4. The T. M. E. R. & L. Co. petitions for joint use of the tracks, wires and poles owned by the Chi. & Mil. El. Ry. Co. on Wells st., between Second and Fifth sts., in the city of Milwaukee. The Chi. & Mil. El. Ry. Co. denies that public convenience and necessity require such joint use of facilities and contends that the T. M. E. R. & L. Co. is not in a position to ask for an order for such joint use until that company has constructed its tracks on Wells st. according to the terms of the ordinance alleged to grant the company the right to use the street named. The Chi. & Mil. El. Ry. Co. also contends that the Commission has no legal or constitutional power to assume jurisdiction in the matter. The Chi. & Mil. El. Ry. Co. operates in Milwaukee under franchises which reserve to the city the right to grant to the T. M. E. R. & L. Co. permission to use the tracks of the Chi. & Mil. El. Ry. Co. under certain terms and conditions. Acting under the power thus reserved to it the city passed an ordinance on April 14, 1913, directing the T. M. E. R. & L. Co. to extend its tracks as specified on Wells st. and authorizing the company, in effect, to make use of the Chi. & Mil. El. Ry. Co's tracks on Wells st. between Second and Fifth sts. The two companies entered into negotiations looking towards an agreement under which the requirements of the ordinance might be fulfilled but failed to come to such an agreement. The objection of the Chi. & Mil. El. Ry. Co., that the joint use of its tracks will diminish the value of its property through the adverse effect upon its business of the delays arising from such use and because the possession by the T. M. E. R. & L. Co. of the right to such use would be an encumbrance upon the property, does not appear to be well founded. The franchise under which the Chi. & Mil. El. Ry. Co. claims to operate provides for a joint use such as that now proposed, and, moreover, it seems probable that this joint use will result in financial gain rather than injury to the company. Each of the two companies claims the privilege of supplying power for the operation of cars over the portion of track to be subject to joint use. If the two companies could come to an agreement as between themselves to string two sets of trolley wires over this portion of track the Commission would probably approve such an arrangement, but in view of the friction and suspicion likely to arise from the creation of an opportunity for the theft of power by one company from the other the Commission is not inclined to order the installation of two sets of trolley wires. Ordinarily it would seem that the company owning the tracks should be permitted to furnish the power, if it desires to do so and is in a position to give adequate power service. Under the circumstances of the present case, however, it seems necessary to have the T. M. E. R. & L. Co. furnish the power. *Held:* The Commission has power to act in this matter under the authority given by ch. 62, laws of 1913. The joint use of the facilities in question is required by public convenience and necessity, for the purpose of providing part of the additional trackage needed to permit the T. M. E. R. L. Co. to reroute certain lines and thus relieve congestion of traffic during rush hours. Such joint use will not prevent the Chi. & Mil. El. Ry. Co. from performing its public duties nor result in irreparable injury to it or in any substantial detriment to the service. It is therefore ordered that the Chi. & Mil. Ry. Co. permit the joint use of that portion of its system located on Wells st. between Second st. and Fifth st. by the cars of the T. M. E. R. & L. Co., and by the cars of any other company or companies which the T. M. E. R. & L. Co. may operate over its own tracks, subject to terms and conditions prescribed by the Commission. These terms and conditions relate chiefly to: the observance of the prior, paramount and preferential right of the Chi. & Mil. El. Ry. Co. to the use of its tracks and power in the city of Milwaukee; the duties, responsibilities and rights of each company with respect to the making of the necessary changes, new construction and connections required to render possible

the joint use of tracks ordered, the maintenance of this construction and its removal or alteration in case the joint use of tracks is, for any valid reason, terminated; the furnishing of the electric energy required for the operation of cars over the portion of track subject to joint use; the payment of car licenses and special taxes on the cars so operated; the responsibility of each company for the fulfillment of its lawful obligations with respect to the tracks in question and for losses, damages and expenses sustained by reason of personal injuries resulting from the operation of cars over the portion of track in joint use; the compensation to be paid by the Chi. & Mil. El. Ry. Co. to the T. M. E. R. & L. Co. for the electric energy used by the Chi. & Mil. El. Ry. Co. in operating its cars over these tracks; and the compensation to be paid by the T. M. E. R. & L. Co. to the Chi. & Mil. El. Ry. Co. for the use of the said tracks and other property of the Chi. & Mil. El. Ry. Co. *T. M. E. R. & L. Co. v. Chi. & Mil. El. Ry. Co.* 299, 312–321.

Joint use of tracks—Establishment of—Terms and conditions of joint use.

5. The M. N. R. Co. proposes in the instant case that the T. M. E. R. & L. Co. shall have no right to operate over the M. N. R. Co's tracks on the portion of street in question any car or cars which compete for traffic either within or without the city of Milwaukee with any car or cars operated by the M. N. R. Co. *Held:* Even though the joint use of tracks by competing lines may have an adverse effect upon the earnings of the company owning the tracks, the Commission must reject any proposal which would restrict such full and free use of the tracks as the needs of the community may demand. The Commission will, however, require such competition only in cases of urgent necessity. In the present case it appears that the M. N. R. Co. in accepting the franchise under which it uses the streets bound itself, when required by the city, to permit the operation over its tracks of such competing cars as those operated by the T. M. E. R. & L. Co. *T. M. E. R. & L. Co. v. M. N. R. Co.* 268, 285–286.

6. Each of the two companies involved in the instant case claims the privilege of supplying power for the operation of cars over the portion of track to be subject to joint use. If the two companies could come to an agreement as between themselves to string two sets of trolley wires over this portion of track the Commission would probably approve such an arrangement, but in view of the friction and suspicion likely to arise from the creation of an opportunity for the theft of power by one company from the other the Commission is not inclined to order the installation of two sets of trolley wires. Ordinarily it would seem that the company owning the tracks should be permitted to furnish the power, if it desires to do so and is in a position to give adequate power service. The Commission believes that it is within its authority to decide which company shall supply the power used over the portion of track in joint operation and it is accordingly ordered that the T. M. E. R. & L. Co. furnish this power. *T. M. E. R. & L. Co. v. Chi. & Mil. El. Ry. Co.* 299, 309, 316.

7. The Commission is inclined to the view that in cases such as the present, where joint use of tracks is proposed, the company owning the tracks should be permitted to furnish the power if it so desires, provided it is in a position to furnish a power that will be reliable in character and adequate in quantity and quality. But when conditions are such that the owning company cannot furnish a satisfactory power, other provision must be made. It would be ridiculous for the Commission to order the joint use of a piece of track and at the same time permit the use of a power supply that was manifestly inadequate for the operation of cars thereover. Furthermore, the company that furnishes the power must be in a position to meet adequately the requirements

of the traffic under both normal and emergency conditions. *T. M. E. R. & L. Co. v. Chi. & Mil. El. Ry. Co.* 299, 309, 310.

Joint use of tracks—Establishment of—Terms and conditions of joint use—Basis of compensation.

8. In the opinion of this Commission a proper basis for such compensation involves consideration of (a) the cost of maintaining the property in good condition and repair, (b) net cost of renewals, replacements, and reconstruction necessary to keep the property at all times in good condition and repair, (c) the taxes paid upon the property and (d) a reasonable rate of return upon the investment in the property. In this case it seems reasonable that the above items should be apportioned between the companies according to the use made by them of the track. Inasmuch as some of the above items of cost vary for different railways, for different parts of any given railway and even from month to month for the same piece of track, it would seem preferable that, insofar as possible, the actual costs on the particular piece of property in question should be determined, rather than average costs for an entire system. Certain of the above items are affected by the amount of traffic over the tracks. It is plain, therefore, that no definite rate of compensation per car-mile can be fixed that will be equitable to both parties under all conditions of traffic. To be equitable, the rate per car-mile would have to vary constantly with the traffic. *T. M. E. R. & L. Co. v. M. N. R. Co.* 268, 280–281.

9. Because of the practicable impossibility of determining the weight of passengers carried and the danger of doing one company or the other an injustice if the weight of merchandise and express matter is included in the ton mileage while the weight of passengers is excluded, the weight of the load may well be disregarded for the sake of simplicity in the determination of ton mileage, whether the load be passengers or merchandise. This method of calculating ton mileage may not result in exactly the same proportioning of expenses as would be made if the load were included but it is believed that the results will be substantially the same. The contention that the use of this method will result in unjust discrimination where one company operates heavy interurban cars, which are, as a rule, but moderately loaded, while the other company operates light city cars, which are often crowded with passengers, is supported by no data offered in the present case, and it is believed that even if the traffic of the two companies is of a different nature the omission of the weight of passengers will not affect to any great extent the justice of the division of expenses proposed by the Commission. *T. M. E. R. & L. Co. v. M. N. R. Co.* 268, 283–284.

10. The proposal made by the M. N. R. Co., that the monthly compensation to be paid by it to the T. M. E. R. & L. Co. for the use of electric energy, which it seems advisable to have the T. M. E. R. & L. Co. supply for the M. N. R. Co. over the portion of track to be subject to joint use, be equal only to the output cost of the M. N. R. Co. seems fair to both companies. In view, however, of the difficulties which would probably arise if the amount of the charge were left to the two companies to determine, the fact that the amounts involved are too small to justify an investigation by the Commission and the further fact that the rate of 1 ct. per kw-hr. offered by the T. M. E. R. & L. Co. is admittedly not excessive, it seems best to adopt the rate last mentioned. *T. M. E. R. & L. Co. v. M. N. R. Co.* 268, 284–285.

11. The use of the car-miles as a unit would not give so equitable a division of the costs as the ton-mile, where two companies are involved, since the types of cars used by the different companies may differ considerably in weight and capacity. If the car-mile is taken as the unit, each company would bear an equal portion of the costs, which is manifestly unfair since the company using the light cars has not had as

much use of the track as the other company. The ton-mile as a unit would give the better results. *T. M. E. R. & L. Co. v. M. N. R. Co.* 268, 281.

12. Both companies in the instant case consider that a compensation based upon a rate per car-mile for the use of the tracks and overhead system in question would be satisfactory, but the two companies fail to agree upon what that rate shall be. The Commission, however, for reasons set forth in *T. M. E. R. & L. Co. v. M. N. R. Co.* 1913, 13 W. R. C. R. 268, 281, adopts the ton-mileage basis used in that case. *T. M. E. R. & L. Co. v. Chi. & Mil. El. Ry. Co.* 299, 307.

Joint use of tracks—Establishment of—Terms and conditions of joint use—Liability for accidents.

13. Although it is true that the joint use of tracks in the present case will mean increased risk to both companies and that the earnings of the M. N. R. Co. from such joint use for a period of many years might be wiped out by the losses arising from a single accident, this is not a sufficient reason for placing all of the burden of responsibility for accidents upon the T. M. E. R. & L. Co. Public policy would appear to forbid the relieving of a railway company of its natural responsibilities and it is also believed that the safety of operation will be promoted if each company is obliged to assume a liability in proportion to its responsibility for any accidents that may occur. Moreover, the joint use of the tracks is being forced, in a measure, upon both companies for the benefit of the public whose streets they occupy and there is no reason for discriminating between the two companies in the matter of liability for personal injuries. *T. M. E. R. & L. Co. v. M. N. R. Co.* 268, 277.

14. With respect to the matter of liability for accidents the position taken by the Commission in *T. M. E. R. & L. Co. v. M. N. R. Co.* 1913, 13 W. R. C. R. 268, 277, is followed. *T. M. E. R. & L. Co. v. Chi. & Mil. El. Ry. Co.* 299, 306–307.

Joint use of tracks—Establishment of—Terms and conditions of joint use—Prevention of accidents.

15. That the joint use of tracks will increase the possibility of accident is obvious. There is no evidence in the instant case, however, to show that the joint use of tracks will increase the possibility of accident to abnormal proportions. It is the expectation of the Commission, moreover, that the standards maintained by the two companies with respect to the upkeep of rolling stock and the discipline of employes will be such as to reduce the number of accidents under joint use of tracks to a minimum. *T. M. E. R. & L. Co. v. Chi. & Mil. El. Ry. Co.* 299–305.

Joint use of tracks—Establishment of—When permissible.

16. Under the law (ch. 62, laws of 1913) the proposed joint use is permissible unless such use will result in irreparable injury to the owner or in substantial detriment to the service, always provided, of course, that such use is required by public convenience and necessity. It appears clear that in the instant case there will be neither irreparable injury to the owner nor substantial detriment to the service by the proposed joint use. On the contrary, there seems to be a probability that the respondent will obtain a financial advantage from the arrangement rather than an injury. For these reasons and under these circumstances, this Commission can not allow the claim of injury to stand in the way of the proposed joint use of these tracks. *T. M. E. R. & L. Co. v. Chi. & Mil. El. Ry. Co.* 299, 306.

Requirements as to service and facilities—Adequacy of service.

17. The petitioner alleges that the limitation of stops made by the cars of the respondent companies within the city of Waukesha results in inadequate street railway service and in danger to public travel at street intersections. In the past the cars have stopped at all street intersections to take on and let off passengers, but under a new schedule which, the respondents allege, was adopted for the purpose of improving the service, the cars stop only at certain designated points. The petitioner alleges that the franchise under which the respondents use the streets in Waukesha requires them to furnish street railway service as distinguished from interurban service and that they have no right to operate interurban cars through the city. *Held:* The right of respondents to operate interurban cars upon the streets of Waukesha is a judicial question and not within the power of the Commission to determine, but so long as the respondents render such service it is subject to the supervision and regulation of the Commission. In view of both of the requirements of the interurban service and the franchise obligations which the respondents may have assumed with respect to the rendering of street railway service, it is deemed advisable to tentatively increase the number of stops made within the city of Waukesha. The respondents are therefore ordered to stop their cars in the city of Waukesha to receive and discharge passengers at points designated by the Commission. *City of Waukesha v. T. M. E. R. & L. Co. et al.* 89, 99.

18. The Commission, on its own motion, investigated the service on the T. M. E. R. & L. Co.'s system of street railways in the city of Milwaukee. The matter of the formal complaint made by the Washington Park Advancement Association and the Northwest Neighborhood Civic Club with respect to the service on the National ave.-Walnut st. line in Milwaukee is included in the present proceeding. The Commission investigated traffic conditions on the company's lines during the summer of 1912 and the winter, spring and summer of 1913. Traffic data were also submitted by the company and by the city of Milwaukee. The company contends that the revenue yielded by the rates provided for the company by the order of the Commission in the *Fare Case (City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 1, 369), is not sufficient to meet reasonable expenses under present conditions without the making of any further improvements in service. A valuation was computed and the revenues and expenses were investigated, data presented in the *Fare Case* being used with new data as the basis for further analyses. Necessary apportionments are made between T. M. E. R. & L. Co. and the M. L. H. & T. Co. In the study of expense for maintenance of equipment consideration is given to comparative data on the unit costs of street railway companies in other large cities. Under present conditions it is impracticable during rush periods to supply all passengers with seats. To enforce such a standard of service with the present track facilities would result in unreasonable congestion in traffic in the down-town districts and would also necessitate vast expenditures for additional equipment, facilities and labor which would have to be borne in some manner by the public. Moreover it is doubtful, in view of the importance of speed when people are going to and from their work, if patrons of the street cars would be willing to wait for cars with vacant seats when cars with comfortable standing room available were passing. *Held:* To render reasonably adequate service in Milwaukee the T. M. E. R. & L. Co. must operate a sufficient number of cars to supply: (1) during any half hour in the non-rush period an average of at least 133 seats per 100 passengers demanding transportation in a given direction at any point on the line; and (2) during the maximum half hour in rush periods a similar average of at least 67 seats per 100 passengers, making provision for a gradual transition

between the two standards. The service rendered by the company is inadequate in that it has failed to comply with the standards of service set forth above. Investigation of the costs of rendering service conforming to these standards shows that the costs can reasonably be met from the revenue yielded by the rates ordered by the Commission in the *Fare Case*. The company is therefore ordered to operate its lines in Milwaukee in accordance with the standards of service set forth, subject to certain modifications, and with other regulations prescribed by the Commission. Because of the fact that the traffic on some lines is so light at times that if only 133 seats per 100 passengers were supplied there would be an unreasonably great time interval between cars, minimum headway requirements are made. The standards of service prescribed are also subject to the following exceptions: (a) No service is to be required on the 12th st.-Viaduct line during the non-rush hours; and (b) suburban service within the city limits is not to be subject to the standards stated unless the cars used are operated as an integral part of the city schedule. During rush hours the company is to station traffic officers with authority over trainmen at important transfer intersections and at other points where these officers can materially assist in the movement of traffic and the maintenance of schedules. The traffic officers, among other things, are, so far as practicable, to limit the loads on individual cars to the maximum comfortable carrying capacity of the cars. The company is also to station fare collectors at important loading points to admit passengers through the front doors of prepayment cars and otherwise facilitate the movement of cars and assist in the handling of passengers. Lists of traffic officers and fare collectors with their stations are to be submitted to the Commission for approval. The company is further ordered: to submit plans for all new passenger cars and for the remodeling of all old passenger cars to the Commission for approval with respect to details affecting the adequacy of service; to remove the dividing rails on the platforms of the rebuilt cars, and the chains attached to the dividing rails on the rebuilt and 600 type cars; and to display separate route and destination signs on the front and a route sign on the side of each car in service, any proposed changes in the type and manner of handling of signs to be submitted to the Commission for approval. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 179, 180.

Requirements as to service and facilities—Adequacy of service—Fare collectors.

See ante, 18.

Requirements as to service and facilities—Adequacy of service—Limitation of stops.

See ante, 17.

Requirements as to service and facilities—Adequacy of service—Minimum headway.

19. In determining standards for adequate street railway service it is necessary to specify what shall be the minimum headway if the public is to be properly accommodated at periods of the day when travel is light. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 202.

Requirements as to service and facilities—Adequacy of service—Necessity for flexible schedule.

See post, 20.

Requirements as to service and facilities—Adequacy of service—Schedule making a managerial detail for the street railway company.

20. In its brief and in its oral argument, the city of Milwaukee in the instant case has taken the position that, to be effective, the order of the Commission should specify definite schedules for each city line in addition to fixing standards of service for rush and non-rush periods, for the purpose of accurately checking the service. The company, on the other hand, has laid great stress upon the necessity of a flexible schedule, and has taken the position that schedule-making is a managerial detail which should be left for the company to control. The company's position in this regard we believe to be correct. Conditions of traffic vary from year to year and with the seasons of the year, and to meet such changes schedules must be flexible. Should the Commission specify the headway on each line, it would be necessary for it to make a constant study of changes in the volume of traffic and modify its orders from time to time. In short, the Commission would, by so doing, place itself at the service of the company, filling a need which should rather be met by an efficient traffic study department. The order has been carefully drawn, and we believe that it will be possible for the city or individuals to prove a violation thereof by making a count for the same period on three successive days at any point where the standards are apparently not being fully complied with. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 211–212.

Requirements as to service and facilities—Adequacy of service—Seating capacity of cars during non-rush periods.

21. A public service corporation which undertakes to supply street railway service should furnish sufficient equipment to afford seats for all passengers who desire such service, unless there exist operating or financial conditions which make it impossible or impracticable to do so. The evidence offered in the present proceeding discloses no conditions which warrant a deviation from this standard except during the morning, noon and evening rush hours of the day and at times when conditions are abnormal. It is held that to render reasonably adequate service in Milwaukee the T. M. E. R. & L. Co. must, among other things, operate a sufficient number of cars to supply during any half hour in the non-rush period an average of at least 133 seats per 100 passengers demanding transportation in a given direction at any point on the line. *In re Service T. M. E. R. & L. Co. in Milwaukee*, 178,, 209.

Requirements as to service and facilities—Adequacy of service—Seating capacity of cars during rush periods.

22. Under present conditions it is impracticable during rush periods to supply all passengers with seats. To enforce such a standard of service with the present track facilities would result in unreasonable congestion in traffic in the down-town districts and would also necessitate vast expenditures for additional equipment, facilities and labor which would have to be borne in some manner by the public. Moreover, it is doubtful, in view of the importance of speed when people are going to and from their work, if patrons of the street cars would be willing to wait for cars with vacant seats when cars with comfortable standing room available were passing. It is held in the instant case that to render reasonably adequate service in Milwaukee the T. M. E. R. & L. Co. must, among other things, operate a sufficient number of cars to supply during the maximum half hour in rush periods an average of at least 67 seats per 100 passengers demanding transportation, making provision for a gradual transition between this standard and

the standard for non-rush period service. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 203–204.

Requirements as to service and facilities—Signs on cars.
See ante, 18.

Requirements as to service and facilities—Standards of service.
23. The traffic data in the instant case show clearly that there is a wide variation in the loading of cars during the non-rush hours and whatever the cause of this condition may be, while it exists it must be given consideration in determining the amount of service necessary. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 201.

Requirements as to service and facilities—Traffic officers.
See ante, 18.

Requirements as to service and facilities—Type of cars.
24. The company is ordered in the instant case to submit plans for all new passenger cars and for the remodeling of all old passenger cars to the Commission for approval with respect to details affecting the adequacy of service and to remove the dividing rails on the platforms of the rebuilt and 600 type cars. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 248.

SUPERINTENDENCE.

Cost of superintendence as element in the valuation of public utilities, *see* VALUATION, 8.

SWITCH CONNECTIONS.

ESTABLISHMENT OF.

Spur track, statutory requirements relating to.
1. The contention of the respondent in the instant case that having once provided the petitioner with track facilities adequate to the then existing needs of the plant the respondent cannot be required either to change the existing tracks or to install additional tracks to meet new requirements of the industry, is not tenable for such a construction of the statute would defeat the purpose of the statute. *Madison G. & El. Co. v. C. & N. W. R. Co.* 409, 413–414.

2. In deciding whether a proposed spur track is practically indispensable to the successful operation of a public utility the mere physical possibility of operating the plant without the use of the spur cannot be taken as conclusive of the question, but consideration must be given to the needs of the plant when operated with the efficient and economical equipment which it is the duty of the public utility under the law (*Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 155) to install and maintain. *Madison G. & El. Co. v. C. & N. W. R. Co.* 409, 415–416.

3. The Commission has the power under sec. 1797—11m of the statutes to order the construction of a spur track to the warehouse involved in the instant case if the location of the warehouse is within three miles

of the company's line, if the connection is necessary for the warehouse or industry in question and if it is not unreasonably dangerous to public travel. *Doyle v. M. St. P. & S. S. M. R. Co.* 620, 622.

RIGHT OF SHIPPER TO SWITCH CONNECTIONS.

Industrial track, petition for construction of, dismissed by Commission.

4. The petitioner asks that the respondent be required to restore the industrial track formerly maintained by it to the petitioner's warehouse at Stockton. The respondent alleges that it removed the track because the business done over it did not justify its maintenance and because it is impracticable to maintain the track on account of the elevation of the main line track at the point of connection. The track was originally constructed for a warehouse other than that of the petitioner and before the passage of the Railroad Commission Law. *Held:* Inasmuch as the track in question was installed before the passage of the Railroad Commission Law and was not paid for in full by the owners of the industry to which it was originally built, nor in part by the petitioner or her predecessors, the removal of the track is not subject to the conditions imposed by sec. 1802 of the statutes and the Commission is without jurisdiction to order the restoration of the track as prayed for. The petition is therefore dismissed. *Doyle v. M. St. P. & S. S. M. R. Co.* 620, 622.

Spur track, construction of, ordered by Commission.

5. Petition is made for an order requiring the respondent to install a spur track for the use of the petitioner under the terms of sec. 1797—11m of the statutes. The petitioner alleges that the spur track desired is practically indispensable to the successful operation of its plant as improved by the installation of a mono-rail system for the handling of coal; that neither the construction nor the operation of the spur track will be unusually unsafe or dangerous or unreasonably harmful to public interest; that an existing spur track which is now useful only to the petitioner and which will cease to be useful even to the petitioner upon the completion of the petitioner's new coal handling system, can be changed to meet the requirements of the petitioner; and that the respondent refuses to cause the change to be made unless the petitioner signs a contract containing a provision imposing all liability growing out of the construction, maintenance or operation of the track upon the petitioner, except liability for personal injuries. *Held:* The spur track requested by the petitioner is practically indispensable to the successful operation of the petitioner's new plant for the manufacture of coal gas and it meets all other statute requirements in that it is less than three miles in length and will not in its construction and operation be unusually unsafe and dangerous nor unreasonably harmful to the public interest. It is ordered: (1) that the respondent construct an adequate and suitable spur track as prayed for by the petitioner: and (2) that the petitioner deposit with the respondent the sum of $588, the estimated cost of the spur track, and give the respondent a bond to be approved by the Commission, securing the respondent against loss on account of any expense incurred beyond the amount of the deposit. *Madison G. & El. Co. v. C. & N. W. R. Co.* 409, 417.

Spur track, construction of—Prior construction of a spur track for an industry not a bar to the requirement of additional or improved track facilities adapted to meet new needs of the industry.

6. The contention of the respondent that having once provided the petitioner with track facilities adequate to the then existing needs of

the plant the respondent cannot be required either to change the existing tracks or to install additional tracks to meet new requirements of the industry, is not tenable. *Madison G. & El. Co. v. C. & N. W. R. Co.* 409, 413–414.

Spur track, construction of—Rights to "spot" freight cars on a public street.

7. The problem of what constitutes the proper use of a street for railroad purposes under permission granted by a city depends for solution upon a number of facts and circumstances. What may be an unreasonable use of a street by a railway company in one locality may be a reasonable use in another locality. In the instant case the street involved, though not legally vacated, has been occupied almost entirely by the respondent under municipal grants for public teaming and industrial tracks and the street has never been required, and in all probability will never be required, for public use. The objection urged by the respondent on the ground that the track desired by the petitioner would have to be constructed and operated, and that cars would have to be spotted for unloading in a public street is therefore not sufficient to justify a refusal to grant the relief asked for by the petitioner. *Madison G. & El. Co. v. C. & N. W. R. Co.* 409, 414–415.

Spur track, construction of—Statutory requirements.

8. In deciding whether a proposed spur track is practically indispensable to the successful operation of a public utility, the mere physical possibility of operating the plant without the use of the spur cannot be taken as conclusive of the question, but consideration must be given to the needs of the plant when operated with the efficient and economical equipment which it is the duty of the public utility under the law (*Berend v. Wis. Tel. Co.* 1909, 4 W. R. C. R. 155) to install and maintain. *Madison G. & El. Co. v. C. & N. W. R. Co.* 409, 415–416.

Spur track, petition for construction of, dismissed by Commission.

9. The petitioner asks that the respondent be required to restore a spur track which it formerly maintained at Kingston, Oconto county, and alleges that if the spur track were replaced potatoes from 75 to 100 acres of land and some logs and pulp wood would be shipped over it. The spur was removed in 1912 because, the respondent alleges, the business originating at Kingston was insufficient to warrant the maintenance of the spur and the physical conditions were such as to make the presence of a switch a menace to safe operation. Facilities for shipping carload freight are now provided at Mountain, which is 2.8 miles by rail from Kingston. *Held:* The traffic at Kingston is not sufficient to warrant an order granting the prayer of the petitioner. The petition is therefore dismissed. *Knutsen v. C. & N. W. R. Co.* 615, 616.

SWITCHING CHARGES.

ESTABLISHMENT, CONSTRUCTION AND MAINTENANCE.

Extension of lines.

1. The Commission, on its own motion, investigated the refusal of the Larsen Tel. Co. to extend its lines to certain applicants for its service unless such applicants would buy stock in the company or build the

necessary extension and turn it over to the company. The costs of making the extension and rendering the service requested were ascertained. *Held:* The telephone company may reasonably be expected to put in the extension if nine new subscribers can be obtained or if any number less than nine desiring service will advance to the company the amount by which the cost of the extension exceeds the amount upon which the revenues from the business acquired will yield a reasonable return, such advances to be repaid if new subscribers are obtained within a reasonable time. It is ordered: (1) that the telephone company shall extend its lines and furnish service at regular rates to the parties residing in the neighborhood of the original applicant in this case, when nine or more of such parties shall agree to take service; and (2) that in case less than nine of the parties concerned agree to take service the company shall, upon demand of a less number, extend its lines and furnish service to those desiring it upon payment by the latter of $45 for each party by which the number subscribers for service is less than nine, such advances to be repaid without interest for each new subscriber added within three years, up to the number for whom the advances were made by the original subscribers. *In re Extension Larsen Tel. Co.* 363, 364–365.

Extension of lines—Advance of cost by subscribers.
See ante, 1.

Extension of lines—Authority for extension derived from the state and not from the municipality.

2. The contention of the respondent that it is entitled to enter the village and compete with the petitioner by virtue of a franchise granted by the village is untenable, for the authority to operate a telephone utility is, under the statutes, derived from the state and not from any local branch of the government. (*State ex rel. Smythe v. Milwaukee Ind. Tel. Co.* 133 Wis. 588.) *Tri-State Tel. & Teleg. Co. v. St. Croix F. M. Tel. Co.* 437, 439.

Extension of lines—Authority from Commission necessary.

3. Under sec. 1797m—74 of the statutes it is made unlawful for any telephone company to extend its service into a territory already occupied by another company without bringing the matter before, and obtaining authority of, the Commission. *Tri-State Tel. & Teleg. Co. v. St. Croix F. M. Tel. Co.* 437, 439.

Extension of lines—Discrimination between stockholders and nonstockholders prohibited.

4. The fact that the persons to whom the respondent desires to extend its service are shareholders, is immaterial, for service must be rendered to shareholders upon the same terms and conditions as to other subscribers. *Tri-State Tel. & Teleg. Co. v. St. Croix F. M. Tel. Co.* 437, 439.

Extension of lines—Duplication of equipment of established utility—When permitted.

5. In previous decisions the Commission has held that it is the intent of ch. 610 of the laws of 1913 that no duplication of lines such as that proposed in the instant case should be allowed, unless it is clearly shown that the company already rendering service in the district in question is unable to render adequate service at reasonable rates. (*In re Proposed Extension Clinton Tel. Co.* 1913, 12 W. R. C. R. 744, 746, and *In re Proposed Extension Ettrick Tel. Co.* 1913, 12 W. R.

C. R. 744.) It is therefore necessary in the instant case to determine whether the existing service is adequate, and if not, whether it is possible to render it adequate by establishing physical connection or by other means. *Eagle Tel. Co. v. State Long Distance Tel. Co. et al.* 597, 601.

Extension of lines—Duplication of equipment of established utility not ordinarily the remedy for excessive rates or inadequate service.

6. If the rates charged by a telephone utility are excessive or if the service is inadequate the remedy is to make complaint to the Commission in the regular way rather than to invite a duplication of telephone systems. *In re Proposed Extension Fond du Lac Rural Tel. Co.* 676, 678.

Extension of lines—Extension contrary to law—St. Croix Farmers' Mut. Tel. Co. in village of Grantsburg, Burnett county.

7. The petitioner alleges the respondent on Aug. 16, 1913, commenced to build telephone lines into the village of Grantsburg for the purpose of competing with the petitioner for local business, contrary to the provisions of ch. 610, laws of 1913. The respondent admits that it connected the telephone of one of its shareholders in the village of Grantsburg with its lines but contends that this act was not in violation of ch. 610, laws of 1913. The telephone involved has since been disconnected. *Held:* The respondent's action in extending its service to an invidual within the limits of the village without previously obtaining authority from the Commission, as required by sec. 1797m—74 of the statutes, was illegal. Inasmuch, however, as the telephone installed in the village by the respondent has been disconnected, there is no present violation of the statute. The instant complaint is therefore dismissed, but should any extensions be made in the future without the procedure proper under the statutes it will become the duty of the Commission to report such violations to the attorney-general for prosecution. *Tri-State Tel. & Teleg. Co. v. St. Croix F. M. Tel. Co.* 437, 439.

Extension of lines—Legality of extension in municipality in which there is already in operation a public utility engaged in similar service.

8. The Bergen Telephone Company has maintained direct connection with three private telephones installed within the village of Clinton which is the district served by the Clinton Telephone Company. The facts in this matter were presented by the Commission to the attorney-general and the latter rendered an opinion under date of February 27, 1913, to the effect that the Bergen Telephone Company was maintaining the service mentioned in violation of sec. 1797m—74 of the Public Utilities Law and that the company was therefore subject to the penalty imposed by section 1797m—95 of the same law. The fact that the number of subscribers given direct service is small and the further fact that some or all of these subscribers have furnished their own equipment are immaterial. The practice in question is clearly illegal and must be discontinued. No order of the Commission is necessary in the matter. *In re Physical Conn. Betw. Clinton & Bergen Tel. Co.* 249, 257–258.

Extension of lines—Proposed extension permitted by law unless Commission finds that public convenience and necessity do not require the extension.

9. The only action required of this Commission by the law in cases involving the duplication of telephone lines within the same territory by the extension of new lines, is a finding that public convenience and necessity do not require the proposed extension. Where the Commission does not make such a finding, the statute itself operates to authorize the extension. *In re Proposed Extension Owen Tel. Co.* 630, 631.

Extension of lines—Public convenience and necessity of extensions in particular cases—Clinton Tel. Co. in town of Clinton, Rock county.

10. The Clinton Tel. Co. filed notice with the Commission, pursuant to ch. 610 of the laws of 1913, of its intention to extend its telephone line a distance of 80 rods in the town of Clinton, Rock county, to reach a former subscriber at his new place of residence. The Bergen Tel. Co., which operates a line running past the house in question, objects to the proposed extension. *Held:* Where adequate service at reasonable rates can be obtained from the company whose lines already occupy the field, encroachments of the kind contemplated by the applicant should not be permitted. The Commission finds that public convenience and necessity do not require the construction of the extension proposed by the applicant. *In re Proposed Extension Clinton Tel. Co's Lines*, 166, 168.

Extension of lines—Public convenience and necessity of extension in particular cases—Fond du Lac Rural Tel. Co. in town of Taychedah, Fond du Lac county.

11. The Fond du Lac Rural Tel. Co. filed notice with the Commission of its intention to extend its telephone line in the town of Taycheedah, Fond du Lac county. The Eastern Wisconsin Tel. Co. objects to the proposed extension. The applicant desires to make the extension for the purpose of serving two residences. The occupant of one of these has connection with the lines of the objector over a line owned by himself and is in a position to extend his service to the occupant of the other residence with much less additional construction than would result if either the applicant or the objector were to extend its lines to reach him. *Held:* Public convenience and necessity do not require the extension proposed. If the charges exacted for service rendered with existing connections are excessive or if the service is inadequate the proper remedy is to make complaint in the regular way rather than to invite a duplication of telephone systems. *In re Proposed Extension Fond du Lac Rural Tel. Co.* 676, 678.

Extension of lines—Public convenience and necessity of extensions in particular cases—Owen Tel. Co. in towns of Hoard and Green Grove, Clark county.

12. The Owen Tel. Co. filed notice with the Commission of its intention to extend its telephone lines in the towns of Hoard and Green Grove in Clark county. The Curtiss & Withee Tel. Co. and the Abbotsford Lt. & Tel. Co. object to the proposed extensions. The unincorporated village of Curtiss, to which the applicant desires to make the extension proposed for the town of Hoard, is now served by both of the objecting companies. The region which the applicant desires to serve by the extension which it proposes to make in the town of Green Grove is without telephone service. *Held:* 1. Public convenience and neces-

sity do not require the proposed extension of the applicant's lines in the town of Hoard. 2. Since the proposed extension in the town of Green Grove cannot be regarded as unwarranted by public convenience and necessity, the applicant may proceed with the construction without any order from the Commission. 3. The contention of the objecting companies that the territory which the applicant desires to serve in the town of Green Grove is naturally tributary to Colby, Abbotsford and Curtiss rather than to Owen is not sufficient to compel a finding that the service of the applicant is not required by public convenience and necessity, for the territory in question is now without telephone service and several residents have already signified their desire for the applicant's service. *In re Proposed Extension Owen Tel. Co.* 630, 632.

Extension of lines—Public convenience and necessity of extensions in particular cases—State Long Distance Tel. Co. in vicinity of Lauderdale Lake, Walworth county.

13. In the instant case the respondent State Long Distance Tel. Co. denies that the physical connection desired by the petitioner is required by public convenience and necessity, alleges that public convenience and necessity will be best served by allowing the said respondent to extend its lines so that telephone subscribers in the vicinity of Lauderdale Lake may be directly connected with its exchange at Elkhorn and asks that it be permitted to make such extensions of its lines. The physical connection formerly maintained was severed on July 1, 1913, the State Long Distance Tel. Co. alleging that the petitioner had violated the terms of the contract for physical connection by connecting the subscribers served under the contract with the petitioner's La Grange exchange. Since July 1, 1913, these subscribers have been obliged to reach Elkhorn indirectly through the La Grange central, which is merely a rural exchange, and over a toll line owned in part by the Eagle Tel. Co. and in part by the Wis. Tel. Co., and complaint is made of the service rendered. The subscribers at Lauderdale Lake, who are for the most part summer residents from Chicago, use their telephones chiefly for communication with Elkhorn and Chicago, and receive slight benefit, if any, from their connection with La Grange. Messages for Chicago sent through the La Grange central go by a less direct route than those sent by way of Elkhorn. *Held:* The subscribers of the petitioner at Lauderdale Lake cannot be adequately served by the petitioner through its La Grance exchange, either under the existing arrangements or with a physical connection between the two companies, and it is regarded as desirable, in the interest of good telephone service, that the lines of the State Long Distance Tel. Co. be extended for a distance of about one and one-half miles north of its present terminus at the Sterlingworth Hotel, connecting with such subscribers as desire the direct service of the Elkhorn exchange. *Eagle Tel. Co. v. State Long Distance Tel. Co. et al.* 597, 602.

OPERATION.

Physical connection—Establishment of—Statutory requirements.

14. Where physical connection of lines is enforced under the statute, it is contemplated that the companies shall agree upon the apportionment of the joint tolls, and it is only in case of failure of agreement that the Commission has authority to make the apportionment. *Ettrick Tel. Co. v. La Crosse Tel. Co.* 25, 27.

15. No telephone company can insist that a connecting telephone company furnish its toll line facilities free of charge, for that would be clearly taking property without compensation and would meet the

condemnation of constitutional provisions. In compelling physical connection between two telephone systems, it must be remembered that the statute provides for reasonable terms and conditions. It could not legally provide that one company should give another the use of its toll lines without compensation. *Ettrick Tel. Co. v. La Crosse Tel. Co.* 25, 28.

Physical connection—Establishment of—Terms and conditions of joint use.

See also RATES—TELEPHONE, 4, 6.

16. On motion of the Commission a rehearing was held of certain matters involved in an order issued October 19, 1912 (10 W. R. C. R. 598) directing the Clinton Tel. Co. and the Bergen Tel. Co. to establish physical connection between their systems and prescribing a 2 ct. toll charge for completed calls between the two systems. The Bergen Tel. Co. is opposed to the exaction of a toll for service between the two systems. The Clinton Tel. Co. favors the retention of the 2 ct. toll ordered by the Commission. It appears that the exaction of this toll has reduced the number of messages transmitted between the two exchanges, largely, it is probable, through the elimination of unnecessary conversation. *Held:* The effect of the 2 ct. toll is in the interests of good service and there are no valid reasons for abandoning the charge. The terms of the former order with respect to the 2 ct. toll and the division of the revenue accruing from it will therefore remain unchanged. *In re Physical Conn. Betw. Clinton & Bergen Tel. Cos.* 249, 252–253.

Physical connection—Establishment of, in particular cases.

17. The petitioner asks for an order requiring the respondent to restore the physical connection and service formerly maintained between the two companies in the village of Owen. The connection was severed by the respondent upon the refusal of the petitioner to accede to new terms which the respondent sought to impose for its services to the petitioner. The respondent is ordered to restore the connection between its lines and the line or lines of the petitioner within ten days of date. Service is to be furnished upon the terms which prevailed prior to the disconnection of the lines until such time as a supplementary order, finally fixing terms for connection, is issued. *Curtis & Withee Tel. Co. v. Owen Tel. Co.* 538, 539.

18. The petitioner alleges that the physical connection maintained prior to July 1, 1913, between its telephone system in the vicinity of Lauderdale Lake and the Elkhorn exchange of the State Long Distance Tel. Co. is required by public convenience and necessity and asks that the Commission require physical connection to be restored and prescribe the conditions under which such connection shall be made. Both the petitioner and the State Long Distance Tel. Co. are sub-licensees of the Wis. Tel. Co., with which they have connecting agreements, and the Wis. Tel. Co. is therefore made a party to the present proceeding. The respondent State Long Distance Tel. Co. denies that the physical connection desired by the petitioner is required by public convenience and necessity, alleges that public convenience and necessity will be best served by allowing the said respondent to extend its lines so that telephone subscribers in the vicinity of Lauderdale Lake may be directly connected with its exchange at Elkhorn and asks that it be permitted to make such extensions of its lines. The said respondent further asks that if a physical connection is ordered, the point of connection be made where the two systems come together midway between the village of East Troy and the city of Elkhorn and that the terms and conditions, the rate of toll and the divi-

sion of the revenue from the tolls be fixed in the order. The physical connection formerly maintained was severed on July 1, 1913, the State Long Distance Tel. Co. alleging that the petitioner had violated the terms of the contract for physical connection by connecting the subscribers served under the contract with the petitioner's La Grange exchange. Since July 1, 1913, these subscribers have been obliged to reach Elkhorn indirectly through the La Grange central, which is merely a rural exchange, and over a toll line owned in part by the Eagle Tel. Co. and in part by the Wis. Tel. Co., and complaint is made of the service rendered. The subscribers at Lauderdale Lake, who are for the most part summer residents from Chicago, use their telephones chiefly for communication with Elkhorn and Chicago, and receive slight benefit, if any, from their connection with La Grange. Messages for Chicago sent through the La Grange central go by a less direct route than those sent by way of Elkhorn. There can be no doubt that the extension which the State Long Distance Tel. Co. proposes to make of its lines would result in more convenient service for the subscribers affected than would the physical connection desired by the petitioner or the toll line routing used at present. It is necessary, however, under ch. 610, laws of 1913, before authorizing the extension to determine whether the existing service is adequate, and if not, whether it can be made adequate by establishing physical connection or by other means. *Held:* The subscribers of the petitioner at Lauderdale Lake cannot be adequately served by the petitioner through its La Grange exchange, either under the existing arrangements or with a physical connection between the two companies, and it is regarded as desirable, in the interest of good telephone service, that the lines of the State Long Distance Tel. Co. be extended for a distance of about one and one-half miles north of its present terminus at the Sterlingworth Hotel, connecting with such subscribers as desire the direct service of the Elkhorn exchange. The petition is dismissed. *Eagle Tel. Co. v. State Long Distance Tel. Co. et al.* 597, 602.

Physical connection—Maintenance of—Terms and conditions of joint use.

19. No telephone company can insist that a connecting telephone company furnish its toll line facilities free of charge, for that would be clearly taking property without compensation and would meet the condemnation of constitutional provisions. In compelling physical connection between two telephone systems, it must be remembered that the statute provides for reasonable terms and conditions. It could not validly provide that one company should give another the use of its toll lines without compensation. *Ettrick Tel. Co. v. La Crosse Tel. Co.* 25, 28.

Requirements as to service and facilities—Adequacy of service.

20. The Commission, on its own motion, investigated the service of the Elderon Tel. Co. after receiving informal complaint that the said service is inadequate. *Held:* The service rendered by the utility is inadequate. Although the Commission is formulating definite standards for telephone service to apply to all telephone companies, the situation in the present case seems to warrant a special order, pending the establishment of such standards, to insure prompt attention to the betterment of the service. The utility is therefore ordered: (1) to make such improvements and additions to its equipment as are necessary to establish adequate service on its lines and thereafter maintain adequate service; and (2) to furnish the Commission, until further notice, before the 10th day of each month, with a statement of the causes and durations of all interruptions in service during the preceding month and the remedies therefor. *In re Invest. Elderon Tel. Co.* 23, 24.

21. In a rehearing on motion of the Commission of certain matters involved in an order issued Oct. 19, 1912 (10 W. R. C. R. 598), directing the Clinton Tel. Co. and the Bergen Tel. Co. to establish physical connection between their systems, the possibility of improving the long distance toll service to points beyond Clinton and Bergen was considered. The Clinton Tel. Co. has refused to receive or transmit long distance messages from or to the Bergen Tel. Co. over the iron line connecting the Clinton and Bergen exchanges. The Clinton Tel. Co. has also refused to receive long distance messages from Bergen over the copper line owned by the Bergen Tel. Co. and connecting with the Clinton to Janesville line of the Badger Teleg. and Tel. Co. As a result the Bergen Tel. Co. is compelled to route its long distance business for Clinton by way of Sharon, which considerably increases the expense and thereby, the Bergen Tel. Co. contends, destroys that company's long distance business with Clinton. The Bergen Tel. Co. therefore asks for authority to use either the iron line or the copper line, as may be most convenient, for the transmission of long distance messages between Bergen and Clinton. The Clinton Tel. Co. objects to the use of the iron line for long distance business and suggests that a Waterloo jack be installed at the Clinton exchange to connect the Bergen Tel. Co's copper line with the Clinton to Janesville line of the Badger Teleg. and Tel. Co. and that the copper line be used for long distance messages between Bergen and Clinton. *Held:* The interests of good service at a reasonable rate demand a change in the methods of handling long distance business at the Bergen and Clinton exchanges. Under ordinary conditions the installation of a Waterloo jack at Clinton would improve the service, but in view of the strained relations which have existed between the Clinton and Bergen companies the Commission does not deem it best to order a change at this time from the direct connection between the copper line of the Bergen Tel. Co. and the Clinton to Janesville line of the Badger Teleg. and Tel. Co. If, however, the Clinton and Bergen companies can come to a reasonable agreement as between themselves and the Badger company for the installation of the Waterloo jack or any other construction which will improve the service, the Commission will welcome the adoption of such an agreement. It is therefore ordered: that the Clinton Tel. Co. and the Bergen Tel. Co. route all long distance messages passing between the two systems directly from Clinton to Bergen or from Bergen to Clinton, as the case may be; that the iron line extending from Bergen to Clinton and owned jointly by the two telephone companies be available for long distance calls between the two exchanges as well as for local business and that the two companies be prepared to render long distance service over this line at a toll charge of 5 cts. in addition to all other toll charges, for all completed calls between the two systems, the revenue so accruing to be divided equally between the two companies. All calls passing over the line which do not originate in the exchange of one company and terminate in the exchange of the other company are to be considered as long distance calls. *In re Physical Conn. Betw. Clinton & Bergen Tel. Cos.* 249, 255, 258.

22. Application is made by the Farmers' Tel. Co. of Beetown for such action by the Commission as may seem just and reasonable with respect to the service rendered over the lines of the Fennimore Mut. Tel. Co. extending from Lancaster to Fennimore. Investigation shows that the service over these lines has been rather unsatisfactory. However, since the necessity of routing calls between Lancaster and Fennimore over loaded lines will be removed by certain parts of the order in this case and inasmuch as there has been no complaint relative to the service in question by the subscribers on these lines, the Commission will not at this time issue an order covering this point. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 573–574. The practice followed generally

by telephone companies in Wisconsin in refusing to place village subscribers on rural lines is, in most instances, in the interest of good service. The applicant in the instant case has allowed certain farmers who have moved into town to connect with their old rural lines, instead of insisting that they be placed on separate lines, because of objections these subscribers have made to the quality of service furnished over the village lines and the charge of 25 cts. exacted from them in certain exchanges for service after 9 p. m. and because they desire immediate connection with their friends and relatives on the rural lines. This is believed to be detrimental to the service as a whole and the order therefore authorizes the applicant to place such subscribers on separate lines, providing changes are made in the organization and operating methods which are satisfactory to the Commission. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 575–576.

23. In connection with the application of the Farmers' Tel. Co. of Beetown for authority to increase its rates and for other relief the Commission investigated the service rendered by the company. *Held:* 1. The service rendered by the applicant is below the standard which should be maintained by it. This is due in part to the fact that practically every line serving subscribers directly is of grounded construction and to the further fact that many of the lines have an abnormally high number of subscribers. The poor construction and the present poor condition of the lines appear, in turn, to result largely from the nature of the organization and plan of operation of the company. The alteration of the articles of organization and the by-laws, so as to provide for a general manager giving all of his time to the work, a board of directors to act as a unit in controlling the affairs of the company, and a competent bookkeeper is deemed necessary. 2. The giving of unlimited free service between the applicant's nine exchanges and to most of the connecting companies is unjust to those subscribers who do not avail themselves of this service and it results, moreover, in considerable congestion of the lines. 3. The traffic over the applicant's lines from Lancaster to Fennimore is congested and measures should be taken to reduce the number of calls per day passing over these lines. In view of the fact that the rates in force are not such as to warrant the construction of additional free lines, it is deemed best to place a toll charge on messages going over these lines. In addition it is strongly recommended that the Annaton and Preston Tel. Co., which is at present connected to one of the lines, in question, cut its line which now extends through Preston to Montfort, in two and terminate it at Preston. This it is believed will improve the service over the applicant's line without working a hardship on the Annaton and Preston Co. It is ordered that the applicant be authorized to put into effect the schedule of rates determined by the Commission only at such time as the applicant shall have made such changes in its management, organization, accounting methods and procedure as meet the requirements of the Commission. The applicant is authorized, upon the adoption of this schedule, to place on separate lines all telephones which are located within the city or village limits and are now connected to rural lines running directly into an exchange belonging entirely to the applicant. It is further ordered that the applicant proceed to make "full metallic" its half of the trunk line between Platteville and Lancaster, construction to begin as soon as the Platteville, Rewey and Ellenboro Tel. Co. shall have agreed to build its half of the line, and that upon the completion of the work the present free service shall be suspended and a toll charge of 7 cts. per call substituted, the revenue therefrom to be divided equally between the two companies, unless they shall agree upon some other basis of division. The Annaton and Preston Tel. Co. is given authority, if the toll charges authorized are put in effect for service over the trunk lines between Lancaster and

Fennimore, to connect its Stitzer exchange, as its option, to the grounded trunk line of the applicant running from Lancaster to Fennimore. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 584–586.

24. The subscribers involved in the instant case are accustomed to the use of a city exchange, and their business is almost wholly with Elkhorn or Chicago. They constitute, as it were, an integral part of Elkhorn, although located geographically at some distance from that city. Adequate service for such a group of patrons must be substantially city service, and to require such service to be rendered by the petitioner through the La Grange exchange would probably place an unreasonable burden upon its rural subscribers for facilities which are not required by their circumstances. *Eagle Tel. Co. v. State Long Distance Tel. Co. et al.* 597, 602.

Requirements as to service and facilities—Adequacy of Service—Duty of utility to provide instruments.

25. It is the duty of telephone companies, under sec. 1797m—90 of the statutes, to own the telephone instruments connected to their lines. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 580.

Requirements as to service and facilities—Adequacy of service—Number of telephones per line.

26. Although the present proceeding will not permit of an order with respect to the number of telephones on the line involved in the proceeding it would seem to be impossible to render adequate service with 27 telephones on the line and it is recommended that the petitioner construct an extra line connecting with the Spring Green exchange for the purpose of relieving the congestion on its existing rural line. *Arena & Ridgeway Tel. Co. v. Troy & Honey Creek Tel. Co. et al.* 763, 770.

Requirements as to service and facilities—Adequacy of service—Statutory requirements.

27. It is contended by the complainant in the instant case that sec. 1791—a of the statutes imposes upon the company the duty of furnishing connection with the telephone of every person, firm or corporation having a telephone connected with the exchange. *Held:* Sec. 1791—a of the statutes, which makes it the duty of every telephone company to connect the telephone of any subscriber, upon request of that subscriber, with the telephone of any other subscriber, without regard to the character of the messages to be transmitted, provided they are not obscene or profane, is in conflict with the Public Utilities Law, which was enacted subsequently, and must therefore be regarded as having been repealed by the latter which merely provides that "every public utility is required to furnish reasonably adequate service and facilities." Sec. 1797m—3. *In re Use of Silent Numbers by Wis. Tel. Co.* 587, 592.

Requirements as to service and facilities—Adequacy of service—Trouble clearance.

See ante, 20.

Requirements as to service and facilities—Adequacy of service—Use of "silent number" telephones.

28. The Commission, on its own motion, investigated the use of the so-called "silent number phones" by the Wis. Tel. Co. in Milwaukee. The numbers of such telephones are not published in the directory and the usual practice of the company is not to connect other parties with the silent number telephone unless the subscriber having the telephone

directs the operator to make the connection. It is alleged in the informal complaint which led to the present investigation that this practice constitutes an unjust discrimination against subscribers who are thus refused connection. *Held:* The maintenance of silent number service cannot be regarded as an unjust discrimination on the part of the telephone company and there is no other ground upon which the practice can be condemned. It is true that there is an element of discrimination in the action of the individual who has the silent number service in giving his number to his friends or acquaintances and withholding it from the general public, but this is a matter which is left to the discretion of the individual. *In re Use of Silent Numbers by Wis. Tel. Co.* 587, 593.

Requirements as to service and facilities—Withdrawal of service for nonpayment of bills rendered.

29. The Commission, on its own motion, investigated the refusal of the Farmers' Union Tel. Co. to continue its service to William Lemcke at his residence near Middleton, Dane county. Mr. Lemcke made deductions from bills rendered him for service on account of materials and labor furnished by him at the time his telephone was installed. The company refused to accept the sums offered as full payment and partially discontinued its service. *Held:* Though the telephone company was justified in discontinuing service to Mr. Lemcke upon his refusal to pay his bill in full, the company is not justified by the existence of his previous indebtedness in refusing to give him present service if he is ready and willing to give the company reasonable security for the payment of future bills. 1 Wyman on Public Service Corporations, 451. The company is ordered to restore its telephone service to Mr. Lemcke upon the tender by him of payment in advance for a reasonable period at the rates now charged, or the deposit by him with the company of a sufficient sum of money to secure the prompt payment of rentals which may become due in the future for services rendered in accordance with such rules and regulations as the company may publish and file with the Commission. Ten days is deemed a reasonable time for the formulation of such rules and their submission to the Commission. *In re Refusal Farmers' Union Tel. Co. to Furnish Service*, 399, 402.

"Silent number" telephones.

See ante, 28.

30. It is contended that "silent number" telephone service transgresses the fundamental relation existing between the patrons of the telephone exchange. Such an exchange renders a community service, and its value depends upon the number and coöperation of its patrons. Also the efficiency of the service depends as much upon the users of the telephones as upon the company. Under the circumstances it is claimed that a special service which enables the subscribers to obtain connection with the telephones of all his co-subscribers, and to deny his co-subscribers connection with his telephone is not consistent either with the public duty of the utility or the duty assumed by the subscriber on becoming a member of the exchange. While it may be conceded that there is some merit in this contention, and that it is at least not without a theoretical basis, yet as a practical question we fail to see how such duty of a subscriber, if at all existing, can be enforced, or how any subscriber can be prejudiced by the self-imposed limitation of another subscriber's service. Whether in the presence of each other or at the ends of a telephone line, men may refuse to speak to each other. Because one does not wish to speak with a particular person by telephone does not seem to be a valid reason for refusing him the privilege of thus speaking to those with whom he does desire

to communicate. One has no right to impose a conversation upon another against his will, and no one should be penalized because of his refusal to submit to such an imposition. *In re Use of Silent Numbers by Wis. Tel. Co.* 587, 589–590.

Adjustment of train schedules.

1. Train schedules must be arranged for the convenience of the patrons of the entire line taken as a whole even though in serving the larger purpose the schedules work some hardship on a few communities and individuals. *Hume et al. v. C. M. & St. P. R. Co.* 80, 83.

TRAIN SERVICE.

Adequacy of train service.

1. The petitioners allege that the passenger train service rendered by the C. M. & St. P. Ry. Co. between Elkhart Lake and Green Bay is inadequate and ask that the railway company be required to extend the operation of train No. 23, leaving Milwaukee at 5:10 p. m. or earlier, from Elkhart Lake to Green Bay, or to change the time of its passenger train No. 9 so that it shall leave Milwaukee at 5:10 p. m., or earlier, and arrive in Chilton before 7:50 p. m. Prior to July 14, 1912, a passenger train was operated between Milwaukee and Green Bay on a schedule under which it arrived at Chilton at 7:50 p. m. On that date a new train, known as No. 9, was put on between Milwaukee and Green Bay and scheduled to arrive in Chilton at 9:37 p. m., and the earlier evening train was discontinued north of Elkhart Lake. No. 9 is a through train running from Chicago to points in upper Michigan. The chief cause of complaint appears to be that it is impossible under the present schedule for persons at Chilton to reach points north of Chilton for evening engagements without taking the morning train and thereby losing an entire day. *Held:* Train schedules must be arranged for the convenience of the patrons of the entire line taken as a whole, even though in serving the larger purpose the schedules work some hardship on a few communities and individuals. The service rendered by the respondent at Chilton is reasonably adequate. The petition is therefore dismissed. *Hume et al. C. M. & St. P. R. Co.* 80, 83.

2. Complaint is made that the respondent railway companies have

failed to comply with the order issued in this matter on Aug. 15, 1912 (9 W. R. C. R. 530), requiring them to so arrange their schedules that goods shipped in less than carload lots from Milwaukee to Seymour, Black Creek and Shiocton shall reach their destination within 84 hours from the time of delivery to the carrier at Milwaukee. The advisability of modifying the provisions of this order is under consideration. It appears that if a shipment does not reach its destination in 66 hours, it is inevitably delayed another 24 hours and it was suggested by the respondents that the order be modified to allow 90 hours in transit instead of 84, since a limitation to 84 hours is in effect a limitation to 66 hours. *Held:* A 66 hour limit allowing 36 hours, after 6 p. m. of the day on which the goods are received, for transportation over the C. M. & St. P. Ry. or the C. & N. W. Ry. from Milwaukee to Green Bay and 30 hours for the Green Bay & Western R. R. Co. to sort the goods and carry them from Green Bay to the points designated, is reasonable. The respondents are ordered to so arrange their schedules as to comply with this limit. *John Hoffman & Sons Co. v. C. M. & St. P. R. Co. et al.* 322, 324.

3. The petitioner alleges that the service of the respondent at Apollonia, Rusk county, is inadequate by reason of the discontinuance by the respondent, on Sept. 24, 1913, of its former practice of stopping passenger trains No. 84 and No. 85 at this point. The respondent formerly maintained a station at Apollonia but closed it in 1910 and the Commission, 1911, 6 W. R. C. R. 526, refused to order a restoration of station facilities. *Held:* In view of the cost of operation, the close proximity of Bruce station to Apollonia, the fact that the people have practically abandoned the station at Apollonia, and the fact that the farming community surrounding Apollonia, as shown by the petition, does not require trains to stop at this point, the Commission would not be justified in requiring two interstate trains to stop there for the purpose of accommodating the very few persons who desire to avail themselves of their services. The petition is therefore dismissed. *Hayden v. M. St. P. & S. S. M. R. Co.* 390, 392.

4. The petitioner alleges that the train service furnished by the respondent at Winnibijou, Douglas county, is inadequate and discriminatory because of the respondent's failure to stop its Sunday excursion train at that point. The train in question is operated during the summer months from Duluth, Minn., to Bibon, and return, and stops at all stations in Wisconsin between Superior and Bibon except Winnibijou. The respondent advances as its reason for refusing to stop the train at Winnibijou the fear that the practice of stopping at this point would be detrimental to the interests of the Winnibijou Fishing Club and ultimately its own interests. *Held:* The reason given by the respondent for its refusal to render the service desired cannot be accepted. The failure of the respondent to stop its Sunday excursion train at Winnibijou, while making stops at other stations of equal or less importance, is unjustly discriminatory. The respondent is therefore ordered to arrange the future schedule of its summer Sunday excursion train between Superior and Bibon to provide a stop at Winnibijou. *Hughson v. D. S. S. & A. R. Co.* 406, 408.

5. The petitioner alleges that the respondent's passenger train service at Unity is inadequate. *Held:* The petitioner's request that the respondent be ordered to stop passenger trains number 103 and 104, which form part of the respondent's limited service between Chicago and Ashland, at Unity cannot be granted for the reason that the train service now rendered at Unity is reasonably adequate. *Village of Unity v. M. St. P. & S. S. M. R. Co.* 430, 436.

6. The petitioner alleges that the passenger train service rendered by the respondent at the village of Diamond Bluff is inadequate and asks that the respondent be required to stop its trains No. 51 or No. 47,

northbound, and No. 48 or No. 58, southbound, at this point. *Held:* For reasons discussed in *Kemp v. C. B. & Q. R. Co.* 1909, 3 W. R. C. R. 350, the present service cannot be condemned as inadequate. The petition is dismissed. *Gantenbein v. C. B. & Q. R. Co.* 525, 526.

7. The petitioners allege that the respondent's passenger train service at Caledonia, Racine county, is inadequate and ask that the respondent be required to stop its trains No. 9 and No. 24 at Caledonia on signal to receive and discharge passengers. Under the present schedule, residents of the territory surrounding Caledonia are unable to reach the county seat at Racine over the respondent's line and return the same day, although the distance one way is only fifteen miles. The respondent objects to the granting of the request of the petitioners on the ground that the trains named are interstate trains operating between Chicago and upper Michigan in competition with interstate trains on the C. & N. W. system. *Held:* The southbound train service at Caledonia is inadequate. The respondent is ordered to stop its train No. 24, scheduled to leave Milwaukee at 7:30 a. m., at Caledonia on signal to receive and discharge passengers, or, at its option, to so adjust its service that residents of Caledonia will be enabled to reach Racine and return the same day, having a reasonable amount of time at that city during business hours for the transaction of business. *Callen et al. v. C. M. & St. P. R. Co.* 732, 734.

8. This proceeding involves two complaints relating to the same subject matter. The petitioners allege that the failure of the respondent from time to time to make connection at Prentice between its train No. 84 running between Minneapolis, Minn., and Pembine, Wis., and its train No. 111 running between Milwaukee and Ashland, results in great inconvenience to passengers going east, and asks that the respondent be required to make this connection at all times. The respondent has a rule requiring train No. 84 to be held for at least 30 minutes at Prentice whenever train No. 111 is late and, upon instructions from the superintendent of transportation at Minneapolis, for such longer period as may be necessary to connect with train No. 111 whenever there are any considerable number of passengers on train No. 111 who have points east of Prentice as their destination. The instant complaints appear to have been caused by the failure of the conductor on train No. 111 on a certain day to notify the superintendent of transportation that there were on the train a number of passengers requiring connection with train No. 84. *Held:* In operating trains the convenience of the greater number of passengers must always be subserved. The respondent's practice at Prentice is proper and should not be interfered with. The petitions are therefore dismissed. *Kissinger et al. v. M. St. P. & S. S. M. R. Co.* 790, 792.

VALUATION.

DETERMINATION OF VALUE OF PROPERTY OF PUBLIC UTILITIES—ELEMENTS CONSIDERED.

In general.

1. There are several elements besides the original cost, the original cost less depreciation, the cost of reproduction, and the cost of reproduction less depreciation that should be taken into consideration in arriving at a fair value of the property under appraisement. These include, among other things, the outstanding indebtedness, the gross and net earnings of the plant, and the cost or value of the business the plant has acquired or its going value. *In re Purchase Manitowoc El. Lt. Plant*, 452, 465.

Going value—Net cost of building up the business.

2. In making an allowance for going value in valuations for rate-making purposes it would be an injustice to force the consumer to bear costs resulting from the failure of the utility's management to properly stimulate the sale of the utility's product. *City of Waukesha v. Waukesha G. & El. Co.* 100, 109.

3. In the instant case it was brought out that the development cost could not be determined on the investment basis because of abnormal items which would bring such costs far above normal and make the computations worthless for the determination of a fair value of the property. *Yanko et al. v. Portage American Gas Co.* 136, 138.

Physical property—Cost of reproduction new—Allowance for item of cost not actually incurred—Paving.

4. Notwithstanding the fact that consideration must be given to the cost of paving over mains and services when determining the cost of reproducing the present plant, it does not necessarily follow that in a matter of rates such items should be allowed. The city of Waukesha in constructing this pavement over the mains and services of the respondent assessed the costs for such construction upon the very persons who might be affected as consumers of this utility's product by an increase in rates due to the increase in the valuation of the property upon which the company is entitled to earn. *City of Waukesha v. Waukesha G. & El. Co.* 100, 104.

5. "Every legitimate expenditure in adapting the utility to the demands of progress and community growth is a proper charge to construction, and as such the investment therefor is entitled to participate in the distribution of the earnings from operation. Obviously expenditures for pavement incurred by the utility in response to assessments levied therefor by the city, or the cost of cutting through such pavement for construction purposes and its replacement, are proper capital charges. It does not necessarily follow that the utility is to capitalize expenses for municipal betterment in which it has not participated and where such accruing benefits to the utility are remote and incidental, and thus compel the subscribers for utility service to pay increased rates because of public improvements. The improvement is not a proper element of value where the pavement has not been paid for by the utility, nor any expense in connection with it directly incurred, in determining a value which shall serve as the basis for an adjustment of rates." (*City of Ripon v. Ripon Lt. & Water Co.* 1910,

5 W. R. C. R. 1, 10.) *City of Waukesha v. Waukesha G. & El. Co.* 100, 104-105.

Physical property—Cost of reproduction new—Continuous construction.

6. The utility in the instant case maintains that from 10 to 15 per cent should be added to the value of the physical property because continuous construction under contract is less expensive than piecemeal construction. *Held:* Some consideration should be given this item in determining the fair value of the utility, but it does not seem that it can be properly considered as an element in determining the cost of reproducing the physical plant. *In re Purchase Manitowoc El. Lt. Plant*, 452, 461.

Physical property—Cost of reproduction new—Discounts on bonds.

7. The Commission has held that reasonable and necessary bond discounts are an element to be considered in arriving at the value of a public utility property for rate-making purposes. Some of the facts to be considered in deciding when bond discounts are reasonable and necessary are the interest rate at which the bonds are issued, the relation of the par value of the bonds to the value of the property against which they are issued, and whether the bonds are an original issue to secure money to start utility operations or a refunding issue. In this case it is clear that the par value of the bonds which were issued is much in excess of the value of the property by which they were secured. The effect of this discrepancy upon the discounts at which bonds were sold is not fully shown, but it seems only reasonable to suppose that the circumstances mentioned bore some relation to the extent of the discount. Also it is doubtless true that, under conditions identical in every other respect, a different rate of interest would have resulted in a different discount. The financial history of the plant, prior to the bond issue of June 1, 1907, is not in the record in this case, but it seems clear that, no matter what the nature of the actual transactions, the new bonds took the place of liabilities of the plant, which in some form had been outstanding previously. Under all these circumstances, it seems that very little if any allowance should be made in our valuation of the property for the item of discounts on bonds. *In re Appl. Manitowoc G. Co.* 325, 332-333.

Physical property—Cost of reproduction new—Engineering, etc. during construction.

See post, 8.

Physical property—Cost of reproduction new—Overhead expenses during construction.

8. Under the head of "Engineering etc., during construction" may be considered engineering, superintendence, and interest during construction, contractor's profit, cost of preliminary investigation, cost of securing franchises, and incorporation and bond expense. It is believed that in the instant case the 15 per cent allowance for various overhead expenses during construction is all that should be made to cover these expenses, with the exception of an allowance for contractor's profit, and the unit prices used in valuing the property include all the allowance which should be made for this item. *In re Appl. Manitowoc G. Co.* 325, 332.

Physical property—Cost of reproduction new—Paving.

9. In matters before this Commission concerning rate values or purchase values it is the policy to allow for paving actually constructed. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 233.

Physical property—Original cost.

10. In establishing the fair value of a plant for the purpose of municipal acquisition, the original cost of construction together with all additions to the property down to date must be considered as an important element. If the books of the company have been accurately kept and if correct methods of accounting have been followed, the books should show the total amount expended for construction and also the extent of the depreciation of the property. Frequently we find that the book value as reported differs very much from the cost of reproduction as determined by our engineering department. Some difference is naturally to be expected, because of the variation in price. In the instant case, however, the difference is relatively small. *In re Purchase Manitowoc El. Lt. Plant*, 452, 461–462.

DETERMINATION OF THE VALUE OF PROPERTY OF PUBLIC UTILITIES—METHODS OF APPRAISAL.

Determination of going value—Net cost of building up the business.

11. In determining going value it is not certain that the full extent of the losses incurred by a utility should be accepted as a cost of developing the business, for losses may be due to causes other than the actual developmental costs. *In re Purchase Antigo W. Co's Plant*, 156, 163.

12. Any attempt to estimate what it would cost to reproduce the business of a utility is open to serious objections, some of which have been discussed in *Common Council of the City of Green Bay v. Green Bay Water Co.* 11 W. R. C. R. 1913, 236–243. With proper allowance made for these objections, however, some light can be obtained upon the cost of developing the business by estimates of the cost of developing a paying business for a utility which is assumed to start operation in a city comparable to the one involved in the instant case. *In re Purchase Antigo W. Co's Plant*, 156, 164.

Determination of the value of physical property of the plant—Cost of reproduction new—Land.

13. The price placed on land by the tax assessor is not a satisfactory measure of value, for the reason that it attempts not to show the full value, but to maintain a just proportionate value between different pieces and classes of property. *In re Purchase Manitowoc El. Lt. Plant*, 452, 455.

Determination of the value of the physical property of the plant—Cost of reproduction new—Obsolete equipment.

14. In obtaining the cost of reproducing equipment which is no longer on the market, consideration must be given to the cost new of modern equipment designed to do the same work. The present value, however, of obsolete equipment which is still in use and rendering fair service would seem to be something above scrap value. *In re Purchase Manitowoc El. Lt. Plant*, 452, 458.

Determination of the value of the physical property of the plant —Cost of reproduction new—Prices applied in determining cost.

15. The city of Manitowoc in the instant case made a valuation of the distribution system of the utility using a flat price per mile, determined upon the basis of the cost in the construction of a similar plant as a unit price. The Commission in making its valuation listed every piece of material, fixed a price for each separately and determined from inspection the extent of the depreciation of each item. Compared with such a method, it does not seem to us that the one used by the city can be seriously considered, for though satisfactory for comparative purposes, it is intended merely to represent an average condition. The number of consumers per mile of wire, the exact number of miles or units, the size of the poles, the character of the construction, and any number of other factors might cause the system at Manitowoc to deviate from the average. We cannot see how such a figure can represent the cost of reproducing the system under consideration, except in a rough way which is not at all satisfactory for the purpose at hand. *In re Purchase Manitowoc El. Lt. Plant*, 452, 456.

Determination of the value of the physical property of the plant —Present value.

16. It has been contended that to assume the same per cent condition for the property on January 1, 1912, as existed at the time of the 1910 appraisal would be misrepresentative of the conditions. However, this does not seem to be true when certain factors are considered which, when analyzed, tend to establish the percentage at about the same figure. In the first place it must be remembered that the present value of 1910 has gone through two full years of depreciation up to January 1, 1912, and through three years up to the first of the same month for 1913. This decreases the old present value to a little over an average of 59 per cent condition on January 1, 1913,—much lower than the one established in 1910. Although the new additions coming in during the succeeding three years at a 100 per cent condition would obviously raise the condition in the aggregate, the weight of depreciation of the old property at over nine million dollars, the figures show, would tend to more than offset the weight of the new additions at three million dollars during the last three years. This is quite clearly substantiated by computations which show that the present value on a cumulative basis is about equal to the present value obtained on the basis of 73.85 per cent condition. It must also be borne in mind that the additions during 1910, for instance, have up to January 1, 1913, depreciated on an average of two and one-half years and are therefore below a 100 per cent condition. Again, the renewals which the company has made during this three-year period have not been very extensive and consequently have not increased the per cent condition materially. And finally, it may be said that the placing of the present value upon a 4 per cent fund basis in 1910 instead of a straight line basis gives the company the benefit of a high final value. In view of the facts outlined above it is quite certain that the per cent condition of 73.85 is not very far out of the way. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 229–230.

Determination of the value of the physical property of the plant —Present value—Depreciation of plant.

17. In order to determine the present investment of the company it is necessary to estimate the amount the property has depreciated through use, and to note the effect that the establishment of a depre-

ciation reserve of an equal amount will have on the balance sheet. *In re Invest. Mosinee El. Lt. & P. Co.* 712, 714.

Determination of the value of the physical property of the plant—Present value—Obsolete equipment.

18. In obtaining the cost of reproducing equipment which is no longer on the market, consideration must be given to the cost new of modern equipment designed to do the same work. The present value, however, of obsolete equipment which is still in use and rendering fair service would seem to be something above scrap value. *In re Purchase Manitowoc El. Lt. Plant*, 452, 458.

Determination of the value of the physical property of the plant—Unit prices.

See also ante, 15.

19. The method followed by Mr. Morgan, of using unit prices based upon conditions prevailing at the time the work was done, would tend to show what it actually cost or would normally have cost at such time. The use of prices based on an average for a number of years prior to the date of the valuation, as made by the Commission, on the other hand, indicates the cost of reproducing the property, rather than the actual amount which the property has cost. Both the actual investment and the cost of reproduction should be considered in finally fixing a value, but it is hardly to be expected that physical valuations designed to show two materially different sets of facts should coincide very closely. The valuation submitted on behalf of the city is indicative of what the investment was or might normally have been, but it does not show what it would actually cost to reproduce the property. *In re Purchase Antigo W. Co's Plant*, 156, 160–161.

DETERMINATION OF THE VALUE OF PROPERTY OF PUBLIC UTILITIES—VALUATION IN PARTICULAR CASES.

Electric utilities—Darlington El. Co., Darlington.

20. A valuation of the physical property as of March 1, 1913, shows that the total value of the petitioner's operating property, when reproduced new, excluding non-operating property, amounts to $14,639, with a present value of $11,309. The non-operating property is valued at $22,465, cost new, and $14,006 present value. As careful and complete a study of the conditions involved in this case as it has been practicable for us to make indicates that the amount of non-operating property which can be recognized in the appraisal may be placed at $6,126 present value, that being its value for stand-by or reserve purpose. *In re Appl. Darlington El. Lt. & W. P. Co.* 344, 350.

Electric Utilities—Endeavor El. Lt. & P. Co., Endeavor.

21. The cost new of the physical property of the applicant as of June 30, 1913, was placed at $6,362 in the Commission's inventory, and the present value at $5,376. *In re Appl. Endeavor El. Lt. & P. Co.* 448, 451.

Electric utilities—Manitowoc El. Lt. Co., Manitowoc.

22. An appraisal of the physical property made as of Jan. 1, 1913, and revised in the month of April, 1913, shows a cost new of $173,708 and a present value of $132,770. Considering all the factors that must be considered under the law in arriving at a fair and just value, it seems that $137,500 is a just compensation to be paid for the property actually used and useful for the convenience of the public. *In re Purchase Manitowoc El. Lt. Plant*, 452, 454, 465.

Electric utilities—Mosinee El. Lt. & P. Co., Mosinee.

23. A valuation of the physical property (date of decision Feb. 9, 1914) shows a cost new of $7,195 and a present value of $6,648. When proper adjustments are made for depreciation and materials and supplies $6,953 is obtained as the present investment. Taking all the facts into consideration it seems that about $7,000 represents a fair value of the property for rate-making purposes. *In re Invest. Mosinee El. Lt. & P. Co.* 712, 713–715.

Electric utilities—Mt. Horeb Heat, Lt. & P. Co., Mt. Horeb.

24. Excluding the non-operative property the valuation as of October 1, 1913, shows a cost of reproduction new of $16,932 and a present value of $13,600, including material and supplies. *In re Appl. Mt. Horeb Heat, Lt. & P. Co.* 653, 655.

Electric utilities—Neshkoro Lt. & P. Co., Neshkoro.

25. An appraisal of the physical property as of June 1, 1913, shows a cost new of $23,113 and a present value of $16,228. *In re Appl. Neshkoro Lt. & P. Co.* 52, 54–55.

Electric utilities—Waukesha G. & El. Co. Waukesha.

26. A valuation of the physical property of the electric utility as of June 30, 1912, shows a cost new of $161,240 and a present value of $132,011. When allowance is made for additions to the investment during the year from June 30, 1912, to June 30, 1913, and all of the various factors involved in the determination of a fair value are given due weight, it appears that the utility should be allowed to earn a reasonable return on about $156,800. *City of Waukesha v. Waukesha G. & El. Co.* 100, 103–111.

Gas utilities—Manitowoc G. Co., Manitowoc.

27. A valuation of the physical property as of Jan. 1, 1913, shows a cost new of $214,708 and a present value of $184,707, or excluding paving, none of which has been cut through by the utility in laying pipes, and the item of non-operating property, a cost new of $205,456 and a present value of $176,960. The total value of the property, including all elements of value, is established as between $196,000 and $200,000, a final statement not being necessary to the decision of the case. *In re Appl. Manitowoc G. Co.* 325, 329–334.

Gas utilities—Portage American G. Co., Portage.

28. A valuation of the physical property as of June 30, 1912, shows a cost new of $118,103 and a present value of $93,088. When all phases of operation are considered it appears that a value of approximately $105,000 will be reasonable for the purposes of this case. *Yanko et al. v. Portage American G. Co.* 136, 137–138.

Gas utilities—Waukesha G. & El Co., Waukesha.

29. A valuation of the physical property of the gas utility as of June 30, 1912, shows a cost new of $248,940 and a present value of $209,890. When allowance is made for additions to the investment during the year from June 30, 1912, to June 30, 1913, and all of the various factors involved in the determination of a fair value are given due weight, it appears that the utility should be allowed to earn a reasonable return on about $233,000. *City of Waukesha v. Waukesha G. & El. Co.* 100, 103–111.

Heating utilities—Waukesha G. & El. Co., Waukesha.

30. A valuation of the physical property of the heating utility as of June 30, 1912, shows a cost new of $45,963 and a present value of

$44,515. Additions to the investment during the year from June 30, 1912, to June 30, 1913, as shown by the utility's annual report to the Commission, amount to $1,598.09. *City of Waukesha v. Waukesha G. & El. Co.* 100, 103–106.

Telephone utilities—Arena & Ridgeway Tel. Co., Spring Green.

31. An estimate of the apportioned value of the Arena & Ridgeway Tel. Co's trunk line between Spring Green and Fernan as of Dec. 1, 1913, shows a cost of reproduction of $246 and a present value of $189. *Arena & Rid'y Tel. Co. v. Troy & Honey Creek Tel. Co. et al.* 763, 765.

Telephone utilities—Farmers' Tel. Co. of Beetown, Beetown.

32. A valuation of the physical property as of April 1, 1913, shows a total cost new of $45,722, of which $8,173 represents city property and $37,549 rural property, and a total present value of $21,653, of which $6,352 represents city property and $15,301 rural property. *In re Appl. Farmers' Tel. Co. of Beetown*, 540, 552–553.

Telephone utilities—Tomahawk Lt., Tel. & Improvement Co., Tomahawk.

33. A valuation of the telephone property (date of decision Dec. 5, 1913) shows a cost of reproduction new of about $18,235 and a present value of about $11,586. *In re Appl. Tomahawk Lt., Tel. & Improvement Co.* 340, 341.

Toll bridge—Postel & Swingle Co., Muscoda.

34. A valuation of the property as of July 30, 1913, shows a cost new of $31,225 and a present value of $19,882. The reasonable value for the purposes of the instant case appears to be about $22,000, including the proper allowance for working capital and going value. *Marcus et al. v. Postel & Swingle*, 47, 49, 50.

Water utilities—Antigo W. Co., Antigo.

35. The revised valuation of the physical property, including an allowance for paving, shows, as of Jan. 1, 1913, a cost new of $128,086, and a present value of $119,229. The fair value of the property used and useful for the public service, as of Jan. 1, 1913, exclusive of materials and supplies on hand, with proper allowance made for all elements to be considered, is $128,800. *In re Purchase Antigo W. Co's Plant*, 156, 158–159, 164.

Water utilities—Beaver Dam W. Co., Beaver Dam.

36. The corrected final summary of the valuation of the physical property as of Nov. 1, 1913, shows a cost new of $135,256 and a present value of $126,651. After a careful consideration of all the elements of value and all the facts and circumstances disclosed, it is the judgment of the Commission that $133,000 is just compensation for the property, exclusive of the stock and materials on hand and additions made to the plant since Nov. 1, 1913. *In re Purchase Beaver Dam Water Co's Plant*, 169, 176–177.

DETERMINATION OF THE VALUE OF PROPERTY OF STREET RAILWAYS—VALUATION IN PARTICULAR CASES.

T. M. E. R. & L. Co., Milwaukee.

37. A valuation computed upon the basis of an appraisal made Jan. 1, 1910, and making proper allowance for all adjustments, additions and renewals reported by the company since Jan. 1, 1910, and for depreciation shows a final fair value of approximately $11,600,000 as of Jan. 1,

1912, and a final fair value of $12,000,000, as of Jan. 1, 1913. *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 178, 229.

ESTABLISHMENT, CONSTRUCTION AND MAINTENANCE.

Extension of water mains.

1. The Commission, on its own motion, investigated the failure of the village council of Viola to take action on a petition of 25 residents of the village asking for an extension of a water main along a route specified in the petition. Since the hearing, 15 of the 25 petitioners have joined in a petition to the Commission, stating that they realize that, in view of the financial condition of the village, the making of the extension asked for is not warranted at the present time and praying the Commission not to order the extension to be made. *Held:* Under the circumstances an order requiring the laying of the water main exten-

sion in question is unwarranted. The matter is therefore dismissed. *In re Proposed Extension Viola Mun. W. Plant*, 702, 703.

MUNICIPAL ACQUISITION—TERMS AND CONDITIONS OF SALE AND PURCHASE.

Compensation for property—Compensation determined by Commission in particular cases.

2. This is a proceeding to determine the just compensation to be paid in the purchase of the property of the Antigo W. Co. by the city of Antigo. Valuations made by the engineers of the Commission and by the city are considered. The water company submits no valuation of the property as a whole, but introduces testimony tending to show the existence of a high going value or developmental cost and contends that the unit prices placed on the items of physical property in the valuation should be higher than the prices used by the engineers of the Commission. The city's valuation is, on the whole, somewhat lower than the Commission's tentative valuation. The actual investment in the property under consideration is indicated by the records of construction, a part of which were made a matter of record in the case of *Hill v. Antigo W. Co.* 1909, 3 W. R. C. R. 623. Inasmuch, however, as the company has not provided a depreciation reserve nor disclosed in its reports the method employed in accounting for reconstruction work, it appears that reconstruction must have been handled as a charge to property and plant, and that the actual cost of the plant is overstated by the amount of such reconstruction. This fact must be considered in accepting as an indication of the value of the property the original cost of the property as shown by the company's records. In addition to the physical property, the cost of developing the business must be given consideration. In the present case this cost is computed separately for interest rates of 6 and 7 per cent upon the original cost of the plant as shown by the records and upon a hypothetical original cost obtained by deducting the amount of the reported extensions from the cost of reproduction of the property. It appears that with an interest rate somewhere between 6 and 7 per cent the net losses incurred in developing the business would be practically nothing, and that even if interest is finally included at 7 per cent and allowance made for the overstatement of losses due to improper charges to construction, the full extent of the losses need not necessarily be accepted as the cost of developing the business. Losses may be due to causes other than the actual developmental costs and may even continue after the normal developmental period is past. Whether in the present case the investment in the utility was somewhat ahead of the needs of the community may, perhaps, be a question. *Held:* The just compensation to be paid to the water company for the taking of the property used and useful for the convenience of the public, exclusive of the stock and material on hand and additions made to the plant since Jan. 1, 1913, is $128,800. The city is ordered to pay this sum to the water company within six months from date, together with such price as may be agreed upon between the parties or, in the event that the parties are unable to agree, fixed by the Commission, for the materials and supplies on hand at the date of the taking of the plant and for new additions made to the plant since Jan. 1, 1913, with interest at 6 per cent per annum until the compensation is fully paid. *In re Purchase Antigo W. Co's Plant*, 156, 164–165.

3. This is a proceeding to determine the compensation to be paid in the purchase of the property of the Beaver Dam Water Co. by the city of Beaver Dam. The tentative valuation made by the engineers of the Commission is accepted by the parties to the proceeding as a fair valuation of the physical property except in respect to certain particulars

which are considered in detail and given proper revision. *Held:* The just compensation to be paid to the water company for the taking of its property used and useful for the convenience of the public, exclusive of the stock and material on hand and additions made to the plant since Nov. 1, 1913, is $133,000. The city is ordered to pay this sum to the water company within six months after the transfer of the property to the city, together with such price as may be agreed upon between the parties to this proceeding or, in the event that the parties are unable to agree, fixed by the Commission, for the materials and supplies on hand at the date of the taking of the plant and for new additions made to the plant since Nov. 1, 1913, with interest at 6 per cent per annum until the compensation is fully paid. *In re Purchase Beaver Dam Water Co's Plant*, 169, 177.

Power of municipality to acquire public utility—Action by municipal council—Regularity.

4. Objection to the jurisdiction of the Commission is made by the Janesville W. Co. in the proceeding instituted by the city of Janesville for the purpose of acquiring the company's water plant. The objection, by consent of the parties, is to be determined before the proceeding is further continued. It is contended by the company in the instant case that the city has never determined, as required by law, to acquire the water plant or property of the company, inasmuch as the question submitted at the general spring election in 1912 was as follows: "Shall the city of Janesville purchase the Janesville Water Company?" It is further contended that the matter of the payment of just compensation for the property proposed to be taken has never been considered, voted upon or determined by the electors or by the common council of the city, as required by law; that no fund has been provided out of which payment may be made, as required by law; that no provision for such payment has been made; and that the city is without power, under sec. 3 of art. XI of the state constitution, to incur the indebtedness proposed to be incurred in the making of such payment. *Held:* The questions here raised were decided by the Commission in the *Racine* case (1912, 10 W. R. C. R. 543) and the position of the Commission was affirmed by the supreme court in the case of *Janes v. City of Racine* (1913, 155 Wis. 1). The objections are therefore overruled. *In re Purchase Janesville Water Co's Plant*, 29, 31.

OPINIONS AND DECISIONS

OF THE

Railroad Commission of Wisconsin

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RATES, RULES AND REGULATIONS OF THE ASHLAND WATER COMPANY.

Decided Feb. 17, 1914.

The Commission, on its own motion, investigated the rates, rules and regulations of the Ashland Water Co. after receiving informal complaints from patrons of the utility (1) against the utility's practice of requiring certain classes of consumers to furnish their own meters if they desired to be served on the meter basis and (2) against the character of the water supplied by the utility. In the course of the proceedings the utility itself filed a petition for such a revision of rates as might be necessary to (1) afford a fair return to the utility upon the property used by it in serving the public and (2) establish rates which are more equitable than the rates now charged in their relations as between private and public consumers. The most serious complaint against the utility appears to be that with respect to the quality of water furnished. The water in question is taken almost entirely from Chequamegon Bay of Lake Superior and is exposed to contamination from the sewage of the city which empties into the bay. The utility operates sand filter beds and applies the hypochlorite of lime treatment in order to purify the water. The peculiar circumstances of the case seeming to require it, the Commission had a special investigation and report made by an expert in matters of municipal water supply. The report so made holds: (1) that the city of Ashland is in constant danger from the present source of its water supply; (2) that it is impracticable to secure a supply of pure water by artificial treatment from the present source of supply and, further, that this source will undoubtedly be necessary in the future as a receptacle for industrial sewage from pulp and paper mills and the like; (3) that it is impracticable for the city of Ashland with its present resources to attempt to secure water from Lake Superior, which is the ideal and ultimate source of supply for any large community located at Ashland; and (4) that it would probably be possible to meet the present needs of the city by resorting to the use of wells to obtain ground water. The report therefore recom-

mends that test wells be driven and that tests be made at certain specified locations near the city to ascertain the best source of ground water supply. In order to determine the rate matter presented by the petition of the utility the Commission made a valuation of the property of the utility and investigated its revenues and expenses. In making the valuation a tentative valuation made by the engineering staff of the Commission by revising a valuation prepared in 1908 for the case of *City of Ashland v. Ashland Water Co.* 1909, 4 W. R. C. R. 273, a valuation submitted on behalf of the city of Ashland, and two valuations submitted by the utility are considered and compared in detail. The utility shows a relatively high investment in physical property as compared with other water plants in Wisconsin. This is due largely to the nature of the source of the water supply. The utility has, until recently, failed to maintain a depreciation reserve. An apportionment of expenses was made between public and private service.

The city has not only had its fire protection service at less than cost but it has also had free of charge a large amount of water which has been supplied to the public schools, police and fire department stations, city hall, public fountains and troughs and the like. This water has been held to be covered by the hydrant rental but the city should have paid for it separately.

The Commission's tentative valuation included an allowance of 12 per cent for general overhead expenses, but this allowance is too low and is therefore increased to 15 per cent in the final valuation.

It is a general rule that public utilities in Wisconsin shall own and maintain the meters through which their services are measured to consumers, yet it is sometimes expedient, if not necessary, to make exceptions to this rule. In the instant case, in view of the present great magnitude of the investment in the plant of the utility, it is deemed inexpedient to require the utility to alter its present rules concerning the furnishing of meters to residence or other small consumers.

As the Public Utilities Law does not permit a difference in charges for like service between consumers who own their meters and those who do not, it is necessary to include in an analysis of costs the investment charges on privately owned meters. The owners of such meters are legally and equitably entitled to a return on the capital charges so included, by the allowance of a meter rental to be deducted in each case from the gross bill. The consumer's investment in a meter box or meter vault, if there be such, is not included, however, in the computation of the meter rental for the reason that this investment is one which properly falls to the consumer rather than the utility to make.

To leave interest, taxes, depreciation and certain operating expenses entirely out of the output costs and charges in the instant case and to put them wholly in the service or fixed charges against consumers would result in an impracticable schedule, as the fixed or service charges would be greater than the value of the service to the smaller consumers. As indicated in previous decisions, the best treatment of the private service portions of the interest, taxes and depreciation is usually to divide their sum between capacity, output and consumer costs in the same proportions as the operating expenses are so divided. This is done in the instant case.

The cost of reproducing the paving placed over a utility's pipe lines after they were laid, as the Commission has already held in several previous cases, has no place in the amount upon which the utility is entitled to earn.

Held: 1. The net earnings of the utility have been too low to constitute a fair return upon the value of the property used in serving the public. The utility is not in such a financial position as to be able to meet the demand for improvement in the quality of water furnished the public by extending the intake to a point in the lake where satisfactory water could always be obtained or to change to a ground water supply. The only plan which it is possible for the utility to adopt under the circumstances is that of installing a suitable water analysis laboratory at the pumping station and employing a competent person to take charge of the laboratory and intelligently supervise the filtration and disinfection of the water supply. Even this plan is not certain of success but the additional expense involved by its use is not large enough to make it too costly to be worth a trial. The cost of applying more scientific treatment to the water purification problem should, however, be properly provided for in the determination of new rates for future service.

2. The greater portion of the deficiency in the net earnings of the utility is reasonably chargeable to the public service and the remainder to the flat rate private service. The meter rates have yielded a fair proportion of the costs but the meter rate schedule is not of the most logical and desirable form. The utility's rules and practices in regard to the furnishing of meters to consumers are reasonable. The unusually but necessarily large investment of the utility requires the exaction of rates materially higher than ordinary water rates.

It is ordered: (1) that the utility within sixty days make such arrangements as may be found necessary to give it the benefit of a suitable laboratory for water analyses in the city of Ashland and thereby keep itself continually informed as to the efficiency of its purification processes by analyses made at least once daily, complete records of such analyses to be permanently preserved; and (2) that the utility discontinue its present schedule of rates and adopt a schedule fixed by the Commission. The schedule of rates prescribed provides for an annual charge of $24,300 for municipal hydrant rental, including general fire protection and flushing of sewers and pavements until extended; a charge for extensions ordered by the city of 8 cts. per foot of mains per annum and $6.50 per additional public fire hydrant per annum; meter and output charges and flat rates for private consumers; and charges for both unmetered and metered private fire service to automatic sprinklers or standpipes inside of buildings. No output charge is included in the charges for metered service for inside fire protection when the water is actually used in fire fighting, otherwise the water used through inside fire protection systems is subject to the rates for commercial service.

It is suggested that the city test the merits of the plan of disinfecting its domestic sewage at the sewer outlets as a method of cooperating with the utility in improving the quality of water furnished by the utility.

On May 8, 1912, the Commission, on its own motion, issued a notice of investigation of the rates, rules and regulations of the Ashland Water Company. This was the result of complaints from citizens of Ashland and patrons of the company against the company's practice of requiring certain classes of consumers

to furnish their meters individually in order to be served on the meter basis; also of complaints as to the character of the water supplied by the company.

In the course of the proceedings the company itself filed a petition and application praying "for such revision and establishment of rates for water service rendered by the company, both for private or domestic consumers and for public or municipal service of all kinds, as shall be found needful and proper,—

First, to afford a fair return to the company upon its plant and property used in the service, after paying the costs of operation and maintenance and all proper charges and allowances thereon; and

Second, to establish rates which are more equitable in their relations as between private and public consumers."

The decision and order herein will cover the company's petition as well as other matters included in the investigation instituted by the Commission.

CHARACTER OF SERVICE.

What appears to be the most serious complaint made by consumers and the city authorities against the water company is that relative to the quality of water furnished. No claim appears to have been made that the capacity of the plant is deficient in any particular so far as meeting the service demands for quantity is concerned. There is a goodly proportion of the mains which are larger than 6 inch diameter, the largest being 20 inch diameter. A close comparison would doubtless show

that the Ashland system of water mains compares very favorably with most others in cities of similar size. The same would also be true of the pumps and other features.

The city's public water supply has always been taken largely from Chequamegon Bay of Lake Superior. Originally, it was entirely from that source. The water company endeavored to develop a well—or ground-water—supply, but did not succeed in obtaining a sufficient quantity. As a result of its efforts to furnish well water to the city the company has, as features of its property and plant, a brick walled covered well, 58.33 feet inside diameter and 35 feet in depth below ground level, and a group of tubular driven wells all connected together and to the pumping station by a pipe system. One of the company's representatives testified that the capacity or yield of the well system was far short of the service requirements. He further testified that other early investigations brought the company to the conclusion that it would probably be impossible to supply the city with water taken exclusively from wells or springs.

The company's original intake pipe in the bay was of 16 inch diameter pipe and only about 1,500 feet long. It appears that the construction of the water works was soon followed by the construction of public sewers which carried the city's sewage directly into the bay. The original intake was abandoned after only about five years of use and a 24 inch diameter intake, having a length more than three times that of the original, was substituted for it. It seems that the second intake, laid in 1889, had a total length of 4,800 feet or more and was laid because of the pollution of the waters along shore and the necessity of getting the water from a point much further out than the length of the original intake.

Prior to 1896 the water taken from the bay was supplied without filtration or other treatment. A slow sand filter plant, consisting of three beds of 1/6 acre each, was built in 1895–6, and was put into operation in February of the latter year. Another similar filter bed and a clear water reservoir were added to the plant in 1912. Earlier in the same year the company began applying the hypochlorite of lime treatment to the filtered water for disinfection.

It is apparently a fact that the water supplied by the company prior to its adoption and use of the hypochlorite treatment possessed a disagreeable taste and odor, particularly at certain

times and seasons. This condition was attributed by at least some of the people of Ashland to creosote or other wastes of a manufacturing plant near the head of the bay, which wastes were disposed of in the bay. The testimony of certain witnesses indicated that the former disagreeable taste and odor of the water had been aggravated by the introduction of the hypochlorite of lime, and that recently the taste and odor may, at certain times, have been due solely to the use of that chemical. This is not the first time nor the first case in which we have learned of such a complaint from consumers of water treated with hypochlorite of lime.

There seems to be no room for doubt that the raw water of the bay, as obtained by the company through its intake pipe, varies widely in its degree of pollution, depending on the varying currents in the bay. It is an apparent fact also that the proper amount of a disinfecting agent to be used in a polluted water depends on the relative condition of that water at different times. The problem of dealing correctly with the purification of a water supply of varying quality and degree of pollution would seem to require the installation and use of facilites for scientifically determining the character of the water at any and all times. The company in this case has had no such facilities of its own. Before the results of analyses made elsewhere for the company can be obtained the character of the water may and probably does often change very materially, requiring a quite different treatment. It may be that the hypochlorite, even when applied in proper quantities, is not applied at the proper point in the flow of water from the filters to the pumps and may not have the necessary mixture and time of action to produce the best effect. These are matters for scientific determination. They are also matters in which the state board of health is concerned, since plans for new water supplies or improvements of existing supplies are required by law to be submitted to that board for its approval before their execution.

City's Plan of Improvement.

In the course of the hearings it became apparent that there was, or at least had been, a belief in the minds of some of the city officials and others that the proper solution of the question of improved service would involve the extension of the intake pipe to some point outside of, and beyond, the government break-

water. This would involve an additional length of about one and one-half miles and an additional investment of probably not less than $120,000. If there were any assurance that the result of such large additional investment would be the securing of a pure water supply the plan might receive serious consideration. The situation, however, is such as to give no assurance that a pure water supply can be obtained in that way. The water works plant in this case already represents a relatively large investment for serving a city the size of Ashland. The practical effect of any such large additional investment at this time would probably be to make the company's service so expensive as to force a continually increasing number of its patrons to discontinue it and obtain water in other ways.

COMMISSION'S INVESTIGATIONS.

The peculiar circumstances of the case seemed to require a special expert investigation and report. For this the Commission engaged PROFESSOR CHARLES S. SLICHTER, of the University of Wisconsin, who has made water supply investigations for the Commission in previous cases as well as for the states and United States geological surveys. His report is here presented in full:

REPORT ON THE WATER SUPPLY OF ASHLAND, WISCONSIN.

PRESENT CONDITIONS.

The water supply of the city of Ashland is taken from a land-locked arm of Lake Superior, known as Chequamegon Bay, a very shallow body of water which constitutes the harbor of the cities of Ashland and Washburn. The position of the bay in the immediate neighborhood of Ashland is shown in Plate I, submitted herewith. This portion of the bay or harbor is partially cut off from the main bay by a government breakwater some 6,000 feet long. The portion of the bay southwest of the line of the breakwater and immediately adjacent to the city is a bag-shaped area, about three miles across the mouth of the bag and three miles in length from the line of the breakwater to the narrow end of the bay at the southwest margin of the bay. The area of this portion is about 6½ square miles. It is this restricted area which constitutes the harbor proper of the city of Ashland. The larger main bay itself is very completely land-locked and cut off from Lake Superior by a long spit of land known as Chequamegon Point and by the Apostle Islands.

A small stream, known as Fish creek, enters near the extreme southern and western extremity of the bay. The water discharged into the bay by Fish creek is insignificant as to volume and is highly polluted.

The exchange of water between the bay and the main lake is dependent upon currents alternating in various directions, due to the wind and to the differences in barometric pressure and other disturbances of level between the lake and the bay. The exchange of water due to the currents is not great and is irregular and uncertain in extent and direction. The water of the bay in the neighborhood of Ashland, as will be shown later, is in a chronic state of high pollution.

Emphasis must be laid upon the extreme shallow character of Ashland Bay, as shown by the 20 foot contour on Plate I submitted herewith. Less than half of the area of the bay in the immediate vicinity of Ashland exceeds a depth of 20 feet, and the deepest portion hardly exceeds 30 feet. A large portion of the southwest end of the bay is extremely shallow. The bay is in no respect self-cleansing and self-scouring; on the contrary, the southwest end of the bay is little more than a reservoir and breeding place for polluting matter and, which is most unfortunate, is so situated as to slowly feed and pass along its contaminated matter to the deeper portion of the bay.

The water supply for the city is taken through a cast iron intake pipe extending 3,260 feet into the bay ending at a point marked (1) on Plate I. The intake terminates in 20 feet of water.

The main domestic sewer enters the bay at the foot of Stuntz avenue, immediately west of the large "Soo" line ore dock and terminates at the shore line at that point. The direct straight line distance from the sewer outfall to the water supply intake is from 3,300 to 3,500 feet.

The water supply is filtered through four covered sand filters of an area of one-sixth of an acre each, placed directly at the shore end of the intake pipe. The pumping station is located at this same point as well as a large well taking its supply from the local artesian zone, which well is said to supply about 20 per cent of the total water used by the city. As full description and drawings of these details of the water supply system are on file in your office, together with the records of operation, it is unnecessary to describe these features at this place.

Time Required for Raw Sewage to Reach Water Supply Intake.

A municipal water supply taken from a small and shallow land-locked bay and only some 3,300 feet in direct line from the outfall of a large domestic sewer discharging untreated sewage into the bay constitutes, on the very face of things, a very

hazardous situation. It was therefore decided to determine by appropriate test the minimum time required under favorable conditions for the raw sewage to reach and enter the water supply intake. For this purpose there was procured fifty pounds of uranine, a very strong fluorescent aniline dye, extremely soluble in water and coloring the water an intense grass green color by reflected light and red by transmitted light.

The uranine was fed into the outfall of the sewer at 9:30 a. m., on September 18, 1913. The wind at the time was a light breeze from the south, blowing diagonally off shore.

To understand the observations to be described, it must be remembered that the water near the shore end of the ore dock was originally quite shallow. The 10 foot contour lies at about 500 feet from shore and the 15 foot contour lies at about 1,200 feet. Therefore, to aid navigation, a slip about 20 feet deep and 100 feet wide has been dredged on each side of the dock extending along its entire length. The sewer discharges into the head of the slip on the westerly side of the dock. There is thus formed an artificial canal extending along the westerly side of the dock which not only serves as a boat slip, but at the same time is admirably adapted to conduct the sewage from the outfall at its shore end outward to the end of the dock. This process is aided by the situation west of the ore dock. On the westerly side there is "made land" for a few hundred feet formed by a filling of slabs, edgings and other sawmill refuse. Beyond this there is a log pocket defined by a floating log boom. The ore dock itself offers considerable obstruction to currents of water passing under it for only a short distance, due to considerable filling of stone. Beyond that there is practically little obstruction.

The observations with uranine showed that the passage of the sewage down the slip was surprisingly rapid. The current from the boat slip from the sewer was ill defined a short distance, the colored sewage largely eddying around toward the southerly corner of the slip. A well defined current was then formed diagonally across and toward the ore dock. The farther limit of the color line moved outward along the dock at a rate of about 600 feet per hour for the first hour, and thereafter at a slightly diminishing rate and reached to the end of the dock about 2:00 p. m. There are 157 ore pockets on each side of the dock, their width being 12 feet center to center, so that the ore pockets cover a dock length of 1,884 feet. The first ore pocket is about 125 feet farther out from the shore line than the end of the sewer. Beyond the main ore dock there is about 100 feet of dock structure and fill, so that the entire dock structure extends 2,100 feet beyond the sewer outfall. The colored sewage traveled that distance within five hours.

The coloring was discernible for a short distance on the easterly side of the dock, it having worked through the structure with ease.

The observations up to 2:00 p. m. of September 18, were made by the writer and Mr. W. E. Miller, engineer in the hydraulic department of the Railroad Commission. A prominent citizen of Ashland was present with the writer and Mr. Miller on the end of the ore dock at 2:00 p. m. September 18, and observed the effect of the green dye extending to that point and easterly of the dock.

Mr. Miller continued the observations after 2:00 p. m. and during the morning of the next day. In the afternoon of the 18th, between 3:30 and 4:00 o'clock, Mr. Miller made an effort to trace from a boat the coloring matter further towards the waterworks intake, it having moved in that direction. The coloring matter did not reach more than 100 feet eastward of the ore dock nor much beyond its end during the first afternoon. On the morning of the day following, the color had all moved southwesterly along the shore. The bay was tinged with the dye for a distance of more than a mile along the shore and for approximately one-half mile out. It had all disappeared from the vicinity of the ore dock and boat slip. The change was evidently due to southwesterly current in the bay along the Ashland side. The sewage current traveled about half way to the mouth of the water supply intake in five hours and but for conflicting currents would have probably reached the intake in ten or twelve hours.

Thus we have the remarkable demonstration that under favorable conditions of current, which moreover must frequently prevail in the summer months, the raw sewage can reach the intake in less than half a day. Thus, under certain conditions, sewage that leaves an Ashland home in the morning may return in the water supply before supper time; diluted, it is true, and run through sand filters at the waterworks, but nevertheless but a few hours removed from its original condition as raw sewage.

The general conditions in Ashland Bay of water intake and sewer outfall convinced the writer that the amount of dilution of the sewage by the water of the bay was at times relatively small and that the time required for direct communication between the sewer and water intake was very short. The demonstration with uranine showed, however, a possible time of direct passage much shorter than had been thought possible; in part, at least, the brevity of this interval is due to the fact that the slip excavated along the ore dock acts as an extension in canal form of the Stuntz avenue sewer toward the neighborhood of the water intake.

Temperature Observations in the Bay: It must not be inferred from the preceding paragraph that the sewage can reach the water intake within ten or twelve hours at all times of the year. In winter the bay is covered with ice, and the natural currents are probably reduced in intensity. In addition to this, the temperature of the water and the bay is nearly uniform, varying but slightly from the freezing point either at top or bottom.

When the ice breaks up in the spring the water begins to warm, which is a process extending from the surface downward. The surface and the upper layer of the water throughout the bay may get quite warm during early summer while the lower layers are still quite cold. At such times there is a very considerable resistance to the mixing of the surface layers with the deeper colder waters, and at such times the diluted sewage would tend to remain in the surface layers of the water of the bay and consequently only reach the water intake after considerable delay. At the same time, however, the amount of dissolved oxygen in the lower layers of water remains very small and may become too lean for proper action of the filters, as the nitrifying organisms in the filter beds can not perform their work of purification if the air supply dissolved in the water becomes too low.

As midsummer comes the above described distribution of temperature passes away, and the temperatures of top and bottom layers become almost identical and both are quite warm. Under these conditions there is no resistance to the mixing of the surface with the deeper waters and the possible time required for the sewage to reach the water supply is reduced to a minimum; also, as above explained, the filter beds may at this very time be in the very poorest condition for active work of purification. Unfortunately this time also closely coincides with the times at which typhoid fever patients begin to seek the local hospitals in greater numbers and, in general, coincides with the time at which typhoid seems to spread and to propagate itself most readily.

In bodies of water of considerable depth, say exceeding 50 or 60 feet, the bottom waters never warm up during the summer sufficiently to approach anywhere near the surface temperature. In such cases a very considerable resistance to mixing of the surface with the deep waters persists throughout the midsummer months.

A violent storm often sweeps the bay of Ashland in such manner as to stir up the water thoroughly and put in suspension quantities of mud and clay.

The fact that the bottom temperatures in Ashland Bay attain substantially to the surface temperatures during the summer and, hence, that all resistance to the downward movement of polluting matter disappears at such times is shown by temperatures taken September 7 and 8, 1913, at stations 1, 2, 3 and 4, as marked on the map, Plate I. The temperatures were taken by a deep sea thermometer kindly loaned by the State Geological and Natural History Survey. The readings are given in degrees centigrade. The highest temperature recorded is equivalent to 67.1° Fahrenheit. On September 2, 1913, several surface temperatures were taken by the writer at various mid-bay points and found to range from 71° to 74° Fahrenheit.

The temperatures presented in this table also indicate the small amount of exchanges of water between Chequamegon Bay and Lake Superior, for at the time the temperature of the bay at stations 1 to 4 ranged between 17.8° C to 19.5° C, or from 64° F to 67° F, the water in the main lake was icy cold, as it always is.

TABLE I.

TEMPERATURE OF THE WATER IN CHEQUAMEGON BAY AT VARIOUS DEPTHS IN METERS

TAKEN WITH DEEP SEA THERMOMETER

On September 7 and 8, 1913.

Temperatures are given in degrees centigrade.

Station No.	TEMPERATURES AT Surface.	2 meters.	3 meters.	Bottom.
September 7, 1913.				
1	19.5° C	18.5°	18½°	18° (6M)
2	18.3	18.3	18.1	16.7 (8.1M)
3	18.	17.7—	17.2	15.8 (9½M)
4	19.	18.4	18.3	17.0 (7M)
September 8, 2 p. m.				
1	18.6°	18.6°	18.5°	18.0° (7½M)
2	18.3	18.3	18.3	16.8 (8M)
3	17.8	17.8	17.9	14.5
4	18.2	18.2	18.0	16.2 (7M)

As is seen from the map of the bay (Plate I) station 1 is at the mouth of the intake in 20 feet of water; station 2 is in mid-bay over a mile outward from the intake and in 26 feet of water. Station 3 is two miles outward from the intake and located in 31 feet of water. Station 4 is behind the government breakwater and in about 23 feet of water.

BACTERIOLOGICAL EXAMINATION OF THE WATERS OF CHEQUAMEGON BAY.

Samples of water from the top and bottom were taken at the same stations on the same date and subjected to sanitary and bacterial examinations by the Wisconsin State Hygienic Laboratory. The results are given in Table II (p. 15).

The analyses show that on the dates named the water at all the stations was so selected as to prove that the entire bay is contaminated and that little preference could be given to the water from one part over that from another part of the bay. The samples taken from the neighborhood of the present water supply intake (station 1) are, on the whole, somewhat worse than the others and, as shown by the uranine tests, much more liable to sudden change in quality; but any one of the stations named

would be an unsatisfactory location for the intake of a municipal water supply.

Filtration of the Water Supply.

Reports on file with the Railroad Commission give details of the covered sand filters used at Ashland in the treatment of the supply taken from the bay. Extensive comments could be made by the writer upon the lack of weirs and other operating devices for the control and inspection of the filters, and for the need of expert daily inspection of the work of the several filters, and of the bacteriological examination of the untreated water and of the filtered supply from each filter bed. But, in the opinion of the writer, all such matters are of secondary importance in connection with the water supply of a city of the size of Ashland, and especially after due consideration is given to its commercial and industrial present and future. Considering human affairs as they must ordinarily run, it is quite visionary to expect a good water supply for the city of Ashland to be made from the polluted waters of the bay by filtration or chlorination or both or by any other artificial treatment. It is, of course, theoretically possible to purify the water of Chequamegon Bay so as to be suitable for domestic needs. Cities of a population of several hundred thousand are able to command the services of experts and to enforce such military discipline among their employes that filtration and similar work can be operated with practically no lapse in efficiency. In America it has been found to be very generally the case that the smaller cities are unable to maintain that discipline and expert daily and hourly supervision that is absolutely essential to the operating of water-treating plants. For that reason, water supply engineers of high standing refrain from recommending such plants where a safe supply is available from other sources.

*Water contaminated.
+Water polluted.
***Bottle containing sample broken in shipment.

During the past thirty months, 177 separate tests of Ashland water have been made by the state hygienic laboratory; over ninety of these examinations disclosed a contaminated or polluted water supply. These examinations have been made at all seasons of the year and under all possible conditions of supply; and yet the last examination on November 17, 1913, shows a pollution fully as bad if not worse than that found two years ago.

The report of John W. Atwood, Dabney H. Maury and Daniel W. Mead, recently made on the water supply of Rockford, illustrates the opinion expressed above. They say in their report:

"It should be fully understood and appreciated that any supply that demands filtration as an adjunct must depend for its purity on constant care and vigilance by experts thoroughly conversant with such operations, and that any carelessness or lack of vigilance will result in a temporary reduction in quality which may, if it occurs at a critical time, result in contamination, with possible resulting sickness and death among its users.

"The best results with any public work are always secured by concentrated rather than continuous effort and a water supply which is normally pure and which must simply be guarded by proper construction in order to ensure its constant delivery to the consumer in potable condition, is much to be desired above any supply that demands continuous vigilance as the price of safety."

These words apply in force to the situation at Ashland. As previously shown in this report, there is a time previous to mid-summer when the surface waters of the bay are warm, but the bottom waters are still cold. As long as this condition holds there is a certain resistance to the entry of the raw sewage to the lower waters but, at the same time the water entering the intake is either low in oxygen or free from it altogether, so that the filters are scantily supplied with nitrifying organisms and are at low ebb in their power to purify. Quite suddenly, however, in mid-summer the entire body of water in the bay becomes warmed, and the intake waters may in consequence become suddenly much worse; later in the year, say in October, the surface waters become cold and during the first severe storm the entire body of water overturns, the bottom water coming to the top and the top waters sinking to the bottom. To have filters scientifically prepared to meet this change in demand, would require the water company to have on hand and under alert discipline experts which no city of that size can hope to have or to retain. This is but one illustration of one of the numerous changes in circumstances for which expert supervision of filter plants must provide.

* Water polluted.
** Water contaminated.

Tables III and IV give a few results of bacteriological examinations of filtered and untreated water at Ashland made during the past three years. These are selected from 177 examinations made of Ashland water by the state hygienic laboratory. They

are inserted here merely to show that the filtered water is polluted, not occasionally, but often, and that its state of pollution is not confined to any particular season or year. They show that an epidemic of typhoid has been an ever present danger at Ashland in the past and that escape therefrom in the years to come must be looked upon as a fortunate providential dispensation.

The maximum daily pumpage at Ashland was reported to the writer to be 1,300,000 gallons per twenty-four hours. The total area of the filter beds is ⅔ acre, which gives a maximum rate of filtration of less than 2,000,000 gallons per day per acre. This rate is certainly moderate and there exists no need of greater filter area. The writer has examined 52 bacteriological tests of water from Ashland made by the state hygienic laboratory during the calendar year 1913. The "raw" or unfiltered water was found "good" on two occasions, and contaminated or polluted at other times; the tests showed a very great variation in the quality of the "raw" water. The samples of filtered but untreated water were usually unsafe. The samples of filtered and treated (with "chlorinated lime" or hypochlorite of lime) showed much improvement over the filtered but untreated water, but some were still polluted. It is interesting to note that all of the samples of filtered and treated water furnished by the Ashland Water Company were "good".

When everything is considered, it is highly visionary to expect that good potable drinking water suitable for a city water supply can be continuously derived by filtration and chlorination of the water of Ashland Bay. Such an expectation is actually and practically beyond reasonable hope, and therefore it seems idle to the writer to discuss better equipment of the filters and the hiring of suitable experts to watch and operate them. It would only mislead the people of Ashland if anything here stated should lead them to believe that safety is practically attainable in that direction.

Removal of Sewage From the Bay.

There is no easy or practical means of conducting the sewage of Ashland and Washburn to points that would leave the bay free from contamination. Fish creek and the storm water sewage from Ashland would still leave the bay anything but a pure source of water supply. But in any case such a proposal seems impossible of realization for other important considerations. The future growth of Ashland must depend upon the development of suitable industries which will be only too glad to take possession of the excellent and cheaply available sites along its water front when in the future the labor market and other conditions at Ashland take a favorable turn for manufacturing growth. Such industries will undoubtedly wish free access to the waters of the bay for industrial use and as a dumping ground for their in-

dustrial waste. It would be an undesirable handicap to the commercial growth of the city to undertake to prevent the contamination of the waters of the bay with industrial sewage. In case pulp mills and paper mills develop and grow in this location, for which conditions seem to be very favorable, the waste from these mills, even after treatment, would induce serious complications and might render it quite impossible to properly filter the water supply. The waste from paper mills is one that interferes most with the maintenance and operation of filters, and yet the use of the bay as a receptacle for this waste seems to be one of the inevitable results of the industrial growth of the city. It seems absurd, therefore, to attempt to set up any standard of purity of water in Chequamegon Bay; it would be a price too heavy to pay for the loss of commercial expansion of the community.

NEW SOURCES OF SUPPLY.

There are only two practicable sources of water supply for Ashland in addition to the present supply from the bay, namely: a supply taken from the main body of Lake Superior, or a supply taken from underground sources. A supply from Lake Superior must be dropped from consideration for the present. When the community reaches a strength of 50,000 or 100,000 inhabitants such a source may well, and probably will, come under consideration. It constitutes the ideal and ultimate source of supply for any large community in this location. It is regrettable that the distance to the lake prohibits its immediate availability. The remaining possibility is a supply from an underground source, and such possibility should be given most careful consideration.

Ground Water Supply: The local conditions at Ashland are entirely favorable for expecting that a suitable groundwater supply can be developed at reasonable cost. The "red clay" soil seen everywhere about Ashland might give the impression that deposits of sand and gravel are non-existent. This superficial indication is, however, quite misleading. The red clay slopes and hills about Ashland contain many buried beaches of sand and gravel of various extents, many of which, in fact, are old shore lines of Lake Superior. Many of these are known to be water bearing, and the frequency of flowing springs in the valleys near Chequamegon Bay indicate that groundwaters are abundant to more than the average extent.

There are known to exist at Ashland not only upper zones of underground waters in old beach gravels, etc., but there are deep zones of flow extending to great depths in the local Lake Superior sandstone. One of the deepest borings in the state is located at Ashland and has explored thoroughly the deeper zones of flow of underground waters. However, the deeper zones of flow are too highly mineralized to permit consideration for a municipal supply.

Temperature of water flowing from Spring No. 2, September 2, 1913, was 44.6° Fahrenheit.

Tables V and VI give information concerning the quality of groundwaters at Ashland. The analyses given in Table V were collected by the Wisconsin Geological and Natural History Survey. This table is interesting as containing the analysis of a sample of water from Chequamegon Bay taken through the ice in December, 1897, and also analyses of water from the city water supply made August 1902, September 1905, and February 1909, the latter indicating contaminated water. Analyses 6 and 7 of Table V are of water from a well at the Chicago & North Western Railway shops, and give a good indication of the mineral content of wells from 150 to 200 feet in depth. Columns 9, 10, and 11 of Table V give interesting results of analyses of samples of water taken at various depths in the deep boring of the Ashland Iron and Steel Company, now the Lake Superior Iron and Chemical Company. This well extends 2,800 feet into the Lake Superior Red Sandstone, and is one of the deepest borings in the state. The mineral content, especially that of common salt, reaches remarkable proportions at a depth of 1,435 feet. The record of this deep boring shuts out any con-

sideration of the possibility of artesian water from a deep source at Ashland.

On the westerly edge of the corporation limits of Ashland, and just north of the right of way of the Chicago, St. Paul, Minneapolis & Omaha Railway, there is a group of several flowing springs, known locally as Prentice Springs. The springs were briefly reported upon and samples of water taken in July, 1911, by P. B. Turner of the engineering staff of the Railroad Commission. Following Mr. Turner's notation, I have numbered these springs 1 to 6, beginning with the most easterly spring, namely that owned or used by the Lake Superior Iron and Chemical Company (formerly known as Ashland Iron and Steel Company). Springs Nos. 2, 3, 4 and 5 have long been neglected and the surroundings permitted to deteriorate. Spring No. 2 flows from the top of a five-inch pipe which rises to about five feet above the ground. The spring was discharging at the rate of 139 gallons per minute when measured by the writer on September 2, 1913. The writer could find no one who could tell the approximate distance to which the well casing had been sunk into the spring, and it was impossible to determine the depth by sounding, as the spring has been neglected for years and small boys had amused themselves by throwing rubbish down the open well casing and partially obstructing the pipe. The spring is now protected from further destruction by a wire cage placed over the mouth of the well casing, so that rubbish can no longer be thrown into the spring. The bacteriological and chemical analyses of the water of the various springs made by the State Hygienic Laboratory in 1911, are given in Table VI. The only analyses having value from the sanitary point of view are those of the waters of springs numbered 1, 2, and 5, as the other springs are open natural springs without any protection against the entrance of decaying animal and vegetable matter. The last column of the table gives the result of chemical and bacteriological examination of samples taken from Spring No. 2 on September 28, 1913, for the purpose of the present investigation. This analysis should give satisfactory information concerning the character of the underground waters at this location, as the spring, although neglected, is now fairly well protected against the entrance of rubbish by means of a wire cage of 2½ to 3 inch mesh placed over the mouth of the discharge pipe. From the analysis of the waters of this spring given in the last column of Table VI it is seen that the water is practically sterile bacteriologically. The mineral content of the spring water is seen to be 264 parts per million total dissolved solids, of which 85.4 parts per million is in the form of common salt, leaving about 179 parts per million of dissolved mineral matter in the form of salts of calcium and magnesium, and the other constituents. The common salt in this water undoubtedly comes from the Lake Superior sandstone, which at greater

depths furnishes a strong brine. The spring water is harder than the water from Chequamegon Bay, but is not to be classed as more than moderately hard; in fact, the water is relatively soft as ground waters usually run. Table VII gives analysis of groundwaters from a number of places in Wisconsin used for municipal supply. For the purpose of comparison, an analysis of the well known White Rock water of Waukesha, and the artesian supply of Rockford, Illinois, is added to the table. Most of these waters are two or three times as strong in dissolved minerals as Prentice Spring water.

A discussion of the data presented by the tests of the Prentice Spring water given in Table VI shows that the undeveloped springs and those cased only to shallow depths furnish relatively soft water, but a small quantity. The springs artificially developed by insertion of deep casings furnish somewhat harder water, and a much greater quantity. All of this indicates that there probably exists at this point an important zone of flow of underground waters in gravel deposits on top of the bed rock of Lake Superior sandstone, or possibly within the upper broken and cracked portion of the sandstone itself. The bed rock in this region, usually called the Lake Superior sandstone, was during glacial times covered with hundreds or thousands of feet of ice. This enormous moving load tended to crack and fracture the upper portion of the sandstone in haphazard manner. This fractured upper portion of the rock is often a most favorable zone of flow for underground waters. Whether the flow of underground waters at Prentice Springs lies primarily within the upper fractured zone of sand rock or within old beach, or glacial gravels deposited on top of the same, or in both zones, can only be determined by investigations especially directed to that end.

The Standard to Be Applied to a Municipal Water Supply.

A perfect water supply is worth all its costs. There is no financial standard by means of which to measure the limit of human effort that should be expended in attaining it. The safety and permanence and growth of the dependent civilization is too important to permit expression in ordinary units, or to be reduced to the basis of profit or interest on investment, or to be viewed in any common way as solely a commercial or industrial enterprise or utility. The example of Rome has been the guide to all the cities of modern cultured nations. Since that day the water supply of a city has been the most important and usually the most expensive of its public works. The abundance and purity of the water supply has determined the growth and permanence of the civic communities and has always been a determining factor in selecting from the group of cities struggling

for commercial and industrial supremacy, the few that should finally be awarded leadership.

The great water supply project of New York city, whose new reservoir in the Catskills requires a conduit of 92 miles in length and a cost of new supply approximating $200,000,000; the equally well known project of Los Angeles just completed at a cost of over $25,000,000 conducting the water a distance of 234 miles; and the new project of the city of Winnipeg, diverting the waters of Shoal Lake to the city, a distance of 90 miles at a cost of $28,000,000; these are some modern instances of the fact that commercial profit and cost must be subservient to necessity in the attainment of an ample and suitable water supply.

It is unnecessary to elaborate upon the fact that a perfect water supply is the guardian and producer of wealth, or to explain in what manner a penalty in wealth an development must be paid as the price of a supply that falls short in any respect from what it might be.

The qualities that characterize a perfect water supply may be summarized as follows:

Such a supply must be:

1. Safe and wholesome from a sanitary standpoint—an imperative quality.
2. Soft and free from incrustants.
3. Free from corrosive ingredients.
4. Free from disagreeable tastes and odors.
5. Free from suspended matter.
6. Free from coloring matter.
7. Low in temperature.
8. Uniform in temperature.

These, however, cannot be used to rate a water by mere preponderance of good qualities. A water may be condemned by extreme departure from normal in any one of the desirable qualities; on any other basis sea water would rank almost as high as well water. Instead of attempting a numerical process of weighting the qualities of water, it is better to take due note of all and express final judgment in terms similar to the following:

1. Excellent.
2. Good.
3. Tolerable.
4. Poor.
5. Very unsatisfactory.

Applying this method to the available supplies at Ashland one may express judgment as follows:

Lake Superior—Excellent.

Underground water—Good to Excellent.

Chequamegon Bay, (treated)—Poor.

Chequamegon Bay, (unfiltered)—Very unsatisfactory.

The above classifications refer to quality only.

Specific Recommendations.

It is the belief of the writer not only that, as a practical matter, a satisfactory water supply cannot be made by the filtration of water from Chequamegon Bay, but that the likelihood of obtaining an excellent supply of ground water for municipal needs at moderate costs is exceedingly promising. The localities suitable for prospecting for underground waters are the northerly sloping lands near the ridge just south of the city, where old beach gravels may be struck at depths above 200 feet, and the obviously favorable location near Prentice Springs. The latter location should first be investigated. I recommend that several six or eight inch test wells be driven to a depth of 150 to 200 feet, located on the land or highway just south of the right of way of the Chicago, St. Paul, Minneapolis & Omaha Railway, and south of Prentice Park. The object is to see if the water bearing gravels or other line of underground drainage can be intercepted at this point. Careful logs of all material encountered in the sinking of these test wells should be kept and after the test wells are constructed and provided with proper strainers extending as far as practicable into the water bearing material, the wells should be subjected to extensive pumping tests to determine the capacity of the wells and the effect of pumping on the normal ground water level in neighboring wells. In case suitable water-bearing gravels or rock are not struck at the location named, then the tests should be transferred to test wells sunk in Prentice Springs themselves.

If a suitable battery of wells can be developed south of Prentice Springs, vacant land exists in that locality so that a sufficient quantity can be purchased or controlled to permanently protect from contamination the underground supply without interfering with the normal growth of the city. Any land required and used for that purpose would still be available for agriculture or for a public park.

The distance of Prentice Springs to the built-up portion of the city is about one mile. The expense of supply main and pumping plant and recovery works at the new location can readily be estimated after the ground water explorations have been completed. The cost would certainly exceed $75,000.

The expense of test boring and experimental pumping would amount to from $2,500 to $4,000. This work should be carried out under the advice and supervision of the engineers of the Railroad Commission.

It is not necessary to discover a reserve of groundwater supply for a future city of 50,000 or 75,000 or 100,000 inhabitants. When Ashland is assured of a population of this magnitude, the expense of an intake in Lake Superior will no longer be an obstacle and a final supply of ideal quality can ultimately be developed from that source.

CONCLUSION.

The above report shows that the city of Ashland is almost in constant danger from the quality of its present water supply. When human life and human happiness are at stake in the degree shown by the facts in the present case, one who feels his individual responsibility in the premises must state clearly and unequivocably the situation as it actually exists so that the local authorities may fully appreciate the needs of their people. I feel that I would fail in my duty if I did not make clear that it is quite visionary to expect any improvement in present conditions by better operation of the filters or by chlorination of the water. If an expense of about $10 per capita cannot be incurred to remove this danger in the manner indicated in the report, there remains nothing that I can recommend for which I can take the responsibility. I feel confident, however, that the city of Ashland will begin soon to take on such an industrial growth that means will gladly and readily be found for putting the water supply beyond all danger of suspicion.

VALUATION OF PROPERTY.

Following its issuance of the notice of investigation of the rates, rules and regulations of the Ashland Water Company, the Commission had its engineering staff prepare a revised valuation of the property and plant of the company, one valuation having previously been made in 1908 for use in the case of *City of Ashland v. Ashland Water Co.* 1909, 4 W. R. C. R. 273. This more recent valuation was made for the property as it existed June 30, 1912.

At that time the company's intake pipe was nearly all taken up as the result of the discovery that it had been broken in several places by the dragging anchors of the heavy ore boats plying in and out of the Ashland harbor. The usable pipe had been raised and stored on the company's property preparatory to relaying it in a deeper trench. The company was also at that time just beginning the construction of the additional filter bed and clear water reservoir. This new construction was, therefore, not included in the staff's valuation of June 30, 1912. The fact that the latter valuation was considerably lower than the one made in 1908 was largely due to the removal of nearly 90 per cent of the intake, originally valued complete at $45,000. The final summary of the staff's 1912 valuation is as follows:

FINAL SUMMARY OF VALUATION.

Items.	Cost new.	Present value.
A. Land	$5,100	$5,100
B. Transmission and distribution	232,078	219,847
C. Buildings and miscellaneous structures	81,004	75,189
D. Plant equipment	34,604	22,163
E. General equipment	4,119	2,765
F. Paving	26	26
Total	$356,931	$325,090
G. Add 12% (see note below)	42,832	39,011
Total	$399,763	$364,101
H. Material and supplies	11,000	11,000
Total	$410,762	$375,101

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc. (Estimate of cost of relaying intake and constructing additional filter bed and reservoir to follow later.)

Three other valuations were submitted in the case, one made on behalf of the city of Ashland by Dabney H. Maury, consulting engineer, Chicago, and two for the company, one made by its president and supervising engineer, William Wheeler, the other by its superintendent, Sam Wheeler. The first two of these were made as of Jan. 1, 1913, while the last was stated to have been as of June 30, 1912, the same date as that of the staff's valuation. All except that made for the Commission were made to cover the subsequent relaying of the intake and the construction of the additional filter and clear water reservoir. Two of the three valuations made for the city and company appear to have actually covered the property as it existed June 30, 1913, this being accomplished by the addition of a final item of $6,027.00 in the Maury and Sam Wheeler valuations for the company's recent construction expenditures on property not already included by them. In the detail valuation sheets it is noted that William Wheeler included the amount shown by the company's books to have been spent on the new construction at the plant up to March 31, 1913, also an amount estimated as necessary to complete the work then in progress.

For the sake of brevity and convenience the four valuations will usually be referred to hereinafter by the following initials: "C" for the valuation made by the Commission's staff, "M" for the Maury valuation, "S. W." and "W. W." for the Sam Wheeler and William Wheeler valuations, respectively.

The estimates of cost of reproduction new presented in the three valuations last named are here grouped together in Table VIII:

[1] Not added by W. W.

The two company valuations are almost identical in cost of reproduction new of the physical property, but in the corresponding present value "W. W." shows less than "S. W.", or in other words, somewhat more depreciation. In cost new these exceed "M" by very close to $90,000 or 18.1 per cent of the latter. In present values "S. W." and "W. W." exceed "M" by 29.3 per cent and 27.3 per cent, or $127,352 and $118,309, respectively.

It has already been indicated that "C" does not include the fourth filter bed, the clear water reservoir and the relaying of about 90 per cent of the intake. So far as the latter item is concerned, "C" includes $4,400 for 550 feet of intake, then intact at $8 per foot, and $7,620 for 24-inch pipe on hand awaiting relaying. "C" admittedly has shortcomings in other respects, which will be taken up separately hereafter in considering the valuation part by part.

A. Land.

On this item there is no disagreement and no evidence that the value placed thereon should be a different amount.

B. Transmission and Distribution.

In this group, which is subdivided, the entire water pipe systems on both sides of the pumps, together with their appurtenances, are apparently included.

1. *Mains.*

(a) C. I. Pipe. The same length of each size of pipe is used in all of the four valuations. There are, however, small differences in the calculated total tonnages of the cast iron pipe. These differences are due in part to the use of slightly different schedules of weights per foot, and in part to the deduction in "M" of one-half of the overweight allowance of 2 per cent provided for in the standard specifications under which pipe is usually bought. This deduction was explained to have been made on the ground that the foundries could not readily absorb the allowable 2 per cent total overweight without either some trouble and expense or the furnishing of some metal for which payment could not be obtained. The deduction was made from the value of both pipe and specials, after computing it on a 2 per cent

overweight allowance, and amounts to $968. In all the valuations except "C" the weights per foot used were whole numbers of pounds, but in "C" the actual list weights of American Water Works Association's Class "B" pipe were used, with the customary 2 per cent allowable total excess. This 2 per cent excess has heretofore been used in all of the staff's valuations and there seems to be a lack of sufficient grounds upon which to eliminate it, either in whole or in part.

The value (f. o. b. cars, Ashland) of all cast iron pipe and specials in the street mains, exclusive of laying costs, has been variously estimated at from $95,878 in "M," (after deducting for one-half the customary overweight allowance) to $105,351 in "W. W.", a difference of nearly $10,000. The value in "C" was $104,408. This and the two company valuations were based upon average prices during the five years ending with December 1911, whereas in "M." the average for five years ending with June 1913 was used. The later figures are somewhat lower, since they are not influenced by the abnormally high prices of 1907 as are the others.

The Commission's views on the question of the proper basis of prices have been quite fully presented in preceding cases of this character and it would be superfluous to repeat them here. The actual total cost of the cast iron pipe in the mains of the Ashland plant, as indeed of most of the other elements, has not been learned. Computations as to the probable total actual cost of the pipe based on data contained in an exhibit by "W. W.", showing the distribution of his valuation by years and on certain unit prices prevailing during the spring of each of those years in which pipe was laid (purchases for the season's work are likely to be made in the spring) indicate that it has probably not exceeded $96,000 or $98,550, including specials. Computed on the staff's estimate of the tonnage and upon the average of monthly quotations during the five years ending with June 1913, the total value would be $96,401, including specials. Current prices of July 1, 1913, would give about $1,000 more total value of the same material. The available evidence seems to indicate that the value of pipe and specials given in "M." before the deduction of 1 per cent for allowable overweight not absorbed by the foundries ($96.846) is as fair a figure as can be determined under the circumstances.

(b) Valves. In the item of valves in street mains all agree as

to number except that "C" and "W. W." show one less 6-inch valve and valve box than are shown by the other two valuations. The total values given this group are $3,850, $3,849, $3,957 and $3,919, by "C", "M", "S. W." and "W. W." respectively. The last three valuations show from $420 to $433 for valves in pumping station basement which appear to have been omitted from "C".

(c) Pipe Laying. On this item there is a large difference between the highest and the lowest figures before us. The totals exclusive of cartage on the materials, according to "M", "C", "W. W.", and "S. W.", are $52,481, $62,557, $68,413 and $68,633 respectively. The highest of these is $16,152, or 30.76 per cent, more than the lowest, a rather surprising difference under the circumstances. No evidence was offered by the parties or obtained by us which would tend to establish the greater reliability of any one of the above estimates over that of the others. The staff's estimate happens to be exactly $2,000 above the mean of the highest and lowest and of the four estimates. It was the first one made. It is considered probable that this estimate is not materially in error. For the purpose of this case it will be accepted.

(d) Small Wrought Pipe Mains. A very similar situation prevails as to the several estimates on small mains which vary from $3,208, as estimated in "M", to $3,761, as estimated in "W. W." The estimate in "C" is $3,616

2. *Hydrants and Connections.*

Here again there are relatively large differences between the various estimates. The amount involved varies from $11,009 in "M" to $15,229 in "W. W." The value in "C" is $13,071. It was explained by the city's expert that he did not consider the Holly and Gaskill hydrants superior to certain other kinds which are sold at lower prices and one of which other kinds is also used in part by the respondent in this case. He therefore put the same price on all of the company's hydrants. The staff, as well as the company, evidently followed the policy of measuring the cost of the kinds actually used rather than of substitute articles. If the company has actually paid for its hydrants the prices used in the valuation estimates by its president and superintendent it would appear that the staff's information in-

dicates that the buying in this case was hardly as favorable as might reasonably be expected. In the absence of satisfactory evidence that the staff's estimate on this item is too low, it must be accepted as substantially correct.

3. *Services.*

The service connections have been collectively estimated at from $23,924 in "M" to $30,507 in "W. W." and "S. W.", the value given in "C" being $29,864. No deduction appears to have been made in arriving at any of these figures by reason of the fact, as admitted by the company in a previous case, *City of Ashland v Ashland Water Co.* 1909, 4 W. R. C. R. 273, 275, that a portion of the material and labor in services had been paid for by consumers. That amount has been estimated in "C" at $6,-720. No other evidence of the value or cost of that portion is before us. This Commission has heretofore indicated that such facts as above mentioned are important in determining the amount upon which any utility is equitably entitled to earn a net return.

4. *Meters.*

The city's and company's valuations are identical on meters and meter boxes and vaults. They include the same number (228)as are shown in the staff's valuation ("C"), which omits the meters owned by consumers which are 219 in number. "C" shows the extra meters on hand as part of the materials and supplies, Group "H", while all the others include them here in the same group with meters in service. This portion of the group was given a cost of reproduction new in the city and company valuations of $339. Exclusive of this, these valuations all assign a cost value new to the meters, extension dials, meter boxes and vaults of $7,908. The corresponding value in "C" is $7,054. The difference is largely in the vaults and boxes, and is appears that there are differences in the character of these items which the staff may not have realized or taken fully into account. The agreement of the city and company valuations regarding the item of meters and settings leads to a belief in their substantial correctness.

5. *Intakes, Collecting Aqueducts and Supply Mains.*

This group covers the entire pipe system for supplying water to the pumps. Quite a number of separate items are included.

The total values as shown by "M", "W. W." and "S. W." are, respectively, $47,598, $48,426 and $48,566. These differ by comparatively small amounts, the differences being $828 and $968 between the first and each of the others. The value for the entire group as shown in "C" is but $6,278, but unlike the others this valuation does not include the relaid portion of the intake. The pipe taken up and relaid is shown by "C" as part of the materials and supplies on hand, Group "H." At the time of making the staff's valuation, it is understood, only a small part of the 24 inch intake as first laid was intact. The values new for the relaid portion, as given in "M", "S. W." and "W. W.", are $36,357, $36,572 and $36,696, respectively. It appears that a part of the suction piping was inadvertently omitted from "C" and that, with these inserted, the value for the entire group must be approximately $48,000.

C. Building and Miscellaneous Structures.

1. *Pumping Station Buildings.*

Pumping station buildings comprise the pumping station, stack, coal shed and barn. On these the valuations range from $10,715 to $19,192, the former being "C", the latter "W. W."; "M" and "S. W." show, respectively, $15,796 and $18,118. In preparing the 1912 valuation it seems that the staff used the same estimates on the buildings as were placed on them in the former case of 1908. They are admittedly somewhat low for present cost of reproduction, but, owing to an apparently large increase in cost of building materials and labor since these structures were built, it is very doubtful that their actual original cost was even as large as the staff's 1908 figure. Estimates on the same buildings made by the company's superintendent for this case are increased above his own estimates of 1908 by more than 50 per cent, yet the earlier estimate was presented in a more detailed form than the later one, showing no less careful consideration and analysis.

In regard to the building estimates made by the staff in this case it may be said that in view of all the circumstances it seems scarcely probable that its 1908 valuation of the buildings above mentioned (which estimate was copied into the 1912 valuation) is as much below the probable present actual cost of reproduction new as it is below the estimates made by the city's and com-

pany's experts. The staff's figure has been admitted to be perhaps from 10 to 15 per cent too low even for 1908, but the making of proper correction for this would still leave large discrepancies between the staff's figure and the other estimates. The addition of 15 per cent as a correction would make the estimate in "C" $12,322 on the basis of building conditions in 1908. As contrasted with that, we have before us three other and more recent estimates which exceed it by from $3,474 to $6,870, or from 28.2 per cent to 55.76 per cent. The Wheeler estimate of 1908 was less than $12,000. If such differences indicate a rise in costs of building materials and labor, and the rate of rise indicated continues, the cost of erecting such buildings in Ashland may become prohibitive in a few years more. A full consideration of all the available evidence as to the cost or value of the pumping station buildings leads to the conclusion that $14,000 is fairly representative of their value for the purposes of this case.

2. *Reservoir.*

Here again the actual cost is unknown and the estimates differ widely. "C" presents the same figures as were made for the case in 1908, though it is admitted that the cost to build the reservoir now would probably be somewhat more than at that time. The 1908 estimate by the staff was $12,340 and that by the company's superintendent, $13,076. The latter's estimate for 1913 is $18,505. "M" and "W. W." show estimates of $14,533 and $18,380, respectively. The structure is reported to have been built in 1893–4, which was a period of general business depression and doubtless of low costs. The actual cost was very probably less than any of the estimates before us. Both the actual original cost and the estimated cost of reproduction are quite generally recognized as being entitled to consideration in determining fair values in such cases as this. In the present case neither the estimate of the original cost nor that of the cost of reproduction is a very definite amount. They are, however, sufficiently definite to establish reasonable limits within which a fair value must lie.

3. *Wells.*

The difference between the several estimates on this item are relatively small and again the actual cost is unknown. The staff's estimate, which was the same in 1908, is $4,024. "M",

"S. W." and "W. W." submit the probable cost of reproduction new as $4,776, $4,905 and $4,945, respectively. While the staff's estimate is doubtless supported by actual costs of similar work in other cases, it may be a little low for the present case. It is certainly a more conservative figure than those representing the judgment of the city's and company's experts.

4. *Filters.*

The estimated cost of reproduction of the filters, as shown by "C", is $49,048. This applies to only the three original filters and their appurtenances, the construction of the fourth one, now forming part of the property, having just begun at the time "C" was prepared. A review of the staff's original detailed calculations makes it appear that there was a duplication of part of the work in estimating on the filters, amounting to $1,915. The correction of the estimate brings the total to $47,133. The original cost (1895–6) appears to have been $40,959. Estimates of the cost of reproduction as made by the company's superintendent in 1908 and 1913 are $46,000 and $50,488, while "M" and "W. W." show estimates of $42,570 and $50,488, respectively. The company's 1913 valuations on the original filters are identical and are about 23.3 per cent above the original cost. The difference between the 1908 and 1913 estimates by the superintendent rather indicates that there may have been a slight and unconscious departure from the intended basis of recent normal or average rates of cost, and that considerations of immediately current rates of wages for labor and prices of materials may have been more of a factor than in the valuations "C" and "M." So far as it is indicated by the evidence before us, the fair value of the original filters for the purpose of this case must fall somewhere between $40,959 and $50,488.

The cost of reproduction of the new filter bed and clear water reservoir, constructed in 1912–13, is given in each of the three valuations by the city's and company's experts as the actual cost shown by the company's books to March 31, 1913, namely, $28,977. "W. W." presents a further item of $256 as estimated to be necessary to complete the work, also an item of $2,960 for automatic controllers on all filters and certain changes in connection with their installation.

5. *Miscellaneous Buildings.*

Roughly speaking, from $5,000 to $7,000 is involved in this group, which includes the superintendent's residence, fences, walks, drains, grading and seeding of grounds, etc. The estimates of the cost of reproduction of the entire sub-group, as presented in "W. W.", "S. W.", "M" and "C", are, respectively, $7,055, $7,177, $7,117 and $4,877. The last of these is the same as was presented four years earlier, at which time the superintendent's estimate was $6,385.50. This latter figure included an increase of 25 per cent over the contract price of the residence which was built in 1902. Judged by the three other valuations and their fairly close agreement, the staff's estimate is probably too low for the present cost of reproduction, yet is doubtless in excess of the original actual cost.

D. PLANT EQUIPMENT.

The cost of reproduction new of the several items included under this heading has been estimated at from $34,487 to $42,266, the former figure being from "M" and the latter from "S. W.". The corresponding estimate made in 1908 by "S. W." appears to have been $36,528.25. The value given in "C" is $34,604, or $117 more than "M", while "W. W." presents a total of $40,366. A large proportion of these values is in the three principal pumping engines, including the cost of their erection. On these three units the several estimates and actual cost appear as follows:

S. W. (1913)	$29,300
S. W. (1908)	26,264
W. W.	27,400
M.	22,050
C.	24,064
Cost (1884–1894)	24,646

"C" and "M" both estimate the cost of reproduction of the two Gaskill pumps at less than their original actual cost as stated in the company's valuations, while both of these latter present higher values. There appears to be no sufficient reason for not accepting the staff's figure on plant equipment as a fair value for the purposes of this case.

E. GENERAL EQUIPMENT.

This group has been estimated at from $4,119 in "C" to $5,604 in each of the company's valuations, the amount in "M" being

the same as in "C". In this connection it is noted that the company's valuations show an item of $1,000 for plans and construction record books. There is no corresponding item in the staff's valuation as the plans and construction records were considered as a part of the cost of engineering and supervision covered in the general overhead expenses. The company values its horses, vehicles, harness, blankets, etc., at $870, or $245 in excess of the staff's estimate. It agrees with the latter on distribution system tools at $1,393. Exclusive of the $1,000 difference above noted, the remaining difference of $240 is in shop and office equipment and is believed to have resulted from an unduly liberal estimate.

F. Paving.

The valuation by the city's expert, D. H. Maury, includes $898 for the paving actually disturbed by the company in its construction work, also an item of $15,818 for all other paving over the company's mains and services. Corresponding to each of these the company submits two figures, those in "W. W." being $1,025 and $21,267 and those in "S. W." being $1,023 and $21,266. "C" presents but one figure, $26.

In reference to the paving placed over the company's pipe lines after they were laid it may be said that the Commission has already held in several previous cases *(City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 1, 116, and cases cited.) that this element of cost of reproduction of its property has no place in the amount upon which the utility is entitled to earn. The matter has been fully discussed in preceding decisions. The same rule will apply here.

The question as to the amount to be allowed in this case for paving is as to the amount of expense to which the company was actually put in placing its pipe lines under pavements then in existence. The staff's estimates on paving in the 1908 valuation was made on the basis of all paving then existing over the mains and services without regard to the amount which had been an actual expense to the utility. Apparently the staff's later valuation of 1912 was based on incorrect or incomplete information as to what paving the company had been obliged to take up and replace, as the quantities used in this estimate are not the same as those used in the city's and company's valuations of 1913. These latter are computed on identical quantities and kinds of paving but on different rates of cost. It is noted, however, that the

amounts include not only such paving as was involved in original construction but also that affected in connection with the renewing or relaying of old pipe. It may be that at least some part of the latter portion is strictly a maintenance expense and is not rightfully entitled to consideration here. As the inclusion or exclusion of the entire amount will affect the gross amount to be earned by the utility by less than $100 per annum, it is not a matter of great consequence.

The staff's (1912) estimate on paving was computed on 26 lineal feet of pipe under brick pavement and 70 feet under macadam. The three other estimates were all computed on 42 lineal feet of mains under asphalt, 115 feet of mains under macadam, 1,964 feet of services under asphalt and 265 feet of services under macadam. The staff's figures probably omitted paving disturbed in connection with the installation of services, also that affected in connection with the relaying of mains, if any was so affected.

The city's and company's estimates show that the total paving expense to which the utility in this case has been put is probably between $898 and $1,025.

ADDITIONS.

The several valuations were nominally made as of different dates, as was heretofore explained, yet it is found that they are in a substantial agreement with the staff's valuation of June 30, 1912, as to quantities on all items except the intake, new filter, and clear water reservoir. The superintendent's valuation presents a supplementary statement showing certain items added to the property between July 1, 1912, and July 1, 1913, and not included in any of the four valuations submitted in this case. The statement shows the kinds, quantities and actual costs of the several additional items. They include small domestic service mains, service connections, meters, utility equipment and office equipment, in addition to a part of the new filter plant investments. The last of the above is here neglected as we have already mentioned and accepted the estimate in "W. W." of the amount required to complete that construction. The other features enumerated in the superintendent's supplementary statement aggregate $1,015.07 and will be included here to arrive at a total property value as of July 1, 1913.

G. Overhead General Expenses.

For preliminary expenses, engineering and superintendence, administration and legal expenses, general contingent costs during construction, interest during construction, etc., the city's valuation includes an item of $65,326 in addition to $422,213 for physical features hereinbefore mentioned.

The company claims $85,896 by "W. W." and $88,112 by "S. W." for the general overhead expenses, which are, respectively, equal to 17.4725 per cent and 18 per cent of their estimates of cost of the physical property. In "C", as prepared in 1912, the allowance for these items was 12 per cent of the estimated cost of reproduction of the several features of the property, or $42,832. This has since been acknowledged to be too low. In certain other subsequent and rather similar cases the staff has applied an addition of 15 per cent to cover expenses of the kind just alluded to. It is admitted that the allowance in this case should be increased from 12 to 15 per cent of the values as herein determined.

H. Materials and Supplies.

The staff's estimate or valuation of the materials and supplies on hand June 30, 1912, included the extra meters on hand for interchange, which were classed in the city's and company's valuations with those in service and have been so considered herein, also the 24-inch intake pipe on hand awaiting relaying. Exclusive of these there appears to be a substantial agreement among the four valuations, the city's and company's being identical and showing $3,057 as the amount of property included under the above heading. That amount is, therefore, accepted here.

Other Physical Property.

The company has pointed out that there have been other elements or items of property representing legitimate investments and which for a time served the purposes for which they were intended, but which had to be displaced and abandoned without return to the company of the investments involved. These items have been summarized under the head of "Uncompensated losses and deficits," which is used to designate plant and capital losses other than ordinary depreciation. The items include: (1) An original 16-inch diameter wrought iron intake pipe

having a length variously stated at from 1,500 to 2,700 feet, laid in 1884, abandoned in 1889. (2) The destruction of part and the consequently necessary reconstruction of a very large part of the 24-inch cast iron intake pipe as first laid in 1889; (3) The original engineer's residence built about 1888–9, replaced by the superintendent's residence 1901; (4) Discounts on bonds. Those were estimated by the company's president at a total of $65,176.

That the company has actually been put to some such amount of expense for the above items has not been disputed. It cannot be claimed, however, and it is not claimed that they represent additional physical property now used or useful for the utility's service to the public. Such facts and circumstances are entitled to consideration and some weight in the determination of the total value upon which earnings should be had, but they are non-physical, rather than physical elements. The review of all the evidence as to the value of the physical property now used or useful leads to the conclusion that it alone fairly represents an investment of not less than $491,500. That the valuation submitted on behalf of the city is somewhat greater than this is due to the inclusion by the city and the exclusion by the staff of the expense of reproduction due to existing pavements.

Consumers' Meters.

The annual report by the company to the Commission for the year ending June 30, 1913, shows that of the total of 588 meters in service 256 are owned by consumers. One of these is a ¾-inch and one a 6-inch meter. The others are all ⅝ inch. In the 332 meters then owned by the company, it appears there were 114 ¾-inch, 11 1-inch, 5 1½-inch, 8 2-inch, 2 3-inch, and 1 4-inch meters. The prices of these are found to range up to $200. While the company owns but 56.5 per cent of the total number of meters, it owns a much larger proportion of the total value, or rather cost, of the meters used. Those owned by consumers, figured at the standard list prices, would represent a total cost new of about $2,500. On the assumption that many of these have already been in service for a number of years their present value will doubtless be considerably less than that amount. Meter boxes and vaults paid for by consumers are not considered, as there is no sufficient reason why the provision of a safe place

in which the utility can set its meters should not be at the individual expense of consumers.

It is now a general rule that Wisconsin utilities shall own and maintain the meters through which their services are measured to consumers, yet it is sometimes expedient, if not necessary, to make exceptions to this rule. In this case less than $2,500 of additional investment would probably be sufficient to enable the company to re-purchase from consumers those meters provided individually. There are, however, more than 1,400 unmetered consumers, over 1,300 of which are residences. If all these have the right of demanding a meter from the company at its expense a further investment of upwards of $10,000 would be necessary. This would also materially affect the total cost of service, through the items of maintenance, depreciation and interest, if not in certain other items.

In view of the present great magnitude of the investment in the Ashland plant as compared with other Wisconsin water plants it is deemed inexpedient to require the company to alter its present rule concerning the furnishing of meters to residence or other small consumers.

Ashland and Other Plants Compared.

When compared with the various other Wisconsin water plants of which the Commission has had valuations made by its engineering staff, the physical property of the Ashland plant shows a relatively high investment. Compared on the basis of investment (as measured by estimated cost of reproduction) per capita, this utility has relatively the highest value in the list. It has a cost of reproduction value new of $40.96 against a value ranging from $15 to $25 per capita for nearly all of the other plants considered.

Compared on the basis of physical property value per service, or per consumer, the Ashland plant shows $248.12 while most of the other plants show between $100 and $170.

The property value per million gallons pumped is also an instructive basis of comparison as it will, to a certain extent, indicate the effect of the property upon rates through the items of interest, taxes and depreciation. This plant is one of only six out of twenty-five plants for which we have the necessary data to make such a comparison, which show a cost of reproduction per million gallons of output exceeding $1,000. Five of the

plants have less than $500 and fourteen have less than $750 of such value.

This aspect of the Ashland plant is very largely due to the proportion of the total value which is represented by the intake, wells, reservoirs, filters and other features for merely supplying water to the pumping engines. This group of items alone shows a cost of reproduction amounting, with its proportion of the overhead expense, to approximately $167,000 or 34 per cent of the grand total of physical value. Probably no other water utility in Wisconsin has nearly so large a proportion of its total cost in the features for developing and conveying water to the pumps, yet apparently none of this property in the present case could well have been dispensed with.

EXPENSE OF RELAYING INTAKE.

The company has plainly shown a belief that the cost of relaying the intake is chargeable to capital investments as representative of new capital. The amount of this expense is reported to be $28,734.50. After the relaying of the intake its cost of reproduction new was shown in the city's and company's valuations as follows:

D. H. Maury (City)	$43,360
Sam Wheeler	43,769
Wm. Wheeler	43,587

In the original valuation by the Commission's staff (1908) this item was given an estimated cost of reproduction new of $45,000, while in the valuation submitted by the company's superintendent about the same time it was valued at $46,003. These figures were on the basis of a length of 5,000 feet. The length as relaid is given as 3,259 feet.

Except for the expense of relaying all but 528 feet of its present length the intake now represents somewhat less capital than it formerly did. One of the questions now before us and the parties in the case is whether or not the relaying cost is to be capitalized. It certainly has not resulted in more or in new physical property. It was the cost of restoring destroyed property. The destruction came about through the developments in the marine commerce of the Ashland harbor and the fact that the pipe had not been laid in such a way as to be safe against the unforeseen conditions which developed. Had it been laid as deep

in the first place as the remaining portion is now laid, it would undoubtedly have cost much more than $45,000 or $46,000. It would also doubtless have remained undisturbed and still have its original length instead of about two-thirds of that length.

The partial destruction of the intake came about through circumstances over which the company cannot be said to have had any control. It would seem to be impossible to support a claim that the company was at fault in not foreseeing the developments in the shipping industry and in not having a much larger investment originally for protecting its intake against these developments.

Many accidents and losses in such plants occur in much the same manner. They must be provided for in some way. The best modern practice makes at least some provision in advance by building up a depreciation reserve year by year to meet the requirements for renewals and replacements which are very sure to become necessary sooner or later through one cause or another. The provision made in advance will probably but seldom prove to be just the right amount. In some cases the requirements may prove to have been overestimated while in others the reverse will be true. The annual appropriations to a depreciation reserve may have to be increased or decreased from time to time in order to keep it in proper relation to the state of the plant.

In this case no depreciation reserve is found to have been created prior to 1911. Such earnings as were obtained in excess of direct operating expenses, ordinary maintenance and taxes were apparently applied to make returns upon the invested capital or were reinvested as new capital. The past earnings seem to have been generally insufficient to build up a proper depreciation reserve and still make a fair return as interest on investments.

The idea of carrying a depreciation reserve in the accounts of a public utility is of comparatively recent origin, at least so far as general application of the idea is concerned. The nearest approach to it formerly was the somewhat common requirement of bondholders that a plant should show net earnings sufficient to meet not only its bond interest but to either retire a certain proportion of its bonds each year or to build up a fund during their life which would be sufficient to retire the whole issue at maturity. This amounts to the return to the investors, during a specified period, of the portion of the capital represented by bonds.

Under the heading "Depreciation" is shown below approximately to what extent a depreciation reserve would have provided for the reconstruction of the intake had such a reserve been founded at the time the present owners acquired the property and been built up at the rate of 0.7 per cent of the property value per annum.

DEPRECIATION.

This utility, in common with nearly all others of its kind, has, until a very recent date, failed to maintain a depreciation reserve for the renewals and replacements which become necessary from time to time in any public utility. That such provision is necessary is now becoming generally recognized. Had such a reserve been kept by this utility from the beginning the annual reservations would, of course, have correspondingly reduced the amounts which were considered by the company as its net earnings, and would also have correspondingly increased such deficiencies as may have existed in net earnings below a fair and reasonable return on its investments.

The several valuations submitted in this case show about as wide differences in the gross amounts of depreciation which has accrued to the plant to date as in the estimates of its cost new. "M" shows a present value of only 87.38 per cent of cost new or a difference of $62,638. "S. W." and "W. W." show differences, due to depreciation, amounting to $25,368 and $35,295, respectively; these are 95.68 per cent and 94.00 per cent of their respective costs of reproduction new. The staff's valuation, which omitted certain large recent investments in new construction of a rather permanent character, as already explained, showed a corresponding difference of $35,662 or a ratio of 91.32 per cent. The effect of including in the cost new the large recent investments in property against which practically no depreciation can yet be considered to have accrued, will obviously be to increase the ratio between present value and cost new. Theoretically, at least, the difference between these values should be in the assets offsetting the depreciation reserve, in order to preserve the property and the investments represented by it.

The matter of properly creating and maintaining a depreciation reserve requires a determination, as nearly as may be, of the rate of depreciation of the property as a whole or

for each of its parts individually. This is nothing more or less than an attempt to properly anticipate the future requirements for renewals and replacements which become necessary through deterioration and decay due to climatic and soil conditions, wear and tear, accidents, etc., or through obsolescence and inadequacy. It can scarcely be contended that the predetermination of such future requirements can be made with mathematical accuracy. It must, however, be approximated as nearly as human judgment and a due consideration of the proportions of the total property included in long lived and short lived items will permit.

Computations show the probable composite life of the property involved in this case to be nearly sixty years. This applies only to the depreciable portion, or that part remaining after the deduction of the land, materials and supplies on hand and scrap or junk values, where the latter may reasonably be considered to exist. The depreciable portion of the Ashland Water Works property is found, after such deductions, to be at this time $414,700. This includes a portion of the general overhead costs.

Computed on a no interest basis, the annual reservation for depreciation at this time should be $6,575; on a 2 per cent interest basis, $3,542; and on a 4 per cent basis, $2,069. These figures indicate, in a general way, the effect of interest upon the amount of principal required annually to take care of depreciation. The practicability of obtaining interest at an average rate of as much as 4 per cent on funds which are frequently drawn upon and added to is of sufficient doubt to lead to the assumption and use of a more conservative rate. The amounts set aside annually for depreciation must increase with the magnitude of the depreciable property, although perhaps not in exactly direct proportions. The amount stated above to have been computed on a 2 per cent interest basis ($3,542) represents 0.854 per cent of the depreciable property or 0.72 per cent of the entire physical property as found to exist on June 30, 1913. It is believed that 0.7 per cent of the entire property will probably be a reasonable annual charge to depreciation for some years to come.

That an annual amount equal to 1 per cent of the entire property value is more than sufficient to take care of depreciation and renewals is well indicated by one of the company's exhibits in this case, namely, its computations of earning value, in which 1 per cent of the reproduction value as distributed by years was

considered to have been the annual requirement for that purpose. The total of the amounts thus charged to depreciation is found to be $108,123, exclusive of any interest which such a reserve fund should have earned. As before stated, the two valuations submitted on behalf of the company show estimates of actual physical depreciation of the property amounting to only $25,368 in one case and $35,295 in the other. The latter of these figures is substantially in agreement with that obtained from the staff's estimates of cost of reproduction new and present value.

When computed as 1 per cent of the annual property values which appear to represent the probable actual total cost year by year, the appropriations to a depreciation reserve, assumed to have been started in 1892 when the present owners came into possession, would now amount to $89,164 without interest accretions, and to $107,949 with compound interest at 2 per cent.

Had such a depreciation reserve been created it would properly be credited with probably about $12,000 for the return of capital invested in certain features of the original plant which have been replaced or abandoned and which, therefore, do not appear in the present inventory and valuation. These include the original 16-inch intake, boilers, the engineer's residence, and perhaps some other minor items.

Assuming such a reserve to have been started in 1893 and built up at the rate of only 0.7 per cent of the cost of the plant annually, and assuming interest accretions at a rate of only 2 per cent, the reserve would have taken care of not only the replacements above noted but the reconstruction of the 24-inch intake in 1912 and would still contain substantially the amount of estimated depreciation of the plant shown by two of the valuations before us.

INTANGIBLE VALUE.

That a public utility may, and usually does, have some value beyond that of the bare cost of its physical property or plant is now so generally recognized as to need no further general demonstration here. Previous decisions of this Commission have clearly shown that there is an additional element, commonly termed "going value," to be considered, and have also indicated the manner in which it is probably best determined.

The city's valuation in this case contains an item of $50,000

for going value, which is added both to the cost new and to the present value of the physical property. The author of that valuation also admitted that there was a further item to be considered along with the total as shown by his figures, namely, working capital. The reasonable and proper amount, in his judgment, to be allowed for this item was not indicated.

The company's superintendent apparently did not prepare and submit any figures as to going value, uncompensated losses and deficits, or working capital required. The company's president and supervising engineer, however, did submit figures for all of these items except working capital. One of the exhibits prepared by him is an earning value computation, made in the manner of similar computations by this Commission in other cases, except that instead of being based on the actual construction expenditures year by year it is based on his estimated cost of reproduction distributed through the several years of development of the property. This computation, based on a return of 7 per cent, showed an earning value, in 1913, of $1,141,917. On account of the large discrepancy between his estimate of cost of reproduction and the value herein found, and between the former and the known or approximately known actual costs of certain parts of the plant, his estimate of present earning value can scarcely be considered as indicating the true deficiencies of net earnings below any assumed fair rate of return.

After the hearings were had, the company upon request furnished a statement of the actual annual construction expenditures as shown by its records from the time when it came into possession of the property, which was in the latter part of 1891 or 1892, or about 7 to 8 years after the plant was started. These data are as follows:

Construction account at time of purchase		$476,378.24
Additional construction:		
To Feb. 28, 1893		17,506.71
" 28, 1894		25,794.02
" 28, 1895		29,160.71
" 28, 1896		42,969.31
" 28, 1897		5,259.88
" 28, 1898		827.16
" 28, 1899		1,232.93
" 28, 1900		2,148.81
" 28, 1901		2,661.49
" 28, 1902		2,836.24
" 28, 1903		8,041.40

" 28, 1907		4,510.52
" 28, 1908		5,151.47
To June 30, 1909		2,652.06
" 30, 1910		6,222.10
" 30, 1911		3,415.84
" 30, 1912		11,192.87
" 30, 1913		[1]57,167.33
Total		$734,300.52

Subsequent to the entry on the company's books of the original item of $476,378.24 in 1892 the records show the expenditure of a total of $257,922.28 for extensions to the property, including $28,734.50 for the relaying of the intake pipe during the latter part of 1912. The deduction of these extension costs from the hereinbefore determined physical property value new ($491,514) shows a difference of $233,592. This would appear to have been reasonably near to the physical property value at the time of the transfer to the present company, except for the effect of including in the cost of extensions the expense of relaying the intake. This expense did not result in giving the company two 24 inch cast iron intake pipes, or more property than it had before, therefore it must be deducted from the total cost of extensions or added to the above sum of $233,592 in order to arrive at a figure more representative of the property in the latter part of 1892. This correction results in a figure of $262,327 as probably more nearly representative of the fair cost of the now existing physical property transferred to the present owners in that year. But there was also certain other property to be considered which was not included in the present inventory, although mentioned in the company's estimate of uncompensated losses and deficits. This includes the original 16 inch diameter intake pipe

[1] Of this amount $28,734.50 is the cost of relaying intake pipe during the latter part of 1912.

and the house for the pumping station engineer which preceded the superintendent's residence. The intake was estimated in "W. W." at $12,150 on the basis of a length of 2,700 feet. The actual length was subsequently stated by the company's superintendent to have been only about 1,500 feet.

That the values of the physical property in 1892, or at the time of its transfer, could not have been anything like the original investment as entered on the present owning company's books is also very strongly indicated by the fact that the distribution by years of the president's estimate of cost of reproduction shows a value of only $328,660 at the end of 1892. This is $147,718 less than the reported original cost to the present owners.

Measured in another way, that of valuation of the property as it appears to have existed in 1892, and largely according to unit prices taken from the staff's estimate of cost of reproduction which, so far as labor is concerned, are undoubtedly much greater than actual unit costs of the early work in this case, the physical property at that time represented not more than $292,000, including an allowance of 15 per cent for general overhead expenses. Including deficits in net earnings below a fair and reasonable return on investment the evidence seems to show that when former lower labor costs are taken into account, $290,000 may fairly be taken as representative of the property in 1892, and as a starting point in our computations of earning value from that year to this. That such computations were not made for each year prior to 1892 is due to the fact that the required data are not available.

The computations referred to show that on our assumption of $290,000 as the earning value of the plant in 1892, when sold to the present owners, and on our estimates of depreciation and the statement of net earnings as submitted by the company, the earning value at June 30, 1913, is $561,462 on a 6 per cent and $734,273 on a 7 per cent uniform rate of return. Interest charges for the current year on these sums at their respective rates would be $33,688 and $52,029. These amounts are almost two to three times the annual net earnings of the company during the past few years. While the past net earnings are unquestionably less than would constitute a fair rate of return, the making of a new rate schedule which will provide more equitable returns is a matter for very serious consideration. The greater the increase in existing rates the greater will be the tendency to not only check

development of new business but to lose some of the company's present consumers and revenue. There is, therefore, a practical limit beyond which earnings cannot possibly be made to go, even though this limit may not provide a fair and reasonable rate of return on the full value.

The city's expert, in estimating the going value of the utility in this case, estimated that 5½ years would be required to build a new and similar plant and have it acquire a business equal to that which the existing plant now has. He arrived at an amount somewhat less than—but which he put in round numbers at—$50,000. Careful consideration of his estimates and the making of further calculations of the same nature lead to the belief that the sum named would be an ample if not a liberal sum to cover not only the going value element but working capital as well.

BOND DISCOUNT.

The company has pointed out that one of the elements of its actual cost or items of expense was bond discount. A tabulation was submitted showing that, exclusive of the unknown discount on the original $100,000 of first mortgage bonds issued by the former owners, the actual expense incurred by the present owners on account of discounts on its own bond issues has been $15,371. It was also inferred that the company believed there had been a further discount of at least 10 per cent, amounting to $10,000, on the $100,000 of first mortgage bonds. The total of the cost of securing money in this case may, therefore, be upward of $25,000. The amount of bonds now outstanding appears to be $225,000. These are all what are known as consolidated mortgage bonds, the original issue of first mortgage bonds having been taken up in exchange for an equal amount of the later issue.

In previous cases the Commission has said that although the item of discount on bonds is important to consider in determining the value of any utility property it does not follow that all of the actual expense which this item represents is to be included in the valuation upon which rates are determined. The obvious results of any such rule would be to encourage the showing of larger and larger discounts of utility securities.

TOTAL VALUE.

When all proper elements of cost or value are taken into account it is apparent that the company in this case is clearly entitled to reasonable net earnings on fully $500,000. In this connection it may be noted that the company's common and preferred stocks and its outstanding bonds aggregate $525,000 at par value.

When all the circumstances, including the present practical limitations of the company's business field, are considered it is very much to be doubted that a net return, after providing for operating expenses, taxes and depreciation, of more than $30,000 per annum may reasonably be expected for the immediate future.

It would not be possible for any one to say with certainty just how far rates or earnings might be increased without affecting the retention of the present volume of business. It is obviously certain that the greater the increase in prospective earnings provided by a new rate schedule the nearer the company will be to the point of losing some of its present consumers.

The question of the value of the service also demands consideration in any case wherein rates equitable to the company may appear to consumers to border on the burdensome. The consumers will naturally be the ultimate judges as to the value of the service in cases where other supplies are available and between which and the general city system a choice may be made. There is evidence before us that many citizens already depend upon bottled spring water for drinking purposes.

STATISTICS OF OPERATION.

For the five years ending with June 30, 1913, the annual reports filed with the Commission show the following yearly revenues and expenses:

	1909	1910	1911	1912	1913
Operating Revenues					
Commercial sales	$29,726 86	$29,577 95	$30,262 31	$29,897 46	$29,922 29
Industrial sales	8,229 07	9,285 38	8,647 03	9,119 55	10,003 01
Mun. hydrant rental	14,960 00	15,010 00	15,060 00	15,097 50	15,110 00
Street sprinkling	178 98	134 89	166 90	202 47	195 39
Municipal depts	74 94	111 56	110 00	45 00	105 00
Miscellaneous					
Total	$53,169 85	$54,119 78	$54,246 24	$54,361 98	$55,335 69
Operating Expenses					
Pumping	$7,945 89	$8,222 76	$8,489 23	$12,798 99	$9,344 90
Distribution	1,943 17	2,060 86	2,661 31	2,363 77	2,590 78
Commercial	893 35	956 80	1,128 41	1,273 50	1,385 12
General	5,804 93	6,253 16	7,220 92	6,283 33	7,495 75
Undistributed	1,328 55	1,583 25	1,417 19	1,092 72	1,357 60
Total	$17,915 89	$19,076 83	$20,917 78	$23,812 31	$22,174 15
Depreciation			2,000 00	3,000 00	2,500 00
Contingencies					
Taxes	11,000 00	16,524 40	11,004 69	9,507 09	10,162 40
Total expenses	$28,215 89	$35,601 23	$33,922 47	$36,319 40	$34,836 55
Net operating revenue	$24,253 96	$18,518 55	$20,323 77	$18,042 58	$20,499 14
Non-operating revenue	1,148 88	815 85	758 47	489 03	355 79
Gross income	$25,402 84	$19,334 40	$21,082 24	$18,531 61	$20,854 93

[1] As charged by company.

It will be noted that no depreciation was charged by the company in its statements of expenses for 1909 and 1910, although during the past three years a total of $7,500 has been so charged in the expense accounts. In our computations of earning value, previously referred to, the estimated proper amounts for depreciation for the past five years were:

1909	$3,280	
1910	3,311	
1911	3,345	$10,276
1912	3,396	
1913	3,535	
Total	$16,867	

The substitution of the above amounts for depreciation in the statements of earnings and expenses for the five years makes the net earnings appear as follows, inclusive of non-operating revenues:

Year	Amount
1909	$22,122.84
1910	16,023.40
1911	19,737.24
1912	18,135.61
1913	19,819.93
Total	$95,839.02
Average	$19,167.80

The operating expenses, exclusive of taxes, and the operating revenues have both shown a fairly gradual but small increase during the past five years. The greater variation in net earnings has been largely due to the variation in taxes. In 1910 this item was $7,017.31 or 73.8 per cent more than in 1912. The total and average amounts paid during the period were, respectively, $58,198.58 and $11,637.72. This average amount was exceeded in only one year, 1910.

Since the proper determination of rates must be based upon a normal statement of expenses it is necessary to make comparisons of the annual operating expenses through a period of years and determine the normal amounts. These will not necessarily be the exact figures for the most recent fiscal year, nor should they necessarily prove to agree with the actual costs for the current year at its close. They must also be such as may appear to indicate reasonably efficient operation and management as measured by results obtained elsewhere, due allowance being made for difference in operating conditions.

One decided fluctuation occurred in the pumping expenses during the five years from 1909 to 1913, inclusive. This was in 1912 and is found to have been due to abnormal or unusual expenditures on maintenance of purification equipment and on maintenance of collecting aqueducts, intakes and supply mains. For rate-making purposes such unusual expenses are properly distributed over several years. Other items which should not show a decided tendency to continually increase or decrease, but which actually vary from year to year, may well be averaged through a few years. In this way it has been determined that the present fair normal operating expense to be apportioned in a new rate schedule amounts quite closely to $22,000, exclusive of taxes, depreciation and interest. This is arrived at by a detailed analysis of the operating costs during the past five years, and without allowance for any additional requirements which may be put upon the company and which may involve more expense.

Additional Expenses.

The urgent demand of the city in this case for improvement in the quality of the water furnished by the company would, if complied with, certainly involve greater expense in some form. The extension of the intake far enough to reach to a point where a

satisfactory water would always be obtained, and the change to a ground water supply are plans which are financially impossible of execution by the water company. The city, if it should acquire the water works property, would doubtless be much more nearly able to finance one of those plans of improvement.

So far as improvement in the quality of its water supply by the company is concerned there is apparently but one way which is possibly feasible under all the circumstances of this case. There may even be some doubt and no assurance of the success or even partial success of that plan, but the probable extra expense involved is not of such proportions as to make it too costly to be well worth a trial. The plan is the installation of a suitable water analysis laboratory at the pumping station and the employment of a competent person (if the company's present organization does not contain one) to have charge of the laboratory and to intelligently supervise the filtration and disinfection of the water supply.

Some other minor changes, such, perhaps as in the point of application of the hypochlorite solution may be desirable and beneficial and yet involve comparatively small extra cost.

We venture to suggest also that until Chequamegon Bay can be abandoned as a source of public water supply there may be some merit in the plan to have the city disinfect its domestic sewage at the sewer outlets, sufficient merit at least to warrant the investigation and trial of that plan by way of coöperating with the water company in the effort to improve the service. It is not believed probable that the cost of the proposed disinfection would necessarily be large or burdensome.

If the company is to be required to apply more scientific treatment to the water purification problem it will doubtless incur some additional expense in that connection and an effort must be made to properly provide for it in establishing new rates for future service. In order to allow for this additional expense and the natural increase in past expenses we shall consider the normal annual operating expense of the immediate future to be substantially $23,800.

Distribution of Expenses.

The several items of expense should be equitably divided between public and private service, and the portions charged to the latter should be further separated into other sub-classes so

that each private consumer will contribute as nearly as practicable his just proportion of the total cost of service. The methods pursued in making such distributions of expenses have been so fully explained in previous decisions of this Commission in rate cases that it would be superfluous to explain them again here. The results of the primary analysis are presented below in Table X, the "General" and "Undistributed expenses" being distributed pro rata with "Pumping", "Distribution", and "Commercial expenses" between the capacity, output and consumer classes.

A reapportionment of the value of the property between public and private service shows that 45 per cent is fairly chargeable to the former and 55 per cent to the latter. These are the proportions which these classes of service are entitled to bear of the capacity expenses, and of the items of interest, taxes and depreciation. The grand total of all expenses, divided between public and private service, is shown below in Table XI. The determination of the respective proportions of the output expenses as charged in Table XI is indicated subsequently under the heading "Consumption".

TABLE XI.

DIVISION OF TOTAL EXPENSES BETWEEN PUBLIC AND PRIVATE SERVICE.

CONSUMPTION.

Pumping statistics furnished by the company for the five years 1909 to 1913, each ending June 30, are as follows:

Year.	Total gallons pumped.	Gallons used for washing filter sand.	Gallons pumped into distribution system.
1909	432,503,710	3,417,270	429,086,440
1910	452,202,750	14,771,400	437,431,350
1911	416,876,090	5,654,410	411,221,680
1912	432,413,480	3,369,500	429,043,980
1913	465,673,100	2,005,020	463,668,080

The above figures are said not to include any quantities which may have been pumped twice, first to the filters and again to the distribution mains. The sums in the last or right hand column above are, therefore, the amounts to be accounted for. Metered consumption in each of these years appears to have been:

Year.	Gallons metered.	Per cent of total.	Services metered.	
			Number.	Per cent of total.
1909	101,823,750	23.73	328	17.5
1910	110,121,000	25.17	332	17.4
1911	104,043,000	25.30	460	24.2
1912	145,606,500	33.94	539	27.2
1913	162,941,250	35.15	555	28.0

In every water works system there is a considerable amount of the total pumpage which is lost and unaccounted for, due chiefly to unknown and unavoidable leakage. In the case of the Madison system, the report of the city engineer for the calendar year 1912 shows about 32 per cent of the total to be chargeable as "lost, unaccounted for, slippage, flushing mains, etc." In the 1912 report of the Milwaukee Water Works the amounts lost and unaccounted for, after making allowances for all legitimate public and private uses, were stated to be 17.27 per cent for 1912 and 18.27 per cent for 1911. In both these cities the percentage of consumers metered was about 99. These and a number of other cases appear to demonstrate that a substantial fraction of the total pumpage must be eliminated from consideration in determining the unit output charge in a rate schedule. The output expenses must be assessed against the amount of pumpage which can be reasonably shown to be used by the city and its citizens and for which collections may reasonably be expected.

The best distribution of the total pumpage which it now appears possible to make in this case in view of the lack of more specific data is the following:

		Gallons	
Total pumpage		463,668,000	
Deduct lost and unaccounted for (20%)		92,733,600	
Amount used		370,934,400	
Private Service			
Metered (588 meters)	162,941,250		
Flat rate (1,426 services)[1]	203,543,150		
		366,484,400	(98.8%)
Public Service (hydrants)			
Fire fighting	800,000		
Sewer flushing	3,150,000		
Washing pavements	500,000		
		4,450,000	(1.2%)
		370,934,400	

[1] Equal to 391 gallons daily per service as an average.

If the 20 per cent of pumpage here charged to water lost and unaccounted for is too great, the excess is the amount by which the flat rate service is relieved of its just proportion, since the metered consumption is a definite amount and the public consumption which is comparatively small is believed to have been closely estimated.

Private service, as here considered, includes the service of the public schools, police and fire department stations, city hall, public fountains and troughs, etc. Although metered by the company this service has, heretofore, been held to be covered in the hydrant rental and to be free of special charge. It appears that the city has used in its public buildings and fountains more than 20,000,000 gallons per annum during the last two years. This is in addition to the water used through the fire hydrants. The city has not only had its fire protection or hydrant service at less than cost, as indicated in our former decision respecting the Ashland plant *(City of Ashland v. Ashland Water Co.* 1909, 4 W. R. C. R. 273) but it has had free of charge this large amount of water for which it should have paid separately. It is noted that the water used in street sprinkling has been metered and paid for, and has amounted to approximately $200 per year for 1912 and 1913. The quantities so used, as shown by by the company's annual reports for those years, were respectively 1,920,000 and 1,311,000 gallons.

Output Costs.

The output costs are, as nearly as can now be determined, chargeable 1.2 per cent to the public or municipal hydrant service, and 98.8 per cent to all other, or private service. With a total output cost for operation only of $9,420.98 (Table X) and an output of 370,934,400 gallons used, the average unit output cost is about 2.54 cts. per thousand gallons or 1.9 cts. per 100 cubic feet. This would be the situation with all of the interest, taxes and depreciation as well as a part of the operating expenses considered as wholly capacity costs, as they are in reality. Theoretically they are to be earned irrespective of the amount of water pumped or used. Under old methods of rate making, which still have favor in the minds of some, all of the expenses of such a plant were considered as output expenses. The natural result of such methods is that a relatively small variation in the output produces a relatively large variation in net earnings.

To leave interest, taxes, depreciation and certain operating expenses entirely out of the output costs and charges, and to put them wholly in the service or fixed charges against consumers would result in an impracticable schedule, as the fixed or service charges would be greater than the value of the service to the smaller consumers.

Previous decisions of this Commission in similar cases have indicated that in making rates for private service the best treatment of the private service portions of the interest, taxes and depreciation is, usually, to divide their sum between capacity, output and consumer costs in the same proportions as the operating expenses are so divided. The proper classification and apportionment of the private service expenses then appear as follows:

COST OF PRIVATE SERVICE.

	Capacity.	Output.	Consumer.	Total.
Operating expenses	$4,663 68	$9,307 93	$5,578 30	$19,549 91
Interest, taxes and depreciation	5,845 13	11,665 92	6,991 45	24,502 50
Total	$10,508 81	$20,973 85	$12,569 75	$44,052 41

When the output expense of private service is made to include a portion of the interest, taxes and depreciation, as above, the average output cost is found to be 5.5 cts. per 1,000 gallons or 4.24 cts. per 100 cubic feet. The large difference between this rate and the company's present meter rate is due to the temporary elimination and separate treatment herein of the greater part of the expenses which are not dependent on the amount of water used. These expenses are discussed and explained under the head of "Capacity and consumer costs."

The total output expense of private service, amounting to $20,973.85, is found to be chargeable as follows, on the basis of the relative consumption of water by the two classes:

Metered service (44.46 per cent)	$9,325.00
Flat rate service (55.54 per cent)	11,648.85

Capacity and Consumer Costs.

Of the totals for these classes of expenses, there are some items chargeable wholly to metered service and others which must be apportioned between metered and flat rate service.

Capacity Expenses. The proportion of total interest, taxes and depreciation which is chargeable to meters alone, amounting to $913, requires separation from the capacity expenses before determining the amount of the latter due to flat rate service. After the deduction of the $913 belonging wholly to metered service, the remainder, $9,595.81, is considered fairly divisible equally between the two kinds of service. The consumers who are served through meters were found to have used very nearly as much water as those on the flat rate system. Metered consumers are certainly responsible for less waste of water, hence their demand rate is quite likely to bear a somewhat larger ratio to their consumption, or average use, than is the case with unmetered service. While no accurate measure of the relative maximum demands of the two divisions is available it seems quite certain that they can differ but little.

Capacity expenses are, therefore, separated as follows:

Metered service	$913.00	
	4,797.90	
		$5,710.90
Flat rate service		4,797.91
Total capacity cost		$10,508.81

Consumer Expenses. These were shown to aggregate $12,569.75. The direct operating expense portion of this amount is made up of items which are affected neither by the amount of water used nor the demand rates at which it is used, in whole or in part. Consumer expenses are those which depend primarily upon the number of consumers. Except for the cost of meter reading, more frequent billing and collecting from metered consumers, etc., they belong to all consumers alike. This raises the question as to the total number of consumers, also the question as to what constitutes a consumer.

In its annual report for the year ending June 30, 1913, the company reported a total of 1,981 consumers, classified as follows:

	Metered.	Unmetered.	Total.
Commercial			
Residences	283	1,309	1,592
Stores	17	5	22
Stores and residences (flats) [1]	54	4	58

Total	555	1,426	1,981

[1] One service for entire building.

It has since been learned that in many cases what the company had considered a single consumer was in reality what this Commission has held to be a group of consumers, each one of the group entitled to share in the consumer expenses. This has been clearly explained in earlier decisions in similar cases.

In reference to the metered class, it is found that when each separate apartment, suite, flat, office, store, etc., of a building is considered a consumer, as it should be, there were 945 consumers served through 555 metered services. On the 555 metered services are 588 meters, showing that some services have more than one meter for each.

The company's present flat rate schedule is apparently such as to provide for cases of more than one consumer being supplied through a single service. The total number of consumers to be considered is, therefore, the sum of 945 metered and 1,426 unmetered, or 2,371. Except for certain purely meter expenses the percentages of the consumer expenses belonging to these two kinds of service would be: metered, 39.86 per cent; unmetered, 60.14 per cent. The purely meter expenses consist of the costs of meter reading and more frequent billing and collecting than in the case of flat rate service. These can only be estimated. In

the absence of any evidence to the contrary, $1.00 per meter per year will be regarded as the proper amount to be charged wholly to metered service before applying the above ratios to the amount to be apportioned in that manner.

The earnings from these two classes separately for the year ending June 30, 1913, and the apportioned expenses which should be earned, according to the analysis previously made, are shown below:

PRIVATE SERVICE.

	Metered.	Unmetered.	Total
Expenses.			
Capacity	$5,710 90	$4,797 91	$10,508 81
Output	9,325 00	11,648 85	20,973 85
Consumer	5,363 93	7,205 82	12,569 75
Total expense	$20,399 83	$23,652 58	$44,052 41
Amount earned, 1912-13	20,910 41	19,014 59	39,925 00
Differences	$510 58	$4,637 99	$4,127 41

The total earnings from all private service are at least 10 per cent less than they should be. Those from metered service are somewhat in excess of the costs shown above, yet the meter rate schedule is not on the proper form. The earnings from flat rate service are only about 80 per cent of the expense which seems fairly chargeable to this class.

It is also to be remembered that the service to city buildings and fountains, which has been metered, has heretofore been free of charge. It is entirely separate and distinct from the municipal hydrant service and should bear its proportion of the total cost of service. If this is not done others must bear more than their proper proportions.

Meter Rates.

It has been found that metered service is chargeable with the following, in addition to a portion of the output costs:

Capacity expense	$5,710.90
Consumer expense	5,363.93

The former of these items belongs to the various metered consumers in proportion to the various individual demand rates, or, in other words, to the relative amounts of plant capacity re-

quired for the service of each. A small user does not make the same demand on a utility that a large user does, nor would a large number of small consumers put the same load on the plant that would be put upon it by the same number of large users. Obviously one to whom the utility may be called upon to furnish 50 gallons or more per minute may reasonably be required to bear a materially greater share of the capacity expenses than one who will never use more than 10 gallons or less per minute.

A strictly accurate measure of the maximum demand of each and every consumer is not obtainable. The nearest possible approach to it has been held to be the meter capacities, and yet some consumers will actually use more nearly all of their meter capacities than others having the same size of meters.

When the total number of meters of each size is multiplied by the relative capacity factor for that size (the factor being 1 for the 5/8″ size) and the sum of those products is divided into the capacity costs for metered service, it is found that the proper annual capacity charges per meter are substantially as follows:

5/8″ meter	$6.23
3/4″ "	12.46
1″ "	24.92
1½″ "	37.38
2″ "	62.30
3″ "	112.14
4″ "	224.28
6″ "	373.80

To the foregoing amounts, $1 per meter is to be added as a purely meter service expense.

The consumer costs for the metered class, after deducting the foregoing estimate of proper allowance for expenses due to the number of meters, appears to be $4,775.93. This is the amount which would strictly be divisible equally between all of the consumers supplied through meters. The average charge for each would be $5.05 per annum since there are 945 such consumers, and this charge would be applicable to the capacity and meter costs once for each consumer served through a single meter. The annual service charge for a 5/8″ meter, as determined by the foregoing analysis, would then be somewhat more than $12 with one consumer and a little over $17 with two consumers on the meter. These would be fixed charges and would not include the use of any water.

In contrast to the above fixed charges the present meter rate schedule has a minimum bill of $1 per month, or $12 per year, for 5/8″ meters; $2 per month or $24 per year for 3/4″

and 1″ meters; and $5 monthly for larger sizes, all these amounts allowing water to be used in such quantities as to produce those charges when computed at the primary rate of 22½ cts. per hundred cubic feet.

The result of the analysis and apportionment made is a schedule which, for practical considerations, requires some modification. The fixed or service charges are probably too burdensome to a large number of small users and together with the output costs for water used will doubtless make the total expense for water service seem out of proportion to its value. It is therefore essential that the capacity and consumer expenses of metered service be reduced by transferring a portion of them to the output expenses. When that is done the following is obtained as a reasonable and proper schedule of meter rates:

Service Charges per Annum with One Consumer on Each Meter.

½″ or ⅝″ meter	$9.00
¾″ "	18.00
1″ "	30.00
1½″ "	42.00
2″ "	68.00
3″ "	120.00
4″ "	216.00
6″ "	360.00

Each additional consumer in excess of one on one meter, $3.00.

Output Charge.

12,500 cu. ft. or less per month, 6 cts. per 100 cu. ft.

Excess amounts at 5 cts. per 100 cu. ft.

In determining the service charges, each separate apartment, suite, flat, store, office or other division of a building shall be considered the premises of a separate consumer.

A comparison of the total annual costs of metered water service under the old and new rates is perhaps best made graphically. This is done by the diagram in Figure 1, which shows that for a ⅝″ meter (one consumer on a meter in each case) the cost is less for all quantities except a consumption of 5,000 cubic feet per year, or 102.5 gallons daily, for which quantity the cost is the same; for a ¾″ meter the cost is less for all quantities except when the consumption falls between 10,000 and 11,000 cubic feet per year, or between 205 and 226 gallons daily, when it is the same or but a few cents more under the new rates; for larger meters the cost is lessened by the new rates only when the consumption exceeds the amounts opposite the meter sizes shown below, the annual costs being increased by the new rates if the consumption is less than those amounts.

Meter Rentals. As the Public Utilities Law does not permit a difference in charges for like service between consumers who own their meters and those who do not, it has been necessary to include in our analysis the investment charges on the privately owned meters. The owners of those meters are legally and equitably entitled to a return of the capital charges so included, by the allowance of a meter rental which shall be deducted from the gross bill in each of such cases. The consumer's investment in a meter box or meter vault, if there be such, is not considered, as that is an expense which properly belongs to the consumers individually and not to the utility.

While it is recognized that the cost of a given size or meter is not the same for all types, it is impracticable to take each separate case into account and allow for minor variations. Several meter manufacturers have a common standard list of prices from which different discounts are sometimes allowed. On the basis of the most common list prices and the number of privately owned meters of each size the following are deemed just and reasonable allowance to consumers:

Meter Rentals per Month.

⅝" meter	$0.08
¾" "	.11
6" "	3.50

The utility's rules now in effect provide for monthly billing of, and collecting from, all metered consumers, while the flat rate users pay semiannually in advance. The practice of rendering meter bills quarterly or semiannually is apparently more common than the practice followed by this utility. The annual service charges arrived at above are in all instances, but one, easily divisible into convenient monthly, quarterly or semiannual charges. Although it is believed that there may perhaps be some reason for a change to quarterly collections of meter bills against the smaller users there is not clearly sufficient reason for requiring it. The change, however, is recommended.

FLAT RATES.

The earnings from flat rate service were shown to have been approximately 80 per cent of the costs apportioned to this class, or, expressed reciprocally, the costs are about 25 per cent more than the earnings.

The amount of water taken by each consumer can be closely determined only by a meter, hence it is impossible to do more than make what appears to be a reasonable estimate of the relative amounts used by each kind of flat rate consumer. It is to be remembered that the output costs are but a relatively small part of the total expense of water works service, so many large items are entirely independent of the amount of water used, therefore the amounts of water actually used by the various flat rate takers individually are of less importance than may seem, to some, to appear. A careful examination and consideration of the existing flat rate schedule leads to the belief that the charges provided by it bear fairly just relations, one with another, and that all may properly be increased in substantially equal proportions.

PRIVATE FIRE PROTECTION.

Under the heading of "Fire sprinklers and hydrants" in the consumer classification there are two metered and four unmetered services.

The present schedule of rates for service provides the following "Charges for private fire protection service, automatic sprinklers and hose outlets," used exclusively for fire protection in buildings:

"For each 1000 square feet of floor surface, or fraction thereof, per annum, $3, provided, that the amount of water rent paid for other purposes on the premises having fire protection fixtures, shall be abated to an amount not exceeding the charge for said fire protection, as per above.

"Outside Fire Hydrants, with outlets like, or similar to city hydrants, each per annum $50 and no reduction or abatement on account of water used for other purposes at the rate provided therefor."

Under these provisions of the existing rate schedule those consumers who have both private inside fire protection and other service get that other service free up to the amount of the charges for the fire protection, by the abatement clause. The full amount

of the fire protection charges are presumably assessed in any case.

The question of proper charges for private fire protection service was not touched upon in the hearings held in this case or in any arguments or exhibits presented. No satisfactory reason is known, however, which will justify any such abatement of charges.

If the furnishing of private fire protection service by a water utility which furnishes general or public fire protection constitutes a proper basis of charges, those who have it and who also use water regularly for other general purposes must unquestionably pay for both kinds of service.

But there is some question as to the extent to which the furnishing of private fire protection by a public utility constitutes a basis of special and individual charges. In several previous cases decided by this Commission it was held that individuals, firms and private corporations are not to be charged separately for any hydrant rental. The furnishing of fire protection of that character is clearly a function of the city. (See *In re Appl. Oconto City Water Supply Co.* 1911, 7 W. R. C. R. 497, 568; *City of Beloit v. Beloit Water, Gas & Electric Co.* 1911, 7 W. R. C. R. 187, 341; etc.)

Inside private fire protection, such as water service to automatic sprinklers and fire hose connections inside of buildings is a somewhat different form of protection. It is usually more quickly gotten into service when a fire starts and is universally considered as being more efficient than the use of ordinary fire hydrants by the fire department. Its presence frequently obviates the use of the outside hydrants and any work on the part of the firemen. It being usually more efficient in fire fighting, its installation produces a saving to the property owner through a reduction of insurance rates. It is of value to all concerned, but particularly to the property owner served. That it is of value to others may, under some circumstances, warrant the elimination of charges for such service, but the necessary circumstances do not exist here.

It is rather difficult to find a strictly logical and impregnable basis upon which to apportion to private fire protection service any definite amount of the expenses of the utility in this case, yet there is probably a more logical basis for the graduation of reasonable charges for such service than the basis of floor area

adopted by the company in formulating its present rate schedule. The floor area basis takes no account of the differences in property values per unit of floor area in different cases, or of the inflammability of the building and contents, the size of water service connection and the consequent demand for water put upon the utility in case of fire, or of various other differences.

The small number of users of such service in Ashland renders the question as to the amounts to be earned by the water company from it of relatively small importance. Previous earnings from four of these six consumers have presumably been included in the earnings from flat rate patrons, which aggregated only about 80 per cent of what such total earnings should be as a minimum.

Probably the most logical basis of such charges as may be made for private fire protection service is primarily that of the sizes and relative capacities of the connections from the mains, making due allowance for such constant or uniform expenses of the utility as cost of inspection, etc., and for the possible use of water, to the extent of undetected leakage at least.

Experience seems to make it perfectly clear that fire services require close inspection and supervision and that they should be metered. The cost of the meter and its installation and maintenance should be paid by the recipient of this special fire protection service, which is entirely different from the commercial service. Meter rates and service charges for private fire protection cannot properly include a very material capacity charge for the reason that the demand put upon the utility by the emergency use of private fires service facilities is simply a portion of the general fire service demand provided for in the public hydrant rental. Any fire occuring in an establishment not provided with the more efficient fire apparatus is very likely to put upon the water utility a greater demand, both in rate and duration, through the public hydrants, than would occur if the establishment were so equipped with special fire apparatus.

The general fire service requirements and the utility expenses charged to these requirements cannot well be apportioned to individual private buildings.

If the costs of metering a private fire service connection be paid by the water utility there is a sound basis for a charge sufficient to at least cover the capital charges on the meter and the expense of its maintenance. This will be an unquestionably

valid charge and will be larger than the probable cost of periodic inspections of private fire protection systems supplied on the flat rate basis as a matter of policy, to encourage the metering of such connections. The charge for metered service of this kind should be less than that for unmetered service, provided, however, that no water is used except for fire protection.

In the light of all the known facts and circumstances, of both general and special nature, attendant upon this class of service in Ashland, it is believed that the costs of fire service meters and their installation should be paid by the recipients of such service, and that the rates and charges for metered and unmetered private fire service should be as hereinafter provided and ordered.

SUMMARY

The character of the public water supply of Ashland is clearly not such as to encourage its free use, especially for drinking purposes. Changing conditions, over which the utility may be said to have had no control, have been chiefly responsible for the present general suspicion of and dissatisfaction with the water. The change from the present source of supply to any other would unquestionably involve an additional investment of such magnitude as to be, under the circumstances of this case, out of the question for the present or immediate future. The property of this utility is relatively so large and expensive as compared with that of other water utilities as to make its necessary rates and charges materially higher than ordinary water rates and to appear, possibly, to border on the burdensome.

The fact that the company in this case has had no means of informing itself continually as to the efficiency of its purification processes and the fact that the raw water undoubtedly varies widely in degree of pollution and in its disinfection requirements, together with the probability of improvement in the quality of the treated water by more scientific management of the treatment given, lead to the belief that the company should provide for some bacteriological laboratory work to be done on the water supplied the public. The possibility that the company may be able to make satisfactory arrangements with the city for the use and benefit of the city's chemical and bacteriological laboratory may perhaps obviate the necessity of a separate and similar but

private laboratory at the pumping station. The use of such facilities appears to be universally recognized as being highly desirable and beneficial in connection with the purification of impure waters.

The net earnings of the company have, almost throughout its entire history, been below the point of a fair and reasonable amount. During the past few years they have scarcely equaled 4 per cent on a reasonable valuation, when depreciation and all other legitimate charges and costs are provided for.

The greater portion of the deficiency in net earnings is reasonably chargeable to the public service, and the balance to the flat rate private service. The meter rates have yielded a fair proportion of the costs but the meter rate schedule is not of the most logical and desirable form.

The company's rules and its practices in regard to the furnishing of meters to all classes of private consumers are, on the whole, reasonable under all the circumstances of the case.

IT IS THEREFORE ORDERED:

1. That the Ashland Water Company shall make such arrangements as may be found necessary to give it the benefit of a suitable laboratory for water analysis in the city of Ashland and shall thereby keep itself continually informed as to the efficiency of its purification processes by analyses made at least once daily. It shall also keep in permanent record form the complete results of all such analyses.

2. The present schedule of rates for service shall be discontinued and the following rates, deemed just and reasonable, substituted therefor:

PUBLIC SERVICE.

Municipal hydrant rental, including the general fire protection and flushing of sewers and pavements until extended, per annum $24,300.

Additional, for extension of system, ordered by city.

Per foot of mains per annum.....$0.08

Per additional public fire hydrant, annually.....$6.50

Street Sprinkling.

PRIVATE SERVICE.

Meter Rates.

Service charge, one consumer on meter.

½" or ⅝" meter, per annum	$9.00
¾" " "	18.00
1" " "	30.00
1½" " "	42.00
2" " "	68.00
3" " "	120.00
4" " "	216.00
6" " "	360.00
Each additional consumer on meter	3.00

Each apartment, flat, suite, store, office, etc., shall be considered a separate consumer in determining service charges.

Output Charge

12,500 cubic feet or less per month, 6 cts. per 100 cubic feet.

Excess amounts, 5 cts. per 100 cubic feet.

FLAT RATES, per annum.

Alcohol, each barrel	$0.10
Ale cellar	10.00
Bakery each oven	10.00
Barber shop, one chair	7.50
each additional chair	4.00
Bath tub, private, used by one family	6.00
used by more than one family, each	4.00
Bath tub, public	12.50
Beer, each barrel brewed	0.07
Beer house	10.00
Billiard saloon, each table	4.00
Boarding house with sewer or cesspool connection, 7 rooms or less	12.00
each additional room	1.00
Boarding house without sewer or cesspool connection 7 rooms or less	9.00

PRIVATE FIRE SERVICE.

1. Unmetered service to automatic sprinklers or standpipes inside of buildings:

6" connection, per annum	$100.00
4" " "	50.00
3" " "	25.00
2" " "	15.00

2. Metered service to automatic sprinklers or standpipes,

(Cost of meter, its installation and maintenance paid by consumer, meter subject to inspection and approval of water utility).

Service charges per annum:

6" connection, per annum	$20.00
4" " "	15.00
3" " "	10.00
2" " "	8.00

Output Charges:

For all water except that actually used in fire fighting same as for commercial service.

3. Outside hydrants similar to city hydrants.

Charges to be added to city hydrant rental as per rates for additional city hydrants.

The foregoing rates shall be placed in effect at the end of the current period for which bills have been or will be rendered under the existing schedule.

Sixty days from the date hereof is deemed sufficient time within which to comply with the first provision of this order.

WILLIAM FRANZEN & COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Feb. 18, 1914.

The petitioner alleges that the charge of 7 cts. per cwt. assessed by the respondent for the transportation of two cars of bottles from Milwaukee to Waukesha was unusual and exorbitant to the extent that it exceeds the rate of 5 cts. per cwt. previously in effect and also in effect over other lines between the said points at the time the shipment moved. The respondent alleges that the 7 ct. rate was published in error and asks that the reparation requested be awarded.

Held: The rate exacted of the petitioner was unusual and exorbitant. The reasonable rate for the service rendered is 5 cts. per cwt. Refund is ordered on this basis.

The petitioner is engaged in the manufacture of bottles at Milwaukee, Wis. It alleges that on and between April 2 and 19, 1913, it shipped to the Milwaukee-Waukesha Brewing Company, Waukesha, Wis., two cars conveying bottles on which the respondent assessed charges at the 5th class rate of 7 cts. per cwt., or a total charge on the two cars of $50.82; that the said rate was unusual and exorbitant to the extent that it exceeded the rate of 5 cts. per cwt. which was previously in effect according to defendant's tariff G. F. D. No. 12200 and also in effect at the time the shipment moved over other lines between said points; that the petitioner was therefore overcharged 2 cts. per cwt. on said shipments, amounting in all to $14.52, for which amount it asks reparation.

The respondent, answering the petition, alleges that the present rate in effect applicable to such shipments is 5 cts. per cwt. and that the publication of the 7 ct. rate was made in error, and therefore asks that the reparation be awarded.

The matter was submitted upon the pleadings, correspondence, and documents on file.

We find and determine that the rate of 7 cts. per cwt., exacted of the petitioner by the respondent railway company on the

aforesaid shipments of bottles from Milwaukee to Waukesha, is unusual and exorbitant, and that the reasonable rate for the transportation services thus rendered is 5 cts. per cwt. The amount of the reparation to be awarded is as alleged, $14.52.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to William Franzen & Company the said sum of $14.52.

OWEN & BROTHER COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Jan. 13, 1914. Decided Feb. 18, 1914.

The petitioner alleges that the rate of 8 cts. per cwt. which the respondent exacted together with a reconsignment charge of $2 for the transportation of a carload of barley from Janesville to Cudahy was unusual and exorbitant and asks for refund on the basis of a rate of 7 cts. per cwt., which is the rate from Janesville to Milwaukee, plus the reconsignment charge of $2 for transportation from Milwaukee to Cudahy. The respondent contends that the 8 ct. charge was correctly made on the basis of the 7 ct. rate from Janesville to Milwaukee plus a rate of 1 ct. from Milwaukee to Cudahy, but that no reconsignment charge should have been assessed. Since the petition was filed the respondent has put into effect the rate claimed as reasonable by the petitioner.

Held: The charge exacted was unusual and exorbitant. The reasonable charge for the service is 7 cts. per cwt. plus a reconsignment charge of $2 at Milwaukee. Refund is ordered on this basis.

The petitioner is a corporation engaged in the grain commission business at Milwaukee, Wis. It alleges that it was charged an unusual and exorbitant freight rate of 8 cts. per cwt. and in addition thereto a reconsignment charge of $2 on a carload of barley shipped from Janesville, Wis., to Cudahy, Wis., on October 16, 1913; that the legal and published rate in effect on barley in carload lots from Janesville to Milwaukee is 7 cts. per cwt. as per respondent's tariff effective March 17, 1913; that the respondent's tariff No. 11019–L, effective March 7, 1913, naming rules governing reconsignment of freight, provided as follows:

"Rule 5. On grain reconsigned from Milwaukee, Wis., to points on the Chicago & North Western Railway beyond Milwaukee, Wis., a reconsignment charge of $2 per car will be made."

"Rule 8. Grain arriving at Milwaukee, Wis., from all points via Chicago & North Western Railway will be reconsigned to Cudahy, South Milwaukee, or Carrollville, Wis., at a charge of $2 per car."

The petitioner further alleges that the respondent's tariffs G. F. D. No. 11019–M and No. 11019–N, effective since September 15, 1913, have been altered in their construction of the aforesaid Rule 8 in such a manner as to make a different application of rates and reconsignment charges than that governing under the previous tariffs; that the intent and application of Rule 8 in tariff G. F. D. No. 11019–L, effective March 7, 1913, and previous issues thereof, was to permit grain arriving at Milwaukee from all points on the respondent's lines to be reconsigned to Cudahy, South Milwaukee or Carrollville at a charge of $2 per car, without any additional freight charges beyond the rate applying from the point of origin to Milwaukee; and that the shipments here involved should have been charged at the rate of 7 cts. per cwt. with an additional charge of $2 for reconsignment to Cudahy. The petitioner therefore prays that the respondent be authorized and directed to make reparation to it in the sum of $6.98 on account of overcharge on the aforesaid shipment.

The respondent, answering the petition, alleges that the lowest rate applicable on the shipment mentioned was 8 cts. per cwt. based on a rate of 7 cts. to Milwaukee, and a rate of 1 ct. from Milwaukee to Cudahy; that said rate of 8 cts. was made up of the combination of locals on Milwaukee, and that therefore the reconsignment charge of $2 should not have been assessed.

The matter came on for hearing on January 13, 1914. The petitioner was represented by *George A. Schroeder,* and the respondent by *Robert Widdicombe,* its attorney.

It seems that there has been a misunderstanding relative to the application of the rule relating to the reconsignment of carloads of grain from Milwaukee to Cudahy, South Milwaukee or Carrollville. In the instant case the respondent, according to its tariffs, charged a rate of 7 cts. per cwt. from Janesville to Milwaukee, and 1 ct. per cwt. from Milwaukee to Cudahy. In addition to this a charge of $2 was made for reconsigning the shipment. It is contended on the part of the petitioner that the reconsignment charge was the proper one, but that the rate from Janesville and other points in the state on the respondent's line to Cudahy should be the same as to Milwaukee. The correctness of this view is scarcely open for argument. The distance from Janesville to Milwaukee is 77 miles, and to Chicago 91 miles. The rate from Janesville to Milwaukee or Chicago is 7 cts. The distance from Janesville to Manitowoc is 154 miles and the rate is

8½ cts. per cwt. The distance from Janesville to Cudahy is 85 miles by way of Milwaukee or 90 miles by way of Kenosha, yet the rate amounts to 8 cts. per cwt. The unreasonableness of the rate is conceded by the respondent. Since the filing of the complaint it has published a tariff establishing the rate from Janesville to Cudahy at 7 cts. per cwt. plus a reconsignment charge of $2 per car at Milwaukee. If this rate had been in effect at the time the shipment in question moved, the total charge paid by the petitioner on such shipment would have been $6.98 less than the charge exacted.

Under the circumstances we find and determine that the rate of 8 cts. per cwt. plus a reconsignment charge of $2 per car exacted of the petitioner on the aforesaid car of grain shipped from Janesville to Cudahy is unusual and exorbitant and that the reasonable charge for such transportation service is 7 cts. per cwt. plus a reconsignment charge of $2 at Milwaukee. The amount of the reparation that will be awarded is $6.98.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company be and the same is hereby authorized and directed to refund to the petitioner, the Owen & Brother Company, the sum of $6.98.

MASON-DONALDSON LUMBER COMPANY
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Feb. 18, 1914.

The petitioner asks for refund of certain switching charges paid on 200 cars of logs shipped to Rhinelander for delivery at the Stevens mill, on the ground that the practice exacting such charges was declared to be unreasonable and unjust in *Stevens Lbr. Co. v. C. & N. W. R. Co. et al.* 1913, 11 W. R. C. R. 476.

Held: The charges exacted were unusual and exorbitant. No charge should have been made for the switching service rendered. Refund of the amount paid is ordered.

The petitioner is a corporation engaged in the manufacture of lumber in the city of Rhinelander, Wis. It alleges that during January, February and March, 1913, it shipped from Driscoll Spur, Brantwood, Spur 187, Catawba and Spur 245, two hundred cars of logs to Rhinelander, Wis., for delivery at the Stevens mill; that it was obliged to pay in addition to the published tariff rate a switching charge of the Chicago & North Western Railway Company amounting to $2 per car, or a total of $400; that during the said period shipments of logs from the same and other points on the respondent's line into Rhinelander for delivery at the mills of Brown Brothers located on the tracks of the Chicago & North Western Railway Company and Robbins Lumber Company located on the respondent's tracks were delivered to the consignees free of such switching charge; that on February 25, 1913, the Commission made an order in the case of the Stevens Lumber Company against the respondent and the Chicago & North Western Railway Company (11 W. R. C. R. 476) abolishing such discrimination as unreasonable and unjust; that since said order the respondent has not exacted said switching charge of the petitioner; and that said charge exacted of the petitioner on the aforesaid shipments was illegal and exorbitant. The petitioner therefore prays that the respondent be authorized and directed to refund to it the said sum of $400.

The respondent railway company admits the allegations of the complaint and consents to the awarding of the reparation asked.

The matter was submitted on the pleadings, papers and documents on file. As the unreasonableness of the charge here in question was considered and passed upon in the case of the *Stevens Lumber Co. vs. the Chicago & North Western Railway Company and the Minneapolis, St. Paul & Sault Ste. Marie Ry. Co.* 1913, 11 W. R. C. R. 476, it is unnecessary to again consider the matter.

We find and determine that the charge exacted of the petitioner of $2 per car for switching at Rhinelander, Wis., on the aforesaid shipments of logs was unusual and exorbitant, and that no charge should have been made for such switching service.

NOW, THEREFORE, IT IS ORDERED, That the respondent be and the same is hereby authorized and directed to refund to the said petitioner the sum of $400.

BIG FOUR CANNING COMPANY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY,
STANLEY, MERRILL AND PHILLIPS RAILWAY COMPANY.

Submitted Feb. 10, 1914. Decided Feb. 18, 1914.

The petitioner alleges that it was overcharged for the transportation of a carload of box shooks from Marinette to Stanley. The charge assessed by the respondents was based on a rate of 13 cts. per cwt. from Marinette to Eau Claire and a rate of 5 cts. per cwt. from Eau Claire to Stanley. Since the shipment moved the C. St. P. M. & O. R. Co. has put into effect a rate of 13 cts. per cwt. for shipments from Marinette to Stanley and the petitioner asks refund upon the basis of this rate.

Held: The charge complained of was unusual and exorbitant. The rate of 13 cts. per cwt. now in effect is the reasonable charge for the service rendered. Refund is ordered upon this basis.

The petitioner is a corporation and operates a canning factory at Stanley, Wis. It alleges that on September 5, 1913, there was shipped it from Marinette, Wis., a car loaded with 36,300 lb. of box shocks; that it was charged therefor a rate of 13 cts. per cwt. from Marinette to Eau Claire, which rate is carried in the respondent's, the Chicago, St. Paul, Minneapolis & Omaha Railway Company's, tariff G. F. D. No. 1360–C, and is subject to the minimum weight of 30,000 lb. as per Rule 1930, W. H. Hosmer's Rules Circular 1–J; that it was charged on said shipment from Eau Claire to Stanley a rate of 5 cts. per cwt., which rate is carried in Chicago, St. Paul, Minneapolis & Omaha Railway Company's G. F. D. No. 2400–A, effective July 17, 1912, subject to minimum weight of 30,000 lb.; that the rate from the first station south of Marinette to Stanley is 13 cts. per cwt., which rate was made applicable from Marinette to Stanley on November 12, 1913, in Supplement 32 to Chicago, St. Paul, Minneapolis & Omaha Railway Company's tariff G. F. D. No. 1360–C; that if the 13 ct. rate had been applicable to petitioner's shipment it would have been obliged to pay on said shipment $18.15

less than it actually paid. Wherefore, petitioner prays that reparation be made to it in the sum of $18.15.

The respondent railway companies, answering the petition, admit the above allegations and express a willingness to make the reparation asked if duly authorized to do so.

The matter came on for hearing on February 10, 1914, and was submitted upon the pleadings, papers and documents on file.

It is conceded that the charge exacted of the petitioner for the transportation services mentioned in the petition is unusual and exorbitant and that the rate of 13 cts. per cwt. now in effect and applicable to such shipments is a reasonable charge. We therefore find and determine that the joint rate of 18 cts. per cwt. exacted of the petitioner on the aforesaid shipment of box shooks from Marinette to Stanley was unusual and exorbitant, and that the reasonable rate that should have been in effect and applicable is 13 cts. per cwt. The amount of refund that will be awarded is $18.15.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company, the Chicago & North Western Railway Company, and the Stanley, Merrill & Phillips Railway Company be and the same are hereby authorized and directed to refund to the Big Four Canning Company the said sum of $18.15.

COLFAX PRODUCE COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Nov. 11, 1913. Decided Feb. 20, 1914.

The petitioner complains of the practice of the respondent in distributing cars to it in the month of September, 1913, for the shipment of potatoes at Colfax. The petitioner alleges (1) that the station at Colfax was not supplied with a sufficient number of cars to meet the requirements of shippers; (2) that the respondent wrongly discriminated against the petitioner in the distribution of cars; and (3) that the respondent failed to leave cars at the petitioner's warehouse a length of time sufficient for loading. The petitioner therefore prays that the respondent be required to pay to the petitioner such damages as the Commission upon investigation may determine are due the petitioner. At the time in question there was a car shortage due to the heavy grain movement from the west.

A railway company may not discriminate against any particular station in the distribution of equipment, but must furnish each station its equitable proportion of the available equipment. No one station, however, has the right to command the entire resources of the company to the exclusion or prejudice of other stations. It is the extent of the business ordinarily done on a particular line or at a particular station which properly measures the carrier's obligation to furnish transportation. *Ayres v. C. & N. W. R. Co.* 1888, 71 Wis. 372.

The contention of the petitioner that it should have been permitted to secure foreign cars directly from foreign companies is not in accordance with good practice as sanctioned by legal authority. In times of car shortage the prorating of cars among shippers must include private cars and cars of foreign lines consigned directly to shippers.

In prorating cars among shippers at a station in times of car shortage consideration must be given to the volume of business done by each shipper, the character of the commodities to be shipped, the necessity for the immediate movement of certain commodities, the climate and character of the weather and perhaps other facts. There is no hard and fast rule by which the matter can be determined. All that the law requires is that the carrier act justly and fairly in distributing its cars.

Held: The evidence does not sustain the petitioner's contention that the respondent in distributing its cars discriminated against Colfax as a station and against the petitioner as an individual shipper. The limitation in the length of time allowed the petitioner for loading cars at its warehouse appears, in view of the small station and limited sidetrack facilities at Colfax, to have been reasonable.

The petition is dismissed.

The petitioner is a corporation engaged in buying, selling and shipping potatoes to Colfax, Wis. It alleges that the respondent railway company has failed and neglected upon reasonable notice and when it was within its power to do so, to furnish suitable cars to the petitioner to ship its produce in carload lots when such cars were available at that point; that during the time between September 14 and September 26, 1913, there were at Colfax insufficient cars to meet the immediate requirements; that the respondent wrongfully discriminated against the petitioner in the distribution of said cars; that it failed to leave cars at the warehouse of the petitioner more than five hours, which length of time was not sufficient to allow the petitioner to load; that after cars were furnished to the petitioner, the respondent insisted that the cars be shipped to a certain point other than the point designated by the petitioner, whereby the petitioner has suffered damage in the sum of $1,000 by reason of the failure of the respondent to give adequate service. Wherefore, the petitioner prays that the respondent be required to pay to the petitioner such damages or loss as the Commission upon investigation may determine is due the petitioner.

No answer was filed by the respondent.

The hearing was held on November 11, 1913, at the office of the Commission at Madison. *R. E. Bundy* represented the petitioner and *Kenneth Taylor* appeared on behalf of the respondent.

The town of Colfax is situated in an extensive potato producing district. From six to eight hundred cars are shipped from this point annually. The petitioner is a corporation organized for the purpose of buying and shipping potatoes and marketing them where the greatest profit can be obtained for its stockholders. There are also a number of other buyers located at Colfax, both local and nonresident, who are not members of this corporation, but who buy and ship independently.

About September 12, 1913, the petitioner began making its purchases. It bought two carloads or about 1,853 bushels the first day and each succeeding day in the month of September its receipts increased until some days as high as eleven carloads were received. At first sufficient cars were obtained by ordering daily through the local agent of the respondent, but soon a scarcity of cars was pleaded by the respondent's agent, on the ground that all the respondent's system cars were needed for shipping grain in other states.

Although a number of other potato buyers shipping out of Colfax are inconvenienced by the inability to obtain cars they do not complain for the reason, the petitioner alleges, that they are competitors of the petitioner and know that such a car shortage embarrasses the petitioner in the conduct of its business.

The petitioner also contends that while the respondent refused to supply it with system cars, as these cars were being used for grain shipments, it did not attempt to control the use of foreign cars used and hauled over its lines, but allowed the companies owning such cars to designate the parties to whom the cars were to be delivered and by whom they were to be used. The ability to thus acquire foreign cars was not known to the petitioner, but it did know that in former years it could secure cars from the Illinois Central Railroad Company through a traveling agent who went among shippers offering his cars. Acting upon this information it wrote to the Illinois Central Railroad Company office in the city of Milwaukee requesting cars, but the request was denied on the ground that the order must be filed through the office of the superintendent to prevent any discrimination in the distribution of cars. Upon the receipt of the reply to its letter the petitioner placed an order for refrigerator cars with the respondent's local agent at Colfax. The agent informed the petitioner that some sixteen cars had been distributed by him in a manner which he deemed equitable regardless of specific orders that had been given for foreign cars. He would not recognize such orders, but distributed such cars as they were billed.

The petitioner further claims that it thereupon notified the respondent's agent on October 15, 1913, that it would use box cars if it could obtain them and would, up to November 1, assume all risks of frost in transit, but received no reply. The petitioner then repeated its offer on October 24, 1913, and on the evening of October 28, the respondent wired the acceptance of the offer, but the season had so far advanced as to render the use of box cars impracticable. On the other hand, the respondent declares that the petitioner's offer to use box cars was first sent to it on October 24; that it had its representative check up the distribution of cars at Colfax during the period in question and that this checking showed that out of a total of 495 cars delivered at Colfax to thirteen different shippers between September 11 and November 9, inclusive, 116 were delivered to the petitioner.

Only one shipper, A. Miller & Co., received a larger number than the petitioner. The distribution seemed to be upon an equitable basis according to the amount of produce handled by each shipper. A statement was shown of produce on hand on October 3, by four of the largest shippers:

On hand Oct. 3, 1913:

A. Miller & Co	1,270,250 bu.
Stark & Hurd	528,625 "
Colfax Produce Co	450,000 "
C. E. Healey	330,000 "

It seems that petitioner's statement that up to September 27 it had received only fourteen cars was in error as the checking of distribution upon the agent's record from September 18 to 27, inclusive, shows that the Colfax Produce Company was furnished with cars as follows:

Sept. 18	2
" 19	4
" 20	4
" 21 (Sunday)	
" 22	2
" 23	5
" 24	1
" 25	6
" 26	3
" 27	7

In the petition three grievances are set forth: First, that the station at Colfax was not supplied with a sufficient number of cars to meet the requirements of shippers; second, that the respondent wrongfully discriminated against the petitioner in the distribution of cars; and third, that the respondent failed to leave cars at the petitioner's warehouse a length of time sufficient for loading. The latter ground of complaint was passed over upon the hearing as the conditions at the Colfax station were such that probably not more than five hours could at times be given to any shipper for the loading of potatoes. This is a small station and the sidetrack facilities are limited. Upon the question of an insufficient number of cars being furnished at Colfax to meet the requirements of the shippers during the time in question, it may be stated that the evidence does not sustain the petitioner's contention. At such time there was a car shortage due to the heavy grain movement from the West. All available equipment was in service. No station of any consequence on the respondent's line could be furnished upon demand with the num-

ber of box cars and other cars suitable for the shipment of potatoes when demanded.

It is true that a railway company can not discriminate against any particular station in the distribution of equipment, but must furnish each station its equitable proportion of the available equipment.

In *Ayres v. C. & N. W. R. Co.* 1888, 71 Wis. 372, the court says:

"It must be remembered that the defendant has many lines of railroad scattered through several different states. Along each and all of these different lines it has stations of more or less importance. The company owes the same duty to shippers at any one station as it does to the shippers at any other station of the same business importance. The rights of all shippers applying for such cars under the same circumstances are necessarily equal. No one station, much less any one shipper, has the right to command the entire resources of the company to the exclusion or prejudice of other stations and other shippers. Most of such suitable cars must necessarily be scattered along and upon such different lines of railroad, loaded or unloaded. Many will necessarily be at the larger centers of trade. The conditions of the market are not always the same, but are liable to fluctuations, and may be such as to create a great demand for such cars upon one or more of such lines, and very little upon others. Such cars should be distributed along the different lines of road, and the several stations on each, as near as may be in proportion to the ordinary business requirements at the time, in order that shipments may be made with reasonable celerity. The requirement of such fair and general distribution and uniform vigilance is not only mutually beneficial to producers, shippers, carriers, and purchasers, but of business and trade generally. It is the extent of such business ordinarily done on a particular line or at a particular station which properly measures the carrier's obligation to furnish such transportation. But it is not the duty of such carrier to discriminate in favor of the business of one station to the prejudice and injury of the business of another station of the same importance."

Relative to the complaint that the petitioner was discriminated against in the distribution of cars and that it should be permitted to secure foreign cars directly from foreign companies, it may be said that permitting shippers to thus draw upon general railway equipment is not in accordance with good practice as sanctioned by legal authority. In times of car shortage the prorating of cars among shippers must include private cars as well

as cars of foreign lines consigned directly to shippers. It is true that private car companies have more or less control over their equipment because of contractual relations with shippers, yet, when it comes to dealing with system cars and foreign cars the company on whose lines the freight originates should have control as far as possible of the distribution of these cars in order to prevent discrimination between shippers. Consequently, the practice of the Illinois Central Railroad Company in billing empty cars direct to shippers was discontinued, and all such cars could be made available only through the superintendent's office, which was charged with the duty of making proper distribution of cars at stations.

It seems to be well established that in times of a shortage of cars, the cars allotted to any station should be prorated among the various shippers at such station upon an equitable basis. In doing this, various elements must be taken into consideration. Among these are the volume of business done by each shipper, the character of the commodities to be shipped, the necessity for the immediate movement of certain commodities, the climate and character of the weather, and perhaps other considerations. All that the law requires is that the carrier acts justly and fairly in making the distribution of cars. There is no hard and fast rule by which the matter can be determined. In each case it must be determined by the information at hand and according to the best judgment of the person charged with the duty of making the distribution.

In the instant case it would seem from the number of cars the petitioner received, taking into consideration its daily receipts, as compared with the number of cars received by other shippers at the same station, taking into consideration their daily receipts, there was no ground for complaint under the circumstances of the apportionment.

In considering the matters in issue, we have laid aside the question of the jurisdiction of this Commission because of the fact that the cars were required for interstate shipments, and have determined these matters on their merits.

For the reason above stated the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the aforesaid petition be and the same is hereby dismissed.

AUGUST RUEDEBUSCH
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Oct. 14, 1913. Decided Feb. 24, 1914.

This proceeding is in effect a continuation of a previous proceeding of the same title in which a decision was rendered through error on July 11, 1913, 12 W. R. C. R. 248. The petitioner alleges that the distance tariff rate exacted on shipments of brick within the yard limits of Mayville, from the petitioner's brickyard to the plant of the Northwestern Iron Co., is excessive and unreasonable as compared with flat rates charged other industries for the movement of commodities within the yard limits. Certain of the flat rates mentioned are a part of concentration rates on raw materials.

Held: The petitioner's shipments were not entitled to concentration rates inasmuch as the movements involved were purely terminal movements. The rate complained of, however, is unreasonably high. The reasonable rate would have been 1 ct. per cwt.

It is ordered that the respondent (1) establish a rate of 1 ct. per cwt., with a minimum of $6.00 per car, for the switching of cars between points within the yard limits of Mayville; and (2) make refund to the petitioner upon the basis of this rate.

August Ruedebusch is a manufacturer of brick at Mayville on the Northern division of the Chicago, Milwaukee & St. Paul Railway in Dodge county. His yard is located within the corporate limits of Mayville, directly on the line of the railroad, and about a half a mile south of the Mayville station. North of the city limits about half a mile, and approximately a mile and a half from the brickyard, are located the coke works of the Northwestern Iron Company, recently constructed.

Mr. Ruedebusch took the contract to furnish the brick for the construction of the new portions of the Northwestern Iron Company's plant. He assumed in taking the contract that he could obtain either the $3 or $5 rate which was charged certain other industries within the yard limits of Mayville. Upon consulting the agent he learned that such rates applied only on certain commodities between certain points and that he must pay the distance tariff of 2 cts. per cwt. as prescribed in G. F. D. No.

6500 A. Mr. Ruedebusch appealed to the Commission and was advised to consult the general freight department of the Chicago, Milwaukee & St. Paul Railway Company, requesting the establishment of a switching rate for hauling brick. Upon the railway company's refusal to establish such a rate Mr. Ruedebusch formally appealed to the Commission for relief, basing his claim upon a carload of brick shipped from the brickyard on October 14, 1912, to the new coke plant of the Northwestern Iron Company, the charges upon which were $12.58. The Chicago, Milwaukee & St. Paul Railway Company, through its commerce counsel, O. W. Dynes, responded that because of the lack of data supplied in the complaint it was unable to check the rate as to its correctness or to definitely state the position of the company.

A hearing in the matter was held October 14, 1913, at the capitol in the city of Madison, at which *August Ruedebusch* appeared in his own behalf and *J. N. Davis* on behalf of the Chicago, Milwaukee & St. Paul Railway Company. This hearing is, in effect, a continuation of the case after the Commission, acting under mistake, had promulgated its decision. The defendant in this case had requested that another formal hearing be called at which both parties might be present and the defendant might introduce additional testimony.

The Northwestern Iron Company maintains a stock pile where the coke, shipped from Milwaukee, is kept pending its use by the company. When cars of this coke are taken from the stock pile to the company's furnace trestle, the respondent does the hauling at the rate of $3 per car, under G. F. D. No. 4900 C. The Northwestern Iron Company also enjoys a rate of $5 per car for the switching of its cars of pig iron from its furnace to its storage yard. Either one of these movements is less than a mile and a half. Also under tariff A A 10709 crushed stone is handled from the Mayville White Lime Kilns, south of the city, to Mayville for $5 per car and under tariff A 2856 crushed stone and ore are moved from Knowles, Neda and Iron Ridge to points within the Mayville yard limits at $2 per car in hopper cars of 40,000 and 60,000 lb. capacity, and in hopper cars, gondolas and other equipment of larger capacity at $3 per car. No one of the outside points mentioned is more than eight miles distant from Mayville.

It appears that the resopndent company keeps two locomo-

tives at Mayville for switching purposes, working the territory between Knowles on the north and Iron Ridge on the south. The operations of the Northwestern Iron Company and the several quarries and lime kilns in this region are of sufficient magnitude to warrant the keeping of these locomotives for the purpose. One of the locomotives in the conduct of its regular business also handled the cars of brick from the yard of the plaintiff to the yard of the Northwestern Iron Company where the construction of portions of the plant was under way. Thus these movements of cars of brick are purely and simply terminal movements.

Mr. Ruedebusch has shipped brick within this district to other points than the Northwestern Iron Company's plant in Mayville and has been charged for the services at the regular distance tariff of 2 cts. per cwt. However, the lower rates on ore, crushed stone (flux) and coke referred to above are in reality parts of concentration rates. By no process of reasoning can the cars of brick from the yard of the plaintiff to Neda and Iron Ridge be construed as shipments of raw material, possibly subject to a concentration rate. Therefore we must eliminate the cars of brick shipped to these points and confine the decision to cars shipped from the brickyard to the plant of the Northwestern Iron Company.

The respondent in this case introduced an exhibit purporting to show that the cost of handling the car in question was $9.68 including in such cost estimate an allowance for return upon the investment. No evidence was submitted by the petitioner tending directly to verify or refute the cost as computed by the respondent. The former pointed rather to the existence of rates lower than the one charged in his case and covering switching movements in the same terminal, contemporaneously performed and of a similar nature.

It was testified at the hearing that the average weight of a carload of brick is 56,000 lb., but from other evidence in the hands of the Commission the average loading appears to be considerably above this figure, or about 69,000 lb. It was stated, further, that during the year 1912 thirty-four cars of brick were shipped to the Northwestern Iron Company and that this was the largest number of cars ever forwarded to that company. It seems not unreasonable, therefore, to hold that the movements under consideration were unusual movements, that they

are not properly classified as concentration movements and hence are not entitled to differential rates. In other words, the shipments under consideration, as well as any future shipments of a similar character, move under conditions which require that the charges upon each car shall be reasonably compensatory for the service performed. What the rate under such conditions should be is determined primarily from the cost of the service, including in such cost a reasonable allowance for interest upon the investment.

As stated above, the respondent in his exhibit estimates the cost, including return to the carrier, to be $9.68 for each car handled. It is significant that according to the carrier's own estimate the charges on the car in question exceed the estimated cost by $2.90. The Commission, on its part, has thoroughly investigated the cost incident to the handling of all traffic within the yard limits of Mayville. Its investigation was directed not only towards a determination of the cost of the individual movements of brick but of all the terminal movements made at Mayville. In determining the cost due consideration was given to the varying length of the movements, whether performed by road trains or in ordinary switching service, and in general the variable factors that increase or decrease cost above the average of all traffic were taken into account. A liberal allowance was included as a return upon the investment actually used and useful in performing the service. The results of this study would seem to indicate that the cost per car as determined by the respondent is altogether too high and that the reasonable cost is somewhere in the neighborhood of $6 per car. When in the case of movements of brick, a commodity of low specific value, the charges upon a reasonable minimum loading of 60,000 lb. are $12 per car, while the reasonable cost of rendering the service does not seem to exceed $6 per car, we cannot help but conclude that the rate complained of is unreasonably high and should be reduced.

It was suggested at the hearing by counsel for the respondent that if the Commission found that the Wisconsin distance tariff rate should not be applied to the movements here considered a rate per 100 lb. be fixed instead of a blanket switching rate. This suggestion is quite in line with the general policy of the Commission in regard to switching rates.

From the facts in this case we find and determine that the

reasonable rate for the switching of cars of brick from the brickyard of the plaintiff to the plant of the Northwestern Iron Company by the respondent should not have exceeded 1 ct. per 100 lb. and that the petitioner is entitled to a refund upon the basis of this rate.

Should the parties to this case be unable to come to an agreement as to the amount of the refund ordered herewith, recourse may be had to the Commission.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, establish a rate of 1 ct. per 100 lb. with a minimum of $6 per car for the switching of cars between points within the yard limits of Mayville; and that the respondent refund to the petitioner, August Ruedebusch, an amount equal to the difference between the actual charges paid on cars of brick from the brickyards to the Northwestern Iron Company's plant, and charges on such shipments at 1 cent per 100 lb. minimum $6 per car, in the period between August 19, 1912, and the date that this order is effective.

LEONARD SEED COMPANY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Nov. 11, 1913. Decided Feb. 24, 1914.

The petitioner alleges that the rate of 32.5 cts. per cwt. exacted by the respondents for the transportation of seed peas in carloads from River Falls to Columbus is exorbitant when compared with rates from other points to Columbus and asks for refund on a certain shipment on the basis of a rate of 20 cts., which is the regular 5th class St. Paul to Chicago rate.

Held: The rate complained of is excessive and the petitioner is entitled to refund. The respondents are ordered: (1) to substitute for this rate a rate of 20 cts. per cwt. on dried and seed peas in carloads at minimum weight of 36,000 lb. per car; and (2) to make refund to the petitioner on this basis.

The petitioner is engaged in the wholesale business of growing and selling peas for seeding purposes. On or about August 28, 1912, it shipped a carload of seed peas weighing 77,000 lb. from River Falls to Columbus on which the freight charges amounted to $250.25. The paid freight bill shows that the shipment moved via the Chicago, St. Paul, Minneapolis & Omaha Railway on local billing River Falls to Camp Douglas at the rate of 19 cts. per 100 lb. and via the Chicago, Milwaukee & St. Paul Railway on local billing Camp Douglas to Columbus at the rate of 13.5 cts. per 100 lb., making a through rate of 32.5 cts. the total charges as stated. This through rate, the petitioner alleges, is exorbitant when compared with rates of 19 and 20 cts. on seed peas shipped by the petitioner from points further distant from Columbus and from points within twenty or thirty miles of River Falls to Columbus.

Hearing was held in the office of the Commission at Madison on November 11, 1913. *John S. Geary* appeared for the petitioner and *J. M. Davis* for the Chicago, Milwaukee & St. Paul Railway Company.

From the testimony taken at the hearing it appears that the

petitioner grows peas at points in Wisconsin and Minnesota, including Antigo, Lake Mills, Columbus, Pepin and Hager, Wis., and Spring Valley, Minn., where soil conditions are found to be suitable, and ships the crops from such points to its storage and cleaning houses at Antigo, Marshal and Columbus, Wis., and Chicago, Ill., according to the point at which the crops may be most economically taken care of and the point to and from which they may be most economically shipped. Considerable acreage was secured a year ago in the vicinity of River Falls, Baldwin and Menomonie, and the conditions for growing peas there found suitable, but owing to the high freight rates from these points to Columbus no acreage was secured there this year. With favorable rates from these points to Columbus the petitioner could do considerable business there. A number of rates applying on seed peas were referred to by way of comparison with the rate against which complaint is made. These rates are shown, as are also the tariff routing and the distance involved, in the following table prepared by the Commission:

RATES IN CENTS PER 100 LB. ON SEED PEAS, CARLOADS, AND DISTANCE IN MILES BETWEEN POINTS NAMED.

From	To	Via junction point.	Distance.			Rate.
			To jct.	From jct.	Total.	
River Falls	Columbus	Camp Douglas	173.2	77.4	251	32.5

Antigo	"	" —C.& N.W	.....	.....	263	18.

[1] Prior to Feb. 4, 1913.
[2] Since Feb. 4, 1913.

The rates shown in the above table are the regular 5th class rates subject to minimum weight of 36,000 lb. as provided for seed peas in western classification.

The petitioner's shipments usually load to the capacity of the car and sometimes 10 per cent over the capacity. The ship-

ment complained of amounted to about 1,300 bushels. Its value was about $1.85 per bushel which was said to be a fair average price for the commodity. This would make the total value of the shipment $2,400. The petitioner's business at Columbus last year amounted to about seventy-five carloads. Nothing was said as to the amount handled at the other points, Antigo, Marshall and Chicago, where the petitioner also maintains cleaning and storage houses, but witness stated that the petitioner expected to handle 150,000 bushels of peas in 1913. There is some loss and damage in connection with the traffic. The petitioner's claims for loss in 1912 amounted to about $140 or $150 and his claims for damage to about the same.

The respondents are willing to refund on the shipment involved on the basis of a through rate of 27 cts. which is the sum of the rates applicable River Falls to Watertown via the Chicago, St. Paul, Minneapolis & Omaha and the Chicago & North Western railways and Watertown to destination via the Chicago, Milwaukee & St. Paul Railway, but dislike to establish joint through rates on one commodity between points where there is so little movement as in the instant case. The petitioner, however, is not willing to accept settlement on this basis for the reason that rates from other points in the vicinity of River Falls to Columbus are lower. He believes that River Falls to Columbus shipments are entitled to a 20 ct. rate.

The foregoing covers the main facts involved in this case. On the basis of comparison alone the River Falls-Columbus rate should be 20 cts. This is the regular 5th class rate between St. Paul, etc. and Chicago, Milwaukee, etc., applying locally via all lines entering these points. It applies as a maximum rate between all points usually taking St. Paul, Chicago, etc. rates, which, generally speaking, include all Minnesota, Wisconsin and Illinois points intermediate on all lines between St. Paul, Chicago, etc., also numerous other points including many points on branches from main line points and many on connecting lines.

This general application exists likewise in connection with all St. Paul, Chicago, etc. class and commodity rates. The respondents, however, do not provide for the application of these rates, nor, for that matter, for any joint rates between points on their respective lines except, perhaps, an odd rate here and there that

would easily be overlooked in making an examination of general conditions.

Prior to April 26, 1913, the respondents had in force joint through class rates on agricultural implements and parts thereof and vehicles and parts thereof as described in western classification, exceptions thereto contained in Western Trunk Lines Rules Circular, and on windmills and parts thereof, in straight or mixed carloads with agricultural implements, also on gasoline engines and parts thereof in mixed carloads with agricultural implements and windmills and parts thereof. These rates applied on the commodities named, between all points on the respondents' lines in Wisconsin, also points on these lines in Illinois, Iowa, Michigan, Minnesota, South Dakota and Nebraska, as provided for in tariff Chicago, St. Paul, Minneapolis & Omaha G. F. D. No. 2444, which took effect January 27, 1910, and was canceled on the date mentioned above. An examination of the tariff shows that the rates named therein between points in the Chicago-St. Paul territory referred to above, including River Falls and Columbus, were the single line rates between St. Paul and Chicago. Under the basis of the rates named in this tariff, therefore, any of the articles described, if classified as 5th class, would take a rate of 20 cts. per 100 lb. between River Falls and Columbus.

The general freight agent of the respondent Chicago, St. Paul, Minneapolis & Omaha Railway Company in a letter addressed to the Commission under date of March 28, 1913, asking the Commission's approval of changes in rates, intended to be brought about by the cancellation of rates named in Chicago, St. Paul, Minneapolis & Omaha G. F. D. No. 2444, referred to above, asserted that upon investigation the Commission would find that these rates have not been used on Wisconsin intrastate traffic on account of being higher than rates in effect from other manufacturing points. Since the cancellation of these rates the Commission's attention has been called to the fact that they were used to some extent while in force. These rates, however, are not in any way involved in the case under investigation. They are referred to merely as tending to show the conditions under which the respondent carriers voluntarily published joint though rates and the basis upon which such rates were established.

In the case under investigation the facts at hand indicate that there is not likely to be a great amount of peas shipped from River Falls to Columbus, even with a rate in force that is entirely satisfactory to the petitioner, nevertheless it appears that there are reasonable grounds for complaint and for the granting of relief. From a careful consideration of all the matters brought out in the case we are of the opinion that the rate on dried peas, carloads, minimum weight 36,000 lb. per car, from River Falls to Columbus should not exceed the 5th class St. Paul-Chicago rate of 20 cts. per 100 lb., and that the charges complained of on the shipment involved in this case are excessive insofar as they exceed charges based on this rate. The shipment weighed 77,000 lb. At a rate of 20 cts. the charges would amount to $154. There are, therefore, excessive charges amounting to $96.25, refund of which will be authorized.

NOW, THEREFORE, IT IS ORDERED, That the respondents cease and desist from charging the rate of 32.5 cts. per 100 lb. on dried or seed peas, carloads, minimum weight 36,000 lb., from River Falls to Columbus and substitute therefore a rate of 20 cts. per 100 lb. at minimum weight of 36,000 lb. per car.

IT IS FURTHER ORDERED, That the respondents be and they are hereby authorized and directed to refund to the petitioner the sum of $96.25 which is hereby declared to have been paid in excess of a reasonable amount of charges on the shipment involved in this complaint.

N. H. JOHNSON ET AL.
vs.
READFIELD TELEPHONE COMPANY,
FREMONT TELEPHONE COMPANY.

Submitted Feb. 19, 1914. Decided March 4, 1914.

The petitioners, who are subscribers of the Readfield Tel. Co., ask that physical connection be established between the lines of the Readfield Tel. Co. and those of the Fremont Tel. Co. in such manner as to enable the subscribers of the two companies to communicate with the village of Fremont and the village of Readfield. The telephone companies are willing to make the desired connection upon proper terms and conditions.

It is ordered that the physical connection requested be made. A toll of 10 cts. per message is to be exacted from parties desiring limited service and a monthly charge of 25 cts. from those desiring unlimited service. Each company is to retain the revenues originating on its own lines.

The petitioners are subscribers of the Readfield Telephone Company and ask that a physical connection be made between the lines of the Readfield Telephone Company and those of the Fremont Telephone Company so as to enable the petitioners and other subscribers of the Readfield Telephone Company, as well as the subscribers of the Fremont Telephone Company, to communicate with the village of Fremont and the village of Readfield.

The Fremont Telephone Company has expressed its willingness to make the desired connection. The Readfield Telephone Company does not oppose the connection but requests that it be made upon proper terms and conditions.

The matter came on for hearing February 19, 1914. The petitioners were represented by *William Rhinehart* and the Readfield Telephone Company by *Charles F. Schneider.*

It appears that the Readfield Telephone Company maintains an exchange in the village of Readfield situated in the town of Caledonia, Waupaca county, and has lines extending to the various parts of said town as well as into the adjoining town of Wolf River on the south, which is in Outagamie county. One of its lines extends from Readfield westward toward Fremont

as far as the town line. The Fremont Telephone Company has its exchange in the village of Fremont in the town of Fremont, Waupaca county, and has lines within said town and also within the town of Wolf River in Outagamie county. It has a line extending from Fremont eastwardly toward Readfield as far as the boundary line between the town of Caledonia and the town of Fremont. The two lines meet at the boundary line between said towns. Formerly these lines were connected. It seems that they were then owned by the Wisconsin Telephone Company and used, while connected, as a toll line. The Readfield Telephone Company and the Fremont Telephone Company each purchased a part of the line and severed it. A number of subscribers residing between Readfield and Fremont desire to communicate with each other as well as with the subscribers of the respective exchanges in Fremont and Readfield. However, not all of the subscribers of either of the respondents require such service regularly, but nearly all seem to require it occasionally. Under the circumstances it seems desirable, when connection is made, to establish a toll rate of 10 cts. for each message, or a charge of 25 cts. per month for unlimited service. Such proposed charges are satisfactory to all parties concerned.

NOW, THEREFORE, IT IS ORDERED, That the Readfield Telephone Company and the Fremont Telephone Company make such physical connection of their lines between Fremont and Readfield as to enable service to be rendered over these lines between the said villages.

IT IS FURTHER ORDERED, That each of said companies exact a toll of 10 cts. for each message from those desiring limited service and a monthly charge of 25 cts. from those desiring unlimited service. Each company shall retain the revenues originating on its own lines.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF A HIGHWAY CROSSING ON THE LINES OF THE CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY AND THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY AT THE DRUMMOND ROAD IN THE CITY OF EAU CLAIRE.

Submitted Oct. 3, 1913. Decided March 6, 1914.

The Commission, on its own motion, investigated the necessity of protecting a highway crossing at the intersections of the Drummond road in the city of Eau Claire with the lines of the C. St. P. M. & O. Ry. Co. and the C. M. & St. P. Ry. Co.

The fact that a question as to whether the Drummond road is a public highway is pending before the courts will not deter the Commission from requiring the installation of such safeguards as are necessary for the immediate protection of the traveling public. If the road is finally declared by the courts to be a public highway, however, it may become necessary to make certain alterations in the crossing for the full and permanent protection of the traveling public.

Held: 1. The crossing of the Drummond road with the line of the C. M. & St. P. Ry. Co. is reasonably safe under the existing traffic conditions.

2. The crossing of the Drummond road with the line of the C. St. P. M. & O. Ry. Co. is dangerous.

It is ordered that the C. St. P. M. & O. Ry. Co. maintain a flagman at the crossing on its line between the hours of 6:15 a. m. and 6:15 p. m. daily.

The Commission being satisfied, upon investigation, that grounds exist sufficient to warrant a hearing with reference to the necessity of protection for the traveling public at the intersections of the Drummond road in the city of Eau Claire with the lines of the Chicago, St. Paul, Minneapolis & Omaha Railway Company and the Chicago, Milwaukee & St. Paul Railway Company, a hearing was ordered and held on October 3, 1913, at Eau Claire. At this hearing *A. H. Shoemaker* appeared for the city of Eau Claire, *J. B. Sheean* for the Chicago, St. Paul, Minneapolis & Omaha Railway Company, and *J. N. Davis* for the Chicago, Milwaukee & St. Paul Railway Company.

It appears from the testimony that at the crossing of the Drummond road with the line of the Chicago, Milwaukee & St. Paul Railway Company, a comparatively unobstructed view of

trains is afforded, and that conditions there are reasonably safe under the existing traffic conditions.

The crossing of the Chicago, St. Paul, Minneapolis & Omaha Railway Company's tracks with the Drummond road is located about one hundred feet west of the intersection of the two railway lines. The three tracks of the railway run northwest and southeast and the highway northeast and southwest. The highway parallels the Chicago, Milwaukee & St. Paul Railway Company's track southwest of the crossing. From the northeast highway approach the view of trains to the southeast is comparatively unobstructed, but to the northwest trains are obscured by high ground. From the southwest highway approach the view in both directions is badly obstructed by buildings so that a traveler must be very close to the tracks before he can see approaching trains. The traveled roadway is very narrow on this approach. An interlocking tower stands only fifteen feet from the track of the Chicago, Milwaukee & St. Paul Railway Company and the traveled roadway passes between them. Thus it is also necessary for a traveler to observe approaching trains on the line of the Chicago, Milwaukee & St. Paul Railway Company, which is difficult because of the parallel position of the tracks. Witnesses testified that horses have been frightened by fast trains passing close to them unexpectedly. It was also pointed out that travelers are often confused by being unable to distinguish approaching trains, and thereby become more liable to accident.

The testimony shows that the Drummond road has been used, in substantially its present location, since the construction of the Chicago, Milwaukee & St. Paul Railway Company's line after the flood in 1884. It is now traveled by farmers hauling or driving stock to the Drummond Packing Company's plant, by employes of that company and other manufacturing companies, and by a considerable number of other persons both afoot and in vehicles. The Drummond Packing Company employs from fifty to eighty persons, most of whom use this crossing frequently. A count was made for the Chicago, Milwaukee and St. Paul Railway Company on its crossing and the results introduced as follows:

	7 a. m. to 7 a. m. Sept. 23 and 24, 1913	Sept. 24 and 25, 1913
Pedestrians	25	12
Teams	34	26
Automobiles	6	10
Bicycles and motor cycles	20	6

The statement was made at the hearing that the traffic over the Chicago, St. Paul, Minneapolis & Omaha Railway Company's crossing is not materially different from that at the Chicago, Milwaukee & St. Paul Railway Company's crossing. However, the investigations of the Commission's engineer indicate that much travel which goes over the tracks at the Chicago, St. Paul, Minneapolis & Omaha Railway Company's crossing does not use the other crossing. A count was made on February 18 and 19, 1914, at the former crossing between the hours of 6 a. m. and 12 midnight with the following results:

	Feb. 18	Feb. 19
Pedestrians, adults	127	173
" children	3	4
Teams	46	102
Automobiles	10	16

Practically all of the highway traffic crossed between 6 a. m. and 7:30 p. m., and comparatively few crossings were noted after 6 p. m.

The superintendent of the Chicago, Milwaukee & St. Paul Railway Company testified that there are twelve regular train movements over that company's track, eight of which are trains operated by the Minneapolis, St. Paul & Sault Ste. Marie Railway Company. The count made by the Chicago, Milwaukee & St. Paul Railway Company shows forty-eight movements over its crossing during a period of forty-eight hours. Our engineer's count shows twelve regular trains and twelve switching movements on the Chicago, Milwaukee & St. Paul Railway Company's track during the period of observation on February 18, 1914, and twelve regular trains and eight switching movements on the following day. During the same periods the traffic on the Chicago, St. Paul, Minneapolis & Omaha Railway Company's line was as follows:

	Feb. 18	Feb. 19
Regular trains, passenger	16	16
" freight	7	6
Extra freight trains	5	10
Switching movements	31	32

On February 18 seven passenger trains, three freight trains, two extra freight trains and nine switching movements occurred after 6 p. m. On the following day seven passenger trains, one regular freight and two extra freight trains and ten switching movements were noted after 6 p. m. Because of the presence of the interlocking plant at the railway crossing the necessity of stopping trains is obviated, and they operate at relatively high speed. Several narrow escapes from accident at the crossing were reported at the hearing.

It was stated that the question whether the Drummond road has been shifted from its original location, and whether it is a public highway, is now before the courts. The Commission's decision has no reference to the merits of that controversy. It is sufficient for the purposes of this proceeding that the road is now, and has been for many years, used by the traveling public. So long as this use continues the Commission will not hesitate to require the installation of such safeguards as are necessary for the immediate protection of the public.

From a careful examination of the testimony and of the reports of three members of our engineering staff we find that the crossing of the Drummond road and the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company is dangerous to public travel, and that further protection is necessary. Pending the conclusion of the litigation with reference to the legal status of the road, temporary protection can be best afforded by stationing a flagman at the crossing. If the road is finally declared to be a public highway by the courts, however, it may become necessary to make certain alterations in the crossing for the full and permanent protection of the traveling public.

IT IS THEREFORE ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company maintain a flagman at the Drummond road crossing on its line in the city of Eau Claire between the hours of 6:15 a. m. and 6:15 p. m. daily.

VILLAGE OF SPENCER

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided March 6, 1914.

The respondent alleges that the removal of a warehouse near Clark st. in the village of Spencer and the making of other improvements render unnecessary the crossing protection required in the order issued in this matter on Sept. 9, 1913 (12 W. R. C. R. 525).

Held: The protection required by the former order is necessary. The order will therefore stand.

An order in this matter was issued on September 9, 1913 (12 W. R. C. R. 525), requiring the Minneapolis, St. Paul & Sault Ste. Marie Railway Company to maintain a flagman from 7 a. m. to 7 p. m. daily at Clark street in the village of Spencer, install an annunciator in the gateman's cabin, and install and maintain at Main street an electric gong to be controlled by the flagman at Clark street.

Under date of November 14, 1913, the respondent asked for a rehearing in the matter alleging that the removal of a warehouse near Clark street and other improvements at Spencer make unnecessary the protection prescribed in the order. This request was granted and the rehearing was held on December 16, 1913, at Spencer, *Jones Ayer* appearing for the village and *Kenneth Taylor* for the respondent.

Under date of December 22, 1913, the respondent asked permission to argue the matter before the entire Commission, and such oral argument was heard on January 13, 1914, by two members of the Commission. *Kenneth Taylor* presented the case for the respondent, but the village was not represented.

Subsequent to the hearing two members of the Commission's engineering staff made two separate investigations of the conditions at the crossings in question. A traffic count was taken on Friday, January 30, 1914, from 7:30 a. m. to 1:10 p. m. and

from 1:40 p. m. to 6:10 p. m. Movements on the railway were observed until 8 p. m. The results of the count are as follows:

Highway Traffic.

	Pedestrians.		Teams.	Automobiles.
	Adults.	Children.		
Clark street	143	179	61	3
Main street	49	41	8	1
La Salle street	1	11	17	1

Railway Traffic.

	Through Trains.		Switching Movements.	
	Passenger.	Freight.	Passenger.	Freight.
Clark street	6	18	17	53
Main street	6	18	0	30
La Salle street	6	18	0	20

Our engineers report that such protection as is given to travelers by members of the train crews while switching is in progress is very slight and is frequently entirely lacking. Both engineers who examined the crossings state that in their opinion a modification of the previous order is not justified by the existing conditions.

In the light of the reports of our engineering staff and upon a careful consideration of the additional evidence introduced at the second hearing we are of the opinion that a modification of our former order is not justified, and that the protection therein prescribed is necessary for the reasonable protection of the public. The order will therefore stand as of this date.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE VINE STREET CROSSING ON THE LINE OF THE MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY IN THE CITY OF MARSHFIELD.

Submitted Jan. 9, 1914. Decided March 6, 1914.

The Commission, on its own motion, investigated the necessity of requiring further protection at the Vine street crossing on the M. St. P. & S. S. M. Ry. in the city of Marshfield.

Held: The crossing is dangerous. The respondent is ordered to station a flagman at the crossing who shall be on duty from 6:00 a. m. to 6:00 p. m. daily.

The mayor of Marshfield, having complained informally to the Commission that a fatal accident had recently occurred at the Vine street crossing in that city and that the crossing is dangerous to public travel, and the Commission being satisfied from its own investigation that grounds existed sufficient to warrant a hearing as to the necessity of further protection at this crossing, a hearing was duly ordered and held at Marshfield, on January 9, 1914. *Albert G. Felker,* mayor, and *R. R. Williams,* city attorney, appeared for the city of Marshfield, and *W. A. Hayes* represented the Minneapolis, St. Paul & Sault Ste. Marie Railway Company.

The testimony shows that Vine street crosses four tracks on the respondent's main line and three tracks on the Nekoosa branch. The main line runs approximately east and west and is straight and level. The crossing is approximately at right angles. From the north highway approach the view to the west is obstructed by stockyards located about four hundred feet west of the crossing. A witness testified that from a point in the highway one hundred feet north of the track a train can be seen four hundred feet west if there are no cars standing on the sidetrack. He said that cars are frequently allowed to stand in a position where they obstruct the view. The east view from the north approach is relatively unobstructed, except for a warehouse located about one hundred fifty feet north of the tracks. From the south highway approach the view to the west

is limited by a coal bunker between the main line and the Nekoosa line and by the freight depot which is between five hundred and six hundred feet west of the crossing. Freight cars standing on the house track sometimes add to the obstruction in this direction. From the same approach the east view is obstructed by an oil warehouse on the railway right of way near the main line, by freight cars standing on the track, by trees, and by a barn. A map was introduced in evidence by the company, showing the limits of vision as observed by its engineer. This map shows the obstructing buildings substantially as described by witnesses for the city. The city attorney objected to the lines of vision indicated, alleging that they do not show the usual condition with regard to standing freight cars, engines on the turntable and other temporary obstructions. However, the limits of vision, as shown on this map, are of such a character as to make clear the necessity of further protection when considered in connection with the traffic conditions.

The mayor pointed out that the danger at this crossing is incurred by the proximity of the main line and the Nekoosa line. The Nekoosa line is about one and one-half feet lower than the main line and about one hundred feet distant from it. He said that it is a frequent occurrence for a team to be caught between the tracks while trains are passing on both lines, even though the driver is reasonably careful. He expressed the opinion that the removal of the oil warehouse and the installation of an electric bell would provide sufficient protection at the crossing.

Vine street is heavily traveled, especially by pedestrians going back and forth to their work morning, noon and evening. A witness estimated that there are about three hundred working people who cross at Vine street during the day. He said that a school is located about three blocks from the crossing and that from twenty-five to thirty children are obliged to cross in going to and from school. Another witness estimated the pedestrian traffic at two hundred, including from fifty to one hundred school children. On stock days traffic from the south uses this crossing. Farmers hauling their products to a cheese factory, a stave factory and a pickle factory cross at Vine street. Some travelers were said to take a longer and more indirect route in order to avoid this crossing which they regard as dangerous. A count was made at the crossing by the Commission's engineer for two days with the following results:

Period.	Pedestrians.		Teams.
	Children.	Adults.	
Feb. 26, 1914, 7 a. m. to 8 p. m.	52	134	53
" 27, 1914, 6 " " " " "	36	122	36

In his report our engineer points out that the weather during the count was very unfavorable for highway travel and expresses the opinion that the results indicate what may be regarded as about the minimum traffic.

The respondent's superintendent testified that ten regular passenger trains, ten regular freight trains and an average of less than four extra trains a day are operated over the main line, all of which stop at Marshfield. About one-half of the movements occur after dark. During the rush season there are from twenty-six to twenty-eight movements a day on the main line. On the Nekoosa line six regular trains are operated, all of which run relatively slowly because the crossing is within the yard limits. Witnesses for the city stated that considerable switching is done over Vine street, especially on the Nekoosa line.

The count taken by our engineer shows the movements over the railway lines as follows:

Period.	Through Trains.		Switching Movements.	
	Main line.	Nekoosa branch.	Main line.	Nekoosa branch.
Feb. 26, 1914, 7 a. m. to 8 p. m.	19	5	43	81
" 27, " 6 " " " " "	20	7	41	84

The mayor testified that four fatal accidents have occurred at this crossing within his memory, and other witnesses described three such accidents. Several narrow escapes were also reported.

In the light of the testimony and of the report of our engineer we find that the Vine street crossing is unusually dangerous and that further protection is necessary. While conditions could be improved by the removal of the oil warehouse, as suggested by the mayor, yet the proximity of the two lines and the fre-

quency of switching movements create a condition which could not be satisfactorily remedied by the installation of an electric bell. Travelers should be informed before crossing either track that no train is approaching on the other line. We therefore regard the services of a flagman as necessary for the proper protection of the public.

IT IS THEREFORE ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company station a flagman at the crossing on its line at Vine street in the city of Marshfield, who shall be on duty from 6 a. m. to 6 p. m. daily.

WECKS LUMBER COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Sept. 18, 1913. Decided March 7, 1914.

The petitioner asks that the respondent be required to construct, operate and maintain a spur track from the respondent's main line to the petitioner's lumberyard in the city of Racine, alleging that such a spur track is practically indispensable to the successful operation of the lumberyard, and that the construction and operation of the spur track would not be unusually unsafe and dangerous nor unreasonably harmful to the public interest. The respondent objects to the granting of the petition on the ground that the location of the spur track as prayed for by the petitioner would necessitate cutting the respondent's main track in high speed territory and operating trains against the current of traffic, thereby increasing the danger of accident. The respondent is willing, however, to install a spur track connected with its third track on the west side of its main line and opposite the petitioner's lumber yard and to establish a private crossing for the petitioner's use. The petitioner desires to have this spur track constructed if no other solution is feasible.

It is ordered: (1) that the respondent construct and maintain a spur track west of its industrial track as specified, for the use of the petitioner; and (2) that the petitioner deposit with the respondent a sum specified to pay for the construction of the spur track, or, in lieu thereof, give bond in accordance with sec. 1797—11*m*—2 of the statutes. Thirty days is considered a sufficient time within which to comply with the order.

If the respondent and the petitioner can reach some agreement relative to the extension of the east industrial track and an apportionment of the cost of the extension, or if a longer track, at an additional cost, west of the tracks is desired, the Commission will modify the present order accordingly.

The petitioner operates a lumberyard at the corner of Yout street and Douglas avenue in the city of Racine on the east side of the Chicago & North Western Railway Company's right of way. It alleges that a spur track connected with the respondent's main line and the petitioner's lumberyard is practically indispensable to the successful operation of the industry; that such a spur track will not necessarily exceed one-half mile in length; that its construction and operation will not be unusually unsafe and dangerous nor unreasonably harmful to the

public interest; and that the petitioner desires immediate connection and is ready and able to pay a proper and reasonable cost of constructing such a track. The Commission is therefore asked to require the respondent to construct, operate and maintain a spur track as described in the petition.

The respondent, in its answer, alleges that it refused the petitioner's application on the ground that the location of the spur track as prayed for would necessitate cutting the main track in high speed territory and operating trains against the current of traffic for a distance of about one mile. It states its willingness to install a switch track reaching the premises of the petitioner and furnishing it adequate service. The dismissal of the complaint is therefore asked.

A hearing was held at Racine on September 18, 1913, at which *E. R. Burgess* appeared for the petitioner and *William G. Wheeler* for the respondent.

The only question at issue is whether the construction and operation of a spur track from the main line of the railway to the petitioner's lumberyard would be unsafe and dangerous. The respondent's general manager testified that forty through passenger trains are operated over this line between Chicago and Milwaukee, passing the point in question at high speed. In order to relieve the main tracks of local freight business a third track has been built west of the main line for serving industries in this vicinity. The general manager said that in the interest of safe operation the company has persistently refused to cut the main line for spur tracks in high speed territory, and that wherever it is possible to do so existing spur tracks of this sort are being removed. The position of the railway company in this regard is approved by the Commission's engineer in his report as follows:

> "It is believed that the railway company's objection to the granting of the spur track connecting with the southbound track of their main line on the ground that the same would introduce an extra and unnecessary hazard in operation is well taken. The railway company should be assisted in discouraging this practice wherever possible."

The respondent expressed its willingness to install a spur track connected with its third track on the west side of its main line and opposite the petitioner's lumberyard and a suitable

private crossing for the petitioner's use. The cost of such a track 280 feet in length is estimated by the railway company's engineer at $962 and by the Commission's engineer at $909. The petitioner objected to this proposal because it would necessitate the constant crossing of the main line by its teams in hauling to and from the proposed spur track. It was also pointed out that such an arrangement would make impossible the use of a roller system for unloading lumber, which is more economical than the use of teams. However, in its brief, the petitioner expresses its desire for a spur track west of the third track if no other solution is regarded as feasible by the Commission, in which event it desires a longer track than that upon which the above estimates were based. The brief does not show the exact length of track desired.

A second alternate solution was suggested by the railway company, namely the extension of an existing industrial track east of the main tracks, which now terminates 3,390 feet south of the petitioner's lumberyard. The company offered to permit the use of as much of its right of way as is available for such an extension on condition that the petitioner bear the entire cost of construction and purchase any additional land necessary. The cost of this extension, not including land, is estimated by the railway company's engineer at $10,278 and by the Commission's engineer at $8,880. This proposal is entirely satisfactory to the petitioner with reference to service, but, as stated in its brief, the petitioner is not in a position to assume an expense for such service exceeding $3,000.

An order will therefore be entered requiring the railway company to construct a suitable sidetrack west of its industrial track as indicated in the map filed with the Commission by the company, dated September 20, 1913, and marked "Proposition A". If the railway company and the petitioner can reach some agreement relative to the extension of the east industrial track and an apportionment of the cost thereof, or if a longer track, at an additional cost, west of the tracks is desired, the Commission will modify this order accordingly.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, construct and maintain a spur track north of Yout street and west of its industrial track at Racine in accordance with plans shown on a map submitted

to the Commission by the respondent and now on file, designated "Proposition A", for the use of the Wecks Lumber Company.

IT IS FURTHER ORDERED, That the Wecks Lumber Company deposit with the Chicago & North Western Railway Company the sum of $909 to pay for the construction of said spur track, or, in lieu thereof, give bond in accordance with the provisions of sec. 1797—11*m*–2 of the statutes of Wisconsin.

Thirty days is considered a sufficient time within which to comply with this order.

CITY OF MONROE
vs.
ILLINOIS CENTRAL RAILROAD COMPANY.

Submitted July 31, 1913. Decided March 7, 1914.

The petitioner alleges that several highway crossings on the respondent's line in the city of Monroe, Green county, are not properly planked and surfaced and that the crossings at Payne street and Madison street are dangerous to public travel. The planking and surfacing of the streets at the crossings other than those at Madison street and Payne street have been improved to the satisfaction of the city authorities since the hearing and only the matter of adequate protection at the Madison street and Payne street crossings remains for determination.

Held: The crossings in question are dangerous. The respondent is ordered: (1) to install and maintain at the Madison street crossing an electric bell with illuminated sign, plans to be submitted for approval; or, at its option, to stop each of its southbound trains at this crossing and send a flagman ahead who shall remain at the crossing and warn travelers until the train has passed; and (2) to install and maintain at the Payne street crossing an electric bell with illuminated sign, plans to be submitted for approval; and to improve the highway approaches as specified.

The city of Monroe in Green county alleges in its petition that several highway crossings in that city on the line of the Illinois Central Railroad Company are not properly planked and surfaced and that the crossings at Payne street and Madison street are dangerous to public travel. The Commission is therefore asked to require the respondent to provide adequate protection at these crossings and for such other action as it may deem proper in the premises.

The respondent, in its answer, enters a general denial of the petitioner's allegations and asks that the complaint be dismissed.

A hearing was held at Monroe on July 31, 1913. *O. S. Rundle* appeared for the petitioners and *Jones & Schubring,* by *E. J. B. Schubring,* for the respondent.

The planking and surfacing of the streets at the crossings other than those at Madison street and Payne street have been improved since the hearing to the satisfaction of the city author-

ities. This decision will therefore refer only to the question of adequate protection at the Payne street and Madison street crossings.

Madison Street Crossing.

Madison street descends from the north on a sharp grade and crosses the respondent's line at an acute angle about four hundred feet northeast of the passenger station. The track lies in a deep cut northeast of the crossing. South of the tracks Madison street continues south, but a more traveled street runs to the southwest, paralleling the track to the passenger station. From the latter approach travelers are enabled to see for a considerable distance trains approaching through the cut from the northeast. From the north highway approach, however, the view of trains to the northeast is obstructed by the banks of the cut, until a traveler is very close to the track. The respondent's engineer testified that from a point in the highway fifty-one feet north of the track a man standing on the track six hundred feet northeast of the crossing is visible, and that from a point sixty feet north a man can be seen three hundred feet northeast on the track. Our engineer reports the limits of vision to the northeast as follows:

Point of observation in highway from track	View northeast
North 50 feet	700 feet
" 100 "	200 "
" 150 "	150 "
" 200 "	75 "
" 250 "	0 "

The view to the southwest is partially obstructed by a bill board and the station building.

Madison street is an important outlet from the city of Monroe into the country. Travel was said to be heavy, but no specific estimates of its volume were made. All of the eight regular trains which are operated over this division stop at the passenger depot. Northbound trains cross Madison street very slowly on this account. Southbound passenger trains were said to cross at a speed of about eight miles an hour, and freight trains at about six miles an hour. The respondent offered to reduce the speed of all trains or stop them at the crossing in preference to installing other forms of protection.

Payne Street Crossing.

Payne street runs east and west and the respondent's line northeast and southwest, the angle of crossing being about 37 degrees. From the west highway approach the view to the northeast is obstructed by buildings and trees. A witness stated that a traveler must be very close to the tracks to obtain a clear view of trains. The west approach is very steep, being on an 8 per cent grade. From the east highway approach the southwest view is obstructed by the banks of a cut and by houses. The limits of vision are reported by our engineer as follows:

Point of observation in highway from track	View northeast	View southwest
West 50 feet	3,000 feet	2,000 feet
" 100 "	250 "	2,000 "
" 200 "	200 "	1,000 "
East 50 "	500 "	2,000 "
" 100 "	400 "	100 "
" 200 "	350 "	0 "

Payne street is an important highway which carries the principal traffic from the territory west of Monroe into the city. No specific traffic data were introduced. Eight regular trains are operated at this point.

Counsel for the respondent called attention to an undercrossing at Cornelius street about one block distant from Payne street, and took the position that the company should not be required to protect Payne street when it has provided an undercrossing only a short distance from it. It appears from the testimony, however, that the so-called undercrossing consists of a framed trestle over a piece of low land, and that the aperture available for the use of traffic is entirely inadequate for any considerable amount of travel. Moreover, the approaches to the undercrossing are unimproved. Witnesses for the city expressed doubt as to whether the subway could be remodeled in such a manner as to give a proper vertical clearance for traffic. They also were of the opinion that even if the undercrossing should be rendered fit for use, it would still be impracticable to close Payne street to the public.

Our engineer's report shows that the total length of the trestle at Cornelius street is 69 feet, the center span under which traffic passes being 19 feet, 6 inches in length. Since the bridge is on a skew the actual horizontal clearance at right angles is

less than 12 feet. The existing vertical clearance is approximately 9 feet. The report continues as follows:

"No survey has been made of the situation; but from a rough examination of the situation on the ground, it is believed that the roadway could be graded down to afford a satisfactory vertical clearance and still provide for drainage. If this were done a grade of perhaps 7 per cent would be necessary for some 230 feet on Cornelius street which might be reduced by carrying the grading on Garden street. In this event a new center span and abutments would be necessary to provide proper horizontal clearance. A very rough estimate of the cost of such improvement, together with the cost of giving a well graded earth road from Hoard street and Galena road to Garden and Russell streets via Cornelius and Garden streets, gives a figure of $3,000."

In the opinion of our engineer the improvement of the undercrossing, as outlined above, and the closing of the Payne street crossing would result in the best permanent solution. In lieu of such action, he recommends that the aproaches to the Payne street crossing be improved so as to afford a clear roadway width of 24 feet at the crown and a grade on the west approach not to exceed six per cent, and that an electric bell and light be installed.

From a careful examination of the testimony and of the report of our engineer, we find that the crossings at Madison street and Payne street are more than ordinarily dangerous. In view of the fact that Madison street is near the passenger depot at which all trains stop, the company will be allowed the option of stopping all southbound trains at the crossing and sending a flagman ahead, or installing bell protection. It is our judgment that the installation of an electric bell would be the most economical procedure. In December 1912 (11 W. R. C. R. 151) the Commission allowed the respondent to stop all of its trains at the Division street crossing in Dodgeville in lieu of installing a bell as formerly ordered (1912, 9 W. R. C. R. 367). Under date of February 12, 1914, T. J. Foley, general manager of the Illinois Central Railroad Company, informed the Commission that the cost of stopping its train up to that date in compliance with that order is estimated at $238.80. This sum is almost sufficient to cover the initial cost of installing an electric bell.

We are not convinced that the improvement of the Cornelius street subway, involving as it does a relatively large expendi-

ture, is warranted at this time. With the increase of traffic and the improvement of the neighborhood, it will probably become necessary to remodel and use the undercrossing at Cornelius street, but under the existing conditions we feel that the travel on Payne street can be reasonably well protected by the installation of an electric bell and the grading recommended by our engineer.

IT IS THEREFORE ORDERED, That the respondent, the Illinois Central Railroad Company, install and maintain at the highway crossing on its line at Madison street in the city of Monroe, an automatic electric bell with an illuminated sign for night indication, plans for track circuits to be submitted to the Commission for approval; or, at its option, stop each of its southbound trains at this crossing and send a flagman ahead who shall remain at the crossing and warn travelers until the train has passed.

IT IS FURTHER ORDERED, That the said respondent railroad company install and maintain an automatic electric bell with an illuminated sign for night indication at the highway crossing on its line at Payne street in the city of Monroe, plans to be submitted to the Commission for approval; and improve the highway approaches so that they shall have a clear roadway width of twenty-four feet at the crown, and a grade not to exceed 6 per cent.

Ninety days is considered a sufficient time within which to comply with this order.

COMMERCIAL CLUB OF MENOMONIE

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted Oct. 21, 1913. Decided March 7, 1914.

The petitioner alleges (1) that the station facilities furnished by the respondent at Menomonie Jct., Dunn county, are inadequate; (2) that the practice of requiring passengers to board or alight from a westbound train on the north side instead of on the station side is dangerous and inconvenient; and (3) that the baggage room at the Menomonie city depot is inadequate, and asks that the respondent be required to provide adequate station facilities at Menomonie and Menomonie Jct. and to allow passengers to board and alight from westbound trains on the station side at Menomonie Jct. Menomonie Jct. is almost exclusively a transfer point. Baggage is usually transferred there on trucks and is sometimes damaged by rain and snow. At the Menomonie city station traffic conditions are such at certain seasons of the year, when students are returning to or leaving the Stout Manual Training Institute, that baggage is exposed to damage from the weather by being allowed to stand on trucks for considerable periods of time.

Held: 1. The station facilities at Menomonie Jct. are inadequate.

2. The change proposed by the petitioner in the present practice of loading and unloading westbound trains at Menomonie Jct. is not practicable from the standpoint of public safety. A suitable shelter should, however, be provided for the use of passengers obliged to wait on the north platform.

The respondent is ordered to enlarge its passenger station at Menomonie Jct. so as to provide adequate accommodation for passengers and baggage and to erect a suitable umbrella shed as specified. Plans are to be submitted for approval. Sixty days is given within which to comply with the order.

No order is issued with reference to the protection of baggage at the city station, it being understood that the respondent will provide tarpaulins and keep all baggage properly covered during the days of abnormal traffic when the baggage room may be insufficient.

The petition alleges in substance that the station facilities furnished by the Chicago, St. Paul, Minneapolis & Omaha Railway Company at Menomonie Junction in Dunn county are inadequate; that the practice of requiring passengers to board or alight from a westbound train on the north side instead of on the station side is dangerous and inconvenient; and that the baggage room at the Menomonie city depot is inadequate.

The Commission is therefore asked to require the respondent to provide adequate station facilities at Menomonie and Menomonie Junction, and to allow passengers to board and alight from westbound trains on the station side at Menomonie Junction.

No formal answer was filed by the respondent.

A hearing was held on October 21, 1913, at Menomonie, Wis. *J. R. Mathews* appeared for the petitioner and *R. L. Kennedy* for the respondent.

Menomonie Junction.

Menomonie Junction is the terminus of a branch line connecting the city of Menomonie with the respondent's main line. The testimony shows that the depot contains a waiting room for women which is 13 feet 8 inches wide and 19 feet 6 inches long, and a waiting room for men which is 14 feet wide and 19 feet 6 inches long. These waiting rooms have a seating capacity of thirty-four. They are heated by a stove connected by an open passage. At the end of the building is a baggage room 11 feet wide and 19 feet 6 inches long. Witnesses stated that the windows cannot be readily opened, and that the waiting rooms are often poorly ventilated and in an unsanitary condition. The rooms were said to be frequently crowded beyond their seating capacity. One witness estimated that an average of about two hundred passengers a day use this depot, and stated that on many occasions as many as one hundred passengers wait for a train. The only toilet facilities provided are outside earth closets.

The respondent's superintendent took the position that the situation at Menomonie Junction is peculiar, in that it is almost exclusively a transfer station at which trains usually make close connections. He suggested that the need for a larger station with toilet facilities could be obviated by allowing the branch line trains to wait at the station until the main line trains with which they connect arrive. Witnesses for the peitioner testified that this arrangement would improve conditions. However, it was pointed out that close connections are not always made.

A study of the traffic conditions at Menomonie Junction was made by the Commission's engineer on December 10 and 11, 1913, and January 30 and 31 and February 1 and 2, 1914. The greatest congestion at the station occurred in the evening at the arriv-

al of trains number 7, number 8 and number 1 on the main line. The number of persons using the station at such times for three days are shown in the following table:

Date.	Train No. 7.		Train No. 8.		Train No. 1.	
	Number using station.		Number using station.		Number using station.	
	Before arrival.	After departure.	Before arrival.	After departure.	Before arrival.	After departure.
Jan. 30, 1914.....	.....	.....	68	.....	.....	81
" 31, "	.....	.....	55	.....	60	80
Feb. 1, "	50	65	72	74	74	81

The engineer points out in his report that, assuming proper ventilation, the existing depot will seat thirty-four persons and accommodate thirty-six with standing room, making its total capacity seventy. It will be noted from the above table that the total seating and standing capacity was exceeded by the demand for accommodations on four different occasions during the period of observation. The observations were made a week after the opening of the Stout Manual Training Institute when the rush of returning students was passed, and when the travel from the school would naturally be normal.

It appears from the testimony that baggage is usually transferred at Menomonie Junction on trucks, without having been stored in the baggage room. Since no shelter on the platform is provided, baggage loaded on trucks is sometimes exposed to rain or snow and damaged thereby. It was suggested that baggage might be suitably protected at such times by the use of tarpaulins. Our engineer recommends that a portion of the station platform be provided with a covering to shelter truckloads of baggage between transfers.

Under the existing operating rules at Menomonie Junction, passengers are obliged to board or alight from westbound main line trains on the north side of the tracks, the station being located south of the tracks. Those desiring to board a westbound train are obliged to cross the tracks when the train becomes visible about a mile distant and wait on the exposed platform until it arrives. This was said to necessitate a wait of from two to four minutes. It was pointed out by witnesses that the prac-

tice of crossing in front of a train is a dangerous one, and a number of narrow escapes resulting from this practice were described. Passengers leaving a westbound train are compelled to wait on the open platform until the train leaves, or walk around the rear car. A witness for the petitioner asserted that it is a common practice to unload passengers on the depot side at other stations on the respondent's double track lines, and expressed the opinion that it could be safely done at Menomonie Junction. The company's superintendent stated that such a rule is followed at some of its stations, but that in each case there are peculiar circumstances which do not exist at Menomonie Junction. He said that a rule is now in effect which requires trains to stop while another train is loading or unloading passengers, and not attempt to pass it, but admitted that this rule may no be rigidly adhered to, through the neglect of trainmen or possibly through physical inability to stop a train in time. The failure to stop under such circumstances would be likely to result in a serious accident. In the opinion of the superintendent the present method of loading is the safest which could be adopted. Observations made by our engineer show that passengers are now obliged to wait on the unsheltered platform for periods ranging from thirty seconds to seven minutes in duration. Our chief engineer expresses the opinion that it would be a dangerous practice to allow passengers to enter and leave westbound trains on the south side unless a suitable island platform between the tracks is provided. He suggests the retention of the existing practice and the erection of an umbrella shed north of the tracks for the use of westbound passengers.

Baggage Protection at Menomonie City.

The testimony shows that the baggage room at the city depot is sufficient under normal conditions of travel, but that at certain seasons of the year when students are returning to or leaving the Stout Manual Training Institute, there is not sufficient space. It was stated that at such times baggage is allowed to stand on trucks for considerable periods, exposed to the weather, and that some damage has resulted from this cause. The respondent's superintendent suggested that this matter could be taken care of by the use of tarpaulins at such times, and this plan was approved by witnesses for the petitioners.

From a careful examination of the testimony and of the re-

ports of our engineering staff we find that the station facilities at Menomonie Junction are inadequate. Proper ventilation should be provided, and the men's waiting room should be enlarged by using some of the space now occupied by the baggage room. A shelter should be erected over a part of the platform to protect baggage while it is standing on trucks awaiting transfer. While there are some advantages to be derived from allowing the branch line trains to stand at the station, as suggested, so that passengers may use the conveniences which they offer, there are serious objections to the plan. At a transfer point of the importance of Menomonie Junction better toilet facilities than those now furnished are certainly necessary, and the company will be expected to find some method of materially improving conditions in this regard.

With reference to the practice of unloading and loading westbound trains north of the tracks, we are convinced that the change suggested by the petitioner is not justified from the standpoint of public safety, when viewed in the light of the traffic conditions. Nor should the present method result in serious inconvenience, since practically all persons using westbound trains change cars at this point and are therefore not delayed in reaching their destinations by being obliged to wait a few minutes on the westbound platform. However, it is unreasonable to require passengers to wait from two to seven minutes on the north platform without shelter, and a suitable umbrella shed should be provided for their use. The erection of such a structure will probably necessitate moving the north passing track a short distance.

No order will be issued with reference to the protection of baggage at the city station, it being understood that the company will provide tarpaulins and keep all baggage properly covered during the days of abnormal traffic when the baggage room may be insufficient.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, enlarge its passenger station at Menomonie Junction so as to provide adequate accommodation for passengers and baggage, and erect a suitable umbrella shed at least two hundred feet in length on the westbound platform. Plans are to be submitted to the Commission for approval.

Sixty days is considered a sufficient time within which to comply with this order.

TOWN OF ALMENA

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF BARRON'S CROSSING ABOUT TWO AND ONE-HALF MILES SOUTHWEST OF COMSTOCK ON THE LINE OF THE CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided March 7, 1914.

The Commission, on its own motion, investigated the advisability of relocating the highway at Barron's crossing on the C. St P. M. & O. Ry. in the town of Almena. The town board and the railway company had agreed upon such a relocation after a hearing in a previous proceeding instituted by the town, but, owing to a disagreement between the town and the owner of the land necessary for the new highway, the relocation had not been effected. Since the previous proceeding was initiated authority has been given the Commission by ch. 603, laws of 1913, to order the closing of a grade crossing and the substitution of another therefor at grade, if found necessary in the interest of public safety.

Held: The relocation of the highway is necessary for public safety. It is ordered: (1) that the railway company construct, as specified, a new crossing and a new highway connecting this crossing with the existing highway; (2) that the railway company furnish all necessary labor and material, acquire all necessary land and perform all necessary work in making the alteration ordered, and that the town of Almena, upon the completion of the work, pay to the railway company the actual cost of the land acquired for relocating the highway, all other costs to be borne by the railway company; and (3) that upon the opening of the new crossing for public travel the portion of the highway lying within the railway right of way lines at the existing crossing be closed and continuous fences erected by the railway company to prevent its use by the public. The alterations ordered are to be completed and the new crossing is to be opened by July 1, 1914.

Under date of September 10, 1912, the town of Almena filed with the Commission a complaint alleging that a highway crossing on the respondent's line, known as Barron's crossing, is unsafe and dangerous to public travel, and asking that the respondent be required to properly safeguard the crossing.

The respondent, in its answer, admits that the crossing is more

or less unsafe and dangerous to public travel and suggests that it may be made less dangerous by relocating the highway so that it shall run outside of the right of way and east thereof, a distance of about eight hundred feet to mile post number 47 and there cross the right of way.

A hearing was held on November 29, 1912, at Turtle Lake, *W. A. Gierhart* appearing for the petitioner and *C. D. Stockwell* for the respondent.

Subsequent to the hearing a conference was held between the town board, the railway company and an engineer of the Commission, at which it was agreed that the crossing should be relocated about 330 feet southwest of its present site, the town to acquire the required land and the company to perform all of the necessary work. Under date of January 5, 1914, the Commission was informed by Henry H. Carsley that the proposed relocation had not been effected. The legislature of 1913 having in the meantime empowered the Commission to order the closing of a grade crossing and the substitution of another therefor at grade, if found necessary in the interest of public safety (ch. 603, laws of 1913), a hearing on motion of the Commission was duly ordered and held at Comstock and, as adjourned, at Turtle Lake on January 26, 1914, *W. A. Gierhart* appearing for the town of Almena and *R. L. Kennedy* for the Chicago, St. Paul, Minneapolis & Omaha Railway Company. At this hearing the testimony taken in the earlier case was placed in evidence.

The testimony shows that the relocation of the highway, agreed upon at the conference referred to above, has not been effected, owing to a disagreement between the town and the owner of the land necessary for the new highway.

The company has admitted that the crossing is dangerous and it is therefore unnecessary to review at length the testimony with reference to its dangerous characteristics. The chief source of danger is the badly obstructed view of trains from the east highway approach. A rural mail carrier who crosses every day testified that from this approach it is impossible to obtain a view of trains until a traveler's horse is within about four feet of the rail. The view to the north is limited by an earth bank ten feet in height and by brush and trees. To the south a similar bank obstructs the vision. From the west highway approach the view is comparatively unobstructed. The track curves a short

distance north of the crossing and about one-fourth of a mile south, and this condition was said to increase the danger from trains. The road is an important highway connecting Comstock and Cumberland. Witnesses estimated that it is traveled by from ten to forty teams a day. Several narrow escapes from accident were described.

The site selected for the new crossing is now the private crossing of the owner of the required land who resides near it. He testified that the proposed road would encroach to some extent upon his garden tract, and for that reason objected to the change, but we believe the benefits to be derived from a public crossing, which would relieve him of the necessity of operating and closing gates in going to and from his property on the opposite side of the railway line is of some benefit to him.

It is evident from the testimony and from the reports of our engineering staff that the crossing in question is unusually dangerous. It is also apparent, in view of the amount of travel and the physical surroundings, that the relocation of the highway, as agreed upon at the conference referred to above, is necessary for public safety.

IT IS THEREFORE ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company construct a highway crossing about 330 feet southwest of the existing Barron's crossing and construct a new highway east of the railway connecting the existing highway and the new crossing.

IT IS FURTHER ORDERED, That the said railway company furnish all necessary labor and material, acquire all necessary land and perform all necessary work in making the alteration ordered herein, and that the town of Almena, upon the completion of the work, pay to the said railway company the actual cost of the land acquired for relocating the highway, all other costs to be borne by the railway company.

IT IS FURTHER ORDERED, That upon the completion of the new crossing and the opening of the same for public travel, the portion of the highway lying within the railway right of way lines at the existing Barron's crossing be closed, and the said railway company is hereby directed to enclose the same with continuous fences so that it cannot be used by the public.

July 1, 1914, is considered a reasonable date at which the alterations ordered herein shall be completed and the new crossing opened for public travel.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF AN ALLEGED VIOLATION OF CHAPTER 610 OF THE LAWS OF 1913, BY THE LISBON TELEPHONE COMPANY.

Submitted Jan. 13, 1914. Decided March 10, 1914.

The Commission, on its own motion, investigated an informal complaint made by the Pewaukee-Sussex Tel. Co. that the Lisbon Tel. Co. had violated ch. 610, laws of 1913. It appears that the Lisbon Tel. Co. in the fall of 1913 extended its line along the Lisbon Plank Road in the town of Lisbon without filing notice, as required by the law cited, with the Commission and with the Pewaukee-Sussex Tel. Co., which was already operating a line for local service along the road named. This violation of law seems, however, not to have been willful and the matter of the extension is therefore considered as if the case were before the Commission in the manner contemplated by the statute. The extension is desired by certain residents along the Lisbon Plank Road who allege that the Lisbon Tel. Co. is in a position to afford them more direct connection and better service to the village of Sussex than is the Pewaukee-Sussex Tel. Co.

The fact that slightly quicker service may be obtained if a duplication of lines is permitted is not necessarily sufficient to justify such duplication.

Held: The extension in question, so far as it reaches the Lisbon Plank Road and residences along the road, is not required by public convenience and necessity and is in existence in violation of law. Though the Commission apparently has no authority to order the Lisbon Tel. Co. to cease giving service to subscribers along the road named, the failure of the company to discontinue such service will render the company liable to prosecution.

If the service furnished by the Pewaukee-Sussex Tel. Co. is inadequate recourse should be had to the remedies provided by law before resorting to the duplication of existing equipment.

This case arises from an informal complaint made to the Commission by the Pewaukee-Sussex Telephone Company to the effect that the Lisbon Telephone Company in the fall of 1913 extended its line to the town of Lisbon, Waukesha county, in a manner contrary to chapter 610 of the laws of 1913. The illegality of the extension as alleged consisted in the failure to file notice with the Commission and with the Pewaukee-Sussex Telephone Company as required by the law and the consequent inability of the Pewaukee-Sussex Telephone Company to appear before

the Commission and offer its objection to the extension. Upon receipt of this informal complaint, the Commission undertook an investigation on its own motion into the matter and held a hearing on the matter at Pewaukee, January 13, 1914. At the hearing the Pewaukee-Sussex Telephone Company was represented by *Alex Caldwell,* and the Lisbon Telephone Company by *Henry Lockney.*

The fact of the violation of ch. 610 of the laws of 1913 by the Lisbon Telephone Company is undisputed. The extension in question was constructed in the town of Lisbon in the fall of 1913 and a telephone instrument was installed in the residence of Paul Mamerow in November of that year. The Pewaukee-Sussex Telephone Company is operating lines for local service in the town of Lisbon, so that its right under the law to object to the extension is clear. It appears that the Lisbon Telephone Company in making the extension was under a misapprehension as to the meaning of the law on the subject.

Since the fact that the Lisbon Telephone Company having made the extension without authority of law is clearly established, the extension of the new line and the rendering of service to subscribers upon it is technically illegal. It seems to us, however, that the best course to pursue in this case, in the absence of any indication of willful violation of the law, is to consider the case upon its merits as though the matter were properly before the Commission in the manner contemplated by the statute.

The territory involved in this case is, roughly speaking, that which lies between the villages of Pewaukee and Sussex. These two villages are five or six miles apart and are connected by a telephone line of the Pewaukee-Sussex Telephone Company. About one and one-half miles south of Sussex and something like four miles north of Pewaukee this line crosses an important east and west highway known as the Lisbon Plank Road. In addition to the north and south line from Pewaukee to Sussex, the Pewaukee-Sussex Telephone Company has a line running easterly along this Lisbon Plank Road for a distance of several miles and serving a number of farmers along the highway. The Lisbon Telephone Company has its headquarters at Sussex and has lines radiating mostly to the north and east of that point. One of its lines extending east from Sussex parallel to the Lisbon Plank Road and about a mile and a half north of it is the line in

question, which was extended in the fall of 1913 down to the Lisbon Plank Road. Mr. Mamerow, to whom this line gives service, resides along the plank road and the line of the Pewaukee-Sussex Telephone Company runs past his residence, but he has never been a user of that company's service. Across the plank road from Mr. Mamerow's residence is that of George F. Stiehl, who has had Pewaukee-Sussex service, but would have changed to the Lisbon Company's new line had not the present investigation interfered. The Lisbon Telephone Company introduced the testimony of other persons living along the Lisbon Plank Road who indicated a desire to have Lisbon Telephone company service if possible, but were not at the time of the hearing users of any service at all.

The main reason stated by the various witnesses for the Lisbon Telephone Company for their desire to have that company's service instead of the Pewaukee-Sussex service was that the Lisbon Telephone Company's line ran directly to the village of Sussex, where their business interests lie. The Lisbon Plank Road is nearer to Sussex than to Pewaukee, and the necessity of a ringing into the Pewaukee switchboard and being switched onto a line from Pewaukee to Sussex was claimed to give rise to considerable inconvenience. If the Lisbon Telephone Company's service could be procured by the residents on the plank road they could ring directly into the Sussex exchange on that company's line. There was also some testimony as to poor service on the Pewaukee-Sussex line to residents along the plank road. One witness, in fact, had removed his Pewaukee-Sussex instrument a year or so ago because, as he testified, it was out of order so much of the time as to be practically useless to him.

It seems that the main difficulty with the telephone situation along the Lisbon Plank Road is that the residents along the road, in order to reach Sussex, have to call the Pewaukee exchange and then be switched onto the line connecting Pewaukee and Sussex. This line is not a clear line, but has four subscribers attached. It is therefore evident that subscribers who are themselves located on loaded farm lines must be first connected with a line carrying four subscribers, and must then obtain further connection at the Sussex end of the line with the persons they desire to reach in Sussex. Under these circumstances, they are quite likely to find one of the three lines busy. If the plank road residents were on the Lisbon Telephone Company's line this chance would be somewhat reduced, owing to the fact that

they would call the Sussex exchange direct and would not have to go over the Pewaukee-to-Sussex line, which now has subscribers of its own.

This is a difficulty which can easily be remedied. The Pewaukee-Sussex Telephone Company is required by law to give reasonably adquate service and the Commission has now under consideration a series of rules laying down standards of adequacy of telephone service. These rules, it is expected, will contain provisions regarding the loading of lines and the kind of connection that is to be made between villages and cities. When these rules are promulgated it will be an easy matter to determine to what extent, if at all, the service of the Pewaukee-Sussex Telephone Company falls short of the standard and to take steps toward a correction of the difficulty. Or, if the service is sufficiently unsatisfactory to make a formal complaint to this Commission worth while, the entire matter of the company's service may be gone into upon a separate investigation. In any case, it would seem that whatever defects there may be in the service should be taken care of in the regular course provided by law unless they are so glaring or so impossible of correction that the usual measures for forcing adequate service will not prove effective. The building of a duplicate line in such a way as to cover territory already fully covered by an existing company is not easily justified, and certainly the amount of deficiency in service which has been disclosed by the testimony in this case is not sufficient to warrant a drastic remedy of duplication in advance of any attempt to correct the service in the more usual way.

It is not to be denied that those persons living along the Lisbon Plank Road and desiring telephone connection with Sussex would find it somewhat more convenient to be able to ring Sussex exchange directly from their instruments instead of ringing Pewaukee and then being switched to the Sussex exchange. This is really only a matter of slight inconvenience, however, when compared with the great public convenience which is subserved by the prevention of unnecessary duplication of telephone lines. If duplication were to be permitted on account of slightly quicker service to be obtained by ringing Sussex directly, there would be few cases of proposed duplication of lines that would not be permitted to proceed. The question of rates does not enter into this case, since the Pewauke-Sussex Telphone Company's service from Pewaukee to Sussex is furnished without any toll charge,

and it therefore costs no more to reach Sussex over that company's line than it would if the Lisbon Telephone Company were permitted to extend to the plank road.

It appears to us that this is a case in which, if the Lisbon Telephone Company had filed its notice with the Commission in the manner required by law, the Commission would have found that public convenience and necessity do not require the proposed extension. The company would not, therefore, have been legally entitled to proceed with the extension. The company should not, of course, be entitled to any greater privilege because it went ahead in violation of law than it would have had had it proceeded in conformity with the law. Chapter 610 of the laws of 1913 prescribes a specific procedure to be followed in the case of telephone extensions, and makes no provision for a case like the present, where the extension is made in violation of the statute. It does not appear, therefore, that we have authority to make an order requiring the Lisbon Telephone Company to remove its line, to discontinue giving service to Mr. Mamerow, and to refrain from installing service in the residence of Mr. Stiehl. The same result will probably be reached, however, by our statement that public convenience and necessity do not require the extension and that it exists in violation of law. Therefore, unless the Lisbon Telephone Company discontinues service to Mr. Mamerow and refrains from serving Mr. Stiehl, the way will be open for a prosecution.

Some mention was made at the hearing of a proposition on the part of the Lisbon Telephone Company to buy from the Pewaukee-Sussex Telephone Company its line along the Lisbon Plank Road. We do not know whether negotiations toward this end have proceeded since the time of the hearing or not, but we have assumed that the relation between the companies at this date are the same as existed at the time of the hearing.

The Lisbon Telephone Company's extension to the plank road appears to be about one mile in length. What we have said regarding the merits of the matter applies only to that portion of the extension which reaches the Lisbon Plank Road and residences along that road. As far as the evidence goes, we see no reason why the northerly part of the extension should not be permitted to remain in existence if the company can obtain subscribers enough to make it worth while. It is very clear to us, however, that neither Mr. Mamerow nor Mr. Stiehl should be given service by the Lisbon Telephone Company.

RUSK BOX AND FURNITURE COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided March 11, 1914.

The petitioner alleges that the charges exacted from it by the respondent on the basis of the regular lumber distance tariff for the movement of ten carloads of lumber within the village of Hawkins are excessive to the extent that they exceed charges based on the switching rate put into effect for such services after the shipments in question moved, and asks for refund. The respondent is willing to make the reparation claimed.

Held: The distance tariff rate was an exorbitant charge. Refund is ordered on the basis of the switching charge now in effect, which would have been the reasonable charge for the services rendered.

The petitioner is a corporation engaged in the manufacture of boxes and other articles at Hawkins, Wis. It alleges that on and between April 2 and May 27, 1913, inclusive, it shipped ten carloads of lumber from the Ellingson Lumber Company's yards at Hawkins to its factory situated within the limits of the village of Hawkins, upon which the respondent exacted charges at the regular lumber distance tariff rate of 3 cts. per cwt., which amounted on said shipments to $90; that the charges thus exacted were excessive, as the service rendered was a switching service; that the reasonable rate for such service was $5 per car; that the respondent, subsequent to said shipment, made effective a rate of $5 per car applicable to shipments of lumber between points within the village of Hawkins; and that as a result of not having in effect any such switching charges of $5 per car, the complainant was obliged to pay an excessive charge of $4 per car on the aforesaid shipments. The petitioner therefore prays that the respondent be required to refund to it the sum of $40.

The respondent railway company admits the allegations of the complaint and expresses its willingness to make reparation in the sum asked if authorized to do so.

The matter was submitted upon the pleadings, documents and schedules on file.

It appears that the petitioner shipped ten carloads of lumber as alleged and paid for the transportation service the sum of $90. This was based on a weight of 30,000 lb. per car at 3 cts. per cwt., which was the lawful rate in effect at the time the shipments moved. Effective May 31, 1913, in respondent's tariff supplement No. 5 to G. F. D. No. 15585, a rate of $5 per car was published to apply on box lumber switched at Hawkins from the Ellingson Lumber Company's track to the Rusk Box & Furniture Company's plant. This change in rate is covered by the Commission's approval No. A–1665, issued May 16, 1913. From the respondent's application for the approval of the said change, as well as from correspondence concerned in the instant case, it appears that the $5 rate provided in the supplemental tariff was intended to apply to the shipments involved, as well as to the future shipments of the same kind, but was published too late to be lawfully applicable to the shipments in question As a result, the petitioner was obliged to pay $4 per car, or $40, for the transportation services rendered in excess of what it would have been obliged to pay had the $5 per car rate been in effect at the time the shipments moved. It is apparent that the distance tariff rate was an exorbitant charge and therefore refund will be awarded on the basis of the present tariff.

We therefore find and determine that the charge of 3 cts. per cwt., exacted of the petitioner on the aforesaid shipments of lumber from the Ellingson Lumber Company's yards to the petitioners plant in the village of Hawkins, is unusual and exorbitant, and that the reasonable charge for the transportation services rendered is $5 per car.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, be and the same is hereby authorized and directed to refund to the petitioner, the Rusk Box & Furniture Company, the said sum of $40.

BROWNDEER LUMBER AND FUEL COMPANY
vs.
GREEN BAY AND WESTERN RAILROAD COMPANY.

Decided March 11, 1914.

The petitioner complains of the rate of 9 cts. per cwt., exacted by the respondent for the transportation of five carloads of slab wood from New London to La Crosse, and asks for refund on the basis of a rate of 4½ cts. per cwt. applying on fuel wood over other lines for a like distance and put into effect by the respondent since the shipments in question moved. The respondent is willing to make refund.

Held: The rate complained of was unusual and excessive. Refund is ordered on the basis of the rate now in effect which would have been the reasonable charge for the services rendered.

This is a complaint against the rate and charges on five carloads of slab wood, shipped from New London to La Crosse during the period December 13, 1913, to December 23, 1913, on which charges were assessed on 211,500 lb. at the rate of 9 cts. per 100 lb., amounting to $190.35. Refund of $95.17 is asked, based on a rate of 4½ cts. per 100 lb. applying on fuel wood over other lines for a like distance, 200 miles, and also established by the respondent on slab wood February 25, 1914, in its tariff G. F. D. No. 6054.

The respondent admits that the rate and charges complained of are excessive and is willing to make refund, if so authorized by the Commission, on the basis of rates published in the tariff named.

From the Commission's files of tariffs, and from correspondence connected with the complaint under investigation, it appears that the charges complained of are excessive and that charges based on rates named in the tariff referred to above would be reasonable. No freight bills or other evidence of shipments as alleged in the petition were filed in the case. The petition, however, gives a list of shipments as follows:

Dec.	13,	1913,	G. B. & W.,	Car No.	473,	Weight	43,800 lb.
"	13,	"	C. M. & ST. P.,	"	500462,	"	36,000 "
"	16,	"	G. B. & W.,	"	471,	"	41,600 "
"	16,	"	"	"	445,	"	41,900 "
"	23,	"	"	"	449,	"	48,200 "

The distance from New London to La Crosse via the respondent's line is 200 miles. The repondent's tariff G. F. D. No. 6054, referred to above, names rates of 4½ and 7 cts. per 100 lb. applying on slab wood for a distance of 200 miles, for alternate use, according to whichever rate results in lower charges, subject to a different set of minimum weights, based on length of car used, for each rate. The four G. B. & W. cars listed above are 35 feet 8 inches and the C. M. & St. P. car 41 feet 5 inches in length. Shipments in cars 35 feet 8 inches in length are subject to minimum weight of 30,000 lb. at the 7 ct. rate or 50,000 lb. at the 4½ ct. rate, and shipments in cars 41 feet 5 inches in length to minimum weight of 36,000 lb. at the 7 ct. rate or 60,000 lb. at the 4½ ct. rate. Charges on the shipments listed, based on these rates, would amount to $117, at a minimum weight of 50,000 lb. per car on the G. B. & W. cars and 60,000 lb. per car on the C. M. & St. P. car and a rate of 4½ cts. per 100 lb. making excessive charges $73.35, instead of the $95.17 stated in the petition, which was arrived at by ignoring the minimum weights applying in connection with the rate named. If upon presentation to the railway companies the freight bills show the payments as alleged in the complaint, the railway company should refund to the respondent the sum of $73.35, as herein found to be an excessive charge.

Under the circumstances stated, we find and determine that the rate of 9 cts. per 100 lb., exacted of the petitioner by the respondent railway company on the aforesaid shipments of slab wood from New London to La Crosse, is unusual and excessive, and that the reasonable rate for such services is that provided in respondent's tariff G. F. D. No. 6054 above mentioned.

NOW, THEREFORE, IT IS ORDERED, That the Green Bay & Western Railroad Company be and the same is hereby authorized and directed to refund to the Browndeer Lumber and Fuel Company the aforesaid sum of $73.35.

IN RE APPLICATION OF THE GRIEB AND GREENE COMPANY FOR A DEALER'S LICENSE, PURSUANT TO CHAPTER 756 OF THE LAWS OF 1913.

Decided March 13, 1914.

The Grieb & Greene Co. of Milwaukee apply for a license to deal in securities as provided in ch. 756, laws of 1913. F. W. Snook & Co. of Milwaukee enter protest against the granting of the application, alleging in effect that the applicant is not qualified to receive such a license. Although not required by law in a case of this kind, a hearing was held for the purpose of obtaining sworn testimony.

Held: The testimony does not disclose any transactions between the applicant and its customers, or any other dealings of the applicant, which would justify the Commission in refusing to grant it a dealer's license in accordance with the provisions of ch. 756, laws of 1913. A license will therefore be issued.

On January 2, 1914, the Grieb & Greene Company, a corporation located in the city of Milwaukee, filed with the Commission an application for a license to deal in securities as provided in ch. 756 of the laws of 1913.

Under date of January 8, 1914, a protest against the granting of this application was made to the Commission by F. W. Snook & Co., a copartnership located in the city of Milwaukee, alleging as the basis for such protest the following:

1. General misrepresentations made by members of the firm and their employes to purchasers of securities.

2. Misrepresentation to clients who have placed securities with the firm for sale as to the price obtained for said securities.

3. Failure to state facts, or what might be called silent misrepresentation by agents of the firm as to whom they represent, for the purpose of inducing a sale or sales of securities, leaving the impression on the part of the purchaser that he is dealing with another firm.

4. The making by a member of the firm of false statements with reference to a member of a competitive firm with the design to injure the competitive firm in its business.

This proceeding is instituted under ch. 756, laws of 1913, which at subsec. 4 of sec. 1753-50, provides as follows:

"No such license shall be issued to any dealer or proposed dealer whose business is so conducted as to deceive or mislead investors or the public, nor unless its business is conducted in all respects in good faith and in compliance with law; and whenever the contrary shall appear to said commission the license therefore issued shall be revoked."

The Commission is not required to hold a public hearing for the purpose of investigating the qualifications of an applicant for a dealer's license, but in view of the nature of the protest and the allegations made therein, it was deemed advisable in this particular case to hold such a hearing in order to obtain sworn testimony upon which to determine the merits of the application. A hearing was therefore ordered and held at Milwaukee on February 9, 1914, and, as adjourned, on February 17, 1914. *J. W. Wegner* appeared for the applicant and *L. B. Lamfrom* for the objector.

The testimony shows that F. W. Snook was formerly employed by the Grieb & Greene Company. After he severed his connection with the applicant and established a copartnership of his own, a sharp rivalry developed between the two companies. The protest in this case appears to be largely the outgrowth of the ill feeling resulting from this rivalry. The Commission has given little consideration to the personal relations between the applicant and the objector, nor has it given weight to the numerous statements made from hearsay by witnesses. Only such portions of the testimony will be reviewed, therefore, as relate to the dealings of the applicant with its customers and the public. An examination of the testimony shows only two specific transactions to which it is necessary to direct attention in this decision.

The first relates to the sale of forty shares of stock of the Standard Separator Company in the spring of 1912. Cornelia S. Kneeland testified that Mr. Grieb of the applicant company agreed to sell this stock for her on a commission basis, and that she consented to its sale at $65 per share. The forty shares were held for her by J. W. Dorsey, who delivered only thirty shares to the applicant, refusing to deliver the other ten shares which he held as collateral with Miss Kneeland's consent. He ultimately purchased them from Miss Kneeland himself for $65 per share. No deduction was made for commission on the sale of the thirty shares, and no bill for commission was presented by the applicant. Miss Kneeland testified that she did not tender

payment for the commission on the thirty shares delivered, supposing that the entire commission would be deducted from the price of the remaining ten shares which were to be delivered later. Mr. Grieb testified that he bought the forty shares outright from Miss Kneeland and that he made no arrangement with her to sell the stock on a commission basis. Mr. Dorsey testified that on the day that Miss Kneeland came to an agreement with the applicant, Mr. Grieb telephoned him that he had purchased the stock in question. Within a half hour Miss Kneeland telephoned Mr. Dorsey as follows:

"Mr. Dorsey, I have sold my stock to Mr. Grieb of Grieb & Greene Company for $65 a share; will you please deliver the stock to him and collect for same."

Miss Kneeland stated that she subsequently learned that Mr. Grieb sold the stock for $85 per share, and that she thereupon brought suit to recover the difference between the amount paid her and the price at which the stock was sold, which suit is now pending. F. W. Snook, who was at that time an agent for the applicant, testified that Mr. Grieb told him that "we" sold Miss Kneeland's stock to Grant Fitch for $85 per share. Mr. Grieb, however, testified that he sold the thirty shares in question to Dr. Jillson for $72 per share. Dr. Jillson testified to this transaction, and exhibited the canceled check for $2,160 given in payment. He stated that he sold the stock for $85 per share to Grant Fitch or Mr. Lombard and retained the profits. He asserted that he did not act as the agent of the Grieb & Greene Company in this sale. No evidence was introduced to show that applicant has been accustomed to buy and sell stock for customers upon a commission basis.

The second specific transaction concerns the sale of ten shares of American Timber Holding preferred stock to Dr. W. H. Folsom of Markesan in November, 1913. Dr. Folsom, in an affidavit submitted in evidence without objection, states that he arranged to purchase the stock from F. W. Snook & Co. and sent a check for $975 in payment to the Wisconsin National Bank, having been informed that the stock would be delivered there on receipt of the money. The following day his check was returned and F. W. Snook telephoned him that the transfer of the stock could not be made at that time, and that he was investigating the title to the cumulative dividends on it. Dr. Folsom states further that on the following day Wm. R. Batin called at his

office, representing himself to be the owner of the stock, and offering to sell it to him direct. Dr. Folsom then notified F. W. Snook of this proposal, and was requested by him to withhold payment until advised further. Upon advice from J. D. Thomsen of F. W. Snook & Co., that the difficulty in transfer had been adjusted, the stock was delivered.

F. W. Snook testified that in answer to an advertisement by his company that it would buy American Timber Holding preferred stock, one Geo. Stuempeley, who was engaged in the roofing business and who has an office near that of the applicant, offered to sell ten shares of this stock, which offer was accepted by F. W. Snook & Co., but was later refused because Stuempeley would not sign a statement that its title was unincumbered and that it carried accumulated dividends. Subsequently the same stock was sold to Dr. Folsom by Wm. R. Battin, a field agent of the applicant company. Mr. Grieb testified that he had no knowledge as to what representations Mr. Battin made to Dr. Folsom. No evidence was introduced to show that Mr. Stuempeley acted as the agent of the applicant in this transaction, nor was it shown where the applicant obtained the stock which Mr. Battin sold to Dr. Folsom. The transfer of the stock was stopped by the secretary of the company upon request of F. W. Snook & Co. The matter was adjusted by the payment of $40 to F. W. Snook & Co. by the applicant, after which the stock was delivered to Dr. Folsom.

The president of the Grieb & Greene Company testified that the corporation was established in 1906, and that it does a general brokerage business in unlisted securities. In its advertising the company specifies the number and kind of securities offered for sale and the price at which it will sell them, and states that it will buy at spot cash certain specified securities, no price being named. He stated that the volume of business transacted by by the company in a month approximates $100,000. The representative of a Seattle firm, which has had dealings with the Grieb & Greene Company, testified that the business transacted between the two companies has been entirely satisfactory.

In our judgment, the testimony does not disclose any transactions between the Grieb & Greene Company and its customers, or any other dealings of that company, which would justify the the Commission in refusing to grant it a dealers' license in accordance with the provisions of ch. 756 of the laws of 1913. A dealers' license will therefore be issued to the applicant.

HORICON ADVANCEMENT ASSOCIATION
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Nov. 4, 1913. Decided March 14, 1914.

The petitioner alleges that the respondent's station facilities at Horicon, Dodge county, are unsanitary, inadequate and insufficient and that the present situation is dangerous and asks that the respondent be required to increase its station accommodations for passengers and to build an adequate freight depot. The respondent concedes that better accommodations are needed and states that it is willing to make the necessary improvements in the spring of 1914, but has failed to submit plans as promised.

Held: The freight and passenger facilities complained of are inadequate. The respondent is ordered (1) to erect a modern depot for passengers at a specified location, (2) to provide a freight station south of the present site and the sidetracks with adequate platform and storage room and a convenient highway approach, and (3) to construct and maintain a properly surfaced driveway to its stockyards from the public highway. Plans for the station buildings are to be submitted for approval and the improvements and new buildings ordered are to be completed and opened for the use of the public by July 15, 1914.

The petition alleges that the respondent's depot arrangements and accommodations for freight and passengers at Horicon in Dodge county are wholly unsanitary, inadequate and insufficient, and that the present situation is dangerous. The Commission is therefore asked to require the respondent to increase its station accommodations for passengers and to build a new and commodious freight depot.

The respondent, in its answer, denies that its facilities at Horicon are wholly inadequate or unsanitary, but states that it will add another waiting room during 1914 and add such other improvements as may be necessary to handle the business.

A hearing was held at Horicon on November 4, 1913. *W. H. Markhan* appeared for the petitioner and *J. N. Davis* for the respondent.

The testimony shows that Horicon is an important junction point between the main line of the respondent's Northern divi-

sion and the northern branch of that division. The passenger depot is about twenty-five years old. It contains two stove heated waiting rooms, each having a seating capacity of sixteen. The platform was said to be so narrow that passengers are subjected to danger from the movement of trucks loaded with baggage and express. The only toilet facilities provided are earth closets, although the city now has water works which make feasible the installation of sanitary toilets. The traffic at Horicon is larger than would naturally be expected at a city of its population, because of the fact that it is an important transfer point. A count was made by a witness for the petitioner of the number of passengers waiting at the station for the evening trains. On each occasion the waiting rooms were filled beyond their seating capacity and passengers were standing on the platform. The observations follow:

Date.	Number of persons waiting at one time.	Date.	Number of persons waiting at one time.
Oct. 21, 1913	130	Oct. 29, 1913	136
" 22, "	77	" 30, "	141
" 23, "	144	" 31, "	111
" 25, "	78	Nov. 1, "	135
" 26, "	113	" 3, "	113
" 28, "	144		

The respondent's agent at Horicon testified that the passenger depot would need to be three times as large as it now is in order to provide seats for all persons waiting for trains in the afternoon.

Witnesses testified that the freight depot is too small to properly shelter the less than carload freight handled at Horicon and that the platform room is insufficient. It was also stated that teamsters have to cross the tracks and back down to the freight houses between tracks which are about thirty-two feet apart. Farmers in delivering goods at the platform are accustomed to drive in and unhitch their teams, fearing that a train will pass while they are unloading and frighten their horses. Several minor accidents from this cause were reported. Moreover, it is impossible for more than one or two teams to unload at the same time. Farmers stated that on account of the danger and inconvenience of the Horicon station, they prefer to drive a

greater distance to other stations where better facilities are available. The respondent's agent admitted that the platform space is insufficient and expressed the opinion that the warehouse for freight should be twice as large as at present.

While the question of stockyard facilities was not specifically mentioned in the complaint, it was considered at the hearing with the consent of the respondent. Witnesses asserted that the present stockyards are inconveniently located, that the approach to them is muddy and too narrow to allow a team to turn around, and that no scales are provided. The company has an arrangement with a private party whereby his scales are placed at the service of stock shippers. These scales are located at a considerable distance from the yards and are therefore somewhat inconvenient. It was claimed that on account of the conditions at these yards stock buyers prefer to ship from other stations, although Horicon is the most available for them geographically.

After a careful investigation of the conditions at Horicon our engineer recommends that a new passenger depot be constructed west of the present structure between the two main lines, and that the tracks on the Milwaukee-Oshkosh line be planked from the platform to the street. He recommends further that the freight depot be relocated south of the two sidetracks, enlarged and provided with suitable platforms on the north, east and west sides. He suggests that the south tracks be moved north so that a thirteen foot center between all the tracks is provided; and that a properly surfaced roadway to the stockyards be built.

In the light of the testimony and the report of our engineer we find that the freight and passenger station facilities at Horicon are inadequate. The company concedes that better accomodations are needed, and states that it is willing to make the necessary improvements in the spring of 1914. With the expectation that the company would submit the plans and specifications of the proposed improvements, the decision of the Commission was withheld in order that it might have the opportunity to pass upon such plans before final action was taken. Under date of January 13, 1914, the Commission requested the company to furnish its plans and specifications for the proposed changes at Horicon, and in reply the Commission was advised on February 11, 1914, that such plans would be submitted within a week or ten days. No plans have yet been received, and we do not feel justified in delaying the matter further.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, erect a modern depot for passengers west of its present depot at Horicon between the two main lines, which shall be adequate for the traffic; provide a freight station south of the present site and south of the sidetracks, which shall have adequate platform and a storage room for the freight handled at Horicon and a convenient highway approach; and construct and maintain a properly surfaced driveway to its stockyards from the public highway.

Plans for the station buildings ordered herein are to be submitted to the Commission for approval.

July 15, 1914, is considered a reasonable date at which the improvements and new buildings ordered herein shall be completed and opened for the use of the public.

CITY OF RACINE

vs.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

Submitted July 3, 1913. Decided March 14, 1914.

The petitioner alleges (1) that the respondent's service in the city of Racine is inadequate; (2) that the extension of certain lines is necessary for proper service to the public; and (3) that the increase of street car traffic in Racine is sufficient to justify the sale of six tickets for 25 cts., good at all times when the cars are in operation. Since the hearing the complaint with regard to adequacy of service has been satisfied. The complaint as to tickets is not considered, inasmuch as no testimony was presented with reference to it.

Held: The Commission has no authority to order extensions of street railway lines. *City of Merrill v. Merrill Ry. & Lt. Co.* 1910, 5 W. R. C. R. 418, 425. It is recommended, however, that the city of Racine grant without unreasonable encumbrance, and that the respondent accept, franchises along certain designated streets in Racine..

The petition is dismissed.

The city of Racine in its petition alleges in substance that the cars operated by the respondent in Racine are inconvenient and inadequate; that at certain times of the day the cars are overcrowded; that the extension of certain lines is necessary for proper service to the public; and that the sale of six tickets for 25 cts., good at any time when the cars are running, is justified because of the increase of street car traffic in Racine. The Commission is therefore asked to require the respondent to improve its service, to extend its lines as requested by the city, and to sell six tickets for 25 cts., good at all times when the cars are in operation.

No answer was filed by the respondent.

A hearing was held at Racine on July 3, 1913. *E. R. Burgess* appeared for the petitioner and *Van Dyke, Rosecrantz, Shaw & Van Dyke,* by *Clarke M. Rosecrantz,* for the respondent.

Subsequent to the hearing several new cars were placed in service, satisfying the complaint with reference to the frequency of operation. The company still retains in service a number of

remodeled cars. The city attorney, in a letter subsequent to the hearing, contends that the service will not be satisfactory until these cars are discarded for new ones. The testimony shows that the cars referred to have been used in Racine about ten years, having been operated in Milwaukee previous to that time. During the summer of 1912 they were remodeled at an expense of something over $1,500 per car, and changed to a prepayment type. The old trucks were replaced by others which had been in use for two years in Chicago.

Members of the Commission's engineering staff have investigated the remodeled cars now in use and report that their operation does not result in unreasonable inconvenience to passengers, so long as the cars are maintained in proper repair. They are also of the opinion that the present traffic in Racine can be best handled by comparatively small cars.

The company has added new cars to its equipment as a result of this complaint, and should continue to do so whenever traffic conditions require it.

The petitioner asks the Commission to require the company to extend its lines as desired by the city. Counsel for the respondent questioned the jurisdiction of the Commission to enter such an order. This matter was considered at length in a former decision. *City of Merrill v. Merrill Ry & Lt. Co.* 1910, 5 W. R. C. R. 418, in which the following language is used at page 425:

"It may be that the authority contended for by the petitioner should exist in case of street railways, which in cities of the size of Merrill have a natural monoply. More than one street railway system in such a city is impossible. Therefore the necessities of such community as a whole should be taken into consideration in developing the street railway system. If public convenience and necessity demand the extension of a line or lines of street railway to serve a section of the city whose population is sufficient to warrant the required investment, the company should meet the exigencies. The Public Utilities Law has vested in common councils the power to compel extensions and additions to public utility plants when necessary to serve the public requirements. The common council is the proper body to which such authority should be given, if possible, over all public utilities, including street railways. It has the control of streets and is best situated, in the first instance, to determine what extensions and additions are required and where they should be made. Such authority, however, has not been conferred upon common councils or this Commission in respect to street railways, and

hence we are without jurisdiction of the subject matter of the petition."

No legislation has been enacted subsequent to that decision affecting the question involved, and the position there taken must be sustained in the present case.

However, our chief engineer and his staff have thoroughly investigated the advisability of the extension suggested at the hearing, especially with reference to the present needs of the city. On March 5, 1914, a committee of business men representing the West Side League requested the Commission to consider also the construction of a line from West Sixth street to State street on either La Fayette street or Mound avenue. This suggestion will receive attention, but we are not prepared at the present time to make any recommendation with respect to it.

Our engineers are of the opinion that an extension is necessary from West Sixth street to Fourteenth street at some point between Wisconsin street and Washington avenue, and that Grand avenue offers a more desirable route than Center street, for the reason that it would better serve this territory.

With reference to the proposed extension of the North Main street line on the north side, they report that an extension as far as Gould street on St. Clair street is necessary, but that beyond Gould street there are few houses and the future development is too problematical to warrant a further extension at this time.

They report that there is an evident need for service on Asylum avenue as far south as Twenty-first street. This territory could be reached by building an extension on Asylum avenue from its intersection with Washington avenue. This arrangement is, however, open to the serious objection that if the North Main street cars should be operated over the new line it would necessitate a split service, some cars turning south on Junction Avenue to the railway station at Sixteenth street, and some continuing on Washington avenue and thence on Asylum avenue. It appears that to properly serve the territory tributary to Asylum avenue, a greater frequency of operation will be necessary than that which could be furnished by a split service. Our engineers therefore recommend that a new track be constructed from the railway station along Sixteenth street to its junction with Asylum avenue and thence on Asylum avenue to Twenty-first street, thus making it possible for all cars to pass the depot.

With the reports of our engineering staff as a basis, we recommend in the interest of better street railway service in the city of Racine that the city grant, without unreasonable encumbrance, and that The Milwaukee Electric Railway and Light Company, accept the following franchises:

1. On Grand avenue from Sixth street to Fourteenth street.
2. On St. Clair street from High street to Gould street.
3. On Sixteenth street from Junction avenue to Asylum avenue and on Asylum avenue from Sixteenth street to Twenty-first street.

No testimony was introduced with respect to the complaint that the company sells six tickets for 25 cts. only for certain portions of the day.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

IN RE APPLICATION OF THE GILMANTON MILL AND ELECTRIC PLANT FOR AUTHORITY TO INCREASE RATES.

Submitted Feb. 17, 1914. Decided March 16, 1914.

The Gilmanton Mill and El. Plant applies (1) for authority to increase its rates by the adoption of such a schedule as the Commission may deem reasonable and just, and (2) to be relieved from the necessity of supplying meters free of cost to consumers, until such time as the financial condition of the utility will permit it to own and furnish meters. The utility furnishes continuous service, except for a few hours each day when a storage battery used in connection with a hydraulic generator is being charged, and it appears that some of the flat rate consumers permit their lamps to remain turned on at all times. All consumers on a metered basis have furnished their own meters. Accurate records of the operating expense of the plant are not available.

Held: 1. Before the present rates are revised more experience in the operation of the utility should be obtained to show what business may be secured and at what cost.

2. In view of the uncertainty as to whether the revenues resulting from the present rates will be adequate to meet the needs of the plant it is not advisable to require the utility to increase its investment by acquiring meters in use or by furnishing those to be installed in the future.

3. The utility is entitled to have a rule limiting the use of lamps on a flat rate to a reasonable use.

It is ordered: (1) that such part of the case as relates to a higher rate for service be dismissed for the present; (2) that the utility be exempted from the necessity of supplying meters at its own expense; (3) that rules regulating the use of all night lights and flat irons in line with the views expressed in the opinion may be filed with the Commission for approval; (4) that after such rules have been filed and approved the utility may require violators of the rules to install meters at their own expense; and (5) that the utility may require all parties using electric fans or other power devices to install meters at their own expense.

The applicant is a public utility engaged in the business of furnishing electric current in Gilmanton, Wis. The application for authority to increase rates was filed with the Commission on January 23, 1914. As set forth in the application the legal rates of the utility are as follows:

Meter rates:

First 10 kw-hr. per month, 13 cts. per kw-hr.
All above 10 kw-hr. per month, 10 cts. per kw-hr.
Minimum monthly bill, $1.

Flat rates:

50 cts. per month per 25-watt lamp.
Minimum monthly bill, $1.

It is stated that the present revenue is insufficient to meet the operating expenses and pay a reasonable amount of return upon the investment, and application is made for authority to substitute for the present rates such schedule of rates as the Commission may deem reasonable and just.

The applicant also asks to be relieved from the necessity of supplying meters free of cost to consumers, until such time as the financial condition of the utility will permit it to own and furnish meters.

Hearing was held at Madison, February 17, 1914. *H. T. Forrest* appeared for the applicant. There was no appearance in opposition.

The electric plant in Gilmanton is operated in connection with a milling business. From the report of the utility to the Commission and from the testimony offered at the hearing it appears that current is generated entirely by hydraulic power. During a part of the day the generator feeds the distribution system directly but at other times a 64 cell storage battery is used. It appears that all night service is furnished, in fact, that service is continuous except for a few hours each day during which the charging of the battery is done. The plant has been furnishing service since October 1, 1912.

At the hearing it was stated that service is supplied to thirty-four consumers. At the end of the fiscal year 1912-1913 the number of consumers reported by the utility was thirty-one, of whom fourteen appear to have been supplied through meters, and data submitted as of October 1, 1913, showed eighteen consumers on a meter basis.

Of the flat rate users it appears that the majority have small installations, in many cases not more than two 25-watt lamps. The consumption records submitted by the utility are not altogether clear but they seem to indicate that in some instances meter readings were not taken each month. There will, of course, be instances where it is impracticable to read a meter but it is important that readings be taken and bills delivered each month, wherever practicable, in order to avoid discrimination and to afford a means of detecting any defective meter or unusual condition of consumption.

No definite schedule of rates was proposed by the applicant. It appears that one of the conditions which the applicant desires to have remedied arise from the fact that some of the flat rate consumers permit their lamps to remain turned on at all times so that there is a continual demand upon the plant. A number of the flat rate users have installations so small that it has not been considered advisable to put in meters. It is clear that the fact that service is offered, under certain circumstances, at a flat rate, cannot justify consumers in making an unreasonable use of their lamps. The flat rate is offered under certain circumstances where it appears that the installation of a meter might be a burden upon the consumer, in case the cost of the meter is to be borne by the consumer. The utility is entitled to have a rule limiting the use of lamps on a flat rate to a reasonable use and providing a penalty for violation of the rule.

It was suggested on behalf of the applicant that consumers desiring to use all night lights be limited to the use of 10-watt lamps at the rate of 50 cts. per lamp. The purpose is not only to secure adequate payment for all night lamps but also to reduce to a minimum the use of current during the night and to limit that use to convenience lighting. With storage battery operation both of these purposes are important. The proposed rule appears to be reasonable and will be approved.

In case consumers do not abide by the rule of the utility there are two possible courses to be taken. Service may be discontinued or meters may be installed. Which of these courses should be pursued must be dependent upon a variety of conditions. We are inclined to believe that the better course to pursue in this case would be to use the meter basis of selling current.

This brings up the question of the ownership of meters. Up to the present time all consumers on a meter basis have furnished their own meters. The representative of the utility expressed his willingness to discontinue the practice of requiring consumers to furnish meters and to acquire meters now in use as soon as the financial condition of the plant would warrant such action. This would require an investment of several hundred dollars and would have its effect upon the amount required by the utility to provide for interest and depreciation. In view of the fact that there is some question as to whether the revenues resulting from the present rate will be adequate to meet the needs of the plant, we believe it would not be advisable to require the utility to in-

crease its investment by acquiring meters in use or by furnishing those to be installed in the future. The ultimate cost to the consumer will be about the same in either case, unless the ownership of meters makes it necessary for the plant to operate at a loss, but it appears that the interest of all parties concerned will be better served by requiring consumers to continue to supply their meters than by having the utility supply them and charge a necessarily higher rate for current.

We have been unable to secure any accurate cost figures on the operation of the plant. Collections for the first year's operation were stated by the utility's representative to be $608.34. Operating expenses appear to have been kept at a low figure and it is probable that the business has not been very remunerative but we are unable to state the exact condition of the business. The entire population of Gilmanton is about 275 and it is hardly to be expected that an electric business would be profitable from its inception, even with inexpensive methods of generation. It may be that somewhat higher rates should be charged but if so we think more experience in the operation of the utility should be obtained to show what business may be secured and at what cost. A simple system of records should be kept to show the cost of operation and maintenance. The Commission's accounting staff will render all necessary assistance in providing the means for keeping such records. It was suggested that some electric street lighting should be done, but as Gilmanton is an unincorporated village, no public street lighting can be secured without the sanction of the town authorities.

The representative of the utility suggested a rule permitting users of flatirons to have service during the summer months for one forenoon of each week, and to forbid the use of flatirons in the forenoon during the winter. Although this may not be very convenient to the users of flatirons it appears to be almost necessary for the satisfactory operation of the plant. In a town of less than 300 inhabitants it is hardly to be expected that the same service will be available as can be secured in larger places;

In furnishing all night service the utility is doing more than is done in many larger places and a necessary restriction of the use of irons and of all-night lights will be approved.

IT IS THEREFORE ORDERED:

1. That such part of this case as relates to a higher rate for service is dismissed for the present.

2. That the utility is exempted from the necessity of supplying meters at its own expense.

3. That rules regulating the use of all-night lights and of flat irons, in line with what has been said in this case, may be filed with the Commission for approval.

4. That after such rules have been filed and approved the utility may require violators of such rules to install meters at their own expense.

5. That the utility may require all parties using electric fans or other power devices to install meters at their own expense.

IN RE APPLICATION OF THE TROY AND HONEY CREEK TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Sept. 16, 1913. Decided March 16, 1914.

The Troy & Honey Creek Tel. Co. applies for authority to increase its rates. Subscribers of the applicant object on the ground (1) that the applicant's service is inadequate and (2) that the rates at present in effect are sufficient. A valuation was made, the revenues and expenses were analyzed and the applicant's service over its own system and to connecting companies was investigated.

Held: 1. The service rendered by the applicant is inadequate.

2. The applicant's present rates require revision to (a) provide a reasonable return to the applicant and (b) promote the improvement of the service.

It is ordered that the applicant be authorized to put into effect a schedule of rates determined by the Commission at such time as it shall have installed and in operation a set of books approved by the Commission and shall have complied fully with all other provisions of the order. The schedule of rates authorized includes flat rates for village and rural telephones and provides that these rates shall entitle subscribers to unlimited service over one of the four toll lines connecting the applicant's exchanges to the foreign exchanges in Mazomanie, Lodi, Plain and Loganville. Subscribers desiring unlimited service over a second one of the toll lines named and subscribers desiring such service over all four toll lines are to pay additional charges. Such calls over the toll lines as are not covered by the schedule of flat rates are to be charged for as specified. Nonsubscribers are to pay 10 cts. per call for all calls. It is further ordered: that all calls to foreign exchanges shall be routed over the through lines where such lines exist, except when the through lines are out of order; that charges be made as specified for the replacing of certain existing substation equipment with other types of equipment; that telephone rentals shall be payable in advance as specified; that the applicant shall submit to the Commission for approval a statement of changes which it proposes to make during the year following the adoption of this schedule, in rearranging party lines so that there will be no more than a specified number of subscribers for each line; and that the applicant shall keep all of its equipment in reasonable repair, preserving a record, open to public inspection, of all trouble occurring on its equipment.

Application in the above matter was filed with the Commission on July 30, 1913, and a formal hearing was held at the office of the Commission at Madison on September 16, 1913. *H. Groto-*

phorst appeared for the applicant and *William Ryan* for the objecting subscribers.

The application states that the rates in effect at the time of the application were as follows:

Business phones—$15 per annum.

Residence phones—$12 per annum.

The application further states that these rates are wholly inadequate and insufficient since the net revenue produced does not exceed an amount in excess of 5 per cent on the actual investment, leaving out of consideration a proper allowance for depreciation on the physical value of the property.

The rates proposed by the applicant to be substituted for the present rates are as follows:

Business phones—$18 per annum,

Residence phones—$15 per annum.

At the hearing and through subsequent investigations by members of the Commission's staff the following facts were brought out.

Extent of Operation.

The applicant is a telephone company operating two exchanges, one at each of the villages of Prairie du Sac and Sauk City, serving these villages and the surrounding rural territory. The following table shows the different classes of service together with the number of telephones in each class for each exchange.

SUMMARY OF TELEPHONES OF PRAIRIE DU SAC AND SAUK CITY EXCHANGES.

	Number of telephones
Rural telephones:	
Business (straight bridging)	12
Residence (straight bridging)	440
Business and residence silent call	10
Village telephones:	
Business, 1 party	52
Business, 2 party	20
Residence, 1 party	31
Residence, 2 party	55
Residence, 4 party	12
Automophone business, 1 party	3
Automophone residence, 1 party	1
Harmonic ringing business, 2 party	..
Harmonic ringing residence, 2 party	..
Harmonic ringing residence, 4 party	16
Total	**652**

This table includes, besides the residence and business classes, the automophone, the harmonic ringing, and the silent call telephones as separate classes. The rates charged for these classes of service are as follows:

Automophone:	
Residence	$15.00 per annum
Business	18.00 per annum
Silent call:	
Residence	15.00 per annum
Business	18.00 per annum
Harmonic ringing:	
Residence	12.00 per annum
Business	15.00 per annum

HISTORY OF FINANCIAL OPERATIONS.

The Troy & Honey Creek Telephone Company was incorporated in 1899 with a capitalization of $2,500. In 1900 the capital stock was increased to $6,000 and in 1901 to $25,000. The total stock outstanding in 1905 was approximately $22,000. It appears that at about this time the value of the company's stock dropped below par and it became impossible to sell the stock when extensions were needed. This drop in the value of the stock was due largely to the failure of the company to pay dividends and this in turn was due partially perhaps to insufficient earnings but more probably to the fact that the company strove to make necessary extensions or new construction out of the earnings of the company. No record was presented to the stockholders or even kept of the amount of increase of the plant value due to the investment of the earnings in the plant and since very little, if anything, in the way of dividends was forthcoming, the stock naturally dropped in value until in 1905, as is stated above, the officers found that no one would buy the stock of the company and that there was no money with which to build necessary new construction. To meet this situation money to the amount of $8,000 was borrowed for the company's use on the individual notes of the officers of the company. This money was used for new construction work, reconstruction, and maintenance and operation of the plant. During the next few years the applicant paid off $3,000, of this debt out of the earnings of the company and finally sold a portion of its plant for approximately $5,000, which wiped out entirely the $8,000 debt. Thus the company at the present time has a total of approximately $22,000 of outstanding capital liabilities with a much larger amount than this

actually invested in the plant as the valuation of the property will show.

Earnings.

A thorough audit of the applicant's books was made and expenses and earnings for the year ending June 30, 1913, were determined as closely as possible. Since no separate records of construction, reconstruction, and operation and maintenance of the plant are kept by the applicant, it was impossible to accept the figures submitted by it to cover expense items. Likewise the applicant's figures covering revenues were not entirely accurate since they were reports of receipts rather than of earnings.

From an examination of the records available it was possible to obtain the total actual earnings for the year ending June 30, 1913. These were as follows:

Rentals from village phones	$2,326.02
Rentals from rural phones	5,389.45
Total earnings from rentals	$7,715.47

Toll Earnings.

The actual toll earnings could only be approximated. An analysis of the vouchers paid by the applicant shows that for the year in question there was paid to the Wisconsin Telephone Company $1,319.54 as its share of the total tolls collected. The annual report of the secretary of the company to the directors for the same period shows that the total amount of tolls collected was $1,852.66. The difference between these two figures is $533.12, which is the net amount of toll earnings retained by the applicant, and represents fairly closely, it is believed, the actual net toll earnings for the year.

The total earnings of the applicant will be therefore the sum of the toll and rental earnings.

Earnings from rentals	$7,715.47
Toll earnings	533.12
Total earnings	$8,248.59

Expense Accounts.

In order to obtain as accurate information as possible relative to the expenditures of the company for operation and mainte-

nance of its lines a detailed analysis of all vouchers and bills covering material or labor paid during the year ending June 30, 1913, was made and the various items carefully distributed to the accounts to which they belonged. The amounts expended for material and labor for new construction or extensions were separated from the other expenses as far as possible and deducted from the whole. The reconstruction done during the year was also an item affecting the total of the expense account. An estimate was furnished by the company's manager relative to the amount of the reconstruction done during the year and inasmuch as a proper allowance will be made for depreciation of the property the cost of this reconstruction (approximately $624) was deducted from the total expense.

A statement of expense revised as indicated above is as follows:

EXPENSE ACCOUNT.

Central office operating labor	$1,527.75
Central office supplies and expenses	213.77
Wire plant maintenance and operation	400.96
Substation operation	236.78
Substation maintenance	696.96
Commercial expense	55.95
General office salaries	1,000.00
General—miscellaneous expense	39.19
General—law expense	10.00
General—Railroad Commission expense	9.22
General office maintenance	1.50
Undistributed—stationery and printing	1.85
Undistributed—utility equipment expense	447.75
Taxes	205.07
Total expense	$4,846.75

In the apportionment of vouchers most of the items could be directly placed in the account where they belonged or charged to new construction. However, there were a number of vouchers covering materials and labor, definite knowledge of which was so meager that their amounts could not be charged directly to any account or to new construction. The total of these amounted to $827.08 and was apportioned between operating expenses and new construction as an overhead charge upon these two accounts.

Another item to be apportioned between operating expense and new construction was the manager's salary which amounted to $1,135 for the period in question. It was considered fair to apportion only a small part of this amount to new construction. $135 was charged to new construction and $1,000 to general

expense. The central office operating labor for the year in question amounted to $1,327.75. It appears, however, that certain of the switchboard operators of the company have been putting in longer hours of labor than the law permits, hence the applicant has lately been required to put on another operator at Sauk City at an additional cost of $300 per year. It seems but fair that this extra amount should be allowed in the total cost of central office operating labor.

VALUATION.

In connection with the obtaining of data bearing upon the case at hand a physical valuation of the property of the applicant was made by the Commission as of June 30, 1913. The summary of this valuation is as follows:

VALUATION OF PHYSICAL PROPERTY.
TROY & HONEY CREEK TELEPHONE COMPANY.
As of June 30, 1913.

	Village.		Rural.		Toll.		Total.	
	Cost new.	Present value.	Cost new.	Present value	Cost new.	Present value.	Cost new.	Present value.
A. Land—none								
B. Distribution system	$5,049	$2,931	$23,017	$13,278	$1,481	$917	$29,547	$17,126
C. Bldgs. and misc. struct'rs	168	134	42	34	20	16	230	184
D. Exchange equipment	620	471	156	120	72	55	848	646
E. General equipment	140	88	959	607	75	47	1,174	742
F. Paving—none								
Total	$5,977	$3,624	$24,174	$14,039	$1,648	$1,035	$31,799	$18,698
Add 12 per cent (see note below)	717	435	2,901	1,685	198	124	3,805	2,244
Total	$6,694	$4,059	$27,075	$15,724	$1,846	$1,159	$35,604	$20,942
H. Material and supplies	81	81	553	553	43	43	677	677
Total	$6,775	$4,140	$27,628	$16,277	$1,889	$1,202	$36,281	$21,619

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The Commission finds the cost of reproduction of the property to be $36,281. Computations indicate that depreciation on this property should be figured at about 7 per cent. Seven per cent of $36,281.00 amounts to $2,539.67. The valuation places the present value at $21,619. Making proper allowances for going value and such other items as it is proper to consider, it would seem that $25,000 is a fair value of the property upon which the applicant should be allowed a return. Interest at 7 per cent on

this sum amounts to $1,750. The total expense, then, including interest and depreciation, will be:

Expense other than interest and depreciation	$4,846.75
Interest	2,539.67
Depreciation	1,750.00
Total expense	$9,136.42

The total revenues for the year, details of which appear elsewhere, amount to $8,248.59, so that the deficit is approximately $887.83.

SERVICE.

A number of protests signed by some two hundred of the subscribers of the applicant were filed with the Commission. These protests set forth: 1st, that the service is very poor and does not meet the requirements of the patrons and, 2nd, that inasmuch as dividends were paid stockholders for the past two years that the rates at present in effect produce revenue sufficiently large to carry on the business without raising the rates. These protests come largely from the rural subscribers.

PHYSICAL CONDITION OF PLANT.

Inspection shows that the central office equipment used is of standard make, fairly well protected and in good repair; that, although there are parts of the distribution system which are badly in need of rebuilding, on the whole the system is in fair shape and transmission of messages should not be much hampered by the condition of the lines. Substation equipment and substation wiring, however, do not appear to be in a reasonably fair condition. Sixty per cent of the rural telephones are of an obsolete type. Some of them will probably give satisfactory service for a number of years but undoubtedly there are a good many which should be replaced at once. Also the wiring of many of these phones has been done in a very slipshod manner and is probably a common source of trouble. Telephone companies operating in rural territory especially should be alive to the fact that the retaining in service of a poor telephone or of a poor wiring job is not an economical method to pursue. The maintenance charges upon such construction and apparatus, especially when it is located a long way from the central office, will usually far outweigh the investment in and maintenance of the necessary new apparatus properly installed.

Adequacy of Plant.

The central office equipment does not seem to be lacking with respect to adequacy. Also there would seem to be little question as to the adequacy of the wire plant within the village limits. The rural wire plant, however, must be studied carefully. There are thirty-four rural lines, which do not connect with a second central, running out of the applicant's two exchanges. To these lines there are connected a total of 442 rural phones, making an average of thirteen phones per line. Were all the lines loaded equally with this average number the situation would be fairly satisfactory. However, such is not the case as the following table shows:

Telephones on Rural Lines.

Number	of	lines	to which	4	phones	are connected	2
"	"	"		6	"	"	1
"	"	"		8	"	"	1
"	"	"		9	"	"	1
"	"	"		10	"	"	3
"	"	"		11	"	"	3
"	"	"		12	"	"	1
"	"	"		13	"	"	4
"	"	"		14	"	"	5
"	"	"		15	"	"	4
"	"	"		16	"	"	5
"	"	"		17	"	"	3
"	"	"		18	"	"	1

The above table indicates not only that there is a wider variation in the number of phones per line, but also that heavily loaded lines are greatly in the majority. We realize that such a situation is largely the result of local conditions; that wires for most of these heaviest loaded lines have had to be run across a sandy strip of territory from three to four miles wide in which few telephone users are located, in order to furnish the service to those farmers located in the towns of Troy and Honey Creek; and that these heavily loaded lines are in nearly every case the longest lines, and that hence the investment, maintenance and operation per telephone is highest on these lines. On the other hand, from the standpoint of adequacy it can hardly be disputed that service over these grounded lines on which there are from 14 to 18 telephones can be fully adequate only in rare cases, if at all. Such a large number of telephones per line decreases the chances that a subscriber on the line has of finding that the

line is not busy when he calls. The greater the number of subscribers, especially on a long line, the greater will be the difficulty of ringing the central office from the remote subscribers, due to the comparatively high resistance of the long line wire and low combined resistance of the bells. Subscribers' substation equipment and wiring is usually the source of a considerable part of the trouble experienced on all telephone construction and it often happens that when one subscriber's station is out of order the whole line is out, due to the trouble at the one station. Hence the more subscribers placed on a single line the greater is the probability that the whole line will be out of order. It would seem, therefore, that the adequacy of the service on these heavily loaded lines varies not only directly with the reciprocal of the number of subscribers on the line, but that it probably varies as some two or three times that reciprocal. In other words, the addition of one subscriber to a line loaded with fifteen subscribers will decrease the adequacy of service not one-fifteenth but probably more nearly one-eighth or one-fifth.

From the preceding discussion it appears that the following factors must be taken into consideration in arriving at a decision in this case.

1. Due to various imperfections of construction and equipment, service being at present rendered by the applicant does not appear to be entirely adequate.

2. The distribution of rural subscribers per line is not at all even, resulting in a number of overloaded lines with consequent inadequate service.

3. The average length of rural lines is high, resulting in high wire plant investment and high maintenance and operation expense.

SERVICE TO CONNECTING COMPANIES.

There are four lines connecting the applicant's exchanges to foreign exchanges, not taking into account the toll lines over which long distance messages are sent. These four lines connect with the following foreign exchanges: Mazomanie, Plain, Lodi, and Loganville. Toll charges on these lines are as follows: Mazomanie—free, Plain—free, Lodi—10 cts, Loganville—free. There are therefore three free lines maintained by the applicant, the upkeep of which under the present arrangement of rates is borne by every subscriber of the company whether this subscriber uses

the particular line in question or not. This, it would seem, is unfair to those who do not use the lines and as a step in the direction of requiring subscribers using toll service to pay for that service it has been deemed advisable to put into effect the following form of rate schedule: A flat rate will be charged, differing in amount with the class of service, which rate will entitle subscribers to elect unlimited service to the Prairie du Sac and Sauk City exchanges and to one of the four above mentioned additional exchanges. For an additional sum the subscriber may elect two of the above extra exchanges and for a still larger sum he may elect all four foreign exchanges. A toll charge per call is proposed to be placed on all calls not coming under the above classes of service. This form of schedule, although not designed to do away entirely with unlimited services to neighboring exchanges, will have a tendency to decrease the number of unnecessary calls over these lines, thus improving the service and at the same time reducing the necessity of building more through lines between exchanges to take care of increased traffic.

The following is the schedule of rates proposed:

SCHEDULE OF RATES.

Flat Rates.

	Rate per Year
Rural:	
Business, straight ringing	$15.00
Business, silent call	16.00
Residence, straight ringing	13.50
Residence, silent call	14.50
Village:	
Business, 1 party, straight ringing	17.00
Business, 1 party, automophone	18.00
Business, 2 party, straight ringing	14.00
Business, 2 party, harmonic ringing	15.00
Residence, 1 party, straight ringing	15.00
Residence, 1 party, automphone	16.00
Residence, 2 party, straight ringing	13.00
Residence, 2 party, harmonic ringing	14.00
Residence, 4 party, straight ringing	12.00
Residence, 4 party, harmonic ringing	13.00
Extension phones (talking set only)	6.00
Extension bells	3.00
Nonsubscriber, per call	.10

No. 1 class of service: The above flat rates shall entitle subscribers to elect in addition to the service of the Prairie du Sac and Sauk City exchanges, unlimited service over one of the four toll lines connecting the applicant's exchanges with the following foreign exchanges: Mazomanie, Lodi, Plain and Loganville.

No. 2 class of service: Subcribers who elect in addition to No. 1 class of service unlimited service over a second one of the above toll lines shall be charged at the rate of $1.60 per year in addition to the rate for the No. 1 class of service.

No. 3 class of service: Subscribers who elect unlimited service over all four of the above toll lines in addition to the Prairie du Sac and Sauk City exchanges shall be charged at the rate of $2.40 per year in addition to the rate for the No. 1 class of service.

Toll Rates.

For calls over the four toll lines above mentioned not included in the above schedule of flat rates a toll charge is proposed as follows:

Mazomanie line	10 cts.
Lodi line	10 cts.
Plain line	10 cts.
Loganville line	5 cts.

All calls to foreign exchanges should be routed over the through lines where such lines exist, except in cases when the through lines are out of order. The line to Loganville is a heavily loaded line and should not, from the standpoint of adequate service, be used as a through line between central offices. However, in view of the fact that this is a rather long line (approximately twenty-six miles) and the further fact that the amount of traffic going over the line is comparatively small the applicant can not at this time be required to build a through line to take care of the through traffic between the exchanges in question. The toll service over this loaded line can hardly be up to the standard of the service over the through lines hence a smaller toll charge for this line seems reasonable.

The increased returns arising from the adoption of the above schedule are, as a whole, rather difficult to determine accurately. Assuming that the number of telephones remains unchanged the increase due to the flat rates alone will be approximately $890 which about equals the amount of deficit under which the company operated for the year ending June 30, 1913. This does not take into consideration the extra return from subscribers who will elect the No. 2 and No. 3 classes of service and the amount of toll arising from the imposition of a toll charge upon the four

toll lines. The amount of the return from these sources is more or less a matter of conjecture. It is believed, however, that it will be sufficient to justify the Commission in requiring the applicant to make some definite effort toward the decreasing of the number of rural patrons per line and the general improvement of service. The applicant will therefore be required to submit to the Commission and have approved by it before the adoption of this schedule of rates, a definite statement of miles of wire, number of poles, cross-arms, etc., which it proposes to install during the coming year for the purpose of relieving the present congestion on these lines. Further, the applicant will be required to keep all of its equipment in reasonable repair at all times. In connection with the above provision it will be ordered that an accurate record be kept of all trouble. This record is to include date and time trouble is reported, by whom reported, nature of trouble, and lines or telephones involved, date and time repaired and by whom repaired.

The above rate schedule contemplates a reduction in the present rate on rural silent call telephones. The extra operation and maintenance expense incident to this class of phone does not appear to justify a rate of over $1 per year above the straight ringing class of service. It seems logical, however, that the applicant be protected from an excessive demand for this class of telephone which would throw out of use part of the already installed equipment and also that the applicant be compensated for the replacing of existing equipment with silent ringing instruments when this service is demanded by the subscribers. A charge of $2 per phone seems fair and the applicant will be authorized to make this charge when, upon request of the subscriber, an instrument is removed and replaced by a silent call telephone. No installation charge is to be made on new construction.

In cases involving the automophone and harmonic ringing instruments no extra charge will be authorized for replacing existing equipment with these classes of equipment. In lieu thereof, however, the applicant will be authorized to use its discretion relative to the installation of these types of instruments so long as no discrimination is practiced.

It seems to be a rather general practice among the better operated telephone companies to charge for service in advance. This practice seems to be a legitimate one and will be authorized in this case.

For failure to pay rental within one month after it is due a penalty of 10 cts. per month or part thereof seems justifiable and will therefore be allowed.

Rentals from village phones will be payable at the central office quarterly in advance. Rentals from rural phones will be payable at the central office six months in advance. Bills for rentals should be mailed to all subscribers when rental is due in order that patrons may be kept informed as to their financial relations with the company.

The applicant's books were found to have been kept in a poor manner viewed from an accounting standpoint. In fact, it was only by a strict audit that the actual financial condition of the company could in any way be determined. The applicant will be required to keep a set of books conforming to the requirements of the Commission.

IT IS THEREFORE ORDERED, That the Troy & Honey Creek Telephone Company, the applicant in this case, be authorized to suspend the rate schedule for telephone service now in effect and substitute therefor the following schedule. This schedule may become effective only at such time as the applicant has complied fully with all of the provisions of this order.

SCHEDULE OF TELEPHONE RATES.

Flat Rates.

	Rate per year
Rural telephones:	
Business, straight ringing	$15.00
Business, silent call	16.00
Residence, straight ringing	13.50
Residence, silent call	14.50
Village telephones:	
Business, 1 party, straight ringing	17.00
Business, 1 party, automophone	18.00
Business, 2 party, straight ringing	14.00
Business, 2 party, harmonic ringing	15.00
Residence, 1 party, straight ringing	15.00
Residence, 1 party, automophone	16.00
Residence, 2 party, straight ringing	13.00
Residence, 2 party, harmonic ringing	14.00
Residence, 4 party, straight ringing	12.00
Residence, 4 party, harmonic ringing	13.00
Extension phones (talking set only)	6.00
Extension bells	3.00

No. 1 class of service: The above flat rates shall entitle subscribers to elect, in addition to the service of the Prairie du Sac and Sauk City exchanges, unlimited service over one of the four

toll lines connecting the applicant's exchanges to the following foreign exchanges: Mazomanie, Lodi, Plain and Loganville.

No. 2 class of service: Subscribers who elect in addition to No. 1 class of service unlimited service over a second one of the above toll lines shall be charged at the rate of $1.60 per year in addition to the rate for the No. 1 class of service.

No. 3 class of service: Subscribers who elect unlimited service over all four of the above toll lines in addition to the Prairie du Sac and Sauk City exchanges shall be charged at the rate of $2.40 per year in addition to the rate for the No. 1 class of service.

Election of class of service and toll lines shall be made six months in advance for all subscribers.

Nonsubscribers shall be charged at the rate of 10 cents per call.

Toll Rates.

A toll charge as follows shall be made over each of the four above mentioned toll lines for such calls as do not come under the above schedule of flat rates:

Prairie du Sac and Sauk City to Lodi.....10 cts.
Prairie du Sac and Sauk City to Mazomanie....10 cts.
Prairie du Sac and Sauk City to Plain.....10 cts.
Prairie du Sac and Sauk City to Loganville..... 5 cts.

The above toll rates shall not affect the extent of free service now being rendered to the Troy and Honey Creek Telephone Company by the foreign companies whose exchanges are listed above.

IT IS FURTHER ORDERED: 1. That all calls to foreign exchanges shall be routed over the through lines where such lines exist, except when the through lines are out of order.

2. That a charge of $2 per phone shall be made by the applicant for replacing, upon the request of the subscriber, existing substation equipment with the silent ringing telephone.

3. That no extra charge shall be made when existing substation equipment is replaced by harmonic ringing telephone or automophones. However, the applicant may establish such other reasonable rules as it sees fit relative to the installation of this type of telephone, providing no discrimination is practiced.

4. That rentals from rural telephones shall be payable six months in advance at the main office of the applicant. Rentals from village telephones shall be payable three months in ad-

vance either at the exchange to which subscriber's telephone is directly connected or to the collectors of the applicant. The applicant shall determine which method of collection it shall adopt.

5. That statements of rentals and tolls shall be mailed by applicant to all subscribers when rentals are due. Subscribers shall be given one month in which to pay rental. Thereafter a penalty of 10 cts. per month shall be applied. For refusal to pay telephone rental for two months telephones shall be disconnected or removed.

6. That the applicant shall submit to the Commission for approval a statement of changes which it proposes to make during the year following the adoption of this schedule, relative to the rearranging of party lines so that there will be fewer phones per line on the heavily loaded lines. This statement shall give the number of miles of wire to be put up, number and size of poles, cross-arms, etc. and also the number of subscribers for each line under the proposed rearrangement. The number of subscribers shall not exceed 15 per line and should not be greater than 12 per line unless abnormal conditions warrant.

7. That the applicant shall keep all of its equipment in reasonable repair. In connection with this requirement the applicant shall keep, open to public inspection, a record of all trouble occurring on its equipment. This record shall include:

a. Date and time trouble is reported.

b. By whom reported.

c. Nature of trouble and lines or telephones involved.

d. Date and time repaired.

e. By whom repaired.

8. That the applicant shall, before this schedule is adopted, install and have in operation a set of books approved by this Commission.

BARKHAUSEN COAL AND DOCK COMPANY,
F. HURLBUT COMPANY
vs.
GREEN BAY AND WESTERN RAILROAD COMPANY.

Submitted Feb. 10, 1914. Decided March 18, 1914.

The petitioners allege that the refusal of the respondent to absorb the switching charges of $2 per car on coal shipped by them to non-competitive points on the respondent's line from the tracks of the C. & N. W. Ry. Co. and the C. M. & St. P. Ry. Co. in Green Bay effects a discrimination against the petitioners by reason of the fact that competing shippers located on the respondent's tracks are not required to pay this charge.

There is no uniform practice among the railroads of the state as to the absorption of switching charges nor have the railroads evolved, or sought to evolve, any principle that would serve as a basis upon which to determine what charges are equitable in a given case. The practice of the railroads in this matter has therefore become more or less arbitrary and inequitable.

Held: The practice of the respondent in the present instance should be discontinued. The respondent is ordered to absorb switching charges on coal in carload lots from Green Bay to non-competitive points upon its lines down to a minimum return of $15 per car, in the same manner as it now absorbs such charges on shipments to competitive points upon its lines.

This case comes before the Commission in the form of two complaints, one by the Barkhausen Coal & Dock Company and the other by the F. Hurlbut Company, both of Green Bay, against the Green Bay & Western Railroad Company, setting forth that the respondent company, by refusing to absorb the switching charges of $2 per car on coal shipped to non-competitive points on its line from the tracks of the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Railway Company, effects a discrimination against certain shippers, and a hardship for shippers of coal generally at Green Bay not on the tracks of the said respondent company.

A hearing was held at the Capitol at Madison on February 10, 1914, at which *H. G. Barkhausen* appeared for the two petitioners, and *J. B. Call,* general passenger and freight agent, for the respondent company.

In substance the complaint recites that the Barkhausen Coal

& Dock Company has its plant located on the Chicago, Milwaukee & St. Paul Railway and the Chicago & North Western Railway tracks; that it ships from one to three carloads of coal a day to non-competitive points on the respondent company's line and on such shipments has to pay a switching charge of $2 per car from its plant to the tracks of the respondent company; that the C. Reiss Coal Company, located on the tracks of said respondent company, does not pay switching charges on such shipments, hence the petitioner is placed at a marked disadvantage in competing for business to the said non-competitive points on the respondent company's line. It is further alleged that the respondent does absorb switching charges where the destination of the shipment is a competitive point on its line.

The F. Hurlbut Company is located on the tracks of the Chicago, Milwaukee & St. Paul Railway Company and is similarly discriminated against upon shipments to the respondent's non-competitive points; but is not similarly discriminated against when shipping to non-competitive points on the Chicago & North Western Railway Company's lines.

Both petitioners allege that the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Railway Company absorb switching charges on coal to non-competitive points on their respective lines whenever the earnings per car of a given shipment nets the company $15 or more; that while the volume of the respondent company's business is much smaller than that of either of the other lines named, the fact that the rates charged by the respondent company on coal shipments are higher than the rates charged by the other two companies, justifies the demand that the respondent company absorb switching charges on the same basis as the other two companies. The petitioners therefore pray that the respondent company be directed to absorb the switching charges of $2 per car on coal shipments to non-competitive points on its lines, down to a return of $15 or more per car, and thus handle the coal shipments from Green Bay on the same basis as the other two railway companies named handle it.

There is no uniform practice among the railroads of the state as to the absorption of switching charges, nor, apparently, have the roads evolved, or sought to evolve, any principle that would serve as a basis upon which to determine what charges are equitable in a given case. If there were such a basis it would be

a very simple matter to dispose of such complaints as the ones under consideration. It has been left for the most part to the exigencies of competition, or the pressure of other circumstances to determine what should be done in each case. Naturally the whole practice has become more or less arbitrary and inequitable. Mr. Call for the respondent company vigorously arraigns the present practice in a letter filed with the Commission after the hearing in the case. He likens it to a feudal system and asserts that it is as iniquitous as the old rebate system.

But Mr. Call's arraignment offers no remedy for the particular complaints before us, loudly as it calls for the abolition of the whole practice. Nor does the contention of his company that switching charges are distinct from carrying charges and should be separately considered. That they are distinct is true only in a limited sense. If an analysis of cost of service is being made, or a basis of distribution of loading is being sought, then the switching charges, as component elements of the transportation charge, must be separated. In a wider sense, however, and in the view of the shipping and receiving public, the charge for switching is merely one of the elements which go to make up the cost of transportation.

The one fact which stands out most conspicuously in this case is that the respondent company, by refusing to absorb switching charges of $2 per carload on coal destined for non-competitive points upon its own lines, is placing at a serious disadvantage shippers to those points whose shipments are loaded on tracks of other companies. The shippers of coal thus discriminated against, it should be understood, have no corresponding advantages, through locations on other tracks, over a competitor located on the respondent company's tracks. As the matter now stands there is no way by which the disadvantages of the two petitioners located on the tracks of other companies, as compared with their competitors located upon the tracks of the respondent company, can be offset or equalized. When the favorably situated competitor ships coal to non-competitive points on the lines of either the Chicago & North Western Railway Company or the Chicago, Milwaukee & St. Paul Railway Company, his switching charges are absorbed down to net earnings of $15 per car. In other words, one shipper, owing to his location, has an absolute advantage over his competitors of $2 per car on all shipments to all points reached exclusively by the respondent company. It

needs no argument to prove that such a state of affairs is highly undesirable, and that it should not be continued for a time longer than is necessary to change it.

Conceding that if the respondent company be required to absorb the switching charges in question, a part at least of the disadvantage under which the petitioners are laboring will be shifted to the respondent company, it is plain that the disadvantage cannot rest so heavily upon the company as it now does upon the petitioners. It is true the shifting cannot wholly remedy the conditions. It is, under the circumstances, but a choice of the lesser of two evils. It can be considered but a local and temporary relief from conditions to which must ultimately be applied a more radical remedy.

IT IS THEREFORE ORDERED, That the Green Bay & Western Railroad Company hereafter absorb switching charges on coal in carload lots from Green Bay to non-competitive points upon its lines down to a minimum return of $15 per car, in the same manner as it now absorbs such charges on shipments to competitive points upon its lines.

CITY OF MONROE
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted June 14, 1913. Decided March 18, 1914.

The petitioner alleges that the highway bridge over the respondent's tracks at Main st. in the city of Monroe is unsafe and asks that the respondent be required to replace the bridge with a steel and cement viaduct. The respondent questions the jurisdiction of the Commission.

Held: (1) The Commission has jurisdiction under sec. 1797—12*e* of the statutes to pass upon the safety of a crossing not at grade upon complaint by the proper municipal authorities. (2) The crossing in question is dangerous.

It is ordered that the respondent improve the approaches to the bridge and construct sidewalks on the sides of the bridge as specified, plans to be submitted for approval. The city of Monroe is to pay 20 per cent of the cost as determined by the Commission, and the respondent is to pay the remainder. The improvements ordered are to be completed and open for the use of the public by June 15, 1914.

The petition is signed by the mayor and city clerk of the city of Monroe, pursuant to a resolution by the common council, and by fourteen other persons. In the preliminary proceedings this case was erroneously captioned: *James O. Fidler et al. v. Chicago, Milwaukee & St. Paul Railway Company.* The petition alleges that the highway bridge over the tracks of the Chicago, Milwaukee & St. Paul Railway Company at Main street in the city of Monroe, Green county, Wis., is in a dilapidated condition as to the structure and approaches and that it is narrower than the highway and too low to comply with the law. The opinion is expressed that the present condition of the structure and approaches is unsafe. The Commission is therefore asked to require the respondent to replace the present bridge with a new steel and cement viaduct the full width of the street with proper sidewalks on both sides.

No answer was filed for the respondent.

A hearing was held on June 14, 1913, at the city hall, Monroe, Wis. *James O. Fidler* appeared for the petitioner, and *J. N. Davis* for the respondent.

From the testimony it appears that the bridge in question is

a framed timber structure having a vertical clearance of 19 feet 9 inches and a width of 18 feet 8 inches in the clear. It is 81 feet long and has guard rails 3 feet 8 inches in height. There are five spans, the middle one directly over the rails being 20.6 feet in length. This middle span is level, but the other parts of the bridge and the approaches descend from it. The level of the street south of the bridge is about 6.7 feet lower than the middle span, and the level of the street north of the bridge about 7 feet lower. No sidewalks are provided for the use of pedestrians.

Witnesses for the petitioner testified that the bridge is too narrow to allow teams or automobiles to pass each other safely. At times drivers will wait until the bridge is clear before venturing across, thus impeding traffic. It is impossible to see vehicles approaching from either side from the opposite approach on account of the ascent to the bridge, and this was said to be a dangerous condition. The danger to pedestrians because of the narrowness of the bridge was also emphasized. Witnesses for the petitioner expressed the opinion that the timbering of the bridge is decayed and in a dangerous condition, but the district carpenter of the company testified that he had made a careful inspection and found all of the timbers sound with the exception of three or four floor joists. He said that the lower timber has been in place only since February, 1912. He expressed the opinion that the existing structure is sound and will be safe for public travel for at least five years.

The testimony shows that the bridge has been in place more than fifteen years and that the travel over it has materially increased during that period. According to the estimates of the mayor and city clerk, from 86 to 130 people living south of the tracks ordinarily use this bridge in going to the main part of of the city. Monroe has a population of about 4,300. It was said that a great deal of country traffic enters and leaves the city over the Main street bridge. A traffic count, made at the bridge by an employe of the company from 7 a. m. to 10 p. m. on Friday, June 13, 1913, shows 283 pedestrians, 85 teams and 52 automobiles. A witness for the petitioner estimated that when the roads are good, from 30 to 50 automobiles cross during the evening. He also stated that from 50 to 60 school children are obliged to cross the bridge three or four times a day on their way to and from school. It appears that a pleasure park is located south of the tracks and that on certain days a great many cross the bridge in going to and coming from this resort.

On the basis of two separate investigations, our engineer reports that the structure is in sound condition, with an estimated life of from five to seven years. He recommends, however, that the ends of the incline trestle approaches be elevated and that the earth approaches be graded in such a way that the grade of approach to the center span of the bridge shall not at any point exceed 5 per cent. He further recommends that suitable sidewalks be built on each side of the bridge and properly connected with the existing sidewalks on Main street, suitable hand railings to be provided as far as necessary.

The estimated cost of the improvements recommended, assuming that macadam surface for a roadway width of 20 feet is provided on the approaches, totals $1,133, of which $417 would be incurred within the railway right of way and $716 outside of the right of way lines.

The representative of the company at the hearing questioned the jurisdiction of the Commission in the present case. Sec. 1797–12*e* empowers the Commission to require an alteration in a crossing upon a petition brought by the common council of a city, and does not specify that the crossing to be altered must be at grade. The following section, 1797—12*f*, however, does specify that a crossing considered on motion of the Commission must be at grade. The legislature apparently intended that the safety of an existing bridge or subway should be passed upon by the Commission only upon complaint by the proper municipal authorities. The petition herein is signed by the mayor and the city clerk pursuant to a formal resolution of the council, and is therefore entirely competent to bring the matter before the Commission. Action was taken in a very similar case *(Town of Westport v. C. & N. W. R. Co.* 1912, 9 W. R. C. R. 218).

The complaint alleges that the bridge is too low to comply with the law. There is no statute which requires a railway company to provide a specified vertical clearance under highway bridges constructed by it. Sec. 697–35 provides that bridges over railways erected by certain counties shall have a clearance of 23 feet, but this section is not applicable to the bridge in question. The legislature has recognized the existence of lower bridges in sec. 1809–*e* which requires that "tell-tales" shall be provided at bridges which are less than seven feet above the roof of freight cars. In the present case "tell-tales" are provided and the law is therefore complied with.

In the light of the testimony and of the report of our engineering staff, it is our judgment that the crossing at Main street is dangerous to public travel, and that the improvements recommended by our engineer are necessary to adequately safeguard the public. The dangerous condition of the bridge could have been avoided when it was first constructed. The danger has been accentuated by the increase in volume and character of travel, but it has always been present in a certain measure. Whatever the character of the traffic, if pedestrians are obliged to use a bridge over a railway where horses are apt to become frightened and on which there is scarcely room for the safe passing of vehicles, such pedestrians are certainly endangered. However, the improvements will result in considerable benefit to the city and a portion of the cost should be borne by it. We regard as equitable an apportionment under which the respondent shall pay 80 per cent and the city 20 per cent of the cost.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, elevate the ends of the incline trestle approaches of the bridge over its tracks at Main street in the city of Monroe, and grade the earth approaches so that the grade of approach to the center span of the bridge shall not exceed 5 per cent, the earth approaches to be surfaced in conformity with the abutting portions of Main street; construct on each side of the bridge a suitable sidewalk, properly guarded with hand rails on both sides, and not less than five feet wide in the clear; and connect said sidewalks with the existing sidewalks on Main street, providing hand rails as far as necessary; plans to be submitted to the Commission for approval.

IT IS FURTHER ORDERED, That said respondent railway company furnish all necessary material and labor, and perform all necessary work in making the alterations ordered herein; and that upon the completion of this work the respondent furnish the Commission with a complete and detailed account of all expenses incurred by it therein, whereupon the Commission, with or without further hearing as may be deemed best, will determine the actual cost of such alterations; and the city of Monroe shall thereupon pay to the respondent 20 per cent of the cost as so determined by the Commission, and 80 per cent of the cost shall be borne by the respondent.

June 15, 1914, is considered a reasonable date at which the improvements herein ordered shall be completed and open for the use of the public.

ETTRICK TELEPHONE COMPANY
vs.
WESTERN WISCONSIN TELEPHONE COMPANY,
LA CROSSE TELEPHONE COMPANY.

Submitted Feb. 18, 1914. Decided March 23, 1914.

The Ettrick Tel. Co. complains that it is unjustly discriminated against by reason of the fact that its subscribers are compelled to pay a toll charge of 15 cts. per message for service over the La Crosse Tel. Co's line between Galesville and La Crosse while the Western Wisconsin Tel. Co. is allowed to offer unlimited service over this line to its subscribers under a flat rate per year. The Western Wisconsin Tel. Co. and the La Crosse Tel. Co. appear to have an agreement by which toll messages are exchanged between the lines of the two companies and each company retains the tolls for messages originating on its own lines. The flat rate mentioned, $25 per year, covers unlimited service over the entire system of the Western Wisconsin Tel. Co. and free connection to La Crosse and to Winona, Minn. Subscribers of the Western Wisconsin Tel. Co. who pay rates of $12.50 and $15 per year, according to the class of service received by them, pay the same rates for toll service to and from La Crosse as do subscribers of the Ettrick Tel. Co. The two methods of satisfying the complaint are considered: (1) the extension of the $25 flat rate to subscribers of the Ettrick Tel. Co.; and (2) the discontinuance of the rate. It appears that the volume of the toll business passing between the Ettrick Tel. Co. and the La Crosse Tel. Co. is very small, that the offering of unrestricted service over the La Crosse Tel. Co's line between La Crosse and Galesville to subscribers of the Ettrick Tel. Co. under a $25 rate would lead to little use of the rate and that the discontinuance by the Western Wisconsin Tel. Co. of the $25 rate would be of no benefit to the Ettrick Tel. Co.

Held: The rates complained of are not unjustly discriminatory and the Ettrick Tel. Co. is not burdened unjustly because of their existence. The complaint is dismissed.

The petition of the Ettrick Telephone Company was filed with the Commission on December 31, 1913. The petition shows that petitioner is a telephone utility with exchanges at Ettrick and Galesville in Trempealeau county, Wis., and surrounding rural territory. The petition further shows that the Western Wisconsin Telephone Company is a public utility operating exchanges at Galesville and other places in Trempealeau county and that the La Crosse Telephone Company is a public utility operating

a telephone exchange at La Crosse and at other points, with toll lines running into Galesville, Wis.

Without being set forth in detail as shown in the complaint, the matters complained of may be stated as follows: The La Crosse Telephone Company and the Western Wisconsin Telephone Company appear to have an agreement by the terms of which toll messages are exchanged between the lines of these companies and each company retains the tolls for messages originating on its own lines. This agreement also permits the Western Wisconsin Telephone Company to send messages to Winona, Minn., retaining the entire revenue from such messages. The Ettrick Telephone Company has physical connection with the toll lines of the La Crosse Telephone Company at Galesville, Wis., connection being made through the switchboard of the Western Wisconsin Telephone Company. The toll charge for messages from the Ettrick Telephone Company to La Crosse is 15 cts. per message. The Western Wisconsin Telephone Company, however, by virtue of its agreement with the La Crosse Telephone Company, offers to its subscribers a somewhat different set of toll rates. The message toll rate is 15 cts., or the same as the charge which is made to the subscribers of the Ettrick Telephone Company for connection with La Crosse. The Western Wisconsin Telephone Company, however, has a variety of exchange rates. For $12.50 per year subscribers can obtain service within the limits of the village where they live. For $15 per year rural subscribers secure connection with their market places, and local subscribers are given connection not only with the local subscribers of their exchange, but with rural subscribers reached through that exchange. For $25 per year the Western Wisconsin Telephone Company furnishes unlimited service over its entire system, embracing nine exchanges in Trempealeau and Buffalo counties, and free connection to La Crosse and Winona.

The Ettrick Telephone Company feels that a discrimination is practiced because subscribers of the Western Wisconsin Telephone Company are able to secure unlimited telephone service to La Crosse and Winona at a flat rate per year and subscribers of the Ettrick Telephone Company can secure connection to La Crosse and Winona only on a message rate basis. The Western Wisconsin Telephone Company, as previously stated, retains the entire amount of toll revenues for messages originating on its system and sent to La Crosse and Winona, but the Ettrick Tele-

phone Company secures only a percentage on originating messages. Representatives of the Ettrick Telephone Company did not state whether they preferred to have a $25 rate placed upon subscribers of their company for unlimited service to La Crosse and Winona or whether they wished to have the $25 rate of the Western Wisconsin Telephone Company suspended as far as its application to the toll business is concerned and have all subscribers of the Western Wisconsin Telephone Company pay the message rate for toll messages from Galesville to La Crosse and Winona.

Hearing in this matter was held on February 18, 1914, at Madison, Wis. Appearances were as follows: For the Ettrick Telephone Company, *John Norgaard* and *A. M. Helleckson;* for the Western Wisconsin Telephone Company, *J. C. Gaveney;* and for the La Crosse Telephone Company, *J. M. Storkerson.*

It appears that the La Crosse Telephone Company owns the wire for the complete toll circuit between Galesville and La Crosse, but that for a distance of some six miles this wire is carried on poles of the Western Wisconsin Telephone Company, from Galesville to Hunter's Bridge. The Western Wisconsin Telephone Company has metallic toll lines connecting its various exchanges in Trempealeau and Buffalo counties, so that there is a joint ownership of the toll system which is used in exchanging messages between the Western Wisconsin Telephone Company and the La Crosse Telephone Company, although between Galesville and La Crosse only a small portion of the line is owned by the Western Wisconsin Telephone Company.

It appears from the record in this case that it would be impracticable to provide a $25 rate on the lines of the Ettrick Telephone Company for service to La Crosse and Winona. The Ettrick Telephone Company serves a much more restricted area than does the Western Wisconsin Telephone Company, and the $25 rate of the Western Wisconsin Telephone Company covers not only toll messages to La Crosse and Winona, but unlimited service over its own system. If a $25 rate were, therefore, put in effect on the Ettrick Telephone Company's system, the service furnished would not be equivalent to that furnished to such subscribers of the Western Wisconsin Telephone Company as choose the $25 rate.

Furthermore, it does not appear from the records in the case that a $25 rate would be of any advantage to the Ettrick Tele-

phone Company, since the volume of the toll business passing between the Ettrick Telephone Company and the La Crosse Telephone Company is exceedingly small. According to a statement filed by the La Crosse Telephone Company for the period from July 18, 1913, to March 1, 1914, or somewhat over seven months, only three messages were sent from La Crosse to the Ettrick Telephone Company over the lines of the La Crosse Telephone Company and only two messages over these lines from the Ettrick Telephone Company to La Crosse. Over the Wisconsin Telephone Company's lines three messages were sent from La Crosse to the Ettrick Telephone Company and seven messages from the Ettrick Telephone Company to La Crosse. From Bangor and New Richmond to the Ettrick Telephone Company a total of three messages were sent. It is reasonable to assume that if unlimited facilities for exchanging toll messages were furnished without additional charge, the amount of toll business would be increased between La Crosse and the Ettrick Telephone Company. But the statement of toll business actually done does not appear to warrant the conclusion that there is so great a demand for unrestricted exchange of toll messages on the part of subscribers of the Ettrick Telephone Company as to lead to any considerable use of a $25 rate if such a rate were offered to subscribers of the Ettrick company.

The present rates of the Ettrick Telephone Company are exceedingly small, being only $5 or $6 per year, depending upon certain rules of the company. It is apparent that the demand for toll business is not such as to lead any considerable number of subscribers to pay approximately $20 per year additional merely for the toll service.

The other way in which the demands of the Ettrick Telephone Company might be met would be to abolish the $25 rate and unlimited toll service of the Western Wisconsin Telephone Company. The testimony introduced on behalf of the Ettrick Telephone Company in the form of affidavits makes it appear, as is undoubtedly the case, that the flat rate for messages from the Western Wisconsin Telephone Company to La Crosse encourages the sending of such messages, but that the message rate from La Crosse to the Western Wisconsin Telephone Company tends to restrict the number of messages. It is therefore probable that parties on lines of the Western Wisconsin Telephone Company who are using the $25 rate are obtaining certain advantages

which are not obtainable by subscribers of the La Crosse Telephone Company or by subscribers of the Ettrick Telephone Company. This rate, however, has been in force for a considerable time. Although the testimony did not show that there was a written contract between the La Crosse Telephone Company and the Western Wisconsin Telephone Company specifying the conditions under which toll messages should be exchanged, it appears that there was undoubtedly an agreement between these companies that each should retain all toll on messages which they originated, and that the $25 rate of the Western Wisconsin Telephone Company was acceptable to the La Crosse Telephone Company.

The Ettrick Telephone Company has toll connection with the lines of the La Crosse Telephone Company upon the same conditions as do subscribers of the Western Wisconsin Telephone Company who pay the $12.50 and $15 rates. Inasmuch as it appears certain that a $25 rate is not demanded by subscribers of the Ettrick Telephone Company because of the small volume of their toll business with La Crosse and Winona, we do not see that there is a discrimination between the Ettrick Telephone Company and the Western Wisconsin Telephone Company which should be removed by order of this Commission. If the $25 rate were established for both the Ettrick Telephone Company and the Western Wisconsin Telephone Company the situation would apparently be about the same as at present, since there is no evidence to show that a $25 rate would be of any value to the Ettrick Telephone Company. If the $25 rate of the Western Wisconsin Telephone Company were ordered discontinued, we fail to see where the Ettrick Telephone Company would gain. Its rate to La Crosse would be the same as at present. The only readjustment would be one affecting different classes of subscribers of the Western Wisconsin Telephone Company. There is, however, no complaint in this case from subscribers of the Western Wisconsin Telephone Company alleging that the $25 rate discriminates against those who pay the $12.50 and $15 rates.

Some consideration must undoubtedly be given to the argument of the Western Wisconsin Telephone Company that conditions throughout the territory served by that company have become adjusted to its schedule of rates. This does not mean that because of such an adjustment an unjustly discriminatory rate

should be continued. But we do not find that the rates complained of in this case are unjustly discriminatory. They may not be such rates as are dictated by the most modern telephone practice. They do not appear, however, to be seriously or unjustly discriminatory, nor does it appear that the Ettrick Telephone Company is being burdened unjustly because of the existence of such rates. The subscribers of the Ettrick Telephone Company, as stated, have the same advantages with regard to toll service as do the Western Wisconsin Telephone Company's subscribers who pay the $12.50 and $15 rates, and inasmuch as there has been very little use of the toll lines between the Ettrick Telephone Company and La Crosse, we do not see that the subscribers of the Ettrick Telephone Company can reasonably be compared with those subscribers of the Western Wisconsin Telephone Company who are paying the $25 rate. As between the other subscribers, there is no discrimination with regard to toll service, and as between the $25 subscribers of the Western Wisconsin Telephone Company and the subscribers of the Ettrick Telephone Company, if there is a discrimination it does not appear that this discrimination is one which works injustice to the Ettrick Telephone Company and therefore requires the abolition of the $25 rate.

In view of all the facts which have been presented in this case we fail to find that there is an unjust discrimination between the Western Wisconsin Telephone Company and the Ettrick Telephone Company or their subscribers in the toll business passing to or from La Crosse.

IT IS THEREFORE ORDERED, That the complaint in this matter be and the same is hereby dismissed.

NEW DELLS LUMBER COMPANY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided March 24, 1914.

The petitioner alleges that the distance tariff rate exacted by the respondent, in the absence of a switching rate governing the movement, for the transportation of seventeen cars of ties and rails from Lange Spur to Hotchkiss Spur, a distance of 2.1 miles, between Draper and Kaiser, Wis., was exorbitant and asks for refund on the basis of a trackage rate of $1 per car. The respondent is willing to make refund.

Held: The charge complained of was unusual and exorbitant. Refund is ordered on the basis of a rate of $1 per car which would have been the reasonable rate for the service performed.

The petitioner is engaged in the lumber business at Eau Claire, Wis. It alleges that on November 4, 1912, it shipped from Lange Spur to Hotchkiss Spur, a distance of 2.1 miles, seventeen cars of ties and rails; that both of said spurs are located between Draper and Kaiser, Wis., on the respondent's line; that the fifth class rate of 4 cts. per cwt., subject to an estimated weight of 36,000 lb., was paid on said shipment; that the total weight of said shipment was 612,000 lb.; that because of the necessity of immediate movement of said shipment, it was impossible for the petitioner to wait until the respondent could publish and make effective a reasonable charge therefor, and that the rate exacted of the petitioner, though in accordance with the respondent's tariff G. F. D. 1555–C, was exorbitant when applied to the shipment in question; that the reasonable charge for such shipment is a trackage rate of $1 per car; that the total amount of freight paid by petitioner on said shipment is $244.80, and that if a rate of $1 per car had been in effect, the charge would have been but $17. The petitioner therefore prays that the respondent be authorized and directed to refund to it the sum of $227.80.

The respondent, answering the petition, admits all the allegations thereof and alleges that it is willing to adjust the charges upon the basis of $1 per car.

The matter was submitted upon the pleadings, papers and documents on file. The time of hearing was waived.

The facts are clearly stated in the pleadings, and need not be repeated. In the absence of a switching rate, the respondent was obliged to charge its regular distance tariff rate. This, of course, was prohibitive.

We find and determine that the charge exacted of the petitioner on the aforesaid shipment was unusual and exorbitant, and that the reasonable rate that should have been in effect and applicable on such shipment is $1 per car. The reparation that will be awarded amounts to $227.80.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company be and the same is hereby authorized and directed to refund to the New Dells Lumber Company the sum of $227.80.

PESHTIGO LUMBER COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY, WISCONSIN AND MICHIGAN RAILWAY COMPANY, WISCONSIN NORTHWESTERN RAILWAY COMPANY.

Decided March 24, 1914.

The petitioner alleges that the charges collected by the respondents for the transportation of thirteen shipments of cedar posts from Taylor Rapids to Peshtigo were erroneous and illegal and asks for refund. The charges in question were based on a rate of 8½ cts. per 100 lb., then in effect from Taylor Rapids to Bagley Jct., plus a charge of $3 per car from Bagley Jct. to Peshtigo. At the time the shipments moved a rate of 6½ cts. per 100 lb. was in effect from Taylor Rapids to Marinette and Menominee, Mich., points beyond Bagley Jct. on the C. M. & St. P. Ry., and this rate has since been put into effect over the same line from Taylor Rapids to Bagley Jct. The C. M. & St. P. Ry. Co. is willing to grant the relief asked.

Held: The charges complained of were unusual and exorbitant. Refund is ordered upon the basis of a rate of 6½ cts. per 100 lb. from Taylor Rapids to Bagley Jct., plus $3 per car from the latter point to Peshtigo, which would have been the reasonable charges for the service performed.

The petitioner alleges that it made thirteen shipments of cedar posts from Taylor Rapids, Wis., in May 1913, for concentration to it at Peshtigo, Wis., via the Wisconsin Northwestern railroad to Girard Junction, the Chicago, Milwaukee & St. Paul railroad to Bagley Junction, and the Wisconsin & Michigan railroad to destination; that all of said carriers, insofar as the shipments in question are concerned, operate within the state of Wisconsin; the charges were collected on the basis of a rate then in force of 8½ cts. to Bagley Junction plus $3 per car beyond; that at the time the shipments in question moved the tariff of the Chicago, Milwaukee & St. Paul Railway Company, namely, 8797–A, provided a rate of 6½ cts. per 100 lb. on shipments of cedar posts from points on the Wisconsin Northwestern railroad, including Taylor Rapids to Marinette and Menominee, Mich.; that Bagley Junction is directly intermediate between Taylor Rapids and Marinette and Menominee; that subsequent

to the time the shipments in question were made the Chicago, Milwaukee & St. Paul Railway Company amended its tariff by publishing a through rate, Taylor Rapids to Peshtigo, of 6½ cts. per 100 lb. plus $3 per car, as per its tariff G. F. A. 8797–B, effective November 24, 1913; that the rate assessed on the shipments in question was erroneous and illegal because it was higher to an intermediate point on the same commodity than to a more distant point; and that under the lower rate subsequently published it is entitled to $104.33 refund. Wherefore, the petitioner prays that the respondent railway companies be required to refund to it the said sum of $104.33.

The Chicago, Milwaukee & St. Paul Railway Company, answering the petition, admits all the allegations thereof and expresses its willingness to grant the relief asked.

The hearing was waived and the claim was submitted upon the pleadings, papers and documents on file. An examination discloses that all the material facts in the case are as set forth in the petition and admitted in the answer.

We therefore find and determine that the charges exacted of the petitioner by the respondent railway companies upon the aforesaid shipments of cedar posts from Taylor Rapids to Peshtigo, Wis., were unusual and exorbitant, and that the reasonable rate for such shipments is 6½ cts. per 100 lb. from Taylor Rapids to Bagley Junction, plus $3 per car from the latter point to Peshtigo. The total amount of charges paid by the petitioner was $482.31. Based upon a rate of 6½ cts. per 100 lb. from Taylor Rapids to Bagley Junction, plus $3 per car from the latter point to Peshtigo, as provided in Chicago, Milwaukee & St. Paul tariff 8797–B, the amount of such charges would have been $377.98. Hence the excess charge is $104.33.

NOW, THEREFORE, IT IS ORDERED, That the respondent railway companies be and the same are hereby authorized and directed to refund to the petitioner the sum of $104.33.

IN RE INVESTIGATION OF CERTAIN OBSTRUCTIONS CONSTRUCTED IN AND OVER THE ROCK RIVER IN THE CITY OF JANESVILLE IN VIOLATION OF THE PROVISIONS OF SECTION 1596 OF THE STATUTES.

Submitted June 25, 1913. Finding filed March 25, 1914.

Complaint is made against the maintenance of certain piles, piers, walls and other obstructions constructed by private persons in and over the Rock river in the city of Janesville. The complainant alleges that these obstructions interfere with navigation; that they have seriously damaged the complainant; that they are a constant menace to the safety of the general public, to the property rights of the owners of property on the banks of the river in general and to those of the complainant in particular; and that their maintenance is in violation of sec. 1596 of the statutes; and asks that the Commission investigate the conditions set forth and report upon them to the governor as required by the section cited. The obstructions mentioned in the petition refer chiefly to buildings which stand within the river boundaries on piles and piers abutting the Milwaukee street bridge and the Court street bridge and the filling in for foundations on the west side of the stream in Janesville. A survey of the Rock river in Janesville was made and soundings were taken to ascertain the probable effects of the obstructions in question in case of floods. It is conceded that none of the structures of which complaint is made, with one exception, were placed or maintained in the river under legislative authority, but it is contended on the part of property owners that, notwithstanding this fact, these structures are not nuisances and that they therefore cannot be removed at the instance of the state or of any private citizen.

Finding: 1. That Rock river in the city of Janesville is a navigable stream.

2. That the river is navigated by row boats, motorboats, and other water craft.

3. That the piers and other structures delineated upon the map on file at the office of the Commission constitute obstructions to navigation and to the natural flow of the water in the stream and have a tendency to narrow the channel of the stream.

4. That in case of very high water, logs, lumber, wood and drift coming down the stream are likely to lodge against such obstructions, preventing the free passage of the water through the natural channel and thereby causing injury and damage to property within the city of Janesville.

The legality of the maintenance of the obstructions in question is not passed upon.

This is a proceeding under sec. 1596 of the statutes (as amended by ch. 652, laws of 1911, and ch. 17, special session laws

of 1912), which makes it the duty of the Railroad Commission to report to the governor of the state any violation of those provisions of the section which prohibit the maintenance of obstructions in or over the navigable rivers and streams of the state. Complaint in the matter was brought, an investigation was made by the Commission, and the findings of the Commission were filed on March 25, 1914, and reported to HIS EXCELLENCY FRANCIS E. MCGOVERN, governor of the state of Wisconsin, as follows:

"C. S. Jackman of Janesville, Rock county, Wis., by Messrs. Richmond, Jackman & Swansen, his attorneys, complains and says that he is a resident, a taxpayer, and freeholder of the city of Janesville, Rock county, Wis.; that he with C. W. Jackman is the owner of certain property situated at the corner of Milwaukee and Main streets in the city of Janesville and running to the back of Rock river where the Milwaukee street bridge crosses the said Rock river; that by virtue of said riparian ownership, he and the said C. W. Jackman are entitled to all the benefits and rights which may accrue to that portion of the bed of Rock river between the thread of said stream and the bank thereof on the northeasterly side of said Milwaukee street bridge; that said space in said Rock river has not been built upon by this complainant or any other persons, and that no obstructions are now in that portion of said river to which said complainant and said C. W. Jackman have the title; that located upon the ground immediately adjoining said Rock river and at the corner of Milwaukee and Main streets and running from thence to the bank of said river there is a large office building which is the property of said complainant and C. W. Jackman; that the Rock river at the city of Janesville and at the space hereinbefore mentioned is a navigable stream and navigable in fact, and for a long distance on each side thereof is a navigable stream and navigable in fact; that various persons have placed in said Rock river at the Milwaukee street bridge divers and many obstructions; that the entire southerly side of the Milwaukee street bridge has been covered by buildings erected upon piles, piers, and concrete foundations; that most of said buildings were originally erected upon piles, but that subsequently, and without the knowledge of this complainant or any other parties, as far as this complainant is informed, the owners of said buildings have covered a considerable number of said piles with steel or corrugated iron coverings and have filled in between the original piles and said corrugated iron coverings with concrete, largely increasing the size of the obstruction in said Rock river; that in addition thereto there have been placed in said Rock river large piers made of concrete and stone which were used as a foundation for the said buildings in said river; that in addition thereto and extending out for a distance of approximately twenty feet from the west

bank of said river, where the said Milwaukee street bridge crosses said Rock river in the city of Janesville, concrete walls have been built and earth, rocks, and other materials filled in; that in addition thereto on the northwesterly side of said river, where the said Milwaukee street bridge crosses said Rock river in the city of Janesville, buildings have been built upon piles and piers and concrete foundations, extending to the middle of said river, so that the only part of said river where the said Milwaukee street bridge crosses said Rock river in the city of Janesville which has not been completely built upon is the space between the thread of the stream and the building owned by said complainant and C. W. Jackman; that none of the said buildings have been placed in said stream by authority of the legislature, except a small building in the center of said stream on the southerly side of the said Milwaukee street bridge, where authority was given to Peter Meyers individually to maintain a meat market, said authority having been given by ch. 426 of the laws of 1852; that Peter Meyers has been dead for more than twenty years, and that a meat market has not been maintained in said building for more than twenty years last past, and that whatever rights said Peter Meyers had in and to said building or the right to maintain said building in said stream have long since ceased to exist; that buildings have been erected abutting the bridge across Rock river known as the Court street bridge and located down the stream of Rock river from the said Milwaukee street bridge; that said piers and piles have caused large amounts of sand to bank up against said piers and piles and other obstructions, and have caused bars to form in said river, so that the current of said river has been unlawfully diverted from its normal course and has been thrown by reason of the obstructions toward the easterly bank of said river and against the bank upon which is located the building owned by said complainant and C. W. Jackman, as hereinbefore stated; that there was maintained by the ancestors of said complainant upon said bank a building with foundations in the same place long prior to the building of any obstructions in the way of buildings in said river; that the maintenance of said piles, piers, walls and other obstructions interferes with navigation and constitutes an obstruction to the use of Rock river and has seriously damaged this complainant and is a constant menace to the safety of the general public and to the property rights of the owners of property on the banks of Rock river, and particularly of said complainant; that the maintenance of said piles, piers, walls, buildings and other obstructions constructed in and maintained in and over said Rock river is in violation of the provisions of ch. 69*m* of the statutes of the state of Wisconsin of 1911 (sec. 1596, ch. 652, laws of 1911), and is a public nuisance; that subsequent to the first of January, 1913, a certain portion of the buildings located on the southeasterly side of the said Milwaukee street bridge and extending from the

easterly shore of the said Rock river to approximately the center of the stream were burned; that the burning timbers, buildings, and debris fell into the said Rock river and a large portion of the stocks of goods in said buildings fell into said Rock river, so that the said Rock river was partially dammed and the natural flow of the said stream was retarded and water was forced up and into the basement of the building owned by said complainant and C. W. Jackman, as stated aforesaid, and fires in the heating apparatus in said building extinguished and said complainant and his co-owner and the tenants of said building put to considerable expense and annoyance; that all of the said buildings so erected in the city of Janesville and across Rock river are frame structures; that they are highly inflammable and that by reason of the open space under said building it is impossible to reach said buildings with a hose or to put out a fire; that in the recent fire above referred to the building of this complainant and C. W. Jackman was seriously menaced, the window glass in certain portions of the building broken by the heat, and the destruction of the building seriously threatened; that after said fire this complainant and other citizens of the city of Janesville were first aware of the nature of the obstructions in said stream and of the extent thereof; that preparations have been made, as this affiant is informed and verily believes and so charges the fact to be, to rebuild the burned portion of the buildings in said Rock river; that the piles upon which said buildings were located and the piers and other obstruction still stand and interfere with the navigability and obstruct the use of said river and constitute a menace to the safety and property rights of said complainant and other citizens of the city of Janesville owning property on the banks of said Rock river; that no effort has been made to remove any of said buildings or obstructions subsequent to the first day of January, 1913, and that all of said buildings so erected still stand in violation of ch. 69*m* of the statutes of 1911 [sec. 1596, ch. 652, laws of 1911.]

"WHEREFORE your complainant prays your honorable body to investigate the conditions as set forth in this complaint and as they now exist in the city of Janesville with reference to Rock river, and that your honorable body report the said facts and any violation of ch. 69*m* [sec. 1596, ch. 652, laws of 1911] to the HONORABLE FRANCIS E. MCGOVERN, as governor of the state of Wisconsin, for further action, and all as provided in ch. 69*m* of the laws of 1911. And for such other and further order as may be just and proper in the premises."

A petition was also filed by L. R. Treat and numerous other citizens of Janesville complaining of the obstructions constructed and maintained in and over the Rock river in the city of Janesville. This petition was deemed defective in its allegations but

because of the full statement of the facts contained in the preceding petition of C. S. Jackman was not amended and refiled.

The matter was heard at Janesville on June 25, 1913. *Ralph W. Jackman* appeared for the petitioners, *W. H. Doherty* for the city of Janesville, *Charles E. Pierce* for George G. Sutherland, and *M. G. Jeffries* and *E. F. Carpenter* in their own behalf.

It appears that the Rock river rises near the boundary line of Fond du Lac and Dodge counties, thence flows through the counties of Dodge, Jefferson and Rock in this state, thence in a southwesterly direction through the state of Illinois and empties into the Mississippi river south of Rock Island, Ill. It was meandered and returned as navigable by the United States surveyors prior to the organization of the state. It was shown that the river is used by canoes bound from the Madison lakes to the Mississippi river, and that, at certain points, notably the dams at Beloit and Janesville and south of Beloit, the river is navigated by launches and other small craft, including steamers carrying passengers. At the Indian Ford dam a railroad is provided for transporting launches around the dam. The river flows through Lake Koshkonong which is navigated by various kinds of boats. It was said that a large boat once came from the Mississippi river as far north as Janesville and that a boat was built at the mouth of what is known as the Bark river and floated down the stream.

With reference to the latter instance a witness called attention to the case of *State ex rel. Attorney-General v. Pliny Norcross,* 1907, 132 Wis. 534. The witness thus testifying stated that he had ascertained from old settlers, now deceased, that in about 1840 logs were rafted down the Rock river from the north but that the use of the river for that purpose was discontinued some time after the year 1850. A witness who was born in 1847 testified that when a boy he had assisted in floating logs down the river to Janesville from the north. He described a dock near the present Court street bridge where rafts of lumber from northern points were formerly landed.

The obstructions mentioned in the petition refer chiefly to buildings which stand within the river boundaries on piles and piers abutting the Milwaukee street bridge and the Court street bridge and the filling in for foundations on the west side of the stream in Janesville. In, or prior to, 1849 a building was erected by Peter L. Meyers for use as a meat market, south of Milwaukee

street at about the center of the stream. The legislature subsequently granted authority to Peter L. Meyers individually to maintain such building (ch. 426 of the laws of 1852). It is provided in said chapter "that said building shall not materially obstruct the flowage upon said river," also "that the said building may be kept and maintained where it now stands so long as the same shall be used as a meat market."

This building has not been used as a meat market for many years. It stood on lime stone piers which were later incased in concrete. It was destroyed by fire early in 1913 but the stone and concrete foundation still remains. The property is still a part of the Meyers estate, and Mr. H. B. Meyers testified that he contemplates the erection of another building on the same site. Adjoining the Meyers building on both sides and extending toward either shore were erected other buildings on piles. Some of these piles also were incased in concrete. Such buildings were owned by George C. Sutherland and E. B. Carpenter. The fire which destroyed the Meyers building also destroyed the buildings belonging to Mr. Carpenter and Mr. Sutherland. The debris from the fire fell into the river and backed the river up from 16 to 18 inches, and had not been removed at the time of the hearing. Both Mr. Carpenter and Mr. Sutherland declare their intention to rebuild their property.

On the northeast side of the bridge, extending from the west shore to the thread of the stream, is another building, constructed on piles, which has stood about thirty years, and which is now owned by Malcolm G. Jeffris. At the Court street bridge there are also buildings on piles on the north side of the bridge, some owned by W. B. Conrad and some constituting a part of the Michael Dawson estate.

In addition to the buildings above designated, the testimony shows that other structures, which do not now stand over the water, were originally built in part on piles and stone piers and the foundations were subsequently filled in with soil or other materials, or the original buildings on the site in question were thus constructed. The Merchants and Savings Bank at the west end of the Milwaukee street bridge was built on the site of the old Bumpsted building. The latter stood on stone piers and the water flowed beneath it, but when the existing building was erected the foundation was filled in and made solid. A concrete wall, known as the Jeffris wall, was built along the stream adjacent to

this structure. A witness who has lived in Janesville since 1847 testified that the river at one time extended to an old mill west of the present site of the Merchants and Savings Bank building. The Jackman Block, which has stood at its present site for about fifty-three years, is located northeast of the Milwaukee street bridge and the retaining wall west of the building extends to the line of the abutment of the old bridge. One of the petitioners stated that the river used to come up under the bridge abutment during periods of very high water and that it even came up and covered Main street at such times. This building is set back about eight feet from the bank of the river. The shore on the side near the Jackman Block is the same now as it has always been. The bank of the river was about where the wall is outside of the building and about eight feet from the present foundations of the block.

It appears that the following structures now extend out over a part of the river: A building of the New Doty Manufacturing Company; a platform and structure of the Thoroughgood Company; a switch of the Rockford & Interurban Railway Company; the Wilson Lane elevator shaft; and the building owned by the Commercial Club of Janesville and known as "The Rink."

It further appears that there are bridges, dams and other obstructions in the Rock river between Beloit and Watertown and that none of these bridges or dams are provided with locks, breaks or draws to make navigation possible. In the order of their location from the south to the north these bridges, dams and other obstructions are as follows: Wagon bridge in Beloit; railway bridge of the Chicago & North Western Railway Company; store buildings owned by C. B. Salmon; wagon bridge at State street in Beloit; store buildings on north side of State street bridge in Beloit; railway sidetrack bridge on the Chicago, Milwaukee & St. Paul Railway Company and the Chicago & North Western Railway Company; dam crossing the entire river, wagon bridge, railway bridge of Rockford & Interurban Railway Company; railway bridge of the Chicago, Milwaukee & St. Paul Railway Company; wagon bridge at town line; wagon bridge at Afton; railway bridge of Chicago, Milwaukee & St. Paul Railway Company; railway bridge of Chicago & North Western Railway Company; dam at Janesville; wagon bridge at Center avenue, Janesville; wagon bridge at Jackson street, Janesville; railway bridge of Rockford & Interurban Railway Company; rail-

way sidetrack bridge of Chicago & North Western Railway Company; wagon bridge at Racine street, Janesville; Court street bridge and buildings adjacent thereto at Janesville; Milwaukee street bridge and buildings adjacent thereto at Janesville; railway sidetrack bridge of Chicago, Milwaukee & St. Paul Railway Company at Janesville; Janesville power dam; wagon bridge at Fourth avenue, Janesville; railway bridge of the Chicago, Milwaukee & St. Paul Railway Company and the Chicago & North Western Railway Company; Four-mile bridge in town of Janesville; Dawson dam; Indian Ford dam; wagon bridge in town of Fulton; railway bridge of Chicago, Milwaukee & St. Paul Railway Company; Newville bridge; South Ft. Atkinson bridge; railway bridge of Chicago & North Western Railway company; wagon bridge at Ft. Atkinson and store on south side thereof owned by Mrs. Parent; railway bridge of Chicago & North Western Railway Company; wagon bridge two miles north of Ft. Atkinson; Jefferson dam; wagon bridge at depot at Jefferson; wagon bridge at street three blocks north of depot at Jefferson; dam at Watertown and railway and wagon bridges at Watertown.

In view of the facts and testimony given upon the hearing it was deemed advisable to have the engineers of the Commission make a survey of the Rock river in Janesville and take soundings at various places for the purpose of obtaining an idea of the contour of the river and the effect the obstructions in question might have in case of floods. In their report they state that the Rock river in the city of Janesville varies in width from 170 feet to 280 feet, that soundings were taken in the vicinity of the buildings north and south of the Milwaukee street bridge to determine the location of sand bars which might be caused by piles and piers in the river and to obtain an idea of the contour of the bottom of the river. The figures on the map prepared by the engineers and filed at the office of the Commission give the approximate depth in feet of the stream at the places indicated. The dash line in the river locates approximately the thread of the stream. Just south of the third arch of the Milwaukee street bridge are the remains of several concrete piers which were formerly used to support a building which was destroyed by fire previous to this investigation. On March 9, 1914, when the soundings were taken, some of the large pieces of these piers, which had been broken and tipped over, were only a few inches

below the surface of the water and were surrounded by bars of sand. Under the building south of the Milwaukee street bridge and near the west bank of the river there were several deep holes but it is believed that these were dug out at some time and that they are not the natural bottom of the river. There were no sand bars around or near the piles under this building.

On the west side, generally speaking, the river is more shallow than on the east side. The soundings were nearly all taken from a boat which was rowed up and down the river without difficulty, running aground only once just south of the building, on the west side of the building and south of the Milwaukee street bridge. In their comment upon the situation the engineers state that the practice of constructing buildings over rivers, besides obstructing navigation, is a dangerous one, especially during times of freshets, when floating logs and debris may lodge against piles and piers and raise the head of water to such a height that it will cause damage. This practice should be discouraged.

The contention of Mr. George Sutherland, one of the property owners, upon the facts disclosed is succinctly stated in the brief of his counsel as follows:

"That Rock river is not now and has not been in the city of Janesville, a navigable stream for any purpose of trade or commerce, or for the floating of logs, lumber or for any craft whatever other than small rowboats or fishing boats for more than fifty years; that the state of Wisconsin has permitted by express legislative enactment the building of the Meyers building, so called, abutting on the southerly side of said bridge, the erection of thirty-nine permanent obstructions across Rock river, to-wit: dams, wagon bridges, and railroad bridges between the southerly state line of Wisconsin and the city of Watertown, in said state, a distance of about forty miles, and that none of said obstructions are or ever have been provided with any draw, lock, gate or other device to permit the passage of any kind of water craft, and that they are a complete obstruction to any possible navigation of said river; that none of the enactments of the legislature passed within the last forty years by reason of the non-navigability of said river contain any provision in relation to any device in said bridges and dams for the convenience of navigation; that said obstructions in and of themselves, if Rock river could be navigated, would be a complete bar to the use of said river in said state for the purposes of navigation; that there are no commodities of any kind along said river for which said river can be used advantageously or at all as a navigable stream; that the country bordering on said river is strictly an agricultural country and has been for more than fifty years; that there are no log-

ging or lumbering industries in said section of the country; that there is not sufficient water in said stream ordinarily for the purpose of navigation, except in the various ponds made by the dams across said river; that the best interests of the citizens of Janesville, of the city itself and of the people of the surrounding country will be best served and promoted by the construction and maintenance of good and substantial store buildings across said Rock river abutting on said Milwaukee street bridge, that the construction and maintenance of buildings across said river abutting on said bridge as now maintained and proposed to be maintained, will not in any way injure the water power and use thereof in said river or the flow of water in said river or jeopardize the property along said river and that the construction and maintenance of said buildings will improve the value of property adjacent to said river and other property in said city of Janesville; that for more than twenty-five years last past, the property abutting on said Milwaukee street bridge in the bed of said river, has been assessed as valuable building property and taxes paid thereon by the owners thereof to the said city of Janesville in said county of Rock, said state of Wisconsin, in large sums amounting to thousands of dollars in each year, and that said property abutting on said Milwaukee street bridge was assessed in the year 1912 by the officers of the state tax commission under the provisions of the laws of Wisconsin and by them assessed as valuable business property at the rate of $175 per front foot, exclusive of the buildings thereon; that the circuit courts of Waukesha and of Rock counties in said state, and the supreme court of the state of Wisconsin, in at least seven actions wherein the state of Wisconsin, the city of Janesville, and others have been parties on one side, and each and all the owners of said property abutting on said Milwaukee street bridge in said Rock river have been parties on the other side, except said petitioners C. S. & C. W. Jackman, have in each and all of said actions determined that the owners of said lots abutting on said Milwaukee street bridge in Rock river had the right to erect and maintain buildings thereon as heretofore erected, and that each and all of said owners relying on said several judgments and recognition thereof by the officers of the state, county and city, and the assessment and collection of taxes on said lots, have expended large sums of money, to-wit: many thousands of dollars, in the purchase of said lots in said river abutting on said bridge and in the erection and maintenance of buildings thereon, and the merchants occupying said stores, have built up and become possessed of large and lucrative trades and businesses in the several buildings abutting on said bridge; that the legislature of Wisconsin in 1882 by an act entitled "An act to reduce the act incorporating the city of Janesville and the several acts amendatory thereto into one act, and to amend the same" delegated to the city of Janesville the same power over said river

within the limits of said city as said city had on the streets and highways of said city, and said city in pursuance thereof has recognized said right to build in said river, established lines on the easterly and westerly sides of said river, built and maintained six bridges across said river, and has adopted plans for rebuilding on said Milwaukee street a new cement bridge at the cost of about $38,000, and that the plans of said bridge have been approved by said Commission; that said river in said city of Janesville for more than fifty years has been abandoned by said city and by said state as a public way and for more than fifty years has ceased to be navigable in fact for any purposes whatsoever, except by light boats for fishing and pleasure; that the best and most valuable business property in said city has been erected and is located within the meandered lines of said river in said city; that in said city of Janesville there are six wagon bridges, six railroad bridges, two dams across said river, two large sewer pipes on the bed of said river and crossing the same and carrying all the sewerage from the east side of said river to the west side, and two water mains crossing said river, which would effectually prevent any navigation of said river if it contained a sufficient volume of water; that the experience of twenty-five years has determined that the water power created by the dams across said river in said city, is not in any way injured or impaired by the erection and maintenance of buildings and bridges across said river; that the power created by said dams is used for lighting the streets of the said city, stores, factories, shops and dwelling houses in said city, and for power for operating the machinery in many of the factories in said city, and for running the street cars in said city; that said river is many times more valuable for power purposes than for navigation purposes, even if it were possible to make said river navigable, and that it is wholly impracticable to use said Rock river as a navigable stream in said state of Wisconsin; that store buildings have been erected on said river abutting on bridges in the cities of Beloit, Ft. Atkinson and Watertown in said state."

The statutes involved in the matters here under investigation provide:

"Section 1596. 1. All rivers and streams which have been meandered and returned as navigable by the surveyors employed by the government of the United States and all rivers and streams, meandered or nonmeandered, which are navigable in fact for any purpose whatsoever are hereby declared navigable to the extent that no dam, bridge, or other obstruction shall be made in or over the same without the permission of the legislature; but this section shall not be construed to impair the powers granted by law to towns, counties, or cities to construct bridges over such rivers and streams. The consent of this state is here-

by given to the acquisition by the United States of all lands and appurtenances in this state which have been or may be acquired by the United States for the purpose of erecting thereon dams, abutments, locks, lockkeepers' dwellings, chutes, or other structures necessary or desirable in improving the navigation of the rivers or other waters within and on the borders of this state, and the United States may hold, use and occupy such lands and other property and exercise exclusive jurisdiction and control over the same subject to the right of this state to have civil and criminal process issued out of any of its courts executed within and upon said lands.

"2. Any dam, bridge or other obstruction constructed or maintained in or over any navigable waters of this state in violation of the provisions of this section is hereby declared to be a public nuisance, and the construction of any such dam, bridge or other obstruction may be enjoined or its maintenance abated by action at the suit of the state or any citizen thereof.

"3. Any person, firm, association of individuals, or corporation violating any of the provisions of this section after January 1, A. D. 1913, shall forfeit for each such offense, and for each day that any such dam, bridge or other obstruction is maintained or remains in or over any such waters, the sum of fifty dollars, the same to be collected in an appropriate action to be brought and prosecuted by the attorney-general or by some other duly authorized person in behalf of the state. Any forfeitures incurred prior to January 1, A. D. 1913, are hereby expressly remitted.

"4. It shall be the duty of the railroad commission to report to the governor any violation of this section, and the governor shall thereupon cause the attorney-general, or some other person duly authorized by the governor to act in his stead, to institute proceedings against the violator as provided in subsections 2 and 3 of this section."

The provisions of subsec. 1 of sec. 1596 are substantially the same as those found in sec. 1596 of the Statutes of 1898 and also in ch. 34 of the Revised Statutes of 1849. This subsection, however, as created by ch. 652, laws of 1911, to include all of the former sec. 1596, extends the definition of navigable streams to "all rivers and streams, meandered or nonmeandered, which are navigable in fact for any purpose whatsoever." Subsecs. 2 and 4 of sec. 1596 were added to the statutes in their present form by ch. 652, laws of 1911. Subsec. 3 was created by the same chapter, but amended to provide for the insertion of the date named in the subsection by ch. 17, special session laws of 1912. Subsec. 2 declares, as will be noted, that any unlawful obstruction is a public nuisance which may be enjoined at the suit of the state or of any citizen of the state.

The construction of this statute is important in its bearing upon the facts in the instant case. It is conceded that none of the structures of which complaint is made, except the original Meyers building, were placed or maintained in the river under legislative authority, but it is contended on the part of property owners that notwithstanding that fact, the structures in question are not nuisances and that they therefore cannot be removed at the instance of the state or of any private citizen. It will be observed that the statute speaks of unlawful obstructions, but does not attempt to define what constitues an unlawful obstruction. Consequently, in the absence of any judicial interpretation limiting and defining the term "unlawful obstruction", the administration of the statute is rendered difficult and uncertain. As a guide to the Commission, it is essential that some general criterion be established by which the unlawfulness of any structure in or over a navigable stream may be determined. If the illegality of every obstruction is to be determined upon its own set of facts and without any general precedent to guide property owners when encroaching on navigable streams, an interminable amount of litigation will arise and a correspondingly heavy burden will be placed upon the Commission in the investigations which it will be called upon to make of the innumerable obstructions in and over the navigable streams of the state.

The purpose of the legislature in broadening the scope of the statute, when taken in connection with the water power act in which the statute was incorporated, is well known. The protection of life and property was the primal incentive for making the statute as comprehensive as possible. This was but the result of caution occasioned by the unprecedented floods in other states which had caused great injury and damage to property located in cities, villages and places situated on the banks of streams whose waters had never before reached such heights as to cause alarm to property owners, because of obstructions in the streams and the narrowing of the channels by encroachments thereon. To prevent any such unexpected catastrophe as occurred in some of the middle western states but a short time ago the legislation in question assumed its present form.

It is clearly shown by the testimony that the Rock river, although conceded to be a navigable stream within the terms of the statute, has generally been regarded by adjoining property owners as private property in and upon which they could build such

structures and obstructions as their judgment or caprice might dictate. The fact that no injury or damage of any consequence had ever resulted from high water, and that the stream in recent years was no longer required by the lumber industry as a highway of commerce, led to the present situation, not only in Janesville, but all along the course of the river from practically its source to the point where it leaves the state and flows into Illinois.

It is exceedingly important that a judicial determination of the rights of property owners involved in this proceeding be had without unnecessary delay. Other property owners similarly situated upon this stream at other points and owners of property abutting on the various navigable streams in the state are interested in the controversy here under consideration for their rights to the use of the streams are equally in doubt. Under the circumstances we do not deem it incumbent upon us to pass upon the legality of the maintenance of the obstructions here in question. We shall content ourselves with a brief finding of the facts based upon the testimony offered at the hearing and upon the results of the independent investigation made by the Commission. The finding is as follows:

1. That Rock river in the city of Janesville is a navigable stream.

2. That the river is navigated by rowboats; motorboats and other water craft.

3. That the piers and other structures delineated upon the map hereinbefore mentioned constitute obstructions to navigation and to the natural flow of the water in the stream and have a tendency to narrow the channel of the stream.

4. That in case of very high water, logs, lumber, wood and drift coming down the stream are likely to lodge against such obstructions, preventing the free passage of the water through the natural channel and thereby causing injury and damage to property within the city of Janesville.

BROWN BROTHERS LUMBER COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided March 26, 1914.

The petitioner asks for refund of certain charges exacted from it for the transportation of two carloads of car stakes from Rhinelander to Spur 236, on the ground that the stakes were removed from cars containing logs and were being returned to the original point of shipment of the logs and therefore should have been returned free of charge. It is the custom of railway companies to include the cost of transporting car stakes used in shipping logs in the rate assessed upon the shipment of logs and to return the stakes to the point of origin of the shipment without additional charge. The respondent is willing to make the refund asked.

Held: The charges complained of were unusual and unreasonable. Refund of the full amount paid is ordered.

The petitioner is a corporation engaged in manufacturing lumber at Rhinelander, Wis. It alleges that on April 16 and May 17, 1913, it shipped two cars of car stakes containing 34,000 and 53,900 lb., respectively, from Rhinelander, Wis., to Spur 236; that the respondent assessed charges on said shipment at the rate of 4½ cts. per 100 lb., amounting to a total of $39.56; that such stakes were removed from cars containing logs and were being returned to the original point of shipment of the logs, and therefore should have been returned free of charge; that the railway company recognized and corrected the error by issuing its tariff G. F. D. No. 17895, effective February 2, 1914, which provides that no charge shall be made for returning stakes to the shipping point. Wherefore, the petitioner prays that the railway company may be authorized to refund to it the said charge of $39.56.

The respondent railway company, answering the petition, admits the allegations thereof and expresses its willingness to make reparation if authorized to do so.

The time of hearing was waived, and the matter was submitted upon the papers, pleadings and documents on file.

In accordance with custom, railway companies return stakes used in shipping logs to the point of origin of shipment. The cost of transportation of such stakes is included in the rate assessed upon the shipment of logs. Under the circumstances the petitioner is entitled to the reparation claimed.

We find and determine that the charges exacted of the petitioner by the respondent for transporting the aforesaid two carloads of stakes from Rhinelander to Spur 236 were unusual and unreasonable, and that no charges should have been made for such services.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized to refund to the Brown Brothers Lumber Company the sum of $39.56.

IN RE APPLICATION OF THE MILTON WATER, LIGHT AND POWER COMPANY FOR AUTHORITY TO INCREASE RATES.

Decided March 27, 1914.

The Milton W. Lt. & P. Co. applies for authority to put into effect a minimum charge of 75 cts. per month for electric current. At present the utility makes no minimum charge. Investigation of the revenues and expenses shows that the utility, which started operation March 1, 1912, is still operating under a deficit.

Held: The application is a reasonable one. The applicant is therefore authorized to put into effect a minimum monthly charge of 75 cts.

The applicant in this case, the Milton Water, Light and Power Company, is a public utility engaged in the management and operation of an electric plant in the village of Milton. The petition is dated January 9, 1914. It shows in full the schedule of rates which the utility now has in effect, none of which, however, are involved in the application. The only matter concerned in the application is a minimum charge which the utility wishes to have placed at 75 cts. per month. At present there is no minimum charge.

Hearing was set for February 17, 1914, but no appearances were made.

An inspection of the reports filed by this utility, and an examination of the records of the utility by members of the Commission's accounting staff in connection with the matter of prescribing a system of accounts for the use of the utility, shows that for the year ended June 30, 1913, the operating expenses, exclusive of any allowance for depreciation or interest, exceeded the revenues by $701.01. The utility started operation March 1, 1912, so that the report filed as of June 30, 1912, covers too short a period to be of any value in connection with this case. According to the report for the year ended June 30, 1913, the cost of the plant amounted to $10,297.44. Cash, materials and supplies, and accounts receivable amounted to something over $700.

From the foregoing facts it is clear that the authorization of a

minimum charge such as asked for the utility will not result in any unreasonable return to the utility. According to the last report filed by this company there were, on June 30, 1913, a total of 95 consumers. On June 30, 1912, there were only 36 consumers reported, so that it is evident that the business has been growing rapidly during the past year. It is probable that with such increased business as may be expected, the deficit from operation will be materially reduced, but it seems clear that for some time to come the revenues of the utility will hardly pay the operating expenses and make adequate provision for depreciation and interest.

In some cases the Commission has recommended the adoption of a minimum charge of less than 75 cts. but from a consideration of all the facts available in this case, we believe that the application for authority to put in a minimum charge of 75 cts. per month is a reasonable one. The data available do not show how many consumers would be affected by such a minimum, but it seems evident that the total increase in revenue will be rather small.

IT IS THEREFORE ORDERED, That the applicant in this case, the Milton Water, Light and Power Company, be and the same is hereby authorized to place in effect a minimum monthly charge of 75 cts. This rate may be put in effect with the bills for current used for the next monthly period succeeding the date of this order.

IN RE APPLICATION OF THE SHEBOYGAN RAILWAY AND ELECTRIC COMPANY FOR AUTHORITY TO INCREASE ITS LIGHTING CHARGES IN THE CITY OF SHEBOYGAN.

Submitted May 22, 1913. Decided March 27, 1914.

The Sheboygan Ry. & El. Co. applies for a review of the findings in the case of *City of Sheboygan v. Sheboygan Ry. & El. Co.* 1911, 6 W. R. C. R. 353, in which the Commission reduced the utility's charges for street lamps from $74 to $68 per lamp per year, and asks for the establishment of a charge upon the basis of the actual consumption of electricity as shown by the review and reinvestigation. Since the application was filed the utility has passed into the control of new owners who have announced their intention of installing new lighting equipment. This makes it unnecessary at this time to reinvestigate the lighting service rendered by the applicant.

Held: Careful reconsideration of the findings fails to reveal any reason for the review and reëstablishment of rates requested. The application is dismissed.

This case comes before the Commission in the form of a request that the Commission review its findings upon which an order was issued on February 3, 1911, in the case of *City of Sheboygan v. Sheboygan Ry. & El. Co.* 6 W. R. C. R. 353, reducing the petitioner's charges for street lamps from $74 to $68 per lamp per year, and reëstablish a price upon a basis of the actual consumption of lamps as shown by such review and reinvestigation.

A hearing was held in the city of Sheboygan on May 22, 1913. *E. R. Bowler* appeared for the petitioner company, and *Edward Voigt* for the city of Sheboygan.

In a general way at the hearing and in the petition it was claimed by the petitioner that the Commission's findings and order made effective in 1911 were based upon errors made by its engineers.

Certain changes in the lighting situation in Sheboygan have occurred since the filing of the petition under consideration which make it unnecessary at this time to reinvestigate the lighting service given by the petitioner, and a careful reconsideration of the findings fails to reveal any reason for the review and

reëstablishment of rates asked for. These changes are first a change in the ownership and control of the petitioner company, and second, the announcement by the new owners that it is their intention and desire to install new lighting equipment.

For these reasons, the request for a review of the Commission's findings and order of February 3, 1911, is dismissed.

GEORGE L. ATWOOD ET AL.

vs.

CITY OF LAKE MILLS.

Submitted March 24, 1914. Decided March 27, 1914.

The petitioners allege that the city of Lake Mills refuses to extend its water mains along Scott and Franklin sts. in Lake Mills and pray for an order requiring the city to lay mains along these streets. The refusal of the common council to order the extensions desired appears to be in deference to the wishes of a majority of the owners of property abutting on the proposed extensions. Under an ordinance adopted by the city in accordance with suggestions made by the Commission in *Weber et al. v. City of Lake Mills*, 1913, 12 W. R. C. R. 577, the abutting property owners would be compelled to bear the greater portion of the cost of the extensions through special assessments levied against the abutting property. The extensions were recommended by the Commission in the decision cited.

Held: The extensions desired by the petitioners are required to protect the public health and to improve the fire protection system. The city is ordered to make the extensions, as specified, within 90 days.

A petition dated March 13, 1914, and signed by George L. Atwood and other citizens of Lake Mills, to the number of twenty-five, was filed with the Commission, making complaint that the city was refusing to extend its water mains on Scott and Franklin streets and praying for an order requiring the city to lay a water main on said streets and furnish water service to residents along that line.

The city waiving the right of ten days notice, a hearing in the matter was held in the office of the clerk of the city of Lake Mills on March 24, 1914. *George L. Atwood* appeared for the petitioners. The city was represented by *Frank B. Fargo,* president of the city council, *E. C. Dodge,* president of the water and light commission, *N. H. Falk,* city attorney, *W. F. Jones* and *Wm. Klein,* members of the common council, *Frank Foote* and *W. F. Jones* as members of the water and light commission, and *V. S. Ravenhill,* city clerk. *A. C. DeMerit,* representing people living on Franklin and Scott streets, appeared in opposition to the petitioners.

The present case is, in a way, a direct result of the decision of the Commission in the case of *E. H. Weber et al. v. City of Lake Mills,* 1913, 12 W. R. C. R. 577, in which was presented a report from the Commission's engineering staff containing recommendations as to what seemed to be desirable and probably needed extensions and improvements in the pipe system of the Lake Mills water works. That report and the investigation underlying it were made in compliance with the expressed wishes of the city authorities. These recommendations were stated to have been based in part upon an inspection or examination of the districts directly affected by the proposed extensions but without an investigation as to the number of residents along the lines who really desired domestic water service at that time. The number and character of residences along the recommended extensions were, in most cases, such as to warrant the belief that there would probably be a number of water takers on those lines when laid, and also that the districts traversed should have fire protection. In some cases the laying of the recommended extensions would improve the general water service in certain parts of the then existing system by eliminating certain objectionable dead ends and increasing the existing fire service capacity in those localities.

Copies of the report of the Commission's engineer in the *Weber* case were sent to the parties in advance of the decision. That report contained also a suggested form of ordinance which, by the city's adoption, would meet the then existing situation as to lack of funds for making water pipe extensions that the city had from time to time been petitioned in vain to make. The city adopted an ordinance similar to the one suggested, and thereby established a definite policy relative to the making of future extensions and also the method of financing such work, which is to raise the greater portion of the cost by levying special assessments against abutting property.

Prior to the city's recent adoption of the ordinance providing for special assessments for water pipe extensions, the legality of which ordinance is not questioned, a number of petitions for water mains had been fruitlessly presented to the council. The necessary funds for such work were said not to have been available.

Both special assessments and bond issues were probably possible methods of obtaining the required funds but resort was made

to neither method and the petitioners failed to get the desired service.

The Commission's order in the *Weber* case applied to only one extension, running along Madison and Fremont streets. Pursuant to the recommendations contained in the engineer's report, the city council of Lake Mills appears to have ordered in all of the recommended extensions.

Prior to that order a notice dated February 3, 1914, was issued and published, stating that on February 17 the council would meet for the purpose of considering the ordering of water mains and sewers laid in and along certain portions of specified streets, levying assessments therefor and hearing objections thereto.

No objections appear to have been made or filed within the time limit given in the notice except perhaps one which was dated February 17, 1914, and signed A. C. DeMerit and others. Although dated on the same day as the council hearing there seems to be some doubt as to whether that petition was received during the hours fixed for the hearing or whether it was filed subsequently. This was a petition remonstrating against the laying of water mains and sewers on Scott and Franklin streets.

Owing to the receipt of that petition the council omitted the portions of the contemplated work which were on those streets and then advertised for bids on all of the other extensions. Other petitions, objecting to other portions of the contemplated work, were then filed with the city council. In reference to these subsequent petitions it was stated that the people of Lake Mills had not previously understood the force and extent of the Commission's order in the *Weber* case and supposed that the recommended extensions were ordered in, along with that prayed for by *Weber* and other petitioners in the *Weber* case, on Madison and Fremont streets, also, that in being so ordered, as they supposed, there was nothing to be gained by making objections.

The petition of Atwood and others to this Commission amounts to a prayer for the restoration of the lines on Scott and Franklin streets, which were eliminated by the council pursuant to the petition of DeMerit and others, to the list of mains to be contracted and laid. It was explained by the city attorney that the filing of the Atwood petition in this case leaves the council in doubt as to how to treat the several other petitions filed with it as objections to, and remonstrances against, the laying of some

of the others of the proposed extensions. This doubt can be cleared only by a decision of the Atwood petition.

There is an indication that some of those now objecting to the proposed extensions were formerly desirous of having the extensions made but do not want them because of the city's adoption of the plan of financing the bulk of the work by special assessments. Apparently a majority of the owners of property abutting on the proposed extensions would still be in favor of their construction if their costs could be met out of the city funds already on hand or perhaps those obtained by sale of general city or waterworks bonds, or in other ways.

There are evidently a number of parties along the several extensions, including those on Franklin and Scott streets, who are sufficiently anxious to have the work done to be willing to pay their special assessment in order to get the city water service. These parties, however, seem to be in the minority since the city's adoption of the special assessment plan of financing such work.

That the will of the majority of those directly affected should govern in a case of this kind and result in denying to some who feel the great need of a service so important as that of city water is not altogether acceptable. It is quite widely recognized that there is an element of serious danger to health in the use for drinking purposes of waters from shallow wells in thickly settled communities, such as most if not all of the private wells in Lake Mills are reported to be. Some waters that look good and taste good are dangerous to drink.

That the waters of such private wells are safe at this particular time has not been proved but were such the case such waters would still be viewed with suspicion by those who appreciate the dangers of such sources.

We learn from the records of the state board of health that the general death rate in Lake Mills was above the normal during four of the last five years for which statistics were available. These years were the years 1908 to 1912, inclusive. In 1910 and 1912 the rates were almost double the normal, or average, for the state, and more than double the average rate for cities of like size. No deaths from typhoid were reported, however, during the entire five year period. How far or to what extent the use of so many shallow wells may have been responsible for the relatively high general death rate is quite problematical.

It has been explained by the city attorney of Lake Mills that the attitude of the city council in the matter of the Atwood peti-

tion before us is strictly neutral, that their only desire is to give their people what is wanted. Their act of ordering construction of all of the recommended extensions of water mains was strictly within their legal powers, even though opposed by a majority of the property owners along the designated lines.

The council's act of eliminating from the list of extensions to be made the proposed work on Franklin and Scott streets, in deference to the petition presented to them by DeMerit and others, was an evidence of good intent to serve the interests of the majority. The majority considered by them, however, appears to have been that of a certain small group of citizens, whereas many others are either directly or indirectly concerned, at least to the extent of having an interest in improved fire protection if not in domestic service and possibly public health. So there is more involved in deciding the question before us than the mere determination of the proportion of the property owners along the Franklin and Scott streets extension who really want the work carried out, even at the expense of a special assessment.

Before ordering the construction of any such public improvements against the expressed wishes of a majority of those most directly affected, a city council or other governing body should, however, have a sound basis for such action.

Among other reasons in favor of the construction of a water main on Scott and Franklin streets is that such a main, together with a short pipe line on Washington street, would form a connection between two different lines on Main and Mulberry streets and thus enable either of those lines to help out the other in case of a fire or other unusual demand upon it. Such cross-connections at short intervals between parallel or radiating water mains are generally recognized as important, particularly from the standpoint of reliability of fire service.

When all the circumstances are considered it appears that the water mains on Scott and Franklin streets should be laid as recommended in the engineer's report presented in our former decision affecting the Lake Mills water utility, and as prayed for by the petitioners in the instant case.

NOW, THEREFORE, IT IS ORDERED, That the city of Lake Mills construct water mains on Scott street and Franklin street in said city and that the new mains be laid so as to form, with the pipe line on Washington street, a circuit between the water mains on Main and Mulberry streets.

Ninety days is deemed sufficient time within which to comply with this order.

CITY OF SHEBOYGAN

vs.

SHEBOYGAN RAILWAY AND ELECTRIC COMPANY.

Submitted March 11, 1914. Decided March 29, 1914.

The city of Sheboygan applies for a certificate of convenience and necessity to permit it to construct a municipal lighting plant, alleging that the lighting service furnished by the Sheboygan Ry. & El. Co. is inadequate. Since the application was filed the utility named has passed into the control of new owners who express a desire to at once install new equipment capable of furnishing adequate service to the city.

Held: Under the circumstances it would be unjust to the city and unfair to the new owners of the utility to permit the city to construct a new lighting plant at this time. The application is dismissed.

This case comes before the Commission in the form of an application by the city of Sheboygan for a certificate of convenience and necessity to permit it to construct a municipal lighting plant, on the ground that the respondent company, the Sheboygan Railway and Electric Company, is not furnishing the city adequate lighting service.

A hearing was held in the office of the Commission at Madison, on March 11, 1914. *Edward Voigt,* city attorney of Sheboygan, appeared for the petitioner, and *E. R. Bowler* for the respondent.

The hearing was a brief one. The attorney for the petitioner asked and was granted leave to offer in evidence the testimony in the matter of the application of the Sheboygan and Electric Company for authority to increase its rates, (1914, 14 W. R. C. R. 208) taken at a hearing at Sheboygan on May 22, 1913. Mr. Bowler for the respondent made a brief statement in the course of which he announced that since the application under consideration was filed with the Commission the Sheboygan Railway and Electric Company, the respondent, had changed owners. He further alleged that the new owners were not only able but willing to install complete new lighting equipment capable of furnishing adequate and satisfactory light to the petitioner city.

Mr. Bowler stated also that the respondent company's new president, Mr. Reiss, had addressed a communication (a copy of which he filed with the records of the case) to the common council of Sheboygan, expressing the desire of his company to install at once a new and modern lighting equipment and to meet all further reasonable demands of the petitioner for improved lighting conditions.

The attitude of the Commission toward applications made for certificates of convenience and necessity to duplicate existing plants is well known. It rests upon the recognized fact that an existing plant can be made, under proper regulation, to give the public better service and at a lower cost than can competing plants. It requires no argument at this late day to prove that competing utilities in any municipality add to the service burdens of the public rather than lessen them. In the case under consideration there are reasons for not granting the application additional to the recognition of the general principle that two competing or noncompeting utility plants are more expensive to the public than one plant.

As has already been noted, the respondent company has changed owners since the application of the petitioner was filed, and the new officers have expressed a desire to install at once a complete new lighting equipment adequate to meet the city's demand for a higher quality of service. In view of this expressed desire and until such new equipment has been installed and the service under the new conditions tested, it would be unjust to the city to burden it with the cost of a new lighting plant, as well as unfair to the new owners of the present lighting plant.

The application of the petitioner is therefore dismissed.

CARL FRONTZ

vs.

MINERAL POINT AND NORTHERN RAILWAY COMPANY.

Decided April 1, 1914.

The petitioner alleges that the rate of 2 cts. per cwt., exacted by the respondent for the transportation of a car of stone tailings from Highland Jct. to Hewetts, was unusual and exorbitant and prays for refund on the basis of a rate of 1.2 cts. which the respondent has put into effect since the shipment moved. The respondent is willing to make refund.

Held: The charge exacted was unusual and exorbitant. Refund is ordered on the basis of the rate of 1.2 cts. now in effect which would have been the reasonable charge for the service performed.

The petitioner resides near Hewetts, Wis. He alleges that on September 6, 1913, he received a car of stone tailings shipped from Highland Junction to Hewetts, Wis., and was charged therefor the rate of 2 cts. per cwt., which is the Class E rate for five miles, as provided in the respondent's distance tariff G. F. D. No. 43; that on March 25, 1914, the respondent made effective a commodity rate on stone tailings of 1.2 cts. per cwt. for distances of five miles, as per its tariff No. 48; that said rate of 2 cts. per cwt. was unusual and exorbitant, and that the reasonable rate that should have been in effect and applicable is the rate of 1.2 cts. now effective. The petitioner therefore asks that the respondent be required to refund to him the sum of $8.16, the overcharge on said shipment.

The respondent railway company admits the allegations of the petition and joins in the prayer thereof.

Notice of investigation and hearing was waived. The matter was submitted upon the papers, pleadings and documents on file.

It appears that the shipment in question weighed 102,000 lb. and that the charges paid by the petitioner were $20.40. If the charges had been assessed at the rate made effective after the shipments moved, they would have amounted to $12.24, or $8.16 less than the charges actually exacted.

From an investigation we are of the opinion that a rate of 2

cts. per cwt. is an excessive charge because of the character of the commodity moved. The class rate would be prohibitive of the movement of stone tailings. This is recognized by the respondent, and to meet future shipments it has placed in effect a commodity rate of 1.2 cts. per cwt. for distances of five miles, which affords adequate compensation for the transportation services involved.

We therefore find and determine that the charge of 2 cts. per cwt., exacted of the petitioner on the aforesaid shipment of stone tailings from Highland Junction to Hewetts, is unusual and exorbitant, and that the reasonable rate that should have been in effect and applicable to such shipments is the rate of 1.2 cts., now provided in respondent's tariff G. F. D. No. 48.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Mineral Point & Northern Railway Company, be and the same is hereby authorized and directed to refund to the petitioner, Carl Frontz, the sum of $8.16.

IN RE PROPOSED EXTENSION OF THE LINE OF THE WEST KEWAUNEE AND WESTERN TELEPHONE COMPANY IN THE TOWNS OF WEST KEWAUNEE AND MONTPELIER, KEWAUNEE COUNTY, WISCONSIN.

Submitted March 30, 1914. Decided April 1, 1914.

The West Kewaunee & Western Tel. Co. filed notice with the Commission of its intention to extend its lines in the towns of West Kewaunee and Montpelier in Kewaunee county. The Horseshoe Tel. Co. objects to the proposed extensions on the ground that they would duplicate parts of its system.

The fact that the rates of a telephone company are higher than those of a competing company is not usually sufficient reason for allowing the latter company to parallel the lines of the former company. If the rates of the former company are excessive their reduction should be secured in the usual way by complaint to the Commission.

Where two telephone lines proceed along the same road and render substantially equal service it would ordinarily be improper to permit the shorter line to be extended beyond the end of the longer line to take on subscribers in territory beyond when the longer line is ready and willing to make the same extension and can do so with much less investment and without causing any more paralleling of lines than already exists.

The contention of the West Kewaunee & Western Tel. Co. that it is not a public utility, for the reason that all its subscribers are stockholders, cannot be granted in view of the fact that the company uses the highways of the state for its pole and wire lines and the further fact that the company apparently holds itself out as giving a public telephone service as distinguished from a purely private service.

Held: Public convenience and necessity do not require either of the extensions proposed by the West Kewaunee & Western Tel. Co. The short paralleling of the Horseshoe Tel. Co's line necessary to permit the West Kewaunee & Western Tel. Co. to extend its service to the cheese factory of its president will not, however, be prohibited, inasmuch as the Horseshoe Tel. Co. does not oppose this extension.

On March 12, 1914, the West Kewaunee & Western Telephone Company filed with this Commission a notice of a proposed extension of its line in the towns of West Kewaunee and Montpelier, Kewaunee county, Wis. Objection to the extension was made by the Horseshoe Telephone Company, a corporation operating telephone lines for local service in the towns in question, and the matter was accordingly set for hearing.

At the hearing, which was held at Kewaunee on March 30,

1914, the West Kewaunee & Western Telephone Company was represented by *George W. Wing,* and the Horseshoe Telephone Company by *L. W. Bruemmer.*

The West Kewaunee & Western Telephone Company's line runs out of the city of Kewaunee in a westerly direction through the town of West Kewaunee and the Horseshoe line runs out of the city in the same general direction about two miles further to the south. The Horseshoe line has a branch running north, however, to the road on which the West Kewaunee line is located and continuing out on that road something over a mile and a half beyond the present terminus of the West Kewaunee line. One of the extensions which the West Kewaunee company proposes is to proceed from its present terminus along the same highway with the Horseshoe Telephone Company to a point beyond the end of the Horseshoe line, a total distance of something over two miles. In making this extension the West Kewaunee company would pass one or more of the present subscribers of the Horseshoe line. Within the first mile of this proposed extension the West Kewaunee company desires to take on as a subscriber the cheese factory recently purchased by the president of the West Kewaunee company, and this westerly extension, as far as the cheese factory, is not opposed by the Horseshoe Telephone Company. That company does, however, oppose the continuance of the extension toward the west, paralleling the Horseshoe line and running past the end of that line; the ground of objection being that the Horseshoe company already has lines further along the same road than the West Kewaunee company's present lines and that if either company is to continue along the road to reach prospective subscribers to the west, it should be the company which is already nearest those subscribers and which could reach them without any paralleling of lines.

In addition to the westerly extension proposed by the West Kewaunee company, that company intends to run its line south from the cheese factory to the residence of John Hlinek, a distance of about half a mile. This residence is on the same road that the Horseshoe Telephone Company uses for its north and south line, and since the Horseshoe company's line runs past Mr. Hlinek's house it was the contention of that company that Mr. Hlinek could be properly served by the Horseshoe Telephone Company without any paralleling of lines.

As to the services performed by the two companies and the fa-

cilities for connection between them, there seems to be nothing to warrant any paralleling of lines. Both companies have their switching done by the Wisconsin Telephone Company at Kewaunee; subscribers on each line can reach those on the other line through the Kewaunee switchboard without extra charge. There is nothing to indicate that the service of the West Kewaunee company is in any way superior to that of the Horseshoe Telephone Company. The only reason that appeared at the hearing for the extension of the West Kewaunee company to subscribers already within easy reach of the Horseshoe line was the difference between the rates of the two companies. It seems that the Horseshoe Telephone Company charges rates varying with the distance of subscribers from the central office, but that its rates for subscribers in the vicinity of Mr. Hlinek will be $11.35 per annum. The West Kewaunee & Western Telephone Company does not have any regular system of rates, but all the subscribers, who are also stockholders in the company, pay $3 each per year to the Wisconsin Telephone Company for switching service and then pay the West Kewaunee company whatever amount may be necessary for repair and maintenance of lines during the year. Although definite figures were not given at the hearing regarding the total cost of a West Kewaunee telephone for a year, it appears likely that this cost does not greatly exceed $5 per annum. The Horseshoe Telephone Company, however, sets aside an annual sum for depreciation and also pays 6 per cent dividend to its stockholders.

Although the question of rates is not at issue in this case, it could hardly be contended that the rate of $11.35 charged by the Horseshoe Telephone Company is greatly excessive. Furthermore, if it were excessive, the way to bring about relief would be to complain to this Commission and have the rate reduced. In addition, it appears that the Horseshoe Telephone Company is complying with this Commission's requirement in the matter of accounting for depreciation and is paying a dividend which certainly does not represent an excessive return on the company's investment. As far as rates are concerned, therefore, there seems to be no reason for penalizing the Horseshoe Telephone Company for its higher rates by allowing a competing company to parallel its lines.

As far as the extension of Mr. Hlinek's residence is concerned, it is very clear that public convenience and necessity do not re-

quire it, since another telephone company is running its lines past the house and is ready to give Mr. Hlinek service quite similar to that of the West Kewaunee company at rates which do not appear to be unreasonable. No reason which this Commission can consider valid has been advanced for the paralleling to Mr. Hlinek's residence.

As to the extension west beyond the present terminus of the Horseshoe Telephone Company's line to prospective subscribers in the town of Montpelier, the evidence shows that the Horseshoe Telephone Company is over a mile nearer these subscribers than is the West Kewaunee company. Furthermore, the proposed extension would result in paralleling the Horseshoe line for a considerable distance. It might, in the course of time, result in the transfer of subscribers from the Horseshoe line to the West Kewaunee line in such a way as to impair the investment of the former company along this road. It is our opinion that where two lines proceed along the same road as in this case and are giving substantially equal service, but one line extends considerably further than the other, it would ordinarily be improper to permit the shorter line to be extended beyond the end of the longer line to take on subscribers in territory beyond, when the longer line is ready and willing to make the same extension and can do so with much less investment and without causing any more paralleling of lines than already exists. The situation might be somewhat different if there were not perfectly free interchange of connection between the two companies through the Kewaunee exchange.

Mention was made at the hearing of the fact that the Horseshoe Telephone Company during the fall of 1913 made two short extensions in the region in question without taking the steps required by law. The making of these extensions was admitted by the Horseshoe Telephone Company and ignorance of the meaning of the law was given as the company's excuse. One of these extensions was made along the east and west road involved in this case and consisted of about four poles. In other words, if this unlawful extension had not been made, the westward line of the Horseshoe Telephone Company would have been about four poles shorter than it is at present, but it would still have extended fully a mile beyond the terminus of the West Kewaunee line. Thus, even if the existence of this short extension were disregarded, the result of the present case would not be affected.

However, we desire to impress it firmly upon the officers of the Horseshoe Telephone Company that extensions of the kind just referred to are not permissible under the law unless the proper procedure has been followed. In the case in question, it appears from the evidence that the extensions were of a kind that would have been permitted by this Commission since they involve no paralleling of lines, but that is no reason for disregarding the law. The circular letter sent out by this Commission on August 4, 1913, a copy of which was received and acknowledged by the Horseshoe Telephone Company, explains fully what the law meant, and this Commission is not inclined to pass without comment such violations of the law as were made by the Horseshoe Telephone Company. In view of the fact that the extensions were apparently of a kind which would have been permitted had the proper procedure been taken, no further action will be taken in this particular matter by the Commission, but it is to be expected that no further violations of the statute will occur in the case of the Horseshoe Telephone Company.

The contention was made by the attorney for the West Kewaunee & Western Telephone Company at the hearing that that company was not a public utility, since it merely consists of a band of farmers who have organized a telephone corporation for their own convenience. All the subscribers are stockholders, and all who desire to have the telephone service of the company are required under its rules to buy stock. The fact remains, however, that the company uses the highways of the state for its pole and wire lines and it could hardly be heard to say that it uses those highways for a purely private purpose. If it is operating for such a public purpose as will justify its use of the highways, it must be conveying telephone messages "to or for the public" as contemplated by the Public Utilities Law. Furthermore, it is by no means clear that, entirely aside from the matter of use of the highways, the company is not serving the public regardless of the fact that it requires all its subscribers to be stockholders. The fact that the company desires to extend its lines to take on several new subscribers seem to be an indication that it holds itself out as a purveyor of telephone service. The further fact that it is connected at Kewaunee with a public telephone exchange through which its subscribers reach and are reached by several hundred subscribers of the Wisconsin Telephone Company and of various farm line companies indicates also that the

West Kewaunee & Western Telephone Company is giving a public telephone service as distinguished from a purely private service.

For the reasons stated, it is the opinion of the Commission that public convenience and necessity do not require either of the extensions proposed by the West Kewaunee & Western Telephone Company. The westerly extension as far as the cheese factory is not opposed by the Horseshoe Telephone Company, and therefore its construction will not be prohibited, although a short paralleling of the lines will be involved. The evidence shows that the president of the West Kewaunee company recently purchased the cheese factory and desires to connect it with the line in which he is interested, and since the Horseshoe Telephone Company has extended him the courtesy of withholding its objection to this portion of the line, the Commission will not stand in the way of his obtaining the service he desires.

We therefore find and determine that public convenience and necessity do not require the extension of the lines of the West Kewaunee & Western Telephone Company as proposed by said company in its notice filed with this Commission March 12, 1914, as far as such proposed extensions are projected west and south from the cheese factory of Charles Baumeister on the line between the towns of West Kewaunee and Montpelier, Kewaunee county, Wis.

H. W. SELLE & COMPANY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided April 4, 1914.

The petitioner alleges that it was charged a rate of 13.5 cts. per cwt., subject to a minimum weight of 22,800 lb., for the transportation of a carload of excelsior weighing 21,736 lb. from Rice Lake to Ft. Atkinson and asks that the respondents be authorized and directed to make refund on the basis of a rate of 11.5 cts., subject to a minimum weight of 20,000 lb., which is the rate now in effect between the points named. It appears that the 11.5 ct. rate should have applied to Ft. Atkinson at the time the shipment moved, but that it was, through error, omitted from the tariff. The respondents are willing to make refund.

Held: The charge complained of was unusual. Refund is ordered on the basis of the 11.5 ct. rate which would have been the reasonable charge for the service performed.

The petitioner is a corporation located at Chicago, Ill. It alleges that on April 10, 1913, the Rice Lake Excelsior Company shipped a carload of excelsior weighing 21,736 lb. from Rice Lake to the Northwestern Manufacturing Company at Fort Atkinson, Wis., for and on account of the petitioner who was the owner of the shipment; that the petitioner was obliged to pay a rate of 13.5 cts. per cwt. on said shipment, subject to a minimum weight of 22,800 lb.; that the total charges on the shipment amounted to $30.78; that there was in effect at the time of the movement of the shipment a rate of 11.5 cts. per cwt. from Rice Lake to Jefferson Junction and Janesville, minimum weight 20,000 lb., as is shown in item No. 2010 of W. H. Hosmer's I. C. C. A–244, effective February 1, 1912; that in item No. 2080–A of supplement 4 to W. H. Hosmer's tariff 5–F, I. C. C. A–422, there was established a rate of 11.5 cts. per cwt. on excelsior, carloads, minimum weight 20,000 lb., from Rice Lake, Wis., to Fort Atkinson, Wis., thus placing Fort Atkinson on the same rate basis as Jef-

ferson Junction and Janesville; that if the last named rate had been effective at the time the shipment in question moved, the charges exacted of the petitioner would have been $25, or $5.78 less than the petitioner was required to pay. The petitioner therefore requests that the respondent railway companies be authorized and directed to refund to it the said sum of $5.78.

The respondent railway companies, answering the petition, admit all the allegations thereof and submit the claim to the decision of the Commission.

The hearing was waived and the matter submitted upon the papers, pleadings and documents on file.

Evidently, due to an oversight, Fort Atkinson was omitted from the tariff which became effective February 1, 1912, establishing a rate of 11.5 cts. per cwt. on carload shipments from Rice Lake to Jefferson Junction and Janesville. To correct such an error a supplement was issued and made effective December 1, 1913, several months after the shipment in question moved.

Under the circumstances we find and determine that the rate of 13.5 cts. per cwt., exacted of the petitioner in the aforesaid shipment of excelsior from Rice Lake to Fort Atkinson, is unusual and that the reasonable and proper rate that should have been in effect and applicable to such shipment is the rate of 11.5 cts. per cwt. now effective.

NOW, THEREFORE, IT IS ORDERED, That the above named respondents, the Chicago, St. Paul, Minneapolis & Omaha Railway Company and the Chicago & North Western Railway Company, be and the same are hereby authorized and directed to refund to the petitioner, H. W. Selle & Company, the aforesaid overcharge of $5.78.

J. C. HOOD ET AL.

vs.

MONROE ELECTRIC COMPANY.

Submitted May 1, 1913. Decided April 6, 1914.

The complainants allege that certain of the respondent's charges for electric current in the city of Monroe are excessive. A valuation was made and the revenues and expenses were investigated. The expenses were apportioned between capacity and output and further apportioned among commercial lighting, commercial power and municipal lighting expenses.

Held: The respondent's rates require revision. The respondent is ordered to put into effect for commercial light and power service a schedule of rates prescribed by the Commission.

The complaint in this case was made by J. C. Hood et al., January 25, 1913, against the Monroe Electric Company. It shows that the respondent is a public utility, engaged in the business of furnishing electric light and power in the city of Monroe and alleges, among other things, that certain charges of the respondent are "unreasonable, excessive, exorbitant and unlawful."

Hearing was held May 1, 1913, at the office of the Commission in Madison. Appearances were entered as follows: *J. C. Hood* for the complainants, *R. F. Garretson* and *H. A. Smith* for the respondent.

The complainants raised objections to certain items of the valuation and also endeavored to show wherein the company had made discriminations between its customers. The respondent claimed that the business had not been as prosperous as the former owner supposed, that the operating expenses have kept pace with the growth of revenues and that the valuations by the Commission do not show as much growth of physical property as actually took place. The claims of the complainants and the respondent will be discussed more fully further on.

Rates Now in Effect.

The rates now in effect, as filed with the Commission, are as follows:

Commercial Lighting.

Meter Rates:
Minimum monthly bill, $1.00

Residences:		
1st 20 kw-hr.	15	cts. per kw-hr.
20 to 24 "	$3.00	
24 " 39 "	12½	cts. per kw-hr.
39 " 48 "	$4.80	
48 kw-hr. and over	10	cts. per kw-hr.
Business places:		
Less than fifty 16 c. p. lamps installed.		
1st 50 kw-hr.	10	cts. per kw-hr.
All over	6	" "
More than fifty 16 c. p. lamps installed.		
1st 100 kw-hr	10	cts. per kw-hr.
All over	6	" "
Saloon and residence lights combined		
Up to 60 kw-hr	10	cts. per kw-hr.
Balance	6	" "

Power and Light.

Business and residence combined		
Up to 25 kw-hr	10	cts. per kw-hr.
Balance	5	" "

Light and Heat.

Business and residence combined		
Up to 25 kw-hr	10	cts. per kw-hr.
Balance	6	" "
Business only		
Up to 10 kw-hr	10	cts. per kw-hr.
Balance	6	" "

Heating and Cooking.

All use	6	cts. per kw-hr.

Flat rates: 16 c. p. incandescent lamps.... 50 cts. per lamp per month

Commercial Power.

Minimum monthly charge, 50 cts. per h. p. installed.
All power, 5 cts. per kw-hr.

Bills amounting to $20	5%	discount
" " 40	10%	"
" " 60	15%	"
" " 80	20%	"
" " 100 and over	25%	"

Street Lighting.

4 ampere, a. c. series open arcs burning about 1,450 hours per annum on a moonlight schedule from dusk to 12:30 a. m., rate $65 per lamp per year.

100 watt, 4 ampere a. c. series tungsten lamps, same burning schedule as the arcs, rate $18 per lamp per year.
100 watt, 4 ampere a. c. series tungsten lamps, burning about 4,000 hours per annum on an all night every night schedule, rate $24 per lamp per year.

Rate not filed.

A charge of 25 cts. per month is made for the rental of four-light clusters installed complete and maintained by the company, including the tungsten lamp renewals of any size desired.

VALUATION.

The company in question was reörganized under its present name in December 1909. The outstanding securities after reorganization were $65,100 and were offset by property and plant account of an equal amount. The Commission's valuation as of November 11, 1909, shows that the cost of reproduction of the physical property was about $64,000, and the present value about $56,000. A second valuation as of January 1, 1913, was prepared by the Commission. Summary of this follows in Table I:

TABLE I.
VALUATION OF PHYSICAL PROPERTY.
As of January 1, 1913.

	Cost new.	Present value.
A. Land	$4 000	$4,000
B Transmission and distribution	27,133	20,242
C. Buildings and miscellaneous structures	7,223	5,670
D. Plant equipment	21,623	16,969
E. General equipment	602	381
Total	$60,581	$47,262
Add 12 per cent (see note below)	7,269	5,671
Total	$67,850	$52,933
F. Paving		
Total	$67,850	$52,933
H. Material and supplies	5,238	5,168
Total	$73,088	58,101

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The complainants claim that the item, "Material and supplies," amounting to $5,238, is too high and that the company should not be allowed to earn on the excessive portion of this value. This matter will be discussed later under the head of allowable interest.

Testimony was introduced showing that there is included in the valuation an item amounting to $588 for clusters of lamps

which are furnished to customers at an extra charge or rental. This item will, therefore, be deducted from the valuation in figuring interest and depreciation allowance for the regular supply of current and will be considered separately in determining a proper rental to be charged for use of the clusters of lamps.

Operating Expenses.

The following table shows the company's income accounts as taken from reports to this Commission for the period of two and a half years ending June 30, 1913:

TABLE II.

COMPARATIVE ANNUAL INCOME ACCOUNTS.

	Six months ending June 30, '10	Year ending June 30, '11.	Year ending June 30, '12.
REVENUES:			
Commercial lighting	$6,748	$15,934	$17,181
Municipal contract lighting	2,363	4,952	4,818
Commercial power	1,546	3,568	4,029
Total operating revenues	$10,657	$24,454	$26,028
Non-operating revenues	316	856	265
Total revenues	$10,973	$25,310	$26,293
EXPENSES:			
Power	$3,639	$8,341	$8,894
Distribution	108	451	414
Consumption	64	289	407
Commercial	138	231	328
General	2,542	5,411	5,531
Undistributed	182	283	103
Total foregoing	$6,673	$15,006	$15,677
Depreciation	750	1,950	2,400
Taxes	204	401	460
Total operating expenses	$7,627	$17,357	$18,537
Gross income	3,346	7,953	7,756
Interest	1,215	2,619	2,681
Dividends	.....	4,183	4,800
Surplus	2,131	1,151	275
Surplus beginning of period	0	2,131	3,282
Surplus end of period	2,131	3,282	3,557

It should be noted in the foregoing accounts, the figures for depreciation represent the actual charges made by the company and not the proper amount of depreciation accrued during each period; and that, in a like manner, the items of interest represent actual interest payments on funded indebtedness and not allowable interest and profits on investment.

The expenses shown in Table II have been reduced to units per kilowatt-hour output at the switchboard and are compared in this form in Table III with the normal expenses of other utilities of about the same size:

TABLE III.

COMPARISON OF UNIT OPERATING EXPENSES.

CENTS PER SWITCHBOARD KILOWATT-HOUR.

	Six months ending June 30, 1910.	Year ending June 30, 1911.	Year ending June 30, 1912.	Normal costs.
Power	2.87 cts.	2.55 cts.	2.54 cts.	2.49 cts.
Distribution	.52	.47	.43	.35
Consumption	.05	.08	.11	.14
Commercial	.10	.07	.09	.12
General	1.19	1.03	1.00	.55
Undistributed	.13	.08	.03	.15
Total foregoing	4.86 cts.	4.28 cts.	4.20 cts.	3.80 cts.

The current lost and unaccounted for during the first six months' period was reported to be 14.4 per cent of the current generated during that time. For the year ending June 30, 1911, the lost and unaccounted for current was said to be 24.0 per cent and the following year, 24.5 per cent. It is, therefore, probable that the generation in the half year referred to is understated by about 10 per cent. If this be true, the costs in column 1, Table III, would be reduced in like proportion, and the unit costs would be very nearly constant for the several periods covered by the statement. It seems, therefore, that the expenses for the year ending June 30, 1912, furnish a proper basis on which to predicate the rates. In determining the foregoing unit costs, $1,800 for superintendence, included in general expenses in the income account, has been divided between power and distribution expenses, $600 for the former and $1,200 for the latter.

Examination shows that the payroll of the Monroe Electric Company is rather high. This is largely on account of what is paid for executive officers' salaries and superintendence in addition to the other regular labor needed to operate the utility. There seems to be very little doubt that a part of executive officers' salaries should be considered in this instance as a part of the profits of the business. In other words, liberal expenditure for salaries which may be the means of obtaining efficient operation must be considered as at least part of the premium allowable for the efficiency obtained. It makes little difference to the cus-

tomers in what manner the profits of a company are divided, and for the purposes of determining the total allowable revenue, it may be borne in mind that a portion of profits has already entered into the costs in the manner explained. The propriety of the payment of this item, therefore, will not be seriously questioned here. This point will be referred to again under "return on investment."

General expenses are high, even with salary for superintendence deducted and distributed among other accounts. This is due partly to the fact that other items, properly chargeable to undistributed expense, have been included in general expense, but chiefly to executive officers' salaries, amounting to $1,800, and certain unusually large miscellaneous expenses such as office rent and traveling expenses.

Cost of Service.

The expenses for the year ending June 30, 1912, are used herein as the basis for finding the cost of the several classes of service. Table IV shows these expenses, including taxes, depreciation, interests and profits, divided into two groups, capacity and output costs. The capacity costs include those expenses or portions of expenses which are proportional or closely related to the capacity of the plant or the demands of the business, while the output costs include those related to the volume of business. This apportionment is preliminary to the division of cost among the several classes of service.

TABLE IV.
CAPACITY AND OUTPUT EXPENSES.
Year Ending June 30, 1912.

Item.	Total.	Capacity	Output.
Power	$9,495	$4,253	$5,242
Distribution	1,614	1,207	407
Consumption	407	294	113
Total above	$11,516	$5,754	$5,762
Commercial	328	164	164
General	3,731	1,865	1,866
Undistributed	103	51	52
Total foregoing	$15,678	$7,834	$7,844
Taxes	460	230	230
Depreciation	3,420	1,710	1,710
Interest and profits	4,400	2,200	2,200
Total cost of service	$23,958	$11,974	$11,984

The taxes shown above are those actually paid by the utility. Depreciation has been figured on the cost new and life of the property in question and the sum arrived at appears to be ample to provide for the replacement of the property. In reaching a conclusion concerning what should be allowed for interest and profits, the facts presented relative to the amount of the respondent's stock of material and supplies have been considered. It was found that not all of the material and supplies which entered into the valuation of the plant are devoted to the supply of utility service but that an important part thereof is used for merchandise and private construction purposes related to the electrical business. But upon examination of the respondent's income account it is found also that the non-operating revenues amounted to $265. This sum is equivalent to a net earning of 7.25 per cent on material and supplies amounting to $3,650 and affords a justification for this investment. However, in determining the cost of utility service, this value of material may be subtracted from the total value of the property if the corresponding net revenue also be not considered. The balance of material and supplies amounts to $1,518, which brings the total present value of the property, including something over $1,000 for additional working capital, to about $55,000. Although securities having a par value equal to the Commission's valuation of 1909 were issued in taking over the property at that time, the amount realized on the securities was probably not far from the present value of the property.

It is claimed by the respondent that examination of the Commission's two valuations and the account of construction since 1909 reveals that a shrinkage in value of the property apparently took place. In other words, about $4,900 of new construction can not be accounted for by a corresponding increase in the cost to reproduce the property new. It is not unreasonable to suppose that this circumstance was caused partly by renewal or changes in the system which did not add to the cost of reproduction and partly by shrinkage in unit prices. Taking into consideration the total amount of renewals, the total theoretical depreciation accrued and the increase, according to the two valuations, in unrenewed depreciation there is yet about $2,500 of renewals not reflected by an increased present value. It is for this alleged shrinkage during three years that the respondent asked to be allowed an additional amount for depreciation.

However, let us see what may actually occur when large expenditures are made for renewals. The equipment, whose replacement is imminent, is valued by physical appraisal methods and goes into the inventory at its minimum service value. Its value, insofar as the physical appraisal is concerned, remains at a point above the residual or scrap value until renewal transpires. Hence, the present value of the property as a whole is apparently higher than it would be were such equipment considered valueless. It is clear, then, that in such cases the utility has the benefit of a high present value before the replacement is made instead of suffering a shrinkage afterward.

The accounts of the utility have been reported to the Commission since January 1, 1910. From that date until June 30, 1913, $8,100 has been credited to the depreciation reserve account while during the same period the charges to this account amounted to only $1,718.33 or 21.2 per cent of the amount provided. The amount charged to the reserve is not a great deal and were this all that had been spent for the renewal of equipment during the period one would expect a considerable reduction in the present value of the property. But considering the time elapsed and the extent of replacement claimed, it appears that a rather large part of the expense of renewal has gone into maintenance or construction accounts, which should have been charged to the depreciation reserve. In accounting for these transactions, it appears also that the practice has been pursued of deducting from the plant account the present value rather than the cost of reproduction of equipment replaced. Such facts, therefore, as well as those which tend to show that unforeseen expenses have been experienced, must be taken into consideration in concluding what should be allowed in this case for interest and profits. It appears to us that the operating expenses, depreciation, interest and profits, although less than the present gross revenues, have been figured on a basis sufficiently liberal to the investor.

The following table shows an apportionment of cost of service among commercial lighting, commercial power and municipal street lighting. Present revenues are also shown.

TABLE V.

APPORTIONMENT OF COST OF SERVICE.

Class.	Capacity cost.	Output cost.	Total cost of service.	Revenues for year ending June 30, 1912.
Commercial light	$8,157	$7,495	$15,652	$17,181
Commercial power	1,923	2,931	4,854	4,029
Municipal light	1,894	1,558	3,452	4,818
Total	$11,974	$11,984	$23,958	$26,028

The foregoing is the summary of a detailed apportionment of expenses, in which the separate items of expense were divided on what seemed the logical basis in each case, taking into consideration the estimated demands of each class, the generation necessary to meet the sales recorded, the connected load, number of consumers, wire-miles and other available information. Fixed charges were allotted on the basis of the investment required by each class of service.

Cost of Service per Unit and Proposed Rates.

Commercial Lighting.

The rated capacity of the connected lighting load is 540 kilowatts. If it is assumed that 55 per cent of this is active, it is found that the capacity cost, amounting to $8,157, is equivalent to 7.45 cts. per active kilowatt per day. To this must be added the output cost amounting to $7,495 or 4.86 cts. per kw-hr. sold, which makes the total cost for the first hour's use of the active load 12.31 cts. per kw-hr. and the average cost of all lighting current sold, 10.2 cts. per kw-hr. But the cost per kilowatt-hour falls below these figures when the load is used longer, as may be seen by means of the following table of decreasing costs:

TABLE VI.

DECREASING COSTS FOR COMMERCIAL LIGHTING.

Cents Per Kilowatt-Hour.

Hours daily use of active load.	Capacity cost.	Output cost.	Combined total cost.
1	7.45 cts.	4.86 cts.	12.31 cts.
2	3.72	"	8.58
3	2.48	"	7.34
4	1.86	"	6.72
5	1.49	"	6.35
6	1.24	"	6.10

Although the complaint in this case does not directly involve the charges for current used for lighting business places, it is apparent that adjustment of rates for one class of service may require also a revision of the charges for a closely related class. Table VI shows the cost of service per unit for combined residence and business lighting and shows that if some reduction is to be made in the maximum rate for residence service some increase must be made in the maximum rate for business lighting which is now 10 cts. per kw-hr. It appears advisable to now put the maximum charges on the same basis. In view of what analysis of the facts in this case discloses, it is believed that the rate for residence and business service should be 12 cts. per kw-hr. for the first 30 kw-hr. per month per active kilowatt connected; plus 9 cts. per kw-hr. for the next 60 kw-hr. per active kilowatt connected; plus 4 cts., per kw-hr. for all use in excess of 90 kw-hr. per active kilowatt connected. Whether this schedule would increase or decrease the bill in individual cases depends upon the length of time consumers use their equipment, but the total net result of the change is a reduction as will be shown further on.

The present flat rate of 50 cts. per lamp per month is equivalent to a charge of 5½ hours' use daily at the above rate. As many of the flat rate lamps are used in such places as halls, for all night service, the charge of 50 cts. per lamp per month is not deemed excessive in this case.

Complaint was made at the hearing concerning the rental charge of 25 cts. per month for fixtures containing clusters of four tungsten lamps. The original installation of these fixtures is made without cost to the user and the utility furnishes maintenance thereof and renewal of tungsten lamps used therein for the monthly charge stated above. From a study of the company's record of lamp renewals and other data on the life of tungsten lamps, it appears that about 12 cts. per month per fixture is required for lamp renewals. Taxes, depreciation and interest amount to about 6 cts. per month. This leaves 7 cts. per cluster, which may be devoted to such other expenses as repairs and inspection. It is the company's desire that the fixtures in question eventually become the property of the users. There would probably be no objection to the existing charge of 25 cts. per month if it were assumed that it also amortizes the investment and makes the fixtures the property of the customers at the end of 5 years. On this basis, the charge will be permitted to stand.

The probable revenue for current for residence and business lighting under the proposed schedule of meter rates is shown in Table VII:

TABLE VII.

ESTIMATE OF COMMERCIAL LIGHTING REVENUES UNDER PROPOSED METER RATE.

Basis for charge.	Per cent.	Kw-hr.	Rate.	Estimated revenues.
Primary energy	50	77,133	12 cts.	$9,256
Secondary "	37	57,000	9 "	5,130
Excess "	13	20,000	4 "	800
Total.....	100	154,133		$15,186

The foregoing estimate of revenue from the sale of commercial current is $15,186. In some instances the revenue provided by the minimum monthly charge would be greater than the amount estimated in accordance with the actual energy used. For this reason, the estimate in Table VII should be increased to some extent. It is believed that $205 per annum just about covers the amount that would be added on this account. The earning from the rental of sixty-five fixtures for clusters of lamps amounts to $195 per year. Revenue from flat rate lamps was $414 for the year ending June 30, 1912. For that year, then, the total revenues from the sale of commercial lighting current would probably have been very close to $16,000.

Commercial Power.

By referring back to Table V, it may be seen that the total cost of current for power purposes amounted to $4,854 and that, as the annual sales for this class of service were 90,277 kw-hr., the average cost was 5.5 cts. per kw-hr. The earnings from power during the year ending June 30, 1912, were $4,029. They were therefore exceeded by the expenses which have been allotted to this division of the business.

The capacity portion of the cost was $1,923. The active capacity of the consumers' motors and other power equipment was 162.6 kw. The capacity cost was therefore $11.80 per active kilowatt per year or 3.24 cts. per day. This, then, is the fixed cost for each active kilowatt of power load and to it must be added the variable or output cost in order to ascertain the total

expense per kilowatt-hour. The output cost was $2,931, which, divided by 90,277, the number of kilowatt-hours sold for commercial power, is 3.25 cts. per kw-hr. Hence, the total cost for one hour's use of the load is 6.49 cts. per kw-hr.

The following table shows how the cost of service decreases as the length of use increases. This reduction in cost is due to the fact that the capacity cost per kilowatt-hour decreases as the length of use increases.

TABLE VIII.

DECREASING COSTS FOR COMMERCIAL POWER.

Cents per Kilowatt-Hour.

Hours daily use of active load.	Capacity cost.	Output cost.	Total cost.
0.5	6.48 cts	3.25 cts.	9.73 cts.
1.0	3.24	"	6.49
1.5	2.16	"	5.40
2.0	1.62	"	4.87
3.0	1.08	"	4.33
4.0	0.81	"	4.06
5.0	0.65	"	3.90
6.0	0.54	"	3.79
7.0	0.46	"	3.71
8.0	0.40	"	3.65

A schedule of rates that would conform very closely with the variations of cost represented in Table VIII may be stated in different ways.

We may have a schedule with a fixed or service charge that the consumer would pay each month. This service charge would be graduated with the size of the installation. In this particular case, it was found that the fixed or capacity costs, amounting to $1,923, are equivalent to 73 cts. per active horse power per month. So it appears that the monthly service charge should be about 70 cts. per active horse power. The consumer would also pay an additional amount varying with the quantity of current consumed. For illustration, it is suggested that the energy charge be 3 cts. per kw-hr. for the first 70 kw-hr. consumed per month per active horse power, plus 2 cts. per kw-hr. for all additional current. The variation in the charges to consumers will be disclosed later in Table IX and the estimate of revenue in Table X.

Or, instead of such a schedule, the rate may be an energy charge graduated with the average length of use to which con-

sumers put their equipment. A schedule of this kind would be similar in form to the schedule already suggested for lighting. The charge per kilowatt-hour under this schedule for power will not be suggested at this point but the effect of several combinations of rates will be shown in Tables IX and X. The primary rate will apply to the first 15 kw-hr. consumed per month per kilowatt of active load, the secondary rate to the next 30 kw-hr. and the excess rate to all use in excess of 45 kw-hr. per month per kilowatt of active load.

TABLE IX.

COMPARISON OF DECREASING COST OF SERVICE AND DECREASING CHARGE TO CONSUMERS FOR VARIOUS SCHEDULES FOR POWER.

Average time active load is used daily Hours.	*Basis A.* Cost. See table VIII.	*Basis B.* Service chg. of 70 cts. per active h. p. per mo. Energy chg. primary, 3 cts., excess 2 cts.	*Basis C.* Primary, 8.0 cts., secondary, 4.0 cts., excess, 2.0 cts.	*Basis D.* Primary, 7.0 cts., secondary, 5.0 cts., excess, 2.5 cts.	*Basis E.* Primary, 7.5 cts. secondary, 5.0 cts , excess, 2.0 cts.	*Basis F.* Primary, 7.5 cts.. secondary, 5.0 cts., excess, 2.0 cts.
0.5.....	9.73 cts.	9.22 cts.	8.0 cts.	7.0 cts.	7.5 cts.	7.5 cts.
1.0.....	6.49	6.11	6.0	6.0	6.25	6.25
1.5.....	5.40	5.07	5.33	5.65	5.82	5.82
2.....	4.87	4.56	4.50	5.12	4.87	5.25
3.....	4.33	4.04	3.67	4.25	3.92	4.33
4.....	4.06	3.53	3.25	3.81	3.44	3.85
5.....	3.90	3.22	3.00	3.55	3.25	3.60
6.....	3.79	3.02	2.83	3.37	2.96	3.42
7.....	3.71	2.87	2.71	3.25	2.82	3.29
8.....	3.65	2.77	2.64	3.16	2.72	3.19

NOTE:—For basis B, primary consists of first 70 kw-hr per month per active kw.
For bases C. D. E. & F. primary consists of the first 15 kw-hr. per month per active kw.
Secondary, the next 30 kw-hr. per month per active kw.
Excess consists of the balance.

A schedule consisting of a service charge and an energy charge, for which the variation of cost to the consumer is shown as Basis B in Table IX, probably would be considered an equitable method of charging for service if the conclusion were based solely on the analysis of the cost to the company. Conditions in this case seem, however, to argue against the use of this form of schedule unless the sum of the service and energy charges be limited by a maximum rate per kilowatt-hour. First, the diversity of use of current by short hour consumers seems to be greater than for long hour consumers. Therefore it is probable that the expense of supplying the former does not rise in such a remarkable degree as the cost curve seems to show. Second, the charge

fixed by the combination of service and energy rates becomes so prohibitively high in some cases that the consumer cannot afford to use the service if he must pay for it on that basis. Yet, if there is some element of profit in this business at a lower rate, other classes of users are not adversely affected if the lower rate be charged.

The objectionable feature of the service charge can be obviated by using a maximum limiting rate. A similar result may be arrived at if we employ a schedule based on the use of the active load.

The power revenue for the year ending June 30, 1912, cost of service and estimated revenue at the various rates shown in Table IX are revealed in Table X:

TABLE X.

COST AND REVENUE FOR POWER.

Year ending June 30, 1912.

Actual revenue		$4,029
Cost of power	Basis A	4,854
Estimated revenue	" B	4,389
" "	" C	3,647
" "	" D	3,909
" "	" E	3,810
" "	" F	4,017

The estimated revenues for bases C, D, E and F would be still further enhanced if a minimum bill for power service were charged. A discussion of the propriety of a minimum charge has been entered into in other cases and will not be repeated here. The respondent's minimum charge for power is now 50 cts. per horse power per month and this provision will not be changed at this time.

The estimate of power revenue, shown in Table X, is based on analysis of the connected load, monthly consumption, and monthly charge for the year ending June 30, 1912. In finding the number of active horse power the following percentages were employed:

First	10 h. p. connected	90	per cent active
Next	20 " "	75	" "
"	30 " "	60	" "
All over	60 " "	50	" "

On this basis, it was found that the connected power load, amounting to 256 horse power, would be considered about 85 per cent active. This is equal to 218 active horse power.

The current used in excess of 70 kw-hr. per month per active horse power was about 15,000 kw-hr. per year. The current equivalent to 15 kw-hr. or less per month per kilowatt of active load was $21,666 kw-hr.; next 30 kw-hr. per month per kilowatt of active load, 27,083 kw-hr.; all over 45 kw-hr. per month per kilowatt of active load, 41,528 kw-hr. This distribution of sales was arrived at by analysis of 85 per cent of the power sales. As it is probable that the remaining 15 per cent was used mostly by short hour users, it is believed that the estimates of revenue are a conservative statement of what the earnings would be under these schedules.

The respondent states that a comparatively low cost for power has been attained because its generating equipment is more fully loaded than customary practice dictates. In other words, the extra capacity usually required to take care of peak loads and emergencies in plants of this kind, if installed in this plant, would increase the respondent's investment and therefore the cost of power also. The respondent asks that it be permitted to enforce a rule requiring consumers using current for power to discontinue use of current during the peak load on the plant or to pay a greater rate if current be taken at that time. Judging from the information now before the Commission, it seems that a rule of this kind is not unreasonable in this instance because usually the lowest rates should be given to those who can be supplied most cheaply. We have already seen that the estimated earnings from the proposed power schedule do not equal the costs allotted to this service in the apportionment that we have made of the expenses. An advance of 10 cts. per active horse power in the service charge will not advance the charge for service beyond its cost.

Under the old power schedule the average charge decreases with the size of the bill without reference to how long the load may be used. Under the proposed schedule a small customer would be able to get the same average rate as a large customer if the active load is used, on the average, the same number of hours per day. It is fortunate that the two large power customers who have received the cheapest current under the old schedule are the most economical users. Because they use their active loads longer than the average power consumer, their annual bills under the proposed rate would have been practically unchanged for the year ending June 30, 1912, despite the fact that the total

revenues from all power sales would have been somewhat increased. The proposed rates would yield sufficient return to make the power business profitable to the respondent, and, at the same time, make excess current cheap enough for owners of large installations to purchase current in preference to operating isolated plants.

In order to give consumers advantage of cheaper current for small power appliances which are usually supplied from the lighting circuits the respondent has, in some instances, installed separate meters and charged for the current at 6 cts. per kw-hr. This is an expensive method of supplying the service, considering the amount of current usually delivered for this purpose, and yet it is quite apparent that some reduction must be made if this kind of business is to be obtained. Under the new form of lighting schedule service may be given to incidental appliances, such as flat irons, toasters, electric fans and private washing machines, at a lower rate without installing a separate meter if the capacity of the appliances be not considered in computing the active load supplied through lighting meters. By this method, the secondary and excess rates are attained much sooner than if the load of the appliances were considered in figuring the active load.

Street Lighting.

The total cost of service for municipal lighting was found by analysis to be $3,452. The present rates of $24 per year for tungsten lamps burning 4,000 hours and $18 for those burning 1,450 hours are approximately equal to the cost of service and need not be changed. When this proceeding was started the rate of 4 ampere series magnetite arcs, burning 1,450 hours annually on a moonlight, dusk to 12:30 a. m. schedule, was $65 per annum. This charge for the service is found to be too high and probably would be reduced except for the fact that we now find the respondent supplying all night service at the same rate. And as the cost of all night service appears from estimates of the additional expense to agree very closely with the rate now charged, no modification of the existing rate is required.

SUMMARY.

The analysis of the investment and operating expenses for the year ending June 30, 1912, reveals that the revenues from commercial lighting exceeded the cost for this class of service by

about $1,500; that the revenues from commercial power were less than the cost by about $800; and that the street lighting revenue exceeded the cost by $1,300. In the case of street lighting, however, the amount of service rendered at the same rate was subsequently increased so that now the cost and earnings are about the same. It was also found that the form of the schedules for lighting and power did not conform to the cost of supplying service to the different users. Accordingly, it is believed that the respondent's schedules should be modified to accomplish the following primary results:

1. A lighting schedule which will reduce the average charge and which is graduated according to the average daily use of consumer's active load.

2. A lighting schedule which will place the maximum charge for all commercial lighting on the same level.

3. A power schedule which will very slightly increase the average charge for power and which is graduated according to average daily use of the consumer's active load.

The evidence appears to be convincing that the rates determined herein upon analysis of the facts are appropriate for the respondent's business. We are mindful of the fact that the valuation of the property is of January 1, 1913, which is some time later than the period for which the expenses were used in these computations. It appears that the impetus given to the development of business by the reduction of the lighting rate and by the change in the graduations will add to the return on the investment, but we do not rely upon this assumption in the following order.

IT IS THEREFORE ORDERED, That the respondent in this case, the Monroe Electric Company, of Monroe, Wis., discontinue its present schedule of rates for commercial electric light and power service within the city of Monroe, and, in lieu thereof, place in effect the following schedule of rates, deemed just and reasonable:

I. COMMERCIAL LIGHTING.

(a) Meter Rate.

Primary: 12 cts. net per kw-hr. for the first 30 kw-hr. per month per active kilowatt of connected load.

Secondary: 9 cts. net per kw-hr. for the next 60 kw-hr. per month for active kilowatt of connected load.

Excess: 4 cts. net per kw-hr. for all use in excess of 90 kw-hr. per month per kilowatt of connected load.

The following percentages of connected lighting loads shall be deemed active:

For Class A, which shall include residences, dwellings, flats, private rooming houses, hotels, hospitals and clubs in which meals and rooms are furnished, 60 per cent of the first 500 watts connected and 33⅓ per cent of all in excess of 500 watts connected shall be deemed active.

For Class B, which shall include banks, offices, stores, shops, saloons, billiard and pool halls, depots, theaters, club and lodge rooms, moving picture theaters, and establishments of a similar nature, 70 per cent of the first 2.5 kilowatts connected and 55 per cent of all in excess of 2.5 kilowatts connected shall be deemed active.

For Class C, which shall include public buildings, schools, churches, factories, warehouses, stables, garages, and establishments of a similar nature, 55 per cent of the total connected load shall be deemed active.

The minimum bill for this schedule shall be $1.00 per month.

(b) Flat Rate.

50 cts. net, per month per 16 c. p. lamp.

This rate is to apply to hall, toilet and other similar lights, where the consumer has no lighting meter installed. The company shall have the option of installing a meter where there are two or more lamps in one building and must do so if there are four lamps or more.

(c) Rental of Clusters.

A monthly charge of 25 cts. in addition to the regular charge for current, shall be made for the use and maintenance of four-light clusters installed complete at the expense of the company. The company is to furnish free tungsten lamp renewals of any size desired for the first five years after the installation of the cluster, at the end of which period the cluster, complete and installed, shall become the property of the consumer and the monthly rental charge shall cease.

II. Commercial Power.

REGULAR SCHEDULE.

(a) Limited Use.

This rate shall apply to consumers not using current from 4.30 p. m. to 10:00 p. m. during the months of November, December, January, February and March, and from 6.00 p. m. to 10.00 p. m. during the months of April, May, June, July, August, September and October.

Service charge:	$0.70 net per month per active horse power connected.
Energy charge:	
Primary:	3.0 cts. per kw-hr. for the first 70 kw-hr. per month per active horse power connected.
Excess:	2.0 cts. per kw-hr. for all current in excess of 70 kw-hr. per month per active horse power connected.

The sum of the service and energy charges shall not exceed 10 cts. per kw-hr. if the total bill exceeds the minimum monthly charge. The minimum monthly charge for this schedule shall be 50 cts. per horse power connected.

The minimum charge shall be based on the rated capacity of equipment used under this schedule and 746 watts shall be considered the equivalent of one h. p. when the equipment is rated in watts or kilowatts.

The active load shall be determined as follows:

Power,	90	per cent	of	the	first	10	h. p.	shall be deemed	active.
	75	"	"	"	next	20	"	" "	"
	60	"	"	"	"	30	"	" "	"
	50	"	"	all	over	60	"	" "	"

Except, however, if capacity of the motor exceeds the possible load, total possible load shall be deemed h. p. connected.

(b) Unlimited Use.

The foregoing power schedule plus 10 cts. per active horse power in the service charge shall apply to use of current for power not limited as to time.

III. Cooking.

Primary:	7.5 cts. net, per kw-hr. for the first 15 kw-hr. per month per kilowatt of active load.
Secondary:	5.0 cts. net, per kw-hr. for the next 30 kw-hr. per month per kilowatt of active load.
Excess:	3.0 cts. net, per kw-hr. for all use in excess of 45 kw-hr. per month per kilowatt of active load.

Twenty per cent of the rated capacity of cooking equipment shall be deemed active.

If not more than 20 per cent of the connected load is power, the whole shall be deemed heating.

The minimum bill for this schedule shall be $1.00 per month.

IV. Incidental Appliances.

Incidental appliances not exceeding 600 watts for any one appliance, such as electric fans, flat irons, private washing machines, toasters, ranges of under 1.5 kilowatts and other similar household conveniences, shall be placed on the lighting rate but omitted from the calculation of connected load. That portion of the rated load in excess of 600 watts for any one appliance shall be added to the connected load in computing the active load. It is further provided that any consumer having a connected load of over 2 kilowatts consisting of the above appliances including motors, may at his option have a power meter installed and pay for the current consumed by such load at the power rate.

V. Free Service.

All free service whatsoever and all flat rates not specifically provided by this order shall be discontinued.

H. R. ANDERTON ET AL.

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided April 6, 1914.

This is a rehearing, upon application of the respondent, of a matter decided Aug. 22, 1913, 12 W. R. C. R. 506. The respondent objects to the order of the Commission requiring it to stop its trains No. 5 and No. 6 at Readfield on signal to receive and discharge passengers. The trains in question are interstate trains and though they stop at certain stations no larger than Readfield they do so only because of the respondent's reluctance to discontinue service to which the respondent's patrons have become accustomed from long usage. New data with reference to the passenger traffic at Readfield are considered.

If a railway company furnishes reasonably adequate service to a community it cannot be required to furnish additional service to that community merely because it furnishes more than adequate service to communities of similar or less importance.

Held: In the light of the new evidence introduced, the failure of the respondent to stop its trains No. 5 and No. 6 at Readfield would not constitute an unjust discrimination against Readfield nor result in service which would be legally inadequate. The former decision is reversed and the original complaint is dismissed.

REHEARING.

An order was made in the above entitled matter on August 22, 1913 (12 W. R. C. R. 506), requiring the respondent railway company to stop its trains No. 5 and No. 6 at Readfield, Waupaca county, on signal, to receive and discharge passengers. Upon the application of the respondent a rehearing was granted and held on September 24, 1913. The petitioners were represented by *Edward Dempsey,* their attorney, and the respondent by *A. H. Lossow,* its commerce counsel. The matter was orally argued on February 10, 1914.

It appears that the only difference between the service which would be afforded Readfield by trains No. 5 and No. 6 and that afforded by trains No. 11 and No. 12 is that the former trains would enable the residents of Readfield to go to Neenah to trade, whereas, with the present service they have more convenient access to the county seat at Waupaca, which is a smaller trade cen-

ter than Neenah. Trains No. 5 and No. 6 are interstate trains operated between Chicago, Ill., and Eau Claire, Wis., and make 55 regular stops and 20 flag stops. It was explained on the part of the respondent that the reason such trains now stop at unimportant stations is that they have operated for many years on substantially the same schedule, and therefore it has been deemed inadvisable to withdraw a service to which the residents of such towns have adjusted themselves and become accustomed. It was also contended that under the present arrangement reasonable connections are afforded passengers from Readfield destined to Milwaukee and Chicago. The operating department of the railway company maintains that trains No. 5 and No. 6 are very busy trains and are operated as fast between stations as is consistent with safety in order to maintain their schedules.

It appears that the distance between Chicago and Eau Claire is 364.4 miles, and that the running time of the trains in question is 12 hours and 45 minutes. These trains, as stated above, make 55 regular stops and 20 stops on signal. The average number of stops made by these trains daily is probably about 70. From the time that a train begins to slacken speed before a stop, until the time it again is under full headway after the stop, a minimum of 3 minutes is consumed. Assuming that these trains make an average of 70 stops they lose 3½ hours in running time. Consequently, the actual speed of these trains between stations is between 38 and 39 miles. This is a very high rate of speed and should not be permitted to be increased.

On the part of the petitioners it is claimed that the people of Readfield have little business to transact at Waupaca and do most of their trading at Neenah. According to the respondent's schedule, Readfield is the only passenger station on the routes of trains No. 5 and No. 6 at which they do not stop. Some of the stations at which these trains stop are of no greater importance than Readfield.

A count made by a witness showed the number of passengers boarding and departing from the trains which now stop at Readfield, from May 29, 1913, to July 19, 1913, and from September 15, 1913, to September 22, 1913, a total period of 61 days. These data are summarized in the following table:

	Total passengers.	Passengers boarding.		Passengers alighting.	
		Train 11.	Train 12.	Train 11.	Train 12.
Total passengers.....	598	143	172	172	111
Average per day	9.7	2.3	2.8	2.8	1.8

Subsequent to the hearing the company submitted a statement showing the number of passengers boarding trains at Readfield, with their destination and the resulting revenue, for June, July and August, 1913. A summary of these data follows:

Month.	Passengers boarding.			Total outbound revenue.
	Train 11.	Train 12.	Total.	
June, 1913.....	52	81½	113½	$59 13
July, "	61	78	139	51 16
August, "	59½	87	146½	62 05
Total.....	172½	246½	419	$172 34
Daily average.....	1.9	2.7	4.6	1 87

The power of the Commission over interstate trains is limited. If a railway company furnishes reasonably adequate service to a community, it has performed its public obligation in that respect. Further service is a matter of discretion on the part of the company, and not a duty that can be imposed by public authority. (*Farmer v. D. S. S. & A. R. Co.* 1907, 1 W. R. C. R. 316; *Schmidt v. G. N. R. Co.* 1909, 4 W. R. C. R. 121; *Laun v. C. M. & St. P. R. Co.* 1910, 6 W. R. C. R. 5.) If the service now afforded Readfield is reasonably adequate, as that term is defined and applied by the authorities, it is incumbent upon the Commission to vacate the order made herein.

The experience of three months during which the train in each direction was stopped at Readfield shows an average of only about nine passengers daily, yielding a revenue of approximately $3.60. This showing clearly indicates in our opinion that under existing conditions the present service, though not as convenient as might be, is not legally inadequate. The fact that trains No. 5 and No. 6, as well as trains No. 11 and No. 12, stop at sta-

tions of equal or less importance than Readfield may be regarded as a discrimination, but in the light of the new evidence introduced upon the rehearing, we do not regard it as unjustly discriminatory. In fact, the village of Readfield is not a station on the respondent's line. It is situated some little distance from the line, and people are obliged to travel some little distance to reach the station named Readfield. Nevertheless, these people are entitled to reasonably adequate service as they are tributary to the respondent's line and have no other line available. Until comparatively recently the people of Readfield were obliged to go to other stations on the respondent's line. In order to accomodate them, a flag station was established at the point nearest the village, and this station was given the name of the village.

The only reason that justified the stopping of the trains in question at small stations, after trains No. 11 and No. 12 were put into service, was a reluctance on the part of the respondent to discontinue service to which patrons had been accustomed from long usage. It does not appear that the practice of the company in rendering more than a minimum of service which might be deemed legally adequate at other small stations on its line, has in any sense injured residents of Readfield. Trains No. 5 and No. 6 should not be required to increase the number of stops. To do this with safety of operation would require an extension of the scheduled time between Chicago and Eau Claire. The result of this would be the inconveniencing of the greater number in order to convenience the few. Furthermore, it would result in a loss of patronage, and this, in turn, might inevitably require the discontinuance of these trains.

After a careful investigation of all the facts and circumstances, we are reluctantly compelled to reverse our former decision and dismiss the complaint.

NOW, THEREFORE, IT IS ORDERED, That the order made herein on August 22, 1913, be and the same is hereby vacated and set aside.

IT IS FURTHER ORDERED, That the complaint be and the same is hereby dismissed.

WILLIAM RUST

vs.

MINNEAPOLIS, SAINT PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Feb. 27, 1914. Decided April 7, 1914.

The petitioner, who is engaged in buying and selling coal and other merchandise at Mukwonago, alleges that the respondent refuses to lease him a suitable site for a warehouse on its right of way at Mukwonago and asks that the Commission take such action as it deems just in the premises. If granted the desired site, the petitioner proposes to ship merchandise of various kinds into Mukwonago, store it temporarily and sell it to farmers and other customers.

Held: There is no evidence to show that the proposed warehouse would be used in any other way than as a private warehouse in connection with a private mercantile business. The Commission is therefore without jurisdiction in the matter and the petition is dismissed.

The petitioner, who is engaged in buying and selling coal and other merchandise at Mukwonago in Waukesha county, alleges in substance that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company refuses to lease him a suitable site for a warehouse on its right of way at Mukowonago. The Commission is therefore asked to take such action as it deems just in the premises.

The respondent in its answer alleges that prior to making complaint to the Commission the petitioner sold his business in Mukwonago with the agreement that he would not engage in business in that village so long as his purchasers continued to transact such business at that point. It further alleges that the warehouse site desired by the petitioner cannot be granted without improper interference with the safety of the respondent, or without imposing upon it expenses which it ought not to be required to assume. It therefore asks that the petition be dismissed.

A hearing was held on February 27, 1914, at Mukwonago, at which *William Rust* appeared in his own behalf, and *Kenneth Taylor* for the respondent.

This action is brought under sec. 1802-*a* of the statutes, which is as follows:

"Any persons proposing to erect and construct a public elevator or public warehouse to be operated for hire, for the purchase, sale, storage or shipping of grain or other personal property to be transported upon any railroad, shall be furnished by such railroad at a reasonable rental, a site upon its vacant right of way or depot grounds, within the yard limits of any station or terminal or such railroad; and the railroad commission shall, upon application, if it shall deem the public interest so requires, by order, direct the railroad to furnish such site and in case of disagreement, the commission shall determine the rental therefor. Elevators and warehouses erected under the provisions of this section shall be deemed to be public elevators or warehouses and shall be subject to such rules and regulations as to charges and the manner of conducting business, as the commission shall prescribe. Provided, that this section shall not apply to cities."

This statute empowers the Commission to require a railway company to lease a site on its right of way only when such site is to be used for the construction of a public elevator or warehouse. The petitioner testified that if granted the desired site, he proposes to ship coal, cement, flour, bran and foodstuffs of all kinds into Mukwonago, store them temporarily, and sell to farmers and other customers. There is no evidence to show that the proposed warehouse would be used in any other way than as a private warehouse in connection with a private mercantile business. Under such circumstances it is obvious that the Commission is without jurisdiction in the matter.

If the petitioner acquires a suitable site for his business on or off the railway right of way and desires a spur track connection therewith, he can obtain such connection by an appropriate action before the Commission under sec. 1797—11*m* of the statutes, which provides for the construction of an industrial spur track at the expense of the petitioner, if such track does not exceed three miles in length, is practically indispensable to the industry and is not unusually dangerous or unreasonably harmful to the public interest.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

WACHSMUTH LUMBER COMPANY

vs.

BAYFIELD TRANSFER RAILWAY COMPANY.

Submitted Feb. 10, 1914. Decided April 7, 1914.

The petitioner alleges that the rates provided by the respondent's tariff of Jan. 1, 1914, for the transportation of logs are excessive and unjustly discriminatory against the petitioner. The petitioner also alleges that many of the cars in use are so defective that they will not carry the minimum weight of 45,000 lb. established by the respondent and complains that the car equipment in general is defective and inadequate and a source of great expense to the petitioner, by reason of the fact that the petitioner is required to replace all cars destroyed in operation and to repair all defective cars. Two questions are considered in deciding the matters at issue: (1) that of rates; and (2) that of the minimum weight of 45,000 lb. The respondent controls and operates two subsidiary lines which comprise, with its own lines, a mileage of about fifteen miles. The combined enterprises, which appear to be under one ownership, have a total bonded indebtedness nearly ten times as great as the present value of the physical property used and useful in carrying on the business. Investigation of the respondent's revenues and expenses for the years 1908 to 1913, inclusive, shows not only that the respondent has failed during these years to meet the interest charges on its funded debt but also that the income of the respondent has been insufficient in all of the years indicated to pay a fair return even on the present value of the property used and useful in the business and in several years to meet operating expenses.

The reasonableness or unreasonableness of a given rate cannot be determined by the consideration of any one alone of the several factors which are involved in the matter but the peculiar conditions out of which the rate grew must be taken into account along with the general principles which are recognized as applicable in the establishment of all rates.

Held: 1. Although the rates complained of are prima facie not unreasonable when the character of the service and the rates charged over other lines for a like service are considered, certain modifications in the tariff should be made to prevent the doing of injustice to the petitioner.

2. The minimum weight of 45,000 lb. per car, in view of the defective condition of many of the cars in use, is excessive.

The respondent is ordered to put into effect a tariff on logs fixed by the Commission, subject to a minimum weight of 40,000 lb. per car. On shipments from Sunnyside to Bayfield, inasmuch as the distance involved is but a fraction over five miles, the five mile rate, instead of the ten mile rate as proposed by the respondent, is to apply.

This case comes before the Commission in the form of a complaint by the Wachsmuth Lumber Company, setting forth that a new tariff issued by the Bayfield Transfer Railway Company, which went into effect January 1, 1914, increases the rates for hauling logs for the petitioner to a point that is "unfair, excessive and unreasonable, and out of proportion to the physical valuation (value) of said railroads, and unjustly discriminatory against the petitioner."

A hearing was held at the office of the Commission in Madison on February 10, 1914. *John Walsh* appeared as attorney for the petitioner and *Alfred H. Bright* for the respondent company.

In the formal petition and at the hearing the petitioner set forth other causes of complaint in addition to that of excessive charges, one being that the car equipment of the respondent was defective condition. It was further alleged by the petitioner being that the respondent had established a minimum weight per car of 45,000 lb. and that nineteen or twenty of the fifty-eight cars in use would not carry the minimum weight, owing to defective condition. It was further alleged by the petitioner that a frequent shortage of cars prevented the economical loading of cars by the petitioner; that the latter had to replace all cars destroyed in operation and repair defective ones, and that the worn-out condition of many of the cars in use caused the petitioner to pay large sums annually for repairs; that the roadbed was not properly ballasted, and was otherwise defective, so that ten or twelve miles an hour was the highest rate of speed at which trains could be run. The petitioner also alleged that the respondent company was too expensively operated, paying for use of cars an exorbitant rental, and that the increase in rates would add to the transportation expenses of the petitioner $15,000 a year.

Mr. Hale, general manager of the respondent company, testified at the hearing that the operating expenses, including the office expenditures, were as low as practicable; that some of the cars used had a capacity of 70,000 lb. and were equal to that load, and that he did not consider the rent paid to one C. E. Wales for twenty cars hired from him ($7,286.76 in two years) was exorbitant.

Out of the complaint and answer and the testimony at the hearing there emerge two distinct questions for the consideration of the Commission: (1) Whether the new rates of the respondent

company which went into effect on January 1, 1914, are unreasonable; (2) whether the respondent is justified in maintaining a minimum weight of 45,000 lb. per car. The other questions, which have arisen incidentally, will adjust themselves when these two are settled.

The reasonableness or unreasonableness of a given rate cannot be determined by the consideration of any one alone of the several factors which are involved. It has become virtually an axiom of the courts that in passing upon the reasonableness of a given rate the peculiar conditions out of which the rate grew must be given due consideration along with the general principles which are recognized as applicable to all rates. The present case with its peculiar conditions is no exception to the rule.

Let us examine some of the conditions presented. The respondent company, the Bayfield Transfer Railway Company, controls and operates two lines of subsidiary companies, the Bayfield Harbor & Great Western and the Bayfield, Superior & Minneapolis, which, with its own short line, comprise a total mileage of 14.99 miles. It is fair to infer that, though existing under different corporation names, the three enterprises are under one ownership. Part of the car equipment used is rented, including one locomotive and twenty cars. The combined enterprises have a funded indebtedness of $1,500,000, upon which the rate of interest is 5 per cent. There is a wide disparity, however, between the funded debt and the actual total value of the properties involved. The Commission's engineers have fixed the cost of reproduction under date of 1913, of the fourteen odd miles of road at $240,517, with a present value of $151,185. In other words, the actual present value of the respondent company's physical property used and useful in carrying on its transportation business is a little over one-tenth the amount of the total bonded indebtedness. Whether the bonds were sold or were, and are now, held by the holders of the stock of the combined enterprises, does not appear. The enterprises were prospected as a great terminal and harbor scheme, and the bonds were doubtless issued on the prospective value as such terminal and harbor facilities. These facts have no very direct bearing upon the questions under consideration, except as they go to explain the large interest item and larger deficits in Table II below.

Upon the actual present value of the combined enterprises as found by the Commission's engineers, and which, by the way,

has steadily decreased since 1910, the highest returns from any one year was 4.45 per cent, allowing nothing for depreciation or for interest. The year following (1912) the total income fell about one-half of one per cent below operating expenses in which were included taxes. That is, the respondent did not quite pay operating expenses, to say nothing of any allowance for depreciation or interest. Table I shows the operating results for six years.

TABLE I.

RATE OF RETURN ON INVESTMENT

BAYFIELD TRANSFER RAILWAY COMPANY.

Italic figures denote deficits.

		1913.	1912.	1911.	1910.	1909.	1908.
1.	Operating revenues	$32,347 48	$37,829 38	$39,902 65	$15,085 30	$7,215 25	$6,34[illegible] 51
2.	Operating expenses	23,392 80	31,959 40	28 681 58	23,013 78	9,755 84	18,22 5[illegible]
3.	Net operating revenue	$9,014 68	$5,869 98	$11,221 07	*$7,928 48*	*$2,540 59*	1 120 9[illegible]
4.	Taxes	482 83	402 43	321 47	252 24	280 15	367 09
5.	Operating income	$8,531 85	$5,467 55	$10,899 60	*$8,180 72*	*$2,820 72*	$753 84
6.	Hire of equipment	4,168 32	6,215 38	4,000 66	215 00	.....	.....
7.	Balance available for return on investment	$4,393 53	*$747 83*	$6,898 94	*$8,395 72*	*$2,820 72*	753 84
8.	Cost of reproduction new	$240,517	$244,322	$244,226	$242,370	$230,258	$217,906
9.	Present condition	151 185	153,853	154,915	158,827	147,057	134,768
10.	Return on cost new	1.83%	*0.31%*	2.82%	*3.46%*	*1.23%*	0.35%
11.	Return on value present condition	2.91%	*0.49%*	4.45%	*5.29%*	*1.92%*	0.56%

It will be seen from the preceding table that for the year ending June 30, 1913, the respondent earned an amount over and above operating expenses, including taxes, equal to 2.91 per cent upon the present value of $151,185, nothing being allowed for depreciation or interest. Probably because of the generally insufficient income the respondent appears to have disregarded the necessity for a depreciation allowance, and the fact of the steadily diminishing value of the physical property is an eloquent proof of this disregard.

Such a return as indicated in Table I might, if the volume of business were maintained, enable the company to keep up its roadbed and equipment at a fair standard of service, but would leave nothing by the way of a return on the investment. Assuming the correctness of the statement of the petitioner that the new rates in force would increase the cost of transportation to it

$15,000 per year, that sum added to the respondent company's income would give the respondent a not unreasonable return on the present value of its property in addition to providing for depreciation. Prima facie, then, the respondent company would seem entitled to some increase in its rates above those which produced the returns for the fiscal year ending June 30, 1913. Table II, which follows, shows somewhat more in detail the actual status of the respondent company, covering the six years ending June 30, 1913:

[2] Supplied to check balance sheet.

It is not overlooked that there may be cases where extravagance or other forms of inefficiency in management are the chief causes of inadequate return upon investment, but in the present case the charge of extravagance will not lie. With the exception of the payment of an exorbitant rental for twenty cars, the expenses of operation appear to be not above the average. In view of the fact that the reduction of the rental referred to down to a reasonable sum would not noticeably affect the result as to rate of

return, it is not necessary to dwell upon the matter of rental further at this time.

We have now to consider the rates fixed by the new tariff against which complaint is made, first with respect to their relation to rates charged by other roads for a similar service, and secondly with respect to their relation to the traffic itself. The new tariff is as follows:

RATES IN CENTS PER 100 LB.

(Where rates are not named for the exact distance, rates for the next greater distance will apply)

For distance of 5 miles, rate of 1.3 cts. will apply.
For distance of 10 miles, rate of 1.4 cts. will apply.
For distance of 15 miles, rate of 1.5 cts. will apply.
Minimum weight 45,000 lb.

Then follows a list of stations and distances.

It was testified at the hearing that the rates prior to the going into effect of the present tariff were $1 per 1,000 feet on all shipments of logs loaded on the petitioner's spur, and $1.50 per 1,000 feet on all logs loaded on the respondent company's lines, and that, in addition to this, the petitioner had to pay 25 cts. per car to the "Omaha" railway company for the switching of the loaded cars through the latter company's yards.

In Table III are shown the rates charged by some of the larger companies for service similar to that performed by the respondent company:

TABLE III.
RATES ON LOGS, CARLOADS, VIA LARGE LINES.
In force March 24, 1914.

Miles.	Chicago, St. Paul, Minneapolis & Omaha Ry. Co.[1]		Chicago & North Western Ry. Co.		Chicago, Milwaukee & St. Paul Ry. Co.	Minneapolis, St. Paul & Sault Ste. Marie Ry. Co.
	Concentration rate.		Concentration rate.	Rate when product not shipped via C. & N. W. Ry.	Concentration rate.	Concentration rate.
	In cts. per 100 lb.	Per 1,000 ft. logs.	In cts. per 100 lb.	In cts. per 100 lb.	In cts. per 100 lb.	In cts. per 100 lb.
5	2	$1 00 $0 70	1	1.5	1	1.1
10	1¼	1 00 1 25	1	1.64	1	1.2
15	1¼, 1¼	1 00 1 25	1	1.78	1.2	1.3
20	2, 1¼, 1¼	1 25 1 00 1 60	1	1.92	1.3	1.4

[1] The C. St. P.M. & O. Ry. has no distance rates on logs. The rates shown are specific rates from and to named points where distance, under a distance tariff, would apply as shown in table.

Table IV shows rate charges by small companies for similar service:

TABLE IV.

RATES ON LOGS, CARLOADS, VIA SMALL LINES.

In force March 24, 1914.

Miles.	Bayfield Transfer Ry.	Dunbar & Wausaukee Ry.	Fairchild & Northeastern Ry.	Hazelhurst & Southeastern Ry.	Mattoon Ry.	Marinette, Tomahawk & Western Ry.
	Cts. per 100 lb.	Per 1,000 feet.	Per car.	Cts. per 100 lb.	Cts. per 100 lb.	Cts. per 100 lb.
5	1.3	$1 65	$6 00	3.	2.2	1.5
10	1.4	1 65	6 00	3.3	2.4	1.64
15	1.5	1 65	9 00	4.	2.55	1.78
20	.....	2 15	9 00	4.5	2.7	1.92

Concerning the statement by the petitioner that when the spur tracks were built by it connecting the respondent company's line with the timber tracts of the petitioner, there was an understanding that the rates fixed then by the respondent were made low in consideration of such hauling, and the denial by the general manager of the respondent's line that there was such an understanding, it need only be said, if such an agreement were entered into it would be illegal and void and could have no weight in determining the reasonableness of the new rates.

Sec. 1797—22—2 of the statutes, covering this point, reads as follows:

"It shall be unlawful for any railroad to demand, charge, collect or receive from any person, firm or corporation a less compensation for the transportation of property or for any service rendered or to be rendered by said railroad, in consideration of said person, firm or corporation furnishing any part of the facilities incident thereto; provided nothing herein shall be construed as prohibiting any railroad from renting any facilities incident to transportation and paying a reasonable rental therefor."

A comparison of the rates in Tables III and IV with those of the respondent company's new tariff, against which the complaint is made, show the latter to vary little either way from those in force on other short lines for similar service. However, the fact that a large part of the petitioner's business now

reaches the respondent's line at Sunnyside, and that in the future most of the hauling will be done by the respondent from there, according to the unrefuted statement of the petitioner, puts a rather different face on the new rates. According to the testimony the haul from Sunnyside is out 5¼ miles, and as anything in excess of 5 miles up to 10 miles takes the latter rate, the respondent company would be receiving for a 5¼ mile haul on the larger part of the petitioner's business, a 10 mile rate. By these means a seemingly just rate might become decidedly unreasonable.

It is the opinion of the Commission that while the respondent company's new rates are prima facie not unreasonable, considering the character of the service and the rates charged by other lines for a like service, yet, under the new schedule it is possible that a measure of injustice might result to the petitioner. The Commission is also of the opinion that a minimum of 45,000 lb. per car, in view of the rather defective condition of many of the cars in use, is excessive; also, that the 10 mile distance rate should not be made to apply to shipments from Sunnyside, the haul from there being in reality only a fraction of a mile over 5 miles.

These suggested modifications of the present tariff may not fully meet the requirements of the situation, but if they prove inadequate after being in force a sufficient length of time to test them, still further modifications can be made.

IT IS THEREFORE ORDERED, That the Bayfield Transfer Railway Company withdraw its present tariff on logs which became effective on January 1, 1914, and substitute therefor the following schedule of rates:

RATES IN CTS. PER 100 LB.

For distance of 5 miles a rate of 1.1 cts.
For distance of 10 miles a rate of 1.2 cts.
For distance of 15 miles a rate of 1.3 cts.
Subject to a minimum weight of 40,000 lb. per car.

The 5-mile rate to apply on shipments from Sunnyside to Bayfield.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SWITCHING RATES OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY AT MILWAUKEE, WISCONSIN.

Decided April 9, 1914.

The Commission, on its own motion, investigated (1) the reasonableness of an increase proposed by the C. M. & St. P. Ry. Co. in its rates for switching service for carload freight between industries on its own line and between these industries and connecting lines in the Milwaukee Terminal District and (2) the adequacy of the service itself, concerning which a number of informal complaints had been made. It appears that the railway company is taking reasonable measures to satisfy the service complaints and the order in the instant case is therefore restricted to the matter of rates. At the hearings individual shippers complained that the increased rates would be unreasonable and excessive. Complaint was also made that the application of the Wisconsin distance tariff to terminal movements requiring the use of team tracks would result in unreasonable and excessive charges, and that the proposed increase in the present reciprocal switching rates with connecting carriers would work serious hardships. A detailed physical valuation of the terminal properties and a detailed study of transportation movements in the district were made; the total freight expenses were apportioned among "Through", "In", "Out" and "Terminal" movements; and the costs of making the terminal movements were analyzed. An ideal terminal tariff based on cost and on weight and distance is considered.

The fact that the movements in question require the use of properties of relatively high value, as compared with other railway property used and useful in the service of the public, and the fact that the bulk of the movements consists of the transportation of raw or partly manufactured materials, the value of the movement of which is not very high to the shipper, make it extremely difficult to apply the cost theory of rate making unalloyed in the instant case. It is, indeed, evident that if each movement were called upon to pay the full estimated average cost of performing the service, including all indirect or overhead costs and dividends, the rates would be so high that many of the movements could not be made. The carrier should therefore be satisfied with a rate which, though it may not cover all the costs arising in connection with each movement, will nevertheless pay all the direct costs and assume a share of the burden of the indirect costs.

Though the terminal rates ordered in the instant case should eventually be increased beyond the increase granted by the present order, this cannot be done until certain line haul rates which are now under consideration are finally adjusted. The fact that the rates at present in effect have resulted in the establishment of economic and traffic conditions which it is a serious matter to radically disturb must also be taken into account.

Held: Considering both the necessary return to the railway company and the competitive status of many of the industries in the district, an industrial switching rate of 1 ct. per 100 lb., with minimum weights of 50,000 lb. and 60,000 lb. per car, is as high a rate as can reasonably be put into effect at this time.

It is ordered that the railway company put this rate into effect for the switching of carload freight at Milwaukee between industries on the company's lines in the Milwaukee Terminal District. In all cases where the present industrial switching rates are $5 per car or less, the minimum weight is to be 50,000 lb. per car; in all cases where the present rate is $6 per car, the minimum weight is to be 60,000 lb. per car.

It is contended in behalf of certain shippers that those owning their own switch engines and doing their own spotting and hauling of cars should be given a lower rate than other shippers. This contention assumes that it is the duty of the carrier to perform these services and that, in the event of their being performed by the shipper himself, the latter is entitled to what in practice would really amount to a division of the rate. Legal authorities upon the reasonable limits of the services which railways render as common carriers and which may be said to be included in the reasonable rate are consulted. The costs of the various modes of receiving and delivering both carload and less than carload freight were investigated and the fixed charges, interest and taxes upon the properties directly involved, such as land, trackage, buildings and paving, were ascertained. These costs were determined per unit of service for each of a large majority of the industries in the Milwaukee Terminal District, for cars originating at team tracks and for cars originating at the freight houses. As between the three services—industry track, team track and freight house—differences in costs are due primarily to differences in the fixed charges upon what may be called the ultimate terminal properties used.

The fact that individual shippers find it to their convenience to perform, by means of their own locomotives, services which under other circumstances would have to be performed by the carrier, is no reason for the granting of reductions in rates to such shippers.

Held: 1. It would appear that the service of transportation includes, in the case of carload freight traffic, all the initial and final movements involved in spotting cars upon industry spurs and in handling to and from team tracks and that this service should be paid for in a single rate.

2. It would be unreasonable, however, to demand, in the case of industrial railways serving industries of large expanse, that cars be spotted at plants regardless of the length of haul beyond the carrier's own tracks.

3. In view of the provisions of sec. 1797—22.2 of the statutes, the general state of industry in the Milwaukee Terminal District and other facts brought out in the instant case, the reduction in rates asked for in behalf of shippers doing their own spotting and hauling cannot be granted for the reason that it would not operate alike upon all shippers.

It is ordered that on shipments to or from connecting lines and to or from industries on the C. M. & St. P. Ry. originating upon, or destined to, C. M. & St. P. Ry. team tracks, the general industrial rate of 1 ct. per 100 lb. ordered herein be charged subject to the minimum weight requirements set forth above.

No decision is rendered in the instant proceedings with respect to that part of the suspended tariff which relates to reciprocal switching rates on traffic interchanged with connecting carriers.

On November 18, 1911, the Chicago, Milwaukee & St. Paul Railway Company issued a tariff, G. F. D. No. 2543–B, canceling G. F. D. 2543–A, quoting switching rates on carload freight

at Milwaukee between industries on the Chicago, Milwaukee & St. Paul Railway and between these industries and connecting lines. An examination of the tariff showed that its effect would be to increase the rates in force by about 80 per cent. At about the same time this Commission received a number of complaints against the Chicago, Milwaukee & St. Paul Railway Company alleging irregular and insufficient service in the same terminal. The complexity of the situation, involving both rates and service, was such that a general investigation was undertaken by this Commission upon its own motion.

The formal hearing in the matter was held on January 4, 1912, in the school board room of the city hall at Milwaukee. The Chicago, Milwaukee & St. Paul Railway Company was represented by *O. W. Dynes,* its commerce counsel, the city of Milwaukee by *Clifton Williams,* assistant city attorney, and numerous shippers in person and by attorney. As some who desired to appear were unable to do so at the first meeting, a second hearing was held in Milwaukee on March 14, 1912.

The question of service arose particularly in connection with the testimony of P. C. Eldredge, general superintendent, and W. H. McNaney, superintendent of terminals. Complaint was made that the equipment was insufficient and that the yards were so laid out as to make it impossible to get full efficiency out of the locomotives. In answer to this complaint Mr. McNaney explained that the road was supplanting its old locomotives with larger and more efficient engines and that it would not be long before there could be no complaint of the service. From time to time this Commission has made suggestions in the matter of service which have lessened materially the difficulties experienced by individual shippers. Altogether it appears that the railway company has responded with reasonable alacrity to the service complaints so that it will not be necessary to make any formal order in the matter of service at this time.

Insofar as the question of rates is involved the testimony of the Chicago, Milwaukee & St. Paul Railway Company may be summarized as follows:

Revenues and Costs.

It was maintained that for the month of November, 1911, the average earnings per car over the entire system were $30.03 and the operating cost per car $22.01, leaving a net operating revenue per car of $8.02. In order to have paid overhead charges (that is taxes, interest and dividends) each car should have earned a net revenue of $8.25. There was therefore a deficit of

23 cts. per car. Reducing these figures to a car-day performance, the total revenue per car per day was $2.45 and the operating expenses were $1.79, leaving a net operating revenue of 66 cts. As overhead charges were 67 cts. this meant a loss of one cent per car per day. For the month of January, 1912, similar computations showed a deficit of 53 cts. per car per day. The applicant also introduced charts purporting to show that, taking the period from 1908 to 1911, the total freight labor expense per thousand ton-miles had increased 96.6 cts. and that the total operating expenses for the same unit of service had increased $1.08, while the corresponding revenues had increased only 31 cts. The statement was also made that the direct costs of switching in the Milwaukee terminal amounts to about $8.00 per car movement, and that the costs including overhead charges would be $11.75 per car movement.

Valuation.

C. F. Loweth, the chief engineer of the road, testified that the physical value of the property within the city limits of Milwaukee should be estimated at $15,000,000 and that at the time of the hearing there were 241 miles of track in this district, of which 30.43 miles were main line tracks.

Tariff Making.

Edward S. Keeley, vicepresident in charge of traffic, gave a history of the development of switching rates. It was the object of the railway company at first to encourage the building up of industries along its track, and so a switching rate, if one was made at all, was merely nominal. Later the rate was raised in an effort to have it cover the cost of service. When Commission regulation came into effect and it became necessary to publish all tariffs, a flat rate of $5 per car was made and enforced. As the territory enlarged and the traffic became greater it became apparent that this rate did not cover the cost of the service. A similar difficulty had been straightened out in Chicago, and the railway company was desirous of establishing the same tariff in Milwaukee. The rates were fixed without reference to the distance as it was felt that injustice would be done should switching zones be established.

On the part of shippers the general tenor of the testimony was that the proposed increases were regarded as unreasonable and excessive. Individual shippers in person or by attorney called attention to certain special considerations which would have to be taken into account in applying the tariff. Thus it was asked

whether companies owning their own switch engines and doing their own spotting and pulling of cars were not entitled to a lower rate. In the case of the operation of quarries within and without switching limits, it was asserted on the one hand, that an increase in switching rates would bring outside concerns into more active competition with local producers, and, on the other hand, that it would discourage the purchase and operation of quarries within the terminal district. Further, this claim was advanced that inasmuch as coal is one of the essential elements of raw material to manufacturing plants, such plants should be granted a remission charge when they deliver the finished product. Moreover, the proposed increase, by equalizing the cost between Indiana and Illinois all-rail coal and dock coal, would seriously affect the latter. Objection was also made to the provision in the tariff requiring movements between industry tracks and team tracks to be made under the general distance tariff. The charges, it was said, would be so excessive as to place the Milwaukee dealer at a disadvantage even with competitors as far distant as Chicago. There was a very general complaint against the increase of the present reciprocal switching rates with connecting carriers, who, it is asserted, would not absorb the increase of $3.00. Finally, the Chamber of Commerce, in behalf of its grain merchants, contended that the proposed increase would practically eliminate the receipt of grain in bulkhead cars which, on account of the extra delivery involved, would have to pay both the higher switching rate and the increased reciprocal rate.

The Commission is now in possession of such facts as enable it to issue a formal order in regard to a reasonable tariff for the Milwaukee Terminal District. An elaborate analysis has been made of the elements entering into the cost of the service and an additional study has been made of the economic conditions existing in the district under consideration. These two factors have been borne in mind in determining a rate which, although it will not render the class of business in question as profitable to the carrier as its regular line-haul business, will nevertheless increase the profitableness of the former to the extent to which economic conditions allow an increase. While in determining what is a reasonable rate for a given service the Commission seeks to isolate all the costs, both direct and indirect, yet in applying the various elements of reasonableness to a given rate the Commission must again view the service in connection with the manifold other services that a transportation agency renders. Accordingly the rate should not materially change the competi-

tive conditions under which the industries affected exist. While there should be no difference at present between the charge made for a haul of ten miles and that for one of five miles, it must not be inferred that this Commission believes such a situation will or should generally continue.

It is evident that the question of available transportation facilities—and by facilities both service and rates are meant—has been a large factor in the past in the establishment of industries at points which are not naturally well adapted for them. The ability of such industries to compete successfully with competitors nearer markets or raw materials is dependent, therefore, upon the continuance of rates and services which offset disadvantages of location. On the other hand, rates that attempt to place different districts more or less fortunately situated upon an equal basis tend to work an economic loss to the community. But rates of this kind have been in existence for a long time and must not be quickly changed. It is hoped that adjustments may be worked out so that this class of patrons will ultimately pay rates commensurate with the costs of performing the service, and that these changes may be reached in such a way as to have little effect upon the competitive relations of these patrons.

The essential steps of the cost analysis which was made for the Milwaukee Terminal District may be summarized as follows: A comparative study was made of the revenues and operating expenses of the railway for a period of years for the purpose of determining a period which would represent normal operating conditions. The year finally chosen was the calendar year 1912, and all figures are for this period. The movement of loaded cars only was considered and the cost of handling empty cars was thus spread over the whole business of the terminal.

From a detailed analysis of transportation movements in general, undertaken from various points of view, principles were derived which were applied to movements in the Milwaukee Terminal District. All movements were classified as "Through", "In", "Out" or "Terminal", and each of these four types was subdivided so that every possible movement could be studied. Altogether approximately 600 types of movements were considered and the following facts determined for each: (a) Times handled by road engine; (b) Miles handled by road engine; (c) Times handled by transfer engine; (d) Miles handled by transfer engine; (e) Times handled by switch engine; and (f) Miles handled by switch engine. To determine the mileage, it

was necessary to locate the center of gravity in districts and yards for inbound and outbound freight.

The next step was to ascertain the number of times each type of movement occurred during the year. The total number of cars handled was determined from the records of the Chicago, Milwaukee & St. Paul Railway Company and, by means of figures representing relative frequency, this total was distributed between the various movements.

The number of cars handled during the year in each movement having been found, the data previously compiled, showing the number of times handled and the number of miles by road, transfer, and switch locomotives, were weighted and the results shown in Table I obtained. The time normally used to complete a transaction was investigated and determined to be approximately as follows: Through movements, one day; In movements, three days; Out movements, three days; and Terminal movements, six days.

The final step in the cost analysis was the determination of operating expenses for the Milwaukee Terminal District for the calendar year 1912. These were derived in part with the aid of statements prepared by the railway company and checked by the Commission, and in part by means of special studies. They were then classified as freight and passenger, and the total freight expenses further apportioned with respect to whether they arose in connection with the handling of "Through", "In", "Out", or "Terminal" movements. The value of the physical plant was determined by the engineering staff of the Commission and the value apportioned to the various movements on a "use" basis. Taxes were apportioned on the basis of the value of physical plant used. The cost of handling the various types of movements having been determined (Table II), this cost was further separated into two classes of expenses, first, those varying with the length of haul and second, those varying with the number of times a car is handled. From the last analysis it appears that the latter type amounts to somewhat more than one-third of the total expense for terminal movements. Considering a case for illustration: The average haul of a terminal movement is, say, five miles, the average number of handlings, say, four. A particular movement was ten miles in length and required six handlings. The distance factor then is two, and the handling factor one and one-half, or weighted, the factor to be used is one and eight-tenths. Hence, if the average charge should be $6 for all terminal movements, this particular movement should be charged $10.80.

TABLE I.

TABLE SHOWING MILEAGE MADE AND NUMBER OF TIMES HANDLED BY ROAD, TRANSFER AND SWITCHING ENGINES, CLASSIFIED ACCORDING TO TYPES OF MOVEMENT.

Movement.	No of cars.	Per cent of total cars.	ROAD. Miles.	Per cent of total miles.	Times handled.	Per cent total times.	TRANSFER. Miles.	Per cent of total miles.	Times handled.	Per cent of total times.	SWITCHING. Miles.	Per cent of total miles.	Times handled.	Per cent of total times.

*Inactive rates.

Table III shows the per car cost of handling cars in terminal movements in the Milwaukee Terminal District. The origin and destination of cars are indicated by the names of established yards and stations.

It is evident at once that if each movement be called upon to pay a rate exactly equal to the estimated average cost of performing the service, and including in such cost all indirect or overhead costs and dividends, many of the movements could never be made on account of the prohibitive rate. The carrier should be satisfied with a rate which, while not covering all the items upon which it is entitled to a return, will nevertheless pay all the direct costs and assume a share of the burden of indirect costs. This reasoning is in line with principles often applied in tariff making in general.

It should be noted in this connection that these movements require the use of properties the value of which, when compared with other railway property used and useful in the service of the public, is exceedingly high. On the other hand, it cannot be said that the nature of these movements is such as to place them very high with respect to their value to the shipper. The bulk of the movements consists in the transportation of raw materials or partly manufactured materials to places of ultimate production. These two considerations, on their nature more or less antagonistic, make it extremely difficult in cases like this, to apply the cost theory of rate making unalloyed.

Bearing in mind, however, all the considerations which the costs suggest, though modifying them by other elements arising out of business prudence and economic foresight, we have built up the scale of charges which is shown in Table IV. Since the paying load varies it was necessary to express the tariff in cents per hundredweight, with a minimum charge such that the expenses independent of weight will be met in each case.

TABLE IV.

TERMINAL TARIFF BASED ON WEIGHT AND DISTANCE.

MINIMUM WEIGHT PER CAR—55,000 LB.

Rate in cents per 100 lb.

From \ To	District I.	District II.	District III.	District IV.	District V.	District VI.

" II.....	1.0	1.0	1.2	1.4	1.1	1.1
" III.....	1.3	1.2	1.0	1.0	1.2	1.2
" IV.....	1.6	1.4	1.0	1.0	1.5	1.5
" V.....	1.3	1.1	1.2	1.5	1.0	1.2
" VI.....	1.3	1.1	1.2	1.5	1.2	1.0

District I includes all industries south of Washington st., at present included in Bay View and Stowell districts.

District II includes all industries between Washington st. and West Chestnut st., at present included in the Reed st., Muskego ave., Fowler st., West Milwaukee and Grand ave. districts.

District III includes all industries between West Chestnut st. and Washington ave., at present included in the North ave. and North Milwaukee districts.

District IV includes all industries between Washington ave. and Prairie st., at present included in the Gibson and Chestnut st. districts.

District V includes all industries between Menomonee Valley joint spur and state fair grounds, at present included in the West Allis district.

District VI includes all industries between Grand ave. jct. and Wauwatosa on the Prairie du Chien division and also the following institutions at Kenyon: County Insane Asylum, County Waterworks, County Almshouse, County Hospital, County Hospital for the Insane, and Home for Dependent Children, all at present included in the Wauwatosa district.

For reasons already stated this Commission does not deem it wise to follow this schedule for the present. It is inserted here in order to indicate what the proper charge would be if the economic and traffic conditions mentioned before did not obtain. It should be borne in mind that these conditions have been fostered and encouraged in part by past acts of the carrier itself. The fact is, moreover, that line-haul rates in this state yield a high return to the road, and that therefore terminal rates, though they should be increased beyond the increase herein granted, can not be finally adjusted until final adjustment has first been made with respect to certain line-haul rates now under consideration. While the Commission does not turn its back upon the facts it cannot consent to increases which might be unreasonable at this time.

Taking into account the necessary return to the carrier and the competitive status of many industries, the Commission concludes that an industrial switching rate of 1 ct. per 100 lb., with a minimum weight of 50,000 lb. and 60,000 lb. per car would be as high a rate as could reasonably be put into effect at this time. The minimum weight of 50,000 lb. should be made to apply upon all cars at present paying a rate of $5 per car or less, and the

minimum weight of 60,000 lb. upon all cars at present paying a rate of $6 per car. A good deal of difficulty has been experienced in arriving at reliable figures as to the average loading per car for the various commodities subject to terminal movements. Under the present conditions the cars are not generally weighed. More evidence on this subject will become available after the new rates have become effective and the Commission will then, if necessary, undertake to modify its order.

It was argued in behalf of certain shippers that shippers owning their own switch engines and doing their own spotting and pulling of cars should be given a lower rate. This contention assumes that it is the duty of the common carrier to perform these services and that in the event of their being performed by the shipper himself, the latter is entitled to what in practice would really amount to a division of the rate.

It becomes necessary, therefore, to determine what are the reasonable limits of the services which railways render as common carriers and which may be said to be included in the reasonable rate.

In general, in the case of carload freight, the undertaking of transportation begins when the shipper applies to the proper agent for empty cars and names the place where the cars are to be put at his disposal. WYMAN, in his work on the law of Public Service Corporations, Vol. I. pp. 585–587, maintains in substance that the carrier's liability as bailee begins at the moment when he assumes possession of the goods with the obligation to transport and the right to transport immediately. Referring to the end of the undertaking of transportation the same writer, on page 919 of Vol. II of the same work, states the following general rule:

"According to what would seem to be the proper test common carriage should come to its end when the undertaking assumed has been performed. A common carrier, as such, undertakes only transportation to a certain place. When he has deposited the goods at that point on the route he has done all that he has professed, and it seems, therefore, that his exceptional liability as a common carrier should then terminate."

The real question which concerns us here is what facilities and services the carrier must provide under the law for the initial or final terminal handling.

European countries afford no criterion for judgment in this

matter because terminal and movement charges are there stated separately. The American system of rate making has been diametrically opposed to the European system. The law and custom in the matter are well summarized by JUDGE GROSSCUP in the case of the *Union Trust Co. v. Atchison, T. & S. F. R. Co.* 1894, 64 Fed. 992, 994.

"The freight [charge] demanded covers the entire service of of the carrier from depot to depot. It is in law the compensation, not only for the actual carriage, but also for the facilities furnished for loading and unloading. The service is a single one, and the compensation is likewise single. The law will not permit the charge for such single service to be divided. * * * This policy of the law is not because a particular shipper might not deal with the carrier as intelligently in the case of one method as in the other, but because the public is not so likely to deal intelligently with a series of items as with a single freight rate. * * * A single charge presents to him [the shipper] at once the whole problem. A series of charges might confuse him and leave uncertain what, in the end, the aggregate would be."

There is some conflict in the decisions upon the question whether the general tariff rate properly includes terminal delivery to the plant of the consignee. Thus in the case of *Associated Jobbers of Los Angeles v. A. T. & S. F. R. Co.* 1910, 18 I. C. C. R. 310, it was held by the interstate commerce commission that each spur track is in a real sense a railway terminal at which the carrier receives and delivers freight. It is a special, and generally in practice an exclusive, railway depot for the carload freight of a particular shipper. It is more than a convenience, it has become a necessity to the carload shipper. Accordingly, carriers having the line haul should deliver the traffic so hauled without additional charge to industries located on its tracks and within its switching limits. COMMISSIONER HARLAN, in a concurring opinion, used the following language (324, case cited):

"The general rate schedules of carriers have been adjusted on the theory that the rates ought to be fixed high enough to warrant carriers in including the spur track service without extra charge, and not on the theory that additional revenues would be available from that service."

The commerce court of the United States, upon appeal, reversed this decision of the interstate commerce commission. *Atchison, T. & S. F. R. Co. v. Interstate Commerce Com.* 1911,

188 Fed. 229. The court here said that the common law rule that carriers by land are bound to deliver goods to the consignee at his residence has never been applied to railway companies. They are "bound only to carry the goods to the depot or station to which they are destined and there hold or place them in a warehouse ready for delivery whenever the consignee or owner calls for them, after notifying the consignee or owner of their readiness to deliver." * * * "Transportation of cars and freight intended for interstate commerce to and from industrial plants located from one-fifth of a mile to seven miles from the main track of the carrier is not", the court held in substance, "the same service which the carrier performs when it delivers freight at its depot or team tracks, the carrier being bound to perform such industrial track service, in the absence of statute, only under an arrangement with the owner of the industrial plant, for which it may charge a reasonable compensation." * * * "Under the facts in this case", the court in substance concluded that "the general tariff rate for interstate commerce does not include delivery to an industrial plant of the consignee or the transportation of the cars from the industrial plant of the shipper to the carrier's yards or main line over a distance varying from one-fifth of a mile to seven miles, but the carrier performing such service is entitled to exact a reasonable charge therefor."

The extent of a carrier's obligation to deliver goods may be summarized as follows:

"The service assumed in common carriage does not necessarily go so far as to impose upon the common carrier the obligation of seeking out the consignee and offering to make delivery to him personally, any more than it imposes the duty to go to the consignor and get the goods from him. But personal delivery is professed in certain kinds of carriage, and in such businesses it is therefore owed. This distinction was marked in the early law by the difference between carriage by sea, where the most that the shipmaster could fairly be said to undertake was to deliver the goods at the wharf, and carriage by land, where the carrier was usually held to undertake personal delivery to the consignee. This distinction is marked in modern times by the difference between the railroad business as it is usually conducted, where delivery to the consignee is not undertaken beyond its own rails, and the express business, where facilities are usually provided for delivery to the addressee personally." (Wyman on Public Service Corporations, Vol. II, p. 93.)

The result of recent legislation and decisions upon the question of what constitutes delivery is, briefly stated, as follows:

"Generally speaking, the modern railway company does not deliver goods except at its established stations. But where there is no freight depot, giving the consignee access to a car upon a siding containing his freight may be equivalent. Where the company has agreed to deliver goods elsewhere or differently, it will become responsible to the extent of its special undertaking. * * * Moreover, the railroad company is generally bound to unload the goods from the cars before delivery can usually be said to have taken place. * * * and the existence of a customary mode of delivery may be sufficient to justify the carrier in delivering in a certain manner which would otherwise be unusual." (Wyman on Public Service Corporations, Vol. II, pp. 928–930.)

Though the facilities that need to be provided for the terminal handling of freight are as a rule of the same general kind, there is a class of commodities comprising by far the larger portion of the freight tonnage which requires special facilities to effect a delivery, namely the class of bulky freight. The carrier's legal duty with respect to bulky freight has been summarized as follows:

"The railroads owe unusual duties with respect to the delivery of bulky freight. When coal, ore, grain or oil are shipped in bulk in carload lots, as they generally are, the consignee may properly insist, if he has a private siding connected with his premises, or if there is a public siding adjoining his premises, that the cars shall be shunted to his premises; for only in this way can such bulky freight be conveniently unloaded. Moreover, if the shipment is of great bulk, such as quarried stone or heavy castings, the request is equally proper, since it is extremely disadvantageous to cart such freight through the streets. There is apparently no such obligation to the consignee of ordinary freight, however large his business with the railroad may be; even if he habitually receives freight in carload lots, it is not outrageous to make him go to the public sidings or the regular freight house for his goods. It should be said, however, that the terminal railways of various sorts usually undertake the delivery of all cars whatever they contain to the premises of the consignees, if they have a special switch or they have a siding adjacent. There are certain special instances which deserve special mention. It seems to be settled now in the *Stockyard Cases* * * * that the railroad may refuse to deliver carloads of cattle to the particular stockyards to which they are consigned, and instead force all consignees of cattle to come to a particular

stockyard, which it thus virtually designates as its cattle station. * * * In practically all cases where delivery at private sidings is conceded, it is held that when the car is placed upon the siding the liability of the carrier ceases.'' (Wyman on Public Service Corporations. Vol. II, pp. 930–932.)

The general rule upon the question of terminal facilities was stated by JUSTICE HARLAN in the case of the *Covington Stock Yards Co. v. Kieth,* 1891, 139 U. S. 128, 135, as follows:

''The carrier must at all times be in proper condition both to receive from the shipper and to deliver to the consignee, according to the nature of the property to be transported, as well as to the necessities of the respective localities in which it is received and delivered.''

Thus, while there appears to be a definite legal obligation on the part of the carrier to deliver carload freight over its own rails to a point as convenient as possible to the shipper's place of business, the shippers on their part, by installing private sidings, have made arrangements which virtually compel the carriers to deliver upon their own premises. This situation is generally true and has been so for some time. JOHNSON & HUEBNER in their work on ''Railroad Traffic and Rates'', Vol. II, p. 93, comment upon the situation in the following language:

''As far as practicable, every plant is connected with a railway by one or more spur tracks over which cars may be switched into and out of the establishments. These industry tracks enable large manufacturers to load and unload, within their own premises, most of the goods they ship and receive, and thus they make relatively little use of the railway company's freight stations. Small manufacturers, practically all persons and companies engaged in the mercantile trade, and the great army of irregular shippers are those who make most demands upon the service of freight stations.''

Upon examination of decisions in these matters, it was found to be impossible to derive anything like a general rule laid down by the courts as to what constitutes adequate terminal service. The determination in each case appears to have been made in view of the particular facts involved, thus rendering a general application of such determination difficult. The chief concern of the courts in all cases appears to have been, however, that fair competition shall be maintained and that there shall not be an unjust or unreasonable discrimination.

In view of the decisions quoted above and the statements of authority it would appear that transportation service should be paid for in a single rate and that this service includes, in the case of carload freight traffic, all the initial and final movements involved in spotting cars upon industry spurs and in handling to and from team tracks. This, it seems, is to be included under the provision that terminal facilities shall be reasonably adequate.

In the case of industrial railways, however, serving industries of large expanse it would be unreasonable to demand that cars shall be spotted at plants regardless of the length of haul beyond the carriers own tracks. To demand this service would be as unreasonable as to demand that the carrier should build and maintain all the trackage required to do such spotting. It is in this light that the interstate commerce commission's recent decision in the *Industrial Railways Case,* decided January 20, 1914, should be viewed. In this case it was held

"* * * that the service by line carriers in official classification territory beyond a reasonably convenient point of interchange, between their rails and the tracks of industries, is a shippers' service, a part of the industrial operations of the plant, and not a service of transportation and that the performance of such services by the line carriers without charge in addition to the rate, and the allowance paid by them therefor to industries, on their plant railways, for performing the service for themselves, are unlawful rebates—in fact and in effect—and give undue and unreasonable preferences and advantages to the industries so favored and work undue and unreasonable prejudice and disadvantage to shippers in the same line of business who do not receive any such allowances or the benefit of any such service."

In order to determine what the proper course would be, both in law and as a matter of equity, as well as to throw light generally upon the questions involved, especially from the carrier's point of view, an investigation was made as to the cost of the various modes of receiving and delivering both carload and less than carload freight. This investigation was directed primarily to a determination of fixed charges, interest and taxes, upon the properties directly involved, such as land, trackage, buildings, and paving. These costs per unit of service were determined separately for each of a large majority of the industries in the Milwaukee Terminal District. They were determined also for cars originating and terminating at team tracks, fruit house and

freight houses. The handling of cars at team tracks appears to involve the highest fixed expenses of the services investigated. The costs per car fluctuate considerably for the different districts, due primarily to two causes: first, variation in land values, as between the different districts, and second, variation in the density of traffic handled over the tracks. Considering total value of all team tracks, fixed charges amount to about $1.68 per car. Of this figure $1.48 or 88 per cent can be traced directly to land values and only 20 cts. or 12 per cent to track values. Similarly, the average cost in fixed charges per car for handling at industry spurs, for the districts as a whole, is 33 cts., of which 21 cts. or 64 per cent is due to investment in land and 12 cts. or 46 per cent to investment in track. In the case of cars handled at freight houses and at the fruit house, the average cost per car in fixed charges upon the investment in land and track only is 35 cts., of which 33 cts. or 94 per cent is for land and 2 cts. or 6 per cent for track. To this should be added an average cost of 11 cts. per car for fixed charges upon the value of buildings.

It was not possible to include in this study all the industry tracks, team tracks and freight houses because the record of cars handled was incomplete or entirely unavailable in many instances. A large proportion of the total business has, however, been included, thus affording a broad and fair basis for a determination of the facts.

We have attempted also to determine the average cost of moving cars between the classification yards and their ultimate destinations. These costs were found to be approximately the same with the exception of movements to freight houses, which were somewhat lower. However, it has not been the custom in terminal services thus far to recognize slight differences in the cost due to the minor variations in distances. We must conclude, therefore, that, as between the three services (industry track, team track and freight house), differences in costs appear primarily in the fixed charges upon the investment in what may be characterized as the *ultimate terminal properties* of a carrier. We are not unmindful of the fact that in the case of less than carload freight certain extra costs incident to the handling, recording and collection should be considered in addition.

Attention has already been directed to the fact that unit costs of delivery vary particularly with the number of cars handled, and that they vary in the inverse ratio. We have undertaken to

eliminate this variable factor by assuming the same number of cars handled per mile of track. Team track patrons at present represent the large class of irregular shippers. Inasmuch as delivery is made to this class under the least favorable conditions, the density of traffic obtaining at team tracks was accepted as the normal density. This calculation would tend to eliminate the difficulty referred to above and would show what the costs would be if the three services were of equal importance. The cost per car at team tracks were thus shown to be $1.68, at industry tracks 34 cts., and at freight houses $3.45. The figures show that spur track delivery is an economical means of delivery when compared with the other alternative methods open. Delivery at "house tracks" is necessarily expensive and can only be kept within bounds by handling as many cars as possible.

The following, therefore, are the important considerations which must be kept in mind in arriving at any conclusion in regard to the adjustment of rates for the three services:

Less than carload freight requires the loading and unloading of cars because the freight is given up in small quantities, and convenience in delivery and carriage demands that the handling be left to the railroad company. In addition less than carload freight requires storage and facilities for teaming. These requirements necessitate the construction and maintenance of warehouses, platforms, cranes and trucking facilities. They require further that approaches be paved and that freight houses be centrally located. The inevitable result is higher land value and a generally higher cost per unit for handling.

Carload traffic, when handled at team yards, requires first of all the central location of the yard in order to reduce the amount of drayage. Secondly, it requires additional space for teaming purposes, which may or may not be paved. The loading and unloading is performed by the shipper. These special requirements again result in a high cost and if the users of such facilities are few the cost per unit is relatively high. In the case of less than carload freight the increased cost of handling is recognized in the comparatively higher rating, though the cost of handling per unit may be no higher. Carload traffic handled at team tracks, however, enjoys the same carload rating as carload traffic handled at industry spurs. If distinctions in cost should be reflected in higher rates, there is sufficient reason for increasing the carload rate for team track users by the imposi-

tion of an additional arbitrary. Directly opposed to this arrangement, however, is the consideration, founded in public policy, that shippers of the same class should be treated alike. The imposition of an extra charge, when cumulated with the expense of carting goods from the team track to the industry, might prove a serious handicap in competition. If the carload rating should remain the same for both classes of shippers, it must be sufficiently high to cover these extra costs.

Carload traffic handled at industry spurs is delivered at the lowest cost per car. While the aggregate cost is considerable, it is borne by so many units that the cost for each unit is materially lower than for the other services. Moreover, the aggregate cost to the company is lessened by two factors: one is the payment by the shipper to the company of all, or a part of, the cost of installation of the track; and the second is the furnishing of the land, in whole or in part, upon which such tracks are laid. These factors have not always been present in the past, but they are becoming more and more important.

On the other hand, spur track delivery affords a large class of shippers a kind of convenience which is not necessarily implied in the contract of transportation. By the delivery at the industry track the shipper saves the expense of cartage; he has unobstructed access to the car so long as it is upon his siding. The carrier, on its part, secures a quicker release of equipment, and is at all times in a position where it may hold the patronage of the shipper. Moreover, the shippers have frequently been invited by the carrier to locate upon its tracks, the benefits being mutual. Under these circumstances it would seem to be unreasonable to ask that shippers be required either to go to the public team tracks or to pay an additional charge for spur track delivery.

The best solution of the difficulty appears to be to allow spur track delivery to continue under the present arrangement, including in such delivery the spotting of each car. For any service beyond this an additional charge per car should be made. Team track delivery should continue under the present arrangement without the imposition of an additional arbitrary.

It is in the light of the obligation devolving upon the carriers to deliver and spot cars that shippers who do their own spotting and switching ask for lower rates. Moreover, shippers who furnish their own sidetrack facilities often urge that, inasmuch as they relieve the public facilities from rendering a large amount

of terminal services, they should be granted something in the way of a concession in the rates.

It has been held in this matter that it is permissible for a railroad to make a lower rate to a shipper who furnishes a part of the facilities which the carrier must otherwise provide in order to serve them. (Beale & Wyman: Railway Rate Regulation—par. 782.) In the case of *Root v. Long Island R. Co.* 1889, 114 N. Y. 300, the question arose whether a provision in a contract providing for a rebate of 15 cts. per ton from the regular tariff rates as consideration for the use of certain terminal facilities was an unjust discrimination as a matter of law. It was held in that case that the point at issue was a question of fact and not of law, and that, since the discrimination was not unjust or unreasonable, it could stand.

A somewhat different holding upon this question can be had from the case of *State ex rel. v. C. N. & T. P. R. Co.* 1890, 47 Ohio State 130; 23 N. E. 928. Here it was held (p. 140) that "the duty of providing suitable facilities for its customers rests upon the railroad company, and if, instead of providing sufficient and suitable cars itself this is done by certain of its customers, even for their own convenience, yet the cars thus provided are to be regarded as part of the equipment of the road." In this case, therefore, the reduced rate was not allowed because of the danger that fair competition might thereby be destroyed.

If individual shippers should find it to be to their convenience to perform, by means of their own locomotives, spotting services which under other circumstances would have to be performed by the carrier, we see no reason why such convenience should carry with it a reduction in rates. It may be true under some circumstances that a shipper who furnishes cars or equipment or services should be allowed a reasonable compensation for such services or use of equipment. Nevertheless, it is a principle well recognized in law that such compensation must not be made as a cover for discrimination in rates. In applying the theory to the actual state of the business of the country, it will be found that a majority of the shippers have not a volume of business that is large enough, or establishments extensive enough, to warrant equipping themselves for such services. Such a theory, once recognized and generally applied, would place the smaller shipper at a ruinous disadvantage in competition. If, in granting a reduced rate to a shipper or a certain class of shippers, it

can be shown that the reduced rate is generally applicable, such reductions might escape the legal prohibition that there shall be no discrimination. In one of the early cases before the interstate commerce commission involving discrimination which was alleged to arise out of differences in rates on oil shipped in barrels and on oil in tank cars, COMMISSIONER COOLEY pointed out:

"The most important question that arises upon the assumptions made as the basis for this argument is whether there are in fact two different modes of transportation which are offered with their corresponding rates, equally and impartially to all shippers alike, and which it is possible for the class of persons usually engaged in the traffic freely to choose between. * * * It is obvious, we think, from the facts stated, that instead of the defendants offering two modes of transportation which are open to the acceptance of all, they offer only one. The other is offered on such terms that it can by possibility be accepted only by parties who can control a considerable capital, and who will supply for themselves an important part of the means of transportation, and also supply terminal facilities. The man of small means who adopts the method of transportation in barrels cannot be said to do so of choice when the failure of the carriers to supply for the other the customary means of transportation compels him to do so." *Rice v. Louisville & Nashville R. Co.* 1888, 1 I. C. C. R. 738–739.

Moreover, it would seem that the law of this state is at least implicit in prohibiting discrimination of the kind contemplated here. Sec. 1797–22.2 of the statutes provides that

" * * * it shall be unlawful for any railroad to demand, charge, collect or receive from any person, firm or corporation a less compensation for the transportation of property or for any service rendered or to be rendered by said railroad, in consideration of said person, firm or corporation furnishing any part of the facilities incident thereto; provided, nothing herein shall be construed as prohibiting any railroad from renting any facilities incident to transportation and paying a reasonable rental therefor."

Therefore, in view of the facts here presented, and the general state of industry in the Milwaukee Terminal District, we can not consent to reductions in rates which we feel would not operate alike upon all shippers.

At the time of the hearings informal complaint was made that the application of the Wisconsin distance tariff to terminal movements requiring the use of team tracks results in unreasonable

and excessive charges. Several formal complaints involving these services have also been filed. Insofar as the formal complaints involve the general question of reasonable rates for these services they will be dealt with in this opinion.

It is claimed by the carriers that movements within the terminal involving team track service do not differ materially from movements involving line hauls and that the Wisconsin distance tariff is properly applicable. In general it must be admitted that a movement within the city from the point of production to the point of consumption is a transportation movement the same as a movement for a similar distance would be in the country. It is also apparent that a railway is legally obligated to accept any commodities given up for transportation whether the movement is one between industries, between an industry and a team track or between two team tracks all within the same terminal. It is immaterial that this service is analagous to the cartage services performed by other transportation agencies. In the early days of transportation industry all movements of freight by rail were made in competition either with canal and lake traffic or cartage. The trend of the economics of freight transportation has always been from the costlier and less convenient medium to the cheaper and more convenient, and it would manifestly be against public policy for this Commission to do anything to reverse this trend. On the other hand, in the making of rates that shall be reasonable and fair to all concerned the Commission can and will recognize all valid distinctions as to the cost of performing the different services.

It is a fact too well known to require lengthy discussion that of all the facilities which a carrier devotes to the service of the public its terminal facilities are the most costly. Originally intended merely to complete the movement and effect the delivery of commodities, they are now also used in the assemblying, classifying and transferring of through freight. Moreover, the rapid increase in the tonnage of freight carried has sometimes taxed these facilities to the utmost. In demanding increased services, therefore, nothing should be asked which would tend to hinder a carrier in the proper performance of its ordinary services in connection with line-haul movements. While a carrier may have made mistakes in the past in the location and arrangement of its terminals and should not now refuse to render services which under other arrangements might easily have been performed, ex-

isting facts must not be lost sight of. It would therefore seem best than commodities which are ordinarily and conveniently hauled by dray, truck or other means of public cartage for cross-town deliveries should continue to be so handled.

That the state has an unquestioned right to demand that a common carrier perform team track service, even if it require the use of a connecting carrier's terminal facilities, was clearly established by the United States supreme court in the case of *Grand Trunk R. Co. v. Michigan R. R. Comm.* decided Dec. 8, 1913, 231 U. S. 457. The Grand Trunk system had published a tariff of switching charges which assessed rates higher by $3 per car than the ordinary industrial switching rate upon terminal movements involving the use of team tracks in shipments going to or coming from connecting lines within the switching limits of Detroit. Upon complaint, the Michigan commission ordered that a tariff be made effective and published removing this discrimination. This order eventually resulted in the filing of a tariff which withdrew all intrastate and interstate switching movements, and which was promptly suspended by the commission pending investigation. The carrier appealed to the district court which decided favorably to the commission. Appeal was finally taken to the supreme court of the United States. The position of the carrier was that switching service involving industry spurs and team tracks within the same terminal "are not in a proper sense transportation, but are essentially distinguishable therefrom." In its decision upholding the action of the commission, the supreme court says (231 U. S. 472):

"In the case at bar a shipper is contesting for the right, as a part of transportation. The order of the commission was a recognition of the right, and legally so. Considering the theater of the movements, the facilities for them are no more terminal or switching facilities than the depots, sidetracks and main lines are terminal facilities in a less densely populated district. A precise distinction between facilities can neither be expressed nor enforced. Transportation is the business of railroads and when that business may be regulated and to what extent regulated may depend upon circumstances. No inflexible principle of decision can be laid down."

Team track service is reserved especially for patrons doing a line-haul business and having no private sidetrack for loading and unloading. It may be said, therefore, that team track fa-

cilities are public facilities for the use of those who are naturally dependent upon railway transportation but are unable to get private track connection. We have also pointed out that delivery to this class of patrons is made at a relatively higher cost per car than to other carload shippers. If we therefore bear in mind that such terminal movements as involve service at team tracks are in fact alternative services which could be performed by other agencies, that they are offered by the carrier only in view of certain conveniences and savings arising therefrom to the shipper, it is plain that a primary consideration in the adjustment of the rate should be the cost of the service.

As shown by the testimony the average number of movements in terminal service involving the use of team tracks is eight cars per day. This is a rather unimportant proportion of the total number of movements handled and ought not seriously to interfere with the line-haul business handled at team tracks.

While it can undoubtedly be shown that the cost of handling such cars at team tracks is higher than the cost of handling cars at industries, we do not believe, considering the relative unimportance of these movements, that a rate higher than the general switching rate herein ordered would be reasonable at this time. It appears, further, that the convenience of the shipper unquestionably demands that such service be rendered.

It will not be possible at this time to render a decision with respect to the proposed increases in the reciprocal switching rates applying on traffic interchanged with connecting carriers. Not all of the carriers affected were present at the hearing when the matter of increase in general switching rates was being heard. That part of the suspended tariff which relates to reciprocal rates will, therefore, not be passed upon in these proceedings.

Upon the findings in this case it is held that the rates named in the following order are the reasonable rates under the circumstances.

IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company cancel tariff G. F. D. 2543–A now in effect, and issue in its place a new tariff quoting a rate of 1 ct. per 100 lb. for the switching of carload freight at Milwaukee between industries on its lines in the Milwaukee Terminal District.

IT IS FURTHER ORDERED, That in all cases where the present industrial switching rates are $5 per car or less, the minimum

weight be 50,000 lb. per car, and in all cases where the present rate is $6 per car, the minimum weight be 60,000 lb. per car.

IT IS FURTHER ORDERED, That on shipments to or from connecting lines and to or from industries on the Chicago, Milwaukee & St. Paul Railway originating upon or destined to Chicago, Milwaukee & St. Paul Railway team tracks, the general industrial switching rate of 1 ct. per 100 lb. herein ordered be charged subject to the same minimum weight requirements as above set forth.

CUMBERLAND FRUIT PACKAGE COMPANY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided April 10, 1914.

The petitioner alleges that the rate of 6 cts. per cwt. exacted by the respondent for the transportation of nine carloads of logs from Grandview to Cumberland was excessive and asks for refund on the basis of a rate of $2 per 1,000 feet, minimum charge $10 per car. The rate last named was canceled prior to the time the shipments moved but was restored after the shipments moved. The respondent is willing to make refund.

Held: The rate complained of was unusual, illegal and exorbitant. Refund is ordered on the basis of a rate of $2.00 per 1,000 feet, minimum charge $10 per car, which would have been the reasonable rate for the service performed.

The petitioner is a corporation engaged in the manufacture of berry boxes, crates and baskets at Cumberland, Wis.

It alleges that on and between Nov. 25, 1913, and December 22, 1913, inclusive, it shipped nine carloads of logs from Grandview, Wis., to Cumberland, Wis., and was charged thereon the rate of 6 cts. per cwt., as provided in the respondent's tariff G. F. D. 2400–A; that said tariff also names a rate of $2 per 1,000 feet on logs, minimum charge of $10 per car from Dauby, Wis., to Stillwater, Minn., which rate is applicable to movements from Grandview to Cumberland, according to the provisions of said tariff relating to intermediate points; that on October 22, 1913, the above named rate was canceled by supplement 8 to said tariff; that the petitioner was not aware of the cancellation of said rate when the shipments in controversy were purchased; that on January 9, 1914, the respondent made effective its tariff G. F. D. 3819, establishing a rate of $2 per 1000 feet on logs, minimum charge $10 per car, from Grandview to Cumberland, Wis.; that the total freight paid on the said shipments amounted to $420.86, and if the same had been computed on a basis of $2 per 1000 feet, minimum charge $10 per car, the total charge would have amounted to $106.46, or $314.40 less than was actually exacted of the petitioner. The petitioner therefore prays

that the respondent be authorized to refund to it the said excessive charge, $314.40.

The respondent railway company admits all the allegations of the complaint, and alleges its readiness to make reparation as prayed if authorized to do so.

The time of the hearing was waived, and the claim was submitted upon the pleadings, papers and documents on file.

It is obvious that the charge exacted of the petitioner was the result of an error. In view of the intermediate clause in tariff 2400–A, the rate now effective would have been applicable to the shipments in question had such rate not been canceled. The cancellation of the tariff resulted in an excessive charge. The respondent rectified this by publishing its tariff G. F. D. 3819, restoring the rate of $2 per 1000 feet, minimum charge $10 per car, applicable to shipments of logs from Grandview to Cumberland.

Under the circumstances we find and determine that the rate of 6 cts. per cwt. exacted of the petitioner by the respondent on the above mentioned shipments was unusual, illegal and exorbitant, and that the reasonable charge that should have been in effect and applicable is the rate of $2 per 1000 feet, minimum charge of $10 per car.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company be and the same is hereby authorized and directed to refund to the petitioner the sum of $314.40 on account of excessive charge on the abovementioned shipments.

M. H. SPRAGUE LUMBER COMPANY
vs.
CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided April 10, 1914.

The petitioner alleges that the rate of 3⅛ cts. per cwt. exacted by the respondent for the transportation of four carloads of logs from Bayfield to Washburn was exorbitant and asks for refund on the basis of a rate of 1 ct. per cwt., minimum charge $5 per car, which was in effect at the time the shipments in question moved for shipments from Bayfield to Ashland originating on the Bayfield Transfer Ry. The respondent is willing to make refund.

Held: The charge complained of was unusual and exorbitant. Refund is ordered on the basis of a rate of 1 ct. per cwt., minimum charge $5 per car, which would have been the reasonable rate for the service performed.

The petitioner is a corporation engaged in the manufacture of lumber, lath and shingles at Washburn, Wis.

It alleges that on and between December 15 and 22, 1913, inclusive, it shipped four carloads of logs over the respondent's line from Bayfield, Wis., to Washburn, Wis., on which it was charged a rate of 3⅛ cts. per cwt., the lumber rate established in the respondent's tariff G. F. D. 2400–A from Bayfield to Mason, Wis.; that Washburn is intermediate between Bayfield and Mason, Wis.; that at the time of such movement there was in effect a rate of 1 ct. per cwt., minimum charge $5 per car, applicable to shipments of logs from Bayfield to Ashland, Wis., when originating at stations on the Bayfield Transfer Railway; that the four cars referred to above originated on the Bayfield Transfer Railway, and under the circumstances the 1 ct. rate would not apply at intermediate points; that the rate of 1 ct. per cwt. into Ashland is subject to shipment of product of logs over the respondent's railway; and that, therefore, any rate in excess of 1 ct. per cwt. is exorbitant; that if the charges had been based upon a rate of 1 ct. per cwt., minimum charge of $5 per car, the total amount of the charges would have been $20; and that the charge actually exacted of the petitioner on said shipments was

$56.57. The petitioner therefore prays that the respondent be authorized and directed to refund to it the sum of $36.57.

The respondent railway company, answering the petition, admits the allegations thereof, and is willing to make the reparation asked, if authorized to do so.

The time of hearing was waived, and the claim submitted upon the papers, pleadings and documents on file.

In view of the situation disclosed upon the investigation, it is apparent that the rate exacted of the petitioner on the shipments in question was unjustly discriminatory. A rate in excess of that in effect from Bayfield to Ashland could not be justified. This is evidently conceded by the respondent.

We find and determine that the charge of 3⅛ cts. per cwt., exacted of the petitioner on the aforesaid shipments of logs, was unusual and exorbitant and that the reasonable rate that should have been exacted is the rate of 1 ct. per cwt., with a minimum charge of $5 per car. As the cars in question were all subject to the minimum charge, the excess charge is, as alleged, $36.57.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company be and the same is hereby authorized and directed to refund to the petitioner the the said sum of $36.57.

TOWN OF VAUGHN
vs.
HURLEY WATER COMPANY.

Submitted Oct. 1, 1913. Decided April 10, 1914.

The petitioner alleges that the respondent's rates for water are unreasonable and exorbitant and that the respondent's service is inadequate both as to the pressure maintained for fire fighting and as to the quality of the water supplied for domestic use. The respondent renders service in Ironwood, Michigan, as well as in Hurley and its pumping plant is located in Ironwood. A valuation was made of the physical property devoted to the service of Hurley, the property in joint use being apportioned between Hurley and Ironwood. It is impossible to accurately determine the amount to be allowed for going value, as the present owners have been in control of the plant for but a little more than two years and are therefore in no position to show complete financial records of its operation. It appears, however, that a total valuation of from $37,000 to $38,000 is about correct. The revenues and expenses were investigated and the expenses apportioned between the two communities. The expenses for Hurley were analyzed and apportioned as closely as possible in the absence of complete data between capacity expenses and output and consumer expenses and between fire and general service.

The alleged fact that the respondent's rates are in strict accordance with the rates provided in the contract with the town of Vaughn under which the respondent constructed its plant and has since maintained and operated it, and the fact that the respondent has never elected to come under the indeterminate permit provisions of the Public Utilities Law, are immaterial, for the respondent has become subject to these provisions without voluntary election on its part.

The Commission does not recommend complete metering in this case, but a gradual extension of the meter system is undoubtedly desirable and the meter rates should be so adjusted that with the extension of the meter system they will be suitable for the changed conditions so far as it is possible to secure this result.

Under the flat rates now in effect there appear to be a number of unjust discriminations due to failure to take into account the number of rooms and the number and kinds of fixtures in determining charges for service to particular consumers under the schedule. There may be something to be said against a charge based on the number of rooms but the number of rooms is apparently one of the elements which should enter into a flat rate schedule and periodic inspections should be made of consumers' fixtures for the purpose of keeping informed as to the number and kinds of fixtures in each place supplied with water service.

Held: 1. With respect to the complaint as to fire protection service, the evidence does not clearly show that the respondent was at fault in the cases of the fires which gave rise to the complaint, but, to avoid a repetition of the difficulties met, both the respondent and the community might well have their own independent pressure recording gages connected by special service pipes to the Hurley mains.

2. Inasmuch as the installation of a purification plant has noticeably improved the quality of the water supplied for domestic use and inasmuch as there is no evidence that laboratory or other additional facilities are urgently needed, an order for the installation of such additional facilities is not advisable at this time.

3. The present schedule of rates should be abandoned and a new schedule adopted which will eliminate certain unjust discriminations and result generally in a marked reduction in charges.

The respondent is ordered: (1) to be prepared at all times to meet the reasonable fire service demands of the village of Hurley, to furnish the necessary number of hose streams under adequate pressure at the hydrants, and, for the purpose of showing the pressure maintained at any and all times, to install and keep in service at a central location on the Hurley pipe system a suitable pressure recording gage, the original daily records made by the gage to be filed and preserved for future ready reference; and (2) to put into effect a prescribed schedule of rates providing a charge for municipal service and meter and flat rates for commercial service. Sixty days is deemed sufficient time within which to comply with the section of the order which relates to service.

A petition dated May 22, 1913, was filed with the Commission on behalf of the town of Vaughn, Iron county, by its duly authorized officers, the chairman and clerk. The petitioner alleges that the schedule of rates charged by the Hurley Water Company is unreasonable and exorbitant and that the service furnished by the company is inadequate, and prays for an order commanding the company to desist from charging excessive rates and to establish such rates as the Commission may find reasonable and to improve its service in such manner as the Commission may find reasonable.

The answer of the respondent was filed at the hearing held in the office of the Commission on October 1, 1913. In its answer the respondent contends:

That it has never elected to come under the provisions of ch. 499 of the laws of Wisconsin for the year 1907 or the acts amendatory thereof;

That, on October 14, 1890, it entered into a contract with the town of Vaughn, which contract provided for the construction, maintenance and operation of water works in the unincorporated village of Hurley, and for a schedule of rates to be charged to the village of Hurley and to its inhabitants for water;

That the company's existing rates are in strict accordance with the rates provided in this contract;

That the contract is still in force;

That the rates are reasonable and fair, and that the service furnished has been at all times, and now is, adequate to the demands of the people of the town of Vaughn.

Hearing was held in the office of the Commission, October 1, 1913. The town of Vaughn was represented by *M. Lambrix,* chairman of the town board, the Hurley Water Company by *A. W. Sanborn.*

Existing Rates.

The company's present rate schedule, against which complaint is made, is as follows:

Public Service
Hydrant rentals: 44 hydrants, each $100 per year
Street sprinkling: no charge
Commercial Service
Meter Rates

First 20,000 gals. per month	40 cts.	per	1,000 gals.
All over 20,000 " "	10 "		1,000 "
Mines and Railroads:			
For consumption under 550,000 gals. per month			
First 20,000 gals.	40 cts.	per	1,000 gals.
All over 20,000 "	10 "		1,000 "
For consumption of 550,000 to 900,000 gals. per month			
First 20,000 gals.	40 cts.	per	1,000 gals.
All over 20,000 "	9 "		1,000 "

Commission's Jurisdiction.

The question of the jurisdiction of the Commission in this case was not specifically raised, yet it seems to have been implied in the respondent's formal answer to the petition and also in certain opening statements made on behalf of the company at the hearing.

Section 1797*m*—77 of the statutes provides:

"Every license, permit or franchise granted prior to July 11, 1907, by the state or by the common council, the board of alder-

men, the board of trustees, the town or village board, or any other governing body of any town, village, or city, to any corporation, company, individual, association of individuals, their lessees, trustees, or receivers appointed by any court whatsoever, authorizing and empowering such grantee or grantees to own, operate, manage, or control any plant or equipment, or any part of a plant or equipment within this state, for the conveyance of telephone messages, or for the production, transmission, delivery, or furnishing of heat, light, water, or power, either directly or indirectly, to or for the public, is so altered and amended as to constitute and to be an 'indeterminate permit' within the terms and meaning of section 1797*m*—1, to 1797*m*—108, inclusive, of the statutes of 1898, and subject to all the terms, provisions, conditions, and limitations of said sections 1797*m*—1 to 1797*m*—108, inclusive, and shall have the same force and effect as a license, permit or franchise granted after July 11, 1907, to any public utility embraced in and subject to the provisions of said sections 1797*m*—1 to 1797*m*—108, inclusive, except as provided in section 1797*m*—80."

The instrument referred to by the respondent as its contract with the town of Vaughn is apparently nothing more or less than its franchise to build, own and operate a water utility in and for the unincorporated village of Hurley, and as a franchise it has been modified by legislative enactment and has become an indeterminate permit. The company has, without voluntary election so to do, become subject to the provisions of ch. 499 of the laws of 1907, known as the Public Utilities Law, and acts amendatory thereof and supplementary thereto. The fact that the company has not voluntarily elected to come under the indeterminate permit provision of the Utilities Law is deemed to be of no material effect.

Valuation of Property.

An estimate of the cost of reproduction new and the present value of the physical property of the Hurley Water Company has been prepared by the Commission. On the date of the hearing the valuation had not been completed to the point of having typewritten copies available to the parties in the case. The totals of the somewhat hastily assembled figures were read into the record of the hearing with the understanding that they were subject to some modification, particularly as to Hurley's proportion of the pumping and purification plant which serves both Ironwood, Mich., and Hurley, Wis. The original pumping

plant was on the Wisconsin side of the state line but it was later moved across the river into Michigan. The service of Hurley obviously requires either a portion of a joint plant or an entirely independent plant. The combination of the service of both communities into the business of a single pumping plant should not work a greater hardship upon either in the matter of rates than would occur in the case of separate and independent plants. This is a proposition to be kept in view in determining the Hurley proportion of the joint features of the property located in Ironwood. Other Ironwood features, those having no part in the water service of Hurley, are of no direct consequence in this case and will be omitted.

The revised valuation of the property devoted to Hurley service is as follows:

	Cost new.	Present value.
A. Land	$300	$300
B. Transmission and distribution	21,722	20,130
C. Buildings and miscellaneous structures	8,690	7,149
D. Plant equipment	2,903	1,364
E. General equipment	70	35
Total	$33,685	$28,978
Add 15 per cent (see note below)	5,053	4,347
Total	$38,738	$33,325
F. Paving	.....	.....
H. Materials and supplies	100	100
Total	$38,838	$33,425

NOTE:— Addition of 15 per cent to cover engineering, superintendence, interest during construction, contingencies, etc,

No other evidence as to the value of the property was offered, and it was stated on behalf of the company that "the valuation of the Commission puts on we are willing to take."

By way of explaining the amount charged to Hurley of the values of joint property in Ironwood, the following report submitted to the Commission's engineers is presented.

APPORTIONMENT OF JOINT PROPERTY.

"A single pumping station, located on the Michigan side of the Montreal river, serves both the city of Ironwood and the unincorporated village of Hurley. The plant includes a water purification plant, consisting of two sedimentation basins, three gravity type rapid sand filters, a filtered water well and accessory features, such as alum and hypochlorite tanks and feeding de-

vices, piping, etc. The water is delivered to the settling basins by a single stage, electrically driven turbine pump, which takes it from an 18″ diameter wooden intake pipe. This intake has a length of about 2,500 feet and extends upstream from the plant to a point just above a small dam on the Montreal river. There is also in reserve a duplex, direct acting, low service steam pump, connected to the intake and to the settling basins.

"The high service pumping equipment consists of an electrically driven 3 stage turbine pump, and two horizontal, compound, duplex, direct acting Deane steam pumps, built in 1891. The latter have generally been used only in case of fire since the installation of the 3 stage turbine pump in 1908. Steam pressure is maintained continuously in one or the other of the two 75 h. p. steam boilers, for emergency use.

"Pumping is done to two duplicate standpipes 30 feet in diameter and 50 feet high, one in Ironwood and one in Hurley. The pipe connections to both standpipes are equipped with electro-hydraulically operated gate valves which are closed on receipt of fire alarms so as to permit the furnishing of higher than standpipe pressure.

"The pumping station was originally located on the Wisconsin side of the river, in Hurley. Between that station and the main street (Silver street) in Hurley there appears to have been approximately 1,300 feet of 8″ delivery main. At the end of that pipe line one main extended west on Silver street and south on 5th avenue to the standpipe as the main artery of the Hurley pipe system and another east to Ironwood. Hurley then had no share or interest in any pipe east of the river, and only a part interest in the pumping plant. There seems to be a serious question as to whether or not the movement of the plant from Hurley to Ironwood should result in charging the service of the former with a portion of the cost of mains in the latter community. At first blush it would appear that such should not be the result, but there are certain considerations to be noted, which seem to put a different light on the matter.

"The original pumping plant was considerably farther downstream than the present plant. It probably took its water from the stream at a point opposite the old plant, and applied no purification treatment worthy of the name. The river receives the discharge of the mine drainage, if not sewage, between the two sites. This greatly increases the turbidity of the water below and the difficulty in clarifying and purifying it. The effect of the mine drainage has been found to extend farther upstream than the present water works station, by backing up from the mine drainage outlets. The taking of the water supply from above the dam, if taken from the river at all, appears to have been a very desirable if not essential step in the provision of a suitable public supply.

"What the original location saved to Hurley in pressure mains it would lose in suction or gravity flow pipe from the dam. It is therefore considered reasonable and proper to apportion to Hurley service a part of the cost of the existing intake and 12" delivery main in Ironwood as well as a part of the cost of the pumping plant and purification works. In doing this any one of several different bases may reasonably be considered, all of which give materially different results.

"The distribution of total population, which is possibly a fair criterion of the distribution of total annual pumpage, would give to Hurley from 10 to 11 per cent of the joint property on the Michigan side.

"Earnings in Hurley and Ironwood separately for the year ending June 30, 1913, would, according to the company's showing, give to Hurley approximately 23.8 per cent of such property.

"The relative capacities of pipe lines, pumping equipment, etc., required for each community separately would, when the fire demands are considered, probably give to Hurley about 30 per cent.

"The relative costs of independent plants would throw a still larger proportion to the Wisconsin community, apparently about 40 per cent.

"The number of consumers on each side is still another basis entitled to consideration. The company reports 324 private consumers of all classes in Wisconsin and 1,567 in Michigan. This basis would give Hurley 17.1 per cent of the joint property in Ironwood.

"Considering the fact that other reasonable bases would charge Hurley with a much smaller proportion, it is very questionable whether the relative cost or any other single basis should be used exclusively in determining how much of the pumping plant and Ironwood pipe line values should be charged to the service of Hurley.

"It is doubtless a well known fact that Ironwood is not only a decidedly larger but a more prosperous community. It is not unlikely that it has a somewhat larger per capita consumption of water than Hurley, due in part to a larger proportion of large consumers, and possibly better development of business.

"When all these aspects of the matter are considered it is very doubtful whether even as much as 20 per cent of the value of joint property in Ironwood is fairly chargeable to Hurley service, yet that proportion is deemed fair and has been used in the valuation and apportionment.

"The amount of the property value thus found to be chargeable to Hurley, when compared on the per capita basis, represents relatively more than double that of the whole amount of property value considered as chargeable to Ironwood. There appear to be no census statistics available for the population of Hurley alone, it being a portion of the town of Vaughn. The entire

town was given a population of 2,449 by the census of 1910. The village of Hurley is locally considered as having about 1,600 inhabitants. On that estimate the Hurley portion of the water works property is considered to represent a cost new of about $24 per capita as against a corresponding value of very close to $10 for the Ironwood portion.

"Valuations made by this staff of several village water plants in Wisconsin where populations range from 500 to 2,500 show per capita investments of from $10 to $23, averaging around $18.

"These considerations tend to show that the property found to be chargeable to Hurley has not been too small. On the contrary, there is a serious question as to whether or not it might not well be even less."

From the foregoing report it appears that the determination of the amount of investment in plant equipment to be supported by revenues from Hurley is as much a matter of judgment as it is of mathematical calculation. As there may be some who will consider that the items in question have not been properly apportioned between the two communities it is pointed out that the amount of the error, if any, affects only a relatively small part of the total cost of service in Hurley. The operating expenses are not affected thereby, so that the percentage of any such total error will be still less.

No evidence as to the value of the property, aside from the physical valuation prepared by the Commission, was offered at the hearing. The estimated cost of reproduction new of the Hurley property, including 20 per cent of the joint property in Ironwood, is $38,638; its present or depreciated value is shown as $33,425.

The above figures differ somewhat from the preliminary estimates read into the record of the hearing. The difference is due in part to a different division of certain items between Ironwood and Hurley and in part to certain corrections subsequently found to be necessary in the statement of the sizes and lengths of mains in Hurley.

DEPRECIATION.

The estimate of present value is $33,425 for the portion of the property concerned in this case. The difference between this estimate and the estimate of the cost of reproduction new is the amount of depreciation considered to have accrued to the several features of the plant to date, and amounts to $5,413. A

part of this sum has been accruing for twenty-three years, according to testimony relative to the history of the utility. The depreciation on some other items has been the result of but a very few years of service.

On the basis of reasonable assumptions as to the normal life of each part, the fair annual depreciation charge of a water utility rarely exceeds one per cent, and usually is somewhat less when the amounts appropriated out of earnings are made to earn some reasonable rate of return, as is feasible and proper. In those cases where the larger proportions of the values are in very long lived structures, or those cases showing the greatest composite life of plant, the fair annual depreciation charges are as low as one-half of one per cent. In this case the requirements will be somewhat nearer the upper limit than the lower one.

In the operating expenses, as apportioned by the company to Hurley, there was charged to depreciation $2,359.30 for the year ending June 30, 1912, and $4,046.00 for the year following, making a total for two years of $6,405.30. This is approximately 118.3 per cent of the Commission's estimate of total depreciation accrued to date. The totals so charged by the company for its entire water works property in the two years were $10,000 and $17,000, respectively. These amounts are unquestionably much greater than those for which equitable rates must provide.

Development Costs.

The fact that the property in this case has been in the hands of the present owners but a little more than two years appears to leave them in no position to show the complete financial records of its operation. It is therefore impossible to accurately ascertain the cost of building up the business, or what is usually termed going value.

That the plant has an intangible element of value as a going concern, and an earning value through a developed business, is deemed sufficiently obvious in the light of the facts peculiar to this case and in the light of what has been said on this subject in previous decisions. The lack of complete evidence renders the final determination of value difficult, but it appears that a valuation of from $37,000 to $38,000 is about correct.

Public Service Proportion.

It appears that the public service, or municipal hydrant service, in this case has a large interest in substantially all parts of the property charged against Hurley. It has the entire interest in the fire hydrants and their connections to the mains. In general, the fire service proportion of water works investments in small communities such as Hurley is greater than the corresponding proportion in larger plants, and is usually more than half of the total property.

The public, or fire hydrant, service proportion is determined upon a consideration of each part of the plant with respect to the relative capacities and costs of similar features in hypothetical separate plants for public and private service. In this case 53 per cent of the investment is considered chargeable to fire protection, and 47 per cent to the general service.

Operating Expenses.

The records of operation for but two full years are before us, these being in the annual reports of the company for the fiscal years ending June 30, 1912, and June 30, 1913.

Earnings from Hurley and Ironwood are separately entered in the income accounts kept by the company, as they should and must be. The relative earnings from the two communities have been the company's basis of apportioning its operating expenses between them, in making its annual financial reports to this Commission. This may be a reasonable basis but possibly not the only feasible one or the best one.

Pumping Expenses. These must necessarily be apportioned on the basis of approximate ratios made as nearly correct as present information will permit, as it is impossible to determine with the company's present facilities how much of the total water pumped enters the Hurley system, or whether or not any water which once enters Hurley afterward flows back into Ironwood. The supplies for Hurley and Ironwood are pumped through the same delivery mains, and by the same pumping equipment. An apportionment of pumping expenses between the two localities served probably ought to take into consideration the demands made by the respective localities, but because of the practically complete lack of data relative to actual de-

mands of the two localities, the total pumpage has been used as a basis of apportionment. Although the proportion of the total pumpage which is hereinafter considered as Hurley's proportion may not be very accurate, its determination is guided by a consideration of all the known facts which form any indication of the truth. Were all consumers in both places supplied through well-maintained meters the situation would be much less uncertain. Most of the consumers, however, are served on a flat rate basis.

The amount of the pumping expenses, when compared on the "per million gallons pumped" basis, with those of other plants having comparable outputs, due allowance being made for difference in conditions, appears to be reasonable and proper. The amount of water pumped by this plant in a day or a year is but crudely estimated and the estimates may be materially in error, thus affecting the unit costs of pumping. The water is all pumped twice, once from the intake to the settling basins above the filters and again from the clear water well or reservoir to the standpipes and distributing systems. The second pumping is done against considerably higher pressure than is the case in several other water plants, a fact which would tend to make the cost per million gallons necessarily greater than at these other plants.

In consideration of the fact that only about 10¼ per cent of the total population of both communities and only about 17.1 per cent of the whole number of consumers are in Hurley it is difficult to see that anything like the proportion of total pumping expense charged by the company to the village rightfully belongs to it.

Distribution Expense. It would doubtless be practicable, if not desirable, for the company to keep its expenditures for distribution in Hurley separate from those in Ironwood. This, however, appears to be the only class of expenses which can be kept separate, and they form but a small part of the total cost of service. In apportioning the gross amount of distribution expense between the two places it is proper to consider other methods than those applied in dividing other classes or groups of expenses. For example, the relative mileages of mains and relative investments in the Ironwood and Hurley systems may well receive consideration as reasonable bases for apportioning this class of expenses.

Including in both cases mains of all sizes, Hurley appears to have 19,466 lin. ft. or 3.69 miles of mains, while Ironwood has 87,238 lin. ft. or 16.51 miles. The former is considered to represent a cost new of $18,640 and the latter a cost new of $74,424. These figures would give Hurley 18.26 per cent on the mileage basis and 19.85 per cent on that of cost. The above figures are all inclusive of Hurley's proportion (20 per cent) of the transmission main in Ironwood. The company has charged Hurley with nearly 24 per cent of total expense on the basis of relative earnings in the two places.

Commercial Expenses. This is a class of expenses which are somewhat dependent upon, and much more nearly proportional to, the number of consumers than to any other one condition or circumstance. If apportioned on this basis the company's commercial expenses are chargeable 17.1 per cent to Hurley and 82.9 per cent to Ironwood.

General and Undistributed Expenses. Probably the most logical and equitable treatment of these expenses is to divide them between the two communities in the same ratio as the sum of the previous classes are divided. The nature of these costs is such that no single basis considered in apportioning the pumping, distribution and commercial expenses seems properly applicable to them.

Taxes. The 1912 and 1913 annual reports of the company to the Commission show $32.59 and $300.79 for the respective total yearly taxes paid by the company. Of these amounts $7.69 and $296.06 are charged to the business in Hurley. In 1912 the tax item is designated on income. It is difficult to see why 98.43 per cent of the total taxes for 1913 should have been charged to the Hurley business, but even that amount is far less than is considered equitable. It is understood that under the terms of the original franchises the utility was exempted from local taxation. The legality of such an exemption is a serious question.

Other property in Hurley appears to be paying about 4 per cent of its value in taxes. In the future the water plant in this case will doubtless be required to pay taxes in the same way, and provision must accordingly be made for that expense in the rates.

Required Earnings.

In view of the evidence as to the value of the property devoted to the service of Hurley, the past operating expenses and

the proportions thereof which are fairly chargeable to Hurley, the equitable amounts which should be obtained from that community under present conditions are considered to be as follows:

Pumping and purification	$1,650
Distribution	340
Commercial	365
General and undistributed	505
Interest, taxes and depreciation	4,000
Total	$6,860

Inasmuch as any apportionment of expenses between the municipalities supplied must be to some extent an approximation, no attempt has been made to state the amounts more closely than in round numbers. It is believed, however, that the foregoing statement fairly shows the expense which should be charged to Hurley. The allowance of $4,000 for interest, depreciation, and taxes is sufficient to provide for depreciation at about 1 per cent of the cost new of the property and interest at about 7 per cent of the fair value at which the property should be included for the purposes of this case and to provide about $1,000 per year for taxes, which is not far from what the allowance apparently should be. Taxes have been provided for here because the utility will undoubtedly be required to pay such taxes in the future. The total of $6,860 charged to Hurley represents our judgment as to what should be charged to that branch of the business, although a division of some of the items on any exact basis has been practically impossible.

Because of the fact that it has not been practicable to determine the details of expense chargeable to Hurley beyond the primary expense groupings, the apportionment of these expenses between capacity and output expenses cannot be made with the accuracy which is to be desired, but such analysis of these expenses as can be made indicates that about $1,132 should be treated as capacity expense and the remainder as output and consumer expense. This does not include any part of the allowance for interest, taxes, and depreciation.

Of the $4,000 of taxes, interest, and depreciation 53 per cent, or $2,120, is chargeable to fire protection upon the basis of the apportionment of the property. To this should be added the proportion of the capacity expense which should be borne by the fire service. In the absence of definite data relative to the demands of the fire and general services the apportionment of ca-

pacity expenses must be largely a matter of estimate, guided by conditions which have been found in other places. It appears that a small part of the consumer expenses, sufficient to cover the cost of maintaining hydrants, and something over half of the capacity expenses should be charged to fire protection, or a total of very nearly $2,800 per year.

This indicates that a total of about $4,060 per year should be obtained from the general service furnished by the utility.

Having determined the cost of the general service furnished by the utility, the next step is to secure such a division of these costs as will result in a properly adjusted rate schedule.

According to the consumer cards submitted by the utility, there were, at the time these cards were submitted, 341 flat rate users. That is, the books of the company showed 341 consumers, although the consumer cards indicate that 399 flat rate users, which means 399 premises having distinct uses, were being supplied. In addition, the cards submitted showed nine flat rate users who were not receiving service at the time in question. As there will probably always be a limited number of patrons who will have temporarily discontinued the use of water for one reason or another, it is considered proper to exclude these consumers from our calculations. The records submitted by the company also showed a total of nine consumers supplied on a meter basis, although in some instances the records do not appear to cover a full year.

In this case the flat rates now and heretofore in effect are on the fixture basis, while in some other cases they depend in whole or in part upon the number of rooms or the number of occupants of the premises. The schedule in this case did not provide extra charges for more than certain specified numbers of fixtures nor does it appear to have made any distinction between consumers with and consumers without sewer or cesspool connections. Consumers having such connections, however, will, in general, undoubtedly use more water than those not having them.

Although the schedule did not provide for it, a uniform charge of $50 per annum for service to saloons appears to have been made and collected, regardless of the numbers and kinds of openings supplied in such premises.

Following is a summary of the statistics of flat rate users as submitted by the utility:

	Hose.	Faucets.	Baths.	Basins.	Closets.	Sewer.	Cellar.	Rooms.	Charge.	No. of premises.	No. of consumers.
Residence ..	15	150	90	185	126	179	67	1,246	$2,719	179	179

Total	15	284	102	383	240	287	106	2,271	$7,082	341	399

In the foregoing summary combined premises have been separately listed, as, for example, a combined saloon and boarding house has been shown separately from the summary of saloons. There are a total of 196 residence premises with sewer connections, and 53 residence premises without sewer connections. Of the other users all except one, a stable, have sewer connections.

Analysis of the consumer data shows several apparently gross iniquities and unjust discriminations. Among the single family residence consumers is a case of a two room residence paying the same charge as each of two eight room houses, owing to the fact that the number and kinds of openings are the same in each case; a case of a four room house paying the same charge as one with twelve rooms for the same reason, and so on. Among the stores and business places are cases reported as having only a wash basin in each but in which the charges were $8, $12, and $15 per annum. A one-room store has a water closet only for which it pays $15, while a two-room store having a similar fixture pays $7. Another one-room store has a wash basin and water closet for which a charge of $15 per annum is made while another store with two rooms and the same number and kinds of

fixtures pays $20. There may be something to be said against a charge based on the number of rooms, but the number of rooms is apparently one of the elements which should enter into a flat rate schedule.

Among the saloons, most of which pay the same rate ($50 per annum), it is found that there is one saloon with two rooms having two water openings, a wash basin and a water closet, and another place with twenty-eight rooms and ten water fixtures, yet both pay the same rate. It appears that the company's classification of consumers must be in error, as a building of twenty-eight rooms could hardly come entirely under the classification of saloon.

Some of the discrimination is not in violation of the existing schedule of rates while other discrimination is. In reference to this, the company maintains that it has not been able to keep "posted" as to the number and kinds of fixtures installed in each place supplied by it with water service, and therefore could not in all cases make the proper charges. The company's witnesses stated that additional fixtures are, at times, installed in various places and not reported to the company. The only feasible way to keep its consumer data correct is, apparently, to make complete and thorough inspections of all consumer's premises periodically. For such a community as Hurley the time of one employe of the company but for a few days each year would probably suffice in doing that. When the number and kinds of fixtures in a place are factors in the flat rate schedule it is necessary that systematic inspections of fixtures be made by the utility in order to avoid discrimination.

The metered consumers in this case and the size of the meter for each are reported as follows:

1 Barn	5/8"
1 Church	5/8"
1 County building	5/8"
1 Factory	5/8"
1 Hotel	5/8"
1 Ice company	5/8"
1 Railroad (C. & N. W.)	1½"
2 Schools	1" and 1¼"

The tabulation below presents the quantities reported by the utility to have been used, and the rates charged:

	Thousands of gallons used.				Rate.
	First quarter.	Second quarter.	Third quarter.	Fourth quarter.	
Barn	6.445	Estimated	30.233	22.223	40c and 10c
Church	.....	23.220	3.570	4.448	40c and 10c
County building	113.910	197.700	287.573	163.057	40c and 10c
Factory	.....	10.193	.....	.....	40c
Hotel	.....	32.925	27.075	150.900	40c and 10c
Ice company	.....	.....	16.800	.....	40c and 10c
Railroad	1,855.200	2,117.100	2,360.025	1,480.050	8c
North Side school	591.225	333.525	109.575	not read.	10c
South " "	160.538	139.320	90.930	91.388	10c

Some of the rates shown above appear to be different from those filed with the Commission, although none are in excess of the schedule rates. The reported consumption of the railroad was not sufficient to entitle it to the flat 8 ct. per 1,000 gallon rate provided in the schedule. No flat 10 ct. rate was provided in the schedule for schools.

In order to determine upon a schedule of meter rates which will answer the requirements of this case it is necessary to know, at least approximately, how much water would be delivered if Hurley were to be supplied upon a meter basis and what the expense of so supplying water would be. Unfortunately there is an almost complete lack of accurate information upon which to proceed. Only nine of the consumers are at present supplied through meters and these are hardly representative of conditions of consumption as they would be with complete metering. The Commission does not recommend complete metering in this case, but a gradual extension of the meter system is undoubtedly desirable and the meter rates should be so adjusted that, with the extension of the meter system, the rates will be suitable for the changed conditions, so far as it is possible to secure this result.

The estimated amount of water delivered in Hurley under the present flat rate system is no criterion of what the consumption would be if meters were to come into general use. The nine metered consumers, according to the report of the utility, used during the past year 10,419,168 gallons. It is not certain that this is a correct statement of the consumption, as there appear to have been some irregularities in reading meters, but it is not believed that there is any substantial error.

The metered users in Hurley are unquestionably very much larger users, on the average, than the present flat rate users

would be, if metered. Estimates of how much water would be used on a meter basis by present flat rate users are so likely to be erroneous that no one can say with any degree of assurance what that amount would be. Unfortunately the establishment of a meter rate requires an estimate of the consumption, fallible as that estimate may be.

From what data we have been able to gather, it seems to us unlikely that the use of metered water by existing flat rate users would be more than 8,000,000 gallons per year. This may seem almost incredible, in the light of the fact that the pumpage statistics indicate that probably more than 100,000,000 gallons per year are used, wasted or lost in Hurley under the present plan of distribution, but unless there are unusual conditions in Hurley of which we have no means of knowing, we estimate the total consumption on a meter basis at not to exceed 18,500,000 gallons per year, including sales to the nine consumers metered at present.

As previously stated, the expenses which should be borne by the general service under present conditions of operation are about $4,060 per year. If the policy of complete metering were to be adopted in Hurley there would be some decrease in these expenses, but the decreases would be by no means proportional to the decrease in water delivered to consumers. Practically the only expense which would be decreased would be a part of the cost of fuel and perhaps some items of pump maintenance which are closely related to variations in pumpage. Although consideration must be given to this condition, the decrease in expenses chargeable to Hurley would be so small that for purposes of our estimates we may use the expenses as stated above. There is, however, a group of expenses which would be incurred by metering, and which must be taken into consideration in the framing of a schedule of meter rates. These are the interest, taxes and depreciation on meters and the cost of meter reading and maintenance. If we assume that 5/8" meters would be satisfactory for the extension of the meter system of selling water, complete metering would apparently require the installation, maintenance, and reading of 341 additional meters. Quarterly reading of meters is probably all that would be required if a policy of general metering were adopted. The cost of maintenance would depend upon many factors, among which may be mentioned location, weather conditions and character of the water itself. For the purpose of determining a meter rate it is believed that ap-

proximately $600 per year should be allowed to cover the expense incident to metering, making the total expenses about $4,660 per year. If the estimate of the amount of water which would be sold, of 18,500,000 gallons per year, can be accepted as correct, the average cost per 1,000 gallons would be 25.2 cts.

An analysis of the data as to the water used during the past year by present users show that about 11 per cent of the total falls within the first 20,000 gallons per month, about 13¼ percent within the first 25,000 gallons, 15.57 per cent within the first 30,000 gallons, 17.61 per cent within the first 35,000 gallons and 19.47 per cent within the first 40,000 gallons per month.

Practically all of the water metered by an extension of the meter system would apparently come within any of the primary groupings oulined above. The estimated consumption within the first 20,000 gallons per month, including present metered users, would be 9,226,940 gallons and within 40,000 gallons per month, 10,109,444 gallons. Within the first 10,000 gallons per month about 8,770,000 gallons would be used.

An examination of the estimated costs of furnishing service in Hurley indicates that it would be difficult to make a rate schedule which would closely follow the cost curve, but the following schedule appears to be about what should be installed:

	Cts. per 1,000 gallons
For the first 10,000 gallons per month through one meter	35
For the next 30,000 " " " "	25
For the next 60,000 " " " "	18
For the next 100,000 " " " "	10
For all over 200,000 " " " "	5

This schedule, on an estimated consumption of 18,500,000 gallons per year, would produce a little less than the estimated expense of the service but a properly adjusted minimum charge would add some revenue to that produced by the rate for water. Inasmuch as the whole matter of fixing a meter rate is so largely a matter of estimate and no general installation of meters is actually contemplated at this time, the meter rate outlined above, with quarterly minimum charges as outlined below, will be satisfactory:

Quarterly minimum	Size of meter
$1.50	⅝"
2.00	¾"
3.00	1"
4.00	1¼"
5.00	1½"
7.00	2"

Flat Rates:

The foregoing meter rates applied to the past year's use of the nine metered consumers would have produced a revenue of $1,247.85, exclusive of any revenue which might have accrued from the application of the minimum charge.

Because of the fact that the results reached in this case have had to be very largely arrived at by estimate and because of the possibility that estimates of expense may prove to be rather conservative, it is probably not desirable to reduce the flat rates to the lowest possible extreme indicated by the cost analysis, but the facts show that there must be a substantial decrease in the general level of flat rates.

The flat rate consumer data submitted by the utility are not clear in some respects, but from an examination of the data available we believe that a schedule of flat rates as hereinafter outlined will be satisfactory. It should be clearly understood that this is not a perfectly adjusted schedule, but it appears to be as nearly what should be provided as is practicable. This schedule will produce sufficient revenue to fully meet the needs of the utility, as shown by its reports to the Commission, and will result in a very marked reduction in charges to almost, if not quite, all of the consumers.

Character of Service.

The complaint alleges that the service rendered by the Hurley Water Company is inadequate, both as to pressure maintained for fire fighting and as to the quality of the water from the standpoint of its domestic use.

Fire Service. In reference to fire service it has been ascertained that no pressure recording gage has been maintained in Hurley by either the company or the community at large. Therefore there is available no reliable record of measured pressure maintained at any time. There appeared, however, to be quite a number of citizens of Hurley ready and anxious to declare, in no uncertain terms, that the pressure furnished during certain fires within the past two years was seriously deficient.

The company has, in its office in Ironwood, one pressure recording gage connected to the system of water mains. By this means it has obtained a series of continuous twenty-four hour records of the pressure in the system at that point. Had the pressure in Hurley been as great during the fire most in ques-

tion as that recorded in the Ironwood office there should have been no cause for complaint against the water company on this subject. But unfortunately there is now no way of ascertaining just what pressure was furnished in Hurley at that time. Very little, if anything, of value can be accomplished in a present discussion of the conditions. The best that can now be done in the matter is to determine to profit by the experience and be prepared in the event of a repetition of it to show a reliable and undeniable record of pressure furnished. Both the water company and the community might well have their own independent pressure recording gages connected by special service pipes to the Hurley mains. These special services should be used for no other purpose and should be well protected from frost.

In the case of one of the fires referred to above the company claims to have closed the standpipe connections and furnished fire pressure within five minutes after receipt of the alarm, and that it did not receive an alarm at its pumping station promptly after the discovery of the fire, the result being that the fire gained undue headway. Citizens of Hurley have stated to a representative of the Commission, in an inquiry conducted subsequent to the hearing held October 1, 1913, that a full standpipe of water furnishes about 80 lb. pressure per square inch in the principal business section of the city, where the fires referred to occurred. These fires occurred along the principal main of the Hurley system, a 10″ pipe line. The depth of the standpipe makes a difference in the static pressure at any place in the system of less than 22 lb. The company's pressure record for the day of the Arcade building fire indicates that the pressure (at the Ironwood office of the company) was very close to 80 lb. and that pumping had apparently been stopped at 1:50 a. m., or about 40 minutes before the fire broke out. The Company's superintendent testified at the Commission's hearing that he was present at that fire and found that one of the hydrants had been only about half opened.

The evidence shows that Hurley is dependent upon telephone service to get a fire alarm or a call for more pressure to the pumping station, although the village has a box alarm system. This system doubtless could and should be extended to the pumping station for the best use of both. Efficiency of a fire department and its apparatus is as much a factor in good fire protection as is water works service. There should be harmony and

coöperation between these two organizations and promptness and high efficiency in each.

The evidence in this case does not clearly show that the company was at fault in the cases of the fires mentioned.

Domestic Service. The quality of the water is the basis of complaint from the consumers' standpoint. It seems to be generally acknowledged that there has been a material improvement in the appearance of the water within recent months. This is, without doubt, due to the recent construction by the water company of a modern purification plant, as hereinbefore explained.

The testimony of one witness, a member of the town board, shows that on one occasion the report on an analysis of the water pronounced it good drinking water, and on another occasion the analysis condemned it for drinking purposes. Dates and other detailed information relative to these anaylsis were not submitted.

Examination has been made of the file of reports in the state hygienic laboratory on analysis of water samples received by the laboratory from Hurley during the last two years. Fifteen such reports were found, but only a few of them were clearly shown to be on samples from the public supply furnished by the Hurley Water Company. The last of these was taken and shipped from Hurley on January 23, 1914. The report pronounced the water good. Other reports were on samples from private wells, the school well and from wells and intakes of the Odanah Iron Company. These latter ranged in character from good to highly polluted. One of two from the school well was pronounced "polluted" and the other "not very satisfactory from drinking purposes,—shows presence of surface contamination and pollution."

As the water company takes its supply from the Montreal river at a point well upstream from any local pollution due to the settlements of Hurley and Ironwood, it is probable that intelligent supervision and operation of its water purification plant should secure satisfactory results.

The character of the water now being supplied by the company is admitted by citizens of Hurley to be noticeably better than that furnished prior to the construction, about two years ago, of the purification plant. The supervision of this feature of the works, however, is not all that is to be desired. The company apparently has no laboratory facilities of its own for determining the results obtained from its filters, or the time for

using its hypochlorite plant or the amount of such chemical to be applied at any time. Such facilities may, at certain periods, be of decided benefit to the service. At present there is no evidence that they are urgently needed and their first cost and cost of operation would add materially to the expense of the service. Until more evidence of the need of such additional facilities is obtained an order for their installation is not deemed advisable.

In view of all the foregoing facts and considerations

IT IS ORDERED:

(1) That the Hurley Water Company shall at all times be prepared to meet the reasonable fire service demands of the village of Hurley and to furnish the necessary number of hose streams under adequate pressure at the hydrants, and that for the purpose of showing the pressure maintained at any and all times, it shall install at a central location on the Hurley pipe system and keep in service a suitable pressure recording gage, the original daily records made by the gage to be filed and preserved by the company for ready future reference.

(2) That the Hurley Water Company shall abandon its present schedule of rates and substitute therefor the following rates, deemed just and reasonable.

PUBLIC SERVICE.

Municipal hydrant service, as now constituted, per annum—$2,800.

COMMERCIAL SERVICE.

Meter Rates

Minimum quarterly charges:

⅝" meter	$1.50
¾" "	2.00
1" "	3.00
1¼" "	4.00
1½" "	5.00
2" "	7.00

Charges for water:

35 cts. per 1,000 gallons for the first 10,000 gallons per month through one meter.

25 cts. per 1,000 gallons for the next 30,000 gallons per month through one meter.

18 cts. per 1,000 gallons for the next 60,000 gallons per month through one meter.

10 cts. per 1,000 gallons for the next 100,000 gallons per month through one meter.

5 cts. per 1,000 gallons for the excess.

Flat Rates—Annual.	With sewer	Without sewer
Dwellings—1 fixture	$5.00	$4.00
Dwellings—each additional fixture	2.00	1.00

Where a dwelling or apartment has no direct water supply but water is carried from other premises the charge for each such dwelling or apartment shall be $4.00 per year. Where fixtures, such as water closets or others, are used by more than one family the charge for each additional family shall be $1.00.

Business places, including saloons, stores, etc.

First fixture	$6.00
Each additional fixture	2.00

In all classes of premises each additional room in excess of eight used by one family or for one business purpose shall be charged for at the rate of 50 cts. per year.

In business places where a fixture is used jointly by two or more business establishments, or for two or more business purposes, a charge of $1.00 per year shall be made for each user above one, except that where such jointly used fixture furnishes the main supply of water for such additional businesses each additional user shall be charged $4.00 per year for such supply.

Each apartment, flat, etc., shall be considered a separate consumer. Where two businesses are conducted in the same building, such as saloon and hotel businesses, each business shall be classed as a separate consumer.

The above schedule shall take effect at the beginning of the next period for which flat rate bills are to be rendered.

Sixty days is deemed sufficient time within which to comply with section (1) of this order.

VILLAGE OF MERRILLAN

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted Oct. 22, 1913. Decided April 14, 1914.

The petitioner alleges that the crossings on the respondent's line at Pearl st. and Main st. in the village of Merrillan, Jackson county, are dangerous and that the protection now afforded by electric bells is inadequate and annoying to the public. Investigation shows that because of the conditions of railway operation at Merrillan the bells in question frequently ring for long periods when no trains are actually passing over the crossings.

Held: The crossings are dangerous and, under the peculiar conditions of highway traffic and train operation which obtain there, the existing safeguards are inadequate. The respondent is ordered to station a flagman at the Pearl st. crossing who shall be on duty from 7 a. m. to 6:30 p. m. daily; to install and maintain an electric gong at the Main st. crossing to be operated by the flagman at Pearl st.; to replace the electric bells now installed at Pearl st. and Main st. by modern visual signals operated automatically and equipped with a suitable flashing device to be operated when the flagman is not on duty; to replace the board fence which extends west from Main st. along the south side of the connecting track with the G. B. & W. R. R. Co's line by a woven wire fence; and to flag all switching movements over Main st. on said connecting track. Plans for the electric gong and signal lights are to be submitted for approval. Ninety days is considered a reasonable time within which to comply with this order.

The petitioner, an incorporated village in Jackson county, alleges in substance that two crossings on the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company at Pearl street and Main street in the village of Merrillan are dangerous and that the protection now afforded is inadequate and annoying to the public. The Commission is therefore asked to require the respondent to maintain flagmen at these crossings in place of the electric bells now installed.

The respondent, in its answer, takes the position that the existing protection is adequate, but states that an order minimizing the annoyance to the public without detracting from the safety of the alarm feature will be agreeable to it.

A hearing was held on October 22, 1913, at Merrillan, *R. F.*

Kountz appearing for the petitioner and *R. L. Kennedy* for the respondent.

The testimony shows that on September 18, 1911, the village of Merrillan passed an ordinance requiring the respondent to establish gate protection at Pearl street. This ordinance was not complied with, and after some conference with the railway officials, the village board on March 5, 1912, enacted another ordinance providing for protection by flagman at Pearl street. Pursuant to this requirement a flagman was maintained at this crossing until August 28, 1912, when electric bells were placed in operation at both Pearl street and Main street. The question before the Commission is whether these bells adequately protect public travel.

Pearl street is the main thoroughfare of Merrillan over which practically all of the traffic from Neillsville passes. A school with an enrollment of 248 is located a short distance from the crossing, and a large proportion of the children in attendance cross the tracks at Pearl street. The petitioner introduced the results of a traffic count made between the hours of 7 a. m. to 7 p. m. on October 20, 1913, and from 7 a. m. to 6 p. m. on the following day, as follows:

Date.	Pedestrians.	Teams.	Automobiles.
October 20, 1913	898	91	10
" 21, 1913	954	93	3

The man who took this count stated that the weather on the 20th was stormy and the road muddy and that the following day was cold and disagreeable. He said that switching movements occurred from 1:25 p. m. to 3:13 p. m. on the 20th and from 12:05 p. m. to 12:45 p. m. on the 21st, and that a number of flying switches were made during these periods.

Counts were made by members of the Commission's engineering staff with the following results:

Period.	Pedestrians.		Teams.	Automobiles.	Through trains.	Switching movements.
	Children.	Adults.				
November 25, 1913, 9:30 a. m. to 12:15 p. m.	109	43	31	5	2	2
February 20, 1914, 8:30 a. m. to 8 p. m.	311	221	88	0	15	23

Main street is a less important thoroughfare than Pearl street, but it is used to a considerable extent. No specific traffic data were offered at the hearing, but counts made by members of the Commission's engineering staff resulted as follows:

Period.	Pedestrians.		Teams	Automobiles.	Through trains	Switching movements.
	Children	Adults.				
November 25, 1913, 8:30 a. m. to 12:05 p. m.....	17	25	18	0	1	6
February 20, 1914, 8:30 a. m to 8:30 p. m.....	32	22	26	1	13	14

Witnesses cited numerous specific instances of the failure of the bells to work properly. Moreover, it was said that because of the conditions of railway operation the bells frequently ring for long periods when trains are not actually crossing Pearl street and Main street. The observations of our engineering staff substantiate the complaint that the bells ring for considerable periods when no trains are passing.

After describing the physical surroundings of these crossings, and the conditions of traffic on the railway and the highway, our engineer comments on the character of protection needed as follows:

"In view of the fact that the electric alarms at both streets ring for long periods without a train actually moving over the crossings, and that because of this fact they are not rendering efficient protection, inasmuch as people have come to disregard their ringing, knowing that they frequently ring when a train is not near the crossing, it is believed that some other form of protection is imperative to avoid accidents. The Pearl street crossing is heavily traveled by school children and for their safety no automatic device is considered to be effective under the existing operating conditions. A flagman is believed to be the only proper form of protection for this street. At Main street the traffic is not so heavy and includes fewer children. A flagman is not deemed necessary here, since effective protection will be afforded for all main line movements if an electric gong is installed, to be operated by the flagman at Pearl street under careful instructions that it shall not be rung except when trains are actually approaching the crossing. The southwest corner of the Main street crossing has a high, tight board fence along the right of way line westerly from the building line, which fence was erected by the private owner. It would curtail the view of a flagman at

Pearl street of movements over the Green Bay connecting track. A man stationed on the north side of Pearl street could see 57 feet west of the westerly Main street walk along this track and from the south side of Pearl street could see only 50 feet. These views are too much restricted by far, but could be somewhat increased. To remedy this condition the railway company should replace the joint board fence by a wire fence. Every switching movement over the connecting track should be carefully flagged over Main street by a member of the train crew. This will provide satisfactory day protection for both crossings.

"As regards night protection the bells might be retained with a switch for cutting them out of service during the day, but it is suggested that since their continued ringing is very objectionable to the residents it might be advisable to replace them by some improved visual signal. There is a quite effective lighting device on the market which is already being installed on another railway in the state; this arrangement, by a stationary fixture with several lamps that light up in succession, gives the effect of a moving light and very effectively attracts the attention of travelers. A similar result, insofar as attracting the attention of travelers on the streets, could be had by using a rather powerful light designed to give an intermittent or flashing illumination. Some such lighting device it is believed would provide sufficient warning so that the bells might be dispensed with. The unsatisfactory condition of having a warning given without a corresponding train movement would still be present but the objectionable noise from the bell would be eliminated and travelers would receive an indication of railway movements and be prepared to meet a train. Since the night travel is quite light it is believed that protection as indicated would be ample. For some months of the year the light protection would be operating partly in daylight hours when the flagman would not be on duty and for this reason the lights used will have to be provided with a special lens or reflecting arrangement for concentrating the rays such as are employed in certain commercial forms of light signals."

It is our judgment that each of the crossings in question is dangerous, and that, under the peculiar conditions of highway traffic and train operation in Merrillan, the existing safeguards are inadequate. We regard the protection suggested by our engineer as necessary to adequately provide for the safety of the traveling public.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, station a flagman at the Pearl street crossing in the village of Merrillan, who shall be on duty from 7 a. m. to 6:30 p. m. daily; install and

maintain an electric gong at the Main street crossing to be operated by the flagman at Pearl street; replace the electric bells now installed at Pearl street and Main street by modern visual signals operated automatically and equipped with a suitable flashing device to be operated when the flagman is not on duty; replace the board fence which extends west from Main street along the south side of the connecting track with the Green Bay & Western Railroad Company's line by a woven wire fence; and flag all switching movements over Main street on said connecting track.

Plans for the electric gong and signal lights are to be submitted to the Commission for approval.

Ninety days is considered to be a reasonable time within which to comply with this order.

TOWN OF SULLIVAN
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided April 14, 1914.

The petitioner alleges that the Radiske, Jefferson st., Palmyra road and Golden Lake crossings on the respondent's line in the town of Sullivan, Jefferson county, are dangerous. Inasmuch, however, as it is admitted that the complaint is not directed primarily against the Radiske and Golden Lake crossings and as the testimony introduced with respect to these crossings is very meager, action at the present time is confined to the Jefferson st. and Palmyra road crossing.

Held: The crossings at Jefferson st. and the Palmyra road are dangerous. The respondent is ordered: (1) to install within ninety days and maintain at each of the crossings an automatic electric bell with illuminated sign, plans to be submitted for approval; and (2) to flag each of the crossings during all switching movements over it and during such time as standing trains may be cut to allow highway traffic to cross.

The petitioner, a regularly organized town in Jefferson county, alleges in substance that four highway crossings on the line of the Chicago & North Western Railway Company in the town of Sullivan are dangerous to public travel. The crossings are designated as follows:

1. Radiske crossing, about three miles west of Sullivan station.

2. Main street (Jefferson street) crossing, immediately west of Sullivan station.

3. Palmyra road crossing, immediately east of Sullivan station.

4. Golden Lake crossing, at Golden Lake station.

The Commission is asked to require the respondent to properly safeguard these crossings.

The respondent, in its answer, denies that any of the crossings involved in the complaint are more dangerous than any crossing of a highway over a railroad track and asks that the petition be dismissed.

A hearing was held at Sullivan on November 10, 1913, at which *Sylvester Garity* appeared for the petitioner and *C. A.*

Vilas, for the respondent. Additional evidence was taken at Madison on November 13, 1913, *C. A. Vilas* appearing for the respondent.

Radiske and Golden Lake Crossings.

The town chairman stated that the complaint is not directed primarily against the Radiske and Golden Lake crossings, and the testimony introduced by the town with respect to them is very meager. It also appears that the traffic at the Golden Lake crossing is materially different in summer than in winter. Action with reference to these two crossings will therefore be held in abeyance, and this decision will refer only to the Main street crossing, the proper name for which is the Jefferson street crossing, and the Palmyra road crossing.

Jefferson Street Crossing.

Jefferson street runs northeast and southwest, and crosses the main track and a sidetrack of the respondent's east and west line about 250 feet west of Sullivan station. The town chairman testified that from the northeast highway approach a comparatively unobstructed view may be had of trains to the east, and that trains can be seen approaching from the west when a traveler is within 10 rods of the track. He said that from the southwest highway approach the view to the west is obstructed by cars standing on the sidetrack and by a tamarack swamp about a quarter of a mile from the crossing and that the view to the east is limited by an elevator, a coal shed, a lumber shed, other buildings farther back from the tracks, and very frequently by cars standing on the sidetrack.

A map of the crossing situation, upon which the limits of vision as observed by the respondent's engineer are indicated, was offered in evidence. These observations have been reduced to tabular form as follows:

Distance of point of observation in highway from main track.	View east.	View west.
Northeast 150 feet	1500 feet	1500 feet
" 200 "	1500 "	560 "
" 250 "	1500 "	460 "
Southwest 50 "	340 "	310 "
" 75 "	200 "	260 "
" 100 "	90 "	[1]250 "

[1] View unobstructed beyond 480 feet west.

The company's superintendent testified that the warehouse in the southeast angle of the crossing is on a leased portion of the railway right of way and expressed the opinion that if this lease were terminated and the building removed, the view afforded to travelers would be satisfactory.

Jefferson street is a part of the highway from Oconomowoc to Rome and is included in the Wisconsin highway commission's system of state aid roads. A traffic count at the crossing was made on October 18, 19 and 20, 1913, by an employe of the company from 7 a. m. to 7 p. m. The average daily traffic was given by the superintendent as follows:

Pedestrians	480
Teams	140
Automobiles	125
Bicycles	36
Motorcycles	3

A count made by the Commission's engineer on February 24, 1914, from 7:45 a. m. to 7:30 p. m. resulted as follows:

Pedestrians (children)	61
Pedestrians (adults)	68
Through trains	8
Switching movements	12
Teams	95

The superintendent testified that there are eight regular passenger trains and four regular freight trains operated on this division, five of which cross at night. Two passenger trains which do not stop at Sullivan ordinarily pass that station at a speed of from thirty to thirty-five miles an hour. Few extra trains are operated. Several narrow escapes from accident were described by witnesses.

Our engineer recommends that a bell and light be installed at Jefferson street, and that the crossing be flagged by members of the train crews during all switching movements and whenever a standing train is cut to allow highway traffic to cross.

Palmyra Road Crossing.

The Palmyra road runs northwest and southeast, crossing the main track and a sidetrack about 650 feet east of Sullivan station. The testimony shows that from the northwest highway ap-

proach the view to the west is comparatively unobstructed and the view to the east limited by a house and barn. From the southeast highway approach the view of trains to the west is obstructed by buildings, the stockyards, the depot and by cars standing on the sidetrack. The view to the east is cut off from a point more than 15 rods from the main track until a traveler has crossed the sidetrack, and is within 35 feet of the main line, the chief obstruction being a condensed milk factory.

The respondent introduced a map showing the limits of vision as observed by its engineer, which have been reduced to tabular form as follows:

Distance of point of observation in highway from main track.	View east.	View west.
Northwest 50 feet	1 mile	1,500 feet.
" 100 "	385 feet	1,000 "
" 150 "	140 "	900 "
" 200 "	[1]110 "	800 "
" 300 "	[1]80 "	700 "
Southeast 50 " [2]	1 mile	665 "
" 75 " [2]	110 feet	545 "
" 100 "	55 "	500 "
" 150 "	45 "	475 "
" 200 "	40 "	465 "

[1] View may be had of train in distance back of 200 feet from track.
[2] View will be further obstructed when cars are on sidetrack.

The highway is the main road from Sullivan to Eagle and Palmyra. An employe in the condensed milk factory testified that more than one hundred milk teams usually cross during a day. A three day traffic count was made by an employe of the company on October 18, 19, and 20, 1913, from 7 a. m. to 7 p. m., the daily average being as follows:

Pedestrians	320
Teams	160
Automobiles	20
Bicycles	7
Motorcycles	2

Our engineer's count, made on February 24, 1914, from 7:45 a. m. to 7:30 p. m. resulted as follows:

Pedestrians (adults)	50
Teams	74
Through trains	8
Switching movements	18

Two serious accidents at this crossing were described by witnesses.

Our engineer recommends that a bell and light be installed at the Palmyra road and that the crossing be flagged by members of the train crews during all switching movements and while standing trains are cut to allow highway traffic to cross.

In the light of the testimony and of the reports of our engineering staff, we find that the crossings at Jefferson street and at the Palmyra road in the town of Sullivan are more than ordinarily dangerous. The protection recommended by our engineer will, in our opinion, render these two crossings reasonably safe under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, install and maintain at each of the two highway crossings on its line at Jefferson street and at the Palmyra road in the town of Sullivan, Jefferson county, an automatic electric bell with an illuminated sign for night indication, plans for track circuits to be submitted to the Commission for approval.

IT IS FURTHER ORDERED, That said respondent railway company flag each of said crossings during all switching movements over it, and during such time as standing trains may be cut to allow highway traffic to cross.

Ninety days is considered a reasonable time within which to comply with the first paragraph of this order.

IN RE APPLICATION OF THE McGOWAN WATER, LIGHT AND POWER COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted April 1, 1914. Decided April 14, 1914.

The McGowan W. Lt. & P. Co. applies for authority to put into effect a minimum monthly charge of $1 for electric service for which, up to the present, the utility has had no minimum charge. The utility is operating at a loss.

Held: Although a minimum charge of $1 per month would not produce an excessive amount of revenue, such a charge is inadvisable because of its probable effect on the business of the utility. The utility is authorized to put into effect a minimum monthly charge of 75 cts. which is considered sufficient to insure the utility against actual losses arising from carrying the accounts of individual consumers.

Application in this matter is dated January 17, 1914. The applicant, the McGowan Water, Light and Power Company, is a public utility engaged in the operation of a water and electric plant in Milton Junction, Wis. The application relates only to the matter of a minimum charge for electric service. It appears that the utility has never had a minimum charge for electric service, and authority is asked in this case to put in a monthly minimum charge of $1.

Hearing in this matter was held at Madison on April 1, 1914. *E. C. McGowan* appeared for the applicant, and there was no appearance in opposition.

The statement of Mr. McGowan indicates that the utility has been operating at a considerable loss and that there is no immediate prospect of its being placed upon even a self-supporting basis. This is substantiated by an examination of the records of the utility by the accounting staff of the Commission. Following is a statement of the income account for the period from July 1 to December 31, 1913. It will be noted that revenues are shown separately for the electric and water departments but the most of the expenses are shown jointly. For the purposes of this case it is not considered necessary to make an analysis of these joint expenses to determine the cost of conducting the electric and water departments separately.

REVENUES—ELECTRIC.

Commercial lighting earnings	$705.85	
Municipal contract lighting	133.38	
Miscellaneous earnings from operation	25.00	
Total earnings from operation—electric		$864.23

REVENUES—WATER.

Commercial sales earnings	$406.94	
Miscellaneous earnings from operation	16.50	
Total earnings from operation—water		423.44
Total earnings from operation—both depts		$1,287.67

JOINT OPERATING EXPENSES.

Gasoline power apportionment account	$830.20
Power generation	297.23
Storage	41.81
Distribution—electric	84.87
Consumption	5.25
Pumping—water	57.12
Distribution—water	1.70
Commercial—joint	35.41
General—joint	90.10
Undistributed—joint	47.45
Total above expenses	$1,491.14
Loss without allowance for depreciation	$203.47
Non-operating gain—electric $40.93	
" loss—water 2.93	
	38.00
Net loss without allowance for depreciation	$165.47
Allowance for depreciation—6 months	429.18
Gross loss on both departments	$594.65

It appears from this income account that during the six months in question the net loss without allowance for depreciation was $165.47. For accounting purposes the depreciation was estimated to be $429.18. Whether this is exactly the amount which would be taken into consideration in case of a complete adjustment of the rates of the utility need not be determined here. It is sufficient to note that whatever the allowance for depreciation, the utility is operating at a loss.

There may be several reasons for this unprofitable operation. It is understood that no revenue is derived from hydrant rentals in the water department, in fact that no fire protection service is furnished. It is also possible that certain of the rates

for other services are not properly adjusted. It is probably true also that the rather high rate for general electric services acts to some extent to discourage the use of electricity, although it does not seem possible to provide for a reduction of this rate at the present time.

As far as the total revenues of the utility are concerned, it is clear that a minimum charge of $1 per month will not produce an excessive amount of revenue. A minimum charge very much higher than $1 a month would in fact fail to make up the deficit. It appears to be impracticable to attempt to any considerable extent to increase the total revenues of the utility by means of a minimum charge. Consequently the question of the authorization of a minimum charge of $1 should be decided with reference to the reasonableness of that particular charge rather than with reference to the total revenues of the utility, although this latter is also an item to be considered.

A list of the bills for electric service covering consumption in the months of June and December, 1913, shows that if a $1 per month minimum had been in effect during the past year, 25 out of a total of 51 consumers would have had their bills increased for the month of June and that 15 out of a total of 67 consumers would have been affected during December.

No analysis of the consumer expenses of this utility which would show just what the minimum charge should be, is considered feasible, but such analyses have been made in other cases with the result that minimum charges ranging from 50 cts. to $1 per month have been authorized. The cost which is properly chargeable as a consumer expense is not the only item which should be considered in determining the minimum charge. The effect upon the business must also be taken into consideration, and in this case we believe that a $1 minimum charge would be inadvisable. It is evident, however, that some minimum charge should be put in, and we believe that a charge of 75 cts. per month will be a proper one. During the month of June, 1913, 20 consumers would have been affected to some extent by such a charge, and during the month of December, 9 consumers would have been affected by it.

The total increase in revenue resulting from a 75 ct. minimum charge will not be large, but, as stated before, the minimum charge can hardly be expected to make up to any great extent the deficits from operation. It should, however, under normal con-

ditions, meet the fixed consumer costs and provide for a payment for the average use of current falling within the minimum. A charge of 75 cts. per month will, we believe, accomplish these purposes. It will not add very much to the revenue of the utility, but it will insure the utility against actual losses in carrying the accounts of individual consumers.

A charge higher than 75 cts. per month would very materially increase the bills of a number of consumers and would affect a very large proportion of the consumers during certain parts of the year. Although it might appear at first sight that because the utility is operating at a loss a $1 minimum should be authorized in order to increase the revenues, it is altogether probable that merely increasing the charges will not have the effect of increasing the revenues. We believe it will be better policy for the company to install the 75 ct. monthly minimum charge than to install a minimum of $1.

IT IS THEREFORE ORDERED, That the applicant in this case, the McGowan Water, Light and Power Company, be and the same is hereby authorized to add to its schedule of rates for electric service a minimum monthly charge of 75 cts. This rate may be placed in effect with the beginning of the next period for which bills are rendered succeeding the date of this order.

IN RE PROPOSED EXTENSION OF THE LINE OF THE MATTOON TELEPHONE COMPANY IN THE TOWN OF NORWOOD, LANGLADE COUNTY, WISCONSIN.

Submitted April 8, 1914. Decided April 14, 1914.

The Mattoon Tel. Co. filed notice with the Commission of its intention to extend its line to the unincorporated village of Phlox in the town of Norwood, Langlade county. The Antigo Tel. Co. objects to the proposed extension. The line which the Mattoon Tel. Co. desires to extend is authorized, though not yet constructed, to a point a half mile short of the village. The Antigo Tel. Co. has a toll line extending from Antigo through Phlox to Mattoon and renders service between Phlox and Mattoon at its regular toll rates. Service over the proposed extension would be free of toll charge.

Held: Inasmuch as the village of Phlox already has adequate telephone connections, it cannot be said that public convenience and necessity require the extension of the Mattoon line for local service into the village. If the toll rate charged by the Antigo Tel. Co. is excessive, the Commission can reduce the rate upon the institution of proper proceedings.

On March 25, 1914, the Mattoon Telephone Company served notice upon this Commission of a proposed extension of its line in the town of Norwood, Langlade county, Wis., and shortly thereafter notice was received from the Antigo Telephone Company of its objection to the proposed extension.

The matter was thereupon set for a hearing which was held at Antigo on April 8, 1914. The Mattoon Telephone Company was represented by *S. H. Kratz* and the Antigo Telephone Company by *T. W. Hogan* and *Edward Cleary*.

The Antigo Telephone Company has a toll line running from Antigo on the north through the unincorporated village of Phlox to the village of Mattoon, where it connects with the switchboard of the Mattoon Telephone Company. The latter company already has legal authority for an extension of its line north in the direction of Phlox but the line as now authorized stops a half mile short of that village. The present case involves a proposed extension of line into the village of Phlox. None of the line has as yet been built, it being the purpose of the Mattoon Telephone Company to ascertain before beginning construction

whether the entire line to Phlox will be authorized. Six contracts have been secured for service upon the line as originally proposed, but the Mattoon Telephone Company has been assured of the patronage of twenty to twenty-five additional farmers if the line is constructed through to Phlox.

The Antigo Telephone Company's toll line from Antigo to Mattoon through Phlox connects with five telephone stations in the latter village, all of which are toll stations. The toll charged at this station of Phlox is 15 cts. for the first three minutes and 5 cts. for each additional minute of conversation. This rate is uniform over the entire toll line whether used for its whole length between Antigo and Mattoon or only for the portion of its length between Phlox and Antigo or Phlox and Mattoon. Phlox is about four miles north of Mattoon and twelve miles south of Antigo.

It is quite apparent that if the Mattoon line were extended into Phlox so that the residents of that village could connect with it and reach Mattoon without paying any toll charge, that line would be used for messages from Phlox to Mattoon to the exclusion of the toll line now in existence. If, on the other hand, the Mattoon line stops half a mile south of Phlox, as the company first intended, the farmers connected with that line could still reach Phlox by calling the Mattoon exchange and being switched over the Antigo Telephone company's toll line, at the regular charge of 15 cts. Thus these farmers would not be deprived of the opportunity to reach Phlox for the transaction of such business as they might have there, but they would do so over the existing line and would contribute to the cost of maintenance and interest charges on that line.

We believe it can not be said that public convenience and necessity require the extension of the Mattoon line for local service into Phlox when an adequate line now exists for connection with the residents of that village. As far as the testimony shows, there is no particular need for local telephone service within the village of Phlox as distinguished from service which will enable the residents of all the village to reach and be reached by other points. Phlox, it was stated at the hearing, is an inland village of about thirty families, with seven business places. In addition to the five business places which have toll stations, there is one public pay station, and as far as we are advised the needs of the residents are satisfied by these stations, so

far as the quality and quantity of service are concerned. If the 15 ct. toll rate is excessive, this Commission can, upon the institution of proper proceedings, reduce the rate, but in any event the present record shows nothing so burdensome in the situation as to warrant an extension which will necessarily cause great loss of revenue to the Antigo Telephone Company.

We therefore find and determine that public convenience and necessity do not require the extension of the line of the Mattoon Telephone Company in the town of Norwood, Langlade county, Wis., as proposed in the notice filed by said Mattoon Telephone Company with this Commission on March 25, 1914.

VILLAGE OF SUN PRAIRIE
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Jan. 8, 1914. Decided April 15, 1914.

The petitioner alleges that the respondent's station facilities at Sun Prairie, Dane county, are inadequate and expresses the opinion that a new and modern station building with proper approaches is required.

Held: The station facilities are inadequate. The respondent is ordered to provide a station which shall be adequate for the accommodation of passengers and freight, and which shall have ample platform accommodations, plans to be submitted for approval. July 1, 1914, is considered a reasonable date at which the work ordered shall be completed.

The petitioner, an incorporated village in Dane county, alleges in substance that the station facilities furnished by the Chicago, Milwaukee & St. Paul Railway Company at Sun Prairie are inadequate and expresses the opinion that in order to provide reasonably adequate facilities for the accommodation of the public a new and modern station building with proper approaches is required. The Commission is therefore asked to take such action as it deems just in the premises.

The respondent, in its answer, enters a general denial of the allegations contained in the petition and asks that the complaint be dismissed.

A hearing was held on January 8, 1914, at Sun Prairie. *John Moran* appeared for the petitioner and *J. N. Davis* for the respondent.

At this hearing the respondent's general superintendent stated that prior to the filing of the present complaint the company had planned to enlarge the depot at Sun Prairie, providing a ladies' waiting room, a smoking room and all other conveniences for which facilities are available. Upon the filing of the complaint action was deferred until a decision in the matter should be reached by the Commission. He stated that the company would be willing to undertake these improvements as soon as its financial condition will permit the necessary expenditure.

The testimony shows that the present station was built about 1870. It contains an office, a freight room, a small storeroom, and a waiting room which is used in common by both men and women. This waiting room is approximately 24 feet long and 16 feet wide, and is heated by a stove. Seats are provided for 18 persons. The only toilet facilities are outside closets located about 150 feet from the station. Witnesses stated that the windows are not opened and that the ventilation is very poor, especially since men make a practice of smoking in the common waiting room. It was also asserted that the building is in a dilapidated condition and is very unsightly. The waiting room was said to be insufficient for the accommodation of passengers, being frequently crowded. Witnesses testified that the platform in front of the depot is too narrow to allow for the safe movement of trucks, and that beyond the end of the depot passengers are liable to step off of it and injure themselves because of its narrowness. Such an accident was described at the hearing.

In the light of the testimony, we find that the existing station facilities at Sun Prairie are inadequate. It is our judgment that a suitable station should be provided with separate waiting rooms for men and women with ample platform accommodations. This will probably necessitate some rearrangement of the sidetracks north of the station.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, provide a station at Sun Prairie which shall be adequate for the accommodation of passengers and freight, and which shall have ample platform accommodations, plans to be submitted to the Commission for approval.

July 1, 1914, is considered a reasonable date at which the work ordered herein shall be completed.

TOWN OF WILTON
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Aug. 11, 1913. Decided April 15, 1914.

The petitioner alleges that the Dorsett crossing on the respondent's line, about three miles east of Wilton, Monroe county, is dangerous and asks that the respondent be ordered to construct an under-crossing for the highway. The respondent contends that the existing bell protection is adequate. Five possible plans for grade separation are considered.

Held: The crossing is dangerous and the existing protection is inadequate. It is ordered: (1) that the respondent construct and maintain an under-highway crossing at a point and in a manner specified, and connect it with the existing highway; (2) that the town of Wilton pay to the respondent 25 per cent of the cost of the alterations ordered, as determined by the Commission, and that the respondent bear the remainder of the cost; and (3) that, when the under-crossing ordered is completed, the existing crossing be closed. The alterations ordered are to be completed and the new crossing opened for use by Nov. 1, 1914.

If the town of Wilton prefers to undertake the work ordered to be done outside the railroad right of way, the order will be modified to permit it, with the understanding that the town bear the entire cost of the work so undertaken.

The petitioner, a regularly organized town in Monroe county, alleges in substance that the Dorsett crossing, located at the intersection of the Wilton-Kendall road and the respondent's line about three miles east of Wilton, is dangerous to public travel and that public safety requires its alteration. The Commission is therefore asked to order the respondent to construct an under-crossing for the highway.

The respondent in its answer alleges that it maintains an electric bell on the crossing in question, and that in view of the light traffic on both the railway and the highway, neither the town nor the railway company should be required to incur the expense of installing an under-crossing. It therefore asks that the complaint be dismissed.

A hearing was held at Wilton on August 11, 1913. *J. G. Graham* appeared for the petitioner and *C. A. Vilas* for the respondent.

The respondent admitted that the crossing is dangerous, but urged that the existing bell protection is adequate under the present conditions of travel. It is therefore necessary to review the testimony relating to the dangerous features of the physical surroundings, except insofar as it has a bearing upon the adequacy of the existing protection.

The "Dorsett crossing" is formed by the intersection of the respondent's line and the Wilton-Kendall road about three miles east of Wilton. The highway descends from south to north and the railway descends from east to west on a grade of about one per cent. The angle of crossing is about 65 degrees. The view of trains from both highway approaches is very much obstructed by high ground and by trees. The limits of vision are reported by our engineer as follows:

Distance of point of observation in highway from track.	View east.	View west.
South 50 feet	100 feet	100 feet
" 100 "	100 "	50 "
" 200 "	100 "	40 "
" 300 "	75 "	30 "
North 50 "	150 "	200 "
" 100 "	40 "	75 "
" 200 "	40 "	75 "
" 300 "	40 "	75 "

The danger caused by the obstructions to the view is accentuated by the inability of travelers on the highway to hear a train approaching from the east. This was said to be due in part to the topography and in part to the fact that westbound trains usually approach this crossing with steam shut off on account of the down grade. Specific instances were cited in which travelers have come very close to the track without hearing an approaching westbound train.

The Wilton-Kendall road is a portion of the main traveled highway which leads from Madison to Baraboo, Elroy and Sparta, and is a part of the state system of highways. A witness estimated that as many as sixty-five teams occasionally use the crossing in a day, and that the daily average throughout the year would approximate twenty-five teams. It was said that some automobiles cross during the summer, and that a number of pedestrians, including five or six school children, regularly use the crossing. On February 18, 1913, the Commission's engineer counted sixteen teams in the three and one-half hours elaps-

ing between 12:15 p. m. and 3:45 p. m. The respondent admits in its answer that the average traffic on the highway amounts to about forty-five teams, two automobiles and two pedestrians per day. There are eight regular train movements over the crossing.

Several fatal accidents occurred at the Dorsett crossing prior to the installation of the bell in 1898. Since then there have been one fatality and a number of narrow escapes. Subsequent to the last fatal accident, which occurred in February 1913, the company installed another bell with an illuminated sign for night indication. Witnesses testified that the new bell has failed to work properly, ringing at times when no train is near and failing to ring when a train is approaching. The superintendent stated that the new bell is modern and that it is frequently inspected and kept in good working order. In his opinion it affords adequate protection.

The company's engineer presented at the hearing estimates covering the cost of installing an underground crossing 620 feet west of the existing crossing, or an overhead highway bridge 190 feet west (A), or 370 feet east (B) of the existing crossing. The cost of either alteration would be, according to his estimates, about $10,000. He said that to construct an under-crossing with a proper clearance would necessitate carrying the road under the tracks at such a low level that it would be subject to overflow at high water.

Our engineering staff has made a careful survey of the conditions in the vicinity of the Dorsett crossing, and has considered in detail the three methods of grade separation suggested at the hearing, and also the further projects of an overhead bridge or a subway at the present site. Subsequent to the hearing the company submitted detailed estimates of the three proposals considered at the hearing. The total cost of grade separation, as shown by the Commission's estimates and the company's estimates, is as follows:

Plan.	Company's estimate.	Commission's estimate.
Overhead Bridge		
1. At present site	[1]	$11,000
2. 190 feet west	$10,700	11,200
3. 370 feet east	10,300	10,300
Under-Crossing.		
1. At present site	[1]	14 900
2. About 600 feet west	10,600	11,170

[1]Not estimated by company.

Our engineer regards the construction of an under-crossing about six hundred feet west of the present side as the most desirable solution, and this view is concurred in by an engineer of the Wisconsin highway commission who made a personal inspection of the situation. The plan for this subway contemplates a lateral clearance of at least twenty-four feet, and a vertical clearance of at least thirteen feet above the surface of the roadway, which is to be not more than six inches below the level of the top of the flooring on the existing bridges over the Kickapoo creek. The plan also provides for the connection of the new subway with the existing highway by a new road extending south from the subway on a line approximately at right angles to the track, and by a new road extending north from the subway over a new bridge across the Kickapoo creek for a distance of about two hundred feet and thence running northeast to a point just north of the existing highway bridge over the Kickapoo creek. In the opinion of our engineer such a subway can be constructed without creating objectionable conditions during periods of high water. It will also improve the condition of the highway by reducing the grade of approach to a maximum of three per cent, instead of an average of more than six per cent as at present.

In the light of the testimony and of the reports of our engineering staff we find that the crossing under consideration is unusually dangerous and that the existing protection is inadequate. It is our judgment that public safety requires the separation of grades at this point, and we believe that the construction of an under-crossing about six hundred feet west of the present side, as recommended by our engineer, is the best solution available. This crossing is on a main traveled road which is a part of the system of the state highways and upon which traffic is sure to increase. In view of its extremely dangerous surround-

ings and the accidents which have occurred there, the present opportunity to eliminate it should be taken advantage of by both the town and the railway company. Inasmuch as the change will entail considerable work outside of the right of way, and since the condition of the road will be materially improved thereby, we regard as equitable an apportionment of the cost whereby the town of Wilton shall bear 25 per cent and the railway company 75 per cent of the actual expenses. These proportions represent approximately our engineer's estimate of the cost within and without the lines of the railway right of way, namely $8,200 within the right of way lines and $2,970 outside of them. The respondent will be directed to make the alterations ordered, but if the town prefers to undertake the work outside of the right of way, this order will be so modified upon proper application, with the understanding that the town bear the entire cost of the work so undertaken.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, construct and maintain an under-highway crossing on its line about six hundred feet west of the existing Dorsett crossing located about three miles east of Wilton in Monroe county, which shall have a lateral clearance of at least twenty-four feet and a vertical clearance of at least thirteen feet, the finished surface of the road at the center of the subway to be not more than six inches lower than the floor surface of the existing highway bridge over the Kickapoo creek, and construct a new highway extending south from said subway on a line approximately at right angles to the track to a connection with the existing highway, and a new highway extending north thereof on a line approximately at right angles to the track over a suitable new bridge across the Kickapoo creek for a distance of about 200 feet and thence in a northeasterly direction to a connection with the existing highway just north of the existing bridge over the Kickapoo creek, such new highways to conform in quality of construction to the existing highway, plans to be submitted to the Commission for approval.

IT IS FURTHER ORDERED, That said respondent railway company furnish all materials and labor, perform all work and acquire all land necessary in making the alterations ordered herein; and that upon the completion of this work it furnish the Commission a complete and detailed account of all expenses incurred by it therein; whereupon the Commission, with or with-

out further hearing as may be deemed best, will determine the actual cost of changing the highway and of the under-crossing; and the town of Wilton shall thereupon pay to the said railway company 25 per cent of the cost as so determined by the Commission, and the said respondent railway company shall bear 75 per cent thereof.

IT IS FURTHER ORDERED, That when the under-crossing ordered herein shall be completed and open for public travel, the portion of the highway now crossing the railway at grade between the right of way lines be closed, and the said respondent railway company is hereby directed to enclose said highway with continuous fences so that it cannot be used by the public.

November 1, 1914, is considered a reasonable date at which the alterations ordered herein shall be completed and the new crossing opened for the use of the public.

A. B. WHITEIS ET AL.

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Feb. 19, 1914. Decided April 15, 1914.

The petitioners allege that the station facilities furnished by the respondent at Reserve, Sawyer county, are inadequate and ask that the respondent be required to maintain and keep open a freight and passenger station and employ a regular agent at Reserve. The respondent is willing to build a separate house for its section foreman and to devote the station building now occupied by him to the exclusive use of passengers and the storage of freight. This is satisfactory to the petitioners and the only question for decision therefore is whether the services of a regular station agent are required.

Held: In view of the amount of freight and passenger business transacted and the fact that there is but one train a day into Reserve, the employment of a regular station agent is not warranted at the present time. A competent caretaker should, however, be employed to keep the station clean, warm and lighted and to open it at least twenty minutes before the train arrives and until it departs, as required by sec. 1797—9 of the statutes as amended by ch. 616, laws of 1913.

The respondent is ordered to provide a station building at Reserve which shall be adequate for its freight and passenger business, and to employ a competent caretaker who shall keep the station properly cleaned, heated and lighted and open for the use of the public at least twenty minutes before the arrival of trains and until their departure. The station is to be open for public use by July 1, 1914.

The petition, which is signed by thirty-three residents of Reserve in Sawyer county, alleges in substance that the station facilities furnished by the Minneapolis, St. Paul & Sault Ste. Marie Railway Company at Reserve are inadequate. The Commission is therefore asked to require the respondent to maintain and keep open a freight and passenger station and employ a regular agent at Reserve.

The respondent, in its answer, states that it is willing to erect a new house for the section foreman as soon as possible in the spring, and devote the building now occupied by him to the exclusive use of passengers and the storage of freight. It denies that there is any necessity for an agent at Reserve.

A hearing was held on February 19, 1914, at Reserve, *A. B. Whiteis* appearing for the petitioners and *Kenneth Taylor* for the respondent.

Counsel for the respondent stated at the hearing that the company is willing to build a separate house for its section foreman in the spring, so that the station building now occupied by him can be used to accommodate freight and passenger traffic, and that it is willing to have the station opened at train time, properly heated during the winter months and lighted when necessary. The company also offered to install a bill box where shippers can leave shipping bills for the attention of the train conductor, and receive them without being compelled to wait for the train. The representative of the petitioners stated that the building now occupied by the section foreman would be sufficient for the freight and passenger traffic, if used exclusively for that purpose. It is therefore unnecessary to comment upon the testimony relative to the need for a station building, and the only question for decision is whether the services of a regular station agent are required.

The testimony shows that Reserve is the terminus of a branch line over which one train a day in each direction is operated. The train is scheduled to arrive at Reserve at 3:25 p. m. and to leave on the return trip ten minutes later. When it is late, as is frequently the case, it leaves for the return trip as soon as the unloading and loading can be completed. A witness estimated that about six hundred people live within one mile of the station and that from eight hundred to one thousand people are tributary to Reserve, some of them traveling twelve or fifteen miles to take the train. The traffic at Reserve is heavier in the summer than at other seasons of the year, because of the fact that a number of summer homes and several club houses are reached from this station. The respondent submitted at the hearing a statement of its freight and passenger business at Reserve for a year, which has been summarized in the following table:

Month.	Number of outbound passengers.	Revenue from outbound passengers.	Freight revenue,		
			Carload.	Less than carload.	Total.
December 1912	42	$20 92	$26 40	$76 54	$102 94
January 1913	33	16 05	47 00	50 02	97 02
February 1913	29	15 72	47 01	47 10	94 11
March 1913	53	21 60	....	63 19	63 19
April 1913	75	36 40	157 15	70 72	227 87
May 1913	66	24 20	560 24	111 75	671 99
June 1913	88	40 96	52 40	124 09	176 49
July 1913	157	73 19	29 74	135 48	165 22
August 1913	188	100 74	.....	151 27	151 27
September 1913	202	130 40	.....	86 51	86 51

Having in mind the fact that there is but one train a day into Reserve, and considering the amount of freight and passenger business transacted, it is our judgment that the employment of a regular station agent as prayed for is not warranted at the present time. However, a competent caretaker should be employed to keep the station clean, warm and lighted, and to open it at least twenty minutes before the train arrives and until it departs, in accordance with sec. 1797—9 of the statutes as amended by ch. 616 of the laws of 1913.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, provide a station building at Reserve which shall be adequate for its freight and passenger business, and employ a competent caretaker who shall keep the station properly cleaned, heated and lighted, and open for the use of the public at least twenty minutes before the arrival of trains and until the departure thereof.

July 1, 1914, is considered a reasonable date at which the station shall be open for the use of the public.

TOWN OF CROSS PLAINS

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SECOND SCHULENBERG, THE BOLLENBECK, AND JOHN SCHOEPP HIGHWAY CROSSINGS ON THE LINE OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY IN THE TOWN OF CROSS PLAINS.

Decided April 15, 1914.

Complaint was made by the town of Cross Plains that three crossings on the respondent's line, designated as the Second Schulenberg crossing, the Bollenbeck crossing and the John Schoepp crossing, were dangerous. A hearing was held and the relocation of the highways and the substitution of two less obstructed grade crossings for the three existing ones was suggested, but, inasmuch as the Commission was not at that time empowered to order such a change, the matter was left open for informal adjustment. Such authority, however, was subsequently conferred upon the Commission by ch. 603, laws of 1913, and, since the proposed improvements had not been effected, the Commission investigated the matter on its own motion. The plan for the relocation of the highways is again considered.

Held: The crossings require further protection. In view of the fact that the Bollenbeck and Schoepp crossings cannot be entirely eliminated but would necessarily be used by farmers as private crossings, the advantages to be gained by the proposed relocation of the highways at these two crossings would be largely offset by the additional danger to which the farmers in question would be subjected. Bell protection will adequately safeguard these crossings under existing traffic conditions. The highway at the Second Schulenberg crossing should, however, be relocated.

It is ordered: (1) that the respondent install and maintain at the Bollenbeck crossing and at the John Schoepp crossing an electric bell with illuminated sign, plans to be submitted for approval; (2) that the respondent construct a new crossing at grade about 470 feet northwest of the Second Schulenberg crossing and relocate the highway as specified; (3) that the town of Cross Plains pay to the respondent 10 per cent of the cost of the alterations ordered as determined by the Commission, the remainder of the cost to be borne by the respondent; and (4) that when the alterations ordered are completed and the new crossing opened for public travel, that portion of the highway now crossing the railway track at grade within the right of way lines at the Second Schulenberg crossing be closed to the public and enclosed by the respondent with continuous fences. Ninety days is considered a reasonable time within which to comply with this order.

This matter was brought before the Commission by a complaint filed by the town of Cross Plains, alleging that three highway crossings on the line of the Chicago, Milwaukee & St. Paul Railway Company, designated as the Second Schulenberg crossing, the Bollenbeck crossing, and the John Schoepp crossing are dangerous to public travel.

The respondent, in its answer, asks the dismissal of the complaint.

A hearing was held at Madison on May 14, 1912, *Adolph Birrenkott* appearing for the petitioner and *W. J. Underwood* for the respondent. At this hearing a relocation of the highways and the substitution of two less obstructed grade crossings for the three existing ones was suggested, and inasmuch as the Commission was not at that time empowered to order such a change, the matter was left open for informal adjustment. Such authority, however, was conferred upon the Commission by ch. 603 of the laws of 1913, and since the proposed improvements had not been effected, a hearing was duly ordered and held on motion of the Commission at Cross Plains on December 6, 1913. *Fred Schulenberg* appeared for the town of Cross Plains, and *N. P. Thurber* for the Chicago, Milwaukee & St. Paul Railway Company. At this hearing the testimony taken upon the original complaint of the town was introduced without objection.

The Second Schulenberg Crossing.

The Second Schulenberg crossing is located about three miles east of Cross Plains station. The railway runs northwest and southeast, and the highway east and west, the angle of crossing being acute. The testimony shows that from the east highway approach the view to the northwest is partially obstructed by trees and brush, and the view to the southeast by trees and by the bank of a cut which is from five to seven feet deep, and which extends about one hundred and fifty feet southeast from the crossing. The northwest highway approach ascends to the track. The low position of the highway to the west, in connection with the bank of the cut and trees on the land adjacent to the right of way, makes it impossible to see a train to the southeast until a traveler is within about twenty-five feet of the rail. To the northeast the view from this approach is comparatively unobstructed, since the track is on a fill.

The highway is a main traveled road leading from Madison to Prairie du Chien, and is a part of the state system of highways. Witnesses estimated the average daily traffic at from forty to sixty teams and from ten to fifteen automobiles. A count made from the company on December 1, 1913, from 6 a. m. to 7 p. m. shows twelve teams, one automobile and one pedestrian. Six regular passenger trains and five regular freight trains are scheduled on this division. A fatal accident occurred at this crossing on February 3, 1912.

The Bollenbeck Crossing.

This is the first crossing west of the Second Schulenberg crossing. The railway runs northwest and southeast and the highway approximately north and south. The railway is on a fill southeast of the crossing and the view in that direction is comparatively unobstructed from both highway approaches. To the northwest, however, the track lies in a deep cut which extends almost to the edge of the roadway, and the view of trains from either approach is cut off until a traveler is within twenty feet of the rail.

The highway connects with the Madison-Prairie du Chien road a short distance south of the crossing, and leads to Ashton on the north. Although it is not heavily traveled, it is regularly used by a number of farmers when they go to points in the northern part of the town of Middleton. A witness estimated the average traffic at less than ten teams a day, but stated that several school children regularly cross there. A count made for the company from 6 a. m. to 7 p. m. on December 1, 1913, shows four teams and seven pedestrians. Railway traffic is similar to that noted with reference to the Second Schulenberg crossing. A narrow escape was described by a witness.

The John Schoepp Crossing.

This is the first crossing northwest of the Bollenbeck Crossing. The highway parallels the track from the southeast, turns due north across the railway right of way, and again parallels the track for some distance to the northwest. The view of trains to the northwest is comparatively unobstructed from both highway approaches. To the southeast the view is badly obstructed by the banks of a cut through which the track curves. The

north bank slopes back into a hill. Witnesses testified that from either highway approach a train cannot be seen to the southeast until a traveler is very close to the rail.

The opinion was expressed by witnesses that highway travel at this point is very similar to that at the Second Schulenberg crossing, but the traffic count made for the railway company shows that a considerable portion of the travel which uses the Schoepp crossing does not cross at the other. The superintendent explained that many travelers turn south on a branch road which leaves the Madison-Prairie du Chien road between the Second Schulenberg and Bollenbeck crossings. The count referred to, which was taken on December 1, 1913, between 6 a. m. and 7 p. m., shows fifty-two teams, one automobile and eighteen pedestrians. Railway traffic is the same as that noted with reference to the Second Schulenberg crossing.

The company takes the position that the Second Schulenberg crossing can be made reasonably safe by grading away a portion of the obstructing banks east of the crossing and using the waste material to elevate the west highway approach so as to afford a more unobstructed view of trains. The representative of the Wisconsin highway commission suggested that the highway be straightened in connection with this grading. Our engineer is of the opinion that these changes would result in a satisfactory view of trains, if the trees south of the crossing and adjacent to the right of way are also removed. However, he points out that the crossing would still be an acute angle, which he regards as a condition to be avoided wherever possible.

Since it is admitted that the Bollenbeck crossing is very slightly traveled, the company takes the position that the expense of installing protection there is not warranted. Our engineer regards some protection as necessary.

The plan for relocation suggested at the hearings contemplates the closing of the Second Schulenberg and Bollenbeck crossings and the substitution therefor a new grade crossing about 470 feet northwest of the Second Schulenberg crossing, the highway being relocated along the north side of the track for this distance. The road which now intersects the track at the Bollenbeck crossing would, under this plan, be connected with the new crossing by a new north and south highway about nine hundred feet in length. Our engineer estimates that the new north and south road would cost $870 and that the remainder of the work

would cost approximately $635, making a total of $1,505 for the entire improvement. Since the land on both sides of the right of way at the Bollenbeck crossing is owned by a farmer who is obliged to cross the track frequently in the course of his farm work, it would be necessary to retain this crossing for his private use.

With reference to the John Schoepp crossing, it was proposed to continue the highway along the south side of the right of way to a new grade crossing located far enough from the cut to allow a more unobstructed view. Some difference of opinion was expressed as to how far northwest of the present site the new crossing should be located. The town chairman stated that a farm house stands north of the track and about four hundred feet west of the crossing, and suggested that if the crossing is relocated, it should be placed about opposite this house. The company's engineer submitted a plan which contemplates the opening of a new crossing about 850 feet northwest of the present site. The Wisconsin highway commission suggests that the new crossing be constructed about 1,300 feet northwest of the existing one. Neither of these locations appears to be ideal, and it is very doubtful whether the change would obviate the necessity of some protective device at the new crossing. Moreover, the existing dangerous crossing would have to be retained as a private crossing if either of the two latter proposals were adopted.

In the light of the testimony and the reports of our engineering staff, we find that each of the crossings under consideration is more than ordinarily dangerous, and that further protection is necessary. In view of the fact that the Bollenbeck and Schoepp crossings cannot be entirely eliminated, and that they would necessarily be used by farmers as private crossings, the advantages to be gained by relocation would be largely offset by the additional danger to which these farmers would be subjected. In our judgment the installation of electric bells will adequately safeguard these crossings under the existing traffic conditions and will protect both the public and the residents of the adjacent land. The conditions at the Second Schulenberg crossing would, without question, be improved by the grading suggested by the company and the representative of the Wisconsin highway commission, but we feel that a bell would be necessary even with this grading, on account of the acuteness of the

angle of crossing and the presence of obstructing woods on private land in the southeast corner. The highway can be continued along the north side of the right of way for about 470 feet, as proposed, to a new crossing at right angles, at a cost of approximately $635, which is not materially greater than the cost of grading the existing crossing and installing a bell. We regard this solution as the best under the circumstances, since it will provide a right angle crossing with an almost unobstructed view of trains. In our opinion the town should bear 10 per cent of the cost of this relocation, and the railway company 90 per cent thereof.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company install and maintain at the Bollenbeck crossing and at the John Schoepp crossing in the town of Cross Plains an automatic electric bell with an illuminated sign for night indication, plans to be submitted to the Commission for approval.

IT IS FURTHER ORDERED, That said railway company construct a new crossing at grade about 470 feet northwest of the Second Schulenberg crossing in the town of Cross Plains, extend the highway along the north side of the railway right of way to a connection therewith, and provide a suitable connection with the existing highway south thereof, the newly constructed portions of the highway to be properly drained and surfaced and to have a roadway available for travel twenty feet in width, increasing to twenty-four feet within the right of way lines.

IT IS FURTHER ORDERED, That said railway company furnish all materials and labor, perform all of the work, and acquire all of the land necessary in making the alterations ordered herein; and that upon the completion of this work it furnish the Commission with a complete and detailed account of all expenses incurred by it therein, whereupon the Commission, with or without further hearing as may be deemed best, will determine the actual cost of such alterations; and the town of Cross Plains shall thereupon pay to the said railway company 10 per cent of the cost as so determined by the Commission, and 90 per cent thereof shall be borne by the said railway company.

IT IS FURTHER ORDERED, That when the alterations ordered herein shall be completed and the new crossing opened for public travel, that portion of the highway now crossing the railway

track at grade within the right of way lines at the Second Schulenberg crossing be closed to public travel, and the said railway company is hereby directed to enclose said portion of the highway with continuous fences so that it cannot be used by the public.

Ninety days is considered a reasonable time within which to comply with this order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SERVICE OF THE STEVENS POINT LIGHTING COMPANY.

IN RE APPLICATION OF THE STEVENS POINT LIGHTING COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Oct. 3, 1913. Decided April 15, 1914.

Two separate actions are involved in this case: (1) the Commission, on its own motion, investigated the gas and electric service rendered by the Stevens Point Ltg. Co.; and (2) the company applied for authority to increase its rates for electric service.

With respect to the matter of service, it appears that the utility has at no time fully complied with the rules of the Commission concerning standards of service. The utility has failed specifically to comply with the rules prescribed in *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418, for the making of periodic tests of gas and electric meters and the keeping of records of such tests, the keeping of station records and the control of voltage variation in electric utilities. The utility has, however, largely removed the main causes of complaint, voltage variation and "line drop", by the rehabilitation of its distribution system.

With respect to the matter of electric rates, the utility alleges that its present power schedule is discriminatory because it permits long hour consumers to obtain current at an excessively low rate and asks for an increase in rates to power consumers, even though it be necessary to decrease lighting rates to offset the increased revenues derived from a higher power schedule. The utility secures its power from the Stevens Point Power Co., but inasmuch as the utility is the sole customer of the power company and the two companies have identical personnels of owners and executives, it appears that the companies are but nominally separate entities. A valuation of the properties of the two companies was made and the revenues and expenses of the electric department of the utility were investigated. The expenses in question were apportioned between capacity and output and further apportioned among municipal street lighting, commercial lighting, and power, and the unit costs were ascertained. The rate now exacted by the utility for current supplied for commercial lighting is 13½ cts. per kw-hr., minimum bill 50 cts., although the utility has a schedule on file with the Commission providing for reductions to 12 cts. per kw-hr. for the second 100 kw-hr., 11 cts. per kw-hr. for the third 100 kw-hr. and 10 cts. for all current used in excess of 300 kw-hr. No explanation of this unauthorized increase in rates is given. A schedule of rates believed to be reasonable is constructed and its probable effects on various sized installations in each classification of consumers determined. The estimates of revenues to be received under the schedule suggested, when summarized and compared with the present reve-

nues, show a general reduction in revenues amounting to 13 per cent.

The failure of a utility to make allowance for depreciation if the earnings have been sufficient is tantamount to a withdrawal of capital from the business and the cost of reproduction new must be diminished in determining the fair value upon which the reasonable return allowed is to be based when an adequate reserve for depreciation has not been provided. The utility is, however, entitled to earn an amount sufficient to offset future depreciation. In the instant case 4 per cent on the cost new is allowed as an operating expense to cover depreciation.

An excessively low book charge for power supplied by one of two interdependent companies to the other is not necessarily conclusive on the Commission, for the Commission can no more recognize such a charge as proper than it could an unreasonably high book charge. A revision of the power expense to meet the existing conditions is therefore made in the instant case.

A public utility which possesses an especially economical source of supply is not entitled to retain the entire saving effected by it but a portion of the saving should be given to the public in the form of lower rates.

Held: 1. Although the utility has improved conditions in its effort to comply with service regulations, its compliance with these regulations is still unsatisfactory with respect to the making of meter tests and the keeping of the records of these tests.

2. The rates exacted by the utility for commercial electric lighting and power service are unjustly discriminatory as between long hour and short hour users, and the charges made for street lighting are excessive.

The utility is ordered: (1) to conform within sixty days to the service rules which it has been violating and to all others set forth in *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418; and (2) to put into effect a schedule of electric rates prescribed by the Commission for commercial lighting, power and street lighting. The rate ordered for street lighting is to become effective only when the city of Stevens Point has filed notice with the Commission and the utility of its acceptance of a contract providing for the service of ninety or more lamps.

The present case involves two separate actions, one concerning service and one concerning rates. The Commission on February 27, 1913, ordered, on its own motion, an investigation of the service rendered by the Stevens Point Lighting Company. On March 4 following, the company filed an application for an increase in rates for electric current. A valuation of the property was therefore made and on October 3, 1913, the whole matter came up for hearing in Madison. *Jas. Mainland,* superintendent, and *F. J. Natwick* appeared for the company. No appearances were made in opposition to the petition for an increase in rates.

The motion to investigate the services at Stevens Point was a direct result of an inspection made by the engineering staff of the Commission, and includes both the gas and electric depart-

ments. The two chief complaints against the electric service were abnormal variations in voltage and "line drop." Some steps towards improving existing conditions had been made previous to the investigation. It developed at the hearing that material for rehabilitation of parts of the distribution system had been purchased but that the undertaking had been delayed because of agitation for an underground system in the down-town district. The changes contemplated were adequate to remedy the poor service rendered in respect to voltage variation and "line drop." The policy of the company in regard to meter testing and station records seemed to be otherwise than as prescribed by the Commission.

As to the application for an increase of rates, the testimony shows that the company feels the present schedule to be inadequate to cover the varying situations. The company believes the schedule to be discriminatory because it permits long hour consumers to obtain current at an exceedingly low rate that does not recompense the company for the service rendered. An increase in power rates is accordingly asked, for which the company is willing to accept a decrease in lighting rates to offset the increased revenues derived from a higher power schedule.

THE SITUATION AT STEVENS POINT.

The Stevens Point Lighting Company supplies the city of Stevens Point with electricity supplied to it, in turn, by the Stevens Point Power Company. The latter company operates a hydraulic plant at Jordan, some few miles distant, but delivery of current to the distributing company appears to be off the generators, since no operating or maintaining expenses of transmission and transformation appear on the books of the power company. The distinction between the two companies as separate entities is more nominal than real, since the personnel of owners and executives of the one is identical with that of the other.

The annual reports of the lighting company since 1908 show an annual expenditure of $5,500 for current purchased. No records of consumption have been kept but it is known that the annual output of the generating plant has steadily increased towards its capacity. Thus the unit price per kilowatt-hour purchased has steadily decreased. The basis of such a rate is not

clear. A further discussion of this follows under power generating costs where it is more pertinent.

I. SERVICE.

At no time has the Commission received from the Stevens Point Lighting Company an adequate response to its rules in regard to service regulation. Inspections have necessarily been frequent, but little progress had been made up to the time the Commission ordered an investigation of the service rendered by the company. Some mention has been made previously of the gist of the testimony taken at the hearing.

The following rules as prescribed in *In re Standards for Gas and Electric Service,* 1913, 12 W. R. C. R. 418, have been specifically violated.

Gas Department.

PERIODIC TESTS.

"Rule 2. Each gas service meter shall be tested before installation and shall be removed, tested and overhauled at least once every forty-eight months, and adjusted whenever it is found to be incorrect. At least two consecutive test runs must be made which agree within one-half of one per cent."

The most recent inspection indicates that ninety meters are now overdue for test.

METER TEST RECORDS.

"Rule 3. Whenever a gas service meter is tested the original test record shall be kept indicating the information necessary for identifying the meter, the reason for making the test, the reading of the meter before being disturbed and the accuracy of measurement, together with all data taken at the time of the test. This record must be sufficiently complete to permit the convenient checking of the methods employed and the calculations. A record shall also be kept, numerically arranged, indicating approximately when the meter was purchased, its size, its identification, its various places of installation with dates of installation and removal, and the dates and general results of all tests."

Although the company has recognized the desirability of such records, no steps have been taken toward the installation of a system. Unless a record of previous tests on each meter is available, it is impossible to make a complete periodic meter test.

Electric Department.

PERIODIC TESTS.

"Rule 17. Each watt-hour meter shall be tested according to the following schedule * * *

"Single phase, induction type meters having current capacities not exceeding 50 amperes, shall be tested at least once every twenty-four months and as much oftener as the results obtained shall warrant.

"All single phase induction type meters having current capacities exceeding 50 amperes and all polyphase and commutator type meters having voltage ratings not exceeding 250 volts and current capacities not exceeding 50 amperes shall be tested at least once every twelve months.

"All other watt-hour meters shall be tested at least once every six months.

"In no case shall commutator type meters having heavy moving elements and sapphire jewels be allowed to make more than 1,000,000 revolutions between tests. Where meters are found to register considerably in error when tested on the above schedule the Commission reserves the right to order the particular meter or class of meters tested more frequently."

Although the company was delinquent in respect to the above rule at the time of the hearing, at present the periodic meter testing appears to be kept up in a satisfactory manner.

METER TEST RECORDS.

"Rule 18. Whenever an electricity meter is tested the original test record shall be kept indicating the information necessary for identifying the meter, the reasons for making the test, the reading of the meter before being disturbed, a statement regarding creepage and the accuracy of measurement together with all data taken at the time of the test. This record must be sufficiently complete to permit the convenient checking of the methods and the calculations. All utilities having more than 250 electricity meters in service shall maintain a meter record, numerically arranged, indicating approximately when the meter was purchased, its identification, its various places of installation with dates of installation and removal, and the dates and general results of all tests, and shall tabulate the results of tests according to types of meters and intervals of test, compiled monthly and annually."

Conditions with respect to electric meter records are the same as with gas meter records and the same discussion applies here.

STATION RECORDS.

"Rule 24. Each utility furnishing electric service shall keep a record of the time of starting and shutting down power station equipment and feeders together with the indication of the principal switchboard instruments at sufficiently frequent intervals to show the characteristics of the load."

The keeping of a daily station log sheet is of primary importance. Such a sheet should furnish a daily record of output for different classes of service and should also indicate the demands made upon the plant at frequent intervals. These data are essential if the utility professes to return a complete and adequate annual report to the Commission.

VOLTAGE VARIATION.

"Rule 25. Each electric utility operating in a city having a population of 1,500 or more shall adopt a standard voltage for the entire constant potential system and shall maintain the voltage within three per cent of such standard on all lighting circuits during lighting hours; on power circuits and during other than lighting hours the voltage shall be maintained within ten per cent of the standard. All other electric utilities shall maintain their voltage regulation on all constant potential circuits during lighting hours so that the maximum voltage furnished any consumer shall not be more than six per cent above the minimum voltage at that consumer's cut-out."

The failure of the utility to keep within the above rule is attributable in part to the delay of reconstruction work caused by agitation for an underground system down-town. The progress made up to the time of the last inspection is indicated by the following memorandum submitted at that time:

"The voltage regulation has been materially improved by changes on the distribution system although in one of the localities where records were taken the voltage dropped abnormally low. Further changes are being made and it is probable that when these are completed the service will be satisfactory. During the last inspection ice trouble at the plant caused practically a shut-down on the system from 7:30 to 8:15 p. m. After the steam plant was started the voltage was carried somewhat low, but service was maintained until the ice was cleared away. The following material has been used on rearrangement of the distribution system within the past few months: 3,000 ft. No. 1 wire, 1,000 ft. No. 2 wire, 5,400 ft. No. 4 wire, 12,100 ft. No. 6 wire, 275 cross-arms, 18 new poles, as well as a number of

changes in transformers. There are still a number of corner poles where the arrangement of wires is not entirely satisfactory. When these are changed, it is proposed to increase the voltage on the primary circuit to 2,300, which will materially improve the regulation on the system, as it will greatly reduce the primary losses. It is contemplated that this work will be completed by March 15."

VOLTAGE SURVEYS.

"Rule 26. Each utility furnishing electric service shall provide itself with one or more portable indicating voltmeters and each utility serving more than 250 consumers shall have one or more portable graphic recording voltmeters, these instruments to be of a type and capacity suited to the voltage supplied. Each of the utilities shall make a sufficient number of voltage surveys to indicate the service furnished from each transformer and feeder and to satisfy the Commission of its compliance with the voltage requirements, and those having graphic recording voltmeters shall keep at least one of these voltmeters in continuous service at the plant, office or some consumer's premises. All voltage records are to be kept open for public inspection."

The inspector reports that "voltage surveys have not been made as required, but the manager has stated that this survey will be started as soon as another graphic recording instrument can be purchased and delivered."

Although the decision *In re Standards for Gas and Electric Service,* 1913, 12 W. R. C. R. 418, superseding former standards laid down on July 24, 1908, in 2 W. R. C. R. 632, in conformity to sec. 1797*m*—23, ch. 499, laws of 1907, formally orders that the above rules be adhered to, a specific order pertaining to the rules violated may make their application in the instant case more clear.

II. RATES.

Schedule.

The Stevens Point Lighting Company, petitioner as to the matter of rates, has charged the following rates:

Commercial Lighting
Minimum, 50 cts.
13½ cts. per kw-hr. for current consumed.

Commercial Power
Minimum monthly charge $1.00 per h. p. per month
Maximum monthly charge $3.00 per h. p. per month
4 cts. per kw-hr. between these rates.

Street Lighting

7.5 amp. a. c. series enclosed arcs on moonlight schedule at $78 per year.

The commercial lighting rates filed with the Commission provide for a reduction of 12 cts. per kw-hr. for the second 100 kw-hr., 11 cts. per kw-hr. for the third, and 10 cts. for all used in excess of the 300 kw-hr. No other rate schedule than this has been authorized by the Commission, nor has the company explained its unauthorized increase in rates.

The commercial power schedule shows a possibility of unlimited use by power users at a certain maximum price per horse power which tends toward an unjust discrimination against small users. The company has recognized this fact in filing its application. A more scientific rate will relieve this condition.

VALUATION.

In view of the interdependent relations sustained by the two companies at Stevens Point the properties have been valued *in toto* by the Commission. The final summary of this appraisal follows as Table I:

TABLE I.

VALUATION OF THE STEVENS POINT LIGHTING & POWER COS.

As of March 30, 1913.

Items of Valuation.	Electric.		Power Company.		Gas.		Total.	
	Cost new.	Present value.	Cost new	Present value.	Cost new.	Present value.	Cost new.	Present value.
A. Land	$635	$635	$1,890	$1,890	$800	$800	$3,325	$3,325
B. Transmission and distributi'n	28,804	$19,298	7,273	5,500	38,840	34,290	74,917	59,088
C. Buildings and miscellaneous structures	9,333	7,861	16,295	13,019	4,848	4,341	30,476	25,221

NOTE:—12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

BALANCE SHEET.

The balance sheet of the electric department of the Stevens Point Lighting Company for the year ending June 30, 1913, is included here as Table II:

TABLE II.
BALANCE SHEET.
STEVENS POINT LIGHTING COMPANY, ELECTRIC UTILITY.
As of June 30, 1913.

Assets.			*Liabilities.*	
Property and plant:			Capital liabilities:	
Cost beginning of year	$144,163 70		Capital stock common	$52,000 00
Construction and equipment current fiscal year	5,114 44		Funded debt	65,000 00
Cost close of year		$149,278 14	Reserve sinking and special fund liabilities:	
Current assets;			Uncollectible accounts reserve	72 00
Cash		547 61	Current liabilities:	
Notes and bills receivable		20 18	Notes and bills payable	15,674 04
Accounts receivable		5,906 86	Accounts payable	32,118 65
Materials and supplies		371 62	Accrued liabilities:	
Prepaid accounts:			Taxes accrued	413 40
Prepaid insurance		274 15	Unmatured interest on funded debt accrued	1,354 17
Miscellaneous prepaid accounts		12 10	Unmatured interest on notes and bills payable accrued	70 05
Open accounts		636 78		
Deficit		9,654 87		
Total assets		$166,702 31	Total liabilities	$166,702 31

The chief asset of the electric utility shown on the balance sheet is in its property and plant account of $149,278.14. Capital liabilities are: common stock $52,000, funded debt $65,000, or a total of $117,000. The cost of reproduction new of the plant as shown in Table I is $59,264; its present value is $39,565. The variance between actual and capitalized value is so great that little consideration may be given to the book value reported.

It will also be noted that no depreciation reserve is shown among the liabilities. The effect of this omission will be discussed in the determination of the fair value upon which the rate of return is based.

INCOME ACCOUNTS.

A comparative table of income accounts shows the development of the company's electric business since 1909:

TABLE III.

COMPARISON OF INCOME ACCOUNTS, ELECTRIC UTILITY.

STEVENS POINT LIGHTING COMPANY.

[1] Included in Commercial lighting earnings.

Inasmuch as no separation of revenues as between lighting and power has been made prior to 1913, the development of these two classes can not be shown. The total revenues, with the exception of 1911, show a marked annual increase. Operating expenses, on the other hand, have not increased proportionately, thus enabling the utility to make a material decrease in its total deficit. The absence of an annual charge for depreciation is also to be noted.

STATISTICS OF PRODUCTION.

In addition to the requirements set forth in the service investigation, the Commission further demands that certain physical data to be submitted in the annual report of the utility. These data are required not only for computation of unit costs, publication of which is prescribed by law, but also for rate investigation purposes when the occasion arises. As a basis for unit costs of service the physical data are highly important, for only through such units can a comparison of all utilities be obtained. In a rate investigation, the accuracy of expense apportionments depends largely on the correctness of physical data on hand.

In the present case it has been impossible to secure all the desired data. The company has no records of output or of demand. In some instances therefore estimates have of necessity been used.

CONSUMPTION.

A summary of commercial power consumption was furnished by the company, but estimates of commercial lighting and of street lighting have been made. As finally apportioned for the purposes of this case, the consumption is as follows:

Class of service	*Per cent*	*Amount*
Commercial lighting	35.2	150,000 kw-hr.
Commercial power	40.0	170,000 "
Street lighting	24.8	105,750 "
Total	100.0	425,750 "

MAXIMUM DEMAND.

The company was able to furnish the maximum demand data requested only as to the plant as a whole. As apportioned between classes of service the maximum demand is as follows:

Class of service	*Amount*	*Per cent*
Commercial lighting	190 kw.	58.5
Commercial power	90 "	27.7
Street lighting	45 "	13.8
Total	325 "	100.0

CONNECTED LOAD.

The total connected load of lighting and power was taken from records furnished by the company and may be summarized thus:

Commercial lighting	522 kw.
Commercial power	225 "
Street lighting	45 "
Total	792 "

CONSUMERS AND METERS.

These data have been secured from the annual report of the company:

Commercial lighting consumers	
Flat rate	7
Metered	535
Total	542
Commercial power consumers	24
Total consumers	566

OPERATING EXPENSE.

The detailed operating expenses of electric service as reported to the Commission are given in Table IV:

TABLE IV.

OPERATING EXPENSES.

Stevens Point Lighting Co. Electric Utility.

For Year Ending June 30, 1913.

Power		
Steam Power Generation		
Maintenance of power plant equipment	$378.07	
Maintenance of power plant buildings, fixtures and grounds	539.25	
Commercial electric current purchased	5,500.00	
Total		$6,417.32
Transmission and Transformation		
Substation and transformer station operating labor	$540.00	
Substation and transformer station supplies and expenses	55.89	
Total		595.89

Bro't forward		$7,013.21
Distribution		
Operation		
Distribution system operating labor	$697.85	
Distribution system supplies and expenses	85.65	
Total operation	$783.50	
Maintenance		
Maintenance of distribution system	$372.06	
Maintenance of transformers	20.10	
Maintenance of meters	10.83	
Total maintenance	$402.99	
Total		1,186.49
Consumption		
Municipal contract lighting		
Trimming and inspecting lamps	$185.00	
Lamp supplies	339.22	
Maintenance of municipal contract lamps	28.17	
Total		552.39
Commercial		
Collection expenses	$374.25	374.25
General		
Operation		
General office salaries	$2,072.45	
General office supplies and expenses	507.69	
Law expenses, general	53.76	
Miscellaneous general expenses	76.72	
Total operation	$2,710.62	
Total		2,710.62
Undistributed		
Insurance	$628.28	
Stationery and printing	71.48	
Operation of utility equipment	686.82	
Maintenance of utility equipment	3.28	
Total		1,389.86
Total of above items		$13,226.82
Taxes		830.92
Total operating expenses		$14,057.74

Generation of Current.

As has been previously indicated, current is purchased from the Stevens Point Power Company at a flat contract rate of $5,500 per annum. The lighting company also maintains an auxiliary steam plant. This, however, contributes only slightly to the total power expense. Estimating the current generated by hydraulic power as 510,000 kw-hr., which is the estimate of con-

sumption given above plus a reasonable percentage for current lost and unaccounted for, it is found that the lighting company is obtaining current at approximately 1 ct. per kw-hr. The average cost of power generation for forty-two Class B electric utilities, using hydraulic, steam or combined methods, is about 2.3 cts. It would seem that on account of the interdependent relations between the two companies no basis for an equitable charge for current had as yet been devised, necessity having forced no issue on that point. Hence it would appear that the book charge, for the purposes of rate investigation, is not necessarily conclusive, and that, on the contrary, the Commission could no more justify an acceptance of such an entry as conclusive, the facts appearing otherwise, than it could recognize as proper an unreasonably high amount merely because such an entry appeared on the books of the company.

If other conditions prevailed at Stevens Point, if the lighting company were but one of several large consumers supplied by the power company, the other large consumers being industrial concerns for whom a power rate must be less than the rate at which they could generate their own current, then a comparative indication would be given of the value of the service. But the lighting company at Stevens Point absorbs the whole output of the power company, so this comparison could not obtain here.

Or, should the lighting company be deprived of its present source of supply and be compelled to rely on other methods of generation, an obvious basis for comparison would be secured. Such an hypothesis has been applied to this situation and shows very clearly that the present source of supply has a value over other methods, a value that is shown by a relative cost delivered to the lighting company.

In such cases it is not always advisable to base the estimate of operating expense upon the narrowed margin of economy and efficiency. To do so deprives the company of an incentive to maintain or advance farther its policies of seeking the lowest cost consistent with the best service. Nor may operating expense be based upon other and more expensive methods of production because of the intervention of regulation. The regulative principle applicable here is that the public, in consideration that it forego competitive conditions in favor of a monopoly, is entitled to a portion of the saving effected. Thus, should com-

petitive conditions without regulation exist at Stevens Point, the present company, by reason of its advantageous source of power supply, would be in a position to meet and overcome competition from a utility whose generating costs must perforce be higher. But in recognizing the undesirability of such conditions, and in granting a sole and exclusive privilege to the present company, the public has sought to further its own welfare and not merely that of a small group of individuals.

Under such conditions, it appears that not more than $3,000 should be allowed to the company for the saving effected by water power operation.

DEPRECIATION.

It appears from the annual reports submitted by the company since 1907 that no allowance has been made for depreciation. This Commission has held that such a practice is tantamount to the withdrawal of capital from the business, if the earnings have been sufficient and that the cost of reproduction new must be diminished in determining the fair value upon which the return shall be based when an adequate reserve for depreciation has not been provided.

The company, however, is entitled to earn an amount sufficient to offset future depreciation, and accordingly an allowance of 4 per cent on the cost new of the plant has been included in the revised table of operating expenses.

INTEREST AND PROFITS.

Working Capital.

Some of those items which under normal circumstances go toward a larger sum for working capital are lacking in the instant case. Current is purchased on a yearly contract basis of $5,500, terms of payment being unknown but probably being on a monthly basis. This, however, is immaterial when the parties between whom the relation of debtor and creditor exists are considered. But where the current is purchased, large generating expenses such as coal and labor are eliminated, reducing the amount of capital which it is necessary to have available. This is also true of power plant supplies. As the present policy of

the company does not include free lamp renewals, the investment in a stock of lamps is thereby saved. The fact that electric appliances are not handled further reduces the amount of working capital necessary. The valuation discloses, under "Materials and supplies," meters, transformers and motors costing $1,863. Under the above conditions $3,000 is considered a reasonable and sufficient amount of working capital.

GOING VALUE.

No evidence was submitted at the hearing on the question of going value nor have the earliest records of the plant been available. Income accounts as submitted since 1907 under the Public Utilities Law, however, show an accumulated deficit. That this may be in part attributed to the cost of developing the business appears reasonable.

Under all circumstances of the case the allowance for going value will be about $6,000.

INTEREST AND PROFITS.

It appears in the instant case that $3,715.60 will be adequate to afford a reasonable return on the fair value of the property as discussed hitherto.

APPORTIONMENT OF EXPENSES.

The activities of an electric plant may be said to be two-fold. In addition to the ordinary function it performs in rendering actual service, each electric plant must stand ready to supply, in theory at least, an amount equal to the total connected load. In practice, however, the actual demand made upon the plant will not be as high as the connected load, due to the diversity of use made of the current supplied. The highest actual demand to which this so-called activity is subjected is known as the maximum demand or peak load. The distinction between the two activities is expressed by the load factor, or percentage of actual generation to the maximum possible generation under continuous operation at the maximum demand figure.

Under these conditions, there are certain expenses or portions of expenses dependent upon the readiness-to-serve feature, and these are commonly known as capacity or fixed expenses, since

they are in no way affected by the use in period of time. On the other hand, other expenses may be due to the quantity of service furnished, and such expenses are known as output, or variable expenses. Capacity expenses will therefore bear a direct relation to the maximum demand while output expenses will be a result of the amount of current generated, or output.

Operating expenses are also apportioned between classes of service in order that each class may be self-supporting and that power users, service to whom is cheaper than to lighting consumers, may not be forced to bear an unjust share of the total expense.

Apportionments on these bases have been made in this case. Table V shows an apportionment between capacity and output of the revised operating expenses. Table VI and VII show a further apportionment of capacity and output expenses among classes of service. A summary of these apportionments appears as Table VIII.

TABLE V.

APPORTIONMENT OF REVISED EXPENSES BETWEEN CAPACITY AND OUTPUT.

Based on Year Ending June 13, 1913.

	Capacity.	Output.	Total.
Power	$4,708 66	$4,708 66	$9,417 32

TABLE VIII.

SUMMARY OF EXPENSE APPORTIONMENTS.

STEVENS POINT LIGHTING COMPANY.

Based on Year Ending June 30, 1913.

Class of service.	Capacity.	Output.	Total.
Commercial lighting	$7,291 75	$4,588 32	$11,880 07
Commercial power	2,882 12	3,383 48	6,265 60
Municipal street lighting	2,295 58	2,629 33	4,924 91
Total	$12,469 45	$10,601 13	$23,070 58

UNIT COST OF SERVICE.

When the component items of Table VIII above are reduced to unit costs according to their respective functions of capacity or demand, and further extended into charts showing the average cost of service, an indication of a reasonable rate appears. These items can now be considered separately under the several classes of service.

COMMERCIAL LIGHTING.

In determining the unit cost for capacity expense, the physical unit used is the active connected kilowatt. Although either the total connected load or the active connected load may be used in this connection, the latter is usually regarded as giving a truer division on the basis of *use*. The principle recognized by the *active* load basis is that a consumer who has additional units in a room for convenience alone will not use his whole load in the same proportion as a consumer who has but a single unit. In the present case the company reports 522 kw. connected. Because no consumer records have been available, an analysis to determine the active percentage has not been made. An estimate based on similar statistics from other companies applied to this situation indicates that 261 kw. should be considered active. As the total capacity expense is $7,291 per year, the expense per active kilowatt per year is $27.93. On a monthly basis this expense is $2.33 and per day it is 7.7 cts. When the use exceeds one hour per day, this unit is proportionally decreased, resulting in a lower cost per kilowatt-hour.

The unit output cost is obtained by dividing the total consumption into the total output expense. There being a consumption of 150,000 kw-hr., and a total expense of $4,588.32, the unit cost is therefore 3.1 cts. per kw-hr.

Charted in a manner showing the average cost per kilowatt-hour, these costs appear in Table IX below:

TABLE IX.

COMMERCIAL LIGHTING. AVERAGE TOTAL COST PER KILOWATT-HOUR.

Hours use daily.	Capacity cost.	Output cost.	Total average cost.
0.5	15.4 cts.	3.1 cts.	18.5 cts.
1	7.7	"	10.8
2	3.9	"	7.0
3	2.6	"	5.7
4	1.9	"	5.0
5	1.5	"	4.6
6	1.3	"	4.4
7	1.1	"	4.2
8	1.0	"	4.1
9	.9	"	4.0
10	.8	"	3.9

The company has been charging 13½ cts. per kw-hr. for all current sold. Under such conditions the long hour user bears an unreasonable share of the capacity expense. A flat meter rate schedule is therefore unjustly discriminatory in favor of short hour users, and in the schedule to be suggested, cognizance will be taken of the decreasing cost of service resultant from increasing daily use of a given connected load.

PROPOSED SCHEDULE.

The cost chart given above indicates the following as a reasonable schedule for lighting service:

Primary, 12 cts. net per kw-hr. for the first 30 kw-hr. or less used per active kilowatt connected.

Secondary, 7 cts. net per kw-hr. for the next 60 kw-hr. or less used per active kilowatt connected.

Excess, 5 cts. per kw-hr. for all current consumed in excess of 90 kw-hr. per active kilowatt connected.

Minimum Bill.

The present schedule includes a minimum monthly charge of 50 cts. The justice of such a charge has been repeatedly upheld

in former decisions; in the present case the amount is very reasonable and will not be changed as a net rate.

Estimated Revenues.

No information is at hand to show very exactly the amount of current that would be paid for at the primary, secondary and excess rates of the schedule suggested above. But from general averages which have been found to be applicable in such cases as this, it is thought that the revenues for lighting sales amounting to 150,000 kw-hr. would be as shown in the following table:

Class.	Per cent.	Kw-hr.	Net rate.	Amount.
Primary	41	61,500	12 cts.	$7,380 00
Secondary	35	52,500	7 cts.	3,675 00
Excess	24	36,000	5 cts.	1,800 00
Total	100	150,000	8.6 cts.	$12,855 00
Additional revenue from minimum bills				300 00
Total estimated revenue				$13,155 00

Comparison of Schedules.

It has not been possible to determine the effect of the lighting schedule on any particular consumers because of the lack of consumer record cards. However, tables have been prepared to show the savings effected by the schedule suggested. These tables have been made to show the effect of long and short periods of use of various sized installations in each classification of consumers. Lighting consumers are commonly classified into three or more groups. Class A includes residences, Class B stores and similar establishments, Class C warehouses and elevators. Other classes are sometimes created to meet special conditions. The theory supporting such a division is that the percentage of the total number of lamps which any one consumer of any one class will use at any given time varies from the percentage of use to which any installation of another class will be put.

TABLE X.

COMPARISON OF PRESENT AND SUGGESTED BILLS.

COMMERCIAL LIGHTING.

Class A Installations.

Table X shows computations for Class A installations, such as residences, flats, etc. having connected loads of 500, 1,000 and 1,500 watts. The installation of the average residence will be between 500 and 1,000 watts, while an approximation of the bills of large residences will be found under the 1,500 watt computation. The difference between the suggested primary rate and the present rate is 1½ cts. per kw-hr., or a reduction of 11 per cent on primary use alone. A relatively larger reduction is noticed, however, when the use exceeds 30 kw-hr. per active kilowatt connected, at which time the secondary rate becomes effective.

It will be noticed that where the installation exceeds 500 watts, a decreasing percentage of the consumption is charged at the primary rate and a relatively larger amount at the secondary and excess rates.

Table XI discloses the same situation in regard to stores and like establishments, known as Class B, and elevators and warehouses, known as Class C.

COMMERCIAL POWER.

The following table shows the computation of the active connected power load at Stevens Point from records of actual load furnished by the company:

	Connected load in h. p.	Per cent active.	Active connected load in h. p.
First 10 h p.	191	90	172
Next 20 "	65	75	49
Next 30 "	30	60	18
All over 60 h p.	15	50	8
Total	301	82	247

Reference to the apportionment of power expense between capacity and output in foregoing tables will show a capacity charge of $2,882.12. Reduced to a kilowatt basis, the active connected load given above is 184 kilowatts. Following the same method of computing the capacity unit as outlined under commercial lighting, it is found that the annual capacity expense per kilowatt is $15.64. In terms of days, it amounts to 4.28 cts.

The output expense is $3,383.48 and the power consumption is 170,000 kw-hr., hence the output cost per kilowatt hour is 2.00 cts. The decreasing average cost per kilowatt hour is shown by Table XII following:

TABLE XII.

SHOWING DECREASING UNIT COST OF POWER.

Hours use daily.	Capacity cost per kw-hr.	Output cost per kw-hr.	Total cost per kw-hr.
0.5	8.56 cts.	2.00 cts.	10.56 cts.
1	4.28	"	6.28
2	2.14	"	4.14
3	1.43	"	3.43
4	1.07	"	3.07
5	.86	"	2.86
6	.71	"	2.71
7	.61	"	2.61
8	.54	"	2.54
9	.48	"	2.48
10	.43	"	2.43
15	.28	"	2.28

Proposed Schedule.

It is thought that a schedule similar in form to that of commercial lighting will be most suitable for Stevens Point. Such a schedule provides for a gradual decrease in the price per kilowatt hour without being open to the objections found in the present power schedule.

The schedule for power as suggested is:

10 cts. net or 11 cts. gross for the first 15 kw-hr. used per active kilowatt connected per month.

4 cts. net or 5 cts. gross for the next 45 kw-hr. used per active kilowatt connected per month.

2 cts. net or 3 cts. gross for all over 60 kw-hr. used per active kilowatt per month.

Minimum Bill.

In order that the company may be adequately recompensed for its readiness to serve certain large installations which at certain seasons may use very little current, a minimum bill based on the size of the active horse power connected has been deemed advisable in this case. In other towns where there are a multitude of larger consumers having a wide diversity of use, a util-

ity need not keep its capacity near the sum of the different connected loads on the system. A smaller plant, similar to that at Stevens Point, must, however, be constantly ready to serve the two or three larger consumers at the same time. This necessitates that the plant capacity must more nearly approach the total connected load than the capacity of a plant whose consumers have a greater diversity of use. Under these conditions the utility must be allowed to charge the consumer, whose demand has made the added installation necessary, an amount commensurate with the size of the installation. A charge of 50 cts. for the first two active horse power connected, or any part thereof, with an added charge of 25 cts. for each additional horse power, is suggested.

Estimated Power Revenues.

An analysis of power consumption records submitted by the company shows the percentage of consumption falling within each class:

Class.	Kw-hr.	Rate.	Amount.
Primary	23,239	10 cts.	$2,323 90
Secondary	48,467	4 cts.	1,938 68
Excess	98,294	2 cts.	1,965 88
Total	170,000	3.66 cts.	$6,228 46
Additional revenue from minimum bills			75 00
Total estimated revenue			$6,303 46

Comparison of Power Schedules.

Table XIII presents a comparison of present and suggested rates as indicated by the monthly statements. Each item represents a consumer's bill during 1913, the period for which the company submitted its report. In almost all cases in which a reduction is effective it will be noticed that the minimum bill has held up the present rate. Where the total bill has been increased, it has been because of the retarding effect of the maximum rate upon the unit price per kilowatt hour and because the consumption per unit was too small to receive full advantage of the decreasing rates.

TABLE XIII.

COMPARISON OF POWER CONSUMERS' BILLS,

[1] Minimum bill.

STREET LIGHTING.

The city of Stevens Point pays for eighty-three lamps at the rate of $78 per year. In addition to these, service for seven lamps is furnished free by the company, three more are contracted for by the county and one by the state, making a total of ninety-four lamps in service. The company received $6,384 in 1913 for this service, or an average of $68 per lamp.

Under what conditions free service for seven lamps is furnished the city is not clear. As between the three consumers to whom arc lamp service is rendered, the city, county and state,

it is but equitable to apportion the expense of this free service to the city. It would therefore appear proper to discontinue free service and base a rate on the total service rendered.

Under such conditions, a rate of $54 per lamp per year will return a reasonable profit upon the street lighting investment.

This rate is based on the present moonlight schedule. The revenue to be obtained from this service is estimated at $5.076. This reduces present revenues for this class of service by $1,308.

SUMMARY OF REVENUES.

The estimates of revenues to be received under the schedule suggested, when summarized and compared with the present revenues, show a general reduction in revenues amounting to 13 per cent:

	Estimated revenues.	Present revenue.
Commercial lighting	$13,155 00	$16,347 72
Power	6,303 46	5,357 13
Street lighting	5,076 00	6,384 90
Total	$24,534 46	$28,089 75

SUMMARY.

The Commission has found it difficult to overcome a tendency toward procrastination on the part of the Stevens Point Lighting Company in the matter of service regulation. Conditions have been improved, however, by numerous inspections. The main causes of complaint, voltage variation and "line drop," have been largely removed by a rehabilitated distribution system. Records of meter tests are not kept as yet in a satisfactory manner, but the installation of a workable system is a small matter when compared with other reforms that have been instituted. The company has been allowed ample time to overcome the remaining defects in its operating system.

Rate schedules for both commercial lighting and power service in Stevens Point have been unjustly discriminatory as between long and short hour users. The new schedules are designed to obviate this difficulty.

Existing arrangements as to power purchase between the Stevens Point Lighting Company and the Stevens Point Power Company have been found inadequate to cover the present situation, due to the interdependent relations existing between the two companies. A revision of the power expense has been made to meet the existing conditions.

Physical data necessary for the most accurate consideration of this case have been lacking and estimates have therefore been necessary in some instances. A strict compliance with service regulations has been ordered to remedy this defect.

ORDER.

IT IS THEREFORE ORDERED, That the Stevens Point Lighting Company, respondent in the matter of service investigation, conform specifically to the foregoing rules as enumerated, and in general to all others as set forth *In re Standards for Gas and Electric Service in the State of Wisconsin,* 1913, 12 W. R. C. R. 418.

Sixty days is deemed ample and sufficient time to fulfill this order.

IT IS FURTHER ORDERED, That the Stevens Point Lighting Company, petitioner in the matter of rates, set aside the schedule of rates now in force for the sale of electric current in Stevens Point and substitute therefor the following schedule of rates:

COMMERCIAL LIGHTING.

Minimum bill: 50 cts. net or 60 cts. gross.

Primary rate: 12 cts. net or 13 cts. gross per kw-hr. for the first 30 kw-hr. or less used per active kilowatt connected per month.

Secondary rate: 7 cts. net or 8 cts. gross per kw-hr. for the next 60 kw-hr. or less used per active kilowatt connected per month.

Excess rate: 5 cts. net or 6 cts. gross per kw-hr. for all current used in excess of 90 kw-hr. per active kilowatt connected per month.

"Active connected load" shall be computed according to the following classification of consumers' premises and by the percentages therein specifically designated:

Class A shall include residences, dwellings, flats, private rooming houses, hotels, sanitarium, hospitals and clubs in which meals and rooms are furnished. Where the total connected load is 500 watts or fraction thereof, 60 per cent of such total actual connected load shall be deemed active. Where the installation exceeds 500 watts, 33⅓ per cent of the total installation over and above 500 watts shall be deemed active.

Class B shall consist of banks, offices, both business and professional (including studios, photograph galleries, tailoring establishments, massage and hair dressing parlors), wholesale and retail merchandise establishments, such as art stores, bakeries, book and stationery stores, cigar and tobacco stores, coffee and tea stores, confectionery stores and ice cream parlors, crockery, drygoods and drug stores, electrical supply houses, flower stores (and greenhouses), furniture, clothing, grocery, hardware and harness stores, hay, grain, feed and coal stores and offices, meat markets, milk depots, jewelry, paint and wall paper, piano and music and picture stores, plumbing shops, saloons, pool and billiard halls and card rooms adjoining, shoe stores and shoe repair shops, tailor shops (including dyeing, cleaning and pressing establishments), undertakers, upholsterers, wine and liquor stores, theaters (including moving picture theaters, shooting galleries and other amusement places), corridors and halls in office and apartment buildings upon separate meters, dance and public halls, (including lodges and society rooms), restaurants (including eating places and lunch wagons), depots and public places for the conduct of railroad, express and telephone business, except as specifically excluded by Class C. Where the total connected load in this class is equal to, or less than 2.5 kilowatts, 70 per cent of such load shall be deemed active, for any installation over and above 2.5 kilowatts, that part exceeding 2.5 kilowatts shall be deemed 55 per cent active.

Class C shall consist of state, county and municipal buildings, churches, factories (including such small industrial establishments as machine shops, carpenter shops, blacksmith shops, tin shops and cigar factories), closing not later than 6 p. m., municipal, private and parochial schools, grain warehouses and elevators, freight and storage warehouses, stables and garages, both private, boarding and livery. Of this class, 55 per cent of the total connected load shall be deemed active.

POWER.

Minimum bill: 50 cts. for the first 2 active h. p. connected, or any part thereof, and 25 cts. for each additional active h. p. connected.

Primary rate: 10 cts. net or 11 cts. gross for the first 15 kw-hr. used per active kilowatt connected per month.

Secondary rate: 4 cts. net or 5 cts. gross for the next 45 kw-hr. used per active kilowatt connected per month.

Excess rate: 2 cts. net or 3 cts. gross for all current used in excess of 60 kw-hr. per active kilowatt connected per month.

The active connected horse power load shall be determined as follows:

First	10	h. p. connected	.....	90	per cent active
Next	20	" "	.....	75	" "
Next	30	" "	.....	60	" "
All over	60	" "	.....	50	" "

Discount.

The difference between the gross and net charges shall constitute a discount for prompt payment.

STREET LIGHTING.

The rate per arc lamp per year in the city of Stevens Point shall be $54 for the present style of street lighting, provided that the city of Stevens Point shall contract for the service of ninety or more lamps. This rate shall not become effective until the city of Stevens Point shall have filed notice with the Railway Commission of Wisconsin and the Stevens Point Lighting Company of its acceptance of the ninety lamp provision.

Free service by the Stevens Point Lighting Company shall be abolished.

H. G. DOUGLAS ET AL.
vs.
EQUITABLE ELECTRIC LIGHT COMPANY.

Decided April 21, 1914.

Informal complaints are made against the order issued in this matter July 11, 1913, 12 W. R. C. R. 337. The Commission held an informal conference with the complainants and the utility and re-investigated the matter from the point of view of the additional information disclosed at the conference. It is claimed by certain consumers that the commercial lighting rates fixed by the Commission are such that consumers with large installations now have to pay a much higher average rate per kw-hr. than previously, and by other consumers that the service charge for the use of power is excessive and that it should be eliminated. The city of Lake Geneva contends that the rate ordered for power furnished the city for use over its own street lighting distribution system is excessive when compared with the commercial lighting rate. Since the conference mentioned, the city and the utility have agreed upon a new rate for this service.

Held: 1. The commercial lighting schedule should be modified by the reduction of the excess rate to reduce the average charge per kw-hr. for consumers who use their active load long periods daily; by the reclassification of hotels, sanitariums, hospitals, Y. M. C. A., and clubs in which meals and rooms are furnished to more closely approximate the conditions under which they receive service; and by the establishment of a flat rate or excess indicator rate to provide a schedule for a new class of service not contemplated in the original order.

2. The power schedule should be modified by changing it from a service and energy charge to a primary, secondary and excess schedule of rates to avoid an excessive average rate per kw-hr. when the amount of current consumed is small; by reducing the connected load for power installations in which the capacity of the motor exceeds the possible load, in order to establish an equitable relation to other installations; and by the reduction in the percentage active for heating loads to establish an equitable relation with other classes and to place the rate for this service within the consumer's reach.

3. The rate for current sold to the city of Lake Geneva for street lighting, as now agreed upon between the city and the utility, is reasonable.

The utility is authorized to put into effect a new schedule of rates determined by the Commission.

SUPPLEMENTARY ORDER.

An order was entered, July 11, 1913 (12 W. R. C. R. 337), in the above entitled matter, which is a complaint of H. G. Douglas

el al. against the rates of the Equitable Electric Light Company of Lake Geneva. Several informal complaints have been made against the schedule of rates put into effect by the respondent upon order of the Commission. Accordingly, an informal conference was held at Lake Geneva, February 27, 1914, to ascertain the cause and scope of the objections made to the schedule of rates ordered. The conference was attended by members of the city council and the water and light commission, representatives of the company and of this Commission, and others. The additional information disclosed at this meeting and by a more complete informal investigation leads to the conclusion that some of the objections to the schedule of rates are well founded and that relief should be afforded through a modification of the original order.

Nature of Original Order.

The Commission's order of July 11, 1913 (12 W. R. C. R. 337), reduced the rate for lighting in Lake Geneva about 10 per cent and changed the schedule from a uniform rate per kw.-hr. to a charge dependent upon the length of time during which the consumer's active load is used. This form of schedule conforms to the cost of supplying service. It places the rate for a small lighting installation on the same level as the rate for a large installation for equal use of the load.

Analysis of the cost of operating the business showed that power service had not yielded revenue equal to the entire cost of supplying it. Nevertheless, the Commission did not deem it proper to increase these earnings, but the order did change the form of the power schedule from rates depending upon the number of kilowatt-hours consumed to a service and an energy charge.

The city owns the street lighting distribution system and buys current for its operation at a per kilowatt-hour rate. The investigation of the respondent's operating expenses showed that the cost of this service was equal to the earning from it. Therefore, the rate, which was 9 cts. per kw-hr., was not changed by the Commission.

The order also established a rate for street lighting at Genoa Junction.

OBJECTIONS TO THE ORDER.

The objections made against the new schedule of rates may be generalized as follows:

1. *Commercial Lighting.* The complainants against the lighting rate are a very few users with large installations. They claim that so much of the current used by them falls within the amount that must be paid for at the highest or primary rate that the average rate per kilowatt-hour is much higher under the new schedule than it was before.

2. *Commercial Power.* It is claimed that in many instances the amount of current used for power is so small in comparison with the size of the installations that the service charge is burdensome and causes the average rate per kilowatt-hour for the consumers affected to much exceed what the consumers can afford to pay. It is requested that the service charge be eliminated.

3. *Power for Street Lighting.* Representatives of the city contend that a rate of 9 cts. per kw-hr. is too high for current for street light considering the fact that the city owns and operates the street lighting distribution system. It is also said, in complaint, that the street lighting rate is too high when compared with the commercial lighting rate, in view of the many additional expenses involved in delivering current for commercial purposes to the consumer's premises.

COMMERCIAL LIGHTING.

Investigation of the facts reveals that the causes of the heavy burden falling upon some of the lighting users are two in number. First, the active load has been arrived at by the respondent by assuming that each opening supplies a certain arbitrary connected load while the fact is that the lamps vary much in size. In those instances, therefore, in which the average wattage rating of the lamps is much below the wattage assumed by the respondent, we find that the amounts to be paid for at the primary and secondary rates were placed at a higher figure than they would be if the active load were determined from the actual rating of the lamps. That a correction should be made in this practice of the respondent appears to be self-evident. The bills of many of the consumers would be decreased by the proper

change; others might be increased to some extent. Second, the number of openings, in the case of some consumers, is so large in proportion to the connected load and the diversity of the use of the lamps is so great that the maximum demand is much less than 55 per cent of the load connected. In billing such consumers for service it appears reasonable to determine the amount of current to be paid for at the primary and secondary rates by measurements of the maximum demand. But to require the utility to install maximum demand meters for all users plainly would increase the expense of the business without a commensurate benefit to its consumers as a whole. The particular difficulty appears to be due to the fact that hotels, sanitariums, hospitals and other places of similar character were designated, in the original order, as Class C establishments, while figures of connected load and demand seem to show that, at least in this case, the percentages for Class A are more appropriate. It appears that proper relief may be secured by a reclassification of some installations or by the use of maximum demand meters. A reclassification will therefore be made and the optional use of demand meters, for certain classes, will be provided for in the order.

The earlier opinion of the Commission (12 W. R. C. R., 337, 351) showed that the cost of supplying commercial lighting service varied according to the length of use of the load as shown in Table I:

TABLE I.

VARIABLE COST OF SERVICE.

Commercial Lighting.

Hrs. daily use of active load	Average cost per kw-hr.
1	13.78 cts.
2	9.74 "
3	8.39 "
4	7.72 "
5	7.32 "
6	7.05 "

The net rate was fixed, in the Commission's order, at 14 cts. per kw-hr. for the primary or first 30 hours' use per month of the active load, 12 cts. for the secondary or next 60 hours' use, and 8 cts. for the excess or all use over 90 hours per month. It was shown that the revenue under this schedule would have been about $11,584 which is less than the earnings but equal to the

cost of lighting service for the year ending June 30, 1912. Upon further consideration of the facts, it appears that a still further reduction may be made in the excess rate without materially reducing the company's earnings from the present service. By so reducing the rate, greater inducement would be offered to consumers to use "excess" current, which the company can supply at the lowest terms. The excess rate for lighting will therefore be reduced from 8 cts. to 6 cts. per kw.-hr.

Commercial Power.

The demand which consumers make upon the respondent's service for power for industrial use is not very great but the power business consists to a remarkable degree of service for domestic purposes. Many customers have large installations of electric stoves, heaters, vacuum cleaners, fans or other appliances. The use of almost any of these is not very extensive but, all together, they add considerably to the utility's business. The respondent believes that, because this service is used chiefly during the daylight hours, the business should not be lost and that the rate should be made sufficiently attractive to encourage the use of current for power purposes. This idea has merit as long as the revenue for the service furnishes something above the bare operating expense.

The power schedule ordered by the Commission was unfortunately such as to burden some of the power users with a prohibitive charge when the total number of kilowatt-hours consumed by them was insufficient to shoulder the service charge. But as the respondent's total power revenue was not increased by the new rate, corresponding relief must have been experienced by other consumers.

A few computations of the average charge per kilowatt-hour for various quantities of current consumed by a given load would show very plainly that a service charge plus an energy rate afford gradations in the bill, conforming to the cost of service. The objection to this form of schedule has real foundation, however, when, as indicated in the foregoing paragraph, the use of service is so limited that the cost greatly exceeds what the average consumer can afford to pay for it. This condition may be remedied either by limiting the maximum charge per kilowatt hour or by making the schedule similar in form to the

schedule for lighting service. The latter procedure seems to be most desired by the company and its consumers and will be followed in the instant case.

The expense assignable to power service in Lake Geneva was found to be $3,024, of which $1,218 is a capacity expense and $1,806 an output expense. (12 W. R. C. R. 337, 350.) The details of the computation will not be shown here, but the units representing the decrease of cost per unit of current with the increase of use ar shown in Table II:

TABLE II.

VARIABLE COST OF SERVICE.

Power.

Hours daily use of active load	Average cost per kw-hr.
1	8.16 cts.
2	6.38 "
3	5.79 "
4	5.49 "
5	5.31 "
6	5.19 "
7	5.11 "
8	5.04 "
9	5.00 "
10	4.96 "

The facts thus disclosed indicate that the power rate, if stated in the same form as the lighting schedule, should be as follows:

7.5 cts. per kw-hr. for the first 15 kw-hr. per active kw. per month;

5.5 cts. per kw-hr. for the next 30 kw-hr. per active kw. per month;

3.0 cts. per kw-hr. for all use over 45 kw-hr. per active kw. per hr.

The service charge having been eliminated from the schedule, it appears advisable to revert to the minimum bill of the respondent's earlier schedule. As there appears to be no objection to this, the matter requires no discussion.

STREET LIGHTING.

It was shown in the earlier opinion in this matter that the street lighting revenues, amounting to $2,682 for the year ending June 30, 1912, were practically equaled by the expenses which were $2,621. (12 W. R. C. R. 337, 350.) The total cost consisted of the items shown in Table III:

TABLE III.

STREET LIGHTING EXPENSES.

Item	Total	Amt. per kw-hr.
Generation	$1,330	4.6 cts.
Distribution	177	0.6 "
General and undistributed	463	1.6 "
Taxes	30	0.1 "
Depreciation	251	0.9 "
Interest	158	0.5 "
Rent	212	0.7 "
Total	$2,621	9.0 "

Statistics show that the amount paid for street lighting is usually about 4.5 cts. per kw-hr. for the large or Class A electric utilities and, for Class B utilities, which include the Lake Geneva plant, 5.5 cts. per kw-hr. Generally the street lighting service, which these utilities furnish, requires them to own and operate distribution systems as well as to supply required energy. Therefore the fact that the city gets only current in this instance adds to the appearance of unreasonableness of a rate per kilowatt hour that is much higher than cities usually pay. The higher cost for Lake Geneva can be accounted for to some degree by the fact that the number of hours the street lighting equipment is operated is much less than the average for other cities. The amount of current consumed for street lighting at Lake Geneva is therefore quite small compared with the size of the street lighting load. This is shown by the following table compiled from a special report of 153 electric utilities of Wisconsin:

STREET LIGHTING SCHEDULES.

Kind of schedule.	Average number of hours annually.	Utilities, number.	Per cent.
1. Every night, all night	3,980	65	42.5
2. Moonlight, all night	2,490	30	19.6
3. Every night, dusk to midnight	2,156	18	11.8
4. Moonlight, dusk to midnight	1,446	17	11.1
5. Every night, dusk to midnight, and 5 a. m. to daylight	2,845	2	1.3
6. Moonlight, dusk to midnight, and 5 a. m. to daylight	1,870	2	1.3
7. Moonlight, dusk to 12:30	1,800	2	1.3
8. Moonlight, dusk to 11 p. m.	1,320	5	3.3
9. Miscellaneous	.....	12	7.8
Lake Geneva, moonlight, dusk to midnight	1,340	.....	.....

The result of the comparatively short burning schedule at Lake Geneva is reflected in the character of the street lighting expense. Reference to the analysis of expenses shows that the fixed costs of the Lake Geneva street lighting service exceed considerably the variable costs. It is easy to see that, were the burning period extended to more nearly equal the usual lighting schedule, the rate could be placed at a lower figure.

But the condition discussed above does not entirely account for the higher cost shown by the analysis of expenses. It was pointed out in the earlier opinion that much of the high cost was attributable to the condition and arrangement of plant equipment and the fact that the cost could and probably would be reduced was given consideration in fixing the rate. Under ordinary circumstances, it appears, that the cost of generating this street lighting current would be from about 5.5 to 6.5 cts. per kw-hr. Except for the inefficiency of production that has prevailed in the past the conditions are not so unusual here that the rate should be fixed above the normal cost.

Some consideration has been given to the subject of a longer street lighting schedule. Another subject commanding attention in fixing a rate for service to the city is the possible use of current for pumping the city's water supply. Such service, if rendered at off-peak periods, would tend to reduce the average operating cost per kilowatt-hour in the same way that a longer street lighting schedule would reduce it; and the better the load factor produced by the pumping service, the lower could be the rate to the city. Assuming that the current consumed by the city would amount to 7 or 8 hours' daily use of the city's maximum demand, it appears that the average charge to the city for current for street lighting and pumping could be reduced to about 3.5 cts. per kw-hr. This condition would be met if the following schedule for service delivered at the company's switchboard were put into effect.

Primary, 7 cts. net, 8 cts. gross, per kw-hr. for the first 50 kw-hr. per month per kilowatt of demand;

Secondary, 4 cts. net, 5 cts. gross, per kw-hr. for the next 50 kw-hr. per month per kilowatt of demand;

Excess, 2 cts. net, 3 cts. gross. per kw-hr. for all use over 100 kw-hr. per month per kilowatt of demand.

Under this rate the current for street lighting service, as it is now rendered, would cost approximately 5 cts., per kw-hr. If

street lighting were supplied on a moonlight all night schedule, the cost would be about 3.75 cts. per kw-hr., and if on an every night all night schedule, 3.2 per kw-hr. Any use of current for pumping that would increase the load factor of the service to the city would tend to still further reduce these charges.

We have been informed that the city and the respondent have reached an agreement setting the rate for the present street lighting service at 5 cts. per kw-hr. This is quite close to the average charge under the rate proposed above for this service, but the city probably receives terms a little more favorable, under the rate agreed to, than under the proposed schedule. It appears proper, in this instance, to authorize the rate which has been accepted by both parties.

Flat Rates for Limited Service.

The company has filed with the Commission certain schedules to apply to patrolled service for display lighting and to residence and business lighting where the maximum demand is limited by a controlling device. In these schedules the rates consist of fixed charges based upon the amount of demand contracted for by the customers.

These rates are not inconsistent with the other schedules which the Commission will order. They have already been authorized but will be restated in the order that follows.

SUMMARY.

The investigation made upon informal complaint against the respondent's rates ordered by the Commission July 11, 1913 (12 W. R. C. R. 337), and upon request of the respondent, discloses that certain modifications of that order should be made as follows:

1. The reduction of the excess rate for commercial lighting to reduce the average charge per kilowatt-hour for consumers who use their active load long periods daily.

2. The reclassification of hotels, sanitariums, hospitals, Y. M. C. A., and clubs in which meals and rooms are furnished to more closely approximate the conditions under which they receive service.

3. The establishment of a flat rate or excess indicator rate to

provide a schedule for a new class of service not contemplated in the original order.

4. The change of the power schedule from a service and energy charge to a primary, secondary and excess schedule of rates, to avoid the excessive average rate per kilowatt-hour when the amount of current consumed is small.

5. The reduction in the connected load for power installations in which the capacity of the motor exceeds the possible load, to establish an equitable relation to other installations.

6. The reduction in the percentage active for heating loads to establish an equitable relation with other classes and to place the rate for this service within the consumers' reach.

7. The reduction of the power rate for street lighting to place the charge at about what the service should cost.

IT IS THEREFORE ORDERED, That the Equitable Electric Light Company, respondent, be and the same hereby is authorized to discontinue its present schedules of rates for electric service and place in effect as a substitute therefor the following rate schedules, deemed just and reasonable:

I. COMMERCIAL LIGHTING.

A. City of Lake Geneva.

(a) Meter Rate.

Primary: 14 cts. net, 15 cts. gross, per kw-hr. for the first 30 kw-hr. per month per kilowatt of active load.

Secondary: 12 cts. net, 13 cts. gross, per kw-hr. for the next 60 kw-hr. per month per kilowatt of active load.

Excess: 6 cts. net, 7 cts. gross, per kw-hr. for all in excess of 90 kw-hr. per month per kilowatt of active load.

The difference between gross and net rate shall constitute a discount for prompt payment.

Active load shall be determined as follows:

Class A shall include residences, dwellings, flats, rooming houses, hotels, sanitariums, hospitals, Y. M. C. A., and clubs in which meals and rooms are furnished. In this class 60 per cent of the first 500 watts connected and 33⅓ per cent of all in excess of 500 watts connected shall be deemed active, if the connected load is equivalent to 50 watts or more per opening. If the connected load is equivalent to less than 50 watts per open-

ing, 60 per cent of the first 500 watts connected, 33⅓ of the next 1,500 watts connected, and 20 per cent of all in excess of 2,000 watts connected shall be deemed active.

Class B shall include banks, offices, stores, shops, saloons, billiard and pool halls, depots, theaters, lodge rooms and clubs not includable in Class A. In this class, 70 per cent of the first 2.5 kw. connected and 55 per cent of all in excess of 2.5 kw. connected shall be deemed active.

Class C shall include public buildings, schools, churches, factories, warehouses, stables and garages. In this class, 55 per cent of the total connected load shall be deemed active.

For all lighting installations exceeding 5 kw. connected load, the active load shall, at the consumers' option, be determined by maximum demand meters.

The connected load shall be represented by the total wattage of lamps connected.

The minimum monthly bills for this schedule shall be:

Connected load	Minimum bill
Under 1 kw.	$0.60
From 1 to 2 kw.	0.80
From 2 to 5 kw.	1.25
Over 5 kw.	2.25

(b) Flat Rate or Excess Indicator Rate.

This rate shall apply only to consumers using tungsten lamps exclusively and to contracts for one year. The rate shall apply to the amount of demand contracted for which shall be limited or controlled by an excess indicator.

Residences ..... 1.0 cts. per watt per month

Business places ..... 1.5 cts. per watt per month

There shall be added to all bills the sum of 25 cts. per month which shall constitute a discount for prompt payment.

Minimum monthly bill for this schedule shall be $1.00.

(c) Patrolled Service for Display Lighting.

Patrolled service for window, sign or other display lighting to be turned on at dusk and off at midnight: 1.5 cts. per watt connected.

Discount for prompt payment of bills shall be 10 per cent.

B. Outside of City of Lake Geneva.

15 cts. per kw-hr. for all commercial lighting.

Minimum monthly bills for this schedule shall be:

Connected load	Minimum bill
Under 1 kw.	$0.60
From 1 to 2 kw.	0.80
From 2 to 5 kw.	1.25
Over 5 kw.	2.25

II. Commercial Power.

Primary: 7.5 cts. net, 8.5 cts. gross per kw-hr. for the first 15 kw-hr. per month per kilowatt of active load.

Secondary: 5.5 cts. net, 6.5 cts. gross per kw-hr. for the next 30 kw-hr. per month, per kilowatt of active load.

Excess: 3.0 cts. net, 4.0 cts. gross per kw-hr. for all over 45 kw-hr. per month per kilowatt of active load.

The difference between gross and net rate shall constitute a discount of prompt payment.

The active kilowatts connected shall be determined by multiplying the active horsepower rating by 0.746.

Active load shall be determined as follows:

Power.

90	per cent	of	the	first	10	h. p.	installed	shall be deemed	active.
75	"	"	"		20	h. p.	"	" "	"
60	"	"	"		30	h. p.	"	" "	"
50	"	"	"		60	h. p.	"	" "	"

Except, however, if capacity of the motor exceeds the possible load, *total possible* load in h. p. shall be deemed h. p. connected.

Heating. 20 per cent of the connected load.

If not more than 20 per cent of the connected load is power, the whole shall be deemed heating.

The minimum monthly bill for this schedule shall be $0.75.

III. Street Lighting.

A. Lake Geneva.

The rate for power sold to the city of Lake Geneva for street lighting shall be 5.0 cts. per kw-hr.

B. Genoa Junction.

A charge of $2 per month per 100 watt series tungsten lamp burning approximately 1,350 hours on a midnight moonlight schedule; company to furnish and make lamp renewals.

IN RE APPLICATION OF THE OCONOMOWOC WATER DEPARTMENT FOR AUTHORITY TO INCREASE RATES.

Decided April 21, 1914.

The Water Department of the city of Oconomowoc applies for authority to establish an annual minimum charge of $5. The utility has been exacting this charge for a number of years although, apparently through a misunderstanding it had not filed the charge with the Commission as a part of the original rate schedule. The equitableness of the charge is not questioned, and as there is no reason to believe the charge unreasonable, the application is granted.

Application in this matter was filed with the Commission on February 24, 1914. The hearing was set for April 9, 1914, but no appearances were entered.

This case has arisen from an apparent misunderstanding on the part of the people in charge of the water department of the city of Oconomowoc. The legal rates of the Oconomowoc water utility as filed with the Commission contained no provision for a minimum charge. Some time previous to the filing of the application in this case, information was received from the water department to the effect that an annual minimum charge of $5 had been in use for a number of years and should have been filed as a part of the originl rate schedule. The question of the reasonableness of this minimum charge has not been raised, but the utility was advised to file a formal application for authority to establish this rate in order to avoid any difficulty which might arise.

This application was filed in response to a suggestion made to the city by the Commission. Minimum charges of $5 per year are very common in Wisconsin, and so far as we know, the reasonableness of such charges has in no case been questioned. Although we are not in a position to make a detailed analysis of the costs of this particular utility at the present time, in order to determine accurately what the minimum charge ought to be, we see no reason to believe that the $5 charge would be unrea-

sonable, and the city will be authorized to establish such a minimum.

IT IS THEREFORE ORDERED, That the applicant in this case, the City of Oconomowoc Water Department, be and the same hereby is authorized to establish a minimum charge of $5 per year per consumer. This charge may be made effective immediately.

IN RE PROPOSED EXTENSION OF THE LINES OF THE WISCONSIN TELEPHONE COMPANY IN THE TOWN OF ROCK, ROCK COUNTY, WISCONSIN.

Submitted April 15, 1914. Decided April 23, 1914.

The Wis. Tel. Co. filed notice with the Commission of its intention to extend its line for local service in section 6 in the town of Rock, Rock county. The Rock County Tel. Co. objects to the proposed extension. The Wis. Tel. Co. desires to make the extension, which would be about a quarter of a mile long, for the purpose of serving a subscriber who formerly received service from the Rock County Tel. Co. whose line runs directly past his residence. The subscriber in question states that he discontinued the service of the Rock County Tel. Co. because of its poor quality and the lack of adequate long distance connections.

Where the line of one telephone company already runs on a highway past a residence and is serving that residence or is able to serve it reasonably well, another telephone company ought not usually to be permitted to construct a parallel line on the same highway to reach the residence in question.

The fact that the paralleling of lines proposed would be only a quarter of a mile long does not make such paralleling any less a violation of the statutes.

Held: Public convenience and necessity do not require the proposed extension. If the service rendered by the Rock County Tel. Co. is inadequate the matter should be brought before the Commission in the usual way. The complaint with respect to the long distance connections of the company need not be passed upon here for the reason that there is now pending before the Commission a proceeding against the two telephone companies here involved in which physical connection between them for long distance service is asked.

This case arises upon the notice filed by the Wisconsin Telephone Company with this Commission on March 18, 1914, relating to two proposed extensions of its line for local service in the town of Rock, Rock county. Objection to one of these extensions was made by the Rock County Telephone Company, and a hearing was held in the matter on April 15, 1914, the Wisconsin Telephone Company having waived its right to have the matter determined within twenty days of the filing of its notice. At the hearing, which was held at Janesville, the Wisconsin Telephone Company was represented by *J. F. Krizek,* and the Rock County Telephone Company by *William Ruger.*

One of the extensions proposed by the Wisconsin Telephone Company did not occasion any objection by the Rock County Telephone Company. It is located in section 4 of the town of Rock and the Wisconsin Telephone Company has a line much nearer the point of the proposed service than that of the Rock County Telephone Company. There is no need, as to this extension, for any discussion of the merits of the proposition.

The other extension is in section 6 of the town of Rock, and "is intended to serve the residence on the "Green Cove Farm," owned by John L. Fisher of Janesville. The residence fronts on a north and south road along which the line of the Rock County Telephone Company is now constructed and in service. This line has two subscribers on the same north and south road above Mr. Fisher's residence and one subscriber below it. Mr. Fisher had the Rock County telephone in his house until about April 1, 1914, but decided to change to the Wisconsin Telephone Company's line, and ordered the Rock County instrument removed. Since that time there has been no telephone service in the residence in question. The Wisconsin Telephone Company's line which is proposed to be extended runs along an east and west road and crosses the road on which the Fisher residence is located, about a quarter of a mile south of the house. The proposed extension would therefore cover about a quarter of a mile, or, as the testimony shows, would require the setting of about ten poles. This extension would, of course, proceed upon the same road on which the Rock County line is located.

According to the testimony of Mr. Fisher as introduced at the hearing, one of the main reasons for his discontinuance of the Rock County service was the unsatisfactory kind of treatment he was receiving from that company. He stated that during the entire month of March, 1914, he was unable to get service on the farm and that at other times the service was slow and unsatisfactory and he considered that the company was discriminating against him personally. One ground of his complaint seemed to be that in calling his farm from his city residence it was necessary for him to call first the farm operator and then give that operator the number desired; but the testimony shows that substantially the same practice is followed on the Wisconsin Telephone Company's rural system. Another frequent source of dissatisfaction seemed to have been the busy condition of the farm line, which caused a good deal of difficulty in obtaining service

just when it was desired. It appears that when Mr. Fisher was connected with the Rock County line there were six other subscribers on that line, while the Wisconsin Telephone Company's line which is proposed to be extended now carries ten subscribers.

The Rock County Telephone Company introduced testimony to the effect that that company had done all in its power to give Mr. Fisher good service at the Green Cove Farm. It was testified that Mr. Fisher had always been a fault-finder and the company had made unusual efforts on this account to satisfy him. As to the lack of service during March, it was stated that the cutting over of the company's lines to its new central office, recently completed, had caused some interruption of service.

In addition to his complaint as to the quality of service he was getting over the Rock County line, Mr. Fisher advanced the lack of long distance connection over that line as another reason for his change of lines. It seems that Green Cove Farm is largely devoted to stock breeding and that long distance calls are very frequent between that farm and other places in Wisconsin and adjoining states. The Rock County Telephone Company is connected with an independent toll line company whose lines and connections cover a few neighboring counties, but for reaching such points as Madison, Milwaukee and other more distant places the Rock County line can not be used. There is no physical connection for any purpose whatever between the lines of the two companies. The Wisconsin Telephone Company keeps a Rock County local telephone in its office and when toll calls come in for subscribers of that company this telephone is used to inform them of the call so that they may go to a Bell instrument for their conversation.

It is apparent on the face of things that the proposed extension of the Wisconsin Telephone Company's line will involve a paralleling of the Rock County line on the same highway for a distance of about a quarter of a mile. It is also apparent that the Rock County Telephone Company is in position to give service to the Green Cove Farm, and that the extension of the Wisconsin Telephone Company's line would result in the acquisition by one company of a subscriber lost by the other. In other words, the extension of the Bell line would result in a competition which would not be possible if the extension were not made. Chapter 610 of the laws of 1913 extends to telephone companies the same kind of protection against unnec-

essary competition that had already been given by the state to other public utilities. This is in pursuance of the policy of the law that where reasonably adequate service can be obtained at reasonable rates from one public utility, another public utility shall not be permitted to enter into competition for the same service. The extension of this principle to rural telephone companies has resulted in some complications, owing to the fact that the time the statute was passed rural telephone lines throughout the state were intermingled in such a way that a great deal of paralleling already existed. This Commission has, however, taken the position that where one line already runs on a highway past a residence and is serving that residence or is able to serve it reasonably well, another company ought not usually to be permitted to construct a parallel line on the same highway to reach the residence in question. In other words, public convenience and necessity do not require the duplication of lines in such a case. This situation has arisen several times before the Commission, and permission to parallel has uniformly been refused. *In re Proposed Extension of the Lines of the Ettrick Tel. Co.* 1913, 12 W. R. C. R. 744; *In re Proposed Extension of the Lines of the Clinton Tel. Co.* 1913, 13 W. R. C. R. 166; *In re Proposed Extension of the lines of the West Kewaunee & Western Tel. Co.* 1914, 14 W. R. C. R. 219; *In re Alleged Violation of Chapter 610 of the Laws of 1913 by the Lisbon Tel. Co.* 1914, 14 W. R. C. R. 131.

The complaint of Mr. Fisher as to poor service obtained by him over the Rock County lines seems to relate mainly to an inability to get prompt connection. As far as this is due to the necessity of ringing two operators, the same trouble would necessarily be experienced on the Bell line. As far as it has to do with the number of persons on the line and the frequency of "busy" answers, the situation on the Bell line would also seem to be quite similar. Mr. Fisher testified, in addition, to his absolute inability to get service during a considerable period of time and to what he considered to be unfair discrimination against him in the matter of putting his calls through promptly and accurately. These are matters on which the Commission has power to make the fullest investigation and to take such action as the circumstances require in the way of improving the service and preventing discrimination. The question of service, although usually involved in cases of this kind, is really collateral to the issue, since the law provides a specific procedure

by which such matters may be brought before the Commission. The main question in such a case as this is whether the Rock County Telephone Company is able to give reasonably adequate service at the point in question, and there seems to be nothing in the evidence to indicate that it is not. The company's lines, as far as we are advised, are kept in working order. It has a new and presumably adequate switchboard and other central office equipment, and we have no reason to believe that the standards of its construction and maintenance are not such as to make good service possible on the Green Cove Farm. It must be borne in mind that city service and rural service are not the same, and that a person on a farm line with six or eight other subscribers must expect to find the line busy at times. As this Commission has said in other cases, the proper procedure in case the service is unsatisfactory is to make complaint in the usual way before asking the Commission to apply the more drastic remedy of permitting the entrance of a competing company into the field. *In re Alleged Violation of Chapter 610 of the Laws of 1913 by the Lisbon Tel. Co. supra.*

The matter of long distance connection presents a different question. The evidence shows that there is no physical connection between the two companies and that a person having the Rock County telephone is absolutely unable to send or receive toll calls except over a limited area in which the companies affiliated and connected with the Rock County lines are operating. To a business establishment of the character of the Green Cove Farm this lack of long distance connection is undoubtedly a serious thing. What effect it should be permitted to have on cases of this kind need not be decided, however, for the reason that there is now pending before the Commission and will very shortly be decided a proceeding against the two telephone companies here involved in which physical connection between them for long distance service is asked. It is sufficient to say that upon the decision of this case such relief will be afforded as will obviate the complaint of Mr. Fisher with respect to lack of long distance connection.

It appeared to be the position of the Wisconsin Telephone Company upon the hearing of the case that the paralleling of lines proposed is so short as to be merely a technical violation, if any violation at all, of the principle of the law. We do not agree to this view, however. We believe that a paralleling of a

quarter of a mile is more than a technicality. It would certainly be very difficult for the Commission to permit a quarter of a mile of duplication and then withhold its sanction to a further extension of the same line for another quarter of a mile, and so on. It would also be difficult to forbid one company to parallel for a third or half mile after permitting another company to parallel for a quarter of a mile.

It appears, then, that Mr. Fisher, by reinstating the Rock County telephone can obtain service without causing any paralleling of lines, and there is nothing in the record to indicate that public convenience and necessity require the duplication of lines which would be involved in the proposed extension of the Wisconsin Telephone Company.

Owing to what seemed to be an emergency condition on the Green Cove Farm, caused by the sickness of several persons there, Mr. Fisher on April 17 asked this Commission whether permission might not be given for a temporary extension of the Wisconsin Telephone Company's line upon the fences and trees to his residence, pending the decision of this case. Since the Wisconsin Telephone Company seemed to be willing to accommodate Mr. Fisher to this extent, and also expressed its willingness to take the line down if the decision in this case should be adverse to it, the Commission offered no objection to the furnishing of the temporary service, but stipulated that the building of the temporary line should have no effect whatever upon its decision of the case. It follows from these circumstances that the temporary service is to be discontinued upon receipt by the Wisconsin Telephone Company of this decision.

We therefore find and determine that public convenience and necessity do not require the extnsion of the line of the Wisconsin Telephone Company in section 6 of the town of Rock, Rock county, Wis., in the manner proposed by said company in its notice filed with this Commission on March 18, 1914.

IN RE PROPOSED EXTENSION OF THE LINE OF THE MAYVILLE RURAL TELEPHONE COMPANY IN THE TOWNS OF THERESA AND HERMAN, DODGE COUNTY, WISCONSIN.

Submitted April 21, 1914. Decided April 28, 1914.

The Mayville Rural Tel. Co. filed notice with the Commission of its intention to make certain extensions of its lines in the towns of Theresa and Herman in Dodge county. The Theresa Union Tel. Co. objects to the proposed extensions insofar as the rendering of service to four of the proposed subscribers is concerned. Three of these subscribers reside on the highway on which the line of the objector is in operation and one resides a few rods east of the highway, and therefore still farther away from the line of the Mayville Rural Tel. Co.

The desire of prospective subscribers of a proposed extension of a telephone line to be on the same line as their neighbors so that they may converse without ringing central office does not seem to be a sufficient reason for permitting the duplication of an existing line.

Held: Public convenience and necessity do not require the proposed extensions insofar as such extensions would serve subscribers located along or east of the highway along which the line of the Theresa Union Tel. Co. extends. The extensions proposed to be made west of this highway will be permitted to proceed.

On April 8, 1914, this Commission was notified by the Mayville Rural Telephone Company of proposed extensions to its line in the towns of Theresa and Herman, Dodge county, Wis., and upon the filing of objection by the Theresa Union Telephone Company a hearing was held on the matter at Theresa, on April 21, 1914. The Theresa Union Telephone Company was represented by *Nathan Haessly,* and the Mayville Rural Telephone Company by *H. F. Ringle, F. A. Justmann* and *Albert Zastrow.*

It appears that a number of persons residing in the towns of Theresa and Herman have applied to the Mayville Rural Telephone Company for service and that the latter company in filing its notice with the Commission was acting at the instance of the proposed subscribers and without any desire to encroach unduly in the territory of the Theresa Union Telephone Company. The latter company has a line for local service running north and south through sections 10 and 3 of the town of Herman and

sections 34 and 27 of the town of Theresa. The majority of the proposed subscribers of the Mayville Company reside in territory west of the Theresa Union Telephone Company's line and the latter company makes no objection to the extension of the Mayville Company's line to them. In fact, they are clearly located in the territory of the Mayville company and nearer its lines than those of the Theresa Union Telephone Company. Three of the proposed subscribers, however, live on the north and south highway on which the Theresa line is in operation and one other is very near the highway, being a few rods east of it on a crossroad. The Mayville lines at present are all west of the north and south road on which the Theresa line is built and if extended to the four subscribers just mentioned these lines would parallel the Theresa line for about a mile. If the four subscribers are eliminated from the proposed extension the two companies' lines will not parallel one another at any points involved in this case and the respective territories of the two companies will be well defined.

The Theresa line is apparently able to serve the four persons living on and near the highway which that line serves and there is no occasion for any duplication of the Theresa line by the Mayville company. Subscribers on the Theresa line have free service to Mayville, so that no toll expense is occasioned by the interchange of connection between the two lines. The only reason given at the hearing for any paralleling of the Theresa line is the fact that the farmers located in sections 3 and 34 desire to be on the same line as their neighbors so that they may converse without ringing central office. This does not seem to be a sufficient reason for permitting the duplication of lines proposed here.

One signer of the application for Mayville Rural Telephone Company service resides one and a half miles east of the Theresa line and fully three miles east of the nearest point on the Mayville line. This proposed subscriber is so clearly out of the territory of the Mayville company that we do not presume that company would care to extend to him even if permission were granted. At any rate, it does not seem possible that public convenience and necessity can require the extension of the Mayville line to serve him.

The extensions proposed by the Mayville company west of the road on which the Theresa line is operating will be permitted to

proceed, but those which would serve subscribers residing along that road, on either side, or east of that road, do not appear to be required by public convenience and necessity.

We therefore find and determine that public convenience and necessity do not require the proposed extensions of the Mayville Rural Telephone Company as described in its notice filed with this Commission April 8, 1914, insofar as such extension would serve subscribers living along or east of the north and south highway running through the center of sections 3 of the town of Herman and 34 of the town of Theresa.

IN RE APPLICATION OF THE ETTRICK TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Decided April 29, 1914.

The Ettrick Tel. Co. applies for authority to increase its rates. The schedule which the applicant proposes provides a rate for stockholders lower than the rate for nonstockholders.

Held: The applicant is entitled to an increase in rates. The proposed discrimination between stockholders and nonstockholders, however, is illegal. The applicant is authorized to put into effect a schedule fixed by the Commission and applicable to stockholders and nonstockholders alike.

Application in this matter was filed with the Commission on March 26, 1914. The applicant is a public utility operating a telephone system in and around Ettrick, Wis. The present rates are:

To stockholders, $5 per year if paid during the first quarter.

To renters, $6 per year.

The applicant asks for authority to substitute for this schedule the following schedule:

To stockholders, $7 per year.

To renters, $8 per year.

All rentals paid before April 1 of each year to be allowed a $1 discount.

Hearing was set for April 21, 1914, but no appearances were entered.

In this case there is no question as to the inadequacy of the present rates, if the utility is to furnish a reasonable degree of service, and no objection can be made to the proposed rates on the ground of reasonableness of the total revenue which will be derived.

The law, however, prohibits a utility from charging a different rate to stockholders than is charged to nonstockholders or renters. It will be necessary, therefore, to so amend the schedule as to eliminate this illegal feature.

IT IS THEREFORE ORDERED, That the applicant, the Ettrick Telephone Company, be and the same hereby is authorized to

discontinue its present schedule and to substitute therefor the following schedule, applicable to stockholders and nonstockholders alike:

$7 per year per telephone if paid during the first quarter of the year for which payment is due.

$1 per year as a penalty when not paid during the first quarter.

This rate and the penalty must be applied strictly and impartially in order to avoid illegal discrimination.

IN RE APPLICATION OF THE BADGER STATE TELEPHONE AND TELEGRAPH COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Feb. 27, 1914. Decided April 29, 1914.

The Badger State Tel. & Teleg. Co. applies for authority to increase its rates for local and rural telephone service at its exchanges in Neillsville and Granton and to adopt new rules to govern the rendering of such service. A valuation of the physical property was made, the property apportioned among the local, rural, toll and switching divisions of the business, and the local and rural property further apportioned between the Neillsville and Granton exchanges. The revenues and expenses of the two exchanges were investigated and the probable revenues from the proposed rates considered.

It is a question open to argument whether the rural patrons of a telephone utility should be charged directly with the full burden of fixed charges on the investment in rural equipment or whether part of these charges should be borne by the classes of local subscribers who are reached by the rural lines.

Held: 1. The rates proposed by the applicant should be approved with the exception of the rate proposed for rural service. This should be placed at $16 rather than $18 per year.

2. The rules proposed by the applicant appear to be reasonable with the exception of certain ones which should be modified. Among others the provision that the applicant will not hold itself liable to furnish party line service unless the line can be kept full to capacity should be rescinded and the applicant should hold itself in readiness to furnish party line service within its exchange limits to all who contract for that service.

The applicant is authorized to put into effect the schedule of rates asked for in its application as modified to include the changes prescribed by the Commission. These rates are to apply only on full metallic service.

This application was dated January 2, 1914. The applicant is a telephone company operating exchange systems in Neillsville and Granton and surrounding rural territory and operating a toll system.

The petition enumerates the rates and rules in effect as follows:

Rates:

Neillsville	
Business telephone—one party	$24.00
Residence telephone—one, two and four party	12.00
Rural telephones—first year	15.00
" " thereafter	12.00
Extension bells	no charge
Long distance sets	3.00
Granton	
Business telephones	18.00
Residence "	12.00
Rural "	12.00
Extension bells	no charge
Long distance sets	3.00
For Neillsville or Marshfield	6.00
Service covering three local exchanges	36.00

Rules:

Phones are installed by the company with the understanding that service will be retained for a period of one year, or else subscriber must bear the cost of installation. Service for short periods at rates to meet each special case. Local service is offered from 6 a. m. to 10 p. m. A fee of 10 cts. will be charged on night calls.

Local rural line service is free to subscribers, only; if a nonsubscriber uses this service a fee of 10 cts. must be collected.

Nonsubscribers should pay a fee of 5 cts. for local service.

A fee to cover the expenses will be charged for the removal of the telephone instrument from its present location to another.

Service bills are payable monthly.

Service will be discontinued for nonpayment of bills.

Subscribers are responsible for all toll originating at their stations.

The subscriber must pay for all careless breakage at his station.

Extra territory rates are not quoted for periods of less than 6 months.

Extra territory privileges do not give any toll line privileges.

The reasons set forth in the application for asking for increased rates are that present rates are insufficient to:

1. Meet the required demands for adequate service.

2. Provide for the sinking funds made necessary by the Public Utilities Act.

3. Provide satisfactory dividends upon the capital invested.

Application is made for authority to abolish all existing rates and rules for exchange service and establish the following rates and rules on the basis of a combined Neillsville and Granton exchange service; the exchange limit at Neillsville to be one mile

from the central office and the exchange limit at Granton to be one-half mile from the central office.

In all cases where common battery service is designated the same shall apply to service in the city of Neillsville and where magneto service is designated the same shall apply to service at Granton.

Rural service shall be designated as "Rural" and shall apply to all stations outside the regular exchange limits.

Business Telephones:		
Common battery, one party, unlimited service..	$30.00	per annum
Common battery, two party, unlimited service..	24.00	"
Magneto (Granton), one party, unlimited service	24.00	"
Extension sets, in same building and for business service only, without listing.....	6.00	"
Extension bells, in same building, ordinary....	1.80	"
Extension bells, in same building, 4" gong.....	3.00	"
Extension bells, in same building, 9" gong.....	9.00	"
Joint user, with consent of subscriber and company and listed.....	12.00	"
Extra listing in directory, same firm and business	1.20	"
Individual line, receiving only.....	12.00	"
Residence Telephones:		
Common battery, one party, unlimited service..	$18.00	"
Common battery, two party, unlimited service..	15.00	"
Common battery, four party, unlimited service.	12.00	"
Magneto (Granton), one party, unlimited service	15.00	"
Extension sets, in same building and for residence service only, without listing.....	4.80	"
Extension bells, same as quoted above.		
Listing nonsubscriber at the residence of a subscriber, with the consent of the subscriber and company, payable quarterly in advance, and listed	4.00	"
Spring jacks: Subscriber must pay installation expense. Rate for three jacks same as for an extension set. Each additional jack....	1.00	"
Rural telephones: unlimited service, outside exchange limits	18.00	"

Employes Service:

The Company does not furnish free service at the home of employes. Service will be furnished to employes who hold responsible positions at the head of some department but will be considered as part of the salary earned.

Institutions not operated for profit.

Charitable institutions, public and parochial schools, armory, public library, churches and fraternal societies will be classed as and carry rates and privileges of individual line residences, except as to joint user privileges.

Rates are quoted for service extending over a period of one year.

Short term contracts will be entered into on the following basis:

Service for three months or less 50% of the annual rate.
Service for six months or less 75% of the annual rate.
Service for nine months or less 90% of the annual rate.
For service over nine months 100% of the annual rate.

The above rates are offered with the understanding that the Company has facilities to provide the service at the location desired.

Extension sets and bells located outside premises will be furnished for regular service at the above rates with a mileage charge of $3.00 per annum for each 1/8 mile or fraction thereof, without listing. Extension sets and bells located out of doors or in the open sheds will be charged for at double the regular rates.

Each main, party and rural telephone shall be entitled to one listing in the directory.

The Company pays the initial expense of installation. The subscriber must pay the expense of any subsequent change in the location of the telephone instrument.

Subscribers may change from a higher class of service to a lower by paying one-half the balance due on the old contract and signing a new contract for a year's service at the lower rate.

Notice of the removal of the telephone instrument shall be in writing.

Extra Equipment:

Extra long cords for desk sets, repair charges	$0.10 per foot
Auxiliary receivers	.10 per month
Desk arm or bracket	.10 per month
Switches, common, for extensions or bells	.10 per month

Penalties:

A penalty of $0.25 will be collected for failure to pay service bill on or before the 16th day of the current month. This penalty shall apply to each main, party and rural telephone. Service will be discontinued for continued neglect to pay service bill.

A deposit or properly signed guarantee will be required from parties who are not known to the Company to be responsible for the payment of service charges.

The company does not hold itself liable to furnish party line service unless the line can be kept full to capacity.

Subscribers who may wish to suspend service for a portion of the year during absence from the community may do so upon payment of one-half the regular net rate for the period of suspension, but in no case shall an allowance be made for a period of less than one month. In all cases the instrument shall remain in place without service and hold its original listing in the directory.

Joint user service shall include any and all service not specified by the main line listing. One main and one joint user may be served on one main line unless the main line subscriber should desire the joint user rate to cover his own additional business.

In order to obtain the rate allowed charitable and public institutions, the applicant must occupy the entire premises and use the service exclusively for the purpose intended. The institution may be required to furnish a written guarantee to cover the above. No joint user rate will be allowed on this class of service.

Service over trunk lines between central offices is free to subscribers only. If nonsubscribers use this service the regular toll fee must be collected.

If nonsubscribers use local service a fee of 5 cts. should be collected and a fee of 10 cts. for rural lines service.

Subscribers are responsible for all toll originating at their stations.

Subscriber must pay for all careless breakage of material at his station.

Hearing was held at Madison on February 27, 1914. *W. L. Smith* appeared for the applicant. There was no appearance in opposition.

From the testimony introduced at the hearing and from data submitted by the utility in connection with this case, as well as from the reports and rate schedules filed by the utility, a number of facts which have a bearing upon the case have been obtained.

It appears that telephone service was installed in Neillsville about 1898 by the Badger State Telephone Company. On May 1, 1901, that company was reorganized and business continued under the name of the Badger State Telephone and Telegraph Company. The present owners acquired possession in 1903. Since then a number of changes have been made in the Neillsville exchange, and it appears that very satisfactory service is being furnished at present. There are a number of rural lines, an exchange in Granton, and about one hundred miles of metallic toll lines.

It is understood that Neillsville local subscribers have the use of the Neillsville exchange, including connecting rural lines, at the exchange rates and that a charge of $6 per year additional is made for connection to Granton. Granton subscribers have the option of paying a message rate to Neillsville or paying a flat rate of $6 per year for the service. Under the rates asked for

by the utility, subscribers would have free, unlimited service over trunk lines connecting central offices.

A valuation of the physical property was made by the Commission as of January 1, 1914. In this valuation the property was divided among the local, rural, toll, and switching divisions. Following is a summary showing the cost new and the present value of the various groups of the property:

VALUATION OF PROPERTY OF
BADGER STATE TELEPHONE AND TELEGRAPH CO.

	Local.		Rural.		Toll.		Switching.		Total.	
	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.
A. Land	$834	$834	$45	$45	$21	$21	.....	...	$900	$900
B. Distribution system	7,384	4,794	19,220	14,296	9,106	5,207	36	27	35,746	24,324

Total	$12,822	$8,817	$25,019	$17,478	$12,337	$6,728	$147	$68	$50,325	$33,091
J. Non-operating	943	137	136	108	100	55	... ..	....	1,179	300
Total	$13,765	$8,954	$25,155	$17,586	$12,437	$6,783	$147	$68	$51,504	$33,391

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The division of the local and rural property according to the localities served is shown in the following tables:

	Neillsville Local.		Neillsville Rural.	
	Cost new.	Present value.	Cost new.	Present value.
A. Land	$834	$834	$45	$45
B. Distribution system	6,576	4,288	14,117	10,712
C. Buildings and miscellaneous structures	153	24	690	102
D. Exchange equipment	1,633	1,404	88	75
E. General equipment	868	517	911	396
Total	$10,064	$7,067	$15,851	$11,330
Add 12 per cent (see note below)	1,208	848	1,902	1,360
Total	$11,272	$7,915	$17,753	$12,690
F. Paving				
Total	$11,272	$7,915	$17,753	$12,690
H. Materials and supplies	330	214	684	430
Total	$11,602	$8,129	$18 437	$13,120
J. Non-operating	943	137	136	108
Total	$12,545	$8,266	$18,573	$13,228

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

	Granton Local.		Granton Rural.	
	Cost new.	Present value.	Cost new.	Present value.
A. Land				
B. Distribution system	$808	$506	$5,103	$3,584
C. Buildings and miscellaneous structures	17	2	230	35
D. Exchange equipment	189	66	30	11
E. General equipment	22	9	305	130
Total	$1,036	$583	$5,668	$3,760
Add 12 per cent (see note below)	124	70	680	451
Total	$1,160	$653	$6.348	$4,211
F. Paving				
Total	$1,160	$653	$6,348	$4,211
H. Materials and supplies	60	35	234	147
Total	$1,220	$688	$6,582	$4,358
J. Non-operating				
Total	$1,220	$688	$6,582	$4,358

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

No value has been fixed for certain rights which the company possesses in various villages. These all appear to be rights affecting the toll system and as the matter of toll rates is not involved in this case it does not seem necessary to go into any de-

tail regarding the valuation of the various rights involved. The reports of the utility for the year ended June 30, 1913, show the plant value of the Granton exchange as of that date as $7,292.55 and the plant value of the Neillsville exchange as $29,334.79. As these include the rural property it is clear that the investment as shown by the company's books is not far from the cost new as shown by the Commission's valuation of the physical property.

Interest at 7 per cent on the various valuations available, with the exclusion of non-operating property from the Commission's valuation of physical property, is as follows:

Neillsville exchange:	
On present value of $21,249	$1,487.43
On cost new of $30,039	2,102.73
On book value of $29,334.79	2,053.44
Granton exchange:	
On present value of $5,046	$353.22
On cost new of $7,802	546.14
On book value of $7,292.55	510.48

Depreciation based on the cost new of all property except land and non-operating property is shown below:

Neillsville exchange:	
At 6½ per cent	$1,889.22
At 7 per cent	2,034.55
Granton exchange:	
At 6½ per cent	$507.13
At 7 per cent	546.14

From a consideration of all the facts it appears that a fair allowance for interest and depreciation will be from $4,000 to $4,100 for the Neillsville exchange and from $1,000 to $1,050 for the Granton exchange.

The operating expenses, including taxes but exclusive of any allowance for interest or depreciation, for the year ended June 30, 1913, were $5,211.14 for the Neillsville exchange and $1,952.39 for the Granton exchange. In dividing its operating expenses between toll and exchange systems the utility has charged central office expenses entirely to exchange systems and has credited the exchanges with a portion of the toll earnings, as would have been done if toll lines were owned by another company. Although the effect of this is to make the local central office expenses appear high, if the proper proportion of toll earnings is credited to the exchange systems, the increased expenses will be offset by increased earnings and the amount of expense to be borne by the exchange business will not be affected by the

accounting practice. In this case it appears that the Granton exchange has been credited with 25 per cent of Badger State telephone and telegraph toll system earnings. At Neillsville 15 per cent of the utility's toll system earnings are credited to the exchange system, which is the same percentage which is obtained on originating messages from the Wisconsin Telephone Company's toll system.

With interest and depreciation allowances included, the expenses of the Neillsville exchange would be between $9,211.14 and $9,311.14 and the expenses of the Granton exchange would be between $2,952.39 and $3,002.39.

In this connection it should be noted that the rural property in the Commission's valuation as of January 1, 1914, includes a considerable number of phones in addition to those which were connected on July 1, 1913. In estimating revenues, on the basis of number of subscribers connected on July 1, 1913, this should be taken into consideration, in order that interest may not be allowed on an investment supplying a larger number of subscribers than the number considered in estimating the probable revenue.

In order to compute the probable revenue from the proposed rates it is necessary to make certain assumptions as to the number of subscribers using each class of service. The assumptions made in a statement filed by petitioner appear to be reasonable and are used here with some slight modifications which appear necessary. On the basis of the assumed distribution of subscribers who were connected on June 30, 1913, the probable revenue would be:

Neillsville exchange:	
Business, one party, 70 at $30	$2,100.00
Business, two party, 14 at 24	336.00
Business extension 1 at 6	6.00
Residence, one party, 50 at 18	900.00
Residence, two party, 113 at 15	1,695.00
Residence, four party, 50 at 12	600.00
Rural, 175 at 18	3,150.00
	$8,787.00
Connecting lines	280.52
Miscellaneous	42.22
Non-operating	118.75
	$9,228.49
Rural tolls, night service—pay station	153.25
	$9,381.74

Granton exchange:	
Business—18 at $24	$432.00
Residence—27 at 15	405.00
Rural—99 at 18	1,782.00
	$2,619.00
Connecting lines	452.84
Miscellaneous	10.00
Non-operating	16.50
	$3,098.34
Night service	6.50
	$3,104.84

Revenues from such items as night service would not exist under the proposed rates, but as they would probably be offset by revenues from miscellaneous appliances, they have been included here at the amounts shown for the last year.

An examination of the facts leads us to the conclusion that the rates for service proposed by the applicant should be approved with the exception of the rate for rural service. In disapproving this rate we do not mean to hold that the rate is higher than a full analysis of the costs would justify, with possibly some offsetting reductions in local rates. It is a question, however, which is open to argument, whether the rural patrons should be charged directly with the full burden of fixed charges on the investment in rural equipment or whether part of these charges should be borne by the classes of local subscribers who are reached by these rural lines. In this case, too, it must be noted that subscribers on rural lines have heretofore been paying only $12 per year and that an increase to $18 per year may affect both subscribers and utility seriously. We are aware that the utility has a relatively heavy investment in rural equipment and that under the new rates subscribers will be able to reach both Neillsville and Granton subscribers at the exchange rate, but a full consideration of all the facts leads us to conclude that rates for rural service should be placed at $16 per year.

In approving the other rates asked for by the applicant we wish to call attention to the fact that all subscribers will be given unlimited service over both exchanges, for which they must now pay $6 per year in addition to regular rates. Also free night service is to be given, so that the proposed increases in rates are to be accompanied by decided increases in the service rendered.

All lines are to be metallic and it is understood that a harmonic ringing system is to be installed.

Rules: The rules proposed by the company appear to be reasonable, in general, but there are one or two of them which should be modified.

1. The provision with regard to penalties will be modified because of the change in rural rates from $18 per year to $16, and to reduce the penalty slightly for all subscribers.

2. The provision that the company does not hold itself liable to furnish party line service unless the line can be kept full to capacity should be rescinded and the company should hold itself in readiness to furnish party line service within its exchange limits, to all who contract for that service.

3. We believe that the provisions for charging nonsubscribers 5 cts. per call for local service and 10 cts. per call for rural service should be discontinued except for calls from pay stations. In some cases such charges are proper, but with a well developed telephone business conducted at rates which will yield a reasonable return, the enforcement of such a charge should probably be discontinued, as it will be an inconvenience to subscribers.

Aside from these three provisions, the rules proposed by the utility appear to be reasonable.

IT IS THEREFORE ORDERED, That the applicant in this case, the Badger State Telephone and Telegraph Company, be and the same is hereby authorized to discontinue its present schedule of rates for exchange service and to substitute therefor the schedule of rates asked for in this application, except that the rate for rural service shall be $16 per year if paid in advance during the first month of the quarter. Where payments for rural service are not so made the rate shall be $18 per year.

The rates for local service shall apply when payments are made on or before the 15th of the month for which service is rendered. There shall be a penalty of 15 cts. per month for delinquent payments for local service.

The proposed rules of the applicant requiring payments from nonsubscribers are disapproved except as they apply to service rendered at pay stations and to service over trunk lines between exchanges. The proposed rule providing that the utility need not furnish party line service unless lines can be kept full to capacity is disapproved.

The rate as authorized shall apply only on full metallic service and may be put in effect for such service for the next period succeeding the date of this order for which bills are rendered.

The utility shall fully inform all subscribers of the changes in rates and in the extent of service to which they are entitled.

CURTISS AND WITHEE TELEPHONE COMPANY
vs.
OWEN TELEPHONE COMPANY.

Decided April 29, 1914.

The decision issued in this matter Jan. 5, 1914, 13 W. R. C. R. 538, left for future determination the terms finally to be fixed for the physical connection ordered to be restored between the petitioner and the respondent at the village of Owen. A traffic study of all calls passing through the respondent's exchange at Owen and a valuation of the portion of the respondent's poles, wire and switchboard used by the petitioner have been made for the purpose of determining the costs properly chargeable to the patrons of the petitioner for the service rendered by the respondent. The rates now temporarily in effect under the former order give the petitioner's patrons the option of paying a flat rate of $3 per year, or 10 cts. per message, aside from regular long distance tolls, for the service in question in this proceeding. All of the revenue from the $3 flat rate is retained by the respondent, while the revenue from the 10 ct. message rate is divided in the proportion of 3⅓ cts. to the respondent and 6⅔ cts. to the petitioner.

Held: The flat rate of $3 per phone per year proposed by the respondent for application to all subscribers of the petitioner cannot be approved. The exaction by the petitioner of a 6⅔ cts. charge on each call is somewhat exorbitant for the service rendered by the petitioner to its patrons. A 5 ct. message charge, divided 3 cts. to the respondent and 2 cts. to the petitioner, would be a more nearly proper charge, and would work to the better interests of the patrons using the message rate service. In its other aspects the present arrangement, with slight modifications, will meet the needs of the situation.

It is ordered that the respondent continue to furnish telephone service to the petitioner, on the basis of a $3 flat rate and a 5 ct. message rate combined, as prescribed by the Commission. No charge is to be made for calls from subscribers connected to the respondent's exchange at Owen to the petitioner's subscribers, but the cost of this service is to be considered as included in the regular rates paid by the respondent's subscribers. Charges for long distance service through the respondent's exchange, either to or from the petitioner's subscribers, are in all cases to be the same as the charges made for this service to or from the respondent's subscribers. In case the total revenue received by the respondent from the petitioner's line for any one year amounts to less than $1 per telephone connected to the petitioner's line, the petitioner is to pay the difference between the two amounts to the respondent.

SUPPLEMENTARY ORDER.

This decision is supplementary to a decision issued in the above matter under date of January 5, 1914 (13 W. R. C. R. 538), in which the respondent, the Owen Telephone Company, was ordered to make reconnection of the line in question until such time as the Commission could make further investigation of the matter to the end that a proper basis of settlement might be determined. The following is an extract from the previous decision setting forth various points brought out in the petition and in the testimony given at the hearing held on the matter at the office of the Commission on October 13, 1913:

"The petition in this matter was filed September 2, 1913. The petition sets forth that the petitioner is supplying telephone service in and around the village of Curtiss, and that the Owen Telephone Company is engaged in the telephone business at Owen; that a number of years ago petitioner had telephone lines extended into the village of Owen; that when the Owen Telephone Company was incorporated and began to furnish local service and connection with long distance lines, the Curtiss and Withee Telephone Company and the Owen Telephone Company entered into an agreement, the terms of which are set forth in some detail in the petition and in other portions of these proceedings, but of which the essential parts, for the purpose of this case were: that the Owen Telephone Company should take over all the property of petitioner within the village of Owen, that the Owen Telephone Company should furnish connection to petitioner by means of which petitioner's patrons could reach any telephone upon the Owen Telephone Company's system and also obtain long distance service; that petitioner's patrons should choose one of two methods of paying for this service, these methods being a flat rate of 25 cts. per month or a message rate of 10 cts. per message, aside from regular long distance tolls. In the case of subscribers who chose to pay 25 cts. per month, the Owen Telephone Company received the entire amount, but of the 10 ct. message fees the Owen Telephone Company paid two-thirds to petitioner. For long distance service petitioner received nothing for out-going messages, but for the use of its lines for incoming messages, it received 6⅔ cts. per message.

"The petition also shows that on or about July 16, 1913, the Owen Telephone Company notified the petitioner that thereafter a charge of 25 cts. per month for switching service would be demanded by it for each of petitioner's subscribers and that the message rate would be discontinued, that if this demand were not complied with within thirty days, the connections between the lines of the two companies would be cut; that petitioner re-

fused to comply with this demand and that the Owen Telephone Company, on or about August 18, 1913, severed the connection.

"Petitioner therefore asks for an order requiring the Owen Telephone Company to restore the connection and service between the lines of the parties to this case, and fixing the terms for such connection and service."

As previously stated, the respondent was ordered to reconnect the petitioner's line to the Owen switchboard under the terms of the contract in force at the time of the disconnection, this contract to remain in force until such time as the Commission had opportunity to make a more thorough investigation of the matter. As a result of this investigation, which has now been made, and through various parts of the testimony in the case the following additional facts have been established:

The Owen Telephone Company operates a telephone exchange in the village of Owen and from this exchange serves the following patrons: 72 in the village of Owen; 54 in the village of Withee; 86 rural subscribers connected to its own lines; 36 rural subscribers on lines owned by other companies. The respondent also has long distance connections with both the Badger Telephone Company and the Wisconsin Telephone Company. The "McClure" or "common return" system is used for the village subscribers, while the rural lines are all grounded. The petitioner in this case is a mutual company, the stockholders of which are principally farmers who have organized their company, put up their own line, and, through the contract previously outlined, obtained connection with the respondent's exchange. The petitioner owns and operates but the one line, on which there are 22 subscribers. This line extends east from Owen to the village of Curtiss, in which village a few business phones are connected.

From the testimony in the case and through subsequent statements it has been shown that under the contract in force before the disconnection of the line was made, the total revenue to the respondent from the petitioner was approximately $21 for the year ending August 1, 1913, and that the total gross revenue which the respondent would receive under the proposed flat rate switching charge of $3 per phone per year for every phone on the line would be approximately $66 per year. One of the principal items to be determined, therefore, was the actual cost to the respondent of furnishing the desired service to the petitioner. To obtain this cost, first, a traffic study was made of all calls going through the exchange of the respondent in order that a proper basis for apportionment of the operators' salaries to the serv-

ice required by the petitioner could be arrived at; and second, a valuation was made of that portion of the respondent's poles, wire and switchboard that is used by the petitioner, for the purpose of determining what return the respondent should have from this investment.

TRAFFIC STUDY.

A twenty-four hour traffic study was made on March 26, 1914, at the Owen exchange, in which a record was made of all numbers calling and called during the twenty-four hours. Record was further kept of all "ringback" or "reverse ringing" calls made on each line during the time that the traffic study was being taken in order that some light might be thrown upon the contention of the respondent that a considerable part of the operator's time was taken up with the supervision of the ringback calls upon the petitioner's line. The various steps taken in the compiling of this traffic study have been very similar to those taken in the compilation of the study of Lancaster and Potosi, details of which appear in the decision *In re Application of Farmers' Tel. Co. of Beetown for Authority to Increase Rates and for other Relief*, 1914, 13 W. R. C. R. 540, 566. Only the summary of the study, therefore, will be given here, which is as follows:

SUMMARY OF TRAFFIC STUDY.
OWEN TEL. CO.
March 26, 1914.

Class of service number.	Designation of classes of service.	Total per cent of operator's time to each class of service.	Total telephones to each class of service.	Per cent of operator's time *per telephone* to each class of service.	Total lines to each class of service.	Per cent of operator's time *per line* to each class of service.
1.....	Owen—local	31.36	72	0.44	64	0.50
2.....	Withee—local	12.75	54	.24	21	.61
3.....	Owen Tel. Co.—rural.....	9.90	86	.115	8	1.24
4.....	Foreign rural (Thorpe & Tisdale line).....	1.13	14	.08	1	1.13
5.....	*Curtiss and Withee Tel. Co.*.	1.09	22	.05	1	1.09
6.....	Badger Tel. Co.—toll lines.	1.65	.....	.....	1	1.65
7.....	Wis. Tel. Co.—toll lines....	30.02	.....	.....	2	15.01
8.....	Operator.....	12.10	.....	.....	.....	.....
9.....	Ringback.....	.....	.....	.....	.....	.....
	Total.....	100.00				

NOTE:—The per cent of operator's time devoted to the "ringback" or "reverse ringing" calls (No. 9 class of service) has been charged directly to the class of service originating such calls, hence does not appear separately in the above table. These calls in this case have been weighted at ½ of a local to local call.

The above summary shows that for the day upon which this study was made the per cent of operator's time devoted to the calls of the petitioner's line was 1.09 per cent.

In order to have further data upon which to base judgment the respondent was requested by the Commission to keep a record of all calls over the petitioner's line, both the ringback calls and those going through the central office, for the two days April 9 and 10, 1914. The result of this record indicates that the per cent of operator's time given to this line is probably somewhat higher than is shown by the traffic study made by the Commission.

From all the data at hand it would seem fair to allow 1.75 per cent to cover this item, and this part of the operator's yearly salary will be considered as an expense chargeable to the petitioner's line.

VALUATION OF PHYSICAL PROPERTY.

A small amount of the respondent's physical property is used by the petitioner. A reasonable return upon the value of this property and the cost of operation and maintenance of the property will be allowed by the respondent. The apportioned value of this property is as follows:

ESTIMATE OF APPORTIONED VALUE OF OWEN TEL. CO. PROPERTY USED BY THE CURTISS AND WITHEE TEL. CO.

Item.	Unit.	Quantity.	Unit price.	Cost of reproduction.	Scrap value.	Condition per cent.	Present value.	Per cent to Curtiss & Withee Tel. Co.	Cost of reproduction.	Present value.

Total		....	.....	.....	....	.....	.....	.....	$13.75	$7.68

NOTE:—Add 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

EXPENSE CHARGEABLE TO SWITCHING OF CURTISS AND WITHEE TELEPHONE COMPANY'S LINE.

Total operating labor—$672.00	
1.75 per cent of $672.00	$11.76
Central office operation and maintenance.	
1 line at $0.50 per line	.50
Wire plant operation and maintenance.	
¼ mile at $12.00 per mile	3.00
Interest at 7 per cent on $8.50[1]	.59
Depreciation at 7 per cent on $13.75	.96
Total expense	$16.81

The cost of keeping a record of message rate calls is included here, being provided for by the weighting factor applied to these calls.

REVENUE FROM LINE.

As has been previously stated, the total return from the petitioner's line for the year ending August 1, 1913, was approximately $21. During this year, according to a statement submitted by the respondent, there was a total of $14 collected from the flat rate charge of $3 per telephone per year and $7 from toll charges. Taking all of the facts into consideration, it would seem that the respondent has been receiving, under the existing contract, approximately sufficient revenue from this line to cover the expense of its operation, hence the flat rate of $3 per phone per year as proposed by the respondent for application to all subscribers cannot be approved.

The next step is to look into the merits of the contract under which the two companies are at present operating. The essential features of this contract, so far as revenues are concerned, are as follows: the petitioner's patrons have the option of paying to the respondent $3 per year as a flat rate switching charge which entitles them to free in and out calls through the respondent's exchange, all of which revenue is retained by the respondent; or they may pay for each call through the respondent's exchange at 10 cts. per call, the revenue from each call in this case being divided 3⅓ cts. to the respondent and 6⅔ cts. to the petitioner. All calls from the respondent's subscribers to the petitioner's subscribers are free.

Such a schedule does not seem to be entirely fair to the vari-

[1] It would seem that $8.50 is a fair value of the property upon which the respondent should be allowed a return.

ous patrons of the petitioner's line. The exaction by the petitioner of a 6⅔ cts. charge on each call seems somewhat exorbitant for the service rendered by the petitioner to its patrons. It is believed that a 5 ct. message charge divided 3 cts. to the respondent and 2 cts. to the petitioner will be a more nearly proper charge, and will work to the better interests of the patrons using the message rate service. In its other aspects the present arrangement, with slight modification as indicated in the following order, seems to meet the needs of the situation.

NOW, THEREFORE, IT IS ORDERED, That the Owen Telephone Company, respondent in this case, continue to furnish telephone service to the Curtiss and Withee Telephone Company, petitioner, on the following basis:

1. No charge shall be made for calls from subscribers connected to the respondent's exchange at Owen to the petitioner's subscribers. The cost of this service is considered to be included in the regular rates paid by these subscribers.

2. The petitioner's subscribers may have the option (*a*) of paying to the respondent a flat rate of $3 per year per telephone and being entitled to unlimited service through the respondent's exchange to subscribers connected directly with that exchange; or (*b*) of paying a 5 ct. toll charge for each call sent through the respondent's exchange to subscribers connected directly with that exchange. The division of the toll charge between the two companies shall be 3 cts. to the respondent and 2 cts. to the petitioner.

3. The petitioner's patrons shall elect the class of service desired for periods of not less than six months.

4. Statements covering the amounts due the respondent for the flat rate switching service and tolls shall be submitted by the respondent to the petitioner at regular intervals, preferably every quarter year, and shall be paid by the petitioner within one month from date or be subject to a penalty of 10 per cent of the unpaid portion of the bill. The statement of the respondent covering the amount of toll charges shall be itemized, showing for each call the name of party making call, name of party called, date of call and whatever additional information is necessary to make the charge clear.

5. Charges for long distance service through the respondent's exchange, either to or from the petitioner's subscribers, shall in

all cases be the same as the charges made for this service to or from the respondent's subscribers.

6. In case the total revenue received by the respondent from the petitioner's line for any one year amounts to less than $1 per telephone connected to the petitioner's line, the difference between the two amounts shall be paid by the petitioner to the respondent.

IN RE APPLICATION OF THE RIPON UNITED TELEPHONE COMPANY FOR AUTHORITY TO INCREASE ITS RATES.

Submitted April 6, 1914. Decided April 30, 1914.

The Ripon United Tel. Co. applies for authority to increase its rates for telephone service furnished from its exchange in the city of Ripon and to abolish certain charges now in effect for service from Ripon to rural subscribers. The utility proposes to effect improvements in its equipment which will increase its investment and thereby increase the value upon which it should be allowed to earn. The charges which the utility desires to abolish are a charge of 10 cts. per message for communication from the city to a rural phone and the alternative charge of 25 cts. per month for unlimited service from the city to rural phones. No such charges are made for communication from rural phones to the city. The value upon which the utility is entitled to a return was computed upon the basis of a valuation made in July, 1913, for purposes of stock issuance, the cost of improvements since made and the cost of the improvements now proposed by the utility, and the revenues and expenses were investigated.

Held: 1. An increase in rates is necessary if the city of Ripon is to be given the advantage of the improved service proposed by the utility.

2. The message and flat rate charges to city subscribers for the use of the rural lines should be abolished.

The utility is authorized: (1) to discontinue the message and flat rate charges in question; and (2) to put into effect, upon completion of the improvements proposed to be made in the equipment of the utility, a schedule of rates determined by the Commission.

This application was filed on March 12, 1914. The applicant is a public service corporation engaged in the business of furnishing telephone service from its exchange in Ripon to the residents of that city and of the surrounding territory within an area of seven miles radius.

The applicant is the successor of the Ripon Telephone Company and of the Ripon Rural Telephone Company, having purchased the property of those concerns in June, 1912. At that time a valuation of $25,800 was placed on the property by this Commission.

The application states that the system of the company is what is known as a magneto system, and that a considerable portion of

the plant and equipment within the city of Ripon and almost the entire rural system is what is known as "metallic." It is the plan of the management to change the city system over to the common battery system. To do this will require the investment of considerable additional capital, and the company asks for authority to issue additional capital stock to provide for the increased capital and for permission to increase its rates 50 cts. on business phones and 25 cts. on residence phones, and to abolish certain existing charges for services from the city to rural subscribers.

Hearing was held at the office of the Commission on April 6, 1914. *S. M. Pedrick,* secretary, and *E. W. Barnes,* manager of the company, appeared for the applicant. No appearances were made in opposition.

The local rates of the company on file with the Commission are as follows:

Single line business phone	$2.00	per month
2 party line business phone	1.75	"
3 or more party line business phone	1.50	"
Extension set business phone	1.00	"
Single line residence phone	1.50	"
2 party line residence phone	1.25	"
3 or more party residence phone	1.00	"
Extension	.50	"

In addition to these rates the company imposes a charge of 10 cts. per message for communication from the city to any of its rural phones, or, in lieu of this message charge, city subscribers may pay a flat rate of 25 cts. per month for unlimited service to the rural lines. This additional charge for service from the city to the rural lines the company proposes to abolish if the increase in rates asked for is allowed. The company's report shows it to have approximately three hundred rural patrons. No additional charge is made to these patrons, it seems, for communication to city subscribers. If the rural calls to the city subscribers are to be regarded as exchange business generally, it is only fair to regard the converse of these calls, i. e., calls from city subscribers to the rural lines, as part of the general exchange business also, to be paid for at regular exchange rates. It is considered, therefore, that this message and flat rate charge to city subscribers for use of the rural lines of the company should be abolished, as suggested by the applicant.

It was testified at the hearing that the company has had an

engineer of the Wisconsin Telephone Company make an estimate of the cost of the desired improvements. This engineer made a survey of the situation and arrived at the conclusion that the cost of the necessary equipment to place the city subscribers upon a common battery system and the rural subscribers on a magneto system would be about $16,125. This figure the manager of the company believes can be reduced by about $4,000, leaving the total cost of equipment at about $12,125. It is estimated that the building proposed to be erected to accommodate the central office will cost $3,500. Thus the entire cost of the improvements is estimated by the management to be about $15,625, the salvage from the equipment now in use being expected to be sufficient to take care of the expense of making the change. Some portion of the new equipment being in the nature of replacement of equipment now in use, a part of the cost will probably be charged to depreciation and paid for out of the depreciation reserve fund. The central office equipment now in use, of a value of about $1,500, and wire plant and other equipment of an estimated value of about $3,500 are thought to be correctly regarded as depreciation. The deduction of the sum of these amounts from the total cost of the improvements leaves $10,625 to be provided for by the sale of additional capital stock.

The value of the property, including a reasonable allowance for cost of developing the business, was placed at $25,800 in July, 1913. The company was permitted to issue stock on the basis of this value. While the value placed upon a property for purposes of purchase or the issuance of stock may not be identical with the value that should be allowed for the purpose of computing a fair value for rate-making purposes, it appears that the amount allowed by the Commission in this instance may fairly be taken as the value as of that date. Since then the company has made some improvements that should be included in a valuation as of the present time. Additions to the wire plant have been made at a cost of $1,106.92. New phones have been placed, which, including wiring and installing, have cost approximately $1,203.26, and land has been purchased as a site for the proposed central office building at a cost of $1,263.03. These additions, together with some minor amounts, bring the value up to $29,786.21 at the date of the last report. This, together with the cost of the estimated improvements, will

make the value upon which the company should be allowed to earn approximately $40,500.

An examination of the income account as reported to this Commission in June, 1913, shows the total operating revenues for the fiscal year last past to have been $12,595.45, and the ordinary operating expenses to have been $7,187.47. Inspection of the various items of operating expense in the light of the data on hand indicates that these items are fairly normal. Depreciation was charged off by the company at a rate of 7 per cent which is probably slightly higher than was entirely necessary. Deducting depreciation and taxes and adding the non-operating revenues, the gross income from the year's operation is found to be $3,195.70, of which $2,608 was paid out in dividends and $587.70 passed to surplus. There remains to be seen what increases there must be in the earnings of the company if it is to continue to meet operating expenses, pay taxes, allow adequately for depreciation and pay a fair return upon the investment.

It is stated by the company that 130 subscribers in the city are paying the flat rate of 25 cts. per month for service to the rural lines. The income from these amount to $390 per year. The income from those subscribers who pay the 10 ct. toll charge for occasional service to the rural lines and from similar tolls from the Wisconsin Telephone lines averages $213.72 per year. The abolition of this special charge for rural service will therefore entail a reduction in income of approximately $600 per year. Applying this reduction to the income reported for the last fiscal year we find the total operating revenues fall to $11,995,45, an amount insufficient to provide completely for operating expenses, depreciation, taxes, and interest, even on the investment the company has at present. *A fortiori,* it would be insufficient to care for the same allowances on an increased investment such as the improved service will require. Some advance in rates is therefore necessary if the city is to be given the advantage of the improved service suggested. But it does not appear that the required increase in revenues is as great as that which would result from the increased rate proposed by the company.

We cannot foretell what effect a change in the schedule of rates of the company will have upon the class of service that the subscribers elect to take. It is probable, however, that there will be some changes from single party to two or more party service following a readjustment of the schedule. We do not anticipate

that the number of changes will be so great as to seriously disturb the accuracy of the estimates we have made, especially since the data we have at hand as to the number of installations are those submitted by the company in its last report, and do not take into consideration the additional installations made since that time. The following table shows the rates that are considered sufficient to meet the requirements of the proposed improved service:

	Rate.	Increase.	Amount.
Business.			
Single party	$2.50	$0.50	$156.00
2 party	2.00	.25	15.00
3 or more party	1.75	.25	261.00
Extension set	1.00		
Residence.			
Single party	1.75	.25	51.00
2 party	1.50	.25	33.00
3 or more party	1.15	.15	621.00
Extension set	.50		
Total additional revenue			$1,137.00

Deducting the revenue at present derived from the class of service previously spoken of, which is to be abolished, and adding the revenue to be derived from the increases in rates herein proposed, the total operating revenues of the company would amount to $13,132.45. The ordinary operating expenses for the past fiscal year, plus an allowance for depreciation at 6½ per cent on the value of the property at present in use and on the estimated cost of the improvements proposed, and plus taxes as already paid for the year 1914, would amount to $10,196.88. A balance would thus be left amounting to $2,935.57, which, adding the non-operating revenues, gives an amount available for a return upon investment of $3,101.89. With interest at 7 per cent this appears to be adequate to pay interest charges and leave a slight surplus to care for unforseen contingencies.

The preceding discussion is based upon the assumption that the system of the Ripon United Telephone Company is to be improved in the manner outlined in the first portion of this decision.

IT IS THEREFORE ORDERED: 1. That the Ripon United Telephone Company abolish the charge now made to city subscribers of 25 cts. per month flat rate for service to rural lines or 10 cts. toll rate to city subscribers for service from the city to rural lines.

2. That, upon the completion of the improvements of the system owned by the said company by the substitution of the common battery system for the magneto system now in use in the city of Ripon, and of complete metallic lines throughout, the company may discontinue its present schedule of rates and substitute therefor the following schedule:

Business rates:	
Single party line	$2.50
2 party line	2.00
3 or more party line	1.75
Extension set	1.00
Residence rates:	
Single party line	1.75
2 party line	1.50
3 or more party line	1.15
Extension set	.50

These rates as authorized shall not be put in effect until the improvements outlined have been fully made.

TOWN OF HOWARD
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Feb. 24, 1914. Decided April 30, 1914.

The petitioner alleges that a crossing on the respondent's line about one mile west of Albertville in the town of Howard, Chippewa county, is dangerous and asks that the respondent be required to install an electric bell.

Held: The crossing is dangerous. The respondent is ordered to install and maintain an electric bell, with illuminated sign, plans to be submitted for approval. Ninety days is considered a sufficient time within which to comply with this order.

The petitioner, a regularly organized town in Chippewa county, alleges in substance that a highway crossing on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company about one mile west of Albertville is dangerous to public travel, and requests the Commission to require the respondent to install an electric bell.

No answer was filed by the respondent.

A hearing was held at Albertville on February 24, 1914, at which *W. H. Gates* appeared for the petitioner, and *Kenneth Taylor* for the respondent.

The testimony shows that at the crossing in question the highway runs north and south and the respondent's single track line east and west. The view of trains to the west is comparatively unobstructed from either highway approach. To the east, however, the view is cut off by the banks of a deep cut. Witnesses stated that on the north highway approach trains from the east cannot be seen until a traveler's horses are within a very few feet of the rail. On the south highway approach trains from the east can be seen at a distance from a point in the highway about forty rods from the rail, but after passing that point no view is afforded until a traveler is very close to the track. The highway descends to the track from both sides, which interferes with the control of heavily loaded teams in a case of emergency. Moreover, the banks of the cut make it difficult to hear a train

approaching from the east if the wind is blowing from the west. It was asserted that trains frequently fail to whistle at this crossing.

The highway leads from the territory south of Albertville to Colfax. Vehicular traffic was estimated at an average of ten or twelve daily, but it was said that as many as twenty-five or thirty vehicles often cross. Witnesses stated that the road is traveled by a number of automobiles during the summer and that several farmers cross regularly in hauling their cream and milk. About ten children are obliged to use this crossing on their way to and from school. The respondent's time-table shows four regular passenger trains and six regular freight trains on this division, of which four are scheduled to pass Albertville after dark. Several narrow escapes at the crossing were described by witnesses.

It is evident from the testimony that the crossing under consideration is one of unusual danger. In view of the existing traffic conditions, it is our judgment that the installation of bell protection, as prayed for, will provide reasonable protection for the public.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, install and maintain at the crossing on its line about one mile west of Albertville in the town of Howard, an automatic electric bell with an illuminated sign for night indication, plans to be submitted to the Commission for approval.

Ninety days is considered a sufficient time within which to comply with this order.

TOWN OF WIEN
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Jan. 20, 1914. Decided May 1, 1914.

The petitioner alleges that the crossings known as the Yanke crossing, the Sawyer crossing and the Hoffman crossing on the respondent's line in the town of Wien, Marathon county, are dangerous.

Held: The crossings require further protection. The respondent is ordered to install and maintain at each an electric bell with illuminated sign, plans to be submitted for approval. Ninety days is considered a reasonable time within which to comply with this order.

It is suggested that the town board remove the obstructing brush and trees at the Yanke and Sawyer crossings.

The petitioner, a regularly organized town in Marathon county, alleges in substance that three highway crossings on the line of the Chicago & North Western Railway Company in the town of Wien are dangerous to public travel on account of the surrounding physical conditions. The crossings are designated as follows:

1. Yanke crossing, 2¾ miles south of Edgar.
2. Sawyer crossing, ½ mile southwest of Fenwood.
3. Hoffman crossing, 1½ miles south of Edgar.

The Commission is therefore asked to take such action as it deems just in the premises.

No formal answer was filed by the respondent.

A hearing was held at Edgar on January 20, 1914, at which *Martin Marguardt* appeared for the petitioner and *C. A. Vilas* for the respondent.

The Yanke Crossing.

The testimony shows that at the Yanke crossing the highway runs east and west and the respondent's line northeast and southwest, the angle of crossing being acute. The town chairman testified that the view of trains to the south from either approach is so badly obstructed by the banks of a cut through

which the track curves, that travelers must be very close to the rail before an approaching train is visible. The respondent's engineer stated that this cut is 15 feet deep at about five hundred feet from the crossing, running about the same depth for one hundred feet each side of that point. The banks are lower nearer the crossing, disappearing a short distance northeast of the highway. The Commission's engineer reports that the land south of the road is high and covered with woods which grow close to the highway and railway right of way fences, and that a similar condition exists in the northwest angle. He also reports that trees and brush growing within the highway lines east of the track obstruct the view of trains.

The respondent's engineer stated the limits of vision, as observed from points in the highway at the railway right of way lines, as follows:

Distance of point of observation on highway from track.	View southwest.	View northeast.
West 50 feet	700 feet	2,000 feet.
East 50 "	400 "	2,000 "

Upon the basis of observations made on July 2, 1913, when the trees were in full leaf, our engineer reports the limits of vision as follows:

Distance of point of observation in highway from track,	View southwest.	View northeast.
East 50 feet	200 feet	½ mile.
" 100 "	80 "	½ "
" 200 "	30 "	¼ "
" 300 "	15 "	¼ "
West 50 "	200 "	½ "
" 100 "	250 "	600 feet.
" 200 "	200 "	300 "
" 300 "	100 "	150 "

The highway is a crossroad used chiefly by the residents of the locality. The town chairman estimated the highway traffic at about eight or ten teams a day. The respondent's superintendent introduced a traffic count made by the section foreman, which shows six teams, one automobile and eight pedestrians on January 16, 1914, and four teams and eight pedestrians on

January 17. There are nine regular train movements, three of which occur after dark.

The Commission's engineer recommends that bell protection be provided, and that the town of Wien remove the obstructing brush within the highway lines for a distance of five hundred feet from the tracks.

The Sawyer Crossing.

It appears from the testimony that at the Sawyer crossing the respondent's line runs northeast and southwest. The highway parallels the track from the southwest and turns sharply at the crossing running due south over the railroad right of way. About two hundred feet south of the track the road divides, one branch going south and the other east. The town chairman testified that from the approach which parallels the track on the north it is impossible to see a train to the southwest without standing up in a vehicle and looking back. Even then, he said, a traveler can see only fifteen or twenty rods, because of the bank of a twelve foot cut through which the track passes. After making the sharp turn on to the railway right of way, one must be almost on the track to see a train to the southwest. This cut also interferes with the view of trains to the southwest from the south highway approach. Our engineer reports that thick woods adjoin the railway right of way northeast of the crossing and both sides of the highway south of the track, and that there is obstructing brush within the highway lines near the crossing.

The respondent's engineer testified that the limits of vision, from points in the highway at the railway right of way lines are as follows:

Distance of point of observation in highway from track.	View southwest.	View northeast.
South 50 feet	1,225 feet.	2,000 feet
North 50 "	875 "	2,000 "

Our engineer reports the limits of vision as observed on July 2, 1913, as follows:

Distance of point of observation in highway from track.	View southwest.	View northeast.
South 50 feet	1,200 feet.	½ mile
" 100 "	250 "	70 feet
" 200 "	150 "	30 "
" 300 "	80 "	20 "
North 50 "	900 "	½ mile
" 100 "	500 "	500 feet
" 200 "	500 "	600 "
" 300 "	500 "	1,200 "

The road is an important highway leading from Fenwood to Stratford. The town chairman estimated the highway traffic at from ten to twenty teams a day on the average. He said that some automobiles cross and that the farm traffic is considerably augmented on stock days. A count taken by the section foreman on January 19, 1914, shows that eight teams crossed during the day. Traffic on the railway is the same as that described with reference to the Yanke crossing.

The Commission's engineer recommends that bell protection be provided at the Sawyer crossing and that the town of Wien remove the obstructing brush and trees from the highway for a distance of five hundred feet on each side of the track.

The Hoffman Crossing.

The testimony shows that at the Hoffman crossing the respondent's line runs northwest and southeast, intersecting at an acute angle an east and west highway. The track lies in a cut, which has a maximum depth of twelve feet at a point between four hundred and five hundred feet southeast of the crossing. The town chairman testified that from the east highway approach the view to the southeast is obstructed by the banks of the cut so that it is difficult to see a train until the traveler is very close to the track. The banks of the cut also obstruct the view to the southeast from the west highway approach, and in addition there are several buildings in the line of vision. The town chairman also stated that the view to the northwest from the west highway approach is obscured by buildings and trees.

The respondent's engineer testified that the limits of vision at points in the highway at the railway right of way lines are as follows:

Distance of point of observation in highway from track.	View southeast.	View northwest.
East 50 feet	535 feet	2,000 feet.
West 50 "	780 "	2,000 "

Our engineer reports the limits of vision, as observed on July 1, 1913, as follows:

Distance of point of observation in highway from track	View southeast.	View northwest.
East 50 feet	650 feet.	1,500 feet.
" 100 "	450 "	1,400 "
" 200 "	300 "	1,300 "
" 300 "	250 "	1,200 "
West 50 "	450 "	¼ mile.
" 100 "	300 "	70 feet.
" 200 "	200 "	30 "
" 300 "	100 "	20 "

The highway is a main traveled road leading from Wausau to Colby. It is being improved under state aid, the work having progressed to a point within four miles of the crossing. The town chairman estimated the traffic at from thirty to fifty vehicles a day. The count submitted by the company shows eighteen teams, one automobile and five pedestrians on January 16, 1914, and seventeen teams, five automobiles and ten pedestrians on the following day. Train movements are the same at this crossing as those described with reference to the Yanke crossing. A narrow escape from accident at the Hoffman crossing was described by witnesses.

The Commission's engineer recommends that bell protection be provided at the Hoffman crossing.

From a careful examination of the testimony and of the reports of our engineering staff, it is our judgment that each of the three crossings designated in the complaint is more than ordinarily dangerous and that further protection at each of them is necessary. We suggest that the town board remove the obstructing brush and trees at the Yanke and Sawyer crossings as recommended by our engineer. In our opinion bell protection

at each crossing will reasonably safeguard public travel under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, install and maintain at each of the three crossings designated in the complaint, namely, the Yanke crossing 2¾ miles south of Edgar, the Sawyer crossing ½ mile southwest of Fenwood, and the Hoffman crossing 1½ miles south of Edgar, an automatic electric bell with an illuminated sign for night indication, plans for track circuits to be submitted to the Commission for approval.

Ninety days is considered a reasonable time within which to comply with this order.

IN RE PROPOSED EXTENSION OF THE LINE OF THE WISCONSIN TELEPHONE COMPANY IN SECTIONS 7, 17 AND 18 IN THE TOWN OF ROCK, ROCK COUNTY, WISCONSIN.

Submitted May 1, 1914. Decided May 6, 1914.

The Wis. Tel. Co. filed notice with the Commission of its intention to extend its line south in the town of Rock between sections 7 and 8 and between sections 17 and 18 to reach three prospective subscribers. The Rock County Tel. Co. objects to the proposed extension. Two of the prospective subscribers reside in section 7, which is in territory now without telephone service and about equidistant from the lines of the two companies. The third prospective subscriber resides in section 18 and now has the service of the Rock County Tel. Co. over a line a quarter of a mile long on which he is the sole subscriber and which was constructed for the purpose of giving him service, but is said to desire the service of the Wis. Tel. Co. for the reason that he has another farm located in section 7 at which he has the service of the Wis. Tel. Co. A proceeding having for its object the establishing of physical connection between the Wis. Tel. Co. and the Rock County Tel. Co. is now pending before the Commission.

The Anti-Duplication Law permits a proposed extension to be made unless the Commission makes a definite finding that public convenience and necessity do not require the extension. The Commission cannot make such a finding on the mere ground that the company objecting to the making of an extension by another company has been longer established than the other in the town in which the extension is to be made and has the preponderating line mileage and number of subscribers in that town.

Held: Public convenience and necessity do not require the extension proposed insofar as the territory south of sections 7 and 8 is concerned. No finding is made with respect to the proposed extension to the two residences in section 7 and the Wis. Tel. Co. will therefore be authorized by the operation of law to proceed with the extension to these points.

Notice of the proposed extension involved in this case was filed with this Commission by the Wisconsin Telephone Company April 17, 1914. Upon the filing of objection by the Rock County Telephone Company the matter was set for hearing at Janesville.

At the hearing which was held May 1, 1914, the Wisconsin Telephone Company was represented by *J. F. Krizek* and the Rock County Telephone Company by *Ruger & Ruger*.

The Wisconsin Telephone Company proposes a lateral extension from its existing line which now runs on an east and west highway between sections 5 and 8 in the town of Rock. The proposed extension would run south on the line between sections 7 and 8 and between sections 17 and 18 to reach three proposed subscribers. Of these three persons, two reside along the proposed line in section 7, and the third, Mr. Finley, is at the end of the proposed line in section 18. A fourth resident, who has not decided to take telephone service but who is considered by the Wisconsin Telephone Company to be a prospect, lives across the road from Mr. Finley and a few rods north. The two proposed subscribers in section 7 now have no telephone service; the one farthest to the north desires the Wisconsin Telephone Company's service; the other one is indifferent as to which service is installed. Mr. Finley, the proposed subscriber farthest to the south, now has the service of the Rock County Telephone Company, and it was stated at the hearing that his main reason for desiring the Wisconsin Telephone Company's service was that he owned another farm at about the center of section 7, at which he had the service of the Wisconsin Telephone Company. It was testified that the Rock County Telephone Company built its line about two years ago to Mr. Finley's residence, constructing for his use about one quarter of a mile of pole line which would be left without any subscribers at all if Mr. Finley were to be transferred to the Wisconsin line. Mr. Finley did not appear at the hearing and some of the testimony tended to show that he was satisfied with the Rock County service and has no great desire for a change.

The two proposed subscribers north of Mr. Finley's residence are in territory served by neither company. There is little difference in the distance either company would have to build its line in order to reach these persons. The northerly one is a little closer to the Wisconsin line, while the southern one seems a little nearer to the end of the Rock County line at Mr. Finley's residence. Under such circumstances as these there does not seem to be any controlling public necessity demanding the service of one company rather than that of the other. The only action the Commission can take under the statute is to make a finding that public convenience and necessity do not require an extension proposed by a telephone company, and if such finding is not made, the company has the right to make the extension.

Such a finding cannot be made in this case as to the more northerly residences since there is nothing in the situation to indicate that from the point of view of the public the service of the Wisconsin Telephone Company is not needed at the points in question.

Counsel for the Rock County Telephone Company in his brief disagrees with the position just stated and previous expressions in other cases by this Commission in regard to entrance of companies into unoccupied territory. It is his position, as we understand it, that where one company has been long established in a given town and has a preponderating mileage of line and a number of subscribers in that town, it should be the one to serve that town; and that if another company happened to be operating within the town when the Anti-Duplication Law became effective, it should be permitted to keep only such subscribers as it had and it should not be allowed to extend. The legislature, it is true, made the town the unit for jurisdictional purposes, but the question of public convenience and necessity is not one that can ordinarily be determined by the location of town lines. So far as the public convenience and necessity are concerned it would be impossible to say that the older or larger company should be permitted to do all the extending within a town and that the newer company should be confined to its existing lines. This Commission must consider the telephone situation as it existed when the Anti-Duplication Law became effective and when the situation is thus considered it is usually difficult to give either company priority when both are about equally near to unoccupied territory. The provision in the law for physical connection between telephone companies should afford relief from such inconvenience as may result from close proximity to telephone lines already established in rural districts.

It follows from what has been stated that the Commission will make no finding with respect to the Wisconsin Telephone Company's proposed extension to the first two residences mentioned in the notice and the company will therefore be authorized by the operation of law to proceed with the extension of these points.

The situation is quite different as to the extension to Mr. Finley's residence where the Rock County Telephone Company is already giving service and there is nothing in the record to in-

dicate that the service is not reasonably adequate. The shifting of Mr. Finley from the Rock County to the Wisconsin line would make about one quarter of a mile of the Rock County pole line useless. The case here is not one of unoccupied territory into which either company may with equal propriety be allowed to enter. The very kind of destructive competition which the law was intended to prevent would result if actual transfer of subscribers from one company to another for such reasons as appear in this case were to be permitted. As we have intimated above, the Physical Connection Law can be called into operation to obviate the difficulty caused by Mr. Finley's ownership of two farms on one of which the Wisconsin Telephone Company's instrument is now installed. As a matter of fact there is now pending before this Commission a proceeding having for its object the establishing of physical connection between the Wisconsin Telephone Company and the Rock County Telephone Company at Janesville and this case will soon be decided. The evidence presented satisfies us that public convenience and necessity do not require the extension to Mr. Finley's residence.

As to the other residence near Mr. Finley, at which there is no certainty that any telephone service at all is desired, it would seem that its close proximity to Mr. Finley's house would make the Rock County line the logical one to be extended if an extension is to be made. The evidence is very vague, however, as to the needs and intentions of Mr. Mulligan, the occupant of this residence, and therefore for the present the Commission's finding will be to the effect that no extension of the Wisconsin Telephone Company's line south of the southern boundary of sections 7 and 8 of the town of Rock is required by public convenience and necessity.

We therefore find and determine that public convenience and necessity do not require the extension of lines of the Wisconsin Telephone Company in the town of Rock, Rock county, Wis., in the manner proposed in its notice filed with this Commission April 17, 1914, insofar as such extension is proposed to proceed south of the southern boundary of sections 7 and 8 of said town of Rock.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF A HIGHWAY CROSSING LOCATED ABOUT ONE MILE SOUTH OF GALESVILLE DEPOT ON THE LINE OF THE CHICAGO AND NORTH WESTERN RAILWAY COMPANY IN THE TOWN OF GALE, TREMPEALEAU COUNTY.

Submitted March 26, 1914. Decided May 6, 1914.

The Commission, on its own motion, investigated the "Richard Jahn crossing" on the C. & N. W. Ry. in the town of Gale, Trempealeau county, after informal complaint had been made that the crossing is dangerous to public travel and that a small bridge located almost entirely on the railroad right of way is in a dangerous condition. As originally constructed the highway was practically level at the point in question but when the railroad was built the highway was raised so as to provide a grade crossing, thereby creating the ascending approaches against which complaint is made. The railway company contends that the jurisdiction of the Commission does not extend to the enforcement of the duties laid upon railroad companies by sec. 1836 of the statutes which requires a railway company in a case like the instant case to restore a highway crossed by its line "to its former state or to such condition as that its usefulness shall not be materially impaired".

Held: 1. The crossing is dangerous and inconvenient.

2. The Commission is vested with authority by sec. 1797—31 of the statutes to enforce the provisions of sec. 1836 of the statutes.

The railway company is ordered to improve the highway approaches to the crossing as specified, to construct a suitable culvert, to replace the bridge against which complaint is made, and to remove the trees and brush along the creek within the railroad right of way lines.

It is recommended that the town board cause to be removed the obstructing brush and trees within the limits of the highway and that it take such action as is necessary to secure the removal of the obstructing brush located on private property in the northeast angle of the crossing.

Following an informal complaint from the chairman of the town of Gale that a highway crossing on the line of the Chicago & North Western Railway Company, located about one mile south of the depot at Galesville in Trempealeau county, is dangerous to public travel and that a small bridge almost entirely on the railway right of way is in dangerous condition, a hearing, on motion of the Commission, was duly ordered and held at Galesville on March 26, 1914. *L. L. Grinde* appeared for the town of Gale, *W. C. Buetow* for the Wisconsin Highway Com-

mission and *C. A. Vilas* for the Chicago & North Western Railway Company.

The testimony shows that the crossing in question is known locally as the "Richard Jahn crossing." The railway is on a fill and runs northeast and southwest, curving to the south about nine hundred feet southwest of the crossing. The highway parallels the track on the southeast side, turns due west at the crossing and continues in that direction west of the track. A small bridge over a stream is located a short distance southeast of the crossing. Witnesses testified that the view of trains is not seriously obstructed from either highway approach, but that on account of the fill and the steepness of the approaches a driver cannot see a team or automobile approaching the crossing from the opposite side. The company's engineer testified that the west highway approach is on a 6 per cent grade and the east approach on a 7½ per cent grade. It was also stated that the approaches are too narrow to permit a team to turn around or to pass an automobile in safety. A narrow escape from collision between a team and an automobile was described. With regard to the convenience of the crossing a witness asserted that it is impossible to haul a full load, such as would normally be carried in this district, over the track at this point. The highway bridge southeast of the track is in poor repair and was said to be dangerous. The opinion was expressed by the railway company's engineer and by the town chairman that the bridge can be satisfactorily replaced by a culvert, since the stream is a small one.

The highway is one of the main traveled roads from Galesville to Trempealeau and Winona. As originally constructed the highway was practically level at this point, but when the railway line was built, about 1883, the highway was raised so as to provide a grade crossing, thereby creating the ascending approaches as they exist to-day. Witnesses estimated that from thirty to forty vehicles and a number of pedestrians, including about ten school children, use the crossing daily. During the summer eight or ten automobiles a day ordinarily cross. The representative of the Wisconsin Highway Commission stated that the highway will be included in the state road system when the town votes for its improvement. There are eight regular train movements on this branch line, all of which occur between 5:40 a. m. and 7:45 p. m.

Some question was raised at the hearing as to whether the bridge over the stream lies within the railway right of way. In its brief the company admits that the records show the bridge to be for the most part, if not wholly, within the limits of its right of way. However, it is not material to a decision in this case whether the bridge is or is not within the company's lines.

The engineer of the Commission, on the basis of an investigation on the ground, recommends that the grade of approach be reduced to a maximum of 5 per cent, that the approaches be widened to twenty feet, and that the existing bridge over the stream be replaced by a suitable culvert. He states that the view of trains to the southwest from the southeast highway approach is obstructed by brush and trees within the highway, and also along the creek within the lines of the railway right of way. Brush on private property in the northwest angle of the crossing also limits the vision. He recommends that the town and the company remove these obstructions.

In the light of the testimony and of the report of our engineer it is our judgment that the crossing in question is dangerous to human life, and we regard the improvements recommended by our engineer as necessary for the adequate safeguarding of public travel on the highway. However, the improvements are also necessary in order that the highway shall be restored "to its former state or to such condition as that its usefulness shall not be materially impaired," as provided in sec. 1836 of the statutes. The highway was practically level before the railway was built, and its present dangerous and inconvenient condition is due entirely to the construction of the railway line on a fill at this point. It is therefore the duty of the railway company to render the crossing, insofar as is possible, as convenient for public travel as it was before the line was built.

Counsel for the company contends that in a case of this nature the jurisdiction of the Commission extends only to matters of public safety as provided in sections 1797—12*e*, *f*, *g*, *h*, *i*, and *j*, and that the enforcement of the duties provided in sec. 1836 is not within the scope of the powers conferred upon the Commission, as this section was in existence prior to the creation of the Commission and has heretofore been enforced by mandatory injunctions. *Jamestown v. Chicago B. & N. R. Co.* 69 Wis. 648; *Oshkosh v. Milwaukee & Lake Winnebago R. Co.* 74 Wis. 543.

But sec. 1797—31 imposes upon the Commission the duty of enforcing the provisions of sections 1797—1 to 1797—38 inclu-

sive, known as the Railroad Commission Act, as well as all other laws relating to railroads, and to report all violations thereof to the attorney-general. It appears from the language of this section that the enforcement of all other laws relating to railroads is placed on the same basis as the enforcement of the Railroad Commission Act. It was evidently the intention of the legislature to give the Commission jurisdiction to hear and determine violations of all laws relating to railroads where the questions involved could properly be passed upon by the Commission and the proceedings provided by statute for the exercise of the functions of the Commission were applicable. This view is sustained in the case of the *Chicago, Burlington & Quincy Railroad Co. v. Railroad Commission,* 1913, 152 Wis. 654. In that case the Commission made an order enforcing the provisions of the statute which imposed a specific penalty for a violation thereof. The Commission took the view that it had concurrent jurisdiction with the courts in enforcing the provisions of the statute. The order of the Commission was sustained.

Heretofore the Commission has made orders requiring railroads to comply with the terms of sec. 1836. *Town of Rhine v. C. M. & St. P. R. Co.* 1910, 5 W. R. C. R. 184; *Town of Lucas v. C. St. P. M. & O. R. Co.* 1913, 12 W. R. C. R. 703.

For the reasons stated an order will be entered requiring the railway company to make the necessary alterations in the crossing in question entirely at its own expense. We recommend to the town board that it cause to be removed the obstructing brush and trees within the limits of the highway, and that it take such action as is necessary to secure the removal of the obstructing brush located on private property in the northeast angle of the crossing.

It is Therefore Ordered, That the Chicago & North Western Railway Company improve the highway approaches to the crossing located on its line about one mile south of Galesville station in Trempealeau county, so as to provide a grade not to exceed 5 per cent and a crown width available for travel of not less than twenty feet; construct a suitable culvert to replace the existing bridge southeast of the track conforming in width to the improved highway approaches, and remove the trees and brush along the creek within its right of way lines.

Ninety days is considered a sufficient time within which to comply with this order.

GREILING BROTHERS COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Feb. 10, 1914. Decided May 6, 1914.

The petitioner alleges that the respondent exacted from it unjust and unwarranted demurrage charges on account of delays in unloading carload shipments of stone at Racine which were occasioned solely by the failure of the respondent to properly fulfill its agreement to provide certain track facilities for the use of the petitioner. There appears to be no provision in the demurrage rules of the respondent which would permit it to make any free time allowance for a delay of the kind involved in the instant case.

Held: The charge complained of was unusual and exorbitant. Refund of the amount claimed is ordered.

It would seem advisable for the railway companies to amend the demurrage rules to make allowances for delays in unloading cars which are occasioned, as in the instant case, by the failure of the railway company to provide promised track facilities within the time agreed upon with shippers.

The Greiling Brothers Company is a Wisconsin corporation engaged in the business of marine contracting with offices at Green Bay, Wis. It alleges that it entered into an agreement with the Lake Shore Stone Company at Lannon, Wis., whereby the latter company was to ship from Lannon, Wis., to Racine over the respondent's tracks nine hundred tons more or less of stone at a rate of two cars per day; that after the arrival and spotting of the first cars it found that only one and part of another car could be unloaded at a time; and that on September 13, at a meeting between the representative of the petitioner, Mr. Clancy, agent of the respondent, and the roadmaster of the respondent, it was agreed that if the petitioner would grade a certain piece of ground adjacent to the track from which the petitioner was then unloading, a track would be laid upon it, sufficient to allow the petitioner to unload two full cars, and part of another without a switch; that on September 17 the petitioner notified Mr. Clancy by letter that the grading was done, and ready for the track; that the respondent delayed laying the track

and that only after the petitioner had notified Mr. Clancy on September 23 that no demurrage would be paid, and that the matter would be taken up with the officials, was any attempt made to lay such track; that it was finally accomplished on September 23 at noon; that grading such grounds cut off the petitioner from the use of the track it had been using, so that it was unable to unload any stone from September 16, the day it began to grade, until noon of September 23 when the track was finally laid; that the petitioner was obliged to use other stone, thereby being deprived of the profit it would have made if it had been able to unload from its own cars; that on September 27 the track so laid spread which resulted in delaying unloading again until noon of October 1, through delays on the part of Mr. Clancy in ordering repairs; that demurrage charges to the amount of $54 accrued after September 17, 1913, and are directly chargeable to the negligence of Mr. Clancy, the employe of the respondent. Wherefore, the petitioner prays that the respondent be required to refund to it the sum of $54.

The respondent, answering the petition, admits all the formal allegations thereof but denies that incapacity or lack of service on the part of the respondent is responsible for the charge or any part of the charge or charges involved. It states that the bill rendered was on the basis of the proper and lawful charges which under the tariffs and rules of the respondent it was obliged by law to collect in the premises, and denies that the petitioner is entitled to refund the demurrage charges to any extent whatsoever. Wherefore, the respondent prays that the petition be dismissed.

A hearing was held on February 10, 1914, at the office of the Commission at Madison. *F. W. Lucas* appeared for the petitioner and *J. M. Davis* for the respondent.

The following facts were shown at the hearing: The petitioner, a marine contractor, entered into a contract with the United States government for the building of a concrete breakwater at Racine, Wis. It was also to replace certain portions of a timber breakwater and fill the same with stone. To carry out this agreement a contract was made with the Lake Shore Stone Company for its supply of stone; in all 10,000 tons had been ordered, to be delivered at a rate of two cars per day. When the first deliveries were made it was found that it was impossible to unload more than one car, or one and one-half cars, at a time on account of

the length of the siding. A meeting was accordingly arranged for September 13 between the petitioner and representatives of the respondent for the purpose of taking up the matter of securing increased facilities. At that meeting it was decided that if the petitioner would grade a certain piece of ground immediately adjacent to the track then used by the petitioner, the respondent would lay a track upon it and install a switch.

At the meeting the petitioner refused to do the grading, believing that it was the duty of the respondent to do this. The roadmaster finally left orders that should the petitioner decide to do the grading, he would order the section men to lay the track.

On the morning of Monday, September 15, the work of grading was begun by the petitioner and completed on the morning of the 16th. The petitioner, on September 17, notified Mr. Clancy, the representative of the respondent, in a personal letter to him, that the work was completed and ready for the track. The respondent admits the receipt of notice but claims that section men were not available at the time notice was received, but that they were put upon the work as soon as available. Without waiting for the track to be laid the petitioner arranged with the Lake Shore Stone Company to deliver four cars per day instead of two, upon the belief that it would require a day or two to change the order and that the additional facilities would be ready by the time the cars arrived. However, it seems the cars arrived immediately and were set out in the yard of the respondent where they remained some time as many as 18 waiting at one time.

The petitioner, it seems, called at the office of the respondent each morning to urge the laying of the track but nothing appears to have been done towards laying the track until the morning of the 23d., when the petitioner notified Mr. Clancy that it would take up the matter with officials of the railway company and would pay no demurrage. Work of laying the track was begun that morning and finished by noon. In the meantime, the United States government, unwilling to await the settlement of the controversy, shipped in over 900 tons of stone on scows on September 19 and ordered the petitioner to fill in the breakwater with them. The petitioner also complained of delay in repairing rails after the track was laid and the rails had spread. To this the respondent answered that when notice was given it the sec-

tion men were making repairs on the main track but that within thirty hours after notice was given the rails were repaired.

The stone contracted for from the Lake Shore Stone Company the petitioner was obliged to dispose of to other parties. This caused an additional delay in unloading and consequently an increase in demurrage charges.

The petitioner's records show that only four cars had been received prior to September 17 and that two of these were unloaded at the time of taking up the matter with the respondent, but the respondent claimed that there were more than this number.

The petitioner in all paid demurrage charges to the amount of $137, of which $54 is claimed as an unjust and unwarranted overcharge because it accrued after September 17.

From the foregoing statement of facts it appears that because of the respondent's delay in fulfilling its promise with the petitioner demurrage in the amount claimed accrued. There appears to be no provision in the respondent's demurrage rules that would permit it to make any free time allowance for a delay of this nature. However, without consideration of the respondent's obligation to enter into such an agreement, it would seem that the petitioner had a right to expect the fulfilment thereof without delay. The fact that the respondent found it necessary and convenient for its own interest to postpone the laying of the track should not operate to the disadvantage of the petitioner. The petitioner had no control over the delay and the respondent could extend the time to any length it saw fit and thereby increase the demurrage charges. It took but one-half day for the respondent to perform the required work and yet the respondent delayed doing the work for a period of six days. We do not deem that there is any equity or justice in charging the petitioner for delay in unloading cars in addition to the inconvenience and other expense suffered by it through this delay.

It would seem advisable for the railway companies to amend the demurrage rules, so that they would be permitted to make allowances for delays of this character. Such delays are likely to occur from time to time as the result of the amount of work the companies may have in hand when construction or extension of sidetracks is required. Any such provision should perhaps ignore short delays of a day or less.

For the reasons above stated, we find and determine that the demurrage charges exacted of the petitioner by the respondent as aforesaid are unusual and exorbitant and that no demurrage charge should have been made after September 17, 1913. The amount of overcharge is $54 for which sum reparation will be awarded.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, be and the same is hereby authorized and directed to refund to the petitioner, Greiling Brothers Company, the said sum of $54.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE ADVISABILITY OF SEPARATING THE GRADES OF A CROSSING FOUR AND ONE-HALF MILES NORTH OF RACINE ON THE LINE OF THE CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided May 7, 1914.

A previous order in this matter as amended requires the C. & N. W. Ry. Co. to construct a new subway at the crossing in question south of the existing subway, using the south abutment of the present structure for a pier, the work to be completed by June 1, 1914. Examination of plans submitted by the railway company and further consideration of the situation at the proposed subway indicate, however, that the retention of the south abutment of the existing subway as a solid pier, as specified in the order, would result in obstructing the view of traffic from the opposite side. The substitution of an open work steel pier for the concrete pier was agreed upon by the interested parties and the order is modified to permit this change. An extension of time for compliance until September 1, 1914, is allowed.

An order in the above entitled matter was issued on October 25, 1912, 10 W. R. C. R. 618, which, as amended on May 15, 1913, and July 9, 1913, provides for the construction of a new subway at the crossing in question south of the existing subway, using the south abutment of the present structure for a pier, the work to be completed by June 1, 1914. Plans were submitted by the Chicago & North Western Railway Company in accordance with this order, but upon a careful examination of these plans and after a further consideration of the situation at the proposed subway, it became evident that the retention of the south abutment of the existing subway as a solid pier, as specified in the order, would result in obstructing the view of traffic approaching from the opposite side.

A rehearing in the matter was therefore ordered and held at Milwaukee on March 25, 1914, and, as adjourned, at Kenosha on April 1, 1914. *Wm. W. Storms* appeared for the town of Caledonia, *Wm. G. Wheeler* and *Irving Herriot* for the Chicago & North Western Railway Company, and *Clarke M. Rosecrantz* for The Milwaukee Electric Railway & Light Company.

At the Kenosha hearing the railway company submitted revised plans which provide for the substitution of an open work steel pier for the concrete pier. This change, according to the estimate of the company's engineer, will increase the cost of the structure about $1,000 and will necessitate three months additional time for securing material and completing the work. The revised plans were agreed upon as acceptable by the representatives of all of the interested parties, and in the opinion of the chief engineer of the Commission the objection to the original plans are eliminated thereby. The revised plans are approved herewith.

IT IS THEREFORE ORDERED, That the order made herein on October 25, 1912, and amended on May 15, 1913, and July 9, 1913, be further modified and amended so as to read as follows:

1. That the Chicago & North Western Railway Company construct and maintain a new subway south of the existing subway where its line crosses the highway, which is located near the southwest corner of the northwest quarter of section 20, town 4 north, range 23 east, Racine county, Wisconsin, which new subway shall be separated from the existing subway by a steel bent pier, and which shall have a vertical clearance of not less than fourteen feet, and a horizontal clearance of not less than twenty-four feet, the approaches not to exceed a 5 per cent grade, in accordance with plans and specifications to be approved by the Commission, and that said subway be used for the purpose of carrying the said highway across the right of way and underneath the tracks of said Chicago & North Western Railway Company.

2. That when said new subway shall be completed and open for public travel, the portion of said highway crossing said railroad at grade between the right of way lines of said railway company be closed, and said Chicago & North Western Railway Company is hereby directed to enclose said highway with continuous fences so that the same cannot be used by the public.

3. That the Chicago & North Western Railway Company shall furnish all material and labor, and perform all necessary work in making the alterations ordered above.

4. That upon the completion of the alterations of the said highway herein provided for, the said Chicago & North Western Railway Company shall furnish this Commission with a complete and detailed account of all moneys expended herein, and

the Commission shall thereupon, with or without further hearing as may be deemed best, determine the actual cost of changing said highway and of the said subway, and the town of Caledonia shall thereupon pay to the said Chicago & North Western Railway Company 20 per cent of said cost as so determined by this Commission, and 80 per cent of said cost shall be borne by said Chicago & North Western Railway Company.

5. That the construction of said subway and the closing of said grade crossing shall be made and completed and said subway opened to the use of the public by September 1, 1914.

EARL TELEPHONE COMPANY
vs.
TREGO TELEPHONE COMPANY.

Submitted Feb. 13, 1914. Decided May 8, 1914.

The Earl Tel. Co. alleges that the Trego Tel. Co. extended its line in the summer and fall of 1913 without authority of law into territory already occupied by the Earl Tel. Co. The Trego Tel. Co. contends that inasmuch as it began the construction of the line prior to the enactment of ch. 610, laws of 1913, it was entitled to complete the line. The territory in question is in the main that which lies between the unincorporated villages of Earl and Springbrook in Washburn county. The Earl Tel. Co. has had for some years a line which runs through the village of Earl and for a mile or so in a northeasterly direction along the road toward Springbrook and another line which runs in a roundabout way into Springbrook. The extension which the Trego Tel. Co. is alleged to have built without authority follows the direct road out of Earl paralleling the Earl line to its terminus and continuing on the same highway to the village of Springbrook.

A telephone company which had its poles hauled and ready to set for an extension of its line prior to the date on which ch. 610, laws of 1913, became effective is not prevented by this law from completing the construction of the line as marked out by the placing of the poles, for the legislature cannot be presumed to have intended the law to affect extensions already made or those in process of construction.

The contention of the Earl Tel. Co. that the hauling and placing of the poles was for the purpose of constructing merely a toll line and that the officers of the Trego Tel. Co. later changed their minds and made the line into a local subscriber line is not supported by the evidence.

Held: The Trego Tel. Co. did not violate ch. 610, laws of 1913, in constructing the extension in question.

This case involves an alleged violation of ch. 610 of the laws of 1913, relating to the extension of telephone companies' lines, by the Trego Telephone Company. It is alleged by the Earl Telephone Company in its complaint that the Trego company without authority of law extended its line in the summer and fall of 1913 in territory already occupied by the Earl Telephone Company. The defense of the Trego Telephone Company is that the construction of its line was begun prior to the enactment of ch. 610 and the company therefore considered itself entitled to complete the line.

A hearing was held in the matter at Spooner on February 13, 1914, at which the Trego Telephone Company was represented by *W. R. Campbell,* and the Earl Telephone Company by *Archie Hope.*

The territory involved in this case is in the main that which lies between the unincorporated villages of Earl and Springbrook in Washburn county. It seems that the Earl Telephone Company has for some years had telephone lines in the vicinity of Earl. One of these lines runs through the village of Earl and for a mile or so in a northeasterly direction along the road toward Springbrook. Another of its lines runs in a roundabout manner into Springbrook. The extension which the Trego Telephone Company was alleged to have built without authority followed the direct road out of Earl paralleling the Earl line to its terminus and continuing on the same highway to the village of Springbrook. The result was that the Trego line paralleled the Earl line for over a mile and also reached the village of Springbrook, which was already served by the Earl company over its roundabout line. In addition, there was a short paralleling of the Earl line south of Earl since the Trego company at the time it began extending had not yet reached that village. The Trego company, in passing through Earl, installed an instrument in the general store there, and that store as a result now has both companies' telephones. The manager of the store acts as central operator for the Earl line. This store appears to be the only subscriber thus far secured on the new Trego line within the distance that the two lines run parallel, but the Trego company has also installed at least two telephones in Springbrook.

The evidence is not disputed as to the fact that the new line of the Trego Company was built in the summer and fall of 1913. It was shown, however, that the poles for this line were hauled about April and May, 1913, which was over two months before ch. 610 of the laws of 1913 became effective, and it was the claim of the Trego Telephone Company that the hauling of the poles was sufficient to establish that company's right to make the extension. It seems that poles were hauled and left lying along the entire route of the proposed line as far as the limits of the village of Springbrook, except that the poles intended to be set through the village of Earl were not distributed but were left in a pile near a warehouse in that village. At a few points along the line the poles were moved across the road before being set, but in gen-

eral they were left at almost the exact points where they were later erected.

With regard to the question presented by the Trego Telephone Company as to its right to continue construction of its line after the poles had been hauled and were ready to be set, it seems to us that the position of the company is well taken. Ch. 610 of the laws of 1913 became effective July 10, 1913. It was, of course, not intended to affect extensions already made, nor could the legislature be supposed to have intended it to affect extensions already in process of construction. Thus, if a company had set its poles and strung its wires, but had not yet installed any telephone instruments along the line, it could hardly be claimed that the enactment of the new law could prevent the company from attaching subscribers to the line thus constructed. If this is the case, it would seem that the setting of the poles without the stringing of the wires should also be enough to establish the company's right, and it is then but a short step to the situation actually existing in this case where the poles had been hauled and were ready to be erected. The cost of purchasing and hauling poles is a very considerable portion of the total cost of poles erected in place, so that it seems that the company had gone to sufficient expense and committed enough of an overt act to justify the assertion that its line was in course of construction. Furthermore, the placing of the poles at about the points where they were later erected marks out very distinctly the territory which the company was to cover. There was therefore much more than an undefined intention on the part of the officers of the Trego company as to the construction of the line; there was the performance of an act which constituted an important part of the actual work of construction and which also gave visual demonstration of the location of the proposed line. Under these circumstances, we think ch. 610 of the laws of 1913 does not affect the line of the Trego Telephone Company as constructed to the village of Springbrook.

The main contention of the Earl Telephone Company, however, is that the hauling and placing of the poles was for the purpose of constructing merely a toll line, and that the officers of the Trego Telephone Company later changed their minds and made the line into a local subscriber line. The manager of the Earl Telephone Company testified that when he asked the then manager of the Trego company, Mr. John T. Fielding, why poles

had been delivered on the highway occupied by his own line, Mr. Fielding had told him not to worry about the new line, since it was only to be a part of a toll line between Spooner and Hayward, a portion of which was to be built by the Trego company and a portion by the Hayward company. It was testified that this conversation took place in the spring of 1913, after the poles had been delivered. Mr. Fielding testified that he remembered the conversation but that he made no such statement as the one attributed to him. He admitted that the original intention had been to construct a toll line from Spooner to Hayward, but stated that the proposition had fallen through, due to lack of coöperation by the Hayward company, some months before the poles were delivered. It then transpired, according to his testimony, that farmers in the vicinity of Springbrook and country north thereof desired the service of the Trego company, and that company decided to build a line to them and had the poles delivered for that purpose. Mr. Fielding testified that at the time of the conversation between him and the manager of the Earl lines he already had contracts with some of these farmers. The testimony along this line is corroborated by that of one of the farmers in question, who said that about January 1913 he talked with Mr. Fielding with regard to the extension of line for local service to his vicinity and agreed that he would assist in hauling and setting the poles.

Although the evidence is in some conflict as to whether the Trego company intended building a local or a toll line when it delivered its poles, we believe it is fairly well established that the local line was in contemplation at the time. It is not denied that a toll line had previously been contemplated and it is entirely possible that some misunderstanding may have arisen in the mind of the Earl Telephone Company's manager due to this fact; or it is possible that the Trego Telephone Company deliberately concealed from the Earl Telephone Company its intention of building a local line and let it appear that the line was for toll service only, but even if this were the case, there was no law at that time to prevent the building of a local line in competition with the Earl line, and the representations made by the Trego Telephone Company would not be material to this case except as they might tend to show that company's actual intention.

We are unable to find from the evidence that the Trego Telephone Company violated the law in the construction of its line

from Springbrook. It will of course be understood that any further extension of that company's line will require previous notification to this Commission and to the other companies operating in the towns where the extensions are to be made. The same requirement will apply to any further extension within the unincorporated village of Springbrook, since that village is legally only a part of the town of Springbrook.

It follows that no order will be made in this case.

E. S. BOARDMAN
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided May 12, 1914.

The petitioner in effect alleges that the passenger service rendered by the respondent at Eidsvold, Clark county, is inadequate and asks that the respondent be required to stop trains No. 5 and No. 6 at that point on flag and on request of passengers. The trains in question are local interstate trains running between Chicago and Eau Claire. The eastbound train, No. 6, stops regularly at Eidsvold on Tuesdays and Fridays to receive shipments of cream for Marshfield and on flag on other days when there is cream to be shipped. Passengers are apparently permitted to board or alight from the train at these stops but the petitioner alleges that the stops are not long enough to afford elderly people an opportunity to make use of the train. The westbound train, No. 5, makes no regular stops at Eidsvold. The respondent states that it sells passenger tickets having Eidsvold as the destination only to such passengers as are willing to travel on the way freights which stop at Eidsvold. Passengers desiring to reach Eidsvold by passenger trains are compelled to purchase tickets either to Thorpe or Stanley, stations 3.4 miles east and 3.4 miles west, respectively, of Eidsvold. A curve in the track and the grade at Eidsvold appear to present operating difficulties which would interfere with the stopping of the westbound train, No. 5, at Eidsvold.

Held: The service complained of appears to be inadequate. An order requiring the respondent to stop train No. 5 on flag in the face of the operating difficulties involved or a permanent order requiring the respondent to stop train No. 6 on flag, however, would not be justified at the present time.

The respondent is ordered: (1) to take such measures as shall be necessary to furnish adequate service to and from Eidsvold on train No. 6 on such days as the respondent may find it necessary to regularly stop this train for cream shipments from Eidsvold and to charge for this service only the lawful rate of fare to and from Eidsvold; (2) for a period of three months to stop train No. 6 on other week days on signal or request to the conductor for the purpose of taking on or letting off passengers; and (3) to keep a complete and accurate record of the passenger business transacted at Eidsvold during the said period, at the expiration of which the Commission will make such further order as the facts may warrant.

The petitioner, a cheese manufacturer and proprietor of a general store at Eidsvold, Clark county, Wis., alleges in substance that the respondent railway company refuses to sell tickets to or

from Eidsvold, though certain of its passenger trains make regular stops at that point; that, as a result of this practice, a passenger having Eidsvold for his destination is obliged to pay railroad fare exceeding the legal rate. The Commission is therefore asked to grant such relief as it may deem just in the premises.

The respondent railway company, answering the complaint, denies that certain of its passenger trains make regular stops at Eidsvold; alleges that the only trains which do stop there regularly are way freights No. 37 and No. 38; that, since Eidsvold is not a regular passenger stop, it does not sell tickets to or from that point; that necessarily, therefore, a passenger having Eidsvold for his destination, must buy a ticket to Stanley or Thorpe, the stations next adjoining Eidsvold to the west and east, respectively; that, having done so, he is carried to whichever destination his ticket reads, and that consequently there is no overcharge.

Two hearings were held in these proceedings. The first took place in the office of the Commission in Madison on December 9, 1913, the second in the city hall at Stanley, January 21, 1914. The petitioner appeared in his own behalf, and the respondent by *Kenneth Taylor*.

This complaint is unusual, in that the petitioner's chief grievance is not embodied in his formal complaint unless possibly by implication. From correspondence on file with the Commission it would seem that the petitioner and others requested the respondent company to stop its local Chicago–Eau Claire passenger trains, number 5 and 6, on flag at Eidsvold. The company seemed unwilling to concede the desired stop and the petitioner thereupon filed the foregoing complaint. There were also several other minor matters as to which he expressed dissatisfaction in correspondence with the Commission and in the testimony.

Much of the respondent's testimony at the first hearing, and practically all of it at the second, was devoted to the impracticability of stopping the trains in question at Eidsvold. Blue prints showing the situation there as to grade and curvature were also submitted by the company with the same end in view. Since Eidsvold is not carded as a stop for passenger trains, either on flag or regularly, the selling of tickets to and from that point, which would remedy the petitioner's complaint, would also necessarily involve the stopping of these trains. Possibly for this reason, possibly on account of the correspondence which took

place prior to these proceedings between the Commission and the parties hereto, the rsepondent clearly seems to have felt no uncertainty as to the stopping of No. 5 and No. 6 being the point chiefly at issue. As has been seen, the petitioner stated that this was what was primarily desired.

The situation as regards the sale of tickets and the alleged overcharge, though not appearing as clearly as might be desired, seems to be substantially as follows. Eastbound passenger train No. 6 does stop on Tuesdays and Fridays at Eidsvold for cream shipments to Marshfield, and also stops on other days if there happens to be cream to ship, in which event the petitioner, who takes care of these shipments, flags the train. These cream stops, however, are not carded, but the matter is managed by bulletins so instructing the train crews. And since cream and not passengers is the object of stopping it is not intended that tickets shall be sold to or from Eidsvold for use on this train or on the corresponding westbound passenger train, No. 5, which does not stop regularly at all but carries the empty cream cans on through to Stanley, from which point they are in due season returned to Eidsvold on No. 6. However, while tickets are not supposed to be sold for use on the passenger trains, they are sold, according to the respondent's superintendent, for use on the way freights, which are carded to stop at Eidsvold. The company has no agent at Eidsvold, and the petitioner states that none is asked.

The trouble of which the petitioner complains, as far as the sale of tickets and the alleged overcharge are concerned, appears to be more or less due to confusion on account of these stops for cream and the company's purpose of treating them chiefly as such. There was some evidence which tends to show partiality on the part of the train crew in stopping for favored individuals, though this was not clear. Of course, such a practice would be indefensible. At any rate the petitioner testified that at times it was possible to stop the train, at others not, and that the same uncertainty existed with regard to the purchase of a ticket to or from Eidsvold, presumably for use on these trains. The petitioner also complained that conductors had quarreled with those who had been successful in purchasing tickets to Eidsvold directly, because the railway company had told them they need not bother with passengers at this point.

Apparently, if the prospective passenger is successful in purchasing a ticket directly to Eidsvold, then no overcharge is

claimed. The overcharge claimed is that frequently a party destined for Eidsvold must purchase to either Thorpe or Stanley, the adjoining stations, and that a party boarding the train at Eidsvold is charged from the last preceding stop to his destination, instead of from Eidsvold.

According to the testimony, the stopping of eastbound local passenger No. 6 for cream was found necessary to the efficient handling of this service. The respondent's superintendent of transportation, in a communication, a copy of which was filed with the Commission by the company, made a statement to the same effect to the general counsel. He added that when this was found to be the case, the stop twice a week was conceded in order to allow settlers in that territory to dispose of their cream and "to obtain cash for it to keep them while they were clearing their land, and which they would not have been able to do without this service."

Obviously it does not necessarily follow that a stop of this kind should be made a precedent in establishing a more frequent regular stop for passengers. It would seem, however, under all the circumstances of this particular case, that when such a stop as here is made regularly, and when, apparently, with very little additional effort or loss of time on the part of the company, this practice could be made much more convenient for those traveling to and from Eidsvold, then matters should be so arranged. Whether further direct passenger service for Eidsvold be justified or not, the Commission believes that the company, as long as it has regular days on which it stops for cream, should make provisions for handling passengers to and from Eidsvold on those days. They will, of course, be entitled to courteous treatment from employes of the company and to an opportunity to ride at the legal rate of fare to and from that point, also to a reasonable length of time in which to board and alight from the train at Eidsvold.

The evidence shows that No. 6 is also flagged on other days for cream. Since this is so, and Eidsvold is not carded as a regular stop for passengers, the fact that passengers destined to that point may have had to buy their ticket to either of the adjoining stations is not necessarily an overcharge, since the train may or may not stop at Eidsvold, if it does not happen to be a Tuesday or Friday. It is difficult though to see how a passenger boarding the train at Eidsvold can legitimately be charged fare from

the last preceding station. Such a practice would seem clearly unlawful. If a passenger is entitled to board the train at that point at all, then it must surely follow that he is entitled to ride at the lawful rate of fare.

The general situation at the point in question is as follows: Eidsvold is a place on the respondent's line about twenty-six miles east of Chippewa Falls and about forty-three miles northwest of Marshfield. These two appear to be the nearest large points on the respondent's line. Eidsvold is without railroad service other than that offered by the respondent. It has no station, but only an open platform. From this platform to the stations at either Stanley or Thorpe, the next station stops to the west and east, respectively, are a distance of 3.4 miles; that is, the stations at Stanley and Thorpe are 6.8 miles apart and the platform at Eidsvold is midway. The foregoing distances are based on the respondent's time-table No. 13, as of October 12, 1913.

Stanley has a population, according to the 1910 census, of 2,675 inhabitants. That of Thorpe is given as 741. Eidsvold is given 25, though the petitioner claims 50 for it at the present time. It further appears that Eidsvold has only the one store, that is, the general store of the petitioner, and that it has neither bank nor post office. As to the latter it seems that there was a post office there formerly, but that the community's mail is now delivered at Stanley and sent over to Eidsvold on the rural free delivery. In this respect the situation seems to be no different there than at Lombard, Mann and Bateman, comparatively nearby points on the same stretch of line. These are flag stops and no more entitled to be such, the petitioner contends, than Eidsvold. It also appears that a sawmill was located there, but that it has been discontinued for several years. The petitioner bases his claim for further service for Eidsvold chiefly, however, on the business given the company by the farming community tributary to that point.

According to a statement offered by the respondent, the freight business at Eidsvold from January to September, inclusive, 1913, was as follows:

Forwarded	$817.03

Adding 25 per cent to make a full year would give approximately $1,200 as the amount of freight business which should be credited to Eidsvold for the year 1913. Aside from the freight, cream shipments must also be taken into consideration. These all go east to Marshfield, and are handled by the Western Express Company. The superintendent of the division here involved testified that during 1913 there was thus shipped 1,113 cans. For this the petitioner claims the express company received $251.79. In the general connection of traffic at this point, the petitioner also stated at the first hearing that a potato warehouse was to be built at Eidsvold the following year, that is, during 1914.

The schedule of the trains herein concerned is as follows:

Eastbound.			Westbound.	
Chicago-Eau Claire local No. 6.	Way freight No. 38.	Station.	Way freight No. 37.	Chicago-Eau Claire local No. 5.
7:18 a. m.	8:55 a. m.	.....Stanley	2:30 p. m.	8:17 p. m,
	9:10 a. m.	.....Eidsvold.....	2:15 p. m.	
7:32 a. m.	9:35 a. m.	.....Thorpe..	2:05 p. m.	8:06 p. m.

The two way freights are the only ones scheduled to stop at Eidsvold, either on signal or otherwise. These are daily except Sunday. As is usual with trains of this class, their movement is irregular. Apparently, however, they do not stop daily, though the testimony is somewhat conflicting. The petitioner stated that they do not stop regularly, but only for the purpose of delivering freight or unloading. The present division superintendent testified that the way freights stop at Eidsvold "when they have business to do there," and that they also carry passengers. The assistant to the general manager of the respondent company, prior to April 1, 1909, general superintendent of the Chicago division, which embraces this territory, stated that the service Eidsvold was supposed to be getting was, that the way freights were to stop there whenever occasion demanded, either for passengers or freight. On the whole it is not clear that the way freights, even making an allowance for their primary purpose, have furnished much of a solution as to the transportation of passengers to and from Eidsvold.

Passenger service of a kind does seem to be available, however, in the stopping of an eastbound local passenger train No. 6 for the cream shipments. As has been stated, these are made regularly Tuesdays and Fridays, and on other days if there is cream to ship, in which case the petitioner is expected to flag the train. It seems that for a time the westbound local train No. 5 stopped at Eidsvold to return the empty cream cans, but that the present practice is for No. 5 to take these on through to Stanley, the next station to the west, and for No. 6 to then carry them back to Eidsvold on the following Tuesday or Friday, when the next cream shipment is expected.

The arrangement by which the cream shipments are handled on passenger No. 6 has been in force, according to the respondent's division superintendent, possibly three or four years. In 1906 and 1907 everything from Eidsvold was handled by way freights. He believed that in 1908 arrangements were made to handle cream in this way from Eidsvold to Owen, and that when the shipping point was changed from Owen to Marshfield, making a distance of forty-three miles instead of fifteen as before, the service probably became unsatisfactory and the stopping of the passenger trains twice a week was conceded.

Prior to this concession for cream, No. 5 and No. 6 did not stop at Eidsvold, and when the arrangement was made, the petitioner conceded it was made principally for cream. The incidental passenger service No. 6 now affords is not satisfactory to the petitioner, since the stop is not long enough, he contends, to afford elderly people time to alight from or board the train. To a letter of the petitioner's dated July 10, 1913, complaining as to this matter, the superintendent on July 12, 1913, replied in part as follows: " * * * People boarding this train are ticketed to Thorpe and the train crew expect them, of course, to ride to destination of tickets. I am quite sure that they would not prevent passengers getting off at Eidsvold when the train stops to load cream, but as this is not a regular passenger stop, they surely can not make provision to unload passengers there. * * * "

As regards the situation from an operating standpoint, the facts appear to be substantially as follows: Eidsvold is located just east of a north and south highway. It is within the limits of a one per cent grade ascending west. This grade was alleged by the respondent's officials in their testimony to be the heaviest

at any point on the Chicago division, and twice the standard grade. A two degree curve has its easterly end just east of the above highway, and is alleged to increase the difficulty of starting on the grade in question. It further appears that there is a sidetrack at Eidsvold, the situation of which is alleged to be such that with box cars thereon the stopping point would be obscured; that train crews have occasionally complained to the officials in charge of stopping at Eidsvold on account of the difficulty in getting started at times of extra travel and also on account of the alleged "danger feature of stopping around the curve behind box cars which were usually on the sidetrack at that point;" and that from the Eidsvold stop the grade descends for seven hundred or eight hundred feet to the east, from which point it is again ascending.

As to trains No. 5 and No. 6, which the petitioner desires stopped on flag, the officials testified that these trains are local interstate passenger trains running between Chicago and Eau Claire; that they stop at all stations of any size; that they carry mail and are the only day trains between those two points; that between Chicago and Stevens Point they make forty regular stops and fourteen flag stops; that on this run their time exclusive of stops is 21.4 miles per hour; that from Stevens Point to Chippewa Falls they make eighteen regular stops and six flag stops, and that on this run their time exclusive of stops is 29.4 miles per hour. Altogether these trains make seventy-eight flag and regular stops between Chicago and Chippewa Falls. The distance, according to the company's time-table No. 13, as of October 12, 1913, is 353.5 miles.

The district surrounding Eidsvold is a fairly well developed dairy country with considerable possibilities in the way of further development. Eidsvold stop itself is located in the south central part of Thorpe town, and is just north of the extreme southern tier of sections. The next town to the south is Worden. The stops requested, except as they might accommodate the general traveling public to a small extent possibly, would convenience chiefly the population in these two towns, though not the entire population, since for those in the eastern and western parts thereof Stanley and Thorpe would presumably be more accessible. According to the 1910 census Thorpe has a population of 1,469 and Worden a population of 979, a total of 2,448. A map was filed by the respondent to show the general geograph-

ical situation. This map also purports to show residences. If correct, the population of the two towns is fairly well distributed. Possibly, allowing for some growth since 1910, there might be 1,000 or 1,200 people to whom these stops would be more or less of a convenience, according to the distance of their homes from Eidsvold, Thorpe and Stanley.

That the respondent's westbound local passenger train No. 5 does not stop at Eidsvold to deliver the empty cream cans, but carries them on to Stanley to be later returned on eastbound local passenger No. 6, would seem to imply that the company considers the grade and curve at this point a real operating difficulty, as it claims, and it was the opinion of the Commission's engineer, who visited Eidsvold, that the company's objection to stopping westbound trains on this grade and curve was not one to be overruled without good reason. He states, "eastbound trains have no difficulty in stopping at or starting from Eidsvold station, because for trains in this direction the one per cent grade is descending at the station," and that "the bottom of the sag is at the bridge of the north fork of the Eau Claire river seven hundred or eight hundred feet east of the station platform." As has been seen, the company does, as a matter of fact, regularly stop its eastbound passenger No. 6 at least twice a week for cream.

While the distance alone to the adjoining stations, Stanley and Thorpe, is not in itself sufficient to entitle the community to what might be described as a minimum of strictly passenger service at Eidsvold, it does appear that at present there is no satisfactory service there of any kind as far as passenger traffic is concerned, since the way freight does not stop regularly, but only for the purpose of delivering freight or unloading.

In view of the fact that up to a few years ago Eidsvold had no service other than that of the way freights; that the cream stops were established as such solely; that the operating difficulty in stopping for westbound trains may be a real obstacle; on the other hand that the information available is limited but leads to the conclusion that the community may be reasonably entitled to more service than it is getting and that a certain amount of traffic does accrue to the company at that point: a permanent order requiring the stopping of these trains on flag would seem no more justified than the dismissal of the complaint. The respondent will be required to stop its eastbound local passenger train, designated

as Chicago-Eau Claire local No. 6 in the company's time-table No. 13, as of October 12, 1913, for a period of three months on flag, or on request to the conductor by passengers. The company will naturally keep as complete a record as possible of passengers alighting from or boarding this train, and the revenues arising therefrom. Upon submission of this information to the Commission, the Commission will make such further order as is just in the premises.

The petitioner statet that passenger traffic at Eidsvold was in no particular direction. Under the circumstances of this case an order requiring the company to stop its westbound local passenger train No. 5 in the face of the operating difficulties described would not be justified at this time. However, the order which is to be issued will give the community all that they now have, and, in addition, regular eastbound morning service to or from Eidsvold, and to eastern points and Chicago. If the use made of this train is such as to justify such action, the order will be made permanent. Of course, should a place be really entitled to service, operating difficulties would, ordinarily at least, be no excuse for denying that service. Here, as stated, it is too doubtful a question whether the community is entitled to the stopping of westbound Chicago-Eau Claire local No. 5, with the difficulties possibly involved, to warrant such an order at this time on the basis of the limited data available. However, it it believed that the stopping of the eastbound local will involve little hardship for either the company or the traveling public, since the train already stops at least twice a week and operating conditions are favorable for the eastbound movement at this point. The cost of stopping trains like these has been estimated at from 25 to 27 cts., and the time consumed in coming to a stop and getting under full headway again as three minutes. These estimates are presumably based on strictly normal conditions. As has been seen, however, the stop here is on a descending grade, and it is believed that the loss would be practically negligible.

In this connection brief mention should be made of a recent order of the Commission, *H. R. Anderton et al. v. M. St. P. & S. S. M. R. Co.*, issued April 6, 1914, 14 W. R. C. R. 227, in which a previous order requiring the stopping of the respondent's trains No. 5 and No. 6, being those here involved, on signal at Readfield, Waupaca county, is vacated. The Commission describes the character of these trains as has been stated above in

the present case, and comes to the conclusion that, all things considered, Readfield is adequately served by the stopping of one passenger train in each direction, and that the *additional* stopping of 5 and 6, their interstate character, schedule, etc., considered, is not justified. The statement made that No. 5 and No. 6 "should not be required to increase the number of stops," must be considered in connection with the circumstances of that case. It is too well settled to require citation that each locality is entitled to adequate service, and that, if it can be secured in no other way, interstate trains may be stopped, though the option would be open to the company of meeting these needs properly in some other way, leaving it free to operate its interstate business unhampered.

Correspondence preceding and subsequent to the filing of the complaint, as well as the testimony, leads to the inference that there may have been a number of minor inattentions, possibly a lack of courtesy at times on the part of train crews towards persons having Eidsvold as their destination; also the unloading of the petitioner's freight on an open platform in unfavorable weather. As to the latter, the petitioner stated to the Commission's engineer, who inspected the situation there, that the superintendent of the railway company had promised him to have the platform rebuilt and a cover constructed over it, which would remedy his complaint as to this point. As to the former, no proof was before the Commission except one instance, and then the superintendent was apparently successful in straightening matters out. A lack of courtesy on the part of the train crews, as alleged, would, if true, create an intolerable situation, and one not to be countenanced, and the company doubtless has taken, or will take, such measures as necessary if such a situation has existed or does exist. However, in justice it must be said that if there has been friction between the petitioner himself and train crews, it is not clear from information before the Commission that the petitioner has been entirely without blame in the matter.

NOW, THEREFORE, IT IS ORDERED:

1. That the respondent company, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, take such measures as shall be necessary to furnish passenger service, which shall be adequate in every respect, to and from Eidsvold, Clark county, Wis., on its eastbound passenger train, designated in its time-table No. 13, as of October 12, 1913, as No. 6 Chicago-Eau Claire local.

This part of the order is to apply to those days on which the company finds it necessary to regularly stop this train for cream shipments from Eidsvold, heretofore Tuesdays and Fridays. On such days passengers to and from Eidsvold are to be afforded reasonable service in all other respects, and are to be charged for their transportation, of course, only the lawful rate of fare to and from that point.

2. That, in addition to the said service, which is to be afforded on those days on which the above train stops regularly for cream shipments, the respondent company, for a period of three months from the time of taking effect of this order, stop the above eastbound local passenger No. 6 at Eidsvold also on other week days on signal or request to the conductor for the purpose of taking on or letting off passengers at that point.

3. That for the said period of three months the respondent company keep a complete and accurate record of the passenger business at Eidsvold, at the expiration of which period the Commission will make such further order as the facts may warrant.

IN RE PETITION OF THE PARAMOUNT POWER AND REALTY COMPANY RELATIVE TO ALLEGED OBSTRUCTIONS TO NAVIGATION IN THE BEAVER DAM RIVER IN THE CITY OF BEAVER DAM, WISCONSIN.

Submitted Nov. 17, 1913. Finding filed May 13, 1914.

The petitioner complains that a building constructed in 1910 by the Masonic Temple Association over and completely across the Beaver Dam river in the city of Beaver Dam obstructs the natural flow of water in the river and the free use of the river and in case of high water, obstructs and sets back the water in the river, to the great damage of the petitioner. The petitioner owns several lots of land located at the outlet of Beaver Dam Lake into the Beaver Dam river and a dam known as the Cotton Mill dam, which is constructed upon this property and used by the petitioner in developing water power. The building in question and certain other buildings are located in whole or in part over the Beaver Dam river between the petitioner's dam and another dam farther down stream known as the Upper Woolen Mill dam. The construction of the latter dam some time prior to 1845 greatly increased the width of the stream through the overflowing of adjoining land, but the riparian owner, evidently assuming that the submerged land outside the banks of the original stream still belonged to him, in conveying his land to various purchasers granted the right to extend structures over the submerged land for a distance of 30 feet, although not to the banks of the original stream. Since then no regard has been given to the stream as a public thoroughfare.

Finding: 1. The Beaver Dam creek or Beaver Dam river in the city of Beaver Dam between the Upper Woolen Mill dam and the Cotton Mill dam is a navigable stream.

2. The stream is navigated by small boats used for fishing and pleasure, and for the repairing of buildings which extend over the submerged land.

3. The buildings encroaching upon the stream as indicated upon the map contained in the record herein constitute obstructions to such navigation.

The legality of the maintenance of the obstructions in question is not passed upon.

This is a proceeding under sec. 1596 of the statutes. The matter was investigated and the finding of the Commission reported to HIS EXCELLENCY FRANCIS E. MCGOVERN, Governor.

The petitioner is a corporation engaged in the business of acquiring and holding real estate, constructing buildings thereon, improving the same and owning and operating water powers,

having its main office at Beaver Dam, Wis. It alleges that it is the legal owner of out-lots one, three, four and six and other property in the city of Beaver Dam, which said real estate is located at the outlet of Beaver Dam Lake; that upon said property is located a large dam built of concrete, owned by the petitioner and used for water power purposes; that such power is leased to the Paramount Knitting Company and is a valuable power; that the outlet of Beaver Dam Lake is the Beaver Dam river, a navigable stream, which flows in the bed of a natural water course through a portion of the business section of the said city of Beaver Dam; that the said water power is constantly in use and that all the power which said dam and plant is capable of producing is required for use in operating the plant of the said Paramount Knitting Company, which company is operating a large factory near said dam; that Beaver Dam Lake is formed by reason of said dam, extends above said dam for a distance of ten miles, is about one mile in width and covers an area of about six thousand acres; that the said Beaver Dam river below said dam is about one hundred twenty feet in width and continues at said width until it empties into the pond formed by another dam lower down the river; that the petitioner and its predecessors in title have for a period of more than fifty years immediately last past maintained the dam at the place where the petitioner's dam is now located and have ponded the said Beaver Dam Lake at the height at which it is now maintained, and that during all said time the petitioner and its predecessors in title have discharged the water from said pond into said Beaver Dam river with full right so to do and in hostility to the right of any and all persons having or claiming to have any right, title or interest as riparian owners, or otherwise, in and to the bed of the said river or any part thereof, and have made use of said river and the bed thereof inconsistent with and contrary to the interests and adverse to the title of any and all riparian owners or claimants of riparian rights in and to said stream and the bed thereof and any part thereof; that the petitioner succeeded to all the right, title and interest of the Beaver Dam Cotton Mills, a corporation, and in and to the said dam, water power, rights, privileges and appurtenances thereunto belonging; that it is the possessor of the legal right to have said Beaver Dam river flow in its natural bed from the said dam to a point and place which is being obstructed as hereinafter fully set forth, with the full right that said natural

water course shall flow in its natural bed free, uninterrupted and unobstructed; that along the bank of the said river below said dam there are constructed a number of buildings used for business purposes, fronting on Front street and north and south of Center street, and between Center and Spring streets in said city of Beaver Dam; that the Masonic Temple Association, a corporation, is the owner of a lot situated directly north of Center street and west of Front street and on said river south of petitioner's dam that the said Masonic Temple Association has constructed a building on said lot owned by it, which said building extends beyond said lot and over and across said river; that said building was constructed during the summer of 1910 of brick and is 91 feet long, 70 feet wide and is 30 inches above the natural surface of the water in the river and lies upon concrete piers, 36 inches in diameter, built close together in the river and covers the river from shore to shore; that the piers so built in the river greatly obstruct the natural flow of the water in said river and that the said building in case of high water obstructs and sets back the water in said river, all to the great damage of the petitioner; that the said association never obtained nor received any permission from the legislature of this state to place said obstruction in said river, or in any wise to obstruct or interfere with the natural flow of the water therein; that said building obstructs the free use of said river and interferes with the free flowage thereof.

The matter came on for hearing on November 17, 1913. The following appearances were entered: *Grotophorst, Evans & Thomas* on behalf of the Paramount Power & Realty Company; *Charles C. Miller* and *Paul O. Husting* on behalf of the Beaver Dam Realty Company; *Binzel & Wein, Louis Ziegler* and *Burke & Lueck* on behalf of the Masonic Temple Association; *John O. Healy* on behalf of the city of Beaver Dam.

The Beaver Dam creek, also called in the record the Beaver Dam river, is a non-meandered stream and has its source in Fox Lake. It flows in a southeasterly direction to and through the city of Beaver Dam, thence in a southerly direction in and through Mud Lake, which is but an enlargement of the stream, thence easterly and empties into a stream known as the Crawfish, which latter stream empties into the Rock River.

The earliest knowledge we have of Beaver Dam creek is that contained in the testimony of John La Fayette Brower, aged 87

years. In 1842 his father and family settled at the point where the city of Beaver Dam is now located. At that time there was a marsh north and west of Beaver Dam through which the creek flowed. The width of the creek through the marsh was from 20 to 30 feet and the creek was, at the usual stage, about 2 feet in depth. Its average width throughout its course was approximately from 20 to 30 feet. When the witness first located on the stream Indians navigated the stream by means of canoes, for the purpose of fishing and hunting. Subsequently the witness used a canoe upon the stream for the purpose of hunting. Since then two dams have been constructed across the stream within the limits of the territory now ocupied by the city of Beaver Dam. The dam belonging to the petitioner is known as the Cotton Mill dam and the one south of it is known as the Upper Woolen Mill dam. The former was constructed by one Drake in 1842. The latter was constructed prior to 1845 as appears from a bond for a deed, given by George W. and John L. Brower bearing date September 1, 1845, which recites that the pond formed by the Upper Woolen Mill dam had not yet filled. The Cotton Mill dam forms a lake north thereof known as the Beaver Dam Lake. Its length is about 14 miles and its average width is about 2 miles.

The petitioner's mill or hosiery factory is located upon the bank adjoining the dam and the power for operating the machinery of the plant is furnished by the water from the dam. Motor boats and crafts of various kinds are used upon the lake for the purpose of hunting, fishing and pleasure trips.

In a franchise granted to the Beaver Dam Manufacturing Company in ch. 331, laws of 1854, the following provisions are found:

"Section 7. The said company are hereby authorized to keep and maintain the upper dam now erected across Beaver Dam creek, at the village of Beaver Dam, in the county of Dodge, in case the present proprietors shall convey all their right, title and interest in and to the same, and to the parcels of land on which it abuts, to the company hereby incorporated, for the purpose of creating a water power for the manufacture of iron, and for other manufacturing and grist mill purposes: Provided, that said dam now erected or the dam hereafter erected shall not be raised so as to cause the water to flow over more or other lands than are already flowed over on account of such dam at its present height; and in the event of the said dam causing the water to flow upon lands other than those belonging to said company; and if the said company can not agree with the owners

thereof as to the amount of compensation to be paid for damages to such lands by reason of such flowing, then the question of damages to such land shall be submitted to arbitrators. * * *

"Section 8. The said company shall keep and maintain a good slide for the passage of rafts, and the ascent and descent of fish; and the lake so improved and extended by the raising of said dam shall be deemed a public highway in all parts within high water mark, and free from any tax, duty or impost for the navigation of the same"

The headwater at this dam is 11½ feet and the headwater at the Upper Woolen Mills dam is about 10 feet. The portion of the stream in controversy lies between these two dams. From the Cotton Mill dam the stream flows northeasterly passing under the Beaver street bridge and Center street bridge and thence in a southerly direction to the Upper Woolen Mill dam. The natural width of the stream prior to the erection of the dam, as has been stated, was from 20 to 30 feet. A plat was offered in evidence known as the Brower & Ackerman plat, showing the original survey of the pond. The plat in connection with the survey made by Mr. Blake of the engineering department of the Commission shows that the channel of the river has remained in substantially the same place. According to the testimony of Mr. Blake based upon his survey, the Beaver Dam river is 120 feet wide just below the Cotton Mill dam, 100 feet at the Beaver street bridge, 75 feet at the Center street bridge, 200 feet at the railroad bridge, and 240 feet at the Upper Woolen Mill dam. The depth of the stream between the two dams measured in the center at intervals of 100 feet varied from 1½ feet at the Cotton Mill dam to 4½ feet at the Upper Woolen Mill dam. Between the Beaver Dam street bridge and the railroad bridge the variation was from 3 feet to 5 feet.

Regarding obstructions in the stream between the two dams it appears that the owner of the Upper Woolen Mill dam, when this dam was constructed, owned the land on both sides of the stream. As was stated, the stream at the time of construction of the dam was about 30 feet in width at most. After the pond formed by the dam had filled, it overflowed adjoining land so that the width of the stream approximated in width 240 feet at the dam. Evidently assuming that the submerged land outside the banks of the original stream belonged to the riparian owner, in conveying the same by lots to various purchasers, such owner granted, in the conveyance to the grantee, the right to extend structures over

the submerged land for a distance of 30 feet. This grant, however, did not carry such right to the banks of the original stream. Since then no regard has been given to the stream as a public thoroughfare. Buildings have been extended over the stream to such an extent that near Center street there is left an open space of but 4 feet and 10 inches between two buildings built upon the opposite sides of the stream. In 1910 the Masonic Temple Association erected a building just west of the Center Street bridge extending from one bank of the stream to the other.

The principal use made of the stream between the two dams since the construction of the Upper Woolen Mill dam has been by persons who maintain boats for the purpose of fishing or gathering water lilies. It also appears in evidence that a scow was sometimes used in repairing buildings which extended over the submerged land.

For the past twenty years the two buildings first above mentioned with a space of only a little over four feet between them, have prevented free passage for boats and since the erection of the building of the Masonic Temple Association covering the entire width of the stream, it has been practically impossible for boats to pass under the building. At the time the engineer of the Commission made his survey he used a flat bottomed boat, and by lying down in the boat was able to pass under the building. However at this time it appears that only one wheel was in operation in the petitioner's factory which was carrying but half a load, and that hence the amount of water discharged into the stream was limited, probably not exceeding 6 M cubic feet of water per minute. According to the testimony it appears that during the high water in 1912 and 1913 the stream reached to within 3 or 4 inches of the sill of the Masonic building.

The foregoing statement contains all the salient facts disclosed by the investigation and material to the issues involved in this case. Although the testimony introduced upon the hearing is voluminous, much of it is cumulative and relates to matters which are either not in dispute or have no bearing upon the questions that may be properly considered in this proceeding. Every essential fact seems to be conceded or established by undisputed evidence. That the stream in question is navigable for certain purposes, and that the buildings encroaching upon the stream are obstructions to such navigation are uncontradicted facts. Whether such navigation is of such a character as is contemplated

by the statute is a question upon which counsel are not agreed. Notwithstanding the exhaustive discussion of this question found in the briefs of the counsels for the respective parties represented at the hearing, we do not deem it necessary to express an opinion. What was said in the report of the Commission in the matter of the petition of C. S. and C. W. Jackman relative to alleged obstructions to navigation in the Rock river in the city of Janesville, 1914, 14 W. R. C. R. 190, is equally applicable to this phase of the instant case, hence further comment is here omitted.

It is the judgment and finding of the Commission:

1. That the Beaver Dam creek or Beaver Dam river in the city of Beaver Dam between the Upper Woolen Mill dam and the Cotton Mill dam is a navigable stream.

2. That such stream is navigated by small boats used for fishing and pleasure, and for the repairing of buildings which extend over the submerged land.

3. That the buildings encroaching upon such stream as indicated upon the map contained in the record herein constitute obstructions to such navigation.

TOWN OF GENEVA

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 20, 1913. Decided May 15, 1914.

The petitioner alleges that a crossing on the respondent's line where it intersects the road leading from Lake Geneva to Williams Bay is dangerous. The respondent offered in its answer and at the hearing to install electric bells at the crossing but has since proposed to substitute for the protection now afforded by a flagman a grade crossing signal known as an "Automatic Flagman".

Held: The crossing is dangerous. The respondent is ordered to install and maintain an "Automatic Flagman" or some other suitable automatic device for protecting travelers both by day and by night, plans to be submitted for approval. Ninety days is considered a sufficient time within which to comply with this order.

The petitioner, a regularly organized town in Walworth county, alleges in substance that a crossing on the line of the Chicago & North Western Railway Company where it intersects the road leading from Lake Geneva to Williams Bay, is dangerous to public travel on account of the surrounding physical conditions. The Commission is therefore asked to require the respondent to install some protective device or otherwise safeguard the crossing.

The respondent, in its answer, alleges that it now employs a flagman at the crossing; that the speed of trains at this point does not exceed eight miles per hour; and that arrangements are now being made to install an electric bell two hundred feet from the center of the track on each side of the crossing. It therefore asks the dismissal of the petition.

A hearing was held on October 20, 1913, at Lake Geneva. *Charles Wurth* appeared for the petitioner and *C. A. Vilas* for the respondent.

The testimony shows that at the crossing in question, which is seven-tenths of a mile east of Williams Bay, the highway runs northwest and southeast, and the single track line of the Chicago & North Western Railway Company curves from the northeast

to southwest. The railway line lies in a cut which is about twelve feet deep, and the highway descends to the track in a depression from either side. From the northwest highway approach the view to the southwest is limited by the curve in the track beyond a point about 1,500 feet from the crossing. Obstructions nearer the crossing are fruit trees, brush along the highway, and the banks of the cut.

A train approaching from the northeast is also hidden in the cut. A traveler coming toward the crossing from the southeast can see a train about one-fourth of a mile to the southwest. To the northeast the view is limited by rising ground, by a row of trees on private property and by a barn. If grain were cultivated in the fields adjacent to the crossing the view of trains would be further obstructed.

The highway is a main traveled road leading from Lake Geneva to Delavan Lake. Travel is especially heavy during the summer, since the locality contains popular lake resorts. The town chairman estimated that from May to September from fifty to one hundred and fifty automobiles cross daily in addition to the usual team traffic. A count made for the company on October 4 and October 5, 1913, between the hours of 7 a. m. and 7 p. m. shows a daily average of sixty-five vehicles and seven pedestrians. During the winter eight passenger trains and four freight trains are operated over the crossing. From May to September there are two additional passenger trains, and during July, August and a part of September the service is further increased by four passenger trains which are operated on Saturdays and Mondays only. Thus the regular train movements at the busiest season total eighteen. Few extra trains are operated over this branch line. The company's superintendent stated that all trains run comparatively slow at the crossing because of its proximity to Williams Bay and because of the grade. He said that a slow order is in force during the summer months. An engineer of the Commission observed the speed of several trains at the crossing on March 27, 1914, by means of a stop watch and actual distances, and reports that one train crossed at an estimated speed of 22 miles an hour, and another at 38 miles an hour.

The town chairman expressed the opinion that a separation of grades by means of an overhead highway crossing is desirable, and stated that the town is willing to assume its proper share of the cost entailed by such an improvement. He asserted that the

flagman employed at the time of the hearing is inefficient, and objected to the installation of electric bells, as proposed by the company in its answer, on the ground that such bells do not always work properly.

The Commission's engineer has examined the crossing and reports that grade separation is feasible, but that in his opinion the conditions of traffic at the present time do not warrant the large expenditure necessary for constructing an overhead highway crossing. He recommends the installation of a bell and light, and the employment of a flagman during the summer months.

The company has maintained a flagman at the crossing since the hearing. Under date of May 5, 1914, plans were submitted for the installation of an "Automatic Flagman" in place of the existing protection. This device is a combined visual and audible grade crossing signal, consisting of a round steel disc, painted red, mounted upon metallic arms, with "STOP," "LOOK OUT" painted in white letters on both sides of the disc, in the center of which are standard ruby red lenses with an incandescent lamp between them. Upon the mechanism case and just below the disc is mounted a standard twelve inch trolley gong, two incandescent lamps being mounted on the rocker arms. The latter serve to light the crossing and to give assurance to the engineer of an approaching train that the "Automatic Flagman" is in operation. The mechanism is driven directly from the motor, the rocking arm causing the disc and lights to swing back and forth and the gong to ring. The machine is geared to about thirty-five operations a minute.

In the light of the testimony and the report of our engineer, it is our judgment that the installation of an "Automatic Flagman" as proposed by the respondent will adequately safeguard this dangerous crossing under the existing traffic conditions. Such a device will accordingly be ordered, subject to inspection and approval by the Commission after a reasonable period of trial. No testimony was introduced to show the necessity of a separation of grades at this crossing, and inasmuch as the petition prays only for the installation of some protective device, the matter of grade separation, which was casually brought forward by the town chairman at the hearing, is not considered in this decision. The order herein will not prejudice the consideration of a petition praying for grade separation, should the town de-

sire to introduce further evidence, or should the traffic materially increase beyond the amount indicated by the testimony.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, install and maintain at the highway crossing on its line seven-tenths of a mile east of Williams Bay in the town of Geneva, Walworth county, an "Automatic Flagman," or some other suitable automatic device for protecting travelers both by day and by night, plans to be submitted to the Commission for approval.

Ninety days is considered a sufficient time within which to comply with this order.

H. KITTLESON ET AL.
vs.
ELROY MUNICIPAL WATER AND LIGHT PLANT.

Decided May 16, 1914.

Complaint is made that the rates charged by the Elroy Mun. W. & Lt. Plant for electric current and water are discriminatory and insufficient and that the records and accounts relating to the operation of the utility are unsystematic and unsuitable and not in accordance with the rules prescribed by the Commission. A valuation was made and the revenues and expenses were estimated, in the absence of satisfactory records, upon the basis of such information as was available. The expenses so estimated were apportioned for the electric department between capacity and output and further apportioned between street lighting and commercial lighting; for the water department they were apportioned between general service and fire service and further apportioned among capacity, output and consumer expenses. The utility has made no provision for depreciation and there has been no charge for municipal hydrant rental nor for street lighting.

Held: Both the electric rates and the water rates require revision. Because of the lack of definite information, however, the conclusions drawn as to what rates are reasonable are only tentative and may require modification when the utility is able to present such information to the Commission as the law requires a utility to have available.

The utility is ordered (1) to put into effect a schedule of water and electric rates fixed by the Commission and (2) to install and keep the accounts and records prescribed for it under date of April 20, 1914, subject to such modifications as the Commission may find necessary. The schedule of rates includes, among other things, provision for charges to be paid by the city of Elroy for fire protection and street lighting.

Complaint in this case was filed August 26, 1913. It alleges, among other things, that the respondent's rates are discriminatory and insufficient and that the records and accounts relating to the operation of the utility are unsystematic and unsuitable and not in accordance with the rules prescribed by the Commission.

Hearings were set for September 13, 1913, and April 10, 1914, but no appearances were made for either of the parties to the proceeding.

The lawful rates now in effect at Elroy appear to be as follows:

ELROY—ELECTRIC RATES.

Commercial Lighting.

METER RATES:

Minimum monthly bill, 50 cts.
Current, 10 cts. per kw-hr.
On bills not paid by the 25th of the month, 2 cts. per kw-hr. additional is charged.

FLAT RATES:

Special five year contract with the Chicago & North Western Railway Company for six 16-c. p. incandescent lamps as $12.50 for each three months period, and 5 multiple 110-volt enclosed arcs burning from midnight to daylight at $50 each per year.

Street Lighting:

26 6.6-ampere, a. c. series enclosed arcs, 10 of which burn on an all night moonlight schedule and 16 on a midnight moonlight schedule.
60 16-c. p., 106 volt a. c. multiple carbon incandescent lamps, burning from dusk to dawn every night.
5 200-volt, 6.6-ampere, a. c. series tungsten lamps burning 2,438 hours per annum on a moonlight schedule.

No charge is made for street lighting. It appears that the old arcs and other carbon incandescent lamps have been replaced during the past year by 51 120-watt tungsten lamps. The utility has filed no notification with the Commission of this change, evidently assuming that as no charge was made for this service, changes made need not be reported.

ELROY—WATER RATES.

Public service.....No charge
Street sprinklers, each wagon during season.....$6.00

Commercial Service:

METER RATES:

First	50,000 gallons	.....	25 cts. per	1,000 gals.
Next	50,000 "	.....	20 "	"
"	50,000 "	.....	15 "	"
"	50,000 "	.....	10 "	"
All over	200,000 "	.....	6 "	"

Minimum annual charge, $5.00 .

FLAT RATES:

	Per year
Minimum annual charge, $5.00.	
Banks, including one wash basin	$5.00
Barber shops, one chair	3.00
Each additional chair	2.00
Bath tubs in barber shops	3.00
Billiard rooms, each table	2.00
Blacksmith shops, one fire	3.00
Each additional fire	2.00
Boarding and lodging house and furnished rooms, per room	1.00
Building purposes for 1,000 brick—wetting and making mortar	.10
For 100 sq. yds. plastering	.15
For 1 cord stone	.10
Butcher shops	$8.00 to 10.00
Churches free, less the price of service pipes, cocks, etc.	
Dental offices	5.00
Drug stores	6.00
Dwelling houses, 6 rooms or less for each family	5.00
Each additional room	.25
Fountains flowing not exceeding 6 hours per day during the season, ⅛ inch orifice	12.00
Fountains, one-sixteenth inch jet	10.00
Fountains, one-fourth inch jet	20.00
Fountains, nozzles or revolving sprays	2.00
Hose for washing and sprinkling sidewalks, gutters, the outside of buildings, per lineal foot front business houses for season	.10
Same as above, private houses	.05
Hose for sprinkling lawns 2,000 feet or less	1.00
Hotels, per room	1.00
Livery, sale and feed stables, per single stall, (inc. washing carriages)	1.25
Offices	3.00
Photograph galleries	10.00
Private stables, 1 horse, 1 cow, or 2 horses, washing carriages	2.00
Private stables, each additional horse or cow	1.00
Private bath tubs	2.00
Printing offices	8.00
Public halls	5.00
Restaurants, if owner resides in same building	10.00
Restaurants, alone	6.00
Stores, 24 feet front or less	5.00
Stores, each additional foot	.25
Saloons	$10.00 to 15.00
Soda fountains	4.00
Urinals in hotels, boarding houses and saloons	3.00
Urinals in stores, banks and offices	3.00
Urinals in private houses	1.50
Wash basins, stationary, in private families, first basin free, all others	1.00
Water closets, private, per bowl	2.50
Water closets, public, per bowl	5.00
C. & N. W. Railroad (charge per month)	90.00

All bills are payable quarterly in advance on the first days of January, April, July, and October; if not complied with within 3 days, 10 per cent penalty will be added, if not paid within six days the water will be shut off.

Meter rates shall be payable monthly; 10 per cent penalty will be added if the rent is not paid in ten days after the same becomes due.

Meters are put in at the expense of the consumer.

Although all bills are payable quarterly in advance, this evidently does not apply to metered service. The meter schedule does not specify whether the quantities in each step are assessed monthly, quarterly, semi-annually, or annually. It appears that there is even no regularity in the readings of the meters at Elroy, some being read semi-annually, others annually, the semi-annual readings predominating.

Certain consumers, it is understood, are being supplied free, contrary to the provision of the Public Utilities Law. Such free service must be discontinued.

Value of Plant and City Equity.

From the records submitted to us no accurate information could be obtained regarding the original cost of plant or the indebtedness incurred by the city for the construction of the electric and water utilities.

The following is a record obtained from the books regarding bond issues and loans:

July 1, 1899—Electric Light Bonds, $10,000. Due July 1, 1919.
July 1, 1911—Extension & Improvement Bonds, $6,000.
Feb., 1906—State Loan $8,500. Amounts paid, Dec., 1910, $500; Dec., 1911, $500; Dec., 1912, $500; leaving a balance of $7,000.
Dec. 1898—State Bank Certificate, $2,000.
Dec. 1898—Citizens Bank, bills allowed, $4,687.72.

Outside of the bond issues no segregation was made of moneys used for city purposes and utility purposes.

Appraised Value.

A detailed inventory and appraisal of the property used and useful for water and electric service has been prepared. This

discloses the following costs to reproduce new and existing values, including materials and supplies of date January 1, 1914:

TENTATIVE VALUATION.

ELROY MUNICIPAL ELECTRIC LIGHT & WATER WORKS.

	Electric.		Water.		Total.	
	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.
A. Land	$300	$300	$300	$300	$600	$600
B. Transmission and distribution	10,416	6,696	20,196	17,830	30,612	24,526
C. Buildings and miscellaneous structures	3,718	2,492	8,667	7,279	12,385	9,771

E. General equipment	179	86	178	89	357	175
Total	$21,806	$13,513	$32,993	$28,309	$54,799	$41,822
Add 12 per cent (see note below)	2,616	1,621	3,960	3,397	6,576	5,018
Total	$24,422	$15,134	$36,953	$31,706	$61,375	$46,840
F. Paving	.....	.....	.....	.....	.....	.....
Total	$24,422	$15,134	$36,953	$31,706	$61,375	$46,840
H. Materials and supplies	745	631	609	509	1,354	1,140
Total	$25,167	$15,765	$37,562	$32,215	$62,729	$47,980
J. Non-operating	2,090	529	.....	.....	2,090	529
Total	$27,257	$16,294	$37,562	$32,215	$64,819	$48,509

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

If the books of a utility have been accurately kept and if correct methods of accounting have been followed, the books should show the total amount expended for construction and also the extent of the depreciation of the property. The book value should not ordinarily vary to any great extent from the cost of reproduction. In the instant case, however, this comparison cannot be made because of the lack of original records.

GENERAL RECORDS.

The general records of the electric and water departments are merged with the general city records. The reports of the utility to the Commission are little more than guesses, as no records were kept of the separation of expenses between the water and the electric departments, or between operating expenses and extensions. An examination of the accounts available for past years discloses the necessity of certain corrections in the allocation of many items. Upon the basis of the records as corrected, an in-

come account has, however, been arrived at for the period June 30, 1912, to June 30, 1913, which, it is believed, is complete enough to furnish a satisfactory basis for computing unit costs.

The following tables disclose the income account for this period:

ELROY WATER DEPARTMENT.

Year ended June 30, 1913.

REVENUES	
Commercial earnings	$2,757.37
Industrial sales	1,176.58
Miscellaneous earnings from operation	175.00
Total revenue	$4,108.95
EXPENSES	
Pumping	
Labor	$553.90
Steam generated	2,304.32
Supplies, maintenance, etc	90.87
Total pumping	$2,949.09
Distribution	
Labor	$300.00
Maintenance, supplies and expenses	242.00
Total distribution	$542.00
Commercial	$94.49
Total direct expenses	$3,585.58
Undistributed	41.30
Total operating expenses	$3,626.88
Gross income available for interest and depreciation	$482.07

ELECTRIC DEPARTMENT.

Year ended June 30, 1913.

REVENUES	
Commercial lighting earnings	$6,387.97
Miscellaneous earnings	240.00
	$6,627.97
EXPENSES	
Power	
Labor	$553.90
Steam generated	3,456.49
Maintenance, supplies and expenses	177.25
Total power	$4,187.64

Distribution	
Labor	$300.00
Maintenance, supplies and expenses	101.56
Total distribution	$401.56
Commercial	265.11
Total direct expenses	$4,854.31
Undistributed	123.90
Total operating expenses	$4,978.21
Amount available for interest and depreciation	$1,649.76

From the foregoing income accounts it will be seen that there has never been any charge made for municipal hydrant rental or for street lighting. This omission should be remedied if the rates are to be equitable to all consumers.

It should be noted here that miscellaneous earnings of the water department include $160 and the electric department $240 revenues from the sale of steam, allocated to each of these departments on the basis of steam generated for each. The revenues from this service, it appears from the data at hand, about offset the costs chargeable to this service. It is believed that, for the purpose of this analysis, a further detailed investigation and separation of these items need not be made. Under other circumstances and conditions, however, these items would be handled by a different accounting procedure which need not be discussed at this time.

No evidence is presented as to the proper rate of depreciation. Computations of the average life of various groups of depreciable property of similar plants would indicate that allowances for what would be reasonably required every year to offset depreciation in determining the cost of service might be placed at about 1 per cent of the total cost of reproduction new in the water department, and at about 4.5 per cent of the total cost of reproduction new in the electric department.

The amount available for a return upon property will, of course, to be to some extent dependent upon the amount which should be reserved to provide for depreciation. It appears from the records that no depreciation has ever been written off on either the water or electric departments. The nature of the items handled by the utility under the head of "Maintenance" and "Construction", much of the latter of which was replacement work, will indicate in a measure the amount which should

be set aside to provide for depreciation. An examination of the items under these heads does not indicate that a reserve to cover depreciation should be dispensed with. It is believed that a fair annual reservation for the electric department is $1,100, and for the water department $375.

With the above annual provisions for depreciation, the amounts available for interest and profits would be $549.76 in the electric department and $107.07 in the water department, on the basis of the adjusted income account for the year ended June 30, 1913. After deducting the non-operating deficit in the electric department, however, the amount available for interest is only $164.41.

The fact that no charge has ever been made for either hydrant rentals or for street lighting service naturally causes the operating expenses for both departments, when interest and depreciation are included, to exceed the revenues by considerable amounts.

Cost of Service.

A tentative apportionment of expenses, with a tax allowance and an interest allowance, for the purpose of these computations, upon a valuation of $16,294 in the electric department and $32,215 in the water department, shows that, with interest at 4½ per cent, capacity expenses of the electric department are $2,543.53, and output expenses are $4,347.91. The apportionment of the expenses of the two departments is summed up as follows:

ELROY ELECTRIC DEPARTMENT.

	Total.	Charged to street lighting.	Charged to commercial lighting.
Capacity	$2,543 53	$352 72	$2,190 81
Output	4,347 91	1,039 78	3,308 13
Total	$6,891 44	$1,392 50	$5,498 94

ELROY WATER DEPARTMENT.
Apportionment of Expenses
(Excluding Taxes, Depreciation & Interest.)

	Total.	Capacity.	Output.	Consumer.
General service	$3,064 32	$637 22	$2,019 00	$408 10
Fire service	562 56	521 36	41 20	.....
Total	$3,626 88	$1,158 58	$2,060 20	$408 10

Taxes, depreciation, and interest:	
General service	$1,092.16
Fire service	893.58
Total	$1,985.74

COST CURVE, ELECTRIC DEPARTMENT.

A cost curve resulting from the foregoing apportionment of expenses of the electric department has been determined. The records of the utility regarding the total connected load of the various classes of service, consumer statistics, amount of current generated and sales to consumers are very inadequate, so that estimates of these items necessarily had to be made in some instances.

COST CURVE, COMMERCIAL LIGHTING.

Hours' use per day.	Capacity cost cts.	Output cost cts.	Total cost cts. per kw-hr.
1	6.25	5.51	11.76
2	3.12	"	8.63
3	2.08	"	7.59
4	1.56	"	7.07
5	1.25	"	6.76
6	1.04	"	6.55
8	.78	"	6.29
10	.63	"	6.14
18	.35	"	5.86
24	.26	"	5.77

This shows, in general, the limits of a rate schedule constructed upon a cost basis. A rate schedule which will best fit the conditions existing at Elroy, aid in the development of the electric business and at the same time correspond closely to the cost curve shown above will be about as follows:

10 cts. net for all or part of first 3 kw-hr. used per month per 100 watts of active load.

8½ cts. net for all, or part, of next 6 kw-hr. used per month per 100 watts of active lead.

7 cts. net per kw-hr. for all current used in excess of 9 kw-hr. per month per 100 watts of active load.

STREET LIGHTING.

Statistics of importance regarding street lighting in Elroy are not as definite and exact as could be desired. Apportionment of the expenses charged to this service indicate a cost of $1 per lamp

per month for the 50-watt units, and $1.75 per lamp per month for the 120-watt units, the yearly costs being $12 and $21, respectively.

Probable Revenue, Electric Department.

It was estimated that the sales of current to commercial service would amount to approximately 60,000 kw-hr. divided as follows: primary 60 per cent or 36,000 kw-hr.; secondary 34 per cent or 20,400 kw-hr.; excess 6 per cent or 3,600 kw-hr. At the rates outlined above revenues from this service will be about $5,582, or $83.06 in excess of the expenses charged to this class of service.

Revenue from street lighting will amount to about $1,404, the excess above operating expenses charged to this service being $11.50.

Cost of Service, Water Department.

Water department records are inadequate, the same condition prevailing as found in the electric department. The reported pumpage of 48,000,000 gallons would be high for a city of the size of Elroy except for the fact that water is supplied to the Chicago & North Western Railway Company for engine use and other purposes. No record of the consumption of this consumer exists. The railroad, however, may use as much as 20,000,000 gallons of water per year, although this is a matter of conjecture. The other consumers, it is believed, will not use over 15,000,000 gallons.

The total cost of each class of service supplied by the water department is summarized below:

	Expenses of operation.	Interest, taxes and depreciation.	Total.
Fire service	$562 56	$893 58	$1,456 14
General service	3,064 32	1,092 16	4,156 48
			$5,612 62

General service cost is made up of $899.34 capacity expenses, $2,849.04 output, and $408.10 consumer expenses. In the absence of reliable data it is impossible to make the further alloca-

tion of costs to metered and flat rate consumers. A number of computations have been made upon the best estimate of the operating statistics we have been able to formulate, and from the results of these computations, it is believed that no changes need be made at present in the flat rates now in force. Meter rates, however, it is believed, should be modified, a schedule somewhat as follows being applicable to the situation in Elroy:

MINIMUM CHARGE—PAYABLE QUARTERLY.

Size meter	Charge
⅝ inch or less	$1.25
¾ "	1.50
1 "	2.25
1½ "	3.75
2 "	5.25
3 "	7.50
4 "	12.00

OUTPUT CHARGE.

First	5,000 gallons per quarter	Minimum bill.	
Next	45,000 " " "	22 cts. net per	1,000 gals.
"	50,000 " " "	18 " "	"
"	50,000 " " "	15 " "	"
"	50,000 " " "	10 " "	"
Over	200,000 " " "	5 " "	"

The following citation is applicable to the situation found in Elroy:

"The fact that sufficiently complete information for a careful revision of the respondent's rate schedule is not available, has already been alluded to. Under somewhat similar conditions, when the application has been for an increase of rates, the Commission has dismissed the case, holding it to be the duty of the utility to maintain such records of its operation as may be necessary for a proper analysis of its business. But under the conditions found in this case, the absence of certain information can hardly be permitted to stand in the way of those adjustments which available facts indicate will lead to greater equity between the utility and the public and between the different classes of consumers. To permit uncertainty, arising from the utility's failure to provide for ordinary utility records, to completely prevent adjustment and reductions of rates would be adding an additional incentive for failure on the part of the utility to determine and record important facts concerning its business with the public." *City of Rhinelander v. Rhinelander Ltg. Co.* 1912, 9 W. R. C. R. 406, 433.

Owing to lack of definite information at important points of this investigation and the necessity of making estimates, it is by

no means certain that the conclusions reached are in all respects accurate. When such information as the law requires a utility to have available is presented to this Commission, a careful analysis of actual instead of estimated operating conditions can be made, and more definite conclusions drawn. If experience shows that some of the conclusions in this case should be altered, the necessary modifications can be made when necessary.

IT IS THEREFORE ORDERED, That the city of Elroy discontinue its present schedule of water and electric rates and substitute therefor the following schedules:

WATER RATES.

1. *Fire Protection.* The city of Elroy shall be assessed $1,500 per annum.

2. *Street sprinkling*—present rates.

3. *General service.*

(a) Meter rates:

Minimum quarterly charges, one consumer on a meter.

⅝ in. meter	$1.25
¾ "	1.50
1 "	2.25
1½ "	3.75
2 "	5.25

Output Charge:

First	5,000	gals.	per	quarter	Minimum bill.					
Next	45,000	"	"		23	cts. gross,	22	cts.	net	per M gals.
"	50,000	"	"		19	"	18	"	"	"
"	50,000	"	"		16	"	15	"	"	"
"	50,000	"	"		11	"	10	"	"	"
Over	200,000	"	"		6	"	5	"	"	"

Free service shall be discontinued.

(b) Flat Rates: present charges.

Rules for payment: Flat rates—Consumers to be allowed 10 days in which to pay accounts. Meter rates—all accounts shall be billed at the gross rate. If paid within 10 days, the difference between the gross and net rates, or one cent, shall constitute a discount for prompt payment.

ELECTRIC RATES.

Commercial Lighting.

Schedule of rates for all lighting service furnished residences and businesses and passing through the same meter and measured by a meter or meters owned and installed by the company. This lighting service will include electric energy furnished for appliances other than lighting equipment, when the aggregate rated capacity of such appliances does not exceed 1½ kw.

Primary rate: 10 cts. net or 11 cts. gross for all or part of first 3 kw-hr. used per month per 100 watts of active load.

Secondary rate: 8½ cts. net or 9½ cts. gross for all or part of next 6 kw-hr. used per month per 100 watts of active load.

Excess rate: 7 cts. net or 8 cts. gross for all current used in excess of 9 kw-hr. per month per 100 watts of active load.

Active connected load shall in each case be a fixed percentage of the total connected lighting load installed upon the consumer's premises.

In Class A, which shall include residences, dwellings, flats and private rooming houses, where the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected lighting load shall be deemed active; where the installation exceeds 500 watts nominal rated capacity, 33⅓ per cent of such part of the total connected lighting load over and above 500 watts shall be deemed active.

In Class B, which shall include all stores, offices, business and professional places, public halls, passenger depots, and theaters, etc., where the total connected lighting load is equal to or less than 2.5 kilowatts, nominal rated capacity, 70 per cent of such total connected load shall be deemed active; where the installation exceeds 2.5 kilowatts nominal rated capacity, 55 per cent of such part of the total connected load over and above 2.5 kilowatts shall be deemed active.

In Class C, which shall include county and city buildings, schools, factories, industrial establishments, shops, stables, garages and warehouses, 55 per cent of the total connected load shall be deemed active.

The minimum monthly charge for lighting service shall be $0.50 for each installation.

Street Lighting.

Street lights to burn on moonlight schedule.
50 watt units $1.00 per unit per month.
120 watt units $1.75 per unit per month.

Discount.

The utility shall bill all consumers at the gross rate and the difference between the gross and the net rates above specified, or one cent per kw-hr., shall constitute a discount for prompt payment.

A canvass shall be made of the connected load of every consumer now connected and of each new consumer upon the installation of each meter; and all bills rendered by the company to the consumer shall state plainly the connected load of each consumer and the percentage which is considered active in computing the rate.

IT IS FURTHER ORDERED, That the city of Elroy shall install and keep such accounts as have been prescribed for its electric and water departments, and such records as have been designed by this Commission and submitted to the utility under date of April 20, 1914, subject, however, to such modifications as this Commission finds necessary.

IN RE APPLICATION OF THE TREGO TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES, TOLLS AND CHARGES.

TREGO TELEPHON COMPANY
vs.
EARL TELEPHONE COMPANY.

Submitted March 4, 1914. Decided May 16, 1914.

Two proceedings are involved in this case: (1) the Trego Tel. Co. applies for the establishment of such toll rates and charges as may be reasonable for service between the exchanges in Earl and Trego and service from the exchange in Trego to the exchange in Spooner; and (2) the Trego Tel. Co. petitions for a more equitable division between it and the Earl Tel. Co. of the toll charges collected for the transmission of messages over the line between Earl and Spooner, part of which is owned jointly by the two companies. At present service is free between Earl and Trego and from Trego to Spooner. For service from Spooner to Trego and either way between Spooner and Earl a toll charge of 15 cts. is made. The tolls collected for service between Earl and Spooner are divided equally between the Trego Tel. Co. and the Earl Tel. Co. The Trego Tel. Co. contends that inasmuch as it owns the major portion of the line the division should be made on the basis of 10 cts. to it and 5 cts. to the Earl Tel. Co. An approximate valuation of the lines involved was made and apportioned among the Trego Tel Co., the Earl Tel. Co. and the Spooner Tel. Co., the latter of which owns part of the equipment used; traffic conditions were determined as closely as possible and the annual cost to each company of the service in question was computed.

Held: 1. In view of the closeness of the exchanges of the Trego and Earl telephone companies, the limited extent of free service furnished by each of the companies, the relatively undeveloped condition of the telephone business in the district served and the fact that the return on the physical investment in the toll line is taken care of for both companies in the return computed from the toll charges allowed, it is advisable to continue the free service now maintained between Trego and Earl.

2. A toll charge of 10 cts. should be made for calls from Trego to Spooner.

3. The revenue collected from the toll charge of 15 cts. for calls between Earl and Spooner should be divided on the basis of 9 cts. to the Trego Tel. Co. and 6 cts. to the Earl Tel. Co.

It is ordered that a schedule prescribed by the Commission and embodying the foregoing conclusions be adopted.

The application of the Trego Telephone Company in the first of the above entitled cases sets forth that at the present time there is no toll rate in effect between the Earl exchange and the

Trego exchange or from the Trego exchange to the Spooner exchange and the applicant prays that the Commission make an order establishing such rates and charges between these exchanges as shall appear just and reasonable. In the second of the above entitled cases the Trego Telephone Company sets forth in the complaint:

1. That the petitioner, i. e. the Trego Telephone Company and the respondent, i. e. the Earl Telephone Company, own jointly 7¼ miles of line, of which the petitioner owns 6½ miles and the respondent only ¾ of a mile.

2. That a rate of 15 cts. per message between Earl and Spooner has been and now is in effect; and

3. That this toll charge has been divided equally between the Trego Telephone Company and the Earl Telephone Company, notwithstanding the fact that the petitioner owns the greater part of the line.

The petitioner therefore prays for a more equitable division of such tolls.

Hearing was held in these matters at the office of the Commission at Madison on March 4, 1914. *W. R. Campbell* appeared for the Trego Telephone Company. There was no appearance for the other parties concerned. Through an investigation which has been made of the situation by the Commission and from the testimony in the cases the following facts have been established:

The Trego Telephone Company operates an exchange in the village of Trego and serves a total of 90 subscribers, 30 of whom are within the village of Trego on single party full metallic lines and the remaining 60 are on rural grounded lines running in all directions from this village. One 150 drop Julius Andrae switchboard with 44 drops in use is installed at Trego. Rates for service are $12 per year per telephone.

The Earl Telephone Company operates three rural grounded party lines and one single party line, with a total of 45 phones connected. The territory covered by this company lies principally south and east of the village of Earl, although one line extends in a round-about way to the village of Springbrook which lies about four miles northeast of Earl. This company has two centrals, one of which it calls its "day central" and one its "night central." The "day central" is located at a store in the village of Earl, 3¾ miles east of Trego, and consists of a 10 line Julius Andrae wall type plug board. The "night central" is lo-

cated at the home of the company's manager about three miles southeast of the day central. By means of switches all lines are connected to the manager's residence after the store is closed at night. Rates for service are $12 per year per telephone.

Although the Spooner Telephone Company has not been made a party to this case, one of the toll lines in question enters the exchange of this company; hence a brief outline of the extent of operation of this company will be given that more light may be thrown upon the situation.

The Spooner Telephone Company operates one exchange located in the village of Spooner. 285 telephones belonging to this company besides a number of telephones which are attached to foreign lines are served by this exchange. A 300 drop switchboard, with 252 drops in use, is in operation.

The toll lines in question in these cases are two grounded through lines, one running between Trego and Spooner, 9.25 miles in length, and the other running between Trego and Earl, 3.83 miles in length. The following table gives the amount of toll charges now in effect over these lines and the division of the revenues among the companies:

From	To	Rate.	Spooner Tel. Co.	Trego Tel. Co.	Earl Tel. Co.
Spooner	Trego	15 cts.	15 cts.		
Spooner	Earl	15 cts.	15 cts		
Trego	Spooner	Free.			
Trego	Earl	Free.			
Earl	Spooner	15 cts.		7½ cts.	7½ cts.
Earl	Trego	Free.			

As has been previously pointed out the petitioner asks that such rates as the Commission finds just and reasonable be established upon calls both ways between Earl and Trego and upon calls from Trego to Spooner. Further, the petitioner contends that the present division of tolls between the Trego Telephone Company and the Earl Telephone Company on calls from Earl to Spooner is unjust, inasmuch as the petitioner owns much the larger share of the joint line used by the two companies. The petitioner prays that it be allowed 10 cts. instead of 7½ cts. on each message going through its exchange from Earl to Spooner.

An approximate valuation of the lines in question has been made by the Commission as follows:

AN ESTIMATE OF APPORTIONED VALUE OF TRUNK LINE BETWEEN TREGO AND SPOONER.

NOTE:—Add 12 per cent to cover engineering and superintendence, interest during construction, contingencies, etc.

The above valuation shows that taking the two toll lines as a whole the Spooner Telephone Company owns 57 per cent, the Trego Telephone Company 39 per cent and the Earl Telephone Company 4 per cent. Allowing reasonable amounts for interest, depreciation and maintenance on this property, we find that the companies concerned should receive as a return per year upon this part of their investment, amounts approximately as follows: The Spooner Telephone Company $89, the Trego Telephone Company $60 and the Earl Telephone Company $5.

Definite data as to the number of calls which will go over these lines under rearranged conditions and the exact cost of handling each call are not available. However, from such data as we have, computations have been made which indicate that the entire cost to each company of furnishing this service for one year,

including operating labor, proper return on investment, and all other items which should be considered is approximately as follows: Spooner Telephone Company $154, Trego Telephone Company $117, Earl Telephone Company $28. Further computations indicate that with a 10 ct. toll charge on calls from Trego to Spooner, with the 15 ct. toll charge from Earl to Spooner divided 9 cts. to the Trego Telephone Company and 6 cts. to the Earl Telephone Company, with free service between Earl and Trego and with no change in the rate from Spooner to either Trego or Earl, the total return to the companies per year for the maintenance of the service will about equal its cost as given above, and with the division of these toll charges as above indicated the revenues will be divided as equitably among the companies concerned as can be determined at this time. This schedule contemplates the retaining of free service between Trego and Earl.

In view of the following facts this free service seems in this case to be justifiable:

1. The companies involved are located closely together, and as a result the subscribers of both exchanges have much in common as is evidenced by the comparatively large number of calls per telephone passing daily between the two exchanges.

2. The extent of free service which either of these companies by itself furnishes its patrons is quite limited, covering only 45 phones for one company and 90 phones for the other.

3. The telephone industry in this section is now going through the earlier part of its development. The placing of a toll charge upon calls between these two exchanges, it is believed, would have a tendency to materially hinder the development of business of both companies.

4. The return on the physical investment in the toll line is taken care of for both companies in the return computed from the toll charges which have been allowed. The labor charge for the free calls, it is believed, in this case may well be considered as being included in the regular yearly rental paid by the subscribers of the companies.

Taking all of the facts into consideration, we believe that it will work no special hardship on the two companies to continue the free service and in fact it would appear rather to work to the advantage of both in the development of their business.

The part of the schedule contemplating a 10 ct. toll charge on

calls from Trego to Spooner would not seem to require much discussion. Heretofore messages from Trego to Spooner over this line have been free while messages in the opposite direction are charged for at the rate of 15 cts. per call. This has resulted in a very uneven distribution of the traffic between the two companies. Moreover, the Trego Telephone Company has had no return upon its investment in this toll line from calls which it originates and the return from other sources has not been sufficient to cover the expense incident to this service. The computations indicate that a 10 ct. toll charge upon this service, together with the 9 cts. per call on calls to Spooner from the Earl Telephone Company, will about cover the cost of handling these calls and provide a reasonable return upon this company's toll line investment.

With reference to the division of the toll charge on calls from the Earl exchange to Spooner between the two parties to this case it would at first seem, taking into consideration only the investment and operating labor, that the Trego Telephone Company should receive a large percentage of this toll charge. However, it must be borne in mind that the Earl Telephone Company is held responsible for the collection of the toll charges, the expense of which will offset to a considerable extent the higher investment of the petitioner. From computations which have been made of the cost to provide this service it seems fair that this 15 ct. toll charge be divided, 9 cts. to the Trego Telephone Company and 6 cts. to the Earl Telephone Company.

The Commission sees no good reason for postponing action in this matter as it has been requested to do by the petitioner. The following order will therefore take effect on June 1, 1914.

IT IS THEREFORE ORDERED, That the present schedule of toll rates and division of tolls involving the Trego Telephone Company and the Earl Telephone Company be discontinued and the following schedule substituted with division of all tolls as indicated:

From this exchange.	To this exchange.	Rate per call.	Revenue to Trego Tel. Co.	Revenue to Earl Tel. Co.
Trego	Spooner	10 cts.	10 cts.	.....
Trego	Earl	Free.	.....	.....
Earl	Spooner	15 cts.	9 cts.	cts.
Earl	Trego	Free.	.....	.....

D. ADAMS ET AL.
vs.
CHICAGO, BURLINGTON AND QUINCY RAILROAD COMPANY.

Submitted April 14, 1914. Decided May 25, 1914.

The petitioners allege that the passenger service rendered by the respondent at Victory, Vernon county, is inadequate and asks that the respondent be required to stop train No. 51, northbound, and train No. 58, southbound, at Victory for the purpose of receiving and discharging passengers. The trains named are interstate trains. Victory now receives passenger service from one passenger train and one freight train each way daily.

Held: The present service is adequate. The petition is dismissed.

The petitioners are residents of Victory, Vernon county, Wis. They complain of the inadequacy of the service furnished by the respondent railway company at that station.

The matter came on for hearing on April 14, 1914. There were no appearances for the petitioners. The respondent was represented by *Andrew Lees,* its attorney.

It appears that the village of Victory is served by two passenger trains daily, No. 53, northbound, and No. 54, southbound. The former arrives at Victory at 8:00 a. m. and the latter at 11:40 a. m. Freight trains No. 93, northbound, and No. 94, southbound, carry passengers. The former is scheduled to arrive at Victory at 3:40 p. m. and the latter at 8:45 a. m.

The objection to the existing service is that persons desiring to go to La Crosse on business have not sufficient time between trains to transact their business and therefore are obliged to remain over night in La Crosse.

To obviate this inconvenience the petitioners request that train No. 51, northbound, arriving at Victory at 5:00 p. m. daily, and train No. 58, southbound, arriving at 11:26 p. m., be required to stop for the purpose of receiving and discharging passengers.

According to the testimony of the respondent's agent at Victory, it appears that Victory is an incorporated village having a

population of 168 within a radius of a mile of the depot. The local freight trains mentioned run between Grand Crossing and Prairie du Chien. For the past year these trains have been run practically on schedule time. During the summer months they seem to be late from one-half hour to one hour. These trains are so scheduled that people can reach La Crosse in the evening and there connect with trains to Chicago and other points south.

For the year ending December 31, 1913, the total ticket sales at this station amounted to $2,551.23. This amount is said to be somewhat in excess of the usual annual revenues, due to the fact that construction work along the line resulted in the bringing in and taking out of laborers.

It would doubtless be a great convenience to the residents of Victory and vicinity if the service desired were granted. The minimum service prescribed by the legislature for stations having two hundred population or over is two trains each way where four trains each way were operated daily. While we do not regard this statute as fixing the maximum of service in all cases, yet it would be difficult under the showing made in this case to say that Victory had not a reasonable service, taking into consideration the population and surrounding country. In comparison with other stations of like importance on other roads, it would seem that the Commission could not legally justify an increase of the service upon the showing made. The trains which we are asked to stop are interstate trains and are obliged to make many additional stops which they were not required to make previous to the legislation mentioned. It would seem clearly within the decisions of the supreme court of the United States a burden upon interstate commerce to compel such trains to stop at stations of the size of Victory when local service is furnished such stations twice each way daily.

For the reasons stated we feel constrained to dismiss the petition.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

GEORGE RUDER BREWING COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted May 12, 1914. Decided May 25, 1914.

The petitioner alleges that the charges exacted by the respondent for the transportation of certain carload shipments of beer from Wausau to Tomahawk and Minocqua are exorbitant to the extent that they exceed the rates established in *Wausau Advancement Ass'n v. C. M. & St. P. R. Co.* 1914, 13 W. R. C. R. 527, and asks for refund.

Held: The charges complained of were unusual and exorbitant. Refund is ordered on the basis of the rates fixed in the order cited.

The petitioner alleges that on and between May 26, 1913, and January 19, 1914, it shipped thirty-four carloads of beer from Wausau, Wis., to Tomahawk, Wis., and that on and between June 2, 1913, and January 7, 1914, it shipped seventeen carloads of beer from Wausau to Minocqua, Wis.; that the rates and charges exacted on such shipments are exorbitant to the extent that the rates and charges on said shipments exceed the rates established by the Commission in its order of January 3, 1914, rendered in the case of *Wausau Advancement Assn. v. C. M. & St. P. R. Co.* 1914, 13 W. R. C. R. 527. Wherefore, the petitioner prays that the respondent be authorized and directed to refund to it such excessive charge, amounting to $284.01.

The respondent railway company, answering the petition, denies all the material allegations thereof, except that the shipments were made as alleged.

The matter came on for hearing May 12, 1914. The petitioner was represented by *A. E. Solie,* its attorney, and the respondent by *J. N. Davis,* its attorney.

It appears that, as alleged in the complaint, the petitioner shipped thirty-four carloads of beer from Wausau, Wis., to Tomahawk, Wis., the total weight of which shipments amounted to 915,775 lb. The charges exacted amounted to $1,007.38, based upon a rate of 11 cts. per cwt. Also, as alleged, the petitioner shipped seventeen carloads of beer from Wausau to Mi-

nocqua, the total weight of which was 505,985 lb. The charges assessed were $657.41, based upon a rate of 13 cts. per cwt.

In *Wausau Advancement Assn. v. C. M. & St. P. R. Co.* an order was made and entered on January 3, 1914, reducing the rate from Wausau to Tomahawk to 9 cts. per cwt. and from Wausau to Minocqua to 11 cts. per cwt. Had these rates been in effect and applicable at the time the shipments moved, the proper charges on the shipments to Tomahawk would have amounted to $824.20 and those to Minocqua to $556.58.

In the *Wausau Advancement Association* case the Commission said (p. 533):

"From the facts in this case we have reached the conclusion that the present rates on beer in carloads from Wausau to Tomahawk and Minocqua over the line of the Chicago, Milwaukee & St. Paul Railway Company are unreasonbly high, from the point of view of the cost of service and in comparison with similar rates elsewhere; that a reasonable rate for such traffic, sufficient to pay all the operating costs and to yield a substantial return upon the investment, should not exceed 9 cts. per cwt. in the case of a haul from Wausau to Tomahawk and 11 cts. in the case of a haul from Wausau to Minocqua."

In view of the above findings it becomes unnecessary to consider the testimony presented in the hearing in the instant case. The unreasonableness of the charges exacted for the shipments in question is no longer open to question.

Under the circumstances we find and determine that the charges exacted of the petitioner of the aforesaid shipments of beer from Wausau to Tomahawk and Minocqua, respectively, were unusual and exorbitant and that the reasonable rates for such transportation services are those established by the order of the Commission in the *Wausau Advancement Association* case. The excess charge is $284.01, for which reparation will be made.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby authorized and directed to refund to the George Ruder Brewing Company the aforesaid sum of $284.01.

IN RE PROPOSED EXTENSIONS OF THE LINE OF THE WISCONSIN TELEPHONE COMPANY IN THE TOWN OF ANSON, CHIPPEWA COUNTY.

IN RE PROPOSED EXTENSIONS OF THE LINE OF THE CHIPPEWA COUNTY TELEPHONE COMPANY IN THE TOWN OF ANSON, CHIPPEWA COUNTY.

Submitted May 21, 1914. Decided May 26, 1914.

The Wis. Tel. Co. filed notice with the Commission of its intention to make certain extensions of its lines in the town of Anson, Chippewa county. The Chippewa County Tel. Co. and the Cadott Tel. Co. filed objections. The Chippewa County Tel. Co. also filed notice of its intention to make certain extensions of its own in the town of Anson. The notice filed by the Wis. Tel. Co. involves eighteen proposed subscribers and that filed by the Chippewa County Tel. Co., sixteen. Four of the proposed subscribers of the Wis. Tel. Co. appear to be located on highways on which that company's line is already in service, passing the four residences, and there is therefore no question as to the propriety of the company's rendering service to these individuals. There is also no question as to the propriety of the extension of the lines of the Chippewa County Tel. Co. to reach three of its proposed subscribers who now have no telephone service and who are located much nearer the lines of that company than to those of any other company. Of the remaining proposed subscribers of the two companies eleven of those named by the Wis. Tel. Co. are identical with eleven of those named by the Chippewa County Tel. Co. Five of these eleven and the remaining three proposed subscribers of the Wis. Tel. Co. are now served by the Cadott Tel. Co. or are so located that the Cadott line runs along the highway past their houses. At the hearing both the Wis. Tel. Co. and the Chippewa County Tel. Co. indicated a willingness to relinquish their claims to these subscribers and the proposals of the two companies are therefore considered as amended to eliminate the persons living along the line of the Cadott Tel. Co. This leaves six persons claimed as prospective subscribers by both the Wis. Tel. Co. and the Chippewa County Tel. Co. together with two others claimed by the latter company but not secured as subscribers by the former. None of the six prospective subscribers claimed by both companies now receive telephone service and none are in a position to get service without an extension for some distance of the lines of one of the companies. All have signed applications for the service of the Chippewa County Tel. Co. although all had previously applied for the service of the Wis. Tel. Co. All expressed a preference for the service of the Chippewa County Tel. Co., because of its connections with persons located in Chippewa Falls and other points and on neighboring farms in the town of Anson. There is no physical con-

nection of any kind between the lines of the two companies. Evidence was introduced to show that the Chippewa County Tel. Co. was first to occupy territory in the town of Anson and that it has the preponderating number of rural subscribers in that town.

When there is a question as to which of two telephone companies shall be allowed to serve a given territory which is about equidistant from the lines of both companies and which is entirely new to both companies, so that neither will have to have its existing investment in any way impaired by the extension of the other, consideration may well be given to some matters that might be extraneous to the issue if an actual duplication of lines were contemplated. Among these are the preponderance of the subscribers of one company in the territory in question, the number and local importance of the points that can be reached without the use of toll lines, the relative length of time the two companies have been operating in the surrounding territory, and the business and social habits and needs of the individuals who are to use the new service. The greater diligence of one company in securing subscribers may also be taken into account in some cases.

While the duplication of service rather than the actual paralleling of lines is the thing principally to be avoided in the construction of new telephone lines, the extension of a paralleling line from which no service is permitted to be given to the persons living along it is likely to lead to friction and dissatisfaction, and the actual incumbering of the highway and the close proximity of the wires are also likely to be unsatisfactory. In the instant case the route proposed by the Chippewa County Tel. Co. which involves practically no paralleling of any line now furnishing local service to subscribers, seems to the Commission to be preferable to the alternative route proposed by the company which would parallel the Wis. Tel. Co.'s line for about half a mile and the Cadott Tel. Co.'s line for a mile and a half before reaching the point where it would enter new territory and take on subscribers of its own.

Held: Public convenience and necessity do not require the extensions proposed by the Wis. Tel. Co. to reach the six prospective subscribers involved in the issue between the Wis. Tel. Co. and the Chippewa County Tel. Co. No finding is made with respect to the other extensions covered by the amended proposal of the Wis. Tel. Co. or the extensions covered by the amended proposal of the Chippewa County Tel. Co. for the reason that authority vests in the respective companies by operation of law to proceed with the extensions in question as soon as the twenty day limit fixed by the statute has expired.

On May 6, 1914, the Wisconsin Telephone Company filed with this Commission notices of proposed extensions of its lines in the town of Anson, Chippewa county, Wis. Upon being notified of these proposed extensions, the Chippewa County Telephone Company filed its objection to them, and also filed notice of certain proposed extensions of its own in the town of Anson. Objection to the Wisconsin Telephone Company's extensions were also filed by the Cadott Telephone Company.

A hearing was held upon the proposition of both the companies, at Cadott, on May 21, 1914. The Wisconsin Telephone Company was represented by *J. F. Krizek,* the Chippewa County Telephone Company by *T. J. Connor,* and the Cadott Telephone Company by *O. J. Jensen.*

The notice filed by the Wisconsin Telephone Company involved eighteen proposed subscribers in the town of Anson. Of these, the four in sections 14, 23 and 19 appear to be located on highways on which the Wisconsin Telephone Company's line is already in service, passing the four residences, so that there can be no question as to the propriety of the company's rendering service to these individuals. Of the other fourteen subscribers, eight are now served by the Cadott Telephone Company or are so located that the Cadott line runs along the highway past their houses. The remaining six proposed subscribers are not now served by any telephone company and reside mainly on or near a north and south road which crosses at right angles the highway on which the Cadott Telephone Company's line is located.

The sixteen subscribers whom the Chippewa County Telephone Company proposes to attach to its system may be divided into two groups. The most northerly of these groups consists of three persons living in sections 4 and 10 of the town, who now have no telephone service. The Chippewa County Telephone Company is much nearer to them than is any other company and will be permitted to serve these persons without further question. Eleven of the remaining thirteen proposed subscribers of the Chippewa County Telephone Company are identical with eleven of the fourteen proposed subscribers of the Wisconsin Telephone Company above referred to. Five of these eleven are now served by the Cadott Telephone Company or reside along its lines. The eight remaining persons whom the Chippewa County Telephone Company proposes to serve include the six prospective subscribers of the Wisconsin Telephone Company mentioned above as residing on or near the north and south road, together with two others near the same road in sections 17 and 21.

As to the proposed subscribers of the Wisconsin Telephone Company and the Chippewa County Telephone Company who are now served by the Cadott Telephone Company or whose houses are now passed by that company's lines, no sufficient reason has been shown for the entrance of either of the two companies into the Cadott Telephone Company's field. In fact, at the close of

the hearing it was proposed by the Wisconsin Telephone Company that its extension should be constructed as not to reach any of these Cadott Telephone Company subscribers, and the Chippewa County Telephone Company also indicated a willingness to relinquish its claim as to these subscribers.

In effect, therefore, the proposal of each company may be considered to be amended so as to eliminate the persons living along the line of the Cadott Telephone Company. This elimination, as above pointed out, will affect five of the proposed Chippewa County company's subscribers and eight of the proposed subscribers of the Wisconsin Telephone Company. It did not appear very clearly at the hearing that these persons had any considerable complaint to make of the service they were receiving from the Cadott Telephone Company or of the rates they were paying to that company. Since an extension of either of the other lines to them would result in a clear duplication of service, it would not be proper, in the absence of convincing evidence of failure and inability of the Cadott Telephone Company to give satisfactory service, to admit another company into the identical territory occupied by it.

The elimination just suggested leaves six persons claimed by both the Wisconsin Telephone Company and the Chippewa County Telephone Company together with two others claimed by the latter company but not secured as subscribers by the former. Since none of them now have service or are able to get it without an actual extension of a telephone line for some distance to them, there can be no question that public convenience and necessity require the extension of one of the companies. The question to be determined is, which of the two companies shall be permitted to make the extension.

It appears from the evidence that most, if not all, of the six persons were approached by the Wisconsin Telephone Company in 1913, and applications for service were obtained from them. The extension of service was not made at this time, and a new set of applications were obtained from the six persons in the spring of the present year. Pursuant to the statute, notice was then filed with this Commission and with the Chippewa County Telephone Company of the Wisconsin Telephone Company's intention, and after the filing of this notice the Chippewa County Telephone Company sent representatives out to interview the proposed subscribers, and obtained from them applications for the Chippewa

County company's service. These latter applications were secured on May 15 and 16, 1914. Several of the proposed subscribers appeared as witnesses at the hearing, and when questioned as to the reason for successively signing contracts for the service of two different companies, the replies of the witnesses were to the effect that they were very desirous of obtaining telephone service and would rather have the service of the Wisconsin Telephone Company than none, but that they preferred the Chippewa County Telephone Company's service, and upon finding that that company was ready to extend to them they no longer desired the Wisconsin Telephone Company's service. It was further stated that since nothing was done in the way of an extension to them in 1913 when the first contracts with the Wisconsin Telephone Company were signed, the witnesses were doubtful as to whether that company would ever be ready to reach them and they were therefore the more ready to negotiate with the Chippewa County Telephone Company. Evidence was introduced to the effect that the Chippewa County Telephone Company was the first to occupy territory in the town of Anson and had the prepondering number of rural subscribers in that town; that the Wisconsin Telephone Company did not extend into any part of the town of Anson until the summer of 1913, beginning its line shortly before the passage of the statute restricting the extension of the telephone lines and completing the line soon after the law became effective. The witnesses stated that they frequently desired to converse with persons located on the Chippewa County Telephone Company's line in Chippewa Falls and other points reached on that line, and especially with persons located on neighboring farms in the town of Anson which are supplied with Chippewa County service. There is no physical connection of any kind between the lines of the two companies.

Under such circumstances as are disclosed by the evidence in this case, it seems that the preference of the persons most concerned with the use of the extension should be given considerable weight. From the geographical point of view there is no choice between the two companies since both would have about an equal length of line to construct. The territory is entirely new to both companies, so that neither will have to have its existing investment in any way impaired by the extension of the other. The preference of the proposed subscribers seems to be unanimously for the Chippewa County Telephone Company's line, and this

preference was shown not only in their signing contracts and in a signed statement filed as an exhibit in the case, but by the oral testimony which was given by several of them and was subjected to cross-examination by the attorney for the Wisconsin Telephone Company. In a situation, of this kind, consideration may well be given to some matters that may be quite extraneous to the issue in case an actual duplication of lines is contemplated; for instance, the preponderence of the subscribers of one company in the territory in question, the number and local importance of the points than can be reached without the use of toll lines, the relative length of time the two companies have been operating in the surrounding territory, and the business and social habits and needs of the individuals who are to use the new service, all are matters of some importance. This is especially true where, as in the present case, there is no physical connection between the lines of the two companies. In favor of the Wisconsin Telephone Company it may be said that that company apparently displayed the greater diligence in securing the subscribers; and in many cases where two companies are competing for entrance into the same unoccupied territory the enterprise of one company in soliciting business may give it a decided equitable advantage over another company. In this case, however, it is the opinion of the Commissioner that the considerations which, from the point of public convenience and necessity, favor the extension of the Chippewa County company's line to the subscribers in question, outweigh those in favor of the Wisconsin Telephone Company.

It is quite apparent that there is no necessity for the extensions of both the companies into the territory in question. The preponderance of the evidence seems to favor the proposition that the service of the Chippewa County Telephone Company is likely to satisfy the public convenience and necessity better than that of the Wisconsin Telephone Company. Since both companies have complied with the legal requirements precedent to the extension by filing the notices required by law, the conclusion that public convenience and necessity require the service of the Chippewa County line necessarily results in the further conclusion that public convenience and necessity do not require the line of the Wisconsin Telephone Company.

The Chippewa County Telephone Company has suggested two alternative routes for its extension to reach the eight subscribers involved in the branch of the case now under consideration. One

of these would parallel the Wisconsin Telephone Company's line for about half a mile and the Cadott Telephone Company's line for a mile and a half before reaching the point where it would enter new territory and take on subscribers of its own. Since no subscribers of the Cadott Telephone Company are to be disturbed as the result of the extension made in this case, it is highly preferable that so much paralleling of line should be avoided if another route is feasible. While the duplication of service rather than the actual paralleling of lines is the thing principally to be avoided in the construction of new telephone lines, the extension of a paralleling line from which no service is permitted to be given to the persons living along it is likely to lead to friction and dissatisfaction, and the actual incumbering of the highway and the close proximity of wires is also likely to be unsatisfactory. The second route proposed by the Chippewa County company, therefore, is the one which seems to the Commission to be preferable. This route involves practically no paralleling of any line which is now furnishing local service to subscribers. The route thus proposed will follow the north and south road along or near which the proposed subscribers live, will then run west of the center lines of sections 17 and 18 of the town, thence north a little less than a mile to a point on the boundary of section 7, where the existing line of the Chippewa County Telephone Company will be joined.

Since the proposals of both the Wisconsin Telephone Company and the Chippewa County Telephone Company are considered to be amended so as to eliminate the persons residing along the line of the Cadott Telephone Company, no finding will be made with respect to them. These subscribers are the ones designated as follows in the map filed by the Wisconsin Telephone Company: Three in the north half and one in the southwest quarter of section 29, two in the southeast quarter of section 20, and two in the north half of section 28. No finding need be made as to the four subscribers to whom, as already stated, the Wisconsin Telephone Company is to be permitted to extend, being those shown on the company's map in the southwest quarter of section 19, the northeast and southwest quarters of section 23, and the northeast quarter of section 14; nor will any finding be made as to the three subscribers in the northern group and the eight in the southern group to whom the Chippewa County Telephone Com-

pany is to extend. As to such subscribers, authority vests in the respective companies by operation of law to proceed with the extensions as soon as the twenty day limit fixed by the statute has expired.

We therefore find and determine that public convenience and necessity do not require the extensions of the Wisconsin Telephone Company's line as proposed by said company in the town of Anson, Chippewa county, Wis., so far as such extensions would reach subscribers located as follows: One in section 17, one in the north half of section 20, one in the southeast quarter of section 29, one in section 32, one in section 16, and one in the southwest quarter of section 28, in said town of Anson.

DAVID C. JONES
vs.
WISCONSIN RAILWAY, LIGHT AND POWER COMPANY.

Submitted Dec. 30, 1913. Decided June 2, 1914.

The petitioner alleges that the street railway service rendered by the respondent at La Crosse is inadequate and discriminatory in that it is arranged for the convenience of one class of patrons without regard to the necessities of laboring men and asks that the respondent be required to operate its cars on La Crosse street as far east as 25th street on a ten-minute schedule from 6 a. m. to 11 p. m. The respondent now operates cars on its Oak Hill-Cemetery line regularly to 18th street and during the period from May to October furnishes additional service to the golf links beyond 25th street on a schedule arranged with reference to the convenience of the patrons of the golf links, the service beginning about 9 a. m. and ending about 7 p. m. The extension of track to the golf links was made about 1901 in accordance with an agreement under which the golf club paid a part of the cost of construction and also bore a part of the operating expenses for the first three years. Traffic data submitted at the hearing and data gathered by the Commission show that the additional service prayed for would cost considerably more than the additional revenue which would be derived from it. No evidence is presented, however, to show that the earnings from the entire line in question would be so reduced by the granting of the additional service that proper service could not be rendered over this line and other lines of the respondent's system, with a reasonable return upon the value of the property used and useful for the public. The respondent operates the line on La Crosse street under a permissive franchise which authorizes it to construct and operate a single track line on La Crosse street from Forest avenue to such point as it may determine.

No power is vested in the Commission to authorize the abandonment of any line of street railway, but that matter is one over which the common council of the city has exclusive jurisdiction. *Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298.

Held: 1. The respondent by constructing and operating its line as far east as 25th street has accepted the permissive franchise and thereby undertaken to supply street car service to that point.

2. It is the duty of the respondent to render adequate service to the full extent of its undertaking, even though such service is not remunerative, so long as the respondent assumes to operate under the permissive ordinance.

The respondent is ordered to operate its cars on La Crosse street from 18th street to 25th street on the same schedule as that on which its cars are or may be operated on the remainder of its Oak Hill-Cemetery line.

The petition alleges in substance that the service rendered by the Wisconsin Railway, Light and Power Company on its street car system at La Crosse is inadequate and discriminatory, being arranged for the convenience of one class of patrons without regard to the necessities of laboring men. The Commission is therefore asked to require the respondent to operate its cars on La Crosse street as far east as Twenty-fifth street on a ten minute schedule from 6 a. m. to 11 p. m.

The respondent, in its answer, denies that its service is inadequate or discriminatory and alleges that it now operates its cars to Eighteenth street, between which terminus and Twenty-fifth street there are less than twenty residents, very few of whom would patronize the service if it were extended. The dismissal of the complaint is therefore asked.

A hearing was held at La Crosse on December 30, 1913, at which *J. E. Higbee* appeared for the petitioner and *Geo. H. Gordon* for the respondent.

The testimony shows that about the year 1893 the respondent extended its tracks to the fair grounds located about three hundred feet beyond the intersection of La Crosse street and the track of the Green Bay & Western Railroad Company at Eighteenth street. When the golf club was organized about 1901, the track was extended to the club house, which is located several hundred feet beyond what is now known as Losey Boulevard or Twenty-fifth street. The golf club paid a part of the cost of constructing the track extension and also bore a part of the operating costs for the first three years. The company operates its cars beyond the Green Bay railroad crossing only during the period from May to October and arranges its schedules during those months with reference to the convenience of patrons of the golf links, the service beginning about 9 a. m. and ending about 7 p. m.

The petitioner testified that between the Green Bay railroad company's track and Twenty-fifth street there are twenty houses occupied by twenty families which average about four persons each. Six of these houses are located south of La Crosse street and west of the fair grounds, the remainder being in the Hill View Addition east of Myrick Park and north of La Crosse street. A number of children from these families attended a school which is at least ten blocks distant, and some of them use the street cars in going and coming. Residents of the Hill View

Addition are now obliged to walk from three to six blocks to the railroad crossing in order to secure car service. Moreover, in the summer months when cars are operated to the golf links they are not run early enough or late enough to be of much service to the residents of the Hill View Addition, most of whom are working people.

The respondent's general manager testified that of the fourteen houses located east of the fair grounds two were unoccupied on the day of his inspection about two weeks prior to the hearing. He offered in evidence a record kept by conductors showing the number of persons living east of the railroad crossing boarding and alighting from cars at the present terminus of the line, as follows:

Date.	Number of passengers living east of terminus.	Date.	Number of passengers living east of terminus.
Dec. 17, 1913	13	Dec. 23, 1913	36
" 18, "	10	" 24, "	12
" 19, "	23	" 25, "	5
" 20, "	20	" 26, "	5
" 21, "	17	" 27, "	13
" 22, "	15	" 28, "	16

A witness for the petitioner questioned the accuracy of these data and testified that to his knowledge fourteen persons living east of the terminus used the cars on December 25. It was also asserted that more than five school children regularly patronize the service twice on each school day.

Traffic data were gathered by the Commission's engineer for three days in March from 6 a. m. to 11 p. m. as follows:

NUMBER OF PERSONS USING STREET CARS IN GOING TO OR FROM POINTS EAST OF TERMINUS AT EIGHTEENTH STREET.

Period.	Friday March 13.	Saturday March 14.	Sunday March 15.
6 to 8 a. m.	3	5	0
8 a. m. to 12 noon	2	2	14
12 noon to 2 p. m.	2	3	8
2 to 5 p. m.	6	5	10
5 to 7 p. m.	4	9	5
7 to 11 p. m.	2	22	12
Total	19	46	49

Our engineer reports that during the period of observation a number of cars turned back at Sixteenth street instead of proceeding to the intersection with the track of the Green Bay & Western Railroad Company at Eighteenth street, which is supposed to be the present terminus. He expresses the opinion that the number of passengers riding during the Saturday and Sunday observed was somewhat greater than would be the case during more severe weather.

The company's general manager testified that the extension of service asked for by the petitioner would necessitate the operation of an additional car from October to May, which would cost $4.25 per day for platform duty, $3.44 for power, $0.25 for fuel and $1.50 for repairs and maintenance, making a total daily cost of $9.44. He expressed the opinion that the traffic obtainable in the district under consideration is not sufficient to warrant the regular operation of cars to Twenty-fifth street.

A study of the traffic data submitted at the hearing and the data gathered by our engineer, makes it clear that the additional service prayed for would cost considerably more than the additional revenue to be derived therefrom. It appears that if cars were operated to Twenty-fifth street on a ten-minute schedule, several trips would be made for each passenger who would ride beyond the present terminus. The data gathered by our engineer show the condition in this respect as follows:

Date.	Number of single trips observed.	Number of passengers who would have ridden beyond 18th street.	Number of trips required per passenger.
March 13	200	17	11.76
March 14	200	46	4.35
March 15	200	49	4.10
March 16	130	17	8.24

Our engineer expresses the opinion that if the cars were operated to Twenty-fifth street it would stimulate travel to some extent, but that the increase would be inconsiderable for some time to come. He states that the proposed service would require the operation of an additional car at a cost of from $7 to $8 per day.

Subsequent to the hearing the company submitted a copy of the franchise under which it operates the Oak Hill–Cemetery line. This ordinance, which was passed on February 16, 1893, grants to the respondent's predecessor, the La Crosse City Railway Company, "the exclusive right to lay down, build, construct, use, operate and repair a single track electric railway * * * running thence by and along Forest avenue to La Crosse street, and thence on La Crosse street to such point as said company may determine." This constitutes the only authorization for the construction and operation of the portion of the Oak Hill-Cemetery line concerned in this case.

It is argued by the city attorney of La Crosse in his brief on behalf of the petitioner that the company has undertaken to render street car service to the district in question, and that adequate service must necessarily include the operation of cars during the winter months when service is most needed by the residents of the territory beyond Eighteenth street. He further contends that the question of adequate remuneration should be considered only with reference to the Oak Hill-Cemetery line as a whole.

It is clear that the company enjoys a permissive franchise to construct and operate a single track line on La Crosse street from Forest avenue to such point as it may determine. Of its own free will it has constructed and operated to a limited extent a single track line as far east on La Crosse street as Twenty-fifth street, thereby accepting the privileges and assuming the duties incident to supplying street car service. Under such circumstances it is the duty of the company to render adequate service to the full extent of its undertaking, even though such service is not remunerative, so long as it assumes to operate under the permissive ordinance. (I Wyman on Public Service Companies, 302.) No power is vested in the Commission to authorize the abandonment of any line of street railway, that matter being one over which the common council has exclusive jurisdiction. *(Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298.) However, if a line has been abandoned without the consent of the common council, and if the restoration of operation thereon would seriously threaten the efficiency of the service over the entire system, the authority to compel the restoration of such service should not be exercised. *(Brown v. Janesville Street Railway Company,* 1910, 4 W. R. C. R. 757, 764.)

In the present case a portion of a line has been virtually abandoned during a portion of each year without the consent of the common council. There is no evidence before the Commission to show that the earnings of the respondent from its Oak Hill-Cemetery line will be so reduced by the regular operation of cars to Twenty-fifth street, as prayed for, that proper service cannot be rendered over this line and other lines of its system, with a reasonable return upon the value of the property used and useful for the public. Under such circumstances it is clear that the company should be held to the fulfillment of its obligations to the city, and that an order should be entered requiring the operation of a reasonable street car service over the portion of the line in question.

The Oak Hill-Cemetery line is operated on a ten-minute headway throughout the year, and during the summer an additional car is placed in service, the ten-minute service being extended to the golf links for a portion of the day. With the existing track layout it is impracticable to operate the portion of the line beyond Eighteenth street without the extra car and on other than a ten-minute schedule, since the passing tracks are placed with that schedule in view. This end of the line, if operated, must be an integral part of the line, and receive service similar to that on other parts. A ten-minute schedule on this particular portion of the line will more than fulfill the requirements of adequate service, but whether a less frequent service over the entire line would be justified cannot be passed upon in this decision.

IT IS THEREFORE ORDERED, That the respondent, the Wisconsin Railway, Light and Power Company, operate its cars over that portion of its Oak Hill-Cemetery line from Eighteenth street to Twenty-fifth street on La Crosse street in the city of La Crosse on the same schedule under which its cars are or may be operated on the remainder of its Oak-Hill Cemetery line.

IN RE APPLICATION OF THE SEVASTOPOL FARMERS TELEPHONE COMPANY FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY.

Submitted Feb. 24, 1914. Decided June 2, 1914.

The Sevastopol Farmers Tel. Co. applies for a certificate of public convenience and necessity permitting it to construct a telephone system north from Sturgeon Bay, Door county, into the towns of Sevastopol, Egg Harbor and Jacksonport. The Door County Tel. Co. and Matt Peffer, each owning and operating rural telephone lines in the towns named, object to the granting of the certificate. The proposed new line would parallel the existing lines on the same highways for practically its entire length. This is sought to be justified by the alleged gross inadequacy of the service afforded by both of the existing systems. Because of the strength of the evidence offered on this point, an investigation of the service rendered by the objectors is ordered by the Commission on its own motion.

The fact that existing telephone service is inadequate is not ordinarily sufficient to justify the issuance of a certificate of public convenience and necessity permitting a new company to enter territory already occupied and fully covered by existing companies, but recourse should be had to the method provided by the Public Utilities Law for the correction of defects in service.

Held: Public convenience and necessity do not require the proposed construction.

The application in this case relates to a proposed telephone system to be constructed north from Sturgeon Bay, Door county, Wis., into the towns of Sevastopol, Egg Harbor and Jacksonport. The construction of this line was opposed by the Door County Telephone Company and by Matt Peffer, each of whom owns and operates rural telephone lines in the same towns.

The hearing was held upon the matter at Sturgeon Bay on February 24, 1914, at which the applicant was represented by *H. M. Ferguson* and the objectors by *W. E. Wagener*.

The proposed new line is plainly intended as a substitute for the existing lines in the towns directly north of Sturgeon Bay. The route laid out by the applicant company involves the paralleling on the same highways of the two existing lines, for practically the entire length of the proposed new line. A few branches of the line would enter new territory for a mile or two

but by far the greater portion of the new line would cover territory already served. At the time of the hearing, about thirty subscribers had been obtained for the line, and it was stated that about two-thirds of these were already subscribers on one or the other of the existing lines. The new company, like the two already in existence, would expect to have its switching done by the Wisconsin Telephone Company in the city of Sturgeon Bay, and have no central office of its own.

Of the two lines already existing in the northern part of Door county, that owned by the Door County Telephone Company is the more extensive. Door county consists of a long peninsula jutting out into Lake Michigan and north of Sturgeon Bay the peninsula is generally not more than seven or eight miles across. The Door County Telephone Company has six circuits, all grounded. Two of these run from Sturgeon Bay to the very end of the peninsula on each side, forming a complete circuit around the northern end of the county. The other four lines are shorter, and cover most of the intervening territory. The proposed line of the applicant would extend for some distance along each side of the peninsula and would cover considerable territory in the interior. The new company's lines on the two sides of the peninsula would parallel for their entire distance the lines of the Door County Telephone Company, and the lines in the interior of the county would also parallel for the most part the various interior lines of the Door County Telephone Company.

The lines owned by Matt Peffer extend from Sturgeon Bay to the northeast for perhaps sixteen miles with a few side branches. In general, they serve the interior of the peninsula rather than either of its shore lines, and they do not, except for short stretches, parallel the Door County Telephone Company's lines on the same highway. The proposed new line would, however, parallel the greater part of the Peffer line.

The organization of the new company and the proposed construction of a competing line appear from the evidence to be the result of a state of great dissatisfaction with the service of both the existing utilities. The statements of various subscribers and former subscribers of the two companies describing the reasons for this dissatisfaction cover many pages of testimony. The lines of both the existing utilities are grounded and the trouble due to cross-talk and buzzing of the lines was stated to be par-

ticularly acute. There are a number of rural telephone lines running into Sturgeon Bay from the south, all centering in the Wisconsin Telephone Company's switchboard, and the evidence shows that cross-talk from these southerly lines often makes trouble with those attempting to use the northern lines. Frequent crossing of wires, owing to their slack condition, was also mentioned. There was evidence to the effect that persons who had asked for the installation of telephones had been required to wait many months for service. There was also evidence that the lines would at times be out of use entirely for several days. In fact, at the time of the hearing the Matt Peffer line had been out of service for three days. Mr. Peffer himself testified as to one of his lines, "I gave up trying to give that line good service; I could not do it; I tried my best and I could not give them service."

The two objecting utilities introduced evidence tending to show the care with which they attended to trouble on their lines. The Door County Telephone Company has two trouble men, one residing at Sturgeon Bay, and one in the northern part of the county, and they testified that it was their practice to attend to trouble as soon as possible after it was reported to them, going out usually on the same day, or the following day. On the Peffer line, trouble is attended to by Mr. Peffer himself or by an employe, depending on the location of the trouble. The local manager of the Wisconsin Telephone Company at Sturgeon Bay testified that whenever a line or an instrument was found by an operator to be out of order the fact was immediately reported to the proper person for correction of the trouble. Both Mr. Peffer and the officers of the Door County Telephone Company testified that the lines of their respective utilities were about to be changed from grounded to metallic service, but the commencement of the work in this direction was being delayed pending the result of this case.

The evidence seemed quite clearly to show a condition of unsatisfactory service on the part of both the companies at various times. How far the inadequacy of service is due to carelessness or neglect on the part of the companies, how far it may be ascribed to inattention by subscribers or even tampering with the lines, and how far it is the result of natural and unpreventable causes, is not clear. The entire situation with respect to the service of the two companies will bear investigation. If, as one

witness suggested, the poles of the Door County Telephone Company are too small or are partly rotted away, or if the wires are too slack or connections are improperly made, these are physical difficulties that can be determined and remedied. If the situation is such as to require the metallicizing of the lines or other precaution to protect them from cross-talk and other noises, there is no reason why these matters cannot also be attended to as soon as the exact situation has been determined and the requisite engineering knowledge has been applied to it.

All of these matters, however, do not seem to present a justification for the establishment of a new telephone system paralleling and competing with the existing lines and inevitably depriving them of a large amount of their business. The Public Utilities Law provides an adequate way of obtaining good service just as it provides a remedy for excessive rates. The existing companies have not evidenced any intention to abandon the business in which they are engaged or show by their attitude that they are indifferent to the quality of service they give, or are willing to let the public suffer indefinitely from poor service. These companies have shown a disposition to improve the quality of service and to take care of trouble when it arises. If this is not done promptly enough or with sufficient skill to make the attempted improvement effective, it is the duty of the companies to mend their ways and the duty of this Commission to see that the service is actually made adequate.

The testimony presented at the hearing offers a sufficient basis for a general investigation on motion of the Commission of the service of the Door County Telephone Company and the Matt Peffer Telephone Line, and a notice of such investigation is being issued and sent to the parties with this decision. If it should develop that for any reason adequate service can not be had from the existing utilities, there might then be occasion for the entrance of a new company into the field.

It is the opinion of the Commission that in a case like the present, where the evidence tends to show inadequacy of service but no steps have been taken to secure the exercise of the Commission's powers for the correction of the inadequacy, the entrance of a new company into territory already occupied and fully covered by existing companies is ordinarily not required by public convenience and necessity. The impairment of existing investments must have better justification than the exist-

ence of defects in service, which, for all that appears in the evidence, may be easily capable of correction when the proper steps have been taken.

Mention was made in the application of the Savastopol Farmers Telephone Company of the excessiveness of the rates of the existing companies. Little evidence on this point was produced at the hearing. It appears that the rural rate of the Door County Telephone Company is $18 and that of the Matt Peffer line is $15 for residences and $18 for business places. There is nothing in the evidence to indicate whether these rates are excessive or not, but if they were excessive the normal remedy would be a complaint to the Commission rather than the organization of a competing company.

For the reasons given, the Commission is unable to find that public convenience and necessity require the construction of the lines proposed by the Sevastopol Farmers Telephone Company, and therefore no certificate will be issued.

E. D. McGOWAN
vs.
ROCK COUNTY TELEPHONE COMPANY,
WISCONSIN TELEPHONE COMPANY.

Decided June 3, 1914.

The petitioner alleges that public convenience and necessity require physical connection between the local systems and toll lines of the Rock County Tel. Co. and those of the Wis. Tel. Co. in the city of Janesville and asks that the Commission investigate the matter as provided by ch. 546, laws of 1911. Both the respondent companies furnish local and long distance service. The Wis. Tel. Co. has a decided advantage as to toll business, while the Rock County Tel. Co. has a slight advantage as to local business. Competition between the two companies appears to have been very keen, as well as unprofitable to both companies. The local rates of the two companies are practically the same. Only a small majority of the business establishments and a very small proportion of the residences connected with either of the two exchanges have the phones of both companies and the Wis. Tel. Co. refuses to transmit over the lines of the Rock County Tel. Co. messages coming over its own lines for parties who are subscribers of the Rock County Tel. Co. but not of the Wis. Tel. Co. The only connection between the two companies is that afforded by a Rock County phone which the Wis. Tel. Co. has installed in its office and which it uses to notify parties having Rock County phones, but not the phones of the Wis. Tel. Co., of calls which come for them over the Wis. Tel. Co's lines. Parties thus notified are compelled to go to a phone of the Wis. Tel. Co. in order to communicate with the party calling. Intercommunication between the rural subscribers is even more difficult than between subscribers in the city and the rural subscribers of the Rock County Tel. Co. are practically deprived altogether of the long distance service of the Wis. Tel. Co.

The contention of the Wis. Tel. Co. that ch. 546, laws of 1911, is invalid for the reason that it violates certain guarantees of property rights found in the constitution of the United States and that the Commission is therefore without authority in the premises, was disposed of in *Winter v. La Crosse Tel. Co. et al.* 1913, 11 W. R. C. R. 748, and the principles there stated are here followed.

The contention of the Wis. Tel. Co. that it would suffer irreparable loss under the physical connection desired by the petitioner through the effect on the business of its local exchange is not valid. Subscribers of either company who are in a position to also become subscribers of the other and who desire to be connected with the other company's exchange, for the purpose of either local or toll service, can be required to pay the company of

which they are not subscribers a small toll for the privilege, so adjusted as to substantially preserve the *status quo* of the two companies so far as any effect of the charge itself is concerned. No charge in excess of the cost of service and reasonable compensation should be made, however, to those rural subscribers and patrons of connecting companies who have and can have the service of only one company available to them under the terms of the Anti-Duplication Law.

Held: Public convenience and necessity require a physical connection between the exchanges of the respondent companies for the interchange of both local and long distance service. Such connection will not result in irreparable injury to the owners or other users of the facilities of the two companies nor in substantial detriment to the service to be rendered by them.

It is ordered: (1) That the respondents make such physical connection or connections between their toll lines and between their local systems in the city of Janesville as is required for the furnishing of toll line and local service, including rural service, to the subscribers of each company, at the stations installed in their residences and places of business over the toll lines and local lines, including rural lines of the other company; and (2) that the expense of making such physical connection or connections be apportioned equally between the respondents. The point and extent of the connection ordered are left to the respondents to agree upon. Thirty days is deemed a reasonable time within which to comply with the order.

The petitioner is a resident of the city of Janesville, Rock county, Wis. He alleges that in the city of Janesville the Rock County Telephone Company and the Wisconsin Telephone Company, also known as the Bell Telephone Company, each maintains an office and a telephone system, with the usual equipment for the transmission of local and long distance messages, and for all other telephone service and purposes; that each maintains telephone toll lines extending from the city of Janesville to many other cities and other places; that these companies have not made any arrangement for physical connection as provided by law either between their local systems or toll lines or both; that they have refused and now refuse to make such physical connection as is provided by ch. 546 of the laws of 1911; that public convenience and necessity require such physical connection; and that no irreparable injury will result therefrom to the owners or other users of the equipment of these companies, nor in any substantial detriment to the service to be rendered by them. The petitioner further alleges that he frequently has occasion to use one or the other of the toll lines operated by the two companies; that he is prevented from so doing by reason of their neglect and failure to make such connection as is provided by law as aforesaid, and that the petitioner frequently has had calls over the toll lines of the two companies, and espe-

cially over those of the Wisconsin Telephone Company, but that the operators of the latter company refused to give or transmit to him such messages over the local telephone lines of the Rock County Telephone Company. Wherefore the petitioner asks that an investigation be made of the matter, as provided by ch. 546 of the laws of 1911, and that, if after investigation the Commission shall ascertain that public convenience and necessity require such physical connection, that no irreparable injury will result therefrom to the owners or other users of the equipment or facilities of the public utilities involved, nor in any substantial detriment to the service to be rendered by such owners or such public utilities or other users of such equipment or facilities, it order that such use be permitted and prescribe reasonable conditions and compensation for such joint use, and order that such physical connection be made and determine how and within what time such connection shall be made, and by whom the expense thereof shall be borne, and for such other or further order with reference to the matter as by law should be made.

The respondent Wisconsin Telephone Company, answering the petition, admits the formal allegations thereof, but objects and protests against the making of any investigation or order therein by the Commission; alleges that the petitioner is without authority, right, or capacity to file or present the foregoing petition; that ch. 546 of the laws of 1911, pursuant to which the petition purports to be filed, is in violation of and in conflict with sec. 1 of article IV, sec. 2 of article VII, and secs. 5, 13 and 22 of article I of the constitution of the state of Wisconsin, and with sec. 10 of article I, of the constitution of the United States, and of sec. 1 of the fourteenth amendment to the said constitution; than any order entered in the proceedings herein directing any physical connection, or determining any matter in relation thereto will deny the Wisconsin Telephone Company the equal protection of the laws, the right of trial by jury, will deprive it of its property without due process of law or the payment of just compensation therefor, and will be subversive of justice, moderation, virtue, and fundamental principle; that, since the Wisconsin Telephone Company's toll lines are operated in conjunction with toll lines engaged in interstate commerce, namely, those owned or controlled by the American Telephone & Telegraph Company, any

order requiring physical connection of respondent company's toll lines with those of the Rock County Telephone Company will affect and interfere with interstate commerce and thus be a regulation of interstate commerce, in conflict with and in violation of subsec. 3 of sec. 8 of article I of the constitution of the United States; and that the Commission is without jurisdiction, right or authority in the matters herein.

Without waiving its aforesaid objections, the respondent Wisconsin Telephone Company further alleges that the refusal of its operators to transmit to the petitioner, over the local telephone lines of the Rock County Telephone Company, messages coming for him over the toll lines of the respondent company was and is proper and in accordance with law; denies that if the petitioner has occasion to use toll lines of the respondent company at the city of Janesville he is unable to do so conveniently by reason of the lack of physical connection between the telephone systems of the respondent companies; alleges that its toll lines and connections reach and give adequate service to all of the various places served by the Rock County Telephone Company and its toll lines; that the refusal of the respondent companies to make such physical connection as is sought by the petitioner is proper and in accordance with law; that public convenience or necessity does not require physical connection between the respondent companies at Janesville or elsewhere; that any such physical connection cannot be readily made; that it will result in irreparable injury to the owners and other users of the facilities of the respondent companies; that it will result in substantial detriment to the service to be furnished by both or either; that it will not extend greatly or otherwise the use of the telephone systems of each or either; that it will not be of great or other advantage to the community, or to the subscribers of both or either telephone company; that any such physical connection as is sought by the petitioner will result in great advantage to the Rock County Telephone Company at serious costs and detriment to the Wisconsin Telephone Company. Wherefore, the respondent Wisconsin Telephone Company prays that the petition be dismissed.

Two hearings were held. The first took place July 2, 1913, at the capitol in the city of Madison; the second, pursuant to adjournment, November 5, 1913, at the city hall, Janesville. *E. D. McGowan* appeared in his own behalf; *Edwin S. Mack* and

J. F. Krizek appeared for the Wisconsin Telephone Company, and *R. Valentine* for the Rock County Telephone Company.

The objections to the jurisdiction of the Commission based upon the alleged invalidity of the statute involved in these proceedings were also set up in the answer in the case of *Winter v. La Crosse Tel. Co. et al.* 1913, 11 W. R. C. R. 748. In the *Winter* case, by stipulation of the parties, physical connection of the two exchanges for interchange of strictly local service between the respondent company's subscribers within the city was eliminated. In the instant case the fullest connection authorized by the statute in question is sought. The principles involved in the *Winter* case and in this case seem closely analogous. As the Commission fully expressed its views in the former case as to the proper interpretation of the statute and the fundamental principles in regard to its administration, further comment upon the legal question raised will not here be made, except insofar as it may be necessary in certain phases of the case presented to advert thereto.

Janesville is given a population of 13,894 by the 1910 census. It is situated on the main line of the Chicago & North Western Railway Company and also on a line of the Chicago, Milwaukee & St. Paul Railway Company. It appears that there are two telephone companies serving the public in Janesville, namely, the Rock County Telephone Company, hereinafter referred to as the Rock Company, and the Wisconsin Telephone Company hereinafter referred to as the Bell Company. Both of these companies furnished local and long distance service. The Rock Company provides long distance service chiefly through its connection with other companies and particularly through its connection with the Badger Telegraph & Telephone Company. The latter operates an independent toll line. However, its bonds and nearly all of its stock are owned by the Rock Company. When the bonds become due, which will be about two years hence, this company will be merged with the Rock Company. The latter company has at present one toll line which extends between Janesville and Footville for a distance of nine miles.

The toll lines of the Bell Company located entirely within the state are:

Janesville–Lake Geneva,
Janesville–Delavan,
Janesville–Whitewater,

Janesville–Milwaukee,
Janesville–Watertown,
Janesville-Ft. Atkinson,
Janesville-Edgerton,
Janesville–Stoughton,
Janesville–Madison,
Janesville–Evansville,
Janesville–Orfordsville,
Janesville–Juda,
Janesville–Monroe,
Janesville–Darlington,
Janesville–Shullsburg,
Janesville–Beloit.

The Bell Company also has a line to Rockford, Ill., and connects with the line of the American Telephone & Telegraph Company.

The Rock Company connects about as follows:

Janesville to Milton, Milton Jct. and Edgerton.
Janesville to Clinton, Darien and Elkhorn.
Janesville to Sharon and Delavan, and points in Illinois.
Through connections with independent companies.

The Rock Company also renders toll service as follows:

Janesville to Beloit and beyond to Illinois points.
Janesville to Brodhead, Monroe, Monticello, Argyle, Belleville and Albany.
Janesville to Evansville and Brooklyn.

From an inspection of the list of long distance stations contained in the Rock Company's directory for 1913 it appears that the Rock Company offered connections to 85 exchanges and stations within the state. From the reports filed with the Commission by the Bell Company, it would seem that that company reaches 47 of these exchanges and stations.

The Bell Company during the year ending December 31, 1912, reached 297 points within the state of Wisconsin from its Janesville exchange. Of these points 64 were reached by the lines of the Badger Telegraph & Telephone Company which, as has been stated, is associated with the Rock Company. The receipts of the Bell Company for such duplicate points, for originating toll business for the year mentioned were $4,704.55, and the receipts for the 233 non-duplicate points were $5,843.45, making a total of $10,548.00 for that year. The total receipts of the Rock Company were $2,618.05 during the year ending May 31, 1912, and $2,379.05 during the year ending May 31, 1913.

The above figures are not strictly comparable since they are not for the same identical period. However, the comparison is close enough to justify the conclusion that, as to the toll business, the advantage is decidedly with the Bell Company and doubtless an important inducement to subscribe for the Bell phone is the long distance toll service. Upon the hearing it appeared that the subscribers of the Rock Company in and near Janesville were approximately 2,400, while those of the Bell Company were 1,774. From the reports filed with the Commission by the two companies the following table has been compiled:

Year ending	Installations.					
	Business.		Residence.		Total.	
	Rock Co.	Bell.	Rock Co.	Bell.	Rock Co.	Bell.
Dec. 31, 1907	.....	.....	.....	.....	1,505	1,149
June 30, 1909	368	335	1,340	820	1,708	1,155
June 30, 1910	440	366	1,395	835	1,835	1,201
June 30, 1911	425	383	1,526	868	1,951	1,251
June 30, 1912	435	427	1,557	1,137	1,992	1,564
June 30, 1913	431	455	1,571	1,329	2,002	1,784

This includes a small number of extensions.

From the foregoing it would seem that the advantage locally of the Rock Company as far as subscribers are concerned is not very great and that it has become somewhat less in the last five or six years. On June 30, 1909, there was a total of 703 business installations by both companies and 2,160 residence installations. Of the former the Bell Company had 48 per cent and of the latter 38 per cent. On June 30, 1913, the Bell Company had 51 per cent of the total business installations and 46 of the total residence installations. In this connection it must be borne in mind that the Bell Company entered the field in Janesville about twenty years earlier than the Rock Company. The directors and officers of the latter company are all residents of Janesville. Against the superior advantages the Bell Company presumably offers for long distance service, the Rock Company opposes, among other things, the prestige of a local concern.

From the annual reports filed with the Commission by the Bell Company it appears that it has incurred a loss on its Janesville exchange during the last few years. From all of these facts

it would seem clear that the competition between the two companies has been very keen, as well as unprofitable to both companies.

On January 1, 1913, the Bell Company had 315 business telephones and 113 residence telephones installed in places where the Rock Company's phones were also installed. At that time the Bell Company had 75 business and 1,122 residence phones installed where the Rock Company's phones were not in use, and the Rock Company had 182 business and 1,305 residence phones installed where no Bell Company's phones were in use. According to the statistics at hand it appears that 572 subscribers had business phones on that date, and that of this number 315, or fifty-five per cent had both phones. On the other hand there were 2,540 subscribers having residence phones of which only 113, or 4 per cent had both phones.

In the transaction of its business the Bell Company refuses to transmit over the lines of the Rock Company messages coming over its own lines for parties who are subscribers of the Rock Company but not of the Bell Company. The only connection between the two companies is that afforded by a Rock Company phone which the Bell Company has installed in its office. When a call comes over the Bell lines for a person having a Rock Company's phone but not a Bell phone, the Bell company notifies the party over the Rock Company's phone in its office of the call. It then becomes necessary for the party called to go to a Bell phone in order to communicate with the party calling. The petitioner who has the phones of both companies in his office, but only the Rock Company's phone in his residence, testified to a number of occasions when he had been seriously inconvenienced by his inability to communicate at his residence with persons calling him over the Bell Company's lines.

As has been seen, 45 per cent of the business establishments and 96 per cent of the residences had only the telephone of one of the companies on January 1, 1913. It has also been noted that the companies are not on a great disparity as regards either business or residence installations so far as mere numbers are concerned. Much of the testimony at the first hearing and practically all at the second dealt with the inconvenience and annoyance due to the lack of physical connection, and the companies' refusal to transmit messages originating on their lines or connections over those of the other company. A number of

witnesses testified to this inconvenience and a number of others were ready to testify, but as such testimony would be merely cumulative it was deemed unnecessary to extend the record with a mass of cumulative evidence. Among the witnesses who testitified were two dealers in leaf tobacco, a banker, a manufacturer of iron working machinery and one engaged in the marble and granite monument business; also a subscriber to one of the rural lines of the Rock Company who is a heavy buyer and shipper of live stock, and another who is connected with the farmers' line and engaged in the implement, coal and grain business. All the witnesses testifying had occasion to make more or less use of the long distance service afforded by the Bell Company. The substance of the testimony was what might perhaps be anticipated where two telephone systems are engaged in serving the same general community and only a small majority of the business establishments and a very small proportion of the residences have the phones of both companies installed and where rural subscribers and those on connecting lines of one company are often entirely cut off from the service of the other company.

In the *Winter* case, *supra,* it was stated, in substance, that to justify the public obligation usually imposed by "public convenience and necessity" there must be present some imperative public exigency. It is inevitable in such a situation as that at Janesville that the aggregate loss of time, inconvenience, and annoyance through the absence of such physical connection as is here requested must be great, and the conclusion is equally inevitable that a public exigency demands physical connection. And where, as here, the local subscribers are rather evenly divided between the two companies, it is evident that physical connection between the local systems of the two companies, as well as between the local exchanges and the toll systems, is called for. That such connection would greatly increase the value of the service to the subscribers of either company is self-evident. That the demand for these connections, both local and toll, has found expression in numerous instances, was brought out in the testimony.

Were there no other elements to this side of the question, the Commission would be of the opinion that physical connection is demanded by public convenience and necessity. However, there is another important factor to be considered, and that is the

rural subscribers of the two companies, between whom any intercommunication must be much more of a problem than between subscribers in the city. From an inspection of the Rock Company's directory for 1913, and supplement as of June 1, 1913, and the Bell Company's directory as of May, 1913, it appears that the former company then had about 342 rural subscribers, the latter about 157. Furthermore, the rural subscribers of the Rock County are practically deprived entirely of the Bell long distance service.

In the present case it has been noted that the two companies are almost on a parity. The Bell Company has a somewhat larger proportion of the business installations, the Rock Company of the residence. In each case the disparity is comparatively small. The rates for the two companies are the same, except that the Bell Company has no four party service for residences and the Rock Company no corresponding two party service. The Bell Company charges the same for its two party service as the Rock Company for its four party service.

The Bell Company contends that under physical connection it would suffer irreparable loss through the effect on its local exchange. If the physical connection were ordered the subscriber of one company who desired to be connected with the other company's exchange, for the purpose of either local or toll service, would be required to pay the company of which he was not a subscriber, a small toll for the privilege. No reason is seen why such a toll or charge could not be so adjusted as to substantially preserve the *status quo* of the two companies as far as any effect of the charge itself would be concerned. Such a charge, when thus adjusted, would not make it an economy for those now having sufficient business to require the phones of both companies to dispense with either and under the circumstances of this case it would perhaps not be lawful to make a charge having that effect, since that would be to take private property without just compensation.

The toll or charge for physical connection would of course include reasonable compensation for additional costs incurred on account of the physical connection and the connecting companies' regular toll charge, if toll service were desired, or whatever should be worked out as a reasonable charge for the local service, if that were wanted. On account, however, of the terms of the Anti-Duplication Law, ch. 610 of the laws of 1913 (amend-

ing sec. 1797*m*—74), which aims to prevent uneconomic competition and duplication, it would seem that no charge in excess of the cost of the service and reasonable compensation should be made to those rural subscribers and patrons of connecting companies who have and could have only the service of one company or the other available to them under the foregoing law.

Physical connection, with properly adjusted charges, as outlined above, should increase, rather than decrease, the earnings of both companies, since it would permit each company to retain all that it already has, and also have the benefit of all that potential, casual business, which would not warrant the installation of the phone of each company by the single individual or establishment, but the sum total of which, while more or less problematical, would necessarily, under the circumstances of this case, be at least considerable.

In addition to business of that nature, the rural subscribers of each company and the subscribers of connecting companies must be considered. The lack of physical connection between the two companies must be a more serious hindrance for many of these than for the subscribers in the city, and it is only reasonable to suppose that, were this connection made, there would follow from this source an increase of business for each company.

The testimony of a number of witnesses, of whom some were on rural lines and others local subscribers, was to the effect that with the physical connection they would do substantially more telephoning. While the number of these was necessarily small compared with the total possible numbers involved, the weight of their testimony must not be unduly underestimated on that account, since in no respect was it evident that their situation, as far as the need for this service was concerned, was exceptional. It also seems reasonable to suppose that with the physical connection there would be an increase in the incoming calls, since with the exception of urgent business there must be some deterrent effect on those desiring to call people who they know will have to be first reached by messenger service, or in some other way at more or less inconvenience to them and the party called.

Another phase of a situation like the present one, when there is no physical connection, was noted in the *Winter* case, *supra*, and that is the additional expense of the delay in handling a long distance call to a person on the other company's lines who must be reached by messenger or otherwise, before the call can

be given. This additional expense would, of course, be eliminated under physical connection.

An implied rather than direct objection of the Wisconsin Company, was that the Badger Telegraph and Telephone Company, through which concern the Rock Company offers most of its long distance service, is a separate corporation and that therefore an order directed to the Rock Company, requiring connection of toll lines, would not affect the former. This objection does not seem fatal. The secretary and general manager of the Rock Company stated, as has been noted, that his company owns the bonds and nearly all the stock of the Badger Telegraph and Telephone Company and that in the comparatively near future the two companies were to be merged. They are thus associated companies. He also stated that the Badger Telegraph and Telephone Company has always been perfectly willing to make the connection herein desired. Under such circumstances, it hardly seems probable that the expected full effect of the order would be thus frustrated. The order would require physical connection between the two companies for both local and long distance service and the Rock Company would be expected to make the long distance service thus controlled, as well as owned by it, available. However, should the Badger Telegraph and Telephone Company decline to permit the connection, it could be made a party in a proceeding before the Commission to compel the connection.

At the time of the hearing the exchanges of the two companies were two blocks apart. The Rock Company's new central office is some distance from its old one which it occupied at the time of the hearing. This fact, however, the engineer of the Commission, who submitted a report bearing on the physical aspects of the case, says has no effect on the practicability of the connection beyond the increase in cost. In fact the Bell Company's counsel conceded the possibility of the connection. He said, "We would not controvert the fact that it is physically possible to connect the two exchanges."

It appears that the Bell Company uses Western Electric transmitters and receivers and that the Rock Company uses the Kellogg & Sterling Electric Company's switchboards. In the report of the engineer the conclusion was reached that there was nothing in the equipment and the nature of the circuits of either company which would result in detriment to either company by

reason of the connection and that in case any trouble should develop it could be readily remedied.

Since it appears that public convenience and necessity require a physical connection for interchange of both local and long distance service between the exchanges of the Wisconsin Telephone Company and the Rock County Telephone Company in the city of Janesville, that such connection will not result in irreparable injury to the owners or other users of the facilities of the said companies, and that it will not result in substantial detriment to the service to be rendered by them, it follows that an order must be entered accordingly.

The point and extent of the connection will be left to the companies, and if no agreement between them can be reached as to the place, manner, or method of making the connection a further hearing will be granted the parties by the Commission and a supplemental order made, determining the details in question. As the cost of making the connections will not be great and the benefits derived will be mutual, each company will be required to pay one-half of the cost.

NOW, THEREFORE, IT IS ORDERED, That the Wisconsin Telephone Company and the Rock County Telephone Company make such physical connection or connections between their toll lines and between their local systems in the city of Janesville as is required for the furnishing of toll line and local service, including rural service, to the subscribers of each company, at the stations installed in their residences and places of business over the toll lines and local lines including rural lines of the other company. It is further ordered that the expense of making such physical connection or connections and the subsequent maintenance thereof be and the same is hereby apportioned equally between said companies.

Thirty days is deemed a reasonable time within which the companies shall comply with this order.

JOHN SCHROEDER LUMBER COMPANY
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided June 4, 1914.

The petitioner alleges that it was overcharged for the transportation of certain carload shipments of logs to Ashland from various points in Wisconsin through the failure of the respondent's tariff in force when the shipments moved to provide for an allowance for car stakes. The omission of a provision making such an allowance was evidently due to an oversight and the mistake has been rectified in a subsequent tariff. The respondent is willing to make refund.

Held: The charge complained of was unusual and exorbitant. Refund of the amount claimed is ordered.

The petitioner is a corporation engaged in the manufacture of lumber, lath and shingles, and has mills located at Ashland, Wis. It alleges that on and between January 12 and April 15, 1914, inclusive, it shipped from Minersville, Peterson's Spur, High Bridge, North York, and other stations in the vicinity of Marengo, Wis., to Ashland, Wis., 272 cars of logs and from other points in Wisconsin to Ashland 25 cars of logs; that the tariff in effect at the time such logs moved, G. F. D. 17183 and 17895, did not provide for an allowance for car stakes, although the tariffs of other railway companies in this state made such provision; and that the respondent's tariff G. F. D. 16800 applying on lumber and other articles taking the same rate contained a provision allowing for car stakes; that the respondent issued its tariff G. F. D. 18270, effective May 8, 1914, which made a provision allowing 500 lb. for stakes; that the petitioner was therefore overcharged to the extent of 1.4 cts. per cwt. on 272 cars at 500 lb. each, 1.6 cts. per cwt. on 19 cars at 500 lb. each, 1.7 cts. on 2 cars at 500 lb. each, and 1.8 cts. on 4 cars at 500 lb. each, which overcharge amounted in the total to $21.09.

The respondent railway company, answering the petition, admits the allegations thereof and expresses its willingness to make the reparation claimed upon being duly authorized to do so,

The omission of a provision allowing for car stakes in the tariffs upon which the shipment here involved moved was evidently due to an oversight. Upon being advised of the fact the carrier immediately published a tariff rectifying the mistake.

We therefore find and determine that the charge exacted of the petitioner on the aforesaid shipments for car stakes is unusual and exorbitant, and that no charge should have been made therefor. An examination of the receipted freight bills submitted to the Commission shows that the excess charge amounts to $21.09 as claimed. Reparation will be ordered for this amount.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the petitioner, the John Schroeder Lumber Company, the sum of $21.09.

H. W. SELLE & COMPANY
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided June 4, 1914.

The petitioner alleges that charges assessed by the respondent at the rate of 10 cts. per cwt. for the transportation of a shipment of excelsior from Rice Lake to Superior were excessive to the extent that they exceed charges based on the rate of 8½ cts. per cwt., put into effect by the respondent since the shipment moved. The respondent is willing to make refund.

Held: The charges complained of were unusual. The refund claimed is ordered.

The petitioner is a corporation engaged in the manufacture of excelsior at Rice Lake, Wis. It alleges that on December 1, 1913, it shipped from Rice Lake to Superior, Wis., one car containing 27,600 lb. of excelsior upon which the respondent assessed charges at the rate of 10 cts. per cwt., amounting to $27.60; that the charges assessed on said shipment were excessive to the extent that they exceeded charges on the basis of a rate of 8½ cts. per cwt., which rate was established by the respondent's supplement number 10 to G. F. D. 16,000, effective May 1, 1914; and that the charges on the basis of a rate of 8½ cts. per cwt. would amount to $4.14 less than the amount actually paid by the petitioner. Wherefore, the petitioner prays that the respondent be authorized to refund to it the said sum of $4.14.

The respondent railway company, answering the petition, admits the allegations thereof and expresses its willingness to satisfy the claim, if authorized so to do.

The rate of 8½ cts. per cwt. was in effect on the Chicago, St. Paul, Minneapolis & Omaha Railway at the time the shipments moved. From a consideration of all the elements involved in determining the reasonableness of the rate thus in effect on a line of railway competing with the respondent for the traffic in question, it appears that the rate of 8½ cts. furnishes adequate compensation for the services rendered and is sufficiently remunera-

tive to the respondent railway company to warrant its adoption. Of course, the respondent could not hope to participate in the traffic on a different rate and consequently reduced its rate to the corresponding rate on a line of its competitor. The allegation of the petition as to the amount of the overcharge is correct.

We therefore find and determine that the rate of 10 cts. per cwt. exacted of the petitioner by the respondent on the aforesaid shipment of excelsior is unusual and that the reasonable rate for such shipment is 8½ cts. per cwt.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the petitioner, H. W. Selle & Company, the sum of $4.14.

TOWN OF RICHMOND
vs.
WISCONSIN AND NORTHERN RAILWAY COMPANY.

Submitted March 16, 1914. Decided June 6, 1914.

The petitioner alleges that a crossing on the respondent's line one mile east of Thornton, Shawano county, is dangerous.

Held: The crossing requires further protection. The respondent is ordered to install and maintain an electric bell supplemented by a visual signal for night indication, plans to be submitted for approval. Ninety days is considered a sufficient time within which to comply with this order.

The petitioner, a regularly organized town in Shawano county, alleges in substance that a highway crossing one mile east of Thornton on the line of the Wisconsin & Northern Railway Company is dangerous to public travel on account of the surrounding physical conditions. The Commission is therefore asked to require the respondent to install some protective device for the protection of travelers.

The respondent, in its answer, denies that the crossing is unusually dangerous and asks that the petition be dismissed

A hearing was held at Shawano on March 16, 1914. *Chas. Brockman* appeared for the petitioner and *C. H. Hartley* for the respondent.

The testimony shows that at the crossing in question the respondent's single track line runs northwest and southeast and the highway east and west. The railway lies in a cut which is from seven to nine feet deep. The highway also lies in a cut on both sides of the track, descending to the grade crossing. The banks of the cuts and the brush growing upon them and upon the adjacent property form the chief obstructions to the view of trains. After the complaint was filed some of the obstructing brush was removed, but witnesses stated that even with this improvement the view is poor, especially from the east highway approach looking northwest, and from the west highway approach looking southeast, and that travelers must be almost on the track before they can see approaching trains.

On April 21, 1914, a member of the Commission's engineering staff investigated the situation at the crossing. Under his direction the actual points on the track at which a train can be seen from various points in the highway were observed. One man walked along the track holding a staff upon which a handkerchief was displayed at approximately the height of the bottom of ventilating transoms in the ordinary passenger car roof. The range of view of the handkerchief was observed from the seat of a buggy at various points along the highway. The limits of vision ascertained in this manner are presented in the following table. It should be noted that the views afforded for pedestrians would be more restricted than those indicated.

Distance of point of observation in highway from track.	View northwest.	View southeast.
West 50 feet	100 feet	100 feet
" 100 "	180 "	240 "
" 175 "	¼ mile	¼ mile
" 250 "	¼ "	350 feet
East 50 "	110 feet	130 "
" 100 "	140 "	¼ mile
" 175 "	115 "	¼ "
" 250 "	75 "	¼ "

The highway is a main traveled road leading to Shawano from the country northwest of that city. During the summer the automobile traffic is considerable, since the road is in better condition than others in the vicinity. The town chairman estimated the traffic at about sixty teams a day on the average. A count made for the company from 7:30 a. m. to 5:15 p. m. for six days in March resulted as follows:

Date.	Number of teams.	Number of pedestrians.
March 9, 1914	47	3
" 10, "	55	3
" 11, "	38	1
" 12, "	39	5
" 13, "	47	8
" 14, "	53	1

Two mixed trains in each direction each day are scheduled on this line between 7:15 a. m. and 4:25 p. m. daily, but these trains are frequently from two or three hours late. Several narrow escapes from accident were described at the hearing.

Our engineer recommends that an electric bell with a visual signal for night indication be installed.

In the light of the testimony and of the report of our engineer it is our judgment that the crossing under consideration is more than ordinarily dangerous, and that further protection is necessary. Under the existing conditions of traffic, the installations recommended by our engineer are, in our opinion, necessary to render this crossing reasonably safe.

IT IS THEREFORE ORDERED, That the respondent, the Wisconsin & Northern Railway Company, install and maintain at the highway crossing on its line one mile east of Thornton an automatic electric bell supplemented by a visual signal for night indication, plans to be submitted to the Commission for approval.

Ninety days is considered a sufficient time within which to comply with this order.

TOWN OF MENOMONEE
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided June 6, 1914.

The petitioner alleges that two highway crossings on the respondent's line lying partially in the town of Menomonee, Waukesha county, are unsafe for public travel and that the grade of approach is too steep for teaming. The respondent made certain improvements in the grade of the approaches at the crossings subsequent to a conference between the interested parties looking toward an informal adjustment of the matters in dispute, but the petitioner objects to the grades of 7 and 7½ per cent left at the crossings. Both the highways involved were in use before the respondent's line was constructed and were practically level at the point where they now cross the railway line.

The construction of a grade crossing with approaches on a 7 or 7½ per cent grade in the place of a practically level highway, especially when a considerable further reduction of grade can be made without unreasonable expense, is not regarded as a substantial compliance with sec. 1836 of the statutes, which makes it the duty of a railway company to restore any highway crossed by its line "to its former state or to such condition as that its usefulness shall not be materially impaired".

The respondent's contention that the Commission has no jurisdiction to enforce the provisions of sec. 1836 of the statutes was discussed in *In re Crossing on C. & N. W. R. in Town of Gale*, 1914, 14 W. R. C. R. 445, and the opinion there given is here followed.

Held: 1. The crossings should be further protected by the addition of guard rails along the sides of the approaches.

2. The respondent should reduce the grade of approach at each of the crossings to a maximum of 4 per cent in order to fulfill the duty imposed by sec. 1836 of the statutes.

The respondent is ordered to provide properly surfaced highway approaches not exceeding 4 per cent in grade at each of the crossings with suitable guard rails on each side of the highway embankments. Sixty days is considered a sufficient time within which to comply with this order.

On May 24, 1912, the town of Menomonee in Waukesha county filed with the Commission a petition which alleges in substance that two highway crossings on the line of the Chicago & North Western Railway Company, lying partially in the town of Menomonee, are unsafe for public travel and that the grade of approach is too steep for teaming. The Commission is asked to take such action as it deems just in the premises.

No formal answer was filed by the respondent, inasmuch as a conference had been arranged between the interested parties, looking toward an informal adjustment of the matters in dispute. Subsequent to this conference certain improvements at the crossing were undertaken by the railway company. Later the town chairman complained to the Commission that the company had failed to fulfill the promises made by its representatives at this conference, and it was therefore deemed advisable to take testimony in the matter. Accordingly, hearings were held at Granville on January 7, 1914, and March 9, 1914, at which *C. G. Birkhauser* appeared for the petitioner and *C. A. Vilas* for the respondent.

The situation at each of the two crossings involved in this complaint is substantially the same. In each instance the highway crosses the lines of the Chicago & North Western Railway Company, and the Chicago, Milwaukee & St. Paul Railway—each of which is on a fill —which parallel each other at a distance of about one hundred feet. The crossing nearest Granville is formed by the intersection of the tracks and a north and south highway which is on the boundary between the towns of Menomonee and Granville and between the counties of Waukesha and Milwaukee. At the other crossing the highway runs east and west and is on the boundary between the towns of Menomonee and Germantown and between the counties of Waukesha and Washington. The town of Menomonee maintains both of the highways at these points.

After the conference referred to above, the company spent approximately $1,000 in grading the approaches at these crossings. The company's engineer stated that the existing grade is approximately 7 per cent at each crossing. The Commission's engineer reports that the approaches on the east and west highway are on a grade of 7 per cent, and on the north and south highway 7½ per cent. He states that the top width of the approaches is about twenty feet.

The town chairman and other witnesses testified that it was their understanding at the conference with the railway company that the grade was to be reduced to 4 per cent. The assistant superintendent who represented the respondent at the conference, however, denied that any such specific promise as to grade was made. Witnesses asserted that the existing grade is so steep that ordinary traffic cannot go over it with ease, and that no

grades as steep as these approaches exist in the town of Menomonee. The chairman of the town of Granville stated that some 7 per cent grades are to be found in his town, but they will be reduced in the near future. The respondent's engineer mentioned several instances where a 7 per cent grade of approach at a crossing exists. He testified that to reduce the grade of approach at these crossings to 4 per cent, as desired by the town, would require an additional expenditure of approximately $800.

Neither of the highways are main traveled roads, but each accommodates a considerable traffic. The east and west road runs from Brown Deer to Colgate and connects with a main traveled road leading to Milwaukee. The north and south road is used largely by a farming community to the north in reaching Granville, Menomonee Falls and Milwaukee. It is more heavily traveled than the east and west roads. Both highways were in use before the respondent's line was constructed, and at that time they were practically level at the points where they now cross the railway line. The track was laid on a fill, thus necessitating the construction of ascending approaches to the grade crossings.

The town chairman pointed out that no guard rails are provided along the sides of the raised approaches, thus endangering public travel. Our engineer in commenting upon the situation reports as follows: "Unless the top width of approach embankments to these crossings is brought uniformly to at least twenty-four feet, guard fences should be installed along both sides of the approaches for practically their entire length." In our judgment, with the existing width of the approaches at these crossings, guard rails are necessary for the proper protection of the public. Aside from the absence of these guard rails, it appears that the crossings are not unusually dangerous. The steepness of the approaches does not materially imperil travelers, but it does render the highways much less convenient, and therefore less useful to the public than they were before the railway was built. It is the respondent's duty under sec. 1836 of the statutes to restore any highway crossed by its line "to its former state or to such condition as that its usefulness shall not be materially impaired." We do not regard as a substantial compliance with the requirements of this statute the construction of a grade crossing with approaches on a 7 or 7½ per cent grade in the place of a practically level highway, especially when a considerable further reduction of grade can be made without unreason-

able expense. In our judgment, the company should reduce the grade of approach at each of the crossings under consideration to a maximum of 4 per cent, as desired by the town, in order to fulfill the duty imposed upon it tbe statute mentioned above.

Counsel for the respondent questioned the jurisdiction of the Commission to enforce the provisions of sec. 1836 of the statutes. Inasmuch as this question has been recently discussed in a very similar case, further reference to it here is unnecessary. *(In re Investigation, on Motion of the Commission, of a Highway Crossing about One Mile South of Galesville Depot on the Line of the Chicago and North Western Railway Company in the Town of Gale, Trempealeau County,* 1914, 14 W. R. C. R. 445.)

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, provide at each of the two highway crossings about one and one-half miles north of Granville, formed by the intersection of its line with a north and south highway bounding the towns of Menomonee and Granville and an east and west highway bounding the towns of Menomonee and Germantown, properly surfaced highway approaches not to exceed 4 per cent in grade, with suitable guard rails on each side of the highway embankments.

Sixty days is considered a sufficient time within which to comply with this order.

W. A. VON BERG ET AL.
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted March 17, 1914. Decided June 6, 1914.

The petitioners allege that the depot maintained by the respondent at Mosinee, Marathon county, is unsanitary and inadequate and ask that the respondent be required to build a new depot. The respondent admits the allegation and states its willingness to make necessary improvements in the existing structure. Witnesses assert that the present location of the depot is such as to imperil passengers in that it is necessary to pass over a dangerous crossing in order to reach it and suggest that the new depot be located on the other side of the tracks. The respondent questions the authority of the Commission to order the relocation of the depot.

Held: 1. The Commission is empowered in a proper case to fix the point of location of a depot. *City of Rhinelander v. M. St. P. & S. S. M. R. Co.* 1912, 8 W. R. C. R. 719, 725.

2. The requirements of public safety and adequate service make it imperative that the new depot be located east of the tracks.

The respondent is ordered to erect a modern station building east of its tracks at Mosinee which shall be adequate for the freight and passenger traffic there, plans to be submitted for approval. Oct. 1, 1914, is considered a reasonable date at which the improvements ordered shall be completed and open for public use.

The matter of the construction of a suitable sidewalk between the bridge over the Wisconsin river and the depot is left to the town authorities and the respondent for informal adjustment.

The petition is signed by thirty-six residents of the village of Mosinee, who allege that the depot maintained by the Chicago, Milwaukee & St. Paul Railway Company at Mosinee is unsanitary and insufficient in size and that it does not properly provide for passengers. The Commission is therefore asked to require the respondent to build a new depot at Mosinee.

The respondent submits for its answer a letter from its general manager which states that the company will make such improvements and enlargements to the building in the spring as may be necessary to adequately take care of the business handled at this point.

A hearing was held at Mosinee on March 17, 1914, at which *W. A. Von Berg* and *E. Walters* appeared for the petitioners and *H. H. Ober* for the respondent.

At the hearing the representative of the respondent admitted that the existing building is unsanitary and inadequate, and stated that the company is willing to make necessary improvements. It is needless, therefore, to comment upon the testimony tending to show that the character of the building is inadequate.

Testimony was introduced to show that the location of the depot is such as to imperil passengers. The village of Mosinee is located west of the Wisconsin river, and the railway line parallels the river on the east side. The present depot is located between the main track and the river about 1,200 feet north of the bridge over which traffic from the village passes. To reach the depot from Mosinee a traveler is obliged to cross the main track at the east end of the bridge, go north along the highway for about 1,000 feet and turn west again over two tracks to the depot. Witnesses asserted that the crossing at the depot is very dangerous on account of the obstructions to the view and the frequency of the switching movements, and mentioned several narrow escapes from accident. They also stated that under the existing conditions passengers frequently walk along the tracks from the bridge to the depot. It was claimed that the choice of a location east of the track will serve to eliminate these dangerous features.

Our engineer has investigated the situation at Mosinee and suggests that the new depot be located east of the tracks either south of the present depot crossing, or north thereof. He points out that such a relocation will necessitate the removal of a portion of the team track. If the site south of the depot crossing is chosen, it will also be necessary to relocate the stockyards and readjust the tracks to a certain extent. He further suggests that a suitable sidewalk be constructed between the bridge and the station, so that pedestrians will be less likely to use the track for a highway. At the hearing the representative of the petitioners stated that the town authorities would be willing to meet the railway company half way in providing a sidewalk. That matter will therefore be left open for informal adjustment.

The Company takes the position that the existing location provides for the reasonable safety of passengers if they exercise proper care, and questions the authority of the Commission to require the relocation of the depot. This matter was passed upon in *City of Rhinelander v. M. St. P. & S. S. M. R. Co.* 1912, 8 W. R. C. R. 719, the following language being used at page 725:

"If such facilities are not reasonably adequate, because of the location or character of the building, the company may be required to provide a depot so located and constructed as to meet the reasonable requirements of the public. * * * The Commission is empowered in a proper case to fix the point of location of a depot or station."

In *Harms et al. v. M. St. P. & S. S. M. R. Co.* 1913, 12 W. R. C. R. 552, and *J. Laursen et al. v. M. St. P. & S. S. M. R. Co.* 1913, 11 W. R. C. R. 627, petitions asking for the relocation of stations were considered and the prayers denied, not because of any lack of jurisdiction, but because the conditions did not warrant such relocation.

In the present case, it is our judgment that the requirements of public safety and of adequate service make it imperative that the station be located east of the tracks. Our engineer expresses the opinion that waiting rooms of the size suggested by the respondent at the hearing will satisfactorily provide for passengers, but states that the size specified for the freight room would be insufficient to properly house the freight which he observed at the depot on May 7 and 8, 1914. He also states that the space allowed for office purposes in the suggested specifications is not sufficient to permit the office force to work to advantage. The station should be adequate for both freight and passengers, and should contain sufficient office room so that employes can effectively perform their duties.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, erect a modern station building east of its tracks at Mosinee in Marathon county, which shall be adequate for the freight and passenger traffic. Plans to be submitted to the Commission for approval.

October 1, 1914, is considered a reasonable date at which the improvements ordered herein shall be completed and open for public use.

CITY OF NEW RICHMOND

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY,

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted Dec. 17, 1913. Decided June 6, 1914.

The petitioner alleges that it is practicable and that public convenience and necessity require that the respondents erect and maintain a union passenger depot at New Richmond and asks that the respondents be ordered to construct, maintain and use such a depot, the adequacy of which is not questioned, very close to the to be gained by the change would be too slight to warrant the expense involved. The C. St. P. M. & O. Ry. Co. maintains a depot, the adequacy of which is not questioned, very close to the retail business district of the city. The depot of the M. St. P. & S. S. M. Ry. Co. is located about one-half mile distant and is admitted by the railway company to be in need of improvement. The petitioner alleges that a union depot is necessary for the convenience both of transfer passengers and of residents of the city and contends that it should be erected at the present time in order to avoid the waste consequent upon the construction of a new separate depot by the M. St. P. & S. S. M. Ry. Co. Residents of the city are divided in their opinions as to the desirability of a union depot.

In passing upon the question as to whether a union depot is required by public convenience and necessity it is necessary to consider the convenience of the traveling public, including both the residents of the community and those who may use the station as a transfer point, and the expenditure to be imposed upon the railway companies.

Held: Public convenience and necessity do not require the erection of a union depot at New Richmond at the present time in view of the fact that such a depot would not be of material advantage to the city as a whole and the further fact that the transfer traffic, independent of the city patronage, is not of sufficient importance to justify the erection of such a depot, especially when such action would place a heavy financial burden upon one of the respondents which is at present rendering adequate station service. The petition is dismissed.

If the matter of the adequacy of the M. St. P. & S. S. M. Ry. Co's station is not satisfactorily adjusted it can be brought to the attention of the Commission for immediate relief by an appropriate complaint.

The city of New Richmond, in its petition, alleges that it is practicable and that public convenience and necessity require that the respondent railway companies erect and maintain at

New Richmond a union passenger depot, and prays that the Commission order the said companies to construct, maintain and use such a union depot.

The respondent Chicago, St. Paul, Minneapolis & Omaha Railway Company, in its separate answer, alleges that the present facilities afforded by it at New Richmond are centrally located, up to date and adequate for all the requirements of that city.

The Minneapolis, St. Paul & Sault Ste. Marie Railway Company, in its separate answer, denies that public convenience and necessity require the erection of a union depot at New Richmond and asks that the complaint be dismissed.

A hearing was held at New Richmond on December 17, 1913, at which *McNally & Doar* appeared for the petitioner, *R. L. Kennedy* for the Chicago, St. Paul, Minneapolis & Omaha Railway Company, and *A. H. Bright* for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company.

The petitioner desires a union passenger station located at the intersection of the two railway lines. It was pointed out that such a station would be convenient for transfer passengers, since relatively close connections between trains on the two lines are made at New Richmond. Under the existing arrangements it is often impossible for a passenger on one line to change to a train on the other line because of the distance between the stations. The chairmen of the towns of Forest and Glenwood testified that they and other persons residing near the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company east of New Richmond are obliged to travel to Hudson, their county seat, by a circuitous route under the existing conditions, whereas with a union station they could take a more direct route at a smaller expense. However, it was admitted that the number of persons who travel to Hudson from points east of New Richmond is relatively small as compared with the total number of persons using the stations at the city. Residents of New Richmond, including the mayor, testified in favor of a union depot, but a number of residents also appeared in opposition to the proposal. The opposing witnesses pointed out that the present station of the Chicago, St. Paul, Minneapolis & Omaha Railway Company is conveniently located for the business section of the city, and asserted that the inaccessibility of proposed union depot would more than outweigh the conveni-

ences which would be derived from it. Two petitions signed by numerous residents of the city were offered, one in favor of and one in opposition to the establishment of a union station.

The testimony shows that the Chicago, St. Paul, Minneapolis & Omaha Railway Company's station is located on Minnesota avenue between Third and Fourth streets, very close to the retail business district. The existing structure was built in 1899, and was remodeled in 1910, at a cost of approximately $6,000. The adequacy of this depot is not questioned.

The Minneapolis, St. Paul & Sault Ste. Marie Railway Company's station is located north of the Willow river at the corner of Main and High streets, near the intersection of the two railway lines, and about one-half mile distant from the Chicago, St. Paul, Minneapolis & Omaha Railway Company's depot. Counsel stated that it is practically conceded that something should be done to improve the Minneapolis, St. Paul & Sault Ste. Marie Railway Company's station facilities at New Richmond, and that negotiations are in progress to that end. In the joint brief filed by the respondents, this company states that it will meet the proposition of an adequate station and the proper location of it in a proper proceeding and at the proper time.

The respondents, in their joint brief, admit that it is practicable to build a union station at the side proposed by the city, but take the position that the public convenience to be gained by the change is too slight to warrant the expense involved. In its brief the city lays stress upon the fact that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company's depot is admittedly inadequate and that it will have to be replaced in the near future. It is argued that because of this condition, the erection of a union station should be brought about at the present time, even though the Chicago, St. Paul, Minneapolis & Omaha Railway Company's depot is sufficient for the immediate needs of the city, since such a union station would involve a still greater cost at some future time if a new separate station is built by the Minneapolis, St. Paul & Sault Ste. Marie Railway Company.

The Commission is empowered to order the erection of a union station only when it is practicable and required by public convenience and necessity. In passing upon the questions here presented, it is necessary to consider the convenience of the traveling public, including both those who may use New Richmond as a transfer point and the residents of the city. The expenditure

to be imposed upon the railway companies is also an element which must be taken into account.

In our judgment the conditions at New Richmond, as developed by the testimony, are such that the granting of the petition is not warranted. If a union station should be erected at the site proposed, it would necessitate the practical abandonment of the Chicago, St. Paul, Minneapolis & Omaha Railway Company's depot which is in good condition and which is adequate under the existing traffic conditions. This depot is located near the center of the city and is more convenient to a majority of the residents of New Richmond than the proposed union structure would be. Some additional convenience would be afforded transfer passengers, but it should be borne in mind that both of the railway lines run directly to St. Paul and Minneapolis, which are the centers of trade for this locality. For this reason it is probable that the exchange of passengers at New Richmond is confined chiefly to local traffic, and the testimony indicates that such traffic is not important as compared with that originating in the city. It is evident that the erection of a union depot would not, in this particular case, be of material advantage to the city as a whole, and it is clear that the transfer traffic is not of sufficient importance to justify it, independent of the city patronage, especially when such action would place a heavy financial burden upon one of the respondents which is at present rendering adequate station service.

We find, therefore, that while it may be practicable to erect a union station at New Richmond, public convenience and necessity do not require such action at the present time.

The question of the adequacy of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company's station is not before the Commission in this proceeding. However, counsel conceded that additional station facilities should be provided, and it is assumed that immediate action will be taken by the company. If this matter is not satisfactorily adjusted it can be brought to the attention of the Commission for immediate relief by an appropriate complaint.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

IN RE APPLICATION OF THE BROWNTOWN MUNICIPAL LIGHT PLANT FOR AUTHORITY TO INCREASE RATES.

Submitted April 8, 1914. Decided June 8, 1914.

The Browntown Mun. Lt. Plant applies for authority to increase its minimum charge for electric service from 50 cts. to $1 per month on the ground that the present revenues are insufficient. Twenty-six citizens of the village present a petition requesting that the operation of the utility be discontinued or that its business be placed on a self-supporting basis. A valuation of the property of the utility was made and its revenues and expenses were investigated. The utility, which was established in 1910, is operating at a relatively large deficit. The community is small and a large proportion of the residents have failed to patronize the utility. It appears that the flat rates in the utility's present schedule have been disregarded in charging for unmetered service, that the revenue from municipal street lighting fails to cover the cost and that the village hall has been supplied with service without charge.

The question as to whether the rates of a municipal utility must be such that the cost of service shall rest entirely upon the consumers is one which depends upon the circumstances for its answer, for the rates must be fair to the consumers as well as to the owners of the utility and the actual cost is not always the entire measure of fairness. In the instant case, in view of the fact that the citizens of the village have failed so largely to patronize their own utility, although they must have known that their undivided support was necessary to its success, it appears unreasonable to load the entire loss of operation upon those who now use the service of the utility.

The question of the authorization of a given minimum charge should be decided with reference to the reasonableness of that particular charge rather than with reference to the total revenues of the utility, although the latter should also be considered. *In re Appl. McGowan W. Lt. & P. Co.* 1914, 14 W. R. C. R. 325.

Held: The utility's rates require revision. The utility is authorized to put into effect a schedule of rates determined by the Commission. The minimum bill is to be 75 cts. per month. Charges are to be made to all classes of consumers strictly in accordance with the schedule.

An application for authority to increase rates for electric service was filed with the Commission, November 19, 1913, by E. J. Strayer, secretary of the lighting board of the village of Browntown. The applicant states that the Browntown municipal lighting plant is not self-sustaining and asks that the minimum charge for service be increased from 50 cts. to $1 per month. At the

same time a petition signed by twenty-six citizens of the village was filed with the Commission, requesting that operation of the plant be discontinued or that the business be placed on a self-supporting basis.

Hearing was held at the office of the Commission at Madison, April 8, 1914. *William Good,* chairman of the lighting board, and *John Jones* appeared in favor of the application. No one appeared in opposition to it.

The testimony brought out the fact that the plant, which was built in 1910, had thirty-one consumers. All except two of the business places in the village use current but only eleven of the sixty-five residences are patrons of the plant. The chairman of the lighting board, in testifying, stated that a mere increase of the minimum monthly charge as asked for in the application would not diminish the operating deficit very much but that the schedules should be further modified by establishing a rate of 15 cts. per kw-hr. for the first 50 kw-hr. used per month. The witness did not state what in his opinion should be charged for the balance of the current.

The testimony showed also that some consumers are charged for service at flat rates, that these charges are not entirely uniform and that where meters are not used a tendency toward wastefulness takes place. The elimination of the flat rate charges or a revision of them was requested.

Data concerning the amount of business, the revenues and expenses were submitted at the hearing and these supplement the report previously filed with the Commission for the year ending June 30, 1913.

VALUATION.

A valuation of the property used and useful for the applicant's electric business has been made by the Commission and is set forth in Table I:

TABLE I.

VALUATION OF PHYSICAL PROPERTY.

BROWNTOWN MUNICIPAL ELECTRIC PLANT.

As of March 1, 1914.

	Cost new.	Present value.
Land	$60	$60
Transmission and distribution	1,459	1,249
Buildings and miscellaneous structures	446	397
Plant equipment	1,816	1,601
General equipment	54	39
Total	$3,835	$3,346
Add 12 per cent (see note below)	460	402
Total	$4,295	$3,748
Material and supplies	235	235
Total	$4,530	$3,983

NOTE: — Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The amount voted by the village in 1910 for installing the plant was $3,600. It seems quite probable that this amount was added to since that time. If so, the cost of additions may have been included in the operating expense of the plant; but examination of the recent expenditures does not reveal any important item that could have been chargeable to plant extension. The present indebtedness of the village on account of the electric plant is reported to be $3,100 upon which the annual interest is 6 per cent or $186.

REVENUES AND EXPENSES.

The operating statements have been recorded in the form of receipts and disbursements and have been reported in this form to the Commission. For the purposes of this case the figures will be treated as though they were revenues and expenses. The summary of receipts and disbursements for the year ending March 26, 1914, is shown in Table II:

TABLE II.

RECEIPTS AND DISBURSEMENTS.

Year ending March 26, 1914.

Receipts:		
Street lighting	$294.52	
Commercial lighting and supplies	571.69	
Total receipts		$866.21
Disbursements:		
Oil	$567.26	
Labor	480.00	
Repairs	79.94	
Supplies	129.13	
Freight and drayage	23.38	
Miscellaneous	26.93	
Total above	$1,306.64	
Interest	186.00	
Total disbursements		1,492.64
Deficit		$626.43

The foregoing statement of disbursements does not include any provision for renewal of equipment, a condition which inevitably must be met in some way if the plant is to continue to operate. According to the usual rate of depreciation of small electric plants, the allowance for depreciation in this case should be about $180 per year, which brings the total cost for the year to $1,672.64, and the total deficit to $806.43. These figures show decisively that the rates as a whole would have to be doubled if the deficit from operation were to be wiped out by a modification of the schedule of rates. That the deficit could be removed even in this drastic manner, is extremely doubtful for, it seems, an increase so great would be sure to drive away much of the present business. This raises the question of whether the rates must be such that cost of service shall rest entirely upon the consumers. Clearly, this depends upon circumstances for the rates must be fair to the consumers as well as to the owners of the utility, and the actual cost is not always the entire measure of fairness.

The village has constructed a municipal electric plant for the mutual benefit, it is to be supposed, of its citizens. The obligation of the citizens, however, does not end with the building of the plant for the plant needs patronage in order to prosper; and the owners, in this instance, are dependent upon themselves as patrons of the plant. This utility operates in a community so

small that the undivided support of all its citizens is needed to make the undertaking successful. That this is true must have been known from the inception of the utility undertaking for it is evident that if every building in the village were electrically lighted the total electric business would still be small. But we find that only eleven out of sixty-five residences, or 17 per cent, take electric service. Under these conditions, should all the loss from operation be loaded upon those who now use service? To do so, appears to us unreasonable. The addition of thirty residence customers with average monthly bills of $1.50 would be sufficient to practically eliminate the deficit chargeable to commercial lighting. It does not appear unreasonable to expect such an increase.

The application calls for an increase in the minimum monthly charge for service in order to make up the loss from operation; but when the matter came to a hearing it was realized by those who appeared for the utility that a minimum charge of $1 instead of 50 cts. per month would not increase the revenues very much. The circumstances respecting the minimum bill are similar to those recently found by the Commission in another case:

"As far as the total revenues of the utility are concerned, it is clear that a minimum charge of $1 per month will not produce an excessive amount of revenue. A minimum charge very much higher than $1 a month would, in fact, fail to make up the deficit. It appears to be impracticable to attempt to any considerable extent to increase the total revenues of the utility by means of a minimum charge. Consequently the question of authorization of a minimum charge of $1 should be decided with reference to the reasonableness of that particular charge rather than with reference to the total revenues of the utility, although this matter is also an item to be considered." *In re Appl. McGowan W. Lt. & P. Co. for Authority to Increase Rates,* 1914, 14 W. R. C. R. 325.

The data upon which a minimum charge ordinarily would be computed have not been submitted in this case, although the data probably could be developed if they appeared necessary for the disposition of the case. We do not see that any injustice will be done if this question be decided upon information derived in other similar cases and if the minimum charge be fixed at 75 cts. per month.

The applicant's meter rates presumably have been in effect since the plant was built in 1910 but they have never been filed with the Commission. The application shows that the rates charged for measured service are as follows:

Present Meter Rates.

15 cts. per kw-hr. for the first 10 kw-hr. per month.
10 " " " " " next 10 " " "
8 " " " " " current in excess of 20 kw-hr. per month.
Minimum monthly charge $0.50.

Flat rates were filed by the applicant April 24, 1912. These rates are shown below:

Present Flat Rates.

5 c-p. 8 " 16 "	carbon lamps	.....	25 cts. per month
32 "	" "	.....	50 " " "
45 watt	tungsten "	.....	25 " " "
70 "	" "	.....	45 " " "
100 "	" "	.....	70 " " "
110 "	" "	.....	80 " " "

It appears from data submitted to the Commission that this schedule of flat rates is disregarded in charging for unmetered service as in nearly all instances where such service is rendered the actual charge is less than it would be if it were made according to the schedule. The utility must correct this variance between its practice and its rate schedule.

As the flat rates affect only nine customers, it might be supposed that the flat rate schedule is not an important part of the matter under consideration. But nine consumers constitute 29 per cent of all the customers served by the applicant so that it is apparent that the financial loss in supplying flat rate customers might be a considerable part of the total deficit. In fixing a schedule of flat rate charges, the rate per watt of load connected should bear some relation to the amount of service rendered, but this relation is so difficult to ascertain and classify that the application of flat rates ought to be limited to those cases in which the installation of a meter is too expensive. There should be also a minimum charge for unmetered service in order to insure that a reasonable part of the cost of service be paid by the customer. These factors will be given consideration in revising the applicant's flat rate schedule.

The increase asked for in the meter rate would increase the revenues about $150 per year and would affect the individual bills as shown in Table III:

TABLE III.

COMPARISON OF PRESENT AND PROPOSED METER RATES.

Kw-hr. per month.	Present charge.	Proposed charge.	Percent increase.
2	$.50	$.75	50
4	.50	.75	50
6	.90	.90	.....
8	1.20	1.20	.....
10	1.50	1.50	.....
12	1.70	1.80	5.9
14	1.90	2.10	10.5
16	2.10	2.40	14.3
18	2.30	2.70	17.4
20	2.50	3.00	20.0
22	2.66	3.30	24.0
24	2.82	3.60	27.6
26	2.98	3.90	30.8
28	3.14	4.20	33.8
30	3.30	4.50	36.4
32	3.46	4.80	38.7
34	3.62	5.10	40.8
36	3.78	5.40	42.8
40	4.10	6.00	46.3
45	4.50	6.75	50.0
50	4.90	7.50	53.0

Although the suggested rate would considerably increase the bills of some consumers it cannot be concluded, in the face of the large operating deficit, that the increase asked for is beyond reason. A rate of 15 cts. per kw-hr. for the first 50 kw-hr. per month and 12 cts. per kw-hr. for the balance should be charged until the business is on a firmer footing.

Nothing was said at the hearing relative to increasing the charge to the village for street lighting service, but apportionment of the operating expenses shows that this is necessary if the village is to bear the cost of service received by it. The revenue received from street lighting during the year ending March 26, 1914, was $294.52. The cost of this service was about $535. Under the circumstances, it appears that the electric plant should be credited with $65 per arc lamp and $15 per 25 watt tungsten lamp for street lighting. This would make a total earning from street lighting of $510.

It is shown by a report filed with the Commission that the village hall is supplied with electric service but that no account had been kept of the amount of current consumed. The plant should be credited with this service either on the meter rate or the flat rate. This is so evident that argument upon the points appear to be unnecessary.

IT IS THEREFORE ORDERED, That the village of Browntown be and the same hereby is authorized to abandon its present schedule of rates for electric service and to substitute in lieu thereof the following schedule deemed just and reasonable:

A. Commercial Lighting.

I. Meter Rate.

15 cts. per kw-hr. for the first 50 kw-hr. per month.
12 cts. per kw-hr. for the use above 50 kw-hr. per month.

II. Flat Rate.

1.0 ct. per month per watt connected.

III. Minimum Charge for Meter and Flat Rate Schedules.

The minimum charge shall be 75 cts. per month.

B. Street Lighting.

3.5 ampere 225 volt arc lamps.....$65.00 each per year
25 watt tungsten lamps.....$15.00 each per year

Charges shall be made to all classes of consumers strictly in accordance with the schedule.

IN RE APPLICATION OF THE WESTERN CRAWFORD COUNTY FARMERS' MUTUAL TELEPHONE COMPANY FOR AUTHORITY TO ESTABLISH A CHECKING STATION WITHIN THE CITY OF PRAIRIE DU CHIEN AND FOR CONNECTION OF SUCH STATION WITH ALL OTHER TELEPHONE SYSTEMS OPERATING IN SAID CITY.

Submitted Dec. 16, 1913. Decided June 9, 1914.

The Western Crawford County Farmers' Mutual Tel. Co. applies for authority to establish a checking station in the city of Prairie du Chien and for the connection of this station with all other telephone systems in the city. The applicant desires the station for the purpose of checking the joint business of the companies with which it is connected under the terms of the order issued in *Union Tel. Co. v. Western Crawford Co. F. M. T. Co. et al.* 1912, 11 W. R. C. R. 42. The applicant maintains a few telephones in the city, installed prior to the enactment of ch. 610, laws of 1913, but these are used solely for communication with rural subscribers and not for communication within the city. At the present time there are two lines within the city limits where checking would be required. One of these is a clear line to Eastman owned jointly by the applicant and the Union Tel. Co. The other is a clear line to Bridgeport leased by the Union Tel. Co. from the Tri-State Tel. Co. Calls over this line are checked by an operator representing each company and the checkings are compared daily. Calls in coming to Prairie du Chien over the Prairie du Chien–Eastman line are checked by both companies; those outgoing from Prairie du Chien over this line are checked only by the Union Tel. Co. but could be checked by the applicant, if desired, without a checking station.

Held: 1. The applicant has no right to increase the number of its telephones in the city of Prairie du Chien except upon a showing that public convenience and necessity require another telephone exchange within the city for the purpose of rendering local service. *Citizens Tel. Co. of Eau Claire v. Railroad Comm. of Wis.* 1914, 146 N. W. 798.

2. Public convenience and necessity do not require an additional telephone exchange within the city of Prairie du Chien.

3. Inasmuch as the checking of traffic between the applicant and the Union Tel. Co. is now, or readily can be, satisfactorily accomplished without any additional facilities or expense, the location of a checking station within the city of Prairie du Chien is unnecessary under present conditions.

The petition is dismissed.

The application in this matter was filed on October 17, 1913. The petitioner alleges in substance that it has telephone lines which extend into various parts of Crawford county and connect with one or the other of two lines running into and connecting

at a common station in the city of Prairie du Chien; that it has several subscribers in the city of Prairie du Chien, including the County Board of Supervisors which has a telephone installed at the court house; and that by virtue of an order of the Commission establishing the rates for joint service between the petitioner and other telephone companies *(Union Tel. Co. v. Western Crawford Co. F. M. T. Co. et al.* 1912, 11 W. R. C. R. 42) it has become necessary for the petitioner to establish a checking station in the city of Prairie du Chien through which all business in which the company may be interested shall pass so that the petitioner may have the opportunity to keep accurate records of the telephone service that is rendered to its subscribers or the subscribers of any other telephone company which may see fit to use the lines and the equipment of the petitioner, to the end that a proper accounting may be had and the interests of the petitioner properly protected.

The petitioner prays that an order be issued permitting and directing it to establish a checking station within the city of Prairie du Chien and further directing that this station be connected with all telephone systems within the city.

A hearing was held December 16, 1913, at the office of the Commission at Madison. *A. H. Long* appeared for the petitioner and *Graves & Earl,* by *Mr. Earl,* appeared for the Union Telephone Company of Prairie du Chien.

Incidentally upon the hearing it was stated that the petitioner might have a right to install this telephone as well as other telephones in the city of Prairie du Chien because of phones that it had installed in said city prior to the enactment of ch. 610, laws of 1913. This chapter amended sec. 1797*m*—74 so that it now reads in part as follows:

"No telephone exchange for furnishing local service to subscribers within any village or city shall be installed in such village or city by any public utility, other than those already furnishing such telephone service therein, * * * except that any public utility already engaged in furnishing local service to subscribers within any city or village may extend its exchange within such city or village without the authority of the commission."

In the instant case the subscribers having the few telephones of the petitioner which are located in the city of Prairie du Chien use them for the purpose of communicating with the petitioner's

rural subscribers and not for the purpose of communicating with each other within the city. The case is analogous to that of *Citizens Tel. Co. of Eau Claire v. Railroad Com. of Wis.* 1914, 146 N. W. 798. In the *Eau Claire* case the subscribers within the city of Eau Claire occasionally used the lines of the Chippewa County Telephone Company for inter-communication. The lines of the Chippewa company were primarily used by its Eau Claire subscribers, however, for communicating with its rural subscribers and its subscribers in the city of Chippewa Falls. The Wisconsin Telephone Company maintained a local exchange within the city of Eau Claire and had approximately 2,000 subscribers. The Chippewa County Telephone Company had but 28 subscribers in the city of Eau Claire. The court says:

> The Chippewa company, it appears, solicited subscribers in Eau Claire for out of town business, and the subscribers testify they made their subscription upon this understanding. * * * It is evident that the local service actually rendered at Eau Claire was in the nature of an occasional accommodation to the subscribers in the city and was incidental to the rural and toll line service of the company. The evidence given by subscribers tends strongly to support this conclusion. We are persuaded by the evidence in the record that the Chippewa company at no time operated a local telephone exchange in the city of Eau Claire for furnishing local telephone service to subscribers in the city within the meaning of the provisions of section 1797*m*—74."

Upon the authority of the *Eau Claire* case it is clear that the petitioner has no right to increase the number of its telephones in the city of Prairie du Chien except upon a showing that public convenience and necessity require another telephone exchange within the city for the purpose of rendering local service. As the petitioner's subscribers have now the means of communicating with the subscribers of the local exchange in the city, there is no necessity for any citizens of the city to subscribe to the petitioner's system as he can obtain communication with the petitioner's subscribers through the local exchange.

Turning to the question of installing a checking station in the city of Prairie du Chien to be used to check and handle all traffic between the Union Telephone Company and the Western Crawford County Farmers' Mutual Telephone Company, we shall consider briefly the situation disclosed by the investigation.

It appears that at the present time there are only two lines within the city limits where checking would be required. One of these lines is a clear line to Eastman. The other is a clear line to Bridgeport. The line between Prairie du Chien and Eastman is jointly owned, that is, that portion of the line between the city limits of Prairie du Chien and the Union Telephone Company's exchange is owned by the latter company, and that portion of the line in the rural districts is owned by the Mutual company. The line between Prairie du Chien and Bridgeport is the property of the Tri-State Telephone Company and is leased to the Union Telephone Company. Besides these two lines, the Mutual company has one line entering Prairie du Chien with the station located in the court house. The company also has a line extending from Eastman to the city limits of Prairie du Chien which has between thirty and forty subscribers. The regular service offered by the Union Telephone Company is continuous throughout the night and day; that of the Mutual company is available from about 6 a. m. to about 8 or 9 p. m. The rate between Bridgeport and Prairie du Chien is 5 cts. per message either outgoing or incoming on either exchange. The rate charged by the Union Telephone Company between Eastman and Prairie du Chien is 3 cts. except to parties who pay a switching fee in which case no charge is made. The incoming and outgoing calls between Prairie du Chien and Bridgeport are checked both at the originating and terminating station. The operators at both stations check with each other daily. The operator at Bridgeport is employed and paid by the Mutual company. The Prairie du Chien-Eastman calls outgoing from Prairie du Chien are checked by the Union company only but could also be checked by the Mutual company if desired. The Prairie du Chien-Eastman calls incoming at Prairie du chien are checked by both companies. The operator at Eastman is an employe of the Mutual company. The operators of both companies compare checkings every day. Under the circumstances it is apparent that the present facilities are such that all calls are, or readily can be, checked without additional expense or inconvenience. The need of such a checking station as that asked for by the Mutual company is, therefore, not apparent. However, should some loaded line be extended to the city of Prairie du Chien and be connected to the

Union Telephone Company's switchboard, such extended line being a part of the Mutual company's system, such a checking station might become necessary. Some arrangement would then have to be made whereby calls on such a line could be classified.

As the checking of traffic between the two companies is now, or readily can be, satisfactorily accomplished without any additional facilities or expense, it appears that the location of a checking station within the city of Prairie du Chien would be superfluous and would cause an unnecessary expenditure of money. For the reasons stated the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition be and the same is hereby dismissed.

JOHN WERNER ET AL.

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted March 24, 1914. Decided June 10, 1914.

The petitioners allege that the train service rendered by the respondent at Pittsville is inadequate. The complaint was temporarily satisfied by the operation of additional trains which were later discontinued, after which the petitioners again complained to the Commission. The present passenger service consists of one mixed train operated each way daily between Babcock and Pittsville and scheduled to leave Babcock at 6:10 a. m., arrive at Pittsville at 6:45 a. m., leave Pittsville at 11:50 a. m. and arrive at Babcock at 12:30 p. m. The evidence shows that the northbound train is frequently late. The petitioners ask that a passenger or mixed train be run to Pittsville and back from Babcock, connecting with train No. 5 on the main line, which is scheduled to arrive at Babcock at 5:33 p. m.

The passenger business on a branch line cannot always be expected to be entirely self-supporting. Where this business is conducted in connection with a profitable freight business on the same trains, the combined earnings must be considered in determining the adequacy of the service. In the instant case the passenger service can be improved in a manner which will also add to the convenience of the freight service, without placing an unreasonable burden upon the railway company.

Held: The service complained of is inadequate. The respondent is ordered to operate a train for the accommodation of passengers and freight from Babcock to Pittsville and return, daily except Sunday, leaving Babcock after a connection with train No. 5 on the main line now scheduled to arrive at that station at 5:33 p. m.

This complaint was filed with the Commission on March 14, 1912, by twenty-seven residents of Pittsville and vicinity. It alleges in substance that the train service rendered by the Chicago, Milwaukee & St. Paul Railway Company at Pittsville is inadequate.

The respondent, answering the complaint informally, states that steps are being taken to improve the service to become effective at an early date.

The matter was duly set for hearing, but on April 30, 1912, the Commission was apprised by the petitioners that additional trains were being operated and that so long as this service was

continued the complaint would be satisfied. Further proceedings were therefore held in abeyance. Under a new schedule made effective on November 9, 1913, the additional trains above referred to were discontinued, so that the present service is substantially the same as that rendered prior to the filing of the original complaint. This change was brought to the Commission's attention by the petitioners, and, after some correspondence looking toward an informal adjustment of the matter, it became evident that a formal hearing was necessary. Such a hearing was therefore held at Pittsville on March 24, 1914, at which a committee composed of *Mayor John Werner, Supervisors J. F. Beidl* and *H. C. McCoy* and *Alderman Ed. Clark* appeared for the petitioners, and *Superintendent H. H. Ober* for the respondent.

The city of Pittsville is the terminus of one of the three branch lines which leave the main line of the Wisconsin Valley division at Babcock. The three lines operate over the same track to Dexterville Junction at which point the Romadka branch is diverted. The Pittsville and Arpin branches continue together to Pittsville Junction, from which the Pittsville line is diverted 1.6 miles northward to Pittsville. The distance from Babcock to Pittsville is 9.9 miles. The testimony shows that the present passenger service consists of one mixed train in each direction. The northbound train is scheduled to connect with train No. 1 on the main line at Babcock, leaving that point at 6:10 a. m. and arriving in Pittsville at 6:45 a. m. Returning it is scheduled to leave Pittsville at 11:50 a. m. arriving in Babcock at 12:30 p. m., connecting there with train No. 6 on the main line. Witnesses stated that the northbound train is frequently late. Data submitted by the company subsequent to the hearing show that out of a total of fifty-seven trips made by this train from January 1, 1914, to March 14, 1914, it was more than thirty minutes late twenty-eight times. On twelve days it failed to arrive until after 8:00 a. m. and on seven days it arrived later than 9.00 a. m. The habitual failure of this train to make its schedule was explained by the superintendent as the result of waiting for connections at Babcock.

When this train is late it allows very little time for business men to look over their mail and answer important letters on the same day, since the only outbound train is scheduled to leave Pittsville at 11.50 a. m. The delay occasioned by waiting twen-

ty-four hours before posting answers to business correspondence is a source of considerable irritation for business men of the community.

It was pointed out that under the existing schedule it is impossible to reach business centers to the south and return the same day. Moreover, to reach Pittsville from Milwaukee one must leave that city at 8.40 in the evening, wait for connections from three to four hours at New Lisbon and about three hours at Babcock, arriving in Pittsville at 6:45 a. m. Witnesses asserted that the present service is inconvenient for shippers of veal, eggs, cream and other farm products, since goods must be shipped in the morning for the following day's market in Milwaukee or Chicago.

The petitioners ask that a passenger or mixed train be run to Pittsville and back from Babcock, connecting with train No. 5 on the main line, which is scheduled to arrive at Babcock at 5:33 p. m. The operation of such a train would enable residents of Pittsville to reach outside points and return the same day. It would make possible direct connections from Milwaukee and other points south. It would place shippers of perishable goods into closer touch with the Milwaukee and Chicago markets. And incidentally it would make possible a much more satisfactory mail service, should the post-office department see fit to take advantage of such facilities.

At the hearing the superintendent estimated that it would cost $1,124.94 per month to operate the service desired by the petitioners. However, in a statement submitted subsequent to the hearing the respondent shows that the cost of operating the two trains which were put on at the time the original complaint was made for the fifteen months prior to November 9, 1913, was $8,879.61, or an approximate average of $600 per month.

Pittsville is credited with a population of 450 in the census of 1910, but one of the supervisors estimated the present population as 530. The city contains a high school attended by a number of pupils from the outlying districts, and has about fifteen stores. It is surrounded by a farming community which is tributary to it for a considerable distance, especially to the north. A statement of its freight and passenger earnings at Pittsville during 1913, as submitted by the company, shows that in that year the ticket sales at that station amounted to $3,052.59, receipts from inbound freight to $11,113.36, and receipts from outbound

freight to $8,435.05, making a total revenue of $22,601.00. Assuming that inbound passenger traffic gives rise to earnings similar to the outbound traffic, the total earnings should be increased to $25,673.59, or a monthly average of $2,139.47.

The respondent claims that its freight service is entirely adequate and that the additional passenger business to be secured by the proposed train would be insufficient to justify its operation. On a branch line of this sort it cannot be expected that the passenger business should be entirely self-supporting. If a single exclusive passenger train were operated to Pittsville it might conceivably be run at a loss. But where a passenger business is conducted in connection with a profitable freight business on the same trains, the combined earnings must be considered in determining the adequacy of the service. In the present case the passenger service is, in our judgment, inadequate; but it can be improved in a manner which will also add to the convenience of the freight service, without placing an unreasonable burden upon the company.

Under such circumstances it is our judgment that an evening train should be operated from Babcock to Pittsville and return, leaving Babcock after a connection with main line train No. 5, which is scheduled to arrive there at 5:33 p. m.

A witness complained at the hearing that no telephone is installed in the station whereby patrons can ascertain the time of arrival of late trains. The superintendent stated that arrangements would be made to install a telephone. This matter is therefore not passed upon in this decision.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, operate a train for the accommodation of passengers and freight from Babcock to Pittsville and return, daily except Sunday, leaving Babcock after a connection with train No. 5 on the main line now scheduled to arrive at that station at 5:33 p. m.

NORTHWESTERN IRON COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided June 12, 1914.

The petitioner alleges that the charge of 12 cts. per cwt. exacted by the respondent for the transportation of a shipment of fuel oil from Mayville to West Allis was exorbitant to the extent that it exceeded the rate of 10 cts. per cwt. put into effect by the respondent since the shipment moved. It appears that the 10 ct. rate was not put into effect earlier for the reason that few if any shipments of fuel oil had been made between the points in question.

Held: The charge complained of was unusual. The refund claimed is ordered.

The petitioner alleges that on January 9, 1914, it made a shipment of petroleum fuel oil from Mayville, Wis., to West Allis, Wis., over the respondent's line and was charged therefor at the rate of 12 cts. per cwt., as provided in respondent's tariff G. F. D. 10,000–A; that West Allis is a station within the rate territory of the city of Milwaukee, and on a great many commodities takes the same rate as shipments destined to Milwaukee; that at the time the shipment in question moved the rate to Milwaukee was 10 cts. per cwt.; that the rate of 12 cts. per cwt. was illegal, exorbitant and unusual to the extent that it exceeded a rate of 10 cts. per cwt.; that subsequent to the movement the respondent published a rate of 10 cts. per cwt. from point of origination to destination in its supplement No. 24 to said tariff effective June 1, 1914; that the aggregate weight of shipment was 47,020 lb.; that the charges exacted therefor were $56.42, or $9.40 more than a reasonable charge. Wherefore, petitioner prays that the respondent be authorized and directed to refund to it the said sum of $9.40.

The respondent railway company, answering the petition, states that at the time the shipment in question moved the only rate lawfully applicable was 12 cts. per cwt., and that subsequent

to the date of shipment the rate was reduced to 10 cts. per cwt. It admits all the other allegations of the petition.

The hearing was waived and the matter submitted upon the pleadings, correspondence and documents on file.

The omission of a rate of 10 cts. per cwt. on petroleum fuel oil moving between the points mentioned in the petition was evidently due to the fact that no such shipments were contemplated and perhaps none had ever previously been made. Since the movement under consideration occurred, the respondent amended its tariff providing a rate in line with the rates on other commodities. There is no reason why petroleum fuel oil should take a higher rate than many of the other commodities listed in the respondent's tariff and applicable to shipments between the points involved.

We find and determine that the charge exacted of the petitioner on the aforesaid shipment was unusual, and that the reasonable charge therefor is 10 cts. per cwt. The amount of the reparation that will be awarded is $9.40.

NOW, THEREFORE, IT IS ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company be and the same is hereby authorized and directed to refund to the Northwestern Iron Company the sum of $9.40.

WAUKESHA LIME AND STONE COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY, CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided June 13, 1914.

The petitioner alleges that the charges exacted by the respondents for the transportation of two carload shipments of lime stone from Waukesha to Black River Falls were exorbitant insofar as they exceeded the rates established in *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471, and applied to the respondents by a supplemental order issued Feb. 7, 1914.

Held: 1. The rate of 7½ cts. per cwt., applied to the shipment of March 13, 1914, was illegal and reparation could have been made without authority from the Commission.

2. The rate of 10 cts. per cwt. applied to the shipment of Feb. 7, 1914, was the rate then legally in effect, but was unusual and exorbitant.

Refund is ordered on the basis of the rate of 4.3 cts. per cwt., established for the distance involved by the orders cited.

The petitioner alleges that on February 7, 1914, it shipped a carload of ground lime stone from Waukesha to Black River Falls, on which it was obliged to pay freight charges at the rate of 10 cts. per 100 lb., amounting to $85.20; that on March 13, 1914, it shipped another carload of lime stone from Waukesha to Black River Falls, on which it was obliged to pay charges assessed at the rate of 7½ cts. per 100 lb., amounting to $63.45; that said rates are unusual and exorbitant insofar as they exceed the rates established by the Commission in the case of the *Waukesha Lime & Stone Company v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471; and the petitioner prays that the respondent railway companies be authorized and directed to refund to it the excess charge.

The respondent railway companies, answering separately, admit all the allegations of the petitioner and declare their readiness to make reparation if authorized to do so.

Through inadvertence in the case of the *Waukesha Lime & Stone Company v. M. St. P. & S. S. M. Ry. Co. et al., supra,* the Chicago & North Western Railway Company and the Chicago,

Milwaukee & St. Paul Railway Company were not made parties to the original proceeding and therefore by supplemental order, made Feb. 7, 1914, the original order was made applicable to these carriers. On one of the shipments involved in the instant case, that of March 13, 1914, the charges should have been assessed at the rate fixed in such order. The rate applied to such shipment was therefore illegal and reparation could have been made by the respondents without authority from the Commission. The rate applied to the shipment of February 7, 1914, was the legal rate then in effect. However, in view of the determination of the Commission in the order establishing a schedule of rates applicable to such shipments, it becomes unnecessary to again consider the matter. The charge exacted on the last named shipment was unusual and exorbitant.

The charge on the shipment of February 7, 1914, was based on a rate of 10 cts. per 100 lb. on 85,200 lb., making a total charge of $85.20, and the charge assessed on the shipment of March 13, 1914, was based on the rate of 7½ cts. per 100 lb. on 84,600 lb., making a total charge of $63.45. According to the tariffs on file with the Commission the authorized distance for use in determining the rates between Waukesha and Black River Falls over the respondents' lines is 190 miles; the rate established for this distance is 4.3 cts. per 100 lb. Charges computed at the established rate on the first shipment mentioned would be $36.64 and on the other shipment mentioned would be $36.38. Consequently, on the two shipments the charge actually made and paid by the petitioner is $75.63 in excess of the reasonable charge.

It is the judgment of the Commission that the charges exacted of the petitioner by the respondent on the aforesaid shipments of ground lime stone from Waukesha to Black River Falls are unusual and exorbitant, and that the reasonable charges for such shipments should have been based on a rate of 4.3 per 100 lb.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company and the Chicago, St. Paul, Minneapolis & Omaha Railway Company be and the same are hereby authorized and directed to refund to the petitioner, the Waukesha Lime & Stone Company, the said excess charge of $75.63.

JAMES CALLEN, JR., ET AL.

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted March 23, 1914. Decided June 18, 1914.

This is a rehearing in a matter decided Feb. 10, 1914, 13 W. R. C. R. 732. The respondent contends that the order issued requiring the respondent to stop its train No. 24 at Caledonia on signal to receive and discharge passengers, or, at its option, to so readjust its service that residents of Caledonia will be enabled to reach Racine and return the same day, having a reasonable amount of time at that city during business hours for the transaction of business, is unreasonable and beyond the authority of the Commission to issue. The train in question is an interstate train and the respondent alleges that it is necessary for the train to make close connections at Chicago. About 1,800 persons are tributary to the respondent's train service at Caledonia. Three northbound and two southbound trains are now stopped at Caledonia, but their schedule is such that it is impossible for residents of the locality to make the trip to Racine and return the same day, having a reasonable time for the transaction of business.

The standard of adequate passenger train service prescribed by sec. 1801 of the statutes for stations having two hundred or more inhabitants is a minimum, not a maximum, standard and if the quantity of service required thereby does not fully meet the requirements of adequacy the Commission has the power to order a rearrangement of schedule or the operation of additional trains. *Chicago, B. & Q. R. Co. v. Railroad Comm.* 1913, 152 Wis. 654; *Chicago, M. & St. P. R. Co. v. Railroad Comm.* 1914, 146 N. W. 1129.

The adequacy of passenger train service cannot be determined from the point of view of quantity alone but consideration must also be given to the schedule upon which the trains stopped are operated.

Held: The former order is reasonable and within the scope of the Commission's jurisdiction. It will therefore stand as of this date.

REHEARING.

An order was issued on February 10, 1914, (13 W. R. C. R. 732), in the above entitled matter, requiring the Chicago, Milwaukee & St. Paul Railway Company to stop its train No. 24, scheduled to leave Milwaukee at 7:30 a. m., at Caledonia on signal to receive and discharge passengers; or, at its option, to so readjust its service that residents of Caledonia will be enabled

to reach Racine and return the same day, having a reasonable amount of time at that city during business hours for the transaction of business.

Under date of February 28, 1914, the respondent petitioned for a rehearing in the matter, alleging that the order did not pass upon a question raised at the hearing, and that the respondent desired to introduce further evidence. A rehearing was therefore held at Milwaukee on March 23, 1914, at which *James Callen, Jr.*, appeared in his own behalf and *J. N. Davis* for the respondent.

The material facts as developed in the testimony at both hearings are as follows: Caledonia is a country station surrounded by a thickly settled farming community. The township of the same name has a population of approximately three thousand persons, of whom about one-fourth are tributary to the respondent's station at Caledonia, the remainder being accommodated at other stations on the respondent's line and by the other steam road and the two interurban electric lines which enter the township. The town of Raymond, which adjoins the town of Caledonia on the west, has approximately two thousand inhabitants of whom about one-half are tributary to Caledonia station. Thus it appears that while there are but few houses immediately adjacent to the station, about eighteen hundred persons are dependent upon the respondent's train service at this point. The county seat of Racine county, the city of Racine, is fifteen miles distant from Caledonia by rail, the route being by way of Corliss which is also the junction point for Burlington, Elkhorn and Janesville. Three northbound trains and two southbound trains are now stopped at Caledonia, but their schedule is such that it is impossible for residents of this locality to make a trip to Racine, Burlington, Elkhorn, Janesville, or Madison and the intervening points and return the same day, having a reasonable time for the transaction of business. It is possible, however, to reach Milwaukee from Caledonia and spend eight hours there, returning the same day.

It was estimated by a witness that from thirty to forty passengers a day board or alight from trains at Caledonia. At the second hearing the respondent introduced a record which shows that during January and February, 1914, a total of 737 tickets were sold at Caledonia, of which 188, or 39 per cent, were for Racine. Assuming that the inbound traffic is substantially the

same as the outbound, the total number of passengers boarding and alighting from trains at Caledonia during the two months would be 1,474. Eliminating Sundays, the average daily traffic would therefore approximate 29 persons.

Train No. 24, which the petitioners desire to use, is an interstate train which is scheduled to arrive in Chicago at 9:35 a. m., only 10 minutes before the Pennsylvania line train, with which it connects, leaves Chicago. The superintendent stated that it is difficult to make this connection at the present time and that additional stops would further aggravate the situation. He said that none of the other morning southbound trains can make additional stops and maintain its schedule. The statement was made that other stations on the respondent's line between Milwaukee and Chicago of equal or greater importance than Caledonia have no better train service than that accorded Caledonia. However, the only specific instance mentioned was Wadsworth, Ill., at which the company recently refused to stop train No. 24 on request of the citizens. An examination of the company's folder shows that three passenger trains in each direction are stopped at Wadsworth, making it possible for residents of that locality to spend more than five hours during business hours at Racine, or more than ten hours in Chicago, and return on the same day.

The respondent contends in its brief that the legislature has established a standard of adequate passenger train service for stations having two hundred or more inhabitants, in sec. 1801 of the statutes, thereby removing such service from the jurisdiction of the Commission. It argues further that the Commission is not justified in characterizing as inadequate for a station of less than two hundred inhabitants a quantum of service equal to, or greater than, that prescribed by the legislature for stations having more than two hundred inhabitants.

It is our understanding of sec. 1801 of the statutes that the quantity of service required thereby is a minimum which may or may not fully meet the requirements of adequacy. The Commission would not be justified in finding that fewer trains could furnish adequate service at a station within the classification, but certainly if the designated number of trains were stopped at extremely inconvenient hours, thereby rendering the service of little or no value to the residents of the locality, the Commission would have power to require a rearrangement of schedule or the

operation of additional trains. That the supreme court of Wisconsin interprets this statute as establishing a minimum standard, is clearly shown in the following language found on page 670 in *Chicago, B. & Q. R. Co. v. Railroad Comm.* 1913, 152 Wis. 654:

"It will be observed that as a basis for a minimum passenger service the population of a station and the number of passenger trains passing each way daily are made the main tests. That such tests are germane to the subject of the act can scarcely be doubted."

The station under consideration in this case does not fall within the classification which sec. 1801 of the statutes specifically covers, and its provisions are therefore not applicable to the matter in hand. This precise point has been passed upon by the supreme court of Wisconsin in the recent case of *Chicago, M. & St. P. R. Co. v. Railroad Comm.* decided May 1, 1914 (146 N. W. 1129), in which an order of the Commission requiring the establishment of a milk station was upheld, the following language being used:

"It is argued (1) that by sec. 1801 stats. (requiring that certain passenger trains stop at all villages of two hundred inhabitants) the legislature has taken the subject of the stopping of passenger trains away from the jurisdiction of the Commission; and (2) that the order is so unreasonable that the court should condemn it.

"Neither claim can be sustained. Sec. 1801 does not attempt to interfere with the powers of the Commission except in cases which it specifically covers, and this is not one of them."

The case before us must therefore be decided upon its merits without reference to the statute cited by counsel.

The adequacy of passenger train service cannot be determined from the point of view of quantity alone. It is essential that a proper number of trains be stopped at a station, but it is more important that the schedule be such as to render travel reasonably convenient. An excess of trains, operated at inconvenient hours, may result in a service which is entirely inadequate as to quality. At Caledonia three northbound trains and two southbound trains are stopped. If these trains were conveniently arranged the service would be ample, but such is not the case. There is no morning train south and the latest train north leaves

Racine at 1:50 p. m. As a consequence of this arrangement, residents of the locality cannot reach their county seat and other points to the south and west and return the same day, having a sufficient time for the transaction of business. This is a consideration of importance in determining the reasonable adequacy of service, as pointed out in *Chicago, B. & Q. R. Co. v. Railroad Comm.* above referred to, on page 671:

"Under the passenger train schedule in force at Cochrane, it renders it practically impossible for its residents to go either north or south to nearby towns, transact business, and return the same day. This situation affects their convenience, and, as has been shown, that is a consideration of some importance in determining the reasonable adequacy of service."

The respondent has emphasized the necessity of train No. 24 making close connection with a train on the Pennsylvania lines at Chicago. It should be noted that the order issued in this matter allowed the company the option of stopping this train or so readjusting its schedules as to furnish adequate southbound service. Inasmuch as seven southbound trains are regularly operated during the morning, it must be possible to discover some method of giving this station morning service without seriously interfering with the efficiency of through trains. Or, if it is deemed preferable, a northbound train might be stopped late in the afternoon or in the evening, thus enabling residents of Caledonia to reach Racine for business purposes and return the same day. This arrangement would be less convenient than the stopping of a morning train, but would satisfy the complaint in a large measure. It is the purpose of the Commission to allow as wide latitude as possible to the company in arranging its schedules, and the stopping of train No. 24 was suggested in the order as being probably the most practicable solution of the difficulty.

Having fully considered the additional testimony offered at the second hearing, and the argument of counsel, we are convinced that our former order is reasonable and within the scope of the Commission's jurisdiction. It will therefore stand as of this date.

IN RE APPLICATION OF THE ELEVA FARMERS TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted April 11, 1914. Decided June 20, 1914.

Two proceedings are involved in this case: (1) certain stockholders of the Eleva Farmers Tel. Co. complain that the rates charged by the company are inadequate and that stockholders are discriminated against in that they are required to pay the same rentals as other patrons and in addition contribute to cover the deficits from operation; and (2) the utility itself applies for authority to increase its rates. The value of the property, the revenues and the expenses were investigated.

Held: The present rates are insufficient. The utility is authorized to put into effect on July 1, 1914, the schedule of rates applied for as modified by the Commission.

The adequacy of the rates of the Eleva Farmers Telephone Company is before the Commission in two proceedings, the first being an investigation on the motion of the Commission and the second being the application of the company itself for authority to increase rates. To economize time and space the two proceedings will be dealth with in one decision.

The investigation on motion of the Commission was instituted as a result of a complaint brought by several stockholders of the company in which it was alleged in general that the rates charged were inadequate to meet the requirements of the company; that the past year's operation showed a deficit of $100; that the stockholders were discriminated against in that they paid the same rentals as other patrons and were obliged to contribute to cover the deficits from operation; that the service was not good; and that an increase in rates of $2 a year was essential to the company's welfare.

A hearing was held at the Commission's offices in Madison on April 11, 1914. *J. A. Nelson,* president of the company, and *John Tollefson,* vicepresident, appeared for the company. There were no appearances for the complaining stockholders.

The schedule of gross rates of which complaint is made is as follows:

$10 per year for rural and two party residence phones.
$13 per year for business and single party residence phones.
A discount of 25 cts. per quarter is allowed if payment is made in advance.

At the hearing it developed that the rates were admittedly inadequate to pay operating expenses, keep up repairs, and set aside a fund for depreciation, to say nothing of providing satisfactory service. Subsequent to the hearing the company itself filed an application for authority to increase its rates to the following schedule:

$12 per year for rural or three-party residence phones.
$15 per year for single party residence phones.
$18 per year for business phones.
Bills to be paid quarterly with a discount of 25 cts. per quarter if paid in advance.

The cost of the property and plant involved in this case is given at the close of the fiscal year as $6,883.62. The report of the company to the Commission made June 31, 1913, shows that there were 272 subscribers, 112 miles of pole line and 195 miles of wire line at that date. According to the report the cost per substation is, therefore, about $25.30, per mile of pole line $61.40, and per mile of wire line $35.30. At the hearing it was testified that the actual cost of the property was in the neighborhood of the capitalized value, or about $8,000. This would give a cost per substation of $29.40, per mile of pole line of $71.40, and per mile of wire line of $41.00. An investigation of the costs of construction of other plants comparable to the one under consideration shows that the costs per unit here given are exceedingly conservative. The strong probability is that the figure testified to at the hearing more nearly represents the actual amount of the investment than does the reported cost of property and plant.

It was testified at the hearing that the total earnings from subscribers for the calendar year 1913 amounted to $2,143.00 and that the total expenditure for the same period was $2,712.15. Of this latter amount a small part was expended for new property and a portion for renewals. The amount expended for these purposes was estimated at about $600.00, thus indicating that the operating expenses were in the neighborhood of $2,112.15. This appears to be a reasonably normal figure. There would therefore appear to be a small deficit from operation during the calendar year 1913, and it is apparent that there cannot be enough return from the present rates to adequately provide for the upkeep of the property and depreciation. Un-

der these conditions resort must be had to assessments of stockholders, a necessity that is inherently undesirable and unjust, particularly when part of the subscribers are not stockholders.

If the rates asked for in the application be authorized, with the modification that a new rate of $12 per year for two-party residence service be added, the results from operation, based on the service data given in the 1913 report, would appear as follows:

ELEVA FARMERS TELEPHONE COMPANY.

ESTIMATED EARNINGS.

Character of phone.	Number of phones.	Proposed rate, net.	Return.
Business:			
One party	18	$17	$306
Residence:			
One party	10	14	140
Two party	8	12	96
Three party	6	11	66
Res. on farm lines	3	11	33
Rural:			
Farm subscribers	227	11	2,497
Total			$3,138

Without allowing for an increase in operating expenses, the surplus from operation resulting under these rates would amount to $1,026.00, an amount scarcely sufficient to provide for a depreciation reserve computed at 6½ per cent on the cost of the property and a return on the investment of 7 per cent. If there result any increase in operating expenses such as normally may be expected, and if the company provide for depreciation according to the dictates of sound business management, there will probably be a slight surplus remaining for return. The situation, therefore, while not being all that could be desired from the stockholders' standpoint, will not be such as can be complained of by subscribers in general.

IT IS THEREFORE ORDERED, That the Eleva Farmers Telephone Company be and the same hereby is authorized to abandon its present rates and substitute therefor the following schedule:

Gross Rates—

$18 per year for business phones.

$15 per year for single-party residence phones.

$13 per year for two-party residence phones.

$12 per year for rural or three-party residence phones.

Bills to be paid quarterly on the first day of each quarter with a discount of 25 cents per quarter if paid in advance.

These rates may be placed in effect July 1, 1914.

IN RE APPLICATION OF THE RICHLAND CENTER ELECTRIC LIGHT AND WATER PLANT FOR AUTHORITY TO INCREASE RATES.

Submitted May 8, 1914. Decided June 20, 1914.

The Richland Center El. Lt. & W. Plant applies for authority to establish a minimum charge and a specified schedule of rates for electric current used for power purposes. The utility also desires that the Commission establish rates for electric lighting and water consumers located outside the city limits. The power rates applied for were authorized previously upon informal presentation of the case. A tentative schedule for water service outside the city was also suggested in answer to an informal request.

Consumers of a municipally owned utility who are located outside the limits of the municipality stand in much the same relation to the utility as they would if it were a private enterprise and so long as the rate charged them is fair they cannot complain of discrimination against them merely because that rate is slightly higher than the rate charged residents of the municipality.

Held: The relief sought should be granted. The utility is authorized to put into effect: (1) a minimum charge of 25 cts. per h. p. per month for electric power consumers; (2) the rates specified in the application for current purchased for power purposes; (3) a specified charge for electric lighting service to consumers outside of the city limits; and (4) a specified schedule of charges for water service to consumers outside of the city limits.

This application was filed with the Commission February 24, 1914. In its original form it sought authority to establish a minimum charge for current for power purposes of 25 cts. per horse power per month and a graduated scale of rates for power as follows:

First	200 kw-hr.	8 cts. per kw-hr.
Next	100 kw-hr.	7 cts. per kw-hr.
Next	100 kw-hr.	6 cts. per kw-hr.
All above	400 kw-hr.	5 cts. per kw-hr.

Subsequently there arose a difference of opinion between the common council and certain consumers relative to the fairness of an extra charge for both water and light furnished to consumers located outside of the corporate limits. This matter was submitted to the Commission informally and the city was

authorized to establish certain rates. It appears, however, that these rates were not put into effect, and the matter arising again in the hearing on the present application, it may properly be dealt with finally in this opinion.

A hearing was held at the office of the Commission in Madison on May 8, 1914, in which the several matters affecting this company at the present time were inquired into. At the hearing *C. H. Strang* appeared for the applicant. There were no appearances in opposition.

It was developed in the testimony that there were four particulars upon which an order of the Commission was desired. The questions to be determined relate: (1) to the establishment of a minimum bill for power; (2) the establishment of a sliding scale as proposed; (3) the rate to be charged for lighting to consumers outside the city; and (4) the rate to be charged for water to consumers outside the city.

The reasonableness of a carefully adjusted minimum charge, to cover certain fixed expenses of furnishing service, has been fully explained in other decisions, and no repetition of the arguments is necessary. This practice of charging a minimum is very general in the electric business and in the present case the amount suggested by the utility as a proper minimum is evidently very conservative. It is our opinion that it should be acceptable to the users of current.

With reference to the graduated scale of charges for power, this feature of the case was submitted to the Commission informally at a previous time and authority was given to the company to place the proposed schedule in effect. There seems to be no question raised in the present proceeding as to the fairness of the schedule, but inasmuch as the subject was associated with the question of the minimum bill, for which formal authority was necessary, it was included in the application in connection with the request for authority to establish the minimum bill. The schedule was in effect a general reduction of charges for current for power purposes, and appears to be fair and equitable.

The question relating to charge for current for lighting furnished to consumers outside of the city limits was discussed at some length in the hearing. The contention was made that customers outside of the city have no just complaint if they are charged a somewhat higher rate than the taxpayers in the city,

so long as the rate they are charged is a fair one as between them and the owners of the plant. The argument is a difficult one to meet. Municipal public utilities are established by reason of the desire of the inhabitants of a municipality to furnish for themselves the convenience and comforts of those public services offered. They are not generally entered into as an enterprise of gain to the city. Indeed, there might arise a troublesome legal question of power to so act if a city undertook any purely commercial business. But when a municipality establishes an electric light plant in order to supply its inhabitants with the conveniences arising therefrom, common sense and good business judgment allow that it should sell its surplus product, if possible, rather than waste it. If to dispose of as much of its product as possible it ventures beyond the limits of the city, the residents in the region thus entered are in about the same position as would be theirs if they were dealing with an entirely private enterprise. In fact, as to those consumers the furnishing of current by the nearby city is virtually a private enterprise. It seems, therefore, that so long as the rate charged them is fair they cannot complain of discrimination against them because they are charged a slightly higher rate than the residents of the city. Aside from this view of the situation, there are certain reasons why it might be practicable for the city to afford service to persons living within its jurisdiction at a slightly lower rate than it furnishes service to outsiders. We need mention only the additional leverage it has in the matter of the collection of bills from householders on its tax rolls. The analysis of the position of the outside consumer given above seems sufficient, however, to make clear the justice to both city and nonresident of a higher charge to nonresident consumers in certain cases, providing the difference in charges is not disproportionate to the elements which make such a difference proper.

In this case the city is charging a rate of 10 cts. per kw-hr. to residents and seeks to charge 11 cts. per kw-hr. to nonresidents. It appears to us that the rate sought to be established is proper, in view of all the circumstances.

At a previous time the question of a schedule for water service outside of the city was submitted to the Commission in an informal way and a tentative schedule was suggested, as follows:

Minimum charge: $2.50 for each 6 months.
First 22,500 gals. used in 6 mos. per M 25 cts.
All over 22,500 gals. used in 6 mos. per M 15 cts.

The matter was gone into at some length at the time the above schedule was authorized, so that no further analysis of costs seems necessary now.

IT IS THEREFORE ORDERED, That the Richland Center Electric Light and Water Plant be and it hereby is authorized:

1. To place in effect a minimum bill for power consumers, said minimum charge to be 25 cts. per horse power per month.

2. To establish in lieu of the present rate the following graduated scale of rates for current purchased for power purposes:

First	200 kw-hr. per month used	8 cts. per kw-hr.
Next	100 kw-hr. per month used	7 cts. per kw-hr.
Next	100 kw-hr. per month used	6 cts. per kw-hr.
All above	400 kw-hr. per month used	5 cts. per kw-hr.

3. To discontinue its present rate for lighting to consumers outside of the city limits and substitute therefor a charge of 11 cts. per kw-hr. consumed.

4. To establish for water service to consumers outside of the city limits the following schedule of charges:

Minimum charge $2.50 for each 6 months.
First 22,500 gals. used in 6 mos. per M 25 cts.
All over 22,500 gals. used in 6 mos. per M 15 cts.

IN RE APPLICATION OF THE COLOMA TELEPHONE COMPANY FOR AUTHORITY TO INCREASE ITS RATES.

Submitted May 20, 1914. Decided June 20, 1914.

The Coloma Tel. Co. applies for authority to increase its rates. The value of the property, the revenues and the expenses were investigated. Because of defective accounts it is impossible to accurately determine the cost of service.

Held: The present rates are insufficient. The rates applied for, however, appear to be higher than necessary. The utility is authorized to put into effect on July 1, 1914, if it chooses, specified rates which represent an increase over the present rates though not the full increase desired by the utility. Further revision of rates may be made if the experience of the utility, with a proper set of accounts, shows the necessity.

The Coloma Telephone Company applies, under date of February 16, 1914, for authority to increase its rates. The application states the present schedule to be $10 per annum or $1 per month, and asks authority to increase the rates to $12 per annum or $1.25 per month.

A hearing was held at the office of the Commission in Madison on May 20, 1914. *F. W. Potts* appeared for the applicant. There were no appearances to contest the application.

At the hearing it developed that the reason the increase was desired was to offset the increase in operating expenses due to the advance in wages, increase in taxes, payment of industrial insurance and general higher cost of materials. It was stated that the increased cost of operating the system was reflected in the report to the Commission for the fiscal year 1913 with the exception of the item of industrial insurance, which amounted to $75 with the pay roll as it is constituted at present.

The data at hand upon which to base computations to ascertain the fairness of the applicant's request are exceedingly meager and unsatisfactory. The financial report for the year 1912 contains practically nothing upon which we may rely. The report for 1913, while fairly complete as to income account, shows a balance sheet that must be scanned with care before accepting its figures as accurate. In the report as originally sub-

mitted by the company the cost of property and plant at the beginning of the year was given as $9,984.02, while no details of this item were given in the table of the report designed to show the elements that make up that item. From an inspection of the report of the preceding year it was evident that the figure for 1913 represented simply the total assets as shown in the balance sheet for the year before, brought forward as the first item in the balance sheet for the year 1913. Request being made for the details of the figure, a revised balance sheet was submitted which showed total assets of $4,820, or an amount equivalent to the sum of the outstanding capital stock and the notes and bills payable as shown on the opposite side of the balance sheet. The cost of property and plant at the beginning of the year was given as $2,444.24, an amount less than that shown for the same item in the previous year's balance sheet. The uncertainty thus manifested as to the actual cost of the plant, coupled with the very evident inadequacy of the figure last shown to cover the entire cost of a system of the size of the one under consideration, throws such doubt upon the balance sheet as submitted as to render it of little practical use in determining a fair value of the property.

It is likely, however, that the figure shown in the 1913 report, as originally submitted, represents approximately the investment in the property involved in this case. In that report the cost of property and plant at the close of the year is shown as $11,402.52. From an investigation of the value of other properties of similar size and similarly located and equipped we conclude that this figure is more reasonably acceptable as representing the actual investment in this propety than the one given in the revised balance sheet. In the interest of conservation, however, for the purpose of the computations in the case it may be well to adopt a figure somewhat lower than the one indicated as representing the value. The error either way would not be great if we regard $11,000 as a fair approximation of the amount invested.

Although the accounting methods and results of the company are not of the best, a general inspection of the expense items discloses nothing seriously abnormal about them. It may be safely assumed that they fairly show the actual cost of operating the system. It was stated at the hearing that the item of industrial insurance that the company is now required to pay

amounted to $75. This amount has been included in the computations to determine the requirements of the plant.

The total earnings are shown to be $3,136.77. Of this amount $2,062.66 is consumed by the operating costs, including taxes amounting to $81.92, and the industrial insurance already mentioned. There is left the sum of $1,124.11 from which to provide a sufficient fund to meet depreciation and to pay interest charges. Computing depreciation at 6½ per cent, a normal rate for plants of this character, and estimating the interest at 7 per cent on the investment, we find that the earnings are insufficient to meet all the burdens of operation, taxes, depreciation and interest, by the sum of $360.89. If we now increase the total earnings by a sum equal to the increase that would result were the rates of the company placed at $12 per annum, the gross earnings appear as $3,846.77. The deduction from this amount of the operating expenses, taxes, depreciation and interest used above leaves a surplus of $299.11.

From such facts as are available, therefore, it appears that the rate asked for by the company is somewhat higher than is necessary to carry on the business and provide an adequate return upon the property. In view of these conditions it appears equitable to authorize a partial increase in the present rate. An increase to $11.00 per year in cases where the charge for telephone service is paid in advance, and to $1.10 per month when the service is paid for monthly would appear to be as large an increase as is required by such facts as are available in this case. This does not mean that it is the judgment of the Commission that $11.00 per year will fully cover all costs of adequate telephone service. In view of the defective reports which the utility has made, however, it does not seem that we should go beyond the rate mentioned. When the utility has its accounts in proper shape we will be in position to determine accurately the cost of service, and if further increase should be made, the necessity for such increase will be disclosed by the records of the utility. Until such time as the accounts are properly kept, however, it would be almost an impossibility to state accurately what the cost of service amounts to, and we do not feel that an increase beyond the amounts mentioned should be authorized until the cost can be fully known. The Commission will be ready to extend necessary assistance in putting the accounts of this company on an adequate basis and in furnishing all neces-

sary information regarding the methods of keeping the records. If the experience of the utility with a proper set of accounts shows the necessity for rates as high as those applied for in the application, there will be nothing to prevent another action at the proper time.

IT IS THEREFORE ORDERED, That the applicant in this case, the Coloma Telephone Company, be and the same hereby is authorized to discontinue its present rates for telephone service and substitute therefor the rate of $11.00 per phone per year where payment is made in advance for a full year, and a rate of $1.10 per month where payment is not made in this manner. This rate may become effective, if the company so chooses, on July 1, 1914.

C. F. RODOLF ET AL.

vs.

SOUTHERN WISCONSIN RAILWAY COMPANY.

Decided June 20, 1914.

This is a supplementary order relating to matters decided in a proceeding of the same title on May 26, 1913 (12 W. R. C. R. 49) and October 6, 1913, (12 W. R. C. R. 797) and in *Elver v. So. Wis. Ry. Co.* on Nov. 26, 1912, (11 W. R. C. R. 67). It appears that the lack of adequate double track facilities has prevented the respondent from complying with the requirements of the Commission governing the maintenance of a five minute schedule on certain portions of the street railway system in the city of Madison and has interfered with the rendering of the tripper service ordered by the Commission.

The respondent is ordered to make specified extensions of its double track facilities. Ninety days is deemed sufficient time within which to comply with this order.

On May 26, 1913, the Commission rendered a decision (12 W. R. C. R. 49) in the matter of service in the above entitled case, reserving for a later period the consideration of that part of the compaint relating to the rate of fare. On October 6, 1913, a supplementary order (12 W. R. C. R. 707) was issued correcting certain operating defects, but not otherwise materially changing the order of May 26, 1913.

On November 26, 1912, the Commission issued an order (11 W. R. C. R. 67) effective January 15, 1913, in the case of *Elmore T. Elver vs. Southern Wisconsin Railway Company.* A part of paragraph (b) of this order reads as follows: "The cars on this line [East Johnson-South Madison] shall be operated in conjunction with the cars on the Fair Oaks-Wingra Park line on such a schedule as to give a five minute headway between Capitol Park and University avenue at Mills street." Also a part of paragraph (c) of the same order reads as follows: "* * * the schedules [shall] be so arranged that cars on the West Main-Baldwin street line operating in conjunction with those on the Fair Oaks-Wingra Park line shall give a five minute headway from Capitol Park to Baldwin street or Dickinson street." It

is clearly the intent of the above order that the schedule shall be arranged and the cars operated in such a manner that the headway of cars between Capitol Park and University avenue and Mills street, and between Capital Park and Baldwin or Dickinson streets shall be five minutes.

Numerous observations have shown that this interval of five minutes between cars is not well maintained, especially during the periods of the day when traffic is heavy. Investigation has shown that one of the most serious causes of the failure to maintain this five minute schedule is due to lack of track facilities on University avenue, Mills street, Williamson street and Winnebago street. As examples of some effects of the lack of track facilities, the following are cited:

Westbound South Madison and Wingra Park cars often reach the end of the double track on Park street before the eastbound cars arrive at that point. Likewise the eastbound Fair Oaks cars often reach the end of the double track on Williamson street before the westbound cars arrive at that point. Any delay resulting at these points affects all the cars on those lines.

Furthermore, a Wingra Park car may be somewhat behind its scheduled time and late enough at Capitol Park to drop behind the South Madison car, which is scheduled to follow five minutes after this same Wingra Park car. When these cars reach the end of the double track at Park street the incoming Wingra Park car may have been met on the double track, but the inbound South Madison car not yet in sight. The single track, therefore, on the Wingra Park line between Park street and Breeze Terrace is unoccupied but the Wingra Park car cannot proceed until the South Madison car has cleared the track.

In the same manner the South Madison car is often detained unnecessarily by falling behind a Wingra Park car which is scheduled to follow it in five minutes or more.

At Williamson and Dickinson streets the eastbound Fair Oaks car often reaches the end of the double track with a Jenifer street car following close behind it. If the corresponding westbound car has not already reached this point, as is frequently the case, the Jenifer street car can not start on the return trip until the westbound car arrives, permitting the Fair Oaks car to pull out. The Jenifer street car then falls in behind the westbound Wingra Park car and the value of its services is very much reduced.

An extension of double track facilities as suggested above would minimize delays of the first type and entirely eliminate those of the second type described.

In the spring of 1913 conferences were held between members of the Commission's engineering department and representatives of the Southern Wisconsin Railway Company and it was agreed at that time that there was a distinct necessity for double track on University avenue from the present switch on Park street to some point at least as far as Mills street, and the Commission's engineers were informed that the Southern Wisconsin Railway Company had contracted with a construction company to extend the double track to some point west of Mills street and on Mills street to same point south of University avenue. It was understood that a definite date was agreed upon when this work should be commenced and that it should be completed not later than November 1, 1913.

Observations indicate that service is materially affected by the lack of double track facilities as outlined above. This lack of track facilities interferes not only with the regular schedule of five minutes, but it also interferes with the tripper service which was the subject of the order in this case dated May 26, 1913.

IT IS THEREFORE ORDERED, That the Southern Wisconsin Railway Company take such steps as may be necessary to extend its double track as described in the following paragraphs:

1. On Park street from the present double track to University avenue.
2. On University avenue from Park street to a point at or near the present crossing of the tracks of the Chicago, Milwaukee & St. Paul Railway Company with the tracks of the Southern Wisconsin Railway Company; or to a connection with the present passing track west of the Chicago Milwaukee & St. Paul Railway tracks.
3. On Mills street from University avenue to some point near West Johnson street.
4. On Williamson street, Winnebago street and Atwood avenue from the end of the double track near Dickinson street to the double track on Atwood avenue.

Ninety days is deemed sufficient time within which to comply with the terms of this order.

WACHSMUTH LUMBER COMPANY
vs.
BAYFIELD TRANSFER RAILWAY COMPANY.

Submitted May 12, 1914. Decided June 22, 1914.

The respondent applies for a rehearing of a matter decided on April 7, 1914, 14 W. R. C. R. 253, on the ground that the rates ordered discontinued were not out of harmony with rates justified by practice and by the approval of the Commission elsewhere in Wisconsin.

Held: No change should be made at this time in the order in question. The application for rehearing is denied.

This case originally came before the Commission in the form of a complaint by the Wachsmuth Lumber Company alleging that a new schedule of rates on logs issued by the Bayfield Transfer Railway Company and put into effect on January 1, 1914, was "unfair, excessive and unreasonable and out of proportion to the physical valuation of said railroad, and unjustly discriminatory against the petitioner, and excessive for the equipment of said railway company used in the operation of said railway." A hearing was held and briefs were submitted by both the petitioner and the respondent.

The rates of the respondent company which were in force prior to January 1, 1914, were $1.50 per 1,000 feet of logs, applied on single shipments, without any provision for any minimum weight or charge on all logs loaded at points on the respondent company's line; and a rate of $1.00 per 1,000 feet of logs on shipments delivered at points on respondent company's line in trains of ten cars or more, but loaded on the private lines of the petitioner.

The schedule which went into effect on January 1, 1914, was stated in cents per 100 lb., being 1.3, 1.4 and 1.5 cts. per 100 lb., for distances of 5, 10 and 15 miles, respectively, and it fixed a minimum of 45,000 lb. per car.

This increase, the petitioner held at the former hearing, amounted to nearly 75 per cent over the old rates.

After a careful consideration of the case this Commission issued an order on April 7, 1914 (14 W. R. C. R. 253), substituting for the respondent's schedule of January 1, 1914, the rates of 1.1, 1.2 and 1.3 cts., per 100 lb. for distances of 5, 10 and 15 miles, respectively, and fixing the car weight minimum at 40,000 lb. Inasmuch as the great bulk of the shipments of logs over the respondent company's line was from Sunnyside to Bayfield, a distance of less than 5¼ miles, it was ordered by the Commission that the five mile rate should be charged between those points.

These rates, while representing a substantial increase over the rate in force prior to January 1, 1914, were somewhat lower than those fixed by the respondent's new schedule against which the complaint was made. The chief difference between the rates fixed by the Commission and the respondent's schedule was due to the change of the car weight minimum from 45,000 to 40,000 lb. and the provision making the five-mile rate instead of the ten-mile rate apply on shipments from Sunnyside to Bayfield.

Not being satisfied with the Commission's ruling, the respondent company asked for a rehearing in the case. A hearing was held at Madison on May 12, 1914, at which *John Walsh* appeared for the Wachsmuth Lumber Company and *A. H. Bright* for the respondent.

The grounds for asking for a rehearing as stated by counsel for the respondent were that the rates attacked—the schedule of January 1, 1914—were "not out of harmony with the rates which had been justified in the state of Wisconsin both by practice and recognition or comment by the Commission."

The testimony and argument at the hearing of May 12, 1914, covered substantially the points brought out at the previous hearing, no new points being adduced by either side.

In making its order of April 7, 1914, the Commission suggested that the modifications in the respondent's new schedule might be found after a time not to meet fully the requirements of the situation, but that this could be determined only from a period of operation under them. Since that order went into effect the Bayfield Transfer Railway Company has not been operated more than a few weeks, the requirements of spring track repair necessitating, according to the statements of the respondent's counsel, a suspension of operation. The repairs have been

completed and the railroad company is again hauling the petitioner's logs.

In view of the brief period of operation under the new schedule ordered, and in view also of the fact that a careful reconsideration by the Commission failed to discover any new facts of importance in the case, the Commission is of the opinion that no change should be made at this time in the order of April 7, 1914. The schedule ordered at that date, therefore, will remain in force.

IT IS THEREFORE ORDERED, That the application for a rehearing in this case be and it hereby is denied.

CITY OF WATERTOWN
vs.
WATERTOWN GAS AND ELECTRIC COMPANY.

Decided June 25, 1914.

The petitioner alleges that the rates charged by the respondent for electric light and power and for gas light and fuel are excessive and asks that just and reasonable rates be established. The petitioner also applies for a certificate of public convenience and necessity authorizing it to do its own street lighting. By agreement between the parties, however, the instant proceeding is limited to the matter of street lighting; and it appears that the immediate finding should be further confined to rates for street lighting. A valuation of the property of the utility was made; the value ascertained was apportioned between street lighting and other service; and the revenues and expenses of the street lighting service were investigated.

The question of what the M. L. H. & T. Co. is entitled to charge the respondent for current for resale leads into phases of the subject which do not appear to be very material to the issue in the case.

In arriving at a fair allowance for power expenses consideration is given to the cost of securing power in several different ways, including the method now employed, which appears to be the most economical. That the public should at least share in the economy effected by the method in use seems quite clear, for it is on account of public interest and by virtue of public authority that monopoly conditions are maintained under regulation in the public utility business. But, on the other hand, it seems also to be required that those who engage in the business should receive something for effecting unusual saving in operation, for otherwise regulation will stifle that development of efficient methods and processes which competition naturally promotes.

The probable cost of operating a system of magnetite arc lamps for street lighting instead of the enclosed carbon arc lamps now in use was made a subject for testimony at the hearing and, as the city may desire to adopt this form of lighting, the cost was further investigated and a reasonable rate for the service determined. However, in the absence of definite action looking to the establishment of a magnetite system this rate is not made a part of the present order.

Held: The rate for street lighting of the type which was furnished during the year ending June 30, 1913, should be $57 per lamp per year. The respondent is ordered to furnish service at this rate on an all night, dark night schedule requiring from 3,200 to 3,400 hours of burning per year.

The rate ordered, assuming that 102 lamps are used, will reduce the total annual charge to the city for street lighting by about 14 per cent.

The city of Watertown filed a complaint with the Commission, February 12, 1913, alleging that the Watertown Gas and Electric Company's schedules of rates for electric light and power and for gas light and fuel are unreasonable, excessive and exorbitant and praying that the Commission order such rates as it may find upon due hearing and investigation to be just and reasonable.

The respondent's answer was filed on February 28, 1913. It denies that the rates are unreasonable and alleges that the rates for gas are too low and do not yield a fair and adequate return upon the amount of the investment.

On April 18, 1913, a petition was filed by the city of Watertown requesting that a certificate of public convenience and necessity be granted authorizing the petitioner to do its own street lighting.

Hearings were held on May 28 and June 13, 1913, in the city hall, Milwaukee, and on June 19, 1913, at Watertown. *G. Buchheit,* city attorney, appeared for the petitioner; *C. M. Rosecrantz,* for the respondent.

By an understanding reached at the first hearing, these proceedings were limited, at least temporarily, to the subject of street lighting. Under the circumstances, it appears that the immediate finding should be further confined to rates for street lighting. It may be desirable and proper to reach a conclusion later in the proceeding for a certificate of public convenience and necessity.

The street lighting contract became effective March 1, 1903, and is part of an electric utility franchise granted for a term of twenty years to the Watertown Electric Company, of which the respondent is successor. The agreement for street lighting was made for a period of 10 years and provided for the furnishing of "2000 candle power arc lamps, consuming 480 watts of current each" on an all night dark night schedule. The charge for service was fixed at $70 per lamp per year for the first 70 lamps and $66 for each additional lamp. The city reserved the right to establish a lighting plant of its own at the end of ten years and, by the terms of the franchise, the city was given an option to lease space for arc lighting wires on the company's poles. This municipal franchise is set aside by the Public Utilities Law and is superseded by an indeterminate permit of the

state. It is under the provisions of this act and this permit that the petitioner brings these proceedings.

The Watertown Gas and Electric Company supplies the city of Watertown with about 102 seven-ampere, series, alternating current, enclosed carbon arc lamps. Energy is furnished partly from respondent's hydro-electric plant at Watertown and partly from the substation operated by the Milwaukee Light, Heat and Traction Company in conjunction with this generating plant. The energy taken from the Milwaukee Light, Heat and Traction Company is paid for according to its standard schedule for water power current; but, prior to November, 1912, the cost of this current, as it appeared on the books of the Watertown Gas and Electric Company, was an apportioned part of the total cost of current secured from the Southern Wisconsin Power Company by the Milwaukee Light, Heat and Traction Company or The Milwaukee Electric Railway and Light Company, as the case may be.

The testimony submitted dwelt chiefly on the method of apportioning the Commission's valuation of the property and on the company's statement of expenses for street lighting and other service. A question was raised concerning what should be allowed for cost of power in view of the conditions under which current is made and purchased. These subjects will be discussed at the appropriate place.

The probable cost of operating a system of street lighting consisting of four-ampere magnetite arc lamps substituted for the lamps now in use was also made a subject for testimony; and as the city may desire to adopt this form of lighting unit, the question is brought up of what the rate for service of this kind should be. It is obvious that estimate must be resorted to in some measure in answering this question.

The conclusion in the main points at issue rests upon what should be set up as the cost of operating the street lighting portion of the business and as a fair return on the investment devoted to it. The primary measure of these factors is usually the actual cost to the utility. If the expenditures are reasonable, the cost of service usually represents more accurately than any other figures a fair rate for the service. However, the actual expenses are not always the only measure taken of what the rate should be. Such expenses must withstand investigation designed to reveal abnormal tendencies.

The Commission has submitted to the parties in this case tentative figures of operating cost as well as of the investment in property. The comments of both parties have been received and given consideration in reaching our conclusion in this matter.

INVESTMENT.

A valuation of the respondent's physical property is shown in Table I. This is the valuation as revised and submitted by the Commission's staff after conference with representatives of the petitioner and the respondent. The cost new of the electric property, Jan. 1, 1913, excluding items designated as "non-operating", is $219,126 and the present value $190,611. Non-operating property consists very largely, in this instance, of that part of the joint substation and generating station which is used by the Milwaukee Light, Heat and Traction Company for substation purposes. The property is not, in fact, non-operative but has been so described because it is not used for service furnished by respondent.

TABLE I.
REVISED VALUATION.
WATERTOWN GAS AND ELECTRIC CO.
As of Jan. 1, 1913.

Classification.	Electric.		Gas.		Total.	
	Cost new.	Present value.	Cost new.	Present value.	Cost new.	Present value.
A. Land	$35,806	$35,806	$6,000	$6,000	$41,806	$41,806
B. Transmission and distribution	52,117	34,305	58,658	51,669	110,775	85,974
C. Buildings and miscellaneous structures	18,413	16,121	10,284	8,041	28,697	24,162
D. Plant equipment	81,024	76,428	43,954	37,950	124,978	114,578
E. General equipment	1,959	1,675	3,066	2,275	5,025	3,950
Total	$189,319	$164,335	$121,962	$105,935	$311,281	$270,270
Add 12% (see note below)	22,718	19,720	14,635	12,712	37,353	32,432
Total	$212,037	$184,055	$136,597	$118,647	$348,634	$302,702
F. Paving. (Included in cost of manhole)	...	...	.....	.....	.....	.....
Total	$212,037	$184,055	$136,597	$118,647	$348,634	$302,702
H. Materials and supplies	7,089	6,556	10,801	10,326	17,890	16,882
Total	$219,126	$190,611	$147,398	$128,973	$366,524	$319,584
J. Non-operating	30,749	22,107	.....	.....	30,749	22,107
Total	$249,875	$212,718	$147,398	$128,973	$397,273	$341,691

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The foregoing summary erroneously includes, as operative property, the following items for an old and partly dismantled steam plant:

	Cost new.	Present value.
Power station site	$5,540	$5,540
Machinery room	2,953	2,272
Boiler "	1,103	846
Coal "	777	581
Foundations	1,120	280
Stack	1,810	1,545
Total	$13,303	$11,064

When the proper corrections to the physical valuation are made on account of the items shown above, it is found that the cost of reproducing the operative property of the electric department is $204,227 and the present value, $178,220.

The witness for the petitioner found that the portion of the plant devoted to street lighting should be valued at $28,171, which was arrived at by certain apportionments of the Commission's tentative valuation of the physical property. The same methods applied to the revised valuation would increase the value found for street lighting property. But some of the other factors upon which the witness relied are not entirely correct as they were obtained from an incomplete operating report containing apparently inaccurate statements. The differences tend to reduce the amount which should be alloted to street lighting. For instance, in determining the maximum demand or peak load on the station, the witness based his conclusion on a statement that the annual output for the year ending June 30, 1912, was 1,323,641 kw-hr. and the load factor 37 per cent. The natural conclusion was that the maximum load on the station was about 408 kw., while as a matter of fact it was more than this. The error lay in the statement of the load factor.

The Commission has divided the physical value between street lighting and other service, using the most reliable data available. The process does not differ much from that followed by the petitioner's witness and it seems unnecessary to go far in explanation. Those items of the inventory, which are used only for street lighting, are, of course, charged entirely to that service. Other items of station equipment, which are used for street lighting and other service jointly, are apportioned in accordance

with the division of the station demands. The distribution system pole line equipment is divided in proportion to the length of wire. General and miscellaneous equipment, which the petitioner's witness divided according to the ratio of kilowatts demanded, we have apportioned on an overhead basis, that is, in accord with the ratio established for other equipment as a whole after division had been made of the individual items. As a large part of material and supplies is used only for commercial purposes, this fact has been taken into account in dividing this item between street lighting and other service.

The tentative figures for the value of physical property used and useful for the present street lighting service are shown in Table II. The apportionment of the value between street lighting and commercial service is based upon the valuation shown in Table I. The value for street lighting property is therefore subject to correction because non-operative property is included. This correction reduces the cost of reproducing the street lighting property to $23,312 and the present value to $18,843.

TABLE II.

PHYSICAL VALUATION OF STREET LIGHTING EQUIPMENT.
BY APPORTIONMENT OF REVISED VALUATION
as of January 1, 1913.

Classification.	Cost new.	Present value.
A. Land	$3,223	$3,223
B. Transmission and distribution	8,743	5,220
C. Buildings and miscellaneous structures	1,657	1,451
D. Plant equipment	8,080	7,662
E. General	220	175
Total	$21,923	$17,731
Add 12%	2,630	2,128
Total	$24,553	$19,859
H. Materials and supplies	100	100
Total	$24,653	$19,959

The figures of Table II are those which were tentatively submitted to the parties to the case. Concerning these figures, the respondent states that it makes no present objection, although it feels that it is entitled to have a higher value fixed upon the property used for street lighting. The respondent claims that the overhead addition to the valuation, for engineering, superintendence, interest during construction, contingencies, etc., should be 15 per cent instead of 12 per cent, but has failed to

submit any evidence showing that 15 per cent is any closer in this instance to the proper amount than 12 per cent.

The Commission's tentative figure for the sum upon which interest and profits should be computed was placed at $23,000. This was based on the physical value set forth in Table II, the amount required for working capital and depreciation reserve, and other elements. The corrections which should be made in the figures of Table II now lead us to conclude that the investment in the present street lighting system should be fixed at $22,000.

Income Account.

The following table shows the revenues and expenses of the gas and electric utilities for the year ending June 30, 1913, and reveals the amount that was available for depreciation, interest and profits during that period:

TABLE III.
INCOME ACCOUNT.
WATERTOWN GAS AND ELECTRIC CO.
Year Ending June 30, 1913.

	Gas Department.		Electric Department.		Combined utility totals.

Balance remaining		$10,724 63		$31,690 18	$42,414 81
Non-operating revenues		1,624 55		3,394 77	5,019 32
Total available for depreciation, interest and profits		$12,349 18		$35,084 95	$47,434 13

A contention having an important bearing upon the operating expenses of the electric utility as a whole was directed at the cost of power. A witness for the respondent testified that in his opinion it is not unreasonable to charge the Watertown Gas and Electric Company for hydraulic current at a higher rate than is paid by The Milwaukee Electric Railway and Light Company because of the responsibilty assumed by the latter concern in purchasing current in large quantities under an agreement which provides for a large minimum annual payment. The petitioner went to some length to establish that the respondent and the Milwaukee Light, Heat and Traction Company are one and the same concern, and to show that an agent who signed the water power contract for the Watertown Gas and Electric Company did so by direction of one who signed it for the Milwaukee Light, Heat and Traction Company.

While the point brought out by the petitioner is an interesting one, it does not appear to assume an important position in this case because it seems that the respondent does not attempt to rely upon the water power agreement as a contract. It seems that reliance is placed rather upon the reasonableness of the terms expressed in the contract. This view is developed in the testimony for the respondent where it is said that the group of properties, including The Milwaukee Electric Railway and Light Company, the Milwaukee Light, Heat and Traction Company, the Watertown Gas and Electric Company, the Racine Gas Light Company, and the Kenosha Gas and Electric Company, has been treated more or less as a large family and that the division of costs was not heretofore properly made, with the result that these companies obtained service at less than the cost of furnishing it. That was the situation, it was testified, in the case of service supplied by the traction company to the Watertown Gas and Electric Company. When this was recognized, it was thought desirable to put the Watertown Gas and Electric Company's service on a basis that would cause that concern to bear its proper portion of the cost of producing the service. This led to the consideration of abandoning the old practice of merely apportioning the charges and of giving no consideration whatever to the problems of the traction company; and, inasmuch as the Watertown Gas and Electric Company had a hydroelectric plant of its own which would produce a certain quantity of power, it was thought most equitable and fair to put that

company on the same basis as any other customer purchasing service of the traction company. This led, it is claimed, to the adoption of the contract between the Watertown Gas and Electric Company and the Milwaukee Light, Heat and Traction Company.

The question of what the Milwaukee Light, Heat and Traction Company is entitled to charge the Watertown Gas and Electric Company for current for resale leads into phases of the subject which do not appear to be very material to the issue in the case. To furnish an answer to this question would require knowledge not only of how much profit should be allowed upon the current resold to the public, but also of how the profit should be divided between the two companies. This would be an important matter if we were to consider the relative interests of the stockholders of the two companies, but insofar as the relation of the public and the respondent is concerned, this question covers considerably more ground than is necessary.

In arriving at a fair allowance for power, we have taken into consideration the cost of securing the power in several different ways, which may be enumerated as follows: (1) producing current at the Watertown hydraulic plant with steam reserve equipment at the same place; (2) producing current entirely by means of a steam plant at Watertown; (3) receiving current from the Kilbourn hydraulic plant and using a steam reserve located at Watertown; and (4) producing current at the Watertown hydraulic plant, receiving current from the Kilbourn plant and using the steam plant at Milwaukee as a reserve. Of all these methods, the last, which is the scheme now employed, appears to be the most economical, and this economy seems to be due, in large measure, to the use of the Milwaukee steam plant as a reserve for emergency. That the public should at least share in such economy seems quite clear, for it is on account of public interest and by virtue of public authority that monopoly conditions are maintained under regulation in the public utility business. But, on the other hand, it seems also to be required that those who engage in the business should receive something for effecting unusual saving in operation. Otherwise regulation will stifle that development of efficient methods and processes which competition naturally promotes. With these facts in view, we conclude that under present conditions about $15,000 should be allowed for power, in addition to fixed charges on the

Watertown generating plant. This would give a very substantial saving to the public and also a fair profit to the utility.

Attention is called to the fact that the figure shown here as an allowance for the power furnished by the respondent rests upon the value found by the Commission for the respondent's present plant as well as upon the cost of producing the power by other means. If other facts remain the same, the proposition appears quite evident that the allowance for power would have to be reduced accordingly if the investment value determined by the Commission were increased, or vice versa.

Apportionment of Expenses.

The operating expenses, exclusive of depreciation, are divided in Table V, below, between commercial and street lighting service. It should be pointed out, perhaps, that the allowance of $15,000 for power is not the amount that should appear on the books as an operating expense because it includes also a part of profit. But for the purpose of determining the rates, it is more convenient, in this instance, to deal with this element of profit in this way than to treat it as an addition to operating expenses further on. Non-operating revenues also are divided in Table V between the two major classes of the business in order to show the amount of the net expense.

TABLE V.

TENTATIVE APPORTIONMENT OF OPERATING EXPENSES.

ELECTRIC DEPARTMENT.

Year Ending June 30, 1913.

	Total.	Commercial.	Municipal.
Power	$15,000 00	$13,445 25	$1,554 75
Distribution			
Meter & transformer expense	273 45	273 45	.....
Oper. & maintenance of distribution system.	1,092 24	797 34	294 90
Consumption			
Commercial	1,433 47	1,433 47	.....
Municipal	577 89	.....	577 89
Commercial			
Promotion of business	934 52	934 52	.....
Collection of meters	435 09	435 09	.....
Total of above	$19,746 66	$17,319 12	$2,427 54
General	3,819 63	3,349 82	469 81
Undistributed	1,042 71	914 46	128 25
Total above	$24,609 00	$21,583 40	$3,025 60
Taxes	1,681 61	1,505 04	176 57
Total of foregoing expenses	$26,290 61	$23,088 44	$3,202 17
Non-operating revenues	779 97	684 03	95 94
Net expenses	$25,510 64	$22,404 41	$3,106 23

The foregoing division of costs places the net operating expenses, exclusive of depreciation, at $22,404.41 for commercial service and $3,106.23 for street lighting. As the charge for street lighting is the particular issue in this case, attention now will be confined more exclusively to this phase of the business.

The street lighting figures of the Commission's tentative apportionment of the operating expenses, Table V, were shown informally to the petitioner and the respondent as a means of threshing out the differences of opinion that existed on the subject. After seeing the tentative figures, the respondent claimed that the allowance for taxes, $167.57, is too low because the taxes for the property as a whole increased very much since the period considered by the Commission. During the year ending June 30, 1913, the respondent charged to operating expenses, on account of taxes, $968.04 for the gas department and $1,681.61 for the electric department. The total of these is $2,649.65. The respondent reported that the taxes paid for the year 1913 were $1,745.00 for the gas department and $3,850.86 for the electric department. The total is $5,595.86. Using the ratio of value of operative property to value the total property as a factor for apportioning taxes, the respondent charged $3,710.00 of the $3,850.86 to commercial and municipal business. Then, in order to find how much of the taxes is chargeable to street lighting service, the respondent determined that the ratio of the gross earnings from municipal contract lighting to the total gross earnings of the electric department is 12 per cent and the ratio of investment in equipment for street lighting to the total investment in operative electric equipment is 11.62 per cent. On the basis of the smaller figure, it was found that taxes amounting to $432 are chargeable to municipal contract lighting service.

It is clearly evident that some consideration should be given to the increase in taxes in fixing rates for service. Otherwise, the revenue from operation would be insufficient to meet the expense of running the plant. However, the fact that various items of expense fluctuate from year to year and that some are high when others are low must not be lost sight of. That this is true is substantiated by the following figures for the respondent's business:

TABLE VI.

COMPARATIVE UNIT EXPENSES.

Year ending June 30	Operation and maintenance of distribution system per mile of wire.	Municipal contract lighting consumption expense per lamp.	General and undistributed expenses per kw-hr.	Taxes per kw-hr.
1910	$18 20	$5 56	$0.00348	$0.00072
1911	8 55	5 76	.00404	.00127
1912	9 12	4 72	.00430	.00111
1913	12 27	5 66	.00320	.00095

DEPRECIATION.

The petitioner's witness stated that in his computations he allowed for depreciation 4 per cent of the depreciable property used for street lighting and that on this basis the annual reserve is $597. It was not shown definitely how the 4 per cent was made up, although the life in years or the rate of depreciation in per cent was stated for several items. This testimony seemed to show that the witness had in mind a straight line basis for computing depreciation. If this is the case, the life corresponding to the rate of depreciation allowed for the station building must be about two hundred years. The life estimated by the witness for plant equipment was twenty years. These estimates are hardly consistent. Although a substantial building considered as a mere physical mass may last for many years, its usefulness as a housing for machinery might be terminated much sooner on account of rapid changes in the methods of producing current. Two and sometimes three complete changes in the equipment may take place within the same building if the original structure be ample in proportions and substantial in design, but actual experience data do not show that the usefulness of a station building is often protracted much longer.

No allowance was made by the witness for depreciation of the dam but he claimed that his estimates for other items of property were ample to cover it all. A proper course would be to make a separate allowance for depreciation of the dam if any allowance appears in good judgment to be required for this purpose.

The respondent claims that the allowance for depreciation should be at least 5 per cent of the value of the physical prop-

erty. This would hardly cover the depreciation based on an indeterminate permit, it is said, and would leave nothing for amortization of special equipment on a ten year contract basis. In support of its contention, the respondent submits the following analysis of the depreciation reserve required for the several groups of equipment:

TABLE VII.

RESPONDENT'S ANALYSIS OF DEPRECIATION ALLOWANCE.

	Amount.	Life years.	Rate depreciation.	Amount depreciation per year.
1. Land	$3,223			
2. Transmission and distribution	8,473	15	6.66%	$582 00
3. Buildings and miscellaneous structures	1,657	40	2.50%	41 50
4. Plant equipment	8,080	20	5.00%	404 00
5. General equipment	1,220	15	6.66%	81 30
Total	**$21,923			$1,108 80
Add 12 per cent	2,630			127 30
Total	$24,553			*$1,236 10
6. Supplies	100			
Grand total	$24,653			

* A yearly depreciation of $1,236.10 = 5.02% of the investment of $24,653.
** Error in respondent's table. Total should be $22,923.

A composite rate of depreciation for the street lighting portion of the plant has been computed by the Commission on straight line and sinking fund bases. In the straight line method, it is assumed that the depreciation reserve fund would earn nothing during the period of accumulation, while in the sinking fund method used in these computations it is assumed that the fund would earn 2 per cent per year. The analysis takes into consideration for each item of equipment its cost new, life in years, and scrap value. The final results show that the amount that should be reserved for depreciation on the straight line basis is $1,015 or 4.35 per cent of the cost of reproducing the physical property and, on a 2 per cent sinking fund basis, $852 or 3.66 per cent.

It is difficult for several reasons to make comparison of the respondent's and the Commission's figures for depreciation. It is said that the respondent's figures, which show the estimated life of equipment, take into consideration the scrap value of equipment, although the scrap value is not actually shown in the table, and that the estimated life would be represented by lower

figures if separate allowance were made for scrap value. The Commission's computations, on the other hand, make separate allowance for scrap value. Then, also, the respondent's analysis of depreciation shows one estimated life for all of the equipment of each group of the valuation, while the Commission's analysis is made up of a grouping of the items of equipment that have the same estimated life.

Before passing from this subject, mention should be made of the fact that about 42 per cent of "Plant equipment," item 4 of Table III, is cost of dam. For all of this item the respondent allowed a life of twenty years. If a longer life had been estimated for the dam, the respondent probably would have found a lower rate of depreciation for the plant as a whole.

Interest and Profits.

The Commission's tentative figures showed interest and profits computed at both 7 per cent and 8 per cent of the investment. The respondent claims that it is entitled to earn a return of 8 per cent because the overhead allowance in the physical valuation is only 12 per cent and because proper allowance has not been made for the increased cost due to the extreme piece-meal construction of this system. As the petitioner points out, these contentions have not been substantiated. Concerning the matter of interest and profits, the petitioner argues that it is not unreasonable to restrict the earnings of the Watertown Gas and Electric Company to a 7 per cent return on the investment because former earnings have been largely in excess of an 8 per cent return. At 7 per cent, interest and profits on the investment determined above for street lighting would be $1,540 per year, and at 8 per cent, $1,760.

Total Cost of Street Lighting.

Tentative figures of operating expenses for the electric street lighting service supplied to the city of Watertown during the year ending June 30, 1913, are shown in Table V. Depreciation, interest and profits are also stated above. Using the tentative figures for operating expenses as set forth in Table V, the total cost amounts to $5,498, or $53.90 per lamp, if depreciation is provided for on a 2 per cent sinking fund basis and interest and profits are allowed at 7 per cent; but with depreciation on

the straight line basis and interest and profits at 8 per cent, the total cost is $5,881, or $57.66 per lamp. Further facts bearing on taxes and other expenses have been brought out in the arguments of the respondent and the petitioner and in the foregoing discussion. Considering the additional facts also and the various circumstances appearing in this case, it must be concluded that the rate for street lighting of the type which was furnished during the year ending June 30, 1913, should be $57 per lamp per year. Assuming that 102 lamps would be used, the total annual charge would be $5,814, which is $923, or about 14 per cent, less than the amount paid during the year ending June 30, 1913.

Magnetite or Luminous Arc Lamp System.

Some difference of opinion was expressed at the hearings regarding whether it would be better to install magnetite lamps of one manufacturer or of another in case the old lamps should be replaced by new ones. The difference of opinion was related to the cost of operation and the quality of service. There appears to be some ground for the testimony introduced on both sides of the question. But, because of the peculiar character of this subject, we believe that it is better to leave the question unanswered at this time. The rights of no one will be affected by our doing so. Within reasonable limits, the utility should be permitted to exercise its own judgment in the selection of equipment and in the operation of it because upon the utility falls the obligation of rendering safe and adequate service. On the other hand, it appears that the city has a reasonable right to select the kind of equipment that it desires to use upon its streets for lighting purposes.

The tentative estimate of the cost of supplying service, using magnetite lamps, rests to some extent upon the costs that were found for the system of street lamps now in use in Watertown, but dependence on other data also is necessary to some degree. Table VIII shows the estimated operating expenses for magnetite lamps. It was assumed that the number of lamps and the burning schedule would not be different than for the present system.

TABLE VIII.

TENTATIVE ESTIMATE OF ANNUAL STREET LIGHTING EXPENSES. FOR MAGNETITE ARC LAMPS.

	Total for 102 lamps	Per lamp.
Power	$987 82	$9 67
Distribution	294 90	2 88
Consumption	795 60	7 80
Total of foregoing	$2,078 32	$20 35
General	409 00	4 01
Undistributed	112 00	1 10
Taxes	190 00	1 86
Total of foregoing	$2,789 32	$27 32
Deduct part of non-operating revenues	84 00	82
Total net expenses	$2,705 32	$26 50

The foregoing estimate shows that the total net expense, exclusive of depreciation, interest and profits, would be about $2,705 per year.

The petitioner's witness claimed that the cost of power for the magnetite system would amount to $7.13 per lamp. This is based on the assumption that each lamp consumes 280 watts and that the burning schedule is 2,800 hours per year. It also rests on the expenses shown for power in the company's annual report for the year ending June 30, 1912.

The respondent obtained a cost of power amounting to $10.97 per lamp, by assuming 310 watts as the consumption per lamp, 3,200 hours as the burning schedule and 0.972 cts. per kw-hr. as the average cost. Losses in converting and distributing the energy were also considered. The cost of 0.972 cts. per kw-hr. was found by the respondent by dividing the Commission's tentative figure of $15,000 by 1,544,900 kw-hr. which is the total output of the station for the year ending June 30, 1913.

The Commission's tentative figure for cost of power for magnetite lamps at Watertown is $9.67 per lamp. The annual consumption of energy was arrived at by assuming that the lamps require 310 watts each. It appears that the petitioner's claim that there is a lamp of this type on the market which requires less than 310 watts should be given some consideration. A claim was made that the illuminating power of these lamps is lower and that the cost of maintaining and operating them is greater than for a lamp of this type made by another manufacturer. The

evidence submitted on these points is not conclusive enough for a definite statement to be made in the matter. The cost per kw-hr. which was employed in reaching the figure of $9.67 per lamp was 0.78 cts. This is the average cost per kw-hr. for the present street lighting service instead of the average for the entire electric business of the company. It seems proper to use the former figure because the load factor for street lighting output differs from the load factor for the total output of the plant.

There is little or no reason to suppose that the distribution system expense, which depends very much on the extent of the wire and pole lines, would be materially modified by changing the kind of arc lamps. Therefore, for the purpose of estimate, this expense is placed at the amount charged to street lighting for the year ending June 30, 1913. The respondent does not object to this but the witness for the petitioner found a lower cost. The low figure determined by the witness for distribution system maintenance and operation is attributable to his use of the 1912 expenses as a basis for his conclusion. Reference to Table VI reveals the fact that during the year ending June 30, 1912, the expense of distribution system maintenance and operation was low. The figures used by the Commission for the year ending June 30, 1913, are neither the highest nor the lowest during a period of several years.

The consumption expenses for magnetite arc lamps were placed, in Table VIII, at $7.80 per lamp. The witness for the petitioner placed these expenses at $4.81 per lamp. This low figure rests on a burning schedule of 2,800 hours and a life of electrodes of 250 hours. The witness claimed that the allowance for trimming and inspecting should be 81 cts. and for maintenance 42 cts. per lamp. These amounts appear to be rather meager. The respondent thought that the Commission's figure of $7.80 was made up as follows:

Electrodes	$1.50	per year
Trimming	1.50	"
Reflectors and glassware	.50	"
Lamp repairs	.80	"
Tube renewals	3.50	"
Total	$7.80	"

The respondent states that it has no objection to any of the items except the item of "Trimming" and that, although the allowance of $1.50 per lamp per year for this item is sometimes

sufficient for a very large system involving several thousand lamps, it is not enough for this system. In support of this contention, the following data were submitted:

TABLE IX.

RESPONDENT'S DATA FOR TRIMMING, PATROLLING AND REPAIRING STREET LAMPS.

	October.		November.		December.	
	No. of hours.	Per cent.	No. of hours.	Per cent.	No. of hours.	Per cent.
Electric:						
Trimming and patrolling arcs	87	30	96	34	100	38
Repairing arcs	30	11	55	19	21	8
Miscellaneous general arc system work	20	7	.....	.....	.....	.....
Total electric	137	48	151	53	121	46
Gas:						
Lighting and extinguishing gas lamps	124	43	120	42	120	46
Inspecting and cleaning gas lamps	17	6	.....	.....	.....	.....
Washing globes and repairing mantels	6	2	13	5	21	8
Miscellaneous work on gas lamps	2	1	.....	.....	.....	.....
Total gas	149	52	133	47	141	54

Average per cent time on "Electric" 49%
Average per cent time on "Gas" 51%

The trimmer is hired by the month at the rate of $65 or $780 per year and it will be noted that it is sometimes necessary to put in as high as 286 hours per month in connection with the two systems.

The respondent concluded from the foregoing data that it is logical to charge 50 per cent of the trimmer's time against the electric street lighting system and, assuming that the same trimmer will be able to care for an installation of approximately 130 magnetite arc lamps, that the cost per lamp would be $3.00 per year. After deducting 50 cts. on account of repairs, it was found that the bare cost of trimming and patrolling would be $2.50. This is the amount claimed in place of $1.50.

The assumption that the Commission's tentative figure of $7.80 per lamp for consumption expenses consists of the component parts shown above, is not entirely correct. The assumption may have been based upon figures used by the Commission in another and different matter. The figure used by the Commission in this case for trimming and patrolling is $2.25 per lamp per year. This is based on an estimate of the amount of labor required for an entire year, while the respondent's data are only for three dark months of the year. The respondent is of the opinion that

the reduction in the amount of time required in the summer would not be sufficient to materially reduce the charges against street lighting during that time. But the following figures of burning hours taken from the records of the utility show considerable monthly variation in the length of time the lamps are burned, so that it is evident that considerable variation must occur in the time required to trim the lamps.

TABLE X.

SUMMARY OF BURNING HOURS.

WATERTOWN GAS AND ELECTRIC CO.

Date.	Burning hours.	Date.	Burning hours.
1912.		1913.	
August	233.40		
September	281.56	March	301.32
October	293.31	April	240.13
November	319.35	May	248.33
December	335.38	June	209.17
1913.		July	220.15
January	371.21	Total	3,382.18
February	326.47		

Although it may be unreasonable to assume that all of the trimmer's time which is not actually devoted to work on the street lighting system could be employed for some other useful purpose, nevertheless it appears that at least some of the spare time which the data of Table X indicate exists during the summer could be used for and charged to some other kind of work. The difference between the respondent's and the Commission's figures for the cost of trimming and patrolling is not very wide and it appears that the difference would not be material were the respondent's figure reduced for the reason stated above.

The Commission's figures for electrodes and tube renewals are less than those stated by the respondent for the reason that the burning period is less than an all night every night schedule.

The total for power, distribution, and consumption expenses appears to be lower for magnetite lamps than for the alternating current enclosed lamps and consequently the charges for general and undistributed expenses have been lowered proportionately. The reasoning upon which this action is based could hardly be successfully attacked without overthrowing also the so-called "overhead" basis of apportioning such costs, which was fol-

lowed in arriving at the cost of operating the present system of lighting.

Taxes, it is estimated, would be a little higher for the magnetite arc lamps than for the alternating current enclosed arc lamps because it appears that the investment would be increased by the change. The increase in the tax rate would apply to magnetite lamps as well as to the present system.

Allowance for depreciation, interest and profits must be added to the estimate of maintenance and operating expenses, and, as our investigation shows that the street lighting investment for a magnetite arc system would be increased to about $24,000, allowance must also be made for a small increase in fixed charges.

Depreciation computed on the 2 per cent sinking fund basis would amount to $912 per year and on the straight line basis to $1,084. Interest and profits at 7 per cent of the investment would be $1,680 and at 8 per cent, $1,920. When these amounts are added to the tentative estimate of maintenance and operating expenses, it appears that the total cost, with interest and profits a 7 per cent and depreciation on the sinking fund basis, would be $5,297, or $51.93 per lamp; with interest and profits at 8 per cent and depreciation on the straight line basis, $5,709, or $55.97 per lamp. In view of these facts and the facts brought out concerning taxes and other elements of cost, it appears that the rate for four ampere series magnetite arc lamps should be $55.00 per lamp per year. But inasmuch as definite action which would lead us to believe that such a system will be installed has not been taken by the respondent, an order on this phase of the subject does not appear to be required at this time.

IT IS THEREFORE ORDERED, That the Watertown Gas and Electric Company, respondent, abandon its present schedule of rates for street arc lighting service in the city of Watertown and substitute in lieu thereof a charge of $57 per lamp per year.

IT IS FURTHER ORDERED, That the respondent furnish service at this rate on an all night, dark night schedule, which requires from 3,200 to 3,400 hours of burning per year.

PESHTIGO LUMBER COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Jan. 13, 1914. Decided June 25, 1914.

Complaint was made of excessive charges on shipments of saw logs from various Wisconsin points to Peshtigo, Wis. It appears that during the period in question the rates in force were slightly higher than those subsequently ordered by the Commission. (*Nor. Hemlock & Hardwood Ass'n v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 241.) In that order the old rates were readjusted and slightly lowered, and the petition asks for a refund on the basis of the rates thus established. The matter of the reasonableness of the rates in question was considered when they were readjusted and the Commission found that they were a little higher than the circumstances warranted, and so arranged as to apply the same rate for a long series of distances and then jump abruptly to a considerably higher rate. The rates ordered were intended to correct these two conditions, neither one of which was specifically declared to be unreasonable.

Held: There is not sufficient ground to authorize a refund in the present case. It is only when the Commission finds the rate is unusual, exorbitant, illegal or erroneous that reparation may be awarded. The mere fact that a rate has been reduced by the Commission is not sufficient ground in itself for authorizing refunds. (*Menasha Wooden Ware Co. v. W. C. R. Co.* 1908, 2 W. R. C. R. 589; *Beaver Dam Lbr. Co. v. C. St. P. M. & O. R. Co.* 1908, 2 W. R. C. R. 700; *Merrill Wooden Ware Co. v. C. M. & St. P. R. Co.* 1908, 3 W. R. C. R. 54; *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774.) The petition is dismissed.

The petitioner is a corporation engaged in the lumber business with principal offices at Milwaukee, Wis. It alleges, among other things, that the respondent, from December 9, 1909, until February 11, 1913, maintained distance tariff rates on saw logs in trainload lots of twenty cars, applicable between stations on its line in the state of Wisconsin; that such rates varied from 1 ct. per 100 lb. for a distance of 65 miles or over to 2 cts. per 100 lb. for a distance of 190 and above 145 miles; that said tariff expired by limitation on February 11, 1913, after which the rates applicable to shipments of saw logs within the state were prescribed in respondent's tariff G. F. D. 10891—A., which were

higher than the trainload rates; that by virtue of an order of the Commission made on July 11, 1913, a new schedule of rates was established which was higher than the charges prescribed in the trainload tariff, but lower than those prescribed in G. F. D. 10891—A; that between February 11, 1913, and July 19, 1913, the petitioner shipped a large number of cars over respondent's lines from various stations to petitioner's mill at Peshtigo, Wis., upon which shipments the petitioner paid the rates prescribed in the tariff G. F. D. 10891—A; that such rates so paid by the petitioner were and are unjust, unreasonable and exorbitant. Wherefore, petitioner prays that the respondent be authorized and required to refund to it the difference between the rates exacted and those prescribed in tariff G. F. D. 14755—A and established by the order of the Commission.

The answer of the respondent is in effect a general denial of the allegations of the petition.

The matter came on for hearing on January 13, 1914. The petitioner was represented by *Edward Leveille* and the respondent by *Robert H. Widdicombe,* its attorney.

The petitioner complains of charges alleged to have been paid on shipments of logs from Shawano, Bowler, Eland Junction, Wittenberg, Whitcomb, Mattoon, Long Lake and Summit Lake to Peshtigo during the period February 11, 1913, to July 19, 1913, and asks for refund on the basis of rates established by order of the Commission in *Northern Hemlock and Hardwood Mfrs. Ass'n v. C. & N. W. R. Co.,* decided July 11, 1913. (12 W. R. C. R. 241.) Neither statement of shipments or freight bills were filed in the case, but petitioner signifies a willingness to file these documents if called upon so to do by the Commission. The complaint arises from the cancellation by respondent, February 11, 1913, of its trainload rates on logs, and the substitution therefor, automatically, of its single car rates that had been in force during the period covered by the trainload rates and remained in force up to July 19, 1913, when rates ordered by the Commission in the case cited were substituted therefor. The effect of the cancellation of the trainload rates, insofar as the points involved in the present complaint are concerned, is shown in the following table:

LOGS FOR MANUFACTURE THE PRODUCT OF WHICH IS SHIPPED VIA THE C. & N. W. RY. CO.

To Peshtigo from	Miles.	Rates in cents per 100 lb.			Excessive charges based on present rates.		
		Trainloads 11—1—09 to 2—11—13.	2—11—13 to 7—19—13.	Since 7—19—13.	Per 100 lb., cents.	Per car of 60,000 lbs.	Per 1000 ft. of logs at 5,000 ft. per car.
Shawano	54	1.	1.75	1.5	0.25	$1.50	$0.30
Bowler	74	1.25	2.	1.8	.2	1.20	.24
Eland Jct	86	1.5	2.5	2.1	.4	2.40	.48
Wittenberg	90	1.5	2.5	2.1	.4	2.40	.48
Whitcomb	92	1.5	2.5	2.1	.4	2.40	.48
Mattoon	106	1.5	2.5	2.4	.1	.60	.12
Long Lake	113	1.75	2.75	2.5	.25	1.50	.30
Summit Lake	123	1.75	3.	2.6	.4	2.40	.48

From the foregoing it appears that during the period February 11 to July 19, 1913, the difference between the rates applying on logs from and to the points named and the rates ordered by the Commission in the case referred to above would amount to 60 cts. to $2.40 per car of 60,000 lb., or to about 12 cts. to 48 cts. per 1,000 ft. of logs based on 5,000 ft. per car, making average excess charges, in case the same number of shipments moved from each point, $1.80 per car or 36 cts. per 1000 feet of logs. These differences are so small that it is not likely complaint for refund would be filed in case a few shipments only were involved, but, of course, in the case of a large number of shipments a more or less substantial aggregate could be shown.

The matter of the reasonableness of the rates involved in this case was quite fully gone into in the case cited above. In that case the Commission said that these rates "seem to be a little higher than the circumstances warrant" and that "they are also arranged * * * in such a way as to apply the same rate for a long series of distances and then jump abruptly to a considerably higher rate." The rates ordered were intended to correct the two conditions mentioned, neither one of which was specifically declared to be unreasonable. Refund was not asked for or authorized in that case and, taking into consideration the whole situation disclosed in both cases, there appears to be insufficient grounds upon which to authorize refund in the present case. It is only when the Commission finds that the rate is unusual, exorbitant, illegal or erroneous that reparation may be

awarded. The mere fact that a rate has been reduced by the Commission is not sufficient ground in itself for authorizing refunds. (*Menasha Wooden Ware Co. v. W. C. R. Co.* 1908, 2 W. R. C. R. 589; *Beaver Dam Lbr. Co. v. C. St. P. M. & O. R. Co.* 1908, 2 W. R. C. R. 700; *Merrill Wooden Ware Co. v. C. M. & St. P. R. Co.* 1908, 3 W. R. C. R. 54; *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774).

For the reasons stated the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

Submitted April 17, 1914. Decided June 25, 1914.

Complaint was made of exorbitant rates upon shipments of saw logs in carload lots from various Wisconsin points to the manufacturing points of the fifteen different petitioners. Refund is asked on the basis of the rate schedule ordered by the Commission in *Northern Hemlock & Hardwood Mfrs. Ass. v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 241. It appears that the rates ordered by the Commission were considerably higher than the trainload rates that expired February 11, 1913, and slightly lower than the carload rates in place of which they were substituted. Refund is asked on shipments charged the carload rates discontinued by the Commission's order. In the order in question the Commission found that the trainload rates were unreasonably low, but the carload rates were a little higher than the circumstances warranted, and so arranged as to apply the same rate for a long series of distances and then jump abruptly to a considerably higher rate. The rates for carload shipments, until changed by the Commission, had been in effect for a number of years without protest on the part of the shippers, and were availed of by those who enjoyed the special contract rates for trainload shipments, when shipping in less than trainload lots. It was conceded that if the special rates had been in effect during the period in question, some of the shipments would have moved in carload lots and taken the regular rates applicable to carload shipments, in which event no objection would have been raised to the rates for carload shipments.

Held: It is impossible to determine what amount of the commodity would have moved in either form. Therefore, to award reparation upon the shipments in question would discriminate against all shippers obliged to pay the regular rates during the period

involved unless like reparation were also awarded to them upon demand. It would also be manifestly unjust to the carrier to establish a rule which would have the likely effect of mulcting it in a large amount to satisfy reparation claims not otherwise thought of, simply because the carrier had failed to voluntarily make certain slight reductions in a schedule of rates, to which no previous objection had been made either by any shipper or the Commission (*Andarko Cotton Oil Co. v. A. T. & S. F. R. Co.* 20 I. C. C. R. 43, 50). Furthermore such a policy would be inimical to the best interests of all concerned, would tend to bring about a rigidity of rate schedules through the temerity of carriers to make adjustments required by business conditions, would cause the Commission to hesitate and estimate ultimate consequences before reducing rates in order to stimulate traffic in particular instances, and through shippers' possible overzealousness to recoup alleged excess freight charges might induce a condition militating against the full, fair regulation of transportation charges primarily contemplated by the statute (*Stevens & Jarvis Lbr. Co. v. C. St. P. M. & O. R. Co.* 1907, 2 W. R. C. R. 131, 134). The relief granted in the case upon which this claim for reparation is based was intended as a complete adjustment of the log rate situation there involved, and it was not the purpose of the Commission that the rates there established should have any retroactive effect. Petitions dismissed.

The petitioners are manufacturers of lumber in northern Wisconsin. Separate petitions were filed, in each of which it is alleged that the respondent had charged erroneous, illegal, unusual and exorbitant rates upon shipments of saw logs in carload lots, from various points in Wisconsin to their respective manufacturing points, during the period from February 11, 1913, to July 19, 1913, which were in excess of rates provided in its tariff G. F. D. No. 109810—A issued November 18, 1908, effective January 1, 1909. Reparation in amounts varying from $100 to over $1,000 is asked.

The respondent, answering the several petitions, admits all the formal allegations thereof, but denies that the rates charged for the transportation of logs from the various points in Wisconsin to the manufacturing points of the several petitioners are illegal, unusual, or exorbitant, and prays that the petitions be dismissed.

The hearing was held April 17, 1914, at the office of the Railroad Commission, in the Capitol, Madison, Wis. The petitioners were represented by *George A. Schroeder,* of Milwaukee, *W. A. Holt,* Oconto, Wis., *J. T. Phillips,* Green Bay, Wis., and *J. H. Johannes* of Wausau, Wis. *C. C. Wright,* general solicitor for the Chicago & North Western Railway Company, and *H. C. Cheney,* assistant general freight agent, appeared for the respondent.

There were in all fifteen separate petitions filed. These were consolidated and heard as one. At the hearing the attorney for the petitioners asked that the proceedings in the case of the *Northern Hemlock & Hardwood Mfrs. Assn. v. C. & N. W. R.* Co. 1913, 12 W. R. C. R. 241, be made a part of the proceedings in this case, as the reparations asked for are based upon the findings and order of the Commission in that case.

From the files in the case cited above, it appears that effective February 11, 1913, as provided by notice in the tariff, certain trainload rates on logs that had been in force a number of years between points on respondent's line expired and were replaced by carload rates that had been in force simultaneously with the trainload rates. The carload rates were considerably higher than the trainload rates, and this advance furnished the grounds for the complaint. The Commission held that the refusal of the carrier to continue the trainload rates was justifiable for the reason that these rates are not only unreasonably low but also discriminated against shipments moving under the carload rates, and that the carload rates were a little higher than the circumstances warrant, and were also arranged in such a way as to apply the same rate for long series of distances and then jump abruptly to a considerably higher rate. A new schedule of rates was ordered to apply in lieu of the carload rates.

The rates ordered by the Commission in the case referred to were considerably higher than the trainload rates that expired February 11, 1913, and slightly lower than the carload rates in place of which they were substituted. These rates average about 0.70 cts. per 100 lb. higher than the trainload and 0.27 cts. per 100 lb. lower than the carload rates. For distances 20 miles and less they are the same as the trainload rates, and for distances 10 miles and less they are the same as the carload rates. For distances over 20 miles the difference, according to different distances, varies from 0.10 cts. to 1.30 cts. over the trainload rates, and for distances over 10 miles from 0.10 cts. to 0.50 cts. per 100 lb. under the carload rates. From the testimony and exhibits in this case it appears that on the average, logs weigh about 5,000 lb. per 1,000 feet, and about 60,000 lb. per car, so that it may be assumed that the average difference between the carload rates ordered by the Commission and the carload rates superseded thereby would be somewhere around 30 cts. per 1,000 feet of logs and $1.80 per car. This average would vary, of course, according to

the percentage of total shipments moved under rates for specified distances, but on the whole it may be taken as a fair estimate. It is apparent, therefore, that the importance of the case now under investigation depends to a great extent, if not wholly, upon the aggregate number of shipments and the distance shipped rather than upon any difference in rates as applied to single carload shipments. It is not likely that the present complaint or any complaint based on the same conditions would come before the Commission if but few shipments were involved.

There appears to be nothing in the matter presented directly in connection with the case now before the Commission, nothing, at least, having an important bearing on the points involved, that was not fully presented in connection with the rate case mentioned, and it is quite evident from the proceedings had in the instant case that the parties interested feel that the former case presents all the matter necessary for a determination of the points at issue herein. The rates for carload shipments, before changed by the Commission, had been effective for a number of years without protest on the part of the shippers, and were in effect during the existence of the special contract rates for trainload shipments, and also availed of by those who enjoyed such special rates when shipping in less than trainload lots. The smaller shippers who could only make carload shipments were obliged to pay the regular rate. It is conceded in the testimony that if the special rates had been in effect during the period in which the shipments in question were made, not all such shipments would have moved in trainload lots, but some of them would have moved in carload lots and taken the regular rates applicable to carload shipments. In that event no objection would have been raised to the rates for carload shipments. It is impossible to determine what amount of the commodity would have moved in either form. Under the circumstances, even if the petitioners were entitled to reparation, the same could not be justly demanded upon shipments which would not have taken the special rates. Hence, to award reparation to the petitioners upon the shipments in question would be a discrimination against all shippers who were obliged to pay the regular rates during the same period unless like reparation were awarded to them upon demand. As all business transactions of the vast majority of shippers involving the amount of transportation charges probably occurred and were concluded upon the basis of rates in ef-

fect when the commodity moved, it would be manifestly unjust to the carrier to establish a rule which would likely have the effect of mulcting the carrier in a large amount required to satisfy numerous reparation claims, which would otherwise not be thought of, because it failed to voluntarily make certain slight reductions in a schedule of rates to which no previous objection had been made either by any shipper or by the Commission. The policy of such a rule would be inimical to the best interests of all concerned. The tendency would be to bring about a rigidity of rate schedules through the temerity of carriers to make adjustments of rates when required by business conditions. The Commission would also be obliged to hesitate and estimate ultimate consequences to the carriers before reducing individual rates or a schedule of rates in order to stimulate traffic in particular instances. In many cases it would be better for shippers to forget past transactions, but by overzealousness to recoup alleged excess freight charges they might induce a condition which would militate against that full and fair regulation of transportation charges in general primarily contemplated by the statute.

Commenting upon the statute under which these proceedings are brought, the Commission said in *Steven & Jarvis Lumber Co. v. C. St. P. M. & O. R. Co.* 1907, 2 W. R. C. R. 131, 134:

". . . It may be well here to note that the statute under which this complaint is made seems to be generally misconceived. A shipper is not entitled to a refund merely because a railway company amends a tariff by lowering a rate, which a shipper was obliged to pay for shipments made prior to the amendment. Such a reduction, independently of other considerations, should not be held to be an admission on the part of the railway company that the prior rate was either unusual or exorbitant, otherwise the policy of the law, of which the statute under consideration is an amendment, would be in a great measure defeated.

This statute was intended to meet exceptional cases and provide relief in cases of exceptional hardships, and not designed to penalize railway companies by voluntarily reducing rates where commercial or other conditions warranted a reduction. Evidently, if a railway company were subject to a rebate upon all shipments made during a period of six months prior to the reduction of any rate at which the shipments moved, we should find few alterations in schedules lowering rates except those ordered by the Commission upon complaint of shippers or upon investigations by the Commission upon its own initiative."

The principle thus enunciated is also adhered to by the interstate commerce commission. JUDGE CLEMENTS, speaking for that commission in *Andarko Cotton Oil Co. v. A. T. & S. F. R. Co.* 20 I. C. C. R. 43, 50, says:

"* * * In the matter before us it appears that some of the rates between many of the points involved were formerly higher than at present, and the situation here fairly illustrates what has taken place elsewhere in reductions from time to time in rates as the density of traffic increases with that of population and business development in a new and growing community. It would be a manifestly harsh rule that would assume a rate now condemned as unreasonable to have been so for a period of two years, or that of the statute of limitations, in the past as a basis for the payment of money by the carriers on past shipments, especially when no complaint had been made against them within that period. Certain it is that the law establishes no such presumption, nor is it a necessary sequence that the rate has been unreasonable for any period in the past. Neither does it seem that the bona fide action of the carriers in the necessary exercise of their judgment within reasonable limits should always be at their peril of liability for reparation for the difference between rates initiated upon their judgment and later changed upon the judgment of the Commission. Therefore the awarding of reparation by no means necessarily follows the reduction of a rate, whether by the voluntary action of the carriers or by order of the Commission."

The Commission has carefully examined and considered all the matter introduced in connection with the rate case, and has failed to find therein sufficient grounds upon which to authorize the reparations asked for in the instant cases. The relief granted in the former case was intended as a full and complete adjustment of the log rate situation involved therein, and it was not the purpose of the Commission that the rates established in that case should have any retroactive effect.

NOW, THEREFORE, IT IS ORDERED, That the petition in each of the above entitled cases be and the same is hereby dismissed.

F. A. DENNETT ET AL.
vs.
CITY OF SHEBOYGAN.

Decided June 29, 1914.

The petitioners requested the Commission to make a thorough investigation of the Sheboygan city water system, its administration, its physical property with relation to its present and future needs, its financial position and the rates now charged for various kinds of service, and upon such investigation to give to the proper administrative authorities such advice or direction as is found to be advisable.

The total cost of the property and plant on June 30, 1913, was about $507,739. In the instant case certain additions should be made to the estimated cost new of plant, for such extensions of mains or enlargements and reinforcements of the system as it appears must be added in the near future.

Held: An analysis of the operating data indicates that the city is not paying as much as it should for fire protection, while other consumers are paying an excess sufficient to meet the deficiency from the fire service, and leave a large surplus besides. The present annual charge for fire service protection should be increased. The total charge for public service, which includes fire service and public use of water should be paid in a lump sum per annum and should amount to the cost as determined. Rigid rules and inspections should be inaugurated to eliminate the wasteful use of water through leaky fixtures, improper use of hose for sprinkling, etc. All consumers owning their meters should be paid a reasonable rental for the same. All free service is to be discontinued. Special rates to hotels, halls and theaters are to be eliminated, and the schedules proposed substituted. Bills not paid within fifteen days of the date they are due are to be assessed a 5 per cent penalty. The respondent is ordered to discontinue its present rates and substitute therefor one of the two schedules proposed by the Commission.

Held: Since the water system has reached its economical capacity steps should be at once taken by the water department to carry out the recommendations regarding the installation of reinforcing mains, etc. in order to improve the fire protection service to all portions of the city at present inadequately protected. It is ordered that the city carry out such installations and such other plant extensions as are necessary to furnish an adequate supply of wholesome water.

Held: The water department should assume the expense of keeping all meters in repair. All consumers using considerable quantities of water should be metered. However, the general installation of meters is not required in this case. The Commission recognizes that under special conditions the advantages of installing meters are not sufficient to offset the additional cost.

Whether the present apparent freedom from contamination of the water can be depended upon to continue indefinitely, cannot at present be determined. If it is liable to contamination, the purification of the supply should be immediately investigated.

As regards the handling of monies of the water department, attention is called to secs. 925—95*b* to 925—95*c* of the statutes, which specifically provide for the administration of waterworks accounts. Compliance with these provisions will relieve the present confusion regarding the handling of finances.

The petition in this matter was filed with the Commission on October 21, 1913. The petitioners request the Commission to make a thorough investigation of the Sheboygan city water system, its administration, its physical property with relation to its present and future needs, its financial position and the rates now charged for various kinds of service, and upon such investigation to give to the proper administrative authorities such advice or direction as is found to be advisable.

The hearings in the matters here involved began on December 18, 1913, at the office of the Railroad Commission in the Capitol, in the city of Madison, Wis. An adjourned hearing was held on February 19, 1914 at the city hall in the city of Sheboygan, Wis. The following appearances were entered December 18, 1913: *O. B. Joerns* and *F. A. Dennett,* members of the water commission; *H. A. Detling,* attorney, on behalf of Mayor Dieckmann; *Edward Voigt,* city attorney, city of Sheboygan; *F. S. Morris,* alderman 1st ward, city of Sheboygan.

At the adjourned meeting the foregoing appearances were again entered and in addition the following: *Theo. Dieckmann,* mayor, city of Sheboygan, *Henry Jung* and others.

The rates complained of follow:

PUBLIC SERVICE:

Hydrant rental

224 hydrants	contract	$6,660.00 per year
216 "	each	30.00 "

METER RATES:

First	5,000	gallons at	40	cts. per 1,000 gallons
Next	5,000	"	30	" "
"	10,000	"	25	" "
"	20,000	"	20	" "
"	60,000	"	15	" "
"	100,000	"	10	" "
"	100,000	"	8	" "
"	200,000	"	7	" "
"	500,000	"	6	" "
"	1,000,000	"	5	" "

Any quantity after 2,000,000 gallons has been consumed per month at 5 cts. per 1,000 gallons.

*Service Charge**

For ½ inch meter	$1.00 per month
" ¾ " "	2.00 "
" 1 " "	4.00 "
" each additional half inch in size $2.00 per month.	

FLAT RATES:

Minimum annual charge	$5.00 per year
Banks, one faucet	10.00 "
Bakery, daily average for each bbl. of flour used, per bbl	4.00 "
Barber shop, one chair	6.00 "
Barber shop, each additional chair	4.00 "
Baths, private, without heating apparatus	3.50 "
Baths, private, with heating apparatus	5.00 "
Each additional	3.00 "
Baths, public, per tub	12.00 "
Baths, hotel or boarding house, each tub, cold	6.00 "
Baths, hotel or boarding house, each tub, hot	8.00 "
Blacksmith shop, first fire	5.00 "
Blacksmith shop, each additional fire	2.00 "
Building purposes, bricks, per 1,000 laid	.10
Building purposes, stone, per perch	.07
Building purposes, plaster, per 100 yard	.30
Boarding house (no license less than $10) per room	1.50 "
Laundries	20.00–50.00 "
Offices with wash basin	5.00 "
Printing office, six hands or less	12.00 "
Printing office, each additional hand	1.50 "
Photograph galleries	15.00 "
Residence occupied by one family	5.00 "
Restaurants, hotels, halls and theaters (special rates)	
Stables, private, one horse, including washing carriage	4.00 "
Stables, private, each additional horse	2.00 "
Stables, private, cows, each	2.00 "
Stables, livery, boarding or sale, including carriage washing, per horse, (no license less than $10.00)	2.00 "
Steam boilers, per horse power (special)	
Saloons	12.00–30.00 "
Wash basins, self-closing faucets	3.00 "
Wash basins, each additional	1.50 "
Stores and shops	5.00–20.00 "
Urinals, private, with self-closing faucets	3.00 "
Urinals, public, with self-closing faucets	8.00 "
Water closets, private, self-closing	4.00 "
Water closets, private, each additional	2.00 "
Water closets, public, hotels, stores, restaurants and saloons	10.00 "
Sprinkling carts, filling each cart per day	.50 "
Sprinkling carts, filling each cart ½ day	.25 "
Season Rates:	
Sprinkling lawns with ⅛ inch nozzle four hours per day, 50 foot front or less	5.00 "
Each additional front foot	.10 "
Streets (corner lots measurements, on both fronts for street sprinkling) in addition to lawn sprinkling per foot	.05 "

* This is applied as a minimum bill instead of a service charge.

Fountains to be used not more than six hours per day for the season for six months as follows:

1-16 inch jet	$10.00	"
1-8 "	20.00	"
3-16 "	35.00	"
Soda fountains	10.00–25.00	"

All supplies not enumerated, subject to special rates and water rates charged by said guarantees to consumers, for domestic and manufacturing purposes shall not exceed the average rates charged at other cities of the state of Wisconsin. Special license issued for building purposes.

Bills due and payable quarterly in advance the first day of January, April, July, and October each year. Meter rents are rendered monthly. A charge of not less than $1 made for turning off and on water for violation of any rules or regulations of company or for non-payment of bills, or for discontinuance of service to vacated premises.

Hose, not larger than ¾ inch with a nozzle not larger than ¼ inch permitted, but shall be held in hand while in use. Time for sprinkling limited to five hours per day from 6 to 9 a. m. and from 5 to 8 p. m. from April 1 to October 31 each year.

City reserves right to set meters upon any service pipes, and consumers may install and maintain meters at their own expense. All meters to be placed in sidewalks or street properly protected.

City may supply motors, steam boilers, etc., through meters and charge a rental equal to 20 per cent of its cost complete, placing the meter at the expense of the consumer.

Discount:

25 per cent on all flat rate bills.

25 per cent on all meter bills when rate is above 10 cts. per M gallons.

10 per cent on all meter bills when rate is 8 cts. and 10 cts. per M gallons.

VALUATION.

No valuation of the physical property of the Sheboygan City Water Works has been made for the purposes of the instant case. The Commission, however, *In re City Water Co. of Sheboygan,* 1909, 3 W. R. C. R. 371–377, held that the just compensation to be paid to the City Water Company of Sheboygan for the taking of the property of the company by the city was $415,000.

At the close of the year ended June 30, 1909, the cost of the property and plant was reported to have been $424,712.98. During the year ended June 30, 1910, $60,504.56 was expended upon construction and equipment, giving a cost of $485,217.54 at the close of the year. During the succeeding year the reported expenditure amounted to $8,064.15, and during the following fiscal year $7,997.47 was reported expended. For the fiscal period ending June 30, 1913 about $6,460 was expended. This gives a total cost on this latter date of about $507,739.

Careful attention must be given in all cases to valuation and cost because of the fact that the actual value of a plant and the cost of service bear a close and direct relation to the reasonable charges which should be paid for the service furnished by the utility. In the instant case certain additions should undoubtedly be made to the estimated cost new of the plant, for such extensions of mains or enlargements and reinforcements of the system as it appears must be added in the near future.

It appears evident from our investigation that unless sprinkling and other unnecessary uses of water during fires be forbidden, and actually be prevented, feeder mains must be correspondingly enlarged or the fire service will suffer. If the general use of water during fires be thus reduced to the practicable minimum, there seems to be no necessity of considering the effect of a general installation of meters. From the examinations made by the engineers of the Commission the conclusion is drawn that, so far as the increase in investment or capacities is concerned, the restriction of the general use of water during fires is of much greater importance than the question of reducing pumpage by a general installation of meters.

Extensive sprinkling during certain times at present, it appears, even when there is no fire to diminish pressure, causes such decreased pressure on the mains in certain sections of the city that some consumers are unable to get water even for domestic purposes. If this condition continues it will undoubtedly be necessary to install reinforcing mains, larger pumping equipment and an additional or larger intake. Such additions to plant will undoubtedly entail an expenditure of approximately $200,000. While the city of Sheboygan may have an unlimited supply of water, the present apparatus for supplying the water to consumers is limited. Reduction in pumpage by the use of meters will not only reduce operating expenses, but will delay the growth of fixed charges.

An examination of the report made to the city of Sheboygan by Mr. C. B. Stewart regarding the reinforcing mains required by the city, reveals the fact that the water system has reached its economical capacity, and it becomes apparent that such recommendations as he has suggested were properly made in order to adequately meet future needs.

It does not seem equitable, however, to make present consumers bear the entire burden of these future additions. It appears

proper to make slight additions to the unit costs, but some allowance must necessarily be made for such additional business as will undoubtedly materialize when such extensions and improvements are made.

WATER SUPPLY.

It is stated that the situation confronting officials of the water department of the city of Sheboygan as regards future improvements along certain lines is indeterminable, especially as regards contamination of the supply. A movement to purify the waters of the Great Lakes is in progress but just what course this movement will take is uncertain. There has been no contemplation of changing to a ground water supply and up to the present no need for such change. A contaminated supply would undoubtedly force the installation of a large filter plant in order to handle the enormous pumpage now being delivered to the city. It is difficult to estimate the money value to the city of a wholesome supply of water from a sanitary standpoint. If the supply of water at Sheboygan, due to the length of intake and other factors, is liable to contamination and hence is injurious for domestic and public purposes, the purification of the supply should be immediately investigated.

No bacteriological or chemical examinations have been made of water from the Sheboygan system. Samples of lake water analyzed at other cities located along the Great Lakes, however, indicate the presence in the water of considerable quantities of extraneous matter. Whether the present apparent freedom from contamination of the water at Sheboygan can be depended upon to continue indefinitely with the growing lake water contamination by sewage discharged into the lake, cannot at present be determined. The treatment of sewage by all lake cities, including Sheboygan may be found to be necessary at no distant date and in that event the danger of contamination of the present supply of lake water at Sheboygan would be at once reduced. Of course, the intake to deep water, if of sufficient length, secures reasonable immunity from contamination.

In our computations in this case we have made no allowances for the probable future installation of a filtration system, believing that the rates as now allowed will be sufficient to carry the proper additional charges necessarily involved if such a system is installed in the near future.

The following table discloses comparative operating statements of the Sheboygan City Water Department for the six years ended June 30, 1908, 1909, 1910, 1911, 1912 and 1913.

Rate of return for depreciation and interest on above	10.92%	11.65%	12.09%	13.83%	13.52%	13.98%

NOTE:—Year 1908 and part of 1909 under private ownership.

Examination of the above statement shows that total operating expenses have not varied greatly during the period included, notwithstanding the fact that the total water pumped has increased from 990,089,000 gallons in 1910 to 1,200,000,000 gallons in 1913, or at the rate of about 70,000,000 gallons per year.

The amount of income available for depreciation and interest upon the estimated value of the plant has been sufficient to allow from 11 per cent to 14 per cent during the period for which statistics are presented.

The following table shows the detailed income account for the year ended June 30, 1913, as reported to the Commission by the Water Department:

SHEBOYGAN CITY WATER WORKS.

Income Account Year Ending June 30, 1913.

Revenues		
Commercial sales	$72,843.30	
Hydrant rentals	14,073.80	
Street sprinkling	1,954.96	
Miscellaneous earnings	731.08	
Total		$89,603.14
Expenses

Total		$1,465.29
Total above items		$18,582.05
Depreciation		15,035.62
Interest		13,840.00
Total expenses		$47,457.67

RETURN.

It is the opinion of certain members of the Water Commission of the city of Sheboygan that the return upon the water works property should be large enough to establish a sinking fund to amortize outstanding bonds. In addition, main extensions, improvements, etc. should be made from surplus rather than new investment on the part of the city. An estimate of from 8 to 9 per cent above depreciation has been advanced as adequate to meet contingencies and at the same time give fair water rates.

Examination of the financial condition of the Water Department would indicate that the department has sufficient funds to make present needed improvements and extensions with the surplus at hand, so that rates as fixed by the Commission, if the Commission finds it advisable to so order, need provide only an amount above the ordinary interest charges to be set aside as a fund to amortize outstanding bonds.

As previously stated, it does not appear equitable to make present consumers contribute through the rates such large amounts towards future additions and towards retirement of present obligations as was suggested at the hearing in this case. Again, the probability of a cycle of hard times occurring later, as was also suggested during the hearings in this matter, should not be made the justification for saddling present consumers with rates through which a surplus fund may be built up to carry the plant over the period of decreased revenue.

For the purposes of determining the equity of the present rates a number of changes must be made in the income account, in view of the extensions and improvements contemplated in the near future. Pumping expenses have been taken at $12,913.08, distribution expense at $3,000.00, and commercial expenses have been placed at $450.00, while general and undistributed have been placed at $4,500.00. A tax allowance, estimated at $8,113.15, depreciation at $7,000.00 and interest at $33,200.00 have been included in the expenses.

The total normal operating expenses, excluding taxes, interest and depreciation amounting to $20,863.08, have been divided between fixed or capacity costs, which would continue even if operations were stopped, and output costs, which would stop if the plant discontinued operations and which vary with the output, as shown below:

Capacity	$8,764.84
Output	9,993.74
Direct to fire service	711.00
Direct to general service	1,393.50
	$20,863.08

When the above expenses as well as the allowance for taxes, interest and depreciation are apportioned between fire service and general service, the following results are obtained:

	General Service.			Fire Protection Service.		
	Operating expenses.	Taxes, depreciation and interest.	Total general.	Operating expenses.	Taxes, depreciation and interest.	Total fire service.
Capacity	$4,382 42	$8,087 62	$12,470 04	$4,382 42	$22,224 05	$26,606 47
Output	9,793 87	18,001 48	27,795 35	199 87	....	199 87
Direct	1,393 50	.....	1,393 50	711 00	.....	711 00
Total	$15,569 79	$26,089 10	$41,658 89	$5,293 29	$22,224 05	$27,517 34

The total cost of fire service is $13,443.54 in excess of the present revenue from this service. The revenue from general service on the other hand, excluding street sprinkling and miscellaneous earnings, was $31,184.41 in excess of the cost of service, or, including the above items, $33,870.45 in excess of the cost.

The facts outlined above clearly indicate that the present distribution of the cost of water service might equitably be changed somewhat. The city is not paying as much as it should for fire protection, while other consumers are paying an excess sufficient to meet the deficiency from the fire service and leave a large surplus besides.

If the city pays for this service an amount about as indicated here, certain reductions can be made in the rates to general consumers and still provide a surplus for a sinking fund to be used for any purpose determined by the water board, such as retirement of outstanding bonds, etc.

STATISTICS OF OPERATION.

The City Water Department reports a total pumpage of 1,200,822,190 gallons of water for the year ended June 30, 1913, an increase of 69,479,000 gallons over the corresponding period of 1912 and an increase of 150,479,000 gallons over 1911.

The total private services in use at the end of the last fiscal period, June 30, 1913, amounted to 4,294 and the total meters in use to 329. The total consumers were given as 4,585. At the time of our informal investigation of the Sheboygan rates in January, 1913, data secured from the records of the department indicated a distribution of consumers somewhat as shown below. The distribution of consumers for the fiscal year ended June 30, 1913, is also shown:

	Fiscal year 1913.	Calendar year 1913.	Per cent.
Total paying flat rate consumers	4,256	4,264	92.9
Total paying metered consumers	329	325	7.1
Total all consumers	4,585	4,589	100
Services not extended (approximately)	.....	567	.....

Of the above 4,264 flat rate consumers, about 94 per cent are residences. Of 313 metered consumers of whom we have accurate data, 95 are residences. As noted, only about 7 per cent of all consumers are metered. The metered users, the utility estimates, consumed a total of 162,685,689 gallons of water during the year ended June 30, 1912, and 181,594,908 gallons during the succeeding fiscal period, an increase of 18,909,219 gallons.

In view of the results obtained from a detailed analysis of the metered consumption it is estimated that total present pumpage will be distributed about as follows, although in the absence of complete metering the actual distribution must always be unknown:

WATER PUMPED TO VARIOUS CLASSES OF CONSUMERS.

	Gallons.	Per cent.
Present metered consumers	181,594,908	
Flat rate residence "	300,600,000	
" " commercial "	25,600,000	
Total	507,794,908	42.3
Street sprinkling, lost, unaccounted for, excessive use and double pumpage	693,027,282	57.7
Total pumpage	1,200,822,190	100

Meters and flat rate consumers are distributed as follows:

	Metered consumers.	Flat rate consumers.	Total probable No. of meters with all services metered.
½ inch	34	1,080	1,114
⅝ "	184	2,284	2,468
¾ "	54	857	911
1 "	24	18	42
1¼ "	2	.....	2
1½ "	7	5	12
2 "	19	4	23
3 "	2	.....	2
4 "	3	12	15
6 "	.....	34	34
	329	4,294	4,623

COST OF SERVICE.

Consumer expenses amount to about $0.315 per consumer. With practically all consumers metered, the metered consumer expense probably will be not more than $1.00 and may be considerably less. With depreciation, taxes and interest on meters based upon the values of the various sizes of meters the consumer expenses are as shown below:

	Taxes, depreciation, interest.	Consumer expenses.	Total expenses.
½ inch, ⅝ "	$1 08	$1.315	$2,395
¾ "	1 50	"	2,815
1 "	2 04	"	3,355
1¼ "	2 75	"	4,065
1½ "	4 20	"	5,515
2 "	6 60	"	7,915
3 "	13 20	"	14,515
4 "	21 00	"	22,315
6 "	38 40	"	39,715

The rate for general service may be made in the form of either a service charge and a charge for water used, or in the form of a minimum bill and an output charge for all water used in excess of the amount under the minimum. The service charge, or if a minimum is incorporated in the schedule, the minimum bill, will meet the consumer expenses and a part or all of the capacity expenses. The minimum charge also, of course, allows for a small amount of water. The remainder of the capacity expenses, if

not covered by the above charges, and the output expenses, will be met by the charge for water.

The service charge, with consumer expenses as indicated above, should be about as shown in the following table:

Size meter.	Consumer expenses.	Annual service charge.	Capacity costs met by service charge.
½ inch	$2 40	$3 60	$1 20
⅝ "			
¾ "	2 82	4 80	1 98
1 "	3 36	8 40	5 04
1¼ "	4 07	9 60	5 53
1½ "	5 52	12 00	6 48
2 "	7 92	18 00	10 08
3 "	14 52	27 00	12 48
4 "	22 32	48 00	25 68
6 "	39 72	96 00	56 28

The following table shows the total capacity expenses which would be met by service charges as outlined above:

Size meter.	Number.	Capacity expense per meter met by service charge.	Total capacity expense met by service charge.
½ inch	1,114	$1 20	$1,336 80
⅝ "	2,468	1 20	2,961 60
¾ "	911	1 98	1,803 78
1 "	42	5 04	211 68
1¼ "	2	5 53	11 06
1½ "	12	6 48	77 76
2 "	23	10 08	231 84
3 "	2	12 48	24 96
4 "	15	25 68	385 20
6 "	34	56 28	1,913 52
	4,623		$8,958 20

While the foregoing estimate may not represent conditions exactly because the distribution of meters by sizes may vary somewhat from the figures used, the total effect of such differences upon the amount of capacity expenses that would be borne by the service charge would not be important.

With the total capacity expenses met by the service charge amounting to $8,958.20, the total revenue to be obtained from the charge for water would be $31,307.19, assuming for the present the city pays the amount for fire protection service as previously suggested. With an estimated consumption of about 36,207,270 cubic feet of water, which appears normal for a city

of the size and character of Sheboygan, the average output cost per 100 cubic feet amounts to 8.64 cts.

An analysis of the distribution of sales of water has been made, and from this analysis a schedule incorporating a minimum charge which it is believed will fit conditions in Sheboygan better than a service charge schedule has been evolved somewhat as follows:

Minimum Monthly Charges.

½ and ⅝ inch meters $0.40; ¾ inch—$0.50; 1 inch—$0.80; 1¼ inch—$0.90; 1½ inch—$1.10; 2 inch—$1.60; 3 inch—$2.45; 4 inch—$4.20; 6 inch—$8.20.

Charges for Water.

First	200	cu. ft.	Minimum charge.
Next	800	"	17 cts. net per 100 cu. ft.
"	1,000	"	14 " " "
"	2,000	"	11¼ " " "
"	6,000	"	8½ " " "
"	10,000	"	6¾ " " "
"	30,000	"	5¼ " " "
"	50,000	"	4½ " " "
Over	100,000	"	3½ " " "

If it is assumed that no change will be made in the charge to the city for fire protection purposes, about $13,443.54 additional expenses chargeable to the city must be allocated to general service. With minimum charges varying with the size of the meter as outlined below, the charges for water must provide for about $44,750.73 if all consumers are metered.

Minimum Monthly Charges.

½ and ⅝ inch meters $0.50; ¾"—$0.60; 1"—$0.90; 1¼"—$1.00; 1½"—$1.20; 2"—$1.75; 3"—$2.75; 4"—$4.50; 6"—$8.50.

Charges for Water.

First	200	cu. ft.	Minimum charge.
Next	300	"	22 cts. net per 100 cu. ft.
"	500	"	17 " " "
"	1,500	"	14 " " "
"	1,500	"	11¼ " " "
"	6,000	"	8½ " " "
"	10,000	"	6¾ " " "
"	30,000	"	5¼ " " "
"	50,000	"	4½ " " "
Over	100,000	"	3½ " " "

FLAT RATES.

From a tentative analysis of flat rate water consumers in Sheboygan, it appears that there will be about 4,294 who will be assessed the net minimum charge for one faucet, namely $3.75. This minimum appears to us to be about as low as the conditions in Sheboygan would warrant. Any reduction in flat rates should come, it is believed, from lowering the charges for other fixtures. The old flat rate schedule has been revised and simplified to a considerable extent, and placed in a form which it is believed will equitably meet the conditions existing in Sheboygan.

An examination of the fixed annual charges assessed against water consumers in Sheboygan reveals the fact that there are certain users who have not been billed according to the rate schedules on file in this office. For this reason it may happen that while the proposed rates will result in a reduction to all consumers properly billed, the new rates may result in a slight increase to those consumers noted who have been improperly assessed.

Flat rates in many instances have proven to be exceedingly inequitable and unsatisfactory to both the consumer and the utility. It has been shown to be practically impossible to do justice to either party. If a rate is made upon an arbitrary basis, the unknown element of waste, which is always present, must be estimated and allowed for; the number and various kinds of openings, the number of persons each service supplies must be carefully ascertained. Thus the careful, economical and proper user of water is required to pay for the waste of his neighbor, which is manifestly unjust to him.

There are certain classes of flat rate users for whom no flat rate can be made that will be equitable. A rate based upon fixtures can never be satisfactory for consumers such as stores, saloons, restaurants, etc., the amounts used being dependent upon elements other than the nature and number of fixtures.

Even among residence consumers, when the same number of fixtures are installed, the amounts of water used vary enormously, depending upon the degree of care exercised by the consumers, their attitude towards the utility, the condition with regard to sewer connections, the leakiness of fixtures, etc.

Variations in charges are invariably found under flat rates, probably due to the difficulty of classifying such consumers un-

der any of the divisions of the flat rate schedule. All consumers whose use of water or whose premises are such that they cannot be classified logically under one of the general headings of the flat rate schedule should be placed on a meter basis.

While in the instant case the general installation of meters has not been required, this omission should not be taken to signify that the Commission approves the flat rate plan. The Commission recognizes, however, that under special conditions the advantages of installing meters are not sufficient to offset the additional cost.

CONCLUSION.

In view of the facts in this case, we feel that the present annual charge for fire service protection should be increased; that the total charge for public service, which includes fire service and public use of water, should be paid in a lump sum per annum and should amount to a figure closely approximating the cost determined herein. All free service in Sheboygan should be discontinued. Special rates to hotels, halls and theaters should be eliminated and the schedules herein proposed substituted. Rigid rules and inspections should be inaugurated to eliminate the wasteful use of water through leaky fixtures, improper use of hose for sprinkling, etc. All consumers using considerable quantities of water should be metered. Steps should at once be taken by the water department to carry out the recommendations of the engineer employed by them regarding the installation of reinforcing mains, etc., in order to improve the fire protection service to all portions of the city at present inadequately protected. Statistics show that over 40 per cent of the meters installed are owned by consumers. It is our opinion that the water department should assume the expenses of keeping all meters in repair and should pay all consumers owning their meters a reasonable rental for the same.

What the amount of reduction will be under the rates outlined, cannot be estimated very closely because of the large number of consumers not metered. For this reason the estimates and rates now made must of necessity be more or less of an experimental nature, and must be held subject to careful review by the Commission after a sufficient trial indicates the actual effect of the change

The financial position of the water department appears to be all that can be desired. The accumulation of about $87,000 of surplus now invested in water works and general city bonds, in addition to about $40,000 cash at present on deposit in the banks, indicates that the city is in a position to carry out such plant extensions as have been recommended by Mr. Stewart.

In regard to the handling of moneys of the water department, attention is called to sec. 925—95*b* to 925—95*c* of the statutes, which specifically provide for the administration of water works accounts. Compliance with the provisions as outlined in the law referred to will, it is believed, relieve the present confusion regarding the handling of finances.

Two schedules have been evolved; Schedule A, based upon the assumption that the city of Sheboygan pays an increased fire service charge; and Schedule B, based upon the assumption that no change is made in the present charge of this service to the city. Two forms of each of the flat rate portion of the schedules are submitted.

IT IS THEREFORE ORDERED, That the City of Sheboygan discontinue its present schedule of rates for water service and substitute therefor one of the following schedules.

Schedule A.

1. The City of Sheboygan shall be charged for fire protection the sum of $27,500 per year, payable annually, this amount to include the charge for sewer flushing, and water used in public city buildings.

2. Meter Rates—General Service.

Minimum Monthly Charge.

½ and ⅝ inch meter	$0.40
¾ " "	.50
1 " "	.80
1¼ " "	.90
1½ " "	1.10
2 " "	1.60
3 " "	2.45
4 " "	4.20
6 " "	8.20

Charges for Water per Month per Meter.

First 200 cu. ft. of water used	minimum charge.
Next 800 " " "	17 cts. net per C cu. ft.
" 1,000 " " "	14 " " "
" 2,000 " " "	11¼ " " "
" 6,000 " " "	8½ " " "
" 10,000 " " "	6¾ " " "
" 30,000 " " "	5¼ " " "

3. Flat Rates.

Rates for all fixtures are in addition to the first faucet rate for premises.

	Net rates per annum. Residence.	Commercial.
All consumers—one faucet	$3.50	$3.50
Wash basins		
First basin (hot water)	2.00	2.00
First basin (cold water)	1.00	1.00
Additional basins	1.00	1.00
Additional faucets	....	1.00
Baths		
First bath—with heating apparatus	3.15	6.00
Each additional	2.00	5.00
Baths without heating apparatus	2.50	4.25
Water closets		
First closet	2.85	7.25
Each additional	1.25	5.00
Urinals	2.00	6.00
Hose connection	3.60	3.60
Water power (motor, pump, etc.)	1.50	3.00

The following consumers shall, in addition to the first faucet rate for premises, and the additional fixture charges, pay $1.00 per each additional unit exceeding one, listed below:

Barber shops	per chair
Bakeries	per average bbl. flour used per day per bbl.
Blacksmith shops	per fire
Boarding houses	per room
Livery stables	per horse
Printing offices	per hand
Saloons	per bib
Ice cream parlors	per three tables
Dyeing and scouring establishments	per hand
Foundry	per fire

Schedule B.

1. The City of Sheboygan shall be charged for fire protection the rates at present in effect.

2. Meter Rates—General Service.

	Minimum Monthly Charge.
½ and ⅝ inch meters	$0.50
¾ " "	.60
1 " "	.90
1¼ " "	1.00
1½ " "	1.20
2 " "	1.75
3 " "	2.75
4 " "	4.50
6 " "	8.50

For each additional consumer on a meter, above minima shall be assessed to each consumer.

Charges for Water per Month per Meter.

First	200	cu. ft.	used	minimum	charge.	
Next	300	"	"	22 cts.	net per	100 cu. ft.
"	500	"	"	17	"	" "
"	1,500	"	"	14	"	" "
"	1,500	"	"	11¼	"	" "
"	6,000	"	"	8½	"	" "
"	10,000	"	"	6¾	"	" "
"	30,000	"	"	5¼	"	" "
"	50,000	"	"	4½	"	" "
Over	100,000	"	"	3½	"	" "

3. Flat Rates.

Rates for all fixtures are in addition to the first faucet rate per premises.

	Net rates per annum. Residence.	Commercial.
All consumers—one faucet	$3.75	$3.75
Wash basins		
First basin (hot water)	2.10	2.10
First basin (cold water)	1.00	1.00
Additional basins	1.00	1.00
Additional faucets	....	1.00
Baths		
First, with heating apparatus	3.15	6.00
Each additional	2.00	5.00
Without heating apparatus	2.50	4.25
Water closets		
First closet	2.85	7.40
Each additional	1.25	5.00
Urinals	2.10	6.00
Hose connection	3.60	3.60
Water power—motor, pump, etc	1.50	3.25

The following consumers shall, in addition to the first faucet rate for premises, plus the additional fixture charges, pay $1.00 per each additional unit exceeding one, listed below:

Barber shops	per chair
Bakeries	per average bbl. flour used per day per bbl.
Blacksmith shops	per fire
Boarding houses	per room
Livery stables	per horse
Printing offices	per hand

The following consumers in addition to the first faucet and additional fixture charges shall pay $2.00 per each additional unit listed below.

Saloons	per bib
Ice cream parlors	per three tables
Dyeing and scouring establishments	per hand
Foundry	per fire

OPTIONAL FORM OF SCHEDULE OF FLAT RATES.

(Note: Amounts are similar to those noted above.)

	Schedule A	Schedule B
Minimum annual charge—(net) one faucet...	$3.50	$3.75
Banks	7.00	7.25
Bakery, daily average for each bbl. of flour used per bbl	2.85	2.85
Barber shops, 1st chair	4.25	4.35
Barber shops, each additional chair	1.00	1.00
Baths, private, without heating apparatus	2.50	2.50
Baths, private with heating apparatus	3.15	3.25
Baths, private each additional	2.00	2.00
Baths, public 1st tub	6.00	6.00
Baths, public each additional	5.00	5.00
Baths, hotel or boarding house—cold, each tub	4.25	4.35
Baths, hotel or boarding house—hot, 1st tub	5.50	6.00
Baths, hotel or boarding house—hot, each additional	5.00	5.00
Blacksmith shops, first fire	3.35	3.50
Blacksmith shops, each additional fire	1.00	1.00
Building purposes, brick per 1,000 laid	.07	.07
Building purposes, stone, per perch	.05	.05
Building purposes, plaster per 100 yds	.20	.20
Boarding house (minimum $7.00) per room	1.00	1.00
Halls (lodge, etc.)	3.50	3.75
Laundries—meter rates		
Offices—one wash basin	3.50	3.75
Offices—each additional basin	1.00	1.00
Printing office—six hands or less	8.50	8.75
Printing office, each additional hand	1.00	1.00
Photograph galleries	10.50	10.75
Residence—one family (one faucet)	3.50	3.75
Restaurants, hotels—meter rates		
Theaters	5.00	5.00
Stables, private, one horse, including washing carriage	2.75	3.00
Stables, private, each additional horse	1.00	1.00
Stables, livery, etc., including carriage washing (minimum $7.25) per horse	1.00	1.00
Steam boilers, meter rates		
Saloons—large—meter rates		
Saloons—small	8.00–20.00	8.50–21.50
Stores and shops—meter rates or	3.50–14.00	3.75–14.00
Urinals, private (residences) self closing faucets	2.00	2.10
Urinals, public self-closing faucets	6.00	6.00
Wash basins self-closing faucets	2.00	2.10
Wash basins, each additional	1.00	1.00
Wash basins, cold water per basin	1.00	1.00
Water closets, private (residences) self-closing	2.85	2.85
Water closets, each additional	1.25	1.25
Water closets, public (business houses, etc.) 1st	7.25	7.40
Water closets, public, each additional	5.00	5.00
Season Rates.		
Sprinkling lawns with ⅛ inch nozzle four hours per day, 50 ft. front or less	3.60	3.75
Each additional foot	.08	.07

Streets, (corner lots measurement, on both fronts for sprinkling) in addition to lawn sprinkling per foot.....	$0.035	$0.035
Fountains to be used not more than six hours per day, for the season of six months as follows:		
1/16 inch jet	7.25	7.50
1/8 "	14.50	15.00
3/16 "	25.00	26.00
Soda fountains, meter rates or.....	7.00–18.00	7.25–18.50

Penalty, either schedule A or B: bills not paid within fifteen days of the date they are due shall be assessed at 5 per cent penalty.

IT IS FURTHER ORDERED, That the City of Sheboygan shall proceed immediately to carry out the installation of reinforcing mains recommended by Mr. C. B. Stewart and such other plant extensions as are necessary to furnish an adequate supply of wholesome water.

HAWKINS CREEK TELEPHONE COMPANY,
WESTFORD TELEPHONE COMPANY
vs.
BADGER TELEPHONE COMPANY.

Submitted Feb. 18, 1914. Decided June 29, 1914.

The complainants petition the Commission to reëstablish physical connection between their lines and those of respondent at Hub City, and at what was formerly known as Rego's switch in Vernon county. It appears that the lines of the three companies were connected at these points up to about one year ago, at which time a disagreement occurred over the amount which the complainants should pay to the respondent for switching fees, with the result that the respondent disconnected its lines from the switches in question. The respondent telephone company connects with the exchange of the Richland Telephone Company at Richland Center—the complainant companies with the exchange of the Cazenovia Telephone Company at Cazenovia. It appears that this connection had existed some twelve years, that Cazenovia was the nearest market for some of respondent's subscribers and also that a connection was desirable for a number of complainants' subscribers in the neighborhood of Hub City.

Held: It is the conclusion of the Commission that the physical connection asked is (1) required by public convenience and necessity, and that (2) it will not result in irreparable injury to the owner or other users, nor (3) in substantial detriment to the service. Under such a state of facts sec. 1797*m*—4 of the statutes imposes upon the Commission the power and duty of requiring physical connection, and it is therefore so ordered.

Respondent contends that there would not be sufficient amount of business to warrant the building of a through line from Richland Center to Hub City and that the reconnection of the present loaded lines would materially impair the service of subscribers already on the line.

Held: It is not deemed advisable at this time to require the installation of a through line from Richland Center to Hub City, or Hub City to Cazenovia. For the present it is believed that the loaded rural lines, with some changes, will handle the traffic in a fairly satisfactory manner. However, the lines of the Hawkins Creek Telephone Company appear to be considerably overloaded. It is ordered that the Hawkins Creek Telephone Company proceed to reduce the number of its subscribers per line to twelve or less. It is further ordered that the Hawkins Creek Telephone Company and the Badger Telephone Company provide sufficient compensation for the operator of the Pleasant Ridge switch to insure adequate service.

It appears that respondent company did not contribute anything to the support of the switches in question during the two years previ-

ous to the disconnection. The respondent proposes to buy the Hub City switch and maintain and operate that and the one at Pleasant Ridge (Rego's switch) for the same fees charged it for switching service by the Richland Telephone Company with whom it connects at Richland Center.

Held: No good reason is seen why respondent should not bear its proportionate part of the expense of operation, provided it is so arranged that it receives a proper compensation for the service rendered. It is ordered that each of the three companies, complainants and respondent, pay to the operator of the Hub City switch the sum of $1.00 per telephone per year for each telephone on its lines which are or may become, by virtue of the order, directly connected to the switch, and that the Badger Telephone Company and the Hawkins Creek Telephone Company share equally in the expense of the operation and maintenance of the Pleasant Ridge switch. The Hub City switch is owned jointly by complainants and no adequate reason is seen for a change of ownership. Respondent's contention as to the switching fees it should receive does not appear well taken, since the amounts and costs of the service rendered in the two cases are entirely different. The parties to the proceedings are ordered to put in a flat rate charge of $1.00 per year for subscribers electing unlimited service, or a toll charge of 5 cts. per call for subscribers not so electing. Provision is to be made for the record of toll calls, and the collection of charges, in the manner prescribed. Calls through the Hub City switch between lines owned by the complainants in this case are to be handled free. Lists of subscribers electing unlimited service are to be kept in the manner prescribed and are to be open to public inspection. All elections of unlimited service rates are to be made at least six months in advance, and prepayment for this service six months in advance may be required so long as no discrimination is practiced between subscribers. Companies not parties to the case may obtain the benefit of these connections and charges by complying with the conditions prescribed. The routing of calls between subscribers of respondent and complainant companies is to be through one of the switches in question, subject to the prescribed exceptions.

The above entitled matter involves the question of physical connection between the Hawkins Creek Telephone Company and the Westford Telephone Company, complainants, and the Badger Telephone Company, respondent, at Hub City and at what was formerly known as Rego's switch, in Vernon county. It appears that the lines of the three companies were connected at these points up to about one year ago at which time a disagreement occurred over the amount which the complainants should pay to the respondent for switching fees, with the result that the respondent disconnected its lines from the above mentioned switches. The complainants in this case are seeking to have these connections restored.

Upon the disconnection by the Badger Company of their lines from these switches the matter was brought to the attention of

the Commission and an effort was made to arrive at a settlement informally. This effort failed, however, and on December 13, 1913, a formal complaint was entered jointly by the Westford Telephone Company and the Hawkins Creek Telephone Company against the Badger Telephone Company in which the following points were set forth:

"1. That the Hawkins Creek and Westford telephone companies are both public utilities engaged in the business of furnishing telephone service, local and long distance, in the counties of Richland and Sauk; that the principal place of business of both is at Cazenovia.

"2. That the Badger Telephone Company is also a public utility corporation furnishing local and long distance telephone service in Richland and Vernon counties, but chiefly in Vernon county.

"3. That large numbers of subscribers of said companies greatly need and desire service with the other; that such a connection is desired for business and social purposes.

"4. That up to May 19, 1913, the said companies maintained physical connection of their lines at Hub City, Richland county, and had so maintained such physical connection for some twelve years prior to said date, and also Pleasant Ridge connections for some years.

"5. That on said May 19, 1913, the respondent company, without just cause or reason, severed the physical connection between the petitioner and the respondent and refuses and neglects to restore such interchange of service, and severed the Pleasant Ridge connections about June 15, 1913.

"6. The petitioners therefore pray that the aforesaid Badger Telephone Company be required to answer such charges and after investigation and hearing an order be entered directing physical connection between petitioners and respondent for local and toll purposes on such terms and conditions as the Commission may deem proper and just."

The above complaint, entered in duplicate, one for the Hawkins Creek Telephone Company and one for the Westford Telephone Company, was signed by some thirty subscribers of the two complaining companies and seven of the respondent's subscribers. These signers reside principally in the neighborhood of the dividing line between the complainants' and respondent's lines.

On February 18, 1914, hearing was held in the matter at the office of the Commission at Madison. *Michael Neary* appeared for the Hawkins Creek Telephone Company and *W. C. Scholl, Frank Bowen* and *R. E. Fogo* appeared for the Badger Tele-

phone Company. Owing to an error the Westford Telephone Company did not receive notice of the hearing and hence was not represented at the hearing. However, an agreement was entered into among the three companies concerned by which the Westford Telephone Company waived its notice of investigation and notice of hearing and agreed that its case might be passed upon and decided wholly upon the testimony and papers filed informally and those filed in the case of the *Hawkins Creek Tel. Co. v. Badger Tel. Co.* and that the final order of the Commission might cover all questions raised and considered in both of said proceedings.

Following the hearing an investigation was made of the situation by the Commission. This investigation, together with the testimony taken in the case, has brought out the following in addition to the facts already presented.

The Hawkins Creek Telephone Company is a farmers' company operating two lines. One of these extends from the Hub City switch to the exchange of the Cazenovia Telephone Company at Cazenovia, a distance of about twelve miles, and serves eighteen patrons. The other line extends from Pleasant Ridge (about seven miles east of Hub City) approximately seven miles to the Cazenovia Telephone Company's exchange at Cazenovia and serves fifteen patrons. On the Pleasant Ridge end of this line is what is known as the Rego switch by which this line was formerly connected to one of the rural lines of the Badger Telephone Company running to Richland Center. The lines of the Hawkins Creek Telephone Company are constructed largely of native poles which appear to be standing in good shape and for the most part are fairly well anchored. However, the wire appears to have been poorly put up, the splices not being properly made and the wire often not properly tied in. This company pays $12.50 per year toward the maintenance of the switch at Hub City. Its rates for service are $7.00 per year, the subscriber owning and maintaining his instrument.

The Westford Telephone Company also operates in the territory between Hub City and Cazenovia, its lines approximately paralleling but lying to the north of the Hawkins Creek lines. This company operates six lines on which there is a total of seventy-six phones. Two of these lines run from Hub City to the exchange of the Cazenovia Telephone Company at Cazenovia, one having thirteen phones and the other eleven. One line

with eleven patrons runs out of the Hub City switch and connects with no other exchange. The remaining three lines connect with the Germantown switch which is owned and maintained entirely by this company. These three lines form part of the means of communication between Cazenovia and Valton, Wonewoc, and La Valle. The Westford company pays $25 per year toward the operation of the Hub City switch. Its rate is $6 per year, with the understanding that the subscriber own and maintain his own instruments.

The Cazenovia Telephone Company, although not a party to this case, is nevertheless a party to the completion of all calls between Cazenovia and the Badger Telephone Company's lines and hence a brief outline of the ownership and extent of operation of this company will be given. The company is owned jointly by the Hawkins Creek Telephone Company and the Westford Telephone Company. It operates a total of thirty-three phones all located within the village of Cazenovia. A twenty-five-line call-bell switchboard with thirteen lines in use is installed in a private residence. Two of the lines terminating in this board are owned by the Hawkins Creek Telephone Company and two by the Westford Telephone Company. The two Westford lines and one Hawkins Creek line run to the Hub City switch. The other Hawkins Creek line runs to Pleasant Ridge. One of the remaining lines is owned by the People's Telephone Company of Limeridge. This loaded line, on which there are five telephones, connects with the Limeridge exchange and at present forms part of one of the connections between Cazenovia and Richland Center which have been used since the disconnection of the Badger Telephone Company's lines.

The Badger Telephone Company, according to its annual report for the year 1913, operates 253 telephones in the rural territory north and west of Richland Center. Most of this company's lines run into the exchange of the Richland Telephone Company at Richland Center where switching service is furnished at $3 per telephone per year. One of this company's lines on which there are twelve subscribers follows a main lead north from Richland Center through Hub City to Yuba and another follows this main lead north as far as Buck Creek, there branching off northeast and terminates near what was formerly known as Rego's switch on Pleasant Ridge. Previous to May, 1913,

these lines were connected through switches directly to the Hawkins Creek and Westford telephone companies' systems, one line at Hub City and the other at Rego's switch. In both of the above instances the loaded lines of the company thus connected were used to a certain extent to handle calls from Cazenovia to Richland Center and reverse and they also served the wants of the neighboring farms on the lines connected directly to these switches. During the month of May, 1913, the Badger Telephone Company served notice upon the Hawkins Creek and Westford companies that thereafter a switching charge of $3 per telephone per year would have to be paid by the two small companies to the Badger company if they desired to retain the connections at Hub City and at Rego's switch. Upon the refusal of the two companies to agree to the payment of this amount the Badger company disconnected their lines from both switches.

The complainants in this case contend that there is a great necessity for a connection between their subscribers and the subscribers of the Badger company and in support of this contention present, signed to the complaint, the names of some thirty-seven of the subscribers of both the complainants and respondent; that the connection is important because one of the Badger subscribers is a doctor living at Rock Ridge which is located about two miles south of Hub City and that it is very necessary that their subscribers have some connection with this doctor; that there is a certain amount of business to be transacted between Cazenovia and the subscribers of the Badger Telephone Company and the Richland Telephone Company and that the route at present used for these calls is very round-about and unsatisfactory; that before the Badger Telephone Company disconnected its line from the Hub City switch the calls from the Badger line to the complainants' lines were many more than the calls in the reverse direction; that the Badger Telephone Company did not contribute anything to the support of these switches during the two years previous to the disconnection of their lines from the complainants' lines; that the terms upon which the respondent proposes to settle this controversy, which are, namely, that the Badger company buy and maintain the switch at Hub City and that the complainants pay to the Badger company a switching fee of $3 per telephone per year, are unreasonable and that such a sum as this would amount to approx-

imately $171 and would be greatly in excess of the cost to the Badger Telephone Company of producing its share of the service; that the cost to produce the complainants' share of this service would be as much or more than the cost to the Badger company for producing their share and therefore the complainants should be entitled to as great a return from the service as the respondent.

The Badger Telephone Company asserts, on the other hand, that its one line now running to Hub City has twelve subscribers connected and contends that the connecting of this loaded line with one of the complainants' loaded lines and the using of the combination as a through line between Cazenovia and Richland Center would materially impair the service of the subscribers already on this line; that the amount of business which would go over such a line would not warrant the building of a through line from Richland Center to Hub City; that the reconnection of the two rural lines at Rego's switch would make very unsatisfactory service over the combination of lines, on which there would be a total of twenty-seven phones; that the respondent pays the Richland Center Telephone Company $3 per telephone per year for switching service and therefore it considers that if it maintains and operates the switches at Hub City and Rego's and furnishes switching service to the Hawkins Creek and Westford telephone companies it is entitled to $3 per year per telephone from every phone connected directly to those switches.

Before proceeding further it may be well to state the powers and duties of this Commission with reference to the physical connection between telephone companies.

The statute provides that, (sec. 1797*m*—4)

"1. * * * every utility for the conveyance of telephone messages shall permit a physical connection or connections to be made, and telephone service to be furnished, between any telephone system operated by it, and the telephone toll line operated by another such public utility, or between its toll lines and the telephone system of another such public utility or between its toll line and the toll line of another such public utility, or between its telephone system and the telephone system of another such public utility, whenever public convenience and necessity require such physical connection or connections, and such physical connection or connections will not result in irreparable injury to the owners or other users of the facilities of such public utilities, nor in any substantial detriment to the service to be

rendered by such public utilities. The term 'physical connection', as used in this section, shall mean such number of trunk lines or complete wire circuits and connections as may be required to furnish reasonably adequate telephone service between such public utilities.

"2. In case of failure to agree upon such use or the conditions or compensation for such use, or in case of failure to agree upon such physical connection or connections, or the terms and conditions upon which the same shall be made, any public utility or any person, association or corporation interested may apply to the commission, and if after investigation the commission shall ascertain that public convenience and necessity require such use or such physical connection or connections, and that * * * such use or such physical connection or connections would not result in irreparable injury to the owner or other users of such equipment or of the facilities of such public utilities, nor in any substantial detriment to the service to be rendered by such owner or such public utilities or other users of such equipment or facilities, it shall by order direct that such use be permitted and prescribe reasonable conditions and compensation for such joint use, and that such physical connection or connections be made, and determine how and within what time such connection or connections shall be made, and by whom the expense of making and maintaining such connection or connections shall be paid.

"3. Such use so ordered shall be permitted and such physical connection or connections so ordered shall be made, and such conditions and compensation so prescribed for such use and such terms and conditions, upon which such physical connection or connections shall be made, so determined, shall be the lawful conditions and compensation for such use, and the lawful terms and conditions upon which such physical connection or connections shall be made, to be observed, followed and paid, subject to recourse to the courts upon the complaint of any interested party, as provided in sections 1797*m*—64 to 1797*m*—73, inclusive, and such section so far as applicable shall apply to any section arising on such complaint so made. Any such order of the commission may be from time to time revised by the commission upon application of any interested party or upon its own motion."

It will be observed that before the duty of making a physical connection of telephone lines under the statute is imposed upon telephone utilities, and can be enforced in any case, it must appear:

1. That the connection is required by public convenience and necessity;

2. That it will not result in irreparable injury to the owner or other users of the facilities of such public utilities; and

3. That no substantial detriment to the service will result therefrom.

In the case at hand it is urged that there is great necessity for a connection between the lines mentioned, especially for the neighboring farmers living in the vicinity of Hub City and Pleasant Ridge. The geographical location of some of the respondent's subscribers indicates that their position is well taken in contending that although they are the respondent's subscribers their nearest market is Cazenovia and hence a workable connection to Cazenovia is very much needed. Also there appear to be quite a number of the complainants' subscribers residing in the neighborhood of Hub City who are so located that it is desirable for them to have a connection to Richland Center. It is the presumption that when the subscribers of both the complainants and respondent in this locality agreed to take phones it was with the understanding that the service which they were to secure would extend to both Cazenovia and Richland Center. It appears therefore that in the disconnection of the lines in question the respondent in this case has deprived its subscribers as well as some of the complainants' subscribers of part of the service which they had enjoyed for a number of years and had a right to expect when they installed their telephones. The fact that this connection existed for some twelve years and gave comparative satisfaction up until a year ago, at which time it was disconnected only because of a disagreement between the companies involved relative to the amounts which should be paid by one company to the other for the connection, indicates that there exists a need for the connection. The contention of the respondent that at present there exists adequate through connection between Cazenovia to Richland Center cannot be upheld. Both of the routes via Hillsboro and via Limeridge are round-about ways, overloaded lines and involve the use of the lines of companies not interested in the completion of these calls. Taking all of the facts into consideration, the conclusion seems inevitable that, although the traffic will in all probability not be great, there exists a public necessity requiring a reconnection of the lines of the complainants and the respondent in this case.

To show that these physical connections will work no irreparable injury to either party to this case would seem to require little proof. As before stated, the connections have existed for a number of years and were disconnected only because the com-

panies involved could not agree upon the terms for continuing the connection.

It may be contended that the requiring of this physical connection will impair the service of the subscribers on the line since if the present loaded rural lines of these companies are connected, through calls from Cazenovia to Richland Center will pass over these lines as well as calls to and from subscribers of both companies who are connected directly to the lines in question. There is no question but that the traffic over the lines will increase to some extent and that the service to the subscribers will be somewhat impaired thereby. It is stated, however, that the amount of traffic which came through the Hub City switch or the Rego switch and was handled at the Richland Center exchange before the lines were disconnected was very small. If this is true the service will not be impaired to a large extent. On the other hand, calls to or from subscribers on these connecting lines must be considered to be an advantage to these subscribers and it is believed that the advantage to them of such a connection will outweigh any impairment of service which they may suffer as a result of the through calls.

It will therefore be ordered that the Badger Telephone Company reconnect its lines to the Hub City switch of the Hawkins Creek and Westford telephone companies and to the Pleasant Ridge switch of the Hawkins Creek Telephone Company.

The statute above quoted also provides that this Commission shall fix the terms and the manner of the physical connections which it orders made.

Inasmuch as the through traffic which will go over these lines is admittedly a comparatively small amount it is not deemed advisable at this time to require the installation of a through line from Richland Center to Hub City or from Cazenovia to Hub City. When the connections of the rural lines, which will be ordered, have been made and it becomes possible to obtain more definite traffic data this Commission will, upon request, investigate further the matter of the installation of a through toll line. For the present it is believed that the loaded rural lines, with some changes, will handle the traffic in a fairly satisfactory manner.

The lines of the Hawkins Creek Telephone Company appear to be considerably overloaded, there being eighteen patrons on one line and fifteen on the other. It will be only in the interest of good service to the subscribers on the Hawkins Creek lines to

require that this number per line be reduced. This company will therefore be given a reasonable time in which to decrease the number of its subscribers per line to twelve or less.

The cost of the Pleasant Ridge switch amounts to very little and likewise its maintenance and operation will not be very high. It is believed that it will be fair to both companies, i. e. the Badger Telephone Company and the Hawkins Creek Telephone Company, if each pay one-half the expense of the operation and maintenance of this switch.

The Hub City switch is owned jointly by the Hawkins Creek Telephone Company and the Westford Telephone Company and for the past few years has been maintained entirely by these companies. We see no adequate reason now for advising a change of ownership of this switch. So far as we are able to learn it has been fairly well maintained although the operators have been poorly paid. The compensation which the operators of this switch have received has been approximately $37.50 per year. Comparison of this sum with compensations received by operators of similar switches in other parts of the state indicates that this compensation is quite inadequate if prompt and efficient operating service is required. For the past two years, it is stated, the Badger Telephone Company has contributed nothing toward the support of this switch. We see no good reason why this company should not bear its proportionate part of this expense of operation, providing it is so arranged that this company receive a proper compensation for this service. To meet the above situations we consider it fair that each company which at the present time has, or by virtue of this order will have, lines connected to the Hub City switch, pay to the operator of that switch $1 per year for each telephone on those of its lines which run into the switch.

The contention by the Badger Telephone Company that it should receive $3 per year per telephone for switching service from each of the complainants' telephones directly connected to either switch does not appear to be justified. The argument advanced in support of this position, that because the Badger company is required to pay $3 per telephone per year to the Richland Telephone Company for switching service is entitled to make the same charge to the Westford and Hawkins Creek Telephone Companies' subscribers does not take into consideration the fact that the amounts and costs of the service rendered in the two

cases are entirely different. In the one case the Richland Telephone Company furnishes a considerable amount of expensive equipment as well as efficient operating labor, while even if the Badger company owned the Hub City and Pleasant Ridge switches, which it does not, its investment per telephone in this equipment would be comparatively small, as would also be the operating expense per telephone. It appears in this case that the service rendered to the complainants by the respondent by means of the switches at Hub City and Pleasant Ridge cost very little, if any, more than the service which is rendered to the respondent by the complainants and that therefore all companies concerned should share in the upkeep of the service. However, it is not deemed equitable that every subscriber of all companies which are parties to this case should be required to contribute to the support of this service but rather only those who make use of the service. A subscriber so located that he finds it desirable to have telephone connection to two markets instead of one must expect to pay a reasonable amount for this extra service.

The situation has been studied carefully and from the data at hand it appears reasonable that a charge of $1 per year be made for each subscriber of the companies made parties to this case desiring unlimited service through the switches in question and that a 5 ct. toll charge be made upon all calls through the switches from those subscribers not electing the above flat charge; that the operators at the switches be held responsible for the collection of all toll charges incident to this order; that each of the three companies which have been made parties to this case keep the operators of the switches in question supplied with strictly up-to-date lists of those of its own subscribers and of the subscribers of connecting companies who elect the unlimited service rate and that these lists be open to public inspection; that companies not parties to this case which desire to give their subscribers the advantage of the above unlimited flat rate service through the switches in question be allowed to do so upon making application for this service to that party to this case with which they connect directly and upon payment to this company of the $1 per year flat rate for each of their subscribers electing this service; that the names of such subscribers be immediately sent to the operators of the switches in question; that companies not parties to this case who refuse to be responsible for the collection of the toll charges provided for in this order be refused

connection; that, except in cases of emergency, calls from the subscribers of the complainants to the subscribers of the respondent in this case, or reverse, be routed through one of the switches in question. (This provision is not to apply to subscribers desiring to use the toll line facilities of any company which furnishes such equipment and makes a toll charge therefor.)

IT IS THEREFORE ORDERED:

1. That the Badger Telephone Company, respondent in this case, reconnect its rural line running into Hub City to the Hub City switch of the complainants in this case and reëstablish the service to and from this switch over this line subject to such provisions as are hereinafter stipulated;

2. That the Badger Telephone Company reconnect its rural line which extends to Pleasant Ridge with the Hawkins Creek Telephone Company's rural line which extends into the same locality by means of a switch installed in some conveniently located farm house, and reëstablish the service to and from this switch over this rural line subject to such provisions as are hereinafter stipulated;

3. That all companies which are parties to these proceedings put into effect the following optional rates for service through these switches, which rates shall be in addition to the regular rates for service charged by these companies:

$1 per year for subscribers who elect to have unlimited service from respondent's lines to complainants' lines, or reverse, through either or both of the switches.

5 cts. per call toll charge for subscribers not electing the unlimited service at the above unlimited service rate.

Calls through the Hub City switch between lines owned by the complainants in this case shall be handled free.

4. That the operators of the switches shall be held responsible for an accurate record of all toll calls through their switch and be entitled to 2 cts. of the 5 ct. toll charge. The remaining 3 cts. of this toll charge shall go to the company originating the call, which company shall be responsible for the collection of the full amount of the toll charge;

5. That each of the three companies made parties to these proceedings shall keep the operators of the switches in question supplied with strictly up-to-date lists of those of its own subscribers and of connecting companies' subscribers who elect the unlimited service rate of $1 per year and that these lists shall be open to public inspection;

6. That each company made a party to this case shall require that all elections of the unlimited service rate shall be made at least six months in advance and may at their option also require payment for this service six months in advance so long as no discrimination between subscribers of the same company is practiced.

7. That companies which are not parties to this case desiring for their subscribers the advantages of the above unlimited service flat rate of $1 per telephone per year may obtain this rate by making application for same to that party to this case with which they connect directly and by paying the $1 charge per year for each subscriber electing to come under this rate. The names of such subscribers shall be sent immediately to the operators of the switches in question. Companies not parties to this case refusing to be responsible for the collection of the toll charges provided for in this order shall be refused connection by the operators of the switches;

8. That calls from the subscribers of the complainants to subscribers of the respondent in this case, or reverse, shall always be routed through one of the switches in question, except in cases of emergency or in case the subscriber wishes to make use of the toll line facilities of such companies as make regular toll charges for such calls;

9. That the Badger Telephone Company and the Hawkins Creek Telephone Company shall share equally in the expense of the operation and maintenance of the Pleasant Ridge switch and provide sufficient compensation to the operator of this switch to insure adequate service through the switch;

10. That each of the three companies to this case shall pay to the operator of the Hub City switch the sum of $1 per telephone per year for each telephone on its lines which are, or which by virtue of this order hereafter become, directly connected to this switch;

11. That the Hawkins Creek Telephone Company shall proceed to reduce the number of its subscribers per line to twelve or less.

Ten days is considered sufficient time within which to comply with all sections of this order except section 11. September 1, 1914, is deemed to be a reasonable date at which the changes ordered in section 11 shall be completed.

O. T. HUGHES ET AL.
vs.
WATERTOWN WATER WORKS.

Submitted Feb. 24, 1914. Decided June 29, 1914.

The petitioners allege that the rates of the municipal water works in Watertown, Wis., are discriminatory and preferential and improperly adjusted, and that the city has failed to put into effect a schedule suggested by the Commission. Petitioners ask that a schedule of rates for water service be established.

It appears that the recommendations of the Commission relating to the elimination of special rates and of joint billing of separate meters have been carried out. But objection is offered to the adoption of a policy requiring the city to pay for fire protection. It is contended the only proper charge for fire protection would be a charge for the water actually used, and attention is called to the fact that a considerable part of the property in the city is beyond the limits to which fire protection is furnished. It seems that special rates are now applied to certain schools and city buildings. No such rates are found in the rate schedule filed with the Commission.

Held: An analysis of the rate situation shows that the present distribution of expenses as between fire and general service is not a correct one. A further defect is found in the fact that the existing rates for general service are regressive. With respect to the charge for fire service, the Commission has repeatedly pointed out that this charge is determined principally by the amount of the investment apportionable to that branch of the service. Respondent's contention that a considerable part of the property in the city is beyond the fire protection limits, is not without merit. When conditions are normal, it is undoubtedly correct for cities to bear the cost of fire protection. However, in the present case it has seemed that the manner in which the fire protection cost should be borne should not be prescribed by the order. The respondent is ordered to discontinue its present rates for metered water and substitute therefor one of the three schedules proposed according to the amount it desires to assume toward bearing the burden of fire protection.

Held: The special rates which were applied to certain schools and city buildings without having been filed with the Commission are unjust, unreasonable, and result in injury. Under the provisions of the law no utility is permitted to make or give any undue preference or advantage to any particular consumer, or subject any consumer to any undue disadvantage in any respect by means of a less rate than that named in the published schedule.

Complaint in this case was filed November 28, 1913, by O. T. Hughes and other residents of Watertown, Wis., and is directed against the Watertown municipal water works. The petitioners allege that the rates of the municipal water works are discriminatory and preferential and improperly adjusted, and that the city has failed to put in effect a schedule suggested by this Commission. Petitioners ask that a schedule of rates be established for water service.

Hearing in this matter was held at Madison, February 24, 1914. Appearances were: For petitioners *O. T. Hughes;* for respondent, *H. G. Grube,* mayor, *Wm. F. Voss,* city clerk, and *Charles Mackay,* superintendent of the water works.

This case has arisen out of an informal investigation conducted by the Commission upon the request of certain members of the Board of Water Commissioners of the city of Watertown. An informal report was submitted by the Commission. As the informal report covered practically the same ground as should be covered by a formal investigation, it is included here, with the exception of a table showing consumers' bills under present and proposed rates, in which it appears that an error was made in computing minimum bills under present rates upon a quarterly basis, instead of upon an annual basis, in accordance with the practice followed in Watertown. Following is a portion of the report:

"The Commission has been requested to investigate the rate situation of the City Water Works Department of the city of Watertown and to recommend equitable rates for water.

"The water rates now in force are as follows:

"*Public Service:*

City sprinkling and other public service, meter rate 6 cts. per M gallons.

"*Commercial Service:*

"Meter rates.

"Minimum annual charge $5.00.

"When daily consumption is

100 to 300	gallons	per	1,000 gallons	$0.25
300 to 1,000	"	"		.20
1,000 to 6,000	"	"		.15
6,000 to 14,000	"	"		.12
14,000 to 20,000	"	"		.10
20,000 to 30,000	"	"		.08
30,000 to 50,000	"	"		.06½
Over 50,000	"	"		.06

"Flat Rates

Building purposes for 1,000 brick, wetting and making mortar	$0.08
" " Stone per cord	.08
" " cement blocks per cord	.08
" " 100 sq. yds. of plastering	.15
" " including walks and gutters, cement and concrete work per sq. yd	.02
Cisterns and tanks, exclusive of labor, 50 bbls. or less	1.00
Each additional 50 bbls	.50

"Payment of rates for building purposes to be made in advance. Bills due and payable quarterly on the first days of March, June, September and December in each year.

"Special rates in force but not filed with the Commission:

"Parochial school and colleges—10 cts. per M gallons:

"Public schools and city buildings—6 cts. per M gallons.

VALUATION.

"A valuation of the physical property of the utility has been made by the Commission. This valuation is of date June 30, 1912. The following table presents a summary of the appraisal, and shows a division of the total property as between domestic and industrial service and fire service.

TABLE I.

TENTATIVE VALUATION.

WATERTOWN MUNICIPAL WATER WORKS.

As of June 30, 1912.

	Total.		Apportioned to			
			Domestic and industrial.		Fire.	
	Cost new.	Present value.	Cost new.	Present value	Cost new.	Present value.

"The following table discloses the detailed operating statement for the year ended June 30, 1912, as reported to the Commission by the City Water Department.

TABLE III.

WATERTOWN MUNICIPAL WATER WORKS.

OPERATING STATEMENT.

For the year ended June 30, 1912.

Operating Revenues	$21,457.71
Pumping:	
Superintendent	$1,108.30
Pump labor	2,295.00
Steam generated	3,920.03
Lubricants	246.25
Misc. pumping station sups. & exps	29.35
Maint. steam power pumping	30.90
Maint. fixtures and grounds	49.04
Total	$7,678.87

Distribution:	
Meter and fittings dept. sups. and exps	$899.25
Maint. reservoirs, standpipes, etc	152.34
Maint. distribution mains	185.51
Maint. service	833.59
Maint. hydrants	8.50
Maint. meters	44.73
Total	$2,123.92
General:	
Salaries general officers	$305.00
" " office clerks	485.00
Misc. " " supplies and expenses	137.86
" " expenses	365.20
Total	$1,323.06
Undistributed:	
For drawing plans	$150.00
Insurance	80.00
Stationery and printing	20.75
Total	$260.75
Total expenses	$11,383.60
Net income	$10,071.11

"Total operating revenues do not include any earnings from fire service, the water works fund receiving no income or credit for hydrant rentals or for water used for flushing sewers, automatic flush tanks, fountains, etc.

"For purposes of ascertaining the equitableness of the rates a number of changes must be made in the income account statement previously shown. To the total direct expenses $200 for commercial expenses has been added. An allowance for taxes (the same as if it were a private plant), and depreciation and interest amounting to $11,807.77 has been included in the expenses of operation. The total of the expenses as used in our computations then was as follows:

Pumping	$7,678.87
Distribution	2,123.92
Commercial	200.00
Total direct	$10,002.79
General	1,323.06
Undistributed	260.75
Total above	$11,586.60
Taxes, depreciation and interest	11,807.77
Grand total	$23,394.37

"It might be said here that the city has taken no steps to preserve the integrity of the investment. No depreciation allow-

ance has been made and no depreciation reserve maintained to take care of the depreciation of the physical property representing its capital investment.

"Each of the various departments of the service should bear its proper burden of expense. The total operating expenses of the plant must be distributed between that class which depends on the output of water and varies with this output, and that class which is independent of this output and which does not vary with it. These expenses in turn must be apportioned between the commercial and industrial service and the fire service.

"The Commission has thoroughly discussed these costs in numerous decisions and they will not be gone into in detail at this time. The total operating expenses, excluding taxes, depreciation and interest, amounting to $11,586.60 were found to be apportionable as follows:

Capacity	$4,373.35
Output	5,153.67
Direct to fire	10.08
Direct to general	2,049.50
Total	$11,586.60

"It is necessary to make a separation of the capacity and output costs chargeable to private consumers and to the city of Watertown in order to get at the costs chargeable to each. In Table I is shown the division between domestic and industrial service and fire service. The domestic and industrial service includes all city uses except for fire protection. From this table it is seen that about 52.5 per cent of the cost new and 52.8 per cent of the present value of the water works plant are charged against the domestic and industrial service, while 47.5 per cent of the cost new and 47.2 per cent of the present value are charged against fire service.

"It is necessary before an apportionment of the operating expenses as between classes of service can be made, to know the demands of the different services and the amount of water sold or delivered to each. It appears in this case that the fire service is responsible for 63 per cent and the domestic and industrial service 37 per cent of the total demand. From the report of the utility to the Commission for the year ended June 30, 1912, it is found that at the end of the year there were 1,117 commercial, 36 industrial and 13 public consumers, or a total of 1,166, excluding hydrants, all metered with the exception of 5 public fountains and troughs. An examination of the consumer records at Watertown indicates that all the consumers are metered with the exception of four barns, which are on a flat rate basis. The distribution of consumers otherwise is about as indicated above. The exact number of hydrants now connected is not known, but at the end of 1912 it appears some 179 were connected to the mains.

"A tabulation was made of the water meter register for the calendar year 1911 showing the distribution of the metered water sold over various groups. These data are shown in the following table:

"TABLE IV.

"WATER CONSUMER DATA.

3rd "	5,550	25,000	88,420	2,889,760	3,008,730
4th "	6,000	25,900	92,170	2,753,670	2,877,740
Total	23,010	94,880	355,790	12,439,830	12,913,510
	.18%	.73%	2.76%	96.33%	100%

"The total pumpage for the year ended June 30, 1912, was reported to be 304,065,938 gallons. The consumption of this water was reported to be as follows:

Commercial sales	177,850,000	gals.
Industrial sales	22,560,000	"
Public schools, city hall, etc	9,470,000	"
Total above	209,880,000	"
Sprinkling streets	10,835,000	"
Total consumed	220,715,000	"
Misc. sales, uses and lost and unaccounted for	83,350,938	"
Total pumped	304,065,938	"

"Our analysis of the consumer data submitted as analyzed and shown in Table IV varies materially from the above figures. The 22,043,274 cubic feet, or 165,324,555 gallons, indicated sold to metered consumers for the calendar year, falls short by 44,555,445 gallons of equaling the consumption of the same consumers for the fiscal year. No explanation of this discrepancy has been advanced by the utility. We have carefully checked all the records of consumption which were submitted, but have been unable to discover the cause for this variation.

COST OF SERVICE.

An apportionment of the output and capacity expenses was made between the domestic and industrial service and the fire service. It was found that of the total demands of the two classes of water service, the fire service demand was about 63 per cent and the demand of all other services about 37 per cent. Of the total water used, it was estimated that the fire service was responsible for only about 2 per cent of the amount, so that the fire service was charged with 2 per cent of the output expenses.

"Taxes, interest and depreciation amounted in all to $11,807.77. Divided between fire and general service upon the basis of the apportionment of the property, the taxes, interest and depreciation chargeable to fire service amounted to $5,596.88 and to general service $6,210.89.

"The following table shows the results of the apportionment of all expenses of operation, excepting taxes, depreciation and interest.

	Total.	Capacity.	Output.	Consumer.
Fire service	$2,868 37	$2,755 21	$103 08	$10 08
General service	8,718 23	1,618 14	5,050 59	2,049 50
Total	$11,586 60	$4,373 35	$5,153 67	$2,059 58

"The total cost of each class of service is made up as follows:

	Expenses of operation.	Taxes, depreciation and interest.	Total.
Fire service	$2,868 37	$5,596 88	$8,465 25
General service	8,718 23	6,210 89	14,929 12
Total	$11,586 60	$11,807 77	$23,394 37

"The total cost of fire service, towards which the city has paid nothing, amounts to $8,465.25. The total cost of general service, amounting to $14,929.12, is $6,528.59 less than the revenue from this service. The total expenses of general service, including taxes, depreciation and interest, are divided among capacity, output, and consumer, as follows:

Capacity	$3,959.65
Output	7,820.64
Consumer	3,148.83
Total	$14,929.12

"Consumer expenses need not be further subdivided between those with which all general consumers are concerned and those which are due to metered users only, as it appears that there are only four small consumers on a flat rate basis.

"The facts outlined above clearly indicate that the present distribution of the cost of water service is not an equitable one. The city is not bearing its proper share of the cost. Each class should pay that portion of the total expense for which it is responsible, in order for the water rates to be just for all classes of consumers and service. The general service is paying a total somewhat above the cost of that service, although the excess obtained from general service does not equal the deficiency from the fire service.

"Instead of treating the interest, depreciation and taxes on meters as a lump sum, we have excluded the total amount of these expenses from the total expenses of general service as determined above, and made an allowance for each meter of the different sizes, to provide for these items. With these expenses taken from the total cost of the service shown above, the distribution of that cost over the various classes of expenses is as follows:

Capacity	$3,959.65
Output	7,820.64
Consumer	2,049.50
	$13,829.79

"Consumer expenses may be divided over the average number of consumers which will be the average number of metered consumers for the year under consideration, which is 1,155.

With taxes, depreciation and interest on meters based upon the values of the various sizes of meters the consumer expenses are as shown below:

TABLE V.

Size of meter.	Taxes, depreciation & interest 10%.	Consumer expenses.	Total expenses.
⅝ inch	$0 90	$1 76	$2 66
¾ "	1 25	1 76	3 01
1 "	1 70	1 76	3 46
1½ "	3 50	1 76	5 26
2 "	5 40	1 76	7 16
4 "	15 00	1 76	16 76
6 "	32 00	1 76	33 76

"With the rate for general service made in the form of a service charge and a charge for water used, the service charge would meet the consumer expenses and a part of the capacity expenses. The remainder of the capacity expenses and the output expenses would be met by the charge for water.

"With consumer expenses as shown above, the service charge should be about as shown in the following table. The table also indicates the amount of capacity expenses which each size of meter would be assessed by the service charge.

TABLE VI.

Size meter.	Consumer expenses.	Annual service charge.	Capacity costs met by service charge.
⅝ inch	$2 66	$3 00	$0 34
¾ "	3 01	4 00	0 99
1 "	3 46	6 00	2 54
1½ "	5 26	8 00	2 74
2 "	7 16	12 00	4 84
4 "	16 76	32 00	15 24
6 "	33 76	60 00	26 24

"In estimating what the revenue would be under a meter rate as outlined in this report, the following table has been prepared to show the total of capacity expenses which would be provided by the service charge as outlined above:

TABLE VII.

Size	Number.	Capacity expenses per meter met by service charge.	Total capacity expense met by service charge.
⅝ inch	1,109	$0 34	$377 06

2 "	5	4 84	24 20
4 "	1	15 24	15 24
6 "	1	26 24	26 24
Total	1,155		$512 20

"With the total capacity and output expenses amounting to $11,780.29 the total revenue to be obtained from the charge for water would be $11,268.09. With a consumption of 166 million gallons per year this is equivalent to an average rate of 7.09 cts. per 1,000 gallons or 5.3 cts. per 100 cubic feet.

"As stated previously, the distribution of sales of water as shown by an analysis of the water consumer statistics was as follows:

"In the 1st 1,000 cu. ft. per quarter	14.1%	3,101,266 cu. ft.
" next 4,000 " "	10.2%	2,249,178 "
" " 20,000 " "	10.0%	2,201,060 "
Excess	65.7%	14,491,770 "
	100.0%	22,043,274 "

"Revenue from the charge for water under rates as outlined in the following summary would be as shown below:

3,101,266	cu. ft. at 10 cts.	$3,101.30
2,249,178	" " 7 "	1,574.44
2,201,060	" " 5 "	1,100.50
14,491,770	" " 4 "	5,796.72
22,043,274		$11,572.96

"The total of output expenses and of that part of capacity expenses which should be met by the charge for water, as determined above, was $11,268.09. The service charge as previously outlined provides for a part of the capacity expenses and consumer expenses, the total revenue from the service charge being about $3,687. The rates as suggested, it appears, would provide a probable revenue of $15,259.96 to meet expenses amounting to $14,929.12.

"The foregoing analysis of the rate situation in Watertown shows that the present distribution of the expenses as between fire and general service is not a correct one. The existing rates for general service are also defective, because the rates are re-

gressive. That is, under the existing schedule it is possible to use a larger amount of water for a smaller payment than a less amount.

"It has been thought advisable in this case to work out an alternate rate with a provision for a minimum bill. From the consumer costs and calculations based upon the cost of meters actually used it is possible to arrive at a minimum charge which will fairly measure the costs that must be provided for in this minimum charge. As practically every consumer paying the minimum bill has used considerable water during the period and hence incurred some output expenses, the minimum bill to be charged must include an allowance for this consumption. If this is not done all water used would really be received free of charge. By computing taxes, depreciation and interest on the value of the meter, adding thereto proper maintenance charges and a fair allowance for water used, a minimum charge can be determined with considerable accuracy that will guarantee to the company its consumer expenses. The minimum charge, however, cannot be fixed regardless of the size of meters or the consumer's demand, as that would ignore the fact that the size of the meter determines whether the investment is large or small. Discrimination results, if the minimum charge is made an average amount, against the consumers who use the small sizes.

"To design a schedule of water rates for Watertown which would correct the present inequalities and do away with the present discriminatory features and at the same time not disturb the situation more than appears absolutely necessary has been difficult.

"The schedule designated No. 2 appears somewhat better adapted to conditions as found in Watertown than schedule No. 1. The latter will cause a slight increase to those consumers using between 500 and 875 cubic feet per quarter, but a substantial decrease to all consumers using amounts other than between the limits indicated. A table is appended showing comparisons of the quarterly bills under the old rate and under the two suggested rates. The regressive features of the old rate are indicated plainly in column two.

"A discount provision has been included in the rates suggested, but the water department can either retain or eliminate this feature as they think best. In case the discount provision is retained a period of ten to twenty days should be allowed in which the discount is applicable.

"The attention of the City Water Department of Watertown is called to sec. 1797*m*—33, ch. 499, laws of 1907, as follows:

"'It shall be unlawful for any public utility to charge, demand, collect or receive a greater or less compensation for any service performed by it within the state or for any service in connection therewith than is specified in such printed schedules including schedule of joint rates, as may at the time be in force, or to demand, collect or receive any rate, toll or charge not specified in such schedule. The rates, tolls and charges named therein shall be the lawful rates, tolls and charges until the same are changed as provided in this act.'

"Such special rates as are now applied to certain schools and city buildings are unjust and unreasonable, and result in injury. The rate schedule filed with the Commission does not show such special rates. Under the provisions of the law no utility should make or give any undue preference or advantage to any particular consumer as has been done in Watertown or subject any consumer to any undue disadvantage in any respect, by means of a less rate than that named in the published schedule. Any consumer who knowingly receives any concession such as receiving the service at a less rate is liable to a fine. The schedules suggested in this report will, if adopted, eliminate not only the discriminatory rates but the regressive features of the old schedule.

"The computation of probable revenue under each suggested rate schedule is shown below:

COMPUTATION OF PROBABLE REVENUE.

COMMERCIAL SERVICE.

	No. 1. Service charge. No. 2, Minimum bill.	Output charge.	Total revenue.
1	$3,687 00	$11,572 96	$15,259 96
2	6,011 00	9,279 01	15,290 01

TOTAL REVENUE.

	No. 1.	No. 2.
General service	$15,259 96	$15,290 01
Fire protection charge to city	8,500 00	8,500 00
Total	$23,759 96	$23,790 01

"In view of the facts as discussed herein, we feel that an annual charge for fire service protection should be paid, and should amount to a figure closely approximating the cost determined herein, or about $8,500. It is thought that this amount will also be sufficient to take care of the street sprinkling service. The rate for commercial metered consumers should be one of the two rates suggested, this to apply to schools and city buildings also."

It is understood that the recommendations of the Commission relating to the elimination of special rates and of joint billing of separate meters have been carried out. Objection has, however, been raised to the adoption of the other changes recommended. Objection is offered to the adoption of a policy of requiring the city to pay for fire protection. City officials seem to be of the opinion that the only charge which could properly be made for fire protection is a charge for the amount of water actually used for fighting fires, which would amount to only a few dollars per year. It has been repeatedly pointed out in decisions of the Commission that the charge to be made for fire protection is determined principally by the amount of the investment apportionable to fire service and by the fixed expenses which are determined by the demands which the plant must meet or by the investment. This was also explained verbally to the city's representatives at the time of the hearing.

An objection offered by the city's representatives to the policy of having the city pay for fire protection and so relieve the water users of this expense, is that a considerable part of the property in the city is beyond the limits to which fire protection is furnished and that a policy of charging the city for fire protection would throw a part of the burden of such protection upon taxpayers who receive no benefit from the service. The conclusion seems to be that the city officials believe that the distribution of the burden of fire protection costs among the actual water users in accordance with the distribution of the costs of general service is more equitable than would be its distribution among the taxpayers as a part of the tax levy, because many of the taxpayers are not directly benefited. This view of the matter is not without merit. Probably the best basis for distributing the cost of fire protection, if such a basis could actually be applied, would be one by which the cost would be distributed, within the protected area, according to the service furnished. In Watertown it appears that neither of the two bases available will remove all grounds for objection, but it will probably be found that the city should assume at least a part of the burden of fire protection, and, to a corresponding degree, decrease the charges to general consumers.

Where conditions are normal it is undoubtedly correct for cities to bear the cost of fire protection. Such protection constitutes a service rendered to the city for which a portion of the investment in the utility, and usually a large portion, together with a portion of the operating expenses, has been incurred. The city, as related to this branch of the service, is a consumer. The fact that the city, in paying for the service, is unable to distribute the burden among the taxpayers according to the benefits conferred, does not alter the fact that the city, as distinct from the general users of water, should be responsible for the payment of the costs incurred. In this case, however, it has seemed that the manner in which this fire protection cost should be borne should not be prescribed by order. Rate schedules will be worked out based on three assumptions:

1. That the city will pay the full cost of fire protection.
2. That the city will pay nothing for fire protection.
3. That the city will assume one-half of the burden of fire protection costs.

The schedules outlined in the informal report submitted by the Commission were based upon the assumption that the city would

pay for fire protection in accordance with the cost of the service. As shown in that report, two schedules were proposed, one of which contained a "service charge" and one of which was a "minimum bill" schedule. From a further study of the situation in Watertown it appears that a schedule of the latter type will be better adapted to the local conditions than one containing the "service charge."

In the schedule as suggested by the Commission the minimum charge was applied quarterly. The practice of the city has been to apply this charge on an annual basis so that, during the last quarter, consumers were required to pay enough to make a total of $5.00 for the year.

At the hearing, representatives of the city attempted to show that the rate as fixed by the Commission was higher than that actually in use at Watertown. Apparently they failed to comprehend the fallacy of the method which they used, in that no comparison of annual charges was made. In all cases comparison was made of quarterly bills for quarters in which no minimum had been applied by the city. If comparisons had been made for quarters in which the city applied the minimum it would have been found that, for such quarters, the city's rate was much higher than the one recommended by the Commission. A few instances taken from the consumers' register of the utility will illustrate:

Consumer's number.	Cubic feet used.				Amount at city rate.					Bill under suggested rate				
	Quarter.				Quarter.				Total for year.	Quarter.				Total for year.
	1	2	3	4	1	2	3	4		1	2	3	4	
392	500	480	620	430	$0.94	$0.90	$1.16	$2.00	$5.00	$1.25	$1.25	$1.25	$1.25	$5.00
400	350	310	780	460	.66	.58	1.46	2.30	5.00	1.25	1.25	1.25	1.25	5.00
401	250	470	590	350	.47	.88	1.11	2.54	5.00	1.25	1.25	1.25	1.25	5.00
402	380	290	510	410	.71	.54	.96	2.79	5.00	1.25	1.25	1.25	1.25	5.00
407	250	200	550	270	.47	.38	1.03	3.12	5.00	1.25	1.25	1.25	1.25	5.00
900	2,690	2,400	2,850	1,480	5.04	4.50	5.34	2.78	17.66	2.60	2.37	2.73	1.63	9.33
989	3,420	3,090	4,110	3,600	6.41	5.79	6.17	6.75	25.12	3.19	2.92	3.74	3.33	13.18
782	1,490	1,700	2,000	5,070	2.79	3.19	3.75	7.61	17.34	1.64	1.81	2.05	4.49	9.99
1,032	700	1,090	1,160	940	1.31	2.04	2.18	1.76	7.29	1.25	1.32	1.38	1.25	5.20
759	830	1,090	1,030	950	1.56	2.04	1.93	1.78	7.31	1.25	1.32	1.27	1.25	5.09
301	770	1,710	1,100	900	1.44	3.21	2.06	1.69	8.40	1.25	1.82	1.33	1.25	5.65
1,096	790	890	1,700	970	1.48	1.67	3.19	1.82	8.16	1.25	1.25	1.81	1.25	5.56
535	5,510	5,600	6,380	6,340	8.26	8.40	9.57	9.51	35.74	4.76	4.81	5.28	5.25	20.10
521	10,940	4,120	12,000	16,810	16.41	6.18	18.00	18.91	59.50	8.01	3.75	8.65	11.54	31.95
.....	255,300	170,000	8,880	26,100	158.18	127.50	13.32	29.36	323.36	114.33	78.08	6.78	16.92	216.11
2	31,800	32,900	26,300	23,000	35.77	37.01	29.59	25.88	128.25	19.34	19.81	17.00	15.25	71.40

All of the foregoing have been computed as they would be with 5/8" meters. A few of the larger consumers probably have larger meters which would make their bills under the suggested rates somewhat larger than those shown, but in practically all cases the rates recommended by the Commission are as low or lower than the rates in force. The only exception would come in the case of consumers using moderate amounts of water but using the greater part of it during the last quarter of the year. For example, if a consumer used 100 cubic feet of water during each of the first three quarters and 2,000 cubic feet during the fourth quarter his total charge for the year under the city's rate would be $5.00. Under the suggested rate, with the minimum charge applied quarterly, the total annual charge would be $5.80. If the minimum charge in the suggested rate were applied annually the total charge under both rates would be the same. It is doubtful whether, even with the minimum charge applied quarterly, more than a very few charges would be increased, and if it were to be applied annually, not a single increase would result, except in such extremely rare cases as might arise where consumers having very large meters would use such small quantities of water that the city's present minimum would not reimburse the city for the fixed charges on the investment in such large meters. The suggested rate does not reduce the minimum charge but it increases the amount of water which may be used under the minimum from 20,000 gallons per year to 30,000 gallons.

Any attempt to make it appear that the suggested rate constituted a general increase is misleading and fails to state the facts correctly. For by far the greater number of users the suggested rate either reduced the charges to consumers or increased the amount of water which could be used without changing the price.

As stated above, the schedule outlined was fixed upon the assumption that the city should pay the full costs of fire protection. It should also be stated that the schedule was designed merely as a recommendation and the Commission did not have before it all the facts which are before it in the present proceeding. In view of these conditions it is deemed best to compute three schedules, as already stated, having in view all the facts now before the Commission. In this connection the argument that the rates at Watertown are already very low should be noted. It is true that the rates are somewhat lower than in many

other cities of the size of Watertown. This is made possible by an unusually good development of the business and particularly by the fact that a great deal of water is sold to the railroads, which, although sold at comparatively low rates, yields enough more than the actual added cost of furnishing the service to enable the city to furnish water to general users at prices materially lower than would be possible if the large consumers were not supplied. Objection is sometimes offered to the policy of supplying large consumers at low rates. Watertown furnishes a clear illustration of the advantages of such a policy. There is no question that if four or five of the largest consumers should discontinue the use of water from the city system the utility would be unable to meet its operating expenses and fixed charges. If water were supplied to all users at a uniform rate the very large users would doubtless find it cheaper to furnish their own supplies than to buy water from the city. The nature of the waterworks business is such that a few very large users, supplied at what may appear to be very low rates, sometimes enable general users to secure rates much more advantageous than would otherwise be possible. An illustration of this is the rate fixed by the Commission in the *Sparta Case*, 12 W. R. C. R., 532–546.

In addition to the information contained in the Commission's informal report, quoted above, we now have the report of the utility for the fiscal year ended June 30, 1913. Following is a statement of the income account as shown in that report:

INCOME ACCOUNT—WATERTOWN WATER WORKS.

Year ended June 30, 1913.

OPERATING REVENUES:		
Earnings from commercial sales	$17,920.47	
Earnings from industrial sales	1,229.40	
Earnings from street sprinkling	675.45	
Earnings from municipal departments	737.13	
Miscellaneous operating earnings	186.36	
Total operating revenues		$20,748.81
OPERATING EXPENSES:		
Pumping	$8,071.09	
Distribution	2,140.24	
Commercial	160.00	
General	1,168.69	
Undistributed	244.62	
Total of above items	$11,784.64	
Depreciation	1,500.00	
Total operating expenses		13,284.64
Net operating revenue		$7,464.17

In the Commission's informal report the reasonable allowance for interest, taxes, and depreciation was fixed at $11,807.77. In round numbers, $12,000 should be a sufficient allowance for these items at the present time. The net operating revenue, together with the amount provided for depreciation during the past year, amounted to $8,964.17. In other words, the actual revenue of the utility fell $3,035.83 short of meeting the operating expenses, providing for depreciation, for the interest and for the amount which the city should be entitled to receive from the utility in lieu of taxes. If the utility had been given credit for fire protection service this apparent deficit would have been more than wiped out.

A revision of the general rate schedule need not affect the earnings from street sprinkling or the miscellaneous operating revenues of the utility. If the city were to pay for fire protection in accordance with the cost as shown in the informal report, the revenue from this source, together with revenue from street sprinkling and miscellaneous operating revenues, would amount to $9,361.81, which would leave $14,422.83, on the basis of the 1913 business, to be obtained from general service, or slightly less than the amount shown in the informal report. If the city were to pay $4,500 per year for fire protection, which is only slightly more than half of the cost of that service, the amount to be secured from commercial and industrial service and from municipal departments would be $18,422.83, as compared with the actual revenue from these sources in 1913 of $19,887. In the relations between the city and the utility are to remain as they have been during the past year the city will virtually be paying $3,035.83 for fire protection, even though no such payment is actually recorded, because of the fact that the utility has failed by that amount to earn enough from its various sources of revenue to meet all expenses which should properly be met by the utility, as distinct from the city.

Following are three schedules of rates designed to fit the different conditions which may arise, depending upon the attitude of the city toward assuming the burden of fire protection:

SCHEDULE I.

If the city will bear the entire cost of the service, about $8,500, or approximately $5,500 above the cost actually borne by it, because of the fact that the earnings of the plant fell about $3,000

short of meeting all expenses properly chargeable against the utility, the following rate schedule will meet the needs:

Minimum bills—quarterly.

5/8″ meters	$1.15
3/4″ meters	1.50
1″ meters	2.00
1 1/2″ meters	2.50
2″ meters	4.00
4″ meters	9.00
6″ meters	16.00

Charges for water:

First 1000 cubic feet per quarter to come under the minimum for all sizes of meters, minimum to be applied quarterly.

That portion of the quarterly consumption between 1,000 and 5,000 cubic feet, 7 cts. per 100 cubic feet.

That portion of the quarterly consumption between 5,000 and 25,000 cubic feet, 5 cts. per 100 cubic feet.

Excess, 4 cts. per 100 cubic feet.

This schedule, on the basis of the analysis we have made of the statistics of consumption will yield about $14,373.19 per year.

SCHEDULE II.

If the city will assume a part of the cost of fire protection, about $2,000 more than at present, the following schedule will meet the needs:

Minimum bills, per quarter—5/8″ meter—$1.25. Other minimum charges as in Schedule I. All minimum charges to be applied quarterly.

Charges for water:

First 750 cubic feet per quarter to come under the minimum for all sizes of meters.

That portion of the quarterly consumption between 750 cubic feet and 5,000 cubic feet, 12 cts. per 100 cubic feet.

That portion of the quarterly consumption between 5,000 cubic feet and 25,000 cubic feet, 10 cts. per 100 cubic feet.

That portion of the quarterly consumption between 25,000 cubic feet and 50,000 cubic feet, 8 cts. per 100 cubic feet.

Excess, 4 1/4 cts. per 100 cubic feet.

The revenue from this schedule would be approximately $17,500 per year.

SCHEDULE III.

A third schedule has been prepared for use in case the city should choose to meet still less of the cost of fire protection than contemplated in Schedule II.

This schedule is as follows:

Minimum charges as in Schedule II, all to be applied quarterly.

Charges for water:

First 750 cubic feet per quarter to come under the minimum for all sizes of meters.

That portion of the quarterly consumption between 750 cubic feet and 5,000 cubic feet, 16 cts. per 100 cubic feet.

That portion of the quarterly consumption between 5,000 cubic feet and 25,000 cubic feet, 12 cts. per 100 cubic feet.

That portion of the quarterly consumption between 25,000 cubic feet and 50,000 cubic feet, 9 cts. per 100 cubic feet.

Excess, 4¼ cents per 100 cubic feet.

This schedule would yield a revenue of about $19,000 per year.

In Schedule III some consumers would pay slightly more than at present because the regressive feature of the present schedule enables consumers to use a larger amount of water for a smaller payment than is required for a smaller consumption. The proposed schedule eliminates the discriminatory feature of the present rate and would affect a slight general reduction.

Under all the circumstances it seems that the respondent should be permitted to adopt one of the three schedules, and that respondent should be permitted to make its own choice as to which of the three should be adopted.

IT IS THEREFORE ORDERED, That the respondent, the city of Watertown, discontinue its present schedule of rates for metered water and substitute therefor one of the three schedules shown above under the symbols, I, II, III. This action shall be taken within a time which will make the new rates apply to all water used after July 1, 1914.

OSCAR A. ALTER ET AL.

vs.

BOARD OF WATER COMMISSIONERS OF THE CITY OF MANITOWOC.

H. L. MARKHAM ET AL.

vs.

CITY OF MANITOWOC.

Decided June 30, 1914.

Respondent petitioned the Commission to suspend its order in the case of *Alter et al. v. City of Manitowoc*, 1912, 10 W. R. C. R. 387. In that case action relating to the readjustment of rates was postponed until such time as the normal operating conditions for the municipally owned water plant could be determined. No change was ordered in the respondent's policy of requiring property owners to pay for the installation of services, but respondent was ordered to furnish meters for certain classes of consumers and to acquire meters then in use, or pay a reasonable rental.

An order requiring the utility to furnish meters hereafter installed and to purchase or rent from the consumers all meters installed at the expense of the consumers, was opposed on a variety of grounds. Among others, respondent urged that consumers should own those parts of the equipment of which they have continuous or sole possession, and which are installed and used for their individual use; that the numbers of meters injured by freezing would probably be increased if the city were to furnish the meters; and that under such an order a few consumers would have the burden of the expense incurred by furnishing meters generally. Respondent further contended that the rule in Milwaukee, where there is a uniformly low rate and no minimum charge, should be applied in Manitowoc. The rule in question requires consumers to furnish meters. It appears from consideration of the last annual report to the Commission by the Manitowoc water department, and from study of the cost of owning or paying rental for meters that the question of expense is not a valid objection to the Commission's order. It further appears that the rate schedule is so adjusted as to place upon each consumer to a considerable extent the burden of fixed charges.

Held: Whether service pipes from the main to the curb line should be furnished by the utility or by the consumer was discussed in the order in question. The conclusion was reached that in the end it would make no substantial difference in the rates to be charged. No reason is seen under the circumstances of this case for changing the order in this respect except to provide that the charge for services to the curb shall be uniform. It is accordingly ordered that the charge for installing service pipes from main to curb shall be uniform for each size of service piping regardless of the distance from main to curb.

Held: As regards the question of ownership, or rentals for meters, the objections urged are not valid under the circumstances in the present case. A provision in the Public Utilities Law states that meters must be owned by the utility unless an exemption is granted by the Railroad Commission. The law does not specifically state under what conditions such exemptions shall be granted, but it is to be presumed that the utility should not be required to furnish meters whenever, because of local conditions, this would cause an unreasonable burden to the utility. No such local conditions are found in the present case. It is therefore ordered that the order in question be affirmed, except that the city may exercise its option as to furnishing meters free of charge or of paying a rental therefor, both with regard to meters already installed, and to those to be installed thereafter. Rentals are to be as stated in the body of the decision.

REHEARING.

This proceeding arises from the decision in the cases brought by H. L. Markham, Oscar A. Alter and other citizens of Manitowoc to compel the furnishing of meters and of service pipes from the main to the curb by the city of Manitowoc. In its decision in these cases, rendered August 27, 1912, (10 W. R. C. R. 387) the Commission dismissed that portion of the complaints which related to the furnishing of service pipes between the main and the curb line. With regard to the meters the Commission ordered the city of Manitowoc to furnish meters for all consumers having sewer or cesspool connections without cost to the consumer, and either to acquire the meters in use or pay the consumers a reasonable rental for the meters furnished by the consumers. After some time it was learned that the city of Manitowoc had not complied with the order of the Commission relating to the meters. A letter was written to the mayor of the city of Manitowoc under date of January 27, 1913, setting forth the provisions of the order and requiring the city to comply with them. On February 3, 1913, a petition was filed by Henry Stolze, Jr., mayor of the city of Manitowoc, and J. E. Plumb, in the name of the board of water commissioners of Manitowoc, Wis., asking that the Commission suspend its order of August 27, 1912, and proceed to reconsider the matters involved in that order. After considering the questions raised in the application filed on behalf of the board of water commissioners, the Commission suspended its order of August 27, 1912, and proceeded to make a further investigation.

A rehearing was held on April 18, 1913, at Manitowoc, Wis. *H. L. Markham* and *Oscar A. Alter* appeared in their own be-

half and in behalf of others similarly situated. The city of Manitowoc was represented by *H. F. Kelly,* city attorney. No detailed résumé of the testimony introduced is considered necessary at this point inasmuch as all of the matters brought out in the testimony and in the supplementary statement filed in connection with this case have been given full consideration in arriving at the decision in this case.

We are aware that in at least one case (*City of Janesville v. Janesville Water Co.* 1911, 7 W. R. C. R. 628) this Commission has required a water utility to furnish service pipes from the main to the curb lines. This was given consideration in connection with the order of August 27, 1912, and it was concluded that, although as a theoretical proposition service pipes should be furnished by the utility, in the end it would not make any substantial difference whether service pipes were furnished by the utility or by the consumer. If they are to be furnished by the consumers, the rates to be charged should reflect that fact, and the same condition should be true if they are furnished by the utility. Action on so much of the original petition as related to the readjustment of rates was postponed until such time as the normal operating conditions for the municipally owned water plant could be determined. Under all the conditions concerned in this case we do not see that the order of August 27, 1912, should be changed so far as it relates to the furnishing and ownership of service pipes.

In regard to the meters the situation is somewhat different. With a properly adjusted rate schedule it is probably true that as far as the cost of the service is concerned the consumer derives no particular benefit from having the meters owned by the utility. There is, however, a provision in the Public Utilities Law which is declaratory of what must generally be the rule with regard to the ownership of meters. This provision states that meters must be owned by the utility unless an exemption is granted by the Railroad Commission. The law does not specifically state under what conditions such exemptions should be granted, but it is to be presumed that the utility should not be required to furnish meters whenever, because of local conditions, this would cause an unreasonable burden to the utility. In the present case it seems that the question for determination is, whether an order requiring the city of Manitowoc to furnish meters hereafter installed and to purchase or rent from the con-

sumers all meters which have been installed at the expense of the consumers, would impose any unreasonable burden upon the city of Manitowoc as a water utility.

The leading objection offered by the city will be considered here. It was contended that consumers should own those parts of the equipment of which they have continuous or sole possession and which are installed and used for their individual uses. Whatever may be said as to the logic of this argument, it seems to us that it must be interpreted in the light of the provisions of the Public Utilities Law previously referred to, which provides that meters will be furnished by the utility except as otherwise stated. If the argument of the city were to hold, there is no reason why it should not hold for all utilities, and any such interpretation would necessarily result in exempting all utilities from the provisions of the law. We must therefore look farther than this argument to find if there are conditions peculiar to the water utility in Manitowoc which make it reasonable that this Commission should exempt the water utility from the provisions of the law.

One argument advanced by the city was that, even with the meters owned by the consumers and with the repair bills borne by the consumers, there are a considerable number of meters injured by freezing, and that this number would probably be increased if the city were to furnish the meters. We fail to see that this is a condition by reason of which the city of Manitowoc should be exempted from the law if the law is to apply in any other cases. No evidence was produced to show that this condition would be any worse in Manitowoc than in the case of utilities not exempted from the law. It is, of course, reasonable for the utility to insist that a fair degree of protection be given the meters and that proper precautions be taken to prevent freezing, and it may not be unreasonable to require the consumers to pay for repairing meters injured by frost, where the injury was due to the failure or refusal of the consumer to provide proper protection, or to his neglect to take reasonable precautions to protect the meter. So far as the freezing of meters is concerned, therefore, it does not seem to us that the city should be exempted from the ownership of the meters.

A citation from the case of *City of Janesville v. Janesville Water Co.* 1911, 7 W. R. C. R. 628, was introduced by the city to the effect that it is not believed by the Commission that the utility should be required to install and own such portions of the services

as are on private property. This statement is somewhat misleading in itself, in that it related to service pipes as used in the *Janesville* decision and not to ownership of meters.

It was also argued by the city that if the consumers were relieved of the necessity of furnishing their own meters, a few consumers would bear the burden of the expense incurred by furnishing meters generally. This argument we do not consider sound. The rate schedule in use in Manitowoc is so adjusted as to place upon each consumer to a considerable extent the burden of the fixed charges incurred in furnishing services. Whether this burden is perfectly distributed is not a matter for determination at this time, but we see no reason to believe that there is any condition peculiar to the situation at Manitowoc which requires us to exempt the city from furnishing meters because of this condition.

It was also stated that approximately one-fourth of the users at Manitowoc pay $35,000 of the gross earnings of the utility. This is manifestly an error, as the total earnings of the utility, aside from its earnings from service furnished to the city for the year ending June 30, 1913, were somewhat less than $31,000.

Comparison was also made between Manitowoc and Milwaukee, and the city contended that the rule in effect in Milwaukee, requiring consumers to furnish meters, should be applied in Manitowoc. Other conditions being equal, there would be considerable justice in the city's claim, but it must be borne in mind that the rate for water in Milwaukee at the present time is a uniform rate of 4½ cts. per hundred cubic feet without any minimum charge whatever. Under these conditions there is nothing in the rate schedule at Milwaukee as at present constituted which insures that each consumer would return to the water department the fixed charges incurred in serving him, particularly if the city were to furnish the meters. It must also be borne in mind that the water rate in Milwaukee is uniformly low, and that because of this and the absence of any minimum charge, conditions in Milwaukee and Manitowoc do not admit of comparison.

It was also stated on behalf of the city that the city cannot afford to furnish the meters or rent those at present in use because of the great expenditure involved. The last annual report made to the Railroad Commission by the Manitowoc water department shows that the net operating revenue for the year

ending June 30, 1913, was $25,669.14, after an allowance of $3,000 had been made for depreciation and $3,535.35 for taxes which should be borne by the water department. According to this same report there were, at the end of the year, 1,448 private consumers supplied with meters and 10 public consumers, and there were 466 private consumers on a flat rate basis and 2 municipal users, exclusive of hydrants. According to this same report there were at the end of the year 1,256 5/8″ meters 130 3/4″, 29 1″, 14 1½″, 7 2″, 11 3″, and 1 4″ meter.

The order of the Commission already referred to did not contemplate that the city must immediately purchase all of these meters. It was provided that the city should either purchase them or pay the consumer a reasonable rental. With the net earnings reported by the utility for the last fiscal year, it is clear that a reasonable rental for these meters plus interest, depreciation and ordinary maintenance charged on meters to be installed in the future, would by no means seriously cut into the net revenues of the utility. We have no information at hand at present as to what type of meter has been installed in Manitowoc, but if the type of meter is that in general use in water utilities in this state, the total burden imposed upon the utility by the order of the Commission would amount to only a very small part of the net earnings. Prices for this type of meter in place as allowed by the Commission's staff in its valuations have usually ranged from about $9.00 for a 5/8″ meter to $150.00 for a 4″ meter. A proper rental to be paid by the city in cases where consumers own their meters should cover the elements of costs of which the city is relieved by the fact that meters are furnished by consumers. These costs are the interest, depreciation and taxes on the meters, for which a fair annual allowance is as follows:

5/8″ meters	$1.00	1½″ meters	$4.00
3/4″ "	1.40	2″ "	6.00
1″ "	1.80	3″ "	11.00
1¼″ "	2.60	4″ "	16.00

Assuming that the city were to rent from consumers all meters in use, instead of purchasing them, the total annual expense incurred for the 1,448 meters shown by the last report to be used in private service, would be $1,672.40. On June 30, 1913, there were 466 unmetered private services and two unmetered public buildings. The fixed charges on the investment which would be

required if all services were to be metered would not be over $500 annually. The cost of owning or paying a rental for meters would not, therefore, stand as a valid objection to the affirmation of the Commission's original order.

Although the city will not be required to put in service pipes free of charge, it will be provided that the charge for services to the curb shall be uniform and shall not be different for different sides of the street.

NOW, THEREFORE, IT IS ORDERED:

1. That the order of August 27, 1912, heretofore referred to, be and the same hereby is affirmed, except that the city may exercise its option as to furnishing meters free of charge or of paying a rental therefor, both with regard to meters already installed and to those to be installed hereafter. Rentals shall be as stated in the body of the decision.

2. That the charge for installing service pipes from main to curb shall be uniform for each size of service piping regardless of the distance from main to curb.

IN RE PETITION OF CITY OF MANITOWOC AS A WATER AND LIGHT UTILITY FOR AUTHORITY TO ALTER RATES AND TO CHANGE ITS UNIT OF MEASURING WATER CONSUMPTION.

Decided June 30, 1914.

Petitioner prays for authority to change its unit of measurement for water from gallons to cubic feet, and to alter its water and electric rates. The petition specifically seeks to reduce the minimum annual charge for water from $5 to $3; to fix a minimum charge for each consumer of electricity for other than power purposes, of 25 cts. per month, and to make a charge of $1 for installing an electric meter upon the cessation of electric service at any one place used in whole or in part for business purposes, provided that the total of all charges for electric consumption since the beginning of such service shall not thereby exceed $3.

It appears that meter readings of water meters in use at Manitowoc are taken in cubic feet, that it is necessary to transpose these into gallons for purposes of billing consumers, and that a ratio of 7.5 gallons to a cubic foot is used.

As regards the minimum annual charge for water, it appears that at present meters are furnished by the consumers, and that, under orders of the Commission (*Alter et al. v. City of Manitowoc*, 1912, 10 W. R. C. R. 387, and, rehearing, decided June 30, 1914, 14 W. R. C. R. 690) the city is required to secure the ownership of the meters, or to pay a rental to consumers who furnish their own meters. The application of the city will virtually amount to a reduction of $1 below the net rate which would result from the order in the cases in question.

The purpose of a charge of $1 for installing electric meters is to prevent the utility from being required to furnish service at a loss to temporary consumers. It is stated that the average cost of installing an electric meter is between $0.90 and $1.00.

Held: The change in the unit of measurement for water service from gallons to cubic feet is not open to objection. It is merely asked as a matter of convenience and is therefore authorized.

Held: The minimum annual charge for water suggested by the city appears rather low, but is accepted in substance, subject to modification as outlined. The petitioner is authorized to reduce its minimum annual charge for water service from $5 to $4 as a gross minimum rate, subject to discount for meter rentals on basis ordered by the Commission, where the consumer owns the meter.

Held: The minimum monthly charge suggested for electric current for all except power purposes seems clearly reasonable and is authorized. The proposed charge for installing electric meters appears a reasonable regulation, and the desired authority is granted.

Petition in this matter was filed with the Commission on April 29, 1914, by Harry F. Kelley, city attorney of Manitowoc. The

petition shows that at a regular meeting of the board of aldermen of the city of Manitowoc held on April 6, 1914, the following resolution was adopted by the affirmative vote of all members present:

"Resolved by the mayor and board of aldermen of Manitowoc that the attorney be and he hereby is instructed to take the proper steps to effectuate the following changes in the practices and rates of the municipal water and electric utilities, to wit: 1. Change the water consumption unit of measurement from gallons to cubic feet for the purpose of making simple computations from meter readings, leaving quantity rates as they are on the basis of 7.5 gallons to a cubic foot. 2. Reduce the minimum annual charge for water from $5 to $3. 3. Fix a minimum charge for each patron of the electric plant at 25 cts. per month. 4. Fix a charge of $1 for installing an electric meter."

Hearing in this matter was set for May 28, 1914, but no appearances were entered. No argument has been submitted in opposition to the proposed changes and no opposition to them has come to the notice of the Commission in any manner. On behalf of the city of Manitowoc a statement of the reasons for the changes was submitted, together with affidavits as to the probable effect of the changes upon the revenues of the utility and upon bills paid by consumers.

The first portion of the application, that which seeks to change the unit of measurement for water service from gallons to cubic feet, does not seem to be open to objection. At present it is understood that the meter readings of water meters in use at Manitowoc are taken in cubic feet and that it is necessary to transpose these into gallons for purposes of billing consumers. It is understood that a ratio of 7.5 gallons to a cubic foot is used. The amendment asked for then is merely asked as a matter of convenience to the utility, and we see no objection to its being authorized.

The second part of the application seeks to reduce the minimum annual charge for water from $5 to $3. In connection with this we must note the proceedings in the case of *Alter et al. v. City of Manitowoc,* in which a decision was issued by the Commission on August 27, 1912, (10 W. R. C. R. 387) requiring the city of Manitowoc to furnish water meters at its own expense. Rehearing in this matter was later authorized, in which the order of August 27, 1912 (14 W. R. C. R. 690), was affirmed,

with the following exception: "That the city may exercise its option as to furnishing meters free of charge or of paying rental therefor both in regard to meters already installed and to those to be installed hereafter." At present the meters are furnished by the consumer. The decision in the *Alter* and *Markham* cases requires the city to make the additional investment required to secure ownership of the meters or to pay a rental to consumers who furnish their own meters, such rental to be $1 per year for a 5/8" meter and larger sums for larger meters. In other words, where consumers still furnish their meters, under the order referred to, the net minimum annual rate to consumers will be $4 for a 5/8" meter. The application of the city will virtually amount to a reduction of $1 below the net rate which would result from the order in the *Alter* and *Markham* cases. We are inclined to believe that although the minimum suggested by the city is rather low, it may be accepted in substance but subject to modifications as outlined here. The minimum charge should be $4 per year, with a rental to consumers who are required by the city to furnish their meters, amounting to $1 per year for a 5/8" meter and to larger sums for larger meters as stated in the cases previously referred to. The net rate to consumers who furnish their meters would then be the same as the net minimum rate suggested by the city. If, however, the city should determine to furnish the meters at its own expense instead of renting them from consumers, the net rate would be $4 per year instead of $3, which difference would about cover the difference in cost to the city.

The third portion of the application relates to the fixing of a minimum charge for each consumer of electricity for other than power purposes of 25 cts. per month. We do not consider it necessary to go into any analysis of this minimum charge. There seems to be no question as to its reasonableness.

The fourth section of the application relates to a charge of $1 for installing an electric meter. The purpose of this portion of the application is somewhat different than would appear from the language in which it has been presented. The rule which the utility suggests to cover this situation reads as follows: "Upon the cessation of electric service at any one place used in whole or part for business purposes the final bill for service there shall include a charge of $1 for installing the meter there, provided that in case the total of all charges for electric consumption there since the beginning of such service shall have been more than $2,

then only such part of $1 as shall make such total $3 shall be included in said bill.'' It is stated in the utility's argument that this rule will affect few situations but will stop a source of some loss and will prevent the utility from being required to furnish service at a loss to temporary consumers. It is further stated that the average cost of installing an electric meter is between $0.90 and $1. This proposed regulation appears to be a reasonable one, as it can do no more than give the utility a reasonable degree of protection against losses from temporary consumers.

IT IS THEREFORE ORDERED, That the applicant, the city of Manitowoc, be and the same hereby is authorized to amend its rates for water and electric service as follows:

1. To express its water rates as charges per hundred cubic feet instead of as charges per thousand gallons, such rates to be filed with the Commission immediately upon their adoption.

2. To amend its water rates by reducing the minimum annual charge for water service from $5 per year to $4 per year as a gross minimum rate to be applied in cases where the city owns the meters. Where consumers own the meters rentals shall be paid as stated in the *Alter* and *Markham* cases so that the net minimum charge shall be $4, less the amount of the rental to be paid by the city to consumers who furnish their meters.

3. To put into effect a minimum monthly charge of 25 cts. for electric current furnished for all except power purposes.

4. To put in effect the following rule regarding charges for connecting electric meters: ''Upon the cessation of electric service at any one place used in whole or in part for business purposes the final bill for service there shall include a charge of $1 for installing the meter there, provided that in case the total of all charges for electric consumption there since the beginning of such service shall have been more than $2, then only such part of $1 as shall make such total $3 shall be included in said bill.''

IN RE APPLICATION OF THE PRESCOTT TELEPHONE EXCHANGE FOR AUTHORITY TO INCREASE RATES.

Decided June 30, 1914.

The applicant asks for authority to increase its rate for business telephones in Prescott, Wis. From a consideration of the earnings and expenses of the applicant, it appears that the earnings resulting from the present rates are and will continue to be insufficient to meet the operating expenses of the utility and provide adequately for depreciation and interest.

Held: The increase asked appears reasonable both in relation to the total earnings of the utility and the service rendered to the class of subscribers involved, and is accordingly authorized.

This application was filed with the Commission on March 5, 1914. The Prescott Telephone Exchange is a public utility operating a telephone system in Prescott, Wis. The application shows that the lawful rates of the applicant now in effect are $0.75 per month for local residence and business telephones, and $1 per month for rural telephones. The applicant asks for an increase in rates for the reason that it considers the rate of $0.75 per month for business subscribers too small to meet the expense of this class of service. Authority is asked to increase the rate for business telephones to $1.25 per month.

Hearing in this matter was set for May 7, 1914, but there were no appearances.

Although the information at hand with regard to the Prescott Telephone Exchange is not as complete in some respects as might be desired, there seems to be no question as to the reasonableness of the increase asked for by the applicant. It appears that the business telephones are on single party lines and that the entire system is metallic.

Earnings from exchange service amount to about $2,200 per year, and the applicant states that the expense, not including the time of the proprietor, amounts to about $1,200 per year. The investment is stated to be $10,000. From such facts as we have with regard to telephone systems of a similar character operating in other localities in the state, it appears unquestionable that

the earnings resulting from present rates are and will continue to be insufficient to meet the operating expenses of the utility and provide adequately for depreciation and interest. Interest and depreciation on the plant alone would be from $1,200 to $1,400 per year. Although the expense of operation is not fully stated by the applicant, it is clear that interest, depreciation, and ordinary operating expenses will make up a total considerably in excess of the present operating revenue. The increase of from $0.75 per month to $1.25 per month for business telephones appears reasonable, not only in its relation to the total earnings of the utility, but in its relation to the service rendered to this class of subscribers, and it will be authorized in this case.

IT IS THEREFORE ORDERED, That the applicant, the Prescott Telephone Exchange, may increase its rate for business telephones from $0.75 per month per telephone to $1.25 per month per telephone. This increase may take effect July 1, 1914.

WEBSTER MANUFACTURING COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY,
NORTHERN PACIFIC RAILWAY COMPANY.

Decided June 30, 1914.

Complaint was made by the petitioner that the rates on hardwood logs between Van Buskirk and Carson, in Iron county, Wis., to Central avenue, Superior, were unjust and unreasonable as compared with rates on forest products for similar hauls in Wisconsin traffic, interstate traffic, or Minnesota intrastate traffic. Petitioner alleged that the various carriers of the state had built up a system of rates on logs and other raw material specially designed to keep such raw materials for manufacture on their own lines, and for the reshipment of the finished product so far as each carrier could control the movement.

Held: While nearly all log rates are constructed on the basis of an outhaul of the finished product and are not directly comparable with the traffic under consideration where reshipment is not taken into account, yet upon any proportional allotment of rates, the ones in question are excessive. From the investigation made it appears that a joint through rate not to exceed 4.5 cts., subject to minimum weight of 50,000 lb., would be reasonable in the present case. The respondents are ordered to discontinue their present rates and substitute therefor the rates approved by the Commission.

This case first came before the Commission late in 1913 as a complaint against the rates of the Chicago & North Western Railway Company on hardwood logs from Van Buskirk and Carson Siding, Wis., to Superior. A hearing was held on December 9, 1913, pursuant to notice, at which no one appeared for the petitioner, but *Robert H. Widdicombe* and *H. C. Cheney* appeared for the Chicago & North Western Railway Company and *W. D. Burr* for the Chicago, St. Paul, Minneapolis & Omaha Railway Company. On January 3, 1914, the Commission received a request from Mr. J. A. Little, representing the petitioner, to withhold a decision in the case, as an amended complaint which would join the Northern Pacific Railway Company with the Chicago & North Western Railway Company was about to be filed.

The amended complaint was duly filed and a hearing was held, pursuant to notice, on March 5, 1914, at which *J. A. Little* appeared for the petitioner, *H. C. Cheney* for the Chicago &

North Western Railway Company, and *W. E. Alair* for the Northern Pacific Railway Company.

The petitioner is a manufacturer of furniture, and is compelled to reach out long distances in order to get the high grade material required for its products.

The substance of the complaint made by the petitioner was that the rates on hardwood logs between Van Buskirk and Carson, in Iron county, Wis., to Central avenue, Superior, where petitioner's mill was located, were "unjust and unreasonable as compared with rates on forest products for similar hauls in Wisconsin traffic, interstate traffic or Minnesota intrastate traffic."

To support the charge, the petitioner pointed out that the log rates were higher than the joint through rates on lumber between the same points. The petitioner further alleged that the various carriers of the state had built up a system of rates on logs and other raw material specially designed to keep such raw materials for manufacture on their own lines, and for the reshipment of the finished product so far as each carrier should control the movement. It was shown at the hearing that the Northern Pacific had not refused, as had the North Western, to make joint rates on the logs required by the petitioner.

According to the published tariffs Chicago & North Western G. F. D. 5600—C and Northern Pacific G. F. D. 1600—B, the rates charged the petitioner on logs are, Carson to Ashland, 6 cts. per cwt.; Ashland to Central avenue Superior, 4.5 cts. per cwt. —combination through rate, 10.5 cts. per cwt. The distances are: Van Buskirk to Central avenue, Superior, 112 miles; from Carson to Central avenue, Superior, 123 miles. These rates are nearly 25 per cent higher than the joint lumber rates in force in the state for similar hauls. They are higher also than rates on logs for similar hauls elsewhere in the state. While it is true that nearly all log rates are constructed on the basis of an outhaul of the finished product, and are not directly comparable with the traffic under consideration where reshipment is not taken into account, yet upon any proportional allotment of rates they are excessive.

Whatever may have been the purpose of the respondent companies in fixing the rates complained of so high, the effect has been prohibitive so far as the petitioner is concerned.

In *Paul Gablowski v. C. & N. W. R. Co.* and *Green Bay & W. R. Co.*, decided January 31, 1912 (8 W.R. C. R. 544) the situation

was about the same as in the present case. Rates ordered in that case to New London have since been put in force between all stations on the Chicago & North Western Railway. This was a voluntary action on the part of the railroad company, with the Commission's approval. These rates apply to shipments of logs not for manufacture and reshipment via Chicago & North Western Railway, and therefore are properly applicable to shipments from Van Buskirk and Carson to Ashland, the Chicago & North Western Railway's haul involved in this case. From Van Buskirk to Ashland the distance is 44.7 miles, and from Carson to Ashland 56.1 miles. Rates for these and similar distances and for distances involved in the entire haul from these points to Central avenue, Superior, are as follows:

Miles.	Rates.	Miles.	Rates.
40	2.48 cents	110	3.85 cents
45	2.62 "	115	3.95 "
50	2.72 "	120	3.95 "
55	2.82 "	125	4.08 "
60	2.92 "	130	4.08 "

The rates named above are published in C. & N. W. G. F. D. No. 14975, effective January 26, 1914.

From Ashland to Central avenue, Superior, via the Northern Pacific Railway, the distance is 67.1 miles. There is no specific rate on logs from and to these points, but N. P. Tariff No. 1600–C names a rate of 4.5 cts. on lumber which applies to logs. This rate added to rates to Ashland, makes the through rates 7.12 cts. from Van Buskirk and 7.42 cts. from Carson to Ashland. The testimony and exhibits offered in behalf of the petitioner at the hearing indicate that the petitioner believes he should have a through rate of 3.5 cts. or 4 cts. but nothing presented appears to show what rate he can pay without hardship. The joint two-line haul rates on pulp wood and pulp wood logs ordered by the Commission in *Pulp & Paper Mfrs. Traffic Assn. v. C. & N. W. R. Co. et al.*, decided February 11, 1914, (13 W. R. C. R. 735) would, if applied to the present case, make a rate of 4 cts. from Van Buskirk and 4.1 cts. from Carson to Central avenue, Superior. Based on this decision it would seem that a joint rate of 4½ cts. might be satisfactory to all concerned.

W. E. Alair's statements for the Northern Pacific Railway, page 24 of the transcript, indicates that a rate of 2.4 cts. Ash-

land to Superior would be satisfactory to that line. Basing the entire haul involved on this, would give a rate of about 4 cts. Inasmuch as this is based on a local rate, and therefore may be considered as nothing more or less than the sum of the locals, the cost of transfer at Ashland need not be considered. The only difference from purely local traffic would arise in connection with cars leaving owners line, resulting in unusual delay thereto. It is not likely that the empty car movement would differ greatly from that in connection with purely local traffic.

From the foregoing it would seem that a joint through rate on logs from Van Buskirk and Carson to Central avenue, Superior, of 4 cts., or not to exceed 4.5 cts. subject to minimum weight of 50,000 lb., should be established.

IT IS THEREFORE ORDERED, That the respondent companies discontinue their present rates on hardwood logs from Van Buskirk and from Carson Siding to Central avenue, Superior, and substitute therefor a joint rate not to exceed 4.5 cts. per cwt., and subject to a minimum weight of 50,000 lb. per car.

ALFRED H. MILLER
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided July 1, 1914.

The petitioner alleges an overcharge on a quantity of fuel wood and fence posts shipped in the same car from Arpin to Neenah, Wis., over respondent's line. It appears the shipment was billed as fuel wood at the rate properly applicable to that commodity. At destination the rate applicable to straight carload shipments of lumber, and articles taking lumber rates, including fence posts, was assessed. This rate does not, however, include fuel wood.

Held: The fuel wood should have been charged at 3½ cts. and the fence posts at 18½ cts. per cwt. Refund ordered on that basis.

The petitioner alleges that on July 23, 1913, he shipped a quantity of fuel wood and fence posts in the same car from Arpin to Neenah, Wis., over the respondent's line; that the shipment was billed at a rate of 3½ cts. per cwt., which was the rate quoted to the petitioner by the respondent's agent at Arpin; that at the destination of such shipment the rate was changed to 8 cts. per cwt. and charges to the amount of $42.72 were paid by the petitioner upon the shipment; that if the rate quoted by the respondent's agent had been applied the charges would have been $26.54; that the rate as applied is unreasonable, exorbitant and illegal. Wherefore petitioner prays that the respondent railway company be required to refund to it the difference between the rate actually applied and the lawful rate, which is $16.18.

The respondent, answering the petition, denies that the charges as assessed and collected upon the above shipment in question are unreasonable, exorbitant or illegal, and prays that the petition be dismissed.

The case was submitted upon the papers, documents and vouchers on file.

The above shipment consisted of a quantity of fuel wood, not exceeding 48,165 lb. and 500 fence posts weighing not more than 5,235 lb. The total weight of the shipment was 53,400 lb., and was shipped in one car. At Arpin the shipment was billed as fuel

wood at 3½ cts. per 100 lb., which was the rate quoted to the petitioner by the agent at that station, which rate is properly applicable to straight carload shipments of fuel wood. At destination the rate applicable to straight carload shipments of lumber and articles taking lumber rates, including fence posts, which is 8 cts. per 100 lb., was assessed. The charges amounted to $42.72, which were paid by the petitioner. This rate, however, does not include fuel wood.

From the statement of facts in this case and an examination of tariffs on file with this Commission it appears that the weight of the fuel wood did not exceed 48,165 lb., and the weight of the fence posts 5,235 lb., and that the fuel wood should have been charged at the rate of 3½ cts. and the fence posts at the less than carload rate of 18½ cts. per 100 lb. The latter is the Fourth class rate from Marshfield to Neenah named in respondent's tariff G. F. D. 11600—A, and its application from Arpin to Neenah is provided for by intermediate clause in the tariff. The lawful charges on the shipment should be 48,165 lb. at 3½ cts. making a charge of $16.86, and 5,235 lb. at 18½ cts., making a charge of $9.68, or a total of $26.54 instead of $42.72 as paid.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company be and the same is hereby required and directed to refund to the petitioner the sum of $16.18.

IN RE APPLICATION OF MOSINEE TELEPHONE COMPANY FOR AUTHORITY TO INCREASE ITS RATES.

Decided July 6, 1914.

Application was made by the Mosinee Tel. Co. for authority to increase its rates on the ground of increased expenses and inability to earn a reasonable return on the investment. It appears that the proposed schedule provides a lower rate for rural subscribers owning their own telephones than for those who do not, and that the practice has been to make a charge of 10 cts. per call between the hours of 10 p. m. and 7 a. m. with the exception of certain subscribers, who make regular early morning calls to the depot, and who are exempted because the charges otherwise would be excessive.

Held: The schedule applied for cannot be approved without certain changes. Under the Public Utilities Law (1797*m*—90) all subscribers having the same class of service must be given the same rate. A reasonable rental, however, may be paid those subscribers owning their own equipment. The company is ordered to keep all equipment in repair and pay a rental of 15 cts. per month to all subscribers owning their telephones. In order to avoid unjust discrimination it is further ordered that all subscribers are to have the privilege of making early morning calls to the depot without extra charge. All other calls between the hours of 10 p. m. and 7 a. m. are to be 10 cts. per call. The respondent is authorized to discontinue its present schedule of rates and to substitute therefor the rates approved by the Commission.

The Mosinee Telephone Company filed application with this Commission on February 2, 1914, for authority to increase its rates.

The rates in effect at the time of the application as stated by the applicant were as follows:

	Rate per month.
Business telephones	$1.50
Residence telephones, private	1.00
Residence, 2 party on selective ringing, metallic	1.00
Residence, 4 party on interurban metallic	1.00
Business, 4 party on trunk line metallic	1.00
Business, 2 party on metallic circuit	1.50
Rural, subscribers owning their telephones	.50
Rural, company owning telephones	1.00
Rural, 3 party on grounded line	1.00

The application alleges that the members of the company have donated their time in order to build up and equip the business

for the purpose of rendering good service to the subscribers, and that notwithstanding this fact they have been unable to receive any return on their investment in the form of dividends or any other remuneration. It is alleged further that the expenses of operation in the past have been low, due to the economical arrangement for conducting the central office and the nominal wages paid the trouble man, but that the arrangement in question cannot be enjoyed by the company in the future and that the operating expenses will therefore be increased. To meet the increased expenses and to pay a reasonable return on the investment, the company applies for authority to put into effect the following schedule of rates:

	Rate per month.
Business telephones, 1 party, metallic	$1.50
Business " 2 " "	1.25
Business " 4 " trunk line metallic	1.25
Residence " 1 " metallic	1.25
Residence " 2 " metallic	1.00
Residence " 4 " metallic interurban lines	1.00
Rural " company owning phones	1.25
Rural " subscribers owning phones	1.00
Rural " grounded line	1.00

The above schedule provides for a rate of $1.00 per month for rural subscribers owning their telephones, and $1.25 per month for those rural subscribers whose telephones are owned by the company. In order to comply with sec. 1797*m*—90 of the Public Utilities Law, all subscribers having the same class of service must be given the same rate, irrespective of whether or not certain subscribers own a part of the equipment. A reasonable rental may be paid those subscribers owning their equipment, however, and this seems to be the proper policy to follow in this case. In the interest of good service it appears desirable, furthermore, to have the company repair all equipment including that owned by the subscribers. Under such conditions, the rental to be paid will be restricted to a reasonable rate for interest and depreciation on the equipment owned by the subscribers. The rental allowance for these two items will amount to about $1.80 per phone per year, or a monthly rental of 15 cts. per phone. The company should keep the telephones owned by the subscribers in repair and in addition pay a rental of 15 cts. per phone per month.

It is stated in the testimony that unlimited service is given between the hours of 7 a. m. and 10 p. m., and that a charge of 10 cts. per call is made for calls between the hours of 10 p. m. and 7 a. m. Exception to the above rule has been made in the case of certain subscribers who make regular early morning calls to the depot. This exception was made primarily, it appears, because a 10 ct. rate per call for those making daily early morning calls would make the charges excessive. The most equitable manner of dealing with this situation, so that no unjust discriminations result between subscribers, is to give all subscribers the privilege of making early morning calls to the depot without additional charges. All other calls coming between the hours of 10 p. m. and 7 a. m. will continue to be 10 cts. per call as at present.

From the foregoing, it appears that certain changes must be made in the schedule of rates applied for before the schedule can be approved. The rates which seem best suited to the conditions are shown in Table I. This table also shows the estimated monthly revenues under the rates outlined.

TABLE I.

ESTIMATED MONTHLY REVENUES.

Classes of service.	Number of subscribers.	Rate per month.	Amount.
One party business, full metallic	15	$1 50	$22 50
Two party business, " "	7	1 25	8 75
One party residence, " "	27	1 25	33 75
Two party residence " "	13	1 00	13 00
Rural subscribers, " "	42	1 25	52 50
Rural subscribers, grounded lines	3	1.00	3 00
			$133 50
Commissions on toll messages			15 00
Total estimated monthly revenues			$148 50
Deduct rental of 24 telephones at 15 cents			3 60
Net estimated monthly revenues			$144 90

With revenues of approximately $145 per month the yearly revenues under the above schedule of rates will be about $1,740.

A system of accounts prescribed by this Commission records the operating expenses of the company since January 1, 1914. The operating expenses for January, February and March were submitted by the applicant for the purposes of this case. These are shown in the following table:

TABLE II.
OPERATING EXPENSES.

	Expenses for 3 months, Jan. Feb. March, per books.	Estimated for year.
Central office	$132 29	$529 16
Wire plant	59 81	239 24
Substation	39 95	159 80
Commercial	8 47	33 88
General	68 24	272 96
Total above	$308 76	$1,235 04
Add		
Taxes estimated		45 00
Depreciation 7 per cent on $4,000		280 00
Total operating expenses		$1,560 04

Although it is not customary to determine the annual operating expenses on the basis of the records for part of a year, the operating expenses as estimated in the above manner should represent the amount required with a reasonable degree of accuracy. Interest at 7 per cent on $4,000, the estimated value of the plant and equipment in this case, is $280, making the total operating expenses $1,840.04.

The estimated operating revenues under the schedule of rates proposed in Table II are $1,740. From this it will be evident that the schedule of rates will not at present yield revenues sufficient to cover the operating expenses and in addition provide a full return on the investment. It appears, however, that increases in the amount of revenues to be received should come from a larger development of the business rather than from further increase of rates.

IT IS THEREFORE ORDERED, That the Mosinee Telephone Company be and hereby is authorized to put into effect the following schedule of rates:

One party business, full metallic	$1.50	per month
Two " " " "	1.25	"
One party residence, " "	1.25	"
Two " " " "	1.00	"
Rural subscribers " "	1.25	"
" " grounded line	1.00	"

Subscribers have the privilege of making early morning calls to the depot without extra charges. All other calls between the hours of 10 p. m. and 7 a. m. shall be 10 cts. per call.

IT IS FURTHER ORDERED, That the company keep all equipment in repair and pay a rental of 15 cts. a month per phone to all subscribers owning their telephones.

IN RE PETITION OF THE CHIPPEWA VALLEY RAILWAY, LIGHT AND POWER COMPANY FOR AUTHORITY TO RELOCATE ITS INTERURBAN LINE THOUGH A PORTION OF THE FIRST AND TENTH WARDS IN THE CITY OF EAU CLAIRE.

Submitted Sept. 4, 1913. Decided July 9, 1914.

Petitioner asks authority to relocate its interurban line in the city of Eau Claire, Wis., along a specified route and requests that the Commission determine the adequacy of the service as proposed. The petitioner alleges that the mayor and council intend to object to the removal of the existing track after the new line shall have been constructed, and further alleges that it is willing to construct the proposed line and operate its interurban cars in the manner indicated, if such change will, in the opinion of the Commission, afford reasonably adequate service for that portion of the city.

Held: The Commission is without jurisdiction to grant the prayer of the petitioner, which is in substance that petitioner be authorized to abandon its existing tracks upon the completion of a new route for which it holds a franchise. (*Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298.) The abandonment of a line of street railway is a matter wholly within the jurisdiction of the common council. However, it seemed advisable to investigate the situation, and to recommend a course of action which, in the opinion of the Commission, will result in the most efficient service for the district in question. It is recommended that the petitioner apply to the city of Eau Claire for authority to abandon its tracks on Franklin, Fay, Putnam and Omaha streets, upon the completion of its new line along Madison street, Mount Tom Park and Starr avenue, as already permitted by franchise; and that the city of Eau Claire grant such authority to the company. The adequacy of the proposed service is not passed upon, since it is a matter which can be more properly determined in the light of the traffic conditions resulting from the change of routing.

The petition alleges in substance that the Chippewa Valley Railway, Light and Power Company now operates in the city of Eau Claire an interurban line from the intersection of Dewey street with the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company in a northeasterly direction along Madison street to Franklin street, thence northerly and easterly along Franklin street, Fay street, Putnam street and Omaha street to what is known as Chippewa road, being an extension of Starr avenue to the north;

That at the instance of certain manufacturing establishments located south of Madison street which employ upwards of 500 men, the petitioner has offered to relocate its track along Madison street to Mount Tom and thence north on Starr avenue and has applied for and been granted a franchise authorizing it to occupy this route;

That there is not sufficient patronage to warrant the maintenance of the existing track and the proposed track and the operation of interurban or local service on both;

That petitioner is informed and believes that it is the purpose of the mayor and council to object to the removal of the existing track and the new line shall have been constructed; and

That petitioner is willing to remove the existing line and construct the proposed line, and operate its interurban cars over such line in connection with local cars morning, noon and night for the accommodation of factory employes, if such change will, in the opinion of the Commission, afford reasonably adequate service for the people of that portion of the city.

The Commission is therefore asked to authorize the petitioner to relocate its interurban line from the junction of Madison street and Franklin street to Chippewa road as above indicated, and to determine the adequacy of the service above proposed.

A hearing was held at Eau Claire on September 4, 1913, at which *Bundy & Wilcox* appeared for the petitioner.

The Commission is without jurisdiction to grant the prayer of the petition, which is in substance that petitioner be authorized to abandon its existing tracks upon the completion of a new route for which it holds a franchise. *(Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298.) The abandonment of a line of street railway is a matter wholly within the jurisdiction of the common council. However, it has been deemed advisable to investigate the situation, and to recommend a course of action which, in the opinion of the Commission, will result in the most efficient service for the district in question.

To this end a five day traffic count was taken and personal inspections made by the Commission's chief engineer and two other members of the staff. Later, on June 29 and 30, 1914, a member of the Commission with two members of the engineering staff went over the situation fully in company with the city officials and representatives of the street railway company and the

interests in favor of and in opposition to the proposed relocation.

Having thoroughly considered all phases of the controversy brought out by the testimony and subsequent investigations and conferences, it is our opinion that the entire North Hill district will be best served by the construction of a new line on Madison street to Mount Tom Park, thence on a private right of way on the south side of the park to Starr avenue, and north on Starr avenue to a connection with the existing line; and by the abandonment of the tracks now located on Franklin, Fay, Putam and Omaha streets.

Omaha street is at the edge of the residence section near the shore of the log reservoir, and does not afford a suitable route for a street car line which is to serve the entire North Hill district. Since the great majority of the patrons live south of Omaha street, they are obliged to walk away from their destination in order to take a car for the city; and this condition tends to discourage the riding habit instead of encouraging it as would be the case if the walk to the car were in the direction of the city. Many people are inconvenienced as compared with the few who are benefited because of their proximity to Omaha street. The existing route affords convenient access to the several cemeteries which are located north of Omaha street and west of Starr avenue, but we believe that the new route herein recommended will make possible reasonably adequate access to the cemeteries from Starr avenue, even though it is somewhat less convenient than the present line.

Several different schemes for rerouting the line in this district were considered. One proposal was to construct a loop, leaving the present track on Omaha street and laying a new line on Madison street and Starr avenue. For a part of the day when the traffic is principally outbound to the factories, the outbound cars would be routed on Madison street, and in the evening when the traffic is chiefly toward the city the movement around the loop would be in the reverse direction. This plan contemplates the maintenance of two routes. The traffic does not at present warrant the operation of two lines in the North Hill district, and such a system would make it difficult to reduce the time interval between cars in the future, because of the additional costs of operation and maintenance.

Several plans were suggested by the mayor. One is to relocate the interurban line on Madison street, through Mount Tom Park and north on Starr avenue, retaining the existing route as far east as Omaha and McDonough streets and connecting it with the new Madison street line, thereby forming a loop,—Madison, McDonough, Omaha and Putnam streets,—for the use of local city cars. While this arrangement would be more convenient for residents of the immediate vicinity of the loop, it would not adequately provide for the industrial and residential growth of the North Hill district, since a loop system is not easily adapted to extensions of service made necessary by the development of the territory beyond the loop.

Another plan brought forward by him is to construct a new line on Madison street, through Mount Tom Park and north on Starr avenue for interurban service and retain the existing line as far east as Omaha and McDonough streets, to be operated as a stub for local service. It is our opinion that the best service for the whole district cannot be provided with two lines. That satisfactory local service on such a stub line could be rendered is questionable, and it is probable that the operation of local cars on Madison street would also be demanded. More satisfactory service can be rendered by frequent operation on a properly located line, than a less frequent operation on two lines. Furthermore, it is probable that a demand would arise for local service on the stub line to the cemeteries, and this would lead to an unwarranted duplication of trackage in the North Hill district.

The mayor also suggested that the line be relocated so as to extend east on Madison street to McDonough street, north on McDonough street to Omaha street, and thence east on Omaha street over the existing route, thus making possible the abandonment of the tracks on Franklin and Fay streets and on Omaha street west of McDonough street. This plan would divide a long narrow territory transversely, and would not fully meet the situation without the addition of a stub line to the factory district. Such a stub line would be open to the same objections as noted above with reference to a somewhat similar plan.

The mayor's fourth proposal contemplates the establishment of a single line north on Putnam street to Summit street, thence east on Summit street to McDonough street, south on McDonough street to Madison street, and thence east on Madison

street along Mount Tom Park and north on Starr avenue. This plan would introduce four curves and lengthen the route about six hundred feet. Such a detour would retard the schedule for both local and interurban cars, and this would become of considerable importance if the interurban schedule should be changed to a thirty minute interval. The time consumed in operating over the detour might be more efficiently used by extending the local service further east on Madison street. Curves also increase the noise of operation and should be avoided wherever possible in residential districts. Another objection to this proposal is that it would result in the operation of local and interurban cars directly in front of the schoolhouse on Summit street.

As a general proposition, a district shaped like the one under consideration can be best served by a longitudinal line at about the center, or on the city side of the center. However, in the present case topographical conditions will not permit an east outlet for a line on Summit street, which forces the new line away from the center of the North Hill district. The route recommended herein will be less convenient for some patrons than the existing line, but will be more convenient for the majority. However, no patrons will be required to walk an unreasonable distance to the car line. Doorstep street car service for all is not practicable, and the criterion must be the reasonableness of the distance which a patron is obliged to walk in order to obtain service. Omaha street is about 1,500 feet north of Madison street. If every resident of a city were within 1,500 feet or even 2,000 feet of a street car line, the distribution of lines would be more fortunate than is usually the case, even in large cities.

We therefore recommend that the Chippewa Valley Railway, Light and Power Company apply to the city of Eau Claire for authority to abandon its tracks on Franklin, Fay, Putnam and Omaha streets, upon the completion of its new line along Madison street, Mount Tom Park, and Starr avenue as already permitted by franchise; and that the city of Eau Claire grant such authority to the company.

The adequacy of the proposed service is not passed upon in this opinion, since it is a matter which can be more properly determined in the light of the traffic conditions which result from the changed routing.

WAUKESHA LIME AND STONE COMPANY
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided July 10, 1914.

Complaint was made by the petitioner that the charges on a carload of ground limestone, shipped from Waukesha to Durand, Wis., were unreasonable. It appears that the petitioner is a corporation engaged in the manufacture of ground limestone for agricultural purposes at different points in the state.

Held: The rates charged were unreasonable and should not have exceeded charges based on rates established by the Commission in *Waukesha Lime & Stone Co., Frank B. Fargo, Agent, v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471, supplemented February 7, 1914, for the purpose of making the C. & N. W. and the C. M. & St. P. railway companies parties to the proceeding. The rate charged on limestone for agricultural purposes from Waukesha to Durand, Wis., a distance of 297 miles via respondent lines, should have been 5.10 cts. per cwt. Refund ordered on that basis.

The petitioner is a corporation engaged in the manufacture of ground limestone for agricultural purposes at different points in the state. It alleges that on or about March 19, 1914, it shipped a carload of ground limestone from Waukesha to Durand, Wis., on which freight charges to the amount of $62.82 were assessed. These charges, petitioner alleges, are unusual and unreasonable and should not exceed the charges based on the rates established by the Commission on interline shipments of limestone for agricultural purposes from Waukesha to points on their lines in Wisconsin in the case of *Waukesha Lime & Stone Co., Frank B. Fargo, Agent, v. M. St. P. & S. S. M. R. R. Co. et al.* 1914, 13 W. R. C. R. 471.

The respondent the Chicago, Milwaukee & St. Paul Ry. Co., in its separate answer, admits all the formal allegations thereof, but denies that the rates charged petitioner are unreasonable and unusual, and should not exceed those established by the Commission in its order in *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.,* but that it has no intrastate line from

Waukesha to Durand, Wis., and that this shipment was interstate in that it passed out of Wisconsin into Minnesota and back again into Wisconsin in its movement from Waukesha to Durand, Wis., and therefore this Commission has no jurisdiction in the matter. Wherefore petitioner asks that the complaint be dismissed.

No answer was filed by the respondent the Minneapolis, St. Paul & Sault Ste. Marie Ry. Co. The case was submitted upon the pleadings, papers and vouchers on file.

The respondent, the Chicago, Milwaukee & St. Paul Ry. Co., is in error in its contention that the above shipment is an interstate shipment. The paid freight bill filed in this case shows that the shipment in question moved from Waukesha over the "Soo" line to Chippewa Falls, and from thence over the Chicago, Milwaukee & St. Paul Railway to Durand, Wis., moving entirely within the state of Wisconsin and is therefore an intrastate shipment and one over which this Commission has jurisdiction.

Charges were paid as follows: Waukesha to Chippewa Falls, 65,400 lb. at 4.8 cts., $31.39; Chippewa Falls to Durand, 65,400 lb. at 4.5 cts., $29.43; making a total of $60.82.

On the day the shipment involved in this case moved, there was in effect a joint rate over the respondents' and other lines on limestone for agricultural purposes of 5.10 cts. per cwt. for a distance of 297 miles, being the distance from Waukesha to Durand via respondent lines. This rate was established by order of the Commission in *Waukesha Lime and Stone Co., Frank B. Fargo, Agent, v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471, and supplemented February 7, 1914. The supplemental order was issued for the purpose of making the Chicago & North Western and the Chicago, Milwaukee & St. Paul railway companies parties to the proceeding.

The facts in this case are similar to those set forth in *Wausau Box & Lbr. Co. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R., 457; *Wausau Box & Lbr. Co. v. C. & N. W. R. Co.* 1910, 4. W. R. C. R., 459; *Goodwille Bros. v. C. & N. W. R. Co.* 1910, 4 W. R. C. R., 461; *Goodwille Bros. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R. 463; *Wisconsin Box Co. v. C. M. & St. P. R. Co.* 1910, 4 W. R. C. R. 768; *Brittingham & Young Co. v. C. M. & St. P. R. Co. et al.* 1911, 6 W. R. C. R., 528; *Higgins Spring & Axle Co. v. C. M. & St. P. R. Co.* 1911, 8 W. R. C. R. 36; and the rule laid down in these cases governs the instant case. The charges on the

shipment complained of at 5.10 cts. per 100 lb. would be $33.35, making an overcharge of $27.47.

We therefore find and determine that the rates so charged by the respondent of the petitioner on the shipment are unusual and unreasonable, and should not exceed the charges based on the rates established by the Commission in *Waukesha Lime & Stone Co., Frank B. Fargo, Agent, v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R., 471.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and the Chicago, Milwaukee & St. Paul Railway Company be and the same are hereby authorized and directed to refund to the Waukesha Lime and Stone Company the sum of $27.47.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RATES, RULES AND REGULATIONS OF THE ASHLAND WATER COMPANY.

Submitted May 21, 1914. Decided July 10, 1914.

The city of Ashland petitioned the Commission for a rehearing in its investigation of the rates, rules and regulations of the Ashland Water Co., and a modification of its order in that case (February 17, 1914, 14 W. R. C. R. 1). The city contended that the value of the property of the company found by the Commission, and the rate of return contemplated by it in the schedule of new water service rates prescribed in the order in question were in excess of what was warranted under the circumstances of the case and that the result was an unduly high schedule of charges for water service.

Consideration of actual costs in the present case was apparently condemned by the city on account of the excessive value reached by the president of the company through a misapplication of the method of fixing value by actual investment. With respect to the physical property values the amounts allowed by the Commission for hydrants, filters, overhead general expenses, operating capital, pipe laying, and services were particularly challenged.

The rate of return contemplated by the schedule established February 17 was inferred by the city to be 5.8 per cent, and it was argued that such a return was far more than was justifiable under all the circumstances of the case; that any real estate owner in Ashland would now be amply satisfied with a net return of 4 per cent; and that a proper rate of return would be one not to exceed 4 per cent upon a reasonable estimate of the costs of reproduction, with increase later, if equitable, as town and business grew, to compensate for any present deficiency. It appears that conditions in Ashland are abnormal. The city covers an area that in size is out of proportion to its population and industries, and the population for some time has been decreasing rather than increasing. The cost per capita and per customer of the Ashland Water Works is about twice as great as the average of these costs for other Wisconsin cities, and the city officers feel strongly that the company should share with all other citizens and the city at large the effect of the abnormal conditions prevailing in Ashland. The fact that the present plant was largely built by bonds bearing six per cent interest is noted, and it is further noted that these bonds were necessarily sold at a discount, and that the city of Ashland itself has been paying 5 per cent interest on most of its own bonds. It seems that the city's expert placed the rate of return for interest and profit at 6 per cent on the fair value of the plant and business and not at a higher figure, on the ground, in his own words, "of the fact, now generally recognized, that under the Wisconsin Commission the operation of public utilities is attended with less hazard than is usually incident to such busi-

ness elsewhere"; that the Commission itself allowed earnings that would yield not far from 6 per cent on the estimated fair value of the investment; and that in doing so the Commission did not place them at a higher figure, such as would have represented ordinary returns for capital similarly invested, because of the exceptional conditions prevailing in Ashland.

Held: The valuation of a property on the basis of actual investment as one of the theories of valuation does not contemplate the substitution of estimates of cost of reproduction in place of the original and actual costs. A method which has long received the favorable consideration of the courts as one of the reasonable methods to be applied when possible should not be condemned simply because, through misapplication in certain cases, extravagant results may have been obtained. No weight can be given to results which are clearly and fundamentally erroneous. The city's apprehension that the Commission may have been influenced by the abnormally large valuation derived by the company's president is therefore unfounded. With respect to the physical property values, the difference between the cost of the hydrants now in use, and the cost of types of similar sizes regularly made and commonly carried in stock, should not be charged off as depreciation due to obsolescence, as contended by the city, since the company's judgment as to the superiority of the more expensive hydrants is not proven to be in error. The valuation formerly found for the hydrants is therefore allowed to stand. As regards the filters, the values arrived at by the city and the Commission are not so far apart that either can be considered very unreasonable. However, possibly a somewhat smaller amount should have been allowed as the cost of reproduction new of this item, though certainly not as much as intimated in the city's argument. A certain reduction is accordingly made in the allowance for the filters. The allowance of 15 per cent for overhead general expenses is not a greater allowance proportionately for that element of cost than has been made by the Commission in certain other cases of utility valuations, and no reason is seen why it is more than a proper addition in the present case. It is not clear that the amount formerly allowed as working capital can properly be reduced. In addition to meeting current operating expenses, the company must be prepared at all times to make extensions and improvements demanded as well as to take care of unusual emergencies which may arise. In the light of the arguments and additional evidence the conclusion is reached that the unit prices for pipe-laying used in the staff's 1912 valuation and accepted in arriving at the total valuation found by the Commission in its decision of February 17, 1914, are unduly liberal, and the allowance for pipe-laying is accordingly reduced. The aggregate amount of the tapping and connecting charges for services in the previous decision should possibly have been and is now deducted from the plant value, and, such being the case, must also be eliminated from non-operating revenues. After making due allowances for pipe and labor paid for by consumers, and for increased number of services in 1913 over 1912, the result of the staff's valuation of services is substantially in agreement with the result reached by the city's expert, and the latter's value is believed a fair one to adopt. The net result of all changes is to reduce the valuation of the physical value of the property $21,695 reproduction cost, and $20,503 present value. The total value, due consideration being given to a sum of $7,500 charged into a depreciation reserve, to working capital and going value, can hardly be regarded as materi-

ally less than $480,000. Should it be disclosed that the book costs, upon which the reductions in the value of the physical property are mainly based, were not correctly stated upon the records of the company, proper corrections may be necessary later.

Held: That the rate of return must take into consideration the abnormal conditions existing in Ashland, and that under such conditions it could not possibly be made as large as what would be considered reasonable under normal conditions, was fully recognized by the Commission in its previous order. On the other hand, the city can hardly claim with reason that the company will receive equitable treatment if it be allowed a smaller rate of interest than the city has had to pay on its own bonds. Had the city owned the waterworks, it is quite certain that, pledging the property of the plant only, it could not have obtained the required capital at a lower cost than that for which the present owners obtained theirs. The cost of capital and the enterpriser are fixed by economic forces, or laws in the open market, which cannot be controlled by the state, the city, or the Commission, and, in spite of the marked tendency of the operation of the Public Utility Law to reduce the risks and lower the cost at which capital can be had, the downward tendency is not always great enough to offset the abnormally low relative earnings sometimes encountered, and it has not been great enough to cause capital and the enterpriser in the public utility field to become so abundant that these factors can generally be had at as low a cost as 6 per cent on the investment. In fact, plants whose net earnings amount to less than about 7.5 per cent on the investment find it difficult to obtain the capital needed on reasonable terms. Were the conditions involved in the present case normal, the Commission would not hesitate to allow a sufficient amount in the way of earnings to cover the full cost of the necessary capital and managing ability as fixed in the open market under similar conditions. Such allowances are undoubtedly best in the long run for all concerned, as they result in an abundant supply of the factors of production, instead of restriction, and the promotion, rather than hindrance, of general development and prosperity. Under the abnormal conditions at Ashland, however, both the water company and its customers will, for the present at least, have to forego something to which they would otherwise be entitled. It is therefore deemed just and equitable to all concerned to temporarily alter the schedule of rates established by the order of February 17, 1914.

It is ordered: 1. that the charge to the city for hydrant rentals be reduced from $24,300 to $21,000 per annum; 2. that the flat rate part of the schedule for residence and commercial users be reduced by a somewhat smaller amount to the rates named in the present order.

The city of Ashland petitioned for a rehearing on the above entitled matter and a modification of the decision and order of the Commission dated February 17, 1914 (14 W. R. C. R. 1).

A rehearing was held in the city hall of the city of Ashland on May 21, 1914. In this the city was represented by *M. E. Dillon* and *Victor T. Pierrelee,* and the Ashland Water Company by *William Wheeler,* president, and *Sam Wheeler,* superintendent.

Written arguments by the attorneys for the city and a written reply thereto by the president of the company were subsequently filed.

It is contended, in the city's argument, that both the valuation found by the Commission for the property of the water company and the rate of return thereon contemplated in the schedule of new water service rates prescribed in the decision and order of February 17, 1914, were greater than were warranted by the circumstances of the case, the result being an unduly high schedule of charges for water service.

It is perfectly clear that the city officers feel quite strongly that the water company should share with all other citizens of Ashland and the city at large the effect of the very abnormal conditions existing there and that the effect of the decision and order of February 17 would be to throw the hardships of those conditions largely upon the city and its citizens. The Commission was quite conscious of the fact that Ashland suffered a loss in population and a general depression in business, with attendant hardships upon its people; also that the water works property clearly represented an abnormally large investment and value for a city of the size and condition of Ashland. Under such circumstances it would be quite unreasonable to expect that the rate of net earnings of the water plant could possibly be made as large as that which, under normal conditions, would properly be considered a reasonable rate.

The city infers that the rate of return contemplated by the schedule established on February 17 was 5.8 per cent. This, it argues, is far more than is justifiable under all the circumstances of the case. One of the contentions seem to be that the business hazards assumed by investors in Wisconsin utilities are less than those existing in other states, and therefore there should be a corresponding reduction in the rate of return. Attention was called to the fact that government bonds yield but 2 or 3 per cent interest. The claims were made that any real estate owner in Ashland would now be amply satisfied with a net return of 4 per cent and that the largest holder of rented tenements in the city derives a net income of less than 3 per cent upon the cost of his properties, which were built fifteen or twenty years ago. It is further claimed that were his income computed upon the cost of reproduction it would amount to less than 2 per cent. The arguments imply that, so far as private business is concerned, the foregoing is representative of the general conditions in Ashland.

It is stated that "a return of not to exceed 4 per cent upon a reasonable estimate of the costs of reproduction we regard as wholly fair to the company, and if too low in the judgment of the Commission, as the town grows and the business with it, the return may be increased to compensate for any present deficiency." The latter portion of this statement indicates a belief in the policy of still further increasing the past deficits which already amount to a large sum even when measured by a return of but 6 per cent. Under ordinary circumstances certainly nothing less than 6 per cent could be maintained to be a fair rate of return to utilities, even in Wisconsin, when it is usually impracticable for them to borrow the full face value of their securities at that rate. The city of Ashland itself has, according to certain information, been paying 5 per cent interest on most of its own bonds. City bonds, legally issued, are quite generally regarded as safer investments than those of a public service company. It is considered highly improbable that the city of Ashland could have built the existing water plant without borrowing the money and paying a substantially greater rate of interest thereon than it now argues would be a fair rate for the company to earn. Public utilities, including both municipally and privately operated, are usually built largely on borrowed capital represented by bonds. The same is true in this case and the bonds of the company bear 6 per cent interest. They were also necessarily sold at a discount. Had the city, instead of the company, built the plant, its ability to offer greater security might have enabled the city to obtain the required capital at a somewhat lower rate than private interests are required to pay. This ability to offer greater security lies in the city's power to tax all privately owned property within its borders. In issuing municipal water works bonds a city not only establishes for such bonds a first lien upon all privately owned property in that city, including public utilities, but it pledges its taxing power in so doing. Without establishing this first lien on all other property and without pledging its taxing power, and with only the plant itself pledged as security, it is very doubtful that the city could obtain money on terms even as favorable as those given to the private company. The city can hardly, with sound reason, claim that the water company in this case will be receiving equitable treatment if it be allowed a smaller rate of interest than

the city has had to pay on its own bonds, particularly when it is remembered that the company's bonds bear interest at 6 per cent and that even at this rate they had to be sold at a discount, this being in some cases as much as 10 per cent.

In determining the force of the arguments as to the low rates of interest obtained by investors in private business enterprises in Ashland, the matter must be viewed from the other side. The question would then be,—should there still be a close relation between the rate of return to the water company and that to other private investors if the latter were obtaining several times the rate now received, say 12 to 15 per cent or more. It is very doubtful that any such rule would be admitted to work both ways. It has not been shown, or apparently even claimed, that there are no private investors in Ashland who are making as much as 6 per cent or more on their investments.

The arguments made on behalf of the city have dealt quite extensively with the valuation of the Ashland water works as found by the Commission in its recent decision and order, and with the evidence which was before us, especially with the estimates prepared by the company's officers and that the city's consulting engineer, D. H. Maury. They have also discussed the theories upon which the values of such properties are to be ascertained.

In considering the valuation prepared and submitted by the company's president it is said: "Were the literature of valuations to be searched for examples of the fallacy and lack of logic of the method of fixing value by 'investment cost', it is doubtful whether any better illustration could be found than the enormous valuation already referred to as having been introduced in this case by the president of the water company."

This statement appears to be intended as a condemnation of the consideration of what actual costs have been. Such condemnation is apparently made because of the enormity of the results obtained, yet the fact that the enormity of the results was, in this case at least, due to a mixing of methods seems to have been overlooked. A method which has long received the favorable consideration of the courts as one of the reasonable methods to be applied when possible is not to be condemned simply because in certain cases it may have been misapplied and extravagant results obtained through its misapplication.

The sum of $1,141,917 obtained by William Wheeler on the basis of a 7 per cent return as the present earning value of the property was clearly due to a misapplication of the method. This fact was briefly referred to in the decision of February 17, 1914 (14 W. R. C. R. 1, 48, 54, 55), but may not have been made clear.

Instead of using the actual additional investments from year to year in making his earning value computations, Mr. Wheeler used a distribution of his estimate of cost of reproduction, which exceeded the actual construction cost. The obvious effect is to make the property values, and consequently the deficiencies in net earnings, below any assumed fair rate of return, greater than they really are.

In his "Distribution by years", Table I, of his Exhibit B, Mr. Wheeler showed a plant value at the end of 1892 of $328,660, and at the middle of 1913 of $611,473, an increase of $282,813. From February 28, 1893, to June 30, 1913, the yearly amounts of "Additional construction", as submitted by the company and presented on page 50 of the recent decision, (14 W. R. C. R. 1) aggregate $240,415.57 when the expense of relaying the intake is included as additional construction. The reconstruction of old features is hardly to be regarded as new or additional construction, hence the expense of relaying the intake should be deducted from the sum of $240,415.57 noted above. The result is the cost of the actually new construction between February 28, 1893, and June 30, 1913, namely $211,681.07.

This latter amount is $71,132 less than was apportioned to almost identically the same period in Mr. Wheeler's distribution by years of his estimate of cost of reproduction. The various circumstances of the case make it appear quite probable that values greater than the actual cost were also apportioned to the features constructed prior to 1893.

The theory of measuring value by actual investment does not contemplate the substitution of estimates of cost of reproduction in place of the original and actual costs. The large and fundamental error in Mr. Wheeler's earning value computations, resulting in the great sum of $1,143,917 for June 30, 1913, was clearly recognized by the Commission before making its decision of February 17, 1914.

The city's apprehension that the Commission may have been influenced by the abnormally large valuation derived by the

company's president is therefore entirely unfounded, as no weight can be given to results which are clearly and fundamentally very erroneous.

Physical Property Values.

Coming now to the valuation of the physical property alone: It is noted that the city argues that the estimates made by its expert, D. H. Maury, were liberal in every respect toward the company, and that the values found by the Commission should not exceed his estimate on any single item. It is urged that Mr. Maury was wholly disinterested, was left entirely free to reach his own conclusions, that he possessed very large experience in construction and valuation, and that he had accepted without question the figures of the company's witnesses on all items except those of which he had very good reason to believe were too high.

Special attention was given in the arguments to the items of pipe laying, hydrants and connections, services, filters, overhead general expenses and operating capital. Although it does not appear that the rehearing resulted in the presentation of any new evidence of consequence as to the proper allowances for these or any other items, they will be given reconsideration in the light of the arguments and also in the light of additional evidence found by the Commission.

Pipe Laying. The city's discussion on this item is confined to the allowances for laying the cast iron mains only, which appear to account for 91.12 per cent of the total mileage. The allowances made in the four valuations are as follows:

William Wheeler, (1913)	$68,413
Sam Wheeler, (1913)	68,633
D. H. Maury, (1913)	52,481
Commission staff, (1912)	62,557

Valuations of the Ashland water works were made in 1908 by both the Commission's staff and the superintendent of the company. The pipe mileage at that time was less than that included in each of the above estimates, so that without modification on account of such difference the totals allowed for pipe laying then and now are not on a comparable basis. On applying the unit prices used in the two earlier valuations to the mileage shown by

the later ones, we arrive at the following totals for laying the cast iron mains:

Sam Wheeler	$62,952.58
Commission staff	52,839.42

The latter figure shows that the original judgment of the Commission's engineers as to cost of pipe laying in Ashland, as expressed in the unit prices used in the 1908 valuation, is substantially in agreement with the estimate made by the city's expert in 1913.

A closer examination of the company's annual reports to the Commission for the years ending June 30, 1909, 1910, 1911, 1912, and 1913, has been made to ascertain what light they throw on the cost of laying water pipe in Ashland. The data therein contained pertain to both cast iron and some small wrought mains, and the material and labor costs on the different kinds and sizes are not separately shown. During those five years the lengths and costs total as follows:

482	lin. ft. of	¾″	main
485	"	1 ″	"
698	"	1¼″	"
46	"	4 ″	"
1,391	"	6 ″	"
1,909	"	8 ″	"
1,827	"	10 ″	"

6,838 lin. ft. of all sizes cost $6,258.27

The same lengths of the various sizes when valued according to the unit prices used in the staff's 1912 valuation would represent a sum of $6,885.32 or fully 10 per cent in excess of the actual cost. There is a question as to whether or not the lower actual cost for this portion of the system was wholly due to less than average cost of materials. The valuations made by the staff are customarily made on the basis of normal prices of materials and labor. Normal prices of at least some construction materials are gauged by a five-year average. The 6,838 lin. ft. of mains above noted were all reported in the last four years of the five-year period ending June 30, 1913, over 84 per cent of the total cost being shown in the 1912 annual report. Approximately 13.6 per cent of the total cost was contained in the 1910 report. The mains laid during these four years represent 4.2 per cent of the total mileage.

Investigation of the variation in current prices of materials during this period does not substantiate the assumption that the above mentioned difference is largely due to less than normal costs of materials. The obvious conclusions are that the unit prices for pipe laying used in the staff's 1912 valuation, which were accepted in arriving at the total valuation found by the Commission in its decision of February 17, 1914, are unduly liberal.

The amount arrived at by applying to the revised mileage the unit prices representing the original judgment of the Commission's engineers as to proper costs of such work is doubtless substantially correct, and is checked very closely by the estimate by the city's expert and by the company's actual costs. The allowance for pipe laying made in the recent previous decision may therefore be reduced from $62,557 to $52,839, as cost new.

Hydrants and Connections. The city appears to contend that the difference between the Commission's allowance for the cost of the Holly and Gaskill hydrants and the cost of the same number of other types should have been charged off to depreciation through obsolescence, on the ground that those hydrants are not longer being manufactured except upon special orders which are largely from plants having adopted those types many years ago. The Holly and the Gaskill hydrants apparently cost considerably more than similar sizes of various other types which are widely used and are regularly made and carried in stock. The company in this case has installed quite a number of hydrants of another such type but is understood to have returned to the use of the Holly and Gaskill hydrants.

It is difficult to see what object the company could have in paying more for hydrants or any other features than is necessary to get satisfactory articles, particularly when it is remembered that the investment in the plan has long been so large as to make it almost impossible to obtain net earnings sufficient to pay a fair rate of return thereon. The company evidently finds the Holly and Gaskill hydrants more satisfactory than others, and in their judgment worth the difference in price.

On hydrants and their connections with the mains the city's expert estimated a cost of reproduction amounting to $11,009 by using the same price for the Holly and Gaskill as for the Mathews hydrants. The staff's corresponding estimate was $13,071 and those made by the company's president and superin-

tendent were respectively $15,229 and $15,074. The difference involved is roughly from two to four thousand dollars. The estimate made by the Commission's staff was adopted in the decision made in February.

It is understood that the city, in fixing the present value, would have the difference between $13,071 and $11,009 charged off as depreciation due to obsolescence before ascertaining and deducting the amount of depreciation due to natural deterioration accruing through service. The propriety of so doing is not clear. The company's judgment as to the superiority of the more expensive hydrants is not proven to be in error. In the absence of such proof the valuation formerly found will be allowed to stand.

Services. The service pipes from main to curb cock appear to have been laid at the expense of the company in all but about 800 cases wherein the consumers paid for the pipe and labor and the company, as usual, furnished the lead and brass goods and curb box and tapped the main. The company's practice and rule has been to make a tapping and connecting charge of $3.25 per service. The aggregate amount of such charges (estimated as $7,793.50) was not deducted from the plant value as possibly it should have been. The usual method of treating such receipts has been to class them among the miscellaneous non-operating revenues. Allowance has been made for them in that way. If taken out of the plant value these receipts must also be eliminated from non-operating revenues.

Deducting from the staff's valuation the estimated amount represented by pipe and labor in 800 services paid for by consumers, as was done in the previous decision, also the sum of the tapping charges collected by the company from consumers, leaves a cost of reproduction to be borne by the utility amounting to $15,350.50. Deducting the sum of the tapping charges from Mr. Maury's estimate results in a net amount of $16,130.50 instead of $16,141.00 as stated in the city's argument.

We note that the two valuations made by the company's officers and the one made on behalf of the city by Mr. Maury include pipe and labor for 1,398 services, goosenecks for 1,970, stop cocks and valves for 1,401, curb boxes for 2,217 and cartage for 2,398 services. Apparently these valuations have intentionally omitted the materials and labor paid for directly by consumers as the latter number appears to be substantially the correct num-

ber of services. All materials and labor for 2,398 services were included in the sum of $29,864 in the 1912 valuation prepared by the staff, from which $6,720 was deducted on account of pipe and labor paid for by consumers. Some allowance is to be made for the increased number in 1913 over that in 1912. The result derived from the valuation by the city's expert, being substantially in agreement with that by the staff when corrected for the increased number, is probably a fair value to use for the purposes of this case.

Filters. Counsel for the city states, "To this item the Commission has taken a figure practically the same as that of Mr. Sam Wheeler [superintendent of the company] and about $8,000 larger than that of Mr. Maury." As a matter of fact the three figures were as follows:

Commission	$47,133
Sam Wheeler	50,488
D. H. Maury	42,570

It will therefore be seen that the revised estimate by the staff which was adopted by the Commission for the purpose of this case, was $3,555 less than that of Mr. Sam Wheeler and only $4,563 instead of about $8,000 in excess of Mr. Maury's estimate. Counsel for the city has evidently failed to note the statement on page 36 of the former decision (14 W. R. C. R. 1) relative to two other items aggregating $3,216, which was for uncompleted work in connection with the new filters, including the installation of automatic flow controllers, arrangement for which was understood to have then been made by the company.

The Commission's figure on the original filters and appurtenances was 10.7 per cent and that of the company's superintendent was 18.6 per cent in excess of Mr. Maury's. It may be true that a somewhat less amount should have been allowed as the cost of reproduction new on this item. There certainly is not, however, a basis for reduction of the former allowance by as much as $8,000, as intimated in the city's argument.

The value estimated by the city's engineer for the original filters was arrived at in a way which seems to entitle it to much weight, but whether due allowance has been made therein for the net increase in cost of materials and labor since the original construction is not altogether certain. No allowance seems to have been made for contingencies beyond such as may have occurred on the original work in addition to that which was eliminated

from consideration by the city's engineer. He eliminated the extra cost which was involved in the original construction on account of a portion of it, at least, having been done during winter months.

The work was done by the company's own forces, the cost including no profit to contractors. It may well be doubted that either the city or the company could now have exactly similar work executed by any contractor for less than was estimated by the staff and allowed in the former decision, even though it were possible for the company, in the absence of all contingencies, to duplicate the work at Mr. Maury's estimate. The two figures are hardly so far apart that either can be considered very unreasonable. So far as the weight of evidence shows, it appears that either may be about as near correct as the other and we shall consider $45,000 as a fair figure to use in this matter.

Overhead General Expenses. Counsel for the city says, "In the recent decision of the *Company* touching upon this phase of the case the Commission indicates that the figures furnished by the city's expert under this head was $68,326 [page 44 of the decision]. The facts are that the city's figure under this head was $65,326 (new) or $3,000 less than the amount suggested by the Commission." We know of no decision of the company and we not only find no reference whatever on page 44 of our former decision (14 W. R. C. R. 1) to the matter of overhead general expenses but we find, on page 45, the city's figure of $65,326 was correctly quoted.

In saying, "It is admitted that the allowance in this case should be increased from 12 to 15 per cent of the value as herein determined", there was no intention to imply that the city made any such admission. The admission was that of the Commission as to the propriety of a change suggested by the staff in its own previous estimates.

It is noted that the city's own expert, instead of adding 15 per cent to his estimates on physical property items to cover overhead general expenses as stated in the city's arguments, actually added very nearly 15½ per cent or, more precisely, 15.4723 per cent.

Whether or not the city admits the justice of allowing as much as was conceded by its own expert to be fair, there appears no reason to believe that 15 per cent is more than a proper addition for that element of cost in the case of a plant such as is here under consideration. This is not a greater allowance, proportion-

ately, than has been made by this Commission in certain other cases of utility valuations.

Operating Capital. The allowance of $15,000 made by the Commission is objected to by counsel for the city, who urge that not more than $5,000 is necessary as operating capital.

Apparently no consideration is given to the fact that the company has more than current operating expenses to be prepared to meet. It must be prepared at all times to make the extensions and improvements demanded as well as to take care of the unusual emergencies which may arise. In the event of a shortage of funds of its own available for such expenses the company would be obliged to borrow and pay interest, provision for which was not made in the new schedule of rates.

The company's income from the public hydrant service is apparently not received quarterly, as stated in the city's argument. It is asserted in the reply of the company that bills have been rendered semiannually for the six months periods ending March 31 and September 30 each year, and for several years past have been paid once a year only, usually in the month of February for the year beginning April 1 preceding.

The company's balance sheets in the annual reports on file of course show the amounts of cash on hand and bills receivable at the close of each fiscal year only. The amounts must continually vary during each year. In the five annual reports now on file it is noted that the sum of these two items has varied for June 30 from $5,670.95 to $14,321.99. With hydrant rentals being paid but once each year the item of bills receivable alone will likely amount to more at certain times than was allowed as working capital in the former decision.

It is not clear that the amount formerly allowed as working capital can properly be reduced.

Net Change in Valuation. The amounts by which it now appears the valuation found in the February decision may properly be reduced are as follows:

	Reproduction cost	Reproduction cost less depreciation
Pipe laying	$9,718	$9,426
Services	7,014	6,313
Filters	2,133	2,090
Total	$18,865	$17,829
15 per cent on same	2,830	2,674
Grand total	$21,695	$20,503

The foregoing changes in certain items result in the following revised valuation of the physical property:

		Reproduction cost.	Reproduction cost less depreciation.
A. Land		$5,100	$5,100
B. Transmission and distribution.			
1. Mains.			
(a) C. I. pipe	$96,846		
(b) Valves and boxes	4,292		
(c) Cartage	1,408		
(d) Laying C.I. mains	52,839		
(e) Small mains	3,616	159,001	155,103
2. Hydrants and connections		13,071	10,849
3. Services		16,130	14,667
4. Meters		8,247	5,623
5. Suction system		48,000	47,040
C. Buildings and miscellaneous structures.			
1. Pumping station buildings		14,000	11,200
2. Reservoir		13,000	12,220
3. Wells		4,600	4,508
4. Filters, old		45,000	44,100
Filters, new			
Amount completed		26,977	28,977
Required to complete		3,216	3,216
5. Miscellaneous buildings		6,000	4,800
D. Plant equipment		34,604	22,163
E. General equipment		4,919	2,765
F. Paving		1,000	960
Total		$404,865	$373,291
G. General expenses (15)		60,730	55,994
Total		$465,595	$429,285
H. Materials and supplies		3,057	3,057
Total		$468,652	$432,342

The utility's accounts show a total of $7,500 charged into a depreciation reserve during the three years 1911, 1912 and 1913, and this should receive consideration. When it and the going value and working capital are considered in connection with the physical property, the total value can hardly be regarded as materially less than $480,000. The valuation made by the engineer employed by the city was slightly in excess of this figure, largely by reason of his inclusion of all the paving then over the mains and services, although he inadvertently omitted allowance for working capital. The substitution of a proper allowance for working capital in place of his allowance for paving which was not disturbed by the company in its construction work would bring his total substantially in agreement with the value stated above.

Effect on Rates. The foregoing modification of the former physical valuation would seem to affect the amount of gross earnings to the extent of interest and depreciation on property rep-

resenting $20,503. If interest on this amount be computed at 6 per cent and depreciation at 0.7 per cent, the reduction affected in gross earnings is $1,374.

A reduction of this much in the rates authorized by the Commission February 17, last, is more of a reduction than could be fairly made if the plant was operating under conditions that could be regarded as normal. In fact, in that case these rates might have to be increased rather than reduced. The conditions surrounding the Ashland water works, however, are abnormal. The city covers an area that in size is out of proportion to its population and industries. This means that more miles of mains and greater pumping capacity is required to serve the people of the city than would be the case if the population was less scattered. The population of Ashland for some time has also been decreasing rather than increasing. These and other facts of this nature should perhaps be given more consideration than was accorded to them in the above named order.

The cost per capita and per customer of the Ashland water works is about twice as great as the average of these costs for other Wisconsin cities. In 1910 for instance, Madison, with 121 per cent more population than Ashland, had only 66 per cent more water pipe mileage than Ashland, while the diameter of the mains was on the average 32 per cent greater in Ashland than in Madison. The cost per customer of the water works in the two cities was $248 in Ashland and $132 in Madison. The Ashland water works is in fact so large and so well constructed that it is very doubtful whether the city, if it had owned the plant, would have invested so liberally therein and would have developed the plant on so extensive a scale as the present owners. Attention is called to these facts not for the purpose of conveying the impression that the Ashland plant has excessive capacity or that it is more costly than necessary, but simply because they vitally affect the cost of the service which this plant renders. The city of Ashland is fortunate rather than otherwise in having its water works owned by parties whose financial position was such that they could be required to provide such a plant as the one it now has, even though it did not earn the ordinary returns upon the investment.

If the city owned the water works it is possible that, by pledging all of its taxable property as well as its powers of taxation, the city could have obtained the capital required for the con-

struction of the water works at a somewhat lower rate of interest than the rate at which the capital for the present plant was obtained. It is also possible that the city in operating its own plant could keep down the executive salaries to a slightly lower figure than the salaries now paid by the existing company. When it comes to the remaining expenses that enter into the cost of the service, however, the situation in this respect is likely to be reversed. While municipal operation is more successful in the case of water works than in the case of other public utilities, it is more than likely that the increase in the other operating expenses under such operation would fully offset the decrease in the fixed charges. These statements are especially true in cases where as much is demanded in the way of facilities and service of municipally owned as of privately owned plants. The tendency to demand more in the way of service in the latter case, however, is in most places quite marked, and this of course has a material affect upon the expenses. If the city, in obtaining capital for the plant, had pledged the property of the plant only, it is quite certain that it could not have obtained this capital at a lower cost than that for which the present owners obtained their capital.

Since this Commission has been severely, not to say intemperately criticised for its conclusions and order in its decision of February 17, last, a few facts bearing upon the justice of these criticisms and the consistency of at least some of those who were responsible for them may be in point. The records in the case show among other things:

That the city of Ashland employed an expert in the case who was said by the city—and we think justly—to be competent, honest and unbiased and who examined the facts involved and investigated the situation generally and furnished testimony upon these points in the case, which testimony the city has also pointed to as fair and just under the circumstances.

That this expert placed the fair value of the plant and its business, including working capital, at not far from $495,000; while this Commission placed this fair value for the purposes of the case at about $500,000; and that this value was placed at much higher figures by the representatives of the water company;

That the said expert placed the fair annual gross earnings of the plant at about $67,000; while this Commission allowed annual gross earnings at about $68,000, including additional or

new expenses involved in the improvement of service as ordered, on a rate schedule under which these earnings would somewhat decrease with increases in proportion of those who used meters; and that the representatives of the water company placed the fair earnings at much higher figures;

That the expert placed the cost of the fire service or hydrant rentals at $27,440 annually; while the Commission allowed $24,300 for this purpose.

That the city's expert placed the rate of return for interest and profit at 6 per cent on the fair value of the plant and the business; that in his notes on going value which were submitted in the case he stated among other things that: "over and above operating expenses, depreciation and taxes the rates charged by the water works for its services should yield a net return of at least 6 per cent on the gross sum of its physical property, going concern value, and necessary operating capital;" that he placed "this net earnings at 6 per cent instead of at a higher figure because of the fact, now generally recognized, that under the Wisconsin Commission the operation of public utilities is attended with less hazard than is usually incident to such business elsewhere";

That this Commission also allowed earnings that would yield not far from 6 per cent for interest and profits on the estimated fair value of the investment. These earnings were placed at these figures, not because it was believed that they represented the ordinary returns for capital similarly invested, or that in the long run the necessary capital and enterprise can be had for such returns, but because the Commission felt that—although little or no testimony had been introduced upon this point—the conditions in Ashland were such that, for the present at least, it would not be fair or to the best interest of all concerned to allow higher earnings.

Upon most of the vital points in this case there is thus substantial agreement between the testimony and opinions upon which the city relied in the case and the conclusions and rates as promulgated in the order of the Commission. Yet, the former is held to be fair and just, while the order of the Commission is characterized as unfair if not dishonest.

It is a fact that, as has been stated by the city's expert, the operation of the Public Utilities Law in this state has had a marked tendency to reduce the risks involved in the business and

hence to lower the cost at which capital can be had in the public utility field. It is also a fact that the public is given the benefit of these reductions, for the allowances for interest and profits which the Commission includes in the cost of the service upon which the rates are based are for these reasons gradually growing smaller. We regret to say, however, that this downward tendency in the cost of obtaining capital for public utilities in this state is not always great enough to offset such abnormally low relative earnings as are sometimes encountered, or to have caused the capital and the enterpriser in this field to become so abundant that these factors can now be generally had at as low a cost as 6 per cent on the investment.

The rates of return for interest and profits depend upon the risks involved, the state of the money market, the nature of the business, and upon many other factors of this nature. Some idea of what capital and the enterpriser can now be had for by public utilities may be gleaned from the prices at which their securities are selling. During the past few years, for instance, good bond issues have been selling on bases upon which the cost to the company, when discounts and selling expenses are taken into account, averages a little more than 6 per cent. The bonds in these cases, however, did not cover more than 80 per cent of the value of the property behind them. They were also secured by a regular net earnings of the plants that amounted to about twice as much as the interest charges on the bonds. Had in these cases the bonds covered a greater proportion of the value of the plant than they did, and had the net earnings of the plant been less or more irregular than they were, then it is also certain that the bonds would have sold on bases under which the cost to the companies would have been still greater. Now if the better secured part of the capital, that which is represented by the bonds, cannot be had at a less cost than 6 per cent, it is quite obvious that that part of the capital which is represented by the stock and which is much less well secured, commands in the long run much higher rates than 6 per cent. In fact, the situation in this respect is such that plants whose net earnings amount to less than about 7.5 per cent on the investment find it difficult to obtain the capital needed on reasonable terms.

The cost of capital and of the enterpriser are fixed by economic forces or laws in the open market. These laws cannot be controlled either by the state, the city or this Commission. Pub-

lic utilities, like everybody else, must pay the market prices for what they need. Exceptions to this are only temporary in their nature. This Commission has been made aware of this in more ways than one. For instance, where the existing rates for services yield less than the market rate for interest and profits, the utilities often find it impossible to obtain capital for new and much needed extensions to the plant until the Commission has authorized such increases in the charges for their services that the returns are brought up to the level of the general market. In other cases, again, where the Commission has happened to make so great reductions in the charges for service that the returns upon the investment were brought down below the market or reasonable level, the Commission has had to retrace its steps and to raise the rates up to the requisite level before the utilities could obtain the necessary capital for such additions to the plant and to the service as were demanded and needed by the public.

These and other facts of the kind illustrate quite fully the fact that each of the factors of production, the same as commodities and services generally, have their market prices, and that these factors, the same as commodities and services generally, cannot be had in the long run unless these prices are paid.

The reductions which in the instant case have been made in the cost of pipe laying, services, and filters, and consequently in the valuation of the physical property, are mostly due to the fact that for the purposes of this case it was thought best to use the cost for these items as shown on the records of the company rather than the cost as computed from the market prices of the elements which enter into these costs. Should it be disclosed that these book costs were not correctly stated on the records of the company, then it may of course be necessary to make the proper corrections later on.

Were the conditions involved in this case normal, the Commission would not now hesitate to allow as much in the way of earnings of the plant as would be sufficient to cover the full cost of the necessary capital and managing ability as fixed in the open market under similar conditions. Such allowances in the long run are undoubtedly the best for all concerned for under them the supply of the factors of production becomes abundant instead of restricted and general development and prosperity is promoted rather than retarded. In fact, no city in the long run can ever hope to obtain service or the factors involved in it for less

than their fair market price. But the conditions at Ashland and which surround the Ashland Water Company are, as stated, abnormal. They appear in fact to be such that both the water company and its customers, for the present at least, will have to forego something to which under more normal conditions they would have been entitled. For these reasons mainly we deem it just and equitable to all concerned to temporarily alter the schedule of rates established by our order of February 17, 1914, by reducing the charge to the city for hydrant rentals from $24,300 as named therein to $21,000 per annum, and by temporarily reducing the so-called flat rate part of this schedule for residence and commercial users by a somewhat smaller amount, or to the rates named in the order herein. It is further deemed fair under the circumstances that the said fire hydrant charge as thus reduced shall go into effect with the beginning of the current billing period April 1, 1914, and that the said flat rate part of the schedule shall go into effect July 1, 1914.

IT IS THEREFORE ORDERED, That the order of this Commission dated February 17, 1914, be so amended that the charge to the city for fire service on hydrant rentals be $21,000 per annum and that this charge shall become effective April 1, 1914.

IT IS FURTHER ORDERED, That the flat rate part of the said order of February 17, 1914, be so amended as to read as below; and that the said flat rates as so amended and given below go into effect July 1, 1914.

IT IS FURTHER ORDERED, That, with the exception of the hydrant rentals to the city and the flat rates to private consumers named herein, all the rates given in the said order of February 17, 1914, go into effect July 1, 1914.

The flat rates named thus provided by this order read as follows:

	Flat rates as revised
Alcohol, each barrel	$0.09
Ale cellar	9.00
Bakery, each oven	9.00
Barber shop, one chair	7.00
Each additional chair	3.50
Bath tub, private, used by one family	5.50
Used by more than one family, each	4.00
Bath tub, public	12.00
Beer, each barrel brewed	.06
Beer house	9.00
Billiard saloon, each table	3.50

Boarding house, sewered, 7 rooms or less	$12.00
Each additional room	1.00
Boarding house, not sewered, 7 rooms or less	11.00
Each additional room	.75
Book bindery	9.00
Brickwork, per 1,000	.09
Candy manufacturing or confectionery	9.00
Church	5.50
Church baptistry	5.50
Cigar manufacturing, per hand	1.70
No license less than	10.00
Club room	17.00
Coffee saloon	5.50
Concrete work per cu. yd	0.055
Dram shop	14.00
Dyeing and scouring	14.00
Forge, each	3.50
Fountain, standard, running not more than 4 hours daily for 6 months	12.00
Hall	17.00
Hat manufacturing	14.00
Horse	1.70
Hose for private stable	5.50
Hose for lawn or street sprinkling used not more than four hours daily for 6 months on 50 feet frontage or less	5.50
Additional frontage per ft	.11
Ice cream parlor	12.00
Livery stable per stall	3.00
Office	5.50
Oyster house	9.00
Photograph gallery	17.00
Plastering, per sq. yd	.00¼
Residences without sewer or cesspool, one family one faucet, 4 rooms or less	6.00
5th, 6th and 7th rooms	1.00
each additional over 7	1.00
Residences with sewer or cesspool, one family, one faucet 4 rooms or less	7.00
Each additional room to 7	1.50
(Bath tubs, toilets, hose or other fixtures charged separately)	
Restaurant	17.00
Sales stable, per stall	2.30
Shop or store	12.00
Stonework, per 100 cu. ft	.055
Tobacco factory, per hhd. manufactured	1.15
Urinal, private, self closing fixture	2.40
Urinal, public, self closing fixture	4.50
Urinal, constant flow	7.00
Vegetable spray per season	5.50
Vinegar, each barrel manufactured	.055
Washing bottles	5.50
Washing barrels, each	.05
Water closet, private, for 1 family	4.50
Used by more than one family, each	3.50
Water closet, public	9.00

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RATES, RULES AND REGULATIONS OF THE MOSINEE ELECTRIC LIGHT AND POWER COMPANY.

Submitted July 2, 1914. Decided July 10, 1914.

Application was made to the Commission by the Mosinee El. Lt. and P. Co. and by the village of Mosinee to fix rates for electric current furnished to the village of Mosinee for operating the pump at its pumping station. The value of the additional investment made by the company to supply current for pumping was appraised by the Commission, and the cost of further equipment necessary to prevent interruptions of the service during electrical storms was also considered. In the light of the facts before the Commission it appears that the first step of the rate schedule proposed by the utility is substantially correct, but that the other rates may be somewhat lower than those proposed. The utility is ordered to charge the rates fixed by the Commission.

This matter has to do only with the rates for electric current furnished to the village of Mosinee for operating the pump at its pumping station. At the time of its decision in the case of *In re Investigation Mosinee El. Lt. & P. Co.* Feb. 9, 1914, 13 W. R. C. R. 712, the facts necessary for the determination of a pumping rate were not before the Commission. The electric company and the village later failed to agree upon the rate for power, and both parties asked the Commission to fix a rate. Notice of investigation and hearing having been waived by the parties concerned, hearing was held at Mosinee on July 2, 1914.

W. A. Von Berg appeared for the company, and the village was represented by *H. B. Hanowitz* and other members of the village board.

Prior to the hearing the company submitted a statement showing the additional investment which it had made in order to supply current for pumping, and an appraisal was made by a member of the Commission's staff. The investment, as reported by the company, was $308.19, and the figure obtained by the Commission's inspector was $304.79. There was no question raised at the hearing as to the value of this property.

The testimony, which there seems to be no reason to question, shows that at present the company from which the electric util-

ity buys its current disconnects the utility's transmission line during severe electrical storms, as a measure of protection to the equipment at the power station, and that in order that service may not be interrupted during storms, a lightning arrester and a transformer must be installed by the electric utility at the power station. The estimates of cost of this equipment range from $750 to about $900. The installation of this equipment is of especial importance to the village in order that pumping may be done in case of fires occurring during electrical storms.

No apportionment of existing property has been made between the general business and the power service, but from the facts regarding the total amount of current sold, which were submitted as a part of the evidence in this case, it seems that the power service to the pumping station will be meeting less than its actual cost if it does not yield a return on approximately $400, including the existing equipment which is used for this purpose only, a proper share of the protected equipment necessary, and a small portion of other equipment of the utility.

An allowance of 15 per cent to provide for interest, taxes, and depreciation of this equipment would amount to $60 per year. Testing the meters, and the cost of ordinary maintenance of equipment will bring this up to about $70 per year.

The utility pays 3 cts. per kw-hr. for its current. No accurate record of line losses is available, but they will hardly be less than 10 per cent. With line losses amounting to 10 per cent, the losses alone would raise the cost of current to 3⅓ cts. per kw-hr.

The records of current used for pumpage show that the use has ranged from 165 kw-hr. to 873 kw-hr. per month. Two rather bad leaks in the water distribution system, however, made the pumpage abnormal for certain months.

At the hearing witnesses estimated the normal use of current, even with an added number of water users, at an average of 250 kw-hr. per month, including the current required for an electric tank heater during the winter. All water is to be metered and leaks have been repaired, so that an average monthly use of 250 kw-hr. seems approximately correct.

If we assume that 3,000 kw-hr. will be used for pumping during a year, the interest, depreciation, taxes and maintenance will amount to 2⅓ cts. per kw-hr.

The rates proposed by the utility for the pumping services are as follows:

Up to and including 200 kw-hr. per month, 6 cts. per kw. hr.
200 to 300 kw-hr. per mo. 5.5 cts. per kw-hr.
300 to 500 kw-hr. per mo., 5 cts. per kw-hr.
500 to 700 kw-hr. per mo., 4.5 cts. per kw-hr.
700 to 1,000 kw-hr. per mo., 4.2 cts. per kw-hr.
1,000 kw-hr. and above per mo., 4 cts. per kw-hr.

From the facts available, the first step of the rate schedule proposed by the utility appears to be substantially correct. Rates for use in excess of 200 kw-hr. per month may be somewhat lower than those proposed by the company. In the light of all the facts which have been presented, a schedule of rates as stated in the following order appears reasonable.

IT IS THEREFORE ORDERED, That the Mosinee Electric Light and Power Company shall charge for current supplied to the village of Mosinee for power and heating purposes at its pumping station, the following rates:

For the first 200 kw-hr. per month, 6 cts. per kw-hr.
For the next 100 kw-hr. per month, 5 cts. per kw-hr.
For all over 300 kw-hr. per month, 4 cts. per kw-hr.

PENNSYLVANIA COAL AND SUPPLY COMPANY
vs.
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Dec. 9, 1913. Decided July 15, 1914.

Complaint was made that the rates on hard coal from Oshkosh and Fond du Lac to Milwaukee are unreasonable. It appears that the rate on hard coal from Milwaukee to Fond du Lac and Oshkosh is 75 cts. per net ton, while the rate from Fond du Lac to Milwaukee is $1.20 per net ton, and from Oshkosh to Milwaukee is $1.30 per net ton. Through an error the petitioner shipped 3 cars of hard coal to Fond du Lac, and one to Oshkosh and was later obliged, in bringing these shipments back, to pay 55 cts. per net ton more in the case of the haul from Oshkosh to Milwaukee than from Milwaukee to Oshkosh, and 45 cts. more per net ton on the haul from Fond du Lac to Milwaukee than from Milwaukee to Fond du Lac. Petitioner asks refund to cover the amount of the excess charge in the reverse movement over that in the going movement, and that the tariff on hard coal be changed to read "between Milwaukee and" certain other points in the state, instead of "from Milwaukee to" these points. From an analysis of the cost of coal movements over the road of the respondent for several years past it appears that the going rate of 75 cts. per net ton to Fond du Lac and Oshkosh allows the carrier to pay all operating expenses and have something to pay a reasonable return on the investment necessary to carry on the business. It also appears that there is very little coal moving into Milwaukee from inland towns.

Held: The fact that there is very little coal moving into Milwaukee is not sufficient reason why an occasional shipment of coal should not be given a reasonable rate on the basis of the cost to the carrier of performing the service. The rates in question from Oshkosh and Fond du Lac to Milwaukee are unreasonable to the extent that they exceed the going rate. Refund is ordered on that basis, and the respondent is further ordered to change its tariff on coal to read "between Milwaukee and" the cities of Fond du Lac and Oshkosh, instead of "from Milwaukee to" Fond du Lac and Oshkosh.

The petitioner, the Pennsylvania Coal and Supply Company, is a wholesaler of coal, its offices being located in Milwaukee and loading chiefly in the Canal and Fowler districts in that city. In December 1912 the petitioner appears to have shipped three cars of hard coal to the Bloedel Fuel Company of Fond du Lac and one car to the Oshkosh Pure Ice Company of Oshkosh. The shipments to both Fond du Lac and Oshkosh were made in error.

The petitioner attempted to market these shipments of coal, but was unable to do so, and, after paying substantial demurrage charges was finally obliged to bring them back to Milwaukee to be unloaded there at its plant. The petitioner states that more coal had been shipped than could be marketed in these cities, while the respondent questions the quality of the coal. Petitioner claims the fact that the coal was wet had nothing to do with the case.

The rate on hard coal from Milwaukee to Fond du Lac and also from Milwaukee to Oshkosh is 75 cts. per net ton, while the rate from Fond du Lac to Milwaukee is $1.20 per net ton, and from Oshkosh to Milwaukee, $1.30 per net ton. The petitioner was obliged to pay 55 cts. per net ton more in the case of the haul from Oshkosh to Milwaukee than from Milwaukee to Oshkosh, and 45 cts. more on the haul from Fond du Lac to Milwaukee than from Milwaukee to Fond du Lac, as shown in the following table:

Initial and Car No.	Billed 12-28-12 at 75 cts. per net T. From Milw. to	Going charges.	Net Wt.	Billed back to Milwaukee.				
				Date.	Rate per net ton.	Returning charges.	Car service charges.	Refund asked by petitioner.
C. M. & St. P.—34996...	Fond du Lac.	$16 16	43,100	1-10-13	$1 20	$25 86	$2 00	$9 70
M. P.—19688.....	"	20 44	54,500	1-10-13	1 20	32 70	6 00	12 26
C. M. & St. P.—33654..	"	16 24	43,300	1-10-13	1 20	25 98	10 00	9 74
P. R. R.—15312.....	Oshkosh.....	25 54	68,100	2-11-13	1 30	44 26	32 00	18 72
							$50 00	$50 42

It is on the return payments that petitioner brings complaint and requests both that a refund be granted in this case covering the amount of the excess charge in the reverse movement over that of the going movement; and also that the tariff on hard coal be changed to read "between Milwaukee and" certain other points in this state instead of "from Milwaukee to" these points.

The respondent, in its answer and in the testimony presented at the hearing, says that the published rates were charged, that these rates are reasonable and not exorbitant and that there is no basis for requiring the same rate to apply on the commodity in question from Fond du Lac and Oshkosh to Milwaukee, as applies from Milwaukee to those points. They state that the trans-

portation and traffic conditions are in a great many respects dissimilar, which dissimilarity is sufficient to warrant the present rate situation.

A hearing was held December 9, 1913, at the office of the Commission in Madison. *F. W. Fellenz* appeared for the petitioner, and *J. M. Davis* for the respondent.

The arguments of the respondent have some merit. The petitioners admit that there is practically no movement of coal into Milwaukee from the inland towns and that only a very few returned shipments are handled, as, for example, the cars mentioned in the complaint.

It appears that in this case it costs the railroad but little, if any, more to bring the cars back to Milwaukee than it did to take them out in the first place, and the difference of 60 to 70 per cent seems hardly warranted. If the cars had been unloaded at Fond du Lac and Oshkosh as was originally intended, they would have been brought back to Milwaukee empty, since there is practically no movement of loaded gondolas from these points to Milwaukee. The fact that there is very little coal moving into Milwaukee is not sufficient reason, in our opinion, why an occasional shipment of coal should not be given a reasonable rate on the basis of the cost to the carrier of performing the service. It seems that traffic conditions being such that gondolas are normally returned empty to Milwaukee, the railroad should be glad to get such return shipments as may be had. The case is one in which it is necessary to investigate the absolute reasonableness of the rate on hard coal from Fond du Lac and Oshkosh to Milwaukee, rather than to attempt to determine the reasonable rate by a comparison with rates from Milwaukee to these points.

An analysis of the cost of coal movements over the road of the respondent for several years past has been made, taking into account the weight of coal per car, the weight of the average car in which coal ordinarily moves, the value of the commodity, and other factors. It appears that the going rate of 75 cts. per net ton to Fond du Lac and Oshkosh allows the carrier to pay all operating expenses, including taxes, and in addition leave something to pay a reasonable return on the investment necessary to carry on the business. The value of hard coal being greater than the value of soft coal, the carrier is entitled to earn somewhat more on shipments of hard coal due to greater risk. It will scarcely be suggested that the actual cost is greater, how-

ever. These facts were not lost sight of in determining what a fair return should be.

The relation of net weight to the total gross weight of the car is an important consideration. In general coal is loaded quite heavily. The four cars mentioned in the complaint were loaded somewhat lighter than is usual, but it so happens that the cars in which the coal moved were also lighter than the average and that the relation of tare weight to net weight was about normal for coal.

After consideration of all the facts and statements and after thorough investigation, it appears to us that the rate of $1.20 and $1.30 per net ton on the cars of coal mentioned in the complaint, and as shown in the table above, is unreasonable to the extent that it exceeds the going rate of 75 cts. per net ton, and that the petitioner is entitled to a refund based on the difference between the rate charged and the rate found reasonable. It also appears that the going rate on coal from Milwaukee to Fond du Lac and Oshkosh allows a reasonable return on the investment necessary to carry on the business.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, be and the same is hereby authorized and directed to refund to the Pennsylvania Coal and Supply Company the sum of $50.42 and

IT IS FURTHER ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company change its tariff on coal to read "between Milwaukee and" the cities of Fond du Lac and Oshkosh, instead of "from Milwaukee to" Fond du Lac and Oshkosh.

IN RE APPLICATION OF THE MARQUETTE AND ADAMS COUNTY TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted June 26, 1914. Decided July 16, 1914.

Application was made by the Marquette & Adams County Tel. Co. for authority to increase its rate for telephone service. It seems that the present rate was put into effect about 9 years ago, and it appears from an inspection of the annual reports filed with the Commission that this rate does not bring in sufficient revenues to meet the operating expenses. In the light of the information available the suggested rate of $10 per year does not appear unreasonable. It also appears that the practice has been to leave the repairing of the lines to two directors on each line and that this is an uneconomical arrangement.

The applicant is authorized to discontinue its present charge of $6.50 per year for telephone service and to substitute therefor a rate of $10 per year.

It is recommended that the company employ an experienced lineman to keep the lines in good working order.

Application in the above entitled matter was filed June 3, 1914. It is stated in the application that the present rate of $6.50 per year for telephone service is too low, and that such an increase as will enable the company to meet operating expenses is desired.

Hearing was held June 26, 1914, at the office of the Commission in Madison. *J. W. Daniels,* manager of the applicant company, appeared in its behalf. No appearances were entered in opposition to the application.

From the testimony it appears that the rather low rate of $6.50 per annum was put into effect about nine years ago when twelve farmers got together and organized a small company. That this rate does not bring in sufficient revenues to meet operating expenses is shown by the annual reports filed with the Commission. For the year ending June 30, 1912, the total operating revenues, including the revenues from toll and switching service, were $2,877.20, while the operating expenses were $3,162.66, leaving a deficit of $285.46. For the year ending June 30, 1913, the operating revenues and expenses were respectively $2,600.05 and $3,795.04, leaving a deficit of $1,195.99.

The application contained a suggestion to the effect that stockholders in the telephone company be given a rate lower than that applied to nonstockholders. In that the law prohibits a utility from charging a different rate to stockholders than is charged to nonstockholders, it will be necessary to fix a rate which will be applicable to stockholders and nonstockholders alike. At the hearing the manager stated that a rate of $10 per annum would very likely be sufficient to meet the needs of the company. In the light of such information as we have at hand an annual rate of $10 does not appear unreasonable. The manager places the value of the company's plant at the present time, excluding subscribers' sets which are owned by the subscribers, at $8,000. The annual report of the company for the year ending June 30, 1913, shows a total cost of $6,614.42. It is not clear whether or not the difference between these figures is due to additional construction since June 30, 1913. Since it is apparent that a rate of $10 per annum applied to 417 subscribers (the number which the company states it has at present) will, after making adequate provision for depreciation, allow only a fair return upon the lower valuation, it does not appear necessary to carefully check the estimate of the value of the plant at the present time.

The testimony indicates that the present practice of leaving the repairing of the lines to two directors on each line is uneconomical. It was suggested at the hearing that an experienced man be employed for the purpose of attending to the repairing of all the lines. The employment of an experienced lineman would very likely prove more satisfactory than the present practice in respect to both service and the cost of repairing. We therefore recommend that the company employ an experienced lineman to keep the lines in good working order.

IT IS THEREFORE ORDERED, That the applicant, the Marquette and Adams County Telephone Company, be and the same hereby is authorized to discontinue its present charge of $6.50 per year for telephone service and substitute therefor a rate of $10 per year.

JOHNSON AND HILL COMPANY
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided July 18, 1914.

Complaint was made of excess charge on three carloads of fuel wood shipped from Dean's Spur, Wis., to Arpin, Wis. It appears that the charges were assessed at the rate of 2¾ cts. per cwt., that a rate of 2 cts. per cwt. was in effect at that time on the Chicago & North Western Railway from Arpin and other stations in the vicinity, and that subsequent to the shipments in question the respondent established a rate of 2 cts. per cwt. on fuel wood from Grand Rapids, Wis., to Arpin. Petitioner asks refund on the basis of the latter rate.

Held: A rate of 2 cts. per cwt. on fuel wood moving from Arpin to Grand Rapids is ample compensation for the services rendered. Refund ordered on that basis.

The petitioner, a corporation engaged in the purchasing and selling of fuel wood at Grand Rapids, Wis., alleges that on and between December 17, 1913, and March 23, 1914, it shipped three carloads of fuel wood from Deans Spur, Wis., to Arpin, Wis., upon which the respondent assessed charges at the rate of 2¾ cts. per cwt.; that such rate is unreasonable to the extent that the same exceeds 2 cts. per cwt., which latter rate was in effect on the Chicago & North Western Railway from Arpin and other stations in the vicinity; that the respondent railway company, subsequent to the movement of the shipments in question, issued its supplement No. 12 to its tariff G. F. D. No. 14225, establishing a rate of 2 cts. per cwt. on fuel wood from Grand Rapids to Arpin. Wherefore petitioner prays that the respondent may be authorized to refund to it the excess charge.

The respondent railway company admits the allegations of the petition and joins in the prayer thereof.

Notice of investigation and hearing was waived. The claim was submitted upon the pleadings, papers, documents and tariffs on file.

The respondent necessarily was obliged to conform its rate to that in effect on the line of its competing company or cease to participate in the traffic.

Taking into consideration all the elements involved in the transportation services rendered, we are satisfied that a rate of 2 cts. per cwt. on fuel wood moving from Arpin to Grand Rapids is ample compensation for the services rendered.

The total weight of the three cars of wood amounted to 165,700 lb., consequently the reparation that will be awarded is $12.43.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the petitioner, the Johnson & Hill Company, the aforesaid sum of $12.43.

A. S. PIERCE
vs.
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY,
STANLEY, MERRILL AND PHILLIPS RAILWAY COMPANY.

Decided July 18, 1914.

Complaint was made of excessive charges on six carloads of lumber shipped from Cotton, Wis., to Rhinelander, Wis., for concentration and reshipment. It appears that the rate upon the basis of which the shipments in question were made had been in effect, but remained in effect only through error at the time it was quoted to petitioner, and that an additional sum, on the basis of a higher rate, was collected by the connecting carrier, the respondent M. St. P. & S. S. M. R. Co. Subsequently the original rate quoted to petitioner was reëstablished, and petitioner asks refund on that basis.

Held: The rate charged petitioner was excessive. A reasonable charge would have been 4½ cts. per cwt., the rate originally charged petitioner and since then put into effect by respondent M. St. P. & S. S. M. R. Co. Refund ordered on that basis.

The petitioner is engaged in the wholesale lumber business at Rhinelander, Wis. He alleges that between July 1, 1911, and September 1, 1912, he forwarded from Cotton, Wis., to Rhinelander, Wis., six carloads of lumber for concentration and reshipment; that the initial carrier, the Stanley, Merrill & Phillips Railway Company, billed the shipment at the rate of 4½ cts. per cwt. according to its tariff G. F. D. No. 479, issued and taking effect May 6, 1910, by order of the Commission, and that charges were paid on that basis; that the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, referred to this tariff as its G. F. D. No. 11720; that, owing to an error on the part of the respondent, the Stanley, Merrill & Phillips Railway Company, in issuing its tariff G. F. D. No. 591, canceling No. 558 and eliminating the 4½ ct. rate from Cotton to Rhinelander, without leaving any rate in effect except the full tariff rate of 10 cts. per cwt., the delivering carrier, the respondent Minneapolis, St. Paul & Sault Ste. Marie Railway Company, charged the full tariff rate and the petitioner was obliged to pay the addi-

tional sum of $137.76; that after the shipments moved and the attention of the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, was called to the error, the rate of 4½ cts. on lumber for concentration and reshipment was established by issuing tariff G. F. D. No. 14021; and that petitioner is thereby injured to the extent of $137.76, the amount collected over the rate of 4½ cts. per cwt. on the shipments in question. Wherefore petitioner asks that the respondent be required to make refund to it in that sum.

No hearing was held as notice and hearing was waived by the respondent. The case was submitted upon the papers, vouchers and documents on file.

In all six carloads of lumber were delivered by the petitioner during the period from July, 1911, to September 1, 1912, to the Stanley, Merrill & Phillips Railway Company at Cotton, Wis., for carriage to Rhinelander for concentration and reshipment. The Stanley, Merrill & Phillips Railway Company billed the shipment at the rate of 4½ cts. per cwt. in accordance with its G. F. D. No. 479, effective May 6, 1910. At this time the connecting carrier, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, published the same rate in its G. F. D. No. 11720. Later the Stanley, Merrill & Phillips Railway Company canceled its G. F. D. No. 479 by issuing G. F. D. No. 558, but continued the same rate on lumber for concentration between Cotton and Rhinelander. To correct this it issued G. F. D. No. 591, effective May 1, 1911, canceling No. 558, eliminating the rate of 4½ cts. per cwt. but naming no new rate and therefore the tariff rate of 10 cts. per cwt. applied. When the Minneapolis, St. Paul & Sault Ste. Marie Railway Company issued its new tariff No. 12709 through an error it failed to state that it was in cancellation of G. F. D. No. 11720.

At the time petitioner was about to make this shipment, the Stanley, Merrill & Phillips Railway Company quoted him a rate of 4½ cts. per cwt., the rate named in its G. F. D. No. 479, which tariff remained in effect through error. The shipment was billed on this basis and charges paid by the petitioner. At the destination of the shipment the Minneapolis, St. Paul & Sault Ste. Marie Railway Company collected an additional 5½ cts. per cwt., under the belief that the tariff rate should have been applied to the shipment as shown by its G. F. D. No. 12400. The amount

collected in this instance was $137.76 which petitioner asks be refunded to him.

After the shipments moved petitioner called attention to the error and a new tariff, G. F. D. No. 14021, effective September ber 22, 1911, was issued reinstating the rate of 4½ cts. per cwt. The respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, acknowledges its error and is willing to refund the excessive charges upon authority from the Commission. Under the circumstances reparation will be awarded as requested. *Johns-Manville Co. v. C. M. & St. P. R. Co.* 1909, 4 W. R. C. R. 114; *Ideal Lumber & Coal Co. v. C. M. & St. P. R. Co.* 1909, 4. W. R. C. R. 171; *Gund Brewing Co. v. C. & N. W. R. Co.* 1909, 4 W. R. C. R. 190; *Ewer v. C. St. P. M. & O. R. Co.* 1909, 4 W. R. C. R. 331; *Pabst Brewing Co. v. C. & N. W. R. Co.* 1910, 4 W. R. C. R. 403; *Kaiser Lumber Co. v. C. St. P. M. & O. R. Co.* 1910, 5 W. R. C. R. 196.

We therefore find and determine that the rate of 10 cts. per cwt. charged the petitioner for the above shipments of lumber from Cotton to Rhinelander for concentration and reshipment was excessive and unreasonable and do further find that a reasonable charge under the circumstances would have been 4½ cts. per cwt. or the rate originally charged the petitioner and which is the rate subsequently made effective by respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, in its G. F. D. No. 14021.

NOW, THEREFORE, IT IS ORDERED, That the respondents be and the same are hereby authorized to refund to the petitioner the sum of $137.76.

IN RE PROPOSED EXTENSION OF THE LINE OF THE RANDOM LAKE TELEPHONE COMPANY IN THE TOWN OF SHERMAN, SHEBOYGAN COUNTY, WISCONSIN.

Submitted July 16, 1914. Decided July 20, 1914.

The Random Lake Tel. Co. filed notice with the Commission of its intention to extend its line parallel to the line of the East Valley Tel. Co. from a point some two miles southwest of Adell, Wis., toward the village of Adell. It appeared that a physical connection between the two companies was feasible, that in fact a line was being built for that purpose, and that, when completed, the desired service could thereby be afforded to the parties who were involved in the present case and wished the proposed extension.

Held: The extension of the line in question in the manner proposed is not required by public convenience and necessity. Since a physical connection would furnish an adequate, feasible remedy, the building of the extension would result in the sort of unnecessary duplication which the law seeks to avoid.

This case involves a proposed extension of the Random Lake Telephone Company's line parallel to the line of the East Valley Telephone Company from a point some two miles southwest of Adell, Wis., toward the village of Adell. This line would have as its patrons several persons residing along a highway on which the East Valley line is now located.

Objection to the construction of this extension was made by the East Valley Telephone Company.

A hearing in the matter was held at Waldo, Wis., on July 13 and 16, 1914. The Random Lake Telephone Company was represented by *Emil C. Thiel,* and the East Valley Telephone Company by *P. G. Van Blarcom* and *August G. Bartelt.*

The purpose for which the proposed telephone line would be used would be to give service into Adell to certain persons living within a mile or two of that village. The Random Lake Telephone Company has a line running into Adell from another direction, and does most of the local telephone business of that village through its exchange. Thus, the proposed subscribers would be able to reach Adell through the exchange at Random Lake. The East Valley line which runs past their residences also

runs into Adell, but has no exchange there and only reaches three business places in the village. The inability of persons living near Adell on the East Valley line to reach more than these three business places has resulted in their desire to have the Random Lake service.

This is a case where a physical connection is very clearly an adequate and feasible remedy for the difficulty in which the residents to the southwest of Adell find themselves. To permit the paralleling of the East Valley line for some distance toward Adell would result in the sort of unnecessary duplication which the law seeks to avoid. It seems that there is at present a physical connection between the two companies at a point called Silver Creek, but that the service through this connection is irregular, owing to the intermittent character of the attendance at the switch. To avoid this difficulty, a line is now being built between the two companies which will result in a physical connection between switchboards continuously attended by operators, and when this line is ready for service there should be no trouble in exchanging service between the two companies. If the construction of this line does not proceed as rapidly as it should, or if the charge made for conversation through the physical connection seems to anyone to be unreasonable, these matters can be taken up with the Commission for adjustment.

For the reasons stated, we find and determine that public convenience and necessity do not require the extension of the line of the Random Lake Telephone Company in the town of Sherman, Sheboygan county, in the manner proposed by that company in its notice filed with the Commission June 30, 1914.

OSCEOLA MILL AND ELEVATOR COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided July 21, 1914.

Complaint was made of excessive charges on a car of hay shipped from Osceola to Rhinelander, Wis., and refund asked. It appeared that the rate would have been 10 cts. per cwt. had it not been for the omission of the intermediate clause from the tariff in question through an oversight, which was corrected when attention was called to it.

Held: The charge of 12½ cts. per cwt. exacted of petitioner on the shipment of hay from Osceola to Rhinelander was excessive. A reasonable rate would have been 10 cts. per cwt. Refund ordered on that basis.

The petitioner complains that on May 29, 1913, it shipped a car of hay containing 29,290 lb. over respondent's line from Osceola to Rhinelander, upon which respondent assessed charges at the rate of 12½ cts. per cwt.; that such rate is unusual and excessive to the extent that the same exceeds the rate on similar shipments from Bald Eagle, Minn., to Rhinelander, Wis., Osceola being intermediate with Bald Eagle on the direct line; that the shipment was originally billed at the rate of 10 cts. per cwt., but was subsequently corrected by respondent because of the absence of the intermediate clause in the tariff; that since said shipment moved, the respondent has corrected its tariff so that intermediate points take the through rate; that the excess charge on said carload of hay is $5.71. Wherefore petitioner prays that respondent be authorized to refund to it the said sum of $5.71.

The respondent railway company, answering the petition, admits the allegations thereof and waives notice of the investigation and hearing.

The omission of the intermediate clause from the tariff in question was doubtless due to an oversight and was corrected upon attention being called to the same.

We therefore find and determine that the charge of 12½ cts. per cwt., exacted of the petitioner on the aforesaid shipment of

hay from Osceola to Rhinelander, was unusual and excessive and that the reasonable rate that should have been exacted and applicable to such shipment is 10 cts. per cwt.

The excess charge on said shipment, on account of error in computation of original bill, is $5.71 as alleged in the petition.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the Osceola Mill and Elevator Company the sum of $5.71.

CREAMERY PACKAGE MANUFACTURING COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY,

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided July 21, 1914.

Complaint was made of excessive charges on a shipment of wooden cheese boxes from Butternut, Wis., to Glover, Wis., and refund asked. It appeared that subsequently the respondent, the M. St. P. & S. S. M. Ry. Co., voluntarily established a considerably lower rate than that charged petitioner, and that at the time of the shipment it had in effect a substantially lower rate applicable to a substantially similar distance and traffic situation as those in question.

Held: The rate of 24½ cts. per cwt. exacted of the petitioner for shipment of cheese boxes from Butternut to Glover was exorbitant. A reasonable charge would have been the rate subsequently established or 18½ cents per cwt. Refund ordered on that basis.

The petitioner is engaged in the manufacture of cheese boxes at Butternut, Wis. It alleges that on January 8, 1914, it shipped one car of wooden cheese boxes from Butternut, Wis., to Glover, Wis., upon which the freight assessed was $49, based upon a rate of 24½ cts. per cwt., which rate was made up as follows: 12½ cts. per cwt. from Butternut to Eau Claire and 12 cts. per cwt. from Eau Claire to Glover; that at the time said shipment moved, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company had in effect a rate of 17 cts. per cwt. from Butternut to Burkhardt, Boardman and other points in that vicinity as per its tariff G. F. D. No. 16639; that the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, published its tariff G. F. D. No. 18168, effective May 13, 1914, establishing a rate of 18½ cts from Butternut to Burkhardt and River Falls and intermediate points; that the said rate of 24½ cts. per cwt. is excessive and unusual insofar as the same exceeds the said rate of 18½ cts. voluntarily established by the carrier in its tariff No. 18168. Wherefore petitioner prays that the respondents be authorized and directed to refund to it the said excessive charge.

The respondents, answering the petition, admit the allegations thereof and express their willingness to make the refund upon the basis contended for by petitioner.

The case was submitted upon the papers, vouchers and documents on file.

As the distance from Butternut to Burkhardt is but little less than the distance from Butternut to Glover, and there is nothing in the traffic situation that warrants a difference in rates applicable to shipments of cheese boxes from Butternut to Burkhardt and from Butternut to Glover, the rate of 24½ cts. exacted of the petitioner can not be justified. Furthermore, the investigation discloses that the rate of 18½ cts. per cwt. is adequate compensation for the services rendered in the instant case.

We therefore find and determine that the rate of 24½ cts. per cwt. exacted of the petitioner on the aforesaid shipment of cheese boxes in unusual and exorbitant, and that the reasonable charge for such services is the rate of 18½ cts. per cwt.

The weight of the shipment was 14,000 lb. The minimum weight requirement for the car used is 19,500 lb. The amount of reparation that will be awarded is therefore $12.92.

NOW, THEREFORE, IT IS ORDERED, That the respondents, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and the Chicago, St. Paul, Minneapolis & Omaha Railway Company, be and the same are hereby authorized and directed to refund to the petitioner the said sum of $12.92.

FRANK J. ALBRIGHT ET AL.

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted May 21, 1914. Decided July 21, 1914.

Application was made for an extension of free storage time, during certain periods of the year, on petitioners' shipments of freight received at Bayfield, Wis., over respondent's line. It appears that the petitioners are residents of La Pointe, a town on Madeline Island, about three and one-half miles from the mainland at Bayfield, that during certain periods of the year both the mail service and the carrying of freight across the channel are subject to more or less regular interruption, and that for more than half the year mail service is scheduled for three days per week only.

Held: The conditions in the present case warrant an exception to the general rule. However, as there is evidence before the Commission of like conditions at other points, and as uniformity in charges is desirable where conditions are alike, a recommendation rather than an order will be made. If not adopted, an investigation, on motion of the Commission, making parties all carriers in the state who are members of the Wisconsin Demurrage Bureau, will follow.

It is recommended that all lines in Wisconsin who are members of the Wisconsin Demurrage Bureau put into effect the rule proposed, or one of similar import, through which, under the conditions stated, additional free time allowance will be made for delay due to infrequent mail service or prohibitive conditions brought about by the weather.

The petitioners, who reside at La Pointe, a town on Madeline Island which is three and one-half miles from the mainland at Bayfield, ask for an extension of free storage time on their shipments of freight received at Bayfield over respondent's line during certain periods of the year when by reason of (1) infrequency of and interruptions in the mail service notices of the arrival of freight at Bayfield are not received at La Pointe in time for the consignee to remove the freight during the free storage period, and (2) conditions brought about principally by the weather which render the channel between La Pointe and the mainland practically impassable for the carrying of freight except at unusual expense and risk.

The matter came on for hearing at Bayfield on May 21, 1914. The petitioners were represented by *J. J. Fisher,* their attorney, and the respondent by *John D. Mahon.*

It appears from the testimony that during the period in which the channel between La Pointe and Bayfield is open for the carrying of freight by boat, a period of about three to four months, there is regular mail service twice daily with very little interruption between Bayfield and La Pointe. During this period there is ordinarily nothing to prevent consignees from removing the freight from the station at Bayfield within the free storage period. The rest of the year mail service is scheduled for three days per week only and is subject to many interruptions because of the condition of the channel. Furthermore, during the latter period there is more or less regular interruption to the carrying of freight across the channel, varying from about three to six weeks, when the channel is freezing over in the fall, and again when the ice is breaking in the spring.

Prior to January 10, 1914, no charge was made for the storage of freight pending delivery or shipment at Bayfield and there was no charge for such accommodation in force generally in the state. On the day mentioned a storage charge of 5 cts. per ton or fractional part thereof per day, except Sundays, legal holidays, and twenty-four hours from 7:00 a. m. after notice of receipt of freight is mailed to consignee, became effective generally in the state. This charge was approved by the Commission pursuant to sec. 1797—4 of the statute. At the time such approval was under consideration we very much doubted the reasonableness of an arbitrary storage charge as proposed, because of the injustice that might result in certain situations, such as is presented in the instant case. However, the necessity of some storage charge was recognized, but the facts necessary to determine the reasonableness of exempting certain shipments from such charges were not available at the time. The approval was therefore granted with the understanding that if investigation showed conditions that warranted exemptions the Commission would provide therefor later.

The conditions shown to exist in the instant case seem to warrant an exception to the general rule. There is similar evidence before the Commission tending to show that like conditions exist at other points. Inasmuch as it is desirable to have uniformity in charges where conditions are alike, no order will be issued at

present but instead a recommendation will be made with the expectation that it will be followed. Otherwise an investigation on the motion of the Commission will follow, making all carriers within the state parties who are members of the Wisconsin Demurrage Bureau.

IT IS THEREFORE RECOMMENDED, That the respondent railway company and all other lines operating in Wisconsin that are members of the Wisconsin Demurrage Bureau immediately publish and make effective, in connection with storage rules, the following rule or a rule of similar import:

"When, through the infrequency of mail delivery at the point where mailed notices of the arrival of freight are received by consignees, such notices are not received in time so that freight may be removed from the station within the period in which no storage is charged, and when, by reason of conditions brought about by the weather, consignees living at a distance of one mile or more from the railroad station are prevented from removing freight held at such station for delivery to them, additional free time, equal to the delay due to the infrequency of the mail service or to the conditions brought about by the weather, as the case may be, will be allowed."

IN RE MICHAEL T. GEHL AND OTHERS FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR THE CONSTRUCTION OF A TELEPHONE LINE IN THE TOWN OF ADDISON, WASHINGTON COUNTY, WISCONSIN.

Submitted June 22, 1914. Decided July 21, 1914.

Application was made for authority, through a certificate of public convenience and necessity, to construct in the town of Addison, Washington county, a telephone line to connect the residences of the various applicants, with a line of the Hartford Rural Tel. Co. The Allenton-Kohlsville Tel. Co. opposed the construction of the new line on the ground that it would compete directly with that company's line on the same highway and would actually deprive that line of subscribers. It appeared that the proposed line would be a little over two miles in length and would run for most of its distance parallel with the Allenton-Kohlsville line on the same highway; that Hartford and Allenton are centers of population quite distinct from one another; that the highway on which the applicants reside happens to be in the nature of a boundary line between the rural community tributary to Hartford and that tributary to Allenton; that some of the residents along this highway desire connection toward Hartford, while others prefer service toward Allenton; that the circumstances are such that a physical connection between the Hartford Rural Tel. Co. and the Allenton Kohlsville Tel. Co. would be impracticable, and that the construction of the proposed line would not result in great loss to the Allenton-Kohlsville Tel. Co.

Held: The construction, in the manner proposed by the applicants, of the line in question for telephone service, is required by public convenience and necessity. Where border territories are involved, it occasionally happens, as in the present case, that the public needs can only be satisfied by permitting a certain amount of overlapping. When such is the case, the convenience and necessity of the public itself in the matter of telephone service is the paramount consideration and the doctrine of protection for existing interests can not be carried to its full length. Ordinarily the appropriate remedy is a physical connection, the general policy of the law being usually against duplication of lines which will impair investments, and the action taken by the Commission in the present case is not to be looked upon as a precedent until a situation develops, which is similar in all respects to the present one.

The applicant, Michael T. Gehl, and six others, residing along a highway running east and west in the town of Addison, Dodge county, Wis., propose to construct a telephone line to connect their various residences with a line of the Hartford Rural Tele-

phone Company which crosses at right angles the highway on which the proposed line is to be located. The Hartford Rural Telephone Company is willing to connect with the proposed line and give its members service, but objection is made by the Allenton-Kohlsville Telephone Company, a public utility operating a line for local service along the same highway on which the new line would be built.

A hearing was held in the matter at Hartford on June 22, 1914, at which the applicants were represented by *Michael T. Gehl,* the Allenton-Kohlsville Telephone Company by *M. H. Schmitt,* and the Hartford Rural Telephone Company by *A. W. Brown.*

The proposed line would be a little over two miles in length and would run for most of its distance parallel with the Allenton-Kohlsville line on the same highway. The latter line now serves a few of the applicants who proposed to discontinue the Allenton-Kohlsville service upon becoming connected with the Hartford rural line. The remainder of applicants now have no service, although the Allenton-Kohlsville line runs past the residences of most of them. The testimony of the applicants was to the effect that their business and social interests lie southward in the direction of Hartford, while the only connection they could get by using the Allenton-Kohlsville service was with the village of Allenton, several miles to the north, and with other places still further north. Connection between Allenton and Hartford may be had by the use of the Wisconsin Telephone Company's toll line, but this necessitates the payment of a 15 ct. toll per message. The objection of the Allenton-Kohlsville Telephone Company to the construction of the new line was on the ground that it would compete directly with that company's line on the same highway and would actually deprive that line of subscribers. The Allenton-Kohlsville Telephone Company presented at the hearing a statement signed by two of the applicants in the case to the effect that they had been under a misapprehension when they signed the application and that they actually desired the Allenton-Kohlsville service. Two other persons, not signers of the petition, also signed the Allenton-Kohlsville Telephone Company's petition, and expressed themselves as being satisfied with that company's service.

The situation with regard to the physical location of the lines of the Hartford Rural and Allenton-Kohlsville telephone com-

panies seems to be such that a physical connection between them would be impracticable. The two companies do not enter any community where the establishment of a switch would be possible, and, in fact, at the present time there is no point of contact whatever between them, since the Allenton line terminates half a mile short of the north and south road on which the Hartford line is built. To attach the loaded line of the Hartford company to the loaded line of the Allenton company by merely tying one to the other without a switch would of course result in the establishment of a single line greatly overloaded. The only possible means of physical connection between the companies would be a new line constructed between Allenton and Hartford and carrying no subscribers. Such a line would necessarily be something over ten miles in length and if such line were to be constructed it would have to be used rather as a toll line than merely as a means of physical connection, since neither company could presumably afford to erect and maintain so long a line for free interchange of messages. The evidence indicates that Hartford and Allenton are centers of population quite distinct from one another. One is located on the Chicago, Milwaukee & St. Paul line, and the other on the "Soo" line, and railroad connection is not direct. The testimony seems to indicate that a person in the region involved in this case having business and social interests in Hartford would not be likely to have any in Allenton, and vice versa. The testimony also tends to show that the east and west highway on which the proposed line would be constructed is about the boundary line between the rural community tributary to Allenton and that tributary to Hartford; in fact, four of the residents along this highway are interested in the present application and desire to have connection toward Hartford, while at least as many more of the residents along the highway have expressed their preference for service toward Allenton.

In border territories like that involved in this case, there is sometimes presented a situation where some overlapping of telephone lines is required in order that public convenience and necessity with regard to telephone service may be fully satisfied. While such overlapping may at times do some injury to one of the companies and the general policy of the law is usually against the duplication of lines which will impair investments, still it is also true that the convenience and necessity of the public it

self in the matter of telephone service is the paramount consideration, and where the public needs can only be satisfied by permitting a certain amount of overlapping, the doctrine of protection for existing interests can not be carried to its full length.

Ordinarily, in a situation of this kind, the remedy sanctioned by the policy of the law is that of a physical connection. Clearly, if a connection between the Allenton and Hartford lines could be established under such circumstances that a subscriber of one company could converse with a subscriber of the other, at a very small cost for transfer of messages and without any appreciable cost for long distance transmission, there would be no public necessity for the construction of the new line. This Commission has had occasion in the past to point out to persons or companies desiring to extend lines in duplication of other lines, that the public convenience and necessity will be best satisfied by a physical connection and no duplication of lines is needed. The situation here appears to be different, however. The highway in question is the south boundary of one line and the northern or northeastern boundary of the other. The lines reach no common point and a physical connection as distinguished from the establishment of a long distance toll service between the companies seems to be practically impossible. Under these circumstances, it may well be that the needs of the public can be best satisfied by permitting the construction of the line proposed by the applicant.

It is not often that a situation involving just the particular elements that are present in this case is brought before the Commission, and until another situation develops which is similar in all respects the action taken in this case should not be looked upon as a precedent. Usually, there is either the possibility of physical connection, or the territory involved in the case is quite clearly within the field of one company or the other. There is usually, of course, no public convenience and necessity which will require a telephone company to extend into territory clearly outside of its proper field merely because someone in the territory wants to reach persons served by the company in question. But here the highway involved in the case seems to be actually the boundary between the two communities, as nearly as such boundary can be ascertained.

Another matter to be considered in this case is that the construction of the proposed line will not result in great loss to the

Allenton-Kohlsville Telephone Company. About two subscribers will be lost to it, but several will remain on its line on the highway in question, and the actual diminution of the company's revenue will not be great enough to be material. This, of course, does not mean that duplication of lines is to be permitted merely because it has only a small effect on the revenues of the other company; but, taken in connection with the circumstances of this case, the fact that the loss to the Allenton-Kohlsville Telephone Company will not be serious is worthy of consideration.

We believe the facts disclosed in this case warrant the finding that public convenience and necessity require the construction of the line proposed by the applicant, and a declaration to that effect will therefore be made.

We find and determine that public convenience and necessity require the construction of the line for telephone service in the town of Addison, Washington county, Wis., in the manner proposed by the applicants, Michael T. Gehl and others, and designated in the diagram attached to the application herein.

BLODGETT MILLING COMPANY
vs.
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided July 27, 1914.

Complaint was made of excessive charges on a carload of buckwheat shipped over respondent's line from Trempealeau to Janesville, Wis. It appeared that at the time the shipment in question moved the rate on buckwheat, with milling in transit privilege at Janesville, from Trempealeau to Chicago and points intermediate between Janesville and Chicago on respondent's line, including Sharon, Wis., was 12½ cts. per cwt.; that the rate from Trempealeau to Milwaukee was 11 cts. per cwt.; that the shipment in question prior to the movement of the product out of Janesville was entitled to either rate, according to the destination of the products; that part of the buckwheat was reshipped to Sharon, Wis.; that the rest of the buckwheat was held at Janesville and that consequently the entire transit credit was not used; that the rate from Trempealeau to Janesville, in effect at the time and charged the shipment involved, was 12½ cts. per cwt., and that some time subsequent to the shipment that rate was changed to 11 cts., the present rate. Refund on the basis of a 11 ct. rate is asked on that part of the buckwheat held at Janesville.

Held: Where a shipment of grain is entitled to transit privileges and where the shipment is separated at the transit point into two or more shipments, each destined to points taking different rates from point of origin to point of final destination, the application of different rates to the shipment involved is not authorized in the present tariffs. Petition dismissed.

The petitioner alleges that on November 5, 1912, one carload of buckwheat, containing 55,450 lb., was shipped from Trempealeau over the respondent's line to the petitioner at Janesville; that the respondent collected freight charges on said shipment at a rate of 12½ cts. per cwt. amounting to $69.31; that said shipment was subject to the milling in transit privilege; that a portion of the buckwheat, namely 35,210 lb., was a local movement between Trempealeau and Janesville; that at the time the shipment moved there was a rate in effect on buckwheat from Trempealeau to Milwaukee of 11 cts. per cwt.; that at the same time respondent's transit tariff No. 14000–80 permitted the milling of buckwheat at Janesville, moving from Trempealeau for

delivery at Milwaukee at the through rate in effect from Trempealeau to Milwaukee, which was 11 cts.; that said tariff provided that where grain was stopped to be milled in transit, the local rate from point of origin to a milling station should be changed at the time the grain was received at the milling station, and that when the product was forwarded to destination, it should take the through rate from point of origin to destination; that if the rate to milling point was less than a through rate, the difference between the rate to the milling point and the through rate should be paid at the time the shipment was forwarded to destination; that the converse would hold, to wit, that where the rate to milling station exceeded the through rate from point of origin to destination, the difference between the rate to milling station and the through rate should be refunded to shipper at the time the transit movement was completed; that the respondent recognized the fact that the local rate to the milling station should not exceed the transit rate to the point of destination in its supplement No. 42 to its tariff G. F. D. No. 8300–A, effective June 16, 1913, which provides:

"The rates authorized between Milwaukee, Wisconsin, and stations in Wisconsin north and west of Madison, Index Nos. 233–271, 289–316 inclusive, will also apply between Beloit, Janesville, Wisconsin, and stations Index Nos 233–271, 289–316 inclusive."

That as after June 16, 1913, the rate on buckwheat from Trempealeau to Janesville in carlots was 11 cts. per cwt.; and that as, at the time the car complained of moved, the rate would have been 11 cts. if the product had been forwarded from Janesville to Milwaukee after being milled, the petitioner requests that the respondent be ordered to refund to it the sum of $5.28, being the difference between freight charges collected on 35,210 lb. at 12½ cts., and freight charges that would have been collected on 35,210 lb. at 11 cts.

The respondent railway company, answering the petition, admits that the shipment moved and the charges were collected as alleged, but denies the conclusion of the petition that where the rate to milling station exceeds the through rate from points of origin to transit destination, the difference between the rate to milling station and the through rate be refunded to shipper at the time the transit movement was completed. It also denies all the material allegations of the petition.

The matter came on for hearing on May 12, 1914, and was submitted upon the pleadings, correspondence, schedules and papers on file.

From an examination of the record and the tariffs on file with the Commission, it appears, as alleged in the petition, that a shipment of buckwheat on November 5, 1912, from Trempealeau to Janesville, consigned to the petitioner and weighing 55,450 lb., was charged at the rate of 12½ cts. per cwt., amounting to $69.31. This charge was in accordance with the published legal rate in force at the time of shipment and that the shipment was taken into account under milling in transit arrangement, which included the privilege of shipment to the product from Janesville to Chicago, Ill., and points intermediate between Janesville and Chicago on respondent's line, including Sharon, Wis., to which the through rate on the grain from point of shipment was 12½ cts. per cwt.

At the time the shipment in question moved the rate on buckwheat, including milling in transit privilege at Janesville, from Trempealeau to Chicago, was 12½ cts. per cwt., and from Trempealeau to Milwaukee 11 cts. per cwt., and the shipment, prior to the movement of the product out of Janesville, was entitled to either rate according to the destination of the product. Part of the transit credit on this shipment was applied in connection with a shipment to Sharon, a 12½ ct. rate point, and the balance, 35,210 lb., was not used, and, therefore, was canceled. The rate on buckwheat moving from Trempealeau to Janesville was 12½ cts. per cwt., although at the same time the rate from Trempealeau to Milwaukee, with privilege of milling in transit at Janesville, was 11 cts., as already stated. Effective June 6, 1913, the rate from Trempealeau to Janesville was changed to 11 cts., which is the present rate. The petitioner asks reparation in the sum of $5.28, on the basis of such 11 ct. rate, on the 35,210 lb. of buckwheat held at Janesville.

From the facts thus found it would seem that the rate of 12½ cts. from Trempealeau to Janesville, as compared with the rate of 11 cts. from Trempealeau to Milwaukee, with transit privilege at Janesville, was somewhat excessive and the changing of the same later to 11 cts. indicates that the difference in these rates was an oversight rather than intentional. This condition does not now exist, for at present the rate from Trempealeau to Janesville is the same as the rate from Trempealeau to Milwaukee,

with transit privilege at Janesville. Apparently the prayer for reparation is based on present conditions and consequently an authorization of the refund asked should involve no change in conditions now existing. A careful examination of tariffs now in effect, however, fails to show any provision for the division of shipments of grain entitled to transit privileges that would authorize the application of different rates to a shipment separated at the transit point into two or more shipments, each of which is destined to points taking different rates from point of origin to point of final destination. The shipment in question, it appears, was so separated, one part going to a 12½ ct. rate point, Sharon, and the balance going to a point that is now and perhaps at the time of shipment was entitled to be an 11 ct. rate point, Janesville. The present conditions do not, therefore, furnish grounds upon which to authorize the reparation demanded, and as these conditions are not attacked as unreasonable, it follows that the petition must be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

C. D. SIEBERNS,
R. R. HOWISON
vs.
CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted Feb. 20, 1914. Decided July 28, 1914.

Complaint was made of inadequate passenger train service between Spring Valley and Woodville, Wis. It seems that two mixed trains, formerly affording passenger service between Spring Valley and Woodville, were taken off for a time and subsequently continued as freight trains carrying no passengers. The Commission is requested to order the respondent to restore the passenger service formerly afforded by these trains. It appeared that the discontinuance of the service in question necessitated a four hour wait at Woodville for Spring Valley people desiring to make a round trip to Eau Claire on the same day, resulted in the loss of the afternoon for business men desiring to transact business the following morning in St. Paul, and allowed persons coming to the village for business and departing the same day only four and one-half hours, including the noon hour, instead of eight hours in the village as formerly.

Held: While the addition of other passenger trains would not be justified, it is manifestly unreasonable, where the use of existing facilities will materially improve the service without any increase in operating expenses, to refuse to accord such service to the public. The respondent is ordered to restore the passenger service formerly rendered by it between Spring Valley and Woodville by allowing passengers to ride on its freight trains No. 34 and No. 35.

The petition alleges in substance that the Chicago, St. Paul, Minneapolis & Omaha Railway Company operated for several years a mixed freight and passenger train between Woodville and Spring Valley, leaving Woodville at about 4:00 p. m., arriving at Spring Valley about 4:30 p. m., and leaving again for Woodville at 6:30 p. m.; that this train was discontinued about June 15, 1913; and that the present train service is inadequate. The Commission is therefore asked to require the respondent to restore the train in question.

The respondent, in its answer, alleges that it now operates two passenger trains in each direction daily on this line, and that this service is entirely adequate and equal to the service of any of its branch lines.

A hearing was held at Woodville on February 20, 1914. *C. D. Sieberns* and *R. R. Howison* appeared in their own behalf, and *R. L. Kennedy* represented the respondent.

The train service now accorded Spring Valley is as follows:

Southbound

No. 31 leaves Woodville 9:30 a. m., arrives Spring Valley 10:20 a. m.
No. 33 " " 7:25 p. m., " " " 7:50 p. m.

Northbound

No. 30 leaves Spring Valley 7:08 a. m., arrives Woodville 7:30 a. m.
No. 32 " " " 3:00 p. m., " " 3:30 p. m.

Witnesses testified that with this schedule a trip to Eau Claire or other points east of Woodville on the main line is inconvenient. An examination of the company's folder shows that by taking the morning train at Spring Valley at 7:08 a. m., and waiting practically two hours at Woodville, one can reach Eau Claire at 10:50 a. m. Returning he must leave Eau Claire at 2:20 p. m. and wait at Woodville about four hours in order to make the round trip on the same day. Thus about thirteen hours are consumed in traveling forty-seven miles and back on the same day, allowing only three and one-half hours at the point of destination, including the noon hour. With the service of the train which was taken off, it was possible to reach Spring Valley from Eau Claire at about 4:30 p. m., the four hour wait at Woodville being eliminated.

It was also pointed out by witnesses that it was formerly possible for residents of Spring Valley to leave that station at about 6:30 p. m., and connect, after a wait of about two hours, with the evening train for St. Paul. Under the present schedule a business man desiring to transact business in the morning at St. Paul must leave Spring Valley at 3:00 o'clock on the preceding day, thus losing an afternoon's work. The afternoon train, however, makes close connection with the main line train west which arrives in St. Paul at 5:30 p. m.

The third, and probably the most important objection to the present schedule from the point of view of the petitioners is that persons coming to that village on business have only about four and one-half hours to stay if they return the same day. This period is from 10:20 a. m. to 3:00 p. m. and thus includes the noon hour, which further limits the time available for business transactions. Formerly persons could reach Spring Valley at 10:30 a. m. and leave at about 6:30 p. m., thus having eight hours for business purposes.

The trains which were taken off were mixed ones, leaving Woodville about 4:00 p. m. for Spring Valley and leaving that station for the return trip at about 6:30 p. m. A single combination coach was attached to the freight trains for the accommodation of passengers. These trains have been continued as freight trains, carrying no passengers, and the company's records show that they have been operated daily during the six months ending July 1, 1914, with the exception of Sundays and six other days. Respondent takes the position that on account of the grade on the line between Woodville and Spring Valley, it is impracticable to handle a passenger coach on this train without interfering with the freight business. It was stated that trains frequently are obliged to double back at the steepest grade, and that the combination coach has been occasionally set out on a siding at the county line, the train proceeding to Spring Valley without it and attaching it again on the return trip. An examination of the records of operation, made by a member of the Commission's engineering staff, shows that during the six months ending July 1, 1914, there were comparatively few instances in which the combination coach could not have been carried without doubling back.

Spring Valley has a population of about 1,000 persons. It now enjoys the service of two trains a day in each direction, which is similar to that furnished the other towns on this branch line. Formerly three trains in each direction daily were available at Spring Valley, it being the only town favored with the additional service. The two other villages of importance are Elmwood with about 800 people, and Weston with a population of approximately 300. The freight and passenger earnings of the three stations during 1912 and 1913, as submitted by the company, are summarized in the following table:

Station.	Revenue from passenger tickets sold at station.	Freight revenue.	Total revenue.
Spring Valley			
1912	$9,279 62	$34,957 85	$44,237 47
1913	8,554 60	37,457 74	43,011 60
Elmwood			
1912	5,687 84	28,840 22	34,528 06
1913	6,187 51	35,243 37	41,430 88
Weston			
1912	1,060 68	16,124 68	17,185 36
1913	982 73	18,827 41	19,810 14

The company also submitted data showing the number of tickets sold and the passenger revenue earned by each of the four trains now operated, for a period of fourteen days. These data are summarized as follows:

Train.	Total number of passenger tickets sold.	Revenue to branch line.	Revenue to main line.	Total revenue.
Train number 30				
Total for 14 days	390	$97 36	$182 35	$279 71
Average per day	28	6 95	13 03	19 98
Train number 31.				
Total for 14 days	397½	91 38	97 85	189 23
Average per day	28	6 53	6 99	13 52
Train number 32.				
Total for 14 days	473	97 57	127 25	224 82
Average per day	34	6 97	9 09	16 06
Train number 33.				
Total for 14 days	470½	113 01	215 13	328 14
Average per day	34	8 07	15 37	23 44

Average passenger earnings per mile—train No. 30	$0.26895
" " " " " " " 31	.25243
" " " " " " " 32	.37526
" " " " " " " 33	.42465

It should be noted that all trains operated on this branch line carry freight to a greater or less extent in connection with the passenger service. The passenger earnings given above are therefore not indicative of the total earning power of these trains. In such cases both passenger and freight earnings must be taken into consideration in determining whether the trains are being operated upon a profitable basis.

In the light of the testimony and the report of our engineer, we regard as an unreasonable practice the refusal of the respondent to allow passengers to use its freight trains now known as No. 34 and No. 35. These trains must be operated with considerable regularity in order to handle the freight traffic, and there is no serious operating objection to carrying a combination coach or caboose for the accommodation of such passengers as may desire to ride. In fact, a caboose is necessary for the convenience of the train crew, whether passengers are or are not allowed to ride. Were these trains not operated, we should not feel justified in requiring the addition of other passenger trains, but where the use of existing facilities will materially improve the service without any increase in operating expenses, it is manifestly unreasonable to refuse to accord such service to the

public. Inasmuch as the trains in question do not operate south of Spring Valley, this passenger service can not be regarded as a discrimination against Elmwood and Weston. It would be unreasonable to require the operation of two additional passenger trains beyond Spring Valley at the present time, and the freight traffic does not appear to require other trains beyond that point.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, restore the passenger service formerly rendered by it between Spring Valley and Woodville, by allowing passengers to ride on its freight trains now designated as No. 34 and No. 35.

ABRAMS BUSINESS MEN'S ASSOCIATION
vs.
CHICAGO, MILWAUKEE AND SAINT PAUL RAILWAY COMPANY.

Submitted March 2, 1914. Decided July 28, 1914.

Complaint was made that the passenger service furnished by respondent at Abrams, Oconto county, Wis., is inadequate and discriminatory, in that northbound passenger train No. 3 does not stop at Abrams for passengers, and that southbound train No. 2 stops only for Milwaukee and Chicago passengers, whereas both trains are stopped elsewhere at points of no greater importance than Abrams; and complaint was further made that the station facilities at Abrams are inadequate for the accommodation of passengers and freight. It appears that subsequent to the filing of the petition respondent began stopping trains No. 2 and No. 3 at Abrams. As to the depot, it appears that the building is about thirty years old, that crates and boxes are often stored in the passenger room, sometimes forcing passengers to the open platform in inclement weather, and that the freight room is frequently overcrowded and infested with rats.

Held: No order need be made at present with respect to passenger train service, since the service at present in effect, if maintained, will satisfy that feature of the complaint. The station facilities, however, are inadequate. The building should be altered and repaired, and vigorous measures should be adopted to rid it of rats. The respondent is ordered to enlarge and repair its station building at Abrams in the manner provided in the order, plans to be submitted to the Commission for approval.

The petition alleges in substance that the passenger service furnished by the Chicago, Milwaukee & St. Paul Railway Company at Abrams in Oconto county is inadequate and discriminatory, in that the northbound passenger train No. 3 does not stop at Abrams for passengers, and that southbound train No. 2 stops only for Milwaukee and Chicago passengers, whereas both trains are stopped at points of no greater importance than Abrams. It further alleges that the station facilities at Abrams are inadequate for the accommodation of passengers and freight. The Commission is therefore asked to take such action as it deems proper in the premises.

The respondent, in its answer, submits a letter from its assistant general manager which states that arrangements have been made to stop train No. 2 on signal without restrictions at

Abrams, but that it would be inconsistent to stop train No. 3 at that point because of its fast schedule and the important connections which it makes. The letter admits that the freight depot is somewhat crowded at infrequent intervals and that there is ground for complaint that shipments have been damaged by rodents, but states that measures will be taken to correct this condition. It further says that it will keep the passenger station in a sanitary condition and will increase the seating capacity if space will permit. The dismissal of the complaint is therefore asked.

A hearing was held at Abrams on March 2, 1914. *A. J. Whitcomb* appeared for the petitioner, and *J. N. Davis* for the respondent.

The respondent is now stopping trains No. 2 and No. 3 at Abrams. No order will therefore be issued with reference to train service at this time, since this service, if maintained, will satisfy that feature of the complaint.

The testimony shows that the depot at Abrams is about thirty years old. It consists of a freight room approximately 24 by 23 feet and a passenger room 16 by 16 feet in dimension. Witnesses stated that the freight room is frequently overcrowded and that crates and boxes are often stored in the passenger room, with the result that on some occasions passengers are forced to wait on the open platform in inclement weather. The freight room is infested with rats, and merchants testified that they are compelled to haul away their goods as soon as they arrive in order to avoid damage from this source. Abrams is surrounded by a prosperous farming community, about 65 per cent of the land being under cultivation. The chairman of the town of Pensaukee estimated that more than 2,100 persons are naturally tributary to Abrams for railway service. As many as twelve persons at a time wait for trains at the station.

In the light of the testimony and of the report of our engineer we find that the facilities at Abrams are inadequate. The building should be enlarged so as to provide a freight room at least 36 feet in length and the full width of the building, and should include a small room adjoining the waiting room suitable for the protection of perishable goods in cold weather. A new floor in the freight room should be provided, and the sidings and battens and the roof should be renewed and painted, so as to render the structure presentable and weatherproof. The pas-

senger room is sufficiently large for the existing traffic, if devoted entirely to the accommodation of passengers. Vigorous measures should be adopted to rid the freight room of rats.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, enlarge and repair its station building at Abrams so that it shall be weatherproof and presentable, and large enough to adequately accommodate the freight and passenger traffic, plans to be submitted to the Commission for approval.

November 1, 1914, is considered a reasonable date at which the improvements ordered herein shall be completed.

CITY OF RACINE

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted May 12, 1914. Decided July 28, 1914.

The respondent petitioned for a rehearing in the matter of *City of Racine v. C. & N. W. R. Co.* 1913, 11 W. R. C. R. 740, involving the construction and maintenance of a subway at Mound avenue in the city of Racine, and suggested a change in the original order on the ground that, for a relatively small additional expense, a more favorable grade of approach to the subway in question could be secured, and the necessity of further substantial change of the tracks at this point, in case of a general grade separation in the city, could be obviated. The petitioner contended that an additional subway for foot passengers should be constructed at Maple street. As to the issue raised by the city over the apportionment of the cost under the revised plans, it appeared that, in addition to the improved convenience of the subway for the traveling public, the accomplishment at the present time of that part of the work forming a permanent part of a possible general track elevation, would relieve the petitioner of approximately the same expense in the future.

Held: The change suggested by respondent would result in a more satisfactory subway than that originally ordered. The original order is therefore vacated, and in lieu thereof respondent is ordered to build the subway in question as specified in the present order. The proposed additional subway for foot passengers at Maple street is unnecessary. A foot path, parallel to the railway line, and extending from Maple street to the subway at Mound avenue would give better service, and cost much less. Respondent is ordered to construct such a footpath in the manner specified in the order. That part of Maple street lying between respondent's right of way limits is ordered closed, and respondent is authorized and directed, upon the opening of the subway and footpath, to obstruct that part of Maple street just described so that it cannot be used for public travel. The changing of the grade of Mound avenue by the petitioner so as to comply with the provisions of the order is made a condition precedent to the obligations of the respondent. The apportionment of 20 per cent of the cost to the petitioner and 80 per cent to the respondent, adopted in the original order, is deemed equitable under the revised construction, and is not changed. Barring the contingencies noted, the work is to be completed, and the subway and footpath opened for public use on or before October 1, 1914.

REHEARING.

An order was issued in this matter on May 14, 1913, *(City of Racine v. C. & N. W. R. Co.* 11 W. R. C. R. 740) requiring the

Chicago & North Western Railway Company to construct and maintain a subway at Mound avenue in the city of Racine in accordance with the specifications predicated upon the existing track level of the city. In the preparation of plans for compliance with this order it became evident to the respondent that by raising the tracks at this point, substantially as they would have to be raised in case of a general grade separation in the city, a more favorable grade of approach to the subway for highway travel could be secured for a relatively small additional expense. The respondent therefore petitioned for a rehearing in the matter, and such rehearing was held at Madison, on May 12, 1914. *E. R. Burgess* appeared for the petitioner and *William G. Wheeler* for the respondent.

At this hearing all parties agreed that the change suggested by the respondent would result in a more satisfactory subway than that originally ordered. The discussion had reference chiefly to the effect which the altered plan should properly have upon the apportionment of the cost. The city argues that since a considerable part of the cost under the revised plan will be incurred in effecting a track elevation which will form a permanent part of a general track elevation which may become necessary in the future, this part of the cost should be borne entirely by the company. Should grade separation become necessary in the future, a portion of the work contemplated in the revised plans will form a permanent part of such a general track elevation, and its accomplishment at this time will relieve the city of approximately the same expense at some future time. In view of this condition and the further fact that under the revised plans the convenience of the subway for the traveling public will be materially improved, we feel that the apportionment adopted in our former order is equitable under the changed construction.

At the hearing and in its brief the city advocated the construction of a subway for foot passengers at Maple street in addition to the subway at Mound avenue. The necessity for such a subway for pedestrians has been investigated by the Commission's chief engineer. Having in mind his report and the testimony, it is our opinion that a subway at Maple street is unnecessary. Persons living on Maple street or Randolph street will be better served by a footway parallel to and southwest of the railway line extending from Maple street to Mound avenue with steps down the sidewalk at the portal of the subway at

Mound avenue. With this arrangement, the distance from Maple street to points on Mound street northeast of the tracks would be greater than if a subway at Maple street were provided; but it is probable that the people affected more often go from Maple street to Sixth street or take a car for the center of the city, and for such travel the footpath suggested would be some two hundred feet shorter than the Maple street subway. As estimated by our engineer, the subway would cost approximately $9,200, as opposed to only about $435, for the footpath southwest of the tracks.

Our former order herein is therefore vacated hereby and in lieu thereof

IT IS ORDERED, That the respondent, the Chicago & Northwestern Railway Company, construct a subway under its tracks at Mound avenue in the city of Racine, and a footpath southwest of its tracks and parallel thereto, connecting said subway and Maple street, according to the conditions hereinafter specified; and that it elevate its roadway and tracks from a point at or near the south end of the bridge over Root river to a point 225 feet south of the south line of Liberty street, so that at Mound avenue the height of the crown of the roadway in the subway above city datum and the clear headroom shall be in accordance with the specifications hereinafter mentioned.

SECTION 1. The crown of the roadway in the subway shall be 34.6 feet above city datum. This level shall extend on the west for a distance of 20 feet west of the west portal, and on the east 20 feet east of the east portal of the subway, measured along the center line of the street. From this level both approaches shall continue by vertical curves and grades not to exceed 3.5 feet in 100 feet to an intersection with the present grade of Mound avenue. The width between the walls of the subway shall be 60 feet, the width of the roadway in the level portion 40 feet, the width of the roadway on the approaches 36 feet, the width of sidewalks in the level portion 10 feet, and the width of sidewalks on the approaches 6 feet. The height of the sidewalks in the subway and approaches shall be 38.6 feet above city datum. Two lines of posts may be placed in the curb lines and inside thereof, and one line of posts in the center of the roadway to support the girders. The subway shall have a clear headroom of 14 feet.

SECTION 2. The subway and approaches shall be excavated to the grade established by this order and shall in all other respects be restored as nearly as may be to their condition before being disturbed. The floor of the subway and the approaches shall be paved with a single course of vitrified brick of standard quality, set upon a foundation of hydraulic cement. The curbs shall be of sound, hard limestone or concrete masonry. The sidewalks shall be paved with Portland cement concrete.

SECTION 3. Provision shall be made for the drainage of the subway by the construction of catch basins properly located in or immediately adjacent to said subway, which catch basins shall be connected with and discharge their contents into the adjacent city sewers.

SECTION 4. The footpath between Maple street and the west portal of the subway shall be 6 feet wide, shall be paved with Portland cement concrete, and shall be connected with the north sidewalk at the west portal of the subway by suitable concrete steps.

SECTION 5. If it shall become necessary to disturb, move or deflect any of the conduits, pipes, poles, wires or other property belonging to any public utility, the interested company shall be notified to that effect by the railway company, and such utility shall within 10 days after the receipt of such notice, and at its own expense, proceed to make the required changes.

SECTION 6. The railway company may, whenever the same shall be necessary in the prosecution of the work ordered herein, obstruct temporarily any public street, avenue or alley, to such extent and for such length of time as may be approved by the commissioner of public works for the city of Racine, and it may, when necessary, erect and maintain temporary structures and false work in any of said streets subject to like approval. It may erect and maintain upon its right of way, subject to the approval of the proper city authorities, temporary offices and sheds for the storage of tools and material, and temporary outhouses for the convenience of workmen.

SECTION 7. The grade of Mound avenue shall be changed by the city of Racine in order to comply with the provisions of this order, as a condition precedent to the obligations of the railway company.

SECTION 8. That part of Maple street lying between the right of way limits of the railway company is hereby closed, and said

company is authorized and directed to obstruct the same so that it can not be used for public travel upon the opening of the subway and footpath herein ordered.

SECTION 9. All work ordered herein shall be performed subject to the inspection and approval of the Commission.

SECTION 10. Upon the completion of the work ordered herein, and the adjustment of damage claims resulting therefrom, the railway company shall furnish the Commission with a complete and detailed account of all expenses incurred by it therein, including any damages to adjacent property or business caused by the proper prosecution of the work ordered, whereupon the Commission, with or without further hearing as may be deemed best, will determine the actual cost of such work, and the city of Racine shall thereupon pay to the railway company 20 per cent of the cost as so determined by the Commission, and 80 per cent thereof shall be borne by the railway company.

SECTION 11. The work ordered herein shall be completed and the subway and footpath opened for public use on or before October 1, 1914. Delays occasioned by strikes, riots, judicial intervention, the failure of public utilities to change pipes, conduits, wires or other property within the specified time, or by action of the city, shall be added to the time allowed herein for the completion of the work, provided that the railway company gives immediate notice in writing to the Commission and the city attorney of the cause and duration of such delays.

TWENTY-SECOND WARD ADVANCEMENT ASSOCIATION
vs.
THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

Submitted March 11, 1914. Decided July 28, 1914.

Complaint was made that the service of respondent from the Twenty-second ward of Milwaukee to the down-town district was inadequate and discriminatory, and the Commission was asked to require the respondent to provide through service over the routes suggested by petitioner and to establish a schedule adequately providing for the district's service demands. The service in the district in question was thoroughly investigated by the Commission in various aspects. It appeared that up to 8 o'clock in the morning and from 5:30 o'clock to 7 o'clock in the evening, i. e. during the rush hours, respondent operated through service to the center of the city over one route only, that at other times persons had to transfer and wait, that the present arrangement was inconvenient and annoying, and that a total population of approximately 50,000 people was involved. It also appeared that the present arrangement of through lines in Milwaukee, necessitating the operation of more cars than are required by the traffic conditions during the non-rush hours in the down-town district, resulted in much wasted car mileage, and that additional extension of through down-town service during the off-peak period, instead of the proper development of cross-town lines, and the adjustment of the transfer system, would still further increase that waste.

Held: The operation of continuous through service from the Twenty-second ward to the center of the city, in the manner suggested by the petitioner, would not be in accord with the best interests of the city. The development of the city has now reached the point where it is impossible for every city line to be routed to the down-town district. The existing cross-town lines should be preserved as such, and the extensions of the system to meet the needs of new territory added to the city should be accomplished by the establishment of other cross-town lines, rather than by the creation of new lines operating through the center of the city over already congested routes. However, during the rush hours, when large numbers of patrons are moving from an outlying district to the center of the city, it is only reasonable that through cars should be operated for their convenience. In addition to the present through service down town over the 27th street line via State street during rush hours, respondent should operate through cars from the Twenty-second ward to the center of the city via North avenue.

It is ordered that the respondent operate through cars from the north terminus of its 27th street line to the down-town district via State street, and from the west terminus of its North avenue line to the down-town district via 8th street, during morning and evening rush hours as fixed in the Commission's former

order, *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 1913, 13 W. R. C. R. 178. The additional service ordered is to be in operation by September 1, 1914.

The petition alleges in substance that no street cars are operated in a continuous route from the Twenty-second ward of Milwaukee to the down-town district over the Thirty-fifth street line, the Twenty-seventh street line or the North avenue line, with the result that residents of that ward are compelled to transfer in going from their home to the business section of the city, a condition which renders the service unreasonable, discriminatory and inadequate. The Commission is therefore asked to require the respondent to provide through service on Thirty-fifth street and Twenty-seventh street by operating its State street line so that alternate cars shall be run north on Twenty-seventh street to Burleigh street and north on Thirty-fifth street to Burleigh street, and to establish a schedule which will adequately provide for the service demands of the Twenty-second ward.

No answer was filed by the respondent.

Hearings were held at Milwaukee on February 21 and March 11, 1914. *Daniel W. Hoan* appeared for the petitioner and *Edwin S. Mack* for the respondent.

The testimony shows that during the rush hours, namely up to 8 o'clock in the morning and from 5:30 to 7 o'clock in the evening, through cars are operated from the Twenty-second ward to the center of the city by way of 27th street and State street. At other times persons are obliged to transfer from the 27th street line in order to reach the down-town district. No through cars are operated on either 35th street or North avenue, and a transfer must be made to reach the center of the city if these routes are used. Numerous witnesses testified that this arrangement is inconvenient and annoying, owing to the delay and discomfort attendant upon transferring from one line to another. A number of specific instances were cited where passengers have waited at the transfer point for several minutes and then been obliged to stand. It was alleged that the existing arrangement is so unsatisfactory that some residents of the Twenty-second ward are moving out to points where direct down-town service can be had. The service under consideration affects the Twenty-second ward, which has a population of about 20,000, and also the Nineteenth and Twentieth wards to a less extent, the total

population concerned totaling approximately 50,000 persons. This section of the city has had a rapid growth within the last few years. Satistics were introduced showing that the building permits issued in 1911 and 1912 in the Twentieth and Twenty-second wards exceeded in number and estimated cost those issued in any other ward of the city. Witnesses for the petitioner suggested that the State street cars be operated alternately on 27th street and 35th street as prayed for in the petition, or that through service from the down-town district be supplied by routing cars from State street north on 27th street and west on North avenue.

The company takes the position that the traffic does no warrant the operation of through cars from this district to the center of the city except during rush hours, and that the operation of continuous through service as prayed for would interfere with the proper use of the cross-town lines.

The Commission's engineering staff has conducted a thorough investigation of the service in the district in question. Transfer traffic was analyzed, and a count taken at 25th street and North avenue. The matter has been considered with reference to the service in the city as a whole and the maintenance of the standards of rush hour and non-rush hour service fixed in the *Service Order* of November 25, 1913 (13 W. R. C. R. 178).

Having in mind the testimony and the reports of our engineers, it is our opinion that the operation of continuous through service to the center of the city from the Twenty-second ward over the 27th street and 35th street lines, or over 27th street and North avenue, as suggested by witnesses for the petitioner, would not be in accord with the best interests of the city of Milwaukee. The development of the city has now reached the point where it is impossible for every city line to be routed to the down-town district. This condition is normal and confronts every large street railway system except under very unusual conditions. The present arrangement of through lines is such that in order to preserve a reasonable minimum time interval between cars in the outlying portions of the city, many more cars than are required by the traffic conditions must now be operated during the non-rush hours in the down-town district. Much car mileage is thus wasted by this uneconomical arrangement, and the waste will inevitably be increased by any further extensions of through down-town service during the off-peak period. Such

an increase in wasted service can be avoided in the future by the proper development of cross-town lines and the proper adjustment of the transfer system so that such lines can be effectively used. The existing cross-town lines should be preserved as such, and the extensions of the system to meet the needs of new territory added to the city should be accomplished by the establishment of other cross-town lines, rather than by the creation of new lines operating through the center of the city over already congested routes.

However, during the rush hours, when large numbers of patrons are moving from an outlying district to the center of the city, it is only reasonable that through cars should be operated for their convenience. The company has recognized this by operating through service down town over the 27th street line via State street during the rush hours. This arrangement should be continued. In addition, traffic conditions appear to warrant the operation of through cars during the rush hours from the Twenty-second ward to the center of the city via North avenue. The most satisfactory routing of such through cars would be, in our judgment, from 47th street and North avenue to 8th street, south on 8th street, Germania and 7th street to Wells street, east on Wells street to 6th street, south on 6th street to Sycamore street, and east to Broadway. By the use of this route the convenience of through service down town during the rush hours will be afforded not only to the Twenty-second ward but also to all the territory served by the North avenue line west of 8th street. The 8th street route is suggested because the present traffic over it is less congested than the 12th street or 3d street routes which might otherwise be followed. With these two direct routes to the center of the city available for use during the rush hours, we believe that the district in question will be reasonably well served, provided, of course, that the standards of service fixed in our former order are strictly adhered to.

The consideration of this case has again brought before the Commission the question of double transfers. To make cross-town service efficient it is necessary in some cases to issue double transfers. In the *Service Decision* the following language was used:

"The company should make a study of the matter and extend the double transfer system where it is necessary to secure the desired results, and if this is not accomplished in a satisfactory

manner, it will be necessary for the Commission to make further investigations and formally consider this question." (1913, 13 W. R. C. R. 178, 213.)

The Company has, up to this time, failed to submit to the Commission a general plan for the extension of its system of double transfers as suggested, and the Commission will therefore proceed to institute an investigation of the matter on its own motion in the near future.

IT IS THEREFORE ORDERED, That the respondent, The Milwaukee Electric Railway & Light Company, operate through cars from the north terminus of its 27th street line to the down-town district via State street, and from the west terminus of its North avenue line to the down-town district via 8th street, during the morning and evening rush hours, in accordance with the standard of rush hour service fixed in our former order.

September 1, 1914, is considered a reasonable date at which the additional service herein ordered shall be in operation.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SERVICE OF THE PEOPLE'S TELEPHONE COMPANY AND THE WISCONSIN TELEPHONE COMPANY AT FALL RIVER, WISCONSIN.

Submitted March 23, 1914. Decided July 28, 1914.

Complaint was made that the telephone service at Fall River, Wis., was inadequate, and that the toll lines furnishing a physical connection between the exchange of the People's Tel. Co. at Fall River, and the exchange of the Wis. Tel. Co. at Columbus were inadequate for the traffic, and the Commission was asked to require the People's Tel. Co. to furnish adequate service, and to authorize and direct the Wis. Tel. Co. to furnish direct service to Columbus for such business men and residents of Fall River as desire it. It seems that general standards of adequate telephone service are to be made effective by the Commission in the near future, and that since the filing of the complaint the service of the People's Tel. Co. has become concededly satisfactory in most respects. As regards the furnishing of direct service to Columbus, it appears that formerly the Wis. Tel. Co. operated telephones within the village of Fall River connected directly with its Columbus exchange, but that since a physical connection was established between its Columbus exchange and the exchange of the People's Tel. Co. at Fall River, the Wis. Tel. Co. has withdrawn this local service entirely, that it now maintains in the village one toll station connected directly with its Columbus exchange, that the proprietor of this station can connect with other residents of Fall River only through making use of both the Columbus and Fall River exchanges and the physical connection between the two, and that this cannot be regarded as local service. There is no question that it is physically possible for the People's Tel. Co. to render adequate service with its local exchange, and with a sufficient number of direct connecting lines between its Fall River exchange and the Columbus exchange of the Wis. Tel. Co., and that the extension requested would result in duplication of equipment, and unwarranted competition, both of which ch. 610, laws of 1913, aims to eliminate.

Held: Decision as to the adequacy of the service of the People's Tel. Co. at Fall River is held in abeyance for the present. As to the extension of service requested of the Wis. Tel. Co., the Commission is without jurisdiction. The Wis. Tel. Co. is not obligated to furnish service of a local character in the village. On the contrary, it could only make the extensions in question after filing notice with, and securing the approval of the Commission under ch. 610, laws of 1913, and it would be contrary to the established policy of the legislature for the Commission to permit or require the extension of the Wis. Tel. Co's lines into Fall River for local service, even though such requirement were legally possible.

This is an investigation, on motion of the Commission, of the service rendered by the People's Telephone Company and the Wisconsin Telephone Company at Fall River, which was instituted following the receipt of a complaint signed by eight residents of that village. This complaint alleges in substance that the service of the People's Telephone Company is inadequate because of poor equipment and inefficient operation; that the Wisconsin Telephone Company formerly operated telephones within the village of Fall River connected directly with its Columbus exchange, but that since a physical connection has been established between it and the People's Telephone Company, it has withdrawn this service except to one patron who still retains his telephone connection with Columbus; that an additional fee of $3 is charged subscribers of the People's Telephone Company at Fall River for connection with Columbus and for printing their names in the Columbus directory of the Wisconsin Telephone Company; that but two toll lines are operated between the Fall River and Columbus exchanges, which toll lines are inadequate for the traffic; and that direct connection over the lines of the Wisconsin Telephone Company is necessary for the adequate service of business men and other residents of Fall River. The Commission is asked to require the People's Telephone Company to furnish adequate service and to authorize and direct the Wisconsin Telephone Company to furnish direct service to such business men and residents of Fall River as desire it.

A hearing was held on March 23, 1914, at Fall River. *George E. Bunsa* appeared for the complainants, *Doerfler, Green & Bender,* by *T. H. Sanderson,* for the People's Telephone Company, and *J. F. Krizek* and *F. M. McEniry* for the Wisconsin Telephone Company.

Witnesses for the complainants conceded at the hearing that the service of the People's Telephone Company had shown marked improvement since the filing of the complaint, and that it is now satisfactory in most respects. In view of this fact, and the further consideration that the Commission is now engaged in formulating general standards of adequate telephone service which will be made effective in the near future, it appears inadvisable to take any action with reference to that phase of complaint at the present time. Our decision as to the adequacy of

the service of the People's Telephone Company will therefore be held in abeyance.

In our judgment the extension of the service of the Wisconsin Telephone Company into territory already occupied by the local company is not warranted by the local conditions. Such an extension would inevitably result in duplication of equipment, and, unless carefully safeguarded, in the ultimate outing of the less powerful company. It is the express intent of chapter 610 of the laws of 1913 to eliminate the waste of such unwarranted competition, and the Commission has repeatedly refused to countenance the extension of lines where adequate service can be rendered by the company already in the field. That it is physically possible for the People's Telephone Company to render adequate service with its local exchange and with a sufficient number of direct connecting lines between its Fall River exchange and the Columbus exchange of the Wisconsin Telephone Company cannot be questioned. It would therefore be contrary to the established policy of the legislature, as applied by this Commission, to permit or require the extension of the Wisconsin Telephone Company's lines into Fall River for local service, even though such requirement were legally possible.

However, in the present case the Commission is without jurisdiction to require such an extension. The Wisconsin Telephone Company maintains one toll station within the village limits of Fall River, connected directly with its Columbus exchange. It is impossible for the proprietor of this station to be connected with other residents of Fall River without making use of both the Columbus and Fall River exchanges and the physical connection between the two companies. This cannot be regarded as local service, and the Wisconsin Telephone Company is not obligated to establish other stations in the village which would render its service local in character. On the contrary, such extensions of its service could only be made after filing notice with and securing the approval of this Commission under chapter 610, laws of 1913.

The prayer of the complaint for the extension of the service of the Wisconsin Telephone Company into Fall River is therefore dismissed.

TOWN OF ELCHO

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Jan. 19, 1914. Decided July 31, 1914.

Complaint was made that the respondent had failed to construct a highway crossing at a point about one and one-fourth miles north of Summit Lake, at which point a new road laid out by the petitioner intersected the line of the respondent, and that respondent's failure to do so created a condition dangerous to public travel. The Commission is asked to determine the mode and manner of the crossing, and to require the respondent, at its own expense, to construct, grade and maintain in a safe condition for public travel the portion of the highway lying within its right of way lines.

The respondent contended that the proceedings with reference to the laying out of the highway in question were invalid for several reasons, which are stated in the decision, and that, since an order determining the mode and manner of the proposed crossing can be effective only upon the legal opening of the highway, the Commission should not act unless the proceeding is clearly valid.

Held: The technical validity of the action of the town board in laying out a highway over the right of way of a railway company must be determined in the courts, and in the present case is immaterial so far as the proceeding before the Commission is concerned. (*Town of Gillett v. C. & N. W. R. Co.* 1912, 9 W. R. C. R. 535.) Pending an adjudication by the courts, the Commission has no choice but to determine the mode and manner of the crossing as provided by law.

It appeared that the crossing at grade had already been constructed in spite of active opposition on the part of the respondent, and that the angle of crossing was acute. Respondent contended that the crossing as constructed was dangerous, but admitted that it could be made less so through reconstruction at right angles to the track. Respondent stated that an overhead highway crossing could be constructed about 1,000 feet south of the existing site at a cost of approximately $7,000. The traffic on the highway in question is light and the surrounding country only partially developed.

Held: A separation of grades, involving a relatively large expense, is not warranted at the present time by traffic conditions. It would necessitate the relocation of the highway in question, and, when necessary, can be accomplished at a cost not materially greater than that which would now be incurred. A reasonably safe grade crossing is practicable. But for the sake of public safety, the present highway should be altered so as to cross the track at right angles. The Commission assumes that if the proceedings of the town board to lay out the high-

way over the point in question should be declared invalid, new proceedings will be instituted.

Petitioner contended that under sec. 1299*h*—1 of the statutes, the respondent is required to construct a suitable crossing within its right of way entirely at its own expense.

Held: Sec. 1797—12*e*, subsequently enacted by the legislature, imposes upon the Commission the duty, upon petition, of determining the mode and manner of a proposed crossing in the interest of public safety, and of apportioning the cost of such crossing between the railway company and the municipality in interest. Necessarily, where the offices of the Commission are invoked in such a case, the provisions of the earlier statute become inactive as to the particular case. The action of the Commission in the present case is predicated upon sec. 1797—12*e* of the statutes.

It is ordered: (1) that the respondent construct, at the point in question, a suitable grade crossing approximately at right angles to its track; (2) that the respondent furnish all necessary material and labor, and perform all necessary work in carrying out the order; and (3) that the petitioner bear 50 per cent and respondent 50 per cent of the cost as determined by the Commission. Sixty days is considered a reasonable time within which to comply with the order.

The petitioner, a regularly organized town in Langlade county, alleges in substance that the town of Elcho has laid out a highway which intersects the line of the Chicago & North Western Railway Company about one and one-fourth miles north of Summit Lake; that this highway has been made a part of the county highway system by the county board with the approval of the Wisconsin highway commission, and that the respondent has failed to construct a suitable highway crossing at the intersection of its line and this new road, thereby creating a condition dangerous to public travel. The Commission is therefore asked to determine the mode and manner of the crossing and to require the respondent, at its own expense, to construct, grade and maintain in a safe condition for public travel the portion of the highway lying within its right of way lines.

The respondent, in its answer, alleges that the proposed crossing, if opened, would be an extremely dangerous one, and asks that the Commission determine the way in which the crossing should be made.

A hearing was held at Antigo on January 19, 1914, at which *C. J. Te Selle* and *George Bowler* appeared for the petitioner, and *C. A. Vilas* for the respondent.

Exhibits introduced by the petitioner and the testimony of the town officials show that on November 6, 1912, a petition asking that a new highway be laid out over a designated route in the

town of Elcho was filed with the supervisors of the town, who thereupon proceeded to take such action as they deemed necessary for laying out the highway. The order declaring the specified route to be a public highway was issued on December 3, 1912, and on the same day an award of damages was made in general terms, the names of property owners and the extent of their holdings not being set forth. On April 22, 1913, the county board on petition of the town of Elcho adopted the proposed route subject to the approval of the Wisconsin highway commission, which approval was granted prior to November 11, 1913. The route designated is as follows:

"Commencing at a stake in center of highway 600 ft. south of ¼ post between sections 24–34–10 east and 19–34–11 east, thence southeast, south and southwest across west ½ of the s. w. quarter section 19 to section corner 24–25–19–30, thence south to ⅛ post, thence southwest across the s. e. of the n. e. section 25–34–10, thence south along ⅛ line to ⅛ stake on s. w. corner of n. e. of the s. w. section 25 thence in a southwesterly and west across the s. w. of the s. e. and the south ½ of the s. w. quarter section 25 to section corner 25–26–35–36, thence southwest and southeast across east ½ northeast quarter and east ½ southeast quarter section 35. Also across the southwest corner of the s. w. of the s. w. 36–34–10. All the above route is in the town 34–10 and 11 east."

Respondent in its brief agrees that the proceedings with reference to the laying out of the highway in question are invalid because (1) the description of the proposed route does not include any property of the Chicago & North Western Railway Company, (2) because no specific award of damages for land to be taken for the proposed highway was made by the town board, and (3) because no notice of *lis pendens* was filed in the office of the register of deeds, and the final resolution or order was never recorded in the office of the register of deeds as required by sec. 3187—*a* of the statutes. It contends that since an order determining the mode and manner of the proposed crossing can be effective only upon the legal opening of the highway, the Commission should not act unless the proceeding is clearly valid.

The validity of the action of the town board in laying out a highway over the right of way of a railway company is not a proper subject for this Commission to pass on, but is one which must be determined in the courts. Pending such adjudication,

the Commission has no choice but to determine the mode and manner of the proposed crossing as provided by law. In the present case the town board has apparently acted in good faith in laying out the highway, and the technical validity of that action is immaterial so far as the proceeding before this Commission is concerned. (*Town of Gillett v. C. & N. W. R. Co.* 1912, 9. W. R. C. R. 535.)

Turning, therefore, to the physical surroundings at the proposed crossing, it appears that a crossing at grade has already been constructed in spite of active opposition on the part of the respondent. The railway runs northeast and southwest and the road approximately east and west, the angle of crossing being acute. The track is on a fill at this point, and the highway approaches ascend slightly to the crossing. The view of trains, as observed by the town chairman from various points in the road is as follows:

Distance of point of observation in road from track.	View northeast.	View southwest.
East 200 feet	¼ mile	666 feet
" 325 "	¼ "	*
" 800 "	799 feet	468 "
West 200 "	800 "	820 "
" 250 "	785 "	*
" 280 "	643 "	*
" 400 "	*	665 "

*Not given.

The former town chairman testified that a good view of trains in both directions can be had at a point fifty feet from the track on either side. Both he and the present town chairman expressed the opinion that the crossing at grade is reasonably safe. A knoll north of the highway and west of the track obscures the view to some extent for pedestrians, but not seriously for persons in vehicles. It was estimated that this knoll could be removed at a cost of approximately $50, and under date of July 1, 1914, the town chairman advised the Commission that it had been removed by the town. Photographs of the crossing and its surroundings were introduced by the railway superintendent.

Respondent's engineer expressed the opinion that the grade crossing as constructed is dangerous to public travel. He stated that it is practicable to construct an overhead highway crossing about 1,000 feet south of the existing site at a cost of approx-

imately $7,000. He admitted, however, that the grade crossing could be made less dangerous by reconstructing it at right angles to the track and by removing the knoll in the northwest angle.

The surrounding country is only partially developed, and the traffic on the highway is light, being estimated by witnesses at from three to eleven teams a day. At the time of the hearing, however, the road was not in first class condition and the travel over it was probably less numerous than will be the case in the future. Most of the travel that has formerly moved over the highway which the new one is designed to replace will eventually pass over this crossing, and with the development of the district this traffic will, no doubt, become important. However, a material increase cannot be predicted for the near future.

From a careful examination of the testimony, and from an inspection of the crossing at the time of the hearing, it is our judgment that traffic conditions do not warrant a separation of grades at the present time. The physical conditions are such that a reasonably safe grade crossing is practicable, and in view of the undeveloped state of the surrounding territory, and the limited use of the highway it does not appear reasonable to impose the relatively large expense of constructing an overhead crossing upon either the town or the railway company. When such a change becomes necessary it can be accomplished at a cost not materially greater than that which would be incurred at the present time, since the highway has already been constructed and would have to be relocated in order to effect a separation of grades. It is our determination, therefore, that the crossing shall be at grade. The site at which the crossing has been constructed is apparently the most favorable one in the vicinity for a grade crossing and we assume that if the proceedings already taken by the town to lay out the highway over the right of way at this point should be declared invalid by the courts, that new proceedings will be instituted. However, we regard it as necessary for public safety that the highway should be altered so as to cross the track at right angles.

Counsel for petitioner maintains that under sec. 1299*h*—1 of the statutes the company is required to construct a suitable crossing within its right of way entirely at its own expense. Sec. 1299*h*—1 was enacted as chapter 120, laws of 1907. The legislature subsequently enacted sec. 1797—12*e* (ch. 540, laws of 1909 and ch. 191, laws of 1911), which imposes upon the Commission

the duty of determining the mode and manner of a proposed crossing in the interest of public safety upon petition of the municipal authorities or the railway company. It also requires the Commission to apportion the cost of such crossing between the railway company and the municipality in interest. Therefore, when the offices of the Commission are invoked to determine the mode and manner of crossing, the provisions of the earlier statute must necessarily become inactive as to the particular case in hand. Our action herein is therefore predicated upon sec. 1797—12*e* of the statutes.

We regard as equitable an apportionment under which the town shall pay 50 per cent of the total cost of the railway company 50 per cent thereof.

IT IS THEREFORE ORDERED, That the proposed crossing of the new highway, laid out by the supervisors of the town of Elcho from Elcho to Summit Lake by their order of December 3, 1912, and the line of the Chicago & North Western Railway Company be at grade; and the respondent, the Chicago & North Western Railway Company, is hereby directed to construct a suitable grade crossing approximately at right angles to its track where the highway as now constructed crosses its right of way about one and one-fourth miles north of Summit Lake.

IT IS FURTHER ORDERED, That the said respondent furnish all necessary material and labor and perform all necessary work in fulfilling the provisions of this order, and that upon the completion of the work said respondent furnish the Commission with a complete and detailed account of all expenses incurred by it therein, whereupon the Commission, with or without further hearing as may be deemed best, will determine the actual expense of constructing the crossing, and the town of Elcho shall thereupon pay to the respondent 50 per cent of the cost as so determined by the Commission, and 50 per cent thereof shall be borne by the respondent.

Sixty days is considered a sufficient time within which to comply with this order.

IN RE PROPOSED EXTENSION OF THE LINE OF THE EAST VALLEY TELEPHONE COMPANY IN THE TOWNS OF SCOTT AND SHERMAN, SHEBOYGAN COUNTY, WISCONSIN.

Decided July 31, 1914.

The East Valley Tel. Co. notified the Commission of a proposed extension of its line in the towns of Scott and Sherman, Sheboygan county. Upon investigation by the Commission it was found that the line had already been built, and that its eastern end was about a mile west of the nearest point on the Random Lake Tel. Co.'s line. The territory involved was new and unoccupied, but the Random Lake Tel. Co. considered it as belonging to itself, and objected to the extension for that reason. However, the latter company had not instituted proceedings before the Commission with a view to obtaining the right to build. The construction of the line in question in the fall of 1913 was technically a violation of ch. 610 of the laws of 1913. But it seems that, while the law went into effect July 10, 1913, its provisions were not clearly understood by the telephone utilities of the state until some time later.

Held: The evidence does not indicate any willful violation of the law, but rather a failure to comprehend its requirements. Had the East Valley Tel. Co. notified the Commission in the regular way of its proposed extension, and had the same facts been placed before the Commission as those considered in the present case, it would have been impossible to find that public convenience and necessity did not require the extension. Under the circumstances, the Commission will take no action looking toward the withdrawal of the East Valley Tel. Co. from the territory in which the new extension was built.

On August 26, 1913, the East Valley Telephone Company notified this Commission of a proposed extension of its line in the towns of Scott and Sherman, Sheboygan county. Upon investigation by the Commission it was found that the extension had already been built. The extension thus constructed is about two and a half miles in length, running in an easterly direction from a point on the East Valley line into territory in which no telephone line was then in existence. The eastern end of the extension was about a mile, more or less, west of the nearest point on the Random Lake Telephone Company's line, and that company objected to the extension for the reason that it considered the territory to belong to itself. An informal conference was held on the matter in September 1913, but it was not made to ap-

pear clearly what the needs of the residents along the new East Valley line were, and the matter was allowed to rest during the winter in order to afford more opportunity for a determination of the actual situation.

Certain residents near the western part of the new extension who had been desirous of obtaining Random Lake service when the matter first came up renewed their request for such service early in the spring of the present year, and the matter was set for a final hearing at Random Lake on May 15, 1914. At this hearing the East Valley Telephone Company was represented by *P. G. Van Blarcom* and *August G. Bartelt,* and the Random Lake Telephone Company by *Emil C. Thiel.*

There is no doubt that the construction of the East Valley line in the fall of 1913 in the manner above described was technically a violation of ch. 610 of the laws of 1913. That chapter went into effect July 10, 1913, and the construction of the line was not begun until after this date. For the first few weeks after the law became effective, however, there was not a clear understanding of its provisions and requirements among the telephone utilities of the state, and for this reason the Commission has been disposed in cases of unwilful violation of the law during the period in question to treat the matter as though the legal requirements had been complied with and not to require the removal of the line unless the circumstances were such as would have necessitated a finding adverse to the construction of the line had the proper proceedings been taken in the first place.

In the present case, the line was built into new and unoccupied territory. The Random Lake Telephone Company, according to the testimony, hauled poles into this territory about the time the East Valley Telephone Company built its line, but the latter company proceeded with the construction of the line more promptly and forestalled the Random Lake company. The latter company, however, had not instituted any proceedings before the Commission with a view to obtaining the right to build a line. Ordinarily, when territory is entirely unoccupied, there is a plain public convenience and necessity requiring some telephone service, and when one company is aggressive enough in the promotion of its business to take steps toward entering the territory, it is difficult to say there is no public convenience and necessity requiring its line. Thus, it is very unlikely that the Commission could have made a finding adverse to the East

Valley Telephone Company had its notice been filed in the usual way and in strict compliance with the law.

The evidence shows that several persons living along the last mile of the extension made by the East Valley Telephone Company desire the Random Lake Telephone Company's service and do not wish to take the service of the East Valley company. The reason for their choice is the preponderance of their business and social interests in the direction of Random Lake over those in the direction of the East Valley line. The remedy for this situation, however, is a physical connection between the companies by which messages can be interchanged without the duplication of lines. It is almost inevitable that in case of an extension of a telephone line into unoccupied territory intermediate between two companies, some of the residents will prefer the service of the company which is not making the extension, and in some such cases where physical connection is not feasible it has been found necessary to permit some overlapping and paralleling of telephone lines in order to serve the real public needs. Here, however, a physical connection is not only feasible but is in process of construction between the two companies and, we are advised, will soon be in operation. If it is not completed as soon as it should be or is not operated upon reasonable terms, the difficulty can be remedied by application to the Commission.

It follows from what has been said that had the East Valley Telephone Company notified this Commission in the regular way of its proposed extension, and had the same facts been brought out in support of its proposition that are now before the Commission, it would have been impossible to find that public conveniences and necessity did not require the extension. The evidence does not indicate any wilful violation of the law by the company but rather a failure to comprehend its requirements. Under these circumstances, no action will be taken by the Commission looking toward the withdrawal of the East Valley Telephone Company from the territory in which the new extension was built.

MERRILL WOODENWARE COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Decided Aug. 5, 1914.

Complaint was made of excess charges on twenty carloads of wood bolts, shipped from Manson and Bradley to Merrill, Wis. It appears that the shipments were billed locally over respondent's line from Manson and Bradley to Heafford Junction, a distance of four miles, at a rate of 3 cts. per cwt., and locally over the line of the C. M. & St. P. Ry. Co. from Heafford Junction to Merrill, a distance of twenty-eight miles, at a rate of 1½ cts. per cwt. Refund is asked on the basis of a 1½ ct. rate. Respondent's tariff applicable to the commodity in question was 2 cts. per cwt. for distances of five miles or less between all points on its line in Wisconsin. The foregoing rate was in effect at the time the shipment moved, and the complaint is not broad enough to warrant an investigation as to its reasonableness.

Held: The charge of 3 cts. per cwt. exacted on the shipments in question was excessive. The reasonable charge exacted should have been 2 cts. per cwt. Refund ordered on that basis.

The petitioner is a corporation engaged in manufacturing woodenware at Merrill, Wis. It alleges that there were shipped to it over respondent's line fifteen cars of bolts from Manson, Wis., to Heafford Junction, Wis., and five cars of bolts from Bradley, Wis., to Heafford Junction, Wis.; that the respondent exacted for said shipments the rate of 3 cts. per cwt., which is unusual and exorbitant; that the same cars were hauled from Heafford Junction to Merrill by the Chicago, Milwaukee & St. Paul Railway Company, a much longer distance than from the points of origin of said shipments to Heafford Junction, and the carrier exacted only 1½ cts. per cwt. for such services. Wherefore petitioner prays that the respondent be required to reimburse petitioner for at least one-half of the charges exacted of it by the respondent on said shipments.

The respondent railway company, answering the petition, expresses a willingness to make reparation upon a basis of 2 cts. per cwt.

The claim was submitted upon the pleadings, papers, vouchers and documents on file.

The petitioner challenges the reasonableness of the charges paid on twenty carloads of wood bolts shipped during the period extending from August 13, 1913, to February 14, 1914, inclusive, from Manson and Bradley to Merrill. These shipments were billed locally over respondent's line from Manson and Bradley to Heafford Junction, a distance of four miles, and charges assessed on a total weight of 1,397,200 lb. at a rate of 3 cts. per 100 lb., amounting to $419.16, and locally over the line of the Chicago, Milwaukee & St. Paul Railway Company from Heafford Junction to Merrill, a distance of twenty-eight miles, and charges assessed on a total weight of 1,412,000 lb. at the rate of 1½ cts. per 100 lb., amounting to $211.82. The petitioner asks for reparation of one-half of the amount paid to the respondent. The respondent is willing to make refund on the basis of 2 cts. per 100 lb. The reasonableness of the rates and charges for the haul from Heafford Junction to Merrill is not attacked.

An examination of tariffs on file with the Commission fails to show any authority for the rate of 3 cts. per 100 lb. on bolts from Merrill to Heafford Junction. The Western Classification, as in effect during the period involved and as still in effect, provides for wood bolts, for staves, shingles or excelsior at Class E rates, subject to a minimum weight of 36,000 lb.; and respondent's tariff G. F. D. No. 16,000, in effect during the same period and still in effect, names a rate on Class E of 2 cts. per 100 lb. for distances of five miles or less between all points on its line in Wisconsin. This rate applies between Manson and Heafford Junction, and in the absence of a more specific rate on wood bolts between these points, would apply to the shipments in question. Had the shipments been subject to the conditions that the product manufactured therefrom should be shipped over respondent's line, the rate properly applicable thereto would have been 1.1 cts. per 100 lb., but as the shipments passed off respondent's line over the Chicago, Milwaukee & St. Paul Railway Company from Heafford Junction to Merrill, they were not subject to such condition. This accounts for the comparatively low rate on the latter line.

The complaint is not broad enough to warrant an investigation into the reasonableness of the rate in question. This, perhaps, is due to the fact that the interests involved do not appear to re-

quire anything further than an adjustment of the charges on the shipments made, as there is no indication that there is to be future shipments requiring the establishment of a proper rate.

The freight bills indicate, as stated, that the shipments were charged at the rate of 3 cts. per 100 lb., on 1,397,200 lb., amounting to $419.16. One shipment was charged as 35,200 lb., being 800 lb. less than the minimum weight applicable in connection with the 2 ct. rate. Adding this 800 lb. to the total weight charged makes the total 1,398,000 lb., which, at 2 cts. per 100 lb., amounts to $279.60; the difference between this amount and the amount actually paid by petitioner is $139.56, for which reparation will be awarded.

We therefore find and determine that the charge of 3 cts. per cwt., exacted on the aforesaid shipments of bolts, is unlawful and that the reasonable and lawful charge that should have been exacted is 2 cts. per cwt., as provided in respondent's tariff G. F. D. No. 16,000.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the petitioner the said sum of $139.56.

IN RE APPLICATION OF THE CASCADE TELEPHONE COMPANY FOR AUTHORITY TO INCREASE ITS RATES.

Submitted May 20, 1914. Decided Aug. 5, 1914.

Application was made for authority to increase rates for telephone service in Cascade, Wis. It appeared that the present rates do not afford a sufficient surplus for interest and depreciation, but that with an increase of 15 cts. per month for two or more party service—there being at present no one party service—the rates would adequately meet requirements with respect to these two items. The suggestion that a discount provision be made in the rates to insure prompt payment of bills is in accord with practice of telephone companies in general and with the holdings of the Commission.

The respondent is authorized to charge, in lieu of present rates, $1.25 per month for two or more party phones, and $1.50 per month for single party phones, bills to be paid quarterly, subject to a discount of 10 cts. per phone per month to subscribers paying within one month.

The present rates of the applicant in and in the vicinity of the village of Cascade, Wis., are stated to be $1.00 per month on all party lines having two or more phones, and $1.25 per month on all single party lines. The application is for authority to increase the rate to $1.25 per month on all party lines having two or more phones, and $1.50 per month on all single party lines.

Hearing was held at the office of the Railroad Commission at Madison on May 20, 1914. *J. E. Hoffman* appeared for the applicant. There were no appearances in opposition.

The hearing disclosed that the company had been in operation about two years; that there had been expended in the construction of the system a sum of about $6,000; that the income of operation was not sufficient to pay a fair return upon the capital invested after operating expenses were met; and that certain extensions and improvements were desired to be made for which it would be necessary to raise additional capital. It was testified that the earnings from operation during the year 1913 amounted to approximately $1,748.70, of which some $250.00 remained uncollected at the close of the year's business. The operating expenses were stated to be $1,435.71, but from the testimony it

seemed that certain amounts were included in that sum which were not properly chargeable to operating expense. The absence of adequate financial reports made it necessary to examine the books and vouchers of the company to determine what items, if any, were improperly given as elements of the operating expense. Such an examination was made with the result that many small items, which were charged on the books of the company as expense of operation, were eliminated as properly belonging in the construction accounts.

The total disbursements for the year 1913 approximated the sum of $2,066.31. Of this amount some $867 appears to have been expended in construction, thus leaving approximately $1,200 for operation of the system.

The cost of operation per subscriber is, therefore, slightly in excess of $9. This figure is perhaps somewhat higher than the normal operating cost of telephone systems of the size and character of the one under consideration. The company has 54 miles of wire line, giving service to 132 substations. The system is evidently a very compact one. It would naturally be concluded that in a situation of this kind the operating costs would run slightly below rather than slightly above normal. It may be said, however, that the company affords exchange with the Plymouth Telephone Company for which it pays the latter 15 cts. per phone per month. For this service no additional charge is made to the subscriber.

Deducting the operating expenses from the gross earnings, the surplus available for interest and depreciation appears to be $548.70, a sum scarcely sufficient to meet a fair allowance for those items. If the rate for two or more party service were raised 15 cts. per month the resulting increase in gross earnings would be $237.60—there being at the present time no subscribers taking single party service. This would increase the allowance for depreciation and interest to $786.30, which is approximately 13 per cent of the amount of the investment, or a 6 per cent allowance for depreciation and 7 per cent for interest. This would seem to adequately meet the needs of the company.

Some difficulty has been experienced by the company in enforcing the prompt payment of bills, and a desire was expressed at the hearing that a discount provision be made in the rates established in order to make it an object to a customer to pay promptly. This suggestion is in accordance with the practice

of telephone companies in general, and with the previous holdings of this Commission.

IT IS THEREFORE ORDERED, That the applicant herein, the Cascade Telephone Company, be authorized to discontinue the rates now in force and to substitute therefor the following schedule:

$1.25 per month for two or more party phone.

$1.50 per month for single party phone.

Bills to be paid quarterly in advance on the first of January, April, July and October, and a discount of 10 cts. per phone per month to be granted subscribers paying within one month.

CHARLES E. McKENNY AND F. R. FINN
vs.
WISCONSIN TRACTION, LIGHT, HEAT AND POWER COMPANY.

Submitted March 30, 1914. Decided Aug. 6, 1914.

Complaint was made that the petitioners, owners of summer cottages near Lake Winnebago, between Waverly Beach and Brighton Beach, stations on respondent's interurban line, cannot conveniently reach those stations without trespassing upon respondent's right of way, which is forbidden, and the Commission was asked to require the respondent to stop its cars on signal at petitioners' cottages. It appeared that in order to reach the stations in question the petitioners were obliged to resort to the dangerous practice of walking along respondent's tracks, or follow a footpath which is almost impassable except during dry weather. The point at which the stop was requested is about 1,700 feet from Waverley Beach station, approximately midway between the two stations involved, and so located that a stop will probably be needed there in the future if the development of the section continues. It also appeared that there was no serious operating objection to the establishment of a flag stop at the point in question, and that stops were in fact being made at other points where only two or three families were involved.

Held: To deny the service requested would be unreasonable under the circumstances of the present case. The respondent is ordered to stop its interurban cars to receive and discharge passengers at a point approximately 1,700 feet west of Waverly Beach station.

The petitioners allege in substance that they own summer cottages near Lake Winnebago between Waverly Beach and Brighton Beach stations on the interurban line of the Wisconsin Traction, Light, Heat and Power Company, and that they cannot conveniently reach these stations without trespassing upon the respondent's right of way, which is forbidden. The Commission is therefore asked to require the respondent to stop its cars on signal at petitioner's cottages.

In its answer the respondent alleges in substance that the distance which the petitioners are required to walk to existing stations is not great, and that the establishment of a stop as prayed for is unnecessary and would lessen the efficiency of the inter-

urban service. The dismissal of the complaint is therefore asked.

A hearing was held on March 30, 1914, at Appleton, at which *F. S. Bradford* appeared for the petitioners and *Van Dyke, Rosecrantz, Shaw & Van Dyke, by Clarke M. Rosecrantz,* for the respondent.

Petitioners' houses are located near the railway track, about 1,700 feet from Waverly Beach station and about 1,900 feet from Brighton Beach station. There is no highway connecting them with these stations, and to secure car service petitioners must walk along the interurban tracks or follow a path along the beach which runs through a marsh and is almost impassable except during dry weather. The danger involved in trespassing upon the respondent's tracks, and the inconvenience of walking to Waverley Beach over a marshy path could be obviated by establishing a flag stop at or near the cottages in question. Witnesses for the petitioners testified that cars frequently arrive in Appleton ahead of their schedules, and expressed the opinion that occasional stops at the proposed station would not interfere with the existing schedules. Respondent's superintendent, however, testified that during the summer months, when the traffic to the beach resorts is at its height, the stopping of cars at the designated points would seriously impede operation. He advanced the argument that if the prayer of the petitioners is granted numerous other residents along the line could demand a similar service.

From a careful examination of the testimony and of the report of our engineer submitted after a personal inspection of the situation, it is our judgment that the interurban cars should stop on signal to receive or discharge passengers at a point approximately 1,700 feet west of Waverly Beach as prayed for. The path referred to in the testimony was impassable at the time of our engineer's inspection late in July when the water was lower than normal; during high water conditions would be even worse. Thus the occupants of the cottages in question are forced to walk along the tracks, which is a dangerous and forbidden practice, or to wade through the submerged path. This condition exists through no fault of the respondent, and is not of itself a sufficient justification for establishing a flag stop. It happens, however, that the cottages are located approximately midway between the two stations, about where a stop will prob-

ably be needed in the future if the development of this section continues. Moreover, there appears to be no serious operating objection to the establishment of a flag stop at this point. The existing schedule time from Neenah to Appleton is ample, and the additional stop would not seriously inconvenience the traveling public. The cars now stop at other points where only two or three families are served, and to make the stop prayed for would not be inconsistent with the company's practice. Under such circumstances it seems unreasonable to deny the interurban service to the petitioners at a point near these cottages.

IT IS THEREFORE ORDERED, That the respondent, the Wisconsin Traction, Light, Heat and Power Company, stop its interurban cars to receive and discharge passengers at a point approximately 1,700 feet west of Waverly Beach station.

IN RE PROPOSED EXTENSION OF THE CORNELL TELEPHONE COMPANY IN THE TOWN OF HOLCOMBE, CHIPPEWA COUNTY, WISCONSIN.

Submitted July 27, 1914. Decided Aug. 7, 1914.

The Cornell Tel. Co. filed notice with the Commission of a proposed extension of its lines in the town of Holcombe, Chippewa county. It appeared that prior to July 11, 1913, the date on which ch. 610, laws of 1913, amending sec. 1797*m*—74 of the statutes, under which this proceeding arises, went into effect, the company was giving certain service in the village of Holcombe, and that prior to the hearing the extensions here involved were made under the misapprehension that the village was incorporated. It did not appear that the demand, which the new service satisfied, could not have been met by the Chippewa County Tel. Co., whose lines the extensions in question paralleled.

Respondent is ordered to permanently discontinue all local service given from such of its lines as were constructed in the town of Holcombe since July 11, 1913.

On July 8, 1914, the Cornell Telephone Company gave notice to this Commission of a proposed extension of its lines in the town of Holcombe, Chippewa county. Notice was served as provided by law upon the other companies operating in that town, namely, the Chippewa County Telephone Company of Chippewa Falls, the Cadott Telephone Company of Cadott, the N. H. Deuel Telephone Company of Arnold, and the Rusk County Telephone Company of Ladysmith. Objection to the extension was made by the Chippewa County Telephone Company and the N. H. Deuel Telephone Company.

A hearing was held at Chippewa Falls July 27, 1914, to ascertain whether or not public convenience and necessity would be best subserved by allowing the extension to be made. The appearances were: For the Cornell Telephone Company, *P. J. Skolsky* and *J. F. Krizek;* for the Chippewa County Telephone Company, *T. J. Connor;* for the Cadott Telephone Company, *Ole Jensen;* for the N. H. Deuel Telephone Company, *N. H. Deuel.*

It developed at the hearing that the extensions had already been made under the misapprehension that the service given

was in an incorporated village, and upon the discovery being made that the village was not incorporated, service to the three subscribers who had been connected was discontinued to permit the Cornell Telephone Company to comply with the requirements of the law. The company was giving service to a few subscribers in the village prior to July 11, 1913, the date on which ch. 610, laws of 1913, amending sec. 1797*m*—74 of the statutes, went into effect. The terminus of the line at that time was at the corner of Main and Irvine streets. Subsequently the company built the extensions under consideration, one, requiring the setting of three poles, running easterly toward the depot along Irvine street, and the other, requiring the setting of ten poles, running northerly along Main street. Both of these extensions paralleled existing lines of the Chippewa County Telephone Company. It may be said in passing that the Irvine street extension was made primarily to carry the toll line of the company, the toll station having been changed from the Holcombe Hotel on Main street to the Folby Hotel on Irvine street. That the poles were set for toll purposes, however, would not make permissible the giving of local telephone service from wires attached thereto, unless the requirements of the law relating to local extensions were complied with first.

The village of Holcombe is a small community of perhaps three or four hundred inhabitants, having stores, hotels and other business enterprises. It can readily be understood that one not residing in the community and unfamiliar with the village affairs, should assume that the place was incorporated. The manager of the Cornell Telephone Company, it appears, is also manager of the Wisconsin Telephone Company exchange at Chippewa Falls. The fact that he was not thoroughly acquainted with the legal status of the community and that he did make some inquiry to ascertain whether or not the place was incorporated, goes only to show that the violation of the law was not wilful and to that extent pardonable. It does not, however, remove the responsibility resting upon the Commission to ascertain whether or not the circumstances are such as would have necessitated a finding adverse to the construction of the lines had the proper legal steps been taken in the first place, and if it is found that they are, to require the removal of the lines constructed. We are forced to conclude that the facts in this

case show that public convenience and necessity do not require the extensions made by the Cornell Telephone Company.

The evidence shows that the Chippewa County Telephone Company had lines in operation along both of the highways upon which these extensions were made. It shows that the Holcombe Mercantile Company, to reach which the longer of the two extensions were installed, was already a subscriber of the Chippewa County Telephone Company. It does not show that there was any public demand for service that the latter company could not have met. Such demand for additional service in Chippewa Falls, as the evidence shows to have existed in Holcombe, could have readily been met by physical connection between the two companies.

IT IS THEREFORE ORDERED, That all local service given from such lines of the Cornell Telephone Company as were constructed in the town of Holcombe since July 11, 1913, be permanently discontinued.

GRAY & ZENTNER

vs.

AMERICAN EXPRESS COMPANY.

Decided Aug. 11, 1914.

Complaint was made that the rate of 75 cts. per 100 lb. on laundry moving between Manitowoc and Green Bay was excessive. The rate in question went into effect Feb. 1, 1914, with the interstate commerce commission's block and sub-block plan of rates, and respondent contended that the complaint could not be satisfied without abandoning that arrangement. It appeared that formerly, under the old point to point tariff, the rate was 15 cts. lower than the present rate, and that Green Bay is nearer to Manitowoc than any other point in its sub-block. Under the Commission's first order with reference to express rates (1913, 12 W. R. C. R. 1, later withdrawn in order to make intrastate rates conform with interstate rates as regards the method of naming rates) the rate between Manitowoc and Green Bay would have been fixed, under scale No. 2, at 60 cts., a rate which would have furnished reasonable compensation. In the present case the rate of 75 cts., based on the interstate commerce commission plan, is the result of one of the defects of that plan, which considers only the sum of sub-blocks east and west and north and south, and fails to take into account short distances on the diagonals, so that in the instant case Green Bay falls just outside the belt of 60 ct. rates, although other stations further from Manitowoc fall within it. While the interstate commerce commission plan contemplates in a general way a 60 ct. belt of rates extending out about 50 miles, the shortest railroad mileage between Green Bay and Manitowoc is only 37 miles, and examination of the situation shows that for practical purposes the express business in the two sub-blocks can be considered as centered at these two main points. As regards the objection to changing the rate in question, because it is based on the interstate commerce commission plan, the fact is noted that in some instances the intrastate block and sub-block rates submitted by the express companies to the Wisconsin Commission, after the change made necessary by that plan, differ materially from the rates which the interstate commerce commission would itself have named, had it had jurisdiction.

Held: The rate of 75 cts. is high for the short distance involved. If defects encountered in the interstate commerce commission plan of rates are due only to a rigid adherence to the method of computation, the defects should be remedied. If the express companies, without jeopardy to that plan, can put in a rate higher than the interstate commerce commission would name, it cannot be maintained that the entire scheme would fall to pieces if a lower rate should be authorized than one which that body would name. The respondent is ordered to discontinue its

charges under Scale No. 5 for the transportation of express matter between block 537, sub-block H, and block 538, sub-block O, and substitute therefor the charges under Scale No. 2.

The petitioners are engaged in the hotel business at Manitowoc, Wis., and in connection with that business ship laundry by express between Manitowoc and Green Bay. They allege that the rate of 75 cts. per 100 lb., under which they ship, is unreasonable and excessive and recite in comparison the lower rates between Manitowoc and Sheboygan and Menasha.

No appearances were entered for the petitioners at the hearing set. The express company introduced no oral testimony, but submitted, through its division superintendent, a letter from the assistant traffic manager of the company, E. E. Bush, and a copy of the testimony of W. A. Ryan of the interstate commerce commission before the Tenneessee railroad commission. Mr. Bush's letter stated that the rate in question had been published strictly in accordance with the sub-block system as promulgated by the interstate commerce commission; that the system had been of great advantage to the shippers of Wisconsin and the country as a whole, as well as to the express companies, in the simplification of tariff statements. He admitted that the case in question showed one of the defects in the system, but it was a defect inherent to any block system of stating rates, and that shippers at Manitowoc and the other points named in the complaint all derive undoubted benefits and advantages from the scheme as a whole. The writer expressed the opinion that the complaint could not be satisfied without abandoning the entire scheme of block and sub-block arrangements.

Mr. Ryan's testimony gave a general review of the interstate commerce commission's investigation of express rates, stated the methods used in determining rates and emphasized the necessity of uniformity in state and interstate rates in order to give the rate scheme a fair test. He admitted that inconsistencies in rates arise under the block and sub-block scheme, but not as many as existed under the old rates. The purpose of the division of the country into blocks and sub-blocks was to reduce the number of rates and thereby simplify them so that shippers could ascertain for themselves what the rates were.

The complaints, while requesting a reduction in the rates on laundry between Green Bay and Manitowoc, do not indicate in their complaint whether they consider the first class rate under

which laundry is shipped between the two points as too high in itself, or whether they consider only the rate on laundry as too high and desire to have the classification of laundry changed so that the charges on it will be less, although the first class rate remains the same. Inasmuch as the complaint, however, contains no reference to classification and compares rates from Manitowoc to Green Bay with rates from Manitowoc to Menasha and Sheboygan, it is assumed that the general level of rates is in question.

The present rate of 75 cts. between Manitowoc and Green Bay went into effect February 1, 1914, with the adoption of the interstate commerce commission's block and sub-block plan of rates. The main features of this plan are scales of charges under which the charges on shipments of light weight are proportionately very much lower to the charges on shipments of 100 lb. than they were under the "graduates" formerly in effect; and the division of the country into sections of territory called blocks and sub-blocks and the naming of rates between those sections instead of between each and every individual point in those sections. To make complete rate schedules the interstate commerce commission had to add to these essential features some scheme of determining what scale of charges should apply between the various blocks and sub-blocks. For long distances rates are named between the larger sections of territories called blocks, each designated by a number. The blocks have too great an area to be used for the shorter distances, so each block is divided into sixteen parts called sub-blocks, each designated by a letter. Under this arrangement the rates between Manitowoc and Green Bay are named as the rates between block 538—sub-block O; and block 537—sub-block H.

Formerly the 100 lb. rate between Manitowoc and Green Bay was 60 cts, or 15 cts. lower than the present rate, but as named in the tariff the rate applied only between these two points. Under the present scheme, the rate between Manitowoc and Green Bay is also the rate between Manitowoc and Pulaski, Sobieski, Big Suamico, Little Suamico and Tremble, the last named points lying with Green Bay in block 537, sub-block H. It is also the rate between Francis Creek and Two Rivers to all the points in block 537, sub-block H. Under the old point-to-point tariff only the situation of Green Bay and Manitowoc had to be considered, but under the new plan the distances between all

the other points must be considered. Green Bay is the nearest to Manitowoc of any of the points in block 537, sub-block H, so that what was formerly a reasonable rate to Green Bay, that point alone considered, would not necessarily be a reasonable rate to Green Bay considered with the other points in the same sub-block. Another consideration tending to justify a higher rate on 100 lb. is found in the other essential feature of the interstate commerce commission plan; namely, that under the new scales the charges on packages of less than 100 lb. are considerably less in proportion to the charges on 100 lb. than under the old "graduates." The bulk of the express business is made up of small shipments, so that a higher 100 lb. basing rate is necessary in order to produce the same amount of revenue from the same traffic. It should be mentioned, however, that small laundry shipments do not participate in the reduction made by the change from the "graduates" to the scales, but this is due to the fact that laundry charges were, and still are, based more directly on the 100 lb. rate than are the charges on ordinary shipments, a method of computation which results in lower charges on laundry than on other business.

This Commission has adopted for intrastate express rates the two essential features of the interstate commerce commission plan, namely, the new scales and the method of naming rates between sections of territory instead of from point to point. As pointed out above, both of these features contain elements tending to justify a higher rate now than before on 100 lb. shipments between Manitowoc and Green Bay, but this does not involve the reasonableness of the general level of either the present or the former rates. It remains, therefore, to determine whether the rates now in effect between block 537, sub-block H, and block 538, sub-block O, are excessive. As recited by Mr. Bush in the letter referred to above, the interstate commerce commission adopted certain methods of computing rates which, applied to the situation in question, gave the scale 5, or 75 cts. per 100 lb. rate now in effect. The interstate commerce commission had to deal with an enormous number of rates covering the interstate business of the entire country. Some refinements of method had in consequence to be sacrificed to the necessity for a plan which would not involve too much labor for each individual rate. Mr. Bush goes as far toward admitting that the rate in question is not entirely reasonable as stating "This particular case points out one of the defects in the system." But he gives

the opinion that the rate cannot be changed without abandoning the entire scheme of block and sub-block rates. Apparently he considers the interstate commerce commission method of computing the rates absolutely essential to the entire scheme. The block and sub-block rates at present in effect on intrastate business in Wisconsin were prepared by the express companies and submitted to this Commission for approval, which was given, subject to certain changes later made. In the course of examination of the rates submitted, the interstate commerce commission was requested to furnish a statement of what rates they would name under their system of computing rates between certain sub-blocks. In some instances the rates named by the interstate commerce commission differed materially from the rates quoted by the express companies. Several of these instances had previously been called to the attention of the express companies but they had insisted their computation of the rates was correct, so that the differences could hardly be explained as due to errors in computation. It would seem, then, that the express companies did not consider that deviations from the rates which the interstate commerce commission would have named had it had jurisdiction (although that body was originator of the plan), would entail the collapse of the entire arrangement of block and sub-block rates, especially if the differences were in their favor. That the interstate commerce commission method of computing rates would give the rate now in effect from Manitowoc and Green Bay, is entirely true, but it does not follow that it is the proper rate. Every one conversant with the interstate commerce commission plan of rates admits there are defects in the system. If the defects encountered are due only to a rigid adherence to the method of computation of rates, the defects should be remedied, for if the express companies can put in a rate higher than the interstate commerce commission would name, it certainly cannot be maintained that the entire scheme will fall to pieces if a rate is authorized which is lower than that body would name.

The shortest railroad mileage between Manitowoc and Green Bay is 37 miles, but the rate in question applies to the other points lying in the same sub-block as well, so that they must be considered. Examination of the situation, however, shows that such a large portion of the express business in the two sub-blocks is at these two main points that for practical purposes the business between the two sub-blocks can be considered as centered at

Green Bay and Manitowoc. Seventy-five cents is a high rate for the short distance between them. In a general way the 60 ct. belt of rates under the interstate commerce commission plan was supposed to extend out about 50 miles from the center under consideration. The placing of the rate here at 75 cts. is the result of one of the defects of the plan of the interstate commerce commission, in that it considers only distances or rather number of sub-blocks east and west and north and south, or the sum of these, and fails to take into account shorter distances on the diagonals, northwest and northeast, southwest and southeast. The shortest railroad distance from Manitowoc to Green Bay lies along one of these diagonals. As a result Green Bay falls just outside the belt of 60 ct. rates, although other stations further from Manitowoc—for example, Menasha—fall within it. Under this Commission's first order with reference to express rates (later withdrawn in order to make intrastate rates conform with interstate rates as regards the method of naming rates) the rates between Manitowoc and Green Bay would have been made by Scale No. 2, a rate of 60 cts, per 100 lb. It is not necessary to go into all the details of the manner in which this rate was computed; suffice it to say that the rate was adequate to cover all the expenses of conducting the business and leave, in addition, an amount necessary to provide a fair rate of return on the investment. In checking the rates submitted by the express companies, a modification of the interstate commerce commission method of computing rates was used, in that distances contemplated by the block and sub-block plan of rates were converted to the railroad mileage equivalents. This method gave rates between sub-blocks considerably higher in some instances and in general a trifle bit higher than did the count of sub-blocks method, but the rate between block 537, sub-block H, and block 538, sub-block O, under this method of computation would have been only 60 cts. for 100 lb. shipments. This method is considered by this Commission to be superior to the interstate commerce commission count of sub-block method, in that it permits an adjustment of rates more nearly in accordance with cost and more finely balanced as between sections of territory.

IT IS THEREFORE ORDERED, That the American Express Company discontinue its charges under Scale No. 5 for the transportation of express matter between block 537, sub-block H, and block 538, sub-block O, and substitute therefor the charges under Scale No. 2.

JOHN SCHROEDER LUMBER COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY, CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Aug. 12, 1914.

Complaint was made of excess charges on a carload of lumber shipped from Ashland to Berlin, Wis., and refund asked. The shipment was made on the assumption that the rate over respondents' lines was the same as that over the lines of the M. St. P. & S. S. M. Ry. Co. and the C. M. & St. P. Ry. Co., which is a rate of 12 cts. between the points in question. The establishment of joint rates on lumber was ordered in *Wis. Retail Lbr. Dealers Ass'n v. C. & N. W. R. Co. et al.* 1909, 3 W. R. C. R. 471 and 589. The petitioner's charge in the present case was based on the sum of the local rates. The fact that a joint rate was not in effect was due to the belief that no shipments of lumber were likely to move between the points in question.

Held: The rate exacted of petitioner was unusual. A reasonable rate would have been 12 cts. per cwt. Refund ordered on that basis.

The petitioner alleges that on September 23, 1913, he shipped over respondent's lines one carload of lumber from Ashland, Wis., to Berlin, Wis., consigned to Louis Stetter, which was sold to the consignee on the assumption that the rate over respondents' lines was the same as the rate over the lines of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and the Chicago, Milwaukee & St. Paul Railway Company; that upon arrival of car at destination, the respondent Chicago & North Western Railway Company assessed a rate of 14 cts. per cwt., which was the rate of 10 cts. from Ashland to Ripon and 4 cts. from the latter point to Berlin; that the rate in effect over the lines of the Minneapolis, St. Paul & Sault Ste. Marie Railway and the Chicago, Milwaukee & St. Paul Railway between Ashland and Berlin is 12 cts. per cwt.; that the weight of said shipment was 50,600 lb.; wherefore the petitioner prays that the respondents be authorized and directed to refund to it the sum of $10.12.

The respondent railway companies filed separate answers; the material allegations in each answer deny that the charge exacted upon the aforesaid shipments was either unusual or excessive.

The claim was submitted upon the pleadings, papers and documents on file.

In *Wis. Retail Lbr. Dealers Ass'n v. C. & N. W. R. Co. et al.* 1909, 3 W. R. C. R. 471, and 589, the Commission ordered the establishment of joint through rates on lumber between points on respondents' lines. In compliance with such order each of the lines interested published tariffs naming joint rates which it was assumed would meet all the requirements of traffic movements. These tariffs, however, as originally published, provided rates only between points where shipments were likely to move and failed to provide rates between many points, including Ashland to Berlin, where it was believed there would be no movements. Additional provisions have been made from time to time so that these tariffs, as at present in effect, seemed to provide rates that are in accordance with the order between nearly all points where lumber may be expected to move. By supplement effective April 15, 1914, a rate of 12 cts. from Ashland to Berlin was published at the request of the Commission. This request was made at the instance of the petitioner. The fact that a joint rate was not effective between the points the shipment in question moved, was due, as indicated, to the belief that no shipments of lumber were likely to move between such points. Under the circumstances the petitioner is justly entitled to reparation.

We find and determine that the rate exacted of the petitioner on the aforesaid shipment is unusual, and that the reasonable rate that should have been in effect and applicable to such shipment is 12 cts. per cwt.

NOW, THEREFORE, IT IS ORDERED, That the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Railway Company be and the same are hereby authorized and directed to refund to the petitioner the sum of $10.12, being the difference between the sum exacted on the aforesaid shipment and the amount based upon the rate of 12 cts. per cwt.

INDEX-DIGEST

Every point taken by the Commission has been included in the INDEX-DIGEST, whether essential to the decision or not. Wherever feasible the exact language used by the Commission, both in the *dicta* and in the decisions, has been embodied in the digest, so that for practical purposes reference back to the decision will in most cases be unnecessary.

ABANDONMENT OF TRACK OR PORTION THEREOF.

Street railways, abandonment of track or portion thereof, *see* STREET RAILWAYS, 1-2.

ABSORPTION OF CHARGES.

Switching charges, on coal, *see* RATES-RAILWAY, 43.

ACCOUNTING.

COST ACCOUNTING—ELECTRIC UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses.

1. Expenses apportioned over output and capacity expenses. *Hood et al. v. Monroe El. Co.* 227, 235.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service.

2. Expenses apportioned over output and capacity expenses and a further apportionment made among the different classes of service. *Hood et al. v. Monroe El. Co.* 227, 235.

3. Expenses were apportioned to capacity and output and a further apportionment was made among the different departments of service. *In re Service and Rates Stevens Point Ltg. Co.* 350, 360, 365.

4. Expenses for the electric department were apportioned between capacity and output, and further apportioned between street lighting and commercial lighting. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant,* 485, 492.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among the different departments of the service—Capacity expenses.

5. In determining the unit cost for capacity expenses, in the instant case, the physical unit used is the active connected kilowatt. Although either the total connected load or the active connected load may be used in his connection, the latter is usually regarded as giving a truer division on the basis of use. The principle recognized by the active load

basis is that a consumer who has additional units in a room for convenience alone will not use his whole load in the same proportion as a consumer who has but a single unit. *In re Service and Rates Stevens Point Ltg. Co.* 350, 368.

Determination of unit costs—Apportionment of expenses over output, capacity, and consumer expenses—Further apportionment among the different departments of the service—Street Lighting.

6. Expenses apportioned between commercial service and street lighting. *City of Watertown v. Watertown G. & El. Co.* 604, 613.

Determination of unit costs—Apportionment of value of physical property among the different departments or branches of the service.

7. Value of property apportioned between commercial service and street lighting. *City of Watertown v. Watertown G. & El. Co.* 604, 609.

COST ACCOUNTING—JOINT UTILITIES.

Determination of unit costs—Apportionment of expenses among different plants (electric and water utilities).

8. Expenses were apportioned between the water and electric departments. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant,* 485, 489.

Determination of unit costs—Apportionment of value of physical property among the different plants (electric and water utilities).

9. The physical property was apportioned between the water and electric departments. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant,* 485, 489.

COST ACCOUNTING—TELEPHONE UTILITIES.

Determination of unit costs—Apportionment of value of lines involved among different exchanges.

10. An approximate valuation of the lines involved was made and apportioned among the Trego Tel. Co., the Earl Tel. Co. and the Spooner Tel. Co., the latter of which owns part of the equipment used; traffic conditions were determined as closely as possible and the annual cost of each company of the service in question was computed. *In re Appl. Trego Tel. Co.* 499, 502–503.

Determination of unit costs—Apportionment of value of physical property among the different departments of service.

11. The value of the physical property of the company was apportioned among the local, rural, toll and switching service. *In re Appl. Badger State Tel. & Teleg. Co.* 407, 412.

Determination of unit costs—Apportionment of value of physical property among different exchanges.

12. The value of the physical property of the company was apportioned between the Neillsville and Granton exchange. *In re Appl. Badger State Tel. & Teleg. Co.* 407, 413.

Determination of unit costs—Apportionment of value of physical property to show value of property used by foreign telephone utilities.

13. An apportionment of the value of physical property was made to show the value of the property used by other telephone companies. *Curtiss & Withee Tel. Co.* 419, 423–424.

COST ACCOUNTING—WATER UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses.

14. The expenses for Hurley were apportioned over output, capacity and consumer expenses. *Town of Vaughn v. Hurley W. Co.* 291, 300–303.

15. Expenses were apportioned between output, capacity and consumer expenses. *Dennett et al. v. City of Sheboygan*, 634, 642–654.

16. Expenses were apportioned among output, capacity and consumer expenses. *Hughes et al. v. Watertown Water Works*, 669, 674–689.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service.

17. Expenses were divided between public and private service and were later further apportioned over output, capacity and consumer expenses. *In re Invest. Ashland Water Co.* 1, 55.

18. The expenses for Hurley were apportioned over output, capacity and consumer expenses and a further apportionment was made as between fire and general service. *Town of Vaughn v. Hurley W. Co.* 291, 300–303.

19. Expenses for the water department were apportioned between general service and fire service and further apportioned among capacity, output, and consumer expenses. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant*, 485, 492.

20. Expenses were apportioned between output, capacity and consumer expenses, and a further apportionment was made as to fire and general service. *Dennett et al. v. City of Sheboygan*, 634, 643.

21. Expenses were apportioned among output, capacity and consumer expenses and a further apportionment was made as to general and fire service. *Hughes et al. v. Watertown Water Works*, 669, 674–689.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among different departments of the service—Interest, depreciation and taxes.

22. Depreciation, interest and taxes were apportioned upon the basis of the property among the different classes of service. *Hughes et al. v. Watertown Water Works*, 669, 676.

Determination of unit costs—Apportionment of the value of physical property among the different departments or branches of the service.

23. A reapportionment of the value of the property between public and private service shows that 45 per cent is fairly chargeable to the former and 55 per cent to the latter. *In re Invest. Ashland Water Co.* 1, 58.

24. In general, the fire service proportion of water works investments

in small communities such as Hurley is greater than the corresponding proportion in larger plants, and is usually more than half of the total porperty. The public, or fire hydrant, service proportion is determined upon a consideration of each part of the plant with respect to the relative capacities and costs of similar features in hypothetical separate plants for public and private service. In the instant case 53 per cent of the investment is considered chargeable to fire protection, and 47 per cent to the general service. *Town of Vaughn v. Hurley W. Co.* 291, 300.

25. A valuation was made of the physical property devoted to the service in Hurley, the property in joint use being apportioned between Hurley and Ironwood. The portion properly chargeable to Hurley was further apportioned between general and fire service. *Town of Vaughn v. Hurley W. Co.* 291, 297, 300.

26. It appears in this case that the fire service is responsible for 63 per cent and the domestic and industrial service 37 per cent of the total demand. *Hughes et al. v. Watertown Water Works*, 669, 674.

CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY.

For electric utilities—When granted.

1. The city of Sheboygan applies for a certificate of convenience and necessity to permit it to construct a municipal lighting plant, alleging that the lighting service furnished by the Sheboygan Ry. & El. Co. is inadequate. Since the application was filed the utility named has passed into the control of new owners who express a desire to at once install new equipment capable of furnishing adequate service to the city. The attitude of the Commission toward applications made for certificates of convenience and necessity to duplicate existing plants is well known. It rests upon the recognized fact that an existing plant can be made, under proper regulation, to give the public better service and at a lower cost than can competing plants. It requires no argument at this late day to prove that competing utilities in any municipality add to the service burdens of the public rather than lessen them. In the case under consideration there are reasons for not granting the application additional to the recognition of the general principle that two competing or noncompeting utility plants are more expensive to the public than one plant. *Held:* Under the circumstances it would be unjust to the city and unfair to the new owners of the utility to permit the city to construct a new lighing plant at this time. The application is dismissed. *City of Sheboygan v. Sheboygan Ry. & El. Co.* 215, 216.

For telephone utilities—When granted.

2. The fact that the existing telephone service is inadequate is not ordinarily sufficient to justify the issuance of a certificate of public convenience and necessity permitting a new company to enter territory already occupied and fully covered by existing companies, but recourse

should be had to the method provided by the Public Utilities Law for the correction of defects in service. *In re Appl. Sevastopol Farmers' Tel. Co.* 524, 527–528.

3. The construction, in the manner proposed by the applicants, of the line in question for telephone service, is required by public convenience and necessity. Where border territories are involved, it occasionally happens, as in the present case, that the public needs can only be satisfied by permitting a certain amount of overlapping. When such is the case, the convenience and necessity of the public itself in the matter of telephone service is the paramount consideration and the doctrine of protection for existing interests can not be carried to its full length. Ordinarily the appropriate remedy is a physical connection, the general policy of the law being usually against duplication of lines which will impair investments, and the action taken by the Commission in the present case is not to be looked upon as a precedent until a situation develops, which is similar in all respects to the present one. *In re Constr. of a Tel. line in Town of Addison, Wash. Co.* 766, 768–770.

CROSS-TOWN LINES.

Establishment of.

1. The operation of continuous through service from the Twenty-second ward to the center of the city, in the manner suggested by the petitioner, would not be in accord with the best interests of the city. The development of the city has now reached the point where it is impossible for every city line to be routed to the down-town district. The existing cross-town lines should be preserved as such, and the extensions of the system to meet the needs of new territory added to the city should be accomplished by the establishment of other cross-town lines, rather than by the creation of new lines operating through the center of the city over already congested routes. However, during the rush hours, when large numbers of patrons are moving from an outlying district to the center of the city, it is only reasonable that through cars should be operated for their convenience. In addition to the present through service down town over the 27th street line via State street during rush hours, respondent should operate through cars from the Twenty-second ward to the center of the city via North avenue. It is ordered that the respondent operate through cars from the north terminus of its 27th street line to the down-town district via State street, and from the west terminus of is North avenue line of the down-town district via 8th street, during morning and evening rush hours as fixed in the Commission's former order, *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 1913, 13 W. R. C. R. 178. The additional service ordered is to be in operation by September 1, 1914. *Twenty-Second Ward Advancmt. Ass'n. v. T. M. E. R. & L. Co.* 788, 792.

CROSSINGS.

DELAYS.

Free time allowance for delays, *see* DEMURRAGE RULES, 1.

DEMURRAGE CHARGES.

Reasonableness of demurrage charges for delays caused by infrequent mail service, or inclement weather, *see* RATES–RAILWAY, 3.
caused by failure of railroad company to properly fulfill its agreement to provide certain track facilities, *see* RATES–RAILWAY, 2; REPARATION, 34.

DEMURRAGE RULES.

Free time allowance for delays, *see also* RATES–RAILWAY, 2–3.

Free time allowance for delays.

1. There appears to be no provision in the demurrage rules of the respondent which would permit it to make any free time allowance for a delay of the kind involved in the instant case. It would seem advisable for the railway companies to amend the demurrage rules to make allowances for delays in unloading cars which are occasioned, as in the instant case, by the failure of the railway company to provide promised track facilities within the time agreed upon with shippers. *Greiling Bros. Co. v. C. M. & St. P. R. Co.* 449, 453.

DEPOTS.

See STATION FACILITIES.

DEPRECIATION.

Apportionment of depreciation in the determination of unit costs for water utilities, *see* ACCOUNTING, 22.
As element considered in making rates for electric utilities, *see* RATES–ELECTRIC, 8.
for water utilities, *see* RATES–WATER, 10.
As element in the valuation of public utilities, *see* VALUATION, 10–12.

IN GENERAL.

Failure to make allowance for depreciation.

1. The failure of a utility to make allowance for depreciation if the earnings have been sufficient is tantamount to a withdrawal of capital from the business and the cost of reproduction new must be diminished in determining the fair value upon which the reasonable return allowed is to be based when an adequate reserve for depreciation has not been provided. The utility is, however, entitled to earn an amount sufficient to offset future depreciation. In the instant case 4 per cent on the cost new is allowed as an operating expense to cover depreciation. *In re Service and Rates Stevens Point Ltg. Co.* 350, 364.

DEPRECIATION RESERVE.

Establishment of reserve.

2. The practicability of obtaining interest at an average rate of as much as 4 per cent on funds which are frequently drawn upon and added to is of sufficient doubt to lead to the assumption and use of a more conservative rate. The amounts set aside annually for depreciation must increase with the magnitude of the depreciable property, although perhaps not in exactly direct proportions. *In re Invest. Ashland Water Co.* 1, 46.

3. The matter of properly creating and maintaining a depreciation reserve requires a determination, as nearly as may be, of the rate of depreciation of the property as a whole or for each of its parts individually. This is nothing more or less than an attempt to properly anticipate the future requirements for renewals and replacements which become necessary through deterioration and decay due to climatic and soil conditions, wear and tear, accidents, etc., or through obsolescence and inadequacy. It can scarcely be contended that the predetermination of such future requirements can be made with mathematical accuracy. It must, however, be approximated as nearly as human judgment and a due consideration of the proportions of the total property included in long lived and short lived items will permit. *In re Invest. Ashland Water Co.* 1, 45, 46.

DEPRECIATION RESERVE CHARGES.

Necessity of reserve charge.

4. This utility, in common with nearly all others of its kind, has, until a very recent date, failed to maintain a depreciation reserve for the renewals and replacements which become necessary from time to time in any public utility. That such provision is necessary is now becoming generally recognized. Had such a reserve been kept by this utility from the beginning the annual reservations would, of course, have correspondingly reduced the amounts which were considered by the company as its net earnings, and would also have correspondingly increased such deficiencies as may have existed in net earnings below a fair and reasonable return on its investments. *In re Invest. Ashland Water Co.* 1, 45.

RATE OF DEPRECIATION.

Rate of depreciation of electric plant.

5. No evidence is presented as to the proper rate of depreciation. Computations of the average life of various groups of depreciable property of similar plants would indicate that allowances for what would be reasonably required every year to offset depreciation in determining the cost of service might be placed at about 1 per cent of the total cost of reproduction new in the water department, and at about 4.5 per cent of the total cost of reproduction new in the electric department. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant*, 485, 491.

6. A composite rate of depreciation for the street lighting portion of the plant has been computed by the Commission on straight line and sinking fund bases. In the straight method, it is assumed that the depreciation reserve fund would earn nothing during the period of accumulation, while in the sinking fund method used in these computations it is assumed that the fund would earn 2 per cent per year. The analysis takes into consideration for each item of equipment its cost new, life in years, and scrap value. The final results show that the amount that should be reserved for depreciation on the straight line basis is 4.35 per cent of the cost of reproducing the physical property

and, on a 2 per cent sinking fund basis, 3.66 per cent. *City of Watertown v. Watertown G. & El. Co.* 604, 616.

Rate of depreciation of water plant.

7. An annual depreciation charge equal to 0.7 per cent of the entire property appears to be reasonable in the instant case. *In re Invest. Ashland Water Co.* 1, 46.

8. On the basis of reasonable assumptions as to the normal life of each part, the fair annual depreciation charge of a water utility rarely exceeds one per cent, and usually is somewhat less when the amounts appropriated out of earnings are made to earn some reasonable rate of return, as is feasible and proper. In those cases where the larger proportions of the values are in very long lived structures, or those cases showing the greatest composite life of plant, the fair annual depreciation charges are as low as one-half of one per cent. In the instant case the requirements will be somewhat nearer the upper limit than the lower one. *Town of Vaughn v. Hurley W. Co.* 291, 299.

9. No evidence is presented as to the proper rate of depreciation. Computations of the average life of various groups of depreciable property of similar plants would indicate that allowances for what would be reasonably required every year to offset depreciation in determining the cost of service might be placed at about 1 per cent of the total cost of reproduction new in the water department, and at about 4.5 per cent of the total cost of reproduction new in the electric department. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant*, 485, 491.

DISCOUNTS.

Discounts on bonds as element in the valuation of public utilities, *see* VALUATION, 8–9.

Discounts on rates to insure prompt payment of bills for telephone service, *see* RATES–TELEPHONE, 13.

DISCRIMINATION.

AS BETWEEN CUSTOMERS.

Electric rates—Discrimination due to straight meter rates.

1. The company has been charging 13½ cts. per kw-hr. for all current sold for commercial lighting. Under such conditions the long hour user bears an unreasonable share of the capacity expenses. A flat meter rate schedule is therefore unjustly discriminatory in favor of short hour users, and in the schedule to be suggested, cognizance will be taken of the decreasing cost of service resultant from increasing daily use of a given connected load. *In re Service and Rates Stevens Point Ltg. Co.* 350, 369.

Electric rates—Discrimination due to unlimited use under maximum charge.

2. The commercial power schedule shows a possibility of unlimited use by power users at a certain maximum price per horse power which tends toward an unjust discrimination against small users. The company has recognized this fact in filing its application. A more scien-

tific rate will relieve this condition. *In re Service and Rates Stevens Point Ltg. Co.* 350, 357.

Electric rates—Necessity of reading meters regularly in order to avoid discrimination.

3. The consumption records submitted by the utility are not altogether clear but they seem to indicate that in some instances meter readings were not taken each month. There will, of course, be instances where it is impracticable to read a meter but it is important that readings be taken and bills delivered each month, wherever practicable, in order to avoid discrimination and to afford a means of detecting any defective meter or unusual condition of consumption. *In re Appl. Gilmanton Mill & El. Plant*, 152, 153.

Water rates—Different rates to customers on account of ownership of instrument or facility.

4. As the Public Utilities Law does not permit a difference in charges for like service between consumers who own their meters and those who do not, it has been necessary to include in our analysis the investment charges on the privately owned meters. The owners of those meters are legally and equitably entitled to a return of the capital charges so included, by the allowance of a meter rental which shall be deducted from the gross bill in each of such cases. The consumer's investment in a meter box or meter vault, if there be such, is not considered, as that is an expense which properly belongs to the consumer individually and not to the utility. While it is recognized that the cost of a given size or meter is not the same for all types, it is impracticable to take each separate case into account and allow for minor variations. *In re Invest. Ashland Water Co.* 1, 68.

Water rates—Minimum charge not based on size of meter.

5. The minimum charge cannot be fixed regardless of the size of meters or the consumers' demand, as that would ignore the fact that the size of the meter determines whether the investment is large or small. Discrimination results, if the minimum charge is made an average amount, against the consumers who use the small sizes. *Hughes et al. v. Watertown Water Works*, 669, 680.

Water rates—Preferential rates.

6. Under the provisions of the law no utility should make or give any undue preference or advantage to any particular consumer as has been done in the instant case or subject any consumer to any disadvantage in any respect, by means of a less rate than that named in the published schedule (sec. 1797*m*—33). *Hughes et al. v. Watertown Water Works*, 669, 681.

AS BETWEEN LOCALITIES.

Train service—Stopping of trains.

7. The fact that certain trains stop at stations of equal or less importance than a station at which they do not stop may be regarded as a discrimination, but if the latter already has reasonably adequate service and the stopping of trains at the former is done solely because of the company's reluctance to discontinue service to which its patrons have become accustomed from long usage, the practice will not be regarded as unjustly discriminatory. *Anderton et al. v. M. St. P. & S. S. M. R. Co.* 247, 248–250.

AS BETWEEN PATRONS.

Discrimination due to service arrangement for convenience of one class of patrons.

8. The petitioner alleges that the street railway service rendered by the respondent at La Crosse is inadequate and discriminatory in that it is arranged for the convenience of one class of patrons without regard to the necessities of laboring men and asks that the respondent be required to operate its cars on La Crosse street as far east as 25th street on a ten-minute schedule from 6 a. m. to 11 p. m. The respondent now operates cars on its Oak Hill-Cemetery line regularly to 18th street and during the period from May to October furnishes additional service to the golf links beyond 25th street on a schedule arranged with reference to the convenience of the patrons of the golf links, the service beginning about 9 a. m. and ending about 7 p. m. *Held:* 1. The respondent by constructing and operating its line as far east as 25th street has accepted the permissive franchise and thereby undertaken to supply street car service to that point. 2. It is the duty of the respondent to render adequate service to the full extent of its undertaking, even though such service is not remunerative, so long as the respondent assumes to operate under the permissive ordinance. The respondent is ordered to operate its cars on La Crosse street from 18th street to 25th street on the same schedule as that on which its cars are or may be operated on the remainder of its Oak Hill-Cemetery line. *Jones v. Wis. Ry. Lt. & P. Co.* 518, 523.

AS BETWEEN SHIPPERS.

Car service—Distribution of foreign cars.

9. Relative to the complaint that the petitioner was discriminated against in the distribution of cars and that it should be permitted to secure foreign cars directly from foreign companies, it may be said that permitting shippers to thus draw upon general railway equipment is not in accordance with good practice as sanctioned by legal authority. In times of car shortage the prorating of cars among shippers must include private cars as well as cars of foreign lines consigned directly to shippers. It is true that private car companies have more or less control over their equipment because of contractual relations with shippers, yet, when it comes to dealing with system cars and foreign cars the company on whose lines the freight originates should have control as far as possible of the distribution of these cars in order to prevent discrimination between shippers. Consequently, the practice of the Illinois Central Railroad Company in billing empty cars direct to shippers was discontinued, and all such cars could be made available only through the superintendent's office, which was charged with the duty of making proper distribution of cars at stations. *Colfax Produce Co. v. M. St. P. & S. S. M. R. Co.* 86, 90, 91.

Car service—Preference in furnishing cars.

10. The petitioner complains of the practice of the respondent in distributing cars to it in the month of September, 1913, for the shipment of potatoes at Colfax. The petitioner alleges (1) that the station at Colfax was not supplied with a sufficient number of cars to meet the requirements of shippers; (2) that the respondent wrongly discriminated against the petitioner in the distribution of cars; and (3) that the respondent failed to leave cars at the petitioner's warehouse a length of time sufficient for loading. The petitioner therefore prays that the respondent be required to pay to the petitioner such damages as the Commission upon investigation may determine are due the petitioner.

At the time in question there was a car shortage due to the heavy grain movement from the west. In prorating cars among shippers at a station in times of car shortage consideration must be given to the volume of business done by each shipper, the character of the commodities to be shipped, the necessity for the immediate movement of certain commodities, the climate and character of the weather, and perhaps other facts. There is no hard and fast rule by which the matter can be determined. All that the law requires is that the carrier act justly and fairly in distributing its cars. *Held:* The evidence does not sustain the petitioner's contention that the respondent in distributing its cars discriminated against Colfax as a station and against the petitioner as an individual shipper. The limitation in the length of time allowed the petitioner for loading cars at its warehouse appears, in view of the small station and limited sidetrack facilities at Colfax, to have been reasonable. The petition is dismissed. *Colfax Produce Co. v. M. St. P. & S. S. M. R. Co.* 86, 91.

Discrimination due to failure to protect an intermediate point.

11. In view of the situation disclosed upon the investigation, it is apparent that the rate exacted of the petitioner on the shipments in question was unjustly discriminatory. A rate in excess of that in effect from Bayfield to Ashland could not be justified. This is evidently conceded by the respondent. *Sprague Lbr. Co. v. C. St. P. M. & O. R. Co.* 289, 290.

Freight rates—Difference in rates not based on substantial differences in the service.

12. The petitioner alleges that the rates provided by the respondent's tariff of Jan. 1, 1914, for the transportation of logs are excessive and unjustly discriminatory against the petitioner. *Held:* Although the rates complained of are prima facie not unreasonable when the character of the service and the rates charged over other lines for a like service are considered, certain modifications in the tariff should be made to prevent the doing of injustice to the petitioner. *Wachsmuth Lbr. Co. v. Bayfield Transfer R. Co.* 253, 254, 260.

Refunds—Should be awarded to all concerned to avoid discrimination.

13. In the instant case it is impossible to determine what amount of the commodity would have moved in either form. Therefore, to award reparation upon the shipments in question would discriminate against shippers obliged to pay the regular rates during the period involved unless like reparation were also awarded to them upon demand. *Barker-Stewart Lbr. Co. et al. v. C. & N. W. R. Co.* 628, 631.

Switching rates—Green Bay.

14. The petitioners allege that the refusal of the respondent to absorb the switching charges of $2 per car on coal shipped by them to non-competitive points on the respondent's line from the tracks of the C. & N. W. Ry. Co. and the C. M. & St. P. Ry. Co. in Green Bay effects a discrimination against the petitioners by reason of the fact that competing shippers located on the respondent's tracks are not required to pay this charge. *Held:* The practice of the respondent in the present instance should be discontinued. *Barkhausen Coal & Dock Co. et al. v. G. B. & W. R. Co.* 172, 173, 174.

Switching rates—Milwaukee Terminal District.

15. In view of the provisions of sec. 1797—22.2 of the statutes the general state of industry in the Milwaukee Terminal District and other

facts brought out in the instant case, the reduction in rates asked for in behalf of shippers doing their own spotting and hauling cannot be granted for the reason that it would not operate alike upon all shippers. *In re C. M. & St. P. Switching Rates in Milwaukee*, 261, 282.

AS BETWEEN STATIONS.

Car service—Preference in furnishing cars and equipment.

16. A railway company may not discriminate against any particular station in the distribution of equipment, but must furnish each station its equitable proportion of the available equipment. No one station, however, has the right to command the entire resources of the company to the exclusion or prejudice of other stations. It is the extent of the business ordinarily done on a particular line or at a particular station which properly measures the carrier's obligation to furnish transportation. (*Ayres v. C. & N. W. R. Co.* 1888, 71 Wis. 372.) *Colfax Produce Co. v. M. St. P. & S. S. M. R. Co.* 86, 90.

AS BETWEEN SUBSCRIBERS.

Telephone rates—Different rates for stockholders and nonstockholders.

17. The law prohibits a utility from charging a different rate to stock holders than is charged to nonstockholders or renters. *In re Appl. Ettrick Tel. Co.* 405–406.

18. Unlawful to charge a lower rate to stockholders than is charged to nonstockholders. *In re Appl. Marquette & Adams County Tel. Co.* 750, 751.

Telephone rates—Discrimination due to granting rebates for repairs and ownership of equipment.

19. It appears that the proposed schedule provides a lower rate for rural subscribers owning their own telephones than for those who do not. Under the Public Utilities Law (1797*m*—90) all subscribers having the same class of service must be given the same rate. A reasonable rental, however, may be paid those subscribers owning their own equipment. The company is ordered to keep all equipment in repair and pay a rental of 15 cts. per month to all subscribers owning their telephones. *In re Appl. Mosinee Tel. Co.* 709, 710.

Telephone rates—Discrimination due to inadequate rates.

20. Two proceedings are involved in this case: (1) certain stockholders of the Eleva Farmers Tel. Co. complain that the rates charged by the company are inadequate and that stockholders are discriminated against in that they are required to pay the same rentals as other patrons and in addition contribute to cover the deficits from operation; and (2) the utility itself applies for authority to increase its rates. The value of the property, the revenues and the expenses were investigated. *Held:* The present rates are insufficient. The utility is authorized to put into effect on July 1, 1914, the schedule of rates applied for as modified by the Commission. *In re Appl. Elva Farmers' Tel. Co.* 586, 589.

Telephone rates—Discrimination due to number of calls.

21. It appears that the practice has been to make a charge of 10 cts. per call between the hours of 10 p. m. and 7 a. m. with the exception of certain subscribers, who make regular early morning calls to the depot, and who are exempted because the charges otherwise would be excessive. In order to avoid unjust discrimination it is ordered that all subscribers are to have the privilege of making early morning calls to the depot without extra charge. All other calls between the hours of 10

p. m. and 7 a. m. are to be 10 cts. per call. The respondent is authorized to discontinue its present schedule of rates and to substitute therefor the rates approved by the Commission. *In re Appl. Mosinee Tel. Co.* 709, 711, 712.

Telephone rates—Discrimination due to paying a toll charge.

22. The Ettrick Tel. Co. complains that it is unjustly discriminated against by reason of the fact that its subscribers are compelled to pay a toll charge of 15 cts. per message for service over the La Crosse Tel. Co's line between Galesville and La Crosse while the Western Wisconsin Tel. Co. is allowed to offer unlimited service over this line to its subscribers under a flat rate per year. The Western Wisconsin Tel. Co. and the La Crosse Tel. Co. appear to have an agreement by which toll messages are exchanged between the lines of the two companies and each company retains the tolls for messages originating on its own lines. The flat rate mentioned, $25 per year, covers unlimited service over the entire system of the Western Wisconsin Tel. Co. and free connection to La Crosse and to Winona, Minn. Subscribers of the Western Wisconsin Tel. Co. who pay rates of $12.50 and $15 per year, according to the class of service received by them, pay the same rates for toll service to and from La Crosse as do subscribers of the Ettrick Tel. Co. The two methods of satisfying the complaint are considered: (1) the extension of the $25 flat rate to subscribers of the Ettrick Tel. Co.; and (2) the discontinuance of the rate. It appears that the volume of the toll business passing between the Ettrick Tel. Co. and the La Crosse Tel. Co. is very small, that the offering of unrestricted service over the La Crosse Tel. Co.'s line between La Crosse and Galesville to subscribers of the Ettrick Tel. Co. under a $25 rate would lead to little use of the rate and that the discontinuance by the Western Wisconsin Tel. Co. of the $25 rate would be of no benefit to the Ettrick Tel. Co. *Held:* The rates complained of are not unjustly discriminatory and the Ettrick Tel. Co. is not burdened unjustly because of their existence. The complaint is dismissed. *Ettrick Tel. Co. v. Western Wisconsin Tel. Co. et al.* 180, 185.

See ACCOUNTING.

OPERATION.

Management—Financial transactions.

1. The utility secures its power from the Stevens Point Power Co., but inasmuch as the utility is the sole customer of the power company and the two companies have identical personnels of owners and executives, it appears, that the companies are but nominally separate entities. *In re Service and Rates Stevens Point Ltg. Co.* 350, 352.

Operating records.

2. The keeping of a daily station-log sheet is of primary importance. Such a sheet should furnish a daily record of output for different classes of service and should also indicate the demands made upon the plant at frequent intervals. These data are essential if the utility professes to return a complete and adequate annual report to the Commission. *In re Service and Rates Stevens Point Ltg. Co.* 350, 355.

Physical data.

3. The Commission demands that certain physical data be submitted in the annual report of the utility. These data are required not only for computation of unit costs, publication of which is prescribed by law, but also for rate investigation purposes when the occasion arises. As a basis for unit costs of service the physical data are highly important, for only through such units can a comparison of all utilities be obtained. In a rate investigation, the accuracy of expense apportionments depends largely on the correctness of physical data on hand. *In re Service and Rates Stevens Point Ltg. Co.* 350, 360.

Requirements as to service and facilities—Adequacy of service

4. The city of Sheboygan applies for a certificate of convenience and necessity to permit it to construct a municipal lighting plant, alleging that the lighting service furnished by the Sheboygan Ry. & El. Co. is inadequate. Since the application was filed the utility named has passed into the control of new owners who express a desire to at once install new equipment capable of furnishing adequate service to the city. *Held:* Under the circumstances it would be unjust to the city and unfair to the new owners of the utility to permit the city to construct a new lighting plant at this time. The application is dismissed. *City of Sheboygan v. Sheboygan Ry. & El. Co.* 215, 216.

5. The activities of an electric plant may be said to be two-fold. In addition to the ordinary function it performs in rendering actual service, each electric plant must stand ready to supply, in theory at least,

an amount equal to the total connected load. In practice, however, the actual demand made upon the plant will not be as high as the connected load, due to the diversity of use made of the current supplied. The highest actual demand to which this so-called activity is subjected is known as the maximum demand or peak load. The distinction between the two activities is expressed by the load factor, or percentage of actual generation to the maximum possible generation under continuous operation at the maximum demand figure. *In re Service and Rates Stevens Point Ltg. Co.* 350, 365.

6. In towns where there are a multitude of larger consumers having a wide diversity of use, a utility need not keep its capacity near the sum of the different connected loads on the system. A smaller plant, similar to that at Stevens Point, must, however, be constantly ready to serve the two or three larger consumers at the same time. This necessitates that the plant capacity must more nearly approach the total connected load than the capacity of a plant whose consumers have a greater diversity of use. *In re Service and Rates Stevens Point Ltg. Co.* 350, 374, 375.

7. With respect to the matter of service, it appears that the utility has at no time fully complied with the rules of the Commission concerning standards of service. The utility has failed specifically to comply with the rules prescribed in *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418, for the making of periodic tests of gas and electric meters and the keeping of records of such tests, the keeping of station records and the control of voltage variation in electric utilities. The utility has, however, largely removed the main causes of complaint, voltage variation and "line drop," by the rehabilitation of its distribuiton system. *Held:* Although the utility has improved conditions in its effort to comply with service regulations, its compliance with these regulations is still unsatisfactory with respect to the making of meter tests and the keeping of the records of these tests. The utility is ordered: (1) to conform within sixty days to the service rules which it has been violating and to all others set forth in *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418. *In re Service and Rates Stevens Point Ltg. Co.* 350, 378.

Requirements as to service and facilities—Adequacy of service—Use of electric flatirons prohibited under certain conditions.

8. The representative of the utility suggested a rule permitting users of flatirons to have service during the summer months for one forenoon of each week, and to forbid the use of flatirons in the forenoon during the winter. Although this may not be very convenient to the users of flatirons it appears to be almost necessary for the satisfactory operation of the plant. In a town of less than 300 inhabitants it is hardly to be expected that the same service will be available as can be secured in larger places. In furnishing all-night service the utility is doing more than is done in many larger places and a necessary restriction of the use of irons and of all-night lights will be approved. *In re Appl. Gilman Mill & El. Plant*, 152, 155.

Requirements as to service and facilities—Appliances for the measurement of product or services—Utility exempt from duty of supplying meters in particular cases.

9. The Gilmanton Mill and El. Plant applies (1) for authority to increase its rates by the adoption of such a schedule as the Commission may deem reasonable and just, and (2) to be relieved from the necessity of supplying meters free of cost to consumers, until such time as the financial condition of the utility will permit it to own and furnish me-

ters. The utility furnishes continuous service, except for a few hours each day when a storage battery used in connection with a hydraulic generator is being charged, and it appears that some of the flat rate consumers permit their lamps to remain turned on at all times. All consumers on a metered basis have furnished their own meters. Accurate records of the operating expense of the plant are not available. The representative of the utility expressed his willingness to discontinue the practice of requiring consumers to furnish meters and to acquire meters now in use as soon as the financial condition of the plant would warrant such action. This would require an investment of several hundred dollars and would have its effect upon the amount required by the utility to provide for interest and depreciation. In view of the fact that there is some question as to whether the revenues resulting from the present rate will be adequate to meet the needs of the plant, we believe it would not be advisable to require the utility to increase its investment by acquiring meters in use or by furnishing those to be installed in the future. The ultimate cost to the consumer will be about the same in either case, unless the ownership of meters makes it necessary for the plant to operate at a loss, but it appears that the interest of all parties concerned will be better served by requiring consumers to continue to supply their meters than by having the utility supply them and charge a necessarily higher rate for current. The utility may require all consumers using electric fans or other power devices to install meters at their own expense. *In re Gilmanton Mill & El. Plant*, 152, 154, 156.

GAS UTILITIES.

OPERATION.

Requirements as to service and facilities—Adequacy of service.

1. With respect to the matter of service, it appears that the utility has at no time fully complied with the rules of the Commission concerning standards of service. The utility has failed specifically to comply with the rules prescribed in *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418, for the making of periodic tests of gas and electric meters and the keeping of records of such tests, the keeping of station records and the control of voltage variation in electric utilities. The utility has, however, largely removed the main causes of complaint, voltage variation and "line drop," by the rehabilitation of its distribution system. *Held:* Although the utility has improved conditions in its effort to comply with service regulations, its compliance with these regulations is still unsatisfactory with respect to the making of meter tests and the keeping of the records of these tests. The utility is ordered: (1) to conform within sixty days to the service rules which it has been violating and to all others set forth *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418. *In re Service and Rates Stevens Point Ltg. Co.* 350, 378.

OPERATION.

Requirements as to service and facilities—Adequacy of service —Relocation of line.

See STREET RAILWAYS, 8.

Requirements as to service and facilities—Stopping of cars.

1. Complaint was made that the petitioners, owners of summer cottages near Lake Winnebago, between Waverly Beach and Brighton Beach, stations on respondent's interurban line, cannot conveniently reach those stations without trespassing upon respondent's right of way, which is forbidden, and the Commission was asked to require the respondent to stop its cars on signal at petitioner's cottages. It appeared that in order to reach the stations in question the petitioners were obliged to resort to the dangerous practice of walking along respondent's tracks, or follow a footpath which is almost impassable except during dry weather. The point at which the stop was requested is about 1,700 feet from Waverly Beach station, approximately midway between the two stations involved, and so located that a stop will probably be needed there in the future if the development of the section continues. It also appeared that there was no serious operating objection to the establishment of a flag stop at the point in question, and that stops were in fact being made at other points where only two or three families were involved. *Held:* To deny the service requested would be unreasonable under the circumstances of the present case. The respondent is ordered to stop its interurban cars to receive and discharge passengers at a point approximately 1,700 feet west of Waverly Beach station. *McKenney et al. v. Wisconsin Tr. L. H. & P. Co.* 811, 813.

LICENSE.

ISSUE BY COMMISSION OF LICENSE TO DEAL IN SECURITIES.

Issue of license in particular cases.

1. The Grieb & Greene Co. of Milwaukee apply for a license to deal in securities as provided in ch. 756, laws of 1913. F. W. Snook & Co. of Milwaukee enter protest against the granting of the application, alleging in effect that the applicant is not qualified to receive such a license. Although not required by law in a case of this kind, a hearing was held for the purpose of obtaining sworn testimony. *Held:* The testimony does not disclose any transactions between the applicant and its customers, or any other dealings of the applicant which would justify the Commission in refusing to grant it a dealer's license in accordance with the provisions of ch. 756, laws of 1913. A license will therefore be issued. *In re Appl. Grieb & Greene Co. for a Dealers' License*, 140, 143.

Public hearing—Statutory requirements as to holding of.

2. The Commission is not required by statute to hold a public hearing for the purpose of investigating the qualifications of an applicant for a

dealers' license, but in view of the nature of the protest and the allegations made in the instant case, it was deemed advisable in this particular case to hold such a hearing in order to obtain sworn testimony upon which to determine the merits of the application. *In re Appl. Grieb & Greene Co. for a Dealers' License*, 140, 141.

MINIMUM CARLOAD WEIGHTS.

See WEIGHTS.

MINIMUM CHARGES.

ELECTRIC UTILITIES.

Reasonableness of advance in electric rates in particular cases, minimum charges, *see* RATES–ELECTRIC, 23–24.

Determination of minimum charge.

1. The cost which is properly chargeable as a consumer expense is not the only item which should be considered in determining the minimum charge. The effect upon the business must also be taken into consideration, and in this case we believe that a $1 minimum charge would be inadvisable. It is evident, however, that some minimum charge should be put in, and we believe that a charge of 75 cts. per month will be a proper one. *In re Appl. McGowan W, Lt. & P, Co.* 325, 327.

Establishment of minimum charges in particular cases.

2. The McGowan W. Lt. & P. Co. applies for authority to put into effect a minimum monthly charge of $1 for electric service for which, up to the present, the utility has had no minimum charge. The utility is operating at a loss. *Held:* Although a minimum charge of $1 per month would not produce an excessive amount of revenue, such a charge is inadvisable because of its probable effect on the business of the utility. The utility is authorized to put into effect a minimum monthly charge of 75 cts. which is considered sufficient to insure the utility against actual losses arising from carrying the accounts of individual consumers. *In re Appl. McGowan W. Lt. & P. Co.* 325, 328.

3. The Milton W. Lt. & P. Co. applies for authority to put into effect a minimum charge of 75 cts. per month for electric current. At present the utility makes no minimum charge. Investigation of the revenues and expenses shows that the utility, which started operation March 1, 1912, is still operating under a deficit. *Held:* The application is a reasonable one. The applicant is therefore authorized to put into effect a minimum monthly charge of 75 cts. *In re Appl. Milton W. Lt. & P. Co.* 206, 207.

Purpose of minimum charge.

4. The total increase in revenue resulting from a 75 ct. minimum charge will not be large, but the minimum charge can hardly be expected to make up to any great extent the deficits from operation. It should, however, under normal conditions, meet the fixed consumer costs and provide for a payment for the average use of current falling within the minimum. A charge of 75 cts. per month will, we believe, accomplish these purposes, in the instant case. It will not add very much to the revenue of the utility, but it will insure the utility against actual losses in carrying the accounts of individual consumers. *In re Appl. McGowan W. Lt. & P. Co.* 325, 327, 328.

5. The justice of a minimum charge has been repeatedly upheld. In order that the company may be adequately recompensed for its readiness to serve certain large installations which at certain seasons may use very little current, a minimum bill based on the size of the active horse power connected has been deemed advisable in this case. In towns where there are a multitude of larger consumers having a wide diversity of use, a utility need not keep its capacity near the sum of the different connected loads on the system. A smaller plant, similar to that at Stevens Point, must, however, be constantly ready to serve the two or three larger consumers at the same time. This necessitates that the plant capacity must more nearly approach the total connected load than the capacity of a plant whose consumers have a greater diversity of use. Under these conditions the utility must be allowed to charge the consumer an amount conmmensurate with the size of the installation. *In re Service and Rates Stevens Point Ltg. Co.* 350, 369, 374–375.

Reasonableness of minimum charge.

6. The Milton W. Lt. & P. Co. applies for authority to put into effect a minimum charge of 75 cts. per month for electric current. At present the utility makes no minimum charge. Investigation of the revenues and expenses shows that the utility, which started operation March 1, 1912, is still operating under a deficit. In some cases the Commission has recommended the adoption of a minimum charge of less than 75 cts. but from a consideration of all the facts available in this case, we believe that the application for authority to put in a minimum charge of 75 cts. per month is a reasonable one. The data available do not show how many consumers would be affected by such a minimum, but it seems evident that the total increase in revenue will be rather small.

Held: The application is a reasonable one. The applicant is therefore authorized to put into effect a minimum monthly charge of 75 cts. *In re Appl. Milton W. Lt. & P. Co.* 206, 207.

7. As far as the total revenues of the utility are concerned, it is clear that a minimum charge of $1 per month will not produce an excessive amount of revenue. A minimum charge very much higher than $1 a month would in fact fail to make up the deficit. It appears to be impracticable to attempt to any considerable extent to increase the total revenues of the utility by means of a minimum charge. Consequently the question of the authorization of a minimum charge of $1 should be decided with reference to the reasonableness of that particular charge rather than with reference to the total revenues of the utility, although this latter is also an item to be considered. *In re Appl. McGowan W. Lt. & P. Co.* 325, 327.

8. The question of the authorization of a given minimum charge should be decided with reference to the reasonableness of that particular charge rather than with reference to the total revenues of the utility, although the latter should also be considered. *In re Appl. Browntown Mun. Lt. Plant*, 560, 564.

9. The reasonableness of a carefully adjusted minimum charge, to cover certain fixed expenses of furnishing service, has been fully explained in other decisions, and no repetition of the arguments is necessary. *In re Appl. Richland Center El. Lt. & W. Plant*, 590, 591.

WATER UTILITIES.

Reasonableness of advance in water rates in particular cases, minimum charges, *see* RATES–WATER, 22.

Determination of minimum charge.

10. As practically every consumer paying the minimum bill has used considerable water during the period and hence incurred some output expenses, the minimum bill to be charged must include an allowance for this consumption. If this is not done all water used would really be received free of charge. By computing taxes, depreciation and interest on the value of the meter, adding thereto proper maintenance charges and a fair allowance for water used, a minimum charge can be determined with considerable accuracy that will guarantee to the company its consumer expenses. The minimum charge, however, cannot be fixed regardless of the size of meters or the consumer's demand, as that would ignore the fact that the size of the meter determines whether the investment is large or small. Discrimination results, if the minimum charge is made an average amount, against the consumers who use the small sizes. *Hughes et al. v. Watertown Water Works*, 669, 680.

MINIMUM LOADING REQUIREMENT.

See WEIGHTS.

MINIMUM RATES.

See RATES; *also* MINIMUM CHARGES.

MINIMUM WEIGHTS.

See WEIGHTS.

MUNICIPAL OWNERSHIP.

Effect of.

1. If the city owned the water works it is possible that, by pledging all of its taxable property as well as its powers of taxation, the city could have obtained the capital required for the construction of the

water works at a somewhat lower rate of interest than the rate at which the capital for the present plant was obtained. It is also possible that the city in operating its own plant could keep down the executive salaries to a slightly lower figure than the salaries now paid by the existing company. When it comes to the remaining expenses that enter into the cost of the service, however, the situation in this respect is likely to be reversed. While municipal operation is more successful in the cost of water works than in the case of other public utilities, it is more than likely that the increase in the other operating expenses under such operation would fully offset the decrease in the fixed charges. These statements are especially true in cases where as much is demanded in the way of facilities and service of municipally owned as of privately owned plants. The tendency to demand more in the way of service in the latter case, however, is in most places quite marked, and this of course has a material effect upon the expenses. If the city, in obtaining capital for the plant, had pledged the property of the plant only, it is quite certain that it could not have obtained this capital at a lower cost than that for which the present owners obtained their capital. *In re Invest. Ashland Water Co.* 721, 736, 737.

MUNICIPALITIES.

Abandonment of any line of street railway, common council has exclusive jurisdiction to authorize, *see* STREET RAILWAYS, 1–2.

NAVIGABLE WATERS.

Jurisdiction of Commission over obstructions in navigable streams, *see* RAILROAD COMMISSION, 12.

REGULATION OF LEVEL AND FLOW OF WATER.

Obstructions in stream.

1. Complaint is made against the maintenance of certain piles, piers, walls and other obstructions constructed by private persons in and over the Rock river in the city of Janesville. The complainant alleges that these obstructions interfere with navigation; that they have seriously damaged the complainant; that they are a constant menace to the safety of the general public, to the property rights of the owners of property on the banks of the river in general and to those of the complainant in particular; and that their maintenance is in violation of sec. 1596 of the statutes; and asks that the Commission investigate the conditions set forth and report upon them to the governor as required by the section cited. The obstructions mentioned in the petition refer chiefly to buildings which stand within the river boundaries on piles and piers abutting the Milwaukee street bridge and the Court street bridge and the filling in for foundations on the west side of the stream in Janesville. A survey of the Rock river in Janesville was made and soundings were taken to ascertain the probable effects of the obstructions in question in case of floods. It is conceded that none of the structures of which complaint is made, with one exception, were placed or maintained in the river under legislative authority, but it is contended on the part of property owners that, notwithstanding this fact, these structures are not nuisances and that they therefore cannot be removed at the instance of the state or of any private citizen. *Finding:* 1. That Rock river in the city of Janesville is a navigable stream. (2) That the river is navigated by rowboats, motorboats, and other water craft. (3) That the piers and other structures delineated upon the map on file at the office of the Commission constitute obstructions to navigation and to the natural flow of the water in the stream and have a tendency to narrow the channel of the stream. (4) That in case of very high water, logs, lumber, wood and drift coming down the stream are likely to lodge

against such obstructions, preventing the free passage of the water through the natural channel and thereby causing injury and damage to property within the city of Janesville. The legality of the maintenance of the obstructions in question is not passed upon. *In re Obstructions in the Rock River at Janesville*, 190, 203.

2. The petitioner complains that a building constructed in 1910 by the Masonic Temple Association over and completely across the Beaver Dam river in the city of Beaver Dam obstructs the natural flow of water in the river and the free use of the river and in case of high water, obstructs and sets back the water in the river, to the great damage of the petitioner. The petitioner owns several lots of land located at the outlet of Beaver Dam Lake into the Beaver Dam river and a dam known as the Cotton Mill dam, which is constructed upon this property and used by the petitioner in developing water power. The building in question and certain other buildings are located in whole or in part over the Beaver Dam river between the petitioner's dam and another dam farther down stream, known as the Upper Woolen Mill dam. The construction of the latter dam some time prior to 1845 greatly increased the width of the stream through the overflowing of adjoining land, but the riparian owner, evidently assuming that the submerged land outside the banks of the original stream still belonged to him, in conveying his land to various purchasers granted the right to extend structures over the submerged land for a distance of 30 feet, although not to the banks of the original stream. Since then no regard has been given to the stream as a public thoroughfare. *Finding:* 1. The Beaver Dam creek or Beaver Dam river in the city of Beaver Dam between the Upper Woolen Mill dam and the Cotton Mill dam is a navigable stream. 2. The stream is navigated by small boats used for fishing and pleasure, and for the repairing of buildings which extend over the submerged land. 3. The buildings encroaching upon the stream as indicated upon the map contained in the record herein constitute obstruction to such navigation. The legality of the maintenance of the obstruction in question is not passed upon. *In re Petition Paramount P. & Realty Co.* 474, 480.

Definition of.

1. In the case *Winter v. La Crosse Tel Co. et al.* 1913, 11 W. R. C. R. 748, it was stated, in substance, that to justify the public obligation usually imposed by "public convenience and necessity" there must be

present some imperative public exigency. It is inevitable in such a situation as that at Janesville that the aggregate loss of time, inconvenience, and annoyance through the absence of such physical connection as is here requested must be great, and the conclusion is equally inevitable that a public exigency demands physical connection. *McGowan v. Rock County Tel. Co. et al.* 529, 537.

CONTROL AND REGULATION OF PUBLIC UTILITIES.

What are public utilities—Telephone company declared to be a public utility.

1. The contention of the West Kewaunee & Western Tel. Co. that it is not a public utility, for the reason that all its subscribers are stockholders, cannot be granted in view of the fact that the company uses the highways of the state for its pole and wire lines and the further fact that the company apparently holds itself out as giving a public telephone service as distinguished from a purely private service. *In re Proposed Extension of West Kewaunee & W. Tel. Co.* 219, 223.

SCOPE AND PURPOSE OF LAW.

With respect to duplication of telephone lines within the same territory.

2. Chapter 610 of the laws of 1913 extends to telephone companies the same kind of protection against unnecessary competition that had been given by the state to other public utilities. In other words, public convenience and necessity do not require the duplication of lines in the instant case. (*In re Alleged Violation of Chapter 610 of the Laws of 1913 by the Lisbon Tel. Co. 14 W. R. C. R. 131*). *In re Proposed Extension Wis. Tel. Co.* 396, 398–400.

PUMPING.

Electric rates for municipal pumping, *see* RATES–ELECTRIC, 32.

RAILROAD COMMISSION.

Authority of Commission in awarding reparation.

1. It is only when the Commission finds that the rate is unusual, exorbitant, illegal or erroneous that reparation may be awarded. The mere fact that a rate has been reduced by the Commission is not sufficient ground in itself for authorizing refunds. (*Menasha Wooden Ware Co. v. W. C. R. Co.* 1908, 2 W. R. C. R. 589; *Beaver Dam Lbr. Co. v. C. St. P. M. & O. R. Co.* 1908, 2 W. R. C. R. 700; *Merrill Wooden Ware Co. v. C. M. & St. P. R. Co.* 1908, 3 W. R. C. R. 54; *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 744.) *Peshtigo Lbr. Co. v. C. & N. W. R. Co.* 624, 626, 627.

Authority of Commission to order physical connection.

2. In the instant case the respondent alleges that the petitioner is without authority, right, or capacity to file or present the foregoing petition; that ch. 546 of the laws of 1911, pursuant to which the petition purports to be filed, is in violation of and in conflict with sec. 1 of article IV, sec. 2 of article VII, and secs. 5, 13 and 22 of article I of the constitution of the state of Wisconsin, and with sec. 10 of article I, of the constitution of the United States, and of sec. 1 of the fourteenth amendment to said constitution. The objections to the jurisdiction of the Commission based upon the alleged invalidity of the statute involved in these proceedings were also set up in the answer and disposed of in the case of *Winter v. La Crosse Tel. Co. et al.* 1913, 11 W. R. C. R. 748. *McGowan v. Rock County Tel. Co. et al.* 529, 531–533.

Duty of the Commission to determine mode and manner of a proposed crossing.

3. In the instant case petitioner contended that under sec. 1299*h*—1 of the statutes, the respondent is required to construct a suitable crossing within its right of way entirely at its own expense. *Held:* Sec. 1797—12*e*, subsequently enacted by the legislature, imposes upon the Commission the duty, upon petition, of determining the mode and manner of a proposed crossing in the interest of public safety, and of apportioning the cost of such crossing between the railway company and the municipality in interest. Necessarily, where the offices of the Commission are invoked in such a case, the provisions of the earlier statute become inactive as to the particular case. The action of the Commission in the present case is predicated upon sec. 1797—12*e* of the statutes. *Town of Elcho v. C. & N. W. R. Co.* 796, 800–801.

Duty of Commission to require physical connection.

4. Section 1797*m*—4 of the statutes imposes upon the Commission the power and duty of requiring physical connection, and it is therefore so ordered in the instant case. *Hawkins Creek Tel. Co. et al. v. Badger Tel. Co.* 655, 661–664.

Jurisdiction of Commission—Commission without authority over interstate shipments.

5. In considering the matters in issue, we have laid aside the question of the jurisdiction of this Commission because of the fact that the cars were required for interstate shipments, and have determined these matters on their merits. *Colfax Produce Co. v. M. St. P. & S. S. M. R. Co.* 86, 91.

Jurisdiction of Commission—Commission without authority to authorize the abandonment of street railway line.

6. No power is vested in the Commission to authorize the abandonment of any line of street railway, that matter being one over which the common council has exclusive jurisdiction. (*Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298). *Jones v. Wis. Ry. Lt. & P. Co.* 518, 522.

7. The Commission is without jurisdiction to grant the prayer of the petition, which is in substance that petitioner be authorized to abandon its existing tracks upon the completion of a new route for which it holds a franchise. (*Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298.) The abandonment of a line of street railway is a matter wholly within the jurisdiction of the common council. *In re Chippewa Val. R. L. & P. Co.* 713, 714.

Jurisdiction of Commission—Commission without jurisdiction to order extension of service.

8. As to the extension of service requested of the Wis. Tel. Co., the Commission is without jurisdiction. The Wis. Tel. Co. is not obligated to furnish service of a local character in the village. On the contrary, it could only make the extensions in question after filing notice with, and securing the approval of the Commisson under ch. 610, laws of 1913, and it would be contrary to the established policy of the legislature for the Commission to permit or require the extension of the Wis. Tel. Co's lines into Fall River for local service, even though such requirement were legally possible. *In re Invest. People's Tel. Co. et al. at Fall River*, 793, 795.

Jurisdiction of Commission—Commission without power to compel street railway company to make extensions or additions to line.

9. The Commission has no authority to order extensions of street railway lines. (*City of Merrill v. Merrill Ry. & Lt. Co.* 1910, 5 W. R. C. R. 418, 425). *City of Racine v. T. M. E. R. & L. Co.* 148, 149.

Jurisdiction of Commisison—Over interstate trains.

10. It would seem clearly within the decisions of the supreme court of the United States a burden upon interstate commerce and therefore beyond the jurisdiction of the Commission to compel interstate trains to stop at stations where the local service is already reasonably adequate and where the size of such stations does not warrant the stopping of such trains. *Adams et al. v. C. B. & Q. R. Co.* 506, 507.

11. The power of the Commission over interstate trains is limited. If a railway company furnishes reasonably adequate service to a com-

munity, it has performed its public obligation in that respect. Further service is a matter of discretion on the part of the company, and not a duty that can be imposed by public authority. (*Farmer v. D. S. S. & A. R. Co.* 1907, 1 W. R. C. R. 316; *Schmidt v. G. N. R. Co.* 1909, 4 W. R. C. R. 121; *Laun v. C. M. & St. P. R. Co.* 1910, 6 W. R. C. R. 5.) *Anderton et al. v. M. St. P. & S. S. M. R. Co.* 247, 249.

Jurisdiction of Commission—Over obstructions in navigable streams.

12. It will be observed that the statute (sec. 1596), speaks of the unlawful obstructions, but does not attempt to define what constitutes an unlawful obstruction. Consequently, in the absence of any judicial interpretation limiting and defining the term "unlawful obstruction," the administration of the statute is rendered difficult and uncertain. As a guide to the Commission, it is essential that some general criterion be established by which the unlawfulness of any structure in or over a navigable stream may be determined. If the illegality of every obstruction is to be determined upon its own set of facts and without any general precedent to guide property owners when encroaching on navigable streams, an interminable amount of litigation will arise and a correspondingly heavy burden will be placed upon the Commission in the investigations which it will be called upon to make of the innumerable obstructions in and over the navigable streams of the state. It is exceedingly important that a judicial determination of the rights of property owners involved in this proceeding be had without unnecessary delay. Other property owners similarly situated upon this stream at other points and owners of property abutting on the various navigable streams in the state are interested in the controversy here under consideration for their rights to the use of the streams are equally in doubt. Under the circumstances we do not deem it incumbent upon us to pass upon the legality of the maintenance of the obstructions here in question. We shall content ourselves with a brief finding of the facts based upon the testimony offered at the hearing and upon the results of the independent investigation made by the Commission. *In re Obstructions in the Rock River at Janesville*, 190, 202–203.

Jurisdiction of Commission—Over Public Utilities.

13. The instrument referred to by the respondent as its contract with the town of Vaughn is apparently nothing more or less than its franchise to build, own and operate a water utility in and for the unincorporated village of Hurley, and as a franchise it has been modified by legislative enactment and has become an indeterminate permit. The company has, without voluntary election so to do, become subject to the provisions of ch. 499 of the laws of 1907, known as the Public Utilities Law, and acts amendatory thereof and supplementary thereto. The fact that the company has not voluntary elected to come under the indeterminate permit provision of the Utilities Law is deemed to be of no material effect. *Town of Vaughn v. Hurley W. Co.* 291, 294.

Jurisdiction of Commission—Over railway crossings.

14. The legislature of 1913 (ch. 603, laws of 1913), empowered the Commission to order the closing of a grade crossing and the substitution of another therefore at grade, if found necessary in the interest of public safety. *In re Barron's Crossing in the Town of Almena*, 128, 129.

15. Authority was conferred upon the Commission by ch. 603, laws of 1913 (sec. 1797—12*f*), to order the relocation of highways. *In re C. M. & St. P. Crossings in Cross Plains*, 343, 344.

16. Sec. 1797—31 imposes upon the Commission the duty of enforcing the provisions of sections 1797—1 to 1797—38 inclusive, known as the

Railroad Commission Act, as well as all other laws relating to railroads, and to report all violations thereof to the attorney-general. *In re Crossing on C. & N. W. R. in Town of Gale*, 445, 447–448.

Jurisdiction of Commission—Over railway crossings not at grade.

17. The Commission has jurisdiction under sec. 1797—12*e* of the statutes to pass upon the safety of a crossing not at grade upon complaint by the proper municipal authorities. *City of Monroe v. C. M. & St. P. R. Co.* 176, 178.

Jurisdiction of Commission—Over restoration of a highway.

18. The respondent's contention that the Commission has no jurisdiction to enforce the provisions of sec. 1836 of the statutes was discussed in *In re Crossing on C. & N. W. R. in Town of Gale*, 1914, 14 W. R. C. R. 445, and the opinion there given is here followed. *Held:* 1. The crossings should be further protected by the addition of guard rails along the sides of the approaches. 2. The respondent should reduce the grade of approach at each of the crossings to a maximum of 4 per cent in order to fulfill the duty imposed by sec. 1836 of the statutes. The respondent is ordered to provide properly surfaced highway approaches not exceeding 4 per cent in grade at each of the crossings with suitable guard rails on each side of the highway embankments. Sixty days is considered a sufficient time within which to comply with this order. *Town of Menomonee v. C. & N. W. R. Co.* 549, 552.

Jurisdiction of Commission—Over location of a station.

19. The Commission is empowered in a proper case to fix the point of location of a depot. (*City of Rhinelander v. M. St. P. & S. S. M. R. Co.* 1912, 8 W. R. C. R. 719, 725). *Von Berg et al. v. C. M. & St. P. R. Co.* 553, 554.

Jurisdiction of Commission—Commission without authority to order telephone company to cease giving service.

20. The extension in question, so far as it reaches the Lisbon Plank Road and residences along the road, is not required by public convenience and necessity and is in existence in violation of law. Though the Commission apparently has no authority to order the Lisbon Tel. Co. to cease giving service to subscribers along the road named, the failure of the company to discontinue such service will render the company liable to prosecution. *In re Alleged Violation of Law by Lisbon Tel. Co.* 131, 135.

Jurisdiction of Commission—Over train service.

21. It is our understanding of sec. 1801 of the statutes that the quantity of service required thereby is a minimum which may or may not fully meet the requirements of adequacy. The Commission would not be justified in finding that fewer trains could furnish adequate service at a station within the classification, but certainly if the designated number of trains were stopped at extremely inconvenient hours, thereby rendering the service of little or no value to the residents of the locality, the Commission would have power to require a rearrangement of schedule or the operation of additional trains. *James Callen Jr., et al. v. C. M. & St. P. R. Co.* 581, 583–584.

Jurisdiction of Commission—Warehouse site.

22. This statute (sec. 1802*a*) empowers the Commission to require a railway company to lease a site on its right of way only when such site is to be used for the construction of a public elevator or warehouse. The petitioner testified that if granted the desired site, he proposes

to ship coal, cement, flour, bran and foodstuffs of all kinds into Mukwonago, store them temporarily, and sell to farmers and other customers. There is no evidence to show that the proposed warehouse would be used in any other way than as a private warehouse in connection with a private mercantile business. Under such circumstances it is obvious that the Commission is without jurisdiction in the matter. *Rust v. M. St. P. & S. S. M. R. Co.* 251, 252.

CONSTRUCTION, MAINTENANCE AND EQUIPMENT.

Crossings—Railroad by highway—Protection of—Jurisdiction of Commission.

1. The Commission has jurisdiction under section 1797—12*e* of the statutes to pass upon the safety of a crossing not at grade, upon com-

plaint by the proper municipal authorities. *City of Monroe v. C. M. & St. P. R. Co.* 176, 178.

2. Authority was conferred upon the Commission by Ch. 603, Laws of 1913 (sec. 1797—12*f*), to order the relocation of highways. *In re C. M. & St. P. R. Crossings in Cross Plains*, 343, 344.

3. Sec. 1797—31 imposes upon the Commission the duty of enforcing the provisions of sections 1797—1 to 1797—38 inclusive, known as the Railroad Commission Act, as well as all the other laws relating to railroads, and to report all violations thereof to the attorney-general. *In re Crossing on C. & N. W. R. in Town of Gale*, 447–448.

4. In the instant case the respondent's contention that the Commission has no jurisdiction to enforce the provisions of sec. 1836 of the statutes was discussed in *In re Crossing on C. & N. W. R. in Town of Gale*, 1914, 14 W. R. C. R. 445, and the opinion there given is here followed. *Held:* 1. The crossings should be further protected by the addition of guard rails along the sides of the approaches. 2. The respondent should reduce the grade of approach at each of the crossings to a maximum of 4 per cent in order to fulfil the duty imposed by sec. 1836 of the statutes. The respondent is ordered to provide properly surfaced highway approaches not exceeding 4 per cent in grade at each of the crossings with suitable guard rails on each side of the highway embankments. Sixty days is considered a sufficient time within which to comply with this order. *Town of Menomonee v. C. & N. W. R. Co.* 549, 552.

Crossings—Railroad by highway—Alteration of.

5. A separation of grades, involving a relatively large expense, is not warranted at the present time by traffic conditions. It would necessitate the relocation of the highway in question, and, when necessary, can be accomplished at a cost not materially greater than that which would now be incurred. A reasonably safe grade crossing is practicable. But for the sake of public safety, the present highway should be altered so as to cross the track at right angles. The Commission assumes that if the proceedings of the town board to lay out the highway over the point in question should be declared invalid, new proceedings will be instituted. *Town of Elcho v. C. & N. W. R. Co.* 796, 800–801.

Crossings—Railroad by highway—Apportionment of cost among parties.

See also post, 14, 17, 22, 23.

6. In the instant case the actual cost of the alterations is apportioned 20 per cent to the city of Monroe and 80 per cent to the railroad company. *City of Monroe v. C. M. & St. P. R. Co.* 176, 179.

7. In the instant case the actual cost of the alterations is apportioned 10 per cent to the town of Cross Plains and 90 per cent to the railway company. *In re C. M. & St. P. R. Crossings in Cross Plains*, 343, 348.

8. In the instant case the actual cost of changing said highway, and of the said subway, is apportioned 20 per cent to the town of Caledonia and 80 per cent to the railway company. *In re Crossing on C. & N. W. R. North of Racine*, 454, 456.

9. In the instant case the actual cost of the subway is apportioned 20 per cent to the city of Racine and 80 per cent to the railway company. *City of Racine v. C. & N. W. R. Co.* 783, 787.

10. Petitioner contended that under sec. 1299*h*—1 of the statutes, the respondent is required to construct a suitable crossing within its right of way entirely at its own expense. *Held:* Sec. 1797—12*e*, subsequently enacted by the legislature, imposes upon the Commission the duty, upon petition, of determining the mode and manner of a proposed crossing in the interest of public safety, and of apportioning the cost of such crossing between the railway company and the municipality in interest. Necessarily, where the offices of the Commission are invoked in

such a case, the provisions of the earlier statute become inactive as to the particular case. The action of the Commission in the present case is predicated upon sec. 1797—12*e* of the statutes. In the instant case the actual expense of constructing the crossing is apportioned 50 per cent to the town of Elcho and 50 per cent to the railway company. *Town of Elcho v. C. & N. W. R. Co.* 796, 801.

Crossings—Railroad by highway—Mode and manner of crossing—Determination of.
See post, 23.

Crossings—Railroad by highway—Protection of.

11. The Commission, on its own motion, investigated the necessity of protecting a highway crossing at the intersections of the Drummond road in the city of Eau Claire with the lines of the C. St. P. M. & O. Ry. Co. and the C. M. & St. P. Ry. Co. The fact that a question as to whether the Drummond road is a public highway is pending before the courts will not deter the Commission from requiring the installation of such safeguards as are necessary for the immediate protection of the traveling public. If the road is finally declared by the courts to be a public highway, however, it may become necessary to make certain alterations in the crossing for the full and permanent protection of the traveling public. *Held:* 1. The crossing of the Drummond road with the line of the C. M. & St. P. Ry. Co. is reasonably safe under the existing traffic conditions. 2. The crossing of the Drummond road with the line of the C. St. P. M. & O. Ry. Co. is dangerous. It is ordered that the C. St. P. M. & O. Ry. Co. maintain a flagman at the crossing on its line between the hours of 6:15 a. m. and 6:15 p. m. daily. *In re Drummond Road Crossing in Eau Claire*, 104, 107.

12. The respondent alleges that the removal of a warehouse near Clark st. in the village of Spencer and the making of other improvements render unnecessary the crossing protection required in the order issued in this matter on Sept. 9, 1913 (12 W. R. C. R. 525). *Held:* The protection required by the former order is necessary. The order will therefore stand. *Village of Spencer v. M. St. P. & S. S. M. R. Co.* 108, 109.

13. The petitioner alleges that several highway crossings on the respondent's line in the city of Monroe, Green county, are not properly planked and surfaced and that the crossings at Payne street and Madison street are dangerous to public travel. The planking and surfacing of the streets at the crossings other than those at Madison street and Payne street have been improved to the satisfaction of the city authorities since the hearing and only the matter of adequate protection at the Madison street and Payne street crossings remains for determination. *Held:* The crossings in question are dangerous. The respondent is ordered: (1) to install and maintain at the Madison street crossing an electric bell with illuminated sign, plans to be submitted for approval; or, at its option, to stop each of its southbound trains at this crossing and send a flagman ahead who shall remain at the crossing and warn travelers until the train has passed; and (2) to install and maintain at the Payne street crossing an electric bell with illuminated sign, plans to be submitted for approval; and to improve the highway approaches as specified. *City of Monroe v. I. C. R. Co.* 118, 122.

14. The petitioner alleges that the highway bridge over the respond-

ent's tracks at Main st. in the city of Monroe is unsafe and asks that the respondent be required to replace the bridge with a steel and cement viaduct. The respondent questions the jurisdiction of the Commission. *Held:* (1) The Commission has jurisdiction under sec. 1797—12*e* of the statutes to pass upon the safety of a crossing not at grade upon complaint by the proper municipal authorities. (2) The crossing in question is dangerous. It is ordered that the respondent improve the approaches to the bridge and construct sidewalks on the sides of the bridge as specified, plans to be submitted for approval. The city of Monroe is to pay 20 per cent of the cost as determined by the Commission, and the respondent is to pay the remainder. The improvements ordered are to be completed and open for the use of the public by June 15, 1914. *City of Monroe v. C. M. & St. P. R. Co.* 176, 179.

15. The petitioner alleges that the crossings on the respondent's line at Pearl st. and Main st. in the village of Merrillan, Jackson county, are dangerous and that the protection now afforded by electric bells is inadequate and annoying to the public. Investigation shows that because of the conditions of railway operation at Merrillan the bells in question frequently ring for long periods when no trains are actually passing over the crossings. *Held:* The crossings are dangerous and, under the peculiar conditions of highway traffic and train operation which obtain there, the existing safeguards are inadequate. The respondent is ordered to station a flagman at the Pearl st. crossing who shall be on duty from 7. a. m. to 6:30 p. m. daily; to install and maintain an electric gong at the Main st. crossing to be operated by the flagman at Pearl st.; to replace the electric bells now installed at Pearl st. and Main st. by modern visual signals operated automatically and equipped with a suitable flashing device to be operated when the flagman is not on duty; to replace the board fence which extends west from Main st. along the south side of the connecting track with the C. B. & W. R. R. Co's line by a woven wire fence; and to flag all switching movements over Main st. on said connecting track. Plans for the electric gong and signal lights are to be submitted for approval. Ninety days is considered a reasonable time within which to comply with this order. *Village of Merrillan v. C. St. P. M. & O. R. Co.* 315, 319.

16. The petitioner alleges that the Radiske, Jefferson st., Palmyra road and Golden Lake crossings on the respondent's line in the town of Sullivan, Jefferson county, are dangerous. Inasmuch, however, as it is admitted that the complaint is not directed primarily against the Radiske and Golden Lake crossings and as the testimony introduced with respect to these crossings is very meager, action at the present time is confined to the Jefferson st. and Palmyra road crossing. *Held:* The crossings at Jefferson st. and the Palmyra road are dangerous. The respondent is ordered: (1) to install within ninety days and maintain at each of the crossings an automatic electric bell with illuminated sign, plans to be submitted for approval; and (2) to flag each of the crossings during all switching movements over it and during such time as standing trains may be cut to allow highway traffic to cross. *Town of Sullian v. C. & N. W. R. Co.* 320, 324.

17. The petitioner alleges that the Dorsett crossing on the respondent's line, about three miles east of Wilton, Monroe county, is dangerous and asks that the respondent be ordered to construct an undercrossing for the highway. The respondent contends that the existing bell protection is adequate. Five possible plans for grade separation are considered. *Held:* The crossing is dangerous and the existing protection is inadequate. It is ordered: (1) that the respondent construct and maintain an under-highway crossing at a point and in a manner specified, and connect it with the existing highway; (2) that the town of Wilton pay to the respondent 25 per cent of the cost of the alterations ordered, as determined by the Commission, and that the respondent

bear the remainder of the cost; and (3) that, when the under-crossing ordered is completed, the existing crossing be closed. The alterations ordered are to be completed and the new crossing opened for use by Nov. 1, 1914. If the town of Wilton prefers to undertake the work ordered to be done outside the railroad right of way, the order will be modified to permit it, with the understanding that the town bear the entire cost of the work so undertaken. *Town of Wilton v. C. & N. W. R. Co.* 334, 339.

18. Complaint was made by the town of Cross Plains that three crossings on the respondent's line, designated as the Second Schulenberg crossing, the Bollenbeck crossing and the John Schoepp crossing, were dangerous. A hearing was held and the relocation of the highways and the substitution of two less obstructed grade crossings for the three existing ones was suggested, but, inasmuch as the Commission was not at that time empowered to order such a change, the matter was left open for informal adjustment. Such authority, however, was subsequently conferred upon the Commission by ch. 603, laws of 1913, and, since the proposed improvements had not been effected, the Commission investigated the matter on its own motion. The plan for the relocation of the highways is again considered. *Held:* The crossings require further protection. In view of the fact that the Bollenbeck and Schoepp crossings cannot be entirely eliminated but would necessarily be used by farmers as private crossings, the advantages to be gained by the proposed relocation of the highways at these two crossings would be largely offset by the additional danger to which the farmers in question would be subjected. Bell protection will adequately safeguard these crossings under existing traffic conditions. The highway at the Second Schulenberg crossing should, however, be relocated. It is ordered: (1) that the respondent install and maintain at the Bollenbeck crossing and at the John Scoepp crossing an electric bell with illuminated sign, plans to be submitted for approval; (2) that the respondent construct a new crossing at grade about 470 feet northwest of the Second Schulenberg crossing and relocate the highway as specified; (3) that the town of Cross Plains pay to the respondent 10 per cent of the cost of the alterations ordered as determined by the Commission, the remainder of the cost to be borne by the respondent; and (4) that when the alterations ordered are completed and the new crossing opened for public travel, that portion of the highway now crossing the railway track at grade within the right of way lines at the Second Schulenberg crossing be closed to the public and enclosed by the respondent with continuous fences. Ninety days is considered a reasonable time within which to comply with this order. *In re C. M. & St. P. R. Crossings in Cross Plains*, 343, 349.

19. The Commission, on its own motion, investigated the "Richard Jahn crossing" on the C. & N. W. Ry. in the town of Gale, Trempealeau county, after informal complaint had been made that the crossing is dangerous to public travel and that a small bridge located almost entirely on the railroad right of way is in a dangerous condition. As originally constructed the highway was practically level at the point in question but when the railroad was built the highway was raised so as to provide a grade crossing, thereby creating the ascending approaches against which complaint is made. The railway company contends that the jurisdiction of the Commission does not extend to the enforcement of the duties laid upon railroad companies by sec. 1836 of the statutes which requires a railway company in a case like the instant case to restore a highway crossed by its line "to its former state or to such condition as that its usefulness shall not be materially impaired." *Held:* 1. The crossing is dangerous and inconvenient. 2. The Commission is vested with authority by sec. 1797—31 of the statutes to enforce the provisions of sec. 1836 of the statutes. The railway company is ordered to improve the highway approaches to the crossing as specified, to construct

a suitable culvert, to replace the bridge against which complaint is made, and to remove the trees and brush along the creek within the railroad right of way lines. It is recommended that the town board cause to be removed the obstructing brush and trees within the limits of the highway and that it take such action as is necessary to secure the removal of the obstructing brush located on private property in the northeast angle of the crossing. *In re Crossing on C. & N. W. R. in Town of Gale*, 445, 448.

20. A previous order in this matter as amended requires the C. & N. W. Ry. Co. to construct a new subway at the crossing in question south of the existing subway, using the south abutment of the present structure for a pier, the work to be completed by June 1, 1914. Examination of plans submitted by the railway company and further consideration of the situation at the proposed subway indicate, however, that the retention of the south abutment of the existing subway as a solid pier, as specified in the order, would result in obstructing the view of traffic from the opposite side. The substitution of an open work steel pier for the concrete pier was agreed upon by the interested parties and the order is modified to permit this change. An extension of time for compliance until September 1, 1914, is allowed. *In re Crossing on C. & N. W. R. North of Racine*, 454, 456.

21. The petitioner alleges that two highway crossings on the respondent's line lying partially in the town of Menomonee, Waukesha county, are unsafe for public travel and that the grade of approach is too steep for teaming. The respondent made certain improvements in the grade of the approaches at the crossings subsequent to a conference between the interested parties, looking toward an informal adjustment of the matters in dispute, but the petitioner objects to the grades of 7 and 7½ per cent left at the crossings. Both the highways involved were in use before the respondent's line was constructed and were practically level at the point where they now cross the railway line. The construction of a grade crossing with approaches on a 7 or 7½ per cent grade in the place of a practically level highway, especially when a considerable further reduction of grade can be made without unreasonable expense, is not regarded as a substantial compliance with sec. 1836 of the statutes, which makes it the duty of a railway company to restore any highway crossed by its line "to its former state or to such condition as that its usefulness shall not be materially impaired." The respondent's contention that the Commission has no jurisdiction to enforce the provisions of sec. 1836 of the statutes was discussed in *In re Crossing on C. & N. W. R. in Town of Gale*, 1914, 14 W. R. C. R. 445, and the opinion there given is here followed. *Held:* 1. The crossings should be further protected by the addition of guard rails along the sides of the approaches. 2. The respondent should reduce the grade of approach at each of the crossings to a maximum of 4 per cent in order to fulfill the duty imposed by sec. 1836 of the statutes. The respondent is ordered to provide properly surfaced highway approaches not exceeding 4 per cent in grade at each of the crossings with suitable guard rails on each side of the highway embankments. Sixty days is considered a sufficient time within which to comply with this order. *Town of Menomonee v. C. & N. W. R. Co.* 549, 552.

22. The respondent petitioned for a rehearing in the matter of *City of Racine v. C. & N. W. R. Co.* 1913, 11 W. R. C. R. 740, involving the construction and maintenance of a subway at Mound avenue in the city of Racine, and suggested a change in the original order on the ground that, for a relatively small additional expense, a more favorable grade of approach to the subway in question could be secured, and the necessity of further substantial change of the tracks at this point, in case of a general grade separation in the city, could be obviated. The petitioner contended that an additional subway for foot passengers should be constructed at Maple street. As to the issue raised by the city over the apportionment of the cost under the revised plans, it appeared that, in ad-

dition to the improved convenience of the subway for the traveling public, the accomplishment at the present time of that part of the work forming a permanent part of a possible general track elevation, would relieve the petitioner of approximately the same expense in the future. *Held:* The change suggested by respondent would result in a more satisfactory subway than that originally ordered. The original order is therefore vacated, and in lieu thereof respondent is ordered to build the subway in question as specified in the present order. The proposed additional subway for foot passengers at Maple street is unnecessary. A foot path, parallel to the railway line, and extending from Maple street to the subway at Mound avenue would give better service, and cost much less. Respondent is ordered to construct such a footpath in the manner specified in the order. That part of Maple street lying between respondent's right of way limits is ordered closed, and respondent is authorized and directed, upon the opening of the subway and footpath, to obstruct that part of Maple street just described so that it cannot be used for public travel. The changing of the grade of Mound avenue by the petitioner so as to comply with the provisions of the order is made a condition precedent to the obligations of the respondent. The apportionment of 20 per cent of the cost to the petitioner and 80 per cent to the respondent, adopted in the original order, is deemed equitable under the revised construction, and is not changed. Barring the contingencies noted, the work is to be completed, and the subway and footpath opened for public use on or before October 1, 1914. *City of Racine v. C. & N. W. R. Co.* 783, 785.

23. Complaint was made that the respondent had failed to construct a highway crossing at a point about one and one-fourth miles north of Summit Lake, at which point a new road laid out by the petitioner intersected the line of the respondent, and that respondent's failure to do so created a condition dangerous to public travel. The Commission is asked to determine the mode and manner of the crossing, and to require the respondent, at its own expense, to construct, grade and maintain in a safe condition for public travel the portion of the highway lying within its right of way lines. The respondent contended that the proceedings with reference to the laying out of the highway in question were invalid for several reasons, which are stated in the decision, and that, since an order determining the mode and manner of the proposed crossing can be effective only upon the legal opening of the highway, the Commission should not act unless the proceeding is clearly valid. *Held:* The technical validity of the action of the town board in laying out a highway over the right of way of a railway company must be determined in the courts, and in the present case is immaterial so far as the proceeding before the Commission is concerned. (*Town of Gillett v. C. & N. W. R. Co.* 1912, 9 W. R. C. R. 535.) Pending an adjudication by the courts, the Commission has no choice but to determine the mode and manner of the crossing as provided by law. It appeared that the crossing at grade had already been constructed in spite of active opposition on the part of the respondent, and that the angle of crossing was acute. Respondent contended that the crossing as constructed was dangerous, but admitted that it could be made less so through reconstruction at right angles to the track. Respondent stated that an overhead highway crossing could be constructed about 1,000 feet south of the existing site at a cost of approximately $7,000. The traffic on the highway in question is light, and the surrounding country only partially developed. *Held:* A separation of grades, involving a relatively large expense, is not warranted at the present time by traffic conditions. It would necessitate the relocation of the highway in question, and, when necessary, can be accomplished at a cost not materially greater than that which would now be incurred. A reasonably safe grade crossing is practicable. But for the sake of public safety, the present highway should be altered so as to cross the track at right angles. The Commission assumes that

if the proceedings of the town board to lay out the highway over the point in question should be declared invalid, new proceedings will be instituted. Petitioner contended that under sec. 1299*h*—1 of the statutes, the respondent is required to construct a suitable crossing within its right of way entirely at its own expense. *Held:* Sec. 1797—12*e*, subsequently enacted by the legislature, imposes upon the Commission the duty, upon petition, of determining the mode and manner of a proposed crossing in the interest of public safety, and of apportioning the cost of such crossing between the railway company and the municipality in interest. Necessarily, where the offices of the Commission are invoked in such a case, the provisions of the earlier statute become inactive as to the particular case. The action of the Commission in the present case is predicated upon sec. 1797—12*e* of the statutes. It is ordered: (1) that the respondent construct, at the point in question, a suitable grade crossing approximately at right angles to its track; (2) that the respondent furnish all necessary material and labor, and perform all necessary work in carrying out the order; and (3) that the petitioner bear 50 per cent and respondent 50 per cent of the cost as determined by the Commission. Sixty days is considered a reasonable time within which to comply with the order. *Town of Elcho v. C. & N. W. R. Co.* 796, 801.

Crossings—Railroad by highway—Protection of—Automatic alarm with illuminated sign.

See also ante, 13, 16, 18.

24. The petitioner alleges that a crossing on the respondent's line about one mile west of Albertville in the town of Howard, Chippewa county, is dangerous and asks that the respondent be required to install an electric bell. *Held:* The crossing is dangerous. The respondent is ordered to install and maintain an electric bell with illuminated sign, plans to be submitted for approval. Ninety days is considered a sufficient time within which to comply with this order. *Town of Howard v. M. St. P. & S. S. M. R. Co.* 433, 434.

25. The petitioner alleges that the crossings known as the Yanke crossing, the Sawyer crossing and the Hoffman crossing on the respondent's line in the town of Wien, Marathon county, are dangerous. *Held:* The crossings require further protection. The respondent is ordered to install and maintain at each an electric bell with illuminated sign, plans to be submitted for approval. Ninety days is considered a reasonable time within which to comply with this order. It is suggested that the town board remove the obstructing brush and trees at the Yanke and Sawyer crossings. *Town of Wien v. C. & N. W. R. Co.* 435, 440.

26. The petitioner alleges that a crossing on the respondent's line one mile east of Thornton, Shawano county, is dangerous. *Held:* The crossing requires further protection. The respondent is ordered to install and maintain an electric bell supplemented by a visual signal for night indication, plans to be submitted for approval. Ninety days is considered a sufficient time within which to comply with this order. *Town of Richmond v. W. & N. R. Co.* 546, 548.

Crossings—Railroad by highway—Protection of—Automatic Flagman.

27. The petitioner alleges that a crossing on the respondent's line where it intersects the road leading from Lake Geneva to Williams Bay

is dangerous. The respondent offered in its answer and at the hearing to install electric bells at the crossing but has since proposed to substitute for the protection now afforded by a flagman a grade crossing signal known as an "Automatic Flagman." *Held:* The crossing is dangerous. The respondent is ordered to install and maintain an "Automatic Flagman" or some other suitable automatic device for protecting travelers both by day and by night, plans to be submitted for approval. Ninety days is considered a sufficient time within which to comply with this order. *Town of Geneva v. C. & N. W. R. Co.* 481, 484.

Crossings—Railroad by highway—Protection of—Duty of Commission to determine mode and manner of a proposed crossing.

28. Section 1797—12*e* of the statutes imposes upon the Commission the duty of determining the mode and manner of a proposed crossing in the interest of public safety upon petition of the municipal authorities or the railway company. It also requires the Commission to apportion the cost of such crossing between the railway company and the municipality in interest. *Town of Elcho v. C. & N. W. R. Co.* 796, 801.

Crossings—Railroad by highway—Relocation of—Jurisdiction of Commission.

33. The legislature of 1913 (ch. 603, laws of 1913), empowered the Commission to order the closing of a grade crossing and the substitution of another therefor at grade, if found necessary in the interest of public safety. *In re Barron's Crossing in the Town of Almena*, 128, 129.

Crossings—Railroad by highway—Relocation of highway.
See also ante, 17–18, 33.

34. The Commission, on its own motion, investigated the advisability of relocating the highway at Barron's crossing on the C. St. P. M. & O. Ry. in the town of Almena. The town board and the railway company had agreed upon such a relocation after a hearing in a previous proceeding instituted by the town, but, owing to a disagreement between the town and the owner of the land necessary for the new highway, the relocation had not been effected. Since the previous proceeding was initiated authority has been given the Commission by ch. 603, laws of 1913, to order the closing of a grade crossing and the substitution of another therefor at grade, if found necessary in the interest of public safety. *Held:* The relocation of the highway is necessary for public safety. It is ordered: (1) that the railway company construct, as specified, a new crossing and a new highway connecting this crossing with the existing highway; (2) that the railway company furnish all necessary labor and material, acquire all necessary land and perform all necessary work in making the alteration ordered, and that the town of Almena, upon the completion of the work, pay to the railway company the actual cost of the land acquired for relocating the highway, all other costs to be borne by the railway company; and (3) that upon the opening of the new crossing for public travel the portion of the highway lying within the railway right of way lines at the existing crossing be closed and continuous fences erected by the railway company to prevent its use by the public. The alterations ordered are to be completed and the new crossing is to be opened by July 1, 1914. *In re Barron's Crossing in the Town of Almena*, 128, 130.

Crossings—Railroad by highway—Separation of grades—Subway.
See also ante, 17, 20, 22.

35. A previous order in this matter as amended requires the C. & N. W. Ry. Co. to construct a new subway at the crossing in question south of the existing subway, using the south abutment of the present structure for a pier, the work to be completed by June 1, 1914. Examination of plans submitted by the railway company and further consideration of the situation at the proposed subway indicate, however, that the retention of the south abutment of the existing subway as a solid pier, as specified in the order, would result in obstructing the view of traffic from the opposite side. The substitution of an open work steel pier for the concrete pier was agreed upon by the interested parties and the order is modified to permit this change. An extension of time for compliance until September 1, 1914, is allowed. *In re Crossing on C. & N. W. R. North of Racine*, 454, 456.

OPERATION.

Requirements as to service and facilities.

See also STATION FACILITIES; SWITCH CONNECTIONS; TRAIN SERVICE; WAREHOUSES.

Requirements as to service and facilities—Railway car service—Distribution of cars.

36. It seems to be well established that in times of a shortage of cars, the cars allotted to any station should be prorated among the various shippers at such station upon an equitable basis. In doing this, various elements must be taken into consideration. Among these are the volume of business done by each shipper, the character of the commodities to be shipped, the necessity for the immediate movements of certain commodities, the climate and character of the weather, and perhaps other considerations. All that the law requires is that the carrier acts justly and fairly in making the distribution of cars. There is no hard and fast rule by which the matter can be determined. In each case it must be determined by the information at hand and according to the best judgment of the person charged with the duty of making the distribution. *Colfax Produce Co. v. M. St. P. & S. S. M. R. Co.* 86, 91.

Discrimination in electric rates, *see* DISCRIMINATION, 1–3.

Charge for installing meters.

See post. 31.

Flat rates.

1. It is clear that the fact that service is offered, under certain circumstances, at a flat rate, cannot justify consumers in making an unreasonable use of their lamps. The flat rate is offered under certain circumstances where it appears that the installation of a meter might be a burden upon the consumer, in case the cost of the meter is to be borne by the consumer. The utility is entitled to have a rule limiting the use of lamps on a flat rate to a reasonable use and providing a penalty for violation of the rule. It was suggested on behalf of the applicant that consumers desiring to use all night lights be limited to the use of 10-watt lamps at the rate of 50 cts. per lamp. The purpose is not only to secure adequate payment for all night lamps but also to reduce to a minimum the use of current during the night and to limit that use to convenience lighting. With storage battery operation both of these purposes are important. The proposed rule appears to be reasonable and will be approved. In case consumers do not abide by the rule of

the utility there are two possible courses to be taken. Service may be discontinued or meters may be installed. Which of these courses should be pursued must be dependent upon a variety of conditions. We are inclined to believe that the better course to pursue in this case would be to use the meter basis of selling current. *In re Appl. Gilmanton Mill & El. Plant*, 152, 154.

2. The present flat rate of 50 cts. per lamp per month is equivalent to a charge of 5½ hours' use daily at the above rate. As many of the flat rate lamps are used in such places as halls, for all night service, the charge of 50 cts. per lamp per month is not deemed excessive in this case. *Hood et al. v. Monroe El. Co.* 227, 236.

3. In fixing a schedule of flat rate charges, the rate per watt of load connected should bear some relation to the amount of service rendered, but this relation is so difficult to ascertain and classify that the application of flat rates ought to be limited to those cases in which the installation of a meter is too expensive. There should be also a minimum charge for unmetered service in order to insure that a reasonable part of the cost of service be paid by the customer. *In re Appl. Browntown Mun. Lt. Plant*, 560, 565.

4. The company has filed with the Commission certain schedules to apply to patrolled service for display lighting and to residence and business lighting where the maximum demand is limited by a controlling device. In these schedules the rates consist of fixed charges based upon the amount of demand contracted for by the customers. These rates are not inconsistent with the other schedules which the Commission will order. *Douglas et al. v. Equitable El. Lt. Co.* 381, 389.

Rate for incidental small power and heating appliances.

5. The demand which consumers make upon the respondent's service for power for industrial use is not very great but the power business consists to a remarkable degree of service for domestic purposes. Many customers have large installations of electric stoves, heaters, vacuum cleaners, fans or other appliances. The use of almost any of these is not very extensive but, all together, they add considerably to the utility's business. The respondent believes that, because this service is used chiefly during the daylight hours, the business should not be lost and that the rate should be made sufficiently attractive to encourage the use of current for power purposes. This idea has merit as long as the revenue for the service furnishes something above the bare operating expense. *Douglas et al. v. Equitable El. Lt. Co.* 381, 385.

Making rates—Elements considered—Cost of service—Economies in operation.

6. A public utility which possesses an especially economical source of supply is not entitled to retain the entire saving effected by it but a portion of the saving should be given to the public in the form of lower rates. *In re Service and Rates Stevens Point Ltg. Co.* 350, 363, 364.

Making rates—Elements considered—Cost of service—Materials and supplies.

7. In reaching a conclusion concerning what should be allowed for interest and profits, the facts presented relative to the amount of the respondent's stock of material and supplies have been considered. It was found that not all of the material and supplies which entered into the valuation of the plant are devoted to the supply of utility service but that an important part thereof is used for merchandise business. But upon examination of the respondent's income account it is found also that the non-operating revenues amounted to $265. This sum is equivalent to a net earning of 7.25 per cent on material and supplies

amounting to $3,650 and affords a justification for this investment. However, in determining the cost of utility service, this value of material may be subtracted from the total value of the property if the corresponding net revenue also be not considered. *Hood et al. v. Monroe El. Co.* 227, 233.

Making rates—Elements considered—Cost of service—Output, capacity and consumer costs.

8. Expenses, including taxes, depreciation, interest and profits, are divided into two groups, capacity and output costs. The capacity costs include those expenses or portions of expenses which are proportioned or closely related to the capacity of the plant or the demands of the business, while the output costs include those related to the volume of business. This apportionment is preliminary to the division of cost among the several classes of service. *Hood et al. v. Monroe El. Co.* 227, 232.

Making rates—Elements considered—Cost of service—Taxes.

9. It is clearly evident that some consideration should be given to the increase in taxes in fixing rates for service. Otherwise, the revenue from operation would be insufficient to meet the expense of running the plant. However, the fact that various items of expense fluctuate from year to year and that some are high when others are low must not be lost sight of. *City of Watertown v. Watertown G. & El. Co.* 604, 614.

Making rates—Elements considered—Cost of service—Wages and salaries.

10. Examination shows that the payroll of the Monroe Electric Company is rather high. This is largely on account of what is paid for executive officers' salaries and superintendence in addition to the other regular labor needed to operate the utility. There seems to be very little doubt that a part of executive officers' salaries should be considered in this instance as a part of the profits of the business. In other words, liberal expenditure for salaries which may be the means of obtaining efficient operation must be considered as at least part of the premium allowable for the efficiency obtained. It makes little difference to the customers in what manner the profits of a company are divided, and for the purposes of determining the total allowable revenue, it may be borne in mind that a portion of profits has already entered into the costs in the manner explained. The propriety of the payment of this item, therefore, will not be seriously questioned here. *Hood et al. v. Monroe El. Co.* 227, 231.

Measurement of active load and maximum demand.

11. The complainants against the lighting rate are a very few users with large installations. The particular difficulty appears to be due to the fact that hotels, sanitariums, hospitals and other places of similar character were designated, in the original order, as Class C establishments, while figures of connected load and demand seem to show that, at least in this case, the percentages for Class A are more appropriate. It appears that proper relief may be secured by a reclassification of some installations or by the use of maximum demand meters. A reclassification will therefore be made and the optional use of demand meters, for certain classes, will be provided for in the order. *Douglas et al. v. Equitable El. Lt. Co.* 381, 384.

Meter rates—Straight meter rates.

12. The company has been charging 13½ cts. per kw-hr. for all current sold for commercial lighting. Under such conditions the long hour

user bears an unreasonable share of the capacity expenses. A flat meter rate schedule is therefore unjustly discriminatory in favor of short hour users, and in the schedule to be suggested, cognizance will be taken of the decreasing cost of service resultant from increasing daily use of a given connected load. *In re Service and Rates Stevens Point Ltg. Co.* 350, 369.

Minimum rates

13. The Milton W. Lt. & P. Co. applies for authority to put into effect a minimum charge of 75 cts. per month for electric current. At present the utility makes no minimum charge. Investigation of the revenues and expenses shows that the utility, which started operation March 1, 1912, is still operating under a deficit. In some cases the Commission has recommended the adoption of a minimum charge of less than 75 cts. but from a consideration of all the facts available in this case, we believe that the application for authority to put in a minimum charge of 75 cts. per month is a reasonable one. The data available do not show how many consumers would be affected by such a minimum, but it seems evident that the total increase in revenue will be rather small. *Held:* The application is a reasonable one. The applicant is therefore authorized to put into effect a minimum monthly charge of 75 cts. *In re Appl. Milton W. Lt. & P. Co.* 206, 207.

14. The McGowan W. Lt. & P. Co. applies for authority to put into effect a minimum monthly charge of $1 for electric service for which, up to the present, the utility has had no minimum charge. The utility is operating at a loss. *Held:* Although a minimum charge of $1 per month would not produce an excessive amount of revenue, such a charge is inadvisable because of its probable effect on the business of the utility. The utility is authorized to put into effect a minimum monthly charge of 75 cts. which is considered sufficient to insure the utility against actual losses arising from carrying the accounts of individual consumers. *In re Appl. McGowan W. Lt. & P. Co.* 325, 328.

15. The justice of a minimum charge has been repeatedly upheld. In order that the company may be adequately recompensed for its readiness to serve certain large installations which at certain seasons may use very little current, a minimum bill based on the size of the active horse power connected has been deemed advisable in this case. In towns where there are a multitude of larger consumers having a wide diversity of use, a utility need not keep its capacity near the sum of the different connected loads on the system. A smaller plant, similar to that at Stevens Point, must, however, be constantly ready to serve the two or three larger consumers at the same time. This necessitates that the plant capacity must more nearly approach the total connected load than the capacity of a plant whose consumers have a greater diversity of use. *In re Service and Rates Stevens Point Ltg. Co.* 350, 369, 374–375.

16. The question of the authorization of a given minimum charge should be decided with reference to the reasonableness of that particular charge rather than with reference to the total revenues of the utility, although the latter should also be considered. *In re Appl. Browntown Mun. Lt. Plant*, 560, 564.

17. The reasonableness of a carefully adjusted minimum charge, to cover certain fixed expenses of furnishing service, has been fully explained in other decisions, and no repetition of the arguments is necessary. *In re Appl. Richland Center El. Lt. & W. Plant*, 590, 591.

Power rates—Discrimination due to unlimited use under maximum charge.

18. The commercial power schedule shows a possibility of unlimited use by power users at a certain maximum price per horse power which tends toward an unjust discrimination against small users. The com-

pany has recognized this fact in filing its application. A more scientific rate will relieve this condition. *In re Service and Rates Stevens Point Ltg. Co.* 350, 357.

Power rates—Limited or "off peak" service.

19. The respondent asks that it be permitted to enforce a rule requiring consumers using current for power to discontinue use of current during the peak load on the plant or to pay a greater rate if current be taken at that time. Judging from the information now before the Commission, it seems that a rule of this kind is not unreasonable in this instance because usually the lowest rates should be given to those who can be supplied most cheaply. *Hood et al. v. Monroe El. Co.* 227, 241.

Rates for incidental or small power appliances.

20. In order to give consumers advantage of cheaper current for small power appliances which are usually supplied from the lighting circuits the respondent has, in some instances, installed separate meters and charged for the current at 6 cts. per kw-hr. This is an expensive method of supplying the service, considering the amount of current usually delivered for this purpose, and yet it is quite apparent that some reduction must be made if this kind of business is to be obtained. Under the new form of lighting schedule service may be given to incidental appliances, such as flatirons, toasters, electric fans and private washing machines, at a lower rate without installing a separate meter if the capacity of the appliances be not considered in computing the active load supplied through lighting meters. By this method, the secondary and excess rates are attained much sooner than if the load of the appliances were considered in figuring the active load. *Hood et al. v. Monroe El. Co.* 227, 242.

Reasonableness of advance in rates in particular cases.

21. The Gilmanton Mill and El. Plant applies (1) for authority to increase its rates by the adoption of such a schedule as the Commission may deem reasonable and just, and (2) to be relieved from the necessity of supplying meters free of cost to consumers, until such time as the financial condition of the utility will permit it to own and furnish meters. The utility furnishes continuous service, except for a few hours each day when a storage battery used in connection with a hydraulic generator is being charged, and it appears that some of the flat rate consumers permit their lamps to remain turned on at all times. All consumers on a metered basis have furnished their own meters. Accurate records of the operating expense of the plant are not available. *Held:* 1. Before the present rates are revised more experience in the operation of the utility should be obtained to show what business may be secured and at what cost. 2. In view of the uncertainty as to whether the revenues resulting from the present rates will be adequate to meet the needs of the plant it is not advisable to require the utility to increase its investment by requiring meters in use or by furnishing those to be installed in the future. 3. The utility is entitled to have a rule limiting the use of lamps on a flat rate to a reasonable use. It is ordered: (1) that such part of the case as relates to a higher rate for service be dismissed for the present; (2) that the utility be exempted from the necessity of supplying meters at its own expense; (3) that rules regulating the use of all night lights and flatirons in line with the views expressed in the opinion may be filed with the Commission for approval; (4) that after such rules have been filed and approved the utility may require violators of the rules to install meters at their own expense; and (5) that the utility may require all parties using electric fans or other power devices to install meters at their own expense. *In re Appl. Gilmanton Mill & El. Plant*, 152, 154, 155.

22. With respect to the matter of electric rates, the utility alleges that its present power schedule is discriminatory because it permits long hour consumers to obtain current at an excessively low rate and asks for an increase in rates to power consumers, even though it be necessary to decrease lighting rates to offset the increased revenues derived from a higher power schedule. The rate now exacted by the utility for current supplied for commercial lighting is 13½ cts. per kw-hr., minimum bill 50 cts., although the utility has a schedule on file with the Commission providing for reductions to 12 cts. per kw-hr., for the second 100 kw-hr., 11 cts. per kw-hr. for the third 100 kw-hr. and 10 cts. for all current used in excess of 300 kw-hr. No explanation of this unauthorized increase in rates is given. A schedule of rates believed to be reasonable is constructed and its probable effects on various sized installations in each classification of consumers determined. The estimates of revenues to be received under the schedule suggested, when summarized and compared with the present revenues, show a general reduction in revenues amounting to 13 per cent. *Held:* The rates exacted by the utility for commercial electric lighting and power service are unjustly discriminatory as between long hour and short hour users, and the charges made for street lighting are excessive. The utility is ordered to put into effect a schedule of electric rates prescribed by the Commission for commercial lighting, power and street lighting. The rate ordered for street lighting is to become effective only when the city of Stevens Point has filed notice with the Commission and the utility of its acceptance of a contract providing for the service of ninety or more lamps. *In re Service and Rates Stevens Point Ltg. Co.* 350, 378.

23. The Browntown Mun. Lt. Plant applies for authority to increase its minimum charge for electric service from 50 cts. to $1 per month on the ground that the present revenues are insufficient. Twenty-six citizens of the village present a petition requesting that the operation of the utility be discontinued or that its business be placed on a self-supporting basis. A valuation of the property of the utility was made and its revenues and expenses were investigated. The utility, which was established in 1910, is operating at a relatively large deficit. The community is small and a large proportion of the residents have failed to patronize the utility. It appears that the flat rates in the utility's present schedule have been disregarded in charging for unmetered service, that the revenue from municipal street lighting fails to cover the cost and that the village hall has been supplied with service without charge. The question as to whether the rates of a municipal utility must be such that the cost of service shall rest entirely upon the consumers is one which depends upon the circumstances for its answer, for the rates must be fair to the consumers as well as to the owners of the utility and the actual cost is not always the entire measure of fairness. In the instant case, in view of the fact that the citizens of the village have failed so largely to patronize their own utility, although they must have known that their undivided support was necessary to its success, it appears unreasonable to load the entire loss of operation upon those who now use the service of the utility. The question of the authorization of a given minimum charge should be decided with reference to the reasonableness of that particular charge rather than with reference to the total revenues of the utility, although the latter should also be considered. *In re Appl. McGowan W. Lt. & P. Co.* 1914, 14 W. R. C. R. 325. *Held:* The utility's rates require revision. The utility is authorized to put into effect a schedule of rates determined by the Commission. The minimum bill is to be 75 cts. per month. Charges are to be made to all classes of consumers strictly in accordance with the schedule. *In re Appl. Browntown Mun. Lt. Plant.* 560, 563, 567.

24. The Richland Center El. Lt. & W. Plant applies for authority to establish a minimum charge and a specified schedule of rates for electric current used for power purposes. The utility also desires that the Com-

mission establish rates for electric lighting and water consumers located outside the city limits. The power rates applied for were authorized previously upon informal presentation of the case. Consumers of a municipally owned utility who are located outside the limits of the municipality stand in much the same relation to the utility as they would if it were a private enterprise and so long as the rate charged them is fair they cannot complain of discrimination against them merely because that rate is slightly higher than the rate charged residents of the municipality. *Held:* The relief sought should be granted. The utility is authorized to put into effect: (1) a minimum charge of 25 cts. per h. p. per month for electric power consumers; (2) the rates specified in the application for current purchased for power purposes; (3) a specified charge for electric lighting service to consumers outside of the city limits. *In re Appl. Richland Center El. Lt. & W. Plant*, 590, 593.

Reasonableness of rates in particular cases.

25. The complainants allege that certain of the respondent's charges for electric current in the city of Monroe are excessive. A valuation was made and the revenues and expenses were investigated. The expenses were apportioned between capacity and output and further apportioned among commercial lighting, commercial power and municipal lighting expenses. *Held:* The respondent's rates require revision. The respondent is ordered to put into effect for commercial light and power service a schedule of rates prescribed by the Commission. *Hood et al. v. Monroe El. Co.* 227, 243.

26. An excessively low book charge for power supplied by one of two inter-dependent companies to the other is not necessarily conclusive on the Commission, for the Commission can no more recognize such a charge as proper than it could an unreasonably high book charge. A revision of the power expense to meet the existing conditions is therefore made in the instant case. *In re Service and Rates Stevens Point Ltg. Co.* 350, 363.

27. Informal complaints are made against the order issued in this matter July 11, 1913, 12 W. R. C. R. 337. The Commission held an informal conference with the complainants and the utility and re-investigated the matter from the point of view of the additional information disclosed at the conference. It is claimed by certain consumers that the commercial lighting rates fixed by the Commission are such that consumers with large installations now have to pay a much higher average rate per kw-hr. than previously, and by other consumers that the service charge for the use of power is excessive and that it should be eliminated. The city of Lake Geneva contends that the rate ordered for power furnished the city for use over its own street lighting distribution system is excessive when compared with the commercial lighting rate. Since the conference mentioned, the city and the utility have agreed upon a new rate for this service. *Held:* 1. The commercial lighting schedule should be modified by the reduction of the excess rate to reduce the average charge per kw-hr. for consumers who use their active load long periods daily; by the reclassification of hotels, sanitariums, hospitals, Y. M. C. A., and clubs in which meals and rooms are furnished to more closely approximate the conditions under which they receive service; and by the establishment of a flat rate or excess indicator rate to provide a schedule for a new class of service not contemplated in the original order. 2. The power schedule should be modified by changing it from a service and energy charge to a primary, secondary and excess schedule of rates to avoid an excessive average rate per kw-hr. when the amount of current consumed is small; by reducing the connected load for power installations in which the capacity of the motor exceeds the possible load, in order to establish an equitable rela-

tion to other installations; and by the reduction in the percentage active for heating loads to establish an equitable relation with other classes and to place the rate for this service within the consumer's reach. 3. The rate for current sold to the city of Lake Geneva for street lighting, as now agreed upon between the city and the utility, is reasonable. The utility is authorized to put into effect a new schedule of rates determined by the Commission. *Douglas et al. v. Equitable El. Lt. Co.* 381, 389.

28. Complaint is made that the rates charged by the Elroy Mun. W. & Lt. Plant for electric current and water are discriminatory and insufficient and that the records and accounts relating to the operation of the utility are unsystematic and unsuitable and not in accordance with the rules prescribed by the Commission. A valuation was made and the revenues and expenses were estimated, in the absence of satisfactory records, upon the basis of such information as was available. The expenses so estimated were apportioned for the electric department between capacity and output and further apportioned between street lighting and commercial lighting; for the water department they were apportioned between general service and fire service and further apportioned among capacity, output and consumer expenses. The utility has made no provision for depreciation and there has been no charge for municipal hydrant rental nor for street lighting. *Held:* Both the electric rates and the water rates require revision. Because of the lack of definite infomation, however, the conclusions drawn as to what rates are reasonable are only tentative and may require modification when the utility is able to present such information to the Commission as the law requires a utility to have available. The utility is ordered (1) to put into effect a schedule of water and electric rates fixed by the Commission and (2) to install and keep the accounts and records prescribed for it under date of April 20, 1914, subject to such modifications as the Commission may find necessary. The schedule of rates includes, among other things, provision for charges to be paid by the city of Elroy for fire protection and street lighting. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant*, 485, 496.

29. The question as to whether the rates of a municipal utility must be such that the cost of service shall rest entirely upon the consumers is one which depends upon the circumstances for its answer, for the rates must be fair to the consumers as well as to the owners of the utility and the actual cost is not always the entire measure of fairness. In the instant case, in view of the fact that the citizens of the village have failed so largely to patronize their own utility, although they must have known that their undivided support was necessary to its success, it appears unreasonable to load the entire loss of operation upon those who now use the service of the utility. *In re Appl. Browntown Mun. Lt. Plant*, 560, 563.

30. The conclusion in the main points at issue rests upon what should be set up as the cost of operating the street lighting portion of the business and as a fair return on the investment devoted to it. The primary measure of these factors is usually the actual cost to the utility. If the expenditures are reasonable, the cost of service usually represents more accurately than any other figures a fair rate for the service. However, the actual expenses are not always the only measure taken of what the rate should be. Such expenses must withstand investigation designed to reveal abnormal tendencies. *City of Watertown v. Watertown G. & El. Co.* 604, 606.

31. Petitioner prays for authority to fix a minimum charge for electricity for other than power purposes, of 25 cts. per month, and to make a charge of $1 for installing an electric meter upon the cessation of electric service at any one place, used in whole or in part for business purposes, provided that the total of all charges for electric consumption

since the beginning of such service shall not thereby exceed $3. The purpose of a charge of $1 for installing electric meters is to prevent the utility from being required to furnish service at a loss to temporary consumers. It is stated that the average cost of installing an electric meter is between $0.90 and $1.00. *Held:* The minimum monthly charge suggested for electric current for all except power purposes seems clearly reasonable and is authorized. The proposed charge for installing electric meters appears a reasonable regulation, and the desired authority is granted. *In re City of Manitowoc*, 697, 700.

32. Application was made to the Commission by the Mosinee El. Lt. and P. Co. and by the village of Mosinee to fix rates for electric current furnished to the village of Mosinee for operating the pump at its pumping station. The value of the additional investment made by the company to supply current for pumping was appraised by the Commission, and the cost of further equipment necessary to prevent interruptions of the service during electrical storms was also considered. In the light of the facts before the Commission it appears that the first step of the rate schedule proposed by the utility is substantially correct, but that the other rates may be somewhat lower than those proposed. *Held:* The utility is ordered to charge the rates fixed by the Commission. *In re Invest. Mosinee El. Lt. & P. Co.* 743, 745.

Revision or adjustment of rates.

33. Although the complaint in this case does not directly involve the charges for current used for lighting business places, it is apparent that adjustment of rates for one class of service may require also a revision of the charges for a closely related class. *Hood et al. v. Monroe El. Co.* 227, 236.

Service charge plus energy charge with limiting maximum rate per kw-hr.

34. A schedule consisting of a service charge and an energy charge probably would be considered an equitable method of charging for service if the conclusion were based solely on the analysis of the cost to the company. Conditions in this case seem, however, to argue against the use of this form of schedule unless the sum of the service and energy charges be limited by a maximum rate per kilowatt-hour. First, the diversity of use of current by short hour consumers seems to be greater than for long hour consumers. Therefore it is probable that the expense of supplying the former does not rise in such a remarkable degree as the cost curve seems to show. Second, the charge fixed by the combination of service and energy rates becomes so prohibitively high in some cases that the consumer cannot afford to use the service if he must pay for it on that basis. Yet, if there is some element of profit in this business at a lower rate, other classes of users are not adversely affected if the lower rate be charged. The objectional feature of the service charge can be obviated by using a maximum limiting rate. *Hood et al. v. Monroe El. Co.* 227, 239–240.

35. Computations of the average charge per kilowatt-hour for various quantities of current consumed by a given load would show very plainly that a service charge plus an energy rate afford gradations in the bill, conforming to the cost of service. The objection to this form of schedule has real foundation, however, when the use of service is so limited that the cost greatly exceeds what the average consumer can afford to pay for it. This condition may be remedied either by limiting the maximum charge per kilowatt-hour or by making the schedule similar in form to the schedule for lighting service. The latter procedure seems to be most desired by the company and its consumers and will be followed in the instant case. *Douglas et al. v. Equitable El. Lt. Co.* 381, 385.

Street lighting rates.

36. The Sheboygan Ry. & El. Co. applies for a review of the findings in the case of *City of Sheboygan v. Sheboygan Ry. & El. Co.* 1911, 6 W. R. C. R. 353, in which the Commission reduced the utility's charges for street lamps from $74 to $68 per lamp per year, and asks for the establishment of a charge upon the basis of the actual consumption of electricity as shown by the review and reinvestigation. Since the application was filed the utility has passed into the control of new owners who have announced their intention of installing new lighting equipment. This makes it unnecessary at this time to reinvestigate the lighting service rendered by the applicant. *Held:* Careful reconsideration of the findings fails to reveal any reason for the review and reëstablishment of rates requested. The application is dismissed. *In re Appl. Sheboygan Ry. & El. Co.* 208, 209.

37. The city of Stevens Point pays for eighty-three lamps. In addition to these, service for seven lamps is furnished free by the company, three more are contracted for by the county and one by the state, making a total of ninety-four lamps in service. Under what conditions free service for seven lamps is furnished the city is not clear. As between the three consumers to whom arc lamp service is rendered, the city, county and state, it is but equitable to apportion the expense of this free service to the city. It would therefore appear proper to discontinue free service and base a rate on the total service rendered. *In re Service and Rates Stevens Point Ltg. Co.* 350, 376.

38. Nothing was said at the hearing relative to increasing the charge to the village for street lighting service, but apportionment of the operating expenses shows that this is necessary if the village is to bear the cost of service received by it. *In re Appl. Browntown Mun. Lt. Plant*, 560, 566.

39. The probable cost of operating a system of magnetite arc lamps for street lighting instead of the enclosed carbon arc lamps now in use was made a subject for testimony at the hearing and, as the city may desire to adopt this form of lighting, the cost was further investigated and a reasonable rate for the service determined. However, in the absence of definite action looking to the establishment of a magnetite system this rate is not made a part of the present order. Within reasonable limits, the utility should be permitted to exercise its own judgment in the selection of equipment and in the operation of it because upon the utility falls the obligation of rendering safe and adequate service. On the other hand, it appears that the city has a reasonable right to select the kind of equipment that it desires to use upon its streets for lighting purposes. *City of Watertown v. Watertown G. & El. Co.* 604, 618.

RATES—EXPRESS.

Changes in block system of rates.
See post, 1.

Reasonableness of rates in particular cases.

1. Complaint was made that the rate of 75 cts. per 100 lb. on laundry moving between Manitowoc and Green Bay was excessive. The rate in question went into effect Feb. 1, 1914, with the interstate commerce commission's block and sub-block plan of rates, and respondent contended that the complaint could not be satisfied without abandoning that arrangement. It appeared that formerly, under the old point to point tariff, the rate was 15 cts. lower than the present rate, and that Green Bay is nearer to Manitowoc than any other point in its sub-block. Under the Commission's first order with reference to express rates (1913, 12 W. R. C. R. 1, later withdrawn in order to make intra-

state rates conform with interstate rates as regards the method of naming rates) the rate between Manitowoc and Green Bay would have been fixed, under scale No. 2, at 60 cts., a rate which would have furnished reasonable compensation. In the present case the rate of 75 cts., based on the interstate commerce commission plan, is the result of one of the defects of that plan, which considers only the sum of sub-blocks east and west and north and south, and fails to take into account short distances on the diagonals, so that in the instant case Green Bay falls just outside the belt of 60 ct. rates, although other stations further from Manitowoc fall within it. While the interstate commerce commission plan contemplates in a general way a 60 ct. belt of rates extending out about 50 miles, the shortest railroad mileage between Green Bay and Manitowoc is only 37 miles, and examination of the situation shows that for practical purposes the express business in the two sub-blocks can be considered as centered at these two main points. As regards the objection to changing the rate in question, because it is based on the interstate commerce commission plan, the fact is noted that in some instances the intrastate block and sub-block rates submitted by the express companies to the Wisconsin Commission, after the change made necessary by that plan, differ materially from the rates which the interstate commerce commission would itself have named had it had jurisdiction. *Held:* The rate of 75 cts. is high for the short distance involved. If defects encountered in the interstate commerce commission plan of rates are due only to a rigid adherence to the method of computation, the defects should be remedied. If the express companies, without jeopardy to that plan, can put in a rate higher than the interstate commerce commission would name, it cannot be maintained that the entire scheme would fall to pieces if a lower rate should be authorized than one which that body would name. The respondent is ordered to discontinue its charges under Scale No. 5 for the transportation of express matter between block 537, sub-block H, and block 538, sub-block O, and substitute therefor the charges under Scale No. 2. *Gray & Zenter v. American Express Co.* 817, 822.

RATES—RAILWAY.

See also REPARATION; SWITCHING CHARGES; TERMINAL CHARGES; various commodity subject headings; WEIGHTS.

Commodity rates.

1. In the instant case the Commission is of the opinion that a rate of 2 cts. per cwt. is an excessive charge because of the character of the commodity moved. The class rate would be prohibitive of the movement of stone tailings. This is recognized by the respondent, and to meet future shipments it has placed in effect a commodity rate of 1.2 cts. per cwt. for distances of five miles, which affords adequate compensation for the transportation services involved. *Carl Frontz v. Mineral Pt. & N. R. Co.* 217, 218.

Concentration rates.

Concentration rates on ore, crushed stone (flux) and coke, Mayville, *see post*, 18.

Demurrage charges.

2. The petitioner alleges that the respondent exacted from it unjust and unwarranted demurrage charges on account of delays in unloading carload shipments of stone at Racine which were occasioned solely by the failure of the respondent to properly fulfill its agreement to provide certain track facilities for the use of the petitioner. There appears to be no provision in the demurrage rules of the respondent which would permit it to make any free time allowance for a delay of the kind

involved in the instant case. *Held:* The charge complained of was unusual and exorbitant. Refund of the amount claimed is ordered. It would seem advisable for the railway companies to amend the demurrage rules to make allowances for delays in unloading cars which are occasioned, as in the instant case, by the failure of the railway company to provide promised track facilities within the time agreed upon with shippers. *Greiling Bros. Co. v. C. M. & St. P. R. Co.* 449, 453.

Demurrage charges—Free storage period.

3. Application was made for an extension of free storage time, during certain periods of the year, on petitioner's shipments of freight received at Bayfield, Wis., over respondent's line. It appears that the petitioners are residents of La Pointe, a town on Madeline Island, about three and one-half miles from the mainland at Bayfield, that during certain periods of the year both the mail service and the carrying of freight across the channel are subject to more or less regular interruption, and that for more than half the year mail service is scheduled for three days per week only. *Held:* The conditions in the present case warrant an exception to the general rule (1797–4). However, as there is evidence before the Commission of like conditions at other points, and as uniformity in charges is desirable where conditions are alike, a recommendation rather than an order will be made. If not adopted, an investigation, on motion of the Commission, making parties all carriers in the state who are members of the Wisconsin Demurrage Bureau will follow. It is recommended that all lines in Wisconsin who are members of the Wisconsin Demurrage Bureau put into effect the rule proposed, or one of similar import, through which, under the conditions stated, additional free time allowance will be made for delay due to infrequent mail service or prohibitive conditions brought about by the weather. *Albright et al. v. C. St. P. M. & O. R. Co.* 763, 765.

Joint or through rates.

4. While nearly all log rates are constructed on the basis of an outhaul of the finished product and are not directly comparable with the traffic under consideration where reshipment is not taken into account, yet upon any proportional allotment of rates, the ones in question are excessive. From the investigation made it appears that a joint through rate not to exceed 4.5 cts., subject to minimum weight of 50,000 lb., would be reasonable in the present case. The respondents are ordered to discontinue their present rates and substitute therefor the rates approved by the Commission. *Webster Mfg. Co. v. C. & N. W. R. Co. et al.* 703, 704–706.

Making rates—Elements considered—Cost of Service.

5. The fact that the movements in question require the use of properties of relatively high value, as compared with other railway property used and useful in the service of the public, and the fact that the bulk of the movements consists of the transportation of raw or partly manufactured materials, the value of the movement of which is not very high to the shipper, make it extremely difficult to apply the cost theory of rate making unalloyed in the instant case. It is, indeed, evident that if each movement were called upon to pay the full estimated average cost of performing the service, including all indirect or overhead costs and dividends, the rates would be so high that many of the movements could not be made. The carrier should therefore be satisfied with a rate which, though it may not cover all the costs arising in connection with each movement, will nevertheless pay all the direct costs and assume a share of the burden of the indirect costs. *In re C. M. & St. P. Switching Rates in Milwaukee,* 261, 270.

Making rates—Elements considered—Cost of service—Terminal and movement expenses.

6. A detailed physical valuation of the terminal properties and a detailed study of transportation movements in the district were made; the total freight expenses were apportioned among "Through", "In", "Out", and "Terminal" movements; and the costs of making the terminal movements were analyzed. An ideal terminal tariff based on cost and on weight and distance is considered. *In re C. M. & St. P. Switching Rates in Milwaukee*, 261, 265.

Manufacturers' rates on raw material.

7. While nearly all log rates are constructed on the basis of an outhaul of the finished product and are not directly comparable with the traffic under consideration where reshipment is not taken into account, yet upon any proportional allotment of rates, the ones in question are excessive. *Webster Mfg. Co. v. C. & N. W. R. Co. et al.* 703, 704.

Reasonableness of rates—Matters considered in determining reasonableness—Competitive status of industries served.

8. Considering both the necessary return to the railway company and the competitive status of many of the industries in the district, an industrial switching rate of 1 ct. per 100 lb., with minimum weights of 50,000 lb. and 60,000 lb. per car, is as high a rate as can reasonably be put into effect at this time. *In re C. M. & St. P. Switching Rates in Milwaukee*, 261, 271.

Reasonableness of rates—Matters considered in determining reasonableness—Cost of Service.

9. It appears that in this case it costs the railroad but little, if any, more to bring the cars back to Milwaukee than it did to take them out in the first place, and the difference of 60 to 70 per cent seems hardly warranted. If the cars had been unloaded at Fond du Lac and Oshkosh as was originally intended, they would have been brought back to Milwaukee empty, since there is practically no movement of loaded gondolas from these points to Milwaukee. The fact that there is very little coal moving into Milwaukee is not sufficient reason, in our opinion, why an occasional shipment of coal should not be given a reasonable rate on the basis of the cost to the carrier of performing the service. *Pennsylvania Coal & Supply Co. v. C. M. & St. P. R. Co.* 746, 748.

Reasonableness of rates—Matters considered in determining reasonableness—Delay due to infrequent mail service or prohibitive conditions brought about by the weather.

See ante, 3.

Reasonableness of rates—Matters considered in determining reasonableness—Nature of traffic.

10. It is impossible to determine what amount of the commodity would have moved in either form. Therefore, to award reparation upon the shipments in question would discriminate against all shippers obliged to pay the regular rates during the period involved unless like reparation were also awarded to them upon demand. It would also be manifestly unjust to the carrier to establish a rule which would have the likely effect of mulcting it in a large amount to satisfy reparation claims not otherwise thought of, simply because the carrier had failed to voluntarily make certain slight reductions in a schedule of rates, to which no previous objection had been made either by any shipper or

the Commission (*Andarko Cotton Oil Co. v. A. T. & S. F. R. Co.* 20 I. C. C. R. 43, 50). Furthermore such a policy would be inimical to the best interests of all concerned, would tend to bring about a rigidity of rate schedules through temerity of carriers to make adjustments required by business conditions, would cause the Commission to hesitate and estimate ultimate consequences before reducing rates in order to stimulate traffic in particular instances, and through shippers' possible overzealousness to recoup alleged excess freight charges might induce a condition militating against the full, fair regulation of transportation charges primarily contemplated by the statute (*Stevens & Jarvis Lbr. Co. v. C. St. P. M. & O. R. Co.* 1907, 2 W. R. C. R. 131, 134). The relief granted in the case upon which this claim for reparation is based was intended as a complete adjustment of the log rate situation there involved, and it was not the purpose of the Commission that the rates there established should have any retroactive effect. Petitions dismissed. *Barker-Stewart Lbr. Co. et al. v. C. & N. W. R. Co.* 628, 631–633.

Reasonableness of rates—Matters considered in determining reasonableness—Quantity of articles shipped.

11. The fact that there is very little coal moving into Milwaukee is not sufficient reason why an occasional shipment of coal should not be given a reasonable rate on the basis of the cost to the carrier of performing the service. *Pennsylvania Coal & Supply Co. v. C. M. & St. P. R. Co.* 746, 748.

Reasonableness of rates—Matters considered in determining reasonableness—Relation of weights.

12. The relation of net weight to the total gross weight of the car is an important consideration. In general coal is loaded quite heavily. The four cars mentioned in the complaint were loaded somewhat lighter than usual, but it so happens that the cars in which the coal moved, were also lighter than the average and that the relation of tare weight to net weight was about normal for coal. *Pennsylvania Coal & Supply Co. v. C. M. & St. P. R. Co.* 746, 749.

Reasonableness of rates in particular cases—Barley, Janesville to Cudahy.

13. The petitioner alleges that the rate of 8 cts. per cwt. which the respondent exacted together with a reconsignment charge of $2 for the transportation of a carload of barley from Janesville to Cudahy was unusual and exorbitant and asks for refund on the basis of a rate of 7 cts. per cwt., which is the rate from Janesville to Milwaukee, plus the reconsignment charge of $2 for transportation from Milwaukee to Cudahy. The respondent contends that the 8 ct. charge was correctly made on the basis of the 7 ct. rate from Janesville to Milwaukee plus a rate of 1 ct. from Milwaukee to Cudahy, but that no reconsignment charge should have been assessed. Since the petition was filed the respondent has put into effect the rate claimed as reasonable by the petitioner. *Held:* The charge exacted was unusual and exorbitant. The reasonable charge for the service is 7 cts. per cwt. plus a reconsignment charge of $2 at Milwaukee. Refund is ordered on this basis. *Owen & Brother Co. v. C. & N. W. R. Co.* 79, 81.

Reasonableness of rates in particular cases—Beer, Wausau to Tomahawk and Minocqua.

14. The petitioner alleges that the charges exacted by the respondent for the transportation of certain carload shipments of beer from Wausau to Tomahawk and Minocqua are exorbitant to the extent that they exceed the rates established in *Wausau Advancement Ass'n v. C. M. &*

St. P. R. Co. 1914, 13 W. R. C. R. 527, and asks for refund. *Held:* The charges complained of were unusual and exorbitant. Refund is ordered on the basis of the rates fixed in the order cited. *Ruder Brwg. Co. v. C. M. & St. P. R. Co.* 508, 509.

Reasonableness of rates in particular cases—Bolts, Manson and Bradley to Merrill.

15. Complaint was made of excess charges on twenty carloads of wood bolts, shipped from Manson and Bradley to Merrill, Wis. It appears that the shipments were billed locally over respondent's line from Manson and Bradley to Heafford Junction, a distance of four miles, at a rate of 3 cts. per cwt., and locally over the line of the C. M. & St. P. Ry. Co. from Heafford Junction to Merrill, a distance of twenty-eight miles, at a rate of 1½ cts. per cwt. Refund is asked on the basis of a 1½ ct. rate. Respondent's tariff applicable to the commodity in question was 2 cts. per cwt. for distances of five miles or less between all points on its line in Wisconsin. The foregoing rate was in effect at the time the shipment moved, and the complaint is not broad enough to warrant an investigation as to its reasonableness. *Held:* The charge of 3 cts. per cwt. exacted on the shipments in question was excessive. The reasonable charge exacted should have been 2 cts. per cwt. Refund ordered on that basis. *Merrill Woodenware Co. v. M. St. P. & S. S. M. R. Co.* 805, 807.

Reasonableness of rates in particular cases—Bottles, Milwaukee to Waukesha.

16. The petitioner alleges that the charge of 7 cts. per cwt. assessed by the respondent for the transportation of two cars of bottles from Milwaukee to Waukesha was unusual and exorbitant to the extent that it exceeds the rate of 5 cts. per cwt. previously in effect and also in effect over other lines between the said points at the time the shipment moved. The respondent alleges that the 7 ct. rate was published in error and asks that the reparation requested be awarded. *Held:* The rate exacted of the petitioner was unusual and exorbitant. The reasonable rate for the service rendered is 5 cts. per cwt. Refund is ordered on this basis. *Franzen & Co. v. M. St. P. & S. S. M. R. Co.* 77, 78.

Reasonableness of rates in particular cases—Box shooks, Marinette to Stanley.

17. The petitioner alleges that it was overcharged for the transportation of a carload of box shooks from Marinette to Stanley. The charge assessed by the respondents was based on a rate of 13 cts. per cwt. from Marinette to Eau Claire and a rate of 5 cts. per cwt. from Eau Claire to Stanley. Since the shipment moved the C. St. P. M. & O. R. Co. has put into effect a rate of 13 cts. per cwt. for shipments from Marinette to Stanley and the petitioner asks refund upon the basis of this rate. *Held:* The charge complained of was unusual and exorbitant. The rate of 13 cts. per cwt. now in effect is the reasonable charge for the service rendered. Refund is ordered upon this basis. *Big Four Canning Co. v. C. St. P. M. & O. R. Co.* 84, 85.

Reasonableness of rates in particular cases—Brick, Mayville.

18. This proceeding is in effect a continuation of a previous proceeding of the same title in which a decision was rendered through error on July 11, 1913, 12 W. R. C. R. 248. The petitioner alleges that the distance tariff rate exacted on shipments of brick within the yard limits of Mayville, from the petitioner's brickyard to the plant of the Northwestern Iron Co., is excessive and unreasonable as compared with flat rates charged other industries for the movement of commodities within

the yard limits. Certain of the flat rates mentioned are a part of concentration rates on raw materials. *Held:* The petitioner's shipments were not entitled to concentration rates inasmuch as the movements involved were purely terminal movements. The rate complained of, however, is unreasonably high. The reasonable rate would have been 1 ct. per cwt. It is ordered that the respondent (1) establish a rate of 1 ct. per cwt.; with a minimum of $6.00 per car, for the switching of cars between points within the yard limits of Mayville; and (2) make refund to the petitioner upon the basis of this rate. *Ruedebusch v. C. M. & St. P. R. Co.* 92, 96.

Reasonableness of rates in particular cases—Car stakes—Rhinelander.

19. The petitioner asks for refund of certain charges exacted from it for the transportation of two carloads of car stakes from Rhinelander to Spur 236, on the ground that the stakes were removed from cars containing logs and were being returned to the original point of shipment of the logs and therefore should have been returned free of charge. It is the custom of railway companies to include the cost of transporting car stakes used in shipping logs in the rate assessed upon the shipment of logs and to return the stakes to the point of origin of the shipment without additional charge. The respondent is willing to make the refund asked. *Held:* The charges complained of were unusual and unreasonable. Refund of the full amount paid is ordered. *Brown Bros. Lbr. Co. v. M. St. P. & S. S. M. R. Co.* 204, 205.

Reasonableness of rates in particular cases—Cheese boxes, Butternut to Glover.

20. Complaint was made of excessive charges on a shipment of wooden cheese boxes from Butternut, Wis., to Glover, Wis., and refund asked. It appeared that subsequently the respondent, the M. St. P. & S. S. M. Ry. Co., voluntarily established a considerably lower rate than that charged petitioner, and that at the time of the shipment it had in effect a substantially lower rate applicable to a substantially similar distance and traffic situation as those in question. *Held:* The rate of 24½ cts. per cwt. exacted of the petitioner for shipment of cheese boxes from Butternut to Glover was exorbitant. A reasonable charge would have been the rate subsequently established or 18½ cents per cwt. Refund ordered on that basis. *Creamery Package Mfg. Co. v. M. St. P. & S. S. M. R. Co.* 761, 762.

Reasonableness of rates in particular cases—Coal (hard coal) Oshkosh and Fond du Lac to Milwaukee.

21. Complaint was made that the rates on hard coal from Oshkosh and Fond du Lac to Milwaukee are unreasonable. It appears that the rate on hard coal from Milwaukee to Fond du Lac and Oshkosh is 75 cts. per net ton, while the rate from Fond du Lac to Milwaukee is $1.20 per net ton, and from Oshkosh to Milwaukee is $1.30 per net ton. From an analysis of the cost of coal movements over the road of the respondent for several years past it appears that the going rate of 75 cts. per net ton to Fond du Lac and Oshkosh allows the carrier to pay all operating expenses and leave something to pay a reasonable return on the investment necessary to carry on the business. It also appears that there is very little coal moving into Milwaukee from inland towns. *Held:* The fact that there is very little coal moving into Milwaukee is not sufficient reason why an occasional shipment of coal should not be given a reasonable rate on the basis of the cost to the carrier of performing the service. The rates in question from Oshkosh and Fond du Lac to Milwaukee are unreasonable to the extent that they exceed the going rate.

Refund is ordered on that basis, and the respondent is further ordered to change its tariff on coal to read "between Milwaukee and" the cities of Fond du Lac and Oshkosh, instead of "from Milwaukee to" Fond du Lac and Oshkosh. *Pennsylvania Coal & Supply Co. v. C. M. & St. P. R. Co.* 746, 749.

Reasonableness of rates in particular cases—Excelsior, Rice Lake to Ft. Atkinson.

22. The petitioner alleges that it was charged a rate of 13.5 cts. per cwt. subject to a minimum weight of 22,800 lb., for the transportation of a carload of excelsior weighing 21,736 lb. from Rice Lake to Ft. Atkinsin and asks that the respondents be authorized and directed to make refund on the basis of a rate of 11.5 cts., subject to a minimum weight of 20,000 lb., which is the rate now in effect between the points named. It appears that the 11.5 ct. rate should have applied to Ft. Atkinson at the time the shipment moved, but that it was, through error, omitted from the tariff. The respondents are willing to make refund. *Held:* The charge complained of was unusual. Refund is ordered on the basis of the 11.5 rate which would have been the reasonable charge for the service performed. *Selle & Co. v. C. St. P. M. & O. R. Co. et al.* 225, 226.

Reasonableness of rates in particular cases—Excelsior, Rice Lake to Superior.

23. The petitioner alleges that charges assessed by the respondent at the rate of 10 cts. per cwt. for the transportation of a shipment of excelsior from Rice Lake to Superior were excessive to the extent that they exceed charges based on the rate of 8½ cts. per cwt., put into effect by the respondent since the shipment moved. The respondent is willing to make refund. *Held:* The charges complained of were unusual. The reasonable rate is 8½ cents per cwt. The refund claimed is ordered. *Selle & Co. v. M. St. P. & S. S. M. R. Co.* 544, 545.

Reasonableness of rates in particular cases—Fuel Oil, Mayville to West Allis.

24. The petitioner alleges that the charge of 12 cts. per cwt. exacted by the respondent for the transportation of a shipment of fuel oil from Mayville to West Allis was exorbitant to the extent that it exceeded the rate of 10 cts. per cwt., put into effect by the respondent since the shipment moved. It appears that the 10 ct. rate was not put into effect earlier for the reason that few if any shipments of fuel oil had been made between the points in question. The rate of 10 cts. is reasonable. *Held:* The charge complained of was unusual. The refund claimed is ordered. *Northwestern Iron Co. v. C. M. & St. P. R. Co.* 577, 578.

Reasonableness of rates in particular cases—Fuel Wood, Deans Spur to Arpin.

25. Complaint was made of excess charge on three carloads of fuel wood shipped from Dean's Spur, Wis., to Arpin, Wis. It appears that the charges were assessed at the rate of 2¾ cts. per cwt., that a rate of 2 cts. per cwt. was in effect at that time on the Chicago & North Western Railway Company from Arpin and other stations in the vicinity, and that subsequent to the shipments in question the respondent established a rate of 2 cts. per cwt. on fuel wood from Grand Rapids, Wis., to Arpin. Petitioner asks refund on the basis of the latter rate. *Held:* A rate of 2 cts. per cwt. on fuel wood moving from Arpin to Grand Rapids is ample compensation for the services rendered. Refund ordered on that basis. *Johnson & Hill Co. v. M. St. P. & S. S. M. R. Co.* 752, 753.

Reasonableness of rates in particular cases—Fuel wood and fence posts, Arpin to Neenah.

26. The petitioner alleges an overcharge on a quantity of fuel wood and fence posts shipped in the same car from Arpin to Neenah, Wis., over respondent's line. It appears the shipment was billed as fuel wood at the rate properly applicable to that commodity. At destination the rate applicable to straight carload shipments of lumber, and articles taking lumber rates, including fence posts, was assessed. This rate does not, however, include fuel wood. *Held:* The fuel wood should have been charged at 3½ cts. and the fence posts at 18½ cts. per cwt. Refund ordered on that basis. *Miller v. C. & N. W. R. Co.* 707, 708.

Reasonableness of rates in particular cases—Ground limestone, Waukesha to Durand.

27. Complaint was made by the petitioner that the charges on a carload of ground limestone, shipped from Waukesha to Durand, Wis., were unreasonable. *Held:* The rates charged were unreasonable and should not have exceeded charges based on rates established by the Commission in *Waukesha Lime & Stone Co., Frank B. Fargo, Agent, v. M. S. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471, supplemented February 7, 1914, for the purpose of making the C. & N. W. and the C. M. & St. P. railway companies parties to the proceeding. The rate charged on limestone for agricultural purposes from Waukesha to Durand, Wis., a distance of 297 miles via respondent lines, should have been 5.10 cts. per cwt. Refund ordered on that basis. *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 718, 720.

Reasonableness of rates in particular cases—Hay, Osceola to Rhinelander.

28. Complaint was made of excessive charges on a car of hay shipped from Osceola to Rhinelander, Wis., and refund asked. It appeared that the rate would have been 10 cts. per cwt. had it not been for the omission of the intermediate clause from the tariff in question through an oversight, which was corrected when attention was called to it. *Held:* The charge of 12½ cts. per cwt. exacted of petitioner on the shipment of hay from Osceola to Rhinelander was excessive. A reasonable rate would have been 10 cts. per cwt. Refund ordered on that basis. *Osceola Mill & Elevator Co. v. M. St. P. & S. S. M. R. Co.* 759, 760.

Reasonableness of rates in particular cases—Logs, Bayfield to Washburn.

29. The petitioner alleges that the rate of 3⅛ cts. per cwt. exacted by the respondent for the transportation of four carloads of logs from Bayfield to Washburn was exorbitant and asks for refund on the basis of a rate of 1 ct. per cwt., minimum charge $5 per car, which was in effect at the time the shipments in question moved for shipments from Bayfield to Ashland originating on the Bayfield Transfer Ry. The respondent is willing to make refund. *Held:* The charge complained of was unusual and exorbitant. Refund is ordered on the basis of a rate of 1 ct. per cwt., minimum charge $5 per car, which would have been the reasonable rate for the service performed. *Sprague Lbr. Co. v. C. St. P. M. & O. R. Co.* 289, 290.

Reasonableness of rates in particular cases—Logs, Grandview to Cumberland.

30. The petitioner alleges that the rate of 6 cts. per cwt. exacted by the respondent for the transportation of nine carloads of logs from Grandview to Cumberland was excessive and asks for refund on the

basis of a rate of $2 per 1,000 feet, minimum charge $10 per car. The rate last named was canceled prior to the time the shipments moved but was restored after the shipments moved. The respondent is willing to make refund. *Held:* The rate complained of was unusual, illegal and exorbitant. Refund is ordered on the basis of a rate of $2.00 per 1,000 feet, minimum charge $10 per car, which would have been the reasonable rate for the service performed. *Cumberland Fruit Pkg. Co. v. C. St. P. M. & O. R. Co.* 287, 288.

Reasonableness of rates in particular cases—Logs, Sunnyside.

31. The respondent applies for a rehearing of a matter decided on April 7, 1914, 14 W. R. C. R. 253, on the ground that the rates ordered discontinued were not out of harmony with rates justified by practice and by the approval of the Commission elsewhere in Wisconsin. *Held:* No change should be made at this time in the order in question. The application for rehearing is denied. *Wachsmuth Lbr. Co. v. Bayfield Transfer Ry. Co.* 601, 603.

Reasonableness of rates in particular cases—Logs, Sunnyside to Bayfield.

32. The petitioner alleges that the rates provided by the respondent's tariff of Jan. 1, 1914, for the transportation of logs are excessive and unjustly discriminatory against the petitioner. The petitioner also alleges that many of the cars in use are so defective that they will not carry the minimum weight of 45,000 lb. established by the respondent and complains that the car equipment in general is defective and inadequate and a source of great expense to the petitioner, by reason of the fact that the petitioner is required to replace all cars destroyed in operation and to repair all defective cars. Two questions are considered in deciding the matters at issue: (1) that of rates; and (2) that of the minimum weight of 45,000 lb. The reasonableness or unreasonableness of a given rate cannot be determined by the consideration of any one alone of the several factors which are involved in the matter but the peculiar conditions out of which the rate grew must be taken into account along with the general principles which are recognized as applicable in the establishment of all rates. *Held:* 1. Although the rates complained of are prima facie not unreasonable when the character of the service and the rates charged over other lines for a like service are considered, certain modifications in the tariff should be made to prevent the doing of injustice to the petitioner. 2. The minimum weight of 45,000 lb. per car, in view of the defective condition of many of the cars in use, is excessive. The respondent is ordered to put into effect a tariff on logs fixed by the Commission, subject to a minimum weight of 40,000 lb. per car. On shipments from Sunnyside to Bayfield, inasmuch as the distance involved is but a fraction over five miles, the five mile rate, instead of the ten mile rate as proposed by the respondent, is to apply. *Wachsmuth Lbr. Co. v. Bayfield Transfer Ry. Co.* 253, 255, 260.

Reasonableness of rates in particular cases—Logs, between Van Buskirk and Carson to Superior.

33. Complaint was made by the petitioner that the rates on hardwood logs between Van Buskirk and Carson, in Iron county, Wis., to Central avenue, Superior, were unjust and unreasonable as compared with rates on forest products for similar hauls in Wisconsin traffic, interstate traffic, or Minnesota intrastate traffic. Petitioner alleged that the various carriers of the state had built up a system of rates on logs and other raw material specially designed to keep such raw materials for manufacture on their own lines, and for the reshipment of the finished prod-

uct so far as each carrier could control the movement. *Held:* While nearly all log rates are constructed on the basis of an out-haul of the finished product and are not directly comparable with the traffic under consideration where reshipment is not taken into account, yet upon any proportional allotment of rates, the ones in question are excessive. From the investigation made it appears that a joint through rate not to exceed 4.5 cts., subject to minimum weight of 50,000 lb., would be reasonable in the present case. The respondents are ordered to discontinue their present rates and substitute therefor the rates approved by the Commission. *Webster Mfg. Co. v. C. & N. W. R. Co. et al.* 703, 706.

Reasonableness of rates in particular cases—Logs, Wisconsin points to Peshtigo.

34. Complaint was made of excessive charges on shipments of saw logs from various Wisconsin points to Peshtigo, Wis. It appears that during the period in question the rates in force were slightly higher than those subsequently ordered by the Commission. (*Nor. Hemlock & Hardwood Ass'n v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 241.) In that order the old rates were readjusted and slightly lowered, and the petition asks for a refund on the basis of the rates thus established. The matter of the reasonableness of the rates in question was considered when they were readjusted and the Commission found that they were a little higher than the circumstances warranted, and so arranged as to apply the same rate for a long series of distances and then jump abruptly to a considerably higher rate. The rates ordered were intended to correct these two conditions, neither one of which was specifically declared to be unreasonable. *Held:* There is not sufficient ground to authorize a refund in the present case. It is only when the Commission finds the rate is unusual, exorbitant, illegal or erroneous that reparation may be awarded. The mere fact that a rate has been reduced by the Commission is not sufficient ground in itself for authorizing refunds. (*Menasha Wooden Ware Co. v. W. C. R. Co.* 1908, 2 W. R. C. R. 589; *Beaver Dam Lbr. Co. v. C. St. P. M. & O. R. Co.* 1908, 2 W. R. C. R. 700; *Merrill Wooden Ware Co. v. C. M. & St. P. R. Co.* 1908, 3 W. R. C. R. 54; *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774.) The petition is dismissed. *Peshtigo Lbr. Co. v. C. & N. W. R. Co.* 624, 627.

Reasonableness of rates in particular cases—Logs, Wisconsin points on the C. & N. W. R.

35. Complaint was made of exorbitant rates upon shipments of saw logs in carload lots from various Wisconsin points to the manufacturing points of the fifteen different petitioners. Refund is asked on the basis of the rate schedule ordered by the Commission in *Northern Hemlock & Hardwood Mfrs. Ass. v. C. & N. W. R. Co.* 1913, 12 W. R. R. 241. It appears that the rates ordered by the Commission were considerably higher than the trainload rates that expired February 11, 1913, and slightly lower than the carload rates in place of which they were substituted. Refund is asked on shipments charged the carload rates discontinued by the Commission's order. In the order in question the Commission found that the trainload rates were unreasonably low, but the carload rates were a little higher than the circumstances warranted, and so arranged as to apply the same rate for a long series of distances and then jump abruptly to a considerably higher rate. The rates for carload shipments, until changed by the Commission, had been in effect for a number of years without protest on the part of the shippers, and were availed of by those who enjoyed the special contract rates for trainload shipments, when shipping in less than trainload lots. It was conceded that if the special rates had been in effect during the period

in question, some of the shipments would have moved in carload lots and taken the regular rates applicable to carload shipments, in which event no objection would have been raised to the rates for carload shipments. *Held:* It is impossible to determine what amount of the commodity would have moved in either form. Therefore, to award reparation upon the shipments in question would discriminate against all shippers obliged to pay the regular rates during the period involved unless like reparation were also awarded to them upon demand. It would also be manifestly unjust to the carrier to establish a rule which would have the likely effect of mulcting it in a large amount to satisfy reparation claims not otherwise thought of, simply because the carrier had failed to voluntarily make certain slight reductions in a schedule of rates to which no previous objection had been made either by any shipper or the Commission (*Andarko Cotton Oil Co. v. A. T. & S. F. R. Co.* 20 I. C. C. R. 43, 50). Furthermore, such a policy would be inimical to the best interests of all concerned, would tend to bring about a rigidity of rate schedules through temerity of carriers to make adjustments required by business conditions, would cause the Commission to hesitate and estimate ultimate consequences before reducing rates in order to stimulate traffic in particular instances, and through shippers' possible overzealousness to recoup alleged excess freight charges might induce a condition militating against the full, fair regulation of transportation charges primarily contemplated by the statute (*Stevens & Jarvis Lbr. Co. v. C. St. P. M. & O. R. Co.* 1907, 2 W. R. C. R. 131, 134). The relief granted in the case upon which this claim for reparation is based was intended as a complete adjustment of the log rate situation there involved, and it was not the purpose of the Commission that the rates there established should have any retroactive effect. Petitions dismissed. *Barker-Stewart Lbr. Co. et al. v. C. & N. W. R. Co.* 628, 633.

Reasonableness of rates in particular cases—Lumber, Ashland to Berlin.

36. Complaint was made of excess charges on a carload of lumber shipped from Ashland to Berlin, Wis., and refund asked. The shipment was made on the assumption that the rate over respondents' lines was the same as that over the lines of the M. St. P. & S. S. M. Ry. Co. and the C. M. & St. P. Ry. Co., which is a rate of 12 cts. between the points in question. The establishment of joint rates on lumber was ordered in *Wis. Retail Lbr. Dealers Ass'n. v. C. & N. W. R. Co. et al.* 1909, 3 W. R. C. R. 471 and 589. The petitioner's charge in the present case was based on the sum of the local rates. The fact that a joint rate was not in effect was due to the belief that no shipments of lumber were likely to move between the points in question. *Held:* The rate exacted of petitioner was unusual. A reasonable rate would have been 12 cts. per cwt. Refund ordered on that basis. *John Schroeder Lbr. Co. v. C. & N. W. R. Co. et al.* 823, 824.

Reasonableness of rates in particular cases—Lumber, Cotton to Rhinelander.

37. Complaint was made of excessive charges on six carloads of lumber shipped from Cotton, Wis., to Rhinelander, Wis., for concentration and reshipment. It appears that the rate upon the basis of which the shipments in question were made had been in effect, but remained in effect only through error at the time it was quoted to petitioner, and that an additional sum, on the basis of a higher rate, was collected by the connecting carrier, the respondent M. St. P. & S. S. M. R. Co. Subsequently the original rate quoted to petitioner was reëstablished, and petitioner asks refund on that basis. *Held:* The rate charged petitioner was excessive. A reasonable charge would have been 4½ cts. per cwt.,

the rate originally charged petitioner and since then put into effect by respondent M. St. P. & S. S. M. R. Co. Refund ordered on that basis. *Pierce v. M. St. P. & S. S. M. R. Co. et al.* 754, 756.

Reasonableness of rates in particular cases—Lumber, Hawkins.

38. The petitioner alleges that the charges exacted from it by the respondent on the basis of the regular lumber distance tariff for the movement of ten carloads of lumber within the village of Hawkins are excessive to the extent that they exceed charges based on the switching rate put into effect for such services after the shipments in question moved, and asks for refund. The respondent is willing to make the reparation claimed. *Held:* The distance tariff rate was an exorbitant charge. Refund is ordered on the basis of the switching charge now in effect, which would have been the reasonable charge for the services rendered. *Rusk Box & Furniture Co. v. M. St. P. & S. S. M. R. Co.* 136, 137.

Reasonableness of rates in particular cases—Posts, (cedar posts) Taylor Rapids to Peshtigo.

39. The petitioner alleges that the charges collected by the respondents for the transportation of thirteen shipments of cedar posts from Taylor Rapids to Peshtigo were erroneous and illegal and asks for refund. The charges in question were based on a rate of 8½ cts. per 100 lb., then in effect from Taylor Rapids to Bagley Jct., plus a charge of $3 per car from Bagley Jct. to Peshtigo. At the time the shipments moved a rate of 6½ cts. per 100 lb. was in effect from Taylor Rapids to Marinette and Menominee, Mich., points beyond Bagley Jct. on the C. M. & St. P. Ry., and this rate has since been put into effect over the same line from Taylor Rapids to Bagley Jct. The C. M. & St. P. Ry. Co. is willing to grant the relief asked. *Held:* The charges complained of were unusual and exorbitant. Refund is ordered upon the basis of a rate of 6½ cts. per 100 lb. from Taylor Rapids to Bagley Jct., plus $3 per car from the latter point to Peshtigo, which would have been the reasonable charges for the service performed. *Peshtigo Lbr. Co. v. C. M. & St. P. R. Co. et al.* 188, 189.

Reasonableness of rates in particular cases—Seed peas, River Falls to Columbus.

40. The petitioner alleges that the rate of 32.5 cts. per cwt. exacted by the respondents for the transportation of seed peas in carloads from River Falls to Columbus is exorbitant when compared with rates from other point to Columbus and asks for refund on a certain shipment on the basis of a rate of 20 cts., which is the regular 5th class St. Paul to Chicago rate. *Held:* The rate complained of is excessive and the petitioner is entitled to refund. The respondents are ordered: (1) to substitute for this rate a rate of 20 cts. per cwt. on dried and seed peas in carloads at minimum weight of 36,000 lb. per car; and (2) to make refund to the petitioner on this basis. *Leonard Seed Co. v. C. St. P. M. & O. R. Co.* 97, 101.

Reasonableness of rates in particular cases—Slab wood, New London to La Crosse.

41. The petitioner complains of the rate of 9 cts. per cwt., exacted by the respondent for the transportation of five carloads of slab wood from New London to La Crosse, and asks for refund on the basis of a rate of 4½ cts. per cwt. applying on fuel wood over other lines for a like distance and put into effect by the respondent since the shipments in question moved. The respondent is willing to make refund. *Held:* The rate complained of was unusual and excessive. Refund is ordered on

the basis of the rate now in effect which would have been the reasonable charge for the services rendered. *Browndeer Lbr. & Fuel Co. v. G. B. & W. R. Co.* 138, 139.

Reasonableness of rates in particular cases—Stone tailings, Highland Jct. to Hewetts.

42. The petitioner alleges that the rate of 2 cts. per cwt., exacted by the respondent for the transportation of a car of stone tailings from Highland Jct. to Hewetts, was unusual and exorbitant and prays for refund on the basis of a rate of 1.2 cts. which the respondent has put into effect since the shipment moved. The respondent is willing to make refund. Held: The charge exacted was unusual and exorbitant. Refund is ordered on the basis of the rate of 1.2 cts. now in effect which would have been the reasonable charge for the service performed. *Frontz v. Mineral Pt. & N. R. Co.* 217, 218.

Reasonableness of rates in particular cases—Switching charges —Coal, Green Bay.

43. The petitioners allege that the refusal of the respondent to absorb the switching charges of $2 per car on coal shipped by them to non-competitive points on the respondent's line from the tracks of the C. & N. W. Ry. Co. and the C. M. & St. P. Ry. Co. in Green Bay effects a discrimination against the petitioners by reason of the fact that competing shippers located on the respondent's tracks are not required to pay this charge. There is no uniform practice among the railroads of the state as to the absorption of switching charges nor have the railroads evolved, or sought to evolve, any principle that would serve as a basis upon which to determine what charges are equitable in a given case. The practice of the railroads in this matter has therefore become more or less arbitrary and inequitable. *Held:* The practice of the respondent in the present instance should be discontinued. The respondent is ordered to absorb switching charges on coal in carload lots from Green Bay to non-competitive points upon its lines down to a minimum return of $15 per car, in the same manner as it now absorbs such charges on shipments to competitive points upon its lines. *Barkhausen Coal & Dock Co. et al. v. G. B. & W. R. Co.* 172, 175.

Reasonableness of rates in particular cases—Switching charges Logs—Rhinelander.

44. The petitioner asks for refund of certain switching charges paid on 200 cars of logs shipped to Rhinelander for delivery at the Stevens mill, on the ground that the practice exacting such charges was declared to be unreasonable and unjust in *Stevens Lbr. Co. v. C. & N. W. R. Co. et al.* 1913, 11 W. R. C. R. 476. *Held:* The charges exacted were unusual and exorbitant. No charge should have been made for the switching service rendered. Refund of the amount paid is ordered. *Mason-Donaldson Lbr. Co. v. M. St. P. & S. S. M. R. Co.* 82, 83.

Reasonableness of rates in particular cases—Ties and rails, Lange Spur to Hotchkiss Spur (between Draper and Kaiser).

45. The petitioner alleges that the distance tariff rate exacted by the respondent, in the absence of a switching rate governing the movement, for the transportation of seventeen cars of ties and rails from Lange Spur to Hotchkiss Spur, a distance of 2.1 miles, between Draper and Kaiser, Wis., was exorbitant and asks for refund on the basis of a trackage rate of $1 per car. The respondent is willing to make refund. *Held:* The charge complained of was unusual and exorbitant. Refund

is ordered on the basis of a rate of $1 per car which would have been the reasonable rate for the service performed. *New Dells Lbr. Co. v. C. St. P. M. & O. R. Co.* 186, 187.

Storage rates—Additional free storage time allowed for delay due to infrequent mail service or prohibitive conditions brought about by the weather.

See ante, 3.

Switching rates.

On coal, absorption of switching charges, *see ante*, 43.

On lumber, reasonableness of switching charges, Hawkins, *see ante*, 38. Rhinelander, *see ante*, 44.

46. Though the terminal rates ordered in the instant case should eventually be increased beyond the increase granted by the present order, this cannot be done until certain line haul rates which are now under consideration are finally adjusted. The fact that the rates at present in effect have resulted in the establishment of economic and traffic conditions which it is a serious matter to radically disturb must also be taken into account. The fact that individual shippers find it to their convenience to perform, by means of their own locomotives, services which under other circumstances would have to be performed by the carrier, is no reason for the granting of reductions in rates to such shippers. *Held:* 1. It would appear that the service of transportation includes in the case of carload freight traffic, all the initial and final movements involved in spotting cars upon industry spurs and in handling to and from team tracks and that this service should be paid for in a single rate. Considering both the necessary return to the railway company and the competitive status of many of the industries in the district, an industrial switching rate of 1 ct. per 100 lb., with minimum weights of 50,000 lb. and 60,000 lb. per car, is as high a rate as can reasonably be put into effect at this time. *In re C. M. & St. P. Switching rates in Milwaukee*, 261, 271, 281.

Switching rates—Reduction in.

47. It is contended in behalf of certain shippers that those owning their own switch engines and doing their own spotting and hauling of cars should be given a lower rate than other shippers. This contention assumes that it is the duty of the carrier to perform these services and that, in the event of their being performed by the shipper himself, the latter is entitled to what in practice would really amount to a division of the rate. Legal authorities upon the reasonable limits of the services which railways render as common carriers and which may be said to be included in the reasonable rate are consulted. The costs of the various modes of receiving and delivering both carload and less than carload freight were investigated and the fixed charges, interest and taxes, upon the properties directly involved, such as land, trackage, buildings and paving, were ascertained. These costs were determined per unit of service for each of a large majority of the industries in the Milwaukee Terminal District, for cars originating at team tracks and for cars originating at the freight houses. As between the three services—industry track, team track and freight house—differences in costs are due primarily to differences in the fixed charges upon what may be called the ultimate terminal properties used. The fact that individual shippers find it to their convenience to perform, by means of their own locomotives, services which under other circumstances would have to be performed by the carrier, is no reason for the granting of reductions in rates to such shippers. In view of the provisions of sec. 1797—22.2 of the statutes, the general state of industry in the Milwaukee Terminal

District and other facts brought out in the instant case, the reduction in rates asked for in behalf of shippers doing their own spotting and hauling cannot be granted, for the reason that it would not operate alike upon all shippers. *In re C. M. & St. P. Switching Rates in Milwaukee*, 261, 281–283.

Train rates—Discriminatory tendency of.
See ante, 35.

Transit rates—In general.

48. Where a shipment of grain is entitled to transit privileges and where the shipment is separated at the transit point into two or more shipments, each destined to points taking different rates from point of origin to point of final destination, the application of different rates to the shipment involved is not authorized in the present tariffs. *Blodgett Milling Co. v. C. & N. W. R. Co.* 771, 774.

RATES—TELEPHONE.

Discrimination in telephone rates, *see* DISCRIMINATION, 17–22.

Making rates—Elements considered—Cost of service.
See post, 9.

Making rates—Elements considered—Traffic conditions.

1. Traffic conditions were determined as closely as possible and the annual cost to each company of the service in question was computed. *Held:* In view of the closeness of the exchanges of the Trego and Earl telephone companies, the limited extent of free service furnished by each of the companies, the relatively undeveloped condition of the telephone business in the district served and the fact that the return on the physical investment in the toll line is taken care of for both companies in the return computed from the toll charges allowed, it is advisable to continue the free service now maintained between Trego and Earl. *In re Appl. Trego Tel. Co.* 499, 500–501.

Party line rates.
See post, 13.

Physical connection, terms and conditions of joint use.
See also TELEPHONE UTILITIES, 39–40.

2. On account of the terms of the Anti-duplication Law, ch. 610 of the laws of 1913 (amending sec. 1797*m*—74), which aims to prevent uneconomic competition and duplication, it would seem that no charge in excess of the cost of the service and reasonable compensation should be made to those rural subscribers and patrons of connecting companies who have and could have only the service of one company or the other available to them under the foregoing law. As the cost of making the connections will not be great and the benefits derived will be mutual, each company will be required to pay one-half of the cost. *McGowan v. Rock County Tel. Co. et al.* 529, 538–539, 541.

Reasonableness of advance in rates in particular cases.

3. The Troy & Honey Creek Tel. Co. applies for authority to increase its rates. Subscribers of the applicant object on the ground (1) that the applicant's service is inadequate and (2) that the rates at present in effect are sufficient. A valuation was made, the revenues and expenses were analyzed and the applicant's service over its own system and to connecting companies was investigated. *Held:* 1. The service rendered by the applicant is inadequate. 2. The applicant's present

rates require revision to (a) provide a reasonable return to the applicant and (b) promote the improvement of the service. It is ordered that the applicant be authorized to put into effect a schedule of rates determined by the Commission at such time as it shall have installed and in operation a set of books approved by the Commission and shall have complied fully with all other provisions of the order. The schedule of rates authorized includes flat rates for village and rural telephones and provides that these rates shall entitle subscribers to unlimited service over one of the four toll lines connecting the applicant's exchanges to the foreign exchanges in Mazomanie, Lodi, Plain and Loganville. Subscribers desiring unlimited service over a second one of the toll lines named and subscribers desiring such service over all four toll lines are to pay additional charges. Such calls over the toll lines as are not covered by the schedule of flat rates are to be charged for as specified. Nonsubscribers are to pay 10 cts. per call for all calls. It is further ordered: that all calls to foreign exchanges shall be routed over the through lines where such lines exist, except when the through lines are out of order; that charges be made as specified for the replacing of certain existing substation equipment with other types of equipment; that telephone rentals shall be payable in advance as specified; that the applicant shall submit to the Commission for approval a statement of changes which it proposes to make during the year following the adoption of this schedule, in rearranging party lines so that there will be no more than a specified number of subscribers for each line; and that the applicant shall keep all of its equipment in reasonable repair, preserving a record, open to public inspection, of all trouble occurring on its equipment. *In re Appl. Troy & Honey Creek Tel. Co.* 157, 177.

4. The Ettrick Tel. Co. applies for authority to increase its rates. The schedule which the applicant proposes provides a rate for stockholders lower than the rate for nonstockholders. *Held:* The applicant is entitled to an increase in rates. The proposed discrimination between stockholders and nonstockholders, however, is illegal. The applicant is authorized to put into effect a schedule fixed by the Commission and applicable to stockholders and nonstockholders alike. *In re Appl. Ettrick Tel. Co.* 405, 406.

5. The Badger State Tel. & Teleg. Co. applies for authority to increase its rates for local and rural telephone service at its exchanges in Neillsville and Granton and to adopt new rules to govern the rendering of such service. A valuation of the physical property was made, the property apportioned among the local, rural, toll and switching divisions of the business, and the local and rural property further apportioned between the Neillsville and Granton exchanges. The revenues and expenses of the two exchanges were investigated and the probable revenues from the proposed rates considered. It is a question open to argument whether the rural patrons of a telephone utility should be charged directly with the full burden of fixed charges on the investment in rural equipment or whether part of these charges should be borne by the classes of local subscribers who are reached by the rural lines. *Held:* 1. The rates proposed by the applicant should be approved with the exception of the rate proposed for rural service. This should be placed at $16 rather than $18 per year. 2. The rules proposed by the applicant appear to be reasonable with the exception of certain ones which should be modified. Among others the provision that the applicant will not hold itself liable to furnish party line service unless the line can be kept full to capacity should be rescinded and the applicant should hold itself in readiness to furnish party line service within its exchange limits to all who contract for that service. The applicant is authorized to put into effect the schedule of rates asked for in its application as modified to include the changes prescribed by the Commission. These rates are to apply only on full metallic service. *In re Appl. Badger State Tel. & Teleg. Co.* 407, 416, 418.

6. The Ripon United Tel. Co. applies for authority to increase its rates for telephone service furnished from its exchange in the city of Ripon and to abolish certain charges now in effect for service from Ripon to rural subscribers. The utility proposes to effect improvements in its equipment which will increase its investment and thereby increase the value upon which it should be allowed to earn. The charges which the utility desires to abolish are a charge of 10 cts. per message for communication from the city to a rural phone and the alternative charge of 25 cts. per month for unlimited service from the city to rural phones. No such charges are made for communication from rural phones to the city. The value upon which the utility is entitled to a return was computed upon the basis of a valuation made in July, 1913, for purposes of stock issuance, the cost of improvements since made and the cost of the improvements now proposed by the utility, and the revenues and expenses were investigated. *Held:* 1. An increase in rates is necessary if the city of Ripon is to be given the advantage of the improved service proposed by the utility. 2. The message and flat rate charges to city subscribers for the use of the rural lines should be abolished. The utility is authorized: (1) to discontinue the message and flat rate charges in question; and (2) to put into effect, upon completion of the improvements proposed to be made in the equipment of the utility, a schedule of rates determined by the Commission. *In re Appl. Ripon United Tel. Co.* 427, 432.

7. Two proceedings are involved in this case: (1) the Trego Tel. Co. applies for the establishment of such toll rates and charges as may be reasonable for service between the exchanges in Earl and Trego and service from the exchange in Trego to the exchange in Spooner; and (2) the Trego Tel. Co. petitions for a more equitable division between it and the Earl Tel. Co. of the toll charges collected for the transmission of messages over the line between Earl and Spooner, part of which is owned jointly by the two companies. At present service is free between Earl and Trego and from Trego to Spooner. For service from Spooner to Trego and either way between Spooner and Earl a toll charge of 15 cts. is made. The tolls collected for service between Earl and Spooner are divided equally between the Trego Tel. Co. and the Earl Tel. Co. The Trego Tel. Co. contends that inasmuch as it owns the major portion of the line the division should be made on the basis of 10 cts. to it and 5 cts. to the Earl Tel. Co. An approximate valuation of the lines involved was made and apportioned among the Trego Tel. Co., the Earl Tel. Co. and the Spooner Tel. Co., the latter of which owns part of the equipment used; traffic conditions were determined as closely as possible and the annual cost to each company of the service in question was computed. *Held:* 1. In view of the closeness of the exchanges of the Trego and Earl telephone companies, the limited extent of free service furnished by each of the companies, the relatively undeveloped condition of the telephone business in the district served and the fact that the return on the physical investment in the toll line is taken care of for both companies in the return computed from the toll charges allowed, it is advisable to continue the free service now maintained between Trego and Earl. 2. A toll charge of 10 cts. should be made for calls from Trego to Spooner. 3. The revenue collected from the toll charge of 15 cts. for calls between Earl and Spooner should be divided on the basis of 9 cts. to the Trego Tel. Co. and 6 cts. to the Earl Tel. Co. It is ordered that a schedule prescribed by the Commission and embodying the foregoing conclusions be adopted. *In re Appl. Trego Tel. Co.* 499, 505.

8. Two proceedings are involved in this case: (1) certain stockholders of the Eleva Farmers Tel. Co. complain that the rates charged by the company are inadequate and that stockholders are discriminated against in that they are required to pay the same rentals as other patrons and in addition contribute to cover the deficits from operation; and (2) the

utility itself applies for authority to increase its rates. The value of the property, the revenues and the expenses were investigated. *Held:* The present rates are insufficient. The utility is authorized to put into effect on July 1, 1914, the schedule of rates applied for as modified by the Commission. *In re Appl. Eleva Farmers' Tel. Co.* 586, 589.

9. The Coloma Tel. Co. applies for authority to increase its rates. The value of the property, the revenues and the expenses were investigated. Because of defective accounts it is impossible to accurately determine the cost of service. *Held:* The present rates are insufficient. The rates applied for, however, appear to be higher than necessary. The utility is authorized to put into effect on July 1, 1914, if it chooses, specified rates which represent an increase over the present rates, though not the full increase desired by the utility. Further revision of rates may be made if the experience of the utility, with a proper set of accounts, shows the necessity. *In re Appl. Coloma Tel. Co.* 594, 597.

10. The applicant asks for authority to increase its rate for business telephones in Prescott, Wis. From a consideration of the earnings and expenses of the applicant, it appears that the earnings resulting from the present rates are and will continue to be insufficient to meet the operating expenses of the utility and provide adequately for depreciation and interest. *Held:* The increase asked appears reasonable both in relation to the total earnings of the utility and the service rendered to the class of subscribers involved, and is accordingly authorized. *In re Appl. Prescott Tel. Exchange*, 701, 702.

11. Application was made by the Mosinee Tel. Co. for authority to increase its rates on the ground of increased expenses and inability to earn a reasonable return on the investment. It appears that the proposed schedule provides a lower rate for rural subscribers owning their own telephones than for those who do not, and that the practice has been to make a charge of 10 cts. per call between the hours of 10 p. m. and 7 a. m. with the exception of certain subscribers, who make regular early morning calls to the depot, and who are exempted because the charges otherwise would be excessive. *Held:* The schedule applied for cannot be approved without certain changes. Under the Public Utilities Law (1797*m*—90) all subscribers having the same class of service must be given the same rate. A reasonable rental, however, may be paid those subscribers owning their own equipment. The company is ordered to keep all equipment in repair and pay a rental of 15 cts. per month to all subscribers owning their telephones. In order to avoid unjust discrimination, it is further ordered that all subscribers are to have the privilege of making early morning calls to the depot without extra charge. All other calls between the hours of 10 p. m. and 7 a. m. are to be 10 cts. per call. The respondent is authorized to discontinue its present schedule of rates and to substitute therefor the rates approved by the Commission. *In re Appl. Mosinee Tel. Co.* 709, 712.

12. Application was made by the Marquette & Adams County Tel. Co. for authority to increase its rate for telephone service. It seems that the present rate was put into effect about 9 years ago, and it appears from an inspection of the annual reports filed with the Commission that this rate does not bring in sufficient revenues to meet the operating expense. In the light of the information available the suggested rate of $10 per year does not appear unreasonable. It also appears that the practice has been to leave the repairing of the lines to two directors on each line and that this is an uneconomical arrangement. *Held:* The applicant is authorized to discontinue its present charge of $6.50 per year for telephone service and to substitute therefor a rate of $10 per year. It is recommended that the company employ an experienced lineman to keep the lines in good working order. *In re Appl. Marquette & Adams County Tel. Co.* 750, 751.

13. Application was made for authority to increase rates for telephone service in Cascade, Wis. It appeared that the present rates do not afford a sufficient surplus for interest and depreciation, but that with an increase of 15 cts. per month for two or more party service—there being at present no one party service—the rates would adequately meet requirements with respect to these two items. The suggestion that a discount provision be made in the rates to insure prompt payment of bills is in accord with practice of telephone companies in general and with the holdings of the Commission. *Held:* The respondent is authorized to charge, in lieu of present rates, $1.25 per month for two or more party phones, and $1.50 per month for single party phones, bills to be paid quarterly, subject to a discount of 10 cts. per phone per month to subscribers paying within one month. *In re Appl. Cascade Tel. Co.* 808, 810.

Reasonableness of rates in particular cases.

14. The Ettrick Tel. Co. complains that it is unjustly discriminated against by reason of the fact that its subscribers are compelled to pay a toll charge of 15 cts. per message for service over the La Crosse Tel. Co's line between Galesville and La Crosse while the Western Wisconsin Tel. Co. is allowed to offer unlimited service over this line to its subscribers under a flat rate per year. The Western Wisconsin Tel. Co. and the La Crosse Tel. Co. appear to have an agreement by which toll messages are exchanged between the lines of the two companies and each company retains the tolls for messages originating on its own lines. The flat rate mentioned, $25 per year, covers unlimited service over the entire system of the Western Wisconsin Tel. Co. and free connection to La Crosse and to Winona, Minn. Subscribers of the Western Wisconsin Tel. Co. who pay rates of $12.50 and $15 per year, according to the class of service received by them, pay the same rates for toll service to and from La Crosse as do subscribers of the Ettrick Tel. Co. The two methods of satisfying the complaint are considered: (1) the extension of the $25 flat rate to subscribers of the Ettrick Tel. Co.; and (2) the discontinuance of the rate. It appears that the volume of the toll business passing between the Ettrick Tel. Co. and the La Crosse Tel. Co. is very small, that the offering of unrestricted service over the La Crosse Tel. Co's line between La Crosse and Galesville to subscribers of the Ettrick Tel. Co. under a $25 rate would lead to little use of the rate and that the discontinuance by the Western Wisconsin Tel. Co. of the $25 rate would be of no benefit to the Ettrick Tel. Co. *Held:* The rates complained of are not unjustly discriminatory and the Ettrick Tel. Co. is not burdened unjustly because of their existence. The complaint is dismissed. *Ettrick Tel. Co. v. Western Wisconsin Tel. Co. et al.* 180, 185.

15. The fact that the rates of a telephone company are higher than those of a competing company is not usually sufficient reason for allowing the latter company to parallel the lines of the former company. If the rates of the former company are excessive their reduction should be secured in the usual way by complaint to the Commission. *In re Proposed Extension of West Kewaunee & W. Tel. Co.* 219, 221–222.

16. Inasmuch as the village of Phlox already has adequate telephone connections, it cannot be said that public convenience and necessity require the extension of the Mattoon line for local service into the village. If the toll rate charged by the Antigo Tel. Co. is excessive, the Commission can reduce the rate upon the institution of proper proceedings. *In re Proposed Extension Mattoon Tel. Co.* 329, 331.

Reasonableness of rates—Matters considered in determining reasonableness—Quality of service.

17. In the instant case the value upon which the utility is entitled to a return was computed upon the basis of a valuation made in July 1913,

for purposes of stock issuance, the cost of improvements since made and the cost of the improvements now proposed by the utility, and the revenues and expenses were investigated. *Held:* An increase in rates is necessary if the city of Ripon is to be given the advantage of the improved service proposed by the utility. *In re Appl. Ripon United Tel. Co.* 427, 430, 432.

Reasonableness of rates—Matters considered in determining reasonableness—Rate of return.

18. Application was made by the Mosinee Tel. Co. for authority to increase its rates on the ground of increased expenses and inability to earn a reasonable return on the investment. From an estimate of the operating revenues it is evident that the schedule of rates will not at present yield revenues sufficient to cover the operating expenses and in addition provide a full return on the investment. The respondent is authorized to discontinue its present schedule of rates and substitute therefor the rates approved by the Commission. *In re Appl. Mosinee Tel. Co.* 709, 710–712.

Switching rates.

19. It appears that respondent company did not contribute anything to the support of the switches in question during the two years previous to the disconnection. The respondent proposes to buy the Hub City switch and maintain and operate that and the one at Pleasant Ridge (Rego's switch) for the same fees charged it for switching service by the Richland Telephone Company with whom it connects at Richland Center. *Held:* No good reason is seen why respondent should not bear its proportionate part of the expense of operation, provided it is so arranged that it receives a proper compensation for the service rendered. It is ordered that each of the three companies, complainants, and respondent pay to the operator of the Hub City switch the sum of $1.00 per telephone per year for each telephone on its lines which are or may become, by virtue of the order, directly connected to the switch, and that the Badger Telephone Company and the Hawkins Creek Telephone Company share equally in the expense of the operation and maintenance of the Pleasant Ridge switch. The Hub City switch is owned jointly by complainants and no adequate reason is seen for a change of ownership. Respondent's contention as to the switching fees it should receive does not appear well taken, since the amounts and costs of the service rendered in the two cases are entirely different. The parties to the proceedings are ordered to put in a flat rate charge of $1.00 per year for subscribers electing unlimited service, or a toll charge of five cents per call for subscribers not so electing. Provision is to be made for the record of toll calls, and the collection of charges in the manner prescribed. Calls through the Hub City switch between lines owned by the complainants in this case are to be handled free. Lists of subscribers electing unlimited service are to be kept in the manner prescribed and are to be open to public inspection. All elections of unlimited service rates are to be made at least six months in advance, and prepayment for this service six months in advance may be required so long as no discrimination is practiced between subscribers. Companies not parties to the case may obtain the benefit of these connections and charges by complying with the conditions prescribed. The routing of calls between subscribers of respondent and complainant companies is to be through one of the switches in question, subject to the prescribed exceptions. *Hawkins Creek Tel. Co. et al. v. Badger Tel. Co.* 655, 665–668.

Toll rates.

See also ante, 3, 7, 14, 16.

20. The Trego Tel. Co. petitions for a more equitable division between it and the Earl Tel. Co. of the toll charges collected for the transmission of messages over the line between Earl and Spooner, part of which is owned jointly by the two companies. At present service is free between Earl and Trego and from Trego to Spooner. For service from Spooner to Trego and either way between Spooner and Earl a toll charge of 15 cts. is made. The tolls collected for service between Earl and Spooner are divided equally between the Trego Tel. Co. and the Earl Tel. Co. The Trego Tel. Co. contends that inasmuch as it owns the major portion of the line the division should be made on the basis of 10 cts. to it and 5 cts. to the Earl Tel. Co. *Held:* A toll charge of 10 cts. should be made for calls from Trego to Spooner. The revenue collected from the toll charge of 15 cts. for calls between Earl and Spooner should be divided on the basis of 9 cts. to the Trego Tel. Co. and 6 cts. to the Earl Tel. Co. *In re Appl. Trego Tel. Co.* 499, 504–505.

RATES—WATER.

Discrimination in water rates, *see* DISCRIMINATION, 4–6.

Fire protection rates.

1. An analysis of the operating data indicates that the city is not paying as much as it should for fire protection, while other consumers are paying an excess sufficient to meet the deficiency from the fire service and leave a large surplus besides. The present annual charge for fire service protection should be increased. The total charge for public service, which includes fire service and public use of water should be paid in a lump sum per annum and should amount to the cost as determined. *Dennet et al. v. City of Sheboygan*, 634, 643, 649.

2. With respect to the charge for fire service, the Commission has repeatedly pointed out that this charge is determined principally by the amount of the investment apportionable to that branch of the service. Respondent's contention that a considerable part of the property in the city is beyond the fire protection limits, is not without merit. When conditions are normal, it is undoubtedly correct for cities to bear the cost of fire protection. However, in the present case it has seemed that the manner in which the fire protection cost should be borne should not be prescribed by the order. The respondent is ordered to discontinue its present rates for metered water and substitute therefor one of the three schedules proposed according to the amount it desires to assume toward bearing the burden of fire protection. *Hughes et al. v. Watertown Water Works*, 669, 682, 683.

Fire protection rates—Private.

3. If the furnishing of private fire protection service by a water utility which furnishes general or public fire protection constitutes a proper basis of charges, those who have it and who also use water regularly for other general purposes must unquestionably pay for both kinds of service. But there is some question as to the extent to which the furnishing of private fire protection by a public utility constitutes a basis of special and individual charges. In several previous cases decided by this Commission it was held that individuals, firms and private corporations are not to be charged separately for any hydrant rental. The furnishing of fire protection of that character is clearly a function of the city. (See *In re Appl. Oconto City Water Supply Co.* 1911, 7 W. R. C. R. 497, 568; *City of Beloit v. Beloit Water, Gas & Electric Co.* 1911, 7 W. R. C. R. 187, 341; etc.) Inside private fire protection, such as water service to automatic sprinklers and fire hose connections inside

of buildings is a somewhat different form of protection. It is usually more quickly gotten into service when a fire starts and is universally considered as being more efficient than the use of ordinary fire hydrants by the fire department. Its presence frequently obviates the use of the outside hydrants and any work on the part of the firemen. It being usually more efficient in fire fighting, its installation produces a saving to the property owner through a reduction of insurance rates. It is of value to all concerned, but particularly to the property owner served. That it is of value to others may, under some circumstances, warrant the elimination of charges for such service, but the necessary circumstances do not exist here. It is rather difficult to find a strictly logical and impregnable basis upon which to apportion to private fire protection service any definite amount of the expenses of the utility in this case, yet there is probably a more logical basis for the gradation of reasonable charges for such service than the basis of floor area adopted by the company in formulating its present rate schedule. The floor area basis takes no account of the differences in property values per unit of floor area in different cases, or of the inflammability of the building and contents, the size of water service connection and the consequent demand for water put upon the utility in case of fire, or of various other differences. Probably the most logical basis of such charges as may be made for private fire protection service is primarily that of the sizes and relative capacities of the connections from the mains, making due allowance for such constant or uniform expenses of the utility as cost of inspection, etc., and for the possible use of water, to the extent of undetected leakage at least. Experience seems to make it perfectly clear that fire services require close inspection and supervision and that they should be metered. The cost of the meter and its installation and maintenance should be paid by the recipient of this special fire protection service, which is entirely different from the commercial service. Meter rates and service charges for private fire protection cannot properly include a very material capacity charge for the reason that the demand put upon the utility by the emergency use of private fire service facilities is simply a portion of the general fire service demand provided for in the public hydrant rental. Any fire occurring in an establishment not provided with the more efficient fire apparatus is very likely to put upon the water utility a greater demand, both in rate and duration, through the public hydrants, than would occur if the establishment were so equipped with special fire apparatus. The general fire service requirements and the utility expenses charged to these requirements cannot well be apportioned to individual private buildings. If the costs of metering a private fire service connection be paid by the water utility there is a sound basis for a charge sufficient to at least cover the capital charges on the meter and the expense of its maintenance. This will be an unquestionably valid charge and will be larger than the probable cost of periodic inspections of private fire protection systems supplied on the flat rate basis. The charge for metered service of this kind should be less than that for unmeterd service, provided, however, that no water is used except for fire protection. In the light of all the known facts and circumstances, of both general and special nature, attendant upon this class of service in Ashland, it is believed that the costs of fire service meters and their installation should be paid by the recipients of such service, and that the rates and charges for metered and unmetered private fire service should be as hereinafter provided and ordered. *In re Invest. Ashland Water Co.* 1, 70–72.

Fire protection rates—Public.

4. The city has not only had its fire protection service at less than cost but it has also had free of charge a large amount of water which has been supplied to the public schools, police and fire department stations, city hall, public fountains and troughs and the like. This water

has been held to be covered by the hydrant rental but the city should have paid for it separately. *In re Invest. Ashland Water Co.* 1, 60.

Flat rates.

5. It is to be remembered that the output costs are but a relatively small part of the total expense of water works service, so many large items are entirely independent of the amount of water used, therefore the amounts of water actually used by the various flat rate takers individually are of less importance than may seem, to some, to appear. *In re Invest. Ashland Water Co.* 1, 69.

6. Under the flat rates now in effect there appear to be a number of unjust discriminations due to failure to take into account the number of rooms and the number and kinds of fixtures in determining charges for service to particular consumers under the schedule. It also appears that the utility has not made any distinction between consumers with, and consumers without sewer or cesspool connections. Consumers having such connections, will in general undoubtedly use more water than those not having them. There may be something to be said against a charge based on the number of rooms but the number of rooms is apparently one of the elements which should enter into a flat rate schedule, and periodic inspections should be made of consumers' fixtures for the purpose of keeping informed as to the number and kinds of fixtures in each place supplied with water service. *Town of Vaughn v. Hurley W. Co.* 291, 304–306.

7. Flat rates in many instances have proven to be exceedingly inequitable and unsatisfactory to both the consumer and the utility. It has been shown to be practically impossible to do justice to either party. If a rate is made upon an arbitrary basis, the unknown element of waste, which is always present, must be estimated and allowed for; the number and various kinds of openings, the number of persons each service supplies must be carefully ascertained. Thus the careful, economical and proper user of water is required to pay for the waste of his neighbor, which is manifestly unjust to him. There are certain classes of flat rate users for whom no flat rate can be made that will be equitable. A rate based upon fixtures can never be satisfactory for consumers such as stores, saloons, resturants, etc., the amounts used being dependent upon the elements other than the nature and number of fixtures. Even among residence consumers, when the same number of fixtures are installed, the amounts of water used vary enormously, depending upon the degree of care exercised by the consumers, their attitude towards the utility, the condition with regard to sewer connections, the leakiness of fixtures, etc. While in the instant case the general installation of meters has not been required, this omission should not be taken to signify that the Commission approves the flat rate plan. The Commission recognizes, however, that under special conditions the advantages of installing meters are not sufficient to offset the additional cost. *Dennett et al. v. City of Sheboygan*, 634, 648, 649.

Free or reduced rate service.

8. The Public Utilities Law does not permit a difference in charges for like service between consumers who own their meters and those who do not. *In re Invest. Ashland Water Co.* 1, 68.

Hydrant rental.

See ante, 1–2, 4.

Making rates—Elements considered—Cost of service—Classes of consumers.

9. Since the proper determination of rates must be based upon a normal statement of expenses, it is necessary to make comparisons of the

annual operating expenses through a period of years and determine the normal amounts. These will not necessarily be the exact figures for the most recent fiscal year, nor should they necessarily prove to agree with the actual costs for the current year at its close. They must also be such as may appear to indicate reasonably efficient operation and management as measured by results obtained elsewhere, due allowance being made for difference in operating conditions. The several items of expense should be equitably divided between public and private service, and the portions charged to the latter should be further separated into other subclasses so that each private consumer will contribute as nearly as practicable his just proportion of the total cost of service. The methods pursued in making such distributions of expenses have been so fully explained in previous decisions of this Commission in rate cases that it would be superfluous to explain them again here. *In re Invest. Ashland Water Co.* 1, 54, 55.

Making rates—Elements considered—Cost of service—Output, capacity and consumer costs.

10. To leave interest, taxes, depreciation and certain operating expenses entirely out of the output costs and charges, and to put them wholly in the service or fixed charges against consumers would result in an impracticable schedule, as the fixed or service charges would be greater than the value of the service to the smaller consumers. Previous decisions of this Commission in similar cases have indicated that in making rates for private service the best treatment of the private service portions of the interest, taxes and depreciation is, usually, to divide their sum between capacity, output and consumer costs in the same proportions as the operating expenses are so divided. *In re Invest. Ashland Water Co.* 1, 61.

11. A small user does not make the same demand on a utility that a large user does, nor would a large number of small consumers put the same load on the plant that would be put upon it by the same number of large users. Obviously, one by whom the utility may be called upon to furnish 50 gallons or more per minute may reasonably be required to bear a materially greater share of the capacity expenses than one who will never use more than 10 gallons or less per minute. A strictly accurate measure of the maximum demand of each and every consumer is not obtainable. The nearest possible approach to it has been held to be the meter capacities, and yet some consumers will actually use more nearly all of their meter capacities than others having the same size of meters. The result of the analysis and apportionment made is a schedule which, for practical considerations, requires some modification. The fixed or service charges are probably too burdensome to a large number of small users and together with the output costs for water used will doubtless make the total expense for water service seem out of proportion to its value. It is therefore essential that the capacity and consumer expenses of metered service be reduced by transferring a portion of them to the output expenses. *In re Invest. Ashland Water Co.* 1, 65, 66.

12. Each of the various departments of the service should bear its proper burden of expense. The total operating expenses of the plant must be distributed between that class which depends on the output of water and varies with this output and that class which is independent of this output and which does not vary with it. These expenses in turn must be apportioned between the commercial and industrial service and the fire service. *Hughes et al. v. Watertown Water Works*, 669, 674.

Making rates—Elements considered—Cost of service—Pumpage lost and unaccounted for.

13. In every water works system there is a considerable amount of the total pumpage which is lost and unaccounted for, due chiefly to

unknown and unavoidable leakage. The investigation in a number of cases appear to demonstrate that a substantial fraction of the total pumpage must be eliminated from consideration in determining the unit output charge in a rate schedule. The output expenses must be assessed against the amount of pumpage which can be reasonably shown to be used by the city and its citizens and for which collections may reasonably be expected. *In re Invest. Ashland Water Co.* 1, 59.

Making rates—Elements considered—Cost of service—Taxes.

14. It is understood that under the terms of the original franchises the utility was exempted from local taxation. The legality of such an exemption is a serious question. Property in Hurley appears to be paying about 4 per cent of its value in taxes. In the future the water plant in this case will doubtless be required to pay taxes in the same way, and provision must accordingly be made for that expense in the rates. *Town of Vaughn v. Hurley W. Co.* 291, 302.

Making rates—Elements considered—Development and retention of business.

15. While the past net earnings are unquestionably less than would constitute a fair return, the making of a new rate schedule which will provide more equitable returns is a matter for very serious consideration. The greater the increase in existing rates the greater will be the tendency to not only check development of new business but to lose some of the company's present consumers and revenue. There is, therefore, a practical limit beyond which earnings cannot possibly be made to go, even though this limit may not provide a fair and reasonable rate of return on the full value. The question of the value of the service demands consideration in any case wherein rates equitable to the company may appear to consumers to border on the burdensome. The consumers will naturally be the ultimate judges as to the value of the service in cases where other supplies are available and between which and the general city system a choice may be made. There is evidence before us that many citizens already depend upon bottled spring water for drinking purposes. *In re Invest. Ashland Water Co.* 1, 50, 52.

Making rates—Elements considered—Future additions.

16. It does not appear equitable to make present consumers contribute through the rates such large amounts towards future additions and towards retirement of present obligations as was suggested at the hearing in this case. Again, the probability of a cycle of hard times occurring later, as was also suggested during the hearings in this matter, should not be made the justification for saddling present consumers with rates through which a surplus fund may be built up to carry the plant over the period of decreased revenue. *Dennett et al. v. City of Sheboygan,* 634, 642.

Meter rates—Straight meter rates.

17. Objection is sometimes offered to the policy of supplying large consumers at low rates. Watertown furnishes a clear illustration of the advantages of such a policy. There is no question that if four or five of the largest consumers should discontinue the use of water from the city system the utility would be unable to meet its operating expenses and fixed charges. If water were supplied to all users at a uniform rate the very large users would doubtless find it cheaper to furnish their own supplies than to buy water from the city. The nature of the waterworks business is such that a few very large users, supplied at what may appear to be very low rates, sometimes enable general users to secure rates much more advantageous than would otherwise be possible. An illustration of this is the rate fixed by the Commission

in the *Sparta Case*, 12 W. R. C. R., 532–546. *Hughes et al. v. Watertown Water Works*, 669, 686.

Meter rental.

18. A proper rental to be paid by the city in cases where consumers own their meters should cover the elements of cost of which the city is relieved by the fact that meters are furnished by consumers. These costs are the interest, depreciation and taxes on the meters. *Alter et al. v. City of Manitowoc*, 690, 695.

Minimum charge.

See also post, 22.

19. As practically every consumer paying the minimum bill has used considerable water during the period and hence incurred some output expenses, the minimum bill to be charged must include an allowance for this consumption. If this is not done all water used would really be received free of charge. By computing taxes, depreciation and interest on the value of the meter, adding thereto proper maintenance charges and a fair allowance for water used, a minimum charge can be determined with considerable accuracy that will guarantee to the company its consumer expenses. The minimum charge, however, cannot be fixed regardless of the size of meters or the consumer's demand, as that would ignore the fact that the size of the meter determines whether the investment is large or small. Discrimination results, if the minimum charge is made an average amount, against the consumers who use the small sizes. *Hughes et al. v. Watertown Water Works*, 669, 680.

Partial metering.

20. The Commission does not recommend complete metering in this case, but a gradual extension of the meter system is undoubtedly desirable and the meter rates should be so adjusted that, with the extension of the meter system, the rates will be suitable for the changed conditions, so far as it is possible to secure this result. *Town of Vaughn v. Hurley W. Co.* 291, 307.

Reasonableness of advance in rates in particular cases.

21. The Commission, on its own motion, investigated the rates, rules and regulations of the Ashland Water Co. after receiving informal complaints from patrons of the utility (1) against the utility's practice of requiring certain classes of consumers to furnish their own meters if they desired to be served on the meter basis and (2) against the character of the water supplied by the utility. In the course of the proceedings the utility itself filed a petition for such a revision of rates as might be necessary to (1) afford a fair return to the utility upon the property used by it in serving the public and (2) establish rates which are more equitable than the rates now charged in their relations as between private and public consumers. The most serious complaint against the utility appears to be that with respect to the quality of water furnished. The water in question is taken almost entirely from Chequamegon Bay of Lake Superior and is exposed to contamination from the sewage of the city which empties into the bay. The utility operates sand filter beds and applies the hypochlorite of lime treatment in order to purify the water. The peculiar circumstances of the case seeming to require it, the Commission had a special investigation and report made by an expert in matters of municipal water supply. The report so made holds: (1) that the city of Ashland is in constant danger from the present source of its water supply; (2) that it is impracticable to secure a supply of pure water by artificial treatment from the present source of supply and, further, that this source will undoubtedly be necessary in the future as a receptacle for industrial sewage from

pulp and paper mills and the like; (3) that it is impracticable for the city of Ashland with its present resources to attempt to secure water from Lake Superior, which is the ideal and ultimate source of supply for any large community located at Ashland; and (4) that it would probably be possible to meet the present needs of the city by resorting to the use of wells to obtain ground water. The report therefore recommends that test wells be driven and that tests be made at certain specified locations near the city to ascertain the best source of ground water supply. In order to determine the rate matter presented by the petition of the utility, the Commission made a valuation of the property of the utility and investigated its revenues and expenses. In making the valuation, a tentative valuation made by the engineering staff of the Commission by revising a valuation prepared in 1908 for the case of *City of Ashland v. Ashland Water Co.* 1909, 4 W. R. C. R. 273, a valuation submitted on behalf of the city of Ashland, and two valuations submitted by the utility are considered and compared in detail. The utility shows a relatively high investment in physical property as compared with other water plants in Wisconsin. This is due largely to the nature of the source of the water supply. The utility has, until recently, failed to maintain a depreciation reserve. An apportionment of expenses was made between public and private service. *Held:* 1. The net earnings of the utility have been too low to constitute a fair return upon the value of the property used in serving the public. The utility is not in such a financial position as to be able to meet the demand for improvement in the quality of water furnished the public by extending the intake to a point in the lake where satisfactory water could always be obtained or to change to a ground water supply. The only plan which it is possible for the utility to adopt under the circumstances is that of installing a suitable water analysis laboratory at the pumping station and employing a competent person to take charge of the laboratory and intelligently supervise the filtration and disinfection of the water supply. Even this plan is not certain of success but the additional expense involved by its use is not large enough to make it too costly to be worth a trial. The cost of applying more scientific treatment to the water purification problem should, however, be properly provided for in the determination of new rates for future service. 2. The greater portion of the deficiency in the net earnings of the utility is reasonably chargeable to the public service and the remainder to the flat rate private service. The meter rates have yielded a fair proportion of the costs but the meter rate schedule is not of the most logical and desirable form. The utility's rules and practices in regard to the furnishing of meters to consumers are reasonable. The unusually but necessarily large investment of the utility requires the exaction of rates materially higher than ordinary water rates. It is ordered: (1) that the utility within sixty days make such arrangements as may be found necessary to give it the benefit of a suitable laboratory for water analyses in the city of Ashland and thereby keep itself continually informed as to the efficiency of its purification processes by analyses made at least once daily, complete records of such analyses to be permanently preserved; and (2) that the utility discontinue its present schedule of rates and adopt a schedule fixed by the Commission. The schedule of rates prescribed provides for an annual charge of $24,300 for municipal hydrant rental, including general fire protection and flushing of sewers and pavements until extended; a charge for extensions ordered by the city of 8 cts. per foot of mains per annum and $6.50 per additional public fire hydrant per annum; meter and output charges and flat rates for private consumers; and charges for both unmetered and metered private fire service to automatic sprinklers or standpipes inside of buildings. No output charge is included in the charges for metered service for inside fire protection when the water is actually used in fire fighting, otherwise the water used through inside fire protection systems is sub-

ject to the rates for commercial service. It is suggested that the city test the merits of the plan of disinfecting its domestic sewage at the sewer outlets as a method of coöperating with the utility in improving the quality of water furnished by the utility. *In re Invest. Ashland Water Co.* 1, 76.

22. The Water Department of the city of Oconomowoc applies for authority to establish an annual minimum charge of $5. The utility has been exacting this charge for a number of years although, apparently through a misunderstanding, it had not filed the charge with the Commission as a part of the original rate schedule. The equitableness of the charge is not questioned, and as there is no reason to believe the charge unreasonable, the application is granted. *In re Appl. Oconomowoc Water Dept.* 394, 395.

23. The city of Ashland petitioned the Commission for a rehearing in its investigation of the rates, rules and regulations of the Ashland Water Co., and a modification of its order in that case (February 17, 1914, 14 W. R. C. R. 1). The city contended that the value of the property of the company found by the Commission, and the rate of return contemplated by it in the schedule of new water service rates prescribed in the order in question were in excess of what was warranted under the circumstances of the case and that the result was an unduly high schedule of charges for water service. Consideration of actual costs in the present case was apparently condemned by the city on account of the excessive value reached by the president of the company through a misapplication of the method of fixing value by actual investment. With respect to the physical property values the amounts allowed by the Commission for hydrants, filters, overhead general expenses, operating capital, pipe laying, and services were particularly challenged. The rate of return contemplated by the schedule established February 17 was inferred by the city to be 5.8 per cent, and it was argued that such a return was far more than was justifiable under all the circumstances of the case; that any real estate owner in Ashland would now be amply satisfied with a net return of 4 per cent; and that a proper rate of return would be one not to exceed 4 per cent upon a reasonable estimate of the costs of reproduction, with increase later, if equitable, as town and business grew, to compensate for any present deficiency. It appears that conditions in Ashland are abnormal. The city covers an area that in size is out of proportion to its population and industries, and the population for some time has been decreasing rather than increasing. The cost per capita and per customer of the Ashland Water Works is about twice as great as the average of these costs for other Wisconsin cities, and the city officers feel strongly that the company should share with all other citizens and the city at large the effect of the abnormal conditions prevailing in Ashland. The fact that the present plant was largely built by bonds bearing six per cent interest is noted, and it is further noted that these bonds were necessarily sold at a discount, and that the city of Ashland itself has been paying 5 per cent interest on most of its own bonds. It seems that the city's expert placed the rate of return for interest and profit at 6 per cent on the fair value of the plant and business and not at a higher figure, on the ground, in his own words, "of the fact, now generally recognized, that under the Wisconsin Commission the operation of public utilities is attended with less hazard than is usually incident to such business elsewhere"; that the Commission itself allowed earnings that would yield not far from 6 per cent on the estimated fair value of the investment; and that in doing so the Commission did not place them at a higher figure, such as would have represented ordinary returns for capital similarly invested, because of the exceptional conditions prevailing in Ashland. *Held:* The valuation of a property on the basis of actual investment as one of the theories of valuation does not contemplate the substitution of estimates of cost of reproduction in place of the orig-

inal and actual costs. A method which has long received the favorable consideration of the courts as one of the reasonable methods to be applied when possible should not be condemned simply because, through misapplication in certain cases, extravagant results may have been obtained. No weight can be given to results which are clearly and fundamentally erroneous. The city's apprehension that the Commission may have been influenced by the abnormally large valuation derived by the company's president is therefore unfounded. With respect to the physical property values, the difference between the cost of the hydrants now in use, and the cost of types of similar sizes regularly made and commonly carried in stock, should not be charged off as depreciation due to obsolescence, as contended by the city, since the company's judgment as to the superiority of the more expensive hydrants is not proven to be in error. The valuation formerly found for the hydrants is therefore allowed to stand. As regards the filters, the values arrived at by the city and the Commission are not so far apart that either can be considered very unreasonable. However, possibly a somewhat smaller amount should have been allowed as the cost of reproduction new of this item, though certainly not as much as intimated in the city's argument. A certain reduction is accordingly made in the allowance for the filters. The allowance of 15 per cent for overhead general expenses is not a greater allowance proportionately for that element of cost than has been made by the Commission in certain other cases of utility valuations, and no reason is seen why it is more than a proper addition in the present case. It is not clear that the amount formerly allowed as working capital can properly be reduced. In addition to meeting current operating expenses, the company must be prepared at all times to make extensions and improvements demanded as well as to take care of unusual emergencies which may arise. In the light of the arguments and additional evidence the conclusion is reached that the unit prices for pipe-laying used in the staff's 1912 valuation and accepted in arriving at the total valuation found by the Commission in its decision of February 17, 1914, are unduly liberal, and the allowance for pipe-laying is accordingly reduced. The aggregate amount of the tapping and connecting charges for services in the previous decision should possibly have been and is now deducted from the plant value, and, such being the case, must also be eliminated from non-operating revenues. After making due allowances for pipe and labor paid for by consumers, and for increased number of services in 1913 over 1912, the result of the staff's valuation of services is substantially in agreement with the result reached by the city's expert, and the latter's value is believed a fair one to adopt. The net result of all changes is to reduce the valuation of the physical value of the property $21,695 reproduction cost, and $20,503 present value. The total value, due consideration being given to a sum of $7,500 charged into a depreciation reserve, to working capital and going value, can hardly be regarded as materially less than $480,000. Should it be disclosed that the book costs, upon which the reductions in the value of the physical property are mainly based, were not correctly stated upon the records of the company, proper corrections may be necessary later. *Held:* That the rate of return must take into consideration the abnormal conditions existing in Ashland, and that under such conditions it could not possibly be made as large as what would be considered reasonable under normal conditions, was fully recognized by the Commission in its previous order. On the other hand, the city can hardly claim with reason that the company will receive equitable treatment if it be allowed a smaller rate of interest than the city has had to pay on its own bonds. Had the city owned the waterworks, it is quite certain that, pledging the property of the plant only, it could not have obtained the required capital at a lower cost than that for which the present owners obtained theirs. The cost of capital and the enterpriser are fixed by economic forces, or laws in the open market, which

cannot be controlled by the state, the city, or the Commission, and, in spite of the marked tendency of the operation of the Public Utilities Law to reduce the risks and lower the cost at which capital can be had, the downward tendency is not always great enough to offset the abnormally low relative earnings sometimes encountered, and it has not been great enough to cause capital and the enterpriser in the public utility field to become so abundant that these factors can generally be had at as low a cost as 6 per cent on the investment. In fact, plants whose net earnings amount to less than about 7.5 per cent on the investment find it difficult to obtain the capital needed on reasonable terms. Were the conditions involved in the present case normal, the Commission would not hesitate to allow a sufficient amount in the way of earnings to cover the full cost of the necessary capital and managing ability as fixed in the open market under similar conditions. Such allowances are undoubtedly best in the long run for all concerned, as they result in an abundant supply of the factors of production, instead of restriction, and the promotion, rather than hindrance, of general development and prosperity. Under the abnormal conditions at Ashland, however, both the water company and its customers will, for the present at least, have to forego something to which they would otherwise be entitled. It is therefore deemed just and equitable to all concerned to temporarily alter the schedule of rates established by the order of February 17, 1914. It is ordered: 1. that the charge to the city for hydrant rentals be reduced from $24,300 to $21,000 per annum; 2. that the flat rate part of the schedule for residence and commercial users be reduced by a somewhat smaller amount to the rates named in the present order. *In re Invest. Ashland Water Co.* 721, 742.

Reasonableness of rates in particular cases.

24. The petitioner alleges that the respondent's rates for water are unreasonable and exorbitant and that the respondent's service is inadequate both as to the pressure maintained for fire fighting and as to the quality of the water supplied for domestic use. The respondent renders service in Ironwood, Michigan, as well as in Hurley and its pumping plant is located in Ironwood. A valuation was made of the physical property devoted to the service of Hurley, the property in joint use being apportioned between Hurley and Ironwood. It is impossible to accurately determine the amount to be allowed for going value, as the present owners have been in control of the plant for but a little more than two years and are therefore in no position to show complete financial records of its operation. It appears, however, that a total valuation of from $37,000 to $38,000 is about correct. The revenues and expenses were investigated and the expenses apportioned between the two communities. The expenses for Hurley were analyzed and apportioned as closely as possible in the absence of complete data between capacity expenses and output and consumer expenses and between fire and general service. The Commisison does not recommend complete metering in this case, but a gradual extension of the meter system is undoubtedly desirable and the meter rates should be so adjusted that with the extension of the meter system they will be suitable for the changed conditions so far as it is possible to secure this result. Under the flat rates now in effect there appear to be a number of unjust discriminations due to failure to take into account the number of rooms and the number and kinds of fixtures in determining charges for service to particular consumers under the schedule. There may be something to be said against a charge based on the number of rooms but the number of rooms is apparently one of the elements which should enter into a flat rate schedule and periodic inspections should be made of consumers' fixtures for the purpose of keeping informed as to the number and kinds of fixtures in each place supplied with water service. *Held:* 1. With respect to the complaint as to fire protection service, the evidence does not

clearly show that the respondent was at fault in the cases of the fires which gave rise to the complaint, but, to avoid a repetition of the difficulties met, both the respondent and the community might well have their own independent pressure recording gages connected by special service pipes to the Hurley mains. 2. Inasmuch as the installation of a purification plant has noticeably improved the quality of the water supplied for domestic use and inasmuch as there is no evidence that laboratory or other additional facilities are urgently needed, an order for the installation of such additional facilities is not advisable at this time. 3. The present schedule of rates should be abandoned and a new schedule adopted which will eliminate certain unjust discriminations and result generally in a marked reduction in charges. The respondent is ordered: (1) to be prepared at all times to meet the reasonable fire service demands of the village of Hurley, to furnish the necessary number of hose streams under adequate pressure at the hydrants, and, for the purpose of showing the pressure maintained at any and all times, to install and keep in service at a central location on the Hurley pipe system a suitable pressure recording gage, the original daily records made by the gage to be filed and preserved for future ready reference; and (2) to put into effect a prescribed schedule of rates providing a charge for municipal service and meter and flat rates for commercial service. Sixty days is deemed sufficient time within which to comply with the section of the order which relates to service. *Town of Vaughn v. Hurley W. Co.* 291, 314.

25. Complaint is made that the rates charged by the Elroy Mun. W. & Lt. Plant for electric current and water are discriminatory and insufficient and that the records and accounts relating to the operation of the utility are unsystematic and unsuitable and not in accordance with the rules prescribed by the Commission. A valuation was made and the revenues and expenses were estimated, in the absence of satisfactory records, upon the basis of such information as was available. The expenses so estimated were apportioned for the electric department between capacity and output and further apportioned between street lighting and commercial lighting; for the water department they were apportioned between general service and fire service and further apportioned among capacity, output and consumer expenses. The utility has made no provision for depreciation and there has been no charge for municipal hydrant rental nor for street lighting. *Held:* Both the electric rates and the water rates require revision. Because of the lack of definite information, however, the conclusions drawn as to what rates are reasonable are only tentative and may require modification when the utility is able to present such information to the Commission as the law requires a utility to have available. The utility is ordered (1) to put into effect a schedule of water and electric rates fixed by he Commission and (2) to install and keep the accounts and records prescribed for it under date of April 20, 1914, subject to such modifications as the Commission may find necessary. The schedule of rates includes, among other things, provision for charges to be paid by the city of Elroy for fire protection and street lighting. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant*, 485, 496.

26. The Richland Center El. Lt. & W. Plant desires that the Commission establish rates for water consumers located outside the city limits. Consumers of a municipally owned utility who are located outside the limits of the municipality stand in much the same relation to the utility as they would if it were a private enterprise and so long as the rate charged them is fair they cannot complain of discrimination against them merely because that rate is slightly higher than the rate charged residents of the municipality. The utility is authorized to put into effect a specified schedule of charges for water service to consumers outside of the city limits. *In re Appl. Richland Center El. Lt. & W. Plant*, 590, 592, 593.

27. Examination of the financial condition of the Water Department would indicate that the department has sufficient funds to make present needed improvements and extensions with the surplus at hand, so that rates as fixed by the Commission, need provide only an amount above the ordinary interest charges to be set aside as a fund to amortize outstanding bonds. It does not appear equitable to make present consumers contribute through the rates such large amounts towards future additions and towards retirement of present obligations as was suggested at the hearing in this case. Again, the probability of a cycle of hard times occurring later, as was also suggested during the hearings in this matter, should not be made the justification for saddling present consumers with rates through which a surplus fund may be built up to carry the plant over the period of decreased revenue. *Dennett et al. v. City of Sheboygan*, 634, 642.

28. The petitioners requested the Commission to make a thorough investigation of the Sheboygan city water system, its administration, its physical property with relation to its present and future needs, its financial position and the rates now charged for various kinds of service, and upon such investigation to give to the proper administrative authorities such advice or direction as is found to be advisable. *Held:* An analysis of the operating data indicates that the city is not paying as much as it should for fire protection, while other consumers are paying an excess sufficient to meet the deficiency from the fire service and leave a large surplus besides. The present annual charge for fire service protection should be increased. The total charge for public service, which includes fire service and public use of water should be paid in a lump sum per annum and should amount to the cost as determined. Rigid rules and inspections should be inaugurated to eliminate the wasteful use of water through leaky fixtures, improper use of hose for sprinkling, etc. All consumers owning their meters should be paid a reasonable rental for the same. All free service is to be discontinued. Special rates to hotels, halls and theaters are to eliminated, and the schedules proposed substituted. Bills not paid within fifteen days of the date they are due are to be assessed a 5 per cent penalty. The respondent is ordered to discontinue its present rates and substitute therefor one of the two schedules proposed by the Commission. *Dennett et al. v. City of Sheboygan*, 634, 654.

29. The petitioners allege that the rates of the municipal water works in Watertown, Wis., are discriminatory and preferential and improperly adjusted, and that the city has failed to put into effect a schedule suggested by the Commission. Petitioners ask that a schedule of rates for water service be established. It appears that the recommendations of the Commission relating to the elimination of special rates and of joint billing of separate meters have been carried out. But objection is offered to the adoption of a policy requiring the city to pay for fire protection. It is contended the only proper charge for fire protection would be a charge for the water actually used, and attention is called to the fact that a considerable part of the property in the city is beyond the limits to which fire protection is furnished. It seems that special rates are now applied to certain schools and city buildings. No such rates are found in the rate schedule filed with the Commission. *Held:* An analysis of the rate situation shows that the present distribution of expenses as between fire and general service is not a correct one. A further defect is found in the fact that the existing rates for general service are regressive. With respect to the charge for fire service, the Commission has repeatedly pointed out that this charge is determined principally by the amount of the investment apportionable to that branch of the service. Respondent's contention that a considerable part of the property in the city is beyond the fire protection limits, is not without merit. When conditions are normal, it is undoubtedly correct for cities to bear the cost of fire protection. However, in the present case

it has seemed that the manner in which the fire protection cost should be borne should not be prescribed by the order. The respondent is ordered to discontinue its present rates for metered water and substitute therefor one of the three schedules proposed, according to the amount it desires to assume toward bearing the burden of fire protection. *Hughes et al. v. Watertown Water Works*, 669, 689.

30. Respondent petitioned the Commission to suspend its order in the case of *Alter et al. v. City of Manitowoc*, 1912, 10 W. R. C. R. 387. In that case action relating to the readjustment of rates was postponed until such time as the normal operating conditions for the municipally owned water plant could be determined. *Held:* Whether service pipes from the main to the curb line should be furnished by the utility or by the consumer was discussed in the order in question. The conclusion was reached that in the end it would make no substantial difference in the rates to be charged. No reason is seen under the circumstances of this case for changing the order in this respect except to provide that the charge for services to the curb shall be uniform. It is accordingly ordered that the charge for installing service pipes from main to curb shall be uniform for each size of service piping regardless of the distance from main to curb. As regards the question of ownership, or rentals for meters, the objections urged are not valid under the circumstances in the present case. A provision in the Public Utilities Law states that meters must be owned by the utility unless an exemption is granted by the Railroad Commission. The law does not specifically state under what conditions such exemptions shall be granted, but it is to be presumed that the utility should not be required to furnish meters whenever, because of local conditions, this would cause an unreasonable burden to the utility. No such local conditions are found in the present case. It is therefore ordered that the order in question is affirmed, except that the city may exercise its option as to furnishing meters free of charge or of paying a rental therefor, both with regard to meters already installed, and to those to be installed hereafter. Rentals are to be as stated in the body of the decision. *Alter et al. v. City of Manitowoc*, 690, 696.

31. Petitioner prays for authority to change its unit of measurement for water from gallons to cubic feet, and to reduce the minimum annual charge for water from $5 to $3. *Held:* The change in the unit of measurement for water service from gallons to cubic feet is not open to objection. It is merely asked as a matter of convenience and is therefore authorized. The minimum annual charge for water suggested by the city appears rather low, but is accepted in substance, subject to modification as outlined. The petitioner is authorized to reduce its minimum annual charge for water service from $5 to $4 as a gross minimum rate, subject to discount for meter rentals on basis ordered by the Commission, where the consumer owns the meter. *In re City of Manitowoc*, 697, 700.

Special rates.

32. The special rates which were applied to certain schools and city buildings without having been filed with the Commission are unjust, unreasonable, and result in injury. Under the provisions of the law no utility is permitted to make or give any undue preference or advantage to any particular consumer, or subject any consumer to any undue disadvantage in any respect by means of a less rate than that named in the published schedule. *Hughes et al. v. Watertown Water Works*, 669, 681.

REASONABLE RETURN.

See RETURN.

REASONABLENESS OF RATES.

REBATES OR CONCESSIONS.

See also RATES–WATER.

Allowance to subscriber of telephone utility on account of ownership of stock.

1. It is unlawful to charge a lower rate to stockholders than is charged to nonstockholders. *In re Appl. Marquette & Adams County Tel. Co.* 750, 751.

Allowance to subscriber of telephone utility on account of ownership of instrument or facility—Rate concession prohibited.

2. It appears that the proposed schedule provides a lower rate for rural subscribers owning their own telephone than for those who do not. Under the Public Utilities Law (1797*m*–90) all subscribers having the same class of service must be given the same rate. A reasonable rental, however, may be paid those subscribers owning their own equipment. The company is ordered to keep all equipment in repair and pay a rental of 15 cts. per month to all subscribers owning their telephones. *In re Appl. Mosinee Tel. Co.* 709, 710.

REPARATION.

GROUND FOR RECOVERY.

Reduction of rate not to be construed as an admission of prior unreasonableness.

1. It is only when the Commission finds that the rate is unusual, exorbitant, illegal or erroneous that reparation may be awarded. The mere fact that a rate has been reduced by the Commission is not sufficient ground in itself for authorizing refunds. (*Menasha Wooden Ware Co. v. W. C. R. Co.* 1908, 2 W. R. C. R. 589; *Beaver Dam Lbr. Co. v. C. St. P. M. & O. R. Co.* 1908, 2 W. R. C. R. 700; *Merrill Wooden Ware Co. v. C. M. & St. P. R. Co.* 1908, 3 W. R. C. R. 54; *Connor Land & Lbr. Co. v. C. & N. W. R. Co.* 1911, 7 W. R. C. R. 774). *Peshtigo Lbr. Co. v. C. & N. W. R. Co.* 624, 626, 627.

IN GENERAL.

Charge in excess of lawful rate—Right to refund excess, without authority from the Commission.

2. On one of the shipments involved in the instant case, the charges should have been assessed at the rate fixed in the order. The rate applied to such shipment was therefore illegal and reparation could have been made by the respondents without authority from the Commission. *Waukesha Lime & Stone Co. v. C. & N. W. R. Co. et al.* 579, 580.

REFUNDS.

Refund from charge erroneously made upon return shipment of car stakes.

3. The petitioner asks for refund of certain charges exacted from it for the transportation of two carloads of car stakes from Rhinelander to Spur 236, on the ground that the stakes were removed from cars containing logs and were being returned to the original point of shipment of the logs and therefore should have been returned free of charge. It is the custom of railway companies to include the cost of transporting car stakes used in shipping logs in the rate assessed upon the shipment of logs and to return the stakes to the point of origin of the shipment without additional charge. The respondent is willing to make the refund asked. *Held:* The charges complained of were unusual and unreasonable. Refund of the full amount paid is ordered. *Brown Bros. Lbr. Co. v. M. St. P. & S. S. M. R. Co.* 204, 205.

Refund from charge in excess of transit rate subsequently made effective.

4. Complaint was made of excessive charges on a carload of buckwheat shipped over respondent's line from Trempealeau to Janesville, Wis. It appeared that at the time the shipment in question moved the rate on buckwheat, with milling in transit privilege at Janesville, from Trempealeau to Chicago and points intermediate between Janesville and Chicago on respondent's line, including Sharon, Wis., was 12½ cts. per cwt.; that the rate from Trempealeau to Milwaukee was 11 cts. per cwt.; that the shipment in question prior to the movement of the product out of Janesville was entitled to either rate, according to the destination of the products; that part of the buckwheat was reshipped to Sharon, Wis.; that the rest of the buckwheat was held at Janesville and that consequently the entire transit credit was not used; that the rate from Trempealeau to Janesville, in effect at the time and charged the shipment involved, was 12½ cts. per cwt., and that some time subsequent to the shipment that rate was changed to 11 cts., the present rate.

Refund on the basis of a 11 ct. rate is asked on that part of the buckwheat held at Janesville. *Held:* Where a shipment of grain is entitled to transit privileges and where the shipment is separated at the transit point into two or more shipments, each destined to points taking different rates from point of origin to point of final destination, the application of different rates to the shipment involved is not authorized in the present tariffs. Petition dismissed. *Blodgett Milling Co. v. C. & N. W. R. Co.* 771, 774.

Refund from distance tariff rate ordered on basis of switching rate established by order of the Commission.

5. This proceeding is in effect a continuation of a previous proceeding of the same title in which a decision was rendered through error on July 11, 1913, 12 W. R. C. R. 248. The petitioner alleges that the distance tariff rate exacted on shipments of brick within the yard limits of Mayville, from the petitioner's brickyard to the plant of the Northwestern Iron Co., is excessive and unreasonable as compared with flat rates charged other industries for the movement of commodities within the yard limits. Certain of the flat rates mentioned are a part of concentration rates on raw materials. *Held:* The petitioner's shipments were not entitled to concentration rates inasmuch as the movements involved were purely terminal movements. The rate complained of, however, is unreasonably high. The reasonable rate would have been 1 ct. per cwt. It is ordered that the respondent (1) establish a rate of 1 ct. per cwt., with a minimum of $6.00 per car, for the switching of cars between points within the yard limits of Mayville; and (2) make refund to the petitioner upon the basis of this rate. *Ruedebusch v. C. M. & St. P. R. Co.* 92, 96.

Refund from excess charge based on a distance tariff rate in the absence of a switching rate.

See post, 13.

Refund from excess charge based on distance tariff rate instead of general switching charge subsequently made effective.

6. The petitioner alleges that the charges exacted from it by the respondent on the basis of the regular lumber distance tariff for the movement of ten carloads of lumber within the village of Hawkins are excessive to the extent that they exceed charges based on the switching rate put into effect for such services after the shipments in question moved, and asks for refund. The respondent is willing to make the reparation claimed. *Held:* The distance tariff rate was an exorbitant charge. Refund is ordered on the basis of the switching charge now in effect, which would have been the reasonable charge for the services rendered. *Rusk Box & Furniture Co. v. M. St. P. & S. S. M. R. Co.* 136, 137.

Refund from excess charge based on rates higher than the rates exacted from more distant points.

7. The petitioner alleges that the rate of 32.5 cts. per cwt. exacted by the respondents for the transportation of seed peas in carloads from River Falls to Columbus is exorbitant when compared with rates from other points to Columbus and asks for refund on a certain shipment on the basis of a rate of 20 cts., which is the regular 5th class St. Paul to Chicago rate. *Held:* The rate complained of is excessive and the petitioner is entitled to refund. The respondents are ordered: (1) to substitute for this rate a rate of 20 cts. per cwt. on dried and seed peas in carloads at minimum weight of 36,000 lb. per car; and (2) to make refund to the petitioner on this basis. *Leonard Seed Co. v. C. St. P. M. & O. R. Co. et al.* 97, 101.

Refund from excess charge based on rates higher than the rates prevailing under substantially similar conditions, and also higher than the cost of transportation warrants.

8. Complaint was made of excess charge on three carloads of fuel wood shipped from Dean's Spur, Wis., to Arpin, Wis. It appears that the charges were assessed at the rate of 2¾ cts. per cwt., that a rate of 2 cts. per cwt. was in effect at that time on the Chicago & North Western Railway Company from Arpin and other stations in the vicinity, and that subsequent to the shipments in question the respondent established a rate of 2 cts. per cwt. on fuel wood from Grand Rapids, Wis., to Arpin. Petitioner asks refund on the basis of the latter rate. *Held:* A rate of 2 cts. per cwt. on fuel wood moving from Arpin to Grand Rapids is ample compensation for the services rendered. Refund ordered on that basis. *Johnson & Hill Co. v. M. St. P. & S. S. M. R. Co.* 752, 753.

9. Complaint was made of excessive charges on a shipment of wooden cheese boxes from Butternut, Wis., to Glover, Wis., and refund asked. It appeared that subsequently the respondent, the M. St. P. & S. S. M. Ry. Co., voluntarily established a considerably lower rate than that charged petitioner, and that at the time of the shipment it had in effect a substantially lower rate applicable to a substantially similar distance and traffic situation as those in question. *Held:* The rate of 24½ cts. per cwt. exacted of the petitioner for shipment of cheese boxes from Butternut to Glover was exorbitant. A reasonable charge would have been the rate subsequently established, or 18½ cts. per cwt. Refund ordered on that basis. *Creamery Package Mfg. Co. v. M. St. P. & S. S. M. R. Co.* 761, 762

Refund from excess charge based on rates higher than the rates prevailing under substantially similar conditions and also on a reasonable rate subsequently made effective.

10. The petitioner complains of the rate of 9 cts. per cwt., exacted by the respondent for the transportation of five carloads of slab wood from New London to La Crosse, and asks for refund on the basis of a rate of 4½ cts. per cwt. applying on fuel wood over other lines for a like distance and put into effect by the respondent since the shipments in question moved. The respondent is willing to make refund. *Held:* The rate complained of was unusual and excessive. Refund is ordered on the basis of the rate now in effect, which would have been the reasonable charge for the services rendered. *Browndeer Lbr. & Fuel Co. v. G. B. & W. R. Co.* 138, 139.

Refund from excess charges based on a rate previously held to be unreasonable by the Commission.

11. The petitioner asks for refund of certain switching charges paid on 200 cars of logs shipped to Rhinelander for delivery at the Stevens mill, on the ground that the practice exacting such charges was declared to be unreasonable and unjust in *Stevens Lbr. Co. v. C. & N. W. R. Co. et al.* 1913, 11 W. R. C. R. 476. *Held:* The charges exacted were unusual and exorbitant. No charge should have been made for the switching service rendered. Refund of the amount paid is ordered. *Mason-Donaldson Lbr. Co. v. M. St. P. & S. S. M. R. Co.* 82, 83.

Refund from excess charges based on rates subsequently reduced by order of the Commission.

12. Complaint was made of excessive charges on shipments of saw logs from various Wisconsin points to Peshtigo, Wis. It appears that during the period in question the rates in force were slightly higher

than those subsequently ordered by the Commission. (*Nor. Hemlock & Hardwood Ass'n. v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 241.) In that order the old rates were readjusted and slightly lowered, and the petition asks for a refund on the basis of the rates thus established. The matter of the reasonableness of the rates in question was considered when they were readjusted and the Commission found that they were a little higher than the circumstances warranted, and so arranged as to apply the same rate for a long series of distances and then jump abruptly to a considerably higher rate. The rates ordered were intended to correct these two conditions, neither one of which was specifically declared to be unreasonable. *Held:* There is not sufficient ground to authorize a refund in the present case. It is only when the Commission finds the rate is unusual, exorbitant, illegal or erroneous that reparation may be awarded. The mere fact that a rate has been reduced by the Commission is not sufficient ground in itself for authorizing refunds. (*Menasha Wooden Ware Co. v. W. C. R. Co.* 1908, 2 W. R. C. R. 589; *Beaver Dam Lbr. Co. v. C. St. P. M. & O. R. Co.* 1908, 2 W. R. C. R. 700; *Merrill Wooden Ware Co. v. C. M. & St. P. R.* Co. 1908, 3 W. R. C. R. 54; *Connor Land & Lbr. Co. v. C. & N W. R. Co.* 1911, 7 W. R. C. R. 774.) The petition is dismissed. *Peshtigo Lbr. Co. v. C. & N. W. R. Co.* 624, 627.

Refund from excess charge based on the sum of the locals instead of through rates.

See post, 23.

Refund from excess charge based on a trackage rate.

13. The petitioner alleges that the distance tariff rate exacted by the respondent, in the absence of a switching rate governing the movement, for the transportation of seventeen cars of ties and rails from Lange Spur to Hotchkiss Spur, a distance of 2.1 miles, between Draper and Kaiser, Wis., was exorbitant and asks for refund on the basis of a trackage rate of $1 per car. The respondent is willing to make refund. *Held:* The charge complained of was unusual and exorbitant. Refund is ordered on the basis of a rate of $1 per car which would have been the reasonable rate for the service performed. *New Dells Lbr. Co. v. C. St. P. M. & O. R. Co.* 186, 187.

Refund from excess charge caused by failure to make allowance for car stakes.

14. The petitioner alleges that it was overcharged for the transportation of certain carload shipments of logs to Ashland from various points in Wisconsin through the failure of the respondent's tariff in force when the shipments moved to provide for an allowance for car stakes. The omission of a provision making such an allowance was evidently due to an oversight and the mistake has been rectified in a subsequent tariff. The respondent is willing to make refund. *Held:* The charge complained of was unusual and exorbitant. Refund of the amount claimed is ordered. *John Schroeder Lbr. Co. v. M. St. P. & S. S. M. R. Co.* 542, 543

Refund from excess charge caused by failure to protect an intermediate point.

15. The petitioner alleges that the rate of 3⅛ cts. per cwt. exacted by the respondent for the transportation of four carloads of logs from Bayfield to Washburn was exorbitant and asks for refund on the basis of a rate of 1 ct. per cwt., minimum charge $5 per car, which was in effect at the time the shipments in question moved for shipments from Bayfield to Ashland originating on the Bayfield Transfer Ry. The

respondent is willing to make refund. *Held:* The charge complained of was unusual and exorbitant. Refund is ordered on the basis of a rate of 1 ct. per cwt., minimum charge $5 per car, which would have been the reasonable rate for the service performed. *Sprague Lbr. Co. v. C. St. P. M. & O. R. Co.* 289, 290.

Refund from excess charges caused by failure to protect an intermediate point in a rate which was subsequently extended to cover the more distant points.

16. The petitioner alleges that the charges collected by the respondents for the transportation of thirteen shipments of cedar posts from Taylor Rapids to Peshtigo were erroneous and illegal and asks for refund. The charges in question were based on a rate of 8½ cts. per 100 lb. then in effect from Taylor Rapids to Bagley Jct., plus a charge of $3 per car from Bagley Jct. to Peshtigo. At the time the shipment moved a rate of 6½ cts. per 100 lb. was in effect from Taylor Rapids to Marinette and Menominee, Mich., points beyond Bagley Jct. on the C. M. & St. P. Ry., and this rate has since been put into effect over the same line from Taylor Rapids to Bagley Jct. The C. M. & St. P. Ry. Co. is willing to grant the relief asked. *Held:* The charges complained of were unusual and exorbitant. Refund is ordered upon the basis of a rate of 6½ cts. per 100 lb. from Taylor Rapids to Bagley Jct., plus $3 per car from the latter point to Peshtigo, which would have been the reasonable charges for the service performed. *Peshtigo Lbr. Co. v. C. M. & St. P. R. Co. et al.* 188, 189

Refund from excess charge caused by failure to protect an intermediate point in a rate which was subsequently extended to cover such point.

17. Complaint was made of excessive charges on a car of hay shipped from Osceola to Rhinelander, Wis., and refund asked. It appeared that the rate would have been 10 cts. per cwt. had it not been for the omission of the intermediate clause from the tariff in question through an oversight, which was corrected when attention was called to it. *Held:* The charge of 12½ cts. per cwt. exacted of petitioner on the shipment of hay from Osceola to Rhinelander was excessive. A reasonable rate would have been 10 cts. per cwt. Refund ordered on that basis. *Osceola Mill & Elevator Co. v. M. St. P. & S. S. M. R. Co.* 759, 760.

Refund from excess charge exacted in error.

See post, 25, 29.

18. The petitioner alleges that the charge of 7 cts. per cwt. assessed by the respondent for the transportation of two cars of bottles from Milwaukee to Waukesha was unusual and exorbitant to the extent that it exceeds the rate of 5 cts. per cwt. previously in effect and also in effect over other lines between the said points at the time the shipment moved. The respondent alleges that the 7 ct. rate was published in error and asks that the reparation requested be awarded. *Held:* The rate exacted of the petitioner was unusual and exorbitant. The reasonable rate for the service rendered is 5 cts. per cwt. Refund is ordered on this basis. *Franzen & Co. v. M. St. P. & S. S. M. R. Co.* 77, 78.

19. The petitioner alleges an overcharge on a quantity of fuel wood and fence posts shipped in the same car from Arpin to Neenah, Wis., over respondent's line. It appears the shipment was billed as fuel wood at the rate properly applicable to that commodity. At destination the rate applicable to straight carload shipments of lumber, and

articles taking lumber rates, including fence posts, was assessed. This rate does not, however, include fuel wood. *Held:* The fuel wood should have been charged at 3½ cts. and the fence posts at 18½ cts. per cwt. Refund ordered on that basis. *Miller v. C. & N. W. R. Co.* 707, 708.

Refund from excess charge ordered on basis of difference between the rate charged and the rate found reasonable.

20. The fact that there is very little coal moving into Milwaukee is not sufficient reason why an occasional shipment of coal should not be given a reasonable rate on the basis of the cost to the carrier of performing the service. The rates in question from Oshkosh and Fond du Lac to Milwaukee are unreasonable to the extent that they exceed the going rate. Refund is ordered on that basis, and the respondent is further ordered to change its tariff on coal and read "between Milwaukee and" the cities of Fond du Lac and Oshkosh, instead of "from Milwaukee to" Fond du Lac and Oshkosh. *Pennsylvania Coal & Supply Co. v. C. M. & St. P. R. Co.*, 746, 748, 749.

Refund from excess charge ordered on basis of distance rates previously established by order of the Commission.

21. The petitioner alleges that the charges exacted by the respondents for the transportation of two carload shipments of limestone from Waukesha to Black River Falls were exorbitant insofar as they exceeded the rates established in *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471, and applied to the respondents by a supplemental order issued Feb. 7, 1914. *Held:* 1. The rate of 7½ cts. per cwt., applied to the shipment of March 13, 1914, was illegal and reparation could have been made without authority from the Commission. 2. The rate of 10 cts. per cwt. applied to the shipment of Feb. 7, 1914, was the rate then legally in effect, but was unusual and exorbitant. Refund is ordered on the basis of the rate of 4.3 cts. per cwt., established for the distance involved by the orders cited. *Waukesha Lime & Stone Co. v. C. & N. W. R. Co. et al.* 579, 580

22. Complaint was made by the petitioner that the charges on a carload of ground limestone, shipped from Waukesha to Durand, Wis., were unreasonable. *Held:* The rates charged were unreasonable and should not have exceeded charges based on rates established by the Commission in *Waukesha Lime & Stone Co., Frank B. Fargo, Agent, v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471, supplemented February 7, 1914, for the purpose of making the C. & N. W. and the C. M. & St. P. railway companies parties to the proceeding. The rate charged on limestone for agricultural purposes from Waukesha to Durand, Wis., a distance of 297 miles via respondent lines, should have been 5.10 cts. per cwt. Refund ordered on that basis. *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 718, 720.

Refund from excess charge ordered on basis of a joint rate established by order of the Commission.

23. Complaint was made of excess charges on a carload of lumber shipped from Ashland to Berlin, Wis., and refund asked. The shipment was made on the assumption that the rate over respondents' lines was the same as that over the lines of the M. St. P. & S. S. M. Ry. Co. and the C. M. & St. P. Ry. Co., which is a rate of 12 cts. between the points in question. The establishment of joint rates on lumber was ordered in *Wis. Retail Lbr. Dealers Ass'n. v. C. & N. W. R. Co. et al.* 1909, 3 W. R. C. R. 471 and 589. The petitioner's charge in the present case was based on the sum of the local rates. The fact that a joint rate was not in effect was due to the belief that no shipments of lumber

were likely to move between the points in question. *Held:* The rate exacted of petitioner was unusual. A reasonable rate would have been 12 cts. per cwt. Refund ordered on that basis. *John Schroeder Lbr. Co. v. C. & N. W. R. Co. et al.* 823, 824

Refund from an excess charge ordered on basis of joint rate subsequently made effective.

See ante, 9.

Refund from excess charge ordered on basis of legal rate in effect at time shipment moved.

24. Complaint was made of excess charges on twenty carloads of wood bolts, shipped from Manson and Bradley to Merrill, Wis. It appears that the shipments were billed locally over respondent's line from Manson and Bradley to Heafford Junction, a distance of four miles, at the rate of 3 cts. per cwt., and locally over the line of the C. M. & St. P. Ry. Co. from Heafford Junction to Merrill, a distance of twenty-eight miles, at a rate of 1½ cts. per cwt. Refund is asked on the basis of a 1½ ct. rate. Respondent's tariff applicable to the commodity in question was 2 cts. per cwt. for distances of five miles or less between all points on its line in Wisconsin. The foregoing rate was in effect at the time the shipment moved, and the complaint is not broad enough to warrant an investigation as to its reasonableness. *Held:* The charge of 3 cts. per cwt. exacted on the shipments in question was excessive. The reasonable charge exacted should have been 2 cts. per cwt. Refund ordered on that basis. *Merrill Woodenware Co. v. M. St. P. & S. S. M. R. Co.* 805, 807.

Refund from excess charge ordered on basis of reasonable rate erroneously omitted from tariff.

25. The petitioner alleges that it was charged a rate of 13.5 cts. per cwt., subject to a minimum weight of 22,800 lb., for the transportation of a carload of excelsior weighing 21,736 lb. from Rice Lake to Ft. Atkinson and asks that the respondents be authorized and directed to make refund on the basis of a rate of 11.5 cts., subject to a minimum weight of 20,000 lb., which is the rate now in effect between the points named. It appears that the 11.5 ct. rate should have applied to Ft. Atkinson at the time the shipment moved, but that it was, through error, omitted from the tariff. The respondents are willing to make refund. *Held:* The charge complained of was unusual. Refund is ordered on the basis of the 11.5 ct. rate which would have been the reasonable charge for the service performed. *Selle & Co. v. C. St. P. M. & O. R. Co. et al.* 225, 226.

Refund from excess charge ordered on basis of reasonable rate established by order of the Commission.

26. The petitioner alleges that the charges exacted by the respondent for the transportation of certain carload shipments of beer from Wausau to Tomahawk and Minocqua are exorbitant to the extent that they exceed the rates established in *Wausau Advancement Ass'n v. C. M. & St. P. R. Co.* 1914, 13 W. R. C. R. 527, and asks for refund. *Held:* The charges complained of were unusual and exorbitant. Refund is ordered on the basis of the rates fixed in the order cited. *Ruder Brwg. Co. v. C. M. & St. P. R. Co.* 508, 509.

Refund from excess charge ordered on basis of reasonable rate previously in effect and subsequently reëstablished.

27. The petitioner alleges that the rate of 6 cts. per cwt. exacted by the respondent for the transportation of nine carloads of logs from

Grandview to Cumberland was excessive and asks for refund on the basis of a rate of $2 per 1,000 feet, minimum charge $10 per car. The rate last named was canceled prior to the time the shipments moved but was restored after the shipments moved. The respondent is willing to make refund. *Held:* The rate complained of was unusual, illegal and exorbitant. Refund is ordered on the basis of a rate of $2.00 per 1,000 feet, minimum charge $10 per car, which would have been the reasonable rate for the service performed. *Cumberland Fruit Pkg. Co. v. C. St. P. M. & O. R. Co.* 287, 288.

28. Complaint was made of excessive charges on six carloads of lumber shipped from Cotton, Wis., to Rhinelander, Wis., for concentration and reshipment. It appears that the rate upon the basis of which the shipments in question were made had been in effect, but remained in effect only through error at the time it was quoted to petitioner, and that an additional sum, on the basis of a higher rate, was collected by the connecting carrier, the respondent M. St. P. & S. S. M. R. Co. Subsequently the original rate quoted to petitioner was reëstablished, and petitioner asks for refund on that basis. *Held:* The rate charged petitioner was excessive. A reasonable charge would have been 4½ cts. per cwt., the rate originally charged petitioner and since then put into effect by respondent M. St. P. & S. S. M. R. Co. Refund on that basis. *Pierce v. M. St. P. & S. S. M. R. Co. et al.* 754, 756.

Refund from excess charge ordered on basis of reasonable rate subsequently made effective.

See also ante, 8, 16, 21, 26.

29. The petitioner alleges that the rate of 8 cts. per cwt. which the respondent exacted together with a reconsignment charge of $2 for the transportation of a carload of barley from Janesville to Cudahy was unusual and exorbitant and asks for refund on the basis of a rate of 7 cts. per cwt., which is the rate from Janesville to Milwaukee, plus the reconsignment charge of $2 for transportation from Milwaukee to Cudahy. The respondent contends that the 8 ct. charge was correctly made on the basis of the 7 ct. rate from Janesville to Milwaukee plus a rate of 1 ct. from Milwaukee to Cudahy, but that no reconsignment charge should have been asssessed. Since the petition was filed the respondent has put into effect the rate claimed as reasonable by the petitioner. *Held:* The charge exacted was unusual and exorbitant. The reasonable charge for the service is 7 cts. per cwt. plus a reconsignment charge of $2 at Milwaukee. Refund is ordered on this basis. *Owen & Brother Co. v. C. & N. W. R. Co.* 79, 81.

30. The petitioner alleges that it was overcharged for the transportation of a carload of box shooks from Marinette to Stanley. The charge assessed by the respondents was based on a rate of 13 cts. per cwt. from Marinette to Eau Claire and a rate of 5 cts. per cwt. from Eau Claire to Stanley. Since the shipment moved the C. St. P. M. & O. R. Co. has put into effect a rate of 13 cts. per cwt. for shipments from Marinette to Stanley and the petitioner asks refund upon the basis of this rate. *Held:* The charge complained of was unusual and exorbitant. The rate of 13 cts. per cwt. now in effect is the reasonable charge for the service rendered. Refund is ordered upon this basis. *Big Four Canning Co. v. C. St. P. M. & O. R. Co.* 84, 85.

31. The petitioner alleges that the rate of 2 cts. per cwt., exacted by the respondent for the transportation of a car of stone tailings from Highland Jct. to Hewetts, was unusual and exorbitant and prays for refund on the basis of a rate of 1.2 cts. which the respondent has put into effect since the shipment moved. The respondent is willing to make refund. *Held:* The charge exacted was unusual and exorbitant. Refund is ordered on the basis of the rate of 1.2 cts. now in effect which would have been the reasonable charge for the service performed. *Frontz v. Mineral Pt. & N. R. Co.* 217, 218.

32. The petitioner alleges that charges assessed by the respondent at the rate of 10 cts. per cwt. for the transportation of a shipment of excelsior from Rice Lake to Superior were excessive to the extent that they exceed charges based on the rate of 8½ cts. per cwt., put into effect by the respondent since the shipment moved. The respondent is willing to make refund. *Held:* The charges complained of were unusual. The refund claimed is ordered. *Selle & Co. v. M. St. P. & S. S. M. R. Co.* 544, 545.

33. The petitioner alleges that the charge of 12 cts. per cwt. exacted by the respondent for the transportation of a shipment of fuel oil from Mayville to West Allis was exorbitant to the extent that it exceeded the rate of 10 cts. per cwt. put into effect by the respondent since the shipment moved. It appears that the 10 ct. rate was not put into effect earlier for the reason that few if any shipments of fuel oil had been made between the points in question. The rate of 10 cts. is reasonable. *Held:* The charge complained of was unusual. The refund claimed is ordered. *Northwestern Iron Co. v. C. M. & St. P. R. Co.* 577, 578.

Refund from excess demurrage charges based on unreasonable delay in providing certain track facilities.

34. The petitioner alleges that the respondent exacted from it unjust and unwarranted demurrage charges on account of delays in unloading carload shipments of stone at Racine which were occasioned solely by the failure of the respondent to properly fulfill its agreement to provide certain track facilities for the use of the petitioner. There appears to be no provision in the demurrage rules of the respondent which would permit it to make any free time allowance for a delay of the kind involved in the instant case. *Held:* The charge complained of was unusual and exorbitant. Refund of the amount claimed is ordered. It would seem advisable for the railway companies to amend the demurrage rules to make allowances for delays in unloading cars which are occasioned, as in the instant case, by the failure of the railway company to provide promised track facilities within the time agreed upon with shippers. *Greiling Bros. Co. v. C. M. & St. P. R. Co.* 449, 453.

Refunds ordered on specific shipments.

RESERVES.

Depreciation reserve charge, *see* DEPRECIATION, 2–4.

RETURN.

Relation of rate of return to public utilities and to private enterprises.

1. In determining the force of the arguments as to the low rates of interest obtained by investors in private business enterprises, the matter must be viewed from the other side. The question would then be,—should there still be a close relation between the rate of return to the water company and that to other private investors if the latter were obtaining several times the rate now received, say 12 to 15 per cent or more. It is very doubtful that any such rule would be admitted to work both ways. *In re Invest. Ashland Water Co.* 721, 726.

RIVER IMPROVEMENTS.

Jurisdiction of Commission over river improvements, *see* RAILROAD COMMISSION, 12.

ROOM BASIS.

Flat rates for water service based on number of rooms, *see* RATES–WATER, 6.

ROUTING.

Street railway cars, change in routing of, to improve service, *see* STREET RAILWAYS, 10.

RULES AND REGULATIONS.

Requirements as to utilities furnishing meters to residence or other small consumers.

1. It is a general rule that public utilities in Wisconsin shall own and maintain the meters through which their services are measured to consumers, yet it is sometimes expedient, if not necessary, to make exceptions to this rule. In the instant case, in view of the present great magnitude of the investment in the plant of the utility, it is deemed inexpedient to require the utility to alter its present rules concerning the furnishing of meters to residence or other small consumers. *In re Invest. Ashland Water Co.* 1, 42.

Requirement as to furnishing party line telephone service.

Rule providing that utility will not hold itself liable to furnish party line service unless the line can be kept full to capacity, held to be unreasonable, *see* TELEPHONE UTILITIES, 45.

RUSH PERIODS.

Street railways, requirements as to service and facilities, adequacy of service, through service during rush-periods, *see* STREET RAILWAYS, 10.

SAFETY APPLIANCES.

SALARIES OF EXECUTIVE OFFICERS.

As element considered in making rates for electric utilities, *see* RATES–ELECTRIC, 10.

SCHEDULES.

Street car schedules, *see* STREET RAILWAYS, 7.

SCHEDULES FOR UTILITIES.

Water utility given choice of schedules contained in order of Commission.

1. Two schedules have been evolved: Schedule A, based upon the assumption that the city of Sheboygan pays an increased fire service charge; and Schedule B, based upon the assumption that no change is made in the present charge of this service to the city. Two forms of each of the flat rate portion of the schedules are submitted. *Dennett et al. v. City of Sheboygan*, 634, 650.

2. Three schedules of rates are designed to fit the different conditions which may arise, depending upon the attitude of the city toward assuming the burden of fire protection. The utility may choose any one of these schedules. *Hughes et al. v. Watertown Water Works*, 669, 687.

SCHEDULES OR TARIFFS.

See RATES; REPARATION.

CHANGE IN TARIFF.

Effect of change ordered by Commission.

1. Although the rates complained of are prima facie not unreasonable when the character of the service and the rates charged over other lines for a like service are considered, certain modifications in the tariff should be made to prevent the doing of unjustice to the petitioner. *Wachsmuth Lbr. Co. v. Bayfield Transfer Ry. Co.* 253, 260.

SCOPE OF LAW.

STATION FACILITIES.

See also SWITCH CONNECTIONS.

Adequacy of station facilities.

1. The petitioner alleges (1) that the station facilities furnished by the respondent at Menomonie Jct., Dunn county, are inadequate; (2) that the practice of requiring passengers to board or alight from a westbound train on the north side instead of on the station side is dangerous and inconvenient; and (3) that the baggage room at the Menomonie city depot is inadequate, and asks that the respondent be required to provide adequate station facilities at Menomonie and Menomonie Jct. and to allow passengers to board and alight from westbound trains on the station side at Menomonie Jct. Menomonie Jct. is almost exclusively a transfer point. Baggage is usually transferred there on trucks and is sometimes damaged by rain and snow. At the Menomonie city station traffic conditions are such at certain seasons of the year, when students are returning to or leaving the Stout Manual Training Institute, that baggage is exposed to damage from the weather by being allowed to stand on trucks for considerable periods of time. *Held:* 1. The station facilities at Menomonie Jct. are inadequate. 2. The change proposed by the petitioner in the present practice of loading and unloading westbound trains at Menomonie Jct. is not practicable from the standpoint of public safety. A suitable shelter should, however, be provided for the use of passengers obliged to wait on the north platform. The respondent is ordered to enlarge its passenger station at Menomonie Jct. so as to provide adequate accommodation for passengers and baggage and to erect a suitable umbrella shed as specified. Plans are to be submitted for approval. Sixty days is given within which to comply with the order. No order is issued with reference to the protection of baggage at the city station, it being understood that the respondent will provide tarpaulins and keep all baggage properly covered during the days of abnormal traffic when the baggage room may be insufficient. *Commercial Club of Menomonie v. C. St. P. M. & O. R. Co.* 123, 127.

2. The petitioner alleges that the respondent's station facilities at Horicon, Dodge county, are unsanitary, inadequate and insufficient and that the present situation is dangerous and asks that the respondent be required to increase its station accommodations for passengers and to build an adequate freight depot. The respondent concedes that better accommodations are needed and states that it is willing to make the necessary improvements in the spring of 1914, but has failed to submit plans as promised. *Held:* The freight and passenger facilities complained of are inadequate. The respondent is ordered (1) to erect a modern depot for passengers at a specified location, (2) to provide a freight station south of the present site and the sidetracks with adequate platform and storage room and a convenient highway approach, and (3) to construct and maintain a properly surfaced driveway to its stockyards from the public highway. Plans for the station buildings are to be submitted for approval and the improvements and new buildings ordered are to be completed and opened for the use of the public by July 15, 1914. *Horicon Advancement Ass'n v. C. M. & St. P. R. Co.* 144, 147.

3. The petitioner alleges that the respondent's station facilities at Sun Prairie, Dane county, are inadequate and expresses the opinion that a new and modern station building with proper approaches is required.

Held: The station facilities are inadequate. The respondent is ordered to provide a station which shall be adequate for the accommodation of passengers and freight, and which shall have ample platform accommodations, plans to be submitted for approval. July 1, 1914, is considered a reasonable date at which the work ordered shall be completed. *Village of Sun Prairie v. C. M. & St. P. R. Co.* 332–333.

4. The petitioners allege that the station facilities furnished by the respondent at Reserve, Sawyer county, are inadequate and ask that the respondent be required to maintain and keep open a freight and passenger station and employ a regular agent at Reserve. The respondent is willing to build a separate house for its section foreman and to devote the station building now occupied by him to the exclusive use of passengers and the storage of freight. This is satisfactory to the petitioners and the only question for decision therefore is whether the services of a regular station agent are required. *Held:* In view of the amount of freight and passenger business transacted and the fact that there is but one train a day into Reserve, the employment of a regular station agent is not warranted at the present time. A competent caretaker should, however, be employed to keep the station clean, warm and lighted and to open it at least twenty minutes before the train arrives and until it departs, as required by sec. 1797—9 of the statutes as amended by ch. 616, laws of 1913. The respondent is ordered to provide a station building at Reserve which shall be adequate for its freight and passenger business, and to employ a competent caretaker who shall keep the station properly cleaned, heated and lighted and open for the use of the public at least twenty minutes before the arrival of trains and until their departure. The station is to be open for public use by July 1, 1914. *Whiteis et al. v. M. St. P. & S. S. M. R. Co.* 340, 342.

5. The petitioners allege that the depot maintained by the respondent at Mosinee, Marathon county, is unsanitary and inadequate and ask that the respondent be required to build a new depot. The respondent admits the allegation and states its willingness to make necessary improvements in the existing structure. Witnesses assert that the present location of the depot is such as to imperil passengers in that it is necessary to pass over a dangerous crossing in order to reach it and suggest that the new depot be located on the other side of the tracks. The respondent questions the authority of the Commission to order the relocation of the depot. *Held:* 1. The Commission is empowered in a proper case to fix the point of location of a depot. *City of Rhinelander v. M. St. P. & S. S. M. R. Co.* 1912, 8 W. R. C. R. 719, 725. 2. The requirements of public safety and adequate service make it imperative that the new depot be located east of the tracks. The respondent is ordered to erect a modern station building east of its tracks at Mosinee which shall be adequate for the freight and passenger traffic there, plans to be submitted for approval. Oct. 1, 1914, is considered a reasonable date at which the improvements ordered shall be completed and open for public use. The matter of the construction of a suitable sidewalk between the bridge over the Wisconsin river and the depot is left to the town authorities and the respondent for informal adjustment. *Von Berg et al. v. C. M. & St. P. R. Co.* 553, 555.

6. Complaint was made that the station facilities at Abrams are inadequate for the accommodation of passengers and freight. It appears that the depot is about 30 years old; that crates and boxes are often stored in the passenger room, sometimes forcing passengers to the open platform in inclement weather; and that the freight room is frequently overcrowded and infected with rats. *Held:* The station facilities are inadequate. The building should be altered and repaired, and vigorous measures should be adopted to rid it of rats. The respondent is ordered to enlarge and repair its station building at Abrams in the manner provided in the order, plans to be submitted to the Commission for approval. *Abrams Business Men's Ass'n v. C. M. & St. P. R. Co.* 780, 782.

Adequacy of station facilities—Car facilities.

Discrimination due to distribution of equipment, *see* DISCRIMINATION, 9–10; RAILROADS, 36.

Adequacy of station facilities—Caretaker.

See ante, 4.

Practicability, public convenience and necessity of union stations in particular cases—New Richmond.

7. The petitioner alleges that it is practicable and that public convenience and necessity require that the respondents erect and maintain a union passenger depot at New Richmond and asks that the respondents be ordered to construct, maintain and use such a depot. The respondents contend that the public convenience to be gained by the change would be too slight to warrant the expense involved. The C. St. P. M. & O. Ry. Co. maintains a depot, the adequacy of which is not questioned, very close to the retail business district of the city. The depot of the M. St. P. & S. S. M. Ry. Co. is located about one-half mile distant and is admitted by the railway company to be in need of improvement. The petitioner alleges that a union depot is necessary for the convenience both of transfer passengers and of residents of the city and contends that it should be erected at the present time in order to avoid the waste consequent upon the construction of a new separate depot by the M. St. P. & S. S. M. Ry. Co. Residents of the city are divided in their opinions as to the desirability of a union depot. In passing upon the question as to whether a union depot is required by public convenience and necessity it is necessary to consider the convenience of the traveling public, including both the residents of the community and those who may use the station as a transfer point, and the expenditure to be imposed upon the railway companies. *Held:* Public convenience and necessity do not require the erection of a union depot at New Richmond at the present time, in view of the fact that such a depot would not be of material advantage to the city as a whole and the further fact that the transfer traffic, independent of the city patronage, is not of sufficient importance to justify the erection of such a depot, especially when such action would place a heavy financial burden upon one of the respondents which is at present rendering adequate station service. The petition is dismissed. If the matter of the adequacy of the M. St. P. & S. S. M. Ry. Co's station is not satisfactorily adjusted it can be brought to the attention of the Commission for immediate relief by an appropriate complaint. *City of New Richmond v. C. St. P. M. & O. R. Co. et al.* 556, 559.

Relocation of stations.

CONSTRUCTION, MAINTENANCE AND EQUIPMENT.

Abandonment of track or portion thereof.

1. No power is vested in the Commission to authorize the abandonment of any line of street railway, that matter being one over which the common council has exclusive jurisdiction. (*Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298.) However, if a line has been abandoned without the consent of the common council, and if the restoration of operation thereon would seriously threaten the efficiency of the service over the entire system, the authority to compel the restoration of such service should not be exercised. (*Brown v. Janesville St. Ry. Co.* 1910, 4 W. R. C. R. 757, 764.) *Jones v. Wis. Ry. Lt. & P. Co.* 518, 522.

2. The Commission is without jurisdiction to grant the prayer of the petition, which is in substance that petitioner be authorized to abandon its existing tracks upon the completion of a new route for which it holds a franchise. (*Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298.) The abandonment of a line of street railway is a matter wholly within the jurisdiction of the common council. *In re Chippewa Val. R. L. & P. Co.* 713, 714.

Extensions or additions to street railways—Commission without authority to compel street railway companies to make extensions or additions to line.

3. The Commission has no authority to order extensions of street railway lines. (*City of Merrill v. Merrill Ry. & Lt. Co.* 1910, 5 W. R. C. R. 418, 425.) *City of Racine v. T. M. E. R. & L. Co.* 148, 149.

OPERATION.

Requirements as to service and facilities—Adequacy of service.

4. The petitioner alleges (1) that the respondent's service in the city of Racine is inadequate; (2) that the extension of certain lines is necessary for proper service to the public; and (3) that the increase of street car traffic in Racine is sufficient to justify the sale of six tickets for 25 cts., good at all times when the cars are in operation. Since the hearing the complaint with regard to adequacy of service has been satisfied. The complaint as to tickets is not considered, inasmuch as no testimony was presented with reference to it. *Held:* The Commission has no authority to order extensions of street railway lines. *City of Merrill v. Merrill Ry. & Lt. Co.* 1910, 5 W. R. C. R. 418, 425. It is recommended, however, that the city of Racine grant without unreasonable encumbrance, and that the respondent accept, franchises along certain designated streets in Racine. The petition is dismissed. *City of Racine v. T. M. E. R. & L. Co.* 148, 151.

5. The petitioner alleges that the street railway service rendered by the respondent at La Crosse is inadequate and discriminatory in that it is arranged for the convenience of one class of patrons without regard to the necessities of laboring men and asks that the respondent be required to operate its cars on La Crosse street as far east as 25th street on a ten-minute schedule from 6 a. m. to 11 p. m. The respondent now operates cars on its Oak Hill-Cemetery line regularly to 18th street and during the period from May to October furnishes additional service to the golf links beyond 25th street on a schedule arranged with reference to the convenience of the patrons of the golf links, the service beginning about 9 a. m. and ending about 7 p. m. The extension of track to the golf links was made about 1901 in accordance with an agreement under which the golf club paid a part of the cost of construction and also bore a part of the operating expenses for the first three years. Traffic data submitted at the hearing and data gathered by the Commission show that the additional service prayed for would cost considerably more than the additional revenue which would be derived from it. No evidence is presented, however, to show that the earnings from the entire line in question would be so reduced by the granting of the additional service that proper service could not be rendered over this line and other lines of the respondent's system, with a reasonable return upon the value of the property used and useful for the public. The respondent operates the line on La Crosse street under a permissive franchise which authorizes it to construct and operate a single track line on La Crosse street from Forest avenue to such point as it may determine. No power is vested in the Commission to authorize the abandonment of any line of street railway, but that matter is one over which the common council of the city has exclusive jurisdiction. *Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298. *Held:* 1. The respondent by constructing and operating its line as far east as 25th street has accepted the permissive franchise and thereby undertaken to supply street car service to that point. 2. It is the duty of the respondent to render adequate service to the full extent of its undertaking, even though such service is not remunerative, so long as the respondent assumes to operate under the permissive ordinance. The respondent is ordered to operate its cars on La Crosse street from 18th street to 25th

street on the same schedule as that on which its cars are or may be operated on the remainder of its Oak Hill-Cemetery line. *Jones v. Wis. Ry. Lt. & P. Co.* 518, 523.

6. Doorstep street car service for all is not practicable, and the criterion must be the reasonableness of the distance which a patron is obliged to walk in order to obtain service. *In re Chippewa Val. R. L. & P. Co.* 713, 717.

Requirements as to service and facilities—Adequacy of service—Double track.

7. This is a supplementary order relating to matters decided in a proceeding of the same title on May 26, 1913 (12 W. R. C. R. 49) and October 6, 1913 (12 W. R. C. R. 797), and in *Elver v. So. Wis. Ry. Co.* on Nov. 26, 1912 (11 W. R. C. R. 67). It appears that the lack of adequate double track facilities has prevented the respondent from complying with the requirements of the Commission governing the maintenance of a five minute schedule on certain portions of the street railway system in the city of Madison and has interfered with the rendering of the tripper service ordered by the Commission. The respondent is ordered to make specified extensions of its double track facilities. Ninety days is deemed sufficient time within which to comply with this order. *Rodolf et al. v. So. Wis. Ry. Co.* 598, 600.

Requirements as to service and facilities—Adequacy of service—Duty to furnish service.

See ante, 5.

Requirements as to service and facilities—Adequacy of service—Relocation of track.

8. Petitioner asks authority to relocate its interurban line in the city of Eau Claire, Wis., along a specified route and requests that the Commission determine the adequacy of the service as proposed. The petitioner alleges that the mayor and council intend to object to the removal of the existing track after the new line shall have been constructed, and further alleges that it is willing to construct the proposed line and operate its interurban cars in the manner indicated, if such change will, in the opinion of the Commission, afford reasonably adequate service for that portion of the city. *Held:* The Commission is without jurisdiction to grant the prayer of the petitioner, which is in substance that petitioner be authorized to abandon its existing tracks upon the completion of a new route for which it holds a franchise. (*Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 298.) The abandonment of a line of street railway is a matter wholly within the jurisdiction of the common council. However, it seemed advisable to investigate the situation, and to recommend a course of action which, in the opinion of the Commission, will result in the most efficient service for the district in question. It is recommended that the petitioner apply to the city of Eau Claire for authority to abandon its tracks on Franklin, Fay, Putnam and Omaha streets, upon the completion of its new line along Madison street, Mount Tom Park and Starr avenue, as alrealy permitted by franchise; and that the city of Eau Claire grant such authority to the company. The adequacy of the proposed service is not passed upon, since it is a matter which can be more properly determined in the light of the traffic conditions resulting from the change of routing. *In re Chippewa Val. R. L. & P. Co.* 713, 717.

Requirements as to service and facilities—Adequacy of service—Remodeled cars.

9. Members of the Commission's engineering staff have investigated the remodeled cars now in use and report that their operation does

not result in unreasonable inconvenience to passengers, so long as the cars are maintained in proper repair. They are also of the opinion that the present traffic in Racine can be best handled by comparatively small cars. *City of Racine v. T. M. E. R. & L. Co.* 148, 149.

Requirements as to service and facilities—Adequacy of service—Routing of cars.

10. Complaint was made that the service of respondent from the Twenty-second ward of Milwaukee to the down-town district was inadequate and discriminatory, and the Commission was asked to require the respondent to provide through service over the routes suggested by petitioner and to establish a schedule adequately providing for the district's service demands. The service in the district in question was thoroughly investigated by the Commission in various aspects. It appeared that up to 8 o'clock in the morning and from 5:30 o'clock to 7 o'clock in the evening, i. e. during the rush hours, respondent operated through service to the center of the city, over one route only, that at other times persons had to transfer and wait, that the present arrangement was inconvenient and annoying, and that a total population of approximately 50,000 people was involved. It also appeared that the present arrangement of through lines in Milwaukee, necessitating the operation of more cars than are required by the traffic conditions during the non-rush hours in the down-town district, resulted in much wasted car mileage, and that additional extension of through down-town service during the off-peak period, instead of the proper development of cross-town lines, and the adjustment of the transfer system, would still further increase that waste. *Held:* The operation of continuous through service from the Twenty-second ward to the center of the city, in the manner suggested by the petitioner, would not be in accord with the best interests of the city. The development of the city has now reached the point where it is impossible for every city line to be routed to the down-town district. The existing cross-town lines should be preserved as such, and the extensions of the system to meet the needs of new territory added to the city should be accomplished by the establishment of other cross-town lines, rather than by the creation of new lines operating through the center of the city over already congested routes. However, during the rush hours, when large numbers of patrons are moving from an outlying district to the center of the city, it is only reasonable that through cars should be operated for their convenience. In addition to the present through service down town over the 27th street line via State street during rush hours, respondent should operate through cars from the Twenty-second ward to the center of the city via North avenue. It is ordered that the respondent operate through cars from the north terminus of its 27th street line to the down-town district via State street, and from the west terminus of its North avenue line of the down-town district via 8th street, during morning and evening rush hours as fixed in the Commission's former order, *In re Service of T. M. E. R. & L. Co. in Milwaukee*, 1913, 13 W. R. C. R. 178. The additional service ordered is to be in operation by September 1, 1914. *Twenty-second Ward Advancmt. Ass'n v. T. M. E. R. & L. Co.* 788, 792.

SWITCH CONNECTIONS.

RIGHT OF SHIPPER TO SWITCH CONNECTIONS.

Spur track, construction of, ordered by Commission.

1. The petitioner asks that the respondent be required to construct, operate and maintain a spur track from the respondent's main line to the petitioner's lumberyard in the city of Racine, alleging that such a spur track is practically indispensable to the successful operation of the lumberyard, and that the construction and operation of the spur track would not be unusually unsafe and dangerous nor unreasonably harmful to the public interest. The respondent objects to the granting of the petition on the ground that the location of the spur track as prayed for by the petitioner would necessitate cutting the respondent's main track in high speed territory and operating trains against the current of traffic, thereby increasing the danger of accident. The respondent is willing, however, to install a spur track connected with its third track on the west side of its main line and opposite the petitioner's lumberyard and to establish a private crossing for the petitioner's use. The petitioner desires to have this spur track constructed if no other solution is feasible. It is ordered: (1) that the respondent construct and maintain a spur track west of its industrial track as specified, for the use of the petitioner; and (2) that the petitioner deposit with the respondent a sum specified to pay for the construction of the spur track, or, in lieu thereof, give bond in accordance with sec. 1797—11*m*—2 of the statutes. Thirty days is considered a sufficient time within which to comply with the order. If the respondent and the petitioner can reach some agreement relative to the extension of the east industrial track and an apportionment of the cost of the extension, or if a longer track, at an additional cost, west of the tracks is desired, the Commission will modify the present order accordingly. *Wecks Lbr. Co. v. C. & N. W. R. Co.* 114, 117.

ESTABLISHMENT, CONSTRUCTION AND MAINTENANCE.

Checking station—Establishment of.

1. The Western Crawford County Farmers' Mutual Tel. Co. applies for authority to establish a checking station in the city of Prairie du Chien and for the connection of this station with all other telephone systems in the city. The applicant desires the station for the purpose of checking the joint business of the companies with which it is connected under the terms of the order issued in *Union Tel. Co. v. Western Crawford Co. F. M. T. Co. et al.* 1912, 11 W. R. C. R. 42. The applicant maintains a few telephones in the city, installed prior to the enactment of ch. 610, laws of 1913, but these are used solely for communication with rural subscribers and not for communication within the city. At the present time there are two lines within the city limits where checking would be required. One of these is a clear line to Eastman owned jointly by the applicant and the Union Tel. Co. The other is a clear line to Bridgeport leased by the Union Tel. Co. from the Tri-State Tel. Co. Calls over this line are checked by an operator representing each company and the checkings are compared daily. Calls in coming to Prairie du Chien over the Prairie du Chien-Eastman line are checked by both companies; those outgoing from Prairie du Chien over this line are checked only by the Union Tel. Co. but could be checked by the applicant, if desired, without a checking station. *Held:* 1. The applicant has no right to increase the number of its telephones in the city of Prairie du Chien except upon a showing that public convenience and necessity require another telephone exchange within the city for the purpose of rendering local service. *Citizens Tel. Co. of Eau Claire v. Railroad Comm. of Wis.* 1914, 146 N. W. 798. 2. Public convenience and necessity do not require an additional telephone exchange within the city of Prairie du Chien. 3. Inasmuch as the checking of traffic between the applicant and the Union Tel. Co. is now, or readily can be, satisfactorily accomplished without any additional facilities or expense, the location of a checking station within the city of Prairie du Chien is unnecessary under present conditions. The petition is dismissed. *In re Appl. Western Crawford Co. Farmers' Mut. Tel. Co.* 568, 572.

Construction of lines—Duplication of equipment of established utility not ordinarily the remedy for excessive rates or inadequate service.

See post, 2.

Construction of lines—Legality of construction in municipality in which there is already in operation a public utility engaged in similar service.

See post, 3.

Construction of line—Public convenience and necessity of extensions in particular cases—Sevastopol Farmers' Tel. Co. in Door county.

2. The Sevastopol Farmers Tel. Co. applies for a certificate of public convenience and necessity permitting it to construct a telephone system north from Sturgeon Bay, Door county, into the towns of Sevastopol, Egg Harbor and Jacksonport. The Door County Tel. Co. and Matt Peffer, each owning and operating rural telephone lines in the towns named, object to the granting of the certificate. The proposed new line would parallel the existing lines on the same highways for practically its entire length. This is sought to be justified by the alleged gross inadequacy of the service afforded by both of the existing systems. Because of the strength of the evidence offered on this point, an investigation of the service rendered by the objectors is ordered by the Commission on its own motion. The fact that existing telephone service is inadequate is not ordinarily sufficient to justify the issuance of a certificate of public convenience and necessity permitting a new company to enter territory already occupied and fully covered by existing companies, but recourse should be had to the method provided by the Public Utilities Law for the correction of defects in service. *Held:* Public convenience and necessity do not require the proposed construction. *In re Appl. Sevastopol Farmers' Tel. Co.* 524, 528.

Construction of line—Public convenience and necessity of extensions in particular cases—Town of Addison, Washington county.

3. Application was made for authority, through a certificate of public convenience and necessity, to construct in the town of Addison, Washington county, a telephone line to connect the residences of the various applicants, with a line of the Hartford Rural Tel. Co. The Allenton-Kohlsville Tel. Co. opposed the construction of the new line on the ground that it would compete directly with that company's line on the same highway and would actually deprive that line of subscribers. It appeared that the proposed line would be a little over two miles in length and would run for most of its distance parallel with the Allenton-Kohlsville line on the same highway; that Hartford and Allenton are centers of population quite distinct from one another; that the highway on which the applicants reside happens to be in the nature of a boundary line between the rural community tributary to Hartford and that tributary to Allenton; that some of the residents along this highway desire connection toward Hartford, while others prefer service toward Allenton; that the circumstances are such that a physical connection between the Hartford Rural Tel. Co. and the Allenton Kohlsville Tel. Co. would be impractical, and that the construction of the proposed line would not result in great loss to the Allenton-Kohlsville Tel. Co. *Held:* The construction, in the manner proposed by the applicants, of the line in question for telephone service, is required by public convenience and necessity. Where border territories are involved, it occasionally happens, as in the present case, that the public needs can only be satisfied by permitting a certain amount of overlapping. When such is the case, the convenience and necessity of the public itself in the matter of telephone service is the paramount consideration and the doctrine of protection for existing interests can not be carried to its full length. Ordinarily the appropriate remedy is a physical connection, the general policy of the law being usually against duplication of lines which will impair investments, and the action taken by the Commission in the present case is not to be looked upon as a precedent until a situation develops, which is similar in all respects to the pres-

ent one. *In re Constr. of a Tel. Line in Town of Addison, Wash. Co.* 766, 770.

Extension of lines—Authority from Commission necessary.

4. It appears to us that this a case in which, if the Lisbon Telephone Company had filed its notice with the Commission in the manner required by law, the Commission would have found that public convenience and necessity do not require the proposed extension. The company would not, therefore, have been legally entitled to proceed with the extension. The company should not, of course, be entitled to any greater privilege because it went ahead in violation of law than it would have had had it proceeded in conformity with the law. Chapter 610 of the laws of 1913 prescribes a specific procedure to be followed in the case of telephone extensions, and makes no provision for a case like the present, where the extension is made in violation of the statute. It does not appear, therefore, that we have authority to make an order requiring the Lisbon Telephone Company to remove its line, to discontinue giving service to Mr. Mamerow, and to refrain from installing service in the residence of Mr. Stiehl. The same result will probably be reached, however, by our statement that public convenience and necessity do not require the extension and that it exists in violation of law. Therefore, unless the Lisbon Telephone Company discontinues service to Mr. Mamerow and refrains from serving Mr. Stiehl, the way will be open for a prosecution. *In re Alleged Violation of Law by Lisbon Tel. Co.* 131, 135.

Extension of lines—Application of ch. 610, laws of 1913 (secs. 1797m—74) to extensions begun before law became effective.

5. The Earl Tel. Co. alleges that the Trego Tel. Co. extended its line in the summer and fall of 1913 without authority of law into territory already occupied by the Earl Tel. Co. The Trego Tel. Co. contends that inasmuch as it began the construction of the line prior to the enactment of ch. 610, laws of 1913, it was entitled to complete the line. The territory in question is in the main that which lies between the unincorporated villages of Earl and Springbrook in Washburn county. The Earl Tel. Co. has had for some years a line which runs through the village of Earl and for a mile or so in a northeasterly direction along the road toward Springbrook and another line which runs in a roundabout way into Springbrook. The extension which the Trego Tel. Co. is alleged to have built without authority follows the direct road out of Earl paralleling the Earl line to its terminus and continuing on the same highway to the village of Springbrook. A telephone company which had its poles hauled and ready to set for an extension of its line prior to the date on which ch. 610, laws of 1913, became effective is not prevented by this law from completing the construction of the line as marked out by the placing of the poles, for the legislature cannot be presumed to have intended the law to affect extensions already made or those in process of construction. The contention of the Earl Tel. Co. that the hauling and placing of the poles was for the purpose of constructing merely a toll line and that the officers of the Trego Tel. Co. later changed their minds and made the line into a local subscriber line is not supported by the evidence. *Held:* The Trego Tel. Co. did not violate ch. 610, laws of 1913, in constructing the extension in question. *Earl Tel. Co. v. Trego Tel. Co.* 457, 461.

Extension of lines—Duplication of equipment.

6. While the duplication of service rather than the actual paralleling of lines is the thing principally to be avoided in the construction of new telephone lines, the extension of a paralleling line from which no

service is permitted to be given to the persons living along it is likely to lead to friction and dissatisfaction, and the actual incumbering of the highway and the close proximity of the wires are also likely to be unsatisfactory. In the instant case the route proposed by the Chippewa County Tel. Co. which involves practically no paralleling of any line now furnishing local service to subscribers, seems to the Commission to be preferable to the alternative route proposed by the company which would parallel the Wis. Tel. Co.'s line for about half a mile and the Cadott Tel. Co.'s line for a mile and a half before reaching the point where it would enter new territory and take on subscribers of its own. *In re Proposed Extension Wis. Tel. Co. in town of Anson*, 510, 515–517.

Extension of lines—Duplication of equipment of established utility.

See post, 22.

Extension of lines—Duplication of equipment of established utility not ordinarily the remedy for excessive rates or inadequate service.

7. The fact that slightly quicker service may be obtained if a duplication of lines is permitted is not necessarily sufficient to justify such duplication. If the service furnished by the Pewaukee-Sussex Tel. Co. is inadequate, recourse should be had to the remedies provided by law before resorting to the duplication of existing equipment. *In re Alleged Violation of Law by Lisbon Tel. Co.* 131, 133, 134.

8. The subscriber in question states that he discontinued the service of the Rock County Tel. Co. because of its poor quality and the lack of adequate long distance connections. Where the line of one telephone company already runs on a highway past a residence and is serving that residence or is able to serve it reasonably well another telephone company ought not usually to be permitted to construct a parallel line on the same highway to reach the residence in question. If the service rendered by the Rock County Tel. Co. is inadequate the matter should be brought before the Commission in the usual way. *In re Proposed Extension Wis. Tel. Co.* 396, 399–401.

Extension of lines—Duplication of equipment of established utility—When permitted.

See also post, 13.

9. The fact that the paralleling of lines proposed would be only a quarter of a mile long does not make such paralleling any less a violation of the statutes. This situation has arisen several times before the Commission, and permission to parallel has uniformly been refused. (*In re Proposed Extension of the Lines of the Ettrick Tel. Co.* 1913, 12 W. R. C. R. 744; *In re Proposed Extension of the Lines of the Clinton Tel. Co.* 1913, 13 W. R. C. R. 166; *In re Proposed Extension of the Lines of the West Kewaunee & Western Tel. Co.* 1914, 14 W. R. C. R. 219; *In re Alleged Violation of Chapter 610 of the Laws of 1913 by the Lisbon Tel. Co.* 1914, 14 W. R. C. R. 131.) *In re Proposed Extension Wis. Tel. Co.* 396, 398.

Extension of lines—Extension contrary to law—Cornell Tel. Co. in town of Holcombe, Chippewa county.

See post, 13.

Extension of lines—Extension contrary to law—East Valley Tel. Co. in towns of Scott and Sherman, Sheboygan county.

10. The East Valley Tel. Co. notified the Commission of a proposed extension of its line in the towns of Scott and Sherman, Sheboygan

county. The construction of the line in question in the fall of 1913 was technically a violation of ch. 610 of the laws of 1913. But it seems that, while the law went into effect July 10, 1913, its provisions were not clearly understood by the telephone utilities of the state until some time later. *Held:* The evidence does not indicate any wilful violation of the law, but rather a failure to comprehend its requirements. Had the East Valley Tel. Co. notified the Commission in the regular way of its proposed extension, and had the same facts been placed before the Commission as those considered in the present case, it would have been impossible to find that public convenience and necessity did not require the extension. Under the circumstances, the Commission will take no action looking toward the withdrawal of the East Valley Tel. Co. from the territory in which the new extension was built. *In re Proposed Extension East Valley Tel. Co.* 802, 804.

Extension of lines—Extension contrary to law—Lisbon Tel. Co. in town of Lisbon.

11. The Commission, on its own motion, investigated an informal complaint made by the Pewaukee-Sussex Tel. Co. that the Lisbon Tel. Co. had violated ch. 610, laws of 1913. It appears that the Lisbon Tel. Co. in the fall of 1913 extended its line along the Lisbon Plank Road in the town of Lisbon without filing notice, as required by the law cited, with the Commission and with the Pewaukee-Sussex Tel. Co., which was already operating a line for local service along the road named. This violation of law seems, however, not to have been wilful and the matter of the extension is therefore considered as if the case were before the Commission in the manner contemplated by the statute. The extension is desired by certain residents along the Lisbon Plank Road who allege that the Lisbon Tel. Co. is in a position to afford them more direct connection and better service to the village of Sussex than is the Pewaukee-Sussex Tel. Co. The fact that slightly quicker service may be obtained if a duplication of lines is permitted is not necessarily sufficient to justify such duplication. *Held:* The extension in question, so far as it reaches the Lisbon Plank Road and residences long the road, is not required by public convenience and necessity and is in existence in violation of law. Though the Commission apparently has no authority to order the Lisbon Tel. Co. to cease giving service to subscribers along the road named, the failure of the company to discontinue such service will render the company liable to prosecution. If the service furnished by the Pewaukee-Sussex Tel. Co. is inadequate recourse should be had to the remedies provided by law before resorting to the duplication of existing equipment. *In re Alleged Violation of Law by Lisbon Tel. Co.* 131, 135.

Extension of lines—Legality of extension in municipality in which there is already in operation a public utility engaged in similar service.

See also ante, 11.

12. In our judgment the extension of the service of the Wisconsin Telephone Company into territory already occupied by the local company is not warranted by the local conditions. Such an extension would inevitably result in duplication of equipment, and, unless carefully safeguarded, in the ultimate outing of the less powerful company. It is the express intent of chapter 610 of the laws of 1913 to eliminate the waste of such unwarranted competition, and the Commission has repeatedly refused to countenance the extension of lines where adequate service can be rendered by the company already in the field. *In re Invest. People's Tel. Co. et al. at Fall River,* 793, 795.

13. The Cornell Tel. Co. filed notice with the Commission of a proposed extension of its lines in the town of Holcombe, Chippewa county. It appeared that prior to July 11, 1913, the date on which ch. 610, laws of 1913, amending sec. 1797*m*—74 of the statutes, under which this proceeding arises, went into effect, the company was giving certain service in the village of Holcombe, and that prior to the hearing the extensions here involved were made under the misapprehension that the village was incorporated. It did not appear that the demand, which the new service satisfied, could not have been met by the Chippewa County Tel. Co., whose lines the extensions in question paralleled. *Held:* Respondent is ordered to permanently discontinue all local service given from such of its lines as were constructed in the town of Holcombe since July 11, 1913. *In re Extension Cornell Tel. Co.* 814, 816.

Extension of lines—Proposed extension permitted by law unless Commission finds that public convenience and necessity do not require the extension.

14. The Anti-duplication Law permits a proposed extension to be made unless the Commission makes a definite finding that public convenience and necessity do not require the extension. The Commission cannot make such a finding on the mere ground that the company objecting to the making of an extension by another company has been longer established than the other in the town in which the extension is to be made and has the preponderating line mileage and number of subscribers in that town. *In re Proposed Extension of Wis. Tel. Co.* 441, 443.

15. Since both companies in the instant case have complied with the legal requirements precedent to the extension by filing the notices required by law, the conclusion that public convenience and necessity require the service of the Chippewa county line necessarily results in the further conclusion that public convenience and necessity do not require the line of the Wisconsin Telephone Company. *In re Proposed Extension Wis. Tel. Co. in town of Anson*, 510, 515–517.

16. Ordinarily, when territory is entirely unoccupied, there is a plain public convenience and necessity requiring some telephone service, and when one company is aggresive enough in the promotion of its business to take steps toward entering the territory, it is difficult to say there is no public convenience and necessity requiring its line. Thus, it is very unlikely that the Commission could have made a finding adverse to the East Valley Telephone Company had its notice been filed in the usual way and in strict compliance with the law. *In re Proposed Extension East Valley Tel. Co.* 802, 803–804.

Extension of lines—Public convenience and necessity of extensions in particular cases—East Valley Tel. Co. in towns of Scott and Sherman, Sheboygan county.

17. The East Valley Tel. Co. notified the Commission of a proposed extension of its line in the towns of Scott and Sherman, Sheboygan county. Upon investigation by the Commission it was found that the line had already been built, and that its eastern end was about a mile west of the nearest point on the Random Lake Tel. Co.'s line. The territory involved was new and unoccupied, but the Random Lake Tel. Co. considered it as belonging to itself, and objected to the extension for that reason. However, the latter company had not instituted proceedings before the Commission with a view to obtaining the right to build. The construction of the line in question in the fall of 1913 was technically a violation of ch. 610 of the laws of 1913. But it seems that, while the law went into effect July 10, 1913, its provisions were not clearly understood by the telephone utilities of the state until some time later. *Held:* The evidence does not indicate any wilful violation

of the law, but rather a failure to comprehend its requirements. Had the East Valley Tel. Co. notified the Commission in the regular way of its proposed extension, and had the same facts been placed before the Commission as those considered in the present case, it would have been impossible to find that public convenience and necessity did not require the extension. Under the circumstances, the Commission will take no action looking toward the withdrawal of the East Valley Tel. Co. from the territory in which the new extension was built. *In re Proposed Extension East Valley Tel. Co.* 802, 804.

Extension of lines—Public convenience and necessity of extensions in particular cases—Lisbon Tel. Co. in town of Lisbon.

18. The extension in question, so far as it reaches the Lisbon Plank Road and residences along the road, is not required by public convenience and necessity and is in existence in violation of law. *In re Alleged Violation of Law by Lisbon Tel. Co.* 131, 135.

Extensions of lines—Public conveniences and necessity of extensions in particular cases—Mattoon Tel. Co. in town of Norwood, Langlade county.

19. The Mattoon Tel. Co. filed notice with the Commission of its intention to extend its line to the unincorporated village of Phlox in the town of Norwood, Langlade county. The Antigo Tel. Co. objects to the proposed extension. The line which the Mattoon Tel. Co. desires to extend is authorized, though not yet constructed, to a point a half mile short of the village. The Antigo Tel. Co. has a toll line extending from Antigo through Phlox to Mattoon and renders service between Phlox and Mattoon at its regular toll rates. Service over the proposed extension would be free of toll charge. *Held:* Inasmuch as the village of Phlox already has adequate telephone connections, it cannot be said that public convenience and necessity require, the extension of the Mattoon line for local service into the village. If the toll rate charged by the Antigo Tel. Co. is excessive, the Commission can reduce the rate upon the institution of proper proceedings. *In re Proposed Extension Mattoon Tel. Co.* 329, 331.

Extension of lines—Public convenience and necessity in particular cases—Mayville Rural Tel. Co. in towns of Theresa and Herman, Dodge county.

20. The Mayville Rural Tel. Co. filed notice with the Commission of its intention to make certain extensions of its lines in the towns of Theresa and Herman in Dodge county. The Theresa Union Tel. Co. objects to the proposed extensions insofar as the rendering of service to four of the proposed subscribers is concerned. Three of these subscribers reside on the highway on which the line of the objector is in operation and one resides a few rods east of the highway, and therefore still farther away from the line of the Mayville Rural Tel. Co. The desire of prospective subscribers of a proposed extension of a telephone line to be on the same line as their neighbors so that they may converse without ringing central office does not seem to be a sufficient reason for permitting the duplication of an existing line. *Held:* Public convenience and necessity do not require the proposed extensions insofar as such extensions would serve subscribers located along or east of the highway along which the line of the Theresa Union Tel. Co. extends. The extension proposed to be made west of this highway will be permitted to proceed. *In re Proposed Extension Mayville Rural Tel. Co.* 402, 404.

Extension of lines—Public convenience and necessity of extensions in particular cases—Random Lake Tel. Co. in town of Sherman, Sheboygan county.

21. The Random Lake Tel. Co. filed notice with the Commission of its intention to extend its line parallel to the line of the East Valley Tel. Co. from a point some two miles southwest of Adell, Wis., toward the village of Adell. It appeared that a physical connection between the two companies was feasible, that in fact a line was being built for that purpose, and that, when completed, the desired service could thereby be afforded to the parties who were involved in the present case and wished the proposed extension. *Held:* The extension of the line in question in the manner proposed is not required by public convenience and necessity. Since a physical connection would furnish an adequate, feasible remedy, the building of the extension would result in the sort of unnecessary duplication which the law seeks to avoid. *In re Proposed Extension of the Random Lake Tel. Co.* 757, 758.

Extension of lines—Public convenience and necessity of extensions in particular cases—West Kewaunee and Western Tel. Co. in the towns of West Kewaunee and Montpelier, Kewaunee county.

22. The West Kewaunee & Western Tel. Co. filed notice with the Commission of its intention to extend its lines in the towns of West Kewaunee and Montpelier in Kewaunee county. The Horseshoe Tel. Co. objects to the proposed extensions on the ground that they would duplicate parts of its system. The fact that the rates of a telephone company are higher than those of a competing company is not usually sufficient reason for allowing the latter company to parallel the lines of the former company. If the rates of the former company are excessive their reduction should be secured in the usual way by complaint to the Commission. Where two telephone lines proceed along the same road and render substantially equal service it would ordinarily be improper to permit the shorter line to be extended beyond the end of the longer line to take on subscribers in territory beyond when the longer line is ready and willing to make the same extension and can do so with much less investment and without causing any more paralleling of lines than already exists. The contention of the West Kewaunee & Western Tel. Co. that it is not a public utility, for the reason that all its subscribers are stockholders, cannot be granted in view of the fact that the company uses the highways of the state for its pole and wire lines and the further fact that the company apparently holds itself out as giving a public telephone service as distinguished from a purely private service. *Held:* Public convenience and necessity do not require either of the extensions proposed by the West Kewaunee & Western Tel. Co. This short paralleling of the Horseshoe Tel. Co.'s line necessary to permit the Western Kewaunee & Western Tel. Co. to extend its service to the cheese factory of its president will not, however, be prohibited, inasmuch as the Horseshoe Tel. Co. does not oppose this extension. *In re Proposed Extension of West Kewaunee & W. Tel. Co.* 219, 224.

Extension of lines—Public convenience and necessity of extensions in particular cases—Wis. Tel. Co. in town of Anson, Chippewa county.

23. When there is a question as to which of two telephone companies shall be allowed to serve a given territory which is about equidistant from the lines of both companies and which is entirely new to both

companies, so that neither will have to have its existing investment in any way impaired by the extension of the other, consideration may well be given to some matters that might be extraneous to the issue if an actual duplication of lines were contemplated. Among these are the preponderance of the subscribers of one company in the territory in question, the number and local importance of the points that can be reached without the use of toll lines, the relative length of time the two companies have been operating in the surrounding territory, and the business and social habits and needs of the individuals who are to use the new service. The greater diligence of one company in securing subscribers may also be taken into account in some cases. While the duplication of service rather than the actual paralleling of lines is the thing principally to be avoided in the construction of new telephone lines, the extension of a paralleling line from which no service is permitted to be given to the persons living along it is likely to lead to friction and dissatisfaction, and the actual incumbering of the highway and the close proximity of the wires are also likely to be unsatisfactory. In the instant case the route proposed by the Chippewa County Tel. Co. which involves practically no paralleling of any line now furnishing local service to subscribers, seems to the Commission to be preferable to the alternative route proposed by the company which would parallel the Wis. Tel. Co.'s line for about half a mile and the Cadott Tel. Co.'s line for a mile and a half before reaching the point where it would enter new territory and take on subscribers of its own. *Held:* Public convenience and necessity do not require the extensions proposed by the Wisconsin Tel. Co. to reach the six prospective subscribers involved in the issue between the Wis. Tel. Co. and the Chippewa County Tel. Co. No finding is made with respect to the other extensions covered by the amended proposal of the Wis. Tel. Co. or the extensions covered by the amended proposal of the Chippewa County Tel. Co. for the reason that authority vests in the respective companies by operation of law to proceed with the extensions in question as soon as the twenty day limit fixed by the statute has expired. *In re Proposed Extension Wis. Tel. Co. in town of Anson*, 510, 517.

Extension of lines—Public convenience and necessity of extensions in particular cases—Wis. Tel. Co. in town of Rock, Rock county.

24. The Wis. Tel. Co. filed notice with the Commission of its intention to extend its line for local service in section 6 in the town of Rock, Rock county. The Rock County Tel. Co. objects to the proposed extension. The Wis. Tel. Co. desires to make the extension, which would be about a quarter of a mile long, for the purpose of serving a subscriber who formerly received service from the Rock County Tel. Co. whose line runs directly past his residence. The subscriber in question states that he discontinued the service of the Rock County Tel. Co. because of its poor quality and the lack of adequate long distance connections. Where the line of one telephone company already runs on a highway past a residence and is serving that residence or is able to serve it reasonably well, another telephone company ought not usually to be permitted to construct a parallel line on the same highway to reach the residence in question. The fact that the paralleling of lines proposed would be only a quarter of a mile long does not make such paralleling any less a violation of the statutes. *Held:* Public convenience and necessity do not require the proposed extension. If the service rendered by the Rock County Tel. Co. is inadequate the matter should be brought before the Commission in the usual way. The complaint with respect to the long distance connections of the company need not be passed upon here for the reason that there is now pending before the Commission a proceeding against the two telephone companies here in-

volved in which physical connection between them for long distance service is asked. *In re Proposed Extension Wis. Tel. Co.* 396, 401.

Extension of lines—Public convenience and necessity of extensions in particular cases—Wis. Tel. Co. in town of Rock, Rock county.

25. The Wis. Tel. Co. filed notice with the Commission of its intention to extend its line south in the town of Rock between sections 7 and 8 and between sections 17 and 18 to reach three prospective subscribers. The Rock County Tel. Co. objects to the proposed extension. Two of the prospective subscribers reside in section 7, which is in territory now without telephone service and about equidistant from the lines of the two companies. The third prospective subscriber resides in section 18 and now has the service of the Rock County Tel. Co. over a line a quarter of a mile long on which he is sole subscriber and which was constructed for the purpose of giving him service, but is said to desire the service of the Wis. Tel. Co. for the reason that he has another farm located in section 7 at which he has the service of the Wis. Tel. Co. A proceeding having for its object the establishing of physical connection between the Wis. Tel. Co. and the Rock County Tel. Co. is now pending before the Commission. The Anti-duplication Law permits a proposed extension to be made unless the Commission makes a definite finding that public convenience and necessity do not require the extension. The Commission cannot make such a finding on the mere ground that the company objecting to the making of an extension by another company has been longer established than the other in the town in which the extension is to be made and has the preponderating line mileage and number of subscribers in that town. *Held:* Public convenience and necessity do not require the extension proposed insofar as the territory south of sections 7 and 8 is concerned. No finding is made with respect to the proposed extension to the two residences in section 7 and the Wis. Tel. Co. will therefore be authorized by the operation of law to proceed with the extension to these points. *In re Proposed Extension Wis. Tel. Co.* 441, 444.

Extension of lines—Service in territory equidistant from lines of two companies—Which company shall serve.

26. When there is a question as to which of two telephone companies shall be allowed to serve a given territory which is about equidistant from the lines of both companies and which is entirely new to both companies, so that neither will have to have its existing investment in any way impaired by the extension of the other, consideration may well be given to some matters that might be extraneous to the issue if an actual duplication of lines were contemplated. Among these are the preponderance of the subscribers of one company in the territory in question, the number and local importance of the points that can be reached without the use of toll lines, the relative length of time the two companies have been operating in the surrounding territory, and the business and social habits and needs of the individuals who are to use the new service. The greater diligence of one company in securing subscribers may also be taken into account in some cases. *In re Proposed Extension Wis. Tel. Co. in town of Anson*, 510, 515.

Extension of service—Statutory requirements.

27. It is the express intent of ch. 610 of the laws of 1913 to eliminate the waste of unwarranted competition, and the Commission has repeatedly refused to countenance the extension of lines where adequate service can be rendered by the company already in the field. *In re Invest. People's Tel. Co. et al. at Fall River*, 793, 795.

Telephone exchange—Public convenience and necessity of additional exchanges in particular cases—Western Crawford Co. Farmers' Mut. Tel. Co. in city of Prairie du Chien.

28. The Western Crawford County Farmers' Mutual Tel. Co. applies for authority to establish a checking station in the city of Prairie du Chien and for the connection of this station with all other telephone systems in the city. The applicant desires the station for the purpose of checking the joint business of the companies with which it is connected under the terms of the order issued in *Union Tel. Co. v. Western Crawford Co. F. M. T. Co. et al.* 1912, 11 W. R. C. R. 42. The applicant maintains a few telephones in the city, installed prior to the enactment of ch. 610, laws of 1913, but these are used solely for communication with rural subscribers and not for communication within the city. At the present time there are two lines within the city limits where checking would be required. One of these is a clear line to Eastman owned jointly by the applicant and the Union Tel. Co. The other is a clear line to Bridgeport leased by the Union Tel. Co. from the Tri-State Tel. Co. Calls over this line are checked by an operator representing each company and the checkings are compared daily. Calls in coming to Prairie du Chien over the Prairie du Chien-Eastman line are checked by both companies; those outgoing from Prairie du Chien over this line are checked only by the Union Tel. Co. but could be checked by the applicant, if desired, without a checking station. *Held:* 1. The applicant has no right to increase the number of its telephones in the city of Prairie du Chien except upon a showing that public convenience and necessity require another telephone exchange within the city for the purpose of rendering local service. *Citizens Tel. Co. of Eau Claire v. Railroad Comm. of Wis.* 1914, 146 N. W. 798. 2. Public convenience and necessity do not require an additional telephone exchange within the city of Prairie du Chien. The petition is dismissed. *In re Appl. Western Crawford Co. Farmers' Mut. Tel. Co.* 568, 572.

OPERATION.

Physical connection—Establishment of—Conditions precedent.

29. In a previous case (*Winter v. La Crosse Tel. Co. et al.* 1913, 11 W. R. C. R. 748) the Commission held that to justify the public obligation usually imposed by "public convenience and necessity" there must be present some imperative public exigency. It is inevitable in such a situation as that at Janesville that the aggregate loss of time, inconvenience and annoyance through the absence of such physical connection as is here requested must be great, and the conclusion is equally inevitable that a public exigency demands physical connection. *McGowan v. Rock County Tel. Co. et al.* 529, 537.

Physical connection—Establishment of, in particular cases.

See also ante, 21.

30. The petitioners, who are subscribers of the Readfield Tel. Co., ask that physical connection be established between the lines of the Readfield Tel. Co. and those of the Fremont Tel. Co. in such manner as to enable the subscribers of the two companies to communicate with the village of Fremont and the village of Readfield. The telephone companies are willing to make the desired connection upon proper terms and conditions. It is ordered that the physical connection requested be made. A toll of 10 cts. per message is to be exacted from parties desiring limited service and a monthly charge of 25 cts. from those desiring unlimited service. Each company is to retain the revenues originating on its own lines. *Johnson et al. v. Readfield Tel. Co. et al.* 102, 103.

31. The petitioner alleges that public convenience and necessity require physical connection between the local systems and toll lines of

the Rock County Tel. Co. and those of the Wis. Tel. Co. in the city of Janesville and asks that the Commission investigate the matter as provided by ch. 546, laws of 1911. Both the respondent companies furnish local and long distance service. The Wis. Tel. Co. has a decided advantage as to toll business, while the Rock County Tel. Co. has a slight advantage as to local business. Competition between the two companies appears to have been very keen, as well as unprofitable to both companies. The local rates of the two companies are practically the same. Only a small majority of the business establishments and a very small proportion of the residences connected with either of the two exchanges have the phones of both companies and the Wis. Tel. Co. refuses to transmit over the lines of the Rock County Tel. Co. messages coming over its own lines for parties who are subscribers of the Rock County Tel. Co. but not of the Wis. Tel. Co. The only connection between the two companies is that afforded by a Rock County phone which the Wis. Tel. Co. has installed in its office and which it uses to notify parties having Rock County phones, but not the phones of the Wis. Tel. Co., of calls which come for them over the Wis. Tel. Co.'s lines. Parties thus notified are compelled to go to a phone of the Wis. Tel. Co. in order to communicate with the party calling. Intercommunication between the rural subscribers is even more difficult than between subscribers in the city and the rural subscribers of the Rock County Tel. Co. are practically deprived altogether of the long distance service of the Wis. Tel. Co. The contention of the Wis. Tel. Co. that ch. 546, laws of 1911, is invalid for the reason that it violates certain guarantees of property rights found in the constitution of the United States and that the Commission is therefore without authority in the premises, was disposed of in *Winter v. La Crosse Tel. Co. et al.* 1913, 11 W. R. C. R. 748, and the principles there stated are here followed. The contention of the Wis. Tel. Co. that it would suffer irreparable loss under the physical connection desired by the petitioner through the effect on the business of its local exchange is not valid. Subscribers of either company who are in a position to also become subscribers of the other and who desire to be connected with the other company's exchange, for the purpose of either local or toll service, can be required to pay the company of which they are not subscribers a small toll for the privilege, so adjusted as to substantially preserve the *status quo* of the two companies so far as any effect of the charge itself is concerned. No charge in excess of the cost of service and reasonable compensation should be made, however, to those rural subscribers and patrons of connecting companies who have and can have the service of only one company available to them under the terms of the Anti-duplication Law. *Held:* Public convenience and necessity require a physical connection between the exchanges of the respondent companies for the interchange of both local and long distance service. Such connection will not result in irreparable injury to the owners or other users of the facilities of the two companies nor in substantial detriment to the service to be rendered by them. It is ordered: (1) That the respondents make such physical connection or connections between their toll lines and between their local systems in the city of Janesville as is required for the furnishing of toll line and local service, including rural service, to the subscribers of each company, at the stations installed in their residences and places of business over the toll lines and local lines, including rural lines of the other company; and (2) that the expense of making such physical connection or connections be apportioned equally between the respondents. The point and extent of the connection ordered are left to the respondents to agree upon. Thirty days is deemed a reasonable time within which to comply with the order. *McGowan v. Rock County Tel. Co. et al.* 529, 541.

32. The complainants petition the Commission to reëstablish physical connection between their lines and those of respondent at Hub City,

and at what was formerly known as Rego's switch in Vernon county. It appears that the lines of the three companies were connected at these points up to about one year ago, at which time a disagreement occurred over the amount which the complainants should pay to the respondent for switching fees, with the result that the respondent disconnected its lines from the switches in question. The respondent telephone company connects with the exchange of the Richland Telephone Company at Richland Center—the complainant companies with the exchange of the Cazenovia Telephone Company at Cazenovia. It appears that this connection had existed some twelve years, that Cazenovia was the nearest market for some of respondent's subscribers and also that a connection was desirable for a number of complainants' subscribers in the neighborhood of Hub City. *Held:* It is the conclusion of the Commission that the physical connection asked is (1) required by public convenience and necessity, and that (2) it will not result in irreparable injury to the owner or other users, nor (3) in substantial detriment to the service. Under such a state of facts sec. 1797*m*—4 of the statutes imposes upon the Commission the power and duty of requiring physical connection, and it is therefore so ordered. *Hawkins Creek Tel. Co. et al. v. Badger Tel. Co.* 655, 668.

33. Complaint was made that the telephone service at Fall River, Wis., was inadequate, and that the toll lines furnishing a physical connection between the exchange of the People's Tel. Co. at Fall River, and the exchange of the Wis. Tel. Co. at Columbus were inadequate for the traffic, and the Commission was asked to require the People's Tel. Co. to furnish adequate service, and to authorize and direct the Wis. Tel. Co. to furnish direct service to Columbus for such business men and residents of Fall River as desire it. It seems that general standards of adequate telephone service are to be made effective by the Commission in the near future, and that since the filing of the complaint the service of the People's Tel. Co. has become concededly satisfactory in most respects. There is no question that it is physically possible for the People's Tel. Co. to render adequate service with its local exchange, and with a sufficient number of direct connecting lines between its Fall River exchange and the Columbus exchange of the Wis. Tel. Co., and that the extension requested would result in duplication of equipment, and unwarranted competition, both of which ch. 610, laws of 1913, aims to eliminate. *In re Invest. People's Tel. Co. et al. at Fall River*, 793, 795.

34. The remedy for the situation in the instant case is a physical connection between the companies by which messages can be interchanged without the duplication of lines. It is almost inevitable that in case of an extension of a telephone line into unoccupied territory intermediate between two companies, some of the residents will prefer the service of the company which is not making the extension, and in some such cases where physical connection is not feasible it has been found necessary to permit some overlapping and paralleling of telephone lines in order to serve the real public needs. Here, however, a physical connection is not only feasible but is in process of construction between the two companies and, we are advised, will soon be in operation. *In re Proposed Extension East Valley Tel. Co.* 802, 804.

Physical connection—Establishment of—Protection of property rights.

35. The contention of the Wis. Tel. Co. that ch. 546, laws of 1911, is invalid for the reason that it violates certain guarantees of property rights found in the constitution of the Unitel States and that the Commission is therefore without authority in the premises, was disposed of in *Winter v. La Crosse Tel. Co. et al.* 1913, 11 W. R. C. R. 748, and the principles there stated are here followed. *McGowan v. Rock County Tel. Co. et al.* 529, 531–533.

Physical connection—Establishment of—Statutory requirements.

36. To justify the public obligation usually imposed by "public convenience and necessity" there must be present some imperative public exigency. It is inevitable in such a situation as that at Janesville that the aggregate loss of time, inconvenience, and annoyance through the absence of such physical connection as is here requested must be great, and the conclusion is equally inevitable that a public exigency demands physical connection. *McGowan v. Rock County Tel. Co. et al.* 529, 537.

37. Section 1797*m*—4 of the statutes imposes upon the Commission the power and duty of requiring physical connection, and it is therefore so ordered in the instant case. *Hawkins Creek Tel. Co. et al. v. Badger Tel. Co.* 655, 661–664.

Physical connection—Establishment of—Statutory requirements—Constitutionality.

38. The respondent alleges that the petitioner is without authority, right, or capacity to file or present the foregoing petition; that ch. 546 of the laws of 1911, pursuant to which the petition purports to be filed, is in violation of and in conflict with sec. 1 of article IV, sec. 2 of article VII, and secs. 5, 13 and 22 of article I of the constitution of the state of Wisconsin, and with sec. 10 of article I, of the constitution of the United States, and of sec. 1 of the fourteenth amendment to said constitution. The objections to the jurisdiction of the Commission based upon the alleged invalidity of the statute involved in these proceedings were also set up in the answer and disposed of in the case of *Winter v. La Crosse Tel. Co. et al.* 1913, 11 W. R. C. R. 748. *McGowan v. Rock County Tel. Co. et al.* 529, 531–533.

Physical connection—Establishment of—Terms and conditions of joint use.

39. The decision issued in this matter Jan. 5, 1914, 13 W. R. C. R. 538, left for future determination the terms finally to be fixed for the physical connection ordered to be restored between the petitioner and the respondent at the village of Owen. A traffic study of all calls passing through the respondent's exchange at Owen and a valuation of the portion of the respondent's poles, wire and switchboard used by the petitioner have been made for the purpose of determining the costs properly chargeable to the patrons of the petitioner for the service rendered by the respondent. The rates now temporarily in effect under the former order give the petitioner's patrons the option of paying a flat rate of $3 per year, or 10 cts. per message, aside from regular long distance tolls, for the service in question in this proceeding. All of the revenue from the $3 flat rate is retained by the respondent, while the revenue from the 10 ct. message rate is divided in the proportion of 3⅓ cts. to the respondent and 6⅔ cts. to the petitioner. *Held:* The flat rate of $3 per phone per year proposed by the respondent for application to all subscribers of the petitioner cannot be approved. The exaction by the petitioner of a 6⅔ cts. charge on each call is somewhat exorbitant for the service rendered by the petitioner to its patrons. A 5 ct. message charge, divided 3 cts. to the respondent and 2 cts. to the petitioner, would be a more nearly proper charge, and would work to the better interests of the patrons using the message rate service. In its other aspects the present arrangement, with slight modifications, will meet the needs of the situation. It is ordered that the respondent continue to furnish telephone service to the petitioner, on the basis of a $3 flat rate and a 5 ct. message rate combined, as prescribed by the Commission. No charge is to be made for calls from subscribers con-

nected to the respondent's exchange at Owen to the petitioner's subscribers, but the cost of this service is to be considered as included in the regular rates paid by the respondent's subscribers. Charges for long distance service through the respondent's exchange, either to or from the petitioner's subscribers, are in all cases to be the same as the charges made for this service to or from the respondent's subscribers. In case the total revenue received by the respondent from the petitioner's line for any one year amounts to less than $1 per telephone connected to the petitioner's line, the petitioner is to pay the difference between the two amounts to the respondent. *Curtiss & Withee Tel. Co. v. Owen Tel. Co.* 419, 426.

40. On account of the terms of the Anti-duplication Law, ch. 610 of the laws of 1913 (amending sec. 1797*m*—74), which aims to prevent uneconomic competition and duplication, it would seem that no charge in excess of the cost of the service and reasonable compensation should be made to those rural subscribers and patrons of connecting companies who have and could have only the service of one company or the other available to them under the foregoing law. As the cost of making the connections will not be great and the benefits derived will be mutual, each company will be required to pay one-half of the cost. *McGowan v. Rock County Tel. Co. et al.* 529, 538–539, 541.

Physical connection—Establishment of—Terms and conditions of joint use—Actual cost of service.

See ante, 39.

Physical connection—Establishment of—Terms and conditions of joint use—Traffic conditions.

See ante, 39.

Physical connection—Impracticability of—In particular cases.

41. Where border territories are involved, it occasionally happens, as in the instant case, that the public needs can only be satisfied by permitting a certain amount of overlapping. When such is the case, the convenience and necessity of the public itself in the matter of telephone service is the paramount consideration and the doctrine of protection for existing interests can not be carried to its full length. Ordinarily the appropriate remedy is a physical connection, the general policy of the law being usually against duplication of lines which will impair investments, and the action taken by the Commission in the present case is not to be looked upon as a precedent until a situation develops which is similar in all respects to the present one. In the instant case the circumstances are such that a physical connection between the Hartford Rural Tel. Co. and the Allenton Kohlsville Tel. Co. would be impractical, and that the construction of the proposed line would not result in great loss to the Allenton-Kohlsville Tel. Co. *In re Constr. of a Tel. Line in Town of Addison, Wash. County*, 766, 767–770.

Requirements as to service and facilities—Adequacy of service.

42. The fact that slightly quicker service may be obtained if a duplication of lines is permitted is not necessarily sufficient to justify such duplication. If the service furnished by the Pewaukee-Sussex Tel. Co. is inadequate recourse should be had to the remedies provided by law before resorting to the duplication of existing equipment. *In re Alleged Violation of Law by Lisbon Tel. Co.* 131, 133–134.

43. The Troy & Honey Creek Tel. Co. applies for authority to increase its rates. Subscribers of the applicant object on the ground (1) that the applicant's service is inadequate and (2) that the rates at present in effect are sufficient. A valuation was made, the revenues and ex-

penses were analyzed and the applicant's service over its own system and to connecting companies was investigated. *Held:* 1. The service rendered by the applicant is inadequate. 2. The applicant's present rates require revision to (a) provide a reasonable return to the applicant and (b) promote the improvement of the service. *In re Appl. Troy & Honey Creek Tel. Co.* 157, 177.

44. The subscriber in question states that he discontinued the service of the Rock County Tel. Co. because of its poor quality and the lack of adequate long distance connections. If the service rendered by the Rock County Tel. Co. is inadequate the matter should be brought before the Commission in the usual way. *In re Proposed Extension Wis. Tel. Co.* 396, 401.

45. The rules proposed by the applicant appear to be reasonable with the exception of certain ones which should be modified. Among others the provision that the applicant will not hold itself liable to furnish party line service unless the line can be kept full to capacity should be rescinded and the applicant should hold itself in readiness to furnish party line service. *In re Appl. Badger State Tel. & Teleg. Co.* 407, 417–418.

46. Complaint was made that the telephone service at Fall River, Wis., was inadequate, and that the toll lines furnishing a physical connection between the exchange of the People's Tel. Co. at Fall River, and the exchange of the Wis. Tel. Co. at Columbus were inadequate for the traffic, and the Commission was asked to require the People's Tel. Co. to furnish adequate service, and to authorize and direct the Wis. Tel. Co. to furnish direct service to Columbus for such business men and residents of Fall River as desire it. General standards of adequate telephone service are to be made effective by the Commission in the near future, and since the filing of the complaint the service of the People's Tel. Co. has become concededly satisfactory in most respects. *Held:* Decision as to the adequacy of the service of the People's Tel. Co. at Fall River is held in abeyance for the present. *In re Invest. People's Tel. Co. et al. at Fall River*, 793, 795.

Requirements as to service and facilities—Adequacy of service—Number of telephones per line.

47. Respondent contends that there would not be sufficient amount of business to warrant the building of a through line from Richland Center to Hub City and that the reconnection of the present loaded lines would materially impair the service of subscribers already on the line. *Held:* It is not deemed advisable at this time to require the installation of a through line from Richland Center to Hub City, or Hub City to Cazenovia. For the present it is believed that the loaded rural lines, with some changes, will handle the traffic in a fairly satisfactory manner. However, the lines of the Hawkins Creek Telephone Company appear to be considerably overloaded. It is ordered that the Hawkins Creek Telephone Company proceed to reduce the number of its subscribers per line to twelve or less. It is further ordered that the Hawkins Creek Telephone Company and the Badger Telephone Company provide sufficient compensation for the operator of the Pleasant Ridge switch to insure adequate service. *Hawkins Creek Tel. Co. et al. v. Badger Tel. Co.* 655, 664–665.

Requirements as to service and facilities—Extension of service.

48. As regards the furnishing of direct service to Columbus, it appears that formerly the Wis. Tel. Co. operated telephones within the village of Fall River connected directly with its Columbus exchange, but that since a physical connection was established between its Columbus exchange and the exchange of the People's Tel. Co. at Fall River, the Wis. Tel. Co. has withdrawn this local service entirely, that it now

maintains in the village one toll station connected directly with its Columbus exchange, that the proprietor of this station can connect with other residents of Fall River only through making use of both the Columbus and Fall River exchanges and the physical connection between the two, and that this cannot be regarded as local service. There is no question that it is physically possible for the People's Tel. Co. to render adequate service with its local exchange, and with a sufficient number of direct connecting lines between its Fall River exchange and the Columbus exchange of the Wis. Tel. Co., and that the extension requested would result in duplication of equipment, and unwarranted competition, both of which ch. 610, laws of 1913, aims to eliminate. As to extension of service requested of the Wis. Tel. Co., the Commission is without jurisdiction. The Wis. Tel. Co. is not obligated to furnish service of a local character in the village. On the contrary, it could only make the extensions in question after filing notice with, and securing the approval of the Commission under ch. 610, laws of 1913, and it would be contrary to the established policy of the legislature for the Commission to permit or require the extension of the Wis. Tel. Co's lines into Fall River for local service, even though such requirement were legally possible. *In re Invest. People's Tel. Co. et al. at Fall River*, 793, 795.

Switching rates.

1. Though the terminal rates ordered in the instant case should eventually be increased beyond the increase granted by the present order, this cannot be done until certain line haul rates which are now under consideration are finally adjusted. The fact that the rates at present in effect have resulted in the establishment of economic and traffic conditions which it is a serious matter to radically disturb must also be taken into account. *Held:* Considering both the necessary return to the railway company and the competitive status of many of the industries in the district, an industrial switching rate of 1 ct. per 100 lb., with minimum weights of 50,000 lb. and 60,000 lb. per car, is as high a rate as can reasonably be put into effect at this time. *In re C. M. & St. P. Switching Rates in Milwaukee*, 261, 271, 286.

TRAIN SERVICE.

Adequacy of train service.

1. This is a rehearing, upon application of the respondent, of a matter decided Aug. 22, 1913, 12 W. R. C. R. 506. The respondent objects to the order of the Commission requiring it to stop its trains No. 5 and No. 6 at Readfield on signal to receive and discharge passengers. The trains in question are interstate trains and though they stop at certain stations no larger than Readfield they do so only because of the respondent's reluctance to discontinue service to which the respondent's patrons have become accustomed from long usage. New data with reference to the passenger traffic at Readfield are considered. If a railway company furnishes reasonably adequate service to a community it cannot be required to furnish additional service to that community merely because it furnishes more than adequate service to communities of similar or less importance. *Held:* In the light of the new evidence introduced, the failure of the respondent to stop its trains No. 5 and No. 6 at Readfield would not constitute an unjust discrimination against Readfield nor result in service which would be legally inadequate. The former decision is reversed and the original complaint is dismissed. *Anderton et al. v. M. St. P. & S. S. M. R. Co.* 247, 250.

2. The petitioner in effect alleges that the passenger service rendered by the respondent at Eidsvold, Clark county, is inadequate and asks that the respondent be required to stop trains No. 5 and No. 6 at that point on flag and on request of passengers. The trains in question are local interstate trains running between Chicago and Eau Claire. The eastbound train, No. 6, stops regularly at Eidsvold on Tuesdays and

Fridays to receive shipments of cream for Marshfield and on flag on other days when there is cream to be shipped. Passengers are apparently permitted to board or alight from the train at these stops but the petitioner alleges that the stops are not long enough to afford elderly people an opportunity to make use of the train. The westbound train, No. 5, makes no regular stops at Eidsvold. The respondent states that it sells passenger tickets having Eidsvold as the destination only to such passengers as are willing to travel on the way freights which stop at Eidsvold. Passengers desiring to reach Eidsvold by passenger trains are compelled to purchase tickets either to Thorpe or Stanley, stations 3.4 miles east and 3.4 miles west, respectively, of Eidsvold. A curve in the track and the grade at Eidsvold appear to present operating difficulties which would interfere with the stopping of the westbound train, No. 5, at Eidsvold. *Held:* The service complained of appears to be inadequate. An order requiring the respondent to stop train No. 5 on flag in the face of the operating difficulties involved or a permanent order requiring the respondent to stop train No. 6 on flag, however, would not be justified at the present time. The respondent is ordered: (1) to take such measures as shall be necessary to furnish adequate service to and from Eidsvold on train No. 6 on such days as the respondent may find it necessary to regularly stop this train for cream shipments from Eidsvold and to charge for this service only the lawful rate of fare to and from Eidsvold; (2) for a period of three months to stop train No. 6 on other week days on signal or request to the conductor for the purpose of taking on or letting off passengers; and (3) to keep a complete and accurate record of the passenger business transacted at Eidsvold during the said period, at the expiration of which the Commission will make such further order as the facts may warrant. *Boardman v. M. St. P. & S. S. M. R. Co.* 462, 472–473.

3. The petitioners allege that the passenger service rendered by the respondent at Victory, Vernon county, is inadequate and asks that the respondent be required to stop train No. 51, northbound, and train No. 58, southbound, at Victory for the purpose of receiving and discharging passengers. The trains named are interstate trains. Victory now receives passenger service from one passenger train and one freight train each way daily. *Held:* The present service is adequate. The petition is dismissed. *Adams et al. v. C. B. & Q. R. Co.* 506, 507.

4. The petitioners allege that the train service rendered by the respondent at Pittsville is inadequate. The complaint was temporarily satisfied by the operation of additional trains which were later discontinued, after which the petitioners again complained to the Commission. The present passenger service consists of one mixed train operated each way daily between Babcock and Pittsville and scheduled to leave Babcock at 6:10 a. m., arrive at Pittsville at 6:45 a. m., leave Pittsville at 11:50 a. m. and arrive at Babcock at 12:30 p. m. The evidence shows that the northbound train is frequently late. The petitioners ask that a passenger or mixed train be run to Pittsville and back from Babcock, connecting with train No. 5 on the main line, which is scheduled to arrive at Babcock at 5:33 p. m. The passenger business on a branch line cannot always be expected to be entirely self-supporting. Where this business is conducted in connection with a profitable freight business on the same trains, the combined earnings must be considered in determining the adequacy of the service. In the instant case the passenger service can be improved in a manner which will also add to the convenience of the freight service, without placing an unreasonable burden upon the railway company. *Held:* The service complained of is inadequate. The respondent is ordered to operate a train for the accommodation of passengers and freight from Babcock to Pittsville and return, daily except Sunday, leaving Babcock after a connection with train No. 5 on the main line now scheduled to arrive

at that station at 5:33 p. m. *Werner et al. v. C. M. & St. P. R. Co.* 573, 576.

5. This is a rehearing in a matter decided Feb. 10, 1914, 13 W. R. C. R. 732. The respondent contends that the order issued requiring the respondent to stop its train No. 24 at Caledonia on signal to receive and discharge passengers, or, at its option, to so readjust its service that residents of Caledonia will be enabled to reach Racine and return the same day, having a reasonable amount of time at that city during business hours for the transaction of business, is unreasonable and beyond the authority of the Commission to issue. The train in question is an interstate train and the respondent alleges that it is necessary for the train to make close connections at Chicago. About 1,800 persons are tributary to the respondent's train service at Caledonia. Three northbound and two southbound trains are now stopped at Caledonia, but their schedule is such that it is impossible for residents of the locality to make the trip to Racine and return the same day, having a reasonable time for the transaction of business. The standard of adequate passenger train service prescribed by sec. 1801 of the statutes for stations having two hundred or more inhabitants is a minimum, not a maximum, standard and if the quantity of service required thereby does not fully meet the requirements of adequacy the Commission has the power to order a rearrangement of schedule or the operation of additional trains. *Chicago, B. & Q. R. Co. v. Railroad Comm.* 1913, 152 Wis. 654; *Chicago, M. & St. P. R. Co. v. Railroad Comm.* 1914, 146 N. W. 1129. The adequacy of passenger train service cannot be determined from the point of view of quantity alone but consideration must also be given to the schedule upon which the trains stopped are operated. *Held:* The former order is reasonable and within the scope of the Commission's jurisdiction. It will therefore stand as of this date. *James Callen, Jr. et al. v. C. M. & St. P. R. Co.* 581, 585.

6. Complaint was made that the passenger service furnished by respondent at Abrams, Oconto county, Wis., is inadequate and discriminatory, in that northbound passenger train No. 3 does not stop at Abrams for passengers, and that southbound train No. 2 stops only for Milwaukee and Chicago passengers, whereas both trains are stopped elsewhere at points of no greater importance than Abrams. It appears that subsequent to the filing of the petition respondent began stopping trains No. 2 and No. 3 at Abrams. *Held:* No order need be made at present with respect to train service, as the service now in effect is adequate and will, if maintained, satisfy this feature of the petitioner's complaint. *Abrams Business Men's Ass'n v. C. M. & St. P. R. Co.* 780, 782.

7. Complaint was made of inadequate passenger train service between Spring Valley and Woodville, Wis. It seems that two mixed trains, formerly affording passenger service between Spring Valley and Woodville, were taken off for a time and subsequently continued as freight trains carrying no passengers. The Commission is requested to order the respondent to restore the passenger service formerly afforded by these trains. It appeared that the discontinuance of the service in question necessitated a four hour wait at Woodville for Spring Valley people desiring to make a round trip to Eau Claire on the same day, resulted in the loss of the afternoon for business men desiring to transact business the following morning in St. Paul, and allowed persons coming to the village for business and departing the same day only four and one-half hours, including the noon hour. instead of eight hours in the village as formerly. *Held:* While the addition of other passenger trains would not be justified, it is manifestly unreasonable, where the use of existing facilities will materially improve the service without any increase in operating expenses, to refuse to accord such service to the public. The respondent is ordered to restore the passenger serv-

ice formerly rendered by it between Spring Valley and Woodville by allowing passengers to ride on its freight trains No. 34 and No. 35. *Sieberns et al. v. C. St. P. M. & O. R. Co.* 775, 779.

Adequacy of train service—Branch line service.

8. In answer to the petitioner's allegation that passenger and freight service at Pittsville is inadequate, the respondent in the instant case claims that the latter is adequate and that the additional passenger business which could be secured by the operation of another train would be insufficient to justify the operation. *Held:* The passenger business on a branch line cannot always be expected to be entirely self-supporting. Where this business is conducted in connection with a profitable freight business on the same trains, the combined earnings must be considered in determining the adequacy of the service. In the instant case the passenger service can be improved in a manner which will also add to the convenience of the freight service without placing an unreasonable burden upon the railway company. *Werner et al. v. C. M. & St. P. R. Co.* 573, 576.

Adequacy of train service—Comparative conditions.

9. If a railway company furnished reasonably adequate service to a community it cannot be required to furnish additional service to that community merely because it furnishes more than adequate service to communities of similar or less importance. *Anderton et al. v. M. St. P. & S. S. M. R. Co.* 247, 250.

Power of Commission to compel stoppage of interstate trains.

See RAILROAD COMMISSION, 10–11.
See also post, 10.

Stopping of interstate trains—When an interference with interstate commerce.

10. It would seem clearly within the decisions of the supreme court of the United States a burden upon interstate commerce and therefore beyond the jurisdiction of the Commission to compel interstate trains to stop at stations where the local service is already reasonably adequate and where the size of such stations does not warrant the stopping of such trains. *Adams et al. v. C. B. & Q. R. Co.* 506, 507.

Stopping of trains.

See ante, 2.

Test of adequacy of passenger train service.

11. The adequacy of passenger train service cannot be determined from the point of view of quantity alone. It is essential that a proper number of trains be stopped at a station, but it is more important that the schedule be such as to render travel reasonably convenient. An excess of trains, operated at inconvenient hours, may result in a service which is entirely inadequate as to quality. *James Callen, Jr., et al. v. C. M. & St. P. R. Co.* 581, 584.

VALUATION.

DETERMINATION OF THE VALUE OF PROPERTY OF PUBLIC UTILITIES—ELEMENTS CONSIDERED.

Book value—As disclosed by the construction accounts and balance sheets.

1. If the books of a utility have been accurately kept and if correct methods of accounting have been followed, the books should show the total amount expended for construction and also the extent of the depreciation of the property. The book value should not ordinarily vary to any great extent from the cost of reproduction. In the instant case, however, this comparison cannot be made because of the lack of original records. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant*, 485, 489.

In general.

2. Careful attention must be given in all cases to valuation and cost because of the fact that the actual value of a plant and the cost of service bear a close and direct relation to the reasonable charges which should be paid for the service furnished by the utility. In the instant case certain additions should undoubtedly be made to the estimated cost new of the plant, for such extensions of mains or enlargements and reinforcements of the system as it appears must be added in the near future. *Dennett et al. v. City of Sheboygan*, 634, 638.

Going value—Net cost of building up the business.

3. That a public utility, may, and usually does, have some value beyond that of the bare cost of its physical property or plant is now so generally recognized as to need no further general demonstration here. Previous decisions of this Commission have clearly shown that there is an additional element, commonly termed "going value", to be considered, and have also indicated the manner in which it is probably best determined. *In re Invest. Ashland Water Co.* 1, 47.

4. The fact that the property in this case has been in the hands of the present owners but a little more than two years appears to leave them in no position to show the complete financial records of its operation. It is therefore impossible to accurately ascertain the cost of building up the business, or what is usually termed going value. That the plant has an intangible element of value as a going concern, and an earning value through a developed business, is deemed sufficiently obvious in the light of the facts peculiar to this case and in the light of what has been said on this subject in previous decisions. *Town of Vaughn v. Hurley W. Co.* 291, 299.

5. No evidence was submitted at the hearing on the question of going value nor have the earliest records of the plant been available. Income accounts as submitted since 1907 under the Public Utilities Law, however, show an accumulated deficit. That this may be in part attributed to the cost of developing the business appears reasonable. *In re Service and Rates Stevens Point Ltg. Co.* 350, 365.

Physical property—Cost of reproduction new—Allowance for item of cost not actually incurred—Paving.

6. In reference to the paving placed over the company's pipe lines after they were laid it may be said that the Commission has already held in several previous cases (*City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 1, 116, and cases cited) that this element of cost of reproduction of its property has no place in the amount upon which the utility is entitled to earn. The matter has been fully dis-

cussed in preceding decisions. The same rule will apply here. *In re Invest. Ashland Water Co.* 1, 38.

Physical property—Cost of reproduction new—Cost of securing capital.

7. The cost of capital and of the enterpriser are fixed by economic forces or laws in the open market. These laws cannot be controlled either by the state, the city or this Commission. Public utilities, like everybody else, must pay the market prices for what they need. Exceptions to this are only temporary in their nature. This Commission has been made aware of this in more ways than one. *In re Invest. Ashland Water Co.* 721, 739–740.

Physical property—Cost of reproduction new—Discounts on bonds.

8. The company has pointed out that one of the elements of its actual cost or items of expense was bond discount. In previous cases the Commission has said that although the item of discount on bonds is important to consider in determining the value of any utility property, it does not follow that all of the actual expense which this item represents is to be included in the valuation upon which rates are determined. The obvious results of any such rule would be to encourage the showing of larger and larger discounts of utility securities. *In re Invest. Ashland Water Co.* 1, 51.

9. Public utilities, including both municipally and privately operated, are usually built largely on borrowed capital represented by bonds. The same is true in this case and the bonds of the company bear 6 per cent interest. They were also necessarily sold at a discount. Had the city, instead of the company, built the plant, its ability to offer greater security might have enabled the city to obtain the required capital at a somewhat lower rate than private interests are required to pay. This ability to offer greater security lies in the city's power to tax all privately owned property within its borders. In issuing municipal water works bonds a city not only establishes for such bonds a first lien upon all privately owned property in that city, including public utilities, but it pledges its taxing power in so doing. Without establishing this first lien on all other property and without pledging its taxing power, and with only the plant itself pledged as security, it is very doubtful that the city could obtain money on terms even as favorable as those given to the private company. The city can hardly, with sound reason, claim that the water company in this case will be receiving equitable treatment if it be allowed a smaller rate of interest than the city has had to pay on its own bonds, particularly when it is remembered that the company's bonds bear interest at 6 per cent and that even at this rate they had to be sold at a discount, this being in some cases as much as 10 per cent. *In re Invest. Ashland Water Co.* 721, 725.

Physical property—Cost of reproduction new—Depreciation fund—Allowance for.

10. The effect of including in the cost new the large recent investments in property against which practically no depreciation can yet be considered to have accrued, will obviously be to increase the ratio between present value and cost new. Theoretically, at least, the difference between these values should be in the assets offsetting the depreciation reserve, in order to preserve the property and the investments represented by it. The best modern practice makes at least some provision in advance by building up a depreciation reserve year by year to meet the requirements for renewals and replacements which are very sure to become necessary sooner or later through one cause or another. *In re Invest. Ashland Water Co.* 1, 44, 45.

11. It is claimed by the respondent that examination of the Commission's two valuations and the account of construction since 1909 reveals that a shrinkage in value of the property apparently took place. In other words, about $4,900 of new construction can not be accounted for by a corresponding increase in the cost to reproduce the property new. It is not unreasonable to suppose that this circumstance was caused partly by renewal or changes in the system which did not add to the cost of reproduction and partly by shrinkage in unit prices. Taking into consideration the total amount of renewals, the total theoretical depreciation accrued and the increase, according to the two valuations, in unrenewed depreciation there is yet about $2,500 of renewals not reflected by an increased present value. It is for this alleged shrinkage during three years that the respondent asked to be allowed an additional amount for depreciation. However, let us see what may actually occur when large expenditures are made for renewals. The equipment, whose replacement is imminent, is valued by physical appraisal methods and goes into the inventory at its minimum service value. Its value, insofar as the physical appraisal is concerned, remains at a point above the residual or scrap value until renewal transpires. Hence, the present value of the property as a whole is apparently higher than it would be were such equipment considered valueless. It is clear, then, that in such cases the utility has the benefit of a high present value before the replacement is made instead of suffering a shrinkage afterward. *Hood et al. v. Monroe El. Co.* 227, 233, 234.

12. The failure of a utility to make allowance for depreciation if the earnings have been sufficient is tantamount to a withdrawal of capital from the business and the cost of reproduction new must be diminished in determining the fair value upon which the reasonable return allowed is to be based when an adequate reserve for depreciation has not been provided. The utility is, however, entitled to earn an amount sufficient to offset future depreciation. In the instant case 4 per cent on the cost new is allowed as an operating expense to cover depreciation. *In re Service and Rates Stevens Point Ltg. Co.* 350, 364.

Physical property—Cost of reproduction new—Interest during construction, engineering, contingencies, etc.

13. Whether or not the city admits the justice of allowing as much as was conceded by its own expert to be fair there appears no reason to believe that 15 per cent is more than a proper addition for that element of cost in the case of a plant such as is here under consideration. This is not a greater allowance, proportionately, than has been made by this Commission in certain other cases of utility valuations. *In re Invest. Ashland Water Co.* 721, 733.

Physical property—Cost of reproduction new—Overhead expenses.

14. The Commission's tentative valuation included an allowance of 12 per cent for general overhead expenses, but this allowance is too low and is therefore increased to 15 per cent in the final valuation. *In re Invest. Ashland Water Co.* 1, 40.

Physical property—Cost of production new—Service connections.

15. The service pipes from main to curb cock appear to have been laid at the expense of the company in all but about 800 cases wherein the consumers paid for the pipe and labor and the company, as usual, furnished the lead and brass goods and curd box and tapped the main. The company's practice and rule has been to make a tapping and connecting charge of $3.25 per service. The aggregate amount of such

charges was not deducted from the plant value as possibly it should have been. The usual method of treating such receipts has been to class them among the miscellaneous non-operating revenues. Allowance has been made for them in that way. If taken out of the plant value these receipts must also be eliminated from non-operating revenues. *In re Invest. Ashland Water Co.* 721, 731.

Physical property—Cost of reproduction new—Street lighting.

16. The Commission has divided the physical value between street lighting and other service, using the most reliable data available. Those items of the inventory, which are used only for street lighting, are, of course, charged entirely to that service. Other items of station equipment, which are used for street lighting and other service jointly, are apportioned in accordance with the division of the station demands. The distribution system pole line equipment is divided in proportion to the length of wire. General and miscellaneous equipment, which the petitioner's witness divided according to the ratio of kilowatts demanded, we have apportioned on an overhead basis, that is, in accord with the ratio established for other equipment as a whole after division had been made of the individual items. As a large part of material and supplies is used only for commercial purposes, this fact has been taken into account in dividing this item between street lighting and other service. *City of Watertown v. Watertown G. & El. Co.* 604, 608–609.

Physical property—Cost of reproduction new—Working capital.

17. Where the current is purchased, large generating expenses such as coal and labor are eliminated, reducing the amount of capital which it is necessary to have available. This is also true of power plant supplies. *In re Service and Rates Stevens Point Ltg. Co.* 350, 364.

18. Apparently no consideration is given to the fact that the company has more than current operating expenses to be prepared to meet. It must be prepared at all times to make the extensions and improvements demanded as well as to take care of the unusual emergencies which may arise. In the event of a shortage of funds of its own available for such expenses, the company would be obliged to borrow and pay interest, provision for which was not made in the new schedule of rates. *In re Invest. Ashland Water Co.* 721, 734.

DETERMINATION OF THE VALUE OF PROPERTY OF PUBLIC UTILITIES—METHODS OF APPRAISAL.

Determination of the value of physical property of the plant—Unit prices.

19. The valuation made by the staff are customarily made on the basis of normal prices of materials and labor. Normal prices of at least some construction materials are guaged by a five-year average. *In re Invest. Ashland Water Co.* 721, 729.

Determination of the total value of the plant and its business from the accounts and records.

20. A method of valuation which has long received the favorable consideration of the courts as one of the reasonable methods to be applied when possible, is not to be condemned simply because in certain cases it may have been misapplied and extravagant results obtained through its misapplication. The theory of measuring value by actual investment does not contemplate the substitution of estimates of cost of reproduction in place of the original and actual costs. The reductions which in the instant case have been made in the cost of pipe laying, services, and filters, and consequently in the valuation of the physical

property, are mostly due to the fact that for the purposes of this case it was thought best to use the cost for these items as shown on the records of the company rather than the cost as computed from the market prices of the elements which enter into these costs. Should it be disclosed that these book costs were not correctly stated on the records of the company, then it may of course be necessary to make the proper corrections later on. *In re Invest. Ashland Water Co.* 721, 726, 727, 740.

DETERMINATION OF THE VALUE OF PROPERTY OF PUBLIC UTILITIES—VALUATION IN PARTICULAR CASES.

Electric utilities—Browntown Mut. Lt. Plant, Browntown.

21. A valuation of the physical property as of March 26, 1914, shows a cost new of $4,530 and a present value of $3,983. *In re Appl. Browntown Mun. Lt. Plant*, 560, 562.

Electric utilities—Elroy Mun. W. & Lt. Plant, Elroy.

22. A valuation of the physical property as of January 1, 1914, shows a cost of reproduction new of $27,257 and a present value of $16,294. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant*, 485, 489.

Electric utilities—Monroe El. Co., Monroe.

23. The Commission's valuation as of November 11, 1909, shows that the cost of reproduction of the physical property was about $64,000, and the present value about $56,000. A second valuation as of January 1, 1913, shows a cost of reproduction new of $73,088 and a present value of $58,101. *Hood et al. v. Monroe El. Co.* 227, 229.

Electric utilities—Stevens Point Ltg. Co., Stevens Point.

24. A valuation of the physical property as of March 30, 1913, shows a cost new of $59,294 and a present value of $39,565. *In re Service and Rates Stevens Point Ltg. Co.* 350, 357.

Electric utilities—Watertown G. & El. Co., Watertown.

25. A valuation of the physical property as of January 1, 1913, shows a cost of reproduction new of $204,227 and a present value of $178,220. *City of Watertown v. Watertown G. & El. Co.* 604, 608.

Gas utilities—Stevens Point Ltg. Co., Stevens Point.

26. A valuation of the physical property as of March 30, 1913, shows a cost new of $80,128 and a present value of $68,695. *In re Service and Rates Stevens Point Ltg. Co.* 350, 357.

Telephone utilities—Badger State Tel. & Teleg. Co., Neillsville and Granton.

27. A valuation of the physical property as of January 1, 1914, shows a cost of reproduction new of $51,504 and a present value of $33,391. *In re Appl. Badger State Tel. & Teleg. Co.* 407, 412–415.

Water utilities—Ashland Water Co., Ashland.

28. A valuation of the physical property as of June 30, 1912, shows a cost new of 410,763 and a present value of $375,101. *In re Invest. Ashland Water Co.* 1, 28.

Water utilities—Elroy Mun. W. & Lt. Plant, Elroy.

29. A valuation of the physical property as of January 1, 1914, shows a cost of reproduction new of $37,562 and a present value of $32,215. *Kittleson et al. v. Elroy Mun. W. & Lt. Plant*, 485, 489.

Water utilities—Hurley Water Co., Hurley.

30. A valuation as of Oct. 1913, of the physical property properly devoted to Hurley service shows a cost of reproduction new of $38,838 and a present value of $33,425. *Town of Vaughn v. Hurley W. Co.* 291, 295.

Water utilities—Sheboygan City Water System, Sheboygan.

31. No valuation of the physical property of the Sheboygan City Water Works has been made for the purposes of the instant case. The Commission, however, *In re City Water Co. of Sheboygan*, 1909, 3 W. R. C. R. 371–377, held that the just compensation to be paid to the City Water Company of Sheboygan for the taking of the property of the company by the city was $415,000. Additional construction since the date of the valuation brings the total cost up to about $507,739 as of June 30, 1913. *Dennett et al. v. City of Sheboygan*, 634, 637.

Water utilities—Watertown Water Works, Watertown.

32. A valuation of the physical property as of June 30, 1912, shows a cost of reproduction new of $213,180 and a present value of $202,677. *Hughes et al. v. Watertown Water Works*, 669, 671.

VISUAL SIGNAL.

Installation of visual signal for night indication, *see* RAILROADS, 13, 16, 18, 24, 27.

WAGES AND SALARIES.

WAITING STATIONS.

See STATION FACILITIES.

WAREHOUSE SITES.

Site for warehouse on railroad's right of way within yard limits of station or terminal.

1. The petitioner, who is engaged in buying and selling coal and other merchandise at Mukwonago, alleges that the respondent refuses to lease him a suitable site for a warehouse on its right of way at Mukwonago and asks that the Commission take such action as it deems just in the premises. If granted the desired site, the petitioner proposes to ship merchandise of various kinds into Mukwonago, store it temporarily and sell it to farmers and other customers. *Held:* There is no evidence to show that the proposed warehouse would be used in any other way than as a private warehouse in connection with a private mercantile business. The Commission is therefore without jurisdiction in the matter and the petition is dismissed. *Rust v. M. St. P. & S. S. M. R. Co.* 251, 252.

WAREHOUSES.

CONTROL AND REGULATION IN GENERAL.

Jurisdiction of Commission over private warehouse sites on railroad property.

ACCOUNTING.

See ACCOUNTING.

ESTABLISHMENT, CONSTRUCTION AND MAINTENANCE.

Extension of water mains.

1. The petitioners allege that the city of Lake Mills refuses to extend its water mains along Scott and Franklin sts. in Lake Mills and pray for an order requiring the city to lay mains along these streets. The refusal of the common council to order the extensions desired appears to be in deference to the wishes of a majority of the owners of property abutting on the proposed extensions. Under an ordinance adopted by the city in accordance with suggestions made by the Commission in *Weber et al. v. City of Lake Mills*, 1913, 12 W. R. C. R. 577, the abutting property owners would be compelled to bear the greater portion of the cost of the extensions through special assessments levied against the abutting property. The extensions were recommended by the Commission in the decision cited. *Held:* The extensions desired by the petitioners are required to protect the public health and to improve the fire protection system. The city is ordered to make the extensions, as specified, within 90 days. *Atwood et al. v. City of Lake Mills*, 210, 214.

OPERATION.

Management—Financial transactions.

2. In regard to the handling of moneys of the water department, attention is called to sec. 925—95*b* to 925—95*c* of the statutes, which specifically provide for the administration of water works accounts. Compliance with the provisions as outlined in the law referred to will, it is believed, relieve the present confusion regarding the handling of finances. *Dennett et al. v. City of Sheboygan*, 634, 650.

Requirements as to service and facilities—Adequacy of service.

3. The peculiar circumstances of the case seeming to require it, the Commission had a special investigation and report made by an expert in matters of municipal water supply. The report so made holds: (1) that the city of Ashland is in constant danger from the present source of its water supply; (2) that it is impracticable to secure a supply of

pure water by artificial treatment from the present source of supply and, further, that this source will undoubtedly be necessary in the future as a receptacle for industrial sewage from pulp and paper mills and the like; (3) that it is impracticable for the city of Ashland with its present resources to attempt to secure water from Lake Superior, which is the ideal and ultimate source of supply for any large community located at Ashland; and (4) that it would probably be possible to meet the present needs of the city by resorting to the use of wells to obtain ground water. The report therefore recommends that test wells be driven and that tests be made at certain specified locations near the city to ascertain the best source of ground water supply. The utility is not in such a financial position as to be able to meet the demand for improvement in the quality of water furnished the public by extending the intake to a point in the lake where satisfactory water could always be obtained or to change to a ground water supply. The only plan which it is possible for the utility to adopt under the circumstances is that of installing a suitable water analysis laboratory at the pumping station and employing a competent person to take charge of the laboratory and intelligently supervise the filtration and disinfection of the water supply. Even this plan is not certain of success but the additional expense involved by its use is not large enough to make it too costly to be worth a trial. The cost of applying more scientific treatment to the water purification problem should, however, be properly provided for in the determination of new rates for future service. It is ordered: (1) that the utility within sixty days make such arrangements as may be found necessary to give it the benefit of a suitable laboratory for water analyses in the city of Ashland and thereby keep itself continually informed as to the efficiency of its purification processes by analyses made at least once daily, complete records of such analyses to be permanently preserved. *In re Invest. Ashland Water Co.* 1, 2–27, 55, 73.

4. It appears evident from our investigation that unless sprinkling and other unnecessary uses of water during fires be forbidden, and actually be prevented, feeder mains must be correspondingly enlarged or the fire service will suffer. If the general use of water during fires be thus reduced to the practicable minimum, there seems to be no necessity of considering the effect of a general installation of meters. From the examinations made by the engineers of the Commission the conclusion is drawn that, so far as the increase in investment or capacities is concerned, the restriction of the general use of water during fires is of much greater importance than the question of reducing pumpage by a general installation of meters. Extensive sprinkling during certain times at present, it appears, even when there is no fire to diminish pressure, causes such decreased pressure on the mains in certain sections of the city that some consumers are unable to get water even for domestic purposes. If this condition continues it will undoubtedly be necessary to install reinforcing mains, larger pumping equipment and an additional or larger intake. While the city of Sheboygan may have an unlimited supply of water, the present apparatus for supplying the water to consumers is limited. Reduction in pumpage by the use of meters will not only reduce operating expenses, but will delay the growth of fixed charges. *Dennett et al. v. City of Sheboygan*, 634, 638.

Requirements as to service and facilities—Adequacy of service—Fire protection.

5. *Held:* 1. With respect to the complaint as to fire protection service, the evidence does not clearly show that the respondent was at fault in the cases of the fires which gave rise to the complaint, but, to avoid a repetition of the difficulties met, both the respondent and the community might well have their own independent pressure recording gages

connected by special service pipes to the Hurley mains. *Town of Vaughn v. Hurley W. Co.* 291, 310–311.

6. Since the water system has reached its economical capacity steps should be at once taken by the water department to carry out the recommendations regarding the installation of reinforcing mains, etc. in order to improve the fire protection service to all portions of the city at present inadequately protected. *Dennett et al. v. City of Sheboygan*, 634, 649.

Requirements as to service and facilities—Appliances for the measurement of product or service—Duty of utility to provide meters.

7. As regards the question of ownership, or rentals for meters, the objections urged are not valid under the circumstances in the present case. A provision in the Public Utilities Law states that meters must be owned by the utility unless an exemption is granted by the Railroad Commission. The law does not specifically state under what conditions such exemptions shall be granted, but it is to be presumed that the utility should not be required to furnish meters whenever, because of local conditions, this would cause an unreasonable burden to the utility. No such local conditions are found in the present case. *Alter et al. v. City of Manitowoc*, 690, 693, 694.

Requirements as to service and facilities—Appliances for the measurement of product or service—Duty of utility to repair meters.

8. While in the instant case the general installation of meters has not been required, this omission should not be taken to signify that the Commission approves the flat rate plan. The Commission recognizes, however, that under special conditions the advantages of installing meters are not sufficient to offset the additional cost. Statistics show that over 40 per cent of the meters installed are owned by consumers. It is our opinion that the water department should assume the expenses of keeping all meters in repair and should pay all consumers owning their meters a reasonable rental for the same. *Dennett et al. v. City of Sheboygan*, 634, 649.

Requirements as to service and facilities—Appliances for the measurement of product or service—Utility relieved from duty of providing meters.

9. It is a general rule that public utilities in Wisconsin shall own and maintain the meters through which their services are measured to consumers, yet it is sometimes expedient, if not necessary, to make exceptions to this rule. In the instant case, in view of the present great magnitude of the investment in the plant of the utility, it is deemed inexpedient to require the utility to alter its present rules concerning the furnishing of meters to residence or other small consumers. *In re Invest. Ashland Water Co.* 1, 42.

Requirements as to service and facilities—Cross connections between mains.

10. Cross connections at short intervals between parallel or radiating water mains are generally recognized as important, particularly from the standpoint of reliability of fire service. *Atwood et al. v. City of Lake Mills*, 210, 214.

Requirements as to service and facilities—Extension of service.

11. That the will of the majority of those directly affected should govern in a case of this kind and result in denying to some who feel the great need of a service so important as that of city water is not altogether acceptable. It is quite widely recognized that there is an element of serious danger to health in the use for drinking purposes of waters from shallow wells in thickly settled communities, such as most if not all of the private wells in the instant case are reported to be. Some waters that look good and taste good are dangerous to drink. The city council's act of orderering construction of all of the recommended extensions of water mains was strictly within its legal powers, even though opposed by a majority of the property owners along the designated lines. *Atwood et al. v. City of Lake Mills*, 210, 213, 214.

Requirements as to service and facilities—Quality of water.

12. There seems to be no room for doubt that the raw water of the bay, as obtained by the company through its intake pipe, varies widely in its degree of pollution, depending on the varying currents in the bay. It is an apparent fact also that the proper amount of a disinfecting agent to be used in a polluted water depends on the relative condition of that water at different times. The problem of dealing correctly with the purification of a water supply of varying quality and degree of pollution would seem to require the installation and use of facilities for scientifically determining the character of the water at any and all times. The company in this case has had no such facilities of its own. Before the results of analyses made elsewhere for the company can be obtained the character of the water may and probably does often change very materially, requiring a quite different treatment. It may be that the hypochlorite, even when applied in proper quantities, is not applied at the proper point in the flow of water from the filters to the pumps and may not have the necessary mixture and time of action to produce the best effect. These are matters for scientific determination. They are also matters in which the state board of health is concerned, since plans for new water supplies or improvements of existing supplies are required by law to be submitted to that board for its approval before their execution. *In re Invest. Ashland Water Co.* 1, 6.

13. Inasmuch as the installation of a purification plant has noticeably improved the quality of the water supplied for domestic use and inasmuch as there is no evidence that laboratory or other additional facilities are urgently needed, an order for the installation of such additional facilities is not advisable at this time. *Town of Vaughn v. Hurley W. Co.* 291, 312.

14. Whether the present apparent freedom from contamination of the water can be depended upon to continue indefinitely, cannot at present be determined. If it is liable to contamination, the purification of the supply should be immediately investigated. *Dennett et al. v. City of Sheboygan*, 634, 639.

Requirements as to service and facilities—Services.

15. Whether service pipes from the main to the curb line should be furnished by the utility or by the consumer was discussed in the order in question (10 W. R .C. R. 387.) The conclusion was reached that in the end it would make no substantial difference in the rates to be charged. No reason is seen under the circumstances of this case for changing the order in this respect except to provide that the charge for services to the curb shall be uniform. It is accordingly ordered that the charge for installing service pipes from main to curb shall be uniform for each size of service piping regardless of the distance from main to curb. *Alter et al. v. City of Manitowoc*, 690, 692.

Requirements as to service and facilities—Standard of a water supply.

16. A perfect water supply is worth all its costs. There is no financial standard by means of which to measure the limit of human effort that should be expended in attaining it. The safety and permanence and growth of the dependent civilization is too important to permit expression in ordinary units, or to be reduced to the basis of profit or interest on investment, or to be viewed in any common way as solely a commercial or industrial enterprise or utility. The example of Rome has been the guide to all the cities of modern cultured nations. Since that day the water supply of a city has been the most important and usually the most expensive of its public works. The abundance and purity of the water supply has determined the growth and permanence of the civic communities and has always been a determining factor in selecting from the group of cities struggling for commercial and industrial supremacy, the few that should finally be awarded leadership. *In re Invest. Ashland Water Co.* 1, 24, 25.
