and coal at $5.40 per ton, which is the price now being paid by the company, this would mean a total fuel cost of about $934 per year.

The largest single item of expense will be that of labor. The operating force is to consist of one engineer at $55 per month, one general man at $50 per month and a manager at $80 per month. This means a total labor bill of $2,220 per year. The other expenses such as oil, gasoline, batteries and miscellaneous items, including repairs and lease of the land on which the plant is built, amounting to $7.50 per year have been placed at $535.

Following is a summary of the expenses enumerated above which, together with the fixed charges, represent the amount that must be paid by the users of electricity in order to yield a reasonable return to the utility:

Fuel	$934.00
Labor	2,220.00
Oil	200.00
Gasoline	25.00
Batteries	10.00
Miscellaneous	300.00
Total	$3,689.00
Interest, depreciation and taxes	1,700.00
Total	$5,389.00

The next table shows the total probable cost under the new operating conditions divided between capacity and output expenses and between the different classes of consumers:

BASIS II.

	Capacity.	Output.	Total.
Commercial lighting	$1,310 51	$1,779 60	$3,090 11
Commercial power	633 36	1,109 89	1,743 25
Street lighting	206 73	348 91	555 64
Total	$2,150 60	$3,238 40	$5,389 00

The nature of the electric business is such that the cost consists of a capacity charge which depends upon the demand and an output charge that varies directly with the quantity of current sold. The cost of current per unit of output therefore varies

with the number of hours' use per day. The following table shows the variable cost for commercial lighting upon the two bases which we have been considering:

No. hours use of load per day.	Basis I.			Basis II.		
	Capacity.	Output.	Total.	Capacity.	Output.	Total.
1	8.4 cts.	8.9 cts.	17.3 cts.	7.2 cts.	6.8 cts.	14.0 cts.
2	4.2 "	8.9 "	13.1 "	3.6 "	6.8 "	10.4 "
4	2.1 "	8.9 "	11.0 "	1.8 "	6.8 "	8.6 "
6	1.4 "	8.9 "	10.3 "	1.2 "	6.8 "	8.0 "
8	1.1 "	8.9 "	10.0 "	.9 "	6.8 "	7.7 "
10	.8 "	8.9 "	9.7 "	.7 "	6.8 "	7.5 "

A consideration of the costs shown on the two bases in the foregoing table suggests a rate of 14 cts. per kw-hr. for the first 30 hours use per month of the active load, 12 cts. per kw-hr. for the next 60 hours and 9 cts. per kw-hr. for the balance.

In order to determine the probable revenue from such a rate schedule an analysis has been made of the current consumed by the commercial lighting customers. This shows that of the 20,523 kw-hr. sold during the year ending November 1, 1913, 10,203 kw-hr. fall in the primary group, 8,127 in the secondary, and 2,193 in the excess. On the basis of this analysis it is estimated that of the 26,148 kw-hr. which we have used as the probable commercial lighting consumption when normal conditions under the new method of generation are reached, 13,015 kw-hr. will fall in the primary group, 10,377 in the secondary, and 2,756 in the excess. The revenue from each of these groups on the basis of the rate suggested is exhibited in the next table which shows the revenue and cost for each class of service for the two bases under consideration. The revenue from minimum bills is based on the assumption that the primary rate will be 14 cts. per kw-hr. for current and that no bill will be rendered for less than $1 per month. The revenue from commercial power is based on a fixed charge of 75 cts. per horse power of connected load and an energy charge of 5 cts. per kw-hr. for all current consumed. The revenue from street lighting is based on a rate of $15 per lamp per year. The reason no revenue or expenses appear for commercial power on Basis I is, of course, that the company has no such business at the present time.

	Basis I.		Basis II.	
	Probable revenue.	Cost.	Probable revenue.	Cost.
Commercial lighting:				
Primary	$1,428 42	.....	$1,822 10	.....

Commercial power:				
Fixed charge	.....	.....	$300 00	.....
Energy charge	.....	.....	800 00	.....
Total	.....	.....	$1,100 00	$1,743 25
Street lighting	$750 00	$549 64	$750 00	$555 64
Grand total	$3,617 14	$3,616 03	$5,493 81	$5,389 00
Net excess	$1 11	.....	$104 81	.....

It will be noted that on Basis I there is an excess amounting to $1.11 of revenue over cost and that on Basis II there is a similar excess of $104.81. The relation of cost to revenue for the different classes of service, however, does not correspond so closely. In commercial lighting, for instance, on Basis I the revenues are less than the cost while on Basis II they are considerably more; consequently it would seem inadvisable either to increase or decrease the rate suggested for this class of business. In the commercial power class the cost exceeds the revenue. The cost as shown is, of course, the result of an apportionment. If a different theory of apportionment had been used, a lower figure might have resulted. The company is attempting to work up its power business, which it is likely to have some difficulty in doing if the rate is much higher; therefore it seems best under the circumstances to establish the rate suggested. Upon both bases we find that the revenue from street lighting exceeds the cost. The street lighting, however, has been changed recently, and it may be that not enough has been included in the cost for renewals and maintenance. The rate as proposed will be a reduction of $3 from the present rate which seems to be about as much of a reduction as is justified at this time. In all these instances we have a situation where the cost does not exactly fit the value of the service. If the commercial lighting rate were increased, it might be that the contemplated increase in business would not materialize, in which event the rate to some other class of service might have to be increased. Taking all the circumstances of the case into consideration it seems that the rates as

suggested above will be fair and just both to the company and to the public.

In computing monthly bills under the suggested rate for incandescent lighting it is to be remembered that the rate is based both on the size of the installation and the current consumed, whereas the schedule now used by the company is based on consumption only. The following examples will illustrate the working of the new schedule:

Computation of Monthly bill for a Residence.

Connected load.
15 40-w. lamps = 600 watts
Active load.
60% of the first 500 watts = 300 watts
33⅓% of the balance = 33 "
Total active load..... 333 "
Current consumed—by meter = 13 kw-hr.
First 30 hours use per month of active load, 333 x 30 = 9.99 kw-hr.
Next 60 hours use per month of active load, 333 x 60 = 19.98 kw-hr.
All over 90 hours use per month of active load, 333 x 90 = 29.97 kw-hr.

For practical purposes the decimals can be omitted and the nearest whole number used and the bill computed as follows:

First 10 kw-hr. at 15 cts. = $1.50
Next 3 " 13 " = .39
Total gross bill..... $1.89
Discount ..... .13
Total net bill..... $1.76

Computations of Monthly Bill for a Store.

Connected Load.
50 60-watt lamps = 3,000 watts

Active load.
70% of the first 2,500 watts = 1,750 watts
55% " balance = 275 "
Total active load..... 2,025 "

Current consumed—by meter = 195 kw-hr.
First 30 hours use per month of active load 2,025 x 30 = 60.75 kw-hr.
Next 60 hours use per month of active load 2,025 x 60 = 121.5 kw-hr.
All over 90 hours use per month of active load 2,025 x 90 = 182.25 kw-hr.

Computation of bill.
First 61 kw-hr. at 15 cts. = $9.15
Next 121 " 13 " = 15.73
Next 13 " 10 " = 1.30
Total gross bill..... $26.18
Discount 1.95
Total net bill..... $24.23

IT S THEREFORE ORDERED, That the Mt. Horeb Heat, Light and Power Company be and hereby is authorized to discontinue its present schedule of rates and place in effect the following:

COMMERCIAL LIGHTING.

For all lighting service furnished residences and businesses (hereinafter specifically referred to as classes A, B and C) including such incidental use of appliances for heating and power used on lighting circuits and passing through the same meter, and measured by a meter or meters owned an installed by the company a charge of

Primary rate: 14 cts. net or 15 cts. gross per kilowatt-hour for current used equivalent to or less than the first thirty hours' use per month of the active connected load.

Secondary rate: 12 cts. net or 13 cts. gross per kilowatt-hour for additional current used equivalent to or less than the next sixty hours' use per month of active connected load.

Excess rate: 9 cts. net or 10 cts. gross per kilowatt-hour for all additional current used in excess of the above ninety hours' use per month of active connected load.

Active connected load shall in each case be a fixed percentage of the total connected load of the lamps installed on the consumer's premises, excluding appliances.

Class A includes residences, flats and private rooming houses. Where the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active; where the installation exceeds 500 watts nominal rated capacity, 33⅓ per cent of such part of the total connected load over and above 500 watts shall be deemed active.

Class B includes stores, saloons, offices, banks, halls, theaters and all others not herein otherwise specifically provided for. In this class 70 per cent of the first 2.5 kw. and 55 per cent of all additional connected load shall be deemed active.

Class C includes churches, industrial establishments, livery stables, garages, barns, club rooms, hotels, schools, libraries, city hall and hospitals. In this class 55 per cent of the connected load shall be deemed active.

Minimum Bill. The minimum bill shall be $1 per month. Where the utility is unable to read meter after reasonable effort

the fact should be plainly indicated upon the monthly bill, the minimum charge assessed and differences adjusted with the consumer when the meter is again read.

Discount. Utility shall bill all consumers at the gross rate, and the difference between the gross and net rates above specified, or one cent per kilowatt-hour, shall constitute a discount for payment on or before the 10th of the month.

Reconnection of meter. For the reconnection of a meter for the same consumer upon the same premises a charge of $1 is deemed reasonable.

COMMERCIAL POWER.

For current used for power purposes, and measured by meters owned and installed by the company, the rate shall be:

Service charge: 75 cts. net per month for the first horse power or fraction thereof and 75 cts. for each additional horse power of connected load.

Energy charge: 5 cts. net or 6 cts. gross per kw-hr. for the first 50 hours' use per month of the connected load, and 3 cts. net or 4 cts. gross for all use of the connected load in excess of 50 hours monthly.

The provisions for discount and reconnection of meters as stated under the schedule for commercial lighting shall also apply to power.

STREET LIGHTING.

The rate for street lighting shall be $15 per 75-watt lamp per year and shall be paid in equal monthly installments.

MERCHANTS AND MANUFACTURERS ASSOCIATION OF MILWAUKEE

vs.

WELLS FARGO AND COMPANY,
UNITED STATES EXPRESS COMPANY,
AMERICAN EXPRESS COMPANY,
NORTHERN EXPRESS COMPANY,
NATIONAL EXPRESS COMPANY,
ADAMS EXPRESS COMPANY,
WESTERN EXPRESS COMPANY.

IN RE INVESTIGATION BY THE RAILROAD COMMISSION OF WISCONSIN OF EXPRESS RATES CHARGED IN WISCONSIN.

Decided Jan. 23, 1914.

The date on which the order issued in this matter on May 20, 1913, (12 W. R. C. R. 1, 43) should become effective has been postponed from time to time pending the decision of the appeal from the order to the circuit court for Dane county and the making by the Commission of certain additional investigations. The latest postponement makes the order effective on Feb. 1, 1914. The respondent express companies, however, desire to put into effect rates for temporary use which will be in harmony with the interstate express rates recently established by the interstate commerce commission to become effective Feb. 1, 1914.

Held: Though the rates proposed by the express companies do not entirely agree with the Commission's ideas of what those rates should be, it is the opinion of the Commission that, in view of the fact that the rates as proposed will confer many benefits on the shippers of the state, these rates should be permitted to become effective for the time being with the exception of such as are higher than the interstate rates between the same blocks would be.

The respondents are therefore ordered to put into effect the rates, classifications and bases of charge shown in the tariffs Wis. R C. numbers 5, 6, 7 and 9 filed by them with the Commission, provided that where block rates between points in Wisconsin as named in these tariffs are higher than the interstate rates effective Feb. 1, 1914, between the blocks in which such points are located, the rates named in the tariffs shall be reduced to an equality with the interstate rates. The rates prescribed are to become effective immediately upon the filing of the tariffs in the manner required by law. The order of May 20, 1913, (12 W. R. C. R. 1, 43) is rescinded.

An order was entered by this Commission in the above entitled case on May 20, 1913 (12 W. R. C. R. 1, 43), establishing a new schedule of express rates to be applied by the respondent express

companies on traffic within the state of Wisconsin. Proceedings were commenced by the express companies in the circuit court for Dane county upon appeal from the Commission's order, and, owing to the pendency of these proceedings and to certain additional investigations which were being made by this Commission, orders were entered from time to time postponing the date on which the order of May 20, 1913, should become effective. The latest of these postponement orders dated December 31, 1913, made the effective date of the Commission's rate order February 1, 1914.

The respondent express companies have made preparations to put into effect throughout the United States the rates and methods of charge established by the interstate commerce commission in its express rate decision. These interstate rates are to be made effective February 1, 1914, and it seems highly desirable that until this Commission can complete its own investigations so as to make a final order as to intrastate express rates for Wisconsin the express companies should be permitted to charge, upon intrastate traffic, rates which will be in harmony with the interstate rates. We have examined carefully the schedules of rates so proposed to be established for temporary use in this state, and do not find them so far at variance with the results of our own investigations to date as to warrant the Commission in delaying the express companies' program of uniform application of interstate schedules. In many instances the rates proposed by the express companies do not entirely agree with the Commission's ideas of what these rates should be, but inasmuch as with the institution of any entirely new system of rates many conditions are necessarily encountered which will require later adjustment, and in view of the fact that the rates as proposed will confer many benefits on the shippers of the state, it is the opinion of the Commission that they should be permitted to become effective for the time being. In a few cases we find that the rates proposed by the express companies to be applied between Wisconsin points are higher than the interstate rates between the same blocks would be, and in such cases our order will require that the interstate rates between such blocks be made the maximum.

It is to be understood that the rate schedule prescribed in the subjoined order is not necessarily the final order in the present proceeding, but that when the Commission's investigations have

been concluded it may be necessary to enter an additional order making certain revisions of the rates herein prescribed.

The schedules of rates proposed to be established by the express companies on February 1, 1914, are contained in the several tariffs which have been submitted to this Commission for examination and approval. These tariffs will be designated in the order by their numbers, since an enumeration of the various rates and bases of application in this order would cover many pages. Since the express companies desire to make these rates effective February 1, 1914, which leaves less than the ordinary time for posting and publication of tariffs, permission will be granted for effectiveness of the rates immediately upon the proper filing of the tariffs as required by law.

IT IS THEREFORE ORDERED, That the respondents, Wells Fargo & Company, United States Express Company, American Express Company, Northern Express Company, National Express Company, Adams Express Company and Western Express Company discontinue the rates now in effect upon their various lines for transportation of express matter between points in the state of Wisconsin, and that they substitute therefor the rates, classifications and bases of charge as shown in the tariffs Wis. R. C. numbers 5, 6, 7 and 9, filed with this Commission by F. G. Airy as agent for the respondent express companies; provided that where block rates between points in Wisconsin as named in such tariffs are higher than the interstate rates effective February 1, 1914, between the blocks in which such points are located, the rates named in such tariffs shall be reduced to an equality with such interstate rates.

The order of this Commission in this proceeding dated May 20, 1913, is hereby rescinded.

Permission is hereby granted for the effectiveness of the rates prescribed in this order immediately upon the filing of the tariffs in the manner required by law.

WHITE ROCK QUARRY COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Jan. 13, 1914. Decided Jan. 28, 1914.

The petitioner alleges that the charge of 6 cts. per cwt. exacted by the respondent for the transportation of 77 carloads of granite blocks from Ablemans to Milwaukee is unusual and exorbitant and asks for refund of the excess of the amount collected above the amount assessable on the basis of a rate of 4 cts. per cwt. which the petitioner alleges is a reasonable rate, the rate now in effect and the rate in effect at the time the shipment moved from Red Granite, Montello, Stevens Point and other Wisconsin points to Milwaukee and Chicago.

Held: For reasons stated in *Milwaukee Sand Stone Co. v. C. & N. W. R. Co.* 13 W. R. C. R. 671, the charge complained of was unusual and exorbitant and the rate of 4 cts. per cwt. is a reasonable rate for the services rendered. Refund is ordered on this basis.

The petitioner is a corporation engaged in quarrying stone at Ablemans, Wis. It alleges that on and between June 7, 1913, and September 16, 1913, it shipped seventy-seven carloads of granite blocks from Ablemans, Wis., to Milwaukee, Wis., upon which the respondent railway company charged and exacted a rate of 6 cts. per cwt., which is 2 cts. per cwt. in excess of the rate now in effect and the rate in effect at the time the shipments moved from Red Granite, Montello, Stevens Point and other Wisconsin points to Milwaukee and Chicago; that such rate of 6 cts. was unusual and exorbitant and that a rate of 4 cts. per cwt. would have been reasonable and just; that as a result petitioner was charged on said shipments the sum of $1,389.38 in excess of what it should have been charged had a reasonable rate been in effect at the time the shipments moved. Wherefore, the petitioner prays that the respondent be authorized and directed to refund to it the said sum of $1,389.38.

No answer was filed by the respondent.

The matter came on for hearing on January 13, 1914. The petitioner was represented by *L. J. Pierson* and the respondent by *Robert H. Widdicombe,* its attorney.

The facts in this case are identical with those stated in the case of *Milwaukee Sand Stone Co. v. C. & N. W. R. Co.* 1914, decided herewith (13 W. R. C. R. 671). For the reasons stated in the decision in said case, we find and determine that the charge of 6 cts. per cwt. exacted by the respondent on the aforesaid shipments of granite paving blocks was unusual and exorbitant, and that the rate of 4 cts. per cwt. is a reasonable rate for the transportation services rendered. An examination of the paid expense bills filed herein shows that the total amount of the excess charges is $1,389.38, as alleged.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company be and the same is hereby authorized and directed to pay to the petitioner, the White Rock Quarry Company, the said sum of $1,389.38.

MILWAUKEE SAND STONE COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Jan. 13, 1914. Decided Jan. 28, 1914.

The petitioner alleges that the charge of 6 cts. per cwt. exacted by the respondent for the transportation of nine shipments of stone paving blocks from Ablemans to Milwaukee was excessive and prays for refund of the excess of the amount collected above the amount assessable on the basis of a rate of 4 cts. per cwt., which is the rate in effect for similar shipments moving from Red Granite, Montello, Stevens Point and other Wisconsin points to Milwaukee and Chicago. The respondent put the rate of 4 cts. in effect after the shipments in question moved and concedes that the petitioner's claim for reparation is valid.

Held: The charge complained of was unreasonable and exorbitant. The reasonable rate would have been 4 cts. per cwt. Refund is ordered on this basis.

The petitioner operates a quarry at Ablemans, Wis. It alleges that the respondent railway company has exacted 2 cts. per cwt. excessive freight on nine shipments of stone paving blocks moving over its lines from Ablemans to Milwaukee, Wis., on and between April 4 and June 4, 1913, which amounts to $168.96; that such charge was 2 cts. per cwt. in excess of rates on stone paving blocks moving from Red Granite, Montello, Stevens Point and other Wisconsin points to Milwaukee and Chicago. Wherefore, petitioner prays that it be awarded reparation in said amount.

The railway company did not file any formal answer. The matter came on for hearing on January 13, 1914. The petitioner was represented by *L. J. Pierson,* and the respondent by *Robert H. Widdicombe,* its attorney.

It appears that about a year before the filing of the complaint herein, the petitioner leased of the respondent railway company a quarry at Ablemans, Wis.; that at the time of leasing said quarry there was a rate of 6 cts. per cwt. on paving blocks to Milwaukee, but no paving blocks had ever been shipped prior

thereto. The respondent also operates a quarry at Stevens Point, Wis., and the rate in effect from Stevens Point upon paving blocks to Milwaukee is 4 cts. per cwt. The rate on granite blocks from Montello, Red Granite and Lohrville is 4 cts. per cwt. It appears that before the shipments in question moved, the petitioner requested the respondent railway company to give it a rate from Ablemans lower than that in effect from the other points named. This the respondent refused to do, but in lieu thereof published a rate of 4 cts. per cwt. from Ablemans to Milwaukee which did not become effective until after the shipments in question moved. The petitioner, expecting a lower rate, entered into contracts for the shipment of granite blocks from Ablemans to Milwaukee on a basis of 4 cts. per cwt. freight. The railway company concedes that the petitioner's claim is valid and that the reparation should be awarded.

Under the circumstances we find and determine that the rate of 6 cts. per cwt. charged the petitioner on the aforesaid shipments of granite blocks from Ablemans to Milwaukee was unusual and exorbitant, and that the reasonable rate that should have been in effect and applicable to such shipments is 4 cts. per cwt. From an examination of the paid expense bills it appears that the excessive charge is $168.96 as alleged.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company be and the same is hereby authorized and directed to refund to the petitioner, the Milwaukee Sand Stone Company, the said sum of $168.96.

MILWAUKEE STRUCTURAL STEEL COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Jan. 13, 1914. Decided Jan. 28, 1914.

The petitioner alleges that the charge assessed by the respondent for the transportation of 6 carloads of material for use in the construction of a paint and plating shop for the respondent at West Milwaukee was unusual and exorbitant and contends that the charge should have been made on a switching basis, inasmuch as the length of the haul was only one and a half miles and other points in the immediate vicinity and beyond are placed on a switching basis. When the shipments in question moved the respondent's switching tariff provided for switching rates between industries named in the tariff, but the consignee in the instant case, not being named in the tariff, was not entitled to receive the switching rates and was charged the distance rate for five miles or less. The respondent, however, subsequently modified its tariff to eliminate the discrimination presented by such cases.

Held: The charge complained of was unusual and exorbitant. The reasonable charge would have been $5 per car and refund is ordered on this basis.

The petitioner is engaged in the manufacture of structural steel at Nineteenth street and St. Paul avenue, in the city of Milwaukee. It alleges that on and between June 27 and September 2, 1913, it required the use of six cars for transportation of material for use in the construction of a paint and plating shop being erected at West Milwaukee by the respondent railway company, and that the charges assessed for the use of the six cars and the amount paid thereon was $80.10; that in view of the fact that the haul of the said cars was only one and a half miles, and the fact that the points in the immediate vicinity and beyond are placed on a switching basis, the charges exacted were unusual and exorbitant. Wherefore, petitioner prays that refund be made to it upon the basis of a switching charge for the service rendered.

The respondent railway company, answering the petition, sets forth that the charges were applied on the basis of the fourth

class rate of 6 cts. less than carloads and sixth class rate of 4 cts. carloads, which is the Wisconsin distance rate for five miles or less, as per tariff G. F. D. No. 6500–B; that supplement No. 31 to tariff G. F. D. No. 2543 A, effective February 19, 1913, names a switching rate of $5 per car from the Milwaukee Structural Steel Company's plant at Muskego avenue to the respondent's shops and buildings at West Milwaukee; that supplement No. 35 to tariff G. F. D. No. 2543–A, effective September 2, 1913, provides as follows:

"The rates named in tariff, as amended, to or from industries with private sidings, will also apply on traffic for other parties using such facilities for traffic connected with the business of the party listed in said tariff, supplements thereto or reissues thereof, as the party having the private siding.

"This rule must not be construed as authorizing the use of individual or private sidetracks for general traffic which should be handled through the public facilities of the carrier."

The respondent further shows that while the petitioner's plant is shown as an industry in the tariff referred to, the material in question was consigned to a party not named in the Milwaukee switching tariff; that said supplement No. 35 was made effective for the purpose of switching of the kind involved in this case, but that this supplement did not take effect until after the shipments in question moved.

The matter came on for hearing on January 13, 1914. The petitioner was represented by *J. F. Henry,* secretary and treasurer of the company, and the respondent by *J. N. Davis.*

It appears that when the shipments in question moved, the respondent's switching tariff provided for switching rates between industries named in the tariff. The consignee in this case was the Northern Construction Company, which was engaged in erecting a building for the respondent railway company at West Milwaukee. It was not named in the tariff, and therefore was not entitled to the switching rate.

Under the circumstances the railway company applied the only tariff which it could legally apply, which was the Wisconsin distance tariff. Of course, it is conceded that the situation presented a discrimination which could not be justified. The railway company consequently corrected its tariff by providing for such cases. Under the circumstances we find and determine

that the charge exacted of the petitioner on the aforesaid shipments was unusual and exorbitant, and that the reasonable charge for the transportation services thus rendered is $5 per car. The number of cars shipped was six, and according to the paid expense bills filed it appears that the amount paid for such shipments was, as alleged, $80.10. The reparation, therefore, amounts to $50.10.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby authorized and directed to refund to the petitioner, the Milwaukee Structural Steel Company, the said sum of $50.10.

IN RE PROPOSED EXTENSION OF THE LINES OF THE FOND DU LAC RURAL TELEPHONE COMPANY IN THE TOWN OF TAYCHEEDAH, FOND DU LAC COUNTY, WISCONSIN.

Submitted Dec. 30, 1913. Decided Jan. 5, 1914.

The Fond du Lac Rural Tel. Co. filed notice with the Commission of its intention to extend its telephone line in the town of Taycheedah, Fond du Lac county. The Eastern Wisconsin Tel. Co. objects to the proposed extension. The applicant desires to make the extension for the purpose of serving two residences. The occupant of one of these has connection with the lines of the objector over a line owned by himself and is in a position to extend his service to the occupant of the other residence with much less additional construction than would result if either the applicant or the objector were to extend its lines to reach him.

Held: Public convenience and necessity do not require the extension proposed. If the charges exacted for service rendered with existing connections are excessive or if the service is inadequate the proper remedy is to make complaint in the regular way rather than to invite a duplication of telephone systems.

The Fond du Lac Rural Telephone Company filed with this Commission on December 16, 1913, its notice of a proposed extension of its line in the town of Taycheedah, Fond du Lac county. The extension as proposed was to consist of wires strung on the poles of a telephone line owned by Frank Nett. The Eastern Wisconsin Telephone Company filed its objection to the extension, and the matter was set for hearing.

At the hearing, which was held at Fond du Lac on December 30, 1913, the Fond du Lac Rural Telephone Company was represented by *Reilly, Fellenz & Reilly,* and the Eastern Wisconsin Telephone Company by *J. E. McMullen.*

It appears from the testimony that both the companies involved in this case have lines extending out of Fond du Lac for rural service in the vicinity of the proposed extension. The objector's local line runs to within about two miles of the points to which the extension is intended to be made, and another local line of the objector, which, however, connects with a different switchboard and necessitates a toll charge in reaching Fond du Lac, comes within about a mile of these points. The

applicant's line now extends to within about fifty rods of the Nett line, and the proposed extension is to run for a distance of about two and a half miles on the poles of the Nett line to reach the residences to which the service of the applicant is desired. It thus appears that the Eastern Wisconsin Telephone Company's line is considerably nearer the residences in question than the line of the applicant.

The two residences to which the applicant desires to extend its line are those of Frank Nett and J. J. O'Laughlin. Mr. Nett's residence is now served by the telephone line which he owns and Mr. O'Laughlin has no service at present, but the arrangement is that Mr. Nett will extend his pole line to Mr. O'Laughlin's residence and the applicant is to string its wires on these poles. Mr. O'Laughlin's house is about one-half mile west of Mr. Nett's. It seems that the objective point of the persons desiring the applicant's service is the city of Fond du Lac, and that they are not particularly interested in the local service which would be obtainable along the applicant's line on the way into this city. Mr. Nett maintains a business office at Peebles, and it is at this point that his telephone line terminates. The Eastern Wisconsin Telephone Company runs two lines through Peebles, one a toll line, and the other a local farm telephone line. These lines, as well as the Nett line, run into a store at Peebles and in this store is a switch by which the Nett line can be connected with the Eastern Wisconsin Telephone Company's lines into Fond du Lac. Thus, anyone served by the Nett line can reach Fond du Lac over the objector's line through the switch at Peebles. The charge for this service is 10 cts. per message. The applicant, if permitted to extend its lines in the manner proposed, would give direct service to Fond du Lac without any switching, and that service would be included in the monthly rate paid by the subscriber without additional toll charges.

It appears that Mr. O'Laughlin, who now has no telephone service, applied some time ago to the Eastern Wisconsin Telephone Company for service, and that that company offered to serve him with its line nearest his residence, which, as before stated, would have connected him with a switchboard in the opposite direction from Fond du Lac and would have necessitated the payment of a toll to reach the latter city. Connection with the Eastern Wisconsin Telephone Company's line running di-

rectly into Fond du Lac was refused Mr. O'Laughlin for the reason that such connection would necessitate a considerably longer pole lead and Mr. O'Laughlin was apparently the only person who would take service on the line thus extended.

The situation as brought out by the evidence is that Mr. Nett now has connection with Fond du Lac over his own telephone line in connection with the Eastern Wisconsin Telephone Company's line through the switch at Peebles, and he pays 10 cts. for this service; while Mr. O'Laughlin has no service at all, but can easily obtain it through an extension of Mr. Nett's line to his house with much less additional construction than would result if either the applicant or the objector were to extend its line to reach him. It does not appear that Mr. Nett pays an excessive amount for the service he receives in reaching Fond du Lac and if in fact the price were excessive the remedy would be to make complaint in the regular way rather than to invite a duplication of telephone systems in the region in question. Similarly, if the service Mr. Nett obtains under the present arrangement in reaching Fond du Lac is not adequate, his first remedy is to make complaint and secure an order requiring adequate service. If it should appear as the result of such complaints that the situation is not such as to make adequate service at reasonable rates possible to Mr. Nett over the lines as now connected, it would then be time to take steps toward introducing a competing line into the neighborhood. As far as Mr. O'Laughlin is concerned, it seems that his situation is similar to that of Mr. Nett. The extension of Mr. Nett's line would give him the same kind of service that Mr. Nett himself now obtains at his residence, and the same reasons which operate against the extension of the applicant's line to reach Mr. Nett apply also to Mr. O'Laughlin.

We therefore find and determine that public convenience and necessity do not require the extension of the line of the Fond du Lac Rural Telephone Company in the town of Taycheedah, Fond du Lac county, Wis., in the manner proposed in the notice filed with the Commission in this proceeding.

C. E. McMILLAN
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

HOWARD TEASDALE
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided Feb. 5, 1914.

Two petitions are involved in this proceeding. The first alleges that the depot maintained by the C. & N. W. Ry. Co. at the city of Sparta is inadequate and asks that the Commission take such action as it may deem just in the premises. The second petition, filed under ch. 69, laws of 1913, alleges that public convenience and necessity require the erection of a union station at Sparta and prays that the C. & N. W. Ry. Co. and the C. M. & St. P. Ry. Co. be required to establish such a station. The C. & N. W. Ry. Co. offers to erect a new depot on its line in 1914, subject to the approval of the Commission, and the first petitioner accepts this as satisfying his complaint. The C. M. & St. P. Ry. Co. has recently improved its depot in compliance with the order issued in *McMillan v. C. M. & St. P. R. Co.* 1912, 10 W. R. C. R. 556. Sparta is the junction point of the Wyeville and Elroy lines of the C. & N. W. Ry. Co. and of the main line of the C. M. & St. P. Ry. Co. and its Viroqua branch and passengers transfer to some extent between the stations of the two railroads.

Held: Public necessity does not require the construction of a union station at Sparta. The second petition is therefore dismissed. With respect to the first petition it is ordered that the C. & N. W. Ry. Co. erect a modern passenger depot at Sparta as stipulated by the attorneys in the matter. June 1, 1914, is considered a reasonable date at which the depot shall be completed and open for public use.

The petition of C. E. McMillan, mayor of Sparta in Monroe county, alleges that the depot maintained by the Chicago & North Western Railway Company at that city is inadequate, and asks that the Commission take such action as it may deem just in the premises.

The Chicago & North Western Railway Company, in its answer, alleges that its station facilities at Sparta are similar to those maintained at other points of the same importance and are adequate for all requirements.

A hearing was held at Sparta on August 11, 1913, at which *S. S. Rice* appeared for the petitioner and *C. A. Vilas* for the respondent.

At this hearing the respondent offered to erect a new depot at Sparta in 1914, subject to the approval of the Commission, and this was agreed to by the petitioner as satisfying his complaint. It was stipulated that an order should be issued requiring the new station to be completed by June 1, 1914.

On August 7, 1913, Howard Teasdale filed with the Commission a petition under ch. 69, laws of 1913, alleging that public convenience and necessity require the erection of a union station at Sparta and praying that the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Railway Company be required to establish such a station.

The Chicago, Milwaukee & St. Paul Railway Company, in its answer, alleges that its existing station at Sparta is adequate and denies that public necessity requires the erection of a union depot. It therefore asks that the complaint be dismissed.

The Chicago & North Western Railway Company, in its answer, denies that public convenience or necessity require the erection of a union depot as prayed for, and alleges that it has made provision for a new depot at Sparta at or near the site of the existing structure. The dismissal of the complaint is therefore asked.

The matter was heard at Sparta on September 25, 1913. The petitioner, *Howard Teasdale,* appeared in his own behalf. The Chicago & North Western Railway Company was represented by *C. A. Vilas* and the Chicago, Milwaukee & St. Paul Railway Company by *P. C. Eldredge.*

The testimony taken at this hearing shows that the depot of the Chicago & North Western Railway Company is located at the foot of Water street, a short distance east of the crossing with the Viroqua branch. The Chicago, Milwaukee & St. Paul Railway Company's depot is situated at the intersection of that company's line and Walcott street, about three quarters of a mile northeast of the Chicago & North Western Railway Company's depot. Both stations are approximately an equal distance from the corner of Oak and Water streets, and are about equally accessible to residents of the city.

Sparta has a population of about 4,000. It is the junction point of the Wyeville and Elroy lines of the Chicago & North

Western Railway Company, and also of the main line of the Chicago, Milwaukee & St. Paul Railway Company and its Viroqua branch. The main lines of the two companies parallel each other from Tomah, Wis., to Winona, Minn. Witnesses testified that a considerable number of passengers transfer from one company's trains to those of the other company. Passengers on the Chicago, Milwaukee & St. Paul Railway Company's line from the west sometimes change cars at Sparta when bound for Wilton or other points on the Elroy–Madison line of the Chicago & North Western Railway Company. Similarly, passengers bound for points on the Viroqua branch from points on the Chicago & North Western lines are obliged to go from one station to the other at Sparta. Witness stated that from seven to twelve people usually leave incoming trains on the Viroqua branch when they stop at the crossing with the line of the Chicago & North Western Railway Company near that company's depot in order to avoid the long transfer by bus from the Chicago, Milwaukee & St. Paul Railway Company's station. The proprietor of the bus line which operates between the two stations testified that only about seven passengers a week transfer from one station to the other. It was said that some passengers who might otherwise change to the other line at Sparta now make the transfer at West Salem where the stations are closer together. Witnesses for the railways pointed out that facilities for transfer between their respective lines are now provided at La Crosse on the west and Camp Douglas on the east. The testimony shows that trains on the two lines bound for the same point pass through Sparta within a short time of each other. Thus if a person plans to take a Chicago & North Western train for a common point, and the train is late, he may with advantage make use of a train on the other line. Such a change could be more conveniently made if a union station were provided.

The railway companies have submitted statements of their passenger business at Sparta as follows:

Month.	C. & N. W. Ry. Co.				C. M. & St. P. Ry. Co.

Total.....	$42,081.11	$35,088.87	$6,022.03	$970.21	$25,222.63	$19,158.98	$5,458.77	$604.88

The petitioner suggested three locations for the proposed union station, as follows:

1. On Water street about 300 feet south of Oak street.
2. The site of the existing Chicago, Milwaukee & St. Paul Railway Company's depot.
3. About 300 feet east of the Water street crossing with the line of the Chicago & North Western Railway Company.

It appears that the establishment of a union depot at site 1 would necessitate backing trains into the station, and require a very large expenditure on the part of both companies. The choice of the present location of the Chicago, Milwaukee & St. Paul Railway Company's depot (site 2) would compel the Chicago & North Western Railway Company to change its route and purchase a new and expensive right of way. Railway officials testified that site 3, near the present location of the Chicago & North Western Railway Company's depot, would be the least expensive and most practicable site for a union depot, but that its choice would involve large expenditures for track changes on both lines and for the relocation of station equipment on the Chicago, Milwaukee & St. Paul Railway Company's line. The cost of the latter item was estimated by the company's superintendent at $12,250.

Both companies took the position that the transfer traffic is insufficient to warrant a union station and that satisfactory service can be rendered at separate stations. It was conceded by all witnesses that a union depot would be more convenient, but most of them, including the former and present mayor, testified

that in their opinion a union depot is not a public necessity at the present time.

From an examination of the testimony we do not find that there is a public necessity for the erection of a union station at Sparta. The transfer traffic is obviously insufficient to justify the expenditures necessary for such a depot, and the advantages which would accrue to the residents of the city are relatively slight. It should also be noted that improvements have been recently made at the Chicago, Milwaukee & St. Paul Railway Company's depot by order of this Commission in an action brought by the mayor of the city *(McMillan v. C. M. & St. P. R. Co.* 1912, 10 W. R. C. R. 556), and that in a similar action considered in this decision the Chicago & North Western Railway Company has volunteered to erect a new and adequate depot at Sparta. An order will therefore be entered in accordance with the stipulation of attorneys in the first case herein, and dismissing the latter complaint.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, erect a modern passenger depot at Sparta which shall be adequate for the traffic obtaining at that city, plans to be submitted to the Commission for approval.

IT IS FURTHER ORDERED, That the complaint of Howard Teasdale against the Chicago, Milwaukee & St. Paul Railway Company and the Chicago & North Western Railway Company be and the same is hereby dismissed.

June 1, 1914, is considered a reasonable date at which the station ordered herein shall be completed and open for public use.

F. G. MORITZ
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Dec. 9, 1913. Decided Feb. 9, 1914.

The petitioner alleges that the respondent overcharged it for the transportation of two carloads of sand from Portage to Milwaukee and one carload of sand from Portage to Racine, in that the respondent wrongly classified the sand as moulding sand and applied a rate later made applicable only to moulding sand. It appears that the respondent's tariff at the time the shipments moved provided one rate for all grades of sand but that subsequently a new tariff was put into effect which maintained this rate for moulding sand but fixed lower rates for other sand.

Held: The charges complained of were excessive. The reasonable rate for the transportation of the two cars of sand from Portage to Milwaukee would have been the present distance rate of 2.82 cts. per cwt. for sand other than moulding sand moving a distance of ninety-five miles and the reasonable rate for the transportation of the car of sand from Portage to Racine would have been the present distance tariff rate of 3.2 cts. per cwt. for sand other than moulding sand. Refund is ordered on this basis.

The petitioner is a dealer in building materials and foundry sand, with offices in Milwaukee. The complaint filed by him on November 6, 1913, asks a refund for overcharge on three carloads of sand from Portage, two of which were destined to Milwaukee and one to Racine; claims that the Chicago, Milwaukee & St. Paul Railway Company classified the sand as moulding sand and applied a rate later made applicable only to moulding sand; and that the commodity in question was not a moulding sand.

A hearing was held in the offices of the Commission at Madison on December 9, 1913. *Mr. Moritz* appeared in person and *J. N. Davis* appeared for the respondent carrier.

Mr. Moritz showed that three grades of sand were shipped from Portage: moulding, silica and core sand. Moulding sand is loamy, more plastic and contains more clay than the others; silica sand is a purer sand, containing perhaps 99 per cent silica, and undergoes a process of washing as it is pumped from

the earth; and core sand is a bank sand, and while not so pure as silica sand (it contains perhaps 60 per cent silica) is used for much the same purpose. Moulding sand is sold at 75 cts. a ton, f. o. b. loading point, while silica and core sand bring only 30 or 35 cts. a ton f. o. b. loading point. Any one of the three grades of sand will weigh about the same per car and the costs of the loading are about the same.

It appears that the Chicago, Milwaukee & St. Paul Railway Company published, with the approval of the Commission, a tariff (G. F. D. 6500B) effective June 15, 1913, which first differentiated between moulding and other sands. Prior to that date all sand moved at the same rate of 3.75 cts. per cwt. for distances of ninety-five miles. The new tariff maintained the same rate for moulding sand for that distance, but on other sand made the rate 2.82 cts. per cwt.

Mr. Davis, in behalf of the respondent carrier, stated that the rate applied to the shipments in question was the legal rate in effect at the time they moved, and that, therefore, no refund is due the complainant. The respondent knew no specific reason why it should make the new tariff retroactive by voluntarily consenting to refund to Mr. Moritz an amount equal to the difference between the new and the old rates.

The three cars of sand on which Mr. Moritz asks refunds are as follows:

Date.	Car initial.	Car number.	To	Charges on moulding sand.	Charges on silicia sand.	Refund asked.
4—10—13...	C. B. & Q...	77001	Milwaukee.....	$40 88	$30 84	$10 04
4—16—13...	C. I. L.....	184612	"	40 25	30 26	9 99
5—29—13...	Penn.....	323388	Racine.....	41 18	31 00	10 18
						$30 21

It would appear that the Chicago, Milwaukee & St. Paul Railway Company, by making the distinction in its classification between moulding and other sand, has admitted the unreasonableness of the old rate on other sand. It is necessary that a lower rate apply to other than moulding sand in order that it move at all, as the value is low in proportion to the weight. The fact that the distinction was not made until recently does not make the old rate any more reasonable than it would be if it were

applied since the tariff became effective. Under the circumstances, we find and determine that the rate exacted of petitioner on the three cars of sand in question was excessive, and that a reasonable rate for the services rendered by the respondent for the transportation of the two cars of sand from Portage to Milwaukee would have been the present distance rate of 2.82 cts per cwt. for a distance of ninety-five miles for sand other than moulding sand; and that a reasonable rate for the transportation of the car of sand from Portage to Racine would have been the present distance tariff rate of 3.2 cts. per cwt. for sand other than moulding sand.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and hereby is authorized and directed to refund to F. G. Moritz the sum of $30.21.

JAMES F. SULLIVAN

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Dec. 9, 1913. Decided Feb. 9, 1914.

The petitioner (1) alleges that the rate of 4 cts. per cwt. exacted by the respondent for the transportation of 4 cars of fuel wood from Kennan to Phillips was excessive to the extent that it exceeds a rate of 3 cts. per cwt. and asks for refund and (2) prays that a rate of 3 cts. per cwt. be established for fuel wood moving between Kennan and Phillips. The respondent states that it is preparing a new fuel wood distance tariff providing a rate of 3 cts. for a distance of 30 miles and expresses its willingness to make the refund requested.

Held: The rate complained of is unreasonable. A reasonable rate would not exceed 3 cts. per cwt.

It is therefore ordered: (1) that the respondent put into effect a rate of 3 cts. per cwt. on fuel wood in carloads from Kennan to Phillips; and (2) that the respondent be authorized to refund to the petitioner the excess of the charges paid by him on the shipments in question over the amount found to be reasonable compensation for the services rendered.

This action was brought by James F. Sullivan, a dealer in wood and coal at Phillips, Price county, Wis. In the course of his business Mr. Sullivan has had occasion to ship several carloads of fuel wood from Kennan, Wis., to Phillips, Wis. Kennan is a station on the Wisconsin and Peninsula division of the "Soo" line and Phillips on what is now known as the Chicago division, which was formerly the Wisconsin Central railroad. On November 5, 1913, Mr. Sullivan filed a complaint with this Commission that the rate charged him, namely 4 cts. per cwt., (the class E rate of the Wisconsin distance tariff for a distance of thirty miles) was excessive and prayed that the Commission authorize the respondent to refund him $21.09, this amount being the difference between a rate of 4 cts. and a rate of 3½ cts. on the four cars of fuel wood mentioned in the petition. He also asked that a rate of 3 cts. per cwt. on fuel wood be established between Kennan and Phillips. The respondent, in its answer, denied the unreasonableness of the rate applied.

A hearing in the matter was held in the office of the Commission at Madison on December 9, 1913, the petitioner appearing in his own behalf and *E. G. Clark* appearing for the respondent.

The petitioner testified that when he had first contemplated shipping wood from Kennan to Phillips the agent at Phillips had informed him that the rate was 3 cts. per cwt. Subsequently, when he received his freight bills, he found that he had been charged at the rate of 4 cts. per cwt.

The total haul for the railroad from Kennan to Phillips is twenty-eight miles, and takes, of course, the thirty mile distance tariff rate. From Kennan to Prentice the haul is over the Wisconsin and Peninsula division, and from Prentice to Phillips over the Chicago division. It appears that the distance tariff of the Wisconsin Central Railway Company on fuel wood was 3 cts. per cwt. for a distance of thirty miles and that after the taking over of that road by the respondent company, this same tariff became the "Soo" line tariff. The rate on fuel wood for the distance of thirty miles on the "Soo" line was 4 cts. per cwt.

Mr. Clark, testifying for the respondent, stated that the confusion in the rate applied to Mr. Sullivan's shipments was due to the existence of the two distinct tariffs. The movement of fuel wood from Kennan to Phillips was an unusual one and he did not believe it was for such traffic that the distance tariff had been established, but rather for shipments to central markets. He stated that his company was preparing a new fuel wood distance tariff which would coincide closely with the old Wisconsin Central tariff and which would give Mr. Sullivan or any other "Soo" line shipper a rate of 3 cts. for a distance of thirty miles. No such tariff has as yet been filed with or approved by the Commission. Mr. Clark stated further that his company was willing to refund to Mr. Sullivan the amount of the difference between a rate of 4 cts. and a rate of 3 cts. on the four cars involved in the complaint.

We therefore find and determine that the rate of 4 cts. per cwt. on fuel wood in carloads for a distance of thirty miles is unreasonable; that a reasonable rate would not exceed 3 cts. per cwt., and that Mr. Sullivan is entitled to reparation to the amount of $21.09, the overcharge on the four cars of fuel wood mentioned in the complaint.

IT IS THEREFORE ORDERED, That the Milwaukee, St. Paul & Sault Ste. Marie Railway Company discontinue its present rate of 4 cts. per cwt. on fuel wood in carloads from Kennan to Phillips and substitute in lieu thereof a rate not to exceed 3 cts. per cwt.

IT IS FURTHER ORDERED, That the Milwaukee, St. Paul & Sault Ste. Marie Railway Company be and hereby is authorized to refund to James F. Sullivan the sum of $21.09.

WAUSAU PAPER MILLS COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Nov. 11, 1913. Decided Feb. 9, 1914.

The petitioner alleges that the respondent exacted a rate of 3 cts. per cwt. for the transportation of eight cars of ground wood pulp shipped from Rothschild to Brokaw between July 11, 1912, and August 3, 1912, and prays for the refund of the excess of the charges paid above the charges assessable on the basis of the 2 ct. rate prescribed by the Commission for shipments of the kind in question in its order of July 11, 1912 (9 W. R. C. R. 400). The respondent admits the overcharges alleged insofar as the three cars moved after the Commission's order became effective on July 31, 1912, are concerned and has adjusted these overcharges with the petitioner. The respondent contends, however, that the rate of 3 cts. per cwt. was properly assessed on the five shipments which moved prior to July 31, 1912.

Held: The rate of 2 cts. per cwt. fixed in the order of July 11, 1912, to become effective on July 31, 1912, was reasonable as far back as July 11, 1912. Refund is ordered on this basis.

On July 11, 1912, this Commission, by an order issued in *Wausau Paper Mills Co. v. C. M. & St. P. R. Co.* (9 W. R. C. R. 400) established a rate of 2 cts. per cwt. on ground wood pulp from Rothschild to Brokaw, Wis. In a petition dated October 22, 1912, the Wausau Paper Mills Company asks the Commission to authorize and direct the Chicago, Milwaukee & St. Paul Railway Company to refund the sum of $59.58, this amount being the difference between a 3 ct. rate and a 2 ct. rate on eight cars of ground wood pulp shipped from Rothschild to Brokaw between July 11, 1912 (the date of the Commission's order), and August 3, 1912. The Wausau Paper Mills Company further alleges that the respondent failed to put into effect the rate established by the order mentioned above until September 1, 1912.

The Chicago, Milwaukee & St. Paul Railway Company, in its answer, makes the following statement:

"The order of the Commission reducing the rate to 2 cts. per cwt. became operative July 31, 1912, and our tariff was published effective upon the date and not September 1st, as stated

in complainant's petition. The shipments alleged to have moved August 2d and 3d are, therefore, overcharged 1 cent per cwt., and this amount should be refunded without intervention of the Railroad Commission of Wisconsin.

"As to the shipments that moved prior to July 31st, the proper tariff rate was assessed and I see no reason why we should voluntarily assume a position that would cause retroactive application of the tariff."

Further answering, the respondent says that steps were then being taken to immediately pay back the overcharge of 1 ct. per cwt. on the three cars moved in August, 1912.

Hearing upon the case was held in the office of the Commission at Madison, on November 11, 1913. *J. N. Davis* appeared for the respondent, but there was no appearance for the petitioner.

Mr. Davis restated his company's position in the matter to the effect that as to the cars moved in August, 1912, adjustment could be made with the Wausau Paper Mills Company without an order from the Commission. As to the five cars moved between July 11 and 31 of the same year—the latter date being the one upon which the Commission's order fixing the 2 ct. rate became effective—the railway company held that it had no right to assume that the Commission's order would be retroactive.

A letter received by the Commission under date of January 24, 1914, from the petitioner states that the overcharge made by the defendant company upon the cars moved on August 2 and 3, 1912, had been adjusted. As this was a question of overcharge simply the Commission had not intended to issue an order, believing that adjustment would be made, as it has been.

The five cars, then, moved between July 11 and 31, 1912, carrying ground wood pulp from Rothschild to Brokaw at a 3 cts. per cwt. rate are all that remain to be considered for adjustment under the complaint. Following are the details of the shipments, together with the refund asked:

Date.	Initial.	Car No.	Weight.	Charges at 3 cts. per cwt.
7-11-12	L. V.	86340	88,000	$26 40
7-14-12	P. M.	43584	66,000	19 80
7-17-12	Penn.	49026	90,585	27 18
7-20-12	M.	54242	66,000	19 80
7-22-12	P. L.	57681	66,000	19 80
			376,585	$112 98
			At 2 cts. per cwt. would be..	75 32
			Refund asked.....	$37 66

In the decision by the Commission establishing the rate of 2 cts. per cwt. between Rothschild and Brokaw the question of the cost of the service was carefully gone over and comparisons were instituted with prevailing short distance rates on ground wood pulp on the respondent company's lines between other points and on the Chicago & North Western lines. Other factors also were considered in fixing the rate. When the order was issued making the new rate it embodied an authorization for refund to the Wausau Paper Mills Company of the difference between a 4.3 ct. rate and the 3 ct. rate, the latter having been voluntarily established by the respondent company after solicitation on the part of the petitioner. The rate fixed as reasonable at that time was 2 cts. per cwt. between the points named. The fixing of that rate, however, did not imply that it would necessarily have been reasonable at a time prior to the issuing of the order, as the following from the Commission's order at that time (1912, 9 W. R. C. R. 400, 404) suggests:

"With regard to the matter of refund on past shipments, it is to be noted that the petitioner asks only for a refund of the difference between the old 4.3 ct. rate and the present 3 ct. rate on shipments moving between July 10 and October 5, 1911. This being the full measure of the request, the Commission cannot properly go further and grant a refund on the basis of the 2 ct. rate herein found reasonable for the future. As a matter of fact, it is not certain that the petitioner, even if it had prayed for it, would have been entitled to a refund of the entire difference between 4.3 cts. and 2 cts. It does not always follow from the reduction of a rate that a refund may properly be granted, and each case depends largely upon its own peculiar circumstances.

But if the fixing of a rate deemed reasonable at a certain time does not imply that such rate would have been reasonable months

or years prior to that time, because of the possibility that different conditions and circumstances might have existed earlier, neither does it prove that the new rate would not earlier have been reasonable.

In the present case the data and the comparisons upon which the Commission's order of July 11, 1912, was promulgated have been used. From a reconsideration of these it would seem that the 2 ct. rate fixed to become effective on July 31, 1912, was reasonable as far back as the date of the issue of the order on July 11, 1912, but the Commission will not hold that the new rate would have been reasonable farther back than that date.

We therefore find and determine that the petitioner, the Wausau Paper Mills Company, is entitled to a refund of $37.66, the amount of the charge over and above a reasonable charge for moving five cars of ground wood pulp between Rothschild and Brokaw by the Chicago, Milwaukee & St. Paul Railway Company.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same hereby is authorized and directed to refund to the Wausau Paper Mills Company the sum of $37.66.

CALLAWAY FUEL COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY, MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted June 10, 1913. Decided Feb. 9, 1914.

The petitioner complains of the routing given a car of coke transported by the respondents from Racine to North Fond du Lac and asks for refund of the excess of the charge exacted above the charge which the petitioner alleges should have been assessed if the car had been properly routed. The car moved via the C. & N. W. Ry. from Racine to Waukesha and via the M. St. P. & S. S. M. Ry. from Waukesha to North Fond du Lac, and the total charge assessed includes the sum of the local rates plus the switching charge of a connecting line. The petitioner contends that the shipment should have moved via the C. & N. W. Ry. to Fond du Lac and that the reasonable switching charge which should have been made by the M. St. P. & S. S. M. Ry. Co. for delivery at North Fond du Lac should have been absorbed by the C. & N. W. Ry. Co.

Held: Although the shipment in question, in view of a carrier's obligation to choose the route having the less distance when the carrier has the choice of two possible routings, should have moved via Fond du Lac, the charge for transportation by this route would have been identical with the charge actually exacted. The petitioner has therefore suffered no injury and his petition, insofar as it relates to the matter of refund, is dismissed.

No switching rates are now provided by the M. St. P. & S. S. M. Ry. Co. for hauls between Fond du Lac and North Fond du Lac. It appears, however, that the rate of $5 per car, which the railway company once expressed its willingness to put into effect for this service, is a reasonable rate and its adoption is therefore recommended for use in connection with traffic interchanged with the C. & N. W. Ry. at Fond du Lac.

The petitioner in this case is a corporation engaged in the sale of coal and coke with offices in Milwaukee, Wis. It alleges that on September 12, 1912, it shipped a carload of coke from Racine, Wis., via the Chicago & North Western Railway consigned to Paul Wirth at North Fond du Lac, care of "Soo" line. The Chicago & North Western Railway Company moved the car to Waukesha, Wis., making delivery to the Minneapolis, St. Paul & Sault Ste. Marie Railway at that point, which, in turn, transported the car from Waukesha to North Fond du Lac. The railroads in question charged, respectively, the local rate of 60 cts. per ton from Racine to Waukesha and 75 cts. per ton from

Waukesha to North Fond du Lac, which, with the connecting line's switching charge, make a total charge of $43.58. The local rate on coke via the Chicago & North Western Railway from Racine to Fond du Lac is 75 cts. per ton and the same rate applies to North Fond du Lac, as per G. F. D. No. 13125–A, but on account of there being no track connection at that point, delivery could not be made to the Minneapolis, St. Paul & Sault Ste. Marie Railway for switching to consignee who is located on the tracks of that line. Such delivery, the petitioner insists, should have been made to the "Soo" line at Fond du Lac, and a reasonable switching charge exacted therefor in addition to the rate of 75 cts. per net ton from Racine to Fond du Lac. In accordance with established practice, this switching charge would be absorbed by the Chicago & North Western Railway, thereby making the delivery to the consignee upon the through rate of 75 cts. per net ton from Racine to North Fond du Lac. On account of the failure of the Chicago & North Western Railway to effect the delivery to the consignee by means of the routing outlined above, the complainant maintains that it suffered a loss of $18.48, which it requests the Commission to authorize and direct the respondents to refund.

The Chicago & North Western Railway Company, in its answer to the above complaint, states that it has not been able to verify the car movement referred to, but denies that it collected more than the legal tariff rates upon any shipment described in the complaint, or that these charges were unjust or unreasonable.

The Minneapolis, St. Paul & Sault Ste. Marie Railway Company made a separate answer to the complaint declaring, in substance, that its charge of 75 cts. per ton for handling the carload of coke from Waukesha to North Fond du Lac was its regularly published tariff rate between the points named; that it was a just and reasonable charge; that if the total charge was greater by reason of the routing given by the initial carrier, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company was in no way at fault because it did not route the car.

A hearing was held June 10, 1913, in the office of the Railroad Commission at Madison. Appearances were entered on behalf of the petitioner and both of the respondents.

The expense bill filed with the complaint shows that the car moved in the manner alleged in the complaint. At the hearing

it developed that there was a difference of opinion as to the construction to be placed upon the words "care of 'Soo' line" which were the shipping directions given by the petitioner to the Chicago & North Western Railway. The former maintained that under these instructions the initial carrier should have moved the car to Fond du Lac, which is the junction point nearest the destination where there is track connection, thus enabling the "Soo" to deliver the car to the consignee. The Chicago & North Western Railway Company maintained, however, that under these instructions its agent was obliged to route the car via Waukesha, its first junction point with the Minneapolis, St. Paul & Sault Ste. Marie Railway.

In general it is true that routing instructions should be so interpreted that freight charges assessed upon the basis of published rates be as low as possible. In the light of this principle we have tested the case under consideration. As already stated in the complaint, the total charges for the movement of the shipment via Waukesha aggregate $43.58. If the shipment had moved via Fond du Lac, the total charges would also have been $43.58, which would be the sum of two local rates, first of the Chicago & North Western Railway's commodity rate, Racine to Fond du Lac, of 75 cts. per ton and second of the Minneapolis, St. Paul & Sault Ste. Marie Railway's class D rate, Fond du Lac to North Fond du Lac, of 3 cts. per 100 lb. In either case, there is a charge of $2 for a switch movement at Racine by a connecting line. From the point of view, therefore, of any possible difference in charges as a consequence of having chosen one of two alternative routings, it is apparent that no real injury was inflicted upon the petitioner. Upon the abstract question of what the proper routing should have been in view of the instructions given, we hold that the shipment should properly have moved via Fond du Lac. Quite aside from any practical effect upon the shipper's charges, if of two possible routings one has the advantage of less distance, no specific instructions on the part of the shipper intervening, that is the routing to be given.

Under the circumstances of this case, where the reasonableness of the rates charged is not questioned but only the reasonableness of the practice resulting in the application of these rates is contested, and where upon investigation it appears that no real injury was done which, under a different practice, might have been avoided, we must conclude that the petitioner in this case is not entitled to a reparation order.

It is to be regretted that the petitioner in this case did not inform himself what the charges would be before making the shipment. The petitioner's contention that the carrier's agent at Racine should have informed him what the charges would be does not, in our opinion, constitute a valid objection. We have repeatedly held that even where a shipment is made upon the quotation of a rate by a carrier's agent, which rate afterwards proves to be inapplicable, the shipper is nevertheless liable to pay the legal and published charges.

It is suggested by the petitioner that a switching rate should have been charged at Fond du Lac for the haul by the Minneapolis, St. Paul & Sault Ste. Marie Railway from Fond du Lac to North Fond du Lac, which would have been absorbed by the Chicago & North Western, thus making the rate to the petitioner 75 cts. per ton. We have examined the tariffs on file but have found no switching tariff effective between Fond du Lac and North Fond du Lac. The only rate that could be applied, therefore, is the class D general distance tariff rate of 3 cts. per 100 lb.

It was pointed out by the petitioner at the hearing that if a satisfactory rate were provided, the petitioner could sell considerable quantities of coke to a dealer at North Fond du Lac. While the Chicago & North Western Railway Company provides team track facilities at North Fond du Lac, it seems that the dealer to whom the coke would be consigned is located on the tracks of the "Soo" line and wants his cars delivered via that line. From the testimony it appears further that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company at one time expressed its willingness to put in a switching rate of $5 per car from Fond du Lac to North Fond du Lac if it was found to be necessary. This rate appears to the Commission to be reasonable and its adoption will therefore be recommended.

NOW, THEREFORE, IT IS ORDERED, That the petition, insofar as it relates to the matter of refund, be and the same is hereby dismissed.

It is recommended that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company establish a switching rate of $5 per car for the movement of cars between Fond du Lac and North Fond du Lac, the same to be used in connection with traffic interchanged with the Chicago & North Western Railway at Fond du Lac.

WAUSAU BOX AND LUMBER COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 14, 1913. Decided Feb. 9, 1914.

The petitioner alleges that the respondent has exacted for the transportation of wooden boxes, in carloads, from Wausau to New London rates and charges which are unjust and unreasonable when compared with rates exacted for the transportation of the same commodity between similar points in Wisconsin and asks for refund on certain shipments. The charges complained of were based on the published tariff of the respondent but the rates on lumber and the box rates depending on the lumber rates have been voluntarily reduced by the respondent since the shipments moved.

Held: The charges complained of were excessive and unreasonable. Refund is ordered on the basis of the rates now in effect.

The petitioner owns and operates a lumber and milling plant at Wausau, Wis., and is engaged in the general business of manufacturing and selling lumber, box shooks, nailed-up boxes and other forest products. It alleges that the respondent has exacted for the transportation of wooden boxes, in carloads, from Wausau to New London, rates and charges that are unjust and unreasonable as compared with rates exacted for the transportation of the same commodity between similar points in Wisconsin, and asks for refund of $52.56 on twenty-seven shipments of boxes which moved prior to March 29, 1913, and $9.68 on three shipments which moved after March 29, 1913, or such other sum as the Commission may find the petitioner entitled to receive as refund.

The respondent, in its answer to the petition, denies the above allegations and prays that the petition be dismissed.

A hearing was held on October 14, 1913, at which the petitioner was represented by *A. E. Solie* and the respondent by *C. A. Vilas* and *H. C. Cheney.*

Additional matter introduced at the hearing consisted, in part, of a supplementary exhibit by the petitioner alleged to be based on rates put in effect by the respondent on July 12, 1913,

and attempting to show that the petitioner was entitled to a reparation of $69.32 on twenty-seven shipments moving prior to March 29, 1913, and to a reparation of $13.82 on three shipments moving subsequent to March 29, 1913, in place of the sums mentioned in the complaint. The sums claimed by the petitioner in the complaint were alleged to be based on a lumber rate of 6.8 cts. from Wausau to New London, which is the rate asked for in the matter of *Wausau Advancement Assn. v. C. & N. W. R. Co.* now pending before the Commission, while the larger sums claimed by the petitioner in the supplementary exhibit presented at the hearing are based on a lumber rate of 6.5 cts. from Wausau to New London, which is a rate established by the respondent carrier on July 12, 1913.

Schedules of rates in effect over the respondent's lines for the period during which the shipments mentioned in the complaint moved will be considered in the opinion in the pending case of *Wausau Advancement Assn. v. C. & N. W. R. Co.*

The question of the reasonableness of the present rate of 6.5 cts. on lumber is not contested in the petition and will therefore not be considered.

Reparation in the amount of $75.07 on twenty-seven shipments moving prior to March 29, 1913, is asked, based on the difference between the box rate of 12.5 cts. then in effect (being the lumber rate of 7.5 cts. plus 5 cts. additional for boxes) and the box rate of 11.5 cts. (being the lumber rate of 6.5 cts. now in effect plus an additional charge of 5 cts. in effect for boxes prior to March 29, 1913). Reparation in the amount of $13.82 on three shipments moving after March 29, 1913, is asked, based on the difference between the box rate of 11.25 cts. then in effect (being 150 per cent of the lumber rate of 7.5 cts. in effect from May 15, 1911, to March 29, 1913) and the box rate of 9.75 cts. (being 150 per cent of the lumber rate of 6.5 cts. now in effect). Prior to March 29, 1913, the rate on wooden boxes was 5 cts. higher than the lumber rate. Effective March 29, 1913, the rate on wooden boxes was 150 per cent of the lumber rate but not to exceed 5 cts. above the lumber rate. The reasonableness of the arbitraries above the lumber rate is not questioned in the petition.

Examination of the freight bills filed with the petition in the case of the *Wausau Advancement Assn. vs. Chicago & North Western Ry. Co.* before mentioned and made part of the com-

plaint in the instant case, shows that the published rate was charged for each shipment. These bills show that the shipper was the Wausau Box and Lumber Company and the consignee the National Condensed Milk Company. The Wausau Box and Lumber Company paid the freight charges to the carrier or showed receipt from the National Condensed Milk Company for refund of such portion of the freight charges as was paid by the consignee on these shipments.

The Chicago, Milwaukee & St. Paul Railway Company and the Green Bay & Western Railroad Company have maintained a joint rate of 6.5 cts. on lumber from Wausau to New London for some time past. This joint rate was voluntarily established by these two carriers. The joint haul is for a total distance of about 99 miles and involves transfer en route. The single line haul by the Chicago & North Western Railway Company is for a distance of about 70 miles and involves no interchange en route. A comparison of costs for the three roads mentioned shows that the 6.5 cts. rate is reasonable and that it gives the carrier a fair return over the two routes. The fact that the Chicago, Milwaukee & St. Paul Railway Company and the Green Bay & Western Railroad Company established this rate of their own accord and the further fact that the Chicago & North Western Railway Company after complaint had been filed established the rate voluntarily on July 12, 1913, further point to the reasonableness of the rate.

It appears, therefore, that the petitioner, the Wausau Box and Lumber Company, has been charged excessive and unreasonable rates on the thirty shipments of nailed-up wooden boxes from Wausau to New London listed in the complaint, to the extent that the lumber rate exceeds 6.5 cts. between these points. An error which appears to have been made in the compilation of the supplementary exhibit has been corrected in the following statement. The amount of the refund to which the petitioner is entitled is $75.07 on twenty-seven shipments moving prior to March 29, 1913, and $13.82 on three shipments moving after March 29, 1913.

OVERCHARGE ON THE FOLLOWING SHIPMENTS OF NAILED-UP WOODEN BOXES, SHIPPED FROM WAUSAU, WIS., TO NEW LONDON, WIS.:

Date shipped 1912.	Road.	Car No.	Weight. lb.	Rate.	Charges.

	As collected		92,100		$103 62
	Should be		92,100	9.75 cts.	89 80
	Overcharge				$13 82
	Total overcharge				$88 89

NOW, THEREFORE, IT IS ORDERED, That the respondent Chicago & North Western Railway Company be and hereby is authorized to refund to the Wausau Box and Lumber Company the sum of $88.89.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF A PROPOSED EXTENSION OF WATER MAINS BY THE VIOLA MUNICIPAL WATER PLANT.

Submitted Oct. 21, 1913. Decided Feb. 9, 1914.

The Commission, on its own motion, investigated the failure of the village council of Viola to take action on a petition of 25 residents of the village asking for an extension of a water main along a route specified in the petition. Since the hearing, 15 of the 25 petitioners have joined in a petition to the Commission, stating that they realize that, in view of the financial condition of the village, the making of the extension asked for is not warranted at the present time and praying the Commission not to order the extension to be made.

Held: Under the circumstances an order requiring the laying of the water main extension in question is unwarranted. The matter is therefore dismissed.

The Commission, on its own motion, investigated the failure of the village council of Viola to take action on a petition signed by twenty-five residents of the village and presented to the council asking for the extension of a water main along a route specified in the petition.

A hearing was held in the office of the Commission at Madison on October 21, 1913. *J. M. Cushman,* one of the signers of the petition presented to the village council, appeared in support of the plan to extend the water main as outlined in the petition. *Charles H. Nye,* village clerk, appeared on behalf of the council and in opposition to the project.

Subsequent to the hearing, the village clerk in a letter dated November 1, 1913, submitted a petition addressed to the Commission and bearing the signatures of fifteen of the signers of the original petition to the village council, stating that they had not authorized nor asked that the matter be brought to the attention of the Commission but that they had relied upon the judgment of the village board and that upon learning, subsequent to the filing of the original petition, of the financial condition of the village, they realized that the public improvements asked for were unwarranted at the present time. The

petitioners therefore prayed the Commission not to order the water pipe extension described in the original petition to the village council.

Some of the evidence presented and statements made in support of the laying of the extension in question were intended to show that the village records accounted for the expenditure of but a small part of the sum of $9,000 borrowed by the village for the construction of a water works plant and system. Without at this time attempting to determine just what investment is represented by the Viola water works, we do not hesitate to say that it seems quite improbable that the works as described could have been built for the expenditures found by Mr. Cushman to have been accounted for.

Further discussion of the circumstances of the case at this time is deemed unnecessary. In view of the evidence presented and facts obtained, it is apparent that an order requiring the laying of the water main extension in question is unwarranted.

IT IS THEREFORE ORDERED, That the matter be and the same is hereby dismissed.

IN RE APPLICATION OF THE VILLAGE OF WITHEE FOR AUTHORITY TO INCREASE ELECTRIC RATES.

Decided Feb. 9, 1914.

The village of Withee, which is operating an electric plant under a six months' lease from the owner, applies for authority to increase its rates for electric current. No satisfactory record information is available as to the value of the plant, its revenues, its expenses or its consumer statistics. It has therefore been necessary to estimate probable revenues and expenses upon the basis of such specific and comparative data as could be secured and the results, consequently, can only be tentative.

The fact that the rates applied for have been in use for some time, as the result of a misunderstanding of the Public Utilities Law, is no indication that they should remain undisturbed. Such rates are illegal until sanctioned by the Commission.

The Commission cannot withhold action upon the instant petition merely because it is the intention of the owner of the plant to present another schedule of rates at some future date when he reassumes control of the property.

Flat rates fixed at a certain rate per lamp usually result in unequal treatment of consumers and in the wasteful use of current. and, usually because of the high figure at which they must be placed, discourage the development of business. In the instant case it is not deemed advisable, however, to require the utility to furnish or install meters at its own expense for consumers using less than four 50-watt units or their equivalent in any one building. The order, therefore, provides flat rates for residence and commercial consumers falling within this class, though it authorizes the utility, if it so desires, to install a meter for any commercial consumer.

Held: (1) The applicant's rates should be revised. (2) A station watt-hour meter should be installed for the purpose of aiding in providing records upon which it will be possible to accurately determine the cost of supplying service.

The applicant is ordered (1) to put into effect a schedule of rates fixed by the Commission; and (2) to install within thirty days a station watt-hour meter to measure the output of the plant.

The applicant in this matter, the village of Withee, is operating an electric plant owned by Paul A. Paulsen. The applicant rented said plant for the six months period from September 1, 1913, to March 1, 1914, for the purpose, it is stated, of determining the cost of operating the plant,

The petition states that the applicant has in effect the following rates:

Residences:

1 light	$0.50 per month
2 lights	.90 per month
4 lights	1.60 per month
Over 4 lights	.35 per light per month.

Hotels, Saloons and Stores:
50 cts. per light.

Blacksmith shops and moving picture shows:
Special prices.

Meter rent—25 cts. per month.
Current—12 cts. per kw-hr.
Discount if paid before the 10th—10 per cent.
Minimum bill—$1.00.

Street Lighting:
12 250-watt tungsten lamps.
6 100-watt tungsten lamps.
Rate: $50 per month.

For the foregoing the utility wishes to substitute the following rates:

Residences:

1 light	$0.50 per month.
2 lights	.90 per month.
4 lights	1.60 per month.
All over 4 lights	.35 per light per month.

Hotels, Saloons and Stores:
50 cts per light.

Blacksmith shops and moving picture shows:
Special rates.

Meter rent—25 cts. per month.
Current—14 cts. per kw-hr.
Discount 10 per cent if paid before the 10th.
Minimum bill—$1.00.

Street Lighting:
15 250-watt tungsten lamps.
6 100-watt tungsten lamps.
Rate: $70.00 per month.

Hearing was held on January 20, 1914. There were no appearances.

It appears that the increased rates applied for have been in effect since August 1, 1913, through a misunderstanding and misinterpretation of the Public Utilities Law. The fact that

these increased rates have now been in use for a considerable period of time is, however, no indication that they should remain undisturbed. In cases such as this, where a utility has been operating contrary to law under the schedule of rates which it asks the Commission to approve, the rates are illegal and as such have no standing until sanctioned by the Commission. In the instant case both the old rates and the proposed schedule of rates have certain features which it seems well to modify to some extent.

The owner of the plant, Mr. Paul A. Paulsen, states in a communication to the Commission in connection with the application of the village for increase in rates, that "after the first day of March, 1914, a new contract will be entered into between the said village and myself and at that time a new rate schedule will be presented to the Railroad Commission". The Commission cannot, however, withhold action upon the present petition merely because it is the intention of the owner of the plant to present another schedule of rates at some future date when he reassumes control of the property. Any questions which may arise at that time will be disposed of on their merits when they are brought before the Commission.

The actual value of the electric plant is unknown but it is estimated not to exceed $5,000. The plant is operated in connection with a sawmill and this value includes only the electrical equipment, the distribution system and such a part of the cost of the boiler, the engine and the buildings as it appears equitable to charge to the electric department.

Only one man is regularly employed, it appears, in the operation of the plant, and he is paid $600 a year. Slabwood, a by-product of the saw mill, is employed throughout the larger part of the year as fuel. It would seem that on this basis the total operating expenses, excluding taxes, depreciation and interest, should be low.

No satisfactory financial and statistical report has ever been made for this utility and its records have been so poorly kept that it is difficult to secure any information from them. Definite data on which to base a judgment as to the reasonableness of the proposed rates are therefore lacking.

For the reasons noted the annual report of the electric plant for the year ended June 30, 1913, is incomplete. The income

account, after adjustment by the Commission, is approximately as shown below:

INCOME ACCOUNT STATEMENT.

Year Ended June 30, 1913.

Earnings:		
Commercial	$840.00	
Municipal street lighting	600.00	
Total revenues		$1,440.00
Expenses:		
Labor	$600.00	
Fuel and other expenses	1,160.00	
Total operating expenses		1,760.00
Deficit		*$320.00*

The utility submitted a statement of the receipts and disbursements for the period January 1, 1913, to August 1, 1913, which is summarized below:

RECEIPTS AND DISBURSEMENTS STATEMENT.

Jan. 1, 1913, to Aug. 1, 1913.

Receipts		
Commercial	$660.98	
Street lighting	245.00	
Total		$905.98
Disbursements		
Labor	$360.00	
Wood and coal	695.00	
Total		1,055.00
Deficit for period		*$149.02*

There appear to be a number of errors in the above statements. The street lighting receipts are listed at $35 per month, whereas the rate schedule calls for a charge of $50 for this period. If the full amount had been collected this item would have been $350 and the total would have been increased to $1,010.98.

We are advised that the wood used for firing the boiler was mostly slab and other waste wood. The average cost for wood per month, however, for the four months of this period in which no coal was used, amounts to $88.75. During the three months in which wood and coal were both used the average cost per month is given as $113.33. An average expense of $88.75 per

month for wood would indicate that on the basis of $3 a cord, a fair price for such wood as is used, about 29½ cords would be used. This is probably equivalent to about 13½ tons of coal. If coal costs $4.50 delivered at the plant the cost per month for the use of coal alone would be close to $60.75. A saving of about $28 a month would thus be effected by the use of coal instead of wood.

It appears to us, after taking into consideration the size of the village, the number of consumers and other facts, that a total fuel expense of between $700 and $900 is all that is required to generate sufficient current (about 13,000 kw-hr.) to supply all needs in Withee.

Because of the fact that no adequate books or records are kept, no satisfactory apportionment of expenses can be made between electric generation and mill operation. This would indicate a probability at least that the reported operating expenses include items charged to electric generation which should have been charged to general mill operation. For this reason the determination of unit costs in the absence of necessary data is extremely difficult and the necessity of making the assumptions required introduces considerable chance of error.

No report is made by the plant as to the consumption of the various classes of consumers or the output of the station by months. Neither is there any record showing connected loads by classes of consumers or by individual consumers.

From an examination of the consumer statistics of a number of other small towns it is believed that the total commercial consumption will not exceed 7,000 kw-hr. The street lights, assuming that they burn 1,220 hours on a moonlight, dusk to midnight schedule, will consume approximately 5,000 kw-hr. Taking into consideration the character of the service, a low line loss etc., it is believed that our estimate of about 13,000 kw-hr. generated may be safely used.

It appears that the total operating expenses, including interest, depreciation and taxes, would amount to about $2,120. The total revenue from all sources for a year under the proposed rates (estimated on data obtained from the annual report and the receipts and disbursements statement) will be about $2,040. This leaves a deficit of some $80.

Attempts to apportion total operating expenses between the classes of service and between capacity and output, in the ab-

sence of record information, can only result in approximations. As before stated, the chance of errors occurring in making so many assumptions is considerable, hence the results can only be tentative.

From an examination of the data relative to street lighting at Withee, it appears that the proposed rate for this class of service is not far from the actual cost of such service.

As regards the proposed flat rates for commercial lighting, attention should be called to the discriminatory features of such rates. Under a system of flat rates there is a considerable tendency for consumers to extend their installations or to increase the sizes of their lighting units without the knowledge of the company and the consumer who uses his lights but a short time each day is thereby required to pay as much as the consumer who uses them many hours per day. Inequalities of this kind are bound to arise when flat rates per lamp are fixed without regard to the time the lamps are used. Such rates, moreover, usually result in waste, for they give no incentive towards saving, since the price is the same whether the lamp is used two or five hours daily.

Flat rates are not only unscientific and unequal, but they tend to prevent the growth of business along those lines where development is most natural for the reason that the rates must usually be placed at a relatively high figure.

This class of rates is most frequently met with in small plants, because of the comparatively large expense which the general installation of meters would mean for such plants. However, the cost of the various sizes of meters which would be required to meter the present flat rate consumers in Withee would not, it is believed, be excessive. The installation of a station watt-hour meter is strongly recommended.

In view of these and other facts, it appears that a more equitable adjustment of the rate schedule may be made if all service is metered and a record kept of the kilowatt-hours generated, etc.

The following extract from a former decision of the Commission is in point:

"The fact that sufficiently complete information for a careful revision of the respondent's rate schedule is not available, has already been alluded to. Under somewhat similar conditions, when the application has been made for an increase of rates, the Commission has dismissed the case, holding it to be the duty

of the utility to maintain such records of its operation as may be necessary for a proper analysis of its business." *City of Rhinelander v. Rhinelander Ltg. Co.* 1912, 9 W. R. C. R. 406, 433.

In the instant case it has been found advisable, in order to permit nothing to stand in the way of those adjustments which it is believed are necessary, to allow certain modifications of the proposed rates to go into effect. At the same time, however, it is the opinion of the Commission that steps should be taken to install a station meter and otherwise improve conditions of operation at the plant. It is only by means of immediate, reliable, adequate and permanent records that equitable rates based upon the costs of supplying the service can be satisfactorily determined. The information derived from the records is an incentive to secure more efficient operation by checking and eliminating wastes.

It is believed that it will be no hardship for the utility to install a station watt-hour meter to measure the output of the plant. The service department of the Commission stands ready at all times to give such assistance to utilities in improving operating conditions as is desired, and there can be no excuse for laxity in this matter.

IT IS THEREFORE ORDERED, That the petitioner in this case, the village of Withee, discontinue its present schedule of rates for electric service and place in effect as a substitute therefor the following rate schedule deemed just and reasonable, as provided under ch. 499, sec. 1797*m*–46, laws of 1907:

COMMERCIAL LIGHTING.

Meter Rates.

Service charge: 25 cts. per meter per month.

Output charge: 14 cts. gross, 13 cts. net per kw-hr.

Discount to apply if bill is paid before the 15th of month following month for which bill is rendered.

Flat Rates.

The utility shall not be required, at its own expense, to furnish or install meters for any consumer using less than four 50-watt units, or the equivalent thereof, in any one building, and the utility is authorized to charge residence consumers using

two or more such units a flat rate of 50 cts. per month per unit for the first two units or equivalent. For each 50-watt unit or equivalent in addition to the first two the charge shall be 35 cts. per month per unit or equivalent.

For commercial consumers using two or more 50-watt units or equivalent the charge shall be 75 cts. per month per unit for the first two units or equivalent, and 50 cts. per month per unit for each additional 50-watt unit or equivalent; or the utility may, at its own option, install a meter for any such consumer, in which event the rate shall be as specified above.

Penalty.

10 per cent shall be added to all flat rate bills if not paid before the 15th of month following month for which bill is rendered.

Minimum Rate.

The utility is authorized in every case when a meter is installed to make a minimum charge of $1.00 per month, and to flat rate customers a minimum charge of $1.00 per month in residences and $1.50 per month in places of business.

STREET LIGHTING.

100-watt lamps, per year, $20.00 per lamp.

250-watt lamps, per year, $48.00 per lamp.

IT IS FURTHER ORDERED, That a station watt-hour meter be installed to measure the output of the plant. Thirty days is considered a sufficient time in which to comply with this portion of the order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RATES, RULES AND REGULATIONS OF THE MOSINEE ELECTRIC LIGHT AND POWER COMPANY.

Submitted Dec. 16, 1913. Decided Feb. 9, 1914.

The Commission, having received complaints that the rates of the Mosinee Lt. & P. Co. are unreasonable and excessive, investigated the matter on its own motion. A valuation was made, the revenues and expenses were analyzed and the expenses were apportioned among commercial lighting, commercial power, and street lighting. The utility began operation in October, 1911, and so far has paid no taxes and made no provision for depreciation. Expenses for these purposes will have to be met in the future, however, and they are therefore considered in determining the reasonableness of rates for the services of the utility. The utility now has in effect for commercial lighting a schedule of rates which takes into account only the amount of electric energy used by a consumer without regard to his installation.

The amount of energy used is only one element in the expense of supplying electric current which must be considered in fixing rates. The size of the consumer's installation must also be considered or unjust discrimination between consumers will result.

It is the duty of every public service company to extend its service to reach as many consumers as possible. Some of these consumers may not be as profitable as others, yet so long as they are not a burden and do not actually hinder the proper development of the utility, they should be offered a rate that will enable them to enjoy the convenience of electricity in their homes. Each case, however, must be decided on its own merits. In the instant case it seems advisable to authorize a minimum bill of 50 cts. per month. This amount may not be sufficient to fully cover every consumer's proportionate share of the total expenses of the utility but it should be sufficient to cover the additional expense incurred in giving him service and to leave some excess to reduce costs to other consumers.

Held: The utility's present schedule of rates requires revision. The utility is therefore ordered to put into effect a schedule of rates fixed by the Commission.

This investigation is the result of complaints received by this Commission that the rates of the Mosinee Light and Power Company are unreasonable and excessive. A hearing was held on December 16, 1913, at the office of the Commission in Madison. The following appearances were entered: *Harris B. Hanowitz,* member of the village board of Mosinee, on his own behalf and

on behalf of others similarly situated, and *W. A. Von Berg* and *A. Paronto,* secretary and treasurer, respectively, of the Mosinee Electric Light and Power Company.

The company began selling electricity about October 15, 1911. Current is purchased from the Wausau Sulphate Fibre Company which owns and operates a hydro-electric plant at Mosinee. The utility owns only the distribution system, its switchboard being located in the station of the Sulphate company. The following rate schedule is in force at the present time:

Commercial Lighting:
Minimum monthly bill 75 cts.
First 10 kw-hr. per month 12 cts. per kw-hr.
All over 10 kw hr. per month 10 cts. per kw-hr.
No free lamp renewals.

Commercial Power:
Minimum monthly bill $1.00 for the first h. p. and 50 cts. for each additional h. p. up to 10 h. p. Energy charge 10 cts. per kw-hr.

Special Power Rate:
One consumer to whom a ¼ mile independent line was built has a 15 h. p. motor for which he pays a minimum monthly bill of $15.00. Energy is charged at 5 cts. per kw-hr.

Street Lighting:
34 100 c. p. tungsten lamps at $20 each per year.

A valuation of the physical property of the company was made as of date June 30, 1913, a summary of which follows:

TABLE I.

	Cost new	Present value
Land	.....	.....
Transmission and distribution	$5,065	$4,654
Buildings and miscellaneous structures	.....	.....
Plant equipment	1,109	1,032
General equipment	.....	.....
Total	$6,174	$5,686
Add 12% (see note below)	741	682
Total	$6,915	$6,368
Materials and supplies	280	280
Total	$7,195	$6,648

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The next table shows the balance sheet as it appears in the corrected annual report of this company for the year ending June 30, 1913:

TABLE II.

Assets		*Liabilities*	
Property and plant....	$7,165.78	Capital stock	$6,000.00
Cash	259.36	Notes and bills payable	400.00
Accounts receivable ...	591.22	Accounts payable	152.26
Materials and supplies	154.13	Surplus	1,625.05
Open accounts	6.82		
Total assets	$8,177.31	Total liabilities ..	$8,177.31

The original cost of this property, as will be noted from the above balance sheet, was $7,165.78, which compares favorably with the Commission's valuation in which the cost of reproduction new, excluding materials and supplies, is shown to be $6,915. In order to determine the present investment of the company it is necessary to estimate the amount the property has depreciated through use, and to note the effect that the establishment of a depreciation reserve of an equal amount will have on the balance sheet. Assuming that this property will depreciate about 6 per cent a year on a straight line basis, a depreciation reserve of $645 should be set up for the year and a half that the company had been operating at the close of the last fiscal year. In order to do this, the surplus will have to be decreased by that amount, leaving it $980.05. It seems unnecessary to further explain that the assets offsetting the depreciation reserve represent that part of the plant which is worn out, that sometime in the future they will be needed to replace such worn out parts and that, consequently, if these assets are paid out as dividends, it will be necessary to obtain funds from some other source to make replacements when they become necessary. In the instant case current assets exceed current liabilities by $459.27, an amount which is $185.73 less than the depreciation reserve of $645.00 that should have been set up. In other words, $185.75 of the assets that offset the depreciation reserve are in the property and plant account. If we then deduct $185.75 from this account we get $6,980.05 as the actual investment on June 30, 1913, which equals the sum of the capital stock ($6,000) and the surplus (980.05).

The Commission's valuation shows that the cost of reproduc-

ing this property new is $6,915 and that its present value is $6,368. If we assume that the excess of $459.27 of current assets over current liabilities had been placed in a depreciation fund, it would be proper to add the amount in this fund to the present value shown in the Commission's valuation. When this is done we get $6,827 as the present investment. We note that in the Commission's valuation materials and supplies are listed at $280, which is $126 more than is shown in this account in the balance sheet. If this $126 is added to the $6,827 obtained above, we get $6,953 as the present investment. Taking all the facts into consideration, it seems that about $7,000 represents a fair value of the property of this company for rate-making purposes. Consequently this figure has been used in our computations.

The next table shows the income accounts for the two years ending June 30, 1912, and June 30, 1913. The company began selling current in October 1911, consequently the first year covers only about eight months.

TABLE III.

	Year ending June 30, 1912.	Year ending June 30, 1913.
Operating Revenues:		
Commercial lighting	$687 57	$1,966 75
Commercial power	7 10	203 25
Municipal street lighting	425 00	656 66
Total revenues	$1,119 67	$2,826 66
Operating Expenses:		
Current purchased	$396 84	$952 08
Distribution	53 23	20 80
Consumption	.....	35 17
Commercial	60 50	94 14
General	192 59	181 20
Undistributed	19 05	7 60
Total operating expenses	$722 01	$1,290 99
Net operating revenue	$397 66	$1,535 67
Non-operating revenue	151 48	[1]*143 43*
Gross income	$549 14	$1,392 24
Deductions from gross income:		
Interest on floating debt	.....	16 33
Net income	$549 14	$1,375 91
Disposition of net income:		
Dividends	.....	300 00
Surplus for the year	$549 14	$1,075 91
Surplus at beginning of year	.....	549 14
Surplus at close of year	$549 14	$1,625 05

[1] Credit.

At the hearing the company contended that the operating expenses as set forth in the above income account are abnormally low, because of the newness of the enterprise. The company claimed that it already has had to increase its general expenses $180 a year, most of which goes to the expense of keeping the company's records. During the last fiscal year $94.14 was spent for direct operating labor, a man being engaged by the hour to do whatever work was necessary. The company claims that this work has become so heavy since the close of the last fiscal year that it will be cheaper to hire a man by the month. It seems that a certain man in Mosinee can be engaged for $20 a month to take care of this work along with his other business. This increase in the general expenses and in operating labor would amount to about $325 a year and would make the yearly labor bill, including officers' salaries, $660, which does not appear unreasonable.

Some of the present customers were taking current only a part of the last fiscal year, and four of the street lamps burned only a part of the same period. It is therefore necessary, in determining normal operating expenses, to increase the amount that will be paid for current proportionately to the increase in consumption, which, it is estimated, will be about 1,316 kw-hr., including distribution losses. The increase in expense, then, will be about $39.48.

It will be noted that nothing has been included in the above income accounts for taxes and depreciation. For some reason or other it appears that the company has not paid any taxes so far. It is not likely that this situation will continue; consequently, in determining the normal expenses we have assumed that taxes will amount to about one per cent on the fair value. In determining the amount that should be set aside for depreciation, a computation was made which showed that this property has an average life of 12.64 years and that $334 placed each year in a fund bearing 4 per cent interest will be sufficient to replace the depreciable property when it is worn out. As this is a new property located in a small village, and as the earnings appear to warrant it, interest and necessary profits, which are usually included in the term "reasonable return", have been placed at 8 per cent on the fair value as found above.

The next table shows the expenses, as adjusted above, divided between the different classes of consumers:

TABLE IV.

	Total.	Commercial lighting.	Commercial power.	Street lighting.
Operating expenses	$1,656 47	$1,138 84	$118 14	$399 49
Interest, depreciation and taxes	964 00	735 36	80 75	147 89
Total	$2,620 47	$1,874 20	$198 89	$547 38

It will be noted that the percentage relation between the operating expenses and fixed charges in commercial lighting and commercial power differs considerably from that existing in street lighting. The reason for this is that relatively less of the investment is used by street lighting than by either of the other two classes, as no meters or service wire are needed in the former. Another reason for this difference is that in street lighting depreciation of the lamps is included in the operating expenses, as maintenance and not in the fixed charges.

The above table shows that $547.38 is the cost of supplying street lighting in Mosinee. There are thirty-four lamps, which means a cost of $16.10 per lamp and suggests a rate of $16.00 per lamp per year.

The rate for commercial lighting in force at the present time is what is known as an increment schedule. The exact rate is 12 cts. per kw-hr. for the first 10 kw-hr. consumed during the month and 10 cts. per kw-hr. for all over 10 kw-hr. consumed during the month. This rate does not take into consideration any factor other than the quantity of current consumed. In the electric business, however, the use of energy is only one element of expense and a consumer who used very little current might cause a relatively large amount of expense. In order to illustrate this point let us consider a case in which there are two consumers, A and B. A has an installation of 10 kilowatts which he uses one hour a day. B has an installation of 1 kilowatt which he used ten hours a day. Both then would consume 10 kw-hr. of current each day and, under an increment schedule such as exists at Mosinee, both would pay the same total amount. The important difference between the two is that in the ordinary plant A requires almost ten times as much investment as B, which means ten times the interest, depreciation and taxes that B occasions, yet A is not compelled to pay a higher monthly

bill than B. In fact, A is treated as a preferred customer and actually would pay less per kw-hr. than B would, because, unless B was a very exceptional customer, he would not use his installation ten hours a day. This condition is due to the fact that the product of an electric utility is a service and as such must be used in connection with the plant, for it cannot be stored as can the product of the ordinary manufacturing plant. The electric plant must always have a certain amount of equipment ready to serve a customer, and the larger the customer the more equipment is necessary. Every rate schedule should take this fact into consideration, and should be so constructed that the number of hours a day that a customer uses his installation, be it large or small, will determine whether he shall get a relatively low rate or not. It is with these considerations in mind that we have worked out a schedule for the utility at Mosinee based on these principles and similar to the schedules prescribed for other utilities for which the Commission has had occasion to adjust rates. This schedule reads as follows: 12 cts. per kw-hr. for the first 30 kw-hr. per month per kilowatt of active load, 10 cts. per kw-hr. for the next 60 kw-hr. per month per kilowatt of active load, and 7 cts. per kw-hr. for all over 90 kw-hr. per month of the active connected load. This rate looks formidable at first glance, but in reality it is quite simple, as will be noted from the illustrations given at the end of this decision. As shown in the next table, this schedule will provide revenue sufficient to cover the cost as exhibited in Table IV.

The rate for power at the present time is 10 cts. per kw-hr. with a minimum monthly bill of $1.00 for the first horse power and 50 cts. for each additional horse power up to 10 horse power. This rate is subject practically to the same criticism that was made of the lighting rate and to the further criticism that it is prohibitive to any one desiring to use a considerable amount of power. For these reasons the power rate has been changed so that it will read 50 cts. per month per horse power of nominal rated capacity plus 5 cts. per kw-hr. of energy consumed, provided that the total charge shall not be more than it would be under the present rate, with the minimum bill on the first horse power reduced to 50 cts. It happens that the present power users will be affected but slightly by this change in the type of rate unless they should use more current, in which event their bills will be reduced.

The company has one special contract with a power customer who has a 15 h. p. motor and to whom an independent line about a quarter of a mile long was built. This particular customer pays 5 cts. per kw-hr. for current, and is subject to a minimum monthly bill of $15. In view of the circumstances surrounding the supplying of current to this customer, it seems reasonable to leave his rate as it is now.

The minimum monthly bill for lighting at the present time is 75 cts. Mr. Hanowitz maintained at the hearing that this charge was unreasonably high and that quite a few new customers could be added if the minimum bill were reduced to 50 cts. per month. We are of the opinion that at least the latter assertion is true, because the smallest consumers buy electricity on the basis of the minimum bill for the year instead of on the basis of a certain rate per kilowatt hour consumed. If there is a choice between a payment of $6 or $9 a year, it can readily be seen that more people will take service when the minimum payment is $6 than when it is $9. We feel that it is the duty of every public service company to extend its service to reach as many consumers as possible. Some of these consumers may not be as profitable as others, yet so long as they are not a burden and do not actually hinder the proper development of the utility, they should be offered a rate that will enable them to enjoy the convenience of electricity in their homes. Each case, however, must be decided on its own merits. We have found instances where it was inadvisable to establish a minimum bill of less than $1 per month. In the case at hand, however, the revenues are sufficient to permit a more extended use of the service among small consumers and we consequently feel justified in fixing the minimum monthly bill at 50 cts. The actual additional expenses that would be occasioned in taking on minimum bill consumers can easily be computed. Assume that the service wire and a meter will cost about $12. If we allow 13.5 per cent on this amount for interest, depreciation, and taxes, the additional fixed charges will amount to $1.62 a year or 13.5 cts. per month. With a rate of 12 cts. per kw-hr. for current it would be possible for a consumer to use 4 kw-hr. under the minimum bill. The company pays 3 cts. per kw-hr. for current. If there is a 25 per cent loss in distribution a kilowatt-hour at the consumers's meter would therefore cost 3.75 cts. and 4 kw-hr. would cost 15 cts. Adding the current cost of 15 cts. to the fixed

cost of 13.5 cts. we get 28.5 cts. as the additional expense of taking on a consumer who would not use more than 50 cts. worth of current a month. This would leave 21.5 cts. per month from each of such consumers to help defray the other expenses. If each consumer were assessed with his proportionate part of all the expenses, a minimum bill of 50 cts. per month would be too small, but it seems to us that it is more logical to determine what expenses will be increased by supplying these small consumers; then, if the other circumstances warrant, a minimum bill should be fixed that will cover these additional expenses and leave a small excess that can be used to reduce the cost to the regular consumers. In this case we see that each additional minimum bill consumer will pay, besides the additional expense he occasions, 21.5 cts. that can be used to help defray the expenses that will not be appreciably increased by his becoming a consumer, which are the fixed charges on the distribution system and the regular operating expenses. The total amount received in this manner will not, as a matter of fact, be enough to make much difference in the total revenue of the utility, but this does not invalidate the contention that these small customers are actually a source of some small profit. Of course, we realize that small consumers of this kind can not be added indefinitely without overthrowing the foregoing conclusions, but we feel that no such number will be added at Mcsinee.

Even with a minimum bill of 50 cts. there will be months when some consumers will not use all the current they are entitled to use under it. From data obtained from the company showing the amount of current used by each customer each month, it has been found that the revenue from a minimum bill of 50 cts. will be $38.63 a year on the basis of the number of customers and current consumed during the last fiscal year.

The next table shows the probable revenue from the rates suggested for the different classes of service. In determining the revenue from commercial lighting an analysis was made of the current consumed which showed that 38 per cent of it was used in the primary group, 40 per cent in the secondary and 22 per cent in the excess. By multiplying the number of kilowatt-hours in each group by the rate, and adding the amounts thus obtained for each group to the revenue from minimum bills, the probable revenue for commercial lighting was found.

TABLE V.

Commercial Lighting		
Primary 6,803 kw-hr. at 12 cts.	$816.36	
Secondary 7,176 " 10 "	717.60	
Excess 3,896 " 7 "	272.72	
Minimum bill, 50 cts. per month	38.63	
Total commercial lighting		$1,845.31
Commercial Power		
653 kw-hr. at 5 cts. plus service charge and revenue from minimum bill	$79.10	
Special contract	189.00	
Total commercial power		268.10
Street Lighting		
34 lamps at $16.00 per year		544.00
Total probable revenue		$2,657.41

It will be noted that the total expense, as shown in Table IV, is $2,620.47. The probable revenue on the basis of the number of consumers and the current sales for the fiscal year 1913, amounts to $2,657.41, leaving an excess of $36.94 of revenue over cost. In view of the fact that this utility had been in operation only about one year and a half at the time of its last annual report to this Commission, during which time it hardly could reach normal operating conditions, it seems to us that no further reduction is warranted at present. It may be that the utility will increase the number of its consumers and its total sales without a proportionate increase in investment and operating expense,—at least it can be expected to do this—but this possibility is hardly sufficient ground for a further reduction at the present time.

It seems advisable to explain the new rate for commercial lighting. The rate that the company has been using is based only on the amount of current used, whereas the new rate is based both on the size of the installation and the amount of current used. The difference between the two rates is that in the former the steps according to which the charge varies are the same for all consumers, large and small, while in the latter rate the steps vary for each consumer according to the size of the installation. After the steps have once been determined for a consumer the data obtained become a part of the company's record and the computation of the monthly bill remains exactly the same as it is under the old increment schedule.

The determination of the steps for each consumer separately seems at first sight a little complex. The rate we are prescribing reads: 12 cts. for the first 30 kw-hr. per month per kw. of active load. The active load is merely a fixed percentage of the connected load, excluding appliances, that is, the active load is based only on the lamps installed. After the active load has been determined, the next thing to do is to multiply it by 30 in order to find the number of kilowatts to which the primary rate is to apply. The second step, being the next 60 kw-hr. per kw. of active load, is just twice the first step, and the third step or excess is merely the balance remaining over the sum of the first two. Thus, if by multiplying the active load of a particular consumer by 30, it was found that 10 kw-hr. were in the first step, or in other words that the primary rate applied to the first 10 kw-hr., then there would be 20 kw-hr. in the second step and all over 30 kw-hr. would be in the third step or excess.

In order to establish a more equitable relation between lighting consumers these consumers are divided into three classes, as will be noted from an inspection of the schedule given below, a different percentage is fixed for each class and from this percentage the active load is determined. The following examples will illustrate the working of the new schedule:

Computation of a Monthly bill for a Residence.

Connected Load
15 40-w. lamps = 600 watts.
Active Load.

60	per cent of the first	500	watts	= 300	watts
33⅓	" "	balance of 100	"	= 33	"
	Total active load.....			333	"

First 30 kw-hr. per month per kw. of active load, .333 x 30 =9.99 kw-hr.
Next 60 kw-hr. per month per kw. of active load, .333 x 60 = 19.98 kw-hr.
All over 60 kw-hr. per month per kw. of active load, .333 x 90 = 29.97 kw-hr.

For practical purposes the decimals can be omitted and the nearest whole number used. Assuming that this particular consumer used 13 kw-hr. during the month, according to the meter on his premises, his bill would be computed as follows:

First 10 kw-hr. at 13 cts =	$1.30
Next 3 " " 11 " =	.33
Total gross bill...	$1.63
Discount[1]	.13
Total net bill	$1.50

Computation of a Monthly Bill for a Store.

Connected Load
50 60-watt lamps—3,000 watts.
Active Load

70 per cent of the first	2,500 watts	=	1,750 watts
55 " " " " balance of	500 "	=	275 "
Total active load			2,025 "

First 30 kw-hr. per month per kw. of active load 2.025 x 30 = 60.75 kw-hr.
Next 60 kw-hr. per month per kw. of active load 2.025 x 60 = 121.5 kw-hr.
All over 90 kw-hr. per month per kw. of active load 2.025 x 90 = 182.25 kw-hr.

Assuming that this consumer used 195 kw-hr. during the month, according to the meter on his premises, his bill would be computed as follows:

First	61 kw-hr. at 13 cts. =		$ 7.93
Next	121 " " 11 " =		13.31
Next	13 " " 8 " =		1.04
Total gross bill.....			$22.28
Discount[1]			1.95
Total net bill.....			$20.33

IT IS ORDERED, That the Mosinee Electric Light and Power Company discontinue its present schedule of rates and place in effect the following:

[1] It will be noted that the bill is computed at the gross rate. The difference between the gross and net rate, or 1 ct. per kw-hr., constitutes a discount for payment on or before the 15th of the month.

Commercial Lighting.

For all lighting service furnished residences and businesses (hereinafter specifically referred to as classes A, B and C) including such incidental use of appliances for heating and power used on lighting circuits and passing through the same meter, and measured by a meter or meters owned and installed by the company, a charge of

Primary rate: 12 cts. net, or 13 cts. gross, per kilowatt-hour for current used equivalent to or less than the first 30 kilowatt-hours per month per kilowatt of active connected load.

Secondary rate: 10 cts. net or 11 cts. gross per kilowatt-hour for current used equivalent to or less than the next 60 kilowatt-hours per month per kilowatt of active connected load.

Excess rate: 7 cts. net or 8 cts. gross per kilowatt-hour for current used in excess of the above 90 kilowatt-hours per month of active connected load.

Active connected load shall in each case be a fixed percentage of the total connected load of the lamps installed on the consumer's premises, excluding appliances.

Class A includes residences, flats and private rooming houses. Where the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active; where the installation exceeds 500 watts nominal rated capacity, 33⅓ per cent of the excess of the total connected load over and above 500 watts shall be deemed active.

Class B includes stores, saloons, offices, banks, halls, theaters and all others not herein otherwise specifically provided for. In this class 70 per cent of the first 2.5 kw. and 55 per cent of all additional connected load shall be deemed active.

Class C includes churches, industrial establishments, livery stables, garages, barns, club rooms, hotels, schools, libraries, city hall and hospitals. In this 55 per cent of the connected load shall be deemed active.

Minimum Bill. The minimum bill shall be 50 cts. per month. Where the utility is unable to read meter after reasonable effort the fact should be plainly indicated upon the monthly bill, the minimum charge assessed and differences adjusted with the consumer when the meter is again read.

Discount. The utility shall bill all consumers at the gross rate, and the difference between the gross and net rates above specified, or one cent per kilowatt-hour, shall constitute a discount for payment on or before the 15th of the month.

Reconnection of meter. For the reconnection of a meter for the same consumer upon the same premises a charge of $1 is deemed reasonable.

Commercial Power.

For current used for power purposes and measured by meters owned and installed by the company, the rate shall be:

Service charge: 50 cts. per month for the first horse power or fraction thereof and 50 cts. for each additional horse power of connected load.

Energy charge: 5 cts. net or 6 cts. gross per kilowatt-hour for all current consumed.

The maximum rate for power shall, however, not exceed 10 cts. per kilowatt-hour, nor shall the minimum monthly bill be less than 50 cts. for the first horse power or fraction thereof and 50 cts. for each additional horse power of connected load.

The provisions for discount and reconnection of meters, as stated under the schedule for commercial lighting, shall also apply to power.

The special contract with one power customer shall remain unchanged.

Street Lighting.

The rate for street lighting shall be $16 per year per 125 watt lamp burning from dusk to 11 p. m. every night.

IN RE APPLICATION OF THE OAKFIELD TELPEHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Jan. 22, 1914. Decided Feb. 9, 1914.

The Oakfield Tel. Co. applies for authority to increase its message rates for toll messages sent from Oakfield to Fond du Lac over the lines of the Wis. Tel. Co. in Fond du Lac. The rates now legally in effect are 5 cts. to subscribers and 10 cts. to non-subscribers for five minutes or less. The applicant desires to have the 10 ct. rate made the legal rate for subscribers as well as for non-subscribers in order to compensate for an increase in the charge made by the Wis. Tel. Co. for distributing messages sent by the applicant.

The charge of 10 cts. per message which the applicant has for some months been exacting from its subscribers for the service in question was not sanctioned by the Commission and is therefore an illegal charge.

Held: A proper adjustment of the message rate from Oakfield to Fond du Lac can not be secured except by an action to fix a joint rate for the Oakfield Tel. Co. and the Wis. Tel. Co. For this reason and for the further reason that the reports of the applicant do not indicate a need for increasing the revenue of the business as a whole the petition is dismissed without passing upon the reasonableness of the increased rate proposed by the applicant.

Application in this matter was dated December 29, 1913. The applicant, the Oakfield Telephone Company, is a corporation organized and doing business under the laws of the state of Wisconsin, and is a public utility engaged in the management and operation of a telephone utility in the village of Oakfield and surrounding towns. The application states the legal rates of the utility in effect at the time of filing the petition. The only portion of these rates involved in this case are the rates for toll messages from Oakfield to Fond du Lac. The legal rate to subscribers for five minutes or less is 5 cts. per message, and to non-subscribers 10 cts. per message. In its application the Oakfield Telephone Company shows that the toll rate from Fond du Lac to Oakfield has been 10 cts. ever since the organization of the Oakfield company, that it costs the applicant 5 cts. to distribute each and every message sent from Oakfield to Fond du Lac over the lines of the Wisconsin Telephone Company in

Fond du Lac, so that, where a message rate of 5 cts. is charged, the Oakfield company has nothing left to pay for the service rendered by it. It is also pointed out in the petition that, owing to increased toll business between Oakfield and Fond du Lac, it has been necessary to construct a second full metallic toll circuit between those places. Applicant asks to have a rate of 10 cts. per message for messages of five minutes or less made the legal rate both for subscribers and for non-subscribers between Oakfield and Fond du Lac.

Hearing in this matter was held January 22, 1914, at Madison. Appearances for the petitioning company were *J. H. Byrne,* president; *W. E. Bristol,* secretary; and *T. E. Worthy,* manager. No one appeared in opposition. Very little was brought out in the way of testimony at the hearing which has any material bearing on the question of the reasonableness of increasing the toll rate. It was, however, pointed out that there are from four hundred to five hundred calls per month from Oakfield to Fond du Lac. According to this, the additional 5 cts. which the applicant seeks to have authorized would yield a revenue of approximately $250 to $300 per year.

Correspondence with the company subsequent to the hearing developed the fact that the utility has actually been charging the 10 ct. message rate since March 1, 1913. This, however, has been an illegal charge, which the utility could not properly collect. It appears that prior to March 1, 1913, the Wisconsin Telephone Company charged the Oakfield Telephone Company 3 cts. per message for distributing messages in the city of Fond du Lac, so that the Oakfield Telephone Company retained 2 cts. per message on each message sent from Oakfield to Fond du Lac. On March 1, 1913, the Wisconsin Telephone Company increased its charge for distributing messages to 5 cts. per message, so that the Oakfield company, unless it increased the toll rate, had nothing left of the message charge. Consequently, the Oakfield Telephone Company increased its message rate to 10 cts.

The reports filed by the Oakfield Telephone Company for the years ending June 30, 1912, and June 30, 1913, showed a cost of plant of $14,105.39 and $15,212.86, respectively. The total operating revenues for 1912 were $5,409.06, and for 1913, $5,654.50. Total expenses for these two years, including the allowance made by the company for depreciation, which appears

to have been reasonably adequate, and including taxes, were respectively $3,784.12 and $3,538.53, leaving available for return on investment $1,624.94 in 1912, and $2,115.97 in 1913. Upon an investment of approximately $15,000, the amounts available for return upon property have been in excess of 10 per cent for both years, and for 1913 the amount was nearly 14 per cent.

Under these conditions it does not seem that the necessity for increased revenue can be given as a reason for increasing the message rate. This does not mean that a company which is doing a profitable business should not charge a message rate in cases similar to this. A refusal to authorize the message rate in this case, however, will not cause any serious hardship. A proper adjustment of the message rate from Oakfield to Fond du Lac cannot be secured except by an action to fix a joint rate for the Oakfield Telephone Company and the Wisconsin Telephone Company on this service. Therefore, in refusing to authorize any increase from the present legal rate of 5 cts., the Commission does not state that it considers 5 cts. the highest reasonable rate for this service, but holds that in order to establish a reasonable rate for this service the Commission must have an action brought before it which will give it jurisdiction over the entire toll business and not merely over that portion of the toll business between Oakfield and Fond du Lac which is carried on the Oakfield company's line. Because of this condition, and because of the fact that the reports of the Oakfield Telephone Company do not indicate a need for further revenue upon the business as a whole, we believe that the application should be denied and that any readjustment of this toll rate should be undertaken only in case an application is made for the fixing of a joint toll rate, which will give the Commission jurisdiction over the entire message.

IT IS THEREFORE ORDERED, That the application of the Oakfield Telephone Company for authority to increase its toll message rate to subscribers for messages of five minutes or less from Oakfield to Fond du Lac from 5 cts. to 10 cts. be and the same is hereby dismissed.

TOWN OF CLEVELAND

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Jan. 20, 1914. Decided Feb. 10, 1914.

The petitioner alleges that a highway crossing on the respondent's line, about two miles north of Stratford in the town of Cleveland, Marathon county, is dangerous.

Held: The crossing requires further protection than that afforded by the crossing signs now used to protect it. The respondent is therefore ordered to install and maintain a bell at the crossing within 90 days, plans to be submitted for approval.

The petitioner, a regularly organized town in Marathon county, alleges in substance that a highway crossing on the line of the Chicago & North Western Railway Company, about two miles north of Stratford in the town of Cleveland, is dangerous to public travel on account of the surrounding physical conditions. The Commission is therefore asked to require the respondent to properly safeguard this crossing.

The respondent, in its answer, alleges that it has arranged to install special crossing signs at the designated crossing which it believes will afford sufficient protection, having in view the amount of travel over the crossing and its condition and location. The dismissal of the complaint is therefore asked.

Hearings were held at Marshfield on November 25, 1913, and at Edgar on January 20, 1914, *C. A. Vilas* appearing for the respondent. Since the notice of the first hearing failed to reach the town chairman, the petitioner was represented only at the second hearing, at which *Albert Nahring* appeared in its behalf.

The testimony shows that the crossing referred to in the complaint is known locally as the "Rock crossing." The highway runs east and west and the railway approximately north and south, being on a curve at this point. The road descends from the east to the tracks on a sharp grade. From this approach the view is fairly open to the north, but is very much obstructed to the south by a rock cut and the curvature of the track. On the

west approach the highway ascends from a bridge over a small stream about 150 feet from the track. The view to the north is comparatively unobstructed, but the view to the south is obstructed by the cut and by trees and brush along the stream. The town chairman testified that a traveler must be within the right of way lines to see a train to the south from either approach, but that the most dangerous condition is on the east approach where the view is more completely obstructed, and where many heavily loaded teams are obliged to approach the track on a steep down grade.

The company's superintendent stated that at the east right of way line, about 50 feet from the track, a train can be seen 1,500 feet to the north and 130 feet to the south, and that from a similar position west of the track a view may be had for 150 feet to the north and 200 feet to the south. At a point 200 feet west of the track, he said, a train can be seen 900 feet to the south.

The limits of vision at this crossing, as observed on July 2, 1913, by the Commission's engineer, are reported as follows:

Distance of point of observation in highway from track.	View north.	View south.
West 50 feet	¼ mile	250 feet.
" 100 "	¼ "	100 "
" 200 "	40 feet	80 "
" 300 "	30 "	500 "
East 50 "	¼ mile	175 "
" 100 "	250 feet	150 "
" 200 "	40 "	150 "
" 300 "	20 "	100 "

The highway is a crossroad connecting a community of about forty settlers living east of the track with a main road west of the railway line. It was built before the railway, but for many years was very lightly traveled. It is now in fairly good condition and is used by from sixteen to twenty teams a day on the average, according to the estimate of the town chairman. The heaviest travel is during the winter months when wood is being hauled to Stratford. A count introduced by the respondent shows sixteen teams from 10:30 a. m. to 6 p. m. on October 23, 1913, and ten teams during the same period on the following day. There are four passenger train movements and three freight train movements daily. In addition two freight trains run three times a week and some extra trains are operated.

Three regular train movements occur after 6 p. m. The superintendent testified that the speed of passenger trains at the crossing is limited to fifteen miles an hour and that of freight trains to ten miles an hour on account of the curve in the track. He pointed out that, because of the up grade, engines make considerable noise in approaching from the south. The town chairman described several narrow escapes at the crossing.

The company has installed a standard crossing sign on each side of the crossing. Counsel took the position that this protection is adequate in view of the relatively light traffic and the existing operating conditions on the railway. It was pointed out that no crossing bells are now installed in this vicinity, and that the maintenance of such a bell would therefore be more costly than usual.

From an examination of the testimony and of the report of our engineer it is evident that this crossing is one of unusual danger on account of its physical surroundings, and in our judgment the crossing signs which have been installed by the company are not a sufficient protection. As shown in the testimony, most of those who use this crossing are residents of the locality and are aware of its existence; but to properly protect these travelers, who are often obliged to approach the crossing on a down grade with a heavily loaded vehicle, it is necessary that some warning should be given of approaching trains in the absence of a reasonably unobstructed view. In our opinion the installation of bell protection is necessary at the crossing in question.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, install and maintain at the "Rock" crossing on its line, two miles north of Stratford in the town of Cleveland, an automatic electric bell with an illuminated sign for night indication, plans for track circuits to be submitted to the Commission for approval.

Ninety days is considered a sufficient time within which to comply with this order.

JAMES CALLEN JR., ET AL.

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Dec. 22, 1913. Decided Feb. 10, 1914.

The petitioners allege that the respondent's passenger train service at Caledonia, Racine county, is inadequate and ask that the respondent be required to stop its trains No. 9 and No. 24 at Caledonia on signal to receive and discharge passengers. Under the present schedule, residents of the territory surrounding Caledonia are unable to reach the county seat at Racine over the respondent's line and return the same day, although the distance one way is only fifteen miles. The respondent objects to the granting of the request of the petitioners on the ground that the trains named are interstate trains operating between Chicago and Upper Michigan in competition with interstate trains on the C. & N. W. system.

Held: The southbound train service at Caledonia is inadequate. The respondent is ordered to stop its train No. 24, scheduled to leave Milwaukee at 7:30 a. m., at Caledonia on signal to receive and discharge passengers, or, at its option, to so adjust its service that residents of Caledonia will be enabled to reach Racine and return the same day, having a reasonable amount of time at that city during business hours for the transaction of business.

The petition alleges that the passenger train service at Caledonia in Racine county on the line of the Chicago, Milwaukee & St. Paul Railway Company is inadequate, and prays that the Commission require the respondent to stop its trains No. 9 and No. 24 at Caledonia on signal to receive and discharge passengers.

The respondent, in its answer, alleges that it is now and has for a long time past been stopping two passenger trains each way each day at Caledonia, thereby fully complying with the requirements of law. It therefore asks that the complaint be dismissed.

A hearing was held at Milwaukee on December 22, 1913. *James Callen, Jr.,* appeared for the petitioners and *J. N. Davis* for the respondent.

Caledonia is a country station surrounded by a thickly settled farming community. The township of the same name has a population of 3,073 according to the census of 1910. A witness

estimated that from thirty to forty passengers board or alight from trains at this station daily on the average. Caledonia is fifteen miles distant from Racine which is its county seat.

The chief complaint of the petitioners is that under the existing schedule residents of the territory surrounding Caledonia are unable to reach the county seat at Racine over the respondent's line and return the same day. The earliest southbound train which stops at Caledonia reaches Corliss at 12:50 p. m., connecting there with a train which arrives in Racine at 1:20 p. m. The latest train northbound which stops at Caledonia leaves Racine at 1:50 p. m. Thus, if trains are on time, only thirty minutes are available for business purposes if the trip is made in a single day. If trains No. 9 and No. 24 stopped at Caledonia it would then be possible for the petitioners to reach Racine at 8:25 a. m. and leave there at 5:55 p. m. on the same day. Petitioners testified that, under the existing schedule, if they wish to make a business trip to the county seat and return the same day, they are obliged to drive to Racine or make use of the interurban cars on the Chicago & Milwaukee Electric Railway Company's line, the nearest station on which is 3¾ miles from Caledonia. It was also pointed out that it is impossible to make a trip from Caledonia to Burlington, Elkhorn, Janesville or Madison and return the same day.

The respondent's superintendent testified that three northbound trains and two southbound trains stop at Caledonia. These trains are shown in the railway folder as follows:

Northbound Trains.				*Southbound Trains.*	
No. 241.	No. 31.	No. 103.		No. 90.	No. 44.
a. m.	a. m.	p. m.		p. m.	p. m.
*7:35	*8:40	1:50	Lv. ..... Racine ..... Arr.	1:20	5:00**
8:17	9:16	2:44	" ..... Caledonia ..... "	12:32	3:45
9:05	9:50	3:20	Arr. ..... Milwaukee ..... Lv.	12:01	3:10

* Daily except Sunday.
** Daily.

The superintendent stated that trains No. 9 and No. 24, which the petitioners desire to have stopped at Caledonia, are interstate trains operated between Chicago and Upper Michigan in competition with interstate trains on the Chicago & North West-

ern system. He testified that with their present stops it is difficult to maintain the schedules of these trains.

From a careful examination of the testimony and of the schedules now in operation on the respondent's line we find that the southbound train service at Caledonia is inadequate. When a railroad company operates a number of morning trains over its line which could be stopped without serious interference with their schedules, we do not regard it as adequate service, at a station such as Caledonia, if no train is stopped until the afternoon and the residents of the locality are thereby deprived of the privilege of making a trip to their county seat, a distance of only fifteen miles, and returning the same day. Practically all passenger trains on this division operate between Chicago, Ill., and Milwaukee, Wis., and are therefore interstate trains. However, in the present case, the service for intrastate passenger traffic is clearly inadequate, and under such circumstances the Commission feels that the order herein is entirely justified.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, stop its train number 24, scheduled to leave Milwaukee at 7:30 a. m., at Caledonia on signal to receive and discharge passengers; or, at its option, so readjust its service that residents of Caledonia will be enabled to reach Racine and return the same day, having a reasonable amount of time at that city during business hours for the transaction of business.

WISCONSIN AND MICHIGAN RAILWAY COMPANY,
WISCONSIN AND NORTHERN RAILROAD COMPANY.

Submitted Oct. 7, 1913. Decided Feb. 11, 1914.

Petition is made for the establishment of joint rates on pulp wood to be applicable throughout the state. The petitioner alleges that the joint rates now charged, which are made up of the sum of the local rates, are excessive, unjust and unreasonable and that, because of the growing scarcity of pulp wood in Wisconsin and the consequently increasing length of haul, these rates place the Wisconsin mills at a disadvantage in their competition with mills in Minnesota and New England. The petitioner suggests that joint rates equal to 80 per cent of the sum of the local rates would be reasonable. Two of the respondents, the Stanley, Merrill Phillips Ry. Co. and the M. St. P. & S. S. M. Ry. Co., contend that the establishment of such rates would work them an injustice by encouraging the shipping from the territory served by them of raw material which is needed to supply local industries already established there. Another of the respondents, the C. & N. W. Ry. Co., proposes the establishment of joint rates equal to the one-line-haul rates plus 1 ct. per cwt. to compensate for the additional terminal or transfer expenses. The effects of the rates suggested are analyzed and compared with the effects of other rates based upon the one-line-haul rate plus arbitraries of different amounts.

It is against public policy to permit a railroad company to put into effect rates which will operate to seclude large timber resources for its sole benefit and exclude from sharing in those resources other portions of the state which have an equal need for them, for such action would lead to monopoly of the most offensive sort. In general it is the plain duty of transportation to do all that it may to lessen the inequalities existing between in-

dustries located in close proximity to the raw material they require and industries further removed from their sources of supply.

It may be assumed as a general rule in tariff making that where two or more railroad lines are used the joint rate should be less than the sum of the several rates. The joint rate should, however, be higher than the one-line-haul rate because of the added terminal or transfer costs incurred in a joint haul.

Held: Joint rates computed by adding an arbitrary of ¾ of a cent per cwt. to the present single-line distance rates for each transfer from one road to another, are reasonable for the traffic in question. The respondents are therefore ordered to establish such joint rates to apply to shipments of pulp wood in carloads.

This case comes before the Commission in the form of a petition by the Pulp & Paper Manufacturers Traffic Association for the fixing of joint rates on pulp wood applicable throughout the state. The association named comprises forty companies which operate sixty pulp and paper mills, mostly in Wisconsin. The petition recites that in the manufacture of paper and pulp large quantities of pulp wood are used which have to be transported from various points within the state to the mills of the petitioner; that where this commodity has to be shipped over two or more lines of railway to reach its destination the railway companies charge as a joint rate the sum of the local rates, and that this combined rate is excessive, unjust and unreasonable.

A hearing was held in the offices of the Commission at Madison, on October 7, 1913. Appearances were: For the petitioner: *Felix J. Streyckmans* and *W. D. Hurlburt*. For the railway companies: *C. C. Wright, E. P. Eyman, A. H. Lossow* and *E. C. Clark* for M. St. P. & S. S. M. Ry. Co.; *J. N. Davis* and *J. M. Davis* for C. M. & St. P. Ry. Co.; *H. W. Hodge* for Stanley, Merrill & Phillips Ry. Co.; *H. N. Breckheimer* for Wisconsin & Michigan R. R. Co.

Upon the complaint of the petitioner in the present case and after due hearing and consideration, the Commission, on January 25, 1913, made an order (*Pulp & Paper Mfrs. Traffic Assn. v. C. & N. W. R. Co. et al.* 11 W. R. C. R. 365) establishing new and lower rates for pulp wood in carload lots. To the rates then fixed no objection is raised in the case now under consideration by either the petitioner or the respondent companies, except on the part of the former to the combining of the local rates to make a joint rate. Following the hearing of October 7, 1913, the petitioner and three of the respondent companies filed briefs with the Commission.

At the hearing and in the brief submitted the petitioner alleged that there is a growing scarcity of pulp wood and a steadily increasing length of haul, as the mills must go farther and farther to secure the needed supply. This constantly lengthening haul makes the combined local rates, when the shipment is over two or more lines, almost prohibitive in some cases and in all cases places the Wisconsin mills at a disadvantage in comparison with mills in Minnesota and New England. It is universally conceded that where two or more lines are used the joint rate should be less than the sum of the several rates. It is true also, the petitioner conceded, that a joint rate should be higher than the one-line-haul rate because of the added terminal or transfer costs, and the Commission, rather than the railroads, should determine how much should be added to the one-line-haul rate to make the joint rate reasonable for both carrier and shipper. The transfers from one line to another, it was alleged, were mostly at small junction points, so that the amount necessary to add to the basal rate need not be large. At the hearing the petitioner suggested that a fair joint rate for general application would be 75 per cent of the sum of the local rates, but in the brief submitted this percentage was raised to 80. The petitioner further pointed out that what was needed was a fixed percentage such as suggested above, or a specified sum to be added to the basal rates, so that a shipper from any point who might have to use two or more lines could know quickly what the charges would be. If the shippers were obliged to bring a complaint for every case in which excessive joint rates were quoted it would cause infinite delay and expense. Hence, what was desired was a fixed percentage or sum which would be generally applicable.

Briefs were submitted for the respondent companies by counsel for the Chicago & North Western Railway Company, by counsel for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and by the manager of the Stanley, Merrill & Phillips Railway Company. The latter alleged that his company was not in a position to profit by an out-haul on pulp wood; that it had mills of various kinds located along its line because of the timber available there; that these mills had the capacity to utilize all the available raw material; that the mills were needed for the building up of markets and communities which would develop agriculture; and that hence his company pre-

ferred to conserve the timber resources rather than encourage, by favorable rates, an outside demand for them. Counsel for the Chicago & North Western Railway Company contended that when the Railroad Commission a year ago lowered the distance rates on pulp wood, the rates were fixed so that the carrier companies could earn only a reasonable return upon their investments. Shipments over two or more lines involve, even at small junction points, additional terminal or transfer costs, besides taking the cars of the originating company off its own lines, thus requiring larger equipment than otherwise. The facts presented by the petitioner, counsel held, were not sufficient to show the need for special joint rates. If such rates, other than the sum of the local rates, be required, however, they should be made on the basis of 1 ct. per cwt. added to the one-line-haul rate, the addition being necessary to compensate for the extra tranfer terminal cost, the ratio of terminal expenses to total rate being large on such low-class shipments as pulp wood. Counsel for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company alleged that the terminal line only could have the benefit of an out-haul on shipments of pulp wood and that this fact would be a discrimination against the line originating the business in case a level reduction of joint rates were made. The claim of the petitioner that such seeming discrimination would be equalized over the different lines was not well founded, for there could be no such equalization unless all the lines had the same available amount of raw material. Counsel propounded this query: When a carrier has ample raw material only for the industries on its own line, which industries were built up because of the accessible raw material, is it fair to compel the carrier to so reduce its charges that outside industries would be enabled to bid successfully for a part of the available supply? Counsel contended further that if the pulp wood rates established by the Commission a year ago brought the carriers only a reasonable return, then it was unreasonable to propose at this time the equivalent of a 20 per cent reduction in those rates. If there ever were a time when rates should not be reduced, counsel alleges, that it is now, when the net revenue of the railroads is steadily diminishing.

The plea of the Stanley, Merrill & Phillips Railway Company that it has a sufficient number of industries along its line to utilize within a reasonable number of years all the available

saw timber and pulp wood; that it depends upon the maintenance of these mills to build up communities and markets through which the agricultural possibilities of the country shall be developed (the sole hope of the investors in the railroad property getting any return resting upon agricultural development), and that to compel it to make low joint rates which would encourage mills far removed to come into the territory and take the available raw material, would be, in effect, to compel a discrimination against the local industries and the railroad itself, deserves some attention. Counsel for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company raises a similar objection, claiming that the establishment of joint rates, particularly on this commodity, would work directly against the interests of his company. Counsel claims that upon his company's line there are ample industries to utilize all the timber material available and that, moreover, his company has greater timber resources than all the other lines interested combined, hence the rates asked for would not only take away from the road's local industries the material they require, but the "Soo", being in every case the originating road for the business, would get no share of the out-haul. The objections raised by these two roads may be considered together.

It may be conceded that the above objections seem to make a reasonable appeal for the maintenance of present rates. All that the two railroad companies could do legitimately to develop industrial enterprises along their lines has been done, with the apparent result of there being a prospective local demand for all the available timber products. Both the railroad companies and the industrial interests along their lines are apparently satisfied with this state of affairs and prefer that it should not be changed. Standing alone the proposition that a railroad company should use all legitimate means to build up industries along its lines and encourage their maintenance when once established is not open to criticism, providing always that such a practice does not involve a direct injustice to other industries or other people. "No man liveth to himself", and no railroad or industry can long thrive in a large way which disregards this principle of inter-dependence. Briefly stated, the proposition which these two companies would like to have maintained is that they shall be permitted to seclude large timber resources for the sole benefit of themselves and exclude from sharing in

those resources the other portions of the state which have an equal need for them. This would be monopoly of the most offensive sort. It needs but a statement of the proposition to show the inherent injustice of it and the short-sightedness of it from an economic point of view. For these companies to contend that they have no desire to deprive other portions of the state of the benefits of their timber resources, while they seek to have rates maintained that shall operate to so deprive, in no way changes the policy which by implication they advocate.

Doubtless there have been times when society was still in a primitive state when such a narrow policy might have been temporarily justified. It will hardly be contended by either of the railway companies making the plea, however, that the logical ultimate of such a policy, namely that it would be right to impair or wreck one industrial enterprise for the purpose of increasing the profits of a similar enterprise located elsewhere, would be justifiable. It is precisely this destructive monopoly policy which modern economic thought and ethics have set themselves firmly against.

Upon this same point the Commission in a decision and order issued on May 7, 1909, (*Wis. Retail Lbr. Dealers' Assn. v. C. & N. W. R. Co. et al.* 3 W. R. C. R. 471, 481) establishing joint rates on lumber said:

"There may be no objection to having railways exert every proper effort to favor enterprises upon their lines. It may even be laudable to do so. Yet, when this ambition to maintain the integrity of an isolated railway domain and to foster the men and industries within that domain goes to the extent of establishing artificial trade relations and exclusive markets, the right to continue to pursue such a policy may well be drawn in question."

It is inevitable that industries located in close proximity to the raw material they require will have an advantage over industries far removed from their sources of supply. It is not within the power of transportation wholly to remove this inequality, nevertheless, it is the plain duty of transportation to do all it may to lessen the inequality. This is not only sound as an economic proposition, but, with society constituted as it is, it is an imperative ethical demand.

We come now to a consideration of the modifications in joint rates which have been suggested—one plan by the petitioner and

another one by one of the respondent companies. The one proposed by the petitioner is that a fair joint rate would be 80 per cent of the sum of the local rates. The other a plan proposed by the counsel for the Chicago & North Western Railway Company, is that a 1 ct. per cwt. arbitrary be added to the one-line-haul rate to compensate for the additional terminal or transfer costs.

Mr. Hurlburt for the petitioner has very carefully worked out a set of tables to show the effect an 80 per cent rate would have upon the different combinations. He has also a table illustrating the effect of a 1 ct. per cwt. arbitrary upon the same combinations. Beginning with a 5-mile haul he has carried his comparisons forward in 5-mile intervals up to a 300-mile combined haul. In his first column he gives the distance rates fixed by the Commission for pulp wood with the 1 ct. arbitrary added. In the next column he gives the combined local rates now charged, and in the fourth column the rates that would obtain if the joint rate were fixed at 80 per cent of the combined locals. The error in Mr. Hurlburt's calculation, as shown in Table I, is that he has failed to consider the additional transfer cost, which his 80 per cent calculation does not adequately cover.

In the opinion delivered by the Commission in issuing its order of January 25, 1913, in *Pulp & Paper Mfrs. Traffic Assn. v. C. & N. W. R. Co. et al.* 11 W. R. C. R. 365, establishing distance rates on pulp wood, the cost-of-service question was rather exhaustively discussed, and it will not be necessary to take up that phase of the subject again, further than to consider the additional terminal costs incident to a joint haul. In Table II is shown the relation of joint rates to costs when certain arbitraries are added to the distance rates established by the Commission in the order cited. In this table rates are worked out on the basis of an additional, first of a ¼-ct. per cwt. arbitrary, then a ½-ct., then a ¾-ct., and then a 1-ct. arbitrary.

A careful study of this table and a comparison of it with Table I will make clear the inadequacy of the 80 per cent rate.

TABLE I.

RATES ON PULP WOOD.

TABLE SHOWING IMPRACTIBILITY OF MAKING JOINT RATES 80% OF THE SUM OF THE LOCALS.

Total distance miles.	Single line rate in cts. per cwt.	Single line costs.	10-mile terminal haul.			
			Initial distance.	Actual joint haul costs.	80% of sum of locals.	80% to joint costs.
30	1.85	1.80	20	2.40	2.48	103.3
50	2.25	2.20	40	2.80	2.80	100.0

190	3.80	4.26	180	4.86	4.05	4.30	4.55	4.80	83.3	88.5	93.6	98.8
210	4.20	4.53	200	5.13	4.45	4.70	4.95	5.20	86.7	91.6	96.5	101.4

Terminal charges 1.20 cents per cwt.
Movement charges .2 mills per cwt. for first 70 miles.
Movement charges .133 " " " " distances over 70 miles.

The preceding two tables are included for purposes of illustration only, in order to throw additional light on the methods of computing joint rates and are not intended as a representation of the cost of the services involved.

While there are exceptions, it may be assumed as the rule in tariff making that a joint rate over two or more lines should be something less than the sum of the local rates, and for a corresponding reason it should be higher than a one-line-haul rate, there being the cost of switching or transfer in addition to the one-line-haul cost. In the next to the last column of Table II is shown the percentage of the joint rate to cost when that joint rate is composed of the one-line-haul rate plus a ¾ ct. arbitrary. The hauls figured are in 20 mile intervals. It will be noted that up to and including a 140 mile joint haul, the rate thus made is higher than the cost, but that beyond 140 miles the rate thus produced is less than costs. The excess up to a 140 mile haul, however, will offset the amount it falls below on the remaining combinations.

These tables do not profess to carry the computation out to its limit, the purpose of them being merely to illustrate the operation of the different suggestions made for reaching an equitable basis for joint rates. They make clear that no arbitrary which can be used will work out with exact equity with all the combinations. It is the opinion of the Commission, however, that a ¾-ct. arbitrary will come nearer to working out equitably for both shipper and carrier than any other feasible proposition.

IT IS THEREFORE ORDERED, That the respondent carriers establish joint rates on pulp wood in carloads by adding to the present single-line-distance rates an arbitrary of ¾ of a cent per cwt. for each transfer from one road to another.

CAZENOVIA AND SAUK CITY RAILROAD COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted June 20, 1913. Decided Feb. 11, 1914.

The petitioner asks for a reapportionment of the joint rates in effect between it and the respondent, as provided by the order in *Bowar et al. v. C. & S. C. R. Co. et al.* 1911, 6 W. R. C. R. 693, on the ground that the division of rates prescribed is confiscatory of its property. The petitioner, under this division, was to receive a mileage pro rata, with a minimum of 25 per cent, but not more than 25 per cent of the current rates to and from Milwaukee nor more than the local rate to or from the junction with the respondent's line. Since the filing of the petition and the hearing in the case the petitioner has passed into the hands of a receiver and its property has been purchased by new owners.

The theory upon which the Commission orders the establishment of joint rates and makes a division of charges is that the smaller road is entitled to a somewhat larger proportion of the revenues than it would otherwise receive because it has developed the business for the larger road. Just how large a proportion the petitioner in the instant case should receive it is difficult to say without an exhaustive investigation of costs and conditions.

Held: Inasmuch, however, as the successors of the petitioner have given no notice of their intention to become a party to the present complaint the petition must be dismissed, but the matter may be taken up again at the instance of either party.

This action was brought before the Commission on May 6, 1913, by petition of J. E. Hanzlik, general manager of the Cazenovia & Sauk City Railroad Company, asking for a reapportionment of the joint rates existing between that company and and the Chicago & North Western Railway Company. The Commission, on petition of certain shippers and with the concurrence of the Cazenovia & Sauk City Railroad Company, on June 13, 1911, ordered the establishment of joint rates between the Chicago & North Western Railway Company and the Cazenovia & Sauk City Railroad Company. (*Bowar et al. v. C. & S. C. R. Co. et al.* 6 W. R. C. R. 693). The division of these rates which the Commission approved is the same as that existing between the Hillsboro & Northeastern Railway Company and the

Chicago & North Western Railway Company, namely, that the proportion to the Cazenovia & Sauk City Railroad Company shall be on a "mileage pro rata, minimum 25 per cent to the short line: C. & S. C. to receive not more than 25 per cent of current rates to and from Milwaukee with maximum of local rate to or from junction with the C. & N. W." Alleging that this division is confiscatory of the property of the Cazenovia & Sauk City Railroad Company, Mr. Hanzlik asks a reapportionment of the charges which will allow his road better returns.

On June 20, 1913, a hearing on the matter was held in the office of the Commission at Madison, *M. B. Olbrich,* of Madison, appearing for the petitioner and *C. C. Wright* and *H. C. Cheyney* for the respondent. The contention of the petitioner at this hearing was that the petitioner suffered through the fact that its revenues could not be more than 25 per cent of the through charge to or from Milwaukee, even should the shipment travel considerably farther.

It has been the practice of the larger carriers in making divisions of joint rates with smaller roads to make the proportion of the charges to the short line on the plan outlined above. It simply means that should a shipment be destined to a point farther from the originating point than a designated gateway, in this case Milwaukee, or to a point taking a rate higher than the rate to the gateway, the smaller road would receive but the agreed percentage of the joint rate to the gateway and not more than its local rate to the junction. This necessitates, of course, in the case of all cars or shipments destined to points farther from the junction than the gateway or to points to which the joint rate is higher than to this gateway, the computation of what would have been the total revenue should the car or shipment have been destined to or from the gateway and the apportionment to the smaller road of its proportion of the gateway charges.

It is obvious that should the larger road fail to fix a gateway (the percentage accuring to the short line remaining the same), the revenue to the short line might be unreasonably high in the case of a shipment to a great distance. In fact, instances might be cited where the revenue to the larger road would not cover the cost of the handling. It is probable, however, that in the case of intrastate shipments alone it would make very little difference should no maximum be established. On out intrastate

shipments in this particular case the revenue accruing to the petitioner for the calendar year 1912, had there been no maximum, would have been $749.54 as against actual revenue of $694.53, making a difference of $55.01 for the year. On the total out business, intrastate and interstate, the additional revenue to the petitioner would have been $545.68.

That the sum of the local rates is often prohibitive is conceded. It is also true that a through joint rate is frequently necessary to develop the territory which the shorter line reaches. That the local rates of the two carriers are in and of themselves reasonable does not make the sum of the two rates reasonable for the through business, and each carrier must yield some of its revenue in order to obtain this business. Whatever additional business the carrier having the long haul may obtain as a result of the construction of the smaller line comes wholly unsolicited, and no overhead expenses, such as advertising and traffic soliciting, etc., can be charged against it. It is also handled for a smaller terminal charge.

It is true that in many cases the short line has an insufficient number of cars to handle the business it creates and the larger line must supply the cars; but in most instances the number of cars required is negligible as compared with the number which the larger road owns and seldom, if ever, does the demand of the smaller road cause a car shortage on the larger. Moreover, the expenses per mile to the road having the longer haul are considerably less than those of the short line. It is a safe assumption that in voluntarily making joint rates each road sees to it that its proportion more than covers its cost. The larger road, however, because of its extent and its relation to the short line, can so dictate the terms of the division that the short line will not receive enough revenue to cover its expenses.

The theory upon which this Commission has ordered the establishment of joint rates and made a division of charges is that the smaller road is entitled to a somewhat larger proportion of the revenues than it would otherwise receive, because it has created the business for the larger road. That the larger carriers have recognized this principle is evident from the fact that before the Commission was empowered to establish joint rates, joint tariffs were effective between large and small roads. Just what should accrue to the smaller road in this particular instance, for example, is difficult to say for it would be practically

impossible to ascertain how much of the business now done by the Chicago & North Western Railway Company and handled to La Valle by the Cazenovia & Sauk City Railroad Company would have been done by the former company had not the line of the latter company been built; nor can we compute at all accurately to what extent the Cazenovia & Sauk City Railroad Company has developed business that would never have existed otherwise.

The last provision of the paragraph in the division sheet showing the proportion accruing to the short line, viz.: "C. & S. C. to receive not more than 25 per cent of current rates to and from Milwaukee with maximum of local rate to or from junction with the C. & N. W." is not wholly in accord with the theory established by the Commission. This provision means that the 25 per cent of the through rate to Milwaukee must not exceed the local rate from the originating point to the junction with the larger road; if it should, the short line can receive but its local charges on the shipment. The question naturally arises —is not the short line entitled to more than the amount of its local charge to the junction for originating the business? An answer to this question would involve an exhaustive study of the cost to each carrier and an exhaustive investigation of conditions.

At best, the present method of computing the revenue accruing to each line is an involved process and is open to much criticism. It would seem that a simpler and fully as fair a method would be one that would apportion the joint revenue to each road on the basis of each line's percentage of the through rate had that rate been the sum of the local rates to and from the junction.

An analysis of the Chicago & North Western Railway Company's accounting department's division statements which apportion the revenue to the Cazenovia & Sauk City Railroad Company develops the fact that the mileage prorate clause of the division sheets has been wholly disregarded. There are several instances where the revenue to the Cazenovia & Sauk City Railroad Company has been computed at 25 per cent of the through charges when it should have been considerably greater because the mileage on the Cazenovia & Sauk City railroad was more than 25 per cent of the total mileage.

Since the filing of this petition and since the hearing on June 20, 1913, the Cazenovia & Sauk City Railroad passed into the hands of a receiver, was improved under his direction and was then purchased by other parties. The new owners have given no notice of their intention to become a party to the complaint. In view of this fact the case will be dismissed without prejudice and may be again taken up whenever either party to it so desires.

IT IS THEREFORE ORDERED, That this case be and that it hereby is dismissed.

HERMAN RUECKERT ET AL.
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted July 22, 1913. Decided Feb. 11, 1914.

The petitioners, residents of the city of Portage, Columbia county, allege that the highway crossing on the respondent's line at Cass st. in the city named is dangerous and ask that the respondent be required to construct a viaduct or subway at the crossing.

Held: Inasmuch as sec. 1797—12*e* of the statutes requires a petition for a separation of grades to be lodged by the common council of a city, the village board of a village, the town board of a town or by a railway company, the Commission has no jurisdiction in the matter as at present brought before it. The petition is dismissed.

The petition, which is signed by 144 residents of Portage in Columbia county, alleges in substance that the highway crossing on the line of the Chicago, Milwaukee & St. Paul Railway Company at Cass street in that city is dangerous to public travel, and asks that the respondent be required to construct a proper viaduct or subway at this crossing.

No formal answer was filed by the respondent.

A hearing was held at Portage on July 22, 1913. *W. O. Kelm* appeared for the petitioner and *J. N. Davis* for the respondent.

Counsel for the respondent objected at the hearing that, inasmuch as the complaint was not filed by the municipality, the Commission has no jurisdiction in the matter.

This position is correct, for sec. 1797–12*e* of the statutes provides that a petition for a separation of grades must be lodged with the Commission by the common council of a city, the village board of a village, the town board of any town, or by a railway company. Upon a petition brought under this section the Commission is directed to apportion the cost of any alteration ordered, between the railway company and the municipality in interest.

No officials of the city of Portage testified at the hearing. The city attorney, however, appeared on behalf of the petitioners. He stated unofficially that the city would take the position that

it should not be required to assume any part of the expense of any viaduct or change of grade which might be ordered.

Subsequent to the hearing the railway company provided an additional flagman at Cass street. If this protection is regarded as insufficient by the city council, that body can bring the matter of grade separation before the Commission by petition as provided in the section of the statutes referred to above.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

Decided Feb. 11, 1914.

The petitioners allege that the classification by the respondents of farm wagons (complete), farm trucks, gas engine trucks and extra wagon boxes and parts as first class is unjust and unreasonable. Prior to Feb. 14, 1913, farm wagons, knocked down, in less than carload lots, were rated as first class and farm trucks, knocked down, in less than carload lots, were rated as third class. On the date named western classification No. 51 went into effect raising farm trucks to first class, thus rating them and farm wagons alike. This classification was subsequently replaced by western classification No. 52, but the latter does not differ materially from the former as to the points here at issue. Both the petitioners and the respondents are agreed that a uniform rating upon farm trucks and farm wagons is desirable in order to avoid confusion, but the petitioners contend that the two commodities should be rated as second class instead of first class, on the ground that the raising of farm trucks from third class to first class will unreasonably increase the price of farm trucks to the retail purchaser.

Held: The classification of farm trucks as first class is not justifiable. The classification of both farm trucks and farm wagons as second class, however, is reasonable. The respondents are therefore ordered to discontinue the first class rating on farm wagons, farm trucks, logging trucks, and gasoline engine trucks, knocked down, and on parts thereof, including wagon boxes, knocked down, and to substitute therefor the second class rating.

This case came before the Commission in the form of a petition signed by the Northwestern Manufacturing Company and ten other manufacturers of and dealers in vehicles and farm implements, alleging that the classification of and rates charged upon farm wagons (complete), farm trucks, gas engine trucks and extra wagon boxes and parts, by the Chicago & North Western Railway Company and eighteen other companies engaged as carriers between points within the state of Wisconsin are unjust, unreasonable and excessive.

Specifically the complaint is against western classification No. 51, which was issued and went into effect in Wisconsin upon the lines named on February 14, 1913, and which eliminates the distinction hitherto made between farm wagons and farm trucks. Prior to the going into effect of said western classification No. 51, farm wagons, knocked down, in less than carload lots were rated as first class, and farm trucks, knocked down, in less than carload lots were rated as third class. Classification No. 51 raised farm trucks to first class, thus rating them and farm wagons alike.

A hearing was held on July 17, 1913, in the city hall in Milwaukee. There were present representing all the petitioners *A. G. Holines,* secretary of the Northwestern Manufacturing Company; and in addition several representatives of individual petitioners appeared. The respondents were represented by *R. H. Widdicombe,* general attorney, and *C. C. Wright,* general solicitor, Chicago & North Western Railway Company; *J. N. Davis,* assistant general solicitor, Chicago, Milwaukee & St. Paul Railway Company; *A. H. Bright,* general counsel, and *K. Taylor,* attorney, Minneapolis, St. Paul & Sault Ste. Marie Railway Company; *H. C. Cheyney* and *J. M. Davis,* assistant general freight agents, Chicago & North Western Railway Company and Chicago, Milwaukee & St. Paul Railway Company, respectively.

Mr. Widdicombe asked a continuance of the hearing on the ground that chairman Fyfe of the western classification committee, who was to appear for the respondents, could not be present. It was decided to proceed, however, and to give those present an opportunity to be heard. After several representatives of the petitioners had been heard and had been cross-examined by the representatives of the respondents, an adjournment was taken until September 18, 1913, at which time the hearing was concluded in the assembly chamber at Madison. At

this hearing, Mr. Fyfe being again unable to be present, counsel for respondents asked that he be allowed to file a statement. Permission was given with the understanding that a copy of his statement be furnished to the petitioners, and the latter be given an opportunity to reply. Mr. Fyfe's statement was duly filed on September 26, 1913, and the petitioners were furnished a copy.

After the case had been presented to the Commission the western classification committee withdrew classification No. 51 and substituted therefor classification No. 52. The latter does not differ materially as to the points in issue in this case from the one for which it was substituted. The classifications and ratings in issue are as follows in classification No. 52:

Wagons

Common or farm, wood or iron with or without boxes, boxes set up, other parts knocked down ..... One and one-half first class
Same knocked down in pieces, actual weight..... First class

Farm Trucks

Knocked down ..... First class

Logging Trucks

Trucks and wagons knocked down..... First class

Gasoline Trucks

Trucks, gasoline engine, knocked down in packages or loose First class

Wagon Boxes

Wagon beds (ordinary farm or express wagon bodies) set up ..... Double First class
Same knocked down in bundles..... First class

The contention of the petitioners is in substance that uniformity of rating as between farm wagons and farm trucks is desirable; that much confusion has grown out of certain distinctions made in classification No. 50 between different grades and kinds of farm trucks; that, from a transportation point of view, there is no real difference between trucks and wagons; and that it was arbitrary and unreasonable to raise farm trucks from third class rating to first class. One dealer testified that the change meant an advance in the price of trucks to the farmers varying $1.20 to $3.00 according to size. This advance would fall on the farmers because the margin is so small the dealers could not absorb it. Figured on the unit system employed by the western classification committee, this petitioner

alleged that neither trucks nor wagons should be rated higher than second class. The petitioners, though holding that third class is a sufficiently high rating for farm trucks, knocked down, in less than carload lots, would not object to their being raised to second class, if farm wagons were lowered to second class to bring uniformity and avoid the confusion which grew out of the former classification.

The contention of the respondent companies as presented by representations of the companies and by Mr. Fyfe, chairman of the western classification committee, is in substance that the first class rating on farm wagons as presented, and which has been in force in this territory since 1887, is reasonable and just; that such rating is applicable on 80 per cent of the railroad mileage of the United States; that the third class rating on trucks was made as a sort of emergency measure to provide for a cheap truck manufactured at Quincy, Ill.; that under the former classification it was found that shippers were dividing their shipments so as to take advantage of the truck rates for parts of their wagon shipments; that uniformity of rating between wagons and trucks is desirable, and that to lower the rating of farm wagons, as petitioners asked, would discriminate against interstate traffic.

CONCLUSIONS.

It appears from the facts as presented at the hearings and in matter subsequently filed with the Commission that the chief purpose of the classification committee in changing the rating upon farm trucks was to secure uniformity in rating between farm wagons and farm trucks. It was testified by both sides that the former classification No. 50, in which farm wagons in less than carload lots, knocked down, were rated first class, and farm trucks similarly shipped were rated third class, opened the way for a great deal of confusion and unjust classification which proved troublesome to the shippers as well as the carriers. Both sides are agreed as to the desirability of a uniform rating upon the two commodities that will eliminate the annoying distinctions made between different kinds of trucks as well as the fiction that farm wagons and trucks are changed essentially in character when they pass from the manufacturer or dealer to the carrier. But while the purpose of the change is to be com-

mended, the same cannot be said as to the manner in which it was effected by the classification committee.

There is a wide difference between the selling price of farm wagons and farm trucks, trucks ranging from $23 to $35 and wagons being about $20 higher. The undisputed testimony of the petitioners goes to show that in the territory affected from two or three times as many trucks as wagons are sold. One petitioner testified, and this was not disputed, that the raising of the trucks rating to first class was substantially a 50 per cent advance in cost of shipment in his territory, and added from $1.20 to $3.00 to the cost to the buyer of a truck. It will hardly be claimed, we think, that however desirable uniformity of rating may be, it will justify so considerable an increase in the ultimate cost of the commodity shipped.

The petitioners have expressed themselves as generally willing to concede in the interest of uniformity an advance in the classification of farm trucks from third class to second class, providing that the rating on farm wagons is reduced to second class.

It appears to the Commission that the proposition of the petitioners offers an equitable settlement of the points at dispute in that it will work no injustice to the respondent companies, while it will bring the desired uniformity in classification without unreasonably raising the cost to the consumer of the cheaper and more generally used commodity.

It is suggested by the Commission that, to avoid further confusion, the following descriptions of the principal articles involved be used in publishing the ratings in compliance with the order which follows:

"Farm wagons (not including spring wagons, platform wagons or drays) K. D. completely; box K. D. flat

"Farm trucks and farm wagon gears completely K. D.

"Gas engine trucks completely K. D."

It is Therefore Ordered, That the respondent carriers cease and desist from applying the first class rating on farm wagons, farm trucks, logging trucks and gasoline engine trucks, knocked down, and to parts thereof, including wagon boxes knocked down, and substitute therefor the second class rating.

CHICAGO, BURLINGTON AND QUINCY RAILROAD COMPANY,
ILLINOIS CENTRAL RAILROAD COMPANY.

Submitted May 27, 1913. Decided Feb. 11, 1914.

The petitioner alleges that the rates exacted by the respondents for the transportation of tile and of tile and brick in mixed carloads are excessive, unreasonable and unjust, and asks that rates be fixed for tile and for tile and brick in mixed carloads and that joint rates be determined for their transportation over two or more lines. Data introduced by the petitioner and the respondents relating to rates on tile in states adjacent to or near Wisconsin and to the cost of moving tile in Wisconsin are considered. An independent investigation of brick and tile rates in general and the cost of handling the traffic was also made.

Held: The rates on drain tile and on mixed carloads of tile and brick should be revised and joint rates should be granted for the transportation of tile and of brick and tile in mixed carloads. The respondents are therefore ordered: (1) to put into effect a schedule of rates fixed by the Commission for the transportation of drain tile in carloads, subject to a minimum weight of 36,000 lb.; (2) to apply on mixed carloads of tile and brick either the rate and minimum on brick or the rate and minimum on tile in such a manner as to produce the greatest charge; and (3) to establish and maintain joint rates on tile and on brick and tile not exceeding the local rate for any distance by more than 1¼ ct. per cwt.

The petition in this case, filed April 3, 1913, alleges that the rates on tile and brick in mixed carloads are excessive, unreasonable and unjust to the manufacturers of tile and to the public. In support of this contention the petitioner alleges further that the rates on tile in Iowa, Illinois, Michigan, Minnesota and Indiana average 50 per cent lower than distance rates in Wisconsin, at least insofar as short hauls are concerned; that in these adjoining states rates on tile are the same as rates on brick,

whereas in Wisconsin rates on tile are about 50 per cent higher than rates on brick; that in Wisconsin shipments of tile and brick in mixed carloads are charged separately, thus making charges on mixed shipment double those on a one-class shipment; that there are in Wisconsin no joint rates on tile or on brick and tile in mixed carloads. It is further alleged that the proper development of the tile industry and the interests of the public require that certain changes be made in the rates and regulations against which the above complaint is made. The petitioner therefore prays: (1) that rates on tile be fixed in 5 mile distances up to and including 300 miles at not to exceed 10 per cent more than the rates on brick; (2) that rates on tile and brick in mixed carloads be fixed in 5 mile distances up to and including 300 miles, such rates to be the same, pro rata, as the rates on tile and brick in straight carloads; and (3) that joint rates over two or more lines on tile and on tile and brick in mixed carloads be fixed at not to exceed 1 ct. per 100 lb. higher than single line rates.

Separate answers to the petition were filed by each of the respondents except the Chicago, Burlington & Quincy and the Green Bay & Western railroad companies. The separate answers filed are, in effect, essentially the same. They deny that the rates complained of are unreasonable, excessive or unjust to the manufacturers of tile, or to the public, or that the tile industry is jeopardized by reason of these rates, and allege that the rates complained of are reasonable and just and that the rates proposed in the petition would not be fair to the carriers.

Hearing was held May 27, 1913, in the city hall, Milwaukee. The petitioner was represented by *Samuel Weidman*, secretary; for the respondents *R. H. Widdicombe*, *H. C. Cheney* and *A. F. Cleveland* represented the Chicago & North Western Railway Company; *J. N. Davis*, the Chicago, Milwaukee & St. Paul Railway Company; *W. D. Burr*, the Chicago, St. Paul, Minneapolis & Omaha Railway Company; *Kenneth Taylor*, the Minneapolis St. Paul & Sault Ste. Marie Railway Company; and *J. A. Cherry*, the Illinois Central Railroad Company. The Green Bay & Western Railroad Company, the Northern Pacific Railway Company and the Chicago, Burlington & Quincy Railroad Company were not represented.

The secretary for the petitioning company offered in evidence certain statements that were presented in behalf of the petition-

ers in *Ringle et al. v. C. M. & St. P. R. Co. et al.,* decided by the Commission July 10, 1911, 7 W. R. C. R. 170. These statements were intended to show the prevailing state and interstate rates on brick, tile, etc. in Wisconsin and bordering states. He introduced also a number of other statements that purported to show prevailing rates on brick and tile between various points and stated that in 1912 in Wisconsin eighteen tile plants reported the manufacture and sale of brick and drain tile; that at four of these plants tile is the principal product and that at the other fourteen plants brick is the principal product; that the value of the tile manufactured at these plants would range from $5,000 to $10,000 annually; that there was no doubt that brick and tile were made at the same plant and often shipped in mixed carloads; and that it was assumed that the minimum weight on tile would be fixed at 30,000 lb., the prevailing minimum. Another witness for the petitioner stated that the value of common brick averaged about $8.00 per 1,000 and that these would weigh about 4,000 lb.; that brick can be loaded to capacity of cars and drain tile to 35,000 to 40,000 lb., and that there are few claims for breakage on tile.

It was alleged by representatives of the respondents that material changes had been made in brick and tile rates within the past two years and objection was made to the introduction by the petitioner of statements, based on exhibits in the brick case referred to above, unless the statements were verified by the Commission. J. H. Cherry, assistant general freight agent of the Illinois Central Railroad Company, testified that class E rates apply on drain tile in Wisconsin and that these rates were not very materially different from rates on drain tile in Iowa, Illinois and Indiana. He filed a statement of such rates for distances up to one hundred miles, called attention to a few comparisons and stated that a large amount of drain tile moves in Illinois on a basis of the distance tariff. Further testimony by this witness was, in substance, about as follows:

A bulletin published by the United States Geological Survey in 1909 gave the value of drain tile manufactured in Illinois at $1,421,878, Wisconsin $74,702, Iowa $2,509,505, and as to the manufacture of clay products generally in all the states placed Illinois third, Iowa ninth, Wisconsin twenty-fourth. From Indiana to Illinois rates are lower than west of the Illinois-Indiana line. At a recent informal conference between shippers

and railroads in Central Freight Association territory, held at Washington, D. C., before Commissioner Clements, a rate of 70 per cent of the sixth class rate was agreed upon. This would be very materially higher than brick rates. The rate on brick, Danville, Ill., to Chicago, Ill., 128 miles, is 85 cts. per ton and on drain tile 6.75 cts. per 100 lb., the tile rate being 159 per cent of the brick rate. This percentage applied to the existing rate on brick in Wisconsin for the same distance would result in a rate of 7.71 cts. on tile, while the rate under the Wisconsin distance tariff is 7 cts. Statistics of the Illinois Central Railroad Company show that on sewer pipe and drain tile the damage claims paid equal about 10 per cent of the revenue on this traffic. Separate statistics as to drain tile and sewer pipe could not be given. Data on about 2,500 cars of drain tile showed that the average load was 37,000 lb. per car.

A statement introduced by witness for the Chicago & North Western Railway Company shows that in the month of September, 1912, this line handled from stations in Illinois, Iowa and Wisconsin 1,209 cars of brick, the average weight of which was 33.2 tons per car; 131 cars of tile, the average weight of which was 18 tons per car; and 558 cars of drain tile, the average weight of which was 17.4 tons per car. This statement shows further that for a period of two years, in which 34,436 cars of brick were handled, the average load was 32 tons; that the loss and damage on tile and sewer pipe on a year's movement was 23.5 times the loss and damage on brick for the same period, whereas the tonnage of brick was but 6.9 times the tonnage of tile, drain tile, and sewer pipe; that investigation shows that tile cannot be loaded in excess of the minimum and that the heavier the loading the greater the per cent of breakage, whereas brick can be loaded to capacity of car. Another statement introduced by this witness is given in full herewith:

STATEMENT SHOWING AVERAGE LOADING OF BRICK, TILE AND SEWER PIPE FOR THE CALENDAR YEAR 1912.

C. & N. W. Ry. Co.

	Originating in Wisconsin.				Entire line.	
	Intrastate.		Interstate.			
	No. Cars.	Average load.	No. cars.	Average load.	No. cars.	Average load.
Brick	1,424	32.0	353	31.9	17,944	31.9
Tile	64	24.8	11	19.0	964	18.6
Sewer pipe	16	14.5	18	16.1	263	16.1
Drain tile	121	22.1	11	20 8	2,181	18.2

Another witness for this company introduced a statement of brick and tile shipments from Jefferson, Wis. This statement shows that during a certain period in which 150 cars of brick moved there were 6 cars of tile, the average weight of the brick being 71,604 lb. and of the tile 37,741 lb. per car.

Petitioner's exhibit "I" is a copy of the printed decision of this Commission in *Ringle et al. v. C. M. & St. P. R. et al.* before referred to, in which case the matter of rates on brick and tile was quite fully gone into. From an examination of the evidence introduced in the present case and of rate schedules now on file with the Commission, some of which are in force and some of which are under suspension by the interstate commerce commission and by certain state commissions, it appears that the general brick and tile rate situation is essentially the same at present as it was when the case referred to came up. Briefly stated, this situation is about as follows: In Wisconsin the rates on brick now in effect were established by the Commission in the rehearing in the case of *Ringle et al. v. C. M. & St. P. R. Co. et al.* decided Aug. 15, 1911, (7 W. R. C. R. 598). The rates on drain tile are the class E rates of the Wisconsin distance tariff with some unimportant general and some specific exceptions which are shown in petitioner's exhibit "I". The rates for Minnesota, Iowa and Illinois, intrastate, and Illinois, Indiana and Southern Michigan, intrastate and interstate, are shown generally in petitioner's exhibit "I". Tariffs showing general advances of about 5 per cent in rates throughout the last named territory are under suspension by the interstate commerce commission and by state commissions.

Taking the territory described above as a whole, there appears to be no uniformity in the relation between the rates on brick and the rates on tile. Many instances may be found where the rates are the same on each commodity; many others where the rates on tile vary from a quarter of a cent to one and one-half cents higher than the rates on brick and there are some instances where rates on tile are lower than rates on brick. This Commission, of course, cannot pass upon the reasonableness of rates over which it has no jurisdiction but a consideration of such rates is valuable for purposes of comparison.

A schedule of distance rates on drain tile, subject to a minimum weight of 36,000 lb. per car, has been worked out by the Commission. In making up this schedule all testimony presented in the present case, and in the cases referred to wherein the rates on brick and tile were involved, has been given due consideration and in addition thereto the Commission has made an independent investigation of brick and drain tile rates in general and of the cost of handling the traffic. The rates shown in this schedule which appears below, are believed to be reasonable and fair to all concerned.

Local and Joint Rates in Cents per 100 lb. on Drain Tile, Carloads, Subject to a Minimum Weight of 36,000 lb. per Car.

Miles.	Cents per 100 lb.	Miles.	Cents per 100 lb.	Miles.	Cents per 100 lb.
10	2.50	75	4.45	180	7.60
15	2.65	80	4.60	190	7.90
20	2.80	85	4.75	200	8.20
25	2.95	90	4.90	210	8.40
30	3.10	95	5.05	220	8.60
35	3.25	100	5.20	230	8.80
40	3.40	110	5.50	240	9.00
45	3.55	120	5.80	250	9.20
50	3.70	130	6.10	260	9.40
55	3.85	140	6.40	270	9.60
60	4.00	150	6.70	280	9.80
65	4.15	160	7.00	290	10.00
70	4.30	170	7.30	300	10.20

The prayer for joint rates on tile and on brick and tile in mixed carloads is reasonable and it is found that a rate thereon of 1¼ cts. per 100 lb. will amply cover the excess cost to the carriers arising out of the transfer at junction points.

IT IS THEREFORE ORDERED, That the respondents, the Chicago & North Western Railway Company, the Chicago, Milwaukee & St. Paul Railway Company, the Chicago, St. Paul, Minneapolis

& Omaha Railway Company, the Minneapolis, St. Paul & Sault St. Marie Railway Company, the Illinois Central Railroad Company, the Green Bay & Western Railroad Company, the Northern Pacific Railway Company and the Chicago, Burlington & Quincy Railroad Company, cease and desist from charging the rates this day in effect on drain tile and substitute therefor the rates as given in the above schedule.

IT IS FURTHER ORDERED, That the above named respondents apply on mixed carloads of tile and brick either the rate and minimum on brick or the rate and minimum on tile in such a manner as to produce the greatest charge.

IT IS FURTHER ORDERED, That the above named respondents establish and maintain joint rates on tile and on brick and tile not to exceed the local rate for any distance by more than 1¼ cts. per 100 lb.

ARENA AND RIDGEWAY TELEPHONE COMPANY
vs.
TROY AND HONEY CREEK TELEPHONE COMPANY,
DODGEVILLE AND WYOMING TELEPHONE COMPANY,
WEST SPRING LINE,
BIG HOLLOW TELEPHONE COMPANY.

Submitted Sept. 30, 1913. Decided Feb. 14, 1914.

This proceeding arises out of a controversy between the petitioner and the respondents with respect to the payment to be made to the respondents for switching service rendered for a certain rural line owned and operated by the petitioner. The petitioner has a system of exchanges and switches in the territory south and east of Spring Green which it has connected with the exchange maintained jointly by the respondents at Spring Green by the rural line mentioned and by a trunk line. The respondents have assessed the petitioner the sum of $75 per year for the switching service rendered for the rural line, but the petitioner has refused to pay this sum on the ground that it is offset by the sum which the respondents should pay toward the upkeep of the trunk line which the petitioner has maintained and operated wholly at its own expense. The respondents allege that the service over the trunk line is of no particular value to their subscribers and contend that they are entitled to a fair switching charge for each telephone connected to the petitioner's rural line. An approximate valuation of the lines in question was made, a peg count of all calls through the Spring Green exchange was taken and the operating expenses of this exchange were determined as closely as possible.

Held: (1) The respondents should share in the expense of maintaining and operating the trunk line between the Spring Green exchange and the petitioner's system; (2) a charge of $1 per telephone is equitable for the service rendered the petitioner by the respondents in switching for the petitioner's rural line at the Spring Green exchange.

It is ordered: (1) that the respondents pay to the petitioner the sum of $27 per year for the use of the trunk line connecting the "Spring Green" and the "Fernan" exchanges; and (2) that the petitioner pay to the respondents each year the sum of $1 per telephone for switching service for such telephones as are connected to the petitioner's rural lines which enter the respondents' Spring Green exchange.

It is recommended that the petitioner construct an extra line connecting with the Spring Green exchange for the purpose of relieving the congestion on its existing rural line.

Complaint in the above matter was filed with the Commission on July 3, 1913, and a formal hearing was held at the office of the Commission at Madison on September 30, 1913. *Wm. Fernan, John McCutchin* and *John E. Johnson* appeared for the petitioner and *E. G. Hood* and *C. D. Johnson* for the respondents.

From the testimony at the hearing and through subsequent investigation made by a member of the Commission's staff the following facts bearing upon the situation have been brought out.

The petitioner operates seven small exchanges and switches in the territory south and east of Spring Green and serves about two hundred subscribers. One of the exchanges is installed at Arena, one at Hyde and the other five are in conveniently located farm houses. All of the seven exchanges are connected by a grounded trunk line over which any exchange may call any other exchange as it chooses.

The four telephone companies named as respondents in this case operate jointly an exchange at Spring Green and together serve directly about three hundred subscribers in the village and surrounding rural territory, of which number about 275 may be considered as paying their yearly rental directly for the support of this exchange. Connecting the Spring Green exchange with the petitioner's "Fernan" exchange is a through line owned and operated by the petitioner. Also terminating in the Spring Green exchange is a loaded rural line which is the property of the petitioner. This line has twenty-seven phones connected to it.

The question at issue in this case involves the refusal on the part of the petitioner to pay the sum of $75 per year to the respondents for switching service for the above mentioned rural line. The petitioner owns and maintains the entire line connecting its exchange with the respondent's exchange and contends that one-half of the upkeep of this trunk line should properly be borne by the respondents and further contends that this amount about offsets the amount due the respondents for switching service for the above mentioned rural line. On the other hand, the respondents state that the service over the through line connecting the two exchanges is of no particular value to their subscribers and contend that they are entitled to a fair switching charge per telephone per year from the telephones located on the above mentioned petitioner's rural line.

There are to be determined therefore:

1. The relative amount of use which each company makes of the trunk line and, using this as a basis, what each company's share of the upkeep of this line should be.

2. A proper switching charge per telephone to be paid the

respondents by the petitioner for telephones located on the petitioner's rural line entering the Spring Green exchange.

In order to make these determinations an approximate appraisal of the lines in question was made, a peg count of all calls through the Spring Green exchange was taken, and the operating expenses of the respondents' exchange at Spring Green were determined as closely as possible.

PHYSICAL VALUE OF PROPERTY.

ESTIMATE OF APPORTIONED VALUE OF PETITIONER'S TRUNK LINE BETWEEN SPRING GREEN AND FERNAN AS OF DEC. 1, 1913.

	Unit.	Quantity.	Unit price.	Cost of reproduction.	Cond. per cent.	Present value.
20"5' cedar poles	ea.	60	$1 30	$78	.....	.....
3 pin X arms	ea.	60	46	28	.....	.....
Anchors	ea.	16	2 50	40	.....	.....
No. 12 iron wire	mi.	8.8	11 36	100	77	$189
Total	.....	.....	.....	$246	.....	$189

For about five miles south from Spring Green to a fork of the road in section 6, town of Wyoming, the above line is considered as running on foreign poles and cross-arms and no allowance is made for this construction. However, the value of the contacts on these foreign poles has been computed and from this value a proper allowance for interest, depreciation, operation and maintenance, per contact, has been arrived at for this line. This figure is placed at $0.04 per contact and will appear as part of the expenses properly chargeable to these lines.

Classes of Service.

No. 1.—Calls to or from village lines (Spring Green).
No. 2.—Calls to or from rural subscribers on lines connecting with a 2nd exchange.
No. 3.—Calls to or from 2nd exchange over loaded rural lines.
No. 4.—Calls to or from rural lines not connecting with a 2nd exchange.
No. 5.—Calls to or from trunk lines to other central offices.
No. 6.—Calls to or from trunk lines running from Fernan to Spring Green.
No. 7.—Calls to or from Arena and Ridgeway Telephone Company's loaded rural line.
No. 8.—Calls to or from long distance.
a.—Busies.
b.—Ring back calls.
d.—Calls other than busies ending or originating at central office.

In order to arrive at a proper apportionment of the operator's time to switching service for the petitioner's rural line entering the Spring Green exchange and to determine the relative use by the companies concerned of the trunk line between Fernan and Spring Green, a twenty-four hour traffic study was made at the Spring Green exchange on November 21, 1913. The compilation of this traffic study involves practically the same steps as are outlined in the case *In re Application of the Farmers Telephone Company of Beetown for Authority to Increase Its Rates and Other Relief*, 1913 13 W. R. C. R. 540, hence only the results together with some other necessary information regarding the study was set down in the foregoing tables.

Trunk Line.

The traffic study shows that there were 17 completed calls going out over the trunk line from the Spring Green exchange and 11 completed incoming calls over this line during the same period. (See traffic study, No. 6 class of service.) This indicates that the respondents in this case do make considerable use of the line and hence should share in its maintenance and operation; in fact, the ratio of the incoming to the outgoing traffic indicates that the respondents should bear a larger share in the upkeep of the line than the petitioner. However, when we consider that both incoming and outgoing traffic is of value to both parties using the line, it seems fair in this case — and it will be so ordered — that each party share equally in the upkeep of the connection between the two exchanges.

The following is a computation of the cost of the upkeep of this line. Depreciation at 7 per cent on the cost of reproduction of the line ($246) as given above amounts to $17.22; interest at 6 per cent on $210, which figure would seem to represent a fair value upon which the owner of the line should be allowed a return, amounts to $12.60. Maintenance of 8.8 miles of wire at $1.50 per mile amounts to $13.20, and maintenance of 2 miles of pole line at $2.50 per mile amounts to $5.00. 158 pole contacts on foreign poles at $0.04 each amounts to $6.32. The total of the above items is $54.34.

Considering that one-half of this amount should be borne by each company the amount payable yearly by the respondents to the petitioner for the use of this line would be approximately $27.00.

It now remains to be determined what is a reasonable charge per telephone for switching service for the petitioner to pay respondents.

EXPENSE ACCOUNT—SPRING GREEN EXCHANGE.

About the only authentic data available relative to the total expense of operating and maintaining the exchange at Spring Green relate to the central office operating labor. The expense for this item amounts to $540 per year. Other items entering into the expense account and properly apportionable to switching service have been taken from the reports of a number of other companies having construction similar to this exchange, and, it is believed, should be fairly close to the actual figures for these items.

Central office operating labor	$540.00
Maintenance of central office equipment at $0.50 per line	42.50
Commercial expense at $0.35 per phone	96.25
General expense at $1.26 per phone	346.50
Total of above items	$1,025.25

The traffic study shows that the percentage of operators' time chargeable to the above rural line (No. 7 class of service) is 2.8 so that $15.12 of operators' salaries is chargeable to this line. Maintenance of central office will amount to about $0.50 for one line. The commercial expense is apportioned on the basis of the number of subscribers connected and inasmuch as one bill for all

the parties on the line will be rendered directly to the petitioner, in the apportionment of this expense this line will be considered as one subscriber. The apportioned commercial expense then will be $0.35. The general expense, apportioned on the overhead basis, amounts to $8.16. Interest and depreciation on central office equipment used by this line will be about $0.65. The sum of the above items is $24.78. This amounts to about $0.92 per phone. In view of all the conditions related to this service a charge equivalent to $1 per telephone per year seems equitable for this service and will therefore be allowed.

With respect to the number of telephones on the above line, the present proceeding will not allow of an order. As has been stated previously, the number of telephones on this one line is 27, a number which it would seem is entirely too large to afford adequate service to the patrons of the line. The traffic study indicates that there are very few calls from this line to the Arena and Ridgeway Telephone Company's exchange or, in other words, that by far the greater share of the switching is done at the Spring Green exchange, yet the percent of operators' time per telephone for this line is less than half of what it is for any other class of service out of the Spring Green exchange. Although the location of the subscribers is a factor which may influence this figure to a certain extent, the conditions nevertheless show, it seems, that the individual subscribers of the line are able to use the service only about one-half as much as the subscribers on other lines similarly situated, but having fewer telephones per line.

The Commission has under consideration at present a set of rules for service for telephone companies which, among other things, will limit the number of telephones on a line to a reasonable number. It would therefore seem to be to the best interests of all concerned that an extra wire be run out from Spring Green and that this line be divided into two parts. It would be necessary to put up about five miles of wire and the cost of this construction would be in the neighborhood of $60, including labor. It is strongly urged that the petitioner install the above outlined construction.

IT IS ORDERED: 1. That the owners of the Spring Green exchange, respondents in this case, pay to the Arena and Ridgeway Telephone Company the sum of $27 per year for the use

of the trunk line connecting the "Spring Green" and the "Fernan" exchanges.

2. That the petitioner pay to the respondents the sum of $1 per telephone per year for switching service for such telephones as are connected to the petitioner's rural lines which enter the respondents' Spring Green exchange.

WAUSAU ADVANCEMENT ASSOCIATION

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted May 13, 1913. Decided Feb. 16, 1914.

The petitioner alleges that the rates charged by the respondent for the transportation of lumber and wooden boxes from Wausau to New London are unjust and unreasonable as compared with corresponding rates to other points and asks that the respondent be directed to make refund of alleged excessive charges to certain shippers. Since the hearing the respondent has reduced its rate on lumber and wooden boxes from Wausau to New London to the point claimed as reasonable by the petitioner. The charges upon which refunds are asked were based upon lawful rates.

Held: The Commission is without power to decide upon the merits of complaints against lawful charges or to authorize refund of any part of such charges except on complaint of a person aggrieved by the exaction of the charges. Inasmuch as the petitioner in the instant case is not a person aggrieved and therefore entitled to ask for refund and inasmuch as a change in rates which satisfies the petitioner has been made, the petition is dismissed.

The petitioner is a voluntary organization made up of corporations and individuals, citizens of Wausau. It complains that the rates charged on lumber and wooden boxes in carload lots by the Chicago & North Western Railway Company from Wausau to New London are unjust and unreasonable as compared with corresponding rates to other points and asks that the respondent company be directed to make refund of alleged excessive charges to certain shippers named. The petitioner further alleges that if the changes in rates asked for be not granted, the petitioner and its traffic will continue to be subjected to undue discrimination, prejudice and disadvantage.

The respondent, in its answer to the petition, denies these allegations and prays for the dismissal of the petition.

A hearing was held May 13, 1913, in the capitol at Madison, at which the petitioner was represented by *A. E. Solie* and the respondent by *C. C. Wright.*

From the petition in this case and the additional matter introduced at the hearing, it appears that this complaint was brought about by, or based upon, the fact that the rate on lumber—and consequently the rate on wooden boxes, which is based on the lumber rate—from Wausau to New London was higher than the rate for the distance between these points as named in a distance tariff applicable between points in certain groups on the respondent's line. The petition asks for the establishment of this distance rate, which, for the distance Wausau and New London, 70 miles, is 6.8 cts. on lumber, and for refund based thereon, but at the hearing witness for the petitioner asked for the establishment of a 6.5 ct. rate, and refund based thereon, alleging that this rate now applies on lumber, Wausau to New London, on the Chicago, Milwaukee & St. Paul Railway in connection with the Green Bay & Western Railroad and that it applied in the past on the respondent's line during a period of nearly four years.

Examination of tariffs on file with the Commission shows that, effective May 15, 1911, the rate on lumber, Wausau to New London, on the respondent's line was changed from 8 to 7.5 cts.; that, effective March 29, 1913, it was changed from 7.5 cts. to 7 cts., and that, effective July 12, 1913, it was changed from 7 cts. to 6.5 cts., thereby satisfying this complaint except as to its refund feature.

Refund in the amount of $52.56 is asked for in the petition on 27 shipments of wooden boxes from Wausau to New London, which moved during the period March 4, 1912, to March 27, 1913, the freight bills for which were filed with the petition; and in the additional amount of $9.68 on three shipments that moved from and to the same points subsequent to the filing of the petition, the freight bills for which were filed at the hearing. Charges on the 27 shipments are at a rate of 12.5 cts. and on the three shipments at the rate of 11.25 cts. The refund asked for on the former is based on a rate of 11.8 cts. which is a rate of 6.8 cts. on lumber for the distance of 70 miles, referred to above, plus 5 cts. per 100 lb. The refund asked for on the latter is based on a rate of 11.2 cts., which is based on 150 per cent of the lumber rate of 6.5 cts. asked for at the hearing. Reference to rates in the preceding paragraph shows that the rate on lumber, Wausau to New London, prior to March 29, 1913, was 7.5 cts.; that March 29, 1913, to July 11, 1913, inclusive,

it was 7 cts. and that since July 12, 1913, it has been 6.5 cts. Prior to March 19, 1913, the rate on wooden boxes was 5 cts. higher than the lumber rate. Effective March 19, 1913, the rate on wooden boxes was changed to 150 per cent of the lumber rate, but not to exceed 5 cts. above the lumber rate. It appears, therefore, that the rate on wooden boxes, Wausau to New London, March 4, 1912, to March 18, 1913, inclusive, was 12.5 cts., March 19 to 28, 1913, inclusive, 11.25 cts., March 29 to July 11, 1913, inclusive, 10.5 cts., and that since July 11, 1913, it has been 9.75 cts.

Examination of freight bills filed in this case indicates that the lawful rate was charged in each instance. These bills show that the shipper was the Wausau Box & Lumber Company and the receiver, or consignee, The National Condensed Milk Company, neither of which is a party to these proceedings or has filed complaint with the Commission concerning these charges. The Commission is without power to decide upon the merits of complaints against lawful charges, or to authorize refund of any part thereof, except on complaint of a person aggrieved, therefore the refund feature of this case as presented cannot be passed upon. Inasmuch as a change in the rate that fully satisfies the complaint against it has been made by the respondent, there appears to be nothing to do but to dismiss the case.

IT IS THEREFORE ORDERED, That this complaint be and hereby is dismissed.

OSHKOSH FUEL COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 14, 1913. Decided Feb. 16, 1914.

The petitioner complains of the rates charged by the respondent for the transportation of dry slab wood and edging and asks for refund on certain shipments. The respondent's tariff provides separate schedules of rates, both distance and group, for carloads of high and low minimum weights. Shipments subject to a low minimum weight take a higher rate than shipments subject to a high minimum weight. The respondent states that the high rate, low minimum basis is intended to apply on dry slabs because of their light loading, while the low rate, high minimum is intended to apply on green slabs, cordwood and the like. The petitioner alleges that the high rate, low minimum basis is practically prohibitive when applied to dry slab wood and edging and desires to have the low rate schedule made directly applicable to shipments of this commodity by the adoption of a minimum weight or weights which can be loaded. The petitioner's request for refund appears to be based upon the fact that his orders for cars of such size that the high minimum, low rate schedules would apply to his shipments were filled by cars of a smaller size taking the low minimum.

Held: Some readjustment of the relation between the two sets of minima and rates as at present arranged should perhaps be made. (1) The minimum weights in the high rate schedules, which seem unnecessarily low, might well be advanced and the rates in these schedules reduced. No order is issued with respect to these rates, but it is recommended that the respondent submit to the Commission for approval a new schedule of minimum weights and a new schedule of rates applying in connection with these minima to supersede the present schedules. (2) The low minimum, high rate schedules, under which the charges complained of were paid, were lawfully in force when the shipments involved moved. The charges in question do not appear to be erroneous, illegal, unusual or exorbitant. Refund therefore cannot be authorized.

The petition is dismissed.

This complaint involves the reasonableness of the rates and minimum weights—duly set forth at the hearing in the papers filed—and the reasonableness of charges based upon these weights paid on certain shipments of wood. A refund, to the amount of $34.03, or such other sum as the Commission finds to be reasonable, is asked.

A hearing was held in the assembly chamber at Madison on October 14, 1913, at which *E. Moerke* appeared for the petitioner, and *C. A. Vilas,* attorney, and *H. C. Cheyney,* assistant general freight agent, for the respondent company.

The situation which brought about the complaint appears to be as follows: The respondent, in its tariff G. F. D. No. 5950–D, publishes group and distance rates on fuel wood that are subject to minimum weight based on the length of car used. There are two separate schedules of both group and distance rates and two separate sets of minimum weights applying in connection therewith. The separate schedules of rates (group and distance) are subject to the same separate set of minimum weights. The rates in the schedule subject to the lower set of minimum weights are higher than those in the schedule subject to the higher minimum weights, therefore the actual weight of any shipment determines the rate and minimum weight to apply in connection therewith. The minimum weights are as follows:

Length of car, inside measurement.	*Minimum weight.*
Cars 34′ 6″ in length and under.....	24,000 and 40,000 lb.
" under 40′ in length and over 34′ 6″.....	30,000 " 50,000 "
" 40′ and over in length.....	36,000 " 60,000 "

Rates subject to the lower set of minimum weights are about 1, 1¼, 1½ and 2 cts., in the case of group rates, and about ½, ¾, 1, 1¼, 1½, 1¾, 2, 2¼ and 2½ cts. in the case of distance rates, higher than rates subject to the higher set of minimum weights, the difference varying according to distance, the longer distances having the greater differences. The tariff is subject to western trunk lines' rules, regulations and exceptions to classification.

From the testimony offered in behalf of the petitioner it appears that the complaint is against the minimum weights and rates set forth above as applied to shipments of dry slab wood and edging only. It is alleged that the high rate, low minimum basis is practically prohibitive insofar as this kind of wood is concerned, for the reason that the rates applicable in connection with the high minimum basis are as much as this wood can stand. The main attack, therefore, is really on the high minimum, low rate basis, although the low minimum, high rate basis is necessarily involved.

Up to a short time ago, the petitioner's shipments of wood in cars larger than those ordered were charged on the basis of

the minimum weight applicable to the size of car ordered as provided, or as then understood to be provided in western trunk lines' rules to which this traffic is subject. Within the last six months or thereabouts the respondent discontinued applying this provision in connection with shipments that could not be loaded in cars of the size ordered, while the Chicago, Milwaukee & St. Paul Railway Company continues to apply this provision in connection with shipments over its line that are subject to similar minimum weights and the same rules. The petitioner avers that it is possible to load the large cars furnished with an amount equal to the capacity of the car ordered, but that such loading would be disadvantageous to both shipper and carrier.

"Soft wood slabs and edgings" is the cheapest refuse from saw mills. The petitioner is now paying 58 cts. per cord for some of it in mill yards. It is much cheaper than cordwood and is more difficult to market. Present values per cord for different kinds and lengths of slab wood delivered at Madison, which is the petitioner's best market, are: about $2.83 for four foot soft wood slabs and edgings, $3.50 to $3.75 for twelve inch soft wood slabs and $5.50 to $5.75 for hardwood slabs. Practically all slab wood is sold by the carload, based on cubic capacity of car, all cars being fully loaded. Statements of forty-five shipments of soft wood slabs and edgings and forty-two shipments of soft wood slabs without edgings, filed by petitioner, show an average weight per cord varying from 1,775 lb. to 2,166 lb. for the former and 1,844 lb. to 2,331 lb. for the latter, and a general average on both of 2,025 lb.

By way of comparison with the rates and minimum weights complained of, the petitioner referred to various rates, minimum weights on fuel wood, and distances involved, as follows:

Respondent's tariff naming rates on wood for burning brick subject to minimum weight of 36,000 lb. in cars 34′ 6″ and under and 40,000 lb. in cars over 34′ 6″. Rates on wood and slabs for fuel to Minneapolis, Minn., from Clifford, Wis., 194 miles, 4 cts.; from Dunbar, Wis., 289 miles, 5½ cts.; from Hermansville, Mich., 321 miles, 5½ cts.; from Nahma Jct., Mich., 373 miles, 6 cts.; from Armstrong Creek, Wis., 277 miles, 5 cts; and from Gladstone, Mich., 353 miles, 5½ cts., subject to minimum weight of 28,000 lb. on soft wood and 35,000 lb. on hard wood, as named in "Soo" line G. F. D. No. 8362, I. C. C. No. 2327.

Rates on fuel wood to Minneapolis, Minn., from Prentice, Wis., 211 miles, 4 cts. and from Mellen, Wis., 276 miles, 4½ cts. and similar rates to Chicago, Ill., from Westboro, Wis., 335 miles, 6¼ cts. and from Mellen, Wis., 413 miles, 7 cts., subject to minimum weight of 35,000 lb. on slab wood in box or stock cars loaded to full capacity as named in "Soo" line G. F. D. No. 14225, I. C. C. No. 3043. Rates on fuel named in C. St. P. M. & O. G. F. D. No. 2334, I. C. C. No. 3893 subject to minimum weight of 36,000 lb. on cordwood, 30,000 lb. on slabs and edgings and 25,000 lb. on trimmings and other fuel wood. The Pere Marquette Railway Company in connection with the Michigan Central or Pan Handle publishes a rate of 6½ cts. subject to minimum weight of 40,000 lb. from Bay City, Mich., to Chicago, Ill., 312 miles. Tariff authority not given. Boyne City, Gaylord & Alpena tariff No. 365, I. C. C. No. 85, names a rate of 8 cts. subject to minimum weight of 40,000 lb. Boyne City, Mich., to Chicago, Ill., 535 miles. The Grand Rapids & Indiana Railway Company publishes a rate of 6 cts. subject to minimum weight of 40,000 lb., Boyne Falls, Mich., to Chicago, Ill., 528 miles. Tariff authority not given. This rate was corrected to 8 cts. in a letter to the Commission from the petitioner under date of October 25, 1913. Tariff authority for the latter Grand Rapids & Indiana G. F. D. No. 1721, I. C. C. No. 1017. Switching charges at Chicago varying from $3.70 per car to $12.00 per car are absorbed by the "Soo" and the Pere Marquette railway companies in connection with rates to Chicago, referred to above, via these lines.

For the respondent, its assistant general freight agent stated that the present high rate, low minimum basis on fuel wood was intended to apply on dry slabs on account of light loading and the low rate, high minimum basis was intended to apply on green slabs, cord wood, etc.; that the petitioner wanted the lower rates regardless of the minimum weights applicable thereto, but witness contended that there was nothing unreasonable about the high rate, low minimum basis in connection with the petitioner's shipments as such shipments were entitled to the low rate, high minimum basis when lower charges resulted thereby; that the lower rates are unremunerative, but that the respondent is willing to reduce the minimum weights applying in connection therewith providing the rates are advanced; and that Wisconsin-Illinois rates are on a different basis than Wisconsin intrastate

rates. The respondent's representatives further said that the schedules of rates and minimum weights involved in this case have been in force since September 15, 1909. Similar schedules have been in force during the same period and are still in force on the Chicago, Milwaukee & St. Paul Railway. Prior to the establishment of these schedules the rates on wood for fuel in force generally on these lines were arranged so that a low basis of rates applied on heavy wood and comparatively high rates on light wood. The rates on heavy wood were so much per cord, regardless of actual weight, and subject to minimum weights varying from 9 to 15 cords per car, for shipments in box or stock cars, based on the capacity of car and kind of wood, green or dry. On slab wood the rates were in cents per 100 lb. subject to minimum weights of 20,000 and 24,000 lb. based on length of car. On or about the time the current rates were published the per cord rates were canceled by both the respondent and the Chicago, Milwaukee & St. Paul Railway Company. The current high minimum, lower rate schedules are based upon and average about the same as the per cord rates formerly in force on a weight basis of about 4,000 lb. per cord. At the time the change from per cord to per 100 lb. rate was made there was considerable dissatisfaction over the change on the part of wood dealers, but this matter apparently worked out satisfactorily, as the only thing that appears to cause dissatisfaction at present is the difference between the rates and minimum weights intended to apply on light wood, such as dry slabs, and the rates and minimum weights intended to apply on heavy wood. The complaint in the present case and the complaint in the pending case of *Central Wisconsin Supply Co. v. C. & N. W. R. Co.*, which was filed a short time later, are principally due to this difference. In each of these cases the petitioner wants the schedules of low rates made directly applicable to shipments of dry slabs and edgings by providing a minimum weight, or minimum weights that can be loaded regardless of the high rate, low minimum basis, which the petitioner in the instant case asserts is prohibitive. Such an adjustment of rates cannot, of course, be made without ignoring to some extent the fact that it costs the carrier more per ton of pay freight to move a lightly loaded car than it does to move a heavily loaded car.

A careful analysis of the rate schedules involved in this case makes clear that the differences between the rates subject to a

high and those subject to a low minimum weight basis follow somewhat the cost differences arrived at by the Commission. It appears, however, from the statements of actual loading, the testimony as to actual weight presented in this case, and an analysis of the respondent's equipment as listed in the Official Register that in connection with the schedules of high rates the minimum weights are unnecessarily low. The Official Register shows that out of a total of 12,272 box cars 34′ 6″and under in length owned by the respondent, all but 114 cars can be loaded with slabs and edgings to about 30,000 to 36,000 lb.; that all of its box cars under 40′ and over 34′ 6″ in length, a total of 10,209 cars, can be loaded to about 38,000 to 44,000 lb.; that all of its box, furniture and automobile cars 40′ and over in length can be loaded to about 42,000 to 68,000 lb.; and that all of its stock cars, which are practically uniform in size, can be loaded to about 33,000 lb. The latter are all 36′ long and therefore subject to 30,000 lb. minimum in connection with the high schedule of rates.

From the foregoing it is apparent that in connection with the high schedules of rates, insofar as these rates apply to shipments of slabs and edgings, the minimum weights for box and furniture cars could be advanced, and that with an advance in the minimum loading requirement some reduction could be made in rates. The facts presented indicate that insofar as shipments of slabs and edgings are concerned the low minimum, high rate schedules are of little use, for the reason that the high minimum, low rate schedules generally result in lower charges. If this is the prevailing condition it would seem that the relation between the two sets of minima and rates, as at present arranged, must be somewhat out of proportion and that perhaps some readjustment should be made. The respondent is willing to reduce the high minimum weight providing the rates applying in connection therewith are proportionately advanced. Such a readjustment, however, would not be satisfactory to the petitioner nor would it be just to shippers of heavy wood that can be loaded without difficulty up to, and in excess of, the high minimum. Readjustment, if necessary, should be along the line suggested above, that is, by advancing the low minimum and reducing the rates applying in connection with them. These minima would stand a material advance and still be low enough so that dry slabs and edgings could be loaded up to them in most

of the respondent's cars. Inasmuch as information in detail about different kinds and weights of wood, sizes of cars available and generally supplied for this traffic, etc., should be given consideration in making any readjustment of the minimum weights and rates, which information the respondent may easily obtain, it is recommended that the respondent submit to the Commission for approval a new schedule of minimum weights, and a new schedule of rates applying in connection with these minima, to supersede minimum weights and rates designated as "Note A" and "Note C" minimum weights and rates in respondent's tariff G. F. D. No. 5950–D. The Commission will issue no order affecting the rates complained of but will be very glad to pass upon the merits of schedules submitted that are in conformity with this recommendation.

The petition for refund in this case appears to be based entirely upon the fact that the petitioner's orders for cars of such size that the high minimum, low rate schedules would apply to shipments in them were filled with cars of a smaller size so that, by ignoring the low minimum, high rate schedules, overcharges may be figured out. The low minimum, high rate schedules, however, were lawfully in force when the shipments in question moved and are still lawfully in force, therefore no part of the charges on any shipment subject to these rates may lawfully be set aside unless found to be erroneous, illegal, unusual or exorbitant, as provided in sec. 1797–37*m* of the statutes. From a careful consideration of all the facts presented in connection with this case the charges complained of do not appear to be either erroneous, illegal, unusual or exorbitant. Refund therefore cannot be authorized.

IT IS THEREFORE ORDERED, That the petition in this case be and it hereby is dismissed.

BLODGETT MILLING COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 14, 1913. Decided Feb. 16, 1914.

The petitioner alleges that the refusal of the respondent to absorb the connecting line switching charges on the in-movement of carload shipments of grain stopped in transit to be milled at the petitioner's mill at Janesville and reshipped over the respondent's line is unreasonable and that this refusal results in the exaction of exorbitant charges. The petitioner also asks for refund on certain shipments. The respondent formerly absorbed the switching charges in question but in a tariff effective Aug. 2, 1912, adopted a rule abandoning this practice. All shipments over the respondent's lines delivered to the petitioner have to be switched over the tracks of the C. M. & St. P. Ry. Co. as the respondent's tracks do not extend to the petitioner's mill. The present rule on switching charges was approved by the Commission in the belief that the respondent's statement that the old rule caused considerable confusion among its local agents and that there would be very few instances where the respondent would get a haul on a shipment of grain to be milled at an industry located on another line was correct. It appears, however, that in the case of the present petitioner shipments of this kind are numerous. The respondent contends in its answer to the petitioner: (1) that the business covered by the complaint was chiefly interstate; (2) that the milling-in-transit of grain was a privilege granted to shippers at a considerable expense to the company; and (3) that it generally required twice as many cars to ship out the mill product as to bring in the grain.

The practices of other railway companies in Wisconsin with respect to the absorption of switching charges show a lack of uniformity but the respondent appears to be the only important railway company in the state which does not absorb switching charges at the stopping point on any shipment stopped in transit for any purpose.

The net cost to the respondent in having to pay the connecting line switching charge is not the full amount paid the connnecting line but only such part of this amount as exceeds what it would cost the respondent to perform the same service if the respondent operated the facilities used.

Held: The respondent's rule in force prior to Aug. 2, 1912, providing for the absorption of the switching charges of connecting lines at the stopping point on the in-movement of grain stopped in transit to be milled should be reinstated and all charges brought about by the change in this rule on the date named should be refunded. Inasmuch, however, as the data submitted with respect to the charges complained of do not show whether the shipments involved were intrastate or interstate, the Commission cannot authorize refund at this time.

It is ordered that the respondent cease and desist from requiring the petitioner to pay connecting line switching charges, except as may be necessary for the protection of minimum revenues now provided for in case of other shipments, on the in-movement of grain stopped to be milled, etc. at Janesville, the product thereof to be forwarded against transit account.

This case comes before the Commission in the form of a complaint by the Blodgett Milling Company of Janesville, Wis., reciting that the Chicago & North Western Railway Company, under a tariff issued and effective August 2, 1912, refuses to absorb switching charges on carload shipments in of grain received over its lines at Janesville and switched over the tracks of the Chicago, Milwaukee & St. Paul Railway Company to the mill of the petitioner, to be milled and reshipped over the respondent company's lines; that the tariff of the respondent company in force prior to Aug. 2, 1912, did absorb such switching charges on shipments in of grain, and that the new rule is unreasonable and results in the exaction of exorbitant charges. The petitioner further asks that the Chicago & North Western Railway Company be directed to refund the said switching charges on shipments in, amounting to $2 per car, upon nineteen carload shipments of grain received since the new rule became effective, and to refund all similar charges that may be paid to the respondent company after the filing of this complaint.

A hearing in the case was held on Oct. 14, 1913, at the office of the Commission in Madison. *D. W. Holmes,* secretary, appeared for the petitioner company and *H. C. Cheyney,* assistant general freight agent, appeared for the respondent company.

In its answer to the complaint the respondent company disputes no allegations made, except to deny that its new rules refusing to absorb the switching charges of $2 per car on shipments in is unreasonable and that it results in the exaction of exorbitant charges. The issue as to that portion of the complaint is thus made clear. It is: Shall the new rule of the respondent company remain effective and the petitioner company be obliged to pay the additional charge of $2 per car on all grain shipped to its mill over the lines of the respondent company?

It appears from the testimony submitted at the hearing by the petitioner that both the respondent and the Chicago, Milwaukee & St. Paul Railway Company have tracks running to the petitioner's property, but that only the track of the Chicago,

Milwaukee & St. Paul Railway Company extends to the mill proper, hence all cars for unloading at the mill must be switched over the Chicago, Milwaukee & St. Paul track. It also appears that the petitioner receives about forty cars of grain a month—more of it coming over the lines of the Chicago, Milwaukee & St. Paul Railway Company than over those of the respondent. The petitioner ships out monthly about an equal number of cars of mill products. The shipments in, consisting of rye and buckwheat exclusively, originate mostly in northern Wisconsin, while most of the mill products go to Ohio, Indiana, Pennsylvania and the eastern seaboard. The shipments of grain in average about 60,000 lb. to the car and the shipments of mill products out about 40,000 lb. to the car. A tabulation of shipments in and out of Janesville, furnished to the Commission by the respondent, shows that about twice as many cars are furnished for the out-shipment of the mill products as are required for the shipment in of grain.

In *Blodgett Milling Co. v. C. & N. W. R. Co.* 1912, 10 W. R. C. R. 377, it was held that the absorption of switching charges on cars earning a given revenue is a common and reasonable practice. It does not appear, however, that the matter of absorption of switching charges on shipments of grain to be milled in transit was gone into exhaustively in connection with that case. The complaint in the case asked for refund only and the respondent had voluntarily reinstated its absorption rule, the discontinuance of which caused the excessive charges against which complaint was made. The present complaint, however, directly involves the reasonableness, in and of itself, of the non-absorption of switching charges on shipments of grain stopped in transit to be milled.

Under the general rule published by the respondent company, all switching charges of connecting lines are absorbed on all shipments, except switching charges at stopping point on shipments stopped in transit, including shipments of grain stopped to be milled, etc., provided that after first deducting such switching charges the total freight charges must not be less than $15 per car on shipments going to or coming from points on the Chicago & North Western, the Chicago, St. Paul, Minneapolis & Omaha and the Pierre, Rapid City & Northwestern and the Wisconsin & Northern railways and $25 per car on all other shipments, except intrastate shipments in Wisconsin. On intra-

state shipments in Wisconsin, except on shipments going to or coming from points on the Chicago & North Western and the Chicago, St. Paul, Minneapolis & Omaha railways, the freight charges must not be less than $20 per car after first deducting such switching charges. On shipments on which the freight charges are not enough in excess of the amounts named to include all switching charges the excess over the amounts named will be absorbed.

The respondent company's answer to the complaint is in substance: (1) That the business covered by the complaint was chiefly interstate; (2) that the milling-in-transit of grain was a privilege granted to shippers at a considerable expense to the company; and (3) that it generally required twice as many cars to ship out the mill product as to bring in the grain.

In reply to the second point in the respondent's answer, Mr. Holmes for the petitioner alleged there never had been fair rates in and out, that is, a combination of locals that would equalize terminal rates, and stated that as rates were made to terminal points only, he did not think the milling in transit provision at interior points could be considered entirely a privilege, as without this provision interior mills would either have to get lower in and out rates or go out of business. He gave as an instance the Beloit to Milwaukee and Chicago rate (on grain) of 7 cts., while the combination of the Beloit to Janesville rate, 5.5 cts., and the Janesville to Milwaukee rate, 5 cts., made 10.5 cts., and said that if the provision for milling in transit at Janesville in connection with the Beloit–Milwaukee rate were stricken out the local rates in and out of Janesville should be on a 5.5 and 1.5 ct. basis, making 7 cts. through.

Some light upon the situation may be gained by a consideration of the practices as to the absorption of switching charges by other railway companies. The rules in force upon the lines of other important railway companies doing business in Wisconsin are as follows:

The Chicago, Milwaukee & St. Paul Railway Company absorbs switching charges on all shipments on which the through freight charges are $15 per car or more and on shipments where the through freight charges are less than $15 absorbs such part of the switching charges as will leave the same net freight charges as on shipments on which freight charges are $15 per car.

The Minneapolis, St. Paul & Sault Ste. Marie Railway Company (Chicago div.) absorbs switching charges on all shipments or such portion thereof as will not reduce freight charges below $15 per car on local and $20 per car on joint shipments.

The Minneapolis, St. Paul & Sault Ste. Marie Railway Company (other than Chicago div.) absorbs switching charges on all shipments that can be shipped from point of origin to destination via competitive lines without payment of such charges.

The Chicago, St. Paul, Minneapolis & Omaha Railway Company same as Minneapolis, St. Paul & Sault Ste. Marie Railway Company (other than Chicago div.) except will not absorb switching charges on shipments of grain, grain products or seeds forwarded against transit account.

The Duluth South Shore & Atlantic Railway Company absorbs switching charges not to exceed $5 per car on shipments between competitive points except shipments stopped to finish loading or to partly unload.

The Green Bay & Western and Kewaunee, Green Bay & Western railway companies absorb switching charges on all shipments except shipments originating at or destined to local stations on Green Bay lines or at Scandinavia.

Northern Pacific Railway Company. Same as Chicago, Milwaukee & St. Paul Railway Company. The Chicago, Burlington & Quincy Railroad Company. Same as the Chicago, Milwaukee & St. Paul Railway Company except that switching charges will be absorbed on shipments stored or stopped in transit to finish loading or partly unload only when destination is a competitive point.

The Illinois Central Railroad Company absorbs switching charges, or such part thereof on competitive shipments on which the freight charges after deducting the switching charges are $10 or more per car except that on grain originating at points on the I. C. R. R., also products of grain milled in transit at such points, switching charges will not be absorbed. On grain or grain products from industries on connecting lines at stations on the I. C. R. R. forwarded to competitive points on or reached via I. C. R. R., switching charges will be absorbed.

The foregoing shows a lack of uniformity among Wisconsin railway companies, yet the respondent appears to be the only important company in Wisconsin which does not absorb switching charges at the stopping point on any shipment stopped in transit for any purpose.

A word may well be said here concerning the first point in the respondent's answer to the complaint, namely that the business covered by the complaint is mostly interstate. Technically this appears to be true; yet, if conditions similar to those pointed

out by the petitioner as to rates from Beloit prevail to any extent, the so-called milling-in-transit business is a misnomer, and the business may easily be lifted out of the interstate field. If the petitioner must pay the same rate on shipments in as if Janesville were the final destination of the traffic, and must pay the same rates out as if the business originated in Janesville, then the shipments in may not be interstate business, though the out-shipments be destined for Chicago. In other words, if the petitioner is compelled to pay two local rates then he is not receiving the benefit of a milling-in-transit rate, and it would be more advantageous for him to make his shipments in intrastate.

Tariffs naming rates on grain usually provide that shipments may be stopped at any intermediate point between the points of shipment and destination for milling, cleaning, etc., and the product thereof shipped from the stopping point to destination without charge for the stop, that is, the rates named on grain include charges for stopping in transit to mill, etc. It is well known that the stopping privilege is made use of generally in connection with this traffic. The facts at hand do not show what proportion of the total traffic is stopped, nevertheless it is safe to assume that this proportion includes much the greater part of the traffic.

The stopping in transit of shipments of grain for milling, etc., as well as the stopping in transit of other commodities, usually necessitates more or less switching at the stopping point. This switching, of course, involves a service and an expense in addition to those required in connection with shipments that are not stopped in transit. There is also, it seems, some further expense in connection with grain shipments due to the necessity of furnishing more cars for shipments out of the stopping point than are required for shipments to the stopping point. It is not likely, however, that railroad companies in preparing schedules of rates to apply on grain, ignore this additional service and consequent additional expense. Switching service must be given at the stopping point by either the line over which the shipment moves or by a connecting line. The average cost of this service must be about the same, whatever line does the switching, therefore, if the service is performed by a connecting line at cost the billing line is under no more expense than it would be if it did the switching itself. The switching charge involved in this

case is $2 per car. If the petitioner's location and facilities were such that the respondent line could perform the switching for which this charge is made there would be no charge for the service, nevertheless the cost of performing it would be essentially the same as if done by a connecting line. It is apparent, therefore, that the net cost to the respondent in having to pay the connecting line for performing the service is not the full amount paid the connecting line but only such part of this amount as is over and above what it would cost the respondent to perform the same service.

The change made by the respondent in its absorption rule effective August 2, 1912, which brought about the present complaint, was approved by the Commission in its approval No. A-928, issued June 24, 1912. The respondent's letter to the Commission requesting approval of this change reads, in part, as follows:

"Heretofore we have absorbed the inbound charges to such industries but have not absorbed on the return movement. The rule has not been very well understood by our agents and has caused considerable trouble. Furthermore, so far as the grain is concerned the instances where we would get a haul on a shipment to be milled at an industry located on another line would be very rare, to say the least."

The Commission's action in the matter was, to a considerable extent, influenced by the statement quoted. It appears, however, that, insofar as the petitioner in the present case is concerned, the shipments that must be switched by a connecting line at Janesville are quite numerous. The change referred to, therefore, was an important one to the petitioner. Had the Commission been fully informed when the matter came up approval would, no doubt, have been withheld.

Under the conditions set forth above it would seem that the rule in force prior to August 2, 1912, which provided for the absorption of the switching charges of connecting lines at the stopping point on the in-movement of grain stopped in transit to be milled, etc., should be reinstated and all charges brought about by the change in this rule on the date named should be refunded. It appears, however, from the testimony taken at the hearing that some at least of the shipments involved are interstate. The bills submitted cover the switching charges only

and do not show full billing reference for the shipments. Without such complete reference the Commission cannot pass upon the intrastate or interstate character of these shipments or upon the matter of refund. In case switching charges have been paid on intrastate shipments the Commission will be very glad to take up the matter of refund of these charges on submission of both freight and switching bills for such shipments.

IT IS ORDERED, That the respondent, the Chicago & North Western Railway Company, cease and desist from requiring petitioner to pay connecting line switching charges, except as may be necessary for the protection of minimum revenues now provided for in case of other shipments, on the in-movement of grain stopped to be milled, etc. at Janesville, and the product thereof forwarded against transit account.

JOHN D. KISSINGER

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

L. H. SCHOENHOFEN

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Feb. 10, 1914. Decided Feb. 16, 1914.

This proceeding involves two complaints relating to the same subject matter. The petitioners allege that the failure of the respondent from time to time to make connection at Prentice between its train No. 84 running between Minneapolis, Minn., and Pembine, Wis., and its train No. 111 running between Milwaukee and Ashland, results in great inconvenience to passengers going east, and asks that the respondent be required to make this connection at all times. The respondent has a rule requiring train No. 84 to be held for at least 30 minutes at Prentice whenever train No. 111 is late and, upon instructions from the superintendent of transportation at Minneapolis, for such longer period as may be necessary to connect with train No. 111 whenever there are any considerable number of passengers on train No. 111 who have points east of Prentice as their destination. The instant complaints appear to have been caused by the failure of the conductor on train No. 111 on a certain day to notify the superintendent of transportation that there were on the train a number of passengers requiring connection with train No. 84.

Held: In operating trains the convenience of the greater number of passengers must always be subserved. The respondent's practice at Prentice is proper and should not be interfered with. The petitions are therefore dismissed. It is suggested, however, that the conductor on train No. 111 be impressed with the duty of notifying the superintendent of transportation whenever his train is late, so that if the exigencies of the situation warrant, the latter may cause orders to be given to train No. 84 to make the connection with train No. 111 at Prentice.

The complaints in the above cases relate to the same subject matter. They allege that the respondent operates a train, No. 84, between Minneapolis, Minn., and Pembine, Wis., which ordinarily connects with the respondent's train No. 111 running from Milwaukee to Ashland; that when connection between these trains is not made at Prentice passengers going east are greatly

inconvenienced for the reason that they are required to lay over at Prentice until 12:36 a. m. for train No. 8, which does not stop at all stations; that even if train No. 8 did stop at all stations there would be often no place for passengers to be accomodated over night; that consequently many passengers are required to remain at Prentice for a period of twenty-four hours for train No. 84 arriving the next day, as this is the only train that stops at most of the stations; that said train No. 84 after leaving Prentice is run as a local and has no other connections to make between that point and Pembine, its destination. The petitioners ask that the respondent be required to make connection at all times at Prentice between trains No. 84 and No. 111.

The answers set forth among other things that train No. 84 is an interstate train and makes connections with the Marinette, Tomahawk & Western Railway train at Bradley, with the Chicago, Milwaukee & St. Paul Railway train at Hefford Junction; with the Laona & Northern Railway train at Laona; and with the Wisconsin & Northern Railway train at Wisconsin and Northern Junction; that train No. 84 carries a great many passengers, and that the inconvenience to them from holding said train unduly in order to await the arrival of No. 111 when the latter train is abnormally late, would be a greater inconvenience than the inconvenience complained of in the petitions; that it is impossible to so conduct any business that no passengers may suffer inconvenience at times, and that such inconvenience is not a sufficient basis upon which to disarrange the method of operating a train which the respondent endeavors to operate so as to best serve the greatest number of passengers.

The matter came on for hearing on February 10, 1914. The petitioners were represented by *L. H. Schoenhofen,* the respondent by *E. F. Potter.*

It appears that on August 18, 1913, the petitioners and others having Marshfield as their destination found upon their arrival at Prentice on train No. 111 that train No. 84 had passed. As a result they were obliged to remain at Prentice until 12:46 a. m. in order to take mixed train No. 8 for Goodman, where they remained over night and returned to Laona Junction the next morning. It was necessary to go to Goodman as there are no accomodations for lodging passengers at Laona Junction. Train No. 8 runs only to Rhinelander, and therefore can accomodate passengers arriving on train No. 111 at Prentice only so far as

that point, when connection is broken with train No. 84 at Prentice. It seems that during a period of four months the connection has been broken four times. It is the rule of the company in any event to hold train No. 84 thirty minutes at Prentice if train No. 111 is late. If the latter train is more than thirty minutes late and there are any number of passengers destined for points east of Prentice, it becomes the duty of the conductor to notify the superintendent of transportation at Minneapolis of the fact, and he in turn instructs the holding of train No. 84 at Prentice until the arrival of No. 111. On the day in question here there was evidently a neglect of duty on the part of the conductor of the train, as the number of passengers would, under the practice described, have required train No. 84 to await the arrival at Prentice of train No. 111, which was but an hour and ten minutes late.

It is difficult at junction points to keep connections at all times. It seems to us that the company's practice at Prentice is proper and should not be interfered with. However, the conductor on train No. 111 should be impressed with the duty of notifying the superintendent of transportation at Minneapolis whenever his train is late, so that if the exigencies of the situation warrant, the latter may cause orders to be given to train No. 84 to make the connection with the train No. 111 at Prentice. It must be conceded that in operating trains the convenience of the greater number of passengers must always be subserved. As it is sometimes said, the few must suffer inconvenience that the many must be convenienced. This seems to be the respondent's policy and is sanctioned both by law and justice.

NOW, THEREFFORE, IT IS ORDERED, That the petitions herein be and the same are hereby dismissed.

INDEX-DIGEST

Every point taken by the Commission has been included in the INDEX-DIGEST, whether essential to the decision or not. Wherever feasible the exact language used by the Commission, both in the *dicta* and in the decisions, has been embodied in the digest, so that for practical purposes reference back to the decision will in most cases be unnecessary.

ABSORPTION OF CHARGES.

ACCIDENTS.

ACCOUNTING.

COST ACCOUNTING—ELECTRIC UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among the different departments of the service.

1. Apportionment of expenses between capacity and output expenses; further apportionment among street lighting, commercial lighting and power. *In re Appl. Neshkoro Lt. & P. Co.* 52, 62.

2. Apportionment of expenses between capacity and output expenses; further apportionment among commercial lighting, commercial power and street lighting. *City of Waukesha v. Waukesha G. & El. Co.* 100, 121–123.

3. Apportionment of expenses between output and capacity expenses; further apportionment among incandescent lighting, power, arc lighting and traction service. *In re Madison G. & El. Co.* 259, 261–262.

4. Apportionment of expenses, (1) under existing operating conditions and (2) under new operating conditions, between capacity and output; further apportionment between commercial lighting and street lighting. *In re Appl. Mt. Horeb Heat, Lt. & P. Co.* 653, 658, 660.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among the different departments of the service—Basis of apportionment.

5. The separation of the capacity and output expense in the instant case between the different classes of service has been complicated by the fact that the maximum or peak load on the station occurs in sum-

mer in the daytime and is therefore to be attributed almost entirely to the power business. This condition must reflect itself in the distribution of expenses over the various services. It would be clearly unjust to assess on the basis of peak responsibility the entire capacity portion of generation and fixed costs to the power business. It is obvious that the use of the investment theoretically caused by the peak load should also be taken into consideration. As the service demands through their load factors are the best determinants of such use it is considered fair in this case to separate the expenses above mentioned on this basis. *City of Waukesha v. Waukesha G. & El. Co.* 100, 122.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among various service districts.

6. Street lighting expenses reapportioned to the various communities supplied with street lighting. *In re Appl. Neshkoro Lt. & P. Co.* 52, 64.

Determination of unit costs—Prorating of output, capacity and consumer expenses.

7. Commercial lighting expenses prorated over the demand and output to obtain unit cost per kw-hr. *In re Appl. Neshkoro Lt. & P. Co.* 52, 63.

COST ACCOUNTING—GAS UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses.

8. Apportionment of expenses between consumer expenses and output expenses. *Yanko et al. v. Portage American G. Co.* 136, 142.

9. Tentative apportionment of expenses, with interest reckoned at 6 per cent and 7 per cent, respectively, between consumer and output expenses. *In re Appl. Manitowoc G. Co.* 325, 336–337.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Interest, depreciation and taxes.

10. Depreciation apportioned between consumer and output expenses upon the basis of the actual amount which must be set aside to replace the property distributed as to consumer and output investment. *City of Waukesha v. Waukesha G. & El. Co.* 100, 118.

11. Taxes and interest apportioned between consumer and output expenses upon the basis of the actual property to which such expenses are attributable. *City of Waukesha v. Waukesha G. & El. Co.* 100, 118.

COST ACCOUNTING—JOINT UTILITIES.

Determination of unit costs—Apportionment of expenses among different plants (electric, gas and heating utilities)—General and undistributed expenses—Basis of apportionment.

12. In making its reports to the Commission the company has apportioned general expenses over the utilities on the basis of sales. Although practice has indicated that the separation of such expense should be made on the basis of the direct expense, it is not clear, especially in the instant case, that this method would produce results more nearly correct than the one used. *City of Waukesha v. Waukesha G. & El. Co.* 100, 115.

Determination of unit costs—Apportionment of expenses among different plants (electric, gas and heating utilities)—Interest, depreciation and taxes.

13. Taxes apportioned to the three utilities on the basis of the valuation made by the Commission. *City of Waukesha v. Waukesha G. & El. Co.* 100, 115.

Determination of unit costs—Apportionment of expenses among different plants (electric utility and street railway)—Interest, depreciation and taxes.

14. Apportionment of taxes between railway and lighting. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 227.

COST ACCOUNTING—STREET RAILWAYS.

Determination of unit costs—Apportionment of expenses among allied companies—Maintenance of way.

15. Apportionment of maintenance of way expenses between the T. M. E. R. & L. Co. and the M. L. H. & T. Co. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 216–219.

COST ACCOUNTING—TELEPHONE UTILITIES.

Determination of unit costs—Apportionment of value of physical property among different exchanges.

16. Apportionment of the value of physical property to show the value of property included in two exchanges used by foreign companies. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 553–554.

Determination of unit costs—Apportionment of value of physical property among different exchanges—Bases of apportionment.

17. The percentages of rural property assigned to the exchanges in question have been determined by taking an average of the results obtained by the use of the following two methods: 1. Rural property was divided according to the number of rural phones paying rental to the various exchanges. 2. From data at hand the total wire mileage of each exchange was estimated and the percentage to be apportioned to each exchange was computed. The results obtained by the two methods were very nearly identical and it is believed that an average of these results represents a fair division of the rural property. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 553–554.

Determination of unit costs—Apportionment of value of physical property to show value of property used by foreign telephone utilities.

18. Apportionment of the value of physical property to show the value of the property used by other telephone companies. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 552–553.

Determination of unit costs—Apportionment of exchange expenses among the different departments of the service, urban, rural and rural connecting lines.

19. Apportionment of the expenses of the Spring Green exchange to the switching service for the rural lines of the Arena & Ridgeway Tel. Co. upon the basis of a traffic study. *Arena & Ridgeway Tel. Co. v. Troy & Honey Creek Tel. Co. et al.* 763, 769–770.

Determination of unit costs—Apportionment of expenses to switching service—Further apportionment among different foreign lines and foreign subscribers.

20. Apportionment on the basis of a traffic study of total expenses of exchanges performing switching service for foreign lines to show cost of this service; further apportionment to show expense to (1) foreign lines not connecting with second exchange; (2) foreign lines connecting with second exchange; (3) subscribers on foreign lines connected with second exchange; and (4) second exchange. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 558–570.

21. Apportionment of additional expense, incident to betterment of service, to cost of switching service; further apportionment to show expenses to (1) subscribers on foreign lines not connected with second exchange; (2) expense to subscribers on foreign lines connecting with second exchange; and (3) expense to second exchange. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 581–582.

Determination of unit costs—Apportionment of expenses to switching service—Further apportionment among different foreign lines and foreign subscribers—Bases of apportionment.

22. The percentages applied to the "Central office operating labor" are those given in the traffic study for these classes of service. The apportionment of "Central office supplies and expenses and maintenance" is made on the basis of the total number of lines of each class connected to the switchboard. The "Wire plant expense" apportionment is made on the basis of the relative value of the equipment owned by the Farmers' Tel. Co. and serving the various classes. The "Commercial" expenses are apportioned according to the ratio of the number of foreign lines for a particular class of service to the total number of Farmers' Telephone Company's subscribers served by the exchange. This basis assumes that the bills for switching service will be rendered to each foreign company for each line connected to the switchboard of the Farmers' Telephone Company. The "General" expenses were apportioned as overhead to the other expenses. The apportionment of the total expenses for lines connecting with a second exchange to the subscribers on these lines and to the second exchange is made on the basis of the division of operator's time between these two classes of service. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 570.

COST ACCOUNTING—WATER UTILITIES.

Determination of unit costs—Proper system of accounting.

23. For the purpose of cost analysis a system of accounts should be used that shows the direct operating expenses of the utility grouped into accounts covering the different steps of production in chronological order. Thus, the direct expenses of a water utility are grouped into: Pumping, distribution, and commercial. The items included in these accounts can be charged directly to the various steps in the furnishing of water. The indirect expenses, also called "overhead" or "fixed," are grouped into general, undistributed, interest, depreciation, and taxes. These expenses cannot be charged to any particular operation, but must be distributed on some basis over the different units of the product. It is obvious that the indirect or capacity expenses do not vary with output, but that, on the other hand, they are occasioned in supplying that output and that output, therefore, should bear its proportionate part. *Vil. of Sharon v. United Heat, Lt. & P. Co.* 1, 9–10.

Determination of unit costs—Prorating of output, capacity and consumer expenses.

24. In determining equitable water rates, no accurate demand data being generally available, the capacity expenses may sometimes be apportioned over the total number of consumers. The variable charge per unit used, which in the present case is one thousand gallons, is obtained by dividing the sum of all those expenses charged to output by the number of gallons of water consumed. *Vil. of Sharon v. United Heat, Lt. & P. Co.* 1, 10.

UNIFORM ACCOUNTS—ELECTRIC UTILITIES.

In general—Keeping of accounts—Conformity to Public Utilities Law required

25. The smallness of the plant cannot be accepted as an excuse for keeping lax operating and accounting records. Some definite procedure should be adopted. The plan of operating without station records or meters results in a lack of reliable data of the output, demand or costs of generation and must be condemned. *In re Appl. Neshkoro Lt. & P. Co.* 52, 61.

UNIFORM ACCOUNTS—STREET RAILWAYS.

Construction and equipment accounts—Paving.

26. The propriety of including paving construction costs as a deduction from income is questionable and it seems more equitable to consider them as capital expenditures. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 233.

UNIFORM ACCOUNTS—WATER UTILITIES.

DELIVERY SERVICE LIMITS.

Express delivery limits—Free delivery service.

1. Sec. 1798 of the statutes fixes the free delivery district of the United States post-office department as the minimum area in which express companies must call for and deliver express. *Heineman Lbr. Co. v. Wells Fargo Exp. Co.* 594, 596.

2. There must be some limits to the area within which express companies may be required to deliver express and the boundaries of the municipality are most satisfactory for this purpose. (*Strauss v. American Exp. Co.* 1909, 3 W. R. C. R. 556.) *Heineman Lbr. Co. v. Wells Fargo Exp. Co.* 594, 596.

DEMURRAGE CHARGES.

Reasonableness of demurrage charges for delays caused by floods, *see* RATES—RAILWAY, 24.

DEPOSIT.

Apportionment of depreciation in the determination of unit costs for gas utilities, *see* ACCOUNTING, 10.
As element considered in making rates for water utilities, *see* RATES—WATER, 1.
As element considered in the determination of minimum charges for electric utilities, *see* MINIMUM CHARGES, 1.
As element in valuation of public utilities, *see* VALUATION, 14, 16–18.

IN GENERAL.

Necessity of allowance for depreciation.

1. Correct accounting demands that an amount be set aside each year for depreciation equal to the decrease in the value of the property due to wear and tear, obsolescence, inadequacy, etc., in order that the capital be not impaired, and also in order to show the present value of the property. If such depreciation is not shown, either as a reserve or a deduction from plant value, the fixed assets of the company are misrepresented. *In re Purchase Manitowoc El. Lt. Plant*, 452, 464.

COMPOSITE LIFE.

Composite life of toll bridge.

2. The composite life of the property in the instant case is estimated at 35 years. *Marcus et al. v. Postel & Swingle*, 47, 50.

DEPRECIATION RESERVE.

Necessity for assets offsetting reserve.

3. It seems unnecessary to further explain that the assets offsetting the depreciation reserve represent that part of the plant which is worn out, that some time in the future they will be needed to replace such worn out parts and that, consequently, if these assets are paid out as dividends, it will be necessary to obtain funds from some other source to make replacements when they become necessary. *In re Invest. Mosinee El. Lt. & P. Co.* 712, 714.

DEPRECIATION RESERVE CHARGE.

Determination of annual charge—Choice of methods.

4. It does not seem fair to allow a continuously operating property an expense for financing depreciation on a straight line basis. A company as large as the T. M. E. R. & L. Co., with a number of joint utilities and subsidiary properties under its control and with numerous opportunities for commercial investment, can readily invest any offsetting assets of the depreciation reserve liabilities at an average of 4 per cent return or better. To assume that under these conditions the company would allow money to remain idle within its business would be to question the capability of the company's administration. The straight line basis adopted in the *Fare Case* was justified on the ground that the 12 per cent overhead expense item was not included in the property upon which, in the first instance, depreciation was computed. It appears, however, that about half or more of the overhead does not ordinarily depreciate, inasmuch as a number of the expenses which are grouped in the item "overhead" do not have to be repeated except when there is total supersession of the plant. In view of this fact the 4 per cent basis for financing depreciation with about one-half of the overhead included as depreciable property seems to be the most equitable basis for the present case. Upon this basis the annual depreciation is 4.32 per cent on the wearing value plus one-half of the overhead costs. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 227–228.

RATE OF DEPRECIATION.

Rate of depreciation of electric plant.

5. A study of forty-two physical valuations of plants varying from one to twenty-four years in age, shows the following descriptive data of the ratio of present value to cost new: minimum 64.6 per cent, average 76.6 per cent, medium 74.7 per cent, and maximum 97.7. per cent. From these data it is seen that a plant that has been in opera-

tion for some time is likely to have depreciated about 25 per cent. *In re Purchase Manitowoc El. Lt. Plant*, 452, 464.

6. The annual charge for depreciation in the instant case was computed upon the basis of a 4 per cent sinking fund and an average life of 12.64 years. *In re Invest. Mosinee El. Lt. & P. Co.* 712, 716.

Rate of depreciation of gas plant.

7. In the instant case depreciation is computed at 2 per cent on the cost new. *Yanko et al. v. Portage American Gas Co.* 136, 141.

Rate of depreciation of paving constructed by street railway company.

8. In the instant case, the rate of depreciation allowed upon the paving constructed by the company was computed upon the basis of the average life of granite paving, brick, asphalt and creosote block paving and the final average life of paving under Milwaukee conditions was placed at twelve and one-half years where track renewals were the determining feature, and the final average life of granite block was placed at twenty-one years. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 234.

Rate of depreciation of street railway plant.

9. Upon the 4 per cent basis for financing depreciation with about one-half of the overhead included as depreciable property the rate of depreciation in the instant case is 4.32 per cent on the wearing value plus one-half the overhead costs. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 228.

Rate of depreciation of water plant.

10. In making the computations in the instant case, depreciation has been included at the rate of approximately 0.63 of 1 per cent, which was the rate used in the computations in the earlier decision involving the rates of this company. *In re Purchase Antigo W. Co's Plant*, 156, 162–163.

DISADVANTAGE.

See DISCRIMINATION.

DISCOUNTS.

Discounts on bonds as element in the valuation of public utilities, *see* VALUATION, 7.

DISCRIMINATION.

AS BETWEEN CUSTOMERS.

Electric rates—Different rates to customers on account of ownership of instrument or facility.

1. The Public Utilities Law (sec. 1797m—90) provides that a public utility shall not give a lower rate to a consumer who owns a meter than to another consumer whose meter is owned by the utility. *In re Appl. Neshkoro Lt. & P. Co.* 52, 54.

Electric rates—Discrimination due to flat rates.

2. Under a system of flat rates there is a considerable tendency for consumers to extend their installations or to increase the sizes of their lighting units without the knowledge of the company and the consumer who uses his lights but a short time each day is thereby required to pay as much as the consumer who uses them many hours per day. Inequalities of this kind are bound to arise when flat rates per lamp are fixed without regard to the time the lamps are used. *In re Appl. Village of Withee*, 704, 709.

Electric rates—Discrimination due to straight meter rate.

3. A straight meter rate can be satisfactory only when all consumers have about the same demand or installation and use the current about the same length of time each day. *In re Appl. Neshkoro Lt. & P. Co.* 52, 54.

Express service—Refusal to deliver to customer beyond city limits.

4. The petitioner alleges that the respondent unjustly discriminates against it by refusing to deliver express to it at its offices which are located a few hundred feet beyond the corporate limits of the city of Merrill. The respondent delivers express to any point within the city limits, although these limits extend beyond the free delivery district of the United States post-office department which is fixed by sec. 1798 of the statutes as the minimum area in which express companies must call for and deliver express, but does not extend this service to any person or corporation located outside the city limits. *Held:* There must be some limits to the area within which express companies may be required to deliver express and the boundaries of the municipality are most satisfactory for this purpose. *Strauss v. American Exp. Co.* 1909, 3 W. R. C. R. 556. The complaint is dismissed. *Heineman Lbr. Co. v. Wells Fargo Exp. Co.* 594, 596.

AS BETWEEN LOCALITIES.

Excursion train service granted to certain localities and refused to another of equal importance.

5. The petitioner alleges that the train service furnished by the respondent at Winnibijou, Douglas county, is inadequate and discriminatory because of the respondent's failure to stop its Sunday excursion train at that point. The train in question is operated during the summer months from Duluth, Minn., to Bibon, Wis., and return, and stops at all stations in Wisconsin between Superior and Bibon except Winnibijou. The respondent advances as its reason for refusing to stop the train at Winnibijou the fear that the practice of stopping at this point would be detrimental to the interests of the Winnibijou Fishing Club and ultimately its own interests. *Held:* The reason given by the respondent for its refusal to render the service desired cannot be ac-

cepted. The failure of the respondent to stop its Sunday excursion train at Winnibijou, while making stops at other stations of equal or less importance, is unjustly discriminatory. The respondent is therefore ordered to arrange the future schedule of its summer Sunday excursion train between Superior and Bibon to provide a stop at Winnibijou. *Hughson v. D. S. S. & A. R. Co.* 406, 408.

AS BETWEEN PASSENGERS.

Interurban zone system rates.

6. The so-called five-cent zone system of suburban and interurban rates in use on many interurban electric railways is unscientific and inequitable because of the unequal zone distances used, the concessions made to favored localities and favored classes of passengers at the expense of other localities and other classes of passengers and the consequent shifting of costs, in the form of excessive rates, onto patrons in the localities or classes discriminated against. In the instant case the one-way fares charged for different trips over the suburban and interurban lines of the two companies vary widely when compared on a passenger-mile basis. This discrimination has given rise to other discriminations such as those involved in the granting of overlapping zones and special and round trip rates to favored points. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 482–484.

AS BETWEEN SHIPPERS.

Switching charges—Milwaukee.

7. The charging of a regular distance rate to a certain shipper when other shippers within the same switching district are given the advantage of a special switching tariff is a form of discrimination which cannot be justified. *Milwaukee Structural Steel Co. v. C. M. & St. P. R. Co.* 673, 674.

AS BETWEEN SUBSCRIBERS.

Telephone service—Extensions of lines—Discrimination between stockholders and nonstockholders prohibited.

8. The fact that the persons to whom the respondent desires to extend its service are shareholders, is immaterial, for service must be rendered to shareholders upon the same terms and conditions as to other subscribers. *Tri-State Tel. & Teleg. Co. v. St. Croix F. M. Tel. Co.* 437, 439.

Telephone rates—Toll rates—Refusal of free toll service to telephone company without proprietary interest in the toll line not an unjust discrimination.

9. The petitioner requests that the respondent be compelled to grant it the same terms for toll service over the respondent's toll line from Galesville to La Crosse that the respondent grants to the Western Wisconsin Tel. Co. The respondent collects from the petitioner 75 per cent of the tolls received by the petitioner from its subscribers for use of the toll line in question. The respondent and the Western Wisconsin Tel. Co. own the toll line jointly and each company retains all toll revenues originating on its own lines. The Western Wisconsin Tel. Co. charges all subscribers who desire toll line service a flat rate of $12.50 more per year than it charges subscribers who do not desire this service. For individual messages it charges the same toll rate as the petitioner. *Held:* We fail to see any unjust discrimination against the petitioner as charged in the petition. The respondent and the Western Wisconsin Tel. Co. were acting entirely within

their right in making the present apportionment of revenues between themselves and, so long as this apportionment does not result in prejudicing the rights of subscribers or patrons of either company, the action of the two companies in this matter is not subject to revision or modification by public authorities. Even where physical connection of lines is enforced under the statute, it is contemplated that the companies shall agree upon the apportionment of the joint tolls, and it is only in case of failure of agreement that the Commission has authority to make the apportionment. Moreover, in making the apportionment the Commission is bound both by statutory and by constitutional requirements to provide for such reasonable terms and conditions as will avoid the taking of property without compensation. Under the circumstances the apportionment of the toll revenues between the respondent and the Western Wisconsin Tel. Co. is no criterion for judging the reasonableness of charges exacted of a connecting company desiring the toll line facilities but having no proprietary interest in these facilities. The petition is dismissed. *Ettrick Tel. Co. v. La Crosse Tel. Co.* 25, 28.

Telephone service—Provision of "silent number" telephones not an unjust discrimination.

10. The Commission, on its own motion, investigated the use of the so-called "silent number phones" by the Wis. Tel. Co. in Milwaukee. The numbers of such telephones are not published in the directory and usual practice of the company is not to connect other parties with the silent number telephone unless the subscriber having the telephone directs the operator to make the connection. It is alleged in the informal complaint which led to the present investigation that this practice constitutes an unjust discrimination against subscribers who are thus refused connection. *Held:* The maintenance of silent number service cannot be regarded as an unjust discrimination on the part of the telephone company and there is no other ground upon which the practice can be condemned. It is true that there is an element of discrimination in the action of the individual who has the silent number service in giving his number to his friends or acquaintances and withholding it from the general public, but this is a matter which is left to the discretion of the individual. *In re Use of Silent Numbers by Wis. Tel. Co.* 587, 593.

11. The whole question with respect to the use of silent number telephones appears to be one of whether the action of the individual who has the silent number service in giving his number to his friends or acquaintances and withholding it from the general public, causes a discrimination by reason of which the telephone company should be ordered to refuse the silent number service. There is some element of discrimination here, but it seems to be rather a case in which the individual may determinine for himself the parties whom he wishes to have call him, just as he would determine for himself with what parties he would speak if everyone could call him. The telephone company acts as his agent in carrying out his wishes, and in so doing, it does not deprive other subscribers of any service of which they would not be deprived if the individual having the silent number service were to discontinue the telephone service entirely, or were to so locate his telephone that he would not get any incoming calls. *In re Use of Silent Numbers by Wis. Tel. Co.*, 587, 591–592.

MUNICIPAL ACQUISITION—TERMS AND CONDITIONS OF SALE AND PURCHASE.

Compensation for property—Compensation determined by Commission in particular cases.

1. This is a proceeding to determine the compensation to be paid in the purchase of the property of the Manitowoc El. Lt. Co. by the city of Manitowoc. Valuations made by the engineering staff of the Commission and by the city are considered and compared in detail. The company submits no valuation of the property as a whole but attacks the reasonableness of the values placed on certain items in the valuation made by the Commission. Some of the land used in the operation of the utility is owned by a private individual, Mr. John Schuette. The city has agreed with Mr. Schuette to purchase part of this land and to

lease part, and also to lease certain equipment used in connection with the plant. The contention that the smoke stack and certain other equipment located on the land mentioned should be charged to a feed and flour mill to which the electric plant sells mechanical power, on the theory that, if it were not for the power supplied to this mill, the equipment in question would not have to be so large or extensive, is not sustained by the facts. It appears that all of this equipment is necessary to meet the maximum demands of the plant during the winter months, and that during the maximum peak demand no power is supplied to the mill. Some consideration must be given in fixing the fair value of the utility to the fact that continuous construction under contract may be less expensive than piecemeal construction, but it does not seem that this fact can be properly considered as an element in determining the cost of reproducing the physical plant. *Held:* The compensation to be paid to the electric light company and Mr. Schuette for the taking of property used and useful for the convenience of the public, exclusive of the stock and material on hand and additions made to the plant since Jan. 1, 1913, is $137,500, of which $600 is to be paid to Mr. Schuette upon delivery by him to the city of a deed to certain land owned by him but necessary to the operation of the utility. The city is ordered to pay the just compensation fixed within three months from date and, in addition, to pay to the company such price as may be agreed upon between the parties or, in the event that the parties are unable to agree, fixed by the Commission, for the material on hand at the date of the taking of the plant and for new additions made to the plant sine Jan. 1, 1913, with interest at 6 per cent per annum until the compensation is paid. The agreement entered into by the city with Mr. Schuette for the lease of certain land and equipment is approved. *In re Purchase Manitowoc El. Lt. Plant*, 452, 467.

OPERATION.

Requirements as to service and facilities—Adequacy of service.

2. "Every public service corporation is required by law to furnish adequate and efficient service to the public according to the development and state of the art at the time the service is performed, and to exact therefor only reasonable compensation. Thus, to fulfill its public duty, it must at all times keep and maintain its plant in a proper state of repair and in an efficient operating condition, adopt new inventions as they arise, make extensions and improvements of its plant when necessary and required for the convenience of the public, and continue its services without cessation whether profitable or unprofitable. It is by statute subject to public supervision as to the extent and quality of its service as well as to the charges it may lawfully exact therefor." (*Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 155.) *Madison G. & El. Co. v. C. & N. W. R. Co.* 409, 416.

3. The Commission, on its own motion, investigated the service of the Neshonoc Lt. & P. Co. in the village of West Salem and the town of Hamilton. In an order issued in a previous matter on Aug. 7, 1912, the Commission specified certain improvements which were to be made in the plant of the utility to enable the utility to comply with the requirements of the standards prescribed by the Commission for electric service. Since the issuance of this order the utility has accepted a number of applications for power service, solicited by engineers of the Commission for the purpose of developing a patronage sufficient to warrant the expenditure necessary to place the plant in the best serviceable condition, and it is therefore necessary that the required improvements be made as soon as possible. The engineers of the Commission recommend that the utility submit for approval complete plans for an hydro-electric power and light plant to be built at the site of the

present plant in such a manner as to allow for additional units to be installed, and for a new dam to replace the present dam when operating conditions warrant, and suggest certain specific improvements which should be made in the equipment of the plant. *Held:* The improvements recommended should be made. The utility is therefore ordered: (1) to submit for approval within three weeks complete plans and specifications for an hydro-electric power and light plant, as recommended by the engineers of the Commission; and (2) to have the said plant completed and the equipment recommended installed within six months after the approval of the plans and specifications. *In re Invest. Service Neshonoc Lt. & P. Co.* 637, 639.

4. The Commission, on its own motion, investigated the practice of the Dodgeville El. Lt. Co. with respect to compliance with the orders of the Commission establishing standards for gas and electric service (July 24, 1908, 2 W. R. C. R. 632 and Aug. 9, 1913, 12 W. R. C. R. 418). Inspections made at various times from March, 1909, to Dec., 1913, showed continued failure to fully comply with the first of these orders but an inspection made in Nov., 1912, indicated that the utility was at that time complying with all the requirements of the order. An inspection made on Jan. 3, 1914, however, showed that the service rendered by the utility does not entirely meet the requirements of adequate service as defined in the order of Aug. 9, 1913. It is ordered that the utility: (1) engage a competent, reliable engineer who thoroughly understands the needs of the utility's system, and notify the Commission of the securing of his services within 15 days after the serving of this order; (2) that plans and specifications covering new equipment and changes in the system be filed with the Commission within 30 days after the securing of the services of the said engineer; and (3) that the changes be made as promptly as possible, such work as can be begun before outdoor construction is possible to be started immediately after the plans and specifications submitted to the Commission are approved by it. Six months is deemed a sufficient time in which to comply with the standards of service included in this order. *In re Service Dodgevills El. Lt. Co.* 642, 645.

Requirements as to service and facilities—Appliances for the measurement of product or service—Duty of utility to provide meters.

5. It is clear that under the provisions of sec. 1797m—90 of the Public Utilities Law a utility cannot give a lower rate to a consumer who owns his meter than to another consumer whose meter is owned by the utility. That the divided ownership of parts of the equipment of public utilities shall cease is clearly contemplated. The management should be responsible for the installation and maintenance of the whole of the equipment, which means undoubtedly that both private and municipal plants must acquire, by purchase or lease unless excused by the Commission, all meters used in connection with their respective works, and cease charging a meter rental. *In re Appl. Neshkoro Lt. & P. Co.* 52, 54.

6. It is the duty of the utility, the Commission has ruled, to sell to all consumers through meters unless exempted from so doing by the Commission. *In re Appl. Neshkoro Lt. & P. Co.* 52, 64.

7. In some instances in the present case it appears that meters have been out of working order and that the meter rates have been applied to an estimated consumption of current. These meters should be promptly repaired and the regular rates applied. *In re Appl. Endeavor El. Lt. & P. Co.* 448, 451.

Requirements as to service and facilities—Appliances for the measurement of product or service—Station meters.

8. In connection with the application of the Village of Withee for authority to increase its electric rates it is deemed advisable, in view of the inadequate records kept by the utility, to require the utility to install a station watt-hour meter to measure the output of the plant. *In re Appl. Village of Withee*, 704, 710.

Requirements as to service and facilities—Refusal of service for nonpayment of bills rendered.

9. The Commission, on its own motion, investigated the refusal of the Madison G. & El. Co. to furnish gas and electric service to F. M. Wylie. Mr. Wylie was in arrears on certain bills rendered him during the course of several years for past service, part of the amount of the bills being in dispute, and the company, upon his removal to a new place of residence, refused to furnish him service unless he would pay this past indebtedness. Mr. Wylie admits being in arrears 52 cts. for service rendered him since the making by him of a special deposit of $5.00, required in accordance with a rule of the company as security for the payment of bills due the company, prior to receiving service at his last place of residence. The company contends that the deposit may be applied to the payment not only of the 52 cts. but also of indebtedness incurred prior to the making of the deposit, and that Mr. Wylie may be required to liquidate in full any remaining indebtedness and to make a new deposit before the company can be required to serve him at his new place of residence. *Held:* 1. A public utility may refuse to furnish service unless the charges for such service are prepaid, or a sum of money sufficient to secure the payment for services rendered during any future interval for which credit is extended, or a bond to secure such payment is deposited with the utility, but the utility may not condition the furnishing of service upon the liquidation of indebtedness to the utility for past service. 2. A public utility which requires a deposit of money to secure the payment of bills for future service before rendering service to an applicant cannot apply the deposit to the payment of indebtedness previously incurred by the applicant, but must look for its remedies to the courts of law. 3. The applicant's contract with the utility in the instant case permits the application of his deposit only to the payment of indebtedness incurred by him after the contract became effective. It is ordered that upon payment by F. M. Wylie of all sums due to the Madison G. & El. Co. for gas furnished him at his last place of residence the company accept his application and serve him with gas and electric current at his present place of residence and retain the $5.00 now held by it as security for the payment of bills for such service when they become due, according to the published rules and regulations of the company. *In re Refusal of Service by Madison G. & El. Co.* 518, 522–524.

See TRAIN SERVICE.

EXPRESS COMPANIES.

Discrimination as between customers of express companies, *see* DISCRIMINATION, 4.

OPERATION.

Requirements with respect to delivery in particular cases.

1. The petitioner alleges that the respondent unjustly discriminates against it by refusing to deliver express to it at its offices which are located a few hundred feet beyond the corporate limits of the city of Merrill. The respondent delivers express to any point within the city limits, although these limits extend beyond the free delivery district of the United States postoffice department which is fixed by sec. 1798 of the statutes as the minimum area in which express companies must call for and deliver express, but does not extend this service to any person or corporation located outside the city limits. *Held:* There must be some limits to the area within which express companies may be required to deliver express and the boundaries of the municipality are most satisfactory for this purpose. *Strauss v. American Exp. Co.* 1909, 3 W. R. C. R. 556. The complaint is dismissed. *Heineman Lbr. Co. v. Wells Fargo Exp. Co.* 594, 596.

FRANCHISES.

Telephone utilities, authority to operate a telephone utility derived from the state and not the municipality, *see* TELEPHONE UTILITIES, 2.

Right to occupy streets for interurban railway service.

1. The petitioner alleges that the stopping by the respondent companies of its cars at certain designated points only instead of at all street intersections results in inadequate street railway service and amounts, in effect, to mere interurban railway service. The petitioner further alleges that it has never granted to any corporation, neither the original grantee nor the present assignees, the right to operate an interurban railway system within its limits, and that the present operation of interurban cars within the city of Waukesha is without the permission of the city or any authority or instruction from the Commission. It prays, therefore, that the respondents be compelled to furnish street railway service as distinguished from interurban service, as required by the terms of their franchise. *Held:* The right of the respondents to operate interurban cars upon the streets of Waukesha is a judicial question and not within the power of the Commission to determine, but so long as the respondents continue to render such service, it is subject to the jurisdiction and regulation of the Commission. *City of Waukesha v. T. M. E. R. & L. Co. et al.* 89, 90, 97.

FREE SERVICE LIMITS.

Express companies, pick-up and delivery service, free service limits, *see* EXPRESS COMPANIES, 1; PICK-UP AND DELIVERY SERVICE, 1.

FREIGHT CARS.

Depreciation, rate of depreciation of gas plant, *see* DEPRECIATION, 7.
Minimum charges for gas utilities, *see* MINIMUM CHARGES, 3.

OPERATION.

Requirements as to service and facilities—Adequacy of service.

1. Although no formal complaint is made in the instant case with respect to the gas service, verbal statements made to the Commission during the investigation made it appear advisable to investigate certain matters connected with the operation of the gas plant. The statements referred to allege that under the system of operation now in force both the pressure and the quality of the gas have varied and the gas supply has failed completely at times. The plant is a gasoline gas plant. *Held:* It is not practicable to establish standards for service for gasoline gas plants. Elements which go to make up adequate service; reliability, uniformity, safety, convenience and intelligent utilization, are almost impossible of realization with this type of plant. Under the circumstances no recommendations with respect to service are made. *Vil. of Sharon v. United Heat, L. & P. Co.* 1, 4–7.

2. "Every public service corporation is required by law to furnish adequate and efficient service to the public according to the development and state of the art at the time the service is performed, and to exact therefor only reasonable compensation. Thus, to fulfill its public duty, it must at all times keep and maintain its plant in a proper state of repair and in an efficient operating condition, adopt new inventions as they arise, make extensions and improvements of its plant when necessary and required for the convenience of the public, and continue its services without cessation whether profitable or unprofitable. It is by statute subject to public supervision as to the extent and quality of its service as well as to the charges it may lawfully exact therefor." (*Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 155.) *Madison G. & El. Co. v. C. & N. W. R. Co.* 409, 416.

Requirements as to service and facilities—Refusal of service for nonpayment of bills rendered.

3. The Commission, on its own motion, investigated the refusal of the Madison G. & El. Co. to furnish gas and electric service to F. M.

Wylie. Mr. Wylie was in arrears on certain bills rendered him during the course of several years for past service, part of the amount of the bills being in dispute, and the company, upon his removal to a new place of residence, refused to furnish him service unless he would pay this past indebtedness. Mr. Wylie admits being in arrears 52 cts. for service rendered him since the making by him of a special deposit of $5.00, required in accordance with a rule of the company as security for the payment of bills due the company, prior to receiving service at his last place of residence. The company contends that the deposit may be applied to the payment not only of the 52 cts. but also of indebtedness incurred prior to the making of the deposit, and that Mr. Wylie may be required to liquidate in full any remaining indebtedness and to make a new deposit before the company can be required to serve him at his new place of residence. *Held:* 1. A public utility may refuse to furnish service unless the charges for such service are prepaid, or a sum of money sufficient to secure the payment for services rendered during any future interval for which credit is extended, or a bond to secure such payment is deposited with the utility, but the utility may not condition the furnishing of service upon the liquidation of indebtedness to the utility for past service. 2. A public utility which requires a deposit of money to secure the payment of bills for future service before rendering service to an applicant cannot apply the deposit to the payment of indebtedness previously incurred by the applicant, but must look for its remedies to the courts of law. 3. The applicant's contract with the utility in the instant case permits the application of his deposit only to the payment of indebtedness incurred by him after the contract became effective. It is ordered that upon payment by F. M. Wylie of all sums due to the Madison G. & El. Co. for gas furnished him at his last place of residence the company accept his application and serve him with gas and electric current at his present place of residence and retain the $5.00 now held by it as security for the payment of bills for such service when they become due, according to the published rules and regulations of the company. *In re Refusal of Service by Madison G. & El. Co.* 518, 522–524.

Standards of service for gasoline gas plants.

4. The Commission has established standards for gas and electric service in Wisconsin but it has not been considered practicable to establish such standards for gasoline gas plants. Elements which go to make up adequate service: reliability, uniformity, safety, convenience, and intelligent utilization, are almost impossible of realization with this type of plant. The Commission has stated: "Adequate service is not necessarily the best service which it is possible to give, but rather the best service which can be given with due regard to economy to the consumer and to the company." (*In re Standards for Gas and Electric Service*, 1908, 2 W. R. C. R. 632, 642.) *Vil. of Sharon v. United Heat, L. & P. Co.* 1, 5.

CONSTRUCTION, MAINTENANCE AND EQUIPMENT.

Adequacy of equipment—Construction of cars.
See post, 2.

Crossings—Railroad by highway—Protection of.

1. The Commission, on its own motion, investigated three highway crossings near Mukwonago, Waukesha county, located two on the M. St. P. & S. S. M. Ry. and one on the line of the M. L. H. & T. Co. Both railway companies approve of a plan to eliminate the Rochester road crossing on the M. St. P. & S. S. M. Ry. and to protect the remaining crossing, at Front st. on the M. L. H. & T. Co.'s line by diverting the Rochester road into Front st. and enlarging the Front st. subway, first, to accommodate the increased traffic and, second, to provide a better view of the interurban cars. The M. St. P. & S. S. M. Ry. Co. is willing to bear the entire expense of the proposed alterations. The village authorities oppose this plan and request that a subway at the Rochester road crossing be ordered. *Held:* Each of the two crossings under consideration is dangerous. The interests of all will be best subserved by relocating the highway. The M. St. P. & S. S. M. Ry. Co. is therefore ordered to construct, and maintain for a period of three years, a suitable highway connecting the Rochester road and Front st., to acquire the land necessary therefor, and to enlarge the subway on Front st., plans to be submitted. The portion of the Rochester road lying within the railway right of way is to be closed. *In re Crossings near Mukwonago*, 32, 37.

Crossings—Railroad by highway—Relocation of highway.
See ante, 1.

Passenger cars adequacy of.

2. The petitioner alleges that the cars used by the respondent in the city of Waukesha are inadequate and asks that the respondent be re-

quired to provide cars which will meet the needs of traffic. *Held:* It would be impracticable to abandon the cars in use and substitute new cars in their places. The respondents should, however, remedy the defects in the present equipment when ordering or constructing new equipment. *City of Waukesha v. T. M. E. R. & L. Co. et al.* 89, 98.

Station facilities, construction of—Location of waiting station in cities.

3. On interurban lines it is impossible to construct waiting stations at every stopping point within cities. The cost of acquiring the necessary land and building structures would be so great as to make the expense of rendering such service prohibitive; furthermore, the convenience of the public may require the changing of stopping points from time to time, and in such event new stations would have to be erected and old ones abandoned. *City of Waukesha v. T. M. E. R. & L. Co. et al.* 89, 98–99.

OPERATION.

Requirements as to service and facilities—Adequacy of service.

4. The petitioner alleges that the limitation of stops made by the cars of the respondent companies within the city of Waukesha results in inadequate street railway service and in danger to public travel at street intersections. In the past the cars have stopped at all street intersections to take on and let off passengers, but under a new schedule which, the respondents allege, was adopted for the purpose of improving the service, the cars stop only at certain designated points. The petitioner alleges that the franchise under which the respondents use the streets in Waukesha requires them to furnish street railway service as distinguished from interurban service and that they have no right to operate interurban cars through the city. *Held:* 1. The right of respondents to operate interurban cars upon the streets of Waukesha is a judicial question and not within the power of the Commission to determine, but so long as the respondents render such service it is subject to the supervision and regulation of the Commission. In view both of the requirements of the interurban service and the franchise obligations which the respondents may have assumed with respect to the rendering of street railway service, it is deemed advisable to tentatively increase the number of stops made within the city of Waukesha. If it is found impossible under the new schedule to maintain the running time between Milwaukee and Watertown it will be necessary for the Commission to reduce the number of stops. The respondents are therefore ordered to stop their cars in the city of Waukesha to receive and discharge passengers at points designated by the Commission. *City of Waukesha v. T. M. E. R. & L. Co.* 89, 97.

Requirements as to service and facilities—Adequacy of service—Frequency of stops.

5. It is our opinion that to compel the respondents to reëstablish their former practice of stopping at all street intersections within the city of Waukesha would probably result in extending the running time of their cars between the Milwaukee terminal and Watertown. However, in view of the fact that there are no local cars operated within the city of Waukesha, we deem it advisable that certain additional stops should be made in the city, unless, after a fair trial, it should appear that the present schedule of time between Milwaukee and Waukesha or Watertown can not be maintained because of these additional stops, in which case it would be necessary for the Commission to reduce the number of stops. Good practice upon interurban railroads re-

quires certain definite stops or stations along the line for the receiving and discharging of passengers. Unless this plan is followed, the usefulness of the service is destroyed and the public as a whole is inconvenienced. (*Racine v. T. M. E. R. & L. Co.* 12 W. R. C. R. 388.) *City of Waukesha v. T. M. E. R. & L. Co.* 89, 97–98.

MILLING IN TRANSIT RATES.

See RATES—RAILWAY.

MINIMUM CARLOAD WEIGHTS.

See WEIGHTS.

MINIMUM CHARGES.

ELECTRIC UTILITIES.

Determination of minimum charge.

1. The minimum charge should be sufficient to cover those operating expenses which vary with the number of consumers and which seem to have little relation to the amount of current sold, such as meter collection and consumer's premises expenses. Allowance should also be made for taxes, depreciation and interest on the investment in consumers' meters and services and for the cost of current likely to be used under the minimum charge. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 356.

2. We feel that it is the duty of every public service company to extend its service to reach as many consumers as possible. Some of these consumers may not be as profitable as others, yet so long as they are not a burden and do not actually hinder the proper development of the utility, they should be offered a minimum charge that will enable them to enjoy the convenience of electricity in their homes. *In re Invest. Mosinee El. Lt. & P. Co.* 712, 719.

GAS UTILITIES.

Determination of minimum charge.

3. The minimum bill should be so constructed as to cover (1) consumer expense and (2) the cost of gas used in small quantities. *Yanko et al. v. Portage American Gas Co.* 136, 143.

Water utilities, municipal acquisition of, *see* WATER UTILITIES, 2–4.

NAVIGABLE WATERS.

Jurisdiction of Commission over river improvements, *see* RAILROAD COMMISSION.

REGULATION OF LEVEL AND FLOW OF WATER.

River improvements—Dredging.

1. The petitioners allege that the respondent, by dredging the Rock river in Dodge county below township 13, is changing the course, lowering the level and destroying the headwaters and navigation of the river and draining out the lake which forms its headwaters, thereby destroying the hunting, boating and fishing on the river and causing the river to become stagnant, and that all of these acts are unlawful and the cause of great injury and damage to the petitioners. The respondent is engaged in constructing a system of ditches for the purpose of draining the Horicon Marsh and, in furtherance of his plan, is deepening, widening and straightening the channel of the Rock river in the city of Horicon under authority granted in an ordinance passed by the city council. Investigations were made on the ground, by engineers employed by the Commission, for the purpose of ascertaining the present and probable future effects of the work undertaken by the respondent. The Commission has power to regulate all river improvements so as to conserve all public rights in the rivers, promote the improvement of navigation and protect life, health and property, but has no jurisdiction over the authorization of contractors to do work or over their dealings with private parties. *Held:* 1. The drainage work in question will insure deeper water in the river at Horicon at all times and thereby improve navigation. 2. Although the current in the river at Horicon may become extremely slow at times no disagreeable or unsanitary condition will result. 3. In view of the benefits which will accrue through the increased farming area tributary to Horicon and Mayville, the fact that the river may be made unsightly at some points in Horicon and the fact that the fishing and hunting interest on the marsh will be damaged, will not justify the condemnation of the project undertaken by the respondent as injurious to public rights or public safety. The petition is therefore dismissed. *Freeholders etc. of Dodge County v. McWilliams*, 603, 607.

PROCEEDINGS BEFORE COMMISSION.

Action on complaint against utility rates not to be withheld because of intention of utility to present a new schedule at some future date.

1. The Commission cannot withhold action upon a complaint with respect to rates charged by the lessee of a utility plant merely because it is the intention of the owner of the utility plant to present another schedule of rates at some future date when he reassumes control of the property. *In re Appl. Village of Withee*, 704, 706.

Petition by individuals for separation of grades at a railway crossing.

2. Sec. 1797—12e of the statutes requires a petition for a separation of grades to be lodged by the common council of a city, the village board of a village, the town board of a town or by a railway company, and the Commission has no jurisdiction in such proceedings when instituted by an individual. *Rueckert et al. v. C. M. & St. P. R. Co.* 749, 750.

PUBLIC UTILITIES.

IN GENERAL.

Investments—Action of Commission with respect to.

1. It devolves upon the Commission to regard the demand for a reasonable return upon actual investment and for services rendered on the part of the utility, as fundamental in establishing and maintaining adequate service for the community—on the assumption, always, that ordinary intelligence and honesty have been shown in establishing the utility. More than the welfare of any given utility or community under consideration is involved in this. If the principle were unwisely disregarded in any one case, it would be an effectual bar to the securing of funds to develop new utilities or improve existing ones throughout the entire state. *In re Appl. Darlington El. Lt. & P. Co.* 344, 346.

CONTROL AND REGULATION OF PUBLIC UTILITIES.

Who are public utilities—Electric light company determined to be public utility.

2. The city of Darlington opposes the application for an increase in rates in the instant case upon the ground, among others, that the applicant is not a public utility. *Held:* The applicant is a public utility and subject to the provisions of the Public Utilities Law. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 349.

PUBLIC UTILITIES LAW.

CONSTRUCTION OF LAW.

With respect to extension of telephone lines.

1. The only action required of this Commission by the law in cases involving the duplication of telephone lines within the same territory by the extension of new lines, is a finding that public convenience and necessity do not require the proposed extension. Where the Commission does not make such a finding, the statute itself operates to authorize the extension. *In re Proposed Extension Owen Tel. Co.* 630, 631.

SCOPE AND PURPOSE OF LAW.

In general.

2. The purpose of the Public Utilities Law, which gives the Commission authority over public utilities, is to insure the communities as such and to the people who compose them, adequate service at reasonable rates from those corporations or individuals whom the state or the community has by grants of special privileges commissioned to perform such services. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 345.

With respect to duplication of telephone lines within the same territory.

3. Unnecessary duplication of telephone lines within the same territory was sought to be avoided when ch. 610 of the laws of 1913 (sec. 1797m—74 of the statutes) was enacted. *In re Proposed Extension Owen Tel. Co.* 630, 631.

RAILROAD COMMISSION.

Authority of Commission in awarding reparation.

1. The Commission cannot relieve a shipper from the payment of the lawful established tariff charges. To do so would be the equivalent of suspending the operation of the statute, which is not within the power of the Commission. It only has authority to authorize refunds when the payments made are found to be exorbitant, unusual, illegal or erroneous. *Paine Lbr. Co. Ltd. v. C. & N. W. R. Co.* 633, 634.

2. The Commission is without power to decide upon the merits of complaints against charges or to authorize a refund of any part thereof, unless the complaint be lodged by the person aggrieved. *Wausau Advancement Assn. v. C. & N. W. R. Co.* 772, 774.

Commission without power to relieve shipper from payment of lawful established tariff charges.

See ante, 1.

Duty of Commission in regulating utilities.

3. The first and chief duty of a controlling body like this Commission is to protect the community and the individuals who compose it from encroachments upon their rights or property, through excessive charges or inadequate service, on the part of the public utility. That being true, it naturally follows that in the exercise of its protecting powers the Commission must have a care not to impair the ability of the utility to maintain at a just standard the character of the services and meet the steadily growing demands of the community for more and better service as time passes. In other words, it devolves upon the Commission to regard the demand for a reasonable return upon actual investment and for services rendered on the part of the utility, as fundamental in establishing and maintaining adequate service for the community on the assumption, always, that ordinary intelligence and honesty have been shown in establishing the utility. More than the welfare of any given utility or community under consideration is involved in this. If the principle were unwisely disregarded in any one case, it would be an effectual bar to the securing of funds to develop new utilities or improve existing ones throughout the entire state. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 346.

4. It is not alone a condition of continuous and improving service that a public utility shall receive reasonable compensation for services rendered, it is a sound economic principle, and one which the courts of last resort of nearly all the states, as well as the United States supreme court, have repeatedly affirmed. If the principle were disregarded by any controlling body, such as the legislature, or a city, or this Commission, an appeal to the courts would bring relief to the utility thus unjustly dealt with. If therefore there were no higher motive to guide the Commission in determining this question of reasonable compensation to utilities, the desire to have its orders effective through judicial affirmation would be sufficiently impelling. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 346–347.

5. This Commission in passing upon any utility case, whether it be

a petition of the utility for permission to increase its charges, or the complaint of a private consumer or a community that rates are too high or the service inadequate, must give a large share of attention to the question of the ability of the utility to maintain its service. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 347.

Duty of Commission to enforce reasonably adequate service and facilities.

6. It is the duty of the Commission to ascertain from all the facts and circumstances presented in any case the reasonableness of any rule or regulation respecting service and, if it shall determine that such rule or regulation is unreasonable, to change the same or substitute a reasonable rule or regulation in place thereof. *In re Use of Silent Numbers by Wis. Tel. Co.* 587, 593.

Jurisdiction of Commission—Commission without authority over authorization of contractors to do work or their dealings with private parties.

7. The Commission has no jurisdiction over the authorization of contractors to do work or over their dealings with private parties. *Freeholders etc. of Dodge County v. McWilliams,* 603, 605.

Jurisdiction of Commission—Industrial tracks—Commission without power to order restoration of an industrial track installed before the passage of the Railroad Commission Law and not paid for in full by the owners of the industry.

8. In the instant case the Commission is without jurisdiction to order the restoration of the sidetrack as prayed for. The track was installed before the passage of the Railroad Commission Law and was not paid for in full by the owners of the industry to which it was originally built, nor in part by the petitioner or her predecessors. Its removal is, therefore, not subject to the conditions imposed by sec. 1802 of the statutes, which provides for the building of spur tracks at the expense of the industry desiring them and for the removal only upon due notice and for good cause shown. *Doyle v. M. St. P. & S. S. M. R. Co.* 620, 622.

Jurisdiction of Commission—Over interurban railway service.

9. The right of the companies to operate interurban cars upon the streets which, in the instant case, was challenged by the city, is a judicial question and not within the power of the Commission to determine. So long as the companies render such service, however, that service is subject to the supervision and regulation of the Commission. *City of Waukesha v. T. M. E. R. & L. Co. et al.* 89, 97.

Jurisdiction of Commission—Over railway crossings—Commission without power to determine mode and manner of crossing on street which has not been legally opened.

10. The Commission is without authority to determine the mode and manner of a railway crossing on any street until the proper proceedings have been taken to have the street legally opened over the railroad right of way. Sec. 1797—12e of the statutes applies only to streets or highways which have been legally opened. *Village of Unity v. M. St. P. & S. S. M. R. Co.* 430, 431.

Jurisdiction of Commission—Over railway crossings—Commission without power to require separation of grades in proceedings instituted by individuals.

11. Sec. 1797—12e of the statutes requires a petition for a separation of grades to be lodged by the common council of a city, the village board of a village, the town board of a town or by a railway company, and the Commission has no jurisdiction in such proceedings when instituted by individuals. *Rueckert et al. v. C. M. & St. P. R. Co.* 749, 750.

Jurisdiction of Commission—Over river improvements.

12. The Commission has power to regulate all river improvements so as to conserve all public rights in such waters, promote the improvement of navigation and protect life, health and property. *Freeholders etc. of Dodge County v. McWilliams*, 603, 605.

Jurisdiction of Commission—Over terms and conditions for joint use of street railway tracks—Supply of electrical energy.

13. This Commission believes that it is within its authority to decide which of two street railway companies ordered to make joint use of tracks shall supply the power used over the tracks in question. *T. M. E. R. & L. Co. v. Chi. & Mil. El. Ry. Co.* 299, 309.

CONSTRUCTION, MAINTENANCE AND EQUIPMENT.

Crossings—Railroad by highway—Protection of—Jurisdiction of Commission.

1. Sec. 1797—12e of the statutes requires a petition for a separation of grades to be lodged by the common council of a city, the village board of a village, the town board of a town or by a railway company, and the Commission has no jurisdiction in such proceedings when instituted by individuals. *Rueckert et al. v. C. M. & St. P. R. Co.* 749, 750.

Crossings—Railroad by highway—Protection of—When necessary—Statutory requirements.

2. When no legal highway crossing exists at a designated point, a railroad company is not, under the statutes, under any obligation to provide cattle guards or other crossing facilities for its protection. *Town of Richfield v. M. St. P. & S. S. M. R. Co.* 623, 624.

Crossings—Railroad by highway—Apportionment of cost among parties.

3. The cost of the viaduct ordered is apportioned 60 per cent to the C. M. & St. P. Ry. Co., 25 per cent to the city of La Crosse and 15 per cent to the Wisconsin Ry. Lt. & P. Co. *In re Mills Street Crossing at La Crosse*, 145, 155.

Crossings—Railroad by highway—Elimination of.

See post, 5, 8.

Crossings—Railroad by highway—Installation of.

4. The petitioner alleges that there are not enough highway crossings over the respondent's line in the village of Unity and asks that the Commission open crossings at certain streets. *Held:* The Commission can take no action in the matter of the crossings desired by the petitioner at Cook, Wood and Church sts. until the streets named have been legally opened by the village over the railroad right of way and petition is made to the Commission for the determination of the mode and manner of crossing, as provided in sec. 1797—12e of the statutes. *Village of Unity v. M. St. P. & S. S. M. R. Co.* 430, 431.

Crossings—Railroad by highway—Protection of.

5. The Commission, on its own motion, investigated three highway crossings near Mukwonago, Waukesha county, located two on the M. St. P. & S. S. M. Ry. and one on the line of the M. L. H. & T. Co. The M. St. P. & S. S. M. Ry. Co. has agreed to install bell protection at the crossing located on its line three-fourths of a mile south of Mukwonago. Two crossings, therefore, remain for consideration. Both railway companies approve of a plan to eliminate the Rochester road crossing on the M. St. P. & S. S. M. Ry. and to protect the remaining crossing, at Front st. on the M. L. H. & T. Co.'s line by diverting the Rochester road into Front st. and enlarging the Front st. subway, first, to accommodate the increased traffic and, second, to provide a better view of the interurban cars. The M. St. P. & S. S. M. Ry. Co. is willing to bear the entire expense of the proposed alterations. The village authorities oppose this plan and request that a subway at the Rochester road crossing be ordered. *Held:* Each of the two crossings under con-

sideration is dangerous. The interests of all will be best subserved by relocating the highway. The M. St. P. & S. S. M. Ry. Co. is therefore ordered to construct, and maintain for a period of three years, a suitable highway connecting the Rochester road and Front st., to acquire the land necessary therefor, and to enlarge the subway on Front st., plans to be submitted. The portion of the Rochester road lying within the railway right of way is to be closed. *In re Crossings near Mukwonago*, 32, 37.

6. The petitioner alleges that three highway crossings on the C. & N. W. Ry. in the city of Ft. Atkinson are dangerous. *Held:* The crossings require further protection. The respondent is ordered: (1) to station a flagman, to be on duty from 7 a. m. to 8 p. m., or until such time as the last passenger train has gone by, at each of the two crossings located respectively at Madison ave. West, and Sherman ave. West; (2) to install and maintain at each of these crossings and at the crossing at South Fifth st. an automatic electric bell with illuminated sign; and (3) to install annunciators at Madison ave. West, and Sherman ave. West. Plans for track circuits are to be submitted to the Commission for approval. If the rule requiring trainmen to flag all train movements at the South Fifth st. crossing is not rigidly enforced the Commission will modify the present order to require the respondent to station a flagman at this crossing also. *City of Ft. Atkinson v. C. & N. W. R. Co.* 69, 73.

7. The petitioner alleges, in effect, that the Hammond road crossing on the C. St. P. M. & O. Ry. in the village of Baldwin, St. Croix county, is dangerous and that the bell protection which the respondent is planning to install would be inadequate. *Held:* The crossing is dangerous. Because of difficulties arising from the nature and amount of traffic, the proximity of the station building to the crossing, and the large number of school children who use the crossing, protection in addition to that afforded by a bell is necessary. The respondent is therefore ordered: (1) to station a flagman at the crossing to be on duty daily from 8:00 a. m. to 9:30 p. m.; and (2) to install and maintain a bell with an illuminated sign to operate during the hours the flagman is not on duty. Plans for track circuits are to be submitted. *Village of Baldwin v. C. St. P. M. & O. R. Co.* 76, 79.

8. The Commission, on its own motion, investigated the public necessity of relocating a highway which crosses the C. B & Q. R. R. near the village of Cassville, Grant county. The highway runs southeast from the village, crosses the railroad, follows the banks of the Mississippi river for about 1.15 miles, then turns north and crosses the railroad again. The railway company is willing to eliminate both crossings by relocating the highway connecting them north of, and parallel to, the tracks and to bear the entire expense of the change. This plan is opposed by three witnesses who own property south of the tracks. *Held:* Public safety requires the relocation of the highway. The company is therefore ordered: (1) to construct and maintain for a period of three years a highway, as specified, connecting the crossings; (2) to provide suitable private crossings at these points for the use of owners of property south of the railroad; and (3) to close the present crossings to public travel. *In re C. B. & Q. R. Crossings near Cassville*, 86, 88.

9. The petitioner alleges that the highway crossings formed by the intersection of Fourth avenue North and Third avenue North with the tracks of the G. B. & W. R. R. Co. and the C. & N. W. Ry. Co. in the city of Grand Rapids are dangerous. *Held:* The crossings require further protection. The respondents are therefore ordered to flag all switching movements on their respective lines over the crossings and to store no cars within the platted width of the streets or within 80 ft. west of Fourth avenue North on the second spur track south of the

main line. The G. B. & W. R. R. Co. is also ordered to limit the speed of trains on its main line over the crossings. *City of Grand Rapids v. G. B. & W. R. Co. et al.* 395, 398.

10. The petitioner alleges that two highway crossings on the respondent's line in the town of La Prairie, Rock county, known, respectively, as the "South Janesville crossing" and "Woodman's crossing," are dangerous. *Held:* The crossings are dangerous. The respondent is ordered to station a flagman at the South Janesville crossing who shall be on duty from 7 a. m. to 9:15 p. m. daily from May 1 to Nov. 30, and from 7 a. m. to 7 p. m. daily, for the remainder of the year; and to install and maintain at the crossing, subject to plans submitted to the Commission for approval, an electric bell with illuminated sign which shall operate during the hours when the flagman is not on duty. The respondent is further ordered to replace the board wing fence at Woodman's crossing with a suitable woven wire fence. It is suggested that the town authorities remove the obstructing brush and trees along the highway at this point. *Town of La Prairie v. C. & N. W. R. Co.* 440, 443.

11. The petitioner alleges, in three separate complaints, that the Tillotson crossing, the Tierman crossing and the Summit crossing on the I. C. R. R. in the town of Madison are dangerous. *Held:* The crossings are dangerous. The railroad company is ordered: (1) to protect the Tillotson crossing by flaring as specified the ends of the cut in which the railroad lies and by grading to its full width that portion of the highway lying within its right of way, providing proper drainage facilities; (2) to install and maintain at the Tierman crossing an electric bell with illuminated sign, plans to be approved; and (3) to remove the waste material from the banks of the cut in which its track lies at the Summit crossing for the entire length of the cut so that the elevation of the land within its right of way shall not be greater than the elevation of the adjacent ground on the same side of the right of way. *Town of Madison v. I. C. R. Co.* 608, 612.

12. This is a rehearing of a matter decided Nov. 14, 1913 (13 W. R. C. R. 74), held upon petition of the railway company which alleges that the highway crossing in question can be adequately protected by other and less expensive means than by a flagman and prays for a modification of the order issued. *Held:* Though as a general practice the Commission does not approve of stopping trains at dangerous crossings in lieu of providing other methods of protection, it appears that trains in the instant case can be stopped as suggested by the railway company without materially impairing their schedules and that this will afford adequate protection at the crossing. The former order is therefore modified so as to require the railway company to station a flagman at the crossing to be on duty from 7 a. m. to 6 p. m. daily, or, at its option, to stop each of its trains at the crossing and protect the crossing by a trainman who shall precede the train to the street and remain there to warn travelers until the train has passed. *In re C. M. & St. P. Crossing in Eau Claire,* 628, 629.

Crossings—Railroad by highway—Protection of—Annunciators.
See ante, 6.

Crossings—Railroad by highway—Protection of—Automatic alarm with illuminated sign.
See also ante, 6–7, 10–11.

13. The petitioner alleges that the "Fergin" highway crossing over the I. C. R. R. in the town of Fitchburg, Dane county, is dangerous. *Held:* The crossing requires protection. The respondent is ordered to install and maintain an electric bell, with illuminated sign, plans to be

submitted for approval. The offer of the respondent to protect the crossing by stopping all of its trains at the crossing cannot be entertained, for the reason that this method of protection would not only impair the service but would also involve much greater expense than the installation of proper safety devices. *Town of Fitchburg v. I. C. R. Co.* 403, 405.

14. The petitioner alleges that a highway crossing, known as Cribbin's crossing, on the I. C. R. R. near Basco station in the town of Montrose, Dane county, is dangerous. *Held:* The crossing requires further protection. The respondent is ordered to install an automatic electric bell with illuminated sign, plans to be approved. *Town of Montrose v. I. C. R. Co.* 613, 614.

15. The petitioner alleges that a highway crossing on the respondent's line, about two miles north of Stratford in the Town of Cleveland, Marathon county, is dangerous. *Held:* The crossing requires further protection than that afforded by the crossing signs now used. The respondent is therefore ordered to install and maintain an automatic electric bell with an illuminated sign for night indication, plans to be submitted for approval. Ninety days is considered a sufficient time within which to comply with this order. *Town of Cleveland v. C. & N. W. R. Co.* 729, 731.

Crossings—Railroad by highway—Protection of—Flagmen.

See ante, 6–7, 9–10, 12.

16. The Commission, on its own motion, investigated a crossing on the C. M. & St. P. Ry. at Chestnut street in Eau Claire. The railroad crosses two intersecting streets and a street railway at the point in question. *Held:* The crossing requires further protection. The respondent is ordered to station a flagman at the crossing to be on duty from 7 a. m. to 6 p. m. daily. *In re C. M. & St. P. Crossing in Eau Claire,* 74, 75.

Crossings—Railroad by highway—Protection of—Improvement of highway.

See ante, 11.

17. The petitioner alleges that the crossing over the respondent's line at Clark street in the village of Unity is not properly graded. *Held:* The crossing is dangerous in its present condition. It is the respondent's duty under sec. 1299*h*—1 of the statutes to remedy this defect by proper treatment of that part of the highway which lies within the railroad right of way. The respondent is therefore ordered to provide a properly drained roadway within its right of way lines at Clark st., which shall be surfaced and graded in substantially the same manner as the adjacent portions of the highway, and which shall have a crown as wide as the full traveled roadway in the adjacent portions of the highway. *Village of Unity v. M. St. P. & S. S. M. R. Co.* 430, 436.

Crossings—Railroad by highway—Protection of—Limitation of car storage area.

See ante, 9.

Crossings—Railroad by highway—Protection of—Provision of private crossings.

See ante, 5, 8.

Crossings—Railroad by highway—Protection of—Removal of obstructions to view.

See ante, 9–11.

Crossings—Railroad by highway—Protection of—Stopping of trains.

See ante, 12.

Crossings—Railroad by highway—Protection of—When no legal highway exists.

18. The petitioner alleges that the respondent refuses to provide cattle guards, signal posts, etc. at a highway crossing formed near Colgate by the intersection of the respondent's line with a public highway. The highway was laid out up to the lines of the respondent's right of way in 1910; but no evidence was introduced to show that the highway was legally opened across the railroad right of way. *Held:* Until the proper legal procedure is taken to open the highway over and across the respondent's right of way no legal highway crossing will exist at the point in question and the respondent will be under no statute obligation to provide cattle guards or other crossing facilities. The complaint is therefore dismissed. *Town of Richfield v. M. St. P. & S. S. M. R. Co.* 623, 624.

Crossings—Railroad by highway—Relocation of highway.

See ante, 5, 8.

Crossings—Railroad by highway—Separation of grades.

19. The petitioners, residents of the city of Portage, Columbia county, allege that the highway crossing on the respondent's line at Cass st. in the city named is dangerous and ask that the respondent be required to construct a viaduct or subway at the crossing. *Held:* Inasmuch as sec. 1797—12*e* of the statutes requires a petition for a separation of grades to be lodged by the common council of a city, the village board of a village, the town board of a town or by a railway company, the Commission has no jurisdiction in the matter as at present brought before it. The petition is dismissed. *Rueckert et al. v. C. M. & St. P. R. Co.* 749, 750.

Crossings—Railroad by highway—Separation of grades—Apportionment of expenses.

See ante, 3.

Crossings—Railroad by highway—Separation of grades—Viaduct.

20. The Commission, on its own motion, investigated the advisability of revising the order issued Jan. 2, 1912 (8 W. R. C. R. 422), in the matter of the Mill street crossing at La Crosse. This order required the construction at Rose street of a viaduct conforming to certain specifications and provided for the division of the expense between the C. M. & St. P. Ry. Co. and the city of La Crosse. Actual work under the order has been deferred from time to time upon request of city officials who have proposed various means other than the remedy ordered by the Commission for eliminating the dangerous conditions now existing at Mill street. The means proposed include: the construction of a subway at Rose street; the construction of a viaduct at Mill street; the construction of a subway and the elevation of the railroad tracks at Mill street; a general elevation of the railroad tracks

and the construction of subways at Mill and certain other streets; and the relocation of the railroad to avoid the present crossings with the streets of the city. *Held:* In view of the present and future needs both of the city and the railway company and the relative expense of making the various alterations proposed, it is advisable to construct a viaduct at Rose street as originally ordered. The apportionment of the expense in the original order, however, appears, in the light of more accurate estimates now available, to be unfair to the city. It also appears desirable to reapportion the work of construction, if the cost is reapportioned. It is therefore ordered that the viaduct be constructed in accordance with specifications set forth and that the C. M. & St. P. Ry. Co. bear 60 per cent, the city 25 per cent, and the Wisconsin Ry. Lt. & P. Co. 15 per cent of the expense incurred. The Wisconsin Ry. Lt. & P. Co. is, with the permission of the city, to change its distribution system so as to operate its cars over the new viaduct instead of over Mill street. The city is to assume responsibility for damages to adjacent property or business arising from the issuance or enforcement of the order or from the proper prosecution of the work ordered. The C. M. & St. P. Ry. Co. is to maintain such portion of the bridge and its approaches as lies within its right of way limits except the planking and pavement on the roadway and the sidewalk, which the city is to maintain. The remainder of the structure is to be maintained by the city. The Wisconsin Ry., Lt. & P. Co. is to maintain its tracks and power distribution system, including those portions upon the viaduct and its approaches. *In re Mills Street Crossing at La Crosse*, 145, 152–155.

RATES—ELECTRIC.

See also MINIMUM CHARGES.

Discrimination in electric rates, *see* DISCRIMINATION, 1–3.

Flat rates.

1. Flat rates are not only unscientific and unequal, but they tend to prevent the growth of business along those lines where development is most natural, for the reason that the rates must usually be placed at a relatively high figure. *In re Appl. Village of Withee*, 704, 709.

2. Under a system of flat rates there is a considerable tendency for consumers to extend their installations or to increase the sizes of their lighting units without the knowledge of the company and the con-

sumer who uses his lights but a short time each day is thereby required to pay as much as the consumer who uses them many hours per day. Inequalities of this kind are bound to arise when flat rates per lamp are fixed without regard to the time the lamps are used. Such rates, moreover, usually result in waste, for they give no incentive towards saving, since the price is the same whether the lamp is used two or five hours daily. *In re Appl. Village of Withee*, 704, 709.

Flat rates—Discriminatory nature of.
See ante, 1–2.

Making rates—Elements considered—Cost of service—Cost of additional business.

3. To adhere closely to the table of costs is not always advisable. The reason for distributing the fixed cost over the three steps, in the present case as well as in many other instances, contrary to the cost curve, and thus charging the short hour user less than his pro rata share, is that there are a great many short hour users who cannot be made to contribute the full amount of this share. These consumers are profitable, however, when they help bear a part at least of the overhead charges, and, even though they do not carry their full share, thus lighten the load to the other consumers. *In re Appl. Neshkoro Lt. & P. Co.* 52, 63.

4. The Commission has pointed out in many cases the advantages of a power load. All that need be said here is that off-peak long-hour power business which, for competitive and other reasons, cannot be had on better terms, might be accepted at less than the regular rates, provided, of course, that the yield therefrom leaves something for fixed charges and, provided further, that it can be so taken without unjust discrimination. For various reasons it is customary everywhere to grant much lower rates for power than for lighting. *In re Appl. Neshkoro Lt. & P. Co.* 52, 64.

Making rates—Elements considered—Cost of service—Deficits arising from failure of a branch of the service to pay its costs.

5. When one service does not pay its costs, some of the other services must contribute to make up the loss in the form of higher rates if the utility as a whole is to receive a fair return on its investment. The question as to how much of these deficits can be equitably charged to the other services, such as street lighting and commercial lighting, must be the issue in this case. *City of Waukesha v. Waukesha G. & El. Co.* 100, 125–126.

Making rates—Elements considered—Cost of service—General and undistributed expenses.

6. The controlling company of the utilities involved in the present case charges against these utilities a sum equal to 2 per cent of their gross receipts to cover the expense for the services of the general officers of the company, the services of a centralized purchasing department and the creation and maintenance of an insurance reserve. Under a system of scientific accounting this expense would be apportioned more accurately among the various utilities owned by the controlling company, but in the instant case it appears that the expense charged is, on the whole, a fair one and any adjustments which are necessary will be made in the rate of return. *City of Waukesha v. Waukesha G. & El. Co.* 100, 116–117.

Making rates—Elements considered—Cost of service—Output, capacity and consumer costs.

7. The probability that taxing officers will use the value placed by the Commission upon the property of a utility as the basis for assessing higher taxes against the utility should be taken into consideration in fixing rates for the services of the utility. Taxes are a legitimate expense of production and must be met from the revenues of the utility. *City of Waukesha v. Waukesha G. & El. Co.* 100, 115–116.

8. In administering the Public Utilities Law the Commission is compelled by economic and legal necessities to recognize the fact that investments are made in public utilities not through philanthropy but through a desire for gain and to regard the demand for a reasonable return upon the actual investment as fundamental in establishing and maintaining adequate service for the community—on the assumption, always, that ordinary intelligence and honesty have been shown in establishing the utility. Charges for the service of a public utility should, as a rule, be determined upon cost based upon a reasonable and just value of the property used and useful in giving the service. In determining this value the Commission gives heed to all factors which seem to enter into the composition of a plant and its product, but pays no attention to fancy values claimed by owners, whether they appear in the form of an over-issue of securities or in inaccurate account keeping. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 345–347.

9. The nature of the electric business is such that the cost consists of a capacity charge which depends upon the demand and an output charge which varies directly with the quantity of current sold. The cost of current per unit of output therefore varies with the number of hours' use per day. *In re Appl. Mt. Horeb Heat, Lt. & P. Co.* 653, 660–661.

10. As the utility plant in the instant case is a new property located in a small village, and as the earnings appear to warrant it, interest and necessary profits, which are usually included in the term "reasonable return", have been placed at 8 per cent on the fair value. *In re Invest. Mosinee El. Lt. & P. Co.* 712, 716.

11. Though the utility in the instant case for some reason has not paid any taxes up to date it is not likely that this situation will continue and allowance has therefore been made for taxes in determining normal expenses. *In re Invest. Mosinee El. Lt. & P. Co.* 712, 716.

12. In the electric business the use of energy is only one element of expense and a consumer who uses very little current may cause a relatively large amount of expense because of the fact that he has a large installation. *In re Invest. Mosinee El. Lt. & P. Co.* 712, 717.

Meter rates—Straight meter rates.

13. A straight meter can be satisfactory only when all consumers have about the same demand or installation and use the current about the same length of time each day. *In re Appl. Neshkoro Lt. & P. Co.* 52, 54.

Power rates.

14. Several reasons are usually assigned for the giving of rates to power service which are lower than the rates given to lighting service. Among these reasons are the low demand of power service at the time of the maximum load upon the station, and the desirability of building up the day load. In the case of large installations, however, the reason is largely to be found in the necessities of competition. To get and retain the business the utility is forced to supply current at a cost no higher than that at which the individual large consumer could supply himself from a private plant. In many instances this

means that the unit costs of the utility must be considerably lower than the unit costs of the private plant to compensate for the fact that the owner of the private plant is often able to use the exhause steam as a by-product for heating purposes and thereby effect a saving in other of his business expenses. *City of Waukesha v. Waukesha G. & El. Co.* 100, 125.

Reasonableness of advance in rates in particular cases.

15. The Neshkoro Lt. & P. Co. applies for authority to increase its rates for electric service in Neshkoro, Lohrville and Red Granite. A valuation was made and the revenues and expenses were investigated. The records of the utility have been improperly kept and it is therefore necessary to estimate normal and reasonable costs on the basis of the record information available and data obtained with respect to the operation of similar plants. The expenses thus estimated were apportioned between capacity and output expenses and further apportioned among street lighting, commercial lighting, and power expenses. In order to arrive at a schedule of reasonable rates, a basis of normal and reasonable costs must be established. In the present case the probable cost of generating electricity at a steam plant furnishing current under conditions similar to those existing in Neshkoro was investigated and it was found that the operating costs would be no lower if steam were substituted for the hydraulic generation now used. The applicant's costs under hydraulic operation are therefore used, with data secured from other sources, as the basis for the determination of the rates ordered. *Held:* In the absence of definite information, due to the applicant's failure to keep such a system of accounts as is required by the Public Utilities Law, it is impossible to reach final conclusions at this time. If experience shows that some of the conclusions tentatively reached in the present case should be altered, modifications can be made when necessary. The applicant is therefore authorized to put into effect rate schedules fixed by the Commission at such time as the applicant shall have adopted and installed a system of accounts in accordance with the Commission's classification. *In re Appl. Neshkoro Lt. & P. Co.* 52, 65–68.

16. The Darlington El. Lt. & W. P. Co., since succeeded by the Darlington El. Co., applied for authority to increase its rates for electric current. A valuation was made, the revenues and expenses were investigated and the expenses were apportioned between commercial lighting and street lighting. The city of Darlington opposes the application of the electric company upon the ground: (1) that the decision in a former proceeding (1910, 5 W. R. C. R. 397) is a bar to the present proceeding; (2) that the electric company is not a public utility; and (3) that with proper operation the present rates will be sufficient to pay all operating expenses and provide a reasonable profit. The city alleges also that the service rendered by the electric company is inadequate. The service, however, has been improved to such an extent that the complaint of the city on this point need not stand in the way of a consideration of the petition in the matter of rates. Careful consideration has been given to the relation between the investment in non-operating property and the costs of operation when current is generated by the utility and when purchased for resale, and allowance is made in the appraisal for the non-operating property upon the basis of its value for stand-by or reserve purposes. Allowance is also made in the consideration of operating expenses for the amortization of the investment in the non-operating property held for stand-by service. *Held:* 1. The Darlington El. Co. is a public utility. 2. Revision of the company's rates is necessary. The company is therefore ordered to put into effect a schedule of rates determined by the Commission for incandescent lighting, street lighting and power service.

This schedule is tentative and it may be necessary to revise it after a year's operation under it. The order provides for a minimum charge of 50 cts. net per month for 500 watts or less of connected load, plus 5 cts. for each additional 50 watts of connected load. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 358–362.

17. Application is made by the city of Menasha for authority to increase its rates for commercial electric lighting and power service. The rates asked for were put into effect by the city in February, 1912, but not filed with the Commission, when the city began to furnish regular commercial service to consumers in the city in competition with the privately owned utility doing business there. The rate formerly in effect was for a small amount of service supplied from the municipal street lighting system to private parties at such times only, it appears, as the equipment was in operation for municipal purposes. *Held:* It is probable that the rates asked for by the applicant might have been accepted without hearing as rates for a new service had they been so filed with the Commission. The rates in question do not meet entirely with the approval of the Commission, but no alteration will be made under the present proceeding. The applicant is authorized to put into effect the schedule of rates described in its application. *In re Appl. City of Menasha*, 424, 426.

18. The Endeavor El. Lt. & P. Co. applies for authority to increase its rates for electric current. The plant is operated in connection with a creamery and in fixing the rates the management underestimated the cost of conducting the electric business. A valuation was made and the revenues and expenses were investigated. It was found that the utility is operating at a loss under the present rates and that even the rates proposed by the utility will fail to yield a fair return and will probably be insufficient to cover depreciation and other operating expenses. *Held:* Though a somewhat different schedule of rates might be recommended, the schedule proposd by the utility is not unreasonable. The utility is therefore authorized to put this schedule into effect. *In re Appl. Endeavor El. Lt. & P. Co.*, 448, 451.

19. The Mt. Horeb Heat, Lt. & P. Co. applies for authority to increase its rates for electric current. A valuation of the physical property of the applicant was made and the revenues and expenses were investigated. The applicant has recently changed its method of generation from steam to producer gas, increased its investment and made plans to furnish its consumers with current during the daytime and to otherwise improve the service. Two computations are accordingly made of revenues and expenses, one being based upon conditions before the changes mentioned, the other upon estimates of what the expenses and sales will be under the new conditions. *Held:* The applicant's rates require revision. The applicant is authorized to put into effect a schedule of rates fixed by the Commission. *In re Appl. Mt. Horeb Heat, Lt. & P. Co.* 653, 664–665.

20. The village of Withee, which is operating an electric plant under a six months' lease from the owner, applies for authority to increase its rates for electric current. No satisfactory record information is available as to the value of the plant, its revenues, its expenses or its consumer statistics. It has therefore been necessary to estimate probable revenues and expenses upon the basis of such specific and comparative data as could be secured and the results, consequently, can only be tentative. *Held:* (1) The applicant's rates should be revised. (2) A station watt-hour meter should be installed for the purpose of aiding in providing records upon which it will be possible to accurately determine the cost of supplying service. The applicant is ordered (1) to put into effect a schedule of rates fixed by the Commission; and (2) to install within thirty days a station watt-hour meter to measure the output of the plant. Though flat rates fixed at a certain rate per lamp

usually result in unequal treatment of consumers and in the wasteful use of current, and usually, because of the high figure at which they must be placed, discourage the development of business, in the instant case it is not deemed advisable to require the utility to furnish or install meters at its own expense for consumers using less than four 50-watt units or their equivalent in any one building. The order, therefore, provides flat rates for residence and commercial consumers falling within this class, though it authorizes the utility, if it so desires, to install a meter for any commercial consumer. *In re Appl. Village of Withee*, 704, 709–711.

Reasonableness of rates—Matters considered in determining reasonableness—Comparative data.

21. In order to arrive at a schedule of reasonable rates, a basis of normal and reasonable costs must be established. It is not enough merely to take an average of expenses for a given period, but expenses must be obtained in detail for a sufficiently long period, and the details must be studied and analyzed and compared with the costs of similar plants. When such analyses and comparisons are properly made, the results are of marked value as indicating what are normal costs and the extent to which these costs are influenced by conditions peculiar to the locality. In this case it has seemed advisable to investigate the probable cost of generation by a steam plant furnishing current under conditions similar to those existing in Neshkoro. *In re Appl. Neshkoro Lt. & P. Co.* 52, 59–60.

Reasonableness of rates—Matters considered in determining reasonableness—Cost of service.

See ante, 21.

Reasonableness of rates—Matters considered in determining reasonableness—Net earnings of utility.

22. An examination of the reports of the utility to the Commission must be made to determine whether the present net earnings of the plant are assured; whether they are high enough to warrant keeping the rates as low as at present and whether the net earnings for some of the more recent years have exceeded the average net earnings for the entire period considered. Where clear and logical reports are available for examination, these points may be determined with ease and accuracy. *In re Appl. Neshkoro Lt. & P. Co.* 52, 55.

Reasonableness of rates in particular cases.

23. The Commission, on its own motion, further investigated the matter of the electric rates charged by the Chippewa Valley Ry. Lt. & P. Co. for service in the city of Eau Claire, for the purpose of considering the advisability of revising the order issued Nov. 11, 1912 (10 W. R. C. R. 692). This order, which gave the utility a choice between two schedules designed to eliminate discriminatory practices previously followed, was suspended prior to the date on which it was to go into effect, on the ground that the utility had additional facts to present to the Commission. *Held:* The adoption of either of the schedules proposed in the order of Nov. 11, 1912, would result in many increases in rates which do not seem warranted at the present time. The order in question is therefore revoked and the utility is ordered to place in effect on Dec. 1, 1913, a new schedule of rates determined by the Commission. *In re Invest. Chippewa Valley Ry. Lt. & P. Co.* 19–22.

24. The city of Waukesha complains that the rates charged by the Waukesha G. and El. Co. for electric service in the city of Waukesha

are excessive. The respondent operates a joint utility composed of three individual utilities engaged in the manufacture and sale of gas, electricity and heat. A valuation of the property of the utilities was made and the unit physical investment in the electric utility was compared with the unit physical investment in similar utilities valued by the Commission. The revenues and expenses were apportioned between capacity and output expenses and further apportioned among commercial lighting, commercial power and street lighting expenses. The utility has suffered heavy losses partly, perhaps, because of the fact that the controlling company, being primarily interested in the sale of gas, has made little effort to increase the sales of electricity. The undeveloped condition of the business of the electric utility is in large part due to the fact that the commercial lighting consumers have been compelled to pay rates high enough to include costs which should have been borne by the power consumers. Fully 90 per cent of the power consumption is paid for at rates which are less than the cost of rendering power service, and the losses thus incurred are recouped, so far as recouped at all, from the rates charged commercial lighting consumers. *Held:* The utility is not earning excessive profits but its rate schedule requires revision for the purpose of eliminating certain regressive or otherwise discriminatory features. The utility is ordered to put into effect a schedule determined by the Commission. This schedule is designed to be developmental and it therefore does not provide sufficient revenue at present to pay a fair return on the investment. The order is tentative and will be modified when the necessity for modification appears. *City of Waukesha v. Waukesha G. & El. Co.* 100, 131–135.

25. The Commission, on its own motion, investigated the rates of the Madison G. & El. Co. A valuation was computed on the basis of the fair value used in a previous investigation of the utility (1911, 7 W. R. C. R. 152) and subsequent additions to property, the revenues and expenses of the electric department were analyzed and the expenses were apportioned among the different classes of service. *Held:* A substantial reduction in the rates for incandescent lighting is possible. Inasmuch as the findings of the Commission in the instant case are the result of an informal proceeding, no formal order is issued but it is recommended that the utility put into effect for this class of service a schedule of rates prescribed by the Commission. *In re Madison G. & El. Co.*, 259, 264–267.

26. The order issued Nov. 4, 1913, 13 W. R. C. R. 19, in this matter was suspended for one month upon application of the utility to enable it to so adjust conditions that the regular commercial lighting schedule could be put into effect. This adjustment has now been made and as the regular lighting schedule appears to be reasonable and as it abolishes certain discriminatory features which have existed for some time it appears that this schedule with certain modifications should be placed in effect. The order of Nov. 4, 1913, is therefore revoked and the utility is ordered to put into effect the schedule in question as prescribed by the Commission. *In re Investigation Chippewa Valley Ry. Lt. & P. Co.* 444, 447.

27. The Commission, having received complaints that the rates of the Mosinee Lt. & P. Co. are unreasonable and excessive, investigated the matter on its own motion. A valuation was made, the revenues and expenses were analyzed and the expenses were apportioned among commercial lighting, commercial power, and street lighting. The utility began operation in October, 1911, and so far has paid no taxes and made no provision for depreciation. Expenses for these purposes will have to be met in the future, however, and they are therefore considered in determining the reasonableness of rates for the services of the utility. The utility now has in effect for commercial lighting a

schedule of rates which takes into account only the amount of electric energy used by a consumer without regard to his installation. *Held:* The utility's present schedule of rates requires revision. The utility is ordered to put into effect a schedule of rates fixed by the Commission. The minimum bill is to be 50 cts. per month. This amount may not be sufficient to fully cover every consumer's proportionate share of the total expenses of the utility, but it should be sufficient to cover the additional expense incurred in giving him service and to leave some excess to reduce costs to other consumers. *In re Invest. Mosinee El. Lt. & P. Co.*, 712, 723–725.

RATES—EXPRESS.

Block system of rates.
See post, 1.

Reasonableness of rates in particular cases.

1. The date on which the order issued in this matter on May 20, 1913, (12 W. R. C. R. 1, 43) should become effective has been postponed from time to time pending the decision of the appeal from the order to the circuit court for Dane county and the making by the Commission of certain additional investigations. The latest postponement makes the order effective on Feb. 1, 1914. The respondent express companies, however, desire to put into effect rates for temporary use which will be in harmony with the interstate express rates recently established by the interstate commerce commission to become effective Feb. 1, 1914. *Held:* Though the rates proposed by the express companies do not entirely agree with the Commission's ideas of what those rates should be, it is the opinion of the Commission that, in view of the fact that the rates as proposed will confer many benefits on the shippers of the state, these rates should be permitted to become effective for the time being with the exception of such as are higher than the interstate rates between the same blocks would be. The respondents are therefore ordered to put into effect the rates, classifications and bases of charge shown in the tariffs W. R. C. numbers 5, 6, 7 and 9 filed by them with the Commission, provided that where block rates between points in Wisconsin as named in these tariffs are higher than the interstate rates effective Feb. 1, 1914, between the blocks in which such points are located, the rates named in the tariffs shall be reduced to an equality with the interstate rates. The rates prescribed are to become effective immediately upon the filing of the tariffs in the manner required by law. The order of May 20, 1913, (12 W. R. C. R. 1, 43) is rescinded. *In re Invest. Express Rates*, 666, 668.

RATES—GAS.

See also MINIMUM CHARGES.

Making rates—Elements considered—Cost of service—Output, capacity and consumer costs.

1. The probability that taxing officers will use the value placed by the Commission upon the property of a utility as the basis for assessing higher taxes against the utility should be taken into consideration in fixing rates for the services of the utility. Taxes are a legitimate expense of production and must be met from the revenues of the utility. *City of Waukesha v. Waukesha G. & El. Co.* 100, 115–116.

2. Although the Commission has no power to determine the taxes to be paid on the property of a utility the Commission must take these taxes into consideration in fixing rates for the service of the utility.

Such taxes are a necessary cost of operation and must be provided for out of the revenues of the utility. *Yanko et al. v. Portage American Gas Co.* 136, 141.

Reasonableness of advance in rates in particular cases.

3. The Manitowoc Gas Co. applies for authority to put into effect a schedule of increased rates. The present rates are the result of a series of rate amendments made voluntarily by the utility since 1907 and effecting successive reductions, apparently for the purpose of developing business. The utility now compares favorably, in respect both to number of consumers and sales per consumer, with other gas utilities in the state operating under similar circumstances, and it is unlikely that anything more than a gradual, normal development of the business will be experienced in the future. A valuation of the physical property was made and the total value, including all elements, established as between $196,000 and $200,000, a final statement of the value of the property not being necessary to the decision of the case. The utility offers no valuation of the property as a whole but submits a brief enumerating amount claimed for various elements of value. This brief is considered in detail. Investigation of the earnings and expenses of the utility for the past two fiscal years shows that when proper charges are made to operating expenses for promotion of business, general expenses and depreciation the amount available under the present rates for interest and profits is insufficient to provide even a 6 per cent return on the value of the property when taken at the lower figure stated above. To arrive at a schedule of rates which will yield a fair return, tentative apportionments of expenses between consumer and output expenses are made upon an assumed valuation of $200,000 for interest rates of 6 and 7 per cent, respectively, and estimates are made of the revenues which, as shown by the experience of other gas plants investigated by the Commission, would probably result from a number of different rate schedules. *Held:* Although some increase in revenues is needed under existing conditions, the increase asked for by the utility is unnecessarily large. The utility is therefore authorized to put into effect a rate of $1.05 per thousand cubic feet, net, or $1.15 gross, for fuel and illuminating gas. All other rates are to remain as at present. *In re Appl. Manitowoc G. Co.* 325, 339.

Reasonableness of rates in particular cases.

4. The city of Waukesha complains that the rates charged by the Waukesha G. and El. Co. for gas service in the city of Waukesha are excessive. The respondent operates a joint utility composed of three individual utilities engaged in the manufacture and sale of gas, electricity and heat. A valuation of the property of the utilities was made and the unit physical investment in the gas utility was compared with the unit physical investment in similar utilities valued by the Commission. The revenues and expenses of the gas utility were investigated and the expenses were apportioned between consumer and output expenses. The utility, though one of the best developed businesses in the state, has suffered losses and is at present earning less than enough to provide adequately for interest and depreciation, because of fixed charges which are heavy in comparison with the volume of business done. *Held:* The utility is not earning excessive profits but is operating at a loss. The rate schedule requires revision, however, for the purpose of eliminating certain regressive or otherwise discriminatory features. The utility is ordered to put into effect a schedule of rates determined by the Commission. The order is tentative and will be modified when the necessity for modification appears. *City of Waukesha v. Waukesha G. & El. Co.* 100, 131–135.

5. The petitioners allege that the rates charged by the Portage American Gas Co. in the city of Portage are excessive. A valuation was made and the revenues and expenses were investigated. The expenses were further apportioned between consumer and output expenses and were further apportioned between commercial and municipal lighting. The business of the utility appears to have about reached its maximum development from the point of view both of the number of consumers and the total sales of gas. Comparison of the unit costs of the utility with those of other coal gas plants in Wisconsin indicates that the utility is efficiently managed. *Held:* The rates charged by the respondent for commercial service require revision. The respondent is ordered to put into effect a schedule of rates determined by the Commission. Power service, which is of little or no importance in the business of the respondent, is to be charged for at the same rates as commercial service. The present rates for street lighting are reasonable and will be left unchanged. *Yanko et al v. Portage American Gas Co.* 136, 144.

6. The Commission on its own motion, investigated the rates of the Madison G. & El. Co. A valuation was computed on the basis of the fair value used in a previous investigation of the utility (1911, 7 W. R. C. R. 152) and subsequent additions to property, the revenues and expenses of the electric department were analyzed and the expenses were apportioned among the different classes of service. *Held:* Because of changes which the utility is making in its methods of production no alteration should be made in the gas rates at the present time. *In re Madison G. & El. Co.* 259, 264.

RATES—HEATING.

Making rates—Elements considered—Cost of service—Output, capacity and consumer costs.

1. The probability that taxing officers will use the value placed by the Commission upon the property of the utility as the basis for assessing higher taxes against the utility should be taken into consideration in fixing rates for the service of the utility. Taxes are a legitimate expense of production and must be met from the revenues of the utility. *City of Waukesha v. Waukesha G. & El. Co.* 100, 115–116.

Reasonableness of rates in particular cases.

2. The rates of the heating utility are not under review in the present proceeding, the heating utility being investigated only in connection with the apportionment of expenses for the gas and electric utilities. It appears, however, that the rates of this utility are too low to cover reasonable costs of operation. *City of Waukesha v. Waukesha G. & El. Co.* 100, 131.

RATES—INTERURBAN.

Distance basis for fares.

1. It is deemed that a basic rate of 2 cts. per passenger mile with a flat rate for the terminals and subterminals will best meet the requirements of the interurban service in the instant case. *In re Milw. Suburban & Interurban Ry. Rates,* 475, 488.

Fare limits—Reasonableness of single fare limits.

See post, 6.

Five cent zone system of rates.

2. The so-called five cent zone system of suburban and interurban rates in use on many interurban electric railways is unscientific and inequitable because of the unequal zone distances used, the concessions made to favored localities and favored classes of passengers at the expense of other localities and other classes of passengers and the consequent shifting of costs, in the form of excessive rates, onto patrons in the localities or classes discriminated against. In the instant case the one-way fares charged for different trips over the suburban and interurban lines of the two companies vary widely when compared on a passenger-mile basis. This discrimination has given rise to other discriminations such as those involved in the granting of overlapping zones and special and round trip rates to favored points. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 482–484.

Limit for commutation tickets—Extension of.

See post, 6.

Making rates—Elements considered—Cost of service.

3. It has been contended that the basic rate in the instant case should be placed upon a cost-of-service basis. When the conditions prevailing on the interurban system as indicated by the passenger density per car-mile are considered, however, it seems best to place the rate at a figure lower than the cost of service would demand so as to encourage the passenger density to increase sufficiently to bring the revenues to the point where they will bring an adequate return above all expenses. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 488–489.

Making rates—Elements considered—Nature of transportation business.

4. The nature of the transportation business is such as to make simplicity, uniformity and stability in rate schedules desirable. The basic rate for regular passenger fares upon the steam lines within the state, for example, is 2 cts. per passenger-mile and with few exceptions the fares are computed accordingly whether the company is large or small, whether the haul is long or short, whether the traffic is profitable or unprofitable, or whether the service is poor or excellent. If all these factors cited should be reflected in full force in the rates the probability is that the rates would vary all the way from 0.5 of a cent per mile to 50 cts. per mile. But the nature of the transportation business is such that the demand for simplicity, uniformity and stability is necessarily controlling because even a slight variation in basic rates would open the way to uncertainty in the minds of the riding public and would result in personal and local discrimination. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 489–490.

Making rates—Elements considered—Traffic conditions.

5. It has been contended in the instant case by representatives of various localities that the patrons of those separate lines or sections of lines having a higher traffic density and operating upon a better revenue basis should be granted fares lower than the fares computed upon a mileage basis. It is difficult, however, to see the justice of establishing such fares, especially when it is the object of this revision of existing rates to abolish, so far as practicable for the present, all special fares involving local discrimination, and to bring about simplicity, uniformity and stability in the rate schedule applying to these lines by disregarding any differences in revenues or operating conditions. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 489.

Reasonableness of rates in particular cases.

6. The T. M. E. R. & L. Co. and the M. L. H. & T. Co. ask that the Commission determine and prescribe reasonable uniform tariffs and schedules of rates for the suburban and interurban transportation service rendered by the two companies. The companies take this action at the suggestion of the Commission in order to dispose in one proceeding of the formal complaints covered in the present opinion and decision and a number of informal complaints which have been made, and to avoid future complaints by eliminating the discriminatory features of the suburban and interurban rate schedules now in effect. The remaining formal petitions listed in the title to this proceeding relate respectively to: (1) the round trip rates between Calhoun and West Allis and Calhoun and Milwaukee, which are alleged to be discriminatory as compared with more favorable rates over the same line between Waukesha and the same points; (2) the single fare limits in Wauwatosa, as recommended by the Commission and as required by the franchises under which the M. L. H. & T. Co. operates in Wauwatosa; (3) the alleged necessity of extending the limit for commutation tickets between the city of Racine and points in the town of Caledonia from Thielen stop to Four Mile road, a point about one-half mile north of Thielen stop, in order to make certain public places available as waiting stations; and, (4) and (5), the reasonableness of the suburban fares in effect between Milwaukee and West Allis, especially with respect to certain single fare limits which are alleged to discriminate unjustly against certain districts and to cause congestion of traffic and hence inadequate service in other districts. *Held:* The rates of fare charged by the T. M. E. R. & L. Co. and the M. L. H. & T. Co. for the suburban and interurban service involved in the present proceeding are unjustly discriminatory. The companies are therefore authorized to put into effect for this service schedules of rates determined by the Commission. These schedules include: (1) rates for suburban passenger service to and through the cities of West Allis and Wauwatosa and on the Wanderer's Rest Cemetery line, to and through the city of North Milwaukee, Whitefish Bay and Fox Point, South Milwaukee and Tippecanoe, and rates for local suburban hauls originating and terminating beyond the single fare limits of the city of Milwaukee; (2) rates through interurban passenger service upon the Milwaukee-Waukesha-Oconomowoc-Watertown line, the Milwaukee-Muskego Lakes-East Troy line, the Milwaukee-Waterford-Burlington line and the Milwaukee-Racine-Kenosha line; and (3) provision for the sale of tickets in packages for the payment of fares between points within the single fare limits of the city of Milwaukee and Marquette Boulevard in the city of South Milwaukee and for the sale of mileage books for the payment of interurban and suburban fares. Single fare limits for the city of Milwaukee are prescribed and all overlapping fare zones are to be abandoned. "Through interurban passenger service" upon the Milwaukee-Waukesha-Oconomowoc-Watertown line, the Milwaukee-Muskego Lakes-East Troy line and the Milwaukee-Waterford-Burlington line is defined as passenger service between any point within the single fare limits of Milwaukee and points beyond Woodlawn Stop, and upon the Milwaukee-Racine-Kenosha line as passenger service between any point within the single fare limits of Milwaukee and points beyond South Limits, South Milwaukee. The rates prescribed for suburban passenger service are based upon the city fare with an addition of 2 cts. for each 2 ct. zone, as determined by the Commission, traveled beyond the single fare limits of the city of Milwaukee. Passengers paying these rates are to be entitled to the privilege of the usual transfers within the single fare limits of the city of Milwaukee and upon the several suburban lines. The rate prescribed for through interurban passenger service is a uniform charge of 2 cts. per mile computed to

the nearest 1 ct. for the actual mileage, except the mileage included within the single fare limits of Milwaukee, for which the charge is in every case to be computed at 4 cts., and the mileage included within certain limits in Waukesha, Watertown, Burlington and Racine. The rate of fare per passenger for interurban service between points without the single fare limits of the city of Milwaukee is to be the difference between the through rates to these points. The minimum fare for any haul is to be 5 cts. Every interurban fare from or to Milwaukee, Racine, Kenosha, Burlington, Waukesha, Oconomowoc and Watertown is to entitle the passenger to the usual transfer privilege within the single fare limits of such cities where such privilege exists. The sale of all commutation and reduced round trip tickets which may now be in force is to be abandoned. The tickets to South Milwaukee authorized by the present order to be sold in packages are to be sold in packages of 20 for $2.50 and each ticket is to be good for one continuous ride between the points named, with privilege of transfers within the distance included. These tickets are to be sold for one year after date of installation. The mileage books authorized are to be for 300 miles at 1.8 cts. per mile, or $5.40 per book, and are to be good for the payment of any interurban or suburban fare, provided that the minimum fare thus payable shall amount to a five mile "tear." All complaints and petitions named in the present proceedings are dismissed insofar as they are not satisfied or granted by this order and insofar only as they relate to rates of fare for suburban and interurban passenger service. It is recommended, however, that the companies provide for a single fare of five cents to apply within the city limits of West Allis. The order is in no wise to affect or alter the rates now in effect for private, funeral, or chartered car service, or the present reduced "party rates" for passenger service, or rates for any service other than the carrying of passengers. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 498–517.

RATES—RAILWAY.

See also REPARATION; SWITCHING CHARGES; various commodity subject headings; WEIGHTS.

Unreasonable rates, reparation for, *see* REPARATION.

In general—Power of Commission to regulate rates.

1. The Commission cannot relieve a shipper from the payment of the lawful established tariff charges. To do so would be the equivalent of suspending the operation of the statute, which is not within the power of the Commission. It only has authority to authorize refunds when the payments made are found to be exorbitant, unusual, illegal or erroneous. *Paine Lbr. Co. Ltd. v. C. & N. W. R. Co.* 633, 634.

Commodity rates.

Commodity rates, establishment of, on beer, Milwaukee to Fond du Lac and Oshkosh, *see post*, 18.

Concentration rates.

Concentration rates on grain, Wisconsin points on the C. & N. W. Ry. to Janesville, *see post*, 29.

Demurrage charges.

Payment of, Commission without power to relieve shipper from payment of lawful established tariff charges, *see post*, 24.

Reasonableness of demurrage charges for delays caused by floods, *see post*, 24.

Group or blanket rates.
See post, 33.

Joint or through rates.
2. It may be assumed as a general rule in tariff making that where two or more railroad lines are used the joint rate should be less than the sum of the several rates. The joint rate should, however, be higher than the one-line-haul rate because of the added terminal or transfer costs incurred in a joint haul. *Pulp & Paper Mfrs. Traffic Assn. v. C. & N. W. R. Co. et al.* 735, 737.

Joint or through rates—Division of joint rates.
3. The petitioner asks for a reapportionment of the joint rates in effect between it and the respondent, as provided by the order in *Bowar et al. v. C. & S. C. R. Co. et al.* 1911, 6 W. R. C. R. 693, on the ground that the division of rates prescribed is confiscatory of its property. The petitioner, under this division, was to receive a mileage pro rata, with a minmum of 25 per cent, but not more than 25 per cent of the current rates to and from Milwaukee nor more than the local rate to or from the junction with the respondent's line. Since the filing of the petition and the hearing in the case the petitioner has passed into the hands of a receiver and its property has been purchased by new owners. *Held:* Inasmuch as the successors of the petitioner have given no notice of their intention to become a party to the present complaint the petition must be dismissed, but the matter may be taken up again at the instance of either party. *Cazenovia & Sauk City R. Co. v. C. & N. W. R. Co.* 744, 748.

Joint or through rates—Establisment of joint rates.
Joint rates on limestone, Waukesha to Wisconsin points, *see post*, 34.
on tile and on brick and tile, Wisconsin points, *see post*, 47.
on wood, Wisconsin points, *see post*, 50.

Making rates—Elements considered—Comparative data.
4. The Commission will not undertake to determine the reasonableness of rates by mere comparison with other existing rates. *Locke v. C. & N. W. R. Co.* 366, 367.

Making rates—Elements considered—Competitive conditions.
5. The Commission will not undertake to adjust rates in order to remove competitive disadvantages due to location. *Locke v. C. & N. W. R. Co.* 366, 367.

6. After the costs have been given due weight, one other matter enters into the question of reasonableness of rates, namely, competitive conditions. Not infrequently the regular rate of transportation would entirely prevent commodities from moving and it may often be to the best interests of the carriers and the community alike that these conditions be taken into account in the final rate adjustment. *Wausau Advancement Ass'n v. C. M. & St. P. R. Co.* 527, 530.

Making rates—Elements considered—Cost of service.
7. It is urged in support of the petition in the instant case that the movement of limestone used for agricultural purposes should be encouraged because of the benefit to the state arising from increased fertility. The Commission heartily concurs in the theory that increased productivity of agricultural lands is of large benefit to the community, but it is inclined to doubt that the movement of any commodity should, except under unusual circumstances, be encouraged by a rate so low as to fail to return to the carrier the costs of the service, thus throw-

ing a burden on the transportation of other commodities. In the instant case, however, it is possible to put into effect joint rates which will be remunerative to the carrier and still be such as to encourage the movement throughout the state of the commodity in question. *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 471, 473.

8. The petitioner in the instant case bases his case for a reduction of the rates in question upon comparisons of these rates with those to other points, but the Commission has repeatedly declared that the comparative basis alone is not always a safe one for rate making and that the best test of the reasonableness of a rate is usually found in the cost of service, including operating expenses, allowance for depreciation and return on investment. *Wausau Advancement Ass'n v. C. M. & St. P. R Co.* 527, 530.

Making rates—Elements considered—Length of haul.

9. In general it is true and in line with correct principles of rate making that the rate per ton-mile for short hauls is higher than the rate for long hauls. The reason for this is to be found in the fact that terminal expenses remaining constant, the total cost in the case of short hauls must be borne by a smaller number of ton-miles, thus increasing the cost per unit. *Wausau Advancement Ass'n v. C. M. & St. P. R. Co.* 527, 531.

Making rates—Elements considered—Movement expenses.

See post, 12.

Making rates—Elements considered—Nature of transportation business.

10. The nature of the transportation business is such as to make simplicity, uniformity and stability in rate schedules desirable. The basic rate for regular passenger fares upon the steam lines within the state, for example, is 2 cts. per passenger mile and with few exceptions the fares are computed accordingly whether the company is large or small, whether the haul is long or short, whether the traffic is profitable or unprofitable, or whether the service is poor or excellent. If all these factors cited should be reflected in full force in the rates the probability is that the rates would vary all the way from 0.5 of a cent per mile to 50 cts. per mile. But the nature of the transportation business is such that the demand for simplicity, uniformity and stability is necessarily controlling because even a slight variation in basic rates would open the way to uncertainty in the minds of the riding public and would result in personal and local discrimination. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 489–490.

Making rates—Elements considered—Prevention of monopoly of natural resource.

See post, 15–16.

Making rates—Elements considered—Public policy with respect to prevention of monopoly of natural resource.

See post, 15–16.

Making rates—Elements considered—Relation of rate to rates to intermediate points.

11. In the instant case the respondent objected to the reduction of the rates in question on the ground that their reduction would necessitate a reduction in the rates to intermediate points. *Held:* "It appears

that in this particular case the conditions are such that this fact alone should not be permitted to prevent the lowering of the rates complained of, if such action is warranted on such other grounds as would otherwise be accepted as good reasons for the reductions. The opposite course would simply mean that no change in these rates, no matter how necessary, could be made except upon investigations that are comprehensive enough to cover all rates directly or indirectly affected by such changes. If this view was consistently taken in all cases of this kind, regulation might be found to be so inelastic as to subserve no practical purpose, and so out of line with public policy as to be directly harmful." (*Wisconsin Box Co. et al. v. C. M. & St. P. R. Co. et al.* 1909, 3 W. R. C. R. 605, 619.) *Wausau Advancement Ass'n v. C. M. & St. P. R. Co.* 527, 532–533.

Making rates—Elements considered—Terminal and movement expenses.

12. In addition to general considerations of cost, a rate to be reasonable should take into account any special conditions which may operate to either increase or decrease the cost of handling above the average of all traffic, such as the amount of terminal handling required, the kind of equipment required, the regularity and amount of such traffic, and many other considerations. *Wausau Advancement Ass'n v. C. M. & St. P. R. Co.* 527, 530.

Milling of transient rates.

Milling in transit rates in grain, Wisconsin points on the C. & N. W. Ry. to Janesville, *see post*, 29.

Payment of rates—Commission without power to relieve shipper from payment of lawful established tariff charges.

13. The Commission cannot relieve a shipper from the payment of the lawful established tariff charges. To do so would be the equivalent of suspending the operation of the statute, which is not within the power of the Commission. It only has authority to authorize refunds when the payments are found to be exorbitant, unusual, illegal or erroneous. *Paine Lbr. Co. Ltd. v. C. & N. W. R. Co.* 633, 634.

Reasonableness of rates—Matters considered in determining reasonableness—Commercial conditions.

14. It must not be forgotten that the present system of rates is of long standing and that business has adjusted itself to these rates. It follows, then, that what changes must be made in the interest of justice between all parties concerned, must be made slowly and with due regard to relationships and values created in the past by the rates which in themselves contain the elements of discrimination. *Waukesha Lime and Stone Co. v. C. M. & St. P. R. Co. et al.* 534, 536–537.

Reasonableness of rates—Matters considered in determining reasonableness—Prevention of monopoly of natural resource.

15. It is against public policy to permit a railroad company to put into effect rates which will operate to seclude large timber resources for its sole benefit and exclude from sharing in those resources other portions of the state which have an equal need for them, for such action would lead to monopoly of the most offensive sort. In general it is the plain duty of transportation to do all that it may to lessen the inequalities existing between industries located in close proximity

to the raw material they require and industries further removed from their sources of supply. *Pulp & Paper Mfrs. Traffic Ass'n v. C. & N. W. R. Co. et al.* 735, 739.

16. "There may be no objection to having railways exert every proper effort to favor enterprises upon their lines. It may even be laudable to do so. Yet, when this ambition to maintain the integrity of an isolated railway domain and to foster the men and industries within that domain goes to the extent of establishing artificial trade relations and exclusive markets, the right to continue to pursue such a policy may well be drawn in question." (*Wis. Retail Lbr. Dealers Ass'n v. C. & N. W. R. Co. et al.* 1909, 3 W. R. C. R. 471, 481.) *Pulp & Paper Mfrs. Traffic Ass'n v. C. & N. W. R. Co. et al.* 735, 740.

Reasonableness of rates—Matters considered in determining reasonableness—Voluntary establishment of rate by company.

17. The fact that two other railroad companies jointly established the rate in question of their own accord and the further fact that the respondent company, after complaint had been filed, established the rate voluntarily, point to the reasonableness of the rate. *Wausau Box & Lumber Co. v. C. & N. W. R. Co.* 698, 700.

Reasonableness of rates in particular cases—Beer, Milwaukee to Fond du Lac and Oshkosh.

18. The petitioners allege that the rate of 12½ cts. per 100 lb. on beer from Milwaukee to Fond du Lac and Oshkosh is unjust, unreasonable and exorbitant. This rate is a fifth class rate applying to beer in carloads. Certain other points in Wisconsin situated similarly to Fond du Lac and Oshkosh are given a commodity rate of 10 cts. per 100 lb. on beer from Milwaukee. *Held:* There is no reason apparent for refusing to grant Oshkosh and Fond du Lac the commodity rate enjoyed by other stations similarly situated. The respondents are therefore ordered to put into effect a commodity rate of 10 cts. per 100 lb., subject to the minimum weight of 30,000 lb. per car, on shipments of beer from Milwaukee to Oshkosh and Fond du Lac. *Pabst Brewing Co. et al. v. C. M. & St. P. R. Co. et al.* 42, 46.

Reasonableness of rates in particular cases—Beer, Wausau to Tomahawk and Minocqua.

19. The petitioner alleges that the respondent's rates for the transportation of beer in carloads from Wausau to Tomahawk and Minocqua are unreasonable and unjustly discriminatory when compared with rates enjoyed by Milwaukee competitors of Wausau brewers. *Held:* The respondent's present rates on beer in carloads from Wausau to Tomahawk and Minocqua are unreasonably high, whether considered in relation to the cost of service or in comparison with similar rates elsewhere. The respondent is ordered to put in effect a rate of 9 cts. per 100 lb. for shipments from Wausau to Tomahawk and 11 cts. per 100 lb. for shipments from Wausau to Minocqua. *Wausau Advancement Ass'n v. C. M. & St. P. R. Co.* 527, 533.

Reasonableness of rates in particular cases—Boxes, Wausau to New London.

20. The petitioner alleges that the respondent has exacted for the transportation of wooden boxes, in carloads, from Wausau to New London rates and charges which are unjust and unreasonable when compared with rates exacted for the transportation of the same commodity between similar points in Wisconsin and asks for refund on certain

shipments. The charges complained of were based on the published tariff of the respondent but the rates on lumber and the box rates depending on the lumber rates have been voluntarily reduced by the respondent since the shipments moved. *Held:* The charges complained of were excessive and unreasonable. Refund is ordered on the basis of the rates now in effect. *Wausau Box & Lumber Co. v. C. & N. W. R. Co.* 698, 701.

Reasonableness of rates in particular cases—Boxes and lumber, Wausau to New London.

See post, 35.

Reasonableness of rates in particular cases—Brick, and tile and brick, Wisconsin points.

See post, 47.

Reasonableness of rates in particular cases—Building materials, Milwaukee to West Milwaukee.

21. The petitioner alleges that the charge assessed by the respondent for the transportation of 6 carloads of material for use in the construction of a paint and plating shop for the respondent at West Milwaukee was unusual and exorbitant and contends that the charge should have been made on a switching basis, inasmuch as the length of the haul was only one and a half miles and other points in the immediate vicinity and beyond are placed on a switching basis. When the shipments in question moved the respondent's switching tariff provided for switching rates between industries named in the tariff, but the consignee in the instant case, not being named in the tariff, was not entitled to receive the switching rates and was charged the distance rate for five miles or less. The respondent, however, subsequently modified its tariff to eliminate the discrimination presented by such cases. *Held:* The charge complained of was unusual and exorbitant. The reasonable charge would have been $5 per car. *Milwaukee Structural Steel Co. v. C. M. & St. P. R. Co.* 673, 675.

Reasonableness of rates in particular cases—Car stakes, Rhinelander to Armstrong Creek.

22. The petitioner alleges that it was erroneously charged for the transportation of three carloads of car stakes over the respondent's line from Rhinelander to Armstrong Creek. The car stakes were furnished and shipped by the petitioner for the use of the respondent in moving pulp wood for the petitioner. When the shipments moved the respondent's tariff relating to shipments of saw logs between points within the state provided that car stakes so transported should be returned and delivered to consignee without charge. *Held:* The charges exacted of the petitioner were unusual. Refund is ordered. *Rhinelander Paper Co. v. M. St. P. & S. S. M. R. Co.* 84, 85.

Reasonableness of rates in particular cases—Coke, Racine to North Fond du Lac.

23. The petitioner complains of the routing given a car of coke transported by the respondents from Racine to North Fond du Lac and asks for refund of the excess of the charge exacted above the charge which the petitioner alleges should have been assessed if the car had been properly routed. The car moved via the C. & N. W. Ry. from Racine to Waukesha and via the M. St. P. & S. S. M. Ry. from Waukesha to North Fond du Lac, and the total charge assessed includes the sum of the local rates plus the switching charge of a connecting line. The

petitioner contends that the shipment should have moved via the C. & N. W. Ry. to Fond du Lac and that the reasonable switching charge which should have been made by the M. St. P. & S. S. M. Ry. Co. for delivery at North Fond du Lac should have been absorbed by the C. & N. W. Ry. Co. *Held:* Although the shipment in question, in view of a carrier's obligation to choose the route having the less distance when the carrier has the choice of two possible routings, should have moved via Fond du Lac, the charge for transportation by this route would have been identical with the charge actually exacted. The petitioner has therefore suffered no injury and his petition, insofar as it relates to the matter of refund, is dismissed. It is recommended that the M. St. P. & S. S. M. R. Co. establish a switching rate of $5 per car between Fond du Lac and North Fond du Lac. *Callaway Fuel Co. v. C. & N. W. R. Co. et al.* 694, 697.

Reasonableness of rates in particular cases—Crushed stone and gravel, Waukesha to Wisconsin points.

See post, 31.

Reasonableness of rates in particular cases—Demurrage charges for delay in unloading caused by flood.

24. The petitioner complains of a bill presented to it for demurrage accrued on a number of cars loaded with logs. These cars petitioner was unable to unload into the river as usual because of the existence of a flood. He contends that the flood should be construed as an Act of God and that he should therefore be relieved from the payment of the demurrage. The demurrage rules in the respondent's tariffs make no exception for cases of delay caused by floods. *Held:* The Commission cannot relieve a shipper from the payment of the lawful established tariff charges but can only authorize refunds after the payments have been made and have been found to be exorbitant, unusual, illegal or erroneous. If the petitioner considers the respondent's demurrage rules as unreasonable its proper course of action is to pay the demurrage and apply for a refund. The petition is dismissed. *Paine Lbr. Co. Ltd. v. C. & N. W. R. Co.* 633, 634.

Reasonableness of rates in particular cases—Excelsior, Rice Lake to Waukesha.

25. The petitioner alleges that the respondent charged it at the rate of 13½ cts. per 100 lb., subject to a minimum weight of 30,000 lb. per car, for the transportation of two cars of excelsior from Rice Lake to Waukesha, instead of at the rate of 11½ cts. per 100 lb., subject to a minimum weight of 20,000 lb. per car, provided in the respondent's tariff. The respondent admits these allegations and joins in the prayer for relief. *Held:* The charge complained of was illegal and erroneous. Refund is ordered on the basis of the proper charge of 11½ cts. per 100 lb. *Selle & Co. v. M. St. P. & S. S. M. R. Co.* 635, 636.

Reasonableness of rates in particular cases—Farm trucks, Wisconsin points.

See post, 26.

Reasonableness of rates in particular cases—Farm wagons, farm trucks, gasoline engine trucks, logging trucks and extra wagon boxes, Wisconsin points.

26. The petitioners allege that the classification by the respondents of farm wagons (complete), farm trucks, gas engine trucks and extra wagon boxes and parts as first class is unjust and unreasonable. Prior

to Feb. 14, 1913, farm wagons, knocked down, in less than carload lots, were rated as first class and farm trucks, knocked down, in less than carload lots, were rated as third class. On the date named western classification No. 51 went into effect raising farm trucks to first class, thus rating them and farm wagons alike. This classification was subsequently replaced by western classification No. 52, but the latter does not differ materially from the former as to the points here at issue. Both the petitioners and the respondents are agreed that a uniform rating upon farm trucks and farm wagons is desirable in order to avoid confusion, but the petitioners contend that the two commodities should be rated as second class instead of first class, on the ground that the raising of farm trucks from third class to first class will unreasonably increase the price of farm trucks to the retail purchaser. *Held:* The classification of farm trucks as first class is not justifiable. The classification of both farm trucks and farm wagons as second class, however, is reasonable. The respondents are therefore ordered to discontinue the first class rating on farm wagons, farm trucks, logging trucks, and gasoline engine trucks, knocked down, and on parts thereof, including wagon boxes, knocked down, and to substitute therefor the second class rating. *Northwestern Mfg. Co. et al. v. C. & N. W. R. Co. et al.* 751, 755.

Reasonableness of rates in particular cases—Fuel, wood, Kennan to Phillips.

27. The petitioner (1) alleges that the rate of 4 cts. per cwt. exacted by the respondent for the transportation of 4 cars of fuel wood from Kennan to Phillips was excessive to the extent that it exceeds a rate of 3 cts. per cwt. and (2) prays that a rate of 3 cts. per cwt. be established for fuel wood moving between Kennan and Phillips. The respondent states that it is preparing a new fuel wood distance tariff providing a rate of 3 cts. for a distance of 30 miles and expresses its willingness to make the refund requested. *Held:* The rate complained of is unreasonable. A reasonable rate would not exceed 3 cts per cwt. It is therefore ordered: (1) that the respondent put into effect a rate of 3 cts. per cwt. on fuel wood in carloads from Kennan to Phillips. *Sullivan v. M. St. P. & S. S. M. R. Co.* 687, 689.

Reasonableness of rates in particular cases—Gasoline engine trucks, Wisconsin points.

See ante, 26.

Reasonableness of rates in particular cases—Grain, Richfield to Milwaukee.

28. The petitioner alleges that the rate of 4 cts. per 100 lb., charged by the respondent for carload shipments of grain from Richfield to Milwaukee, is erroneous, illegal, unusual and exorbitant and asks that the rate of 3½ cts. applying over the M. St. P. & S. S. M. Ry. for shipments from Duplainville, Templeton and Colgate to Milwaukee be established, and that refund be authorized on certain shipments made by the petitioner. Since the hearing the rate on grain to Milwaukee from the points named and other nearby points competing with Richfield has been changed from 3½ cts. to 4 cts. by all railroads passing through these points, and the petitioner is satisfied with this adjustment. Only the matter of reparation, therefore, remains to be determined by the Commission. *Held:* The petitioner is entitled to reparation. Refund is accordingly ordered on the basis of the 3½ ct. rate. *Wolf v. C. M. & St. P. R. Co.* 375, 377.

Reasonableness of rates in particular cases—Grain, Wisconsin points on the C. & N. W. Ry. to Janesville.

29. The petitioner alleges that the refusal of the respondent to absorb the connecting line switching charges on the in-movement of carload shipments of grain stopped in transit to be milled at the petitioner's mill at Janesville and reshipped over the respondent's line is unreasonable and that this refusal results in the exaction of exorbitant charges. The petitioner also asks for refund on certain shipments. The respondent formerly absorbed the switching charges in question but in a tariff effective Aug. 2, 1912, adopted a rule abandoning this practice. All shipments over the respondent's lines delivered to the petitioner have to be switched over the tracks of the C. M. & St. P. Ry. Co. as the respondent's tracks do not extend to the petitioner's mill. The present rule on switching charges was approved by the Commission in the belief that the respondent's statement that the old rule caused considerable confusion among its local agents and that there would be very few instances where the respondent would get a haul on a shipment of grain to be milled at an industry located on another line was correct. It appears, however, that in the case of the present petitioner shipments of this kind are numerous. The respondent contends in its answer to the petitioner: (1) that the business covered by the complaint was chiefly interstate; (2) that the milling-in-transit of grain was a privilege granted to shippers at a considerable expense to the company; and (3) that it generally required twice as many cars to ship out the mill product as to bring the grain. The practices of other railway companies in Wisconsin with respect to the absorption of switching charges show a lack of uniformity but the respondent appears to be the only important railway company in the state which does not absorb switching charges at the stopping point on any shipment stopped in transit for any purpose. The net cost to the respondent in having to pay the connecting line switching charge is not the full amount paid the connecting line but only such part of this amount as exceeds what it would cost the respondent to perform the same service if the respondent operated the facilities used. *Held:* The respondent's rule in force prior to Aug. 2, 1912, providing for the absorption of the switching charges of connecting lines at the stopping point on the in-movement of grain stopped in transit to be milled should be reinstated and all charges brought about by the change in this rule on the date named should be refunded. Inasmuch, however, as the data submitted with respect to the charges complained of do not show whether the shipments involved were intrastate or interstate, the Commission cannot authorize refund at this time. It is ordered that the respondent cease and desist from requiring the petitioner to pay connecting line switching charges, except as may be necessary for the protection of minimum revenues now provided for in case of other shipments, on the in-movement of grain stopped to be milled, etc. at Janesville, the product thereof to be forwarded against transit account. *Blodgett Milling Co. v. C. & N. W. R. Co.* 782, 789.

Reasonableness of rates in particular cases—Granite blocks, Ablemans to Milwaukee.

30. The petitioner alleges that the charge of 6 cts. per cwt. exacted by the respondent for the transportation of 77 carloads of granite blocks from Ablemans to Milwaukee is unusual and exorbitant and asks for refund of the excess of the amount collected above the amount assessable on the basis of a rate of 4 cts. per cwt. which the petitioner alleges is a reasonable rate, the rate now in effect and the rate in effect at the time the shipment moved from Red Granite, Montello,

Stevens Point and other Wisconsin points to Milwaukee and Chicago. *Held:* For reasons stated in *Milwaukee Sand Stone Co. v. C. & N. W. R. Co.* 13 W. R. C. R. 671, the charge complained of was unusual and exorbitant and the rate of 4 cts. per cwt. is a reasonable rate for the services rendered. *White Rock Quarry Co. v. C. & N. W. R. Co.* 669, 670.

Reasonableness of rates in particular cases—Gravel and crushed stone, Waukesha to Wisconsin points.

31. The complainant alleges that it was overcharged for the transportation of a number of carloads of gravel and crushed stone, from Waukesha to various points, through the action of the C. & N. W. Ry. Co. in failing to absorb switching charges out of a $15 line haul earning; applying the marked capacity of the car as the minimum weight for carload shipments; applying rates on file at the time, but subsequently reduced as unreasonable by the Commission, to shipments moving prior to July 27, 1912. *Held:* 1. The absorption of switching charges by the C. & N. W. Ry. Co. out of line haul earnings, insofar as possible without reducing the latter below $15, is correct according to the company's tariffs and is reasonable. 2. The application of the marked capacity of the car as the minimum weight for carload shipments, though correct according to the company's tariff put into effect for carload shipments of sand and gravel in compliance with the Commissioner's order of June 24, 1912, 9 W. R. C. R. 347, was unreasonable and is contrary to the present practice of the respondent company and other carriers in fixing the minimum weight at 90 per cent of the marked capacity of the car, which would have been reasonable in the instant case. 3. The rates ordered by the Commission on June 24, 1912, 9 W. R. C. R. 347, were reasonable at the date of the earliest movement of carloads of stone and gravel over which the Commission has jurisdiction under the present complaint. *Waukesha Lime & Stone v. C. & N. W. R. Co. et al.* 368, 371.

Reasonableness of rates in particular cases—Gravel and sand, Janesville to Wisconsin points on the C. M. & St. P. Ry.

See post, 38.

Reasonableness of rates in particular cases—Hay, Wisconsin points on the C. & N. W. Ry.

32. The complainant alleges that the respondent charged it an unjust and unreasonable rate for the transportation of hay in carloads between certain points in Wisconsin. The rate complained of was declared excessive in *Wausau Advancement Association v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 438. The shipments in question were involved in the complaint in the case cited but refunds were not authorized for the reason that the petitioner in that case was not a "person aggrieved" within the meaning of the law. *Held:* The shipments should have moved at the rate of 10 cts. per 100 lb., found to be reasonable in the case cited above. Refund is ordered on this basis for such shipments as moved within the then statutory period of one year previous to the time the complaint was filed. *Northern Milling Co. v. C. & N. W. R. Co.* 468, 470.

Reasonableness of rates in particular cases—Lime, Rockfield to Wisconsin points designated on the C. & N. W. Ry.

33. The petitioner alleges that certain rates on lime, granted in the case of the *Waukesha Lime & Stone Co. v. C. & N. W. R. Co.* (1913, 11 W. R. C. R. 419) for shipments from Waukesha, unduly discriminate against the petitioner, and prays that the rates for shipments of lime

from Rockfield, at which point the petitioner is located, to Racine, Kenosha, and other points be made the same as the rates granted by the Commission for shipments from Waukesha to these points. The petitioner is in competition with the Waukesha Lime & Stone Co. and, prior to the issuance of the order mentioned, enjoyed the same rates to Racine, Kenosha and other points as did the Waukesha company. Except in a few instances, the distances from Waukesha and Rockfield to the points in question differ considerably. To some of these points, however, the rate under the prevailing group rate system on lime should, perhaps, be the same from both places. *Held:* To more nearly equalize conditions, some adjustment of the present rates is necessary. The respondent is therefore ordered to put into effect rates prescribed by the Commission for shipments of lime in carloads from Rockfield to the stations named in the order, these rates to be subject to the same minimum weights and rules of transportation as are now in effect. *Mace Lime Co. v. C. & N. W. R. Co.* 38, 41.

Reasonableness of rates in particular cases—Limestone, Waukesha to Wisconsin points.

34. Petition is made for the establishment of joint rates on lime stone used for agricultural purposes shipped from Waukesha to stations on the respondents' lines. It is urged in support of the petition that the movement of the commodity in question should be encouraged because of the benefit to the state arising from increased fertility. The Commission heartily concurs in the theory that increased productivity of agricultural lands is of large benefit to the community, but it is inclined to doubt that the movement of any commodity should, except under unusual circumstances, be encouraged by a rate so low as to fail to return to the carrier the costs of the service, thus throwing a burden on the transportation of other commodities. In the instant case, however, it is possible to put into effect joint rates which will be remunerative to the carrier and still be such as to encourage the movement throughout the state of the commodity in question. The respondents are ordered to put into effect for interline shipments of limestone for agricultural purposes from Waukesha to points on their lines a tariff of joint rates determined by the Commission. This tariff is based on the distance tariff for carloads of sand, crushed stone and gravel shipped from Waukesha ordered in *Waukesha Lime & Stone Co. v. C. M. & St. P. Co. et al.* 1912, 9 W. R. C. R. 87–99 and 347–353, and *In re Investigation Rates on Sand etc. on C. M. & St. P. R.* 1912, 11 W. R. C. R. 98–100, but is modified by the addition of a charge to cover the expense of transfer at junction points. *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 471, 474.

Reasonableness of rates in particular cases—Logging trucks, Wisconsin points.

See ante, 26.

Reasonableness of rates in particular cases—Lumber and wooden boxes, Wausau to New London.

35. The petitioner alleges that the rates charged by the respondent for the transportation of lumber and wooden boxes from Wausau to New London are unjust and unreasonable as compared with corresponding rates to other points and asks that the respondent be directed to make refund of alleged excessive charges to certain shippers. Since the hearing the respondent has reduced its rates on lumber and wooden boxes from Wausau to New London to the point claimed as reasonable by the petitioner. The charges upon which refunds are asked were based upon lawful rates. *Held:* The Commission is without power to

decide upon the merits of complaints against lawful charges or to authorize refund of any part of such charges except on complaint of a person aggrieved by the exaction of the charges. Inasmuch as the petitioner in the instant case is not a person aggrieved and therefore entitled to ask for refund and inasmuch as a change in rates which satisfies the petitioner has been made, the petition is dismissed. *Wausau Advancement Ass'n v. C. & N. W. R. Co.* 772, 774.

Reasonableness of rates in particular cases—Pulp, Rothschild to Brokaw.

36. The petitioner alleges that the respondent exacted a rate of 3 cts. per cwt. for the transportation of eight cars of ground wood pulp shipped from Rothschild to Brokaw between July 11, 1912, and August 3, 1912, and prays for the refund of the excess of the charges paid above the charges assessable on the basis of the 2 ct. rate prescribed by the Commission for shipments of the kind in question in its order of July 11, 1912 (9 W. R. C. R. 400). The respondent admits the overcharges alleged insofar as the three cars moved after the Commission's order became effective on July 31, 1912, are concerned and has adjusted these overcharges with the petitioner. The respondent contends, however, that the rate of 3 cts. per cwt. was properly assessed on the five shipments which moved prior to July 31, 1912. *Held:* The rate of 2 cts. per cwt. fixed in the order of July 11, 1912, to become effective on July 31, 1912, was reasonable as far back as July 11, 1912. *Wausau Paper Mills Co. v. C. M. & St. P. R. Co.* 690, 693.

Reasonableness of rates in particular cases—Sand, Portage to Milwaukee and to Racine.

37. The petitioner alleges that the respondent overcharged it for the transportation of two carloads of sand from Portage to Milwaukee and one carload of sand from Portage to Racine, in that the respondent wrongly classified the sand as moulding sand and applied a rate later made applicable only to moulding sand. It appears that the respondent's tariff at the time the shipments moved provided one rate for all grades of sand but that subsequently a new tariff was put into effect which maintained this rate for moulding sand but fixed lower rates for other sand. *Held:* The charges complained of were excessive. The reasonable rate for the transportation of the two cars of sand from Portage to Milwaukee would have been the present distance rate of 2.82 cts. per cwt. for sand other than moulding sand moving a distance of ninety-five miles and the reasonable rate for the transportation of the car of sand from Portage to Racine would have been the present distance tariff rate of 3.2 cts. per cwt. for sand other than moulding sand. *Moritz v. C. M. & St. P. R. Co.* 684, 686.

Reasonableness of rates in particular cases—Sand and gravel, Janesville to Wisconsin points on the C. M. & St. P. Ry.

38. The petitioner complains that the respondent exacted charges for the transportation of certain carload lots of sand and gravel from Janesville to points within Wisconsin which were higher than the rates prescribed by the Commission in *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co.* 1912, 9 W. R. C. R. 86 and 347, and asks for refund and such further order as the Commission may deem necessary. It appears that the present case arises out of a misunderstanding, on the part of both the petitioner and the respondent, of the facts involved, inasmuch as the orders cited above prescribe rates for shipments from Waukesha only, although the Commission recommended that the rates ordered be made effective generally on the intrastate traffic of the railway companies affected. The present case, however, being brought in

good faith and upon what appear to be substantial grounds, is considered on its merits. The shipments in question moved before the order of Nov. 29, 1912, 11 W. R. C. R. 98, applying the rates prescribed for shipments of sand, gravel and crushed stone from Waukesha to similar shipments from all points on the respondent's line in Wisconsin, went into effect. *Held:* Inasmuch as the rate upon which the claim for reparation is based has already been held by the Commission, 11 W. R. C. R. 98, to be unreasonable and inasmuch as the respondent gave the petitioner reasonable assurance, upon which the petitioner relied, that the lower rate of the respondent's competitor would be met, refund should be granted. *So. Wis. Sand & Gravel Co. v. C. M. & St. P. R. Co.* 380, 389.

Reasonableness of rates in particular cases—Scrap iron, between Sheboygan Falls and Sheboygan and between Sheboygan and Milwaukee.

39. The petitioner alleges that the rates charged by the respondent for the transportation of scrap iron between Sheboygan Falls and Sheboygan and between Sheboygan and Milwaukee are unjustly discriminatory and excessive. *Held:* Although the Commission will not undertake to adjust rates for the purpose of removing competitive disadvantages due to location nor to determine the reasonableness of rates by mere comparison with other rates, the rates complained of must be regarded as excessive when the costs of performing the service and the return on the investment are considered. The respondent is therefore ordered to put into effect a rate of 2¾ cts. per cwt. on scrap iron and other scrap metals moving between Sheboygan and Sheboygan Falls and a rate of 4 cts. per cwt. on scrap iron and other scrap metals moving between Sheboygan and Milwaukee. *Locke v. C. & N. W. R. Co.* 366, 367.

Reasonableness of rates in particular cases—Slag, Milwaukee to Horicon.

40. The petitioner alleges that the respondent charged it an unusual and exorbitant rate for the transportation of certain carload shipments of slag from Milwaukee to Horicon. The rate in question, 5 cts. per 100 lb., was in accordance with the respondent's tariff at the time the shipments moved but has since been reduced to 50 cts. per ton of 2,240 lb. *Held:* The rate complained of was unusual and exorbitant. The rate of 50 cts. per ton of 2,240 lb. would have been adequate compensation for the service rendered. *International Harvester Corporation v. C. M. & St. P. R. Co.* 640, 641.

Reasonableness of rates in particular cases—Stone paving blocks, Ablemans to Milwaukee.

41. The petitioner alleges that the charges of 6 cts. per cwt. exacted by the respondent for the transportation of nine shipments of stone paving blocks from Ablemans to Milwaukee was excessive and prays for refund of the excess of the amount collected above the amount assessable on the basis of a rate of 4 cts. per cwt., which is the rate in effect for similar shipments moving from Red Granite, Montello, Stevens Point and other Wisconsin points to Milwaukee and Chicago. The respondent put the rate of 4 cts. in effect after the shipments in question moved and concedes that the petitioner's claim for reparation is valid. *Held:* The charge complained of was unreasonable and exorbitant. The reasonable rate would have been 4 cts. per cwt. *Milwaukee Sand Stone Co. v. C. & N. W. R. Co.* 671, 672.

Reasonableness of rates in particular cases—Switching charges, Fond du Lac, between Fond du Lac and No. Fond du Lac.

42. It appears in the instant case that no switching rates are now provided by the M. St. P. & S. S. M. Ry. Co. for hauls between Fond du Lac and No. Fond du Lac. The railway company, however, once expressed its willingness to put into effect a rate of $5 per car for this service and inasmuch as this appears to be a reasonable rate it is recommended that the company establish it for use in connection with traffic interchanged with the C. & N. W. Ry. at Fond du Lac. *Callaway Fuel Co. v. C. & N. W. R. Co.* 694, 697.

Reasonableness of rates in particular cases—Switching charges, Waukesha.

43. The complainant alleges that the charge of $4 per car exacted by the C. M. & St. P. Ry. Co. for local switching service at Waukesha is excessive. *Held:* The charge is reasonable. The petition is dismissed. *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 372, 374.

Reasonableness of rates in particular cases—Switching charges—Stone and gravel, Waukesha.

44. The complainant alleges that excessive and unreasonable charges were exacted from it for the movement of 31 cars from one of its plants located on the M. St. P. & S. S. M. Ry. in Waukesha to another plant located on the C. M. & St. P. Ry. in Waukesha. Only one of the 31 cars moved less than a year prior to the filing of the complaint, which was filed before ch. 66, laws of 1913, increasing the time in which such complaints may be filed from one year to two years, went into effect and therefore the charge on this car only can be considered. The charge in question was $7, made up of $5 for the services of the M. St. P. & S. S. M. Ry. Co. and $2 for the services of the C. M. & St. P. Ry. Co. The latter rate was according to tariff, but there is no tariff authority for the $5 charge, which should have been $4. The practice followed for many years by railroad companies in making switching movements for each other at rates less than those charged the public for similar services is likely to result in the imposition of unjust burdens on shippers in order to recoup losses thus sustained. Inasmuch, however, as the practice in question is one of long standing and as business has adjusted itself to it, such changes as are necessary in the interest of justice between the parties concerned should be made slowly. *Held:* The charge exacted was excessive. Six dollars would have been a reasonable charge and refund is ordered on that basis. *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 534, 537.

Reasonableness of rates in particular cases—Switching charges—Wood, Waukesha.

45. Complaint is made of certain charges which are exacted on carload shipments of slab wood, kiln wood and cordwood originating at Wisconsin points on the C. M. & St. P. and the C. & N. W. railroads and delivered to the complainant at its plant on the tracks of the C. M. & St. P. railroad at Waukesha. The complainant alleges: (1) that the charge of $4 per car for the service rendered by the C. M. & St. P. Ry. Co. and the M. St. P. & S. S. M. Ry. Co. in delivering cars brought into Waukesha by the C. & N. W. Ry. Co. is excessive by the amount that it exceeds $2; and (2) that the switching charges of the C. M. & St. P. Ry. Co. and the M. S. & P. & S. S. M. Ry. Co. should be absorbed by the C. & N. W. Ry. Co. out of a line haul charge of $15 per car instead of down to a net charge of $15 per car. *Held:* 1. The switching charge of

$4 is correct on the basis of the tariffs filed and is not unreasonable. 2. The absorption of switching charges down to a net line haul revenue of $15 is reasonable. The complaint is dismissed. *Waukesha Lime & Stone Co. v. C. & N. W. R. Co. et al.* 650, 652.

Reasonableness of rates in particular cases—Tanbark, Westboro to Milwaukee.

46. Complaint is made that excessive charges were exacted by the M. St. P. & S. S. M. Ry. Co. for the transportation of twelve carload shipments of tanbark from Westboro to Milwaukee. The shipments in question were loaded in box cars, for the purpose of making a test for the information of the Commission in deciding the case of *Barker & Stewart Lbr. Co. v. C. M. & St. P. R. Co.* 1913, 11 W. R. C. R. 537, of the amount of tanbark that could be loaded into this class of cars. Charges were assessed on the basis of the minimum rated capacity of the cars used, although the actual weight of the shipments, when the cars were loaded to full capacity, was less than the minimum weight applied. *Held:* The charges complained of should have been assessed on the basis of the rule which provides for the use of two cars for one when one car cannot be furnished to accommodate the minimum weight provided by tariff. *Barker & Stewart Lbr. Co. v. C. M. & St. P. R. Co. supra.* Refund is therefore ordered of the excess of the charges paid above what the charges would have been if based on the actual weight of the shipments. *Westboro Lbr. Co. v. M. St. P. & S. S. M. R. Co.* 378, 379.

Reasonableness of rates in particular cases—Tile, and brick and tile, Wisconsin points.

47. The petitioner alleges that the rates exacted by the respondents for the transportation of tile and of tile and brick in mixed carloads are excessive, unreasonable and unjust, and asks that rates be fixed for tile and for tile and brick in mixed carloads and that joint rates be determined for their transportation over two or more lines. Data introduced by the petitioner and the respondents relating to rates on tile in states adjacent to or near Wisconsin and to the cost of moving tile in Wisconsin are considered. An independent investigation of brick and tile rates in general and the cost of handling the traffic was also made. *Held:* The rates on drain tile and on mixed carloads of tile and brick should be revised and joint rates should be granted for the transportation of tile and of brick and tile in mixed carloads. The respondents are therefore ordered: (1) to put into effect a schedule of rates fixed by the Commission for the transportation of drain tile in carloads, subject to a minimum weight of 36,000 lb.; (2) to apply on mixed carloads of tile and brick either the rate and minimum on brick or the rate and minimum on tile in such a manner as to produce the greatest charge; and (3) to establish and maintain joint rates on tile and on brick and tile not exceeding the local rate for any distance by more than 1¼ ct. per cwt. *Wis. Clay Mfrs. Assn. v. C. M. & St. P. R. Co. et al.* 756, 762.

Reasonableness of rates in particular cases—Twine, Waupun to Menomonie.

48. The petitioner alleges that it was overcharged for the transportation of a carload of twine from Waupun to Menomonie through the assessment of charges on a weight of 30,000 lb. instead of the correct weight of 28,000 lb. and the movement of the shipment by the most expensive route. The shipment moved from Waupun to Camp Douglas over the C. M. & St. P. Ry. and from the latter point to Augusta over the C. St. P. M. & O. Ry. The shipment should have moved as directed

by the petitioner from Waupun to Burnett Jct. by way of the C. M. & St. P. Ry. and thence to Menomonie by way of the C. & N. W. Ry. and the C. St. P. M. & O. Ry. It appears that the actual weight of the shipment was 27,000 lb. *Held:* The petitioner is entitled to reparation on the basis of the actual weight of the shipment and the rate over the cheaper route. *Kraft, Radtke & Quilling Co. v. C. M. & St. P. R. Co. et al.* 393, 394.

Reasonableness of rates in particular cases—Wagon boxes, Wisconsin points.

See ante, 26.

Reasonableness of rates in particular cases—Wood, Oshkosh to Wisconsin points on the C. & N. W. Ry.

49. The petitioner complains of the rates charged by the respondent for the transportation of dry slab wood and edging and asks for refund on certain shipments. The respondent's tariff provides separate schedules of rates, both distance and group, for carloads of high and low minimum weights. Shipments subject to a low minimum weight take a higher rate than shipments subject to a high minimum weight. The respondent states that the high rate, low minimum basis is intended to apply on dry slabs because of their light loading, while the low rate, high minimum is intended to apply on green slabs, cordwood and the like. The petitioner alleges that the high rate, low minimum basis is practically prohibitive when applied to dry slab wood and edging and desires to have the low rate schedule made directly applicable to shipments of this commodity by the adoption of a minimum weight or weights which can be loaded. The petitioner's request for refund appears to be based upon the fact that his orders for cars of such size that the high minimum, low rate schedules would apply to his shipments were filled by cars of a smaller size taking the low minimum. *Held:* Some readjustment of the relation between the two sets of minima and rates as at present arranged should perhaps be made. (1) The minimum weights in the high rate schedule, which seem unnecessarily low, might well be advanced and the rates in these schedules reduced. No order is issued with respect to these rates, but it is recommended that the respondent submit to the Commission for approval a new schedule of minimum weights and a new schedule of rates applying in connection with these minima to supersede the present schedules. (2) The low minimum, high rate schedules, under which the charges complained of were paid, were lawfully in force when the shipments involved moved. The charges in question do not appear to be erroneous, illegal, unusual or exorbitant. Refund therefore cannot be authorized. The petition is dismissed. *Oshkosh Fuel Co. v. C. & N. W. R. Co.* 775, 781.

Reasonableness of rates in particular cases—Wood, Wisconsin points.

50. Petition is made for the establishment of joint rates on pulp wood to be applicable throughout the state. The petitioner alleges that the joint rates now charged, which are made up of the sum of the local rates, are excessive, unjust and unreasonable and that, because of the growing scarcity of pulp wood in Wisconsin and the consequently increasing length of haul, these rates place the Wisconsin mills at a disadvantage in their competition with mills in Minnesota and New England. The petitioner suggests that joint rates equal to 80 per cent of the sum of the local rates would be reasonable. Two of the respondents, the Stanley, Merrill & Phillips R. R. Co. and the M. St. P. & S. S. M. Ry. Co., contend that the establishment of such rates would work

them an injustice by encouraging the shipping from the territory served by them of raw material which is needed to supply local industries already established there. Another of the respondents, the C. & N. W. Ry. Co., proposes the establishment of joint rates equal to the one-line-haul rates plus 1 ct. per cwt. to compensate for the additional terminal or transfer expenses. The effects of the rates suggested are analyzed and compared with the effects of other rates based upon the one-line-haul rate plus arbitraries of different amounts. It is against public policy to permit a railroad company to put into effect rates which will operate to seclude large timber resources for its sole benefit and exclude from sharing in those resources other portions of the state which have an equal need for them, for such action would lead to monopoly of the most offensive sort. In general it is the plain duty of transportation to do all that it may to lessen the inequalities existing between industries located in close proximity to the raw material they require and industries further removed from their sources of supply. *Held:* Joint rates, computed by adding an arbitrary of ¾ of a cent per cwt. to the present single-line distance rates for each transfer from one road to another, are reasonable for the traffic in question. The respondents are therefore ordered to establish such joint rates to apply to shipments of pulp wood in carloads. *Pulp & Paper Mfrs. Traffic Assn. v. C. & N. W. R. Co. et al.* 735, 743.

Reasonableness of rates in particular cases—Wood, Wisconsin points on the M. St. P. & S. S. M. Ry. to Waukesha.

51. The complainant alleges: (1) that it was overcharged on a number of shipments of slab wood, kiln wood and cordwood moving from points in Wisconsin on the "Soo" line to Waukesha and there turned over to the C. M. & St. P. Ry. Co. for delivery to the complainant at its plant on the C. M. & St. P. Ry. Co.'s tracks; and (2) that the local switching charge exacted by the C. M. & St. P. Ry. Co. is excessive. The complaint with respect to the alleged overcharges appears to be based primarily upon a misunderstanding of the rule in the "Soo" line's tariff for the absorption of switching charges of connecting lines. This rule provides for the absorption by the "Soo" line at junction points on its Chicago division of "the switching charges of connecting lines, or such portion of them as will not reduce charges below $15 per car, if from or to station on its line, or $20 per car if from or to stations on connecting lines." The term "charges," as used in the rule, evidently means the line haul charges of the issuing line and not the total charge including both the line haul charges and the switching charge. *Held:* (1) The absorption of the switching charges as made by the "Soo" Ry. Co. on the cars named in the complaint was reasonable and correct insofar as may be determined from the record of weights and charges presented by the complainant. (2) The C. M. & St. P. Ry. Co's switching charge of $4 per car is reasonable. The petition is therefore dismissed. *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 372, 374.

Reasonableness of rates in particular cases—Wood, Wisconsin points to Waukesha.

52. Complaint is made of certain charges which are exacted on carload shipments of slab wood, kiln wood and cordwood originating at Wisconsin points on the C. M. & St. P. and the C. & N. W. railroads and delivered to the complainant at its plant on the tracks of the C. M. & St. P. railroad at Waukesha. The complainant contends that the charge of the C. & N. W. Ry. Co. and the C. M. & St. P. Ry. Co. for line haul should in every case be computed on the actual weight of fuel wood in the car at the lowest rate. *Held:* The custom of having a dual

basis of computing charges on wood, using either a high rate and low minimum or a low rate and high minimum in order to obtain the lowest charge, is not entirely defensible, but inasmuch as the present rates when combined with the prescribed minimum are not excessive, the request that the minimum used with the low rate in the instant case be lowered cannot be granted. The complaint is dismissed. *Waukesha Lime & Stone Co. v. C. & N. W. R. Co. et al.* 650, 651–652.

Reasonableness of rates in particular cases—Wooden boxes and lumber, Wausau to New London.

See ante, 35.

Switching charges.

Waukesha, on the C. M. & St. P. Ry., *see ante,* 43.

Switching charges—Reciprocal switching rate.

53. A reciprocal rate, or the charge as between carriers for switching service, should not differ from the rate quoted the individual shipper for the same service, and either rate should be sufficient to pay the costs incurred and contribute in some part, large or small, depending upon other conditions, to the return of the carrier upon its investment. *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 534, 536.

RATES—STREET RAILWAY.

Discrimination in street railway rates, see DISCRIMINATION, 6.

Fare limits—Extension of single fare limits.

See post, 10.

Fare limits—Reasonableness of single fare limits.

See post, 10.

Fares—Transfer privileges on payment of single fare.

1. The question of double transfers in the city of Milwaukee is raised in the instant case. *Held:* In order to facilitate travel and relieve congestion in the down-town district, it is now necessary that the matter of double transfers should receive general consideration. The company should make a study of the matter and extend the double transfer system where it is necessary to secure the desired results, and if this is not accomplished in a satisfactory manner, it will be necessary for the Commission to make further investigations and formally consider this question. *In re Service of T. M. E. R. & L. Co. in Milwaukee,* 178, 213.

Five-cent zone system of rates.

2. The so-called five-cent zone system of suburban and interurban rates in use on many interurban electric railways is unscientific and inequitable because of the unequal zone distances used, the concessions made to favored localities and favored classes of passengers at the expense of either localities and other classes of passengers and the consequent shifting of costs, in the form of excessive rates, onto patrons in the localities or classes discriminated against. In the instant case the one-way fares charged for different trips over the suburban and interurban lines of the two companies vary widely when compared on a passenger-mile basis. This discrimination has given rise to other discriminations such as those involved in the granting of overlapping zones and special and round trip rates to favored points. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 482–484.

Making rates—Elements considered—Cost of service.

3. It has been contended that the basic rate in the instant case should be placed upon a cost-of-service basis. When the conditions prevailing on the interurban system as indicated by the passenger density per car-mile are considered, however, it seems best to place the rate at a figure lower than the cost of service would demand so as to encourage the passenger density to increase sufficiently to bring the revenues to the point where they will bring an adequate return above all expenses. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 488–489.

Making rates—Elements considered—Nature of transportation business.

4. The nature of the transportation business is such as to make simplicity, uniformity and stability in rate schedules desirable. The basic rate for regular passenger fares upon the steam lines within the state, for example, is 2 cts. per passenger-mile and with few exceptions the fares are computed accordingly whether the company is large or small, whether the haul is long or short, whether the traffic is profitable or unprofitable, or whether the service is poor or excellent. If all these factors cited should be reflected in full force in the rates the probability is that the rates would vary all the way from 0.5 of a cent per mile to 50 cts. per mile. But the nature of the transportation business is such that the demand for simplicity, uniformity and stability is necessarily controlling because even a slight variation in basic rates would open the way to uncertainty in the minds of the riding public and would result in personal and local discrimination. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 489–490.

Making rates—Elements considered—Traffic conditions.

5. It has been contended in the instant case by representatives of various localities that the patrons of those separate lines or sections of lines having a higher traffic density and operating upon a better revenue basis should be granted fares lower than the fares computed upon a mileage basis. It is difficult, however, to see the justice of establishing such fares, especially when it is the object of this revision of existing rates to abolish, so far as practicable for the present, all special fares involving local discrimination, and to bring about simplicity, uniformity and stability in the rate schedules applying to these lines by disregarding any differences in revenues or operating conditions. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 489.

Reasonableness of rates—Matters considered in determining reasonableness—Cost of service—Allowance for paving to be constructed in the future.

6. It does not seem necessary to provide for paving costs in the distant future, as conditions at that time may have changed considerably, and to provide for the paving work which may reasonably be expected within the near future, say four or five years, is no doubt all that can reasonably be expected here. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 233.

Reasonableness of rates—Matters considered in determining reasonableness—Cost of service—Interest and profits.

7. In the instant case an allowance of 7½ per cent on the value of the property is included in the total operating expenses for interest and profit. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 239.

Reasonableness of rates—Matters considered in determining reasonableness—Decrease in earnings due to quantity rate on tickets prescribed in previous order of Commission.

8. Allowance is made in the instant case for the reduction of earnings resulting from the provisions of the order in *City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 1, 305, which requires the sale of 13 tickets for 50 cts. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 235–236.

Reasonableness of rates in particular cases.

9. The street railway company contends in the instant case that the revenue yielded by the rates provided for the company by the order of the Commission in the *Fare Case* (*City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 1, 369), is not sufficient to meet reasonable expenses under present conditions without the making of any further improvements in service. A valuation was computed and the revenues and expenses were investigated, data presented in the *Fare Case* being used with new data as the basis for further analyses. Necessary apportionments are made between T. M. E. R. & L. Co. and the M. L. H. & T. Co. In the study of expense for maintenance of equipment consideration is given to comparative data on the unit costs of street railway companies in other large cities. *Held:* Investigation of the costs of rendering service conforming to the standards of service established as adequate in the instant case shows that the cost can reasonably be met from the revenue yielded by the rates ordered by the Commission in the *Fare Case*. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 241–244.

10. The T. M. E. R. & L. Co. and the M. L. H. & T. Co. ask that the Commission determine and prescribe reasonable uniform tariffs and schedules of rates for the suburban and interurban transportation service rendered by the two companies. The companies take this action at the suggestion of the Commission in order to dispose in one proceeding of the formal complaints covered in the present opinion and decision and a number of informal complaints which have been made and to avoid future complaints by eliminating the discriminatory features of the suburban and interurban rate schedules now in effect. The remaining formal petitions listed in the title to this proceeding relate respectively to: (1) the round trip rates between Calhoun and West Allis and Calhoun and Milwaukee, which are alleged to be discriminatory as compared with more favorable rates over the same line between Waukesha and the same points; (2) the single fare limits in Wauwatosa, as recommended by the Commission and as required by the

franchises under which the M. L. H. & T. Co. operates in Wauwatosa; (3) the alleged necessity of extending the limit for commutation tickets between the city of Racine and points in the town of Caledonia from Thielen stop to Four Mile road, a point about one-half mile north of Thielen stop, in order to make certain public places available as waiting stations; and (4) and (5), the reasonableness of the suburban fares in effect between Milwaukee and West Allis, especially with respect to certain single fare limits which are alleged to discriminate unjustly against certain districts and to cause congestion of traffic and hence inadequate service in other districts. *Held:* The rates of fare charged by the T. M. E. R. & L. Co. and the M. L. H. & T. Co. for the suburban and interurban service involved in the present proceeding are unjustly discriminatory. The companies are therefore authorized to put into effect for this service schedules of rates determined by the Commission. These schedules include: (1) rates for suburban passenger service to and through the cities of West Allis and Wauwatosa and on the Wanderer's Rest Cemetery line, to and through the city of North Milwaukee, Whitefish Bay and Fox Point, South Milwaukee and Tippecanoe, and rates for local suburban hauls originating and terminating beyond the single fare limits of the city of Milwaukee; (2) rates through interurban passenger service upon the Milwaukee-Waukesha-Oconomowoc-Watertown line, the Milwaukee-Muskego Lakes-East Troy line, the Milwaukee-Waterford-Burlington line and the Milwaukee-Racine-Kenosha line; and (3) provision for the sale of tickets in packages for the payment of fares between points within the single fare limits of the city of Milwaukee and Marquette Boulevard in the city of South Milwaukee and for the sale of mileage books for the payment of interurban and suburban fares. Single fare limits for the city of Milwaukee are prescribed and all overlapping fare zones are to be abandoned. "Through interurban passenger service" upon the Milwaukee-Waukesha-Oconomowoc-Watertown line, the Milwaukee-Muskego Lakes-East Troy line and the Milwaukee-Waterford-Burlington line is defined as passenger service between any point within the single fare limits of Milwaukee and points beyond Woodlawn Stop, and upon the Milwaukee-Racine-Kenosha line as passenger service between any point within the single fare limits of Milwaukee and points beyond South Limits, South Milwaukee. The rates prescribed for suburban passenger service are based upon the city fare with an addition of 2 cts. for each 2 ct. zone, as determined by the Commission, traveled beyond the single fare limits of the city of Milwaukee. Passengers paying these rates are to be entitled to the privilege of the usual transfers within the single fare limits of the city of Milwaukee and upon the several suburban lines. The rate prescribed for through interurban passenger service is a uniform charge of 2 cts. per mile computed to the nearest 1 ct. for the actual mileage, except the mileage included within the single fare limits of Milwaukee, for which the charge is in every case to be computed at 4 cts., and the mileage included within certain limits in Waukesha, Watertown, Burlington and Racine. The rate of fare per passenger for interurban service between points without the single fare limits of the city of Milwaukee is to be the difference between the through rates to these points. The minimum fare for any haul is to be 5 cts. Every interurban fare from or to Milwaukee, Racine, Kenosha, Burlington, Waukesha, Oconomowoc and Watertown is to entitle the passenger to the usual transfer privilege within the single fare limits of such cities where such privilege exists. The sale of all commutation and reduced round trip tickets which may now be in force is to be abandoned. The tickets to South Milwaukee authorized by the present order to be sold in packages are to be sold in packages of 20 for $2.50 and each ticket is to be good for one continuous ride between the points named, with privilege of transfers within the distance in-

cluded. These tickets are to be sold for one year after date of installation. The mileage books authorized are to be for 300 miles at 1.8 cts. per mile, or $5.40 per book, and are to be good for the payment of any interurban or suburban fare, provided that the minimum fare thus payable shall amount to a five mile "tear." All complaints and petitions named in the present proceeding are dismissed insofar as they are not satisfied or granted by this order and insofar only as they relate to rates of fare for suburban and interurban passenger service. It is recommended, however, that the companies provide for a single fare of five cents to apply within the city limits of West Allis. The order is in no wise to affect or alter the rates now in effect for private, funeral, or chartered car service, or the present reduced "party rates" for passenger service, or rates of any service other than the carrying of passengers. *In re Milw. Suburban & Interurban Ry. Rates*, 475, 498–517.

RATES—TELEPHONE.

Discrimination of telephone rates, *see* DISCRIMINATION, 8–11.

Exchange radius, determination of.

See also post, 3.

1. It undoubtedly costs much more to furnish service to the individual who happens to live at a considerable distance from the central office than to the individual whose telephone is located close to the central office, if the cost of building the individual line is to be charged entirely to the subscriber to be reached by that line. Ordinarily it would probably be true that a city should be considered as a unit for purposes of telephone service, but in the present case the conditions appear to be so exceptional as to justify some departure from this policy. The city limits seem to be very much out of proportion to the population of the city and to the area which is really built up. An exchange radius of one mile would, to all intents and purposes, it appears, include all persons who are within the city. That is, it would include all persons living under city conditions, even if it did not include all those who happen to be within the very extensive city limits. Because the city limits happen to be out of all proportion to the size of the city itself it hardly seems reasonable to require the telephone utility to serve all patrons within those limits if such patrons are not really city subscribers in a practical sense. *In re Appl. Tomahawk Lt., Tel. & Improvement Co.* 340, 342–343.

Making rates—Elements considered—Traffic conditions.

2. A factor to be considered in the forming of an equitable rate schedule is the relation between the rates to be paid by rural subscribers connected to loaded lines running between two exchanges when there is a trunk line between those exchanges and the rate for the same class of subscribers when there is no trunk line between the exchanges. In the first case the service over the loaded line will not be interfered with by calls passing between central offices over these loaded lines, as all calls will be required to be put through over the trunk lines. In the second instance calls passing between the two central offices will have to be put through over the loaded lines and will cause more or less interference with the use of those lines. In therefore seems reasonable and just to charge a somewhat higher rate per telephone for the first mentioned class of subscribers than for the second. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 583.

Message rates.

See also TELEPHONE UTILITIES, 16, 19.
See post, 46.

Reasonableness of advance in rates in particular cases.

3. The Tomahawk Lt., Tel. & Improvement Co. applies for authority to put into effect for telephone service in the city of Tomahawk a schedule of rates under which subscribers whose telephones are located beyond an exchange radius of ¾ of a mile will be charged rates increased by 25 cts. per month for every ⅛ of a mile or fraction thereof of the distance beyond the exchange radius. Since the hearing the utility has filed, as an alternative plan, a proposed rule requiring subscribers to pay for all extensions in excess of 1,000 feet. A valuation of the telephone property was made and the revenues and expenses of the telephone utility were investigated. It appears that the schedule of rates might perhaps be improved by providing for two party or four party service at a rate lower than that asked for single party service but that no revision of the general rate schedule is necessary at this time. Ordinarily a city should probably be considered as a unit for purposes of telephone service, but in the present case, inasmuch as the city limits are out of all proportion to the population of the city, it seems reasonable to restrict the exchange radius to the area occupied by persons living under city conditions, even though some persons living within the city limits are thereby excluded. *Held:* The additional distance charge proposed by the utility is unnecessarily high, and the exchange radius proposed cannot be approved. The applicant is therefore authorized to amend its rate schedule by providing that its present rates shall apply only within a radius of one mile from the central office, and that for distances beyond this radius an additional charge of 25 cts. per month per one quarter mile of line or fraction thereof shall be made, such additional charge to be divided equally among all telephones on the line. *In re Appl. Tomahawk Lt. Tel. & Improvement Co.,* 340, 343.

4. Application is made by the Farmers' Tel. Co. of Beetown for authority to increase its rates. The Farmers' Tel. Co. operates a total of nine exchanges in Grant county and serves about 400 square miles of territory. The Commission investigated the organization of the company, the quality of its service, its switching connections with foreign lines and its revenues and expenses, and made traffic studies to determine (1) the extent and cost of switching service for foreign lines, (2) the possibility of improving various phases of the service rendered by the applicant and (3) proper toll charges for calls between central offices. In connection with the determination of the cost of switching service for foreign lines, and for other purposes, the valuation made in 1909 of the physical property of the applicant was revised and brought up to date as of April 1, 1913, and the value of the property used by foreign lines was determined. For the purpose of fixing reasonable toll rates between the various central offices connected to the applicant's so-called "Fennimore lines" between Lancaster and Fennimore an approximate valuation of these lines was made and used in connection with the results obtained in the traffic study in determining the cost of service. The records of the applicant are incomplete. It was therefore necessary to construct income and expense accounts upon the basis of such record information as could be obtained, supplemented by other data in the possession of the Commission. *Held:* (1) The giving of unlimited free service between the applicant's nine exchanges and to most of the connecting companies is unjust to those subscribers who do not avail themselves of this service and its results, moreover, in considerable congestion of the lines. (2) In view of the congested traffic over the applicant's lines from Lancaster to Fennimore and the

fact that the rates in force are not such as to warrant the construction of additional free lines, it is deemed best to place a toll charge on messages going over these lines. (3) A toll charge may reasonably be made for service over the trunk line between Lancaster and Platteville, owned jointly by the applicant and the Platteville Rewey and Ellenboro Tel. Co., when the line is made "full metallic" as contemplated. It is ordered that the applicant be authorized to put into effect a schedule of rates determined by the Commission, at such time as the applicant shall have made such changes in its management, organization, accounting methods, and procedure as meet the requirements of the Commission. It is further ordered that upon the completion of the work of making "full metallic" the line between Lancaster and Platteville, the present free service shall be suspended and a toll charge of 7 cts. per call substituted, the revenue therefrom to be divided equally between the two companies, unless they shall agree upon some other basis of division. The schedule of rates authorized covers business, residence and rural telephones and switching service for foreign lines and provides toll charges for calls passing between different exchanges of the applicant or between exchanges of the applicant and foreign exchanges and toll charges to be adopted in place of the present free service over the company's trunk lines from Lancaster to Fennimore. Subscribers connected to lines entering two of the applicant's exchanges are to have unlimited service to both exchanges; subscribers connected to lines entering but one of the applicant's exchanges are to have the option of taking unlimited service to the one exchange at a specified rate, or unlimited service to that exchange and their choice of any one additional exchange of the system which may be called directly from the exchange to which their line is connected, at a higher rate. All calls passing between two of the applicant's exchanges are to be routed over the trunk lines where such lines exist and are to be charged for at the rate of 5 cts. per call, except calls made under the provisions for unlimited service. All calls passing between one of the applicant's exchanges and an exchange of any foreign company made a party to the instant case, are to be routed over through lines where such lines exist and to be charged for at the rate of 5 cts. per call, except for Lancaster-Platteville, Lancaster-Fennimore, and Lancaster-Preston calls, which are provided for elsewhere in the order, and the total revenue from calls of this class going over trunk lines owned entirely by one company is to be divided as follows: 70 per cent to the owner of the line and 30 per cent to the company connecting with the line. In cases where there is no trunk connection between two exchanges of the applicant and it is necessary to route calls over loaded lines, a toll charge of 4 cts. per call is to be made, except for calls made under the provisions for unlimited service. In cases where there is no trunk connection between one of the applicant's exchanges and a foreign exchange and calls are routed over loaded lines belonging to the applicant or to a foreign company, a toll charge of 4 cts. is to be made and the total revenue from such calls is to be divided as follows: 30 per cent to each company performing switching service and 40 per cent to the owner of the line. No part of the schedule authorized is to be adopted unless the entire schedule is adopted. If the schedule is not adopted the rate for switching service for foreign lines is to be $1.00 per telephone per year for telephones on lines connecting with a second exchange and $1.50 per telephone per year for telephones on lines not connecting with a second exchange. *In re Farmers' Tel. Co. of Beetown*, 540, 584–586.

5. The Oakfield Tel. Co. applies for authority to increase its message rates for toll messages sent from Oakfield to Fond Lac over the lines of the Wis. Tel. Co. in Fond du Lac. The rates now legally in effect are 5 cts. to subscribers and 10 cts. to non-subscribers for five minutes

or less. The applicant desires to have the 10 ct. rate which it has been exacting from its subscribers for some months for the service in question though not sanctioned by the Commission, made the legal rate for subscribers as well as for non-subscribers in order to compensate for an increase in the charge made by the Wis. Tel. Co. for distributing messages sent by the applicant. *Held:* A proper adjustment of the message rate from Oakfield to Fond du Lac can not be secured except by an action to fix a joint rate for the Oakfield Tel. Co. and the Wis. Tel. Co. For this reason and for the further reason that the reports of the applicant do not indicate a need for increasing the revenue of the business as a whole the petition is dismissed without passing upon the reasonableness of the increased rate proposed by the applicant. *In re Appl. Oakfield Tel. Co.* 726, 728.

Reasonableness of rates in particular cases.

6. On motion of the Commission a rehearing was held of certain matters involved in an order issued October 19, 1912 (10 W. R. C. R. 598) directing the Clinton Tel. Co. and the Bergen Tel. Co. to establish physical connection between their systems and prescribing a 2 ct. toll charge for completed calls between the two systems. The Bergen Tel. Co. is opposed to the exaction of a toll for service between the two systems. The Clinton Tel. Co. favors the retention of the 2 ct. toll ordered by the Commission. It appears that the exaction of this toll has reduced the number of messages transmitted between the two exchanges, largely, it is probable, through the elimination of unnecessary conversation. *Held:* The effect of the 2 ct. toll is in the interests of good service and there are no valid reasons for abandoning the charge. The terms of the former order with respect to the 2 ct. toll and the division of the revenue accruing from it will therefore remain unchanged. *In re Physical Conn. Betw. Clinton & Bergen Tel. Cos.* 249, 252–253.

7. This proceeding arises out of a controversy between the petitioner and the respondents with respect to the payment to be made to the respondents for switching service rendered for a certain rural line owned and operated by the petitioner. The petitioner has a system of exchanges and switches in the territory south and east of Spring Green which it has connected with the exchange maintained jointly by the respondents at Spring Green by the rural line mentioned and by a trunk line. The respondents have assessed the petitioner the sum of $75 per year for the switching service rendered for the rural line, but the petitioner has refused to pay this sum on the ground that it is offset by the sum which the respondents should pay toward the upkeep of the trunk line which the petitioner has maintained and operated wholly at its own expense. The respondents allege that the service over the trunk line is of no particular value to their subscribers and contend that they are entitled to a fair switching charge for each telephone connected to the petitioner's rural line. An approximate valuation of the lines in question was made, a peg count of all calls through the Spring Green exchange was taken and the operating expenses of this exchange were determined as closely as possible. *Held:* (1) The respondents should share in the expense of maintaining and operating the trunk line between the Spring Green exchange and the petitioner's system; (2) a charge of $1 per telephone is equitable for the service rendered the petitioner by the respondents in switching for the petitioner's rural line at the Spring Green exchange. It is ordered: (1) that the respondents pay to the petitioner the sum of $27 per year for the use of the trunk line connecting the "Spring Green" and the "Fernan" exchanges; and (2) that the petitioner pay to the respondents each year the sum of $1 per telephone for switching service for such telephones as are connected to the petitioner's rural lines which enter the respondent's Spring Green exchange. *Arena & Ridgeway T. Co. v. Troy & Honey Creek Tel. Co. et al.* 763, 770–771.

Switching rates.
See ante, 4.

Toll rates
See also ante, 4, 6.

8. The petitioner requests that the respondent be compelled to grant it the same terms for toll service over the respondent's toll line from Galesville to La Crosse that the respondent grants to the Western Wisconsin Tel. Co. The respondent collects from the petitioner 75 per cent of the tolls received by the petitioner from its subscribers for use of the toll line in question. The respondent and the Western Wisconsin Tel. Co. own the toll line jointly and each company retains all toll revenues originating on its own lines. The Western Wisconsin Tel. Co. charges all subscribers who desire toll line service a flat rate of $12.50 more per year than it charges subscribers who do not desire this service. For individual messages it charges the same toll rate as the petitioner. *Held:* The request of the petitioner cannot be granted. The respondent and the Western Wisconsin Tel. Co. were acting entirely within their right in making the present apportionment of revenues between themselves and, so long as this apportionment does not result in prejudicing the rights of subscribers or patrons of either company, the action of the two companies in this matter is not subject to revision or modification by public authorities. Even where physical connection of lines is enforced under the statute, it is contemplated that the companies shall agree upon the apportionment of the joint tolls, and it is only in case of failure of agreement that the Commission has authority to make the apportionment. Moreover, in making the apportionment the Commission is bound both by statutory and by constitutional requirements to provide for such reasonable terms and conditions as will avoid the taking of property without compensation. Under the circumstances the apportionment of the toll revenues between the respondent and the Western Wisconsin Tel. Co. is no criterion for judging the reasonableness of charges exacted of a connecting company desiring the toll line facilities but having no proprietary interest in these facilities. The petition is dismissed. *Ettrick Tel. Co. v. La Crosse Tel. Co.* 25, 28.

9. With respect to the matter of long distance toll service to points beyond Clinton and Bergen the Commission in the instant case establishes a toll charge of 5 cts. in addition to all other toll charges for all completed long distance calls passing between the systems of the Clinton Tel. Co. and the Bergen Tel. Co. over the iron line extending from Bergen to Clinton and owned jointly by the two companies. The company on whose line or connecting lines the call originates is to collect the revenue from this charge and all such revenue is to be divided equally between the two utilities. *In re Physical Conn. Betw. Clinton & Bergen Tel. Cos.* 249, 257, 258.

Toll rates—Adjustment of toll rates subsequent to physical connection.
See ante, 6.

RATES—TOLL BRIDGE.

Making rates—Elements considered—Cost of service—Management, wages of.

1. In view of the investment in the property and the risks to which it is exposed, the volume of business, and also the time required for management of the affairs of the utility, provision should be made for the payment of a salary to the member of the firm who is in active charge of the bridge. *Marcus et al. v. Postel & Swingle*, 47, 49.

Reasonableness of rates in particular cases.

2. The complainants allege that the rates charged by the respondent for the use of its toll bridge over the Wisconsin river at Muscoda are excessive and discriminatory. A valuation was made and the revenues and expenses were investigated. *Held:* A slight reduction of revenue is justified. The present rate schedule, however, shows no marked inequality, except that existing between the charge for a single trip for a double team or automobile and the ticket rates for vehicles making 10 or more trips. A reduction of the single trip rate for this class of business is, therefore, the only change which is considered advisable. The respondent is accordingly ordered to reduce the present rate of 25 cts. for a single trip for two horse teams and automobiles to 20 cts. and to retain all other rates as they are at present. *Marcus et al. v. Postel & Swingle*, 47, 51.

RATES—WATER.

Making rates—Elements considered—Cost of service—Output, capacity and consumer costs.

1. Cost of service is made up of different kinds of expenses. It must be clear to all that expenses incurred in the production and distribution of a service are not all of the same nature; as, for example, the expense of steam generation differs from interest on the investment. Such expenses as depreciation, interest, taxes, and certain *portions* of other expenses, are indirect expenses, and may be said to be determined by the investment necessary to provide for the consumers' demand. It logically follows that there are certain other expenses which are directly dependent upon the output of the plant, varying directly with the output. *Vil. of Sharon v. United Heat, Lt. & P. Co.* 1, 9.

2. For the purpose of cost analyses a system of accounts should be used that shows the direct operating expenses of the utility grouped into accounts covering the different steps of production in chronological order. Thus, the direct expenses of a water utility are grouped into: Pumping, distribution, and commercial. The items included in these accounts can be charged directly to the various steps in the furnishing of water. The indirect expenses, also called "overhead" or "fixed," are grouped into general, undistributed, interest, depreciation, and taxes. These expenses cannot be charged to any particular operation, but must be distributed on some basis over the different units of the product. It is obvious that the indirect or capacity expenses do not vary with output, but that on the other hand, they are occasioned in supplying that output, hence output should bear its proportionate part. *Vil. of Sharon v. United Heat, Lt. & P. Co.* 1, 9–10.

3. The cost of supplying water is composed of three elements, the consumer, capacity, and output costs—the first two, however, sometimes being combined in utility accounts—and it is inequitable to assess the indirect expenses entirely to any one or two of these elements. Each element must bear its proper share. *Vill. of Sharon v. United Heat. Lt. & P. Co.* 1, 10.

4. The rates charged for a service, in order to bear the proper relations to the cost of furnishing it, should be made up of a fixed charge, based, if possible, upon the consumer's demand, and of a variable charge for each unit used. In determining equitable water rates, no accurate demand data being generally available, the capacity expenses may sometimes be apportioned over the total number of consumers. The variable charge per unit used, which in the present case is one thousand gallons, is obtained by dividing the sum of all those expenses charged to output by the number of gallons of water consumed. *Vill. of Sharon v. United Heat, Lt. & P. Co.* 1, 10.

Reasonableness of rates in particular cases.

5. The petitioner alleges that the respondent charges it an excessive rate for pumping water into the village water system from the well which supplies the water; that the respondent has increased the cost of this service, contrary to the provisions of an agreement between the petitioner and the respondent; that the petitioner has to bear the cost of depreciation, upkeep, etc., in addition to the contract price; and that the petitioner is not receiving a just compensation for the use of its power house and equipment by the respondent. The petitioner owns a joint gas and water utility for which the respondent for some time past has pumped the water used. The reasonableness of the terms of the agreement under which the respondent undertook to perform this service, and is still performing it, is in question. Investigations were made of the operating conditions of both the water and gas departments, and of the revenues and expenses of the water department. The contract price of 30 cts. per thousand gallons pumped appears to be slightly higher than the cost to the respondent of performing the service but it is lower than the cost to the village was when the village did the pumping. The difference between the cost to the respondent and the contract price seems to be made up of savings arising from the lower cost of fuel, from improved efficiency of equipment and from other economies. *Held:* The terms under which the respondent performs the service of pumping for the petitioner do not appear to be unreasonable. The evidence shows that the respondent has not increased the cost of pumping water, as alleged, and that the petitioner, under the agreement, should assume the burden of depreciation and upkeep of the equipment in question. It appears further that the respondent should not be required to pay a rental, in addition to operating the gas plant, for the portion of the station used for the respondent's electrical equipment. The petition is therefore dismissed. *Vill. of Sharon v. Heat, Lt. & P. Co.* 1, 17–18.

REAPPORTIONMENT OF JOINT RATES.

REFUSAL OF SERVICE.

Refusal of service by public utility for non-payment of bills rendered, *see* RULES AND REGULATIONS, 2, 8–10.

RELATION OF RATES.

See RATES.

REPARATION.

GROUND FOR RECOVERY.

Claim for reparation based on contract for different rate than that stated in published tariff.

1. We have repeatedly held that even where a shipment is made upon the quotation of a rate by a carrier's agent, which rate afterwards proves to be inapplicable, the shipper is nevertheless liable to pay the legal and published charges. *Callaway Fuel Co. v. C. & N. W. R. Co. et al.* 694, 697.

Competitive nature of traffic.

2. In the instant case there are considerations in addition to the general unreasonableness of the rate which make the claims for reparation valid. These considerations arise out of the competitive nature of some of the traffic which would have made the shipments in question unavailable to the respondent unless the lower rates were met. *So. Wis. Sand & Gravel Co. v. C. M. & St. P. R. Co.* 380, 384–385.

Existence of a lower rate on a competing line.

3. It has been held repeatedly in reparation cases that a refund may be granted when a competing line has a lower rate in effect and the respondent railway company could not have participated in the traffic upon its lawfully published rate. (*Geo. T. Rowland & Son v. C. & N. W. R. Co.* 1912, 9 W. R. C. R. 163; *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co.* 1912, 9 W. R. C. R. 167.) *So. Wis. Sand & Gravel Co. v. C. M. & St. P. R. Co.* 380, 384.

Recent change of classification not a proof of reasonableness of rate under previous classification.

4. The fact that a distinction in the various grades of a commodity has been recently made and rates adjusted on the basis of this distinction, does not prove that the former classification, and the rates applicable under it, were not unreasonable. *Moritz v. C. M. & St. P. R. Co.* 684, 685–686.

Reduced rate may be considered to have been reasonable prior to the date of its establishment.

5. Although the fixing of a reasonable rate at any given time does not necessarily imply that this rate would have been reasonable at any previous point of time, yet neither is it conclusive evidence that the new rate would not have been reasonable prior to the date of the order establishing it. *Wausau Paper Mills Co. v. C. M. & St. P. R. Co.* 690, 692–693.

IN GENERAL.

Power of Commission to authorize refund.

6. The Commission cannot under the statute relieve a shipper from the payment of the lawful established tariff charges but can only authorize refunds after the payments have been made and have been duly found to be exorbitant, unusual, illegal and erroneous. When a shipper considers demurrage rules to be unreasonable, his proper procedure is to pay the demurrage charges and apply for a refund. *Paine Lbr. Co. Ltd. v. C. & N. W. R. Co.* 633, 634.

Proceedings for recovery—Person aggrieved must petition Commission.

7. The Commission is without power to decide upon the merits of complaints against charges or to authorize a refund of any part thereof, unless the complaint be lodged by the person aggrieved. *Wausau Advancement Assn. v. C. & N. W. R. Co.* 772, 774.

JURISDICTION OF COMMISSION.

Authority of Commission in awarding reparation.

See ante, 6–7.

REFUNDS.

Refund from charges based on minimum weight of cars furnished at the convenience of the carrier instead of the minimum weight of the cars ordered by the shipper.

8. The petitioner complains of the rates charged by the respondent for the transportation of dry slab wood and edging and asks for refund on certain shipments. The respondent's tariff provides separate schedules of rates, both distance and group, for carloads of high and low minimum weights. Shipments subject to a low minimum weight take a higher rate than shipments subject to a high minimum weight. The respondent states that the high rate, low minimum basis is intended to apply on dry slabs because of their light loading, while the low rate, high minimum is intended to apply on green slabs, cordwood and the like. The petitioner alleges that the high rate, low minimum basis is practically prohibitive when applied to dry slab wood and edging and desires to have the low rate schedule made directly applicable to shipments of this commodity by the adoption of a minimum weight or weights which can be loaded. The petitioner's request for refund appears to be based upon the fact that his orders for cars of such size that the high minimum, low rate schedules would apply to his shipments were filled by cars of a smaller size taking the low minimum. *Held:* Some readjustment of the relation between the two sets of minima and rates as at present arranged should perhaps be made. (1) The minimum weights in the high rate schedules, which seem unnecessarily low, might well be advanced and the rates in these schedules reduced. No order is issued with respect to these rates, but it is recommended that the respondent submit to the Commission for ap-

proval a new schedule of minimum weights and a new schedule of rates applying in connection with these minima to supersede the present schedules. (2) The low minimum, high rate schedules, under which the charges complained of were paid, were lawfully in force when the shipments involved moved. The charges in question do not appear to be erroneous, illegal, unusual or exorbitant. Refund therefore cannot be authorized. The petition is dismissed. *Oshkosh Fuel Co. v. C. & N. W. R. Co.* 775, 781.

Refund from charge based on minimum weight which cannot be loaded.

9. Complaint is made that excessive charges were exacted by the M. St. P. & S. S. M. Ry. Co. for the transportation of twelve carload shipments of tanbark from Westboro to Milwaukee. The shipments in question were loaded in box cars, for the purpose of making a test for the information of the Commission in deciding the case of *Barker & Stewart Lbr. Co. v. C. M. & St. P. R. Co.* 1913, 11 W. R. C. R. 537, of the amount of tanbark that could be loaded into this class of cars. Charges were assessed on the basis of the minimum rated capacity of the cars used, although the actual weight of the shipments, when the cars were loaded to full capacity, was less than the minimum weight applied. *Held:* The charges complained of should have been assessed on the basis of the rule which provides for the use of two cars for one when one car cannot be furnished to accommodate the minimum weight provided by tariff. *Barker & Stewart Lbr. Co. v. C. M. & St. P. R. Co., supra.* Refund is therefore ordered of the excess of the charges paid above what the charges would have been if based on the actual weight of the shipments. *Westboro Lbr. Co. v. M. St. P. & S. S. M. R. Co.* 378, 379.

Refund from charge erroneously made upon return shipment of car stakes.

10. The petitioner alleges that it was erroneously charged for the transportation of three carloads of car stakes over the respondent's line from Rhinelander to Armstrong Creek. The car stakes were furnished and shipped by the petitioner for the use of the respondent in moving pulp wood for the petitioner. When the shipments moved the respondent's tariff relating to shipments of saw logs between points within the state provided that car stakes so transported should be returned and delivered to consignee without charge. *Held:* The charges exacted of the petitioner were unusual. Refund is ordered. *Rhinelander Paper Co. v. M. St. P. & S. S. M. R. Co.* 84, 85.

Refund from excess charge based on a rate subsequently held to be unreasonable by the Commission.

11. The petitioner complains that the respondent exacted charges for the transportation of certain carload lots of sand and gravel from Janesville to points within Wisconsin which were higher than the rates prescribed by the Commission in *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co.* 1912, 9 W. R. C. R. 86 and 347, and asks for refund and such further order as the Commission may deem necessary. It appears that the present case arises out of a misunderstanding, on the part of both the petitioner and the respondent, of the facts involved, inasmuch as the orders cited above prescribe rates for shipments from Waukesha only, although the Commission recommended that the rates ordered be made effective generally on the intrastate traffic of the railway companies affected. The present case, however, being brought in good faith and upon what appear to be substantial grounds, is considered on its merits. The shipments in question moved before the order of Nov.

29, 1912, 11 W. R. C. R. 98, applying the rates prescribed for shipments of sand, gravel and crushed stone from Waukesha to similar shipments from all points on the respondent's line in Wisconsin, went into effect. *Held:* Inasmuch as the rate upon which the claim for reparation is based has already been held by the Commission, 11 W. R. C. R. 98, to be unreasonable and inasmuch as the respondent gave the petitioner reasonable assurance, upon which the petitioner relied, that the lower rate of the respondent's competitor would be met, refund should be granted. The respondent is therefore ordered to refund to the petitioner all sums wrongfully collected in excess of the reasonable sum of $3,827.07 for the transportation of the carload shipments listed. *So. Wis. Sand & Gravel Co. v. C. M. & St. P. R. Co.* 380, 389.

12. The complainant alleges that the respondent charged it an unjust and unreasonable rate for the transportation of hay in carloads between certain points in Wisconsin. The rate complained of was declared excessive in *Wausau Advancement Association v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 438. The shipments in question were involved in the complaint in the case cited but refunds were not authorized for the reason that the petitioner in that case was not a "person aggrieved" within the meaning of the law. (Sec. 1797—37m.) *Held:* The shipments should have moved at the rate of 10 cts. per 100 lb., found to be reasonable in the case cited above. Refund is ordered on this basis for such shipments as moved within the then statutory period of one year previous to the time the complaint was filed. *Northern Milling Co. v. C. & N. W. R. Co.* 468, 470.

Refund from excess charge based on a switching charge which is excessive as compared with the reciprocal switching rate.

13. The complainant alleges that excessive and unreasonable charges were exacted from it for the movement of 31 cars from one of its plants located on the M. St. P. & S. S. M. Ry. in Waukesha to another plant located on the C. M. & St. P. Ry. in Waukesha. Only one of the 31 cars moved less than a year prior to the filing of the complaint, which was filed before ch. 66, laws of 1913, increasing the time in which such complaints may be filed from one year to two years, went into effect and therefore the charge on this car only can be considered. The charge in question was $7, made up of $5 for the services of the M. St. P. & S. S. M. Ry. Co. and $2 for the services of the C. M. & St. P. Ry. Co. The latter rate was according to tariff, but there is no tariff authority for the $5 charge, which should have been $4. *Held:* The charge exacted was excessive. Six dollars would have been a reasonable charge and refund is ordered on that basis. *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 534, 537.

Refund from excess charge based on unreasonable rate and minimum weight and failure to absorb switching charges out of line of haul earnings.

14. The complainant alleges that it was overcharged for the transportation of a number of carloads of gravel and crushed stone, from Waukesha to various points, through the action of the C. & N. W. Ry. Co. in: (1) failing to absorb switching charges out of a $15 line haul earning; (2) applying the marked capacity of the car as the minimum weight for carload shipments; and (3) applying rates on file at the time, but subsequently reduced as unreasonable by the Commission, to shipments moving prior to July 27, 1912. *Held:* 1. The absorption of switching charges by the C. & N. W. Ry. Co. out of line haul earnings, insofar as possible without reducing the latter below $15, is correct according to the company's tariffs and is reasonable. 2. The applica-

tion of the marked capacity of the car as the minimum weight for carload shipments, though correct according to the company's tariff put into effect for carload shipments of sand and gravel in compliance with the Commission's order of June 24, 1912, 9 W. R. C. R. 347, was unreasonable and is contrary to the present practice of the respondent company and other carriers in fixing the minimum weight at 90 per cent of the marked capacity of the car, which would have been reasonable in the instant case. 3. The rates ordered by the Commission on June 24, 1912, 9 W. R. C. R. 347, were reasonable at the date of the earliest movement of carloads of stone and gravel over which the Commission has jurisdiction under the present complaint. Refund is therefore ordered. Inasmuch, however, as the original records of the shipments in question have not been submitted, the Commission cannot undertake to compute the amount of reparation due the complainant, unless the parties submit their original records to the Commission for the determination of these amounts. The C. & N. W. Ry. Co. is accordingly authorized to refund to the complainant an amount equal to the excess of the actual charge over the proper charge, as calculated upon the basis of the above holdings, for every carload of stone and gravel moved for the complainant over the C. & N. W. Ry. from Waukesha to West Allis, Cudahy, Milwaukee, Racine, Racine Jct. or Layton Park at any time during the period beginning April 3, 1912, and ending April 2, 1913. *Waukesha Lime & Stone Co. v. C. & N. W. R. Co. et al.* 368, 369–371.

Refund from excess charge caused by failure of carrier to absorb switching charges correctly.

15. The complainant alleges: (1) that it was overcharged on a number of shipments of slab wood, kiln wood and cordwood moving from points in Wisconsin on the "Soo" line to Waukesha and there turned over to the C. M. & St. P. Ry. Co. for delivery to the complainant at its plant on the C. M. & St. P. Ry. Co's tracks. The complaint appears to be based primarily upon a misunderstanding of the rule in the "Soo" line's tariff for the absorption of switching charges of connecting lines. This rule provides for the absorption by the "Soo" line at junction points on its Chicago division of "the switching charges of connecting lines, or such portion of them as will not reduce charges below $15 per car, if from or to stations on its line, or $20 per car if from or to stations on connecting lines." The term "charges," as used in the rule, evidently means the line haul charges of the issuing line and not the total charges including both the line haul charges and the switching charge. *Held:* The absorption of the switching charges as made by the "Soo" Ry. Co. on the cars named in the complaint was reasonable and correct insofar as may be determined from the record of weights and charges presented by the complainant. The petition is dismissed. *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 372, 373–374.

Refund from excess charge caused by failure of carrier to absorb switching charges out of line haul earnings.

See ante, 14.

Refund from excess charges caused by failure to protect an intermediate point in a rate which was subsequently extended to cover the more distant points.

16. The petitioner alleges that the rate of 4 cts. per 100 lb., charged by the respondent for carload shipments of grain from Richfield to Milwaukee, is erroneous, illegal, unusual and exorbitant and asks that

the rate of 3½ cts. applying over the M. St. P. & S. S. M. Ry. for shipments from Duplainville, Templeton and Colgate to Milwaukee be established, and that refund be authorized on certain shipments made by the petitioner. Since the hearing the rate on grain to Milwaukee from the points named and other nearby points competing with Richfield has been changed from 3½ cts. to 4 cts. by all railroads passing through these points, and the petitioner is satisfied with this adjustment. Only the matter of reparation, therefore, remains to be determined by the Commission. *Held:* The petitioner is entitled to reparation. Refund is accordingly ordered on the basis of the 3½ ct. rate. *Wolf v. C. M. & St. P. R. Co.* 375, 377.

Refund from excess charge due to diversity of rates in the tariff on different divisions of carrier's line.

17. The petitioner (1) alleges that the rate of 4 cts. per cwt. exacted by the respondent for the transportation of 4 cars of fuel wood from Kennan to Phillips was excessive to the extent that it exceeds a rate of 3 cts. cwt. and asks for refund and (2) prays that a rate of 3 cts. per cwt. be established for fuel wood moving between Kennan and Phillips. The respondent states that the confusion in the rate applied was due to the existence of two distinct tariffs, one on its Wisconsin and Peninsula division and the other on its Chicago division, and that it is now preparing a new fuel wood distance tariff providing a rate of 3 cts. for a distance of 30 miles and expresses its willingness to make the refund requested. *Held:* The rate complained of is unreasonable. A reasonable rate would not exceed 3 cts. per cwt. It is therefore ordered: (1) that the respondent put into effect a rate of 3 cts. per cwt. on fuel wood in carloads from Kennan to Phillips; and (2) that the respondent be authorized to refund to the petitioner the excess of the charges paid by him on the shipments in question over the amount found to be reasonable compensation for the services rendered. *Sullivan v. M. St. P. & S. S. M. R. Co.* 687, 689.

Refund from excess charge due to failure to include petitioner within the terms of a switching tariff.

18. The petitioner alleges that the charge assessed by the respondent for the transportation of 6 carloads of material for use in the construction of a paint and plating shop for the respondent at West Milwaukee was unusual and exorbitant and contends that the charge should have been made on a switching basis, inasmuch as the length of the haul was only one and a half miles and other points in the immediate vicinity and beyond are placed on a switching basis. When the shipments in question moved the respondent's switching tariff provided for switching rates between industries named in the tariff, but the consignee in the instant case, not being named in the tariff, was not entitled to receive the switching rates and was charged the distance rate for five miles or less. The respondent, however, subsequently modified its tariff to eliminate the discrimination presented by such cases. *Held:* The charge complained of was unusual and exorbitant. The reasonable charge would have been $5 per car and refund is ordered on this basis. *Milwaukee Structural Steel Co. v. C. M. & St. P. R. Co.* 673, 675.

Refund from excess charge exacted in error.

19. The petitioner alleges that the respondent charged it at the rate of 13½ cts. per 100 lb., subject to a minimum weight of 30,000 lb. per car, for the transportation of two cars of excelsior from Rice Lake to Waukesha, instead of at the rate of 11½ cts. per 100 lb., subject to a minimum weight of 20,000 lb. per car, provided in the respondent's

tariff. The respondent admits these allegations and joins in the prayer for relief. *Held:* The charge complained of was illegal and erroneous. Refund is ordered on the basis of the proper charge of 11½ cts. per 100 lb. *Selle & Co. v. M. St. P. & S. S. M. R. Co.* 635, 636.

Refund from excess charge on basis of improper routing.

20. The petitioner complains of the routing given a car of coke transported by the respondents from Racine to North Fond du Lac and asks for refund of the excess of the charge exacted above the charge which the petitioner alleges should have been assessed if the car had been properly routed. The car moved via the C. & N. W. Ry. from Racine to Waukesha and via the M. St. P. & S. S. M. Ry. from Waukesha to North Fond du Lac, and the total charge assessed includes the sum of the local rates plus the switching charge of a connecting line. The petitioner contends that the shipment should have moved via the C. & N. W. Ry. to Fond du Lac and that the reasonable switching charge which should have been made by the M. St. P. & S. S. M. Ry. Co. for delivery at North Fond du Lac should have been absorbed by the C. & N. W. Ry. Co. *Held:* Although the shipment in question, in view of a carrier's obligation to choose the route having the less distance when the carrier has the choice of two possible routings, should have moved via Fond du Lac, the charge for transportation by this route would have been identical with the charge actually exacted. The petitioner has therefore suffered no injury and his petition, insofar as it relates to the matter of refund, is dismissed. *Callaway Fuel Co. v. C. & N. W. R. Co. et al.* 694, 697.

Refund from excess charge on basis of rule providing for absorption of switching charges.

21. The petitioner alleges that the refusal of the respondent to absorb the connecting line switching charges on the in-movement of carload shipments of grain stopped in transit to be milled at the petitioner's mill at Janesville and reshipped over the respondent's line is unreasonable and that this refusal results in the exaction of exorbitant charges. The petitioner also asks for refund on certain shipments. The respondent formerly absorbed the switching charges in question but in a tariff effective Aug. 2, 1912, adopted a rule abandoning this practice. All shipments over the respondent's lines delivered to the petitioner have to be switched over the tracks of the C. M. & St. P. Ry. Co. as the respondent's tracks do not extend to the petitioner's mill. The present rule on switching charges was approved by the Commission in the belief that the respondent's statement that the old rule caused considerable confusion among its local agents and that there would be very few instances where the respondent would get a haul on a shipment of grain to be milled at an industry located on another line was correct. It appears, however, that in the case of the present petitioner shipments of this kind are numerous. The respondent contends in its answer to the petitioner: (1) that the business covered by the complaint was chiefly interstate; (2) that the milling-in-transit of grain was a privilege granted to shippers at a considerable expense to the company; and (3) that it generally required twice as many cars to ship out the mill produce as to bring in the grain. *Held:* The respondent's rule in force prior to Aug. 2, 1912, providing for the absorption of the switching charges of connecting lines at the stopping point on the in-movement of grain stopped in transit to be milled, should be reinstated and all charges brought about by the change in this rule on the date named should be refunded. Inasmuch, however, as the data submitted with respect to the charges complained of do not show whether the shipments involved were intrastate or interstate, the Com-

mission cannot authorize refund at this time. *Blodgett Milling Co. v. C. & N. W. R. Co.* 782, 789.

Refund from excess charge ordered on basis of actual weight of shipment.

See post, 9.

Refund from excess charge ordered on basis of rates for shortest available route and the actual weight of the shipment.

22. The petitioner alleges that it was overcharged for the transportation of a carload of twine from Waupun to Menomonie through the assessment of charges on a weight of 30,000 lb. instead of the correct weight of 28,000 lb. and the movement of the shipment by the most expensive route. The shipment moved from Waupun to Camp Douglas over the C. M. & St. P. Ry. and from the latter point to Augusta over the C. St. P. M. & O. Ry. The shipment should have moved as directed by the petitioner from Waupun to Burnett Jct. by way of the C. M. & St. P. Ry. and thence to Menomonie by way of the C. & N. W. Ry. and the C. St. P. M. & O. Ry. It appears that the actual weight of the shipment was 27,000 lb. *Held:* The petitioner is entitled to reparation on the basis of the actual weight of the shipment and the rate over the cheaper route. Refund is therefore ordered on this basis. *Kraft, Radtke & Quilling Co. v. C. M. & St. P. Co. et al.* 393, 394.

Refund from excess charge ordered on basis of reasonable minimum weight subsequently made effective.

See ante, 14.

Refund from excess charge ordered on basis of reasonable rates established by order of the Commission.

See also ante, 14.

23. The petitioner alleges that the respondent exacted a rate of 3 cts. per cwt. for the transportation of eight cars of ground wood pulp shipped from Rothschild to Brokaw beween July 11, 1912, and August 3, 1912, and prays for the refund of the excess of the charges paid above the charges assessable on the basis of the 2 ct. rate prescribed by the Commission for shipments of the kind in question in its order of July 11, 1912 (9 W. R. C. R. 400). The respondent admits the overcharges alleged insofar as the three cars moved after the Commission's order became effective on July 31, 1912, are concerned and has adjusted these overcharges with the petitioner. The respondent contends, however, that the rate of 3 cts. per cwt. was properly assessed on the five shipments which moved prior to July 31, 1912. *Held:* The rate of 2 cts. per cwt. fixed in the order of July 11, 1912, to become effective on July 31, 1912, was reasonable as far back as July 11, 1912. Refund is ordered on this basis. *Wausau Paper Mills Co. v. C. M. & St. P. R. Co.* 690, 693.

Refund from excess charge ordered on basis of reasonable rate in effect on a competing line.

See ante, 3, 11.

Refund from excess charge ordered on basis of reasonable rate subsequently made effective.

24. The petitioner alleges that the respondent charged it an unusual and exorbitant rate for the transportation of certain carload shipments of slag from Milwaukee to Horicon. The rate in question, 5 cts. per

100 lb., was in accordance with the respondent's tariff at the time the shipments moved but has since been reduced to 50 cts. per ton of 2,240 lb. *Held:* The rate complained of was unusual and exorbitant. Refund is ordered on the basis of a rate of 50 cts. per ton of 2,240 lb. which would have been adequate compensation for the service rendered. *International Harvester Corporation v. C. M. & St. P. R. Co.* 640, 641.

25. The petitioner alleges that the charge of 6 cts. per cwt. exacted by the respondent for the transportation of 77 carloads of granite blocks from Ablemans to Milwaukee is unusual and exorbitant and asks for refund of the excess of the amount collected above the amount assessable on the basis of a rate of 4 cts. per cwt. which the petitioner alleges is a reasonable rate, the rate now in effect and the rate in effect at the time the shipment moved from Red Granite, Montello, Stevens Point and other Wisconsin points to Milwaukee and Chicago. *Held:* For reasons stated in *Milwaukee Sand Stone Co. v. C. & N. W. R. Co.* 13 W. R. C. R. 671, the charge complained of was unusual and exorbitant and the rate of 4 cts. per cwt. is a reasonable rate for the services rendered. Refund is ordered on this basis. *White Rock Quarry Co. v. C. & N. W. R. Co.* 669, 670.

26. The petitioner alleges that the charge of 6 cts. per cwt. exacted by the respondent for the transportation of nine shipments of stone paving blocks from Ablemans to Milwaukee was excessive and prays for refund of the excess of the amount collected above the amount assessable on the basis of a rate of 4 cts. per cwt., which is the rate in effect for similar shipments moving from Red Granite, Montello, Stevens Point and other Wisconsin points to Milwaukee and Chicago. The respondent put the rate of 4 cts. in effect after the shipments in question moved and concedes that the petitioner's claim for reparation is valid. *Held:* The charge complained of was unreasonable and exorbitant. The reasonable rate would have been 4 cts. per cwt. Refund is ordered on this basis. *Milwaukee Sand Stone Co. v. C. & N. W. R. Co.* 671, 672.

27. The petitioner alleges that the respondent overcharged it for the transportation of two carloads of sand from Portage to Milwaukee and one carload of sand from Portage to Racine, in that the respondent wrongly classified the sand as moulding sand and applied a rate later made applicable only to moulding sand. It appears that the respondent's tariff at the time the shipments moved provided one rate for all grades of sand but that subsequently a new tariff was put into effect which maintained this rate for moulding sand but fixed lower rates for other sand. *Held:* The charges complained of were excessive. The reasonable rate for the transportation of the two cars of sand from Portage to Milwaukee would have been the present distance rate of 2.82 cts. per cwt. for sand other than moulding sand moving a distance of ninety-five miles and the reasonable rate for the transportation of the car of sand from Portage to Racine would have been the present distance tariff rate of 3.2 cts per cwt. for sand other than moulding sand. Refund is ordered on this basis. *Moritz v. C. M. & St. P. R. Co.* 684, 686.

28. The petitioner alleges that the respondent has exacted for the transportation of wooden boxes, in carloads, from Wausau to New London rates and charges which are unjust and unreasonable when compared with rates exacted for the transportation of the same commodity between similar points in Wisconsin and asks for refund on certain shipments. The charges complained of were based on the published tariff of the respondent but the rates on lumber and the box rates depending on the lumber rates have been voluntarily reduced by the respondent since the shipments moved. *Held:* The charges complained of were excessive and unreasonable. Refund is ordered on the basis of the rates now in effect. *Wausau Box & Lumber Co. v. C. & N. W. R. Co.* 698, 701.

29. The petitioner alleges that the rates charged by the respondent for the transportation of lumber and wooden boxes from Wausau to New London are unjust and unreasonable as compared with corresponding rates to other points and asks that the respondent be directed to make refund of alleged excessive charges to certain shippers. Since the hearing the respondent has reduced its rate on lumber and wooden boxes from Wausau to New London to the point claimed as reasonable by the petitioner. The charges upon which refunds are asked were based upon lawful rates. *Held:* The Commission is without power to decide upon the merits of complaints against lawful charges or to authorize refund of any part of such charges except on complaint of a person aggrieved by the exaction of the charges. Inasmuch as the petitioner in the instant case is not a person aggrieved and therefore entitled to ask for refund and inasmuch as a change in rates which satisfies the petitioner has been made, the petition is dismissed. *Wausau Advancement Assn. v. C. & N. W. R. Co.* 772, 774.

Refunds ordered on specific shipments.

Refund on shipment of bark, *see ante*, 9.
of boxes, *see ante*, 28.

RESERVES.

Depreciation reserve charge, *see* DEPRECIATION, 4.
Reserve for injuries and damages, allowance for, *see* INJURIES AND DAMAGES, 1.

RETURN.

Property employed in public utilities—Reasonable return to owner necessary.

1. It devolves upon the Commission to regard the demand for a reasonable return upon actual investment and for services rendered on the part of the utility, as fundamental in establishing and maintaining adequate service for the community—on the assumption, always, that ordinary intelligence and honesty have been shown in establishing the utility. More than the welfare of any given utility or community under consideration is involved in this. If the principle were unwisely disregarded in any one case, it would be an effectual bar to the securing of funds to develop new utilities or improve existing ones throughout the entire state. *In re Darlington El. Lt. & W. P. Co.* 344, 346.

What constitutes a reasonable return for public service companies.

2. Under the constitution, as well as under the statutes, a public service company is ordinarily entitled to rates that will yield reasonable amounts for operating expenses, including depreciation, and for interest and profit on the fair value of the property employed. Of this, in the long run, such companies cannot be deprived even if the Commission were short sighted enough to attempt it. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 215.

What constitutes a reasonable return for public utilities.

3. For growing utilities where rate adjustments cannot, in the very nature of things, be of very frequent occurrence and for which, owing to the law of increasing returns, the net earnings both actually and relatively are gradually increasing, fairness often demands that the returns allowed for the first year or at the time the rates are adjusted should be below rather than above the normal figures. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 240.

4. Interest and necessary profits are usually included in the term "reasonable return." *In re Invest. Mosinee El. Lt. & P. Co.* 712, 716.

5. As the utility plant in the instant case is a new property located in a small village, and as the earnings appear to warrant it, interest and necessary profits have been placed at 8 per cent on the fair value. *In re Invest. Mosinee El. Lt. & P. Co.*, 712, 716.

What constitutes a reasonable return for street railway companies.

6. Under normal conditions a rate of return of 7.5 per cent for interest and profit on such a valuation as that allowed in the *Fare Case* (*City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 1) and under such other conditions as obtained in that case, is ordinarily sufficient to bring the necessary capital into the service. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 231.

RIVER IMPROVEMENTS.

Jurisdiction of Commission over river improvements, *see* RAILROAD COMMISSION, 12.

ROUTE SIGNS.

Street railways, route signs to be displayed on cars to improve service of, *see* STREET RAILWAYS, 18.

ROUTING.

Routing of shipments—Duty of railway company to route shipments over lines whereby the distance will be the least.

1. Where a carrier has the choice of two possible routings for the transportation of a shipment, no specific instructions being given by the shipper and the rates being the same by both routes, it is the duty of the carrier to choose the route having the less distance. *Callaway Fuel Co. v. C. & N. W. R. Co. et al.* 694, 696.

RULES AND REGULATIONS.

Duty of Commission to enforce reasonably adequate service and facilities.

1. It is the duty of the Commission to ascertain from all the facts and circumstances presented in any case the reasonableness of any rule or regulation respecting service and, if it shall determine that such rule or regulation is unreasonable, to change the same or substitute a reasonable rule or regulation in place thereof. *In re Use of Silent Numbers by Wis. Tel. Co.* 587, 593.

Requirements as to payment of rates for services rendered by public utility.

2. A public utility may refuse to furnish service unless the charges for such service are prepaid, or a sum of money sufficient to secure the payment for services rendered during any future interval for which credit is extended, or a bond to secure such payment is deposited with the utility, but the utility may not condition the furnishing of service upon the liquidation of indebtedness of the utility for past service. *In re Refusal of Service of Madison G. & El. Co.* 518, 522.

3. When a consumer moves from one place of residence to another he may doubtless be treated as a new consumer and be obliged to comply anew with the rules and regulations then in effect before receiving service at his new place of residence. The acceptance of the application for service at the new place of residence then constitutes a new and independent contract distinct from the contract for service at the former place of residence. *In re Refusal of Service by Madison G. & El. Co.* 518, 521.

4. A public utility which requires a deposit of money to secure the payment of bills for future service before rendering service to an applicant cannot apply the deposit to the payment of indebtedness previously incurred by the applicant, but must look for its remedies to the courts of law. *In re Refusal of Service by Madison G. & El. Co.* 518, 522.

Requirements as to payment of rates for services rendered by public utility—Necessity for prompt payment.

5. A public utility owes a duty, not only to itself but to its patrons as a whole, to collect promptly all indebtedness due for services rendered, for "In conserving the revenues of such corporation and preventing reductions in the same from loss of accounts, the public is as much interested as the directors and stockholders of the company, for any material reduction in revenues, however caused, generally results, and often necessarily so, in increasing the cost of the service to the patron and diminishing the return to the stockholder. The burden thus occasioned is invariably cast upon and must be borne by both the public and the shareholders, in varying proportions, depending upon the circumstances of each particular case." (*Berend v. Wis. Tel. Co.* 4 W.

R. C. R. 155.) *In re Refusal of Service by Madison G. & El. Co.* 518, 522.

Requirements as to payment of rates for services rendered by public utility—Necessity for prompt payment—Duty of utility to establish rules and regulations.

6. It is the duty of a public utility to establish rules and regulations having for their purpose the enforcement of prompt payment of all accounts due for services when rendered. *In re Refusal Farmers' Union Tel. Co. to Furnish Service*, 399, 401.

Requirements as to payment of rates for services rendered by public utility—Payments to be uniform without reference to contractual relations between utility and its customers.

7. The refusal of the telephone company to accept as full payment for its services a sum less than the full rate which other subscribers are required to pay for similar services was in accord with the plain duty of the company under sec. 1797m—90 of the statutes. It is the intent of this section that the payment for services rendered by a utility shall be uniform without reference to any contractual relations existing between the utility and its subscribers. *In re Refusal Farmers' Union Tel. Co. to Furnish Service*, 399, 400.

Requirements as to payment of rates for services rendered by public utility—Regulations for discounts or penalties—Refusal of service.

See also ante, 2.

8. Though a telephone company is justified in discontinuing service to a subscriber upon his refusal to pay bills rendered him in full, when the subscriber asks for a renewal of service the company is not justified by the existence of his previous indebtedness in refusing to give him present service if he is ready and willing to give the company reasonable security for the payment of future bills. *In re Refusal Farmers' Union Tel. Co. to Furnish Service*, 399, 401–402.

9. The rule followed in the instant case is stated in 1. Wyman on Public Service Corporations, 451, as follows: "As one in public service may always demand prepayment, having given credit, the company must be content as other creditors must be to collect its back bills by legal means. To attempt to make such collections by refusing present service for ready money would seem to be in the face of the public duty." *In re Refusal Farmers' Union Tel. Co. to Furnish Service*, 399, 402.

Requirements as to payment of rates for services rendered by public utility—Regulations for discounts or penalties—Refusal of service.

10. The authorities are not in accord as to the obligation of a public utility to serve an applicant who is in arrears at other premises, although he tenders ready money for present service, but the best considered cases take the view that it is inconsistent with public duty to refuse service under such circumstances. *In re Refusal of Service by Madison G. & El. Co.* 518, 521.

Requirements as to payment of rates for services rendered by public utility—Regulations for discount or penalties—Withdrawal of service.

11. In the present case the company has not established any rule for the enforcement of prompt payment of rentals. However, in the absence of such rule it could not be compelled to furnish to a subscriber service free of charge, for that would be a violation of the statute quoted. Consequently, when a patron refuses to pay the full amount of rental at the end of the period when the rental becomes due, the company should discontinue his service. In this case the company, in the absence of any rule protecting it against loss of revenue from the refusal of patrons to meet their obligations, discontinued complainant's service when he refused to pay the bill in full, and its act in the premises cannot be questioned. *In re Refusal Farmers' Union Tel. Co. to Furnish Service*, 399, 401–402.

12. Complaint is made by the Farmers' Tel. Co. of Beetown that the C. & N. W. Ry. Co. refuses to pay for a telephone installed in its depot at Lancaster. *Held:* The proper course to follow, if telephone rental is not paid within a reasonable time, would be to take out the telephone. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 576.

Requirements as to payment of rates for services rendered by public utility—Regulations for money deposit or security.

See ante, 2, 4, 8–10; *post*, 13–14.

Requirements as to payment of rates for services rendered by public utility—Regulations for money deposit or security—Application of deposit of payment of indebtedness previously incurred not permissible.

13. A public utility which requires a deposit of money to secure the payment of bills for future service before rendering service to an applicant cannot apply the deposit to the payment of indebtedness previously incurred by the applicant, but must look for its remedies to the courts of law. *In re Refusal of Service by Madison G. & El. Co.* 518, 523.

Requirements as to payment of rates for services rendered by public utility—Regulations for payment of rates in advance.

See ante, 2, 8–10.

Requirements as to payment of rates for services rendered by public utility—What are reasonable regulations.

14. The following rules for the protection of a public utility against loss of operating revenues because of uncollectible accounts, and for the securing of prompt receipt of all moneys due for services performed or protection furnished, may be deduced as reasonable regulations which may be lawfully prescribed and enforced by a public utility: 1. It may require of any patron the deposit of a reasonable sum of money as security for the prompt payment of bills when due. In determining the reasonableness of the amount thus to be deposited, the probable amount of the indebtedness that may be incurred during the month or other stated period at the end of which bills are made out and rendered, is an important factor. No more than a sum sufficient to furnish adequate security for the credit extended may be legally exacted. 2. It may require satisfactory security to be furnished in lieu of such

deposit. 3. It may allow a discount upon bills paid on or before a stated day, or exact a penalty for failure to make payment within a certain time. 4. For neglect or refusal on the part of any patron to comply with any of the legal rules and regulations established, it may discontinue service to such patron." (*Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 150, 159.) *In re Refusal Farmers' Union Tel. Co. to Furnish Service*, 399, 401.

STATION FACILITIES.

Adequacy of station facilities.

1. The petitioner alleges that reasonably adequate service demands the erection of a suitable waiting room at the junction of the respondent's line and the line of the "Soo" railway company in the city of Waukesha, as required by sec. 1862g of the statutes. *Held:* The waiting station now provided by the respondents in the city of Waukesha is reasonably adequate to meet the convenience of the public, and it is not necessary to construct a waiting station at the "Soo" line crossing. *City of Waukesha v. T. M. E. R. & L. Co. et al.* 89, 98.

2. The petitioner alleges that the respondent's freight and passenger station facilities at Belle Plaine, Shawano county, are inadequate and asks that the respondent be required to construct a suitable depot for the accommodation of passengers and the storing of freight and to construct and maintain a yard and loading facilities for stock. The respondent agreed at the hearing to add a waiting room for passengers to the existing building and to employ a caretaker to keep it clean and heated. The respondent has also installed a portable stock chute. Permanent stock yards are available at Embarrass, a point 4½ miles distant. *Held:* The present station facilities, though adequate with respect to the shipment of stock, are in need of improvements in certain other respects. The respondent is therefore ordered to provide the station with a stove and suitable lights and to employ a caretaker who shall keep the station clean and properly lighted and heated. *Ford v. C. & N. W. R. Co.* 418, 420.

3. Petition is made that the C. & N. W. Ry. Co. be required to construct and maintain an adequate depot at Allenville, Winnebago county. The railway company now maintains a box car shelter for freight but provides no shelter for passengers. *Held:* The business transacted by the railway company at Allenville is sufficient to warrant the erection of a building for the accommodation of passengers and proper protection of freight. The company is ordered to provide a building suitable for these purposes and to place it in charge of a caretaker who shall keep it clean and properly lighted and heated. Plans are to be submitted for approval. *Cross et al. v. C. & N. W. R. Co.* 421, 423.

4. The petitioners allege that the station facilities on the respondent's line at Shepley, Shawano county, are inadequate, in that no station agent is maintained there. Shepley is a prepaid station and the

service rendered appears to be similar to that ordinarily afforded at a prepaid station. The passenger traffic is light, and the greater part of the freight consists of forestry products in carload lots. *Held:* Conditions at Shepley do not warrant the issue of an order requiring the respondent to maintain an agent at that point. The petition is therefore dismissed. The respondent should, however, arrange to designate the consignees of empty cars and remove the causes of other minor complaints made by the petitioners. *Pukall et al. v. C. & N. W. R. Co.* 427, 429.

5. The petitioner allges that the station facilities supplied by the respondent at Finley, Juneau county, are inadequate and asks that the respondent be required to install an agent and provide suitable grounds and buildings. The respondent now maintains two small sheds at Finley serving, respectively, as a shelter for passengers and as a freight room. Persons desiring to secure empty cars at Finley can do so by notifying the agent at Babcock or Necedah by mail. Shippers of less than carload freight have to wait at the station for a local train and help to load their goods on to the cars. *Held:* Though the freight and passenger business transacted at Finley does not warrant the establishment of that station as a regular agency, as prayed for by the petitioner, the existing facilities cannot be regarded as adequate. The respondent is therefore ordered to properly repair its freight and passenger sheds at Finley, to employ a competent caretaker who shall have charge of the sheds and see that they are clean and that the passenger room is properly lighted and heated at train times, and to erect a suitable raised platform for loading cream and other articles onto cars, or, at its option, to load such cream and freight. *Rogers v. C. M. & St. P. R. Co.* 617, 619.

6. The petitioner alleges that the failure of the respondent to maintain an agent at its station at Brill in Barron county causes great inconvenience to the patrons of the respondent and asks that the Commission take such action as it deems just in the premises. The respondent has an agreement with a local merchant under which the latter meets all passenger trains to sell tickets and transact other business for the respondent at the depot, bills goods for shipment and transacts business for the respondent at his store at hours other than train times. *Held:* The service now rendered by the respondent at Brill is adequate under the existing traffic conditions. The petition is dismissed. *Pritchard v. C. St. P. M. & O. R. Co.* 625, 627.

7. The petitioner alleges that the depot and station facilities maintained by the respondent at Elroy, Juneau county, are inadequate, unsightly and unsanitary and asks that the respondent be required to provide a new and adequate depot. *Held:* The station facilities in question are inadequate and can be made adequate only by the construction of a new depot. The respondent is ordered to erect a modern and adequate depot, to be open for public use on or before Oct. 1, 1914, plans to be submitted for approval. *Frederick v. C. & N. W. R. Co.* 646, 649.

8. The petitioner alleges that the depot maintained by the C. & N. W. Ry. Co. at the city of Sparta is inadequate and asks that the Commission take such action as it may deem just in the premises. The C. & N. W. Ry. Co. offers to erect a new depot on its line in 1914, subject to the approval of the Commission, and the petitioner accepts this as satisfying his complaint. *Held:* The present station facilities are inadequate. It is ordered that the C. & N. W. Ry. Co. erect a modern passenger depot at Sparta as stipulated by the attorneys in the matter. June 1, 1914, is considered a reasonable date at which the depot shall be completed and open for public use. *McMillan v. C. & N. W. Ry. Co.* 679, 683.

Adequacy of station facilities—Telephone facilities.

9. Complaint is made by the Farmers' Tel. Co. of Beetown that the C. & N. W. Ry. Co. refuses to pay for a telephone installed in its depot at Lancaster. *Held:* The proper course to follow, if telephone rental is not paid within a reasonable time, would be to take out the telephone. Then the telephone company may install a pay station in the depot as provided in *In re Free and Reduced Rate Telephone Service*, 1908, 2 W. R. C. R. 521, 543. In case a pay station does not seem to answer the requirements the telephone company may then apply to the Commission for an order requiring the railroad company to install adequate telephone facilities. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 576.

Construction of, on interurban lines.

10. On interurban lines it is impossible to construct waiting stations at every stopping point within cities. The cost of acquiring the necessary land and building structures would be so great as to make the expense of rendering such service prohibitive; furthermore, the convenience of the public may require the changing of stopping points from time to time, and in such event new stations would have to be erected and old ones abandoned. *City of Waukesha v. T. M. E. R. & L. Co. et al.* 89, 98–99.

Duty of railway company to provide adequate station facilities.

11. The fact that passengers have been permitted to wait for trains in a store near the depot does not relieve a railway company of its duty to provide adequate station facilities. *Cross et al. v. C. & N. W. R. Co.* 421, 423.

Practicability, public convenience and necessity of union stations in particular cases—Sparta.

12. The petition, filed under ch. 69, laws of 1913, alleges that public convenience and necessity require the erection of a union station at Sparta and prays that the C. & N. W. Ry. Co. and the C. M. & St. P. Ry. Co. be required to establish such a station. The C. M. & St. P. Ry. Co. has recently improved its depot in compliance with the order issued in *McMillan v. C. M. & St. P. R. Co.* 1912, 10 W. R. C. R. 556. Sparta is the junction point of the Wyeville and Elroy lines of the C. & N. W. Ry. Co. and of the main line of the C. M. & St. P. Ry. Co. and its Viroqua branch and passengers transfer to some extent between the stations of the two railroads. *Held:* Public necessity does not require the construction of a union station at Sparta. The petition is therefore dismissed. *Teasdale v. C. M. & St. P. R. Co. et al.* 679, 683.

CONSTRUCTION, MAINTENANCE AND EQUIPMENT.

Crossings—Railroad by railroad—Separation of grades—Viaduct.

1. The Commission, on its own motion, investigated the advisability of revising the order issued Jan. 2, 1912 (8 W. R. C. R. 422), in the matter of the Mill street crossing at La Crosse. This order required the construction at Rose street of a viaduct conforming to certain specifications and provided for the division of the expense between the C. M. & St. P. Ry. Co. and the city of La Crosse. Actual work under the order has been deferred from time to time upon request of city officials who have proposed various means other than the remedy ordered by the Commission for eliminating the dangerous conditions now existing

at Mill street. The means proposed include: the construction of a subway at Rose street; the construction of a viaduct at Mill street; the construction of a subway and the elevation of the railroad tracks at Mill street; a general elevation of the railroad tracks and the construction of subways at Mill and certain other streets; and the relocation of the railroad to avoid the present crossings with the streets of the city. *Held:* In view of the present and future needs both of the city and the railway company and the relative expense of making the various alterations proposed, it is advisable to construct a viaduct at Rose street as originally ordered. The apportionment of the expense in the original order, however, appears, in the light of more accurate estimates now available, to be unfair to the city. It also appears desirable to reapportion the work of construction, if the cost is reapportioned. It is therefore ordered that the viaduct be constructed in accordance with specifications set forth and that the C. M. & St. P. Ry. Co. bear 60 per cent, the city 25 per cent, and the Wisconsin Ry. Lt. & P. Co. 15 per cent of the expense incurred. The Wisconsin Ry. Lt. & P. Co. is, with the permission of the city, to change its distribution system so as to operate its cars over the new viaduct instead of over Mill street. The city is to assume responsibility for damages to adjacent property or business arising from the issuance or enforcement of the order or from the proper prosecution of the work ordered. The C. M. & St. P. Ry. Co. is to maintain such portion of the bridge and its approaches as lies within its right of way limits except the planking and pavement on the roadway and the sidewalk, which the city is to maintain. The remainder of the structure is to be maintained by the city. The Wisconsin Ry., Lt. & P. Co. is to maintain its tracks and power distribution system, including those portions upon the viaduct and its approaches. *In re Mills Street Crossing at La Crosse*, 145, 152–155.

Passenger cars, adequacy of.

2. The petitioner alleges that the cars used by the respondent in the city of Waukesha are inadequate and asks that the respondent be required to provide cars which will meet the needs of traffic. *Held:* It would be impracticable to abandon the cars in use and substitute new cars in their places. The respondents should, however, remedy the defects in the present equipment when ordering or constructing new equipment. *City of Waukesha v. T. M. E. R. & L. Co. et al.* 89, 98.

OPERATION.

Joint use of tracks—Establishment of, in particular cases.

3. The T. M. E. R. & L. Co. petitions, under ch. 62, laws of 1913, for joint use of the tracks, wires and poles owned by the M. N. R. Co. on Wells st., between Fifth and Sixth sts., in the city of Milwaukee. The M. N. R. Co. denies that public convenience and necessity require such joint use of facilities and contends that the Commission is without power to grant the relief asked for prior to the construction by the T. M. E. R. & L. Co. of its tracks on Wells st. from Eleventh st. to Sixth st. The M. N. R. Co. operates in Milwaukee under an ordinance of the city of Milwaukee which reserves to the city the power to grant to any interurban railway or suburban street railway rendering service of like nature to that rendered by the M. N. R. Co. the right to use the tracks, roadway and motive power of the M. N. R. Co. within the limits of the city. Acting under the rights thus reserved to it, the city passed another ordinance on April 14, 1913, directing the T. M. E. R. & L. Co. to extend its tracks on Wells st, from West Water st. to Fifth st. and from

Sixth st. to Eleventh st., connecting with the tracks of the M. N. R. Co. from Fifth st. to Sixth st. The two companies entered into negotiations looking toward an agreement under which the requirements of the ordinance could be fulfilled, but failed to come to such an agreement. The sliding scale car-mile basis proposed by the T. M. E. R. & L. Co. for the calculation of the compensation to be paid by that company to the M. N. R. Co. for the use of its tracks and overhead equipment is defective for the reason that the use of this basis will not permit an accurate adjustment of rates to costs under varying conditions of traffic and with different types of cars. The Commission therefore provides in the present order for the division of costs upon a ton-mile basis under which the T. M. E. R. & L. Co. is to pay such proportion of the costs as the ton-miles operated by it over the portion of track in joint use bear to the total ton-miles operated over this portion of track. The proposal made by the M. N. R. Co., that the monthly compensation to be paid by it to the T. M. E. R. & L. Co. for the use of electric energy, which it seems advisable to have the T. M. E. R. & L. Co. supply for the M. N. R. Co. over the portion of track to be subject to joint use, be equal only to the output cost of the M. N. R. Co. seems fair to both companies. In view, however, of the difficulties which would probably arise if the amount of the charge were left to the two companies to determine, the fact that the amounts involved are too small to justify an investigation by the Commission and the further fact that the rate of 1 ct. per kw-hr. offered by the T. M. E. R. & L. Co. is admittedly not excessive, it seems best to adopt the rate last mentioned. *Held:* Public convenience and necessity require the joint use of the facilities in question, for the purpose of providing part of the additional trackage and greater flexibility in car routing necessary to prevent the overloading of the cars of the T. M. E. R. & L. Co. and permit the company to render adequate service. Such joint use will not prevent the M. N. R. Co. from performing its public duties nor result in irreparable injury to it or in any substantial detriment to the service. It is therefore ordered that the M. N. R. Co. permit the joint use of that portion of its system located on Wells st. between Fifth st. and Sixth st. by the cars of the T. M. E. R. & L. Co., and by the cars of any other company or companies which the T. M. E. R. & L. Co. may operate over its own tracks, subject to terms and conditions prescribed by the Commission. As a condition precedent to the obligations of the M. N. R. Co. under this order, however, the T. M. E. R. & L. Co. is to give substantial evidence of its acceptance of, and intention to comply with, the terms of the ordinance of April 14, 1913. The terms and conditions prescribed by the Commission relate chiefly to the observance of the prior, paramount and preferential right of the M. N. R. Co. to the use of its tracks and power in the city of Milwaukee; the duties, responsibilities and rights of each company with respect to the making of the necessary changes, new construction and connections required to render possible the joint use of tracks ordered, the maintenance of this construction, and its removal or alteration in case the joint use of tracks is, for any valid reason, terminated; the furnishing of the electric energy required for the operation of cars over the portion of track subject to joint use; the payment of licenses and special taxes on the cars so operated; the responsibility of each company for the fulfillment of its lawful obligations with respect to the tracks in question and for losses, damages and expenses sustained by reason of personal injuries resulting from the operation of cars over the portion of track in joint use; the compensation to be paid by the M. N. R. Co. to the T. M. E. R. & L. Co. for the electric energy used by the M. N. R. Co. in operating its cars over these tracks; and the compensation to be paid by the T. M. E. R. & L. Co. to the M. N. R. Co. for the use of the said tracks and other property of the M. N. R. Co. *T. M. E. R. & L. Co. v. M. N. R. Co.* 268, 286–298.
