other Liquor to temper and dilute it, or from any other Cauſe, becoming converted into too thin, ſubtile, and penetrating a Vapour, is ſo far from moiſtening and cooling the Throat, that, on the contrary, it dries and heats it; and hence that Motion in the Nerves, the Senſation whereof we call *Thirſt*. See HUNGER.

Thirſt ſometimes alſo ariſes from a mere Dryneſs of the Part; and ſometimes from ſharp Salts, more immediately vellicating the Fibres of the Throat.

There are various Kinds of Liquors which quench *Thirſt*; ſome by tempering the Stomach Liquor, others by diluting, and even diſſolving the Salt; and others by moiſtening and ſuppling the Fibres.

Acids are peculiarly fitted for that End. See ACID.

Thirſt is ſometimes eluded by rolling a leaden Bullet or a Pebble in the Mouth, which occaſions an extraordinary Iſſue of Saliva to moiſten the Throat, &c. See SALIVA.

Mr. *Boyle* mentions a Man who could eaſily abſtain from Drinking for nine Days, and yet his Diet nothing more liquid than uſual; the Secretions of Urine, Sweat, &c. being perform'd all the while regularly, and in the ſame Quantity as uſual.

In dropſical Caſes, where there is not a right Secretion of the Urine by the Renal Glands, and the Veſſels and Parts of the Body are loaded with too great a Quantity of ſerous Humours, a great Moderation in Drinking might be attended with good Succeſs, provided ſome Liquor could be found out to allay that uneaſy Senſation: Probably this would be beſt perform'd by Mucilages acidulated with Spirit of Vitriol or Sulphur, or Gellies with Juice of Lemon, &c. and that a ſmall Quantity of ſuch a Compoſition now and then us'd, might be of as much real Service in quenching *Thirſt*, as Draughts of Liquors which increaſe the Symptoms. See DROPSY.

THISTLE, *Carduus*, a Name common to divers Plants, whoſe Flowers conſiſt of ſeveral little narrow longiſh Leaves, in Manner of Tubes, rang'd cloſe together like a Head, and whoſe Leaves are very prickly.

The moſt known of theſe Plants are 1° *Carduus Benedictus*. The Apothecaries diſtil a Water from it, ſaid to be of great Service in peſtilential Diſeaſes, the worſe Kind of Fevers, and particularly as a Sudorific. The Water is likewiſe accounted one of the four common Cordial Waters: Its fixt Salt is much of the ſame Nature as other fixt Salts prepar'd from Wormwood, &c. *viz.* Anti-emetic, Diuretic, &c. See CARDUUS *Benedictus*.

2° The *hundred-headed* THISTLE, or *Eryngium vulgare*; the Root whereof boil'd in Wine, is us'd with good Succeſs againſt Retentions of Urine: This is not properly of the *Thiſtle* Kind.

3° Our *Ladies Thiſtle*, *Carduus Albis Maculis notatus vulgaris* CB, the Decoction whereof is recommended againſt the Dropſy, Jaundice, and Pains of the Kidneys.

The *Fullers Thiſtle*, or Teazel; See under the Article TEAZEL.

Order of the THISTLE, or of St. *Andrew*, is a Military Order in *Scotland*; inſtituted, as ſome ſay, by *Hungus*, or *Hungo*, King of the *Picts*, after a Victory obtain'd over *Athelſtan*. See KNIGHT.

The Legend is, that a Croſs of St. *Andrew* (the Patron of that Kingdom) appearing to him at the Time of the Engagement; he bleſt the happy Augury; took the Figure thereof into his Standard in Honour of his Protector; and inſtituted an Order of Knights, whoſe Collar is of Gold interwoven with *Thiſtle* Flowers.

From the Collar hangs a Medal repreſenting S. *Andrew* holding his Croſs in his Right Hand; with this Motto, *Nemo me impune laceſſet*, No Body ſhall provoke me impune.

Others give a different Account of its Origin, and aſſure us, it was inſtituted after the Concluſion of a Peace between *Charles* VII. of *France*, and the King of *Scotland*.

The Abbot *Juſtiniani* goes up higher, and will have it to have been inſtituted by *Acharus* I. King of *Scotland*, in 809; who, after an Alliance made with *Charlemaign*, took for his Device the *Thiſtle*, with the Words *Nemo me impune laceſſet*, which, in Effect, is that of the Order: He adds, that King *James* the IVth. renew'd the Order, and took St. *Andrew* for its Protector.

The Order only conſiſts of twelve Knights, whereof the King is the Chief: They wear a green Ribbon, with a Gold Medal enamell'd; on the one Side whereof is the Image of St. *Andrew*, and on the Reverſe, the Device above mention'd.

Our Lady of the THISTLE, was alſo a Military Order inſtituted in 1370, by *Louis* II. Duke of *Bourbon*.

It conſiſted of 26 Knights, whereof that Prince and his Succeſſors were the Chiefs: Their Badge was a Sky-blue Girdle; and, on ſolemn Occaſions, a Mantle of the ſame Colour, with a Gold Collar, interwoven with Flower-de-Luces, among which was the Word *Eſperance*, Hope, in Capitals.

They had their Name from a *Thiſtle* fix'd to an Oval, which hung to the Girdle.

THISTLE-*take*, a Cuſtom in the Honour of *Halton*, in the County of *Cheſter*, whereby, if in driving Beaſts over the Common, the Driver permits them to graze, or take but a *Thiſtle*; he ſhall pay a Half-penny a Beaſt to the Lord of the Fee.

At *Fiskerton*, in *Nottinghamſhire*, by ancient Cuſtom, if a Native, or Cottager kill'd a Swine above a Year old, he paid the Lord one Penny; which was alſo call'd *Thiſtle-take*.

THLIPSIS, is uſed by ſome Anatomiſts, for a preſſing together of the Veſſels of a human Body.

THOMÆANS, THOMEANS, THOMITES, or *Chriſtians of St.* THOMAS, a People of the *Eaſt Indies*, who, according to Tradition, receiv'd the Goſpel from the Apoſtle S. *Thomas*. See CHRISTIAN.

Upon the Arrival of the *Portugueſe* at *Calecut*, in their firſt Voyage to the *Indies*, they met with ancient Chriſtians, who pretended to be deſcended from thoſe converted by S. *Thomas*.

The *Thomæans* being inform'd of a new People arriv'd among them, who bore a particular Veneration for the Croſs; ſent Embaſſadors to them to make an Alliance with them, and to ſolicit their Aſſiſtance againſt the Gentile Princes, by whom they were greatly oppreſs'd.

'Tis certain the *Thomæans* are Indigenæ, or originally of *India*: They are call'd *Nazareans*; but Cuſtom has affix'd to that Name an Idea of Contempt: Their other Name *Mappuley*, and, in the plural, *Mappuleymar*, is more honourable.

They form a very conſiderable Clan, or Canton; but are always divided by Factions, inveterate Enmities, &c. The Clan extends through all the Lands from *Calecut* to *Travencor*; not that all the Tract is poſſeſs'd wholly by them: Sometimes they have a whole Town to themſelves, and ſometimes only a certain Quarter in it.

They own themſelves Strangers in that Country, and their Tradition is, that they came thither from the Country about the City of *Mailapur*, or S. *Thomas*, by reaſon they were perſecuted by the Prince thereof. But the Time of this Tranſmigration no Body knows any thing of; for they keep no Monuments.

The *Thomæans* aſcribe their Converſion, their Diſcipline, &c. to S. *Thomas*: Their Breviary adds, that their Apoſtle paſs'd thence into *China*.

We ſhall not here enter into the Diſpute, whether the S. *Thomas* ſo fam'd in the *Indies*, be the Apoſtle, or ſome other Saint of that Name; which latter is the Opinion of ſeveral learned Men, and particularly of M. *Huet*.

But the Progreſs of the Hiſtory of this Church is not leſs difficult to trace than its Origin: Our *European* Books mention the Patriarch of *Alexandria*'s ſending Biſhops to the *Indies*, particularly S. *Pantænus*, S. *Frument*, &c. It may be doubted, whether or no it were to theſe *Indies* that they were ſent: *Baronius*, indeed, maintains it was; but the *Portugueſe* Author *da Hiſtoria d' Ethiopia*, endeavours to prove it was to *Ethiopia* theſe ancient Miſſionaries went. All we know for certain is, that the *Thomæans*, for ſeveral Ages, were furniſh'd with Biſhops from the Side of *Babylon*, or *Syria*; and there is a kind of Patriarch at *Babylon* who continues to furniſh them.

Whether or no their Apoſtle ordain'd them any Biſhops, (the Order whereof may have been ſince extinct thro' want of proper Subjects, as F. *Bouchet* imagines) is a Queſtion: All we can ſay is, that the *Thomæan Church*, at the firſt Arrival of the *Portugueſe*, was wholly govern'd by theſe foreign Biſhops. The Language they uſe, *in Sacris*, is the *Chaldee*, ſome ſay the *Syriac*: As to their ordinary Language, 'tis the ſame with that of their Neighbours.

The *Chaldee* was doubtleſs brought among them by their Biſhops: 'Tis added, that at the Time the Eaſt was infected with Neſtorianiſm, Eutychianiſm, &c. the Biſhops likewiſe carry'd them thoſe Hereſies.

Such a Mixture of Opinions, with a total Interruption of Paſtors, ſometimes for ſeveral Years together, occaſion'd that horrible Chaos their Religion was in at the Arrival of the *Portugueſe*; For a Specimen whereof we ſhall add their Manner of celebrating the Euchariſt.

Over the Altar was a kind of Tribune or Gallery; and while the Prieſt was ſaying the Beginning of the Office below, a Cake of Flower of Rice was frying in Oil or Butter above: When enough, the Cake was let down in a Basket upon the Altar, where the Prieſt conſecrated it. As to the other Species, for Wine, they uſed a kind of Brandy variouſly prepar'd in that Country. Nor was their Ordination much more regular; the Archdeacon, who was ſometimes more reſpected than the Biſhop himſelf, frequently ordained Prieſts.

Their other Abuſes were infinite: The *Portugueſe*, for theſe two laſt Centuries, have labour'd the Reformation of this Church; and have employ'd both the Eccleſiaſtic and Secular Power therein: To this End they have call'd the *Thomæan* Biſhops to the Councils at *Goa*, have inſtructed, charg'd

charg'd them, &c. and have even ſent them for Inſtruction to *Portugal* and *Rome*: But they were ſtill apt to relapſe at their Return; ſo that finding no Good was like to be done with them, they reſolv'd to exclude them once for all, and to appoint an *European* Biſhop in their Room.

Theſe Proceedings have render'd the *Portugueſe* infinitely odious to the *Thomæans*.

The Perſon who contributed moſt to the Reform, is *Dom Frey Alexo de Meneiſes*, Archbiſhop of *Goa*, who governing the *Portugueſe Indies* for ſome time, in defect of a Viceroy, took that Occaſion to call a Synod in the Village of *Diamper*, where Abundance of Regulations were made, and the *Thomæans* united to the *Roman* Church: He was ſeconded by the Jeſuits.

After the Death of the Archbiſhop, a great Part of the *Thomæan* Church relaps'd, and thus ſtill continues, partly *Roman*, partly *Thomæan*.

THOMISM, or THOMAISM, the Doctrine of S. *Thomas Aquinas*, and his Followers the *Thomiſts*; chiefly with Regard to Predeſtination and Grace. See THOMIST.

There is ſome doubt what the true genuine *Thomiſm* is: The Dominicans pretend to hold pure *Thomiſm*; but there are other Authors who diſtinguiſh the *Thomiſm* of S. *Thomas*, from that of the Dominicans. See DOMINICANS.

Others again make *Thomiſm* no other than a kind of Janſeniſm diſguis'd; but Janſeniſm we know has been condemn'd by the Pope, which pure *Thomiſm* never was. See JANSENISM.

In effect, the Writings of *Alvarez* and *Lemos*, who were appointed by their Order to lay down and defend before the Holy See the Dogmata of their School, have ſince been reputed the Rule of pure *Thomiſm*.

The modern School has abandon'd many ancient *Thomiſts*, whoſe Sentiments and Expreſſions appear'd to *Alvarez* and *Lemos* too hard; and the new *Thomiſts*, who paſs the Bounds mark'd by theſe two Doctors, cannot give their Opinions for the Sentiments of the School of S. *Thomas*, which the Pope has forbid being cenſur'd.

The *Thomiſm* allow'd, is that of *Alvarez* and *Lemos*: Thoſe two Authors diſtinguiſh four Claſſes of *Thomiſts*: The firſt, which they reject, deſtroys or takes away Liberty; the ſecond and third don't differ from *Molinas*. See MOLINISTS.

The laſt, which *Alvarez* embraces, admits a Phyſical *Premotion*, or *Predetermination*, which is a Compliment of the active Power, whereby it paſſes from the firſt Act to the ſecond; that is, from compleat and next Power to Action. See PREDETERMINATION.

This Premotion they hold is offer'd in ſufficient Grace: Sufficient Grace is given to all Men; and they have a compleat, independent, next Power not to act, and even to reject the moſt efficacious Grace. See SUFFICIENT and GRACE.

THOMISTS, a Sect of School Divines, who maintain *Thomiſm*. See SCHOOL and THOMISM.

The avow'd Antagoniſts of the *Thomiſts* are the Scotiſts. See SCOTIST.

THORACIC, in Anatomy, an Epithet given to two Branches of the Axillary Artery, on Account of their conveying the Blood into ſome Parts of the *Thorax*. See THORAX.

The *Thoracic Arteries* are diſtinguiſh'd by *upper* and *lower*. There are likewiſe *Thoracic Veins*, an *upper* and *under*, for the Reconveyance of the Blood from the *Thorax* to the Axillary Vein. See AXILLARY.

THORACIC *Duct*, or *Ductus* THORACICUS *Chyliferus*, is a little Canal ariſing from, or rather a Continuation of, the Exit or Mouth of the Receptaculum Chyli. See RECEPTACLE.

It mounts all along the Thorax, whence it takes its Name, and ends in the left Subclavian Vein.

In its Progreſs thro' the Thorax, it is furniſh'd with a proper Integument from the Pleura, beſides the Membrane it has in common with the Receptaculum: At about one Third of its Way it devaricates, but ſoon unites again.

Dr. *Drake* obſerves, that it has Valves in divers Places of its Tract; *Euſtachio* ſays Glands. Its Uſe is to carry the Chyle and Lympha from the Receptaculum into the Subclavian, by which it is forwarded to the Cava, and thence to the Heart. See CHYLE.

It is ſometimes call'd *Pecquets Duct*, or *Ductus Pecqueticus*, from M. *Pecquet*, the firſt Diſcoverer thereof. See PECQUET'S DUCT.

THORAX, in Anatomy, that Part of the human Body which forms the Capacity of the Breaſt, and wherein are included the Heart and Lungs. See BREAST.

It is bounded a-top by the Clavicles, and at Bottom by the *Cartilago Xiphoides*, and the Diaphragm.

Its fore Part is call'd the *Sternum*, or *Breaſt Bone*; its ſide Parts, the *Coſtæ*, or *Ribs*; its hind Part are the *Spina Dorſi*, and its *Vertebræ*, with the *Omoplate*. See RIBS, STERNUM, &c.

The *Thorax* is alſo call'd the *ſecond* or *middle Venter*, and popularly the *Cheſt*. See VENTER.

Beſide the Heart and Lungs, the *Thorax* likewiſe contains the aſcending Cava, the Aorta, the pulmonary Vein and Artery, the Trachea, Oeſophagus, &c.

'Tis lin'd within-ſide with a Membrane call'd the *Pleura*, and divided in the Middle by another call'd the *Mediaſtinum*. See PLEURA and MEDIASTINUM.

It has its Name from the *Greek*, θορεῖν, *ſalire*, to leap; by Reaſon the Heart, contain'd therein, makes a continual Motion. *Galen* calls it *Cythara*, and ſays it contains the Parts that excite to love.

THOROUGH-*Baſs*, in Muſic, is that which goes quite through the Compoſition. See BASS.

It is alſo call'd *Continu'd Baſs*. See CONTINU'D *Baſs*.

THOUGHT, *Sentiment*, a general Name for all the Ideas conſequent on the Operations of the Mind, and even for the Operations themſelves. See THINKING.

As in the Idea of a *Thought*, there is nothing included of what we include in the Idea of an extended Subſtance; and that whatever belongs to Body, may be deny'd to belong to *Thought*: We may conclude that *Thought* is not a Mode of extended Subſtance, it being the Nature of a Mode not to be conceiv'd, if the Thing whereof it is the Mode be deny'd it. Hence we infer, that *Thought* not being a Mode of extended Subſtance, muſt be the Attribute of ſome other Subſtance very different. See MODE.

F. *Mallebranch*, with the Spirit of a *Carteſian*, denies that a Man who thinks ſeriouſly on the Matter, can doubt but the Eſſence of the Mind conſiſts altogether in *Thought*, as that of Matter does in Extenſion; and that according to the various Modifications of *Thought*, the Mind ſometimes wills, ſometimes imagines, &c. as, according to the various Modifications of Extenſion, Matter is ſometimes Water, ſometimes Wood, Fire, &c.

By the Way, by *Thought* he does not mean the particular Modifications of the Soul, *i. e.* ſuch or ſuch a *Thought*, but *Thought* or *Thinking* in the general, conſider'd as capable of all Kinds of Modifications or *Thoughts*: As by Extenſion he does not mean ſuch or ſuch an Extenſion, as a Square, Oval, or the like, but Extenſion in the Abſtract, conſider'd as ſuſceptible of all Kinds of Modifications or Figures.

He adds, that he takes it to be impoſſible to conceive a Mind which does not *think*, tho' it be eaſy to conceive one which does not feel, or imagine, or will; in like Manner as 'tis impoſſible to conceive a Matter which is not extended, tho' it be eaſy to conceive one that is neither Earth, nor Metal; nor ſquare, nor round; nor that is even in Motion.

Hence it may be concluded, that as 'tis poſſible there may be Matter which is neither Earth nor Metal; nor ſquare nor round; nor even in Motion; 'tis alſo poſſible, that a Mind may neither perceive Heat nor Cold; nor Joy nor Grief; nor imagine any thing, nor will any thing; ſo that theſe Modifications are not eſſential to it. *Thought* alone, therefore, is the Eſſence of the Mind, as Extenſion alone is the Eſſence of Matter. See ESSENCE, EXTENSION, WILL, &c.

But this Doctrine no longer paſſes among us. The Followers of Sir *Iſaac Newton*, and the new Philoſophy, deny Extenſion to be the Eſſence of Matter (ſee MATTER); and the Followers of Mr. *Lock* deny *Thought* to be the Eſſence of the Mind. See SOUL.

THOUSAND. See NUMERATION.

THOUSAND *Years Reign*. See MILLENNIUM.

THRASHING, or THRESHING, in Agriculture, the Act of beating the Corn out of the Ears. See CORN.

Thraſhing is perform'd two Ways; or rather there are two Ways of ſeparating Corn from the Ear; the firſt by beating it with a Flail, which is properly what we call *Thraſhing*.

Some Authors will not by any means we ſhould call this by the *Roman* Name *tritura* or *trituratio*, but *flagellatio* of *flagellum*, a Scourge or Flail.

The other Manner, ſtill practis'd in ſeveral Countries, as we are inform'd by *Liger*, is to make Mules or Horſes trample on it backwards and forwards: This is properly what the Ancients call'd *tritura* and *trituratio*.

But they alſo us'd Oxen therein; witneſs the *Hebrews*, who ſometimes yoak'd four Oxen together.

Another Way was with a kind of Sledge made of Boards join'd together, and loaden with Stones or Iron, upon which a Man was mounted, and the whole drawn over the Corn by Horſes: This Inſtrument was call'd *Traha* or *Tributus*.

'Tis a Rule among Husbandmen, that the Seaſon for *Thraſhing*, is when the Corn has ſweated in the Heap, or Mow.

THRAVE *of Corn*, from the *Saxon*, *Threav*, Bundle, or the *Britiſh Dreſa*, twenty-four, is in moſt Parts of *England* twenty-four Sheaves, or four Shocks of ſix Sheaves to the Shock.

King *Athelſtan*, Anno 923, gave by Charter to Sir *John* of *Beverley*'s Church, four *Thraves* of Corn for every Plough Land in the Eaſt Riding of *Yorkſhire*.

Ta fou Threve *be Heven King*
Of Ilka Plough of Eſt Riding.

See PETER-CORN.

THREE-*Legged Staff*, an Inſtrument conſiſting of three Wooden Legs, made with Joints, ſo to ſhut all together, and to take off in the Middle, for the better Carriage; and uſually having on its Top a Ball and Socket, ſerving to ſupport and adjuſt Inſtruments for Aſtronomy, Surveying, &c. See BALL and SOCKET.

THRENGUS, in our ancient Cuſtoms. See DRENCHES.

Quia vero non erant adhuc tempore Regis Willielmi *Milites in Anglia, ſed* Threnges; *præcipit Rex ut de eis Milites fierent ad defendendam terram: fecit autem Lanfrancus* Threngos *ſuos Milites*, &c. Somn. Gavelk.

They were Vaſſals, but not of the loweſt Degree of thoſe who held Lands of the chief Lord.

The Name was impos'd by the Conqueror; for when one *Edwyn Sharnbourn* of *Norfolk*, and others, were ejected out of their Lands; they complain'd to the Conqueror; inſiſting, that they were always on his Side, and never oppos'd him: which, upon Enquiry, he found to be true; and therefore he commanded that every one ſhould be reſtor'd to their Lands, and for ever after be call'd *Drenches*. *Spelm.*

THRENODY, THRENODIA, a mournful, or Funeral Song. See FUNERAL.

THROAT, the Part of an Animal between the Head and the Shoulders, wherein is the Gullet. See GULLET.

Phyſicians include under the Word *Throat*, all that Hollow or Cavity which may be ſeen when the Mouth is wide open.

It is ſometimes alſo call'd *Iſthmus*, by Reaſon it is narrow, and bears ſome Reſemblance to thoſe Streights call'd by the Geographers *Iſthmi*.

THROAT, in Architecture, Fortification, &c. See GORGE and GULA.

THRONE, from the *Greek* θρονος, a magnificent Seat or Chair; is a Royal Seat, inrich'd with Ornaments of Architecture and Sculpture, made of ſome precious Matter, rais'd on ſeveral Steps, and cover'd with a kind of Canopy.

Such as are in the Rooms of Audience of Kings and other Sovereigns.

THROWS *of Women*, the Pains of Child-Birth. See DELIVERY, &c.

THROWSTER, one who *throws*, *i. e.* winds or rolls Silk. See SILK.

THUNDER, a Noiſe in the loweſt Region of the Air, excited by a ſudden kindling of ſulphurous Exhalations. See AIR, ATMOSPHERE, EXHALATIONS, &c.

Seneca, *Rohault*, and other Authors, both ancient and modern, account for *Thunder*, by ſuppoſing two Clouds impending over one another, the upper and rarer whereof becoming condens'd by a freſh Acceſſion of Air rais'd thither by Warmth from the lower Parts of the Atmoſphere; or driven upon it by the Wind; immediately falls forcibly down upon the lower, and denſer Cloud: By which Fall, the Air interpos'd between the two being compreſs'd; that next the Extremities of the two Clouds is ſqueez'd out, and leaves Room for the Extremity of the upper Cloud to cloſe tight upon the under: Thus a great Quantity of Air is inclos'd, which at length eſcaping thro' ſome winding irregular Vent or Paſſage, it occaſions that Noiſe we call *Thunder*. See CLOUD, &c.

But this only reaches to the Phænomena of *Thunder* heard without Lightening; and, in effect, we have now a better Solution: *Thunder* is not occaſion'd by the falling of Clouds; but by the kindling of ſulphurous Exhalations, in the ſame Manner as the Noiſe of Aurum Fulminans.

"There are ſulphurous Exhalations, ſays Sir *Iſaac Newton*, always aſcending into the Air when the Earth is dry; there they ferment with the nitrous Acids, and ſometimes taking Fire, generate into *Thunder*, Lightening, &c.

That, beſide the Vapours rais'd from Water, &c. there are alſo Exhalations carry'd off from Sulphur, Bitumen, Volatile Salts, &c. is paſt all doubt; the vaſt Quantity of ſulphurous and bituminous Matter all over the Surface of the Earth, and the Volatile Salts of Plants and Animals, afford ſuch an ample Stock thereof; that 'tis no Wonder the Air ſhould be fill'd with ſuch Particles, rais'd higher or lower, according to their greater or leſs Degree of Subtility and Activity; and more copiouſly ſpread in this or that Quarter, according to the Direction of the Winds, &c. See SULPHUR.

Now, the Effects of *Thunder* are ſo like thoſe of fir'd Gunpowder, that Dr. *Wallis* thinks we need not ſcruple to aſcribe them to the ſame Cauſe: But the principal Ingredients in Gunpowder we know are Nitre and Sulphur; Charcoal only ſerving to keep the Parts ſeparate, for the better kindling. See GUNPOWDER.

Hence, if we conceive in the Air a convenient Mixture of nitrous and ſulphurous Particles, from the Sources abovemention'd; and thoſe, from ſome Cauſe, to take Fire; ſuch Exploſion may well follow, and with ſuch *Noiſe* and *Light*, the two Phænomena of *Thunder*; as in the firing of Gunpowder: and being once kindled, it will run from Place to Place, this Way or that, as the Exhalations happen to lead it; as in a Train of Gunpowder.

This Exploſion, if high in the Air, and remote from us, will do no Miſchief; but if near us, may deſtroy Trees, Animals, &c. as Gunpowder would do in the like Circumſtances.

This Nearneſs or Farneſs may be eſtimated by the Interval of Time between the Flaſh and the Noiſe: Dr. *Wallis* obſerves, that ordinarily the Difference between the two is about ſeven Seconds; which, at the Rate of 1142 Feet in a Second of Time, gives the Diſtance about a Mile and half: But ſometimes it comes in a Second or two, which argues the Exploſion very near us, and even among us. And in ſuch Caſes, the Revd. Doctor aſſures us, he has more than once foretold the Miſchiefs that befell.

Upon the whole, that there is in Lightening a ſulphurous Vapour, appears from the Sulphur which attends it, and from the ſultry Heat in the Air which uſually precedes it; and that there is a nitrous Vapour along with it, the ſame Author concludes hence, that we know of no other Body ſo liable to a ſudden and violent Exploſion. And as to the kindling of theſe Materials, we know that a Mixture of Sulphur and Steel Filings, with a little Water, will break forth into actual Flame. Nothing therefore is wanting to the Exploſion, but ſome Chalybeat, or Vitriolic Vapour; and among the various Effluvia from the Earth, the Doctor does not doubt, but there muſt be ſome of that: But what he leaves as a Probability, we can produce a kind of Proof of.

In Hiſtory we meet with Inſtances of its raining Iron in *Italy*, and Iron Stones in *Germany*: *Jul. Scaliger* tells us, he had by him a Piece of Iron rain'd in *Savoy*. *Cardan* reports 1200 Stones to have fallen from Heaven, ſome of them weighing 30, ſome 40, and one an hundred and twenty Pound, all very hard, and of the Colour of Iron.

The Matter of Fact is ſo well atteſted, that Dr. *Liſter*, in the *Philoſophical Tranſactions*, builds a whole Theory of *Thunder* and Lightening on it; maintaining, that they both owe their Matter to the Breath or Exhalation of *Pyrites*. See PYRITES.

That Rattling in the Noiſe of *Thunder*, which makes it ſeem as if it paſs'd thro' Arches, or were broken variouſly, is doubtleſs owing to the Sound being excited among Clouds hanging over one another, and the agitated Air paſſing between them. See LIGHTENING.

THUNDER-*Bolt*. If what we call *Lightning*, act with extraordinary Violence, and break or ſhatter any thing; it is call'd a *Thunder-bolt*; which the People, to fit it for ſuch Effects, ſuppoſe to be a hard Body, and even a Stone. See LIGHTENING.

But that we need not have recourſe to a hard ſolid Body to account for the Effects commonly attributed to the *Thunder-bolt*, will be evident to any one, who conſiders thoſe of Pulvis Fulminans, &c. of Gun-powder. See FULMINANS.

The Phænomena of the *Thunder-bolt* are, that it oftener ſtrikes on high Places than on low: That it frequently burns Peoples Cloaths, without touching their Bodies: That it ſometimes breaks their Bones, without hurting their Fleſh, or their Cloaths; that it has even melted the Sword without touching the Scabbard, &c.

The Firſt is eaſily accounted for, from the ordinary Height of the Clouds, out of which the Lightening darts: As to the reſt, ſince Exhalations may be very different from one another; ſome, *e. gr.* coming neareſt the Nature of Sulphur, may only yield a very ſlight lambent Flame, which will only affect ſuch things as take Fire the ſooneſt. And others, on the contrary, ſo ſubtile and penetrating, as to come near the Nature of Volatile Salts or Aqua-fortis, which ſpare ſoft Bodies, and ſpend their whole Force on hard ones.

The Chevalier *de Louville* of the *French* Academy of Sciences, accounts for ſome of the Effects of Thunder upon a new Principle; as to killing of Animals, without burning or wounding them, 'tis naturally enough aſcribed to the Sulphur, which falling near enough the Perſon, the Fumes thereof ſtop his Reſpiration. As to Trees, Buildings, &c. ſplit or beat down, there muſt be another Cauſe. M. *de Louville*, therefore, ſuppoſes, that when the Thunder is ſo high, its Flame is diſſipated e'er it arrive at the Earth: And that the Air being violently driven along by the impetuous Motion of the Flame, and of conſequence exceedingly condenſed, becomes a kind of hard Body, capable of producing terrible Effects.

Places ſtruck with *Thunder-bolts*, were held Sacred among the Ancients. *Nigidius* has a very curious Treatiſe on the *Thunder-bolt*.

Marcilius Ficinus, and ſome others, maintain, that Coral diſſipates panic Fears, and keeps off *Thunder-bolts* and Hail: *Fortunat. Licetus* has endeavour'd to account for it phyſically. F. *le Brun* proves very eaſily, that thoſe Philoſophers are miſtaken.

On Medals, the *Thunder-bolt* is ſometimes found to accompany the Emperors Heads; as that of *Auguſtus*. In which Caſe, it is a Mark of Soveraignty, and of a Power equal with the Gods.

Appian informs us, that the *Thunder-bolt* was the principal Divinity of *Seleucia*; adding, that it was adored even in his Time, with various Hymns and Ceremonies. See GOD.

THUS. See FRANKINCENSE.

THUMMIM, in the Scripture Learning. See URIM and THUMMIM.

THURSDAY. See WEEK.

Maunday THURSDAY. See MAUNDAY *Thurſday*.

THYMUS, in Anatomy, a conglobate Gland, ſituated in the upper Part of the Thorax, under the Claviculæ, where the Cava and Aorta divide into the Subclavian Branches. See GLAND.

This Gland is big in Infants, but as they grow in Age, it grows leſs; its Arteries and Veins are Branches of the Carotides and Jugulars. It has Nerves from the Par Vagum, and its Lymphatick Veſſels diſcharge themſelves into the Ductus Thoracicus.

The learned Dr. *Tyſon* ſuppoſes the Uſe of this Gland to be for a Diverticulum to the Chyle in the Thoracick Duct of a Fœtus, whoſe Stomach being always full of the Liquor in which it ſwims, muſt keep the Thoracick Duct diſtended with Chyle; becauſe the Blood which the Fœtus receives from the Mother, fills the Veins, and hinders the free Entrance of the Chyle into the Subclavian Veins. See FOETUS.

M. *Cheſelden* obſerves, that where the *Thymus* in Men is very ſmall, the Thyroid Glands encreaſe proportionably; but in ſuch Brutes as have fallen under his Obſervation, it is juſt the contrary; from which he is inclined to believe that they belong to the ſame Lymphatics, and that either of them encreaſing as much as both ought to do, if both encreaſed, anſwers the ſame End as both did; and that the Reaſon why the *Thymus* encreaſes rather than the Thyroid Glands in Brutes, is, becauſe the Shape of their Thorax affords convenient Room for it to lodge in; and that in Men, the Reaſon why the Thyroid Glands encreaſe ſo much, is, becauſe there is no Room in that part of the Thorax where the *Thymus* is ſeated, for a large Gland to be lodg'd.

The *Thymus* is that, which in a Breaſt of Veal we call the *Sweat-Bread*.

THYMUS, in Medicine, is uſed for a kind of Wen, growing on the natural Parts, the Fundament, and ſeveral other Places of the Body, with cloven Aſperities like thoſe of the Herb *Thyme*, whence its Name. See WEN.

The ordinary Method of curing a *Thymus*, is by Ligature and deſiccative Lotions, or by Cauſtic's; and if large, by Inciſion; taking Care firſt to ſecure the greater Veſſels by tying them.

THYREOARYTÆNOIDEUS, in Anatomy, a Pair of Muſcles, ſituate under the Cartilago Thyreoides; from the fore and back Part of which, it ariſes with a very broad Head, and terminates in the Arytænoides, which it conſtringes, and ſhuts the Larynx. See ARYTÆNOIDES.

THYROIDEÆ *Glandulæ*, THYROID *Glands*, are two Glands of the Larynx. See LARYNX.

There are Four pretty large Glands, which ſerve to moiſten the Larynx; two above and two below.

The two latter are call'd *Thyroideæ*; ſituate at the bottom of the Larynx, aſide of the Annular Cartilage, and of the firſt Ring of the Trachea; one on each Side.

They are in form of little Pears; their Colour a little more reddiſh, their Subſtance more ſolid, more viſcous, and reſembling more the Fleſh of the Muſcles, than the other Glands.

They receive Nerves from the Recurrents, Arteries from the Carotides; Veins which paſs to the Jugulars, and Lymphaticks, which diſcharge themſelves into the Thoracic Duct.

Their Uſe is to ſeparate a viſcid Moiſture, ſerving to line, and lubricate the Larynx, to facilitate the Motion of its Cartilages, to ſoften the Acrimony of the Saliva, and to ſweeten the Voice.

THYROIDES, in Anatomy, one of the five Cartilages of the Layrinx. See LARYNX.

The firſt, and biggeſt of the Cartilages of the Larynx is call'd *Thyroides* or *Scutiformis*, by reaſon of its Figure, which ſome fancy to reſemble a Shield. It is hollow within, and gibbous without ſide; but more ſo in Men than in Women. In the middle is a Prominence, call'd *Pomum Adami*. 'Tis uſually parted by a Line running along the middle; whence ſome make two of it; tho' in reality 'tis very rare 'tis found double.

It is near a Square; and at each Angle is a Proceſs: The two uppermoſt are the longeſt, and tie it by means of a nervous Ligament to the Os Hyoides: The two lower, and ſhorter, connect it to the ſecond Cartilage, call'd *Cricoides*.

The Word is form'd from the *Greek*, θυρεὸς, Buckler, and εἶδος, Form.

THYRSUS, in Antiquity, the Scepter which the ancient Poets put in the Hand of *Bacchus*, and wherewith they furniſh the *Menades* in their *Bacchanalia*. See BACCHANALIA, &c.

The *Thyrſus* was originally a Lance, or Spear, wrapt up in Vine-Leaves; wherewith *Bacchus* is ſaid to have arm'd himſelf and his Soldiers in his *Indian* Wars, to amuſe and deceive the unpractiſed *Indians*, and make them ſuſpect no Hoſtilities.

Hence it was afterwards bore in the Feaſts and Sacrifices of that God; and as the Satyrs, who were *Bacchus*'s Soldiers, were ſuppoſed to have fought with it, it became a Cuſtom to repreſent them therewith. See SATYR, &c.

The Word is form'd from the *Greek*, θυρσὸς, *Haſtula frondibus veſtiti*, ſignifying the ſame thing.

TIARA or THIARA, an Ornament or Habit, wherewith the ancient *Perſians* cover'd their Head; and which the *Armenians*, and Kings of *Pontus* ſtill wear on Medals; theſe laſt, becauſe deſcended from the *Perſians*.

The *Latin* Authors call it indifferently, *Tiara* or *Cidaris*. *Strabo* ſays, the *Tiara* was in form of a Tower: The Scholiaſt on *Ariſtophanes*'s Comedy, Ἀχάρνης, *Act* 1. *Scene* 2. affirms, that it was adorn'd with Peacock's Feathers. Some Moderns, however, take it, the Scholiaſt is here ſpeaking of the Cask which the ancient *Perſians* wore in War; rather than the Habit which they wore on the Head in the Cities: But they don't ſeem to have conſider'd the Paſſage in the Poet, to which the Scholiaſt refers: The Matter there ſpoke of is Peace, and Embaſſadors ſent to treat of Peace, with Habits of Pomp and Ceremony, Ἀχθομαι γὰ, &c. *Theſe Ambaſſadors, theſe Peacocks, all theſe Things of Pomp and Oſtentation diſpleaſe me.* By *theſe Peacocks*, ſays the Scholiaſt, he means the *Tiaræ*, which among the *Perſians* are Ornaments of the Head, wherein are Peacock's Feathers, &c.

St. *Jerom* on *Dan. cap.* iv. defines the *Tiara* a kind of Cap, *genus Pilleoli*, wore by the *Perſians* and *Chaldeans*. In another Place, he adds, 'tis like *Ulyſſes*'s Cap.

The ancient Scholiaſt, on *Juvenal*, deſcribes the *Tiara* as a Prieſt's Cap, which deſcending over the Cheeks, was tied under the Chin; which agrees very well with the Form of that which we ſee *Mithridates* wear, on Medals. *Servius* on *Virgil*, *lib.* viii. *Æneid.* calls the *Tiara*, a *Phrygian* Cap; and *Statius*, *Thebaid*, *lib.* viii. gives it the Kings of *Parthia*, who, doubtleſs, borrowed it from the *Perſians*.

Juſtin attributes the long Garment and *Tiara* of the *Perſians*, to *Semiramis*'s Diſguiſe; whereby ſhe paſs'd for *Ninus*.

The Kings of *Perſia* alone, had the Right of wearing the *Tiara* ſtraight and upright: The Prieſts, and great Lords wore it depreſs'd, or turn'd down on the Fore-ſide. *Xenophon* in his *Cyropæd.* ſays, that the *Tiara* was ſometimes encompaſs'd with the Diadem, at leaſt in Ceremonies; and had frequently the Figure of a Half Moon embroider'd on it: Others are of Opinion, that 'twas the Diadem had the Figure of a Moon, and that it was hence the *Tiara* was call'd *Lunata*; and, laſtly, others think that the *Tiara* itſelf was ſometimes in form of a Half Moon. From what we have ſaid, it appears, that there were different Forms of *Tiara's*; and, in effect, *Paſchalius*, *de Coronis*, ſhews there were Five different Kinds. See DIADEM.

TIARA is alſo the Name of the Pope's Triple Crown; anciently call'd *Regnum*. See CROWN.

The *Tiara*, and Keys are the Badges of the Papal Dignity; the *Tiara* of his Civil Rank, and the Keys of his Juriſdiction: For, aſſoon as the Pope is dead, his Arms are repreſented with the *Tiara* alone, without the Keys.

The ancient *Tiara* was a round high Cap, *John* XXIII. firſt encompaſs'd it with a Crown. *Boniface* VIII. added a ſecond Crown; and *Benedict* the XIIth, a Third.

TIBIA, in Anatomy, the bony Part of the Leg, between the Knee and the Ankle. See LEG.

The *Tibia* conſiſts of two Bones, call'd *Fociles*, the one on the Inſide the Leg, call'd the *Fibula*, or *little Focil*. See FIBULA.

The other on the Out-ſide, call'd by the common Name *Tibia*, or the great *Focil*. See the following Article.

TIBIA, is, properly, the inner and bigger Bone of the Leg, call'd alſo *Focile Majus*. See BONE.

The *Tibia* is hard and firm, having a pretty large Cavity in its Middle, to contain the Medulla. See MEDULLA.

It is almoſt Triangular; its fore, and ſharp Edge being call'd the *Shin*: in its upper Extremity, it has two large Sinus's, tipt with a ſoft and fine Cartilage, from its Figure, call'd *Cartilago Lunata*; which runs in between the Extremities of the two Bones, and grows very thin at its Edge; ſerving to facilitate a ſmall Side-motion in the Knee, like thoſe in the Articulation of the lower Jaw.

The Sinus's receive the two Protuberances of the Femur, or Thigh-bone; and the Production which is between the Sinus's of the *Tibia*, is received into the Sinus, which divides theſe two Protuberances of the Femur. See FEMUR.

By bending the Knee, we bring the Leg, in walking, in a ſtrait Line forwards; which we could not have done without this Articulation; but like thoſe who have the Misfortune to have a wooden Leg, we muſt have brought our Foot about in a Semi-circle, in going even upon a Plain, but more evidently upon an Aſcent.

On the Side of this upper End, it has a ſmall Knob, which is received into a ſmall Sinus of the *Fibula*, and on its Forepart, a little below the Patella, it has another into which the Tendons of the Extenſors of the Leg, are inſerted. See FIBULA.

Its

Its lower Extremity, which is much ſmaller than its upper, has a remarkable Proceſs, which forms the inner Ankle; and a pretty large Sinus, divided in the Middle by a ſmall Protuberance; the Sinus receives the convex Head of the Aſtragalus, and the Protuberance is received into the Sinus, in the convex Head of the ſame Bone.

It has another ſhallow Sinus in the Side of its lower End, which receives the Fibula.

Mr. *Cheſelden* gives an Inſtance of a Boy of Seven Years of Age, where both the Epiphyſes at the upper End of the *Tibiæ*, were ſo far ſeparated, that not more than Half each *Tibia* was join'd to Half the Epiphyſis; which made his Legs wholly uſeleſs. This had been occaſion'd, by the Nurſe's holding him out to Stool by the Heels and Back, when very young; which is among them (as he obſerves) too common a Practice.

TIBIALIS or TIBIÆUS, in Anatomy, a Name given two Muſcles of the Leg; diſtinguiſh'd by *Anticus* and *Poſticus*.

The *Tibialis Anticus*, ſprings from the exterior Proceſs of the *Tibia*, and becoming gradually broad and fleſhy about the middle of the *Tibia*, down the Fore-part of which it runs, is contracted again, into a ſlender, ſmooth Tendon, which paſſes under the Ligamentum Annulare, and is partly inſerted to the Os Cuneiforme Majus, and partly to the Bone of the Metatarſus, that ſupports the great Toe. Its Office is to draw the Foot up.

Tibialis Poſticus, is derived from both Bones of the *Tibia*, and from the Ligament that bends them together; and runs with a ſmooth, ſtrong Tendon through the Sinus on the inner Malleolus, under the Annular Ligament, to the Inſide of the Os Naviculare.

Its Office is to draw the Foot inwards. From the Uſe Sailors make of it in Sailing, it is alſo called the *Nauticus*.

TICHONIC *Syſtem* or *Hypotheſis*. See TYCHONIC.

TIDES, Two periodical Motions of the Waters of the Sea, call'd the *Flux* and *Reflux*; or the *Ebb* and *Flow*. See SEA, FLUX, EBB, *&c.*

When the Motion of the Water is againſt the Wind, 'tis call'd a *Windward Tide*; when Wind and *Tide* go the ſame Way, *Leeward Tide*: When it runs very ſtrong, 'tis a *Tide-gate*.

To Tide it over or up into any Place, is to go in with the *Tide*, either Ebb or Flood, as long as that laſts; then to ſtay at Anchor all the Time of contrary *Tide*; and thus to ſet in again with the Return of the firſt *Tide*.

It is ſaid to *flow Tide and Half Tide*, when the *Tide* runs three Hours in the Offing, longer than it does by the Shore: but, by *longer*, they don't mean more Hours; but, that if it be high Water a-ſhore at 12, it will not be ſo in the Offing till Three. If it Ebb and Flow longer, they ſay it runs *Half Tide* and *Half-quarter*.

When the Moon is in the Firſt and Third Quarter, *i. e.* when ſhe is New and Full, the *Tides* are High and Swift, and called *Spring Tides*; when ſhe is in the ſecond and laſt Quarter, the Tides are lower and ſlower, and call'd *Neap Tides*. See NEAP, *&c.*

Phænomena of the TIDES.

The Sea is obſerv'd to flow, for certain Hours, from *South* towards *North*; in which Motion, or Flux, which laſts about Six Hours, the Sea gradually ſwells; ſo that entering the Mouths of Rivers, it drives back the River-waters towards their Heads or Springs. See RIVER, *&c.*

After a continual Flux of Six Hours, the Sea ſeems to reſt for about a Quarter of an Hour; after which it begins to ebb or retire back again from *North* to *South*, for Six Hours more: In which Time, the Water ſinking, the Rivers reſume their natural Courſe. After a ſeeming Pauſe of a Quarter of an Hour, the Sea again begins to flow as before, and thus alternately.

Thus does the Sea ebb twice a-day, and flow as often; but not in the ſame Hours thereof. The Period of a Flux and Reflux is 12 Hours 50 Minutes, ſo that the *Tides* return later, and later each Day, by 50 Minutes or $\frac{1}{4}$ of an Hour, 5 Minutes.

Now, 12 Hours 50 Minutes is a Lunar Day; *i. e.* the Moon paſſes the Earth's Meridian later and later each Day by 50 Minutes. So that the Sea flows as often as the Moon paſſes the Meridian, both the Arch above, and that below the Horizon; and Ebbs as often as ſhe paſſes the Horizon, both the Eaſtern and Weſtern Point thereof. See MOON.

This further Agreement we obſerve between the Moon and the Sea; that the *Tides*, though conſtant, are not equal; but are greateſt, when the Moon is in Conjunction, or Oppoſition to the Sun, and leaſt when in Quadrate thereto.

Laſtly, thoſe *Tides* are the greateſt, which happen in the New and Full Moon, at the Times of the Equinoxes.

Add, that the ſame Things are obſerved throughout moſt of the Coaſts of *Europe*; only that the *Tides* are ſo much the leſs, and happen the later, as the Coaſts are the more Northerly.

Theſe Phænomena of the *Tides* are admirably accounted for, from the Principle of Gravitation. All we require to their Solution, is, that the Earth and Moon, and every Particle thereof, mutually gravitate towards each other; the Reaſonableneſs of which Aſſumption, ſee under the Article GRAVITATION.

Indeed the ſagacious *Kepler* long ago, conjectured this to be the Cauſe of the *Tides*: "If, ſays he, the Earth ceas'd "to attract its Waters towards itſelf; all the Water of the "Ocean would riſe and flow into the Moon: The Sphere of "the Moon's Attraction extends to our Earth, and draws up "the Water." Thus thought *Kepler* in his *Introd. ad Theor. Mart.* This Surmize, for it was then no more, is now abundantly verified, in the following Theory, deduced by Dr. *Halley*, from the *Newtonian* Principles.

Theory of the TIDES.

1° As the Surface of the Earth and Sea is naturally globular; if we ſuppoſe the Moon A (Tab. Geography Fig. 6.) perpendicularly over ſome Part of the Surface of the Sea, as E; 'tis evident the Water E, which is now neareſt the Moon, will gravitate towards it more than any other Part of the Earth and Sea in the Hemiſphere FPH.

The Water in E, therefore, muſt by this means, be rais'd towards the Moon, *i. e.* it will be lighter than uſual, and of conſequence will ſwell in E.

For the ſame Reaſon the Water in G being the moſt remote from the Moon, will gravitate towards the ſame, rather than any other Part of the Earth or Sea in the Hemiſphere FGH.

The Water here, therefore, muſt approach leſs towards the Moon, than any other Part of the Globe, *i. e.* it muſt be rais'd the contrary Way; as being lighter than uſual, and will therefore ſwell in G.

By this means, the Surface of the Ocean muſt neceſſarily form itſelf into a Spheroidal, or Oval Figure, whoſe longer Diameter is EG; its ſhorter FH. And thus, the Moon ſhifting her Poſition in her Diurnal Motion round the Earth; this Oval of Water muſt ſhift with her; by which means are effected thoſe two Floods and Ebbs, obſervable every 25 Hours.

2° Since, in the Conjunctions and Oppoſitions of the Sun and Moon, the Gravitation of the Water to the Sun conſpires with its Gravitation towards the Moon; but in the Quadratures, the Water rais'd by the Sun is depreſs'd by the Moon: Hence it is that the *Tides* are greateſt in the Syzygies, and leaſt in the Quadratures.

In effect, there are two *Tides* every natural Day, from the Action of the Sun, as there are in the Lunar Day from that of the Moon; all govern'd by the ſame Laws: Only thoſe caus'd by the Sun, are much leſs than thoſe of the Moon; becauſe though the Sun be Ten thouſand times bigger than both the Earth and Moon, yet he is at ſo immenſe a Diſtance, that the Earth's Semi-diameter bears no Proportion thereto.

Hence, the different *Tides* depending on the particular Actions of the Sun and Moon are not diſtinguiſh'd, but confounded. The Lunar *Tide* is ſomewhat changed by the Action of the Sun; and this Change varies every Day, by reaſon of the Inequality between the Natural and Lunar Day. See DAY.

3° Since the greateſt *Tides* about the Equinoxes (*viz.* thoſe happening in the Syzygies) ariſe from the Sun and Moon being in the Equinoctial; and thoſe about the Solſtices, from the Sun and Moon being in the Tropicks; for this Reaſon, thoſe greateſt *Tides* about the Equinoxes are greater than thoſe about the Solſtices, ſince the greater the Circle is, wherein the Waters turn, the greater is their Agitation. And if the Moon ſtood ſtill in the Pole, the Spheroid would become immoveable about the Pole, and the high Water be fix'd therein.

4°. Since the *Tides* are ſomewhat chang'd by the Libration of the Waters, which uſe to retain a Motion impreſs'd on them for ſome time; for this Reaſon the higheſt *Tides* are not preciſely in the very Conjunction and Oppoſition of the Moon, but two or three *Tides* afterwards.

5°. Since the Sun is ſomewhat nearer the Earth in Winter than in Summer; hence it is, that the greateſt Equinoctial *Tides* are obſerv'd to be a little before the Vernal Equinox, and a little after the Autumnal one.

6°. Since the greateſt of the two *Tides* happening in every Diurnal Revolution of the Moon, is that wherein the Moon is neareſt the Zenith, or Nadir: For this Reaſon, while the Sun is in the Northern Signs, the greater of the two Diurnal *Tides* in our Climates, is that ariſing from the Moon above the Horizon; when the Sun is in the Southern Signs, the greateſt is that ariſing from the Moon below the Horizon.

7°. Such would the *Tides* regularly be, if the Earth were cover'd with Sea very deep; but by Reaſon of the Shoalneſs of ſome Places, and the Narrowneſs of the Straits in others, by which the *Tides* are propagated, there ariſes a great Diverſity in the Effect, not to be accounted for, without an exact Knowledge of all the Circumſtances of the Places; as the Poſition of the Land, and the Breadth and

Depth

Depth of the Channels, &c. for a very ſlow and imperceptible Motion of the whole Body of Water, where it is (for Example) two Miles deep, will ſuffice to raiſe its Surface 10 or 12 Feet in a *Tides*-time; whereas, if the ſame Quantity of Water were to be convey'd upon a Channel of 40 Fathom deep, it would require a very great Stream to effect it, in ſo large Inlets as are the Channel of *England* and the *German* Ocean; whence the *Tide* is found to ſet ſtrongeſt in thoſe Places where the Sea grows narroweſt, the ſame Quantity of Water being in that Caſe to paſs thro' a ſmaller Paſſage.

This is moſt evident in the Straits between *Portland* and *C. de la Hogue*, in *Normandy*, where the *Tide* runs like a Sluice; and would be yet more between *Dover* and *Calais*, if the *Tide* coming about the Iſland did not check it.

And this Force being once impreſs'd upon the Water, continues to carry it above the Level of the ordinary Height in the Ocean, particularly where the Water meets a direct Obſtacle, as it is in St. *Maloes*; and where it enters into a long Channel, which running far into the Land, grows very ſtrait at its Extremity, as it is in the *Severn*-Sea at *Chepſtow* and *Briſtol*.

This Shoalneſs of the Sea, and the intercurrent Continents, are the Reaſon that in the open Ocean, high Water is not at the Time of the Moon's Appulſe to the Meridian, but always ſome Hours after it, as it is obſerv'd upon all the Weſt Coaſt of *Europe* and *Africa*, from *Ireland* to the *Cape of Good Hope*; in all which a South-Weſt Moon makes high Water; and the ſame is reported to be on the Weſt of *America*.

It would be endleſs to recount all the particular Solutions, which are eaſy Corollaries from this Doctrine: as, why the Lakes and Seas, ſuch as the *Caſpian* Sea, and the *Mediterranean* Sea, the *Black Sea*, and *Baltick*, have no ſenſible *Tides*: For Lakes having no Communication with the Ocean, can neither increaſe or diminiſh their Water, whereby to riſe and fall; and Seas that communicate by ſuch narrow Inlets, and are of ſo immenſe an Extent, cannot in a few Hours Time receive and empty Water enough to raiſe or ſink their Surface any thing ſenſibly.

To demonſtrate the Excellency of this Doctrine, the Example of the *Tides* in the Port of *Tunking* in *China*, which are ſo extraordinary, and different from all others we have yet heard of; may ſuffice. In this Port there is but one Flood and Ebb in 24 Hours; and twice in each Month, *viz.* when the Moon is near the Equinoctial, there is no *Tide* at all, but the Water is ſtagnant; but with the Moon's Declination, there begins a Tide, which is greateſt when ſhe is in the Tropical Signs; only with this Difference, that when the Moon is to the Northward of the Equinoctial, it flows when ſhe is above the Earth, and ebbs when ſhe is under, ſo as to make high Water at Moon-ſetting, and low Water at Moon-riſing: But, on the contrary, the Moon being to the Southward, makes high Water at riſing, and low Water at ſetting, it ebbing all the Time ſhe is above the Horizon.

The Cauſe of this odd Appearance is propos'd by Sir *Iſaac Newton* to ariſe from the Concurrence of two *Tides*, the one propagated in ſix Hours out of the great *South-Sea* along the Coaſt of *China*; the other out of the *Indian* Sea from between the Iſlands in twelve Hours, along the Coaſt of *Malacca* and *Camboya*. The one of theſe Tides being produc'd in North Latitude, is, as hath been ſaid, greater when the Moon being to the North of the Equator, is above the Earth, and leſs when ſhe is under the Earth. The other of them, which is propagated from the *Indian* Sea, being rais'd in South Latitude, is greater, when the Moon declining to the South is above the Earth, and leſs when ſhe is under the Earth; ſo that of theſe *Tides* alternately greater and leſſer, there come always ſucceſſively two of the greater, and two of the leſſer together every Day; and the high Water falls always between the Arrival of the two greater Floods; and the low Water between the Times of the Arrival of the two leſſer Floods: And the Moon coming to the Equinoctial, and the alternate Floods becoming equal, the *Tide* ceaſes, and the Water ſtagnates; but when ſhe has paſs'd to the other Side of the Equator, thoſe Floods which in the former Order were the leaſt, now becoming the greateſt, that which before was the Time of the high Water, now becomes the low Water, and the converſe; ſo that the whole Appearance of theſe ſtrange *Tides* is, without any forcing, naturally deduc'd from theſe Principles, and is a great Argument for the Certainty of the whole Theory.

TIDE-*waiters*, or TIDE-*men*, certain Officers belonging to the Cuſtom-houſe, appointed to watch or attend on Ships, coming from abroad, to ſee that nothing be landed till the Cuſtom of the Freight be paid. See CUSTOM, FREIGHT, &c.

They are thus call'd, becauſe they go aboard the Ships at their Arrival in the Mouth of the *Thames*, and come up with the *Tide*.

TIERCE, in Heraldry, a Term denoting the Shield to be divided into three equal Parts, of different Colours or Metals.

If the Chief and Baſe be of the ſame Colour when divided by a Feſſe, they blazon it by expreſſing the Colour, and mentioning the Feſſe; otherwiſe, they ſay it is *Tierce en faſce*, and mention each of the Colours; or *Tierce en pal*, if ſo divided in Pale.

TIERCE, or TERCE, is alſo a Meaſure of liquid Things, as Wine, Oil, &c. containing the third Part of a Pipe, or 42 Gallons. See MEASURE, GALLON, &c.

TIERCE, in Muſic. See THIRD.

TIERCE, *Three*, a Sequence of three Cards of the ſame Colour. See SEQUENCE.

TIERCE, in Fencing. See GUARD.

TIERCE *Order*. See THIRD *Order*.

TIGE, in Architecture, a *French* Term for the Shaft or Fuſt of a Column; comprehended between the Aſtragal and the Capital. See FUST and COLUMN.

TILE. See TYLE.

TILLER, or TILLAR, in Husbandry, a little young Tree left to grow till it be fellable. See TIMBER.

TILLER of a Ship, is a ſtrong Piece of Wood faſten'd to the Rudder. See RUDDER.

The ſame Name is alſo given to that which ſerves for a Helm in a Boat.

TILLING, in Gardening and Agriculture, a moving or ſtirring of the Ground, with the Plough or Spade; which being perform'd on the Top, enters to a certain Depth, and makes the lower and upper Parts change Place; by which means the Goodneſs of the Earth is kept from being ſpent in feeding ill Plants. See PLOUGHING, &c.

The Rule, as to Gardening in general, is, that hot and dry Earth ſhould be *till'd* in Summer, either a little before, or while it rains, or ſoon after; and that neither too often nor too deep: In hot Weather 'tis not to be perform'd, unleſs water'd ſoon after: But for moiſt, cold, and ſtrong Earth, it muſt never be *till'd* in Time of Rain, but rather in the greateſt Heats. As to Arable Lands, that which is clayey, ſtiff, cold, and moiſt, is generally thrice *till'd*; in Spring, Summer, and at Seed Time, for Wheat; and four Times for Barley.

Theſe repeated Ploughings or Fallowings are very advantageous to the Soil, both as they deſtroy Weeds, and as the Ground is hereby laid in Ridges, which prevents its being over drench'd in wet Seaſons, ſaves it much from Blights, and bleak Weather, and makes the Land lighter and fitter for the Seed to take Root in, and to imbibe the nitrous Dews and Influences of the Air, &c. See FALLOWING and VEGETATION.

TILT. See JOUST and TOURNAMENTS, CARROUSELS and QUADRIL, &c.

TILT-*Boat*, a Boat cover'd with a *Tilt*, *i. e.* a Cloth, or Tent, for the Sheltering of Paſſengers: Such is that which carries Paſſengers between *London* and *Graveſend*.

TIMAR, TIMARIUM, a Lordſhip or Tract of Ground, which the Grand Signior gives the *Spahis*, in Uſu Fruit, *i. e.* to enjoy during Life, for their Subſiſtence. See SPAHI.

Meninski calls it a Penſion, Stipend, or Revenue, granted to old Soldiers who have deſerv'd well, in Lands and Poſſeſſions of Caſtles, Towns, Villages, Fields, or in Tithes, and other Fruits and Incomes, with the Præfecture, Juriſdiction, or Lordſhip of the ſaid Places.

The *Timar* is a kind of Fief granted for Life. --- The whole Ottoman Empire is divided into Sangiackes or Baneries, under which, all ſuch as hold *Timars*, who are call'd *Timariots*, are bound to liſt themſelves, when ſummon'd upon any Expedition. See TIMARIOT.

Timars may be reſign'd as Benefices among us, only obtaining the Conſent of the Beglerbei, or Governor of the Province.

Indeed, for *Timars* of above 20000 Aſpers *per Annum*, call'd *Zaim*, the Grand Vizier alone grants Diſpenſations. See ZAIM.

TIMARIOTS, thoſe who enjoy Lands and Benefices on the Tenure and Condition of *Timars*. See TIMAR.

The *Timariots* are oblig'd to ſerve in War, perſonally, with as many Men and Horſes for Service, as their *Timar*, by the Eſtimate made thereof, contains Times 2500 Aſpers, or 11 Pounds Sterling; and to maintain them conſtantly mounted and arm'd, after their Manner, to be ready to march at all Hours when commanded; and that on Pain of Death; nothing, not even Sickneſs itſelf, being allow'd to excuſe them.

Beſide this Service, they likewiſe pay an Acknowledgment of one Tenth of their Revenue. --- If they have any Children of Age to bear Arms, and fit for the Service, after their Deceaſe, or in Defect hereof, if they have any Relations, that have the leaſt Intereſt; the *Timar* is us'd to be continu'd to them on the ſame Conditions; otherwiſe, it is transferr'd to others.

If the Revenue thus held of the Grand Signior exceed 15000 Aſpers, or 66 Pounds Sterling, they who hold it, are not call'd *Timariots*, but *Subaſſi*, or *Zaims*; and have the Adminiſtration of Juſtice in the Place, under the Sangiac of the Province.

The *Timariots* have different Appointments, from 4 or 5000 Aſpers; equal to about 22 Pounds Sterling; to 20000 Aſpers: But unleſs their *Timar* exceed 8000 Aſpers, they are never oblig'd to march, except when the Grand Signior goes in the Army in Perſon; on which Occaſion none are exempted.

The Origin of the *Timariots* is referr'd to the firſt Sultans, who being Maſters of the Fiefs or Lands of the Empire, erected them into Baronies or Commanderies; to reward the Services of their braveſt Soldiers; and eſpecially to raiſe and keep on Foot a Number of Troops without diſburſing any Money.

But it was *Soliman* II. that firſt eſtabliſh'd the Order and Diſcipline among theſe Barons, or Knights of the Empire; and by his Order it was, that the Number of Horſemen each ſhould maintain, was regulated.

This Body has always been not only exceedingly powerful, but great and illuſtrious, throughout all the Empire: But Avarice, the ordinary Fault of the Orientals, has occaſion'd their Declenſion of late Years.

The Viceroys and Governors of Provinces manage their Matters ſo at Court, that *Timars*, even out of their Juriſdiction, are given to their Domeſticks, or to ſuch as will give the moſt Money for them.

There are two Kinds of *Timariots*; the one appointed by the Porte, the other by the Viceroy of the Country: But the Revenues of both are leſs than thoſe of the *Zaims*, and their Equipage and Tents leſs in Proportion. See ZAIM.

Thoſe who have their Patents from the Court, have from 5 or 6000 Aſpers, to 19999 Aſpers *per Annum*; if they have one Aſper more, they become *Zaims*. Thoſe who receive their Patents from the Viceroys, have from 3 to 6000 Aſpers *per Annum*.

This Cavalry is better diſciplin'd than that properly call'd the *Spahis*, tho' the *Spahis* be the neateſt and briskeſt. Theſe laſt only fight in Plattoons; whereas the *Zaims* and *Timariots* are divided into Regiments, and commanded by Colonels, under the Direction of Baſhaws.

The Baſhaw of *Aleppo*, when in the Army, is Colonel General of this Militia.

TIMBER, includes all Kinds of fell'd and ſeaſon'd Woods, us'd in the ſeveral Parts of Building; as Carpentry, Joinery, Turnery, *&c.* See WOOD and BUILDING.

The Kinds of *Timber* are numerous: We ſhall only mention ſome of the moſt uſual; from *Evelyn*'s *Sylva*, &c. as,

1°. *Oak*; the Uſes whereof need no enumerating: To endure all Seaſons and Weathers, there is no Wood like it: Hence its Uſe in Pales, Shingles, Poſts, Rails, Boards, *&c.* For Water-works it is ſecond to none; and where it lies expos'd both to Air and Water, there is none equal to it.

2°. *Elm*: This fell'd between *November* and *February*, is all Spine or Heart, and no Sap; and is of ſingular Uſe in Places where it is always wet or dry: Its Toughneſs likewiſe makes it of Uſe to Wheel-wrights, Mill-wrights, *&c.* nor muſt it be omitted, that its not being liable to break and fly in Chips, makes it fit for Dreſſers and Planks to chop on.

3°. *Beech*: Its chief Uſe is in Turnery, Joinery, Upholſtery, and the like, as being of a clean, white, fine Grain, not apt to bend or ſlit: Yet is it ſometimes, eſpecially of late, us'd for building *Timber*; and if it lie conſtantly wet, is judg'd to out-laſt Oak.

4°. *Aſh*: Its Uſe is almoſt univerſal: 'Tis good for Building, or other Occaſions where it may lie dry: It ſerves the Carpenter, Cooper, Turner, Plough-wright, Wheel-wright, Gardener; as alſo at Sea for Oars, Hand-Spikes, *&c.*

5°. *Fir*; commonly known by the Name of *Deal*, is of late much us'd in Building, eſpecially within Doors, for Stairs, Floors, Wainſcot, and moſt Works of Ornament.

6°. *Walnut-Tree*, is of univerſal Uſe; excepting for the Out-ſides of Buildings: None better for the Joiners Uſe; it being of a more curious brown Colour than Beech, and leſs ſubject to Worms.

7°. *Cheſnut-Tree*, next to Oak, is the *Timber* moſt ſought for by Joiners and Carpenters: 'Tis very laſting.

8°. *Service-Tree*, us'd in Joinery, as being of a delicate Grain, and fit for Curioſities: It alſo yields Beams of conſiderable Bigneſs for Building.

9°. *Poplar*, *Abel*, and *Aſpen*, differing very little from one another, are much us'd of late inſtead of Fir: They look as well, and are tougher and harder.

10. *Alder*; much us'd for Sewers or Pipes to convey Water. When always wet it grows hard like a Stone; but where ſometimes wet, and ſometimes dry, it rots immediately.

Felling of TIMBER.

The Seaſon uſually commences about the End of *April*; in regard the Bark then generally riſes the freelieſt; ſo that where a Quantity of *Timber* is to be fell'd, the Statute requires it to be done then for the Advantage of Tanning. See TANNING.

However, the Opinions and Practices of Authors are very different, as to the beſt Seaſon for felling *Timber*: *Vitruvius* recommends an Autumnal Fall; others adviſe *December* and *January*: *Cato* was of Opinion, that Trees ſhould have bore their Fruit e'er fell'd; at leaſt their Fruit ſhould be firſt ripe; which falls in with the Sentiment of *Vitruvius*.

In effect, tho' *Timber* unbark'd be moſt obnoxious to Worms, yet we find the wild Oak, and many other Kinds, if fell'd too late, when the Sap begins to be proud, to be very ſubject to Worms; whereas, about Mid-Winter, it neither caſts, riſts, nor twines.

It were happy, therefore, if a Method of Tanning without Bark could be invented, that Trees being fell'd more early, the *Timber* might be the better ſeaſon'd.

The Ancients had a great Regard to the Age of the Moon in the felling their *Timber*: If their Rules avail ought, they are theſe: Fell *Timber* in the Wain, or four Days after new Moon: Some ſay, let it be the laſt Quarter. *Pliny* orders it to be in the very Article of the Change; which happening in the laſt Day of the Winter Solſtice, the *Timber*, ſays he, will be immortal. *Columella* ſays, from the 20th to the 28th Day. *Cato*, four Days after the Fall. *Vegetius*, from the 15th to the 25th for Ship *Timber*; but never in the Increaſe, Trees then abounding with Moiſture, the only Source of Putrifaction.

Some even have a Regard to the Temper and Time of the Day; the Wind to be low, neither Eaſt nor Weſt; neither in froſty, wet, nor dewy Weather; and therefore never in the Forenoon.

Laſtly, ſome Regard is had to the Species: Fir is beſt fell'd when it begins to ſpring; both as it then quits its Coat beſt, and as the Wood, according to *Theophraſtus*, is by that Means render'd wonderfully durable in Water. Elm, ſays Mr. *Worlidge*, is to be fell'd between *November* and *January*; in which Caſe it will be all Heart; at leaſt, the Sap will be very inconſiderable: This, he adds, is the only Seaſon for felling Aſh.

Some Authors add further, that in felling *Timber*, Care is to be taken only to cut it into the Pith, and ſo to let it ſtand till dry; by which Means the Moiſture is evacuated in Drops, which would otherwiſe occaſion Putrifaction.

Seaſoning of TIMBER.

After felling, and ſawing it, ſome adviſe it to be laid up very dry, in an airy Place, yet out of the Wind and Sun, at leaſt free from any Extremities of either; And that it mayn't decay, but dry evenly, they order it to be daub'd over with Cows Dung.

'Tis not to ſtand upright, but to lie all along, one Piece over another, only kept apart by ſhort Blocks interpos'd, to prevent a certain Mouldineſs, which they are apt to contract in Sweating on one another; from which frequently ariſes a kind of Fungus, eſpecially if there be any ſappy Parts remaining.

Others adviſe Boards, Planks, *&c.* to be laid in ſome Pool, or running Stream for a few Days, to extract the Sap from them, and afterwards to dry them in the Sun or Air. By this means, 'tis ſaid, they will be prevented from either chapping, caſting, or cleaving; but againſt ſhrinking there is no Remedy. Mr. *Evelyn* particularly recommends this Method for Fir.

Others again, are for burying them in the Earth; others in Wheat; and others for ſcorching and ſeaſoning them in Fire, eſpecially Piles, Poſts, *&c.* that are to ſtand either in Water or Earth.

Sir *Hugh Platt* informs us, that the *Venetians* burn and ſcorch their *Timber* in the flaming Fire, continually turning it round with an Engine, till it has got a hard, black, cruſty Coal upon it.

Preſerving of TIMBER.

When Boards, *&c.* are dry'd, ſeaſon'd, and fix'd in their Places, Care is to be taken to defend and preſerve them; to which the ſmearing them with Linſeed Oil, Tar, or the like Oleaginous Matter, contributes much.

The *Dutch* preſerve their Gates, Portcullices, Draw-Bridges, Sluices, *&c.* by coating them over with a Mixture of Pitch and Tar, whereon they ſtrew ſmall Pieces of Cockle and other Shells, beaten almoſt to Powder, and mix'd with Sea Sands; which incruſts and arms it wonderfully againſt all Aſſaults of Wind and Weather.

Timber fell'd before the Sap is perfectly at reſt, is very ſubject to the Worms; to prevent, or cure which, Mr. *Evelyn* gives us the following Secret, as moſt approv'd. Put common Sulphur in a Cucurbit, with as much Aqua-fortis, as will cover it three Fingers deep; diſtil it to a Dryneſs, which is perform'd by two or three Rectifications.

Lay

Lay the Sulphur remaining at Bottom on a Marble, or in a Glaſs; and with the Oil it diſſolves into, anoint the *Timber*. This, he adds, not only infallibly prevents or cures the Wormineſs; but preſerves all Kinds of Woods, and even many other Things, as Ropes, Nets, and Maſts from Putrifaction, either in Air, Water, Snow, *&c.*

For ſuch as would go a ſhorter Way to work, two or three Anointings with Linſeed Oil may do very well. As to Poſts, *&c.* that are to ſtand in the Ground, the burning the Outſides to a Coal is a great Preſervative.

As to the Chops or Cleſts green *Timber* is liable to after working, a very great Eye-ſore in many fine Buildings, they are clos'd by anointing, ſuppling, and ſoaking it with the Fat of powder'd Beef-Broth, twice or thrice repeated. Some Carpenters uſe Greaſe and Saw Duſt mingled for the ſame Purpoſe. But the former Method is excellent, only it is not to be us'd while the *Timber* is green.

TIMBER-*Trees*, the Wood of *Timber*, e'er yet fell'd; particularly that of Oak, *&c.* See TIMBER and TREE.

For the *Raiſing*, *Planting*, *Tranſplanting*, *Pruning*, &c. of *Timber-Trees*. See SEMINARY, PRUNING, TRANSPLANTING, *&c.*

TIMBER *Meaſure*. *Timber* is uſually meaſur'd and eſtimated by the *Load* or *Tun*; which is a ſolid Meaſure containing 40 Feet of round *Timber*, or 50 of hewn *Timber*. The Denomination of *Load*, *&c.* we ſuppoſe ariſes hence, that 40 or 50 ſolid Feet of ſuch *Timber* weighs about a Tun, *i. e.* 20 hundred Weight, which is uſually accounted a Cart Load.

I°. *For the Meaſuring of round Timber*; the Practice is to gird the Tree about, in the Middle of the Length, and folding the Line twice, to take one Length or Quarter of the whole, and account that for the true Side of the Square: Then, for the Length, 'tis counted from the But-end of the Tree, ſo far up as the Tree will hold *half a Foot Girt*, as they call it; *i. e.* ſo long as the Line, twice folded, is half a Foot.

The Dimenſions thus taken, the Quantity of *Timber* is had, either by multiplying the Side of the Square into itſelf, and that Product by the Length; by the Method of Croſs-Multiplication. See CROSS-MULTIPLICATION.

Or, more eaſily, and ſpeedily on *Gunter*'s Line, by extending the Compaſſes from 12, to the Side of the Square in Inches; for that Extent turn'd twice (the ſame Way) from the Length in Feet, will reach to the Content in Feet. See GUNTER's *Scale*.

Or, better ſtill, on *Coggeſhall*'s Sliding Rule, by ſetting 12 on the Girt Line D, to the Length in Feet on the Line C. Then againſt the Side of the Square, on the Girt Line D, taken in Inches, you have on the Line C the Content of the *Timber* in Feet. See *Coggeſhall*'s SLIDING *Rule*.

Note, 1°. This Method of meaſuring round *Timber*, tho' common, is yet erroneous; and the Content found hereby, 'tis demonſtrated, is leſs than the true Content or Meaſure in the Ratio of 11 to 14. How to avoid this Error, and meaſure it juſtly, we have ſhewn under the Uſe of *Coggeſhall*'s *Sliding Rule*.

2°. If the Tree have any great Boughs that are *Timber*, as the Phraſe is, *i. e.* which will hold Foot girt, they are commonly meaſur'd, and added to the reſt: The Solidity of the whole being thus found, they divide it by 40, which brings it into Loads.

3°. In meaſuring round *Timber* for Sale, they uſually caſt away an Inch out of the Square for the Bark, if Oak; ſo that a Tree 10 Inches ſquare, they only account as if 9; but for Aſh, Elm, Beach, *&c.* an Inch is too much.

II°. *For the Meaſuring hewn* or *ſquared Timber*; the Practice is, to find the Middle of the Length of the Tree, and there to meaſure its Breadth, by clapping two Rules, or other ſtraight Things, to the Sides of the Tree, and meaſuring the Diſtance between them: In the like Manner they meaſure the Breadth the other Way. If the two be found unequal, they add them together, and take half the Sum for the true Side of the Square.

The Dimenſions thus taken, the Content is found either by Croſs-Multiplication, *Gunter*'s Scale, or the Sliding Rule, after the Manner already directed.

The Content divided by 50, gives the Number of Loads. Note, If the *Timber* be unequally ſided, this Method of meaſuring it is erroneous; always giving the Content more than the Truth, and the more ſo, as the Difference of the Sides is greater; yet Cuſtom has authoriz'd it.

To meaſure ſuch *Timber* juſtly, a mean Proportional ſhould be found between the unequal Sides; and this Mean be accounted the Side of the Square.

For the meaſuring of Taper Timber, &c. *Timber* of other Forms, as *Cubes*, *Priſms*, *Pyramids*, &c.; See the Methods under the Article SLIDING *Rule*.

TIMBER *of Skins*, is forty Skins. *Hæc Civitas (ſc. Ceſtriæ) tunc reddebat de forma* 45 *Libras & tres* Timbres *pellium Martenarum* IL. Edw. Conf.

TIMBER, in Falconry. To *timber*, is to neſtle, or make a Neſt, as Birds of Prey do. See NEST.

TIMBERS *of Ermine*, in Heraldry, are the Ranks or Rows of Ermine in Noblemens Coats. See ERMINE.

TIMBRE, or TIMMER, in Heraldry, the Creſt of an Armoury; or whatever is placed a-top of the Eſcutcheon, to diſtinguiſh the Degree of Nobility, either Eccleſiaſtic or Secular. See CREST.

Such is the Papal Tiara, Cardinals Hat, the Croſs, Mitre, Coronet, Mortier; and particularly the Casks or Helmets, which the Ancients call'd more eſpecially *Timbres*, from their reſembling a kind of Bell without a Clapper, which the *French* call *Timbres*; or becauſe they re-ſounded like thoſe *Timbres* when ſtruck. This is the Opinion of *Loiſeau*, who derives the Word from the *Latin*, *Tintinnabulum*. See CASK.

TIME, a Succeſſion of Phænomena in the Univerſe; or a Mode of Duration, mark'd by certain Periods and Meaſures; chiefly by the Motion and Revolution of the Sun. See MODE and DURATION.

The Idea of *Time* in the General, Mr. *Lock* obſerves, we acquire by conſidering any Part of infinite Duration, as ſet out by periodical Meaſures: The Idea of any particular *Time* or Length of Duration, as a Day, an Hour, *&c.* we acquire firſt by obſerving certain Appearances at regular, and, ſeemingly, equi-diſtant Periods.

Now, by being able to repeat thoſe Lengths or Meaſures of *Time* as often as we will, we can imagine Duration, where nothing really endures or exiſts; and thus we imagine to *Morrow*, *next Year*, *&c.*

Some of the later School Philoſophers define *Time* to be the Duration of a Thing, whoſe Exiſtence is neither without Beginning nor End; by which, *Time* is diſtinguiſh'd from *Eternity*. See ETERNITY.

Ariſtotle and the Peripateticks, define it *Numerus motus ſecundum prius & poſterius*; or a Multitude of tranſient Parts of Motion, ſucceeding each other, in a continual Flux, in the relation of Priority and Poſteriority.

Hence it ſhould follow, that *Time* is Motion itſelf, or at leaſt the Duration of Motion, conſider'd as having ſeveral Parts, ſome whereof are continually ſucceeding to others: But on this Principle, *Time*, or temporal Duration, would not agree to Bodies at reſt, which yet no Body will deny to exiſt in *Time*, or to endure for a *Time*.

To evade this Inconvenience, the *Epicureans* and *Corpuſcularians* made *Time* to be a ſort of Flux, different from Motion, conſiſting of infinite Parts, continually and immediately ſucceeding each other, and this from Eternity to Eternity; but others directly explode this Notion, as eſtabliſhing an Eternal Being, independant of God. For how ſhould there be a Flux, before any thing exiſted to flow? And what ſhould that Flux be, a Subſtance or an Accident?

Time may be diſtinguiſh'd like Place, into *Abſolute* and *Relative*. See PLACE.

Abſolute TIME, is *Time* conſider'd in itſelf, and without any relation to Bodies or their Motions. This flows equally, *i. e.* never proceeds either faſter or ſlower; but glides on in a conſtant, equable Tenor.

Relative or *Apparent* TIME, is the ſenſible Meaſure of any Duration, by means of Motion. For ſince that equable Flux of *Time* does not affect our Senſes, nor is any way immediately cognizable thereby; there is a Neceſſity for calling in the Help of ſome nearly equable Motion to be a ſenſible Meaſure, whereby we may determine its Quantity, by the Correſpondency of the Parts of this, with thoſe of that.

Hence, as we judge thoſe *Times* to be equal, which paſs while a moving Body, proceeding with an equable Velocity, paſſes over equal Spaces; ſo we judge thoſe *Times* to be equal, which flow while the Sun, Moon and other Luminaries perform their Revolutions, which, to our Senſes, are equal.

But ſince the Flux of *Time* cannot be accelerated, nor retarded; whereas all Bodies move ſometimes faſter and ſlower, and there is, perhaps, no perfectly equable Motion in all Nature: It appears hence to follow, that abſolute *Time* ſhould be ſomething truly and really diſtinct from Motion. For let us ſuppoſe the Heavens and Stars to have remained without Motion from the very Creation; does it hence follow, that the Courſe of *Time* would have been at a Stand? Or, rather, would not the Duration of that Quieſcent State be equal to the very *Time* now elapſed?

Since abſolute *Time* is a Quantity uniformly extended, and in its own Nature moſt ſimple; it hence comes to be repreſented by Mathematicians, to the Imagination, under the moſt ſimple, ſenſible Magnitudes, and particularly right Lines and Circles, with which it bears a near Analogy, in reſpect of Geneſis, Similarity, *&c.*

'Tis not, indeed, neceſſary, that *Time* ſhould be meaſured by Motion; any conſtant periodical Appearance in ſeemingly equidiſtant Spaces, as the freezing of Water, the blowing of a Plant, *&c.* returning at ſet Periods, might do as well. In effect, Mr. *Lock* mentions an *American* People, who count their

their Years by the coming and going away of Birds. See PERIODS.

Some Authors diſtinguiſh *Time* into *Aſtronomical* and *Civil*.

Aſtronomical Time, is that taken purely from the Motion of the heavenly Bodies, without any other regards.

Civil Time, is the former *Time* accommodated to Civil Uſes; and form'd and diſtinguiſh'd into *Years*, *Months*, *Days*, *&c.* See DAY, MONTH, WEEK, YEAR, *&c.*

In this Senſe, *Time* is the Subject of Chronology. See CHRONOLOGY.

TIME, in Muſic, is an Affection of Sound, whereby we denominate it *long* or *ſhort*, with regard to its Continuity in the ſame Degree of Tune. See SOUND.

Time and Tune are the great Properties of Sound, on whoſe Difference, or Proportions, Muſic depends: Each has has its ſeveral Charms; where the Time, or Duration of the Notes is equal, the Differences of Tune alone are capable to entertain us with endleſs Pleaſure. See TUNE.

And of the Power of *Time* alone, *i. e.* of the Pleaſures ariſing from the various Meaſures of long and ſhort, ſwift and ſlow; we have an Inſtance in the Drum, which has no Difference of Notes, as to Tune. See DRUM, ACCENT, *&c.*

Time, in Muſic, is conſider'd, either with reſpect to the abſolute Duration of the Notes, *i. e.* the Duration conſider'd in every Note by itſelf, and meaſured by ſome external Motion foreign to the Muſic; in reſpect to which, the Compoſition is ſaid to be *quick*, or *ſlow*: or it is conſider'd, with reſpect to the relative Quantity or Proportion of the Notes compared with one another. See NOTE.

The Signs or Characters by which the Time of Notes is repreſented, are ſhewn under the Article, CHARACTERS *in Muſic*; where the Names, Proportions, *&c.* are alſo expreſs'd.

A Semi-breve, for Inſtance, is mark'd to be equal to two Minims, a Minim to two Crotchets, a Crotchet to two Quavers, ſo on, and ſtill in a duplicate *Ratio*, *i.e.* in the *Ratio* of 2 : 1. Now, where the Notes reſpect each other, thus, *i. e.* where they are in this *Ratio*; the Muſic is ſaid to be in *Duple*, i. e. *double* or *common Time*.

When the ſeveral Notes are Triple each other, or in the *Ratio* 3 : 1; that is, when the Semi-breve is equal to three Minims, the Minim to three Crotchets, *&c.* the Muſic is ſaid to be *triple Time*.

Now, to render this Part as ſimple as poſſible, the Proportions already ſtated among the Notes, are fix'd and invariable; and to expreſs the Proportion of 3 : 1, a Point (.) is added on the right Side any Note, which is deem'd equivalent to Half of it; and by this means a pointed Semi-breve O· becomes equal to three Minims, *&c.* ſo of the reſt.

From hence ariſe ſeveral other *Ratios* conſtituting new Kinds of triple Time; as 2 : 3 and 3 : 4, *&c.* but theſe Mr. *Malcolm* obſerves, are of no real Service, and are not perceived without a painful Attention. For the Proportions of the Times of Notes, to afford us Pleaſure, muſt be ſuch as are not difficultly perceived; on which account, the only *Ratios* fit for Muſic, beſides that of Equality, are the *Double* and *Triple*.

Common or duple TIME, is of two Species; the Firſt, when every Meaſure is equal to a Semi-breve, or its Value in any Combination of Notes of a leſſer Quantity.

The Second, where every Bar is equal to a Minim, or its Value in leſſer Notes. The Movements of this Kind of Meaſure are various; but there are Three common Diſtinctions; the firſt *ſlow*, ſignify'd at the beginning by the Mark C; the ſecond *brisk*, ſignify'd by ₵; the third *very quick*, ſignify'd by D.

But what that ſlow, brisk and quick is, is very uncertain, and only to be learnt by Practice. The neareſt Meaſure we know of, is to make a Quaver the Length of the Pulſe of a good Watch; then, a Crotchet will be equal to two Pulſes, a Minim to four, and the whole Meaſure or Semi-breve to eight. This may be reputed the Meaſure of *brisk Time*; for the *ſlow*, 'tis as long again, and the *quick*, only half as long.

The whole Meaſure, then, of common *Time*, is equal to a Semi-breve or a Minim: But theſe are variouſly ſub-divided into Notes of leſs Quantities. See MEASURE.

Now to keep the *Time* equal, we make uſe of a Motion of the Hand or Foot, thus: Knowing the true *Time* of a Crotchet, we ſhall ſuppoſe the Meaſure or Bar actually ſubdivided into four Crotchets for the firſt Species of common *Time*; then the Half Meaſure will be two Crotchets; therefore, the Hand or Foot being up, if we put it down with the very beginning of the firſt Note or Crotchet, and then raiſed with the Third; and then down to begin the next Meaſure: this is call'd *beating of Time*.

By Practice, we get a Habit of making this Motion very equal, and conſequently of dividing the Meaſure or Bar into equal Parts, up and down; as alſo of taking all the Notes in the juſt Proportion, ſo as to begin and end them preciſely with the beating. In the Meaſure of two Crotchets, we beat down the firſt, and the ſecond up. Some call each Half of the Meaſure in common *Time*, *a Time*; and ſo they call this the Mode or Meaſure of *two Times*, or the *Dupla* Meaſure.

Again, ſome mark the Meaſure of two Crotchets with a 2 or $\frac{2}{4}$, ſignifying it to be equal to two Notes, whereof four make a Semi-breve; and ſome mark it $\frac{4}{8}$ for Quavers.

For Triple TIME; ſee TRIPLE *Time*.

TIME *in Fencing*, There are three Kinds of *Time*; that of the Sword; that of the Foot, and that of the whole Body. All the *Times* that are perceived out of their Meaſure, are only to be conſider'd as Appeals or Feints, to deceive and amuſe the Enemy.

TIME *in Grammar*	See	TENSE.

TIME-*Keeper*, or TIME-*Meaſure*. See CHRONOMETER.

TIN, a whitiſh Metal, ſofter than Silver, yet much harder than Lead. See METAL.

The Chymiſts, *&c.* hold *Tin* an imperfect Metal, generated of two different Seeds, *viz.* that of Silver and that of Lead; which renders it a kind of Compound of both; and accordingly it is frequently found in Lead and Silver Mines.

Tin, however, has alſo its proper Mines, of which our Counties of *Cornwal* and *Devonſhire* are an abundant Evidence: The greateſt Part of the *Tin* conſumed in *Europe*, is procured from thence; and *Cambden* even ſuppoſes this Abundance of *Tin* in thoſe two Provinces, to have given the original Denomination *Britain* to the whole Country. In the *Syrian* and *Chaldee*, *Tin* is call'd *Bragmanac*; the Primitive whereof is *Bratman* or *Britman*, whence *Britain*.

The principal Characters or Properties of *Tin*, enumerated by *Boerhaave*, are, That it is the lighteſt of all Metals; very little ductile or elaſtic; the moſt fuſible and volatile of all Metals; ſcarce diſſoluble by Acids, unleſs the weaker Sorts; and eaſily and intimately miſcible with other Metals, the Ductility whereof becomes diminiſh'd by ſuch Mixture.

The ſame Author concludes, that Sulphur is a prevailing Ingredient in *Tin*, and deduces ſeveral of its particular Properties therefrom. He adds, that could the Metal be perfectly purged of this heterogeneous Sulphur, 'tis probable it would be found no other than Silver.

Several Authors had before noted a great Conformity, in divers Particulars, between the two Metals; as, that both grow bitter when diſſolved by Acids; that when fuſed together, there is ſcarce any ſeparating them again, not even by Lead. Add, that Mr. *Boyle* and others, give us ſeveral Inſtances of Silver being actually procured in conſiderable Quantity from *Tin* Ore. See SILVER.

Yet ſome Naturaliſts judge the Analogy greater between *Tin* and Lead; and contend that *Tin* is only Lead, under a leſs Degree of Coction; but if there be ſome Marks of Agreement between them, there are as many of Diſagreement. The Calx of Lead, for inſtance, eaſily fuſes and vitrifies, but that of *Tin* not without the laſt Difficulty: If *Tin* and Lead be mix'd by a vehement Fire, a vehement Colluctation enſues, and they both run into a Calx: Add, that *Tin* is eaſily revivified; but Lead with great Labour. See LEAD.

The Method of getting, preparing, *&c.* the *Tin* in the *Corniſh* Mines, much the beſt and moſt conſiderable in the World; is given us in the *Philoſophical Tranſactions*.

The working of the *Tin*-Mines is very hard and difficult; not only by reaſon of the great Depth which the Veins deſcend to, even as low as 50 Fathom; but alſo becauſe the Rocks, through which Paſſages are frequently to be cut, are often ſo hard, that the Workman can't dig a Foot in a Week. Nor is the ſoft, ſhaking Earth found in the *Tin*-Mines, much leſs inconvenient to the Workmen; both by reaſon of fœtid, malignant Vapours it exhales, and of the Currents of Water often met withal therein: all theſe Diſadvantages together render it impracticable for the Workmen to hold it above four Hours together.

The mineral Stones or Glebe being dug and drawn out of the Mine, is there broke into Pieces with large Iron Mallets; then brought to a Stamping Mill, where 'tis ſtill pounded ſmaller with Stampers, much like thoſe of Paper Mills; and the Water paſſing through it waſhes away the earthy Parts, leaving the Metallic ones behind: The Lotion is repeated twice, to make the better Separation.

This done, they dry it in a Furnace on Iron Plates; and grind it very fine in a Craſing Mill; then waſh it again; then dry it: In this State, the metallic Matter is call'd *Block*, or *Black Tin*.

To convert it into *Tin*, *i. e.* into *white Tin*, they carry it to a Furnace or blowing Houſe; where, by means of a Charcoal Fire, kept up by huge Bellows work'd with the Water, it is melted; after it has paſs'd all theſe Preparations, and is become cold, they forge it; which is the laſt Thing done to it in the Works.

The

The Droſs or Scoria ſcumm'd off the *Tin* in Fuſion, being melted down with freſh Ore, runs into Metal; and even the Cauſalty, *i. e.* the Matter waſh'd and ſeparated from the Metal in the Mill, being thrown up in Heaps, after reſting Six or Seven Years, they fetch it over again, and it yields as good *Tin* as any of that of *Germany*.

The Workmen diſtinguiſh ſeveral Kinds of *Tin*; as *Moor-Tin*, which is the beſt Sort, a Fool whereof, weighs 80 Pounds; and *Mine-Tin*, which is the next, a Fool thereof weighing about 52 or 50 Pounds. The *Tin* got from the ſoft, gravelly Earth, they call *Pryan Tin*, to diſtinguiſh it from that got from the Stones, which is better by almoſt Half.

Two Pounds of *black Tin*, when melted, yield about one of *White*.

There is a Curioſity in theſe *Corniſh* Mines, which the Lover of Natural Hiſtory will be pleas'd to hear; and 'tis this: That in digging, at the Depth of 40 or 50 Fathoms, they frequently meet with large Trees, ſtill entire. See SUBTERRANEOUS.

Childrey, in his Natural Hiſtory, goes back as far as the Deluge to place them there; but without having recourſe to ſo great Antiquity, they who believe that the Mines, when exhauſted of their Ore or Mineral Matter, renew and fill again in courſe of Time, will ſoon ſolve the Difficulty, by ſuppoſing, that in the firſt Working of theſe Mines, theſe Trees had been let down to ſerve as Props and Pillars. See DELUGE.

But there are other People will think this Renewal of the Mines itſelf a Difficulty as great as the former. However, what the former Author adds, *viz.* that in ſome Places in the Mines, they likewiſe find Pick-axes, *&c.* with wooden Shafts, as alſo braſs Nails, and even a Medal of *Domitian*, ſeems to countenance the Opinion. See MINE.

The Chymiſts call *Tin*, *Jupiter*: But from what Analogy between the Metal and the Planet, we leave them to explain. See JUPITER.

By the Analyſes made of this Metal, they hold it compounded of Earth, Sulphur, a metallic Salt, and Mercury.

The chief chymical Preparations from *Tin*, are Salt of *Tin*, Flower of *Tin*, and Diaphoretic of *Tin*.

Salt of TIN, or of *Jupiter*, is *Tin* calcined; and diſtill'd Vinegar pour'd thereon; from which, by means of Fire, and then of a cool Place wherein 'tis put, a very white Salt is drawn. See SALT.

Flower of TIN, is a kind of white Coſmetic, or Paint, for the Complexion; drawn with Sal Ammoniac, by means of Sublimation. See FLOWER.

Diaphoretic of TIN, is fine *Tin*, and Regulus of Antimony melted, firſt together, and then both with Salt-petre. Whence, after various Lotions, is drawn a Powder, held to be ſoveraign againſt various Diſeaſes.

Ceruſs of TIN, is a white Powder, procured from *Tin*, whereof a Fucus is made, call'd *Spaniſh White*.

This *Ceruſs* is not made with Vinegar, as that of Lead is; but with the Urine of a young Perſon: The Powder is alſo uſed to colour *Delft* Ware.

Calx of TIN, is what we properly call *Bezoardicum Joviale*. See BEZOARDICUM.

TIN *of Glaſs*, is what we properly call *Biſmuth*. See BISMUTH.

For the uſe of Tin in the Compoſition of Pewter; ſee PEWTER.

Method of Aſſaying TIN.

To find whether *Tin* be ſoft and ductile, or harſh and brittle; there are two Kinds of Aſſays; the Firſt, is by putting the *Tin* in a hot, braſs Mould, and there melting it. If the Metal be harſh, it will be taken out heavier than before; otherwiſe it will be lighter. The Second, is by caſting the melted *Tin* into a little Mould, made of the Thunder-ſtone. This Mould has a little Canal of moderate Length, which conducts the Matter into a Cavity, capable of containing half a Billiard Ball: If the *Tin* be harſh, it appears whitiſh towards the Entry of the Mould, otherwiſe 'tis tinged ſuperficially with a very faint, bluiſh Brown.

TINCTURE or *Eſſence*, in Pharmacy and Chymiſtry, a Separation of the finer and more volatile Parts of a mixt Body, made by means of a proper Menſtruum diſſolving the ſame. See MENSTRUUM and DISSOLUTION.

TINCTURE is particularly applied to the Extraction, or Separation of a Colour from a mixt, and the Impreſſion it makes in a Liquor, or Menſtruum which takes away a Part of its pureſt Subſtance, and by that means becomes a ſharer in its Colour, Virtues, *&c.*

Thus in Pharmacy, we have Cephalic *Tinctures*, Antiſcorbutic *Tinctures*, Stomachic *Tinctures*, Anticholic *Tinctures*, Invigorating *Tinctures*, *&c.*

Tinctures are drawn from Roſes, from Corals, *&c.* See EXTRACTION.

To make a *Tincture*, the Matter is uſually bruiſed, put in a Matraſs, and the Menſtruum, which commonly is Spirit of Wine, poured on it, to the Height of two or three Fingers above it. Then the Glaſs is cloſed, and ſet for Digeſtion, in a Sand Heat during four or five Hours, till the Spirit is well impregnated, and has received a high Colour. See DIGESTION.

Thus are *Tinctures* of odoriferous Vegetables, as Cinnamon, *&c.* drawn; and the ſame Menſtruum ſerves for thoſe of Metals and Minerals.

The *Tinctures* of Metals, ſo much talk'd of by the Chymiſts and Alchymiſts, are not proper *Tinctures*; they are only Diſſolutions, wherein the Metal is divided and attenuated to a greater Degree, than it is in its natural and ordinary Diſſolvent.

If the *Tincture* were irreductible; that is, if the Metal were diſſolv'd to ſuch a Degree, as that it could not be brought back again into Metal; or, which comes to the ſame, if the Principles which compoſe it were diſunited, it would be what the Chymiſts have ſo long and ſo earneſtly wiſh'd for, and ſought with ſuch infinite Pains, eſpecially with regard to Gold; the *Irreductible Tincture* whereof, is what ſhould be call'd *Aurum Potabile*. See GOLD.

But no ſuch *Tincture* has ever yet been diſcover'd: The Potable Gold in uſe among us, being only Gold extreamly divided; and the Caſe is the ſame with the *Tinctures* of other Metals. See METAL and MINERAL.

The Intention of metalline *Tinctures*, is to rarify and extend the Sulphur of the Metal as much as poſſible; and ſo render the fix'd and earthy Parts, as ſubtle and volatile as may be: If they are deſigned to be of Uſe in Medicine, ſome harmleſs and agreeable Intermedium is to be uſed. See STEEL.

The Alchymiſts give the Name of *Grand Mineral Tincture* to the Philoſophers Stone; from an Opinion, that all which is required to that Operation, is to give the Colour or *Tincture* of Gold to fix'd Mercury. See PHILOSOPHERS *Stone*.

Marble, Alabaſter and Bones, receive *Tinctures* from Lixiviums, and ſharp Juices; and Mr. *Boyle* thinks there is reaſon to hope the ſame may be done of precious Stones; Rock Cryſtal, 'tis certain, is tinged by Subterraneous Juices; ſo is Saphyr itſelf. See STONE.

In the Memoirs of the *French* Academy, mention is made of certain Liquors, *e. gr.* Salts drawn from Wheat, which will extract *Tinctures*, even out of ſome precious Stones. 'Tis added, they are the more capable of producing this Effect, as they give a greater Degree of Redneſs to the Solution of Vitriol.

TINCTURE is alſo applied by the Heralds, to the Colours in an Eſcutcheon, or Coat of Arms; under which may be likewiſe reduced the two Metals, *Or* and *Argent*, becauſe often repreſented by Yellow and White. See COLOUR and METAL.

TINEA, in Medicine, a Diſeaſe call'd by the *Arabic* Writers *Sahafati*, and in *Engliſh* uſually a *ſcall'd Head*.

The *Tinea* is a Diſeaſe of the Leprous Kind: Authors uſually reckon three Species of it, *viz.* a *dry*, *moiſt*, and *lupinous*; which, in reality, are only ſo many Degrees of the ſame Diſeaſe. See LEPRA.

Turner defines it an Ulcer ariſing in the Heads of Children, from a vicious, corroſive, or ſaline Humour, which preying on the Cutaneous Glands, in Time deſtroys their Texture.

In the firſt Stage it is cover'd with white, dry, ſcurfy, or ſquammous Matter: In the ſecond the ſubjacent Fleſh appears granulated: And in the third it is ulcerous.

It has its Name *Tinea*, Moth, from the Similitude of the Holes eat by that Inſect on Paper, *&c.*

The internal Remedies proper for the *Tinea*, are Mercurials, proper Cathartics, and Dietetics, or Edulcorants; and ſometimes a Salivation, eſpecially by Unction, has been efficacious, after all other Methods have prov'd vain. The Externals are Fomentations made of Roots of *Oxylapathum*, *Birthwort*, *Horſe-Radiſh*, *Wormwood*, *&c.* boil'd in Water and ſtrain'd; to which are added, Spirits of Wine camphorated, *&c.* *Liniments* of Hogs Lard, white Precipitate Mercurial Ointments, with powder'd Brimſtone; and ſometimes Powder of *Roman* and white Vitriol, red Precipitate, *&c.*

TIN-*Glaſs*, a mineral Matter, white, ſmooth, and, as to Appearance, reſembling *Tin*; but hard, ſharp, brittle, and diſpos'd into ſhining Scales, as it were Pieces of Glaſs, whence its Name. See MINERAL.

Tin-Glaſs is the ſame with what we otherwiſe call *Biſmuth*. See BISMUTH.

TINNING, the covering or lining any thing with melted *Tin*, or with *Tin* reduc'd to a very fine Leaf.

Looking Glaſſes are foliated or *tinn'd* with thin Tables of beaten *Tin*, the whole Bigneſs of the Glaſs; apply'd and faſten'd thereto by means of Quickſilver. See FOLIATING and LOOKING-*Glaſs*.

Kettles, Saucepans, and other Kitchen Utenſils, are *tinn'd* with melted *Tin*; and Locks, Bits, Spurs, *&c.* with Leaf *Tin* by Help of Fire.

The Plumbers uſe to *tin* or whiten their Sheets of Lead; in order to which they have a *tinning Furnace*, fill'd with

live Coal, at the two Sides whereof two Men are plac'd, who hold up the Sheets over the Fire to heat; and the *Tin*-leaves being laid over them, as faſt as the Sheets grow hot, and the *Tin* melts, they fix it on by rubbing and ſtretching it with Tow and Roſin. See PLUMBERY.

TINNITUS *Auris*, *Tingling of the Ear*, a Diſeaſe pretty frequent in the Ear, conſiſting in the Perception of a Sound which is not, or, at leaſt, which is not external.

This Perception is occaſion'd by the beating of an Artery in the Ear, by an Inflammation, or Abſceſs of the Tympanum or Labyrinth, by the Admiſſion of foreign Bodies, by Commotions of the Cranium, Blows on the Ear, *&c.* Extraordinary and irregular Motions of the Animal Spirits are alſo found to occaſion the *Tinnitus*, as we find in Deliriums, Phrenſies, Vertigos, *&c.* The Tingling of the Ear is one of the Diagnoſtic Signs of the Plague.

TIP-*ſtaves*, or *Baſtons*, are the Wardens of the *Fleet*'s Officers, attending the King's Courts, with a painted Staff, for the taking into Cuſtody ſuch Perſons as are committed by the Court; and to attend ſuch Priſoners as go at large by Licence. See BASTON.

By this Name alſo are the Judges Officers call'd, who carry a Rod, or Staff, *tip'd* with Silver, and take Charge of ſuch Priſoners, as are either committed or turn'd over at the Judge's Chambers. See VERGE.

TIRE, or, as the Seamen pronounce it, TEER, *of Guns*, is a Rank of Guns plac'd along upon a Ship's Side, either above upon Deck, or below; the former of which are call'd the *upper Tire*, the latter the *lower Tire*. See SHIP.

TITANS, in the ancient Mythology, the Sons of *Uranius*, or *Cœlus*, and *Veſta*, *i. e.* of *Heaven* and *Earth*, according to *Heſiod* and *Apollodorus*; or, which comes to the ſame Thing, of *Æther* and *Earth*, according to *Hyginus*.

Apollodorus reckons five *Titans*, *Oceanus*, *Cœus*, *Hyperion*, *Crius*, and *Japetus*; all elder Brothers of *Saturn*: *Hyginus* reckons ſix, all, except *Hyperion*, different from the former; their Names, *Briareus*, *Gyges*, *Steropes*, *Atlas*, *Hyperion*, and *Ptolus*; but he ſeems to include the hundred-handed Giants in the Number, which *Apollodorus*, and the Generality of Mythologiſts, diſtinguiſh from the *Titans*.

Cœlus, by the ſame Wife, *Veſta*, had *Briareus*, *Gyges*, and *Cottus*, the hundred-handed Giants, and had chain'd them up in *Tartarus*: *Veſta*, the Earth, their Mother, reſenting this Treatment, rais'd the *Titans* againſt their Father, her Huſband: All, excepting *Oceanus*, made War upon him, and dethron'd him, ſetting up *Saturn* in his Place.

Saturn, it ſeems, prov'd no more favourable to them than his Father; but continu'd the Giants in their Priſon.

Upon this, *Jupiter* revolted againſt *Saturn*; ſerving him as he had done *Cœlus*; and reſcu'd the three Giants; who afterwards prov'd of great Service to him in the War the *Titans* wag'd againſt him.

This War laſted ten Years; but at length the *Titans* were vanquiſh'd; *Jupiter* remain'd in peaceable Poſſeſſion of Heaven, and the *Titans* were bury'd under huge Mountains thrown on their Heads.

Hyginus gives another Origin of the *Titans*: He derives 'em from *Titan*, *Saturn*'s elder Brother, by *Cœlus* and *Veſta*; who, tho' preſumptive Heir of Heaven, yet finding his Father and Mother more inclin'd for *Saturn* than him, ſurrender'd to him his Right of Succeſſion, on Condition he ſhould not bring up any Male Child, that the Empire of Heaven might revert to his own Iſſue the *Titans*.

But *Jupiter*, *Neptune*, and *Pluto* having been afterwards ſav'd by the Artifice of *Ops*; *Titan* and his Sons, the *Titans*, made War on *Saturn*, vanquiſh'd, and impriſon'd him: Thus he continu'd in the Power of his Enemies, till *Jupiter* being grown up, made War on the *Titans*, and deliver'd his Father.

F. *Pezron*, in his Antiquity of the *Celtæ*, makes them the ſame with the *Titans* in Mythology; and their Princes the ſame with the Giants in Scripture: He adds, that the Word *Titan* is perfect *Celtic*, and derives it from *Tit*, Earth, and *Den* or *Ten*, Men: And hence the *Greeks* call them very properly Γηγενεῖς, *q. d. Terrigenæ*, Earth-born.

The Word *Titan* is alſo us'd by the Poets for the Sun; in which Caſe it is likewiſe *Celtic*; only of another Etymology, being form'd from *ti*, Houſe, or Habitation, and *tan*, Fire.

Heſychius obſerves, that the Word *Titan* is likewiſe us'd for *Sodomite*: He adds, further, that 'tis one of the Names of Antichriſt; in which Senſe it muſt be wrote *Teitan* in *Greek*, to contain the Numeral Letters of 666; which in the Apocalypſe xiii. 18. is the Number of the Beaſt.

TITE, or TIGHT: The Seamen ſay a Ship is *tite*, when ſhe is ſo ſtaunch as to let in but very little Water. This is known by the Smell of the Water pump'd out; for if ſhe let in little, it will always ſtink; otherwiſe not.

TITHES, or TYTHS, TENTHS, *Decimæ*, *Dixmes*, the tenth Part of all Fruits, both Prædial, Perſonal, and Mix'd; allotted to the Clergy for their Maintenance. See FRUIT, CLERGY, *&c.*

Of *Tithes* there are three Kinds, *viz.* 1°. *Perſonal Tithes*; which are thoſe due or accruing from the Profits of *Labour*; *Art*, *Trade*, *Navigation*, and *Induſtry* of Man. See PERSONAL.

2°. *Prædial Tithes*, which ariſe either from the Fruits of the Ground; as *Corn*, *Hay*, *Underwood*, *Flax*, *Hemp*, &c. or from the Fruits of Trees; as *Apples*, *Pears*, *Plumbs*, *Cherries*; or from the Fruits of Gardens. See PRÆDIAL.

3°. *Mixt Tithes*, which are ſuch as ariſe from Beaſts, and other Animals fed with the Fruits of the Earth; as *Cheeſe*, *Milk*, *Wooll*, *Lambs*, *Calves*, *Fowls*, &c. See MIXT.

Prædial Tithes, again, are either *great* or *ſmall*: The *great Tithes* are thoſe of Corn, Hay, and Wood; *ſmall Tithes* are thoſe of Flax, *&c.* which are *prædial*; and thoſe of Wooll, Milk, Cheeſe, Lambs, Ferrets, *&c.* which are *mix'd*. See PARSON, RECTOR, VICAR, *&c.*

The Cuſtom of giving or paying *Tithe* is very ancient: In *Gen.* xiv. 2. *Abraham* gives *Abimelech* the Tenth of all the Spoils he had taken from the four Kings he had defeated: In *Gen.* xxviii. 22. *Jacob* makes a Vow at *Bethel*, to give the Tenth of all the Riches he ſhall gather in that Sojourn, to God.

But theſe *Tithes* were free and voluntary; and, beſide, differ'd in divers other Reſpects from what was afterwards call'd *Tithes*: What *Melchiſedech* receiv'd, was only the Tenth of the Spoils, not of *Abraham*'s Poſſeſſions; and this once, not annually; and beſide, not as Maintenance, which *Melchiſedech* wanted not, but as Homage: Add, that this was only from one Prieſt to another; for *Abraham* had not only a Prieſt in his Loins, but was a Prieſt himſelf. ---- And as to *Jacob*, who was alſo a Prieſt, what he did was the Effect of a Vow, voluntarily taken, to offer the Tenth of all he ſhould poſſeſs; not to any other Prieſt, but to God himſelf upon an Altar.

Tithe was firſt legally enjoin'd by *Moſes*, *Exod.* xii. *Lev.* xxvii. 30. *Numb.* xviii. 21. *Deut.* xiv.

That Legiſlator oblig'd the *Iſraelites* to ſeveral Kinds of *Tithes*; as, 1°. The *firſt Tithe*, מעשר הראשן, which was a *Tithe* of all the Fruits, given to the *Levites*: This was not taken till after the Oblation call'd תרומה had been made. See LEVITE.

2°. The *ſecond Tithe* was a tenth Part of the nine remaining after Payment of the firſt *Tithe*. This *Tithe* was ſet apart in each Family; and the Maſter of the Family was oblig'd to carry it to *Jeruſalem*, and to ſpend it there; or, in Caſe he could not, he was to redeem it, or convert it into Money, in which Caſe he was to add a Fifth to it, and carry the Money to *Jeruſalem*. The Rabbins ſay, that if he did not redeem it himſelf, that is, if he did not ſubſtitute his own Money in lieu of it, but ſold it to another, he was only requir'd to carry the bare Price to *Jeruſalem*, without any Addition.

3°. The *Tithe of the Tithe*, was the tenth Part of all the *Tithes* that had been given the *Levites* by the People; for the *Levites*, after they had got all their *Tithes* of the People, divided it into ten Parts; and in their Turn, gave a *Tithe* to the Prieſts.

This *Tithe* the Rabbins call תרומתמעשר, the Oblation of the *Tith*, or מעש דמיזהמעשר, *Tithe of Tithe*, or ים מקר שים מעשר, the *Tithe* of ſanctify'd Things. --- And this the *Levites* were oblig'd to carry to the Temple; the reſt was reſerv'd for their own Subſiſtence.

4°. *The Tithe of the third Year*, was another Kind of *Tithe*, not much different from the ſecond *Tithe*, excepting that it was leſs troubleſome, by Reaſon they were not oblig'd to carry it to *Jeruſalem*. Every ſeventh Year God appointed the Ground ſhould lie and reſt, nor ſhould the Owners even gather the Fruits which it produc'd ſpontaneouſly: That Year, therefore, they paid no *Tithe*, but only the ſix preceding ones. See SABBATH.

Now, every third of theſe ſix Years, *i. e.* on the third, and the ſixth, they rais'd, as uſually, the firſt *Tithe*; and after that a ſecond. --- But this ſecond they did not carry to *Jeruſalem* either in Kind or in Money; but kept it by them to be ſpent by the *Levites*, the Strangers, the Fatherleſs, and the Widows of the Place, *Deut.* xiv. 28, 29.

This was alſo call'd the *Tithe of the Poor*, and the *third Tithe*; and theſe third Years it was paid on, were call'd the *Tithe*-Years.

All theſe *Tithes* amounted to above one Sixth of the Revenue of each Perſon: For if, for Inſtance, a Maſter of a Family reap'd 6000 Meaſures of Wheat, and 100 were firſt taken away for the firſt Fruits or Oblation, he had only 5900 left: From this 5900, taking away the firſt *Tithe*, there remain'd 5310, the Tenth whereof is 531; which being taken, leaves 4779 for the Proprietor; who, conſequently, has given 1121, *viz.* 121 more than a Sixth of the whole.

Of the 590 which the *Levites* receiv'd for the firſt *Tithe*, 59 went to the Prieſt for the *Tithe of Tithes*; ſo that they were left 531 for their own Subſiſtence, and that of their Families.

Theſe

These Matters are all further explain'd in the *Thalmud*, wherein there are two Books of *Tithes*, the Book of Benedictions, ברכות, in the Commentaries of *Bartenora*, *Maimonides*, *R. Schelomoh Jarrhi*, in *Scaliger*, *Amama*, *Selden*, *Friſchmuth*, *Quenſteed*, *Varenius*, *Hottinger*, *Sigonius*, *Cunæus*, *Goodwin*, *Leidekker*, &c.

Under the new Law, 'tis not Jeſus Chriſt that eſtabliſh'd *Tithes*, as 'twas God himſelf did it under the old Law by the Miniſtry of *Moſes*: The Chriſtian Prieſts, and the Miniſters of the Altar of the new Covenant, liv'd, at firſt, wholly of the Alms and Oblations of the Devout. See OBLATIONS, *&c.*

In after Times the Laity gave a certain Portion of their Revenues to the Clergy, but voluntarily, and not out of any Conſtraint or Obligation: The firſt Inſtances we have of it, are in the IVth and Vth Centuries.

This Gift was call'd *Tithe*; not that it was really a tenth Part of their Income, or near ſo much; but only in Imitation of the *Tithes* of the old Law.

In the following Age, the Prelates in their Councils, in Concert with the Princes, made an expreſs Law to the Purpoſe; and oblig'd the Laity to give a full tenth Part of their Revenues, their Fruits, *&c.* to the Eccleſiaſticks.

This the Church enjoy'd without Diſturbance for two or three Centuries; but in the VIIIth Century the Laity got hold of Part of theſe *Tithes*, either by their own Authority, or by Grants and Donations of the Princes; and appropriated them to their own Uſes. See APPROPRIATION.

Some time afterwards they reſtor'd them, or apply'd them to the founding of Monaſteries or Chapters; and the Church conſented, at leaſt tacitely, to this Reſtitution.

In 1179, the third Council of *Lateran*, held under *Alexander* III. commanded the Laymen to reſtore all the *Tithes* they yet held, to the Church.

In 1215, the fourth Council of *Lateran*, held under *Innocent* III. moderated the Matter a little; and, without ſaying any thing of the *Tithes* which the Laity already poſſeſs'd, forbad them to appropriate or take any more for the future.

Fra. Paolo, in his Treatiſe *de materia Beneficiaria*, is of Opinion, that the Cuſtom of paying *Tithes* under the new Law, began in *France*; and affirms, that there are no Inſtances of it before the VIIIth and IXth Centuries: But he muſt be miſtaken; for in the 2d Council of *Matiſcon*, held in 585, 'tis ſaid expreſsly, that the Chriſtians had a long Time kept inviolate that Law of God, whereby *Tithe* of all their Fruits was enjoin'd to be given to holy Places, *&c.*

In effect, *Origen*, *Hom.* XI. on *Numb.* thinks, that the old Laws of *Moſes*, touching the firſt Fruits and *Tithes*, both of Cattle, and of the Fruits of the Earth, are not abrogated by the Goſpel; but ought to be obſerv'd on their ancient footing. The Vth Canon of the Council of *Macon*, orders *Tithe* to be paid to the Miniſters of the Church according to the Law of God, and the immemorial Cuſtom of the Chriſtians, and that upon Penalty of Excommunication; which is the firſt Penalty we find impos'd on ſuch as would not pay *Tithe*.

On theſe Grounds it is that many among the modern Clergy hold their *Tithes* to be *Jure Divino*.

Others, on the contrary, plead, that the Recompence to be given Church Miniſters, is differently ordain'd by God, according to the Differences he has put between his two great Diſpenſations, the Law and the Goſpel: Under the Law he gave them *Tithes*; under the Goſpel, having left all Things in his Church to Charity, and Chriſtian Freedom, he has given them only what ſhall be given them freely, and in Charity: That the Law of *Tithes* is in Force under the Goſpel, all the Proteſtant Divines, except ſome among the *Engliſh*, deny; for tho' Hire to the Labourer be of moral and perpetual Right, yet the ſpecial Kind of Hire, the Tenth, can be of no Right or Neceſſity, but to the ſpecial Labour for which God ordain'd it: That ſpecial Labour was the Levitical and Ceremonial Service of the Tabernacle, *Numb.* xviii. 21, 31. which was aboliſh'd; the Right therefore of the ſpecial Hire muſt be aboliſh'd too.

That *Tithes* were Ceremonial, is evident from their not being given to the *Levites* till they had been firſt offer'd as a Heave Offering to the Lord, *v.* 24, 28.

He, then, who by the Law brings *Tithes* into the Goſpel, brings in likewiſe a Sacrifice and an Altar; without which, *Tithes*, by the Law, were unſanctify'd and polluted, *v.* 32. And therefore were never thought of in the firſt Chriſtian Times, till Ceremonial Altars and Oblations had been brought back.

The *Jews* themſelves, ever ſince their Temple was deſtroy'd, tho' they have Rabbies and Teachers of the Law, yet pay no *Tithes*, as having no proper *Levites* to whom, nor Altar whereupon, to hallow them; which argues, that the *Jews* themſelves never look'd on *Tithes* as Moral, but merely Ceremonial. Add, that *Tithes* were not allow'd to the Prieſts and *Levites* merely for their Labours in the Tabernacle; but in Conſideration of this likewiſe, that they were not allow'd to have any other Part or Inheritance in the Land, *v.* 20, 24. and who, by that Means, for a Tenth, loſt a Twelfth.

In effect, for the firſt three hundred Years after Chriſt, no mention is made in all Eccleſiaſtical Hiſtory of any ſuch Thing as *Tithes*; tho', in that Time, Altars and Oblations had been recall'd, and the Church had miſerably Judaiſed in many other Things. The Churchmen confeſſedly liv'd all that Time on Free-will Offerings; nor could the Defect of paying *Tithes* be owing to this, that there were wanting Civil Magiſtrates to injoin it, ſince Chriſtians, having Lands, might have given out of them what they pleas'd, and the firſt Chriſtian Emperors, who did all Things by Advice of the Biſhops, ſupply'd what was wanting to the Clergy, not out of *Tithes*, which were never propos'd, but out of their own Imperial Revenues.

The firſt Authority produc'd, ſetting aſide the Apoſtolical Conſtitutions, which few of the Patrons of *Tithes* will inſiſt on, is a Provincial Synod at *Cullen* in 356, where *Tithes* are voted to be God's Rent: But before that Time, divers other Abuſes and Complaints had got ground, as Altars, Candles at Noon, *&c.* And one Complaint begot another; as 'tis certain that *Tithes* ſuppoſe Altars.

'Tis alledg'd, that *Tithes* are of early and ſolemn Force among us; having been paid by Statute ever ſince the *Saxon* King *Athelſtan*, An. 928: To which it may be ſaid, that *Rome-Scot*, or *Peter Pence*, had been likewiſe paid to the Pope by Statute above 200 Years longer, *viz.* from the Year 725. And by the Way it is to be noted, that theſe ancient *Tithes* among our Anceſtors, kept a nearer Analogy to their Original in the Moſaic Law; for the Prieſts had but a third Part, the other two Thirds being appointed for the Poor, and to adorn and repair the Churches, as appears from the Canons *Ecbert* and *Elfric*.

The Cuſtom of paying *Tithe*, or of offering a Tenth of what a Man enjoys, or of what he reaps from it, has not only been practis'd under the old and the new Law, but we alſo find ſomething like it among the Heathens.

Xenophon, in the 5th Book of the Expedition of *Cyrus*, gives us an Inſcription upon a Column near the Temple of *Diana*, whereby the People were warn'd to offer the tenth Part of their Revenues every Year to the Goddeſs.

Pauſanias, lib. 5. and *Diodorus Siculus*, *Biblioth. Hiſt.* lib. 11. tell us, that a Tenth of the Spoils were offer'd to the Gods. And *Feſtus de Verb. ſignif.* aſſures us, that the Ancients us'd to give *Tithe* of every thing to their Gods: *Decima quæque veteres Diis ſuis offerebant.*

Impropriated and *Appropriated* TITHES, call'd alſo *Infeoff'd Tithes*, are thoſe alienated to ſome Temporal or Eccleſiaſtical Lord, united to their Fee, and poſſeſs'd as ſecular Goods. See IMPROPRIATION.

By the Council of *Lateran*, held under *Alexander* III. in 1179, the Alienation or Infeodation of *Tithes* is prohibited for the future: Whence all Infeodations made ſince that Time are generally held by the Canoniſts illegal.

Some attribute the Original of theſe impropriated *Tithes* to *Charles Martel*; and hold him damn'd for firſt giving the Revenues of Benefices to ſecular Nobles: But *Baronius* will have this a Fable, and refers their Origin to the Wars in the Holy Land; which is alſo the Opinion of *Paſquier*.

The Tribute, it ſeems, which the *Romans* impos'd on all the Provinces of their Empire, was a tenth Part of all the Fruits: Hence ſeveral Authors obſerve, that the *Franks* having conquer'd the *Gauls*, and finding the Impoſition eſtabliſh'd, they kept it on Foot, and gave thoſe *Tithes* in *Fee* to their Soldiers: And this, ſay they, was the Origin of infeoff'd, or impropriated and appropriated *Tithes*. See FEE and BENEFICE.

But the Truth is, they are not ſo ancient; nor do we find any mention of them before the Reign of *Hugh Capet*; even the very Council of *Clermont*, held in 1097, as hot as it was in the Intereſts of the Church, does not ſay one Word of them; which yet would undoubtedly have made loud Complaints of ſuch an Uſurpation, had it been then known.

The *Tithes* of Grounds newly broke up and cultivated, are call'd *Decimæ Novales*, and always belong to the Vicar, as well as the ſmall *Tithes*. The Novelty is confin'd to forty Years before the Demand. See VICAR.

TITHING, from the *Saxon*, *Teothinge*, Decury, a Number or Company of Ten Men, with their Families; knit together in a kind of Society, and all bound to the King, for the peaceable Behaviour of each other. See DECENNA.

Of theſe Companies there was one chief Perſon, who from his Office was call'd *Teothingman*; and at this Day in the Weſt *Tithingman*, tho' now no more than a Conſtable; the old Cuſtom of Tenmentales, or *Tithings*, being long ſince diſus'd. See CHIEF-PLEDGE, FRANK-PLEDGE, DECENNIER, TRITHING, TENMENTALE.

TITILLATION, the Act of *Tickling*, *i. e.* of exciting a ſort of pleaſurable Idea, by a gentle Application of ſome ſoft Body,

Body, upon a nervous Part; and which uſually tends to produce Laughter. See LAUGHTER.

The Word is *Latin*, *Titillatio*, ſignifying the ſame Thing.

TITLE, *Titulus*, an Inſcription put over any thing, to make it known. See INSCRIPTION.

The Word is particularly uſed for that in the firſt Page of a Book, containing the Subject thereof, the Author's Name, *&c.*

What tortures abundance of Authors, is to find ſpecious *Titles* for their Books: A *Title* ſhould be ſimple, and yet clear: Theſe are the two genuine Characters of this kind of Compoſition. Aſſuming *Titles* are a Prevention againſt the Author.

The *French* are much addicted to Fanfaronnades in their *Titles*; Witneſs that of M. *le Pay*'s *Amitiez*, *Amours*, *Amourettes*; or that Improvement hereon, *Fleurs*, *Fleurons*, *Fleurettes*, *&c.*

TITLE, *Titulus*, in the Civil and Canon Law, is a Chapter or Diviſion of a Book. See CHAPTER, *&c.*

A *Title* is ſubdivided into Paragraphs, *&c.* See PARAGRAPH, *&c.*

Each of the 50 Books of the Digeſt conſiſts of a Number of *Titles*; ſome of more, others of leſs. See DIGEST.

TITLE is alſo an Appellation of Dignity, Diſtinction or Preeminence; given to Perſons poſſeſs'd of the ſame. See DIGNITY.

The *Titles* of Order or Dignity, *Loyſeau* obſerves, ſhould always come immediately after the Name, and before the *Titles* of Office.

The King of *Spain* has a whole Page of *Titles*, to expreſs the ſeveral Kingdoms, and Signiories he is Maſter of. The King of *England* takes the *Title* of *King of Great Britain*, *France and Ireland*: The King of *France*, the Title of *King of France and Navarre*: The King of *Sweden* entitles himſelf *King of the Swedes and Goths*: The King of *Denmark*, *King of Denmark and Norway*: The King of *Sardinia*, among his *Titles*, takes that of *King of Cyprus and Jeruſalem*: The Duke of *Lorrain*, the *Title* of *King of Jeruſalem*, *Sicily*, *&c.* See KING, *&c.* See alſo the following Article.

The Cardinals take a *Title* from that of ſome Church in *Rome*; as of St. *Cecilia*, St. *Sabina*, *&c.* and they are call'd Cardinals of the *Title of St. Cecilia*, *&c.* See CARDINAL.

The Emperor can confer the *Title* of *Prince* or *Count* of the Empire; but the Right of Suffrage in Aſſemblies of the Empire, depends on the Conſent of the Eſtates. See EMPIRE.

The *Romans* gave their *Scipio*'s the *Titles* of *Africanus*, *Aſiaticus*, *&c.* and to others, they gave thoſe of *Macedonicus*, *Numidicus*, *Creticus*, *Parthicus*, *Dacicus*, *&c.* in Memory of the Victories obtained over the People ſo call'd. The King of *Spain*, after the like manner, gives honourable Titles to his Cities, in Recompence for their Services, or their Fidelity.

TITLE is alſo a certain Quality aſcribed in way of Reſpect to certain Princes, *&c.* See QUALITY.

The Pope has the *Title* of *Holineſs*; A Cardinal Prince of the Blood, that of *Royal Highneſs* or *Moſt ſerene Highneſs*, according to his Nearneſs to the Throne; other Cardinal Princes, *Moſt Eminent Highneſs*; an Archbiſhop, *Grace*, and *Moſt Reverend*, a Biſhop, *Right Reverend*; Abbots, Prieſts, Religious, *&c. Reverend.* See HOLINESS, EMINENCE, GRACE, REVERENCE, *&c.* See alſo POPE, CARDINAL, *&c.*

As to ſecular Powers, to the Emperor is given the *Title* of *Imperial Majeſty*; to Kings, *Majeſty*; to the King of *France*, *Moſt Chriſtian Majeſty*; to the King of *Spain*, *Catholic Majeſty*: The *Italians* give the King of *Poland* that of *Orthodox Majeſty*; to the King of *England*, is given *Defender of the Faith*; to the *Turk*, *Grand Signior*, and *Highneſs*; to the Prince of *Wales*, *Royal Highneſs*; to the Dauphin of *France*, *Serene Highneſs*; to Electors, *Electoral Highneſs*; to the Grand Duke, *Moſt Serene Highneſs*; to the other Princes of *Italy* and *Germany*, *Highneſs*; to the Doge of *Venice*, *Moſt Serene Prince*; to the Republic or Senate of *Venice*, *Signory*; to the Grand Maſter of *Malta*, *Eminence*; to Nuncio's and Embaſſadors of Crown'd Heads, *Excellency*. See EMPEROR, KING, PRINCE, DUKE, *&c.* ſee alſo HIGHNESS, SERENITY, EMINENCE, EXCELLENCY, *&c.*

The Emperor of *China* among his *Titles*, takes that of *Tien ſu*, Son of Heaven.

The Orientals are exceedingly fond of a Number of *Titles*: The ſimple Governor of *Schiras*, for Inſtance, after a pompous Enumeration of Qualities, Lordſhips, *&c.* adds the *Titles* of *Flower of Courteſy*; *Nutmeg of Conſolation*, *and Roſe of Delight*.

TITLE, in Law, is a Right which a Perſon has to the Poſſeſſion of any thing. See RIGHT.

It is alſo an authentic Inſtrument, whereby he can prove, and make appear his Right.

A Preſcription of Twenty Years, with a *Title*, is good; and of Thirty without a *Title*. See PRESCRIPTION.

There muſt be at leaſt a colour'd *Title*, to come into Poſſeſſion of a Benefice; otherwiſe the Perſon is deem'd an Intruder. See BENEFICE.

TITLE, in the Canon Law, is that by Virtue whereof a Beneficiary holds a Benefice; ſuch is a Collation of an Ordinary, or a Proviſion in the Court of *Rome* founded on a Reſignation, Permutation or other legal Cauſe.

The *Title* of a Benefice, or Beneficiary, is either a *True* or a *Colourable one*: A *True* or *Valid Title*, is that which gives a Right to the Benefice; ſuch is that given by a Collator who has a Right to confer the Benefice to a Perſon capable thereof, the uſual Solemnities being obſerv'd. See COLLATOR, *&c.*

A colourable *Title* is an apparent one, *i. e.* ſuch a one as appears Valid, and is not. Such wou'd that be founded on the Collation of a Biſhop, in Caſe the Benefice in Queſtion were not in his Collation.

By the Canons, a colourable Title, though falſe, produces two very conſiderable Effects. 1° That after peaceable Poſſeſſion of three Years, the Incumbent may defend himſelf by the Rule *de Triennali Poſſeſſione*, againſt ſuch as would diſpute the Benefice with him. 2° That in Caſe he be proſecuted within three Years, and obliged to ſurrender the Benefice; he ſhall not be obliged to reſtore the Fruits.

TITLE is alſo uſed in ſeveral ancient Synods and Councils, for the Church to which a Prieſt was ordained, and where he was conſtantly to reſide. *Nullus in Presbyterium, nullus in Diaconum, niſi ad certum* Titulum *Ordinetur. Concil. London. An.* 1125.

There are many Reaſons why a Church might be call'd *Titulus*, *Title*; the moſt probable, *Cowel* takes to be this, That in ancient Days, the Name of the Saint, to whom the Church was dedicated, was engraven on the Porch, as a Token that the Saint had a *Title* to that Church; whence the Church itſelf became afterwards call'd *Titulus*. See *Clerical* TITLE.

TITLES, or *Titular Churches*, M. *Fleury* obſerves, were formerly a particular Kind of Churches at *Rome*. See CHURCH.

In the VI. and VII. Centuries, there were four Sorts of Churches in that Metropolis, *viz. Patriarchal*, *Titular*, *Diaconal* and *Oratorial*.

The *Tituli*, *Titular*, were, as it were, Pariſhes, each aſſigned to a Cardinal Prieſt, with a certain Diſtrict or Quarter depending thereon, and a Font for the Adminiſtration of Baptiſm, in Caſe of Neceſſity. See QUARTER, CARDINAL, *&c.*

Clerical or *Sacerdotal* TITLE, is a yearly Revenue or Income, of the Value of 50 Crowns, which the Candidates for Prieſthood were anciently obliged to have of their own; that they might be aſſured of a Subſiſtance. See ORDINATION, *&c.*

By the ancient Diſcipline, there were no Clerks made, but in Proportion as they were wanted for the Service of the Church; which is ſtill obſerved with regard to Biſhops; none being conſecrated, but to fill ſome vacant See. See BISHOP, PRIEST, *&c.*

But, for Prieſts, and other Clerks, they began to make vague Ordinations in the *Eaſt*, as early as the Vth Century: This occaſion'd the Council of *Chalcedon* to declare all vague and abſolute Ordinations null.

Accordingly, the Diſcipline was pretty well obſerved, till towards the End of the XIth Century; but then it began to relax, and the Number of Prieſts was exceedingly increaſed; either becauſe the People became deſirous of the Privileges of the Clericate; or becauſe the Biſhops ſought to extend their Juriſdiction.

One of the great Inconveniencies of theſe vague Ordinations, was Poverty, which frequently reduced the Prieſts to ſordid Occupations, and even to a ſhameful Begging. To remedy this, the Council of the *Lateran*, laid it on the Biſhops, to provide for the Subſiſtance of ſuch as they ſhould Ordain without *Title*, till ſuch time as they had got a Place in the Church, that would afford them a ſettled Maintenance.

There was alſo another Expedient found out to elude the Canon of the Council of *Chalcedon*; and it was appointed, that a Prieſt might be ordained on the *Title* of his Patrimony: That is, it was not neceſſary he had any certain Place in the Church, provided he had a Patrimony ſufficient for a creditable Subſiſtance.

The Council of *Trent* retrieved the ancient Diſcipline in this reſpect; forbidding all Ordinations, where the Candidate was not in peaceable Poſſeſſion of a Benefice ſufficient to ſubſiſt him; and allowing no Body to be ordained on Patrimony or Penſion, unleſs where the Biſhops declare it to be expedient for the Good of the Church: So that the Benefice is the Rule, and the Patrimony the Exception.

But this Rule is not regarded, even in ſome Catholic Countries, particularly *France*, where the Patrimonial *Title* is the moſt frequent; and the *Title* is even fix'd to a very moderate Sum; about 3 *l.* 15 *s. per Annum Sterling*. Indeed at *Paris*, and in ſome other Dioceſes 150 Livres are required.

As to Religious, the Profeſſion they make in a Monaſtery ſerves them for a *Title*; in regard the Convent is obliged to maintain

maintain them. And as to Mendicants, they are ordained upon the *Title of Poverty*.

Thoſe of the Houſe, and Society of the *Sorbonne*, are alſo ordained without any *Patrimonial Title*, and on the ſole *Title* of *Poverty*; it being ſuppoſed a Doctor of the *Sorbonne* can never want a Benefice. See SORBONNE.

TITUBATION, or TREPIDATION, in Aſtronomy, a kind of Libration or Shaking, which the ancient Aſtronomers attributed to the Cryſtallin Heaven; to account for certain Inequalities, which they obſerved in the Motion of the Planets. See TREPIDATION.

TITULAR or TITULARY, a Perſon inveſted with a Title, in Virtue whereof he holds an Office, or Benefice; whether he perform the Functions thereof or not. See OFFICE and BENEFICE.

An Officer is always reputed *Titular*, till he have reſigned his Office, and the Reſignation have been admitted.

In this Senſe, the Term is uſed in Oppoſition to *Survivor*, and to a Perſon only acting by Procuration or Commiſſion. See PROCURATOR, *&c.*

TITULAR is ſometimes alſo applied adjectively, to a Perſon who has the Title and Right of an Office or Dignity; but without having Poſſeſſion, or diſcharging the Function thereof.

It is ſometimes alſo uſed, abuſively, for a Perſon who aſſumes and pretends a Title to a Thing, without either a Right thereto, or a Poſſeſſion thereof.

TMESIS, in Grammar, a Figure whereby a compound Word is ſeparated into two Parts; and one or more Words interpos'd between them.

Thus, when *Terence* ſays, *Quæ meo cunque animo lubitum eſt facere*, there is a *Tmeſis*; the Word *quæcunque* being divided by the Interpoſition of *meo*.

Lucretius abounds in *Tmeſes*; as *Sæpe ſalautatum tactu præterque meantum*: Or, *Diſſidio potis eſt ſejungi ſeque gregari*; and, *Diſpectis diſque gregatis*.

The Word is form'd from the *Greek*, τέμνω, I cut.

TOBACCO or TABACCO, a Medicinal Herb, not known in *Europe* till after the Diſcovery of *America* by the *Spaniards*; and firſt Imported about the Year 1560.

The *Americans* of the Continent call'd it *Petum*; thoſe of the Iſlands, *Yoli*. The *Spaniards*, who gave it the Name *Tabaco*, took it from *Tabaco*, a Province of *Jucatan*, where they firſt found it, and firſt learnt its Uſe.

The *French*, at its firſt Introduction among them, gave it various Names; as *Nicotiana*, or the *Embaſſador's Herb*, from *John Nicot*, then Embaſſador of *Francis* II. in *Portugal*, who brought ſome of it with him from *Lisbon*, and preſented it to a Grand Prior of the Houſe of *Lorrain*, and to Queen *Catherine de Medicis*; whence it was alſo called *Queen's Herb* and *Grand Prior's Herb*.

They alſo gave it other Names; which are now all reduced to the original Name *Tobaco*, or *Tobacco*, for *Tabaco*, given it by *Hernandez de Toledo*; who firſt ſent it into *Spain* and *Portugal*.

Culture and Preparation of TOBACCO.

Tobacco is cultivated in ſeveral Parts of *America*; particularly in the *Caribee Iſlands*, *Virginia*, *&c.* where they are forced to mix Aſhes with the Soil, to prevent its riſing too thick.

After ſowing, they water it every Day, and on very hot Days cover it up to prevent its being ſcorched by the Sun.

When 'tis riſen to a convenient Pitch, they tranſplant it, much as we do Lettice, only at a Diſtance of three Feet, and in a Soil prepared with great Care: When re-planted, 'tis kept continually Weeding; the Stem frequently cleans'd; and the loweſt Leaves and the Suckers it puts forth, taken off, that Ten or Fifteen of the fineſt Leaves may have all the Nouriſhment.

The Leaves thus reſerved being ripe, which is known by their breaking when bent; the Stalks are cut, and left to dry two or three Hours in the Sun; after which they are tied two by two, and hung up on Ropes under a Shed to be dried by the Air.

When the Leaves are ſufficiently dried, they are pull'd from off the Stalks, and made up in little Bundles; which being ſteep'd in Sea-water, or for want thereof, in common Water, are twiſted, in manner of Ropes; and the Twiſts form'd into Rolls, by winding them with a kind of Mill around a Stick.

In this Condition 'tis imported into *Europe*, where 'tis cut by the Tobacconiſts, for Smoaking; form'd into Snuff, and the like.

Beſides the *Tobacco* of the *Weſt-Indies*, there are conſiderable Quantities cultivated in the *Levant*, the Coaſts of *Greece* and the *Archipelago*, the Iſland of *Malta* and *Italy*. The Marks of good Twiſt *Tobacco*, are a fine ſhining Cut, an agreeable Smell; and that it have been well kept.

Tobacco is either taken by way of Snuff, as a Sternutatory; or as a Maſticatory by chewing it in the Mouth; or by ſmoaking it in a Pipe. See PIPE, STERNUTATORY, MASTICATORY, FUMIGATION, *&c.*

'Tis ſometimes alſo taken in little longiſh Pellets put up the Noſe, where 'tis found to produce very good Effects, to attract a deal of Water or Pituita, unload the Head, reſolve Catarrhs, and make a free Reſpiration; for the ſubtile Parts of the *Tobacco* in Inſpiration, are carried into the Trachea and Lungs, where they looſen the peccant Humours adhering thereto, and promote Expectoration.

Some have left this *Tobacco* in their Noſes all Night; but this is found to occaſion Vomiting the morrow Morning. Another thing charged on this Way of Application, is, that it weakens the Sight.

Tobacco is held a firſt rate Narcotic. See OPIATE.

When taken in great Quantities in the way of Snuff, 'tis found to prejudice the Smelling, greatly diminiſhes the Appetite, and in time gives riſe to a Phthiſis.

That taken in the way of Smoak, dries and damages the Brain. *Borrheus* in a Letter to *Bartholine*, mentions a Perſon, who through Exceſs of Smoaking had dried his Brain to that degree, that after his Death, there was nothing found in his Head but a little black Lump, conſiſting of mere Membranes.

Some People uſe the Infuſion of *Tobacco* as an Emetic; but 'tis a very dangerous and unjuſtifiable Practice, and often produces violent Vomitings, Sickneſs and Stupidity.

Bates and *Fuller* give ſome Receipts, in which *Tobacco* is an Ingredient with mighty Encomiums in Aſthmatic Caſes.

A ſtrong Decoction of *Tobacco*, with proper Carminatives and Catharticks, given Clyſter-wiſe, ſometimes proves of good Effect in what is uſually called the *Stone Colic*; and alſo in the Iliac Paſſion. See COLIC and ILIAC *Paſſion*.

A Drop or two of the Chymical Oil of *Tobacco* being put on the Tongue of a Cat produces violent Convulſions, and Death itſelf in the Space of a Minute; yet the ſame Oil uſed in Lint, and applied to the Teeth, has been a Service in the Tooth-ach; though it muſt be to thoſe that have been uſed to the taking of *Tobacco*, otherwiſe great Sickneſs, Reachings, Vomiting, *&c.* happens; and even in no Caſe is the internal Uſe of it warranted by ordinary Practice.

A ſtrong Decoction of the Stalks, with ſharp pointed Dock and Allom, is ſaid to be of good Service, uſed externally, in Cutaneous Diſtempers, eſpecially the Itch. Some boil them for that Purpoſe in Urine. The ſame is ſaid to be Infallible in curing the Mange in Dogs.

Sig. *Paulli*, Phyſician of the King of *Denmark*, in an expreſs Treatiſe on *Tobacco*, obſerves that the Merchants frequently lay it in Bog-houſes, to the End that becoming Impregnated with the volatile Salt of the Excrements, it may be rendred the brisker, more fœtid and ſtronger.

Amurath IV. Emperor of the *Turks*; the Grand Duke of *Muſcovy*, and the Emperor of *Perſia* have prohibited the Uſe of *Tobacco* in their States. Our King *James* I. wrote a Treatiſe againſt *Tobacco*, entitled a *Counter-blaſt to Tobacco*. By a Bull of Pope *Urban* VIII. ſuch are excommunicated, as take *Tobacco* in Churches.

TOD *of Wooll*; is mention'd in 12 *Car. c.* 23. as a Weight, containing 28 Pounds and two Stone. See WOOLL.

It is derived from the *French*, *Toilet*, a Wrapper, within which, by Uſage, two Stone of Wooll is folded.

TOES, by Anatomiſts, call'd *Digiti pedis*, are the extreme Diviſions of the Feet, anſwering to the Fingers of the Hand. See FOOT.

The *Toes* of each Foot conſiſt of 14 Bones; the great *Toe* having two, and the reſt three each. They are like the Bones of the Fingers, but ſhorter. See FINGER.

In the *Toes* are found, twelve Oſſa Seſamoidæa as in the Fingers. See SESAMOIDÆA.

The Gout chiefly ſeizes the great *Toe*. See GOUT.

TOFT, TOFTUM or TOFTA, in our Law-books, a Parcel of Land, or a Place where a Meſſuage hath ſtood, but is decay'd or caſually burnt, and not re-edified.

TOGA, in Antiquity, a large woollen Gown or Mantle, without Sleeves, uſed among the *Romans*, both by Men and Women.

In proceſs of Time, none wore the *Toga* but lewd Women, whence that of *Horace*.

In Matrona, pecceſve togata.

The *Toga* was of divers Colours, and admitted of various Ornaments: There was that called *Toga Domeſtica*, wore within Doors; *Toga Forenſis*, wore Abroad; *Toga Militaris*, uſed by Soldiers, tucked up after the *Gabinian* Faſhion; and *Toga Picta*, or *Trium phalis*, wherein the Victorious triumphed, embroidered with Palms: that without any Ornaments, was called *Toga Pura*.

The *Toga* was ſometimes wore open, call'd *Aperta*: Sometimes girt or tuck'd up, call'd *Præcincta*; And this Cincture or Girding again, according to *Sigonius*, was of three Kinds: *Laxior*, or the looſe Kind, where the Tail trailed on the Ground; *Aſtrictior*, the cloſe Kind, wherein it did not reach

ſo low as the Feet; and *Gabinia*, where one of the Skirts or Lappets was girt round the Body.

Sigonius diſtinguiſhes the *Togæ* or *Roman* Gowns into *Pura*, *Candida*, *Pulla*, *Picta*, *Prætexta*, *Trabea* and *Palludamentum*. See PRÆTEXTA, PALUDAMENTUM, &c.

The *Toga Pura* was alſo call'd *Virilis*. See VIRILE.

The *Jus Togæ*, or Right of the *Toga*, was the ſame with the Right of a *Roman* Citizen, *i. e.* the Right of wearing a *Roman* Habit, of taking, as they explain'd it, Fire and Water through the *Roman* Empire. See CITIZEN.

TOILES, are Snares or Nets ſet by Hunters for catching of wild Beaſts.

TOILET, a fine Cloth, of Linnen, Silk, or Tapiſtry, ſpread over the Table in a Bed-chamber or Dreſſing Room, to undreſs and dreſs upon.

The Dreſſing-Box, wherein are kept the Paints, Pomatums, Eſſences, Patches, &c. the Pin-cuſhion, Powder-Box, Bruſhes, &c. are eſteem'd Parts of the Equipage of the Ladies *Toilet*.

That of the Men, conſiſts of a Comb-Caſe, Bruſhes, &c. To make a Viſit to one at his *Toilet*, is to come to entertain him while he is dreſſing or undreſſing.

Satin, Velvet, Brocade, Point de France, &c. are now ordinarily us'd for *Toilets*; anciently they were much plainer; whence the Name, which is form'd from the *French*, *Toilette*, a Diminutive of *Toile*, any thin Stuff.

TOISE, a *French* Meaſure, containing ſix of their Feet, or a Fathom. See FATHOM; ſee alſo MEASURE.

TOISON *d'Or*; is a Term in Heraldry for a Golden Fleece, which is ſometimes borne in a Coat of Arms. See GOLDEN *Fleece*.

TOL-BOOTH, or TOLL-BOOTH, a Place in a City where Goods are weigh'd, to aſcertain the Duties or Imports thereon.

TOLERATION, in Religion, a Term which has made a great Figure in the Diſputes among the Proteſtants; who have been exceedingly divided about the Meaſures of *Toleration*, or the Degrees to which Hereticks and Schiſmaticks are, or are not, to be ſuffer'd.

All who have reaſon'd conſiſtently from the Principles of the Reformation, have been for *Toleration*; as well perceiving they had no Right to oblige any body to follow their particular Sentiments: but the Difficulty was, the ſetting Bounds to this *Toleration*.

M. *Baſnage*, and ſome others, diſtinguiſh *Civil Toleration* from *Eccleſiaſtical*. The latter allows of different, and even oppoſite Sentiments in the Church; and the firſt permits them in Civil Society.

By *Civil Toleration*, is meant Impunity and Safety in the State, for every Sect which does not maintain any Doctrine inconſiſtent with the Peace and Welfare of the State. This *Civil* or *Political Toleration*, implies a Right of enjoying the Benefit of the Laws, and of all the Privileges of the Society, without any Regard to Difference of Religion.

Eccleſiaſtical Toleration, is an Allowance of certain Opinions, which not being Fundamentals, don't hinder thoſe who profeſs them from being eſteem'd Members of the Church. But as to the Quality and Number of theſe Fundamental Points, they never could, nor, in all Probability, ever will, be agreed upon.

TOL, in Law, a Term ſignifying to defeat, or take away; from the *Latin*, *tollere*. Thus to *tol the Entry*, is to take away the Right of Entry.

TOLL, a *Saxon* Term, tho' deriv'd originally from the *Latin*, *tollere*, to take away: It has two Acceptations,

1°. It denotes a Liberty to buy and ſell within the Bounds of a Manor.

2°. A Tribute or Cuſtom paid for Paſſage, &c. See PASSAGE, TRIBUTE, &c.

Some interpret it to be a Liberty, as well to take, as to be free from, *Toll*; for they who are enfeoff'd with *Toll*, are Cuſtom-free.

Of this Freedom from *Toll*, the City of *Coventry* boaſts an ancient Charter, granted them by *Leofrick* or *Luriche*, Earl of the *Mercians*, in *Edward* the Confeſſor's Time, who, at the Importunity of *Godeva* his Lady, granted this Freedom to the City.

Some Records make mention of *Toll-thoro*, or *Thur-toll*, which is Money paid for Paſſage in or through ſome Highways, or over Ferries, Bridges, &c.

Toll Travers, for paſſing over a private Man's Ground.

Toll Turn, paid at the Return of Beaſts from Fairs and Markets, tho' they were not ſold.

By the ancient Law, the Buyers of Corn and Cattel in Fairs or Markets ought to pay *Toll* to the Lord of the Market, in Teſtimony of the Contract there lawfully made in open Market; becauſe privy Contracts were held unlawful. See IN-TOLL and UT-TOLL.

TOMAN, or TOUMAN, a kind of Money of Account, us'd among the *Perſians* in the keeping of their Books, and to facilitate the Reduction of Money in the Payment of conſiderable Sums.

The *Toman* conſiſts of fifty Abaſſi's, or a hundred Mamoudi's, or two hundred Chayez, or ten thouſand Dinars; which amount to about three Pounds ſeven Shillings Six-pence Sterling. See MONEY.

D' Herbelot derives the Word from the Language of the Moguls, where it ſignifies the Number *ten thouſand*.

Ebeu Arabſchah ſays, that the Word *Touman*, when us'd to expreſs a Weight, or Money, contains ten thouſand Silver *Arab* Drachmas, call'd *Methkal*; which are a Third lighter than the *Attic*. See DRACHMA.

The *Moguls*, &c. frequently uſe *Toman* for ten thouſand Men; and ſay, *e. gr.* that the City *Samarcand* contains ſeven *Tomans* of People fit to bear Arms; and that of *Andekhan* nine *Tomans*.

TOMB, includes both the *Sepulchre*, wherein the Defunct is interr'd; and the *Monument* erected to preſerve his Memory. See SEPULCHRE and MONUMENT.

Among the *Romans*, none but the Emperors, Veſtals, and Perſons ſignaliz'd by great Actions, were allow'd to have *Tombs* in the Cities; the reſt were all in the Country, near the High-Roads; whence thoſe common Words, *Siſte, & abi, Viator*; which are ſtill retain'd in the Inſcriptions of our Monuments in Churches, &c. tho' the Occaſion be no more. See VIATOR.

At *Anchiales* is ſtill ſeen the *Tomb* of *Sardanapalus*, with this Inſcription in Verſe: Sardanapalus *built* Anchiales *and* Tarſus *in one Day*: *Go, Paſſenger, eat, drink, and be merry; the reſt is nothing.*

The Word *Tomb* is form'd from the *Greek*, τύμβος, *Tumulus*, Sepulchre; or, according to *Menage*, from the *Latin*, *Tombe*, which ſignified the ſame Thing.

The *Romans* had a kind of empty *Tomb*, call'd *Cenotaphium*, or an *honorary Tomb*, wherein no Deceas'd was laid. It was us'd to be built in Favour of Perſons periſhing at Sea, in remote Countries, &c. where no Sepulture could be had.

The Occaſion hereof was a ſuperſtitious Notion, that the Souls of thoſe whoſe Bodies were not bury'd, wander'd an hundred Years by the Banks of the Rivers of Hell, e'er they were admitted to paſs over.

The Κενοτάφιον being made, the ſame Ceremonies were practis'd as at real Funerals. The *Cenotaphia* were inſcrib'd with the Words *ob Honorem*, or *Memoriæ Sacrum*; whereas other *Tombs*, wherein the Aſhes were really depoſited, were inſcrib'd D. M. S. *q. d.* Sacred to the Manes.

When the Words *Tacito Omine* were added, it declar'd the Aſhes inclos'd therein infamous for ſome Crime.

TOME, is a bound Book; or Writing that makes a juſt Volume.

All the Works of ſuch an Author are compiled, and reduc'd into one, or more *Tomes*. There are *Tomes* in Folio, in Quarto, in Octavo, Duodecimo, &c.

The Councils printed in the Louvre are in XXXVII *Tomes*. *Salmeron* has wrote the Life of Chriſt in XII *Tomes*. See VOLUME.

TOMENTUM, properly ſignifies Flocks, or Locks of Wooll; but by Botaniſts is us'd for that ſoft downy Matter which grows on the Tops of ſome Plants, hence denominated *Tomentoſa*; as, *Gramen Tomentoſum*, *Carduus Tomentoſus*, &c.

M. *Winſlow* obſerves a kind of *Tomentum* in the ſecretory Veſſels of the Glands; and from this, accounts for the Secretion of the various Fluids from the Blood. See GLAND and SECRETION.

TONDIN, in Architecture. See TORE.

TONE, or TUNE, in Muſic, a Property of Sound, whereby it comes under the Relation of *Grave* and *Acute*; or, the Degree of Elevation any Sound has, from the Degree of Swiftneſs of the Vibrations of the Parts of the ſonorous Body. See SOUND.

For the Cauſe, Meaſure, Degree, Difference, &c. of *Tones*. See TUNE.

The Variety of *Tones* in human Voices, ariſes partly from the Dimenſions of the Wind-pipe, which, like a Flute, the longer and narrower it is, the ſharper is the *Tone* it gives; but principally from the Head of the Larynx, or Knot of the Throat, call'd *Pomum Adami*; the *Tone* of the Voice being more or leſs grave, as the Rima, or Cleft thereof is more or leſs open. See VOICE.

TONE, is particularly us'd in Muſic for a certain Degree or Interval of Tune, whereby a Sound may be either rais'd or lower'd from one Extreme of a Concord to the other; ſo as ſtill to produce true Melody. See INTERVAL and CONCORD.

Muſicians, beſide the Concords, or harmonical Intervals, admit three leſſer Kinds of Intervals, which are the Meaſures and component Parts of the greater; and are call'd *Degrees*: The Nature, Origin, Uſe, &c. whereof, ſee under the Article DEGREE.

Of theſe Degrees, two are call'd *Tones*, and a third a *Semitone*; their Ratio's in Numbers are 8 : 9, call'd a

greater

greater Tone; 9: 10, call'd a *leſſer Tone*; and 15: 16, a *Semitone*.

The *Tones* ariſe out of the ſimple Concords, and are equal to their Differences: Thus the *greater Tone* 8: 9 is the Difference of a Fifth and a Fourth: The *leſſer Tone* 9: 10 the Difference of a leſſer Third and Fourth, or of a Fifth and ſixth greater: And the *Semitone* 15: 16, the Difference of a greater Third and Fourth. See SEMITONE.

Of theſe *Tones* and *Semitones* every Concord is compounded, and conſequently is reſolvable into a certain Number thereof: Thus, the leſſer Third conſiſts of one *greater Tone* and one *Semitone*; the greater Third of one *greater Tone* and one *leſſer Tone*. See THIRD.

The Fourth of one *greater Tone*, one *leſſer Tone*, and one *Semitone*. See FOURTH.

The Fifth of two *greater Tones*, one *leſſer Tone*, and one *Semitone*. See FIFTH, *&c.*

For the Uſe of theſe Tones, &c. *in the Conſtruction of the Scale of Muſic*; See SCALE.

TONGUE, in Anatomy } See { LINGUA.
TONGUE-*graſting* } See { GRAFTING.
TONGUE-*Tyed* } See { RANULA.

TONIC, in Medicine, is apply'd to a certain Motion of the Muſcles, wherein the Fibres being extended, continue their Extenſion in ſuch Manner, as that the Part ſeems immoveable, tho' in reality, it be in Motion. See MUSCLE.

Such is the Caſe in a Man ſtanding, in Birds planing or ſwimming thro' the Air, *&c.*

Galen ſays, that the Muſcles act even when at reſt; for after having made any Contraction to fix themſelves in a certain State or Diſpoſition; the preſerving of that Contraction is what we call the *Tonic Motion*.

The Word is form'd from the *Greek* τείνειν, to ſtretch.

TON } See { TUN.
TONNAGE } See { TUNNAGE.

TONSILS, in Anatomy, call'd alſo *Amygdalæ*, or *Almonds*, are two round Glands, ſituate near the Root of the Tongue, on each Side the Uvula, under the common Membrane of the Fauces, with which they are cover'd.

Each of them has a large oval Sinus, which opens into the Fauces, and in it are a great Number of leſſer ones, which diſcharge themſelves thro' the great Sinus, of a mucous and ſlippery Matter into the Fauces, Larynx, and Oeſophagus, for the moiſtening and lubricating theſe Parts. When the Muſcle Oeſophagæus acteth, it compreſſeth the *Tonſillæ*. See AMYGDALÆ.

TONSURE, the Art or Act of cutting the Hair, and ſhaving the Head. See HAIR.

The *Tonſure* was anciently a Mark of Infamy in *France*; inſomuch, that when they would render any Prince incapable of ſucceeding to the Crown, they cut off his Hair, and ſhav'd him.

The Word is form'd from the *Latin*, *tondere*, to ſhave.

TONSURE, in the *Romiſh* Church, is us'd for the Entrance or Admiſſion into Holy Orders. See ORDERS.

In Propriety, *Tonſure* is the firſt Ceremony us'd to devote a Perſon to God and the Church, by preſenting him to the Biſhop, who gives him the firſt Degree of the Clericate, by cutting off Part of his Hair, with certain Prayers and Benedictions.

Some hold the *Tonſure* a particular Order; others, as *Loyſeau*, only the Mark and Form of Eccleſiaſtical Orders in general.

The *Tonſure* ſuffices to make a Clerk: The reſt is only to qualify him for the holding a Benefice.

A Perſon is capable of the *Tonſure* at ſeven Years of Age; hence a Benefice of ſimple *Tonſure*, is ſuch a one as may be enjoy'd by a Child of ſeven Years old. The *Tonſure* is the Baſis of all the other Orders.

TONSURE is particularly us'd for the Corona, which Prieſts, *&c.* wear, as the Mark of their Order, and of the Rank they hold in the Church. See CROWN.

The Barbers have the Meaſures and Dimenſions of the different Kinds of *Tonſures*, or Clerical Crowns; to be practis'd according to the different Degrees and Orders.

A *Clerk's Tonſure*, a *Sub-deacon's Tonſure*, a *Deacon's Tonſure*, a *Prieſt's Tonſure*, are each ſucceſſively bigger than other.

Various are the Ceremonies and Cuſtoms the Beard has been liable to: *Kingſon* aſſures us, that a conſiderable Branch of the Religion of the *Tartars* conſiſts in the Management of their Beards; and that they wag'd a long and bloody War with the *Perſians*, and declar'd them Infidels, tho', in other Reſpects, of the ſame Faith with themſelves, merely becauſe they would not cut their Whiskers after the Mode or Rite of the *Tartars*.

Athenæus, from *Chryſippus*, obſerves, that the *Greeks* always wore their Beards till the Time of *Alexander*; and that the firſt who cut it at *Athens*, ever after bore the Addition of κορσης, ſhaven, in Medals. *Plutarch* adds, that *Alexander* commanded the *Macedonians* to be ſhaven, leſt the Length of their Beards ſhould give a Handle to their Enemies: However this be, we find *Philip*, his Father, as well as *Amyntas* and *Archelaus*, his Predeceſſors, repreſented on Medals without Beards.

Pliny obſerves, that the *Romans* did not begin to ſhave till the Year of *Rome* 454, when *P. Ticinius* brought over a Stock of Barbers from *Sicily*: He adds, that *Scipio Africanus* was the firſt who introduc'd the Mode of ſhaving every Day.

Among that People, it became the Cuſtom to have Viſits made in Form at the cutting of the Beard for the firſt Time: The firſt fourteen *Roman* Emperors ſhav'd, till the Time of the Emperor *Adrian*, who retain'd the Mode of wearing the Beard. *Plutarch* tells us, he did it to hide the Scars in his Face.

Formerly there was a great deal of Ceremony us'd in bleſſing the Beard; and there are ſtill extant the Prayers us'd in the Solemnity of conſecrating it to God, when an Eccleſiaſtic was ſhaven.

Perſons of Quality had their Children ſhav'd the firſt time by others of the ſame, or greater Quality, who, by this Means, became Godfather, or adoptive Father of the Children. See ADOPTION.

Anciently, indeed, a Perſon became Godfather of the Child by barely touching his Beard: Thus Hiſtorians relate, that one of the Articles of the Treaty between *Alaric* and *Clovis* was, that *Alaric* ſhould touch the Beard of *Clovis* to become his Godfather. See GOD-*father*.

As to Eccleſiaſtics, the Diſcipline has been very different on the Article of Beards: Sometimes they have been enjoin'd to wear them, from a Notion of too much Softneſs and Effeminacy in ſhaving, and that a long Beard was more ſuitable to the Eccleſiaſtical Gravity; and ſometimes, again, they were forbid it, as imagining Pride to lurk in a venerable Beard.

The *Greek* and *Romiſh* Churches have been long together by the Ears about their Beards: Since the Time of their Separation, the *Romaniſts* ſeem to have given more into the Practice of ſhaving, by Way of Oppoſition to the *Greeks*; and have even made ſome expreſs Conſtitutions *de radendis Barbis*.

The *Greeks*, on the contrary, eſpouſe very zealouſly the Cauſe of long Beards, and are extremely ſcandaliz'd at the beardleſs Images of Saints in the *Roman* Churches.

By the Statutes of ſome Monaſteries it appears, that the Lay Monks were to let their Beards grow, and the Prieſts among them to ſhave; and that the Beards of all that were receiv'd into the Monaſteries, were bleſs'd with a great deal of Ceremony.

To let the Beard grow is a Token of Mourning in ſome Countries, and to ſhave it in others. *Le Comte* obſerves, that the *Chineſe* affect long Beards extravagantly; but Nature has balk'd them, and only given them very little ones, which, however, they cultivate with infinite Care: The *Europeans* are ſtrangely envy'd by them on this Account, and eſteem'd the greateſt Men in the World.

The *Ruſſians* wore their Beards till within a very few Years, when the late Czar enjoin'd them all to ſhave; but notwithſtanding his Injunction, he was oblig'd to keep on Foot a Number of Officers to cut off by Violence the Beards of ſuch as would not otherwiſe part with them.

Chryſoſtom obſerves, that the Kings of *Perſia* had their Beards wove or matted together with Gold Thread; and ſome of the firſt Kings of *France* had their Beards knotted and button'd with Gold. See PERRUKE.

TOOLS, are ſimple Inſtruments, us'd in the more obvious Operations; and particularly in the making of other more complex Inſtruments. See INSTRUMENTS.

Tools are divided into *Edg'd Tools*, *Spring-Tools*, *Pointed-Tools*, &c. See STEEL and TEMPERING.

TOOTH. See TEETH.

TOOTH-ACH. See ODONTALGY.

The *Tooth-ach* uſually proceeds from a Caries which rots the Bone, and eats it hollow. For the Cauſes, *&c.* of this Caries; See TEETH.

Sometimes it proceeds from a Defluxion of a ſharp Matter upon the Gums. For the *Tooth-ach*, a Paſte made of ſoft Bread, and the Seed of Stramonia, laid on the Tooth affected, abates the Pain. If the Tooth be hollow, and the Pain great, a Compoſition of equal Quantities of Opium, Myrrh, and Camphire, made up into a Paſte with Brandy or Spirits of Wine, and about a Grain or two put into the hollow Place, puts a Stop to the Caries, and blunts the acute Pain of the Nerve; by which it often gives immediate Relief.

Chymical Oils, as thoſe of Origanum, Cloves, Tobacco, *&c.* are alſo of Service, deſtroying, by their hot Cauſtic Nature, the Texture of the ſenſible Veſſels of the Tooth affected; tho', from too liberal an Uſe of them, frequently proceeds a Defluxion of Humours, and Impoſtumation.

A Bliſter

A Bliſter apply'd behind one or both Ears, ſeldom fails to cure the *Tooth-ach*, eſpecially when attended with a hot Defluxion of Humours, and ſwelling of the Gums, Face, &c. Liniments of Ointment of Marſhmallows, Alder, &c. mix'd with Rum, Brandy, or Spirit of Wine, camphorated, are good, us'd outwardly, to abate the Swelling.

Mr. *Cheſelden* mentions one cur'd of the *Tooth-ach* by applying a ſmall cauterizing Iron to the Anthelix of the Ear, after he had undergone Bleeding, Purging, Salivation, Setons, &c. to no Purpoſe: The Caſe was very remarkable; for when he was ſeiz'd with it, a Convulſion of that whole Side of his Face follow'd, whenever the Pain became acute, or he attempted to ſpeak.

Scockins, in his Treatiſe of Butter, maintains, that there is no better Means of keeping the Teeth fair and ſound, than by rubbing them over with Butter: An Opiate not much leſs diſtaſteful than that of the *Spaniards*, who waſh their Teeth every Morning with Urine.

To prevent and cure the Scurvy in the Gums, 'tis recommended to waſh the Mouth every Morning with Salt and Water; and to hinder the Teeth from ſpoiling or growing carious, ſome uſe only Powder of Hartſhorn to rub the Teeth with, and then waſh the Mouth with cold Water: 'Tis alledg'd, this is preferable to other Dentifrices, on this account, becauſe their hard Particles are apt to abrade that fine ſmooth Poliſh, with which the Surface of the Teeth is cover'd, and which is their Preſervative from the ill Effects of Air, Aliment, Liquors, &c. which occaſion Ailments of the Teeth when wore off.

Dentifrices are uſually compounded of Powders of Hartshorn, red Coral, Bone of the Cuttle Fiſh, burnt Alum, Myrrh, Dragon's Blood, &c. Some commend Powder of Bricks, as ſufficient to anſwer all the Intentions of a good Dentifrice. See DENTIFRICE.

TOPARCHY, a little State, or Signory, conſiſting only of a few Cities, or Towns; or a petty Country govern'd and poſſeſs'd by a *Toparch*, or Lord.

Judea was anciently divided into ten *Toparchies*. See *Pliny*, lib. 5. c. 14. and *Joſeph.* lib. 3. *de Bel. Jud.* lib. 5. c. 2, &c.

The laſt mention'd Author calls the Cities of *Azotes*, *Jamnia*, and *Phaſaelides*, which *Herod* left by Teſtament to his Siſter *Saloma*, a *Toparchy*.

Procopius only gives the Quality of *Toparchy* to the Kingdom of *Edeſſa*; to *Abgarus*, the *Toparch* or Lord whereof there is a Tradition, that Jeſus Chriſt ſent his Picture, with a Letter.

The Word is form'd from the *Greek*, τοπος, Place, and ἀρχὴ, Command, Government.

TOPAZ, a precious Stone; the third in Order after the Diamond. See PRECIOUS *Stone*.

The *Topaz* is tranſparent; its Colour, a beautiful Yellow, or Gold Colour: It is very hard, and takes a fine Poliſh.

It is the true Chryſolite of the Ancients; and is found in ſeveral Parts of the *Indies*, in *Ethiopia*, *Arabia*, *Peru*, and *Bohemia*. See CHRYSOLITE.

The Oriental *Topazes* are moſt eſteem'd; their Colour borders on the Orange: Thoſe of *Peru* are ſofter, but their Colour much the ſame: The Yellow of thoſe of *Bohemia* is a little blackiſh; they are the ſofteſt of all, and their Poliſh the coarſeſt. Thoſe of *Madagaſcar* were in much Eſteem, but are now held good for little.

Tavernier mentions a *Topaz*, in the Poſſeſſion of the Great Mogul, weighing 157 Carats, which coſt 20300 Lib. Sterling: And *Boetius de Boot*, in his Treatiſe of precious Stones, affirms to have ſeen in the Cabinet of the Emperor *Rudolphus*, whoſe Phyſician he was, a *Topaz* above three Foot long, and ſix Inches broad. Probably it might be ſome Marble a little tranſparent, of a *Topaz* Colour.

The *Topaz* is eaſily counterfeited; and there are fictitious ones, which, to the Eye, don't come behind the natural ones.

If we might believe the Ancients, the *Topaz* has very notable Virtues; but thoſe are now in Diſcredit: And yet the *Topaz* is of ſome Uſe in Medicine, reduc'd into an impalpable Powder, and apply'd in Water. See GEM.

Some ſay, it takes its Name *Topaz* from an Iſland in the Red Sea, of the ſame Name, where it was firſt found by *Juba*, King of *Mauritania*; but it was known to the *Hebrews* before, as appears from the 118th Pſalm.

TOPHUS, in Medicine, a ſtony Concretion in any Part of an Animal Body; as in the Bladder, Kidneys, &c. (See STONE) or in the Joints, &c. See GOUT.

Dr. *Rutty*, in a Treatiſe, juſt publiſh'd, of the *Urinary Paſſages*, takes the Stone to ariſe from the Attraction of volatile and ſaline Particles; of which Particles the Stone, when view'd with a Microſcope, ſeems to be made up: He thinks the Fault of theſe Aggregates of ſaline Particles, ought generally to be ſuppos'd to begin in, or proceed from, the Papillæ of the Kidneys, and not from the Sediment of Urine in the Bladder.

The Reaſon why Wine-drinkers are more ſubject to the Stone, and other Concretions, than Malt or Water-drinkers, he ſuppoſes to be the volatile and ſaline, or earthy Particles contain'd in the Wine in greater Quantities than in the Ale, &c. A Calculus, he obſerves, reduc'd to a Caput Mortuum, will, upon the Affuſion of warm Water, diſſolve, and entirely mix; but in a ſhort Time will again ſettle, and the Particles thereof ſo cloſely unite or attract, as that, by repeated Affuſions, they cannot be brought again to diſſolve. See LITHONTRIPTIC.

TOPIC, in Rhetoric, a probable Argument, drawn from the ſeveral Circumſtances and Places of a Fact, &c. See PLACE, &c.

TOPICKS, or TOPICA, expreſſes the Art or Manner of inventing and managing all Kinds of probable Argumentations: *Ariſtotle* has wrote *Topicks*; and *Cicero* a kind of Comment on them, to his Friend *Trebatius*, who, it ſeems, did not underſtand them.

But the Criticks obſerve, that the *Topica* of *Cicero* agree ſo little with thoſe eight Books of *Topicks* which paſs under the Name of *Ariſtotle*, that it follows neceſſarily, either that *Cicero* was much miſtaken; which is not very probable; or that the Books of *Topicks* attributed to *Ariſtotle*, are not wholly his.

Cicero defines *Topica*, or *Topice*, to be the Art of finding Arguments, *Diſciplina Inveniendorum Argumentorum*. See ARGUMENT.

Rhetoric is divided into two Parts, Judgment, call'd alſo *Dialectice*; and Invention, call'd *Topice*. See RHETORIC.

The Word is form'd from the *Greek*, τοπικ-, of τόπος, Place; its Subject being the *Places*, which *Ariſtotle* calls the *Seats*, of Arguments.

TOPIC, in Medicine. *Topicks*, or *Topical* Remedies, are what we otherwiſe call *External Remedies*, *i. e.* ſuch as are apply'd externally to ſome diſeas'd and painful Part. See MEDICINE.

Such are Plaiſters, Cataplaſms, Bliſters, Unguents, Salves, Collyriums, &c.

The Gout is never cur'd by *Topicks*: They may aſſuage the Pain for a Time; but for a Cure, the Source of the Evil muſt be attack'd with Internals. See GOUT.

The Word is form'd from τόπος, Place.

TOPOGRAPHY, a Deſcription or Draught of ſome particular Place, or ſome ſmall Tract of Land; as that of a Manor or Tenement, Field, Garden, Houſe, Caſtle, or the like; ſuch as Surveyors ſet out in their Plots, or make Draughts of, for the Information and Satisfaction of the Proprietors. See MAP, SURVEYING, &c.

Topography differs from Chorography, as a Particular from more General; Chorography being a Deſcription of a Country, a Dioceſe, Province, or the like. See CHOROGRAPHY.

The Word is form'd from τόπος and γεάφω, I deſcribe.

TORCH, *Teda*, a Sort of Luminary; being, properly, a kind of Staff, or Stick, of Fir, or other reſinous and combuſtible Matter, as Pine, Linden, &c. more, or leſs thick, and from ſeven to twelve Foot long; encompaſs'd at one End with ſix Wax Candles, which being lighted, yield a kind of gloomy Brightneſs. See LUMINARY.

Torches are us'd in ſome Church Ceremonies, particularly at the Proceſſions of the Holy Sacrament in the *Romiſh* Church, and at the Interments of the poorer People.

Formerly they were us'd at the Funerals of thoſe of the firſt Rank; but Tapers and Flambeaux are now us'd in their ſtead. See FLAMBEAU and TAPER.

TORCULAR, or TORCULARIS, among Chirurgions, a Contrivance for ſtopping of Bleedings in Amputations. See AMPUTATION.

TORCULAR *Herophili*, in Anatomy, a Name given to a Part in the Duplicatures of the Dura Mater; form'd of a Concourſe of a Branch of the longitudinal Sinus, with the lateral Sinus's. See DURA *Mater* and SINUS.

It has its Name *Torcular* from its reſembling a Preſs or Screw: *Herophili* is added from the Diſcoverer's Name.

TORE, TORUS, in Architecture, a thick round Moulding us'd in the Baſes of Columns. See BASE.

'Tis the Bigneſs that diſtinguiſhes the *Torus* from the *Aſtragal*. See ASTRAGAL.

The Baſes of *Tuſcan* and *Doric* Columns have but one *Tore*, which is between the Plinth and the Liſtel. In the *Attic* Baſe there are two; the *upper*, which is the ſmaller; and an *under*.

The Word is form'd from the *Greek*, τόρος, a Cable, whereof it bears ſome Reſemblance; or from the *Latin*, *Torus*, a Bed, as being ſuppos'd to repreſent the Edge of ſuch Matters as ſwell out with the Weight of the incumbent Column.

It is alſo call'd a *thick Baton*; ſometimes its Contour reſembles half a Heart; in which Caſe it is call'd *Baguette*. See BAGUETTE.

TOREUMATOGRAPHY, a *Greek* Term, ſignifying the Knowledge, or, rather, the Deſcription of ancient Sculptures, and Baſſo-Relievo's.

The *Italian* Engravers have given a great deal of Light to this Science. See SCULPTURE and ENGRAVING.

TOREUTICE, τορευτικὴ, that Part of Sculpture, call'd *Turning*. See SCULPTURE and TURNING.

The Word is form'd of the *Greek*, τορνος, or τορος, Lath, of τορεω, terebro, perforo.

TORIES, or TORYS, a Party or Faction in *England*, oppoſite to the Whigs. See FACTION.

Theſe two celebrated Parties, which have ſo long divided our Country, will make a conſiderable Article in the *Engliſh* Hiſtory, nothing inferior, in many Reſpects, to that of the *Guelfs* and *Gibellins*. ---- The Diviſion has gone ſo deep, that it is preſum'd, no *Engliſhman*, who has any Concern or Principles at all, but inclines more to one Side than the other: For which Reaſon, we ſhall borrow our Account of them from the Mouths of Foreigners, who may be ſuppos'd more impartial; and particularly from M. *de Cize*, a *French* Officer, ſome time in the Service of *England*, who has wrote the Hiſtory of *Whigiſm* and *Toriſm*, printed at *Leipſic*, Anno 1717; and M. *Rapin*, whoſe *Diſſertation ſur les Whigs & les Torys*, printed at the *Hague* the ſame Year, is well known.

During the unhappy War which brought King *Charles* I. to the Scaffold; the Adherents of that King were firſt call'd *Cavaliers*, and thoſe of the Parliament *Round-Heads*; which two Names were afterwards chang'd into thoſe of *Tories* and *Whigs*, on the following Occaſion.

A kind of Robbers, or Banditti in *Ireland*, who kept on the Mountains, or in the Iſlands form'd by the vaſt Bogs of that Country, being call'd *Tories*; a Name they ſtill bear indifferently with that of *Rapparees*; the King's Enemies accuſing him of favouring the Rebellion in *Ireland*, which broke out about that Time, gave his Partiſans the Name of *Tories*: And, on the other Hand, the *Tories*, to be even with their Enemies, who were cloſely leagu'd with the *Scots*, gave them the Name of *Whigs*, which is that given in *Scotland* to another Kind of Banditti, or rather of Fanaticks, in that Country. See WHIG.

The Cavaliers, or *Tories*, had then principally in View the Political Intereſts of the King, the Crown, and the Church of *England*: And the Round-Heads, or Whigs, propos'd chiefly the maintaining the Rights and Intereſts of the People, and of Proteſtaniſm. Nor have the two Factions yet loſt their firſt Ideas; tho' their firſt Names, Cavalier and Round-Head, be now entirely diſus'd.

This is the moſt popular Account; and yet 'tis certain the Names *Whig* and *Tory* were but little known till about the Middle of the Reign of King *Charles* II. M. *de Cize* relates, that it was in the Year 1678, that the whole Nation was firſt obſerv'd to be divided into *Whigs* and *Tories*; and that on Occaſion of the famous Depoſition of *Titus Oates*, who accus'd the Catholicks of having conſpir'd againſt the King and the State. ---- The Appellation *Whig* was given to ſuch as believ'd the Plot real; and *Tory* to thoſe who believ'd it fictitious.

We ſhould here, confine ourſelves to the *Tories*; and for what regards the Whigs, refer to that Article; but ſince by comparing and confronting the two Parties together, both the one and the other will appear in the ſtronger Light, it would be imprudent to ſeparate them; ſo that we rather chuſe to ſay the leſs under the Word *Whigs*, and refer thence hither.

The Factions we are ſpeaking of, may be conſider'd either with Regard to the *State*, or to *Religion*.

The *State Tories* are either violent or moderate: The firſt would have the Sovereign to be abſolute in *England*, as in other Countries, and his Will to be a Law. This Party, which is not very numerous, has yet been conſiderable; 1°. On Account of its Leaders, which have been Lords of the firſt Rank, and generally Miniſters and Favourites. 2°. In that being thus in the Miniſtry, it engag'd the Church *Tories* to maintain ſtiffly the Doctrine of Paſſive Obedience. 3°. Becauſe the King has uſually thought it his Intereſt to ſupport them.

The moderate *Tories* would not ſuffer the King to loſe any of his Prerogatives; but neither would they ſacrifice thoſe of the People. Theſe, ſays M. *Rapin*, are true *Engliſhmen*; have frequently ſav'd the State, and will ſave it again whenever it ſhall be in Danger, either from the violent *Tories*, or from the Republican Whigs.

The *State Whigs*, again, are either Republican or Moderate: The firſt, according to our Author, are the Remains of the Party of the long Parliament, who took in Hand to change the Monarchy into a Commonwealth: Theſe make ſo ſlender a Figure, that they only ſerve to ſtrengthen the Party of the other Whigs. The *Tories* would perſuade the World, that all the Whigs are of this Kind; as the Whigs would make us believe that all the *Tories* are violent.

The moderate State Whigs are much in the ſame Sentiments as the moderate *Tories*; and deſire the Government may be maintain'd on its ancient Foundation: All the Difference is, that the moderate *Tories* lean a little more to the Side of the King, and the moderate Whigs to that of the Parliament and People. Theſe laſt are in a perpetual Motion to prevent the Rights of the People from being broke in upon; and have ſometimes taken Precautions at the Expence of the Crown.

Before we conſider our two Parties with Regard to *Religion*, it muſt be obſerv'd, that the Reformation, as carry'd on to a greater or leſs Length, divided the *Engliſh* into Epiſcopalians, and Presbyterians or Puritans: The firſt contended, that the Epiſcopal Juriſdiction ſhould be continu'd on the ſame Footing, and the Church in the ſame Form, as before the Reformation: The latter maintain'd, that all Miniſters or Prieſts had equal Authority; and that the Church ought to be govern'd by Presbyteries, or Conſiſtories of Prieſts and Lay Elders. See PRESBYTERIAN, &c.

After long Diſputes, the more moderate of each Party relax'd a little of their Stiffneſs, and thus form'd two Branches of moderate Whigs, and moderate *Tories*, with regard to Religion; but there was a much greater Number kept to their Principles with inconceiveable Firmneſs: And theſe conſtituted two Branches of rigid Epiſcopalians and Presbyterians, ſubſiſting to this Day; and now compriz'd under the general Names of *Whigs* and *Tories*; in regard the firſt join the *Tories*, and the latter the Whigs.

From what has been obſerv'd, we may conclude, that as the Names *Tory* and *Whig* have a Regard to two different Objects, they are equivocal, and of conſequence ought never to be apply'd without expreſſing in which Senſe 'tis done; --- For the ſame Perſon may be, in the different Reſpects, both *Whig* and *Tory*.

A Presbyterian, for Inſtance, who wiſhes the Ruin of the Church of *England*, is certainly, on that Score, of the Party of Whigs; yet if he oppoſe the Attempts ſome of his Party would make againſt the Royal Authority, it can't be deny'd but he is effectually a *Tory*.

After the like Manner, the Epiſcopalians ought to be eſteem'd as *Tories* with Regard to the Church; and yet how many of them are Whigs with Regard to the Government?

For the reſt, the general Motives that have form'd and kept up the two Parties, appear, in the main, to be no other than the private Motives of particular Perſons: Self-Intereſt is the Primum Mobile of their Actions: Ever ſince the Riſe of theſe Factions, each has ſtruggled earneſtly to get the Advantage over the other; inaſmuch as from ſuch Superiority accrue Places, and Honours, and Promotions, &c. which the prevailing Party diſtributes among its own Members, excluſive of the contrary Party.

As to the Characters commonly attributed to the Whigs and *Tories*; The *Tories*, ſays M. *Rapin*, appear fierce and haughty: They treat the Whigs with the laſt Contempt, and even ſomewhat hardly, when they have the Advantage over them: They are very hot and vehement, and proceed with a Rapidity which yet is not always the Effect of Heat and Tranſport, but has its Foundation ſometimes in good Policy: They are very ſubject to change their Principles, as their Party prevails, or gives Way.

If the rigid Presbyterians prevail'd in the Whig Party, it would not be leſs hot and zealous than that of the *Tories*; but 'tis ſaid they have not the Direction thereof; which gives Room to affirm, that thoſe at the Head of the Whig Party are much more moderate than the Chiefs of the *Tories*: Add, that they uſually conduct themſelves on fix'd Principles, proceed to their End gradually, and without Violence; and their Slowneſs is not leſs founded on good Politicks, than the Haſtineſs of the *Tories*. --- Thus much, ſays our Author, may be ſaid to the Advantage of the moderate Whigs, that, in the general, they maintain a good Cauſe, *viz.* the Conſtitution of the Government as by Law eſtabliſh'd. See WHIGS.

TORMINA, in Medicine, a Term uſed to expreſs Pains in the General; but particularly a Species of Pain call'd *Tormina Ventris*, or *Alvi*; in *Engliſh*, the Gripes. See GRIPES.

Young Children are very often troubled with Gripes; 'tis upon this account, that Nurſes, in order to prevent or remedy them, uſually mix with their Spoon-meats, a little Brandy or ſome Carminitive Seeds, as Carus Seeds, &c. See CHILDREN.

Some Children breed their Teeth with violent Gripes, which is apt to turn to Convulſions of the Bowels. See DENTITION.

In Adults, the dry Gripes is uſually cured by the Exhibition of warm Catharticks, ſuch are Tincture of Hiera Picra, Elixir Salutis, Tincture of Rhubarb, &c. with the Aſſiſtance of Opiats.

TORNADO, a ſudden and violent Storm at Sea. See WHIRLWIND.

TORNESOL, TOURNESOL, or TURNSOL, called alſo *Heliotrope*, and *Sun-flower*, and by the Botaniſts *Ricinoides*,

a Plant whoſe Flower is ſaid to follow the Motion of the Sun; and to turn ſtill towards it.

Some ſay, 'tis hence it takes its Name, and account for the Effect, by ſuppoſing that its heavy Stalk, warm'd and ſoften'd with the Heat which is ſtrongeſt on that Side toward the Sun, inclines naturally towards the ſame; but others take the Opinion to have had its Riſe from the Name, which was given it by Reaſon of its Appearance in the Time of the greateſt Heats, when the Sun is in the Tropic.

Some have imagined the Sun-flower of uſe in Medicine; but its Reputation that Way is now out of Doors. Its principal Uſe is in Dying: In order to which, its Juice is inſpiſſated and prepared with Calx and Urine, into blue Cakes; uſed alſo for Starch, inſtead of Smalt. See BLUE, SMALT, &c.

Its Juice likewiſe furniſhes the Colour wherewith the People of *Languedoc* and ſome other Parts of *France*, where it grows, prepare what they call the *Tourneſol en Drapeaux*, or *Turnſol in Rags*. The Proceſs whereof, is owing to M. *Niſſole* of the Royal Academy of Sciences, and is as follows;

The Summets or Tops of the Plant being gather'd in the beginning of *Auguſt*, are ground in Mills, not unlike our Oil Mills: Then, being put up in Bags, the Juice is expreſs'd with Preſſes.

This Juice having been expoſed to the Sun about an Hour, they dip Linnen Rags therein, and hang them out in the Air till they be well dried again. When, moiſtening them for ſome time, over the Vapour of about ten Pound Weight of quick Lime ſlaked in a ſufficient Quantity of Urine, they lay them out again to the Sun to dry; to be again dipp'd in the Juice of the *Ricionoides*.

When they are dried for the laſt Time, they are in their Perfection; and are thus ſent into moſt Parts of *Europe*, where they are uſed to tinge Wines and other Liquors, and give them an agreeable Colour.

The *Dutch* prepare a kind of *Turnſol* in Paſte or Cakes, or Stones; pretended to be the Juice of that Plant Inſpiſſated: But there is Reaſon to think it a Cheat; and to be the Juice of ſome other Plant prepared after the like Manner; the *Tournſol* being no Plant of their Growth.

TORPEDO, in Natural Hiſtory, a Sea-fiſh, fam'd both among the Ancient and Modern Naturaliſts, for a remarkable Numbneſs wherewith it ſtrikes the Arm of ſuch as touch it.

Various are the Accounts given us of this ſingular Fiſh; ſome Authors raiſing the Effects it produces, to a kind of Miracle; and others treating them as little better than Chimera's; ſome ſolving the Appearance this Way, and ſome that. But M. *Reaumur*, of the *French* Academy of Sciences, has at length cleared the Point, and ſet the Matter in a ſatisfactory Light.

The *Torpedo* is a flat Fiſh, much of the Figure of the Thorn-back; ſufficiently deſcribed in moſt Treatiſes of Fiſhes, and commonly enough found about the Coaſts of *Provence*, *Gaſcony*, &c. where the People eat it without any Danger. See its Figure repreſented in Tab. Natural Hiſtory, Fig. 9.

Phænomenon of the TORPEDO.

Upon touching it with the Finger, it frequently, though not always happens, that the Perſon feels an unuſual painful Numbneſs, which ſuddenly ſeizes the Arm up to the Elbow, and ſometimes to the very Shoulder and Head.

The Pain is of a very particular Species, and not to be deſcribed by any Words; yet Meſſieurs *Lorenzini*, *Borelli*, *Redi* and *Reaumur*, who all felt it ſeverally, obſerve it to bear ſome Reſemblance to that painful Senſation felt in the Arm, upon ſtriking the Elbow violently againſt a hard Body: though M. *Reaumur* aſſures us, this gives but a very faint Idea thereof.

Its chief Force, is at the Inſtant it begins; it laſts but a few Moments and then vaniſhes entirely. If a Man don't actually touch the *Torpedo*, how near ſoever he holds his Hand; he feels nothing: If he touch it with a Stick, he feels a faint Effect: If he touch it through the Interpoſition of any pretty thin Body, the Numbneſs is felt very conſiderably; if the Hand be preſs'd very ſtrong againſt it, the Numbneſs is the leſs, but ſtill ſtrong enough to oblige a Man ſpeedily to let go.

Theory of the Phænomenon of the TORPEDO.

There are different Ways of accounting for this Effect: The firſt is, that of the Ancients, who contented themſelves with aſcribing a *Torporific* Virtue or Faculty to this Animal.

The ſecond, will have this Effect produced by the *Torpedo*, to depend on an Infinity of Corpuſcles iſſuing continually out of the Fiſh, but more copiouſly under ſome Circumſtances than others: This is the Opinion moſt generally received; being adopted by *Redi*, *Perrault* and *Lorenzini*.

They explain themſelves thus; As the Fire emits a Quantity of Corpuſcles, proper to heat us; ſo the *Torpedo* emits a Quantity of Corpuſcles fit to numb the Part they inſinuate themſelves into; whether it be by their entering in too great abundance, or by their falling into Tracks or Paſſages very diſproportionate to their Figures.

The third Account, is that of *Borelli*, who looks on this Emiſſion of Corpuſcles, as imaginary: He ſays, That upon touching the Fiſh, it puts itſelf into a violent Tremor or Agitation, and that this occaſions a painful Numbneſs in the Hand that touches it. But M. *Reaumur* aſſures us, That notwithſtanding all the Attention he could view this Fiſh withal, when ready to ſtrike the Numbneſs, he could perceive nothing of this Trembling or Agitation.

The laſt and juſteſt Hypotheſis, is that of M. *Reaumur*: The *Torpedo*, like other flat Fiſhes, he obſerves, is not abſolutely flat, but its Back, or rather all the upper Part of its Body, a little Convex: When it did not, or would not, produce any Numbneſs in ſuch as touch'd it, its Back, he found, always preſerved its natural Convexity; but whenever it would diſpoſe itſelf to reſent a Touch or Thruſt, it gradually diminiſhed the Convexity of the back Parts of the Body; ſometimes only rendring them flat, and ſometimes even concave.

The very next Moment, the Numbneſs always began to ſeize the Arm; the Fingers that touch'd, were obliged to give back, and all the flat and concave Part of the Body was again ſeen Convex: And whereas, it only became flat inſenſibly, it return'd to its Convexity ſo ſwiftly, that one could not perceive any Paſſage from the one to the other State.

The Motion of a Ball out of a Musket, is not, perhaps, much quicker than that of the Fiſh reaſſuming its former Situation; at leaſt the one is not more perceivable than the other.

'Tis from this ſudden Stroke, that the Numbneſs of the Arm ariſes; and accordingly, the Perſon when he begins to feel it, imagines that his Fingers have been violently ſtruck. 'Tis the mere Velocity of the Stroke that produces the Numbneſs.

The Wonder is, how ſo ſoft a Subſtance, as that of the Fiſh, ſhould give ſo rude a Blow: Indeed a ſingle Stroke of a ſoft Body could never have done it; But in this Caſe, there is an Infinity of ſuch Strokes given in an Inſtant. To explain the admirable Mechaniſm hereof, we muſt give a View of the Parts whereon it depends.

The Mechaniſm, then, conſiſts in two very ſingular Muſcles, *b*, *b*, deſcribed by ſeveral Authors, who have given the Anatomy of the *Torpedo*. *Redi*, and after him *Lorenzini*, call them the *Muſculi Falcati*; their Form is that of Creſcents, and they together, take up almoſt Half the Back of the Fiſh; the one on the right Side, and the other on the Left. Their Origin is a little above the Mouth; and they are ſeparated from each other by the Bronchia, into the laſt of which they have their Inſertion.

What is ſingular in them, is their Fibres; if, with the Authors above-mentioned, we may give that Name to a Sort of leſſer Muſcles as big as Gooſes Quills; of an Aſſemblage whereof the two great Muſcles are form'd. Theſe leſſer Muſcles are hollow Cylinders, their Length nearly equal to the Thickneſs of the Fiſh, and ranged a-ſide of each other; all perpendicular to the upper and lower Surfaces of the Fiſh, accounting theſe Surfaces as two nearly parallel Planes. The exterior Surface of each of theſe Cylinders, conſiſts of whitiſh Fibres, whoſe Direction is the ſame with that of the Cylinder: But theſe Fibres only form a kind of Tube, whoſe Parietes are not above the Thickneſs of a Leaf of Paper. The Cavity of the Tube is full of a ſoft Matter, of the Colour and Conſiſtence of Pap, divided into Twenty-five or Thirty different little Maſſes, by ſo many Partitions, parallel to the Baſe of the Cylinder; which Partitions are form'd of tranſverſe Fibres: So that the whole Cylinder is in ſome meaſure compoſed of Twenty-five or Thirty ſmaller Cylinders placed over each other, and each full of a medullary Subſtance.

We need only now, remember, that when the *Torpedo* is ready to ſtrike its Numbneſs, it ſlowly flattens the outer Surface of its upper Part; and the whole Mechaniſm, whereon its Force depends, will be apparent. By that gradual Contraction, it bends, as it were, all its Springs; renders all its Cylinders ſhorter, and at the ſame time augments their Baſes, or, which amounts to the ſame, ſtretches all the little Incloſures which divide the ſoft Matter. In all Probability, too, the large Fibres, or little Muſcles, in that Moment, loſe their cylindrical Form, to fill the Vacuities between them.

The Contraction being made to a certain Degree, all the Springs unbend; the longitudinal Fibres are lengthen'd, the tranſverſe ones, or thoſe which form the Incloſures, are ſhorten'd; each Incloſure, drawn by the longitudinal Fibres which are lengthen'd, drives the ſoft Matter it contains, upwards; in which it is apparently aſſiſted by the undulatory Motion, which is in the tranſverſe Fibres when contracting.

If then, a Finger touch the *Torpedo*, it inſtantly receives a Stroke, or rather ſeveral ſucceſſive Strokes, from each of the Cylinders whereon it is applied. As the ſoft Matter is diſtributed into divers Incloſures, 'tis more than probable, all the Strokes are not given preciſely at the ſame Moment: Nay, were there no Incloſures to ſeparate the Matter, its Impreſſion

would

would give Strokes, in ſome meaſure, ſucceſſive: For all Parts of ſoft Bodies don't ſtrike at once; the Impreſſion of the laſt does not take till after the firſt have done acting. But theſe ſeveral Incloſures ſerve to augment the Number of the Springs, and, of Conſequence, the Velocity and Force of the Action.

Theſe quick re-iterated Strokes given by a ſoftiſh Matter, ſhake the Nerves, ſuſpend, or change the Courſe of the Animal Spirits, or ſome Fluid equivalent: Or, if you had rather, theſe Strokes produce an Undulatory Motion in the Fibres of the Nerves, which claſhes or diſagrees with that they ſhould have, in order to move the Arm. And hence the Inability we are under of uſing the ſame, and the painful Senſation which accompanies it.

Hence it is, that the *Torpedo* does not convey its Numbneſs to any Degree, except when touch'd on theſe great Muſcles; ſo that the Fiſh is very ſafely taken by the Tail, which is the Part by which the Fiſhermen catch it.

The Authors who have accounted for the Effect of the *Torpedo* from *Torporific* Effluvia, have been obliged to have recourſe to the ſame two Muſcles; but then they only make them Reſervoirs of the Corpuſcles, whereby the Numbneſs is effected.

Lorenzini, who has obſerved the Contraction as well as *Reaumur*, pretends that all its Uſe, is to expreſs thoſe Corpuſcles from out of the hollow Fibres of theſe Muſcles wherein they are impriſon'd; but this Emanation of Corpuſcles admitted by moſt Authors, is diſproved by M. *Reaumur*, from the following Conſiderations;

1° In that no Numbneſs is convey'd, if the Hand be at the ſmalleſt Diſtance from the *Torpedo:* Now, to uſe their own Compariſon, if the *Torpedo* numbs as the Fire warms, the Hands would be affected at a Diſtance from the one as well as the other.

2° In that the Numbneſs is not felt till the Contraction of the Muſcles is over; whereas were the Cauſe in *Torporific* Particles expreſs'd by the Contraction, the Effect would be felt in the time of the Contraction.

3° In that were the Numbneſs the Effect of *Torporific* Particles, it would be convey'd by degrees, as the Hand warms by degrees.

Laſtly, in that the *Torpedo* conveys its Numbneſs to the Hand, thro' a hard, ſolid Body, but does not do it thro' the Air.

Were the only Uſe the *Torpedo* makes of its Faculty, the ſaving itſelf from the Fiſhermen, as ſome have ſuppoſed, it would ſignify but little; for 'tis very rare that it eſcapes their Hands. *Pliny*, *Ariſtotle* and moſt Naturaliſts, therefore agree, that it likewiſe ſerves it for the catching of other Fiſhes: All we know for certain, is, that it lives on other Fiſhes, and that 'tis generally found on Banks of Sand, *&c.* probably, to ſerve it as a Foundation or Support for the exerting its Faculty.

M. *Reaumur* had no Fiſhes alive to examin what the *Torpedo* would do to them; but an Animal, next a-kin to a Fiſh, he tried it on, *viz.* a Drake, which being ſhut up a while in Water with the Fiſh, was taken out dead; doubtleſs from its too frequent Contacts on the *Torpedo*.

In the Hiſtory of *Abyſſinea*, we are aſſured, that if the *Torpedo* kill living Fiſhes, it ſeems to bring dead ones to life again; dead Fiſhes being ſeen to ſtir, if put in the ſame Veſſel with it: But this is much leſs credible than what is told us in the ſame Hiſtory, that the *Abyſſinans* uſed *Torpedo*'s for the Cure of Fevers, by tying down the Patient to a Table, and applying the Fiſh ſucceſſively upon all his Members, which puts the Patient to cruel Torment, but effectually rids him of his Diſeaſe.

Bellon aſſures us, that our own *Torpedo*'s applied to the Soals of the Feet, have prov'd ſucceſsful againſt Fevers.

M. *du Hamel* in his Memoirs of the Academy of Sciences, *Anno* 1677, mentions a kind of *Torpedo*'s, which he compares to Conger Eels: M. *Richer*, from whom he has the Account, affirms on his Knowledge, that they numb the Arm ſtrongly, when touch'd with a Staff, and that their Effects even go to the giving Vertigo's.

TORQUE, in Heraldry, a round Roll of Cloth twiſted and ſtuff'd; ſuch is the Bandage frequently ſeen in Armories about the Heads of Moors, Savages, *&c.*

It is always of the two principal Colours of the Coat. The *Torque* is the leaſt Honourable of all the Enrichments wore on the Helmet by way of Creſt. See CREST.

TORREFACTION, in Pharmacy, a kind of *Aſſation*, wherein a Drug is laid to dry on a Metal Plate plac'd over Coals, till it become friable to the Fingers.

Torrefaction is particularly us'd, when, after reducing ſome Drug, as Rhubarb, or Myrabolans into Powder, 'tis laid on an Iron or Silver Plate, and that plac'd over a moderate Fire till the Powder begin to grow darkiſh; which is a Mark thoſe Remedies have loſt their purgative Virtue, and have acquir'd a more aſtringent one. See RHUBARB, *&c.*

The Word is form'd from the *Latin torrefacere*, to roaſt.

Formerly, they us'd to *torrefy* Opium, to get out ſome malignant Parts fancy'd to be in it, e'er they durſt uſe it in Medicine; but the Effect was, that its volatile Spirits and Sulphur, wherein its greateſt Virtue conſiſts, were hereby evaporated. See OPIUM.

TORRENT, TORRENS, in Geography, an impetuous Stream of Water, falling ſuddenly from Mountains wherein there have been great Rains, or an extraordinary Thaw of Snow; and making great Ravages in the Plains. See RIVER, *&c.*

TORRICELLIAN, a Term very frequent among phyſical Writers, uſed in the Phraſes, *Torricellian Tube*, and *Torricellian Experiment*, on account of the Inventor, *Torricelli*, a Diſciple of the great *Galileo*.

The TORRICELLIAN *Tube* is a Glaſs Tube, as A B, about three Foot long, and 3 ½ of an Inch in Diameter, repreſented (Tab. Pneumaticks, Fig. 6.) whoſe upper Orifice A is hermetically ſealed.

The TORRICELLIAN *Experiment*, is perform'd by filling the *Torricellian* Tube A B with Mercury; then ſtopping the Orifice B, with the Finger; inverting the Tube; and plunging that Orifice in a Veſſel of ſtagnant Mercury C. See MERCURY.

This done, the Finger is removed, and the Tube ſuſtain'd perpendicular to the Surface of the Mercury in the Veſſel.

The Conſequence is, that Part of the Mercury falls out of the Tube into the Veſſel, and there only remains enough in the Tube to fill from 28 to 31 Inches of its Capacity, above the Surface of the ſtagnant Mercury in the Veſſel.

Thoſe 28, *&c.* Inches of Mercury, are ſuſtain'd in the Tube by the Preſſure of the Atmoſphere on the Surface of the ſtagnant Mercury; and according as that Atmoſphere is more or leſs heavy, or as the Winds blowing upwards or downwards, heave up, or depreſs the Air, and ſo increaſe or diminiſh its Weight and Spring; more or leſs Mercury is ſuſtain'd from 28 Inches to 31. See AIR and ATMOSPHERE.

The *Torricellian Experiment* makes what we now commonly call the *Barometer* or *Weather-Glaſs*. See BAROMETER.

TORRID *Zone*, the Tract of Earth lying under the Line, and extending on each Side to the Two Tropicks; or to 23 Degrees and a Half of Latitude. See TROPIC, ZONE, *&c.*

The Ancients believed the *Torrid Zone* uninhabitable; but from the late Navigations, we learn, that the exceſſive Heat of the Day there, is tempered by the Coldneſs of the Night.

TORT, in Law, an *Injuſtice* or *Injury*; as *de ſon Tort meme*, in his own Wrong, *&c.* Hence alſo *Tort-feaſor*, *&c.* The Word is pure *French*.

TORTEAUX, in Heraldry. See TOURTEAUX.

TORTOISE-*Shell*, the Spoils or Cover of a Teſtaceous Animal, call'd a *Tortoiſe*; uſed in Inlaying, and on various other Occaſions, as for Snuff-boxes, Combs, *&c.* See TESTACEOUS and SHELL.

There are two Kinds of *Tortoiſes*, *viz.* the *Land* and *Sea Tortoiſe*.

The *Sea Tortoiſe*, again, is of four Kinds, *viz.* the *Freſh Tortoiſe*, the *Caret*, the *Cahohanna*, and the *Lager-hu:* But 'tis the *Caret* alone furniſhes that beautiful *Shell*, ſo much admired in *Europe*.

The Shell of the Caret is thick, and conſiſts of two Parts, the upper, which covers the Back, and the lower, the Belly: The Two are joined together at the Sides by ſtrong Ligaments which yet allow of a little Motion.

In the Fore-part is an Aperture for the Head and fore Legs: and behind, for the hind Legs and Tail.

'Tis the under Shell alone is uſed: To ſeparate it from the upper, they make a little Fire beneath it, and aſſoon as ever 'tis warm, the under Shell becomes eaſily ſeparable from the upper, with the Point of a Knife, and is taken off in Laminæ or Leaves, without killing the Animal, which, 'tis ſaid, being turn'd to Sea again, gets a new Shell.

The whole Spoils of the Caret conſiſt in 13 Leaves, 8 of them flat, and 5 a little bent: Of the flat ones, there are 4 large ones, about a Foot long, and 7 Inches broad.

The beſt Shell is thick, clear, tranſparent, of the Colour of Antimony, ſprinkled with Brown and White. When uſed in Marquettry, *&c.* the Workmen give it what Colour they pleaſe, by means of colour'd Leaves, which they put underneath them.

In Generation, *Rondeletius* obſerves, the Embraces of the Male and Female *Sea Tortoiſes*, continue for a whole Lunar Month; and that they ſquirt Water out of the Noſtrils, in the ſame Manner as the Dolphin. On the *Braſilian* Shore, they are ſaid to be ſo big, as ſometimes to dine Fourſcore Men: And that in the *Indian* Sea, the Shells ſerve the Natives for Boats. *De Laet* adds, that in the Iſland of *Cuba* they are of ſuch a Bulk, that they will creep along with Five Men on their Backs.

TORTOIS *in the Military Art.* See TESTUDO.

TORTURE, a grievous Pain inflicted on a Criminal, or Perſon accuſed; to make him confeſs the Truth. See QUESTION.

The Forms of *Torture* are different in different Countries. In ſome they uſe Water, in others Iron, in ſome the Wheel or Rack, in ſome the Boot, Thumbkins, *&c.* See RACK.

In

In *England*, the uſe of all *Torture* is aboliſh'd, both in Civil and Criminal Matters; and even in Caſes of High Treaſon; tho' ſomething like it ſtill obtains, where the Criminal refuſes to plead. See PAINE *fort & dure*.

In *France*, the *Torture* is not practiſed in Civil Matters: But by an Ordonnance of 1670, if a Perſon be accuſed of a Capital Crime, he may be put to the Queſtion, *i. e.* to the *Torture*, if there be conſiderable Proof againſt him, and yet not Proof enough to convict him. See PROOF.

There are two Kinds of *Torture*; the one *Preparatory*, appointed before Sentence paſs'd; the other *Definitive*, decreed by a Sentence of Death.

The *Preparatory Torture*, is order'd *Manentibus Judiciis*, ſo that if the Accuſed don't confeſs, he cannot be condemn'd to Death, but only *ad omnia citra Mortem*.

The *Definitive Torture*, is that a condemn'd Criminal is put to, to make him confeſs his Accomplices. The Ordinary *Torture* is given at *Paris* with Six Quarts of Water, and the little Treſtle; and the Extraordinary, with Six other Pots, and the great Treſtle.

In *Scotland*, the *Torture* is given with the Boot. See BOOT.

In ſome other Countries, by heating the Criminal's Feet; in others, with Wedges, *&c.*

The *Torture*, ſays M. *Bruyere*, is a ſure Expedient to deſtroy an Innocent Perſon of a weak Complexion, and to ſave a Criminal of a robuſt one. --- It was a noble Saying of an Ancient, *They who can, and they who cannot bear the* Torture, *will equally lie.*

TOTTED. A good Debt to the King is, by the foreign Appoſer, or other Officer in the *Exchequer*, noted for ſuch by writing the Word *tot*, q. d. *tot pecuniæ Regi debentur*, whence it is ſaid to be *totted*.

Alſo that which is paid is to be *totted*. See EXCHEQUER.

TOTUM. See WHOLE.

TOUCAN, in Aſtronomy, a Conſtellation of the Southern Hemiſphere. See CONSTELLATION.

TOUCH, in Muſic. An Organ is ſaid to have a good *Touch*, when the Keys cloſe, and lie down well; being neither too looſe, nor too ſtiff. See ORGAN.

TOUCH *the Wind*, in the Sea Language, is when the Steer's-man at the Helm is bid to keep the Ship as near the Wind as may be. See STEERAGE.

TOUCHING is ſometimes us'd for the Senſe of *Feeling*. See FEELING.

TOUCHING, *in Geometry*. A right Line is ſaid to *touch* a Circle, when it meets it in ſuch Manner, as that being produc'd it does not *cut*, but falls without the Circle. See TANGENT.

TOUCH *ſtone*, a black poliſh'd Stone, us'd to try Metals upon. See STONE.

The Ancients call'd it *Lapis Lydius*, the *Lydian Stone*, from *Lydia*, a Country of *Aſia minor*, whence it was brought.

The Moderns call it *Touch-ſtone*, in regard the Proof they make of Metals, is by *touching* or rubbing the Metal to be try'd on the Stone, and comparing the Colour of the Mark it leaves thereon, with the Mark of another Piece of Metal of the ſame Species, whoſe Goodneſs is paſt doubt. See METAL.

TOUR, *Turn*, a *French* Term, often us'd among *Engliſh* Writers, for a Journey. Thus we ſay the *Tour* of *Paris*, of *Rome*, &c.

TOUR *of Hair*, a Treſs, or Border of Hair, going round the Head, which mingled dexterouſly with the natural Hair, lengthens and thickens it. See HAIR.

Theſe *Tours* are for Men. --- The Women likewiſe uſe *Tours*, and falſe Hair, either to hide their Age, or to ſupply the Thinneſs of their natural Hair on the Forehead and Temples.

The Form is different according to the Mode; ſometimes rais'd and curl'd, ſometimes ſtraight and laid flat along the Forehead. See PERRUKE.

The Word is pure *French*, ſignifying literally *a Round*, or ſomething that goes around.

TOURN, in Law. See TURN.

TOUT *temps priſt & uncore eſt*, *q. d.* always ready, and ſo at the preſent Time; is a kind of Plea in Way of Excuſe or Defence, for him that is ſued for any Debt or Duty belonging to the Plaintiff. See PLEA.

TOW. Whatever is drawn by a Ship or Boat with a Rope, is ſaid to be *towed* after her.

TOWAGE, the haleing or drawing a Ship or Barge by Men or Beaſts, or by another Ship or Boat, faſten'd to her; in order to make her enter a Port, aſcend a River, or the like.

The Term is alſo us'd for the Money, or other Recompence, given by Bargemen to the Owner of the Ground next the River where they *tow* a Barge or other Veſſel, for the Liberty of paſſing along the Side thereof.

The Word is probably deriv'd from the *Saxon*, *Teon*, to draw.

TOWER, a tall Building, conſiſting of ſeveral Stories, and uſually of a round Form.

Before the Invention of Guns, they us'd to fortify Places with *Towers*; and to attack them with moveable *Towers* of Wood, mounted on Wheels, to ſet the Beſiegers on a Level with the Walls, and drive the Beſieg'd from under the ſame.

Theſe *Towers* were ſometimes 20 Stories, and 30 Fathom high: They were cover'd with raw Skins, and an hundred Men employ'd to move them.

Towers are alſo built to enable one, by their Elevation, to view to a great Diſtance.

Theſe are of all Figures; as, ſquare, round, pentagonal, *&c.* See PHAROS.

In *China* is a famous *Tower* of *Porcelain*, whereof the *Dutch* relate Wonders. See PORCELAIN.

Towers are alſo built for Fortreſſes, Priſons, *&c.* as the *Tower* of *London*, the *Towers* of the Baſtille, *&c.* See FORTIFIED *Place*.

The Tower of London is not only a Cittadel, to defend and command the City, River, *&c.* but alſo a Royal Palace, where our Kings with their Courts have ſometimes lodg'd; a Royal Arſenal, wherein are Arms and Ammunition for 60000 Soldiers; a Treaſury for the Jewels and Ornaments of the Crown; a Mint for coining of Money; the great Archive, wherein are preſerv'd all the ancient Records of the Courts of *Weſtminſter*, &c. and the chief Priſon for State Criminals. See ARSENAL, MINT, *&c.*

In the midſt of it is the great ſquare, white *Tower*, built by *William* the Conqueror; --- Within the *Tower* is a Parochial Church, exempt from all Juriſdiction of the Archbiſhop, and a Royal Chapel, now diſus'd.

The chief Officer of the *Tower* is the *Conſtable*, under whom is the *Lieutenant*, who acts by his Direction, and in his Abſence. He has by Grant of ſeveral of our Kings, *Unam Lagenam*, two Gallons and a Pint of Wine, out of every Veſſel; and a certain Quantity out of every Boat laden with Lobſters, Oyſters, and other Shell Fiſh, and double the Quantity out of every Alien's Boat, paſſing by the *Tower*: To him alſo belongs a Fee of 200 *l.* for every Duke committed Priſoner; 100 *l.* for every Peer not a Duke, and 50 *l.* for every Commoner. See CONSTABLE, *&c.*

Under the Conſtable, and, in his Abſence, under the Lieutenant, are a *Gentleman Porter*, and the *Warders*.

The firſt has Charge of the Gates, to lock and unlock them, and deliver the Keys every Night to the Conſtable, or Lieutenant, and receive them of him next Morning: He commands the Warders who are upon the Day's Wait; and at the Entrance of a Priſoner has for his Fee *Veſtimenta Superiora*, or elſe a Compoſition for the ſame, which is uſually 30 *l.* for a Peer, and 5 *l.* a-piece for others.

Note, The ancient Allowance from the King to a Duke or Marquis, Priſoner in the *Tower*, was 12 *l.* a Week, now but 4 *l.* To all other Lords anciently 10 *l.* a Week, now 2 *l.* 4 *s.* 5 *d.* To Knights and Gentlemen anciently 4 *l.* a Week, now 13 *s.* and 4 *d.* And to inferior Perſons, now 10 *s.* per Week.

The *Yeomen Warders* of the *Tower* are 40, who are accounted the King's Domeſtic Servants: Their Duty is to attend State Priſoners, and to wait at the Gates: Ten of them to be upon the Day's Wait, to take account of all Perſons that come into the *Tower*, to enter their Names, and the Names of thoſe they go to: Two of them are on the Watch all Night. See WARDER.

In the *Tower* is likewiſe kept a Court of Record every *Monday*, by Preſcription, for the Liberty of the *Tower*, of Debt, Treſpaſs, and other Actions of any Sum. See COURT.

Beſide the ancient Liberty of the *Tower*, which adjoins to it; the old Artillery Garden by *Spittle-Fields*, and the *little Minories*, are within the *Tower* Liberty; within which the Gentleman Porter has the ſame Power and Authority, as Sheriffs within their reſpective Counties. See ORDNANCE, *&c.*

Hollow TOWER, in Fortification, is a Rounding made of the Remainder of a Briſure, to join the Courtin to the Orillon.

TOWN, a Place inhabited by a conſiderable Number of People; of an intermediate Degree between a City and a Village. See VILLAGE, *&c.*

'Tis very hard to give a tolerable Definition of a *Town*, in regard the Idea is a little arbitrary and unfix'd. A *Town* is generally without Walls, which is the Character that uſually diſtinguiſhes it from a City: But this does not hold univerſally. See CITY.

We have ſeveral Kinds of *Towns*; Borough *Towns*, Market *Towns*, County *Towns*. See BOROUGH, *&c.*

TOXICA, a Sort of Poiſon, ſaid to be us'd by the *Indians* to their Arrows, in order to render Wounds made by them incurable. See POISON.

The *Indians* are ſuppos'd to poiſon their Arrows, Daggers, *&c.* with the Virus of Vipers, the miſchievous Effects whereof continue a long Time after the Matter is quite dry'd up. See VIPER.

TRABEATION,

TRABEATION, in the ancient Architecture, the ſame with *Entablature*. See ENTABLATURE.

It conſiſts of three principal Members or Diviſions, *viz.* the Architrave, Freeze, and Cornice; each of which conſiſts of divers leſſer Members and Ornaments. See ARCHITRAVE, FREEZE, *&c.*

The Proportion, Members, *&c.* are different in the ſeveral Orders. See ORDER; ſee alſo each Order apart, TUSCAN, DORIC, *&c.*

TRACE, a Mark or Impreſſion which any thing leaves behind it in paſſing over another.

Traces of the Brain, among the *Carteſian* Philoſophers, are thoſe Impreſſions, more or leſs deep, which ſenſible Objects make on the fine Fibres of the Brain, by means of the Organs of Senſe. See BRAIN.

Theſe Impreſſions are alſo call'd *Traces of the Object*: The Courſe of the Animal Spirits ſerves to keep them up, and to renew them. See SPIRIT.

The Vivacity of the Imagination ariſes from the prodigious Quantity of *Traces* of different Objects in the Brain, which are ſo link'd together, that the Spirits cannot be ſent into one of them, but they run into all the reſt; by which Means the Ideas occaſion'd by the Application of the Spirits to thoſe ſeveral *Traces*, are all excited, as it were, at once. See IMAGINATION.

Memory, according to the ſame, conſiſts in the *Traces* which the Animal Spirits have impreſs'd. See MEMORY, HABITUDE, *&c.*

TRACE *of a Hare*, among Hunters, is her Footing in the Snow; diſtinct from her other Treadings, call'd *Doubling* and *Pricking*, &c.

Traces are alſo the Tracts of ravenous Beaſts, as Wolves, wild Bears, *&c.*

TRACHEA, in Anatomy, a large Artery, call'd alſo *Aſpera Arteria*, and popularly the *Wind-pipe*; being the Canal or Tube which carries the Air into the Lungs, for the Uſe of Reſpiration and Speech. See RESPIRATION and VOICE.

It is compos'd wholly of Cartilages, Membranes, little Veins, Arteries, and Nerves: *Galen* gave it the Name *Trachea*, τραχεῖα, becauſe of its being rough and uneven; on which Account the *Latins* alſo call'd it *Aſpera*.

The Head or Cover of the *Trachea Arteria* is call'd the *Larynx*. See LARYNX.

Its Cartilages are in Form of Rings, flat on one Side, and not finiſhing the whole Circle, but repreſenting the Figure of an ancient *Greek* Sigma, whence they are call'd *Sigmoides*. See ASPERA.

In the *Philoſophical Tranſactions*, is a Letter by Mr. *John Keen*, recommending the more frequent Uſe of Laringotomy, or Opening of the Wind-pipe upon preſſing Occaſions; which he urges from a remarkable Caſe of a Perſon who had the *Trachea*, or Wind-pipe, cut quite thro' beneath the Pomum Adami, cur'd by ſtitching the Wound, and uſing proper Medicines. See LARYNGOTOMY.

TRACHOMA, in Medicine, a Roughneſs or Aſperity of the inner Part of the Palpebræ; attended with an Itching, Redneſs, and frequently with Puſtles, reſembling Millet-Seeds.

Its Degrees are the *Sycoſis* and *Tyloſis*. See SYCOSIS, *&c.*

TRACT, from the *Latin*, *Tractus*, properly denotes an Extent of Ground, or a Portion of the Surface of the terraqueous Globe. See TERRAQUEOUS, *&c.*

TRACT, or TRACTATE, from the *Saxon*, *Traht*, or the *Latin*, *Tractatus*, does alſo ſignify a ſmall Treatiſe, or written Diſcourſe, upon any Subject. See TREATISE.

TRACT, in Hunting, denotes the Trace or Footing of a wild Beaſt.

TRACTION, *drawing*, the Action of a moving Power whereby the Moveable is brought nearer to the Mover; call'd alſo *Attraction*. See ATTRACTION.

TRACTRIX, in Geometry, a Curve Line; call'd alſo *Catenaria*. See CATENARIA.

TRADE, *Traffic*, *Commerce*, the negotiating, buying, ſelling, exchanging, *&c.* of Commodities, Bills, Money, *&c.*

For the Origin, Progreſs, *&c.* of *Trade*. See COMMERCE and NAVIGATION.

TRADE-*winds*, are certain regular Winds at Sea, blowing either conſtantly the ſame Way, or alternately this way and that; thus call'd from their great Uſe in Navigation and the *Indian* Commerce.

The *Trade-winds* are of different Kinds; ſome blowing three or ſix Months of the Year one Way, and then the like Space of Time the oppoſite Way; very common in the *Indian* Seas, and call'd *Monſoons*. See MONSOON.

Others blow conſtantly the ſame Way: ſuch is that general Wind between the Tropicks, which off at Sea is found to blow all Day long from Eaſt to Weſt.

For the Phænomena of each, with their Phyſical Cauſes, ſee WIND.

Dr. *Liſter* has a Conjecture in the *Philoſophical Tranſactions*, that the *Tropical*, or *Trade-winds*, ariſe, in great Part, from the daily and conſtant Breath of a Sea Plant, call'd the *Sargaſſa*, or *Lenticula Marina*, which grows in vaſt Quantities from 36° to 18° North Latitude, or elſewhere upon the deepeſt Seas. ---- For the Matter of Wind coming from the Breath of one only Plant, muſt needs be conſtant and uniform; whereas the great Variety of Trees and Plants at Land, furniſhes a confus'd Matter of Winds. Hence, he adds, it is, that theſe Winds are briskeſt about Noon; the Sun quickening the Plant moſt then, and cauſing it to breathe faſter, and more vigorouſly. Laſtly, the Direction of this Wind from Eaſt to Weſt, he attributes to the general Current of the Sea; for a gentle Air is obſerv'd to be conſtantly led along with the Stream of a River: Nor muſt it be omitted, that every Plant is, in ſome Meaſure, a Heliotrope, and bends itſelf, and moves after the Sun, and conſequently emits its Vapour thitherward; ſo that the Direction of the *Trade-wind* is, in ſome meaſure, alſo owing to the Courſe of the Sun.

Dr. *Gordon* has another Hypotheſis: The Atmoſphere, which ſurrounds the Earth, and moves along with it in its Diurnal Motion, he ſuppoſes to keep Pace therewith; that Part of it, at leaſt, which is near the Earth; if the remoter Part ſhould be judg'd to loſe Ground.

If then there were no Changes in the Atmoſphere's Gravity, he ſuppoſes it would always go along with the Earth from Weſt to Eaſt in an uniform Motion, altogether inſenſible to us: But the Portion of the Atmoſphere under the Line being extremely rarify'd, its Spring expanded, and ſo its Gravity and Preſſure much leſs than the neighbouring Parts of the Atmoſphere; it is incapable of the uniform Motion towards the Eaſt, and muſt therefore be preſs'd Weſtwards, and make the continual Breeze from Eaſt to Weſt, between the Tropicks.

TRADITION, the Act of delivering a Thing into the Hands of another.

The Sale of a Moveable is compleated by a ſimple *Tradition*. See LIVERY.

TRADITION, in Matters of Religion, is apply'd to thoſe Laws, Doctrines, Relations, *&c.* which have been handed down to us from our Fore-fathers, without being written.

Taking *Tradition* in this Senſe, for every thing relating to Faith, or the Rites and Ceremonies of Religion thus deriv'd down to us from the Primitive Church, there are two Kinds, *viz. Apoſtolical* and *Eccleſiaſtical Tradition*.

Apoſtolical Tradition, which is what we properly call *Tradition*, is defin'd by the *Romaniſts*, to be the unwritten Word of God, deſcended from the Apoſtles to us, thro' a continual Succeſſion of the Faithful.

By this *Tradition*, ſay they, it is that the Holy Scriptures have been kept entire, both as to the Letter, *i. e.* the Text, and as to the Spirit or Senſe thereof: This *Tradition*, the Council of *Trent* declares to have the ſame Authority with the Holy Scripture itſelf; and pronounces every one who rejects it a Heretic.

Eccleſiaſtical Traditions, are certain Statutes and Regulations regarding the Rites, Cuſtoms, and Circumſtances of Religion, introduc'd ſince the Time of the Apoſtles, by Councils, Popes, *&c.* and continu'd to our Time thro' a conſtant Obſervance of the Church.

The *Romaniſts* make another Diviſion of *Tradition*, *viz.* into *Written* and *Unwritten*.

Written Tradition, is that whereof we find ſome Traces in the ancient Fathers and Doctors.

Unwritten Tradition, is that whereof we find no Signs or Footſteps in any of the Fathers extant.

The Church of *Rome* pretends to be the Depoſitary of each Kind: *Tradition*, ſhe holds to be abſolutely neceſſary in the Church; grounding this Neceſſity on the Promiſe of Infallibility which Jeſus Chriſt is pretended to have made her.

Yet others of that Communion deny *Tradition*, how excellent ſoever it may be for the Reclaiming of Hereticks, to be abſolutely neceſſary; maintaining, that the Church would not be leſs infallible, nor leſs the Rule of Doctrine, *&c.* if the Fathers had never wrote at all.

TRADITIONARY, TRADITIONARIUS, a Name given among the *Jews*, to ſuch of them as acknowledge *Tradition*, follow it, and explain the Scriptures thereby; in Oppoſition to the Caraites, who refuſe any thing but the pure Scriptures themſelves. See CARAITE.

The *Traditionaries* are what we more uſually call *Rabbins*, or *Talmudiſts*. See RABBIN and TALMUD.

Hillel ſhone among the *Traditionaries*, and *Schammai* among the Textuaries. See TEXTUARY.

TRADITORES, a Name given in the firſt Ages of the Church, to ſuch Chriſtians, as, in Times of Perſecution, to avoid Death and Martyrdom, deliver'd up the ſacred Writings to the Perſecutors.

The Enemies of Religion, even under the old Law, made their utmoſt Efforts to deprive the World of the Holy Scriptures: In that cruel Perſecution which *Antiochus* rais'd againſt the *Jews*, the Books of the Law were very ſolicitouſly ſought after, torn, and burnt, and ſuch as kept them put to Death; as we read in the firſt Book of *Maccab.* cap. iv. 59, and 60.

Diocleſian renew'd the ſame Impiety, by an Edict publiſh'd in the 19th Year of his Empire, commanding all the ſacred Books to be brought to the Magiſtrates, and burnt.

Many weak Chriſtians, and even ſome Biſhops, overcome by the Fear of Puniſhment, carry'd in their Books to the Perſecutors; which the Church deteſting, made very ſevere Laws againſt them, and gave them the infamous Name of *Traditores*, from *Trado*, I deliver.

As the great Pretence of the Schiſm of the Donatiſts was, that the Catholicks tolerated the *Traditores*; it was decreed in the Council of *Arles*, held in 314, that ſuch as ſhould be found guilty of having deliver'd up any of the Holy Books, or Veſſels, ſhould be depos'd from the Order of the Clergy, *&c.*

TRADUCIANS, Traduciani, a Name the *Pelagians* anciently gave to the Catholicks, becauſe of their teaching, that original Sin was tranſmitted from Father to Children, or that it was communicated to the Children by the Father in the Way of Generation. See Original *Sin.*

The Word is form'd of the *Latin*, *tradux*, which was made Uſe of to expreſs that Communication; and which comes from *traduco*, I tranſmit, or make paſs from one to another.

At preſent, ſome give the Appellation *Traducian* to ſuch as hold that the Souls are tranſmitted to the Children by the Father.

TRADUCTION, the *Tranſlating*, or turning out of one Language into another. See Translation.

The Word is form'd of *trans*, beyond, and *duco*, I lead, draw.

TRAFINE, among Surgeons, an Inſtrument, call'd alſo *Trepanum*, *Anabapiſton*, *Modiolus*, &c. See Trepanum and Modiolus.

TRAFFIC. See Trade and Commerce.

The principal *Traffic* in *Muſcovy*, and the North, is in Furs and Skins: The great *Traffic* of the *Dutch* in the Eaſt is in Spices: The *Traffic* of Money is moſtly carry'd on at the Exchange.

The Word is form'd from the *French*, *Trafic*, and that from the *Italian*, *Trafico*, which is again borrow'd from the *Arabic*.

TRAGACANTH, or Adraganth, a kind of Gum oozing out at Inciſions made in the Trunk and larger Branches of a Plant, or little Shrub, of the ſame Name. See Gum.

The naked Hillocks of Mount *Ida* in *Candia*, M. *Tournefort* tells us, produce a deal of the Plant *Tragacantha*, which gives the Gum ſpontaneouſly towards the End of *June*, and in the following Months; when the nutritious Juice of the Plant, thicken'd by the Heat, burſts moſt of the Veſſels it is contain'd in.

This Juice coagulates in Threads, which make their Way into the Pores of the Bark, where being puſh'd forwards by new Juice, they get thro' the Bark, and are at length harden'd in the Air, either into little Lumps, or into twiſted Pieces in Form of little Worms, more or leſs long according to the Matter they are form'd of.

It ſhould ſeem too that the Contraction of the Fibres contributes to the Expreſſion of the Gum: Thoſe fine Fibres, like thoſe of Hemp, laid bare and trampled under Foot by Men and Horſes, contract themſelves, and facilitate the Expreſſion of the extravaſated Juice.

The Plant grows alſo in ſeveral Places of the *Levant*, particularly about *Aleppo*.

The Word is form'd of the *Greek*, τραγος, Goat, and ακανθα, Thorn, by Reaſon the Plant is beſet with Thorns.

The Gum is of different Colours, and Qualities; ſome being white, other-ſome greyiſh, ſome red, and ſome almoſt black. The white is the beſt. It muſt be choſen clear, ſmooth, and twiſted like little Worms.

It diſſolves eaſily in any aqueous Menſtruum, which it will give the Conſiſtence of a Syrup to, in the ſmall Proportion of a Dram to a Pint. It is ſmooth and ſoftening, and therefore good to obtund the Acrimony of any Humours, which makes it of Service in ſuch Coughs as proceed from Catarrhs and Defluxions of Rheum. It is alſo very ſtrengthening in ſome Seminal Weakneſſes, and prevalent againſt the Whites in Women.

TRAGEA, in Pharmacy, a Term frequently uſed to expreſs Powders groſly beat; but now obſolete. See Powder.

TRAGEDY, a Dramatic Poem, repreſenting ſome ſignal Action, perform'd by illuſtrious Perſons, and which has frequently a fatal Iſſue or End. See Drama.

Ariſtotle more Scientifically defines *Tragedy*, the Imitation of one grave and entire Action, of a juſt Length; and which, without the Aſſiſtance of Narration, by raiſing of Terror and Compaſſion, refines and purges our Paſſions.

This Definition has given the Criticks ſome Perplexity; and *Corneille* declares he cannot reconcile *Ariſtotle* with himſelf: The Inſtances *Ariſtotle* cites, he thinks, ruin his own Definition. He even denies the purging our Paſſions to be the End of *Tragedy*.

Our *Engliſh* Authors are more favourable to the Definition: By the purging our Paſſions, they underſtand not the extirpating them, but the reducing them to juſt Bounds; for by ſhewing the Miſeries that attend a Subjection to them, it teaches us to watch them more narrowly; and by ſeeing the great Misfortunes of others, it leſſens the Senſe of our own.

Tragedy, in its Original, M. *Hedelin*, obſerves, was only a Hymn ſung in Honour of *Bacchus*, by ſeveral Perſons, who, together, made a Chorus of Muſic, with Dances and Inſtruments. See Chorus.

As this was long, and might fatigue the Singers, as well as tire the Audience; they bethought themſelves to divide the ſinging of the Chorus into ſeveral Parts, and to have certain Recitations in the Intervals.

Accordingly, *Theſpis* firſt introduced a Perſon upon the Stage with this View: *Æſchylus* finding one Perſon inſufficient, introduced a Second to entertain the Audience more agreeably, by a kind of Dialogue: He alſo cloath'd his Perſons more decently, and firſt put them on the Buskin. See Cothurnus.

The Perſons who made theſe Recitations on the Scene, were call'd *Actors*; ſo that *Tragedy* at firſt was without Actors. And what they thus rehearſed, being things added to the ſinging of the Chorus, whereof they were no neceſſary Part, were call'd *Epiſodes*. See Episode.

Sophocles found that two Perſons were not enough for the Variety of Incidents; and accordingly introduced a Third: And here the *Greeks* ſeem to have ſtopp'd; at leaſt 'tis very rare that they introduce four Speakers on the ſame Scene. See Person.

Tragedy and Comedy were at firſt confounded with each other; But they were afterwards ſeparated; and the Poets applied themſelves to the cultivating of *Tragedy*, neglecting Comedy. See Comedy.

When *Tragedy* was got into a better Form; they changed the Meaſure of its Verſe, and endeavour'd to bring the Action within the Compaſs of a Day, or of a Revolution of the Sun. See Unity.

For the ſeveral Parts of Tragedy; ſee Act, Scene, Action, Fable, Character, Manners, *&c.*

The *Engliſh* received the firſt Plan of their Drama from the *French*; among whom it had its firſt Riſe towards the End of the Reign of *Charles* V. under the Title of *Chant-Royal*, which were Pieces in Verſe, compoſed in Honour of the Virgin, or ſome of the Saints, and ſung on the Stage; call'd by the Title of *Chant-Royal*, becauſe the Subject was given by the King of the Year; or the Perſon who had bore away the Prize the Year preceding. See Chant.

The Humour of theſe Pieces run wonderfully among the People, inſomuch that in a little time there were form'd ſeveral Societies, who began to vie with each other: One of theſe, to engage the Town from the reſt, began to intermix various Incidents, or Epiſodes, which they diſtributed into *Acts*, *Scenes*, and as many different *Perſons* as were neceſſary for the Repreſentation.

Their firſt Eſſay was in the *Bourg S. Maur*; and their Subject the Paſſion of Our Saviour. The Prevot of *Paris* prohibiting their continuing of it, they made Application to Court; and to render it the more favourable to them, erected themſelves into a Fryary or Fraternity, under the Title of *Brothers of the Paſſion*; which Title has given ſome Occaſion to ſuſpect them to have been an Order of Religious, or Friars of the Paſſion.

The King, on ſeeing and approving ſome of their Pieces, granted them Letters of Eſtabliſhment in 1402: upon which they built a Theatre; and for an Age and a Half, acted none but grave Pieces, which they called *Moralities*; till the People growing weary of them, they began to intermix Farces or Interludes taken from profane Subjects.

This Mixture of Farce, and Religion, diſpleaſing many; they were re-eſtabliſh'd by an Arret of Parliament in 1548, on Condition of their acting none but profane, lawful and decent Subjects, without intermedling with any of the Myſteries of Religion; and thus were the Brothers of the Paſſion deſpoil'd of their religious Character; upon which they mounted the Stage no more in Perſon; but brought up a new Set of Comedians, who acted under their Direction.

Thus was the Drama eſtabliſh'd; and on this Foundation arrived in *England*. In proceſs of Time, as it was improv'd, it became divided into Branches, agreeable to the Practice of the Ancients, and the Nature of Things, *viz.* into *Tragedy* and Comedy, properly ſo call'd, and this laſt again, was ſub-divided into pure Comedy and Farce; ſee each under its proper Head, Comedy, *&c.*

TRAGI-COMEDY, another kind of Dramatic Piece, repreſenting ſome Action paſs'd among eminent Perſons, the Event whereof is not unhappy or bloody; and wherein is ſometimes admitted a Mixture of leſs ſerious Characters.

The Ancients, M. *Dacier* obſerves, knew nothing of ſuch Compoſitions, wherein the Serious and Comic are blended: Nor does the Epithet M. *Corneille* gives them of *Heroic Comedies*, excuſe their Irregularity.

Their Foundation is certainly bad; for endeavouring both to make us laugh and cry in their turns, they endeavour at contrary Emotions, which the Heart can never undergo; every thing that diſpoſes for the one, indiſpoſing for the other.

The *Tragi-Comedy* was formerly very common on the *Engliſh* Stage: Scarce ſuch a thing in the 17th Century, as a pure Tragedy without a ſpice of Comedy, or Farce to make the People laugh. Now, that the Stage and our Taſtes are brought nearer to the Model of Nature and the Ancients, the *Tragi-Comedy* is diſuſed. *Tragi-Comedy* is the only Caſe, wherein Comedy is allow'd to introduce Kings and Heroes. See COMEDY.

TRAGUS, in Anatomy, one of the Protuberances of the Auricle, or external Ear; call'd alſo *Hircus*, becauſe uſually hairy. See EAR.

The *Tragus* is that Protuberance next the Temple; that on the oppoſite Side, to which the ſoft Lobe of the Ear is annex'd, is call'd the *Antitragus*.

TRAJAN *Column*, a famous hiſtorical Column, erected in *Rome*, in Honour of the Emperor *Trajan*. See COLUMN.

'Tis of the *Tuſcan* Order, though ſomewhat Irregular: Its Height is Eight Diameters, and its Pedeſtal *Corinthian*; it was built in a large Square there, call'd the *Forum Romanum*.

Its Baſe conſiſts of 12 Stones of an enormous Size, and it is raiſed on a Socle or Foot of Eight Steps. Within-ſide, is a Stair-caſe, illumined with 44 Windows. 'Tis 140 Foot high, which is 35 Foot ſhort of the *Antonine Column*; but the Workmanſhip of the former is much more valued.

'Tis adorn'd from top to bottom with Bas-relievo's, repreſenting the great Actions of that Emperor againſt the *Dacæ*.

Several learned Men have explain'd the Bas-reliefs of the *Trajan Column*, and among others *Ciaconius* and *Fabretti*.

The late King of *France*, *Louis* XIV. had Models of all the Bas-reliefs taken off in Plaiſter of *Paris*.

TRAJECTORY *of a Comet*, is its Path or Orbit; or the Line it deſcribes in its Motion. See ORBIT.

This, *Hevelius*, in his *Cometagraphia*, will have to be very nearly a right Line; but Dr. *Halley* rather concludes it to be a very excentrical Ellipſis. See ELLIPSIS.

Sir *Iſaac Newton* in Prop. 41. of his third Book, ſhews how to determine the *Trajectory* of a Comet from three Obſervations; and in his laſt Propoſition, how to correct a *Trajectory* graphically deſcribed. See COMET.

TRAIL-*Board*, in a Ship, is a curved Board on each Side of her Beak, which reaches from the Main-ſtem to the Figure, or the Brackets. See SHIP.

TRAIN; the Attendance of a great Perſon; or, the Trail of a Gown, or Robe of State.

In Falconry, it is the Tail of an Hawk. See TAIL.

TRAIN is likewiſe uſed for the Number of Beats which a Watch makes in an Hour, or any other certain Time. See WATCH-*Work*, &c.

TRAIN is alſo uſed for a Line of Gun-powder, laid to give fire to a Quantity thereof, in order to do Execution, by blowing up Earth, Works, Buildings, &c. See GUN-*Powder*, MINE, &c.

TRAIN *of Artillery*, includes the great Guns and other Pieces of Ordnance belonging to an Army in the Field. See GUN, CANNON, ORDNANCE, &c.

TRAIN *Oil*, the Oil procured from the Blubber of Whales, by boiling. See OIL and WHALE.

TRAIN-*Bands*, or TRAINED-*Bands*, a Name given to the Militia of *England*. See MILITIA.

TRAINING *a Load*, among Miners, is the ſearching for, and purſuing a Vein of Ore. See VEIN.

TRAMBLING *the Tin Ore*, among Miners, is a waſhing it very clean; which is done with a Shovel, and in a Frame of Boards. See TIN.

TRAMEL, an Iron Inſtrument, wherewithal to make a Horſe amble. See AMBLING.

It is alſo taken in many Places for an Iron moveable Inſtrument in Chimneys, to hang Pots over the Fire.

TRAMEL-*Net*, is a long Net, wherewith to take Fowl by Night, in Champian-Countries; much like the Net uſed for the Low-bell, both in Shape, Bigneſs and Maſhes.

To uſe it, they ſpread it on the Ground, ſo as the nether or further End, fitted with ſmall Plummets, may lie looſe thereon. Then the other Part being bore up by Men, placed at the Fore-ends, it is thus trailed along the Ground. At each Side, are carried great blazing Lights, by which the Birds are raiſed; as they riſe under the Net, they are taken. See LOW-*Bell* and HAND-*Net*.

The Word comes from the *French*, *Tremail*, form'd of the *Latin Tremaculum* or *Tremaclum*, of *Macula*, by reaſon it is compoſed of three Rows of Maſhes.

TRAMONTAN, TRAMONTANE or TRAMONTAIN, ſomething beyond, or on the further Side the Mountains.

The Term is particularly applied by the *Italian* Painters, to all ſuch as live on the other Side the *Alps*, *i. e.* all out of *Italy*; as the *Germans*, *Flemiſh*, *French*, &c.

The *French* Lawyers give the ſame Title of *Tramontane* or *Ultramontane* Doctors to the *Italian* Canoniſts, *Gomez*, *Hoſtienſis*, *Panorm*, &c. who go upon Rules and Maxims, too favourable to the Court of *Rome*, and contrary to thoſe of *France*, &c.

The Word is form'd from the *Italian*, *tra*, of the *Latin*, *trans*, which ſignify beyond; and *mons* or *mont*, Mountain.

On the *Mediterranean*, and in *Italy*, a North Wind is call'd a *Tramontane Wind*: and ſome call the Pole Star, the *Tramontane*.

Hence the Proverb, To *loſe the* Tramontane; that is, to be out of one's Aim, to be diſconcerted.

TRANCHE is uſed by the *French* Armoriſts, to expreſs that Manner of Partition call'd among us *Party per bend Dexter*. See PARTY and BEND.

A Scutcheon is ſaid to be *tranche*, *cut*, when it is divided in two Diagonally; the Diviſion coming from the Dexter Angle of the Chief, to the Iniſter Angle of the Point: When it is divided contrary-wiſe, it is ſaid to be *taille*.

TRANSACTION, a *Negotiation*, particularly an Accommodation, or a Diſpatch of ſome Buſineſs, or of a Diſpute between two Parties, by a mutual and voluntary Agreement or Contract between them.

Philoſophical TRANSACTIONS, are a kind of Journal of theprincipal Things that come before the Royal Society of *London*. See JOURNAL and *Royal* SOCIETY.

The *Tranſactions* contain the ſeveral Diſcoveries and Hiſtories of Nature and Art, made by the Members of the Society, or communicated by them from their Correſpondents; the ſeveral Experiments, Obſervations, &c. made by them, or tranſmitted to them, &c.

They were firſt ſet on Foot in 1665 by Mr. *Oldenbourg*, Secretary of the Society, and continued by him till the Year 1679. After his Death, Dr. *Hook*, the ſucceeding Secretary, continued them under the Title of *Philoſophical Collections*: But Dr. *Grew*, appointed to the ſame Office in 1689, reſumed the former Title of *Philoſophical Tranſactions*, which was retain'd by his Succeſſor Dr. *Plott*, and ſubſiſts to this Day.

They were publiſh'd every Month, with great Care, by Mr. *Oldenbourg*, and the firſt Secretaries; but after Dr. *Plott*, they were frequently interrupted. In the Year 1700 Dr. *Sloan* reſtored their regular Publication, Monthly; in time they relapſed, and only came out once in two Months; from that they fell to 3, 4 and 6 Months. They are now publiſh'd more frequently and regularly, by the Care of Dr. *Jurin*.

TRANGLE, in Heraldry, the Diminutive of a Feſſe, commonly called a *Bar*. See BAR and FESSE.

TRANSCENDANT, or TRANSCENDENTAL, ſomething raiſed, or elevated beyond other Things; or which paſſes and *tranſcends* the Reaſons and Circumſtances of other inferior Beings, ſo as not to be intimately and eſſentially included under them.

The Term is particularly applied to the Object of Metaphyſicks, which conſiders Being in general, or *Tranſcendant* Beings, as God and Angels; and Truths conſiſting in pure Speculation. See METAPHYSICKS.

The Logicians and Metaphyſicians, call *Tranſcendental* Terms, thoſe which are ſo general and of a Signification ſo extenſive and univerſal, that they paſs through all the Catagories, and agree to all kinds of Things; ſuch are the Terms *Ens*, *Unum*, *Verum*, *Bonum*, *Res*. See ENS, &c.

TRANSCENDENTAL *Quantities*, among the School-men, &c. are particularly apply'd to the Continuation of the Exiſtence, Duration, or Time of a Being. See DURATION and TIME.

TRANSCENDENTAL *Quantities*, among Geometricians, are undeterminate ones; or ſuch as cannot be expreſs'd or fix'd to any conſtant Equation: Such is a *Tranſcendental Curve*, or the like. See TRANSCENDENTAL *Curve*.

M. *Leibnitz* has a Diſſertation in the *Acta Erudit. Lipſ.* wherein he endeavours to ſhew the Origin of ſuch Quantities, *viz.* why ſome Problems are neither Plain, Solid, nor Surſolid, nor of any certain Degree, but do *tranſcend* all algebraical Equations. See PROBLEM.

He alſo ſhews how it may be demonſtrated without a Calculus, that an algebraic Quadratrix for the Circle or Hyperbola, is impoſſible: For if ſuch a Quadratrix could be found, it would follow, that by means thereof, any Angle, Ratio or Logarithm might be divided in the given Proportion of one right Line to another, and this, by one univerſal Conſtruction; and, conſequently, the Problem of the Section of an Angle,

or

or the Invention of any Number of mean Proportionals, would be of a certain Degree. See CIRCLE, QUADRATRIX, QUADRATURE, &c.

Whereas the different Degrees of algebraical Equations; and, therefore, the Problem, underſtood in general of any Number of Parts of an Angle or mean Proportionals; is of an indefinite Degree, and tranſcends all Algebraical Equations. See EQUATION.

TRANSCENDENTAL *Curve*, in the higher Geometry, is ſuch a one as cannot be defined by any Algebraic Equation, or which, when expreſs'd by an Equation, one of the Terms thereof is a variable or flowing Quantity. See CURVE.

Theſe Curves are the ſame with what *Des Cartes*, and, after his Example, ſeveral others, call *Mechanical Curves*; and which they would have excluded out of Geometry; but Sir *Iſaac Newton* and M. *Leibnitz*, are of another Sentiment. For, in effect, in the Conſtruction of Geometrical Problems, one Curve is not to be preferr'd to another, as is defined by a more ſimple Equation; but as it is more eaſily deſcribed than that other. See GEOMETRICAL *Line*.

And ſome of theſe *Tranſcendental* or Mechanical Curves, are found of greater Uſe than all the Algebraical ones together, except the Circle. See MECHANICAL.

Add, That M. *Leibnitz*, in the *Acta Eruditor. Lipſ.* gives us a kind of *Tranſcendant Equations*, whereby theſe *Tranſcendental* Curves are actually defined, and which are of an indefinite Degree; that is, are not always the ſame in all the Points of the Curve.

Whereas Algebraiſts, uſe to aſſume ſome general Letters, or Numbers, for the Quantities ſought; in theſe *Tranſcendental* Problems, M. *Leibnitz* aſſumes general or indefinite Equations for the Lines ſought; *e. gr.* putting x and y for the Abciſs and Ordinate, the Equation he uſes for a Line ſought, is, $a+bx+cy+exy+fxx+gyy$, &c. $=0$. By the help of which indefinite Equation, which in reality is Finite; for it may always be determined, how far ſoever 'tis neceſſary to raiſe it; he ſeeks the Tangent; and that which reſults, comparing with the given Property of Tangents, he finds the Value of the aſſumed Letters, a, b, c, &c. and thus defines the Equation of the Line ſought.

If that Compariſon abovementioned, do not proceed, he pronounces the Line ſought, not to be an Algebraical, but a *Tranſcendental* one.

This ſuppoſed, he goes on to find the Species of *Tranſcendency*; for ſome *Tranſcendentals* depend on the general Diviſion or Section of a Ratio, or upon the Logarithms; others upon the Arks of a Circle, and others on more indefinite and compound Enquiries.

Here, therefore, beſides the Symbols x and y, he aſſumes a Third, as v, which denotes the *Tranſcendental Quantity*; and of theſe Three, forms a general Equation for the Line ſought; from which he finds the Tangent, according to the differential Method, which ſucceeds even in *Tranſcendental Quantities*. What he finds he compares with the given Properties of the Tangent; and ſo diſcovers, not only the Values of a, b, c, &c. but alſo the particular Nature of the *Tranſcendental Quantity*.

And though it may ſometimes happen, that the ſeveral *Tranſcendents* are ſo to be made uſe of, and theſe of different Natures too, one from another; alſo though there be *Tranſcendents* of *Tranſcendents*, and a Progreſſion of theſe in Infinitum, yet we may be ſatisfied with the moſt eaſy and uſeful one; and for the moſt Part may have recourſe to ſome peculiar Artifices for ſhortning the Calculus, and reducing the Problem, to as ſimple Terms as may be.

This Method being applied to the Buſineſs of Quadratures, or to the Invention of Quadratrices, in which the Property of the Tangent is always given; 'tis manifeſt not only how it may be diſcovered, whether the indefinite Quadrature may be algebraically Impoſſible, but alſo how, when this Impoſſibility is diſcovered, a *Tranſcendental* Quadratrix may be found; which is a Thing which had not before been ſhewn. So that it ſeems, that Geometry is by this Method carried infinitely beyond the Bounds, to which *Vieta* and *Des Cartes* brought it: Since by this means a certain and general Analyſis is eſtabliſh'd, which extends to all the Problems which are of no certain Degree, and conſequently not comprehended within Algebraical Equations.

Again, in order to manage *Tranſcendental* Problems, where-ever the Buſineſs of Tangents or Quadratures occurs, by a Calculus, there is hardly any that can be imagined ſhorter, more advantageous, or univerſal, than the Differential Calculus, or Analyſis of Indiviſibles and Infinites.

By this Method we may explain the Nature of *Tranſcendental* Lines by an Equation, *e. gr.* Let A be the Ark of a Circle, and x the verſed Sine: Then will $A=\int \frac{dx}{\sqrt{2x-xx}}$ and if the Ordinate of the Cycloid be y, then will $y=\sqrt{2x-xx}+\int \frac{dx}{\sqrt{2x-xx}}$ which Equation perfectly expreſſes the Relation between the Ordinate y and the Abciſſa x, and from it all the Properties of the Cycloid may be demonſtrated.

Thus is the Analytical Calculus, extended to thoſe Lines which have hitherto been excluded, for no other Cauſe, but that they were thought incapable of it. See GEOMETRICAL *Line*.

TRANSCOLATION, in Pharmacy, the ſame with Filtration or Percolation. See FILTRATION, &c.

TRANSCRIPT, a Copy of any Original Writing; particularly that of an Act or Inſtrument, inſerted in the Body of another. See COPY.

In this Senſe, we ſay *Tranſcript of a Fine*, &c. See FINE, DUPLICATE, &c.

TRANSCRIPTIO *Recognitionis factæ coram Juſticiariis Itinerantibus*, &c. is a Writ for the certifying a Recognizance into *Chancery*, taken before the Juſtices in Eyre. See RECOGNIZANCE.

TRANSCRIPTIO *pedis finis levati mittenda in Cancellariam*, is a Writ for the certifying the Foot of a Fine, levied before the Juſtices in Eyre, &c. into *Chancery*. See FINE.

TRANSEAT, in the Schools, &c. a Term purely *Latin*, ſignifying *Let it paſs*, or ſuppoſe a Propoſition to be true, without granting it.

Hence the Proverb, *Tranſeat, Græcum eſt, non legitur*: The Diction is ſaid to have taken its Riſe from ſome ancient Commentators, or Gloſſographers of the Civil Law, who not underſtanding *Greek*, paſs'd over all the Words that occurr'd in that Language, without explaining them.

In the *Roman* Chancery, a *Nil Tranſeat* is a kind of Oppoſition made to the ſealing of a Bull, or to the Delivery of ſome other Inſtrument, till the Parties againſt whoſe Intereſt it is directed, have been heard againſt it.

TRANSELEMENTATION, in the Schools, a Change of the Elements or Principles of one Body into thoſe of another. See ELEMENT.

Such is that which the *Roman* Catholicks contend for in the Euchariſt; where the Elements of Bread and Wine are changed into thoſe of Fleſh and Blood. See TRANSUBSTANTIATION.

Tranſelementation, where-ever it happens, is always allow'd Miraculous; or an Effect beyond the ordinary Powers of Nature. See MIRACLE.

TRANSFER, in Commerce, &c. an Act whereby a Perſon ſurrenders his Right, Intereſt or Property in any thing moveable or immoveable, to another.

The Term is principally uſed in the Commerce of Stocks; for the aſſigning and making over Subſcriptions, or Shares therein, to ſuch as purchaſe them of the Proprietors. See SUBSCRIPTION, &c.

In the *South Sea* Company, the *Bank*, *Eaſt India*, &c. *Tranſfers* are made, by eraſing the former Proprietors Names, and entering the Stock under the Name of the Purchaſer, under his proper Letter of the Alphabet. See COMPANY, BANK, &c.

In order to a *Tranſfer*, 'tis required the Party bring another with him to ſwear he is the ſame Perſon to whom the Stock is enter'd. A Counterfeit in this Caſe is by Act of Parliament made a capital Crime.

The Lawyers ſay, that the Sale, or Donation of an Inheritance, &c. *Tranſfers* the Property, Rights, &c. thereof.

TRANSFIGURATION, among Divines, that miraculous Change wrought by *Jeſus Chriſt*, in Preſence of St. *Peter*, St. *James* and St. *John*, on Mount *Thabor*, where he appear'd in his Glory, in the middle of *Moſes* and *Elias*. See the Deſcription thereof in St. *Matthew*, *c.* xvii.

The Term is alſo applied to a Feaſt held in the *Romiſh* Church on the Sixth of *Auguſt*, in Commemoration of that Miracle.

TRANSFORMATION, a Change of Form; or a Metamorphoſis. See METAMORPHOSIS.

The Chymiſts have been a long Time ſeeking the *Tranſformation* of Metals, that is, their *Tranſmutation*, or the Manner of changing them into Gold. See TRANSMUTATION.

Among the Myſticks, by *Transformation*, is underſtood a Change of the Contemplative Soul, whereby it is in ſome meaſure deified or converted into the Subſtance of God, and wherein it is, as it were, loſt and ſwallow'd up in the Divinity, ſo as not to perceive its own Diſtinction from God.

The Senſe of the Word *Transformation* is very liable to be abuſed; and, in effect, the Quietiſts and Quakers have abuſed it. But many of the Myſticks uſe it innocently enough; meaning no other by it than what St. *Paul* did when he ſaid, *Vivo ego, jam non ego, vivit vero in me Chriſtus*.

TRANSFORMATION is alſo ſometimes uſed for what we more properly call *Tranſubſtantiation*. See TRANSUBSTANTIATION.

TRANSFUSION, the Act of pouring a Liquor out of one Veſſel into another.

The Word is compounded of the *Latin* Prepoſition *trans*, beyond, further, and *fundo*, I pour.

In the Preparations of Chymiſtry and Pharmacy, there are frequent *Transfuſions* of Liquors, Syrup, &c.

TRANSFUSION *of the Blood*, is particularly us'd for the letting out the Blood of one Animal, ſo as to be immediately receiv'd into the Body of another. See BLOOD.

Dr. *Lower* is uſually accounted the Inventor of this *Transfuſion*, and the Experiment ſaid to have been firſt publickly made by him at *Oxford* in 1665, and the Deſcription thereof publiſh'd in his excellent Book *de Corde*.

Yet we are inform'd from good Hands, that it had been propos'd at *Paris* in 1658; that another of our Countrymen had had the Idea before; and that it had been known in *Germany* ſeveral Years. -- 'Tis certain there is a Paſſage in *Libavius*, wherein the *Transfuſion* is exactly deſcrib'd as now practis'd: 'Tis true he diſapproves of it; and only mentions it to ridicule it.

The Uſe moſt naturally expected from the Operation, is, that one Animal may live of the Blood of another; ſo that thoſe which want Blood, or have corrupt, morbid Blood, may be ſupply'd from others with a ſufficient Quantity, and of ſuch as is good and laudable.

However, 'tis certain the Operation has no Place in the preſent Practice of Phyſic; but whether that be the Fault of the Operation itſelf, or owing to the Indolence and Averſeneſs of People to run into new Methods, we will not undertake to ſay.

The Method of *transfuſing*, Dr. *Lower* gives us to the following Effect: Take up the carotid Artery of the Dog, or other Animal whoſe Blood is to be *transfus'd* into another of the ſame, or a different Kind; ſeparate it from the Nerve of the eighth Pair, and lay it bare above an Inch. Make a ſtrong Ligature on the upper Part of the Artery; and an Inch nearer the Heart another Ligature with a running Knot, to be looſen'd and faſten'd as Occaſion requires. Draw two Threads between the two Ligatures; open the Artery, put in a Quill, and tye up the Artery again upon the Quill by the two Threads, and ſtop the Quill by a Stick.

Then make bare the Jugular Vein of the other Animal, for about an Inch and half in Length, and at each End make a Ligature with a running Knot; and in the Space between the two Knots, draw under the Vein two Threads, as in the other.

Open the Vein, and put into it two Quills, one into the deſcending Part of the Vein, to receive the Blood from the other Dog, and carry it to the Heart: The other Quill put into the other Part of the Jugular, towards the Head, through which the ſecond Animal's own Blood is to run into Diſhes. The Quills thus ty'd faſt, ſtop them up with Sticks till there be occaſion to open them.

Things thus diſpos'd, faſten the Dogs on their Sides towards one another, in ſuch Manner, as that the Quills may go into each other: Then unſtop the Quill that goes down into the ſecond Dog's Jugular Vein, as alſo that coming out of the other Dog's Artery; and by the Help of two or three other Quills put into each other, as there ſhall be occaſion, inſert them into one another.

Then ſlip the running Knots, and immediately the Blood runs through the Quills as through an Artery, very impetuouſly.

As the Blood runs into the Dog, unſtop the Quill in the upper Part of his Jugular, for his own Blood to run out at, tho' not conſtantly, but as you perceive him able to bear it, till the other Dog begin to cry, and faint, and at laſt die.

Laſtly, Take out both Quills out of the Jugular, tye the running Knot faſt, and cut the Vein aſunder, and ſew up the Skin: The Dog thus diſmiſs'd, will run away as if nothing ail'd him.

In the *Philoſophical Tranſactions*, we have Accounts of the Succeſs of various *Transfuſions* practis'd at *London*, *Paris*, in *Italy*, &c. Sir *Edmund King transfus'd* 49 Ounces of Blood out of a Calf into a Sheep; the Sheep after the Operation appearing as well and as ſtrong as before.

Mr. *Coxe transfus'd* 14 or 16 Ounces out of a mangy into a ſound Dog: The Effect was, that no Alteration was obſerv'd in the ſound Dog, but the mangy one was cur'd.

M. *Gayant transfus'd* the Blood of a young Dog into the Veins of an old one almoſt blind with Age, and ſcarce able to ſtir; which yet, two Hours afterwards, leap'd and friſk'd about.

M. *Denis transfus'd* the Blood of three Calves into three Dogs, which all continu'd brisk, and eat well as before. --- The ſame Perſon *transfus'd* the Blood of four Weathers into a Horſe 26 Years old, which thence receiv'd much Strength, and a more than ordinary Appetite.

At St. *Griffoni*'s at *Udine*, the Blood of a Lamb was *transfus'd* into the Veins of a Spaniel 13 Years old, which had been quite deaf for three Years, and ſo feeble as ſcarce to be able to walk at all. --- After the Operation he leap'd from the Table, and went about the Houſe to ſeek his Maſters. --- Two Days afterwards he ran up and down the Streets with other Dogs: His Stomach grew ſtrong, and he recover'd his Hearing.

TRANSGRESSION, *Tranſgreſſio*, an Offence againſt ſome Law, or a Breach or Violation thereof. See LAW.

The Term is chiefly us'd in reſpect of the Laws of God. In the Doctrine of Original Sin, all Mankind are ſuppos'd to ſhare with *Adam* in the Guilt of his firſt *Tranſgreſſion*. See ORIGINAL *Sin*.

Moſes threatens the *Tranſgreſſors* of his Law with abundance of Temporal Puniſhments. See PUNISHMENT.

The Word is compounded of *trans*, beyond, and *gradiri*, to go.

TRANSGRESSIONE, in our Law, a Writ uſually call'd a Writ or Action of *Treſpaſs*.

Of this *Fitzherbert* has two Sorts: One Vicountial, thus call'd becauſe directed to the Sheriff, and not returnable; but to be determin'd in the County. See VICOUNTIAL.

Its Form differs from that of the other; as wanting the Words *quare vi & armis*, &c.

The other is term'd a Writ of *Treſpaſs*, and to be ſued in the *Common Pleas* and *King's-Bench*. See TRESPASS.

TRANSIRE, in Stat. Anno 14. *Car.* II. is us'd for a Cuſtom-houſe Warrant, or a Let-paſs; from the Verb *tranſeo*, I go forth.

TRANSIT, TRANSITUS, in Aſtronomy, ſignifies the Paſſage of any Planet, juſt by, or over any fix'd Star; and of the Moon, in particular, covering or moving over any other Planet. See STAR and PLANET.

Mercury, *Venus*, &c. in their *Tranſits* over the Sun, appear like dark Specks. See MERCURY and VENUS.

The Word comes from the *Latin*, *tranſire*, to paſs over; form'd of *trans* and *eo*, I go beyond.

TRANSITION, in Muſic, is when a greater Note is broken into leſſer, to make ſmooth the Roughneſs of a Leap, by a gradual Paſſage to the Note next following; whence it is commonly call'd the *breaking of a Note*; being ſometimes very neceſſary in Muſical Compoſitions. See NOTE and PASSAGE.

TRANSITION, in Rhetoric, (which ſome will have to be a Figure, tho' others, with *Quintilian*, deny it) is a kind of Connexion in Diſcourſe, whereby the ſeveral different Parts and Members thereof are join'd, ſo as to conſtitute one regular Whole.

F. *de Colonia* makes two Kinds of *Tranſitions*; the one perfect, the other imperfect.

A *perfect Tranſition*, is ſuch wherein we briefly intimate what is ſaid, and what remains to be ſaid; as, *Now that we have ſpoke of War, there remains ſomething to be ſaid of Peace. --- Satis multa de Turpitudine: dicam deinceps, quod propoſui, de periculo. --- Uni Epiſtolæ reſpondi: Venio ad alteram. --- Sed hæc Vetera; illud recens: Cæſarem meo Conſilio Interfectum.*

An *imperfect Tranſition*, is ſuch wherein only one of theſe is expreſs'd; as, *Let us now conſider the Conſequences of*, &c. *Poſtularet hic locus ut dicerem de ---- ſed finis ſit; neque enim præ lachrymis jam loqui poſſum; & hic ſe lachrymis defendi nequeat.*

TRANSITIVE, in Grammar, an Epithet given to ſuch Verbs, as ſignify an Action which paſſes from the Subject that does it, to, or upon another Subject which receives it. See VERB.

Under the Head of *Verbs Tranſitive*, come what we uſually call Verbs Active and Paſſive: Other Verbs, whoſe Action does not paſs out of themſelves, are call'd Neuters, and by ſome Grammarians *Intranſitives*. See NEUTER.

In the *Hebrew*, the Verb היה, *hajah*, in the *Greek*, εἰμὶ, and in the *Latin*, *ſum*, are Verbs purely *Neuter* or *Intranſitive*; or, as the *Latin* and *Greek* Grammarians more uſually expreſs it, Verbs ſubſtantive, ſignifying the mere Exiſtence of the Thing, without the active or *tranſitive* Conjugations.

TRANSITORY, in Law, &c. a Term oppoſite to Local. See LOCAL.

TRANSLATION, the Act of transferring or removing a Thing from one Place to another. See PLACE.

As the *Tranſlation* of a Biſhop, a Council, a Seat of Juſtice, a Parliament; the *Tranſlation* of the Relicks of a Saint; the *Tranſlation* of the Empire, &c.

The Word is form'd of *trans*, beyond, and *latio*, of *ferre*, to carry.

The *Tranſlations* of Biſhops from one See to another, are prohibited by the Council of *Nice*, which renders them null, and appoints the *tranſlated* Biſhop to return to his former Church. --- The Council of *Sardica* excludes *tranſlated* Biſhops from Communion. It had been obſerv'd, that no Biſhop was ever remov'd from a greater Church to a leſſer; and that thoſe who thus quitted their Churches, only did it out of Ambition or Avarice.

This Diſcipline was obſerv'd for 900 Years; and the firſt Inſtance of any *Tranſlation* of Note, was that of Pope *Formoſa*, who was Biſhop of *Porto*. One of his Succeſſors took hold of this Pretence to have him taken out of his

Grave; and a Council held ſoon after, forbad this *Tranſlation* to be made a Precedent.

However, the ſame Church allow'd of ſome legitimate Cauſes of *Tranſlations*; as, the apparent Advantage of the Church: Under which Pretence, *Tranſlations* ſoon became ſo frequent, that for 500 or 600 Years laſt paſt, they have been eſteem'd a Kind of Common Law. See BISHOP.

The *Tranſlation* of a Religious from one Order to another, cannot be effected without the Conſent of the Pope: 'Tis added, that it is not allow'd to *tranſlate* from a ſeverer Rule to a laxer one.

TRANSLATION is alſo us'd for the Verſion of a Book, or Writing out of one Language into another. See VERSION.

Tranſlators frequently endeavour to excuſe themſelves at the Expence of their Language; and ask Pardon for it, as if it were not rich and copious enough to expreſs all the Force and Beauties of the Original.

Thus is the *Engliſh* Tongue accus'd of the Poverty and Dryneſs which is in the *Tranſlator*'s own Genius; and the Faults charg'd on that, which ſhould only lie at their own Doors.

The *Italians* have a Proverb, *Traduttore, Traditore:* A *Tranſlator*, a Traytor.

TRANSMARINE, TRANSMARINUS, ſomething that comes from, or belongs to, the Parts beyond Sea. See FOREIGN and EXOTIC.

TRANSMIGRATION, the Removal or Tranſlation of a whole People into ſome other Country, by the Violence of a Conqueror.

Some tranſlate the leading of the Children of *Iſrael* Captive into *Babylon*, the *Tranſmigration* of the *Iſraelites*, &c. See MIGRATION.

TRANSMIGRATION is particularly us'd for the Paſſage of a Soul out of one Body into another; the ſame with what we otherwiſe call METEMPSYCHOSIS.

The *Siameſe*, F. *Tachard* informs us, from a Belief of the *Tranſmigration* of Souls into other Bodies, forbear killing any Beaſts; leſt, by that Means, they ſhould diſpoſſeſs the Souls of their deceas'd Relations.

TRANSMISSION, in Opticks, *&c.* the Act of a tranſparent Body paſſing the Rays of Light through its Subſtance, or ſuffering them to paſs; in which Senſe the Word ſtands in Oppoſition to *Reflection*. See REFLECTION.

Tranſmiſſion is alſo frequently us'd in the ſame Senſe with *Refraction*, by Reaſon moſt Bodies in *tranſmitting* the Rays, do alſo refract them. See REFRACTION.

For the Cauſe of *Tranſmiſſion*, or the Reaſon why ſome Bodies *tranſmit*, and others reflect the Rays. See TRANSPARENCY and OPACITY.

The Rays of Light, Sir *Iſaac Newton* obſerves, are ſubject to Fits of eaſy *Tranſmiſſion* and each Reflection. See RAY and LIGHT.

TRANSMUTATION, the Act of transforming, converting or changing one Nature into another. See CONVERSION and TRANSFORMATION.

The Term is chiefly us'd in Chymiſtry and Medicine: 'Tis greatly queſtion'd, whether the *Tranſmutation* of Silver into Gold, and of Tin into Silver, ſo much ſought by the Chymiſts, be poſſible or not. See GOLD, *&c.*

The pureſt and ſubtileſt Parts of the Food are *tranſmuted* or aſſimulated into the proper Subſtance of the Body. For the Manner how, ſee NUTRITION.

Nature, Sir *Iſaac Newton* obſerves, ſeems delighted with *Tranſmutations*: He goes on to enumerate ſeveral Kinds of *Natural Tranſmutations*; groſs Bodies and light, he ſuſpects, may be mutually *tranſmuted* into each other; and adds, That all Bodies receive their active Force from the Particles of Light which enter their Compoſition. See LIGHT and FIRE.

For all fix'd Bodies, when well heated, emit Light as long as they continue ſo; and again, Light intermingles itſelf and inheres in Bodies as often as its Rays fall on the ſolid Particles of thoſe Bodies. See OPACITY.

Again, Water, which is a fluid, volatile, taſtleſs Salt, is by Heat *tranſmuted* into Vapour; which is a kind of Air; and by Cold, into Ice, which is a cold, tranſparent brittle Stone, eaſily diſſolvable; and this Stone convertible again into Water by Heat, as Vapour is by Cold. See WATER, VAPOUR, ICE, *&c.*

Earth, by Heat, becomes Fire; and by Cold, is turned into Earth again: Denſe Bodies, by Fermentation, are rarified into various kinds of Air; and that Air by Fermentation alſo, and ſometimes without, reverts into groſs Bodies. See AIR, *&c.*

Quickſilver ſometimes puts on the Form of a fluid Metal; ſometimes it appears in Shape of a pellucid, fragile Salt, called *Sublimate*; ſometimes of a pellucid volatile, white, taſtleſs Earth, called *Mercurius Dulcis*; by Diſtillation it becomes Vapour, and by Agitation in vacuo, ſhines like Fire, *&c.* See MERCURY and PHOSPHORUS.

All Bodies, Beaſts, Fiſhes, Inſects, Plants, *&c.* with all their various Parts, grow and increaſe out of Water, and aqueous and ſaline Tinctures; and by Putrefaction, all of them revert into Water or an aqueous Liquor again. See WATER.

Further, Water expos'd a while to the open Air, puts on a Tincture, which in Proceſs of Time has a Sediment and a Spirit; and before Putrefaction, yields Nouriſhment both for Animals and Vegetables. See NUTRITION and VEGETATION.

TRANSMUTATION, in Alchymy, the Act of changing or exalting imperfect Metals into Gold or Silver. See METAL, GOLD, *&c.*

This is alſo call'd the *Grand Operation*, and is to be effected with the Philoſophers Stone. See PHILOSOPHERS *Stone*.

Some Alchymiſts hold, that the *Tranſmutation* ſhould rather be call'd the *Perfection* of imperfect Metals; as holding all Metals intended by Nature to arrive equally at this Perfection, inaſmuch as they are compos'd of the ſame Matter; and that 'tis only the Impurity of their Matrices, that is, of the Place wherein they are form'd by Nature, that has prevented their arriving thereat. See METAL.

The Elixir being projected on any of thoſe Metals, it is ſuppos'd to purge, and ſeparate the impure Parts from the pure, and to join itſelf wholly to the Mercury (which is the pure Part,) as being of the ſame Nature. See PROJECTION.

Whether or no Metals are *tranſmutable* into one another, is a Point ſtrongly diſputed among the Philoſophers; the Alchymiſts ſtrenuouſly aſſerting the Affirmative. See ALCHYMY.

Some Metals 'tis commonly allow'd may be chang'd into others, *e. gr.* Iron into Braſs or Copper, and Lead into Tin; but *Cardan* and ſome others deny even this, and argue further, that tho' Iron and Braſs, as being nearly alike in Weight and Tenacity, *&c.* provided their Colour and Hardneſs could be chang'd, might be converted into one another, either really, or, at leaſt, apparently, yet would the *tranſmuting* or ripening of other Metals into Gold or Silver be ſtill impoſſible; both as thoſe Metals are all to be firſt calcin'd, after which they can never be brought again to their priſtine Purity; and as there is a Generation requir'd, which is not the Work of Art, but Nature.

Cardan de Metall. Lemery, Dickenſon, and others, give us Accounts of the various Impoſtures of *Adepti* in the Buſineſs of *Tranſmutation*; ſome, for Inſtance, fixing Mercury with Verdigreaſe, and then heightening the Colour with Cadmia, Turmeric, *&c.* But this, if try'd with the Coppel, all goes off in Fumes; and, in effect, nothing produc'd this Way ought to be adjudg'd true Gold, unleſs it endure Coppelling, Cementation, Purification, with Antimony and the Depart. See PURIFICATION, ESSAYING, *&c.*

Add, that it muſt have the Malleability, extreme Ductility, and ſpecific Gravity of Gold, which is to Water as 18 and half to 1. See WEIGHT.

The Trick of *tranſmuting* Cinnabar into Silver is thus: The Cinnabar being bruis'd groſsly, is ſtratify'd in a Crucible with granulated Silver, and the Crucible plac'd in a great Fire; and after due Time for Calcination, taken off: then the Matter being pour'd out, is found to be Cinnabar turn'd into real Silver, tho' the Silver Grains appear in the Number and Form they were put into the Crucible; but the Miſchief is, coming to handle the Grains of Silver, you find them nothing but light friable Bladders, which will crumble to Pieces between the Fingers.

Mr. *Boyle* in his Scept. Chymiſt. tells us, that two Friends of his did, by urging Mercury in a ſkilfully manag'd Fire, turn it almoſt Weight for Weight into Water; but does not ſay what was the ſpecific Gravity of the produc'd Water, nor of the remaining *untranſmuted* Maſs of Mercury. --- He likewiſe aſſures us, that Rain Water being diſtill'd and re-diſtill'd by a Friend of his, near 200 times, did, after each Diſtillation, leave, at the Bottom of the Glaſs Body, a conſiderable Quantity of a white Earth; and that more plentifully in the latter Diſtillation than the former.

This he believ'd to be a certain Quantity of Water actually *tranſmuted* into Earth; adding, that it was above twice as heavy ſpecifically as common Water, and of ſo fix'd a Nature, that it lay a conſiderable Time in a red hot Crucible, without loſing any thing of its Weight, or emitting any Smoak.

TRANSMUTATION, in Geometry, the Reduction, or Change, of one Figure or Body into another of the ſame Area, or Solidity, but of a different Form; as a Triangle into a Square; a Pyramid into a Parallelopiped, *&c.* See FIGURE, *&c.*

TRANSMUTATION, in the higher Geometry, is us'd for the Converting a Figure into another of the ſame Kind and Order, whoſe reſpective Parts riſe to the ſame Dimenſions in an Equation, admit the ſame Tangents, *&c.* See TRANSFORMATION.

If a rectilinear Figure be to be *tranſmuted* into another, 'tis ſufficient that the Interſections of the Lines that compoſe it, be transferr'd; and Lines drawn thro' the ſame in the new Figure. See REDUCTION.

If the Figure to be *tranſmuted* be Curvilinear, the Points, Tangents, and other right Lines, by means whereof the Curve

Curve Line is to be defin'd, muſt be transferr'd. See CURVE.

TRANSMUTATION *of Plants.* See SEED.

TRANSOM, among Builders, the Piece that is framed acroſs a double light Window. See WINDOW.

TRANSOM among Mathematicians, denotes the Vane of a Croſs-ſtaff; or a wooden Member fixed acroſs it, with a ſquare Socket whereon it ſlides, *&c.* See VANE and CROSS-*ſtaff.*

TRANSOM, in a Ship, is a Piece of Timber which lies athwart the Stern, between the two Faſhion Pieces, directly under the Gun-room-port.

TRANSPARENCY, or *Diaphaneity*, in Phyſics, a Quality in certain Bodies, whereby they give Paſſage to the Rays of Light. See LIGHT.

The *Tranſparency* of natural Bodies, as Glaſs, Water, Air, *&c.* ſome have imputed to the great Number, and Size of the Pores or Interſtices between the Particles of thoſe Bodies: But this Account is exceedingly defective; for the moſt ſolid and opake Body in Nature, we know, contains a great deal more Pores than it does Matter; a great deal more, ſure, than is neceſſary for the Paſſage of ſo infinitely fine and ſubtile a Body as Light. See PORE.

Ariſtotle, Des Cartes, &c. place *Tranſparency* in the Rectitude or Straightneſs of the Pores; by means of which, ſay they, the Rays are enabled to make their Way through, without ſtriking againſt the ſolid Parts, and being reflected back again: But this Account, Sir *Iſaac Newton* ſhews, is lame; the Quantity of Pores in all Bodies being ſufficient to tranſmit all the Rays that fall on them, howſoever thoſe Pores be ſituated with reſpect to each other.

The Cauſe, then, why all Bodies are not *Tranſparent*, muſt not be aſcribed to their wanting Rectilinear Pores; but either to the unequal Denſity of the Parts; or to the Pores being fill'd with ſome foreign Matters, or their being empty; by means of which, the Rays in paſſing thro', undergoing a great Variety of Reflections and Refractions, are perpetually diverted this way and that, till at length falling on ſome of the ſolid Parts of the Body, they are extinguiſh'd and abſorbed. See RAY and REFLECTION, *&c.*

Thus, Cork, Paper, Wood, *&c.* are Opake; when-as Glaſs, Diamonds, *&c.* are *Tranſparent*: The Reaſon is, that in the neighbourhood of Parts equal in Denſity, ſuch as thoſe of Glaſs, Water, Diamond, *&c.* are with reſpect to each other; the Attraction being equal on every Side, no Reflection or Refraction enſues; but the Rays which enter'd the firſt Surface of the Bodies, proceed without Interruption quite through the Body; thoſe few only excepted, which chance to meet with the ſolid Parts. But in the Neighbourhood of Parts, that differ much in Denſity, ſuch as the Parts of Wood and Paper are both in reſpect of themſelves, and of the Air or the empty Space in their Pores; as the Attraction will be very unequal, the Reflections and Refractions muſt be very great; and therefore the Rays will not be able to make their Way through ſuch Bodies, but will be perpetually deflected, and at laſt quite ſtopp'd. See OPACITY.

TRANSPARENCY, in Heraldry, the ſame as *Adumbration.* See ADUMBRATION.

TRANSPIRATION, the inſenſible, or almoſt inſenſible Paſſage of an excrementitious Matter through the Pores of the Skin; called alſo *Perſpiration.* See PERSPIRATION.

There are an Infinity of theſe *tranſpiratory* Pores in the Skin; the moſt conſiderable whereof, are the Orifices of the Ducts ariſing from the milliary Glands. See PORE and SKIN.

The Cauſe of *Tranſpiration*, is the Circulation and Heat of the Blood.

Inſenſible *Tranſpiration* is found very much to exceed all the ſenſible Evacuations put together. *Sanctorius* even ſhews, in his *Medicina Statica*, that a Perſon loſes more in one Day by *Tranſpiration*, than by all the other Outlets, in Fifteen. He adds, that if the Food taken in one Day weigh Eight Pounds, the *Tranſpiration* will be Five of them.

Cold prevents *Tranſpiration*, by its conſtringing the Pores of the Skin, and thickening the Liquors circulating in the cutaneous Glands: Heat, on the contrary, augments *Tranſpiration*, both by its opening the excretory Ducts of the Glands, and by its increaſing the Fluidity and Velocity of the Humours. See COLD, *&c.*

M. *Dodart*, from a Number of Experiments made for 33 Years together, aſſures us that we *tranſpire* much more in Youth than in Age.--- In ſome Perſons, the *Tranſpiration* is ſo copious, that they void but very little of the coarſer Excrements, though they eat very heartily.

Tranſpiration is abſolutely neceſſary in the Animal Oeconomy, to purify the Maſs of Blood, and diſcharge it of a Number of uſeleſs heterogeneous Particles which might corrupt it. Hence it is, that upon a Stoppage of the uſual *Tranſpiration*, there ariſe ſo many Indiſpoſitions, particularly Fevers, Agues, Itch, *&c.*

Tranſpiration is alſo of uſe to the Organ of Feeling, in that it prevents the Papillæ of the Skin from being dry'd, either by the Air, or by the continual Touches of external Bodies.

TRANSPIRATION is alſo uſed by ſome Authors, for the Entrance of the Air, Vapours, *&c.* through the Pores of the Skin into the Body.

Cardan, by this kind of *Tranſpiration*, accounts for the Prodigy of a Woman, whoſe daily Urines weigh'd 27 Pounds; though all the Foods ſhe took, both dry and liquid, did not exceed Four Pounds.--- Dr. *Baynard* ſuſpects ſome ſuch *Tranſpiration* to be the Caſe in hydropical Perſons. See DROPSY.

TRANSPLANTATION or TRANSPLANTING, in Agriculture and Gardening, the Removing of Trees or Plants, from the Places where they were ſowed or bred up, and planting them in other. See PLANTING and REPLANTING.

In the Tranſplanting of Foreſt Trees, Care is to be taken to preſerve the Roots, and even the fine Hairs or Filaments thereof, with the Earth that ſticks thereto; theſe Filaments being the Mouths that ſuck the Nouriſhment, and tranſuſe it to the Tree. See ROOT and VEGETABLE.

The Pits or Foſſes, into which the Trees are *tranſplanted*, ſhould be left open for ſome time before hand, that the Rain, Froſt and Sun may diſſolve the compacted Salt, render the Earth friable, and qualify it for nouriſhing the Tree.---- The ſame may be done, in ſome meaſure, by burning Straw in the new Pits, and drenching the Mould with Water in dry Seaſons, and by enriching the Ground with Manure. See MANURE.

Pliny was of Opinion, no Tree ſhould be removed under two, or above three Years old. *Cato* would have none *tranſplanted* leſs than Five Fingers in Diameter: But we are, now, able to *tranſplant* Trees of all Ages and Sizes, without Danger.

To *tranſplant* old Trees, was reckon'd ſo difficult, that *Veterem Arborem tranſplantare* is become a Proverb for a difficult Enterprize; and yet we are informed of a Grove of Six hundred Coco Trees of 80 Years Growth, and 60 Foot high to the loweſt Bough, *tranſplanted* by Count *Maurice*, to his Paradiſe of *Friburg*: And a great Perſon in *Devonſhire*, Mr. *Evelyn* tells us, *tranſplanted* Oaks, as big as Twelve Oxen could draw, to ſupply a Defect in an Avenue.

For the *Tranſplantation* of grown Trees, Mr. *Evelyn* gives the following Method, as practiſed with good Succeſs by the Lord *Fitzharding*: Chooſe Trees about the Thickneſs of a Man's Thigh; remove the Earth from about them, cut through all the ſide Roots, till the Tree may be, by force, brought down on one Side; ſo that the tap Roots may be conveniently come at to be cut off with the Ax: then redreſs the Tree, and let it ſtand cover'd with the Mould from which it was looſen'd, till next Year, or longer; and by that time it will have drawn new tender Roots fit for *tranſplanting*, and may be taken up at a fit Seaſon.

Otherwiſe, for very large Trees; e'er the hard Froſts come on, make a Trench about the Tree, at ſuch Diſtance from the Stem, as you judge ſufficient for the Root; dig ſo deep, as almoſt to undermine it; place Blocks, and Quarries of Wood to ſuſtain the Earth, and caſt in as much Water as may fill the Trench or ſufficiently wet it, unleſs the Ground were very moiſt before. Thus let it ſtand till ſome hard Froſt bind it firmly to the Roots, and then convey it to its new Station, which may be preſerv'd from freezing, by placing ſtore of warm Litter in it: ſo cloſe the Mould the better to the ſtraggling Fibres, and place the Earth taken out of the Pit about the Root of the new-planted Tree.

The common Rules for *Tranſplanting*, are, 1° The lighter the Soil is, the deeper are the Trees to be planted. 2° If the Soil be Gravel, or Sand, mix Clay with it, and *vice verſa.* 3° The beſt Seaſon, is either *October* or *February*; in warm, moiſt, clear Weather. 4° The large Roots to be abated, to prevent the Neceſſity of digging too deep; but the ſmall Fibrous ones to be ſpared. 5° In taking up the Trees to obſerve how the Roots grow, and in *Tranſplanting*, to diſpoſe them in the ſame Order, and place the Tree to the ſame Aſpect. 6° To defend young Trees after *Tranſplantation*, both from Wind and Sun, till the Roots be fix'd, and they begin to ſhoot. 7° If the Soil you *tranſplant* into, be good, don't top the Trees, but lop all the Boughs to one ſingle one, the moſt upright and promiſing among them: But if the Soil be poor, top them, and when they are ſhot out again, lop off all the Branches to one. See PRUNING.

TRANSPLANTING *of Fruit-Trees.* After a Summer's Growth of Fruit Seedlings in the Seminary, ſuch are pull'd up as are above a Foot high, and *tranſplanted* into a Nurſery; the reſt to be left in the Seed-Plot till another Year. See SEMINARY.

When drawn up, the Sprigs are to be cut off, from about the Top, the Strings from the Roots, and the Extremities, both of the Top, that it mayn't run too faſt upwards, and of the tap or heart Root, that it may not paſs directly downwards; leſt it go beyond the good Soil. The Holes, or Pits to be ſo deep, as that the Plants may ſtand ſomewhat deeper in the Ground, than when in the Seed-plot; cloſe

the

the Mould about them, and if it be a dry Time, water them the firſt Day, and cover the Soil with old Fern.

Mr. *Bradley* gives us a new Method of *Tranſplanting* Trees of all Kinds and Ages with Safety, either while they are in Bloſſom, or with Fruit upon them; thus: The Holes to receive the Trees, are to be prepared before the Trees are taken up; and the Earth which comes out of the Holes to be made very fine, and put into large Tubs and mix'd with Water, till it be about the Conſiſtence of thin Batter. Then the Holes wherein the Trees are to be planted, are to be fill'd with this thus-temper'd Earth, before the earthy Parts have time to ſettle.

The Advantage hereof is, that the Trees thus planted, have their Roots immediately incloſed and guarded from the Air; and the warm Seaſon of the Year diſpoſing every Part of the Tree for Growth and Shooting, it will loſe very little of its Vigour. ---- In Winter it does not ſucceed.

The ſame Author adds, that in conſideration of the Circulation of the Sap, it is as neceſſary to preſerve the Veſſels of Trees entire, as thoſe in Animal Bodies: And therefore in *tranſplanting* Trees in the Summer Seaſons, 'tis not proper to cut off any of the Branches, or wound any of the Veſſels, till they have renewed their Roots, which it is of abſolute Neceſſity to wound in *Tranſplanting* them. For the wounded Roots, he has provided a Plaiſter of a Mixture of Gums to prevent the Canker and Rot, and promote their Healing.

TRANSPLANTATION, in Natural Magic, is uſed for a Method of curing Diſeaſes, by transferring them from one Subject to another; much in Vogue among certain Philoſophers. See SYMPATHETIC.

This *Tranſplantation* is effected, either by the Uſe of a certain Medium, called on that account a *Magnet*; or without, by ſimple Contact.

The firſt Kind, which is that moſt properly call'd *Tranſplantation*, is when the Patient's Excrement being mix'd up with Earth, the Diſeaſe is *tranſplanted* into a Vegetable, ariſing from a Seed ſown in the ſaid Compoſt; or, when the Parings of the Nails of a gouty Perſon, are incloſed in an Auger-hole made in a Plant, particularly an Oak.

Here the Patient's Excrement is the Magnet, and the vital Spirit of the Plant ariſing from the Seed, is the Mumia which the Magnet receives; and the Caſe is the ſame, in the Parings of the Nails, and the vital Spirit of the Oak. See MUMIA.

The ſecond Kind of *Tranſplantation*, properly call'd *Approximation*, is, when a Finger ſeiz'd with a Panaris or Whit-low, is cured by rubbing in a Cat's Ear, which is held to receive the Pain.

In this Caſe, the ſound Subject receives the vital Spirits, unites with them, and corrects their morbific State: And, as certain Diſeaſes are got by Approximation; the infected Spirits of a diſeas'd Body, inſinuating themſelves into a ſound one, and thus infecting the ſame; ſo they are cured by Approximation; when the Spirits of a diſeaſed Perſon entering a ſound Body, the latter corrects and retrieves the morbific State of the former.

Tranſplantation, by means of the Magnet, is of five Kinds, *viz.* *Inſemination*, *Implantation*, *Impoſition*, *Irroration* and *Ineſcation*; each whereof, ſee under its proper Article, INESCATION, IMPLANTATION, *&c.*

TRANSPORT-*Ship*, is a Veſſel whereon to convey Proviſions, warlike Stores, Soldiers, *&c.* See VESSEL.

TRANSPORTATION, the Act of conveying, or carrying a thing from one Place or Country to another. See EXPORTATION.

In Matters of Commerce, *Tranſportation* is of equal Import with *Re-exportation*, *viz.* the taking up of Commodities in one foreign State or Kingdom, bringing them hither, and payingDuties for them; and then conveying them into ſome other foreign State, *&c.* by which it is diſtinguiſh'd from *Importation* and *Exportation*; where the Commodities are either carried originally out of, or brought finally into, our own Kingdom. See IMPORTATION and EXPORTATION.

Our *Tranſportation* or Re-exportation of Wooll, Butter, Hides, Tallow, Herrings, Beef and Salmon, which we tranſport from *Ireland*, to other Provinces, being the Concerns of our Merchants, and paying Duties to His Majeſty, have been reckon'd at 300,000 *l. per Annum.*

'Twou'd be tedious to enumerate the Value of our *Tranſportations* from *Denmark*, *Sweden*, *Spain*, *Portugal*, the *Streights*, *Turkey*, *Guinea*, *&c.* the moſt conſiderable, is from the *Eaſt Indies*. In the Infancy of that Trade, *viz.* in the Year 1613, of Pepper only, beſides what we conſumed at Home, we *tranſported* in one Year to other Countries, after it had paid Duty here, to the Value of 200,000 *l.* and of late Years our Exportation of what we bring from thence, after we have ſupplied ourſelves, is computed at 500,000 *l. Sterling.* See NAVIGATION and COMMERCE.

TRANSPORTATION is alſo a kind of Puniſhment; or, more properly, an Alleviation or Commutation of Puniſhment, for Criminals convicted of Felony, who, for the firſt Offence, unleſs it be an extraordinary one, are ordinarily *Tranſported* to the Plantations, there to bear hard Labour for a Term of Years, within which if they return, they are executed without further Trial. See FELONY, PUNISHMENT, *&c.*

TRANSPOSITION, in Algebra, the bringing any Term of an Equation over to the other Side. See TERM.

Thus if, $a+b=c$, and you may make $a=c-b$; b is ſaid to be *tranſpoſed*. See EQUATION.

TRANSPOSITION, in Grammar, call'd alſo *Hyperbaton*, a diſturbing or diſlocating of the Words in a Diſcourſe; or a changing of their natural Order of Conſtruction, to pleaſe the Ear, by rendring the Contexture more eaſy, ſmooth, and harmonious. See HYPERBATON.

A *Tranſpoſition*, which renders the Senſe perplex'd, is vicious.

The Conſtruction of the ancient Languages being much more Artful than that of the Modern ones; allowed of much greater and more frequent *Tranſpoſitions*. The *Engliſh*, *French*, *&c.* ſcarce ever allow of them but in Oratory and Poetry; in which Caſes they ſerve to give a Force and Energy to the Diſcourſe or the Verſe, and to prevent their languiſhing. See CONSTRUCTION.

TRANSPOSITION *in Muſic*, is a changing of the Notes of a Piece of Muſic. See NOTE.

Of this there are two Kinds; the firſt with reſpect to the *Clef*, the ſecond with reſpect to the *Key*.

Tranſpoſition with reſpect to the Clef, conſiſts in the changing of the Places or Seats of the Notes or Letters, amongſt the Lines and Spaces; but ſo as that every Note is ſet at the ſame Letter. See CLEF.

This is done either by removing the ſame Clef to another Line; or by uſing another Clef, but with the ſame Signature, by reaſon the Piece is ſtill in the ſame Key. See CLEF.

The Practice is eaſy in either Caſe: In the firſt, you take the firſt Note at the ſame Diſtance above or below the Clef-Note, in its new Poſition as before; and all the reſt of the Notes in the ſame Relations or Diſtances from one another; ſo that the Notes are all ſet on Lines and Spaces of the ſame Name.

In the ſecond, or ſetting the Muſic to a different Clef, 'tis to be obſerved, the Places of the three Clef Notes are invariable in the Scale, and are to one another in theſe Relations, *viz.* the Mean a 5th above the Baſs, and the Treble a 5th above the Mean. Now to *Tranſpoſe* to a new Clef, *e. gr.* from the Treble to the Mean; where-ever that new Clef is ſet, we ſuppoſe it the ſame individual Note, in the ſame Place of the Scale, as if that Piece were that Part in a Compoſition to which this new Clef is generally appropriated; that ſo it may direct to the ſame Notes we had before *Tranſpoſition*: Now, from the fix'd Relations of the three Clefs in the Scale, it will be eaſy to find the Seat of the firſt *tranſpoſed* Note; and then all the reſt are to be ſet at the ſame mutual Diſtances they were at before. See SCALE.

Suppoſe, *e. gr.* the firſt Note of a Song be *d*, a 6th above the Baſs-clef; where-ever that Clef is placed, the firſt Note muſt be the greater 2d above it, becauſe a greater 2d above the Mean is a greater 6th above the Baſs-clef, the Relation of thoſe two being a 5th. ---- So that the firſt Note will ſtill be the ſame individual *d*.

The Uſe of this *Tranſpoſition* is, that if a Song being ſet with a certain Clef, in a certain Poſition, the Notes go far above or below the Syſtem of five Lines; they may, by the Change of the Place of the ſame Clef in the particular Syſtem, or by taking a new Clef, be brought more within the Compaſs of the Lines.

Tranſpoſition from one Key to another, is a changing of the Key; or a ſetting all the Notes of the Song at different Letters, and performing it, conſequently, in different Notes upon an Inſtrument. See KEY.

The Deſign hereof is, that a Song which being begun in one Note, is too high or low, or otherwiſe inconvenient for a certain Inſtrument; may be begun in another Note, and from that carried on in all its juſt Degrees and Intervals.

The Clef and its Poſition here remain the ſame; and the Change is of the Notes themſelves, from one Letter, and its Line or Space, to another.

In the former *Tranſpoſition*, the Notes were expreſs'd by the ſame Letters, but both removed to different Lines and Spaces: In this, the Letters are unmoved, and the Notes of the Song transferr'd to, or expreſs'd by other Letters, and conſequently ſet upon different Lines and Spaces, which, therefore, requires a different Signature of the Clef.

TRANSPOSITION *of Equation*. See EQUATION.

TRANSSUMPTIO, TRANSUMPTION, in the Schools, a Syllogiſm by Conceſſion or Agreement, us'd where a Queſtion propos'd is transferr'd to another, with this Condition, that the Proof of this latter ſhall be admitted for a Proof of the former.

Thus *Ariſtotle* in his Book *de Cœlo*, undertaking to ſhew that all the Stars are round, transfers the Queſtion to the Moon, and proves her Rotundity from her Increaſing and Waining;

Waining; ſuppoſing it a Thing admitted by his Opponents, that the Stars are all alike.

TRANSUBSTANTIATION, in Theology, the Converſion or Change of the Subſtance of the Bread and Wine, in the Euchariſt, into the Body and Blood of Jeſus Chriſt. See EUCHARIST.

Tranſubſtantiation, taken in its general and literal Senſe, implies any Change of one Subſtance into another; thus, the Change of *Moſes*'s Rod into a Serpent; of the Waters of the *Nile* into Blood; of *Lot*'s Wife into a Pillar of Salt, were preternatural *Tranſubſtantiations*; and the Change of the Food we eat, into the Subſtance of our Bodies, is a natural *Tranſubſtantiation*. See SUBSTANCE.

But the Word in its proper Senſe, as a Term, is reſtrain'd to the miraculous Change which the *Romiſh* Church holds is wrought in the Sacrament, by the Conſecration of the Prieſt.

One of the great Articles of that Church, rejected by the Reform'd, is that of *Tranſubſtantiation*; the latter maintaining the *Tranſubſtantiation* to be only figurative, and the former real.

The Reform'd interpret *eſt*, *is*, in the Text, *Hoc eſt Corpus meum*, This is my Body, by ſignificat; *q. d.* this *ſignifies* my Body: But the Council of *Trent* ſtand up ſtrenuouſly for the literal Senſe of the Verb: Thus, in Can. 1. Seſſ. 13. of that Council, 'tis expreſsly decreed, that in *Tranſubſtantiation, the Body and Blood of our Lord Jeſus Chriſt are truly, really, and ſubſtantially under the Species of Bread and Wine.*

'Tis added, that by *truly*, we mean properly, and not only by Signification, as if the Euchariſt were no more than a Sign of the Body and Blood of Jeſus Chriſt: That by *really*, we mean in Fact, and not only in a Figure, as if the Euchariſt were only a Figure and Repreſentation of the Body and Blood of the Saviour of the World: And that by *ſubſtantially*, we mean in Subſtance, and not only in Virtue and Energy. --- Thus is *truly* oppos'd to a ſimple Sign; *really* to a Figure; and *ſubſtantially* to Energy.

TRANSVERSALIS, in Anatomy, a Name given to ſeveral Muſcles, *&c.* in reſpect of their Situation, Progreſs, *&c.* as the

TRANSVERSALIS *Abdominis*, a Muſcle which lies under the Obliqui, and ariſes from the Cartilago Xiphoides, from the Extremities of the falſe Ribs, from the Tranſverſe Apophyſis of the Vertebræ of the Loins, and fix'd to the inner Side of the Spine of the Ilium, and inſerted in the Os Pubis, and Linea Alba.

This, with the Obliqui, (which ſee) unites its Tendons, as it approaches the *Linea Alba*, and is the only Muſcle that is cut in the Operation of the *Bubonocele*: It has a fine and thin Membrane that cloſes exactly its Ring or Hole, through which the Veſſels paſs.

TRANSVERSALIS *Colli*, is a Part of the *Tranſverſalis Dorſi*, which ſome divide into three, *viz.* the Sacer, Semiſpinatus, and *Tranſverſalis Colli*.

It ariſes from the Os Sacrum, and from all the tranſverſe Proceſſes of the Vertebræ of the Loins, Back, and Neck, except the two firſt; and is inſerted by ſo many diſtinct Tendons to all their ſuperior Spines: It moves the whole Spine obliquely backwards.

TRANSVERSALIS *Pedis Placentini* comes from the Bone of the Metatarſus, that ſuſtains the Toe next the little Toe, and paſſing acroſs the other Bones, is inſerted into the Os Seſamoides of the great Toe: Its Uſe is to bring all the Toes cloſe to one another.

TRANSVERSALIS *Penis* ariſes from the Iſchium juſt by the Erectores, and runs obliquely to the upper Part of the Bulb of the Urethra.

It helps to preſs the Veins upon the Back of the Penis, againſt the Os Pubis, which is the Cauſe of Erection. See ERECTION.

TRANSVERSALIS *Dorſi*, TRANSVERSALIS *Lumborum*, TRANSVERSALIS *Femoris* } See { SEMISPINATUS. SACER. QUADRATUS.

TRANSVERSALIS is alſo a Name given to a Suture of the Cranium, becauſe of its traverſing or croſſing the Face from one Side to t'other. See SUTURE.

It ariſes at one of the leſſer Angles of the Eye, and paſſing along the Bottom of its Orbit, and the Root of its Noſe, terminates in the other leſſer Angle.

TRANSVERSE, ſomething that goes acroſs from Right to Left, or from Corner to Corner.

Thus Bends and Bars in Heraldry are *tranſverſe* Pieces or Bearings. See BEND.

The Diagonals of a Paralelogram or a Square are *tranſverſe* Lines. See DIAGONAL.

Lines which make Interſections with Perpendiculars, are alſo call'd oblique or *tranſverſe* Lines. See LINE, PERPENDICULAR, OBLIQUE, *&c.*

TRANSVERSE *Axis*, or *Diameter*, call'd alſo the *firſt* or *principal Axis*. See AXIS and LATUS *Tranſverſum*.

The Tranſverſe *Axis of an Ellipſis*, is the longer Axis, or that which *traverſes* it lengthwiſe, in contra-diſtinction to the Conjugate one. See ELLIPSIS and CONJUGATE.

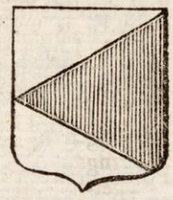
The *Tranſverſe* Axis of an Hyperbola, is the Line D K, Tab. Conicks, Fig. 17. cutting the Curve in the Points D and K. See HYPERBOLA.

TRANSVERSE *Muſcles*, in Anatomy, are certain Muſcles ariſing from the *tranſverſe* Proceſſes of the Vertebræ of the Loins. See VERTEBRÆ and LOINS.

TRANTERY, in ſome Cuſtoms, is the Money ariſing by Amerciaments of Ale-ſellers and Victuallers, for breaking the Aſſize of Bread and Ale. See ASSIZE.

Particularly at *Luſton*, and other Manors in *Herefordſhire*.

TRAVERSE or TRANSVERSE, ſomething that goes athwart another, *i. e.* croſſes and cuts it obliquely. See TRANSVERSE.



TRAVERSE is particularly uſed for a Piece of Wood or Iron placed tranſverſely, to ſtrengthen and fortify another. Such are thoſe uſed in Gates, Windows, *&c.*

To plane a Board againſt the Grain, is alſo call'd among Joiners, *&c.* to *Traverſe* it.

TRAVERSE, in Gunnery, ſignifies to turn or point a Piece of Ordnance which Way one pleaſes, upon her Platform. See ORDNANCE, CANNON, *&c.*

The laying and removing a Piece of Ordnance or a great Gun, in order to bring it to bear, or lie level with the Mark; is alſo called *Traverſing the Piece*. See GUNNERY, *&c.*

TRAVERSE is ſometimes alſo uſed in Heraldry, for a Partition of an Eſcutcheon, of the Figure adjoining, which they Blazon parted *per pal Traverſe*, Argent and Gules.

TRAVERSE, in Navigation, is the Variation or Alteration of a Ship's Courſe, occaſion'd by the ſhifting of the Winds, Currents, *&c.* See COURSE.

Traverſe Sailing, is uſed when a Ship having ſet Sail from one Port, towards another, whoſe Courſe and Diſtance from the Port ſail'd from, is given or known, is, by reaſon of contrary Winds, or other Accidents, forced to ſhift and ſail on ſeveral Courſes, which are to be brought into one Courſe, to learn, after ſo many Turnings and Windings, the true Courſe and Diſtance made from the Place ſail'd from, and the true Point or Place where the Ship is; that ſo the Wind coming fair, it may be known how to ſhape a Courſe for the Place intended. See SAILING.

This may be perform'd Geometrically two Ways: The Firſt, by drawing new Meridians, through the Extremity of every Courſe, parallel to the firſt Meridian, or North and South Lines at firſt made: and ſetting off every Courſe with a Sweep of 60, as if it were a Queſtion in Plain Sailing. You may alſo let fall Perpendiculars to every new Meridian, from the Point that the Ship ſail'd to upon that Courſe, by which you have the Courſe, Diſtance, Difference of Latitude and Departure to every Courſe. To Illuſtrate this by an Example: A Ship being bound for a Port diſtant 120 Miles N. E. ½ E. ſails S. S. E. 30 Miles, then N. E. by N. 40, then E. by N. 25, then N. N. E. 44; 'tis requir'd to find the Courſe and Diſtance made good, and alſo the Courſe and Diſtance to the Port bound for.

Draw the Line HK (Tab. Navigation, Fig. 17.) at pleaſure, for a Meridian, or North and South Line, and therein aſſume a Point, as at A, for the Port ſail'd from; then with 60 of the Chords, and one Foot in A, draw the Arch L m, upon which ſet off two Points (becauſe the Courſe is S.S.E.) from L to m, and draw the Line A m, upon which ſet off the Diſtance 30, from A to B; then is the Ship at B: Thus letting fall the Perpendicular B K, A K 27° 7′ is the Difference of Latitude, and B K 11° 5′, the Departure for the firſt Courſe.

For the ſecond Courſe, with the Diſtance K B, draw the Parallel B N, and thereby with the Chord of 60, as before, ſet off the Second Courſe and Diſtance, N. E. by N. 40, from B to C, and let fall the Perpendicular C L, then is the Ship at C, the Difference of Latitude upon that Courſe is B L 33: 3, and Departure C L 22: 2.

Proceed in the ſame manner for the third Courſe, with the Parallel C O, ſet off E. by N. 25, from C to D, and draw the Line D P, from which ſet off the laſt Courſe, N. N. E. 44, then is your Ship at E.

Since, then, the Ship came from A, and is now at E, the Line A E meaſured on the ſame equal Parts, upon which all the other Diſtances were taken, will be found 91 Miles, and the Arch R Q meaſured on the Rhumbs, five Points, *viz.* N. E. by E. ſo that the Ship is now 91 Miles N. E. by E. from the Port ſailed from.

To find her Courſe and Diſtance to the Port bound for, ſet off 4 half Points upon the Arch R Q from R to S, and from A through S draw the Line A S F; upon which ſet off

120, the Distance from the Port sailed from to the Port bound for, from A to F, then is F the Port bound for; now the Port bound for being at F, and the Ship being but at E, the Line E F measured on the same equal Parts that the rest was taken from, will be found to be 31, and the Arch T U measured on the Chords, is 35° 12′, or N. E. by N. somewhat easterly, &c.

This Method is useful, where the Courses tend generally one way, without intersecting one another; but if they often cross, 'tis best to have recourse to the 2d Method, which is without new Meridian.

In order to this, observe how many Points are between the Point next to be laid down, and the Point opposite to the Course last laid down; for that is the Point for laying down; then, with the Chord of 60, and one Foot in the Point the Ship is last come to, describe an Arch; upon which set off the Points found by the abovesaid Rule, and through that draw the Line for the next Course, &c. For an Example;

Draw a North and South Line, as in the former, as the Line R M, Fig. 17; in which assume a Point, as at A, for the Port sail'd from; then from A set off the first Course and Distance, *viz.* N. N. W. 68, from A to B, and for the second Course, with the Chord of 60, and one Foot in B, draw the Arch T W, upon which to set off the next Course S. S. W. 70, observe the Rule above delivered, *viz.* To take the Number of Points between the Point opposite to the last Course sailed, and the Point you are next to sail. The Reason of which Rule is this: If from A to B your Course be N. N. W. the Back from B to A, must needs be S. S E. the opposite Point, and then if you were to sail S. by E. it must be one Point to the Southward of that S. S. E. Line; if South, it is two Points, and consequently the next Course being S. S. W. I set off 4 Points, upon which set off 70 Miles, from B to C, and then is your Ship at C: For the third Course, if from B to C be S. S. W. then from C to B N. N. E. but the next Course being E. half N. the Points between N. N. E. and E. half N. are five Points and an Half, and therefore with the Chord of 60 and one Foot in C, draw the Arch *x y*, upon which set off five Points and an Half, from *x* to *y*, and through *y* draw the Line C D, upon which set off 90 Miles from C to D, then is *y* our Ship at D.

After the same Manner lay down all the rest, as D E W. N. W. half N. 70, then E F South 25, then F G, E. half S. 45; then lastly G H, South 30, which is the last Course.

Thus your Ship being at H, and the Port sailed from at A, the Line A H 28 Miles, is the Distance made good; and the Angle at A is four Points, *viz.* S. E. but the Port intended for, being S. W. 55. Set it from A to K, and the Ship being at H, the Line H K, 62 Miles, is the Distance from the Ship to the Port bound for; and the Course is found by measuring the Angle at H 71° 48′ or W. S. W. more than a Quarter Westerly, &c.

To work a TRAVERSE *by the Tables of Difference of Latitude and Departure.*

This is the principal Use those Tables are intended for; and the Way of working a *Traverse* hereby, is equal to the best for Exactness, and superior in Point of Expedition.

Make a little Table with six Columns, the First for the Course, the Second for the Distance, the Third for the Northing, the Fourth for the Southing, the Fifth for the Easting, the Sixth for the Westing. Then find the Difference of the Latitude and the Departure to every Course, and set them in their proper Columns; as where the Course is Northerly, set the Difference of the Latitude under Northing, or in the North Column; and where the Course is Southerly, set the Difference of Latitude in the South Column.

Again, where the Course is Easterly, set the Departure in the East Column, and when Westerly, set it in the West Column; then adding up each Column by itself, subtract the North and South Columns, the greater from the lesser, the Remainder is the Northing or Southing made good. Also subtract the East and West Columns, the bigger from the lesser, the Remainder is the Easting or Westing made good; then have you the Difference of Latitude and Departure given, to find the Course and Distance.

In the first Example above specified, the first Course is S. S. E. 30 Miles, or two Points 30 Miles; for which, I find the Difference of Latitude 27 : 7. Now the Course being between South and East, I place my Difference of Latitude in the South Column, and my Departure 11 : 5 in the East Column, leaving the North and West Columns blank.

Then for the Second Course, N. E. by N. or three Points 40 Miles, my Difference of Latitude, 33 : 3 is to be placed in the North Column, and the Departure 22 : 2, in the East Column, because the Course is between the North and East.

Then the third Course being E. by N. or seven Points, 25 Miles, I place my Difference of Latitude, 4 : 9 in the North Column, and Departure 24 : 5, in the East Column.

And so for the fourth Course N. N. E. or two Points 44 Miles, I place my Difference of Latitude 40 : 6, in the North Column, and my Departure, 16 : 8, in the East Column; then adding up each Column, the Sum of the Northing Column is 78 : 8, and the Sum of the South Column is 27 : 7, which subtracted from the Northing 78 : 8, the Remainder 51 : 1, is the Difference of Latitude made good, which is Northing, because the Northing was the greater Number.

Again, the Sum of the Easting Column is 75 : 0, which, because there is no Westing to subtract from it, is the Easting made good. Thus you have the Northing 51 : 1, and the Easting 75 : 0 given, to find Course and Distance; and though you cannot find in the Table the exact Number of 51 : 1, and 75 : 0 together, yet find the nearest you can, which is 75 : 4, and 50 : 9, over which at the Top, you find 34 Degrees for the Course, which is N. E. by N. 0° 15′ easterly, and the Distance 91 Miles.

TRAVESTY or TRAVESTI, a Term which some late Authors have introduced into Poetry. The Word is originally *French*, being a Participle, of the Verb *Travestir*, to disguise one's self, or to appear in Masquerade. Hence *Travesty* comes to be applied to the disfiguring of an Author, or the Translating him into a Style and Manner different from his own; by which means it becomes difficult to know him.

G. Battista Lalli, has *travestied Virgil*, or turn'd him into *Italian* Burlesque Verse. *Scarron* has done the same in *French*, and *Cotton* and *Phillips* in *English* Verse. See BURLESQUE.

Castalio is charged with having *travestied* the Bible, by reason of the Difference of Air and Stile between his Version and the Original.

TRAUMATICKS, Τραυματικὰ, Vulneraries; are Herbs or Drugs good for the curing of Wounds. See VULNERARY.

TRAYL-BASTON, TRAIL-BASTON (*q. d. trahe baculum*, drag a Club or Staff). See JUSTICE *of Trail-baston*.

Edward I. in his 32d Year, sent out a new Writ of Inquisition, called *Trail-baston*, against the Intruders on other Mens Lands, who to oppress the right Owner, would make over their Lands to great Men; against Batterers hired to beat Men; Breakers of Peace; Ravishers; Incendiaries; Fighters; false Assisors and other Malefactors; which Inquisition was so strictly executed, and such Fines taken, that it brought in a world of Treasure to the King.

TRAYTOR, TRAITOR, TRADITOR, a Betrayer of his King and Country; or one guilty of High Treason. See TREASON and TRADITOR.

TRAYTEROUS *Position*, is particularly understood of a Tenet, which some formerly held, of the Legality and Property of taking Arms by the King's Authority against his Person and those commission'd by him; which is condemn'd by Statute 14 *Car.* II.

TREACLE, in Pharmacy, &c. See THERIACA.

TREASON, *Treachery*; the Act of Infidelity to one's lawful Soveraign.

Treason, in our Laws, is of two Sorts, *viz. High* and *Petty Treason*.

High TREASON or TREASON *Paramount*, is an Offence committed against the Security of the King or Kingdom, whether by Imagination, Word or Deed. Such are, To compass or imagine the Death of the King, Queen or Prince; or to Deflour the King's Wife, or his Eldest Daughter unmarried, or his Eldest Son's Wife; or to levy War against the King in his Realm; to adhere to his Enemies; Counterfeit his great Seal or Money; to kill the King's Chancellor, Treasurer, Justices of either Bench, Justices in Eyre, of Assize, or of Oyer and Terminer, being in their Place during their Office; diminishing or impairing current Money; saying that the King is a Heretic or Papist, or intends to introduce Popery, &c. *Anno* 13 *Car.* II.

'Tis a Maxim, That *In majori Proditione, omnes sunt Principales*; there are no Accessaries in *Treason*, all are Principals.

Also, that *Voluntas non reputabitur pro facto, nisi in causa Proditionis*; the Will is never taken for the Deed in any Case, but that of *High Treason*: Though some *High Treasons* are much more Heinous than others, yet the Punishment appointed by Law, is the same in all (Clipping and Coining only excepted) which is, that the Traitor be laid upon a Hurdle or Sledge, drawn to the Gallows, there hanged, but cut down while alive, the Entrails pulled out and burnt before the Criminal's Face; then his Head and Quarters cut off, and Impaled where the King shall judge meet. Add to this, that he forfeits all his Lands and Goods whatever, to the King; his Wife loses her Dowry; his Children their Nobility, and all Right of Inheriting.

Even an Ideot or Lunatic, though judg'd incapable of most Crimes, shall be punished as a Traitor, if he go about to kill the King.

For Petty TREASON. See PETTY *Treason*.

This Kind gives Forfeiture of Eſcheats to every Lord within his Manor. See ESCHEAT.

There is alſo mention made of *Accumulative* and *Conſtructive Treaſon*, in the Statute 14 *Car.* II.

TREASURE, *Theſaurus*, Θεσαυρος, Store of Money in reſerve. See TREASURER and TREASURY.

TREASURE-*Trove*, q. d. *Treaſure found*, in Law, is when any Money, Gold, Silver, Plate, or Bullion, is found in any Place, and none knows to whom it belongs.

This ſhould, naturally, fall to the Finder; but particular People have made particular Proviſions for it.---- The *Jews* gave it the Proprietor of the Place where it was found: The *Roman* Juriſprudence was various with regard hereto; ſometimes it was given to the Maſter of the Grounds; ſometimes to the Finder; and ſometimes it was adjudged to the public Treaſury.

In *France* and *England*, the general Uſage is to have ſuch *Treaſure* ſequeſtred to the King, unleſs where the Benefit thereof is expreſly granted or made over by the King to ſome other.

In ſome Places in *France*, it is divided into three Parts; one for the Prince, one for the Proprietor of the Land, and one for the Finder.

Briton ſays, 'tis every Subject's Part, as ſoon as he hath found any Treaſure in the Earth, to make it known to the Coroners of the County, &c.

This was anciently call'd *Findaringa*, of finding the *Treaſure*, L L. *Hen.* I.

The Puniſhment for concealing *Treaſure* found in *England*, is Impriſonment and Fine; but if any Mine of Metal be found in any Ground, it always appertains to the Lord of the Soil, except it be a Mine of Gold or Silver, which anciently always belong'd to the King, in whoſe Ground ſoever it were found: But by an Act of Parliament, the King now, hath only the Præ-emption.

TREASURER, an Officer to whom the Treaſure of a Prince or Corporation is committed to be kept and duly diſpoſed of in the Payment of Officers and other Expences. See TREASURY.

Of theſe there is a great Variety. ---- His Majeſty of *Great Britain*, in Quality of Elector of *Brunſwick*, is *Arch Treaſurer of the* Roman *Empire*. ---- In the States of *Poland* are two *Grand-Treaſurers*; that of the Kingdom of *Poland*, and that of the Dutchy of *Lithuania*.

In *England*, the principal Officers under this Denomination are the Lord *High Treaſurer*, the *Treaſurer of the Houſhold*; *Treaſurer of the Navy*, of the *Wardrobe*, of the *King's Chamber*, &c.

Anciently we had likewiſe a *Treaſurer of the Exchequer*; *Treaſurer of Wars*, &c.--- In the *Romiſh* Countries, the Title *Treaſurer* is alſo given, ſomewhat abuſively, to an Eccleſiaſtic, who has the keeping of the Relicks, and the Charters, and Archives of a Church, or Monaſtery.

This Dignity ſucceeds, in ſome meaſure, to that of the ancient Deacons, who had the like Charge in the Primitive Church. See DEACON.

Lord High TREASURER *of England*, is the Third great Officer of the Crown. See CROWN.

He receives the Office, by Delivery of a white Staff to him from the King, and holds it during the King's Pleaſure: Anciently, he received it, by Delivery of the Golden Keys of the Treaſury.

Under his Charge and Government, is all the King's Revenue kept in the Exchequer. See REVENUE and EXCHEQUER.

He has the Check of all the Officers, any way employ'd in collecting Impoſts, Cuſtoms, Tributes or other Revenues of the Crown. He has the Gift of all the Cuſtomers, Comptrollers and Searchers Places, in all the Ports of *London*, and the Nomination of the Eſcheators in every County. See CUSTOM-*Houſe*, &c.

He, alone, or others in Commiſſion with him, letteth Leaſes of all the Crown Lands, gives Warrants to certain Perſons of Quality to have their Wine Cuſtom-free, &c.

The ancient Salary was 383 *l.* but at preſent 8000 *l.* The Office of Lord *Treaſurer*, is now in Commiſſion. See TREASURY.

TREASURER *of the Houſhold*, is an Officer, who, in the Abſence of the Lord Steward, has Power, with the Comptroller and other Officers of the Green Cloth and the Steward of the *Marſhalſea*, to hear and determine Treaſons, Felonies and other Crimes committed within the King's Palace. See HOUSEHOLD, GREEN *Cloth*, &c.

TREASURER *of the Navy*, is an Officer who receives Money out of the Exchequer, by Warrant from the Lord *High Treaſurer*, or the Lords Commiſſioners executing that Place; and pays all Charges of the Navy, by Warrant from the principal Officers of the Navy. See NAVY.

TREASURY, the Place wherein the Revenues of a Prince are receiv'd, preſerv'd, and disburs'd.

In *England*, the *Treaſury* is a Part of the Exchequer, by ſome call'd the *Lower Exchequer*. See EXCHEQUER.

The Officers of his Majeſty's *Treaſury*, or the lower *Exchequer*, are, the Lord Treaſurer, a Chancellor, a Secretary, two Chamberlains, an Auditor, four Tellers, a Clerk of the Pells, Uſhers of the Receipt, a Tally-cutter, &c. See each Officer under his proper Article, CHANCELLOR, TELLER, TALLY, &c.

At *Rome* under the Emperors, there were two Kinds of *Treaſuries*, the one call'd *Ærarium*, wherein the Monies deſtined to ſupport the Charges of the Government were kept; the other *Fiſcus*, wherein were preſerv'd thoſe intended for the particular Subſiſtence of the Emperor and his Court. In effect the Ærarium belong'd to the People, and the Fiſcus to the Prince. See FISCUS.

We have ſtill a Reſemblance of this Difference among us; but it is confounded in *France*, &c. where the King diſpoſes abſolutely of the public Treaſure, &c.

Lords of the TREASURY. In lieu of one ſingle Director, and Adminiſtrator of his Majeſty's Revenues, under the Title of Lord *High Treaſurer*; it is frequently thought proper to put that Office in Commiſſion, *i. e.* to appoint ſeveral Perſons to diſcharge it, with equal Authority, under the Title of *Lords Commiſſioners of the Treaſury*. See TREASURER.

TREAT, in our old Law-books, from the *French*, *Traiter*, ſignifies as much as taken out, or withdrawn: Thus a Juror was challenged, becauſe he could not diſpend 40 *l.* and therefore was *Treat* by the Statute. *Old. Nat. Br.* or diſcharged.

TREATISE, TRACTATUS, a ſet Diſcourſe in Writing, on any Subject.

The *Treatiſe* is ſuppoſed more expreſs, formal and methodical than an Eſſay; but leſs ſo than a Syſtem. See ESSAY, &c.

TREATY, a Covenant between ſeveral Nations; or the ſeveral Articles or Conditions ſtipulated and agreed upon between Sovereign Powers. See ALLIANCE.

There are *Treaties* of Peace, of Marriage, of Confederacy, of Neutrality, of Capitulation, and of Commerce and Navigation. See PEACE, CONFEDERACY, &c.

The celebrated *Treaties* are thoſe of *Nimeguen*, of *Munſter*, of the *Pyreneans*, of *Weſtphalia*, of *Riſwick*, of *Utrecht*, of *Hanover*, of *Vienna*, &c.

Treaties of Commerce are uſually follow'd by various Tariffs, to adjuſt the Duties of Exportation and Importation of Merchandizes into the reſpective Dominions of the contracting Power.

The laſt *Treaty* of Peace, Commerce, Navigation, &c. between *England* and *France*, was ſign'd at *Utrecht* the 1ſt of *April*, 1713, and conſiſts of 39 Articles, moſt whereof are regularly executed between the two Nations, only ſome of the more particular ones cannot yet be executed, by Reaſon of ſome Difficulties in the Tariffs. See TARIF.

TREATY, in Commerce, is a Convention or Contract agreed on, and the Clauſes and Conditions thereof regulated between two or more Perſons. The Word is underſtood of any thing that may enter into Commerce by way of Purchaſe, Sale, Exchange, &c. There are *Treaties* for the Buying of Merchandize, for the Freighting of Veſſels, for the Aſſurance of Goods, &c. See POLICY.

TREBELLIANICA, or TREBELLIAN *Fourth*, in the *Roman* Juriſprudence, a Right belonging to an Heir inſtituted by Teſtament. --- If the Teſtator, after appointing a full and general Heir, ſpent and diſpos'd of all his Effects in Legacies; or if he went *ultra Dodrantem*, beyond three Fourths thereof; in that Caſe, the Heir was allow'd to retrench and detain one fourth Part of the Legacies to his own Uſe.

In like Manner, if the Teſtator charg'd his Heir with a Feoffment of Truſt, and to reſtore the Succeſſion to another; in that Caſe, the Heir might likewiſe retain a Fourth of the whole Succeſſion, that the Quality of Heir might not be render'd wholly vain and fruitleſs.

TREBLE, in Muſic, the higheſt or acuteſt of the four Parts in Symphony, or that which is heard the cleareſt in a Concert. See MUSIC, GRAVITY, and SYMPHONY.

In the like Senſe we ſay, a *Treble* Violin, *Treble* Hautboy, &c. See VIOLIN, &c.

In Vocal Muſic, the *Treble* is uſually committed to Boys and Girls.--- Their Part is the *Treble*. See PART.

The *Treble* is divided into *firſt* or *higheſt Treble*, and *ſecond* or *Baſe Treble*. --- The half *Treble* is the ſame with Counter-tenor. See HARMONY.

TREBUCHET, TRIBUCH, TRIBUCHETUM, a Tumbrel, or Cucking-ſtool. See CUCKING-STOOL.

TREDECILE. See ASPECT.

TREE, *Arbor*, the firſt and largeſt of the vegetable Kind, conſiſting of a ſingle Trunk, out of which ſpring forth Branches and Leaves. See VEGETABLE, &c.

Standards, or *Trees in full Air*, are ſuch as naturally riſe a great Height, and are not topp'd. --- For the Choice of *Trees* of this Kind to be tranſplanted out of a Nurſery, *Quinteney* recommends us to ſuch as are ſtraight, ſix Foot high

high at leaſt, and five or ſix Inches thick at Bottom, and three or four at Top; the Bark pretty ſmooth and ſhining, as a Token of their Youth, and of the good Soil they grew in. See TRANSPLANTING, NURSERY, &c.

Dwarf Trees, are ſuch as are kept low, and never ſuffer'd to have above half a Foot in Stem. --- Theſe are us'd to be kept vacant or hollow in the Middle, that the Branches ſpreading round about the Sides, may form a kind of round Bowl or Buſh. See DWARF.

Wall Trees, are thoſe whoſe Branches are ſtretch'd out, and nail'd againſt Walls. See WALL and ESPALIER.

For Dwarf and Wall *Trees*, ſuch are to be choſe out of the Nurſery for Tranſplantation as are ſtraight, and conſiſt of a ſingle Stem, and a ſingle Graft, rather than two or three Grafts in ſeveral Branches: Their Thickneſs at Bottom ſhould be two or three Inches.

Fruit Trees, are ſuch as bear *Fruit*. See FRUIT.

Timber Trees, are thoſe whoſe Trunks are tall and ſtraight, whereof Beams, Maſts, &c. are us'd to be made. See TIMBER.

Coniferous Trees, are thoſe whoſe Fruit is of a conical Figure, as the Pine, Fir, Larch, &c. See CONIFEROUS.

Theſe are alſo call'd *Reſiniferous*, by reaſon Coniferous *Trees* are generally cover'd with a Bark that abounds in Reſin.

Mr. *Ray*, and other Authors, ſpeak of ſeveral *Trees* of prodigious Bulk. --- The Jeſuit *d'Acoſta*, in his Hiſtory of the *Indies*, lib. iv. c. 3. mentions a hollow *Tree* at *Tlococharaya*, three Leagues from *Gauxa* in *New Spain*, nine Fathom within-ſide near the Ground, and ſixteen without-ſide. He adds, that 'tis under this *Tree* the Barbarians aſſemble to perform their religious Ceremonies, dance round their Idols, &c. --- *Herrera* mentions another, which ſixteen Men, joining Hands, cannot fathom. --- F. *Kircher*, in his *Latium*, *p.* 50. affirms, he has ſeen a *Tree* near *Gonzano*, which would lodge a whole Family of 25 Perſons in its Cavity. The common People have a Tradition, that it was planted by *Auguſtus*.

In the *Indies* there are very large Foreſts conſiſting only of one ſingle *Tree*, whoſe Branches falling to the Ground, take Root, and put forth new *Trees*: The Fig *Tree* and Paretuvier are of this Kind.

M. *Lonvillier* mentions *Trees* in *Peru*, one Part of whoſe Branches produce Fruit one half the Year, and the other Part the other half.

In *China* is a *Tree* which bears Tallow, whereof that Nation make their Candles. See TALLOW.

There are two or three very remarkable Phænomena in the Growth of *Trees*, which have eſcap'd the Obſervations of the Naturaliſts of all Ages, except thoſe of our own: Theſe are the *Perpendicularity of their Trunks*, or Stems, to the Horizon; and the *Paralleliſm of their Tufts* to the Spot of Earth they grow on. An Account of each, ſee under the Articles PERPENDICULARITY and PARALLELISM.

For the *Planting*, *Tranſplanting*, *Semination*, *Pruning*, *Felling*, *Grafting*, &c. *of Trees*; ſee the reſpective Articles, PLANTING, TRANSPLANTING, SEMINATION, PRUNING, FELLING, GRAFTING.

Mr. *Ray* diſtinguiſhes the *Trees* and Shrubs of our native Growth in *England*, into, I. Such as have their Flower diſjoin'd, and remote from the Fruit. Theſe are,

1°. *Nuciferous* ones, or ſuch as bear Nuts; as the Walnut *Tree*, the Hazle-nut *Tree*, the Beach, the Cheſnut, and the common Oak. See NUT.

2°. *Coniferous* ones, or ſuch as bear a ſquammous or ſcaly Fruit, of a kind of Conical Figure, and of a woody or hard Subſtance, in which are many Seeds, which, when they are ripe, the Cone opens or gapes in all its ſeveral Cells or Partitions, and lets them drop out: Of this Kind are the *Scotch* Firs, Male and Female; the Pine, which in our Gardens is call'd the *Scotch* Fir; the common Alder *Tree*, and the Birch *Tree*.

3°. *Bacciferous* ones, or ſuch as bear Berries; as the Juniper and Yew *Tree*. See BACCIFEROUS.

4°. *Lanigerous* ones, or ſuch as bear a woolly, downy Subſtance; as the black, white, and trembling Poplar, Willows, and Oſiers of all Kinds.

5°. Such as bear their Seeds, (having an imperfect Flower) in leafy Membranes and Caſes; as the Horn-beam, or Hard-beam, call'd, in ſome Places, the Hornbeech.

II. Such as have their Fruits and Flowers contiguous; which are either with the Flower plac'd on the Top of the Fruit, or adhering to the Baſe or Bottom of the Fruit.

Of the former Kind, ſome are *Pomiferous*, as Apples and Pears; and ſome *Bacciferous*, as the Sorb or Service *Tree*, the White or Haw-thorn, the wild Roſe, Sweet-brier, Currants, the great Bilberry-buſh, Honey-ſuckle, Ivy, &c.

The latter Kind are either ſuch as have their Fruit moiſt and ſoft when ripe, as 1°. *Pruniferous* ones, whoſe Fruit is pretty large and ſoft, with a Stone in the Middle, as the black Thorn or Sloe *Tree*, the black and white Bullace *Tree*, the common wild Cherry, the black Cherry, &c.

2°. *Bacciferous* ones; as the Strawberry *Tree* in the Weſt of *Ireland*, Miſſletoe, Water-Elder, the Dwarf, a large Laurel, the Viburnum or way-faring *Tree*, the Dogberry *Tree*, the Sea black Thorn, the Berry-bearing Elder, the Privet, Barberry, common Elder, the Holly, the Buckthorn, the Berry-bearing Heath, the Bramble, and the Spindle *Tree* or Prickwood.

Or ſuch as have their Fruit dry when ripe; as the Bladder-Nut *Tree*, the Box *Tree*, the common Elm and Aſh, the Maple, the Gaule or Sweet Willow, common Heath-Broom, Dyers Weed, Furze or Gorſe, the Lime *Tree*.

Diana's TREE, *Arbor Dianæ*, among the Chymiſts, is a kind of Vegetation of Mercury, which after a long Proceſs ſhoots out into Branches, with the Appearance of Leaves, and even Flowers. See DIANA's *Tree*.

Arbor Martis, or TREE *of Mars*, is another very ſingular Vegetation, firſt diſcover'd accidentally by the younger *Lemery*. See VEGETABLE.

The Manner of the Diſcovery was this: On a Diſſolution of Iron-filings in Spirit of Nitre, contain'd in a Glaſs, he pour'd Oil of Tartar per Deliquium: Upon this the Liquor ſoon ſwell'd very conſiderably, tho' with a very ſmall Fermentation; and was no ſooner at reſt, than there aroſe a Sort of Branches adhering to the Surface of the Glaſs, which continuing to grow, at length cover'd it all over.

The Form of the Branches was ſo perfect, that one might even diſcover a kind of Leaves and Flowers thereon; ſo that this Vegetation has as good a Title to the Appellation of *Arbor Martis*, as the former has to that of *Arbor Dianæ*. See *Hiſtoir. Acad. Royal. An.* 1706.

TREDDLE, or TREADLE, *Chalazza*, in Natural Hiſtory. See CHALAZZA, EGG, CICATRICULA, &c.

TREMOR, *Trembling*, in Medicine, a Diſeaſe nearly akin to a Convulſion, wherein there is ſomething of a convulſive Motion accompanying a voluntary or natural Motion. See CONVULSION.

A *Tremor* is frequently found to ariſe upon the more violent Paſſions, particularly, Anger, Gluttony, Venery, &c. but this is accidental and tranſitory.

A *Tremor* is ſometimes apt to degenerate into other worſe Diſeaſes, *viz.* Palſey, Apoplexy, Lethargy, Spaſmus, &c. In old Men it is incurable.

Tremor of the Heart. See PALPITATION.

The Medicine commonly made uſe of in *Tremors* and other nervous Diſtempers, by the Name of *Palſey Drops*, is no other than *compound Spirit of Lavender*. The moſt ſucceſsful Way of uſing it, is by taking 30 or 40 Drops twice or thrice a Day, dropt on Loaf Sugar or a little Bread. --- 'Tis ſuppos'd, that by this Way the moſt ſpirituous and efficacious Parts make their Way directly by the Nerves of the Pallat, &c. without undergoing the Courſe of the Circulation, as it is ſaid to do when taken in a liquid Vehicle.

TRENCH, a Ditch cut or dug in the Ground, to drain off the Waters in a Meadow, a Moraſs, or the like; or to divert the Courſe of a River.

Many of the Bogs in *Ireland* have been drain'd, and made good Ground, by only digging *Trenches* around them. See BOG.

TRENCHES, *in Fortification*, are Moats or Ditches, which the Beſiegers cut to approach more ſecurely to the Place attack'd; whence they are alſo call'd Lines of Approach. See DITCH, APPROACH, &c.

Theſe *Trenches* are of ſeveral Sorts, according to the Nature of the Soil; for if the adjacent Territory be rocky, the *Trench* is only an Elevation of Bavins, Gabions, Woollpacks, or Shouldrings of Earth, caſt round about the Place: But where the Ground may be eaſily open'd, the *Trench* is dug therein, and border'd with a Parapet on the Side of the Beſieg'd. See PARAPET, &c.

The Breadth of the *Trench* is from eight to ten Foot, and the Depth from ſix to ſeven; and 'tis cut in Talus, or aſlope. See TALUS.

The *Trenches* are to be carry'd on with winding Lines, in ſome Manner parallel to the Works of the Fortreſs, ſo as not to be in View of the Enemy, nor to expoſe its Length to their Shot, which they call *Enfilading*; for then it will be in Danger of being Enfiladed, or ſcoured by the Enemies Cannon: This carrying of the *Trenches* obliquely, they call carrying them by *Coudees* or *Traverſes*.

They call it *Opening the Trenches*, when the Beſiegers begin to work upon the Line of Approaches, which is uſually done in the Night, and ſometimes within Muſket-ſhot, and ſometimes within half, or whole Cannon-ſhot of the Place, if there be no riſing Ground about it, the Garriſon ſtrong, and their Cannon well ſerv'd.

The Workmen that open the *Trenches*, are always ſupported by Bodies of Men againſt the Sallies of the Beſieg'd; and ſometimes thoſe Bodies lie between them and the Place, as alſo on their Right and Left.

The Pioneers ſometimes work on their Knees; and the Men that are to ſupport them lie flat on their Faces, in order

to

to avoid the Enemies Shot; and the Pioneers are likewiſe uſually cover'd with Mantelets, or Sauciſſons.

They ſay, *Mount the Trenches*, that is, go upon Duty in them: To *Relieve the Trenches*, is to relieve ſuch as have been upon Duty there.

The Enemy is ſaid to have clear'd the *Trenches*, when they have driven away or kill'd the Soldiers who guarded them.

The *Tail of the Trench*, is the Place where it was begun; and the *Head* that to which it is carry'd. See HEAD.

To TRENCH *the Ballaſt*, is a Sea Phraſe, ſignifying to divide the Ballaſt into ſeveral *Trenches* in a Ship's Hold. See BALLAST.

TRENCHE, in Heraldry. See TRANCHE.

TRENCHING *Plough*, is an Inſtrument for cutting out the Sides of *Trenches* and Drains, or the Sides of Turf, *&c.* See PLOUGH.

TRENTAL, TRIGINTAL, or TRICENNAL, a *Romiſh* Office for the Dead, conſiſting of thirty Maſſes, rehears'd for thirty Days after the Party's Death: Thus call'd from the *Italian*, *trenta*, *triginta*, thirty.

'Tis mention'd *Anno primo Ed.* VI. *Et volo, & ordino, quod Executores mei ordinant ſeu ordinare faciunt unum* Trental *pro ſalute Animæ meæ.*

TREPANUM, a Chirurgeon's Inſtrument, call'd alſo *Anabaptiſton* and *Modiolus*. See MODIOLUS, *&c.*

It is in Form of a Terebra or Wimble, only the Handle indented ſomewhat in Manner of a round Saw.

Its Uſe is for the Cure of Wounds, Contuſions, and Fractures of the Cranium, when they don't go beyond the ſecond Table; for by means hereof, an Amputation or Exfoliation is made of what Part, or Quantity of a Bone one pleaſes. See CRANIUM, FRACTURE, TREPANNING, *&c.*

It has uſually a ſharp Nail in the Middle of its Circumference, ſerving to keep it firm and ſteady during the Operation. --- It ſhould alſo have a kind of Cope to riſe and fall as Occaſion requires, that it mayn't go deeper in the Bone than is neceſſary.

There are alſo two-pointed *Trepans*, others Triangular, Quadrangular, and Hexagonal, for the Cure of Caries's of the Bones. --- There are alſo perforative *Trepans*, and exfoliative ones.

TREPANNING, in Chirurgery, the Operation of relieving Cuts, Contuſions, Corruptions, and Fractures in the Scull; by means of an Inſtrument call'd the *Trepanum*. See TREPANUM.

Trepanning is a very dangerous and difficult Operation; not to be us'd, unleſs when the Chips and Prominences of the Bones prick; when the upper Table is entire, but depreſs'd, and the lower broken; and when the extravaſated Blood would endanger the Perſon's being ſuffocated. See CRANIUM.

The Manner of *Trepanning*, or Opening the Scull, is thus: The Hairs being ſhaven off, the Skin is to be cut thro' to the Pericranium, avoiding, as much as poſſible, the Muſcles of the Temples, and the Sutures of the Scull: And for this Time the Wound is to be bound up, unleſs there be ſo little Blood ſpilt, that the Pericranium may at the ſame time be pull'd up from the Bone.

After a few Hours, ſtop the Patient's Ears, and take one of the Inſtruments call'd a *Male Trepanum*, or *Modiolus*; fix its Point in the Skull, but ſo far off the Fracture, that it touch it not, much leſs the Suture, with its Teeth; tho' ſome Surgeons don't mind to avoid the Sutures, but aſſure us, they have perforated them as ſucceſsfully as any other Part.

Then, holding the Inſtrument faſt with the left Hand, turn it round with the right, till you have cut a pretty deep Hole: After this take a Female *Trepanum*, which has no Point in the Middle, and turn it round as before: In the mean time, take away the Duſt or Chips that proceed from the Perforation, and moiſten the Inſtrument in Oil and Water to make it cool and ſlippery.

The Blood appearing, will ſhew you are now gone as deep as the ſecond Table, *i. e.* beyond the Skull, to the Dura Mater; in which Caſe you muſt preſs very gently, leſt that Membrane be unadviſedly hurt.

When the Bone begins to wag, put ſomething in between the Sides of the Wound; looſen it, and take it out with a Pair of Surgeons Pincers or Forceps.

After the Operation is over, the Part is to be waſh'd gently with weak red Wine; and proper Dreſſings apply'd thereon, as Honey of Roſes, Arceus Liniment, Oil of St. *John*'s Wort, *&c.* --- If the Dura Mater be corrupted, add, as Occaſion requires, Spirits of Wine, Tincture of Myrrh and Aloes, Venice Turpentine, Honey, Ægyptiacum, *&c.*

Mr. *Cheſelden* takes Notice, that the Sinus's and Spine in the Os Frontis, make it very dangerous, if not impracticable, to apply a Trepanum to the middle and lower Part of the Forehead.

TREPIDATION, in Medicine, a *Tremor*, or Trembling of the Members and Nerves of the Body. See TREMOR.

The firſt Symptom of Madneſs in Dogs, is a *Trepidation* of the Members, *&c.* See HYDROPHOBRA.

TREPIDATION, in the ancient Aſtronomy, is a Libration of the eighth Sphere; or a Motion which the *Ptolomaic* Syſtem attributes to the Firmament, to account for certain almoſt inſenſible Changes and Motions obſerv'd in the Axis of the World; by means whereof the Latitudes of the fix'd Stars come to be gradually chang'd, and the Ecliptic ſeems to approach reciprocally, firſt towards one Pole, then the other. See PTOLOMAIC, *&c.*

This Motion is alſo call'd the Motion of the firſt Libration. See LIBRATION.

TRESPASS, in Law, ſignifies any Tranſgreſſion of the Law, under Treaſon, Felony, or Miſpriſion of Treaſon. See TRANSGRESSION.

For a Lord of Parliament to depart from thence without the King's Licence, is neither Treaſon nor Felony, but *Treſpaſs. Staundford Pl. Cor.*

The Word *Treſpaſs*, however, is generally us'd either for that Wrong or Damage which is done to the King in his Foreſt, or by one private Man to another.

According to this Signification, it is of two Sorts; *Treſpaſs general*, otherwiſe call'd *Treſpaſs vi & armis*, where Force or Violence is us'd: And *Treſpaſs ſpecial*, otherwiſe call'd *Treſpaſs upon the Caſe*; which ſhould be that done without Force. --- But the two are ſometimes confounded.

In an Action of *Treſpaſs*, the Plaintiff always ſues for Damages, or the Value of the Hurt done him by the Defendant. See DAMAGES.

There is alſo *Treſpaſs local* and *Treſpaſs tranſitory*.

Treſpaſs local is that which is ſo annex'd to the Place certain, that if the Defendant join Iſſue upon a Place, and traverſe the Place mention'd in the Declaration, and aver it; it is enough to defeat the Action.

Treſpaſs tranſitory, is that which cannot be defeated by the Defendants Traverſe of the Place, becauſe the Place is not material. See TRAVERSE.

The Action of *Treſpaſs*, *quare clauſum fregit*, ought to be local.

TRESSURE, in Heraldry, a Diminutive of an *Orle*, uſually ſuppos'd to be half the Breadth thereof. See ORLE.

It is uſually born flory, and counter-flory; and ſometimes double, as in the Figure adjoining; and ſometimes triple.

TRESTLE, of the *French Treſteau*, is explain'd by *Minſhew* to be three Stools, or a three-footed Stool; particularly a wooden Frame to bear up Tables, Scaffolds, *&c.*

TRET, in Commerce, an Allowance made for the Waſte or the Duſt that may be mix'd with any Commodity; which is always 4 Pounds in every 104 Pounds Weight. See TARE.

TREVE *de Dieu*, *Trevia*, *Treuvia*, *Treuga*, or *Truga Dei*, a Phraſe famous in the Hiſtories of the XIth Century; when the Diſorders and Licences of private Wars between particular Lords and Families, oblig'd the Biſhops of *France* to forbid ſuch Violences within certain Times, under Canonical Pains.

Thoſe Intervals they call'd *Treve de Dieu*, *q. d.* Truce of God, a Phraſe frequent in the Councils ſince that Time. See TRUCE.

The firſt Regulation of this Kind was in a Synod held in the Dioceſe of *Elno* in *Rouſſillon*, Anno 1027, where it was enacted, That throughout that County, no Perſon ſhould attack his Enemy from the Hour of Nones on *Saturday*, to that of Primes on *Monday*, that *Sunday* might have its proper Honour: That no Body ſhould attack, at any Time, a Religious or Prieſt walking unarm'd, nor any Perſon going to Church, or returning from the ſame, or walking with Women: That no Body ſhould attack a Church, or any Houſe within thirty Paces around it. --- The whole under Penalty of Excommunication, which, at the End of three Months, was converted into an Anathema.

TRIA *prima*, among Chymiſts, the three Hypoſtatical Principles, *viz.* Salt, Sulphur, and Mercury; of which they hold all Bodies to be primarily made, and into which they are all held reſolvable by Fire. See PRINCIPLE and ELEMENT. See alſo SALT, SULPHUR, and MERCURY.

TRIAD, TRIAS, τριας, a Term ſometimes us'd for a Trinity. See TRIAS.

TRIAL, in Law, the Examination of any Cauſe, whether Civil or Criminal, according to the Laws of the Realm, before a proper Judge. See CAUSE and PROOF.

Of this there are divers Kinds: Matters of Fact, *e. gr.* being to be *try'd* by the Jurors; Matters of Law by the Juſtices; Matters of Record by the Record itſelf. See JURY, JUDGE, JUSTICE, RECORD, *&c.*

A Lord of Parliament indicted of Treaſon or Felony, ſhall be *try'd*, without any Oath, by his Peers, upon their Honours and Allegiance; but in Appeal, at the Suit of any Subject, they ſhall be *try'd per bonos & legales homines*. See PEER.

If ancient Demeſne be pleaded of a Manor, and deny'd, this ſhall be *try'd* by the Record of Doomſday. See DEMESNE and DOOMSDAY.

Baſtardy, Excommunication, Lawfulneſs of Marriage, and other Eccleſiaſtical Matters, ſhall be *try'd* by the Biſhop's Certificate.

Before *Trial* in a Criminal Caſe, 'tis uſual to ask the Criminal how he will be *try'd*? which was anciently a very pertinent Queſtion, tho' not ſo now; in regard there were formerly ſeveral Ways of *Trial*, *viz.* by *Battel*, *Ordeals*, and *Jury*. See BATTEL, ORDEAL, and JURY.

When the Criminal anſwer'd by God, and his Country, it ſhew'd he made Choice to be *try'd* by a Jury. --- But there is now no other Way of *Trial*. This is alſo call'd *trying per pais*, *per patriam*.

For the ancient Manner of Trial *by Combat and great Aſſize*; See COMBAT, DUEL, and ASSIZE.

TRIANGLE, in Geometry, a Figure comprehended under three Lines, and which of Conſequence has three Angles. See FIGURE and ANGLE.

If the three Lines or Sides of the *Triangle* be all right, it is ſaid to be a *Plane* or *Rectilinear Triangle*. See PLANE and RECTILINEAR.

If all the three Sides of the *Triangle* be equal, (as ABC Tab. Geometry, Fig. 68.) it is ſaid to be *equilateral*. See EQUILATERAL.

If only two of the Sides of the *Triangle* be equal, (as in DEF, Fig. 69.) it is call'd an *Iſoſceles*, or *Equicrural Triangle*. See ISOSCELES, *&c.*

If all the Sides of the *Triangle* be unequal to each other, (as in ACB, Fig. 70.) the *Triangle* is ſaid to be *Scalenous*. See SCALENOUS.

If one of the Angles (as K of Fig. 71.) of a *Triangle* KML be a right Angle, the *Triangle* is ſaid to be *Rectangular*. See RECTANGLE.

If one of the Angles (as N Fig. 72.) be obtuſe, the *Triangle* is ſaid to be *Obtuſangular*, or *Amblygonous*. See OBTUSANGLE.

If all the Angles be acute, (as in ACB, Fig. 68.) the *Triangle* is ſaid to be *Acutangular*, or *Oxygonous*. See ACUTANGLE, *&c.*

If the three Lines of the *Triangle* be all curves, the *Triangle* is ſaid to be *Curvilinear*. See CURVILINEAR.

If ſome of the Sides be right, and others curve, the Angle is ſaid to be *Mixtilinear*. See MIXTILINEAR.

If the Sides be all Arches of great Circles of the Sphere, the *Triangle* is ſaid to be *Spherical*. See SPHERICAL *Triangle*.

Conſtruction of TRIANGLES.

1°. Two Sides, as AB and AC, Fig. 73. being given in Numbers, or otherwiſe, together with the Quantity of the Angle intercepted between them, A; to conſtruct a *Triangle* --- Aſſume AB as a Baſe; and in A make the given Angle: On the other Leg ſet off the other given Line AC; laſtly, draw BC: Then will ABC be the *Triangle* requir'd.

Hence, two Sides with the intercepted Angle being determin'd, the whole *Triangle* is determin'd. --- Wherefore, if in two *Triangles* ACB and *acb*; $a=A$; and $ab : ac :: AB : AC$, the *Triangles* are determin'd in the ſame Manner, and are therefore ſimilar; conſequently $c=C$ and $b=B$, $ab : bc :: AB : BC$, *&c.*

2°. Three Sides, AB, BC, and CA, Fig. 70. being given, any two whereof, as AC, AB, taken together, are greater than the third, to conſtruct a *Triangle* --- Aſſume AB for a Baſe; and from A, with the Interval AC, deſcribe an Arch *y*; and from B, with the Interval BC, deſcribe another Arch *x*: Draw the right Lines AC and BC. Thus is the *Triangle* conſtructed.

Hence, as of any three given right Lines, only one *Triangle* can be conſtructed; by determining the three Sides, the whole *Triangle* is determin'd.

Wherefore if in two *Triangles* ACB and *acb*; $AC : AB :: ac : ab$; $AC : CB :: ac : bc$; the *Triangles* are determin'd in the ſame Manner, and conſequently are ſimilar, and therefore are mutually equiangular.

3°. A right Line, as AB, and two adjacent Angles A and B, which, taken together, are leſs than two right ones, being given; to deſcribe the *Triangle* ABC. --- On the given Line AB, make the two given Angles A and B: Continue the Sides AC and BC till they meet in C. Then will ABC be the *Triangle* requir'd.

Hence, one Side and two Angles being given, the whole *Triangle* is determin'd. --- Wherefore if in two *Triangles* $A=a$ and $B=b$, Fig. 73. the *Triangles* are determin'd after the ſame Manner, and therefore are ſimilar.

Menſuration of TRIANGLES.

To find the Area of a Triangle. -- Multiply the Baſe AB Fig. 74. by the Altitude C*d*; half the Product is the Area of the *Triangle* ABC.

Or thus: Multiply half the Baſe AB by the Altitude CD; or the whole Baſe by half the Altitude; the Product is the Area of the *Triangle*.

E. gr. AB = 342	AB = 342	½ AB = 171
C*d* = 234	½ CD = 117	C*d* = 234
1368	2394	684
1026	342	513
684	342	342
2) 80028 (	40014	40014 Area
are as 40014		

Or, The Area of any *Triangle* is had by adding all the three Sides together, and taking half the Sum; and from that half Sum, ſubſtracting each Side ſeverally, and multiplying that half Sum and the Remainder continually into one another, and extracting the Square Root of the Product.

Hence, 1°. If between the Baſe, and half the Altitude; or between the Altitude, and half the Baſe, be found a mean Proportional; it will be the Side of a Square equal to the *Triangle*.

2°. If the Area of a *Triangle* be divided by half the Baſe, the Quotient is the Altitude.

General Properties of Plane TRIANGLES.

1°. If in two *Triangles* ABC and *abc*, Fig. 73. the Angle $Abc=a$; and the Sides $AB=ab$, and $AC=ac$; then will the Sides $BC=bc$, and $C=c$, the Angle $B=b$; and therefore the whole *Triangles* will be equal and ſimilar.

2°. If one Side of a *Triangle* ABC (Fig. 75.) be continu'd to D; the external Angle DAB will be greater than either of the internal oppoſite ones B or C.

3°. In every *Triangle*, the greateſt Side is oppos'd to the greateſt Angle, and the leaſt to the leaſt.

4°. In every *Triangle*, any two Sides taken together are greater than the third.

5°. If in two *Triangles*, the ſeveral Sides of the one be reſpectively equal to the Sides of the other, the Angles will likewiſe be reſpectively equal; and conſequently the whole *Triangles* equal and ſimilar.

6°. If any Side, as AC (Fig. 76.) of a *Triangle* ACB be continu'd to D, the external Angle DCA will be equal to the two internal oppoſite ones *y* and *z* taken together.

7°. In every *Triangle*, as ABC, the three Angles A, B, C, taken together, are equal to two right ones, or 180°.

Hence, 1°. If the *Triangle* be rectangular, as MKL, (Fig. 71.) the two oblique Angles M and L, taken together, make a right Angle, or 90°; and therefore are half Right, if the *Triangle* be Iſoſceles. --- 2°. If one Angle of a *Triangle* be oblique, the other two taken together are oblique likewiſe. --- 3°. In an Equilateral *Triangle*, each Angle is 60°. --- 4°. If one Angle of a *Triangle* be ſubſtracted from 180°, the Remainder is the Sum of the other two; and if the Sum of two be ſubſtracted from 180°, the Remainder is the third. --- 5°. If two Angles of one *Triangle* be equal to two of another, either together or ſeparately; the third of the one is likewiſe equal to the third of the other. --- 6°. Since in an Iſoſceles *Triangle* DFE (Fig. 69.) the Angles at the Baſe *y* and *v* are equal; if the Angle at the Vertex be ſubſtracted from 180°, and the Remainder be divided by 2, the Quotient is the Quantity of each of the equal Angles: In like Manner, if the double of one of the Angles at the Baſe *y* be ſubſtracted from 180, the Remainder is the Quantity of the Angle at the Vertex.

8°. If in two *Triangles*, ABC, and *abc*, Fig. 73. $AB=ab$, $A=a$ and $B=b$; then will $AC=ac$, $BC=bc$, $C=c$, and the *Triangle* ACB equal and ſimilar to the *Triangle* *abc*. --- Hence, if in two *Triangles*, ACB and *acb*, $A=a$, $B=b$ and $BC=bc$; then will $C=c$; conſequently $AC=ac$, $AB=ab$; and the *Triangle* $ACB=acb$.

9°. If in a *Triangle* DFE the Angles at the Baſe *y* and *v*, Fig. 69. be equal, the *Triangle* is Iſoſceles: Conſequently, if the three Angles be equal, it is equilateral.

10°. If in a *Triangle* ABC, (Fig. 77.) a right Line DE be drawn parallel to the Baſe; then will $BA : BC :: BD : BE :: AD : EC$. And $BA : AC :: BD : DE$. Conſequently the *Triangle* BDE ſimilar to BAC.

11°. Every *Triangle* is inſcribable in a Circle. See CIRCLE.

12°. The Side of an equilateral *Triangle*, inſcrib'd in a Circle, is in Power triple of the Radius. See RADIUS.

13°. *Triangles* on the ſame Baſe, and having the ſame Height, that is between the ſame parallel Lines, are equal. See PARALLEL.

14°. Every *Triangle*, as CFD, Fig. 41. is one half of a Parallelogram ACDB on the ſame, or an equal Baſe CD, and of the ſame Altitude, or between the ſame Parallels: Or a *Triangle* is equal to a Parallelogram upon the ſame Baſe, but half the Altitude; or half the Baſe, and the ſame Altitude. See PARALLELOGRAM.

15°. In

15°. In every *Triangle*, as well plane as ſpherical, the Sines of the Sides, are proportional to the Sines of the oppoſite Angles.

16°. In every plane *Triangle*, as the Sum of two Sides is to their Difference, ſo is the Tangent of half the Sum of the oppoſite Angles, to the Tangent of half their Difference. See TANGENT.

17°. If a Perpendicular be let fall upon the Baſe of an oblique angled *Triangle*; the Difference of the Squares of the Sides is equal to double the Rectangle under the Baſe, and the Diſtance of the Perpendicular from the Middle of the Baſe.

18°. The Sides of a *Triangle* are cut proportionably, by a Line drawn parallel to the Baſe.

19°. A whole *Triangle*, is to a *Triangle* cut off by a right Line, as the Rectangle under the cut Sides, is to the Rectangle of the other two Sides.

20°. In a right lined *Triangle*, a Line drawn from the right Angle at the Top perpendicular to the Hypothenuſe, divides the *Triangle* into two other right lined *Triangles*, which are ſimilar to the firſt *Triangle*, and to one another.

21°. In every right angled *Triangle*, the Square of the Hypothenuſe is equal to the Sum of the Squares of the other two Sides. See HYPOTHENUSE.

22°. If any Angle of a *Triangle* be biſſected, the biſſecting Line will divide the oppoſite Side, in the ſame Proportion as the Legs of the Angle are to one another. See BISSECTION.

23°. If the vertical Angle of any *Triangle* be biſſected, the Difference of the Rectangles, made by the Sides and the Segments of the Baſe, is equal to the Square of the Line that biſſects the Angle.

24°. If a right Line BE, Fig. 78. biſſect an Angle ABC of a *Triangle*, the Square of the ſaid Line BE = AB + BC − AE + EC. *Newt. Arith. Univerſ.*

Properties of Spherical Triangles. See SPHERICAL *Triangle*.

To divide a Triangle *into any given Number of equal Parts:* Divide the Baſe CD (Fig. 77.) into as many equal Parts as the Figure is to be divided into; and draw the Lines A 1, A 2, &c.

TRIANGLE, in Trigonometry.— The Solution or Analyſis of *Triangles*, is the Buſineſs of *Trigonometry*. See TRIGONOMETRY.

The ſeveral Caſes thereof are reducible to the following Problems.

Solution of plane TRIANGLES.

1°. *Two Angles* A *and* C *(Tab. Trigonometry, Fig. 27.) being given, together with the Side* AB *oppoſite to one of them; to find the Side* BC *oppoſite to the other.*

The Rule or Canon is this: As the Sine of the Angle C, is to the given Side AB, oppoſite to the ſame; ſo is the Sine of the other Angle A, to the Side requir'd. The Side BC, therefore, is commodiouſly found by the Logarithms, from the Rule for finding a fourth Proportional to 3 Numbers given. See LOGARITHM.

For an Example: Suppoſe C = 48° 35′, A = 57° 28′, AB = 74. The Operation will ſtand thus:

Log. of Sine of C	9.8750142
Log. of AB	1.8692317
Log. of Sine of A	9.9258681
Sum of Log. of AB and of Sine of A	11.7950998

Log. of BC 1.9200956. The Number correſponding to which, in the Table of Logarithms, is 83, the Quantity of the Side ſought.

2°. *Two Sides* AB *and* BC, *together with the Angle* C, *oppoſite to one of them given; to find the other Angle* A *and* B.

The Rule is this: As one Side AB is to the Sine of the given Angle oppoſite thereto C; ſo is the other Side BC, to the Sine of the Angle requir'd oppoſite thereto.

E. gr. Suppoſe AB = 94, BC = 69, C = 7° 15′.

Log. of AB	1.9731279
Log. of Sine of C	9.9788175
Log. of BC	1.8388491
Sum of Log. of Sine of C and of BC	11.8176666

Log. of Sine of A 9.9444387. The Number correſponding to which, in the Table of Logarithms, is 61° 37′. Now the given Angle C being 72° 13′, the Sum of the two; 133° 52′ ſubſtracted from 180, the Sum of the three, gives 46° 8′ for the other Angle ſought B.

In like Manner, ſuppoſe, in a right angled *Triangle*, (Fig. 28.) that beſide the right Angle, A, is given the Hypothenuſe BC, 49, and the Cathetus AC, 36, to find the Angle B; Then will the Operation ſtand thus:

Log. of BC	1.6901961
Log. of whole Sine	10.0000000
Log. of AC	1.5563025

Log. of Sine of B 9.8661064. The correſponding Number to which, in the Table of Logarithms, is 47° 16′; conſequently, C = 42° 44′.

3°. *Two Sides* BA *and* AC, *together with the included Angle* A *being given; to find the two remaining Angles.*

I. If the *Triangle* ABC be rectangular; take one of the Sides including the Right Angle, as AB, for Radius; then will CA be the Tangent of the oppoſite Angle B: The Rule then is;

As one Leg AB, *is to the other* AC; *ſo is the whole Sine to the Tangent of the Angle* B.

E. gr. Suppoſe BA 79, and AC 74;

Log. of BA	18976271
Log. of AC	17323938
Log. of whole Sine	10000c000

Log. of Tang. of B 98347667; The correſponding Number to which, in the Table of Logarithms, is 34° 21′; conſequently the Angle C is 55° 39′.

II. If the *Triangle* be oblique, the Rule is; *As the Sum of the given Sides* AB *and* AC, *Fig. 29. is to this Difference; ſo is the Tangent of Half the Sum of the ſought Angles* C *and* B, *to the Tangent of Half the Difference.* Adding, therefore, the Half Difference, to the Half Sum; the Aggregate will be the greater Angle C; and ſubtracting the Half Difference from the Half Sum; the Remainder is the leſs Angle B.

E. gr. Suppoſe AB = 75, AC 58, A 108° 24′; Then will

AB 75	AB 75	A + B + C	179° 60′
AC 58	AC 58	A	108 24
Sum 133	Differ. 17	B + C	71 36
		B + C	35 48

Log. of AB + AC 2.1238516
Log. of AB − AC 1.2304489
Log. of Tang. $\frac{B+C}{2}$ 9.8580694
Sum of Log. 12.0885183
L. of Tang. $\frac{C-B}{2}$ 8.9646667. The correſponding Number to which is 5° 16′.

$\frac{B+C}{2}$ = 35° 48′ $\frac{B+C}{2}$ = 35° 48′

$\frac{C-B}{2}$ = 516 $\frac{C-B}{2}$ = 5° 16′

C = 41 4 B = 30 32

4° *The Three Sides*, AB, BC *and* CA *(Fig. 30.) being given, to find the Angle* A, B *and* C.

From the Vertex of the Angle A, with the Extent of the leaſt Side AB, deſcribe a Circle: Then will CD be the Sum of the Legs AC and AB; and CF their Difference. The Rule then is,

As the Baſe BC is to the Sum of the Legs CD; ſo is the Difference of the Legs CF, to the Segment of the Baſe CG. ---- This Segment, thus found, being ſubtracted from the Baſe CB, the Remainder is the Chord GB. Then, from A to the Chord GB let fall the Perpendicular AE; thus will BE = EG = ½ GB.

Thus, in a rectangled *Triangle*, AEB, the Sides AB and BE being given; Or, in an obliquangled *Triangle*, ACE the Sides AC and CE being given: the Angles B and A are found.

E. gr. Suppoſe AB = 36, AC = 45, BC = 40.

AC = 45	AC = 45
AB 36	AB = 36
AC + AB = 81	FC = 9
Log. of BC =	1. 6020600
Log. of AC + AB	1. 9084850
Log. of FC =	0. 9542425
Sum of Log. =	2. 8627275

Log. of CG = 1. 2606675; The correſponding Number to which, in the Tables, is 18.

BC = 4000	EG = 1089
CG = 1822	CG = 1822
BG = 2178	CE = 2911
BE = 1089	

Log. of AB = 3.5563025
Log. of whole Sine = 10.0000000
Log. of EB = 3.0370279

Log. of Sine of EAC = 9. 8108297; to which the correſpondent Number in the Tables is 40° 18′; therefore ACE 49° 42′; and CAB 57° 54′.

Solution of right angled ſpherical TRIANGLES, *by the common Rules.*

I. *In a right angled ſpherical* Triangle, *any two Parts beſide the right Angle, being given, to find any of the reſt.*

1° Conſider whether the Parts, which come to the Queſtion, be conjunct or disjunct (See PART.) If the disjunct be oppoſite to each other; as, if the Hypothenuſe BC, and the Angle C, Fig. 31. be given for the oppoſite Leg AB; then the Rule is;

As the whole Sine is to the Sine of the Hypothenuſe BC; *ſo is the Sine of the Angle* C, *to the Sine of the oppoſite Leg* AB.

2° If the disjunct Parts be not oppoſite to each other; as, if AB, and the adjacent Angle B be given for the oppoſite Angle C; the Sides of the *Triangle* are to be continued one Way, 'till they become Quadrants, that you may thus have a new *Triangle*, wherein the Parts that come into the Queſtion, are mutually oppoſite to each other; as, in our Caſe, the *Triangle* EBF, wherein we have given BF, the Complement of the Leg AB, and the Angle B for EF, the Complement of the Angle C. The Rule then is;

As the whole Sine is to the Sine of BF; *ſo is the Sine of the Angle* B *to the Sine of* EF, *or Co-ſine of* C.

3° If the Hypothenuſe be not among the conjunct Parts, as if the Legs AB and AC be given for an Angle oppoſite to one of them; the Rule is,

As the Sine of AC *is to the whole Sine*; *ſo is the Tangent of* AB, *to the Tangent of* O.

4° But if the Hypothenuſe be found among the conjunct Parts; as if the Hypothenuſe BC, and the Angle C be given to find the adjacent Side AC: The Sides of the *Triangle* are to be continued one way, till they become Quadrants, that we may have a new *Triangle*, wherein the Hypothenuſe is not among the Parts that come into the Queſtion; *e. gr.* in our Caſe, the *Triangle* EBF, wherein are given the Complement EB of the Hypothenuſe BC, and the Complement of the Angle C, and the Angle F the Complement of the Leg AC. Since then, in the *Triangle* EFB, the Hypothenuſe does not come in the Queſtion; the Rule is as before.

As the Sine of EF, *or Co-ſine of* C, *is to the whole Sine*; *ſo is the Tangent of* EB, *or Co-tangent of* BC, *to the Tangent of* F, *or Co-tangent of* AC.

5° When the Sides of a *Triangle* are to be continued, 'tis the ſame thing, which way ſoever they be produced, provided no acute Angle come into the Queſtion; otherwiſe, the Sides are to be continued through the other oblique one. If both be in the Connection, the Sides are to be continued through that adjacent to the Side in Queſtion.

By this means, a *Triangle* is always obtained, wherein the Thing required is found, either by the Rule of Sines or Tangents.

Solution of right angled ſpherical Triangles, *by one catholick Rule.*

Conſider, as before, whether the Parts that come in Queſtion be conjunct or disjunct. See PART.

If either one, or both the Sides, including the right Angle, come into the Queſtion; for it, among the Data, write its Complement to a Quadrant. ---- Since, then, by the catholic Rule, deliver'd under the Article *Trigonometry*; the whole Sine, with the Sine Complement of the middle Part, is equal to the Sines of the disjunct Parts, and the Co-tangents of the conjunct Parts; from the Sum of thoſe Data, ſubtract the third Datum: the Remainder will be ſome Sine or Tangent, the Side or Angle correſponding to which, in the artificial Canon of *Triangles*, is the Side or Angle ſought.

This univerſal Rule being of great Service in Trigonometry, we ſhall apply it to the various Caſes thereof, and illuſtrate it with Examples; which Examples, in the Caſe of ſeparate Parts, will at the ſame time illuſtrate the common Method; but in the Caſe of contiguous Parts, admit of other Solutions.

1° *Given the Hypothenuſe* BC 60° *and the Angle* C 23° 30′, *to find the oppoſite Leg* AB *(Fig. 32.)*

Since AB is the middle Part, C and BC are disjunct (See PART); the whole Sine, with the Co-ſine of the Complement AB, *i. e.* with the Sine itſelf of AB, is equal to the Sines of C and BC.

Therefore, from Sine of C	96006997
Sine of BC	99375306
Sum	195382303
Subtract whole Sine	100000000

Remain Sine of AB 95382303. The correſponding Number to which, in the Canon, is 20° 12′ 6″.

2° *Given the Hypothenuſe* BC 60° *and the Leg* AB 20° 12′ 6″ *to find the oppoſite Angle* C.

'Tis evident from the preceding Problem, that from the Sum of the whole Sine, and the Sine of the Leg AB, the Sine of the Hypothenuſe BC is to be ſubtracted; the Remainder is the Sine of the Angle C. The Example, therefore, of the former Caſe is eaſily converted into an Example of this.

3° *Given the Leg* AB 20° 12′ 6″ *and the oppoſite Angle* C 23° 30′, *to find the Hypothenuſe* BC.

'Tis evident from the firſt Caſe, that from the Sum of the whole Sine, and the Sine of AB is to be ſubtracted the Sine of the Angle C, and the Remainder is the Sine of the Hypothenuſe BC.

4° *Given the Hypothenuſe* BC 60°, *and one Leg* AB 20° 12′ 16″ *to find the other Leg.*

Since BC is the mean Part, and AB and AC are disjunct Parts, the whole Sine, with the Co-ſine of the Hypothenuſe BC, are equal to the Sines of the Complements; *i. e.* to the Co-ſines of the Legs AB and AC.

Therefore from whole Sine	100000000
Co-ſine of BC	96989700
Sum	196989700
Subtract Co-ſine of AB	99724279

Remains Co-ſine of AC 97265421. The Correſponding Number to which, in the Canon, is 32° 11′ 34″; therefore AC 57° 48′ 26″.

5° *Given the Legs* AC 57° 48′ 26″ *and* AB 20° 12′ 6″, *to find the Hypothenuſe* BC.

'Tis evident from the preceding Caſe, that the whole Sine is to be ſubtracted from the Sum of the Co-ſines of the Legs AB and AC; the Remainder is the Co-ſine of the Hypothenuſe BC. The Example, therefore, of the preceding Caſe is eaſily applied to this.

6° *Given the Leg* AC 50° 48′ 26″ *and the adjacent Angle* C 23° 30′ *to find the oppoſite Angle* B.

Since B is the middle Part, and A and C disjunct Parts; the whole Sine, with the Co-ſine of B, is equal to the Sine of C, and the Sine of the Complement, *i. e.* to the Co-ſine of AC;

Therefore from Sine of C	96006997
Co-ſine AC	97265421
Sum	193272418
Subtract whole Sine	100000000

Remains Co-ſine of B 93272418. The Number correſponding to which, in the Canon, is 12° 15′ 56″; therefore B 77° 44′ 4″.

7° *Given the Leg* AC 57° 48′ 26″ *and the oppoſite Angle* B 77° 44′ 4″ *to find the adjacent Angle* C.

'Tis evident from the preceding Caſe, that the Co-ſine of AC is to be ſubtracted from the Sum of the whole Sine, and the Co-ſine of B; the Remainder is the Sine of C. The former Example, therefore, is eaſily accommodated to the preſent Caſe.

8° *Given the oblique Angles* B 77° 44′ 4″ *and* C 23° 30′, *to find the Leg adjacent to the other*, AC.

From Problem the Sixth, 'tis evident that the Sine of C is to be ſubtracted from the Sum of the whole Sine, and the Co-ſine of B; and that the Remainder is the Co-ſine of AC. The Example of the ſixth Problem is eaſily applied to this.

9° *Given the Leg* AC 57° 48′ 26″ *and the adjacent Angle* C 23° 30′, *to find the oppoſite Leg* AB.

Since AC is the mean Part, and C and AB conjunct Parts; the whole Sine, with the Sine of AC, is equal to the Co-tangent of C, and the Tangent of AB.

Therefore from whole Sine	100000000
Sine of AC	99275039
Sum	199275039
Subtract Co-tangent of C	103616981

Remains Tangent of AB 95658058. To which the correſponding Number in the Canon, is 20° 12′ 6″.

10° *Given the Leg* AB 20° 12′ 6″ *and the oppoſite Angle* C 23° 30′, *to find the adjacent Leg* AC.

From

From the Sum of the Co-tangent of C, and the Tangent of A B, ſubtract the whole Sine; the Remainder is the Sine of A C.

11° *Given the Legs* A B 20° 12′ 6″, *and* A C 57° 48′ 26″, *to find the Angle* C, *oppoſite to one of them.*

From the Sum of the whole Sine, and Sine A C, ſubtract the Tangent of B A; the Remainder is the Co-tangent of C.

12° *Given the Hypothenuſe* B C 60°, *and the oblique Angle* C 23° 30′, *to find the adjacent Leg* A C.

Since C is the middle Part, and B C and A C conjoynt Parts; the whole Sine, with the Co-ſine of C, will be equal to the Co-tangent of A C.

Therefore from whole Sine	100000000
Co-ſine of C	99623978
Sum	199623978
Subtract Co-tangent of B C	97614394

Remains Tangent of A C 102009584. The Number correſponding to which, in the Tables, is 57° 48′ 26″.

13° *Given the Leg* A C 57° 48′ 26″, *and the adjacent Angle* C 23° 30′, *to find the Hypothenuſe* B C.

From the Sum of the whole Sine, and the Co-ſine of C, ſubtract the Tangent of A C, the Remainder is the Co-tangent of B C.

14° *Given the Hypothenuſe* B C 60°, *and the Leg* A C 57° 48′ 26″, *to find the adjacent Angle* C.

From the Sum of the Co-tangent of B C, and Tangent of A C, ſubtract the whole Sine; the Remainder is the Co-ſine of C.

15° *Given the Hypothenuſe* B C 60°, *and one Angle* C 23° 30′, *to find the other*, B.

Since B C is the middle Part, and B and C disjunct Parts, the whole Sine, and the Co-ſine of B C will be equal to the Co-tangents of B and C.

Therefore from whole Sine	100000000
Co-ſine of B C	96989700
Sum	196989700
Subtract Co-tangent of C	10366981

Remains Co-tangent of B 93372719; The correſponding Number to which, in the Canon, is 12° 15′ 56″; therefore B is 77° 44′ 4″.

16° *Given the oblique Angles* B 77° 44′ 4″ *and* C 23° 30′, *to find the Hypothenuſe.*

From the Sum of the Co-tangents of C and B, ſubtract the whole Sine; the Remainder is the Co-ſine of B C.

Solution of oblique-angled ſpherical TRIANGLES.

1° *In an oblique-angled ſpherical* Triangle A B C, (*Tab. Trigonometry Fig.* 32.) *two Sides* A B *and* B C *being given, together with an Angle* A, *oppoſite to one of them, to find the other* C: The Rule is,

As Sine of the Side B C, is to the Sine of the oppoſite Angle A; ſo is the Sine of the Side B A, to the Sine of the oppoſite Angle C,

Suppoſe, for Example, B C 39° 29′; A 43° 20′; B A 66° 45′; then will

Sine of B C	98033572
Sine of A	983647
Sine of B A	99632168
	197996939
Sine of C	99963367

The correſponding Number to which, in the Tables, is 82° 34′ 7″.

2°. *Given two Angles* C 82° 34′ 7″, *and* A 43° 20′, *together with the Side* A B 60° 45″, *oppoſite to one of them* C; *to find the Side* B C *oppoſite to the other of them* A. Say,

As Sine of Angle C, is to Sine of the oppoſite Side A B; ſo is Sine of Angle A, to Sine of oppoſite Side B C. --- The former Example may ſuffice for the preſent Caſe.

3°. *Given two Sides* A B 66° 45′, *and* B C 39° 29′, *together with an Angle oppoſite to one of them* A 45° 20′; *to find the Angle included by them* B.

Suppoſe the Angle C to be acute, ſince the other, A, is alſo acute; the Perpendicular B E falls within the *Triangle*. In the rectangled *Triangle* A B E, therefore, from the given Angle A, and Side A B, find the Angle A B E. Since B E is aſſum'd as a *lateral* Part in the *Triangle* A E B, the Angle E B C is the middle Part, and the Side B C a conjoynt Part: The Coſine of the Angle E B C will be found by ſubtracting the Co-tangent of A B from the Sum of the Coſine of the Angle A B E, and the Co-tangent of B C. If then the Angles A B E and E B C be added together; or, in caſe the Perpendicular fall without the *Triangle*, be ſubtracted from each other, you will have the Angle requir'd B.

E. gr.

whole Sine	10000000
Coſine of A B	95963154
Sum	195963154
Cotang. of A	100252805

Cotang. of A B 95710349. The Number correſponding to which, in the Tables, is 20° 25′ 35″. A B therefore is 69° 34′ 25″.

Coſine of A B E	95428300
Cotang. of B C	100141529
Sum	196269829
Cotang. of B	96330085

Coſine of E B C 9938544. The Number correſponding to which, in the Tables, is 80° 26′. Therefore A B C is 79° 9′ 59″.

4°. *Given two Angles* A 43° 20′, *and* B 79° 9′ 59″, *together with the adjacent Side* A B 66° 45′; *to find the Side* B C *oppoſite to one of them.*

From one of the given Angles B, let fall a Perpendicular E B, to the unknown Side A C; and, in the rectangled *Triangle* A B E, from the given Angle A, and Hypothenuſe A B, find the Angle A B E; which ſubtracted from the Angle A B C, leaves the Angle E B C. But if the Perpendicular ſhould fall without the *Triangle*, the Angle A B C ſhould have been ſubtracted from A B E. Since as the Perpendicular B E is taken for one of the lateral Parts, the middle Part in the *Triangle* A B E, is the Angle E, and the conjoynt Part B C; the Co-tangent of the Side B C is found by ſubtracting the Coſine of E B A, from the Sum of the Co-tangent of A B, and the Coſine of E B C. ---The Example of the preceding Caſe is eaſily apply'd to this.

5°. *Given two Sides* A B 66° 45′, *and* B C 39° 29′, *with the Angle* A *oppoſite to one of them*, 43° 20′; *to find the third Side* A C.

Letting fall, as before, the Perpendicular B E; in the rectangled *Triangle* A B E, from the given Angle and Hypothenuſe A B, find the Side A E. Since, aſſuming B E for a lateral Part in the *Triangle* A E B, A B is the middle Part, and A E the ſeparate Part; and in the *Triangle* B E C, B C, is the mean Part, and E C a disjunct Part; the Coſine of E C is found by ſubtracting the Coſine of A B from the Sum of the Coſines of A E and C B. If then the Segments A E and E C be added together; or in caſe the Perpendicular fall without the *Triangle*, be ſubtracted from each other; the Side A C will be had.

6°. *Given two Sides* A C 65° 30′ 46″, *and* A B 66° 45′, *together with the included Angle* A; *to find the third Side* B C *oppoſite thereto.*

Letting fall the Perpendicular B E, find, in the rectangled *Triangle*, the Segment A E; which ſubtracted from A C, leaves E C. If the Perpendicular fall without the *Triangle*, A C is to be ſubtracted from A E; ſince by aſſuming the Perpendicular B E for a lateral Part in the *Triangle* A E B, A B becomes a middle Part, and A E a ſeparate Part: In the *Triangle* E B C, C B is the middle Part, E C a ſeparate Part: The Coſine of B C is found, by ſubtracting the Coſine of A E from the Sum of the Coſines of A B and E C.

7°. *Given two Angles* A 43° 20′, *and* B 79° 9′ 59″, *together with the Side* C B 39° 29′, *oppoſite to one of them*; *to find the Side* A B *adjacent to both.*

Letting fall the Perpendicular C D from the unknown Angle C, to the oppoſite Side A B; and that falling within the *Triangle*, from the given Angle B, and the Hypothenuſe B C, ſeek in the rectangled *Triangle* B C D for the Segment B D. Since aſſuming the Perpendicular C D for a lateral Part in the *Triangle* C D B, D B is the mean Part, and the Angle B a conjunct Part; and in the *Triangle* C D A, A D is the middle Part, and the Angle A a conjunct Part: The Sine of the Segment A D is found, by ſubtracting the Co-tangent of the Angle B from the Sum of the Sine of D B, and the Co-tangent of the Angle A. If then the Segments A D and D B be added, or in caſe the Perpendicular fall without the *Triangle*, be ſubtracted from each other, the Reſult will be Side A B requir'd.

8°. *Given two Sides* A B 66° 45′, *and* B C 39° 29′, *with the included Angle* 79° 9′ 59″; *to find the Angle* A *oppoſite to one of them.*

Letting fall the Perpendicular C D, find the Segment D B, as in the preceding Problem. This ſubtracted from A B leaves A D. If the Perpendicular fall without the *Triangle*, A B is to be added to D B; ſince by aſſuming the Perpendicular C D for a lateral Part in the *Triangle* C D B, B D is the middle Part, and the Angle B a conjoynt Part; and in the *Triangle* C D A, A D is the middle Part, and the Angle A a conjoynt Part: The Co-tangent of the Angle A is found by ſubtracting the Sine of D B from the Sum of the Co-tangent of the Angle B, and of the Sine of A D.

9°. *Given two Angles* A 43° 20′, *and* B 79° 9′ 59″, *together with the adjacent Side* A B 66° 45′; *to find the Angle* C *oppoſite to the ſame.*

From one of the given Angles B, letting fall the Perpendicular B E, to the oppoſite Side A C; in the rectangled *Triangle* A B E, from the given Angle A, and Hypothenuſe A B, we find the Angle A B E; which ſubtracted from A B C, leaves the Angle E B C. In caſe the Perpendicular fall without the *Triangle*, A B C is to be ſubtracted from A B E; ſince by aſſuming B E for a lateral Part in the *Triangle* C E B, the Angle C is the middle Part, and the Angle C B E the disjoynt Part; and in the *Triangle* A B E, the Angle A is the middle Part, and the Angle A B E the disjoynt Part: The Coſine of the Angle C is found by ſubtracting the Sine of the Angle A B E, from the Sum of the Coſine of the Angle A, and of the Coſine of E B C.

10°. *Given two Angles* A 43° 20′, *and* C 82° 34′, *together with a Side* B A 66° 45′, *oppoſite to one of them; to find the other Angle.*

From the ſought Angle B, let fall a Perpendicular B E; and in the right angled *Triangle* A E B, from the given Angle A, and Hypothenuſe B A, find the Angle A B E; ſince aſſuming the Perpendicular E B for a lateral Part in the *Triangle* E C B, the Angle E is the middle Part, and the Angle C B E a disjunct Part; and in the *Triangle* A B E, the Angle A is the middle Part, and the Angle A B E a disjunct Part: The Sine of the Angle E B C is found by ſubtracting the Coſine of A from the Sum of the Coſine of C, and of the Sine of A B E. If then A B E and E B C be added, or in caſe the Perpendicular fall without the *Triangle*, be ſubtracted from each other, the Reſult will be Angle requir'd A B C.

11°. *Given the three Sides; to find an Angle oppoſite to one of them.*

I. If one Side A C, Fig. 16. be a Quadrant, and the Leg A B leſs than a Quadrant, find the Angle A. Continue A B to F, till A F become equal to a Quadrant; and from the Pole A draw the Arch C F, to cut the Arch A F at right Angles in F. Since in the rectangled *Triangle* C B F, we have given the Hypothenuſe B C, and the Side A F, or its Complement A B to a Quadrant; we ſhall find the Perpendicular C F C, which being the Meaſure of the Angle C A B, that Angle is found of courſe.

II. If one Side A C be a Quadrant, and the other A B greater than a Quadrant, ſeek again the Angle A: From A B ſubtract the Quadrant A D, and from the Pole A deſcribe the Arch C D, cutting the Arch C D at right Angles in D. Since in the rectangled *Triangle* C D B, the Hypothenuſe B C, and Side D B, or Exceſs of the Side A B beyond a Quadrant, is given, the Perpendicular C D will be found as before, which is the Meaſure of the Angle A requir'd.

III. If the *Triangle* be Iſoſceles, and A C = C F, and the Angle A C F be requir'd; biſſect A F in D, and thro' D and C draw the Arch D C. Since C D is perpendicular to A F, the Angles A and F, and A C D and D C F are equal; from the Hypothenuſe A C, and Leg A D, given in the rectangled *Triangle* A C D, we find the Angle A C D; the double whereof is the Angle requir'd A C F: and from the ſame Data may the Angle A or F be found.

IV. If the *Triangle* be Scalenous, and the Angle A, Fig. 32. be requir'd; from C let fall the Perpendicular C D, and ſeek the Semi-difference of the Segments A D and D B, by ſaying, As the Tangent of half the Baſe A B, is to the Tangent of half the Sum of the Legs A C and C B; ſo is the Tangent of their Semi-difference, to the Tangent of the Semi-difference of the Segments A D and D B: Add then the Semi-difference of the Segments to the half Baſe, to find the greater Segment; and ſubtract the ſame from the ſame for the leſs. Thus having in the rectangled *Triangle* C A D, the Hypothenuſe A C, and the Side A D, the Angle A is found thence. After the ſame Manner is B found in the other C D B, from C D and D B given.

12°. *Given the three Angles* A B *and* C, *to find any of the Sides.*

Since in lieu of the given *Triangle*, another may be aſſum'd, whoſe Sides are equal to the given Angles, and the Angles to the given Sides; this Problem is reſolv'd after the ſame Manner as the preceding one.

TRIANGLE, TRIANGULUM, in Aſtronomy, a Name common to two Conſtellations; the one in the Northern Hemiſphere, call'd ſimply *Triangulum*, or *Triangulum Cœleſte*; the other in the Southern Hemiſphere, call'd *Triangulum Auſtrale*. See CONSTELLATION.

The Stars in the Northern *Triangle*, in *Ptolomy*'s Catalogue are 4; in *Tycho*'s as many; in the *Britannic* 24: The Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow:

Stars in the Conſtellation TRIANGULUM.

TRIANGULAR *Compaſſes*, are ſuch as have three Legs or Feet, whereby to take off any *Triangle* at once. See COMPASSES.

Theſe are much us'd in the Conſtruction of Maps, Globes, &c.

TRIANGULAR *Numbers*, are a kind of Polygonous Numbers; ſee POLYGONOUS *Number*; being the Sums of Arithmetical Progreſſions, the Difference of whoſe Terms is 1: Thus,

Of Arithmetical Progreſs	1	2	3	4	5	6
are form'd *Triang.* Numb.	1	3	6	10	15	21.

TRIANGULAR *Quadrant*, is a Sector furniſh'd with a looſe Piece, whereby to make it an Equilateral *Triangle*. See SECTOR.

The Calendar is graduated thereon, with the Sun's Place, Declination, and other uſeful Lines; and by the Help of a String and a Plummet, and the Diviſions graduated on the looſe Piece, it may be made to ſerve for a Quadrant. See QUADRANT.

TRIANGULARIS, in Anatomy, a Name given to two Muſcles, in reſpect of their Figure. See MUSCLE.

The *Triangularis Pectoris*, which has ſometimes the Appearance of three or four diſtinct Muſcles, ariſes from the Inſide of the Sternum, and is implanted into the Cartilages which join the four loweſt true Ribs to the Sternum.

The Action of this Muſcle is very obſcure; ſince both the Origination and Inſertion are at Parts not moveable, but together. --- Dr. *Drake* conjectures it may conduce towards the forming the neceſſary Incurvation of the Sternum, and by its Over-tenſion in Children, while the Cartilages are ſoft, may occaſion that morbid Acumination of the Sternum ſeen in rickety Children. --- Others ſuppoſe it may contract the Cavity of the Thorax in Expiration.

TRIANGULARIS *Labii*. See DEPRESSOR *Labii Superioris*.

TRIARII, in the *Roman* Militia, a kind of Infantry, arm'd with a Pike and a Shield, a Helmet and a Cuiraſs.

They were thus call'd, becauſe they made the third Line of Battle.

Polybius diſtinguiſhes four Kinds of Forces in the *Roman* Army: The firſt, call'd *Pilati*, or *Velites*, were a raw Soldiery, lightly arm'd. --- The *Haſtati*, or Spear-men, were a Degree older, and more experienc'd. --- The third, call'd *Principes*, Princes, were ſtill older, and better Soldiers than the ſecond. --- The fourth were the eldeſt, the moſt experienc'd, and the braveſt: Theſe were always diſpos'd in the third Line, as a Corps de Reſerve, to ſuſtain the other two, and to reſtore the Battle, when the others were broken or defeated.

Hence their Name of *Triarii*; and hence the Proverb *ad* Triarios *ventum eſt*, to ſhew that one is at the laſt and hardeſt Struggle.

The *Triarii* were alſo call'd *Poſtſignani*, becauſe rang'd behind the *Principes*, who bore the Standard in a Legion. See PRINCIPES.

TRIAS *Harmonica*, or the *Harmonical* TRIAD, in Muſic, a Compound of three radical Sounds, heard all together; two whereof are a Fifth, and a Third above the other, which is the Fundamental. See CONCORD, &c.

The *Triad* is properly a Conſonance form'd of a Third and a Fifth; which, with the Baſs, or fundamental Sound, makes three different Terms, whence the Name *Trias*. --- That of *harmonical* is doubtleſs given it from that wonderful Property of the Fifth, which divides itſelf naturally into two Thirds, both excellent, and perfectly harmonical; ſo that this one

Sound

Sound disposed between two others, makes two Thirds at once, and of Consequence a double Harmony. See FIFTH.

Hence it is, that in *Trio*'s, particularly, this Concord is preferr'd to that which divides the Octave into a Fifth and a Fourth: In regard that, if there be a Concord on one Side, there is a Discord on the other; whereas here the Harmony is compleat on both Sides.

Of the three Sounds which compose the harmonical *Triad*, the gravest is call'd the *Fundamental*, or *Bass*; the acutest, *i. e.* that which makes the Fifth, and which terminates the Concord upwards, is call'd the *excluded* or *highest* Sound; and that which divides the Fifth so agreeably into two Thirds, is call'd the *harmonical Mean*.

The Division of the Fifth into two Thirds, may be perform'd two Ways, *viz.* 1°. Harmonically, when the greater Third is lowest, and the less a-top; in which Case the *Triad* is perfect and natural.

2°. Arithmetically, when the less Third is lowest, and the greater a top; in which Case the *Triad* is imperfect and flat. Both are good; but the latter not to be often us'd.

TRIBE, TRIBUS, in Antiquity, a certain Quantity or Number of People; when a Division is made of a Nation into Quarters or Districts.

The City of *Athens* was divided into ten *Tribes*.--- The *Jewish* Nation into twelve *Tribes*, the Descendants of the twelve Sons of *Jacob*, *viz.* the *Tribes* of *Judah*, of *Reuben*, *Gad*, *Asher*, *Dan*, *Naphthali*, *Ephraim*, *Manassah*, *Simeon*, *Levi*, *Issachar*, *Zabulon*, and *Benjamin*.

These, in effect, make thirteen *Tribes*, from twelve Patriarchs; by Reason the Posterity of *Joseph* was divided into two *Tribes*, that of *Manassah*, and that of *Ephraim*. See PATRIARCH.

There were ten of these *Tribes* that revolted and follow'd *Jeroboam*.

The *Roman* People was at first only divided into three *Tribes*; and from this Number *three*, *tres*, it was that the Word *Tribe*, *Tribus*, took its Rise. --- This Division was accommodated by *Romulus*, to the several Nations he had united: The first consisted of the *Albans*, the second of the *Sabins*, and the third of a Mixture of Fugitives, who came to seek an Asylum at *Rome*.

Servius Tullus fearing this Partition might occasion Seditions, divided the Inhabitants of *Rome* by Cantons, not by Nations; accordingly, he distributed the City into four Quarters or *Tribes*; and by Reason a great Number of Citizens had retir'd into the Country about, of those he compos'd 26 other *Tribes*; so that from his Time the *Roman* People consisted of 30 *Tribes*.

In after-times, the Number of *Tribes* was encreas'd to 35; but they then ceas'd to be rang'd according to the Quarters of the City. --- The Distribution depended on the Censors, who form'd their List at Discretion, frequently confounding the Country *Tribes* with those of the City.

A Man was never absolutely a *Roman* Citizen, unless he had the *Jus Tribus*, *i. e.* till he were intitled to the Honours of the Magistrature, as also to a Right of voting in Assemblies of the People: And this was what they call'd *Jus Quiritium*.

Hence, the Inhabitants of the municipal Cities, were only imperfect Citizens, as being of no *Tribe*. See CITIZEN.

The Freedmen were oblig'd to purchase this *Right of Tribe*, which did not otherwise belong to them, tho' they were Citizens of *Rome*. See LIBERTUS.

The Names of the 35 *Tribes* were, 1°. the *Palatina*. 2°. the *Suburana*. 3°. the *Collina*. 4°. the *Esquilina*. 5°. the *Romilia*. 6°. the *Æmilia*. 7°. the *Cruſtumina*. 8°. the *Cornelia*. 9°. the *Fabia*. 10°. the *Galeria*. 11°. the *Leomonia*. 12°. the *Mentina* or *Menenia*. 13°. the *Ocriculana*. 14°. the *Papiria*. 15°. the *Pollia*. 16°. the *Popilia*. 17°. the *Pupinia*. 18°. the *Sergia*. 19°. the *Vegentina*. 20°. the *Voltinia*. 21°. the *Claudia*. 22°. the *Stellatina*. 23°. the *Tromentina*. 24°. the *Arnenſis*. 25°. the *Sabatina*. 26°. the *Pomptina*. 27°. the *Poblilia*. 28°. the *Mœcia*. 29°. the *Scaptia*. 30°. the *Onfentina*. 31°. the *Falerina*. 32°. the *Anienſis*. 33°. the *Terentina*. 34°. the *Velina*. 35°. the *Quirina*. In ancient Authors and Inscriptions, we meet with the Names of others, *viz.* *Pinaria*, *Sappinia*, *Camilla*, *Ceſtia*, *Cluentia*, &c.

TRIBRACHYS, in the ancient Prosody, a Foot of Verse, consisting of three Syllables, and those all short, as *Melius*.

The Word is form'd from the *Greek*, τρεῖς, three, and βραχυς, short.

TRIBUCH, and TREBUCHET, a Tumbrel, or Cucking-stool. See CUCKING-*stool*.

TRIBUNAL, *Judgment-Seat*, the Seat of a Judge. See JUDGE.

The *Tribunal* in a Court of Justice, is properly the Seat or Bench whereon the Judge and his Associates are placed. See BENCH.

The Word is *Latin*, and takes its Origin from a Seat rais'd from the Ground, wherein the *Tribune* of the *Roman* People was plac'd to administer Justice. See TRIBUNE.

Tribunal, *Tribuna*, or *Tribune*, among the Ancients, was also a Place from whence the People were harangued.

Among the *Romans*, it was an Eminence near the Temple, in the Place call'd *Pro Roſtris*, where the People were harangued in *Tribes*.

The *French* Architects likewise use the Word *Tribune* for a Gallery or Eminence in a Church, or other Place, wherein the Music is plac'd for a Symphony or Concert.

TRIBUNE, TRIBUNUS *Militum* or *Militaris*; an Officer in the *Roman* Army. See TRIBUNUS.

TRIBUNE, TRIBUNUS *Plebis*, in Antiquity, a *Roman* Magistrate, chosen out of the Populace, to protect them against the Oppression of the Great, and to defend the Liberty of the People against the Attempts of the Senate and Consuls.

The *Tribunes of the People* were first establish'd in the Year of *Rome* 259. The first Design of the Creation, was to shelter them from the Cruelties of Usurers, and to engage them to quit the *Aventine* Mount, whither they had retir'd in Displeasure.

Their Number, at first, was but two; but the next Year, under the Consulate of *A. Postumus Aruncius*, and *Cassius Viscellinus*, there were three more added; and this Number of five was afterwards increas'd by *L. Trebonius* to ten.

The Appellation *Tribune* was given them, by reason they were at first chosen out of the *Tribunes* of the Army. See TRIBUNUS.

The *Tribunes* were, as it were, the Leaders and Guardians of the People. --- They call'd Assemblies of the People when they pleas'd; and in those Assemblies frequently annull'd the Decrees of the Senate. Nothing could be concluded without their Consent, which they express'd by subscribing the Letter *T* at the Bottom of the Decree. They had it in their Power to prevent the Execution of any Decree, without giving any Reason for it, and merely by subscribing *Veto*.

They sometimes call'd the Consuls and Dictator to account for their Conduct, before the People.

Augustus himself was *Tribune* for 37 Years; *Tiberius* assum'd the same Quality; as likewise did his Successor, signifying the Year of their *Tribunate* on their Medals and Coins: But their Design, herein, was only to possess themselves of all the Authority, that there might be no-body to oppose them. See TRIBUNICIAN.

TRIBUNICIAN, a Term among Antiquaries and Medallists.--- The *Tribunician Power*, was the Dignity, Office, or Authority of a *Tribune of the People*. See TRIBUNE.

This Power was assum'd by the Emperors, and makes one of the chief Titles they bear on their Medals: The Quality was first introduc'd by *Augustus*, to keep the Sovereign Authority over the other Magistrates, without either taking that of Dictator or King. Indeed it was offer'd to *Julius Cæsar*, but he despis'd it. *Augustus* is the first who us'd it, and his Successors follow'd his Example. --- They reckon the Years of their Empire on their Medals by those of their *Tribunician Power*.

This Power was sometimes given them for a certain Number of Years, and sometimes for ever. Sometimes the Emperors would communicate the Power to such as they associated, or as they intended to succeed them: And *Tiberius* held it fifteen Years with *Augustus*. But this Practice only obtain'd till the Time of *Valerian* and *Gallian*. After them we only find T R. P. II. in *Claudius*; T R. P. V. in *Aurelian*; and T R. P. in *Probus*.

This, however, is to be understood of Medals; for in Inscriptions we find it after that Time.

Cardinal *Noris* and F. *Pagi* have disputed about this *Tribunician Power*, wherein it consisted. --- The first maintains, that it did not at all differ from that of the ordinary Tribunes, which consisted in three Things, 1°. In a Right of opposing all the Acts and Resolutions of the other Magistrates. 2°. In that it render'd their Person sacred and inviolable. 3°. In a Right of making Edicts and Laws.

F. *Pagi* asserts, that it made an Addition to the Power of the Tribunes; that the Privilege it had of making Edicts, was more ample than that of the ordinary Tribunes; besides, that it carry'd with it a Power of convening the Senate at Pleasure.

M. *Spanheim* is of F. *Pagi*'s Opinion: He believes that the *Tribunician Power* had much the Advantage of the *Tribunate*, 1°. In that it was peculiar to the Patricians, and did not reduce the Person who held it to the Degree of a Plebeian. 2°. In that it was not confin'd to the City of *Rome* alone, like the other, but extended throughout the Empire; as well as the Proconsular Power, which was usually annex'd to it. 3°. That the Dignity of the Tribunes was inferior to that of the Pretors; whereas the *Tribunician Power* of the *Cæsars*, conferr'd, according to *Tacitus*, a Sovereign Authority over all Magistrates, and render'd such as it was communicated to, equal to the Emperors, and even their Collegues in the Empire: Besides the Power of opposing the Enterprizes of all the other Magistrates; and

that

that it render'd their Perſons ſacred, and gave them a Right to aſſemble and diſmiſs the Senate, which were Rights the *Tribunician Power* held in common with the Tribunes.

F. *Hardouin* thinks we ſhould diſtinguiſh two *Tribunician Powers*; the one Civil, the other Military; but the Proof he brings thereof is very weak. M. *Spanheim* ſays, his Diſtinction is only founded on vain Conjectures, none of which deſerve Notice.

The Learned are greatly divided as to the Month and Day whereon the *Tribunician* Power commenced: *Sigonius* and *Petavius* will have it begin on the 1ſt of *January*: Others, as *Perizonius*, on the 5th of the Calends of *July*: M. *Toinard* on the 4th of the Ides of *December*: *Onuphrius*, Cardinal *Noris*, F. *Pagi*, &c. on the Day of the Emperor's Acceſſion to the Empire; with this Difference, that F. *Pagi* takes it to be on the 5th of the Calends of the Month wherein the Prince was proclaim'd; and that this Day was, for this Reaſon, held ſacred among the *Romans*.

F. *Hardouin* thinks, that on Medals the *Tribunician Power* commences on the Anniverſary of the Building of *Rome*, *viz.* the 11th of the Calends of *May*; excepting on the *Greek* Medals, where it begins in *September*, in regard this Month, which began the *Greek* Year, was near the Time when the *Tribunician Power* was firſt conferr'd.

Of all theſe Sentiments the moſt probable is that of *Onuphrius*, &c. ſetting aſide the Reſtriction of F. *Pagi*. See M. *Spanheim*, Differt. XII. Tom. II. p. 429.

TRIBUNUS *Militum* or *Militaris*, or *Military* TRIBUNE, an Officer in the *Roman* Army who commanded in chief over a Body of Forces, particularly a Legion; much the ſame with our Colonel, or the *French Meſtre de Camp*. See LEGION.

There is ſome Diſtinction of the *Tribunes*, into *Laticlavi*, and *Anguſticlavi*: Thoſe born of noble Families were allow'd, after they were made *Tribunes* of a Legion, to take the *Laticlavus*. See LATICLAVUS.

The reſt were only to wear the *Anguſticlavus*; whence *Suetonius* takes Care to inform us, that his Father was *Tribunus Laticlavus* of the 13th Legion.

Over theſe *Tribunes* of Legions and Cohorts, there were other *Tribunes* who commanded in the Abſence of the Conſuls, and who were inveſted with a Conſular Authority. --- *Budeus* will have theſe to be much the ſame as the Marſhals of *France*, or, at leaſt, Lieutenants General.

Romulus likewiſe eſtabliſh'd a *Tribune* of the Cavalry, *Tribunus Equitum*, who was the ſame with the *Magiſter Equitum* under the Dictators, the firſt Officer after the Kings. See MAGISTER *Equitum*.

The *Tribunes* of the Soldiery, were of an elder ſtanding than thoſe of the People; thoſe latter being elected out of the former.

Varro will have it, they were call'd *Tribunes*, becauſe, at firſt, they were only three in Number in each Legion, when the Legion conſiſted of three thouſand Men, taken out of the three Tribes then on Foot.

In Proportion as the Legion was increas'd, the Number of *Tribunes* was likewiſe increas'd to the Number of ſix.

At firſt, the Election lay in the General of the Army; but in the Year of *Rome* 391, it was appointed, that the People ſhould nominate one Part, and the General another: The latter were call'd *Rufuli*, from *Rotilius Rufus*, who paſs'd the Law.

Thoſe choſe by the People in the Comitia, were call'd *Comitiati*: They were indifferently either Patricians or Plebeians; and had the ſame Marks of Honour as the Conſuls themſelves. --- The *Tribune of the Pretorian Cohorts* was the Captain of the Guards. See PRETORIAN.

The Term *Tribune* was alſo apply'd to various other Officers; as the *Tribuni Ærarii*, *Tribunes* of the Treaſury: --- The *Tribune of the Celeries*, the Officer who commanded them: The *Tribuni Fabricarum*, thoſe who had the Direction of the making of Arms: The *Tribuni Marinorum*; *Tribuni Nolanorum*, *Tribuni Voluptatum*, mention'd in the *Theodoſian Code*, as Intendants of the Publick Shews and other Diverſions.

The Title *Tribune* was alſo given to the chief of a Tribe. See TRIBE.

TRIBUTE, TRIBUTUM, a Duty or Tax which one Prince or State is oblig'd to pay to another, as a Token of Dependance; or in Virtue of a Treaty, and as a Purchaſe of Peace.

The *Romans* made all the Nations they ſubdu'd pay them *Tribute*. --- *Mahomet* laid it down as a Fundamental of his Law, that all the World ſhould pay him *Tribute*.

In the States of the Grand Signior, Chriſtian Children are taken in Way of *Tribute*, to make Janiſaries. See JANISARY.

TRIBUTE is ſometimes alſo us'd for a perſonal Contribution, which Princes levy on their Subjects by Way of Capitation or Poll-Money. See TAX.

In this it differs from an Impoſt, which is properly what is laid on Merchandizes. See IMPOST.

TRIBUTARY, one who pays *Tribute* to another, in order to live in Peace with him, or ſhare in his Protection. See TRIBUTE.

The Republic of *Raguſa* is *Tributary* to the Grand Turk; ſo is the Cham of Little *Tartary*, &c.

TRICEPS, in Anatomy, a Muſcle of the Thigh, having three Originations, and as many Inſertions; and which may therefore, be conveniently divided into three Muſcles, all ariſing from the Os Pubis, and inſerted into the Linea Aſpera of the Thigh Bone, whereof they poſſeſs the greateſt Part. See MUSCLE.

They ſerve as Adductores, and draw the Thighs together.

TRICUSPIDES, in Anatomy, an Epithet given to three Valves, ſituate at the Entrance of the Vena Cava into the Heart. See VALVE.

They open from without inwards, ſo as to let the Blood of the Cava paſs into the Heart, but prevent its Reflux into the Cava. See HEART.

They are thus call'd, from their Figure, which is triangular: Some fancy them to be of the Figure of three Tongues; and call them *Triglottides*.

TRIDENT, TRIDENS, an Attribute of *Neptune*; being a kind of Scepter which the Painters and Poets put in the Hands of that God, in form of a Fork with *three Teeth*; whence the Word. See SCEPTER.

The Poets ſtill tell us, that *Neptune* makes the Earth open, whenever he ſtrikes it with his *Trident*.

TRIDENT, among Mathematicians, is us'd for a Kind of Parabola, by which *Cartes* conſtructed Equations of ſix Dimenſions. See PARABOLA.

TRIEMIMERIS, a kind of Cæſura of a *Latin* Verſe, wherein, after the firſt Foot of the Verſe, there remains an odd Syllable, which helps to make up the next Foot; as in this Verſe,

Ille latus niveum molli fultus Hyacintho.

TRIENNIAL, an Epithet applied chiefly to Offices or Employments, which laſt for three Years.

Thus we ſay, a *Triennial Government*: Moſt regular Monaſteries have *Triennial* Superiors; they elect new ones at the End of each three Years.

In 1695, an Act was made for *Triennial Parliaments*, *i. e.* for Parliaments which ſhould be diſſolved, and the Members be elected anew every three Years. Till that Time, the King had it in his Power to prorogue and continue his Parliaments as long as he pleas'd. ---- This opened a Door to Corruption, which the *Triennial* Bill was intended to prevent.

The *Triennial* Act has, from ſome other Views, been ſince Repeal'd: The great Struggles uſual at Elections, the great Ferment it uſually puts the Nation into, the great Expences upon that Occaſion, with other Conſiderations, determined the Legiſlature, in 1717, to change *Triennial* Parliaments for Septennial ones. See PARLIAMENT.

TRIENS, in Antiquity, a Term uſed for two different Things; 1° A Copper Money, of the Value of one Third of an As. ----- On one Side, it bore a *Janus*'s Head, and on the other, a Water-Rat. This was the Piece of Money uſed to be put in the Mouths of the Deceas'd, to pay *Charon* his Fare for their Paſſage into the other Life. See MONEY and COIN.

2° The *Triens* was alſo a drinking Cup; and that which was ordinarily uſed. -- It was a fourth Part of the Septary. SEPTARY.

TRIFOLIUM or TREFOIL, any three-leaf'd Graſs: That which is moſt uſed in Medicine, is the *Trifolium Aquaticum*, or Buck-Bean, which is very detergent, and uſed with Succeſs in Scorbutic, Rheumatic and Scrophulous Habits. The way of uſing it is generally to make a pretty ſtrong Infuſion of the dry'd Herb, in form of Tea.

TRIGA, in Antiquity, a kind of Car, or Chariot with three Horſes. See CAR, &c.

The *Triga*, in reality, was only drawn by two Horſes; ſo that it was properly a Biga: but it had, beſides, a third Horſe tied to the others, like a led Horſe, for Change. See BIGA.

Statius calls the third Horſe *Equus funalis*; *Heſychius*, παρήορος; and *Dionyſius Halicarnaſſæus*, σειραῖος.

We don't find the *Triga* on any ancient Monument; but it was a long time in uſe among the *Romans*, at their Ludi Circenſes. ---- The *Greeks*, who firſt introduced it, ſoon abandon'd it.

TRIGAMY, a third Marriage; or the State of a Perſon who has been married three Times. See MARRIAGE.

In the ancient Church, *Trigamy* was only allowed to ſuch as had no Children by their former Marriages.

If, having Children by one or both the former, they married again, after 40 Years of Age, they were excluded from Communion for five Years. ---- If they were only forty Years old, the Penance was but four Years. See BIGAMY.

TRIGLYPHS, in Architecture, a ſort of Ornaments repeated at equal Intervals in the *Doric* Freeze. See FREEZE, &c.

They

They consist of two entire Gutters or Channels, cut to a right Angle, call'd *Glyphes*, and separated by two Interstices, call'd, by *Vitruvius*, *Shanks*, from two Half Channels at the Sides. See GLYPHES.

The ordinary Proportion of *Triglyphs*, is to be a Module broad, and one and a Half high. ---- But this Proportion, M. *le Clerc* observes, sometimes occasions ill-proportion'd Intercolumnations in Portico's; for which Reason he chuses to accommodate the Proportion of his *Triglyphs* to that of the Intercolumns. See INTERCOLUMNATION.

The Intervals between the *Triglyphs*, are called *Metopes*. See METOPES.

Under the Channels, or Glyphes, are placed Guttæ or Drops. See GUTTÆ.

The *Triglyphs* make the most distinguishing Character of the *Doric* Order. --- Some imagine them originally intended to convey the Guttæ that are underneath them: Others fancy they bear some Resemblance to a Lyre, and thence conjecture the Order to have been originally invented for some Temple sacred to *Apollo*. See DORIC.

The Word is form'd from the *Greek* τρίγλυφος, three Engravings, from γλύφω, *Sculpo*.

TRIGON, TRIGONUS, in Geometry, a Triangle. See TRIANGLE.

The Word is form'd from the *Greek* τριγονος, *Triangle*.

TRIGON, in Astrology, is an Aspect of two Planets, wherein they are 120 Degrees distant from each other; called also *Trine*. See TRINE.

The *Trigons* of *Mars* and *Saturn*, are held Malefic Aspects. See ASPECT.

TRIGON, TRIGONON, *in Music*, is a Musical Instrument, used among the Ancients.

The *Trigon* was a kind of triangular Lyre, invented by *Ibycus*. See LYRE.

TRIGONOMETRY, the Art of finding the Dimensions of the Parts of a Triangle unknown, from other Parts known: Or, the Art whereby, from any three Parts of a Triangle given, all the rest are found. See TRIANGLE.

Thus, *e. gr.* from two Sides A B and A C and an Angle B, we find by *Trigonometry*, the other Angles B and C with the third Side B C, Tab. Trigonometry Fig. 1.

The Word literally signifies the *measuring of Triangles*; form'd from the *Greek*, τρίγονος, Triangle, and μετρον, Measure; yet does not the Art extend to the measuring of the Area or Surface of Triangles, which comes under Geometry: *Trigonometry* only considers the Lines and Angles thereof.

Trigonometry is of the utmost Use in various mathematical Arts. --- 'Tis by means hereof, that most of the Operations of Geometry and Astronomy are perform'd; without it the Magnitude of the Earth and the Stars, their Distances, Motions, Eclipses, &c. would be utterly unknown.-- *Trigonometry*, therefore, must be own'd an Art, whereby the most hidden Things, and those remotest from the Knowledge of Men, are brought to light. A Person ignorant hereof, can make no great Progress in mixt Mathematicks; but will often be gravell'd, even in Natural Philosophy, particularly in accounting for the Phænomena of the Rain-bow, and other Meteors.

Trigonometry, or the Solution of Triangles, is founded on that mutual Proportion which is between the Sides and Angles of a Triangle; which Proportion is known, by finding the Proportion which the Radius of a Circle has to certain other Lines, coll'd *Chords*, *Sines*, *Tangents* and *Secants*. See RADIUS, CHORD, SINE, TANGENT and SECANT.

This Proportion of the Sines and Tangents to their Radius, is sometimes express'd in common or natural Numbers, which constitute what we call the *Tables of natural Sines, Tangents*, &c. --- Sometimes it is express'd in Logarithms, and in that Case, constitutes the Tables of *artificial Sines*, &c. See TABLES.

Lastly, sometimes the Proportion is not express'd in Numbers; but the several Sines, Tangents, &c. are actually laid down upon Lines or Scales; whence the *Line of Sines, Tangents*, &c. See LINE and SCALE.

Trigonometry is divided into *Plain* and *Spherical*: The first considering rectilinear Triangles; and the second, Spherical ones. --- The *First* is of obvious and continual Use in Navigation, Measuring, Surveying and other Operations of Geometry. See MEASURING, SURVEYING, SAILING, &c.

The *Second* is only learn'd, with a View to Astronomy and its kindred Arts, Geography and Dialling. --- It is generally esteem'd exceedingly difficult, by reason of the vast Number of Cases wherewith it is perplex'd; but the excellent *Wolfius* has removed most of the Difficulties. That Author has not only shewn how all the Cases of rectangled Triangles may be solv'd the common Way, by the Rule of Sines and Tangents; but has likewise laid down an universal Rule, whereby all Problems, both in Plain and Spherical rectangled Triangles are solved: And even obliquangular Triangles, he teaches to solve with equal Ease. ---- His Doctrine, see under the Article TRIANGLE.

Plain TRIGONOMETRY, is an Art whereby, from three given Parts of a Plain Triangle, we find the rest.

The great Principle of *Plain Trigonometry*, is, that in *every plain Triangle, the Sides are, as the Sines of the opposite Angles*. ---- See this Principle applied to the Solution of the several Cases of Plain Triangles, under the Article TRIANGLE.

Spherical TRIGONOMETRY, is the Art whereby, from three given Parts of a spherical Triangle, we find the rest. *E. gr.* whereby from two Sides and one Angle, we find the two other Angles, and the third Side. See SPHERICKS.

The Principles of *Spherical Trigonometry*, as reform'd by *Wolfius*, are as follow:

1° *In every rectangled spherical Triangle, A B C, rectangular at C, the whole Sine is to the Sine of the Hypothenuse, B C, Tab. Trigonom. Fig. 33. as the Sine of either of the acute Angles, as C, is to the Sine of the Leg, opposite thereto A B; Or, the Sine of the Angle B, to the Sine of its opposite Leg A C*; whence we deduce, that the Rectangle of the whole Sine into the Sine of one Leg, is equal to the Rectangle of the Sine of the Angle opposite thereto, into the Sine of the Hypothenuse.

2° *In every right-angled spherical Triangle A B C, Fig. 31. none of whose Sides is a Quadrant; if the Complements of the Legs A B and A C to a Quadrant, be consider'd as the Legs themselves; the Rectangle of the whole Sine into the Cosine of the middle Part, is equal to the Rectangle of the Sines of the disjunct or separate Parts.*

Hence, 1°. If the Sines be artificial, that is, the Logarithms of the natural ones; the whole Sine, with the Co-sine of the middle Part, will be equal to the Sines of the disjunct Parts. ---- 2° Since, in the rectilinear Triangle A B C (Fig. 34.) the whole Sine is to the Hypothenuse B C, as the Sine of the Angle B or C to the Sine of the opposite Leg A C or A B: if, instead of the Sines of the Sides, we take the Sides themselves; here, too, the whole Sine, with the Co-sine of the middle Part A C or A B, will be equal to the Sines of the disjunct Parts B or C and B C; *i. e.* to the Sine of B or C, and B C itself.

This, *Wolfius* calls *Regula Sinuum Catholica*, or the first Part of the Catholic Rule of *Trigonometry*; by means whereof all the Problems of either *Trigonometry* are solved, when the thing is effected by Sines alone. ---- My Lord *Neper* had the first Thought of such a Rule: But he used the Complements of the Hypothenuse B C (Fig. 22.) and the Angles B and C for the Hypothenuse, and Angles themselves: So that the Tenor of his Catholic Rule of Sines is this:

The whole Sine, with the Sine of the middle Part, is equal to the Co-sines of the disjunct, or, as he calls them, opposite Parts. --- But, in this, that Harmony between Plain and Spherical *Trigonometry*, visible in *Wolfius*'s Rule, does not appear.

3° *In a rectangled spherical Triangle A B C (Fig. 33.) none of whose Sides is a Quadrant; as the whole Sine is to the Sine of the adjacent Leg A C; so is the Tangent of the adjacent Angle C to the Tangent of the Leg A B.*

Whence, 1°, as the Co-tangent of the Angle is to the whole Sine, as the whole Sine is to the Tangent of the Angle C, so is the Sine of A C to the Tangent of A B; therefore the Co-tangent of the Angle C, will be to the whole Sine, as the Sine of the Leg adjacent thereto, A C, is to the Tangent of the opposite one A B. 2° The Rectangle, therefore, of the whole Sine, into the Sine of one Leg A C, is equal to the Rectangle of the Tangent of the other Leg A B, into the Co-tangent of the Angle C, opposite to the same. And, in like manner, the Rectangle of the whole Sine, into the Sine of the Leg A B, is equal to the Rectangle of the Tangent of the Leg A C into the Co-tangent of the Angle B.

4° *In every right-angled spherical Triangle, A B C (Fig. 31) none of whose Sides is a Quadrant; if the Complements of the Legs A B and A C to a Quadrant, or their Excesses beyond a Quadrant, be consider'd as the Legs themselves; the Rectangle of the whole Sine, into the Co-sine of the middle Part, will be equal to the Rectangle of the Co-tangents, of the conjunct Parts.*

Hence, 1°, If the Sines and Tangents be Artificial; the whole Sine, with the Co-sine of the middle Part, is equal to the Co-tangents of the contiguous Parts. 2° Since in a rectilinear, right-angled Triangle, we use the Tangents, when from the Legs A B and A C (Fig. 34.) given, the Angle C is to be found; and in that Case the whole Sine is to the Co-tangent of C. *i. e.* to the Tangent of B, as A B to A C; therefore, also, in a rectilinear Triangle, if for the Sines and Tangents of the Sides be taken the Sines themselves; the whole Sine, with the Co-sine of the middle Part, *i. e.* with A C, is equal to the Co-tangents of the conjunct Parts, *i. e.* to the Co-tangent of C, or Tangent of B and the Side A B.

This, *Wolfius* calls *Regula Tangentium Catholica*, and constitutes the other Part of the Catholic Rule of *Trigonometry*; whereby all Problems in each *Trigonometry*, where Tangents are required, are solved.

My Lord *Neper*'s Rule to the like Effect, is thus: ---- That the whole Sine, with the Sine of the middle Part, is equal to the Tangents of the contiguous Parts.

'Tis, therefore, a Catholic Rule, which holds in all *Trigonometry*; that *in a rectangled Triangle, (notatis notandis, i. e.*

the Complements of the Legs A B and A C, being conſider'd as Legs themſelves, and in rectilinear Triangles, the Sides themſelves being taken for the Sines and Tangents of the Sides) *The whole Sine with the Co-ſine of the mean or middle Part is equal to the Sines of the diſjunct or ſeparate Parts, and the Co-tangents of the conjunct or contiguous Parts.*

For an Illuſtration and Application of this Rule, in the Solution of the various Caſes of ſpherical Triangles; ſee TRIANGLE.

TRIHING or TRICHING, from the *Saxon*, *Trihinga*, an Extent containing three or four Hundreds, or the third Part of a Shire or Province. See TITHING.

The Word is alſo uſed for a Court held within that Circuit, which was the ſame with what we now call a *Court-Leet*, which is above a Court Baron, and inferior to the County Court. See COURT, LEET, &c.

TRILLION or TRILION, in Arithmetic, the Number of a Billion of Billions. See NUMERATION.

After Billions, we reckon by *Trillions*, which makes a Claſs of Numeration, and are divided, like the other Claſſes, into three Places: Thus we ſay *Trillions*; *Tens of Trillions*; *Hundreds of Trillions*, &c.

TRIM, in the Sea Language. --- *To Trim a Boat*, is to ſet the Paſſengers ſo as to keep the Boat even on both Sides.

TRIM of a Ship, is her beſt Poſture, Proportion of Ballaſt, and hanging of her Maſts for ſailing.

Hence, to find the beſt way of making a Ship ſail ſwiftly, is to find her *Trim*.

TRIMACRUS, Τριμακρος, in the ancient Proſody, a Foot in Verſe, conſiſting of three long Syllables. See FOOT.

TRIMILCHI, from the *Saxon Trimilc*, a Name by which the *Engliſh Saxons* called the Month of *May*; becauſe they milked their Cattle three times a Day in that Month.

TRIMMERS, in Architecture, Pieces of Timber, fram'd at right Angles to the Joints, againſt the Ways; for Chimneys and Well-holes for Stairs.

TRINE *Dimenſion*, or *Three-fold Dimenſion*, includes Length, Breadth and Thickneſs. See DIMENSION.

The *Trine* Dimenſion is peculiar to Bodies or Solids. See BODY, &c.

TRINE *in Aſtrology*, is the Aſpect or Situation of one Star with regard to another, when they are diſtant 120 Degrees, as the Arch A B (Tab. Aſtronomy, Fig. 3.) which is a Third of a Circle, and its ſubtenſe A B, a Side of an equilateral Triangle A B inſcribed in the Sphere. See ASPECT.

It is alſo called *Trigon*, and ſignified by the Character △. See TRIGON.

TRINGLE, in Architecture, a Name common to ſeveral little ſquare Members, or Ornaments; as Reglets, Liſtels and Plat-bands. See REGLET, LISTEL, &c.

The Word is *French*, where it ſignifies the ſame thing.

TRINGLE is particularly uſed for a little Member fix'd exactly over every Triglyph, under the Plat-band of the Architrave; from whence hang down the Guttæ or Pendant Drops. See TRIGLYPH and GUTTÆ.

TRINITARIANS, a Term uſed very variouſly, and arbitrarily --- Frequently it ſtands as a common Name for all Hereticks, who have Sentiments on the Myſtery of the Trinity, contrary to thoſe of the Catholic Church. See TRINITY.

Sometimes it is more immediately reſtrain'd to ſome one or other particular Claſs of Hereticks: Thus the *Trinitarians* are frequently confounded with the *Unitarians*. See UNITARIANS.

Sometimes it is even applied to the Orthodox themſelves, in Contradiſtinction to the *Antitrinitarians*, who deny or impugn the Doctrine of the Trinity: Thus the Socinians and others us'd to call the Athanaſians, *Trinitarians*.

TRINITARIANS are alſo an Order of Religious, inſtituted in Honour of the Trinity, for the Redeeming of Chriſtian Captives from the Infidels; vulgarly call'd *Mathurins*, and Brothers of the *Redemption*. See MATHURIN.

They are cloath'd in White, and bear on the Stomach a Croſs, partly Red and partly Blue; by which three Colours, White, Red and Blue, is ſuppoſed to be repreſented, the Myſtery of the Trinity.

The *Trinitarians* make it their Buſineſs to go and ranſom Chriſtians held in Slavery in the Republicks of *Algiers*, *Tunis* and *Tripoly*, and the States of *Morocco*. --- They have a Rule peculiar to themſelves; though ſeveral Hiſtorians rank them among the Obſervers of the Rule of St. *Auguſtin*.

The Order had its Riſe in 1198, under the Pontificate of *Innocent* III. The Founders were *John de Matha* and *Felix de Valois*: The firſt of *Faucon* in *Provence*; the ſecond, not of the Royal Family of the *Valois*'s, as ſome have imagin'd; but thus call'd, in all probability, as being a Native of the Country *Valois*.

Gauthier of *Chatillon* was the firſt who gave them a Place in his Lands to build a Convent; which afterwards became the Chief of the whole Order: *Honorius* III. confirm'd their Rule. *Urban* IV. appointed the Biſhop of *Paris* and others, to reform them: they did it; and the Reform was approved in 1267, by *Clement* IV.

This Order poſſeſſes about 250 Convents, divided into Thirteen Provinces; whereof ſix are in *France*, three in *Spain*, one in *Italy*, and one in *Portugal*. --- Formerly, there was one in *England*, another in *Scotland*, and a third in *Ireland*.

In the general Chapters held in 1573 and 1576, a Reform was order'd, and begun ſome time afterwards by *Julian de Nantonville*, and *Claude Aleph*, two Hermits of St. *Michael*, but now permitted by Pope *Gregory* to take the Habit of the Trinity; upon which their Hermitage was converted into a Houſe of the Order.

In 1609, Pope *Paul* allow'd them to build new Houſes, and to introduce the Reform into the old One. In 1635 *Urban* VIII. by a Brief, appointed the Cardinal *de Rochefoucault* to introduce the Reform into all the Houſes of the Order, which was done accordingly, by a Sentence containing the Reform in Eight Articles, the Principal whereof were, That they ſhould obſerve the primitive Rule approved of by *Clement* IV. ſhould abſtain from Fleſh, uſe woollen Shirts, have Matins at Midnight, &c. In 1554 there was alſo a Reform made among thoſe of *Portugal*.

The Habit of the *Trinitarians* is different in different Countries; and that of the Reform'd different from the reſt.

Bare-foot TRINITARIANS, are a Reform of this Order, made in *Spain* at a general Chapter, held in 1594, where it was reſolved, That each Province ſhould eſtabliſh two or three Houſes, where the primitive Rule ſhould be obſerv'd, and where the Religious ſhould live up to a greater Auſterity, uſe coarſer Cloaths, &c. and yet ſhould have the Liberty of returning to their ancient Convents when they thought fit.

Dom. Alvares Baſan, intending to found a Monaſtery at *Valdepegnas*, and deſiring to have it held by bare-foot Religious; it was agreed to add Nudity of Feet to the Reform; that the *Trinitarians* might have the Benefit of that Eſtabliſhment. The Reform afterwards grew into three Provinces, and was at length introduced into *Poland* and *Ruſſia*, and thence into *Germany* and *Italy*.

There are alſo *bare-footed Trinitarians* in *France*, eſtabliſh'd by F. *Jerom Hallies*, who being ſent to *Rome* to ſollicit the firſt Reform mentioned above; not content therewith, he carried it further, and obtain'd a Permiſſion of Pope *Gregory*, to add a coarſe Habit, and Nudity of Feet thereto. He began with the Convent of St. *Denis* at *Rome*, and thoſe of *Aix* in *Provence*.

In 1670 there were Houſes enough of this Reform to make a Province; and accordingly they held their firſt general Chapter the ſame Year. See PROVINCE.

There are alſo Nuns of the *Trinitarian* Order, eſtabliſh'd in *Spain* by St. *John de Matha* himſelf, who built them a Convent in 1201. --- Thoſe who firſt took the Habit were only Oblati, and made no Vows; but in 1201 the Monaſtery was fill'd with real Religious, under the Direction of the Infanta *Conſtantia*, Daughter of *Peter* II. King of *Arragon*, who was the firſt Religious, and the firſt Superior of the Order.

There are alſo *Bare-foot Nuns* of this Order, eſtabliſh'd at *Madrid* about the Year 1612, by *Frances de Romero*, Daughter of *Julian de Romero*, Lieutenant-General in the *Spaniſh* Army. Her Deſign being to found a Monaſtery of *Bare-foot Auguſtines*, ſhe aſſembled a Number of Maids for that End, lodging them, for the Time, in a Houſe belonging to the Monaſtery of *Bare-foot Trinitarians* in the Neighbourhood.

Here, attending at the Church of thoſe Fathers, and being under the Direction of F. *John Baptiſt* of the Conception, their Founder; the Knowledge of that Father, and the Services he did them, made them change their Reſolution of becoming *Auguſtines*, and demand of their Director the Habit of his Order; which he gave them.

But the Order oppoſing their Deſign, and refuſing to take them under its Juriſdiction, they addreſs'd themſelves to the Archbiſhop of *Toledo*, who allow'd them to live according to the Rule of that Order; ſo that they took the Habit anew in 1612, and began their Noviciate.

Laſtly, there is a third Order of *Trinitarians*. See THIRD *Order*.

TRINITY, TRINITAS, TRIAS, TRIAD, in Theology, the ineffable Myſtery of three Perſons in one God; Father, Son, and Holy Spirit. See PERSON and MYSTERY.

'Tis an Article in the Chriſtian Faith, that there is one God; an Unity in Nature and Eſſence, and a *Trinity* of Perſons. --- The Term *Trinity* implies the Unity of three, the Unity of three divine Perſons really different, and the Identity of an indiviſible Nature: The *Trinity* is a Ternary of divine Perſons of the ſame Eſſence, Nature, and Subſtance.

Theology teaches, that there is in God one Eſſence, two Proceſſions, three Perſons, four Relations, five Notions, and

the

the Circumincession; which the *Greeks* call *Perichoresis*. Of each whereof we shall enlarge a little.

There is, then, one single *Essence*, one divine Nature, which is Infinite, Eternal, Spiritual; which sees all Things, which knows all Things, which is every where, All-mighty, and which created all Things of nothing. See GOD.

In this God there are two *Processions*, or Emanations, *viz.* that of the Son, and that of the Holy Spirit: The first is call'd *Generation*, and the second *Spiration*. See GENERATION, &c.

The Son proceeds from the Father by way of Knowledge; for God in knowing himself eternally, necessarily and infinitely, produces a Term, an Idea, a Notion or Knowledge of himself, and all his adorable Perfections, which is call'd his *Word*, his *Son*, who is equal to him in all Things, eternal, infinite, and necessary as his Father. --- The Father regards the Son as his Word, and the Son has a Regard to the Father as his Principle: And in thus respecting each other eternally, necessarily, and infinitely, they love each other, and produce an Act of their mutual Love: The Term of that Love is the Holy Spirit, who proceeds from the Father and the Son by way of Spiration, Love, and Impulsion; who is also equal in every Thing to the Father and the Son. See FATHER, SON, and SPIRIT.

Each divine Procession establishes two *Relations*: The one, on the Side of the Principle, or that from whence; and the other, on that of the Term, or that to which. --- Hence, as there are two Processions in God, there must be four Relations; the Paternity, the Filiation, the active Spiration, and the passive.

The *Paternity* is a Relation founded in what the School Divines call the notional Understanding; in which the Father stands related to the second Person, the Son. --- The Filiation is the Relation wherein the second Person, *viz.* the Son refers to the Father.

The *active Spiration*, is the Relation founded in the notional Act of the Will, whereby the first and second Persons regard or refer to the third: The passive Spiration or Procession, taken in its strict Sense, is the Relation whereby the third Person regards, and is referr'd to the first and second. --- Hence it appears, that there are in God four Relations, as we have already said; and five Notions, as we shall shew hereafter.

Person is defin'd an individual, reasonable, or intellectual Substance; or, an intellectual and incommunicable Substance. See PERSON.

The Hypostasis, or Subsistence, is what constitutes the Person. --- There are, then, in the Holy *Trinity*, three Persons, Father, Son, and Holy Spirit, which have all Things in common, except their Relations; whence that Axiom in Theology comes to have Place, in the divine Persons there is no Distinction where there is no Opposition of Relation: And hence it follows, that if Power be sometimes attributed to the Father, Wisdom to the Son, and Goodness to the Holy Spirit; or if Sins of Infirmity or Weakness be said to be against the Father, Sins of Ignorance against the Son, and Sins of Malice against the Holy Spirit, it is only spoke by way of Appropriation, and not of Property; for all those Things are in common: Whence that Axiom, The Works of the Holy *Trinity* are common and undivided, (*i. e.* they agree to all the divine Persons) but not their Productions *ad intra*, (as they are call'd) by Reason they are Relative.

By Appropriation we mean the giving of some common Attribute to a certain divine Person, on account of some Suitableness or Agreement. Thus, in the Scriptures, in the Apostles, and the *Nicene* Creed, *Omnipotence* is attributed to the Father, because he is the first Principle, and a Principle without Origin, or higher Principle. --- *Wisdom* is attributed to the Son, because he is the Term of the divine Understanding to which Wisdom belongs: *Goodness* is attributed to the Holy Spirit, as being the Term of the Will to which Goodness belongs.

Some Divines give other Reasons of such Kind of Attributions and Appropriations, *viz.* that it is to stave off those Imperfections from the divine Persons which are found in the Creatures: For created Fathers are weak, drooping, and impotent; wherefore to ward off this Imperfection from the third Person, he is peculiarly said to be *Almighty*.

Again, created Sons are usually imprudent; wherefore to remove this Imperfection from the second Person, he is said to be *wise*, or *Eternal Wisdom*.

Lastly, great Minds or Spirits, among created Beings, are frequently wicked; wherefore to remove this Imperfection from the third Person, *Goodness* is attributed to him.

The Father is the first Person in the Holy *Trinity*, by reason the Father, alone, produces the Word, by the way of *Understanding*; and with the Word produces the Holy Spirit, by way of *Will*.

Here it is to be observ'd, that the Holy Spirit is not thus call'd from his Spirituality, that being common and essential to all three Persons; but from the passive Spiration, which is peculiar to him alone.

Add, that when one Person in the Holy *Trinity* is call'd *first*, another *second*, and another *third*, it must not be understood of a Priority of Time, or of Nature, which would imply some Dependance; but of a Priority of Origin and Emanation, which consists in this, that one Person produces the other in such Manner, as that the Person which produces cannot be, or be conceiv'd, without that produc'd.

From these Things it follows, that in the Holy *Trinity* there are five *Notions* (understanding by Notion the peculiar Manner whereby one divine Person is distinguish'd from another). The Notions, then, whereby the Father is distinguish'd from the Son and Holy Ghost, are *Innascibility* and *Paternity*. --- That whereby the Son is distinguish'd from the two other divine Persons, is *Filiation*.

Active Spiration distinguishes the Father and the Son from the Holy Spirit; and *passive* Spiration is that whereby the Holy Spirit is distinguish'd from the Father and Son

The *Circumincession* or Perichoresis, is the intimate Inexistence of the divine Persons, or their mutual in-dwelling in each other: For tho' they be really distinct, yet are they Consubstantial; whence it is that Jesus Christ says in St. *John*, cap. xiv. *Believe ye not that I am in the Father, and the Father in me?* Identity of Essence, which the *Greeks* call ὁμοσία, and Consubstantiality, with a Distinction of Persons, are necessary to this Circumincession.

Many of the Heathens seem to have had a Notion of a *Trinity*. --- *Steuch. Eugub. de Peren. Philos.* lib. 1. cap. 3. observes, that there is nothing in all Theology more deeply grounded, or more generally allow'd by them, than the Mystery of the *Trinity*. The *Chaldeans*, *Hebrews*, *Phœnicians*, *Greeeks*, and *Romans*, both in their Writings and their Oracles, acknowledg'd that the supreme Being had begot another Being from all Eternity, which they sometimes call'd the *Son of God*, sometimes the *Word*, sometimes the *Mind*, and sometimes the *Wisdom of God*, and asserted it to be the Creator of all Things.

Among the Sayings of the *Magi*, the Descendants of *Zoroaster*, this is one; Παντα ὁξετελεστ παντα χαὶ νῶ παρέδωκε δευτέρω: *The Father finish'd all Things, and deliver'd them to the second Mind.* --- The Son was call'd the *Anima Mundi*. See ANIMA.

The *Ægyptians* call'd their *Trinity Hemphta*, and represented it by a Globe, a Serpent, and a Wing dispos'd into one Hieroglyphic Symbol. --- *Kircher*, *Gale*, &c. suppose the *Ægyptians* learnt their Doctrine of the *Trinity* from *Joseph* and the *Hebrews*.

The Philosophers, says St. *Cyril*, own'd three Hypostases or Persons. --- They have extended the Divinity to three Persons; and even, sometimes, us'd the Term *Trias*, *Trinity*: They wanted nothing but to admit the Consubstantiality of the three Hypostases, to signify the Unity of the divine Nature, in exclusion of all Triplicity with regard to Difference of Nature; and not to hold it necessary to conceive any Inferiority of Hypostases.

In effect, *Plato*, and some of his Followers, speak of a *Trinity* in such Terms, that the primitive Fathers have been accus'd of borrowing the very Doctrine from the Platonic School; but F. *Mourgues*, who has examin'd the Point, asserts, that nothing can be more stupid, than to suppose the Platonic *Trinity* brought into the Church; and to have Recourse to the Platonism of the Fathers to discredit their Authority with regard to this Opinion. See PLATONIC.

Friary or Fraternity of the Holy TRINITY, is a Society instituted at *Rome* by S. *Philip Neri* in 1548, to take Care of Pilgrims coming from all Parts of the World to that Capital to visit the Tombs of S. *Peter* and S. *Paul*. See FRATERNITY.

In order to this, they had a House wherein they entertain'd them for the Space of three Days, and not only them, but poor People who were on the Recovery, and who being turn'd too hastily out of the Hospitals, were expos'd to Relapses.

It was first set on Foot in the Church of S. *Saviour* in *Campo*; and consisted only of fifteen poor Persons, who met in that Church the first Sunday of each Month, to practise the Exercises of Piety prescrib'd by the Founder, and to hear the Exhortations he there gave.

In 1558 Pope *Paul* IV. gave the Fraternity the Church of St. *Benedict*, to which they gave the Title of the Holy *Trinity*. Since that Time, they have built close by it a very ample Hospital for Pilgrims, and Persons on the Recovery.

The Fraternity is now very considerable, and most of the Nobless of *Rome*, of either Sex, have done it the Honour to be of it.

Congregation of the Holy TRINITY, is a Congregation of twelve Priests establish'd in the Hospital of the Fraternity just mention'd, to take Care of Pilgrims and others entertain'd therein.

The frequent Change of Priests in the Hospital occasioning a deal of Diversity in the Spiritual Conduct and Instruction of the Pilgrims; to render it more uniform, the Guardians and Administrators establish'd a Congregation of

twelve

twelve Prieſts, who lodge in a Quarter of the Hoſpital, as in a Monaſtery, and live there in Community.

Order of the Holy TRINITY. See TRINITARIAN.

TRINITY *Sunday*, is the next *Sunday* after *Whitſun-ſunday*; thus call'd, becauſe on that Day was anciently held a Feſtival, (as it ſtill continues to be in the *Romiſh* Church) in Honour of the Holy *Trinity*.

The Obſervation of this Feſtival was firſt enjoin'd by the Council of *Arles* in 1260.

TRINITY *Houſe*, is a kind of College at *Deptford*, belonging to a Corporation of Sea-faring Perſons, who have Power, by the King's Charter, to take Cognizance of ſuch as deſtroy Sea-Marks, to correct the Faults of Sailors, *&c.* and to take Care of ſeveral other Things belonging to Navigation and the Seas, the Examination of young Officers, *&c.* Anno 8° *Eliz.*

TRINIUMGELD, THRI-NIGON-GILD, a Compenſation us'd among our *Saxon* Anceſtors for great Crimes, which were not abſolv'd but by paying a Fine thrice nine Times. See GELD.

TRINODA *Neceſſitas*, in our ancient Cuſtoms, were *Expeditio*; *Pontis*, *& Arcis Reparatio*; going to the Wars, repairing of Bridges, and of Caſtles.

Theſe were the three Exceptions anciently inſerted in the King's Grants of Lands to the Church, after the Words that freed them from all ſecular Service. See PONTAGE.

TRINODIA *terræ*, in our ancient Writers, denotes a Quantity of Land containing three Perches. See PERCH.

TRINOMIAL, or TRINOMINAL *Root*, in Mathematicks, is a Root conſiſting of three Parts, connected together by the Sign +. See ROOT.

Such is $x+y+z$. See BINOMIAL.

TRIO, in Muſic, a Part of a Concert, wherein there are only three Perſons ſing; or a muſical Compoſition conſiſting of three Parts.

Trio's are the fineſt Kind of Compoſition; and theſe and Recitativo's are what pleaſe moſt in Concerts.

TRIOCTILE, in Aſtrology, an Aſpect or Situation of two Planets with regard to the Earth, when they are three Octaves, or eight Parts of a Circle diſtant from each other.

This Aſpect, which ſome call the *Seſquiquadrans*, is one of the new Aſpects ſuper-added to the old ones by *Kepler*. See ASPECT.

TRIONES, in Aſtronomy, *βόες ἀροτῆρες, q. d.* ploughing Oxen; a Sort of Conſtellation or Aſſemblage of ſeven Stars in Urſa Minor; popularly call'd *Charles*'s *Wane*. See URSA *minor*.

From the *Septem Triones* the North Pole takes the Denomination *Septentrio*. See NORTH, *&c.*

TRIOURS, in Law, ſuch as are choſen by the Court to examine whether a Challenge made to the Pannel, or any of them, be juſt or no. See JURY.

TRIP, a Sea Term. A Ship is ſaid to bear her Topſails *a-trip*, when ſhe carries them hoiſted up to the higheſt.

TRIPARTITION, is a Diviſion by three, or the taking the third Part of any Number or Quantity. See PARTITION and DIVISION.

Hence *Tripartite*, *Tripartitus*, ſomething divided into three Parts, or made by three Parties: an Indenture *Tripartite*, *&c.* See INDENTURE.

TRIPLE, *Three fold*, *Ratio*. See RATIO.

TRIPLE, in Muſic, is one of the Species of Meaſure or Time. See TIME.

Triple Time conſiſts of many different Species; whereof there are in general four, each of which has its Varieties. --- The common Name of *Triple* is taken hence, that the whole or half Meaſure is diviſible into three equal Parts, and beat accordingly.

The firſt Species is call'd the *ſimple Triple*, whoſe Meaſure is equal either to three Semibreves, to three Minims, three Crotchets, three Quavers, or three Semiquavers; which are mark'd thus, $\frac{3}{1}$ or $\frac{3}{2}$, $\frac{3}{4}$, $\frac{3}{8}$, $\frac{3}{16}$; but the laſt is not much us'd, except in Church Muſic.

In all theſe, the Meaſure is divided into three equal Parts or Times, call'd thence *Triple Time*, or the Meaſure of *three Times*, whereof two are beat down, and the third up.

The ſecond Species is the *mix'd Triple*: Its Meaſure is equal to ſix Crotchets, or ſix Quavers, or ſix Semiquavers, and accordingly mark'd $\frac{6}{4}$, or $\frac{6}{8}$, or $\frac{6}{16}$; but the laſt is ſeldom us'd.

Some Authors add other two, *viz.* ſix Semibreves, and ſix Minims, mark'd $\frac{6}{1}$ or $\frac{6}{2}$; but theſe are not in Uſe.

The Meaſure here is uſually divided into two equal Parts or Times, whereof one is beat down, and one up; but it may alſo be divided into ſix Times, whereof the firſt two are beat down, and the third up; then the next two down, and the laſt up; *i. e.* each half of the Meaſure is beat like the *ſimple Triple*, (on which Account it may be call'd the *Compound Triple*); and becauſe it may be thus divided either into two or ſix Times, (*i. e.* two *Triples*) 'tis call'd *mix'd*, and by ſome the *Meaſure of ſix Times*.

The third Species is the *Compound Triple*, conſiſting of nine Crotchets, or Quavers, or Semiquavers, mark'd $\frac{9}{4}$, $\frac{9}{8}$, $\frac{9}{16}$; the firſt and laſt are little us'd; ſome alſo add $\frac{9}{1}$, $\frac{9}{2}$, which are never us'd.

This Meaſure is divided either into three equal Parts or Times, whereof two are beat down, and one up; or each third Part may be divided into three Times, and beat like the ſimple *Triple*; on which Account it is call'd the *Meaſure of nine Times*.

The fourth Species is a Compound of the ſecond Species, containing twelve Crotchets, or Quavers, or Semiquavers, mark'd $\frac{12}{4}$, $\frac{12}{8}$, $\frac{12}{16}$, to which ſome add $\frac{12}{1}$ and $\frac{12}{2}$, which are never us'd; nor are the firſt and third much us'd, eſpecially the latter.

The Meaſure, here, may be divided into two Times, and beat one down, and one up; or each half may be divided, and beat as the ſecond Species, either by two or three; in which Caſe it will make in all twelve Times, and hence is call'd *the Meaſure of twelve Times*.

The *French* and *Italian* Authors make a great many more Species and Diviſions of *Triple* Time, unknown, or, at leaſt, unregarded by our *Engliſh* Muſicians, and therefore not ſo neceſſary to be dwelt upon here.

TRIPLICATE *Ratio*, is the Ratio which Cubes bear to each other. See CUBE.

This Ratio is to be diſtinguiſh'd from *Triple* Ratio, and may be thus conceiv'd.

In the Geometrical Proportionals 2, 4, 8, 16, 32; as the Ratio of the firſt Term (2) is to the third (8), Duplicate of the firſt to the ſecond; or as 4, the Square of 2, is Duplicate of 16, the Square of 4; ſo the Ratio of 2 to 16, the fourth Term, is *Triplicate*; or as 8, which is the Cube of 2, to 64, the Cube of 4. --- And this *Triplicate* Ratio is compounded of all the preceding Ratio's. *Harris*.

TRIPLICATIO, TRIPLICATION, in Civil Law, is the ſame with Surjoinder in Common Law. See SURJOINDER.

TRIPLICITY, among Aſtrologers, is the Diviſion of the Signs, according to the Number of the Elements; each Diviſion conſiſting of three Signs.

TRIPLICITY, a Term frequently confounded with *Trine-Aſpect*; tho', ſtrictly ſpeaking, the two are very different Things.

Triplicity is only us'd with regard to the Signs; and Trine, on the contrary, with regard to the Planets. --- The Signs of *Triplicity* are thoſe which are of the ſame Nature, and not thoſe which are in Trine-Aſpect. --- Thus *Leo*, *Sagittary*, and *Aries* are Signs of *Triplicity*, becauſe thoſe Signs are all ſuppos'd fiery. See SIGN.

TRIPLOIDES, of the *Greek*, τριπλοειδής, a Surgeon's Inſtrument, with a three-fold Baſis, us'd in the reſtoring great Depreſſions of the Skull. See TREPANUM.

TRIPOD, or TRIPOS, in Antiquity, a fam'd ſacred Seat or Stool, ſupported by three Feet, whereon the Prieſts and Sybils were plac'd to render Oracles. See ORACLE.

'Twas on the *Tripos* that the Gods inſpir'd them with that divine Fury and Enthuſiaſm, wherewith they were ſeiz'd at the delivering their Predictions. See ENTHUSIASM.

M. *Spanheim* obſerves, that on *Roman* Medals, the *Tripod* expreſſes ſome Prieſthood, or ſacerdotal Dignity. --- A *Tripod* with a Crow and a Dolphin, is the Symbol of the Duumviri, deputed for the keeping of the Sybillin Oracles, and for the conſulting them on Occaſion.

TRIPODIUM. --- In the Laws of *Hen.* I. occurs this Paſſage. --- *In quibus vero cauſis triplicem ladam haberet, ferat judicium* Tripodii, *i. e.* 60 Solid.: The Meaning whereof is, that as for a ſmall Offence, or for a trivial Cauſe, the Compoſition was twenty Shillings; ſo for a great Offence, which was to be purg'd *Triplici lada*, the Compoſition was three times twenty Shillings, *viz. Tripodio*.

TRIPOLI, or TRIPOLY, call'd alſo *Alana*, a kind of Chalk, or white ſoft Stone, bordering a little on red, us'd in poliſhing the Lapidaries, Goldſmiths, Copperſmiths, and Glaſs-grinders Works. See GLASS, GRINDING, POLISHING, *&c.*

Some imagine *Tripoli* to be a common Stone, burnt and calcin'd by the ſulphurous Exhalations which happen to be under the Mines where it is found: Of theſe Mines there are a Number in divers Parts of *Europe*, particularly in *Italy*, where the *Tripoli* is very good. --- Others take it for a Native Earth.

TRIPPING is a Term in Heraldry. See PASSANT.

Tripping, in Heraldry, denotes the quick Motion of all Sorts of Deer, and ſome other Creatures repreſented with one Foot up, as it were on a Trot.

TRIPTHONGUE, in Grammar, an Aſſemblage or Concourſe of three Vowels in the ſame Syllable, as *u a e*. See SYLLABLE.

Quintilian, lib. I. cap. 6. aſſerts, that there never was any Syllable of three Vowels, but that one of them was always

turn'd

turn'd into a Conſonant: *Scioppius* aſſerts the contrary: --- However this may be in the *Latin* and *Greek*, which were the only Languages *Quintilian* underſtood; 'tis certain there are ſeveral Languages in *Europe*, wherein *Tripthongues* are in Uſe. See DIPHTHONG.

TRIPTOTES, in Grammar, defective Nouns, which have only three Caſes. See CASE.

Such are the Words *Tantundem*, *Tantandem*, *Tantidem*, and *Sordis*, *Sordem*, *Sorde*.

The Word is compounded of τρεῖς, three, and πλωτον, Caſe.

TRIREME, TRIREMIS, in Antiquity, a Galley with three Ranks of Oars on a Side. See GALLEY.

TRIS-*Diapaſon*, in Muſic, a Concord, otherwiſe call'd a *Triple Eighth* or Fifteenth. See CONCORD.

TRISACRAMENTALES, TRISSACRAMENTARIANS, an Appellation given to a Sect in Religion, who admit of three Sacraments, and no more. See SACRAMENT.

There have been ſeveral *Triſacramentarians* among the Proteſtants, who allow'd of Baptiſm, the Euchariſt, and Abſolution, for Sacraments. --- The *Engliſh* are often miſrepreſented by Foreigners as *Triſacramentarians*, from an Opinion that they allow Ordination a Sacrament. See ORDINATION.

TRISAGION, or TRISAGIUM, in Church Hiſtory, a Hymn, wherein the Word *holy* is repeated three Times. See HYMN.

The proper *Triſagion* is thoſe Words *holy, holy, holy, Lord God of Hoſts*, which we read in *Iſaiah* vi. 3. and in the Apocalypſe.

From theſe Words, the Church form'd another *Triſagion*, which is rehears'd in *Latin* and *Greek*, in the reſpective Churches, to this Effect: *Holy God, holy Fort, holy Immortal! have Mercy upon us.*

Petrus Fullenſis to this *Triſagion* added, *Thou who waſt crucify'd for us, have Mercy upon us*: Thus attributing the Paſſion not to the Son alone, but to all the three Perſons of the *Trinity*, and pronouncing Anathema to all ſuch as would not ſay the ſame.

The Uſe of this latter *Triſagion*, (excluſive of the Addition of *Fullenſis*) began in the Church of *Conſtantinople*, from whence it paſs'd into the other Churches of the Eaſt, and afterwards into thoſe of the Weſt. --- *Damaſcenus*, *Codin*, *Balſamon*, and others, ſay it was in the Time of the Patriarch *Proclus* that it was firſt introduc'd, and on the following Occaſion: There being a violent Earthquake in the 35th Year of the younger *Theodoſius*, the Patriarch made a grand Proceſſion, wherein, for ſeveral Hours together, was ſung the Kyrie Eleiſon, Lord have Mercy upon us. While this was in Hand, a Child was taken up into the Air, where, it ſeems, he heard the Angels a ſinging the *Triſagion* juſt mention'd. He return'd ſoon after, and told what he had heard: Upon which they began to ſing that Hymn, and the more willingly too, as they attributed the Troubles they were then under to the Blaſphemies which the Hereticks of *Conſtantinople* utter'd againſt the Son. --- *Aſclepiades*, *Cedrenus*, Pope *Felix*, *Nicephorus*, &c. relate the ſame Story.

Petrus Fullenſis, Patriarch of *Antioch*, and a zealous Partizan of *Neſtorius*, endeavour'd to corrupt the Hymn, by adding, *who ſuffer'd for us*; but in vain: It ſtill ſubſiſts in its primitive Purity, both in the *Latin*, *Greek*, *Ethiopic*, and *Moſarabic* Offices. See PATRIPASSIONS.

The Word is compounded of the *Greek*, τρεῖς, three, and αγιος, *ſanctus*, holy.

TRISECTION, or TRISSECTION, a dividing of a Thing into three. See DIVISION, SECTION, &c.

The Term is chiefly us'd in Geometry, for the Diviſion of an Angle into three equal Parts. See ANGLE.

The *Triſection of an Angle* geometrically, is one of thoſe great Problems, whoſe Solution has been ſo much ſought by Mathematicians for theſe two thouſand Years; being, in this reſpect, on a Footing with the Quadrature of the Circle, and the Duplicate of the Cube Angle. See PROBLEM.

Several late Authors have wrote of the *Triſection* of the Angle, and pretend to have found out the Demonſtration thereof; but they have all committed Paralogiſms. See ANGLE.

TRISMEGISTUS, an Epithet or Surname given to that of the two *Hermes*'s or *Mercuries*, Kings of *Thebes*, in *Ægypt*, who was cotemporary with *Moſes*.

Mercury, or *Hermes Triſmegiſtus*, is the latter of the two; the former having reign'd about the Time of the Deluge. --- They are both of them repreſented as Authors of many Arts and Inſtitutions of the *Ægyptians*. See HERMETIC.

The Word is form'd from τρὶς, thrice, and μεγιστος, greateſt.

TRISOLYMPIONICES, among the Ancients, a Perſon who had thrice bore away the Prize at the Olympic Games. See OLYMPIC.

The *Triſolympionices*, or *Triſolympionicks*, had great Privileges and Honours allow'd them. --- Statues were erected to them, of the Kind call'd *Iconicæ*, which were modell'd to the Size and Form of their Perſons. See STATUE.

They were exempted from all Charges and Incumbrances, and could never be mark'd with Infamy.

The Word is compos'd of τρεις, *tres*, three, Ολυμπια, Olympic Games, and νικη, Victory.

TRISOS, of the *Greek* τειζω, a Convulſion of the Muſcles of the Temples, cauſing the Teeth to gnaſh. See CONVULSION, &c.

TRISPAST, TRISPASTON, in Mechanicks, a Machine with three Pullies; or an Aſſemblage of three Pullies. See PULLY.

The *Triſpaſton* is a Species of Polyſpaſton. See POLYSPASTON.

The Word is compounded of τρεις, three, and σπαω, *traho*.

TRISTRIS, TRISTIS, and TRISTA, in our old Law-Books, is an Immunity, whereby a Man is excus'd from attending on the Lord of a Foreſt, when he is diſpos'd to chaſe within the Foreſt; and is alſo not compell'd to hold a Dog, follow the Chaſe, nor ſtand at a Place appointed, which otherwiſe he might be under Pain of Amercement. *Manw. ſint quieti, &c. de Chevagio, Londepenny, Buckſtol & Triſtri, de omnibus Miſericordiis, &c. Privileg. de Semplingham.*

TRISYLLABLE, or TRISSYLLABLE, in Grammar, a Word conſiſting but of three Syllables. See WORD and SYLLABLE.

TRITE, in Muſic, the third muſical Chord. See CHORD and DIAGRAM.

TRITHEISM, the Opinion of the *Tritheiſts*, or the Hereſy of believing three Gods. See GOD and TRINITY.

Tritheiſm conſiſts in admitting not only of three Perſons in the Godhead; but of three Subſtances, three Eſſences or Hypoſtaſes, and three Gods. See PERSON, HYPOSTASIS, &c.

Several People out of Fear of giving into *Tritheiſm* have become Sabellians; and ſeveral others, to avoid Sabellianiſm, have commenc'd *Tritheiſts*; ſo delicate and ſubtle is the Medium. See SABELLIAN.

In the famous Controverſy between Dr. *South* and Dr. *Sherlock*, the firſt is judg'd to have run into Sabellianiſm, by a too rigorous aſſerting of the Unity of the Godhead; and the latter into *Tritheiſm*, by a too abſolute maintaining the *Trinity*.

John the Grammarian, ſurnam'd *Philoponus*, Lover of Labour, is held the Author of the Sect of the *Tritheiſts*, under the Emperor *Phocas*; at leaſt it appears he was a zealous Advocate thereof. --- *Leontius* and *Georgius Piſides* wrote againſt him

TRITON, in Poetry, a Sea Demi-God, held by the Ancients to be an Officer or Trumpeter of *Neptune*, attending on him, and carrying his Orders and Commands from Sea to Sea. See GOD.

The Poets and Painters repreſent him as half Man, half Fiſh, terminating in a Dolphin's Tail, and bearing in one Hand a Sea-ſhell, which ſerv'd as a Trumpet.

Some of the Ancients make him the Son of *Neptune*, and the Nymph *Salacia*; *Heſiod* of *Neptune* and *Amphitrite*; *Neumenius* in his Book *de Piſcationibus*, makes him the Son of *Ocean* and *Tethys*; and *Lycophron* the Son of *Neptune*.

But tho' *Heſiod*, and the Mythologiſts, only ſpeak of one *Triton*, yet the Poets have imagin'd ſeveral; giving ſome of them for Trumpeters to all the Sea-Gods, particularly to *Neptune* and *Venus*: accordingly they were frequently introduc'd on the ancient Theatres, and in the Naumachia.

In effect, the *Tritons* not only officiated as Trumpeters in *Neptune*'s Retinue; but were alſo ſuppos'd to draw his Chariot, *i. e.* the Sea-ſhell wherein he rode over the Waters, as we find in *Virgil Æneid* X. 209. *Ovid Metam.* I. 333. and on a Medal of *Claudius*.

The Fable of the *Tritons*, no doubt, took its Riſe from Sea or Mer-men; for that there are ſuch Things as Sea-men, would ſeem a Thing ſcarce to be doubted, after what we have ſaid under the Article MER-*maid*.

The Poets ordinarily attribute to *Triton* the Office of calming the Waves, and of making Tempeſts ceaſe. --- Thus in the 1ſt of the *Metamorphoſes* we read, that *Neptune* deſiring to recal the Waters of the Deluge, commanded *Triton* to ſound his Trumpet, at the Noiſe whereof the Waters all retir'd.

TRITONE, TRITON, in Muſic, a falſe Concord, conſiſting of three Tones, or a greater Third, and a greater Tone. See CONCORD.

Its Ratio, or Proportion in Numbers, is of 45 to 32. In dividing the Octave, we find, on one Side, the falſe Fifth, and the *Tritone* on the other. See OCTAVE.

The *Tritone* is a kind of redundant Third, conſiſting of three Tones, whence its Name; or, more properly, of two Tones, with a greater Semitone, and a leſſer, as of *ut* to *fa*, of *fa* to *ſi*, &c. --- But it is not, as many imagine, a greater Fourth; for the Fourth is a perfect Interval, which does not admit of any Majority or Minority: Nor muſt the *Tritone* be confounded with the falſe Fifth; for the *Tritone* only comprehends four Degrees, *viz. ut, re, mi, fa*, whereas the

falſe Fifth comprehends Five, *viz. fa, ſol, la, ſi, ut*; beſides, that among the Six Semitones, which compoſe the *Tritone* chromatically, there are three greater and three leſſer; whereas among the Six Semitones, which compoſe the falſe Fifth, there are only two leſſer, and four greater. See THIRD, FOURTH, FIFTH, *&c.*

TRITURATION, in Pharmacy, *Grinding*; the Act of reducing a ſolid Body into a ſubtile Powder; call'd alſo *Levigation*, *Pulveriſation*, *&c.* See POWDER, LEVIGATION, *&c.*

The *Trituration* of Woods, Barks, Minerals, and other hard and dry Bodies, is perform'd in Metalline Mortars.

The ſame Term is alſo applied to the comminuting, bruiſing and dividing of humid Matters, into little Parts: --- The *Trituration* of moiſt Bodies is perform'd in Marble, or Stone Mortars, with Peſtles of Wood, Glaſs, Ivory, *&c.*

The Word is form'd from *tri* and *tero*, I wear.

Trituration, *Boerhaave* obſerves, has a wonderful Force to diſſolve ſome Bodies, and will render them as fluid, as if they were fuſed by the Fire. ---- Thus if you grind the Powder of Myrrh, and Salt of Tartar together, they will diſſolve each other. By rubbing new and bright Filings of Iron in a Mortar, with double their Weight of clean Sulphur, the Iron will be diſſolved, ſo as by diluting it with Water to afford the Vitriolum Martis. See IRON and VITRIOL.

Gold long ground in a Mortar, with Salt of Tartar, will yield a kind of Tincture; and rubbed with Mercury, in a Mortar of Glaſs, it entirely diſſolves into a Purple Liquor, and becomes a moſt powerful Medicine.

Dr. *Langelotte* has wrote a curious Treatiſe of the great Effects of *Trituration* in Chymiſtry; and deſcribes a peculiar Way he employed to grind Gold, whereby he could render it as fluid as the Fire does, and make an Aurum Potabile, by the bare Motion of a Mill. See GOLD and POTABLE.

That Author, in the *Philoſophical Tranſactions*, mentions his way of grinding Gold, and deſcribes two Engines, or Philoſophical Mills for the Purpoſe, with one of which, in the Space of Fourteen natural Days, he reduced a Leaf of Gold to a dusky Powder, and putting it into a ſhallow Retort placed in a Sand Heat, he thence obtained, by gradually increaſing the Fire and giving a ſtrong one at laſt, a few very red Drops, which, digeſted *per ſe*, or with tartarized Spirit of Wine, afforded a pure and genuine Aurum Potabile.

The Succeſs of this Operation, the Doctor attributes, in a great meaſure, to the Salt of the Air, which in grinding, plentifully mixes and unites itſelf with the Gold.

TRITURATION, in Medicine, is uſed for the Action of the Stomach, on the Food. See STOMACH, *&c.*

Some Phyſicians have maintain'd, that Digeſtion was perform'd by *Trituration*, and not by *Fermentation*, *i. e.* that all the Stomach does, is to grind and comminute the Food into ſmaller Parts to fit it for Nutrition, without any other Alteration therein. See the Article DIGESTION, where the Doctrine is laid down at large.

This Syſtem was much talk'd of ſome Years ago, being countenanced by Dr. *Pitcairn*, and others; but ſeems now much declined.

The Doctrine of *Trituration* is not new: --- *Eriſiſtratus* maintain'd it in all its Latitude many Ages ago; and the Moderns have only revived it.

It was firſt broach'd in the Time of *Hippocrates*, that is, in a Time when Anatomy was but little known; and 'twas this that render'd it current. ---- An Opinion was entertain'd by ſome Phyſicians of thoſe Times, that the Stomach was only the Receptacle of the ſolid or dry Foods; that thoſe Foods, after having been diluted, and broke in the Mouth, were again broke more perfectly in the Stomach, and by this means alone were converted into Chyle: but that the Drink, by reaſon of its Liquidity, not being ſubject to be broken, went to the Lungs, and not the Stomach, where, by reaſon of its abundance, it would rather have prejudiced the Digeſtion than have aided it.

Hippocrates, we read, in the fourth Book of *Diſeaſes*, ſtood up ſtrenuouſly againſt an Opinion ſo viſibly contrary to Reaſon and Experience; and he informs us, That if he gave himſelf this Trouble, 'twas becauſe the Error had already got a good number of Partizans. ---- It could not ſtand long againſt the Reaſons of *Hippocrates*; and its Defeat was followed by the intire Ruin of the Syſtem of *Trituration*, which had its Foundation thereon.

But *Eriſiſtratus* retrieved it again; and the Doctrine, after having been ſupported for ſome time, fell anew into Oblivion; whence ſome late Authors have in vain endeavour'd to recover it.

TRIUMPH, TRIUMPHUS, a Ceremony or Solemnity, practiſed among the ancient *Romans*, to do Honour to a victorious General, by affording him a magnificent Entry into their City.

The *Triumph* was the moſt pompous Spectacle known among the Ancients: Authors uſually attribute its Invention to *Bacchus*; and tell us, that he firſt *triumph'd* upon the Conqueſt of the *Indies*; and yet this Ceremony was only in uſe among the *Romans*.

The *Triumph* was of two Kinds, the *leſſer* and the *greater*. --- The *leſſer Triumph* was granted upon a Victory over ſome unequal or unworthy Enemy; as over Pyrates, Slaves, *&c.* ---- This they call'd *Ovatio*; becauſe the only Sacrifices offer'd herein, were Sheep. See OVATIO.

The *greater Triumph*, call'd alſo *Curulis*, and, ſimply, The *Triumph*, was decreed by the Senate to a General, upon the conquering of a Province, or gaining a ſignal Battle.

The Order and Oeconomy of the *Triumph* was thus: --- The General having diſpatch'd Couriers with Tidings of his Succeſs, the Senate met in *Bellona*'s Temple to read his Letters: ---- This done, they ſent him the Title of *Imperator*, with Orders for him to return, and to bring his victorious Troops along with him. When he was arrived near the City, the General and principal Officers took Oath of the Truth of the Victory; and the Day of *Triumph* was appointed.

The Day being arrived, the Senate went to meet the Conqueror without the Gate call'd *Capena* or *Triumphalis*, and march'd in order before him to the Capitol. --- He was richly clad, in a Purple Robe Embroider'd with Figures of Gold, ſetting forth his glorious Atchievements: His Buskins were beſet with Pearl, and he wore a Crown, which at firſt was only Laurel, but afterwards, Gold: One Hand bore a Laurel Branch, and the other a Truncheon. He was drawn in a Car or Chariot, adorn'd with Ivory and Plates of Gold, drawn uſually by two white Horſes, though ſometimes by other Animals; as that of *Pompey*, when he *triumph'd* over *Africa*, by Elephants; that of *Mark Anthony*, by Lions; that of *Heliogabalus*, by Tygers; that of *Aurelian*, by Deer; that of *Nero* by Hermophrodite Mares, *&c.*

At his Feet were his Children, or, ſometimes, on the Chariot Horſes. ---- 'Tis added, that the public Executioner was behind him, to remind him, from Time to Time, that theſe Honours were Tranſitory, and wou'd not ſcreen him from the Severity of the Laws, if he ſhould ever be found delinquent.

The Cavalcade was led up by the Muſicians, who had Crowns on their Heads: after them came ſeveral Chariots, wherein were Plans of the Cities and Countries ſubdued, done in Relievo: They were followed by the Spoils taken from the Enemy, their Horſes, Arms, Gold, Silver, Machines, Tents, *&c.* After theſe came the Kings, Princes or Generals ſubdued, loaden with Chains, and followed by Mimicks and Buffoons, who inſulted over their Misfortunes. ---- Next came the Officers of the conquering Troops, with Crowns on their Heads.

Then appear'd the *triumphal* Chariot; before which as it paſs'd, they all along ſtrew'd Flowers; the Muſic play'd in Praiſe of the Conqueror amidſt the loud Acclamations of the People, crying *Io Triumphe.*

The Chariot was follow'd by the Senate clad in white Robes, and the Senate by ſuch Citizens as had been ſet at Liberty or Ranſom'd.

The Proceſſion was cloſed by the Sacrificers, and their Officers and Utenſils, with a white Ox led along for the chief Victim.

In this Order they proceeded through the *triumphal* Gate, along the *Via Sacra* to the Capitol, were the Victims were ſlain.

In the mean time, all the Temples were open; and all the Altars loaden with Offerings and Incenſe; Games and Combats were celebrated in the public Places, and Rejoycings appear'd every where.

What was horrible amidſt all this Mirth, was, that the Captives, when arrived at the Forum, were led back to Priſon and Strangled; it being a Point of Religion with them, not to touch the Victims till they had taken full Revenge of their Enemies. ---- The Rites and Sacrifices over, the *Triumpher* treated the People in the Capitol, under the Porticos, and ſometimes in *Hercules*'s Temple.

TRIUMPHAL *Crown* or *Garland*. See CROWN.

It is ſaid to have been taken from *Apollo*'s crowning his Head with a Laurel, after killing the *Delphick* Serpent. ---- It was as much eſteem'd by the *Romans*, as if it had been Gold.

TRIUMVIR, one of three Perſons who govern abſolutely and with equal Authority in a State.

The Word is little uſed but in the *Roman* Hiſtory. --- *Cæſar*, *Craſſus* and *Pompey* were the firſt *Triumvirs*, *i. e.* the firſt who divided the Government of the Republic among them. See TRIUMVIRATE.

There were alſo other Officers, call'd *Triumvirs*, *Triumviri*; as the *Triumviri Capitales*, created in the Year of *Rome* 463, to take Care of Priſoners, and look to the Execution of Criminals.

Triumviri Monetales, who were Magiſtrates created at the ſame time, to look to the Coinage of the Money; whence that Mark ſtill extant on many ancient Coins, IIIVIRI. ---- Theſe Officers were very conſiderable, and choſen out of the Knights.

Knights. They made Part of the *Centumviri*. The Title they bear on Medals, is IIIVIR AAA FF. *Triumvir Auro Argento Ære Flando, Feriendo*, which ſignifies that they had the Direction of the caſting and ſtriking of Gold, Silver and Braſs.

There were alſo --- *Triumviri Ædibus reficiendis*, Officers appointed to look to the Reparation of Temples. --- *Triumviri Colonis deducendis*, for the conducting and ſettling of Colonies. --- *Triumvirs* for the raiſing of Troops. --- *Nocturnal Triumviri*, to prevent or extinguiſh Fires. --- *Triumvirs* to review the Forces, *&c.*

In the *Acilian* Family, we read of one M. *Acilius* IIIVIR VALETU. that is, *Triumvir of Health*, or a Magiſtrate of Health. --- M. *Spanheim* takes him to have been a Commiſſioner eſtabliſh'd to perform Sacrifice to the Gods of Health, to Dedicate their Temples, *&c.*

Onuphrius and *Vaillant* read *Triumvir Valetudinis*; *Patin*, *Triumvir Valetudinarius*; but M. *Spanheim*, with much more Reaſon, reads *Triumvir Valetudo*; in like manner, as on a Medal of the *Aquilian* Family, we read IIIVIR VIRTUS, ſignifying, that one M. *Aquilius* had been made *Triumvir*, to repair the Temple of *Virtue*, and *Acilius*, that of *Health*.

TRIUMVIRATE, an abſolute Government adminiſter'd by three Perſons, with equal Authority. See TRIUMVIR.

There were two famous *Triumvirates* at *Rome*, --- *Pompey*, *Cæſar* and *Craſſus* eſtabliſhed the firſt; and *Auguſtus*, *Mark Anthony* and *Lepidus*, the ſecond.

This latter *Triumvirate* gave the laſt Blow to the Liberty of the Republic. *Auguſtus* having vanquiſh'd *Lepidus* and *Anthony*, the *Triumvirate* ſunk into a Monarchy. See MONARCHY.

TRIUNE, *q. d. tres in Uno*, Three in one, a Term ſometimes applied to God, to expreſs the Unity of the God-head, in a Trinity of Perſons. See TRINITY.

TROCHAIC, TROCHAICUS, in the *Latin* Poetry, a kind of Verſe conſiſting of *Trochees*; or wherein that Foot predominates; as the *Iambic*'s do in the Iambic. See IAMBIC and TROCHEE.

The XVIIIth Ode of the II. Book of *Horace*'s Odes, conſiſts of Strophes of two Verſes, the firſt whereof is *Trochaic* Dimetre Catalectic; *i. e. Trochaic*, compoſed of three *Trochees*, beſides a Syllable at the End.

Non ebur neque Aureum ------
Largioria flagito.

TROCHANTER, in Anatomy, a Name given to two Apophyſes ſituate in the upper Part of the Thigh-bone. See APOPHYSIS.

The largeſt, which is above, is call'd the *great Trochanter*; and the ſmaller, beneath, the *leſs Trochanter*. See FEMUR.

The Word literally ſignifies *Rotator* or *Roller*, from the *Greek*, τροχάω, *roto*, I run, I turn round. --- That Appellation was given to thoſe Apophyſes, by reaſon they receive the Tendons of moſt of the Muſcles of the Thigh, amongſt which are the Obturators which move it round. See OBTURATOR.

TROCHEE, TROCHÆUS, in the *Greek* and *Latin* Poetry, a kind of Foot, conſiſting of two Syllables, the firſt long, the latter ſhort --- Such are the Words *vade* and *muſa*. See FOOT.

The *Trochee* is the Reverſe of the Iambus; and has a juſt contrary Effect; the latter being light and ſprightly, and the former weak and languid, as all thoſe Meaſures are, which move from a long to a ſhort Syllable. See IAMBIC.

Some call the *Trochee*, the *Choree*, *Chorœus*, becauſe proper for Songs and Dances.

TROCHE, TROCHISCUS, in Pharmacy, a Form of Medicine, made to be held in the Mouth to diſſolve.

The *Troche* is properly a dry Compoſition, the chief Ingredients whereof, after having been brought into a very ſubtile Powder, are incorporated with ſome proper Liquor, as diſtill'd Waters, Wine, Vinegar or Mucilages; and reduced into a Maſs, which is moulded into little Cakes or Balls of any Form, at Pleaſure, and dried in the Air far from the Fire.

There are *Troches* of various Kinds, and for various Intentions; as Purgative, Alterative, Aperitive, Corroborative, *&c.*

Latin Authors call them *Paſtilli*, *Rotulæ*, *Placentulæ*, *Orbes* and *Orbiculi*; and the *Engliſh*, frequently, *Lozenges*.

The chief *Troches* are of Agaric, Liquorice, Nutmeg, Amber, Rhubarb, Capers, Myrrh, Roſes, Camphor, Squillæ, Vipers, *&c.*

Thoſe of Coloquintida, are call'd *Troches of Alhandal*, from the *Arabs*, who call Coloquintida, *Handal*.

TROCHILUS, TROCHILE, in Architecture, a large hollow Member, whoſe Cavity is compoſed of two Arches; ſuch is that HKI, Tab. Architect. Fig. 13.

The *Trochilus* is uſually call'd by the Modern Architects, *Scotia*. See SCOTIA; and by our *Engliſh* Workmen, *Caſement*. See CASEMENT.

TROCHITÆ, or TROCHITES, in natural Hiſtory, a kind of figur'd foſſil Stones, reſembling Plants; vulgarly call'd St. *Cutberd*'s *Beads*. See FOSSIL and STONE.

They are uſually of an opake, dark Colour, break like Flint, poliſh'd and ſhining, and are eaſily diſſolv'd in Vinegar. --- Their Figure is generally Cylindrical, ſometimes a little Tapering, the Circumference ſmooth, and both the flat Sides cover'd with fine Radii drawn from a certain Hole in the Middle to the Circumference. See Tab. Natural Hiſtory, Fig. 12.

Two or three or more of theſe *Trochitæ* joyn'd together, conſtitute what the Naturaliſts call an *Entrochos*. See ENTROCHOS.

The *Trochitæ*, or ſingle Joints, are ſo ſet together, that the Rays of one enter into Furrows in the other, as in the Sutures of the Skull. --- They are found in great Plenty in the Bodies of the Rocks at *Braughton* and *Stock*, two Villages in *Craven*, at all Depths under Ground; in *Mendip* Hills, *&c.* ſometimes only ſprinkled here and there, and ſometimes in large Strata or Beds of all Magnitudes, from the Size of the ſmalleſt Pin, to two Inches about.

They are generally found ramous or branchy, larger Branches ariſing from the Stem, or Cylinder, and ſmaller from theſe. The Branches being deeply inſerted into the Stem, the tearing them off leaves great Holes therein.

Dr. *Liſter* has diſcover'd a ſort of little Fragments among them, which he takes to have been the Apices of the Plants; and another Sort, which he ſuppoſes to have been the Roots. --- In effect, the *Trochitæ* are generally allow'd to be the Bodies of Rock-Plants, ſuch as Coral is. See ROCK-*Plant*.

Mr. *Beaumont* in the *Philoſophical Tranſactions*, aſſures us, he has found that all the Cliffs in ſome Mines, are made up of theſe Stone-plants, ſome whereof have been converted into Lime-ſtone Rocks, while in their tender Growth; while others becoming Spar, compoſe Bodies of that Subſtance; and conſidering that all the Cliffs for a very large Circumference in ſome Places, conſiſt wholly of theſe Plants; we may ſay, there have been, and, in all probability, ſtill are whole Fields or Foreſts of theſe under Ground, as there are of Coral in the Red Sea. See CORAL.

In the Courſes between the Cliffs, are found of theſe Plants at all Stages and Degrees of Maturity, growing up in the gritty Clay, and rooted in the rake mold Stones, many of them of the Form and Dimenſions of a Tobacco-pipe, ſome yet crude or raw Clay, others of the Conſiſtence of Lime-ſtone, others ſtill harder, with the evident Beginnings of Circles and Sutures; and others full grown, and become perfect Spar, which is their Point of Maturity. See SPAR.

The Pith continues ſtill white and ſoft; as the whole Plant, no doubt, was at firſt; and is continually refreſhed by the mineral Streams and Moiſture which have free Acceſs to it through Five hollow Slits or Feet in the figured Roots, or through the Maſs of Clay uſually lying under the plain Roots.

Nor can it be denied, but theſe Stone-plants have true Life and Growth. --- In the Curioſity of their Make, they may vie with moſt of the Vegetable Kingdom, and are ſhaped and formed like them, having Stem, Branches, Roots, an inward Pith, as likewiſe Joints and Runnings in their Girt, and ſometimes Cells to ſupply the Place of Veins and Fibres: Why, then, mayn't they be allowed as proper Vegetations, as other Plants?

Indeed 'tis highly probable, theſe Rock-plants are *Lapides ſui Generis*, and not parts of Animals or Plants petrified, as many Authors have imagined. --- If the figured Roots, whereon they ſometimes grow, give any Suſpicion they might have belong'd to an Animal, particularly a Species of the Stella Arboreſcens; the Trunks clearly evince the contrary, and can never be look'd on as Parts of an Animal: nor are they reducible to any known Species of Vegetables. Mr. *Beaumont* tells us, he has by him above 20 different Species of *Trochites*, all of them wonderfully regular, and not to be parallelled by any Vegetable he knows of in Nature: and 'tis inconceivable how ſo many Species diffuſed through many Parts of the Earth, ſhould come to be loſt. See PLANT, PETRIFACTION, CORNU *Ammonis*, *&c.*

TROCHLEA, one of the mechanical Powers, uſually call'd a *Pulley*. See PULLEY.

Hence the Cavity in the Bone of the Arm or Shoulder, whereinto, when the Arm is ſtretched forth, the Proceſs of the undermoſt and leſſer of the long Bones of the Cubitus enters, is alſo called *Trochlea*. See CUBITUS, *&c.*

TROCHLEARES, in Anatomy, a Name given the oblique Muſcles of the Eye, becauſe ſerving to pull the Eye obliquely upwards or downwards, as if it turn'd like a Pulley. See OBLIQUUS and EYE.

TROCHOID, TROCHOIDES, in Geometry, a Curve, whoſe Geneſis may be thus conceived. --- If a Wheel or Circle be moved with a two-fold Motion at the ſame time, the one in a right Line, and the other circularly about its Centre; and theſe two Motions be equal, *i. e.* deſcribe two equal Lines in the ſame Time: And if in the Radius, which at the beginning of the Motion, reaches from the Centre of the Wheel, or the firſt Point of the Line which deſcribes the Circumference;

If,

If, I ſay, in this Radius a Point be taken any where except in the Centre, this Point will deſcribe a Curve, one Part whereof will be below the Line deſcribed by the Centre, and the other above it. --- This Line, thus deſcribed by the Point taken in the Radius, is call'd the *Trochoid*.

The right Line which joyns the two Extremities of the *Trochoid*, and which is either the Path the Wheel makes, or a Line parallel to that Path, is call'd the *Baſe of the Trichoid*.

The *Axis of the Trochoid*, is the Diameter of the Wheel, perpendicular to the Baſe in the middle of the Motion; or that Part of the Radius between the *Trochoid* and its Baſe. --- The Point wherein the Axis is cut into two Parts by the Line deſcribed by the Centre of the Wheel, is call'd the *Centre of the Trochoid*; the uppermoſt Point of the Axis, the *Vertex of the Trochoid*; and the Plane, comprehended between the *Trochoid* and its Baſe, the *Trochoidal Space*.

The *Trochoid* is the ſame with what we otherwiſe call the *Cycloid*; the Properties, &c. whereof, ſee under the Article CYCLOID.

The Word is form'd from the *Greek*, τρόχος, Wheel, and εἶδος, Form.

TROGLODYTES, TROGLODYTÆ, in the ancient Geography, a People of *Æthiopia*, ſaid to have lived in Caves under Ground.

Pomp. Mela gives a ſtrange Account of them. --- He ſays they did not ſo properly ſpeak as ſhriek; that they liv'd on Serpents, &c.

Tzetza calls them *Ichthyophagi*. *Montanus* takes them to be the ſame with thoſe call'd in Scripture *Ghanamim*. *Pintianus* in *Strabo*, will have them wrote without the *l*, *Trogoditæ*.

The Word is form'd of the *Greek*, τρωγλη, Caverna.

TROGLODYTES are alſo ſpoke of as a Sect of *Jewiſh* Idolaters. See SECT.

The Prophet *Ezekiel* relates, *cap.* viii. *v.* 8. 9. 10, &c. that God, among other Abominations of the *Iſraelites* which he ſet before him, ſhew'd him ſeventy old Men, who with their Cenſers in their Hands, adored ſecretly, all kinds of Animals and Reptiles painted on the Wall.

Philaſtrius on this Viſion of the Prophet, erects theſe Idolaters into a Sect of *Iſraelites*, who, hiding themſelves under Ground and in Caves, adored all kinds of Idols: And the Editor of *Philaſtrius* calls this Sect *Troglodytes*, from τρώγλη, a Cave, and δύω, I penetrate, as believing, on the Credit of *Philaſtrius*, that thoſe of this Sect hid themſelves in Caves.

And yet the Prophet plainly ſhews, that it was in ſecret Parts of their Houſes, and not in ſubterraneous Caverns, that theſe 70 *Iſraelites* Idolatrized.

The Word *Troglodytes*, then, is feign'd; ſo is the Sect.

TROIA or TROJAN *Games*, *Ludi* TROJANI, were Games inſtituted by *Aſcanius*, Son of *Æneas*; and which afterwards paſs'd to the *Romans*, and were celebrated in the Circus by the Youth of *Rome*. See GAMES and CIRCUS.

One of the Number who preſided over the Solemnity, was call'd the *Princeps Juventutis*; and was always of one of the firſt Families in *Rome*. See PRINCE.

At firſt, 'tis ſuppoſed, they only engaged on Foot and on Horſeback; becauſe *Virgil*, who deſcribes theſe Games in the *Æneid. lib.* V. only ſpeaks of Horſes and Cavaliers, without any mention of Bigæ and Quadrigæ, which were not in Uſe at *Rome*, till long after *Aſcanius*. --- And yet *Dion*, ſpeaking of *Cæſar*'s Games, ſays, the Youth there combated in Chariots: But 'tis thought by ſome, that theſe were not the *Trojan* Games, but Courſes and Combats of a different Kind, proper for young People of a more advanced Age.

TROLLING, among Anglers. --- *To Troll*, is to fiſh for Pikes with a Rod, whoſe Line runs on a Reel. See *Pike*-FISHING.

TRONCHONNE & *demembree*, in Heraldry, denotes a Croſs or other Thing cut in Pieces and diſmembred, yet ſo as all the Pieces keep up the Form of a Croſs, though ſet at a ſmall Diſtance from one another. See CROSS.

TRONAGE, TRONAGIUM, an ancient Cuſtom or Toll pay'd for the weighing of Wooll.

The Word comes from *Trona*, an old Name for a Beam to weigh withal. Hence

TRONATOR, an Officer of the City of *London*, whoſe Buſineſs it was to weigh the Wooll brought into that City.

TRONE-*Weight*, was the ſame with what we now call *Troy-weight*. See WEIGHT.

TROOP *of Horſe*, is a ſmall Body of Horſe, under the Command of a Captain; anſwering to a Company of Foot. See COMPANY and CAPTAIN.

Independant TROOP, is a *Troop* that is not imbodied with, or joined to any Regiment. See REGIMENT, GUARD, &c.

To beat the TROOP, is the ſecond Beat of a Drum, whereby the Foot are advertis'd to march. See DRUM.

TROPE, TROPUS, in Rhetoric, a kind of Figure of Speech, whereby a Word or Diction is changed from its proper and natural Signification into another, with ſome Advantage. See FIGURE.

As, when we ſay an *Aſs*, for a *ſtupid Perſon*; *Thunderbolt of War*, for a *great Captain*, to *waſh the Black-more white*, for a *fruitleſs Undertaking*.

This Change of Senſe is never to be uſed, but where it gives a Force and Dignity, or renders the Diſcourſe more ſignificant, weighty and graceful.

'Tis call'd *Trope*, from the *Greek*, τρέπω, *verto*, I turn, change, in regard the Words are here transferred from the Things they properly import, to others which they only import indirectly; and that *Tropes* only ſignify the Things they are applied to by reaſon of the Connexion and Relation thoſe Things have with thoſe others, whoſe proper Names they are.

This Change or Inverſion is perform'd various Ways; but chiefly Four; whence ariſe four principal *Tropes*, *viz.* the *Metaphora*, *Metonymia*, *Synechdoche* and *Ironia*; each whereof, ſee under the proper Articles, METAPHORA, METONYMIA, SYNECDOCHE, &c.

Some Authors confound the Term *Trope*, with *Figure*; but they are very different Things. --- Moſt Authors, as F. *de Colonia*, &c. make Figure, the Genus, and *Trope*, a Species; defining *Figure* to be any Ornament in Diſcourſe, whereby it is raiſed above the common Language; and *Trope* to be that peculiar kind of Ornament which conſiſts in the Change of the Senſe, &c.

But *Voſſius* makes *Trope* and Figure to be two collateral and independent Things; defining *Trope* to be the Change of the Senſe, &c. And *Figure*, to be any Ornament, except what becomes ſo by ſuch Change, &c. See FIGURE.

'Tis in the *Tropes*, principally, that the Richneſs and Variety of a Language conſiſts; and yet thoſe ſhould never be uſed but to expreſs what could only be repreſented imperfectly, in common and proper Terms. --- *Tropes* ſhould always be clear; they are vicious, if they be obſcure, or too far-fetch'd. The Idea of the *Trope* ſhould be ſo connected with that of the proper Name, that they ſhould follow each other; ſo that in exciting the one, the other ſhould be awakened of courſe.

Beſides the four capital *Tropes* above-mentioned, there are ſeveral inferior ones: When the *Trope* is too bold, 'tis call'd an *Hyperbole*; when continued, 'tis an *Allegory*; when too obſcure, an *Ænigma*; when it ſhocks us, or is too remote, a *Catachreſis*. See HYPERBOLE, ALLEGORY, ÆNIGMA, &c.

Add to theſe, other *Tropes*, as the *Metalepſis*, *Antonomaſia* and *Litotes* or *Extenuation*. See METALEPSIS, &c.

Some alſo refer the Six Kinds of Irriſion, to the *Tropes*, *viz.* the *Sarcaſm*, *Diaſyrm*, *Charientiſm*, *Aſteiſm*, *Myctériſm* and *Muneſis*; but without ſufficient Reaſon. See SARCASM, &c.

TROPHY, TROPHÆUM, among the Ancients, a Pile or Heap of Arms of a vanquiſh'd Enemy, rais'd by the Conqueror in the moſt eminent Part of the Field of Battel.

The Word is alſo uſed for an artificial Repreſentation of ſuch a Pile in Marble, Stone or other Matter. --- Such were the *Trophies* of *Marius* and *Sylla* in the Capitol, &c.

The ancient *Trophies* conſiſt of *Greek* and *Roman* Arms; and the Modern ones of Arms of the various Nations now in uſe; as in thoſe inſolated ones near *Blenheim*, in the *Fauxbourg*, S. *Antoin*, and in the Caſtle of *Verſailles*.

Some are done in Baſſo-Relievo, as thoſe of the *Trajan* Column, and the Attic of the Court of the *Louvre*.

Trophies are likewiſe frequently exhibited on Medals of the Emperors, ſtruck on occaſion of Victories; wherein, beſides Arms and Spoils, are frequently ſeen, one or two Captives by the Sides of the *Tropky*.

Trophies, M. *Vaillant* obſerves, were, originally, nothing but Trunks of Trees, which the Victor planted on the moſt eminent Part of the conquer'd Province, and which were hung with the Spoils of the Enemy, to perpetuate the Memory of his Defeat.

The Word is form'd from the *Latin*, *Trophæum*, which *Voſſius* deduces from the *Greek*, *Trope*, the Flight of an Enemy.

TROPHY-*Money*, a Duty of 4*d.* paid Annually by the Houſe-keepers or the Trained Bands, for the Drums, Colours, &c. of their reſpective Companies. See MILITIA.

TROPICKS, TROPICI, in Aſtronomy, two immoveable Circles of the Sphere, drawn through the Solſtitial Points, parallel to the Equator. See CIRCLE and SPHERE.

Such are the Circles M E and N L, Tab. Aſtronomy, Fig. 52. See SOLSTITIAL *Point*.

Or, the *Tropicks* may be defined two Circles parallel to the Equator, at ſuch Diſtance therefrom, as is equal to the Sun's greateſt Receſs from the Equator towards the Poles; or to the Sun's greateſt Declination; or the Obliquity of the Ecliptic. See DECLINATION, OBLIQUITY, &c.

That of the *Tropicks* drawn through the beginning of *Cancer* E, is called the *Tropic of Cancer*. See CANCER.

And that through the beginning of *Capricorn*, the *Tropic of Capricorn*. See CAPRICORN.

They

They have their Name from the *Greek*, τροπὴ, *Turn*, *Converſion*, as being the Limits of the Sun's Way, or Declination towards North and South; ſo that when the Sun is arriv'd at either of them, he *turns* the other Way.

Hence, 1°. Since the Declination of the Ecliptic is the Arch E A or L D; E N will be the Diſtance of the *Tropicks* which is double the greateſt Declination.

2°. Wherefore if the Sun's Meridian Altitude be obſerv'd, both in the Winter and Summer Solſtice, and the latter be ſubtracted from the former, the Remainder will be the Diſtance of the *Tropicks*; half whereof is the greateſt Declination of the Ecliptic. See ECLIPTIC.

TROPICKS, in Geography, are two leſſer Circles of the Globe, drawn parallel to the Equator, thro' the Beginnings of *Cancer* and *Capricorn*. See CANCER and CAPRICORN.

Theſe *Tropicks* are in the Planes of the Cœleſtial *Tropicks*, and at the Diſtance of 23° 29′ from the Equator, which is the Sun's greateſt Declination. See CIRCLE and GLOBE.

TROPISTS, or TROPICI, the Name of a Sect. --- St. *Athanaſius*, in his Letter to *Serapion*, gives this Appellation to the *Macedonians*, who were alſo call'd *Pneumatomachi* in the Eaſt, and *Patripaſſians* in the Weſt. See PNEUMATOMACHI, &c.

The Reaſon of the Name *Tropiſt* was, that they explain'd the Scripture altogether by Tropes and Figures of Speech. See TROPE.

The *Romaniſts* alſo give the Appellation *Tropiſts* to thoſe of the Reform'd Religion; in regard of their conſtructing the Words of the Euchariſt figuratively. See TRANSUBSTANTIATION.

TROPITES, TROPITÆ, a Sect, who, according to *Philaſtrius*, maintain'd that the Word was *turn'd* or *chang'd* into Fleſh, or into Man.

This Opinion they founded on that Paſſage of St. *John*, miſunderſtood; *The Word was made Fleſh*; as if it imported, that the Word was converted into Fleſh, and not that he was cloath'd with our Fleſh, and our Nature.

TROT, in the Manage, one of the natural Paces of a Horſe, perform'd with two Legs in the Air, and two on the Ground at the ſame time, croſs-wiſe, like St. *Andrew*'s Croſs; and continuing ſo alternately to raiſe the hind Leg of one Side, and the fore Leg of the other Side at once, leaving the other hind and fore Leg upon the Ground till the former come down.

In this Motion, the nearer the Horſe takes his Limbs from the Ground, the opener, the evener, and the ſhorter his Pace will be. --- If he takes up his Feet ſlovenly, it is a Sign of Stumbling and Lameneſs; if he tread narrow, or croſs, it betokens interfering or failing; if he tread long, it ſhews over-reaching; if he ſtep uneven, it beſpeaks Toil and Wearineſs.

TROUBADOURS, or TROUVEOURS, or TROUVERS, a Name anciently, and to this Day, given the ancient Poets of *Provence*. See POETRY.

Some will have the Name borrow'd from *trouver*, to find, by reaſon of their *Inventions*; tho' others take them to have been call'd *Trombadours*, by reaſon they ſung their Poems on an Inſtrument call'd a *Trompe* or *Trump*.

The Poeſy of the *Troubadours* conſiſted in Sonnets, Paſtorals, Songs, Syrventes or Satyrs, which were much to their Taſte; and in Tenſons, which were Love Diſputes.

Jean de Notre Dame, commonly call'd *Noſtradamus*, a Procureur in the Parliament of *Provence*, wrote an ample Diſcourſe of theſe Poets. --- He makes their Number ſeventy-ſix.

Paſquier tells us, he had an Extract of an ancient Book belonging to Cardinal *Bembo*, entitled, *Los Noms daquels qui firent Tenſons & Syrventes*, which made their Number ninety-ſix, among which was an Emperor, *viz. Frederick* I. and two Kings, *viz. Richard* I. of *England*, and a King of *Arragon*, with a Dauphin, ſeveral Counts, &c. Not that all theſe had compos'd entire Works in Provincial; ſome of them had not brought forth any thing beyond Epigrams.

Petrarch ſpeaks with Applauſe of ſeveral *Troubadours* in the IVth Chapter of the Triumph of Love. --- The *Italian* Poets are ſaid to have borrow'd their beſt Pieces from the *Troubadours*. *Paſquier* declares expreſly, that *Dante* and *Petrarch* are, indeed, the Fountains of the *Italian* Poetry; but Fountains which have their Sources in the Provincial Poetry.

Bouche, in his Hiſtory of *Provence*, relates, that about the Middle of the XIIth Century, the *Troubadours* began to be eſteem'd throughout *Europe*, and that their Credit and Poeſy was at the higheſt about the Middle of the XIVth. He adds, that it was in *Provence* that *Petrarch* learnt the Art of Rhiming, which he afterwards practis'd, and taught in *Italy*.

TROVER, in Law, an Action which a Man hath againſt one that having found any of his Goods, refuſeth to deliver them upon Demand.

Actions of Detinue are frequently turn'd into Actions upon the Caſe, *ſur Trover* and Converſion. See DETINUE.

TROUGH *of the Sea*, is the Hollow or Cavity made between the Waves or Billows in a rowling Sea. --- Hence, when a Ship lies down there, they ſay ſhe lies in the *Trough of the Sea*.

TROUSSEQUIN, in the Manage, a Piece of Wood cut arch-wiſe, rais'd above the hinder Bow of a great Saddle, and ſerving to keep the Bolſters firm.

TROUT *colour'd*. --- A Horſe is ſaid to be of this Colour when he is white, and ſpeckled with Spots of black, bay, or ſorrel, eſpecially about the Head and Neck.

TROUT-*Fiſhing*. See *Trout*-FISHING.

TROY-*weight*, anciently call'd *Trone-weight*. See TRONAGE and WEIGHT.

TRUCE, a Suſpenſion of Arms; or a Ceſſation of Hoſtilities between two Parties at War.

Truces are frequently concluded between Princes, in order to come to a Peace. --- *Truces* of many Years ſerve in lieu of Treaties of Peace between Princes, whoſe Differences cannot be finally adjuſted. See TREATY.

The Word, according to *Menage*, &c. comes from the *Latin*, *Treuga*, which ſignifies the ſame Thing. *Caſeneuve* derives it from the *German*, *trava*, or *trew*, which ſignifies Faith.

TRUCE *of God*, or *Treuga Dei*. See TREUGA *Dei*.

TRUCHMAN, *Dragoman*, or *Drogman*, in the Countries of the *Levant*, an Interpreter. See DRAGOMAN.

TRUCK, in a Ship, a ſquare Piece of Wood at the Top of a Maſt, to put the Flag Staff in.

TRUCKING, in Commerce. See PERMUTATION, EXCHANGE, COMMERCE, &c.

TRUCKS, among Gunners, round Pieces of Wood like Wheels, fix'd on the Axel-trees of Carriages, to move the Ordnance at Sea.

TRUE, ſomething agreeable to the Reality of Things, or to Truth. See TRUTH.

In this Senſe we ſay, the *true* God, the *true* Religion, *true* Gold, &c. in Oppoſition to falſe or pretended ones. See FALSHOOD.

TRUE *Place* of a Planet, or Star, in Aſtronomy, is a Point of the Heavens ſhewn or pointed out by a right Line, drawn from the Centre of the Earth through the Centre of the Planet or Star. See PLACE. See alſo PLANET, &c.

In this Senſe the Word ſtands oppos'd to *apparent Place*, which is that found by a right Line drawn from the Obſerver's Eye through the Centre of the Planet or Star. See APPARENT.

This Point in the Heavens is referr'd to the Ecliptick or Zodiack, by the Planet or Stars Circle of Longitude. See *Circle of* LONGITUDE.

TRUFFLES, *Tubera Terræ*, in Natural Hiſtory, a kind of vegetable Productions, not unlike Muſhrooms. See MUSHROOM.

The ancient Phyſicians and Naturaliſts, rank *Truffles* in the Number of Roots, Bulbs, or Cloves; and define them to be a Species of Vegetables, without Stalks, Leaves, Fibres, &c.

They are produc'd moſt in dry chap'd Grounds, and that, as *Pliny* ſays, chiefly after Rains and Thunder, in Autumn. --- Their Duration he limits to a Year. --- Their Colour is uncertain; ſome being white, others black, &c.

In *Italy*, *France*, &c. they eat them as a great Dainty, either fry'd in Slices with Oil, Salt and Pepper, or boil'd over and again in their own Broth. --- The Hogs are exceedingly fond of them, and are frequently the Means of diſcovering the Places where they are; whence the common People call them *Swine-bread*.

The modern Botaniſts rank *Truffles* in the Number of Plants; tho' they want moſt of the uſual Parts thereof. --- All we know of their Growth, is, that they are at firſt no bigger than a Pea, rediſh without, and within whitiſh; and that as they ripen, the white Part grows more dusky and black, only there are ſtill left a Number of white Streaks, which all terminate at Places where the outer Coat is crack'd, or open; and which, in all Probability, are the Veſſels that convey the Nouriſhment into the *Truffles*.

In theſe Veſſels is found a whitiſh Matter, which, when view'd with a Microſcope, appears to be a tranſparent Parenchyma, conſiſting of Veſiculæ; in the Middle whereof are perceiv'd little round black Grains, ſeparate from each other, ſuppos'd to be the Seed of the *Truffles*. See SEED.

When the *Truffle* rots in the Ground thro' Exceſs of Ripeneſs, theſe Grains are the only Thing that remain of them; and theſe are ſuppos'd to produce new *Truffles*, which grow one after another.

What confirms the Opinion of their coming from Seed, is, that there have been *Truffles* lately diſcover'd in *England*, and this only in *Northamptonſhire*, and even only in one Place thereof, *viz.* near *Ruſhton*, a Place ſtock'd with Plants formerly brought from *Languedoc*; and 'tis only ſince then, that any *Truffles* have been there obſerv'd; whence 'tis con-

cluded, that the Seed of theſe *Truffles* was brought from *France* among the Roots of the other Plants.

Theſe *Engliſh Truffles* were firſt diſcover'd by Dr. *Hatton*. — Dr. *Tancred Robinſon* aſſures us, they are the true *French Truffles*; the *Italian Tartaffi* or *Tartuffole*, and the *Spaniſh Turmas de Tiera*, being not noted by Mr. *Ray* as ever known on *Engliſh* Ground: Indeed, he adds, that he has ſeen them thrice as large at *Florence*, *Rome*, &c.

Thoſe obſerv'd in *England* are all included in a ſtudded Bark or Coat, and the inner Subſtance is of the Conſiſtence of the fleſhy Part of a young Cheſnut, of a Paſte Colour, a rank or hircine Smell, and unſavoury.

By a Chymical Analyſis, *Truffles* are found to abound in a volatile Alkali mix'd with Oil, upon which their Smell, *&c.* depends. They never riſe out of the Ground; but are found uſually half a Foot beneath the Surface thereof.

Dr. *Hatton* has obſerv'd ſeveral little Fibres iſſuing out of ſome *Truffles*, and inſinuating themſelves within the Soil, which, in all Probability, do the Office of Roots. — The *Truffles* grow tolerably globular, as receiving their Nouriſhment all around them; they being to be conſider'd, like Sea Plants, encompaſs'd with their Food, which they ſuck in thro' the Pores of their Bark or Rind. See CORAL.

They are tendereſt and beſt in the Spring, tho' eaſieſt found in Autumn; the Wet ſwelling them, and the Thunder and Lightening diſpoſing them to ſend forth their Scent, ſo alluring to the Swine, that ſome of the Ancients call'd them *Cerauna*.

The Depth at which the *Truffles* lie, Dr. *Robinſon* obſerves, is no Objection to their being of the vegetable Tribe; that being a Thing common to ſeveral other Plants that ſhoot up Stalks, particularly the Lathyrus tuberoſus, commonly call'd *Chamabalanus* and *Terræ Glandes*, in *Engliſh* Earth-Nuts, the Roots of our Bulbocaſtanum, *&c.*

The Ancients are exceedingly divided as to the Uſe of *Truffles*; ſome affirming them to be wholeſome Food, and others pernicious; *Avicenna* particularly, who will have them to cauſe Apoplexies. — For my own Part, ſays M. *Lemery*, I am of Opinion they have both good and evil Effects; they reſtore and ſtrengthen the Stomach, promote the Semen, *&c.* but when us'd in abundance, they attenuate and divide the Juices immoderately, and by ſome volatile and exalted Principles, occaſion great Fermentations, *&c.* tho' the Pepper and Salt they are ordinarily eaten with, do doubtleſs contribute greatly to thoſe Effects: — Their rich Taſte is owing to their not putting forth any Stalk; in effect their Principles being united, and, as it were, concentred in a little Bulb, muſt yield a richer and more delicious Savour than if the Juices were diſpers'd by Vegetation thro' the ſeveral Parts of a common Plant. — Some roaſt the *Truffles* under the Aſhes; others pulverize and mix them in Sauces.

The Word is form'd from the *Latin*, *Tuber*, or *Tuberculum*.

TRUG, and TRUG-*Corn*, in our ancient Cuſtoms. — *Tres* Trug *frumenti vel avenæ faciunt* 2 *Buſhels*, *intra prebendam de Hunderton in Eccleſia* Heref. M. S. *de temp. E.* 3.

In the black Book of *Hereford*, we find *truga frumenti* for a Meaſure of Wheat: And at *Lempſter*, at this Day, the Vicar has *Trug-Corn* allow'd him for officiating at ſome Chapels of Eaſe, as *Stoke* and *Dockly* within that Pariſh. — Haply it may come from the *Saxon*, *Trog*, which ſignifies a great hollow Veſſel or Trough.

TRULLIZATION, in the ancient Architecture, a Term us'd by *Vitruvius* for all Kinds of Couches or Layers of Mortar, wrought with the Trowel in the Inſide of Vaults; or for the Hatches made on the Layer of Mortar, to retain the Lining of Stuc.

TRULLUM, a barbarous Word, ſignifying *Dome*; chiefly us'd in this Phraſe, The *Council in Trullo*. See COUNCIL.

This was a Council aſſembled in the Year 680, againſt the *Monothelites*, in the Dome of the Palace of *Conſtantinople*, call'd *Trullum*; the Name whereof it has retain'd.

It was alſo call'd the *Quinſextum*. See QUINSEXTUM.

The *Trullum* was properly a Hall in the Palace of the Emperors of *Conſtantinople*, where they uſually conſulted of Matters of State. — The Council held therein was the 6th Oecumenical or General Council, call'd in *Trullo*.

The Term is form'd from the *Latin*, *Trulla*, Cup; the Hall being ſo call'd becauſe vaulted.

TRUMPET, a muſical Inſtrument, the moſt noble of all portable ones of the Wind Kind, us'd chiefly in War, among the Cavalry, to direct them in the Service. See MUSIC.

'Tis uſually made of Braſs, ſometimes of Silver, Iron, Tin, and Wood. *Moſes*, we read, made two of Silver, to be us'd by the Prieſts, *Numb.* x. and *Solomon* made 200 like thoſe of *Moſes*, as we are inform'd by *Joſephus*, lib. viii. which ſhews abundantly the Antiquity of that Inſtrument.

The Ancients had various Inſtruments of the *Trumpet* Kind; as the *Tubæ*, *Cornua*, and *Litui*; which ſee under their reſpective Articles.

The modern *Trumpet* conſiſts of a Mouth-piece, near an Inch broad, tho' the Bottom be only one Third ſo much. — The Pieces which convey the Wind are call'd the *Branches*; the two Places where it is bent, *Potences*; and the Canal between the ſecond Bend and the Extremity, the *Pavillion*; the Places where the Branches take aſunder, or are ſolder'd, the *Knots*; which are five in Number, and cover the Joints.

When the Sound of the *Trumpet* is well manag'd, 'tis of a great Compaſs. — Indeed its Extent is not ſtrictly determinable; ſince it reaches as high as the Strength of the Breath can force it. — A good Breath will carry it beyond four Octaves, which is the Limit of the uſual Keys of Spinets and Organs.

In War there are eight principal Manners of ſounding the *Trumpet*: The firſt, call'd the *Cavalquet*, us'd when an Army approaches a City, or paſſes thro' it in a March. — The ſecond the *Boute-ſelle*, us'd when the Army is to decamp or march. — The third is when they ſound to *Horſe*, and then to the *Standard*. — The fourth is the *Charge*. — The fifth the *Watch*. — The ſixth is call'd the *double Cavalquet*. — The ſeventh the *Chamade*. — And the eighth the *Retreat*. Beſide various Flouriſhes, Voluntaries, *&c.* uſed in Rejoycings.

There are alſo People who blow the *Trumpet* ſo ſoftly, and draw ſo delicate a Sound from it, that it is uſed not only in Church Muſic, but even in Chamber Muſic: And 'tis on this Account that in the *Italian* and *German* Muſic we frequently find Parts entitled *Tromba prima*, or Ia firſt *Trumpet*, *Tromba* IIa, *ſegonda*, IIIa, *terza*, ſecond, third *Trumpet*, *&c*, as being intended to be play'd with *Trumpets*.

There are two notable Defects in the *Trumpet*, obſerv'd by Mr. *Roberts*, in the *Philoſophical Tranſactions*; — The firſt is, that it will only perform certain Notes within its Compaſs, commonly call'd *Trumpet Notes*: The ſecond, that four of the Notes it does perform, are out of Tune. See NOTE.

The ſame Defects are found in the *Trumpet Marine*; and the Reaſon is the ſame in both. See TRUMPET *Marine*.

The Word *Trumpet* is form'd from the *French*, *Trompette*. *Menage* derives it from the *Greek*, τρόμβος, *turbo*, a Shell anciently uſed for a *Trumpet*. *Du Cange* derives it from the corrupt *Latin*, *Trumpa*, or the *Italian*, *Tromba*, or *Trombetta*; others from the *Celtic*, *Trompill*, which ſignifies the ſame Thing.

TRUMPET *Marine*, is a muſical Inſtrument conſiſting of three Tables, which form its triangular Body.

It has a very long Neck, with one ſingle String, very thick, mounted on a Bridge, which is firm on one Side, but tremulous on the other. — 'Tis ſtruck by a Bow with the one Hand, and with the other the String is preſs'd or ſtopp'd on the Neck by the Thumb.

'Tis the Trembling of the Bridge, when ſtruck, that makes it imitate the Sound of a *Trumpet*; which it does to that Perfection, that 'tis ſcarce poſſible to diſtinguiſh the one from the other.

And this is what has given the Denomination of *Trumpet Marine*, tho', in Propriety, it be a kind of Monochord.

The *Trumpet Marine* has the ſame Defects with the *Trumpet*, *viz.* that it performs none but *Trumpet Notes*, and ſome of thoſe either too flat or too ſharp. — The Reaſon, Mr. *Fr. Roberts* accounts for, only premiſing that common Obſervation of two uniſon Strings, that if one be ſtruck, the other will move; the Impulſes made on the Air by one String, ſetting another in Motion, which lies in a Diſpoſition to have its Vibrations ſynchronous to them: To which it may be added, that a String will move, not only at the ſtriking of an Uniſon, but alſo at that of an 8th or 12th, there being no Contrariety in the Motions to hinder each other. See UNISON and CHORD.

Now in the *Trumpet Marine* you do not ſtop cloſe, as in other Inſtruments, but touch the String gently with your Thumb, whereby there is a mutual Concurrence of the upper and lower Part of the String to produce the Sound. — Hence 'tis concluded, that the *Trumpet Marine* yields no muſical Sound, but when the Stop makes the upper Part of the String an Aliquot of the Remainder, and conſequently of the Whole; otherwiſe the Vibrations of the Parts will ſtop one another, and make a Sound ſuitable to their Motion, altogether confus'd. Now theſe aliquot Parts, he ſhews, are the very Stops which produce the *Trumpet Notes*.

TRUMPET *Harmonious*, is an Inſtrument which imitates the Sound of a *Trumpet*, and which reſembles it in every thing, excepting that it is longer, and conſiſts of more Branches.

'Tis ordinarily call'd *Sackbut*. See SACKBUT.

Speaking TRUMPET, is a Tube from ſix to fifteen Foot long, made of Tin, perfectly ſtraight, and with a very large Aperture; the Mouth-piece being big enough to receive both Lips.

The

The Mouth being apply'd hereto, it carries the Voice to a very great Diſtance, ſo as it may be heard diſtinctly a Mile; whence its Uſe at Sea.

The Invention of this *Trumpet* is held to be modern; and is commonly aſcrib'd to Sir *Samuel Morland*, who call'd it the *Tuba Stentorophonica*. — But *Ath. Kircher* ſeems to have a better Title to the Invention; for 'tis certain he had ſuch an Inſtrument before ever Sir *S. Morland* thought of his.

Kircher, in his *Phonurg.* ſays, that the Tromba publiſh'd laſt Year in *England*, he invented 24 Years before, and publiſh'd in his *Miſurgia*: He adds, that *Jac. Albanus Ghibbiſius* and *Fr. Eſchinardus*, aſcribe it to him; and that *G. Schottus* teſtifies of him, that he had ſuch an Inſtrument in his Chamber in the *Roman* College, with which he could call to, and receive Anſwers from the Porter.

Indeed, conſidering how fam'd *Alexander* the Great's Tube was, wherewith he uſed to ſpeak to his Army, and which might be heard diſtinctly 100 Stadia or Furlongs, 'tis ſomewhat ſtrange the Moderns ſhould pretend to the Invention; the *Stentorophonic* Horn of *Alexander*, whereof there is a Figure preſerv'd in the Vatican, being almoſt the ſame with that now in Uſe. See STENTOROPHONIC.

Liſtning, or *Hearing* TRUMPET, is an Inſtrument invented by *Joſeph Landini*, to aſſiſt the Ear in hearing of Perſons who ſpeak at a great Diſtance, without the Aſſiſtance of any ſpeaking *Trumpet*. See HEARING and EAR.

TRUMPETER, in Anatomy. See BUCCINATOR.

TRUNCATED *Pyramid*, or *Cone*, is one whoſe Top or Vertex is cut off by a Plane parallel to its Baſe. See PYRAMID and CONE.

A *Truncated* Cone, or the Fruſtum of that Body, is ſometimes alſo call'd a *Curry-Cone*. See FRUSTUM. See alſo GAUGING.

The Word is form'd of the *Latin*, *Truncare*, to cut off a Part from the Whole; whence alſo *Truncus*, *Trunchion*, &c. In Heraldry they ſay *Trunked*.

TRUNCHEON, of the *French Tronçon*, and the *Latin Truncus*; a *Battoon*; or a kind of ſhort Staff us'd by Kings, Generals, and great Officers, as a Mark of their Command. See BATTOON.

TRUNDLE, is a kind of Carriage with low Wheels, whereon to draw heavy cumberſome Burdens.

TRUNDLE *Shot*, is an Iron Shot about 17 Inches long, ſharp-pointed at both Ends, with a round Bowl of Lead caſt upon it, about a Hand Breadth from each End. See SHOT.

TRUNK, *Truncus*, the Stem, or Body of a Tree; or that Part between the Ground and the Place where it divides into Branches. See STEM, BRANCH, and TREE.

In lopping of Trees, nothing is left but the *Trunk*. See PRUNING.

Trunk is alſo uſed for the Stump, or that Part left over the Root in felling. — Large Trees when fell'd, ſhoot out from the *Trunk*, and make a Copſe or Underwood.

'Tis by means of the *Trunks* left rotting in the Ground, that the Waſtes in Foreſts are diſcover'd.

TRUNK, *in Anatomy*, is uſed for the Buſto of the human Body, excluſive of the Head and Limbs. See BUSTO.

TRUNK, *Truncus*, is alſo uſed for the Body of an Artery or Vein; in contra-diſtinction to the Branches and Ramifications thereof. See VEIN and ARTERY.

The Word is particularly apply'd to certain Parts of the Aorta and Cava. See AORTA and CAVA.

TRUNK, *in Architecture*, is uſed for the *Fuſt*, or *Shaft* of a Column, with that Part of the Pedeſtal between the Baſe and the Cornice, call'd the *Dye*. See SHAFT and COLUMN.

TRUNK, is alſo popularly uſed for the Snout of an Elephant; by Naturaliſts call'd the *Proboſcis* thereof. See PROBOSCIS.

TRUNK *Roots* of a Plant, are little Roots which grow out of the *Trunks* of Plants. See ROOT.

Theſe are of two Kinds, 1°. Such as vegetate by a direct Deſcent, the Place of their Eruption being ſometimes all along the *Trunk*, as in Mints, &c. and ſometimes only in the utmoſt Point, as in Brambles.

2°. Such as neither aſcend nor deſcend, but ſhoot forth at right Angles with the *Trunk*; which therefore, tho' as to their Office they are true Roots, yet, as to their Nature, are a Medium between a *Trunk* and a Root.

TRUNKED, among Heralds, is apply'd to Trees cut off at each End, which are ſaid to be *trunked*, or *truncated*.

TRUNNIONS of a Piece of Ordnance, are thoſe Knobs or Bunches of the Gun's Metal, which bear her up upon the Cheeks of the Carriages. See GUN, CANNON, ORDNANCE, CARRIAGE, &c.

TRUNNION *Ring*, is the Ring about a Cannon, next before the *Trunnions*. See ORDNANCE.

TRUSS *of Flowers*; is a Term us'd by Floriſts to ſignify many Flowers growing together on the Head of a Stalk; as in the Cowſlip, Auricula, &c.

A *Truſs of Hay* conſiſts of fifty-ſix Pounds, or half an hundred Weight; thirty-ſix *Truſſes* make a Load: But in *June* and *Auguſt* the *Truſs* muſt weigh ſixty Pounds, on Forfeiture of 18 *s. per Truſs*.

A *Truſs of Forage*, is as much as a Trooper can carry on his Horſe's Crupper.

TRUSS is alſo us'd for a Sort of Bandage made of Steel or the like Matter, wherewith to keep up the Parts in thoſe who have Hernias or Ruptures. See HERNIA, BANDAGE, &c.

TRUSSES, in a Ship, are Ropes made faſt to the Barrels of a Yard, to bind the Yard to the Maſt, when the Ship rolls. See YARDS.

TRUSSING, in Falconry, is an Hawk's raiſing any Fowl or Prey aloft, ſoaring up, and then deſcending with it to the Ground. See HAWK and FALCONRY.

TRUSTEE, one who has an Eſtate, or Money put or intruſted in his Hands for the Uſe of another.

TRUTH, *Veritas*, a Term us'd in Oppoſition to *Falſhood*; and apply'd to Propoſitions which anſwer or accord to the Nature and Reality of the Thing whereof ſomething is affirm'd, or deny'd. See PROPOSITION, &c.

Thus, when we ſay that 4 is the fourth Part of twice 8; that Propoſition is *true*, becauſe agreeable to the Nature of thoſe Numbers. See FALSHOOD.

Truth, according to Mr. *Lock*, conſiſts in the joining or ſeparating of Signs as the Things ſignify'd by them do agree or diſagree one with another. — Now the joining or ſeparating of Signs, is what we call making of Propoſitions. — *Truth* then, properly, belongs only to Propoſitions, whereof there are two Sorts, *mental* and *verbal*; as there are two Sorts of Signs commonly made uſe of, *viz. Ideas* and *Words*. See IDEA and WORD.

Mental Propoſitions, are thoſe wherein the Ideas in our Underſtanding are put together, or ſeparated by the Mind perceiving or judging of their Agreement or Diſagreement.

Verbal Propoſitions, are Words put together, or ſeparated, in affirmative or negative Sentences: — So that Propoſition conſiſts in joining or ſeparating Signs; and *Truth* conſiſts in putting together or ſeparating thoſe Signs, according as the Things they ſtand for agree or diſagree.

Truth, therefore, as well as Knowledge, may come under the Diſtinction of *verbal* and *real*; that being only *verbal Truth*, where Terms are join'd according to the Agreement or Diſagreement of the Ideas they ſtand for, without regarding whether our Ideas are ſuch as really have, or are capable of having any Exiſtence in Nature. — But it is then they contain *real Truth*, when theſe Signs are join'd as our Ideas agree; and when our Ideas are ſuch, as we know are capable of having an Exiſtence in Nature; which in Subſtances we cannot know, but by knowing that ſuch have exiſted. See SUBSTANCE.

Truth is the marking down in Words the Agreement or Diſagreement of Ideas, as it is. — Falſhood is the marking down in Words the Agreement or Diſagreement of Ideas, otherwiſe than it is; and ſo far as theſe Ideas, thus mark'd by Sounds, agree to their Archetypes, ſo far only is the *Truth* real.

The Knowledge of this *Truth* conſiſts in knowing what Ideas the Words ſtand for, and the Perception of the Agreement or Diſagreement of thoſe Ideas, according as it is mark'd by thoſe Words. See PROBABILITY, EVIDENCE, &c.

Beſides *Truth* taken in the ſtrict Senſe before mention'd, which is alſo call'd *Logical Truth*, there are other Sorts of *Truths*; as,

1°. *Moral Truth*, which conſiſts in ſpeaking Things according to the Perſuaſion of our own Minds; call'd alſo *Veracity*.

2°. *Metaphyſical*, or *Tranſcendental Truth*, which is nothing but the real Exiſtence of Things conformable to the Ideas which we have annex'd to their Names. See KNOWLEDGE. See alſo ERROR, &c.

In this Senſe a Clock may be ſaid to be *true*, when it anſwers the Idea or Intention of the Perſon who made it.

Others, will have *Metaphyſical Truth* to conſiſt in the Agreement of a Thing with the Idea thereof in the divine Underſtanding.

TRUTINA *Hermetis*, is uſed among Aſtrologers, for an artificial Method of examining and rectifying a Nativity. See HOROSCOPE.

TRUTINATION, the Act of weighing or ballancing a Thing. See WEIGHT and BALLANCE.

The Word is form'd from the *Latin Trutina*, a Pair of Scales.

TRYAL. See TRIAL.

To TRY, in the Sea Language. — A Ship is ſaid to *try*, when ſhe has no more Sails aboard but her Main-ſail, or the Miſſen-ſail only.

TRYPHERA, TRYPHERE, in Pharmacy, a Term us'd for ſeveral Kinds of Opiates. — The *Great Tryphere* is compoſed

poſed of Opium, Cinnamon, Cloves, and ſeveral other Ingredients: It is uſed to fortify the Stomach, to ſtop Fluxes, and for ſome Diſeaſes of the Womb.

There is alſo the *Saracenic Tryphere*, and the *Perſian Tryphere*, thus call'd, becauſe firſt introduced the one by the *Saracens*, and the other by the *Perſians*; they both purge gently.

The Word is form'd from the *Greek*, τρυφερὸς, delicate, ſoft, by reaſon it makes thoſe who uſe it, reſt.

TUB is uſed as a kind of Meaſure, to denote the Quantity of divers Things. --- A *Tub of Tea*, is a Quantity of about 60 Pounds. --- A *Tub of Camphire*, is a Quantity from 56 to 80 Pounds.

TUBE, Tubus, a *Pipe*, *Conduit* or *Canal*; being a Cylinder, hollow within ſide, either of Lead, Iron, Wood, Glaſs or other Matter, for the Air or ſome other Fluid to have a free Paſſage or Conveyance through.

The Term is chiefly uſed for thoſe uſed in Phyſicks, Aſtronomy, Anatomy, &c. On other ordinary Occaſions, we uſually ſay Pipe. See Pipe.

In the Memoirs of the *French* Academy of Sciences, M. *Varignon* gives us a Treatiſe on the Proportions neceſſary for the Diameters of *Tubes*, to give preciſely any determinate Quantities of Water. --- The Reſult of his Piece turns upon theſe two Analogies; That the Diminutions of the Velocity of Water, occaſion'd by its Friction againſt the Sides of the *Tubes*, are as the Diameters; the *Tubes* being ſuppoſed equally long; and the Quantities of Water iſſuing out at the *Tubes*, are as the ſquare Roots of their Diameters, deducting out of them the Quantity each is diminiſh'd. See Fluid, Fountain, Friction, &c.

For the Tubes *of Barometers and Thermometers*; ſee Barometer and Thermometer.

For the Aſcent of Liquors in Capillary Tubes; ſee Ascent and Capillary.

Torricellian Tube. See Torricellian *Tube*.

Tube, in Aſtronomy, is ſometimes uſed for *Teleſcope*; but more properly for that Part thereof into which the Lens's are fitted, and by which they are directed and uſed. See Telescope.

The Goodneſs of the *Tube*, being of great Importance to that of the Teleſcope; we ſhall here add its Structure.

*Conſtruction of a Draw-*Tube *for a Teleſcope.*

The great Points to be regarded here, are, that the *Tube* ben't troubleſome by its Weight, nor lyable to warp and diſturb the Poſition of the Glaſſes: So that any kind of *Tube* will not ſerve in every Caſe: But

1° If the *Tube* be ſmall, 'tis beſt made of thin braſs Plates cover'd with Tin, and form'd into Pipes or Draws, to ſlide within one another.

2° For long *Tubes*, Iron would be too heavy; for which reaſon ſome chuſe to make them of Paper, thus: ---- A wooden Cylinder is turn'd, of the Length of the Paper to be uſed; and of a Diameter equal to that of the ſmalleſt Draw. About this Cylinder is roll'd Paper, till it be of a ſufficient Thickneſs: When one Pipe is dry, provide others after the ſame manner; ſtill making the laſt ſerve as a Mould for the next, till you have enough for the length of the Tube deſired. Laſtly, to the Extremes of the Draws are to be glew'd wooden Ferrils, that they may be drawn forth the better.

3° Since Paper Draws are apt to ſwell with moiſt Weather, ſo as to ſpoil their ſliding; and in dry Weather to ſhrink, which renders them looſe and tottering; in both which Caſes, the Situation of the Lens's is eaſily diſturb'd; the beſt Method of making *Tubes*, is as follows: Glue Parchment round a wooden Cylinder; and let the Parchment be colour'd Black, to prevent the reflected Rays making any Confuſion. Provide very thin Slits of Beech, and bending them into a Cylinder, glue them carefully to the Parchment: Cover this wooden Caſe with white Parchment; and about its outer Extreme make a little Ring or Ferril: after the ſame manner make another Draw over the former; and then another, till you have enough for the Length of the *Tube*.

To the inner Extremes of each Draw, fit a wooden Ferril, that the ſpurious Rays ſtriking againſt the Sides, may be intercepted and loſt. In thoſe Places where the Lens's are to be put, it will be proper to furniſh the Ferrils with Female Screws. Provide a wooden Cover to defend the Object Glaſs from the Duſt, and putting the Eye Glaſs in its wooden Ferril, faſten it by the Screw to the *Tube*. Laſtly, provide a little wooden *Tube* of a Length equal to the Diſtance the Eye Glaſs is to be from the Eye, and fit it to the other Extream of the *Tube*.

Tube *Fallopian*, Tuba *Euſtachiana* } in Anatomy. See { Fallopian-*Tube*. Eustachiana.

TUBER, or Tubercle, in Botany, a kind of round turgent Root, in form of a Knob or Turnip. See Root.

The Plants which produce ſuch Roots, are hence denominated *Turberoſe* or *Turberous Plants*.

Tuber or Tuberosity, in Medicine, is uſed for a Knob or Tumour growing naturally on any Part; in Oppoſition to Tumors which ariſe accidentally, or from a Diſeaſe. See Tumor.

The ſame Term is alſo uſed for a Knot in a Tree.

TUBERCULES, Tubercles, are little Tumors which ſuppurate and diſcharge Pus; often found in the Lungs. See Lungs.

TUBERI *Lactiferi*, in Anatomy, is a Name uſed by ſome Writers, for thoſe ſmall Tubes through which the Milk flows to the Nipples of the Mammæ or Breaſts. See Milk and Mammæ.

TUBEROSE, an Epithet given to ſuch Roots as are round and fleſhy, and grow in the Fleſh ſolid and continuous; having neither Skin nor Shell. --- Such are the Roots of Saffron, Peony, &c.

TUBILUSTRIUM, in Antiquity, a Feaſt or Ceremony in uſe among the *Romans*. See Feast.

This Name was given to the Day whereon they purified their ſacred Trumpets; as alſo to the Ceremony of purifying them: It was held on the fifth and laſt Day of the Feaſt of *Minerva*, call'd *Quinquatrus* or *Quinquatria*, which was perform'd twice a Year.

The Word is compounded of *Tubus*, and *Luſtro*, I purify.

TUBULI *Vermiculares*, a Name ſometimes uſed by Naturaliſts, for certain ſmall winding Cavities on the out-ſides of Shells. See Shell.

TUFT, a Term uſed by ſome Authors for the buſhy Part of Trees; or that Part ſet with Branches, Leaves, &c. See Branch.

Paralleliſm of the Tufts *of Trees*. ---- All Trees are obſerv'd naturally to affect to have their *Tufts* parallel to the Spot of Ground they ſhadow; an Account of which Phænomenon, ſee under the Article Parallelism.

TUILERIE, or Tylery, a Tyle-work; being properly a large Building with a Drying-place, cover'd a-top, but furniſhed with Apertures on all Sides, through which the Wind having Admittance, dries the Tyles, Bricks, &c. in the Shade, which the Sun would crack, before they be in the Furnace. See Brick and Tyle.

The Word is pure *French*, form'd from *Tuile*.

The Garden of the *Louvre* is call'd the *Tuileries*, as being a Place where Tyles were anciently made, &c. ---- But the Term *Tuileries* does not only include the Garden; but alſo a magnificent Palace, whoſe Face takes up the whole Length of the Garden: And hence it is, that they ſay, The King lodges in the *Tuileries*; The King has quitted the *Tuileries* for a few Days, to reſide in the *Louvre*.

The Palace of the *Tuileries* is joined to the *Louvre* by a large Gallery, which runs all along the ſame, and has its Proſpects thereon. See Louvre.

The *Tuileries* was begun in 1564, by *Catherine de Medicis*, Wife of *Henry* II. in the Time of her Regency; finiſhed by *Henry* IV. and magnificently adorned by *Louis* XIV. ---- The Garden of the *Tuileries* was much improved by *Louis* XIII.

TUMBLER, a ſort of Dog, called in *Latin*, *Vertagus*, from his quality of tumbling and winding his Body about, e'er he attacks and faſtens on the Prey.

Theſe Dogs are often leſs than Hounds; being lanker, leaner, and ſomewhat pricked-eared; and by the Form of their Bodies, might be called Mungrel Grey-hounds, if they were a little bigger.

TUMBREL, Tumbrellum, Turbichetum, an Engine of Puniſhment, which ought to be in every Liberty, that has View of Frank-pledge, for the Correction and Cooling of Scolds and unquiet Women. See Cucking-*ſtool*.

TUMEFACTION, the Act of ſwelling, or riſing into a Tumor. See Tumor.

Inflammations and *Tumefactions* of the Teſtes, frequently happen in the Gonorrhæa; either from the Weakneſs of the Veſſels, violent Motion, unſeaſonable Uſe of Aſtringents, a Neglect of Purging, or the like. See Gonorrhæa.

TUMOR or Tumour, in Medicine, &c. a preternatural Riſing or Eminence on any Part of the Body.

Tumor is defined by the Phyſicians, a Solution of Continuity, ariſing from ſome Humor collected in a certain Part of the Body, which disjoyns the continuous Parts, inſinuates itſelf between them, and deſtroys their proper Form.

This has given occaſion to the *Arabs* to define a *Tumor* to be an Indiſpoſition, compoſed of three Kinds of Diſeaſes, *viz.* an Intemperature, an ill Conformation, and a Solution of Continuity, all which they comprize under the Name *Apoſtkem*, from the *Greek*, ἀπόστημα. See Aposthem.

Tumors may proceed from various Cauſes. --- The Maſs of Blood throwing off or diſcharging itſelf of any particular Humor, as ſometimes happens in the Criſis of a Fever, Pleuriſy, Empyema, Bubo, &c. will give riſe hereto. ---

And

And according to the Nature of the Humour ſo diſcharged, whether Sanguinous, Watery, Bilious, &c. the *Tumor* is different.

Other *Tumors* there are, occaſioned by Flatulency, as the Tympany, after the ſame Manner as hydropical *Tumors* are occaſioned by a Collection of the Lympha, or Serum, in a particular Part.

Ruptures of the Inteſtines, or their ſtarting from their Places, will likewiſe cauſe a *Tumor*. See RUPTURE.

External Injuries are another general Cauſe of *Tumors*. --- Thus a Contuſion, or a violent Stricture of any Part, a Wound, Fracture, Diſlocation, &c. will make it ſwell, or riſe above its natural Level. And the ſame thing may likewiſe happen from the Bites of venomous Creatures, &c. See WOUND, ULCER, CONTUSION, BITE, &c.

Tumors, properly ſo call'd, *i.e. Humoral Tumors*, or thoſe which contain a fluid Matter, ariſe either from a Stagnation, *i.e.* an Obſtruction of the Paſſage of ſome Fluid, occaſioning a ſlow Congeſtion; or a Tranſlation or Fluxion of an Humor from ſome other Part; or a Generation of ſome new Humor. See HUMOR.

Tumors of the firſt Kind are very numerous, and are uſually divided, with regard to the particular Humors they are filled with, into Phlegmons, which come from the Blood. See PHLEGMON and BLOOD.

Eryſipela's, which are filled with the Bile. See ERYSIPELAS and BILE.

Oedemas fill'd with Pituita. See OEDEMA and PITUITA.

And *Schirrus*'s with Melancholy. See SCHIRRUS.

To which may be added, *Flatulencies*, fill'd with Wind. See FLATULENCY, &c.

Of the ſecond Kind, are *critical Tumors*. See CRITICAL.

And of the third Kind, are *Cancers*, *Ganglio's*, and all *Tumors* contain'd in a Cyſtis or Bag. See CANCER, GANGLIO, &c.

TUMORS alſo frequently acquire peculiar Denominations from the Part affected, as *Ophthalmia*, if in the Eye; *Parotides* about the Ears; *Paronichia* in the Fingers, &c. See OPHTHALMIA, &c.

With reſpect to the Cure, all *Tumors* are diviſible into *Simple* and *Compound*, *i. e.* into ſuch as are of a kindly Nature, and go off, or are cured in a reaſonable Time, by the uſe of common Means, without the Appearance of any violent or dangerous Symptoms; and ſuch as are more malignant, or prove difficult of Cure, and are attended with bad Symptoms, and affect the adjacent Parts, or the whole Body. --- When a *Tumor* is formed by Fluxion, a ſudden Pain, Heat, Tenſion and Pulſation are felt in the Part, and manifeſt Signs of a Fever appear.

In thoſe form'd by Congeſtion, the Swelling riſes ſlowly, and the Pain, and other Symptoms, come on gradually, and prove leſs violent; unleſs it happen in the Joints, and other of the more ſenſible Parts.

All *Tumors*, except thoſe from Ruptures, terminate or are removed, either by Diſcuſſion, Suppuration, Putrefaction, Induration, or Tranſlation. See DISCUTIENT, SUPPURATIVE, &c.

When a *Tumor* is diſcuſſed, the Part that was affected, appears relaxed, or reduced to its natural Size and Figure, and is free from Pain and Hardneſs. See DISCUSSION.

When a *Tumor* haſtens to Suppuration, a conſiderable Degree of Heat, Pain and Pulſation are felt in the Part, and if the *Tumor* be large, or lie deep, a Fever generally comes on: When the Matter is formed, theſe Symptoms commonly decreaſe, and ſometimes totally vaniſh. And now, if the Situation of the Parts permits of it, the *Tumor* appears drawn to a Point, or becomes Conical in the Middle, or moſt depending Part, where the Matter collected commonly proves White. --- At this Time, likewiſe, the *Tumor* appears to be more contracted, and the Skin of the Part more ſhrivelled or flaccid than before: And now, upon Preſſure, if the *Tumor* be ſuperficial, or by vibrating it between the Fingers, the Matter may be felt to quaſh from Side to Side. See SUPPURATION.

Tumors in the fleſhy Parts of the Body, tend to their State, or ſuppurate faſter than *Tumors* in the Joints, Glands, &c.

When a *Tumor* is reſolved by Induration, the Swelling of the Part, and the Pain decreaſe, as the Hardneſs comes on. ---- When it terminates in Putrefaction or Mortification, the Part grows ſenſeleſs, and turns black and fœtid. See MORTIFICATION.

But when a *Tumor* goes off by Repulſion, or a Return of the Matter into the Blood, it diſappears at once; upon which a Fever, or ſome other acute Diſeaſe preſently enſues. See REPELLENT.

Windy Tumors, M. *Littre* deſcribes as form'd of Air, incloſed under ſome Membrane, which it dilates more or leſs in proportion to the Quantity, and from which it cannot eſcape; at leaſt not for ſome time.

The Difficulty is, to conceive how the Air ſhould come to be collected here. --- M. *Littre* thinks that the moſt ordinary Cauſe of *windy Tumors*, is the gathering of Juices in ſome neighbouring Part, wherein there is an Obſtruction. The Air which is intimately mix'd with all the Juices of the Body, continues to be ſo while they are in their natural Fluidity and Motion; but if they be collected in any Part, and, by Conſequence, have their Motion and Fluidity diminiſhed, the Air gets its Liberty, and diſengages itſelf from them. Now the Membranes of the Part wherein the Liquor is collected, becoming dilated by this Collection, and their Pores enlarged; the diſengaged Air eſcapes through them; but the Juice is left behind, as being too much thickned by its ſtay there: It therefore runs under ſome other neighbouring Membrane, which it raiſes, ſwells and extends.

TUN or TON, originally ſignifies a large Veſſel or Cask, of an oblong Form, biggeſt in the Middle, and diminiſhing towards its two Ends; girt about with Hoops; and uſed to put up ſeveral kinds of Merchandizes in, for their better Carriage; as Brandy, Oil, Sugar, Skins, Hats, &c.

The Term is alſo uſed for certain Veſſels of extraordinary Bigneſs, ſerving to keep Wine in for ſeveral Years. --- In *Germany*, there are many ſcarce ever emptied: The *Heidelberg Tun* is famous.

Some derive the Word from *Autumnus*, in regard 'tis then *Tuns* are moſt needed: *Du Cange* deduces it from *Tunna* or *Tonna*, Words uſed in the baſe *Latin*, for the ſame thing; whence alſo *Tunnare* to *Tun*.

The *Tun*, we frequently call a *Hogſhead*. See HOGSHEAD.

TUN is alſo a certain Meaſure, for Liquids, as Wine, Oil, &c. See MEASURE.

The *Engliſh Tun* contains two Pipes or four Barrels, or 252 Gallons.

The *Tun* of *Amſterdam* contains 6 Aems or Ams; the Aem 4 Ankers; the Anker 2 Stekans, the Stekan 16 Mingles; 12 Stekans are equal to an *Engliſh* Barrel or 63 Gallons. See GALLON.

The *Tun* of *Bourdeaux* and *Bayonne* contains four Barrels, equal to three *Paris* Muids. ---- At *Orleans* and *Berry*, it is about two *Paris* Muids. See MUID.

The *Tun* of *Malaga*, *Alicant*, *Sevil*, &c. is two Bottes, equal to about 36 or 37 Stekans. ---- The *Tun* of *Lisbon* is two *Portugueze* Bottes, equal to 25 Stekans.

TUN is alſo a certain Weight, whereby the Contents of Ships, &c. are eſtimated. See WEIGHT.

The *Sea Tun* is computed to weigh Two thouſand Pounds, or Twenty Quintals or Hundreds Weight; ſo that when we ſay a Veſſel carries Two hundred *Tuns*, we mean 'tis able to carry Two hundred times the Weight of Two thouſand Pounds, *i. e.* Four hundred thouſand Pounds: It being found, by a curious Obſervation, that the Sea Water, whoſe Room the Veſſel fills, when full loaden, weighs ſo much. See BURTHEN.

To find the Burthen and Capacity of a Ship, they meaſure the Hold or Place where ſhe is loaden; allowing 42 Cubic Feet to the *Sea Tun*. See HOLD.

The Price of Freight, or Carriage of Merchandizes, is ordinarily ſettled on the Foot of the *Sea Tun*: And yet, though the Tun is Twenty hundred Weight, there is ſome Difference made therein, either on account of the Weight or Cumberſomneſs or Bulk of the Commodities, the Space they take up, or the like. See FREIGHT.

Accordingly, at *Bourdeaux*, four Barrels of Wine are held a *Tun*; five Barrels of Brandy are eſtimated two *Tuns*; three of Syrop are one *Tun*; four Barrels of Prunes, one *Tun*; two Dozen of Walnut-tree Tables, one *Tun*; a Dozen of Planks one *Tun*; Twenty Buſhels of Cheſnuts are accounted one *Tun*; and the like of Wheat or other Grain: Ten Bales of Cork; Five Bales of Feathers, and Eight of Paper, make each one *Tun*.

A *Tun* or Load of Timber, is 40 ſolid Feet, if the Timber be round: If it be hew'd, or ſquare, 50. See TIMBER.

TUN, TON, in the end of Words or Names of Places, ſignify a Town, Village, or dwelling Place; from the *Saxon*, *Tun*, *Sepes*, *Vallum*, *Villa*, *Vicus*, *Oppidum*; and this from the *Saxon Thun*, *i.e.* an Hill, where they formerly built Towns. See TOWN.

TUN-*Greve*, from the *Saxon*, *Tungeræva*, *q. d. Villæ præpoſitus*, a Term anciently uſed for a Reeve or Bailiff, *qui in Villis, & quæ dicimus Maneriis, Domini perſonam ſuſtinet, ejuſque vice omnia diſponit & moderatur. Spelman.* See GREVE.

TUNE or TONE, in Muſic, is that Property of Sounds whereby they come under the relation of *Acute* and *Grave* to one another. See GRAVITY, &c.

Though Gravity and Acuteneſs be mere Terms of Relation, yet the Ground of the Relation, the *Tune* of the Sound, is ſomething abſolute; Every Sound having its own proper *Tune*, which muſt be under ſome determinate Meaſure, in the Nature of the Thing.

The only Difference, then, between one *Tune* and another, is, in Degrees; which is naturally infinite, *i. e.* we conceive there is ſomething poſitive in the Cauſe of Sound which is capable of leſs and more, and contains in it the Meaſure of the Degrees of *Tune*; and becauſe we don't ſuppoſe a leaſt or greateſt Quantity of this, we conceive the Degrees depending on thoſe Meaſures to be infinite. See SOUND.

If two or more Sounds be compar'd together in this Relation, they are either equal or unequal in the Degree of *Tune*. --- Such as are equal are call'd *Uniſons*. See UNISON.

The unequal conſtitute what we call an *Interval*, which is the Difference of *Tune* between two Sounds. See INTERVAL.

Cauſe and Meaſure of TUNE; *or that whereon the* Tune *of a Sound depends.*

Sonorous Bodies, we find, differ in *Tune*, 1°. According to the different Kinds of Matter; thus the Sound of a Piece of Gold is much graver than that of a Piece of Silver of the ſame Shape and Dimenſions; in which Caſe, the *Tones* are proportional to the Specific Gravities.

2. According to the different Quantities of the ſame Matter in Bodies of the ſame Figure; as a ſolid Sphere of Braſs, one Foot in Diameter, ſounds acuter than a Sphere of Braſs two Foot Diameter; in which Caſe the *Tones* are proportional to the Quantities of Matter.

Here, then, are different *Tunes* connected with different ſpecific Gravities, and different Quantities of Matter; yet cannot the different Degrees of *Tune* be referr'd to thoſe Quantities, *&c.* as the immediate Cauſe. In Effect, the Meaſures of *Tune* are only to be ſought in the Relations of the Motions that are the Cauſe of Sound, which are no where ſo diſcernable as in the Vibrations of Chords. See CHORD.

Sounds, we know, are produc'd in Chords by their vibratory Motions; not, indeed, by thoſe ſenſible Vibrations of the whole Chord, but by the inſenſible ones, which are influenc'd by the ſenſible, and, in all Probability, are proportional to them. --- So that Sounds may be as juſtly meaſur'd in the latter, as they could be in the former, did they fall under our Senſes: But even the ſenſible Vibrations are too ſmall and quick to be immediately meaſur'd. --- The only Reſource we have, is to find what Proportion they have with ſome other Thing, which is effected by the different Tenſions, or Thickneſs, or Lengths of Chords, which, in all other Reſpects, excepting ſome one of thoſe mention'd, are the ſame. See VIBRATION.

Now, in the general, we find that in two Chords, all Things being equal, excepting the Tenſion, or the Thickneſs, or the Length, the *Tones* are different; there muſt therefore be a Difference in the Vibrations owing to thoſe different Tenſions, *&c.* which Difference can only be in the Velocity of the Courſes and Recourſes of the Chords, thro' the Spaces wherein they move to and again. --- Now, upon examining the Proportion between that Velocity, and the Things juſt mention'd, whereon it depends, 'tis found to a Demonſtration, that all the Vibrations of the ſame Chord are perform'd in equal Times.

Hence, as the *Tone* of a Sound depends on the Nature of thoſe Vibrations whoſe Differences we can conceive no otherwiſe than as having different Velocities, and as the ſmall Vibrations of the ſame Chord are all perform'd in equal Time; and as 'tis found true in Fact, that the Sound of any Body ariſing from one individual Stroke, tho' it grow gradually weaker, yet continues in the ſame *Tone* from firſt to laſt; it follows, that the *Tone* is neceſſarily connected with a certain Quantity of *Tune* in making every ſingle Vibration; or that a certain Number of Vibrations, accompliſh'd in a given Time, conſtitutes a certain and determinate *Tune*; for the frequenter thoſe Vibrations are, the more acute is the *Tune*; and the ſlower and fewer they are in the ſame Space of Time, by ſo much the more grave is the *Tune*; ſo that any given Note of a *Tune*, is made by one certain Meaſure of Velocity of Vibrations, *i. e.* ſuch a certain Number of Courſes and Recourſes of a Chord or String in ſuch a certain Space of Time, conſtitutes a determinate *Tune*. See NOTE.

This Theory is ſtrongly ſupported by our beſt and lateſt Writers on Muſic, Dr. *Holder*, Mr. *Malcolm*, &c. both by Reaſon and Experience. --- Dr. *Wallis*, who owns it very reaſonable, adds, that 'tis evident the Degrees of Acuteneſs are reciprocally as the Length of the Chords; tho', he ſays, he will not poſitively affirm that the Degrees of Acuteneſs anſwer the Number of Vibrations as their only true Cauſe: But his Diffidence ariſes hence, that he doubts whether the Thing have been ſufficiently confirm'd by Experiment. --- Indeed, whether the different Number of Vibrations in a given Time is the true Cauſe on the Part of the Object, of our perceiving a Difference of *Tune*, is a Thing which we conceive does not come within the Reach of Experiment; 'tis ſufficient the Hypotheſis is reaſonable. See CONCORD, HARMONY, *&c.*

TUNICA, a kind of Waſtecoat or Under-Garment wore by the Ancients, both at *Rome*, and in the Eaſt.

The common People ordinarily wore only a ſingle *Tunica*; but thoſe of better Faſhion wore a *Toga* or Gown over it. See TOGA.

The Philoſophers wore a Gown without a *Tunica*, as profeſſing to go half naked.

The *Tunica* was peculiar to the Men; the Under-Garment of the Women not being call'd *Tunica*, but *Stola*. See STOLA.

The Senators wore their *Tunica* enrich'd with ſeveral little Pieces of Purple, cut in Form of large Nails; whence it was call'd *Laticlava*: The Knights had leſſer Nails on their *Tunica*, which was hence call'd *Anguſticlava*: The common People wore their *Tunica* without any Nails at all. --- And 'twas by theſe three different Sorts of *Tunicas*, that the three different Orders of the *Roman* People were diſtinguiſh'd. See LATICLAVA, *&c.*

Among the Religious, the woollen Shifts, or Under-Garments, are ſtill call'd *Tunicas* or *Tuniques*.

TUNICA, or TUNIC, in Anatomy, is a Term apply'd to the Skins or Membranes which coat or incloſe the Veſſels, and divers other of the leſs ſolid Parts of the Body. See MEMBRANE.

The Eye conſiſts principally of a Number of *Tunics* rang'd over one another; as the *Tunica Albuginea*, the *Tunica Cornea*, the *Tunica Retiformis*, &c. See EYE, *&c.*

TUNICA *Vaginalis*. See VAGINALIS.

TUNNAGE, or TONNAGE, a Duty or Cuſtom due for Merchandize brought or carry'd in Tuns, and ſuch like Veſſels, from or to other Nations; thus call'd, becauſe rated at ſo much *per* Tun. See CUSTOM.

Tunnage is properly a Duty impos'd on Liquids according to their Meaſures; as Poundage is that impos'd on other Commodities according to their Weight. See POUNDAGE.

They were both firſt ſettled by Authority of Parliament under King *Edward* III; were re-eſtabliſh'd in 1660, under the Reign of King *Charles* II. for his Life, upon abrogating all the Laws made under *Oliver Cromwell*, and re ordaining the Execution of the ancient Laws and Regulations; and have been continu'd and renew'd by the Parliaments ever ſince. --- By an Act made in the firſt Year of the Reign of Queen *Anne* they were continu'd for 96 Years, expiring in the Year 1798.

This Duty at firſt was 4*l.* 10*s.* Sterling *per* Tun, for *French* Wines brought into the Port of *London* by the *Engliſh*; and only three for that brought in the other Ports. --- For the ſame Wine imported by Strangers to *London*, this Duty was 6*l.*, and that brought into the other Ports 4*l.* 10*s.* Sterling.

Rheniſh Wine, in Virtue of the ſame Act, paid 7*l.* 10*s.* Sterling; and *Spaniſh*, *Portugueſe*, *Malmſey*, and *Greek* Wines, the ſame as the *French* Wines.

But there have been divers additional Duties added ſince. --- As, the *additional Duty of the old Subſidy*, *Seignorage Duty of ancient Impoſt of* Tunnage, *Duty of additional Impoſt*, *Orphans Money*, *new Subſidy*, &c.

TUNNAGE is alſo uſed for a certain Duty paid the Mariners by the Merchants, for unloading their Ships arriv'd in any Havens, after the Rate of ſo much a *Tun*. See DUTY.

TUNNEL, or FUNNEL, an Inſtrument thro' which any Liquor is pour'd into a Veſſel. --- Part of the Draught of a *Chimney* above the Mantle-piece, is alſo call'd by the ſame Name. See CHIMNEY.

TUNNEL-*Net*, is a kind of Net much uſed for the catching of Partridges; thus call'd from its Form, which is a Cone 15 or 18 Feet long.

To uſe it, a Covey of thoſe Birds being found, a Compaſs is taken, and the Net pitch'd at a good Diſtance from them, according to the Situation of the Ground. --- Then, with a natural or artificial Stalking Horſe, they are ſurrounded, and gently driven towards the Net, never coming on them in a direct Line, but by Windings, Turnings, *&c.* See STALKING.

TUNNING, a Part of the Proceſs of Brewing, or rather an Operation which is the Sequel thereof. See BREWING.

The *Tunning of Beer*, &c. is perform'd various Ways; ſome being of Opinion 'tis beſt *tunn'd* as it cools, or begins to come; while others let it ſtand longer to become riper.

The moſt regular Method is to cleanſe and *tun* juſt as it comes to a due Ferment, and gets a good Head; for then it has the moſt Strength to clear itſelf. --- What works over is to be ſupply'd with freſh Beer of the ſame Brewing.

TURBAN, or TURBENT, the Head-dreſs of moſt of the Eaſtern and Mahometan Nations. See HAT, CAP *&c.*

A *Turban* conſiſts of two Parts, *viz.* a Cap, and a Shaſh of fine Linnen, or Taffaty, artfully wound in divers Plaits about the Cap.

The *Turks* call the Shaſh *Turbent*; whence we have form'd the Word *Turban*.

The Cap is red or green, without any Brim, pretty flat, tho' roundiſh a-top, and quilted with Cotton, but does not cover the Ears. --- About this is wrapp'd a long Piece of fine,

fine, thin Linnen or Cotton, in ſeveral Wreaths variouſly diſpos'd.

There is a good deal of Art in the giving a *Turban* the fine Air; and the making them up makes a particular Trade, as the making of Hats does among us.

The *Emirs*, who pretend to be deſcended of the Race of *Mahomet*, wear their *Turbans* quite green: Thoſe of the other *Turks* are ordinarily red, with a white Shaſh. --- Your genteel People are to have frequent Changes of *Turbans*. --- M. *de Tournefort* obſerves, that the *Turban*, all Things conſider'd, is a very commodious Dreſs; and that he even found it more eaſy to him than his *French* Habit.

The Grand Signior's *Turban* is as big as a Buſhel, and ſo exceedingly reſpected by the *Turks*, that they dare ſcarce touch it. --- It is adorn'd with three Plumes of Feathers, enrich'd with Diamonds and precious Stones: He has a Miniſter on Purpoſe to look to it, call'd *Tulbentoglan*.

That of the Grand Vizier has two Plumes; ſo have thoſe of divers other Officers, only ſmaller, one than another; others have only one; and others none at all. --- The *Turban* of the Officers of the Divan is of a peculiar Form, and call'd *Mugenezek*.

The Shaſh of the *Turks Turban*, we have obſerv'd, is white Linnen; that of the *Perſians* is red Woollen. Theſe are the diſtinguiſhing Marks of their different Religions: *Sophi*, King of *Perſia*, who was of the Sect of *Ali*, being the firſt who aſſum'd that Colour, to diſtinguiſh them from the *Turks*, who are of the Sect of *Omar*, and whom the *Perſians* eſteem Hereticks. See MAHOMETAN, &c.

The Word is form'd from the *Arabic* דאר, *dar*, or דור, *dur*, or דאל, *dal*, or דול, *dul*, which ſignifies to encompaſs; and בנד, *band* or *bend*, which ſignifies Shaſh, or Scarf, or Band; ſo that *Durbent*, or *Turbent*, or *Tulbent* only ſignifies a Scarf, or Shaſh, ty'd round; it being the Shaſh that gives the Denomination to the whole *Turban*.

TURBARY, TURBARIA, a Right to dig Turf in another Man's Ground; from *Turba* an old *Latin* Word for a Turf. See TURF.

Common of *Turbary*, is a Liberty which ſome Tenants have by Preſcription to dig on the Lord's Waſte. See COMMON.

TURBARIA is ſometimes alſo taken for the Ground where Turfs are digged. See TURF.

TURBARIA *Bruaria*, particularly denotes a Flaw Turf, or Heath Turf; mention'd in a Charter of *Hamon de Maſſy*.

TURBITH, or TURPETH, TURPETHUM, a Medicinal Root, brought from the *Eaſt Indies*, particularly *Cambaya*, *Surat*, and *Goa*; tho' others will have it, that the true *Turbeth* comes chiefly from *Ceylon*.

The *Turbeth* of the Moderns bears ſo little Reſemblance to that of the Ancients, that 'tis difficult to ſuppoſe them the ſame. --- That ſold by our Druggiſts is longiſh, about the Thickneſs of the Finger, reſinous, heavy, and of a browniſh hue without, and whitiſh within. --- 'Tis brought to us cloven in the Middle, length-wiſe, and the Heart or woody Matter taken out.

When in the Ground it ſhoots out Vines, ſome whereof creep along the Ground, and the reſt wind about the neighbouring Trees and Shrubs.

Turbeth is a violent Purgative, and is uſed in the Dropſy, Palſy, and Apoplexy. See PURGATIVE.

It yields a deal of reſinous Matter in a ſpirituous Menſtruum, which Dr. *Quincy* obſerves, does not affect the larger Paſſages much; but is very active in the ſmaller Veſſels, and glandulous Contorſions, which it wonderfully clears of all viſcid Adheſions. See PURGATIVE.

Some Apothecaries, either thro' Ignorance or Parſimony, ſubſtitute white Thapſia, which they call grey *Turbeth*, for the true *Turbeth*; tho' both as to Taſte, Colour, and Qualities, they are very different.

It is commonly ſuppos'd to take its Name *Turbith* from the Violence of its Operation, as *diſturbing* the whole Oeconomy.

Mineral TURBITH, or TURPETHUM *Minerale*, is a Name which the Chymiſts give to a yellow Precipitate of Mercury, which purges violently. See MERCURY and PRECIPITATE.

The Method of preparing it is thus: - - On the dry Powder gain'd by diſſolving Mercury in Oil of Vitriol, pour a proper Quantity of warm Rain Water, and the Powder will immediately turn of a yellow Colour. Continue to waſh this Powder by repeated Affuſions of Water, till the Liquor comes away as inſipid and colourleſs as it was pour'd on, leaving a beautiful yellow Calx at the Bottom of the Veſſel, which being gently dry'd at the Fire, is call'd by the Name of *Turbith mineral*.

This Powder is call'd *Mineral Turbith* from the Reſemblance it bears to the vegetable *Turbith* of the *Arabians*, in ſtrongly purging the moſt internal Receſſes of the Body; for tho' it be inſipid upon the Tongue, yet it is poſſeſſed of very conſiderable Virtues. --- Being boil'd with Water, it loſes more of its Salts, and thereby grows milder, and more ſafe; ſo it does by being deflagrated twice or thrice, or diſtill'd with Spirit of Wine.

A very few Grains of this *Turbith* will prove emetic and purgative. --- It is alſo accounted an excellent Medicine in the Cure of the Venereal Diſeaſe: But as it operates with conſiderable Violence, it ought not to be given, unleſs the Viſcera are known to be ſound. See PURGATIVE.

This appears to have been the grand Secret of *Paracelſus*, which, in his ſcarce *German* Book of Hoſpital Medicines, he praiſes ſo extravagantly for the Venereal and all Chronical Diſeaſes. --- *Sydenham* alſo commends it in Venereal Caſes, given in the Quantity of ſix or eight Grains, in ſtrong Habits of Body, ſo as to prove emetic; but when imprudently uſed, it is apt to give the Dyſentery. See VENEREAL *Diſeaſe*.

TURBINATED, is a Term frequently apply'd by Naturaliſts to Shells, and other Bodies; to denote them of a Conical Figure, repreſenting a Peer or a Top. See SHELL.

TURBO, in Meteorology, a *Whirlwind*. See WHIRLWIND.

TURCOISE, or TURQUOIS, in Natural Hiſtory, a precious Stone, of a blue Colour; ordinarily opake, but ſometimes a little tranſparent. See PRECIOUS *Stone*.

There are *Turcoiſes* both *Oriental* and *Occidental*, of the *new Rock* and the *old*.

The Oriental partakes more of the blue Tincture than the green; and the Occidental more of the green than the blue. --- Thoſe of the old Rock are a deep blue, and thoſe of the new Rock more whitiſh, and don't keep their Colour.

The Oriental ones come from *Perſia*, the *Indies*, and ſome Parts of *Turky*; and ſome even ſuppoſe that 'tis hence they derive their modern Name *Turquoiſe*. --- The Occidental are found in various Parts of *Europe*, particularly *Germany*, *Bohemia*, *Sileſia*, *Spain*, and *France*.

Turcoiſes all grow of a round or oval Figure: They cut eaſily; and beſides Seals, which are frequently engrav'd on them, ſome are form'd into Crucifix's, or other Figures near two Inches high; tho' *Boetius* miſtakenly affirms, that none have been known to exceed the Bigneſs of a Walnut.

The Ancients attribute a Kind of Sympathetic Virtue to the *Turquois*. --- 'Tis commonly ſuppos'd, that it changes Colour, or breaks, at the Death, Sickneſs, or even Misfortune of the Perſon who bears it; that it diſagrees with marry'd People, and even breaks on their Fingers; that it marks all the Changes and Accidents that happen in the Body of the Wearer, by correſpondent Changes in its Colour; and that it is for this Reaſon the Ladies have forbore the Uſe of it. --- *De Boot* endeavours to account for all theſe Effects from natural, and even probable Cauſes.

The *Turquois* is eaſily counterfeited; and that ſo perfectly, that 'tis impoſſible to diſcover the Deceit, without taking it out of the Collet.

The *Greeks* and *Latins* call it *Calavs*, and κυανος; and it appears to have had a Place in the Rationale of the High Prieſt of the *Jews*.

In the Memoirs of the Academy of Sciences, we have a very curious Account of the Formation of the *Turquois*, the Manner of giving it the blue Colour, &c. by M. *Reaumur*. --- The *Turquois*, he obſerves, is one of the ſofteſt of precious Stones, its Hardneſs ſcarce exceeding that of a Cryſtal, or a tranſparent Pebble; tho' ſome are much harder than others; and ſtill the harder, *cæteris paribus*, the more valuable, by Reaſon of the Vivacity of the Poliſh, which is always proportionable to the Hardneſs.

Roſnel, a Jeweller, and the Author of a ſcarce Treatiſe call'd *Mercure Indien*, eſtimating the ſeveral precious Stones, ſets a hard *Turquois*, whoſe Blue is neither bright nor deep, on the Foot of the moſt perfect Emeralds, that is, on a Level with a Diamond. --- Thoſe with any Defect he only values at a *French* Crown the Caract.

Tavernier aſſures us, there are but two Mines of *Turquoiſes* known in all the Earth, and thoſe are both in *Perſia*; the one call'd the *Old Rock*, near a Town call'd *Neabourg*, three Days Journey to the North Eaſt of *Meched*: The other call'd the *New Rock*, is five Days Journey. --- The latter, he adds, are but little valued; and the King of *Perſia* has for many Years prohibited the digging in the former for any but himſelf. --- M. *Reaumur* takes the *old Rock* to be now exhauſted; in effect the common Diviſion of *Turquoiſes* into the *old Rock*, or *Oriental*, and *new Rock*, or *Occidental*, is very arbitrary and precarious. --- All the beſt, and moſt perfect, grow they where they will, in *India* or *Europe*, are reckon'd among the former, and the reſt among the latter.

Near *Simore*, in the lower *Languedoc*, are ſeveral conſiderable Mines of *Turquoiſes*; but that fine blue Colour admir'd in the *Turquois*, is not natural to theſe Rocks; the prevailing Colour being ſometimes white, and ſometimes much like that of *Tripoli* and *Venice*. The other precious Stones are dug out of the Mine with all their Colour, to the Force whereof nothing can be added, tho' it may frequently

be

be diminiſh'd, as we ſee Fire bring down the too deep Colour of the Saphir, and quite take away that of a pale Saphir: Theſe *Turquoiſes*, on the contrary, are naturally whitiſh or yellowiſh, of a Colour as common as that of a Free-ſtone; and by oppoſing them for ſome Time to the Action of the Fire, they aſſume a blue Colour.

It ſeems a Paradox, and yet M. *Reaumur* has made it exceeding probable, that *Turquoiſes* are originally the Bones of Animals. --- In the Mines in *France*, Pieces have ſeveral times been found in the Figure of Teeth, Bones of the Arms, Legs, *&c.* And *Turquoiſes* which are yet imperfect or ill form'd, are apparently compos'd of Laminæ or Leaves like thoſe of Bones, between which ſome petrifying Juice inſinuating itſelf, binds them cloſe together: And ſtill, the ſofter, and more imperfect the Stones are, the more diſtinguiſhable are the different Directions of the Fibres and Laminæ, with their Interſections, and the greater Reſemblance they bear to fractur'd Bones, and the leſs to any kind of Stones known.

To give them the blue Colour, they dry them awhile in the Air, then heat them gradually in a Furnace made after a particular Manner. If they be heated too haſtily, the Humidity between the Lamina, wanting Time to evaporate all, will ſeparate into Scales or Flaws. Some of the Stones require a greater Degree of Heat to bring them to their Colour than others; and even in large Pieces, ſeveral Parts ordinarily require ſeveral Degrees of Heat.

On this Account a world of Care is to be taken in the Heating them; for the Fire, which gives them their Blue by Degrees, if they be expos'd beyond a certain Degree, takes it away again.

M. *Reaumur* accounts for their taking a blue Colour by Heat, very well: When freſh cut out of the Rock, it ſeems, their Subſtance is found ſprinkled and ſtreak'd all over with Spots, Veins, little Circles, *&c.* of a black-blue Colour: Theſe he takes to be Remains of a deep blueiſh Matter, which the Fire rarefying, ſpreads and diffuſes throughout the whole Subſtance of the Stone. --- This Matter, again, he concludes to have been either originally the Juice contain'd in the Bones, ſince mix'd and coagulated with the petrifying Juice, or ſome other Mineral Matter inſinuated into the Pores of the Stone.

The great Defect of all *Turquoiſes* is, that in Time they loſe their blue Colour, and become green; and then ceaſe to be of any Value.

TURF, or PEAT, a blackiſh ſulphurous Earth, us'd in ſeveral Parts of *England*, *Holland*, and *Flanders*, as Fuel. See FUEL.

In *Flanders*, their *Turf* is dug or pared from off the Surface of the Earth, and cut in Form of Bricks. --- The *Gramen*, a Species of Graſs growing very thick on the *Turf* Earth, contributes greatly, when dry, to the Maintenance of the Fire.

The *Dutch* draw their *Turf* from the Bottom of the Dikes or Canals which run acroſs moſt of their Lands; by which Means they not only ſupply the Defect of Wood, which is very great in moſt of the United Provinces, but alſo keep their Dikes clear and navigable: This *Turf* Earth is very black. As they take it up from the Bottoms of the Dikes, they ſpread it about the Edges, of ſuch a Thickneſs, as may be reduc'd to three Inches when moderately dry'd. --- In this Condition they cut it into Pieces or *Turfs* ſeven or eight Inches long, and three broad; and, to compleat the drying, lay them up in Heaps, and at laſt in Stacks.

In the North of *England*, *Scotland*, *&c.* *Turf* or Peat is dug out of a ſoft, moiſt, rotten Earth, call'd *Peat-Moſs*: *For the Formation whereof*, ſee Moss.

They dig horizontally from the Surface, to the Depth of about four Foot, with a Spade, which at once faſhions and takes them out in Parallelopipeds nine or ten Inches long, and three ſquare; which are ſpread on the Ground to drain as faſt as dug; and then ſet up an end three or four againſt each other, for the Wind to blow thro' them; and at laſt ſtack'd or houſed.

The Pits or Dikes in a few Years fill up again, and afford a freſh Crop.

TURFING *Spade*, among Husbandmen, is an Inſtrument us'd to under-cut the *Turf*, after it is mark'd out with a Trenching Plough.

TURGESCENCE, a Swelling or growing *turged* or bloated. --- From the *Latin*, *turgere*.

TURIONES, the firſt young tender Shoots which Plants do annually put forth. See GEM, CYON, *&c.*

TURKY *Company*. See COMPANY.

TURLUPINADE, a Term us'd chiefly among the *French* for a low dry Jeſt, or Witticiſm. --- The Occaſion of the Name is deriv'd from a famous Comedian at *Paris*, call'd *Turlupin*; whoſe Talent, like that of our *Pinkethman*, conſiſted chiefly in raiſing a Laugh by miſerable Puns and Points.

TURLUPINES, TURLUPINI, a Sect of Hereticks, or rather of People who made publick Profeſſion of Impudence, going naked, without ſo much as covering their Privy Parts, and having to do with Women, like the Cynicks, in open Market.

They call'd their Sect the *Fraternity of the Poor*, and ſpread themſelves over *England* and *France*.

They are ſaid by ſome to have had their Name *Turlupins*, *quod ea tantum habitarent loca quæ lupis expoſita erant*.

They attempted to ſettle themſelves at *Paris* in 1372, but were a great Part of them burnt, with their Books; as is related by *Gaguin* and *du Tillet* in the Life of *Charles* V.

TURMERIC, a Root us'd by the Dyers to give a yellow Colour, call'd in *Latin*, *Curcuma Officinarum*. See DYING.

'Tis yellow both within and without Side, very hard, as if petrify'd, and not unlike, either in Figure or Size, to Ginger. --- The Leaves it produces are like thoſe of white Hellebore; its Flowers riſe in Manner of a Spica or Ear; and its Fruit rough like our new Cheſnuts.

'Tis brought chiefly from the *Eaſt-Indies*; tho' the Iſland *Madagaſcar* does likewiſe afford it. --- You are to chuſe that which is big, new, reſinous, hard to break, and heavy.

Some People have miſtakenly imagin'd there was a Native red *Turmeric*; their Error was owing to this, that the yellow Root, as it grows old, turns brown; and when pulveriz'd reddiſh.

'Tis much us'd by the Glovers, *&c.* to dye their Gloves; as alſo by the Founders, *&c.* to give a Gold Colour to their Metals. --- The *Indians* uſe it to dye their Rice, and other Foods, of a yellow Colour; whence ſome call it *Indian Saffron*.

Our Dyers don't find that it gives ſo ſteady a Yellow as the Luteola or Greening Weed; but 'tis admirable to brighten and heighten the red Colours dyed with Cochineel or Vermillion; as Scarlets, *&c.*

Turmeric is us'd in Medicine by Way of Decoction, Infuſion, Powder, *&c.* with other Ingredients, in the Jaundice, Hypochondriac, Leucophlegmatic, and Cachectical Conſtitutions.

TURN, is uſed for a circular Motion; in which Senſe it coincides with Revolution. See REVOLUTION.

TURN, in Clock or Watch Work, particularly denotes the Revolution of a Wheel or Pinion. See WHEEL, PINION, *&c.*

In Calculation, the Number of *Turns* which the Pinion hath in one *Turn* of the Wheel, is commonly ſet down as a Quotient in common Arithmetic, thus, 5)60(12, where the Pinion 5 playing in a Wheel of 60, moveth round 12 times in one *Turn* of the Wheel: Now, by knowing the Number of *Turns*, which any Pinion hath in one *Turn* of the Wheel it worketh in, you may alſo find how many *Turns* a Wheel or Pinion hath at a greater Diſtance; as the Contrat-wheel, Crown-wheel, *&c.* by multiplying together the Quotients, and the Number produc'd, is the Number of *Turns*; as in this Example:

5) 55 (11
5) 45 (9
5) 40 (8

The firſt of theſe three Numbers has 11 *Turns*, the next 9, and the laſt 8. If you multiply 11 by 9, it produceth 99; that is, in one *Turn* of the Wheel 55, there are 99 *Turns* of the ſecond Pinion 5, or the Wheel 40, which runs concentrical, or on the ſame Arbor with the ſecond Pinion 5. --- If you multiply 99 by the laſt Quotient 8, it produces 792, which is the Number of *Turns* the third Pinion 5 hath.

TURN is alſo us'd for the Sheriffs Court, kept twice a Year, *viz.* a Month after *Eaſter*, and within a Month after *Michaelmas*. See SHERIFF and COURT.

From this Court none are exempted but Archbiſhops, Biſhops, Earls, Barons, Religious Men and Women, and all ſuch as have Hundreds of their own to be kept.

It is a Court of Record in all Things that pertain to it; and is alſo the King's Leet through all the County, whereof the Sheriff is Judge; this Court being incident to his Office.

It is call'd the Sheriff's *Turn*, becauſe he takes a *Turn* or Circuit thro' the Shire, holding the ſame in ſeveral Places. See SECTA REGALIS.

TURN-*pike*, a Gate ſet up acroſs a Road, watch'd by an Officer for the Purpoſe, in order to ſtop Travellers, Waggons, Coaches, *&c.* to take Toll of them, towards repairing, or keeping the Roads in repair. See ROAD.

TURN-*pike* is alſo us'd in the Military Art, for a Beam ſtuck full of Spikes, to be plac'd in a Gap, a Breach, or at the Entrance of a Camp; to keep off an Enemy.

The *Turn-pike* is a Spar of Timber, twelve or fourteen Feet long, and about ſix Inches Diameter; of a ſexangular Form; and bored with Holes, one right under another, about an Inch Diameter; the Axis of the Holes being ſix Inches one from another, and to go in from each Side. --- The Spikes or Prickets that are driven into the Holes, are five or ſix Feet long, pointed with Iron; and with Wedges or Nails faſten'd hard into the Holes.

Two of these fasten'd together with an Iron Chain and Staple, six Inches long, are of great Use to stop the Enemy in the Breaches or elsewhere.

Those intended to be thrown in Breaches, must be made of Oak; and need not be so big, or the Pickets so long.

TURNADO or TORNADO, a Wind which on some Coasts blows all Night from the Shore. See WIND, WHIRLWIND, TRADE-*Wind*, MONSOON.

TURNAMENT or TOURNAMENT, a martial Sport or Exercise, which the ancient Cavaliers used to perform, to shew their Bravery and Address.

The first *Turnaments* were only Courses on Horseback, wherein the Cavaliers tilted at each other with Canes, in manner of Lances; and were distinguish'd from Justs, which were Courses accompanied with Attacks and Combats with blunted Lances and Swords.

Others say, it was a *Turnament*, when there was only one Quadril or Troop; and that where there were several to encounter each other, it was a *Just*: but 'tis certain the Two became confounded together in process of Time; at least we find them so in Authors. See JUST.

The Prince who publish'd the *Turnament*, used to send a King at Arms with a safe Conduct, and a Sword to all the Princes, Knights, &c. signifying that he *Intended a* Turnament *and a Clashing of Swords, in the Presence of Ladies and Damsels*; which was the usual Formula of Invitation.

They first engaged Man against Man, then Troop against Troop; and after the Combat, the Judges allotted the Prize to the *Best Cavalier, and the best Striker of Swords*; who was, accordingly, conducted in Pomp, to the Lady of the *Turnament*, where, after thanking her very reverently, he saluted her, and likewise her two Maids.

These *Turnaments* made the principal Diversion of the XIIIth and XIVth Centuries. --- *Munster* says, it was *Henry the Fowler*, Duke of *Saxony*, and afterwards Emperor, that first introduced them; but it appears from the Chronicle of *Tours*, that the true Inventor of this famed Sport, was one *Geoffrey*, Lord of *Preuilli*, about the Year 1066.

From *France* they passed into *England* and *Germany*. --- The *Historia Byzantina* tells us, That the *Greeks* and *Latins* borrowed the Use thereof from the *Franks*; and we find mention made of them in *Cantacusana*, *Gregorias*, *Bessarion* and others of the late *Greek* Authors.

Budeus derives the Word from *Trojana agmina*; others from *Trojamentum*, *quasi ludus Trojæ*. *Menage* deduces it from the *Latin*, *Tornensis*, or the *French*, *Tourner*, in regard the Combatants turn'd and twisted this way and that. M. *Paris* calls them in *Latin*, *Hastiludia*; *Neubrigensis*, *Meditationes Militares*; others *Gladiaturæ*, others *Decursiones ludicræ*, &c.

Pope *Eugenius* II. excommunicated those who went to *Turnaments*, and forbad them Burial in holy Ground. --- K. *Henry* II. of *France* died of a Wound received at a *Turnament*. --- One *Chiaoux*, who had assisted at a *Turnament* under *Charles* VIII. said very happily; *If it be in Earnest*, *'tis too little*; *If in Jest*, *too much*.

'Tis to the Exercise of *Turnaments* that we owe the first Use of Armories; of which, the Name Blazonry, the Form of the Escutcheons, the Colours, principal Figures, the Mantlings, Labels, Supporters, &c. are undeniable Evidences. See ARMS.

In *Germany*, 'twas anciently a Custom to hold a solemn *Turnament* every three Years, to serve as a Proof of Nobility. --- For the Gentleman who had assisted at Two, was sufficiently blazon'd and publish'd, *i. e.* he was acknowledged Noble, and bore two Trumpets by way of Crest on his *Turnament* Cask. --- Those who had not been in any *Turnaments*, had no Arms, though they were Gentlemen. See NOBILITY, DESCENT, &c.

TURNETUM, in our old Law-books, a Duty paid to the Sheriff for holding his Turn or County-Court. See TURN and SHERIFF.

TURNING, a Branch of Sculpture; being the Art of fashioning hard Bodies, as Brass, Ivory, Wood, &c. into a round or oval Form, in a Lathe. See LATHE.

Turning is performed, by putting the Substance to be *turned*, upon two Points, as an Axis; and moving it about on that Axis; while an edge Tool set steady to the Outside of the Substance, in a Circumvolution thereof, cuts off all the Parts that lie further off the Axis, and makes the Outside of that Substance Concentric to the Axis.

The Invention of *Turning* appears to be very ancient. --- Some, indeed, to do Honour to the Age, will have it brought to Perfection by the Moderns; but if what *Pliny*, and some other ancient Authors relate, be true, that the Ancients *turned* those precious Vases, enrich'd with Figures and Ornaments in Relievo, which we still see in the Cabinets of the Curious; it must be owned, that all that has been added in these Ages, makes but a poor Amends for what we lost of the manner of *Turning* of the Ancients. See SCULPTURE.

The principal Instruments used in *Turning*, beside the Lathe, are Chissels and Mandrels of various Forms; *The Description whereof, see under their proper Articles.*

TURNSOLE, TOURNSOL or TORNSOL. See TORNSOL.

TURPENTINE, TEREBENTHINA, a transparent Gum or Resin flowing either Naturally or by Incision, from several fatty resinous Trees; such as the *Terebinthus*, Larch, Pine, Fir, &c. See GUM and RESINIFEROUS.

We distinguish several Kinds of *Turpentines*; as that of *Chio*, that of *Venice*, that of *Bourdeaux*, that of *Cyprus*, *Strasbourg*, &c.

The *Turpentine* of *Chio*, which is the only genuin Kind, and that which gives the Denomination to all the rest, is a whitish Resin, bordering a little on the Green, very clear and a little odoriferous; drawn by Incision from a Tree called *Terebinthus*, very common in that Island, as also in *Cyprus*, and some Parts of *France* and *Spain*.

The Gum must be chosen of a Solid Consistence, almost without either Taste or Smell, and not at all Tenacious, which distinguishes it from the false *Turpentine* of *Venice*, commonly substituted for it, which has a strong Smell, a bitter Taste, and sticks much to the Finger. --- This *Turpentine* of *Chio* is indisputably the best; but its Scarcity occasions it to be little in use.

The *Turpentine* of *Venice*, is falsly so called, for though there was a *Turpentine* anciently brought from *Venice*, yet that now so called, comes all from *Dauphine*. --- 'Tis liquid, of the Consistence of a thick Syrop, and whitish; and flows either spontaneously, or by Incision from Larches, Firs and Pines, chiefly in the Wood *de Pilatze*.

That flowing naturally, call'd by the Peasants, *Bijon*, is a kind of Balm not inferior in virtue to that of *Peru*, to which it is frequently substituted. --- That drawn by Incision, after the Tree has ceas'd to yield spontaneously, is of very considerable Use, in several Arts, and 'tis even of this that Varnish is made. See VARNISH.

It must be chosen White and Transparent, and Care be taken it han't been counterfeited with Oil of *Turpentine*.

The *Turpentine* of *Bourdeaux* is white and thick as Honey. --- It does not ooze from the Tree in the Manner it is sent to us; but is properly a Composition, wherein, among other Ingredients, is a white hard Sort of Rosin called *Galipot*. See PITCH.

The *Turpentine* of *Strasbourg*, *Dantzic*, &c. is that most commonly used among us; and is preferr'd, by our People, to that of *Venice*, which it is distinguish'd from, by its green Hue.

The Uses of *Turpentine* in Medicine, are innumerable. --- 'Tis a great Vulnerary, and very Detergent, and as such is prescribed in all Abscesses and Ulcerations, &c. It promotes Expectoration, and as such is prescribed in Diseases of the Lungs and Breast: But it is most famous for clearing the Urinary Passages, and as such prescribed in Obstructions of the Reins, in Gonnorhæas, &c.

Oil of TURPENTINE. --- There are two Kinds of Oils drawn from *Turpentine* by Distillation; the first White, the second Red; both esteem'd as Balsoms proper for the Cure of Wounds, Chilblains, &c. But they are so little used among us, that 'tis not easy to procure either of them.

What is commonly sold under the Name of *Oil of Turpentine*, or *Etherial Oil*, is only a Distillation of the Rosin called *Galipot*, fresh from the Tree. --- It is used with Success in the Cure of green Wounds, as also by the Painters, Farriers, &c. --- To be good, it must be clear and white as Water, of a strong penetrating Smell, and very inflammable.

TURUNDA, in Chirurgery, a Tent; or any thing to be thrust into an Orifice or Cavity. See TENT, &c.

TUSCAN, in Architecture, the first, simplest, and most Massive of the five Orders. See ORDER.

The *Tuscan Order* takes its Name from an ancient People of *Lydia*, who coming out of *Asia* to people *Tuscany*, first executed it in some Temples, which they built in their new Plantations.

Vitruvius calls the *Tuscan*, the *Rustic Order*; with whom agrees M. *de Chambray*, who in his Parallel, says, it ought never to be used but in Country-houses and Palaces. M. *le Clerc* adds, that in the manner *Vitruvius*, *Palladio* and some others, have ordered it, it does not deserve to be used at all. But in *Vignola*'s Manner of Composition, he allows it a Beauty, even in its Simplicity; and such as makes it proper not only for private Houses, but even for public Buildings, as in the Piazzas of Squares and Markets; in the Magazines and Granaries of Cities; and even in the Offices and lower Apartments in Palaces.

The *Tuscan* has its Character and Proportions, as well as the other Orders; but we have no ancient Monuments, to give us any regular *Tuscan* Order for a Standard.

M. *Perrault* observes, that the Characters of the *Tuscan* are nearly the same with those of the *Doric*; and adds, that the *Tuscan* is, in effect, no other than the *Doric*, made somewhat stronger, by the shortning of the Shaft of the

Column, and ſimpler, by the ſmall Number, and Largeneſs of the Mouldings. See DORIC.

Vitruvius makes the whole Height of the Order 14 Modules, wherein he is followed by *Vignola*, M. *le Clerc*, &c. — *Serlio* only makes it 12. — *Pallaaio* gives us one *Tuſcan* Profile, much the ſame as that of *Vitruvius*; and another too rich: On which Side *Scamozzi* is likewiſe faulty. Hence it is, that that of *Vignola*, who has made the Order very regular, is moſt follow'd by the Modern Architects. See COLUMN.

Of all the Orders, the *Tuſcan* is the moſt eaſily executed; as having neither Triglyphs nor Dentils, nor Modillions to confine its Intercolumns. — On this account the Columns of this Order may be ranged in any of the five Manners of *Vitruvius*, *viz.* the *Picnoſtyle*, *Siſtyle*, *Euſtyle*, *Diaſtyle* and *Areoſtyle*. See INTERCOLUMNATION.

For the Parts and Members of the Tuſcan *Order, their Proportions*, &c. ſee CAPITAL, BASE, PEDESTAL, FREEZE, &c.

TUSCULAN, in Matters of Literature, a Term frequently uſed in the Phraſe *Tuſculan Queſtions*. — *Cicero*'s *Tuſculan Queſtions*, are Diſputations on ſeveral Topicks in Moral Philoſophy, which that great Author took Occaſion to denominate from the *Tuſculanum*, a Country Seat or Villa, where they were compos'd, and where he lays the Scene of the Diſpute.

They contain Five Books; the Firſt on the Contempt of Death; the ſecond of enduring Pain; the third on aſſwaging Grief; the fourth on the other Perturbations of the Mind; and the laſt, to ſhew that Virtue is ſufficient to a happy Life.

TUSKES or TUSKS of a Horſe. See TEETH.

TUSSIS, in Medicine, a *Cough*; a Diſeaſe affecting the Lungs, occaſioned by a ſharp ſerous Humor, vellicating the Fibrous Coat thereof, and urging it to a Diſcharge by Spitting, &c. See LUNGS.

When the Humor is ſo ſubtile, that the Lungs cannot lay hold of it, to throw it off; or when the Humor is ſo thick that it will not give Way, it is ſaid to be a *dry Cough*.

Dry Coughs are the moſt dangerous. — *Hippocrates* ſays, the Cough ceaſes, if the Teſticles ſwell. See COUGH.

TUT, in Armory, &c. an Imperial Enſign of a golden Globe, with a Croſs on it.

TUTELARY, TUTELARIS, one who has taken ſomething into his Patronage and Protection. See PROTECTION.

'Tis an ancient Opinion, that there are *tutelary* Angels of Kingdoms and Cities, and even of particular Perſons, call'd *Guardian Angels*. See ANGEL, DÆMON, GENIUS, &c.

The ancient *Romans*, 'tis certain, had their *tutelary* Gods, whom they called *Penates*. See PENATES.

And the *Romiſh* Church to this Day, hold an Opinion not much unlike it. — They believe that every Perſon, at leaſt every one of the Faithful, has, from the Time of his Birth, one of thoſe *Tutelary* Angels attached to his Perſon, to defend him from all Temptations; and 'tis on this, principally, that their Practice of invoking Angels is founded.

F. *Anthony Macedo*, a *Portugueze* Jeſuit, of *Conimbra* has publiſh'd a large Work in Folio, on the *tutelary* Saints of all the Kingdoms, Provinces and great Cities of the Chriſtian World: *Divi Tutelares Orbis Chriſtiani*, at *Lisbon* 1687. See PATRON, SAINT, &c.

TUTOR, in the Civil Law, is one choſe to look to the Perſon and Eſtate of Children, left by their Fathers and Mothers in their Minority. See GUARDIAN, MINOR and PUBERTY.

By the Cuſtom of *Normandy*, the Father is the natural *Tutor* of his Children. — A Perſon nominated *Tutor*, either by Teſtament, or by the Relations of the Minor, may decline that Office, if he have Five Children alive; if he have any other conſiderable *Tutorage*; if he be under 25 Years of Age; if he be a Prieſt, or a Regent in an Univerſity; if he have any Law Suit with the Minors, &c. See TUTORAGE.

The Marriage of a Pupil, without the Conſent of his *Tutor*, is invalid. — *Tutors* may do any thing for their Pupils, but nothing againſt them; and the ſame Laws which put them under a Neceſſity of preſerving the Intereſt of the Minors, put them under an Incapacity of hurting them. See PUPIL.

TUTOR is alſo uſed in our Univerſities, for a Member of ſome College or Hall, who takes on him the Inſtructing young Students in the Arts and Faculties.

TUTORAGE, TUTELA, in the Civil Law, a Term equivalent to Guardianſhip in the Common Law; ſignifying an Office impoſed on any one, to take care of the Perſon and Effects of one or more Minors. See MINOR.

By the *Roman* Law, there are three Kinds of *Tutorage*. — The *Teſtamentary*, which is appointed by the Father's Teſtament: The *Legal*, which is appointed by the Law to the neareſt Relation; and the *Dative*, which is appointed by the Magiſtrate.

But in all Cuſtomary Provinces, as *France*, &c. all *Tutorages* are Dative and Elective; and though the Father have by Teſtament, nominated the next Relation to his Pupil, yet is not that Nomination of any Force, unleſs the Choice be confirm'd by that of the Magiſtrate, &c.

By the *Roman* Law, *Tutorage* expires at 14 Years of Age; but in *France* not till 25 Years. A Minor quits his *Tutorage*, and becomes free by Marriage; in which Caſe a *Curator* is given him. See CURATOR and GUARDIAN.

TUTTY, TUTIA or *Lapis* TUTIÆ, a metallic Soot, thrown off from Braſs, in the Furnace; and form'd into Concave Flakes of different Sizes and Thickneſs; very hard, greyiſh, and full of little protuberant Grains as big as Pins Heads.

It is found adhering to Rolls of Earth ſuſpended for that Purpoſe over the Furnaces of the Founders in Braſs, to receive the Fumes of the melted Metal. See BRASS and FOUNDERY.

Tutty is now brought chiefly from *Germany*. Anciently it came from *Alexandria*.

To prepare the *Tutty* for Uſe, they heat it red Hot three times in a Crucible, among burning Coals; and quench it as often in Roſe-water: Then they grind it on a Porphyry Stone, mixing with it as much Roſe-water, or Plantain-water as is neceſſary, till it be brought to a very fine Powder: Then they make it up into little Troches, and thus dry it.

Tutty is very deſiccative. Its principal Uſe is in Diſeaſes of the Eyes, particularly Inflammations; in order to which, it is diluted with Roſe-water or Plantain-water, in form of a Collyrium. See COLLYRIUM.

Some uſe it incorporated with freſh Butter, in form of an Unguent.

In the *London* Diſpenſatory, it gives Title to a Compoſition called *Ointment of Tutty*, good for Eye Diſeaſes, and frequently uſed by Surgeons with other Deſiccatives to cicatrize Ulcers. — Tis alſo good in the Hemorrhoids.

TWA-*Nights-Geſte*, in our ancient Cuſtoms. See THIRD-*nights-awn-Hynde*.

If the *Twa-Nights-geſte* did any harm to any, his Hoſt was not anſwerable for it, but himſelf.

TWELF-HINDUS, in our ancient Cuſtoms, the ſame with *Thanus*. See THANE.

Among the *Engliſh Saxons*, every Man was valued at a certain Price; and where an Injury was done, either to the Perſon or Goods, a pecuniary Mulct was impoſed, and paid in Satisfaction of that Injury, according to the Worth and Quality of the Perſon to whom it was done. — And hence all Men were ranked in three Claſſes; which ſee in HINDENA.

Thoſe who were worth 1200 *s.* were called *Twelf-hindi*, and if an Injury was done to them, Satisfaction was to be made accordingly.

TWELFTH-DAY or *Tide*, the Feſtival of the *Epiphany*, or the Manifeſtation of Chriſt to the Gentiles; ſo called, as being the *Twelfth-day*, excluſively, from the Nativity or *Chriſtmaſs-day*. See EPIPHANY.

TWELVE-MONTH, the Space of a Year, according to the Calender Months. See YEAR and MONTH.

TWELVE-MEN, *Duodecim homines Legales*, otherwiſe called the *Jury* or *Inqueſt*, is a Number of *Twelve* Perſons, or upwards to Twenty-four; by whoſe Oath, as to Matters of Fact, all Trials paſs, both in Civil and Criminal Caſes, through all Courts of the common Law in this Realm. See JURY and TRIAL.

In Civil Caſes, when Proof is made of the Matter in Queſtion, the Point of Fact, whereon they are to give their Verdict, is deliver'd to them; which is called the *Iſſue*. — Then they are put in mind of their Oath, and are by the Judge's ſumming the Evidence, ſent out of Court by themſelves, to conſider on the Evidence on both Sides, till they be agreed.

In Cauſes Criminal, there are two Sorts of Inqueſts: One called the *Grand Inqueſt*, the other the *Inqueſt of Life and Death*.

The firſt is ſo called, becauſe it conſiſts of Sixteen Perſons at leaſt; or becauſe all Cauſes Criminal or Penal paſs through their Hands; whereas the other Inqueſt is eſpecially appointed for one or more Matters.

Thoſe of the Grand Inqueſt are call'd by *Bracton*, *duodecim Milites*, becauſe they were wont to be Knights; if ſo many could be had.

Their Function is to receive all Preſentments of any Offence, and accordingly to give their general Opinion of them, by writing either the Words *Billa vera* upon the Bill of Preſentment, which is an Indictment of the Party preſented; or elſe *Ignoramus*; which is a doubting of the Fact preſented. See ENQUEST and INDICTMENT.

TWI-FALLOWING *Ground*, in Husbandry, is the Tilling or Ploughing it a ſecond Time. See TILLING and FALLOWING.

TWI-HINDI, among our *Saxon* Anceſtors, were Men valued at 200 *s.* See TWELFHINDUS.

Theſe Men were of the loweſt Degree; and if ſuch were killed, the Mulct was 30 *s.* — Thus in *Leg. H. I. c.* 9. *de* Twihindi *hominis interfecti, wera debet reddi ſecundum legem.*

legem. --- Where, Note, that this was not an Introduction of a new Law, but a Confirmation of the Old, made in the Reign of King *Alfred.*

TWINS. See GEMINI, DIDYMI, *&c.*

It has been greatly diſputed, which of two *Twins* is to be eſteem'd the Elder. --- The Faculty of *Montpellier* have given it, that the latter borne is to be reputed the Elder; becauſe firſt conceived: But by all the Laws which now obtain, the firſt-born enjoys the Privileges of Seniority; and the Cuſtom is confirm'd by the Inſtance of *Eſau* and *Jacob.*

But if two *Twins* be born ſo intermix'd, that one cannot diſtinguiſh which of the Two appeared the firſt; it ſhould ſeem that neither the one nor the other can pretend to the Right of Primogeniture, which ought to remain in Suſpence, by reaſon of their mutual Concourſe.

In ſuch Caſe, ſome would have the Deciſion left to the Father, and others to the Hazard of a Lot. Sometimes there are born Three *Twins*, as in the Inſtances of *Horatii* and *Curiatii*; and ſometimes there have been known Four, or even Five or more. See FOETUS, EMBRYO, *&c.*

TWIST *of a Rope*, Cord, *&c.* See ROPE, CORDAGE, CABLE, *&c.*

TWIST, is alſo uſed in Architecture, for a Piece of Timber, otherwiſe called a *Girder.* See GIRDER.

TWIST, again, is uſed for the Inſide, or flat Part of a Man's Thigh, upon which a true Horſeman reſts when on Horſeback. See THIGH.

To TWIST *a Horſe*, is violently to wring or *twiſt* his Teſticles twice about, which cauſes them to dry up, and deprives them of Nouriſhment, and reduces the Horſe to the ſame State of Impotency with a Gelding. See GELDING.

TWISTING of Silk, *&c.* ſee SILK, *&c.*

TYCHONICK *Syſtem*, or *Hypotheſis*, is an Order or Arrangement of the heavenly Bodies, of an intermediate Nature between the *Copernican* and *Ptolomaic*, or participating alike of them both. See SYSTEM.

It takes its Name from *Tycho Brahe*, a noble *Dane*; of whom ſome Account is hereafter given, under the Article URANISBOURG.

In this Syſtem, the Earth is, with *Ptolomy*, placed in the Middle, and ſuppos'd immoveable; and the Sun and Moon to revolve in Orbits, reſpecting the ſame as a Centre: But the other five Planets are ſuppos'd, with *Copernicus*, to revolve round the Sun as their Centre. --- So that the Orbits of the three ſuperior Planets include the Earth, but not thoſe of the inferior ones; by reaſon they are nearer to the Sun than the Earth is.

Accordingly, the Heavens are here ſuppos'd to be fluid; and to conſiſt of three different Orbs or Spheres; the firſt moveable, ſuppos'd to make a Revolution in 24 Hours; the ſecond the Sphere of the Planets; and the third the Firmament, or Region of fix'd Stars.

See the Diſpoſition of the heavenly Bodies in this Syſtem, repreſented in Plate Aſtronomy, Fig. 45.

Some later Aſtronomers finding the *Ptolomaic* Syſtem diſagree with the Phænomena; and not daring to make the Earth move; but at the ſame time diſliking the *Tychonic* Notion of two Centres, one of them moveable, *viz.* the Sun; and the other fix'd, the Earth; have fram'd a new Syſtem out of the *Ptolomaic* and *Tychonic*, call'd the *Semi-Tychonic*; wherein, not only the Sun and Moon, but *Jupiter* alſo, and *Saturn*, are ſuppos'd to move in Excentrics or Deferents, reſpecting the Earth as a Centre, tho' revolvent at the ſame time in their reſpective Epicycles. --- But even here, the inferior Planets are ſtill ſuppos'd to move round the Sun as their Centre; their Phaſes, obſerv'd with the Teleſcope, being no otherwiſe accountable for. –

TYLE or TILE, in Building, a ſort of thin factitious Stone, uſed in the Roofs, *&c.* of Houſes; or, more properly, it is a kind of fat, clayey Earth, knodden and moulded of a juſt Thickneſs, dried and burnt in a Kiln, like a Brick, and uſed in the Covering of Houſes. See BRICK and COVERING.

It is thus called from the *French, Tuile*, of the *Latin, Tegula.*

Tyles are made, ſays M. *Leybourn*, of better Earth than Brick-earth, and ſomething nearer akin to the Potter's Earth. --- According to Stat. 17 *Edw.* IV. the Earth for *Tyles* ſhould be caſt up before the firſt of *November*, ſhired and turned before the firſt of *February*, and not made into *Tyles* before the firſt of *March*; And ſhould likewiſe be tried and ſever'd from Stones, Marle and Chalk.

For the Method of Burning them, ſee BRICK.

As to the applying of *Tyles*; ſome lay them dry, as they come from the Kiln, without Mortar or any thing elſe: Others lay them in a kind of Mortar made of Loam and Horſe-dung. --- In ſome Parts, as in *Kent*, they lay them in Moſs.

There are various Kinds of *Tyles*, for the various Occaſions of Building; as *Plain, Thack, Ridge, Roof, Creaſe, Gutter, Pan, Crooked, Flemiſh, Corner, Hip, Dorman, Dormar Scallop, Aſtragal, Traverſe, Paving* and *Dutch Tyles.*

Plain or *thack Tyles*, are thoſe in ordinary Uſe for the Covering of Houſes. They are ſqueez'd flat, while yet ſoft, in a Mould. --- They are of an oblong Figure, and by Stat. 17° *Edw.* IV. are to be 10 ½ Inches long; 6¼ broad, and Half an Inch and Half a Quarter thick. But theſe Dimenſions are not over-ſtrictly kept to.

Ridge, Roof or *Creaſe Tyles*, are thoſe uſed to cover the Ridges of Houſes; being made circular breadth-wiſe, like a half Cylinder. --- Theſe are what *Pliny* calls *Latercali*; and are, by Statute, to be 13 Inches long, and of the ſame Thickneſs with the *Plain Tyles.*

Hip or *Corner Tyles*, are thoſe which lie on the Hips or Corners of Roofs. --- As to Form; they are firſt made flat, like *Plain Tyles*, but of a Quadrangular Figure, whoſe two Sides are right Lines, and two Ends, Arches of Circles, one End being a little Concave and the other Convex; the convex End to be about Seven times as broad as the concave End; ſo that they would be Triangular, but that one Corner is taken off: Then, before they are burnt, they are bent on a Mould, breadthwiſe, like *Ridge Tyles.* --- They have a Hole at their narrow End, to nail them on by; and are laid with their narrow End upwards. By Statute, they are to be 10 ½ Inches long, and of a convenient Breadth and Thickneſs.

Gutter Tyles, are thoſe which lie in Gutters or Valleys in Croſs-buildings. --- They are made like *Corner Tyles*, only the Corners of the broad End are turned back again with two Wings. --- They have no Holes in them, but are laid broad End upwards, without any nailing. --- They are made in the ſame Mould as *Corner Tyles*, and have the ſame Dimenſions on the convex Side. Their Wings are each 4 Inches broad and 8 long.

Pan, Crooked, or *Flemiſh Tyles*, are uſed in covering of Sheds, Lean to's, and all kinds of flat-roofed Buildings. --- They are in Form of an oblong Parallelogram, as plain *Tyles*; but are bent breadth-wiſe forwards and backwards, in Form of an S, only one of the Arches is at leaſt three Times as big as the other; which biggeſt Arch is always laid uppermoſt; and the leſſer Arch of another *Tyle* lyes over the Edge of the great Arch of the former. --- They have no Holes for Pins, but hang on the Laths by a Knot of their own Earth: They are uſually 14 ½ Inches long, and 10 ¼ broad.

Dormar, or *Dorman Tyles*, conſiſt of a plain *Tyle*, and a triangular Piece of a plain *Tyle*, ſtanding up at right Angles to one Side of a plain *Tyle*, and ſwept with an Arch of a Circle from the other End, which End terminates in a Point. --- Of theſe *Tyles* there are two Kinds; the triangular Piece, in ſome, ſtanding on the right, in others on the left Side of the plain *Tyle.* --- And of each of theſe, again, there are two Kinds; ſome having a whole plain *Tyle*, others but half a plain *Tyle.* But in them all, the plain *Tyle* has two Holes for the Pins, at that End where the broad End of the triangular Piece ſtands.

Their Uſe is to be laid in the Gutters, betwixt the Roof and the Cheeks or Sides of the Dormars, the plain Part lying on the Roof, and the triangular Part ſtanding perpendicularly by the Cheek of the Dormar. --- They are excellent to keep out the Wet in thoſe Places, and yet are not perhaps known any where but in *Suſſex.* --- The Dimenſions of the plain *Tyle* Part are the ſame as thoſe of a plain *Tyle*, and the triangular Part is of the ſame Length, and its Breadth at one End 7 Inches, and at the other nothing.

Scallop or *Aſtragal Tyles*, are in all reſpects like plain *Tyles*, only their lower Ends are in Form of an Aſtragal, *viz.* a Semicircle, with a Square on each Side. --- They are us'd in ſome Places for Weather *Tyling.*

Travers Tyles, are a kind of irregular plain *Tyles*, having the Pin-holes broke out, or one of the lower Corners broke off. --- Theſe are laid with the broken End upwards, upon Rafters, where pinn'd *Tyles* cannot hang.

Flemiſh or *Dutch Tyles*, are of two Kinds, ancient and modern. --- The firſt were uſed for Chimney-foot Foot-paces: They were painted with antick Figures, and frequently with Poſtures of Soldiers, ſome with Compartments, and ſometimes with Moreſque Devices; but came much ſhort, both as to the Deſign and Colours of the modern ones.

The modern *Flemiſh Tyles* are commonly uſed, plaiſter'd up in the Jaumbs of Chimneys, inſtead of Chimney-Corner-ſtones. --- Theſe are better glaz'd; and ſuch as are painted (for ſome are only white) much better perform'd than the ancient ones.

But both Kinds ſeem to be made of the ſame whitiſh Clay as our white glazed Earthen Ware. --- The ancient ones are five Inches three Quarters ſquare, and about three Quarters of an Inch thick: The modern ones ſix Inches and half ſquare, and three Quarters of an Inch thick.

TYLERY. See TUILERIE.

TYLWITH, in Matters of Heraldry and Deſcent, is ſometimes uſed for a Tribe or Family branching out of another;

ther; which the modern Heralds more uſually call the ſecond or third Houſe.

TYMBER *of Skins*, is the Number of forty Skins. See TIMBER.

TYMPAN, or TYMPANUM, in Architecture, the Ground or Area of a Pediment; being that which is in a Level with the Naked of the Freeze. Or it is the Space included between the three Cornices of a triangular Pediment, or the two Cornices of a circular one. See PEDIMENT.

Sometimes the *Tympan* is cut out, and the Part fill'd with an Iron Lattice to give Light; and ſometimes it is enrich'd with Sculpture, in Bas Relief, as in the Weſt Front of St. *Paul*'s, in the Temple of *Caſtor* and *Pollux* at *Naples*, &c.

The Word TYMPAN is alſo uſed for that Part of a Pedeſtal call'd the *Trunk* or *Dye*. See PEDESTAL. See alſo DYE.

TYMPAN, among Joyners, is alſo attributed to the Pannels of Doors. See PANNEL.

TYMPAN, among Printers, is a Frame belonging to the Preſs, cover'd with Parchment, on which every Sheet is placed, in order to be printed off. See PRINTING *Preſs*.

TYMPAN *of an Arch*, in Architecture, is a triangular Space or Table in the Corners or Sides of the Arch; uſually hollow'd and enrich'd, ſometimes with Branches of Laurel, Olive-tree, or Oak; or with Trophies, &c. ſometimes with flying Figures, as Fame, &c. or ſitting Figures, as the Cardinal Virtues. See ARCH.

TYMPANITES, or TYMPANY, in Medicine, a flatuous Tumor, or Swelling of the Abdomen, or Belly; very hard, equable, and permanent; whereby the Skin is ſtretch'd ſo tight, that when ſtruck, it gives a Sound like that of a Drum. See TUMOR.

The *Tympanites* is a Species of a Dropſy; but what the Cauſe and Seat of the Diſeaſe is, or what the morbific Matter is that occaſions the Tumor, Phyſicians are not at all agreed. See DROPSY.

Wind certainly makes a principal Part of the morbid Matter; but this is ſcarce ever found without Water, excepting at the Beginning; ſo that ſome will not allow of any Difference between the *Tympany* and the *Aſcites*.

Some ſuppoſe it to ariſe from a watery Humour extravaſated and rarify'd into Vapour; and by a Property common to it with common Air, corrupting the Parts.

But this *Boerhaave* makes a particular Kind of *Tympanites* or Wind Dropſy; and adds, that it is cured like the Aſcites or Water Dropſy, by Tapping, &c. See TAPPING and ASCITES.

Others will have the *Tympanites* to ariſe from the Air's inſinuating itſelf thro' Perforations in the putrify'd Inteſtines. --- A *Tympanites* from this Cauſe, *Boerhaave*, who makes it a peculiar Claſs, obſerves, is almoſt always incurable.

Willis ſets aſide this latter Cauſe, and accounts for the Diſeaſe from an Irregularity in the Animal Spirits belonging to the Viſcera, which ruſhing tumultuarily into the nervous Fibres, bloat them up: Thus is the Peritoneum inflated, the Inteſtines diſtended, and the Meſentery, and other Viſcera, render'd turgid; and while this is doing, that the Vacuities left in the tumify'd Viſcera may be fill'd up, a Quantity of the Humour contain'd in them is rarify'd into Vapour, which preſently ſpreads in Blaſts through the vacant Places.

Others account for the *Tympanites* from a Convulſion of the Muſcles of the Abdomen, &c.

M. *Littre* has propos'd a new Syſtem of the *Tympanites*, built on a great Number of Obſervations. --- According to him, it does not proceed from any Convulſion of the Abdominal Muſcles, nor from any Air contain'd in the Cavity thereof, or in the Thorax, the Meſentery, or Epiploon; but from the Air inclos'd in the Stomach and Inteſtines, which ſwells them exceſſively.

This Air, always carry'd into thoſe Parts with the Food, maintains a kind of Equilibrium therein; oppoſing, on the one Hand, the too great Preſſure on that long Canal when empty of Food; and finding, on the other Side, in the Spring of the Coats of the Stomach and Inteſtines, an Obſtacle capable of preventing its too great Dilatation.

If this Equilibrium chance to be deſtroy'd by the Irritation of the Fibres, whoſe Spring in that Caſe prevails over that of the Air; this latter is expell'd either upwards or downwards, or both: (whence Belching, &c.) But if the Equilibrium come to be broke by the Force of the Air, render'd ſuperior to that of the Fibres, by thoſe latter being left deſtitute of Spirits, from the Blood's being impoveriſh'd after a long Sickneſs; in that Caſe, the Air, rarifying itſelf beyond Meaſure, ſwells the Cavities it is contain'd in.

If it be demanded, Why when the Stomach and Inteſtines are ſo full of Wind, none of the Wind eſcapes, either thro' the Anus, or by the Mouth, which uſes to be expell'd by thoſe Paſſages?

M. *Mery* ſolves the Paradox thus: According to this Theory, the Fibres, both of the Stomach and Inteſtines have loſt their Spring, at leaſt in Part, and are in an imperfect Palſy; but the Winds evacuated either by the Anus or Mouth, are Winds which thoſe Viſcera expel out of their Cavities, by putting them in a State of Contraction capable of ſurmounting the Forces which oppoſe the Egreſs of the Matters contain'd in thoſe Cavities. --- Theſe Forces are two Sphincters, one whereof ſhuts the upper Orifice of the Stomach, and the other the Anus: But paralytic Viſcera, *i. e.* Viſcera deſtitute of Spirits, in which alone conſiſts the Strength of the Muſcles, cannot overcome the Reſiſtance of thoſe two Muſcles: Whence the Wind, therefore, cannot eſcape thro' its uſual Out-lets.

The *Tympanites* rarely kills of itſelf; but frequently degenerates into an Aſcites. --- Catharticks rather aggravate than alleviate it: Antihyſtericks, Antiſcorbuticks, Chalybeats, and Strengthners are of uſe, before it be fallen into an Aſcites. Equal Quantities of Leek and Elder Leaves mix'd analytically, is a fam'd Empirical Medicine, which has often prov'd effectual when every thing elſe had fail'd.

'Tis uſual to apply Carminatives to the Belly, as the Emplaſter of Cumin-Seeds, &c. and alſo to uſe Carminatives mix'd with Cathartics, Diuretics, &c. internally: But if the Diſeaſe proceed from a Paralytic Cauſe, deſtroying the Tone of the Fibres of the firſt Paſſages, what is of Uſe in rectifying of Paralytic Diſorders, where the Tenſion of the Fibres are inſufficient, will doubtleſs for the ſame Reaſon be of Uſe here. See PALSY.

TYMPANUM, τυμπανον, *Drum*; a muſical Inſtrument, which among the Ancients, conſiſted of a thin Piece of Leather or Skin, ſtretch'd upon a Circle of Wood or Iron, and beat with the Hand. See DRUM.

TYMPANUM, TYMPAN, in Mechanicks, is a kind of Wheel plac'd on an Axis or Cylindrical Beam, on the Top of which are two Levers or fix'd Staves, for the more eaſy turning the Axis about, in order to raiſe a Weight requir'd. See WHEEL.

The *Tympanum* is much the ſame with the Peritrochium; but that the Cylinder of the Axis of the Peritrochium is much ſhorter and leſſer than the Cylinder of the *Tympanum*. See PERITROCHIUM.

TYMPANUM of a Machine, is alſo us'd for any hollow Wheel, wherein one or more People, or other Animals, walk to turn it; ſuch as that of ſome Cranes, Calanders, &c. See WHEEL.

TYMPANUM, in Anatomy, or *Membrana* TYMPANI, is a thin tender Skin or Membrane, ſtretch'd upon a Bony Circle, in the Meatus Auditorius of the Ear, which it ſhuts; and ſuppos'd to be the immediate Organ of Hearing. See EAR.

The *Tympanum*, popularly call'd the *Drum*, with reſpect to the erect Poſture of the Body, is ſituate obliquely, facing downwards; whence it is that we hear Sounds coming from below, better than thoſe from above. See DRUM.

Its external Surface is a little hollow'd in the Middle. --- It is compos'd of two Membranes; or, as others will have it, of only two or more Lamellæ. --- It has a Perforation, or, at leaſt, a diſengaged Part, which admits of the Paſſage of Wind, and, in ſome, of Smoak from the Meatus a Palato.

Behind it is a Cavity of the Os Petroſum, call'd *Tympani Cavitas*, and by ſome ſimply *Tympanum*; wherein are four little Bones, *viz.* the *Malleolus*, *Incus*, *Stapes*, and *Os Orbiculare*: Which ſee under their reſpective Articles, MALLEOLUS, &c.

Within the *Cavitas Tympani*, *Vieuſſens* has diſcover'd a very fine thin Membrane, ſerving to ſhut the Door of the Labyrinth, and prevent the internal Air from having any Communication with the external. --- The *Membrana Tympani* has a remarkable Branch of a Nerve paſſing on its internal Surface between the Incus and Malleolus, call'd the *Chorda Tympani*. See CHORDA.

The *Tympanum*, Dr. *Willis* takes to be a kind of preparatory Inſtrument to Hearing; and its Office to be to receive the firſt Impreſſions of the Sound, or the ſenſible Species, and to convey them duly modify'd and proportion'd to the Senſorium. See SOUND.

Its Office, in effect, with reſpect to the Senſe of Hearing, ſeems to be the ſame as that of the Pupil of the Eye with regard to Seeing: Each of them prevent the Ingreſs of too many Rays, temper and ſoften them, and deliver them, as it were, commenſurate to the Senſory; upon which, if they ſhould fall immediately, they might be apt to ſpoil its delicate Conſtitution. See PUPIL.

The *Tympanum*, it's true, does not hear; but it contributes to the better and ſafer Hearing. --- That it may do the Office of a Porter the better, 'tis neceſſary its Expanſe ſhould, like the Pupil, be contracted and relax'd on Occaſion; and to this purpoſe ſerve the four little Bones above mention'd, which have the ſame Uſe in ſtraining and relaxing, as the Braces of the War Drum have in that Inſtrument. --- By means of this Extenſion and Retraction, the *Tympanum* is made to correſpond to all Sounds loud or languid; as the Pupil does to all the Degrees of Light. See HEARING.

But what makes the Uſe of the *Tympanum* appear the leſs conſiderable, is, that there are Inſtances where the Hearing has been perfect without any Uſe of a *Tympanum*. --- Mr. *Cheſelden* relates, that he broke the *Tympanum* in both Ears of

of a Dog, yet it did not deſtroy his Hearing; tho' for ſome time afterwards he receiv'd ſtrong Sounds with great Horror: He adds, that Mr. St. *Andre* aſſur'd him, that a Patient of his had the *Tympanum* deſtroy'd by an Ulcer, and the Auditory Bones caſt out, without deſtroying his Hearing.

TYMPANY, or TYMPANITES, in Medicine. See TYMPANITES.

TYPE, a Copy of a Model; or a Figure or Character either engraven or printed. See MODEL, CHARACTER, &c.

The Term *Type* is leſs in uſe than its Compounds *Prototype* and *Archetype*, which are the Originals that are made without Models. See PROTOTYPE, &c.

The Word is form'd from the *Greek*, τυπος, Figure.

TYPE is alſo a School Term, much uſed among Divines, ſignifying a Symbol, Sign, or Figure of ſomething to come.

In this Senſe, the Word is commonly uſed with relation to *Antitype*, αντιτυπος, which is the Thing itſelf, whereof that is a *Type* or Figure. See ANTITYPE.

Thus *Abraham*'s Sacrifice, the Paſchal Lamb, &c. were *Types* or Figures of our Redemption: The Brazen Serpent was a *Type* of the Croſs, &c.

Theſe *Types* were not ſimple Conformities or Analogies, which the Nature of Things ſets on foot between them; nor arbitrary Images ariſing merely from the caſual Reſemblance of Things; but there is further requir'd a particular Inſtitution of God to make a *Type*; a particular Declaration of his that it is ſo.

Gale divides *Types* into hiſtorical and prophetical. — The firſt are thoſe uſed by the Prophets in their Agitations and Viſions: The ſecond, thoſe wherein Things done, or Ceremonies inſtituted in the Old Teſtament, præfigure Chriſt, or Things relating to him in the New Teſtament.

The ancient Fathers, as well as the modern Criticks, have been greatly divided about the Nature and Uſe of *Types*, and *typical* Repreſentations, in the Old Teſtament; and 'tis this makes one of the great Difficulties in underſtanding the ancient Propheſies, and in reconciling the new and old Teſtament together. See PROPHESY.

There is no denying but that there were *Types* which the divine Wiſdom inſtituted to be the Shadows and Figures of Things to come; and yet People run into an Exceſs that Way: Some looking for *Types* in every thing; like *Origen*, who diſcover'd Myſteries in the very Caldrons of the Tabernacle. — One ſhould be contented with the more ſenſible and obvious ones; nor propoſe any without proving them as much as poſſible, and ſhewing that they were really intended for *Types*, in order to juſtify the Solidity of the Reaſoning of the Apoſtles, who argu'd from them.

A late Author maintains, that not the Fathers only, but St. *Paul* himſelf was of the Opinion, that "Chriſtianity "was all contained in the *Old Teſtament*, was implied in the "*Jewiſh* Hiſtory and Law; both which are to be reputed "*Types* and Shadows of Chriſtianity." — In order to which, he quotes *Hebrews* viii. 5. x. 1, and *Co.* ii. 16, 17. — He adds "That the Ritual Laws of *Moſes*, being in their own "Nature no other than *Types* and Shadows of future good "Things, are to be conſider'd as having the Effect of Pro-"pheſies." — This is likewiſe the Senſe of Mr. *Whiſton* and others; but the ſame Author even quotes our Saviour ſpeaking in behalf of this *Typical* Reaſoning, in that Paſſage, *Matthew* xi. 13, where he affirms, that "The Law "propheſies; and that he came to fulfil the Law as well as "the Goſpel, *Matthew* v. 17." *Diſcourſe of the Grounds and Reaſon of the Chriſtian Religion.*

An ingenious Divine takes this Occaſion to obſerve, that had the Ancients, with the modern Retainers to the *typical* Way, expreſly deſign'd to have expos'd Chriſtianity, they could not have done it more effectually than by thus making every thing *Types* and Propheſies. — 'Tis no wonder, he adds, That Atheiſts and Deiſts ſcoff at the Credulity of Chriſtians, and reject what is ſupported by ſuch Folly and Abſurdity.

Not that he denies the Reality of ſuch Things as *Types*. — 'Tis manifeſt, there were many under the *Old Teſtament*, ſuch were *Zacharia*'s Staves, Beauty and Bands, *c.* xi. 7, 10, 14; ſuch was *Hoſeah*'s Adulterous Wife, *c.* i. 2; and ſuch were his Children, *v.* 4, 6. — The Prophets deſign'd by theſe to prefigure future Events; but in theſe Inſtances the Reader is at once, by the Declaration of the Prophet, made to underſtand as much, and not left to his own Conjectures about them, after the Events are over.

In effect, all that is urged from Scripture for the *typical* or allegorical Interpretations of the *Jewiſh* Law, Hiſtory, Ceremonies, &c. 'tis aſſerted, may be ſet aſide, without any Violence to the ſacred Text, which may be explain'd on more natural and intelligible Principles, and more conſiſtently with *Grammar*. See ALLEGORICAL.

The Word τυπος, we have obſerved, literally denotes no more than a Copy or Impreſſion of any thing; and accordingly, in our Tranſlation, we find it ſometimes render'd by *Print*, ſometimes by *Figure*, ſometimes by *Faſhion*, and ſometimes by *Form*. — Hence, alſo, the Word is figuratively applied to denote a moral Pattern; in which Senſe it ſignifies no more than *Example* and *Similitude*.

Again, the Word αντιτυπος, in Scripture, ſignifies any thing form'd according to a Model or Pattern; and thus in the Epiſtle to the *Hebrews*, the Tabernacle, and Holy of Holies being made according to the Pattern ſhewn to *Moſes*, are ſaid to be *Antitypes* or Figures of the true holy Places. — In the like Senſe, St. *Peter* ſpeaking of the Flood and the Ark, whereby Eight Perſons were ſaved, calls Baptiſm an *Antitype* thereto; by which he expreſſes no more than a *Similitude* of Circumſtances.

The other Words uſed in Scripture to imply a future Event, prefigured by ſome foregoing Act, are — Υποδειγμα, render'd by Imitation and Example; and σκια, Shadow.

This laſt Word is frequently uſed by St. *Paul*, and applied to the *Jewiſh* Law, Ceremonies, Prieſt, &c. which are repreſented as only *Shadows* of Things to come, or of heavenly Things. 'Tis from ſuch general Expreſſions, that People were led to miſtake the Apoſtles Deſign in theſe Compariſons, and to aſſert, that all the *Moſaic* Rites were *Types* of, or deſign'd to ſignify future Events; and that the Goſpel is to be found in the Pentateuch. — Whereas St. *Paul*'s Intent appears no other than to ſhew the great Advantage of the Goſpel over the Law in ſeveral Particulars, wherein it has as much Pre-eminence as the Subſtance has over the *Shadow*.

If the *Shadow* of Things to come, ſignify a Prefiguration of future Events, what are thoſe Events to which the *Jewiſh* New Moons, *Col.* xi. 16. or the *Jewiſh* Meats and Drinks, have a reſpect? Or, how did the Law of *Moſes*, made up of Commands about Perſons, Times, Places, and Sacrifices, prefigure a Diſpenſation, where regard to Sacrifices, holy Perſons, Times and Places, are ſo far from being enjoyn'd, that they are declared uſeleſs? Can a particular holy Place in the Law, be deſigned a Prefiguration of a State, where all Places are equally Holy?

Such being the Import of all the Terms uſed in the *New Teſtament* Writers ſeeming to imply any Prefiguration of future Events under the Goſpel, we may obſerve,

1° That to argue from *Types*, is only to argue from Examples or Similitudes, and, conſequently, all Inferences drawn from ſuch Reaſonings, are no farther concluſive, than Reaſonings from Similitudes are. — The Intent of Similitudes is only to help to convey ſome Ideas more clearly or ſtrongly; ſo that to deduce Conſequences from a Simile, or infer any thing from other Parts of the Simile than what are plainly ſimilar, is abſurd.

2° It cannot be proved that the Ceremonies of the *Moſaic* Law, were ever deſign'd to prefigure any future Events in the State of the *Meſſiah*'s Kingdom. — No ſuch declared Prefigurations are mention'd in the Writings of the *Old Teſtament*; whatever Notions prevailed among the Writers, who immediately followed. 'Tis granted, that the Apoſtles argued from the Rites in the *Moſaic* Inſtitution; but it appears to have only been by way of Illuſtration and Analogy.

There is certainly a general Likeneſs in all the Diſpenſations of Providence; an Analogy of things in the Natural as well as the Moral World, from which it is eaſy arguing by way of Parity, and 'tis very juſt and uſual ſo to do: But that one of theſe Diſpenſations was therefore given to preſignify another that was future, can never be proved, unleſs it be expreſly declared. — The Land of Promiſe, we know, was to be a Place where the *Jews* were to enjoy Reſt from their Labours; God likewiſe did, himſelf, reſt the Seventh Day from his Works: Yet, whoever imagin'd God's Reſt from the Creation to be prefigurative of the *Jews* Reſt in *Canaan*; and is it not equally reaſonable to ſay, that God's Reſt on the Seventh Day, prefigured the Entrance of the *Jews* into *Canaan*, as to ſay, that the *Jews* Reſt in *Canaan* prefigured the Reſt mentioned by *David* in the *Pſalms*?

This will equally imply, that all the following Events in the uniform Courſe of God's Government, ſimilar to any preceding ones, were deſign'd to be preſignified; in which Senſe, it will readily be owned, that the Reſt of the *Jews* was *Typical* of the Reſt of Chriſtians.

'Tis in the ſame manner we are to underſtand St. *Paul*, where he ſays, "That Chriſt our Paſſover is ſacrificed for "us." And thus we are to underſtand *John the Baptiſt*, when he calls our Saviour the "Lamb of God." — There was this Similitude of Circumſtances, that Chriſt was ſlain on the ſame Day with the Paſchal Lamb; that he died about the ſame time of the Day when the Prieſts began their Hillel; that not a Bone of the one, or the other was broken. Add, that as the Paſchal Lamb was without Blemiſh, ſo was Chriſt without Sin. — From theſe and other Circumſtances, the Apoſtle applied the Term *Paſſover* to Chriſt.

Thus, alſo, are we to account for what St. *Paul* calls the Baptiſm of the Children of *Iſrael* in the Cloud, and in the

Sea; and for the Compariſon betwixt the High Prieſt entring the Holy Place every Year, and Chriſt entring into Heaven. See QUOTATION.

TYPE is alſo a Name given to an Edict of the Emperor *Conſtans*, publiſh'd in 648, to impoſe a general Silence both on the Orthodox and the Monothelites.

The *Type* ow'd its Original to *Paul* Patriarch of *Conſtantinople*, who perſuaded that Emperor to take away the Ecteſis compiled and hung up in all the public Places by *Heraclius*; (as occaſioning great Complaints from the Orthodox, by its favouring the Monothelites) and to publiſh an Edict to impoſe Silence on both Parties.

But ſuch kinds of Pacifications are held inexcuſable in Matters of Religion; accordingly Pope *Theodore* ſoon procur'd the Patriarch *Paul* to be depos'd: The *Type* was examin'd in the Council of *Rome* in 649, and condemn'd; and an Anathema pronounc'd againſt all ſuch as admitted either the impious Ecteſis or *Type*. See ECTESIS.

It had the Name *Type*, as being a kind of Formulary of Faith; or rather a Form whereon Men were to regulate their Conduct.

TYPE, TYPUS, is ſometimes alſo uſed for the Order obſerved in the Intermiſſion of Pulſes, Fevers, *&c.* See PULSE and FEVER.

TYPHOIDES, in Medicine, an ardent or burning Fever. See FEVER.

TYPHOMANIA, in Medicine, a Diſeaſe of the Brain, wherein the Patient not being able to ſleep, tho' greatly inclin'd thereto, lies with his Eyes ſhut, talks abſurdly, and flings himſelf this Way and that.

If he be pull'd, or the like, he juſt opens his Eyes, looks about, and ſinks again into a kind of dozing, which is interrupted by a Train of diſagreeable Imaginations.

A *Typhomania* frequently takes Place in Fevers, Phrenzies, and the like Diſeaſes. --- 'Tis alſo call'd a *Coma Vigil*. See COMA.

The Word is form'd from the *Greek*, τύφος, Smoak, and μανία, Madneſs.

TYPOGRAPHY, the Art of Printing. See PRINTING.

The Word is form'd from the *Greek*, τύπος and γραφη, *ſcriptura*, Writing.

TYRANT, TYRANNUS, among the Ancients, denoted ſimply a King or Monarch. See KING and MONARCH.

But the ill Uſe ſeveral Perſons inveſted with that ſacred Character, made of it, has alter'd the Import of the Word; and *Tyrant* now carries with it the Idea of an unjuſt and cruel Prince, who invades the Peoples Liberty, and rules in a more deſpotic Manner than the Laws of Nature or the Country do allow of.

The Term *Tyrant*, we are told, became odious among the *Greeks*, thoſe zealous Lovers of Liberty, almoſt as ſoon as introduc'd: But *Donatus* aſſures us, it was never taken ſo among the *Romans* till the latter Ages of that Empire.

TYRIAN-*Purple*. See PURPLE.

TYRO. See TYROCINIUM.

TYROCINIUM, TYROCINY, a Novitiate or Apprenticeſhip in any Art or Science. See NOVICE and NOVITIATE.

We have ſeveral Writings under the Title of *Tyrociniums*: *Tyrocinium Chymicum*, *Tyrocinium Chirurgicum*, *&c.* containing the Rudiments of thoſe Arts, accommodated to the Apprehenſions of Beginners.

The Word is form'd of *Tyro*, a raw, freſh-water Soldier.

TYROSIS, in Medicine, a Coagulating or Curdling of Milk in the Stomach; after the Manner of Cheeſe. See CURDLING and COAGULATION.

The Word is form'd of the *Greek*, τυρός, *Caſeus*, Cheeſe. See CHEESE.

TYTH, or rather TITHE. See TITHE.

TYTHING and TYTHING-*Man*. See DECENNA, TENEMENTALE, HUNDRED, WAPENTAKE, *&c.*

V,

U, THE twentieth Letter in the Alphabet, and the fifth Vowel. See LETTER, and VOWEL.

Beſides the Vowel U, there is a Conſonant of the ſame Denomination, wrote *V*, or *U*. See CONSONANT.

The Pronunciation of the *U*, as now uſed among the *Engliſh*, *French*, &c. is borrow'd from the antient *Gauliſh*: for all the other Weſtern People, with the *Romans*, pronounce it *ou*.

V is alſo a Numeral Letter, and ſignifies *five*; according to the Verſe,

V, *vero quinque dabit tibi, ſi recte numerabis.*

When a Daſh was added a-top, $\overline{V}$, it ſignified 5000.

V. R. among the *Romans*, ſtood for *Uti Rogas*, as you deſire: which was the Mark of a Vote, or Suffrage for the paſſing of a Law. See ROGATIO; ſee alſo A.

VACANCY, or VACUUM, in Philoſophy, an empty Interval, or Space void of Matter. See VACUUM.

VACANCY, in Law, *&c.* a Poſt or Benefice wanting a regular Officer, or Incumbent. See OFFICER, *&c.*

The Canoniſts hold, that the Kind of *Vacancy* is to be expreſs'd in the Impetration of a Benefice. See BENEFICE.

A *Future Vacancy*, or Voidance of a Spiritual Living, ſome Writers call *Vacatura*.

Devolution is a Species of Canonical *Vacancy*. See DEVOLUTION.

VACANT *Effects*, *Prædia Vacua*, are ſuch as are abandon'd for want of an Heir, after the Death or Flight of their former Owner. See RESIGNATION, *&c.*

In our Law-Books, *Vagantes Terræ*, for *Vacantes*, expreſſes forſaken or uncultivated Lands.

A Benefice is ſaid to be *vacant*, *in Curia Romana*, when the Incumbent dies in *Rome*, or within 20 Leagues thereof; tho it be only by Accident that he was there.

The Pope nominates to all Benefices *vacant in Curia Romana*; excepting thoſe of the neighbouring Biſhopricks.

VACATION, *Non-Term*, in Law, is all the Time, reſpectively, included between the End of every Term, and the Beginning of the next ſucceeding one. See TERM, and *Non*-TERM.

This Intermiſſion was call'd by our Anceſtors *Pax Dei*, and *Eccleſiæ*; and ſometimes the *Times or Days of the King's Peace*.

Among the *Romans*, it was call'd *Juſtitium*, or *Feriæ*, or *Dies Nefaſti*. See DAY; ſee alſo FASTUS.

The Time from the Death of a Biſhop, or other Spiritual Perſon, till the Biſhoprick or other Dignity be ſupplied by another, is alſo call'd *Vacation*. See PLENARY.

Cicero, in his *Orations*, mentions a Law, whereby the Prieſts were exempted from Service in all Wars, except only Uproars and Civil Tumults; which Exemptions he calls *Vacationes*.

VACUUM, VACUITY, in Phyſicks, a Space empty, or devoid of all Matter, or Body. See SPACE, and MATTER.

Whether there be any ſuch Thing in Nature as an abſolute *Vacuum*; or whether the Univerſe be completely full, and there be an abſolute *Plenum*; is a thing has been controverted by the Philoſophers of all Ages. See PLENUM.

The Antients, in their Controverſies, diſtinguiſh two Kinds; a *Vacuum Coacervatum*, and a *Vacuum Interſperſum*, or *Diſſeminatum*.

Vacuum Coacervatum is conceiv'd as a Place deſtitute of Matter: Such, *e.g.* as there would be, ſhould God annihilate all the Air and other Bodies within the Walls of this Chamber.

The Exiſtence of ſuch a *Vacuum* is maintain'd by the *Pythagoreans*, *Epicureans*, and the *Atomiſts*, or *Corpuſcularians*; moſt of whom aſſert ſuch a *Vacuum* actually to exiſt with-out the Limits of the ſenſible World. But the modern *Corpuſcularians*, who hold a *Vacuum Coacervatum*, deny that Application; as conceiving, that ſuch a *Vacuum* muſt be Infinite, Eternal, and Uncreated. See UNIVERSE.

According, then, to the later Philoſophers, there is no *Vacuum Coacervatum* with-out the Bounds of the ſenſible World; nor would there be any *Vacuum*, provided God ſhould annihilate divers contiguous Bodies, than what amounts to a mere Privation, or Nothing: The Dimenſions of ſuch a Space, which the Antients held to be real, being by theſe held to be mere Negations; that is, in ſuch a Place, there is ſo much Length, Breadth, and Depth wanting, as a Body muſt have to fill it. To ſuppoſe, that when all the Matter in a Chamber is annihilated, there ſhould yet be real Dimenſions; is to ſuppoſe Corporeal Dimenſions without Body, which is abſurd.

The *Carteſians*, however, deny any *Vacuum Coacervatum* at all; and aſſert, that if God ſhould immediately annihilate all the Matter, *v.g.* in this Chamber, and prevent the Ingreſs of any other Matter, the Conſequence would be, that the Walls would become contiguous, and include no Space at all. They add, that if there be no Matter in a Chamber, the Walls can be conceiv'd no otherwiſe than as contiguous; thoſe Things being ſaid to be contiguous, between which there is not any thing intermediate: But, if there be no Body between, there is no Extenſion between; Extenſion and Body being the ſame thing: and if there be no Extenſion between, then the Walls are contiguous; and where's the *Vacuum*?

But the Reaſoning is built on a Miſtake, *viz.* that Body and Extenſion are the ſame thing. See EXTENSION, and SPACE.

Vacuum Diſſeminatum, or *Interſperſum*, is that ſuppos'd to be naturally interſpers'd in, and among, Bodies, in the Pores of the ſame Body, and in the Interſtices between different Bodies. See PORE.

'Tis this kind of *Vacuum* which is chiefly diſputed among the modern Philoſophers: The *Corpuſcularians* ſtrenuouſly aſſerting it; and the *Peripateticks* and *Carteſians* as ſtiffly impugning it. See CORPUSCULAR, CARTESIAN, *&c.*

The great Argument the *Peripateticks* urge againſt a *Vacuum Interſperſum*, is, that there are divers Bodies frequently ſeen to move contrary to their own Nature and Inclination; and for no other apparent Reaſon, but to avoid a *Vacuum*: whence they conclude, that Nature abhors a *Vacuum*; and give us a new Claſs of Motions aſcrib'd to the *Fuga Vacui*, or Nature's flying a *Vacuum*. See FUGA.

Such is the Riſe of Water in a Syringe, upon drawing up the Piſton; ſuch alſo is the Aſcent of Water in Pumps, the Swelling of the Fleſh in a Cupping-Glaſs, *&c.*

But ſince the Weight, Elaſticity, *&c.* of the Air, have been aſcertain'd by ſure Experiments; thoſe Motions and Effects are univerſally aſcrib'd to the Gravity, and Preſſure of the Atmoſphere. See AIR; ſee alſo SYRINGE, PUMP, CUPPING-*Glaſs*, &c.

The *Carteſians* deny not only the Actual Exiſtence, but even the Poſſibility of a *Vacuum*: and that on this Principle, That Extenſion being the Eſſence of Matter, or Body, wherever Extenſion is, there is Matter: But mere Space, or *Vacuity*, is ſuppos'd to be extended; therefore it is material. Whoever denies an empty Space, conceives Dimenſions in that Space, *i.e.* conceives an extended Subſtance in it; and therefore admits a *Vacuum*, at the ſame time that he admits it.

On the other hand, the *Corpuſcular* Authors prove, not only the Poſſibility, but the Actual Exiſtence of a *Vacuum*, from divers Conſiderations; particularly, from the Conſideration of *Motion*, in general; and that of the *Planets*, *Comets*, &c. in particular; from the *Fall* of Bodies; from the Vibration of *Pendulums*; from *Rarefaction* and *Condenſation*; from the *different* Specific *Gravities* of Bodies; and from the *Diviſibility* of Matter into Parts.

1°. 'Tis argued, that *Motion* could not be effected without a *Vacuum*. See MOTION.

This is what *Lucretius* urg'd long ago,—*Principium quoniam cedendi nulla daret res—undique materies quoniam ſtipata fuiſſet.*

The Force of this Argument will be increas'd from the two following Conſiderations, *viz.* firſt, that all Motion is either in a ſtrait Line; or in a Curve, which returns into it ſelf, as the Circle, and Ellipſis; or in a Curve that does not return into it ſelf, as the Parabola, *&c.* And, ſecondly, that the moving Force muſt always be greater than the Reſiſtance.

For, hence it follows, that no Force, even tho infinite, can produce Motion where the Reſiſtance is infinite; conſequently, there can be no Motion either in a ſtrait Line, or a non-

non-returning Curve; becauſe in either of thoſe Caſes, the Protruſion, and conſequently the Reſiſtance, would be infinite. There remains, therefore, only the Motion in a revolving Curve practicable; which muſt either be a Revolution upon an Axis, or an annular Motion round a quieſcent Body; both which are, again, impoſſible in an Elliptic Curve: And conſequently, all Motion muſt be in Circles geometrically true; and the revolving Bodies muſt either be Spheres, Spheroids, Cylinders, or Portions of them, exactly geometrical; otherwiſe, their Revolutions in a *Plenum* would be impoſſible: But ſuch Motions, or ſuch figur'd Bodies, we do not know in Nature. Therefore there is a *Vacuum*.

2°. The *Motions of the Planets and Comets* demonſtrate a *Vacuum*: Thus Sir *I. Newton* argues; 'That there is no 'ſuch fluid Medium as Æther, *(to fill up the porous Parts of all ſenſible Bodies, as the Air and interſtellar Parts, and ſo make a* Plenum) 'ſeems probable; becauſe the Planets and Comets proceed with ſo regular and laſting a Motion thro' the Celeſtial Spaces, both from and to all Parts: For hence it appears, that thoſe Celeſtial Spaces are void of all ſenſible Reſiſtance, and conſequently of all ſenſible Matter. For the reſiſting Force of fluid Mediums, ariſes partly from the Attrition of the Parts of the Medium, and partly from the Inactivity of Matter. Now that Part of the Reſiſtance of any Medium, which ariſes from the Tenacity or Attrition of its Parts, may be leſſen'd by dividing the Matter into ſmaller Parts, and by rendring thoſe Parts more ſmooth and ſlippery: But that Part of the Reſiſtance which ariſes from the Inactivity of Matter, is always in proportion to the Denſity of the Matter; nor can be diminiſh'd by dividing the Matter, nor by any other means, except by diminiſhing the Denſity thereof.

'Conſequently, if the Celeſtial Regions were as denſe as Water, or Quickſilver, they would reſiſt almoſt as much as Water or Quickſilver; but if they were perfectly denſe, without any *interſpers'd Vacuity*, tho the Matter were ever ſo fluid and ſubtile, they would reſiſt more than Quickſilver does; a perfectly ſolid Globe, in ſuch a Medium, would loſe above half its Motion, in moving three Lengths of its Diameter; and a Globe not perfectly ſolid, ſuch as the Bodies of the Planets and Comets are, would be ſtop'd ſtill ſooner. Therefore, that the Motion of the Planets and Comets may be regular and laſting, it is neceſſary the Celeſtial Spaces be void of all Matter, except perhaps ſome few and much rarified Effluvia of the Planets and Comets, and the paſſing Rays of Light. See Resistance, Medium, Planet, Comet, *&c.*

3°. The ſame great Author deduces a *Vacuum* from the Conſideration of the *Weights of Bodies*; thus: 'All Bodies about the Earth gravitate towards the Earth; and the Weights of all Bodies equally diſtant from the Earth's Centre, are as the Quantities of Matter in thoſe Bodies. '—If the Æther, therefore, or any other ſubtile Matter, were altogether deſtitute of Gravity, or did gravitate leſs than in proportion to the Quantity of its Matter: Becauſe, (as *Ariſtotle*, *Des Cartes*, and others argue) it differs from other Bodies only in the Form of the Matter; the ſame Body might by the Change of its Form gradually be converted into a Body of the ſame Conſtitution with thoſe which gravitate moſt in proportion to the Quantity of Matter: and on the other hand, the moſt heavy Bodies might gradually loſe their Gravity, by gradually changing their Form; and therefore the Weights would depend upon the Forms of Bodies, and might be chang'd with 'em; which is contrary to all Experiment. See Weight.

4°. The *Deſcent of Bodies* proves that all Space is not equally full; for the ſame Author goes on, 'If all Spaces were equally full, the Specifick Gravity of that Fluid with which the Region of the Air would in that Caſe be fill'd, would not be leſs than the Specific Gravity of Quickſilver, or Gold, or any other the moſt denſe Body; and therefore, neither Gold, nor any other Body, could deſcend therein. For Bodies do not deſcend in a Fluid, unleſs that Fluid be ſpecifically lighter than the Body. But by the Air-Pump, we can exhauſt a Veſſel, till even a Feather ſhall fall with a Velocity equal to that of Gold in the open Air: The Medium, therefore, thro' which the Feather falls, muſt be much rarer than that thro' which the Gold falls.' See Descent.

'The Quantity of Matter, therefore, in a given Space, may be diminiſh'd by Rarefaction: and why may not it be diminiſh'd *in infinitum*? Add, that we conceive the ſolid Particles of all Bodies to be of the ſame Denſity; and that they are only rarefiable by means of their Pores: Whence a *Vacuum* evidently follows.' See Rarefaction, Pores, and Particle.

5°. 'That there is a *Vacuum*, is evident from the *Vibrations of Pendulums*: For ſince thoſe Bodies, in Places out of which the Air is exhauſted, meet with no Reſiſtance to retard their Motion, or ſhorten their Vibrations; 'tis evident there is no ſenſible Matter in thoſe Spaces, or in the occult Pores of thoſe Bodies. See Pendulum.

For, as to what *Des Cartes* urges of his *Materia Subtilis*, that its Tenuity prevents its Reſiſtance from being ſenſible, and that a ſmall Body ſtriking againſt a greater, cannot in the leaſt move, or reſiſt the Motion of that other; but is reflected back again with all its Momentum: 'tis contrary to all Experience. For Sir *Iſaac* proves, that the Denſity of fluid Mediums, is proportionable to their Reſiſtances very nearly; and that they are exceedingly miſtaken, who ſuppoſe the Reſiſtance of Projectiles to be infinitely diminiſh'd, by dividing the Parts of the Fluid, even *in infinitum*. (*Princip.* Lib. II. Prop. 38.) When, on the contrary, 'tis clear the Reſiſtance is but little diminiſh'd by the Subdiviſion of the Parts; (*Ibid.* Prop. 40.) and that the reſiſting Forces of all Fluids are nearly as their Denſities. For why ſhould not the ſame quantity of Matter, whether divided into a great number of ſubtile Parts, or into a few larger ones, have the ſame reſiſting Force? If then there were no *Vacuum*, it would follow, that a Projectile moving in the Air, or even in a Space whence the Air is exhauſted, ſhould move with as much difficulty as in Quickſilver; which is contrary to Experience. See Projectile.

6°. That there are *Interſpers'd Vacuities*, appears from *Matter's being actually divided* into Parts, and from the Figures of thoſe Parts: For, on Suppoſition of an abſolute Plenitude, we do not conceive how any Part of Matter could be actually divided from that next adjoining, any more than it is poſſible to divide actually the Parts of abſolute Space from one another: for by the actual Diviſion of the Parts of a *Continuum* from one another, we conceive nothing elſe underſtood, but the placing thoſe Parts at diſtances from one another which in the *Continuum* were at no diſtance from one another: But ſuch Diviſions between the Parts of Matter, muſt imply *Vacuities* between. See Divisibility.

7°. As for the *Figures* of the Parts of Bodies, upon the Suppoſition of a *Plenum*, they muſt either be all Rectilinear, or all Concavo-convex; otherwiſe, they would not adequately fill Space; which we do not find to be true in Fact.

8°. The denying a *Vacuum* ſuppoſes what it is impoſſible for any one to prove to be true, *viz.* That the material World hath no Limits. See Universe.

Since, then the Eſſence of Matter does not conſiſt in Extenſion, but in Solidity, or Impenetrability, the Univerſe may be ſaid to conſiſt of ſolid Bodies moving in a *Vacuum*: Nor need we at all fear, leſt the Phænomena of Nature, moſt of which are plauſibly accounted for from a Plenitude, ſhould become inexplicable when the *Plenum* is ſet aſide. The principal ones, ſuch as the Tides; the Suſpenſion of the Mercury in the Barometer; the Motion of the Heavenly Bodies, of Light, *&c.* are more eaſily and ſatisfactorily accounted for from other Principles. See Tides, *&c.*

Vacuum, or Vacuum *Boyleanum*, is alſo uſed, ſomewhat abuſively, to expreſs that approach to a real *Vacuum*, which we arrive at by means of the Air-Pump. See Air-Pump.

Thus, any thing put in a Receiver ſo exhauſted, is ſaid to be put *in Vacuo*: and thus, moſt of the Experiments with the Air-Pump, are perform'd *in Vacuo*, or *in Vacuo Boyleano*.

Some of the principal Phænomena obſerv'd of Bodies in Vacuo, are; That the heavieſt and lighteſt Bodies, as a Guinea and a Feather, fall here with equal Velocity:—That Fruits, as Grapes, Cherries, Peaches, Apples, *&c.* kept for any time *in Vacuo*, retain their Nature, Freſhneſs, Colour, *&c.* and thoſe wither'd in the open Air, recover their Plumpneſs *in Vacuo*:—All Light and Fire becomes immediately extinct *in Vacuo*:—The Colliſion of Flint and Steel *in Vacuo*, produces no Sparks:—No Sound is heard, even from a Bell rung *in Vacuo*:—A ſquare Viol, full of common Air, well clos'd, breaks *in Vacuo*; a round one does not:—A Bladder half full of Air, will heave up 40 Pound weight *in Vacuo*:—Cats, and moſt other Animals, readily expire *in Vacuo*.

By Experiments made in 1704, Mr. *Derham* found, that Animals which have two Ventricles, and no *Foramen Ovale*, as Birds, Dogs, Cats, Mice, *&c.* die in leſs than half a Minute; counting from the firſt Exſuction: A Mole died in one Minute; a Bat liv'd ſeven or eight. Inſects, as Waſps, Bees, Graſhoppers, *&c.* ſeem'd dead in two Minutes; but, being left *in Vacuo* 24 Hours, came to life again in the open Air: Snails continu'd 24 Hours *in Vacuo*, without appearing much concern'd.

Seeds planted *in Vacuo* don't grow:—Small Beer dies, and loſes all its Taſte *in Vacuo*:—Lukewarm Water boils very vehemently *in Vacuo*:—Air, ruſhing thro' Mercury into a *Vacuum*, throws the Mercury in a kind of Shower upon the Receiver, and produces a great Light in a dark Room. See Attrition, *&c.*

The Air-Pump can never produce a preciſe *Vacuum*; as is evident from its Structure, and the manner of its working: In effect, every Exſuction only takes out a part of the Air: ſo that there will ſtill be ſome left, after any finite Number of Exſuctions. Add, that the Air-Pump has no longer any effect,

effect, than while the Spring of the Air remaining in the Receiver, is able to lift up the Valves: When the Rarefaction is come to that degree, you can come no nearer to a *Vacuum*.

Sir *I. Newton*, obſerving that a Thermometer ſuſpended *in Vacuo*, and in that State removed to a warm or a cold Room, receives the Heat or Cold, riſes, or falls, almoſt as ſoon as another not *in Vacuo*; takes thence occaſion to ſuſpect, that the Heat of the warm Room is convey'd thro' the *Vacuum* by the Vibrations of a much ſubtiler Medium than Air, which remain'd in the *Vacuum* after the Air was drawn out. (*Opt.* p. 323.) See MEDIUM, HEAT, &c.

VADARI, in the Civil Law, denotes a Perſon to pledge, undertake, or give Security in behalf of another; that he ſhall, on a certain Day, appear in Court, to proſecute, or anſwer.

If he fails, his Surety has *Actionem Vadimonii deſerti* againſt him; that is, an Action for deſerting his Bail. See VADIMONIUM, and BAIL.

Properly ſpeaking, the *Vadari Reum*, among the *Romans*, was the Act of the Plaintiff himſelf, who hereby demanded Surety or Bail from the Defendant, that he would appear before the Prætor on a certain Day.

VADE-MECUM, or VENI-MECUM, a *Latin* Term, us'd in *Engliſh* to expreſs a Thing that is very handy and familiar; and which one uſually carries about with him.

'Tis chiefly apply'd to ſome favourite Book: Some make *Virgil*, others *Horace*, their *Vade-mecum*, or *Veni-mecum*; others an *Epictetus*, others a *Thomas à Kempis*, &c.

This is what the *Greeks* call an ἐγχειρίδιον, or *Manual*.

The *Arabs* have a Phraſe of equal import, *viz. Habib al feir*, Friend of the Journey. In *Latin* it is beſt expreſs'd by *Comes*; as, *Comes Theologicus*, *Comes Ruſticus*, &c.

VADIMONIUM, in the Civil Law, a Promiſe, or Bond for appearance before the Judge upon a Day appointed. See VADARI.

VAGABOND, a Perſon that wanders about, having no certain Dwelling; or a ſturdy Beggar, &c. mention'd in divers Statutes.——*De Vagabundis & aliis hominibus mendicantibus qui ſe nominant.—Travelling Men*, &c. Charta 22. *Hen.* VI.——*Item utemur quod nullus vagabundus vagetur ſeu deambulet de nocte in Villa ſeu Suburbio poſt pulſationem campanæ noſtræ communis, vocatæ* Coverfeu, *& ſi aliquis ibidem capiatur poſt pulſationem dictæ campanæ, ducatur ad Gaulam Domini Regis, & ibi morabitur uſq; in Craſtinum ut Notitia perſonæ ſuæ habeatur*, &c. MS. Cod. de Leg. & Stat. Burgi villæ Mountgomer. Temp. *Hen.* II.

VAGINA, a *Latin* Term, literally ſignifying a *Sheath*, or *Scabbard*; uſed on divers Occaſions.

VAGINA, in Architecture, is uſed for the lower Part of a *Terminus*; becauſe reſembling a Sheath, out of which the Statue ſeems to iſſue. See TERMINUS.

The *Vagina* is that long Part between the Baſe and the Capital; and is found in divers Manners, and with divers Ornaments.

VAGINA, in Anatomy, a Canal, or Cavity leading from the *Pudendum* to the *Uterus*, or Womb of Women. See UTERUS.

The *Vagina Uteri*, or *Matricis*, is a membranous Part, reaching from the *Rima*, or Aperture of the *Labia*, to the Neck of the Womb. See LABIA.

It lies upon the *Rectum*, to which it finally adheres; and under the Urinary Bladder: Its length is ordinarily ſeven or eight Inches.

Its inward Subſtance is nervous, and exquiſitely ſenſible; the outer membranous, and looſe: At its Orifice it is much narrower than elſewhere; eſpecially in Virgins.

Thro' its whole Courſe it is full of *Rugæ*, or Wrinkles; eſpecially in the upper internal Surface: which *Rugæ* the uſe of Venery renders leſs apparent, and frequent Parturition almoſt obliterates: Which ſhews, that they were intended to render the Part more eaſily diſtendible for Parturition.

Along the whole Tract of the *Vagina* are Pores, or *Oſtia*, or little Ducts ſeen, which in the Act of Venery emit a Liquor, that has been by many miſtaken for Seed. See SEED.

The *Vagina* has a Conſtrictory Muſcle, inſerted under the *Clitoris*; which with a broad Series of Fibres embraces and conſtringes the lower Part of the *Vagina*, and puts the Dimenſion of the Part, in ſome meaſure, in the Power of the Mind. See MATRIX.

VAGINÆ *Uteri Sphincter*. See SPHINCTER *Uteri*, &c.

VAGINALIS *Gulæ*, in Anatomy, a Name ſome Anatomiſts give to the muſculous Coat of the *Gula*; as ſuppoſing it a proper Muſcle, conſpiring with the *Oeſophagus* in thruſting the Aliment down, when entred. See GULA, DEGLUTITION, &c.

VAGINALIS *Tunica*, the ſame with what we otherwiſe call'd the *Elytroides*. See ELYTHYROIDES.

VAGUM, in Anatomy, a Name given to the eighth Pair of Nerves of the *Medulla Oblongata*, call'd the *Par vagum*, becauſe diſpenſed to divers Parts of the Body. See PAR, and NERVE.

VAIR, in Heraldry, a kind of Fur, or Doubling, conſiſting of divers little Pieces, Argent and Azure, reſembling a *Dutch* U, or a Bell-glaſs. See VAIRY.

Vairs have their Point Azure, oppoſite to their Point Argent, and the Baſe Argent to the Azure.

When there are only two, or three *Vairs*, the antient Heralds call it *great Vair*; and when there are more, *ſmall Vair*.

Vair is intended to repreſent a kind of Skin, uſed antiently by the Kings of *France* in lieu of a Fur, and wherewith the Gowns of the Preſidents *à Mortier*, the Counſellors of the Court, the Heralds Coats, &c. were lined, till the XVth Century.

It was properly the Skin of a kind of Squirrel, call'd alſo in French *Vair*, and in Latin *Scriveus*, which was white underneath, and Dove-colour a-top. It is deſcrib'd by *Aldrovandus* under the Name of *Scriveo Vario*, and is the ſame, according to *Geſner*, with the *Mus ponticus* of *Ariſtotle* and *Pliny*; which the *Latins* call *Varus*, or *Varius*, from the Variety of its Colour. Its two Skins join'd together, make the Figure of the *Vairs* in Armories; being naturally white and azure.

Vair, *Colombiere* obſerves, is a ſecond Fur, antiently us'd as a Lining of the Garments of great Men; conſiſting of little Pieces, ſew'd by the Furriers on white Skins: and becauſe theſe Pieces were uſually blue, thoſe who firſt ſettled the Rules of Heraldry, decreed, that this Fur, in its natural Blazon, ſhould always be Argent and Azure. So that if it be abſolutely ſaid, ſuch a Family bears *Vair*; it is ſuppoſed to be Argent and Azure.

Regularly, there muſt be but four Rows or Ranks of *Vair* in the Shield; if there be either more, or leſs, the Number muſt be ſpecify'd. The ſmalleſt Number, being three Rows, is called *Beffroy de Vair*; and the moſt, being five or ſix, is call'd *Menu*, or *ſmall Vair*.

The *Beffroy* is alſo known by the firſt Figure on the Dexter-ſide of the Eſcutcheon, being always of Metal, and in form of a Belt; whereas that of mere *Vair* is in ſhape of a Glaſs.

VAIRY, VAIRE, VERRY, or VARRY, is applied to a Coat, or the Bearings of a Coat, when charged or chequer'd with *Vairs*. See VAIR.

When the Colours are Argent and Azure, 'tis *Vairy proper*: if they be otherwiſe, the Colours are to be expreſly nam'd; *Vairy* of ſuch a Colour or Metal; he bears *Vairy* Or, and Gules. This is particularly call'd *Vair compoſed*.

The Bearings are likewiſe ſaid to be *Vairy* when they are charged with *Vairs*. When Chiefs, Croſſes, Pales, Feſſes, &c. happen to be *Vairy*, the number of Ranks are to be ſpecify'd.

Vairy Gowns are obſerved by *Julius Pollux* to have been the Habit of the antient *Gauls*, as Ermins were of the *Armenians*. See ERMIN.

VAIRY *Cuppy*, or VAIRY *Taſſy*, or *Potent Counter-potent*; is a Bearing in Heraldry of the Figure adjoining. In blazon, the Colours muſt be expreſs'd; as Azure, Argent, &c.

VALECT, VALET, VADELECT, VADLAT, and VASSET, in our Law-Books; is, according to *Camden*, a Servitor, or Gentleman of the Privy-Chamber: but, according to *Selden*, antiently ſignify'd the young Heirs which were to be knighted, or young Gentlemen of Quality and Deſcent.

But the Term is now applied to thoſe of the Rank of Yeomen.—In the Accounts of the *Inner Temple*, it is us'd for a Bencher's Clerk, or Servant: The Butlers of the Houſe corruptly call 'em *Varlets*.

VALENTINIANS, an antient and famous Sect of *Gnoſticks*; thus called from their Leader *Valentinian*. See GNOSTIC.

VALERIAN, the *great Set-wall*, a Plant, whoſe Root is of conſiderable uſe in Medicine.

There are various Kinds of *Valerian*; but the only one in uſe is that cultivated in Gardens, call'd the *large Valerian*, or *Valeriana Hortenſis*; and by *Dioſcorides*, *Phic, folio oliſatri*.

It has its Name, according to ſome, from one *Valerius*, who firſt brought it into uſe; according to others, from *Valere*, to have great Virtues.

It is warm and aromatick, but ſomewhat of a fetid Scent: Its efficacy, as a Sudorific, is ſupported by the Teſtimony of both antient and modern Practice. It has been reckon'd by ſome Deterſive, ſo much as to make it Diuretick, and good in all Obſtructions of the *Viſcera*. It is extoll'd alſo for

ſtrength-

ſtrengthning the Optic Nerves, and reſtoring decay'd Sight; but the preſent Practice acknowledges it not in any ſuch Intentions. It ſometimes does Wonders in hyſterical Affections; eſpecially where thoſe of the fetid kind are good, and the Spirits are too impetuous in their Motions, ſo as to occaſion Convulſions. It is alſo aſſiſted with Camphire, and ſome other things of the like Nature which are very powerful in breaking thro' the minuteſt Obſtructions, to cure obſtinate Agues.

It is efficacious in all nervous Caſes; and particularly the Epilepſy: which Virtue in it ſeems to have been firſt diſcover'd by *Fabius Columna*, who preſcrib'd it for that Purpoſe in Pouder.

M. *Marchant*, in the Memoirs of the Academy of Sciences, has confirm'd this Virtue by many Inſtances within his Knowledge: And what is very remarkable, is, that in the two Obſervations he enlarges moſt upon, the Patients voided great Quantities of Worms. His Cuſtom was, always to purge before he adminiſter'd it.

VALESIANS, Valesiani, antient Sectaries, ſo called from one *Valens*, a Perſon unknown to *Epiphanius*, who makes mention of this Sect, *Hær.* 58. tho he owns we know but very little of 'em; only this, that they admitted none into their Society but Eunuchs: at leaſt, if any were admitted before Caſtration, they oblig'd 'em not to eat any Meat till the Operation was perform'd.

For, then, being no longer ſubject to the Motions of the Fleſh, they allow'd 'em to eat any kind of Meats.

VALET, a *French* Term, antiently wrote *Varlet*.

In *France*, *Valet* is a common Name for all domeſtick Servants, employ'd in the lower, and more ſervile Offices; including what we call *Grooms*, *Footmen*, *Coachmen*, *Bailiffs*, &c.

But the Word is not uſed among us in this Senſe, nor any otherwiſe than in the Phraſe *Valet de Chambre*; which is a Servant, whoſe Office is to dreſs and undreſs his Maſter, to look to his Bed-Chamber, wait on him at Table, &c. the ſame with what we otherwiſe call a *Gentleman*.

In the Hiſtory of *Lewis* XII. by *Seiſel*, we always find *Varlet de Chambre du Roi*, *Varlet de la Gardrobe*, &c. But *Varlet*, like *Knave*, and divers other Words, is now degenerated into a Word of reproach.

Valet, *Valect*, *Vadelect*, *Vadlat*, and *Vallet*, *Camden* obſerves, were antiently uſed at our Court for a Gentleman of the Privy-Chamber.

Selden, in his *Titles*, relates, that *Valets* antiently ſignify'd young Gentlemen, and Heirs of great Eſtate and Quality; eſpecially ſuch as were to be knighted. See Valect.

VALETUDINARY, *Valetudinarius*, a Term ſometimes uſed by the Writers of Medicine, for a Perſon of a weak, crazy, ſickly Conſtitution, frequently out of order, &c.

Dr. *Cheyne*, by all means, directs the weakly, the ſtudious, the ſedentary, and the *valetudinary*, to a low, ſpare Regimen. See Food, Exercise, Diet, &c.

VALID, a Term applied to Acts, Tranſactions, Expeditions, &c. which are clothed in all the Formalities requiſite to their being put in Execution, and to their being admitted in a Court of Juſtice.

A Contract by a Minor is not *valid*, or is *invalid*: A Marriage is not *valid*, unleſs perform'd with the Solemnities enjoin'd.

VALLAR, Vallaris, in Antiquity, an Epithet given to a kind of Crown, which the *Roman* Generals beſtow'd on him who in attacking the Enemies Camp firſt broke in upon the Enemies Lines. See Crown.

The Word is form'd from *Vallum*, a Stake with Branches, whereof they made the Palliſade of a Camp, call'd *Lorica*.

The *Corona Vallaris* was the ſame with what was otherwiſe call'd *Corona Caſtrenſis*, from *Caſtra*, a Camp. *Aulus Gellius* aſſures us, that it was of Gold, as the Mural and Naval Crowns were: yet, tho they were made of that precious Metal, they were not the moſt valued: For *Pliny*, Lib. XXII. cap. 3. gives the Preference to the *Corona Obſidionalis*, which yet was only of Gramen, or Graſs.

VALLEY, VALE, in Geography. See Mountain.

VALORE *Maritagii*, *Value of Marriage*, a Writ which antiently lay for the Lord, after having proffer'd ſuitable Marriage to an Infant who refuſed the ſame; to recover the Value of the Marriage. See Maritagium.

VALUE, in Commerce, the Price or Worth of any Thing.

Intrinſick Value, is the proper, real, and effective *Value* of any Thing: and is uſed chiefly with regard to Money; the *popular Value* whereof, may be rais'd and lower'd at the Pleaſure of the Prince; but its *real*, or *intrinſick Value*, depending wholly on its Weight and Fineneſs, is not at all affected by the Stamp, or Impreſſion thereon. See Money, &c.

'Tis generally on the Foot of this *intrinſick Value*, that Species are receiv'd in foreign Countries; tho in the Places where they are coin'd, and where the Sovereign Power makes 'em current, they generally paſs for much more. See Par.

'Tis, in good meaſure, on the difference of thoſe two *Values*, one whereof is, as it were, arbitrary, and the other, in ſome ſort, natural; that the difference of Exchanges depends: and thoſe ſtill riſing and falling, as the Rate at which a Species is current, comes nearer or farther off the juſt Price of the Metal whereof it conſiſts. See Exchange.

In Bills of Exchange, *Value* is us'd to ſignify the Nature of the Thing, (as ready Money, Merchandizes, Bills, Debts, &c.) which is given, as it were, in Exchange for the Sum ſpecify'd in the Bill.

From four different Manners of expreſſing this *Value*, ſome diſtinguiſh four Kinds of Bills of Exchange: The firſt bears *Value receiv'd*, ſimply and purely, which comprehends all Kinds of *Value*; the ſecond, *Value receiv'd in Money*, or *Merchandize*; the third, *Value of my ſelf*; and the fourth, *Value underſtood*.

The firſt is dangerous, and the fourth but little uſed: accordingly, to have the *Value* well expreſs'd, and to prevent the ill Conſequences of Overſights therein, 'tis well provided by the *French* Ordonnance of 1673, that Bills of Exchange ſhall contain the Name of the Perſon to whom the contain'd Sum is to be paid; the Time of Payment; the Name of him who has given the *Value*; and whether it was receiv'd in Money, Merchandize, or other Effects. See Bill *of Exchange*.

Value, Valor, Valentia, in Law, &c. *Weſt* gives us a nice Difference between *Value* and *Price*.——'The 'Value, *(ſays he)* of Things in which Offences are commit-'ted, is uſually compris'd in Indictments; which ſeems ne-'ceſſary in Theft, to make a difference from petty Lar-'ceny, and in Treſpaſs, to aggravate the Fault, and in-'creaſe the Fine: But no Price of Things *feræ Naturæ* 'may be expreſs'd, as of Deers, Hares, &c. if they be not 'in Parks and Warrens. And where the Number of Things 'taken is to be expreſs'd in the Indictment, as of young 'Doves in a Dove-houſe, there muſt be ſaid *Pretii*, or *ad* '*Valentiam*: but of divers dead Things, *ad Valentiam*, and 'not *Pretii*: Of Coin not current, it ſhall be ſaid *Pretii*; 'but of Coin current, neither *Pretii* nor *ad Valentiam*; 'the Price and *Value* being certain.

VALVE, Valvula, in Anatomy, a thin Membrane, applied, like a Door or Shutter, on divers Cavities and Veſſels of the Body; to afford a Paſſage to ſome Humour, or other Matter, going one way, and prevent its Re-flux towards the Part whence it came. See Vessel, &c.

The Veins and Lymphaticks have *Valves*, ſituate from Space to Space, which open towards the Heart, but keep cloſe on that Side toward the Extremities, *i. e.* they let the Blood and Lymph paſs towards the Heart, but prevent their returning to the extreme Parts, whence they came. See Vein, and Blood.

The Heart has alſo its *Valves*, placed at the Entrance of the Veſſels ariſing out of it. Thoſe at the Entrance of the *Vena Cava* and Pulmonary Vein, let the Blood paſs on to the Heart, and prevent its return: On the contrary, thoſe at the Entrance of the *Aorta* and Pulmonary Artery, let the Blood paſs out of the Heart, and prevent its flowing back again. See Heart, and Circulation; ſee alſo Cava, &c.

In the *Jejunum Inteſtinum* there are *Valves* which retard the Deſcent of the Chyle. See Intestines.

The Colon has a thick *Valve*, to prevent the Excrements from paſſing into the *Ileon*; and ſeveral other *Valves*, to retard the Deſcent of the Excrements. See Colon, and Excrement.

The *Valves* in the Body acquire different Denominations from their different Forms, and other Circumſtances; as *Sigmoides*, *Semilunares*, *Mitrales*, *Tricuſpides*, &c. *See each under its reſpective Article*, Sigmoides, Mitrales, &c.

Some attribute the Diſcovery of the *Valves* in the Veins to *Fra. Paolo*. *Ruyſch* has a particular Treatiſe on the *Valves* of the *Lymphatic* and *Lacteal* Veſſels. See Lacteal, &c.

Valve, *Valvula*, in Hydraulics, Pneumatics, &c. is a kind of Lid, or Cover of a Tube, or Veſſel, ſo contriv'd as to open one way; but which, the more forcibly 'tis preſs'd the other way, the cloſer it ſhuts the Aperture: ſo that it either admits the Entrance of a Fluid into the Tube, or Veſſel, and prevents its return; or admits it to eſcape, and prevents its re-entrance.

Valves are of great uſe in the *Air-Pump*, and other Wind-Engines; in which they are ordinarily made of Pieces of Bladder. See Air-*Pump*; and Wind-*Gun*.

In Hydraulic Engines, as the Emboli of Pumps, they are frequently of Leather; their Figure round, and are fitted to the Bottoms, or other Parts of the Barrels, &c. to ſhut the Apertures. See Embolus.

Sometimes they are made of two round Pieces of Leather, incloſed between two others of Braſs; having divers Perforations, which are cover'd with another piece of Braſs, moveable upwards and downwards, on a kind of Axis, which goes thro' the middle of them all.

Some-

Sometimes they are made of Braſs cover'd over with Leather, and furniſh'd with a fine Spring, which gives way upon a Force apply'd againſt it: but, upon the ceaſing of that, returns the *Valve* over the Aperture. See PUMP, &c.

Conſtantine Varole, a *Bolognese*, and Phyſician of *Gregory* XIII. who dy'd in 1570, was the firſt who obſerv'd the *Valve* in the Colon. *Bart. Euſtachio*, a Native of *San Severino* in *Italy*, diſcover'd, about the ſame time, the *Valve* at the Orifice of the Coronary Vein, and that remarkable one at the Orifice of the lower Trunk of the *Vena Cava*, near the right Auricle of the Heart: Tho he did not take it for a *Valve*, but merely for a Membrane.

Sig. *Lanciſi*, Phyſician to the late Pope, who firſt publiſh'd *Euſtachio*'s Works, takes the Uſe of this *Valve* to be to prevent the Blood of the upper *Vena Cava* from ſtriking with too much violence againſt that of the lower: And Monſieur *Winſlow*, who has conſider'd it very diligently in the Memoirs of the Royal Academy of Sciences, is much of the ſame Opinion.

But as it gradually dwindles in Children, and at length becomes quite loſt in Adults, ſtill diminiſhing as the *Foramen Ovale* does; it ſhould ſeem to have ſome other Office; and that, chiefly, regarding the Circulation of the Blood in the *Fœtus*.

In effect, by means hereof, M. *Winſlow* reconciles the two oppoſite Syſtems of the Circulation of the Blood in the *Fœtus*, deliver'd under the Article *Circulation*. See CIRCULATION *of the Blood*; and FOETUS.

VALVULA, *Valve*. See VALVE.

The *great Valve*, in Latin *Valvula Major*, is the upper Part, and, as it were, the Lid of the *Iſthmus* between the *Teſtes*, and the firſt Vermicular Proceſs of the *Cerebellum*: Its Subſtance is medullary. Its Uſe is to prevent the Lymph from falling on the Nerves at the Baſe of the *Cranium*.

'In the *Jejunum* and *Ileum*, the inner Tunic being larger than the outer, is much corrugated; the looſe Folds of which, have been thought in ſome meaſure to do the Office of *Valves*; and have therefore been call'd *Valvulæ Conniventes*.' Drake's *Anat.* p. 49.

'The Lacteals, opening into the Inteſtines, receive the prepared fluid Part of the Chyle; and appear at Intervals, as it were, girt and ſtraiten'd; and when preſs'd, do not admit of a Reflux towards the Inteſtines: tho the Liquor be eaſily propell'd towards the Glands: Which argues, that there are *Valves* in 'em, tho too minute to be ſenſible to the Eye.' *Id. ibid.* p. 56.

The Word is form'd from the Latin *Valvæ*, folding Doors.

VAN, or VANT, or VAUNT, of the French, *avant*, or *avaunt*, before; a Term uſed in Compoſition with ſeveral Words in our Language.

VAN-*Couriers*, are Light-arm'd Soldiers, ſent before to beat the Road, upon the Approach of an Enemy. See RECONNOITRE.

VAN-*Foſſe*, a Ditch dug without the Counterſcarp, and running all along the Glacis; uſually full of Water. See DITCH.

VAN, or VANT, or VAUNT-*Corps*. See CORPS.

VAN-*Guard*, is a Military Term, ſignifying the firſt Line of an Army, drawn up in Battalia.

It is the ſame with the *Front* of an Army, and gives the firſt Charge upon the Enemy. See FRONT.

Every Army is compos'd of three Parts, a *Van-guard*, *Rear-guard*, and *Main Body*.

VANES, on Mathematical Inſtruments, are Sights made to move and ſlide upon Croſs-ſtaves, Fore-ſtaves, *Davis*'s Quadrants, &c. See CROSS-STAFF, FORE-STAFF, &c.

VANES, or FANES *of Feathers*. } See { FEATHER.
VANES *of Windmills*. } See { WINDMILL.

VANILLA, or BANILLA, a little black Seed, growing in longiſh Pods; uſed in the *Weſt-Indies*, *France*, *Spain*, &c. as a principal Ingredient in the Compoſition of Chocolate; to give it Strength, and an agreeable Flavour. See CHOCOLATE.

It is alſo uſed to perfume Tobacco withal. See TOBACCO.

It is ſuppoſed to ſtrengthen the Brain, and Stomach; to attenuate viſcid Humours, provoke Urine, and the Menſes.

VAPORATION, in Chymiſtry, a Term applied to the Action of *Vapour*. See VAPOUR.

The Chymiſts have a Bath call'd a *Vaporatory*, or *Balneum Vaporationis*, or *Vaporis*; whereby the Warmth or Humidity of a *Vapour* is made to act on ſome other Body, that is to be warm'd, or moiſten'd. See BALNEUM, HEAT, &c.

VAPOROSUM *Balneum*, or VAPOUR-*Bath*, in Chymiſtry, a Term applied to a Chymiſt's Bath, or Heat, wherein the Body is placed ſo as to receive the Fumes of boiling Water.

The *Balneum Vaporoſum* conſiſts of two Veſſels, diſpoſed over one another in ſuch manner, as that the *Vapour* rais'd from the Water contain'd in the lower, heats the Matter encloſed in the upper. See HEAT.

The *Vapour-Bath* is very commodious for the diſtilling of odoriferous Waters, and the drawing of Spirit of Wine.

We alſo uſe the Term *Vapour-Bath*, when a ſick Perſon is made to receive the *Vapours* ariſing from ſome liquid Matter placed over a Fire. See BATH.

VAPOUR, in Meteorology, a thin Veſicle of Water or other humid Matter, fill'd or inflated with Air; which being rarefy'd to a certain degree by the Action of Heat, aſcends to a certain height in the Atmoſphere, where it is ſuſpended, till it return in form of Rain, Snow, or the like. See RAIN, and SNOW.

An Aſſemblage of a Number of Particles, or Veſicles of *Vapour*, conſtitutes what we call a *Cloud*. See CLOUD.

Some uſe the Term *Vapour*, indifferently, for all Fumes emitted, either from moiſt Bodies, as Fluids of any kind; or from dry Bodies, as *Sulphur*, &c. But Sir *I. Newton*, and other Authors, better diſtinguiſh between *humid* and *dry* Fumes, calling the latter *Exhalation*. See EXHALATION.

For the Manner wherein VAPOURS *are rais'd, and again precipitated*; ſee DEW, RAIN, HEAT, COLD, and BAROMETER.

For the Effect of VAPOUR *in the Formation of Springs*, &c. See SPRING, and RIVER.

The quantity of *Vapour* rais'd from the Sea by the Warmth of the Sun, is far greater than one would imagine. Dr. *Halley* has attempted to eſtimate it.

In an Experiment made with that view, and deſcribed in the *Philoſophical Tranſactions*, he found that a Quantity of Water no warmer than Air in Summer, loſt in *Vapour* in the Space of two Hours, no leſs than $\frac{1}{53}$ part of an Inch in depth: Now, for $\frac{1}{53}$ in two Hours, taking, for the eaſier Calculation, $\frac{1}{80}$ in the twelve Hours that the Sun is up each Day, it will raiſe $\frac{1}{10}$ of an Inch from the Surface of the Sea.

On this Suppoſition, every 10 ſquare Inches of the Surface of Water, yield in *Vapour*, *per Diem*, a Cubic Inch of Water; and each ſquare Foot, half a Wine Pint; every Space of four Foot ſquare, a Gallon; a Mile ſquare, 6914 Tuns; a ſquare Degree, ſuppoſed of 69 *Engliſh* Miles, will evaporate 33 Millions of Tuns: And if the *Mediterranean* be eſtimated at 410 Degrees long, and four broad, Allowances being made for the Places where it is broader, by thoſe where it is narrower, there will be 160 ſquare Degrees at Sea: and conſequently the whole *Mediterranean* muſt loſe in *Vapour*, in a Summer's Day, at leaſt, 5280 Millions of Tuns.

And this Quantity of *Vapour*, tho very great, is only the Remains of another Cauſe, which cannot be reduced to Rule; we mean the Winds; whereby the Surface of the Water is lick'd up, ſometimes faſter than it exhales by the Heat of the Sun; as is well known to thoſe that have conſider'd thoſe drying Winds. See EVAPORATION.

VAPOURS, in Medicine, a Diſeaſe, call'd popularly the *Hypo*, or *Hypochondriacal* Diſeaſe; and in Men, particularly, the *Spleen*. See SPLEEN.

'Tis ſuppoſed to be owing to a ſubtile *Vapour*, riſing from the lower Parts of the Abdomen, particularly the *Hypochondrium*, to the Brain; which it diſturbs, and poſſeſſes with wild, delirious, but generally diſagreeable Imaginations. See HYPOCHONDRIACAL *Diſeaſe*.

Vapours, ſuppoſed to be emitted from the Womb, in Women, are what we otherwiſe call *Hyſterical Affections*, or *Suffocations*, or *Fits of the Mother*. See HYSTERICAL, &c.

VAPOUR-*Bath*. See VAPOROSUM *Balneum*.

VARI, in Medicine, little, hard, ruddy Tumors, whitiſh about the Tips, and of the ſize of an Hemp-ſeed; frequently found on the Face and Neck of young People; chiefly ſuch as are much addicted to Venery.

If the red be very lively, the Cure is ſomewhat difficult; and tho the Puſtles be taken away, the Redneſs remains.

To which, if an Inflammation and Hoarſeneſs be added, 'tis a Symptom of an approaching Leproſy. See LEPROSY.

VARIABLE, in the new Doctrine of Infinites, is a Term applied chiefly by the foreign Mathematicians, to ſuch Quantities, as either increaſe, or diminiſh, according as ſome other Quantity either increaſes or diminiſhes.

Thus, the Semiordinates and Abſciſſes of a Circle, &c. are *Variable Quantities*; becauſe, if the one increaſe, the other increaſes likewiſe. See SEMIORDINATE, &c.

They are thus call'd, in contradiſtinction to *conſtant*, or *given*, or *ſtable Quantities*; which are always the ſame, tho others change; as the Semidiameter of a Circle, which remains the ſame, tho the Abſciſſes and Semiordinates increaſe.

Variable Quantities, are uſually denoted by the laſt Letters of the Alphabet, *x y z*. See QUANTITY.

Our *Engliſh* Authors, inſtead of *variable*, and *conſtant* Quantities, generally uſe the Terms *fluent*, and *ſtable* Quantities. See FLUENT.

The infinitely ſmall Quantity whereby a *variable* Quantity is continually increaſing, or diminiſhing, is called the *Fluxion*, or Difference; the Calculation whereof, is the Subject of the new *Methodus Differentialis*, or *Doctrine of Fluxions*. See DIFFERENTIAL, and FLUXION.

VARIANCE, in Law, an Alteration or Change of Condition in a Perſon, or Thing; after ſome former Concern or Tranſaction therewith.

Thus, if the Commonalty of a Town make a Compoſition with a Lord, and afterwards Bailiffs be granted by the King to the ſame Town; there, if the Lord commence any Suit for breach of the Compoſition, he muſt *vary* from the Word *Commonalty*, uſed in the Compoſition; and uſe *Bailiffs and Commonalty*.

The Term *Variance* is alſo uſed for an Alteration of ſomething formerly laid in a Plea. See PLEA.

VARIATION, in Geography, Navigation, *&c.* a Term apply'd to the Deviation of the Magnetical Needle, or Compaſs, from the true North-Point, towards either Eaſt, or Weſt; call'd alſo the *Declination*. See DECLINATION.

The Variation *or Declination of the Needle*, is properly defin'd, the Angle which a Magnetic Needle, ſuſpended at liberty, makes with the Meridian-Line on a horizontal Plane. See NEEDLE.

In the Sea Language, the *Variation* is uſually called *North-Eaſting*, or *North-Weſting*. See COMPASS, *&c.*

All Magnetic Bodies, we find, range themſelves, in ſome ſort, to the Meridian; but 'tis rare they fall in preciſely with it: In one Place, they decline from the North to the Eaſt, and from the South to the Weſt; and in another Place, on the contrary, from the North to the Weſt, and from the South to the Eaſt; and that, too, differently, at different Times. See MAGNET, and MAGNETISM.

Various are the Hypotheſes fram'd to account for this extraordinary Phænomenon: We ſhall only mention ſome of the later and more probable. The firſt is that of *Gilbert*, which is follow'd by *Cabeus*, &c.

Their Notion was, that 'tis the Earth, or Land, that draws the Needle out of its Meridional Direction; and hence they argued, that the Needle *vary'd* more, or leſs, as it was more or leſs diſtant from any great Continent: conſequently, that if it were placed in the middle of an Ocean, equally diſtant from equal Tracts of Land, on each ſide, Eaſtward and Weſtward, it would not decline either to the one or the other; but point juſtly North and South.

Thus, in the *Azores* Iſlands, which are equally diſtant from *Africa* on the Eaſt, and *America* on the Weſt, there is, in effect, found no *Variation*: but, as from the *Azores* you ſail towards *Africa*, the Needle begins to decline from the North to the Eaſt; and that ſtill more and more, till you reach the Shore.

If you ſtill proceed Eaſtward, the Declination gradually diminiſhes again; by reaſon of the Land left behind on the Weſt, which continues to draw the Needle.

The ſame holds till you arrive at a Place where there are equal Tracts of Land on each ſide, and there, again, there is no *Variation*.

The Obſervations of our Mariners in their *Eaſt-India* Voyages, ſeem to confirm this Syſtem: As they proceed towards the Cape of *Good Hope*, the *Variation* is ſtill Eaſtward; at length, arriving at the Cape *De las Aguillas*, q. d. *of the Needles*, the Meridian-Line, then, dividing *Africa* into two equal Parts; there is no *Variation* at all: But as they proceed further, and leave the *African* Coaſts on the Weſt, the *Variation* becomes Weſtward.

But the Misfortune is, the Law does not hold univerſally: In effect, a great Number of Obſervations of the *Variation*, in various Parts, made and collected by Dr. *Halley*, overturn the whole Theory.

Others, therefore, have recourſe to the Frame and Compages of the Earth, conſider'd as interwove with Rocks and Shelves; which being generally found to run towards the Poles, the Needle comes to have a general tendency that way; but which ſeldom going perfectly in the Direction of the Meridian, the Needle, of conſequence, has commonly a *Variation*. See EARTH.

Others hold various Parts of the Earth to have various degrees of the Magnetic Virtue; as ſome are more intermix'd with heterogeneous Matters, which prevent the free Action or Effect thereof, than others. See MAGNETISM.

Others aſcribe all to Magnetic Rocks, and Iron Mines, which affording more of the Magnetic Matter than other Parts, draw the Needle more. See IRON, *&c.*

Laſtly, others imagine Earthquakes, or High Tides, to have diſturb'd and diſlocated ſeveral conſiderable Parts of the Earth, and ſo chang'd the Magnetic Axis of the Globe, which originally was the ſame with the Axis of the Globe it ſelf.

But ſtill, that great Phænomenon, the *Variation of the Variation*, *i. e.* the continual Change of the Declination in one and the ſame Place, which the modern Obſervations do abundantly evince, is not accountable for, on any of theſe Foundations; nor even conſiſtent with 'em.

Dr. *Halley*, therefore, gives us a new Syſtem; the Reſult of a great Number of Obſervations; and even of a great Number of Voyages made, at the publick Charge, on this very Account: The Light that excellent Author has let into this obſcure Part of Natural Hiſtory is very great; and the Conſequences thereof in Navigation, *&c.* very conſiderable. Add, that he has reduced the divers *Variations* of divers Places to a preciſe Rule, or Order, which before appear'd all precarious, and arbitrary.

His Theory, therefore, will deſerve a more ample Detail.—The Obſervations it is built on, as laid down in the *Philoſophical Tranſactions*, are as follow.

Obſervations of the Variations *of the Needle, in divers Places, and at divers Times.*

From theſe Obſervations the learned Author gathers, 1ſt, That throughout all *Europe*, the *Variation*, at this Time, is *Weſt*; and more in the Eaſtern Parts thereof than the Weſtern, increaſing that way.——2d, That on the Coaſts of *America*, the *Variation* is *Weſterly*; increaſing all the way as you go Northerly along the Coaſt; ſo as to be above 20 Degrees at *Newfoundland*, nearly 30 Degrees in *Hudſon's Streights*, and not leſs than 57 Degrees in *Baffin's Bay*: And that as you ſail Eaſtward from this Coaſt, the *Variation* diminiſhes. Hence, he argues, ſomewhere between *Europe* and the North Part of *America*, there muſt be an Eaſterly *Variation*, or at leaſt no *Variation*.——3d, That on the Coaſt of *Brazil*, there is Eaſt *Variation*; increaſing as you go to the Southward, ſo as to be 12 Deg. at *Cape Frio*, and 20 Degrees and half over againſt *R. Plata*; and thence ſailing South-weſterly, to the Streights of

of *Magellan*, it decreaſes 17 Degrees, and at the Weſt Entrance about 14 Degrees.——4th, That Eaſtward of *Braſil*, this Eaſterly *Variation* dcreaſes, ſo as to be very little at *St. Helena* and *Aſcenſion*, and to be quite gone, and the Compaſs point true about 18 Degrees of Longitude Weſt from the Cape of *Good Hope*.—— 5th, That to the Eaſtward of the aforeſaid Places, a Weſtward *Variation* begins, and governs in all the *Indian* Sea, ariſing to 18 Degrees under the Equator, about the Meridian of the Northern Part of *Madagaſcar*; and 27 Degrees and a half in 39 Degrees South Latitude, near the ſame Meridian: Eaſterly from thence, the Weſt *Variation* decreaſes, ſo as to be not much above 8 Degrees at Cape *Comorin*, and about 3 Degrees upon the Coaſt of *Java*; and about the *Molucca Iſlands* to be quite gone; as alſo a little to the Weſtward of *Van Diemen's Land*.——6th, That to the Eaſtward of the *Molucca's* and *Van Diemen's Land*, in South Latitude, there ariſes another Eaſterly *Variation*, which ſeems not ſo great as the former, nor of ſo large Extent; for that at the Iſland *Rotterdam*, it is ſenſibly leſs than upon the Eaſt Coaſt of *New Guinea*; and at the Rate it decreaſes, it may well be ſuppoſed, that about 20 Degrees further Eaſtward, or 225 Degrees Eaſt Longitude from *London*, in the Latitude of 20 Degrees South, a Weſterly *Variation* begins.——7th, That the *Variation* taken at *Baldivia*, and at the Weſt Entrance of the Streights of *Magellan*, ſhews, That the Eaſt *Variation* noted in the third Obſervation, is decreaſing apace; and that it cannot well extend many Degrees into the *South Sea*, from the Coaſt of *Peru* and *Chili*, leaving room for a ſmall Weſterly *Variation* in that Tract of the unknown World that lies in the mid-way between *Chili* and *New Zealand*, and between *Hounds Iſland* and *Peru*.——8th, That in ſailing North-weſt from *St. Helena*, by *Aſcenſion*, as far as the Equator, the *Variation* continues very ſmall Eaſt, and as it were, conſtantly the ſame: So that in this Part of the World, the Courſe, wherein there is no *Variation*, is evidently no Meridian, but rather North-weſt.——9th, That the Entrance of *Hudſon's Streights*, and the Mouth of *R. Plata*, being nearly under the Meridian, at the one Place the Needle varies 29 Degrees and a half Weſt; at the other 20 Degrees and a half Eaſt.

Theory of the VARIATION *of the Needle.*

From the Circumſtances above rehearſed, the learned Author takes occaſion to aſſert, 'That the whole Globe of 'the Earth is one great Magnet, having four Magnetical 'Poles, or Points of Attraction; near each Pole of the E-'quator, two; and that in thoſe Parts of the World which 'lie near adjacent to any one of theſe Magnetical Poles, 'the Needle is govern'd thereby; the neareſt Pole being 'always predominant over the more remote.'

The Pole which at preſent is neareſt to us, he conjectures to lie in or near the Meridian of the Lands-End of *England*, and not above 7 Degrees from the Arctick Pole: by this Pole, the *Variation* in all *Europe* and *Tartary*, and the North Sea, are principally govern'd; tho ſtill with ſome regard to the other Northern Pole, whoſe Situation is in the Meridian, paſſing about the Middle of *California*, and about 15 Degrees from the North Pole of the World; to which the Needle has chiefly reſpect in all the North *America*, and in the two Oceans on either ſide thereof, from the *Azores* Weſtwards, to *Japan*, and farther.

The two Southern Poles, he imagines, are rather farther diſtant from the South Pole of the World: The one about 16 Degrees therefrom, in a Meridian ſome 20 Degrees to the Weſtward of *Magellan Streights*, or 95 Degrees Weſt from *London*: This commands the Needle in all South *America*, in the Pacifick Sea, and the greateſt Part of the Ethiopick Ocean.——The other ſeems to have the greateſt Power, and largeſt Dominions of all, as it is the moſt remote from the Pole of the World, being little leſs than 20 Deg. diſtant therefrom, in the Meridian which paſſes thro' *New Holland* and the Iſland *Celebes*, about 120 Degrees Eaſt from *London*: This Pole is predominant in the South Part of *Africa*, in *Arabia* and the Red Sea, in *Perſia*, *India*, and its Iſlands; and all over the Indian Sea, from the Cape of *Good Hope* Eaſtwards, to the middle of the great South Sea that divides *Aſia* from *America*.

Such ſeems to be the preſent Diſpoſition of the Magnetical Virtue, throughout the whole Globe of the Earth. It remains to ſhew, how this Hypotheſis accounts for all the *Variations* that have been obſerv'd of late; and how it anſwers to the ſeveral Remarks drawn from the Table.

1°, Then, it is plain, that as our *European* North Pole is in the Meridian of the Land's-End of *England*, all Places more Eaſterly than that, will have it on the Weſt ſide of their Meridian; and conſequently the Needle, reſpecting it with its Northern Point, will have a Weſterly *Variation*; which will ſtill be greater as you go to the Eaſtwards, till you come to ſome Meridian of *Ruſſia*, where 'twill be greateſt, and from thence decreaſe again. Accordingly, in fact, we find that at *Breſt* the *Variation* is but 1 Degree 3 Quarters; at *London*, 4 Degrees and an half; and at *Dantzick* 7 Degrees, Weſt. Again, to the Weſtward of the Meridian of the Land's-End, the Needle ought to have an Eaſterly *Variation*; were it not that (by approaching the *American* Northern Pole, which lies on the Weſt ſide of the Meridian, and ſeems to be of greater force than this other) the Needle is drawn thereby Weſtward, ſo as to counter-balance the Direction given by the *European* Pole, and to make a ſmall Weſt *Variation* in the Meridian of the Land's-End it ſelf. Yet, about the Iſle *Tercera*, 'tis ſuppoſed our neareſt Pole may ſo far prevail, as to give the Needle a little Turn to the Eaſt; tho but for a very little Space; the Counter-balance of thoſe two Poles permitting no conſiderable *Variation* in all the Eaſtern Part of the Atlantick Ocean; nor upon the Weſt Coaſt of *England* and *Ireland*, *France*, *Spain*, and *Barbary*: But to the Weſtward of the *Azores*, the Power of the *American* Pole, overcoming that of the *European*, the Needle has chiefly reſpect thereto; and turns ſtill more and more towards it, as you approach it. Whence it comes to paſs, that on the Coaſt of *Virginia*, *New England*, *Newfoundland*, and in *Hudſon's Streights*, the *Variation* is Weſtward; that is, increaſes as you go from thence towards *Europe*: and that it is leſs in *Virginia* and *New England*, than in *Newfoundland* and *Hudſon's Streights*.

2°, This Weſterly *Variation*, again, decreaſes, as you paſs over the North *America*, and about the Meridian of the middle of *California*, the Needle again points due North; and from thence Weſtwards to *Yedzo* and *Japan*, 'tis ſuppoſed the *Variation* is Eaſterly; and half Sea over, not leſs than 15 Degrees: And that this Eaſt *Variation* extends over *Japan*, *Yedzo*, Eaſt *Tartary*, and part of *China*, till it meet with the Weſterly, which is govern'd by the *European* North Pole, and which is the greateſt; ſomewhere in *Ruſſia*.

3°, Towards the South Pole the Effect is much the ſame; only that here the South Point of the Needle is attracted. Whence it will follow, That the *Variation* on the Coaſt of *Braſil*, at the River of *Plata*, and ſo on to the Streights of *Magellan*, ſhould be Eaſterly; if we ſuppoſe a Magnetical Pole ſituated about 20 Degrees more Weſterly than the Streights of *Magellan*. And this Eaſterly *Variation* doth extend Eaſtward over the greateſt Part of the Ethiopick Sea, till it be counterpoiz'd by the Virtue of the other Southern Pole; as it is about mid-way, between the Cape of *Good Hope*, and the Iſles of *Triſtan d'Acunha*.

4°, From thence Eaſtwards, the *Aſian* South Pole becoming prevalent, and the South Point of the Needle being attracted thereby, there ariſes a Weſt *Variation*, very great in Quantity and Extent; becauſe of the great Diſtance of this Magnetical Pole of the World. Hence it is, That all the Indian Sea, as far as *Hollandia Nova*, and farther, there is conſtantly a Weſt *Variation*; and that under the Equator it ſelf, it ariſes to no leſs than 18 Degrees, where 'tis moſt. Add, that about the Meridian of the Iſland of *Celebes*, being likewiſe that of this Pole, this Weſterly *Variation* ceaſes, and an Eaſterly begins, which reaches to the middle of the South Sea, between the middle of *Zelandia Nova* and *Chili*; leaving room for a ſmall Weſt *Variation*, govern'd by the *American* South Pole.

5°, From the whole it appears, That the Direction of the Needle in the Temperate and Frigid Zone, depends chiefly upon the Counterpoiſe of the Forces of two Magnetical Poles of the ſame Nature: As alſo why, under the ſame Meridian, the *Variation* ſhould be in one Place 29 Degrees and a half Weſt, and in another 20 Degrees and a half Eaſt.

6°, In the Torrid Zone, and particularly under the Equinoctial, reſpect muſt be had to all four Poles, and their Poſitions well conſider'd; otherwiſe it will not be eaſy to determine what *Variations* ſhall be; the neareſt Pole being always ſtrongeſt: yet not ſo, as not to be counter-balanc'd ſometimes by the united Forces of two more remote: Thus, in ſailing from *St. Helena* by the Iſle of *Aſcenſion*, to the Equator, on the North-weſt Courſe, the *Variation* is very little Eaſterly, and in that whole Tract unalterable; becauſe, the South *American* Pole (which is conſiderably the neareſt in the aforeſaid Places) requiring a great Eaſterly *Variation*, is counterpoiz'd by the contrary Attraction of the North *American*, and the *Aſian* South Pole; each whereof, ſingly, are, in theſe Parts, weaker than the *American* South Pole: and upon the North-weſt Courſe, the Diſtance from this latter is very little varied; and as you recede from the the *Aſian* South Pole, the Balance is ſtill preſerv'd by acceſs towards the North *American* Pole. In this Caſe, no notice is taken of the *European* North Pole; its Meridian being little remov'd from thoſe of theſe Places, and of it ſelf requiring the ſame *Variations* we here find.

After the ſame manner, may the *Variations* in other Places, under and near the Equator, be accounted for: So that

that the Hypotheſis muſt be allow'd very adequate, and ſufficient for the Phænomena.

Theory of the Variation of the VARIATION.

From the Obſervations abovemention'd, it ſeems to follow, that all the Magnetical Poles have a Motion Weſtward: but if it be ſo, 'tis evident, that it is not a Rotation about the Axis of the Earth; for then the *Variations* would continue the ſame, in the ſame Parallel of Latitude (the Longitude only changed) as much as the Motion of the Magnetical Poles: But the contrary is found by Experience; for there is no where, in the Latitude of 51 and an half North, between *England* and *America*, a *Variation* of 11 Degrees Eaſt, at this time; as it was once here at *London*. Wherefore, it ſeems that our *European* Pole is grown nearer the Arctick Pole than it was heretofore; or elſe, that it has loſt Part of its Virtue.

But whether theſe Magnetick Poles move altogether with one Motion, or with ſeveral; whether equally, or unequally; whether circular, or libratory: If circular, about what Centre; if libratory, after what manner? are Things yet unknown.

This Theory ſeems yet ſomewhat obſcure, and defective: To ſuppoſe four Poles in one Magnetical Globe, in order to account for the *Variation*, is a little unnatural; but to conceive thoſe Poles to move, and that by ſuch Laws as to ſolve the *Variation* of the *Variation*, is ſtill more extraordinary. In effect, the Solution appears as implicite and arbitrary as the Problem.

The Author, therefore, found himſelf under a Neceſſity to ſolve the Phænomena of his Solution; and with this View, preſented the following Hypotheſis.

The external Parts of the Globe, he conſiders as the Shell, and the internal as a *Nucleus*, or inner Globe; and between the two he conceives a fluid Medium. That inner Earth having the ſame common Centre, and Axis of diurnal Rotation, may turn about with our Earth each 24 Hours. Only the outer Sphere having its turbinating Motion ſome ſmall Matter either ſwifter or ſlower than the internal Ball; and a very minute difference in length of Time, by many Repetitions, becoming ſenſible; the internal Parts will by degrees recede from the external; and not keeping pace with one another, will appear gradually to move, either Eaſtward or Weſtward, by the difference of their Motions.

Now, ſuppoſing ſuch an internal Sphere, having ſuch a Motion, the two great Difficulties in the former Hypotheſis are eaſily ſolv'd: For if this exterior Shell of Earth be a Magnet, having its Poles at a diſtance from the Poles of diurnal Rotation, and if the internal *Nucleus* be likewiſe a Magnet, having its Poles in two other Places, diſtant alſo from the Axis; and theſe latter, by a gradual and ſlow Motion, change their Place in reſpect of the External: We may then give a reaſonable Account of the four Magnetical Poles aforemention'd, as likewiſe of the Changes of the Needle's *Variations*.

The Period of this Motion being wonderful great, and there being hardly an hundred Years ſince theſe *Variations* have been duly obſerv'd; it will be very hard to bring this Hypotheſis to a *Calculus*; eſpecially ſince, tho the *Variations* do increaſe and decreaſe regularly in the ſame Place, yet in differing Places, at no great diſtance, there are found ſuch caſual Changes thereof, as can no ways be accounted for by a regular Hypotheſis; but ſeem to depend upon the unequal and irregular Diſtribution of the Magnetical Matter within the Subſtance of the external Shell or Coat of the Earth, which deflect the Needle from the Poſition it would acquire from the Effect of the general Magnetiſm of the whole. Of which, the *Variations* at *London* and *Paris* give a notable Inſtance; for the Needle has been conſtantly about $1\frac{1}{2}$ more Eaſterly at *Paris* than at *London*: Tho it be certain, that according to the general Effect, the Difference ought to be the contrary way; notwithſtanding which, the *Variations* in both Places do change alike.

Hence, and from ſome other things of like Nature, it ſeems plain, that the two Poles of the external Globe are fix'd in the Earth; and that if the Needle were wholly govern'd by them, the *Variations* thereof would be always the ſame, with ſome Irregularities upon the Account juſt now mention'd. But the internal Sphere having ſuch a gradual Tranſlation of its Poles, does influence the Needle, and direct it variouſly, according to the Reſult of the attractive or directive Power of each Pole; and conſequently, there muſt be a Period of the Revolution of this internal Ball; after which, the *Variations* will return again, as before. But if it ſhall in future Ages be obſerv'd otherwiſe, we muſt then conclude, that there are more of theſe internal Spheres, and more Magnetical Poles than four; which, at preſent, we have not a ſufficient number of Obſervations to determine, and particularly in that vaſt *Mer del Zur* which occupies ſo great a Part of the whole Surface of the Earth.

If then two of the Poles be fix'd, and two moveable, it remains to aſcertain, which they are that keep their Place. The Doctor thinks it may be ſafely determin'd, that our *European* North Pole is the moveable one of the two Northern Poles, and that which has chiefly influenc'd the *Variations* in theſe Parts of the World: For in *Hudſon's Bay*, which is under the Direction of the *American* Pole, the Change is not obſerv'd to be near ſo faſt, as in theſe Parts of *Europe*, tho that Pole be much farther removed from the Axis. As to the South Poles, he takes the *Aſian* Pole to be fixed, and conſequently the *American* Pole to move.

This granted, 'tis plain the fixed Poles are the Poles of this external Shell or Cortex of the Earth; and the other the Poles of the Magnetical *Nucleus*, included and moveable within the other. It likewiſe follows, that this Motion is Weſtwards; and, by conſequence, that the aforeſaid *Nucleus* has not preciſely attain'd the ſame Degree of Velocity with the exterior Parts in their diurnal Revolutions; but ſo very nearly equals it, that in 365 Revolves, the Difference is ſcarce ſenſible. That there is any difference, ariſes hence, That the Impulſe whereby the diurnal Motion was impreſs'd on the Earth, was given to the external Parts; and from thence, in time, communicated to the internal: but not ſo, as yet perfectly to equal the Velocity of the firſt Motion impreſs'd on, and ſtill conſerv'd by, the ſuperficial Parts of the Globe.

As to the preciſe Period, we want Obſervations to determine it; tho the Author thinks we may with ſome Reaſon conjecture, that the *American* Pole has moved Weſtward 46 Degrees in 90 Years; and that the whole Period thereof is perform'd in about 700 Years.

Mr. *Whiſton*, in his *New Laws of Magnetiſm*, raiſes ſeveral Objections againſt this Theory; *which ſee under the Article* MAGNETISM.

To obſerve the VARIATION *or Declination of the Needle.*

Draw a Meridian-Line, as directed under the Article MERIDIAN: Then, a Style being erected in the middle thereof, place a Needle thereon, and draw the right Line it hangs over. Thus will the Quantity of the *Variation* appear. See COMPASS.

Or thus: As the former Method of finding the Declination cannot be applied at Sea, others have been thought of; the Principal whereof follow. Suſpend a Thread and Plummet over the Compaſs, till the Shadow paſs thro' the Centre of the Card: Obſerve the Rhumb, or Point of the Compaſs, which the Shadow touches when 'tis the ſhorteſt. For the Shadow is then a Meridian-Line: Conſequently the *Variation* is ſhewn.

Or thus: Obſerve the Rhumb wherein the Sun or ſome Star riſes and ſets: Biſſect the Arch intercepted between the riſing and ſetting; the Line of Biſſection will be the Meridian-Line: Conſequently, the Declination is had as before. The ſame is had from two equal Altitudes of the ſame Star, obſerved either by Day or Night.

Or thus: Obſerve the Rhumb wherein the Sun, or a Star riſes and ſets; and from the Latitude of the Place, find the Eaſtern or Weſtern Amplitude: For the difference between the Amplitude, and the diſtance of the Rhumb obſerved, from the Eaſtern Rhumb of the Card, is the *Variation* ſought.

Or thus: Obſerve the Altitude of the Sun, or ſome Star, S I, (Tab. *Navigation*, Fig. 16.) whoſe Declination is known; and note the Rhumb in the Compaſs to which it then correſponds. Since then in the Triangle Z P S we have three Sides, *viz.* P Z, the Complement of the Elevation of the Pole P R; S P, the Complement of the Declination D S; and Z S, the Complement of the Altitude S I; the Angle P S Z is found by Spherical Trigonometry, (ſee TRIANGLE:) the contiguous one to which, *viz.* A Z S, meaſures the Azimuth H I. The difference, then, between the Azimuth, and the Diſtance of the Rhumb obſerved from the South, is the *Variation* ſought.

Note, To have the Eaſtern or Weſtern Amplitude accurately, regard muſt be had to the Refraction; the Laws whereof are abundantly deliver'd under the Article REFRACTION.

For the more commodious obſerving in what Rhumb of the Compaſs the Sun, or a Star is ſeen, it will be proper to have two little Apertures, or glaſs Windows oppoſite to each other under the Limb thereof; with a Teleſcope Sight fitted to one of them, and to the other a fine Thread.

VARIATION *of the* VARIATION, *or Declination*, is the Change in the Declination of the Needle, obſerved at different Times in the ſame Place.

This *Variation*, firſt, 'tis ſaid, diſcover'd by *Gaſſendus*, is found to obſerve one and the ſame Law pretty regularly.

It is ſuppoſed owing to the difference of Velocity of the Motions of the internal and external Parts of the Globe. We want Obſervations of two or three hundred Years, to determine the Quantity of this *Variation* in any certain Time: but from what Obſervations we have, Dr. *Halley* computes it to be at about 23 Degrees in 90 Years: So that in 700 Years it will come round; and every Place have the ſame *Variation* it had.——*See more at large under* VARIATION, and MAGNETISM.

VARIATION *of Quantities*, in Algebra. See COMBINATION, and PERMUTATION.

VARIATION, in Aſtronomy. The *Variation of the Moon*, called alſo the *Reflection of her Light*, is the third Inequality obſerv'd in the Moon's Motion; whereby, when out of the Quadratures, her true Place differs from her Place twice equated. See PLACE, EQUATION, &c.

Sir *I. Newton* takes the Moon's *Variation* to ariſe partly from the form of her Orbit, which is an Ellipſis; and partly from the Inequality of the Parts of Space which the Moon deſcribes in equal Times, by a Radius drawn to the Earth. See MOON.

To find the greateſt Variation, obſerve the Moon's Longitude in the Octants; and for the Time of Obſervation, compute the Moon's Place twice equated: The difference between the computed and the obſerv'd Place, is the greateſt *Variation*.

Tycho makes the greateſt *Variation* 40′ 30″: *Kepler* makes it 51′; Sir *I. Newton* makes the greateſt *Variation* at a mean diſtance between the Sun and the Earth, to be 35′ 9″; at the other Diſtances, the greateſt *Variation* is in a Ratio compounded of the duplicate Ratio of the Times of the Moon's Synodical Revolution directly, and a triplicate Ratio of the Diſtance of the Sun from the Earth inverſly. *Phil. Nat. Princ. Math.* Prop. XXXIX. Lib. iii.

VARIATION, in the *Italian* Muſick, is underſtood of the different Manners of playing or ſinging a Tune, or Song; whether by ſubdividing the Notes into ſeveral others, of leſſer Value, or by adding Graces, &c.——In ſuch manner, however, as that one may ſtill diſcern the Ground of the Tune thro' all the Enrichments; which ſome call *Embroideries*.

Thus, *e. g.* the divers Couples of Chacons, *Spaniſh* Folies, Gavots, *French* Paſſacaillies, &c. are ſo many *Variations*: So alſo many Diminutions of Courants, Gavots, and other Pieces for the Lute, Harpſichord, &c. are real *Variations*.

VARICIFORMES *Paraſtatæ*, in Anatomy, a Name ſome Authors give to two Veſſels near the Bladder; by reaſon of their many Turnings; ſerving to work the Seed the better. See PARASTATÆ.

VARICOSUM *Corpus*, in Anatomy, the ſame as *Corpus Pyramidale*. See PYRAMIDALE *Corpus*.

VARIEGATION, among Botaniſts and Floriſts, the Act or Art of ſtreaking or diverſifying the Leaves, &c. of Plants and Flowers with ſeveral Colours.

Variegation is either *Natural*, or *Artificial*.

Of *Natural Variegation* there are three Kinds; the firſt ſhewing it ſelf in yellow Spots here and there in the Leaves of Plants; call'd by the Gardeners the *yellow Bloach*.

The ſecond, call'd the *white Bloach*, marks the Leaves with a great number of white Spots, or Stripes; the whiteſt lying next the Surface of the Leaves, uſually accompany'd with other Marks of a greeniſh white, that lie deeper in the Body of the Leaves.

The third, and moſt beautiful, is where the Leaves are *edg'd* with white, being owing to ſome Diſorder or Infection in the Juices, which ſtains the natural Complexion or Verdure of the Plant.

Variegation is in it ſelf a Diſeaſe; and theſe are only ſo many Species, or rather Degrees thereof.

In the *yellow*, the Diſeaſe is the ſlighteſt: The *white* is a ſure Sign of a deep Infection, and Weakneſs in the Plant: which is further evinc'd by this; that no two Leaves are ever mark'd exactly like. This ſometimes degenerates into the third, or *edg'd* Kind; which is a total and immoveable Diſeaſe, that lays hold not only of the Leaves, but of the Wood, and even the Fruit, Seed, &c.

In the two firſt Kinds, there is a poſſibility of recovering the Plants to their native Verdure, by inarching 'em into a healthful Stock of the ſame Species, and letting the Stocks ſtand a Year or two join'd together; by which means, the Juices of the ſtrong Stock overpowering the Diſtemper, throw off the morbid Humours by Perſpiration: But the third Kind is incurable; no Art can recover the edg'd Plant to produce plain green Leaves again.

Artificial Variegation, is perform'd by inarching, or inoculating a ſtriped, or *variegated* Plant into a plain one of the ſame ſort: as a *variegated* common Jeſſamin, into a plain, common, *Spaniſh*, *Brazil*, or *Indian* Jeſſamin. See INOCULATION, and ABLACTATION.

A ſingle Bud, or Eye, Mr. *Bradley* obſerves, being plac'd in the Eſcutcheon of a diſtemper'd Tree, where it can only receive Nouriſhment from the vitiated Juices, will become *variegated* proportionably to the Nouriſhment it draws; and will partake more of the white or yellow Juice, than if a Branch ſhould be inarch'd: the Bud having nothing to nouriſh it, but the Juices of the Plant it is inoculated on; whereas, a Cyon inarch'd is fed both by the ſtriped Plant, and the healthful one.

As to the natural Stripes, or *Variegations*, there are ſome particular Circumſtances to be obſerv'd; 1°, That ſome Plants only appear *variegated*, or bloach'd in the Spring and Autumn; the Stains diſappearing as they gather Strength in Summer: Of this Kind are Rue, Thyme, and Pot Marjoram.

2°, Some Plants are continually bloach'd in the ſpongy Part of their Leaves; the Sap-Veſſels all the Time remaining of a healthful green: Such are the Alaternus, Orange-Mint, &c. which being ſtrengthen'd by rich Manure, or being inarch'd into healthful Plants, throw off the Diſtemper.

3°, In other Plants, the Diſeaſe is ſo rooted and inveterate, that it is propagated with the Seed: Such are the Archangel, Water Betony, Bank Creſs, Borage, Striped Salary, and Sycamore. The Seeds of which produce ſtriped Plants.

VARIOLÆ, in Medicine, a contagious Diſeaſe, popularly called the *Small Pox*.

It is call'd *Variolæ*, as ſhewing it ſelf in Puſtles, or little Tumors like *Varices*; or as *variegating* the Skin. See *Small* Pox.

VARIORUM, in Matters of Literature, a Term or Phraſe of Abreviation, uſed for an Edition of a Claſſic Author, printed in *Holland*, with the Notes of divers Authors thereupon; *Cum Notis Variorum*, or *Cum Selectis Variorum Obſervationibus*. See EDITION.

In this Senſe, we ſay, *Plautus Variorum*; a Set of *Dutch Variorums*, &c.

The *Variorums*, for the generality, are the beſt Editions.

The Word is the Genitive Plural of the Latin *Varius*, different, divers.

VARIX, in Medicine, a little Dilatation of a Part of a Vein, ſo as to make it bulge out, or thruſt the Skin above its natural level. See VEIN.

Sometimes, it is confin'd to one ſingle Branch of a Vein; and ſometimes it extends to ſeveral; and ſometimes runs crooked, and bent, in various Knots and Circumvolutions.

It happens oftneſt to the Crural and Hemorrhoidal Veins; ſometimes, alſo, to thoſe in the Teſtes, and frequently in the Abdomen and Breaſts of pregnant Women, and ſuch as give ſuck.

It is ſuppoſed owing to the too great abundance or thickneſs of the Blood; or to the Relaxation of the Membranes of the Veins; immoderate Labour, Sprains, Cramps, too great Preſſure or Stricture by Bandages; and Stagnations of the Blood from a Plethora, Cacochymia, &c. may give occaſion thereto.

Melancholic Perſons, and thoſe who feed on coarſe Meats, are moſt ſubject to them: The generality of Women with Child have *Varices* on their Thighs and Legs, occaſion'd by the *Fœtus* compreſſing the Iliac Veins; and by that means preventing the Reflux of the Blood to the Heart.

Varices happening ſpontaneouſly, and proving of a moderate ſize, are rarely dangerous; but even are allow'd ſerviceable in caſe of the Hemorrhoids. When immoderate, they ſometimes occaſion a Cachexy, Dropſy, or Conſumption.

The Cure is to be attempted by Evacuations, as Phlebotomy and Catharticks; external Applications, as diſcutient Fomentations, Cataplaſms, Embrocations, Bandages, &c. Or, laſtly, where the Caſe grows dangerous, by Inciſion.

The Word is pure *Latin*, form'd from the Verb *Variare*; by reaſon of the Turns and Meanders of the Veins, which the Tumor ſometimes follows.

Hernia VARICOSA, in the Teſtes, is known by the Situation of the Tumor, the Courſe of the Vein, Relaxation of the Part, or its appearing inflated with Air, diſtended, and painful. See HERNIA.

It is remedy'd by a proper Truſs, or Bandage, with the Medicines abovemention'd.

VARLET. See VALET.

VARNISH, or VERNISH, a thick, viſcid, ſhining Liquor; uſed by Painters, Gilders, and various other Artificers, to give a gloſs and luſtre to their Works, as alſo to defend 'em from the Weather, Duſt, &c.

There are ſeveral Kinds of *Varniſh* in uſe; as the *Siccative*, or *Drying Varniſh*, made of Oil of Aſpin, fine Turpentine, and Sandarac, melted together.

White Varniſh, call'd alſo *Venetian Varniſh*; made of Oil of Turpentine, fine Turpentine, and Maſtick.

Spirit of Wine Varniſh, made of Sandarac, White Amber, Gum-Elemy, and Maſtick; ſerving to gild Leather, Picture Frames, &c. withal.

Gilt Varniſh, made of Linſeed Oil, Sandarac, Aloes, Gum-Gutta, and Litharge of Gold.

China Varniſh, made of Gum Lacca, Colophony, Maſtick, and Spirit of Wine.

And, laſtly, the Common *Varniſh*; which is only common Turpentine, diſſolv'd in Oil of Turpentine.

Beſides theſe *Varniſhes*, there are *hard* and *ſoft Varniſhes*, or Grounds, uſed by the Etchers and Engravers. See ETCHING.

VARNISH, is alſo uſed for a kind of ſhining Plaiſter, wherewith Potters Ware, Delft Ware, China Ware, &c. are cover'd, to give them a Smoothneſs and Luſtre. Melted Lead is the *Varniſh* us'd for the firſt; and Smalt for the ſecond.

The true *Varniſh* uſed by the *Chineſe* and *Japoneſe*, to give that inimitable Luſtre to their Porcelain, is one of the grand Secrets in that Manufacture; and the only thing wanting, to make *Delft* and *French* Ware vie with the *Chineſe*. Several have deſcribed the Preparation thereof; particularly *Kircher*: but none ever ſucceeded in the Trial. See PORCELAIN.

VARNISH is alſo a Term given to the Colours which antique Medals have got in the Earth. See MEDAL.

The Value of a Medal is heighten'd by a Beauty which Nature alone is able to give, and Art has never yet attain'd to counterfeit: we mean, the Colour or *Varniſh* which certain Soils tinge the Medal withal; ſome with a blue, almoſt as beautiful as that of a Turquoiſe; others with an inimitable Vermilion Colour; others with a certain ſhining poliſh'd brown, infinitely finer than our Brazil Figures.

The moſt uſual *Varniſh* is a fine green, which hangs to the moſt delicate Strokes without effacing them; much more accurately than the fineſt Enamel does on Metals.

Braſs alone is ſuſceptible of it; for as to Silver, the green Ruſt that gathers on it always ſpoils it; and it muſt be ſcower'd off with Vinegar, or Lemon Juice.

There is alſo a *falſe*, or *modern Varniſh*; which the Falſifiers of Medals give to their Counterfeits, to give them the Air of Antiquity: 'Tis diſcover'd by its being ſofter than the natural *Varniſh*, which is as hard as the Metal it ſelf.

Some lay their ſpurious Medals under-ground, where they contract a degree of *Varniſh* that may impoſe on the leſs knowing: Others uſe Sal Armoniac, mix'd with Vinegar; others burnt Paper.

VAS, *Veſſel*. See VESSEL.

VAS-*Breve*, q. d. *Short Veſſel*, in Anatomy, a Veſſel at the bottom of the Stomach; thus called from its ſhortneſs. See STOMACH.

It ſends divers little Branches from the bottom of the Stomach to the Spleen; or, according to the Uſe the Antients imagin'd it to be of, from the Spleen to the Stomach: For their Notion was, that by means of this Veſſel, the Spleen ſupplied the Stomach with an acid Juice; which acting on the inner nervous Membranes of the Stomach, caus'd the Senſation of *Hunger*; and at the ſame time mixing with the Foods contain'd therein, aſſiſted by its acid quality in the Diſſolution thereof. See SPLEEN, HUNGER, &c.

But upon examining the little Branches of this Veſſel more accurately, we find they don't pierce into the Stomach, and that they are no more than Branches of Veins, ſerving to return the Blood into the Splenic Vein; whence it paſſes into the *Vena Porta*. See SPLENIC, and PORTA.

VASA *Adipoſa*, *Præparantia*, &c. See ADIPOSA, PRÆPARANTIA, &c.

VASA *Concordiæ*, among Hydraulic Authors, are two Veſſels, ſo conſtructed, as that one of them, tho full of Wine, won't run a Drop, unleſs the other, being full of Water, do run alſo.

Their Structure and Apparatus may be ſeen in *Wolfius*, *Element. Matheſ.* T. II. Hydraul.

VASCULAR, in Anatomy, is applied to any thing conſiſting of divers Veſſels, Veins, Arteries, &c.

Thus, we ſay, The *Vaſcular* and Valvular Texture of the Lungs.

All the Fleſh in an animal Body is found to be *Vaſcular*, none of it Parenchymous, as the Antients imagin'd. See FLESH, PARENCHYMA, &c.

VASCULAR, VASCULARIUS, in Antiquity, was the Denomination of a kind of Tradeſmen, or Artificers, among the antient *Romans*.

The *Vaſcularii* were properly a kind of Goldſmiths, or Workmen who made Silver and Gold Veſſels without Relievo's, or Figures of different Matter thereon.

Hence, according to *Salmaſius*, it is, that *Cicero* in his VIth Oration againſt *Verres*, diſtinguiſhes *Vaſcularius* from *Cælator*.

In the Art called by the *Greek* Ἐμπαιστικὴ, which was the Art of Superadding Ornaments of precious Stones, or rich Metals, to Vaſes of other Metals; the *Vaſcularii* and *Cælatores* were different; the firſt being thoſe who made the *Vaſe*, the ſecond thoſe who added the Ornaments: But in the Art called Τορευτικὴ, or the Art of cutting Bas Reliefs, or ſtamping other Figures on Metal; the *Vaſcularii* were alſo *Cælatores*, or Engravers: that is, they who made the Vaſe, made alſo the Relievos, or Figures wherewith it was enrich'd.

VASCULIFEROUS *Plants*, are, according to the Botaniſts, ſuch as beſides the common Calyx, have a peculiar Veſſel or Caſe to contain the Seed; which is ſometimes divided into Cells. See PLANT.

Theſe have always a Monopetalous Flower; either uniform, or difform. See MONOPETALOUS.

The former, have their Seeds all divided, 1°, into two Partitions, as the *Hyoſcyamus*, *Nicotiana*, *Priapæa*, and the *Gentiana*. 2°, Into three Partitions, as the *Convolvulus*, *Speculum Veneris*, *Trachelium*, *Rapunculus Campanula*, *Repunculus Corniculatus*, &c. 3°, Into four Partitions; as the *Stramonium*.

Thoſe of the latter Kind, which have a difform Monopetalous Flower, as the *Linaria Pinguicula*, *Antirrhinum*, *Ariſtolochia*, *Scrophularia*, *Digitalis*, *Pedicularis*, *Melampyrum*, *Euphraſia*, &c.

VASE, a Term of equal import with the Latin *Vas*, whence it is form'd; and the Engliſh *Veſſel*.

It is applied to the antient Veſſels, dug from under-ground, or otherwiſe found, and preſerv'd in Cabinets, &c. as Veſſels of Sacrifice, Urns, &c. and to other more modern Veſſels which are rather of Curioſity and Shew than Uſe; as thoſe of Cryſtal, Porcelain, &c.

VASES, in Architecture, are certain Ornaments, plac'd on Corniches, Socles, or Pedeſtals; repreſenting the Veſſels of the Antients; particularly thoſe uſed in Sacrifice, as the *Præfericulum*, *Simpulum*, Incenſe-Pots, and Flower-Pots: all which are occaſionally enrich'd with Baſſo Relievo's.

They are commonly placed there to crown or finiſh Facades, or Frontiſpieces. See CROWNING.

They are frequently call'd *Acroteria*; and are uſually inſulate. See ACROTERIA.

Vitruvius mentions a kind of *Theatrical Vaſes*, made of Braſs, or Earthen Ware, call'd *Echeia*; which they diſpos'd in private Places, under the Steps and Seats of the Theatres, to aid and increaſe the Reflection and Reſonance of the Actors Voices, &c. See THEATRE.

'Tis ſaid, there are *Vaſes* of this Kind in the Cathedral Church of *Milan*.

VASE is particularly uſed in Architecture, to ſignify the Body of the *Corinthian* and *Compoſite* Capital; call'd alſo the *Tambour*, or *Drum*; and ſometimes the *Campana*, or *Bell*. See CORINTHIAN, and CAMPANA.

VASE is alſo ſometimes uſed among Floriſts, for what they otherwiſe call the *Calyx*.

The *Vaſe*, or rather Calyx of a Tulip, is the Top, or Head of a Tulip; the Leaves whereof form a kind of *Vaſe*, or Cup. See CALYX.

Goldſmiths, Pewterers, &c. alſo uſe *Vaſe* for the middle of a Church Candleſtick; which is uſually of a roundiſh Figure, bordering ſomewhat on that of a *Vaſe*.

VASSAL, in our antient Cuſtoms, a Perſon who vow'd Fidelity, and Homage to a Lord, on account of ſome Land, &c. which he held of him, in Fee. See FEALTY, HOMAGE, LORD, &c.

The *Vaſſal*, *Vaſſallus*, was alſo called *Piratus*, *Lord's-man*, and *Fee-man*; but now the Denomination is chang'd into that of *Tenant in Fee*. See TENANT.

They ſometimes alſo uſed the Term *Vaſſour* for *Vaſſal*; whence *Vavaſſour*. See VAVASSOUR.

If a *Vaſſal* offended his Lord grievouſly, either in Perſon, or in Honour, he committed the Crime of Felony; which carry'd with it a Confiſcation of his Fee. See VASSALAGE.

A *Rear* VASSAL, is he who holds of a Lord, who himſelf is *Vaſſal* of another Lord. See MESNE.

VASSAL was alſo antiently uſed for *Soldier*; by reaſon Fees, at firſt, were given to none but Military Men. See FEE.

Du Cange will have the Word to come from *Vaſſus*, which antiently ſignify'd a Servant or Domeſtic of a Prince, and ſometimes the *Comites*, or *Aſſeſſores* in publick Trials.

Menage, after *Cujas*, takes *Vaſſal* to have been form'd of *Geſſe*, or *Geſſus*; an antient *Gauliſh* Word, ſignifying Fellow, or Companion in Arms; from *Geſſo*, or *Geſſum*, or *Jæſum*, a kind of Javelin us'd among them.

Voſſius derives *Vaſſal* from *Vas*, *Pledge*; whence alſo he will have it to be, that they are ſometimes called *Fideles*.

VASSALAGE, the State of a *Vaſſal*; or a Servitude and Dependency on a ſuperior Lord. See VASSAL.

Antiently, they diſtinguiſh'd between *Liege Vaſſalage* and *Simple Vaſſalage*.

Liege Vaſſalage only belong'd to the King; as carrying with it an Obligation on the ſide of the *Vaſſal*, to ſerve his Lord in War againſt all Perſons whatever.

In all *Simple Vaſſalage*, the Fealty, or *Liege Vaſſalage*, was ſtill reſerv'd to the King.

Some alſo make *Active Vaſſalage*, and *Paſſive*: The firſt is the Right of Fealty reſiding in the Lord; the ſecond, the Service and Duties incumbent on the Tenant.

VASTO, in Law, a Writ that lies for the Heir, againſt the Tenant for Life, or Years, for making waſte; or for him in the Reverſion, or Remainder.

VASTUS, in Anatomy, a Name common to two Muſcles of the Leg, diſtinguiſh'd into *internal*, and *external*; thus call'd from their largeneſs: both of 'em ſerving to extend the Leg.

VASTUS *Externus*, ſprings from the Root of the great *Trochanter*, and from the *Linea Aſpera*; outwardly tendinous and inwardly fleſhy; and deſcending obliquely forwards, becomes, *vice verſa*, tendinous inwardly and fleſhy outwardly; till meeting the Tendon of the *Rectus*, it grows quite tendinous, and is inſerted together with it.

VASTUS *Internus*, ariſes likewiſe partly tendinous, and partly fleſhy, from the *Linea Aſpera*, immediately below the leſs *Trochanter*, upon the outſide of the *Tibia*; and is continued almoſt to the lower *Apophyſes* thereof, on the inſide: whence it deſcends obliquely, and growing tendinous, is inſerted with the former.

VAT, or FAT, a kind of Veſſel, uſed to hold Wine, Ale, Beer, Syder, or any other Liquor, in the time of its Preparation.

VATICAN, is properly the Name of one of the ſeven Hills whereon *Rome* ſtands: On the Foot hereof is the famous Church of St. *Peter*, hence called the *Vatican*; and a magnificent Palace of the Pope, which has the ſame Denomination.

Hence ariſe divers figurative Expreſſions; as, the *Thunderbolt of the Vatican*, *q. d.* the Pope's Anathema, *&c.*

The Library of the *Vatican* is one of the moſt celebrated in the World: It is particularly remarkable for its Manuſcripts. Towards the beginning of the laſt Century, it was greatly augmented by the addition of that of the Elector *Palatine*. It is open to all the World three or four times a-Week.

In it are ſhewn a *Virgil*, *Terence*, &c. above a thouſand Years old; the Manuſcript whereon the Edition of the Septuagint was made; and abundance of Rabbinical Manuſcripts. See LIBRARY.

The Word, according to *Aulus Gellius*, is derived from *Vaticinium*, Prophecy; by reaſon of the Oracles and Predictions which were uſed to be deliver'd there by the Inſpiration of an antient Deity, called *Vaticanus*; who was ſuppoſed to unbind the Organ of Speech in new-born Children; and whom others will have to be no other than *Jupiter*, conſider'd in that Capacity.

VATICINATION, the Act of Prophecying or Divining. See DIVINATION, and PROPHECY.

VAVASOR, or VALVASOR, or VAVASOUR, or VALVASOUR, in our antient Cuſtoms, a Diminutive of *Vaſſal*, or *Vaſſor*; ſignifying a *Vaſſal of a Vaſſal*, or one who held a Fee of another *Vaſſal*. See VASSAL.

Yet, *Camden*, and others, hold *Vavaſor* to be a Dignity, next below that of a Baron: He adds, that the Word is form'd of *Vas ſortitum ad Valetudinem*, a Veſſel choſen for Safety, and Health.

Some derive the Word *à valvis*, *quaſi obligatus ſit adſtare ad valvas Domini*, *vel dignus ſit eas intrare*; as being a Perſon oblig'd to wait at his Lord's Door, or worthy to enter thereat: But the Etymology is ridiculous enough.

Du Cange ſays, they were call'd *Valvaſores*, and *Valvaſini*; and were of two Kinds: the *great*, called *Valvaſores*, who held of the King; ſuch were Counts and Barons: and the *leſſer*, call'd *Valvaſini*, who held of the former.

VAVASORY, the Quality of the Lands, or Fee held by a *Vavaſor*.

There are *baſe Vavaſories*, and *frank*, or *noble Vavaſories*; according as it hath pleas'd the Lord to make his *Vavaſour*.

Baſe Vavaſories are thoſe for which the Lord of the Fee owes Summage, Light-horſe, Rents, or other Services.

Free Vavaſories are ſuch as are exempt from theſe Services. *Quod dicitur de Baronia non eſt obſervandum in* Vavaſoria, *vel aliis minoribus feodis quam Baronia, quia caput non habent ſicut Baronia.* Bract. Lib. II. cap. 39.

VAUDOIS, or VALDENSES, or WALDENSES, a Name given to a Sect of Chriſtians, who made their firſt appearance about the Year 1160; or, as others will have it, about the Year 1118.

The Occaſion of their Riſe is thus deliver'd: 'In an 'Aſſembly of ſeveral of the more conſiderable Citizens of 'Lyons, one of 'em fell down ſuddenly dead in the middle. 'Upon which, *Pierre Valdo*, who was one of the Number, 'being ſtruck with the Accident, diſtributed a large Sum 'of Money among the Poor on the Spot. This drawing a 'great number of People to follow him, he exhorted them 'to embrace a voluntary Poverty, after the Example of Je'ſus Chriſt and his Apoſtles: And as he was a Man of 'ſome learning, he expounded to 'em the New Teſtament 'in the vulgar Tongue.

'The Clergy ſoon began to cry out on him as a raſh In'truder: but he, deſpiſing their Reprimands, ſtill held on; 'and even went further. For the Accuſations of the Prieſts 'having exaſperated him, he began to declaim againſt 'em; 'expos'd their corrupt Lives and Morals; and even, by de'grees, came to cenſure ſome of the Corruptions in the 'Diſcipline and Doctrine of the Church.' And this pav'd ſome of the way to the Reformation.

The *Vaudois* had their Name from this *Valdo*, whoſe Retainers they were. They were alſo call'd *Lyoniſts*, and *Sabatez*, or *Inſabatez*, or *Enſabatez*.

VAULT, *Fornix*, in Architecture, an arch'd Roof, ſo contriv'd, as that the ſeveral *Vouſſoirs*, or *Vault*-Stones whereof it conſiſts, do by their Diſpoſition ſuſtain each other. See ARCH.

Vaults are to be prefer'd, on many Occaſions, to Soffits, or flat Cielings, as they give a greater Riſe and Elevation; and beſides, are more firm and durable. See CIELING, ROOF, *&c.*

The Antients, *Salmaſius* obſerves, had only three Kinds of *Vaults*: The firſt, the *Fornix*, made Cradle-wiſe; the ſecond, *Teſtudo*, Tortoiſe-wiſe, call'd by the French *Cul de Four*; or Oven-wiſe: The third *Concha*, or Trumpet-wiſe, as growing narrower and narrower.

But the Moderns ſubdivide theſe three Sorts into a great many more, to which they give different Names, according to their Figures and Uſes: Some are *Circular*, others *Elliptical*, &c.

The Sweeps of ſome, again, are larger, others leſs Portions of a Sphere: All above Hemiſpheres are call'd *high*, or *ſurmounted Vaults*; all that are leſs than Hemiſpheres, are *low*, or *ſurbaſed Vaults*, or *Teſtudines*, &c.

In ſome the Height is greater than the Diameter; in others 'tis leſs: There are others, again, quite flat, only made with Haunſes; others Oven like, or in form of a *Cul de Four*, &c. others growing wider as they lengthen, like a Trumpet.

There are likewiſe *Gothic Vaults*, *with Ogives*, *&c.*

Of *Vaults*, again, ſome are *ſingle*, others *double*, *croſs*, *diagonal*, *horizontal*, *aſcending*, *deſcending*, *angular*, *oblique*, *pendent*, &c. See OGIVE, GROIN, PENDENTIVE, *&c.*

Maſter-Vaults, are thoſe which cover the principal Parts of Buildings; in contradiſtinction to the *leſſer*, or ſubordinate *Vaults*, which only cover ſome little Part; as a Paſſage, a Gate, *&c.*

Double Vault, is ſuch a one as being built over another, to make the exterior Decoration range with the interior, leaves a Space between the Convexity of the one, and the Concavity of the other; as in the Dome of St. *Peter*'s at *Rome*.

Vaults with Compartments, are ſuch whoſe Sweep, or inner Face, is enrich'd with Pannels of Sculpture, ſeparated by Plat-bands: Theſe Compartments, which are of different Figures, according to the *Vaults*, and uſually gilt, on a white Ground, are made with Stuc, on Brick Walls; as in the Church of St. *Peter*'s at *Rome*; and with Plaiſter, on Timber *Vaults*.

Theory of VAULTS.

A Semicircular Arch, or *Vault*, ſtanding on two *Piedroits*, or Impoſts, and all the Stones that compoſe them, being cut and placed in ſuch manner, as that their Joints, or Beds, being prolong'd, do all meet in the Centre of the *Vault*; 'tis evident, all the Stones muſt be in form of Wedges, *i. e.* muſt be wider and bigger a-top than at bottom: by virtue of which, they ſuſtain each other, and mutually oppoſe the Effort of their Weight, which determines them to fall.

The Stone in the middle of the *Vault*, which ſtands perpendicular to the Horizon, and is call'd the *Key of the Vault*, is ſuſtain'd on each ſide by two contiguous Stones, juſt as by two inclined Planes: and of conſequence, the Effort it makes to fall, is not equal to its Weight.

But ſtill, that Effort is greater, as the inclined Planes are leſs inclin'd; ſo that, if they were infinitely little inclined, *i. e.* if they were perpendicular to the Horizon, as well as the Key, it wou'd tend to fall with its whole Weight; and wou'd actually fall; but for the Mortar.

The ſecond Stone, which is on the right or left of the Key-Stone, is ſuſtain'd by a third; which, by virtue of the Figure of the *Vault*, is neceſſarily more inclin'd to the ſecond, than the ſecond is to the firſt; and of conſequence, the ſecond, in the Effort it makes to fall, employs a leſs Part of its Weight than the firſt.

For the ſame Reaſon, all the Stones, reckoning from the Key-Stone, employ ſtill a leſs and leſs Part of their Weight, to the laſt; which reſting on a horizontal Plane, employs no part of its Weight; or, which is the ſame thing, makes no effort to fall; as being entirely ſupported by the Impoſt.

Now, in *Vaults*, a great Point to be aim'd at, is, that all the *Vouſſoirs*, or Stones, make an equal effort towards falling: To effect this, it is viſible, that as ſuch (reckoning from the Key to the Impoſt) employ a ſtill leſs and leſs Part of its whole Weight, the firſt, for Inſtance, only employing one half; the ſecond, one third; the third, one fourth, *&c.* there is no other way to make thoſe different Parts equal, but by a proportionable Augmentation of the whole, *i. e.* the ſecond Stone muſt be heavier than the firſt; the third than the ſecond, *&c.* to the laſt; which ſhould be infinitely heavier.

M. *de la Hire* demonſtrates, what that Proportion is, in which the Weights of the Stones of a Semicircular Arch, muſt be increaſed, to be *in Equilibrio*, or to tend with equal Forces to fall; which is the firmeſt Diſpoſition a *Vault* can have.

Before him, the Architects had no certain Rule to conduct themſelves by; but did all at random. Reckoning the Degrees of the Quadrant of the Circle from the Key-Stone to the Impoſt; the Extremity of each Stone will take up ſo much the greater Arch, as it is farther from the Key.

M. *de la Hire*'s Rule is, to augment the Weight of each Stone, above that of the Key-Stone, as much as the Tangent of the Arch of the Stone, exceeds the Tangent of the Arch of half the Key. Now, the Tangent of the laſt Stone, of neceſſity becomes infinite, and of conſequence its Weight ſhould be ſo too: but as Infinity has no place in Practice, the Rule amounts to this, that the laſt Stones be loaded as much as poſſible, that they may the better reſiſt the Effort which the *Vault* makes to ſeparate 'em; which is call'd the *Shoot* or *Drift of the Vault*.

M. *Parent* has ſince determin'd the Curve, or Figure which the *Extrados*, or outſide of a *Vault*, whoſe *Intrados*, or inſide, is ſpherical, muſt have, that all the Stones may be *in Equilibrio*.

Key of a VAULT, is a Stone, or Brick, in the middle of the *Vault*, in form of a truncated Cone; ſerving to bind or faſten all the reſt. See KEY.

The Reins of a VAULT, or the filling up, are the Sides which ſuſtain it.

The Pendentive of a VAULT, is the Part ſuſpended, between the Arches or Ogives. See PENDENTIVE.

The Impoſt of a VAULT, is the Stone whereon the firſt *Vauſſoir*, or Stone of the *Vault*, is laid. See IMPOST, &c.

VAULT, or VOLT, in the Manage, an Action of a Horſe, wherein he turns round, or makes a Circle ſide-ways, going round a Centre.

There are ſome *Vaults* wherein the Horſe makes two parallel Circles, the one with his fore Feet, and the other with his hind; and others, wherein the Horſe making Curvets and Capriols, his Haunches follow his Shoulders, and only make one Circle, or Oval, about a Pillar or Centre.

An *inverted*, or *backward Vault*, is that wherein the Horſe, turning likewiſe ſideways, has his Head towards the Centre, and his Tail towards the Circumference: So that the great Circle is form'd by the fore-Feet, and the little one by the hind-Feet.

A *Demi-Vault*, or *Half-Vault*, is when the Horſe only goes half the Circle, and comes back again the ſame way.

Vault is alſo uſed for the Manages practis'd on the wooden Horſe, to learn to mount and unmount with Eaſe and Expedition.

VAUNT-*Lay*, among Hunters, a ſetting of Hounds, or Beagles in a readineſs where the Chace is to paſs; and caſting 'em off before the reſt of the Kennel come in. See RELAY.

VAYVODE, or VAIVODE. See WAYWODE.

UBIQUISTS, UBIQUITARIES, or UBIQUITARIANS, a Sect of Hereticks, which roſe and ſpread it ſelf in *Germany*; and whoſe diſtinguiſhing Doctrine was, that the Body of Jeſus Chriſt is every where, or in every Place.

Brentius, one of the earlieſt Reformers, is ſaid to have firſt broach'd this Error, in 1560. *Melanchton* immediately declar'd againſt it; maintaining, that it introduc'd, with the *Eutycheans*, a kind of Confuſion into the two Natures of Jeſus Chriſt; and proteſted that he would oppoſe it as long as he liv'd.

On the other hand, *Andrew* and *Flaccius Illyrius*, *Oſiander*, &c. eſpouſed *Brentius*'s Party; and aſſerted, the Body of Jeſus Chriſt to be every where.

The Univerſities of *Leipſick* and *Wirtenberg*, and the generality of Proteſtants, ſet themſelves againſt this new Hereſy, but in vain: The *Ubiquitarians* grew ſtronger and ſtronger. Six of their Leaders, *Smidelin*, *Selneccer*, *Muſculus*, *Chemnitius*, *Chytræus*, and *Cornerus*, having a Meeting in 1577, in the Monaſtery of *Berg*; they there compoſed a kind of *Credo*, or *Formula* of Faith; wherein the *Ubiquity* was eſtabliſh'd as an Article.

All the *Ubiquiſts*, however, are not agreed: Some of 'em, and among the reſt the *Swedes*, hold that Jeſus Chriſt, even during his Mortal Life, was every where: Others maintain, that 'tis only ſince his Aſcenſion that his Body is every where.

G. Hornius will only allow *Brentius* to be the firſt Propagator of *Ubiquitiſm*; its firſt Inventor, according to him, was *John* of *Weſtphalia*, a Miniſter at *Hambourg*, in 1552.

In the Univerſity of *Paris*, *Ubiquiſt* is a Term applied to ſuch Doctors in Theology as are not reſtrain'd to any particular Houſe; either to that of *Navarre*, or *Sorbonne*.

The *Ubiquiſts* are called ſimply *Doctors in Theology*; whereas the others add, *of the Houſe of Sorbonne*, or *Navarre*, &c. See SORBONNE.

The Word is form'd from the *Latin* Adverb, *ubique*, every where.

UBIQUITY, more properly call'd *Omnipreſence*; an Attribute of the Godhead, whereby he is always, intimately preſent to all Things; gives the *Eſſe* to all Things; knows, preſerves, and works all, in all Things. See GOD.

For ſince God cannot be ſaid to exiſt in all Places, as plac'd therein, (ſince, then, he would need ſomething to his Exiſtence, *viz.* Place; and would have Extenſion, Parts, &c.) he muſt be conceiv'd to be every where, or in all Things, as a firſt, univerſal efficient Cauſe, in all his Effects.

He is preſent, therefore, to all his Creatures, as a pure Act, or an Exerciſe of an active Virtue, which knows, preſerves, governs, &c. every thing. Nor are, even finite Minds, preſent otherwiſe than by Operation. See PRESENCE.

UDDER, UBER, in Comparative Anatomy, that Part in Brutes wherein the Milk is prepared; anſwering to the *Mammæ*, or Breaſts, in the human Kind. See MAMMÆ, and MILK.

VECTIS, in Mechanicks, one of the Powers; more uſually call'd the *Lever*. See LEVER.

VECTOR, in Aſtronomy, a Line ſuppos'd to be drawn from any Planet moving round a Centre or the *Focus* of an Ellipſis, to that Centre, or *Focus*.

This, by ſome Writers of the new Aſtronomy, is called *Vector*, becauſe it is that Line by which the Planet ſeems to be carried round its Centre; and with which it deſcribes Areas, proportional to the Times. See PLANET.

VEDETTE, in the Military Art, a Sentinel on Horſeback, detach'd from the main Body of the Army, to diſcover and give notice of the Enemy's Deſigns. See RECONNOITRE.

VEER, a Sea Term, variouſly uſed. *Veering out a Rope*, denotes the letting it go by hand, or letting it run out of it ſelf: Thus, they ſay, *Veer more Cable*; that is, let more run out: But they do not uſe the Word for the letting out of any running Rope, except the Sheet.

The Word *Veer* is alſo uſed in reference to the Wind; for when it changeth often and ſuddenly, they ſay, *the Wind veereth*.

Alſo, when a Ship, under ſail, hath her Sheet *veered* out, they ſay, *She goes veering*; that is, at large, neither by a Wind, nor directly before it, but between both; which they alſo call *Quartering*. See WIND, and QUARTERING.

VEGETABLE, in Phyſiology, a Term applied to all Plants, conſider'd as capable of growth, *i. e.* to all natural Bodies which have Parts organically form'd for Generation, and Accretion, but not Senſation. See PLANT.

In *Vegetables*, there is ſuppoſed to be a Principle of Life, commonly call'd the *Vegetative Soul*. See VEGETATIVE, and VEGETATION.

Boerhaave very ſcientifically defines a *Vegetable* to be a Body generated of the Earth; to which it adheres, or is connected, by Parts called Roots, thro' which it receives the Matter of its Nouriſhment, and Increaſe; and conſiſts of Juices, and Veſſels, ſenſibly diſtinct from each other: Or, a *Vegetable* is an organical Body, compos'd of Veſſels, and Juices, every where diſtinguiſhable from each other; to which grow Roots, or Parts whereby it adheres to ſome other Body, from which it derives the Matter of its Life, and growth.

This Definition furniſhes a juſt and adequate Idea of a *Vegetable*: for by its conſiſting of Veſſels and Juices, it is diſtinguiſh'd from a Foſſil; and by its adhering to another Body, and deriving its Nouriſhment therefrom, it is diſtinguiſh'd from an Animal. See FOSSIL, and ANIMAL.

A *Vegetable* is defined *an Organical Body*, becauſe conſiſting of different Parts, which jointly concur to the Exerciſe of the ſame Function. See ORGANICAL.

Adhering by ſome of its Parts to another Body; for we know of no Plant that is ſo abſolutely vague and fluctuating, but has ſtill a Body it adheres to; tho that Body may be various, *e. g.* Earth, as in our common Plants; Stone, as in Rock Plants; Water, as in Sea Plants; and Air, as in ſome Mucilages. See ROCK-*Plant*, *Sea*-PLANT, &c.

As to thoſe few Plants which appear to float with the Water, their manner of growth is ſomewhat anomalous: M. *Tournefort* has ſhewn, that all Plants do not ariſe ſtrictly from Seeds; but that ſome, inſtead of Semen, depoſite, or let fall a little drop of Juice, which ſinking in the Water, by its Gravity reaches the bottom, or ſome Rock, &c. in its way; to which it ſticks, ſtrikes Root, and ſhoots into Branches: Such is the Origin of Coral. See CORAL.

Add, that the Root of a Plant may have any Situation at pleaſure, with reſpect to the Body thereof; nor needs it either be loweſt, or higheſt, &c. Accordingly, in Aloes, Coral, Moſſes, Fungus's, &c. the Root is frequently uppermoſt, and its growth downward.

The vaſcular Structure of *Vegetables*, is render'd very apparent, by an Experiment of Mr. *Willoughby*: Cutting off ſome pretty big Branches of Birch, and making a ſort of Baſon, or Reſervoir on the End thereof with ſome ſoft Wax; upon filling this with Water, and holding the Branch upright, the Water, in a few Minutes, ſunk into the Veſſels of the Wood, and running quite thro' the Length, drop'd out conſiderably faſt; continuing ſo to do, ſo long as the Water was pour'd on.

The ſame ſucceeds in a Sycamore, Walnut, &c. tho the Flux here is not ſo copious. *Phil. Tranſact.* N° 70.

There are Secrets whereby the Growth of *Vegetables* is ſurprizingly promoted. Mr. *Boyle* mentions a Virtuoſo, who entertain'd his Friends at the End of their Meal with a Sallad of Lettices, which he ſow'd in their preſence, immediately before they ſat down to Table.

The Chymiſts have furniſh'd us with ſome very extraordinary *Vegetables*; as the *Arbor Dianæ*, *Arbor Martis*, &c.

In effect, Gold, Silver, Iron, and Copper, being prepared in Aqua fortis, there riſes out of 'em a kind of Tree, which *vegetates*, or grows, to the naked Eye, and ſpreads into Branches, Leaves, &c. the whole height of the Water; till all the Matter is ſpent therein. See TREE.

This Water the Chymiſts call *Flint-Water*; the Secret whereof has been communicated by *Rhodes Canaſſes*, a *Greek* Chymiſt.

VEGETATION, the Act whereby Plants receive Nouriſhment, and grow. See PLANT, VEGETABLE, &c.

Plants, we learn from the Microſcope, conſiſt of different Parts, Veſſels, &c. analogous to thoſe of Animals: And each kind of Veſſel is ſuppoſed to be the Vehicle of a different Humour, or Juice ſecreted from the Maſs of Sap; which is conſider'd as the Blood, or common Fund of them all. See SAP, and BLOOD.

Dr. *Grew* aſſigns the Offices of the ſeveral Veſſels: Thoſe placed on the inner Verge of the Bark, he calls *Lymphæducts*, and ſuppoſes 'em deſtin'd for the Conveyance of the moſt aqueous or watery Liquor; theſe, Mr. *Bradley* calls, the *new forming Veſſels*, which are annually produced, and help to increaſe the Bulk of the Tree.

Thoſe in the middle of the Bark, Dr. *Grew* calls *Lactiferous*, or *Reſiniferous* Veſſels; their uſe, according to *Bradley*, is to return the ſuperfluous Sap: Theſe Veſſels, *Grew* obſerves, are the principal *Viſcera* of Plants; and adds, that as the *Viſcera* of Animals are but Veſſels conglomerated; ſo the Veſſels of a Plant are *Viſcera* drawn out at length. See VISCERA.

To the Nutrition of Plants, as well as Animals, it ſeems neceſſary that there be a Concurrence of two ſpecifically diſtinct Fluids; and a learned Author maintains an Intermixture of two ſuch Humors in every Part of a Tree, like that which we obſerve in Linſey-woolſey: Every Part of Sap being impregnated with other Tinctures, and continually filter'd from Fibres of one kind to thoſe of another. From this Mixture, many of the Phænomena of the Ripening, Odours, Colours, &c. are accounted for.

Theory of VEGETATION.

The Proceſs of Nature in the *Vegetation* of Plants, is very accurately deliver'd by the excellent *Malpighi*, to the Effect following.

The Egg (or Seed) of the Plant being excluded out of the Ovary, (call'd *Pod*, or *Huſk*) and requiring further foſtering and brooding; is committed to the Earth. See SEED, and EGG.

There, that kind Mother having receiv'd it into her Boſom, not only does the Office of Incubation, by her own warm Vapours and Exhalations, join'd with the Heat of the Sun; but, by degrees, ſupplies what the Seed requires for its further growth: as abounding every where with Canals and Sinus's, wherein the Dew, and Rain-Water, impregnated with fertile Salts, glide, like the Chyle and Blood in the Arteries, &c. of Animals.

This Moiſture meeting with the new depoſited Seed, is percolated, or ſtrain'd thro' the Pores or Pipes of the outer Rind, or Huſk (correſponding to the *Secundines* of *Fœtus*'s) on the inſide whereof lie one or more, commonly two, thick Seminal Leaves, (anſwering to the *Placenta* in Women, and the *Cotyledons* in Brutes). See SECUNDINE, PLACENTA, &c.

Theſe Seed-Leaves conſiſt of a great Number of little *Veſiculæ*, or Bladders; with a Tube, correſponding to the Navel-ſtring in Animals. See UMBILICUS.

Into theſe *Veſiculæ* is receiv'd the Moiſture of the Earth, ſtrain'd thro' the Rind of the Seed; which makes a ſlight Fermentation with the proper Juice before contain'd therein.

This fermented Liquor is convey'd by the Umbilical Veſſel to the Trunk of the little Plant; and to the Gem or Bud, which is contiguous thereto: upon which, a *Vegetation* and increaſe of the Parts ſucceeds.

Such is the Procedure in the *Vegetation* of Plants; which the illuſtrious Author exemplifies in a Grain of Wheat; as follows:

The firſt Day the Grain is ſown, it grows a little turgid; and the Secundine, or Huſk, gapes a little in ſeveral Places: and the Body of the Plant, being continued by the Umbilical Veſſel to a conglobated Leaf, (which is call'd the Pulp or *Fleſh* of the Seed, and is what conſtitutes the *Flower*) ſwells; by which means, not only the Gem, or Sprout, (which is to be the future Stem) opens, and waxes green; but the Roots begin to bunch out; whence the *Placenta*, or Seed-Leaf, becoming looſe, gapes.

The ſecond Day, the Secundine or Huſk, being broke thro'; the Stem, or Top of the future Straw, appears on the outſide thereof, and grows upwards by degrees: In the mean time, the Seed-Leaf guarding the Roots, becomes turgid with its *Veſiculæ*; and puts forth a white Down. And the Leaf being pull'd away, you ſee the Roots of the Plant bare; the future Bud, Leaves, and reſt of the Stalk, ſtill laying hid. Between the Roots, and the aſcending Stem, the Trunk of the Plant is knit by the Navel-knot to the Flower-Leaf; which is very moiſt, tho it ſtill retains its white Colour, and its natural Taſte.

The third Day, the Pulp of the conglobated or round Leaf, becomes turgid with the Juice which it has receiv'd from the Earth, fermenting with its own.

Thus the Plant increaſes in bigneſs, and its Bud or Stem becoming taller, and from whitiſh, turns greeniſh: The lateral Roots alſo break forth greeniſh, and pyramidal from the gaping Sheath, which adheres cloſely to the Plant; and the lower Root grows longer, and hairy, with many Fibres ſhooting out of the ſame.

Indeed, there are hairy Fibres hanging all along on all the Roots, except on their Tips; and theſe Fibres are ſeen to wind about the ſaline Particles of the Soil, little Lumps of Earth, &c. like Ivy; whence they grow curled. Above the lateral Roots, there now break out two other little ones.

The fourth Day, the Stem mounting upwards, makes a right Angle with the Seminal Leaf: The laſt Roots put forth more; and the other three, growing larger, are clothed with more Hairs, which ſtraitly embrace the Lumps of Earth; and where they meet with any Vacuity, unite into a kind of Net-work. The Conglobate, or Flower-Leaf, is now ſofter; and when bruis'd yields a white ſweetiſh Juice, like Barley Cream. By ſtripping it off, the Root and Stem of the Plant are plainly ſeen, with the intermediate Navel-knot, whoſe outer Part is ſolid, like a Bark, and the inner more ſoft, and medullary.

The fifth Day, the Stalk ſtill riſing, puts forth a permanent or ſtable Leaf, which is green, and folded; the Roots grow longer, and there appears a new Tumor of a future Root: The outer, or Sheath-Leaf is looſen'd; and the Seed-Leaf begins to fade.

The ſixth Day, the Stable-Leaf being looſen'd, the Plant mounts upwards; the Sheath-Leaf ſtill cleaving about it like a Bark. The Seed-Leaf is now ſeen ſinuous, or wrinkled, and faded: and this being cut or freed from the Secundine, the Fleſh, or *Pericarpium*, is found of a different Texture; the outer Part, whereby the outſide of the Seed or Grain is heaved up, being more ſolid; but the inſide veſicular, and fill'd with Humor: eſpecially that Part next the Navel-knot. All the Leaves being pull'd off, the Roots torn, and the Flower-Leaf remov'd, the Trunk appears; wherein, not far from the Roots, the Navel-knot bunches out, which is ſolid, and hard to cut: Above, there is the Mark of the Sheath-Leaf, which was pull'd off; and underneath, as in an Arm-pit, the Gem is often hid. The hind Part of the Plant ſhews the breakings forth of the Roots, likewiſe the faded *Placenta*, &c.

After the eleventh Day, the Seed-Leaf, as yet ſticking to the Plant, is crumpled, and almoſt corrupted; within, it is hollow; and about the Secundine, the mucous and white Subſtance of the Seed being continu'd to the Navel-knot, forms a Cavity. All the Roots becoming longer, put forth new Branches out of their Sides: The Seed-Leaf withers, and its Veſicles are empty'd: The Internodes, or Spaces between the Knots, grow longer; new Gems appear; and the middle Root grows ſeveral Inches long.

After a Month, the Roots and Stalk being grown much longer, new Buds break out at the firſt Knot, and little Tumors bunch out, which at length break into Roots.

For other Circumſtances, ſee GENERATION, SAP, SEED, RADICLE, PLUME, PERPENDICULARITY, PARALLELISM, &c.

As to the Vegetable Matter, or the Food whereby Plants grow, there is ſome doubt: The common Opinion, among Naturaliſts, is, that Water is the great *vegetable* Food; which is confirm'd by an eaſy Experiment.

A Sprig of Balm, Mint, or the like Plant, is ſet in a Phial of pure Water, without any Mixture of Earth; yet the Sprig grows, puts forth Roots, Leaves, and Branches.

Agreeable to which, is another fam'd Experiment of *Van Helmont*; who drying 200 Pounds of Earth, and planting a Willow which weigh'd five Pounds therein, he water'd it only with Rain, or diſtill'd Water; and to ſecure it from any other Earth, cover'd it with a perforated tin Cover: At five Years end, weighing the Tree, with all the Leaves it had borne in that time, he found it to weigh 169 Pounds 3 Ounces; yet the Earth was only diminiſh'd two Ounces. See WATER.

To aſcertain this Point, Dr. *Woodward* has made ſome very good Experiments; which, at the ſame time, give light to many other Circumſtances of *Vegetation*. His Experiments are moſt of 'em with Sprigs of Mint, and ſome other

Plants, nicely weigh'd, and inclos'd in equal glaſs Phials, well cover'd up with Parchment; leaving only room for the Stems to aſcend thro' it; and fill'd with Water: ſome with Spring Water, others with Rain Water, others with *Thames* Water.

At the End of 77 Days he took 'em all out again; weigh'd 'em, as alſo the Water left; and computed the Weight of Water expended on 'em, and the Proportion of the Increaſe of the Plant, to the Expence of the Water.

The next Year, *viz.* 1692, he made freſh Experiments with the ſame Phials, and the ſame ſort of Plants, weigh'd as before, only ſome were fill'd with *Hyde-Park* Conduit Water alone, others with the ſame Water, and a certain Proportion of Garden-Earth diſſolv'd in it; and others in the ſame Water diſtill'd.

At the End of 56 Days, he weigh'd the Plants, Water, *&c.* and computed what each Plant had gain'd, what Quantity of Water was expended on the Plant, and the Proportion of the Increaſe of the Plant, to the decreaſe of the Water.

The Reſult of all which Experiments, he gives us in the following Obſervations and Reflections:

1°. *In Plants of the ſame Kind, the leſs they are in bulk, the ſmaller Quantity of the fluid Maſs, in which they are ſet, is drawn off*; the Conſumption, where the Maſs is of equal thickneſs, being pretty nearly proportion'd to the Bulk of the Plant.

In effect, the Water ſeems to aſcend up the Veſſels of Plants, in much the ſame manner as up a Filtre: and it is no great wonder that the larger Filtre ſhould draw off more Water than the ſmaller; or that a Plant that hath more and larger Veſſels, ſhould take up a greater Share of the Fluid in which it is ſet, than one that has fewer can: Nor is this noted as a thing very conſiderable in it ſelf, but chiefly with regard to what follows.

2°. *Much the greater Part of the fluid Maſs thus drawn off, and convey'd into the Plant, does not ſettle or abide there; but paſſes thro' their Pores, and exhales up into the Atmoſphere.* That the Water in theſe Experiments aſcended only thro' the Veſſels of the Plants, is certain; ſince ſome Glaſſes, which had no Plants in them, tho diſpoſed in like manner as the reſt, remain'd at the end of the Experiment as at firſt, and without any Diminution of Water: and that the greateſt Part of it flies off from the Plant into the Atmoſphere, is as certain.

The leaſt Proportion of the Water expended, was to the Augment of the Plant, as 46 or 50 to 1; and in ſome 100, 200, nay, in one, as 700 to 1.

This ſo continual an Emiſſion of Water, in ſo great Plenty, from the Parts of the Plant, affords a manifeſt Reaſon, why Countries that abound with Trees, and the larger *Vegetables* eſpecially, ſhould be very obnoxious to Damps, great Humidity in the Air, and more frequent Rains, than others that are more open and free. The great Moiſture in the Air, was a great Inconvenience and Annoyance to thoſe who firſt ſettled in *America*; which, at that time, was overgrown with Woods and Groves: But as theſe were burnt and deſtroy'd, to make way for Habitations, and Culture of the Earth; the Air mended, changing into a Temper much more ſerene and dry than before.

Nor does this Humidity go off pure, and alone, but uſually carries with it many Parts of the ſame Nature with thoſe whereof the Plant, thro' which it paſſes, conſiſts: The Craſſer, indeed, are not ſo eaſily borne up into the Atmoſphere, but are uſually depoſited on the Surface of Leaves, Flowers, and other Parts of the Plants; whence our Mannas, our Honies, and other gummous Exudations of *Vegetables*: But the finer and lighter Parts are with greater eaſe ſent up into the Atmoſphere; thence they are convey'd to our Organs of Smell, by the Air we draw in Reſpiration; and are pleaſant or offenſive, beneficent or injurious to us, according to the Nature of the Plants from whence they ariſe. And ſince theſe owe their Riſe to the Water that aſcends out of the Earth, thro' the Bodies of Plants; we cannot be far to ſeek for the Cauſe why they are more numerous in the Air, and a greater Quantity of Odours is found exhaling from *Vegetables*, in warm humid Seaſons, than in any others.

3°. *A great Part of the terreſtrial Matter that is mix'd with Water, aſcends up into the Plant, as well as the Water.* There was much more terreſtrial Matter, at the End of the Experiment, in the Water of the Glaſſes that had no Plants in them, than in thoſe which had Plants. The Garden-Mold diſſolved in ſome of the Glaſſes, was conſiderably diminiſh'd, and carry'd off; nay, the terreſtrial and vegetable Matter, was borne up in the Tubes filled with Sand, Cotton, *&c.* in that quantity, as to be evident, even to Senſe: and the Bodies in the Cavities of the other Tubes, that had their lower Ends immers'd in Water, wherein Saffron, Cochineal, *&c.* had been infus'd, were ting'd with yellow, purple, *&c.* To look abroad a little towards our Shores, and Parts within the Verge of the Sea, theſe will preſent us with a large Scene of Plants, that along with the Vegetable, take up into them mere Mineral Matter alſo, in great abundance; ſuch as our Sea-Purſlain, the ſeveral ſorts of Algas, of Samphires, and other marine Plants: Thoſe contain common Sea Salts, which are the ſame as the Foſſil, in ſuch plenty, as not only plainly to be diſtinguiſh'd on the Palate, but may be drawn out of them in conſiderable quantity: nay, ſome affirm, There are Plants found that will yield Nitre, and other Mineral Salts.

The *Vegetable* Matter being very fine and light, is ſurprizingly apt, and diſpoſed to attend Water in all its Motions and follow it into each of its Receſſes; as appears not only from the Inſtances above alledg'd, but many others: percolate it with all the Care imaginable, filtre it with never ſo many Filtrations, yet ſome terreſtrial Matter will remain. Dr. *Woodward* has filtred Water thro' ſeveral Sheets of thick Paper, and after that thro' very cloſe fine Cloth, twelve times doubled; and this over and over, and yet a conſiderable Quantity of this Matter diſcover'd it ſelf in the Water after all. Now, if it thus paſſes Interſtices that are ſo very ſmall and fine, along with the Water; it is the leſs ſtrange, it ſhould attend it in its Paſſage thro' the Ducts and Veſſels of Plants: It is true, filtring and diſtilling of Water, intercepts, and makes it quit ſome of the earthy Matter it was before impregnated withal; but then, that which continues with the Water after this, is fine and light, and ſuch, conſequently, as is in a peculiar manner fit for the Growth and Nouriſhment of *Vegetables*. And this is the Caſe of Rain Water: the quantity of terreſtrial Matter it bears up into the Atmoſphere, is not great; but what it doth bear up, is chiefly of that light Kind, or Vegetable Matter, and that, too, perfectly diſſolv'd, and reduc'd to ſingle Corpuſcles, all fit to enter the Tubules and Veſſels of Plants: On which accounts it is, that this Water is ſo very fertile and prolifick.

The Reaſon why all the terreſtrial Matter mixed with the Water, does not aſcend into the Plant, is, that the mineral Matter makes a great deal of it, which is not only groſs and ponderous, but ſcabrous and inflexible; and ſo not diſpos'd to enter the Pores of the Roots: Beſides a great many of the ſimple Vegetable Particles, by degrees, unite, and form ſmall Clods, or *Moleculæ*, which ſtick to the Extremities of the Roots of thoſe Plants; and others of them, entangled in a looſer manner, form the *Nubeculæ*, or green Bodies, ſo commonly obſerved in ſtagnant Water: Theſe, when thus conjoin'd, are too big to enter the Pores, or aſcend up the Veſſels of Plants; which ſingly they might have done.

Hence it is, that in Agriculture, be the Earth never ſo rich, good, and fit for the Production of Corn, or other Vegetables; little will come of it, unleſs the Parts of it be ſeparated and looſe: And 'tis on this account, ſuch Pains are beſtow'd in the digging, tilling, ploughing, fallowing, harrowing, and breaking the clodded Lumps of Earth: And 'tis the ſame way that Sea Salt, Nitre, and other Salts, promote *Vegetation*.

Some Authors imagine Nitre eſſential to Plants; and that nothing in the Vegetable Kingdom is tranſacted without it: But the Doctor aſſures us, that by all the Trials he has been able to make, the Thing ſeems to him quite otherwiſe; and when contiguous to the Plant, Nitre rather deſtroys than nouriſhes it. But Nitre, and other Salts, certainly looſen the Earth, and ſeparate the concreted Parts thereof; by that means, fitting and diſpoſing them to be aſſumed by the Water, and carried up into the Seed or Plant for its Formation and Increaſe. 'Tis every body's Obſervation, how apt all ſorts of Salts are to be wrought upon by Moiſture, how eaſily they run with it; and when theſe are drawn off, and have deſerted the Lumps wherewith they were incorporated, thoſe muſt moulder immediately, and fall aſunder of courſe: The hardeſt Stone we meet with, if it happen, as it frequently doth, to have any ſort of Salt intermix'd with the Sand of which it conſiſts, upon its being expos'd to a humid Air, in a ſhort time diſſolves and crumbles all to pieces; and much more will clodded Earth, or Clay, which is not of ſo compact and ſolid a Conſtitution.

The ſame way is Lime likewiſe ſerviceable in this Affair: The Husbandmen ſay, It does not fatten, but only mellows the Ground: by which they mean, it doth not contain any thing in it ſelf that is of the ſame Nature with the Vegetable Mould, or afford any Matter fit for the Formation of Plants, but merely ſoftens, and relaxes the Earth; by that means, rendring it more capable of entring the Seeds and Vegetables ſet in it, in order to their Nouriſhment, than otherwiſe it would have been. The Properties of Lime are well known, and how apt it is to be put in a Ferment and Commotion by Water; nor can ſuch Commotion ever happen when Lime is mixed with Earth, however hard and clodded that may be, without opening and looſening it.

4°. *The Plant is more or leſs nouriſhed, in proportion, as the Water in which it ſtands, contains a greater or ſmaller Quantity of proper terreſtrial Matter in it.* The

Truth

Truth of this Propoſition, is diſcernable thro' the whole Proceſs of this Author's Experiments. The Mint in one of his Glaſſes, was of much the ſame Bulk and Weight with that of two or three others: But the Water in which the firſt was, being River Water, which was apparently ſtor'd more copiouſly with terreſtrial Matter, than the Spring or Rain Water wherein the others ſtood, occaſion'd it to arrive at almoſt double the Bulk that either of them had, and with a leſs expence of Water too: So likewiſe the Mint in another Glaſs, in whoſe Water was diſſolv'd a ſmall Quantity of good Garden-Mold; tho it had the Diſadvantage to be leſs, when firſt ſet, than either of the Mints in two other Glaſſes whoſe Water was the very ſame with the firſt, only had none of the Earth mix'd with it; yet, in a ſhort time, the Plant not only overtook, but much outſtrip'd the others.

The Reaſon why the Proportion of the Increaſe of the Plant is limited to the quantity of proper terreſtrial Matter in the Water, is, that all, even Vegetable Matter, is not proper for the Nouriſhment of every Plant: Nor do there want good Indications, that every Kind of Vegetable requires a peculiar and ſpecifick Matter for its Formation and Nouriſhment; yea, each Part of the ſame Vegetable: and that there are very many and different Ingredients to go to the Compoſition of the ſame individual Plant. If, therefore, the Soil wherein any Vegetable or Seed is planted, contains all, or moſt of theſe Ingredients, and thoſe in due quantity; it will grow and thrive there; otherwiſe it will not: If there be not as many ſort of Corpuſcles, as are requiſite for the Conſtitution of the main, and more eſſential Parts of the Plant, it will not proſper at all; if there are theſe, and not in ſufficient plenty, it will never arrive to its natural Stature: or, if there be any the leſs neceſſary and eſſential Corpuſcles wanting, there will be ſome failure in the Plant; it will be defective in Taſte, Smell, Colour, or ſome other way.

Indeed, 'tis inconceivable how one uniform, homogeneous Matter, having its Principles, or original Parts, of the ſame Subſtance, Conſtitution, Magnitude, Figure, and Gravity; ſhould conſtitute Bodies ſo unlike in all thoſe reſpects, as Vegetables of different Kinds are; nay even as the different Parts of the ſame Vegetable: That one ſhould carry a reſinous, another a milky, a third a yellow, a fourth a red Juice in its Veins; one afford a fragrant, another an offenſive Smell; one ſweet to the Taſte, another acid, bitter, acerb, auſtere, *&c.* that one ſhould be nouriſhing, another poiſonous; one purging, another aſtringent. And this Argument makes equally ſtrong againſt thoſe who ſuppoſe mere Water the Matter out of which all Bodies are form'd. A Cataputia in one of the Glaſſes receiv'd but little increaſe, only $3\frac{1}{2}$ Grains all the while it ſtood, tho 2501 Grains of Water were ſpent upon it: But this might poſſibly be owing not to the Water's wanting Matter fit for the Nouriſhment of that particular Plant; but to the Water's being an improper Medium for it to grow in: Too much of that Liquor, in ſome Plants, may probably hurry the terreſtrial Matter thro' the Veſſels, too faſt for them to lay hold of it.

But a farther Proof of this Doctrine, is, That the Soil, once proper for the Production of ſome ſort of Vegetable, does not ever continue to be ſo; but in tract of time loſes its Property; and ſooner in ſome Lands, and later in others: If Wheat, for Example, be ſown upon Land proper for that Grain, the firſt Crop will ſucceed very well, and perhaps the ſecond, and the third, as long as the Ground is in heart, as the Farmers call it; but in a few Years it will produce no more, if ſow'd with that Corn: Some other Grain it may, as Barley; and after this hath been ſown ſo oft, that the Land can bring forth no more of it, it may afterwards yield ſome good Oats; and perhaps Peaſe after them. At length it becomes barren; the Vegetative Matter that at firſt it abounded with, being reduced by the ſucceſſive Crops, and moſt of it borne off: Each ſort of Grain takes forth that peculiar Matter, that is proper for its own Nouriſhment.

It may be brought to bear another Series of the ſame Vegetables; but not till it is ſupplied with a new Fund of Matter, of the like ſort with what it firſt contain'd; either by the Ground's lying fallow for ſome time, till the Rain hath pour'd a freſh Stock upon it; or by the manuring it. That this Supply is of the like ſort, is evident from the ſeveral Manures found beſt to promote the *Vegetation*; which are, chiefly, either Parts of Vegetables, or of Animals: Of Animals, we ſay, which either derive their own Nouriſhment immediately from Vegetable Bodies, or from other Animals that do ſo; in particular, the Blood, Urine, and Excrements of Animals; ſhavings of Horns, and Hoofs; Hair, Wool, Feathers, calcin'd Shells, Lees of Wine and Beer, Aſhes of all ſorts of Vegetable Bodies, Leaves, Straw, Roots, and Stubble, turned into Earth by ploughing, or otherwiſe, to rot and diſſolve there. Theſe are our beſt Manures; and being vegetable Subſtances, when refunded back again into the Earth, ſerve for the Formation of other like Bodies. See MANURE, and COMPOST.

The like is obſervable in Gardens, where the Trees, Shrubs, and Herbs, after their continuing in one Station, till they have derived thence the greater Part of the Matter fit for their increaſe; will decay and degenerate; unleſs either freſh Earth, or ſome fit Manure be applied to them: 'Tis true, they may maintain themſelves there for ſome time, by ſending forth Roots farther and farther, to an Extent all around, to fetch in more Proviſion; but at laſt, they muſt have a freſh Supply brought to them, or they themſelves remov'd or tranſplanted to ſome Place better furniſh'd with Matter for their Subſiſtence. And accordingly, Gardiners obſerve, that Plants that have ſtood a long while in a place, have longer Roots than uſual; part of which they cut off, when they tranſplant to a freſh Soil, as not now of any farther uſe to them.

All theſe Inſtances point forth a particular Terreſtrial Matter, and not Water, for the Subject to which Plants owe their Increaſe: Were it Water only, there would be no need of Manures, or tranſplanting; the Rain falls in all Places, in this Field and that, indifferently; on one ſide of an Orchard and Garden, as well as another: Nor could there be any Reaſon, why a Tract of Land ſhould yield Wheat one Year, and not the next; ſince the Rain ſhowers down alike on each.

5°. *Vegetables are not formed of Water, but of a certain peculiar terreſtrial Matter.* A little Diſtillation ſhews, that there is a conſiderable Quantity of this Matter, contained both in Rain, Spring, and River Water: and the Experiments above mention'd, ſhew that the much greateſt Part of the fluid Maſs that aſcends up into Plants, does not ſettle or abide there, but paſſes thro' the Pores of them, and exhales into the Atmoſphere; and that a great Part of the terreſtrial Matter, mixed with the Water, paſſes up into the Plant along with it; and that the Plant is more or leſs augmented, in proportion, as the Water contains a greater or ſmaller quantity of that Matter: From all which, we may reaſonably infer, that Earth, and not Water, is the Matter that conſtitutes Vegetables.

One of the Sprigs of Mint drew up into it 2501 Grains of the fluid Maſs, and yet had receiv'd but $3\frac{1}{2}$ Grains of Increaſe from it: A ſecond, tho it had at firſt the Diſadvantage to be much leſs than the third; yet, being ſet in Water wherewith Earth was plentifully mixed, and the other in Water without any ſuch Earth, it had vaſtly outgrown it; weighing at leaſt 145 Grains more than that did: A fourth Plant, tho at firſt a great deal leſs than the fifth, yet being ſet in the foul craſs Water, that was left in the Still, after that in which the laſt was ſet was drawn off, had gained in weight, at the end, above double what that in the finer and thinner Water had. The Proportion of the Augment of that Plant, which throve moſt, was to the fluid Maſs ſpent upon it, but as 1 to 46; in others, as 1 to 60, 100, 200, and in the Cataputia, but as 1 to 714. One of the Sprigs took up 39 Grains of Water a-day, one Day with another; which was much more than the whole Plant originally, and yet it gained not $\frac{1}{4}$ of a Grain a-day in weight: And another took up 253 Grains a-day, which was near twice as much as its original weight; and after all, the daily Increaſe of the Plant was no more than $2\frac{15}{16}$ Grains.

6°. *Spring and Rain Water contain near an equal Charge of Vegetable Matter; River Water more than either of them.* Theſe Proportions hold in the main, but a ſtrict and juſt Compariſon is hardly to be expected; inaſmuch as in all probability, the Water that falls in Rain, contains at ſome times a greater ſhare of terreſtrial Matter, than that which falls at other times; a more powerful and intenſe heat, of neceſſity, hurrying up a larger quantity of that Matter, along with the humid Vapours that form Rain, than one more feeble and remiſs poſſibly can. The Water of one Spring may flow forth with an higher Charge of this Matter than that of another: this depending partly upon the quickneſs of the Ebullition of the Water, and partly upon the quantity of that Matter latent in the *Strata*, thro' which the Fluid paſſes; and the greater or leſs Laxity of thoſe *Strata*: For the ſame Reaſon, the Water of one River may abound with it, more than that of another; nay, the ſame River, when much agitated and in Commotion, muſt bear up more of it, than when it moves with leſs Rapidity and Violence. That there is a great quantity of this Matter in Rivers, and that it contributes vaſtly to the ordinary Fertility of the Earth; we have an illuſtrious Inſtance in the *Nile*, the *Ganges*, and other Rivers, that yearly overflow the neighbouring Plains: their Banks ſhew the faireſt and largeſt Crops of any in the World.

7°. *Water ſerves only for a Vehicle to the terreſtrial Matter which forms Vegetables; and does not it ſelf make any addition to them.* Where the proper terreſtrial Matter is wanting, the Plant is not augmented, tho never ſo much Water aſcend into it: Water, then, is not the Matter that compoſes Vegetable Bodies; it is only the Agent that conveys the Matter to them, that diſtributes it to their ſeveral Parts for their Nouriſhment: That Matter is ſluggiſh and inactive;

inactive, and would lie eternally confin'd to its Beds of Earth, without advancing up into Plants; did not Water, or ſome like Inſtrument, fetch it forth, and carry it into them.

This Fluid is capacitated for the Office here aſſign'd it, ſeveral ways: By the Figure of its Parts, which, as appears from many Experiments, is exactly and mathematically ſpherical; their Surfaces being perfectly polite, and without any the leaſt Irregularities. It is evident, Corpuſcles of ſuch a Figure are eaſily ſuſceptible of Motion, and far above any others whatever; and conſequently the moſt capable of moving and conveying other Matter that is not ſo active: then, the Intervals of Bodies of that Figure, are, with reſpect to their Bulk, of all others, the largeſt, and ſo the moſt fitted to receive and entertain foreign Matter in them; beſides, as far as the Trials hitherto made inform us, the conſtituent Corpuſcles of Water, are each ſingly conſider'd, abſolutely ſolid, and do not yield to the greateſt external Force: This ſecures their Figure againſt any Alteration, and the Intervals of the Corpuſcles muſt be always alike. By the latter, it will be ever diſpoſed to receive Matter into it; and by the former, when once received, to bear it along with it. Water is farther capacitated to be a Vehicle to this Matter, by the Tenuity and Fineneſs of the Corpuſcles of which it conſiſts: We hardly know any Fluid in all Nature, except Fire, whoſe conſtituent Parts are ſo exceeding ſubtile and ſmall, as thoſe of Water are: they will paſs Pores and Interſtices, that neither Air nor any other Fluid will. This enables them to enter the fineſt Tubes and Veſſels of Plants, and to introduce the terreſtrial Matter, conveying it to all Parts of them; whilſt each, by means of Organs it is endu'd with for the purpoſe, intercepts, and aſſumes into it ſelf ſuch Particles as are ſuitable to its own Nature, letting the reſt paſs on thro' the common Ducts.

8°. *Water is not capable of performing this Office to Plants, unleſs aſſiſted by a due quantity of Heat.* This muſt concur, or *Vegetation* will not ſucceed. The Plants ſet in the Glaſſes in *October*, and the following colder Months, had not near the Quantity of Water ſent up into them, or ſo great an additional Increaſe, by much; as thoſe that were ſet in *June*, *July*, and the hotter Months. It is plain, Water has no power of moving it ſelf, or riſing to the vaſt height it doth, in the more tall and lofty Plants; ſo far from it, that it doth not appear from any Diſcovery yet made, that even its own Fluidity conſiſts in the inteſtine Motion of its Parts; whatever the *Carteſians* think. Indeed, we need nothing more to ſolve all the Phænomena of Fluidity, than ſuch a Figure and Diſpoſition of Parts, as Water has: Spherical Corpuſcles muſt ſtand ſo very tickliſh upon each other, as to be ſuſceptible of every Impreſſion; and tho not perpetually in Motion, muſt be always ready and liable to be put into it, by any the ſlighteſt Force imaginable: 'Tis true, the Parts of Fire, or Heat, are not capable of moving themſelves, any more than thoſe of Water; but they are more ſubtile, light, and active, than thoſe are, and ſo more eaſily put into Motion. See FLUIDITY.

That the Concourſe of Heat in this Work is really neceſſary, appears not only from the Experiments before us, but from all Nature; from the Fields and Foreſts, Gardens and Orchards: We ſee in Autumn, as the Sun's Power is gradually leſs and leſs, ſo its Effects on Plants is remitted, and *Vegetation* ſlackens by little and little. Its Failure is firſt diſcernable in Trees; which being raiſed higheſt above the Earth, require a more intenſe heat, to elevate the Water charg'd with Nouriſhment, to their Tops; ſo that for want of freſh Support and Nutriment, they ſhed their Leaves, unleſs ſecured by a very firm and hard Conſtitution indeed, as our Ever-greens are: Next, the Shrubs part with theirs; and then the Herbs, and lower Tribes: the Heat being, at length, not ſufficient to ſupply even theſe, tho ſo near the Earth, the Fund of their Nouriſhment. As the Heat returns the ſucceeding Spring, they all recruit again, and are furniſh'd with freſh Supplies and Verdure: But firſt, thoſe which are loweſt, and neareſt the Earth, and that require a leſſer degree of Heat to raiſe the Water with its earthy Charge into them: then the Shrubs and higher Vegetables, in their turns; and laſtly, the Trees. As the Heat increaſes, it grows too powerful, and hurries the Matter with too great Rapidity, thro' finer and more tender Plants: Theſe, therefore, go off, and decay; and others that are more hardy and vigorous, and require a greater degree of heat, ſucceed in their Order. By which Mechaniſm, provident Nature furniſhes us with a very various and differing Entertainment; and what is beſt ſuited to each Seaſon, all the Year round.

As the Heat of the ſeveral Seaſons affords us a different Face of Things, ſo the ſeveral diſtant Climates ſhew the different Scenes of Nature, and Productions of the Earth. The hotter Countries ordinarily yield the largeſt and talleſt Trees, and thoſe, too, in a much greater Variety than the colder; even thoſe Plants common to both, attain to a much greater Bulk in the Southern, than the Northern Climes: nay, there are ſome Regions ſo cold, that they raiſe no Vegetables at all to a conſiderable ſize; this we learn from *Greenland*, *Iceland*, and other Places of like cold Situation and Condition: In theſe there are no Trees, and the Shrubs are poor, little, and low. Again, in the warmer Climates, and ſuch as do furniſh Trees, and the large Vegetables, if there happen a Remiſſion or Diminution of the uſual Heat, their Productions are impeded in proportion: Our cold Summers give us Proof enough of this; for tho at ſuch times the Heat we have, is ſufficient to raiſe the Vegetative Matter into the lower Plants, our Corns, Wheat, Barley, Peaſe, and the like; and we have plenty of Strawberries, Rasberries, Gooſeberries, Currants, and the Fruits of ſuch Vegetables as are low and near the Earth; and a moderate Store of Cherries, Mulberries, Plums, &c. and ſome others that grow at ſomewhat greater height; yet our Apples, Pears, Walnuts, and the Productions of the taller Trees, have been fewer, and thoſe not ſo thoroughly ripen'd, and brought to that Perfection, as they are in more benign and warm Seaſons: and indeed, in Trees of the ſame Kind; thoſe that keep cloſeſt to the Earth, always produce the moſt and beſt Fruit: For which Reaſon it is, that the Gardeners check and reſtrain the Growth of their better Fruit-Trees, and prevent their running up to too great a height. As to our Grapes, Apricots, Peaches, Nectarins, and Figs, they being tranſplanted hither out of hotter Countries, it is the leſs wonder we have a Failure of them in cold Summers. Nor is it the Sun, or the ordinary Emiſſion of the Subterranean Heat only, that promotes *Vegetation*, but any other indifferently according to its Power and Degree; as we find from our Stoves, Hot-Beds, &c. See HEAT, COLD, WATER, EARTH, SOIL, TREE, DWARF, PRUNING, &c.

VEGETATIVE, a Term applied to that Principle, or Part in Plants, by Virtue whereof they receive Nouriſhment, and *grow*, or *vegetate*. See VEGETATION.

The Philoſophers ſpeak of three Kinds of Souls, the *Vegetative*, *Senſitive*, and *Rational*. See SOUL.

The *Vegetative Soul*, is that Principle whereby Trees and Plants live, grow, produce their Kind, &c. See PLANT.

This *Vegetative* Principle is differently ſeated in different Plants: An ingenious Author obſerves, that, generally ſpeaking, its Place is exactly between the Trunk, and Root; at leaſt, this appears to be the Place in moſt of the Seminiferous Tribe; which, if cut down near that Place, rarely ſhoot again.

In other Plants, as the Elm, and many edible Plants, it ſeems to reſide wholly in the Roots; which, if cut into ever ſo many Parts, yet, thoſe being planted in the Ground, ſoon grow. See ROOT, and PLANTING.

In others, as the Willow Kinds, it ſeems to be diffus'd all over, both Root, Trunk, and Branches; inſomuch that if cut into a thouſand Pieces, there is no deſtroying 'em without ſplitting 'em in the middle; and ſcarcely then. See FOECUNDITY.

Laſtly, In others, as the Cereus's, Ficus's, &c. it is ſeated in the Body, Branches, and Leaves; any of which being put into the Ground, ſtrike Root immediately, and grow.

The Office of this *Vegetative* Principle, is to concoct the indigeſted Salts which aſcend thro' the Roots; and to aſſimilate 'em to the Nature of the Plant. See VEGETATION.

VEHICLE, in its literal Senſe, ſignifies ſomewhat that carries, or bears a Thing along: Thus, in Anatomy, the Serum is ſaid to be the *Vehicle* that conveys the Globules of the Blood. (See BLOOD.) And in Pharmacy, any Liquid to dilute another with, or to adminiſter it in, to a Patient, is called a *Vehicle*. Water is the *Vehicle* of the nutritious Matter of Vegetables. See VEGETATION.

VEIL, a piece of Stuff, ſerving to hide, or prevent the Sight of any thing.

In this Senſe, we read of a large *Veil*, or Curtain, in the Temple of *Jeruſalem*, miraculouſly rent at the Paſſion of our Saviour. See TEMPLE.

In the *Romiſh* Churches, in time of *Lent*, they have *Veils*, or large Curtains over the Altar, Crucifix, Images of the Saints, &c.

The Term *Veil* is alſo uſed for a large piece of Crape, wore on the Head by the Nuns; as the Badge of their Profeſſion: Hence, to *take the Veil*, is to commence Religious.

The Novices wear white *Veils*; and thoſe who have made the Vows, black *Veils*. See NOVICE.

The Prelate before whom the Vows are made, bleſſes the *Veil*, and gives it the Religious. See RELIGIOUS, BENEDICTION, &c.

VEIN, VENA, in Anatomy, a Name given to ſeveral Veſſels, or Canals, which receive the Blood from the divers Parts of the Body, to which the Arteries have convey'd it from the Heart; and carry it back to the Heart again. See BLOOD, &c.

The *Veins* are only a Continuation of the extreme Capillary Arteries, reflected back again towards the Heart. See CAPILLARY, and ARTERY.

In

In their Progreſs, uniting their Channels as they approach it, they, at laſt, all form three large *Veins*, or Trunks, *viz.*

The *Vena Cava deſcendens*, which brings the Blood back from all the Parts above the Heart. See CAVA.

The *Vena Cava aſcendens*, which brings the Blood from all the Parts below the Heart. See HEART.

And the *Porta* which carries the Blood to the Liver. See PORTA, *&c.*

The *Anaſtomaſis*, or Inoſculation of the *Veins* and Arteries, was firſt ſeen by the Microſcope, in the Feet, Tails, *&c.* of Frogs, and other amphibious Animals, by *Leewenhoeck*; but has ſince been obſerv'd in other Animals, particularly the Omentum of a Cat, by Mr. *Cowper*, &c. See ANASTOMASIS, CIRCULATION, *&c.*

The Coats of the *Veins* are four, the ſame with thoſe of the Arteries; only the muſcular Coat is as thin in all the *Veins*, as it is in the Capillary Arteries; the Preſſure of the Blood againſt the Sides of the *Veins*, being leſs than that againſt the Sides of the Arteries; becauſe the Force of the Heart is much broke in the Capillaries. See PHLEBOTOMY.

In the *Veins* there is no Pulſe, becauſe the Blood is thrown into them with a continued Stream, and becauſe it moves from a narrow Channel to a wider. See PULSE.

But they have a Periſtaltick Motion, which depends on their muſcular Coat. See PERISTALTIC.

The *Capillary Veins* unite with one another, as has been ſaid of the Capillary Arteries; only their Courſe is directly oppoſite: for inſtead of a Trunk diſtributed into Branches and Capillaries, a *Vein* is a Trunk form'd out of a Concourſe of Capillaries. See CAPILLARY.

In all the *Veins* which are perpendicular to the Horizon, excepting thoſe of the *Uterus* and the *Porta*, there are ſmall Membranes, or Valves: ſometimes there is only one, ſometimes there are two, and ſometimes three, placed together, like ſo many half Thimbles ſtuck to the Sides of the *Veins*, with their Mouths towards the Heart.

Theſe, in the Motion of the Blood towards the Heart, are preſs'd cloſe to the Sides of the *Vein*; but ſhut the *Veins*, againſt any re-flux of the Blood that way from the Heart, and thereby ſuſtain the Weight thereof in the great Trunks. See VALVES.

The *Veins* are diſtinguiſh'd, with reſpect to their Situation, into *ſuperior* and *inferior*, *aſcending*, and *deſcending*; *right*, as the *Meſenteria*, and *left*, as the Splenic Branch; *internal*, as the *Baſilica*; and *external*, as the *Humeral*.

Many of them, likewiſe, acquire Denominations from the Parts wherein they are found; as, the *Jugulars*, *Phrenitic*, *Renal*, *Iliac*, *Hypogaſtric*, *Epigaſtric*, *Axillary*, *Crural*, *Umbilical*, *Sural*, *Sciaticæ*, *Saphenæ*, *Medianæ*, *Cephalic*, *Thoracic*, *Subclavian*, *Intercoſtal*, *Coronal*, *Diaphragmatic*, *Cæcal*, *Hemorrhoidal*, *Cervical*, *Thymal*, *Mamillary*, *Gaſtric*, *Stomachic*, *Epiploic*, *Splenic*, &c.

They are alſo diſtinguiſh'd from their particular Offices, into *Spermatic*, *Emulgent*, &c. *all which ſee exhibited in Plate* Anatomy——*and their particular Deſcriptions under their proper Articles*——.

VEIN is alſo apply'd to the Streaks, or Waves of divers Colours, appearing on ſeveral ſorts of Woods, Stones, *&c.* as if they were really painted; and which the Painters frequently imitate in painting Wainſcots, *&c.*

Marble is generally full of ſuch *Veins*. See MARBLE.

Lapis Lazuli has *Veins* like Gold. See LAPIS.

Ovid, ſpeaking of the Metamorphoſes of Stones into Men, ſays,

Quæ modò vena fuit, ſub eodem nomine manſit.

Veins, in Stones, are a Defect, proceeding uſually from an Inequality in their Conſiſtence as to *hard*, and *ſoft*; which makes the Stone crack, and ſhiver in thoſe Parts.

VEIN, is alſo applied, in the ſame Senſe with *Stratum*, to the different Diſpoſitions and Kinds of Earth met withal in digging. See STRATUM.

Thus, we ſay, a *Vein* of Sand, another of Rock, *&c.* a *Vein* of Ocher, Vitriol, Allom, Calamine, Coal, *&c.*

Mineral Waters acquire their different Qualities by paſſing thro' *Veins* of Vitriol, Sulphur, *&c.* See MINERAL.

In the ſame Senſe, we ſay, a *Vein* of Gold, Silver, Quickſilver, *&c.* meaning certain Parts of the Earth, wherein the Oar or Glebe of thoſe Metals is found; and which is diſtributed into divers Branches, like the *Veins* in the Body. See OAR, MINE, *&c.*

Tavernier gives us a Deſcription of the *Veins* in the Diamond Mines in *Golconda*, with the manner of digging them. See DIAMOND.

In digging of Coal-Pits, they meet with a Variety of *Veins*, the Order, *&c.* of which, is different in different Places: In the *Philoſophical Tranſactions*, N° 360. the *Veins* in thoſe famous Coal-Mines at *Mendip*, in *Somerſetſhire*, are obſerved to be, (below the Turf, or Loam, or Malm, a reddiſh *Fire-ſtone*; the Coal *Clives*, which is a blackiſh Rock;) the *ſtinking Vein*, a hard Coal for mechanic Uſes; five Foot below which, is the *Catſhead Vein*, 22 Foot thick, intermix'd with Lumps of Stone; at a like diſtance below which, is the *three Coal Vein*, divided into three Kinds of Coal, and about three Foot thick.

The *Veins* hitherto mention'd are frequently work'd in the ſame Pit.—The next is *Peaw Vein*, which is intermix'd with Cockle-ſhells and Fern Branches, uſually wrought in a ſeparate Pit: tho its depth below the *three Coal Vein* be only about five Foot, yet the Cliff between is very hard, and liable to Water: This *Vein* is about a Yard thick; and the like diſtance below it, is the *Smith's Coal Vein*: beneath which is the *Shelly Vein*; and under that a *Vein* of ten Inches, little worth, and ſeldom wrought. See COAL.

The ſame *Veins* are found in a Place ſeven or eight Miles apart.—All the *Veins* lie obliquely, or ſhelving, like the ſide of a Houſe: The Obliquity, or *Pitch*, as they term it, is about 22 Inches in a Fathom; which, when it riſes to the Land, is call'd *Crop*, and in ſome Places *Baſſeting*.

In digging to the South-weſt, they oft meet with Ridges, which cauſe the *Vein* to *trap up*; *i. e.* being cut off by the Ridges, they find it over their Heads, when they are thro' the Ridge: On the contrary, working thro' a Ridge to the North-eaſt, they ſay it *traps down*; *i. e.* they find it under their Feet.

VEJOURS, in Law, are thoſe ſent by the Court to take View of any Place in queſtion, for the better Deciſion of the Right. See VIEW.

It is alſo uſed for thoſe ſent to view ſuch as Eſſoign themſelves *De malo lecti*; whether in truth they be ſuch as that they cannot appear, or whether they counterfeit.

VELAMEN, in Surgery, the Bag, Skin, or Bladder of an Impoſthume, or Swelling. See CYSTIS.

VELAMENTUM *Bombycinum*, a Name ſome Anatomiſts give to the velvet Membrane, or Skin of the Inteſtines. See INTESTINE.

VELARIUS, in Antiquity, an Officer in the Court of the *Roman* Emperors.

The *Velarii* were a kind of Uſhers, whoſe Poſt was behind the Curtains, *Vela*, in the Prince's Apartments; as that of the Chancellors was at the Entry of the Baluſtrade, *Cancelli*; and that of the *Oſtiarii* at the Door.

The *Velarii* had a Superior, of the ſame Name, who commanded them; as we find in two Inſcriptions, quoted by *Salmaſius* in his Notes on *Vopiſcus*; and by a third in *Gruter*. The firſt is,

D. M.
TI. CL. HALLUS
PRÆPOSITUS VELARIORUM—
DOMUS AUGUSTANAE
FEC. SIBI ET FILIIS SUIS L. L.
POST. EORUM.

Salmaſius, and others, for HALLUS, which is in the Stone whereon the Inſcription is, at *Rome*, put THALLUS: Tho we find mention of the ſame *Hallus* as a *Samaritan* by Nation, and *Tiberius*'s Freedman, in *Joſephus*; which ſhews that the *Velarii* and their Chief were very antient Officers, and in uſe among the firſt Emperors.

VELITES, in the *Roman* Army, a kind of antient Soldiery, who were arm'd with a Javelin, a Caſk, Cuiraſſe, and Shield.

VELLEITY, in the School Philoſophy, is defined by ſome, to be a languid, cold, and remiſs Will. See WILL.

Others ſay, it implies an Impotency of obtaining what we require: Others will have it a ſlight Deſire for ſomething, which a Perſon does not matter much, or is too indolent to ſeek: as, *Catus amat Piſcem, ſed non vult tangere Lympham.*

VELLICATION, among Phyſicians, the Act of Twitching.

Vellications are particularly uſed for a ſort of ſudden Convulſions that happen to the Fibres of the Muſcles. See FIBRE, and CONVULSION.

VELOCITY, in Mechanicks, *Swiftneſs*; is that Affection of Motion, whereby a Moveable is diſpoſed to run over a certain Space in a certain Time. See MOTION.

It is alſo call'd *Celerity*; and is ſtill proportional to the Space moved. See CELERITY.

The greateſt *Velocity* wherewith a Ball can deſcend, by virtue of its ſpecific Weight, in a reſiſting Medium, is that which the ſame Ball would acquire by falling in an unreſiſting Medium, thro' a Space which is to four thirds of its Diameter, as the Denſity of the Ball to the Denſity of the Fluid. See DESCENT.

Huygens, *Leibnitz*, *Bernoulli*, *Wolfius*, and the foreign Mathematicians, hold that the *Momenta*, or Forces of falling Bodies, at the End of their Falls, are as the Squares of their *Velocities* into the Quantities of Matter; the *Engliſh* Mathematicians, on the contrary, maintain 'em to be as the *Velocities* themſelves into the Quantities of Matter. See MOMENTUM.

Velocity is conceiv'd either as *abſolute*, or *relative*: The *Velocity* we have have hitherto conſider'd, is *ſimple*, or *abſolute*, with reſpect to a certain Space mov'd in a certain Time.

Relative, or *reſpective Velocity*, is that wherewith two diſtant Bodies approach each other, and come to meet in a longer or a leſs time: Whether, only one of 'em moves towards the other at reſt, or whether they both move; which may happen two ways; either by two Bodies mutually approaching each other in the ſame right Line, or by two Bodies moving the ſame way in the ſame Line, only the Foremoſt ſlower than the other; for by this means, this will overtake that. And, as they come to meet in a greater or leſs Time, the *relative Velocity* is greater or leſs.

Thus, if two Bodies come nearer each other by two Foot, in one Second of Time; their reſpective *Velocity* is double that of two others, which only approach one Foot in the ſame Time.

VELOCITIES *of Bodies moving in Curves.*

According to *Galileo*'s Syſtem of the Fall of heavy Bodies, now admitted by all Philoſophers, the *Velocities* of a Body falling vertically, are, each Moment of its Fall, as the Roots of the Heights from whence it has fallen; reckoning from the beginning thereof.

Hence that Author gather'd, that if a Body fall along an inclined Plane, the *Velocities* it has at the different Times, will be in the ſame Ratio: For ſince its *Velocity* is all owing to its Fall, and it only falls as much as there is perpendicular height in the inclined Plane; the *Velocity* ſhould be meaſur'd by that height, as much as if it were vertical.

The ſame Principle likewiſe led him to conclude, That if a Body fall thro' two contiguous inclined Planes, making an Angle between them, much like a Stick when broke, the *Velocity* would be regulated after the ſame manner, by the vertical Height of the two Planes taken together: For 'tis only this height it falls; and from its Fall it has all its *Velocity*.

The Concluſion was univerſally admitted, till the Year 1693, when M. *Varignon* demonſtrated it to be falſe: From his Demonſtration, it ſhould ſeem to follow, that the *Velocities* of a Body falling along the Cavity of a Curve, for inſtance, of a Cycloid; ought not to be as the Roots of the Height; ſince a Curve is only a Series of an Infinity of infinitely little contiguous Planes, inclined towards one another. So that *Galileo*'s Propoſition would ſeem to fail in this Caſe too, and yet it holds good; only with ſome Reſtriction.

All this Mixture of Truths and Errors, ſo near a-kin to each other, ſhew'd that they had not got hold of the firſt Principles; M. *Varignon*, therefore, undertook to clear what related to the *Velocities* of falling Bodies; and to ſet the whole Matter in a new light: He ſtill ſuppoſes *Galileo*'s firſt Syſtem, that the *Velocities* at the different times of a vertical Fall, are as the Roots of the correſpondent Heights. The great Principle he makes uſe of to attain his End, is that of Compound Motion. See COMPOUND *Motion*.

If a Body falls along two contiguous inclined Planes, making an obtuſe Angle, or a kind of Concavity between 'em; M. *Varignon* ſhews, from the Compoſition of thoſe Motions, that the Body, as it meets the ſecond Plane, loſes ſomewhat of its *Velocity*; and of conſequence that it is not the ſame at the end of the Fall, as it would be, had it fell thro' the firſt Plane prolonged: So that the Proportion of the Roots of the Heights aſſerted by *Galileo*, does not here obtain.

The Reaſon of the loſs of *Velocity*, is, that the Motion, which was parallel to the firſt Plane, becomes oblique to the ſecond, ſince they make an Angle: This Motion, which is oblique to the ſecond Plane, being conceived as compounded, that Part perpendicular to the Plane, is loſt by the oppoſition thereof, and part of the *Velocity* along with it: Conſequently, the leſs of the perpendicular there is in the oblique Motion, or, which is the ſame thing, the leſs the two Planes are from being one, *i. e.* the more obtuſe the Angle is, the leſs *Velocity* does the Body loſe.

Now, all the infinitely little, contiguous, inclined Planes, whereof a Curve conſiſts, making infinitely obtuſe Angles among themſelves, a Body falling along the Concavity of a Curve, the loſs of *Velocity* it undergoes each inſtant is infinitely little: But a finite Portion of any Curve, how little ſoever, conſiſting of an Infinity of infinitely little Planes, a Body moving thro' it, loſes an infinite Number of infinitely little Parts of its *Velocity*: and an Infinity of infinitely little Parts, makes an Infinity of a higher Order, *i. e.* an Infinity of infinitely little Parts, makes a finite Magnitude, if they be of the firſt Order, or Kind; and an infinitely little Quantity of the firſt Order, if they be of the ſecond; and ſo *in infinitum*. Therefore, if the Loſſes of *Velocity* of a Body falling along a Curve be of the firſt Order, they will amount to a finite Quantity, in any finite Part of the Curve, *&c.* See CURVE.

The Nature of every Curve is abundantly determin'd by the Ratio of the Differences of the Ordinates to the correſpondent Portions of the Axis; and the Eſſence of Curves in general, may be conceiv'd as conſiſting in this Ratio, which is variable a thouſand ways. Now this ſame Ratio will be likewiſe that of two ſimple *Velocities*, by whoſe Concurrence a Body will deſcribe any Curve: And of conſequence, the Eſſence of all Curves in the general, is the ſame thing as the Concourſe or Combination of all the Forces, which taken two by two, may move the ſame Body. Thus we have a moſt ſimple and general Equation of all poſſible Curves, and all poſſible *Velocities*. See CURVE.

By means of this Equation, as ſoon as the two ſimple *Velocities* of a Body are known, the Curve reſulting from 'em is immediately determin'd. It is obſervable, that on the Foot of this Equation, an uniform *Velocity*, and a *Velocity* that always varies according to the Roots of the Heights, produce a Parabola, independent of the Angle made by the two projectile Forces that give the *Velocities*: Conſequently, a Cannon Ball, ſhot either horizontally or obliquely to the Horizon, muſt always deſcribe a Parabola. The beſt Mathematicians, till then, had much ado to prove, that oblique Projections form'd Parabolas, as well as horizontal ones. See PROJECTILE, and PARABOLA.

To have ſome meaſure of *Velocity*, the Space is to be divided into as many equal Parts, as the Time is conceiv'd to be divided into: For the quantity of Space correſponding to that Diviſion of Time, is the Meaſure of the *Velocity*.

For an Inſtance; Suppoſe the Moveable A, (Tab. *Mechanicks*, Fig. 45.) travel a Space of 80 Feet in 40 Seconds of Time; dividing 80 by 40, the Quotient 2 ſhews the *Velocity* of the Moveable to be ſuch, as that it paſſes over an Interval of two Feet in one Minute: The *Velocity*, therefore, is rightly expreſs'd by $\frac{40}{80}$; that is, by 2.

Suppoſe, again, another Moveable, B, which in 30 Seconds of Time travels 90 Feet; the Index of its Celerity will be 3. Wherefore, ſince in each Caſe the meaſure of the Space is a Foot, which is ſuppoſed every where of the ſame length; and the meaſure of Time a Second, which is conceiv'd every where of the ſame Duration: the Indices of the *Velocities* 2 and 3, are homogeneal: And therefore, the *Velocity* of A is to the *Velocity* of B, as 2 to 3.

Hence, if the Space be $= f$, and the Time $= t$, the *Velocity* may be expreſs'd by $f : t$; the Space being in a Ratio of the Time and the *Velocity*. See MOTION.

VELOM, a kind of Parchment, finer, evener, and whiter than the common Parchment. See PARCHMENT.

The Word is form'd from the French *Velin*, of the Latin *Vitellinus*, *belonging to a Calf*.

VELVET, a rich kind of Stuff, all Silk, cover'd on the outſide with a cloſe, ſhort, fine, ſoft Shag; the other ſide being a very ſtrong, cloſe Tiſſue, or Web.

The Nap or Shag, call'd alſo the *Velveting*, of this Stuff, is form'd of part of the Threads of the Warp, which the Workman puts on a long narrow channel'd Ruler, or Needle; and which he afterwards cuts, by drawing a ſharp ſteel Tool along the Channel of the Needle, to the Ends of the Warp.

The principal and beſt Manufactories of *Velvet* are in *France*: there are others in *Italy*, particularly at *Venice*, *Milan*, *Florence*, *Genoa*, and *Lucca*: others in *Holland*, ſet up by the *French* Refugees; whereof that at *Haerlem* is the moſt conſiderable: But they all come ſhort of the Beauty of thoſe of *France*; and accordingly are ſold for 10 or 15 *per Cent.* leſs. There are even ſome brought from *China*, but they are the worſt of all.

The Word *Velvet* is form'd of the French *Velours*, which ſignifies the ſame thing; and which comes from *Velu*, a thing cover'd with Hair.

There are *Velvets* of various Kinds; as, *Plain*, that is, uniform and ſmooth, without either Figures or Stripes: *Figured*, that is, adorn'd and work'd with divers Figures; tho the Ground be the ſame with the Figures; that is, the whole Surface *velveted*. See FIGURED.

Ramage, or branch'd *Velvet*, repreſenting long Rinds, Branches, *&c.* on a Satin Ground, which is ſometimes of the ſame Colour with the *Velvet*, but more uſually of a different one. Sometimes, inſtead of Satin, they make the Ground of Gold and Silver; whence the Denominations of *Velvets with Gold ground*, &c.

Shorn Velvet, is that wherein the Threads that make the *Velveting*, have been rang'd in the channell'd Ruler, but not cut there.

Strip'd Velvet, is that wherein there are Stripes of divers Colours, running along the Warp; whether thoſe Stripes be partly *Velvet* and partly Satin, or all *velveted*.

Laſtly, *Flower'd Velvet*, is that wherein the Ground is a kind of Taffety, and the Figures *Velvet*.

Velvets are likewiſe diſtinguiſh'd, with regard to their different Degrees of Strength and Goodneſs, into *Velvets* of four Threads, three Threads, two Threads, and a Thread

and

and half: the first are those where there are eight Threads of Shag, or *Velveting* to each Tooth of the Reed; the second have only six, and the rest four.

In general, all *Velvets*, both work'd and figur'd, short and flower'd, are to have their Warp and Shag of Organsin, spun and twisted, or thrown in the Mill; and their Woof of boil'd Silk, not raw; and are of the same breadth.

VENA, VEIN, in Anatomy. See VEIN.

VENA *Cava*. VENA *Porta*, &c. VENA *Pulmonalis*. } See { CAVA. PORTA, *&c.* See PULMONIC.

VENÆ-*Sectio*, the opening of a Vein, call'd also *Phlebotomy*; and popularly *Bleeding*. See PHLEBOTOMY, *&c.*

VENÆ *Lacteæ*. VENÆ *Lymphaticæ*. VENÆ *Præputii*, &c. } See { LACTEAL. LYMPHATIC. PRÆPUTIUM.

VENAL, or VENOUS, among Anatomists, something that bears a Relation to a Vein. See VEIN.

The Extremities of the Cava and Pulmonary Veins, where they enter the Auricles of the Heart, are call'd *Venous Sinus*'s. See CAVA, and PULMONARY; see also HEART, and CIRCULATION.

VENAL, VENALIS, is also used for something bought with Money, or procur'd by Bribes.

Thus, we say, *Venal* Bards; Courtezans and Flatterers are *Venal*; Justice in *Turks* is *Venal*, it must be bought of the Bashaws.

In *England*, there are several Offices in the Revenue, Policy, *&c. Venal*: But this *Venality* of Offices is no where so considerable as in *France*, where all Offices of Judicature are bought of the King, and only municipal Officers are elective. See OFFICE.

Offices in *England* are *venal* only by a kind of Connivance; in *France* it is a thing solemn, and authoriz'd.

The *Venality* was first introduc'd by *Louis* XII. who, to clear those immense Debts contracted by his Predecessor *Charles* VIII. without burdening his People with new Taxes, bethought himself to sell the Offices; and, in reality, made a vast Sum thereby.

Francis I. made an advantage of the same Expedient to get Money, and sold his Posts openly: Under the same King, it was only accounted a kind of Loan; but that Loan was no more than a Name to disguise a real Sale. The Parliament not being able to relish the *Venality* of Offices, always made the Buyer take an Oath that he did not buy his Post, either directly or indirectly; but there was a tacit Exception made, of Monies lent the King for being put into them. At length, the Parliament finding its oppositions were in vain, and that the Traffick of Offices was publickly authoriz'd, abolish'd the Oath in 1597.

The Word is form'd from the Latin *Venalis*, to be sold.

VENDEE, in Law, the Person to whom any thing is sold; in contradistinction to *Vendor*, or the *Seller*.

VENDITIONI *Exponas*, is a Writ Judicial, directed to the Under-Sheriff; commanding him to sell Goods, which he hath formerly, by Commandment, taken into his Hands; for the satisfying a Judgment given in the King's Court.

VENEERING, or VANEERING, a kind of Marquetry, or Inlaying; whereby, several thin Slices, or Leaves of fine Woods of different kinds, are applied and fasten'd on a Ground of some common Wood.

There are two Kinds of Inlaying; the one, which is the more ordinary, goes no further than the making of Compartments of different Woods; the other requires a deal more Art, and represents Flowers, Birds, and the like Figures.

The first Kind is what we properly call *Veneering*; the latter we have already describ'd, under the Article MARQUETRY.

The Wood intended for *Veneering*, is first saw'd out into Slices, or Leaves about a Line thick: In order to saw 'em, the Blocks or Planks are placed upright, in a kind of Sawing-Press; the Description whereof may be seen under the Article PRESS.

These Slices are afterwards cut into narrow Slips, and fashion'd divers ways, according to the Design propos'd: Then the Joints being carefully adjusted, and the Pieces brought down to their proper thickness, with several Planes for the Purpose; they are glu'd down on a Ground or Block of dry Wood, with good strong *English* Glue.

The Pieces thus jointed and glu'd, the Work, if small, is put in a Press; if large, 'tis laid on the Bench, cover'd with a Board, and press'd down with Poles or Pieces of Wood, one end whereof reaches to the Ceiling of the Room, and the other bears on the Board.

When the Glue is quite dry, they take it out of the Press, and finish it; first with little Planes, then with divers Scrapers; some whereof resemble Rasps, which take off the Dents, *&c.* left by the Planes.

When sufficiently scrap'd, the Work is polish'd with the Skin of a Sea-Dog, Wax, and a Brush and Polisher of Shave-grass: which is the last Preparation. See EBONIST.

VENEREAL, something belonging to *Venus*. See VENUS.

A *Venereal* Person, is one addicted to *Venery*, or *Venereal* Pleasures.

VENEREAL *Disease*, call'd also the *Lues Venerea*, *French Disease*, *Foul Disease*, *French Pox*, *Great Pox*, &c. is a contagious Disease, contracted by some impure Humor, generally receiv'd in Coition; and discovering it self in Ulcers and Pains, about the Genital and other Parts. See POX.

It is generally said to have made its first Appearance in *Europe*, in the Year 1493; tho others will have it much older, and contend for its being known to the Antients, only under other Names.

Mr. *Becket*, particularly, has attempted to shew, that it is the same with what among our Forefathers was call'd the *Leprosy*; and which in many of our antient *English* Writings, Charters, *&c.* is called *Brenning*, or *Burning*.

In order to prove his Point, he has search'd the Records relating to the Stews antiently kept on the *Bankside*, *Southwark*, under the Jurisdiction of the Bishop of *Winchester*. See STEWS.

Among other Constitutions of these Stews, dated 1162, it was appointed, *That no Stew-holder should keep any Woman that hath the perillous Infirmity of* BURNING. And in another Vellom Manuscript, now in the Custody of the Bishop of *Winchester*, dated 1430, it is again order'd, *That no Stew-holder keep no Woman within his House that hath any Sickness of* BRENNING, *but that she be putte out, upon the Peyne of making a Fine unto the Lord of a hundred Shillings*. See BURNING, and BRENNING.

To confirm this Account, Mr. *Becket* quotes a Description of the Disease from a Manuscript of *John Arden* Esq; Surgeon to K. *Richard* II. and K. *Henry* IV. *Arden* defines the Disease called *Brenning*, *Incendium*, to be, *a certain inward Heat and Excoriation of the Urethra*: which Definition, Mr. *Becket* observes, gives us a perfect Idea of what we now call a *Clap*; agreeable to the latest and most exact anatomical Discoveries, and free of all the Errors of *Platerus*, *Rondeletius*, *Bartholin*, *Wharton*, and other later Writers on this Disease. See CLAP.

As to the Leprosy being the same with this *Venereal Disease*, it must be own'd, there are a good many Symptoms in the one Disease, which quadrate well enough with those in the other; but then the Symptoms in each are so precarious, that a great deal of Stress can't be laid hereon. See LEPROSY.

The common Tradition is, that the *Venereal Disease* first broke out in the *French* Army, when it lay encamp'd before *Naples*; and that it was owing to some unwholesom Food: On which account, the *French* call it the *Neapolitan Disease*; and the *Italians*, the *Mal Francese*.

But others go much higher, and suppose it to be the Ulcer *Job* complain'd of so grievously: and accordingly, in a Missal printed at *Venice* in 1542, there is a Mass in honour of S. *Job*, to be said by those recover'd of this Disease; as being supposed to owe their Deliverance to his Intercession.

But the Opinion which prevails most among the more knowing of our Physicians, is, that the Disease is of *Indian* Extraction; and that it was brought hither by the *Spaniards* from the *American* Islands, where it was very common, before ever the *Spaniards* set footing there: Whence the *Spaniards* call it *Sarva des Indias*, or *Las Buvas*: notwithstanding what *Herrera* says, that the *Spaniards* carry'd it to *Mexico*, instead of bringing it thence.

Lister, and others, take it to have had its first Rise from some of the Serpentine Kind; either from a Bite thereof, or from some of their Flesh taken as Food: This is pretty certain, that Men bitten or stung by Scorpions, are greatly eas'd by Coition; but the Woman, *Pliny* assures us, receives a deal of damage thereby: which is no slender Argument, of the Disease's arising from some Person so poison'd.

He adds, there is no room to doubt, but that the *Lues* arose from some such Cause; for upon any venomous bite, the Penis becomes vehemently extended; and the Patient being seiz'd with a *Satyriasis*, breaths nothing but Rage and Lust: Nature, in effect, seeming to direct him to Coition for a Remedy.

But what proves a Remedy to the wounded Person, proves a Disease to the Woman: And from Women thus infected, other Men, who have to do with 'em, become infected in their turns; and thus has the Disease been propagated.

The first Symptoms generally arising after an Affair with an infected Person, are a Heat, Swelling, and Inflammation about the Penis or Vulva, with a hotness of Urine.

The second or third Day usually brings on a Gonorrhæa, or Dripping, which denominates it a *Clap*; and which in a few Days more is follow'd by a Cordee. See GONORRHÆA, and CORDEE.

Tho sometimes there is no Gonorrhæa, or Clap; but the Poison rather makes its way thro' the Cutis to the Groin; and

there ariſes Bubos, with various malignant Puſtles in all Parts of the Body. See BUBO.

Sometimes, alſo, there happen callous Ulcers, call'd *Shankers*, in the *Scrotum* and *Perinæum*; and ſometimes a cancerous and callous Ulcer between the Prepuce and Glans; and in ſome the Teſticles ſwell. See SHANKER.

Add to theſe, violent nocturnal Pains, Nodes, Heats in the Palms of the Hands, and Soals of the Feet; and hence Fiſſures, Excoriations, Condylomata, &c. about the *Anus*; falling of the Hair; ruddy, yellow, or livid Spots, Hoarſeneſs, Relaxation and Eroſion of the Uvula, Ulcer of the Palate, Ozæna, tingling of the Ears, Deafneſs, Blindneſs, Itch, Conſumption, &c. But 'tis rare all theſe Symptoms happen to the ſame Perſon.

The *Venereal Diſeaſe*, *Sydenham* obſerves, is communicated by Copulation, Lactation, Handling, Saliva, Sweat, the genital Mucus, and the Breath: And in whatever Part it is receiv'd, it there diſcovers it ſelf firſt. When the Infection is receiv'd along with the Milk from the Nurſe, it commonly ſhews it ſelf in Soreneſs and Ulcers of the Mouth.

The Method of Cure is various, according to the various Symptoms and Stages: For the firſt Stage, *viz.* a *Gonorrhœa Virulenta*, or Clap. See CLAP, and GONORRHÆA.

Dr. *Pitcairn*'s Method is this: After two or three Vomits, he directs *Mercurius Dulcis*, for ſome Days, twice a-day; when the Mouth grows ſore, let alone the Mercury for three or four Days, and purge every other Day. As the Mouth grows well again, repeat the uſe of Mercury; and thus alternately, till the Symptoms ceaſe. See MERCURY.

For a confirm'd *Lues*, Mercurial Salivation is generally held the only effectual Cure: Tho Mercurial Frictions, applied in ſuch Quantity, and at ſuch Intervals as not to raiſe a Salivation, is held by ſome to be not only eaſier and ſafer, but even more ſucceſsful, in this Diſeaſe, than Salivation it ſelf. See SALIVATION.

Dr. *Sydenham* tells us, he uſes to ſalivate immediately, without any preliminary Evacuation, or Preparation of the Body at all. His Method is this; He preſcribes an Unguent of ℥ii of *Axang. Porcin.* Swines-ſeam, and ℥i of Mercury. With a third Part of this, he orders the Patient to anoint his Arms and Legs, for three Nights ſucceſſively, with his own Hands; ſo as not to touch either the Arm-pits, the Groin, or the Abdomen.—After the third Unction, the Gums uſually ſwell, and a Ptyaliſm comes on.—If it does not come in the time, he exhibits Turbith Mineral gr. viii. in Conſerve of Red Roſes; which occaſioning a Vomiting, raiſes the Ptyaliſm. And if, afterwards, the Salivation abate, ere the Symptoms are quite diſappear'd, he orders it to be promoted with a freſh Doſe of *Mercurius Dulcis*. The Diet and other Regimen, to be the ſame as in a Catharſis.

VENERIS *Oeſtrum*, *the Tranſport of Love*, expreſſes the utmoſt Ecſtaſy of Deſire, or Enjoyment, in Coition. See OESTRUM.

Some are of Opinion, that infectious Women are the moſt apt to communicate the Poiſon, when they are thus excited with Deſire; whereas, with Indifference, they may admit the ſame Intercourſe without giving the Infection.

VENERIS *Oeſtrum*, in Anatomy, the ſame as CLITORIS.

VENERY, is uſed for the Act of Copulation, or Coition of the two Sexes. See COITION, and GENERATION.

It takes its Name from *Venus*, the ſuppoſed Deity of the Paſſion of Love.

VENERY, is alſo the Art or Exerciſe of hunting wild Beaſts; which are alſo call'd *Beaſts of Venery*, and *Beaſts of Foreſt*. See HUNTING.

Such are the Hare, Hart, Hind, Boar, and Wolf. See BEASTS.

VENIA, among our antient Writers, denotes a kneeling, or low Proſtration on the Ground; uſed by Penitents. *Walſingham*, p. 196. *Rege interim proſtrato in longa* venia.

Per venias *centum verrunt barbis pavimentum.*

VENIAL, a Term in the *Romiſh* Theology, applied to ſlight Sins, and ſuch as eaſily obtain Pardon. See SIN.

In confeſſing to the Prieſt, People are not oblig'd to accuſe themſelves of all their *Venial* Sins.

The thing that gives the greateſt Embarras to the *Romiſh* Caſuiſts, is to diſtinguiſh between *Venial* and *Mortal* Sins. The Reformed reject this Diſtinction of *Venial* and Mortal Sins; and maintain, that all Sins, how grievous ſoever, are *Venial*; and all Sins, how ſlight ſoever, are Mortal: And the Reaſon they urge, is, that all Sins, tho of their own Nature Mortal, yet become *venial*, or pardonable, by virtue of our Saviour's Paſſion, to all ſuch as fulfil the Conditions on which it is offer'd in the Goſpel.

To which the *Romaniſts* anſwer, that one of theſe Conditions is Confeſſion. See CONFESSION.

VENIRE *Facias*, in Law, is a Judicial Writ, lying where two Parties plead, and come to Iſſue: for then, the Party Plaintiff, or Defendant, ſhall have this Writ directed to the Sheriff, to cauſe twelve Men of the ſame Country to ſay the Truth upon the Iſſue taken: And if this Inqueſt come not at the Day of the Writ return'd; then ſhall go an *Habeas Corpus*, and after that a Diſtreſs, until they come.

VENIRE *Facias tot Matronas.* See VENTRE *Inſpiciendo.*

VENISON, or VENAISON, the Fleſh of Beaſts of Game, or of Animals to be caught in the way of Gaming, *i. e.* by Hunting, &c. as Deer, Hare, &c. See GAME.

The Word is form'd of the Latin *Venatio*, Hunting. See HUNTING.

Beaſts of VENISON. See BEAST.

VENOM. See POISON.

The Terms *Venom* and *Poiſon* only differ from each other in this, that the latter is uſed where the noxious Matter is taken inwardly, as in Foods, Drinks, &c. and the former, where it is applied outwardly, as in Stings, and Bites of Serpents, Scorpions, Vipers, Spiders, &c.

The Pike is ſaid to have a *venomous* Tooth. All *venomous* Beaſts, in the general, have that Quality in a greater degree, when bred in mountainous and dry Places, than when in wet and marſhy Places; the Southern more than the Northern; thoſe hungry and enraged, than others; and in Summer more than Winter.

VENOUS, *Venoſus*. See VENAL.

VENOUS *Artery*, *Arteria* VENOSA. See ARTERY, LUNGS, CIRCULATION, &c.

VENT, VENT-*Hole*, or *Spiracle*, a little Aperture, left in the Tubes or Pipes of Fountains, to facilitate the Wind's eſcape; or, on occaſion, to give them Air; as in froſty Weather, &c. for want of which they are apt to burſt. See FOUNTAIN.

A *Vent*, taken in this Senſe, is the End of a Pipe, placed erect, and reaching above ground; being uſually ſolder'd to the Elbows of the Pipes.

The *Vents* of large Pipes, are always as high as the Superficies of the Reſervoir; unleſs there be a Valve in them.

The Word is form'd from the Latin *Ventus*, Wind.

VENT is alſo uſed for a little Hole, pierced in Veſſels of Wine, Beer, &c. that are in tap; and which admits Air enough to make the Liquor run, but not ſo much as to corrupt and ſpoil it.

VENT, again, is apply'd to the Covers in Wind-Furnaces, whereby the Air enters, which ſerves them for Bellows; and which are ſtop'd with Regiſters, or Slices, according to the degree of heat requir'd; as in the Furnaces of Glaſs-Houſes, Aſſayors, &c. See BELLOWS, FURNACE, &c.

Laſtly, the Word VENT is uſed for a Pipe of Lead, or Potter's Ware; one end whereof opens into the Cell of a Neceſſary Houſe, and the other reaches to the Roof of the Houſe; to give room for the corrupt fetid Air to exhale.

There are alſo *Vents*, or Apertures made in the Walls which ſuſtain Terraſſes, to furniſh Air, and give a Paſſage for the Waters.

This kind of *Vent* the *Italians*, and we from 'em, call a *Barbacane*. See BARBACANE.

VENTER, *Belly*, in Anatomy, a Cavity in the Body of an Animal, containing *Viſcera*, or other Organs, neceſſary for the Performance of divers Functions. See VISCERA, &c.

Phyſicians divide the human Body into three *Venters*, Regions, or Cavities; the firſt the *Head*, containing the Brain, &c. See HEAD.

The ſecond the *Breaſt*, or *Thorax*, as far as the Diaphragm; containing the Organs of Reſpiration. See THORAX.

The third, which is what we commonly call the *Venter*, or *Belly*, is that wherein the Inteſtines and the Organs of Generation, and Digeſtion, are contain'd; called by Anatomiſts the *Abdomen*. See ABDOMEN.

This laſt, call'd alſo the *lower Venter*, is ſubdivided into three Regions; the firſt and higheſt whereof, call'd the *Epigaſtric* Region, reaches from the *Cartilago Xiphoides* near to the Navel; the ſecond, call'd the *Umbilical*, comprehends the Space of three or four Fingers breadth, about the Navel, containing the Reins and Loins; and the third, the *Hypogaſtric*, which reaches to the *Pudenda*, and is what we properly call the *lower Venter*: *Hippocrates* calls it ὑστερον. See HYPOGASTRIC, EPIGASTRIC, &c.

Its two Sides are call'd *Ilia*, the *Flanks*; and its loweſt Extreme the *Groin*; in Latin *Inguen*, and in *Greek* βουβών.

VENTER, or *Belly*, is alſo popularly us'd for the exterior Part of the lower *Venter*: In which Senſe, we ſay, the Navel is in the middle of the *Venter*, &c.

It is alſo uſed for the *Ventricle*, or Stomach; becauſe that Part is encloſed in the Cavity thereof. See VENTRICLE.

In this Senſe it is, that *Jonas* is ſaid in Scripture to have been three Days in the Whale's Belly.

Laſtly, *Venter* is alſo uſed for the Womb, or *Uterus* of Women: And hence the Writ *De Ventre Inſpiciendo.*

Hence, alſo, in the Civil Law, we ſay, *Partus ſequitur Ventrem*, the Child follows the Belly; meaning, that its Condition is either free or ſervile, according to that of its Mother. See MARRIAGE.

They

They alſo ſay, to *appoint a Curator for the Belly*, with regard to poſthumous Children yet in the Mother's Womb. See POSTHUMOUS.

With regard to Princes, the *Venter* or Belly has been ſometimes crown'd, in form.

VENTER, or *Belly* of a Muſcle, is the fleſhy or body Part thereof; as contradiſtinguiſh'd from the two Tendons, its Extremes; one whereof is call'd the *Head*, and the other the *Tail* of the Muſcle. See MUSCLE.

VENTER *Draconis*, *Dragon's Belly*, in Aſtronomy, the middle of a Planet's Orbit; or that Part moſt remote from the Nodes, *i. e.* from the *Dragon's-Head* and *Tail*; being the Part which has the greateſt Latitude. See ORBIT, and NODE.

The Moon has five Degrees of Latitude, when in the *Dragon's Belly*, and is 90 Degrees diſtant from the Nodes. See LATITUDE.

Of theſe two Points, in each Orbit, that towards the South is alſo call'd the *Southern Limit*, and that towards the North, the *Northern Limit*. See LIMITS.

VENTER *Equinus*, or *Horſe's Belly*, among Chymiſts, is a Dunghil, wherein are incloſed certain Veſſels for particular Operations to be perform'd by means of the gentle heat thereof. See FIRE, and HEAT.

VENTER, in our Cuſtoms, is uſed for a Partition of the Effects of a Father and Mother, among Children born, or accruing from different Marriages.

This Partition is ſo order'd, as that a ſingle Child of one Marriage, or *Venter*, takes as much as ſeveral of another Marriage, or *Venter*: In order to which, the Eſtate is divided into ſo many Parts as there have been *Venters*, or Marriages.

VENTER is alſo uſed for the Children whereof a Woman is deliver'd at one pregnancy.

Thus, two Twins are ſaid to be of the ſame *Venter*.—— Many People take for a Fable what is related of the Counteſs of *Holland*, *viz.* that ſhe had 365 Children at one *Venter*, all living, and baptized: and yet the Story is very gravely related by abundance of Authors; and the Font or Baſon is ſtill ſhewn in the Church where they were baptiz'd; with a kind of Monument of the Fact, thereon. See FOETUS.

VENTIDUCTS, in Building, call'd by the Italians *Ventidotti*, and by the French *Priſons des Vents*, or *Palais d'Eole*; are Spiracles, or ſubterraneous Places, where freſh, cool Winds being kept, are made to communicate, by means of Ducts, Funnels, or Vaults, with the Chambers or other Apartments of a Houſe; to cool them in ſultry Weather.

Theſe are much in uſe in *Italy*, &c. See BUILDING, HOUSE, *&c.*

VENTOSITY, in Medicine. See FLATULENCY.

VENTRE *Inſpiciendo*, a Writ for the ſearch of a Woman that ſays ſhe is with Child, and thereby holds Land from him that is otherwiſe next Heir at Law.

VENTRICLE, *q. d. Little Belly*, in Anatomy, a Diminutive of *Venter*; ſignifying a Cavity ſmaller than what we expreſs by a Venter; or rather, ſignifying a Diviſion of a Venter; or ſome ſmaller Cavity, contain'd in a larger. See VENTER.

There are two Cavities in the Heart, adjoining to the Auricles; and four in the Brain; call'd *Ventricles*; *which ſee explain'd under the Articles* HEART, and BRAIN.

The right Ventricle of the Heart, in relaxing, admits the Blood by the right Auricle from the *Cava*; and contracting, drives it out into the pulmonary Arteries: The *left*, receiving the Blood by the left Auricle, from the Lungs, drives it out into the *Aorta*. See CAVA, AORTA, and LUNGS; ſee alſo SYSTOLE, DIASTOLE, CIRCULATION, *&c.*

VENTRICLE, or VENTRICULUS, by way of Eminence thus call'd, is the ſame thing with the Stomach. See STOMACH.

For the Action of the Ventricle in Vomiting, ſee VOMITING.

VENTRILOQUOUS, VENTRILOQUUS, call'd alſo *Gaſtriloquous*, and *Engaſtrimythus*, a Term applied to Perſons who form their Speech by drawing the Air into the Lungs; ſo that the Voice proceeds out of the Thorax; and, to a By-ſtander, ſeems to come from a diſtance. See ENGASTRIMYTHUS, *&c.*

Such a Perſon we had lately in *London*, a Smith by Profeſſion, who had the Faculty in ſuch Perfection, that he'd make his Voice appear, now, as if it came out of the Cellar, and the next Minute, as if in an upper Room; and no body preſent perceive that he ſpoke at all: Accordingly, he has frequently call'd a Perſon firſt up, then down Stairs; then out of doors, then this way, then that, without ſtirring from his Seat, or appearing to ſpeak at all.

Rolandus, in his *Agloſſoſtomographia*, mentions, that if the *Mediaſtinum*, which is naturally a ſingle Membrane, be divided into two Parts, the Speech will ſeem to come out of the Breaſt; ſo that the By-ſtanders will fancy the Perſon poſſeſs'd. See ENGASTRIMANDER.

The Word is a Compound of *Venter*, and *loquor*, I ſpeak.

VENTURINE, in Natural Hiſtory. See ADVENTURINE.

VENTURINE, or ADVENTURINE, is likewiſe uſed for the fineſt and ſlendereſt Gold Wire, uſed by Embroiderers, *&c.* See *Gold* WIRE.

When reduced into Pouder, as fine as it can be clip'd, or filed, this Pouder may be ſtrew'd on the firſt Layer of pure Varniſh, made uſe of in Japanning, after the Varniſh is dry, in order to lay any Colour over it. See JAPANNING.

VENUE, or VENEW, in Law, a neighbouring or near Place.—*Locus quem vicini habitant.*

Thus, we ſay, Twelve of the Aſſize ought to be of the ſame *Venew* where the Demand is made. See ASSIZE.

——*And alſo return in every ſuch Pannel upon the* Venire Facias, *ſix ſufficient Hundreders*, at the leaſt, *if there be ſo many within the Hundred where the* Venire *lies*. Stat. 25. Hen. VIII. See VISNE.

VENUS, in Aſtronomy, one of the inferior Planets; denoted by the Character ♀. See PLANET.

Venus is eaſily diſtinguiſh'd by her brightneſs, which exceeds that of all the other Planets, and which is ſo conſiderable, that in a very dark Place ſhe projects a ſenſible Shadow. Her Place is between the Earth and Mercury.

She conſtantly attends the Sun, and never departs from him above 47 Degrees: When ſhe goes before the Sun, that is, riſes before him, ſhe is call'd *Phoſphorus*, or *Lucifer*, or the *Morning Star*; and when ſhe follows him, that is, ſets after him, *Heſperus*, or *Veſper*. See PHOSPHORUS, VESPER, *&c.*

The Semidiameter of *Venus*, is to that of the Earth, as 10 to 19; her Diſtance from the Sun is $\frac{723}{1000}$ of the Earth's diſtance from the Sun: her Excentricity 5; the Inclination of her Orbit 3° 23′. See INCLINATION, EXCENTRICITY, *&c.*

Her periodical Courſe round the Sun, is perform'd in 224 Days 17 Hours; and her Motion round her own Axis, in 23 Hours. See PERIOD, and REVOLUTION.

Her greateſt Diſtance from the Earth, according to *Caſſini*, is 38000 Semidiameters of the Earth; and her ſmalleſt 6000. See DISTANCE.

Her Parallax is 3 Minutes. See PARALLAX.

Venus, when view'd thro' a Teleſcope, is rarely ſeen to ſhine with a full Face, but has Phaſes juſt like thoſe of the Moon; being now gibbous, now horned, *&c.* and her illumin'd Part conſtantly turn'd towards the Sun, *i. e.* it looks towards the Eaſt when *Phoſphorus*, and towards the Weſt when *Heſperus*. See PHASES.

De la Hire, in 1700, thro' a Teleſcope of 16 Feet, diſcover'd Mountains in *Venus*; which he found to be larger than thoſe in the Moon. See MOON.

And *Caſſini* and *Campani*, in the Years 1665 and 1666, diſcover'd Spots in her Face: from the Appearances of which, he aſcertain'd her Motion round her Axis. See SPOTS.

Sometimes ſhe is ſeen in the Diſk of the Sun, in form of a dark, round Spot. See TRANSIT.

In 1672, and 1686, *Caſſini*, with a Teleſcope of 34 Feet, thought he ſaw a Satellite moving round this Planet, and diſtant from it about $\frac{1}{3}$ of *Venus*'s Diameter. It had the ſame Phaſes as *Venus*, but without any well defin'd Form; and its Diameter ſcarce exceeded $\frac{1}{4}$ of that of *Venus*.

Dr. *Gregory* thinks it more than probable that this was a Satellite; and ſuppoſes the Reaſon why it is not uſually ſeen, to be the unfitneſs of its Surface to reflect the Rays of the Sun's Light; as is the Caſe of the Spots in the Moon: of which, if the whole Diſk of the Moon were compos'd, he thinks, that the Planet could not be ſeen as far as to *Venus*. See SATELLITE.

The Phænomena of *Venus*, evidently ſhew the Falſity of the *Ptolemaic* Syſtem: For that Syſtem ſuppoſes, that *Venus*'s Orb, or Heaven, incloſes the Earth; paſſing between the Sun and Mercury. And yet all our Obſervations agree, that *Venus* is ſometimes on this ſide the Sun, and ſometimes on that; nor did ever any body ſee the Earth between *Venus* and the Sun: which yet muſt frequently happen, if *Venus* revolved round the Earth in a Heaven below the Sun. See SYSTEM, EARTH, *&c.*

VENUS, in Chymiſtry, is uſed for the Metal *Copper*. See COPPER.

Its Character is ♀; which, ſay the *Adepti*, expreſſes it to be Gold, only join'd with ſome corroſive and arſenical Menſtruum; which removed, Copper would be Gold. See GOLD.

Venus is univerſally allow'd, by the Chymiſts, *&c.* to be one of the moſt powerful Medicines in Nature: Of this, is ſaid to have been compos'd the famous *Butler's Stone*, which cured moſt Diſeaſes by only licking it.——Of this is compos'd that noble Remedy of *Van Helmont*, *viz.* the Sulphur of Vitriol, or *Ens Vitrioli*, fix'd by Calcination, and Cohobation.—— Of the *Ens Vitrioli* of *Venus*, is likewiſe compoſed Mr. *Boyle*'s Arcanum, the *Colcothar Vitrioli*. See VITRIOL.

'Tis certain, Copper is a moſt excellent Emetic, and a noble Antidote againſt Poiſons; for it is no ſooner taken than it exerts its force: whereas other Vomitories lie a

good while in the Stomach: But one ſingle Grain of Ruſt of *Venus* immediately vomits. See EMETIC.

Hence, Syrups that have ſtood over-night in Copper Veſſels, create a vomiting.

It is alſo an excellent Medicine in Chronical Caſes: Hence a famous Phyſician is recorded to have cur'd *Charles* V. of a Dropſy by the Uſe of *Copper*.

Venus is diſſoluble by all the Salts known, both Acid, Alkaline, and Nitrous; nay, even by Water and Air, conſider'd as they contain Salt. See DISSOLUTION, SALT, *&c.*

'Tis from this common Reception of all Menſtruums, that Copper is called *Venus*, q. d. *meretrix publica*, a common Proſtitute: Tho others take the Denomination to have been occaſion'd by its turning of a Sea-green Colour, when diſſolved by Acids.

Mount of VENUS, *Mons* VENERIS, among Anatomiſts, is a little hairy Protuberance, in the middle of the *Pubes* of Women; occaſion'd by the more than ordinary Collection of Fat under the Skin in that Place. See PUBES.

Among Chiromancers, the *Mount of Venus* is a little Eminence in the Palm of the Hand, at the Root of one of the Fingers.

VERB, in Grammar, a Word ſerving to expreſs what we affirm of any Subject, or attribute to it; as the Words *is*, *underſtands*, *hears*, *believes*, &c. See WORD.

The *Verb* is thus called of the Latin *Verbum*, Word, by way of Eminence; as being the principal Word of a Sentence. See SENTENCE.

The common Definition given by Grammarians, is, that a *Verb* is a Word which betokens being, doing, or ſuffering.

To conceive the Origin and Office of *Verbs*, it may be obſerved, that the Judgment we make of any thing, as when I ſay *the Earth is round*, neceſſarily includes three Terms. See TERM.

The firſt, called the *Subject*, is the Thing we affirm of, *e. g. Earth*. See SUBJECT.

The ſecond, called the *Attribute*, is the Thing affirm'd, *e. g. round*. See ATTRIBUTE.

The third, *is*, connects thoſe two Terms together, and expreſſes the Action of the Mind, *affirming* the Attribute of the Subject. This laſt is what we properly call the *Verb*, and which ſome of our later Grammarians, particularly the Port Royaliſts, chuſe to call by a more ſignificant Word, *Affirmation*. See AFFIRMATION.

The Reaſon is, that its principal Uſe is to ſignify *Affirmation*; that is, to ſhew that the Diſcourſe wherein that Word is uſed, is the Diſcourſe of a Man, who does not only conceive Things, but judges and affirms ſomewhat of them.

By this Circumſtance, a *Verb* is diſtinguiſh'd from Nouns which alſo ſignify an Affirmation, as *affirmans affirmatio*; thoſe only ſignify an Affirmation, as that, by a Reflection of the Mind, is render'd an Object of Thought: ſo, that they don't ſhew that the Perſon who uſes 'em *affirms*, but only that he conceives *an Affirmation*.

Tho the principal Uſe of *Verbs* be to ſignify Affirmation; they alſo ſerve to expreſs the other Motions of the Soul: as to deſire, pray, command, *&c.* but this they only do by changing the Mood, or Inflexion; which we ſhall conſider under the Article MOOD.

Here, we only conſider the *Verb* in its primary Signfication, which is that it has in the *Indicative* Mood.

On this Footing, the *Verb* ſhould have no other uſe, but to mark the Connection which we make in the Mind, between the two Terms of a Propoſition; but the *Verb eſſe*, *to be*, is the only one that has retain'd this Simplicity: nor, in ſtrictneſs, has this retain'd it, but in the third Perſon; as *eſt*, is.

In effect, Men being naturally inclin'd to ſhorten their Expreſſions, to the Affirmation they have almoſt always added other Significations, in the ſame Word: Thus, *e. g.* they add that of ſome Attribute, ſo as that two Words make a Propoſition; as in *Petrus vivit*, *Peter* lives: where *vivit* includes both the Attribute and Affirmation; it being the ſame thing to ſay *Peter lives*, as that *Peter is living*. And hence the great Variety of *Verbs* in every Language.

For, had the People been contented to give the *Verb* its general Signification, without any additional Attribute, each Language would only have needed one *Verb*, *viz.* the *Verb* Subſtantive *eſt*, is.

Again, on ſome Occaſions, they alſo ſuperadd the Subject of the Propoſition, as *Sum homo*, *I'm a Man*; or *vivo*, *I live*: And hence the diverſity of *Perſons* in *Verbs*. See PERSON.

Again, we alſo add to the *Verb*, a Relation to the Time with regard to which we affirm; ſo that one ſingle Word, as *cænaſti*, ſignifies that I attribute to the Perſon I ſpeak, the Action of Supping, not for the preſent Time, but for the paſt: And hence the great diverſity of *Tenſes* in moſt *Verbs*. See TENSE.

The diverſity of theſe Significations, or Additions in the ſame Word, has perplex'd and deceiv'd many of our beſt Authors in the Nature of a *Verb*; and led 'em to conſider it, not according to what is eſſential to it, which is *to affirm*; but according to ſome of its accidental Relations.

Thus, *Ariſtotle*, taking up with the third of thoſe additional Significations, defines *Verb* to be *Vox ſignificans cum tempore*; a Word ſignifying ſomething with Time.

Others, as *Buxtorf*, adding the ſecond Relation, define it, *Vox flexilis cum tempore & perſona*; a Word admitting of divers Inflexions, in reſpect of Time and Perſon.

Others, taking up with the firſt of the additional Significations, which is that of the Attribute, and conſidering that the Attributes Men ordinarily add to the Affirmation, were Actions and Paſſions; have ſuppoſed the Eſſence of a *Verb* to conſiſt in ſignifying *Actions, or Paſſions*.

Laſtly, *Scaliger* imagin'd he had made a great Diſcovery in his Book of the *Principles of the* Latin *Tongue*, in ſaying, that the Diſtinction of Things into *Permanentes*, and *Fluentes*, into what remain, and what paſs away, is the proper Source of the Diſtinction between Nouns, and *Verbs*; the firſt being to ſignify what remains, and the ſecond what paſſes.

But from what we have ſaid, 'tis eaſy to perceive, that theſe Definitions are all falſe; and that the only true Definition is, *Vox ſignificans Affirmationem*: This Definition includes all that is eſſential to the *Verb*; but if one would likewiſe include its principal Accidents, one might define it, *Vox ſignificans Affirmationem, cum deſignatione Perſonæ, Numeri, & Temporis*; a Word which ſignifies an Affirmation, with a Deſignation of Perſon, Number, and Tenſe: which is what properly agrees to the *Verb* Subſtantive *eſt*.

For as to other *Verbs*, conſider'd as becoming different by the union of certain Attributes, one may define 'em thus; *Vox ſignificans Affirmationem alicujus attributi, cum deſignatione Perſonæ, Numeri, & Temporis*; a Word which expreſſes the Affirmation of ſome Attribute, with a Deſignation of Perſon, Number, and Time.

Verbs are variouſly divided; with reſpect to the Subject, they are divided into, *Active*, *Paſſive*, *Neuter*, &c. with reſpect to their Inflexions, into *Regular*, and *Irregular*; *Perſonal*, and *Imperſonal*; *Auxiliary*, *Subſtantive*, &c.

VERB *Active*, is a *Verb* which expreſſes an Action that falls on another Subject, or Object. See ACTIVE.

Such are *I love*, *I work*, &c. which ſignify the Action of Loving, Working, *&c.*

Of theſe, Grammarians make two Kinds; the one call'd *Tranſitive*, and the other *intranſitive*, or *reciprocal*. See TRANSITIVE, *&c.*

VERB *Paſſive*, is that which expreſſes a Paſſion; or which receives the Action of ſome Agent; and which is conjugated in the modern Tongues with the Auxiliary *Verb I am*, *je ſuis*, *jo ſo*, &c. See AUXILIARY.

Some don't allow of any *Verbs Paſſive* in theſe Languages: The Reaſon is, that what we call *paſſive*, is nothing but the Participle of the *Verb*, join'd with the Auxiliary Verb *to be*; whereas the *Verbs Paſſive* of the *Latin*, &c. have their particular Terminations. See PASSIVE.

VERB *Neuter*, is that which ſignifies an Action that has no particular Object whereon to fall; but which of it ſelf takes up the whole Idea of the Action: as, *I ſleep*, *thou yawn'ſt*, *he ſnores*, *we walk*, *you run*, *they ſtand*.

The *Latins* call 'em *Neuters*, by reaſon they are neither Active nor Paſſive; tho they have the Force and Signification of both: as *I languiſh*, ſignifies as much as *I am languiſhing*; *I obey*, as much as *I exerciſe Obedience*, &c. only that they have no Regimen to particularize this Signification.

Of theſe *Verbs* there are ſome which form their Parts by the Auxiliary Verb *to have*; as, *I have ſlept*, *you have run*.

Theſe, Grammarians call *Neuters Active*.

Others there are, which form their compound Parts by the Auxiliary *to be*; as, *to come*, *to arrive*, &c. for we ſay, *I am come*, not *I come*, &c. Theſe are call'd *Neuters Paſſive*.

VERB *Subſtantive*, is that which expreſſes the Being, or Subſtance which the Mind forms to it ſelf, or ſuppoſes in the Object; whether it be there, or not: as, *I am*, *thou art*. See SUBSTANTIVE.

Auxiliary, or *Helping* VERBS, are thoſe which ſerve in conjugating Active and Paſſive *Verbs*: ſuch are, *I am*, *I have*, &c. See AUXILIARY.

The Abbot *de Dangeau* diſtinguiſhes all *Verbs* into two general Kinds; *Auxiliary Verbs*, and *Verbs* which make uſe of Auxiliaries.

This Diſtinction ſome may tax as not very juſt; in regard, *Auxiliary Verbs* ſometimes make uſe of Auxiliaries themſelves; but this does not deſtroy the Diviſion: it only ſhews, that the *Auxiliary Verb* has two Formalities, or two different Qualities to be conſider'd under; in virtue whereof, it conſtitutes, as it were, two *Verbs*.

The *Verbs* which make uſe of Auxiliaries, he divides into *Active*, *Neuter*, and *Pronominal*.

Verbs Neuter he diſtinguiſhes into *Neuters Active*, and *Neuters Paſſive*. *Pronominals* he diſtinguiſhes into *Identic*, *Reci-*

Reciprocal, *Neutrized*, and *Paſſived*.—But ſeveral of theſe are peculiar to the *French* Language.

Verbs, in the *Engliſh*, and moſt modern Tongues, do not change their Endings, as in *Latin*, to denote the ſeveral Times, Modes, &c. of their being, doing, or ſuffering; but in lieu thereof, make uſe of *Auxiliaries*; as, *have*, *am*, *be*, *do*, *will*, *ſhall*, *may*, *can*, &c.

Regular VERBS, are thoſe which are conjugated after ſome one Manner, Rule, or Analogy. See CONJUGATION.

Irregular, or *Anomalous* VERBS, are thoſe which have ſomething ſingular in the Terminations, or Formations of their Tenſes.

The Irregularities in our *Engliſh Verbs*, lie wholly in the Formation of the Preter Tenſe, and Paſſive Participle.

The firſt, and moſt general Irregularity, took its Riſe from the quickneſs of our Pronunciation, by changing the Conſonant *d* into *t*; the Vowel *e*, in the regular Ending *ed*, being cut off, that the Pronunciation might be more ready: Thus, for *dwelled*, *keeped*, *ſended*, we ſay, *dwelt*, *kept*, *ſent*.

VERBS *Impersonal*, are thoſe which have only a third Perſon; as, *it behoves*, &c.

There are alſo *Reduplicative Verbs*, as *reſound*, *recall*, &c. *Frequentative Verbs*, &c.

VERBAL, ſomething that belongs to *Verbs*, or even to Words, ſpoke with the Mouth.

Thus, *Verbal* Nouns are thoſe form'd from Verbs. See NOUN.

So, a *Verbal* Contract, is that made merely by Word of Mouth; in oppoſition to that made in Writing. See CONTRACT, &c.

VERBERATION, *Smiting*, in Phyſicks, a Term uſed to expreſs the Cauſe of Sound, which ariſes from a *Verberation* of the Air, when ſtruck, in divers manners, by the ſeveral Parts of the ſonorous Body firſt put into a vibratory Motion. See SOUND.

The Word is form'd from the Latin *Verbero*, I ſmite.

VERDEGREASE, VER-DE-GRIS, a kind of Ruſt of Copper, of great uſe among Painters, for a green Colour. See COLOUR.

Verdegreaſe is prepar'd from Copper Plates, and Huſks of Grapes well ſaturated with Wine, put up in earthen Pots; and ranged, *ſtratum ſuper ſtratum*, that is, firſt Huſks, then Copper; and ſo alternately.

When the Pots are fill'd, they are ſet in the Cellar; whence, after ſome time, they are taken out, to gather the *Verdegreaſe*, which is a green Ruſt, covering the Plates all over. See RUST, and COPPER.

Some talk of *Verdegreaſe* made with Vinegar, and other corroſive Salts; but 'tis a Miſtake: the beſt Wine being nothing too good for the purpoſe.

Accordingly, the greateſt Part of the *Verdegreaſe* conſum'd in *Europe*, is made in *Languedoc*, of the Wines of that Country; and is exported in Cakes, about 25 Pounds weight each.

There is but very little quite pure: To be good, it muſt be very dry, of a deep green, and pretty clear of white Spots.

The Word is form'd from the Latin *Viride æris*: 'Tis alſo called *Ærugo*. Others call it the *Flower*, and others the *Vitriolic Salt of Copper*; tho, in reality, it be the proper Subſtance thereof. See VITRIOL.

The Apothecaries uſe to diſſolve *Verdegreaſe* in diſtill'd Vinegar, and then filtrate, and evaporate it in the Cellar; upon which it ſhoots into Cryſtals. Theſe Cryſtals are uſed among Chirurgeons, &c. to eat off the fungous Fleſh.

The Painters alſo uſe it for a green Colour; eſpecially in Works of Miniature. See GREEN, &c.

VERDERER, or VERDEROR, a Judicial Officer of the King's Foreſt, whoſe Buſineſs is to look to the Vert, and ſee it well maintain'd. See VERT.

He is ſworn to keep the Aſſizes of the Foreſt; as alſo to view, receive, and enroll the Attachments and Preſentments of all manner of Treſpaſſes, relating to Vert and Veniſon therein. See FOREST.

The Word is form'd from the Latin *Viridarius*, which *Ulpian* uſes in the ſame Signification.

VERDETER. See VERDITER.

VERDICT, is the Anſwer of the Jury, made upon any Cauſe, Civil or Criminal, committed by the Court to their Examination. See JURY.

'Tis called *Verdict*, for *Vere dictum*, q. d. *dictum veritatis*, the Dictate of Truth.

A *Verdict* is either *General*, or *Special*.

A General VERDICT, is that which is brought into the Court in like general Terms as the general Iſſue: As in Action of Diſſeiſin, the Defendant pleadeth, No Wrong, no Diſſeiſin. Then the Iſſue is general, whether the Fact be wrong, or not: which being committed to the Jury, they, upon Conſideration of the Evidence, come in and ſay, either for the Plaintiff, That it is a wrong Diſſeiſin; or for the Defendant, That it is no Wrong, no Diſſeiſin.

A Special VERDICT, is, when they ſay at large, that ſuch and ſuch a Thing they found to be done by the Defendant or Tenant; declaring the Courſe of the Fact, as in their Opinion it is proved; and as to the Law, upon the Fact, praying the Judgment of the Court.

This *Special Verdict*, if it contain any ample Declaration of the Cauſe from the beginning to the end, is alſo called a *Verdict at large*.

Item utimur quod Balivi & Coronatores Burgi noſtri uſi fuerint & adhuc utuntur recipere Veredictum *duodecim Juratorum ex quacunque Cauſa, infra Burgum Noſtrum prædictum, ſeu ejus Libertatem emergenti, ſive contingenti, Seneſchalli præſentia, nullo modo expectata.* MS. Cod. & Stat. Burg. Vill. *de Mountgoner*. See JUROR.

VERDITER, VERDETER, or VERDITURE, a Drug, uſed by the Painters, &c. for a green Colour. See GREEN.

Verditer is, properly, a native Mineral Subſtance, of a ſtony Conſiſtence, and a blue Colour; but ſpangled with little ſhining Points like Gems; brought from the Mountains of *Hungary* and *Moravia*; called alſo *Lapis Armenius*.

Of this, well ground, and cleans'd by Lotion, ſhould be made the Painter's green called *Verditer*. See COLOUR.

But this Stone is very rare; and the *Verditer* uſed, is not a native but a factitious Subſtance: the proper way of preparing it, we are told, is by caſting Wine or Water upon new Copper, juſt as it comes red hot out of the Furnace, and catching the Steams which riſe from it upon Copper Plates. Others ſay, 'tis prepar'd by diſſolving Copper Plates in Wine; much after the manner of Verdegreaſe. But the Method in practiſe among us, is as follows:

Into an hundred Pounds weight of Whiting, the Refiners pour their Copper Water, and ſtir them together, every Day for ſome Hours, till the Water grows pale: Then they pour that away, and ſet it by for farther uſe; and pour on more of the green Water, and ſo till the *Verditer* be made: which being taken out, is laid on large pieces of Chalk in the Sun, till it be dry, for the Market.

The Water mention'd to be pour'd off from the *Verditer*, (which remains at the bottom of a Tub) is put into a Copper, and boil'd till it come to the thickneſs of Water-Gruel: now, conſiſting principally of Salt-petre reduced, moſt of the Spirit of Vitriol being gone with the Copper into the *Verditer*; and a Diſh full of this being put into the other Materials for Aqua fortis; is re-diſtill'd, and makes what they call a double Water, which is near twice as good as that made without it.

VERDOY, in Heraldry, is applied to a Bordure of a Coat of Arms; charg'd with any Kinds, or Parts of Flowers, Fruits, Seeds, Plants, &c.

VERDURE, the Quality of Greenneſs. See GREEN.

The Word is *French*, form'd of *Verd*, green.

VERGE, a Rod, Switch, or Yard; particularly a Stick or Wand, which Perſons are admitted Tenants by holding in their Hands, and ſwearing Fealty to the Lord of the Manor. See INVESTITURE.

On this account, they are call'd *Tenants by the Verge*. See TENANT.

Among Floriſts, a *dented Verge*, is a jagged edge or outſide of a Leaf.

VERGE is alſo the Compaſs or Extent of the King's Court; within which is bounded the Juriſdiction of the Lord Steward of the King's Houſhold, and of the Coroner of the King's Houſe. See COURT, HOUSHOLD, &c.

It is thus call'd, from the *Verge*, or Staff which the Marſhal bears.

The Lord Steward, by virtue of his Office, without any Commiſſion, judges of all Tranſgreſſions, as Treaſons, Murders, Felonies, Bloodſhed, &c. committed in the Court, or within the *Verge* thereof; which extends every way the Space of twelve Miles from the chief Tunnel of the Court; only *London* by Charter exempted. See *Lord* STEWARD.

This was antiently called *Pax Regis*, or the *King's Peace*. See PEACE.

Court of VERGE, is a Court or Tribunal, in manner of a King's-Bench; which takes cognizance of all Crimes and Miſdemeanors committed within the *Verge*.

It is held in the Compting-Houſe, by the Lord Steward, as Judge thereof, aſſiſted by other Officers of the Houſhold; as, the Treaſurer, Comptroller, Cofferer, Clerks of the Green-Cloth, &c. See GREEN-*Cloth*, &c.

VERGE *of Land*. See YARD *Land*.

VERGERS, call'd by *Bracton*, &c. *Vergatores Servientes*, are Officers who carry white Wands before the Juſtices of either Bench; by others call'd *Porters of the Verge*. See PORTER.

VERGERS *of Cathedral or Collegiate Churches*, are inferior Officers, who go before the Biſhop, Dean, &c. with a *Verge*, or Rod tip'd with Silver.

VERGILIÆ, Conſtellations, whoſe appearance denote the Approach of the Spring. See SPRING.

According

According to the Poets, they were the Daughters of *Atlas*; and by the *Greeks* were call'd *Pleiades*: but the *Romans* named them *Vergiliæ*. See PLEIADES.

VERIFICATION, the Act of proving, or making a thing good.

In the *French* Law, *Verifying* is uſed for the recording of the King's Edicts and Decrees by the Parliament.

VERISIMILITUDE. See PROBABILITY.

VERJUICE, a Juice or Liquor, drawn from ſour Grapes, or Apples, unfit for Wine, or Cyder; or from ſweet ones, while yet acid, and unripe. See CYDER.

Its chief uſe is in Sauces, Ragouts, &c. tho it is alſo an Ingredient in ſome Medicinal Compoſitions; and is uſed by the Wax-Chandlers to purify their Wax.

It has its Name from a large Grape, call'd *Verjus*, or *Bourdelas*; which is ſaid never to grow perfectly ripe; or rather, which in its utmoſt Maturity is too auſtere and ſour to be us'd in Wine; whence it is commonly turn'd into *Verjuice*.

There is alſo a tolerable *Verjuice* made of Crabs, gather'd, laid in a heap to ſweat, the Stalks, &c. ſeparated, then ſtamp'd or ground, and the Crab-maſh put in a hair Bag; the Juice ſqueez'd out in a Preſs, barrell'd up cloſe, and ſet in a warm Place to work for ten or twelve Days.

VERMES, in Medicine, a Diſeaſe popularly call'd *Worms*; ariſing from ſome of thoſe Reptiles being generated, and growing in the Body: whence, frequently, dire Symptoms proceed. See WORMS.

The ordinary Place of the Worms is the Inteſtines: Tho there is ſcarce any Part of the Body but is ſometimes infected with 'em: For beſides the *Vermes Inteſtinales*, there are *Dentales*, *Gingivales*, *Pulmonarii*, *Cardiaci*, *Sanguinarii*, *Urinarii*, *Cutaneous*, *Umbilicales*, Worms *in the Liver*, the *Saliva*, &c.

They are all ingender'd from the Eggs of ſome Inſect, depoſited in ſomething that is taken into the Body by way of Food, or ſome other way.

There are three Species of Worms, moſt frequent in the human Body: The *Teretes*, or round and long, moſtly found in the *Duodenum*; the *Latus*, or flat, call'd *Tænia*; and the round and ſhort, found in the *Rectum*, and call'd *Aſcarides*. See ASCARIDES, &c.

Sometimes, indeed, there are anomalous Worms expell'd; as horned, hairy, four-footed, two-headed, &c.

The Symptoms of the Diſeaſe are, Vomiting, Head-ach, Heart-burn, Sighing, Swooning, feeble Pulſe, heavy Sleep, Deliria, Squinancy, Pleuriſy, canine Hunger, and innumerable others; occaſion'd by the Animal's ſucking, moving, vellicating, gnawing, conſuming the Chyle; irritating the Nerves, wounding the Solids, &c.

As to the *Latus*, beſide the other common Symptoms, thoſe affected with this have one peculiar to 'em; which is, that with their Stools they diſcharge ſeveral little Bodies, like Gourd-Seeds.

Dr. *Tyſon*, in the *Philoſophical Tranſactions*, N° 146. gives a curious account of the *flat Worm*, or *Lumbricus latus*; call'd by *Hippocrates* Ταινία, and in *Engliſh*, ordinarily, the *Tape-Worm*, or *Jointed Worm*.

This Worm is always ſingle: It lies variouſly convoluted; being ſometimes as long as all the Guts, and ſometimes vaſtly exceeds that length.

Olaus Borrichius aſſures us, a Patient of his, in a Year's time, voided 800 Foot of this ſort of Worm, tho he had not yet met with the Head: in voiding, the Patient always perceiv'd it to break off.

Dr. *Tyſon* parallels this Caſe with that of a Patient of his, who voided vaſt Quantities of this Worm, for ſeveral Years together: but in various Pieces; ſome two, three, four, ſix, or more Yards long: But all put together, he ſays, would much exceed the length of that of *Borrichius*.

The Joints in this Worm are very numerous: In one of 24 Foot long, Dr. *Tyſon* number'd 507 Joints. Above the middle of the Edges of each Joint, he obſerv'd a protuberant Orifice.—Thoſe Orifices he takes for ſo many *Mouths*; the beſt Microſcopes diſcovering no Mouth in the Head.

The Worm is frequent enough in moſt Kinds of Animals; as Dogs, Oxen, Crabs, Herrings, Pikes, &c.

Some Authors aſſert, that it is not one, but many Worms link'd together, and included in a *Spolium* of the Inteſtines; and that this *Spolium* is not animated, but receives its Senſe and Motion from *Vermiculi*, or *Cucurbitini* incloſed in it. This, *Gabucinus*, *de Lumb. Com.* ſays, he has plainly diſcover'd: But Dr. *Tyſon* abundantly evinces the contrary.

VERMICELLI, or VERMICELLY, is, properly, a kind of Meſs, prepar'd of Flower, Cheeſe, the Yolks of Eggs, Sugar, and Saffron; and reduc'd into little long Pieces, or Threads, like Worms, by forcing it with a Piſton thro' a number of little Holes in the end of a Pipe made for the purpoſe.

It was firſt brought from *Italy*, where it is in great vogue. In effect, 'tis the great regale of the *Italians*. Other Nations are hardly brought into the Taſte of it.

It is chiefly uſed in Soupes and Pottages, to provoke Venery.——

The Word, in the original *Italian*, ſignifies *little Worms*: They alſo call it *Tagliarini*, and *Millefanti*.

VERMICULAR, an Epithet given to any thing that bears a relation, or reſemblance to Worms, *Vermiculi*.

Anatomiſts particularly apply it to the Motion of the Inteſtines, and certain Muſcles of the Body. See INTESTINE, &c.

The *Vermicular*, or Periſtaltic Motion of the Inteſtines, is perform'd by the Contraction of the Fibres thereof, from above, downwards; as the Antiperiſtaltick Motion is by their Contraction from below, upwards. See PERISTALTIC.

The Contraction happening in the *Periſtaltic*, which others call the *Vermicular* Motion, as reſembling the Motion of Worms, does not affect all the Parts of the Inteſtines at once; but one part after another.

VERMICULAR *Work*, *Opus Vermiculatum*, in Sculpture, a ſort of Ornaments uſed in Ruſtick Work; conſiſting of Frets, or Knobs, cut with Points, repreſenting, in ſome ſort, the Tracks made by Worms. See MOSAIC.

VERMIFORMIS, in Anatomy, a Term applied to various Parts in the human Body; bearing ſome reſemblance to Worms.

Such are the *Proceſſus*, or *Apophyſes Vermiformes*; which are the two Extremities of the *Cerebellum*, ſituate near the fourth Ventricle. See CEREBELLUM.

VERMIFORMES *Muſculi*, are the four Muſcles in each Hand and Foot, which bring the Fingers and Toes towards the Thumbs and great Toes; call'd alſo *Lumbricales*. See LUMBRICALES.

VERMIFUGUS. See WORM-*Pouder*.

VERMILION, a very bright, beautiful, red Colour; in great eſteem among the Antients, under the Denomination *Minium*. See RED, and COLOUR.

There are two Kinds of it; the one *Natural*, the other *Factitious*.

The *Natural* is found in ſome Silver Mines, in form of a ruddy Sand; which they prepare, and purify by ſeveral Lotions and Coctions.

The *Artificial* is made of Mineral Cinnabar, ground up with Aqua vitæ and Urine, and afterwards dry'd.

They alſo make it of Lead burnt and waſh'd; or of Ceruſſe, prepared by Fire: But this is not properly denominated *Vermilion*, but *red Lead*. See LEAD.

'Tis this laſt, however, that ſeems to be the real *Minium* of the Antients; and accordingly, the Apothecaries and Painters ſtill give it the Name, to enhance the Price. See MINIUM.

The antient *Greek* and *Latin* Authors, have given us ſtrange fabulous Accounts of this *Minium*; and ſeveral of the Moderns have adopted their Dreams: *Theophraſtus* attributes the firſt Invention of making it to *Callias* the *Athenian*; who hit upon it, in endeavouring to draw Gold by Fire out of a red Sand found in the Silver Mines, in the Year of *Rome* 249: But *Vitruvius* ſays, it was diſcover'd in the *Cilbian Fields*; where it was drawn from a red Stone, call'd by the Greeks *Anthrax*.

We have two Kinds of *Vermilion* from *Holland*; the one of a deep red, the other pale: But 'tis the ſame Stuff at bottom; the difference of Colour only proceeding from the Cinnabar's being more or leſs ground: when fine ground, the *Vermilion* is pale; and this is prefer'd to the coarſer and redder.

It is of conſiderable uſe among the Painters in Oil, and Miniature; and likewiſe among the Ladies, as a *Fucus*, or Paint, to heighten the Complexion of ſuch as are too pale. See PAINTING, MINIATURE, &c.

Among the Antients, the Images of the Gods were painted with *Vermilion* on the Feaſt-Days; and their Generals on the Days of Triumph. See CINNABAR.

Vermilion is ſometimes alſo, tho improperly, uſed for what we otherwiſe call *Kermes*, or *Scarlet* Grain. See KERMES, &c.

VERMINATION, the Act of breeding of Worms, and other Vermine; particularly Bots in Cattel.

VERMINATION, is ſometimes alſo uſed among Phyſicians, for a ſort of *Tormina Ventris*, or wringing of the Guts; wherein the Patient is affected, as if Worms were gnawing his Inteſtines. See GRIPES.

VERMINE, a collective Name, including all Kinds of little Animals, or Inſects, which are hurtful or troubleſome to Men, Beaſts, Fruits, &c. as Lice, Fleas, Bugs, Caterpillars, Ants, Flies, &c. See INSECT, WORM, BLIGHT, &c.

VERMIVOROUS *Animals*, are ſuch as feed upon Worms. See ANIMAL.

VERNACULAR, is applied to any thing that is peculiar to ſome one Country.

Whence, Diſeaſes which reign moſt in any particular Nation, Province, or Diſtrict, are called *Vernacular Diſeaſes*. See DISEASE.

Such are the *Plica Polonica*, *Scorbutus*, *Tarantiſm*, &c. See PLICA, SCORBUTUS, TARANTISM, &c.

VERNAL,

VERNAL, ſomething belonging to the Spring Seaſon. See SPRING.

Hence, *Vernal Leaves*, are thoſe Leaves of Plants which come up in the Spring, &c. See LEAVES.

VERNAL *Signs*, are thoſe which the Sun is in during the Spring Seaſon, *viz.* Aries, Taurus, and Gemini. See SIGNS.

VERNAL *Equinox*, is that which happens when the Sun is aſcending from the Equator towards the North Pole. See EQUINOX.

VERONICA, a Term abbreviated from *Vericonica*, of *Veraicon*, q.d. *true Image*; and applied to Portraits or Repreſentations of the Face of our Saviour on Handkerchiefs.

Veronica's are Imitations of that celebrated Original one, preſerv'd with great Veneration at St. *Peter's* in *Rome*; and imagin'd by ſome to be the Handkerchief laid over our Saviour's Face in the Sepulchre.

The firſt mention we find of that celebrated Relick, is in a Ceremonial compiled in 1143, dedicated to Pope *Celeſtin*, by *Benedict* a Canon of St. *Peter's*: But there is no mention made of the Time when it was brought to *Rome*. A Feaſt is kept in honour thereof in moſt Churches, on the *Tueſday* in *Quinquageſima* Week.

It is to be obſerv'd, that the Name *Veronica* is only given to ſuch Handkerchiefs as repreſent no more of our Saviour than his Face: For ſuch as repreſent his whole Body, as that of *Beſancon*, which ſhews his Fore-part at length, and that of *Turin*, which repreſents both his fore and hind Part, as having cover'd him all over; were never call'd by this Name.

The Painters ſometimes make the *Veronica* to be held up by an Angel, but moſt commonly by a Woman; which Woman the common People imagine to be a Saint, call'd Saint *Veronica*.

On this Principle, ſome People, towards the Cloſe of the IXth Century, began to fancy there might have been a Woman of that Name in *Jeruſalem*, who had preſented her Handkerchief to our Saviour, as he went to *Calvary*, to wipe his Face withal, beſmear'd, as it was, with Sweat and Blood; and that the Picture of his Face had been miraculouſly impreſs'd thereon.

This was no ſooner imagin'd by ſome, than it was believ'd by others: And accordingly, we find by the Travels of *Bernard de Bredemback* Dean of *Mentz*, to the Holy Land in 1483, printed in 1502, that it was not long ere her very Houſe was found out.

From that time the Fiction gain'd ground, and became a current Legend.

It was at length added, that this ſame Woman, S. *Veronica*, was the Woman troubled with the Flux of Blood in the Goſpel: and accordingly, ſhe was ſoon join'd with S. *Fiacrius*, and invok'd together with him againſt the Hemorrhoids.—And hence the Eſtabliſhment of Feaſts in honour of S. *Veronica*, in the Churches dedicated to S. *Fiacrius*.

In ſome of theſe Churches, particularly at S. *Giles's* in *Valenciennes*, this Saint is commonly call'd S. *Venice*, by Abreviation from the Genitive *Veronicæ*: And the Women have a Cuſtom at certain times of the Year, to hang linen Swathes, wherewith they had girt themſelves for nine Days, near her Statue.—And 'tis thence, or rather, from our Saviour's Picture expreſs'd on the linen Handkerchief, that the Milleners have taken S. *Veronica*, or, as they call her, S. *Veniſſe*, or S. *Venecia*, or *Veniſa*, for their tutelary Saint.

VERRUCA, in Medicine. See WART.

Hence, *Verrucous* is applied to any Excreſcencies which have a reſemblance to Warts.

VERRY, in Heraldry. See VAIRY.

VERSE, in Poetry, a Line, or Part of a Diſcourſe, conſiſting of a certain Number of long and ſhort Syllables, which run with an agreeable Cadence; the like being reiterated in the Proceſs of the Piece. See POETRY.

This Repetition, according to F. *Boſſu*, is neceſſary to diſtinguiſh the Notion of *Verſe* from that of *Proſe*: for in Proſe, as well as *Verſe*, each Period and Member are Parts of Diſcourſe, conſiſting of a certain Number of long and ſhort Syllables; only, Proſe is continually diverſifying its Meaſures, and Cadences; and *Verſe* repeats 'em. See PROSE.

This Repetition of the Poets, appears even in the manner of Writing; for one *Verſe* being finiſh'd, they return to the beginning of another Line to write the *Verſe* following: and 'tis to this Return, that *Verſe* owes its Name; *Verſus* coming from *Vertere*, to turn, or return.

Accordingly, we find the ſame Name uſed to ſignify any thing that is placed in a certain, regular Order: *Cicero* uſes the Word for a Line in Proſe; *Virgil* for a Row of Trees, and even of Oars in a Galley. But, as the Regularity of *Verſe* carries with it more Charms, and requires a greater degree of Exactneſs, the Word has, in time, become appropriated to Poetry.

To make *Verſe*, 'tis not enough that the Meaſures and Quantities of Syllables be obſerv'd, and ſix juſt Feet put, one after another, in the ſame Line: There are further requir'd certain agreeable Cadences, particular Tenſes, Moods, Regimens, and even ſome Words unknown in Proſe.

But what is chiefly requir'd, is an elevated, bold, figurative Manner of Diction: This Manner, is a thing ſo peculiar to this kind of Writing, that without it, the moſt exact Arrangement of Longs and Shorts, does not conſtitute *Verſe*, ſo much as a kind of meaſur'd Proſe. See VERSIFICATION.

The *Greek* and *Latin Verſes*, conſiſt of a certain Number of Feet, of a certain Quantity. See FOOT.

Some have attempted to make *French* and *Engliſh Verſes* on the ſame Foundation; but without Succeſs. See QUANTITY, and HEXAMETER.

Voſſius is very ſevere on the modern *Verſe*, and makes it altogether unfit for Muſick: Our *Verſes*, ſays he, run all as it were on one Foot; without diſtinction of Members, or Parts, and without regard to the natural Quantities of Syllables. We have no *Rythmus* at all: and we mind nothing but to have a certain Number of Syllables in a *Verſe*, of whatever Nature, and in whatever Order. See RYTHMUS.

But Mr. *Malcolm* vindicates our *Verſe* from this Imputation. 'Tis true, we don't follow the Metrical Compoſition of the Antients; yet we have ſuch a Mixture of ſtrong and ſoft, long and ſhort Syllables, as makes our *Verſes* flow, ſmooth or rumbling, ſlow or rapid, agreeably to the Subject. Inſtances of all which we have in the following Lines:

'Soft is the Strain when Zephyr gently blows;
'The hoarſe rough *Verſe* ſhould like the Torrent roar:
'The Line too labours, and the Words move ſlow,
'Flies o'er the unbended Ears, and ſkims along the Main.

By making a ſmall Change, or Tranſpoſition of a Word or Syllable, in any of theſe *Verſes*, any body who has an Ear will find, that we make a great Matter of the Nature and Order of the Syllables.

Voſſius adds, that the antient Odes were ſung, as to the *Rythmus*, in the ſame manner as we ſcan 'em: every *Pes* being a diſtinct Bar or Meaſure, ſeparated by a diſtinct Pauſe: Tho, in reading, that Diſtinction was not accurately obſerv'd.

Laſtly, he obſerves, that their Odes had a regular Return of the ſame kind of *Verſe*; and the ſame Quantity of Syllables in the ſame Place of every *Verſe*: whereas, in the modern Odes, to follow the natural Quantity of our Syllables, every Stanza would be a diſtinct Song. See ODE.

'Tis next to impoſſible to write Proſe, without ſometimes intermixing *Verſe* with it; So that *Vaugelas's* Rule, which enjoins us to avoid 'em, is next to impracticable. This may be further ſaid, that for ſhort *Verſes*, they are ſo little perceiv'd, that 'tis ſcarce worth while to ſtrain one's ſelf to avoid 'em; and as to long *Verſes*, they are chiefly to be avoided in the Ends of Periods; for in the Middle they are ſcarce felt.

In the general, Rules of this kind muſt be conſider'd as principally regarding numerous *Verſes*, and ſuch as are readily diſtinguiſh'd by their Cadence: Thus, in *Latin*, 'tis ſcarce poſſible to avoid Iambick *Verſes*; but Hexameters muſt by all means be avoided, their Cadence being more ſenſible and more ſtudy'd. See RHIME, &c.

The *Greek* and *Latin Verſes*, are *Hexameters*, *Pentameter*, *Iambicks*, *Hendecaſyllabs*, *Trochaicks*, &c. *See each under its proper Article.*

The Moderns have invented *Heroic*, or *Alexandrian Verſes*, which conſiſt of twelve or thirteen Syllables. See ALEXANDRIAN.

The Antients have likewiſe invented various Kinds of *Verſes*, or Poetical Deviſes; as *Centos*; *Echos*; *Minorimes*; *Equivocal Verſes*, where the ſame Words contain'd in two Lines carry a different Senſe. See CENTO, ECHO, and EQUIVOCAL.

Reciprocal Verſes, which read the ſame backwards as forwards. See RETROGRADE.

VERSE, is alſo a part of a Chapter, Section, or Paragraph, ſubdivided into ſeveral little Articles. See CHAPTER.

The whole Bible is divided into Chapters; and the Chapters ſubdivided into *Verſes*. See BIBLE.

The Diſtinction of *Verſes* in the New Teſtament, was only made by *Robert Stephens*: And ſo negligently was it done, that his Son *Henry Stephens* aſſures us, he work'd at it as he travell'd from *Paris* to *Lions*. Many learned Men find a great many Faults with that Diviſion; and yet 'tis every where follow'd.

M. *Simon* obſerves, that the *Greeks* and *Latins* meant by *Verſe*, a Line, containing a certain number of Words. He adds, that the Authors of thoſe Days, to prevent any thing being added or taken away from their Works, uſed to mark at the End the number of *Verſes* they contain'd; but the Books themſelves were wrote all running, without any Diviſions, Points, &c.

VERSED *Sine*, of an Arch, is the Segment of the Diameter of a Circle lying between the Foot of the right Sine, and the lower Extremity of the Arch. See ARCH.

Thus, S T, (Tab. *Trigonometry*, Fig. 7.) is the *Verſed Sine* of the Arch R T; and A S the *Verſed Sine* of the Arch A R, the Complement of the former. See SINE.

VERSIFICATION, the Art, or Manner of making *Verſe*; alſo the Tune and Cadence of *Verſe*. See VERSE.

Verſification, is properly applied to what the Poet does more by Labour, Art, and Rule, than by Invention, and the Genius or *Furor Poeticus*.

The Matter of *Verſification* is long and ſhort Syllables, and Feet compos'd of them; and its Form, the Arrangment of them in correct, numerous, and harmonious *Verſes*: But this is no more than a mere Tranſlator may pretend to, and which the *Catilinarian* War, put in Verſe, might not merit.

'Tis with Reaſon, therefore, that theſe ſimple Matters are diſtinguiſh'd from the grand Poetry, and call'd by the Name *Verſification*. See POETRY.

In effect, there is much the ſame difference between Grammar and Rhetorick, as between the Art of making of Verſes, and that of inventing Poems.

VERSION, a *Tranſlation* of ſome Book, or Writing, out of one Language into another. See TRANSLATION.

VERT, in Heraldry, the Term for a green Colour. See GREEN, and COLOUR.

It is called *Vert* in the blazon of the Coats of all under the Degree of Nobles; but in Coats of Nobles, 'tis call'd *Emerauld*; and in thoſe of Kings, *Venus*.

In engraving, 'tis expreſs'd by Diagonals, or Lines drawn a-thwart, beginning at the ſiniſter Corner of the Eſcutcheon; as in the Figure adjoining.

In lieu of *Vert*, the *French* Heralds uſe *Sinople*, or *Synople*. See SINOPLE.

VERT, or *green Hue*, in Foreſt Law, any thing that grows, and bears a green Leaf within the Foreſt, that may cover a Deer. See FOREST, GAME, *&c.*

It is either *Over-Vert*, or *Nether-Vert*; Over-*Vert* is the great Woods, which in Law-Books are uſually called *Hault-Bois*.

Nether-*Vert* is the Under-Woods, otherwiſe call'd *Sub-Bois*.

We ſometimes alſo meet with *Special Vert*, which denotes all Trees growing in the King's Wood, within the Foreſt; and thoſe that grow in other Men's Woods, if they are ſuch Trees as bear Fruit to feed the Deer.

VERTEBRALES, in Anatomy, a Pair of Muſcles, ſerving to ſtretch out all the *Vertebræ* of the Back. See VERTEBRÆ.

VERTEBRÆ, a Chain of little Bones, reaching from the Top of the Neck, down the Back, to the *Os Sacrum*; and forming a third Part of the human Skeleton, call'd the *Spina Dorſi*. See SPINA.

The *Vertebræ* have their Name *à vertendo*; becauſe 'tis on them the Head and Trunk turn: The *Greeks* call them *Spondyli*, for the ſame Reaſon.

The *Vertebræ* are 24 in Number: Seven of 'em belong to the Neck, twelve to the Back, and five to the Loins. See NECK, LOINS, *&c.*

They lie not in a ſtrait Line; thoſe of the Neck bend inwards, and thoſe of the Back outwards, for enlarging the Cavity of the Thorax; and thoſe, again, of the Loins bend inwards, and thoſe of the *Os Sacrum* outwards, to enlarge the Cavity of the Baſon.

The Body of each *Vertebra* is ſpongious and cavernous; having in the middle a large Perforation, thro' which the *Medulla Spinalis* paſſes, and ſeven Apophyſes, or Proceſſes.

The Fore-part of this Body is round and convex; the Hind-part ſomewhat concave: its upper and lower Sides are plain; each cover'd with a Cartilage which is pretty thick forwards, but thin backwards, by means whereof it is, that we bend the Body forwards; the Cartilages yielding to the Preſſure of the Bodies of the *Vertebræ*, which in that Motion come cloſer to one another: Which could not be effected, if the harder Bodies of the *Vertebræ* were cloſe to one another.

The Proceſſes of each *Vertebra* are of three ſorts: Two tranſverſe, or lateral; in each of which there is a Tendon of the *Vertebral* Muſcles inſerted: Four oblique ones; by which the *Vertebræ* are articulated to one another: and one acute, on the hindmoſt Part of the *Vertebra*.

Theſe Proceſſes, which are peculiarly call'd the *Spines*, form, with the hinder or concave Part of the Body of the *Vertebræ*, a large Hole in each *Vertebra*; and all the Holes anſwering one another make a Channel for the Deſcent of the Spinal Marrow, which ſends out its Nerves to the ſeveral Parts of the Body by Pairs, thro' two ſmall Holes, form'd by the jointing of four Notches in the Sides of each ſuperior and inferior *Vertebra*. See MEDULLA *Spinalis*.

The *Vertebræ* are articulated to one another by Ginglymus: For the two deſcending oblique Proceſſes of each ſuperior *Vertebra* of the Neck and Back, have a little dimple in their Extremities, wherein they receive the Extremities of the two aſcending oblique Proceſſes of the inferior *Vertebræ*; ſo that the two aſcending Proceſſes of each *Vertebra* of the Neck and Back are received, and the two deſcending do receive, except the firſt of the Neck, and laſt of the Back; but the aſcending Proceſſes of each *Vertebra* of the Loins receive, and the two deſcending are received; contrary to thoſe of the Neck and Back.

The *Vertebræ* are all tied together by a hard Membrane, made of ſtrong and large Fibres: It covers the Body of all the *Vertebræ* forwards; reaching from the firſt of the Neck to the *Os Sacrum*.—There is another Membrane, which lines the Canal, made by the large Hole of each *Vertebra*; which alſo ties them all together: beſides, the Bodies of each *Vertebra* are tied to one another by the intervening Cartilages; and the Tendons of the Muſcles, which are inſerted in their Proceſſes, tie them together behind.

This Structure of the Spine is admirable; for had it been all one Bone, we could have had no Motion in our Backs; had it been of two or three Bones articulated for Motion, the *Medulla Spinalis* muſt have been neceſſarily bruis'd at every Angle, or Joint: beſides, the whole would not have been ſo pliable for the ſeveral Poſtures we have occaſion to put our ſelves in: If it had been made of ſeveral Bones, without intervening Cartilages, we ſhould have had no more uſe of it, than if it had been but one Bone. If each *Vertebra* had had its own diſtinct Cartilages, it might have been eaſily diſlocated.——Laſtly, the oblique Proceſſes of each ſuperior and inferior *Vertebra*, keep the middle one, that it can neither be thruſt backwards norforwards, ſo as to compreſs the *Medulla Spinalis*.

The *Vertebræ* of the Neck differ from the reſt, in that they are ſmaller and harder, their tranſverſe Proceſſes perforated for the Paſſages of the Vertebral Veſſels, and their acute Proceſſes forked and ſtrait: Add, that the firſt and ſecond have ſomething peculiar to themſelves. The firſt, called *Atlas*, is ty'd to the Head; and moves with it upon the ſecond, ſemicircularly. See ATLAS.

The ſecond is called *Epiſtrophæus*, or *Vertebra Dentata*: In the middle, between its two oblique aſcending Proceſſes, it has a long and round Proceſs like a *Tooth*, which is receiv'd into a Sinus of the Atlas; and upon it, the Head, with the firſt *Vertebra*, turns half round, as upon an Axis. The Extremity of this Proceſs is knit to the Occiput, by a ſmall but ſtrong Ligament. A Luxation of this Tooth is mortal, becauſe it compreſſes the *Medulla Spinalis*.

The third is call'd *Axis*: The reſt have no particular Names.

The *Vertebræ* of the Back differ from the reſt in this, that they are larger than thoſe of the Neck, and ſmaller than thoſe of the Loins: Their acute Proceſſes ſlope downwards upon one another. They have in each ſide of their Bodies a ſmall Dimple, wherein they receive the round Extremities of the Ribs: The uppermoſt of 'em is ſometimes call'd the *Creſt*; the ſecond the *Axillaris*; and the reſt *Coſtales*.

The *Vertebræ* of the Loins are the broadeſt; and the laſt of them, the largeſt of all the *Vertebræ*.

Tho each *Vertebra* has but a ſmall Motion, yet the Motion of 'em all is conſiderable: The Head, we have obſerved, moves only backwards and forwards on the firſt *Vertebra*, and ſemicircularly on the ſecond.

The Motion of the other *Vertebræ* of the Neck is not ſo manifeſt, yet it is greater than that of the *Vertebræ* of the Back; becauſe their acute Proceſſes are ſhort and ſtrait, and the Cartilages which are between their Bodies, thicker. The *Vertebræ* of the Back have the leaſt Motion of any; becauſe their Cartilages are thin, their acute Proceſſes long, and very near to one another: And they are fixed to the Ribs, which neither move forwards nor backwards. The greateſt Motion of the Back, is perform'd by the *Vertebræ* of the Loins; becauſe their Cartilages are thicker, and their acute Proceſſes are at a greater diſtance from one another: For the thicker the Cartilages are, the more we may bend the Body forwards; and the greater diſtance there is between the acute Proceſſes, the more we may bend backwards.

Such is the Structure and Motion of the *Vertebræ*, when in their natural Poſition: but we frequently find 'em variouſly diſtorted. If the *Vertebræ* of the Back ſtick out, it conſtitutes what we call a *Bunch'd Back*: And in ſuch Caſes the Cartilages between the *Vertebræ* are very thin and hard, forwards, but conſiderably thick backwards where the oblique Proceſſes of the ſuperior and inferior *Vertebræ* are at a conſiderable diſtance from one another, which diſtance is fill'd up with a viſcous Subſtance.

This Inequality of the thickneſs of the Cartilages happens either by a Relaxation, or a Weakneſs of the Ligaments and Muſcles faſten'd to the backſide of the *Vertebræ*: in which Caſes, their Antagoniſts finding no oppoſition, remain in a continual Contraction.

The *Os Sacrum* does alſo conſiſt of *Vertebræ* in Children; which grow ſo cloſe together in Adults, that they make but one large and ſolid Bone, of the Figure of an Iſoſceles Triangle, whoſe Baſis is ty'd to the laſt *Vertebra* of the Loins, and the upper Part of its Sides to the *Ilia*, and its Point to the *Os Coccygis*. See SACRUM *Os*.

VERTEX, in Anatomy, the Crown of the Head; or that Part ſituate between the *Sinciput* and *Occiput*. See HEAD.

Hence, alſo, *Vertex* is figuratively uſed for the Top of other Things.

Thus, the *Vertex* of a Cone, Pyramid, Conic Section, &c. is the Point of the upper Extremity of the Axis; or the Top of the Figure. See CONE, PYRAMID, &c.

VERTEX *of an Angle*, is the angular Point; or the Point A, (Tab. *Geometry*, Fig. 1.) wherein the Legs meet. See ANGLE.

VERTEX *of a Figure*, is the *Vertex* of the Angle oppoſite to the Baſe. See FIGURE.

Such is the Point M, (Tab. *Geometry*, Fig. 19.) oppoſite to the Baſe KL. See BASE.

VERTEX *of a Curve*, is the Point A, (Tab. *Geom.* Fig. 51.) from which the Diameter is drawn; or the Interſection of the Diameter, and the Curve. See CURVE.

VERTEX *of a Glaſs*, in Opticks, the ſame with the Pole thereof. See POLE, OPTIC *Glaſs*, &c.

VERTEX is alſo uſed in Aſtronomy, for that Point of Heaven perpendicularly over our Heads; properly call'd the *Zenith*. See ZENITH.

VERTICAL *Circle*, in Aſtronomy, is a great Circle of the Sphere, paſſing thro' the Zenith Z, and Nadir N, (Tab. *Aſtronomy*, Fig. 6.) and any other given Point in the Surface of the Sphere. See CIRCLE, and SPHERE.

Thus, the Meridian of any Place is a *Vertical Circle*. See MERIDIAN, &c.

All the *Vertical Circles* interſect each other in the Zenith and Nadir. See ZENITH, and NADIR.

The uſe of the *Vertical Circles*, is to meaſure the Height of the Stars, and their Diſtances from the Zenith, which is reckon'd on theſe Circles; and to find their Eaſtern and Weſtern Amplitude, by obſerving how many degrees the *Vertical* wherein the Star riſes, or ſets, is diſtant from the Meridian. See ALTITUDE, AMPLITUDE, &c.

The *Vertical Circles* are alſo called *Azimuths*. See AZIMUTH.

Prime VERTICAL, is that *Vertical* Circle, or Azimuth, which paſſes thro' the Poles of the Meridian; or which is perpendicular to the Meridian, and paſſes thro' the Equinoctial Points. See PRIME *Vertical*.

VERTICAL *of the Sun*, is the *Vertical* which paſſes thro' the Centre of the Sun, at any Moment of Time.

Its uſe is in Dialling, to find the Declination of the Plane whereon the Dial is to be drawn; which is done by obſerving how many Degrees that *Vertical* is diſtant from the Meridian, after marking the Point, or Line of the Shadow upon the Plane, at any time. See DECLINATION.

VERTICAL *Angles*. Two Angles, as *o* and *x*, (Tab. *Geometry*, Fig. 18.) are ſaid to be *Vertical*, if the Legs of one of 'em, AE and EC, be only Continuations of the Legs of the other, DE and BE. See ANGLE.

VERTICAL *Plane*, in Perſpective, is a Plane perpendicular to the Geomerrical Plane; paſſing thro' the Eye, and cutting the Perſpective Plane at right Angles. See PLANE.

VERTICAL *Plane*, in Conicks, is a Plane paſſing thro' the Vertex of the Cone, and parallel to any Conic Section. See PLANE, and CONE.

VERTICAL *Line*, in Conicks, is a right Line drawn on the *Vertical Plane*, and paſſing thro' the Vertex of the Cone. See LINE.

VERTICAL *Dial*, is a Sun-Dial, drawn on the Plane of a *Vertical* Circle; or perpendicular to the Horizon. See DIAL, and DIAL-*Plane*.

Theſe are particularly call'd *Oriental*, Eaſt, *Occidental*, Weſt, *Meridional*, South, and *Septentrional*, or North *Verticals*, when oppoſed to one, or other of theſe Cardinal Points of the Horizon. See EAST, WEST, &c.

When they don't look preciſely to any of them, they are call'd *Decliners*: And when their Plane, or Surface is not perfectly perpendicular, *Recliners*. See DECLINER, RECLINER, &c.

VERTICAL *Point*, in Aſtronomy, the ſame with VERTEX, or ZENITH.

Hence, a Star is ſaid to be *Vertical*, when it happens to be in that Point which is juſt over any Place.

VERTICAL *Line*, in Dialling, is a Line on any Plane perpendicular to the Horizon.

This is beſt found and drawn on an erect and reclining Plane, by holding up a String and heavy Plummet ſteadily, and then marking two Points of the Shadow of the Thread on the Plane, a good diſtance from one another; and drawing a Line thro' thoſe Marks. See DIALLING.

VERTICILLATE *Plants*, are ſuch as have their Flowers intermix'd with ſmall Leaves, growing in a kind of Whirls about the Joints of a Stalk; as Penny-royal, Horehound, &c. See PLANT.

The peculiar Characteriſtick of this Genus of Plants, according to Mr. *Ray*, is, that their Leaves grow by Pairs, one juſt againſt another, on the Stalk: the Flower monopetalous, but uſually hanging down with a kind of Lip, or turned ſomething like the form of an Helmet: Four Seeds after each Flower; to which the Periantheum of the Flower ſerves inſtead of a *Capſula Seminalis*.

The ſame Author makes two Species of theſe *Verticillate* Plants.

1°. The *Fruticoſæ*, or ſuch whoſe Superficies is Perennial: Theſe, again, have either a plain Flower, as the *Chamædrys Vulgaris*, *Thucrium*, and the *Marum Syriacum*; or a Flower with a Lip, which they call a *Labiated Flower*; or one ſomething in the form of an Helmet, which they call *Galeated*; as the *Sacria Stæchas*, *Hyſſopus*, *Roſmarinus*, *Satureia*, *Marum vulgare*, *Thymum vulgare*, and the *Polium Montanum*.

2°. The *Herbaceæ*, or ſuch whoſe Stalks are not Perennial; theſe are the *Menthæ*, *Verbena*, *Dictamnus Creticus*, *Origanum*, *Majorana*, *Ocimum*, *Horminum*, *Galeopſis*, *Nepeta*, *Betonica*, *Prunella*, *Stachys*, *Clinopodium vulgare*, *Lamium*, *Moluca Hedera Terreſtris*, *Galericulata*, *Calamintha*, *Meliſſa*, *Marrubium Commune*, *nigrum* and *aquaticum*; *Chamæpetys*, *Scarodonia*, *Scordium*, *Bugula*, *Syderitis*, *Cardiaca*.

VERTICITY, is that Property of the Loadſtone, whereby it turns to ſome particular Point. See MAGNET.

The Attraction of the Magnet was known long before its *Verticity*. See COMPASS, NEEDLE, &c.

VERTIGO, in Medicine, an Indiſpoſition of the Brain, wherein the Patient ſees the Objects about him as if they turn'd round, and fancies he turns round himſelf; tho all the while at reſt.

Phyſicians diſtinguiſh two Kinds, or rather, two Degrees of *Vertigoes*: The firſt, call'd a *Simple Vertigo*, is when the Body and external Objects appear to turn round, without any great dimneſs of Sight.

The other, call'd *Scotomia*, or *Vertigo Tenebroſa*, is when the Eyes are darken'd, and as it were cover'd with a Miſt. See SCOTOMIA.

Some make a third Stage, *viz.* a *Vertigo Caduca*, wherein the Patient actually falls down: But this ſeems ſcarce to differ from an Epilepſy. See EPILEPSY.

Sometimes the *Vertigo* is ſeated in the fore-part of the Head, and ſometimes in the hind-part: whereof, the latter is much the more dangerous.

Bellini accounts for the *Vertigo* very well, from a preternatural Motion in the *Retina*: for 'tis evident, an Object will ſeem to move circularly, if the Images thereof, painted on the *Retina*, fall ſucceſſively on different Parts of the *Retina*. See RETINA.

This they may do, either by the Objects moving while the Eye is at reſt, or from the Eye moving while the Objects reſt; or, laſtly, the Object and Eye being both at reſt, the Rays falling on the ſame Place by the Optic Nerve's being alone in Motion. For ſince a right and an oblique Incidence do not excite the ſame Tremors in the Nerves, and the ſame Species of Motion; if the Optic Nerve only be moved, and the Object be at reſt, it will appear to ſhift its Situation, by the Change of Place in which it was repreſented. See VISION.

External Cauſes of *Vertigines*, are a continued turning round of the Body, Drunkenneſs, too long Faſting, immoderate Exerciſe, Surprize, Voracity, much uſe of Pulſe, Onions, Leeks, Raddiſhes, Cabbage, Muſtard, &c. and in the general, whatever may preſs, diſtend, or contract the Arteries.

The Word is form'd *à vertendo*, from turning.

The firſt Step in the Cure, is bleeding in the Jugular, or Cupping; then they proceed to an Emetic; then a Veſicatory on the Neck, or a perpetual Bliſter, or Iſſues; with Sternutatories, and the other Medicines that obtain in the Apoplexy. See APOPLEXY.

VERTILLAGE, in Agriculture, the *Tilling*, or preparing of Ground to receive the Seed, by turning, ſtirring, or toſſing it. See TILLING.

VERTUE. See VIRTUE.

VERTUOSO. See VIRTUOSO.

VERU-MONTANUM, in Anatomy, a Term compounded of the two *Latin* Words, *Veru*, and *Montanum*; ſignifying a kind of little Valve, in the Place where the Ejaculatory Ducts enter the Urethra. See VALVE, URETHRA, &c.

Its uſe is, to prevent the Urine, in paſſing the Urethra, from getting in at thoſe Ducts, and ſo mixing with the Semen. See URINE, &c.

VERY *Lord*, and VERY *Tenant*, are thoſe that are immediate Lord and Tenant, to one another.

——*And know ye, that in taking of Leaſes ſix things are neceſſary*, viz. Very Lord, *and* Very Tenant; *Service behind*; *the Day of the taking*; *Seiſin of the Services, and within his Fee*; *and that a Man is not* Very Tenant, *until he have atturned to the Lord by ſome Service.* Old Nat. Brev. See TENANT, &c.

VESICA, in Anatomy, a *Bladder*; a membranous or ſkinny Part, in which any Humor is contain'd. See BLADDER.

VESICA *Bilaria*. See VESICULA *Fellis*.

VESICA, among Chymiſts, is a large Copper Veſſel, tinn'd on the inſide; uſed in diſtilling Ardent Spirits: ſo called, as reſembling the Figure of a blown Bladder. See DISTILLATION.

VESICATORY, an external Medicine, ſerving to raiſe a Bliſter; whence alſo it is it ſelf, tho improperly, call'd a *Bliſter*. See BLISTER.

Veſicatories are Unguents, Cataplaſms, or Plaiſters made of ſharp, irritating Medicaments, which have a Faculty of drawing the Humours from within, outwards; inflaming and ulcerating the Skin, and raiſing *Veſicæ*, or Bladders; whence the Name of *Veſicatory*.

We have *Veſicatories* made of Cantharides, Euphorbium, Figs, Sublimate of Mercury, *Lapis Infernalis*, Muſtard, Anacardium, Scillæ, Briony, Vinegar, Pepper, Leaven, &c. which are incorporated and made up with Honey, Gums, Reſins, &c. to bring them to the Conſiſtence requir'd. See CANTHARIDES, &c.

Veſicatories are a ſtronger ſort of *Sinapiſms*. See SINAPISM, CAUSTIC, &c.

VESICULA, *Veſicle*, a Diminutive of *Veſica*; ſignifying a little Bladder.

The Lungs conſiſt of *Veſiculæ*, or *Lobules* of *Veſiculæ*, admitting Air from the *Bronchiæ*; and not only Air, but alſo of Duſt, &c. See LOBULE, and LUNGS.

There are ſeveral Parts in the Body which bear this Appellation; as the,

VESICULA *Fellis*, *Ciſtula Fellis*, or *Gall-Bladder*; which is an oblong, membranous Veſſel, not unlike a Pear both in form and ſize; ſituate in the hollow Part of the Liver. See LIVER.

It adheres to the Liver, not only by its Veſſels, which it receives from it, but likewiſe by its Membranes, whereof, the External is common to both. The lower Part, which hangs out of the Liver, reſts on the *Pylorus* of the Stomach.

Its Trunks, or Membranes, are uſually reckon'd five; an outer, or common one, from the *Peritonæum*; an inner one, on that ſide which adheres to the Liver from the *Capſula* of the *Porta*, and of the *Porus Bilarius*.

And three proper ones: The firſt whereof is Vaſculous; the ſecond Muſcular; and the third Glandulous.

But Dr. *Drake*, viewing a piece of dried Gall-Bladder with a Microſcope, found but little Reaſon for this accurate Diſtinction; the ſeveral Orders of Fibres of the ſeveral Coats appearing to be no other than an infinite Perplexity of Veſſels diverſly ramified.

The Gall-Bladder is uſually diſtinguiſh'd into the *Fundus*, which is the wideſt Part; and the *Collum*, or Neck, which is the narroweſt.

The Neck of the *Veſicula Fellis* being prolong'd, terminates in a Duct, called *Meatus Cyſticus*, or *Bilarius*; which, at about two Inches diſtance from the Gall-Bladder, is join'd to the *Meatus Hepaticus*; theſe, together, form the *Ductus Communis*. See DUCTUS, MEATUS, &c.

The uſe of the Gall-Bladder, is to receive the Bile after its being ſecreted in the Glands of the Liver; and to diſcharge it by the common Duct into the *Duodenum*.

The Bile found in this Veſſel is of a brighter yellow, a greater Conſiſtence, and more bitter and acrimonious than that in the *Porus Bilarius*. See BILE.

VESICULÆ *Seminales*. } See { SEMINALES.
VESICULÆ *Adipoſæ*. } See { ADIPOSÆ.

VESPER, in Aſtronomy, called alſo *Heſperus*; is the Planet *Venus*, when ſhe is Weſtwards of the Sun. See VENUS.

VESPERS, in the *Romiſh* Church, *Evening Songs*; that Part of the Office which is rehearſed after Noon: anſwering to our Evening-Prayers; except that it differs more from the Office of the Morning, call'd *Mattins*. See MATTINS.

Sicilian VESPERS, is a famous Æra in the *French* Hiſtory; ſignifying a general Maſſacre of all the *French* in *Sicily*, in the Year 1282; to which the firſt Toll that call'd to *Veſpers* was the Signal.

Some will have it to have happen'd on *Eaſter*-Eve: others on the Day of the Annunciation.

It was rais'd by one *Procbites* a Cordelier, at the Time when *Charles* of *Anjou*, Count of *Provence*, was King of *Naples* and *Sicily*.——The Women with Child by *Frenchmen* were not ſpared.

After the like manner, we ſay, the *Mattins of Moſcow*, ſpeaking of the *Muſcovites* aſſaſſinating their Prince *Demetrius*, and all the *Poles* his Adherents at *Moſcow*, the 27th of *May* 1600, under the Conduct of their Duke *Choutsky*, at ſix a-clock in the Morning.

VESPERTILIONUM *Alæ*, q. d. *Bats Wings*, among Anatomiſts, two broad membranous Ligaments, with which the bottom of the Womb is ty'd to the Bones of the Flank; ſo called, from their reſembling the Wings of a Bat. See UTERUS.

VESPERTINE, in Aſtronomy. When a Planet ſets after the Sun, it is ſaid by ſome to be *Veſpertine*.

VESSEL, VAS, VASE, a Thing proper to hold or contain Liquor.

Thus, a Tunn, Hogſhead, &c. are *Veſſels* fit to contain Ale, Wine, &c.

The Chymiſts uſe a great diverſity of *Veſſels* in their Operations; as Matraſſes, Pelicans, Retorts, Receivers, &c. See MATRASS, PELICAN, &c.

Among Anatomiſts, &c. all the Tubes or Canals wherein the Blood and other Juices or Humours are ſecreted, convey'd, depoſited, &c. as the Veins, Arteries, Lymphaticks, Spermaticks, &c. are call'd *Veſſels*. See TUBE, CANAL, DUCT, VEIN, VESICULA, &c.

Some even extend the Word to the Nerves; as ſuppoſing 'em the Conduits of the Animal Spirits. See NERVE.

Veſſels conſiſt of Membranes variouſly form'd and diſpos'd for the Reception of the Fluids; and theſe Membranes, again, conſiſt of leſſer *Veſicles*, or *Veſiculæ*: And this, for what we know, without end. See MEMBRANE, FLUID, &c.

In the new Syſtem of many modern Philoſophers and Phyſicians, *Veſſel* is a Name common to all the ſolid Parts of the Body. See SOLID.

Theſe Authors explain the whole Animal Oeconomy, Functions, &c. from the different Liquors diffus'd throughout the Body, and the Tubes, or *Veſſels* which contain thoſe Liquors. In effect, all we know in the human Body, is either *Veſſel*, or Liquor. See DIGESTION.

The Antients, 'tis true, had a Notion, that ſome Parts of the Body, as the Heart, Spleen, &c. are mere *Parenchyma's*, *i. e.* a kind of Pulp, or Pith, void of all *Veſſels*; but the Moderns, by the advantage of Microſcopes, Injections, &c. find that theſe, and all other Parts of the Body, are mer Congeries, or Maſſes of *Veſſels* interwove. See PARENCHYMA, CARO, &c.

Some Philoſophers even extend the modern Syſtem to all Material Beings; owning, only, two Elements, *viz.* a Matter infinitely *liquid*, diffus'd thro' all Nature; and *hard*, or *ſolid* Parts; which are, as it were, the *Veſſels* of that Matter. See ELEMENT, &c.

The *Veſſels* have a conſiderable ſhare in the vital Actions; all that is requir'd to the Maintenance of Life, being a due Quantity of a proper Humour, and its continued Motion along the *Veſſels*: This Motion depends, in great meaſure, on the Action of the *Veſſels* themſelves; and the Action of the *Veſſels* depends on the Contraction of the Fibres, whereby, when ſtretch'd and diſtended by the flowing Humour, they ſhorten themſelves again, and diſpoſe themſelves into right Lines, ſtill approaching towards the Axis of their Cavity; and thus, they propel their Contents: So that the Force of the *Veſſels*, is chiefly to be determin'd from their Figure. See FIBRE, ELASTICITY, &c.

The Number of *Veſſels*, ſome of our lateſt and beſt Anatomiſts obſerve, is greateſt in Embryo's; and continually decreaſes as Age comes on. See FOETUS.

For, in the Actions whereby Nutrition, &c. are effected, the greater *Veſſels* being much diſtended by their Humours, the ſmaller *Veſicles*, whereof the Membranes or Coats of the larger are wove, become compreſs'd and ſtreighten'd, and at length quite dry, and void of Juices; ſo that growing together, the Fibres become the firmer and ſtronger by the loſs of the *Veſicles*. And hence the Strength, Firmneſs, Stiffneſs, &c. of the ſolid Parts. See SOLID; ſee alſo DISEASE, and DEATH.

VESSELS, in Navigation, is a common Name for all ſorts of Shipping, *i. e.* all floating Machines, or Vehicles that move in the Water. See SHIP.

Veſſels are frequently diſtinguiſh'd into two general Claſſes, *viz. high-bottom'd*, or *deck'd Veſſels*: which are thoſe that move wholly with wind and Sail, and live in all Seas; as *Pinks*, *Galeons*, *Ships*, &c. See SAILING.

And *flat-bottom'd Veſſels*, which go both by Oars and Sails: Such are *Boats*, *Galleys*, *Praws*, *Wherries*, &c. See OARS, ROWING, &c. ſee alſo BOAT, GALLEY, &c.

Floating Veſſels, are uſually diſtinguiſh'd into *Boats*, *Lighters*, *Barges*, *Barks*, *Fiſhing Veſſels*, *Ships of Trade*, and *Veſſels of War*; of each whereof there are divers Kinds and Denominations. See BOAT, BARGE, LIGHTER, SHIP, &c.

Veſſels of War, are a *three-deck'd Ship*, firſt and ſecond Rate; a *Frigate*, or *two-deck'd Ship*, third, fourth, and fifth Rate; a *one-deck'd Ship*, ſixth Rate; (ſee RATE.) a *Boom-Veſſel*, a *Fireſhip*, a *Ketch*, a *Machine-Veſſel*, a *Smoker*.

A *Veſſel* is ſaid to be *of three or four hundred Tonns*; meaning that it will carry three or four hundred times two thouſand Weight: or, that when immerg'd in Water, it poſſeſſes the Space of three or four hundred Tonn of Water; which is equal to the Weight of the *Veſſel*, and all the Loading it can carry. See TUN, and BURDEN.

A *Veſſel* is ſaid to *draw ten or fifteen Foot of Water*; meaning, that when loaden, it ſinks ſo deep under Water.

The

The Form of *Veſſels*, is a thing of great importance, with regard to their Motion, Sailing, &c. and in the determining what Form is moſt commodious, the new Doctrine of Infinites becomes of apparent Service to Navigation and Commerce.

A Body moving in an immoveable Fluid is obliged to ſever the Parts thereof; and they reſiſt ſuch Separation. Now, ſetting aſide a certain Tenacity, whereby they are glued together; and which is different in different Liquids; the whole Force of the Reſiſtance depends on that of the Shock, or Impulſe: For a Body that is ſtruck, ſtrikes at the ſame time; but a perpendicular Stroke is that a Liquid reſiſts the moſt, as being the greateſt: And for a Body to move freely therein, it muſt be of ſuch Figure, as to preſent it ſelf as obliquely as poſſible. If it were triangular, and moved Point foremoſt; 'tis certain all its Parts would ſtrike the Fluid obliquely, but they would all ſtrike it with the ſame Obliquity; and it were more advantageous, that each ſhould ſtrike more obliquely than its Neighbour.

Now, ſuch a perpetual Augmentation of Obliquity, can no where be had but in a Curve Line; each Point whereof is conſider'd as an infinitely ſmall right Line, always inclined to the other little right Lines contiguous to it.

To find what Curve it is whoſe perpetual Change of Obliquity, or Inclination in all its Parts, renders it of all others the fitteſt to divide the Fluid eaſily; is a Problem much more difficult than it appears to be; and, in effect, only to be ſolved by the new Geometry: The Solution was firſt given by Sir *I. Newton* in his Inveſtigation of the Solid of the leaſt Reſiſtance.

That Author, however, did not publiſh his Analyſis; yet the Marquis *de l'Hopital* hit upon it: And afterwards M. *Fatio* reſolv'd the ſame Problem; tho by a much longer and more perplex'd way. See SOLID *of the leaſt Reſiſtance.*

VEST, and VESTITURE. See INVESTITURE.

VESTALS, in Antiquity, Maids in antient *Rome*, conſecrated to the Service of the Goddeſs *Veſta*; and particularly, to watch the ſacred Fire in her Temple. See VESTALIA.

Numa firſt inſtituted four *Veſtals*; and *Plutarch* tells us, *Servius Tullius* added two more: which number, ſix, laſted as long as the Worſhip of the Goddeſs *Veſta*.——'Tis true, S. *Ambroſe* reckons them ſeven; but without any Foundation.

The *Veſtals* made a Vow of perpetual Virginity: Their Employment was, the Sacrificing to *Veſta*, and keeping up the Holy Fire in her Temple. If they violated their Chaſtity, they were puniſh'd with remarkable Severity; being ſhut up, or buried in a deep Pit, or Cavern, with a lighted Lamp, and a little Water and Milk, and there left to be devour'd by Hunger.——If they let out the Fire, they were whip'd by the *Pontifex Maximus*; and the Fire was re-kindled by the Sun-Beams collected, ſome ſay, in Burning-Glaſſes, and not otherwiſe.

To be ſecure of their Virginity, at their Admiſſion, it was provided, That they ſhould not be above ſix Years old.——They were choſen by Lot, out of twenty Virgins carried by the Pontiff to the *Comitia*, for that purpoſe.

They were only conſecrated for 30 Years; after which time, they were at liberty to go out and be marry'd. If they continu'd in the Houſe after that time, they were only to be aſſiſtant in point of Advice to the other *Veſtals*.

The firſt ten Years they were to employ in learning their Functions; the ten following they were to exerciſe them; and the laſt ten, to teach them to others.

Their Order was very rich; both on account of the Endowments of the Emperor, and of Legacies of other Perſons.

The *Veſtals* had a particular Place allotted them at the Amphitheatres and Games of the Circus.——Their Vehicle was the *Carpentum*, or *Pilentum*. See CARPENTUM, &c.

The Veil wherein they ſacrificed, was call'd *Suffibulum*.

At firſt, they were nominated by the Kings; but after the Extinction of Monarchy, by the *Pontifex Maximus*, or High Prieſt. The oldeſt of them was call'd *Maxima*, as the firſt Pontiff was *Maximus*. See PONTIFF.

They had divers Privileges: diſpoſed of their Effects by Teſtament in their Father's Life-time; had the ſame Gratification as a Mother of three Children; and whenever they met a Criminal going to Execution, had a Power to pardon him.

The Fire which the *Veſtals* were to watch, was not on an Altar, or a Hearth; but in little earthen Veſſels with two Handles, call'd *Capeduncula*.

This Fire was held a Pledge of the Empire of the World. If it went out, 'twas held a very unlucky Prognoſtick; and was to be expiated with infinite Ceremonies. Among the *Romans*, *Feſtus* tells us, it was only to be re-kindled by the rubbing a kind of Wood, proper for the Purpoſe. But among the *Greeks*, *Plutarch*, in the Life of *Numa*, obſerves, it was to be re-kindled by expoſing ſome inflammable Matter in the Centre of a concave Veſſel held to the Sun.—For it is to be noted, the *Romans* were not the only People who kept the perpetual Fire of *Veſta*, in imitation of the celeſtial Fires: but the *Greeks* were poſſeſs'd with the ſame Superſtition; particularly the *Delphians*, *Athenians*, *Tenedians*, *Argives*, *Rhodians*, *Cyzicenians*, *Mileſians*, *Epheſians*, &c.

VESTALIA, Feaſts held in honour of the Goddeſs *Veſta*, on the fifth of the Ides of *June*, *i. e.* on the ninth Day of that Month. See FEAST.

On that Day, Banquets were made before the Houſes; and Meats ſent to the *Veſtals*, to be offer'd by them to the Goddeſs.

The Aſſes that turn'd the Mills for grinding of Corn, were on this occaſion led about the City crown'd with Flowers, and Chaplets form'd of pieces of Bread; and the Millſtones were likewiſe deck'd with Garlands and Crowns.

The Ladies went barefooted in Proceſſion to the Temple of *Veſta*; and an Altar was erected to Jupiter *the Baker*, *Jovi Piſtori*, in the Capitol.

The *Veſtalia* had their Name from that of their Goddeſs *Veſta*, whom the *Greeks* call'd Ἑστία, *Fire*, or *Hearth*; whence *Cicero* derives the *Latin* Name.——Accordingly, the Poets frequently uſe *Veſta* for Fire, or Flame; as *Jupiter* for Air, *Ceres* for Corn, &c. See GOD, &c.

VESTIARIUS, VESTIARY, in Antiquity, a Maſter of a Ward-robe; or an Officer under the *Greek* Empire, who had the Care and Direction of the Emperor's Apparel, Robes, &c.

The *Protoveſtiarius*, or *firſt Veſtiary*, was the grand Maſter of the Ward-robe.——But, among the *Romans*, *Veſtiarius* was only a Saleſman, or Tailor.

VESTIBLE, VESTIBULUM, in Architecture, a kind of Entry into large Buildings; being an open Place before the Hall, or at bottom of the Staircaſe.

Veſtibles only intended for Magnificence, are uſually between the Court and the Garden: Theſe are ſometimes *ſimple*, that is, have their oppoſite Sides equally enrich'd with Arches; and ſometimes their Plan is not contain'd under four equal Lines, or a circular one, but forms ſeveral Van-corps and Rear-corps, furniſh'd with Pilaſters, &c.

The *Romans* had Places call'd *Veſtibles* at the Entrance of their Houſes, to ſhelter People oblig'd to ſtand at the Door, from the Weather: We have ſtill *Veſtibles* of the like kind, in many old Churches, Houſes, &c. call'd *Porches*. See PORCH.

Martinius derives the Word from *Veſtæ ſtabulum*; by reaſon the Fore-part of the Houſe was dedicated to *Veſta*. *Daviler* derives it from *Veſtis*, and *ambulo*; by reaſon People there begin to let their Trains fall.

VESTIBLE, in Anatomy, the Fore-part of the Labyrinth of the Ear. See EAR, and LABYRINTH.

The *Veſtible* is a ſmall Cavity, of an irregular Form, placed immediately above the Baſis of the Stapes; between the ſemicircular Channels, and the Cochlea.

In it appear divers *Foramina*; as that of the *Feneſtra Ovalis*; the five *Foramina* of the ſemicircular Canals; that of the Cochlea; and five other very ſmall ones, thro' which ſo many Nerves paſs. See FORAMEN, FENESTRA, &c.

VESTIGIA, a *Latin* Term, frequently uſed by *Engliſh* Writers, to ſignify the Traces, or Footſteps any thing has left behind it. See TRACE.

The Word is particularly applied to the Marks remaining of ſomething Antique, gone to Ruin by Time. See RUINS.

VESTRY, VESTIARIA, a Room adjoining to a Church, where the Prieſts Veſtments and ſacred Utenſils are kept. See VESTRY-*Men*.

VESTRY-*Men*, a ſelect Number of the principal Perſons of every Pariſh within the City of *London*, and elſewhere; who yearly chuſe Pariſh-Officers, and take care of its Concernments. See PARISH.

They are thus called, becauſe they uſually meet in the *Veſtry* of the Church. See SECRETARIUM.

VESTRY-*Clerk*, an Officer who keeps the Pariſh Accompts. See PARISH.

VESTURE, VESTMENT, a Garment, or Cloathing.

Sometimes, in our Law-Books, it is uſed metaphorically; as in *Veſtura terræ*, i.e. *Segetes quibus terra Veſtitur*; the Corn wherewith the Earth is clothed, or cover'd.

——*Veſture of an Acre of Land*, is the Profit of it, or the Wood, Corn, &c. growing on it.

VESTURE alſo ſignifies a Poſſeſſion, or admittance to a Poſſeſſion: In which Senſe it is borrow'd from the Feudiſts; with whom *Inveſtitura* ſignifies a Delivery of Poſſeſſion by a Spear, or Staff; and *Veſtura*, Poſſeſſion it ſelf. See INVESTITURE.

VETERAN, VETERANUS, in the *Roman* Militia, a Soldier who was grown old in the Service; or who had made a certain number of Campaigns; and on that account was entitled to certain Benefits and Privileges.

Twenty Years Service, were ſufficient to entitle a Man to the Benefits of a *Veteran*.

Theſe Privileges conſiſted in being abſolv'd from the Military Oath; in being exempted from all the Functions of a Soldier; in enjoying a certain Salary, or Appointment, &c.

In *France*, the Term *Veteran* is ſtill retain'd to ſuch Officers as have held their Poſts 20 Years; and who enjoy certain of the Honours and Privileges affixed thereto, even after they have laid 'em down.

A *Veteran* Counſellor has a Voice and Seat at Audiences, tho not at Proceſſes by Writing.——A *Veteran* Secretary of the King, acquires the Privileges, &c. of Nobility, to himſelf and his Children.

VETERINARIA *Medicina*, is ſometimes uſed for Phyſick or Medicine applied to the Diſeaſes of Cattel. Whence,

VETERINARIUS, a Farrier, or Horſe-Leech.

VETERNUS, is uſed by ſome Phyſicians for a Lethargy, or other drouſy Diſeaſe. See LETHARGY, &c.

VETITUM *Namium*, in Law, a Phraſe literally importing a *forbidden Diſtreſs*: as, when the Bailiff of a Lord diſtrains Beaſts, or Goods, and the Lord forbids his Bailiff to deliver 'em when the Sheriff comes to replevy them; and to that End, drives 'em to Places unknown: or when, without any Words, they are ſo eſſoign'd, as they cannot be replevied. See DISTRESS.

Divers Lords of Hundreds and Courts-Baron, have Power to hold Plea *de Vetito Namio.*——*Mathilda de mortuo Mari clamat in Manerio de Mawerdon duos* Law-days, & *Infangentheft & placita de* Namio vetito, *ſine breve domini Regis*. Int. Record. in Theſaur. Scac.

VI & *Armis*, q. d. *by Force and Arms*, a Law-term uſed in an Indictment; to denote the forcible and violent Commiſſion of any Crime. See TRESPASS, and INDICTMENT.

VI *Laica Removenda*, a Writ, lying where debate being between two Parſons, or Proviſors for a Church; one of 'em makes a forcible Entry into it, with a number of Laymen, and holds the other out.

VI *Laica Admovenda*, a Writ which is ſerv'd when a Biſhop has certify'd into the Court of Chancery, that the Parſon of any Church within his Juriſdiction, is kept out of his Church or Glebe by any Lay-Force.

VIA, *Way*. See ROAD.

VIA *Militaris*, in our Law-Books, is uſed for a *Highway*; *quæ publica dici poterit & ducit ad Mare & ad Portum, & quandoque ad Mercata*. Bracton, Lib. IV. c. 16.

VIA *Regia*, in *Leg. Hen.* I. is defined to be that *quæ ſemper aperta, & quam nemo conclaudere poteſt cum minis ſuis, quia ducit in Civitatem vel Burgum vel Portum Regis.* 'That which is always open, and which no body may ſhut 'by any Threats, as leading to a City, Port, or Town.'—Its Breadth the ſame Laws preſcribe to be ſuch, as that two Carts may meet each other, and ſixteen Horſemen arm'd go a-breaſt.

VIA *Lactea*, in Aſtronomy, the *Milky Way*, or Galaxy. See GALAXY.

VIA *Solis*, the *Sun's Way*, in Aſtronomy, is uſed among ſome Aſtronomers for the Ecliptic Line; ſo called, becauſe the Sun never goes out of it. See ECLIPTIC.

VIÆ *Primæ*, among Phyſicians, are the Stomach and Guts; including the whole Length of the Alimentary Duct or Canal, from the Mouth to the *Sphincter Ani*. See DUCT; ſee alſo STOMACH, INTESTINES, &c.

In this Senſe, we ſay, An Obſtruction in the *Primæ Viæ*.—Purging and Emetic Medicines operate chiefly in the *Primæ Viæ*.—Sudorificks, Alteratives, Cardiacks, &c. ſuſpend their Action till after they have paſs'd the *Primæ Viæ*. See MEDICINES, PURGATIVE, EMETIC, &c.

VIAL, or PHIOL, a ſmall thin glaſs Bottle. See PHIOL.

VIALES, in Mythology, a Name given, among the *Romans*, to the Gods who had the Care and Guard of the Roads, and Highways; call'd by the Latins *Viæ*. See GOD.

The *Dii Viales*, according to *Labeo*, were of the Number of thoſe Gods called *Dii Animales*; who were ſuppoſed to be the Souls of Men changed into Gods; and were of two Kinds, *viz.* the *Viales* and *Penates*. See PENATES.

The *Viales* were the ſame with thoſe otherwiſe call'd *Lares*; at leaſt, ſome of the *Lares* were denominated *Viales, viz.* ſuch of them as had the more immediate Intendency of the Roads. See LARES.

Hence, the two Names are ſometimes join'd, and thoſe Highway Deities call'd *Lares Viales*: Witneſs that Inſcription in *Gruter*.

IONI.

VIATICUM, among the antient *Romans*, was the Allowance or Appointment which the Republick gave to ſuch of its Officers as were ſent into any of the Provinces, to exerciſe any Office, or perform any Service, or Commiſſion; as alſo to the Officers of the Army, and even the Soldiers, &c. See PROVINCE.

Tacitus makes mention of it, Lib. I. Annal. c. 37. *Viaticum amicorum ipſiuſque Cæſaris*; meaning the Appointments which the Republick paid to *Germanicus*, and his Officers.

This *Viaticum*, however, did not conſiſt altogether in Money: The Ring given the Magiſtrates and Officers ſent into the Provinces, was part of it; ſo were the Clothes, Baggage, Tents, and the reſt of their Equipage.

In the *Romiſh* Church, *Viaticum* is ſtill the Allowance made a Religious, to defray the Expences of a Journey, Miſſion, &c. See MISSION.

The Term is alſo uſed for the Communion, or Euchariſt, which is given to People in the Pangs of Death; or who are about to make the Voyage of the other World.

The *Viaticum* is not given to Perſons executed in courſe of Juſtice.

VIATOR, in Antiquity, an Officer of Juſtice among the *Romans*.

The Term, originally, had no other Signification than that of a publick Meſſenger, or Servant ſent to advertiſe the Senators and Magiſtrates when Aſſemblies were to be held, where their Preſence was requir'd. And becauſe in the firſt Ages of that Empire, the *Roman* Magiſtrates lived moſtly at their Country-Houſes, theſe Officers being oblig'd to be frequently upon the Road, were called *Viatores*, Travellers; from *Via*, Highway.

In proceſs of Time, the Name *Viator* became a common Name for all Officers of the Magiſtrates; *Lictors*, *Accenſi*, *Scribes*, *Statores*, and *Cryers*: whether it were that theſe Names and Offices were confounded in one; or whether *Viator* was a general Name, and the reſt particular ones, ſpecifying the particular Functions they diſcharg'd, as *A. Gellius* ſeems to inſinuate, when he ſays, that that Member of the Company of *Viatores* who binds a Criminal condemn'd to be whip'd, was called *Lictor*. See ACCENSI, SCRIBE, LICTOR, &c.

Be this as it will, the Names *Lictor* and *Viator* are often uſed indiſcriminately for each other; and we as often meet with, *Send to ſeek, or advertiſe him by a Lictor*, as *by a* Viator.

None but the Conſuls, Pretors, Tribunes, and Ediles, had a right to have *Viatores*.—They were not to be *Roman* Citizens, and yet were requir'd to be free.

VIBEX, is ſometimes uſed by Phyſicians for a black and blue Spot, occaſion'd by a Flux of Blood. See PETECHIA, &c.

VIBRATION, in Mechanicks, a regular, reciprocal Motion of a Body, *e. g.* of a Pendulum; which, being ſuſpended at freedom, ſwings or *vibrates*, firſt this way, then that.

For the Bob being rais'd, falls again by its gravity, and with the Velocity thus acquir'd, riſes to the ſame height on the other ſide: (See PENDULUM.) Whence its gravity makes it fall again: And thus its *Vibrations* are continued.

Mechanical Authors, in lieu of *Vibration*, frequently uſe the Term *Oſcillation*. See OSCILLATION.

The *Vibrations* of the ſame Pendulum are all Iſochronal; that is, perform'd in equal Time, at leaſt in the ſame Climate; for towards the Equator they are found ſomewhat ſlower.

A Pendulum 3 Feet 3 Inches and 2 tenths of an Inch, according to *Huygens*, or 39,25 Inches, according to Sir *J. Moor* and Lord *Brouncker*, *vibrates* Seconds, or makes 3600 *Vibrations* in an Hour. See SECOND.

The *Vibrations* of a longer Pendulum, take up more time than thoſe of a ſhorter one, in a ſubduple Ratio of the Lengths. Thus, a Pendulum 3 Foot long, will make 10 *Vibrations*; while another 9 Inches long makes 20.—For 10 is the half of 20, and 3 Feet, or 36 Inches, are the Square of 6 Inches; which is double of 3, whoſe Square is 9: ſo that 10 is to 20 in a Subduple Ratio of 36 to 9.

The ſame Thing is meant when we ſay, that the Number of *Vibrations* of Pendulums in a given Time, is in a reciprocal Ratio of their Lengths.

M. *Mouton*, a Prieſt of *Lyons*, wrote an expreſs Treatiſe, to ſhew, that by means of the Number of *Vibrations* of a given Pendulum, in certain time, one might eſtabliſh an univerſal Meaſure throughout the whole World; and fix the ſeveral Meaſures in uſe among us, in ſuch manner as that they might be recover'd again, if at any time they ſhould chance to be loſt, as is the Caſe of moſt of the antient Meaſures, which we now only know by conjecture. See MEASURE.

The VIBRATIONS *of a ſtretch'd Cord*, or *String*, ariſe from its Elaſticity; which Power being of the ſame kind with that of Gravity, the *Vibrations* of a Cord follow the ſame Laws as thoſe of Pendulums: Conſequently, the *Vibrations* of the ſame Cord equally ſtretch'd, tho they be unequal in length, are equi-diurnal, or perform'd in equal Times; and the Squares of the Times of the *Vibrations* are among themſelves, inverſly, as the Powers whereby they are

are equally bent and inflected. See CHORD, ELASTICITY, FIBRE, &c.

The *Vibrations* of a *Spring*, too, are proportional to the Powers whereby it is bent: Theſe follow the ſame Laws as thoſe of the Cord, or Pendulum, and conſequently are equi-diurnal; which is the Foundation of Spring-Watches. See SPRING, and WATCH.

VIBRATION is alſo uſed in Phyſicks, &c. for divers other regular alternate Motions.

Senſation is ſuppoſed to be perform'd by means of the *vibratory* Motion of the Nerves, begun by external Objects, and propagated to the Brain. See SENSATION, VISION, NERVE, &c.

The ſeveral ſorts of Rays of Light, Sir *I. Newton* conceives to make *Vibrations* of ſeveral bigneſſes; which, according to thoſe bigneſſes, excite Senſations of ſeveral Colours; much after the ſame manner as *Vibrations* of Air, according to their ſeveral bigneſſes, excite Senſations of ſeveral Sounds. See COLOUR, SOUND, &c.

Heat, according to the ſame Author, is only an Accident of Light, occaſion'd by the Rays putting a fine, ſubtil, etherial Medium which pervades all Bodies, into a *vibrative* Motion, which gives us that Senſation. See MEDIUM, and HEAT.

From the *Vibrations* or Pulſes of this ſame Medium, he accounts for the alternate Fits of eaſy Reflexion and eaſy Tranſmiſſion of the Rays. See LIGHT, RAY, REFLEXION, &c.

In the *Philoſophical Tranſactions* it is obſerv'd, that the Butterfly into which the Silkworm is transform'd, makes 130 *Vibrations* or Motions of its Wings in one Coition.

VICAR, VICARIUS, a Perſon appointed as Lieutenant of another; to perform his Functions, in his Abſence, and under his Authority. See LIEUTENANT.

The Pope pretends to be *Vicar* of Jeſus Chriſt on Earth. He has under him a *Grand-Vicar*, who is a Cardinal, and whoſe Juriſdiction extends over all Prieſts, both Secular and Regular; and even over Laymen.

The Word is form'd from *Vicarius, qui alterius vices gerit.*

Among the antient *Romans*, *Vicarius*, *Vicar*, was properly a kind of Lieutenant, ſent into the Provinces where there was no Governour: So that they were properly the Emperor's *Vicars*, not thoſe of Governours. *Cod. de Offic. Vicar.*

Italy, in the Time of the Eaſtern Empire, was govern'd by two *Vicarii*: The one *Vicar of Italy*, who reſided at *Milan*; the other of the City, who reſided at *Rome*.

Cujas obſerves, that the Word *Vicar* was ſometimes, tho rarely, attributed to the Lieutenant-Generals of Proconſuls, or Governours of *Roman* Provinces.

VICAR, in the Canon Law, a Prieſt of a Pariſh the predial Tithes whereof are impropriated, or appropriated; that is, belong either to a Chapter, Religious Houſe, &c. or to a Layman, who receives 'em, and only allows the *Vicar* the ſmall Tithes, or a convenient Salary, antiently call'd *Portio congrua*. See TITHE, APPROPRIATION, &c.

He is thus called *quaſi vice fungens Rectoris*, as ſerving for, or in lieu of a Rector, who would be intitled to the great Tithes. See RECTOR.

Theſe *Vicars* were antiently call'd *Perpetui Vicarii*; becauſe not appointed by the Impropriator, and licens'd by the Biſhop to read Service; but preſented by the Patron, and Canonical Inſtitution given 'em by the Hands of the Ordinary; and ſo having conſtant Succeſſion, as Corporations, and never dying.

The Canoniſts mention four Species of *Vicars*: ſome *Perpetual*; others appointed for a certain Time, and on ſome ſpecial Occaſion, call'd *Mercenarii*; others call'd *Speciales*, appointed not for the whole Cure, but for ſome certain Place, Article, or Act: others *Generales*, neither perpetual, nor appointed for any certain Act, but for all Things in the general.

VICAR *General*, was a Title given by King *Henry* VIII. to *Thomas Cromwell* Earl of *Eſſex*; with full Power to overſee the Clergy, and regulate all Matters relating to Church Affairs.

VICE, VITIUM, in Ethicks, is ordinarily defin'd an elective Habit, deviating, either in Exceſs, or in Defect, from a juſt Medium wherein Virtue is placed. See VIRTUE.

'Tis call'd a *Habit*, to diſtinguiſh it from *Sin*, which is only an Act: Hence, a Sin is look'd on as ſomething tranſient; and a *Vice* as ſomething permanent. See SIN, HABIT, &c.

Authors diſtinguiſh three States of *Vice*; the firſt *Incontinentiæ*, of Incontinence, wherein a Perſon ſees, and approves the Good, but is hurried to Evil by the Violence of his Paſſions: The ſecond, *Intemperantiæ*, of Intemperance; wherein even the Judgment is depraved, and perverted. The third, *Feritatis*, of Obduracy; wherein the Perſon is totally immers'd in *Vice*, without any ſenſe or feeling thereof.

The State of Incontinency is conſider'd as Infirmity, wherein the Perſon feels the ſharpeſt Stings of Conſcience: That of Intemperance, as Malice, wherein the Remorſe is not ſo lively. In that of Obduracy there is none. See CONSCIENCE.

VICE, in Smithery, and other Arts employ'd in Metals, is a Machine or Inſtrument, ſerving to hold faſt the Pieces to be filed, bent, riveted, &c. See SMITHERY, &c.

To file ſquare, 'tis abſolutely neceſſary the *Vice* be placed perpendicular, with its Chaps parallel to the Work-Bench. See FILING.

The Parts of the *Vice* are, the *Face*, or *Plane*, which is its uppermoſt Part; the *Chaps*, which are cut with a baſtard Cut, and well temper'd; the *Screw-pin*, cut with a ſquare ſtrong Worm; the *Nut*, or *Screw-box*, which has a ſquare Worm, and is brazed into the round Box; the *Spring*, which throws the Chaps open; and the *Foot*, on which the whole is mounted.

Hand-VICE, is a ſmall kind of *Vice*, ſerving to hold the leſſer Works in, that require often turning about.

Of this there are two Kinds, the *Broad chapt Hand-Vice*, which is that commonly us'd; and the *Square-nos'd Hand-Vice*, ſeldom us'd but for filing ſmall round Work.

VICE is alſo a Machine uſed by the Glaziers, to *turn* or draw Lead into flat Rods, with Grooves on each ſide, to receive the Edges of the Glaſs. See LEAD.

This Machine conſiſts of two Iron Chaps, or Cheeks, join'd with two croſs Iron Pieces.—In the Space between the Chaps, are two ſteel Wheels, with their Spindles or Axes paſs'd thro' the middle; each of which has its Nut, or Pinion with Teeth, that catch into each other: To the loweſt is fitted a Handle, whereby the Machine is turn'd.

There are ſome of theſe *Vices* double, and that will draw two Leads at once: Theſe have three Wheels. Some Glaziers will turn Lead of different Sizes in the ſame *Vice*; by changing their Cheeks for each Size.

With another Pair of Spindles, whoſe Nuts almoſt meet, they turn Lead for Tiers; which when it comes out of the *Vice* is almoſt cut aſunder, in two thickneſſes eaſy to be parted.

Before the Invention of this *Vice*, which is but a late Thing, they uſed a Plane: Accordingly, in all the antient Windows, we find the Lead planed, and grooved that way. See GLASS.

VICE is alſo uſed in the Compoſition of divers Words, to denote the Relation of ſomething which comes inſtead, or in the Place, of another.

In this Senſe, the Word is Latin, *Vice*, ſtead, place, turn, &c.

VICE-*Admiral*, is one of the three principal Officers of the Royal Navy; who commands the ſecond Squadron, and has his Flag ſet up in the Fore-top of his Ship. See ADMIRAL, NAVY, &c.

VICE-*Chamberlain*, call'd alſo in antient Statutes, *Under-Chamberlain*; is a great Officer in the Court, next under the Lord Chamberlain, and in his abſence has command and controll of all Officers belonging to that part of the Houſhold call'd the *Chamber*, or above Stairs. See CHAMBERLAIN.

VICE-*Chancellor* of an Univerſity, is an eminent Member, choſe annually, to manage Affairs in the Abſence of the Chancellor. See UNIVERSITY.

VICE-*Doge*, is a Counſellor of *Venice*, who repreſents the Doge when ſick, or abſent; that the Seignory may never be without a Chief.

This *Vice-Doge* never takes the Ducal Chair, nor bears the Horn, nor is addreſs'd under the Title of *Sereniſſimo*: yet, the foreign Embaſſadors, ſpeaking to the College, uſe the common Apoſtrophe of *Sereniſſimo Principe*: And he performs all the Offices of Doge; and gives Anſwers to Embaſſadors without moving his Cap. See DOGE.

VICE-*Dominus*, a Viſcount, Sheriff, or Vidame. See VICOUNT, VIDAME, &c.

VICE-*Dominus Abbatiæ*, or *Eccleſiæ*, in the Civil and Canon Law, an Advocate, or Protector of an Abbey, or Church. See ADVOCATE, and AVOUEE.

VICE-*Dominus Epiſcopi*, in the Canon Law, is the Official, Commiſſary, or Vicar-General of a Biſhop. See COMMISSARY, &c.

VICE-GERENT, a Vicar, Deputy, or Lieutenant. See VICAR, LIEUTENANT, &c.

VICE-*Comes*, in Law, &c. See VICOUNT.

VICE-*Legate*, an Officer whom the Pope ſends to *Avignon*, and ſome other Cities, to perform the Office of a Spiritual and Temporal Governour, at a time when there is no Legate or Cardinal to command there.

All the *Gaule Narbonnoiſe*, as *Dauphine*, *Provence*, &c. has recourſe to the *Vice-Legate* of *Avignon*, for all Eccleſiaſtical Diſpatches; in like manner as the other Provinces addreſs themſelves to *Rome*. See LEGATE.

VICE-*Roy*, a Governour of a Kingdom, who commands therein, in the Name and Stead of a King; with full and ſovereign Authority.

Naples, *Sicily*, *Catalonia*, &c. are govern'd by *Vice-Roys*: See KING.

VICE *Verſa*, a *Latin* Phraſe, frequently retain'd in *Engliſh* Writings; ſignifying as much as *on the contrary*.

Thus, As the Sun mounts higher and higher above the Horizon, inſenſible Perſpiration increaſes; and, *vice verſa*, as he deſcends lower, diminiſhes.

VICEN-

VICENNALIS, in Antiquity, ſomething of 20 Years, or that returns after 20 Years.

Among the *Romans*, *Vicennalia* was particularly uſed for the Funeral Feaſts, held on the 20th Day after a Perſon's deceaſe.

VICENNALIA, or VICENNALES *Ludi*, were alſo the Games, Feaſts, and Rejoicings, held every 20th Year of the Reign of a Prince.

On Medals we frequently meet with *Vicennalia Vota*; the Vows put up on that Occaſion, for the Safety of the Emperor, and Inlargement of the Empire.

Theſe are expreſs'd by VOT. X & XX, in the Medals of *Tacitus*, *Gallian*, and *Probus*; VOT. X. M. XX, in thoſe of *Valerius Maximianus*, and *Galerius Maximianus*; VOT. X. MUL. XX, in thoſe of *Conſtantine*, *Valentinian*, and *Valens*; VOT. X. MULT. XX, in thoſe of *Dioclefian*, *Conſtantine*, *Julian*, *Valentinian*, *Theodoſius*, *Arcadius*, *Honorius*; VOTIS X. MULT. XX, in thoſe of *Julian*, *Valentinian*, *Gratian*; VOT. X. SIC. XX, in thoſe of *Valerius Conſtantius*; VOT. XII. FEL. XX, in the younger *Licinius*; VOT. XV. FEL. XX, in *Conſtantine*. See Vows.

VICINAGE, and VICINETUM. See VENUE, and VISNE.

VICIS & *Venellis Mundandis*, a Writ lying againſt a Mayor, Bailiff, &c. for not taking care that the Streets be well cleans'd.

VICISSITUDE, from the Latin *Viciſſitudo*, a Change or Turn; the ſucceeding of one thing after another. As the *Viciſſitude* of Seaſons, Fortunes, &c.

VICONTIEL. } See { VICOUNTIEL.
VICONTIELS. } See { VICOUNTIELS.

VICOUNT, or VISCOUNT, or VICE-COMES, in our Law-Books, ſignifies the ſame with *Sheriff*; between which two Words, there ſeems to be no other difference, but that the one came from our Conquerors, the *Normans*; the other from our Anceſtors, the *Saxons*. See SHERIFF.

VICOUNT, or VISCOUNT, is alſo uſed for a degree of Nobility next below a Count or Earl, and above a Baron. See NOBILITY.

Camden obſerves, that this is an antient Name of Office, but a new one of Dignity, never heard of among us till *Henry* VIth's Days, who, in his 18th Year, created in Parliament *John* Lord *Beaumont*, *Viſcount Beaumont*: But it is much more antient in other Countries.

Du Cange, indeed, will have the Dignity to have had its firſt Riſe in *England*; but 'tis much more probable, it was firſt brought over hither by the *Normans*.

The Privileges of a *Vicount*, are, that he may have a Cover of Aſſay held under his Cup when he drinks, and may have Travers in his own Houſe.——And a *Vicounteſs* may have her Gown bore up by a Woman, out of the Preſence of her Superiors; and in their Preſence by a Man. See CORONET, &c.

VICOUNTIELS, VICONTIELS, *Vicecomitalia*, in our Law-Books, denotes Things belonging to the *Vice-Comes*, or Sheriff; particularly certain Farms, for which the Sheriff pays a Rent to the King, and makes what Profit he can of them.

Writs VICOUNTIEL, are ſuch as are triable in the County or Sheriff's-Court.

VICOUNTIELS, or VICONTIELS *Juriſdiction*, is that Juriſdiction belonging to the Officers of a County; as Sheriffs, Coroners, Eſcheators, &c.

VICTIM, VICTIMA, a bloody Sacrifice, offer'd to ſome Deity, of a living Thing, either a Perſon, or a Beaſt, which is ſlain to appeaſe his Wrath, or to obtain ſome Favour. See SACRIFICE.

The *Greeks* offer'd *Iphigenia* at *Aulis*, for a *Victim* to obtain a favourable Wind.

The Gods of the Heathens had each their proper *Victims*: Thus, the Goat was *Bacchus*'s *Victim*; the Horſe *Neptune*'s. See GOD, and VICTIMARIUS.

VICTIMARIUS, was a Miniſter, or Servant of the Prieſts; whoſe Office was to bind the *Victims*, and prepare the Water, Knife, Cake, and other things neceſſary to the Sacrifice. See SACRIFICE.

To the *Victimarii* it alſo belonged to knock down and kill the Victims: In order to which, they ſtood cloſe by the Altar, naked to the Waiſt, but crown'd with Laurel; and holding a Hatchet or a Knife up, aſk'd the Prieſt leave to ſtrike; ſaying *Agone*? Shall I ſtrike? Whence they were alſo called *Agones*, and *Cultellarii*.

When the *Victim* was kill'd, they open'd it, and after viewing the Entrails, took them away, waſh'd the Carcaſe, ſprinkled the Floor, &c.

The ſame *Victimarii* lighted the Fire wherein Books were condemn'd to be burnt. See *Livy*, Lib. XV. cap. 29. and *A. Gellius*, L. I. c. 1.

VICTORIAN *Period*, in Chronology. See PERIOD.

VICTORY, VICTORIA, the Overthrow or Defeat of an Enemy, in War, Combat, Duel, or the like. See WAR, BATTLE, COMBAT, DUEL, &c.

Among the *Romans*, Crowns, Triumphs, &c. were decreed to their Generals for the *Victories* they gain'd. See CROWN, TRIUMPH, &c.

VICTUALLING *Office*, an Office kept on *Tower-Hill*, for the furniſhing his Majeſty's Navy with *Victuals*. See OFFICE.

It is manag'd by ſeven Commiſſioners, who have their inferior Officers; as Secretaries, Clerks, &c. beſide Agents in divers Parts of *Great Britain*, *Ireland*, &c. See NAVY.

VICTUS *Ratio*, among Phyſicians, a particular manner of living, for the Preſervation of Health, and Prevention of Diſeaſes. See DIET, REGIMEN, &c.

VIDAME, q. d. *Vice-Dominus*, was antiently the Biſhop's Deputy in Temporals; as the *Comes* was the King's.

Vidame is ſtill a Title of Seignory, or Lordſhip; attributed to ſeveral Gentlemen in *France*: as the *Vidame* of *Chartres*, of *Amiens*, &c.

The Word, according to *Nicod*, comes from *Vicarius*; and according to *Paſquier*, from *Vice-Dominus*; *dam* ſignifying *Dominus*, or Lord.

The original Inſtitution of *Vidames*, was for defence of the Temporalties of Biſhopricks, while the Biſhops themſelves were taken up in Prayer, and other Spiritual Functions.——They alſo led the Biſhop's Forces, when they were oblig'd to go to War, either to defend their Temporalties, or for the Arrier-Ban.

They alſo manag'd and pleaded their Cauſes in Courts of Juſtice; diſtributed Juſtice among their Tenants; prevented any body's pillaging or damaging the Houſes of deceas'd Biſhops, &c.—In effect, they repreſented the Biſhop, conſider'd as a Temporal Lord. See BISHOP.

Paſquier ſays, they were the Biſhop's Temporal Judges; and had the ſame Privileges as the Vicounts.

By degrees, the *Vidames* converted their Office into a Fee; and the Biſhops their *Vidames*, or Judges, into Vaſſals, as Kings did their Counts, Dukes, &c. See COUNT, VASSAL, &c.

Accordingly, the *Vidames* of *Chartres*, &c. ſtill hold Lands of the Biſhops of thoſe Places.

In ſome antient Charters, the *Vidames* are call'd *Advocates*, or *Advowees*. See ADVOCATE.

VIDIMUS, in Law, the ſame with *Innoteſcimus*; being Letters Patent of a Charter of Feoffement, or ſome other Inſtrument not of Record. See INNOTESCIMUS.

VIDUITY. See WIDOWHOOD.

VIDUITATIS *Profeſſio*, the making a ſolemn Profeſſion of living a chaſte Widow; a Cuſtom heretofore obſerv'd in *England*, and attended with divers Ceremonies. See WIDOW, and WIDOWHOOD.

VIEW, in Law, the Act of *Veiors*, or *Viewers*. See VIEWER.

When a real Action is brought, and the Tenant knows not well what the Land is the Demandant aſks; he may pray the *View*: which is, that he may *ſee* the Land which is claim'd.

This Courſe of proceeding we receiv'd from the *Normans*, as appears by the *Grand Cuſtomary*.—It is uſed in various Caſes; as in Aſſize of Rent-Service, Rent-Charge, Rent-Seck; in a Writ of Nuſance; in a Writ *quo Jure*; in the Writ *de Rationabilibus diviſis*, &c.

VIEW *of Franc-Pledge*, is the Office which the Sheriff in his County-Court, or the Bailiff in his Hundred, performs; in looking to the King's Peace, and ſeeing that every Man be in ſome Pledge. See FRANC-*Pledge*.

This is called by *Bracton*, *Res quaſi ſacra quia ſolam perſonam Regis reſpicit, & introducta pro pace, & communi utilitate.*

VIEW, in Matters of Opticks, Perſpective, &c. See VISION, SIGHT, PERSPECTIVE, &c.

VIEW, among Hunters, the print of the Feet of a fallow Deer on the Ground.

To VIEW *a Place*, in the Military Art, is to ride about it before the laying of a Siege, in order to obſerve the Strength or Weakneſs of its Situation and Fortification. See FORTIFICATION, &c.

VIEWERS, in Law, are Perſons that are ſent by a Court to *view* a Place or Perſon in queſtion; as alſo the Situation of a Place where a Fact was committed; or a Perſon in caſe of Sickneſs, &c.

VIGIL, or EVE, in Church Chronology, the Day before any Feaſt, &c. See FEAST, and EVE.

Tho the Civil Day begin at Midnight, yet the Eccleſiaſtical, or Scriptural Day, begins at ſix a-Clock in the Evening, and holds till ſix in the Evening the enſuing Day. See DAY.

Hence, the Collect for every Sunday and Holy-Day, by Order of the Church, is to be read at the preceding Evening-Service at ſix a-Clock the Day before; from which time the Religious Day was ſuppoſed to begin.

And this firſt part of the Holy-day, from ſix a-Clock the Day before, was, by the primitive Chriſtians, ſpent in Hymns and other Devotions; and being often continu'd till late in the Night, were call'd *Vigils*.

Theſe *Vigils* came, by degrees, to be ſo enlarg'd, that at laſt all the Day preceeding the Holy-day was call'd by this Name.

VIGILIA, that State of an Animal which is oppoſite to Sleep, and popularly call'd *Waking*, or *Watching*. See SLEEP, and WAKING.

VIGINTIVIRATE, a Dignity among the antient *Romans* eſtabliſh'd by *Cæſar*.

This Dignity comprehended four others; for of the *Vigintiviri*, or twenty Men which compos'd the Company, there were three who ſat and judg'd of all Criminal Affairs; three others had the Inſpection of the Coins and Coinage; four took Care of the Streets of *Rome*; and the reſt were Judges of Civil Affairs.

VILL. See VILLAGE.

VILLA *Regis*, a Title antiently given to thoſe *Villages* where the Kings of *England* had a Royal Seat, and held the Manor in their own Demeſn.

VILLAGE, VILLA, or VILL, an Aſſemblage of Houſes, inhabited chiefly by Peaſants and Farmers, having uſually a Church, but no Market.

The want of a Market diſtinguiſhes it from a *Town*, as the Church does from a Green, Street, &c. See TOWN, &c.

The Word is *French*, form'd of *vil*, or *vilis*, low, mean, contemptible.

Among our *Saxon* Anceſtors, *Vill* or *Village* was uſed in the Senſe of the Roman *Villa*; *viz.* for a Country Farm or Seat, furniſh'd with convenient Out-houſes, &c. for repoſiting the Fruits thereof.

Afterwards it came to be taken for a *Manor*, then for part of a Pariſh, or the Pariſh it ſelf. See PARISH.

Hence, in ſeveral antient Law-Books, *Vill* and *Pariſh* are the ſame thing: Accordingly, *Forteſcue*, *de Laudibus Leg. Ang.* writes, That the Boundaries of *Villages*, are not by Houſes, Streets, or Walls, but by a large Circuit of Ground, within which may be divers Hamlets, Waters, Woods, &c.

Fleta makes this difference between a *Manſion*, a *Village*, and a *Manor*; that a Manſion may conſiſt of one, or more Houſes; tho it is only to be one Dwelling-place, without any other very near it: for if other Houſes be contiguous, 'tis then a *Village*. A Manor may conſiſt of one or more *Villages*. See MANSION, and MANOR.

For the better Government of *Villages*, the Lord of the Soil has uſually a Power to hold a Court-Baron, every three Weeks. See COURT-*Baron*.

VILLAIN, in our antient Cuſtoms, the ſame with *Bondman*. See BONDMAN.

In Doomſday Book he is call'd *Servus*, Servant, Slave. See SERVANT, SLAVE, &c.

A *Villain* was one who held Lands in *Villenage*, or on condition of rendering baſe Services to his Lord. See SERVICE.

There were antiently in *England* two ſorts of *Villains*, viz. *Villains in Groſs*, who were bound immediately to the Perſons of their Lords, and to their Heirs; and *Villains regardant to a Manor*: Theſe the Civilians call *Glebæ Aſcripti*; and they were bound to their Lord, as Members belonging to ſuch a Manor, of which he was owner.

This latter was a pure *Villain*, of whom the Lord took Redemption to marry his Daughter, and to make him free; and he might put him out of his Lands and Tenements at his Will; might beat and chaſtiſe him, but not maim him.

There are not properly any ſuch *Villains* now, tho the Law concerning them ſtands unrepeal'd.

The Lands before held in *Villenage*, are now held in free and common Socage. See TENURE, SOCAGE, &c.

They were call'd *Villains* from *Villa*; becauſe they dwelt in *Villages*: The ſame were alſo call'd *Pagenſes*, and *Ruſtici*; and of ſuch ſervile Condition were they, that they were uſually ſold with the Farm to which they reſpectively belong'd.

VILLAIN *Eſtate*, or *Condition*, is contradiſtinguiſh'd to Free Eſtate. See FREE *Eſtate*.

VILLAINOUS *Judgment*, is that which caſts the Reproach and Stain of *Villany* and Shame on him againſt whom it is given. See JUDGMENT.

Such is that againſt a Conſpirator, &c.

Lambard calls it *Villainous Puniſhment*; and ſays, it may well be call'd *Villainous*, in regard the Judgment, in ſuch Caſe, ſhall be like the antient Judgment in attaint, *viz.* that the Criminals ſhall not be of any Credit afterwards; nor ſhall it be lawful for them, in Perſon, to approach the King's Court: That their Lands and Goods ſhall be ſeiz'd into the King's Hands, their Trees rooted up, their Bodies impriſon'd, &c.

VILLENAGE, or VILLAINAGE, a ſervile kind of Tenure of Lands or Tenements; whereby the Tenant was bound to do all ſuch Service as the Lord commanded, or were fit for a *Villain* to perform. See VILLAIN.

This *Bracton* expreſſes by, *Sciri non poterit veſpere, quale ſervitium fieri debet mane.*

Villenage is divided into that *by Blood*, and that *by Tenure*.

Tenure in *Villenage*, could make no Freeman a Villain, unleſs it were continu'd time out of Mind; nor could free Land make a *Villain* free. See TENURE.

Villenage is alſo divided by *Bracton* into *Pure Villenage*, where the Services to be perform'd were indeterminate and arbitrary, as above expreſs'd; and *Socage Villenage*, which was to carry the Lord's Dung into his Fields, to plough his Ground on certain Days, ſow and reap his Corn, &c. and even to empty his Jakes; as the Inhabitants of *Bickton* were bound to do to the Lord of *Clun-Caſtle* in *Shropſhire*: which was afterwards turn'd into a Rent, now call'd *Bickton Silver*; and the *Villainous* Service excus'd.

VILLI, *Coarſe Hair*, in Anatomy, is uſed in the ſame Senſe as Fibres, or *Fibrillæ*. See FIBRE.

In Botany, *Villi* denotes a ſort of *Tomentum*, or Down, like the Grain or Shag of Pluſh; with which, as a kind of Excreſcence, ſome Trees do abound.

VILLOUS, VILLOSA, is particularly apply'd to one of the Coats or Membranes of the Stomach, call'd *Cruſta Villoſa*. See STOMACH, &c.

It takes its Name from innumerable *Villi*, or fine *Fibrillæ*, wherewith its inner Surface is cover'd. See CRUSTA *Villoſa*.

VINALIA, in Antiquity, a Name common to two Feaſts among the antient *Romans*; the one in honour of *Jupiter*, and the other of *Venus*. See FEAST.

The firſt was held on the 19th of *Auguſt*, and the ſecond on the 1ſt of *May*.

The *Vinalia* of the 19th of *Auguſt* were call'd *Vinalia Ruſtica*, and were inſtituted on occaſion of the War of the *Latins* againſt *Mezentius*; in the Courſe of which War, that People vow'd a Libation to *Jupiter* of all the Wine of the ſucceeding Vintage.

On the ſame Day likewiſe fell the Dedication of a Temple of *Venus*; whence ſome Authors have fallen into a Miſtake, that theſe *Vinalia* were ſacred to *Venus*. But *Varro*, LLL. V. and *Feſtus*, in *Verbo Ruſtica*, diſtinguiſh between the two Ceremonies; and expreſly aſſert the *Vinalia* to be a Feaſt of *Jupiter*.

VINCULUM, in Fluxions, denotes ſome compound Surd Quantity's being multiply'd into a Fluxion, &c.

Thus, in this Expreſſion, $a x \sqrt{a x - o a}$, the *Vinculum* is the compound Surd, $\sqrt{o x - a a}$, which is $x^{\frac{1}{2}}$ into $a^{\frac{1}{2}}$.

VINDEMIATING, the gathering of Grapes, or other ripe Fruits; as Apples, Pears, Cherries, &c.

The Word is form'd of the Latin *Vindemia*, Vintage. See VINTAGE.

VINDEMIATRIX, a Fixed Star of the third Magnitude, in the Conſtellation Virgo; whoſe Longitude, Latitude, &c. ſee among the reſt of thoſe of VIRGO.

VINDICATION, *Claiming*, in the Civil Law, an Action ariſing from the Property a Perſon has in any thing: or a Permiſſion to take or ſeize a thing as one's own, out of the Hands of a Perſon whom the Law has doom'd not to be the true Proprietor.

VINE, a Noble Plant or Shrub, of the Reptile Kind; famous for its Fruit, or *Grapes*, and for the Liquor they afford. See WINE.

The Kinds of *Vines* are almoſt infinite; denominated, either from the Soil and Place where they grow; as the *Bourguignon*, *Bourdelas*, *Italian*, *Mantua Vine*, &c. or from the Form, Colour, Taſte, &c. of their Grapes; as the Acorn, Apricot, Damaſk, Birds-bill, Muſcadine, &c. See GRAPE.

Our Gardeners find, that *Vines* are capable of being cultivated in *England*, ſo as to produce large Quantities of Grapes; and thoſe ripen'd to ſuch a degree, as may afford a good ſubſtantial vinous Juice. Witneſs the Vineyards in *Somerſetſhire*; particularly that famous one at *Bath*.

In effect, it does not ſeem ſo much owing to the Inclemency of our *Engliſh* Air, that our Grapes are generally inferior to thoſe of *France*, &c. as to the want of a juſt culture.

Thoſe fitteſt for the *Engliſh* Climate, Mr. *Mortimer* finds to be the ſmall black Grape, the white Muſcadine, Parſley Grape, Muſcadilla, white and red Frontigniac.—Mr. *Bradley* recommends the *July* Grape, the early ſweet Water Grape lately brought from the Canaries; the *Arbois*, or *French* ſweet Water Grape: All which, if well manag'd, and the Weather favourable, are ripe by the middle of *Auguſt*. He alſo recommends the Claret and *Burgundy* Grapes.

The beſt Soil for *Vines*, according to *Mortimer*, is the hotteſt Gravel, Sand, or dry rocky Ground; provided it be well water'd and ſhaded.——At firſt planting, Mr. *Bradley* recommends chalky Hills, as proper for *Vines*.

To mend a Soil that wants thoſe Qualities, 'tis good to throw in the rubbiſh of old Buildings, well mix'd with twice as much Earth and ſifted about the Roots of the *Vines*. See VINEYARD.

Vines are propagated either by Layers, or Cuttings; that is, either by laying down the young Branches as ſoon as the Fruit is gather'd, or by making Plantations of Slips, or Cuttings, at that time. See PROPAGATION.

Mr. *Mortimer* ſays, it may be done any time in the Winter before *January*; tho *Bradley* ſays, he has done it with ſucceſs in *March* and *April*.

For the Pruning of VINES. } See { PRUNING.
For the Planting of VINES. } See { VINEYARD.

VINEA, in Fortification. See MANTELET.

VINEGAR, *Acetum*, an agreeable, acid, penetrating Liquor, prepar'd from Wine, Cyder, Beer, and other Liquors; of conſiderable uſe, both as a Medicine, and a Sauce. See ACETUM.

Wine, and other vinous Liquors, are ſaid to gain a grateful ſharpneſs, *i. e.* to become *Vinegar*, by having their Salts exalted by Inſolation, or other means; and their Sulphurs weaken'd and depreſs'd.

Others aſcribe the Converſion of vinous Liquors into *Vinegar*, to the grinding or ſharpening of the longitudinal Particles thereof; by which means, they become more tart and pungent.

The Method of making *Vinegar* has long been kept a Secret among the People of the Profeſſion; who, 'tis ſaid, oblige themſelves to each other by Oath not to reveal it. But notwithſtanding this, the *Philoſophical Tranſactions*, and ſome other later Writings, furniſh us with approved Accounts thereof.

Method of making VINEGAR *of Cyder.*

The Cyder, (the meaneſt of which will ſerve the Purpoſe) is firſt to be drawn off fine into another Veſſel, and a quantity of the Muſt, or Pouz of Apples to be added: The whole is ſet in the Sun, if there be a Conveniency for the Purpoſe, and at a Week or nine Days end it may be drawn off. See CYDER.

Method of making VINEGAR *of Beer.*

Take a middling ſort of Beer, indifferently well Hopp'd; into which, when it has work'd well, and is grown fine, put ſome Rapes, or Huſks of Grapes, uſually brought home for that purpoſe: Maſh them together in a Tub; then letting the Rape ſettle, draw off the liquid Part, put it into a Caſk, and ſet in the Sun as hot as may be; the Bung being only cover'd with a Tile, or Slate-ſtone: and in about thirty or forty Days, it will become a good *Vinegar*, and may paſs in uſe as well as that made of Wine, if it be refined, and kept from turning muſty.

Or thus: To every Gallon of Spring Water, add three Pounds of Malaga Raiſins; which put into an earthen Jar, and place them where they may have the hotteſt Sun from *May* till *Michaelmas*: then preſſing all well, tun the Liquor up in a very ſtrong iron-hoop'd Veſſel, to prevent its burſting: It will appear very thick and muddy when newly preſs'd; but will refine in the Veſſel, and be as clear as Wine. Thus let it remain untouch'd for three Months, before it be drawn off, and it will prove excellent *Vinegar*.

To make VINEGAR *of Wine, or vinous Liquors.*

Any ſort of vinous Liquor, being mixed with its own Fæces, Flowers, or Ferment, and its Tartar, firſt reduced to Pouder; or elſe with the acid and auſtere Stalks of the Vegetable from whence the Wine was obtain'd, which hold a large proportion of Tartar; and the whole being kept frequently ſtirring in a Veſſel which has formerly held *Vinegar*, or ſet in a warm place full of the Steams of the ſame, will begin to ferment anew, conceive heat, grow ſour by degrees, and ſoon after turn into *Vinegar*.

The remote Subjects of acetous Fermentation, are the ſame with thoſe of vinous; but the immediate Subjects of it, are all kinds of vegetable Juices, after they have once undergone that Fermentation which reduces 'em to Wine: for 'tis abſolutely impoſſible to make *Vinegar* of Muſt, the crude Juice of Grapes, or other ripe Fruits, without the aſſiſtance of the vinous Fermentation.

The proper Ferments of this Operation, whereby *Vinegar* is prepar'd, are, 1ſt, The Fæces of all acid Wines: 2d, The Lees of *Vinegar*: 3d, Pulveriz'd Tartar; eſpecially that of Rheniſh Wine, or the Cream or Cryſtals thereof: 4th, *Vinegar* it ſelf: 5th, A wooden Veſſel, well drench'd with *Vinegar*, or one that has long been employ'd to contain it: 6th, Wine that has often been mix'd with its own Fæces: 7th, The Twigs of Vines, and the Stalks of Grapes, Currants, Cherries, or other Vegetables of an acid auſtere Taſte: 8th, Bakers Leaven, after it's turn'd acid: 9th, and laſtly, All manner of Ferments, compounded of thoſe already mention'd.

Vinegar is no Production of Nature, but a Creature of Art: For Verjuice, the Juices of Citrons, Lemons, and the like native Acids, are improperly ſaid to be natural *Vinegars*; becauſe, when diſtill'd, they afford nothing but vapid Water: whereas it is the Property of *Vinegar* to yield an acid Spirit by Diſtillation.

Method of making VINEGAR *in* France.

In *France* they uſe a Method of making *Vinegar* different from that above deſcrib'd.—They take two very large oaken Veſſels, the larger the better, open at the top; in each whereof they place a wooden Grate, within a Foot of the bottom: upon theſe Grates, they firſt lay Twigs, or Cuttings of Vines, and afterwards the Stalks of the Branches, without the Grapes themſelves, or their Stones; till the whole Pile reaches within a Foot of the brims of the Veſſels: Then they fill one of theſe Veſſels with Wine to the very top, and half fill the other; and with Liquor drawn out of the full Veſſel, fill up that which was only half full before; daily repeating the ſame Operation, and pouring the Liquor back from one Veſſel to the other; ſo that each of them is full, and half full by turns.

When this Proceſs has been continued for two or three Days, a degree of heat will ariſe in the Veſſel which is then but half full, and increaſe for ſeveral Days ſucceſſively, without any appearance of the like in the Veſſel which happens to be full during thoſe Days; the Liquor whereof will ſtill remain cool: and as ſoon as the heat ceaſes in the Veſſel that is half full, the *Vinegar* is prepar'd: Which, in the Summer, happens on the fourteenth or fifteenth Day from the beginning; but in the Winter, the Fermentation proceeds much ſlower; ſo that they are oblig'd to forward it by artificial warmth, or the uſe of Stoves.

When the Weather is exceeding hot, the Liquor ought to be pour'd off from the full Veſſel into the other twice a-day: otherwiſe, the Liquor would be over-heated, and the Fermentation prove too ſtrong; whence the ſpirituous Parts would fly away, and leave a vapid Wine, inſtead of *Vinegar* behind.

The full Veſſel is always to be left open at the top, but the Mouth of the other muſt be cloſed with a Cover of Wood; in order the better to keep down and fix the Spirit in the Body of the Liquor; for otherwiſe, it might eaſily fly off in the heat of Fermentation.—The Veſſel that is only half full ſeems to grow hot, rather than the other, becauſe it contains a much greater Quantity of the Vine-twigs and Stalks than that, in proportion to the Liquor; above which the Pile riſing to a conſiderable height, conceives heat the more, and ſo conveys it to the Wine below.

VINEGAR *of Antimony*, is an acid Spirit, drawn by Diſtillation from the *Marcaſite* of Antimony. See ANTIMONY.

Its uſe is commended in continued and malignant Fevers.—The Apothecaries likewiſe make a kind of Theriacal *Vinegar* of Dittany, Angelico, Valerian, Cardimums, Oranges, *&c.* See ACETUM.

The Word *Vinegar* is *French*; form'd from *Vin*, Wine, and *aigre*, ſour. See WINE.

VINEYARD, a Plantation of Vines. See VINE.

The beſt Situation of a *Vineyard*, is on the Declivity of an Hill lying to the South. See EXPOSURE.

The *Vine* is propagated by Slips, Layers, or Suckers, planted in a Nurſery, and thence tranſplanted, about *February*, into the *Vineyard*.

As to the Soil, it is agreed, nothing can be too dry for them: And as to the ſorts of *Vines*, none but the forward ones to be planted in *England*.—Theſe are found to ripen very well in open Borders without Walls.

They are to be planted in Lines running North and South, five or ſix Foot apart; only two *Vines* in each Hole.—The *September* following, the Shoots of that Summer to be prun'd ſhorter, according to their Strength; and the Summer following, the ſtrongeſt will begin to ſhew a little Fruit. They are now to be ſupported with Stakes, *&c.* ſo as they may run about a Foot above ground: The higher they run, the leſs danger they are in of being ſpoil'd with Wet; but the lower, the ſweeter Grapes, and the ſtronger Wine.

If, notwithſtanding due pruning, they don't ſeem inclinable to bear large Bunches, the Ground to be help'd with a Mixture of Rubbiſh of ſome old Building, with Sea-coal Aſhes, or Drift Sand.—Thus manag'd, a *Vineyard*, in five or ſix Years, will produce good ſtore of Grapes.

The celebrated *Vineyard* at *Bath*, containing about ſix Acres of Ground, planted with White, Muſcadine, and Black cluſter Grapes, Mr. *Bradley* aſſures us, by ſuch Management, four or five Years ago, yielded 60 Hogſheads of Wine at a Vintage: Tho in the Year 1721, it only yielded three Hogſheads.

The ſame Author mentions a little *Vineyard* of a private Gardener at *Rotherhith*; which, tho only conſiſting of 100 Vines, and ſome of them only of the ſecond Year's growth, yielded at a Vintage 95 Gallons of Wine; which, he adds, had the true *Burgundy* Flavour, as being made from that ſort of Grape: and exceeded any made from any *Vineyard* on this ſide *Paris*. See WINE.

VINTAGE, the Crop of Wine, or what is got from the Vines each Seaſon. See WINE.

The

The Word is alſo uſed for the Time or Seaſon of gathering or preſſing the Grapes.

In *France*, a Decree or Ordonnance of the proper Judge, and a ſolemn Publication thereof, are requir'd, ere the *Vintage* can be begun.

VINOUS, Vinosus, ſomething that relates to Wine; particularly the Taſte, and Smell thereof. See Wine.

All Vegetables, by a due Treatment, afford a *Vinous* Liquor; as Corn, Pulſe, Nuts, Apples, Grapes, &c. See Malt, Brewing, &c.

And a ſecond Fermentation, duly manag'd, turns any *Vinous* Liquor into an acetous one. See Vinegar.

The proper Character and Effect of Fermentation, is to produce either a *Vinous* or an acetous Quality in the Body fermented. See Fermentation.

Some of our Countrymen, bound on a Voyage to the *Eaſt Indies*, having fill'd ſeveral Caſks with *Thames*-Water, to carry along with 'em; obſerv'd an inteſtine Motion in it, when they came to the Equator; and found it afterwards turn'd into a kind of *Vinous* Liquor, capable of affording an inflammable Spirit by Diſtillation.

This, without diſpute, proceeded from the Flowers, Leaves, Roots, Fruits, and other vegetable Matters, continually falling or waſh'd down into that River.——Such Waters are always found in a State of Putrefaction, ere they put on a *Vinous* Nature. See Putrefaction.

VINUM, a Liquor, or Drink, popularly call'd *Wine*. See Wine.

Vinum, in Medicine, or Vinum *Medicatum*, is particularly applied to ſeveral *medicated Wines*, *i. e.* Medicinal Preparations, whereof that Liquor is the Baſis; ſuch as the

Vinum Marinum, Sea-Wine; made by caſting Sea-Water on the Grapes in the Vat.

Vinum Cydonites, Quince-Wine; made of Slices of that Fruit, ſteep'd in Muſt, or new Wine.

Vinum Roſatum, Roſe-Wine; made by ſteeping Roſes for three Months in Wine.

Vinum Strobilites, or Pine-Apple Wine:—*Vinum Hyſopites*, Hyſop-Wine.

Vinum Aromaticum, made by infuſing Aromaticks, or Spices, in new Wine or Muſt.

Vinum Picatum, pitch'd Wine; made of Pitch infus'd in Muſt.

Vinum, call'd alſo *Acetum*, *Scilliticum*. See Scilliticum.

Vinum Abſynthites, or Wormwood-Wine; is made of the great or little *Abſynthium*, by taking the Apices or Tops of the Flowers, putting them in a *Sacculus*, or Bag, and ſuſpending it in the middle of a Veſſel of Wine; which fermenting, extracts the Taſte, Smell, and Virtues of the Wormwood.

Vinum Emeticum, Emetic Wine; is Wine wherein Glaſs, Regulus of Antimony, and Crocus Metallorum have been ſteep'd. See Emetic.

It only takes a certain degree of Efficacy from the Matters; nor is it found any ſtronger at three Months end, than at the end of eight Days.—It purges both upwards and downwards.

Vinum Hippocraticum, or Hippocras; ſo called of *Manica Hippocratis*, or *Hippocrates*'s Sleeve, thro' which it is ſtrained; is a ſort of ſpiced Wine, in which Sugar and Spices have been ſteeped for ſometime. See Claret, &c.

VIOL, a Muſical Inſtrument, of the ſame Form with the *Violin*; and ſtruck, like that, with a Bow. See Violin.

There are *Viols* of divers Kinds: The firſt, and the principal, among us, is the *Baſs-Viol*, call'd by the *Italians* *Viola di Gamba*, or the *Leg-Viol*; becauſe held between the Legs.

'Tis the largeſt of all; and is mounted with ſix Strings, having eight Stops, or Frets, divided by Semi-tones.

Its Sound is very deep, ſoft, and agreeable.—The Tablature, or Muſick for the Baſs-Viol, is laid down on ſix Lines, or Rules.

What the *Italians* call *Alto Viola*, is the Counter-Tenor of this; and their *Tenore Viola* the Tenor. They ſometimes call it ſimply the *Viol*: Some Authors will have it the *Lyra*, others the *Cithara*, others the *Chelis*, and others the *Teſtudo* of the Antients. See Lyra, &c.

2°, The *Love-Viol*, which is a kind of Triple *Viol*, or Violin; having ſix braſs or ſteel Strings, like thoſe of the Harpſichord.—It yields a kind of ſilver Sound, which has ſomething in it very agreeable.

3°, A *Large Viol*, with 44 Strings, call'd by the *Italians* *Viola di Bardone*; but little known among us.

4°, The *Viola Baſtarda*, or *Baſtard Viol*, of the *Italians*; not uſed among us: *Broſſard* takes it to be a kind of *Baſs-Viol*, mounted with ſix or ſeven Strings, and tuned as the common one.

5°, What the *Italians* call *Viola di Braccio*, Arm-*Viol*; or ſimply *Braccio*, *Arm*; is an Inſtrument anſwering to our Counter-Tenor, Treble, and Fifth Violin.

6°, Their *Viola Prima*, or *Firſt Viol*, is really our Counter-Tenor Violin; at leaſt, they commonly uſe the Cliff of *C ſol ut* on the firſt Line, to denote the Piece intended for this Inſtrument.

7°, Their *Viola Secunda*, is much the ſame with our Tenor Violin; having the Key of *C ſol ut* on the ſecond Line.

8°, Their *Viola Terza*, is nearly our Fifth Violin; the Key *C ſol ut* on the third Line.

9°, Their *Viola Quarta*, or Fourth *Viol*, is not known in *England* or *France*: Tho we frequently find it in the *Italian* Compoſitions; the Key on the fourth Line.

Laſtly, their *Violetta*, or little *Viol*; is, in reality, our Triple *Viol*: Tho Strangers frequently confound the Term with what we have ſaid of the *Viola Prima*, *Secunda*, *Terza*, &c.

Viol is alſo a Term uſed among Mariners, when a ſtrand Rope is bound faſt with Nippers to the Cable, and brought to the Jeer-Capſtan, for the better weighing of the Anchor. See Anchor.

VIOLATION, the Act of *Violating*, *i. e.* forcing a Woman, or committing a Rape upon her. See Rape.

Ammon, *David*'s Son, *violated* his Siſter, who was aveng'd by *Abſalom*: *Tereus* violated his Siſter-in-Law *Philomela*.——To violate the Queen, the King's Eldeſt Daughter, or the Princeſs of *Wales*, is High Treaſon. See Treason.

Violation is alſo uſed in a Moral Senſe for a Breach or Infringment upon a Law, Ordinance, or the like.——Thus, we ſay, A *Violation* of the Law of Nature, of a Treaty of Peace, of one's Oath, &c.——The Law of Nations was *violated* in the Inſult offer'd to Mr. *S*—— the King's Embaſſador at *Madrid*.

The Word is alſo uſed for a Profanation.——In this Senſe, we ſay, to *violate* a Church, &c. See Profanation.

VIOLENT, in the Schools. A Thing is ſaid to be *violent*, when effected by ſome external Principle; the Body that undergoes it contributing nothing thereto, but ſtruggling againſt it.

The Body, in ſuch Caſe, is ſaid to *ſtruggle*, by reaſon whatever is *Violent*, diſcompoſes and diſtracts a thing from its natural Conſtitution, and tends to deſtroy it.

The Schoolmen all allow, that Man, as being endu'd with Reaſon, is capable of ſuffering ſuch *Violence*; but brute and inanimate Bodies are not: *In Brutum*, &c. Violentum *non cadit*.

VIOLIN, or *Fiddle*, a Muſical Inſtrument, mounted with four Strings, or Guts; and ſtruck, or play'd with a Bow.

The *Violin* conſiſts, like moſt other Inſtruments, of three Parts; the *Neck*, the *Table*, and the *Soundboard*.

At the Sides are two Apertures, and ſometimes a third towards the Top, ſhaped like a Heart.

Its Bridge, which is below the Apertures, bears up the Strings, which are faſten'd to the two Extremes of the Inſtrument; at one of them, by a Screw, which ſtretches, or looſens 'em at pleaſure.

The Style and Sound of the *Violin*, is the gayeſt and moſt ſprightly of all other Inſtruments; and hence it is of all other the fitteſt for dancing. Yet there are ways of touching it, which render it grave, ſoft, languiſhing, and fit for Church or Chamber Muſick.

It generally makes the Treble, or higheſt Part in Conſorts.—Its Harmony is from Fifth to Fifth. Its play is compoſed of Baſs, Counter-Tenor, Tenor, and Treble; to which may be added, a Fifth Part: Each Part has four Fifths, which riſe to a greater Seventeenth.

In Compoſitions of Muſick, *Violin* is expreſs'd by V: two V V denote two *Violins*.

The Word *Violin*, alone, ſtands for *Treble Violin*: When the *Italians* prefix *Alto*, *Tenore*, or *Baſſo*, it then expreſſes the Counter-Tenor, Tenor, or Baſs-*Violin*.

In Compoſitions where there are two, three, or more different *Violins*, they make uſe of *primo*, *ſecundo*, *terzo*, or of the Characters I° II° III°, or 1° 2° 3°, &c. to denote the difference.

The *Violin* has only four Strings, each of a different thickneſs, the ſmalleſt whereof makes the *E ſi mi* of the higheſt Octave of the Organ; the ſecond, a Fifth below the firſt, makes the *A mi la*; the third, a Fifth below the ſecond, is *D la re*; laſtly, the fourth, a Fifth below the third, is *G re ſol*.

Moſt Nations, ordinarily, uſe the Key *G re ſol* on the ſecond Line, to denote the Muſick for the *Violin*; only in *France*, they uſe the ſame Key as the firſt Line at bottom: The firſt Method is beſt where the Song goes very low, the ſecond where it goes very high.

The *Violoncella* of the *Italians*, is properly our Fifth *Violin*; which is a little Baſs *Violin* with five or ſix Strings.

And their *Violone* is a Double Baſs, almoſt twice as big as the common Baſs *Violin*, and the Strings bigger and longer, in proportion; and conſequently, its Sound an Octave lower than that of our Baſs *Violin*, which has a noble Effect in great Concerto's.

VIPER, in Natural Hiſtory, a kind of Serpent, famed not only for the exceeding Venomouſneſs of its Bite, which is one of the moſt dangerous Poiſons in the Animal King-

dom, but alſo for the great uſefulneſs of its Fleſh in Medicine: Whence *Vipers* come to make a conſiderable Article in divers Arts.

This remarkable Reptile has the biggeſt and flatteſt Head of all the Serpent-kind. Its uſual length is about half an Ell; and its thickneſs an Inch: Its Snout is not unlike that of an Hog.

It has ſixteen ſmall immoveable Teeth in each Jaw; and, beſides, two other large, ſharp, hooked, hollow, tranſparent, canine Teeth, ſituate at each ſide of the upper Jaw, which are thoſe that do the Miſchief: Theſe are flexible in their Articulation; and are ordinarily laid flat along the Jaw, the Animal never raiſing 'em but when it would bite.

The Roots or Baſes of theſe Teeth are incompaſs'd with a Veſicle, or Bladder, containing the quantity of a large drop of a yellow inſipid ſalivous Juice.

It has only one Row of Teeth; whereas all other Serpents have two: Its Body is not at all fetid; whereas the inner Parts of the Bodies of other Serpents are intolerable. —It creeps very ſlowly, and never leaps like other Serpents; tho 'tis nimble enough to bite when provok'd.

Its Body is of two Colours, aſh-colour'd, or yellow, and the ground ſpeckled with longiſh brown Spots.—The Scales under its Belly are of the Colour of well-poliſh'd Steel.

The Male has two Sets of Genital Inſtruments, and the Female two Matrixes, *&c.* She brings forth her young living; whereas other Serpents lay Eggs and hatch 'em: On which account, the *Viper* is rank'd among the Viviparous Animals. See VIVIPAROUS.

Her young ones come forth wrap'd up in thin Skins, which break on the third day, and ſet the Animal at liberty.—She brings forth to the Number of 20 young; but only one each Day.

The Antients, particularly *Pliny*, *Galen*, &c. believ'd that the young kill'd their Mother in the Delivery; but this is not the only Miſtake they were guilty of on the Subject of the *Viper*. They held that it eat Cantharides, Scorpions, *&c.* which render'd its Poiſon ſo very dangerous.

Dr. *Mead* obſerves, that the Antients eſteem'd the *Viper* ſacred; and that one of the Kings of the *Eaſt Indies* cauſed Cottages to be built for their Entertainment, and their Killers to be puniſh'd with Death.——On Medals, the *Viper* is frequently repreſented as a Symbol of divine Power; and as ſuch, uſed by way of attribute to the antient Phyſicians.

As to the manner wherein the *Viper* conveys its Poiſon, Authors are a little diſagreed.——*Franciſco Redi*, and *Moiſe Charras*, have each of 'em wrote very curious Pieces on the Subject, but their Reſult is very different.

Redi maintains, that all the Venom of the *Viper* is contain'd in the two *Veſiculæ*, or Bags which cover the Baſe of the two canine Teeth; whence, upon biting, the yellowiſh Liquor is ſqueez'd out into the Wound: where, mixing with the Blood and other Juices, it produces thoſe dreadful Symptoms.

This Hypotheſis he maintains by a good number of Experiments, as of Animals, *viz.* Cocks, *&c.* being bit with *Vipers* after theſe *Veſiculæ* and their Juice had been taken out; without any Signs of Poiſon, or any ill Conſequence at all.

Charras, on the other hand, maintains, that this yellow Liquor is not poiſonous; that he has given it to Pidgeons as Food, without their being at all diſorder'd thereby; that the *Viper*'s bite he has always found mortal to Animals, even after the Bag has been taken clear out, as well as before: And laſtly, that the Poiſon muſt lie in the irritated Spirits of the *Viper*, which it exhales in the Ardor of its biting; and which are ſo cold, that they curdle the Blood, and ſtop the Circulation.

The Controverſy between theſe two ingenious Authors is very extraordinary: Their Syſtems are oppoſite; yet both maintain'd by a great number of well atteſted Experiments. —The Publick, however, generally give into the Sentiment of Sig. *Redi*; as anſwering beſt to the Mechaniſm of the Parts.

Dr. *Mead* ſuppoſes it the true one, in his Eſſay on the Poiſon of the *Viper*; and adds to *Redi*'s Account, that the Poiſon in the *Viper*'s Bag is ſeparated from the Blood by a conglomerated Gland, lying in the lateral anterior part of the *Os Sincipitis*, behind the Orbit of the Eye; from which Gland is a Duct that conveys the Poiſon to the Bags at the Teeth. The Teeth, he adds, are tubulated for the Conveyance and Emiſſion of the Poiſon into the Wound; but their hollowneſs does not reach to the Apex or Tip of the Tooth, but ends in a long Slit below the Point, out of which the Poiſon is emitted.

Theſe Slits, or Perforations of the Teeth, *Galen* ſays, the Mountebanks of his Days uſed to ſtop with ſome kind of Paſte; after which, they would publickly expoſe themſelves to be bitten, without danger.

Account of the Effects of the Bite of the Viper, *from Dr.* Mead.

The Symptoms following the Bite of a *Viper*, are an acute Pain in the Place wounded; Swelling, firſt red, afterwards livid, ſpreading by degrees; great Faintneſs; a quick, low, and ſometimes interrupted Pulſe; Sickneſs at the Stomach; bilious convulſive Vomiting; cold Sweats; ſometimes Pains about the Navel; and Death it ſelf, if the Strength of the Patient, or ſlightneſs of the Bite do not overcome it.

If he do overcome it, the Swelling continues inflam'd for ſome time; and the Symptoms abating, from the Wound runs a ſanious Liquor, little Puſtles are rais'd about it, and the Colour of the Skin is as if the Patient were Icterical.

By the Microſcope, the *Virus* was found to conſiſt of minute Salts in continual Motion; after which, a Number of *Spicula* or Darts appear'd, reſembling, but much finer, a Spider's Web.——This, when mixed with *Syr. Violor.* inclined to red, no ways to green; ſo that the Juice is not alkalious: But Mr. *Boyle* and Dr. *Pitcairn* prove the Blood to be only an Alkaly.

Such a ſmall Quantity of the *Virus* ſeems to have its Effect by wounding the Fibres, and altering the Coheſion of the Globules of Blood, which by the elaſtick Matter thereof proves a nimble Vehicle to carry the Viperine *Spicula* almoſt every where ſuddenly.—They will alſo ſtimulate and fret the ſenſible Membranes; whereupon, a more than uſual Afflux of the Animal Juices will be carried to the Parts.

The Cure ſeems very unſettled: Mr. *Boyle* found a hot Iron held near the Place ſucceſsful; but it proved otherwiſe with Monſieur *Charras*.—Again, the Snake-ſtone from the *Eaſt Indies*, immediately applied to the Place, is much commended: But Signior *Redi* and Monſieur *Charras* found it of no uſe; yet *Baglivi* and Dr. *Havers* give Inſtances of its good Succeſs.

Dr. *Mead* adds, that the ſame Stone directly applied to a Pigeon when bitten, ſaved its Life four Hours; whereas, moſt of the other Pigeons bitten died in half an Hour.

This Stone is not Natural, but Factitious; its Virtue lies in its Poroſity, which is ſuppoſed to imbibe the *Virus*.

The *Viper*-Catchers have a Specifick, in which they can ſo far confide, as not to be afraid of being bitten.——That Specifick is the *Auxungia* of the *Viper* preſently rubb'd into the Wound; which conſiſting of clammy, viſcid, penetrating, and active Parts, ſheaths the Salts of the *Virus*.

The ſame Author, applying it to the Noſtrils of a Dog bitten, found it well the next Day: When this is not timely applied, and the *Virus* has inſinuated into the Blood, the *Sal Viper.* is excellent, given and repeated till Sweats be produced. This ſucceeded well with Monſieur *Charras*; and Dr. *Mead* relates, that it recover'd one, after the *Virus* had induc'd an univerſal Icterus.

Vipers make a conſiderable Article in Medicine.—Moſt Authors agree, that there is no Part, Humour, or Excrement, not even the Gall it ſelf, of a *Viper*, but may be ſwallow'd without much harm.—Accordingly, the Antients, and, as ſeveral Authors aſſure us, the *Indians* at this day, both of the Eaſt and Weſt, eat 'em as we do Eels.

Caro Viperina, *Viper*'s Fleſh, either roaſted or boil'd, the Phyſicians unanimouſly preſcribe as an excellent Reſtorative; particularly in the Elephantiaſis, incurable Conſumptions, Leproſy, *&c.* and Dr. *Mead* thinks they might be leſs ſparing in the Quantity than they are; inſtead of a little *Viper*'s Fleſh, he recommends the Broth or Gelly of *Vipers*; or, as the Antients did, to boil and eat them as Fiſh, or at leaſt to drink *Vinum Viperinum*, *i. e.* Wine wherein they have been long infus'd.

Viper's *Fleſh* is an Ingredient in ſeveral of our beſt Antidotes; as the *Theriaca Andromach.* &c. See THERIACA.

The Apothecaries alſo ſell the *Pulvis Viperinus*, which is only dried *Vipers* pulveriz'd, Heart Liver and all, and paſs'd thro' a Sieve.—This, to heighten the Price we ſuppoſe, they call *Animal Bezoard.* See BEZOARD.

The *Salts of Vipers*, whether volatile or fix'd, alſo their Fat or *Axungia*, and their *Oil*, chymically drawn, are Drugs in good repute.

VIRAGO, a Maid, or Woman of extraordinary Stature; and who, with the Mien and Air of a Man, performs the Actions and Exerciſes thereof. See AMAZON.

Such were *Semiramis* and *Penthesilea*, among the Antients, *&c.* *Jeanne à Pucelle*, commonly call'd *the Maid of Orleans* among the Moderns.

In the Vulgate Verſion of the Bible, *Eve* is called *Virago*, becauſe made of the Rib of the Man.—The *Latin* Tranſlator, by this, aim'd to preſerve the Etymology which is in the *Hebrew*, and of *Vir*, form'd *Virago*; as *Adam*, in the *Hebrew* Text, call'd Eve *Ichad*, of *Iſch*, Man.

The Word is pure *Latin*, and ſeldom uſed but in the way of Deriſion.

VIRGA. See YARD.

VIRGA, is particularly uſed in Law, for a Verge, or Rod, ſuch as Sheriffs and Bailiffs carry as a Badge of their Office. See VERGE.

——*Ranf. ap Howel, præpoſitus de Lantiffin, amerciatus pro eo quod habuit in manu ſua coram Juſticiariis hic* virgam *nigram & inhoneſtam, ubi habere debuiſſet* virgam *albam & honeſtam certæ longitudinis, prout decet.* In ſeſſ. Itin. de *Cardiff.* 7 *Hen.* VI.

VIRGÆ, in Phyſiology, a Meteor, call'd alſo *Columellæ*, and *Funes Tentorii*; being an Aſſemblage of ſeveral Streams of Light, repreſenting a Bundle of Rods, or Ropes. See METEOR.

It is ſuppoſed owing to the Streaming of the Sun-beams thro' certain *Rimulæ* or Chinks, at leaſt thro' the more lax and open Parts of a watry Cloud; happening chiefly in the Morning and Evening.

There is alſo another Kind, conſiſting, not of Streams of mere white Light; but, as it were, painted, of various Colours; like thoſe of the Rainbow. See RAIN-BOW.

VIRGATA *Terræ*, or VIRGA *Terræ*, a Yard Land. See YARD *Land.*

Virgata Terræ *ex* 24 *conſtat acris*; *quatuor* Virgatæ *Hidam faciunt, quinque Hidæ feodum Militis.* See HIDE, and KNIGHT'*s Fee.*

VIRGATORES *Servientes*, in *Fleta*, are Virgers or Tipſtaves that attend the Judges. See VERGER, and SERJEANT *at Arms.*

VIRGIN, a Female who has had no commerce with Man; or, more properly, who has ſtill the *Flos Virginis*, or Maiden-hood. See VIRGINITY.

In the *Roman Breviary*, there is a particular Office for *Virgins* departed, anſwering to thoſe for Saints, Martyrs, and Confeſſors. See OFFICE.

Criticks and Antiquaries are much divided about a Feaſt held in that Church, in honour of S. *Urſula* and her Companions, who are ſaid in the Ritual, Legend, *&c.* to have been eleven thouſand *Virgins.*

Some imagine there has been a Miſtake in reading the antient Rituals, wherein XI. M. V. which was only an Abbreviation of *Eleven Virgin Martyrs*, was read according to the Numeral Letters, *Eleven thouſand Virgins.* F. *Sirmond* conjectures, that in the antient Liſts of Martyrs, there were found *S. S. Urſula* and *Undecimilla* V. M. and that in lieu of *Undecimilla*, which is the Name of a *Virgin* Martyr, the Copiſts had made *Undecimillia*, which is Eleven Thouſand.

By the *Moſaic* Law, the Prieſts are enjoin'd to take none to Wife but thoſe that are *Virgins:* The Widow, the Divorced, and the Harlot are to be refrain'd from.

VIRGIN is alſo applied, by way of Eminence, to *Mary* the Mother of our Saviour; as conceiving and bringing him forth, without any Breach of her Chaſtity.

Neſtorius and his Adherents, maintain'd, That the *Virgin* could not with any Propriety be called the *Mother* of God; as being really no more than the *Hoſteſs* of God: For that the eternal Word could not be conceiv'd and born of the Womb of a *Virgin.* See NESTORIANS.

This Hereſy was condemn'd at the Council of *Epheſus*; yet has it been lately reviv'd in *Holland*, chiefly by a Refugee Monk, one *Renoult.*

VIRGIN is alſo uſed, figuratively, for ſeveral Things that retain their abſolute Purity, and have never been made uſe of.

Thus, *Virgin Wax*, is that which has never been wrought, but remains as it came out of the Hive. See WAX.

Virgin Oil, is what oozes ſpontaneouſly from the Olive, *&c.* without preſſing. See OIL.

Virgin Gold, is that Metal ſuch as it is got out of the Ore, without any Mixture or Alloy; in which State it is ſo ſoft, that it will take the Impreſſion of a Seal. See GOLD.

Virgin Copper, is that which has never been melted down. See COPPER.

Virgin Mercury, is that found perfectly form'd, and fluid, in the Veins of Mines; or at leaſt, is got from the Mineral Earth, by mere Lotion, without Fire. See MERCURY.

Virgin Parchment, is, properly, that made of a kind of Cap, or Caul, which Children bring into the World on their Heads.—But the Word is alſo uſed for that made of the Skin of an abortive Lamb, or Calf. See PARCHMENT, and VELOM.

Virgin's Milk. See LAC *Virginale.*

VIRGIN's *Thread*, is a ſort of Dew, that flies in the Air, like ſmall untwiſted Silk; and which falling upon the Ground, or upon Plants, changes it ſelf into a Form like a Spider's Web. See METEOR.

The Matter of it is ſuppoſed to be of an earthy ſlimy Nature. In theſe Northern Climates, it is moſt frequent in Summer; the Days being then temperately warm, the Earth not exceeding dry, nor yet over-charg'd with Moiſture,

VIRGINALE *Clauſtrum*, in Anatomy, the ſame as *Hymen.* See HYMEN.

VIRGINEUS *Morbus*, the *Virgin*'s Diſeaſe; the Green-Sickneſs, or *Chloroſis.* See CHLOROSIS.

VIRGINITY, the Character or Criterion of a *Virgin*; or that which entitles her to the Denomination. See VIRGIN.

In the firſt Ages of the Chriſtian Church, *Virginity* grew into great Honour and Eſteem; inſomuch, that the Women were admitted to make ſolemn Vows thereof in publick.—Yet was it held infamous among the *Jews*, for a Woman to die a *Maid.*

The Veſtals, among the Antients, and the Nuns or Religious among the Moderns, found guilty of a Breach of the Vow of *Virginity*, are allotted a ſevere Puniſhment; the firſt to be buried alive, the latter to be immur'd. See VESTAL, *&c.*

The Phyſicians, both antient and modern, are exceedingly divided upon the Subject of *Virginity:* Some holding that there are no certain Marks, or Teſtimonies thereof, and others that there are.

Solomon ſays expreſly, there are four Things too wonderful for him to know: 'The way of an Eagle in the Air; 'of a Serpent on the Rock; of a Ship in the midſt of the 'Sea; and *the way of a Man in a Maid*;' which our Tranſlators have render'd, leſs juſtly, *the way of a Man with a Maid.*

Yet *Moſes* eſtabliſh'd a Teſt, which was to be concluſive among the *Jews.*—The Nuptial Sheets, it ſeems, were to be view'd by the Relations on both Sides; and the Maid's Parents were to preſerve them as a Token of her *Virginity*; to be produced, in caſe her Husband ſhould ever reproach her on that ſcore.

In caſe the Tokens of *Virginity* were not found thereon, ſhe was to be ſtoned to Death at her Father's Door.

This Teſt of *Virginity* has occaſion'd abundance of Speculation about the Parts concern'd; but the niceſt Inquiries cannot ſettle any thing certain about 'em.—Dr. *Drake* ſays expreſly, that whatever might be expected among the *Jews*, there is not the ſame Reaſon to expect thoſe Tokens of *Virginity* in theſe Countries: For, beſides that the *Hebrews* marry'd extremely young, as is the Cuſtom in all the Eaſtern Countries; there are ſeveral Circumſtances which may here fruſtrate ſuch Expectations, even in Virgins not vitiated either by any Male Contact, or any Wantonneſs of their own.

In effect, in theſe Northern Climates, the inclemency of the Air expoſes the Sex to ſuch Checks of Perſpiration, as gives a great turn to the Courſe of the Humours, and drives ſo much Humidity thro' the Parts, as may extraordinarily ſupple and relax thoſe Membranes from which the Reſiſtance is expected; and from which, in hotter Countries, it might more reaſonably be depended on.

What moſt commonly paſſes among us for a Teſt of *Virginity*, is the *Hymen:* And yet the moſt curious among the Anatomiſts are greatly divided, not only about the Figure, Subſtance, Place, and Perforations of this famous Membrane, but even about the Exiſtence thereof; ſome poſitively affirming, and others as flatly denying it. See HYMEN.

As nice a Point as that of *Virginity* is among Anatomiſts, the Midwives and Matrons treat it with leſs diffidence.—In the Statutes of the ſworn Matrons of *Paris*, containing likewiſe divers *Formula's* of Reports and Depoſitions made in Court upon their being call'd to viſit Girls that made their Complaint of being deflower'd, they lay down fourteen Marks, whereon to form a Judgment.

Laur. Jobert, a famous Phyſician of *Montpellier*, has tranſcrib'd three of theſe Reports: one made to the Provoſt of *Paris*; another in *Languedoc*; and a third in *Bearn.*—Theſe Reports are very conſiſtent with each other; and contain fourteen Marks of *Virginity*, expreſs'd in their proper Terms; ſuch as were receiv'd among the Women of that Profeſſion, and authoriz'd in Court.

Monſieur *Jobert* does not explain thoſe Terms; nor do we find any Explanation of them any where, but in another Report of the 23d of *October*, 1672, inſerted in the *Picture of Love* of *Venette* a Phyſician of *Rochel*; a Copy of which, we ſhall here give in *Engliſh.*

" We, *Mary Miran, Chriſtophlette Reine*, aud *Jeanne* " *Porte Poulet*, Sworn Matrons of the City of *Paris*, cer- " tify to all thoſe whom it may concern, that on the 22d of " *October*, in this preſent Year, at the Appointment of " Monſieur the Provoſt of *Paris*, we went into the Street " *de Pompierre*, to a Houſe next the Sign of the Silver Key; " to view and viſit *Olive Tiſſerand* of the Age of 30 Years, " on a Complaint made by her in Court againſt *James Mudont*, " Citizen of *Roche ſur Mer*; for forcing and violating her " the ſaid *Olive*: And having view'd and examin'd the " whole with the Eye and Finger, we find,

" *Les Toutons devoyez*, that is, the Breaſts looſe and flac- " cid, *Mammæ marcidæ & flaccidæ: Les Barres froiſſées*, " *i. e.* the *Os Pubis* bruis'd, *Os Pubis colliſum: Le Lippion* " *recoquille*, *i. e.* the Hair curl'd up, *Pubes in Orbem ſinu-* " *ata: L'Entrepet ridé*, *i. e.* the *Perinæum* or Seam wrin- " kled, *Perinæum corrugatum: Le Pouvant debiffee*, *i. e.* " the *Vulva* or *Pudendum* tumbled and diſorder'd, *Vulva* " *diſſoluta & marceſcens: Les Balunaux pendants*, *i. e.* the " *Labia* hanging down, *Labia pendentia: Le lippendis pile*,

" *i. e.* the Edge of the *Labia* bared of Hair, *Labiorum* " *Ora Pilis defectæ : les Baboles abbatues, i.e.* the *Nymphæ* " beat down, *Nymphæ depressæ : Les Halerons demis, i. e.* " the *Carunculæ* undone, or open'd, *Carunculæ dissolutæ* : " *l'Entrechenat retourné, i. e.* the Membranes which con- " nect the Caruncles inverted : *Membrana connectens in-* " *versa : le Barbidau ecorché*, that is, the *Clitoris* excori- " ated, *Clitoris excoriata : le Guilboquet fendu, i. e.* the " Neck of the Womb torn, *Collum uteri dilaceratum : le* " *Guillenard elargi, i. e.* the *Vagina* ſtretch'd, or widen'd : " *Vagina dilatata : la Dame du Milieu retireé, i. e.* the " *Hymen* broke and gone, *Hymen deductum : l'arriere foſſe* " *ouverte, i. e.* the inner Orifice of the Womb open'd, *Os* " *Internum Matricis apertum.*——*Le tout veu et viſite* " *feuillet par feuillet nous avons trouve qu' il, y avoit trace* " *de*——The Whole view'd and examin'd Part by Part, we " find plainly the Track or Foot-ſtep of——*Omnibus ſi-* " *gillatim perſpectis & perſcrutatis*, &c.—— Accordingly " we, the ſaid Matrons, do certify it to be true, to you, " Monſieur *le Prevoſt*, on the Oath we have taken. Done " at *Paris* the 23d of *October*, 1672."

In *Peru*, and ſeveral other Provinces of *South-America*, we are aſſured by *Pedro de Cieca*, the Hiſtory of the *Incas*, &c. that the Men never marry but on Condition that the next Relation, or Friend of the Maid's, ſhall undertake to enjoy her before him, and take away her Virginity. And our Countryman *Lawſon*, relates the like of ſome of the *Indian* Nations of *Carolina* : So little is the *Flos Virginis*, prized ſo much among us, valued by them.

VIRGO, in Aſtronomy, one of the Southern Signs, or Conſtellations of the Zodiac, into which the Sun enters in the beginning of *Auguſt*. See SIGN, and CONSTELLATION.

The Stars in the Conſtellation *Virgo*, in *Ptolemy*'s Catalogue, are 32 ; In *Tycho*'s, 39 ; in *Flamſted*'s, 89. The Longitudes, Latitudes, Magnitudes, *&c.* whereof, are as follows :

Stars in the Conſtellation VIRGO.

Names and Situations of the Stars.	Signs.	Longitude. ° ′ ″	Latitude. ° ′ ″	Magn.
That preced. *Virgo*'s Head	♍	17 30 05	5 19 13	6

VIRGULA *Divina*, or *Bacculus Divinatorius*, a forked Branch in form of a Y, cut off a Hazle-tree ; by means whereof People have pretended to diſcover Mines, Springs, *&c.* under Ground. See MINE, *&c.*

The Method of uſing it is this : The Perſon who bears it walking very ſlowly over the Places where he ſuſpects Mines or Springs may be, the Effluvia exhaling from the Metals or the Water, impregnating the Wood, makes it dip or incline ; which is the Sign of a Diſcovery.

We find no mention made of this *Virgula* in any Author before the eleventh Century : but from that time it has been in Uſe ; Divers fine Names have been invented for it, ſome calling it *Caduceus*, others, *Aaron*'s *Rod*, &c.

Some diſpute the matter of fact, and deny it to be poſſible ; others, convinc'd with the great number of Experiments alledg'd in its behalf, look out for the natural Cauſes thereof.—The Corpuſcles, ſay theſe Authors, riſing from the Springs, or Minerals, entring the Rod, determine it to bow down, in order to render it parallel to the vertical Lines which the Effluvia deſcribe in their riſe.

In Effect, the mineral, or watery Particles are ſuppoſed to be emitted by means of the ſubterraneous Heat, or of the Fermentations in the Entrails thereof : Now the *Virgula* being of a light, porous Wood, gives an eaſy Paſſage to thoſe Particles, which, withal, are very fine and ſubtile ; the Effluvia then driven forwards by thoſe that follow them, and oppreſs'd at the ſame time by the Atmoſphere incumbent on them, are forced to enter the little Interſtices between the Fibres of the Wood, and by that Effort oblige it to incline, or dip down perpendicularly, to become parallel with the little Columns which thoſe Vapours form in their riſe.

VIRGULA, in Grammar, a Term which the *Latin*, *French*, and many other Authors, uſe for a Point in Writing, uſually call'd by us *Comma*. See COMMA.

Virgula's, *Fa. Simon* obſerves, are an Invention of the modern Grammarians, to give the greater Clearneſs to Diſcourſe.—The Uſe thereof was unknown to the antient *Greeks* and *Romans*, who wrote all without taking off the Pen, ſo that

that their Books lie all together without any Diſtinction of Points and *Virgula's*. See POINTUS.

VIRGULTUM, in our antient Law-books, is uſed for an Holt, or Plantation of Twigs, or Oziers.

Sometimes alſo for a Coppice of young Wood: *Et præterea concedo* Virgultum *meum & totam communiam Dominii mei.* Mon. Angl.

In another place of the ſame Work, it may be taken for *Virgata*, viz.—*Dedit prædictæ Eccleſiæ unam Virgultam Terræ in Manerio de Cumptone.*

VIRIDARIO *eligendo*, a Writ that lies for the Choice of a Verderor in the Foreſt. See VERDEROR.

VIRIDE *Æris*, the ſame as *Ærugo*, or *Verdegreaſe*. See VERDEGREASE.

VIRILE, ſomething that belongs or is peculiar to Man.

Thus *Virile* Member, *Membrum Virile*, is frequently uſed for the Penis. See PENIS.

The *Virile* Age, *Ætas Virilis*, is the Strength and Vigour of a Man's Age, *viz.* from thirty to forty-five Years, which is an Age wherein we are equally remov'd from the Extremes of Youth and old Age. See AGE.

The Civil Lawyers only make one Age of Youth and Virility; and yet their different Temperatures ſeem to require a Diſtinction; for which Reaſon ſome compare Youth to Summer, and Virility to Autumn. See PUBERTY.

At *Rome*, the Youth quitted the *Prætexta* at fourteen or fifteen Years of Age, and took the *Virile* Gown, *Toga virilis*, to ſhew, it ſeems, that they then entred on a ſerious Age. See PRÆTEXTA and TOGA.

M. Dacier will have it, the Children did not take the *Prætexta* till thirteen Years of Age, nor quit it for the *Toga Virilis*, till ſeventeen.

VIRILIA, a Man's privy Members, including the *Penis* and *Teſtes*. See PENIS, *&c.*

The cutting off the *Virilia*, according to *Bracton*, was Felony by Common Law, and that whether the Party were conſenting or not. See EUNUCH.

—*Henricus Hall & A. Uxor ejus capti & detenti in priſona de Evilcheſter, eo quod rectati fuerunt quod ipſi abſciderunt* Virilia *Johannis Monachi, quem idem Henricus deprehendit cum prædicta A. Uxore ejus.* Rot. Clauſe 13 Hen. III. See CASTRATION.

VIRSUNGIANUS *Ductus*, or *Ductus Virſungii*, in Anatomy, a Canal, more uſually call'd, *Ductus Pancreaticus*. See PANCREATICUS. It took its Name, *Verſungianus*, from the Inventor, *Verſung*.

VIRTUAL, *Potential*, ſomething that has a Power or Vertue of acting or doing. See VIRTUALLY.

The Term is chiefly underſtood of ſomething that acts by a ſecret inviſible Cauſe; in Oppoſition to actual, and ſenſible. See POTENTIAL.

VIRTUAL *Focus*, in Opticks, is a Point from which Rays, before converging, begin to diverge, or divaricate. See FOCUS.

Hence it is alſo call'd, *Point of Diſperſion*, or *Divergence*; in Oppoſition to the *Focus*, which is call'd the *Point of Concurrence*. See POINT, DISPERSION, DIVERGENT, *&c.*

Suppoſe, *e. g.* the Concavity of a Glaſs to be *a b c* (Tab. *Opticks* Fig. 11.) and its Axis *d e*; let *f g* be a Ray of Light falling on the Glaſs parallel to the Axis *de*, and let *d* be the Centre of the Ark *a b c*.

This Ray *f g*, after it has paſſed the Glaſs, at its Emerſion at *g*, will not proceed directly to *h*, but be refracted from the Perpendicular *d g*, and become the Ray *g k*.

Draw then directly *g k*, ſo that it may croſs the Axis in *e*.—The Point *e* ſo found, Mr. *Molyneux* calls the *Virtual Focus*, or *Point of Divergence*. Diopt. Nov.

VIRTUALITY, VIRTUALITAS, in the Schools, is ſome Mode or Analogy in a Object, which in reality is the ſame with ſome other Mode; but out of regard to contradictory Predicates, is look'd on as if really diſtinct therefrom.

Thus the divine Nature, and the Perſon of the Word, are two *Virtualities*; for tho in reality they be the ſame, yet are they conſider'd as things different.—For the Perſon of the Word is ſaid to have been begotten, and his Nature is ſaid not to be begotten: now begotten, and not-begotten, are contradictory Predicates.

And hence ariſe what we call *virtual Diſtinctions*, whereby one *Virtuality* is diſtinguiſh'd from another, not one Thing from another.

Thus it is the divine Nature is diſtinguiſh'd from the divine Perſon, and the divine Underſtanding from the divine Will.. See TRINITY.

VIRTUALLY, VIRTUALITER, in the Schools, is applied to a Mode of Exiſtence.—Thus a thing is ſaid to be *Virtually* any where, when it is deem'd to be there by ſome *Virtue*, *Influence*, or other Effect produc'd by it.

As the Sun is *Virtually* on Earth, *i. e.* by his Light, Heat, *&c.*

A thing is alſo ſaid to be *Virtually* preſent when the Virtues or Properties belonging to it, and iſſuing from it, remain.——In which Senſe the Forms of the Elements are held to be *Virtually* in mix'd Bodies.

A thing is alſo ſaid to be a Cauſe *Virtually*, or a *Virtual Cauſe*, and that two Ways: the firſt, when there is no real Diſtinction between it, and the Effect attributed to it; and yet it is conceived by us as if it were really the Cauſe thereof:——Thus, Immutability in God, is the Cauſe of Eternity.

Secondly, when an Effect is not of the ſame kind with the Cauſe, and yet the Cauſe has the *Power*, or *Virtue* of producing the Effect: thus the Sun is not *formally*, but *Virtually* hot; and Fire is not contain'd *formally*, but *Virtually* in Heat.

VIRTUE, VIRTUS, a Term uſed in various ſignifications.

In the General, it denotes *Power*, or *Perfection* of any Thing, whether Natural or Super-natural, Animate or Inanimate, Eſſential or Acceſſary: hence the *Virtues* of God, Angels, Men, Plants, Elements, *&c.* See POWER, and FACULTY.

In its more proper and reſtrain'd Senſe, *Virtue* ſignifies a Habit, which improves and perfects the Haver or Poſſeſſor, and his Actions. See HABIT, PERFECTION, *&c.*

In this Senſe, *Virtue* is a Principle of acting, or doing well and readily; and that, either infuſed from above, ſuch as are the *Theological Virtues*; or acquired by our own Application, as the *Intellectual* and *Moral Virtues*.

For, as there are two Things in Man from which all his Actions proceed, *viz.* the Underſtanding, and the Will; ſo the *Virtue* by which he is perfected, or whereby he is diſpoſed to do all Things rightly, and to live happily, muſt be two-fold: the one, of the Underſtanding; the other, of the Will.

That which improves the Underſtanding is call'd *Intellectual* or *Dianoetic*; and that, the Will, *Moral* or *Ethic*.

For, ſince there are two Things requir'd in order to live a-right, *viz.* to know what ſhould be done; and, when known, readily to perform it: And ſince Man is apt to err various Ways in each reſpect, unleſs regulated by Diſcipline, *&c.* he alone can deport himſelf rightly in his whole Courſe of Life, whoſe Underſtanding and Will have attain'd their utmoſt Perfection.

An *Intellectual* VIRTUE, then, according to *Ariſtotle*, is a Habit of the reaſonable Soul, whereby it conceives, or ſpeaks the Truth; either in affirming, or denying. See TRUTH.

The *Virtues* which come under this Claſs, are divided into *Speculative*; which are thoſe converſant about neceſſary Things, that can only be known, or contemplated; and *Practical*, which are converſant about contingent Things, that may likewiſe be practiſed.

Ariſtotle has another Diviſion of *Intellectual Virtue*, fetch'd from the Subject; as ſome of 'em are ſeated in the θεωρητικὸν, or *Contemplative Part*, viz. thoſe converſant about neceſſary things, as *Science*, *Wiſdom*, *Intelligence*. See SCIENCE, UNDERSTANDING, *&c.*

And others, in the λογιστικὸν, or *Practical Part*; ſuch as thoſe converſant about contingent Things, as *Prudence*, *Art*, *&c.* See ART, *&c.*

Moral VIRTUE is defined by *Ariſtotle* to be an elective Habit, placed in a Mediocrity, determin'd by Reaſon, and as a prudent Man would determine.

The *Scotiſts* maintain every moral Habit to be indifferent as to good or evil, and capable of becoming, ſucceſſively, either *Virtue* or *Vice*: Virtue, if it have a relation of conformity with right Reaſon; and Vice, if it have not. See VICE.

According to them, therefore, *Virtue* is a Habit ſubjectively, but not entitatively, good: as it is only a relation of Conformity, *&c.* which is ſeparable from the Entity of the Habit.

The *Thomiſts*, on the contrary, aſſert *Virtue* to be a Habit eſſentially good; nor capable of miniſtring any thing to any Act poſitively bad.—And they philoſophize thus: Every Habit eſſentially good, inclines to Acts like thoſe whereby it was acquired; thus, by doing juſtly we become juſt; and, by abſtaining from forbidden Pleaſures, we become temperate. But *Moral Virtue* is produced, or acquired by Acts eſſentially good; good, we mean, both in reſpect of our Duty, and of the Motive and End: therefore *Moral Virtue* inclines only to good Acts.

Others diſallow the *Peripatetic* Notion of *Virtue* as placed in a Habit; for a Habit, or Hability, ſay they, includes two Things; a Cuſtom, and Facility; the firſt as a Cauſe, and the ſecond as an Effect: ſo that a Habit is nothing but a Facility acquired by Cuſtom.—They therefore who make *Virtue* a Habit of doing well, muſt of neceſſity aſcribe it to a frequent Exerciſe of good Actions.—But this can't be; for the *Virtue* muſt be before the good Actions; and the Habit, after 'em.—Indeed, whence ſhou'd the Actions proceed but from *Virtue? Virtue* therefore is before the good Actions, and certainly before a Habit reſulting from a frequency of good Actions.

Hence, they define *Virtue* to be a firm Purpoſe or Reſolution of doing whatever right Reaſon demands to be done. For tho a Cuſtom of doing well be requir'd to make a Perſon eſteem'd good among Men; yet it does not follow, that that Cuſtom or Habit is the formal Cauſe of that Denomination, or the Goodneſs it ſelf.

Moraliſts uſually diſtinguiſh four *Principal*, or, as they are vulgarly call'd, *Cardinal Virtues*, viz. *Prudence*, *Juſtice*, *Fortitude*, and *Temperance*: The Reaſon of which Diviſion is founded in this, That for a Man to live *virtuouſly* and honeſtly, 'tis neceſſary he know what is fit to be done; which is the Buſineſs of *Prudence*.

That he have a conſtant and firm Will to do what he judges beſt; which will perfect the Man, either as it reſtrains too violent Perturbations, the Office of *Temperance*.

Or, as it ſpurs and urges on thoſe that are to ſlow and languid, which is the Buſineſs of *Fortitude*.

Or, laſtly, comparatively, and with regard to human Society; which is the Object of *Juſtice*.

To theſe four all the other *Virtues* are refer'd, either as Parts, or as Concomitants.

VIRTUES, in the Hierarchy, the third Rank, or Choir of Angels; being that in order between *Dominations* and *Powers*. See HIERARCHY.

To theſe is attributed the Power of working Miracles, and of ſtrengthning and reinforcing the inferior Angels in the Exerciſe of their Functions. See ANGEL.

VIRTUOSO, an *Italian* Term, lately introduced into *Engliſh*; ſignifying a Man of Curioſity and Learning; or one who loves and promotes the Arts and Sciences.

In *Italy*, *Virtuoſi* are properly ſuch as apply themſelves to the polite Arts of Painting, Sculpture, Turning, Mathematicks, &c.——A Perſon who makes Profeſſion thereof, is call'd *Virtuoſo*, *queſta è un Virtuoſo*.

Among us, the Term ſeems affected to thoſe who apply themſelves to ſome curious and quaint, rather than immediately uſeful Art or Study: As Antiquaries, Collectors of Rarities of any kind, Microſcopical Obſervers, &c.

VIRULENT, a Term apply'd to any thing that yields a *Virus*; that is, a corroſive or contagious Pus. See PUS.

The *Gonorrhœa Virulenta*, is what we popularly call a *Clap*. See GONORRHÆA.

VIS, a *Latin* Word, ſignifying *Force*, or *Power*; adopted by phyſical Writers, to expreſs divers Kinds of Natural Powers: as the

VIS *Inertiæ*, or *Power of Inactivity*, which is defin'd by Sir *I. Newton* to be a Power implanted in all Matter, whereby it reſiſts any Change endeavour'd to be made in its State, *i. e.* whereby it becomes difficult to alter its State, either of Reſt, or Motion. See INERTIA.

This Power, then, coincides with the *Vis reſiſtendi*, Power of reſiſting, whereby every Body endeavours, as much as it can, to perſevere in its own State whether of Reſt, or uniform rectilinear Motion: Which Power is ſtill proportional to the Body, and only differs from the *Vis Inertiæ* of the Maſs in the manner of conceiving it.

Bodies only exert this Power in Changes brought on their State by ſome *Vis Impreſſa*, Force impreſs'd on 'em. And the Exerciſe of this Power, is, in different reſpects, both *Reſiſtance*, and *Impetus*: Reſiſtance, as the Body oppoſes a Force impreſs'd on it to change its State; and *Impetus*, as the ſame Body endeavours to change the State of the reſiſting Obſtacle.——*Phil. Nat. Princ. Math.* Lib. I. See REACTION.

The *Vis Inertiæ*, the ſame great Author elſewhere obſerves, is a paſſive Principle, by which Bodies perſiſt in their Motion or Reſt; receive Motion, in proportion to the Force impreſſing it, and reſiſt as much as they are reſiſted. See MOTION.

For the Effect of the Vis Inertiæ *in reſiſting and retarding the Motion of Bodies*, &c. ſee RESISTANCE, and RETARDATION.

VIS *Impreſſa*, is defined by Sir *I. Newton* to be the Action exercis'd on any Body, to change its State, either of reſting, or moving uniformly in a right Line.

This Force conſiſts altogether in the Action; and has no place in the Body after the Action is ceaſed.—For the Body perſeveres in every new State by the *Vis Inertiæ* alone.

This *Vis Impreſſa* may ariſe from divers Cauſes, as from the Percuſſion, Preſſion, and Centripetal Force. See PERCUSSION, &c.

VIS *Centripeta*. VIS *Centrifuga*. VIS *Motrix*. VIS *Stimulans*. } See { CENTRIPETAL *Force*. CENTRIFUGAL *Force*. MOTION. STIMULANT.

VISCERA, in Anatomy, a Term of equal import with *Entrails*, or Bowels; including the Heart, Liver, Lungs, Spleen, Inteſtines, and other inward Parts of the Body. See BODY.

The Word is alſo frequently uſed ſingularly, *Viſcus*, to expreſs ſome particular part of the Entrails; by reaſon the Word *Entrails* has no Singular.

The Term *Viſcus* is pure *Latin*, being form'd of *Veſci*, to feed; by reaſon, the Foods, call'd in Latin *Veſca*, undergo divers Preparations in the *Viſcera*.

VISCIDITY, or VISCOSITY, the Quality of ſomething that is *viſcid*, or *viſcous*, *i. e.* glutinous, or ſticky; like Birdlime, which the *Latins* call by the Name *Viſcus*. See BIRDLIME.

Viſcid Bodies, are thoſe which conſiſt of Parts ſo implicated within each other, that they reſiſt a long time a compleat Separation, and rather give way to the Violence done them by ſtretching or extending each way. See PARTICLE, and COHESION.

The too great *Viſcidity* of Foods has very ill Effects: Thus, Meals, or *Farinæ* not fermented, Gellies, &c. of Animals, tough Cheeſe, or Curd too much preſs'd, produce a Weight or Oppreſſion in the Ventricle; Winds, Yawnings, Crudities, Obſtructions of the minuter Veſſels in the Inteſtines, &c. Hence, an Inactivity of the Inteſtines themſelves, a Swelling of the Abdomen; and, hence, a *Viſcidity* of the Blood, from the re-union of the *viſcid* Particles; Obſtructions of the Glands; Paleneſs, Coldneſs, Tremors, &c.

VISCOUNT. See VICOUNT.

VISCUS, VISCOUS, VISCOSITY, in Anatomy. See VISCERA, and VISCIDITY.

VISCUS, in Natural Hiſtory, &c. See MISLETOE.

VISIBLE, ſomething that is an Object of Sight, or *Viſion*; or ſomething whereby the Eye is affected, ſo as to produce a Senſation. See VISION.

The School Philoſophers make two Kinds of *Viſibles*, or *Viſible* Objects: the one *proper*, or *adequate*; which are ſuch as are no other way perceivable, but by Sight alone: The other *common*; which are ſubject to divers Senſes, as the Sight, Hearing, Feeling, &c.

Again, the firſt, or *proper Object of Viſion*, is of two Kinds, *viz. Light*, and *Colour*; for theſe two are only ſenſible by Sight.——The firſt and primary, *viz. Light*, they make the *formal*, and *Colour* the *material* Object. See OBJECT.

The *Carteſians* think they philoſophize better, when they ſay, That Light alone is the proper Object of Viſion; whether it flow from a luminous Body thro' a tranſparent Medium, and retain its firſt Name, *Light*: or whether it be reflected from opake Bodies, under a certain new Modification, or Habitude, and exhibit their Images: or, laſtly, whether in being reflected, it is likewiſe refracted after this or that manner; and affects the Eye with the Appearance of *Colour*.

But, agreeably to Sir *I. Newton*'s Sentiments, Colour alone is the proper Object of Sight: Colour being that Property of Light, whereby the Light it ſelf is *viſible*; and whereby the Images of opake Objects are painted on the *Retina*. See LIGHT, and COLOUR.

Ariſtotle, *de Anima*, Lib. II. enumerates five Kinds of common *Viſibles*, which are uſually received for ſuch in the Schools, *viz. Motion*, *Reſt*, *Number*, *Figure*, and *Magnitude*: Others maintain nine, as in the Verſes,

Sunt objecta novem Viſus *communia*: Quantum,
Inde Figura, Locus, *ſequitur* diſtantia, ſitus,
Continuumque & Diſcretum, motuſque, quieſque.

Authors reaſon very variouſly as to theſe common Objects of Viſion: There are two principal Opinions among the Schoolmen.—The Adherents to the firſt, hold, That the common *Viſibles* produce proper Repreſentations of themſelves, by ſome peculiar Species or Image whereby they are formally perceiv'd independently of the proper *Viſibles*.

But the ſecond Opinion prevails moſt, which maintains, That the common *Viſibles* have not any ſuch formal peculiar Species to become *viſible* by; but that the proper Objects are ſufficient to ſhew themſelves in this or that Place or Situation; and in this or that Diſtance, Figure, Magnitude, &c. by the Circumſtances of their conveyance to the Senſory.

In effect, ſince theſe common *Viſibles* cannot be repreſented alone, (for who ever ſaw Place, Diſtance, Figure, Situation, &c. of it ſelf) but are always convey'd along with the Images of Light and Colour to the Organ; what neceſſity is there to conceive any ſuch proper Images, whereby the common *Viſibles* ſhould be formally perceiv'd by the Soul? 'Tis much more probable, that from the peculiar manner wherein the Senſitive Faculty perceives a proper Object, it is appriz'd of its being in this or that Situation, or Place; in this or that Figure, Magnitude, &c. How this is effected, may be conceiv'd from what follows.

I. *The Situation and Place of* viſible *Objects, are perceiv'd without any intentional Species thereof, merely by the Impulſe being made from a certain Place and Situation, either above or below, on the right or left, before or behind; whereby the Rays of the proper* Viſibles *are thrown upon the* Retina, *and their Impreſſion convey'd to the Senſory.*

For ſince an Object is ſeen by thoſe Rays which carry its Image to the *Retina*, and in that Place to which the *viſive* Power is directed by the Rays it receives; as it perceives the Impulſe of the Rays to come from any Place, &c. it is abundantly admoniſh'd of the Object's being in that Place and Situation. See PLACE.

From this Principle, ſeveral remarkable Phænomena of Viſion are accountable for; as,

1°, That if the Diſtance between two *viſible* Objects, be ſeen under an Angle that is inſenſible; the diſtant Bodies will appear as if contiguous: Whence, a continuous Body being the Reſult of ſeveral contiguous ones; the Diſtances of ſeveral *Viſibles* appearing under an inſenſible Angle, they will appear one continuous Body: which gives a pretty Illuſtration of the Notion of a *Continuum*. See CONTINUITY.

2°, If the Eye be placed above a horizontal Plane, the remoter Parts will appear as if higher and higher, till the laſt be ſeen in a level with the Eye. Whence it is, that the Sea, to Perſons ſtanding a-ſhore, ſeems to riſe higher and higher the further they look.

3°, If any number of Objects be placed below the Eye; the moſt remote will appear the higheſt: If they be above the Eye, the moſt remote will appear the loweſt.

4°, The upper Parts of high Objects, appear to ſtoop, or incline forwards; as the Fronts of Churches, Towers, &c. And Statues a-top of Buildings, to appear upright, muſt recline, or bend backwards. See further under the Article HOROPTER, &c.

II. *The Mind perceives the* Diſtance *of* Viſible *Objects, from the different Configuration of the Eye, and the manner wherein the Rays ſtrike the Eye and the Image is impreſs'd thereon.*

For the Eye diſpoſes it ſelf differently, according to the different Diſtances it is to ſee, *viz.* for remote Objects, the Pupil is dilated, and the Cryſtalline brought nearer the *Retina*, and the whole Eye made more globous: on the contrary, for near Objects, the Pupil is contracted, the Cryſtalline thruſt forwards, and the Eye lengthen'd. See PUPIL, CRYSTALLINE, &c.

The Diſtance, again, is judg'd of by the Angle the Object makes, from the diſtinct or confuſed Repreſentation of the Object; and the Briſkneſs or Feebleneſs, the Rarity or Spiſſitude of the Rays.

To this it is owing, 1°, that Objects which appear obſcure or confuſed, are judg'd to be the more remote: a Principle which the Painters uſe, to make ſome of their Figures appear farther diſtant than others on the ſame Plane. See PERSPECTIVE, &c.

To this it is likewiſe owing, that Rooms whoſe Walls are whiten'd, appear the ſmaller: That Fields cover'd with Snow, or white Flowers, ſhow leſs than when clothed with Graſs: That Mountains cover'd with Snow, in the Night-time, appear the nearer: That opake Bodies, appear the more remote in the Twilight, &c. See DISTANCE.

III. *The* Magnitude *or Quantity of* Viſible *Objects, is known chiefly by the Angle comprehended between two Rays drawn from the two Extremes of the Object, to the Centre of the Eye.* See OPTIC *Angle*.

An Object appears *ſo* big *as* is the Angle it ſubtends; or Bodies ſeen under a greater Angle appear greater; and thoſe under a leſs, leſs, &c.—Hence, the ſame thing appears now bigger, and now leſs, as it is leſs or more diſtant from the Eye.

This we call *Apparent Magnitude*. See MAGNITUDE.

Now, to judge of the real Magnitude of an Object, we conſider the diſtance: For ſince a near and a remote Object may appear under equal Angles, the Diſtance muſt neceſſarily be eſtimated; that if it be great, and the Optic Angle ſmall, the remote Object may be judg'd great, and *vice verſa*.

The Magnitude of *Viſible* Objects, is brought under certain Laws, demonſtrated by the Mathematicians: as,

1°, That the apparent Magnitudes of a remote Object, are as the Diſtances, reciprocally.

2°, That the Co-tangents of half the apparent Magnitudes of the ſame Objects, are as the Diſtances: Hence, the apparent Magnitude and Diſtance being given, we have a Method of determining the true Magnitude: The Canon is this, As the whole Sine is to the Tangent of half the apparent Magnitude; ſo is the given Diſtance to half the real Magnitude.—The ſame Canon, inverted, will from the Diſtance and true Magnitude given, determine the apparent one.

3°, Objects ſeen under the ſame Angle, have their Magnitudes proportional to their Diſtances.

4°, The Subtenſe AB, (Tab. *Opticks*, Fig. 51.) of any Arch of a Circle, apppears of equal Magnitude in all the Points D C E G; tho one Point be vaſtly nearer than another: and the Diameter D G, appears of the ſame Magnitude in all the Points of the Periphery of the Circle.—Hence we take a pretty Hint for the moſt commodious Form of Theatres. See THEATRE.

5°, If the Eye be fix'd in A, (Fig. 52.) and the right Line B C be moved in ſuch manner, as that the Extremes thereof always fall on the Periphery; it will always appear of the ſame Magnitude.—Hence, the Eye being placed in any Angle of a regular Polygon, the Sides will appear equal.

6°, If the Magnitude of an Object directly oppoſite to the Eye, be equal to its diſtance from the Eye; the whole Object will be taken in by the Eye, but nothing more. Whence, the nearer you approach an Object, the leſs part you ſee of it. See FLAME.

IV. *The* Figure *of* Viſible *Objects is eſtimated chiefly from our Opinion of the Situation of the ſeveral Parts thereof.*

This Opinion of the Situation, &c. enables the Mind to apprehend an external Object under this or that Figure, more juſtly than any Similitude of the Image in the *Retina* with the Object can; the Images being frequently elliptical, oblong, &c. when the Objects they exhibit to the Mind are Circles, Squares, &c.

The Laws of Viſion, with regard to the Figures of the *Viſible* Objects, are,

1°, That if the Centre of the Pupil be exactly againſt, or in the Direction of a right Line; the Line will appear as one Point.

2°, If the Eye be placed in the Direction of a Surface, ſo that only one Line of the Perimeter can radiate upon it; it will appear as a Line.

3°, If a Body be oppoſed directly towards the Eye, ſo as only one Plane of the Surface can radiate on it; it will appear as a Surface.

4°, A remote Arch, view'd by an Eye in the ſame Plane, will appear as a right Line.

5°, A Sphere, view'd at a diſtance, appears a Circle.

6°, Angular Figures at a diſtance appear round.

7°, If the Eye look obliquely on the Centre of a regular Figure, or a Circle, the true Figure will not be ſeen; but the Circle will appear Oval, &c. See FIGURE.

V. *The* Number *of* Viſible *Objects is perceiv'd, not only by one or more Images form'd in the Fund of the Eye; but alſo by ſuch a Poſition of thoſe Parts of the Brain, whence the Optic Nerves ſpring, as the Mind has been uſed to, in attending to a certain Place, and that either ſingle, or manifold.*

Accordingly, when either of the Eyes, with the contiguous Part of the Brain, are forced out of their juſt Paralleliſm with the other, *v. g.* by preſſing it with the Finger, &c. all Things appear double: But when they are in their requiſite Paralleliſm, tho there be two Images in the Fund of the two Eyes; yet the Object will appear ſingle.—Again, one thing may appear double, or even manifold, not only with both Eyes, but even with only one of them open: By reaſon, the common Concourſe of the Cones of Rays reflected from the Object to the Eye, either falls ſhort of the *Retina*, or goes much beyond it. See NUMBER.

VI. Motion *and Reſt are* ſeen, *when the Images of the Objects repreſented in the Eye, and propagated to the Brain, are either moved, or at reſt: And the Mind perceives theſe Images either moving or at reſt, by comparing the moved Image to another, with reſpect to which it changes place; or, by the Situation of the Eye to the Object being continually chang'd*

So that Motion is only perceiv'd, in perceiving the Images to be in different Places and Situations: Nor are theſe Situations perceiv'd, unleſs effected in time. So that to perceive Motion, a ſenſible Time is requir'd.——But Reſt is perceiv'd by the viſive Faculty, from the Perception of the Image in the ſame Place of the *Retina*, and the ſame Situation for ſome ſenſible Time.

Hence, the Reaſon why Bodies moving exceedingly faſt, appear at reſt: Thus, a live Coal, ſwung briſkly round, appears a continued Circle of Fire; the Motion not being commenſurate with *viſible* Time, but much ſwifter than the ſame: So that in the Time the Soul requires to judge of any Change of Situation of the Image on the *Retina*, or that it is moved from this Place to that, the Thing it ſelf performs its whole Circuit, and is in its former Place again.

The Laws of Viſion, with regard to the Motion of the Viſibles, *are,*

1°, That if two Objects unequally diſtant from the Eye, move from it with equal Velocity; the more remote one will appear the ſlower: Or, if their Celerities be proportionable to their Diſtances, they will appear to move equally ſwift.

2°, If two Objects, unequally diſtant from the Eye, move with unequal Velocities in the ſame Direction; their apparent Velocities are in a Ratio compounded of the direct Ratios of their true Velocities, and the reciprocal one of their Diſtances from the Eye.

3°, A *visible* Object moving with any Velocity, appears to be at reſt, if the Space deſcribed in the Interval of one Second, be imperceptible at the diſtance of the Eye.—Hence it is, that a near Object moving very ſlowly, as the Index of a Clock; or a remote one very ſwiftly, as a Star; ſeem at reſt.

4°, An Object moving with any degree of Velocity, will appear to reſt, if the Space it runs over in a Second of Time be to its diſtance from the Eye, as 1 to 1400: Nay, in fact, if it be as 1 to 1300.

5°, The Eye proceeding ſtrait, from one Place to another; a lateral Object, either on the right or left, will ſeem to move the contrary way.

6°, If the Eye and the Object move both the ſame way, only the Eye much ſwifter than the Object, that laſt will appear to go backwards.

7°, If two or more Objects move with the ſame Velocity, and a third remain at reſt; the Moveables will appear fix'd, and the quieſcent in motion the contrary way.—Thus, Clouds moving very ſwiftly, their Parts ſeem to preſerve their Situation, and the Moon moves the contrary way.

If the Eye be moved with a great Velocity, lateral Objects at reſt, appear to move the contrary way.—Thus, to a Perſon ſitting in a Coach, and riding briſkly thro' a Wood, the Trees ſeem to retire the contrary way; and to People in a Ship, *&c.* the Shores ſeem to recede.

VISIBLE *Species*. See SPECIES.

VISION, the Act of *Seeing*; or of perceiving external Objects by the Organ of Sight. See SEEING, and SIGHT.

Viſion is well defin'd to be a Senſation, whereby, from a certain Motion of the Optic Nerve, made in the bottom of the Eye, by the Rays of Light emitted, or reflected from Objects, and hence convey'd to the common Senſory in the Brain; the Mind perceives the luminous Object, its Quantity, Quality, Figure, *&c.* See VISIBLE.

The Phænomena of *Viſion*, the Cauſes thereof, and the Manner wherein it is effected, make one of the greateſt and moſt important Articles in the whole Syſtem of Natural Knowledge.—Indeed, a great Part of the Phyſical, Mathematical, and Anatomical Diſcoveries and Improvements of the Moderns terminate here; and only tend to ſet the Buſineſs of *Viſion* in a clearer Light.

Hitherto, refer what Sir *I. Newton* and others have diſcover'd of the Nature of Light, and Colours; the Laws of Inflexion, Reflexion, and Refraction of the Rays; the Structure of the Eye, particularly the *Retina*, and Optic Nerves, *&c.*

It is not neceſſary we ſhould here give a minute Detail of the Proceſs of *Viſion* from its firſt Principles: The greateſt Part is already deliver'd under the reſpective Articles.——The *Eye*, the Organ of *Viſion*, we have deſcrib'd under the Article EYE; and its ſeveral Parts, Tunics, Humours, *&c.* under their proper Heads, CORNEA, CRYSTALLINE, *&c.*

The immediate and principal Organ of *Viſion*, *viz.* the *Retina*, according to ſome, and the *Choroides*, according to others, are diſtinctly conſider'd: as alſo, the Structure of the *Optic Nerve*, which conveys the Impreſſion to the Brain; and the Texture and Diſpoſition of the *Brain* it ſelf, which receives them, and repreſents 'em to the Soul. See RETINA, CHOROIDES, OPTIC *Nerve*, BRAIN, SENSORY, *&c.*

Again, the Nature of *Light*, which is the Medium, or Vehicle whereby Objects are carried to the Eye, is laid down at large under the Article LIGHT, and COLOURS; and the chief Properties thereof concern'd in *Viſion*, under REFLEXION, REFRACTION, *&c.* And many of its Circumſtances under RAY, MEDIUM, *&c.*——What remains for this Article, therefore, is only to give a general Idea of the whole Proceſs; in which all the ſeveral Parts are concern'd.

Opinions or Syſtems of VISION.

The *Platoniſts* and *Stoicks* held *Viſion* to be effected by the Emiſſion of Rays out of the Eyes; conceiving, that there was a ſort of Light thus darted out, which with the Light of the external Air, taking, as it were, hold of the Objects, render'd 'em viſible; and thus returning back again to the Eye alter'd and new modify'd by the Contact of the Object, made an Impreſſion on the Pupil, which gave the Senſation of the Object.

The Reaſons whereby they maintain their Opinion, are fetch'd, 1°, from the Brightneſs and Luſtre of the Eye: 2°, From our ſeeing a remote Cloud, without ſeeing one which we are incompaſs'd withal; (the Rays being ſuppoſed too briſk and penetrating to be ſtop'd by the near Cloud, but growing languid at a greater diſtance, are return'd to the Eye:) 3°, From our not ſeeing an Object laid on the Pupil: 4°, From the Eye's being weary with ſeeing, *i. e.* by emitting great Quantities of Rays: And laſtly, from Animals which ſee in the Night; as Cats, Lions, Moles, Owls, and ſome Men.

The *Epicureans* held *Viſion* to be perform'd by the Emanation of corporeal Species, or Images from Objects; or, a ſort of Atomical Effluvia, continually flying off from the intimate Parts of Objects to the Eye.

Their chief Reaſons are, 1°, That the Object muſt neceſſarily be united to the viſive Faculty; and ſince it is not united by it ſelf, it muſt be ſo by ſome Species that repreſents it, and that is continually flowing from Bodies: 2°, That it frequently happens, that old Men ſee remote Objects better than near ones; the diſtance making the Species thinner, and more commenſurate to the Debility of their Organ.

The *Peripateticks* hold, with *Epicurus*, that *Viſion* is perform'd by the Reception of Species; but differ from him in the Circumſtances: For they will have the Species, (which they call *Intentionales*) to be incorporeal.

'Tis true, *Ariſtotle*'s Doctrine of *Viſion*, deliver'd in his Chapter *de Aſpectu*, amounts to no more than this; That Objects muſt move ſome intermediate Body, that by this they may move the Organ of Sight: To which he adds, in another Place, That when we perceive Bodies, 'tis their Species, not their Matter, that we receive: as a Seal makes an Impreſſion on Wax, without the Wax's retaining any thing of the Seal.

But this vague and obſcure Account, the *Peripateticks* have thought fit to improve.—Accordingly, what their Maſter call'd *Species*, the Diſciples underſtanding of real proper Species, aſſert, That every viſible Object expreſſes a perfect Image of it ſelf, in the Air contiguous to it; and this Image another, ſomewhat leſs, in the next Air; and the third another, *&c.* till the laſt Image arrives at the Cryſtalline, which they hold for the chief Organ of Sight, or that which immediately moves the Soul.—Theſe Images they call'd *Intentional Species*. See SPECIES.

The modern Philoſophers, as the *Carteſians* and *Newtonians*, give a better account of *Viſion*.—They all agree, that it is perform'd by Rays of Light reflected from the ſeveral Points of Objects, received in at the Pupil, refracted and collected in their paſſage thro' the Coats and Humours, to the *Retina*; and thus ſtriking, or making an Impreſſion on ſo many Points thereof: which Impreſſion is convey'd by the correſpondent Capillaments of the Optic Nerve to the Brain, *&c.*

As for the *Peripatetick* Series or Chain of Images, 'tis a mere Chimera, and *Ariſtotle*'s meaning is better underſtood without than with 'em.—In effect, ſetting theſe aſide, the *Ariſtotelian*, *Carteſian*, and *Newtonian* Doctrines of *Viſion* are very conſiſtent: For Sir *I. Newton* imagines, that *Viſion* is perform'd chiefly by the Vibrations of a fine Medium which penetrates all Bodies, excited in the bottom of the Eye by the Rays of Light; and propagated thro' the Capillaments of the Optic Nerves, to the *Senſorium*. And *Des Cartes* maintains, that the Sun preſſing the *Materia Subtilis*, wherewith the World is fill'd, every way; the Vibrations or Pulſes of that Matter reflected from Objects, are communicated to the Eye, and thence to the Senſory: So that the Action or Vibration of a Medium is equally ſuppoſed in all. See MEDIUM.

Modern Theory of VISION.

In order to *Viſion*, we are certain, it is required that the Rays of Light be ſent from the viſible Objects to the Eye.—What befals them in the Eye, will be conceiv'd from what follows.

Suppoſe, *e. g.* Z the Eye, and A B C the Object, (Tab. *Opticks*, Fig. 53.) Now, tho every Point of an Object be a radiant Point, that is, tho there be Rays reflected from every Point of the Object to every Point of the circumambient Space; each carrying with it its reſpective Colour, (which we falſly imagine to be thoſe of the Object;) yet, as only thoſe Rays which paſs thro' the Pupil of the Eye affect the Senſe, we ſhall here conſider none elſe.

And, again, tho there be a great number of Rays paſſing from one radiant Point, as B, thro' the Pupil, yet we ſhall only conſider the Action of a few of 'em; as BD, BE, BF.

Now then, the Ray B D, falling perpendicularly on the Surface E D F, will paſs out of the Air into the aqueous Humour, without any Refraction, and proceed right to H; where falling perpendicularly on the Surface of the cryſtalline Humour, it will go on without any Refraction to M; where, again, falling perpendicularly on the Surface of the vitreous Humour, it will proceed ſtrait to the Point O, in the Fund or bottom of the Eye.

Again, the Ray B E paſſing obliquely out of Air upon the Surface of the watery Humour E D F, will be refracted, and approach towards the perpendicular E P: Thus, proceeding to the Point G, in the Surface of the Cryſtalline, it will be there refracted ſtill nearer to the Perpendicular.—So alſo E G, falling obliquely out of Air into a harder Body, will be refracted towards the Perpendicular G R; and falling on the Point L of the Surface of the vitreous Humour, it will ſtill be brought nearer to M.

Laſtly, G L, falling obliquely out of a denſer, upon the Surface of a rarer Body L M N, will be refracted, and recede from the Perpendicular L T; in receding from which, it is evident it approaches towards the Ray B D O, and may be ſo refracted, as to meet the other in O.——In like manner, the Ray B F being refracted in B, will turn to I,

and thence to N, and thence to the others in O.——But the Rays between BE and BF, being ſomewhat leſs refracted, will not meet preciſely in the ſame Point O.

Thus will the radiant Point B affect the Fund of the Eye, in the ſame manner as if the Pupil had had no breadth, or as if the Radiant it ſelf had only emitted one ſingle Ray, ſuch as were equal in Power to all thoſe between BE and BF.

In like manner, the Rays proceeding from the Point A, will be ſo refracted in paſſing thro' the Humours of the Eye, as to meet near the Point X: And the Rays from any intermediate Point between A and B, will nearly meet in ſome other Point in the Fund of the Eye, between X and O.

Upon the whole, it may be aſſerted univerſally, that every Point of an Object affects only one Point in the Fund of the Eye; and on the contrary, that every Point in the Fund of the Eye, only receives Rays from one Point of the Object.—Tho this is not to be underſtood in the utmoſt rigour. See RADIANT.

Now, if the Object recede from the Eye, in ſuch manner as that the radiant Point B does not decline from the Line BD; the Rays which would proceed from B not enough divaricated, would be ſo refracted in paſſing the three Surfaces, as that they would meet ere they reach'd the Point O: On the contrary, if the Object ſhould be brought nearer the Eye, the Rays paſſing from the Point B to the Pupil, too much divaricated, would be refracted ſo, as not to meet till beyond the Point O. Nay, the Object may be ſo near, that the Rays proceeding from any Point may be ſo divaricated, as that they ſhall never meet at all.—In all which Caſes, there would be no Point of the Object but would move a pretty large Portion of the Fund of the Eye; and thus the Action of each Point would be confounded with that of the contiguous one.

And this would commonly be the Caſe, but that Nature has provided againſt it; either by contriving the Eye ſo as its Bulb may be lengthen'd, or ſhorten'd, as Objects may be more or leſs diſtant; or, as others will have it, ſo as that the Cryſtalline may be made more convex or more flat; or, according to others, ſo as that the diſtance between the Cryſtalline and the *Retina* may be lengthen'd or ſhorten'd.

The firſt Expedient is the moſt probable; on the footing of which, when we direct our Eyes to an Object ſo remote as that it can't be diſtinctly view'd by the Eye in its accuſtom'd Figure, the Eye is drawn back into a flatter Figure, by the Contraction of four Muſcles; by which means, the *Retina* becoming nearer the cryſtalline Humour, receives the Rays ſooner: and when we view an Object too near, the Eye being compreſs'd by the two oblique Muſcles, is render'd more globular; by which means, the *Retina* being ſet further off from the Cryſtalline, does not receive the Rays of any Point before they meet.

It may be here added, that this acceſs and receſs of the Cryſtalline, is ſo neceſſary to *Viſion*, that whereas in ſome Birds the Coats of the Eye are of ſuch a bony conſiſtence, that Muſcles would not have been able to contract and diſtend 'em; Nature has taken other means, by binding the Cryſtalline down to the *Retina*, with a kind of blackiſh Threads, not found in the Eyes of other Animals.—Nor muſt it be omitted, that of the three Refractions above mention'd, the firſt is wanting in Fiſhes; and that to remedy this, their Cryſtalline is not lenticular, as in other Animals, but globular. Laſtly, ſince the Eyes of old People are generally worn flatter than thoſe of young ones; ſo that the Rays from any Point fall on the *Retina* ere they become collected into one; they muſt exhibit the Object ſomewhat confuſedly: nor can ſuch Eyes ſee any but remote Objects diſtinctly. See PRESBYTÆ.

In others, whoſe Eyes are too globular, the Caſe is juſt the reverſe. See MYOPES.

From what has been ſhewn, that every Point of an Object moves only one Point of the bottom of the Eye; and, on the contrary, that every Point in the Fund of the Eye, only receives Rays from one Point of the Object; 'tis eaſy to conceive, that the whole Object moves a certain Part of the *Retina*; that in this part there is a diſtinct and vivid Collection of all the Rays receiv'd in at the Pupil; and that as each Ray carries its proper Colour along with it, there are as many Points painted in the Fund of the Eye, as there were Points viſible in the Object.—Thus is there a Species or Picture on the *Retina*, exactly like the Object; all the difference between 'em, is, that a Body is here repreſented by a Surface; a Surface frequently by a Line, and a Line by a Point: that the Image is inverted, the right hand anſwering to the left of the Object, *&c.* and that 'tis exceedingly ſmall, and ſtill the more ſo, as the Object is more remote. See VISIBLE.

What we have ſhewn under other Articles, of the Nature of Light, and Colours, readily accounts for this painting of the Object on the *Retina*.—The matter of Fact is proved by an eaſy Experiment, firſt try'd by *Des Cartes*; thus: The Windows of a Chamber being ſhut, and Light only admitted at one little Aperture; to that Aperture apply the Eye of ſome Animal newly kill'd, having firſt dextrouſly pull'd off the Membranes that cover the bottom of the vitreous Humour, *viz.* the hind Part of the *Sclerotica*, *Choroides*, and even part of the *Retina*; then will the Images of all the Objects without Doors be ſeen diſtinctly painted on any white Body, as on an Egg-ſhell, that the Eye is laid upon.—The ſame thing is better ſhewn by an Artificial Eye, or a *Camera Obſcura*. See EYE, and CAMERA *Obſcura*.

The Images of Objects, then, are repreſented on the *Retina*; which is only an Expanſion of the fine Capillaments of the Optic Nerve, and from which the Optic Nerve is continu'd into the Brain.——Now, any Motion or Vibration impreſs'd on one extreme of the Nerve, will be propagated to the other: Hence, the Impulſe of the ſeveral Rays ſent from the ſeveral Points of the Object, will be propagated as they are on the *Retina*, (*i. e.* in their proper Colours, *&c.* or in particular Vibrations or manners of Preſſure, correſponding thereto) to the Place where thoſe Capillaments are interwoven into the Subſtance of the Brain.—And thus is *Viſion* brought to the common Caſe of Senſation.

For ſuch, we know, is the Law of the Union between the Soul and Body; that certain Perceptions of the firſt, do neceſſarily follow certain Motions of the laſt: But the different Parts of the Object do ſeparately move different Parts of the Fund of the Eye; and thoſe Motions are propagated to the Senſory: it follows, therefore, that there muſt ariſe ſo many diſtinct Senſations at the ſame time. See SENSATION.

Hence, 1°, we eaſily conceive, that the Perception, or Image in the Mind, muſt be the clearer, and more vivid, the more Rays the Eye receives from the Object: Conſequently, the largeneſs of the Pupil will have ſome ſhare in the clearneſs of *Viſion*. See PUPIL.

2°, Conſidering only one radiant Point of an Object, we may ſay, that that Point would move the Senſe more weakly, or be ſeen more obſcurely, as it is more remote; by reaſon the Rays coming from any Point, like all Qualities propagated *in Orbem*, are always diverging; and therefore the more remote, the fewer of 'em will be receiv'd in at the Pupil.—But, as 'tis not a ſingle Point of an Object, but all of them together, that affect the Organ of Senſe; and as the Image of the Object ſtill poſſeſſes a leſs part of the *Retina* as 'tis more remote; therefore, tho the Rays that flow from any Point of an Object two Miles off, into the Pupil, be rarer or fewer by half than thoſe flowing from the ſame Point at a Mile's diſtance; yet the ſame Capillament of the Optic Nerve, which in the latter Caſe would only be mov'd by that one Point, in the former, will be affected with the joint Action of the neighbouring Points; and therefore the Image be as clear as in the other Caſe.—Add, that the Pupil dilating it ſelf more, as the Object is more remote, takes in more Rays than it would otherwiſe do.

3°, The Diſtinctneſs of *Viſion* is ſomewhat concern'd in the Size of the Image exhibited in the Fund of the Eye.—For there ſhould be, at leaſt, as many Extremes of Capillaments, or Fibres of the Optic Nerve in the Space that Image poſſeſſes, as there are Particles in the Object that ſends Rays into the Pupil: otherwiſe, every Particle will not move its ſeparate Capillament: And if the Rays from two Points fall on the ſame Capillament, 'twill be the ſame as if only one Point had fell there; ſince the ſame Capillament cannot be differently moved at the ſame time.—And hence it is, that the Images of very remote Objects being very ſmall, they appear confus'd, ſeveral Points of the Image affecting each Capillament: And hence alſo, if the Object be of different Colours, ſeveral Particles affecting the ſame Capillament at the ſame time, only the brighteſt and moſt lucid will be perceiv'd: Thus, a Field furniſh'd with a good number of white Flowers among a much greater quantity of green Graſs, *&c.* at a diſtance appears all white.

Our *ſeeing* of Objects *ſingle*, tho with two Eyes, in each of which is a ſeveral Image, or Picture; and our *ſeeing* of 'em *erect*, whereas the Picture is inverted; are two great Phænomena in *Viſion: which ſee conſider'd under the Article* SIGHT.

For the Manner of ſeeing and judging of the Diſtance *and* Magnitude *of Objects*. See DISTANCE, and MAGNITUDE.

VISION, in Opticks.—The Laws of *Viſion*, brought under Mathematical Demonſtrations, make the Subject of *Opticks*, taken in the greateſt Latitude of that Word: For among the Writers of Mathematicks, Opticks is generally taken, in a more reſtrain'd Signification, for the Doctrine of *Direct Viſion*; *Catoptricks*, for the Doctrine of *Reflected Viſion*; and *Dioptricks*, for that of *Refracted Viſion*. See OPTICKS, CATOPTRICKS, and DIOPTRICKS.

Direct, or *Simple* VISION, is that perform'd by means of direct Rays; that is, of Rays paſſing directly, or in right Lines, from the radiant Point to the Eye. See DIRECT.

Such is that explain'd in the preceding Article VISION; ſee alſo RAY.

Reflected VISION, is that perform'd by Rays reflected from *Specula*, or Mirrors. See REFLEXION.

The

The Laws hereof, ſee under REFLEXION, and MIRROR.

Refracted VISION, is that perform'd by means of Rays *refracted*, or turn'd out of their way, by paſſing thro' Mediums of different denſity; chiefly thro' Glaſſes and Lenſes.

The Laws of this, ſee under the Articles REFRACTION, LENS, *&c.*

VISION, among Divines, is uſed for an Appearance which God occaſionally ſent his Prophets and Saints; either by way of Dream, or in reality. See PROPHECY, REVELATION, *&c.*

Such were the *Viſions* of *Ezekiel*, *Amos*, &c. the *Viſion* of St. *Paul*, lifted up to the third Heaven, *&c.* of *Joſeph*, by which he was aſſur'd of the Purity of the Virgin, *&c.*

Many among the *Romiſh* Saints ſtill pretend to *Viſions*: the *Revelations of S.* Bridget are ſo many *Viſions*.

Hence the Word has come into diſrepute, and become a common Name for all Chimeras, or Spectres, which either our own Folly or Fear poſſeſſes us with: And hence, a Perſon that frames to himſelf wild romantic Notions, is called a *Viſionary*.

Quevedo's *Viſions*, are Deſcriptions of what paſs'd in the Imagination of that Author.

The *Beatific Viſion*, is the Act whereby the Angels and bleſſed Spirits ſee God in Paradiſe. See BEATIFIC.

VISIR, or VISIER, or VIZER, an Officer or Dignitary in the *Ottoman* Empire.

There are two Kinds of *Viſirs*, the firſt called by the *Turks*, *Viſir Azem*, that is *Grand Viſir*; firſt created in 1370, by *Amurath* I. in order to eaſe himſelf of the chief and weightier Affairs of the Government.

The *Grand* or *Prime Viſir*, is the firſt Miniſter of State in the whole Empire.——He commands the Army in chief, and preſides at the Divan, or great Council.——Renegado Chriſtians, have been frequently rais'd to the *Viſirate*: Such were *Khairedain*, *Ulug Ali*, &c.

Next to the Grand *Viſir* are ſix other ſubordinate *Viſirs*, call'd *Viſirs of the Bench*, who officiate as Counſellors or Aſſeſſors in the Divan. See DIVAN.

VISITATION, an Act of Juriſdiction, whereby a Superior, or proper Officer, *viſits* ſome Corporation, College, Church, or other publick or private Houſe, to ſee that the Regulations thereof be duly obſerv'd.

Among us, the Biſhop of each Dioceſe is oblig'd to hold a *Viſitation* every three Year, and the Archdeacon every Year; to ſee that the Diſcipline be well obſerv'd, the People well inſtructed, and take care that neither the Church, nor the Paſtors thereof receive any detriment. See BISHOP, ARCHDEACON, *&c.*

Antiently, the *Regarder*'s Office was expreſs'd to be the *Viſitation of Manners*. See REGARDER.

The Lawyers hold it a Branch of the King's Prerogative, to *viſit* the Univerſities; to inquire into the Statutes, and Obſervation of them; to expel Delinquents, *&c.* But ſome of the Colleges diſallow this Privilege; and plead themſelves, by Royal Charters, exempt from all Civil and Royal *Viſitations*. See UNIVERSITY.

Among the *Romaniſts*, the General of each Religious Order, is oblig'd to *viſit* the ſeveral Monaſteries of the Order. See GENERAL, and ORDER.

In Abbies that are Chiefs of their Orders, there are particular Officers, call'd *Viſitors*; who are diſpatch'd into all the Houſes and Congregations depending on them, to ſee that the regular Diſcipline is obſerv'd.

In *Spain*, there is a *Viſitor* and *Inquiſitor General*.—— The *Viſitation* of the Cloiſter belongs to the Ordinary.—— At *Paris*, the Parliament *viſit* the ſeveral Priſons and Priſoners four times a Year.

In a Moral and Religious Senſe, *Viſitation* is alſo uſed for the Afflictions that befal Mankind; as coming from the Hand of God, to try or prove them.—In this Senſe, the laſt Plague among us is frequently call'd the *Viſitation*.

VISIVE, in the School Philoſophy, a Term applied to the Power of *Seeing*. See SEEING.

Authors are exceedingly divided about the Place where the *Viſive Faculty* reſides: Some will have it in the *Retina*; others in the *Choroeides*; others in the Optic Nerve; others, as Sir *I. Newton*, in the Place where the Optic Nerves meet, before they come to the Brain; and others in the Brain it ſelf. See SIGHT, and SENSORY.

VISNE, in Law, a neighbouring Place, or Place near at hand. See VENEW.

VISUAL, ſomething belonging to the Sight, or Seeing. See SIGHT, and SEEING.

VISUAL *Rays*, are Lines of Light, imagin'd to come from the Object to the Eye. See RAY.

All the Obſervations of Aſtronomers and Geometers, are perform'd by means of the *Viſual* Rays, receiv'd in at the Sights, or *Pinnulæ* of Alhidades. See OBSERVATION, SIGHT, QUADRANT, LEVELLING, *&c.*

VISUAL *Point*, in Perſpective, is a Point in the horizontal Line, wherein the ocular Rays unite. See POINT.

Thus, a Perſon ſtanding in a ſtrait long Gallery, and looking forwards, the Sides, Floor, and Ceiling ſeem to meet, and touch one another in a Point, or common Centre.

VITA, *Life*, is a very ambiguous Term: For both God and Man, and a Soul, and an Animal, and a Plant, are ſaid *to live*: yet there is not any thing common to *all* theſe, beſide a kind of active Exiſtence, which, however, is very different. See ANIMAL, VEGETABLE, *&c.*

Life, then, in the general, expreſſes a kind of active, operative Exiſtence; and is therefore conceiv'd to conſiſt in Motion.——But, particularly,

VITA *Corporis*, *the Life of a Body*, conſiſts in an uninterrupted Motion therein.—A Body, therefore, ſaid to be *living*, muſt conſiſt of various Parts or Members, both internal and external, ſo framed and put together, as to conſtitute one Whole. And theſe Members muſt be moved and warm'd by ſome fluid Subſtance, permeating the whole Frame; by which Heat and Motion, the vital Functions are to be perform'd.—Such are Nutrition, Generation, Local Motion, *&c.* See BLOOD, CIRCULATION, *&c.*

VITA *Mentis*, *the Life of a Mind*, is held by the *Carteſians* to conſiſt in a perpetual Cogitation, or uninterrupted Courſe of Thinking; which ſeems likewiſe to have been *Ariſtotle*'s meaning, when he call'd the Soul ἐντελεχεια; which his Interpreters call *Actus*: Thinking being the only proper Act of the Mind. See ENTELECHEIA.

But Mr. *Lock* endeavours to refute this Principle. See THINKING.

VITA *Hominis*, *Life of a Man*, conſiſts in a continued Communication of Body and Mind; or in Operations to which both the Motions of the Body, and Ideas of the Mind, contribute.

Thus, *e. g.* the Mind now thinking of ſomething, on occaſion of that Thought, there ariſes a certain Motion in the Body: And now, again, the Body moves firſt, which Motion is follow'd by ſome Thought of the Mind.

In ſuch alternate or reciprocal Operation does the Life of Man conſiſt; conſider'd as he is a Compound of Body and Mind. See SENSATION, MOTION, *&c.*

VITAL, in Anatomy, ſomething that miniſters principally to the conſtituting or maintaining of Life in the Bodies of Animals.

Thus, the Heart, Lungs, and Brain, are called *Vital* Parts. See PART.

VITAL *Functions*, or *Actions*, are thoſe Actions of the *Vital* Parts, whereby Life is effected; ſo as that it can't ſubſiſt without 'em.—Such are the muſculous Action of the Heart; the ſecretory Action of the *Cerebellum*; the reſpiratory Action of the Lungs; the Circulation of the Blood and Spirits, thro' the Arteries, Veins, and Nerves. See FUNCTION.

VITAL *Spirits*, are the fineſt and moſt volatile Parts of the Blood. See SPIRITS.

VITELLIANI, in Antiquity, a kind of Tablet or Pocket-Book, wherein People antiently uſed to write down their ingenious, humourous, and wanton Fancies and Impertinencies: The ſame as what in *Engliſh* we may call a *Triſle-Book*. See *Martial*, Lib. XIV. Epig. viii.

Some will have them to take their Name from *Vitellus*, a Yolk of an Egg; by reaſon, the Leaves were rubb'd therewith: Others derive it from one *Vitellius* their Inventor.

VITRIFICATION, or VITRIFACTION, the Act of converting a Body into Glaſs, by Fire. See GLASS.

Of all Bodies, Fern-Aſhes, Sand, Bricks, and Pebbles, *vitrify* the moſt eaſily. Accordingly, it is of the firſt of theſe that Glaſs is principally made.

Gold, held by M. *Homberg* near the *Focus* of the Duke of *Orleans*'s large, burning, concave Mirror, at firſt ſmoak'd, then changed, all of it that did not go off in Fumes, into Glaſs, of a deep violet Colour.—The Glaſs of Gold weighs leſs than Gold. *Memoirs of the* French *Academy*, 1702. See GOLD.

All Metals, and even almoſt all Natural Bodies, ſufficiently heated, *vitrify*: And this *Vitrification* is the laſt Effect of the Fire; after which the moſt intenſe heat of the largeſt Burning-Glaſs, will make no further Alteration. See BURNING-GLASS, MIRROR, and FIRE.

Vitrification, ſome Authors will have to be chiefly effected by the Salts uniting and incorporating with the metalline Particles. See CALCINATION.

But, according to M. *Homberg*, all *Vitrification* reſults from the Earth, which being expoſed to a violent Fire, and intimately penetrated by ſome other Diſſolvent, commences Glaſs.——Thus, ſuppoſing the Principle of Gold to be Mercury, a metallick Sulphur, and an Earth; the *Vitrification* of Gold is eaſily conceived: the Mercury, being volatile, exhales in Smoke, and leaves behind it the Earth, and Sulphur, which are fix'd; the Sulphur diſſolves the Earth and *vitrifies* it.

VITRIOL, in Natural Hiſtory, a kind of Foſſil, or mineral Salt, chiefly found in Copper-Mines. See SALT, and COPPER.

Vitriol

Vitriol is more properly rank'd among the Class of *Semi-metals*, as having a metallic Matter mixt or combin'd with its Salt. See SEMI-METAL.

Vitriol is defined by *Boerhaave*, a saline, metallic, transparent Glebe; dissoluble in Water, and fusible and calcinable by Fire.

It acquires different Names, according to the different Places where it is dug: and the *Vitriols* of those also, differ from each other in Denomination and Colour, some being *White*, others *Blue*, and others *Green*.

Roman Vitriol, for Instance, is White; that of *Cyprus*, Blue; and that of *Pisa* and *Germany*, greenish.

White Vitriol partakes but little of any Metal, *Blue* partakes of Copper, and *Green* of Iron. See IRON, &c.

Monsieur *Geoffroy*, the elder, observes, that they all consist of an acid Salt, like that found in Alum and Sulphur; excepting that in Alum, the Acid is mixt with an absorbent Earth, or Calx: in Sulphur it is united with certain fat, bituminous Parts; and in *Vitriols*, with metallic Parts.

According to *Boerhaave*, *Vitriols* consist of a metallic Part with a Sulphur adhering, a menstruous Acid, and Water.

In *Blue Vitriol*, the Metal, wherewith the Acid, &c. is join'd, is Copper. See VENUS.

In *White Vitriol*, commonly call'd *White Copperas*, it is mixt with *Lapis Calaminaris*, or some ferruginous Earth, intermix'd with Lead or Tin. See COPPERAS.

In *Green Vitriol*, the Acid is join'd with Iron. See MARS.

The Antients give the Name *Chalcitis*, or *Chalcite*, to *native Vitriol*; or that which acquires its full Perfection in the Entrails of the Earth, and which is a kind of mineral Stone, of a reddish Colour.—Of this they observ'd three different States, or Transformations: *Chalcitis*, in its first State, they call'd *Misi*; this afterwards turn'd into *Melanteria*, and that into *Sori*. See CHALCITIS.

The Moderns take this *Chalcitis* to be the same with the *Colcothar* brought from *Sweden* and *Germany*, the best whereof is of a brownish-Red Colour, and a *vitriolic* Taste, and dissolves easily in Water; and, when broke, is of the Colour of shining Copper. See COLCOTHAR.

All the other *Vitriols* above-named, are really factitious, being only a kind of Crystals, drawn, by means of Water, from a sort of Marcasite ordinarily found in Mines, and call'd, by Naturalists, *Pyrites*, or *Quis*. See PYRITES.

Roman Vitriol is made by exposing these *Pyrites* to the Air, till such time as they calcine, and change into a greenish, acid, *vitriolic* Calx, or Dust; in such State they are thrown into the Water, and are afterwards, by boiling and evaporation, reduced into that kind of Crystals sent us from *Italy*.

All the other *Vitriols* are made after the same manner, that is, much after the same manner as Alumn is made in *England*, or Salt-petre in *France*. See ALUM, and SALT-PETRE.

For *Green Vitriol*, they add a great number of pieces of Iron to the Liquor in the boiling; these raise a great Ebullition. As soon as the Iron is dissolved, they evaporate the Dissolution to a certain Degree; and so let it crystalize.—The Crystals being form'd, there remains a thick, reddish, unctuous Styptic, and astringent Liquor, which Monsieur *Geoffroy* calls *Eau-mere de Vitriol*, as containing all the Principles of the Mineral, tho dis-united.

The Powder of this *Vitriol* is exceeding styptic, and excellent for the cure of Wounds, and the stopping of Blood. —Its Effects this Way, have been rais'd by the knavery of some, and the credulity of others, to a kind of Miracle; it being this that makes the Basis of the famous *Sympathetic Powder*. See SYMPATHETIC.

The medicinal Virtues of *Vitriol* are very great; but all owing to the Iron, or other metallic Parts mixt with it, and therefore follow the kind of Metal.

Thus, those of *Green Vitriol* depend on the stypticity or astringency of Iron, or *Mars*. See MARS, &c.

The *Eau-mere* drawn from *Green Vitriol*, Monsieur *Geoffroy* observes, does not differ any way, essentially, from a great Number of Preparations which the Chymists have given us of *Vitriol*, *Iron*, and the *Lapis Hæmatites*: As the *fix'd* and *anodyne Sulphurs of Vitriol* or *Mars*; Arcana, and Magisteries of *Vitriol*; Tinctures, &c. of *Vitriol*, *Mars*, &c. The common Basis of all which is Iron exceedingly subtilized and attenuated. See IRON.

A Solution of *Vitriol* mix'd with a Tincture of Galls, becomes instantly exceeding Black: and 'tis this is the common Writing-Ink. See INK.

Monsieur *Lemery*, the younger, has a pretty Hypothesis to account for this Blackness: he imagines, that as the *Vitriol* whereof Ink is made, is Iron dissolved by an Acid, and intimately mix'd therewith; and as Gall is an Alkali, or Absorbent, this Alkali meeting the Acids which hold the Iron dissolved, unites with them, and makes them let the Iron loose, which thereupon revivifies, and resumes its natural Blackness. So that in strictness, 'tis Iron we write withal.

This System is confirm'd hence: that of the five sorts of *Vitriol*, that of *Cyprus* or *Hungary* is the only one whose Base is Copper; that of the rest is Iron: and accordingly they all serve to make Ink withal; excepting that.

Vitriol also enters the Composition of *Aquafortis*. See AQUAFORTIS.

What we call *Calcanthum* is only *Vitriol* rubified, and is not the same with *Colcothar*, as some have imagined. See CALCANTHUM.

Some take the Word *Vitriolum* to be used, *quasi vitri oleum*, because of its shining Colour; but *Menage* rather derives its Name, *à vitreo colore*: the *Latins* call it, *Atramentum*; and the *Greeks*, *Calcanthus*.

Some Naturalists hold *Vitriol* to be the Root, or Matrix of Copper; because in the Copper-Mines they never dig deeper than the Glebe out of which the *Vitriol* is drawn.

Vitriol affords several Chymical Preparations, as——*Spirit of Vitriol*, procured by first Calcining, then Distilling it.——*Oil of Vitriol*, which comes out after the *Spirit*, by heightning the Fire wherewith that had been rais'd. ——What remains after both, is the *Colcothar of Vitriol*. ——*Tartar of Vitriol* is had by mixing *Oil of Vitriol* with *Oil of Tartar per deliquium*; a Salt precipitating to the bottom, which being set to exhale and crystalize, is the *Tartar of Vitriol*. See TARTAR.

From the *Colcothar of Vitriol* is prepared the *Ens Veneris*. See ENS VENERIS.

Metallic VITRIOLS: All Metals, it is to be observed, may be converted into *Vitriols*, by dissolving 'em with acid Spirits, and letting 'em stand; tho 'tis very difficult to obtain *Vitriol* of Gold or Silver, by reason these Metals are not easily dissolved by the Spirit; but *Vitriols* of Iron and Copper are easily had.

VITRIOL *of Mars*, is a Preparation made by dissolving Iron, or Steel, in a proper acid Menstruum, then evaporating or drawing off the Moisture, and bringing the Matter to crystalize, *viz.* by setting it in a cool place. See MARS.

It is also call'd *Salt of Steel*. See STEEL.

VITRIOL *of Luna*, or *the Moon*, is the Body of Silver chymically opened, and reduced into the Form of Salt by the sharp Points of *Spirit of Nitre*. See LUNA, and SILVER.

VITRIOL *of Venus*, is a Preparation made by a solution of Copper in the *Spirit of Nitre*, evaporated and crystallized, to gain the Salt; call'd also *Vitriol of Copper*. See COPPER, &c.

These factitious *Vitriols* being only Metals dissolved and crystallized in saline Menstruums, are frequently call'd, by way of distinction, *Metallic Vitriols*, and *Metallic Salts*.

VITRIOLATED, among Chemists, turned into *Vitriol*, or having *Vitriol* infused in it.

Tartar Vitriolated. See TARTARUM *Vitriolatum*.

VITRIOLIC, something that has the Quality of *Vitriol*, or partakes of the Nature of *Vitriol*.

In this Sense we say, a *Vitriolic Spring*, *Vitriolic Stone*, *Vitriolic Spirits*, &c.

If Iron be thrown into a *Vitriolic Water*, and the red Rust arising on the Surface of the Iron be melted down, it will be found real Copper; which is an Instance of the Transmutation of one Body into another. See TRANSMUTATION.

VITRIOUS *Humour*, in Anatomy, is the third Humour of the Eye, call'd *Vitrious*, *i. e.* glassy, from its resemblance to melted Glass. See HUMOUR.

It lies under the Crystalline; by the Impression of which, its fore-part is rendred concave. See CRYSTALLINE, and EYE.

For the Office of the *Vitrious Humour*, see VISION.

Some Authors call the Coats or Membranes that contain this Humour, the *Vitrious Tunics*.

VITTA, among Anatomists, a *Fillet* or *Head-band*; is used for that part of the *Amnion* which sticks to the Infant's Head when it is just born. See AMNION.

VITUS's *Dance*, in Medicine. See CHOREA *Sancti Viti*.

VIVA *Pecunia*, was antiently used for live Cattle. See PECUNIA.

VIVA *Voce*, *q. d.* by Word of Mouth. See DEPOSITION.

VIVARY, in our Law Books, is sometimes used for a Park, Warren, or Fish-pond, wherein living Creatures are kept, &c. See PARK, WARREN.

VIVIFICATION, in Medicine, the Art of *Vivifying*, that is, of contributing to the Action that gives Life, or maintains Life. See LIFE.

The Chymists also use the Word in speaking of the new Force, Vigour, and Lustre which by this Art they give to natural Bodies, particularly to Mercury; which after having been fix'd or amalgamated, they restore to its first State. See REVIVIFICATION.

VIVIPAROUS, in Natural History, an Epithet applied to such Animals as bring forth their Young alive, and perfect: in contradistinction to such as lay Eggs; which are call'd, *Oviparous Animals*. See ANIMAL, OVIPAROUS, and EGG.

Vipers are distinguished from Snakes, in that the latter lay Eggs in Dunghills, to be hatch'd by the Warmth thereof; but the former are *Viviparous*, that is, lay their Eggs

within their Bellies, and bring forth live Vipers. See VIPER.

In the *Philoſophical Tranſact.* we have an Account of a *Viviparous Fly*, of the *Oeſtrum* or Gad-kind.——Dr. *Liſter* tells us he open'd ſeveral Females of this Claſs, and found, in each, two Bags of live white Worms. The like is hinted by *Aldrovandus*.

Dr. *Liſter* ſuſpects, that all of this Tribe are, in ſome meaſure, *Viviparous*. See INSECTS.

VIVO, in Architecture, the Shaft, or Fuſt of a Column. See SHAFT, and COLUMN.

The Term is alſo uſed in a more particular Senſe, for the Naked of a Column, or other Part. See NAKED.

VIZARD, or VIZOR. See MASK.

VIZOR, or VIZARD, in Heraldry. See GARDEVISURE.

ULCER, ULCUS, in Medicine, a Solution or Diſcontinuity of Texture, or a loſs of Subſtance in the fleſhy Parts of the Body, proceeding from an internal Cauſe. See SOLUTION.

Galen defines it an inveterate Eroſion of the ſoft Parts of the Body, by which, inſtead of Blood, they are brought to yield a kind of *Pus*, or *Sanies*; which prevents the Conſolidation.

Etmuller defines an *Ulcer*, a Solution of Continuity from ſome coroſive Sharpneſs or Acidity, that takes away from the Parts, and turns the proper Nouriſhment of the Body into a ſanious Matter.—A like Solution of Continuity happening in a bony Part, is call'd a *Caries*. See CARIES.

Galen commonly uſes the Words *Ulcer* and Wound, indifferently; but the *Arabs*, and the Moderns after them, diſtinguiſh between the two. See WOUND.

Spontaneous *Ulcers*, are generally ſuppoſed to proceed from Acrimony, or a corroſive Diſpoſition of the Humours of the Body, whether brought on by Poiſons, the venereal Taint, or other Cauſes.

Ulcers are divided into *ſimple*, and *complicated*: They are again divided, with regard to their Circumſtances, into *Putrid*, or *Sordid*, wherein the Fleſh all around is corrupted and fetid; *Verminous*, where the Matter being thick, does not flow away, but generates Worms, &c. *Virulent*, which inſtead of Pus, or Sanies, yield a malignant *Virus*, &c.

They are again diſtinguiſh'd, with regard to their Form, into *Sinuous*, *Fiſtulous*, *Varicous*, *Carious*, &c.

When an *Ulcer* happens in a good Conſtitution, and proves eaſy of Cure, 'tis ſaid to be *Simple*.

When attended with other concurring Symptoms, as a Cacochymic Habit, which greatly retards or obſtructs the Cure, it is called a *Compound Ulcer*.

A *Simple Ulcer* is attended with no other Sign than that of Eroſion; but *Compound Ulcers*, happening in a Scorbutic, Dropſical, or Scrophulous Conſtitution, may be attended with Pain, a Fever, Convulſions, a large and emaciating Diſcharge of Matter, Inflammation and Swelling of the Part, Calloſity of the Lips, a Caries of the Bones, &c.

A Putrid or *Sordid Ulcer*, is that whoſe Sides are lined with a tough, viſcous Humour, and is alſo attended with Heat, Pain, Inflammation, and a large Flux of Humours to the Part: With time the *Sordes* increaſe and change Colour, the *Ulcer* corrupts, its Matter grows fetid, and ſometimes the Part gangrenates.—Putrid Fevers often give riſe to this kind of *Ulcer*.

A Phagedænic Ulcer, is an *Ulcer* of a corroſive Nature, eating away the adjacent Parts all a-round; the Lips thereof remaining tumefied. When this kind of *Ulcer* eats deep, and ſpreads wide, without being attended with a Tumour, but putrifies and grows foul and fetid, 'tis call'd *Noma*; and both, on account of the Difficulty wherewith they heal, are alſo termed *Dyſepulota*.

Varicous Ulcers, are ſuch as being ſeated in the Veins, and becoming painful and inflammatory, ſwell up the Part they poſſeſs.——Theſe, when recent, being occaſion'd by the Uſe of Corroſives, or proceeding from a ruptured Varix, are often attended with an Hæmorrhage.—The Veins adjacent to the *Ulcers* are, in this caſe præter-naturally diſtended, and may ſometimes be felt interwoven together, like network, about the Part.

Sinuous Ulcers, are ſuch as run a-ſlant or ſide-ways from their Orifice, and may be known either by ſearching with the Probe, Wax-Candle, &c. or the Quantity of Matter they diſcharge in proportion to their apparent magnitude.—Theſe ſometimes lie deep, and have ſeveral Turnings: they are diſtinguiſhed from *Fiſtulas* only by their want of Calloſity, except in the very Orifice.

Fiſtulous Ulcers, are ſuch as are ſinuous, or winding, and attended with great Calloſity, and diſcharge a thin, ſerous, and fetid Matter.

Old *Ulcers* are rarely cured without the Uſe of Internals, which are to be ſuch as abſorb and deſtroy the Acidity; Sudorificks eſpecially, Decoctions of the Woods, Antimonials, Viperines, and Volatiles; but above all things Vomitories often repeated: In the moſt obſtinate *Ulcers*, mercurial Salivation is often required; Old *Ulcers* are frequently incurable without making an Iſſue in the oppoſite Part.

The Cure of ſimple, ſhallow *Ulcers*, is commonly affected by applying a Pledget armed with *Liniment. arcæi*, or *Baſilic. flav.* to the Part, a Plaiſter of *Diachyl. ſimp.* or *de Minio*, being laid over it, and repeating the dreſſing once a-day, or ſeldomer.

If only the Cuticula be loſt or eat away, nothing more than a little *Unguent. de Siccativ. Rub.* or *Diapomphol.* &c. ſpread thin upon Linen, need be applied.

If ſpongy Fleſh ſhould grow up, in either caſe it may be kept down with a little *Roman Vitriol*, &c. as in caſe of healing up the *Simple Ulcers* made by the breaking of the common Tumors.

Evacuations are indiſpenſibly neceſſary in the Cure of *Ulcers* of the compound kind, where the Conſtitution will admit thereof.

If the *Ulcer* be fiſtulous, ſinuous, cancerous, &c. and the Matter fetid, thin, or ſanious, it is found proper to join Calomel with the Purgatives, or to give it in ſmall Doſes, between the Repetitions thereof, ſo as not to ſalivate.

Beſides the Uſe of evacuating Medicines, it will here alſo be proper to order a Courſe of Diet-drink, made with the Sudorifick Woods, eſpecially where the Ulcer is ſuſpected to be Venereal.——In the mean time proper Dreſſings are to be uſed.

When the *Ulcer* obſtinately reſiſts this Treatment, a Salivation is generally propoſed, and ſeldom fails to promote the Cure, tho all other Remedies ſhould have been tried in vain. If the Patient be too weak to undergo the Fatigue of a thorough Salivation, it may be moderated, and kept up the longer, in Proportion to his Strength. See SALIVATION.

External Medicines for *Ulcers*, are Digeſtives, Cleanſers, Sarcoticks, and Epuloticks.—— Monſieur *Belloſte* gives us a Medicine of ſingular Efficacy in the Cure of *Ulcers*; and it is no more than a Decoction of Walnut Leaves in Water, with a little Sugar; in which a Linen Cloth being dipp'd, is to be laid on the *Ulcer*, and this to be repeated every ſecond or third Day. This ſimple and vulgar Medicine he finds ſuppurates, deterges, incarnates, reſiſts Putrefaction, &c. more than any other Medicine known.

An *Ulcer* in the Lungs makes what we call a *Phthiſis*. See PHTHISIS.

The *Venereal Diſeaſe* is a grand Source of *Ulcers*; particularly in the Præpuce and Glans, in Men; the Vagina, &c. in Women; and in the Mouth and Palate in both. See VENEREAL *Diſeaſe*.

Venereal Ulcers are of various kinds; thoſe that grow callous and cancrous, are call'd *Shankers*. See SHANKER.

ULCERATION, a little Aperture, or Hole in the Skin, cauſed by an *Ulcer*.

Cauſtic Medicines ſometimes occaſion *Ulcerations* in the Skin. See CAUSTICS.

Arſenic always *Ulcerates* the Parts it ſticks to.—A Flux at the Mouth *Ulcerates* the Tongue and Palate. See SALIVATION.

ULIGINOUS, ULIGINOSUS, implies as much as moiſt, mooriſh, fenny. See FEN, BOG, MORASS, &c.

ULLAGE *of a Cask*, is ſo much as a Veſſel wants of being full.

ULNA, in Anatomy, a long, hard Bone in the Arm, with a Cavity in the Middle; call'd alſo *Focile Majus*, and *Cubitus*. See ARM, and CUBITUS.

The *Ulna* lies on the inſide of the Fore-Arm, reaching from the Elbow to the Wriſt; is big at its upper-end, and grows ſmaller to its lower-end.

At its upper it has two Proceſſes, which are received into the fore and hind *Sinus's* of the Extremity of the *Humerus*. The foremoſt Proceſs is ſmall and ſhort; the hindmoſt, called Ὠλέκρανον, is bigger and longer: it ſtays the Fore-Arm, when it comes to a ſtrait Line with the Arm. See OLECRANON.

Betwixt theſe Proceſſes it has a ſemi-circular *Sinus*, which receives the inner Protuberance of the lower-end of the *Humerus*, upon which we bend and extend our Fore-Arm; and along the middle of that there runs a ſmall Ridge, by which this Bone is articulated to the *Humerus* by *Ginglymus*.—Had the Articulation here been an *Arthrodia*, the Joint muſt have been much weaker; but the Hand could have received no more Motion from it than it has now from the Shoulder.

The inſide of this upper-end has a ſmall *Sinus*, which receives the Circumference of the round Head of the *Radius*. Its lower Extremity, which is round and ſmall, is received into a *Sinus*, in the lower-end of the *Radius*; and upon this Extremity, it has a ſhort and ſmall Proceſs, from which the Ligaments which tie it to the Bones of the Wriſt ariſe: this Proceſs ſerves to keep the Bones of the Wriſt in their place.

ULNA, an *Ell* in meaſure. See ELL, and MEASURE.

ULNA *Ferrea*, is an old Law-word for the Standard Iron-Ell, kept in the *Exchequer*. See STANDARD.

ULNAGE. See ALNAGE.

ULNARIS *Extenſor*, in Anatomy, a Muſcle, call'd alſo *Extenſor Carpi*. See EXTENSOR.

ULNARIS *Flexor*. See FLEXOR *Carpi*.

ULTERIOR, in Geography, is apply'd to ſome part of a Country, or Province, which, with regard to the reſt of that Country, is ſituate on the farther Side of a River, Mountain, or other Boundary which divides the Country into two Parts.

Thus, *Africa*, with regard to *Europe*, is divided by Mount *Atlas*, into *Citerior*, and *Ulterior*, *i. e.* into two Portions, the one on this ſide Mount *Atlas*, and the other on that.

The Word is pure *Latin*.

ULTIMA *Baſia*, q. d. *laſt Kiſſes*, is a Phraſe uſed among ſome Painters, for the laſt finiſhing Touches with the Pencil. See PAINTING.

ULTRAMARINE, a beautiful blue Colour, uſed by the Painters, prepared from *Lapis Lazuli*. See BLUE, and LAPIS.

This Blue is one of the richeſt and moſt valuable Colours uſed in Painting.—The Preparation conſiſts in firſt calcining the *Lapis* in an Iron Mortar, then grinding it very fine on a Porphyry Stone; then mixing it up with a Paſte made of Wax, Pitch, and Oil; and at laſt waſhing the Paſte well in clear Water, to ſeparate the colouring Part from the reſt, which precipitates to the bottom, in form of a ſubtile, beautiful, blue Pouder.

The Water is then pour'd off; and the Pouder at bottom dried in the Sun: which is the true *Ultramarine*.

Thoſe who prepare this Colour, have uſually four Kinds, which they get by ſo many different Lotions: The firſt is ſtill the beſt; and the reſt worſe and worſe, to the laſt.

There is *Ultramarine* of the firſt Kind, ſold for 11 *l.* Sterling *per* Ounce; and of the laſt, for about 12 or 15 *s.*

Some derive its Name, *Ultramarine*, q. d. *beyond Sea*, from its being firſt brought into *Europe* out of *India* and *Perſia*: Others ſay, 'tis becauſe its Colour is deeper than that of the Sea.

The common Opinion is, that the Method of making it was firſt diſcover'd in *England*; and that a Member of the *Eaſt India* Company, having a Quarrel with his Aſſociates, to be reveng'd of them, made the Secret publick.

Ultramarine muſt be choſen of a high Colour, and well ground which is known by putting it between the Teeth, where, if it feel gritty, 'tis a Sign the Triture is not ſufficient.

To know whether it be pure and unmix'd, put a little of it in a Crucible, and heating it red hot, if the Pouder han't chang'd its Colour after this Trial, 'tis certainly pure: On the contrary, if you perceive any change, or any black Specks in it, 'tis falſify'd.

Beſide this, there is another Kind, call'd *Common* or *Dutch Ultramarine*; which is only *Lapis* or *Smalt* well ground, and pulveriz'd; the Colour whereof, when uſed by the Painters, is much like that of the true *Ultramarine*, tho much leſs valued.

ULTRAMONTANE, ſomething beyond the Mountains.

The Term is principally uſed in relation to *Italy* and *France*, which are ſeparated by the Mountains of the *Alps*.

In *France*, the Opinions of the *Ultramontane* Canoniſts, *i. e.* of thoſe of *Italy*, are not receiv'd.

The Painters, particularly thoſe of *Italy*, call all thoſe that are not of that Country, *Ultramontanes*; or, ſimply, *Tramontanes*. *Pouſſin* is the only *Tramontane* Painter that the *Italians* ſeem to envy. See TRAMONTANE.

ULTRAMUNDANE, *Ultramundanus*, q. d. *beyond the World*; is that Part of the Univerſe, ſuppoſed to be without, or beyond the Limits of our World, or Syſtem. See UNIVERSE, WORLD, *&c.*

UMBELICUS. } See { UMBILICUS.
UMBELICAL. } See { UMBILICAL.

UMBELLA, or UMBRELLA. See PARASOL.

UMBELLÆ, among Botaniſts, *&c.* is applied to the round Tufts or Heads of certain Plants, ſet thick together, and all of the ſame height.—But *ſparſed* or *thin Umbellæ*, is when they ſtand at a diſtance from one another, yet all of an equal height. See UMBELLIFEROUS.

UMBELLIFEROUS *Plants*, are ſuch as have their Tops branched, and ſpread out like an *Umbrella*; on each little Subdiviſion of which, there is growing a ſmall Flower; ſuch are Fennel, Dill, *&c.* See PLANT.

This Flower is always *Pentapetalous*; and is ſucceeded by two naked Seeds adjoining to each other, which are the true Characteriſticks that diſtinguiſh theſe Plants from others.

The *Umbelliferous* are a very large Genus of Plants, and are diſtinguiſh'd by Mr. *Ray* as follows:

1°, Such as have a compounded Leaf, of a triangular and pinnate Form.—The Seeds of theſe are either broad, flat, and plain, almoſt like Leaves; as the *Sphondylium*, *Paſtinaca Latifolia*, *Panax Heracleum Tordylium*, *Orcoſelinum*, *Thyſſelinum*, *Apium Cicutæ foliis*, *Daucus Alſaticus carvifolia*, *Anethum*, *Pucedanum*, *Thapſia*, *Ferula*, &c. Or with a Seed more tumid, and leſs compreſſed and flat than the former; as the *Cachrys*, *Laſerpitium*, *Cicutaria vulgaris*, *Scandix*, *Cerefolium*, *Myrrhis Sativa Angelica*, *Leviſticum*, *Siler Montanum*, *Bulbocaſtanum*, *Siſarum*, *Oenanthe*, *Sium*, *Pimpinella*, *Apium*, *Cicuta*, *Viſnaga*, *Saxifraga*, *Crithmum*, *Fœniculum*, *Daucus vulgaris*, *Aniſum*, *Caucalci*, *Coriandrum*, *Paſtinaca Marina*, &c.

2°, Such as have a ſimple, or undivided Leaf, or at leaſt one only a little jagged; as the *Perfoliata*, *Buplerum*, *Aſtrantia nigra*, *Sanicula*, and the *Seſeli Æthiopicum*.

UMBER, among Painters, *&c.* a kind of Earth, which, diluted with Water, ſerves to make a dark brown Colour.

It is called *Umber* from *Umbra*, Shadow; as ſerving chiefly for the Shadowings of Objects. See SHADOW.

UMBILICAL, UMBILICALIS, or UMBELICAL, in Anatomy, ſomething that relates to the *Umbilicus*, or Navel. See UMBILICUS, *&c.*

UMBILICAL *Veſſels*, are a Set or Aſſemblage of Veſſels belonging to a *Fœtus*; conſtituting what we call the *Funiculus Umbilicalis*, or Navel-ſtring. See FOETUS, and UMBILICALIS.

Theſe *Veſſels* are two Arteries, a Vein, and the *Urachus*.

The *Umbilical Arteries* ariſe from the Iliacks, near their Diviſion into external and internal; and paſs thence on each ſide of the Bladder, thro' the Navel, to the *Placenta*.

By the Number of Contortions, or Convolutions of theſe Arteries in the Navel-ſtring, our Midwives ſuperſtitiouſly reckon the Number of Children the Woman is to have.

The *Umbilical Vein*, from innumerable Capillaries united into one Trunk, deſcends from the *Placenta* to the Liver of the *Fœtus*; where it is partly diſtributed into the *Porta*, and partly into the *Cava*.

The *Urachus* is only plainly found in Brutes; tho there is no doubt but it has place likewiſe in Mankind. See URACHUS.

The Uſe of theſe *Veſſels*, is to maintain a Continuity and Communication between the Mother and the *Fœtus*.—Some Authors will even have it, that the *Fœtus* receives its Food and Increaſe this way; and that it grows, like a Vegetable, from the Mother as the Root, of which the *Umbilical Veſſels* are the Stem; and the Child the Head or Fruit of this Plant-Animal. See CIRCULATION, NUTRITION, FOETUS, *&c.*

UMBILICAL *Region*, is that Part of the Abdomen lying round about the *Umbilicus*, or Navel. See ABDOMEN, and REGION.

Funiculus UMBILICALIS, popularly call'd the Navel-ſtring, is a kind of String, form'd of the *Umbilical* Veſſels; which being ty'd up in a common Coat, or Membrane, traverſe the Secundines, and are inſerted at one end into the *Placenta* of the Mother, and at the other into the Abdomen of the *Fœtus*. See UMBILICAL *Veſſels*.

The Navel-ſtring is membranous, wreathed, and unequal; ariſing out of the middle of the Abdomen, and reaching to the *Placenta Uterina*: 'Tis uſually half an Ell in length, and as thick as one's Finger.—It was neceſſary it ſhould be ſo long and lax, that when the *Fœtus* in the Womb grows ſtrong, it might not break it by its ſprawling and tumbling about; and that after it is born, the Secundine, or After-Birth, might be drawn out the better by it.

The way that it paſſes from the Navel to the *Placenta*, is very unconſtant; for ſometimes it goes upon the right Hand to the Neck, which having incompaſs'd, it deſcends to the *Placenta*; and ſometimes it goes on the left Hand up to the Neck, *&c.* Sometimes it comes not to the Neck at all, but goes firſt a little up towards its Breaſt, and then turns round its Back, and from thence paſſes to the *Placenta*.

This Part, at the Birth, is either broke, or cut away to the Navel; ſo that its *Veſſels*, *viz.* two Arteries, a Vein, and *Urachus*, become perfectly uſeleſs, as *Veſſels*; and drying up, become impervious, and ſerve only as Ligaments to ſuſpend the Liver.

UMBILICAL *Points*, in Mathematicks, the ſame with *Foci*. See FOCUS.

UMBILICUS, the *Navel*, in Anatomy, the middle of the Mid-part of the lower Venter, or Belly; being the Place thro' which the *Umbilical* Veſſels paſs out of the *Fœtus* to the *Placenta* of the Mother.

The Word is pure *Latin*, form'd of *Umbo*, the little bunch in the middle of a Buckler; by reaſon of its reſemblance to the Navel. See UMBILICAL *Veſſels*.

UMBILICUS, in Mathematicks, the ſame with *Focus*. See FOCUS.

UMBONE, or *Horn*, among Floriſts, ſignifies any pointed Style, or Piſtil, in the middle of a Flower. See PISTIL.

There is alſo an *Umbone* call'd *doubly-pointed*, or *by-parted*, as in the Peony; and ſometimes the *Umbone* has four ſharp Points, in which Caſe it is termed, an *Umbone* divided into ſo many Heads, or cut into three or four Parts.

UMBRELLO. See UMBELLA.

UMPIRE, a third Perſon, choſen to decide a Controverſy left to an Arbitration, in caſe the Arbitrators ſhould not agree. See ARBITRATOR.

This, ſome call a *Sur-Arbitrator*.

Minſhew ſuppoſes the Word form'd of the French *un pere*, a Father.

UNCASING, among Hunters, the cutting up, or fleaing of a Fox.

UNCIA, a Term generally us'd for the twelfth Part of a Thing.——In this Senſe, the Word occurs in *Latin* Writers, both for a Weight, call'd an *Ounce*; and a Meaſure, call'd an *Inch*. See OUNCE, and INCH; ſee alſo WEIGHT, and MEASURE.

UNCIA *Terræ*, or *Agri*, is a Phraſe frequently met withal in the antient Charters of the *Britiſh* Kings; but what the Quantity of Ground was, is a little obſcure.—All that we know for certain, is, that it ſignify'd a large Quantity, as much as 12 *Modii*. See MODIUS *Terræ*.

UNCIÆ, in Algebra, are the Numbers prefix'd to the Letters of the Members of any Power, produced from a Binomial, Reſidual, or Multinomial Root. See ROOT.

Thus, in the fourth Power of $a+b$, that is, $aaaa+4aaab+6aabb+4abbb+bbbb$, the *Unciæ* are 4, 6, 4. See POWER, &c.

Sir *I. Newton* gives a Rule for finding the *Unciæ* of any Power ariſing from a Binomial Root. Thus:

Let the Index of the Power be called m; then will the *Unciæ* ariſe from ſuch a continual Multiplication as this, *viz.* $1\times\frac{m-0}{1}\times\frac{m-1}{2}\times\frac{m-2}{3}\times\frac{m-3}{4}\times\frac{m-4}{5}$, &c. Thus, if the *Unciæ* of the Biquadrate, or fourth Power, were requir'd; the Rule is, $1\times\frac{4-0}{1}(=4)\times\frac{4-1}{2}(=6)\times\frac{4-2}{3}(=4)\times\frac{4-3}{4}(=1)$; which ſhews, that the *Unciæ* are 1,4,6,4,1. See POLYGONAL *Number*.

Or thus: The Terms of any Powers are compounded of certain literal *Factums*, with Numbers call'd *Unciæ*, prefix'd; and the *Factums* are found, by making two Geometrical Progreſſions; the firſt of them beginning from the requir'd Power of the firſt Part of the Root, and ending in Unity; and the ſecond beginning with Unity, and ending in the requir'd Power of the ſecond Part: Thus, for a ſixth Power of $a+b$;

$a^6\ a^5\ a^4\ a^3\ a^2\ a^1$ firſt Series,
$1\ b\ b^2\ b^3\ b^4\ b^5\ b^6$ ſecond Series,

and multiplying the Terms of the ſame Order in either Series into one another: as, $a^6+a^5b+a^4b^2+a^3b^3+a^2b^4+ab^5+b^6$, out of which the ſixth Power of $a+b$ is compounded.

The *Unciæ*, then, are found by writing the Exponents of the Powers of the ſecond Series, *i.e.* of b, under the Exponents of the Powers of the firſt Series, *i.e.* of a; and taking the firſt Figure of the upper Series for the Numerator, and the firſt of the lower for the Denominator of a Fraction, which is equal to the *Uncia* of the ſecond Power; and ſo for the reſt. Thus, for the ſixth Power we have,

6 5 4 3 2 1
1 2 3 4 5 6

Accordingly, $\frac{6}{1}=6$ is the *Uncia* of the ſecond Term of the ſixth Power; $\frac{6\cdot5}{1\cdot2}=\frac{30}{2}=15$, the *Uncia* of the third Term; $\frac{6\cdot5\cdot4}{1\cdot2\cdot3}=\frac{120}{6}=20$, the *Uncia* of the fourth Term; $\frac{6\cdot5\cdot4\cdot3}{1\cdot2\cdot3\cdot4}=\frac{6\cdot5}{1\cdot2}=\frac{30}{2}=15$, the *Uncia* of the fifth Term; $\frac{6\cdot5\cdot4\cdot3\cdot2}{1\cdot2\cdot3\cdot4\cdot5}=\frac{6}{1}=6$, the *Uncia* of the ſixth Term; $\frac{6\,5\,4\,3\,2\,1}{1\,2\,3\,4\,5\,6}=1$, the *Uncia* of the laſt Power. See PYRAMIDAL *Numbers*.

UNCIAL, UNCIALIS, an Epithet which the Antiquaries give to certain large-ſiz'd Letters, or Characters, antiently us'd in Inſcriptions and Epitaphs. See LETTER, CAPITAL, &c.

The Word is form'd from the Latin *Uncia*, the twelfth Part of any thing; and which in geometrical Meaſure ſignify'd the twelfth Part of a Foot, *viz.* an Inch; which was ſuppoſed the Thickneſs of one of theſe Letters.

UNCORE, or UNQUES *Priſt*, q. d. *ſtill ready*, in Law, a Plea for the Defendant, being ſued for a Debt due on a Day paſt, to ſave the Forfeiture of his Bond, &c. by affirming, that he tender'd the Debt at the Time and Place, and that there was none to receive it; and that he is *yet* alſo *ready* to pay the ſame.

UNCTION, the Act of anointing, or ſmeering with Oil, or other fatty Matter.

Mercurial *Unction*, properly applied brings on a Salivation. See SALIVATION.

The Surgeons cure divers Wounds, Ulcers, &c. by repeated *Unctions* with Oils, Unguents, Cerats, &c. See OIL, UNGUENT, LINIMENT, &c.

UNCTION, in Matters of Religion, is uſed for the Character confer'd on ſacred Things, by anointing 'em with Oil.

Such is the *Unction* of Kings, Prophets, Prieſts, &c.—The *Unction* of Kings is ſuppos'd to be a Ceremony introduc'd very late among Chriſtian Princes: *Onuphrius* ſays, none of the Emperors were ever anointed before *Juſtinian* or *Juſtin*. The Emperors of *Germany* took up the Practice from thoſe of the Eaſtern Empire.—King *Pepin* of *France* was the firſt King who receiv'd the *Unction*. See CORONATION.

In the *Romiſh* Church, beſides an *Unction* at Baptiſm, on the Forehead, and at Confirmation, on the Head; they have an *Extreme Unction*, given to People in the Pangs of Death, on the Parts where the five Senſes reſide, being the Parts by which the Perſon might have ſinn'd. See EXTREME *Unction*.

UNCUTH, q. d. *unknown*, is uſed in the antient *Saxon* Laws, for him that comes to an Inn, Gueſt-wiſe, and lies there but one Night: In which Caſe, his Hoſt was not bound to anſwer for any Offence he committed, whereof he was guiltleſs himſelf.

——*Prima nocte poteſt dici* Uncuth, *ſecundo vero*, Gueſt, *tertia nocte* Hoghenehine. *Bracton*, Lib. III. See THIRD *Night awn Hine*.

UNDECAGON, is a regular Polygon of eleven Sides. See POLYGON.

UNDECIMVIR, by the *Greeks* call'd ΟΙΕΝΔΕΚΑ, and by *Jul. Pollux*, *Eparcha*; a Magiſtrate among the antient *Athenians*, who had ten other Collegues, or Fellows in the ſame Poſt.

The Functions of the *Undecimviri* at *Athens*, were much the ſame as thoſe of the *Prevots de Marechauſſee* in *France*. They took care of the apprehending of Criminals; ſecur'd 'em in the Hands of Juſtice; and when they were condemn'd, took 'em again into Cuſtody, that the Sentence might be executed againſt 'em.

They were choſe by the Tribes; each Tribe naming its own: And as the Number of Tribes after *Calliſthenes* was but ten, which made but ten *Eparchæ*, a Scribe or Notary was added, which made the Number eleven: Whence their Name ΟΙΕΝΔΕΚΑ, or *Undecimviri*, as *Cornelius Nepos* calls 'em in the Life of *Phocion*.

UNDEE, or UNDY, in Heraldry. See WAVY.

UNDER *the Sea*, in the Sea Language.—A Ship is ſaid to be ſo when ſhe lies ſtill, or waits for ſome other Ships, with her Helm laſhed, or ty'd up a-Lee.

UNDER-*Currents*—Diſtinct from the *upper*, or *apparent Currents* of the Seas. Some Naturaliſts conclude, there are in divers Places *Under-Currents*, which ſet or drive a contrary way. See CURRENT.

Dr. *Smith*, in the *Philoſophical Tranſactions*, brings the Hypotheſis of *Under-Currents* to ſolve that remarkable Phænomenon, the Sea's ſetting ſtrongly thro' the *Streights* into the *Mediterranean*, with a conſtant Current 20 Leagues broad.—What ſhould become of the vaſt Quantity of Water pour'd in this way; as alſo, of that running from the *Euxine*, thro' the *Boſphorus* into the *Helleſpont*, and thence into the *Archipelago*; is a Speculation that has long employ'd the Philoſophers.

This Author's Conjecture is, That there is an *Under-Current*, whereby as great a Quantity of Water is carried out as comes in.

To confirm this, he obſerves, that between the North and South Foreland, it is either high or low Water upon the Shore three Hours before it is ſo off at Sea: A certain Sign, that tho the Tide of Flood runs aloft, yet the Tide of Ebb runs under-foot, or cloſe by the Ground.

He adds an Account from an able Sailor in the *Baltick* Sound; that going with their Pinnace into the middle Stream, they were carry'd violently away by the Current: But that ſinking a Bucket with a large Cannon Bullet to a certain Depth of Water, it gave check to the Boat's Motion; and ſinking it ſtill lower, the Boat was driven a-head to the Windward, againſt the upper Current, which was not above four or five Fathom deep.

Dr. *Halley* ſolves the Current's ſetting in at the *Streights*, without overflowing the Banks, from the great Evaporations; without ſuppoſing any *Under-Current*. See VAPOUR, and EVAPORATION.

UNDER-*Wood*, is Coppice, or any Wood that is not accounted Timber. See COPPICE, and TIMBER.

UNDER-*Chamberlain of the Exchequer*, is an Officer there that cleaves the Tallies, and reads the ſame; ſo that the Clerk of the Pell, and the Comptrollers thereof, may ſee that the Entries are true. See EXCHEQUER, TALLY, PELLS, &c.

He alſo makes Searches for all Records in the Treaſury, and hath the Cuſtody of the Doomſday Book.—There are two Officers of this Name.

UNDER-*Treaſurer of* England, *Vice-Theſaurarius Angliæ*, an Officer mention'd in the Stat. 39 *Eliz.* and whom ſeveral other Statutes confound with Treaſurer of the Exchequer. See EXCHEQUER.

In the Vacancy of the Lord Treaſurer's Office, he did every thing in the Receit, that the Lord Treaſurer himſelf does. He alſo cheſted up the King's Treaſure at the End of every Term, and noted the Content of Money in each Cheſt, and ſaw it carried to the King's Treaſury in the *Tower*, for the eaſe of the Lord Treaſurer, &c. See TREASURER.

UNDER-*Sheriff*, *Sub vice comes*. See SHERIFF.

UNDER-*Setter*, is an *Inmate*. See INMATE.

UNDER-TAKERS, were antiently ſuch Perſons as were employ'd by the King's Purveyors, and acted as their Deputies. See PURVEYORS.

At preſent, the Name is chiefly uſed for *Upholders*, or Perſons who furniſh out Funerals: And for ſuch as *undertake* any great Work, as the draining of Fens, &c. Stat. 43 *Eliz.*

UNDER-MINING. See SAPPING.

UNDERSTANDING, or *Intellect*, is defined, by the Peripateticks, to be a Faculty of the reaſonable Soul, converſant about intelligible Things, conſider'd as intelligible. See FACULTY and SOUL.

They alſo make it twofold, *viz. Active* and *Paſſive*.

Active Underſtanding, they hold, that Faculty of the Soul by which the Species and Images of intelligible Things are framed, on occaſion of the preſence of Phantaſms or Appearances thereof.—For maintaining the Intellect to be Immaterial, they hold it impoſſible it ſhould be diſpoſed to think by any diſproportionate Phantaſms of mere Body, and therefore is obliged to frame other proportionate Species of it ſelf; and hence its Denomination *active*.

Paſſive Underſtanding, is that which receiving the Species framed by the *Active Underſtanding*, breaks forth into actual Knowledge. See KNOWLEDGE.

The Moderns ſet aſide the *Peripatetic* Notion of an *active Underſtanding*.—The *Carteſians* then define the *Underſtanding* to be that Faculty, whereby the Mind converſing with, and as it were intent on, itſelf, evidently knows what is true in any thing not exceeding its Capacity. See JUDGMENT.

The *Corpuſcular* Philoſophers define the *Underſtanding* to be a Faculty, expreſſive of Things which ſtrike on the external Senſes, either by their Images, or their Effects, and ſo enter the Mind.—Their great Doctrine is, *Nihil eſſe in Intellectu quod non prius fuerit in ſenſu*; and to this Doctrine our famous Mr. *Locke*, and moſt of our lateſt *Engliſh* Philoſophers ſubſcribe.

The *Carteſians* cry out aloud againſt it, between whom and the *Corpuſcularians* there is this farther Difference, that the latter make the Judgment to belong to the *Underſtanding*; but the former to the Will. See WILL.

Hence, according to the moſt approved Opinion of the *Corpuſcularians*, the *Underſtanding* has two Offices, *viz. Perception* and *Judgment*; according to the *Carteſians* only one, *viz. Perception*. See PERCEPTION.

Underſtanding is alſo uſed for the Act, Exerciſe, or Exertion of this Faculty; or the Action whereby the Mind knows Things, or repreſents 'em in Idea to itſelf.

UNDULATION, in Phyſicks, a kind of tremulous Motion, or Vibration, obſervable in a Liquid; or a ſort of wavy Motion, whereby a Liquid alternately riſes and falls, like the Waves of the Sea.

And hence it is that this Term takes its riſe, *Unda* ſignifying *Wave*. See WAVE.

This *Undulatory* Motion, if the Liquid be ſmooth and at reſt, is propagated in Concentrick Circles, as moſt People have obſerved upon throwing a Stone or other matter upon the Surface of a ſtagnant Water, or even upon touching the Surface of the Water lightly with the Finger, or the like.

The Reaſon of theſe circular Undulations is, that by touching the Surface with the Finger there is produced a Depreſſion of the Water in the place of Contact. By this Depreſſion the ſubjacent Parts are moved ſucceſſively out of their place, and the other adjacent Part thruſt upwards, which lying ſucceſſively on the deſcending Liquid, follow it; and thus the Parts of the Liquid are alternately rais'd and depreſs'd, and that circularly.

When a Stone is thrown into the Liquid, the reciprocal Vibrations are more conſpicuous: Here the Water in the Place of Immerſion, riſing higher, by means of the Impulſe or Rebound, till it comes to fall again, gives an Impulſe to the adjoining Liquid, by which means that is likewiſe rais'd about the place of the Stone, as about a Centre, and forms the firſt undulous Circle; which falling again, gives another Impulſe to the Fluid next to it further from the Centre, which likewiſe riſes in a Circle; and thus, ſucceſſively, greater and greater Circles are produced.

Undulatory Motion, is likewiſe applied to a Motion in the Air, whereby its Parts are agitated after the like manner as Waves in the Sea; as is ſuppoſed to be the Caſe when the String of a muſical Inſtrument is ſtruck. See CHORD.

This *Undulatory* Motion of the Air, is ſuppoſed the Matter or Cauſe of Sound. See SOUND.

Inſtead of the *Undulatory*, ſome Authors chuſe to call this a *vibratory Motion*. See VIBRATION.

UNDULATION is alſo uſed, in Chirurgery, for a Motion enſuing in the Matter contain'd in an Abſceſs, upon ſqueezing it.—A Tumor is ſaid to be in a condition for opening, when one perceives the *Undulation*. See TUMOR.

UNGELD, in our antient Cuſtoms, *ſi Frithman*, i. e. *Homo pacis, fugiet & repugnet, & ſe nolit indicare; ſi occidatur jaceat* Ungeld, *i. e.* no pecuniary Compenſation ſhall be made for his Death, Skinner.—*Ungilda Aker*, mention'd in *Brompton*, has much the ſame Signification, *viz.* where any Man was kill'd attempting any Felony, he was to lie in the Field unburied, and no pecuniary Compenſation to be made for his Death. From the *Saxon*, *an*, without, *gilda ſolutio*, & *acera*, *ager*, Field.

UNGUENT, UNGUENTUM, in Chirurgery, a topical Remedy, or Compoſition, uſed in the dreſſing of Wounds and Ulcers. See WOUND, &c.

Unguents, Liniments, and Cerats, are external Forms applied on divers Parts of the Body, both to cure, and to eaſe and relieve 'em.—They only differ from each other in Conſiſtence, with regard to which Unguents hold the Medium; being ſtiffer than *Liniments*, but ſofter than *Cerats*. See LINIMENT, and CERAT.

Oils are ordinarily the Baſes of all three; to which are added Wax, *Axungia*, and ſeveral Parts of Plants, Animals, and Minerals, both in reſpect of the Virtues they furniſh, and to give a Conſiſtence to the Oils, and to keep 'em longer on the Part, that they may have more time to act.

The Principal *Unguents* are *Unguentum Roſatum*, *Unguentum Album*, or white Unguent of Ceruſs; the *Populeum* made of the Buds of the Poplar-Tree; the *Unguentum Apoſtolorum*, ſo call'd from the twelve Drugs it conſiſts of, a Cleanſer; the *Ungentum Baſilicum*, a Suppurative; the *Unguentum Egyptiacum*, Cauſtic; the *Unguentum Aureum*, Incarnative and Cicatrizing; the *Unguent. de Apio*, Mundicative; the *Unguent. Agrippæ*, ſaid to be diſcover'd by King *Agrippa*. See each under their proper Articles, POPULEUM, EGYPTIACUM, APOSTOLORUM, &c.

Pomatums are alſo rank'd in the Number of *Unguents*. See POMATUM.

UNGUIS, a *Latin* Term, ſignifying a Nail of the Hand or Foot. See NAIL.

UNGUIS, in Medicine, a Diſeaſe of the Eye, occaſion'd by a nervous Excreſcence on the *Conjunctiva*, beginning at the great *Canthus* and ſpreading inſenſibly till it reach the *Pupil*, and at laſt quite cover it. See CONJUNCTIVA.

The ordinary Cauſe of the *Unguis* is an exceſſive Acrimony in the Tears, which corrode the *Conjunctiva*, as is often the Caſe in an *Opthalmia*, or after the Small-Pox.

The *Greeks* call it πτερύγιον. See PTERYGIUM.

UNGUIS, in Anatomy, is applied to two Bones of the Noſe, being as thin as Scales, and reſembling the Nail; whence their Name. See NOSE.

The *Ungues* are the ſmalleſt Bones in the upper-Jaw, and are ſituate cloſe to the great *Canthus* of the Eyes. See MAXILLA.

Some Authors call them *Oſſa Lachrymalia*, but improperly; there being no *Glandula Lachrymalis* in the *Canthus*. Others call 'em *Orbitaria Oſſa*.

They are contiguous to four other Bones, *viz.* the Coronal, that of the Noſe, the Maxillary, and that part of the *Ethmoides* which forms the Orbit.

UNGUIS, or *Unguiculus*, among Botaniſts and Floriſts, is a little Speck, of a different Colour from the reſt of the *Petala*, or Leaves of Flowers. See PETALA.

It has the figure of a Nail of the Hand: Its place is at the Origin, or Root of thoſe Leaves; as we ſee in the Roſe, Poppy-flowers, and divers others.

In preparing of Medicines, the *Ungues*, or *Unguiculi*, are pull'd off the Flowers that enter the ſame.

UNGUIS *Odoratus*. See BLATTA *Bizantia*.

UNGULA, in Geometry, is the Section of a Cylinder cut off by a Plane paſſing obliquely thro' the Plane of the Baſe, and part of the cylindrick Surface. See MOTION.

UNGULA, in Natural Hiſtory, the Claw, or Hoof of a Quadruped. See HOOF.

UNGULA *Alcis*, the Elk's Claw. See ELK.

UNGULA, among Surgeons, a ſort of hooked Inſtrument where-withal to extract a dead Fœtus out of the Womb.

UNICORN, in Natural Hiſtory, an Animal famous among the *Greek* Authors, under the Name of Μονοκέρως, and among the *Latins*, *Engliſh*, *French*, &c. under thoſe of *Unicornis*, *Unicorn*, *Licorne*, &c.

All theſe Names it takes from its diſtinguiſhing Characteriſtic, the having one Horn only, which is repreſented as five Palms long, growing in the middle of the Forehead.

This Animal claims a place here, not only as it makes a curious Article in Natural Hiſtory, but alſo as it furniſhes ſomething to Medicine, Commerce, and Heraldry.

The popular Account is, that it is about the ſize of a Horſe, its Hair ſhort and of a dark-brown colour; very timerous, and therefore keeping moſtly in the Woods; and that its true Place is the Province of *Agoas* in the Kingdom of *Damotes*, in *Ethiopia*.

And. Marin, a learned Phyſician of *Venice*, has wrote an expreſs Treatiſe on the *Falſe Opinion of the Unicorn*.

The firſt Author, according to *Pliny*, who wrote of the *Unicorn*, was one *Creſius*, whom *Ariſtotle* mentions as a very ſuſpicious Author. *Ælian* only ſpeaks of it in very doubtful Terms. The other Authors on the Subject are *Philoſtratus*, and *Solinus*; *Æneas Sylvius*, who is Pope *Pius* II. *Marcus Paulus*, *Aloeſius*, *Geſner*, *Garcias ab Horto*, &c. Of theſe, ſome ſay it reſembles a Horſe, others an Aſs, others a Goat, by its Beard; others an Elephant, others a Rhinoceros, others a Grey-hound, *&c.*

Munſter and *Thevet* will have it an amphibious Animal, and its Horn to be moveable at pleaſure. Others make all its Strength to conſiſt in its Horn, and add, that when purſued by the Hunters it precipitates its ſelf from the tops of the higheſt Rocks, and pitches upon its Horn, which ſuſtains the whole Effort of its Fall ſo that it receives no damage thereby. In effect, the ſeveral Authors do all give ſeveral Accounts of the Figure and Colour, both of the Animal and of its Horn, and all its Parts.——And hence the more knowing among the Moderns do unanimouſly hold it a fabulous Animal.

The Legend adds, that it is wonderful fond of chaſte Perſons; and therefore, in order to take it, a Virgin is placed in its way, whom when the *Unicorn* ſpies, he lies down by her, and lays his Head on her Lap, and ſo falls a-ſleep; upon which the Virgin making a Signal, the Hunters come in and take the Beaſt; which could never be caught any other way, becauſe it would either caſt it ſelf head long from a Rock, or die.

What ordinarily paſſes among us for *Unicorn's Horn*, and is ſhewn for ſuch in the Collections of Curioſities, and uſed for ſuch by ſeveral Phyſicians, we are aſſured by *Pereyra*, in his Account of *Greenland*, to be the Tooth of a large Fiſh of the Whale Kind, call'd by the Iſlanders *Narwal*; and, in other Places, *Walrus* and *Robart*; frequent enough in the icy Sea.

This Tooth, or Horn, turn'd, channel'd, and terminating in a Point, as it is, ſprings out of the middle of the fore-part of the upper-Jaw, where it has a Root a Foot long, as thick as the Horn itſelf: 'tis the only Tooth the Animal has in the upper-Jaw; and ſerves it as a Weapon of Defence, wherewith it dares to attack the largeſt Whale.——It can ſtrike it with ſuch violence as even to pierce the Side of a ſtrong built Ship.

There is a fine Horn of this kind preſerv'd in the Repoſitory of St. *Denis* at *Paris*, given by *And. Thevet*, and pretended to have been a Preſent to him from the King of *Monomotapa*, who carried him to hunt the *Unicorn*; which is frequent in that Country: This Horn ſome have ſuſpected to be an Elephant's Tooth, carved in that manner. At *Strasbourg* there is another, between ſeven and eight Foot long. In the Repoſitory at *Venice*, there is a good Number; all different from each other.

The Antients held the *Unicorn's Horn* to be a Counterpoiſon; and, that the Animal uſed to dip it in the Water, to purify and ſweeten it ere it wou'd drink: 'Tis added, that for the ſame reaſon other Beaſts wait to ſee it drink before 'em. Thence, as alſo from the Rarity of the Thing, People have taken Occaſion to attribute divers medicinal Vertues thereto.

But *Amb. Paré* has proved it a mere piece of Charletanery, and all the Virtues attributed to it to be falſe; and yet the Price it has bore is almoſt incredible: *Andrea Racci*, a Phyſician of *Florence*, affirms, the Pound of 16 Ounces, to have been ſold in the Apothecaries Shops for 1536 Crowns, when the ſame weight of Gold was only worth 148 Crowns.

UNICORN, in Heraldry, is repreſented *paſſant*, and ſometimes *rampant*: When in this laſt Action, as in the *Engliſh* Arms, it is properly ſaid to be *ſaillanti*, Argent: an *Unicorn* ſeiant ſable, armed and unguled, Or. Borne by the Name of *Harding*.

The *Unicorn* is one of the Supporters of the Arms of *England*. See SUPPORTER.

UNIFORM, UNIFORMIS, denotes a thing to be ſimilar, or conſiſtent either with another thing or itſelf, in reſpect of Figure, Structure, Proportion, and the like.—In which ſenſe it ſtands oppoſed to *Difform*. See SIMILITUDE.

UNIFORM, or *Equable Motion*. See MOTION.

UNIFORM *Flowers of Plants*, are ſuch as are of the ſame Figure all a-round, having their fore and back-parts, as alſo their right and left-parts exactly a like. See FLOWER.

When they are otherwiſe, they are term'd *difform Flowers*. See DIFFORM.

UNIFORMITY, *Regularity*, a Similitude or Reſemblance between the Parts of a Whole.——Such is that we meet withal in Figures of many Sides and Angles reſpectively equal and anſwerable to each other. See REGULAR.

A late Ingenious Author makes Beauty to conſiſt in Uniformity, join'd or combined with Variety. See BEAUTY.

Where the Uniformity is equal in two Objects, the Beauty, he contends, is as the Variety; and where the Variety is equal, the Beauty is as the *Uniformity*. See DEFORMITY.

UNIFORMITY, is particularly uſed for one and the ſame Form of Public Prayers, and Adminiſtration of Sacraments, and other Rites, *&c.* of the Church of *England*, preſcribed by the famous Stat. 1 *Eliz.* and 14 *Car.* II. call'd *the Act of Conformity*.

UNION, a Junction, Coalition, or Aſſemblage of ſeveral Things in one.

Philoſophers are exceedingly to ſeek about the manner of the *Union* of Soul and Body, or by what Medium it is that two ſuch heterogeneous Beings are kept ſo cloſely together.—'Tis one of the great Laws of this *Union*, that ſuch and ſuch an Impreſſion on the Brain be follow'd by ſuch and ſuch a Senſation, or Perception in the Soul. See SOUL, SENSATION, MOTION, *&c.*

UNION, in an Eccleſiaſtical Senſe, is a combining or conſolidating of two Churches into one. See CHURCH, BENEFICE, CONSOLIDATION, *&c.*

This is not done without the Conſent both of the Biſhop, the Patron, and the Incumbent. See PATRON, *&c.*

The Canoniſts diſtinguiſh three kinds of *Union*, that of *Acceſſion*, that of *Confuſion*, and that of *Equality*.

The *Union* of *Acceſſion* is the moſt uſual: by this the united Benefice becomes a Member, and acceſſory of the Principal.

The *Union* by *Confuſion*, is that where the two Titles are ſuppreſs'd, and a new one created including both.

In the *Union* of *Equality* the two Titles ſubſiſt; but equal, and independent.

By Stat. 37 *Hen.* VIII. it is enacted, That an *Union*, or Conſolidation of two Churches may be admitted, provided the annual Value of one of them, in the King's Books, don't exceed 6 *l.* and the diſtance between them, be not above one Mile.——And by another, Stat. 17 *Car.* II. it is enacted, That the *Union* of two Churches or Chapels in any City or Town, ſhall be valid, unleſs the Value of the Churches, ſo united, exceed 100 *l.*

UNION, or *the Union* by way of Eminence, is particularly uſed, among us, to expreſs the Act whereby the two ſeparate Kingdoms of *England* and *Scotland* were incorporated into one, under the Title of *the Kingdom of* Great Britain.

This *happy Union*, in vain attempted by King *James* I. was at length effected in the Year 1707, by the general Conſent of the Queen, and the Eſtates of each Realm.

The Act, or Treaty of *Union*, conſiſts of Twenty-five Articles; which eleven *Engliſh* Commiſſioners and eleven *Scotiſh* ones, examin'd, approved, and ſign'd on the 3d of *Auguſt*, 1706. The Parliament of *Scotland* approved it on the 4th of *February*, 1707; and the Parliament of *England*, the 10th of *March* in the ſame Year.—On the 17th following, the Queen went to Parliament, where ſhe approved the ſame Treaty, with the Act of Ratification.

Since that time, there is only one Privy-Council and one Parliament for the two Kingdoms: The *Scotiſh* Parliament is ſuppreſs'd, or, rather ſuper-added to the *Engliſh*, both of them only conſtituting one, under the Title of the Parliament of *Great Britain*.

The Number of Members which by the Articles of the *Union* the *Scots* are to ſend into the Houſe of Commons, to repreſent the Commons of that Country, are 45; and the Number of Peers whereby their Peerage is to be repreſented, is 16.

The great Officers of the Crown of *Scotland*, before the *Union*, were the Lord High Chancellor, Lord High Theſaurer or Treaſurer, Lord Privy-Seal, and Lord Regiſter. Their leſſer Officers of State were, the Lord Regiſter, Lord Advocate, Lord Theſaurer Depute, and Lord Juſtice-Clerk.

The four firſt Officers are diſſolv'd by the *Union*, and inſtead thereof new Officers are erected, ſerving for both Countries under that Title of *Lord High Chancellor of* Great Britain, *&c.* See CHANCELLOR, TREASURER, *&c.*

The four latter Offices ſtill ſubſiſt. See ADVOCATE, REGISTER, *&c.*

UNION, in a philoſophic Senſe, is uſed, by Dr. *Grew*, for one of the three ways of Mixture; being the Joining tother of Atoms or inſenſible Particles ſo as to touch in a Plane, as is ſuppoſed to be the Caſe in the Cryſtallizations of Salts, and the like Bodies. See MIXTURE, CRYSTALLIZATION, *&c.*

UNION-*Pearls*, are ſuch Pearls as grow in the Couples; the beſt ſort of Pearls. See PEARL.

UNION, in Architecture, is particularly uſed for a Harmony between the Colours in the Materials of a Building.

UNION, among Painters, expreſſes a Symmetry and Agreement between the ſeveral Parts of a Painting; when, *e.g.* there is a deal of Relation and Connexion between them, both as to the Figures, and the Colouring: ſo that they apparently conſpire to form one thing. See SYMMETRY.

When this *Union* is finely manag'd, ſome call it *Suavity*.

UNISON, in Muſick, is the Effect of two Sounds, which are equal in degree of Tune, or in point of Gravity and Acuteneſs. See TUNE.

Or, *Uniſon* may be defined a Conſonance of two Sounds, produced by two Bodies of the ſame Matter, Length, Thickneſs, Tenſion, equally ſtruck, and at the ſame time; ſo that they yield the ſame Tone, or Note. See NOTE.

Or, it is the *Union* of two Sounds, ſo like each other, that the Ear perceiving no difference, receives them as one and the ſame Sound. See SOUND.

What conſtitutes *Uniſonance*, is the Equality of the Number of Vibrations of the two ſonorous Bodies in equal Times: Where there is an Inequality in that reſpect, and of conſequence an Inequality in degree of Time; the unequal Sounds conſtitute an *Interval*. See INTERVAL, and VIBRATION.

Uniſon is the firſt and greateſt of Concords; and the Foundation, or, as ſome call it, the *Mother* of all the reſt: Yet ſome deny it to be any Concord at all; maintaining it to be only that in Sounds, which Unity is in Numbers. See UNITY.

Others reſtrain the Word *Concord* to Intervals, and make it include a difference of Tune; but this is precarious: for as the Word *Concord* ſignifies an Agreement of Sounds, 'tis certainly applicable to *Uniſons* in the firſt degree.

But tho *Uniſonance*, or an Equality of Tune, makes the moſt perfect Agreement of Sound; it is not true that the nearer any two Sounds come to an Equality of Tune, they are the more agreeable.—The Mind is delighted with Variety; and the Reaſon of the Agreeableneſs or Diſagreeableneſs of two Sounds, muſt be aſcrib'd to ſome other Cauſe than the Equality or Inequality of the Number of their Vibrations. See CONCORD.

'Tis a fam'd Phænomenon in Muſick, that an intenſe Sound being rais'd, either with the Voice or a ſonorous Body, another ſonorous Body near it, whoſe Tune is either *Uniſon* or Octave above that Sound, will ſound its proper Note *Uniſon* or Octave to the given Note.——The Experiment is eaſily try'd by the Strings of two Inſtruments, or by a Voice and a Harpſichord, or a Bell, or even a drinking Glaſs.

This our Philoſophers account for thus: One String being ſtruck, and the Air put in Motion thereby; every other String within the reach of that Motion, will receive ſome Impreſſion therefrom: But each String can only move with a determinate Velocity of Recourſes, or Vibrations; and all *Uniſons* proceed from equal or equidiurnal Vibrations; and other Concords from other Proportions. The *Uniſon* String, then, keeping equal pace with the ſounded String, as having the ſame Meaſure of Vibrations, muſt have its Motion continued and ſtill improv'd, till its Motion become ſenſible, and it give a diſtinct Sound. Other concording Strings have their Motions propagated in different Degrees, according to the frequency of the Coincidence of their Vibrations with thoſe of the ſounded String: The Octave, therefore, moſt ſenſibly; then the fifth: after which, the croſſing of the Motions prevents any effect.

This they illuſtrate by the Pendulum; which being ſet a-moving, the Motion may be continu'd and augmented by making frequent, light, coincident Impulſes; as blowing on it when the Vibration is juſt finiſh'd: But if it be touch'd by any croſs or oppoſite Motion, and this, too, frequently; the Motion will be interrupted, and ceaſe altogether.—So, of two *Uniſon* Strings, if the one be forcibly ſtruck, it communicates Motion by the Air to the other: and being equidiurnal in their Vibrations, that is, finiſhing them preciſely together, the Motion of that other will be improv'd and heighten'd, by the frequent Impulſes receiv'd from the Vibrations of the firſt; becauſe given preciſely when that other has finiſh'd its Vibration, and is ready to return: But if the Vibrations of the Chords be unequal in Duration, there will be a croſſing of Motions, leſs or more, according to the Proportion of the Inequality; by which the Motion of the untouch'd String will be ſo check'd, as never to be ſenſible. And this we find is the Caſe in all Conſonances, except *Uniſon*, Octave, and the Fifth. See CHORD.

UNITARIANS, a Name aſſumed by the new Antitrinitarians; as making Profeſſion to preſerve the Glory and Attribute of Divinity to the *One*, only great and ſupreme God, and Father of our Lord Jeſus Chriſt. See ARIANS, SOCINIANS, *&c.*

UNIT, UNITE, in Arithmetick, the Number *One*; or one ſingle, individual Part of diſcrete Quantity. See NUMBER.

If a Number conſiſt of four or five Places, that which is outermoſt towards the right hand, is called the Place of *Unites*. See NUMERATION.

Number, in general, is by *Euclid* defin'd to be μονάδων πόσότης, a Multitude, or Aggregate of *Unites*; in which Senſe *Unity* is not a Number. See UNITY.

UNITY, the Abſtract or Quality, which conſtitutes or denominates a Thing *unum*, or one.

The School Philoſophers generally define *Unity*, by a Thing's being undivided in it ſelf, and divided from every thing elſe.—Others, more accurately, define it, a Mode of Being, whereby it agrees to any particular being, once; and make two Kinds of *Unity*, viz. *Unity of Simplicity*, which is both undivided and indiviſible; ſuch as is that of God, Angels, and human Souls: The other *Union of Compoſition*; which, tho undivided, is diviſible in the Being, as conſiſting of divers Parts: ſuch is that of Man, *&c.*

Hence, *Unity* is alſo divided into that *per ſe*, which agrees to any Being whoſe Parts are collected into one *Subſtratum*; and *Unity per accidens*, whoſe Parts are not united into one *Subſtratum*; as that of a Flock of Sheep, *&c.*

Some alſo make a *Singular*, or *Numerical Unity*, and an *Univerſal Unity*; a *Real*, and an *Imaginary Unity*, &c.

'Tis diſputed among Mathematicians, whether or no *Unity* be a *Number*.—The generality of Authors hold the Negative; and make *Unity* to be only inceptive of Number, or the Principle thereof; as a Point is of Magnitude, and *Uniſon* of Concord.

Stevinus is very angry with the Maintainers of this Opinion: and yet, if Number be defin'd a Multitude of *Unites* join'd together, as many Authors define it, 'tis evident *Unity* is not a Number. See NUMBER.

UNITY, among Divines.—The *Romaniſts* and the Reform'd diſpute whether or no the Church be one ſingle Body, all the Members whereof are join'd together, either really, or in Inclination; ſo that whatever does not appertain to that Body, is no part of the Church: Which is what they call the *Unity of the Church*; and which the *Romaniſts* maintain is reſtrain'd to one ſingle Society, or one Communion, under one viſible Head; and out of which the Proteſtants are excluded.

Theſe laſt, on the contrary, hold, That the *Unity* of the Church may ſtill ſubſiſt, without being united under any one viſible Head; it being ſufficient that all Chriſtians be united by the Bonds of mutual Love, and Charity; and that they be agreed in the Fundamental Points of Religion.

All the difficulty is to fix what thoſe Fundamentals are; ſome inclining to make the Door of the Church wider than others. See TOLERATION.

UNITY, in Poetry.—In the *Drama* there are three *Unities* to be obſerv'd; *the Unity of Action*, that of *Time*, and that of *Place*. See DRAMA.

In the Epic Poem, the great and almoſt only *Unity*, is that of the Action.—Some regard, indeed, ought to be had to that of Time: That of Place there is no room for. The *Unity* of Character is not reckon'd among the *Unities*. See CHARACTER.

The *Unity* of the Dramatic Action, conſiſts in the *Unity* of the Intrigue in Comedy, and that of the Danger in Tragedy; and this, not only in the Plan of the Fable, but alſo in the Fable extended and fill'd with Epiſodes. See ACTION.

The Epiſodes are to be work'd in, without corrupting the *Unity*, or forming a double Action; and the ſeveral Members are to be ſo connected together, as to be conſiſtent with that Continuity of Action ſo neceſſary to the Body; and which *Horace* preſcribes, when he ſays, ——*ſit quodvis ſimplex dumtaxat & unum*. See EPISODE.

The *Unity of the Epic Action*, M. *Dacier* obſerves, does not conſiſt in the *Unity* of the Hero, or in the *Unity* of his Character, and Manners; tho thoſe be Circumſtances neceſſary thereto. The *Unity of Action*, requires that there be but one principal Action, of which all the reſt are to be Incidents or Dependencies. See HERO, MANNERS, *&c.*

F. *Boſſu* aſſigns three Things requiſite thereto: The firſt, That no Epiſode be uſed but what is fetch'd from the Plan, and Ground of the Action, and which is a natural Member of that Body: The ſecond, that theſe Epiſodes and Members be well connected with each other: The third is, Not to finiſh any Epiſode, ſo as it may appear a whole Action; but to let each be always ſeen in its quality of Member of the Body, and an unfiniſh'd Part.

The ſame excellent Critick examines the *Æneid*, *Iliad*, and *Odyſſee*, with reſpect to theſe Rules, and finds 'em ſtrictly obſerv'd.—Indeed, it was from the Conduct of thoſe divine Poems, that he took the Hint of the Rules themſelves. Inſtances wherein theſe Rules are all neglected, he gives us in *Statius's Thebaid*.

To the *Unity of Time* it is requir'd, in the Drama, that the Action be included in the Space of a Day.

Ariſtotle ſays expreſly, It muſt not exceed the Time the Sun is making one Revolution, which is a Natural Day, under pain of Irregularity: Some Criticks will even have it included in the Space of twelve Hours, or an Artificial Day.

Indeed, the antient Tragic Poets ſometimes diſpens'd with this Rule; and the modern *Engliſh* ones many of 'em diſallow it: few of 'em practiſe it.

In the Epic Poem, the *Unity of Time* is ſtill leſs eſtabliſh'd: In effect, there is no fixing the Time of its Duration; in regard, the warmer and more violent it is, the leſs muſt be its Continuance: Whence it is that the *Iliad*, repreſenting the Anger of *Achilles*, only contains forty ſeven Days at moſt; whereas the Action of the *Odyſſee* holds eight

Years and an half, and that of the *Æneid* almoſt ſeven Years.

But the length of the Poem *Ariſtotle* gives us a Rule for; which is that it be ſuch as it may be read over in one Day: pretending, that if it exceeds that compaſs, the Sight will be bewilder'd in it, and that one can't ſee the End, without having loſt the Idea of the Beginning.

As to the *Unity of Place* and *Scene*, neither *Horace* nor *Ariſtotle* give us any Rules relating thereto.—It were to be wiſh'd, indeed, that what is preſented to the Audience on the ſame Stage, which is never ſhifted, might be ſuppoſed to have paſs'd in the ſame Houſe, and the ſame Apartment. But as ſuch a Conſtraint would cramp the Poet too much; and as ſuch an Uniformity would ſuit very ill with abundance of Subjects; it has been agreed that what paſſes any where in the ſame Town or City, ſhall be allow'd for *Unity of Place*.—At leaſt, if two different Places be unavoidable; yet the Place is never to be chang'd in the ſame Act. See SCENE.

UNITY *of Poſſeſſion*, in Law, ſignifies a joint Poſſeſſion of two Rights, by ſeveral Titles: Thus, if I take a Leaſe of Land upon a certain Rent, and afterwards buy the Fee Simple; this is an *Unity of Poſſeſſion*, whereby the Leaſe is extinguiſh'd: by reaſon I, who before had only the Occupation for my Rent, am now become Lord of the ſame, and am to pay Rent to none but my ſelf.

Unity of Poſſeſſion, in the Civil Law, is the ſame with *Conſolidation*. See CONSOLIDATION.

UNIVERSAL, ſomething that is common to many Things, or it is one Thing belonging to many.

The Word is compounded of *unum verſus alia*.

The *Romaniſts* are divided among themſelves about the Title of *Univerſal Biſhop*, which the Popes have arrogated to themſelves; tho others of 'em have declined it.—*Baronius* holds the Appellation to belong to the Pope *Jure Divino*; and yet S. *Gregory*, oppoſing the ſame Quality given by a Council in 586 to *John* Patriarch of *Conſtantinople*, aſſerted expreſly, that it did not belong to any Biſhop; and that the Biſhops of *Rome* could not nor ought not to take it. Accordingly, S. *Leo* refuſed to accept it, when offer'd him by the Council of *Chalcedon*; for fear, leſt giving ſomething particular to one Biſhop, they ſhould take from all; ſince there could not be an *Univerſal Biſhop*, but the Authority of the reſt muſt be diminiſh'd. See BISHOP, OECUMENICAL, *&c.*

An UNIVERSAL *Dial*, is that whereby the Hour may be found by the Sun all over the Earth; or under any Elevation of the Pole. See DIAL.

There are alſo *Univerſal Inſtruments*, for meaſuring all kinds of Diſtances, as Heights, Lengths, *&c.* call'd alſo *Pantometers*, and *Holometers*. See PANTOMETER.

Several learned Authors have had it in view to eſtabliſh an *Univerſal Character*; by which the different Nations might underſtand each others Writings, without learning their Language. See CHARACTER.

UNIVERSAL, UNIVERSALE, in Logick, is either *Complex* or *Incomplex*.—A *Complex Univerſal*, *Univerſale Complexum*, is either an *univerſal* Propoſition, as, *Every Whole is greater than its Part*; or whatever raiſes a manifold Conception in the Mind; as the Definition of a reaſonable Animal.

An *Incomplex Univerſal*, *Univerſale Incomplexum*, is what produces one only Conception in the Mind, and is a ſimple thing reſpecting many; as Human Nature, which relates to every Individual wherein it is found.

According to the various Order and Reſpect this Univerſe has to many; there are ſeven Modes thereof aſſign'd: *viz.*

Univerſals in cauſing, ſuch are the common efficient Cauſes of divers Effects; as *God*, the *Sun*, &c. See CAUSE, *&c.*

Univerſals in diſtributing, ſuch are common or *univerſal* Signs; as *all*, *none*, &c.

Univerſals in knowing, which know all things; as the Underſtanding, *&c.*

Univerſals in repreſenting, ſuch are Images, or Ideas of *univerſal* Things; as the Idea of a Houſe, of a Man, *&c.*

Univerſals in ſignifying, ſuch are common Words, ſignifying many things; as Animal, Stone, *&c.*

Univerſals in being, or *exiſting*, are Natures exiſting in ſeveral; as Humanity in *Peter*, *Paul*, &c. And,

Univerſals in predicating, which exiſting in many things, are ſeparately predicated of 'em all; as, *ens*, and *unum*: Theſe are alſo call'd *Logical Univerſals*.

All theſe Kinds of *Univerſals*, the two laſt only excepted, are not *Univerſals* in themſelves, but only with reſpect to their Objects *cauſed*, *repreſented*, &c. So that what we chiefly conſider as *Univerſals*, are the *Univerſalia in eſſendo*, and *prædicando*.

Now in an *Univerſal*, they diſtinguiſh two things, the *Matter*, called the *Material Univerſal*, *Univerſale Materiale*, which is the one Nature multipliable in many; as Humanity in *Peter*, *Paul*, &c. and the *Form*, call'd the *Formal Univerſal*, which is the Unity of that Nature.

Wherefore, to conſtitute an *Univerſal*, 'tis requiſite the Nature be one, yet multipliable: But what ſuch a Nature is, has proved Matter of great Controverſy, both among the antient and modern Philoſophers.

The *Platoniſts* will have *Univerſals* to be nothing but divine Ideas.——Now by Idea they mean the Pattern or Form which the Artificer has in view, when he makes any thing: But as this is twofold, *internal*, which is a ſort of Image of the Thing to be done, which the Artificer frames in himſelf; and *external*, which is ſomething out of himſelf, which the Artificer imitates: the Philoſophers have been infinitely perplex'd, to find which of the two *Plato* meant.—The *Peripateticks* inſiſt he meant the *External*; but the *Platoniſts*, and moſt of the Chriſtian Divines, hold for the *Internal*.

The *Stoicks* and *Nominaliſts* hold this in common with the *Platoniſts*, That *Univerſals* are not in the Things themſelves, but out of 'em: The *Stoicks*, particularly, for *Univerſals*, put a kind of formal Conceptions, or Acts of knowing; by reaſon they repreſent many things at the ſame time: *e. g.* Knowledge, repreſenting all Men, is, according to the *Stoicks*, an *Univerſal*.

The *Nominaliſts* make Words *Univerſals*; by reaſon the ſame Word repreſents many things, as the Word *Man* repreſents all Men: But both *Stoicks* and *Nominaliſts* make *Univerſals* to be ſomething extrinſick to Things themſelves; by reaſon whatever exiſts, or is produced, is ſingular: ſo that there is no *Univerſal* really in Things.

The *Peripateticks*, however, contend that there are *Univerſal* and *Common* Natures in Things themſelves; or that Things and Natures, like each other, form a Material *Univerſal*.—But as to the Manner wherein they are *univerſal*, or whence they derive their *Univerſality*, that is, their Unity and Aptitude of being in many, whether from Nature, or from our Underſtanding, is matter of diſpute among 'em.—If they derive that Unity, wherein their *univerſal* Form is placed, from Nature; then, there is an *Univerſal à parte Rei*; which is the Opinion of the *Scotiſts*. See SCOTISTS.

If they don't derive it from Nature, but only from our Minds or Underſtandings, then the Doctrine of the *Thomiſts* is allow'd; who contend that a formal *Univerſal* has no other Exiſtence, but by an Act of the Intellect. See THOMISTS.

UNIVERSALISTS, in Polemical Divinity, an Appellation given to ſuch as hold *univerſal* Grace: In like manner as *Particulariſts* is given to thoſe who hold *particular* and *efficacious* Grace. See GRACE, *&c.*

The *Arminians* are particularly denominated *Univerſaliſts*. See ARMINIAN, and REMONSTRANT.

UNIVERSALITY, the Quality that denominates a thing *Univerſal*.

The Catholicks aſſert the *Univerſality* of their Church, both as to Time, and Perſons; and maintain this to be a Mark of the true Church; which diſtinguiſhes it from all other Societies that pretend to the Name. See UNIVERSAL.

UNIVERSALITY, in the Schools.—Logicians make two Kinds of *Univerſality*; the one Metaphyſical, the other Moral.

Metaphyſical Univerſality, is that which excepts nothing; as this Propoſition, *Every Man is mortal*.

Moral Univerſality, is that which admits of ſome Exception; as, *All old Men praiſe the Times paſt*. In ſuch-like Propoſitions, 'tis enough the Thing be ordinarily ſo; it not being ſtrictly requir'd that every old Man ſhould be of that Sentiment.

UNIVERSE, a collective Name, ſignifying *the whole World*, or the Aſſemblage of all Bodies; call'd by the *Greeks* τὸ πᾶν; and by the *Latins*, *Mundus*, and *Univerſum*; as being no other than an Univerſity of Bodies. See WORLD.

The Antients, and after them the *Carteſians*, imagin'd the *Univerſe* to be infinite.——The Reaſon they give, is, That it implies a Contradiction to ſuppoſe it finite, or bounded; ſince it is impoſſible not to conceive Space beyond any Limits that can be aſſign'd it: Which Space, according to the *Carteſians*, is Body; and conſequently part of the *Univerſe*. See SPACE.

But that the *Univerſe* is finite, appears from the two following Conſiderations—1ſt, That whatever conſiſts of Parts, cannot be infinite; ſince the Parts that compoſe it, muſt be finite either in Number or Magnitude; which if they be, what they compoſe muſt be ſo too: Or, 2dly, they muſt be infinite in Number or Magnitude; but an infinite Number is a Contradiction; and to ſuppoſe the Parts infinitely big, is to ſuppoſe ſeveral Infinites, one bigger than another; which, tho it may paſs among Mathematicians, who only argue about Infinites *in poſſe*, or in Imagination, will not be allow'd in Philoſophy.

UNIVERSITY, a collective Term, applied to an Aſſemblage of ſeveral Colleges eſtabliſh'd in a City, wherein are Profeſſors in the ſeveral Sciences, appointed to teach them to Students; and where Degrees, or Certificates of

Study

Study in the divers Faculties are taken up. See ART, and SCIENCE.

In each *Univerſity*, four Faculties are uſually taught; Theology, Medicine, Law, and the Arts and Sciences. See FACULTY.

They are call'd *Univerſities*, or *Univerſal Schools*, by reaſon the four Faculties are ſuppoſed to make the World or *Univerſe* of Study.

In the Eye of the Law, an *Univerſity* is held a mere Lay Body, or Community; tho, in reality, it be a mix'd Body, compos'd partly of Laymen, and partly of Eccleſiaſticks. See COMMUNITY, COMPANY, &c.

Univerſities had their firſt Riſe in the XIIth and XIIIth Centuries.—Thoſe of *Paris* and *Boulogne* pretend to be the firſt that were ſet on foot; but then they were on a different Footing from the *Univerſities* among us. See SEMINARY, and SCHOOL.

The *Univerſity* of *Paris* is ſaid to have commenced under *Charlemaign*, and to owe its Riſe to four *Engliſhmen*, Diſciples of Venerable *Bede*; who going to that City, made a Propoſal to ſet up and ſell Learning; and accordingly held their firſt Lectures in Places aſſign'd 'em by that Prince: Such is the Account given by *Gaguin*, *Gilles*, *de Beauvais*, &c. Tho the Authors who wrote in thoſe Days, as *Eginard*, *Acmon*, *Rheginon*, *Sigebert*, &c. make not the leaſt mention thereof.

Add, that *Paſquier*, *du Tillet*, &c. declare openly againſt the Opinion; and aſſert, that its firſt Foundations were not laid till *Louis* the Young, and *Philip Auguſte*, in the XIIth Century.——The earlieſt mention we find made of it, is in *Regordus*, who lived in that Age; and who was Cotemporary with *Peter Lombard*, the Maſter of the Sentences, the great Glory of that *Univerſity*; in Memory of whom, an Anniverſary is to this Day obſerv'd by that Body, in the Church of S. *Marcel*, where he lies buried.

But 'tis certain it was not eſtabliſh'd all at once: It appears to have been at firſt no other than a publick School in the Cathedral Church; from which it grew, by little and little, under the Favour and Protection of the Kings, into a regular Body.

In effect, our own *Univerſities*, *Oxford* and *Cambridge*, ſeem intitled to the greateſt Antiquity of any in the World; and *Univerſity*, *Baliol*, and *Merton* Colleges in *Oxford*, and St. *Peter's* in *Cambridge*, all made Colleges in the XIIIth Century, may be ſaid to be the firſt regular Endowments of this kind in *Europe*.

For tho *Univerſity* College in *Cambridge* had been a Place for Students ever ſince the Year 872; yet this, like many of the other antient Colleges beyond Sea, and *Leyden* to this Day, was no proper College; but the Students, without any Diſtinction of Habit, liv'd in Citizens Houſes; having only Meeting-Places to hear Lectures, and diſpute.

In After-times, there were Houſes built for the Students to live in Society; only each to be at his own Charge, as in the Inns of Court. See INN.

Theſe, at firſt, were call'd *Inns*; but now *Halls*. See HALL.

At laſt, plentiful Revenues were ſettled on ſeveral of theſe Halls, to maintain the Students in Diet, Apparel, &c. and theſe were call'd *Colleges*. See COLLEGE.

The *Univerſities* of *Oxford* and *Cambridge* are govern'd, next under the King, by a *Chancellor*, who is to take care of the Government of the whole *Univerſity*, to maintain the Liberties thereof, &c. See CHANCELLOR.

Under him is the *High Steward*, whoſe Office is to aſſiſt the Chancellor and other Officers, when requir'd, in the Execution of their Offices; and to hear and determine capital Cauſes, according to the Laws of the Land, and the Privileges of the *Univerſity*.

The next Officer is the *Vice-Chancellor*, who officiates for the Chancellor in his abſence.—There are alſo two *Proctors*, who aſſiſt in the Government of the *Univerſity*; particularly in the Buſineſs of School-Exerciſe, taking up Degrees, puniſhing Violaters of the Statutes, &c. See PROCTOR.

Add, a *publick Orator*, *Keeper of Records*, *Regiſter*, *Beadles*, and *Virger*.

For the Degrees taken up in each Faculty, with the Exerciſes, &c. requiſite thereto, ſee DEGREE; ſee alſo DOCTOR, BATCHELOR, &c.

UNIVOCAL, in the Schools, is applied to two or more Name or Terms, that have but one Signification. In Oppoſition to *Equivocal*; which is, where one Term has two or more Significations.

Or, *Univocal Terms*, are ſuch whoſe Name, as well as Nature, is the ſame; in oppoſition to *Equivocals*, whoſe Names are the ſame, but their Natures very different. See EQUIVOCAL.

For a thing to be predicated *univocally* of any others, it is to be attributed to all of them alike, and in the ſame proper Senſe. See PREDICATE, and PREDICABLE.

UNIVOCAL *Generation*—The Doctrine of the Antients with reſpect to Propagation, was, That all perfect Animals were produced by *Univocal Generation*, that is, by the ſole Union or Copulation of a Male and Female of the ſame Species or Denomination: and, that Inſects were produced by *Equivocal Generation*, without any Seed, and merely of the Corruption of the Earth exalted, and as it were impregnated by the Sun's Rays. See EQUIVOCAL, INSECT, &c.

Some Philoſophers make a kind of *Intermediate Generation*, between *Equivocal* and *Univocal*, which they call *Analogous Generation*. See GENERATION.

UNIVOCALS, call'd by the *Greeks*, *Syonyma's*, are defined by *Ariſtotle* to be thoſe Things whoſe Name is common, and the Reaſon correſponding to the Name, that is, the Definition of the Idea affix'd to it, the ſame.

Thus, under the Name and Definition of *Animal*, Man and Brute are equally included; and Circle and Square in the Reaſon or Definition of a *Figure*.

Here, the word, as *Figure*, they uſe to call *Univocum univocans*, or *univocating Univocal*; and the Things included under the univocal Name, *Univoca univocata*, *univocated Univocals*.

UNIVOCATION, in Logicks and Metaphyſicks.—The School-men have long diſputed about the *Univocation* of Being, *i. e.* whether the general Idea of *Being* agree in the ſame manner, and in the ſame ſenſe, to the Subſtance and the Accident; to God, and the Creature.

UNLAWFUL, *Illegal*, ſomething prohibited by, or contrary to, the Terms of a Law, either divine or human. See LAW.

UNLAWFUL *Aſſembly*, is particularly uſed for the meeting of three or more Perſons together by Force, to commit ſome unlawful Act; as to aſſault any Perſon, to enter his Houſe, or Land, &c. and thus abiding together, tho not attempting the Execution thereof. See ASSEMBLY, RIOT, &c.

By the Stat. 16 *Car.* II. if five Perſons, or more, ſhall be aſſembled together, above thoſe of the Family, at any Conventicle or Meeting, under colour of any exerciſe of Religion, it is *unlawful*, and puniſhable by Fines, and otherwiſe, as in that Statute is provided.

UNLIKE *Quantities*, and Signs in Algebra. See LIKE *Signs and Quantities*; ſee alſo SIGN, and QUANTITY.

UNLIMITED or *Indeterminate Problem*, is ſuch a one as is capable of infinite Solutions.—As, to divide a Triangle given into two equal Parts, to make a Circle paſs thro' two Points aſſign'd, &c. See PROBLEM.

UNLUTING, in Chymiſtry, the taking away of the Lute, Loam, or Clay, where-with a Veſſel is cloſed, join'd to another, or the like. See LUTE.

UNMOOR, a Term uſed at Sea, when a Veſſel that before rid, or was held by two Anchors, is begun to get them up, and prepared to weigh. See ANCHOR and MOOR.

UNQUES *Priſt*, a Plea in Law-ſuit, by which a Man profeſſes himſelf always ready to perform what the Demandant requires.

UNREEVING *a Rope*. See REEVE.

UNRIGGING *of a Ship*, is the taking away the Rigging or Cordage. See RIGGING.

UNSEELING, in Falconry, a taking away the Thread that runs thro' the Hawk's Eye-lids and hinders her Sight. See HAWK, and FALCONRY.

Drawing the Strings of the Hood, to be in Readineſs to pull off, is call'd, *Unſtriking the Hood*.

VOCABULARY, in Grammar, a Term ſignifying, a Collection of the Words of a Language, with their Significations; otherwiſe call'd a *Dictionary*, *Lexicon*, or *Nomenclature*. See WORD.

The *Vocabulary* is, properly, a leſſer kind of Dictionary, which does not enter ſo minutely into the Origins and different Acceptations of Words. See DICTIONARY.

The *Italian Vocabulary* of the Academy *de la Cruſca*, was forty Years in compiling.

The Word is *French*, form'd of the obſolete term *Vocable*; of the *Latin*, *Vocabulum*, word.

VOCAL, ſomething that relates to the Voice. See VOICE.

Thus, *Vocal Prayer* is that ſpoke out, or delivered in words: In contra-diſtinction to *mental Prayer*. See PRAYER.

In our antient Cuſtoms, *Vocalis* is frequently uſed for *ſo call'd—Poſt hæc Morganus de tribu Walenſium, & alter nomine Madocus* vocalis *princeps eorum*. Matt. Paris.

The Term is ſometimes alſo uſed ſubſtantively, in ſpeaking of Matters of Election, to ſignify a Perſon who has a right to vote.—A Man muſt have been a Religious a certain number of Years, to be a *Vocal*. See VOTE.

VOCAL *Muſic*, is Muſic ſet to Words, eſpecially Verſes; and to be perform'd with the Voice. In contra-diſtinction to *Inſtrumental Muſic*, compoſed only for Inſtruments, without Singing. See MUSIC.

Poetry then makes a neceſſary Part of *Vocal Muſick*; and this appears to have been the chief, if not the only Practice of the Antients, from the Definitions which they gave us of Muſic. See HARMONY, &c.

Their *Vocal Muſic* ſeems to have had ſome Advantage over ours, in that the *Greek* and *Latin* Languages were better contrived to pleaſe the Ear than the modern ones.——In effect, *Voſſius* taxes all the later Languages as unfit for Muſic,

and ſays, ‘ We ſhall never have any good *Vocal Muſic* till ‘ our Poets learn to make Verſes on the Model of the An- ‘ tients,’ *i. e.* till the antient metrical Feet and Quantities are reſtored. See VERSE, and QUANTITY.

But it is to be obſerv'd, that the *Rythmus* of their *Vocal Muſic*, was only that of their Poetry; and had no other Forms and Mutations than what the metrical Art afforded. See MUTATION.

Their Changes were no other than from one kind of *Metrum* or Verſe, to another; as from *Iambic*, to *Choraic*. See MEASURE, and RYTHMUS.

Their *Vocal Muſick*, then, conſiſted of Verſes ſet to muſical Tunes, and ſung by one or more Voices, in Chorus, or alternately; ſometimes with, and ſometimes without the Accompanyments of Inſtruments. See SYMPHONY.

For Inſtrumental Muſick, in the manner we have defin'd it, 'tis not very clear they ever had any. See SYNAULIA, *&c.*

VOCATION, or *Calling*, among Divines, the Grace or Favour which God does any one in calling him out of the way of Death, and putting him into the way of Salvation.

In this Senſe, we ſay, the *Vocation* of the *Jews*; *Vocation* of the *Gentiles*, &c.

There are two Kinds of *Vocation*; the one *external*, the other *internal*.

The firſt conſiſts in a ſimple and naked propoſing of Objects to the Will.——The ſecond is that which renders the firſt effectual, by diſpoſing our Faculties to receive thoſe Objects.

VOCATION is alſo uſed for a Deſtination to any State or Profeſſion.—'Tis a Rule, that none are to enter the Eccleſiaſtick or Monaſtick State, without a particular *Vocation*, or Call. See ORDERS, ORDINATION, *&c.*

The *Romaniſts* hold the *Vocation* of the Reformed Divines null and invalid.—Among our ſelves, ſome hold an uninterrupted Succeſſion neceſſary for the Validity of the *Vocation* of a Prieſt.

VOCATIVE, in Grammar, the fifth Caſe, or State of Nouns. See CASE.

When we name the Perſon we are ſpeaking to, or addreſs our ſelves to the Thing we are ſpeaking of, as if it were a Perſon; the Noun or Name acquires a new Relation, which the *Latins* and *Greeks* expreſs by a new Termination, call'd the *Vocative*.

Thus, of *Dominus*, Lord, in the Nominative, the *Latins* have made *Domine*, O Lord, in the *Vocative*; of *Antonius*, *Antoni*, &c.—But as this was a thing not abſolutely neceſſary, and as the Nominative Caſe might ſerve on ſuch Occaſions; this new Caſe, or Termination, was not univerſal: in the Plural, for Inſtance, it was the ſame with the Nominative; and even in the Singular, it was only practis'd in the ſecond Declenſion among the *Latins*; and in *Greek*, where it is the moſt common, it is frequently neglected, and the Nominative uſed inſtead of it: as in that Paſſage in the *Greek* Pſalms, quoted by St. *Paul* to prove the Divinity of Jeſus Chriſt, θρονός σου, ὁ θεός, *thy Throne, O God.*

In *Engliſh*, and moſt of the modern Tongues, this Caſe is ordinarily expreſs'd in Nouns that have an Article in the Nominative, by ſuppreſſing that Article: as, *The Lord is my hope—Lord, thou art my hope:* Tho on many Occaſions we uſe an Interjection.

VOCIFERATIO, in our old Law-Books, the ſame with HUE *and Cry*.

——*Qui furem plegiatum dimiſerit, qui ei obviaverit & gratis ſine* Vociferatione *dimiſerit*, &c. Leg. *Hen.* I.

VOICE, *Vox*, a Sound produced in the Throat and Mouth of an Animal, by an Apparatus of Inſtruments for that purpoſe. See SOUND.

Voices are either *Articulate*, or *Inarticulate*.

Articulate Voices, are thoſe whereof ſeveral conſpire together to form ſome Aſſemblage, or little Syſtem of Sounds: ſuch are the *Voices* expreſſing the *Letters* of an Alphabet, numbers of which join'd together form *Words*. See LETTER, and WORD.

Inarticulate Voices, are ſuch as are not organiz'd, or aſſembled into Words: Such is the barking of Dogs, the braying of Aſſes, the hiſſing of Serpents, the ſinging of Birds, *&c.*

The Formation of the *human Voice*, with all the Varieties thereof obſerv'd in Speech, Muſick, *&c.* make a very curious Article of Inquiry; and the Apparatus and Organiſm of the Parts miniſtring thereto, is ſomething exceedingly ſurprizing.

Thoſe Parts are, the *Trachea*, or Wind-pipe, thro' which the Air paſſes and repaſſes into the Lungs; the *Larynx*, which is a ſhort cylindric Canal, at the Head of the Trachea; and the *Glottis*, which is a little oval Cleft or Chink, left between two ſemicircular Membranes, ſtretch'd horizontally withinſide the Larynx; which Membranes, tho capable of joining cloſe together, do generally leave an Interval, either greater or leſs, between 'em, call'd the *Glottis*.—— *See particular Deſcriptions of each of theſe Parts, under the Articles* TRACHEA, LARYNX, and GLOTTIS.

The long Canal of the Trachea, terminated a-top with the Glottis, appears ſo like a Flute, that the Antients made no doubt but the Trachea contributed the ſame to the *Voice*, as the Body of the Flute does to the Sound of that Inſtrument.—*Galen* himſelf fell, in ſome meaſure, into the Miſtake: He perceived, indeed, that the principal Organ of *Voice* was the Glottis; but he ſtill allow'd the Trachea a conſiderable ſhare in the Production of Sound.

Galen's Opinion was follow'd by all the Antients after him; and even by all the Moderns, before M. *Dodart*.—— But that Author, obſerving that we don't either ſpeak or ſing, when we inſpire, or take in the Air, but only when we expire, or expel it; and this the Air coming out of the Lungs, paſſes always out of the minuter Veſicles of that Part into larger; and at laſt into the Trachea it ſelf, which is the largeſt of all: that thus its Paſſage becoming ſtill more free and eaſy, and this more than ever in the Trachea, it can never undergo ſuch a Violence, and acquire ſuch a Velocity in that Canal, as is requir'd to the Production of Sound.—But that, as the Aperture of the Glottis is very ſmall, in compariſon with the Width of the Trachea, the Air can never get out of the Trachea by the Glottis, without a vaſt Compreſſion and Augmentation of its Velocity; and that by this means, in paſſing, it communicates a briſk Agitation to the minute Parts of the two Lips of the Glottis, gives 'em a kind of Spring, and occaſions 'em to make Vibrations; which communicated to the paſſing Air, occaſions the Sound. See VIBRATION.

This Sound, thus form'd, proceeds into the Cavity of the Mouth and Noſtrils; where 'tis reflected, and reſounds: And on this Reſonance, M. *Dodart* ſhews, it is, that the Agreeableneſs of the Voice entirely depends.—The different Conſiſtences, Forms, *&c.* of the divers Parts of the Mouth, contribute to the Reſonance, each in their way; and from this Mixture of ſo many different Reſonances in their due Proportion, reſults a Harmony in the human *Voice*, inimitable by any Muſician.

Hence it is, that when any of theſe Parts is diſorder'd, *e. g.* the Noſe ſtop'd, the *Voice* becomes diſpleaſing.

This Reſonance of the Cavity of the Mouth, does not ſeem to conſiſt in a ſimple Reflexion, ſuch as that of a Vault, *&c.* but in a Reſonance proportionate to the Tones of the Sound ſent into the Mouth from the Glottis; and accordingly, we find this Cavity to lengthen and ſhorten it ſelf, according to the Depth or Acuteneſs of the Tone.

Now, for the Trachea to effect this Reſonance, as it was the common Opinion it did; it would be requir'd, that the Air, after its being modify'd and turn'd into Sound by the Glottis, inſtead of continuing its Courſe from within outwards, ſhould return from without inwards, and thus ſtrike on the Sides of the Trachea: Which can never happen, except in thoſe who have a violent Cough, and in ventriloquous Perſons. Indeed, in moſt River-Fowl, which have a very ſtrong *Voice*, the Trachea does reſound; but the reaſon is, that the Glottis is placed at the bottom of the Trachea, and not at the top, as in Men.

That Canal, then, which at firſt paſs'd for the principal Organ of *Voice*, is found not to be ſo much as the ſecondary one, *i. e.* not that which occaſions the Reſonance.—It does not ſerve the Glottis, as the Body of a Flute does its Plug; but inſtead of that, the *Mouth* ſerves the Glottis as the Body of ſome other Wind-Inſtrument not yet known in Muſick.——In effect, the Office of the Trachea, is no other than that of the Port-Vent in an Organ, *viz.* to furniſh Wind.

For the Cauſe of the different Tones of *Voice*—As the Organs that form the *Voice* make a kind of Wind-Inſtrument, one might expect to find ſome Proviſion therein, anſwerable to that which produces the difference of Tones in ſome other Wind-Inſtruments. But in the divers Kinds of Wind-Inſtruments, the Hautboy, Organ, Clarion, *&c.* there is none. —The Tone, therefore, muſt be attributed either to the Mouth and Noſtrils, which occaſion the Reſonance, or to the Glottis, which produces the Sound: And as all the different Tones are produced in Man by the ſame Inſtrument; it follows, that the Part which produces 'em muſt be capable of Changes anſwerable thereto.

Now, for a grave Tone, we know, there is more Air requir'd than for an acute one.—The Trachea, therefore, to let this greater quantity paſs, muſt dilate and ſhorten it ſelf; by which ſhortening, the External Canal, that is, the Canal of the Mouth and Noſe, reckon'd from the Glottis to the Lips, or Noſtrils, is lengthen'd.—For, the ſhortening of the internal Canal, *i. e.* of the Trachea, brings the Larynx and Glottis lower down; and of conſequence makes its diſtance from the Mouth, *&c.* greater: And there is a Change in the length of each Canal, for every change of Tone, and Semitone.—Accordingly, 'tis eaſy to obſerve, that the Knot of the Larynx alternately riſes and falls in all Quaverings, or Shakings of *Voice*, how ſmall ſoever the difference of Tone may be.

Hence,

Hence, as the Depth of the Tone of a Hautboy is anſwerable to the Length of the Inſtrument; the longeſt Fibres of the Wood, whoſe Vibrations make the Reſonance, making always the ſloweſt Vibrations, and conſequently the deepeſt Tone: It may appear probable, that the Concavity of the Mouth, by its lengthening for grave Tones, and ſhortening for acute ones, might ſerve very well for the Production of the divers Tones: but M. *Dodart* obſerves, that in that play of the Organ call'd the *human Voice*, the longeſt Pipe is ſix Inches, and yet with all that length it does not make any difference of Tone, but the Tone of the Pipe is preciſely that of the Plug; whereas the Concavity of the Mouth of a Man of the graveſt *Voice*, not being above ſix Inches deep; 'tis evident that can't modify, vary, and give the Tone. See TUNE.

'Tis the Glottis, then, that forms the Tone, as well as the Sound; and the manner of forming the various Tones, is by varying its Aperture.—A piece of Mechaniſm too admirable not to be here particularly inquir'd into.

The human Glottis, then, repreſented in Tab. *Nat. Hiſtory*, Fig. 11. is only capable of one proper Motion, *viz.* that of an Approach of its Lips, A D B and A B D.—Accordingly, the dotted Lines A E B, A F B, A G B, exhibit three different degrees of Approach.——Theſe different Apertures of the Glottis, Anatomiſts uſually attribute to the Action of the Muſcles of the Larynx; but M. *Dodart* ſhews, from their Poſition, Direction, *&c.* that they have other Uſes; and that the opening and ſhutting of the Glottis is effected by other means, *viz.* by two tendinous Cords, or Strings, incloſed in the two Lips of that Aperture.

In effect, each of the two ſemicircular Membranes, whoſe Interſtice forms the Glottis, is doubled back upon it ſelf; and within each Duplicature is a Chord or String, which is faſten'd at one End to the fore-part of the Larynx, and to the hind-part at the other.——'Tis true, they appear more like Ligaments than Muſcles; as conſiſting of white and membranous Fibres, not of red and fleſhy ones: But the vaſt Number of minute Changes in this Aperture, neceſſary to form the vaſt Variety of Tones, make an extraordinary kind of Muſcle, by whoſe Contraction they ſhould be effected, abſolutely neceſſary. Common fleſhy Fibres, wherein the Blood is receiv'd in large quantity, had been infinitely too coarſe for ſuch delicate Motions.

Theſe Strings, which in their State of Relaxation make each a little Arch of an Ellipſis; as they contract more and more, become longer, but leſs and leſs curve; and at laſt, with the greateſt Contraction they are capable of, degenerate into two right Lines applied cloſe to each other; ſo cloſe and ſo firm, that an Atom of Air can't eſcape out of the Lungs, how full ſoever they may be, and how great an Effort ſoever all the Muſcles of the lower Venter may make againſt the Diaphragm, and by the Diaphragm againſt theſe two little Muſcles.

The different Apertures of the Lips of the Glottis, then, produce all the different Tones in the ſix Parts of Muſick, viz. *Baſs*, *Common pitch*, *Tenor*, *Counter-tenor*, *Treble-Baſs*, and *Treble*; and the Manner is thus:

The *Voice*, we have ſhewn, can only be form'd by the Glottis; but the Tones of the *Voice* are Modifications of the *Voice*; and can only be produced by the Modifications of the Glottis.—Now the Glottis is only capable of one Modification, which is, the mutual Approach or Receſs of its Lips: 'Tis this, therefore, produces the different Tones.—Now that Modification includes two Circumſtances: the firſt, and principal, is, that the Lips are ſtretch'd more and more, from the loweſt Tone to the higheſt; the ſecond is, that the more they are ſtretch'd, the nearer they approach.

From the firſt it follows, that their Vibrations will be ſo much the quicker, as they come nearer their higheſt Tone; and that the *Voice* will be juſt when the two Lips are equally ſtretch'd, and falſe when unequally; which agrees perfectly well with the Nature of String Inſtruments.

From the ſecond it follows, that the higher the Tones are, the nearer will they approach each other; which agrees perfectly well with Wind Inſtruments, govern'd by Reeds, or Plugs.

The Degrees of Tenſion of the Lips, are the firſt and principal Cauſe of Tones; but their Differences are inſenſible.—The degrees of Approach, are only Conſequences of that Tenſion; but their Differences are more eaſily aſſign'd.

To give a preciſe Idea of the thing, therefore, we had beſt keep to that; and ſay, that this Modification conſiſts in a Tenſion, from whence reſults a very numerous Subdiviſion of a very ſmall Interval; which yet, ſmall as it is, is capable, phyſically ſpeaking, of being ſubdivided infinitely. See DIVISIBILITY.

This Doctrine is confirm'd from the different Apertures found in diſſecting Perſons of different Ages of both Sexes.—The Aperture is leſs, and the exterior Canal always ſhallower in the Sex and Ages fitteſt to ſing Treble.—Add, that the Reed of a Hautboy, ſeparated from the Body of the Inſtrument, being a little preſs'd between the Lips, will yield a Tone ſomewhat higher than its natural one; and if preſs'd ſtill more, will yield another ſtill higher: And thus an able Muſician may run ſucceſſively thro' all the Tones and Semitones of an Octave.

'Tis different Apertures, then, that produce, or at leaſt accompany different Tones, both in Natural Wind Inſtruments, and Artificial ones; and the Diminution of the Aperture, raiſes the Tones both of the Glottis and the Reed.

The Reaſon why leſſening the Aperture heightens the Tone, is, that the Wind paſſes thro' it with the greater Velocity; and from the ſame Cauſe it is, that if any Reed, or Plug of an Inſtrument be too weakly blown, its Tone will be lower than ordinary.

Indeed, the Contractions and Dilatations of the Glottis, muſt be infinitely delicate: By an exact Calculation of the ingenious Author abovemention'd, it appears, that to perform all the Tones and Semitones of a common *Voice*, which is computed to reach to 12 Tones to perform all the Particles and Subdiviſions of thoſe Tones, into Commas and other minuter tho ſtill ſenſible Parts; to perform all the Shades, or the Differences in a Tone when ſounded more or leſs ſtrong, without changing the Tone: the little Diameter of the Glottis, which does not exceed $\frac{1}{10}$ of an Inch, but which varies within that Extent at every Change, muſt be actually divided into 9632 Parts; which Parts are yet very unequal, and therefore many of 'em much leſs than the $\frac{1}{963200}$ Part of an Inch.—A Delicacy ſcarce to be match'd by any thing but a good Ear, which has ſo juſt a Senſe of Sounds, as, naked, to perceive Differences in all theſe Tones; even thoſe whoſe Origin is much leſs than the 963200th Part of an Inch. See HEARING.

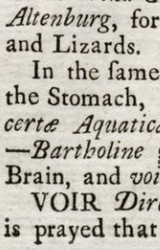
VOICE, in Grammar, is a Circumſtance in Verbs, whereby they come to be conſider'd as either *active* or *paſſive*, *i. e.* either as expreſſing an Action impreſs'd on another Subject, as *I beat*; or receiving it from another, as *I am beaten*. See VERB; ſee alſo ACTIVE, and PASSIVE.

VOICE, in Matters of Elections, denotes a *Vote*, or *Suffrage*. See VOTE, *&c.*

In this Senſe, a Man is ſaid to have a *deliberate Voice*, when he has a Right to give his Advice and Opinion in a Matter of debate, and his Suffrage is taken——An *active Voice*, when he gives his Vote for the Election of any one; and a *paſſive Voice*, when the Suffrages may fall on him to be elected—An *excitative Voice*, when he may act to procure another to be elected—A *conſultative Voice*, when he can only offer Reaſons and Remonſtrances, whereon the Chief or Head determines at his own Diſcretion: Such the Cardinals have, with regard to the Pope; the Maſters of Chancery, with regard to the Lord Chancellor, *&c.*

VOID *Space*, in Phyſicks. See VACUUM.

VOID, in Common Law. See ANNULLING.



VOIDANCE, VACANCY, in the Canon Law, a Want of an Incumbent upon a Benefice. See VACANCY, *&c.*

This is twofold, either *in Law*, *de Jure*; as when one holds ſeveral Benefices that are incompatible: or *de Facto*, *in Deed*; as when the Incumbent is dead, or actually depriv'd.

VOIDED, UUIDE, in Heraldry, is underſtood of an Ordinary whoſe inner or middle Part is cut out; leaving nothing but its Edges to ſhow its Form; ſo that the Field appears thro' it.

Hence it is needleſs to expreſs the Colour or Metal of the *voided* Part; becauſe it muſt of courſe be that of the Field.

Thus, the *Croſs voided* differs from the Croſs fimbriated, in that this latter does not ſhew the Field thro' it, as the other does.—And the ſame is uſed in other Ordinaries.

VOIDER, in Heraldry, one of the Ordinaries, whoſe Figure is much like that of the Flaſque, or Flanch; only that it doth not bend ſo much. See FLANCH.

This Armoury, they ſay, is properly the Reward of a Gentlewoman that has well ſerved her Prince.—It is always born by Pairs.

VOIDING, in Medicine. See EVACUATION.

In the *Philoſophical Tranſactions*, we have an account of one *Matt. Milford*, who *voided* a Worm by Urine, ſuppoſed to have come from the Kidneys. See WORMS.

Dr. *Liſter* mentions true Caterpillars *voided* by a Boy of nine Years old.—Mr. *Jeſſop* ſaw Hexapods vomited up by a Girl.

Catherina Geilaria, who dy'd in 1662, in the Hoſpital of *Altenburg*, for 20 Years *voided* by Vomit and Stool, Toads, and Lizards. *Ephem. German.* T. I. Obſ. 103.

In the ſame *Ephem.* is an Inſtance of a Kitten, bred in the Stomach, and vomited up.——Of Whelps, Frogs, *Lacertæ Aquaticæ*, and other Animals, bred the like way.—*Bartholine* gives us an Inſtance of a Worm, bred in the Brain, and *voided* by the Noſe of *O. W.* See VERMES.

VOIR *Dire*, in Law—When, upon a Trial at Law, it is prayed that a Witneſs may be ſworn upon a *Voir dire*; the

the meaning is, he ſhall upon his Oath ſpeak or declare the Truth, whether he ſhall get or loſe by the Matter in Controverſy.—If he be unconcern'd, his Teſtimony, is allow'd; otherwiſe, not. See OATH, WITNESS, &c.

VOL, among the *French* Heralds, ſignifies the two Wings of a Fowl born in Armoury as being the whole that makes the Flight: Accordingly, a *Demivol* is a ſingle Wing.

VOLA, the Palm of the Hand. See HAND.

VOLANT, in Heraldry, is when a Bird in a Coat of Arms is drawn flying, or having its Wings ſpread out.

VOLATILE, in Phyſicks, is commonly uſed to denote a mix'd Body whoſe integral Parts are eaſily diſſipated by Fire, or other heat; but is more properly uſed for Bodies whoſe Elements, or firſt component Parts, are eaſily ſeparated from each other, and diſpers'd in Air. See BODY, COHESION, ELEMENT, &c.

For, as any mix'd Body is ſaid to be fix'd in a double Senſe; ſo may it be ſaid to be *Volatile* two ways: whence the ſame Body, *e. g.* Mercury, is both *volatile* and fix'd at the ſame time.

Since, as its integral Parts, or thoſe which ſtill retain the Nature of Mercury, are eaſily ſeparable by Fire, and readily fly away; it is ſaid to be *Volatile:* And yet as 'tis very difficult to deſtroy its Contexture, and reſolve it by Fire, or any other Menſtruum, into its firſt Elements, it is ſaid to be *fix'd.*—The ſame may be ſaid of Sulphur, Antimony, &c.

Minerals, for the generality, are leſs *volatile* than Vegetables, and Vegetables leſs than Animals. See FIX'D.

The Chymiſts diſtinguiſh between *Volatile* Salts, and Fix'd Salts. See SALTS.

The Capitals of Alembicks ſtop and collect the *Volatile Parts* of Subſtances in Sublimation; and make what we call *Flowers.* See FLOWERS.

'The Particles of Fluids which do not cohere very ſtrongly together, and are of ſuch Smallneſs, as renders them moſt ſuſceptible of thoſe Agitations which keep Liquors in a Fluor, are eaſily rarify'd into Vapour; and, in the Language of the Chymiſts, are *Volatile.*——Thoſe which are groſſer, and ſo leſs ſuſceptible of Alterations; or cohere by a ſtronger Attraction, do not evaporate without a ſtronger Heat, or perhaps not without Fermentation: Theſe are what the Chymiſts call *Fix'd Bodies.*' *Newton. Optic.* p. 371.

VOLATILE, in Chymiſtry—When the Fire decompounds any mix'd Body, the Parts moſt diſpoſed to receive a great Motion, are ſooneſt looſen'd, and riſe up in the Order which the differences of that Diſpoſition give them; the reſt remaining immoveable at the bottom of the Veſſel. See ANALYSIS, FIRE, &c.

Thoſe that riſe firſt, are called *Volatile Parts*; ſuch are *Phlegm, Oil, Spirits,* and *Salts,* both urinous and alkalious. See SPIRIT, PHLEGM, and SALT.

The Parts remaining, *viz. Earth,* and *Lixivial Salts,* are call'd *Fix'd.* See EARTH, and VOLATILISATION.

For the making of Fix'd Salts volatile; ſee VOLATILISATION.

VOLATILISATION, the Act of rendering Fix'd Bodies *Volatile*; or of reſolving 'em by Fire into a fine, ſubtile Vapour, or Spirit, which eaſily diſſipates, and flies away. See VOLATILE.

All Bodies, even the moſt fix'd, as Gold may be *volatiliz'd*; either of themſelves, or with the Admixture of ſome *volatile* Subſtance, or Spirit; by Diſtillation, or Sublimation. See DISTILLATION, and SUBLIMATION; ſee alſo GOLD, BURNING-GLASS, &c.

In the *Memoirs of the* French *Academy,* we have a Diſcourſe on the *Volatiliſation of the fix'd Salts of Plants,* by M. *Homberg.*—That admirable Chymiſt, it ſeems, by an odd Accident, found fix'd Salts ſpontaneouſly *volatiliz'd* in Soap: Now Soap, we know, is a Compoſition of Oil, and the alkalous lixivial Salts of the Plant *Kali.*—Upon this, M. *Homberg* conjectur'd, that the Oil from which the volatile Salts ſeem to derive their Volatility, being intimately mix'd with the fix'd Salts of the Kali in the Soap, had render'd them *Volatile:* So that they ceaſe to be Alkalious, by reaſon their Pores are now fill'd with the Oil which they have abſorb'd.—Oil, in effect, has always ſomewhat of an Acid in it; which Acid, being join'd to the Alkali, the whole is render'd a kind of intermediate Salt; which yet, as the Acid and Alkali were only join'd by means of the Oil, is ſtill oily or ſulphureous.

In conſequence of this View, he made divers chymical Operations, whereby he found, that to diſpoſe the fix'd Salts of Plants to *volatiliſe,* the Proceſs is to be begun by making them into a Sapa, and letting that Sapa ſhoot out little ſaline Points, or Cryſtals on its Surface; which Cryſtals are no other than fix'd Salts already *volatiliz'd.*—Then, the Remainder of the Matter is to be ſet over the Fire, after being well imbib'd and penetrated by ſome new Liquor, proper to aſſiſt in a new Sublimation of more fix'd Salts to be *volatiliz'd:* and this to be repeated till no more Salts will riſe.

The Choice of the Liquor wherewith the Sapa is to be ſaturated, is not indifferent—Water is, of all other, the leaſt fit for the Effect: Oil does well; yet diſtill'd Oil better than that drawn from Expreſſion: and Spirit of Wine beſt of all.

By ſuch means, M. *Homberg volatiliz'd* almoſt half a Quantity of Salt of Tartar, which is a fix'd Vegetable Salt. See TARTAR.

VOLATILITY. See SUBLIMATION.

VOLCANO, or VULCANO, in Natural Hiſtory, a Name given to Mountains that belch, or vomit Fire, Flame, Aſhes, Cinders, Stones, &c. See MOUNTAIN.

Such are Mount *Ætna* in *Sicily,* Mount *Veſuvius* near *Naples,* &c. See ERUPTION.

Near *Guatimala* in *South America,* are two Mountains, the one call'd *Volcano of Fire*; the other *of Water.*—Out of the firſt, huge pieces of Rocks are frequently hurl'd with as much vehemence as Balls out of a Canon; and a written Letter may be read by the Light of its Flames, at the diſtance of three Miles.

Out of the other, vaſt Quantities of Water are continually ſpued up. See EARTHQUAKE.

Volcanos and Ignivomous Mountains, tho ſome of the moſt terrible Phænomena in Nature, have their Uſes; being a kind of Spiracles, or Tunnels, whereby to vent the Fire and Vapour, that would otherwiſe make a more dreadful Havock by Convulſions and Earthquakes.

Nay, if the Hypotheſis of a central Fire and Waters, be admitted; theſe Outlets muſt be abſolutely neceſſary to the Peace and Quiet of the terraqueous Globe.—Accordingly, Dr. *Woodward* obſerves, there is ſcarce any Country much annoy'd with Earthquakes, but has one of theſe fiery Vents; which are conſtantly obſerved to be all in Flames, whenever an Earthquake happens; by which means, they diſgorge that Fire, which while it was underneath, was the Cauſe of the Diſaſter.—He adds, that were it not for theſe *Diverticula,* whereby the central Fire has an Exit, 'twould rage in the Bowels of the Earth much more furiouſly, and make much greater Havock than it does; and that there are not wanting Inſtances of Countries that have been wholly freed from Earthquakes, by the Eruption of a new *Volcano* there, See EARTHQUAKE.

VOLERY, a great Bird-Cage, ſo large, that the Birds have room to fly up and down in it. See AVIARY.

VOLITION, the Act of Willing. See WILL.

VOLLEY, a military Salute, made by diſcharging a great number of Fire-Arms at the ſame time.

In the *Philoſophical Tranſactions,* Mr. *Robert Clarke* gives us an Account of a very remarkable Effect of firing ſome *Volleys* of ſmall Shot: 'Upon proclaiming the Peace in 1697, two Troops of Horſe were drawn in a Line, the Centre whereof was againſt a Butcher's Door, who kept a very large, couragious Maſtiff Dog, the biggeſt in the Town.

'Upon firing of the firſt *Volley,* the Dog, who before lay a-ſleep by the Fire, ſtarted up, ran into an upper Room, and hid himſelf under the Bed.——The Servant being about to beat him down, (as he had never uſed to go up Stairs) a ſecond *Volley* came; which made the Dog riſe, run ſeveral times about the Chamber, with violent Trembings, and ſtrange Agonies.——But immediately a third *Volley* came; upon which the Dog run once or twice about, fell down, and died immediately; throwing out Blood at Mouth and Noſe.'

VOLO, in Antiquity, a Name which the *Romans* gave the Slaves, who, in the ſecond *Punic* War, offer'd themſelves to ſerve in the Army; upon a want of a ſufficient Number of Citizens. See SLAVE.

The Names *Volo, Volones,* they are ſaid to have had from their offering themſelves *voluntarily.*

Feſtus ſays, 'twas after the Battle of *Cannæ* that this happen'd: *Macrobius, Sat.* Lib. I. cap. ii. places it before that Battle.

Capitolinus tells us, that *Marcus Aurelius* form'd Troops or Legions of Slaves, which he call'd *Voluntarii*; and that the like Forces in the ſecond *Punic* War had been call'd *Volones.*—But before *M. Aurelius, Auguſtus* had given the Name *Voluntarii* to Forces which he had raiſed out of *Liberti,* or Freedmen; as we are aſſur'd by *Macrobius, Sat.* Lib. I. cap. ii.

VOLUME, VOLUMN, VOLUMEN, a Book, or Writing, of a juſt bulk to be bound by it ſelf.

The Library of *Ptolemy* King of *Egypt,* contain'd, according to *Aulus Gellius,* three hundred thouſand *Volumes*; and according to *Sabellicus,* ſeven hundred thouſand. See LIBRARY.

Raymond Lully wrote above four thouſand *Volumes*; whereof we have divers Catalogues extant.—'Tis held, that *Triſmegiſtus* wrote ſix thouſand five hundred twenty five *Volumes*; others ſay, thirty ſix thouſand five hundred twenty nine: But 'tis much more rational to ſuppoſe, with *la Croix,*

that

that it was the Cuſtom of the *Egyptians* to put all the Books they compos'd under the Name of *Triſmegiſtus*.

The Word had its riſe *à volvendo*; the antient way of making up Books being in Rolls of Bark, or Parchment. See ROLL.

This manner laſted till *Cicero*'s Time, and long after that Paper was invented, and Books wrote thereon—The ſeveral Sheets were glued, or paſted End to End, wrote only on one ſide; and at the bottom a Stick faſten'd, call'd *Umbilicus*; and at the other end a piece of Parchment, whereon was the Title of the Book in Letters of Gold.

And yet, we are aſſured, King *Attilus* had, long before, done up ſome of his Books in the ſquare form; as having found the Secret of Parchment, which would bear writing on both ſides. See PARCHMENT.

At preſent, *Volume* is chiefly uſed in the ſame Senſe with *Tome*, for a Part or Diviſion of a Work, bound ſeparately. ——In this Senſe, we ſay, the *Councils* are printed at the *Louvre* in 37 *Volumes*. See TOME.

The VOLUME *of a Body*, is ſometimes alſo uſed among Philoſophers, for its *Bulk*, or the Space incloſed within its Superficies.

VOLT, in the Manage, ſignifies a round or circular Motion, conſiſting of a Gate of two Treads, made by an Horſe going ſideways round a Centre; the two Treads marking parallel Tracks, one by the Fore-feet, larger; and the other by the Hind-feet, ſmaller: the Shoulders bearing outwards, and the Croup approaching towards the Centre.

Demi-VOLT, is a Round of one Tread, or two, made by the Horſe at one of the Angles or Corners of the *Volt*, or at the End of the Line of the Paſſade; ſo as when he is near the End of this Line, or near one of the Corners of the *Volt*, he changes Hands, to return by a Semicircle.

A Renverſed VOLT, is a Track of two Treads, which the Horſe makes with his Head to the Centre, and his Croup out; going ſideways upon a Walk, Trot, or Gallop, and tracing out a larger Circumference with his Shoulders, and a ſmaller with his Croup.

VOLUMUS, in Law, the firſt Word of a Clauſe in the King's Writs of Protection, and Letters Patent. See PROTECTION.

VOLUNT, in Law, is when the Tenant holds Lands, *&c.* at the Will of the Leſſor, or Lord of the Manor. See TENANT, VASSAL, *&c.*

VOLUNTARY, in the Schools—The generality of Philoſophers uſe *Voluntary* in the ſame Senſe with *Spontaneous*; and apply it to any thing ariſing from an internal Principle, attended with a due Knowledge thereof.—In which Senſe, they ſay, a Dog moves *Voluntarily* when he runs to the Pot. See SPONTANEOUS.

Ariſtotle and his Followers, reſtrain the Term *Voluntary* to thoſe Actions that proceed from an inward Principle which knows all the Circumſtances of the Action.

There are two Things, therefore requir'd to the *Voluntarineſs* of an Action: The firſt, that it proceed from an inward Principle; thus, walking for pleaſure-ſake is a *Voluntary* Action; as ariſing from the Will commanding, and the moving Faculty obeying, which are both internal.—On the contrary, the Motion of a Man drag'd to Priſon is not *Voluntary*.

The ſecond, that the Action be perform'd with a perfect Intelligence of the End, and Circumſtances thereof: In which Senſe, the Actions of Brutes, Children, ſleeping People, *&c.* are not properly *Voluntary*. See WILL.

Anatomiſts diſtinguiſh between the *Voluntary*, and Natural, or *Involuntary Motions* in the Body: Of the firſt Kind are thoſe of the Heart, Lungs, Pulſe, *&c.* See MUSCULAR *Motion*.

VOLUTE, VOLUTA, in Architecture, a kind of Scrowl, or ſpiral Contortion, uſed in the *Ionic* and *Compoſite* Capitals; whereof it is the principal Character and Ornament. See CAPITAL.

Some call it the *Ram's-Horn*, from its Figure, which bears a near reſemblance thereto.

Moſt Architects ſuppoſe, that the Antients intended it to repreſent the Bark or Rind of a Tree, laid under the Abacus, and twiſted thus at each Extreme where it is at Liberty: Others will have it a ſort of Pillow, or Bolſter laid between the Abacus and Echinus, to prevent the latter being broke by the Weight of the former, and the Entablature over it; and accordingly call it *Pulvinus*.

Others, after *Vitruvius*, will have it to repreſent the Curls or Treſſes of a Woman's Hair. See IONIC *Order*.

There are alſo eight angular *Volutes* in the *Corinthian* Capital, accompany'd with eight other ſmaller ones, called *Helices*.

There are ſeveral Diverſities in the *Volute*.—In ſome, the Liſt or Edge, throughout all the Circumvolutions, is in the ſame Line, or Plane: ſuch are the antique *Ionic Volutes*, and thoſe of *Vignola*.—In others, the Spires or Circumvolutions fall back; in others project, or ſtand out.—Again, in ſome the Circumvolutions are oval; in others, the Canal of one Circumvolution is detach'd from the Liſt of another, by a Vacuity or Aperture.—In others, the Round is parallel to the Abacus, and ſprings out from behind the Flower thereof.—In others, it ſeems to ſpring out of the Vaſe, from behind the Ovum, and riſes to the Abacus, as in moſt of the fine *Compoſite* Capitals.

Conſoles, Modillions, and other ſorts of Ornaments, have likewiſe their *Volutes*. See CONSOLE, *&c.*

The *Volute* is a Part of great Imporance to the Beauty of the Column.—Hence Architects have invented divers ways of delineating it.——The principal are that of *Vitruvius*, which was long loſt, and at laſt reſtor'd by *Gouldman*; and that of *Palladio*.—*Daviler* prefers the former as the eaſier. —The manner thereof is as follows.

Divide the Altitude A B, (Tab. *Architect.* Fig. 12 *Volute*) into eight equal Parts, and aſſuming the Fifth Q P, for a Diameter, from the Centre G, with half the Diameter G P, deſcribe a Circle for the Eye of the *Volute*.—Biſſect the Radii G P and G Q in 1 and 4, and ſubdivide the half Parts G 1 and G 4 each into three equal Parts: Then, upon the right Line 1 4, conſtruct a Square 1, 2, 3, 4; one of whoſe Sides 2, 3, continue on to D; another 3, 4, to E; and the third 1, 2, to C. From G draw right Lines, G 2 and G 3; which divide into three equal Parts.—Then, thro' 6 and 10, draw 6 L and 10 N, parallel to 2 D. And thro' 11 and 7 draw 11 O and 7 K, parallel to 3 E; and thro' 5 and 9 draw 5 H, and 9 M, parallel to 1 C.——Laſtly, from 12, 11, 10, 9, 8, *&c.* ſtrike the Quadrants P O, O N, N M, M L, L K, *&c.* which will form the *Volute*.

VOLVULUS, in Medicine, a *Latin* Name, which ſome Authors have given to a Diſeaſe otherwiſe call'd the *Iliac Paſſion*; and by others the *Miſerere mei*. See ILIAC PASSION, *&c.*

'Tis a kind of Cholic, wherein the Patient voids his Excrements by the Mouth, inſtead of the *Anus*; by reaſon the Membranes of the Inteſtine *Ileon* are drawn within one another, and form Knots, which prevent the ordinary Courſe of the *Fæces*. See CHOLIC.

VOMER, in Anatomy, a *Latin* Name, ſignifying, literally, a *Ploughſhare*; uſed by Authors to denote the eleventh Bone of the upper Jaw: by reaſon of the Reſemblance it bears to that Utenſil. See MAXILLA.

The *Vomer*, or *Vomer Aratri*, is a thin Bone, placed in the middle of the Noſe, over the Palate, ſerving to part the two Noſtrils from each other. See NOSTRIL.

'Tis ſmall, but hard, and is join'd to the *Sphenoides* and *Ethmoides*, which have each of them little Eminences that are received into the Cavities of the *Vomer*; by which means it is faſten'd in its Place. See NOSE.

VOMICA, in Medicine, a Collection of Pus in any Part of the Body. See PUS.

When this Maſs or Collection is in the Lungs, 'tis called *Vomica Pulmonum*—When in the Kidneys, *Vomica Renum*, &c. See LUNGS.

The *Vomica* of the Lungs differs from an *Empyema*, which is a Collection of Pus in the Cavity of the Thorax. See EMPYEMA.

Nux VOMICA, *Vomiting Nut*, is a little round, flat, woolly Fruit, half the bigneſs of a Farthing; hard as Horn, of a Mouſe-colour without, but of various Colours within: ſometimes yellow, ſometimes white, and ſometimes brown.

'Tis not known what the Plant is that bears it.—'Tis a Poiſon for Dogs, and divers Quadrupeds, which it kills preſently, thro' exceſſive *Vomiting*. See POISON.

VOMITING, VOMITUS, the Act of caſting up, or evacuating by the Mouth what is contain'd in the Stomach. See EVACUATION.

This Action has been generally allow'd to be owing principally, to the Contraction of the Fibres of the Stomach, when irritated by the acrimonious Quality, or oppreſs'd with the Quantity, of its Contents. See STOMACH.

But M. *Chirac*, and after him M. *du Verney*, and others, ſet aſide the Fibres of the Stomach; and advance, That *Vomiting* is produced wholly by the extraordinary Motions of the Diaphragm, and the Muſcles of the lower Venter.—So that the Stomach is here ſuppoſed deſtitute of all Action, and caſts back its Contents only by its being compreſs'd and flatted, from ſome foreign and accidental Cauſes.

However, *Boerhaave*, and moſt of our lateſt Writers, allow both the Stomach, the Diaphragm, and the Muſcles of the Abdomen, to have their ſhare in the Action of *Vomiting*: Accordingly, that excellent Author makes *Vomiting* to conſiſt in a convulſive and retrograde Motion of the muſcular Fibres of the Gullet, Stomach, and Inteſtines; as well as thoſe of the Abdomen, and the *Septum Tranſverſum*; which, when in a leſs degree, produce a *Nauſea*, and in a greater a *Vomiting*. See NAUSEA.

By the Contraction of ſo many Parts, the Stomach comes to be ſqueez'd, as in a Preſs; whence it is obliged to give up what is contain'd in its Cavity, and the neighbouring Parts; juſt as Water is in a Bladder or Sponge, when ſqueez'd between the Hands.

The Evacuation, too, muſt be upwards, rather than downwards; by reaſon the Paſſage is more open and eaſy that

way, and that the Inteſtines are preſs'd by the Diaphragm, and the Muſcles of the lower Venter.

The primary Cauſe of *Vomiting*, uſes to be the too great Quantity, or too much Acrimony of the Contents, ariſing from Poiſons, Contuſions, Compreſſions, Inflammations, and Wounds in the Brain, Inflammations of the Diaphragm, Stomach, Inteſtines, Spleen, Liver, Kidneys, Panchreas, and Meſentery; unuſual Agitations in Coaches, at Sea, &c. and *vomitive* or *emetic* Medicines. See EMETICS.

VOMITIVE, or *Vomiting Medicines*. See EMETICS.

VOPISCUS, a *Latin* Term, uſed in reſpect of Twins in the Womb, for that which comes to the perfect Birth. See TWINS.

VORTEX, *Whirlwind*, in Meteorology, a ſudden, rapid, violent Motion of the Air, in Gyres or Circles. See WHIRLWIND.

VORTEX, *Vorago*, is alſo uſed for an Eddey, or *Whirlpool*; or a Body of Water in certain Seas and Rivers, which runs rapidly around, forming a ſort of Cavity in the middle.

The ordinary Cauſe of theſe *Vortices*, is a Gulph, or Outlet, whereby the Water of the Sea, &c. is abſorbed, or precipitates itſelf into ſome other Receptacle; ſometimes to ſome other communicant Sea, and ſometimes, perhaps, into the vaſt Abyſs of central Water. See WHIRLPOOL, and ABYSS.

An *artificial Vortex*, expreſſive of the Phænomena of the natural ones, may be made with a cylindric Veſſel, placed, immoveable, on a horizontal Plane, and fill'd to a certain height with Water.—In this Water a Stick being plunged, and turn'd round as briſkly as may be, the Water is neceſſarily put into a pretty rapid circular Motion, and riſes to the very Edge of the Veſſel, and when there arrived, ceaſes to be further agitated.

The Water thus rais'd forms a Cavity in the Middle, whoſe Figure is that of a truncated Cone; its Baſe is the ſame with the upper Cavity of the Veſſel, and its *Vertex* in the Axis of the Cylinder.

What raiſes the Water at the ſide of the Veſſel, which occaſions the Cavity in the Middle, is its centrifugal Force.—For the Motion of the Water being circular, it reſpects a Centre taken in the Axis of the Veſſel, or, which is the ſame, in the Axis of the *Vortex* form'd by the Water; the ſame Velocity, then, being impreſs'd on all the Water, the Circumference of a ſmaller Circle of Water, or a Circle leſs remote from the Axis, has a greater centrifugal Force than another that is greater, or more remote from the Axis. The ſmaller Circle therefore drives the greater towards the ſide of the Veſſel, and from this Preſſion or Impulſion which all the Circles receive from the ſmaller ones that precede them, and convey to the greater which follow them, ariſes that Elevation of the Water along the Edge of the Veſſel to the very top, where we ſuppoſe the Motion to ceaſe.

With a *Vortex* thus form'd, M. *Saulmon*, of the Royal Academy of Sciences, made divers Experiments by putting ſeveral ſolid Bodies therein, to acquire the ſame circular Motion; with Intent to diſcover which of them, in making their Revolutions round the Axis of the *Vortex*, approach towards, or recede from it, and with what Velocity.—The Reſult was, that the heavier the Body, ſtill the greater was its Receſs from the Axis.

M. *Saulmon*'s View in this Attempt, was to ſhew how the Laws of Mechanicks produce the cœleſtial Motions; and that it is probably to thoſe Motions that the *Gravity* or Weight of Bodies is owing.—But, unhappily, the Experiments ſhew juſt the contrary of what they ſhould do, to confirm the *Carteſian* Doctrine of *Gravity*. See GRAVITY.

VORTEX, in the *Carteſian* Philoſophy, is a Syſtem or Collection of Particles of Matter moving the ſame way, and round the ſame Axis.

Such *Vortices* are the Grand Machines whereby theſe Philoſophers ſolve moſt of the Motions and other Phænomena of the heavenly Bodies.—Accordingly, the Doctrine of theſe *Vortices* makes a great part of the *Carteſian* Philoſophy. See CARTESIANISM.

The Matter of the World, they hold to have been divided at the Beginning into innumerable little equal Particles, each endow'd with an equal Degree of Motion, both about its own Centre and ſeparately, ſo as to conſtitute a Fluid. See FLUID.

Several Syſtems, or Collections of this Matter, they further hold to have been endow'd with a Motion about certain Points, as common Centres, placed at equal Diſtances; and that the Matters moving, round theſe, compos'd ſo many *Vortices*.

Then, the primitive Particles of Matter they ſuppoſe, by theſe inteſtine Motions, to be as it were ground into ſpherical Figures, and ſo to compoſe Globules of divers Magnitudes; which they call *the Matter of the Second Element*: and the Particles rubb'd or ground off them, to bring them to that Form, they call *the Matter of the Firſt Element*. See ELEMENT.

And ſince there would be more of this *Firſt Element* than would ſuffice to fill all the Vacuities between the Globules of the *Second*, they ſuppoſe the remaining Part to be driven towards the Centre of the *Vortex*, by the circular Motion of the Globules; and that being there amaſs'd into a Sphere, it would produce a Body like the Sun. See SUN.

This Sun being thus form'd, and moving about its own Axis with the common Matter of the *Vortex*, would neceſſarily throw out ſome Parts of its Matter, thro' the Vacuities of the Globules of the *Second* Element conſtituting the *Vortex*; and this eſpecially at ſuch Places as are fartheſt from its Poles; receiving, at the ſame time, in by theſe Poles, as much as it loſes in its equatorial Parts. And by this means it would be able to carry round with it thoſe Globules that are neareſt, with the greater Velocity, and the remoter, with leſs. And by this means thoſe Globules which are neareſt the Centre of the Sun muſt be leaſt; becauſe were they greater, or equal, they would, by reaſon of their Velocity, have a greater centrifugal Force, and recede from the Centre. See LIGHT.

If it ſhould happen that any of theſe Sun-like Bodies in the Centres of the ſeveral *Vortices*, ſhould be ſo incruſtated and weakened, as to be carried about in the *Vortex* of the true Sun; if it were of leſs Solidity, or had leſs Motion than the Globules towards the Extremity of the *Solar Vortex*; then it would deſcend towards the Sun, till it met with Globules of the ſame Solidity, and capable of the ſame Degree of Motion with itſelf; and thus, being fix'd there, it would be for ever after carried about by the Motion of the *Vortex*, without either approaching any nearer to, or receding from the Sun; and ſo become a *Planet*. See PLANET.

Suppoſing then all this, we are next to imagine that our Syſtem was at firſt divided into ſeveral *Vortices*, in the Centre of each of which was a lucid ſpherical Body; and that ſome of theſe being gradually incruſtated, were ſwallowed up by others which were larger and more powerful, till at laſt they were all deſtroy'd and ſwallow'd up by the biggeſt *Solar Vortex*, except ſome few which were thrown off in right Lines from one *Vortex* to another, and ſo became *Comets*. See COMET.

But this Doctrine of *Vortices*, is at beſt merely hypothetical.—It does not pretend to ſhew by what Laws and Means the cœleſtial Motions are really effected, ſo much as by what Means they poſſibly might, in caſe it ſhould have ſo pleas'd the Creator.——But we have another Principle which accounts for the ſame Phænomena as well, nay better than that of *Vortices*; and which we plainly find has an actual Exiſtence in the Nature of Things: And this is *Gravity*, or the weight of Bodies. See GRAVITY.

The *Vortices*, then, ſhould be caſt out of Philoſophy, were it only that two different adequate Cauſes of the ſame Phænomena are inconſiſtent. See NEWTONIAN *Philoſophy*.

But we have other Objections againſt it.—For 1°, If the Bodies of the Planets and Comets be carried round the Sun in *Vortices*, the Bodies of the Parts of the *Vortex* immediately inveſting 'em, muſt move with the ſame Velocity, and in the ſame Direction; and beſides, muſt have the ſame Denſity, or the ſame *vis Inertiæ*.——But it is evident, that the Planets and Comets move in the very ſame Parts of the Heavens with different Velocities, and in different Directions. It follows, therefore, that thoſe Parts of the *Vortex* muſt revolve at the ſame time in different Directions, and with different Velocities; ſince one Velocity and Direction will be required for the Paſſage of the *Planets*, and another for that of the *Comets*.

2°, If it were granted, that ſeveral *Vortices* are contain'd in the ſame Space, do penetrate each other, and revolve with divers Motions; ſince thoſe Motions muſt be conformable to thoſe of the Bodies, which are perfectly regular, and perform'd in Conic Sections; it may be aſk'd, How they ſhould have been preſerv'd entire ſo many Ages, and not diſturb'd and confounded by the adverſe Actions and Shocks of ſo much Matter as they meet withal?

3°, The Number of *Comets* is very great, and their Motions perfectly regular, obſerving the ſame Laws with the *Planets*, and moving in conical Orbits, that are exceedingly excentric. Accordingly they move every Way, and to all Parts of the Heavens, freely pervading the planetary Regions, and going frequently contrary to the Order of the Signs; which were impoſſible, unleſs theſe *Vortices* were away.

4°, If the *Planets* moved round the Sun in *Vortices*, thoſe Parts of the *Vortices* next the *Planets*, we have already obſerved, would be equally denſe with the *Planets* themſelves: Conſequently the vortical Matter contiguous to the Perimeter of the Earth's Orbit, would be as denſe as the Earth itſelf: And that between the Orbits of the Earth and *Saturn*, muſt be as denſe, or denſer.—For a *Vortex* cannot maintain itſelf, unleſs the more denſe Parts be in the Centre, and the leſs denſe towards the Circumference: And ſince the periodical times of the Planets are in a ſeſquialterate Ratio of their Diſtances from the Sun, the Parts of the *Vortex* muſt be in the ſame Ratio. Whence it follows, that the centrifugal Forces of the Parts will be reciprocally as the Squares of the Diſtances.——Such, therefore, as are at a greater diſtance from the Centre, will endeavour to recede there-

from

from with the leſs Force. Accordingly, if they be leſs denſe, they muſt give way to the greater Force, whereby the Parts nearer the Centre endeavour to riſe. Thus, the more denſe will riſe, and the leſs denſe deſcend; and thus there will be a change of places, till the whole fluid Matter of the *Vortex* be ſo adjuſted, as it may reſt in *æquilibrio*.

Thus will the greateſt part of the *Vortex* without the Earth's Orbit, have a Degree of Denſity and Inactivity not leſs than that of the Earth itſelf.—Whence the *Comets* muſt meet with a very great reſiſtance; contrary to all Appearances. *Coteſ. præf. ad Newt. princip.* See COMET, RESISTANCE, MEDIUM, &c.

The Doctrine of *Vortices*, Sir *I. Newton* obſerves, labours under many Difficulties: For a *Planet* to deſcribe Areas proportional to the Times, the periodical Times of the *Vortex* ſhould be in a duplicate Ratio of their Diſtances from the Sun; and for the periodical Times of the *Planets* to be in a ſeſquiplicate Proportion of their Diſtances from the Sun, the periodical Times of the Parts of the *Vortex* ſhould be in the ſame Proportion of their Diſtances; and, laſtly, for the leſſer *Vortices* about *Jupiter*, *Saturn*, and the other *Planets*, to be preſerved and ſwim ſecurely in the Sun's *Vortex*, the periodical Times of the Parts of the Sun's *Vortex* ſhould be equal.—— None of which Proportions are found to obtain in the Revolutions of the Sun and Planets a-round their Axes. *Phil. Nat. prin. Math. apud Schol. Gen. in Calce.*

Beſides, the *Planets*, according to this Hypotheſis, being carried about the Sun in Ellipſes, and having the Sun in the *Umbilicus* of each Figure, by Lines drawn from themſelves to the Sun, do always deſcribe Areas proportionable to the Times of their Revolutions; which that Author ſhews the Parts of no *Vortex* can do. *Schol. Prop. ult. lib. 2. Princip.*

Again, Dr. *Keil* proves in his *Examination of* Burnet's *Theory*, That if the Earth were carried in a *Vortex*, it would move faſter in the Proportion of 3 to 2, when it is in *Virgo*, than when it is in *Piſces*; which all Experience proves to be falſe.

VOTE, or *Voice*. See SUFFRAGE, and VOICE.

—In the Houſe of Peers they give their *Votes* or Suffrages, beginning at the Puiſne or loweſt Baron, and ſo to the reſt ſeriatim, every one anſwering, a-part, *Content* or *not Content*; and if the Affirmatives and Negatives are equal, *ſemper præſumitur pro negante*; the Speaker having no *caſting Vote* unleſs he be a Peer.

In the Houſe of Commons they Vote by *Yea's* and *No's*, promiſcuouſly. See PARLIAMENT.

VOTUM, in our antient Law-books, is uſed for *Nuptiæ*; ſo *Dies votorum*, is the Wedding-day, *Fleta*, lib. 4. cap. 2. par. 16. *Si donatorius ad alia vota convolaverit*, &c.

VOTUM, or *Vow*. See Vow.

VOUCH,—A Perſon is ſaid to *Vouch for another*, when he undertakes to maintain or warrant him in a thing, or paſſes his Word in his behalf.

In Law, to *Vouch*, is to call ſuch Perſon or *Vouchee* into Court, to make good his Warrant. See WARRANT.

VOUCHEE, a Perſon who is to warranty, or *Vouch* for another, who in reſpect hereof is call'd *Voucher*. See VOUCHER.

VOUCHER, in Law, the Tenant who calls another Perſon into Court, bound to warranty him, and either to defend the Right againſt the Demandant, or to yield him other Lands, &c. to the value. See WARRANT.

This ſeems in ſome meaſure to agree to the Contract, in Civil Law, whereby the Vendee binds the Vendor, ſometimes in the Simple Value of the Things bought, ſometimes in the Double; to warrant the ſecure enjoying of the Thing bought.

Yet there is this Difference between the Civil and Common Law in this Point, That the Civil Law binds every Man to warrant the Security of that which he ſelleth; which the Common Law doth not, unleſs it be ſpecially covenanted.

The Proceſs whereby the Vouchee is call'd, is a *Summoneas ad Warrantiſandum*; and if the Sheriff return upon that Writ, that the Party hath nothing whereby he may be ſummon'd, then goes out anothor Writ call'd, *Sequentur ſub ſuo periculo.*

A Recovery with a *ſingle Voucher*, is when there is but one *Voucher*; and with a *double Voucher*, is when the Vouchee voucheth over; and ſo a *treble Voucher*. See RECOVERY.

There is alſo a *foreign Voucher*, when the Tenant is impleaded in a particular Juriſdiction of that Court; more pertinently call'd a *Voucher of a Foreigner*.

VOUCHER, alſo ſignifies a Leiger-book, or Book of Accompts, wherein are enter'd the Warrants for the Accomptant's Diſcharge. See BOOK-KEEPING.

VOUSSOIR, *Vault-ſtone*, in Architecture, a Stone proper to form the ſweep of an Arch, being cut ſomewhat in manner of a truncated Cone, whoſe Sides, were they prolong'd, would terminate in a Centre, to which all the Stones of the Vault are directed. See VAULT.

VOW, VOTUM, a ſolemn Promiſe or Offering of a Man's ſelf to God. See OATH.

A Perſon is conſtituted a Religious by taking three *Vows*, that of Poverty, that of Chaſtity, and that of Obedience. See RELIGIOUS.

Authors are divided as to the Antiquity of theſe *Vows*. ——'Tis agreed, the antient Anchorites, and Hermits of the *Thebaide* made none; they did not conſecrate themſelves to God by an indiſſolvable Obligation, but were at liberty to quit their Retirement, and return into the World, whenever the Fervor that drove 'em out of it, came to abate. See ANCHORITE, &c.

Vows were not introduced till long after; and that, to fix the too frequent Inconſtancy of ſuch as, after retiring from the World, repented themſelves too ſoon, or too ſlightly; and by that means ſcandaliz'd the Church, and diſturb'd the Quiet of Families by their Return.

Eraſmus will have it, that ſolemn *Vows* were not introduced till the thirteenth Century, under the Pontificate of *Boniface* VIII.——Others hold 'em as antient as the Council of *Chalcedon*: But the Truth is, before *Boniface* VIII. there were none but ſimple *Vows*, and ſuch as might be diſpenſed withal.——Their *Vows*, till that time, were not deem'd eternal Chains; they were not indiſſoluble. 'Tis true, they were obligatory Promiſes, as to Conſcience, and the Inconſtancy of ſuch as violated them was held an odious Deſertion: But as to Law, the Perſons were not held to be civilly dead, ſo as, upon their Return, to render 'em incapable of all Acts of civil Society.

The moſt common *Vow* was that of Poverty, but this only regarded the Convent, on account of which every Perſon diveſted himſelf of all Property; but the making of *Vows* did not at all exclude 'em from the Rights of Blood, or render 'em incapable of Inheriting.

No Religious, 'tis true, acquired the Property of the Effects that fell to him; they all belong'd to the Monaſtery, in favour of which he had diveſted himſelf of every thing; and the Monaſtery only left him the Uſufruit and Direction of them.—The Popes have frequently confirm'd this Privilege to divers Orders, and permitted the Monks to inherit as much as if they were Seculars, and had made no *Vows*.

At preſent, the civil Death of a Religious is dated from the Day he makes the *Vows*; and from that time he is utterly incapable of inheriting.—A Religious may reclaim, or proteſt againſt his *Vows* within five Years; but, after that, 'tis no longer admitted.—The Failures in the Profeſſion are eſteem'd to be purged by his Silence and Perſeverance for five Years.—Indeed, to be reliev'd from his *Vows*, 'tis not enough the Party reclaim within the five Years; but he muſt likewiſe prove, he was forced to take the Habit.

Vows, *Vota*, among the *Romans*, ſignify the Sacrifices, Offerings, Preſents, and Prayers, made for the Emperors and *Cæſars*, particularly for their Proſperity, and the Laſtingneſs of their Empire.

Theſe were, at firſt, made every five Years, then every fifteen, and then every thirty, call'd *Quinquennalia*, *Decennalia*, and *Vicennalia*.

In divers antique Medals and Inſcriptions, we read, *Vot.* X. *Vot.* XX. *Vot. mult.* ſignifying *Votis Decennalibus*, *Vicenalibus*, *Multis*, &c.

VOTIVE *Medals*, are thoſe whereon the Vows of the People for the Emperors or Empereſſes are expreſs'd. See MEDAL.

The Public Vows, made every five, ten, or twenty Years, are more often found round the Edges of the Medal, than on the Faces thereof, at leaſt in the Weſtern Empire; for in the Eaſtern the Caſe is different; witneſs the Medal of *M. Aurelius* the younger, where the Reverſe repreſents the Vows made at the time of his Marriage, VOTA PUBLICA. And on *Greek* Medals, ΔΗΜΟΥ ΕΥΧΑΙ, which they ſometimes expreſs by the two initial Letters, Δ. Ε. according to *F. Hardouin*'s Conjecture, which may be admitted, in certain Medals, where the ΔΕΜ. ΕΞ. that is, ΔΕΜΑΡΧΙΚΗΣ ΕΞΟΥΣΙΑΣ, does not well agree. Witneſs alſo the Medal of *Antoninus*, VOTA SUSCEPTA DECENNALIA.

The Origin of *Vows*, and *Votive Medals*, is given by *M. du Cange*, thus:—*Auguſtus* feigning himſelf willing to quit the Empire, and having twice, at the Prayers of the Senate, condeſcended to hold it for ten Years longer, it grew into a Cuſtom, to make freſh Public Prayers, Sacrifices, and Games, for his continuing it, at the ten Years end; and theſe they call *Decennalia*, or *Vota Decennalia*.

Under the Eaſtern Emperors, theſe Vows were repeated every five Years: Hence it is that, after *Dioclesian*'s Time, we find on Medals VOTIS V. XV. &c. which Practice continued till the Time of *Theodoſius*, when Chriſtianity being well eſtabliſh'd, a Ceremony that had ſome Remains of Heatheniſm in it, was ſet aſide. So that the VOTIS MULTIS, on a Medal of *Majorianus*, muſt be a very different Thing; and no other, doubtleſs, than a kind of Acclamation, like that, PLURA NATALIA FAELICITER.

VOWEL, in Grammar, a Letter which affords a complete Sound of it ſelf; or a Letter ſo ſimple as only to need a bare opening

opening of the Mouth to make it heard, and to form a diſtinct Voice. See LETTER.

Such are *a*, *e*, *i*, *o*, *u*; which are call'd *Vocales*, *Vowels*, in contradiſtinction to certain other Letters, which depending on a particular Application of ſome part of the Mouth, as the Teeth, Lips, or Palate, can make no perfect Sound without an opening of the Mouth, that is, without the addition of a *Vowel*; and are therefore call'd *Conſonants*. See CONSONANT.

Tho we ordinarily only reckon five *Vowels*, yet, beſides that each of theſe may be either long or ſhort, which occaſions a conſiderable Variety in the Sound: To conſider only their Differences reſulting from the different Apertures of the Mouth, one might add four or five more *Vowels* to the Number.—For the *e* open, and the *e* cloſe, are different enough to make two *Vowels*, as in *Sea*, and *Depth*; ſo alſo the *o* open, and *o* cloſe, in *Hoſt*, and *Organ*.—Add that the *u* pronounced *ou*, as the *Latins* did, and as the *Italians* and *Spaniards* ſtill do, has a very different Sound from the *u*, as pronounced by the *Greeks*, and as at this Day by the *Engliſh* and *French*.—Again, *eo*, in *People*, make but one ſimple Sound, tho we write it with two *Vowels*.

Laſtly, the *e* mute is originally no more than a Surd join'd to a Conſonant when that is to be pronounced without a *Vowel*, as when it is immediately follow'd by other Conſonants, as in the Word *Scamnum*.—This is what the *Hebrews* call *Scheva*, eſpecially when it begins the Syllable: And this *Scheva* is found in all Languages, tho over-look'd in many of them, particularly the *Engliſh*, *Latin*, &c. by reaſon it has no proper Character to deſign it; tho in ſome of the Vulgar Tongues, particularly *French* and *High-Dutch*, it is expreſs'd by the *Vowel e* adding its Sound to the reſt.

Thus, without regarding the Differences of the ſame Sound or *Vowel* as to length or ſhortneſs, one may diſtinguiſh ten ſeveral Sounds or *Vowels*, expreſs'd by the following Characters, *a*, *e*, *é*, *i*, *o*, *ó*, *eu*, *ou*, *u*, *e*, mute. See ALPHABET.

VOX, in Law—*Vocem non habere*, is a Phraſe uſed by *Bracton* and *Fleta*, for an infamous Perſon; one who is not admitted to be a Witneſs.

UP-LAND, is high Ground, or, as ſome call it, *Terra firma*; oppoſite to ſuch as is mooriſh, marſhy, or low: or it is Paſture-land, which lies ſo high as not to be overflow'd with Rivers, or Land-floods.

UPRIGHT, in Architecture, a Repreſentation or Draught of the Front of a Building; call'd alſo, an *Elevation*. See ELEVATION.

UPRIGHT, in Heraldry, is uſed in reſpect of Shell-Fiſhes, as Crevices, &c. when ſtanding upright in a Coat.—Inaſmuch as they want Fins, they cannot according to *Gullim*, be properly ſaid to be *Hauriant*; that being a Term appropriated to ſcaly Fiſhes.

URACHUS, in Anatomy, a membranous Canal in a *Fœtus*, proceeding from the Bottom of the urinary Bladder, thro' the Navel to the *Placenta*, along with the umbilical Veſſels, whereof it is eſteem'd one. See UMBILICAL *Veſſels*.

The Termination of the *Urachus* in the *Placenta*, forms a little oval *Veſica*, or Bladder, which ſerves to receive the Urine ſecreted in the Kidneys of the *Fœtus*, and that could not make its way thro' the *Urethra*, by reaſon of the reſiſtance of the *Sphincter* of the Bladder, which is not to be overcome but by Inſpiration.

The Humour found in the *Veſica* of the *Urachus*, is ſtill in the greater Quantity, the higher colour'd, and the more like Urine; as the *Fœtus* is nearer the time of the Birth.

The *Urachus* is not plainly found any where but in Brutes; but there is no diſpute but that it exiſts in an Human *Fœtus*. See FOETUS,

M. *Drelincourt*, a celebrated Profeſſor of Anatomy at *Leiden*, and ſome others after him, deny the *Urachus* to be hollow: On which Suppoſition it would not be eaſy to aſſign its Uſe, unleſs to keep the Bladder ſuſpended to the Navel. But the former Opinion ſeems the beſt warranted. See URINE.

URANIBOURG, a Term often heard among Aſtronomers, being the Name of a celebrated Obſervatory, in a Caſtle on the little Iſland *Veena*, or *Huena*, in the *Sound*; built by that noble *Dane*, *Tycho Brahe*, and furniſh'd with Inſtruments for obſerving the Courſe and Motions of the heavenly Bodies. See OBSERVATORY.

This famed Obſervatory, finiſh'd about the Year 1580, did not ſubſiſt above ſeventeen Years; when *Tycho*, who little thought to have erected an Edifice of ſo ſhort a Duration, and who had even publiſh'd the Figure and Poſition of the Heavens which he had choſe for the Moment to lay the firſt Stone in, was obliged to abandon his Country.

Soon after this, thoſe to whom the Property of the Iſland *Huena* was given, made it their Buſineſs to demoliſh *Uranibourgh*: Part of the Ruins were diſpers'd into divers Places, the reſt ſerved to build *Tycho* a handſom Seat upon his antient Eſtate, which to this Day bears the Name of *Uranibourgh*.—For as to the antient *Uranibourg*, there is now no Footſteps remaining. 'Twas here *Tycho* compoſed his Catalogue of the Stars. See CATALOGUE.

M. *Picart*, making a Voyage to *Uranibourgh*, found *Tycho*'s Meridian-Line drawn thereon, to deviate from the Meridian of the World; which confirms the Conjecture of ſome, That the Poſition of the Meridian-Line may vary. See MERIDIAN.

URBICARY *Provinces*. See SUBURBICARY.

URDEE, in Heraldry.—A *Croſs urdee*, ſeems to be the ſame with what we otherwiſe call *clechee*. See CLECHEE.

UREDO, the Blaſting or Blighting of Trees or Herbs. See BLAST and BLIGHT.

UREDO, is ſometimes uſed by Phyſicians for an Itching or Burning in the Skin. See ITCH.

URENTIA, are ſometimes uſed for Medicines of a hot or burning Quality. See CAUSTIC.

URETERS, in Anatomy, two long and ſmall Canals, which come from the Baſon of the Kidneys, one on each ſide, and terminate in the Bladder; ſerving to convey the Urine, ſecreted in the Glands of the Kidneys, into the Bladder. See KIDNEY, and BLADDER.

They lie between the doubling of the *Peritonæum*; and deſcending in the form of an S, pierce the Bladder near its Neck, where they run, firſt, ſome ſpace betwixt its Coats, and then open into its Cavity.

They are compoſed of three Coats.—The firſt is from the *Peritonæum*; the ſecond is made of ſmall oblique muſcular Fibres; and the third, which is very ſenſible, has ſeveral ſmall Glands, which ſeparate a ſlimy Liquor, to defend it againſt the Acrimony of the Urine.

The neighbouring Parts furniſh them with Blood-Veſſels; and they have Nerves from the Intercoſtals and the *Vertebræ* of the Loins.—Their Cavity is ſometimes contracted in three or four places, eſpecially towards the Bladder.

Such as are ſubject to the Gravel, and given to exceſſive drinking, have them ſometimes ſo much dilated, that one may put the End of ones little Finger into them. See STONE and GRAVEL.

Their Obſtruction cauſes a Suppreſſion of the Urine. See URINE.

The Word is form'd from the *Greek* οὐρεῖν, *meiere*, to make Water.

URETHRA, in Anatomy, call'd alſo *Meatus Urinarius*, a Tube or Canal ariſing from the Neck of the Bladder, and continued to the *Pudendum*; ſerving to diſcharge or carry off the Urine out of the Bladder. See URINE.

Some will have it to be only a Production of the Neck of the Bladder itſelf.——Its length is very different in the two Sexes.—In Man it terminates in the Extremity of the Glans, and is ordinarily a Foot long.——In Woman, 'tis but two Fingers breadth long, and terminates in the *Vulva*; but it is much wider, and more eaſily dilated here than in the other Sex.

Mr. *Cowper* gives us an Inſtance of a Woman, wherein the *Hymen* was ſo firm and impervious, that her Husband finding no Paſſage thro' it, had open'd himſelf another thro' the *Urethra*. See HYMEN.

The *Urethra* is compoſed of two Membranes, and a little ſpongy Subſtance like that of the *Corpora Cavernoſa*, except at the End which joins the Neck of the Bladder, where the diſtance between the Membranes is ſmall, and fill'd up with a thin and red glandulous Subſtance, whoſe excretory Ducts piercing the inner Membrane, pour into a Pipe a mucilaginous Liquor which lines and lubricates its Cavity, and prevents the Salts of the Urine from galling it; as having a farther Office in the Male Sex, *viz.* the Emiſſion of the Seed. See PENIS, and SEED.

URIGO, a burning with a Cauſtic or Cautery. See CAUSTIC, and CAUTERY.

URIM *and Thummim*, אורים ותמים, q. d. *Lights and Perfections*, the Name of a kind of Ornament belonging to the Habit of the High-Prieſt, in vertue whereof he gave oracular Anſwers to the People. See PROPHECY, &c.

The High-Prieſts of the *Jews*, we are told, conſulted God in the moſt important Affairs of their Common-wealth, and received Anſwers by the *Urim and Thummim*.—What theſe were is diſputed among the Criticks: Some take them to be the twelve precious Stones in the Breaſt-Plate of the High-Prieſt, which ſhone like a Flame of Fire. See PECTORAL.

Others will have them, the antient *Teraphim*, or little human Figures carried by the Prieſt, hid in the Fold of his Robe or Gown, and by which he anſwer'd the Queſtions of the *Jews*. See TERAPHIM.

Diodorus Siculus relates, that there was a like Ceremony in uſe among the *Egyptians*, whoſe principal Miniſter of Juſtice carried an Image of precious Stones about his Neck, which was call'd *Truth*.

URINAL, in Medicine, a Veſſel fit to receive and hold *Urines*; and uſed accordingly, for the conveniency of ſick Perſons.

'Tis

'Tis uſually of Glaſs, and crooked; and ſometimes fill'd with Milk, to aſſwage the Pain of the Gravel.

URINARIA *Fiſtula*, is the ſame as *Urethra*; ſo call'd from its Office, to convey the *Urine*. See URETHRA.

URINARY *Paſſage*. } See { URETHRA.
Meatus URINARIUS. }

URINARY *Bladder*. } See { BLADDER.
Veſica URINARIA. }

URINE, a liquid Excrement, or Humour, ſeparated from the Blood in the Kidneys, convey'd thence into the Bladder, and diſcharg'd by the *Urethra*. See EXCREMENT.

The *Urine* is ſecreted from the Arterial Blood in the Glands of the *Kidneys*; from which ariſe numerous little pellucid Pipes, and Veins, which receiving the ſecreted *Urine*, at length join into twelve *Papillæ*; out of which the *Urine* oozes into a Cavity call'd the *Pelvis*, from whence it runs into the *Ureters* of either ſide, and thro' them into the *Bladder*; and from that, at length, thro' the *Urethra*, out of the Body. See KIDNEYS, PAPILLÆ, PELVIS, URETER, BLADDER, and URETHRA.

The Secretion of the *Urine*, then, is not perform'd by any Attraction, as ſome will have it; or by any Emulſion, as others; or any Fermentation, as others; or any Precipitation, as others: but by the Force of the Heart, and Arteries, whereby the Blood is driven thro' innumerable Turnings and Windings of the Veſſels; attenuated by Reſiſtances, oppoſite Motions, violent Concuſſions, and various Mixtures, till the more liquid and ſerous Part thereof, is forc'd thro' Canals ſmaller than the Blood-Veſſels, and ſo collected and diſcharg'd. See SECRETION.

The Word *Urine* is form'd from the *Greek* ὑρον, which ſignifies the ſame thing.

'Tis more than probable, that the Blood of the Emulgent Artery, convey'd thro' all the little Branches that ſpread thro' the exterior Membranes of the *Veſiculæ* whereof the Kidneys are compos'd, being by this means exceedingly divided, and as it were attenuated, enters the *Veſiculæ* themſelves, and gives them their red Colour; that it is there filtrated, and the ſerous or *urinous* Parts ſecreted; and that this Filtration is promoted by the alternate Contractions and Dilatations of the fleſhy Fibres that incloſe the little Veſicles; and that after the Filtrations, the Parts that remain Blood are reſum'd by the Capillary Branches of the Veins; the reſt entering the excretory Ducts of the *Veſiculæ*, which are the firſt Receptacle of the *Urine*. *Hiſt. Acad. de Sciences*, An. 1705.

Monſieur *Morin*, in the *Memoirs of the* French *Academy*, marks out a new Rout or Courſe for the *Urine*.—The *ordinary* one, which is the Paſſage of any Liquor we drink thro' the Stomach, into the Inteſtines, thence into the Lacteals, thence into the Receptacle of the Chyle, thence into the Subclavian Vein, thence into the *Cava*, thence into the right Ventricle of the Heart, thence into the Lungs, and thence into the left Ventricle of the Heart; thence into the *Aorta*, thence into the Emulgent Artery, thence into the Kidneys, thence into the Ureters, and at laſt into the Bladder; ſeems too long and circuitous; conſidering how readily Mineral Waters paſs, and what a ſpeedy effect Aſparagus is found to have.—Beſides, that on this Principle, the Liquors we drink mixing with ſo many other Liquors in their way, ſhould be greatly alter'd thereby; whereas we frequenly find a Tincture of Caſſia, render'd by *Urine* almoſt as black as when firſt taken: and the like is obſerv'd of divers other Liquors.

M. *Morin*, therefore, maintains, that a good part of the Liquor we drink, oozes thro' the Membranes of the Stomach, and falls into the Pelvis; where it enters the Bladder thro' the Pores thereof, without getting into the Inteſtines, which are lined with too thick and viſcid a Humour to allow it Ingreſs.

This Syſtem is confirm'd hence, That both the Stomach and Bladder, even of a dead Animal, are found eaſily permeable to Water.

Accordingly, Dr. *Morgan* aſſures us, that if the Contents of the Abdomen be taken out of an animal Body, after it is juſt open'd; and the Stomach be fill'd with warm Water, while the Parts are yet reaking; the Liquor will paſs into the Bladder, which will viſibly receive it, and be fill'd in proportion as the Stomach empties.

The ſame Author adds, that if a Ligature be made upon the Ureters, while the Animal is yet living, and the Blood continues to circulate; tho this muſt cut off all Communication from the Kidneys to the Bladder; yet any Liquor with which the Stomach is fill'd will paſs into the Bladder.

From the whole, tho ſome of our beſt Anatomiſts hold that a Circulation of the whole Maſs of Blood is effected in five Minutes, and others in two; which might account for the quick Paſſage of the *Urine*; 'tis hard to conceive, but that part of it muſt go immediately from the Stomach into the Bladder.

The general Deſign of Nature in this new *Urinary* Drain, is ſuppoſed to be to prevent any ſudden Plethora, or immoderate Diſtenſion of the Veſſels upon drinking.

As a neceſſary Conſequence of this Syſtem, the Author eſtabliſhes two kinds of *Urines*; the one filtrated immediately out of the Stomach into the Bladder; the other making the long Courſe of the Circulation.

In the *Philoſophical Tranſactions*, we have an Inſtance given us, by Mr. *Young*, of a Boy ſix Years old, that piſs'd off almoſt all his *Urine* by his Navel.

In the ſame *Tranſactions*, Dr. *Richardſon* gives an Account of a Boy at *North Bierly* in *Yorkſhire*, who liv'd to ſeventeen Years of Age without ever making Water; yet was in perfect Health.—He had conſtantly a Diarrhæa on him, but without much uneaſineſs.—The Obſtruction, that Author obſerves, muſt have been in his Kidneys; for he had never any Inclination to make Water.

Urines are of various Kinds and Properties.—After drinking plentifully of any aqueous Fluid, the *Urine* is crude, inſipid, void of Smell, and eaſily retain'd.—That yielded by Chyle well concocted, is ſharper, more ſaline, leſs copious, ſomewhat fetid, and more ſtimulating.—That from Chyle already converted into Serum, is redder, ſharper, ſalter, and more fetid and ſtimulating.—And that ſecern'd after long Abſtinence, from Humours well concocted and wore off the ſolid Parts, is the leaſt copious, ſharpeſt, ſalteſt, reddeſt, moſt fetid, almoſt putrify'd, and of all others the hardeſt to retain.

The *Urine*, therefore, contains the watery Part of the Blood, its ſharpeſt, ſubtileſt, and moſt volatile Salt, and that neareſt to the alkaline Kind; its ſharpeſt, ſmalleſt, and moſt volatile Oil, and that neareſt to Putrefaction; and its ſmalleſt moſt volatile Earth. See BLOOD.

The Sal Armoniac of the Antients was prepar'd from Camels *Urine*. See ARMONIAC.

And the *Phoſphorus*, in uſe among us, from human *Urine*. See PHOSPHORUS.

Salt-petre is likewiſe prepar'd from the *Urine*, and other Excrements of Animals. See SALT-PETRE.

The *Indians* ſcarce uſe any other Medicine but Cows *Urine*.—The *Spaniards* make great uſe of *Urine* to clean their Teeth withal: So did the *Celtiberians* of old.

Urine is alſo uſed in Dying, to ferment and warm the Woad.—Old *Urine*, tinges Silver with a fine gold Colour.

The *Diſorders in the Urine* are various. See STRANGURY, RETENTION, DIABETES, STONE, NUBECULA, &c.

URINE, in Medicine.——The *Urine* affords one of the principal Criterions, or Signs whereby Phyſicians judge of the State of the Patient, and the Courſe of the Diſeaſe. See SIGN, SYMPTOM, DISEASE, &c.

In *caſting*, or examining *Urine*, the Things to be conſider'd, are, its *Quantity*, *Colour*, *Smell*, *Taſte*, *Fluidity*, and the Matters ſwimming therein.

An abundance of Urine, indicates a Looſeneſs of the Renal Pipes; a Diminution of Perſpiration; Sweat; Saliva; an imperfect Mixture of the Blood, whereby the watery Parts ſeparate eaſily from the reſt; a nervous Indiſpoſition; a copious drinking of ſome aqueous Liqiud, or ſome Diuretic taken.—Such *Urine* preſages a Thickneſs of what is left behind, and its Acrimony; Thirſt, Anxiety, Obſtructions, and their Effects, a dry, thirſty, hot Conſumption.

A contrary State of the *Urine* indicates the Contraries; and preſages future Repletions, Heavineſs, Drouſineſs, Convulſive Tremors, &c.

A thin, limpid, inſipid, colourleſs, taſteleſs Urine, denotes a great Conſtriction of the Renal Veſſels, and at the ſame time, a briſk Agitation of the Humours; a ſtrong Coheſion of the Oil, Salt, and Earth in the Blood it ſelf, and an imperfect Mixture of the aqueous Parts therewith; ſome grievous Indiſpoſition of the Mind, a hyſteric or hypochondriac Fit; a Debility of the *Viſcera*; Crudity, Pituita, Obſtructions of the Veſſels; and, in acute Diſeaſes, a want of a Coction and Criſis.—Such *Urine* portends much the ſame as a too copious *Urine*; and in acute inflammatory Diſeaſes, a bad Condition of the *Viſcera*, Deliria, Phrenſies, Convulſions, Death.

Ruddy Urine, without any Sediment, in acute Diſeaſes, indicates a violent Motion and Attrition among the Parts that conſtitute the Humours, and between the Veſſels and the Humours; a cloſe intimate Mixture of the Oil, Salt, Earth and Water in the Humours: and hence a great Crudity of the Diſeaſe, and its long Duration, and great Danger.—Such *Urine* preſages gangrenous Deſtructions of the fineſt Veſſels; chiefly thoſe of the Brain and *Cerebel*, and thence Death: a difficult Coction; a ſlow, doubtful Criſis: And all theſe the worſe, as the *Urine* is redder, and freer of Sediment. If there be a heavy copious Sediment, it ſhews a ſtrong antecedent Attrition; looſe Veſſels; ſharp, ſaline, colliquated Blood, unfit for Nutrition; intermitting Fevers, and Scurvy.

The Preſages are, the Durableneſs of the Diſeaſe, wearing of the Veſſels, Weakneſs, colliquative Sweats, Saliva, &c. Atrophy, and Dropſy.—If the Sediment in ſuch *Urine*

be branny, ſcaly, filmy, &c. it preſages the like, only worſe.

A yellow Urine, with a Sediment as before, denotes a Jaundice, and the Symptoms thereof in the Cutis, Stools, Hypochondriums, &c.

A green Urine, with a thick Sediment, denotes an atrabilary Temperature, and that the Matter thereof is reſolved, and now excreted: conſequently Anxieties about the *Præcordia*, Perturbations of Stool, Iliac and Colic Pains.

Black Urine, denotes the ſame with green, only in a greater and worſe degree.

Blood, Pus, Caruncles, Filaments, Hairs, Anguillæ, Grumæ, Sand, Parts of Stone, and a Mucus at the bottom of the *Urine*, denote ſome Diſorder in the Kidneys, Ureters, Bladder, Teſticles, Seminal Veſicles, *Proſtatæ*, and Urethra.

Fatty Urine, generally breeds ſmall Sands, adhering to ſome viſcid Matter, and thus produces a ſort of oily Membrane, or Pellicle, which denotes an abundance of Earth, and a heavy Salt in the Blood, and preſages the Scurvy, Stone, &c.

A Fœtid Urine, denotes the Salts and Oils to be attenuated, diſſolv'd, and almoſt putrify'd; whence very great danger, both in chronic and acute Diſeaſes.

Urine which when ſhook, retains its Froth long, denotes a Tenacity of the Mixture, and thence a difficulty of Criſis; and pulmonick Diſeaſes, or Catarrhs in the Head.

But the *Urine* is chiefly conſulted in acute Fevers, where 'tis a very ſure Sign: For, 1°, *Urine* with a white, light, equable, turbinated, inodorous Sediment, thro' the whole Courſe of the Diſeaſe to the Criſis, is a very good Preſage. 2°, Copious, white, ſtrangurious *Urine*, with much white Sediment, emitted, at the Time of the Criſis, cures and takes away Abſceſſes. 3°, A thin, ruddy *Urine*, that does not ſubſide; a white, thin, watery *Urine*; a thin, equable, yellow *Urine*; a turbid *Urine* that does not ſubſide, denotes, in very acute Diſeaſes, a great Crudity, a difficult Criſis, and a durable dangerous Diſeaſe.

URINE, in Agriculture, is of excellent Uſe as a Manure. See MANURE.

The knowing in Agriculture and Gardening, prefer *Urine* for Land, Trees, &c. before Dung; as penetrating better to the Roots; and removing divers Infirmities of Plants.

The Decay of the antient *Kentiſh* Pippins, is a thing much complain'd of; and Mr. *Mortimer* obſerves, they will be quite loſt, unleſs ſome Perſons ſet themſelves to the antient way of Culture; which, as all antient Graziers and Gardeners know, was by waſhing the moſſy, worm-eaten, canker'd, and unſound Trees, two or three times in the Month of *March*, with the *Urine* of Oxen, &c. gather'd in earthen Veſſels, plac'd under the Planks of the Stalls wherein they were fatted.

In *Holland*, and in divers other Parts, they preſerve the *Urine* of their Beaſts, &c. with as much Care as their Dung.

Mr. *Hartlib*, Sir *Hugh Plat*, Mr. *Mortimer*, &c. make a common Complaint, that ſo great an Improver of Land, and ſo remarkable a Strengthner of Manure, ſhould be ſo much diſregarded among us.

URINOUS *Salts*, are the ſame with what we otherwiſe call *Alcali Salts*, or *Alkalies*. See ALKALI.

There are two Kinds of *Urinous Salts*, the one *fix'd*; the other *volatile*.——The fix'd prevail in Plants, and the volatile in Animals. See SALT.

They are called *Urinous*, in reſpect of their Taſte and Smell, which bear ſome reſemblance to thoſe of Urine.

URN, URNA, a kind of Vaſe, of a roundiſh form, but biggeſt in the middle, like the common Pitchers; now ſeldom uſed, but as Ornaments over Chimney-pieces, in Buffets, &c. or by way of Acroters, a-top of Buildings, Funeral Monuments, &c. See VASE, and ACROTER.

The great uſe of *Urns* among the Antients, was to preſerve the Aſhes of the Dead, after they were burnt: For which Reaſon they were call'd *Cineraria*, and *Urnæ Cinerariæ*; and were placed ſometimes under the Tomb-ſtone, whereon the Epitaph was cut; and ſometimes preſerved in Vaults in their own Houſes. See SEPULCHRE, TOMB, and FUNERAL.

Urns were alſo uſed at their Sacrifices, to put liquid things in. See SACRIFICE.

They were alſo of uſe in the *Sortes Prænestinæ*, or Caſting of Lots. See SORTES.

At *Rome*, too, the Cuſtom was to abſolve or condemn the Accuſed, by the Suffrages, or *Calculi*, which the Judges caſt into the *Judicatory Urn*. See ABSOLUTION, &c.

Virgil repreſents *Minos* the Judge of Hell, ſhaking the *Urn*, to decide the Lots of Mankind—*Quæſitor Minos* urnam *movet*.

The *Urn* is ſtill the attribute of *Rivers*, which are painted leaning on *Urns*, repreſenting their Sources by the Water flowing therefrom.——We find them repreſented in the ſame manner on antique Medals, and Relievo's. See RIVER, and ATTRIBUTE.

URN, URNA, was alſo a *Roman* Meaſure, for liquid Things; containing about three Gallons and a half of our Meaſure. See MEASURE.

UROCRITERIUM, a *Caſting of Water*; a giving Judgment of Diſeaſes by the Sight of the Urine. See URINE.

The Word is compounded of ουρον, *Urine*, and κριτηριον, *Criterion*, *Mark*, *Sign*.—Hence alſo the Words *Uromancy*, *Uroſcopy*, &c.

URSA, in Aſtronomy, *the Bear*, *Triones*, a Name common to two Conſtellations of the Northern Hemiſphere, near the Pole; diſtinguiſh'd by *Major*, and *Minor*. See CONSTELLATION.

URSA *Major*, or *the Great Bear*, according to *Ptolemy*'s Catalogue, conſiſts of 35 Stars; according to *Tycho*'s of 56; but in the *Britannic Catalogue* we have 215: The Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Conſtellation URSA *Major*.

URSULINES, an Order of Nuns, which obſerve the Rule of St. *Auguſtin*; and are chiefly noted for taking on them the Education and Inſtruction of young Maids. See ORDER, and RELIGIOUS.

They take their Name from their Inſtitutreſs St. *Urſula*; and are cloth'd in White and Black.

The *Urſulines* have ſpread exceedingly in *France*, &c. within theſe few Years.——Few Maids but are put out to School to them.

USAGE, in Law. } See { PRESCRIPTION.
USAGE, in Language. } See { LANGUAGE.

USANCE, in Commerce, in *Italian*, *Uſo*, is a determinate time for the Payment of Bills of Exchange, reckon'd either from the Day of the Bills being accepted, or from the Day of their date; and thus call'd, becauſe regulated by the Uſage and Cuſtom of the Places whereon they are drawn. See BILL, and EXCHANGE.

Bills of Exchange are drawn at one or more *Uſances*, either from ſight or from date.—The *Italians* ſay *Uſo doppio*, for *double Uſance*, or *two Uſances*.

This Term is longer or ſhorter, according to the different Countries.—In *France*, *Uſance* is fix'd at thirty Days.—At *London*, *Uſance* is a Calendar Month; and *double Uſance*, two Months.—In *Spain*, *Uſance* is two Months.—At *Venice*, *Genoa*, and *Leghorn*, three Months.

At *Hamburgh*, *Uſance* of Bills drawn from *England*, *France*, and *Venice*, is two Months after date.—From *Antwerp* and *Nurenberg*, fifteen Days after ſight.

At *Venice*, *Uſance* of Bills drawn at *Ferrara*, *Boulogne*, *Florence*, *Lucca*, and *Leghorn*, is five Days after ſight.—From *Naples*, *Augsbourg*, *Genoa*, and *Vienna*, fifteen Days after ſight.—From *Mantua*, *Modena*, and *Milan*, twenty Days after date.—From *Amſterdam*, *Antwerp*, and *Hamburgh*, two Months after date; and from *London*, three Months after date.

At *Milan*, *Uſance* of Bills drawn from *Genoa*, is eight Days after ſight.—From *Rome*, ten Days after ſight. And from *Venice*, twenty Days after Date.

At *Florence*, *Uſance* of Bills drawn from *Boulogne*, is three Days after ſight.—From *Rome* ten Days after ſight.—From *Venice* and *Naples*, twenty Days after Date.

At *Rome*, *Uſance* of Bills of Exchange drawn in *Italy*, was, originally, ten Days after ſight; but by an Abuſe this Term has been extended to fifteen.

At *Leghorn*, *Uſance* of Bills drawn from *Genoa*, is eight Days after ſight: From *Rome*, ten Days: From *Naples*, three Weeks: From *Venice*, twenty Days after date: From *London*, three Weeks; and from *Amſterdam*, forty Days.

At *Amſterdam*, *Uſance* of Bills drawn from *England* and *France*, is a Month after date: From *Venice*, *Madrid*, *Cadix*, and *Sevil*, two Months.

At *Genoa*, *Uſance* of Bills from *Milan*, *Florence*, *Leghorn*, and *Lucca*, is eight Days after ſight: From *Venice*, *Rome*, and *Boulogne*, fifteen Days: From *Naples*, twenty two Days: From *Sicily* a Month after ſight, or two Months after date: From *Sardinia*, a Month after ſight: From *Antwerp*, *Amſterdam*, and other Places in the *Low Countries*, three Months after date.

USE, in Law, the Profit of Lands and Tenements.

A Deed conſiſts of two principal Parts.——The *Premiſes*, which includes all that comes before the *Habendum*, or Limitation of the Eſtate; and the *Conſequent*, which is the *Habendum* itſelf; wherein are two Limitations.——The one of the *Eſtate*, or Property the Party ſhall receive by the Deed. The other of the *Uſe*, expreſſing to, or for what *Uſe* and Benefit he ſhall have the ſame. See DEED.

The *Uſes* were invented upon the Stat. of *Weſtminſ. quia Emptores terrarum*; before which Statute, no ſuch *Uſes* were known.——And becauſe, in courſe of time, many Deceits were invented by ſettling the Poſſeſſion in one Man, and the *Uſe* in another, it was enacted, *Anno* 27 *Hen.* VIII. That the *Uſe* and Poſſeſſion of Lands ſhould always ſtand united.

USE, and *Cuſtom*, in the antient Law-Books, is the ordinary Method of acting or proceeding in any Caſe, which by length of Time has obtain'd the force of Law. See CUSTOM, PRESCRIPTION, LAW, &c.

USER *de Action*, in Law, is the purſuing, or bringing an Action. See ACTION, and PROSECUTION.

USES *and Cuſtoms of the Sea*, are certain Maxims, Rules, or *Uſages*, which make the Baſe or Ground-work of the Maritime *Juriſprudence*; by which the Policy of Navigation, and Commerce of the Sea, are regulated. See NAVIGATION, COMMERCE, &c.

Theſe *Uſes* and Cuſtoms conſiſt in three kinds of Regulations:

The firſt, call'd *Laws* or *Judgments of Oleron*, were made by order of Queen *Eleanor*, Dutcheſs of *Guienne*, at her return from the Holy War; and that chiefly from Memoirs which ſhe had gather'd in the *Levant*, where Commerce was at that time in a very flouriſhing Condition.

She call'd them *Rolls of Oleron*, by reaſon ſhe then reſided in an Iſland of that Name in the Bay of *Aquitaine*.—They were much augmented about the Year 1266, by her Son *Richard*, King or *England*, on his return from the *Holy Land*.

The ſecond Regulations were made by the Merchants of *Visbuy*, a City in the Iſland of *Gothland* in the *Baltic*, antiently much famed for Commerce, moſt of the Nations of *Europe* having their Quarters, Magazines, and Shops therein.

Theſe were compiled in the *Teutonic* Language, and are ſtill the Rule in the Northern Countries. Their Date does not appear; but 'tis probable they were made ſince the Year 1288, that the City of *Visbuy* was deſtroy'd the firſt time, afterwards reſtored by *Magnus*, King of *Sweden*.

The third Regulations were made at *Lubeck*, about the Year 1597, by the Deputies of the *Hans Towns*. See HANS.

USHER, *Oſtiarius*, from the *French*, *Huiſſier*; ſignifies an Officer, or Servant, who has the Care and Direction of the Door of a Court, Hall, Chamber, or the like.

In the King's Houſhold there are four *Gentlemen-Ushers* of the Privy-Chamber, appointed to attend the Door, give Entrance, &c. to Perſons that have admittance thither.—Four *Gentlemen-Ushers*, Waiters; and an Aſſiſtant *Gentleman-Uſher*.——Eight *Gentlemen-Ushers*, Quarter-Waiters in Ordinary. See CHAMBER.

In the *French* Court there are two *Ushers* of the Anti-Chamber, or Hall where the King dines in publick.—They wait Sword by ſide, all the Year, and open the Door to ſuch as are to come in.——There are above ſixteen *Ushers* of the Chamber, two of the Cabinet, and one of the *Order of the Holy Ghoſt*.

The *Ushers* of the *Inquiſition* in *Spain* and *Portugal*, are Perſons of the prime Quality, who think themſelves highly honour'd by only looking to the Doors of the ſacred Tribunal. See INQUISITION.

USHER is alſo uſed for an Officer in the Exchequer; of which ſort three or four do attend the chief Officers and Barons, at the Court at *Weſtminſter*, and Juries, Sheriffs, and other Accomptants; at the pleaſure of the Court. See EXCHEQUER.

USHER *of the Black-Rod*, is an Officer conſtituted by the Founder of the *Order of the Garter*. See GARTER.

In a Chapter held at *White-hall*, 13 *Car.* II. it was ordain'd, that it ſhould be fix'd to one of the *Gentlemen-Ushers*, daily Waters at Court; the eldeſt of which always holds the Place; and is call'd *Gentleman-Uſher*, and *Black-Rod*.

In relation to the *Order of the Garter*, he is appointed to carry the Rod at the Feaſt of St. *George*, and other Solemnities, which he makes uſe of as an Authority to attach Delinquents, who have offended againſt the Statutes of the Order, which he frequently doth by touching them therewith.——He wears a Gold Badge, embelliſhed with the Enſigns of the Order.——He has an Houſe in *Windſor-Caſtle*, and other Privileges. See BLACK-*Rod*.

USNEA, in Natural Hiſtory, a ſort of Plant of the Moſs Kind, growing on the Oak, Cedar, and divers other Trees. See Moss.

USNEA *Humana*, is a ſmall greeniſh Moſs, growing on human Skulls, that have lain a long time expoſed to the Air.

'Tis very aſtringent, and held proper to ſtop Hemorrhages.——It is alſo an Ingredient in the *Weapon-Salve* of *Paracelſus*, and *Crollius*.

USQUEBAUGH, a ſtrong, rich, compound Liquor, chiefly taken by way of Dram; its Baſis being Brandy, or rectified Spirit of Wine.

The Proceſs is ſomewhat various, and the Ingredients numerous.——We ſhall give one much commended formerly, as a Specimen.

To two Gallons of Brandy, or Spirits, put a Pound of *Spaniſh* Liquorice, half a Pound of Raiſins of the Sun, four Ounces of Currants; three of Dates ſliced; Tops of Thyme, Balm, Savory, and Mint, and Tops or Flowers of Roſemary, of each two Ounces; Cinnamon and Mace, bruiſed, Nutmegs, Anis Seeds and Coriander Seeds, bruiſed likewiſe, of each four Ounces; Citron, or Lemon and Orange Peel, ſcraped, of each an Ounce.

All theſe to be left to infuſe 48 Hours in a warm place, often ſhaking them together: Then ſet them in a cool place, for a Week; after which the clear Liquor is to be decanted off, and to it an equal Quantity of neat white Port-Wine, and a Gallon of Canary are to be added—The whole to be ſweetned with a proper Quantity of double refined Sugar.

USTION, in Pharmacy, the preparing of certain Subſtances by burning them. See BURNING.

The Antients made uſe of the *Uſtion* of Horns, Nails, Feathers, and other Parts of Animals, for divers Remedies: And the Moderns ſtill uſe *Æs Uſtum*, which is burnt Copper, or Copper that has undergone the *Uſtion*, with Sulphur. See ÆS USTUM.

The *Uſtion* of Minerals, is a more imperfect kind of Calcination. See CALCINATION.

The Word is form'd from the Latin *urere*, to burn.

USUCAPTION, USUCAPTIO, in the Civil Law, is an Acquiſition of the Property of a Thing by a Poſſeſſion and Enjoyment thereof for a certain term of Years preſcribed by Law. See POSSESSION.

Some make a Difference between *Preſcription* and *Uſucaption*, maintaining that the latter is only uſed with regard to Moveables, and the former with regard to Immoveables. —But there is no eſſential Difference between 'em, and accordingly, *Preſcription* and *Uſucaption*, are generally held Synonyma's. See PRESCRIPTION.

USUFRUIT, USUS-FRUCTUS, in the Civil Law, the Enjoyment or Poſſeſſion of any Effect; or the right of receiving the Fruits and Profits of an Inheritance, or other Thing, without a Faculty of alienating or damaging the Property thereof. See POSSESSION, &c.

When the *Uſufructuary* dies, the *Uſufruit* returns to the Proprietor.

The Dowry or Jointure of a Widow is only an *Uſufructuary* due, that is, ſhe only enjoys the *Uſufruit* thereof, and cannot diſpoſe of the Principal. See DOWER.

All mutual Preſents between Man and Wife, only import the *Uſufruit* of the Goods of the firſt that dies, to the Profit of the Survivor.

The Incumbents of Benefices are only *Uſufructuary*. See BENEFICE.

An *Uſufructuary* has full Right over the Coppice; but can't fell Timber-Trees.

USURER, a Perſon charged with a Habit or Act of *Uſury*. See USURY.

The Laws of our antient *Saxon* and *Norman* Kings, are very ſevere upon *Uſurers*, or Letters-out of Money upon Intereſt.——*Uſurarios quoque defendit Rex* Edvardus (Confeſſor,) *ne remaneret aliquis in toto regno ſuo; & ſi quis inde convictus eſſet, quod fœnus exigerat, omni ſubſtantia propria careret & poſtea pro exlege habeatur, quoniam* Uſura *radix omnium malorum*. Leg. Edv. Confeſſ. cap. 37.

They were indeed allowed to diſpoſe of their Goods before Conviction, and whilſt they were living; but after their Death they were confiſcate, if it could be proved they lent Money to *Uſe* within a Year before their death. *Matt. Paris.*

If a Clergyman were an *Uſurer*, his Goods were not to be confiſcated; but to be diſtributed to pious Uſes.

In thoſe Days *Uſury* was thus defin'd:

Eſt Uſura *ſuos quiſquis tradit mihi nummos*
Spe lucri, fœnus duplex Uſura *vocatur.*

USURIOUS *Contract*, is any Bargain or Contract, whereby a Man is obliged to pay more Intereſt for Money than the Statute allows. See INTEREST and USURY.

USURPATION, in Law, the Enjoyment of a thing for continuance of time, or receiving the Profits thereof. See USUCAPTION.

USURY, USURA, in the general, is an Intereſt, Gain, or Profit which a Perſon makes of his Money or Effects, by lending the ſame; or it is an Increaſe of the Principal, exacted for the Loan thereof; or the Price a Borrower gives for the *Uſe* of a Sum credited to him by the Lender; call'd alſo *Uſe* and *Intereſt*, and in ſome antient Statutes, *dry Exchange*. See INTEREST, and EXCHANGE.

The Word *Uſury* is uſually taken in an evil Senſe, *viz.* for an unlawful Profit which a Perſon makes of his Money; in which Senſe it is, that *Uſury* is forbidden by the Civil and Eccleſiaſtical Law, and even by the Law of Nature: In this Senſe it alſo is, that it is held *Uſury* to lend Money on Pawns, to exact Intereſt for Money without ſurrendering the Principal, and to ſtipulate Intereſt for Money which is not employ'd in Trade, nor brings any Profit to the Perſon who receives it: But as the *Latin* Word *Uſura*, at leaſt the Plural thereof *Uſuræ*, may be underſtood of a lawful Intereſt, we don't ſee why *Uſury* may'n't be uſed in *Engliſh*, in the ſame harmleſs Senſe.

By the antient *Roman* Law, People were allow'd to lend out their Money at one *per Cent*, *per* Month; which was 12 *per Cent. per Annum*.—If they received more, they incurr'd the Note of Infamy, and the Overplus was charged on the Principal.

This Rate of *Uſury* was allow'd of as low as the Time of *Juſtinian*, who moderated it a little by the 26th Law in the Code *de Uſuris*. And not long after, the Canon Law forbid all ſort of *Uſury* whatever.—In compliance with which Prohibition, the cuſtomary Laws don't allow any Intereſt to be exacted for Money lent on a ſimple Promiſe or Obligation; but only by Contract, and upon Alienating the Principal, which the Debtor is to reimburſe at Pleaſure: Which is a kind of buying an annual Revenue.

So that in Propriety, *unlawful Uſury* conſiſts in extorting an exceſſive Rate for one's Money, beyond what is preſcribed by Law.

Du Moulin indeed makes *Uſury*, taken in the ill Senſe, to be *a Profit exacted for a Loan made to a Perſon in want*; intimating, That it is unlawful to extort Gain from the Aſſiſtance given to the Unhappy, or to convert an Office of Humanity into a mercenary one.—The Reaſon is, that Money is a barren and fruitleſs Thing in the Hands of a Perſon whom Neceſſity obliges to borrow; and that being lent him to be ſpent, he can make no Advantage of it: Whereas the principal Pretext for requiring lawful Intereſt, is, that the Perſon who lends, may ſhare in the Profits thereof with the Perſon to whom it is lent.

Notwithſtanding, moſt of the antient Canoniſts inſiſt on a rigorous Obſervation of that Precept in *Deuteronomy*, *Non fœneraberis fratri tuo*, Thou ſhalt not lend Money to thy Brother, on *Uſury*: And plead that nothing be required further than the Principal.

However, in Life, we call nothing *Uſury* but what exceeds the Bounds preſcribed by the Laws: So that when a Perſon does not alienate his Principal, or takes Intereſt beyond what is limited by Statute, theſe alone are *Uſury*.

By the Stat. 12 *Car.* I. no Man is allow'd to take above ſix Pounds for the Forbearance of one hundred Pounds for one Year, under certain Penalties therein enjoin'd.——And by a later Stat. 1° *Georgii*, no Man muſt take above five Pounds for the like Occaſion.

UT, a *Latin* Term ſignifying, literally, *as*; much uſed in the Stating of Ratios and Proportions. See RATIO, and PROPORTION.

Sir *I. Newton* aſſigns its Uſe thus: If indeterminate Quantities of divers kinds be compared together, and one of 'em be ſaid to be *Ut*, *as*, any other directly or inverſely; the meaning is, that the firſt is increas'd or diminiſh'd in the ſame Ratio as the latter.—And if one of 'em be ſaid to be, *ut*, *as*, two or more others directly, or inverſely, the meaning is, that the firſt is increaſed or diminiſhed in a Ratio compounded of the Ratios in which the others are increaſed or diminiſhed.

Thus, if A be ſaid to be *as* B directly, and *as* C directly, and as D inverſely, the Meaning is 'tis increaſed or diminiſhed in the ſame Ratio with $_{B\times C\times}\frac{1}{D}$, that is, A and $\frac{BC}{D}$, are to each other in a given Ratio. *Phil. Nat. Princ. Math.*

UT, in Muſic, the firſt of the muſical Votes. See NOTE.

Ut, *re*, *mi*, *fa*; the Clef of *G*, *re*, *ſol*, *ut*; of *C*, *ſol*, *ut*, &c.

This Note, with the reſt, were taken out of the Hymn of St. *John Baptiſt*. *Ut queant laxis*, &c. See MUSIC.

UT *fang thef*, an antient Royalty, or Privilege, granted to the Lord of a Manor by the King, giving him a Power to puniſh a Thief dwelling, and committing Theft out of his Liberty; if he be taken within the Lord's Fee.—*Ut fang thef dicitur extraneus Latro veniens aliunde de terra aliena, & qui captus fuit in terra ipſius qui tales habet libertates.* Bracton.

UTENSIL, a little domeſtic Moveable, belonging principally to the Kitchen.——Such are Pots, Pans, Plates, *&c.*

Utenſil is particularly uſed in War for the Moveables which the Hoſt is obliged to furniſh the Soldiers quarter'd with him; which are, a Bed with Bed-clothes, a Pot and a Spoon.—— They are likewiſe to have a place at their Hoſt's Fire, and Candle.

Utenſils are ſometimes furniſh'd in Money, and ſometimes in Kind. The Word is form'd from the Latin *Utenſile*, which ſignifies the ſame thing.

UTERINE, UTERINUS, ſomething belonging to the *Uterus*, or Womb of Women. See UTERUS.

Thus *Uterine* Brothers or Siſters, are thoſe born of the ſame Mother, but different Fathers. See BROTHER, *&c.*

Furor UTERINUS, in Medicine, is a kind of Madneſs, attended with laſcivious Speeches and Geſtures, and an invincible Inclination to Venery.

The *Furor Uterinus*, is a Complication of hyſterical Symptoms, ariſing from a Turgeſcency or Inflation of the *Uterine Veſſels*. See HYSTERIC.

It is uſually ſuppoſed to conſiſt in ſome irregular Motion of the Spirits, occaſion'd by a hot, luſtful Temperament, the Converſation of debauch'd Perſons, or the reading of wanton Books, hot Foods, the Abundance and Acrimony of the ſerous Matter which moiſtens the *Pudendum*, Suppreſſion of the Menſes, large Doſes of Cantharides, &c.

It has been frequently found, that Maids that were held to be poſſeſs'd, were only ſeiz'd with the *Uterine Fury*.

Before the Paroxyſm, the Patient often appears ſilent and ſorrowful, with a Fluſhing in the Face, and a Reſpiration and Pulſe frequently intermitting, and ſuddenly varying.—— During the Paroxyſm they burſt ſometimes into Laughter, and then into a Fit of Tears, &c.

Bleeding, fætid Suffiments, and other hyſterical Medicines, are proper during the Fit.

Men are ſubject to the Diſeaſe as well as Women; ſo that it might with more Propriety be call'd, the *Furor Venereus*, or *Venereal Fury*.

It had its Name *Furor Uterinus*, from an Opinion, that it proceeded from Vapours riſing from the Womb to the Brain.

UTERUS, in Anatomy, the *Matrix* or *Womb* of a Woman; or that Organ of Generation wherein the Buſineſs of Conception is perform'd, and wherein the Embryo or *Fœtus* is lodg'd, fed, and grows, during the time of Geſtation, or till its Delivery.——*Its Deſcription ſee under the Article* MATRIX.

Its Office, &c. *under* GENERATION, CONCEPTION, GESTATION, FOETUS, &c.

Vagina UTERI. See VAGINA.

UTILE, a *Latin* Term ſignifying profitable or uſeful; ſometimes uſed by *Engliſh* Authors in the ſame Senſe.

The *Utile* and the *Dulce*, Profit and Delight, are both to be aim'd at in Poetry; but it is diſputed which of them is to be aim'd at in the firſt place.——*Corneille* ſays expreſly, *Dans la Tragedie l'utile n'entre que ſous la forme du delectable*. See POETRY.

In the Language of the Philoſophers, there is nothing *Utile* but what is juſt and honeſt: *Nihil bonum niſi honeſtum: nihil malum niſi turpe*. Cic. de Fin. lib. 2.

UTLAGATIO, in Law-Term, an Out-lawry. See OUTLAWRY.

UTLAGATO *capiendo*, *quando utlagatus in uno comitatu poſtea fugit in Alium*, a Writ for the apprehending a Man who is outlaw'd in one Country, and flies into another. See OUTLAWRY.

UTLAGH, UTLAGHUS. See OUTLAW.

UTLAND. See INLAND.

UTLARY, or UTLAWRY. See OUTLAWRY.

UTRUM. See ASSISE.

UTTER, or *Outer Barriſters*, are ſuch Candidates as, in regard of their long Study and great Induſtry beſtow'd upon the Knowledge of the Common Law, are call'd out of their Contemplation to Practice, and in the View of the World to take upon 'em the Protection and Defence of Clients. See BARRISTER.

In moſt other Countries they are call'd *Licentiates*. See LICENTIATE.

They have their Name *Utter Barriſters*, q. d. Pleaders *ouſter the Bar*, to diſtinguiſh 'em from Benchers, who have been *Readers*, and are ſometimes admitted to plead within the Bar; as the King's Council are. See BENCHER, &c.

UVEA, in Anatomy, the third Tunic, or Membrane of the Eye; thus call'd, as reſembling a Grape-ſtone. See EYE.

The hind-part of this Coat, or that next the Orbit of the Eye on each ſide, is call'd the *Choroides*; and is derived from the *Pia Mater*. See CHOROIDES.

The fore-part is, like the former, tranſparent, but thinner; and is by Authors reckon'd as a different Tunic, and call'd *Uvea*.

Of the Duplicature of this Part, is form'd that ſtriped, variegated Circle, call'd the *Iris*. See IRIS.

And in its middle is a Perforation, thro' which appears a little black Speck, which is the Sight, or *Pupil* of the Eye; and about which the Iris forms a Ring. See PUPIL.

From the inſide of this Membrane, ſpring certain Fibres, which ſpread themſelves round the cryſtalline Humour; ſerving to contract or dilate the Sight at pleaſure; and call'd the *Ligamentum Ciliare*. See CILIARE, and CRYSTALLINE.

VULVA, a Name ſome Phyſicians give to the *Uterus*, or Womb.

The Word *Vulva*, is Latin, thus call'd, *quaſi Valva*, a Door. See UTERUS.

Vulva is ſometimes alſo, tho leſs properly, uſed for the *Pudendum Muliebre*. See PUDENDUM.

VULVA *Cerebri*, is an oblong Furrow in the Brain; ſo called from its likeneſs, in Figure, to a Female *Vulva*.

VULCANO, among Naturaliſts. See VOLCANO.

VULGAR *Fractions*. See FRACTION.

VULGATE, a very antient *Latin* Tranſlation of the Bible; and the only one the Church of *Rome* acknowledges authentick. See BIBLE.

The antient *Vulgate of the Old Teſtament*, was tranſlated almoſt Word for Word, from the *Greek* of the Seventy. The Author of the Verſion is not known, nor ſo much as gueſs'd at. See SEPTUAGINT.

It was a long time known by the Name of the *Italic*, or *Old Verſion*; as being of very great Antiquity in the *Latin* Church.—It was the common, or *vulgar* Verſion before S. *Jerom* made a new one; whence its Name *Vulgate*.

Nobilius in 1588, and F. *Morin* in 1628, gave new Editions of it; pretending to have reſtored, and recollated it from the Antients who had cited it.—The *Vulgate* was held by S. *Auguſtine* to be preferable to all the other *Latin* Verſions then extant; as rendering the Words and Senſe of the ſacred Text, more cloſely and juſtly than any of the reſt. It has ſince been re-touch'd from the Corrections of S. *Jerom*; and 'tis this Mixture of the antient *Italic* Verſion and ſome Corrections of S. *Jerom*, that is now called the *Vulgate*, and which the Council of *Trent* has declar'd to be authentick.

'Tis this *Vulgate* alone is uſed in the *Romiſh* Church, excepting for ſome Paſſages of the antient *Vulgate* left in the Miſſal, and the Pſalms; which are ſtill ſung according to the old *Italic* Verſion. See BIBLE.

Vulgate of the New Teſtament.—This the *Romaniſts* generally hold preferable to the common *Greek* Text; in regard 'tis this alone, and not the *Greek* Text, that the Council of *Trent* has declar'd authentick: Accordingly, that Church has, as it were, adopted this Edition. The Prieſts read no other at the Altar, the Preachers quote no other in the Chair, nor the Divines in the Schools.

Yet ſome of their beſt Authors, F. *Bouhours* for inſtance, own, that among the Differences that are found between the common *Greek* and the *Vulgate*, there are ſome wherein the *Greek* reading appears the more clear and natural than that of the *Latin*; ſo that the ſecond might be corrected from the firſt, if the Holy See ſhould think fit.—But thoſe Differences, for the generality, only conſiſt in a few Syllables or Words: They rarely touch the Senſe. Beſides, in ſome of the moſt conſiderable, the *Vulgate* is authoriz'd by ſeveral antient Manuſcripts.

Bouhours ſpent the laſt Years of his Life, in giving a *French* Tranſlation of the New Teſtament, according to the *Vulgate*.

In 1675, a new Edition of the *Greek* Teſtament was publiſh'd by the *Univerſity of Oxford*; and great Care taken therein, to compare the common *Greek* Text with all the moſt antient Manuſcripts in *England*, *France*, *Spain*, and *Italy*; and to note the Differences obſerv'd therein.

In the Preface to this Work, the Editors ſpeaking of the divers Verſions of the Bible in the vulgar Tongues, obſerve of the *Vulgate*, that there is no Verſion in any Language to be compar'd with it.—And this they juſtify, by comparing Paſſages that occur in the moſt celebrated *Greek* Manuſcripts, with the ſame Paſſages in the *Vulgate*, where there is any difference between that and the common printed *Greek* Copy.

In effect, 'tis probable, that at the Time the antient *Italic*, or *Vulgate* Verſion of the New Teſtament was made, and at the Time it was afterwards compar'd with the *Greek* Manuſcripts by S. *Jerom*; as they were then nearer the Times of the Apoſtles, they had juſter *Greek* Copies, and thoſe better kept than any of thoſe uſed when Printing was firſt ſet on foot, two Centuries ago.

M. *Simon* calls the *Greek* Verſion of the Seventy, before it was revis'd and reformed by *Origen*, *The antient* Vulgate *Greek*.—*Origen*'s Correction got the upper hand of the antient *Greek*, and joſtled it out of uſe; ſo that we have now ſcarce any Copies thereof. See SEPTUAGINT.

VULNERARY, in Medicine, an Epithet given to Remedies proper for the Cure of Wounds, and Ulcers. See WOUND, and ULCER.

There are divers *Vulnerary* Herbs; as *Ariſtolochia*, or Birthwort; *Sanicle*, or Self-heal; *Plantain*, *Mouſe-Ear*, *Veronica*, or *Fluellin*, *Agrimony*, *Vervein*, or Holy Herb, &c.

There are alſo *Vulnerary Potions*, compoſed of various Simples.—*Vulnerary* Balms, Unguents, Plaiſters, &c. See BALM, &c.

The Word is form'd from the Latin *Vulnus*, Wound.

VULTUS *de Luca*. See VERONICA.

UVULA, in Anatomy, a round, ſoft, ſpongeous Body, like the End of a Child's Finger; ſuſpended from the Palate, near the *Foramina* of the Noſtrils, perpendicularly over the Glottis.

Its uſe is to break the Force of the cold Air, and prevent its entering too precipitately into the Lungs. See RESPIRATION, &c.

It's form'd of a Duplicature of the Membrane of the Palate; and is called by ſome Authors *Columella*, and by others *Gurgulio*.

It is moved by two Pair of Muſcles, and ſuſpended by as many Ligaments.—The Muſcles are, the *External*, called the *Sphenoſtaphilinus*, which draws the *Uvula* upwards and

and backwards; and hinders the maſticated Aliment from paſſing into the *Foramina* of the Noſtrils in Deglutition. See SPHENOSTAPHILINUS.

And the *Internal*, call'd the *Pterygoſtaphilinus*; which draws the *Uvula* upwards and forwards. See PTERYGOSTAPHILINUS.

Both Muſcles move the *Uvula* upwards, to give room for ſwallowing; and ſerve to raiſe it, when relax'd and fallen down.—In which Caſe, 'tis uſual to promote its riſing, by applying a little beaten Pepper on the End of a Spoon to it. See DEGLUTITION.

Bartholin ſays, that ſuch as have no *Uvula* are ſubject to the Phthiſic, and uſually die thereof; by reaſon the cold Air, entering the Lungs too haſtily, corrupts 'em.

UXORIUM, in Antiquity, a Fine or Forfeit paid by the *Romans* for not marrying. See MARRIAGE, POLITICAL *Arithmetic*, &c.

UZIFUR, in Chymiſtry, a Name ſome Authors give to Cinnabar. See CINNABAR.

WAG

W, A Letter peculiar to the Northern Languages, and People; as the *Engliſh*, *Dutch*, *Poliſh*, and others of *Teutonic* and *Sclavonic* Original. See LETTER, and ALPHABET.

The *W* is alſo admitted into the *French*, *Italian*, &c. in proper Names, and other Terms borrow'd from the Languages where it is us'd.

In *Engliſh*, the *W* is uſually a Conſonant; and as ſuch, may go before all the Vowels, except *u*; as in *Want*, *Weapon*, *Winter*, *World*, &c. See CONSONANT.

It is ſometimes alſo a Vowel; and as ſuch, follows any of the Vowels *a*, *e*, *o*, and unites with them into a kind of double Vowel, or Dipthong; as in *Law*, *Ewe*, *Sow*, &c.

The *Engliſh w* is ſounded as the *Latin u*, in *quantum*, *ſuadeo*, *lingua*.—Its Sound is alſo commonly like the groſs, or full *U* rapidly pronounc'd.——In *French*, the Sound of the *W*, does not differ from that of the ſingle V.

WADDING, in Gunnery, a Stopple of Paper, Hay, Straw, old Clouts, &c. forc'd into a Gun upon the Pouder, to keep it cloſe in the Chamber; or put up cloſe to the Shot, to keep it from rolling out. See CHARGE.

WAFT.—*To waft a Ship*, is to convoy her ſafe, as Men of War do by Merchant Ships. See CONVOY.

To make a Waft, is to hang out ſome Coat, Sea-Gown, or the like, in the main Shrouds of the Ship; as a Sign for the Men to come on board, &c. Such *Waft* is alſo frequently intended to ſhew that a Ship is in diſtreſs by a Leak, &c. and therefore wants help from the Shore, or from other Ships.

WAFTORS.—King *Edward* IV. conſtituted a triumvirate of Officers with Naval Power, whom the Patent ſtyles *Cuſtodes*, *Conductores*, and *Waftores*; whoſe buſineſs chiefly was to guard our Fiſhermen on the Coaſts of *Norfolk*, and *Suffolk*.

WAGA, or VAGA. See WEIGH.

WAGE, in Law, *Vadiare*, from the French *Gager*, *dare pignus*, to pledge; ſignifies, the giving Security for the Performance of any thing. See PLEDGE.——Thus, to *wage* Law, is to put in Security that you will make Law, at the Day aſſign'd; and to make Law, is to take an Oath, that a Man owes not a Debt which is claimed of him, and alſo to bring with him ſo many Men as the Court ſhall aſſign, who ſhall avow upon their Oaths that they believe he ſwears truly.

WAGGON, a kind of Vehicle, or Carriage in common uſe.

There are divers Forms of *Waggons* accommodated to the divers Uſes they are intended for.

The common *Waggon* conſiſts of the *Shafts*, or *Rads*, which are the two Pieces the hind Horſe bears up; the *Welds*; the *Slotes*, which are the croſs Pieces that hold the Shafts together; the *Bolſter*, being that Part on which the fore Wheels and Axletree turn, in wheeling the *Waggon* a-croſs the Road; the *Cheſt*, or *Body* of the *Waggon*, having the Staves or Rails fix'd thereon; the *Balls*, or *Hoops* which compoſe the Top; the *Tilt*, the Place cover'd with Cloth at the End of the *Waggon*: beſides the *Wheels*, *Axletree*, &c.

The greater the Wheels of the *Waggon*, and their circumference; the eaſier the Motion; and the leſs, the heavier, and more uneaſy and jogging they go.—The only Reaſon why the fore Wheels of *Waggons*, &c. are made leſs than the hind Wheels, is for the Conveniency of turning. See WHEEL.

But ſtill, the higher a *Waggon*, &c. is ſet, the apter it is to over-turn.

The more upright or ſquare the Spokes of the Wheels are from the Box, or Centre, the weaker they are when they come to bear on either ſide: on which account, as alſo to ſecure a Wheel from breaking in a fall, they are made concave, or diſhing.

WAK

WAGGONER, in Aſtronomy, a kind of Conſtellation; call'd alſo *Charles's Wain*. See CHARLES's *Wain*.

WAGGONER is alſo uſed for a Routter, or Book of Charts, deſcribing the Seas, their Coaſts, &c. See CHART, and ROUTTER.

WAIF, or WAFE, a Term primarily applied to ſtolen Goods, which a Thief, being purſu'd or overburden'd, flies, and leaves behind him.

The King's Officer, or the Bailiff of the Lord within whoſe Juriſdiction ſuch *Waifs* or *Waif* Goods were left, (who by Grant, or Preſcription, hath the Franchiſe of *Waif*) may ſeize the Goods to his Lord's uſe; except the Owner come with freſh Suit after the Felon, and ſue an Appeal within a Year and a Day, or give in Evidence againſt him, and he be attainted.——In which Caſes, the Owner ſhall have his Goods again.

Tho *Waif* be properly ſpoken of Things ſtolen, yet it may alſo be underſtood of Goods not ſtolen: As, if a Man be purſu'd with Hue and Cry, as a Felon, and he flies and leaves his own Goods; theſe ſhall be forfeit as Goods ſtolen; and are properly call'd *Fugitive Goods*. See FUGITIVE.

Waifs, *Things loſt*, and *Eſtrays*, are ſaid to be *Pecus vagrans*; and are *nullius in bonis ubi non apparet dominus*. And therefore belong to the Lord of the Franchiſe where they are found; who muſt cauſe them to be cried and publiſh'd in the Markets and Churches near about: elſe the Year and Day does not run to the prejudice of him that loſt them.

WAINSCOT, in Building, the Timber-Work ſerving to line the Walls of a Room; being uſually in Pannels, and painted, to ſerve in lieu of Hangings. See WALL, &c.

Even in Halls, 'tis common to have *Wainſcot* breaſt high; by reaſon of the natural Humidity of Walls. See HALL.

Some Joiners put Charcoal behind the Pannels of the *Wainſcot*, to prevent the Sweating of Stone and Brick-Walls from ungluing the Joints of the Pannels.—Others uſe Wool for the ſame purpoſe.—But neither the one nor the other is ſufficient in ſome Houſes: The only ſure way, is by priming over the back-ſides of the Joints with White Lead, Spaniſh Brown, and Linſeed Oil.

Wainſcotting with Norway *Oak*, the Workman finding Stuff, is valu'd at ſix or ſeven Shillings *per* Yard ſquare.—*Plain ſquare Wainſcotting*, the Workman finding Deal, is valu'd at three Shillings, or three Shillings ſix Pence *per* Yard.—*Large biſection Wainſcotting*, with *Dantzick* Stuff, is valued at ſix or ſeven Shillings *per* Yard; and *ordinary Biſection* Work at three Shillings ſix Pence *per* Yard.

Note, In taking Dimenſions, they uſe a String, which they preſs into all the Mouldings; it being a Rule that they are to be paid for all where the Plane goes.

WAIVE, in Law, a Woman that is outlaw'd. See OUTLAW.

She is called *Waive*, as being forſaken of the Law: and not *Outlaw*, as a Man is; by reaſon Women cannot be of the *Decenna*, are not ſworn in Leets to the King, nor to the Law, as Men are; who therefore are within the Law: whereas Women are not; and ſo cannot be outlaw'd, ſince they never were within it.

In this Senſe, we read, *Waviaria Mulieris*, as of the ſame Import with *Utlegatio Viri*.

WAKE *of a Ship*, is the ſmooth Water that runs from a Ship's Stern, when ſhe is under ſail.

By this, a good Gueſs may be made of the Speed ſhe makes. See RECKONING.

They alſo judge from this, whether the Ship goes as ſhe looks; that is, whether ſhe makes her way right a-head, as

ſhe

ſhe lies; as ſhe doth when her *Wake* is right a-ſtern: But if this *Wake* be a Point or two to Leeward, they judge that ſhe falls to the Leeward of her Courſe.

When, in a Ship's ſtaying, ſhe is too quick; they ſay ſhe does not fall to the Leeward upon a Tack, but when tack'd, her *Wake* is to the Leeward; which is a Sign ſhe feels her Helm well, and is nimble of Steerage.

Alſo, when one Ship giving chaſe to another, is got as far into the Wind as ſhe, and ſails directly after her; they ſay, ſhe is got into her *Wake*.

WAKEFULNESS, WATCHFULNESS, *Inſomnia*; a Diſorder whereby a Perſon is diſabled from going to ſleep. See SLEEP.

It is occaſion'd by a continual and exceſſive Motion of the Animal Spirits in the Organs of the Body, whereby thoſe Organs are prepared to receive, readily, any Impreſſions from external Objects, which they propagate to the Brain; and furniſh the Soul with divers Occaſions of Thinking. See SPIRIT.

This extraordinary Flux of Spirits may have two Cauſes: For, 1°, the ſenſible Objects may ſtrike the Organ with too much Force. In which Caſe, the Animal Spirits being violently agitated, and thoſe Agitations continued by the Nerves to the Brain, they give a like Motion to the Brain it ſelf; the neceſſary Conſequence of which, is, that the Animal muſt wake. See VIGILIA.

Thus, a loud Shriek, Pains, Headach, Gripes, Coughing, &c. cauſe *waking*. Add, that the Soul's being oppreſs'd with Cares, or deeply engag'd in Thinking, contributes to the ſame: Since, as it acts by the miniſtry of the Spirits, any Cares or Meditations that keep thoſe in motion, muſt produce *Watchfulneſs*.—Of this Kind are thoſe inveterate *Wakings* of melancholick Perſons; ſome of whom have been known to paſs three or four Weeks without a wink of Sleep. See MELANCHOLY.

2°, The other Cauſe is in the Spirits themſelves; which have ſome extraordinary Diſpoſition to receive Motion, or to perſiſt in it: As, from their too great heat, or that of the Brain in burning Fevers, &c. Hence it is, that the Diſorder is moſt frequent in Summer, in the heat of Youth, &c.

Long Faſting has the ſame Effect; the want of Food ſubtilizing the Spirits, and drying the Brain.—The ſame is likewiſe an ordinary Symptom in old Age, by reaſon the Pores of the Brain and the Nerves, having been much widen'd by the continual Paſſage of Spirits, for a great number of Years; the Spirits now paſs and repaſs thro' 'em with too much eaſe; and need not any extraordinary Motion to keep the Mind awake. See HABITUDE.

There are Inſtances of *waking* for 45 Nights ſucceſſively: And we even read of a melancholy Perſon, who never ſlept once in 14 Months.—Such Watchings uſually degenerate into Madneſs. See NARCOTICS, and OPIATE.

WAKES, VIGILS, or *Country*-WAKES, are certain antient Anniverſary Feaſts, in the ſeveral Pariſhes; wherein the People were to be awake at the ſeveral Vigils, or Hours to go to prayer. See VIGIL.

They are uſually obſerved in the Country, on the Sunday next after the Saint's Day to whom the Pariſh-Church is dedicated.

Cowel, who derives the Word from the Saxon *Wac*, *temulentia*; defines 'em to be the Vigils in the Dedications of Churches, where Men ſat drinking in the Choir all Night. See DEDICATION.

WALKERS, a ſort of Foreſt-Officers, appointed by the King to *walk* about a certain ſpace of Ground, committed to their Care and Inſpection. See FOREST.

Walkers are the ſame with what we otherwiſe call *Foreſters*. See FORESTER.

WALKS, in Gardening. See ALLEYS.

To keep the Weeds from growing upon *Walks*, Mr. *Switzer* directs, that the Bottoms thereof be fill'd with Lime-Rubbiſh, or coarſe Gravel, Flint-ſtones, or other rocky Stuff, eight or ten Inches deep; over which may be laid a like depth of Gravel, not too fine.

To keep 'em the drier, they are to be made round, or convex.—The uſual Proportion is, that a *Walk* 20 Foot wide, be four Inches higher in the Middle, than at the Sides; a *Walk* 25 Foot wide, 5 Inches, &c.

After laying a *Walk*, it is to be roll'd, both lengthwiſe, and croſs-wiſe; and to lay it the firmer, it muſt have three or four Water-Rollings; that is, when it rains ſo very faſt, that the *Walk* ſwims with Water: which, when dry Weather comes, will bind as hard as Terrace.

To make the Gravel bind the better, ſome mix a little Lime with it; which being apt to ſtick to the Heels of the Shoes in wet Weather, others grind or pound Sea-ſhells, and lay a thin Coat thereof on the Gravel; which being roll'd, incorporates with the Gravel, and hinders its hanging to the Shoes. Others beat Smiths Cinders to Duſt, and others Bricks; ſtrewing the Duſt on the *Walks*, which dries up the Moiſture, and gives 'em a Colour.

For Terraſs-WALKS. See TERRASS.

WALL, in Architecture, &c. a Work of Stone, Brick, Wood, or the like; making the principal Part of a Building; as ſerving both to incloſe it, and to ſupport the Roof, Floors, &c. See BUILDING, HOUSE, &c.

Walls, tho built very thick and ſtrong, and their Foundations laid deep, yet, if carried on ſtrait in a Line, are inclined to lean, or fall; and ſuch as are built crooked, tho thin and weak, are much more laſting. A *Wall* rais'd over a River, on Arches of Pillars, ſtands as firm as others, whoſe Foundation is entire.

Hence it appears, that a *Wall* built much thinner than uſual, by only having at every 20 Foot's diſtance an Angle ſet out about two Foot, or more, in proportion to the Height of the *Wall*; or by having at the like diſtance, a Column or Pilaſter erected along with it, ſix or eight Inches on each ſide over and above the thickneſs of the reſt of the *Wall*: Such *Wall* will be much ſtronger than if five times the quantity of Materials were uſed in a ſtrait Wall.

Walls are diſtinguiſh'd into divers Kinds, from the Matter whereof they conſiſt; as *Plaiſter'd*, or *Mud-Walls*, *Brick-Walls*, *Stone-Walls*, *Flint* or *Boulder-Walls*, and *Boarded Walls*.—In all which, theſe general Rules are to be regarded.

1ſt, That they be built exactly perpendicular to the Ground-work.

2d, That the maſſieſt and heavieſt Materials be the loweſt; as fitter to bear than be borne.

3d, That the *Walls*, as they riſe, diminiſh proportionally in Thickneſs, for eaſe both of Weight and Expences.

4th, That certain Burſes, or Lodges, of more ſtrength than the reſt, be interlaid, like Bows, to ſtrengthen the whole Fabrick.

Mud and *Plaiſter'd-Walls* are chiefly in ordinary Timber Buildings.—Theſe *Walls*, being quarter'd and lath'd between the Timber, or ſometimes lath'd over all, are plaiſter'd with Lome, (ſee LOME;) which being almoſt dry, is plaiſter'd over again with white Mortar. See MORTAR.

Brick-Walls, are the moſt important and uſual among us.—In theſe, particular Care is to be taken about the laying of the Bricks, *viz.* That in Summer they be laid as wet, and in Winter as dry as poſſible; to make them bind the better with the Mortar: That in Summer, as faſt as they are laid, they be cover'd up, to prevent the Mortar, &c. from drying too faſt: that in Winter they be cover'd well to protect them from Rain, Snow, and Froſt, which are all Enemies to the Mortar: That they be laid Point and Joint in the middle of *Walls*, as ſeldom as may be; but, good Bond made there, as well as on the outſides.—Care is likewiſe to be taken, that the Angles be firmly bound: In order to which, in working up the *Walls* of a Building, 'tis not adviſable to raiſe any *Wall* above three Foot high, ere the next adjoining *Wall* be wrought up to it; that good Bond may be made in the progreſs of the Work.

Laſtly, in Building a Houſe in the City of *London*, the *Walls* are to be of ſuch thickneſſes as are enjoined by the Act of Parliament for rebuilding that City. See HOUSE.

Flint, or *Boulder-Walls*, are frequently uſed in divers Parts for Fence-*Walls* round Courts, Gardens, &c. and even for *Walls* of Out-houſes.—Sir *Henry Wotton* obſerves, that the building of *Walls* of Flint, is a thing utterly unknown to the Antients; who obſerving in that Material a kind of metallic Nature, at leaſt a Fuſibility, reſerv'd it for nobler Uſes.

Theſe *Walls* are uſually rais'd by a right and left-handed Man, who have a Hod of Mortar pour'd down on the Work, which they part betwixt them; each ſpreading it towards himſelf, and ſo they lay in the Flints.—The Mortar for this Work is to be very ſtiff.

Board-WALLS. } See WEATHER-*Boarding*.
Stone-WALLS. } See STONE.
Party-WALLS. } See PARTITION.
Fence-WALLS. } See FENCE.

WALL, in Fortification, &c. See RAMPART.

WALLS, in Gardening, &c.—The Poſition, Matter, and Form of *Walls* for Fruit-Trees, are found to have a great Influence on the Fruit: Tho Authors differ as to the Preference. See GARDEN, ORCHARD, &c.

The Revd. Mr. *Lawrence* directs, that the *Walls* of a Garden be not built directly to face the four Cardinal Points, but rather between 'em, *viz.* South-Eaſt, South-Weſt, North-Eaſt, and North-Weſt: In which, the two former will be good enough for the beſt Fruit, and the two latter for Plums, Cherries, and baking Pears.

Mr. *Langford*, and ſome others, propoſe Garden-*Walls* to conſiſt chiefly of Semicircles; each about ſix or eight Yards in Front, and including two Trees; and between every two Semicircles, a Space of two Foot of *plain Wall*.—By ſuch a Proviſion, every Part of a *Wall* will enjoy a ſhare of the Sun, one time with another; beſides that the Warmth will be increas'd, by the collecting and reflecting of the Rays in the Semicircles; and the Trees within be ſkreen'd from injurious Winds.

As to the Materials of *Walls* for Fruit-Trees, Brick, according to Mr. *Switzer*, is the beſt; as being the warmeſt, and kindeſt for the ripening of Fruit, and affording the beſt conveniency for nailing.

Mr. *Lawrence*, however, affirms, on his own Experience, that *Mud-Walls*, made of Earth and Straw temper'd together, are better for the ripening of Fruit than either Brick or Stone *Walls*: He adds, that the Coping of Straw laid on ſuch *Walls*, is of great advantage to the Fruit, in ſheltering 'em from perpendicular Rains, &c.

M. *Fatio*, in a particular Treatiſe on the Subject, inſtead of the common perpendicular *Walls*, propoſes to have the *Walls* built ſloping, or reclining from the Sun; that what is planted againſt 'em may lie more expos'd to his perpendicular Rays; which muſt contribute greatly to the ripening of Fruit in our cold Climate.

The Angle of Reclination is to be that of the Latitude of the Place; that when the Sun is in the Meridian at the Equinoxes, his Rays may ſtrike juſt perpendicularly. See HEAT.

Yet ſome others prefer perpendicular *Walls*, and even inclining ones, or ſuch as hang forwards to the Sun; as ſuch receive the Sun's Rays perpendicularly when he is low; as in Spring and Autumn, or in the Evening and Morning: which they imagine of more ſervice than the greateſt Heats of the Sun at Midſummer, upon reclining *Walls*.

Add, that in Autumn the Sun is moſt wanted to ripen Winter Pears; in order to which, they ſhould be kept dry; which againſt ſloping *Walls* cannot be; the Dews, &c. lying much longer thereon, than on thoſe that are perpendicular.

One great advantage, however, of M. *Fatio*'s ſloping *Walls*, is, that Fruit-Trees, as Vines, &c. being planted againſt 'em, Melon-Glaſſes may be ſet on the Fruit; which will much forward its ripening.

Sea-WALLS, See WATERGAGE.

WALOON, or WALLOON, a kind of old *French*; being the Language ſpoke by the *Walloons*, or the Inhabitants of a conſiderable Part of the *Spaniſh Low-Countries*, *viz.* thoſe of *Artois*, *Hainault*, *Namur*, *Luxemburg*, and part of *Flanders*, and *Brabant*.

The *Walloon* is held to be the Language of the antient *Gauls*. See GAULISH.

The *Romans* having ſubdu'd ſeveral Provinces in *Gaul*, eſtabliſh'd Prætors or Proconſuls, &c. to adminiſter Juſtice in the *Latin* Tongue.—On this Occaſion, the Natives were brought to apply themſelves to learn the Language of the Conquerors; and thus introduc'd abundance of the *Roman* Words and Phraſes into their own Tongue.

Of this Mixture of *Gauliſh* and *Latin* was form'd a new Language, call'd *Roman*; in contradiſtinction to the antient unadulterated *Gauliſh*, which was called *Wallon*, or *Walloon*.

This Diſtinction is kept up to this Day; for the Inhabitants of ſeveral of the Low-Country Provinces, ſay, that in *France* they ſpeak *Roman*; whereas they ſpeak the *Waloon*, which comes much nearer the Simplicity of the antient *Gauliſh*. See ROMAN, and FRENCH.

WANLASS, in Hunting.—Driving the *Wanlaſs*, is the driving of Deer to a ſtand. See HUNTING.

WAPENTAKE, or WEAPENTAKE, a Diviſion of certain Counties, particularly *Nottingham*, and thoſe beyond the *Trent*; anſwering to what in other Places is call'd a *Hundred*, or *Cantred*. See HUNDRED.

Authors differ as to the Origin of the Word.—*Hoveden* brings it from the Saxon *Weapen*, and *teaken*, to take; by reaſon the Tenants antiently deliver'd their Arms to every new Lord, as a Token of their Homage.

Sir *Thomas Smith* gives a different Account.——He ſays, that antiently Muſters were taken of the Armour and Weapons of the ſeveral Inhabitants of every *Wapentake*; and that from ſuch as could not find ſufficient Pledges for their good abearing, their Weapons were taken away, and deliver'd to others.

Others ſuppoſe the Word of *Daniſh* Original; and give a different account of its Riſe, *viz.* That when firſt the Kingdom was divided into *Wapentakes*; he who was the Chief of the Diviſion, and whom we now call *High-Conſtable*, as ſoon as he enter'd upon his Office, appear'd in the Field, on a certain Day, on Horſe-back, with a Pike in his Hand, and all the chief Men of the Hundred met him with their Lances; who alighting, touch'd his Pike with their Lances, as a Signal they were firmly united to each other, by the touching their Weapons: The Saxon *Weapen* ſignifying *Weapon*, and *tac*, *touching*.

WAR, *Bellum*, a Conteſt, or Difference between Princes, States, or large Bodies of People; which not being determinable by the ordinary Meaſures of Juſtice and Equity, is refer'd to the Deciſion of the Sword.

Hobbes's great Principle, is, That the Natural State of Man is a State of *Warfare*; moſt other Politicians hold *War* to be a preternatural and extraordinary State.

Civil, or *Inteſtine* WAR, is that between Subjects of the ſame Realm; or between Parties in the ſame State.—In this Senſe, we ſay, The *Civil Wars* of the *Romans* deſtroy'd the Republick: The *Civil Wars* of *Granada* ruin'd the Power of the *Moors* in *Spain*: The *Civil Wars* in *England* begun in 1641, ended in the King's Death, 1649.

King's WAR, *Bellum Regis*.—At the Time when particular Lords were allow'd to make *War* with one another, to revenge Injuries, inſtead of proſecuting them in the ordinary Courts of Juſtice; the Appellation *King's War* was given to ſuch as the King declared againſt any other Prince, or State; on which Occaſion, the Lords were not allow'd to make *private War* againſt each other; as being oblig'd to ſerve the King, with all their Vaſſals. See VASSAL, &c.

Religious WAR, is a *War* maintain'd in a State, on account of Religion; one of the Parties refuſing to tolerate the other.

The *Holy War*, is that antiently maintain'd by Leagues and Croiſades, for the Recovery of the Holy Land. See CROISADE.

Council of WAR, is an Aſſembly of great Officers, call'd by a General or Commander, to deliberate with him on Enterprizes, and Attempts to be made. See COUNCIL.

On ſome Occaſions, *Council of War* is alſo underſtood of an Aſſembly of Captains, ſitting in Judgment on delinquent Soldiers, Deſerters, Coward-Officers, &c.

Place of WAR, is a Place fortified on purpoſe to cover and defend a Country, and ſtop the Incurſion of an Enemy's Army: Or, it is a Place, wherein are diſpos'd the Proviſions of *War*, for an Army incamp'd in the Neighbourhood; or whither an Army retires into Winter Quarters. See PLACE.

Art of WAR. *Man of* WAR. } See { MILITARY *Art*. SHIP.

WARBLING *of the Wings*, in Falconry, is when a Hawk, after having mantled herſelf, croſſes her Wings over her Back. See HAWK, and FALCON.

WARD, a Word uſed in our Law-Books in divers Significations.—Thus, a *Ward*, in *London*, is a part of the City, committed to the ſpecial Charge of one of the Aldermen of the City.—There are 26 *Wards* in *London*, which are as Hundreds, and the Pariſhes thereof as Towns. See ALDERMAN, HUNDRED, &c.

A Foreſt is alſo divided into *Wards*. See FOREST, and HOSPITAL.

A Priſon is alſo called a *Ward*. See PRISON, and GOAL.

The Heir of the King's Tenant, who held by Knights-Service or *in Capite*, was alſo called a *Ward* during his Nonage. But this laſt is taken away by the Statute, 12 *Car.* II. cap. 24. See GUARD, and GUARDIAN.

WARD-*Hook*, in Gunnery, a Rod, or Staff, with an Iron-end turned Serpent-wiſe, or like a Screw, to draw the Wads or Ockam out of a Gun, when it is to be unloaded.

WARD, or WARDA, call'd alſo WARDAGIUM, is uſed in our antient Writers for the Cuſtody of a Town or Caſtle, which the Tenants and Inhabitants were bound to keep at their own charge. See WARDAGE.

WARDA *Eccleſiarum*, denotes the Guardianſhip of Churches; which is in the King during the Vacancy, by reaſon of the *Regalia*, or Temporalties. See REGALIA, and TEMPORALTIES.

WARDAGE, WARDAGIUM, is ſometimes uſed in our antient Law-Writers, in the ſame Senſe with *Wardpenny*. See WARDPENNY.

Sometimes it alſo ſeems to denote a being free from *Wardſhip*.

WARDECORNE, among our antient Writers, a Duty incumbent on the Tenants, to guard the Caſtle, by ſounding a Horn upon the approach of an Enemy; call'd alſo *Cornage*. See CORNAGE.

WARDEN, one who has the Charge or Keeping of any Perſon or Thing, by Office.—Such is the *Warden of the Fleet*, the Keeper of the Fleet Priſon; who has the Charge of the Priſoners there; eſpecially ſuch as are committed from the Court of Chancery for Contempt. See FLEET.

Such alſo are, the *Warden* of the Fellowſhips, *Warden* of the Marches, *Wardens* of Peace, *Warden* of the Weſt Marches, *Warden* of the Foreſt, *Warden* of the Alnage, *Warden* of the King's Wardrobe, &c. See GUARDIAN; ſee alſo JUSTICE, MARCH, WARDROBE, &c.

WARDEN, in an Univerſity, is the Head of a College; anſwering to what in other Colleges we call the *Maſter* thereof. See COLLEGE.

WARDEN, or *Lord* WARDEN *of the Cinque-Ports*, is the Governour of thoſe noted Havens; who has the Authority of an Admiral, and ſends out Writs in his own Name. See CINQUE-*Ports*.

WARDEN *of the Mint*, is an Officer whoſe Buſineſs is to receive the Gold and Silver Bullion brought in by the Merchants; to pay them for it, and overſee the other Officers. See MINT.

He is alſo call'd Keeper of the Exchange and Mint.

WARDER.—The *Yeomen Warders of the Tower*, are Officers, forty in Number, who are accounted the King's

domeſtick Servants, and are ſworn by the Lord Chamberlain: Their Duty is to attend Priſoners of State, and wait at the Gates. See TOWER.

Ten of 'em are uſually upon the Day's-wait, to take an account of all Perſons who come into the Tower; to enter their Names, and the Names of the Perſons they go to, in a Book to be peruſed by the Conſtable or Lieutenant.

WARDFEOH, or WARDFEGH, of the Saxon *Weard, a Ward*, and *feoh, Fee*; denotes the Value of a *Ward*, or Heir under Age; or the Money paid to the Lord of the Fee for his Redemption.

WARDMOTE, in *London*, is a Court ſo call'd, which is kept in every *Ward* of the City. See MOTE.

WARD-PENNY, WARPEN, WARTHPENNY, was formerly a cuſtomary Due, antiently paid to the Sheriff, and other Officers, for maintaining Watch and *Ward*. See PENNY.

It was payable at the Feaſt of St. *Martin*; and is ſtill paid within the Manor of *Sutton Colfield* in *Warwickſhire*; and with ſome very ſingular Ceremonies.

WARDROBE, a Cloſet, or little Room, adjoining to a Bed-Chamber; ſerving to diſpoſe and keep a Perſon's Apparel in; or for a Servant to lodge in, to be at hand to wait, *&c.*

WARDROBE, in a Prince's Court, is an Apartment wherein his Robes, wearing Apparel, and other Neceſſaries, are preſerv'd; under the Care and Direction of proper Officers.

His Majeſty has a *Great Wardrobe*; a *Removing Wardrobe*; and divers *Standing Wardrobes*, belonging to his Bedchambers in each of his Palaces, *viz.* at *Whitehall*, *Kenſington*, *Windſor*, *Hampton-Court*, and the *Tower*; each under its reſpective Keeper.

The *Removing Wardrobe* always attends on the King's Perſon; as alſo on Embaſſadors, at Chriſtenings, Maſques, Plays, *&c.*—It is under the Command of the Lord Chamberlain: The under-Officers are, a Yeoman, two Grooms, and three Pages.

The *Great Wardrobe*, is of great Antiquity—Antiently, it was kept near *Puddle-Wharf*, in a Houſe purchas'd for that purpoſe by King *Edward* III. but ſince the Fire of *London*, it has been kept in *York-Buildings*.

The Maſter or Keeper thereof, is an Officer of great Dignity: high Privileges were confer'd on him by *Henry* VI. King *James* I. enlarg'd the ſame, and erected the Office into a Corporation.

The Officers are, the *Maſter* or *Keeper*, his *Deputy*, and his *Clerk*; beſide ſeveral under-Officers; and above ſixty Tradeſmen, all ſworn Servants to the King.

This Office is to provide for Coronations, Marriages, and Funerals of the Royal Family; to furniſh the Court with Beds, Hangings, Carpets, *&c.* to furniſh Houſes for Embaſſadors, at their firſt arrival here; Preſents for foreign Princes and Embaſſadors; Furniture for the Lord Lieutenant of *Ireland*, and our Embaſſadors abroad; Robes for the Knights and Officers of the Garter, Herald, Purſuivants, Miniſters of State, Liveries for the Officers of the Bedchamber, and other Servants; Liveries for the Lord Chief Juſtices, and Barons of the Exchequer; and other Officers in thoſe Courts: As alſo Yeomen, Warders, Trumpets, Kettledrums, Meſſengers, Coachmen, Grooms, *&c.* with Coaches, Harneſſes, Saddles, *&c.* The Watermen, Game-keepers; Linen and Lace for the King's Perſon; Tilts, *&c.* for his Barges, *&c.*

WARDS *and Liveries*, a Court firſt erected by King *Henry* VIII. and after augmented by him with the Office of *Liveries*: But it is now abſolutely taken away and aboliſh'd, by a Statute made 12 *Car.* II. cap. 24. See LIVERY.

WARD-STAFF.—The Manor of *Lambourn* in *Eſſex*, is held by Service of the *Ward-ſtaff*, *viz.* the carrying a Load of Straw in a Cart with ſix Horſes, two Ropes, two Men in Harneſs, to watch the ſaid *Ward-ſtaff*, when it is brought to the Town of *Aibridge*, &c. *Cam.* tit. *Eſſex*.

WARD-WITE, is defined by *Fleta*, as ſignifying a being exempted from the Duty of Watching.—Others rather take it for a Duty paid towards the Charge thereof.

The Word is compounded of the Saxon *Weard*, *Vigilia*, Watch; and *Wite*, Mulct.

WARECTUM, and *Terra* WARECTA, in antient Writers, ſignifies Land that has lain long neglected, and untill'd.

In antient Records we meet with *Tempus Warecti*, for the Time wherein Land lies fallow, the following Year; or elſe the Seaſon of Fallowing. See FALLOW.

WAREN. See WARREN.

WARMTH. See HEAT.

WARN, in Law, to ſummon a Perſon to appear in a Court of Juſtice. See SUMMONS.

WARNING *Wheel*, in a Clock, is the third or fourth, according to its diſtance from the firſt Wheel. See CLOCK.

WARP, in the Manufactures, is the Threads, whether of Silk, Wool, Linen, Hemp, Cotton, or the like, that are extended lengthwiſe on the Weaver's Loom; and acroſs which the Workman, by means of his Shuttle, paſſes the Threads of the Woof, to form a Cloth, Ribband, Fuſtian, or other Matter. See WEAVING.

For a woollen Stuff, *&c.* to have the neceſſary Qualities, 'tis requir'd that the Threads of the *Warp* be of the ſame kind of Wool, and of the ſame Fineneſs throughout; that they be ſized with *Flanders* or Parchment Size, well prepar'd; and that they be in ſufficient Number, with regard to the Breadth of the Stuff to be wrought. See WOOL, CLOTH, *&c.*

To WARP *a Ship*, is to hale her to a Place, when the Wind is wanting, by means of a Hawſer, a Cable, and an Anchor fix'd thereto.

WARRANT, an Act, Inſtrument, or Obligation, whereby a Perſon authorizes another to do ſomething, which he had not otherwiſe a right to do. See WARRANTY, and GUARANTY; ſee alſo VOUCHER.

WARRANT *of Attorney*, is that whereby a Man appoints another to do ſomething in his Name, and *warrants* his Action. See ATTORNEY.

It ſeems to differ from a *Letter of Attorney*, which paſſes under Hand and Seal of him that makes it, before creditable Witneſſes; whereas *Warrant of Attorney*, in perſonal, mix'd, and ſome real Actions, is put in of courſe by the Attornies for the Plaintiffs, or Defendants.

Tho, a *Warrant of Attorney*, to ſuffer a common Recovery by the Tenant or Vouchee, is acknowledg'd before ſuch Perſons, as a Commiſſion for the doing thereof directs. See RECOVERY, *&c.*

In the Court of Common Pleas there is a *Clerk of the Warrants*, who enters all *Warrants of Attorney* for Plaintiff and Defendant. See CLERK.

WARRANTY, WARRANTIA, a Promiſe, or Covenant by Deed, made by the Bargainer for himſelf and his Heirs, to *warrant* and ſecure the other Party and his Heirs, againſt all Men, for the enjoying of the Thing agreed on between them.

This *Warranty* paſſeth from the Seller to the Buyer; from the Feoffer to the Feoffee; from him that releaſeth, to him that is releaſed from an Action real.

The form of it is thus: *Et ego vero præfatus A. & hæredes mei prædictas quinque acras terræ cum pertinentiis ſuis præfato B. hæredibus & aſſignatis ſuis contra omnes gentes* Warrantizabamus, *in perpetuum per præſentes.*

Note, under *Hæredes*, Heirs, are compris'd all ſuch as the firſt *Warranter*'s Lands come to, whether by Deſcent, Purchaſe, or the like.

Warranty is either *Real*, or *Perſonal*.—*Real*, when it is annex'd to Lands and Tenements granted for Life, *&c.* which, again, is either *in Deed*, or *in Law*. See FACTO, *&c.*

Perſonal, either reſpects the Property of the Thing ſold, or the Quality of it. See PERSONAL, *&c.*

Real Warranty, again, in reſpect of the Eſtate, is either *Lineal*, *Collateral*, or *commencing by Diſſeiſin*.

WARRANTIA *Chartæ*, a Writ that lies for a Perſon who is infeoffed in Lands and Tenements, with Clauſe of *Warranty*; and is impleaded in an Aſſize, or Writ of Entry, wherein he cannot Vouch, or call to *Warranty*.

WARRANTIA *Dei*, a Writ which lies in Caſe where a Man having a Day aſſign'd perſonally to appear in Court to an Action wherein he is ſued, is, in the mean time, by Commandment employ'd in the King's Service; ſo that he cannot come at the Day aſſign'd.

WARREN, or WAREN, a Franchiſe or Place privileg'd, either by Preſcription, or Grant from the King, to keep Beaſts and Fowl of *Warren* in; as *Rabbits*, *Hares*, *Partridges*, *Pheaſants*, &c. See BEAST, GAME, HUNTING, *&c.*

By a Statute 21 *Edw.* III. a *Warren* may lie open, and there is no need of cloſing it in; as there is of a Park. See PARK, *&c.*

If any Perſon be found an Offender in any ſuch Fee-*Warren*, he is puniſhable for the ſame at Common Law.

Beaſts of WARREN. See BEASTS *of Warren*.

WART, *Verruca*, a little round, hard Excreſcence, ariſing on the Fleſh, like a Pea.

Warts are more frequent on the Hands than any other Part.—There are divers ſorts: The moſt uſual are call'd *Porraceæ*; as having Heads like Leeks, and conſiſting of little Threads, reſembling the Roots thereof.

Another ſort is called *Myrmecia*, which is a little round, callous Eminence on the Hands of young Children; riſing ſuddenly, and diſappearing again.

Some Phyſicians alſo rank the Corns growing on the Toes under the Claſs of *Warts*: which the *Latins* call *Clavi*; becauſe occaſioning ſhooting Pains, as if one were pricked with the Point of a Nail. See CLAVUS.

Warts, if only rooted in the Cutis, are eaſily taken away; but if they ariſe from the Tendons underneath, there is ſcarce any extirpating 'em without great danger.—The Juice of *Chelidon. Maj.* or *Eſula*, or *Dens Leonis*, or *Tithymal*, frequently applied, takes off *Warts*.

Borelli commends Water wherein Sal Armoniac has been diſſolv'd; which Dr. *Mapletoft*, late Profeſſor of Phyſick at *Greſham College*, makes no ſcruple to ſay, is the only ſure Remedy he knows of in all Medicine.

WASH-

WASHING. See LOTION, ABLUTION, &c.

The Waſhing of the Feet was a common piece of Civility among the *Jews*, practis'd upon Strangers, Viſitors, &c. at their arrival.

The *Waſhing* of the Feet of twelve poor People, is an anniverſary Ceremony, perform'd both by the Kings of *England* and *France*; in commemoration of our Saviour's *waſhing* the Feet of his Apoſtles.

Arnobius, *adv. Gentes*, Lib. VII. mentions a Feaſt in uſe among the Antients, call'd *Lavatio Matris Deûm*, the *Waſhing* of the Mother of the Gods, held on the 30th of *March*.

WASHING *of a Ship*, in the Sea Language, is when all the Guns are brought to one ſide, and the Men, getting up on the Yards, *waſh* her other ſide, and ſcrape her as far as they can reach.

WASHING, in Painting, is when a Deſign drawn with a Pen, or Crayon, has ſome one Colour laid over it with a Pencil, as Indian Ink, Biſtre, or the like; to make it appear the more natural, by adding the Shadows of Prominences, Apertures, &c. and by imitating the particular Matters whereof the Thing is ſuppoſed to conſiſt.

Thus, they *waſh* with a pale red to imitate Brick and Tyle; with a pale Indian blue to imitate Water and Slate; with green for Trees and Meadows; with Saffron or *French* Berries, for Gold and Braſs; and with ſeveral Colours for Marbles.

Theſe *Waſhes* are uſually given in equal Teints, or Degrees, throughout; which are afterwards brought down and ſoften'd over the Lights with fair Water, and ſtrengthen'd with deeper Colours for the Shadows. See LIGHT, and SHADOW.

WASHINGS, or WASHES, among Goldſmiths, Coiners, &c. are the Lotions whereby they draw the Particles of Gold and Silver out of the Aſhes, Earths, Sweepings, &c.

This is either perform'd by ſimply *waſhing* 'em again and again, or by putting 'em in the *Waſhing Mill*.

To make one of theſe *Waſhes*, they not only gather together the Aſhes of the Furnaces, and the Sweepings of the Places where the Works are; but they alſo break and pound the old earthen Crucibles, and the very Bricks whereof the Furnaces are built: little Particles of Gold, &c. being found to ſtick to 'em by the crackling natural to thoſe Metals, when in their laſt degree of heat.

Theſe Matters being all well ground, and mix'd together, are put in large wooden Baſons, where they are waſh'd ſeveral times and in ſeveral Waters, which run off, by Inclination, into Troughs underneath; carrying with 'em the Earth, and the inſenſible Particles of the Metals, and only leaving behind 'em the larger and more conſiderable ones, which are viſible to the Eye, and taken out with the Hand; without more trouble.

To get out the finer Parts, gone off with the Earth, they uſe Quickſilver, and a *Waſhing* Mill.—This Mill conſiſts of a large wooden Trough, at bottom of which are two metalline Parts, ſerving as Mill-ſtones; the lower being convex, and the upper, which is in form of a Croſs, concave.

A-top is a Winch, placed horizontally, which turns the upper piece round; and at bottom a Bung, to let out the Water and Earth when ſufficiently ground.

To have a *Waſh*, then, the Trough is fill'd with common Water, into which they caſt thirty or forty Pounds of Quickſilver, and two or three Gallons of the Matter remaining from the firſt Lotion.—Then turning the Winch, they give Motion to the upper Mill-ſtone; which grinding the Matter and the Quickſilver violently together, the Particles of Gold and Silver become the more eaſily amalgamated therewith: This Work they continue for two Hours; when opening the Bung, the Water and Earths run out, and a freſh quantity is put in.

The Earths are uſually paſs'd thus thro' the Mill three times; and the ſame quantity of Mercury uſually ſerves all the three times.—When there is nothing left in the Mill but the Mercury, united with the Gold or Silver which it has amalgamated; they take it out, and *waſhing* it in divers Waters, they put it in a Ticken Bag, and lay it in a Preſs, to ſqueeze out the Water and the looſe Quickſilver: the remaining Quickſilver they evaporate by Fire, in a Retort, &c. See GOLD, and SILVER; ſee alſo LAVADERE.

WASSAILE, or WASSEL, a Feſtival Song, ſung heretofore from door to door, about the Time of *Epiphany*. See WASSEL-*Bowl*.

WASSEL-*Bowl*, was a large Cup or Bowl, of Silver or Wood, wherein the *Saxons* at their publick Entertainments drank a Health to one another, in the Phraſe *Was-heal*; that is, *Health be to you*.

This *Waſſel-Bowl*, ſeems plainly to be meant by the Word *Vaſtellum*, in the Lives of the Abbots of *St. Albans*, by *Matt. Paris*; where he ſaith, *Abbas ſolus prandebat ſupremus in Refectorio habens* Vaſtellum: 'He had ſet by him 'the *Waſſel-Bowl*, to drink an Health to the Fraternity; or 'the *Poculum Charitatis*.

And hence the Cuſtom of going a *Waſſeling*, ſtill uſed in *Suſſex* and ſome other Places, ſeems to have taken its Name.

WAST, or WASTE, in Law, has divers Significations.—1ſt, It is uſed for a Spoil, made either in Houſes, Woods, Lands, &c. by the Tenants for Life, or for Years, to the prejudice of the Heir, or of him in Reverſion.—Upon this, the Writ of *Waſte* is brought for recovery of the Thing *waſted*, and treble Damages.

Waſte of the Foreſt, is, properly, where a Man cuts down his own Woods within the Foreſt, without Licence of the King, or Lord-Chief-Juſtice in Eyre. See FOREST, and PURLIEU.

WASTE is alſo taken for thoſe Lands which are not in any Man's Occupation; but lie common. See COMMON.

They ſeem to be ſo called, becauſe the Lord cannot make ſuch Profit of them as of his other Lands; by reaſon of the uſe others have thereof, for paſſing to and fro.—Upon this none may build, cut down Trees, dig, &c. without the Lord's Licence.

Year, Day, and WASTE, is alſo a Puniſhment or Forfeiture belonging to Petit Treaſon, or Felony. See YEAR, DAY, &c.

WASTE *of a Ship*, is that Part of her between the two Maſts; that is, between the Main-maſt, and the Fore-maſt. See SHIP, and MAST.

WASTE-*Boards*, are Boards ſometime ſet upon the ſide of a Boat, to keep the Sea from breaking into her.

WATCH, a ſmall portable Movement, or Machine, for the meaſuring of Time; having its Motion regulated by a Spiral Spring. See WATCH-WORK.

Watches, ſtrictly taken, are all ſuch Movements as ſhew the Parts of Time; as Clocks are ſuch as publiſh it, by ſtriking on a Bell, &c. But commonly, the Name *Watch* is appropriated to ſuch as are carried in the Pocket; and *Clock* to the larger Movements, whether they ſtrike the Hour or not. See CLOCK.

Spring, or *Pendulum Watches*, ſtand pretty much on the ſame Principle with Pendulum Clocks; whence their Denomination.—If a Pendulum, deſcribing little Arches of a Circle, makes Vibrations of unequal Lengths in equal Times; 'tis by reaſon it deſcribes the greater with a greater Velocity. For the ſame Reaſon, a Spring put in Motion, and making greater or leſs Vibrations, as it is more or leſs ſtiff, and as it has a greater or leſs degree of Motion given it; performs them nearly in equal Times. Hence, as the Vibrations of the Pendulum had been applied to large Clocks, to rectify the Inequality of their Motions; ſo, to correct the unequal Motions of the Balance of *Watches*, a Spring is added; by the Iſochroniſm of whoſe Vibrations, the Correction is to be effected. See PENDULUM.

The Spring is uſually wound into a Spiral; that, in the little compaſs allotted it, it may be as long as poſſible; and may have Strength enough, not to be maſter'd and drag'd about by the Inequalities of the Balance it is to regulate.

The Vibrations of the two Parts, *viz.* the Spring and Balance, ſhould be of the ſame length; only ſo adjuſted, as that the Spring, being the more regular in the length of its Vibrations than the Balance, may, on occaſion, communicate its Regularity thereto. See SPRING.

The Invention of Spring or *Pocket Watches*, is owing to the Felicity of the preſent Age.—'Tis true, we find mention made of a *Watch* preſented to *Charles* V. in the Hiſtory of that Prince: But this, in all probability, was no more than a kind of Clock to be ſet on a Table; ſome Footſteps whereof, we have ſtill remaining in the antient Pieces made before the Year 1670.

In effect, 'tis between Dr. *Hook* and Mr. *Huygens*, that the Glory of this excellent Invention lies: but to which of them it properly belongs, is greatly diſputed: The *Engliſh* aſcribing it to the former; and the *French*, *Dutch*, &c. to the latter.

Mr. *Derham*, in his *Artificial Clockmaker*, ſays roundly, that Dr. *Hook* was the Inventor; and adds, that he contriv'd various ways of Regulation.—One way was with a Loadſtone.—Another with a tender ſtrait Spring, one end whereof play'd backwards and forwards with the Balance; ſo that the Balance was to the Spring, as the Bob to a Pendulum; and the Spring as the Rod thereof.—A third Method was with two Balances, of which there were divers ſorts; ſome having a Spiral Spring to the Balance for a Regulator, and others without.

But the way that prevail'd, and which continues in Mode, was with one Balance, and one Spring running round the upper Part of the Verge thereof. Tho this has a Diſadvantage, which thoſe with two Springs, &c. were free from; in that a ſudden jerk, or confuſed ſhake, will alter its Vibrations, and put it in an unuſual hurry.

The Time of theſe Inventions was about the Year 1658; as appears, among other Evidences, from an Inſcription on one of the double Balance *Watches*, preſented to K. *Charles* II. viz. *Rob. Hook Inven.* 1658. *T. Tompion fecit*, 1675.—The Inven-

Invention preſently got into Reputation both at home and abroad; and two of 'em were ſent for by the Dauphin of *France*.

Soon after this, Mr. *Huygens*'s *Watch* with a Spiral Spring got abroad, and made a great a noiſe in *England*, as if the Longitude could be found by it.—'Tis certain, however, that his Invention was later than the Year 1673, when his Book *de Horol. Oſcillat.* was publiſh'd; wherein he has not one word of this, tho he has of ſeveral other Contrivances in the ſame way.

One of theſe the Lord *Brounker* ſent for out of *France*, where Mr. *Huygens* had got a Patent for 'em.—This *Watch* agreed with Dr. *Hook*'s in the Application of the Spring to the Balance; only Mr. *Huygens*'s had a longer Spiral Spring, and the Pulſes and Beats were much ſlower. The Balance, inſtead of turning quite round, as Dr. *Hook*'s, turns ſeveral rounds every Vibration.

Mr. *Derham* ſuggeſts, that he has reaſon to doubt Mr. *Huygens*'s Fancy was firſt ſet to work by ſome intelligence he might have of Dr. *Hook*'s Invention, from Mr. *Oldenburg*, or ſome other of his Correſpondents in *England*: tho Mr. *Oldenburg* vindicates himſelf againſt that Charge, in *Philoſophical Tranſactions*, N° 118. and 129.

Huygens invented divers other Kinds of *Watches*, ſome of them without any String or Chain at all; which he call'd particularly *Pendulum Watches*.

As it was in *England* that *Watches* had their firſt riſe; ſo 'tis there, too, they have arriv'd at their greateſt Perfection.—Witneſs that exceeding Value put on an *Engliſh Watch* in all foreign Countries, and that vaſt Demand made for 'em.

Monſieur *Savary*, in his *Diction. de Commerce*, pretends to match the *French* Watchmakers againſt the *Engliſh*.—He aſſerts, "That if the *Engliſh* be in any Condition to "diſpute it with 'em, they owe it entirely to the great "Number of *French* Workmen, who took ſhelter here upon "the Revocation of the Edict of *Nants*." He adds, "That "three fourths of the *Watches* made in *England*, are the "Work of *Frenchmen*." From what Authorities he ſays this, we know not: But it need not be told *Engliſhmen* that it is falſe; there not being one *French* Name, that we know of, among all our fam'd *Watchmakers*: nor, in the Body of *Watchmakers*, is there one eighth part *French*.

'Tis certain the *French* People prefer our *Watches* vaſtly to their own; inſomuch, that to have 'em with the more eaſe, a number of *Engliſh* Workmen were invited over in 1719, and eſtabliſh'd with great countenance at *Verſailles*, under the Direction of the famous Mr. *Law*.—But the Eſtabliſhment, tho every thing promis'd well for it, and the *French* Watch and Clockmakers ſeem'd undone by it, fell to the Ground in leſs than a Year's time.—M. *Savary* imputes its Fall, intirely, to that ſtrong Prejudice of the *French* People in behalf of the *Engliſh* Workmen, and to the Opinion that *the Watches did not come from* England. But the Truth is, the Workmen ſent over being moſt of 'em Men of looſe Characters, grew diſſolute, quarrell'd with the Prieſts, inſulted the Magiſtrates, and were diſmiſs'd, of neceſſity.

Striking WATCHES, are ſuch, as beſides the proper *Watch*-part, for meaſuring of Time, have a Clock-part, for ſtriking the Hours, *&c.*

Theſe are real Clocks; only moved by a Spring inſtead of a Weight.—Properly ſpeaking, they are call'd *Pocket-Clocks*. See CLOCK.

Repeating WATCHES, are ſuch as by pulling a String, *&c.* do *repeat* the Hour, Quarter, or Minute, at any time of the Day or Night.

This Repetition was the Invention of Mr. *Barlow*, and firſt put in practice by him in larger Movements, or Clocks, about the Year 1676.—The Contrivance ſtrait ſet the other Artiſts to work, who ſoon contriv'd divers ways of effecting the ſame. But its application in Pocket *Watches* was not known before King *James* the Second's Reign; when the ingenious Inventor abovemention'd, having directed Mr. *Thompſon* to make a *Repeating Watch*, was ſoliciting a Patent for the ſame.

The Talk of a Patent engag'd Mr. *Quare* to reſume the Thoughts of a like Contrivance, which he had had in view ſome Years before: He now effected it; and being preſs'd to endeavour to prevent Mr. *Barlow*'s Patent, a *Watch* of each kind was produc'd before the King and Council; upon Trial of which, the Preference was given to Mr. *Quare*'s.

The Difference between 'em was, that *Barlow*'s was made to Repeat by puſhing in two pieces on each ſide the *Watch*-Box; one of which repeated the Hour, and the other the Quarter: Whereas *Quare*'s was made to repeat by a Pin that ſtuck out near the Pendant; which being thruſt in, (as now 'tis done by thruſting in the Pendant it ſelf) repeated both the Hour and Quarter with the ſame thruſt.

WATCH-WORK, is that Part of the Movement of a Clock or *Watch*, which is deſigned to meaſure, and exhibit the Time on a Dial-Plate; in contradiſtinction to that Part which contributes to the ſtriking of the Hour, *&c.* which is call'd *Clock-work*. See WATCH.

The ſeveral Members of the *Watch*-part, are, 1°, The *Balance*, conſiſting of the *Rim*, which is its circular Part; and the *Verge*, which is its Spindle; to which belong the two *Pallets* or *Leves*, that play in the Teeth of the Crown-Wheel.

2°, The *Potence*, or *Pottance*, which is the ſtrong Stud in Pocket-*Watches*, wherein the lower Pivot of the Verge plays, and in the middle of which, one Pivot of the Balance-Wheel plays; the bottom of the Pottance is the *Foot*, the middle part the *Noſe*, and the upper part the *Shoulder*.

3°, The *Cock*, which is the piece covering the Balance.

4°, The *Regulator*, or *Pendulum Spring*, which is the ſmall Spring in the new Pocket-*Watches*, underneath the Balance.

5°, The *Pendulum*; whoſe Parts are, the *Verge*, *Pallets*, *Cocks*, and the *Bob*.

6°, The *Wheels*; which are, the *Crown-Wheel*, in Pocket Pieces, and the *Swing-Wheel* in Pendulums; ſerving to drive the Balance or Pendulum.

8°, The *Contrate Wheel*, which is that next the Crown-Wheel, *&c.* and whoſe Teeth and Hoop lie contrary to thoſe of other Wheels; whence the Name.

9°, The *great*, or *firſt Wheel*; which is that the Fuſy, *&c.* immediately drives: after which are the *ſecond Wheel*, *third Wheel*, &c.

Laſtly, between the Frame and Dial-Plate, are, the *Pinion of Report*, which is that fix'd on the Arbor of the great Wheel; and ſerves to drive the *Dial-Wheel*, as that ſerves to carry the *Hand*.

Theory, and Calculation of WATCH-WORK.

Preliminaries neceſſary to the calculating the *Watch*-part of a Movement, are laid down nnder the Articles MOVEMENT and CLOCK-WORK.

Preliminary Rules common to the Calculation of all Movements, the *Clock* as well as the *Watch*-parts; ſee under the Article MOVEMENT.

Particular Rules for the *Striking-part*; ſee under the Article CLOCK-WORK.

Thoſe for the *Watch-part* we have from the Rev. Mr. *Derham*, as follow.

1°, The ſame Motion, 'tis evident, may be perform'd either with one Wheel and one Pinion, or many Wheels and many Pinions; provided the Number of Turns of all the Wheels bear the Proportion to all the Pinions, which that one Wheel bears to its Pinion: or, which is the ſame thing, If the Number produced by multiplying all the Wheels together, be to the Number produc'd by multiplying all the Pinions together, as that one Wheel to to that one Pinion.—Thus, ſuppoſe you had occaſion for a Wheel of 1440 Teeth, with a Pinion of 28 Leaves; you may make it into three Wheels and Pinions, *viz.* 4) 36, 7) 8, 1) 5. For the three Wheels, 36, 8, and 5, multiply'd together, give 1440 for the Wheels; and the three Pinions 4, 7, and 1, multiplied together, give 28 for the Pinions.—Add, That it matters not in what order the Wheels and Pinions are ſet, or which Pinion runs in which Wheel; only for Contrivance-ſake, the biggeſt Numbers are commonly put to drive the reſt.

2°, Two Wheels and Pinions of different Numbers may perform the ſame Motion.—Thus, a Wheel of 36 drives a Pinion of 4, the ſame as a Wheel of 45 a Pinion of 5; or a Wheel of 90 a Pinion of 10.—The Turns of each being 9.

3°, If in breaking the Train into Parcels, any of the Quotients ſhould not be liked; or if any other two Numbers to be multiplied together, are deſir'd to be varied; it may be done by this Rule.—Divide the two Numbers by any other two Numbers which will meaſure them; multiply the Quotients by the alternate Diviſors; the Product of theſe two laſt Numbers found, will be equal to the Product of the two Numbers firſt given.—Thus, if you would vary 36 times 8, divide theſe by any two Numbers which will evenly meaſure them: So, 36 by 4, gives 9; and 8 by 1, gives 8: now, by the Rule, 9 times 1 is 9, and 8 times 4, 32; ſo that for 36×8, you have 32×9; each equal to 288. If you divide 36 by 6, and 8 by 2, and multiply as before, you have $24 \times 12 = 36 \times 8 = 288$.

4°, If a Wheel and Pinion fall out with croſs Numbers, too big to be cut in Wheels, and yet not to be alter'd by theſe Rules; in ſeeking for the Pinion of Report, find two Numbers of the ſame, or a near Proportion, by this Rule: As either of the two given Numbers is to the other; ſo is 360 to a fourth. Divide that fourth Number, as alſo 360, by 4, 5, 6, 8, 9, 10, 12, 15, (each of which Numbers exactly meaſures 360) or by any of thoſe Numbers that brings a Quotient neareſt an Integer.—As ſuppoſe you had 147 for the Wheel, and 170 for the Pinion; which are too great to be cut into ſmall Wheels, and yet cannot be reduc'd into leſs, as having no other common meaſure but Unity: ſay, as 170 : 147 :: 360 : 311. Or, as 147 : 170 :: 360 : 416. Divide the fourth Number, and 360 by one of the foregoing Numbers; as 311 and 360 by 6, it gives 52 and 60; divide them by 8, you have 39 and 45: and, if you divide 360 and

416 by 8, you have 45 and 52 exactly. Wherefore, inſtead of the two Numbers 147 and 170, you may take 52 and 60, or 39 and 45, or 45 and 52, &c.

5°, To come to Practice in calculating a piece of *Watch-work*, firſt pitch on the Train or Beats of the Balance in an Hour; as whether a ſwift one, of about 20000 Beats, (the uſual Train of a common 30 hour Pocket-*Watch*) or a ſlower of about 16000, (the Train of the new Pendulum Pocket-*Watches*) or any other Train.—Next reſolve on the Number of Turns the Fuſy is intended to have, and the Number of Hours the Piece is to go: Suppoſe, *e. g.* 12 Turns, and to go 30 Hours, or 192 Hours, (*i. e.* 8 Days) &c. Proceed now to find the Beats of the Balance or Pendulum in one Turn of the Fuſy, by the Direction given under the Word BEAT.—Thus in Numbers; 12 : 16 : : 20000 : 26666. Wherefore, 26666 are the Beats in one Turn of the Fuſy, or great Wheel, and are equal to the Quotients of all the Wheels into the Balance multiplied together. Now this Number is to be broken into a convenient parcel of Quotients; which is to be done thus: Firſt, halve the Number of Beats, *viz.* 26666, and you have 13333; then pitch on the Number of the Crown-Wheel, ſuppoſe 17: Divide 13333 by 17, and you have 784 for the Quotient (or Turns) of the reſt of the Wheels and Pinions; which being too big for one or two Quotients, may be beſt broken into three. Chuſe therefore three Numbers, which when multiplied all together continually, will come neareſt 784: As ſuppoſe 10, 9, and 9, multiplied continually, gives 810, which is ſomewhat too much; therefore try again other Numbers, 11, 9, and 8: theſe drawn one into another continually, produce 792; which is as near as can be, and convenient Quotients.—Having thus contrived the Piece from the great Wheel to the Balance; but the Numbers not falling out exactly, as you firſt propoſed; correct the Work thus: Firſt, (by the Direction given under the Word BEATS) multiply 792, the Product of all the Quotients pitch'd upon, by 17, (the Notches of the Crown-Wheel) the Product is 13464, which is half the Number of Beats in one Turn of the Fuſy; then, (by a Rule given under the Word BEAT) find the true Number of Beats in an Hour. Thus, 16 : 12 : : 13464 : 10098; which is half the Beats in an Hour. Then find what Quotient is to be laid upon the Pinion of Report, (by the Rule given under that Word.) Thus, 16 : 12 : : 12 : 9, the Quotient of the Pinion of Report.—Having thus found your Quotients, 'tis eaſy to determine what Numbers the Pinions ſhall have; for, chuſing what Numbers the Wheels ſhall have, and multiplying the Pinion by their Quotients, the Produce is the Number for the Wheels. Thus,

4)	36	(9
5)	55	(11
5)	45	(9
5)	40	(8
		17

the Number of the Pinion of Report is 4, and its Quotient 9; therefore the Number for the Dial-Wheel muſt be 4×9, or 36: ſo the next Pinion being 5, its Quotient 11, therefore the great Wheel muſt be 5×11=55, and ſo of the reſt.

Such is the Method of calculating the Numbers of a 16 hour *Watch*.—Which *Watch* may be made to go longer, by leſſening the Train, and altering the Pinion of Report. Suppoſe you would conveniently ſlacken the Train to 16000; then by the Rule given under the Word BEAT, ſay, As ⅓ 16000, or 8000 : 13464 : : 12 : 20. So that this *Watch* will go 20 Hours. Then for the Pinion of Report, ſay, (by the Rule given under that Word) As 20 : 12 : : 12 : 7. So that 7 is the Quotient of the Pinion of Report. And as to the Numbers, the Operation is the ſame as before; only the Dial-Wheel is but 28, for its Quotient is alter'd to 7.—If you would give Numbers to a *Watch* of about 10000 Beats in an Hour, to have 12 Turns of the Fuſy, to go 170 Hours, and 17 Notches in the Crown-Wheel: The Work is the ſame, in a manner, as in the laſt Example; and conſequently thus: As 12 : 170 : : 10000 : 141666, which fourth Number is the Beats in one Turn of the Fuſy; its half, 70833, being divided by 17, gives 1467 for the Quotients: And becauſe this Number is too big for three Quotients, therefore chuſe four, as 10, 8, 8, 6⅓; whoſe Product into 17 makes 71808, nearly equal to half the true Beats in one Turn of the Fuſy.—Then ſay, As 170 : 12 : : 71808 : 5069, which is half the true Train of your *Watch*. And again, 170 : 12 : : 12 : $\frac{144}{170}$, (or 170) 144, which expreſſes the Pinion of Report, and the Number of the Dial-Wheel. But theſe Numbers being too big to be cut in ſmall Wheels, they muſt be varied by the fourth Rule, above, thus;

4)	28	(7
5)	55	(11
5)	45	(9
5)	48	(8
		17

As 144 : 170 : : 360 : 425.
Or 170 : 144 : : 360 : 305.

24)	20	($\frac{20}{24}$
6)	60	(10
6)	48	(8
5)	40	(8
5)	33	(6⅓
		17

Then dividing 360, and either of theſe two fourth Proportionals, (as directed by the Rule) ſuppoſe by 15, you'll have $\frac{24}{8}$ or $\frac{20}{24}$; then the Numbers of the whole Movement will ſtand as in the Margin.

Such is the Calculation of ordinary *Watches* to ſhew the Hour of the Day: *In ſuch as ſhew Minutes and Seconds, the Proceſs is thus.*

1°, Having reſolved on the Beats in an Hour; by dividing the deſigned Train by 60, find the Beats in a Minute; and accordingly, find proper Numbers for the Crown-Wheel and Quotients, ſo as that the Minute-Wheel ſhall go round once in an Hour, and the Second-Wheel once a Minute.—

Suppoſe, *e. g.* you ſhould chuſe a Pendulum of ſix Inches to go eight Days, with 16 Turns of the Fuſy; a Pendulum of 6 Inches vibrates 9368 in an Hour; and conſequently, dividing it by 60, gives 156, the Beats in a Minute. Half theſe Sums are 4684 and 78. Now the firſt work is to break this 78 into a good proportion which will fall into one Quotient, and the Crown-Wheel. Let the Crown-Wheel have 15 Notches, then 78 divided by 15, gives 5; ſo a Crown-Wheel of 15, and a Wheel and Pinion, whoſe Quotient is 5, will go round in a Minute to carry a Hand to ſhew Seconds.—For a Hand to go round in an Hour to ſhew Minutes; becauſe there are 60 Minutes in an Hour, 'tis but breaking 60 into good Quotients, (ſuppoſe 10 and 6, or 8 and 7, &c.) and 'tis done. Thus 4684 is broken, as near as can be, into proper Numbers. But ſince it don't fall out exactly into the abovemention'd Numbers, you muſt correct, (as before directed) and find the true Number of Beats in an Hour, by multiplying 15 by 5, which makes 75; and 75 by 60, makes 4500, which is half the true Train. Then find the Beats in one Turn of the Fuſy; thus, 16 : 192 : : 4500 : 54000; which laſt are half the Beats in one Turn of the Fuſy. This 54000 being divided by 4500, (the true Numbers already pitch'd on) the Quotient will be 12; which not being too big for a ſingle Quotient, needs not be divided into more; and the Work will ſtand as in the Margin.——As to the Hour-hand, the great Wheel which performs only one Revolution in 12 Turns of the Minute-Wheel will ſhew the Hour: or it may be done by the Minute-Wheel.

WATCH, at Sea, ſignifies a meaſure or ſpace of four Hours; becauſe half the Ship's Crew *watch* and do Duty in their turns ſo long at a time.

The Ship's Company is divided into two Parts, the *Larboard Watch*, and the *Starboard Watch*.—The Maſter of the Ship commands the latter, and the chief Mate the former.

Sometimes, when a Ship is in Harbour, they *watch* but a *Quarter-watch*, as they call it; that is, but a quarter of the Company *watch* at a Time.

The *Watch-Glaſs* being four Hours, is uſed at Sea to ſhift or change their *Watches*.—There are alſo *Half-watch* Hour-Glaſſes; Minute and Half-minute Glaſſes; by which laſt they count the Knots when they heave the Log, in order to find the Ship's Way. See LOG-*Line*.

WATER, *Aqua*, in Phyſicks, a ſimple, fluid, and liquid Body; reputed the third of the four vulgar Elements. See ELEMENT.

Sir *I. Newton* defines *Water* to be a fluid Salt; volatile, and void of Taſte: But this Definition *Boerhaave* ſets aſide, inaſmuch as *Water* is a Menſtruum or Diſſolvent of Salts and ſaline Bodies, which does not agree with the Notion of its being a Salt it ſelf; inaſmuch as, we don't know of any Salt that diſſolves another. See SALT.

Whether Water *be originally fluid*?——Tho *Water* be defin'd a *Fluid*, 'tis a Point controverted among Philoſophers, whether Fluidity be its Natural State, or the Effect of Violence: We ſometimes find it appear in a fluid, and ſometimes in a ſolid form; and as the former in our warmer Climate is the more uſual, we conclude it the proper one, and aſcribe the other to the extraneous Action of Cold. —*Boerhaave*, however, aſſerts the contrary, and maintains *Water* to be of the Cryſtalline Kind; ſince, wherever a certain degree of Fire is wanting to keep it in fuſion, it readily grows into a hard Glebe, under the Denomination of *Ice*. See ICE.

Mr. *Boyle* is much of the ſame Sentiment.—Ice, he obſerves, is commonly reputed to be *Water* brought into a preternatural State by Cold: But, with regard to the Nature of Things, and ſetting aſide our arbitrary Ideas, it might as juſtly be ſaid, That *Water* is Ice, preternaturally thawed by Heat. If it be urg'd that Ice, left to it ſelf, will, upon the Removal of the freezing Agents, return to *Water*: It may be anſwer'd, that, not to mention the Snow and Ice which lie all Summer long on the *Alps* and other high Mountains, even in the Torrid Zone, we have been aſſur'd, that in ſome Parts of *Siberia*, the Surface of the Ground continues more Months of the Year frozen by the natural Temperature of the Climate, than thaw'd by the Heat of the Sun; and a little below the Surface of the Ground, the *Water* which

chances to be lodg'd in the Cavities there, continues in a ſtate of Ice all the Year round: So that when in the heat of Summer the Fields are cover'd with Corn, if you dig a Foot or two deep, you ſhall find Ice, and a frozen Soil.

No pure Water *in all Nature.*——*Water*, if it could be had alone, and pure, *Boerhaave* argues, would have all the requiſites of an Element, and be as ſimple as Fire; but there is no expedient hitherto diſcover'd for making it ſuch. Rain-*Water*, which ſeems the pureſt of all thoſe we know of, is replete with infinite Exhalations of all kinds, which it imbibes from the Air: So that filter'd and diſtill'd a thouſand times, there ſtill remains Fæces.—Further, the Rain-*Water* gather'd from the Roofs of Houſes, is a Lixivium of Tyles, Slate, or the like, impregnated with the Dungs and Fæces of the Animals, Birds, *&c.* depoſited thereon; and the Exhalations of numerous other Things.—Add, that all the Rain-*Water* gather'd in Cities, muſt at laſt be ſaturated with the Smoke of a thouſand Chimnies, and the various Effluvia of Numbers of Perſons, *&c.* Beſide that there is Fire contained in all *Water*; as appears from its Fluidity, which is owing to Fire alone. See FIRE.

As what is in the Air neceſſarily mixes it ſelf with *Water*, it hence appears impoſſible to have ſuch a thing as pure *Water*.—If you percolate it thro' Sand, or ſqueeze it thro' Pumice, or paſs it thro' any other Body of the like kind, you will always have Salt remaining.—Nor can Diſtillation render it pure; ſince it leaves the Air therein, which abounds in Corpuſcles of all ſorts. See AIR.

The pureſt of all *Waters* we can any way arrive at, is that diſtill'd from Snow, gather'd in a clear, ſtill, pinching Night, in ſome very high Place; taking none but juſt the outer or ſuperficial Part thereof.—By a Number of repeated Diſtillations hereof, the greateſt part of the Earth and other Fæces, may be ſeparated herefrom: And this is what we muſt be contented to call *pure Water*.

Mr. *Boyle*, indeed, relates, that a Friend of his, by diſtilling a quantity of *Water* an hundred times, found at length that he had got ſix tenths of the firſt Quantity in Earth: Whence he concludes, that the whole *Water*, by further proſecuting the Operation, might be converted into Earth. See EARTH.

But it ſhould be conſider'd, that the *Water* cannot be removed, or poured into a Veſſel, without the Mixture of ſome Duſt therewith; ſo, neither can the Luting of the Veſſel be diſtill'd, without loſing ſomething every time. *Boerhaave*, therefore, rather concludes, that the *Water* thus often diſtill'd, might acquire ſtill new Earth from the Duſt floating in the Air, and the Inſtruments employ'd in the Operation.

That Author aſſures us, that after diſtilling ſome very pure *Water*, by a gentle Fire, the ſpace of four Months, it appear'd perfectly pure; and yet leaving it to reſt in Veſſels exactly cloſed, it would conceive a ſlender kind of weedy Matter, ſomewhat like the *Stamina* of Plants, or the little Tufts of a Mucilage: and yet, *Schottus* ſaw *Water*, in *Kircher*'s *Muſæum*, that had been kept in a Veſſel hermetically ſeal'd, upwards of fifty Years, yet ſtill remained clear and pure, and ſtood to the ſame height in the Veſſel as at firſt, without the leaſt Sign of Sediment.

Boerhaave adds, that he is convinced no body ever ſaw a Drop of pure *Water*; that the utmoſt of its purity known, only amounts to its being free of this or that ſort of Matter: and that it can never, for inſtance, be quite deprived of Salt; ſince Air will always accompany it, and Air has always Salt. See AIR.

Water *in all Places and Bodies.*—*Water* ſeems to be diffuſed every where, and to be preſent in all Space where there is Matter.—Not a Body in all Nature but will yield *Water:* 'Tis even aſſerted that Fire it ſelf is not without *Water*. A ſingle Grain of the moſt fiery Salt, which in a Moment's Time will penetrate thro' a Man's Hand, readily imbibes half its weight of *Water*, and melts, even in the drieſt Air imaginable.—Thus, Salt of Tartar, placed near the hotteſt Fire, will attract or imbibe *Water*; and by that means, increaſe conſiderably its weight in a ſmall time: So in the drieſt Summer's-Day, a pewter Veſſel with Ice in it, brought up from ſome cold ſubterraneous Place into the hotteſt Room, will immediately be cover'd over with little Drops of *Water*, gather'd from the contiguous Air, and condens'd by the Coldneſs of the Ice.

'Tis ſurprizing to conſider the plenteous Stock of *Water* which even dry Bodies afford.—Oil of Vitriol, being expoſed a long time to a violent Fire, to ſeparate all the *Water*, as much as poſſible, from the ſame; will afterwards, by only ſtanding a few Minutes in the Air, contract freſh *Water* ſo faſt, as ſoon to afford it as plenteouſly as at firſt.—— Hartſhorn, kept forty Years, and turn'd as hard and dry as any Metal; ſo, that if ſtruck againſt a Flint, it will yield Sparks of Fire; yet, being put into a glaſs Veſſel, and diſtill'd, will afford one eighth of its Quantity of *Water*. Bones dead and dried twenty five Years, and thus become almoſt as hard as Iron; yet, by Diſtillation, have afforded half their weight of *Water*. And the hardeſt Stones, ground and diſtill'd, do always diſcover a Portion thereof.

Eels, by Diſtillation, yielded Mr. *Boyle* ſome Oil, Spirit, and Volatile Salt, beſides the *Caput Mortuum*; yet all theſe were ſo diſproportionate to the *Water*, that they ſeemed to have been nothing but that coagulated: The ſame ſtrangely abounds in Vipers, tho eſteemed very hot in operation; and will, in a convenient Air, ſurvive for ſome Days the loſs of their Heads and Hearts. Human Blood it ſelf, as ſpirituous and elaborate a Liquor as it is reputed, ſo abounds in *Water*, that out of ſeven Ounces and an half, the ſame Author, by Diſtillation, drew near ſix of Phlegm; before ever any of the other Principles began to riſe. See PHLEGM.

Whether Water *be the common Matter of all Bodies?*—From Conſiderations of this kind, *Thales*, and ſome other Philoſophers, have been led to hold, That all Things were made of *Water:* Which Opinion, probably, had its riſe from the Writings of *Moſes*, where he ſpeaks of the Spirit of God moving upon the Face of the *Waters*.—But Mr. *Boyle* does not conceive the *Water* here mention'd by *Moſes* as the Univerſal Matter, to be our Elementary *Water:* we need only ſuppoſe it an agitated Congeries of a great Variety of ſeminal Principles, and of other Corpuſcles fit to be ſubdu'd and faſhion'd by them; and it may yet be a Body fluid like *Water*, in caſe the Corpuſcles it was made up of, were, by their Creator, made ſmall enough, and put into ſuch an actual Motion, as might make them roll, and glide eaſily over one another.—However, *Baſil Valentine*, *Paracelſus*, *Van Helmont*, *Centivoglio*, and others, have maintained the ſame Principle, *viz.* That *Water* is the Elemental Matter or *Stamen* of all things, and ſuffices alone for the Production of all the viſible Creation.—Thus, Sir *I. Newton*, 'All Birds, 'Beaſts, and Fiſhes, Inſects, Trees, and Vegetables, with 'their ſeveral Parts, do grow out of *Water*, and *watery* 'Tinctures, and Salts; and by Putrefaction return again into '*watery* Subſtances.'

Helmont endeavours to prove this Doctrine from an Experiment; wherein, burning a quantity of Earth, till all the Oil was conſum'd, and then mixing it up with *Water*, to draw out all the Salt; and putting this Earth, thus prepared, into an earthen Pot, which nothing but Rain-*Water* could enter; yet a Willow, planted therein, grew up to a conſiderable height and bulk, without any ſenſible Diminution of the Earth: Whence he concluded, that the *Water* was the only Nutriment of the Vegetable Kind, as Vegetables are of the Animal. The ſame thing is infer'd by Mr. *Boyle* from a parallel Experiment: And the whole is countenanc'd by Sir *I. Newton*, who obſerves, that *Water*, ſtanding a few Days in the open Air, yields a Tincture, which, like that of Malt, by ſtanding longer, yields a Sediment, and a Spirit; but before Putrefaction, is fit Nouriſhment for Animals and Vegetables.

But Dr. *Woodward* endeavours to ſhew the whole a Miſtake: *Water* containing extraneous Corpuſcles, ſome of theſe, he ſhews, are the proper Matter of Nutrition; the *Water* being ſtill found to afford ſo much the leſs Nouriſhment, the more it is purify'd by Diſtillation. Thus, a Plant in diſtill'd *Water* will not grow ſo faſt as in *Water* not diſtill'd; and if the *Water* be diſtill'd three or four times over, the Plant will ſcarce grow at all, or receive any Nouriſhment from it. So that *Water*, as ſuch, does not ſeem the proper Nutriment of Vegetables; but only the Vehicle thereof, which contains the nutritious Particles, and carries them along with it, thro' all the Parts of the Plant. See VEGETATION.

Hence, a Water-Plant, *e. g.* a *Naſturtium*, brought up in a Veſſel of *Water*, will be found to contain the more Salt and Oil, the muddier the *Water* is: In effect, *Water* nouriſhes the leſs, the more it is purged of its ſaponaceous Salts; in its pure State, it may ſuffice to extend or ſwell the Parts, but affords no new Vegetable Matter. See VEGETABLE, NUTRITION, *&c.*

Helmont, however, carries his Syſtem ſtill further, and imagines, that all Bodies may be re-converted into *Water*. His Alkaheſt, he affirms, adequately reſolves Plants, Animals, and Minerals, into one Liquor, or more, according to their ſeveral internal Differences of Parts: And the Alkaheſt, being abſtracted from theſe Liquors, in the ſame Weight and with the ſame Virtues as when it diſſolv'd them; the Liquors may, by frequent Cohobations from Chalk, or ſome other proper Matter, be totally depriv'd of their ſeminal Endowments, and return at laſt to their firſt Matter, inſipid *Water*.

Thus much is confeſs'd, that mix'd Bodies do all reſolve by Fire, into Phlegm or *Water*, Oil, Spirit, Salt, and Earth; each of which is found to contain *Water*.

Spirits, for inſtance, cannot be better repreſented than by Spirit of Wine, which of all others ſeems freeſt from *Water:* yet, *Helmont* affirms, it may be ſo united with *Water*, as to become *Water* it ſelf. He adds, that 'tis materially *Water*; only under a ſulphurous Diſguiſe.—According to him, in making

making *Paracelſus*'s *Balſamus-ſamech*, which is nothing but *Sal Tartari* dulcify'd by diſtilling Spirit of Wine from it till the Salt be ſufficiently ſaturated with its Sulphur, and till it ſuffers the Liquor to be drawn off as ſtrong as it was poured on; when the Salt of Tartar, from which it is diſtill'd, hath retained, or deprived it of the ſulphurous Parts of the Spirit of Wine, the reſt, which is incomparably the greateſt Part of the Liquor, will turn to Phlegm. In effect, corroſive Spirits, according to Mr. *Boyle*'s Obſervation, abound in *Water*; which may be obſerved, by entangling, and ſo fixing their ſaline Parts, as to make them corrode ſome proper Body; or elſe by mortifying them with ſome contrary Salt: which will turn them into Phlegm.

And as to Salts; Salt of Tartar well calcin'd, being laid to liquify in the Air, will depoſite an Earth; and if it be then committed to Diſtillation, will yield a conſiderable Quantity of inſipid *Water*; inſomuch, that if it be urg'd with a vehement Fire, the Salt will almoſt all vaniſh, and nothing ſaline remain, either in the *Water*, or the Earth.—Whence *Helmont* concludes, that all Salts might be converted into *Water*. Add, that Sea Salt, recover'd from its own acid Spirit and Oil of Tartar, melts into *Water*, as much as into Oil of Tartar.

Laſtly, Oils run, in great meaſure, into *Water*; and 'tis probable, might be converted wholly into the ſame. See Oil, Sulphur, *&c.*

No Standard for the Weight and Purity of Water.—*Water* ſcarce ever continues two Moments exactly of the ſame weight, being always varying, by reaſon of the Air and Fire contained therein. Thus, a piece of pure limpid Ice, laid in a nice balance, never continues *in Æquilibrio*.—In effect, the Expanſion of *Water* in boiling, ſhews what effect the different degree of Fire has on the Gravity of *Water*.—This makes it difficult to fix the ſpecifick Gravity of *Water*, in order to ſettle its degree of Purity; but this we may ſay in the general, That the pureſt *Water* we can procure, is that which is 880 times as heavy as Air. However, neither have we any tolerable Standard in Air; for *Water* being ſo much heavier than Air, the more *Water* is contain'd in the Air, the heavier of courſe muſt it be: As, in effect, the principal Part of the Weight of the Atmoſphere, ſeems to ariſe from the *Water*. See Air, and Atmosphere.

Properties and Effects of Water.

1°, *Water* is found the moſt *penetrative* of all Bodies, after Fire, and the moſt difficult to confine; ſo that a Veſſel thro' which *Water* cannot paſs, may retain any thing. Nor is it any Objection, that Syrups and Oils will ſometimes paſs thro' Bodies which will hold *Water*; this not being owing to the greater Subtilty and Penetration of their Particles, but to the Reſin wherewith the Wood of ſuch Veſſels abounds, to which Oils and Syrups are as Menſtruums; ſo that diſſolving the Reſin, they make their way thro' the Spaces left thereby; whereas *Water*, not acting on Reſins, is retained. See Resin.

And yet, *Water* gradually makes its way, even thro' all Woods, and is only retainable in Glaſs and Metals; nay, it was found by Experiment at *Florence*, that when ſhut up in a ſpherical Veſſel of Gold, and then preſs'd with a huge force, it made its way thro' the Pores even of the Gold; ſo that the moſt ſolid Body in Nature is permeable to *Water*. See Gold.

Water is even found more fluid than Air; a Body being reputed more fluid than another, when its Parts will find way thro' ſmaller Pores: now Air, 'tis known, will not paſs thro' Leather, as is evident in the Caſe of an exhauſted Receiver cover'd therewith; whereas *Water* paſſes with eaſe.—Again, Air may be retain'd in a Bladder, but *Water* oozes thro'. In effect, 'tis found, that *Water* will paſs thro' Pores ten times ſmaller than Air will. See Pore.

It muſt not be omitted, however, that M. *Homberg* accounts for this paſſage of *Water* thro' the narrow Pores of animal Subſtances which will not admit the Air, on another Principle, *viz.* its moiſtening and diſſolving the glutinous Matter of the fine Fibres of the Membranes, and rendering them more pliable and diſtractile; which are things that the Air, for want of a wetting Property, cannot do.—As a Proof of this Doctrine, he filled a Bladder, and compreſs'd it with a Stone, and found no Air to come out; but placing the Bladder thus compreſs'd in *Water*, the Air eaſily eſcap'd. *Hiſt. de l'Acad.* Ann. 1700. p. 45.

2°, *Water*, then, may even hence, *viz.* from its penetrative Power, be argu'd to enter *the Compoſition* of *all Bodies*, both Vegetable, Animal, and Foſſil; with this peculiar Circumſtance, That it is eaſily, and with a gentle heat, ſeparable again from Bodies it had united with; which cannot be ſaid of any other Body.—Fire, indeed, will penetrate more than *Water*; but 'tis difficult to procure it again from the Bodies it is once fixed in, as is evident in Red Lead, *&c.* See Minium, *&c.*

This Property of *Water*, join'd with its Smoothneſs and Lubricity, fits it to ſerve as a Vehicle, for the commodious and eaſy Conveyance of the Nutritious Matter of all Bodies: being ſo fluid, and paſſing and repaſſing ſo readily, it never ſtops up the Pores, but leaves room for the following *Water*, to bring on a new Supply of nutritious Matter. See Nutrition.

3°, And yet the ſame *Water*, as little coheſive as it is, and as eaſily ſeparated from moſt Bodies, will *cohere firmly with ſome others*, and bind them together into the moſt ſolid Maſſes: Tho it appears wonderful, that *Water*, which will be ſhewn an almoſt univerſal Diſſolvent, ſhould withal be a great Coagulator.

Water, we ſee, mixed up with Earth or Aſhes, gives them the utmoſt Firmneſs and Fixity.—The Aſhes, *e. g.* of an Animal, incorporated with pure *Water* into a Paſte, and bak'd by a vehement Fire, grow into a Coppel; which is a Body remarkable for this, that it will bear the utmoſt Effort of a Refiner's Furnace.—'Tis, in effect, upon the glutinous Nature of *Water* alone that our Houſes ſtand; for take but this out of Wood, and it becomes Aſhes; or out of Tyles, and they become Duſt.

Thus, a little Clay dry'd in the Sun, becomes a Pouder, which mix'd with *Water* ſticks together again, and may be faſhion'd at pleaſure; and this dried again by a gentle Fire, or in the Sun, and then baked in a Potter's Oven, by an intenſe Fire, becomes little other than a Stone.—So the *Chineſe* or *Japan* Earth, whereof our Porcelain Veſſels are made, which hold all Liquors, and even melted Lead it ſelf, is diluted and wrought up with *Water*. See Porcelain.

To ſay no more, all the Stability and Firmneſs ſeen in the Univerſe is owing to *Water* alone.—Thus, Stone would be an incoherent Sand, did not *Water* bind it together; and thus, again, of a fat gravelly Earth, wrought up with *Water* and baked or burnt, we make Bricks, Tyles, and earthen Veſſels, of ſuch exceeding Hardneſs and Cloſeneſs, that *Water* it ſelf cannot paſs thro' them. And theſe Bodies, tho to appearance perfectly dry, and deſtitute of *Water*, yet, being pulveriz'd and put in a Retort, and diſtill'd, yield an incredible quantity of *Water*.

The ſame holds of Metal; for the Parings or Filings of Lead, Tin, Antimony, *&c.* by Diſtillation, yield *Water* plentifully; and the hardeſt Stones, Sea Salt, Nitre, Vitriol, Sulphur, *&c.* are found to conſiſt chiefly of *Water*, into which they reſolve by force of Fire.

The *Lapis Calcarius*, or Lime-ſtone, being expos'd to the Fire, affords a prodigious Quantity of pure *Water*; and the more of this *Water* is expreſs'd, the more friable does it become, till at length it commences a dry Calx or Lime; wherein, in lieu of the *Water* ſo expell'd, the Fire, in the Courſe of Calcination, enters; which is expell'd again, in its turn, by pouring on cold *Water*. Yet, the ſame *Water* and Calx, temper'd together, produce a Maſs, ſcarce inferior, in point of Solidity, to the primitive Lime-ſtone. See Heat.

4°, That *Water* is *not elaſtick*, is evident hence, that it is incompreſſible, or incapable, by any Force, of being reduced into leſs compaſs: This eaſily follows from that famous Experiment abovemention'd, made by order of the great Duke of *Tuſcany*.—The *Water*, being incapable of Condenſation, rather than yield, tranſuded thro' the Pores of the Metal, ſo that the Ball was found wet all over the outſide; till at length, making a Cleft in the Gold, it ſpun out with great vehemence.——From this laſt Circumſtance, indeed, ſome have weakly concluded it was elaſtick. For the *Impetus* wherewith the *Water* darted forth, was more probably owing to the Elaſticity of the Gold, which communicated that Impreſſion to the *Water*.

And hence we ſee the Reaſon why Blocks of Marble ſometimes burſt in cold weather; and why a Veſſel fill'd with *Water*, and afterwards, by any means, reduced to a leſs compaſs, burſts the Veſſel, tho ever ſo ſtrong.—This is obſervable in a piece of braſs Canon, which being filled with *Water*, and the Mouth exactly ſtop'd, ſo as to prevent all egreſs of *Water*; if a cold Night happens, ſufficient to contract and conſtipate Bodies; the metallick Matter undergoing the common Fate, and the *Water* refuſing to give way, the Cannon is burſt aſunder with incredible violence.

Some bring an Argument for the Elaſticity of *Water* hence, that hot *Water* takes up more room than cold; but no legitimate Concluſion can be form'd from hence: for in the hot *Water* there is a good quantity of Fire contain'd, which interpoſing between the Particles of the *Water*, makes it extend to a greater Space, without any Expanſion of Parts from its own Elaſticity. This is evident hence, that if *Water* be once heated, there is no reducing it to its former Dimenſions, but by letting it cool again: which plainly ſhews, that the Expanſion depends not on the Elaſticity of Parts, but on the Preſence of Fire.—*Water*, then, tho incapable of Compreſſion or Condenſation, may yet be rarefied by Heat, and contracted by Cold. See Rarefaction, *&c.*

It may be added, that a further degree of Cold, that is, ſuch a one as congeals *Water*, or turns it into Ice, does expand it.—There are other ways to manifeſt this Expanſion

of

of *Water* by Freezing.—Mr. *Boyle* having poured a proper quantity of *Water* into a ſtrong cylindrical earthen Veſſel, expoſed it, uncover'd, both to the open Air in froſty Nights, and the Operation of Snow and Salt; and found, that the Ice produced in both Caſes, reach'd higher than the *Water* before 'twas froze. Add, that it has been found, that the Rain ſoaking into Marble, and violent Froſts coming on, have burſt the Stones: And even Implements made of Bell-Metal, careleſly expos'd to the wet, have been broken and ſpoiled by the *Water*; which entering at little Cavities of the Metal, was there afterwards froze, and expanded into Ice.

From the whole, we may be enabled to ſettle ſomething as to the Nature of the component Particles of *Water*; and, 1°, That they are, as to our Senſes, infinitely ſmall; whence their penetrative Power: 2°, Exceeding ſmooth and ſlippery, void of any ſenſible Aſperities; witneſs their Fluidity, and their being ſo eaſily ſeparable from other Bodies which they adhere to: 3°, Extremely ſolid: 4°, Perfectly tranſparent, and as ſuch inviſible; which we gather hence, that pure *Water*, inclos'd in a Veſſel hermetically ſeal'd, projects no Shadow; ſo that the Eye ſhall not be able to diſcover whether the Veſſel have *Water* in it or not; and in that the Cryſtals of Salts, when the *Water* is ſeparated from them, loſe their Tranſparency.—5°, Hard, rigid, and inflexible; as appears from their not being compreſſible.——If it be aſk'd, How a Body ſo light, fluid, and volatile, and which ſo eaſy a Fire ſuffices to rarefy, ſhould be ſo ſtubborn and incompreſſible? We ſee no other Cauſe to aſſign, but the Homogeneity of its Parts. If *Water* be conſider'd as conſiſting of ſpherical or cubical Particles, hollow withinſide, and of a firm Texture; here will be enough to account for the whole: Its Firmneſs and Similarity will make it reſiſt ſufficiently; and its Vacuity render it light enough, *&c.*—The little Contact between Spherules, will account for the Weakneſs of its Coheſion, *&c.* See Particle, Cohesion, *&c.*

Salt melted in *Water*, does not fill the Veſſel in proportion to its own bulk: Whence it follows, that there are little Spaces between its Particles, to admit thoſe of the Salt.—And hence, again, we gather, that the *watry* Particles are extremely ſolid, and inflexible; ſince, tho they have intermediate Spaces, no force or weight can compreſs, or crowd them nearer. See Salt.

5°, *Water* is the moſt *inſipid* of all Bodies; the Taſte we ſometimes obſerve therein, ariſing not from the mere *Water*; but from Salt, Vitriol, or other Bodies mixed therewith: And accordingly, all the ſapid *Waters* recommended for Medicinal Uſes, are found to depoſite a Quantity of ſome of thoſe Foſſils.

6°, *Water* is perfectly *inodorous*, or void of the leaſt Smell.——*Water*, then, neither affects Sight, Taſte, nor Smell, provided it be pure; and conſequently might remain for ever imperceptible to us, but for the Senſe of Feeling.

Whether Water *be convertible into Air?*

It has been diſputed, whether or no *Water* be convertible into Air; there being numerous Inſtances of, at leaſt, an apparent Tranſmutation.—In the Vapours daily raiſed, we find *Water* rarefy'd to ſuch a degree, as to take place in the Atmoſphere, and help to compoſe a conſiderable part of what we call *Air*; and even to contribute to many of the Effects aſcribed to the Air. See Vapour, Air, and Atmosphere.——But ſuch a Vapour-Air has not the Characters of true permanent Air, being eaſily reducible into *Water* again. So, in Digeſtions and Diſtillations, tho *Water* may be rarefied into Vapours, yet it is not really changed into Air, but only divided by Heat, and diffuſed into very minute Parts; which meeting together, preſently return to ſuch *Water* as they conſtituted before.

Yet, *Water* rarefy'd into Vapour in an Æolipyle, will, for a while, have an elaſtick Power, the great and laſt Characteriſtick of true Air, and ſtream out perfectly like a Blaſt of Air: The elaſtick Power of this Stream, is manifeſtly owing to nothing elſe but the Heat, that expands and agitates the aqueous Particles thereof; and when the Heat is gone, the Elaſticity and other aerial Properties diſappear likewiſe. See Elasticity.

Rapid Winds thus made, ſeem to be no more than mere *Water*, broke into little Parts, and put into motion; ſince, by holding a ſolid, ſmooth, and cold Body againſt it, the Vapours condenſing thereon, will preſently cover the Body with *Water*.—Indeed, tho no heat intervenes, Motion alone, if vehement, may perhaps ſuffice to break *Water* into minute Parts, and make them aſcend upwards, in form of Air.—Mr. *Boyle* obſerves, that between *Lyons* and *Geneva*, where the *Rhone* is ſuddenly ſtraiten'd by two Rocks very near each other, that rapid Stream, daſhing with great impetuoſity againſt them, breaks part of its *Water* into minute Corpuſcles, and gives it ſuch a Motion, that a Miſt may be obſerv'd at a conſiderable diſtance, ariſing from the Place, and aſcending high into the Air.

WATER, in Geography, Hydrography, *&c.* is a common, or general Name applied to all liquid tranſparent Bodies, gliding or flowing on the Earth. See Fluid, Liquid, *&c.*

In this Senſe, *Water* and Earth are ſaid to conſtitute one terraqueous Globe. See Earth.

Some Authors have raſhly and injuriouſly taxed the Diſtribution of *Water* and Earth in our Globe as unartful, and not well proportion'd: Suppoſing that the *Water* takes up too much room. See Terraqueous.

An Inundation, or Overflowing of the *Waters*, makes a *Deluge*. See Deluge.

Various Kinds of Waters.

Water is diſtinguiſh'd, with regard to the Places where it is found, into *Marina*, *Sea-Water*; *Pluvialis*, *Rain-Water*; *Fluviatilis*, *River-Water*; *Fontana*, *Spring-Water*; *Putealis*, *Well-Water*; *Ciſternina*, thoſe of *Ciſterns*; *Palluſtris*, that of *Lakes*, *Moraſſes*, &c.

Theſe ſorts of *Water* are each more impure, and heterogeneous than other.

Sea-Water. See Sea, and Ocean.

Sea-Water, is an Aſſemblage of Bodies, wherein *Water* can ſcarce be ſaid to have the principal Part: 'Tis an univerſal Colluvies of all the Bodies in Nature, ſuſtain'd and kept ſwimming in *Water*, as a Vehicle.——Dr. *Liſter* conſiders it as the Fund or Source, out of which all Bodies ariſe. He gives, in ſome meaſure, into the Opinion of *Thales* and *Van Helmont*; and imagines the *Sea-Water* to have been the only Element created at the Beginning, before any Animal, or Vegetable; or even before the Sun himſelf.—*Freſh-Water*, he ſuppoſes to have aroſe accidentally after the Creation of theſe; and to owe its Origin to the Vapours of Plants, the Breath of Animals, and the Exhalations raiſed from the Sun. *De Font. Med. Ang.*——Dr. *Halley* is of another Opinion—He takes it for granted, that the Saltneſs of the Sea, ariſes from the ſaline Matter diſſolved and imbib'd by the Rivers in their progreſs, and diſcharg'd, with their *Waters*, into the Ocean; and conſequently, that the degree of Saltneſs is continually and gradually increaſing.—On this Hypotheſis, he even propoſes a Method for determining the Age of the World: For two Experiments of the degree of Saltneſs, made at a large Interval of Time, will, by the Rule of Proportion, give the Time wherein it has been acquiring its preſent degree. *Philoſ. Tranſact.* N° 344.

The *Water* of the Sea is liable to ſeveral periodical Changes. See Tides.

High-Water. } See Flux, Ebb, *&c.*
Low-Water. }
Ebb-Water. }

Rain-Water. See Rain.

Rain-Water, is the *Water* of the Sea, purified by a ſort of Diſtillation: or rather, it is the *watery* Vehicle, ſeparated from the ſaline, and other Matters reſiding therein, by Evaporation. See Evaporation.

The *Water* which deſcends in Rain, is, of all others, the pureſt, in a cold Seaſon, and a ſtill Sky; and this we muſt be contented to take for *Elementary Water*.

The *Rain Water* in Summer, or when the Atmoſphere is in Commotion, 'tis certain, muſt contain infinite Kinds of heterogeneous Matter: Thus, gathering the *Water* that falls after a Thunder-Clap, in a ſultry Summer Day, and letting it ſettle, a real Salt is found ſticking at the bottom.—But in Winter, eſpecially when it freezes, the Exhalations are but few, ſo that the Rain falls without much Adulteration: and hence, what is thus gather'd in the Morning-time, is found of good uſe for taking away Spots in the Face; and that gathered from Snow, againſt Inflammations of the Eyes. See Snow.

Yet this *Rain-Water*, with all its purity, may be filter'd and diſtill'd a thouſand times, and it will ſtill leave ſome Fæces behind it.

Spring-Water. See Spring.

The *Water* of Springs is the next, in point of Purity.—This, according to Dr. *Halley*, is collected from the Air it ſelf; which being ſaturated with *Water*, and coming to be condenſed by the Evening's Cold, is driven againſt the cold Tops of the Mountains; where being further condenſed and collected, it gleets down, or diſtills, much as in an Alembic.

This *Water*, which before floated in the Atmoſphere in form of a Vapour, being thus brought together, at firſt forms little Streams; ſeveral of which meeting together, form Rivulets; and theſe, at length, Rivers.

River-Water. See River.

This, on ſome occaſions, is to be eſteem'd purer than that of Springs.—If the Stream, in deſcending from its Spring, chance to flow over *Strata*, or Beds, wherein there is Salt, Sulphur, Vitriol, Iron, or the like, it diſſolves and imbibes part thereof.—Otherwiſe, Spring-*Water* becomes purer and better; for while the River drives on its *Waters* in an uninterrupted Stream, all its Salts, with the Vegetable and Animal Matters drained into it either from Exhalations, or from

from the Ground it waſhes, gradually either ſink to the bottom, or are driven to the Shore: And hence the antient Poets and Painters repreſent the Deities of Springs and Rivers, as combing and carding their *Waters*.

With regard to the Qualities of *Water*, it is further diſtinguiſh'd into *Salina*, Salt-*Water*; *Dulcis*, Freſh-*Water*, &c.

Salt WATER, or *Sea*-WATER. See SALT, and *Sea*-WATER.

Freſh-WATER.—It is generally granted that thoſe *Waters*, *cæteris paribus*, are the beſt, as well for wholeſomneſs, as other various œconomical Uſes, &c. that are freeſt from Saltneſs; which is an adventitious, and in moſt Caſes a hurtful Quality in *Waters*.—Mr. *Boyle* therefore contrived a very extraordinary Method of examining the Freſhneſs and Saltneſs of *Waters*, by a Precipitant, which could diſcover one Part of Salt in 1000, nay 2 or 3000 Parts of *Water*. See FRESH *Water*.

The thaw'd Ice of Sea-*Water* is often uſed in *Amſterdam* for brewing; and *Bartholine*, in his Book *de Nivis Uſu*, confirms the Relation: 'Tis certain, ſays he, that if the Ice of the Sea-*Water* be thawed, it loſes its Saltneſs; as has been lately tried by a Profeſſor in our Univerſity.

Uſes of Water.

The Uſes of *Water* are infinite; in Food, in Medicine, in Agriculture, in Navigation, in divers of the Arts, &c.

As a *Food*, 'tis one of the moſt univerſal Drinks in the World; and if we may credit many of our lateſt and beſt Phyſicians, one of the beſt too.—For this Uſe, that which is pureſt, lighteſt, moſt tranſparent, ſimple, colourleſs, void of Taſte and Smell, and which warms and cools faſteſt, and wherein Herbs and Pulſe infuſe and boil the ſooneſt, is beſt. See DRINK.

Hippocrates, in his Treatiſe *de Aere, Aquis & Locis*, ſpeaks much in behalf of light *Water*.—*Herodotus* relates, That among the Antients, ſome Nations drank a *Water* ſo very light, that all Woods readily ſunk therein. And Mr. *Boyle* mentions ſome *Water* brought out of *Africa* into *England*, which was ſpecifically lighter than ours, by four Ounces in a Pint, *i. e.* by one third. See WATERPOISE.

'Tis eſteem'd a good Quality in *Water*, to bear Soap, and make a Lather therewith. This our River-*Waters* readily do, but the Pump and Spring-*Waters* are found too hard for it; yet may theſe be remedy'd, by barely letting 'em ſtand for four or five Days.

As a *Medicine*, 'tis found, internally, a powerful *Febrifuge*; excellent againſt Colds, Coughs, Stone, Scurvy, &c. See FEBRIFUGE, &c.

Externally, its Effects are no leſs conſiderable. See BATH, and BATHING.

In *Agriculture* and Gardening, *Water* is allow'd abſolutely neceſſary to Vegetation; whence *Varro* places it in the Number of the Divinities he invokes in his firſt Book *de Re Ruſtica*: *Etiam*, ſays he, *precor Lympha, quoniam ſine aqua omnis miſera eſt agricultura*. See WATERING.

The Changes *Water* is liable to, and the different Forms it appears under, are numerous.—Sometimes as *Ice*, then as *Vapour*, then as a *Cloud*, *Shower*, *Snow*, *Hail*, *Fog*, &c. See ICE, VAPOUR, CLOUD, SHOWER, SNOW, HAIL, FOG, &c. ſee alſo FREEZING, THAWING, &c.

Many Naturaliſts have even maintain'd *Water* to be the Vegetable Matter, or the only proper Food of Plants; but Dr. *Woodward* has overturn'd that Opinion, and ſhewn, that the Office of *Water* in Vegetation, is only to be a Vehicle to a terreſtrial Matter, whereof Vegetables are form'd; and does not it ſelf make any Addition to 'em.—All *Water*, he allows, contains more or leſs of this terreſtrial Matter; Spring and Rain-*Water* near an equal quantity, and River-*Water* more than either of 'em. See VEGETATION.

Water is of the laſt Uſe in Chymiſtry; being one of the great Inſtruments by means whereof its Operations are all perform'd. See CHYMISTRY, and OPERATION.

It acts in various Manners and Capacities, as a Menſtruum, a Ferment, a Putrefacient, a Vehicle, a Medium, &c.

1°, As a *Menſtruum*, it diſſolves all Kinds of *Salts*. See SALT, &c.

Air alſo ſeems to diſſolve Salts; but 'tis only in virtue of the *Water* it contains.—Nor has any other Body the Power of diſſolving Salts, further than as it ſhares of this Fluid. See AIR, &c.

The Particles of Salts, we have obſerved, inſinuate themſelves into the Interſtices between the Particles of *Water*; but when thoſe Interſtices are once filled, the ſame *Water* will not any longer diſſolve the ſame Salt; but it will diſſolve a Salt of another Kind, by reaſon of the different Figure of the Particles, which enter and occupy the Vacancies left by the former: And thus it will diſſolve a third, or fourth Salt, &c.—So, when *Water* has imbib'd its fill of common Salt, it will ſtill diſſolve Nitre; and when ſaturated with Nitre, it will diſſolve Sal Ammoniac, and ſo on.

Water alſo diſſolves all *ſaline* Bodies, it being the conſtituent Character of this Claſs of Bodies, that they are uninflammable and diſſoluble in *Water*.—Hence, *Water* may diſſolve all Bodies, even the heavieſt and moſt compact, as Metals; inaſmuch as thoſe are capable of being reduced into a ſaline form: in which State they may be ſo intimately diſſolved by *Water*, as to be ſuſtained therein.

Water diſſolves all *ſaponaceous* Bodies, *i. e.* all alkalious Salts and Oils blended together: Tho Oil it ſelf be not diſſoluble in *Water*, the Admixture of Salt herewith, rendering it ſaline, brings it under the Power of *Water*.

Now, all the Humours in the human Body are apparently ſaline, tho none of them are Salt it ſelf; and the ſame may be ſaid of the Juices of all Vegetables, excepting the Oils; and accordingly, they all diſſolve in *Water*.

Water diſſolves *Glaſs* it ſelf.——This being melted with Salt of Tartar, becomes ſoluble in *Water*. See GLASS.

It diſſolves all *Gums* and *gummous* Bodies; it being a Characteriſtick of a Gum, that it diſſolves in *Water*; in contradiſtinction from a Reſin. See GUM, &c.

Yet, *Water* mix'd with alcali Salts, diſſolves Oils and oily Bodies.—Thus, tho mere *Water* pour'd on greaſy Wool, be repelled thereby; yet a ſtrong Lixivium, or alcali Salt being mix'd with the *Water*, it readily diſſolves and abſorbs all that was greaſy and oleaginous; and thus it is that woollen Cloths are ſcour'd.

Again, *Water* does not diſſolve Reſins; as we conceive a Reſin to be no other than an inſpiſſated, or concentrated Oil. See RESIN.

Oils and Sulphurs *Water* leaves untouch'd; and what is more extraordinary, it repels them; and by repelling, drives the oily Particles into Eddies.—Add, that it ſeems to repel all oleaginous, ſulphurous, fatty, and adipous Bodies, wherein Oil predominates; and hence alſo it is, that the fatty Parts in our Bodies eſcape being diſſolved by *Water*.—And 'tis, in all probability, by this means, that Fat is collected in the adipoſe Cells of all Animals. See FAT.

Nor does it diſſolve *terrene* or earthy Bodies, but rather unites and conſolidates them; as we ſee in Tyles, &c. See EARTH.

After diſſolving a Body, the *Water* unites and hardens together with it; and, if the Body be of the ſaline Kind, forms Cryſtals, and retains the Salts in that form. See CRYSTAL.

Salts, while thus join'd with *Water*, aſſume various Figures; the Cryſtals of Sea-Salt, *e. g.* are pyramidal; thoſe of Nitre, priſmatical; thoſe of *Sal Gemmæ*, cubical, &c. But, that *Water* is the Cauſe of theſe Salts being in Cryſtals, is evident hence, That upon ſeparating the *Water*, the Cryſtals are no more; their Form is loſt, and their Tranſparency ceaſes. See CRYSTALLIZATION.

2°, Without *Water* there can no Fermentation be rais'd.—Thus, if you grind a Plant into a Duſt or *Farina*, it will never ferment; even tho you add Yeaſt or Spirit of Wine thereto: but *Water* being pour'd on it, the Fermentation readily ariſes. See FERMENTATION.

3°, All *Putrefactions*, both of Animal and Vegetable Bodies, are likewiſe perform'd by means of *Water* alone; and without it there would be no ſuch Effect in all Nature. See PUTREFACTION.

4°, *Water* is indiſpenſibly requir'd to *Effervеſcence*; which is an inteſtine Motion, ariſing between contrary Salts: for no ſuch Motion can ariſe from a Mixture of contrary Salts, unleſs there be *Water* to diſſolve and keep 'em in Solution.

5°, A farther Uſe is in the making *Separations* of oily from ſaline Parts, which is a thing of the laſt Service: Thus, any oleaginous Subſtance, incorporated with Salt, being ſhook ſometime in a proper quantity of *Water*; the Salts diſſolving, will be extracted from the Oil, and imbib'd by the *Water*; and thus is the Body dulcify'd.—So Butter, by a continued Lotion in fair *Water*, becomes inſipid; and aromatick Oils, agitated a long time in warm *Water*, lay aſide their ſaline ſpirituous Parts, and become inert and inodorous.

Spirit of Wine, mix'd with Oil, makes one Body therewith; but if you pour *Water* thereon, it will repel the Oil, and draw all the Spirit to it ſelf; nay, frequently, what the Spirit had diſſolved in other Bodies, *Water* will ſeparate from 'em, by attenuating the Spirit, and letting the other Matters precipitate.

6°, *Water* is of great ſervice in directing and determining the Degree of Fire, or Heat.—This was firſt diſcover'd by M. *Amontons*, from an Obſervation that *Water* over the Fire grows gradually more and more hot, till it comes to boil; but then ceaſes to increaſe, and only maintains its preſent degree of heat, even tho the Fire were ever ſo much enlarg'd, or were continu'd ever ſo long.—This, therefore, affords a Standard or fixed Degree of Heat all over the World; boiling *Water*, provided it be equally pure, being of the ſame Heat in *Greenland* as under the Equator.

By means hereof, they make *Baths* of divers Degrees of Heat, accommodated to the various Occaſions. See BATH, FIRE, HEAT, &c.

Water is of the utmoſt Uſe in divers of the *Mechanical Arts* and Occaſions of Life; as, in the Motion of Mills, Clocks, and other Machines—And the Laws, Properties, &c. of this Fluid with reſpect thereto; as its *Motion*, *Gravitation*, *Preſſion*, *Elevation*, *Action*, &c. And the Conſtruction of divers Engines ſubſervient thereto, or founded thereon; as *Syphons*, *Pumps*, &c. make the Subject of *Hydraulicks* and *Hydroſtaticks*. See HYDRAULICKS; ſee alſo FLUID, ASCENT, &c.

The Quantity of *Water* on this ſide our Globe, Dr. *Cheyne* ſuſpects to be daily decreaſing; 'ſome part thereof being 'continually turned into Animal, Vegetable, Metalline, or 'Mineral Subſtances; which are not eaſily diſſolv'd again 'into their component Parts.—Thus, if you ſeparate a few 'Particles of any Fluid, and faſten them to a ſolid Body, or 'keep them aſunder one from another, they are no more 'fluid; to produce Fluidity, a conſiderable Number of ſuch 'Particles is requir'd.' See FLUIDITY.

'Moſt of the Fluids or Liquors we know of, are form'd 'by the Coheſion of Particles of different Figures, Magnitudes, Gravities, and attractive Powers, ſwimming in pure 'Water, or an aqueous Fluid; which ſeems to be the common Baſis of all. Wine is only *Water* impregnated with 'Particles of Grapes; and Beer with Particles of Barley: 'All Spirits ſeem to be nothing but *Water*, ſaturated with 'ſaline or ſulphurous Particles: and all Liquors are more 'or leſs fluid, according to the greater or ſmaller Coheſion 'of the Particles, which ſwim in the aqueous Fluid. And 'there is hardly any Fluid without this Coheſion of Particles: not even pure *Water* it ſelf; as is apparent from the 'Bubbles which ſometimes will ſtand on its Surface, as well 'as on that of Spirits and other Liquors.' *Philoſ. Princip. of Relig.*

Aſcent of WATER. See ASCENT, and CAPILLARY.

WATER, in Natural Hiſtory, &c. is diſtinguiſh'd into *Pure*, call'd alſo *Elemental*; *Mineral*; and *Artificial*, or Factitious.

As to the *Pure*, we have already obſerv'd, that there is, perhaps, none abſolutely ſo; all *Water* being found to contain more or leſs Particles, ſuch as are in terreſtrial Bodies; not earthy Particles, we mean, but Oils, Salts, &c.

Mineral WATERS, are thoſe which contain ſuch and ſo many Particles of different Nature from *Water*, as thence to derive ſome notable Property beyond what common *Water* has: Or, *Mineral Waters* are thoſe which have contracted ſome Virtue extraordinary, by paſſing thro' Beds of Minerals, as Alumn, Vitriol, Sulphur, &c. or by receiving the Fumes thereof. See MINERAL.

The Kinds of *Mineral Waters* are various, as are the Kinds of Compoſitions of the Minerals they are impregnated withal. See FOSSIL.

Some are *Simple*, as only containing mineral Particles of one ſort; others *Mix'd*, of two, three, four, or more ſorts.

Hence, we have, 1°, *Metallick Waters*, *viz.* in different Parts, *Golden*, *Silver*, *Copper*, *Tin*, *Leaden*, and *Iron Waters*. See METAL, FERRUGINOUS, CHALYBEAT, &c.

2°, *Saline Waters*, viz. *Nitrous*, *Aluminous*, *Vitriolate*, and thoſe of common Salt. See SALT.

3°, *Bituminous*, *Sulphurous*, *Antimonial*, *Carbonaceous*, and *Amber Waters*. See BITUMEN, &c.

4°, *Earthy* and *Stony Waters*, viz. *Lime*, *Chalk*, *Oker*, *Cinnabar*, *Marble*, and *Alabaſter Waters*.

5°, *Mercurial Waters*. See MERCURY, QUICKSILVER, &c.

This Diviſion of *Mineral Waters* is taken from their Eſſences; that is, from the Mineral Particles they contain: but the moſt uſual and celebrated Diviſion, is borrow'd from the manner wherein they affect our Senſes; with regard to which there are ten Kinds; viz. *acid*, *bitter*, *hot*, *very cold*, *oily* and *fat*, *poiſonous*, *colour'd*, *boiling*, *petrifying*, *incruſting*, and *ſaline*.

Acid Waters, called alſo *Acidulæ*, ariſe from the Admixture of Vitriol, Nitre, Alumn, and Salt.—Theſe are cold, and very frequent, there being not reckon'd leſs than 1000 in *Germany* alone: Some of which are ſower as Vinegar, and uſed inſtead thereof; others vinous, and ſerving for Wine; others aſtringent, &c. See ACIDULÆ.

Hot Waters, called *Thermæ*, ariſe from the Admixture of ſulphurous Particles and Fumes.—Of theſe, the hotteſt is that in *Japan*, which no Fire can bring *Water* to equal; and which keeps hot thrice as long as our boil'd *Water*. See THERMÆ, &c.

Oily and *Fat Waters*, ariſe from a bituminous and ſulphureous Matter; as Amber, Petroleum, Pitch, Naphtha, &c. See NAPHTHA, PETROL, &c.

Bitter Waters are produced from an impure Sulphur, Bitumen, Nitre, and Copper.—Such is the *Lacus Aſphaltites*.

Very cold Waters, have their riſe from a Mixture of Nitre and Alumn; or of Mercury, Iron, &c. The Depth of the Source or Spring too, has ſome effect.

Waters which change the Nature of Bodies.——Of theſe there is great Variety.

1°, Near *Armagh* in *Ireland*, is a Lake, wherein a Staff being fix'd ſome Months, the Part that ſtuck in the Mud will be turn'd into Iron; and that Part incompaſs'd with the *Water* into Hone; the reſt remaining as before.—Thus *Gyraldus*, and *Maginus*; but *Brietius* denies it.

2°, In the Northern Part of *Ulſter* is a Spring, which in the Space of ſeven Years petrifies Wood, or converts it into Stone.—The like are found in divers other Parts, as in *Hungary*, *Burgundy*, &c. *Vitruvius* mentions a Lake in *Cappadocia*, which converts Wood into Stone in one Day. See PETRIFACTION.

3°, There are *Waters* ſuppoſed to tranſmute or turn Iron into Copper. See TRANSMUTATION.

4°, Others are ſaid to change the Colour of the Hair.—*Gyraldus* mentions a Spring in *Ireland*, wherein if a Perſon were waſh'd he inſtantly became grey.

Poiſonous Waters are occaſion'd by their creeping thro' Arſenical, Antimonial, and Mercurial Earths, or being impregnated by their Fumes.—Such is the *Lacus Aſphaltites*, and divers others about the *Alps*, &c. which immediately kill thoſe who drink: But theſe are moſt of 'em fill'd up with Stones; which is one Reaſon ſo few are known.

Saline Waters are generated two ways; either they are deriv'd from the Sea, by ſome ſubterraneous Paſſage; or are generated from Mineral Salts, which they meet withal in their paſſage ere they arrive at their Springs. See SEA, and SALT.

Boiling or *Bubbling Waters*, are produced either by a ſulphureous, or a nitrous Spirit, mix'd with the *Water* in the Earth: If it be ſulphurous, the *Water* is hot; if nitrous, cold. For all the *Waters* that boil as if hot are not ſo, but ſome few are cold: We read both of *Thermæ* and *Acidulæ* that boil.

There are divers other *Waters* that have very ſingular Properties, not reducible to any of theſe Claſſes: Such, 1°, is that Spring in *Portugal*, which abſorbs all Bodies caſt into it, tho the lighteſt: And not far from it there was antiently another, in which no Bodies, not the heavieſt, could ſink.—2°, In *Andaluſia*, we are aſſur'd by *Euſeb. Nierembergenſis*, there is a Lake which foretels approaching Storms, by making a terrible bellowing, that may be heard 18 or 20 Miles diſtance.—3°, In *Granada* is a Well whoſe *Water* diſſolves Stones.—4°, We read of a Spring in *Arcadia*, which render'd thoſe who drank of it abſtemious.—5°, In the Iſland of *Chio* is a Spring, which converts thoſe who drink of it into Fools.—6°, There are Springs in divers Parts of *England*, *Wales*, *Spain*, &c. which ebb and flow daily with the Flux and Reflux of the Sea; and ſome are even ſaid to ebb and flow againſt the Tide.—Add, 7°, *Stalactical Waters*. See STALACTICAL.

Bath-WATER.	See	BATH, and BATHING.
Spaw-WATER.		SPAW.
Petrifying-WATER.		PETRIFYING.

WATER, in Chymiſtry, by the Chymiſts called more uſually *Phlegm*; is the fourth of the five chymical Principles, and one of the paſſive ones. See PRINCIPLE, and PHLEGM.

It is never drawn pure and unmix'd; which, Dr. *Quincy* obſerves, makes it uſually a little more deterſive than common *Water*.

This Principle, probably, contributes much to the Growth of Bodies, in that it both renders and keeps the active Principles fluid; ſo that they are capable of being convey'd by Circulation into the Pores of the mixed: and alſo becauſe it tempers their exorbitant Motion, and keeps them together; ſo that they are not ſo eaſily and ſoon diſſipated.

In all ſuch Bodies whoſe active Subſtances are join'd and united pretty cloſely together, as in common Salt, Tartar, all Plants that are not odoriferous, and in many animal Bodies; this Principle is the firſt that comes in Diſtillation: But when *Water* is mixed with volatile Salts, or with Spirit of Wine, or is in any odoriferous Mixture; then the volatile Particles will riſe and come away firſt. See PRINCIPLE, ELEMENT, &c.

WATERS, in Medicine, Pharmacy, Chymiſtry, &c. call'd alſo *Artificial*, *Medicinal*, &c. *Waters*; are a Kind of Liquors, procured or prepared by Art from divers Bodies, principally of the Vegetable Tribe; having various Properties, and ſerving various Purpoſes.

Theſe *Waters* are either *Simple*, or *Compound*.

Simple

Simple WATERS, are thoſe procur'd from ſome one Vegetable Body. See VEGETABLE.

A *Simple Water*, is not ſuppoſed to be the mere *Water* or Phlegm of the Body it is drawn from, as is evident from the Taſte and Smell thereof.—The Intention of making ſuch *Water*, is to draw out the Virtues of the Herb, Seed, Flower, Root, or the like, ſo as it may be more conveniently given in that form than any other. But the Phlegm, or *watery* Parts of any Medicinal Simple, is no better than common *Water* undiſtill'd: So that all thoſe Ingredients which in Diſtillation raiſe nothing but Phlegm, as may be diſcover'd from the Scent and Taſte of what comes over, are not fit for the Still.—On this Principle, a great part of the *Waters* retained in the Diſpenſatories will appear good for nothing, at leaſt not worth diſtilling.

The Means whereby this Separation is effected, are either *Evaporation*, *Infuſion*, *Decoction*, or *Diſtillation*.

The firſt is perform'd by expoſing the Vegetable in a cold Still to a gentle Heat, like that of a Summer's Sun; and catching the Effluvia which exhale from it. See HEAT, EVAPORATION, *&c.*

The Effect of this Operation, is a *Water*, or fluid Matter, which is the moſt volatile, fragrant, and aromatick Part of the Plant; and that wherein its ſpecifick Virtue reſided.

And thus is it that the aromatick or odoriferous *Waters* of Vegetables are procured. See AROMATICK, and ODORIFEROUS.

The ſecond Means, *viz. Infuſion*, is perform'd by putting the Vegetable in hot Rain-*Water*, below the degree of boiling; keeping it to this degree by an equable heat, for the ſpace of half an Hour; and then ſtraining or pouring it off. See INFUSION.

The only *Waters* procured this way in much uſe in the modern Practice, are thoſe of Frog-ſpawn, and Oak-buds.

The third Means, *viz. Decoction*, only differs from the ſecond in this, that the *Water* is kept to the degree of boiling. See DECOCTION.

The fourth Means, *viz. Diſtillation*, is perform'd by infuſing the Subject in an Alembick, by a gentle warmth, for ſome time, and then increaſing the Heat ſo as to make it boil; and laſtly, catching and condenſing the Steam or Vapour ariſing therefrom. See DISTILLATION.

This Proceſs furniſhes what we call the *Diſtill'd Waters*, of ſo much uſe in Medicine, *&c.*

The Vegetable Subjects beſt fitted for it, are the ſapid and odorous, or thoſe of the aromatick Tribe; as Angelica, Aniſeed, Baum, Carraway, Coriander, Cumin, Dittany, Fennel, Hyſſop, Marjoram, Mint, Roſes, Roſemary, Saffron, Sage, Scurvygraſs, Thyme, Cinnamon, Citron, Juniper, Lime, Myrtle, Orange, Peach, *&c.*

The Medicinal Virtues of *Waters* prepared after this manner, are the ſame as thoſe of the reſpective Plants, *&c.* they are drawn from.—Thus, the diſtill'd *Water* of Mint is Stomachic; that of Wormwood, Vermifugous, *&c.*

The *Materia Medica*, it may be obſerv'd, affords no Remedies in this way, but for the Intentions either of Cordials, Diureticks, or Diaphoreticks.—Were it practicable to raiſe a Balſamick, Cathartick, or Opiate in this way, yet would thoſe Properties be much more conveniently brought forth by other Proceſſes; ſo that nothing is to be look'd for in a diſtill'd *Water*, but ſuch ſubtile and light Parts of a Medicinal Simple, as may fall in with the forementioned Intentions: Indeed, very little comes over under that Diviſion, weighty enough to affect even the urinary Secretions.

The *Simple Waters* of chief Virtue are the following ones, *viz.* Dill-*Water*, *Aqua Anethi*; Baum-*Water*, *Aqua Meliſſæ*; Angelica-*Water*, *Aqua Angelicæ*; Mint-*Water*, *Aqua Minthæ*; Roſemary-*Water*, *Aqua Anthos*; Orange-Flower-*Water*, *Aqua Naphæ*; Black-Cherry-*Water*, *Aqua Ceraſor. nig.*; Parſly-*Water*, *Aqua Petroſelini*; Camomile, *Chamom.* Pennyroyal, *Pulegii*; Fennel-*Water*, *Aqua Fæniculi*; Damaſk-Roſe-*Water*, *Aqua Roſarum dam.*; Hyſſop-*Water*, *Aqua Hyſſopi*; Rue-*Water*, *Aqua Rutæ*; Juniper-*Water*, *Aqua Juniperi bac.*; Eldar-*Water*, *Aqua Sambuci flor.*; Lovage-*Water*, *Aqua Leviſtici*; Carminative-*Water*, *Aqua Carminativa*, &c.

It may be here proper to note, That whatever Properties any Simple has from the Groſſneſs or Solidity of its Parts, which make it act as an Emetick, Cathartick, or Aſtringent; the Reſidue left after Diſtillation will remain in full poſſeſſion thereof.—Thus, the purging Syrup of Roſes, is as well made after the Damaſk-Roſe-*Water* is drawn off, as if the Flowers were juiced, or put into Infuſion; becauſe nothing of a Cathartick Quality riſes with the *Water*.

Sometimes, the Subject is fermented by the Addition of Yeaſt, Honey, or the like Ferment, to the hot *Water*, before the Diſtillation begin: In which Caſe, if the Ferment added were in ſufficient quantity to effect a thorough Fermentation, the Liquid afterwards exhal'd and drawn off would be thin and inflammable; which makes what we call a *Spirit*; otherwiſe, thick, white, ſapid, *&c.* and call'd a *Water*. See FERMENTATION, SPIRIT, *&c.*

The *Waters* procured in this manner, contain the Oil of the Plant in great Perfection; which makes 'em of conſiderable uſe in Medicine, further than thoſe rais'd without Fermentation; beſide that they keep better and longer; the Spirit in 'em preventing their corrupting or growing mothery.

The Compound WATERS, or thoſe wherein ſeveral Ingredients are uſed, are very numerous, and make a large Article in Commerce; ſome prepared by the Apothecaries, according to the Diſpenſatory Preſcripts, for medicinal Uſes; others by the Diſtillers, to be drank by way of Dram, *&c.* and others by the Perfumers, *&c.*

They are diſtinguiſh'd by different Epithets, taken from the *Latin*, *Greek*, *Arabick*, *Engliſh*, &c. in reſpect either of the ſpecifick Virtues of the *Waters*; or the Parts of the Body for the Cure whereof they are intended; or the Diſeaſes they are good againſt; or the Ingredients they are compounded of; or their different Uſes, *&c.*

The moſt conſiderable among the Claſs of *Compound Waters*, we ſhall here enumerate.—The manner of making 'em, 'tis true, is not always the ſame; eſpecially thoſe intended for drinking; for which, every one gives his own Method as the beſt.—Thoſe we here deliver, are taken from ſuch as have the greateſt Reputation in preparing theſe things; or from thoſe who have wrote beſt of 'em.

We have only three general Remarks to add, with regard to thoſe intended for drinking: 1°, That ſuch wherein any thing is infuſed, as broken Fruits, pounded Herbs, or ground Spices, are always paſs'd thro' a Strainer, to make 'em finer and purer.—2°, That thoſe made with Brandy or Spirit of Wine, are uſually diſtill'd after the mixing of their Ingredients; which renders thoſe Liquors exceeding ſtrong and dangerous, and confirms the Proverb; *Plures occidit Gula quam Gladius.* In effect, ſome of 'em are ſo penetrating, that they burn the Tongue when taken.—3°, That the *Waters* that take their Name from any particular thing, as *Cinnamon*, &c. have always ſome other Ingredients joined with 'em, according to the Taſte or Smell requir'd.

Alexipharmachic, or *Alexiterial* WATERS, are *Waters* that reſiſt Poiſons and the Plague.—Such are thoſe of Angelica, Scorzonera, Citron, Orange, Scordium, Rue, *&c.* See ALEXIPHARMACHIC.

Such alſo are Treacle-*Water*, Plague-*Water*, Milk-*Water*, Poppy-*Water*, &c.

Alumn WATER, is a vulnerary *Water*, thus call'd, by reaſon the Baſis or principal Ingredient thereof is Alumn. See ALUMN, and VULNERARY.

Angelica WATER, is uſually prepar'd of Brandy, Angelica-Roots and Seeds, Carduus, Baum, Fennel-Seed, *&c.* the whole beat together in a Mortar; infuſed for a Night, and then diſtill'd.—It is reputed a good carminative, and Cordial, as alſo a Cephalic, *&c.*

Aniſeed-WATER.—To eight Parts of Eſſence of Anis-ſeed diſtill'd, put three Parts of Brandy, with one of *Water* boil'd; mix the whole together: and if you require it ſugar'd, add half a Pint of clarify'd Sugar; but many prefer it without: and ſtrain the whole.

Apricot WATER.—To a Quart of *Water* put ſix or eight Apricots, ſliced; boil the whole, to extract the Taſte; and when cold, add four or five Ounces of Sugar.—When that is diſſolved ſtrain it.

Aromatick WATERS, we have already ſpoke of among the *Simple Waters*.

Arthritic WATERS, are *Waters* good againſt the Gout, Palſy, Tremors, Pains in the Joints, *&c.*—Such are thoſe of Piony, Chamæpetis, Betony, Roſemary, *&c.* See ARTHRITIC.

Bryony WATER, is one of the *Compound Waters* preſcrib'd in the College Diſpenſatory; prepared from Bryony-Roots, Rue, Mugwort, Savin, Feverfew, Dittany, *&c.*—It is a good Hyſteric, opens Menſtrual Obſtructions, *&c.*

Carduus WATER, is made from *Carduus Benedictus* pounded in a Mortar, and put in an Alembick.—Then, a ſufficient quantity of the Juice of the ſame ſort of Plant, drawn by Expreſſion, is pour'd into the Alembick, that the Herbs ſwimming in the Juice may be in no danger of ſticking to the bottom of the Cucurbit in Diſtillation. Laſtly, fitting on a Capital, and luting the Joints, diſtil half as much Juice as you put in.—This *Water* is ſudorifick; and good againſt the Plague, Malignant Fevers, *&c.* See CARDUUS.

WATER *of Separation*, or *Depart*, is only *Aqua fortis*; thus called, becauſe ſerving to ſeparate Gold from Silver. See DEPART. It is alſo called

Cauſtic, *Burning*, or *Strong* WATER, and is prepared of a Mixture of Spirits of Nitre and Vitriol, drawn by force of Fire; to which are ſometimes added Alumn and Arſenic.

It diſſolves all Metals, Gold only excepted.—The Invention of Aqua fortis, is uſually refer'd to the XIIIth Century: Tho ſome hold it to have been known in the Time of *Moſes*. See AQUA *Fortis*, AURUM *Potabile*, &c.

Cephalic WATERS, are *Waters* proper to ſtrengthen and comfort the Brain.—Such are thoſe of Roſemary, Marjoram, Sage, Pyony, Bettony, Baum, &c. See CEPHALIC.

Chalybeat WATER, is a *Water* wherein red-hot Steel has been quenched.—It is aſtringent, and good, like Ferruginous or Iron *Waters*, for Diarrhæas, &c. See CHALYBEAT, and MARTIAL.

Cherry WATER.—In a Quart of *Water* cruſh half a pound of Cherries, with four or five Ounces of Sugar. Strain the whole thro' a Cloth, till it be very clear.

Cinnamon WATER.—In a Quart of *Water* boil half an Ounce of broken Cinnamon; and taking it off the Fire, add a quarter of a Pound of Sugar: Let it cool, and ſtrain it.—*Or thus:* Take a Pound of Cinnamon, three Pounds of Roſe-Water, and as much White-wine: bruiſe the Cinnamon, infuſe it fourteen Days, then diſtil it.—The firſt *Water* that riſes is the beſt; then the ſecond; then the third. See CINNAMON.

Clary WATER, is compoſed of Brandy, Sugar, and Cinnamon, with a little Ambergreaſe diſſolved in it.—It helps Digeſtion, and is Cardiack.—This *Water* is render'd either purgative or emetick, by adding Reſins of Jallap and Scammony, or *Crocus Metallorum*.—Some make *Clary Water* of Brandy, Juice of Cherries, Strawberries and Gooſeberries, Sugar, Cloves, White Pepper, and Coriander-Seeds; infuſed, ſugar'd, and ſtrain'd.

Clove WATER, is prepared of Brandy, and Cloves bruis'd therein, and diſtill'd. See CLOVE.

Cordial or *Cardiac* WATERS, are *Waters* proper to ſtrengthen, and comfort the Heart.—Such are thoſe of Endive, Chicory, Bugloſs, Burridge, Marigolds, &c. See CARDIAC, and CORDIAL.

Coſmetic WATERS, are *Waters* proper to cleanſe, ſmoothen and beautify the Skin. See COSMETIC.

Fennel WATER.—Infuſe a Handful of Fennel in a Pint of cold Water, for an Hour or an Hour and an half: add three or four Ounces of Sugar. Strain it, and drink it.

Gentian WATER.—Take four Pounds of Gentian Roots, either green or dry'd; mince them ſmall, infuſe them in White-wine, or only ſprinkle them therewith; then diſtil them, with the Addition of a little Centaury the leſſer. See GENTIAN.

It is frequently uſed as a Stomachic, and is alſo commended for a Deterger; ſerving in Dropſies, Jaundice, Obſtructions of the *Viſcera*, &c.

Gum WATER, is that made by letting Gum-Arabick, inclos'd in a linen Rag, infuſe in common *Water*.—The Ladies alſo make *Water* to gum their Hair, of Quince-Kernels ſteep'd in *Water*. See GUM.

Hepatic WATERS, are thoſe uſed to cleanſe, ſtrengthen, and refreſh the Liver.—Such are thoſe of Chicory, Capillaries, Purſlain, Agremony, Fumitory, &c. See HEPATIC.

Honey WATER, is a *Water* prepar'd in Places where much Honey is made, by waſhing out the Honey-Combs, and the Veſſels they have been in, in common *Water*.—This gives it a Honey-Taſte, and it afterwards becomes very clear, and the People uſe it as their common Drink. See HONEY.

Horſe-raddiſh WATER, *Aqua Raphani*, is prepar'd of the Juices of Scurvygraſs, Brook-Lime, Water-Creſſes, White-wine, Lemon-Juice. Bryony-Root, Horſe-raddiſh, Winter's Bark and Nutmeg, digeſted and diſtill'd.—It is a good Diuretic; cleanſing, and removing Obſtructions of the *Viſcera*, promoting Perſpiration, &c.

Hungary WATER, is a Liquor diſtill'd *in Balneo Mariæ*, from Roſemary-Flowers, and Spirit of Wine well rectify'd.—It has its Name from the wonderful Effects it is ſaid to have had on a Queen of *Hungary*, at the Age of 72 Years.—'Tis good againſt Faintings, Palſies, Lethargies, Apoplexies, and hyſterical Diſorders.—There are divers ways of preparing it. See HUNGARY.

Hyſteric WATERS, are thoſe proper to ſtrengthen the Matrix, or Womb, and remedy the Diſorders that befal it.—Such are thoſe of Bryony, Matricary or Motherwort, Hyſſop, Fennel, Baum, Mugwort, Smallage, &c. See HYSTERIC.

Iced, or *Frozen* WATERS, are certain agreeable and wholeſom *Waters*, as Orange-*Water*, or the like, artificially froze in Summer-time, particularly in hot Countries, to be uſed in Collations, &c. as Coolers.—The way of making 'em is thus: The Veſſels containing the Liquors deſign'd to be froze, are firſt ſet in a Pail, in ſuch manner as not to touch each other; then cover'd up, and the void Space in the Pail fill'd with common Ice, beaten, and mix'd with Salt.—Every half Hour they clear out what Water the thawing Ice ſends to the bottom of the Pail, by means of a Hole at bottom; and at the ſame time ſtir up the Liquors with a Spoon, that they may freeze into Snow: For were they to ſhoot in form of Ice, or Icicles, they would have no Taſte.—Then, covering the Veſſels again, they fill up the Pail with more beaten Ice, and Salt, in lieu of that diſſolved and evacuated. The more expeditious the Freezing is requir'd to be, the more Salt to be mix'd with the Ice. See FREEZING.

Imperial WATER, *Aqua Imperialis*, is a *Water* diſtill'd from Cinnamon, Nutmeg, Citron-Bark, Cloves, *Calamus Aromaticus*, Santal, and divers other Simples, infus'd in White-wine and Baum-*Water*.—It is a pleaſant Cordial-Dram, good againſt Diſeaſes of the Brain, Stomach, and Womb.

Juniper WATER, is a Compound *Water*, made of Brandy, and Juniper-Berries beaten therein, and diſtill'd. See BRANDY, and GENEVA.

Lime WATER, is common Water, wherein Quick-lime has been ſlak'd; and afterwards filter'd. See LIME.

Milk WATER, *Aqua Lactis*, is prepared of Mint, Wormwood, Carduus Benedictus, Goats-Rue, and Meadow-ſweet, bruis'd, infuſed in Milk, and drawn off by Infuſion.—It is held Alexipharmic and Cephalic.

Aqua Mirabilis, or *the Wonderful* WATER, is prepared of Cloves, Galangals, Cubebs, Mace, Cardomums, Nutmeg, Ginger, and Spirit of Wine, digeſted 24 Hours, then diſtill'd.——It is a good and agreeable Cordial; Carminative, &c.

Nephritic WATERS, are ſuch as ſtrengthen the Reins, and help 'em to diſcharge by Urine any Impurities therein.——Such are thoſe of the Honeyſuckle, Pellitory, Raddiſh, Beans, Mallows, &c. See NEPHRITIC.

The *Nephritic Water* of Dr. *Radcliff*, popularly called Dr. *Radcliff*'s *Water*, is taken into the laſt Edition of the College Diſpenſatory. It is prepar'd from the Kernels of Black Cherries, Peaches, and Bitter Almonds, beaten in a Mortar into a Paſte, with Rheniſh Wine; and Seeds of Smallage, Treacle, Muſtard, Gromwel and Parſley, beaten likewiſe, and added thereto: To the Mixture are put Juniper-Berries, Garlick, Onions, Leeks, Pimpernel, Horſe-raddiſh, Calamus Aromaticus, Cinnamon, Wall-Rue, Mace, and Nutmegs: the whole macerated in Rheniſh, Spirit of Black Cherries, &c. and thus diſtill'd.——It is one of the moſt powerful Detergers and Cleanſers known; good in the Dropſy, Jaundice, Aſthma, Pleuriſy, &c.

Ophthalmic, or *Eye* WATERS, are ſuch as are good in Diſorders of the Eyes.——Such are thoſe of Eyebright, Fennel, Vervain, Plantain, Celandine, Cyanus, &c. See OPHTHALMIC.

Orange-Flower WATER, is made of common Water, Sugar, and Orange-Flowers, infuſed for about two Hours.——After the like manner, one may make *Waters* of divers other Flowers; as *Violets*, *Jonquils*, *Jeſſamins*, *Tuberoſes*, &c.

Peach WATER, is made after the ſame manner as *Apricot Water*; only with Peaches.

Phagædenic WATER, is Lime-*Water*, to every Pound whereof is added twenty or thirty Grains of Corroſive Sublimate, in Pouder.—It ſerves to cleanſe old Ulcers, to eat off fungous Fleſh, &c. See PHAGÆDENIC.

Plague WATER, *Aqua Epidemica*, is prepar'd from the Roots of Maſterwort, Angelica, Pyony, and Butter-bur; Viper-Graſs, *Virginia* Snakeroot, Rue, Roſemary, Baum, Carduus, Water Germander, Marigolds, Dragons, Goats-Rue, and Mint; the whole infus'd in Spirit of Wine and diſtill'd.—It is of frequent Uſe as an Alexipharmachic: It revives the Spirits, and promotes a Diaphoreſis. It is the Baſis of moſt Juleps now preſcrib'd, eſpecially in feveriſh Caſes.

Poppy WATER, is prepared from the Flowers of wild Poppies, infus'd in White-wine, or Brandy, and drawn off in a cold Still.—It is a Cordial, good againſt the Colic, and by ſome call'd *Red Plague-Water*.

Pyony WATER, is made of Pyony and Lime-Flowers, Lilly of the Valley ſteep'd in Canary, and diſtill'd: To the *Water* thus procured, are added the Root of Male Pyony, White Dittany, Birthwort, Miſletoe, Rue, Caſtor, Cubebs, Cinnamon, Betony, &c.—It is a good Cordial, and much uſed in nervous Caſes.

Roſe WATER.—Take of Roſes three Parts, and of Fennel and Rue each, one Part; chop 'em ſmall, and mix 'em well together; then diſtil 'em.—This *Water* is excellent for the Eyes, &c.

Scordium WATER, is prepared from the Juices of Goats-Rue, Sorrel, Scordium, Citrons and Treacle, digeſted and diſtill'd.—It is an Alexipharmachic.

Second WATER. See SECUNDA *Aqua*.

Specific WATERS, are ſuch as have ſome peculiar Virtue, appropriate to certain Diſeaſes.—Thus Purſlain *Water*, wherein Mercury has been infuſed, is a Specific againſt Worms in young Children. See SPECIFIC.

Splenetic WATERS, are thoſe proper againſt Diſeaſes of the Spleen.—Such are thoſe of the Tamariſk, Cuſcuta, Hartſtongue, Hops, &c. See SPLEEN.

Stephens's WATER, *Aqua Stephani*, is made from Cinnamon, Ginger, Galangals, Cloves, Nutmegs, Paradiſe Grains, Anis-ſeeds, Sweet Fennel, Carraway, Thyme, Mint, Sage, Pennyroyal, Pellitory, Roſemary, Red Roſes, Camomile, Origany and Lavender, ſteep'd in *Gaſcoign* Wine, or Spirit of Wine, diſtill'd.—It is a good Cephalic and Cardiac, and is alſo reputed Hyſterical.

Sto-

Stomachic WATERS, are ſuch as have the Virtue to cleanſe, ſtrengthen, and confirm the Stomach.——As Red Roſe-*Water*, Mint-*Water*, Aniſeed-*Water*, &c. See STOMACH.

Stygian WATER. See AQUA *Regalis*.

Styptic WATER, is a Diſſolution of red Vitriol, or the Colcothar remaining in the Retort after the Spirit has been extracted; with burnt Alumn and Sugar-candy.—With thirty Grains of each of theſe three Drugs, they mix half an Ounce of Urine of a young Man, as much Roſe-*Water*, and two Ounces of Plantain-*Water*.—Its uſe is to ſtop Bleeding. See STYPTIC.

Treacle WATER, *Aqua Theriacalis*, is directed by the College Diſpenſatory to be made of green Walnuts, Rue, Carduus, Marigold, Baum, Butter-bur-Roots, Burdock, Angelica, Maſterwort, Water-Germander, Venice Treacle, Mithridate, Canary, Vinegar, and Lemon-Juice, ſteep'd and diſtill'd.—It is the moſt uſed of any in the Shops; tho Dr. *Quincy* decries it as one of the worſt concerted of all. Its Intention is to be an Alexipharmachic and Sudorific.

Other Diſpenſatories give a more ſimple *Treacle-Water*, made from Treacle, with an equal quantity of Brandy and Vinegar.—It is good for Ulcers, and Eroſions of the Mouth; eſpecially if a little *Armenian* Bole be diſſolv'd therein. See TREACLE.

Vulnerary WATER, is a *Water* proper for the healing of Wounds, prepared from the Juice of Vulnerary Plants. See VULNERARY.

WATER, in Anatomy, *&c.* is applied to divers Liquors or Humours in the human Body. See HUMOUR.

Such is the *Aqua Phlegmatica*, Phlegmatic *Water*; which is a ſoft ſerous Humour, contained in the *Pericardium*, and wherein the Heart ſwims. See PERICARDIUM.

Anatomiſts are divided about it: Some will not have it natural, but ſuppoſe it ſeparated forcibly during the Pangs of Death: Their Reaſon is, the difficulty they meet withal in tracing its Paſſage, or how it is carried off.—The lateſt Anatomiſts, however, ſeem to agree to its being a natural and neceſſary Humour: and one Reaſon is, that it is found even in the Pericardiums of *Fœtus*'s.

It has likewiſe been diſputed whence it ſhould be ſeparated.—The freſheſt Opinion is, that it is ſecreted by ſome Glands about the Baſis of the Heart; and that it diſtils thence drop by drop, into the Cavity of the Pericardium, in ſuch Quantity, as juſt to ſupply what is expended daily by the Motion and Warmth of the Heart; and ſo needs no Evacuation. Its Uſe is, to moiſten, lubricate, and cool the Heart, and prevent any Inflammation that might ariſe from the dry Friction of the Heart and Pericardium. So that it does the ſame Office to the Heart, that the *Water* does wherein the *Fœtus* ſwims; which without it would not have liberty to move at all. See HEART.

WATER is alſo uſed in divers Ceremonies, both Civil and Religious.—Such is the *Baptiſmal Water*, *Holy Water*, &c. See BAPTISM, *&c.*

Holy WATER, is a *Water* prepared every Sunday in the *Romiſh* Church, with divers Prayers, Exorciſms, *&c.* uſed by the People to croſs themſelves withal at their entrance, and going out of Church; and pretended to have the Virtue of waſhing away venial Sins, driving away Devils, preſerving from Thunder, diſſolving Charms, ſecuring from, or curing Diſeaſes, *&c.*

The Uſe of *Holy Water* appears to be of a pretty antient ſtanding in the Church: witneſs S. *Jerom*, in his Life of S. *Hilarion*, and *Gretſer de Benedict.* Cap. x, *&c.*

M. *Godeau* attributes its Original to Pope *Alexander*, a Martyr under the Emperor *Adrian*.

Many of the Reformed take the Uſe of *Holy Water* to have been borrow'd from the *Luſtral Water* of the antient *Romans*. See LUSTRALIS.——Tho it might as well be borrow'd from the Sprinklings in uſe among the *Jews*. See *Numbers* xix. 17.

Urban Godfrey Siber, a *German*, has a Diſſertation printed at *Leipſic*, to ſhew, by Proofs brought from Church-Hiſtory, that one may give *Holy Water* to drink to Brutes.

Bitter WATERS *of Jealouſy*.—In the *Levitical* Law, we find mention made of a *Water*, which ſerv'd to prove whether or no a Woman were an Adultreſs.——The *Formula* was this: The Prieſt, offering her the Holy *Water*, denounced,—"If thou haſt gone aſide to another, inſtead of thy "Husband, and if thou be defiled, *&c.* the Lord make "thee a Curſe and an Oath among thy People, by making "thy Thigh to rot, and thy Belly to ſwell: And this *Wa*"*ter* ſhall go into thy Bowels, to make thy Belly to ſwell, "and thy Thigh to rot." And the Woman ſhall ſay, *Amen.*——"Theſe Curſes the Prieſt ſhall write in a Book, "and blot 'em out with the *bitter Water.*"——"When he "hath made her drink the *Water*, it ſhall come to paſs, "that if ſhe be defiled, the *Water* ſhall enter into her and "become bitter, and her Belly ſhall ſwell, *&c.*"——"If "ſhe be not defiled, ſhe ſhall be free, and conceive Seed." *Numbers* ch. v.

WATER *Ordeal*, or *Trial* was of two Kinds; by hot, or by cold *Water*.

Trial or Purgation by boiling, or hot Water.——Among our Anceſtors, there was a way of proving Crimes, by immerging the Body or the Arm in hot *Water*, with divers Religious Ceremonies. See TRIAL, PURGATION. *&c.*

In the Judgment by *boiling Water*, the Accuſed, or he who perſonated the Accuſed, was oblig'd to put his naked Arm into a Cauldron full of boiling *Water*; and to draw out a Stone thence, placed at a greater or leſs depth according to the Quality of the Crime.——This done, the Arm was wrap'd up, and the Judge ſet his Seal on the Cloth; and at the end of three Days they returned to view it; when, if it were found without any Scald, the Accuſed was declared Innocent.

The Nobles and great Perſons purg'd themſelves thus by *hot Water*; and the Populace by *cold Water*.

F. *Mabillon* will have this Ceremony introduced by Pope *Eugenius* II. in lieu of making Oath with the Hand laid on the Relicks of ſome Saint; which having been abuſed, was prohibited by *Innocent* III. at the Council of the *Lateran*.

"*Theotberge*, Wife of *Lothaire* of *France*, having been "accuſed of Inceſt, committed before Marriage with her "Brother Duke *Hubert*; as ſhe could not be convicted by "any Witneſſes, certain of the Biſhops were conſulted as to "the manner wherein the Judges ſhould proceed in an Af"fair where the Crime, tho very dubious, did diſhonour "to the King.——The Biſhops were of Opinion they "ſhould have recourſe to the *Proof by boiling Water*; "which conſiſted in this, That the Accuſed, to prove her "Innocence, ſhould plunge her Hand into a Baſon of boiling "*Water*, and take out a Ring put therein. Sometimes, in"deed, they ſubſtituted another Perſon to make the Trial, "in the room of the Accuſed: Accordingly, the Rank and "Quality of *Theotberge* excuſing her from making the Proof "her ſelf, ſhe choſe a Man to do it for her; who either "out of Zeal for the Life and Honour of the Princeſs, or "for Money, ſtood the Teſt, and drew out his Hand and "the Ring, without harm." *F.* Daniel's *Hiſt. of* France.

Trial or Purgation by cold Water.—After certain Prayers, and other Ceremonies, the Accuſed was ſwaddled, or ty'd up all in a Pelotoon or Lump; and thus caſt into a River, Lake, or Veſſel of *cold Water*; where, if he ſunk, he was held criminal; if he floated, innocent. See JUDICIUM, PURGATION, PROOF, ORDEAL, COMBAT, *&c.*

WATER, among Jewelers, is properly the Colour or Luſtre of Diamonds, and Pearls; thus call'd, by reaſon theſe were antiently ſuppoſed to be form'd, or concreted, of *Water*. See GEM, *&c.*

Thus, they ſay, ſuch a Pearl is of a fine *Water*. See PEARL.—The *Water* of ſuch a Diamond is muddy. See DIAMOND.

The Term is ſometimes alſo uſed, tho leſs properly, for the Colour or Hue of other precious Stones. See PRECIOUS *Stone*.

WATER-*Bailiff*, is an Officer antiently eſtabliſh'd in all Port-Towns, for the ſearching of Ships; as appears from 28 *Hen.* VI. cap. v.

There is ſuch an Officer ſtill on foot in the City of *London*, who ſuperviſes and ſearches all Fiſh brought thither; and gathers the Toll ariſing from the River of *Thames*.—He attends alſo on the Lord Mayor, and hath the principal Care of marſhalling the Gueſts at the Table.

He alſo arreſts Men for Debt, or other Perſonal or Criminal Matters, on the River of *Thames*, by Warrant of his Superiors, *&c.*

WATER *Born*, in the Sea Language.—A Ship is ſaid to be *Water-born*, when ſhe is where there is no more *Water* than will barely bear her from Ground; or when lying even with the Ground, ſhe firſt begins to float or ſwim.

WATER-*Colours*, in Painting, are ſuch Colours as are only diluted and mix'd up with Gum-*Water*.—In contradiſtinction to *Oil Colours*. See COLOUR.

The Uſe of *Water-Colours*, makes what we call *Limning*; as that of Oil-Colours does *Painting* properly ſo called. See LIMNING, and PAINTING.

Dead-WATER, in the Sea Language, is the Eddy *Water* that follows the Stern of the Ship; not paſſing away ſo faſt as that which ſlides by her Sides.

WATER-*Farcin*. See FARCIN.

WATER-*Gage*, an Inſtrument to meaſure the Depth or Quantity of any *Water*. See GAGE, SOUNDING, *&c.*

WATER-*Gang*, from the Saxon *Watergang*, a Courſe or Trench, to convey a Stream of *Water*. See CANAL, TRENCH, *&c.*

WATER-*Line*, of a Ship, is that Line which diſtinguiſhes that part of her under *Water*, from that above; when ſhe is duly laden.

WATER-*Measure*.——Salt, Sea-Coal, &c. while aboard Veſſels in the Pool, or River, are meaſur'd with the Corn-Buſhel heap'd up; or elſe five ſtriked Pecks are allow'd to the Buſhel.—This is called *Water-Meaſure*; and exceeds *Wincheſter*-Meaſure by about three Gallons in the Buſhel. See MEASURE, CHALDRON, &c.

WATER-*Poiſe*. See HYDROMETER.

Dr. *Hook* has contrived a *Water-poiſe*, which may be of good ſervice in examining the Purity, &c. of *Water*. It conſiſts of a round glaſs Ball, like a Bolt-head, about three Inches in Diameter, with a narrow Stem or Neck, $\frac{1}{24}$ of an Inch; which being poiſed with red Lead, ſo as to make it but little heavier than pure ſweet *Water*, and thus fitted to one end of a fine Balance, with a Counterpoiſe at the other; upon the leaſt Addition of even $\frac{1}{2000}$th Part of Salt to a quantity of *Water*, half an Inch of the Neck will immerge above the *Water*, more than did before. *Philoſoph. Tranſact.* N° 197.

WATER-*Scape*, of the Saxon *Waterſchap*, denotes an Aqueduct. See AQUEDUCT.

WATER-*Shoot*, a young Sprig, which ſprings out of the Root or Stock of a Tree. See SHOOT, STOCK, &c.

WATER-*Shot*, in the Sea Language, a ſort of riding at Anchor; when a Ship is moored neither croſs the Tide, nor right up and down; but quarter'd betwixt both.

WATER-*Table*, in Architecture, is a ſort of Ledge, left in Stone or Brick Walls, about 18 or 20 Inches from the Ground: from which Place, the Thickneſs of the Wall begins to abate. See WALL.

WATER-*Way*, in a Ship, is a ſmall Ledge of Timber, lying on the Deck, cloſe by the Sides; to keep the *Water* from running down there.

WATER-*Wheel*, an Engine for raiſing *Water* in great quantity out of a deep Well. See PERSIAN *Wheel*.

WATERING, in Gardening, &c. the Application of *Water* to the Soil of Plants, &c. when not ſufficiently moiſten'd with Rain, Dew, &c. See SOIL, VEGETATION, &c.

After ſowing Seed of any kind, tho the Ground be ever ſo dry, they ſhould never be *water'd* till they have been 48 Hours in the Ground; and the Ground is a little ſettled about 'em; otherwiſe, a too great glut of Nouriſhment at firſt will be apt to burſt 'em. See SEED, and SOWING.

Care is to be taken, that the Leaves of young and tender Plants ben't *water'd* at all while the Weather is cold; only the Ground to be wet about 'em.

For hardy Plants and Seeds, if the Nights be cold, *water* in the Forenoon; otherwiſe in the Evening.

Water that comes out of deep Pits, or Wells, ſhould ſtand a Day in an open Veſſel, ere it be applied to tender Plants in the Spring. Dung of Sheep, Pidgeons, or Hens, or Aſhes, Lime, &c. infuſed in the *Water*, will forward the Growth of Plants. See MANURE.

WATERING, in the Manufactures.—To *Water a Stuff*, is to give it a Luſtre, by wetting it lightly, and then paſſing it thro' the Preſs, or the Calendar, whether hot or cold. See CALENDAR, TABBY, PRESSING, &c.

WATTLES, among Husbandmen, Grates or Hurdles, or Folds for Sheep. See PARK.

The Word is alſo uſed for the Gills of a Cock: and the naked red Fleſh that hangs under a Turkey's Neck.

WAVE, *Unda*, in Phyſicks, &c. a Cavity in the Surface of Water or other Fluid, with an Elevation aſide thereof. See FLUID, and WATER.

The Origin of *Waves* may be thus conceived.—The Surface of a ſtanding Water being naturally Plain, and parallel to the Horizon; if by any means it be render'd hollow, as at A, (Tab. *Hydroſtatics*, Fig. 30.) its Cavity will be ſurrounded with an Elevation B B; this raiſed Water will deſcend by its Gravity, and with the Celerity acquir'd in deſcending, form a new Cavity; by which Motions, the Water will aſcend at the Sides of this Cavity, and fill the Cavity A, while there is a new Elevation towards C; and when this laſt is depreſs'd, the Water riſes anew towards the ſame Part. Thus ariſes a ſucceſſive Motion in the Surface of the Water; and a Cavity, which carries an Elevation before it, is moved along from A towards C. This Cavity, with the Elevation next it, is called a *Wave*; and the Space taken up by the *Wave* on the Surface of the Water, and meaſur'd according to the Direction of the *Wave*'s Motion, is called the *Breadth of the Wave*. See RIVER, and UNDULATION.

The Motion of Waves, makes an Article in the New Philoſophy; and the Laws thereof being now pretty well determin'd, we ſhall give the Reader the Subſtance of what is taught thereon.

1°, Then, the Cavity, as A, is incompaſs'd every way with an Elevation; and the Motion abovemention'd expands it ſelf every way; therefore the *Waves* are moved circularly.

2°, Suppoſe, now, A B, (Fig. 31.) an Obſtacle, againſt which the *Wave*, whoſe beginning is at C, ſtrikes; and we are to examine what Change the *Wave* ſuffers in any Point, as E, when it is come to the Obſtacle in that Point. In all Places thro' which the *Wave* paſſes in its whole Breadth, the *Wave* is raiſed; then a Cavity is form'd, which is again fill'd up; which Change, while the Surface of the Water undergoes, its Particles go and return thro' a ſmall Space: The Direction of this Motion is along C E, and the Celerity may be repreſented by that Line.—Let this Motion be conceived to be reſolved into two other Motions, along G E and D E, whoſe Celerities are reſpectively repreſented by thoſe Lines. By the Motion along D E, the Particles do not act againſt the Obſtacle; but after the Stroke, continue their Motion in that Direction with the ſame Celerity; and this Motion is here repreſented by E F, ſuppoſing E F and E D to be equal to one another: But by the Motion along G E, the Particles ſtrike directly againſt the Obſtacle, and this Motion is deſtroy'd; for tho the Particles are elaſtick; yet, as in the Motion of the *Waves* they run thro' but a ſmall Space, going backward and forward, they proceed ſo ſlowly, that the Figure of the Particles cannot be changed by the Blow; and ſo are ſubject to the Laws of Percuſſion of Bodies perfectly hard. See PERCUSSION.

But there is a Reflexion of the Particles, from another Cauſe: The Water which cannot go forward beyond the Obſtacle, and is puſh'd on by that which follows it, gives way where there is the leaſt Reſiſtance; that is, aſcends: And this Elevation, which is greater in ſome than other Places, is cauſed by the Motion along G E; becauſe it is by that Motion alone that the Particles come againſt the Obſtacle.—The Water, by its Deſcent, acquires the ſame Velocity with which it was raiſed; and the Particles of Water are repell'd from the Obſtacle, with the ſame Force in the Direction E G, as that with which they ſtruck againſt the Obſtacle.——From this Motion, and the Motion abovemention'd along E F, ariſes a Motion along E H, whoſe Celerity is expreſs'd by the Line E H, which is equal to the Line C E; and by the Reflection, the Celerity of the *Wave* is not changed; but it returns along E H, in the ſame manner, as if taking away the Obſtacle, it had moved along E *h*.

If from the Point C, C D be drawn perpendicular to the Obſtacle, and then produced, ſo that D *e* ſhall be equal to C D; the Line H *e* continued, will go thorow *c*: And as this Demonſtration holds good in all Points of the Obſtacle; it follows, that the reflected *Wave* has the ſame Figure on that ſide of the Obſtacle, as it would have had beyond the Line A B, if it had not ſtruck againſt the Obſtacle.—If the Obſtacle be inclined to the Horizon, the Water riſes and deſcends upon it, and ſuffers a Friction, whereby the Reflection of the *Wave* is diſturb'd, and often wholly deſtroy'd: And this is the Reaſon why very often the Banks of Rivers do not reflect the *Waves*.

If there be a Hole, as I, in the Obſtacle B L, the Part of the *Wave* which goes thro' the Hole, continues its Motion directly, and expands it ſelf towards Q Q; and there is a *new Wave* formed, which moves in a Semicircle whoſe Centre is the Hole. For, the raiſed Part of the *Wave*, which firſt goes thro' the Hole, immediately flows down a little at the Sides; and by deſcending, makes a Cavity, which is ſurrounded with an Elevation on every Part beyond the Hole, which moves every way in the ſame manner as was laid down in the Generation of the firſt *Wave*.

In the ſame manner, a *Wave* to which an Obſtacle, as A O, is oppoſed, continues to move between O N; but expands it ſelf towards R, in a Part of a Circle, whoſe Centre is not very far from O.——Hence we may eaſily deduce, what muſt be the Motion of a *Wave* behind an Obſtacle, as M N.

Waves are often produced by the Motion of a tremulous Body, which alſo expand themſelves circularly, tho the Body goes and returns in a right Line; for the Water which is raiſed by the Agitation, deſcending, forms a Cavity, which is every where ſurrounded with a Riſing.

Different *Waves* do not diſturb one another, when they move according to different Directions.——The Reaſon is, that whatever Figure the Surface of the Water has acquir'd by the Motion of the *Waves*, there may in that be an Elevation and Depreſſion; as alſo ſuch a Motion as is requir'd in the Motion of a *Wave*.

To determine the Celerity of the *Waves*, another Motion, analogous to theirs muſt be examin'd.——Let there be a Liquid in the recurve cylindric Tube E H, (Fig. 32.) and let the Liquid in the Leg E F, be higher than in the other Leg, by the Diſtance *l* E; which difference is to be divided into two equal Parts at *i*. The Liquid by its Gravity deſcends in the Leg E F, while it aſcends equally in the Leg E H: ſo that when the Surface of the Liquid is arrived at *i*, it is at the ſame height in both Legs; which is the only Poſition wherein the Liquid can be at reſt: But by the Celerity acquir'd in deſcending, it continues its Motion, and aſcends higher in the Tube G H; and in E F is depreſs'd quite to *l*, except ſo much as it is hinder'd by the Friction againſt the Sides of the Tube. The Liquid in the Tube G H, which is higher, alſo deſcends by its Gravity, and ſo

the Liquid in the Tube rises and falls, till it has lost all its Motion by the Friction.

The Quantity of Matter to be moved, is the whole Liquid in the Tube; the moving Force, is the Weight of the Column *l* E, whose weight is always double the Distance E *i*; which distance, therefore, increases and diminishes in the same Ratio with the moving Force.—But the Distance E *i* is the Space to be run thro' by the Liquid, in order to its moving from the Position E H, to the Position of Rest; which Space, therefore, is always as the Force continually acting upon the Liquid: But it is demonstrated, that it is on this account that all the Vibrations of a Pendulum, oscillating in a Cycloid, are Isochronal; and therefore, here also, whatever be the Inequality of the Agitations, the Liquid always goes and returns in the same Time. The Time in which a Liquid thus agitated ascends or descends, is the Time in which a Pendulum vibrates, whose length is equal to half the Length of Liquid in the Tube, or to half the Sum of the Lines E F, F G, G H. This length is to be measur'd in the Axis of the Tube. See PENDULUM.

From these Principles, to determine the Celerity of the *Waves*, we must consider several equal *Waves* following one another immediately; as A, B, C, D, E, F, (Fig. 33.) which move from A towards F: The *Wave* A has run its breadth, when the Cavity A is come to C; which cannot be, unless the Water at C ascend to the height of the Top of the *Wave*, and again descends to the depth C; in which Motion, the Water is not agitated sensibly below the Line *h i*: Therefore this Motion agrees with the Motion in the Tube abovemention'd, and the Water ascends and descends, that is, the *Wave* goes thro' its Breadth, while a Pendulum of the Length of half B C performs two Oscillations, or whilst a Pendulum of the Length B C D, that is, four times as long as the first, performs one Vibration. Therefore, the Celerity of the *Wave* depends upon the Length of the Line B C D; which is greater, as the Breadth of the *Wave* is greater, and as the Water descends deeper in the Motion of the *Waves*.—In the broadest *Waves*, which do not rise high, such a Line as B C D, does not much differ from the Breadth of the *Wave*; and in that Case, a *Wave* moves its breadth, while a Pendulum equal to that *Wave* oscillates once. See OSCILLATION.

In every equable Motion, the Space gone thro' increases with the Time and the Celerity; wherefore, multiplying the Time by the Celerity, you have the Space gone thro': whence it follows, that the Celerity of the *Waves* are as the square Roots of their Breadth: For as the Times in which they go thro' their Breadths are in that Ratio, the same Ratio is requir'd in their Celerities, that the Products of the Times by their Celerities may be as the Breadth of the *Waves*, which are the Spaces gone thro'.

WAVED, or WAVY, a Term in Heraldry, when a Bordure, or any Ordinary or Charge in a Coat of Arms, has its Out-lines indented, in manner of the rising and falling of *Waves*.

This is also called *Undy*. See UNDY.

To WAVE, is also used in the Sea Language, for the making Signs for a Vessel to come near, or keep off. See SIGNAL.

WAVESON, in the Admiralty Law, a Term used for such Goods, as after Shipwreck do appear swimming on the *Waves*. See FLOTSON, JETSON, &c.

WAX, *Cera*, a soft yellowish Matter, whereof the Bees form Cells to receive their Honey. See CELL.

Wax is not the Excrement of this laborious Insect, as the Antients, and after them many of the Moderns, have imagin'd.

'Tis properly a Juice, exuding out of the Leaves of Plants, and adhering to the Surface thereof; from which it is scrap'd off by the Bees with their rough Thighs, to build their Combs withal.—It is chiefly afforded by Lavender and Rosemary; from which last, any body may gather *Wax*; and, with the assistance of the Microscope, the *Wax* may be plainly seen sticking on the Leaves of the Plant.—So that *Wax* is not an Animal, but a Vegetable Substance.

Naturalists have generally imagin'd the *Wax* to be gather'd from the Flower, some from the Petala, and others from the Apices; but *Boerhaave* affirms it a Juice peculiar to the Leaves, and not afforded by the Flowers, which only yield Honey. See HONEY.

The Honey is form'd of a liquid Matter suck'd into the Body; and only seems to arrive at its Perfection in the Entrails of the little Animal: Whereas the *Wax*, being a hard Substance, is gather'd only with the fore Legs and Chaps; convey'd thence to the middle Legs, and thence to the middle Joint of the hind Legs, where there is a small Cavity, like the bowl of a Spoon, to receive it; and where it is collected into Heaps, of the shape and size of Lentils.

The Bee arrived at the Hive with its Load of *Wax*, finds some difficulty in unburdening himself of so tenacious a Matter.—Frequently, being unable to lay it down himself, he calls for Assistance, by a particular Motion of the Legs and Wings; upon which, a number of his Companions strait run to his succour, and each with his Jaws takes off a small quantity of the *Wax*; others succeeding; till their laden Fellow be quite disburden'd. See HONEY-COMB.

Wax makes a very considerable Article in Commerce; the Consumption thereof, throughout the several Parts of *Europe*, being incredible.—There are two Kinds, *white*, and *yellow*; the yellow is the native *Wax* just as it comes out of the Hive, after expressing the Honey, &c. the white is the same *Wax*, only purify'd, wash'd, and expos'd to the Air. The Preparation of each follows.

Yellow WAX.

To procure the *Wax* from the Combs for use; after separating the Honey from them, in the manner describ'd under the Article HONEY; they put all the Matter remaining in a large Kettle, with a sufficient quantity of Water; where, with a moderate Fire, they melt it, and then strain it thro' a linen Cloth, by a Press: ere cold, they scum it with a Tyle, or a piece of wet Wood, and cast it, while yet warm, in wooden, earthen, or metalline Molds; having first anointed 'em with Honey, Oil, or Water, to prevent the *Wax* from sticking.—Some, to purify it, make use of *Roman* Vitriol, or Copperas; but the true Secret is to melt, scum it, &c. properly, without any Ingredients at all.

The best is that of a high Colour, an agreeable Smell, brittle, and that does not stick to the Teeth when chew'd. 'Tis often sophisticated with Rosin, or Pitch colour'd with Rocou, or Turmeric.

By Chymistry, *Wax* yields a white thick Oil, resembling Butter; whence the Chymists call it *Butter of Wax*.—From this Oil is drawn a second, as clear as Water: Both the one and the other are excellent for Chilblains.—The Faces remaining in the Bag after expressing the *Wax*, is used both by Farriers and Surgeons, with success against Strains.

White WAX.

The whitening or blanching of *Wax*, is perform'd by reducing the *yellow* sort, first, into little bits or grains, by melting it, and throwing it, while hot, into cold Water; or else by spreading it into very thin Leaves, or Skins. This *Wax*, thus granulated, or flatted, is exposed to the Air on linen Cloths; where it rests Night and Day, having equally need of Sun and Dew. Then they melt and granulate it over again several times; still laying it out to the Air in the Intervals between the Meltings.

When the Sun and Dew have at length perfectly blanch'd it, they melt it for the last time in a large Kettle; out of which they cast it with a Ladle, upon a Table cover'd over with little round Dents or Cavities, of the form of the Cakes of *white Wax* sold by the Apothecaries, &c. having first wet those Molds with cold Water, that the *Wax* may be the easier got out. Lastly, they lay out these Cakes to the Air for two Days and two Nights, to render it more transparent and drier.

This *Wax* is used in the making of Torches, Tapers, Flambeaux, Figures, and other *Wax*-works. See TAPER, TORCH, &c.

It is also an Ingredient in Plaisters, Cerats, and divers Pomatums and Unguents for the Complexion. See CERAT, &c.

Yellow *Wax* is made soft with Turpentine, yet retains its natural Colour.—Red *Wax*, is only the white melted with Turpentine and redden'd with Vermilion or Orcanette.—Verdegrease makes it green; and burnt Paper or Lampblack, black.—Some Travallers tell us of a natural black *Wax*; assuring us there are Bees, both in the *East* and *West-Indies*, that make an excellent Honey, included in black Cells. Of this *Wax* it is that the *Indians* make those little Vases, wherein they gather their Balsam of *Tolu*.

Virgin WAX, or *Propolis*, is a sort of reddish *Wax*, used by the Bees to stop up the Clefts or Holes of the Hive: 'Tis applied just as taken out of the Hive, without any Art, or Preparation of boiling, &c.—'Tis the most tenacious of any, and is held good for the Nerves. See PROPOLIS.

Sealing WAX, or *Spanish* WAX, is a Composition of Gum Lacca, melted and prepar'd with Rosin and Chalk, and colour'd red with ground Cinnabar. See LACCA.

WAX-*Candles*. See CANDLE.

WAX-WORK.—Here we must not forget that pretty Invention of M. *Benoist*, a Man famous at *Paris* for his Figures of *Wax*.—Being by Profession a Painter, he found the Secret of forming Molds on the Faces of living Persons, even the fairest and most delicate, without any danger either to Health or Complexion: In which Molds he cast Masks of *Wax*; to which by his Colours, and glass Eyes imitated from Nature, he gave a sort of Life: insomuch, as when cloth'd in proper Habits, they bore such a resemblance, that it was difficult distinguishing between the Copy and the Original.

Grafting WAX, is a Composition serving to bind or fix the Bud or Graft in the Cleft of the Stock. See GRAFTING.

Inſtead of *Grafting Wax*, the Country Gardeners, &c. only uſe Clay, which they lay over a piece of linen Cloth, and ſo keep it moiſt; and to prevent its cracking with the heat of the Sun, tie Moſs over it. But the *Wax* ordinarily uſed, is a Compoſt of one Pound and an half of Pitch, a quarter of a Pound of *Wax*, and an Ounce of Oil of Almonds, melted and mix'd together; with the Addition, in Spring or Autumn, of a moderate quantity of Turpentine.

For Cleft-Grafting, Whip-Grafting, and Grafting by Approach, Mr. *Mortimer* recommends temper'd Clay, or ſoft *Wax*; but for Rind-Grafting, Clay and Horſe-dung.

WAX-SCOT, or WAX-SHOT, *Ceragium*, in our antient Cuſtoms, Money paid twice a Year towards the Charge of maintaining Lights, or Candles in the Church. See LUMINARY.

WAY, *Via*. See ROAD, and VIA.

Roman Ways, are divided into *Conſulares*, *Prætorias*, *Militares*, and *Publicas*. See MILITARY, &c.

We have four notable ones in *England*; antiently call'd *Chimini quatuor*, and entitled to the Privileges of *Pax Regis*.

The firſt, *Watling-ſtreet*, or *Warlam-ſtreet*, leading from *Dover* to *London*, *Dunſtable*, *Touceſter*, *Atterſton*, and the *Severn*, near the *Wrekin* in *Shropſhire*, extending as far as *Angleſea* in *Wales*.

The ſecond call'd *Ikenild-ſtreet*, ſtretches from *Southampton* over the River *Iſis* at *Newbridge*, thence by *Cambden* and *Litchfield*, then paſſes the *Derwent* near *Derby*, ſo to *Bolſover Caſtle*, and ends at *Tinmouth*.

The third, call'd *Foſſe-Way*, becauſe in ſome Places it was never perfected but lies as a large Ditch; leads from *Cornwal* thro' *Devonſhire*, by *Tetbury* near *Stow in the Wolds*; and beſide *Coventry* to *Leiceſter*, *Newark*, ſo to *Lincoln*, &c.

The fourth, call'd *Ermin* or *Erminage-ſtreet*, ſtretches from *S. David's* in *Weſt-Wales*, to *Southampton*.

Milky WAY. See GALAXY.

WAY *of a Ship*, is ſometimes uſed for the ſame with the Rake, or Run of her forward and aftward on. See RAKE.

But the Term is more commonly underſtood in reſpect of her ſailing.—When ſhe goes apace, they ſay, ſhe hath a *good Way*; and they call the Account how faſt ſhe ſails by the Log, *Keeping an Account of her Way*. See LOG.

And becauſe moſt Ships are apt to fall a little to the Leeward of their true Courſe, they always, in caſting up the Log-board, allow ſomething for her *Leeward Way*; which is one Point, or more, according to her *Way* of ſailing. See RECKONING.

WAY *of the Rounds*, in Fortification, is a Space left for the Paſſage of the Rounds, between the Rampart, and the Wall of a fortify'd Town. See ROUND.

This is not now much in uſe; becauſe the Parapet not being above a Foot thick, it is ſoon overthrown by the Enemy's Cannon.

WAY-WISER, an Inſtrument for meaſuring of the Road, or Diſtance gone; call'd alſo *Perambulator*, and *Pedometer*. See PERAMBULATOR, and PEDOMETER.

WAYWODE, is properly a Title given the Governours of the chief Places in the Dominions of the Czar of *Muſcovy*.

The *Palatines*, or Goverours of Provinces in *Poland*, alſo bear the Quality of *Waywodes*, or *Waiwodes*. See PALATINE.

The *Poles* likewiſe call the Princes of *Walachia* and *Moldavia*, *Waywodes*; as eſteeming them no other than on the Foot of Governours: Pretending that *Walachia* and *Moldavia* are Provinces of *Poland*; which have withdrawn themſelves from the Obedience of the Republick.

Every where elſe they are call'd *Hoſpodars*. See HOSPODAR.

Du Cange ſays, that the Name *Waywode* is uſed in *Dalmatia*, *Croatia*, and *Hungary*, for a *General of an Army*: And *Leunclavius*, in his *Pandects of Turkey* tells us, it uſually ſignifies *Captain*.

WEALD, or WELD, the woody Part of a Country; as the *Weald of Kent*.—It is miſ-printed in ſome Books and Maps, the *Wilds of Kent*, *Suſſex*, and *Surry*.

WEANEL, a Country Word, for a young Beaſt newly *weaned*, or taken from ſucking its Dam.

WEANING, *Ablactation*. See ABLACTATION.

WEAPONS. See ARMS, and ARMOUR.

WEAPON-*Salve*, a kind of Unguent, ſuppoſed to cure Wounds ſympathetically, by being applied, not to the Wound, but to the *Weapon* that made it. See SYMPATHETIC *Pouder*, TRANSPLANTATION, &c.

WEAR, or WARE, a great Stank, or Dam in a River; fitted for the taking of Fiſh, or for conveying the Stream to a Mill. See FISHING.

WEATHER, the State or Diſpoſition of the Atmoſphere, with regard to Moiſture or Drought, Heat or Cold, Wind or Calm, Rain, Hail, Froſt, Snow, Fog, &c. See ATMOSPHERE, RAIN, HEAT, WIND, HAIL, FROST, &c.

As 'tis in the Atmoſphere that all Plants and Animals live and breathe, and as that appears to be the great Principle of moſt Animal and Vegetable Productions, Alterations, &c. (See AIR.)——There does not ſeem any thing in all Philoſophy of more immediate Concernment to us, than the State of the *Weather*.—In effect, all living Things are only Aſſemblages or Bundles of Veſſels, whoſe Juices are kept moving by the Preſſure of the Atmoſphere; and which, by that Motion, maintain Life. So that any Alterations in the Rarity or Denſity, the Heat, Purity, &c. of that, muſt neceſſarily be attended with proportionable ones in theſe.

What vaſt, yet regular Alterations, a little Turn of *Weather* makes in a Tube fill'd with Mercury, or Spirit of Wine, or in a piece of String, &c. Every body knows, in the common Inſtance of Barometers, Thermometers, Hygrometers, &c. and it is owing partly to our Inattention, and partly to our unequal, intemperate Courſe of living, that we don't feel as great and as regular ones in the Tubes, Chords, and Fibres of our own Bodies.

'Tis certain, a great part of the Brute Creation have a Senſibility, and Sagacity this way beyond Mankind; and yet, without any Means or Diſpoſition thereto more than we; except that their Veſſels, Fibres, &c. being in other reſpects in one equable Habitude; the ſame, or a proportionable Cauſe from without, has always a like, or proportionable Effect on them: that is, their Veſſels are regular Barometers, &c. affected only from one external Principle, *viz.* the Diſpoſition of the Atmoſphere; whereas, ours are acted on by divers from within, as well as without; ſome of which check, impede, and prevent the Action of others. See BAROMETER, THERMOMETER, HYGROMETER, &c.

We know of nothing more wanting than a juſt Theory of the *Weather* on Mechanical Principles.—But in order to that, a compleat Hiſtory of the *Weather* will be requir'd.

Were Regiſters carefully kept in divers Parts of the Globe, for a good Series of Years, we ſhould be inabled to determine the Directions, Breadth, and Bounds of the Winds, and of the *Weather* they bring with them; the Correſpondence between the *Weather* of divers Places, and the Dependence between one ſort and another at the ſame Place.—In time, no doubt, we might learn to foretel divers great Emergencies; as, extraordinary Heats, Rains, Froſts, Droughts, Dearths, Plagues, and other epidemical Diſeaſes, &c.

The Members of our *Royal Society*, the *French Academy of Sciences*, and divers other Authors of note, have made ſome Eſſays this way; but the Dryneſs and Quaintneſs of the Subject, induc'd them all to drop it.

Eraſ. Bartholin, for inſtance, has Obſervations of the *Weather* of every Day throughout the Year 1671: Mr. *W. Merle* made the like at *Oxford*, for ſeven Years, *viz.* the Years 1337, 1338, 1339, 1340, 1341, 1342, 1343. Dr. *Plot* did the ſame at the ſame Place, for the Year 1684; Mr. *Hillier*, at *Cape Corſe*, for the Years 1686, 1687; Mr. *Hunt*, &c. at *Greſham College*, for the Years 1695, 1696; Mr. *Derham*, at *Upminſter* in *Eſſex*, for the Years 1691, 1692, 1697, 1698, 1699, 1703, 1704, 1705; Mr. *Townley* in *Lancaſhire*, 1697, 1698; Mr. *Cunningham*, at *Emin* in *China*, for the Years 1698, 1699, 1700, 1701; Mr. *Locke* at *Oats* in *Eſſex*, 1692; Dr. *Scheuchzer* at *Zurich*, in 1708; and Dr. *Tilly* at *Piſa*, the ſame Year. See the *Philoſoph. Tranſact.*

The Form of Mr. *Derham's* Obſervations, we give as a Specimen of a Journal of this kind; obſerving that he notes the Strength of the Winds by 0, 1, 2, 3, &c. and the Quantity of Rain, as it fell thro' a Tunnel, in Pounds and Centeſimals.

Phænomena of the Weather, October 1697.

Day.	Hour.	Weather.	Wind.		Barometer.		Rain	
27	7	Fair	S. W.	2	29	37	1	52
	12	Rain	S.W.b.W.	5	29	34		
	9	Stormy		0	29	88	0	21

As a Specimen of the Uſe of ſuch Hiſtories, we ſhall add ſome general Remarks drawn from them by Mr. *Derham*; and,—1°, That *Foggy Weather* makes the Mercury riſe in the Barometer, as well as the North Wind.—The Cauſe, he ſuggeſts, probably enough, to be the Acceſſion of the Load of Vapour to the former Weight of the Atmoſphere. See FOG.

Miſling Weather, he likewiſe obſerves to have the like Effect. See BAROMETER.

2°, The Colds and Heats in *England* and *Switzerland*, begin and end nearly about the ſame time: Nay, and any remarkable *Weather*, eſpecially if it continue any while, affects one Place as well as t'other. See HEAT.

3°, That the remarkably cold Days in *June*, *Anno* 1708, were found in *Switzerland* to precede ours, commonly by about five Days or more; and that the remarkable Heats in the following Months, began to abate in both Places about the ſame time; only ſomewhat ſooner here than there. See COLD.

4°, That tho the Winds in both Places frequently agree, yet they oftner differ. See WIND.

5°, That the Barometer is always lower at *Zurich* than at *Upminſter*, by ſometimes one, and ſometimes above two *Engliſh* Inches; but the common difference is about half an Inch. Which may be ſolved either by ſuppoſing *Zurich* ſituate one fourth of a Mile higher above the Level of the Sea, than *Upminſter*; or elſe, by ſuppoſing that Part of the terraqueous Globe, as lying nearer the Line, to be higher, and more diſtant from the Centre than ours is, which lies nearer the Pole. See EARTH, MOUNTAIN, &c.

6°, That the Barometer generally riſes and falls together at far diſtant Places: Tho this Agreement of the Barometer is not ſo conſtant between *Zurich* and *Upminſter*, as in Places nearer home, *viz.* at *London* and *Paris*; where, again, the Agreement is not ſo great as between *Upminſter* and *Lancaſhire*.

7°, That the Variations of the Barometer are greateſt, as the Places are neareſt the Pole.—Thus, *e. g.* the Mercury at *London* has a greater Range by two or three Lines than at *Paris*; and at *Paris* a greater than at *Zurich*. In ſome Places near the Equinoctial, there is ſcarce any Variation at all. See BAROMETER.

8°, That the Rain in *Switzerland* and *Italy* is much greater in Quantity, throughout the Year, than that in *Eſſex*; yet the Rains are more frequent, *i. e.* there are more rainy Days in *Eſſex*, than at either of thoſe Places.——The Proportion of the annual Rains that fall in the ſeveral Places we have any good Obſervations of ſtand thus: At *Zurich* the Depth of the annual Rain, at a Medium, is about $32\frac{1}{2}$ *Engliſh* Inches; at *Piſa* $43\frac{1}{4}$; at *Paris* 23; at *Liſle* in *Flanders* $23\frac{1}{2}$ Inches; at *Townley* in *Lancaſhire* $42\frac{1}{2}$; at *Upminſter* $19\frac{1}{4}$. See RAIN.

9°, That Cold contributes greatly to Rain; and that, apparently, by condenſing the ſuſpended Vapours, and making 'em deſcend.—Thus, very cold Months or Seaſons are generally follow'd immediately by very rainy ones; and cold Summers are always wet ones. See COLD, and VAPOUR.

10°, That high ridges of Mountains, as the *Alps*, and the Snows they are cover'd withal, not only affect the neighbouring Places by the Colds, Rains, Vapours, &c. they produce; but even diſtant Countries, as *England*, often partake of their Effects.—Thus, the extraordinary Colds *Decemb.* 1708, and the Relaxations thereof, were felt at *Italy* and *Switzerland*, ſeveral Days ere they reach'd us: An Indication, Mr. *Derham* thinks, that they were derived from them to us.

Indications or Prognoſticks of the Weather.

We don't here mean to obtrude the idle, arbitrary Obſervations of fanciful People upon our Reader.—That Cloud of popular Predictions from the Brute World, which partly the Sagacity, and partly the Credulity of our Countrymen have eſtabliſh'd, we ſet aſide, as not flowing from any natural, neceſſary Relations, that we know of, in the Things themſelves.—Such is the foretelling of Rain and Wind from Water-Fowls flocking to Land, or Land-Fowls to the Water; from Birds pruning their Feathers, Geeſe gaggling, Crows cawing loud, and flying in Companies, Swallows chattering and flying low, Peacocks crying much, Aſſes braying, Deer fighting, Foxes and Wolves howling, Fiſhes playing, Ants and Bees keeping within Doors, Moles caſting up Earth, Earth-Worms creeping out, &c.—We ſhall offer nothing on this Head, but what has ſome viſible Foundation in the Nature of Things; and which lets ſome Light into the Cauſe and Reaſon of *Weather* it ſelf, or diſcovers ſome notable Effects thereof.

1°, Then, *a thick dark Sky*, ſudum cœlum, *laſting for ſome time, without either Sun or Rain, always becomes firſt fair, then foul, i. e.* changes to a fair clear Sky, ere it turns to Rain.—This, the Rev. Mr. *Clarke*, who kept a Regiſter of the *Weather* for 30 Years, ſince put into Mr. *Derham*'s Hands by his Grandſon the learned Dr. *Sam. Clarke*; this, he ſays, he ſcarce ever knew to fail: at leaſt, when the Wind was in any of the Eaſterly Points: But Mr. *Derham* has obſerv'd the Rule to hold good, be the Wind where it will. And the Cauſe is obvious.—The Atmoſphere is replete with Vapours, which, tho ſufficient to reflect and intercept the Sun's Rays from us, yet want Denſity to deſcend; and while the Vapours continue in the ſame State, the *Weather* will do ſo too. Accordingly, ſuch *Weather* is generally attended with moderate warmth, and with little or no Wind to diſturb the Vapours, and an heavy Atmoſphere to ſuſtain 'em; the Barometer being commonly high.—But when the Cold approaches, and by condenſing drives the Vapours into Clouds or Drops, then, way is made for the Sun-beams; till the ſame Vapours, being by further Condenſation form'd into Rain, fall down into Drops.

2°, *A Change in the Warmth of the* Weather, *is generally follow'd by a Change in the Wind.*—Thus, the Northerly and Southerly Winds, commonly eſteem'd the Cauſes of cold and warm *Weather*, are really the Effects of the Cold or Warmth of the Atmoſphere: Of which, Mr. *Derham* aſſures us he has had ſo many Confirmations, that he makes no doubt of it. Thus, it is common to ſee a warm Southerly Wind ſuddenly chang'd to the North, by the fall of Snow or Hail; or to ſee the Wind in a cold froſty Morning, North, when the Sun has well warm'd the Earth and Air, wheel towards the South; and again turn Northerly or Eaſterly in the cold Evening.

3°, *Moſt Vegetables expand their Flowers and Down in Sunſhiny* Weather, *and towards the Evening*; *and againſt Rain, cloſe 'em again*; eſpecially at the beginning of their flowering; when their Seeds are tender and ſenſible.—This is viſible enough in the Down of Dandelion, and other Downs: and eminently in the Flowers of Pimpernel; the opening and ſhutting of which, *Gerard* obſerves, are the Countryman's *Weatherwiſer*, whereby he foretels the *Weather* of the following Day.—The Rule is, if the Flowers be cloſe ſhut up, it betokens Rain and foul *Weather*: if they be ſpread abroad, fair *Weather*. *Ger. Herb.* Lib. II.

Eſt & alia [arbor in Tylis] *ſimilis, foliоſior tamen, roſeique floris; quam noctu comprimens, aperire incipit ſolis exortu, meridie expandit. Incolæ dormire eam dicunt.* Plin. Nat. Hiſt. Lib. II. cap. 11.

The Stalk of Trefoil, my Lord *Bacon* obſerves, ſwells againſt Rain, and grows more upright: and the like may be obſerv'd, tho not ſo ſenſibly, in the Stalks of moſt other Plants.—He adds, that in the Stubble Fields there is found a ſmall red Flower, call'd by the Country-People *Wincopipe*; which opening in a Morning, is a ſure Indication of a fine Day.

That Vegetables ſhould be affected by the ſame Cauſes that affect the *Weather*, is very conceivable; if we conſider them as ſo many Hygrometers and Thermometers, conſiſting of an infinite Number of *Tracheæ*, or Air-Veſſels; by which they have an immediate Communication with the Air, and partake of its Moiſture, Heat, &c. Theſe *Tracheæ* are very viſible in the Leaf of the Scabioſe, Vine, &c. See PLANT, VEGETABLE, &c.

Hence it is, that all Wood, even the hardeſt and moſt ſolid, ſwells in moiſt Weather; the Vapours eaſily inſinuating into the Pores thereof; eſpecially of that which is lighteſt and dryeſt.—And hence we derive a very extraordinary uſe of Wood, *viz.* for breaking Rocks and Mill-ſtones. See WOOD.

Their Method at the Quarries is this.—Having cut a Rock into a Cylinder, they divide that into ſeveral leſſer Cylinders, by making Holes at proper diſtances round the great one: Theſe Holes they fill with ſo many pieces of ſallow Wood, dried in an Oven; which, in moiſt *Weather*, becoming impregnated with the humid Corpuſcles of the Air, ſwell, and, like Wedges, break or cleave the Rock into ſeveral Stones.

Indications and Predictions of the Weather *from the Barometer.* See BAROMETER.

WEATHER-*Cock*, or WEATHER-*Vane*, a moveable Vane, in form of a Cock, or other ſhape; placed on high, to be turn'd round according to the Direction of the Wind, and point out what Quarter the Wind blows from. See WIND.

WEATHER-*Glaſſes*, are Inſtruments contriv'd to indicate the State, or Diſpoſition of the Atmoſphere, as to Heat, Cold, Gravity, Moiſture, &c. to meaſure the Changes befalling in thoſe reſpects; and by thoſe means to predict the Alteration of *Weather*, as Rains, Winds, Snow, &c.

Under the Claſs of *Weather-Glaſſes*, are comprehended *Barometers*, *Thermometers*, *Hygrometers*, *Manometers*, and *Anemometers*, of each whereof there are divers Kinds: See their Theories, Conſtructions, Uſes, Kinds, &c. under the reſpective Articles, BAROMETER, THERMOMETER, HYGROMETER, &c.

WEATHER-*Board*, in the Sea Language, that ſide of a Ship which is to the Windward.

WEATHER-*Gage*, at Sea.—A Ship is ſaid to have the *Weather-Gage* of another, when ſhe is to the Windward of her. See GAGE.

WEATHERING, a Doubling, or getting to the Windward of a Point or Place.

The WEATHERING *of a Hawk*, among Falconers, is the ſetting her abroad to take the Air. See HAWK, and HAWKING.

WEAVING, the Art or Act of working a Web of Cloth, Silk, Linen, or other Stuff, on a Loom, with a Shuttle. See LOOM, SHUTTLE, STUFF, &c.

'Tis difficult to ſay, with any Aſſurance, who it is we owe this admirable Invention to, unleſs we chuſe to aſcribe it to the Spider, that poiſonous, but ingenious little Inſect, which draws certain infinitely fine Threads from its own Subſtance thro' its *Anus*. See *Spider's*-WEB.

WEAVING *of Cloth.*
WEAVING *of Tapeſtry*, &c.
Stocking-WEAVING.
} See CLOTH. TAPESTRY, &c. STOCKINGS.

WEB, a ſort of Tiſſue, or Texture, form'd of Threads interwove with each other; ſome whereof are extended in

length, and called the *Warp*; and others drawn a-croſs them, call'd the *Woof*. See TEXTURE, WOOF, WARP, &c.

Spider's-WEB, or *Cob*-WEB, is a very delicate and wonderful Tiſſue, which that Inſect ſpins out of its own Bowels; ſerving it as a ſort of Toil, or Net to catch Flies, &c. withal.

For the manner wherein the Spider ſpins his Web; *the admirable Mechaniſm of the Parts ſubſervient thereto, and the Uſes thereof*; ſee SILK.

Dr. *Liſter* tells us, that attending nearly to a Spider weaving a Net, he obſerv'd it ſuddenly to deſiſt in the midwork, and turning its Tail to the Wind, darted out a Thread, with the violence and ſtream we ſee Water ſpout out of a Jet: This Thread, taken up by the Wind, was immediately emitted ſome Fathoms long; ſtill iſſuing out of the Belly of the Animal.—By and by the Spider leap'd into the Air; and the Thread mounted her up ſwiftly.—After this Diſcovery, he made the like Obſervation in near thirty different ſorts of Spiders; and found the Air fill'd with young and old, ſailing on their Threads, and doubtleſs ſeizing Gnats and other Inſects in their paſſage: there being often, manifeſt Signs of Slaughter, Legs and Wings of Flies, &c. on theſe Threads, as well as in their *Webs* below.

Dr. *Hulſe* diſcover'd the ſame thing about the ſame time. —In a Letter of Dr. *Liſter* to Mr. *Ray*, he thinks there is a fair Hint of the darting of Spiders in *Ariſtotle*, *Hiſt. An.* Lib. IX. cap. 39. and in *Pliny*, Lib. II. cap. 24. But for their ſailing, the Antients are ſilent, and thinks it was firſt ſeen by him.—In another Letter to Mr. *Ray*, dated *Jan.* 1670, ſpeaking of the Height Spiders are apt to fly to, he ſays, "Laſt *October*, &c. I took notice that the Air was "very full of *Webs*; I forthwith mounted to the Top of "the higheſt Steeple on the *Minſter*, [in *York*] and could "there diſcern 'em yet exceeding high above me."

WEDGE, *Cuneus*, in Mechanicks, the laſt of the five Powers or ſimple Machines. See MECHANICAL *Power*.

The *Wedge* is a triangular Priſm, whoſe Baſes are equilateral acute-angled Triangles. See PRISM.

Authors are divided about the Principle whence the *Wedge* derives its Power.—*Ariſtotle* conſiders it as two Levers of the firſt kind, inclined toward each other, and acting oppoſite ways.—*Guido Ubaldus*, *Merſennus*, &c. will have 'em Levers of the ſecond kind.—But *Fr. de Lanis* ſhews, it cannot be reduced to any Lever at all. See LEVER.

Others refer the *Wedge* to the inclined Plane.——Others, again, with *de Stair*, deny the *Wedge* to have ſcarce any Force at all; and aſcribe much the greateſt Part to the Mallet that drives it.

But the lateſt Authors agree to refer the Effect of the *Wedge* to the *Cochlea*, or *Screw*. See SCREW.

Its Doctrine is contain'd in this Propoſition.——*If a Power be applied to a* Wedge, *in ſuch manner as that the Line of Direction* C D, (Tab. *Mechanicks*, Fig. 53.) *perpendicular to* A B, *is to the Reſiſtance to be overcome, as* A B *to* C D; *the Power will be equal to the Reſiſtance.*

Or thus: *If the Power directly applied to the Head of the* Wedge, *be to the Reſiſtance to be overcome by the* Wedge, *as the Thickneſs of the* Wedge *is to its Height*; *then the Power will be equivalent to its Reſiſtance*; *and if increaſed, will overcome it.*

For the Firmneſs whereby the Parts of the Obſtacle, ſuppoſe Wood, adhere to one another, is the Reſiſtance to be overcome by the *Wedge*. See FIRMNESS, and RESISTANCE.

Now, it is evident, that while the *Wedge* is drove into the Wood, the Way or Length it has gone is B A, (Fig. 54.) and D C is the Way or Length gone in the ſame time by the Impediment; that is, the Parts C and D of the Wood, are ſo far divided aſunder: and according as the *Wedge* is drove down farther and farther along its Height; ſo the Parts C and D of the Wood, are divided more and more along the Thickneſs of the *Wedge*.

Hence, if the Thickneſs of the *Wedge* (that is, the Way of the Impediment, and conſequently its Velocity) be to the Height of the *Wedge*, (that is, the Way, and conſequently the Velocity of the Power) as the Power to the Impediment or Reſiſtance; then the Momentum of the Power and the Impediment, will be equal the one to the other; and conſequently, the Power, being increaſed, will overcome the Reſiſtance.

Hence, 1°, As the Power equivalent to half the Reſiſtance, is to it as $\frac{a}{2}b$ to A b, that is, as the whole Sine to the Tangent of half the Angle of the *Wedge*, a A b.—And, 2°, as the Tangent of a leſs Angle is leſs than that of a greater, the Power muſt have a greater Proportion to half the Reſiſtance if the Angle be greater, than if leſs.—Conſequently, the acuter the *Wedge* is, the more does it increaſe the Power.

To the *Wedge* may be refer'd all Edge-Tools, and Inſtruments which have a ſharp Point, in order to cut, cleave, ſlit, chop, pierce, bore, or the like; as *Knives*, *Hatchets*, *Swords*, *Bodkins*, &c.

WEDLOCK. See MARRIAGE, WIFE, HUSBAND, &c.

WEDNESDAY. See MONTH, DAY, &c.

Aſh-WEDNESDAY. See ASH-*Wedneſday*.

WEED, a common Name for all rank and wild Herbs, that grow of themſelves, to the Detriment of other uſeful Herbs they grow among. See PLANT, HERB, &c.

Fuller's-WEED. See THISTLE, or TEAZLE.

WEED, in the Miners Language, is the Degeneracy of a Load or Vein of fine Metal, into an uſeleſs Marcaſite. See VEIN, MINE, METAL, MARCASITE, &c.

WEEDS, are alſo a peculiar Habit, wore by the Relicts of Perſons deceas'd, by way of Mourning. See MOURNING.

WEEK, *Septimana*, *Hebdomada*, in Chronology, a Diviſion of Time, compriſing ſeven Days. See TIME, and DAY.

The Origin of this Diviſion of *Weeks*, or of computing Time by Sevenths, is greatly controverted.—Some will have it to take its riſe from the four Quarters or Intervals of the Moon, between her Change of Phaſes, which being about ſeven Days diſtant, gave occaſion to the Diviſion. See MOON, QUARTER, &c.

Be this as it will, the Diviſion is certainly very antient.—The *Syrians*, *Egyptians*, and moſt of the Oriental Nations, appear to have uſed it from all Antiquity: tho it did not get Footing in the Weſt, till Chriſtianity brought it in: The *Romans* reckoning their Days, not by Sevenths, but by Ninths; and the antient *Greeks* by Decads, or Tenths.

Indeed, the *Jews* divided their Time by *Weeks*, but it was upon a different Principle from the other Eaſtern Nations. God himſelf having appointed 'em to work ſix Days, and to reſt the Seventh; in order to keep up the Senſe and Remembrance of the Creation, which being effected in ſix Days, he reſted the ſeventh. See SABBATH.

Some Authors will even have the uſe of *Weeks* among the other Eaſtern Nations, to have proceeded from the *Jews*; but with little Appearance of Probability.—'Tis with better Reaſon that others ſuppoſe the Uſe of *Weeks* among the Heathens of the Eaſt, to be a Remain of the Tradition of the Creation, which they had ſtill retain'd with divers others.

This is the Opinion of *Grotius*, *De Veritat. Relig. Chriſt.* Lib. I. who likewiſe proves, that not only thro'out the Eaſt, but even among the *Greeks*, *Italians*, *Celtæ*, *Sclavi*, and even the *Romans* themſelves, the Days were divided into *Weeks*; and that the ſeventh Day was in extraordinary Veneration.—This appears from *Joſeph. adv. Appionem* II. *Philo de Creatione*, *Clem. Alexand. Strom.* Lib. V.——Tho *Helmoldus*, Lib. I. cap. 84. *Philoſtratus*, Lib. III. cap. 13. *Dion.* Lib. XXXVIII. *Tibullus*, *Lucian*, *Homer*, *Callimachus*, *Suetonius*, *Herodotus*, &c. who mention the Cuſtom as very antient, ſuppoſe it to have been deriv'd from the *Egyptians*.

The *Days of the Week* were denominated by the *Jews* from the Order of their Succeſſion from the Sabbath.—— Thus, the Day next after the Sabbath they call'd the *firſt* of the Sabbath, the next the *ſecond* of the Sabbath, and ſo of the reſt; except the ſixth, which they call'd *Paraſceve* or Preparation of the Sabbath. See PARASCEVE.

The like Method is ſtill kept up by the Chriſtian *Arabs*, *Perſians*, *Ethiopians*, &c.—The antient Heathens denominated the Days of the *Week* from the ſeven Planets; which Names are ſtill generally retain'd among the Chriſtians of the Weſt.—Thus, the firſt Day was call'd *Sun-day*, *Dies Solis*; the ſecond *Mon-day*, *Dies Lunæ*, &c. a Practice the more natural on *Dion*'s Principle, who ſays, The *Egyptians* took the Diviſion of the *Week* it ſelf from the ſeven Planets.

In effect, the true Reaſon of theſe Denominations is founded in Aſtrology.—For the Aſtrologers, diſtributing the Government and Direction of all the Hours in the *Week* among the ſeven Planets, ♄ ♃ ♂ ☉ ♀ ☿ and ☽; ſo as that the Government of the firſt Hour of the firſt Day fell to *Saturn*, that of the ſecond to *Jupiter*, &c. They gave each Day the Name of the Planet which preſided over the firſt Hour thereof: and that, according to the Order ſpecify'd above; and which is included in the following Technical Verſe.

Poſt S I M S U M *ſequitur*, *pallida* L*una ſubeſt*.

Wherein, the Capital Letters, S I M S U M and L, are the initial Letters of the Planets.—Thus, the Order of the Planets in the *Week*, has little Relation to the Order in which they follow in the Heavens: The former being founded on an imaginary Power each Planet has in its turn on the firſt Hour of each Day. See PLANET, HOUR, HOUSE, ASCENDENT, HOROSCOPE, &c.

Dion. Caſſius gives another Reaſon of the Denomination, fetch'd from the celeſtial Harmony.—For it being obſerv'd that the Harmony of the Diateſſaron, which conſiſts in the Ratio of 4 to 3, is of great force and effect in Muſick; it was judg'd meet to proceed directly from *Saturn* to the *Sun*; becauſe there are three Planets between *Saturn* and the *Sun*, and four from the *Sun* to the *Moon*. See DIATESSARON, HARMONY *of the Spheres*, &c.

To

To find the Accompliſhment of *Daniel*'s Propheſy of the Meſſiah, the Deſtruction, Rebuilding, &c. of the Temple, *C.* IX. *v.* 24, &c. the Criticks generally agree to underſtand *Weeks of Years*, inſtead of *Weeks of Days*. See PROPHECY, YEAR, &c.

Paſſion WEEK, or *the Holy* WEEK, is the laſt *Week* in *Lent*, wherein the Church celebrates the Myſtery of our Saviour's Death and Paſſion. See LENT, and PASSION.

It is ſometimes alſo called *the great Week*.

Its Inſtitution is generally refer'd, both by Proteſtants and Papiſts, to the Times of the Apoſtles.—All the Days of that *Week* were held as Faſts: no Work was done on 'em; no Juſtice diſtributed; but the Priſoners were ordinarily ſet at liberty, &c. even Pleaſures otherwiſe allowed, were now prohibited.

The *Oſculum Charitatis* was now forborn; and divers Mortifications practis'd by all ſorts of People, and even the Emperors themſelves.

WEEK, or WIECK *of a Candle*, &c. the Cotton Match in a Candle, or Lamp. See CANDLE, LAMP, &c.

WEEPING. See TEARS.

WEFT, a kind of Web, or Thing woven; as a *Weft* or Treſs of Hair. See WEB, HAIR, TRESS, &c.

WEIF. See WAIF.

WEIGH, WEY, WAGA, a Weight of Cheeſe, Wool, &c. containing 256 Pounds Averdupois——of Corn, the *Weigh* contains 40 Buſhels; of Barley or Malt, ſix Quarters. In ſome Places, the Weigh of *Cheeſe* is 300 Pounds. See MEASURE.

——*Et decimam caſei ſui de Herting, præter unam peiſam quæ pertinet ad Eccleſiam de A.* Mon. Angl. where *peiſa* ſeems to be uſed for a *Weigh*.

Coke mentions eighty *Weighs* of Bay-Salt. See WAGA.

WEIGHER, an Officer in divers Cities, appointed to *weigh* the Commodities bought or ſold, in a publick Balance, &c.

Theſe *Weighers* are generally oblig'd by Oath to do Juſtice to both Parties; and to keep a Regiſter of the Things they weigh.—In *Amſterdam* there are twelve *Weighers* eſtabliſh'd into a kind of Office.

As it was formerly allow'd 'em to touch the Strings of the Balance in *weighing*, it was eaſy for 'em to favour either the Buyer or Seller, according as the one gave 'em more Money than the other.—To prevent which Abuſe, it was charg'd on 'em, by an Ordonnance of the Bourguemaiſters in 1719, not to touch the Balance in any manner whatever.

WEIGHING, the Act of examining a Body in the Balance, to find its *weight*. See BALANCE, and WEIGHT.

The Diſtillers in *London* weigh their Veſſels when full; and for half a Hogſhead, which is 31 Gallons and an half, allow 200 one quarter and 11 Pounds for the Caſk and Liquor.—For a Puncheon, they allow 600 one quarter and two Pounds: For a Canary Pipe 800 a half and 17 Pounds.

WEIGHING-*Chair*, a Machine contriv'd by *Sanctorius*, to determine the Quantity of Food taken at a Meal; and to warn the Feeder when he had eat his *Quantum*.

That ingenious Author having obſerved, with many others, that a great part of our Diſorders ariſe from the Exceſs in the Quantity of our Foods, more than in the Quality thereof; as alſo how much a fix'd Portion, once well adjuſted, would, if kept regularly, contribute to Health; bethought himſelf of an Expedient to that purpoſe.—The Reſult was the *Weighing-Chair*: which was a Chair fix'd at one Arm of a ſort of Balance, wherein a Perſon being ſeated at meat, as ſoon as he had eat his Allowance, the increaſe of *Weight* made his Seat preponderate: So that deſcending to the Ground, he left his Table, Victuals, and all out of reach. See PERSPIRATION.

WEIGHING *of the Air*. See WEIGHT *of Air*.

WEIGHING *Anchor*, in the Sea Language, is the drawing up the Anchor out of the Ground it had been caſt into; in order to ſet ſail, or quit a Port, Road, or the like. See ANCHOR.

The Anchor is *weigh'd* or recover'd, by means of the Capſtan. See CAPSTAN.

WEIGHT, *Gravity*, *Pondus*, in Phyſicks, a Quality in Natural Bodies, whereby they tend downwards, towards the Centre of the Earth. See BODY, DESCENT, EARTH, &c.

Or, *Weight* may be defined, in a leſs limited manner, to be a Power inherent in all Bodies, whereby they tend to ſome common Point, call'd the Centre of *Weight*, or Gravity; and that with a greater or leſs Velocity, as they are more or leſs *denſe*, or as the Medium they paſs thro' is more or leſs *rare*. See CENTRE, DENSITY, &c.

In the common Uſe of Language, *Weight* and *Gravity* are conſider'd as one and the ſame thing.—Some Authors, however, make a difference between 'em; and hold *Gravity* only to expreſs a *Niſus*, or endeavour to deſcend; but *Weight* an actual Deſcent.

But there is room for a better Diſtinction.—In effect, one may conceive Gravity to be the Quality, as inherent in the Body; and *Weight* the ſame Quality exerting it ſelf, either againſt an Obſtacle, or otherwiſe. See QUALITY, &c.

Hence *Weight* may be diſtinguiſh'd, like Gravity, into *Abſolute*, and *Specific*. See GRAVITY.

Sir *I. Newton* demonſtrates, that the *Weights* of all Bodies, at equal diſtances from the Centre of the Earth, are proportionable to the Quantity of Matter each contains.—Whence it follows, that the *Weights* of Bodies have not any dependance on their Forms, or Textures; and that all Spaces are not equally full of Matter. See VACUUM.

Hence alſo it follows, that the *Weight* of the ſame Body is different, on the Surface of different Parts of the Earth; by reaſon its Figure is not a Sphere, but a Spheroid. See SPHEROID.

The Law of this Difference, the ſame Author gives in the following Theorem.—'The Increaſe of *Weight*, as you 'proceed from the Equator to the Poles, is, nearly, as the 'Verſed Sine of double the Latitude; or, which amounts 'to the ſame, As the Square of the right Sine of the La-'titude.

Therefore, ſince the Latitude of *Paris* is 48° 50′, that of a Place under the Equator 00° 00′; and that of a Place under the Pole 90° 00′; and the Verſed Sines of the double Latitudes are 11334,00000 and 20000, the Radius being 10000; and the *Weight* at the Pole is to the *Weight* at the Equator as 230 to 229; and the Exceſs of *Weight* at the Pole to that at the Equator, as 1 to 229: The Exceſs of Gravity in the Latitude of *Paris*, to that under the Equator, will be as $1 \times \frac{11334}{20000}$ to 229, or 5667 to 2290000; and therefore, the whole *Weights* in thoſe Places, will be to each other as 2295667 to 2290000.

Hence, alſo, as the Lengths of Pendulums that perform their Vibrations in equal Times, are as their *Weights*; and the Length of a Pendulum which in the Latitude of *Paris* vibrates Seconds, is three *Paris* Feet and eight Lines: The Length of a Pendulum that vibrates Seconds under the Equator, will be ſhort of a Synchronous Pendulum at *Paris*, by one Line and an 87000th Part of a Line. *Phil. Nat. Princ. Math.* Lib. III. p. 382, &c. See PENDULUM.

A Body immerg'd in a Fluid ſpecifically lighter than it ſelf, loſes ſo much of its *Weight*, as is equal to the *Weight* of a Quantity of the Fluid of the ſame Bulk with it ſelf. See FLUID.

Hence, a Body loſes more of its *Weight* in a heavier than in a lighter Fluid; and therefore weighs more in a lighter than a heavier Fluid. See SPECIFIC *Gravity*.

To find the Weight *of any Quantity of a Fluid*, *e. g.* of the Wine contain'd in a Hogſhead.—Find the Bulk or Quantity of the Liquor by the Rules of Gauging. See GAUGING.

Suſpend a cubick Inch of Lead therein by a Horſe-hair; and by a Balance note the *Weight* loſt.—This will be the *Weight* of a cubic Inch of the Fluid.

Wherefore, ſince in a homogeneous Fluid the *Weight* is proportionable to the Bulk; the *Weight* of the Fluid will be found by the Rule of Three.—Thus, if the Capacity of the Hogſhead be 88 cubic Feet, and the cubic Foot of Wine 68 Pounds; the whole *Weight* of the Wine will be 88 : 68 :: 1 : 5984.

The *Weight* of a cubic Foot of Water, has been determin'd by ſeveral; but as in different Springs, &c. the *Weight* of the Water is different, and there is even a difference in the ſame Water at different times; 'tis no wonder the Obſervations of the ſeveral Authors ſhould be found very different.—Sir *Sam. Morland*, by repeated Experiments, found a cubic Inch of Water to weigh 70 Pounds 2 Ounces. See WATER.

WEIGHT, *Pondus*, in Mechanicks, is any thing to be rais'd, ſuſtain'd, or mov'd by a Machine; or any thing that in any manner reſiſts the Motion to be produc'd. See MOTION, &c.

In all Machines, there is a natural Ratio between the *Weight* and the moving Power.—If the *Weight* be increaſed, the Power muſt be ſo too; that is, the Wheels, &c. are to be multiplied, and ſo the Time increas'd, or the Velocity diminiſh'd. See POWER, and MACHINE.

The Centre of Gravity F, (Tab. *Mechanicks*, Fig. 55.) *of a Body* I H, *together with the* Weight *of a Body*, *being given*; *to determine the Point* M, *in which*, *lying on an horizontal Plane*, *a given* Weight G, *hung in* L, *cannot remove the Body* I H *out of its horizontal Situation*.

Conceive a *Weight* hung in the Centre of Gravity F, equal to the *Weight* of the whole Body I H, and find the common Centre of Gravity M, of that and the given *Weight* G. If the Point M be laid on the horizontal Plane; the *Weight* G will not be able to move the Body H I out of its Place.

Suppoſe, *e. g.* F the Centre of Gravity of the Staff, which is diſtant from its Extremity by the Space I F 20 Inches; the Bucket of Water to weigh 24 Pounds, and the *Weight* of the Staff to be 2 L F = 18 Inches: We ſhall find L M = L F. F. (G + F) = 18. 2 : 22 :: 18 : 11 = $16\frac{4}{11}$; ſo that 'tis no wonder the Bucket hung on the Staff I H, laid on the Table, does not fall.

The Centre of Gravity C, (Fig. 56.) *of a Body* A B, *together with its* Weight G, *being given; to determine the Points* L *and* M, *wherein Props* M, N, *are to be placed, that each may bear any given Proportion of the* Weight.

In the horizontal Line A E, paſſing thro' the Centre of Gravity C, aſſume the right Lines M C and C L in the given Ratio.—Props, then, M, N, placed in theſe Points, will be preſs'd in the given Ratio.

Hence, if in the Points M, L, in lieu of Props, you place the Shoulders, or Arms of Porters, *&c.* They will be able to bear the Burden alike; if their Shares be proportion'd to their Strengths.—Thus we have a way of diſtributing a Burden in any given Ratio.

WEIGHT, in Commerce, *&c.* is a Body of a known *Weight*, appointed to be put in the Balance againſt other Bodies, whoſe *Weight* is requir'd. See WEIGHING, BALANCE, *&c.*

Theſe *Weights* are uſually of Lead, Iron, or Braſs; tho in divers Parts of the *Eaſt-Indies* they are common Flints, and in ſome Places a ſort of little Beans.

The Security of Commerce depending, in good meaſure, on the Juſtneſs of theſe *Weights*; there is ſcarce any Nation but has taken proper Meaſures to prevent the Falſification thereof.—The ſureſt Means are the ſtamping, or marking 'em by proper Officers, from ſome Original or Standard, depoſited where recourſe may be had to 'em.

This expedient is very antient; and many Authors are of Opinion, that what among the *Jews* was called *Shekel of the Sanctuary*, was not any particular Kind of *Weight*, different from the common one; but a Standard or original *Weight*, preſerv'd by the Prieſts in the Sanctuary, See SHEKEL, and SANCTUARY.

Thus, alſo, in *England*, the Standard of *Weights* is kept in the Exchequer by a particular Officer, call'd the *Clerk* or *Comptroller of the Market*.—In *France*, the Standard *Weight* is kept under ſeveral Keys in the Cabinet of the *Cour des Monnoyes*. See STANDARD.

Moſt Nations, wherein there is any thing of Commerce flouriſhing, have their particular *Weights*; and even ſometimes different *Weights* in the different Provinces, and for the different Kinds of Commodities.

This Diverſity of *Weights*, makes one of the moſt perplexing Articles in Commerce; but it is irremediable.—The reducing the *Weights* of different Nations to one, is not only impracticable; but even the Reduction of thoſe of the ſame Nation: Witneſs thoſe vain Attempts made for the reducing the *Weights* in *France*, by ſo many of their Kings, *Charlemaign*, *Philip* the Long, *Louis* XI. *Francis* I. *Henry* II. *Charles* IX. *Henry* III. *Louis* XIV.

Weights may be diſtinguiſh'd into *Antient* and *Modern*, *Foreign*, and *Domeſtic*.

Modern WEIGHTS.

Weights *uſed in the ſeveral Parts of* Europe *and the* Levant.

Engliſh WEIGHTS.——By the XXVIIth Chapter of *Magna Charta*, the *Weights* are to be the ſame all over *England*; but for different Commodities there are two different ſorts, *viz. Troy Weight*, and *Averdupois Weight*.

The Origin from which they are both rais'd, is the Grain of Wheat, gather'd in the middle of the Ear. See GRAIN.

In *Troy Weight*, 24 of theſe *Grains* make a *Penny-weight* Sterling; 20 Penny-weight make an *Ounce*; and 12 Ounces a *Pound*. See OUNCE, POUND, *&c.*

By this *Weight* we weigh Gold, Silver, Jewels, Grains, and Liquors. See TROY.

The Apothecaries alſo uſe the Troy Pound, Ounce, and Grain; but they differ from the reſt, in the intermediate Diviſions.——They divide the Ounce into 8 *Drachms*; the Drachm into 3 *Scruples*; and the Scruple into 20 *Grains*. See DRACHM, SCRUPLE, *&c.*

In *Averdupois Weight*, the *Pound* contains 16 *Ounces*; but the Ounce is leſs by near $\frac{1}{12}$ than the Troy Ounce; this latter containing 490 Grains, and the former only 448.—The Ounce contains 16 *Drachms*—80 Ounces Averdupois, are only equal to 73 Ounces Troy; and 17 Pounds Troy, equal to 14 Pounds Averdupois. See POUND.

By Averdupois *Weight*, are weigh'd Mercery and Grocery Wares, baſe Metals, Wool, Tallow, Hemp, Drugs, Bread, *&c.* See AVERDUPOIS.

Table of Troy Weight, *as uſed by the* Goldſmiths, *&c.*

Grains.			
24	Penny-weight.		
480	20	Ounce.	
5760	240	12	Pound.

Table of Troy Weight, *as uſed by the* Apothecaries.

Grains.			
20	Scruple.		
60	3	Drachm.	
480	24	8	Ounce.
5700	288	96	12 Pound.

Table of Averdupois Weight.

Scruple.				
3	Drachm.			
24	8	Ounce.		
384	128	16	Pound.	
43008	14336	1792	112	Quintal, or Hundred.
860160	286720	35840	2240	20 Tun.

The Moneyers, Jewellers, *&c.* have a particular Claſs of *Weights* for Gold and Precious Stones, *viz. Caract*, *Penny-weight*, and *Grain*; and for Silver the *Penny-weight* and *Grain*. See CARACT; ſee alſo GOLD, and SILVER.

The Moneyers have alſo a peculiar Subdiviſion of the *Grain* Troy: Thus;

The { *Grain*, *Mite*, *Droit*, *Perit* } into { 20 *Mites*, 24 *Droites*, 20 *Perits*, 24 *Blanks*. }

The Dealers in Wool have likewiſe a particular Set of *Weights*, *viz.* the *Sack*, *Weigh*, *Tod*, *Stone*, and *Clove*. See WEIGH, *&c.*

The Proportion of theſe, ſee under the Article WOOL.

French WEIGHTS.——Their common or *Paris Pound*, is 16 *Ounces*; which they divide two ways: The firſt Diviſion is into two *Marcs*, the Marc into eight *Ounces*; the Ounce into eight *Gros*; the Gros into three *Penny-weights*; the Penny-weight into 24 *Grains*; the Grain equivalent to a Grain of Wheat.—The ſecond Diviſion of the Pound, is into two *Half-pounds*; the Half-pound into two *Quarters*; the Quarter into two *Half-quarters*; the Half-quarter into two *Ounces*; and the Ounce into two *Half-ounces*.

The *Weights* of the firſt Diviſion are uſed to weigh Gold, Silver, and the richer Commodities: and the *Weights* of the ſecond Diviſion for Commodities of leſs Value.

Grains.					
24	Penny-weight.				
72	3	Gros.			
576	24	8	Ounce.		
1008	192	64	8	Marc.	
9216	384	128	16	2	Pound.

Half-ounce.						
2	Ounce.					
4	2	Half-quart.	Pound.			
8	4	2	Quarter	Pound.		
16	8	4	2	Half	Pound.	
32	16	8	4	2	Pound.	
3200	1600	800	400	200	100	Quintal.

But the Pound is not the ſame throughout *France*.—At *Lyons*, *e. g.* the City Pound is only 14 Ounces: So that 100 *Lyons* Pounds make only 88 *Paris* Pounds.—But beſide the City Pound, they have another at *Lyons* for Silk, containing 15 Ounces.——At *Tholouſe*, and throughout the *Upper Languedoc*, the Pound is 13 Ounces and $\frac{1}{2}$ of *Paris Weight*.—At *Marſeilles*, and throughout *Provence*, the Pound is 13 Ounces of *Paris Weight*.—At *Rouen*, beſide the common *Paris* Pound and Marc, they have the *Weight* of the *Vicomte*; which is 16 Ounces and $\frac{1}{2}$ and $\frac{1}{8}$, to the *Paris* Pound.

The *Weights* enumerated under the two Articles of *Engliſh* and *French Weights*, are the ſame that are uſed thro'out the greateſt Part of *Europe*; only under ſomewhat different Names, Diviſions, and Proportions. See POUND, GROS, MARC, PENNY-WEIGHT, *&c.*

Particular Nations, however, have alſo certain *Weights* peculiar to themſelves: Thus, *Spain* has its *Arobas*, containing 25 *Spaniſh* Pounds, or $\frac{1}{4}$ of the common Quintal: Its *Quintal Macho*, containing 150 Pounds, or $1\frac{1}{2}$ common Quintal, or 6 *Arobas*: Its *Adarme*, containing $\frac{1}{176}$ of its Ounce.—And for Gold, it has its *Caſtillan*, or $\frac{1}{100}$ of a Pound.—Its *Tomin*, containing 12 Grains, or $\frac{1}{8}$ of a Caſtillan.—The ſame are in uſe in the *Spaniſh Weſt-Indies*.

Portugal

Portugal has its *Arata*, or *Aroba*, containing 32 *Lisbon* Pounds: Its *Faratelle*, containing two *Lisbon* Pounds: Its *Rottoli*, containing about 12 Pounds. And for Gold, its *Chego*, containing four *Carats*.—The ſame are uſed in the *Portugueze Eaſt-Indies*.

Italy, and particularly *Venice*, have their *Migliaro*, containing four Mirzes; the *Mirze* containing 30 *Venice* Pounds: The *Saggio*, containing a ſixth Part of an Ounce.——*Genoa* has five Kinds of *Weights*, *viz.* *Large Weights*, whereby all Merchandizes are weigh'd at the Cuſtom-houſe: *Caſh-Weights*, for Piaſtres and other Species: The *Cantara*, or Quintal, for the coarſeſt Commodities: The *Large* Balance, for raw Silks; and the *Small* Balance for the finer Commodities.—*Sicily* has its *Rottolo*, 32 and a half Pounds of *Meſſina*.

Germany, *Flanders*, *Holland*, the *Hans Towns*, *Sweden*, *Denmark*, *Poland*, &c. have their *Schippondt*, which at *Antwerp* and *Hamburgh* is 300 Pounds, at *Lubeck* 320; and at *Coningsberg* 400 Pounds.—In *Sweden*, the *Schippondt* for Copper is 320 Pounds; and the *Schippondt* for Proviſions 400 Pounds. At *Riga* and *Revel*, the *Schippondt* is 400 Pounds; and at *Dantzic* 340 Pounds: In *Norway* 300 Pounds: At *Amſterdam* 300; containing 20 *Lyſpondts*, each weighing 15 Pounds.

In *Muſcovy*, they weigh their large Commodities by the *Bercheroct*, or *Berkewits*, containing 400 of their Pounds.—They have alſo the *Poet*, or *Pode*, containing 40 Pounds, or $\frac{1}{10}$ of the *Bercheroct*.

In *Turky*, at *Smirna*, &c. they uſe the *Batman*, or *Battemant*, containing ſix Ocquos; the *Ocquo* weighing 3 Pounds $\frac{4}{5}$ *Engliſh*.—They have another *Batman*, much leſs, conſiſting as the former of ſix Ocquos, but the Ocquo only containing 15 Ounces *Engliſh*: 44 Ocquos of the firſt Kind, make the *Turkiſh Quintal*.—At *Cairo*, *Alexandretta*, *Aleppo*, and *Alexandria*, they uſe the *Rotte*, *Rotton*, or *Rottoli*. The Rotoli at *Cairo*, and other Parts of *Egypt*, is 144 Drachms; being ſomewhat over an *Engliſh* Pound.—At *Aleppo* there are three ſorts of Rottos; the firſt 720 Drachms, making about ſeven Pounds *Engliſh*, and ſerving to weigh Cottons, Galls, and other large Commodities: The ſecond is 624 Drachms, uſed for all Silks but white ones, which are weigh'd by the third Rotte of 700 Drachms. At *Seyda* the Rotto is 600 Drachms.

The other Ports of the *Levant*, not named here, uſe ſome of theſe *Weights*; particularly the *Occo*, or *Ocqua*, the *Rotoli* and *Rotte*.

To ſhew the Proportion of theſe ſeveral *Weights* to one another, we ſhall add a Reduction of the divers *Pounds* uſed throughout *Europe*, by which the other *Weights* are eſtimated, to one Standard Pound, *viz.* the Pound of *Amſterdam*, *Paris*, and *Bourdeaux*; as calculated with great Accuracy by Monſieur *Ricard*, and publiſh'd in the new Edition of his excellent *Traite de Commerce*, in 1722.

Alphabetical Table of the Proportion of the Weights *of the chief Cities in* Europe, *to thoſe of* Amſterdam.

An hundred Pounds of *Amſterdam*, are equal to

108 Pounds of *Alicant*.
105 *l.* of *Antwerp*.
120 *l.* of *Archangel*, or 3 *Poedes*.
105 *l.* of *Arſchot*.
120 *l.* of *Avignon*.
98 *l.* of *Baſil* in *Switzerland*.
100 *l.* of *Bayonne* in *France*.
166 *l.* of *Bergamo*.
97 *l.* of *Berg ap Som*.
95 *l.* $\frac{1}{4}$ of *Bergen* in *Norway*.
111 *l.* of *Bern*.
100 *l.* of *Beſancon*.
100 *l.* of *Bilboa*.
105 *l.* of *Bois le duc*.
151 *l.* of *Boulogne*.
100 *l.* of *Bourdeaux*.
104 *l.* of *Bourg en Breſſe*.
103 *l.* of *Bremen*.
125 *l.* of *Breſlaw*.
105 *l.* of *Bruges*.
105 *l.* of *Bruſſels*.
105 *l.* of *Cadiz*.
105 *l.* of *Cologne*.
125 *l.* of *Coningsberg*.
107 *l.* and $\frac{1}{2}$ of *Copenhagen*.
87 Rottes of *Conſtantinople*.
113 *l.* and $\frac{1}{2}$ of *Dantzic*.
100 *l.* of *Dort*.
97 *l.* of *Dublin*.
97 *l.* of *Edenburgh*.
143 *l.* of *Florence*.
98 *l.* of *Francfort*, on the *Maine*.
105 *l.* of *Ghent*.
89 *l.* of *Geneva*.
163 *l.* of *Genoa*, *Caſh-Weight*.
102 *l.* of *Hamburg*.
106 *l.* of *Leiden*.
105 *l.* of *Leipſic*.
105 *l.* and $\frac{1}{2}$ of *Liege*.
114 *l.* of *Liſle*.
116 *l.* of *Lyons*, *City-Weight*.
106 *l.* and $\frac{1}{2}$ of *Lisbon*.
143 *l.* of *Leghorn*.
109 *l.* of *London*, *Averdupois-Weight*.
105 *l.* of *Lovaine*.
105 *l.* of *Lubec*.
141 $\frac{1}{2}$ *l.* of *Lucca*, *Light-Weight*.
114 *l.* of *Madrid*.
105 *l.* of *Malines*.
123 *l.* and $\frac{1}{2}$ of *Marſeilles*.
154 *l.* of *Meſſina*, *Light-Weight*.
168 *l.* of *Milan*.
120 *l.* of *Montpellier*.
125 Bercheroct's of *Muſcovy*.
100 *l.* of *Nantes*.
106 *l.* of *Nancy*.
169 *l.* of *Naples*.
98 *l.* of *Nuremberg*.
100 *l.* of *Paris*.
112 *l.* and $\frac{1}{2}$ of *Revel*.
109 *l.* of *Riga*.
100 *l.* of *Rochel*.
146 *l.* of *Rome*.
100 *l.* of *Rotterdam*.
96 *l.* of *Rouen*, *Vicounty-Weight*.
100 *l.* of *S. Malo*.
100 *l.* of *S. Sebaſtian*.

An hundred Pounds of *Amſterdam* is equal to

158 *l.* and $\frac{1}{2}$ of *Saragoſa*.
106 *l.* of *Seville*.
114 *l.* of *Smirna*.
110 *l.* of *Stetin*.
81 *l.* of *Stockholm*.
118 *l.* of *Tholouſe* and *Upper Languedoc*.
151 *l.* of *Turin*.
158 *l.* and $\frac{1}{2}$ of *Valencia*.
182 *l.* of *Venice*, *Small Weight*.

WEIGHTS *uſed in the ſeveral Parts of the* Eaſt-Indies, China, Perſia, *&c.*

The *Chineſe* WEIGHTS, are—The *Pic* for large Commodities; it is divided into 100 Catis, or Cattis, tho ſome ſay into 125: the *Cati* into 16 Taels; each *Tael* equivalent to $1\frac{1}{3}$ of an Ounce *Engliſh*, or the *Weight* of one Rial and $\frac{1}{12}$, and containing 10 Mas, or Maſſes; and each *Mas* 10 *Condorins*. So that the *Chineſe* Pic amounts to 137 Pounds *Eng.* Averdupois, and the Cati to 1 Pound 8 Ounces.——The *Picol*, for Silk, containing 66 Catis and $\frac{3}{4}$: The *Bahar*, *Bakaire*, or *Barre*, containing 300 Catis.

Tunquin has all the ſame *Weights*, Meaſures, *&c.* as *China*.

Japan has only one *Weight*, *viz.* the *Catti*; which, however, is different from that of *China*, as containing 20 Taels.—At *Surat*, *Agra*, and throughout the States of the Great *Mogul*, they uſe the *Man*, or *Mein*, whereof they have two Kinds; the *King's Man*, or *King's Weight*; and the *Man* ſimply: The firſt uſed for the weighing of common Proviſions, containing 40 *Sers*, or *Serres*; and each Ser a juſt *Paris* Pound. Tho *Tavernier* will have the *Ser* near a Seventh leſs than the *Paris* Pound.——The common *Man*, uſed in the weighing of Merchandize, conſiſts likewiſe of 40 Serres, but each Serre is only eſtimated at 12 *Paris* Ounces, or $\frac{3}{4}$ of the other Ser.

The *Man* may be look'd on as the common *Weight* of the *Eaſt Indies*, tho under ſome difference of Name, or rather of Pronunciation; it being call'd *Mao* at *Cambaya*, and in other Places *Mein*.—The *Ser* is properly the *Indian* Pound, and of univerſal uſe: The like may be ſaid of the *Bahar*, *Tael*, and *Catti* abovemention'd.

The *Weights* of *Siam*, are the *Pic*, containing 2 *Schans* or *Catis*; but the *Siameſe* Cati is only half the *Japoneſe*, the latter containing 20 Taels and the former only 10: Tho ſome make the *Chineſe* Cati only 16 Taels, and the *Siameſe* 8.—The *Tael* contains 4 *Baats* or *Ticals*; each about a *Paris* Ounce: The *Baat* 4 *Selings*, or Mayons: The *Mayon* 2 Fouangs: The *Fouang* 4 Payes: The *Paye* 2 Clams: The *Sompaye*, half a Fouang.

It is to be obſerved, that theſe are the Names of their Coins, as well as *Weights*; Silver and Gold being, there, Commodities, ſold, as other things, by their *Weights*. See COIN, *&c.*

In the Iſle of *Java*, and particularly at *Bantam*, they uſe the *Gantan*, which amounts to near 3 *Dutch* Pounds.——In *Golconda*, at *Viſapour* and *Goa*, they have the *Furatelle*; containing 1 Pound 14 Ounces *Engliſh*: The *Margalis*, or *Mangelin*, for weighing Diamonds and Precious Stones; weighing at *Goa* 5 Grains, at *Golconda*, &c. $5\frac{1}{2}$ Grains.—They have alſo the *Rotolo*, containing $14\frac{1}{2}$ Ounces *Engliſh*: The *Metricol*, containing the ſixth Part of an Ounce: The *Val*, for Piaſtres and Ducats; containing the 73d Part of a Real.

In *Perſia*, they uſe two Kinds of *Batmans* or *Mans*; the one called *Cahi* or *Cheray*, which is the King's *Weight*, and the other *Batman of Tauris*, from the Name of one of the chief Cities of *Perſia*.—The firſt weighs, according to *Tavernier*, 13 Pounds 10 Ounces *Engliſh*; the ſecond, 6 Pound $\frac{1}{4}$. According to Sir *J. Chardin*, the *King's Batman* is 13 Pounds 14 Ounces, and the *Batman of Tauris* 6 Pounds $\frac{1}{2}$.—Its Diviſions are, the *Ratel*, or a 16th; the *Derhem*, or Drachm, which is the 50th; the *Meſcal*, which is half the Derhem; the *Dung*, which is the 6th Part of the Meſchal; being equivalent to 6 Carat-Grains; and laſtly the *Grain*, which is the 4th Part of the Dung.—They have alſo the *Vakie*, which exceeds, a little, our Ounce: The *Sah-cheray*, equal to the 1170th Part of the Derhem: And the *Toman*, uſed to weigh out large Payments of Money, without telling: its *Weight* is that of 50 *Abaſſis*. See TOMAN.

African and American WEIGHTS.

We have little to ſay as to the *Weights* of *America*: The ſeveral *European* Colonies there, making uſe of the *Weights* of the States or Kingdoms of *Europe* they belong to. For as to the *Aroue* of *Peru*, which weighs 27 Pounds, 'tis evidently no other than the *Spaniſh Aroba*, with a little difference in the Name.

As to the *Weights* of *Africa*; there are few Places have any, except *Egypt* and the Coaſts of *Africa*, whoſe *Weights* are enumerated among thoſe of the Ports of the *Levant*, &c.

As to the Coaſts beyond *Cape Verde*, viz. *Guinea*, *Congo*, to *Soffola*, *Moſambica*, &c. they have no *Weights*; only,

the *Engliſh*, *French*, *Dutch*, *Portugueze* and *Danes*, have introduc'd their own *Weights* in their reſpective Settlements.

The Iſle of *Madagaſcar*, indeed, has its particular *Weights*; but it has none that exceed the Drachm, nor are they us'd for any thing but Gold and Silver.——Other Commodities they never weigh.

Antient WEIGHTS.

Jewiſh WEIGHTS *reduc'd to* Engliſh *Troy* Weights.

| | | |

Torbay, ebbs and flows very often every Hour; tho ſomewhat oftener in Winter than Summer. Dr. *Oliver* obſerves, its Flux and Reflux ſometimes return every Minute, tho ſometimes not above 26 or 20 times an Hour. *Philoſoph. Tranſact.* N° 104.

WELL-*Water* is not ſo wholeſom or good for moſt Uſes, as *River-Water*. See WATER.

WELL-*Hole*, in Building, is the Hole left in a Floor for the Stairs to come up thro'. See STAIRS.

WELL, in the Military Art, is a Depth which the Miner ſinks into the Ground, to prepare a Mine, or find out and diſappoint the Enemy's Mine. See MINE, SAP, *&c.*

WEN, a Tumor, or Excreſcence growing on divers Parts of the Body; conſiſting of a Cyſtis, or Bag, fill'd with ſome peculiar Matter. See TUMOR, and EXCRESCENCE.

Of this, Phyſicians uſually reckon three Kinds, according to the Matter it is form'd of, *i. e.* the Humour contain'd therein.—If ſoft, reſembling a Pulp, the *Wen* is call'd *Atheroma*; if Honey, *Meliceris*; and if Suet, *Steatoma*.

M. *Littre*, in *Mem. de l'Acad. des Sciences*, adds a fourth Kind, which he calls *Lipoma*; by reaſon, the *Wen* is form'd of ſoft Fat.

They are all, uſually, of the like Colour with the reſt of the Body; begin from very little, and grow gradually. They are not dangerous, but frequently laſt a long while. Sometimes they degenerate into Abſceſſes.

The Cure is, to cut off the Cyſtis by the Root, which is always narrow.

In the *Philoſophical Tranſactions*, we have an Account of a very extraordinary *Wen*, on the lower Jaw of one *Alex. Palmer* of *Keith* in *Scotland*.—It was 27 Years a-growing: at length, its enormous Bulk, and the Pain it gave him, together with its emaciating him exceedingly, determin'd him to have it cut off. Dr. *Bowers* aſſures us, its Baſis was five Inches over, which ſhould ſeem too large for the whole Face, and that with Blood and all, it weigh'd one or two and twenty Pounds. Its form was Spheroidal; and when meaſur'd, was 34 Inches about, one way, and 28 another. It ſeem'd to be an *Atheroma*; being a glandulous Subſtance, with ſeveral big Blood-Veſſels in it; and Hair growing on it. It was as ſenſible as any other Part.—The Hemorrhage, after cutting it off, was ſtop'd by the Vitriolic Pouder, and the ordinary Dreſſing being us'd, a Cure was compleated in ſix Weeks time.

WERE, or WERRE, in our old Law-Books, ſignifies as much as *Æſtimatio Capitis*, or *Pretium hominis*; that is, ſo much as was antiently paid for killing a Man. When ſuch Crimes were puniſh'd with pecuniary Mulcts, not Death; the Price was ſet on every Man's Head, according to his Condition and Quality.——Were *ſuum*, id eſt, *pretium ſuæ redemptionis*, his Ranſom. See RANSOM.

WERELADA, from the Saxon *Were* and *ladian*, to purge; was thus: Where a Man was ſlain, the Price at which he was valu'd was to be paid to his Relations. For in the Time of the *Saxons*, the killing a Man was not puniſh'd by Death, but by a pecuniary Mulct, call'd *Were*. See WERE.

WERGILD, WERGELD, in our antient Cuſtoms, *pretium ſeu Valor hominis occiſi*, *homicidii pretium*; which was paid partly to the King for the Loſs of his Subject, partly to the Lord whoſe Vaſſal he was, and partly to the next of kin.——*Quædam Crimina emendari non poſſunt*; *quæ ſunt* Husbrech, Bernet, & Openchef, & Everemord, & Latordfith, & *infractio pacis Eccleſiæ*, *vel per Manus Regis per homicidium*, L. L. *Hen.* I. c. 13.—Where are likewiſe enumerated the Crimes that might be redeemed *per Weram*. ——*De unoquoque ſure per totam ſcotiam eſt* Wergelt 30 *Vaccæ & una Juvenca*, *ſive fuerit liber homo ſive ſervus*.

The *Wergeld* of an Archbiſhop and of an Earl, was 15000 Thrimſa's. Selden's *Titles of Honour*.

If the Party deny'd the Fact, he was to purge himſelf by the Oaths of ſeveral Perſons, according to his Degree and Quality.—If the Guilt amounted to four Pounds, he was to have 18 Jurors on his Father's ſide, and four on his Mother's: If to 14 Pounds, he was to have ſixty Jurors. And this was called *Werelada*.—*Homicidium* Were *ſolvatur aut* Werelada *negetur*.

WEST, *Occidens*, *Occaſus*, in Coſmography, one of the Cardinal Points of the Horizon; diametrically oppoſite to the Eaſt. See CARDINAL *Point*, EAST, *&c.*

Weſt is, ſtrictly defined, the Interſection of the Prime Vertical with the Horizon, on that ſide the Sun ſets in. See SETTING.

To draw a true Weſt-*Line*. See MERIDIAN.

In Aſtronomy, *Weſt* is chiefly uſed for the Places in or towards which, the Sun or Stars ſink under the Horizon.—— Thus, we ſay, the *Sun*, *Mars*, &c. are in the *Weſt*.

The Point the Sun ſets in, when in the Equator, is particularly call'd the *Equinoctial Weſt*, or *Point of true Weſt*. See EQUINOCTIAL.

In Geography, *Weſt* and *Weſtern* are applied to certain Countries, *&c.* ſituate towards the Point of Sun-ſetting, with reſpect to certain others.—Thus, the Empire of *Rome*, antiently, and of *Germany*, at preſent, are called the Empire of the *Weſt*, or *Weſtern* Empire; in oppoſition to that of *Conſtantinople*, which is call'd the *Empire of the Eaſt*. See EMPIRE.

The *Latin* or *Roman* Church, is called the *Weſtern Church*; in oppoſition to the *Greek* Church.—The *French*, *Spaniards*, *Italians*, &c. are called *Weſtern Nations*, in reſpect to the *Aſiaticks*; and *America* the *Weſt-Indies*, in reſpect of the *Eaſt-Indies*.

WEST-*Wind*, is alſo called *Zephyrus*, and *Favonius*. See WIND.

WEST-*Saxonlage*, or WEST-*Saxonlaga*, the Law of the *Weſt-Saxons*. See LAW, MERCHENLAGE, *&c.*

WESTPHALIA *Ham*. See HAM.

WET-*Glover*, a Dreſſer of the Skins of Sheep, Lambs, Goats, *&c.* which are ſlender, thin, and gentle. See GLOVE, SKIN, *&c.*

WHALE, in Aſtronomy, one of the Conſtellations. See CETUS.

WHALE-*Bone*, a Commodity got from the *Whale*, uſed as Stiffening in Stays, Fans, Busks, Skreens, *&c.*

There are two Kinds of *Whales*; the one retaining that Name, the other called *Cachalot*. Their Difference conſiſts in this, that the Cachalot has Teeth, and the *Whale*, properly ſo call'd, inſtead of Teeth, has a kind of Whiſkers in his Throat, about a Span broad and 15 Foot long, ending in a kind of Fringe, much like Swines Briſtles.

They are ſet in the Palate, and do in ſome meaſure the Office of Teeth.—Theſe Whiſkers, ſplit and faſhion'd, are what we call *Whalebone*.—The Pizzle or Genital Member of the Animal ſerves likewiſe for the ſame Purpoſe.

WHALE-*Fiſhery*. See FISHERY.

WHARF, a Space on the Banks of a Haven, Creek, or Hithe; provided for the convenient loading and unloading of Veſſels upon. See HAVEN, HITHE, *&c.*

The Fee paid for the Landing of Goods on a *Wharf*, or for Shipping them off, is call'd *Wharfage*.—And the Perſon who has the Overſight and Direction of the *Wharf*, receives Wharfage, *&c.* is called the *Wharfinger*. See KEY.

WHARLS *of Flowers*, among Herbaliſts, are Rows of leſſer Flowers, ſet at certain Diſtances about the main Stalk or Spike. See FLOWER.

WHEAT. See CORN.

WHEEL, *Rota*, in Mechanicks, a ſimple Machine, conſiſting of a round piece of Wood, Metal, or other Matter; turning round on an Axis. See AXIS.

The *Wheel* is one of the principal Mechanick Powers.— It has place in moſt Engines; and, in effect, 'tis of an Aſſemblage of *Wheels*, that moſt of our chief Engines are compoſed.——Witneſs Clocks, Mills, *&c.* See CLOCK, MILL, *&c.*

Its form is various, according to the Motions it is to have; and the Uſe it is to anſwer.—By this it is diſtinguiſh'd into *Simple* and *Dented*.

Simple Wheels, are thoſe whoſe Circumference and Axis is uniform, and which are uſed ſingly, and not combined.— Such are *Wheels* of Carriages; which are to have a double Motion: the one circular, about their Axis; the other rectilinear; by which they advance along the Road, *&c.* which two Motions they appear to have; tho, in effect, they have but one: It being impoſſible the ſame Thing ſhould move or be agitated two different ways at the ſame time.

This one is a ſpiral Motion; as is eaſily ſeen by fixing a piece of Chalk on the Face of a *Wheel*, ſo as it may draw a Line on a Wall, as the *Wheel* moves.—The Line it here traces is a juſt Spiral, and ſtill the more Curve as the Chalk is fix'd nearer the Axis.

For a very nice Phænomenon in the Motion of theſe *Wheels*, ſee *Ariſtotle*'s WHEEL.

We ſhall add, that in *Wheels* of this kind, the Height ſhould always be proportion'd to the Stature of the Animal that draws or moves them.—The Rule is, that the Load and the Axis of the *Wheels*, be of the ſame Height with the Force that moves them: Otherwiſe, the Axis being higher than the Beaſt, part of the Load will lie on him; or, if it be lower, he pulls to diſadvantage, and muſt exert a greater Force. Tho, *Stevinus*, Dr. *Wallis*, &c. ſhew, that to draw a Vehicle, *&c.* over waſte, uneven Places, it were beſt to fix the Traces to the *Wheels* lower than the Horſe's Breaſt.

The Power of theſe *Wheels* reſults from the Difference of the Radii of the Axis, and Circumference.—The Canon is this: As the Radius of the Axis is to that of the Circumference, So is any Power, to the *Weight* it can ſuſtain hereby.

This is alſo the Rule in the Axis *in Peritrochio*; and, in effect, the *Wheel*, and the Axis *in Peritrochio*, are the ſame thing; only, in Theory it is uſually call'd by the former Name, and in Practice by the latter. See AXIS *in Peritrochio*.

Dented Wheels, are thoſe whoſe Circumference, or elſe Axis, is cut into Teeth, by which they are capable of moving and acting on one another, and of being combined together. See DENTED, TEETH, *&c.* The

The uſe of theſe is very conſpicuous in Clocks, Jacks, &c. See CLOCKWORK, WATCHWORK, &c.

The Power of the *Dented Wheel* depends on the ſame Principle as that of the *Simple* one.—'Tis only that to the ſimple Axis *in Peritrochio*, which a compound Lever is to a ſimple Lever. See LEVER.

Its Doctrine is compriz'd in the following Canon, *viz.*—*The Ratio of the Power to the Weight*, in order for that to be equivalent to this, *muſt be a Ratio compounded of the Ratios of the Diameter of the Axis of the laſt* Wheel, *to the Diameter of the firſt; and of the Ratio of the Revolutions of the laſt* Wheel *to thoſe of the firſt, in the ſame time.*—But this Doctrine will deſerve a more particular Explication.

1°, Then, If the Weight be multiply'd into the Product of the Radii of the Axis, and that Product be divided by the Product of the Radii of the *Wheels*, the Power requir'd to ſuſtain the Weight will be found.——Suppoſe, *e. g.* the Weight A, (Tab. *Mechanicks*, Fig. 61.) = 6000 Pounds, BC = 6 Inches, CD = 34 Inches, EF = 5 Inches, EG = 35 Inches, HI = 4 Inches, HK = 27 Inches. Then will BC, EF, HI = 120; and CD, EG, IK = 32130.—Hence the Power requir'd to ſuſtain the Weight, will be the Quotient of 6000—120 divided by 32139, *viz.* $22\frac{1}{3}$ of a Pound, very nearly; a ſmall Addition to which will raiſe it.

2°, If the Power be multiply'd into the Product of the Radii of the *Wheels*, and the *Factum* be divided by the Product of the Radii of the Axes; the Quotient will be the Weight which the Power is able to ſuſtain.—Thus, if the Power be $22\frac{1}{3}$ of Pound, the Weight will be 6000 Pound.

3°, *A Power and a Weight being given, to find the Number of* Wheels, *and in each* Wheel *the Ratio of the Radius of the Axis to the Radius of the* Wheel: *ſo, as that the Power being applied perpendicularly to the Periphery of the laſt* Wheel, *may ſuſtain the given Weight.*

Divide the Weight by the Power: Reſolve the Quotient into the Factors which produce it.—Then will the Number of Factors be the Number of *Wheels*; and the Radii of the Axis will be to the Radii of the *Wheels*, as Unity to the ſeveral *Wheels*.—Suppoſe, *e. g.* a Weight of 3000 Pound and a Power of 60, which reſolves into theſe Factors, 4 5 5 5. Four *Wheels* are to be made, in one of which the Radius of the Axis is to the Radius of the *Wheel* as 1 to 4.—In the reſt, as 1 to 5.

4°, If a Power move a Weight by means of two *Wheels*, the Revolutions of the ſlower *Wheel* are to thoſe of the ſwifter, as the Periphery of the ſwifter Axis is to the Periphery of the *Wheel* that catches on it.

Hence, 1°, the Revolutions are as the Radius of the Axis FE, to the Radius of the *Wheel* DC.—2°, Since the Number of Teeth in the Axis FD, is to the Number of Teeth in the Circumference of the *Wheel* M as the Circumference of that, to the Circumference of this: The Revolutions of the ſlower *Wheel* M, are to the Revolutions of the ſwifter N, as the Number of Teeth in the Axis, to the Number of Teeth in the *Wheel* M it catches into.

5°, If the *Factum* of the Radii of the *Wheels* GD, DC be multiply'd into the Number of Revolutions of the ſloweſt *Wheel* M; and the Product be divided by the *Factum* of the Radii of the Axes which catch into them, GH, DE, &c. The Quotient will be the Number of Revolutions of the ſwifteſt *Wheel* O. *E. g.* If GE = 8, DC = 12, GH = 4, DE = 3, and the Revolution of the *Wheel* M be one; the Number of Revolutions of the *Wheel* O will be 8.

6°, If a Power move a Weight by means of divers *Wheels*, the Space paſs'd over by the Weight is to the Space of the Power, as the Power to the Weight.——Hence, the greater the Power, the faſter is the Weight mov'd; and *vice verſa*.

7°, The Spaces paſs'd over by the Weight and the Power, are in a Ratio compounded of the Revolutions of the ſloweſt *Wheel*, to the Revolutions of the ſwifteſt; and of the Periphery of the Axis of that, to the Periphery of this.—Hence, ſince the Space of the Weight and the Power are reciprocally as the ſuſtaining Power to the Weight, the Power that ſuſtains a Weight, will be to the Weight, in a Ratio compounded of the Revolutions of the ſloweſt *Wheel* to thoſe of the ſwifteſt, and of the Periphery of the Axis of that, to the Periphery of this.

8°, *The Periphery of the Axis of the ſloweſt* Wheel, *with the Periphery of the ſwifteſt* Wheel, *given; as alſo, the Ratio of the Revolutions of the one, to thoſe of the other: To find the Space which the Power is to paſs over, while the Weight goes any given length.*

Multiply the Periphery of the Axis of the ſloweſt *Wheel*, into the antecedent Term of the Ratio, and the Periphery of the ſwifteſt *Wheel* into the conſequent Term; and to theſe two Products, and the given Space of the Weight, find a fourth Proportional: This will be the Space of the Power. Suppoſe, *e. g.* the Ratio of the Revolutions of the ſloweſt *Wheel* to thoſe of the ſwifteſt to be as 2 to 7; and the Space of the Weight 30 Feet: And let the Periphery of the Axis of the ſloweſt *Wheel* be to that of the ſwifteſt as 3 to 8. The Space of the Power will be found 280.

9°, *The Ratio of the Peripheries of the ſwifteſt* Wheel, *and of the Axis of the ſloweſt; together with the Ratio of their Revolutions, and the Weight, being given: to find the Power able to ſuſtain it.*

Multiply both the Antecedents and the Conſequents of the given Ratio into each other: and to the Product of the Antecedents, the Product of the Conſequents, and the given Weight, find a fourth Proportional. That will be the Power requir'd.—Suppoſe, *e. g.* the Ratio of the Peripheries 8 : 13. That of the Revolutions 7 : 2; and the Weight 2000: The Power will be found $214\frac{2}{7}$.—After the ſame manner may the Weight be found; the Power and the Ratio of the Peripheries, &c. being given.

10°, *The Revolutions the ſwifteſt* Wheel *is to perform while the ſloweſt makes one Revolution, being given; together with the Space the Weight is to be rais'd, and the Periphery of the ſloweſt Wheel; to find the Time that will be ſpent in raiſing it.*

Say, as the Periphery of the Axis of the ſloweſt *Wheel* is to the Space of the Weight given; ſo is the given Number of Revolutions of the ſwifteſt *Wheel* to a fourth Proportional; which will be the Number of Revolutions perform'd while the Weight reaches the given Height.—Then, by Experiment, determine the Number of Revolutions the ſwifteſt *Wheel* performs in an Hour; and by this divide the fourth Proportional found before.—The Quotient will be the Time ſpent in raiſing the Weight.

WHEELS *of a Clock*, &c. are the *Crown Wheel*, *Contrat Wheel*, *Great Wheel*, *Second Wheel*, *Third Wheel*, *Striking-Wheel*, *Detent-Wheel*, &c. See CLOCK, and WATCH.

WHEELS *of Coaches*, *Waggons*, &c.—In the *Philoſophical Tranſactions*, we have ſome Experiments ſhewing the Advantages of *high Wheels* in Carriages of all Kinds; the Reſults of the Experiments amount to this:

1°, That, four *Wheels* of $5\frac{2}{3}$ Inches high, *viz.* one half of the ordinary Height of the *Wheels* of a Waggon, draw a Weight of $50\frac{1}{2}$ *l.* Averdupoiſe up an inclined Plane with leſs Weight by ſix Ounces, than two of them match'd with two ſmaller ones of $4\frac{1}{3}$ Inches height.

2°, That any Vehicle might be much more eaſily drawn in rough ways, if the *fore Wheels* were as high as the *hind-Wheels*, and the Thills fix'd under the Axis.

3°, That ſuch a Vehicle would likewiſe be drawn more eaſily where the *Wheels* cut in Clay, Sand, &c.

4°, That high *Wheels* would not cut ſo deep as low *Wheels*.

5°, That low *Wheels* are indeed beſt for turning in a narrow Compaſs.

Potter's WHEEL. See POTTERY.

Ariſtotle's WHEEL. See ROTA *Ariſtotelica*.

Meaſuring WHEEL. See PEDOMETER, PERAMBULATOR, WAYWISER, &c.

WHEEL is alſo a kind of Puniſhment which great Criminals are put to in divers Countries. See PUNISHMENT.

In *France*, their Aſſaſſins, Parricides, and Robbers on the Highway, are condemn'd to the *Wheel*, *i. e.* having their Bones firſt broke with an Iron Bar on a Scaffold, they are expos'd and left to expire on the Circumference of a *Wheel*.—In *Germany*, they break their Bones on the *Wheel* it ſelf.

This cruel Puniſhment was unknown to the Antients; as is obſerv'd by *Cujas*.—'Tis not certain who was the Inventor.—Its firſt Introduction was in *Germany*. 'Twas but rarely practis'd any where elſe, till the Time of *Francis* I. of *France*; who by an Edict of the Year 1534, appointed it to be inflicted on Robbers on the Highway. *Richelet* dates the Edict of the Year 1538, and quotes *Brodeus*.

WHEEL, in the Military Art, is the Word of Command when a Battalion is to alter its Front, either one way or the other. See EVOLUTION.

To *Wheel to the right*, the Man in the right Angle is to turn very ſlowly, and every one to *wheel* from the left to the right, regarding him as their Centre; and *vice verſa*, when they are to *wheel to the left*.

When a Diviſion of Men are on the March, if the Word be *Wheel to the right*, or *to the left*, then the right or left-hand Man keeps his Ground, turning only on his Heel, and the reſt of the Rank move about quick, till they make an even Line with the ſaid right or left-hand Man.

Squadrons of Horſe *wheel* much after the ſame manner.

WHEEL-*Fire*, among Chymiſts, a Fire uſed for fuſing of Metals; properly called *Ignis Rotæ*. See FUSION, METAL, &c.

It is a Fire which covers or incompaſſes the Crucible, Coppel, or Melting-Pot quite over; a-top, as well as around the Sides. See FIRE.

WHERLICOTES, a ſort of open Chariots, uſed by Perſons of Quality before the Invention of Coaches. See COACH, CHARIOT, &c.

WHERRY. See VESSEL, BOAT, &c.

WHETSTONE, a Stone for the whetting or ſharpening Knives, and other Tools upon. See STONE, and HONE.

WHEY, the Serum or watery Part of Milk. See MILK.

WHIFFLER, of a Company of *London*, a young Freeman, who goes before, and waits on the Company on occaſions of public Solemnity. See COMPANY.

WHIGS, a Party or Faction in *England*, oppoſite to the *Tories*. See TORY.

The Origin of the Names of theſe two mighty Factions is very obſcure.——If ſome little trivial Circumſtance or Adventure, which eſcapes the Knowledge of Mankind, give the Name to a Party, which afterwards becomes famous; Poſterity labours in vain to find the Original of ſuch Names: It ſearches the Sources, forms Conjectures, invents Reaſons, and ſometimes meets the Truth, but always without knowing it aſſuredly.

Thus, in *France*, the *Calviniſts* are call'd *Huguonots*; yet no body was ever able certainly to aſſign the Cauſe of that Appellation. See HUGUONOT.

Whig is a *Scottiſh*, and ſome ſay, too, an *Iriſh* Word, literally ſignifying *Whey*.——*Tory* is another *Iriſh* Word, ſignifying a Robber or Highwayman.

Now, under the Reign of King *Charles* the Second, while his Brother, then Duke of *York*, was obliged to retire into *Scotland*, there were two Parties form'd in that Country—— That of the Duke, which was ſtrongeſt, perſecuted the other, and frequently reduced them to fly into the Mountains and Woods, where thoſe unhappy Fugitives had often no other Subſiſtence for a long time but Cows-Milk. Hence their Adverſaries they call'd *Tories*, *q. d.* Robbers; and the Tories upbraiding them with their Unhappineſs, and from the Milk whereof they liv'd, call'd them *Whigs*—— From *Scotland* the two Names came over with the Duke into *England*.

Others give the Origin and Etymology of the two Words thus——During the unhappy War which brought King *Charles* I. to the Scaffold, the Partizans of that Prince were at firſt call'd *Cavaliers*, and thoſe of the Parliament *Round-Heads*.——Now, *Tory* was a Name for a kind of *Banditti* in *Ireland*, who ſhelter'd themſelves in the Mountains and the Iſlands form'd by the Bogs; as, then, the King's Enemies charged him with favouring the Rebellion in *Ireland*, which broke out at that time, they changed the Name *Cavalier* into that of *Tory*——And theſe laſt, to be even with their Enemies, who were ſtrictly leagued with the *Scots*, changed *Round-Heads* for *Whigs*, the Name of a ſort of Enthuſiaſts in *Scotland*, who living in the open Fields and Woods, fed much on Milk. *Diſſert. de Monſ.* Rapin Thoiras *ſur les* Wighs *& les* Torys. Haye Ann. 1717.

WHINE, a hunting Term, uſed in reſpect of the Cry of an Otter. See HUNTING.

WHIP, or WHIP STAFF, in a Ship, a Piece of Timber in form of a ſtrong Staff, faſten'd into the Helm, for the Steers-Man in ſmall Ships, to hold in his Hand; thereby to move the Helm and direct the Ship. See HELM and STEERING.

WHIPPING, a Term uſed by Anglers, when they faſten a Line to the Hook, or Rod. See ANGLING.

The Word is alſo taken for the caſting in of the Hook, and drawing it gently on the Water.

WHIRL-POOL, an Eddy, Vortex, or Gulph, where the Water is continually turning round. See GULPH, EDDY, VORTEX, *&c.*

WHIRL-WIND, a Wind that riſes ſuddenly, is exceedingly rapid and impetuous, when riſen, but ſoon ſpent. See WIND and HURRICANE.

There are divers ſorts of *Whirl Winds*, diſtinguiſh'd by their peculiar Names; as the *Preſter*, *Typho*, *Turbo*, *Exhydria*, and *Ecnephia*.

The *Preſter* is a violent Wind breaking forth with flaſhes of Lightning——This is rarely obſerv'd, ſcarce ever without the *Ecnephia*.——*Seneca* ſays 'tis a *Typho*, or *Turbo*, kindled or ignited in the Air. See PRESTER.

The *Ecnephia* is a ſudden and impetuous Wind breaking out of ſome Cloud; frequent in the *Æthiopic* Sea, particularly about the *Cape of Good Hope*——The Seamen call them *Travados*. See TRAVADOS.

The *Exhydria* is a Wind burſting out of a Cloud with a great quantity of Water——This only ſeems to differ in degree from the *Ecnephias*, which is frequently attended with Showers.

A *Typho* is an impetuous Wind, running rapidly every way, and ſweeping all round the Place——It frequently deſcends from on high. The *Indians* call it *Orancan*, the *Turks*, &c. *Oliphant*. 'Tis frequent in the *Eaſtern Ocean*, chiefly about *Siam*, *China*, &c. and renders the Navigation of thoſe Parts exceeding dangerous. See VORTEX, SPOUT, *&c.*

WHISPERING; ſee HEARING, ATTENTION, *&c.*

WHISPERING-*Places* depend on this Principle, That the Voice being apply'd to one end of an Arch, eaſily rolls to the other. See SOUND, ARCH, *&c.*

Accordingly, all the Contrivance in a *Whiſpering-Place*, is, that near the Perſon who whiſpers there be a ſmooth Wall, arch'd, either Cylindrically, or Elliptically——A circular Arch will do, but not ſo well. See PHONICS.

Places form'd for the Conveyance of *Whiſpers*, are the Priſon of *Dionyſius* at *Syracuſe*, which increaſes a ſoft *Whiſper* to a Noiſe, the Clap of one's Hand to the Sound of a Cannon, *&c.*——The Aquæducts of *Claudius*, which carry a Voice ſixteen Miles: And divers others enumerated by *Kircher* in his *Phonurgia*.

The moſt conſiderable in *England*, are, the Dome of St. *Paul's*, *London*, where the Ticking of a Watch may be heard from Side to Side; and a very eaſy *Whiſper* be ſent all round the Dome.——This, Mr. *Derham* found to hold not only in the Gallery below, but above upon the Scaffold, where a *Whiſper* would be carried over one's Head round the Top of the Arch, tho' there be a large Opening in the Middle of it into the upper Part of the Dome.

The famous *Whiſpering-Place* in *Glouceſter* Cathedral, is no other than a Gallery above the Eaſt End of the Choir, leading from one Side thereof to the other.—It conſiſts of five Angles and ſix Sides, the Middleſt of which is a naked Window; yet two *Whiſperers* hear each other at the diſtance of twenty-five Yards.

WHITE, one of the Colours of natural Bodies. See COLOUR and BODY.

White is not ſo properly ſaid to be any one Colour, as a Compoſition of all the Colours.

It is demonſtrated by Sir *Iſaac Newton*, that thoſe Bodies only appear *White*, which reflect all the kinds of colour'd Rays alike. See WHITENESS.

Hevelius affirms it as a thing moſt certain, that in the Northern Countries, Animals, as Hares, Foxes, Bears, *&c.* become *White* in the Winter-time; and in Summer reſume their natural Colours. See HAIR.

Black Bodies are found to take heat ſooner than *white* ones; by reaſon the former abſorb or imbibe Rays of all Kinds and Colours, and the latter reflect all. See BLACKNESS.

Thus black Paper is ſooner put into Flame by a Burning-Glaſs, than *white*; and black Clothes hung up by the Dyers in the Sun, dry ſooner than *white* ones. See BLACK.

WHITE-*Paper* is that intended for Writing, Printing, *&c.* in contradiſtinction to brown Paper, marbled Paper, blotting Paper, *&c.* See PAPER.

WHITE *Pepper* is black Pepper blanch'd or *whiten'd*, by ſhelling off its upper Skin. See PEPPER.

WHITE *Wine* is that of a clear, bright, tranſparent Colour, bordering on *white*.——'Tis thus call'd, to diſtinguiſh it from the red Wines or Clarets.

The generality of *white Wines* are made from *white* Grapes; tho' there are ſome from black ones. See WINE.

WHITE *Wax*, is yellow Wax blanch'd, and purify'd by the Sun and Dew. See WAX.

WHITE *Linnen*, is Cloth of Hemp or Flax, bleach'd by divers Lyes and Waterings on the Ground. See BLEACHING.

WHITE *Salt* is Common, or Sea-Salt dried and calcined by the Fire, ſo as not to leave any Moiſture therein.—— The Chymiſts call it *decrepitated Salt*.

There are ſome Salts naturally *white*; and others that need to be *whiten'd* either by diſſolving and purifying 'em in clear Water, which is afterwards evaporated; or by means of Fire; or by the Sun. See SALT.

Spaniſh WHITE, is a kind of Fucus uſed by the Ladies to *whiten* the Complexion, and hide the defects thereof. ——'Tis made of Tin of Glaſs diſſolved in Spirit of Nitre, and precipitated into a very fine Powder, by means of Salt-water. See TIN.

WHITE *Lead*, is a Ruſt of Lead; or Lead diſſolved with Vinegar; much uſed by the Painters. See LEAD.

'Tis prepared two ways——either by reducing the Lead into thin Laminæ, ſteeping 'em in ſtrong Vinegar, and every ten days ſcraping off the Ruſt form'd on the Surface: and repeating this till the Lead be quite conſumed.

Or, by rolling the Laminæ into Cylinders like Sheets of Paper, only ſo as that there be a little Space left between the ſeveral Folds or Turns.——Theſe Laminæ they ſuſpend in the middle of Earthen Pots, at bottom of which is Vinegar——The Pots being well cloſed, are buried in a Dunghill for thirty days; after which being open'd, the Lead is found, as it were, calcined and reduced into what they call *white Lead*, to be broke into Pieces, and dried in the Sun.

'Tis uſed both in painting in Oil and in Water-Colours, and makes a beautiful Colour in each——But 'tis ſomewhat dangerous both in the grinding and uſing it, as being a rank Poiſon. See COLOUR.

Of this *white Lead* it is that the Paint uſed by the Ladies, call'd *Ceruſs*, is made. See CERUSS.

WHITE *Friars*, a Name common to ſeveral Orders of Monks, from their being clothed in a *white* Habit. See MONK, HABIT, &c.

Such are the regular Canons of St. *Auguſtin*, the *Premonſtrantes*, and *Bernardins*.

WHITE *of the Eye*, is the firſt Tunic or Coat of the Eye, call'd *Albuginea*, and *Conjunctiva*, becauſe ſerving to bind together or incloſe the reſt. See CONJUNCTIVA, &c.

WHITE *hart Silver*, *Candidi Cervi Argentum*, a Tribute or Mulct paid into the Exchequer, out of certain Lands in or near the Foreſt of *White-hart*; which has continued from *Henry* the Third's Time, who impoſed it upon *Thomas de la Linde*, for killing a very beautiful *white* Hart, which that King had purpoſely ſpared in hunting. See HART and HUNTING.

WHITE *Line*, among Printers, a void Space greater than uſual, left between two Lines. See PRINTING.

WHITE *Meats*, include Milk, Butter, Cheeſe, *White*-Pots, Cuſtards, and other Foods coming of Milk. See MILK, FOOD, &c.

WHITE-*Pot* denotes Milk or Cream baked with the Yolks of Eggs, fine Bread, Sugar, and Spice, in an Earthen-Pot.

The Cooks furniſh us with a Variety of Diſhes under this Form and Denomination; *Norfolk White-Pot*, *Weſtminſter White-Pot*, *Rice White-Pot*, &c.

WHITE *Sauce*, in Cookery, a Sauce made of blanched Almonds, and the Breaſt of a Capon, pounded together with Cloves, Cinnamon, &c.——We alſo hear of *White Broth*, being a ſort of Broth enriched with Sack, and Spices, having blanched Almonds ſcraped into it, and the whole thicken'd with the Yolks of Eggs, &c.

WHITE *Line*; ſee LINEA *Alba*.

WHITE *Rent*, is a Rent or Duty of 8 *d.* payable yearly, by every Tanner in the County of *Devon*, to the Duke of *Cornwall*.

WHITE *Spurs*; ſee ESQUIRE.

WHITENESS, *Albedo*, the Quality which denominates a Body *white*. See WHITE and COLOUR.

Sir *Iſaac Newton* ſhews, that *Whiteneſs* conſiſts in a Mixture of all the Colours; and that the Light of the Sun is *white*, becauſe conſiſting of Rays of all Colours. See RAY.

From the multitude of Rings of Colours, which appear upon Compreſſing two Priſms, or Object-Glaſſes of Teleſcopes together, it is manifeſt, that theſe do ſo interfere and mingle with one another at laſt, as after eight or nine Reflexions to dilute one another wholly, and conſtitute an even, and uniform *Whiteneſs*: Whence, as well as from other Experiments, it appears, that *Whiteneſs* is certainly a Mixture of all Colours, and that the Light which conveys it to the Eye is a Mixture of Rays indued with all thoſe Colours. See LIGHT.

The ſame Author ſhews, that *Whiteneſs*, if it be moſt ſtrong and luminous, is to be reckon'd of the firſt Order of Colours; but if leſs, as a Mixture of the Colours of ſeveral Orders: Of the former ſort he reckons white Metals; and of the latter, the *Whiteneſs* of Froth, Paper, Linnen, and moſt other white Subſtances——And as the White of the firſt Order is the ſtrongeſt that can be made by Plates of tranſparent Subſtances, ſo it ought to be ſtronger in the denſer Subſtances of Metals, than in the rarer ones of Air, Water, and Glaſs.

Gold or Copper mixed either by Fuſion, or Amalgamation with a very little Mercury, with Silver, Tin, or Regulus of Antimony, becomes white; which ſhews, both that the Particles of white Metals have much more Surface, and therefore are ſmaller than thoſe of Gold or Copper; and alſo that they are ſo opake, as not to ſuffer the Particles of Gold or Copper to ſhine through them.—And as that Author doubts not, but that the Colours of Gold and Copper are of the ſecond or third Order, therefore the Particles of *white* Metals cannot be much bigger than is requiſite to make them reflect the *white* of the firſt Order. See PARTICLE.

WHITENING; ſee BLEACHING.

WHITENING *of Wax.* } See { WAX.
WHITENING *of Hair.* } See { HAIR.

WHITES, in Medicine; ſee FLUOR *Albus*.

WHITLOW, in Medicine, a Tumor, by Phyſicians commonly call'd *Paronychia*, See PARONYCHIA.

WHITSON *Farthings*; ſee PENTECOSTALIA.

WHITSONTIDE—The Seaſon properly call'd *Pentecoſt*, is popularly call'd *Whitſontide*; ſome ſay, becauſe in the Primitive Church, thoſe who were newly baptized came to Church between *Eaſter* and *Pentecoſt* in *white* Garments.——*Whitſunday* always falls between the 9th of *May*, and the 14th of *June*, excluſive. See PENTECOST.

WHOLE, in Arithmetic, &c. See TOTUM; ſee alſo PART, DIVISION, PARTITION, &c.

WHOLESOM; ſee FOOD, POISON, HEALTH, &c.

WHOODINGS, *q. d.* HOODINGS, a Sea-Term, uſed for Planks joined and faſtned along the Ship's Sides to the Stern.

WHORE; ſee MERETRIX, HARLOT, &c.

WHORLBAT, of the *Saxon*, *Batt* and *Whirl*; a kind of Gauntlet, with Straps and leaden Plummets, uſed by the antient *Romans* in their ſolemn Games and Exerciſes. See GAUNTLET, &c.

This *Whorlbat* is the ſame with what they call'd *Ceſtus*. See CESTUS.

WHUR, in Falconry, is the Fluttering of Partridges or Pheaſants, as they riſe. See HAWK and HAWKING.

WIC, denotes a Place on the Sea-Shore, or on the Bank of a River; tho', in the *Saxon*, it more properly ſignifies a Street, a Village, or Dwelling-Place, alſo a Caſtle. See WYKE.

We often meet with it in the *Saxon* Language as a Termination of the Name of a Town which had a compleat Name without it, as *Lunden-wic*, that is, *London* Town, which ſignifies no more than *London*; as in the *Saxon* Annals it is mentioned, that King *Æthelbert* made *Mellitus* Biſhop of *Lunden-wic*.——So *Ipſwich* is written in ſome old Charters *Villa de Gippo*, and ſometimes *Villa de Gippo Wico*, which is no variance, but the ſame thing; for *Gipps* is the compleat Name, and *Gipp-wic* is *Gipps* Town.

WICKER, of the *Daniſh Wiger*, or the *Teutonic Wicken*; a Twig of the Oſier-Shrub. See VINE, BASKET, &c.

WICKET, of the *French Guichet*, a little Door within a Gate; or a Hole in a Door, through which to view what paſſes without. See DOOR.

WICKLIFFISTS, or WICKLIFFITES, a Religious Sect who had their Riſe in *England*, and their Name from their Leader *John Wickliff*, a Profeſſor of Divinity in the Univerſity of *Oxford*,

To that immortal Author it is we owe the firſt Hint of the great Reformation effected 200 Years after him. See REFORMATION.

Wickliff maintained, that the Subſtance of the Sacramental Bread and Wine ſtill remained ſuch after Conſecration.——He alſo oppoſed the Doctrine of Purgatory, Indulgences, the Invocation of Saints, and the Worſhip of Images. See TRANSUBSTANTIATION, PURGATORY, &c.

He made an *Engliſh* Verſion of the Bible; and compoſed two large Volumes call'd *Aletheia*, that is, *Truth*; which was the Source whence *John Hus* firſt learn'd moſt of his Doctrines. See HUSSITES.

The Archbiſhop of *Canterbury* call'd a Council againſt *Wickliff*, and he was condemn'd therein; but the good Reformer ſet the Condemnation at nought.——After this, King *Richard* baniſh'd him out of *England*, but he was afterwards recall'd, and died in his own Country in the Year 1384.

Forty Years afterwards, his Doctrine and the Adherers thereto were condemn'd by the Council of *Conſtance*; in conſequence of which, his Bones were dug up, and the Council condemn'd him of forty Errors.

WIDOW, *Vidua*, a Woman that has loſt her Husband. See WOMAN, WIFE, HUSBAND, &c.

Some alſo uſe the Term *Widower* for a Man who has loſt his Wife.——Marriage with a *Widow*, is a kind of Bigamy in the Eye of the Canon-Law. See BIGAMY.

WIDOW *of the King*, was ſhe who, after her Husband's death, being the King's Tenant *in Capite*, was driven to recover her Dower by the Writ *de Dote Aſſignanda*; and could not marry again without the King's Conſent. See VIDUITY.

WIDOW *Bench*, in the County of *Suſſex*, is that Share which a Widow is allow'd of her Husband's Eſtate beſides her Jointure. See BENCH.

WIDOWHOOD; ſee VIDUITY.

WIFE, *Uxor*, a married Woman; or one join'd with, and under the Protection of, a Husband. See WOMAN, MARRIAGE, and HUSBAND. See alſo MATRON, &c.

A *Wife*, in our *Engliſh* Law, is termed *Feme Covert*; and in the Judgment of the Law is reputed to have no Will, as being ſuppoſed entirely under, and ſubject to that of her Husband: *Uxor fulget radiis Mariti*. See FEME and COVERTURE.

If any Goods or Chattels be given her, they all immediately become her Husband's.——She cannot let, ſell give away, or alienate any thing without her Husband's Conſent.——Her very neceſſary Apparel is not hers in Property——All her perſonal Chattels which ſhe held at her Marriage, are ſo much her Husband's, that after his Death they ſhall not return to her, but go to the Executor or Adminiſtrator of her Husband; except only her *Paraphernæ*, or *Præter-dotalia*, being her neceſſary Apparel, which, with the Conſent of her Husband, ſhe may demiſe by Will. See PARAPHERNALIA.

The *Wife* can make no Contract without her Husband's Conſent, and in all Law-Matters, *ſine Viro reſpondere non poteſt*.

The

The Law ſuppoſes in the Husband, the full Power over his *Wife*, as over his Child or Servant; and therefore he muſt anſwer for all her Faults, and Treſpaſſes.

If a *Wife* bring forth a Child during her Husband's Abſence, tho' of many Years; yet if he lived all the time *inter quatuor Maria*, within the Iſland, he muſt father the Child; and the Child, if firſt born, ſhall inherit.

If a *Wife* bring forth a Child begot by a former Huſband, or any other Perſon, before Marriage, but born after Marriage with another Man; this latter muſt own the Child; and that Child ſhall be his Heir at Law.

The *Wife*, after her Husband's Death, having no Jointure ſettled before Marriage, may challenge the third part of his yearly Rents of Land during her Life; and within the City of *London*, a third part of all her Huſband's Moveables for ever.

The *Wife* partakes of the Honours, and Condition of her Husband; but none of the *Wife's* Dignities come by Marriage to her Husband.

Yet, the Husband, for getting his *Wife* with Child, which muſt appear by its being born alive, ſhall have all his *Wives* Lands for Life.

The *Engliſh* Laws are generally eſteem'd by Foreigners, as very hard in reſpect of the Women; and yet *Chamberlain* is of a very different Sentiment, aſſerting that the Condition of *Wives* in *England* is better than in any other Country.

Tertullian has two Books on the Ornaments and Attire of *Wives*——In the ſecond he labours to prove, that a Chriſtian *Wife* cannot in conſcience endeavour to pleaſe by her Beauty, which ſhe knows to be naturally liable to raiſe looſe Deſires; and that ſhe ought not only to avoid all affected Beauty, but even to conceal and cover her natural Beauty.

Mid-WIFE, *Obſtetrix*. See DELIVERY, FOETUS, *&c.* See alſo VIRGINITY.

WILDERNESS, ſee DESART, GROVE, WOOD, *&c.*

WILD-*Fire*, *Ignis Gregalis*, or *Græcus*. See FIRE.

WILD-*Fire Arrows*, ſuch as are trimmed with *Wild-Fire*, and ſhot burning, to ſtick in the Sails or Rigging of Ships in a Fight.

WILD-*Fire*, is alſo a Diſeaſe in Cattel; which is infectious, deadly, and even reputed incurable. See MURRAIN.

WILL, *Voluntas*, is uſually defined a Faculty of the Mind, whereby it embraces or rejects any thing repreſented to it as Good or Evil by the Judgment. See FACULTY, GOOD, EVIL, *&c.*

Others will have it to be the Mind itſelf, conſider'd as embracing or refuſing; adding, that as the Underſtanding is nothing elſe but the Soul, conſider'd as *perceiving*; ſo the *Will* is nothing elſe but the Soul conſider'd as *Willing*, *&c.* See UNDERSTANDING.

Mr. *Locke* more intelligibly defines the *Will* a Faculty, which the Soul has of beginning, or forbearing, continuing, or ending ſeveral Actions of the Mind, and Motions of the Body, barely by a Thought or Preference of the Mind, ordering, or, as it were, commanding the doing, or not doing ſuch and ſuch a particular Action——This Power the Mind has, to order the Conſideration of any Idea, or the forbearing to conſider it; or to prefer the Motion of any part of the Body to its Reſt, and *vice verſa*, is what we call the *Will*. See POWER.

The actual Exerciſe of that Power, is what we call *Volition*, or *Willing*; and the doing or forbearing any Action conſequent on ſuch Order of the Mind, is call'd *Voluntary*. See VOLITION, VOLUNTARY, *&c.*

Father *Mallebranch* lays it down, that the *Will* is that to the Soul, which Motion is to the Body; and argues, That as the Author of Nature is the univerſal Cauſe of all the Motions in Matter, ſo he is of all the Inclinations in the Mind: and that as all Motions are direct, unleſs their Courſe be diverted and chang'd by ſome foreign Cauſe; ſo all *Inclinations* are right, and could have no other End, but the Enjoyment of Truth and Goodneſs, were there not ſome foreign Cauſe to determine the natural Impreſſion to evil Ends.

Accordingly, he defines *Will* to be the Impreſſion, or natural Motion, which carries us towards Good indeterminately, and in the general; and the Power the Mind has to direct this general Impreſſion towards any particular Object that pleaſes it, is what he calls *Liberty*. See LIBERTY and NECESSITY.

Ariſtotle diſtinguiſhes two kinds of Acts of the *Will*; *viz.* βουλησις, *Willing*, *Volition*; and προαιρεσις, *Election*—— The firſt, that employ'd about the ultimate End; the latter, about the Means.

The Schoolmen alſo diſtinguiſh the Actions of the *Will* into *Elicit* and *Commanded*——Elicit Acts, *Actiones Eliciteæ*, are thoſe immediately produc'd by the *Will*, as really inherent therein; ſuch are *Willing* and *Nilling*——Commanded Acts, *Actiones Imperatæ*, are Effects produc'd by other Powers, *v. gr.* the Senſitive, Intellective, or Locomotive Powers, at the Command or Inſtigation of the *Will*——As to *follow*, *ſtay*, *fight*, *fly*, *&c.* See ACTION.

But others will have the former kind properly to belong to the Underſtanding; and only the latter, to the *Will*.

The Word *Will* is taken in three Senſes: 1°. For the Power, or Faculty of *Willing*; in which ſenſe it is, we have conſider'd it above——2°. For the Act, or Exerciſe of the Power; as, when we ſay, No Man *wills* his own Deſtruction—— 3°. For a Habit, or a conſtant Diſpoſition and Inclination to do any thing——In which ſenſe, Juſtice is defined a conſtant *Will* to give every one what belongs to him: *Juſtitia eſt conſtans & perpetua* Voluntas *jus ſuum unicuique tribuendi*. Inſtit. Juſtin.

Free-WILL. See LIBERTY.

WILL, or *Laſt* WILL, in Law, *&c.* a ſolemn Act, or Inſtrument, whereby a Perſon directs and orders the Diſpoſal of his Goods, Effects, *&c.* after his Death.

Wills are of two kinds: A *Will in Writing*, properly called alſo a *Teſtament*. See TESTAMENT.

And a *Will by word of mouth* only, call'd a *Nuncupative Will*; which being proved by three or more Witneſſes, may be of as good force as that in Writing; except for Lands, which are only deviſable by Teſtament in Writing during the Life of the Teſtator. See NUNCUPATIVE.

WILL *with a Whiſp*, a Meteor known among the People under this Name; but more uſually among Authors under that of *Ignis Fatuus*. See *Ignis* FATUUS.

WIMPLE, of the *Dutch Wimpel*, a Mufflet, or plaited Linnen Cloth, which Nuns wear about their Neck.

The Word is alſo uſed for a Streamer or Flag. See FLAG, *&c.*

WIN, in the Beginning or End of the Names of Places, ſignifies that ſome great Battel was fought, or a Victory gain'd there.

The Word is form'd from the *Saxon Winge*, *Prælium*, Battel.

WIND, *Ventus*, a ſenſible Agitation of the Air, whereby a large quantity thereof flows out of one Place or Region into another. See AIR.

The *Winds* are divided into *perennial*, *ſtated*, and *variable*——They are alſo divided into *general*, and *particular*.

Perennial, or *conſtant* WINDS, are ſuch as always blow the ſame way.——Of theſe we have a very notable one, between the two Tropicks, blowing conſtantly from Eaſt to Weſt; call'd the *general Trade-Wind*. See TRADE-*Wind*.

Stated, or *periodical* WINDS, are ſuch as conſtantly return at certain Times——Such are the Sea and Land-Breezes, blowing from Sea to Land in the Evening; and from Land to Sea in the Morning. See BREEZE.

Such alſo are the *ſhifting*, or *particular Trade-Winds*, which for certain Months of the Year blow one way, and the reſt of the Year the contrary way. See MONSOON.

Variable, or *erratic* WINDS, are ſuch as blow now this, now that way; are now up, now huſh'd, without any Rule or Regularity, either as to Time or Place.

Such are all the *Winds* obſerv'd in the Inland Parts of *England*, *&c.* Tho' ſeveral of theſe claim their certain Times of the Day——Thus the *Weſt-Wind* is moſt frequent about Noon; the *South-Wind* in the Night; the *North* in the Morning, *&c.* See WEATHER.

General WIND is ſuch a one, as at the ſame time blows the ſame way over a very large Tract of Ground, almoſt all the Year——Such only is the *general Trade-Wind*.

But even this has its Interruptions: For, 1°. At Land it is ſcarce ſenſible at all, as being broke by the Interpoſition of Mountains, Valleys, *&c.* 2°. At Sea, near the Shore, it is diſturb'd by Vapours, Exhalations, and particular *Winds*, blowing from Landward; ſo that it is chiefly conſider'd as *general*, only at Mid-Sea: Where, 3°. It is liable to be diſturb'd by *Clouds* driven from other Quarters.

Particular WINDS——Excepting the general Trade-*Winds*, all others are *particular*.

Thoſe particular to one little Canton, or Part, are call'd *Topical*, or *Provincial Winds*——Such is the North *Wind* on the Weſtern Side of the *Alps*, which does not blow above one or two Leagues lengthwiſe, and much leſs in breadth: Such alſo is the *Pontias* in *France*. See PONTIAS.

Phyſical Cauſe of WINDS.

Some Philoſophers, as *Des Cartes*, *Rohault*, *&c.* account for the general *Wind* from the diurnal Rotation of the Earth; and from this general *Wind* derive all the particular ones——The Atmoſphere, ſay they, inveſting the Earth, and moving round it; that part will perform its Circuit ſooneſt, which has the ſmalleſt Circle to deſcribe: The Air, therefore, near the Equator, will require a ſomewhat longer time to perform its Courſe in from Weſt to

East, than that nearer the Poles——Thus, as the Earth turns Eastward, the Particles of the Air near the Equinoctial being exceeding light, are left behind, so that in respect of the Earth's Surface, they move Westwards, and become a constant *Easterly Wind*.

This Opinion seems confirmed by this, that these *Winds* are found only between the Tropicks, in those Parallels of Latitude where the diurnal Motion is swiftest——But the constant Calms in the *Atlantick* Sea, near the Equator, the westerly *Winds* near the Coast of *Guinea*, and the periodical westerly Monsoons under the Equator in the *Indian* Seas, declare the Insufficiency of this Hypothesis.

Besides, the Air being kept close to the Earth by the Principle of Gravity, would in time acquire the same degree of Velocity, that the Earth's Surface moves with, as well in respect of the diurnal Rotation, as of the annual about the Sun, which is about thirty times swifter

Dr. *Halley*, therefore, substitutes another Cause, capable of producing a like constant Effect, not liable to the same Objections, but agreeable to the known Properties of the Elements of Water and Air, and the Laws of the Motion of fluid Bodies.——Such a one is the Action of the Sun's Beams upon the Air and Water, as he passes every day over the Ocean, consider'd together with the Quality of the Soil, and the Situation of the adjoining Continents.

According to the Laws of Staticks, the Air which is less rarefied or expanded by Heat, and consequently more ponderous, must have a Motion towards those Parts thereof which are more rarefied and less ponderous, to bring it to an Equilibrium; also the presence of the Sun continually shifting to the Westward, that part towards which the Air tends by reason of the Rarefaction made by his greatest Meridian Heat, is with him carried Westward, and consequently the tendency of the whole Body of the lower Air is that way.

Thus a general Easterly *Wind* is formed, which being impress'd upon all the Air of a vast Ocean, the parts impel one the other, and so keep moving till the next return of the Sun, whereby so much of the Motion, as was lost, is again restored; and thus the Easterly *Wind* is made perpetual.

From the same Principle it follows, that this Easterly *Wind* should on the North Side of the Equator be to the Northwards of the East, and in South Latitudes to the Southwards thereof; for near the Line, the Air is much more rarefied, than at a greater distance from it; because the Sun is twice in a Year vertical there; and at no time distant above 23 ½ Degrees: At which distance, the Heat being as the Sine of the Angle of Incidence, is but little short of that of the perpendicular Ray; whereas under the Tropicks, tho' the Sun stay long Vertical, yet he is a long time 47 Degrees off; which is a kind of Winter, wherein the Air so cools, as that the Summer Heat cannot warm it to the same degree with that under the Equator. Wherefore the Air towards the Northward and Southward being less rarefied, than that in the middle, it follows, that from both Sides, it ought to tend towards the Equator. See HEAT.

This Motion compounded with the formerly Easterly *Wind*, accounts for all the Phænomena of the *general Trade-Winds*; which, if the whole Surface of the Globe were Sea, would undoubtedly blow quite round the World, as they are found to do in the *Atlantick*, and the *Ethiopick* Ocean.——But seeing so great Continents do interpose, and break the Continuity of the Oceans, regard must be had to the Nature of the Soil, and the Position of the high Mountains, which are the two principal Causes of the Variation of the *Wind* from the former general Rule; for if a Country lying near the Sun prove to be flat, sandy, and low Land; such as the Desarts of *Libya* are usually reported to be; the Heat occasion'd by the Reflections of the Sun's Beams, and the retention thereof in the Sand, is incredible to those who have not felt it; whereby the Air being exceedingly rarefied, it is necessary, that this cooler, and more dense Air, should run thitherwards to restore the Equilibrium.

This is supposed to be the Cause, why near the Coast of *Guinea*, the *Wind* always sets in upon the Land, blowing Westerly instead of Easterly; there being sufficient reason to believe, that the inland Parts of *Africa* are prodigiously hot, since the Northern Borders thereof were so intemperate as to give the Antients cause to conclude, That all beyond the Tropicks was uninhabitable by excess of Heat.

From the same Cause it happens, that there are so constant Calms in that part of the Ocean call'd the *Rains*; for this Tract being placed in the Middle, between the Westerly *Winds* blowing on the Coast of *Guinea*, and the Easterly *Trade-Winds* blowing to the Westwards thereof; the tendency of the Air here, is indifferent to either, and so stands *in Equilibrio* between both; and the weight of the incumbent Atmosphere being diminished by the continual contrary *Winds* blowing from hence, is the reason that the Air here holds not the copious Vapour it receives, but lets it fall in so frequent Rains.

But, as the cool and dense Air, by reason of its greater Gravity, presses upon the hot and rarefied, it is demonstrable, that this latter must descend in a continued Stream, as fast as it rarefies; and that being ascended, it must disperse itself to preserve the Equilibrium; that is, by a contrary Current the upper Air must move from those Parts where the greatest Heat is: so by a kind of Circulation, the North-East *Trade-Wind* below, will be attended with a South-Westerly above; and the South-East with a North-West *Wind* above. See CURRENT, UNDER-*Current*, &c.

That this is more than a bare Conjecture, the almost instantaneous Change of the *Wind* to the opposite Point, which is frequently found in passing the Limits of the *Trade-Winds*, seems to assure us; but that which above all confirms this Hypothesis, is the Phænomenon of the Monsoons, by this means, most easily solved, and without it hardly explicable. See MONSOON.

Supposing therefore such a Circulation as above; it is to be consider'd, that to the Northward of the *Indian* Ocean, there is every where Land, within the usual Limits of the Latitude of 30, *viz Arabia*, *Persia*, *India*, &c. which, for the same reason as the *Mediterranean* Parts of *Africa*, are subject to unsufferable Heats, when the Sun is to the North, passing nearly Vertical; but yet are temperate enough, when the Sun is remov'd towards the other Tropick, because of a Ridge of Mountains at some distance within the Land, said to be frequently in Winter cover'd with Snow, over which the Air, as it passes, must needs be much chill'd——Hence it happens, that the Air coming, according to the general Rule, out of the North-East, in the *Indian* Sea, is sometimes hotter, sometimes colder, than that which, by this Circulation, is return'd out of the South-West; and by consequence, sometimes the Under-Current, or Wind, is from the North-East, sometimes from the South-West.

That this has no other Cause, is clear from the Times, wherein these Winds set, *viz.* in *April*; when the Sun begins to warm those Countries to the North, the South-West Monsoons begin, and blow during the Heats till *October*, when the Sun being retir'd, and all things growing cooler Northward, and the Heat increasing to the South, the North-East enter, and blow all the Winter, till *April* again. And it is undoubtedly from the same Principle, that to the Southward of the Equator, in part of the *Indian* Ocean, the North-West *Winds* succeed the South-East, when the Sun draws near the Tropic of *Capricorn*. See TIDE.

But, the Industry of some late Writers having brought the Theory of the Production and Motion of *Winds* to somewhat of a Mathematical Demonstration; we shall here give it the Reader in that form.

Laws of the Production, &c. *of* WINDS.

If the Spring of the Air be weaken'd in any place, more than in the adjoining places; a *Wind* will blow thro' the place where the Diminution is. See ELASTICITY.

For, since the Air endeavours, by its elastic Force, to expand itself every way; if that Force be less in one place than another; the *Nisus* of the more, against the less elastic, will be greater than the *Nisus* of the latter against the former——The less elastic Air, therefore, will resist with less force than it is urg'd, by the more elastic: Consequently, the less elastic will be driven out of its place, and the more elastic will succeed.

If, now, the Excess of the Spring of the more elastic, above that of the less elastic, be such as to occasion a little alteration in the Baroscope; the Motion both of the Air expell'd, and that which succeeds it, will become sensible. *Q. E. D.*

2. Hence, since the Spring of the Air increases, as the compressing Weight increases; and compress'd Air is denser than Air less compress'd: All *Winds* blow into rarer Air out of a place fill'd with a denser.

3. Wherefore, since a denser Air is specifically heavier than a rarer; an extraordinary Lightness of the Air in any place, must be attended with extraordinary *Winds* or Storms.

Now, an extraordinary Fall of the Mercury in the Barometer, shewing an extraordinary Lightness of the Atmosphere; 'tis no wonder, if that foretels Storms.

4. If the Air be suddenly condens'd in any place, its Spring will be suddenly diminish'd: Hence, if this Diminution be great enough to affect the Barometer, there will a Wind blow thro' the condens'd Air.

5. But since it cannot be suddenly condens'd, unless it have before been much rarefy'd; there will a *Wind* blow thro' the Air, as it cools, after having been violently heated.

6. In like manner, if Air be suddenly rarefy'd, its Spring is suddenly increas'd; wherefore, it will flow thro' the contiguous Air, not acted on by the rarefying Force——

A *Wind*, therefore, will blow out of a place, in which the Air is ſuddenly rarefy'd: And on this Principle, in all probability, it is, that,

7. Moſt Caves are found to emit *Wind*, either more or leſs———Since the Sun's Power in rarefying the Air, is notorious; it muſt neceſſarily have a great influence on the Generation of *Winds*.

The riſing and changing of the *Wind* is determin'd experimentally, by means of Weather-cocks, placed a-top of Houſes, &c.——But theſe only indicate what paſſes about their own Height, or near the Surface of the Earth: *Wolfius* aſſuring us, from Obſervations of ſeveral Years, that the higher *Winds* which drive the Clouds, are different from the lower ones, which move the Weather-cocks——Mr. *Derham* obſerves ſomething not unlike this; *Phyſ. Theol. l.* 1. *c.* 2.

The Author laſt mention'd obſerves, upon comparing ſeveral Series of Obſervations made of the *Winds* in divers Countries, *viz. England*, *Ireland*, *Switzerland*, *Italy*, *France*, *New England*, &c. That the *Winds* in thoſe ſeveral places ſeldom agree; but when they do, it is commonly when they are ſtrong, and of long continuance in the ſame Quarter; and more, he thinks, in the Northerly and Eaſterly, than in other Points——Alſo, that a ſtrong *Wind* in one place, is oftentimes a weak one in another; or moderate, according as the places are nearer, or more remote. *Philoſoph. Tranſact.* N° 297, and 321.

Laws of the Force, and Velocity of Wind.

Wind being only Air in Motion, and Air being a Fluid, ſubject to the Laws of other Fluids; its Force may be brought to a preciſe Computation: Thus——*The Ratio of the ſpecific Gravity of any other Fluid, to that of Air, together with the Space that Fluid impell'd by the Preſſure of the Air, moves in any given Time, being given; we can determine the Space which the Air itſelf, acted on by the ſame Force, will move in the ſame time:* By this Rule,

1. As the ſpecific Gravity of Air, is to that of any other Fluid; ſo, reciprocally, is the Square of the Space which that Fluid, impell'd by any Force, moves in any given time, to the Square of the Space which the Air, by the ſame Impulſe, will move in the ſame time.

Suppoſing, therefore, the Ratio of the Specific Gravity of that other Fluid to that of Air, to be $= b : c$; the Space deſcrib'd by the Fluid to be call'd f; and that which the Air will deſcribe by the ſame Impulſe, x. The Rule gives us $x = \sqrt{(bs : c)}$.

Hence, if we ſuppoſe Water impell'd by the given Force, to move two Feet in a Second of Time; then will $f = 2$; and ſince the ſpecific Gravity of Water to the Air, is as 970 to 1; we ſhall have $b = 970$, and $c = 1$; conſequently $x = \sqrt{970}$. $4 = \sqrt{3880} = 623$ Feet. The Velocity of the *Wind*, therefore, to that of Water moved by the ſame Power, will be as 623 to 2; *i.e.* if Water move two Feet in a Second, the *Wind* will fly 623 Feet.

2. Add, that $f = \sqrt{(cx^2 : b)}$ and therefore the Space any Fluid, impell'd by any Impreſſion, moves in any time, is determin'd, by finding a fourth Proportional to the two Numbers that expreſs the Ratio of the ſpecific Gravity, and the Square of the Space the *Wind* moves in, in the given time——The ſquare Root of that fourth Proportional is the Space requir'd.

M. *Mariotte*, *e.gr.* found, by various Experiments, that a pretty ſtrong *Wind* moves 24 Feet in a Second of Time; wherefore, if the Space which the Water, acted on by the ſame Force as the Air, will deſcribe in the ſame time, be requir'd; then will $c = 1$, $x = 24$, $b = 970$; and we ſhall find $f = \sqrt{(576 : 970)} = \frac{24}{31}$.

3. *The Velocity of Wind being given, to determine the Preſſure requir'd to produce that Velocity*; we have this Rule:———The Space the *Wind* moves in one Second of Time, is to the height a Fluid is to be rais'd in an empty Tube in order to have a Preſſure capable of producing that Velocity; in a Ratio compounded of the ſpecific Gravity of the Fluid to that of the Air, and of quadruple the Altitude a Body deſcends in the firſt Second of Time, to the foreſaid Space of the Air.

Suppoſe, *e.gr.* the Space the Air moves in a Second, $a = 24$ Feet, or 288 Inches; call the Altitude of the third x, and the Ratio of Mercury to Air $b : c = 13580 : 1$, $d = 181$ Inches; x will be leſs than that Number by one Line, or $\frac{1}{12}$ of an Inch. And hence we ſee why a ſmall, but ſudden Change in the Barometer, ſhould be follow'd with violent *Winds*. See Barometer.

The Force of the *Wind* is determin'd experimentally by a peculiar Machine, call'd an *Anemometer*, *Wind Meaſurer*; which being moved by means of Sails, like thoſe of a *Wind-Mill*, raiſes a Weight, that, ſtill the higher it is rais'd, receding further from the Centre of Motion, by ſliding along an hollow Arm fitted on to the Axis of the Sails, becomes heavier and heavier, and preſſes on the Arm; till being a Counter-poiſe to the Force of the *Wind* on the Sails, it ſtops the Motion thereof. An Index, then, fitted upon the ſame Axis at right Angles with the Arm, by its riſing or falling, points out the Strength of the *Wind*, on a Plane divided like a Dial-Plate into Degrees. See Anemometer.

Qualities of Winds.

1. *A Wind blowing from the Sea, is always moiſt: In Summer, 'tis cold; and in Winter, warm: unleſs the Sea be froze up*——This is well demonſtrated thus: There is Vapour continually riſing out of all Water, (as appears even hence, that a Quantity of Water being left a little while in an open Veſſel, is found ſenſibly diminiſh'd) but eſpecially if it be expos'd to the Sun's Rays; in which Caſe, the Evaporation is beyond all expectation. See Vapour.)——By this means, the Air incumbent on the Sea, becomes impregnated with a deal of Vapour. But the Winds blowing from off the Sea, ſweep theſe Vapours along with them; and conſequently are always moiſt.

Again, Water in Summer, &c. conceives leſs Heat than terreſtrial Bodies expos'd to the ſame Rays of the Sun; but in Winter, Sea-Water is warmer than the Earth cover'd with Froſt and Snow, &c. Wherefore, as the Air contiguous to any Body, is found to partake of its Heat and Cold, the Air contiguous to Sea-Water will be warmer in Winter, and colder in Summer, than that contiguous to the Earth——Or thus: Vapours rais'd from Water by the Sun's Warmth in Winter, is warmer than the Air it riſes in; (as appears from the Vapours condenſing and becoming viſible almoſt as ſoon as they are got out into Air.) Freſh Quantities of Vapour, therefore, continually warming the Atmoſphere over the Sea, will raiſe its Heat beyond that of the Air over the Land——Again, the Sun's Rays reflected from the Earth into the Air, in Summer, are much more than thoſe from the Water into Air: The Air therefore over the Earth, warm'd by the Reflection of more Rays than that over Water, is warmer——Hence Sea-Winds make thick, cloudy, hazy Weather.

2. *Winds blowing from the Continent, are always dry; in Summer, warm; and cold in Winter*——For there is much leſs Vapour ariſing from the Earth, than from Water. And therefore the Air over the Continent will be impregnated with much fewer Vapours. Add, that the Vapours or Exhalations rais'd by a great degree of Heat out of the Earth, are much finer, and leſs ſenſible, than thoſe from Water——The *Wind*, therefore, blowing over the Continent, carries but little Vapour with it; and is therefore dry.

Further, the Earth in Summer is warmer than Water expos'd to the ſame Rays of the Sun——Hence, as the Air partakes of the Heat of contiguous Bodies; that over the Earth in Summer will be warmer than that over the Water: Therefore the *Wind*, &c.

After the like manner it is ſhewn, that the Land-*Winds* are cold in Winter———Hence we ſee why Land-*Winds* make clear, cold Weather. See Weather.

Our Northerly and Southerly *Winds*, however, which are commonly eſteem'd the Cauſes of cold and warm Weather, Mr. *Derham* obſerves, are really the Effect of the Cold, or Warmth of the Atmoſphere.——Hence it is, that we frequently ſee a warm ſoutherly *Wind* on a ſudden changed to the North, by the fall of Snow or Hail; and that in a cold, froſty Morning, we ſee the *Wind* North, which afterwards wheels about towards the Southerly Quarters, when the Sun has well warm'd the Air, and again in the cold Evening turns Northerly or Eaſterly.

For the manner wherein North-Eaſterly Winds *contribute to Blights*; ſee Blight.

For the Effect of Winds *on the Barometer, and Thermometer*; ſee Barometer and Thermometer.

Wind, in Navigation, is the ſame Agitation of the Air, conſider'd as ſerving for the Motion of Veſſels on the Water. See Sailing.

The *Winds* are divided with reſpect to the Points of the Horizon from which they blow, into *Cardinal* and *Collateral*.

Cardinal Winds, are thoſe blowing from the four Cardinal Points, Eaſt, Weſt, North, and South. See Cardinal.

Collateral Winds, are the intermediate *Winds* between two Cardinal *Winds*——The Number of theſe is infinite, as the Points from which they blow are; but only a few of them are conſider'd in Practice: *i. e.* only a few of them have their diſtinguiſhing Names. See Collateral.

The antient *Greeks* at firſt only uſed the four Cardinal ones; at length, they took in four more.———*Vitruvius* gives us a Table of twenty, beſides the Cardinals, in uſe among the *Romans*.

The Moderns, as their Navigation is much more perfect than the antient, have given Names to twenty-eight Collateral ones; which they range into *primary* and *ſecundary*—and the *ſecundary* they ſubdivide into thoſe of the *firſt* and *ſecond Order*. See POINT.

The *Engliſh* Names of the primary Collateral *Winds* and Points are compounded of the Names of the Cardinal ones, *North* and *South* being ſtill prefix'd.

The Names of the ſecundary Collateral *Winds* of the firſt Order, are compounded of the Names of the Cardinals, and the adjacent primary one——Thoſe of the ſecond Order are compounded of the Names of the Cardinal, or the next adjacent primary; and the next Cardinal, with the addition of the Word (*by*).——The *Latins* have diſtinct Names for each; all which are expreſs'd in the following Table.

Engliſh.	Names of the *Winds*, and Points of the Compaſs. *Latin* and *Greek.*	Diſtance of the Parts, &c. From North.
1. *North.*	*Septentrio*, or *Boreas.*	0° 0′
2. North by Eaſt.	Hyperboreas. Hypaquilo.	11 15
3. North-North-Eaſt.	Gallicus. Aquilo.	22 30
4. North-Eaſt by North.	Meſoboreas Meſaquilo. Supernas.	33 45
5. *North-Eaſt.*	*Arctapeliotes. Borapeliotes. Græcus.*	45
6. North-Eaſt by E.	Hypocæſias.	56 15
7. Eaſt-North-Eaſt.	Cæſias Helleſpontius. Meſocæſias.	67 30
8. Eaſt by North.	Carbas.	78 45
		from the Eaſt.
9. *Eaſt.*	*Solanus, Subſolanus, Apeliotes.*	0° 0′
10. Eaſt by South.	Hypeurus, or Hypereurus.	11 15
11. Eaſt-South-Eaſt.	Eurus, or Volturnus.	22 30
12. South-Eaſt by Eaſt.	Meſeurus.	33 45
13. *South-Eaſt.*	*Notapeliotes Euroauſter.*	45
14. South-Eaſt by South.	Hypophœnix.	56 15
15. South-South-Eaſt.	Phœnix, Phœnicias, Leuco-notus, Gangeticus.	67 30
16. South by Eaſt.	Meſophœnix.	78 45
		from the South.
17. *South.*	*Auſter, Notus, Meridies.*	0° 0′
18. South by Weſt.	Hypolibononotus, Alſanus.	11 15
19. South-South-Weſt.	Libonotus, Notolybicus Auſtro-africus.	22 30
20. South-Weſt by South.	Meſolibonotus.	33 45
21. *South Weſt.*	*Noto-Zephyrus. Noto-Lybicus. Africus.*	45
22. South-Weſt by Weſt.	Hypolibs. Hypafricus. Subveſperus.	56 15
23. Weſt-South-W.	Libs.	67 30
24. Weſt by South.	Meſolibs. Meſozephyrus.	78 45
		from the Weſt.
25. *Weſt.*	*Zephyrus, Favonius, Occidens.*	0° 0′
26. Weſt by North.	Hypargeſtes. Hypocorus.	11 15
27. Weſt-North-Weſt.	Argeſtes. Caurus, Corus, Japyx.	22 30
28. North-Weſt by Weſt.	Meſargeſtes. Meſocorus.	33 45
29. *North-Weſt.*	*Zephyro-boreas, Borolybicus, Olympias.*	45
30. North-Weſt by North.	Hypocircius. Hypothraſcias. Scirem.	56 15
31. North-North-Weſt.	Circius, Thraſcias.	67 30
32. North by Weſt.	Meſocircius.	78 45

Note, The antient Names are here, after *Ricciolus*, adapted to the modern ones; not as the *Winds* formerly denoted by thoſe were preciſely the ſame with theſe, (for the antient Number and Diviſion being different from the Modern, the Points they refer to will be ſomewhat different) but as theſe are what come the neareſt.———Thus, *Vitruvius* only reckoning twenty-four *Winds*, diſpoſes the Points they refer to in a different Order; as in the following Table.

Names of the Winds.	*Diſtance from North.*		*Names of the* Winds.	*Diſtance from Eaſt.*	
1 *Septentrio.*	0°	0′	7 *Solanus.*	0°	0′
2 Gallicus.	15		8 Ornithias.	15	
3 Supernas.	30		9 Cæcias.	30	
4 Aquilo.	45		10 Eurus.	45	
5 Boreas.	60		11 Volturnus.	60	
6 Carbas.	75		12 Europotius.	75

For the Uſe of the Winds *in Navigation*, &c. See RHUMB, COMPASS, *&c.*

WIND-*Gun*, a Machine, ſerving to explode Bullets, and other Shot, with great Violence; by the force of the Air. See GUN.

This Arm charged with Air, has an Effect ſcarce inferior to that of a common Fire-Arm charged with Gun-Powder; but it diſcharges itſelf with a much leſs Report: And 'tis this, which, in all probability, gave occaſion to the Fable of white Gun-Powder. See GUN-*Powder*.

There are *Wind-Guns* of divers Contrivances; the moſt eaſy and portable one, and the moſt in uſe is repreſented, (Tab. PNEUMATICS, *Fig.* 14.) It conſiſts of a round Metalline Tube 3, 3. open at the end *c c*, and exactly ſtopp'd at the other end *a*, like the Barrels of other Guns; 1, 1, 1, 1, is another larger Metal Tube, wherein the former is diſpoſed ſo as to leave a Space between 'em 4, 4, wherein Air may be incloſed. The two Tubes are joined together at the common Aperture *c c* by a circular Plate exactly ſolder'd to both, ſo as to prevent the Air from eſcaping out of the Space 4, 4, *&c.* At 8 is a ſpring Valve, which opening inwardly, lets the Air paſs through from 2 into the Space 1, but prevents its return from 1 to 2. Near the cloſe end of the inner Tube are two Holes 6 and 5; by the firſt the Space 1 and the inner Tube communicate, ſo that the Air would paſs out of that into this, but that the Paſſage is ſtop'd by a Valve opening outwardly; by the latter there is a communication between the open Air, the Space 4, and the inner Barrel: only the Air pent up in the Space can't eſcape at this Hole by reaſon of a little Tube exactly ſolder'd to both Barrels, which ſtops the communication: nor can Air eſcape out of the inner Barrel through this little Tube, by reaſon of a little moveable Pin which exactly fills the Cavity of the Tube.

Laſtly, the Part 2, 2, 2, 2, repreſents the Body of a Syringe or Sucking-Pump; by which, as much Air as poſſible, is to be intruded into the Space 4, 4, *&c.*——After which, a Bullet being put into the Cavity of the inner Barrel, as high as the little Tube 5, the Gun is charged. See SYRINGE.

Now, to diſcharge it, the little Valve 6 is puſh'd up by means of the Pin that plays in the little Tube 5. Upon this, the compreſs'd Air in the Cavity of the outer Barrel 4, ruſhing through the Hole 6 into the Cavity of the inner Barrel; expels the Bullet with a vaſt force, ſufficient to penetrate a thick Board.

Note, To give the Machine the greater reſemblance of a Fire-Arm, the Part 2, 2, 2, 2, is uſually faſhion'd like the Butt-end of a Muſquet, and on the Part 28, 28 is fitted a Lock; by turning the Trigger of which, the Pin 5 is made to puſh back the Valve, and ſo diſcharge the Piece.——By the Lock too, it is contrived that either the whole Charge of Air may be ſpent at one Exploſion, or only part of it, and the reſt reſerved for freſh Bullets. By this piece of Mechaniſm, we can have half a dozen good, effective Shoots, with one Charge of Air.

WIND-*Egg*, an addle Egg, or Egg that has taken *Wind*. See EGG.

WIND-*Fall*, denotes Fruit blown off the Tree by the *Wind*.

WIND-*Gall*, in Horſes, a ſoft, flatulent Tumour or Bladder, ariſing on the fetlock Joint, and cauſing great Pain, eſpecially in hot Weather and hard Ways. See GALL.

It is uſually owing to a violent Strain, extreme Labour, and Heat, a Horſe's ſtanding on a ſloping Floor, a Blow from another, or the like.

WIND-*Mill*, a kind of Mill which receives its Motion from the Impulse of the *Wind*. See MILL.

The *Windmill*, tho' a Machine common enough, has yet somewhat in it more ingenious than is usually imagined.—Add, that it is usually granted to have a degree of Perfection which few of the popular Engines have attained to, and which the Makers are but little aware of——Tho' the new Geometry, *&c.* has furnished ample Matter for its Improvement.

Structure of the WIND-*Mill.*

The internal Structure of the *Windmill* is much the same with that of Water-Mills———The difference between 'em lies chiefly in an external Apparatus for the Application of the Power.

This Apparatus consists of an Axis L F (Tab. PNEUMATICS, *Fig.* 15.) thro' which pass two Rods or Yards, A B and C D, intersecting each other at right Angles in E, whose length is usually about 32 Feet: On these Rods are form'd a kind of Sails, Vanes, or Flights, in the Figure of Trapeziums, with parallel Bases, the greater whereof H I is about six Feet, and the less F G determined by Radii drawn from the Centre E, to C and H.

These Sails are to be capable of being always turn'd to the Wind, that they may receive its Impression: In order to which, there are two different Contrivances, which constitute the two different kinds of *Wind-Mills* in use.

In the one, the whole Machine is sustain'd upon a movable Arbor or Axis perpendicular to the Horizon, on a Stand or Foot; and turn'd occasionally this way or that, by means of a Lever.

In the other, only the Cover, or Roof of the Machine, with the Axis and Sails turn round ——In order to which,

The Cover is built Turret-wise, and the Turret encompass'd with a Wooden-Ring, wherein is a Groove, at the bottom whereof are placed at certain distances, a number of Brass Truckles, and within the Groove is another Ring upon which the whole Turret stands. To the moveable Ring are connected Beams *a b* and *f c*; and to the Beam *a b*, in *b* is fasten'd a Rope, which at the other extreme thereof is fitted to a Windlass or Axis in Peritrochio: This Rope being drawn through the Iron Hook G, and the Windlass turn'd, the Sails will be moved round, and put in the direction requir'd.

Theory of the Motion of a WIND-*Mill, with the Position of the Sails or Vanes thereof.*

The Angle the Sails are to make with their common Axis, so as the *Wind* may have the greatest Effect, is a Matter of nice Enquiry, and has employ'd the Thoughts of the Mathematicians.

To conceive why a *Wind-Mill* moves at all, the Theory of compound Motions must be supposed——A Body moving perpendicularly against any Surface, strikes it with all its force.———If it move parallel to the Surface, it does not strike it at all: And if it move obliquely, its Motion being compounded of the perpendicular and parallel Motion, only acts on the Surface consider'd as it is perpendicular, and only drives it in the direction of the Perpendicular. So that every oblique Direction of a Motion is the Diagonal of a Parallelogram, whose perpendicular and parallel Directions are the two Sides. Add, That if a Surface, which being struck obliquely has only received the perpendicular Direction, be fasten'd to some other Body, so as that it cannot pursue its perpendicular Direction, but must change it for some other; in that Case, the Perpendicular itself becomes the Diagonal of a new Parallelogram, one of whose Sides is the Direction the Surface may follow, and the other, that it cannot.

Thus, a Rudder fasten'd obliquely to the Keel of a Vessel, being struck by the Current of Water parallel to the Keel, and of consequence obliquely with regard to itself; it will appear, by drawing the Line of perpendicular Impulse, that it tends to tear the Rudder from the Keel, and to carry it away: And that this Direction perpendicular to the Rudder, is oblique to the Keel.———The Rudder, then, would be carried off in an oblique Direction: But, as, in effect, it is so secur'd, that it cannot be torn or carried off; we are only to consider, in this compound Motion, that of the two Directions wherewith it can move without being torn from the Keel; and leave the other which would tear it off, as useless.

Now, the Direction in which it can move without parting from the Keel, is that which carries it circularly about its Extremity as a Centre. So that the effect of the oblique Impulse of the Water on the Rudder, is reduced, first to a perpendicular Impression, which is again reduced to the mere turning the Rudder round; or, if the Rudder be immoveable, to the turning of the Vessel.

Now, in an oblique and compound Motion, where only one of the Directions is of service; the greater Ratio the other has thereto, the less effect will the Motion have; and *vice versa*.——In examining the compound Motions of the Rudder, we find that the more oblique it is to the Keel, the Ratio of the Direction that serves to turn it to the other, is the greater. But, on the other hand, the more oblique it is to the Keel, and of consequence to the Course of the Water which is supposed parallel thereto, the more weakly it strikes. The obliquity of the Rudder, therefore, has at the same time both an Advantage and a Disadvantage; but as those are not equal, and as each of 'em are still varying with every different Position of the Rudder, they become complicated variously, so that sometimes the one prevails, and sometimes the other.

It has been a Point of Enquiry to find the Position of the Rudder wherein the Advantage should be the greatest. M. *Renau*, in his famous Theory of the Working of Ships, has found that the best situation of the Rudder is when it makes an Angle of 55 Degees with the Keel. See SAILING, STEERING, *&c.*

If, now, a *Wind-Mill* exposed directly to the Wind, should have its four Sails perpendicular to the common Axis wherein they are fitted, they would receive the Wind perpendicularly; and it is visible that Impulse would only tend to over-turn 'em———There is a necessity, therefore, to have 'em oblique to the common Axis, that they may receive the Wind obliquely.

For the greater ease; let us only consider one Vertical Sail———The oblique Impulse of the Wind on this Sail is reducible to a perpendicular Impulse: And that Direction, as the Sail cannot absolutely keep to it, is compounded of two; one whereof tends to make it turn on its Axis, and the other to fall backwards. But it is only the first of these Directions can be obey'd. Of consequence the whole Impulse of the Wind on the Sail has no other effect but to make it turn from right to left, or from left to right, as its acute Angle turns this way or that. And the Structure of the Machine is so happy, that the three other Sails are determined, from the same reasons, to move the same way.

The Obliquity of the Sails with regard to their Axis, has precisely the same Advantage, and Disadvantage, with the Obliquity of the Rudder to the Keel.——And M. *Parent*, seeking, by the new Analysis, the most advantageous Situation of the Sails on the Axis, finds it precisely the same Angle of 55 Degrees. Yet, in practice this Rule is very little observed; as, indeed, being little known. They are usually about 60 Degrees, which is very much out of the way.

Elliptical WIND-*Mill.*

M. *Parent* considers further, what Figure the Sails of a *Wind-Mill* shall have, to receive the greatest Impulse from the *Wind*; and he determines it to be a Sector of an Ellipsis whose Centre is that of the Axis or Arbor of the Mill; and the little Semi-Axis, the height of thirty-two Feet. As for the greater, it follows necessarily from the Rule that directs the Sail to be inclined to the Axis 55 Degrees.

On this foot, he assumes four such Sails, each whereof is one-fourth of an Ellipsis; which, he shews, will receive all the Wind, and lose none, as the common ones do.——These four Surfaces multiply'd by the Lever with which the Wind acts on one of 'em, express the whole force the Wind has to move the Machine, or the whole force the Machine has when in Motion.

The same manner of Reasoning apply'd to a common *Wind-Mill* whose Sails are Rectangular, and their Height about five times their Breadth; shews that the *Elliptic Wind-Mill* has above seven times the force of the common one. A prodigious Advantage! And worthy, sure, to have the common Practice set aside for, could so common a Practice be easily changed.

A *Wind-Mill* with six Elliptic Sails, he shews, would still have more force than one with four——It would only have the same Surface with the four; since the four contain the whole Space of the Ellipsis as well as the six. But the force of the six would be greater than that of the four in the Ratio of 245 to 231. If it were desir'd to have only two Sails, each being a Semi-Ellipsis, the Surface would be still the same, but the force would be diminished by near one-third of that with six Sails; by reason the greatness of the Sectors would much shorten the Lever with which the Wind acts.

The best Form and Proportion of Rectangular WIND-*Mills.*

But, as Elliptical Sails would be something so new, that there is little room to expect they will come into common Use; the same Author has consider'd which Form, among the rectangular ones, will be the most advantageous, *i. e.* which, the Product of whose Surface by the Lever of the Wind will be the greatest. And by the Method *de Maximis*

imis & Minimis, he finds them very different from the common ones.

The Reſult of his Enquiry is, that the Width of the rectangular Sail ſhould be nearly double its Height or Length; whereas the Height or Length are uſually made almoſt five times their Width.——Add, that as the Height, or Length, is the Dimenſion taken from the Centre of the Axis; the greateſt Dimenſion of the new rectangular Sail will be turn'd towards the Axis, and the ſmalleſt from it: Quite contrary to the Poſition of the common Sails.

The Force of a *Windmill* with four of theſe new rectangular Sails, M. *Parent* ſhews, will be to the Force of 4 Elliptic Sails, nearly as 13 to 23; which leaves a conſiderable advantage on the ſide of the Elliptic ones: yet will the Force of the new rectangular Sails be nearly four times as great as thoſe of the common ones.

M. *Parent* likewiſe conſiders what Number of the new Sails will be moſt advantageous, and finds that the fewer Sails, the more Surface there will be, but the leſs Force—The Ratio of the Force of a *Windmill* with 6 Sails, will be to another with 4, nearly as 14 to 13. And the Force of another with 2, will be to that with 4, nearly as 13 to 9.

As to the common *Windmill*, its force ſtill diminiſhes as the Breadth of the Sails is ſmaller in proportion to the Height. The uſual Proportion, therefore, of 5 to 1, is exceedingly diſadvantageous.

The Uſes of this new Theory of *Windmills* are very obvious———The more Force a *Windmill* has, the ſwifter it turns; the more it diſpatches, and the leſs Wind it needs. Add, that on this Theory, one may have a *Windmill*, whoſe Sail ſhall be a deal leſs, and yet the Force a deal greater, than in the common one.

WIND-*Inſtruments*, in Muſic, are Inſtruments play'd by the *Wind*, chiefly the Breath; in contradiſtinction to String-Inſtruments, and Inſtruments of the pulſatile Sound. See MUSIC.

The *Wind-Inſtruments* known to the Antients, were the *Tibia*, *Fiſtula*, *Syringa* of *Pan*, conſiſting of ſeven Reeds join'd ſide-wiſe; *Organs*, *Tubæ*, *Cornua*, and *Lituus*: See TIBIA, FISTULA, &c. each under the proper Article.

Thoſe of the Moderns, are the *Flute*, *Bagpipe*, *Hautboy*, *Trumpet*, &c. See FLUTE, BAGPIPE, &c.

WIND *Dropſy*, WIND *Colic*, WIND *Tumors*, &c. } See { TYMPANITES. COLIC. TUMOR.

WINDASS, WANDASS, and WANLASS, corruptly WINDLASS; a Term in Hunting———Thus, to drive the *Windlaſs*, ſignifies the chaſing a Deer to a Stand, where one is ready with a Bow or Gun to ſhoot. See HUNTING.

——*Omnes illi qui tenuerunt in Bondagii tenura ſolebant vocari Cuſtumarii: Et quotieſcunque Dominus ad venandum venerit, illi Cuſtumarii ſolebant fugare* Windaſſum, *ad ſtabulum in Venatione ferarum Beſtiarum ſecundum quantitatem Tenuræ ſuæ.* MS. de Conſuetud. Manerii de Sutton Colfield, An. 3. Ed. 2.

WINDLASS, or WINDLESS, a Machine uſed to raiſe huge Weights withal, as Guns, Stones, Anchors, &c. See MACHINE.

It is very ſimple, conſiſting only of three Pieces of Wood; a Roll or Axle-Tree, and a Pully——The Pieces of Wood meet a-top; being plac'd diagonally, ſo as to prop each other——The Axis or Roller goes thro' two of the Pieces, and turns in them———The Pully is faſten'd a-top, where the three Pieces join.

Laſtly, there are two Levers go thro' the Roll, whereby it is turn'd, and the Rope, which comes over the Pully, is wound off, and on the ſame.

WINDLASS *in a Ship*, is a Piece of Timber, having ſix or eight Squares, and fix'd abaft the Stern aloft, where the Cables come in from one ſide of the Ship to the other; uſed in Meal-Ships, and in the *Flemiſh* Ships, which are lightly mann'd.

This *Windlaſs* will purchaſe more by much than any Capſtan in the weighing of an Anchor, and without any danger to thoſe that heave; becauſe they heave here with Hand-Spikes, put into the Hole at either End of the *Windlaſs*. See CAPSTAN.

WIND-*Tackle-Blocks*, in a Ship, are the main double Blocks or Pulleys; which being made faſt to the end of a ſmall Cable, ſerve for the hoiſting of Goods into the Ship, &c. See BLOCK, TACKLE, &c.

To wind or wend a Ship, ſignifies to bring her Head about.

How winds or wends the Ship? is a Queſtion ask'd by Mariners concerning a Ship under Sail, ſignifying as much as, upon what Point of the Compaſs does ſhe lie with her Head?

WIND-*ward Tide*, in the Sea-Language, a Tide which runs againſt the *Wind*. See TIDE.

WINDOW, *q. d. Wind-Door*, an Aperture or open Place in the ſide of an Houſe, to let in the Air and Light. See BUILDING, APERTION, LIGHT.

We have various Kinds and Forms of *Windows*; as Glaſs *Windows*, Wire *Windows*, Horn *Windows*, &c.——Arch'd *Windows*, Circular *Windows*, Elliptical *Windows*, Square and Flat *Windows*; Round *Windows*, Oval *Windows*, Gothic *Windows*, Regular *Windows*, Ruſtic *Windows*, &c. Sky-Lights. See GLASS, GLAZIERY, LEAD, PLUMBERY, VICE, &c.

Dormer WINDOWS, or *Lutherns*. See DORMER and LUTHERN.

Tranſom WINDOWS. See TRANSOM.

The chief Rules with regard to *Windows* are——1. That they be as few in Number, and as moderate in Dimenſions, as may conſiſt with other Reſpects; inaſmuch as all Openings are Weakenings———— 2. That they be placed at a convenient Diſtance from the Angles, or Corners of the Building; becauſe that part ought not to be open and infeebled, whoſe Office is to ſupport and faſten all the reſt of the Building———3. That Care be taken the *Windows* be all equal one with another in their Rank and Order; ſo that thoſe on the right hand may anſwer to thoſe on the left, and thoſe above be right over thoſe below: for this Situation of *Windows* will not only be handſome and uniform; but alſo the Void being upon the Void, and the Full upon the Full, it will be a ſtrengthening to the whole Fabrick.

As to their Dimenſions, Care is to be uſed neither to give them more, nor leſs Light than is needful; therefore regard is to be had to the Bigneſs of the Rooms which are to receive the Light. 'Tis evident that a great Room needs more Light, and conſequently a greater *Window* than a little Room; and *è contra*.

The Apertures of *Windows* in middle-ſized Houſes, may be four and a half, or five Feet between the Jambs; and in the greater Buildings, ſix and a half, or ſeven Feet; and their Height may be double the Length at the leaſt ———But in high Rooms, or larger Buildings, their Height may be a third, a fourth, or half their Breadth, more than double their Length.

Such are the Proportions for *Windows* of the firſt Story; and according to theſe muſt thoſe in the upper Stories be for Breadth; but as to Height, they muſt diminiſh: the ſecond Story may be one third part lower than the firſt, and the third Story one fourth part lower than the ſecond. See STORY.

WINDOW, in Anatomy, &c. See FENESTRA.

WIND-*taught*, a Sea-Term, implying as much as, ſtiff in the *Wind*.

Thus they ſay, a thing is *taught*, when it is ſtiff——So, too much Rigging, high Ropes, or any thing catching or holding *Wind* aloft, is ſaid to hold a Ship *Wind-taught*; by which they mean, that ſhe ſtoops too much in her Sailing, in a ſtiff Gale of *Wind*. Again, when a Ship rides in a main ſtreſs of *Wind* and Weather, they ſtrike down her Top-maſts, and bring her Yards down, which elſe would hold too much *Wind*, or be too much diſtended.

WINE, *Vinum*, a brisk, agreeable, and ſpirituous Juice, drawn from vegetable Bodies, and fermented. See VEGETABLE and FERMENTATION.

The Character of a *Wine*, according to *Boerhaave*, is, that the firſt thing it affords by Diſtillation, be a thin, fatty, inflammable, &c. Fluid; call'd a *Spirit*. See SPIRIT.

This diſtinguiſhes *Wines* from another Claſs of fermented vegetable Juices, *viz. Vinegars*; which, inſtead of ſuch Spirit, yield, for the firſt thing, an acid, uninflammable Matter. See VINEGAR.

All ſorts of Vegetables, Fruits, Seeds, Roots, &c. afford *Wine*; as Grapes, Currants, Mulberries, Elder, Cherries, Apples, Pulſe, Beans, Peaſe, Turnips, Radiſhes, and even Graſs itſelf. See VINOUS *Liquor*.

Hence, under the Claſs of *Wines*, or Vinous Liquors, come *Wine*, abſolutely ſo call'd, Ale, Cyder, &c. See MALT *Liquor*, ALE, CYDER, &c.

WINE, is in a more particular manner appropriated to that drawn from the Fruit of the *Vine*, by ſtamping its Grapes in a Vat, or cruſhing and expreſſing the Juice out of them in a Preſs, and then fermenting, &c. See VINE, and VINEYARD.

The Goodneſs of *Wine* conſiſts in its being net, dry, clear, fine, brisk, without any Taſte of the Soil, of a clean, ſteddy Colour; in its having a Strength, without being heady; a Body, without being ſour; and its keeping, without growing hard.

Wine being a Liquor moſtly of foreign Produce; the divers Names, Forms, Kinds, Diſtinctions, &c. thereof, are borrow'd from the Countries where 'tis produc'd; the principal whereof, at this day, is *France*: To *Wines* of which

of which Country, a good part of what we have to say of this noble Liquor, will more immediately belong.

Wine is distinguish'd from the several Degrees and Steps of its Preparation, into, 1. The *Mere-goutte*, Mother-drop; which is the Virgin *Wine*, or that which runs of itself out at the Tap of the Vat wherein the Grapes are laid, before the Vintager enters to tread or stamp the Grapes——— The *Must*, *Surmoust*, or *Stum*; which is the *Wine*, or Liquor, in the Vat, after the Grapes have been trod or stamp'd——The *press'd Wine*, *Vin de Pressurage*, which is that squeez'd with a Press, out of the Grapes half bruised by the treading——The Husks left of the Grapes, are call'd Rape or Marc; by throwing Water upon which, and pressing them a-fresh, they make a Liquor for Servants Use, answerable to our Water-Cyder, and call'd *Boisson*, *Draught*; which is of some use in Medicine in the Cure of Disorders occasion'd by viscid Humours.

Sweet Wine, *Vin Poux*, is that which has not yet work'd nor boil'd———*Bouru*, that which has been prevented working, by casting it in cold Water———*Cuve*, *work'd Wine*, or that which has been let work in the Vat, to give it a Colour———*Cuit*, *boiled Wine*, that which has had a boiling e'er it work'd; and which, by that means, still retains its native Sweetness——*Passe*, or *strain'd Wine*, that made by steeping dry Grapes in Water, and letting it ferment of itself.

Wines are also distinguish'd with regard to their Colour, into *White Wine*, *Red Wine*, *Claret Wine*, *Pale Wine*, *Rose* or *Black Wine*——And with regard to their Country, or the Soil that produces them, into *French Wines*, *Spanish Wines*, *Rhenish Wines*, *Hungary Wines*, *Greek Wines*, *Canary Wines*, *&c.*——And more particularly into *Port Wine*, *Madera Wine*, *Burgundy Wine*, *Champaigne Wine*, *Falernian Wine*, *Tokai Wine*, *Schiras Wine*, *&c.*

Wines, again, are distinguish'd with regard to their Quality, into *sweet Wines*, rough or *dry Wines*, and *rich* or *luscious Wines*, *Vins de liqueur*; of which last, some are exceedingly sweet, others sweet and poignant: all chiefly used by way of Dram after Meals, *&c.*

Such are the *French Frontigniac*, *Madera*, the *Canary*, the *Hungary*, *Tokai*, the *Italian Montesfiascone*, the *Persian Schiras*, the *Malmsey Wines* of *Candia*, *Chio*, *Lesbos*, *Tenedos*, and other Islands of the *Archipelago*, which antiently belonging to the *Greeks*, but now to the *Turks*: these *Wines* are sometimes call'd *Greek Wines*, and sometimes *Turkey Wines*.

Method of Making and Fining Wine.

In the Southern Parts of *France* their way is, for *Red Wines*, to tread or squeeze the Grapes between the Hands, and to let the whole stand, Juice and Husks; till the Tincture be to their liking: after which they press it.——But for *White Wines*, they press the Grapes immediately.

When press'd, they tun the Must, and stop up the Vessel; only leaving the depth of half a Foot or more empty, to give room for it to work——At ten days end, they fill this Space with some other proper *Wine*, that will not provoke it to work again——This they repeat from time to time; new *Wine* spending itself a little, e'er it be perfect.

About *Paris*, and in the Northern Parts of *France*, they let the Murk and Must stand two Days and Nights for *White Wines*, and at least a Week for *Claret Wines*; e'er they tun it——While it continues working, 'tis kept as warm as possible.

Some, upon stopping it up for good and all, roll the Cask about the Cellar, to mix it with the Lees; and after settling a few days, rack it off with great Improvement.

To fine it down, they put Shavings of green Beech into the Vessel; having first taken off all the Rind, and boil'd them an hour in Water, to extract their Rankness; and afterwards dry'd them in the Sun, or an Oven: a Bushel of these serve for a Tun of *Wine*. They put it in a gentle Working, and purify it in twenty-four hours. They also give it an agreeable Flavour—The same Chips being wash'd, serve again and again, till almost quite consumed.

Some sweeten their *Wines* with Raisins of the Sun, trod in the Vat with the Grapes, having been first plump'd by boiling: Others, by boiling half the Must, scumming it, and tunning it up hot with the other.

For *English Wine*, the Method recommended by Mr. *Mortimer*, is, first to gather the Grapes when very dry, to pick them from the Stalks, then to press them, and let the Juice stand twenty-four hours in the Vat cover'd. Afterwards, to draw it off from the gross Lees, and then put it up in a Cask, and to add a Pint or Quart of strong Red or White Port to every Gallon of Juice; and let the whole work: bunging it up close, and letting it stand till *January*; then bottle it in dry Weather.

By this Method he assures us, he has made *English Wine* as good as any the best and purest *French Wine*, drank either in *Paris* or *Champaigne*.

Mr. *Bradley* chuses to have the Liquor when press'd, to stand with the Husks, Stalks, and all, in the Vat to ferment for fifteen days.

He adds, that according as the Vines have been manag'd, the *Wine* will be stronger or weaker——Those, *e.gr.* which run at liberty up high Trees, and are never pruned, make the *smallest Wines*: Those kept tied to Stakes about four Foot high, and which have their Branches kept pruned, make *stronger Wines*: And those nearest the Ground, the *strongest*.

The Force of the fermenting *Wine* is very great; being able, if close stop'd up, to burst thro' the strongest Cask ——The readiest and only way to stop or abate the Fermentation, is by the Fume of burning Sulphur.

Add, that when *Wine* already made is upon the Fret, or, by any Alteration in the Air, begins to ferment again; the way used by the Vintners and Wine-Coopers to save it, is by the flame of common Sulphur, or a lighted Match dip'd in it; which held under the Cask just ready to burst its Hoops, calms its Fury, and makes it immediately subside. See Sulphur.

Wine is variously denominated, according to its State, Circumstances, Qualities, *&c.*

Natural Wine, is such as it comes from the Grape, without further Mixture or Sophistication.

Brew'd or *Adulterated* Wine, is that wherein some Drug is added to give it a Strength, Fineness, Flavour, Briskness, Sweetness, or some other Quality which it wanted.

Prick'd, or *Eager* Wine, is that turn'd sourish.

Flat Wine, is that fallen weak and vappous for want of being drank in time.

Sulphur'd Wine, is that put in Casks wherein Sulphur has been burnt; in order to fit it for keeping, or for Carriage by Sea.

Colour Wine, is some thick *Wine*, of a very deep Colour, serving to dye the *Wines* that are too pale, *&c.* As the *Black Wine* in use among our Vintners.

Chip Wine, is that pour'd on Chips of Beech-wood, to fine or soften it.

Rape Wine, is that put in a Cask half full of fresh Grapes pick'd for the purpose, to recover the Strength, Briskness, *&c.* it had lost by keeping, *&c.*

Burnt Wine, is that boil'd up with Sugar; and sometimes with a little Spice.

There is also a sort of *Malmsey* Wine, made by boiling of Muscadine. See Malmsey.

The Uses of Wine are very great; not only as a Drink, but as a Medicine. See Drink, *&c.*

Several Physicians recommend it as an excellent Cordial, and particularly serviceable in Fevers, the *Lues Venerea*, *&c.*

Pliny mentions *Staphilus* as the first who mixed *Wine* with Water; but *Athenæus* gives the Credit thereof to *Amphitryon* King of *Athens*———On this Occasion a Fable was invented; *viz.* That *Bacchus* having been struck with a Thunderbolt, and being all inflam'd, was presently cast into the Nymph's Bath, to be extinguish'd.

The Age of Wine is properly reckoned by Leaves——Thus they say *Wine* of two, four, six Leaves, to signify a *Wine* of six, four, or two Years old; taking each new Leaf put forth by the Vine since the *Wine* was made, for a Year.

Among the *Romans*, the Age of *Wines* was, as it were, the Criterion of their Goodness.———*Horace*, in his *Odes*, which one may call *Bacchic Songs*, boasts of his drinking *Falernian Wine*, born, as it were, with him, or which reckon'd its Age from the same Consuls.

Pliny mentions *Wines* kept above a hundred Years, and yet potable———Others he speaks of kept two hundred Years, which by this time were reduced to the Consistence of Honey.

But the Moderns keep no *Wines* to any such Age. Where they are kept the longest, as in *Italy* and *Germany*, there are scarce any to be found above fifteen Leaves. In *France*, the *Wines* that keep best, as those of *Dijon*, *Nants*, and *Orleans*, are reckon'd superannuated at five or six Leaves old.

Lees of Wine, are the Impurities thereof, or the thick Sediment remaining at the bottom of the Casks, when the *Wine* is drawn out. See Lees and Vinegar.

Wine is also a Name used in Medicine and Pharmacy, for divers Mixtures or Compositions, wherein the Juice of the Grape is a principal Ingredient. See Vinum.

These *Medicated Wines* make a considerable Article in our Dispensatories, in quality of Diet-Drinks; some being denominated from the Ingredients used in 'em; some from the Intentions wherewith they are prescribed; and some from their Qualities, *&c.*

Bitter Wine, *Vinum Amarum*, is an Infusion of certain bitter Stomachic Herbs, as Gentian-Root, Juniper-Berries, Tops of Centaury, Orange and Lemon Peel, in white Port, or other white *Wine*; taken by way of Whet in a Morning, to restore the pall'd Stomach after a Debauch, and bring the Fibres to their due Tension.

Chalybeate, or *Steel* WINE, is prepared of Filings of Steel, and Saffron infuſed, and filter'd. It is good for removing Obſtructions in the Viſcera, as in the Chlorofis, &c.

Vinum Benedictum, the bleſſed WINE, is made of *Crocus Metallorum* and Mace infuſed in *Wine*. It was formerly a celebrated Emetic, but now almoſt out of uſe for its roughneſs.

Elecampane WINE, *Vinum Enulatum*, is an Infuſion of the Root of that Plant with Sugar and Currants, in white Port.——It cleanſes the Viſcera, prevents Diſorders and Obſtructions of the Lungs; and is good in Aſthmatic Caſes, Cachexies, &c.

Hog-lice WINE, *Vinum Millepedum*, is prepared of Hog-lice put alive in white Port; and after ſome infuſion, preſs'd and ſtrain'd out: To the Liquor is added Saffron, Salt of Steel, &c.——It is recommended againſt the Jaundice, Dropſy, Cachectic Habits, &c. See MILLEPEDES.

Pectoral WINE, *Vinum Pectorale*, is prepared of Liquorice, Saffron, Coriander-Seeds, Carraway, Aniſe, Salt of Tartar, Penny-royal, and Hyſſop-Waters, digeſted with Canary *Wine*, and ſtrain'd. It is a good Expectorant; helping to deterge and cleanſe the Lungs, &c.

Emetic WINE, *Vinum Emeticum*. See EMETIC.

Hippocrates's WINE, *Vinum Hippocraticum*, or *Hippocras*. See HIPPOCRAS.

Viper WINE, *Vinum Viperinum*, is a Preparation of female Vipers, infuſed ſix Months in *Canary Wine*.——It is a great Reſtorative, and provokes to Venery; good againſt Cutaneous Eruptions, &c. See VIPER.

Vinum Scilliticum, WINE *of Squills*, is an Infuſion of thoſe Onions in white *Wine* for forty days, and then the Squills ſtrain'd out, and the Liquor preſerv'd for uſe. It is a gentle Emetic, good againſt inundations of Rheum, &c. See SQUILLÆ.

WINE-*Meaſure*; ſee MEASURE.

WING; ſee FEATHER and FLYING.

WINGS, in Heraldry, are bore ſometimes ſingle, ſometimes in pairs, in which caſe they are call'd *Conjoin'd*; when the Points are downward, they are ſaid to be *Inverted*; when up, *Elevated*. See VOL.

WING, *Ala*, in Botany, the Angle which the Leaves of a Plant, or the Pedicles of the Leaves, form with the Stem, or a Branch of the Plant. See LEAF.

This Angle is commonly acute, and always ſtands upward.——It has its Name from its reſembling the Angle which the *Wings* of a Bird form with the Body; or rather from the Angle which a Man's Arms makes with his Trunk, which is alſo call'd *Ala*, *Wing*.

WINGS, in Gardening, &c. are ſuch Branches of Trees, or other Plants, as grow up a-ſide of each other. See BRANCH.

La Quintiny ſays, the Term is particularly apply'd to Artichoaks, whoſe *Wings* or *Alæ*, are the leſſer Heads or Fruits that grow up with the principal one, on the ſame Stalk.

WINGS, *Alæ*, in the Military-Art, are the two Extremes of an Army, ranged in form of Battel; being the Right and Left Parts thereof, and including the Main Body. See ARMY and BATTEL.

The Cavalry are always poſted in the *Wings*; *i. e.* on the Flanks, or the Right and Left Sides of each Line; to cover the Foot in the Middle. See LINE and FLANK.

Pan, one of *Bacchus's* Captains, is ſaid to have been the firſt Inventor of this Method of ranging an Army; whence, ſay they, it is that the Antients painted him with Horns on his Head; what we call *Wings* being by them call'd *Cornua*, Horns. See PANIC.

This at leaſt is certain, that the Method of Arranging in *Wings* is very antient. The *Romans*, we know, uſed the Term *Alæ*, or *Wings*, for two Bodies of Men in their Army; one on the Right, the other on the Left, conſiſting each of 400 Horſe, and 4200 Foot uſually, and wholly made up of Confederate Troops.——Theſe were deſign'd to cover the *Roman* Army, as the *Wings* of a Bird cover its Body.

The Troops in theſe *Wings* they call'd *Alares*, and *Alares Copiæ*; and we at this day diſtinguiſh our Armies into the Main Body, the Right and Left *Wings*.

WING is alſo uſed for the two Files that terminate each Batallion, or Squadron, on the Right and Left——The Pikes are ranged in the Middle, and the Muſqueteers in the *Wings*.

WINGS, in Fortification, are the larger Sides of Horn-works, Crown-works, Tenailles, and the like Out-works; including the Ramparts, and Parapets, with which they are bounded on the Right and Left, from their Gorge to their Front.

Theſe *Wings* or Sides are capable of being flank'd either with the Body of the Place, if they ſtand not too far diſtant; or with certain Redoubts; or with a Traverſe made in their Ditch.

St. *Michael's* WING, is a Military Order in *Portugal*, inſtituted, according to the Jeſuit *Mendo*, in 1165; or, according to *di Michieli* in his *Teſoro Militar de Cavalleria*, in 1171.

Its Inſtitutor was *Alphonſus Henry* I. King of *Portugal*; and the Occaſion was a Victory gain'd by him over the King of *Sevil* and his *Sarazens*; for which he thought himſelf beholden to St. *Michael*, whom he had choſe for his Patron in the War againſt the Infidels.

The Banner they bore was a *Wing*, reſembling that of the Arch-Angel, of a purple Colour encompaſs'd with Rays of Gold——Their Rule was that of St. *Benedict*; the Vow they made was to defend the Chriſtian Religion, and the Borders of the Kingdom, and to protect Orphans. Their Word, *Quis ut Deus*.

WINGED, in Botany, a Term apply'd to ſuch Stems of Plants, as are furniſh'd, all their length, with a ſort of membranous Leaves. See STEM.

Several kinds of *Thiſtles* have *winged* Stalks, and Branches.

They alſo uſe the Term *winged Leaves* for ſuch as conſiſt of divers little Leaves rang'd in the ſame direction, ſo as to appear no more than one and the ſame Leaf. See LEAF.

Such are the Leaves of Agrimony, Acacia, Aſh, &c.

Winged Seeds, are ſuch as have Down or Hairs on 'em, whereby the Wind taking hold, blows 'em to a diſtance. See SEED and SEMINATION.

WINGED, in Heraldry, is apply'd to a Bird, when its *Wings* are of a different Colour or Metal, from the Body.

Winged is alſo apply'd to any thing repreſented with *Wings*, tho' contrary to its Nature; as a *winged or flying Hart*, &c. See FLYING.

WINNOW, ſignifies to fan, or ſeparate Corn from the Chaff by Wind.

WINTER, one of the four Seaſons, or Quarters of the Year. See SEASON, &c.

Winter commences on the Day when the Sun's diſtance from the Zenith of the Place is the greateſt, and ends on the Day when its diſtance is at a Mean between the greateſt and leaſt. See SUN.

Notwithſtanding the Coldneſs of this Seaſon, it is proved in Aſtronomy, that the Sun is really nearer to the Earth in *Winter* than in Summer. See EARTH.

The reaſon of the decay of Heat, &c. ſee under the Articles HEAT, LIGHT, &c.

Under the Equator the *Winter*, as well as the other Seaſons, return twice every Year; but all other Places have only one *Winter* in the Year; which, in the Northern Hemiſphere, begins when the Sun is in the Tropic of *Capricorn*; and in the Southern Hemiſphere, when in the Tropic of *Cancer*: So that all Places in the ſame Hemiſphere have their *Winter* at the ſame time.

WINTER *Solſtice*; ſee SOLSTICE.

WINTER's *Bark*, *Cortex Winteri*, or *Winteranus*; ſee CORTEX and CINNAMON.

WINTER, among Printers, a part of the Printing-Preſs. See PRINTING-*Preſs*.

WINTER *Rig*, among Husbandmen, ſignifies to fallow, or till the Land in *Winter*. See FALLOW, &c.

WIRE, wrote alſo *Wyre*, and *Wiar*, is a piece of Metal, drawn thro' the Hole of an Iron, into a Thread, of a Fineneſs anſwerable to the Hole it is paſs'd through.

Wires are frequently drawn ſo fine, as to be wrought along with other Threads of Silk, Wool, or Hemp: And thus they become a conſiderable Article in the Manufactures.

The Metals moſt commonly drawn into *Wire* are Gold, Silver, Copper, and Iron——And hence we have *Gold-Wire*, *Silver Wire*, *Iron-Wire*, &c. as in the following Articles.

Gold and *Silver* WIRE——What we call *Gold Wire* is made of cylindric Ingots of Silver cover'd over with a Skin of Gold, and thus drawn ſucceſſively thro' a vaſt Number of Holes, each ſmaller, and ſmaller; till at laſt it be brought to a Fineneſs exceeding that of a Hair.

That prodigious Ductility which makes one of the diſtinguiſhing Characters of Gold, is no where more conſpicuous than in this gilt *Wire*——A Cylinder of 48 Ounces of Gold cover'd with a Coat of Gold only weighing one Ounce, Dr. *Halley* informs us, is commonly drawn into a *Wire*, 2 Yards of which only weigh one Grain: Whence 98 Yards of the *Wire* only weigh 49 Grains; and one ſingle Grain of Gold covers the ſaid 98 Yards. So that the ten thouſandth part of a Grain is above $\frac{1}{3}$ of an Inch long.

The ſame Author computing the thickneſs of the Skin of Gold, found it to be only $\frac{1}{1145\,0}$ Part of an Inch——yet ſo perfectly does it cover the Silver, that even a Microſcope does not diſcover any appearance of the Silver underneath.

M. *Rohault* obſerves, that a like Cylinder of Silver cover'd with Gold, 2 Feet 8 Inches long, and 2 Inches 9 Lines in Circumference, is drawn into a *Wire* 307200 long, *i. e.* into 115200, its former length.

Mr. *Boyle* relates, that 8 Grains of Gold covering a Cylinder of Silver, is commonly drawn into a *Wire* thirteen thouſand Feet long. See GOLD.

The Method of drawing it, ſee further illuſtrated under the Article DUCTILITY.

Silver WIRE is the ſame with Gold *Wire*, except that the latter is gilt, or cover'd with Gold, and the other is not. See SILVER.

There are alſo counterfeit Gold and Silver *Wires:* The firſt made of a Cylinder of Copper, ſilver'd over, then cover'd with Gold; and the ſecond of a like Cylinder of Copper ſilver'd over, and drawn thro' the Iron after the ſame manner as Gold and Silver *Wire*.

Braſs WIRE is drawn after the ſame manner as the former.——Of this, there are divers Sizes ſuited to the divers Kinds of Works. The fineſt is uſed for the Strings of Muſical-Inſtruments, as Spinets, Harpſichords, Manichords, *&c.* See CHORD.

The Pinmakers likewiſe uſe vaſt Quantities of *Wire* of ſeveral Sizes, to make their Pins of. See PIN.

Iron WIRE, is call'd by the *French Fil d'Archal*; the Reaſon of which, their Authors are not agreed about—— That celebrated Etymologiſt, M. *Menage*, derives it from *filum & aurichalcum*; but others, more converſant in the Commerce thereof, deduce it from one *Richard Archal* the firſt Inventor thereof.

There are various Sizes of this *Wire*, from $\frac{1}{2}$ of an Inch to $\frac{1}{32}$ of an Inch Diameter. The ſmalleſt Sizes are uſed to ſtring Muſical Inſtruments withall, particularly Harpſichords, Pſalteries, *&c.*——Vaſt Quantities of *Iron-Wire* are brought yearly from the *Baltick*; partly ſpent at home, and part exported to *France*, &c.

WIRE-*drawing*——*For the ſeveral Manners of drawing Gold and Silver*; ſee DRAWING, GOLD, SILVER, DUCTILITY, *&c.*

The firſt Iron that runs from the Stone, when melting, being the ſofteſt, and tougheſt, is preſerv'd to make *Wire* of. See IRON.

WISDOM, *Sapientia*, uſually denotes a higher and more refined Knowledge of things, immediately preſented to the Mind, as it were by Intuition, without the aſſiſtance of Diſcourſing. See KNOWLEDGE, DISCOURSE, SCIENCE, *&c.*

In this Senſe, *Wiſdom* may be ſaid to be a Faculty of the Mind, or at leaſt a Modification and Habit thereof. See FACULTY, MODIFICATION, HABIT, *&c.*

Sometimes the Word is more immediately uſed in a Moral Senſe for what we call *Prudence*, or *Diſcretion*; which conſiſts in the Soundneſs of the Judgment, and a Conduct anſwerable thereto. See JUDGMENT.

The School-Divines ſometimes reſtrain it to the Knowledge of the more ſublime and remote Objects; as that of God, *&c.* In which ſenſe, Theology is properly ſaid to be *Wiſdom*.

The Word in *Latin*, is *Sapientia*, which literally expreſſes the Senſe of Taſting; to which *Wiſdom* is ſuppoſed to have ſome Conformity——The Sight, and other Senſes only repreſent to us the Surface of things: Taſte goes deeper, penetrates into the Subſtances; ſo that what, *e. gr.* to the Feeling ſeem'd cold, to the Taſte ſhall be found hot: So *Wiſdom* ariſing from a deep Attention to our Ideas, goes further, and frequently judges otherwiſe than the common Apprehenſions of Men would reach to. See UNDERSTANDING, REASON, *&c.*

WISTA, a Quantity, or Meaſure of Land among our *Saxon* Anceſtors.

It was different in different Places——In the *Monaſticon*, it is ſaid to be half a Hide, or ſixty Acres: In an old Chronicle of the Monaſtery of *Battle*, it is ſaid to be forty-eight Acres. See HIDE, *&c.*

WIT, a Faculty of the Mind, conſiſting, according to Mr. *Locke*, in the aſſembling, and putting together of thoſe Ideas with Quickneſs and Variety, wherein can be found any Reſemblance or Congruity; thereby to make up pleaſant Pictures and agreeable Viſions to the Phantaſy. See FACULTY and IMAGINATION.

This Faculty, the ſame great Author obſerves, is juſt the contrary of Judgment, which conſiſts in the ſeparating, carefully, from one another, ſuch Ideas wherein can be found the leaſt difference, thereby to avoid being miſled by Similitude, and by Affinity to take one thing for another. See JUDGMENT.

'Tis the Metaphor, and Alluſion, wherein, for the moſt part, lies the Entertainment and Pleaſantry of *Wit*; which ſtrikes ſo livelily on the Fancy, and is therefore ſo acceptable to all People, becauſe its Beauty appears at firſt Sight, and there is required no Labour of Thought to examine what Truth or Reaſon there is in it——The Mind, without looking any further, reſts ſatisfied with the Agreeableneſs of the Picture, and the Gaiety of the Imagination; and it is a kind of Affront to go about to examine it by the ſevere Rules of Truth, or Reaſon.——Whence it ſhould ſeem, that *Wit* conſiſts in ſomething that is not perfectly conformable to 'em. *Eſſay on Hum. Underſt.* L. I. c. II.

WIT is alſo an Appellation given to Perſons poſſeſs'd of the Faculty call'd *Wit*, *Eſprit*.

A *French* Author, who, in 1695 publiſhed a Treatiſe *of Wit*, *du bel Eſprit*, lays down four Characteriſticks thereof.

——1. A Man, who, with an open Air, and eaſy Motions, affects thoſe he converſes withal agreeably; and on any Subject that preſents itſelf, advances new Thoughts, and adorns them with a ſprightly Turn; is, all the World over, a *Wit*.

2. Another, who leſs ſolicitous about the Choice and Delicacy of his Sentiments, knows how to make himſelf valued by I know not what Elevation of Diſcourſe; who draws a deal of Attention, and ſhews a deal of Vivacity in his Speaking, and Readineſs in his Anſwers; is likewiſe acknowledged a *Wit*.

3. A third, who takes leſs Care about thinking, than about ſpeaking well; who affects fine Words, tho' perhaps low and poor in Matter; who pleaſes by an eaſy Pronunciation, and a certain Tone of Voice, is placed in the ſame Rank.

4. Another, whoſe chief Aim is not to make himſelf eſteem'd, ſo much as to raiſe Mirth and Laughter: who jokes pertinently, rallies pleaſantly, and finds ſomething to amuſe himſelf withall in every petty Subject; is likewiſe allow'd a *Wit*.

Yet, it may be obſerv'd, that in all theſe Caſes, there is nothing of real *Wit*, as above defin'd; but the whole is Imagination, or Memory at moſt: The whole is no more than Temperament may give.

A *true Wit* muſt have a juſt Faculty of Diſcernment; muſt have, at the ſame time, both a deal of Energy and of Delicacy in his Sentiments; his Imagination muſt be noble, and withal happy and agreeable; his Expreſſions polite and well turn'd: without any thing of Pardoe or Vanity in his Diſcourſe, or his Carriage. 'Tis not at all eſſential to a *Wit* to be ever hunting after the *Brillant*; ſtill ſtudying fine Thoughts, and affecting to ſay nothing but what may ſtrike and ſurprize.

This is a Fault very frequent in Dramatic Perſons: The Duke of *Buckingham* rallies it very juſtly.

What is that thing which we ſheer Wit *do call?*
'Tis when the Wit *of ſome great Writer ſhall*
So overflow; that is, be none at all:
That even his Fools ſpeak Senſe——

Humour, ſay our Critics, is the genuine *Wit* of Comedies. See HUMOUR.

WITCHCRAFT; ſee SORCERY and MAGIC.

There may, perhaps, be ſome Foundation for what we call *Witchcraft*——We have infinite Inſtances and Hiſtories to this purpoſe; which it were not fair to ſet aſide, merely becauſe they are not reconcileable to our Philoſophy: But, as it happens, there ſeems to be ſomething in Philoſophy to countenance them.

All living things, we know, emit Effluvia, both by the Breath and the Pores of the Skin——All Bodies, therefore, within the Sphere of their perſpiratory, or expiratory Effluvia, will be affected by 'em; and that, in this or that manner, according to the Quality of the Effluvia; and in this or that degree, according to the Diſpoſition of the emittent and recipient Parts. See EFFLUVIA.

Thus far is inconteſtable; nor need we produce Inſtances of Animals exhaling ſweet or ſtinking Smells; of menſtruous Women's infecting a Looking-Glaſs with a bloody Tarniſh; or the infectious Diſeaſes convey'd by Effluvia, *&c.* in confirmation thereof.

Now, of all Parts of an Animal Body, the Eye, we know, is the quickeſt——It moves with the greateſt Celerity, and in all the Variety of Directions. Again, Its Coats and Humours are permeable as any other part of the Body, (witneſs the Rays of Light it ſo copiouſly receives.) The Eye, therefore, no doubt emits its Effluvia like the other parts. Nay, it muſt do ſo. The fine Humours of the Eye muſt be continually exhaling. The Heat of the pervading Rays muſt rarefy and attenuate 'em: And that, with the ſubtile Juice or Spirit of the neighbouring optic Nerve, ſupply'd in great abundance by the vicinity of the Brain, muſt make a fund of volatile Matter to be diſpens'd, and, as it were, determined by the Eye.

Here, then, we have both the Dart and the Hand to fling it——The one furniſh'd with all the Force and Vehemence, and the other with all the Sharpneſs and Activity, one would require. No wonder their Effects are great!

Do but conceive the Eye as a Sling, capable of the ſwifteſt and intenſeſt Motions and Vibrations: And, again, as communicating with a Source of ſuch Matter as the nervous Juice elaborated in the Brain; a Matter ſo ſubtile and penetrating, that it flies inſtantaneouſly thro' the ſolid Capillamenta of the Nerves, and ſo active and forcible, that it diſtends and convulſes the Muſcles, and diſtorts the Limbs, and alters the whole Habitude of the Body, giving Motion and Action to a Maſs of inert, inactive Matter. A Projectile of ſuch a nature, flung by ſuch an Engine as the Eye, muſt have an Effect wherever it ſtrikes: And the Effect will be limited and modified by the Circumſtances of Diſtance, the Impetus of the Eye, the Quality, Subtility, Acrimony, *&c.*

of

of the Juices, and the Delicacy, Coarſeneſs, &c. of the Object it falls on.

This Theory, we are of opinion, will account for the general Phænomena of *Witchcraft*——'Tis certain the Eye has always been eſteem'd the chief Seat, or rather Organ of *Witchcraft*; tho' without knowing why or wherefore:—The Effect was apparently owing to the Eye; but how, was not dreamt of. Thus, the Phraſe, To have an *Evil Eye*, imports as much as to be a *Witch*. And thus *Virgil*,

Neſcio quis teneros oculus mihi faſcinat agnos.

Again, old, ſanguine Perſons are thoſe moſt frequently ſuppoſed to have the Faculty; the nervous Juice in them being depraved and irritated by a vicious Habitude of Body; and ſo render'd more penetrating and malignant——And young Perſons, chiefly Children and Girls are moſt affected by it; by reaſon their Pores are patent, their Juices incoherent, and their Fibres delicate and ſuſceptible. Accordingly, the *Witchcraft* mention'd by *Virgil*, only reaches to the tender Lambs.——Laſtly, the Faculty is only exerciſed when the Perſon is diſpleas'd, provoked, irritated, &c. It requiring ſome extraordinary Streſs and Emotion of Mind to dart a Quantity of the proper Effluvia, with a ſufficient Impetus to produce the Effect at the diſtance.

That the Eye has ſome very conſiderable Powers, is paſt diſpute. The antient Naturaliſts aſſure us, that the Baſiliſk, and Opoblepa kill other Animals merely by ſtaring at 'em. If this fail of Credit; a late Author aſſures us to have ſeen a Mouſe running round a large Toad which ſtood looking earneſtly at it, its Mouth open: Still the Mouſe made leſs and leſs Circles about it; crying all the while, as if compell'd thereto; and, at laſt, with a deal of ſeeming Reluctance, ran into the gaping Mouth, and was ſtrait ſwallow'd.

Who has not obſerv'd a Setting-Dog; and the Effect of its Eye on the Partridge? The poor Bird, when once its Eyes meet thoſe of the Dog, ſtands as if confounded, regardleſs of itſelf, and eaſily lets the Net be drawn over it. We remember to have read of Squirrels ſtupefy'd and overcome by a Dog's ſtaring hard at 'em, and thus made to drop out of their Trees into his Mouth.

That Man is not ſecure from the like Affections, is matter of eaſy Obſervation. Few People but have again and again felt the Effects of an angry, a fierce, a commanding, a diſdainful, a laſcivious, an intreating Eye, &c.——Theſe Effects, no doubt, are owing to the different Ejaculations from the Eye; and are a degree of *Witchcraft*.

WITE, Wita, or Wyte, in antient Cuſtoms, a Puniſhment, Forfeiture, Penalty, Fine or Mulct, antiently of XXX Shillings. See Wyte.

Hence *Wite*, or *Wittree*, one of the Terms of Privilege granted our Portſmen; ſignifying a Freedom or Immunity from Fines or Amerciaments: Or, as 'tis vulgarly conceiv'd, from being liable to be begg'd for Fools for lack of *Wit*.

Wita Plena, ſignify'd a Forfeiture of fifty Shillings—— *Si Pundbreche fiat in Curia Regis* Plena Wita *ſit*; *alibi quinque Marcæ*.

Secundum Witam *jurare*, was to purge one's ſelf by the Oaths of ſo many Witneſſes, as the Nature of the Crime, and the Puniſhment, or *Wite*, did require. See Purgation.

——*Jurat ſecundum* Witam *quod nec fuerat furti conſcius nec coadjutor in eo.* Leg. Inæ.

Hence *Bloodwita*, *Fintwita*, *Legerwita*, *Ferdwita*, *Childwita*, *Wardwita*, *Heingwita*, &c. See Bloodwita, Fintwita, &c.

WITHERNAM——Where Goods are taken by colour of Diſtreſs, and driven to an Hold, or out of the County; ſo that the Sheriff cannot upon the Replevin make deliverance thereof to the Party diſtrain'd: In this Caſe the *Writ of Withernam*, or *de vetito namio*, is directed to the Sheriff, for the taking as many of the Party's Beaſts as he did thus unlawfully diſtrain; or as much Goods of his, till he has made deliverance of the firſt Diſtreſs. See Distress, Replevy, &c.

The Word is compounded of the *Saxon Wither*, *contra*, againſt, and *Nam*, *captio*, taking; *q. d.* Repriſals. See Nam.

WITHERS *of an Horſe*, the Juncture of the Shoulder-Bones at the bottom of the Neck and Main, toward the upper part of the Shoulder. See Horse.

WITNESS, *Teſtis*, a Perſon who certifies, or aſſerts the Truth of any Fact. See Evidence.

Two Eye-*Witneſſes*, or *de Viſu*, not ſuſpected, are deem'd a concluſive Proof. See Testimony.

Falſe *Witneſſes*, Suborners of *Witneſſes*, &c. are puniſh'd with the Pillory; in ſeveral other Countries, with Death.

In a Synod at *Rome*, under *Conſtantine*, in the Year 320, it was decreed, that there ſhould be 72 *Witneſſes* heard, to condemn a Biſhop; which was call'd *libra teſtium*, a Pound of *Witneſſes*. Accordingly there were 72 *Witneſſes* heard againſt Pope *Marcellinus*; who, ſays the Hiſtorian, *erant electi libra occidua*.

Antiently there were *Synodal Witneſſes*, *Teſtes Synodales*, in each Pariſh, choſe by the Biſhop, to enquire into the Hereſies, and other Crimes of the Pariſhioners; and to make Oath thereof on the Relicks of the Saints. See Sidesmen.

Among the *Romans* it was a Cuſtom to pull or pinch the Ears of *Witneſſes* preſent at any tranſaction; that they might remember it when they were call'd to give in their Teſtimony.

WITTENA-*Gemote*, among our *Saxon* Anceſtors, a Term literally ſignifying *Council*, or *Aſſembly of Sages*; apply'd to the Great Council of the Land, now call'd the *Parliament*. See Parliament.

WOAD, or Goud, or Gaud, *Guado*, *Guadum*, a Drug uſed by the Dyers, to give a blue Colour; call'd alſo *Paſtel*. See Blue.

It ariſes from a Seed, ſown annually in the Spring; which puts forth a Plant call'd *Glaſtum Sativum*, whoſe Leaves reſemble thoſe of Plantane——They have uſually three, four, or five Crops of Leaves every Year; but only the two or three firſt are of any Value; whereof the firſt is beſt, and the reſt in their Order.

When the Leaves are ripe, they gather them; and letting them lie ſome time, put them under the Wheel to bruiſe or grind them; after which they are laid eight or ten days in Piles or Heaps; and at laſt reduced into a kind of Balls which are laid in the Shade on Hurdles to dry.

This done, they grind 'em to Powder; and when ground, ſpread it on a Floor, and water it, which they call *Couching*.

Here they let it ſmoke and heat, till by torrifying it every day, it become quite dry, which they call *Silvering*. A week after which, it is in a condition to be uſed in dying.

The antient *Britons* uſed to dye their Bodies herewith; and it was from this Plant that Glaſs took its Denomination. See Glass.

A *Woad blue* is a very deep blue, almoſt black; and is the Baſe of ſo many ſorts of Colours, that the Dyers have a Scale whereby they compoſe the divers Caſts or Degrees of *Woad* from the brighteſt to the deepeſt. See Dying.

WOLD, ſignifies a plain Down, or open Champain-Ground, hilly, and void of Wood—Hence the Names, *Stow in the Wold*, and *Cotſwold* in *Gloceſterſhire*; whence alſo that part of *Leiceſterſhire*, which lies Northward beyond the *Wreken*, is call'd the *Wold of Leiceſterſhire*.

WOLVES *Teeth of an Horſe*, are over-grown Grinders, the Points of which being higher than the reſt, prick the Tongue and Gums in feeding, ſo as to hinder the Chewing of the Meat.

They are ſeldom met with in young Horſes; but if the Teeth be not daily worn by chewing, they will grow up even to pierce the Roof of the Mouth. See Teeth.

WOMAN, Fæmina, *Mulier*, the Female of Man. See Female and Man.

St. *Auguſtine* calls *Women* the *Devout Sex*: at leaſt this is the common Opinion; tho' others rather think that in the Prayer uſually attributed to that Father, and ſtill rehearſed in the *Romiſh* Church to the holy Virgin, the Words *intercede pro devoto Fæmineo ſexu*, are to be underſtood of *Women* devoted or conſecrated to God in Religious Houſes, which had been ſufficiently expreſs'd by the Words, *Ora pro populo*, *interveni pro Clero*. See Sex; ſee alſo Religious, &c.

'Tis a popular Tradition among the *Mahometans*, which obtains to this day, that *Women* ſhall not enter Paradiſe. See Paradise.

An Anonymous Author, about the Cloſe of the XVIth Century, publiſhed a little *Latin* Diſſertation to prove that *Women* are not Men; that is, are not reaſonable Creatures: *Diſſertatio perjucunda qua Anonymus probare nititur* Mulieres *homines non eſſe*——He alſo endeavours to prove, what naturally follows from his Principle, *viz.* That *Women* ſhall not be ſaved; that there is no future Life or Happineſs for them.

His Proofs are all taken from Scripture, or founded on Scripture——Tho', after all, his Aim is not ſo much to degrade *Women* to the condition of Brutes; as to ſhew the Ridicule and Weakneſs of that Principle or Method of the Anabaptiſts and ſome others, who, in Points of Controverſy, admit of no Proofs or Conſiderations but what are taken from Scripture alone. This appears from the Concluſion of the Work. *Probavi*, *opinor*, *Invictiſſimis SS. Literarum Teſtimoniis*, Mulierem *non eſſe hominem*, *nec eam ſalvari: Quod ſi non effeci*, *oſtendi tamen univerſo Mundo quo modo hujus temporis Hæretici*, *& preſertim Anabaptiſtæ*, *Sacram ſoleant explicare Scripturam*, *& qua utantur Methodo ad ſtabilienda ſua execranda Dogmata*.

Yet

Yet, *Simon Gediceus*, a *Lutheran* Divine, wrote a ſerious Confutation of this Piece, in 1595; wherein he reſtores the *Women* to the Expectation of Heaven on their good Conditions.

The antient *Marcionites* allow'd their *Women* to baptize; as we are aſſured by St. *Epiphanius*, Hær. 42. c. 4.——The *Montaniſts* admitted *Women* to the Prieſthood, and even the Epiſcopate. *Epiph.* Hær. 49. c. 2.——The modern Quakers alſo permit their *Women* to preach and propheſy on an equal footing with the Men. See MARCIONITE, MONTANIST, and QUAKER.

'Tis a Point much controverted, how far, Learning and Study become the Sex.—*Eraſmus* handles the Queſtion at large in one of his Letters to *Budeus*: *Lud. Vives* in his *Inſtitutio Fœminæ Chriſtianæ* has a Chapter expreſs on the ſame Subject. Madam *Schurman*, a learned *German* Lady, has gone beyond 'em both, in a Treatiſe on this Problem; *Num Fœminæ Chriſtianæ conveniat ſtudium Literarum*?

Several of the *Women* remarkable for Learning have been alſo diſtinguiſh'd for their want of Conduct: The Reaſon, no doubt, lay in this, that their firſt Studies lying in Books of Gallantry and Intrigue, the Imagination was early turn'd that way, and the Memory fill'd with a ſort of Ideas, which a favourable Diſpoſition and Age adopted too eaſily, and improved too faſt—'Tis not that Study in itſelf, has any natural tendency to produce ſuch Effects; rather the contrary: The cloſe abſtracted Reſearches of Metaphyſics, Logics, Mathematics, Phyſics, Criticiſm, *&c.* no doubt, would be one of the ſureſt Means to ſecure, and eſtabliſh the Virtue of Continency in a *Woman*.

A WOMAN in *England*, as ſoon as ſhe is married, with all her Moveables, is wholly *in poteſtate viri*, at the Will and Diſpoſal of her Husband. See FEME.

There are divers conſiderable things relating to *Women*, in the Laws of *England*; which ſee under the Article WIFE.

WONDER; ſee MIRACLE.

The *Seven Wonders of the World*, as they are popularly call'd, were, the *Egyptian* Pyramids; the *Mauſoleum* erected by *Artemiſa*; the Temple of *Diana* at *Epheſus*; the Walls and hanging Gardens of the City of *Babylon*; the Coloſſus or Brazen Image of the Sun at *Rhodes*; the Statue of *Jupiter Olympius*; and the Pharos or Watch-Tower of *Ptolemy Philadelphus*. See PYRAMID, MAUSOLEUM, COLOSSUS, PHAROS, *&c.*

WOOD, *Lignum*, a ſolid Subſtance, whereof the Trunks and Branches of Trees are form'd; and deriving its Growth from certain Juices in the Earth. See TRUNK, BRANCH, *&c.*

The *Wood* is all that part, in a Tree, included between the Bark and the Pith. See TREE and BARK.

Dr. *Grew*, in his Anatomy of Plants, has diſcover'd, by means of the Microſcope, that what we call *Wood* in a Vegetable, notwithſtanding all its Solidity, is only an aſſemblage of infinite minute Canals, or hollow Fibres, ſome of which riſe from the Root upwards, and are diſpoſed in form of a Circle; and the others, which he calls *Inſertions*, tend horizontally from the Surface to the Centre; ſo that they croſs each other, and are interwove like the Threads of a Weaver's Web. See VEGETATION, SAP, *&c.*

Woods are diſtinguiſh'd into divers Kinds; with regard to their Natures, Properties, Virtues, and Uſes.

Of WOOD, conſider'd according to its Qualities, whether Uſeful, Curious, Medicinal, *&c.* the Principal is that call'd *Timber*, uſed in building Houſes, laying Floors, Roofs, Machines, *&c.* See TIMBER.

WOODS valued on account of their Curioſity, are *Cedar*, *Ebony*, *Box*, *Calembouc*, &c. which, by reaſon of their extraordinary Hardneſs, agreeable Smell, or beautiful Poliſh, are made into Tables, Combs, Beads, *&c.* See EBONY, *&c.*

The *Medicinal* WOODS are *Guaiac*, which the *Spaniards* call *Ligno Sancto*; *Aloes* or *Agillochum*, *Saſſafras*, *Nephriticum*, *Santal*, *Sarſaparilla*, *Aſpalathum*, *Eagle Wood* or *Pao d'Aquilla*, &c. See ALOES, SASSAFRAS, *&c.*

WOODS uſed in Dying, are the *Indian Wood*, *Braſil*, *Campeche*, &c. See BRASIL, *&c.*

Cord WOOD is *Wood* for the Fire, generally made of the Branches or Loppings of Trees, piled up in Order.

This is limited to be below ſeventeen Inches, and above ſix Inches thick, and at leaſt three Foot and a half long. See CORD.

Foſſil, or *Subterraneous* WOOD——There are divers Places where *Wood* is found under ground: Whether overturn'd, and buried there from the time of the Deluge, as many ſuppoſe; or whether form'd and produced there, as Jet is known to be. See FOSSIL, JET, *&c.*

Not long ago, there were found in *England*, at above a hundred Foot depth, ſeveral huge Oaks with all their Branches on, and which, by their ſubterraneous Situation, had contracted a black Colour, nothing inferior to Jet, join'd with a Hardneſs which far ſurpaſs'd that of any living Oak.——'Tis hard to conceive how ſuch Trees ſhould come there, unleſs by a general Subverſion of the whole terreſtrial Globe at the Flood. See DELUGE.

Mr. *Boyle* mentions a huge Oak dug out of a Salt-Mine in *Tranſilvania*, ſo hard as not eaſily to be wrought on by Iron-Tools; yet being expoſed to the Air out of the Mine, became ſo rotten, that in four days it crumbled between the Fingers. *Diſſert. de Admir. Hung.* And Mr. *Derham* obſerves the ſame of the Trees lately turn'd up by the Breaches at *Dagenham*, &c. *Philoſ. Tranſ.* N° 335. See Moss.

WOOD, *Sylva*, in Geography, a Multitude of Trees, extended over a large continued Track of Land, and propagated without Culture. See FOREST.

The generality of *Woods* only conſiſt of Trees of one Kind.——At *Cape Verd* in *Africa* are *Woods* of Orange and Lemon Trees; in *Ceylon* are *Woods* of Cinnamon Trees; in the *Molucca* Iſlands *Woods* of Caroway Trees; in the Iſlands of *Nero*, *Lontour*, *Loſgain*, &c. *Woods* of Nutmeg Trees; in *Braſil*, *Woods* of Braſil Trees, *&c.* in *Numidia*, *Woods* of Date Trees; in *Madagaſcar*, *Woods* of Tamarind Trees, *&c.*

WOOD *and* WOOD, in the Sea-Language, is when two Pieces of Timber are ſo let into each other, that the Wood of the one joins cloſe to the other.

WOOD-GELD, WOODGELDUM, in our antient Cuſtoms, the gathering or cutting of Wood within the Foreſt——Or it may denote the Money paid for the ſame, to the Foreſters. Sometimes it alſo ſeems to ſignify an Immunity from this Payment by the King's Grant.

Crompton ſays expreſly, it ſignifies to be free from the Payment of Money, for taking of Wood in a Foreſt. See GELD.

WOOD-*Hay*, an antient Cuſtom at *Exeter*; whereby a Log out of every Seam of Wood brought over *Ex* Bridge, is taken towards the Reparation of that Bridge. *Antiq. of Exeter.*

WOOD-*Corn*, is a certain Quantity of Oats, or other Grain, antiently given by cuſtomary Tenants to their Lord, for the liberty to pick up dead or broken Wood.

WOOD-*Lands*, are Places where there are many Woods—the Word is alſo more generally taken to ſignify incloſed Countries.

WOOD-*Mote*, the antient Name of that Foreſt-Court, now call'd the Court of Attachment. See ATTACHMENT and FOREST.

WOOD-*Plea-Court*, is a Court held twice a Year in the Foreſt of *Clun* in *Shropſhire*, for determining all Matters relating to *Wood*, and the feeding of Cattel there.——Perhaps it was originally the ſame with *Wood-Mote-Court*.

WOODWARD, an Officer of the Foreſt, whoſe Function it is to obſerve any Offences either in Vert, or Veniſon, committed within his Charge; and to preſent the ſame; and in caſe any Deer are found kill'd or hurt, to inform the Verderer thereof, and preſent 'em at the next Court of the Foreſt. See FOREST.

Woodwards may not walk with Bows and Shafts, but with Foreſt-Bills. *Arcum & Calamos geſtare in Foreſta non licet, ſed* (*ut reſcripti utar Verbo*) *Hachetum tantummodo.* Term. Hil. An. 13 *Ed.* 3.

WOOF, among Manufacturers, the Threads which the Weavers ſhoot a-croſs, with an Inſtrument call'd the *Shuttle*, between the Threads of the Warp; to form the Web. See WARP, WEB, WEAVING, *&c.*

The *Woof* is of different Matter, according to the Piece to be wrought——In Taffaty both *Woof* and Warp are Silk. See TAFFATY.

In Mohairs the *Woof* is uſually Wool, and the Warp Silk——In Sattins the Warp is frequently Flax, and the *Woof* Silk. See CLOTH, SERGE, SATIN, VELVET, *&c.*

WOOL, the Hair, or Covering of Sheep; which, waſh'd, ſhorn, dreſs'd, comb'd, ſpun, wove, *&c.* makes divers kinds of Stuffs, Cloths, *&c.* for Apparel, Furniture, *&c.* See HAIR and MANUFACTURE.

While the *Wool* remains in the State it was firſt ſhorn off the Sheep's Back, and not ſorted into its different Kinds, it is call'd *Fleece*. See FLEECE.

Each Fleece conſiſts of *Wool* of divers Qualities and Degrees of Fineneſs, which the Dealers therein take care to ſeparate.

The *French* and *Engliſh* uſually ſeparate each Fleece into three Sorts; *viz.* 1. *Mother-Wool*, which is that of the Back and Neck. 2. The *Wool* of the Tails and Legs. 3. That of the Breaſt and under the Belly.

The *Spaniards* make the like diviſion into three Sorts, which they call Prime, Second, and Third; and for the greater Eaſe, denote each Bale or Pack with a Capital Letter denoting the Sort——If the Triage or Separation be well made, in fifteen Bales there will be twelve mark'd R, that is, Refine or Prime; two mark'd F, for Fine or Second; and one S, for Thirds.

The *Wools* moſt eſteem'd are the *Engliſh*, chiefly thoſe about *Leominſter*, *Cotſwold*, and the Iſle of *Wight*; the *Spaniſh*, principally thoſe about *Segovia*; and the *French* about *Berry*:

which laſt are ſaid to have this peculiar Property, that they will knot or bind with any other ſort; whereas the reſt will only knot with their own kind.

Among the Antients, the *Wools* of *Attica*, *Megara*, *Laodicea*, *Apulia*, and eſpecially thoſe of *Tarentum*, *Parma*, and *Altino* were the moſt valued. *Columella* ſets the two laſt even above that of *Tarentum*, Lib. vii. c. 2. And *Varro* aſſures us, the People there uſed to clothe their Sheep with Skins, to ſecure the *Wool* from being damaged. *De Re Ruſt.* L. II. c. 2.

Tavernier affirms, that the *Wools* in *Aſia* are incomparably finer than thoſe of *Europe*; and there is no doubt but that *Wool* was the Golden Fleece ſought at *Colchos*. See GOLDEN FLEECE.

The Art of Preparing and Working *Wool* is attributed by the Antients to *Minerva*; who accordingly is made the Genius and Protectreſs thereof. See WOOLLEN.

Engliſh WOOL——The *Wools* of *England* have always been in the higheſt repute; and that more abroad than at home.——Some we have, which manufactured by our own Clothiers, *Chamberlain* obſerves, does both for ſoftneſs and fineneſs, vie with the choiceſt Silks. *Spaniſh Wools*, we know, bear a great Price among us; but 'tis certain much the greateſt part of that, which, when manufactured, our Clothiers, *&c.* call *Spaniſh Cloth*, grows in *England*. Add, that the *French* can make no good Cloth of their own *Wool*, without at leaſt one third of *Engliſh Wool* mix'd with it.——'Tis allow'd, the goodneſs of the *Spaniſh Wools* is owing to a few *Engliſh* Sheep ſent over into *Spain* as a Preſent by *Henry* II. of *England*; or, as others will have it, tho' we think miſtakenly, by *Edward* IV. in 1465.

The fineneſs and plenty of our *Wools* is owing, in ſome meaſure, to the ſweet, ſhort Graſs in many of our Paſtures and Downs; tho' the advantage of our Sheeps feeding on this Graſs all the Year, without being obliged to be ſhut up in Folds during the Winter, or to ſecure 'em from Wolves at other times; contributes not a little thereto.

The *Scotch* and *Iriſh Wools* are commonly ſold abroad for *Engliſh*; and upon the ſame footing.——But Foreigners, ſkill'd in thoſe Matters, find they come far ſhort of it in fineneſs, tho' at ſome Markets the *Iriſh* is even ſaid to be prefer'd to the *Engliſh*.

The yearly Produce of *Wool* in *England* is calculated by Dr. *Davenant* and Mr. *King* at two Millions Sterling. See WOOLLEN *Manufactory*.

Antiently, the principal Commerce of the Nation conſiſted in *Wool* unmanufactured; which Foreigners, eſpecially the *French*, *Dutch*, and *Flemiſh* bought of us. Inſomuch that the Cuſtoms of *Engliſh Wool* exported in *Edward* the Third's Reign, amounted, at 50 *s.* a Pack, to 250000 *l. per Annum*. An immenſe Sum in thoſe days. See COMMERCE.

This exceſſive Cuſtom on the Export of unmanufactured *Wool*, ſet our People to the making it into Cloth themſelves——In which they ſucceeded ſo well, that towards the Cloſe of the ſixteenth Century, under the Reign of Queen *Elizabeth*, the Exportation of any *Wool* at all was abſolutely prohibited, and this upon pain of having the right Hand ſtruck off. See CONTRABAND.

From that time, *England* has been exceedingly jealous of its *Wool*; to prompt their Vigilance, the Lords in Parliament are ſeated on *Wool*-Packs——Accordingly, ſcarce a Parliament but has renew'd and reinforced the Prohibition; particularly, about the middle of the ſeventeenth Century, the exporting of *Wool* was made a Capital Crime.

But all theſe Precautions are ineffectual; the *Engliſh* themſelves, particularly about the Coaſts of *Suſſex*, making uſe of the long Winter-Nights to waft over their *Wools* to *France:* being ſure of carrying them to a good Market, they deſpiſe the Penalty, with an Intrepidity, that the reſt of *Europe* are amaz'd at. See OWLERS.

M. *Colbert*, a Name the *French* Manufactures and Commerce are infinitely indebted to, had entertain'd a Deſign of procuring ſome of our *Engliſh* Sheep, and propagating them in *France*; hoping, that by chuſing them, in the Provinces of that Kingdom, ſuch Paſtures, and ſuch a Sky as they had in their own Iſland, they might there be perpetuated; and *France* be no longer obliged precariouſly to depend on the clandeſtine Supplies of *Wool* from the *Engliſh* Owlers.—— But the Count *de Cominges*, then Embaſſador of *France* at the *Engliſh* Court, laid the Impoſſibility of having ſuch an Export of Sheep, and the almoſt equal Impoſſibility of keeping and making them multiply there, ſo ſtrongly before him; that he abandon'd the Deſign.

Wool is reckon'd by the *Sack*, containing two Weighs; the *Weigh* ſix Tod and a half; the *Tod* two Stone; the *Stone* two Cloves; and the *Clove* ſeven Pounds. Twelve Sacks make a *Laſt*, or 4368 Pounds. See LAST, *&c.*

A Sack of Wool, or 364 Pounds, is ſufficient for four Standard Cloths, to render them true Breadth, *i. e.* ſix Quarters and a half; true Weight, *i. e.* ſixty Pounds; and true Length, *i. e.* twenty-four Yards.

For the divers Preparations of Wool, ſee CARDING, COMBING, SPINNING, WEAVING, SCOWRING, FULLING, DYING, CLOTH, *&c.*

WOOL-*Drivers*, are thoſe who buy *Wool* of the Sheep-Maſters in the Country, and carry it on Horſe-Back to the Clothiers, or Market-Towns, to ſell it again.

WOOL-*Staple*, is a City or Town where *Wool* uſed to be ſold. See STAPLE.

WOOL-*Winders*, are Perſons employ'd in winding up Fleeces of *Wool* into Bundles, to be pack'd and ſold by Weight ——Theſe are ſworn to do it truly between the Owner and the Merchant.

WOOLLEN *Manufactory*, includes the ſeveral ſorts of Commodities into which *Wool* is wrought; as *broad Cloths*, *long* and *ſhort Kerſeys*, *Bays*, *Serges*, *Flannel*, *Perpetuanas*, *Says*, *Stuffs*, *Frize*, *Penniſtons*, *Stockings*, *Caps*, *Rugs*, &c. —Each whereof ſee under its reſpective Article, CLOTH, SERGE, FLANNEL, *&c.*

The *Woollen Manufacture*, which now makes the principal Article both in our foreign and domeſtick Trade, being that which furniſhes the Cargoes of our Veſſels, that employs our People, *&c.* may be ſaid to have had its Riſe in the fifteenth Century.

Till that time, our *Wool* was all ſold in the Fleece, to ſuch of our Neighbours as came to fetch it.——Among our Cuſtomers, however, the principal were the *Flemings* and *Brabanters*, and particularly the Merchants of *Gant* and *Louvain*, who took off vaſt Quantities to ſupply two Manufactories that had flouriſh'd in thoſe two Cities from the tenth Century, and had furniſh'd the greateſt part of *Europe*, and even *England* itſelf with all ſorts of *Woollen* Cloths, *&c.* But the Richneſs of the Manufactories of *Gant*, and the incredible Number of Hands employ'd therein, having ſpirited up the Inhabitants to revolt, divers times, againſt their Sovereigns, on account of certain Taxes which they refuſed to pay; the Seditious were at length puniſh'd and diſperſed, and part of 'em took refuge in *Holland*, and the reſt in *Louvain*.

Theſe laſt, together with their Art of Manufacturing Cloths, carry'd with 'em their Spirit of Sedition——And it was not long e'er ſeveral of 'em, to avoid the Puniſhment they had deſerved for killing ſome of the Magiſtrates, removed into *England*; where they inſtructed our People how to work their own *Wools*.

This Eſtabliſhment is refer'd to the Year 1420; from which time no Endeavours have been ſpar'd to keep our *Wools* to ourſelves. See WOOL.

The Preſident *Thuanus* makes this Epocha an hundred Years later; and attributes the Eſtabliſhment of the *Woollen Manufactures* in *England* to Queen *Elizabeth*, and the Troubles about Religion which the Severity of the Duke of *Alva* and the *Spaniſh* Inquiſition had occaſion'd, and kept up ſo long in the *Low Countries*——But what that noble Author ſays, is rather to be underſtood of their Perfection, than their firſt Eſtabliſhment; and of the ſeveral great Manufactures then ſet up at *Norwich*, *Colcheſter*, *Sandwich*, *Hampton*, &c. For in the *Engliſh* and *Flemiſh* Hiſtorians we find mention of the Manufactures of *London* long before any part of the ſeventeen Provinces had attempted to throw off the *Spaniſh* Yoak.

As this Manufacture now ſtands, Dr. *Davenant* and Mr. *King* compute the Produce thereof to be eight Millions *per Annum*; three fourths whereof are conſumed at home, and the reſt exported. See REVENUE, POLITICAL *Arithmetic*, *&c.*

So jealous are we now become of our *Woollens*, that beſides the Precautions taken to uſe all our own *Wools* ourſelves; we have added that of ſelling 'em ourſelves, and of carrying 'em to the Places where they are required; not admitting Strangers to come and buy any in *England*. See NAVIGATION,

And hence the eſtabliſhment of thoſe famous Magazines in *Holland*, the *Levant*, and the *North*, where our *Woollens* are repoſited to be vended by Factors or Commiſſioners.—— The Magazine in *Holland* has changed place divers times; and it has been ſucceſſively at *Middlebourg*, *Delft*, *Rotterdam*, and *Dort* where it now remains; and where all the *Germans* come to furniſh themſelves——That for the *Levant* is at *Smyrna*; and that for the North at *Archangel*.

A Pack, or 240 Pounds Weight of ſhort *Wool*, 'tis computed, employs ſixty-three Perſons a Week, to manufacture it into Cloth; *viz.* three Men to *Sort*, *Dry*, *Mix*, and make it ready for the Stock-Carder; five to *Scribble*, or Stock-Card it; thirty-five Women and Girls to *Card* and *Spin* it; eight Men to *Weave* it; four Men and Boys to *Spoole* it, and *reed* Quills; eight Men and Boys to *Scower*, *Burl*, *Mill* or *Full* it, *Row*, *Shear*, *Pack*, and *Preſs* it.

A Pack of large long combing *Wool* made into Stuffs, Serges, Sagathies, *&c.* for the *Spaniſh* Trade, will employ for one Week 202 Perſons; whoſe Wages amount to 43 *l.* 10 *s.*—— Thus, 7 *Combers* 3 *l.* 10 *s.* *Dyers* 5 *l.* 150 *Spinners* 18 *l.*

20 *Throwers* and *Doublers* 5 *l.* 25 *Weavers* and Attendants 12 *l.*

A Pack of *Wool* made into Stockings will employ for one Week 184 Perſons, who will earn 56 *l.*———Thus, 10 *Combers* 5 *l.* 5 *s.* the *Dyer* 1 *l.* 6 *s.* 102 *Spinners* 15 *l.* 12 *s.* *Doublers* and *Throwers* 4 *l.* 10 *s.* 60 *Stocking Weavers* 30 *l.*

WORD, *Vox*, *Vocabulum*, in Language, is an articulate Sound deſigned to repreſent ſome Idea. See SOUND, VOICE, IDEA, *&c.*

In writing, a *Word* is an aſſemblage of ſeveral Letters, forming one or more Syllables, and ſignifying ſome thing. ee LETTER and SYLLABLE.

The *Port-Royaliſts* define *Words* to be diſtinct articulate Sounds agreed on by Mankind to convey their Thoughts and Sentiments by. See LANGUAGE.

Grammarians divide *Words* into eight Claſſes, call'd *Parts of Speech*; which are the *Noun*, *Pronoun*, *Verb*, *Participle*, *Adverb*, *Conjunction*, *Prepoſition*, and *Interjection*; to one or other of which all the *Words* and Terms in all Languages, which have or may be invented to expreſs our Ideas, are reducible. See each under its proper Article, NOUN, PRONOUN, VERB, *&c.*

Words, again, are divided into *Primitives* and *Derivatives*, *Simple* and *Compound*, *Synonymous* and *Equivocal*. See PRIMITIVE, DERIVATIVE, *&c.*

With regard to their Syllables, *Words* are further divided into *Monoſyllables*, and *Polyſyllables*. See MONOSYLLABLE, *&c.*

The Grammatical Figures of *Words*, *Tropi Verborum*, which occaſion changes in the Form, *&c.* of *Words*, are *Syncope*, *Apocope*, *Apoſtrophe*, *Diæreſis*, *Aphæreſis*, *Proſtheſis*, *Epentheſis*, *Paragoge*, *Metatheſis*, *&c.* See each in its proper Place, SYNCOPE, APOCOPE, *&c.* ſee alſo TROPE and FIGURE.

The Uſe of *Words*, we have obſerved, is to ſerve as ſenſible Signs of our Ideas; and the Ideas they ſtand for in the Mind of the Perſon that ſpeaks, are their proper Significations.

Simple and *Primitive Words* have no natural Connexion with the things they ſignify; whence there is no rationale to be given of them: It is by a mere arbitrary Inſtitution and Agreement of Men that they come to ſignify any thing. Certain *Words* have no natural Propriety or Aptitude to expreſs certain Thoughts, more than others; were that the caſe, there could have been but one Language. See PRIMITIVE.

But in *Derivative* and *Compound Words* the Caſe is ſomewhat different. In the forming of theſe, we ſee, a regard is had to Agreement, Relation, and Analogy: Thus, moſt *Words* that have the ſame ending, have one common and general way of denoting or ſignifying things; and thoſe compounded with the ſame Prepoſitions, have a ſimilar Manner of expreſſing and ſignifying ſimilar Ideas in all the learned Languages where they occur.

For the Perfection of Language, 'tis not enough, Mr. *Locke* obſerves, that Sounds can be made Signs of Ideas; unleſs theſe can be made uſe of, ſo as to comprehend ſeveral particular things; for the multiplication of *Words* would have perplexed their uſe, had every particular thing needed a diſtinct Name to be ſignified by.

To remedy this Inconvenience, Language had a farther Improvement in the uſe of general Terms whereby one *Word* was made to mark a Multitude of particular Exiſtences; which advantageous Uſe of Sounds was obtained only by the difference of the Ideas they were made ſigns of; Thoſe Names becoming general, which are made to ſtand for general Ideas; and thoſe remaining particular, where the Ideas they are uſed for are particular. See GENERAL *Terms*.

It is obſervable, that the *Words* which ſtand for Actions and Notions quite removed from Senſe, are borrow'd from ſenſible Ideas; as, to Imagine, Apprehend, Comprehend, Underſtand, Adhere, Conceive, Inſtill, Diſguſt, Diſturbance, Tranquillity, *&c.* which are all taken from the Operations of things ſenſible, and apply'd to Modes of Thinking———Spirit, in its primary Signification, is no more than Breath; Angel, a Meſſenger. By which we may gueſs what kind of Notions they were, and whence derived, which filled the Minds of the firſt beginners of Languages, and how Nature, even in the naming of things, unawares, ſuggeſted to Men the Originals of all their Knowledge: whilſt, to give Names that might make known to others any Operations they felt in themſelves, or any other Ideas, that came not under their Senſes, they were forced to borrow *Words* from the ordinary and known Ideas of Senſation. See SENSATION, PERCEPTION, *&c.*

The Ends of Language in our Diſcourſe with others, are chiefly three: Firſt, to make our Thoughts or Ideas known one to another——This we fail in, 1. When we uſe Names without clear and diſtinct Ideas in our Minds. 2. When we apply received Names to Ideas, to which the common uſe of that Language doth not apply them. 3. When we apply them unſteadily, making them ſtand now for one, and anon for another Idea.

Secondly, To make known our Thoughts with as much eaſe, and quickneſs as is poſſible———This, Men fail in, when they have complex Ideas, without having diſtinct Names for them; which may happen either through the defect of a Language, which has none; or the fault of that Man, who has not yet learned them.

Thirdly, To convey the Knowledge of Things——This cannot be done, but when our Ideas agree to the reality of things. He that hath Names without Ideas, wants meaning in his *Words*, and ſpeaks only empty Sounds. He that hath complex Ideas, without Names for them, wants diſpatch in his Expreſſion. He that uſeth his *Words* looſely and unſteadily, will either not be minded, or not underſtood. He that applies his Names to Ideas, different from their common uſe, wants Propriety in his Language, and ſpeaks Gibberiſh; and he that hath Ideas of Subſtances, diſagreeing with the real Exiſtence of things, ſo far wants the Materials of true Knowledge. See KNOWLEDGE.

WORD, or *Watch*-WORD, in an Army, or Garriſon, is ſome peculiar *Word*, or Sentence, by which the Soldiers know, and diſtinguiſh one another in the Night, *&c.* and by which Spies, and deſigning Perſons are diſcovered.

It is uſed alſo to prevent Surprizes.———The *Word* is given out in an Army every Night by the General, to the Lieutenant, or Major-General of the Day, who gives it to the Majors of the Brigades, and they to the Adjutants; who give it firſt to the Field-Officers, and afterwards to a Serjeant of each Company, who carry it to the Subalterns.

In Garriſons it is given after the Gate is ſhut, to the Town-Major, who gives it to the Adjutants, and they to the Serjeants. See ROUNDS.

WORD, in Heraldry, *&c.* See MOTTO.

WORK-*Houſe*, a Place where indigent, vagrant, and idle People are ſet to work, and maintain'd with Clothing, Diet, *&c.*

Such is *Bridewell*, and ſeveral other Places about the City and Suburbs; particularly that in *Biſhopſgate-ſtreet* for employing the poor Children of the City and Liberties, who have no Settlement; and that for the Pariſh of St. *Margaret's Weſtminſter*, call'd the *Grey-Coat Hoſpital*. See BRIDEWELL and HOSPITAL.

At *Amſterdam* they have a famous *Work-Houſe*, or Houſe of Correction, call'd the *Raſphuyſe*, which, by a Privilege granted in 1602, has alone the Right of Shaving and Cutting the Dyers Woods, as Braſil, Santal, Campeche, Saſſafras, *&c.*

Each Perſon, tolerably ſtrong, kept in the Houſe, is obliged to furniſh 250 Pounds of raſp'd Wood *per* Day; and the weaker, a certain Quantity of Chips. See RASPHUYSE.

WORKS, *Opera*, in Fortification, the ſeveral Lines, Trenches, Ditches, *&c.* made round a Place, an Army, *&c.* to fortify and defend it. See LINE, TRENCH, *&c.*

The principal *Works* in a Fortreſs or fortify'd Place, ſee under the Articles FORTIFY'D *Place*, FORTIFICATION, *&c.*

Crown-WORK, *Horn*-WORK, *Out*-WORK, *Field*-WORK, } See { CROWN-*Work*. HORN-*Work*. OUT-*Work*. FIELD-*Work*.

WORLD, *Mundus*, the Aſſemblage of Parts which compoſe the Univerſe; call'd by the *Greeks* τὸ πᾶν, and by the *Latins*, *Univerſum*. See UNIVERSE.

The *Duration of the World* is a thing has been greatly diſputed———*Plato*, after *Ocellus Lucanus*, held it to be eternal; and to have flow'd from God, as Rays flow from the Sun. *Ariſtotle* was much of the ſame mind: he aſſerts, that the *World* was not generated, ſo as to begin to be a *World*, which before was none: and, in effect, his whole eighth Book of *Phyſ.* and firſt Book *de Cœlo*, is ſpent in proving the Eternity of the *World*. See ETERNITY.

He lays down a pre-exiſting and eternal Matter as a Principle; and thence argues the *World* eternal. His Argument amounts to this, that it is impoſſible an eternal Agent, having an eternal paſſive Subject, ſhould continue long without Action. See ARISTOTELIAN.

His Opinion was generally follow'd; as ſeeming to be the fitteſt to end the Diſpute among ſo many Sects about the firſt Cauſe. See CAUSE.

Epicurus, however, tho' he makes Matter eternal; yet ſhews the *World* to be but a new thing form'd, out of a fortuitous Concourſe of Atoms. See *Lucretius*, lib. V. See MATTER, ATOM, *&c.* See alſo EPICUREAN, *&c.*

Some of the modern Philoſophers refute the imaginary Eternity of the *World*, by this Argument: That, if it be *ab Eterno*, there muſt have been a generation of Individuals in a continual Succeſſion from all Eternity; ſince no Cauſe can be aſſign'd why they ſhould not be generated, *viz.* one from another. Therefore, to conſider the Origin of Things, and the

the Series of Cauſes, we muſt go back *in infinitum*, *i. e.* there muſt have been an infinite Number of Men and other Individuals already generated; which ſubverts the very Notion of Number. And if the Cauſe which now generates have been produced by an infinite Series of Cauſes; How ſhall an infinite Series be finite, to give room for new Generations?

Dr. *Halley* ſuggeſts a new Method of finding the Age of the *World*, from the degree of Saltneſs of the Ocean. See SALTNESS, *&c.*

'Tis another popular Topic of Controverſy, Whether the *World* be finite, or infinite? *See the Arguments on both ſides under the Article* UNIVERSE.

'Tis likewiſe diſputed, Whether it were poſſible for ſeveral *Worlds* to exiſt——Some hold the Affirmative, from an Opinion of the infinite Power of the Deity; it being a ſetting Bounds to Omnipotency, to ſay, that he created ſo many Bodies at firſt, that he could not create more.

The *Carteſians* maintain the Negative upon theſe Principles: That it is a Contradiction to ſay, there are ſeveral *Worlds* exiſting at the ſame time; ſince this implies ſeveral Univerſes of created Beings, the *World* being the τὸ πᾶν. That if there were ſeveral *Worlds*, they muſt either be at a diſtance from one another, or contiguous; but neither can be ſaid: For were they contiguous, they would only conſtitute one; and were they diſtant, there muſt be ſomething between. But what can be between? If it be extended, it is corporeal; and inſtead of ſeparating the ſeveral *Worlds*, will connect 'em into one.

The *World* is ſometimes divided into *Upper*, and *Lower*——The *Lower World*, or Sublunary, is the Globe of our Earth. See EARTH.

The *Upper World* includes the Heavens, and heavenly Bodies. See HEAVEN.

Syſtem of the WORLD; ſee SYSTEM.

Soul of the WORLD; ſee ANIMA *Mundi*.

Map of the WORLD; ſee MAP.

WORMS, in Medicine; ſee VERMES.

Sir *Theodore Mayerne* aſſures us, in the *Philoſoph. Tranſ.* N° 211. That the famed Sugar, or Remedy given by *Pontæus*, (a celebrated Chymical Empiric) for the *Worms* in Children, is fifteen Grains of *Mercurius Dulcis* with five Grains of Scammony, or two or three times as much Sugar, made up in Lozenges. He adds, that this Doſe, which in *France* purges grown Perſons, is ineffectual in *England* to Perſons of above fifteen Years old, and ought to be augmented.

In the ſame *Tranſact.* N° 113. we have Accounts of divers remarkable Operations whereby *Worms* were taken out of divers unſuſpected Parts of the Body; the Operators being chiefly Women. Mrs. *Mary Haſtings* is there recorded as famous for the diſcovery of *Worms* hid in the Face, Gums, Tongue, *&c.* which ſhe managed with ſuch Addreſs, that ſhe took them out of any part affected with a Gooſe-Quill.——Mr. *Dent* relates, that he himſelf was cured of certain odd Tumors on his Tongue by one of thoſe *Worm* Doctreſſes, Mrs. *French*; who, piercing the parts affected with a Lancet, drew out five or ſix *Worms* at a time——In leſs than eight days, he aſſures us, ſhe took out of his Tongue above a hundred *Worms*, and thirty out of his Gums. See HYDATIDES.

In *Perſia*, &c. there are very long, ſlender *Worms*, ſix or ſeven Yards long, bred in the Legs and other Parts of Mens Bodies: When arriv'd at a certain Pitch, they put out their Heads, Necks, *&c.* and withdraw them (if diſpleaſed or hurt) again, cauſing intolerable Pains, Fevers, *&c.* See CRINONES.

Ariſtotle obſerves, that all Deer have *Worms* under their Tongues——Sheep's Noſes often abound with them.

WORM, in Chymiſtry, a long, winding Pewter-Pipe, which Diſtillers and Apothecaries place in a Tub of Water to cool and condenſe the Vapours in the Diſtillation of Spirits. See ALEMBIC, DISTILLATION, *&c.*

Formerly, this *Worm*, or ſomething like it, was placed above the Head of the Still, with a Refrigeratory at the upper end of it, which is uſeful enough in the Diſtilling of Spirit of Wine. See REFRIGERATORY.

This the Chymiſts call a *Serpentine*. See SERPENTINE.

To WORM *a Cable*, in the Sea-Phraſe, ſignifies to ſtrengthen it by winding a ſmall Rope all along between the Strands. See CABLE, *&c.*

To WORM *a Dog*, is to take out a kind of *Worm* from under his Tongue; which, if let alone, would make him mad.

WORM-SEED, a kind of WORM-*Powder*, call'd alſo *Barbotine*, *Semen contra*, *Semen ſanctum*, *Semen ſantonicum*, and *Abrotonum*, is a kind of Seed proper to deſtroy *Worms* generated in a human Body, particularly in Children. See WORMS.

This Seed is ſmall, of a browniſh Colour, an oblong Figure, a bitter Taſte, and a ſtrong Smell.

The Place where it is produced, is *Perſia*, about the Frontiers of *Muſcovy*. It is brought to us from *Aleppo*, *&c.*——Naturaliſts are not agreed about the Plant that produces it. *J. Bauhin* has a large Diſſertation on the Subject——Some will have it the Species of *Abſynthium*, or *Wormwood* call'd *Santonicum*, or *Marinum Abſynthium*; others will have it the *Tanacetum*, others the *Abrotonum*.

Monſ. *Tournefort* gives us the following Account of this notable Drug, in the ſecond Volume of his Travels——The *Sementine* or *Worm-Powder*, is not gather'd like other Seeds——The Plant grows in the Meadows, and muſt be let ripen; and the miſchief is, that as it grows near to Maturity, the Wind ſcatters a good part of it among the Graſs, where it is loſt; and this it is makes it ſo dear.

As they dare not touch it with the Hand for fear of making it ſpoil the ſooner; when they would gather what is left in the Ear, they have recourſe to this Expedient——They take two Hand-Baskets, and walking along the Meadows, ſweep the Baskets the one from right to left, the other from left to right, as if they were mowing; by this means the Seed is ſhook out into the Baskets.

It muſt be choſen new, greeniſh, of a ſharp, bitter, aromatic Taſte, yet diſagreeable.

WORMWOOD, a Medicinal Herb, among Phyſicians, *&c.* call'd *Abſynthium*. See ABSYNTHIUM.

WORMWOOD-*Wine*, *Vinum Abſynthites*; ſee VINUM.

WORSHIP *of God*, *Cultus Dei*, is what we uſually call *Religion*. See RELIGION.

This *Worſhip* conſiſts in paying a due Reſpect, Veneration, and Homage to the Deity, under a certain Expectation of Reward. See GOD.

And this internal Reſpect, *&c.* to be ſhewn and teſtified by external Acts; as Prayers, Sacrifices, Thankſgivings, *&c.* See PRAYER, SACRIFICE, *&c.*

The *Quietiſts*, and ſome other myſtic Divines, ſet aſide not only all uſe of external *Worſhip*; but the Conſideration of Rewards and Puniſhments. See QUIETISM.

Yet, even the Heathens had a Notion, that God did not require us to ſerve him for nought:——*Dii quamobrem Colendi ſunt*, ſays *Cicero*, *non intelligo*, *nullo nec accepto ab illis nec ſperato bono*.

The School-Divines divide *Worſhip* into divers Kinds, *viz.* *Latria*, that render'd to God; and *Idolatria*, that render'd to Idols or Images. To which the *Romaniſts* add, *Dulia*, that render'd to Saints; and *Hyperdulia*, that to the Virgin. See IDOLATRY, IMAGE, DULIA, HYPERDULIA, *&c.*

WORSTED, or WOOLSTED, in Matters of Commerce and Manufacture, is a kind of Woollen-Thread. See WOOL.

Worſted is properly a Thread ſpun of Wool that has been combed; and which in the Spinning is twiſted harder than ordinary. See COMBING.

It is chiefly uſed either to be knit or wove into Stockings, Caps, Gloves, or the like. See STOCKING, *&c.*

The name *Worſted* is ſuppoſed to be borrow'd from a Town thus call'd in *Norfolk*, noted for fine Spinning——They who write it *Woolſted*, do it on ſuppoſition of the Word's being form'd from *Wool*, the Matter of this Thread.

WOULDING, a Sea-Term, for the winding of Ropes hard round about a Yard or Maſt of a Ship, after it has been ſtrengthned by ſome Piece of Timber nailed thereto.

WOUND, *Vulnus*, in Medicine and Chirurgery, a recent Separation made in the ſoft or fleſhy Parts of the Body, from an external Cauſe, and particularly the Action of ſome hard and ſharp Inſtrument. See SOLUTION.

Or, it is a Solution of the Continuity of a fleſhy Part, made by ſome penetrating Body; while it yet remains freſh, bloody, and without Putrefaction: By which Circumſtances it is diſtinguiſh'd from an *Ulcer*. See ULCER.

A like Separation happening in a bony Part, is call'd a *Fracture*. See FRACTURE. See alſo FLESH, BONE, *&c.*

All *Wounds* proceed either from Puncture, Inciſion, or Contuſion, according to the Nature and Make of the Inſtrument they were caus'd by. See PUNCTURE, INCISION, and CONTUSION.

Wounds are uſually divided, with reſpect to their Cauſe, Circumſtances, Cure, *&c.* into *Simple* and *Compound*.——*Simple Wounds* are thoſe made by Puncture, Inciſion, or Contuſion ſeparately; thoſe of the outer Skin, without any conſiderable loſs of Subſtance, or hurting any remarkable Veſſel; and thoſe not complicated with any dangerous Symptoms.

Compound Ulcers are thoſe made both by Puncture and Inciſion at the ſame time, to which is ſometimes alſo added Contuſion; thoſe attended with great loſs of Fleſh, or the hurt of ſome conſiderable Veſſel; and thoſe made by envenom'd Inſtruments, or attended with violent Symptoms.

The Hiſtory of a *Wound* is thus delivered by *Boerhaave*——Immediately upon the Solution, the *wounded* Parts recede

further

further and further from each other. The Blood guſhes out, at firſt, with ſome violence; but ſtops of itſelf: then a bloody Scab is form'd in the Cavity of the *Wound*, and a thin ruddy Humour oozes out; the Lips of the *Wound* begin to redden, heat, ake, ſwell, and turn back; and (in great *Wounds*) a Fever and Thirſtineſs ſucceed. On the third or fourth day, there is found a white, viſcid Pus; upon which, the heat, redneſs, tumor, *&c.* abate, and the Cavity gradually fills up from the bottom upwards, and from the Circumference to the Centre with growing Fleſh. Laſtly, the *Wound* dries, and cicatriſes.

But note, theſe Symptoms vary according to the Nature and Cauſe of the *Wound*——Thus, if it be by Inciſion, and a large Blood-Veſſel be cut, the Hæmorrhage is more violent; eſpecially if it be an Artery; in which caſe, florid Blood flies out impetuouſly and by ſtarts: If only a Vein be cut, the Flux is more moderate and equable, and the Blood of a darker Colour——If the *Wound* be attended with Contuſion, the Hæmorrhage is ſmall.

In *Wounds*, where any large Artery is quite cut in two, the Flux uſually proves mortal. A leſſer Artery cut tranſverſely, flies back againſt the ſolid Parts, and will have its Mouths ſtop'd: If an Artery be not quite cut off, there ariſes a perpetual Flux; or if that be ſtop'd, an Aneuriſma. ——A Nerve being cut off, flies back, produces a Pain, and Obſtruction about the *Wound*; and below it, a Numbneſs, and waſting Immobility: The caſe is much the ſame in *wounded* Tendons and Membranes.——*Wounds* of the temporal Muſcle are rarely cured; but generally bring on horrible Convulſions.

The following *Wounds* are commonly reputed mortal; *viz.* thoſe of the *Cerebellum*, and of the *Cerebrum*, if they be deep enough to hurt the *Medulla oblongata*; deep *Wounds* in the ſpinal Marrow, eſpecially the upper part thereof; thoſe of the Heart, Lungs, Liver, Spleen, Kidneys, Pancreas, Meſentery, Stomach, Inteſtines, *&c.* Thoſe of the *Cava*, *Aorta*, *Carotides*, pulmonary, and other large Veins and Arteries. Thoſe of the *Bronchia*, *Thorax*, *Diaphragm*; large *Wounds* of the *Oeſophagus*, *Trachea*, and the Bladder, and all invenom'd *Wounds*.

In young Children and aged Perſons, *Wounds* frequently prove mortal which ſeem'd but ſlight. Thoſe *Wounds* generally prove troubleſome which happen in an ill ſtate of Body, and eſpecially a low or hardy Diet. All *Wounds* are reputed more dangerous and difficult of Cure in Winter than Summer; in *Auguſt* than in Spring.

The Cure of *Wounds* conſiſts in the Uniting of the divided Parts; which is the Work of Nature alone, and which the Chirurgeon can only contribute to by removing external Impediments, and applying Medicines familiar to the Part, call'd *Vulneraries* and *Balſamicks*. See VULNERARY, *&c.*

The firſt Step, then, to be taken in a ſimple *Wound*, is to cleanſe it, and extract any heterogeneous Body that may chance to be lodged therein. Next, The Cavity to be gently wiped with Doſils dipt in warm red Wine. The Lips, now to be brought together by the Bandages or Sutures; and the *Wound* to be covered with a Pledget dipt in Balm of *Peru*, or Oil of ſweet Almonds——The Pain thus eaſed, and the Symptoms removed, the *Wound* is to be ſuppurated, deterged, incarned, and cicatrized after the manner of Tumors and Ulcers. See SUPPURATION, DETERGENT, INCARNATIVE, CICATRISIVE, *&c.*

If the *Wound* be dangerous, the Symptoms violent, and the Body Cacochymic, more powerful Means are had recourſe to; as, firſt, Phlebotomy, then gentle Cathartics or Clyſters; then vulnerary Drinks, Apozems, and Ptiſans, with Cardiacs and Paragorics interpoſed.

In internal *Wounds*, Vulneraries and Alcalies do well, particularly *Album Græcum*, River Lobſters, Mercurials, *&c.*

Freſh *Wounds* are cured ordinarily in three or four days, without any other Means than applying a few Drops of Balſam of *Peru*——Sometimes, however, Digeſtives are required.

Gun ſhot *Wounds* are uſually the worſt of all, by reaſon of the violent Contuſion and Secretion of the Parts; which prevent their coming to Digeſtion for the Space of three or four days.

In the Cure of large *Wounds*, Bandages and Sutures are required, to fit and diſpoſe 'em for healing. See SUTURE and BANDAGE.

WREATH, in Heraldry, a Roll of fine Linnen, or Silk, (like that of a *Turkiſh* Turbant) conſiſting of the Colours born in the Eſcutcheon; placed in an Atchievement between the Helmet and the Creſt, and immediately ſupporting the Creſt. See CREST, *&c.*

WRECK, or *Sea*-WRECK, in Natural Hiſtory, a kind of Herb, growing in the Sea, upon Rocks, and which the Waves tearing off, caſt upon Shore.

In ſome Places it is uſed to manure the Ground——In *Normandy* and other Parts they burn it, and of the Aſhes make a kind of Soude or Salt-wort, which they uſe in the making of common green Glaſs, to promote the Fuſion or Vitrification of the Matter. See GLASS.

WRECK, or *Ship*-WRECK, in Law, *&c.* is when a Ship periſhes in the Sea, and no Man eſcapes alive out of it.

The Civilians term it *Naufragium*——The Goods in the Ship, which are brought to Land by the Waves, belong to the King, or him to whom he aſſigns the Right thereof.

If a Man, a Dog, or even a Cat eſcape alive; the Party to whom the Goods belong coming within a Year and a Day, and proving the Goods to be his, ſhall have them again.

In divers Charters and old Writings, it appears that *Wreck* antiently not only comprehended Goods which came from a periſhing Ship, but whatever elſe the Sea caſt upon Land; whether it were precious Stones, Fiſhes, Sea-weed, or the like.

Thus in the *Stat. Prærog. Reg.* c. 11.——*Rex habebit* Wreckum Maris *per totum regnum, Balenas & Sturgeones captas in Mari vel alibi infra Regnum, exceptis quibuſlibet Privelegiatis locis, &c.*

This *Wreck* in the grand Cuſtomary of *Normandy*, c. 17. is call'd *Varech*, and latined *Veriſcum*; and in ſome of our antient Charters, *Wreche*, *Werec*, *Werenche*, and *Seupwerp*, q. d. *Sea-up-werp* and *up werpen*.

WRESTLING, a kind of Combat, or Engagement between two Perſons, unarm'd; Body to Body; to prove their Strength and Dexterity, and try which can throw his Opponent to the Ground. See EXERCISE, GAME, *&c.*

Wreſtling, *Paleſtra*, is an Exerciſe of very great Antiquity and Fame——'Twas in uſe in the Heroic Age; witneſs *Hercules*, who *wreſtled* with *Antæus*. See PALESTRA.

It continued a long time in the higheſt Repute; and had very conſiderable Rewards and Honours aſſign'd it at the *Olympic* Games——'Twas the Cuſtom for the *Athletæ*, to anoint their Bodies with Oil to give the leſs hold to their Antagoniſt. See ATHLETA, *&c.*

Ablancourt obſerves, that *Lycurgus* ordain'd the *Spartan* Maids to *wreſtle* in public, quite naked; to break them of their too much Delicacy and Niceneſs, to make 'em appear more robuſt, and to familiarize the People, *&c.* to ſuch Nudities. See GYMNASIUM, *&c.*

WRIST; ſee CARPUS.

WRIT, *Breve*, in Law, a Precept of the King, whereby any thing is commanded to be done, touching a Suit, Action, or Proceſs for Juſtice.

Such are the Summoning the Defendant, taking a Diſtreſs, redreſſing a Diſſeiſin, *&c.*

Writs are variouſly divided, and in various reſpects——Some, with regard to their Order, or manner of Granting, are term'd *Original*; and others *Judicial*.

Original WRITS are thoſe ſent out of the High Court of Chancery to ſummon the Defendant in a Perſonal, or Tenant in a real Action, either before the Suit begins, or to begin the Suit thereby. See PROCESS, *&c.*

Judicial WRITS are thoſe ſent out by Order of the Court where the Cauſe depends, upon emergent Occaſions, after the Suit begins.

Judicial Writs are diſtinguiſh'd from Original, in that their *Teſte* bears the Name of the Chief Juſtice of that Court whence they come; whereas the Original ſay, *Teſte me ipſo*, in the Name, or relating to, the King.

Writs are alſo diſtinguiſh'd, according to the nature of the Action, into *Real* and *Perſonal*.——*Real* are either touching the Poſſeſſion, call'd *Writs of Entry*, or the Property, call'd *Writs of Right*. See ENTRY and RIGHT.

Some *Writs*, again, are at the Suit of the Party; ſome of Office; ſome Ordinary; ſome of Privilege—A *Writ* of Privilege is that which a privileged Perſon brings to the Court for his Exemption, by reaſon of ſome Privilege. See BRIEF, *&c.*

The word *Writ* is form'd from the *Saxon Writan*, to write.

WRIT *of Rebellion*; ſee COMMISSION *of Rebellion*.

WRITS *Vicountiel*, are ſuch as are triable in the Sheriff's or County-Court. See VICOUNTIEL.

WRIT *of Aſſiſtance* iſſues out of the Exchequer to authorize any Perſon to take a Conſtable, or other publick Officer to ſeize Goods or Merchandize prohibited and uncuſtomed, *&c. Stat.* 14. 2 *Car.* 1. There is alſo a *Writ* of this Name iſſuing out of the Chancery to give a Poſſeſſion.

WRITER *of the Tallies*, an Officer of the Exchequer, being Clerk to the Auditor of the Receipt; who writes upon the Tallies the whole Letters of the Tellers Bills. See TALLY, EXCHEQUER, *&c.*

WRITING, *Scripture*, *Scriptura*, the Art or Act of ſignifying and conveying our Ideas to others, by Letters, or Characters viſible to the Eye. See CHARACTER, WORD, *&c.*

Writing is now chiefly practiſed among us by means of Pen, Ink, and Paper. See PAPER, INK, *&c.*——The Antients had other Methods. See BOOK, BARK, STYLE, *&c.*

The Invention of the Art of *Writing* is refer'd to *Cadmus*. See LETTER and GREEK.

In Law, we ſay, Deeds, Conveyances, &c. are to be in *Writing*.——A Will may either be in *Writing* or by Word of Mouth. See DEED, CONVEYANCE, WILL, &c.

We alſo ſay, the *written* Law, *Lex ſcripta*, in oppoſition to common Law, which is call'd *Lex non ſcripta*. See LAW, STATUTE, COMMON *Law*, &c. ——We have alſo *written* and *unwritten* Traditions, &c. See TRADITION.

Authentic *Writings* of any Contract, ſealed and delivered, make the Evidence thereof. See EVIDENCE, TESTIMONY, &c.

J. Ravenau has a Treatiſe entitled *des Inſcriptions en Faux*, wherein he ſhews how to revive and reſtore old *Writings* almoſt effaced, by means of Galls ground in white Wine, and diſtill'd; and thus rubb'd over the *Writing*.

La Vayer has a curious Diſſertation on the Proof of Facts by compariſon of Hand *Writings*, wherein he endeavours to ſhew this Method of Proof to be very ſuſpicious and fallacious. See PROOF, &c.

'Tis a Point controverted among the School-Philoſophers, what it is that *Writing* properly ſignifies, or repreſents; whether Ideas, or Things, or Words; *i. e.* whether it expreſſes Things themſelves, or our Ideas of Things, or the articulate Sounds by which, on other Occaſions, we expreſs thoſe Ideas.

The common Opinion is, that *Writing* only repreſents Words, that its proper Object is the Voice, and that it only ſignifies Ideas mediately, or ſecondarily; and by means of thoſe, Things themſelves.

Others, on the contrary, will have Ideas, Speech, and *Writing*, all equally and immediately repreſentatives of Things. See IDEA, NOTION, &c.

But the Controverſy is impertinent enough.——No doubt our Ideas of Things are the Things themſelves; there being no foundation for any diſtinction between them. See EXTERNAL.

And as to *Writing*, ſome may be ſaid to be real, or ſignificant of Things and Ideas———As the *Egyptian* Hieroglyphics; the Characters of Chymiſts, Aſtronomers, &c. which are a kind of Images, or bear ſome natural Reſemblance or Analogy with the Things they are intended to expreſs. See SYMBOL, HIEROGLYPHIC, *Real* CHARACTER, &c.

But the common *Writing* only repreſents Sounds, which is the firſt and moſt natural Language; and accordingly our Orthography is apparently form'd on, or adapted to the Pronunciation. See ORTHOGRAPHY and PRONUNCIATION.

Hence, the End of *Writing* is to excite, as it were, certain Sounds, which have been made the arbitrary Signs of certain Ideas—This they do by virtue of a Combination or Aſſociation between ſuch and ſuch Figures made with the Pen, and ſuch and ſuch Inflexions of the Voice.

In effect, we have a great many *written* Words which have no Ideas belonging to 'em; as *Scindapſus*, *Bladri*, &c. which tend no further than to produce Sounds.——Add, that People when they begin to learn to read *Writing*, take it from Sounds which they hear produced by the Perſon who teaches 'em: An abundant Argument, that *Writing* does not immediately ſignify Ideas and Things, but firſt Sounds, and then Things.

Short WRITING; ſee BRACHYGRAPHY.

Secret WRITING; ſee CRYPTOGRAPHY, CYPHER, &c.

Hand WRITING; ſee HAND.

WRONG, in a Logical Senſe; ſee ERROR, FALLACY, FALSHOOD, TRUTH, &c.

WRONG, in a Legal Senſe, *Injury*, *Tort*. See INJURY, JUSTICE, TORT, RIGHT, &c.

WULVESHEVED, or WULVESHEAD, from the *Saxon*, *Wulfe*, *Lupus*, and *Heofod*, *Caput*, q. d. *Caput Lupinum*, was the Condition of thoſe Out-law'd for Criminal Matters in the *Saxons* time, for not yielding themſelves to Juſtice. For if they could have been taken alive, they muſt have been brought to the King; and if they for fear of being apprehended, did defend themſelves, they might be ſlain, and their Heads brought to the King; for their Head was no more to be accounted of than a Wolf's Head. *LL. Edw.* in *Lamb.* fol. 127. and *Bract.* lib. 3. tract. 2. cap. 11. See UTLAWRY.———*Wolfeſhead* and *Wulferford*, are all one. *Coke* on *Littl.* fol. 28.

WYCH-*Houſe*, a Houſe in which the Salt is boiled. See SALT.

WYDRAUGHT, a Water-Courſe, or Water-Paſſage; properly, a Sink, or Common-Shore. See CLOACA.

WYKE, antiently denoted a Farm, Hamlet, or little Village. See FARM, HAMLET and VILLAGE.

WYTE or WYTA, WITE or WITA, in our antient Cuſtoms, a pecuniary Penalty or Mulct. See WITE.

The *Saxons* had two kinds of Puniſhments, *Were*, and *Wyte*; the firſt for the more grievous Offences. See WERE.

The *Wyte* was for the leſs heinous ones———It was not fixed to any certain Sum; but left at liberty, to be varied according to the Caſe.

WYTHE, in Law, the ſame as *Waif*. See WAIF.

X.

X, A double Conſonant, and the twenty-ſecond Letter in the *Engliſh* Alphabet. See LETTER, CONSONANT, ALPHABET, &c.

The *x* of the *Latins*, and ξ of the *Greeks* are compounded of *c s*, and κ σ; whence, to this day, the Letter *x* in the *Engliſh* and *French* has the ſame Sound with *c s* or *k s*.——Thus we pronounce *Alexander*, as if wrote *Alecſander* or *Alekſander*. See C, K, S, &c.

The *Italians* have no *x* at all in their Language; but, both ſpeak and write *Aleſſandro*——The *Spaniards* pronounce the *x* like our *c* before *a*; viz. *Alexandro*, as if it were *Alecandro*. The *Portugueze* pronounce it like our *ſh*.

In foreign Words uſed in *Engliſh* we ſometimes ſoften the *x* into a double *s*; as *Bruſſels* for *Bruxelles*, &c.

The Letter is not known in the *Hebrew*, or other Oriental Languages; but in lieu of it they write the two ſimple Letters whereof it is compounded——And the like do the modern *Germans*.

X is alſo a numeral Letter, and ſignifies *ten*; as repreſenting two V's placed one a-top of the other. See V.

X *Supra denos numero tibi dat retinendos.*

When a Daſh is added over it, $\overline{X}$, it ſignifies *ten thouſand*.

XENIA, in antient Cuſtoms, were Gifts or Preſents made to the Governours of Provinces by the Inhabitants thereof.

The Word occurs pretty frequently in Charters of Privileges; where, *Quictos eſſe à* Xeniis, denotes an Exemption from making ſuch Preſents to Kings and Queens upon their travelling through ſuch Precincts. See MUNUS, &c.

XENODOCHUS, an Eccleſiaſtical Officer in the *Greek* Church; the ſame with *Hoſpitaller*, or a Perſon who takes care of the Reception and Entertainment of Strangers. See HOSPITALLER.

St. *Iſidore*, a Prieſt and Solitary, ſurnamed the *Xenodochus*, liv'd in the IVth Century——He was thus call'd, becauſe entruſted with that Office in the Church of *Alexandria*.

XEROPHTHALMIA, a kind of *Ophthalmia*, wherein the Eyes itch, and are red, but without ſwelling or watering. See OPHTHALMIA.

The Word is compounded of ξηρος, dry, and ὀφθαλμος, Eye.

XEROPHAGIA, XEROPHAGY, in Church-Hiſtory, the uſe of dried Foods. See FOOD.

In the firſt Ages, ſome not contented with ſimple Faſting, added the *Xerophagy* thereto; abſtaining not only from Fleſh and Wine, but alſo from all freſh, ſucculent, and vinous Fruits——And ſome even brought themſelves to bare Bread and Water. See FASTING and ABSTINENCE.

Tertullian in his Book *de Abſtinentia*, c. 9. ſpeaks of the *Xerophagia* as a thing commendable in time of Perſecution.

The Word is form'd from ξηρὸς, *ſiccus*, dry, and φάγω, I eat.

XESTA, ξέστης, an *Attic* Meaſure of Capacity. See MEASURE.

XIPHIAS, a fiery Meteor, in form of a Sword. See METEOR.

It differs from the *Acontias*, in that this latter is longer, and more like a Dart; and the former ſhorter and broader in the middle. See ACONTIAS.

XV.VIR, *Quindecimvir*; ſee QUINDECIMVIR.

Authors, and eſpecially the Antiquaries, make uſe of ſuch Abbreviations, which they borrow from Medals, and other Monuments of Antiquity, where thoſe Names are ſo expreſs'd.

XYLO-ALOES, in Medicine, &c. the *Lignum Aloes*: call'd alſo *Agillochum*. See ALOES and AGILLOCHUM.

The Word is compounded of ξυλον, *Lignum*, Wood, and αλοη, Aloes.

XYLO-*Balſamum*, a Name which Naturaliſts, &c. give to the Wood of the Tree which yields that precious Gum known to the *Latins* by the Name of *Opo-Balſamum*, and among us by the Name of *Balm of Gilead*. See BALM.

We have Branches of this Tree brought us from *Cairo*. They are very ſtreight, brittle, unequal, and full of Knots; their Bark reddiſh without, and greeniſh within. The Wood is whitiſh, and full of Pith, and when broke, yields an agreeable ſmell reſembling that of the Balm.

The *Xylo-balſamum* is reputed good to ſtrengthen the Brain, and Stomach, and to expel Poiſon.

The Word is compounded of ξύλον, Wood, and βάλσαμον, Balſam, Balm.

XYNOECIA, a Feaſt among the antient *Athenians*, inſtituted on occaſion of *Theſeus*'s uniting all the petty Communities of *Attica* into one Common-wealth; the Aſſemblies whereof were to be held at *Athens*, in the *Prytanæum*. See FEAST.

The Word is form'd of the *Greek* ξὺν or σὺν with, and οἰκεω, I inhabit.

XYPHOIDES, in Anatomy, a Cartilage at the bottom of the Sternum; call'd alſo *Enſiformis*. See CARTILAGE and ENSIFORMIS.

It is about an Inch long, and ſhaped like the Point of a Sword; whence its Appellation, from ξίφος, Sword, and εἶδος, Figure. See STERNUM.

XYSTARCHA, in Antiquity, the Maſter or Director of the *Xyſtus*. See XYSTUS.

In the *Greek Gymnaſium*, the *Xyſtarcha* was the ſecond Officer——The firſt was the *Gymnaſiarcha*.

The *Xyſtarcha* was his Lieutenant, and preſided over the two *Xyſti*, and all Exerciſes of the *Athletæ* therein. See GYMNASIUM and GYMNASIARCH.

XYSTUS, in the antient Architecture——A *Xyſtus*, among the *Greeks*, was a long Portico, either open, or cover'd over; wherein the *Athletæ* practiſed Wreſtling, and Running. See ATHLETA, WRESTLING, &c.

The Gladiators who practiſed therein, were call'd *Xyſtici*. See GLADIATOR.

Among the *Romans*, the *Xyſtus* was only an Alley, or double Row of Trees, meeting Arbor-wiſe a-top, and forming a Shade to walk under.

The Word is *Greek*, ξύστος, form'd of ξύειν, to poliſh, ſhave, rub.

Y.

Y, The twenty-third Letter in the *Engliſh* Alphabet, borrow'd originally from the *Greek* υ. See LETTER and ALPHABET.

It is occaſionally both Vowel, and Conſonant———As a Vowel, ſome Authors have judged it unneceſſary in our Language, in regard its Sound is preciſely the ſame with that of the *i*. Accordingly, it is but little uſed except in Words borrow'd from the *Greek*, to denote their Origin, by repreſenting their ὕ ψιλόν.

The Vowel *y*, however, has a place even in ſome Words purely *Engliſh*; and that both in the middle thereof, as in *dying*, *frying*, &c. and at the end, as in *lay*, &c.

Some aſcribe the uſe of the *y* in pure *Engliſh* and *French* Words, and thoſe that have no *y* in *Latin* or *Greek*, to this, that antiently thoſe Words were pronounced with a double ii; which having ſomething aukward in it, the *y* was ſubſtituted in lieu thereof. See I.

Others ſay, that thoſe Words being antiently wrote, as well as pronounced with a double ii, which they ſtill are in the *Walloon*, as *paiing*, *paiiſan*, &c. to avoid their being miſtaken for an u with two Dots over it, they made the ſecond i longer than the firſt, and ſo form'd the *y*.—Some give a particular Reaſon why Words ending in i, came to be wrote with *y*; *viz.* that the Copiſts found the Tail of the *y* very commodious to adorn the Margins and Bottoms of Pages withal.

When the *y* follows a Conſonant, it is a Vowel; and when it precedes a Vowel, it is a Conſonant, and ſhould be call'd *ye*, and not *wy*.

The *Romans* uſed the *y* for the Vowel *u*, which they had not; their way being to pronounce the common *u* as we do the Dipthong *ou*; and the *Greek* υ ψιλον as the *Engliſh* and *French* *u*.

In our own, and ſome other modern Tongues, Authors begin to diſpenſe more and more with the preciſe Orthography, which requires all Words that have an *Upſilon* in the *Greek* to be wrote with a *y*. And with reaſon; ſince our *Greek y* has loſt the Sound it had in the Language whence we borrow it. But 'tis certainly ridiculous to uſe it, as many do, in Words which indeed have a *Greek* Origin, but have no *u* in the *Greek*; as in *Eclipſe*. See ECLIPSE, ECLIPTIC, &c.

Y is alſo a numeral Letter, ſignifying 150, or, according to *Baronius*, 159; as in the Verſe:

Y *dat Centenos & quinquaginta Novenos.*

When a Daſh was added a-top, $\overline{Y}$, it ſignified 150 thouſand.

Pythagoras uſed the Y as a Symbol of human Life; the Foot repreſenting Infancy, and the forked Top, the two Paths of Vice and Virtue, one or t'other of which, People are to enter upon after attaining to the Age of Diſcretion.

YACHT, a kind of Veſſel, uſed by the *Engliſh*, furniſh'd with Maſts and Sails; fit to go by Sea; and commodiouſly contriv'd and adorn'd, both withinſide and without, to ſuit it for State-Paſſengers, &c.

The *Dutch* have alſo *Yatchts*, but not ſo well prepared to live at Sea——They are ſeldom uſed but to ſail on Rivers and Canals.

The Word ſeems derived from the *Dutch Iacht*, hunting, by reaſon of the lightneſs of theſe Veſſels.

YARD, *Virga*, a long Meaſure uſed in *England*, and *Spain*; chiefly to meaſure Cloth, Stuffs, &c. See MEASURE.

The *Engliſh Yard* contains three Foot. See FOOT.

It was firſt ſettled by *Henry* I. from the length of his own Arm. See VIRGA.

The *Engliſh Yard* is juſt ſeven Ninths of the *Paris* Ell; ſo that nine *Yards* make ſeven Ells——To reduce Ells, therefore into *Yards*, ſay, If ſeven Ells give nine *Yards*, how many *Yards* will the given Number of Ells give?

Yards are converted into Ells *Flemiſh*, by adding a third part; into Ells *Engliſh*, by ſubſtracting a fifth part; or multiplying by 8, and caſting off the right-hand Figure——Ells *Engliſh* are converted into *Yards*, by adding a fourth. To turn Ells *Flemiſh* into *Yards*, ſubſtract one Quarter. See ELL.

The *Spaniſh Yard* chiefly uſed at *Sevil*, is, in ſome Places, call'd *Barra*——It contains $\frac{17}{24}$ of the *Paris* Ell; ſo that 17 Ells make 24 *Spaniſh Yards*.

YARD, in Anatomy, the *Penis*, or Virile Member; ſerving for the evacuating of the Urine, and Seed. See PENIS; ſee alſo URINE and SEED.

YARD-*Land*, *Virgata Terræ*, or *Virga Terræ*, is a certain Quantity of Land, various according to the Place——At *Wimbleton* in *Surrey*, it is only 15 Acres; but in moſt other Counties it contains 20, in ſome 24, in ſome 30, and in others 40 Acres. See ACRE.

Virgata Terræ continet 24 *Acras*; & 4 *Virgatæ conſtituunt unam Hidam*, & *quinque Hidæ conſtituunt Feodum Militare*. MS. Abbot Malmeſ. See HIDE, KNIGHT'S *Fee*, CARRUCATE, &c.

YARDS, or *Sail-Yards*, of a Ship, are long pieces of Timber, tapering at each end, fitted a-croſs the ſeveral Maſts to carry the Sails. See MAST.

The Sails are faſten'd to the *Yards* at the Heads; ſo as to be hoiſted up, and let down together with them, by Ropes call'd Halliards. See SAIL and HALLIARD.

The Main *Yard* is that of the Main-Maſt——the Mizzen *Yard*, Bolt-ſprit *Yard*, &c. are thoſe of the Mizzen, &c. See MIZZEN, BOLT-SPRIT, &c.

They have ſeveral Phraſes and Words of Command relating to the Management of the *Yards*; as——*Brace the Yard*, which ſignifies to traverſe aft the *Yard*-Arm whoſe Brace is haled; ſo that to traverſe the *Yard*, is the ſame as to ſay, Brace it aft.———*Square the Yard*, is as much as to ſay, ſee that it hang right a-croſs the Ship, and one *Yard*-Arm not traverſed more than the other.——*Top the Yards*, *q. d.* make them hang even.

YARD's-*Arm*, is that half of the *Yard* which is on either ſide the Maſt, when it lies athwart the Ship.

YARDS are alſo Places belonging to the Navy, where the Ships of War, &c. are laid up in Harbour. See NAVY, HARBOUR, SHIP, &c.

The King's *Yards*, are *Chatham*, *Deptford*, *Woolwich*, *Portſmouth*, *Shereneſs*, *Plimouth*, and *Harwich*; each of which is provided with ſeveral Docks, Wharfs, Lanches, and Graving Places for the Building, Repairing, and Cleaning his Majeſty's Ships. See DOCK, WHARF, &c.

In theſe *Yards* are alſo lodged great quantities of Timber, Maſts, Planks, Anchors, &c. There are alſo Store-Houſes belonging to each *Yard*, wherein are reſerv'd vaſt quantities of Cables, Rigging, Sails, Blocks, &c.

In the ſeveral *Yards* are great Rope-*Yards*, wherein Cables and all ſorts of Cordage are made. See CORDAGE, CABLE, &c.

YARE, among Sailors, implies as much as, nimble, ready, quick, expeditious.

Hence, to *Be Yare at the Helm*, ſignifies to ſet a freſh Man at the Helm.

YARN, Spun Wool. See WOOL, SPINNING, CLOTH, &c.

YARRINGLES, or YARRINGLE *Blades*, a kind of Reel, or Inſtrument with which Hanks of Yarn are wound in Clews, or Balls. See REEL.

YATCHES, Veſſels with one Deck, carrying from 4 to 12 Guns, with from 20 to 40 Men; being of Burden from 30 to 160 Ton. See VESSEL.

They draw little Water, and are uſed for running, and making ſhort Trips, &c.—Their Makes and Forms are various.

YAWES, in the Sea-Language,—A Ship is ſaid to make *Yawes*, when through the fault of him at the Helm, ſhe is not kept ſteady in her Courſe; but makes Angles in and out. See HELM.

To prevent this, the *Conner* cries to him at Helm, Steady, Steady. See CONNER.

YAWNING, *Oſcitatio*, an involuntary opening of the Mouth, occaſion'd by a Vapour or Ventoſity, endeavouring to eſcape; and generally witneſſing an irkſome Wearineſs, or an Inclination to Sleep.

The Remedy *Hippocrates* preſcribes againſt continual *Yawnings*, is to make long Breathings, or Reſpirations—The ſame he recommends againſt the Hiccough. See HICCOUGH.

The nervous Membrane of the *Oeſophagus* is the Seat of *Yawning*, which is certain to be produced whenever any irritation determines the Spirits to flow thither in too great abundance.——The Cauſe of the Irritation is ſuppoſed to be ſome troubleſome Humour wetting the inner Membrane of the *Oeſophagus*; which Humour proceeds either from the Glands ſpread throughout that Membrane, or from acid Vapours ariſing from the Stomach, as from a Boiling-Pot, and which condenſe on the Sides of the *Oeſophagus* as on a Pot-Lid.

On ſuch occaſions, the nervous Fibres of the Membrane of the Gullet being irritated, dilate the Gullet; and the

Mouth

Mouth is conſtrain'd to follow the ſame Motion, as being lined with the ſame Membrane.

YCONOMUS: ſee OECONOMUS.

YDRARGYROS, *Hydrargyros*, or *Quickſilver*; ſee MERCURY.

YEAR, *Annus*, in the full extent of the Word, is a Syſtem or Cycle of ſeveral *Months*; uſually *twelve*. See CYCLE and MONTH.

Others define *Year*, in the general, a Period, or Space of Time, meaſured by the Revolution of ſome Cœleſtial Body in its Orbit. See TIME and PERIOD.

Thus, the Time wherein the fixed Stars make a Revolution, is call'd the *great Year*. And the Times wherein *Jupiter*, *Saturn*, the *Sun*, *Moon*, &c. finiſh their Revolutions, and return to the ſame Point of the Zodiac, are reſpectively call'd the *Years of Jupiter*, and *Saturn*, the *Solar*, and the *Lunar Years*. See SUN, MOON, PLANET, &c. *Solar* YEAR, *Lunar* YEAR, &c.

YEAR, properly, and by way of eminence ſo call'd, is the *Solar Year*; or the Space of Time wherein the Sun moves thro' the Ecliptic. See ECLIPTIC.

This, by the Obſervations of *Caſſini*, *Bianchini*, and *de la Hire*, contains 365 Days, 5 Hours, and 49 Minutes; which is the Quantity of the *Year* aſſumed by the Authors of the *Gregorian* Calendar. See *Solar* YEAR.

But, in the Civil, or popular Account, this *Year* only contains 365 Days; except every fourth, which contains 366. See *Civil* YEAR.

The Viciſſitude of Seaſons ſeems to have given occaſion to the firſt Inſtitution of the Year.———Man, naturally curious to know the Cauſe of that Diverſity, ſoon found it was the proximity and diſtance of the Sun; and upon this, gave the Name *Year* to the Space of Time wherein that Luminary performing his whole Courſe, return'd to the ſame Point of his Orbit. See SEASON.

And hence, as it was on account of the Seaſons, in a great meaſure, that the *Year* was inſtituted; their chief Regard and Attention, was, that the ſame parts of the *Year* ſhould always correſpond to the ſame Seaſons; *i. e.* that the beginning of the *Year* ſhould always be when the Sun was in the ſame Point of his Orbit; and that they ſhould keep pace, come round, and end together.

This, different Nations aim'd to attain by different ways; making the *Year* to commence from different Points of the Zodiac; and even the time of his Progreſs different. So that ſome of their *Years* were much more perfect than others, but none of them quite juſt; *i. e.* none of them but whoſe Parts ſhifted with regard to the Parts of the Sun's Courſe.

'Twas the *Egyptians*, if we may credit *Herodotus*, that firſt form'd the *Year*, making it to contain 360 Days, which they ſubdivided into 12 Months.

Mercury Triſmegiſtus added 5 Days more to the Account ———And on this footing, *Thales* is ſaid to have inſtituted the *Year* among the *Greeks*. Tho' that Form of the *Year* did not hold throughout all *Greece*———Add, that the *Jewiſh*, *Syrian*, *Roman*, *Perſian*, *Ethiopic*, *Arabic*, &c. *Years*, were all different.

In effect, conſidering the poor State of Aſtronomy in thoſe Ages, 'tis no wonder different People ſhould diſagree in the Calculus of the *Sun*'s Courſe——We are even aſſured by *Diod. Siculus*, Lib. I. *Plutarch* in *Numa*, and *Pliny*, Lib. VII. c. 48. that the *Egyptian Year* itſelf was at firſt very different from that now repreſented. See *Egyptian* YEAR, *Roman* YEAR, *Jewiſh* YEAR, &c.

Various Forms of Solar *and* Lunar YEARS.

Solar YEAR is the Interval of Time wherein the Sun finiſhes his Courſe through the Zodiac; or, wherein he returns to the ſame Point thereof whence he had departed. See SUN.

This, according to our Account, is 365 Days, 5 Hours, 49 Minutes; tho' ſome Aſtronomers make it a few Seconds, and ſome a whole Minute leſs; as *Kepler*, for inſtance, who makes it 365 Days, 5 Hours, 48 Minutes, 57 Seconds, 39 Thirds: *Ricciolus*, 365 Days, 5 Hours, 48 Minutes; and *Tycho Brahe* 365 Days, 5 Hours, 48 Minutes.

The *Solar Year* is either *Aſtronomical*, or *Civil*.

The *Solar Aſtronomical* YEAR is that determined preciſely by the Obſervations of Aſtronomy; and is of two kinds, *Tropical*, and *Siderial* or *Aſtral*.

The *Tropical*, or *Natural* YEAR, is the Time which the Sun employs in paſſing through the Zodiac; which, as before obſerved, is 365 Days, 5 Hours, 49 Minutes.

The *Siderial* or *Aſtral* YEAR, is the Space of Time wherein the Sun going from any fixed Star, returns to the ſame———This conſiſts of 365 Days, 6 Hours, 10 Minutes. See SIDERIAL.

Civil YEAR is that Form of *Year* which each Nation has contrived to compute Time by: or, the Civil, is the *Tropical Year* conſider'd as only conſiſting of a certain Number of whole Days; the odd Hours and Minutes being ſet aſide, to render the Computation of Time, in the common occaſions of Life, more eaſy. See CIVIL.

Hence, as the *Tropical Year* is 365 Days, 5 Hours, 49 Minutes, the *Civil Year* is 365 Days. And hence, alſo, as 'tis neceſſary to keep pace with the Heavens, it is required that every fourth Year conſiſt of 366 Days.

Hence, laſtly, the *Civil Year* is either *Common* or *Biſſextile*.

The COMMON *Civil* YEAR is that conſiſting of 365 Days. This, therefore, has ſeven Months of 30 Days each, and five of 31 Days.

Biſſextile or *Leap* YEAR is that conſiſting of 366 Days; or has one Day extraordinary, which Day is call'd the *Intercalary* or *Biſſextile Day*. See INTERCALARY.

This Intercalary, or additional Day to every fourth *Year*, was firſt appointed by *Julius Cæſar*, who, to make the *Civil Years* keep pace with the *Tropical* ones, contrived, that the 6 Hours which the former came ſhort of the latter, ſhould, in four Years, make a whole Day, and be added after the 23d of *February*, which was their ſixth of the Calends of *March*.

Hence, as, in that *Year*, they reckon'd this Day twice over, or had *bis ſexto Calendas*; the *Year* itſelf came to be call'd *Bis Sextus* and *Biſſextile*.

The Intercalary Day, however, among us, is not got in by telling the 24th of *February* twice over; but by adding a Day after the 28th of *February*; which by this means, that *Year*, comes to contain 29 Days. See BISSEXTILE.

A further Reformation in this *Year* was made by Pope *Gregory*. See *Gregorian* YEAR.

Lunar YEAR is a Syſtem of 12 Lunar Months. See LUNAR.

Hence, from the two kinds of Synodical Lunar Months, there ariſe two kinds of *Lunar Years*, the one *Aſtronomical*, the other *Civil*.

Lunar Aſtronomical YEAR conſiſts of twelve Lunar Synodical Months; and therefore contains 354 Days, 8 Hours, 48 Minutes, 38 Seconds, 12 Thirds. See SYNODICAL.

Lunar Civil YEAR, is either *Common*, or *Embolimic*.

The COMMON *Lunar* YEAR conſiſts of twelve Lunar Civil Months; and therefore contains 354 Days.

The EMBOLIMIC or *Intercalary* YEAR conſiſts of 13 Lunar Civil Months; and therefore contains 384 Days. See EMBOLIMIC.

Note, as the difference between the common Lunar Civil *Year* and the Tropical *Year*, is 11 Days, 5 Hours, and 49 Minutes; to have the former keep pace with the latter, there are 34 Months of 30 Days, and 4 Months of 31 Days each, to be inſerted in every 100 Lunar *Years*; which ſtill leave behind 'em an Appendix of 4 Hours, 21 Minutes, which in ſix Centuries make nearly a day more.

Thus far we have conſider'd *Years* and Months with a view to the Principles of Aſtronomy, whereon the diviſion is founded. By this, the various Forms of Civil *Years* that have antiently obtain'd, or ſtill do obtain, in divers Nations, are to be examined.

Various Forms of Civil YEARS.

Antient Roman YEAR, was the *Lunar Year*, which, as firſt ſettled by *Romulus*, only conſiſted of ten Months; *viz.* 1. *March*, containing 31 Days. 2. *April*, 30. 3. *May*, 31. 4. *June*, 30. 5. *Quintilis*, 31. 6. *Sextilis*, 30. 7. *September*, 30. 8. *October*, 31. 9. *November*, 30 10. *December*, 30; in all 304 Days, which came ſhort of the true Lunar *Year* by 50 Days, and of the Solar by 61 Days.

Hence, the beginning of *Romulus*'s *Year* was vague, and unfix'd to any preciſe Seaſon; which Inconvenience to remove, that Prince order'd ſo many days to be added yearly as would make the State of the Heavens correſpond to the firſt Month, without incorporating theſe additional Days, or calling them by the Name of any Month.

Numa Pompilius corrected this irregular Conſtitution of the *Year*, and compoſed two new Months, *January* and *February*, of the days that were uſed to be added to the former *Year*—Thus, *Numa's Year* conſiſted of twelve Months, *viz.* 1. *January*, containing 29 Days; 2. *February*, 28; 3. *March*, 31; 4. *April*, 29; 5. *May*, 31. 6. *June*, 29; 7. *Quintilis*, 31; 8. *Sextilis*, 29; 9. *September*, 29; 10. *October*, 31; 11. *November*, 29; 12. *December*, 29; in all 355 Days, which exceeds the quantity of a Lunar Civil *Year* by one day; and that of a Lunar Aſtronomical *Year* by 15 Hours, 11 Minutes, 24 Seconds; but came ſhort of the common Solar *Year* by ten Days; ſo that its beginning was vague, and unfix'd.

Numa, however, deſiring to have it fixed to the Winter-Solſtice, ordered 22 Days to be Intercalated in *February* every ſecond *Year*, 23 every fourth, 22 every ſixth, and 23 every eighth *Year*.

But this Rule failing to keep Matters even, recourſe was had to a new way of Intercalating; and inſtead of 23 Days every eighth *Year*, only 15 were added; and the Care of the whole committed to the *Pontifex Maximus*; who,

neglecting the Truſt, let things run to the utmoſt Confuſion. And thus the *Roman Year* ſtood till *Julius Cæſar* made a Reformation. See *Julian* YEAR.

For the manner of reckoning the Days of the Roman *Months*; ſee CALENDS, NONES, and IDES.

Julian YEAR is a Solar *Year* containing, commonly, 365 Days; tho' every fourth *Year*, call'd *Biſſextile*, contains 366.

The Months, *&c.* of the *Julian Year* ſtand thus; 1. *January*, 31 Days; 2. *February*, 28; 3. *March*, 31; 4. *April*, 30; 5. *May*, 31; 6. *June*, 30; 7. *July*, 31; 8. *Auguſt*, 31; 9. *September*, 30; 10. *October*, 31; 11. *November*, 30; 12. *December*, 31.——But every *Biſſextile Year* a day is added after the 28th of *February*, which Month, then, contains 29 Days.

The Aſtronomical Quantity, therefore, of the *Julian Year* is 365 Days, 6 Hours, which exceeds the true Solar *Year* by 11 Minutes; which exceſs, in 131 *Years* amounts to a whole Day——And thus the *Roman Year* ſtood till the Reformation made therein by Pope *Gregory*. See *Gregorian* YEAR.

For this Form of the *Year* we are indebted to *Julius Cæſar*; who, in the Contrivance thereof, was aſſiſted by *Soſigenes*, a famous Mathematician, call'd over from *Egypt* for this very purpoſe; who, to ſupply the defect of 67 Days which had been loſt through the fault of the Pontifices, and to fix the beginning of the *Year* to the Winter-Solſtice, made that *Year* to conſiſt of 15 Months, or 445 Days; which, for that reaſon, is uſed to be call'd the *Year of Confuſion*.

This Form of the *Year* was uſed in all Chriſtian Nations till the middle of the 16th Century; and ſtill continues to be ſo not only by ſeveral Nations (and among the reſt by the *Engliſh*, *Swedes*, *Danes*, &c.) but alſo by the modern Aſtronomers and Chronologers——For, ſince the Error is known, there is no danger from it.

Gregorian YEAR is the *Julian Year* corrected by this Rule, that, whereas on the common footing every ſecular or hundredth *Year* is *Biſſextile*; on the new footing, three of 'em are common *Years*, and only the fourth *Biſſextile*.

The Error of 11 Minutes in the *Julian Year*, little as it was, yet, by being repeated over and over, at length became conſiderable; and from the time when *Cæſar* had made his Correction, was grown into 13 Days, by which means the Equinoxes were greatly diſturb'd——To remedy this Irregularity, which was ſtill a-growing, Pope *Gregory* XIII. call'd together the chief Aſtronomers of his Time, and concerted this Correction; and to reſtore the Equinoxes to their Place, threw out the ten days that had been got from the time of the Council of *Nice*, and which had ſhifted the 5th of *October* to the 15th.

In the *Year* 1700, the Error of 10 days was grown to 11; upon which the Proteſtant States of *Germany*, to prevent further Confuſion, accepted the *Gregorian* Correction. See CALENDAR, STYLE, *&c.*

Yet is the *Gregorian Year* far from being perfect; for we have ſhewn that in four Centuries the *Julian Year* gains 3 Days, 1 Hour, 20 Minutes: But 'tis only the three Days are kept out in the *Gregorian Year*; ſo that here is ſtill an exceſs of 1 Hour, 20 Minutes, in 4 Centuries; which, in 72 Centuries amounts to a whole Day. See EASTER.

Egyptian YEAR, call'd alſo the YEAR *of Nabonaſſar*, is the Solar *Year* of 365 Days, divided into twelve Months of 30 Days each, beſide 5 Intercalary Days added at the end.

The Names, *&c.* of the Months are as follows: 1. *Thot*, 2. *Paophi*, 3. *Athyr*, 4. *Chojac*, 5. *Tybi*, 6. *Mecheir*, 7. *Phamenoth*, 8. *Pharmuthi*, 9. *Pachon*, 10. *Pauni*, 11. *Epiphi*, 12. *Meſori*; beſide the ἡμέραι ἐπαγόμεναι.

Hence, as the *Egyptian Year*, in every four *Years* loſes a whole Day of the *Julian Year*; its beginning, in the Space of 460 *Years*, runs thro' every part of the *Julian Year*; which Space elapſed, they meet again.

This *Year* is uſed by *Ptolemy* in his *Almageſt*; ſo that the Knowledge thereof, is of uſe in Aſtronomy for comparing the antient Obſervations with the moderm.

The antient *Egyptians*, we are told by *Diodorus Siculus*, Lib. I. *Plutarch*, in the Life of *Numa*, and *Pliny*, Lib. VII. c. 48. meaſured their *Years* by the Courſe of the Moon—— At firſt, they were only one Month; then three; then four, like that of the *Arcadians*; and then ſix, like that of the People of *Acarnania*. Thoſe Authors add, that 'tis on this account, they reckon ſuch a vaſt Number of *Years* from the beginning of the World; and that in the Hiſtory of their Kings, we meet with ſome who liv'd 1000 or 1200 *Years*.

But *Herodotus* is ſilent on this Point: He only ſays, that the *Egyptian Year* conſiſted of 12 Months, as we have above repreſented it. Beſides, we learn from Scripture, that from the time of the Flood the *Year* was compoſed of 12 Months: *Cham*, conſequently, and his Son *Miſraim*, the Founder of the *Egyptian* Monarchy, muſt have had that Cuſtom; and it is no way probable his Deſcendants ſhould alter it—— Add, that *Plutarch* ſpeaks of it with a deal of Uncertainty; and as no more than a Report: And *Diod. Siculus* as only a Conjecture of I know not what Authors, whom he does not name; and who, in all probability, might have framed this Hypotheſis to reconcile the *Egyptian* Chronology with that of ſome other Nations——His Words are, Ἀπίσε δ'ὄντοις τὸ πλήθος τῶν ἐτῶν ἐπιχειρῆσαι τινες λέγειν ὅτι, &c. *This Number of Years being incredible, ſome undertake to ſay*, &c.

F. *Kircher*, however, maintains, that beſides the Solar *Year*, there were ſome of the *Nomæ*, or Cantons of *Egypt*, who uſed a Lunar one; and that in the remoteſt Ages there were ſome who took a Revolution of the Moon, that is, a Month, for a *Year*; and others, who finding the *Year* too ſhort, made it two Months, others three, and others four, *&c. Oedip. Ægypt.* Tom. II. p. 252.

A late Author obſerves, that *Varro* has affirm'd of all Nations, what we have here quoted of the *Egyptians*; and adds, that *Lactantius* takes him to task on that Subject—— We don't know in what Places of *Varro* or *Lactantius* he has ſeen this: All we can ſay, is, that *Lactantius*, *Divin. Inſt.* Lib. II. c. 13. where he gives *Varro*'s Opinion, only repreſents him as ſpeaking of the *Egyptians*.——However, St. *Auguſtin*, *de Civit. Dei*, c. 14. ſhews, that the *Years* of the Patriarchs mention'd in Scripture, are like ours, and not one of ours equal to ten of theirs; as, it appears, had been the Opinion of ſome People.

Upon the *Egyptians* being ſubdued by the *Romans*, they received the *Julian Year*; tho' with ſome Alteration: For they ſtill retain'd their antient Months, with the five ἡμέραι ἐπαγόμεναι, and every fourth *Year* intercalated another Day between the 28th and 29th of *Auguſt*——Add, that the beginning of their *Year* anſwer'd to the 29th of *Auguſt* of the *Julian Year*.

This *Year* thus reform'd was call'd the *Annus Actiacus*, as being inſtituted ſoon after the Battel of *Actium*. See ACTIAN.

Antient Greek YEAR, was Lunar; conſiſting of twelve Months, which, at firſt were 30 Days a-piece, then alternately 30, and 29 Days, computed from the firſt Appearance of the new Moon; with the addition of an *Embolimic* Month of 30 Days, every 3d, 5th, 8th, 11th, 14th, 16th, and 19th Years of a Cycle of nineteen Years; in order to keep the New and Full Moons to the ſame Terms or Seaſons of the *Year*. See EMBOLIMIC.

Their *Year* commenced at the Full Moon next after the Summer Solſtice——The Order *&c.* of their Months was thus: 1. Ἑκατομβαίων, containing 29 Days; 2. Μεταγειτνιών, 30; 3. Βοηδρομιών, 29; 4. Μαιμακτηριών, 30; 5. Πυανεψιών, 29; 6. Ποσιδεών, 30; 7. Γαμηλιών, 29; 8. Ανθεστηριών, 30; 9. Ελαφηβολιών, 29; 10. Μουνυχιών, 30; 11. Θαργηλιών, 29; 12. Σκιροφοριών, 30.

The *Macedonians* had other Names for their Months: ſo had the *Syro-Macedonians*, *Smyrnæans*, *Tyrians*; ſo alſo the *Cypriots*, *Paphians*; and ſo the *Bithynians*. See *Macedonic* YEAR.

Antient Macedonian YEAR, is a *Lunar Year*, only differing from the *Attic* in the Names and Order of the Months; the firſt *Macedonian Year* agreeing with the *Attic Mæmacterion*. The Months ſtand thus: 1. Διῶ, 30 Days; 2. Απελλαῖῶ. 29; 3. Ανδυναῖῶ, 30; 4. Περίτῶ, 29; 5. Δύσῶ. 30; 6. Ξανθικῶ, 29; 7. Αρτεμίσῶ 30; 8. Δαίσῶ, 29; 9. Πανεμῶ, 30; 10. Λῴῶ. 29; 11. Γορπαῖῶ, 30; 12. Υπερβερεταῖῶ, 29.

Modern Macedonian YEAR, is a Solar *Year* whoſe beginning is fixed to the firſt of *January* of the *Julian Year*, with which it perfectly agrees.

This *Year* was particularly call'd the *Attic Year*; and the intercalary Month, after *Poſideon*, was call'd ποσιδεὼν β, or latter *Poſideon*.

Antient Jewiſh YEAR is a Lunar *Year*, conſiſting, commonly, of eleven Months, which alternately contain 30 and 29 Days.

It was made to agree with the Solar *Year* either by the adding of 11, and ſometimes 12 Days at the End of the *Year*, or by an Embolimic Month.

The Names and Quantities of the Months ſtand thus: 1. *Niſan*, or *Abib*, 30 Days; 2. *Jiar*, or *Zius*, 29; 3. *Siban*, or *Sivan*, 30; 4. *Thamus*, or *Tamuz*, 29; 5. *Ab*, 30; 6. *Elul*, 29; 7. *Thiſri*, or *Ethanim*, 30; 8. *Marcheſvan*, or *Bul*, 29; 9. *Caſleu*, 30; 10. *Tebeth*, 29; 11. *Sabat*, or *Schebat*, 30; 12. *Adar*, in the *Embolimic Year*, 30. *Adar* in the common *Year* was but 29.

Note, in the defective *Year*, *Caſleu* was only 29 Days; and in the redundant *Year*, *Marcheſvan* was 30.

Modern Jewiſh YEAR is likewiſe Lunar, conſiſting, in common *Years*, of 12 Months, but of 13 in *Embolimic Years*, which in a Cycle of 19 *Years* are the 3d, 6th, 8th, 11th, 14th, 17th, and 19th——Its beginning is fixed to the new Moon next the Autumnal Equinox.

The Names, *&c.* of the Months are, 1. *Tiſhri*, containing 30 Days; 2. *Marcheſvan*, 29; 3. *Caſleu*, 30; 4. *Tebeth*, 29;

29; 5. *Shebat*, 30; 6. *Adar*, 29; 7. *Veadar*, in the *Embolimic Year*, 30; 8. *Nisan*, 30; 9. *Ijar*, 29; 10. *Sivan*, 30; 11. *Tamuz*, 29, 12. *Ab*, 30; 13. *Elul*, 29.

Syrian YEAR is a Solar *Year*, having its beginning fixed to the beginning of *October* in the *Julian Year*; from which it only differs in the Names of the Months, the Quantities being the same; as follows:

1. *Tishrin*, answering to our *October*, and containing 31 Days; 2. Latter *Tishrin*, containing, like our *November*, 30; 3. *Canun*, 31; 4. Latter *Canun*, 31; 5. *Shabat*, 28; 6. *Adar*, 31; 7. *Nisan*, 30; 8. *Aiyar*, 31; 9. *Haziram*, 30; 10. *Tamuz*, 31; 11. *Ab*, 31; 12. *Elul*, 30.

Persian YEAR, is a Solar *Year* of 365 Days, consisting of twelve Months of 30 Days each, with 5 *Musteraka*, or Intercalary Days added at the end.

The Months are as follow: 1. *Asrudia* meh; 2. *Ardikascht* meh; 3. *Cardi* meh; 4. *Thir* meh; 5. *Merded* meh; 6. *Schabarir* meh; 7. *Mehar* meh; 8. *Aben* meh; 9. *Adar* meh; 10. *Di* meh; 11. *Behen* meh; 12. *Affirer* meh.

This *Year* is call'd the *Yezdegerdic Year*, to distinguish it from the fixed Solar *Year*, call'd the *Gelalean Year*, which the *Persians* began to use in the *Year* 1079; and which was form'd by an Intercalation made six or seven times in four *Years*, and then once every fifth *Year*.

The *Yezdegerdic Year*, it may be observed, is the same with *Nabonassar's Year*—As to the *Gelalean Year*, 'tis absolutely the best and justest of all the Civil *Years* yet invented, as being found by Calculation to keep the Solstices and Equinoxes precisely to the same days, and answering very accurately to the Solar Motions; which no other Civil *Year* does, not even the *Gregorian*, for want of so commodious an Intercalation.

Arabic and *Turkish* YEAR, is a Lunar *Year*, consisting of twelve Months, which contain alternately, 30 and 29 Days.

Tho', sometimes it contains thirteen Months; the Names, *&c.* whereof are as follow: 1. *Muharram*, containing 30 Days; 2. *Saphar*, 29; 3. *Rabia*, 30; 4. Latter *Rabia*, 29; 5. *Jomada*, 30; 6. Latter *Jomada*, 29; 7. *Rajab*, 30; 8. *Shasban*, 29; 9. *Samadan*, 30; 10. *Shawal*, 29; 11. *Dulkaadah*, 30; 12. *Dulheggia*, 29; and in the Embolimic *Year*, 30.——An Intercalary Day is added every 2d, 5th, 7th, 10th, 13th, 15th, 18th, 21st, 24th, 26th, 29th, in a Cycle of 29 *Years*.

Ethiopic YEAR, is a Solar *Year* perfectly agreeing with the *Actiac*, except in this, that the Names of the Months are different——It commences with the *Egyptian Year*, on the 29th of *August* of the *Julian Year*.

Its Months are, 1. *Mascaram*; 2. *Tykymt*; 3. *Hydar*; 4. *Tyshas*; 5. *Tyr*; 6. *Jacatit*; 7. *Magabit*; 8. *Mijazia*; 9. *Ginbat*; 10. *Syne*; 11. *Hamle*; 12. *Habasc*. Intercalary Days 5.

Metonic YEAR,	See	METONIC *Year.*
Actiac YEAR,		GREEK *Year.*
Attic YEAR,		GREEK *Year.*
Yezdegerdic YEAR,		PERSIAN *Year.*
Gelalean YEAR,		PERSIAN *Year.*
Nabonassar's YEAR,		EGYPTIAN *Year.*

Sabbatic YEAR, *Annus* SABBATICUS, among the Antients, was every seventh *Year*; during which, the *Jews* let their Land lie at rest. See SABBATH.

Every seventh *Sabbatic Year*, *i. e.* every 49th *Year* was call'd the *Year of Jubilee*; and held with Solemnity extraordinary. See JUBILEE.

Climacteric YEAR,	See	CLIMACTERIC.
Platonic, or *great* YEAR,		PLATONIC.
YEAR *of the Hegira*,		HEGIRA.

New YEAR's *Day*, or the Day wherein the Year commences, has always been very different, in different Nations, and yet in all held in great Veneration.

Among the *Romans*, the first and last Day were consecrated to *Janus*; on which account it was, that they represented him with two Faces.

To them we owe the Ceremony of wishing *a happy new Year*; which appears to be very antient——Before the first day was spent, they not only visited and complimented each other, but also presented *Strenæ*, and offer'd Vows to the Gods for the Preservation of each other.—*Lucian* represents it as a Practice of a very antient standing even in his Time; and refers it to *Numa*. See STRENÆ, VOTA, *&c.*

Ovid intimates the same Ceremony in the beginning of his *Fasti*:

Postera lux oritur linguisque animisque favete
Nunc dicenda bono, sunt bona verba die.

And *Pliny*, more expressly, Lib. XXVIII. cap. 1. *Primum anni incipientis diem lætis precationibus invicem faustum ominantur.*

The Civil or *Legal Year*, in *England*, commences on the Day of the Annunciation, *i. e.* on the 25th day of *March*; tho' the Historical *Year* begins on the Day of the Circumcision, *i. e.* the first of *January*, on which day the *German* and *Italian* Year also begins——*Stow* observes, that *William the Conqueror*, having been crown'd on the first of *January*, that thenceforth became the first of the *Year* for Historians, *&c.* Tho' in all Civil Affairs they retain'd the antient manner of accounting, which began with the 25th of *March*. See CIRCUMCISION, NATIVITY, *&c.*

The part of the *Year* between those Terms is usually expressed both ways, as $172\frac{4}{5}$ or $172\frac{8}{10}$.——Since the Conqueror, the King's Patents, Charters, Proclamations, *&c.* are usually dated by the *Year* of the King's Reign.

The Church, as to her solemn Service, begins the *Year* on the first Sunday in Advent, which is always that next St. *Andrew's* Day, or the 30th of *November*. See ADVENT.

The *Jews*, as most other Nations of the East, had a *Civil Year* which commenced with the new Moon in *September*; and an Ecclesiastic *Year*, which commenced from the new Moon in *March*.

The *French Year*, during the Reigns of the *Merovingian* Race, began on the Day wherein the Troops were review'd; which was the first day of *March*——Under the *Carlovingians* it began on Christmas-day; and under the *Capetians* on Easter-day; which, therefore, varied between the 22d of *March* and the 25th of *April*.

And this is still the beginning of their Ecclesiastic *Year*—But for the *Civil*, *Charles* IX. appointed in 1564, that for the future it should commence on the first of *January*.

The *Mahometans* begin their *Year* the Minute the Sun enters *Aries*——The *Persians* in the Month answering to our *June*——The *Chinese*, and most of the *Indians*, begin it with the new Moon in *March*——The *Brachmans* begin it with the new Moon in *April*; on which day they hold a Feast call'd *Samwat Saradi Pauduga*, *q. d.* Feast of *New-Year's Day*——The *Mexicans*, according to *d'Acosta*, begin the *Year* on our 23d of *February*, when the Leaves begin to grow green. Their *Year* consists of 18 Months of 20 Days each: which making 360 Days, the remaining five days are spent in Mirth, and no Business suffer'd to be done, nor even any Service at the Temples.——*Alvarez* relates much the same of the *Abyssinians*; who begin their *Year* on the 26th of *August*, and have five idle Days at the end, which they call *Pagomen*.——At *Rome* there are two ways of computing the Year; the one beginning at the Nativity of our Lord: This the Notaries use, dating *à Nativitate*. The other in *March*, on occasion of the Incarnation: And 'tis by this the Bulls are dated, *Anno Incarnationis*.——The *Greeks* begin their *Year* of the World from the first of *September*.

YEARS are also distinguish'd with regard to the Epocha's whence they are number'd: Thus, *Years of our Lord*, are those reckon'd from the Birth of Jesus Christ, which are now 1727. *Years of the World* are those elapsed since the Creation, which *Scaliger* makes to be 5676.——*Years of Rome*, *of the Hegira* of *Nabonassar*, &c. *See the difference between these* Years *under the Article* EPOCHA.

YEAR *and Day*, in Law, *&c.* is a Time that determines a Right in many Cases, and is in some an Usucaption, and in others a Prescription. See PRESCRIPTION, *&c.*

Thus in the Case of an Estray, if the Owner, Proclamation being made, challenge it not within that time, it is forfeit.

In like manner is the *Year and Day* given in Cases of Appeal, of Descent, after Entry or Claim, of Non-claim upon a Fine, or Writ of Right, of the death of a Man sore bruis'd or wounded; of Protections, Essoins, in respect of the King's Service; of a Wreck, *&c.*

YEAR-*day and Waste*, is a part of the King's Prerogative, whereby he challenges the Profits of the Lands and Tenements of Persons attainted for Petit-Treason, or Felony for the Space of a *Year* and a Day.

Not only this, but at the end thereof he may waste the Tenements, destroy the Houses, root up the Woods, Gardens, Pasture, and plough up the Meadows, unless the Lord of the Fee agree with him for the Redemption of such Waste.

YEARN, in Hunting, signifies to bark, as Beagles properly do, at their Prey. See HUNTING.

YELLOW, a bright Colour, reflecting the most Light of any, after White. See COLOUR and LIGHT.

There are divers *yellow* Substances that become white upon wetting and drying them again several times at the Sun: As Wax, Linnen-Cloth, *&c.* See BLEACHING; see also HAIR, WHITENING, *&c.*

The same Bodies, if they be already white, and continue a long time in the Air without being wetted; turn *yellow*.

Paper

Paper and Ivory apply'd near the Fire, become ſucceſſively *yellow*, red, and black——Silk, when turn'd *yellow*, is whiten'd with the Fumes of Sulphur. See WHITE, WHITENESS, &c.

YELLOW, in Dying, is one of the five ſimple and mother Colours. See DYING.

For the fineſt *Yellows*, they firſt boil the Cloth, or Stuff in Allum and Pot-Aſhes; then, give the Colour with Goud. See GOUD.

Turmeric likewiſe gives a good *Yellow*, tho' not the beſt——There is alſo an *Indian* Wood that gives a *yellow* Colour bordering on Gold. A fourth ſort of *Yellow* is made with Savoury, but this is inferiour to them all.

Greens are uſually made of *Yellow* and Blue mixed. See GREEN.

With *Yellow*, red of Madder, and that of Goats-Hair prepared with Madder, are made the *gold Yellow*, *Aurora*, *Thought colour*, *Nacarate*, *Iſabella*, and *Chamois-colour*; which are all Caſts or Shades of *Yellow*.

Painters and Enamellers make their *Yellow* of *Maſſicot*, which is Ceruſs rais'd by the Fire; or with Oker. See ENAMEL and ENAMELING.

Limners and Colourers make it with Saffron, and *French* Berries, Orcanette, &c.

Bramton obſerves, it was antiently the Cuſtom to paint a Man's Door *yellow*, and ſtrew his Houſe with Salt; to declare him Traytor to his King.

The Word is form'd from the *Italian giallo*, or the *German geel*, or the *Latin galbanus*.

YELLOW, or *French Berries*; ſee BERRIES.

YELLOW *Jaundice*; ſee JAUNDICE.

YELLOWS, a Diſeaſe in a Horſe, the ſame with that call'd Jaundice in Man. See JAUNDICE.

There are two kinds of it, the *yellow* and the black.

The *Yellows* is a very frequent Diſorder, ſay the Farriers, ariſing from Obſtructions in the Gall-pipe, or the little Ducts opening into the ſame, occaſion'd by viſcid or gritty Matters lodged therein, or a Plenitude and Compreſſion of the neighbouring Blood-veſſels; by means whereof, the Matter that ſhould be turn'd into Gall, is taken up by the Vein, and carried back into the Maſs of Blood; which it tinctures *yellow*: So that the Eyes, inſide of the Lips, and other parts of the Mouth capable of ſhewing the Colour, appear *yellow*.

The Effect whereof is, that a Horſe will be dull, heavy, and low-ſpirited; eaſily jaded by the leaſt Labour or Exerciſe, &c.

YEOMEN, YEMEN, YOMEN, the firſt or higheſt Degree of the Commons or Plebeians of *England*; and thoſe next in order to the Gentry. See COMMONS and GENTLEMAN.

The *Yeomen* are properly the Freeholders, who have Land of their own; ſo call'd from the *German Gemen*, or *Gemain*, that is, common.

According to Sir *Thomas Smith*, a *Yeoman* is a free-born *Engliſhman*, who may lay out of his own free Land in yearly Revenue, to the Sum of forty Shillings *Sterling*.

The *Yeomanry* of *England* are capable of holding Lands of their own to a good value; are adjudged capable of certain Offices, as Conſtables, Church-Wardens, Jury-men, to vote in Elections to Parliament, and to ſerve in the Army.

The *Yeomen* were famous in antient times for Military-Valour, being particularly expert at the Management of the Bow; whence the Infantry was compoſed chiefly of them. See ARCHER.

In many Caſes, the Law conceives a better Opinion of the *Yeomanry* that occupy Lands, than of Tradeſmen, Artificers, &c. See FREEHOLDER.

By a Statute 2 *Hen.* 4. it is enacted, that no *Yeoman* ſhall take or wear a Livery of any Lord upon pain of Impriſonment, and a Fine at the King's Pleaſure.

The Word *Yongman* is uſed for *Yeoman* in the Statute 33 *Hen.* 8. and in old Deeds it is ſometimes written *Jeman*.

YEOMAN is alſo a Title of Office in the King's Houſhold, of a middle Place or Rank between an Uſher and a Groom. See USHER and GROOM.

Such are the——*Yeomen* of the Chandry; *Yeomen* of the Scullery; *Yeomen* of the Stirrop, &c. See HOUSHOLD.

YEOMEN *Warders*; ſee WARDERS *of the Tower*.

YEOMEN *of the Guard*, properly call'd *Yeomen of the Guard of the King's Body*, were antiently 250 Men of the beſt Rank under Gentry, and of larger Stature than ordinary; every one being required to be ſix Foot high. See GUARD.

At preſent there are but one hundred *Yeomen* in conſtant Duty; and ſeventy more not in Duty; and as any of the hundred die, his Place is ſupply'd out of the ſeventy.

They go clad after the manner of King *Henry* the Eighth's time——They had Diet as well as Wages, when in Waiting; but this was taken off in the Reign of Q. *Anne*.

Their Attendance is on the Sovereign's Perſon, both at home and abroad; and they have a Room allotted for them only, call'd the *Guard-Chamber*.

The Officers and *Yeomen* are at the diſpoſal of the Captain, but the Captain at the Appointment of the King.

YERKING, in the Manage, is when a Horſe ſtrikes with his hind Legs, or flings and kicks back with his whole hind Quarters; ſtretching out the two Legs nearly together and even. See AIR, SAULT, &c.

YEST, or *Barm*, a Head, or Scum riſing up on Beer, or Ale, while working or fermenting in the Vat. See BREWING, MALT-*Liquor*, &c.

It is uſed for a Leven or Ferment in the baking of Bread; as ſerving to ſwell or puff it up very conſiderably in a little Time, and to make it much lighter, ſofter, and more delicate——When there is too much of it, it renders the Bread bitter. See BREAD and BAKING.

The uſe of *Yeſt* in Bread is but of late ſtanding among us: 'Tis not above eighty Years ſince the Avarice of the Bakers firſt introduced it; and then it was only done by ſtealth——Tho' *Pliny* witneſſes it to have been uſed by the antient *Gauls*.

The Faculty of Medicine of *Paris*, by a Decree of the 24th of *March* 1688, ſolemnly maintain'd it noxious to the Health of the People; yet could not that prevent its Progreſs. See BEER.

YEZDEGERDIC *Year*, an Epocha thus call'd. See YEAR and EPOCHA.

YGROMETER; ſee HYGROMETER.

YIELDING *and paying*, a Law-Phraſe, form'd by corruption from the *Saxon Geldan*, and *Gildan*, to pay——Hence in *Domeſday*, *Gildare* is frequently uſed for *Solvere*, *Reddere*, the *Saxon* G being often miſtaken for a Y. See GELD and GILD.

YQUETAYA, in Natural Hiſtory, a Plant in *Braſil*, long uſed as a Medicine in that Country; and lately diſcovered to the *Europeans* by a *French* Surgeon.

It has been ſince found in *France*, where being cultivated and examined by M. *Marchant*, it appears to be a kind of Scrophulary or Blood-Nettle.

It has this remarkable Property, that it takes away from *Senna* all its ill taſte and ſmell, which Property of correcting the Infuſion of *Senna* was unknown in the Scrophulary. See SENNA.

To uſe this Plant, it muſt be dried ten or twelve days in the Shade, and afterwards expoſed to the Sun till quite dry.

YNCA, YNCAN, or INCA, a Name antiently given to the Kings of *Peru*, and the Princes of their Blood: The Word ſignifying literally *Lord*, *King*, *Emperor*, and *Royal Blood*.

The King himſelf was particularly call'd *Capac Ynca*, *i. e.* Great Lord——His Wife *Pallas*, and the Princes ſimply *Yncas*.

Theſe *Ynca's*, before the arrival of the *Spaniards*, were exceedingly powerful——Their People rever'd 'em to exceſs, as believing them to be Sons of the Sun, and never to have committed any fault.

If any Perſon offended the Royal Majeſty in the ſmalleſt Matter, the City he belong'd to was totally demoliſhed.

When they travelled, whatever Chamber they lay in on the Road, was wall'd up as ſoon as they departed, that no body might ever enter it, after them.——The like was done to the Room wherein the King died; in which, likewiſe, all the Gold, Silver, and precious Furniture were immured, and a new Apartment built for his Succeſſor.

Their beloved Wives, Domeſticks, &c. likewiſe ſacrificed themſelves, and were buried alive in the ſame Tomb along with him. *See the Hiſtory of the* Yncas *by* Garcilaſſo de la Vega.

YOAK, or YOKE, in Agriculture, a Frame of Wood, fitted over the Necks of Oxen; whereby they are coupled together, and harneſs'd to the Plough, &c. See PLOUGH.

It conſiſts of ſeveral Parts; as, the *Yoke* properly ſo call'd, which is a thick piece of Wood lying over the Neck; the *Bow*, which compaſſes the Neck about; the *Stitchings* and *Wreathings*, which hold the Bow faſt in the *Yoke*; and the *Yoke-Ring* and *Ox-Chain*.

The *Romans* made the Enemies they ſubdued, *paſs under the Yoke*, which they call'd *ſub jugum mittere*: That is, they made them paſs under a ſort of *Furcæ Patibulares*, or Gallows, conſiſting of a Pike, or other Weapon laid a-croſs two others planted upright in the Ground——This done, they treated 'em with Humanity enough, and ſent 'em home again. See FURCA.

The ſame Meaſure was ſometimes dealt 'em by their Enemies, upon the ſame Occaſion——Thus *Cæſar*, Lib. 2. obſerves, that the Conſul *L. Caſſius* had been kill'd by the *Swiſs*, his Army defeated, and made paſs under the *Yoak*.

YOAK *of Land*, *Jugata Terræ*, in our antient Cuſtoms, was the Space which a *Yoke* of Oxen, that is, two Oxen, may plough in one day. See JUGATA, HIDE, YARD-*Land*, &c.

YOIDES, or HYOIDES, in Anatomy, a Bone ſituate at the Root of the Tongue, and compoſed of divers little Bones united by Cartilages which ſometimes oſſify. See TONGUE.

It

It has its Name ὑοειδὴς, and ſometimes υψιλοειδὴς *Ypſiloides*, from its reſembling a *Greek* υ, or *Upſilon*——Some call it *Lambdoides*, as reſembling a *Lambda* inverted.

It is not contiguous to the Extremity of any other Bone, nor has any Articulation with 'em: on which account it is not ſhewn in the Skeletons.

Its Uſe is to fortify the Baſe or Root of the Tongue, and facilitate the Paſſage of the Air into the *Trachea*, and the Food into the Gullet.

It has five Pair of Muſcles, which move it together with the Tongue. See LINGUA.

YPSILOIDES, or YLYPSILOIDES, in Anatomy, the third genuine Suture of the *Cranium*; thus call'd from its reſembling a *Greek y*, or *Upſilon*. See SUTURE.

Some alſo call it λαμβοειδὴς, *Lamdoeides*.

There is alſo a Bone at the Root of the Tongue call'd *Ypſiloides*, and ſometimes *Yoides*. See YOIDES.

YOLK, or YELK, in Natural Hiſtory, the yellow part in the middle of an Egg. See EGG.

The Chicken is form'd out of, and nouriſh'd by, the *White* alone; till it be grown to ſome bulk: After which, the *Yolk* ſerves it for Nouriſhment, which it likewiſe does, in part, after it is hatched——For a good part of the *Yolk* remains after excluſion; being received into the Chicken's Belly; and being there reſerved, as in a Store-houſe, is by the *Ductus Inteſtinalis*, as by a Funnel, convey'd into the Guts, and ſerves inſtead of Milk. *Willough. Ornithol.* L. I. c. 3.

This was even known to *Pliny*: *Ipſum Animal ex albo liquore Ovi corporetur: Cibus ejus in Luteo eſt.* Lib. 10. c. 53.

YOUNG; ſee GENERATION, CONCEPTION, GESTATION, EMBRYO, FOETUS, DELIVERY, CHILD, *&c.* See alſo STORGE, *&c.*

In the Army, That Regiment, or Officer, is ſaid to be the *Younger* which was laſt raiſed, or whoſe Commiſſion is of lateſt Date, whatever be the Age of the Man, or however long he may have ſerved in other Capacities.

YOUNKERS, among Sailors, are the *young* Men, otherwiſe call'd *Foremaſt-men*; whoſe Buſineſs is to take in the Top-Sails, or Top and Yard, for Furling the Sails, Slinging the Yards, *&c.* and to take their turns at the Helm.

YOUTH, *Adoleſcence*; ſee AGE and ADOLESCENCE.

Z.

Z The laſt Letter in the Alphabet, and one of the double Conſonants, both among the *Latins* and *Greeks*. See LETTER and CONSONANT.

Its Pronunciation is much more ſoft and obtuſe than the X, which makes *Quintilian* call it *Molliſſimum*, and *Suaviſſimum*——Nevertheleſs, the Sound was not always the ſame as it is now; which is but, as it were, half that of an *S*.

It had ſomething alſo in it of the D; but only what ſounded very ſmoothly: Thus, *Mezentius* was pronounced as if it had been *Medſentius*, &c. See D.

The Z had alſo an affinity with the G: Thus, *Capella*; Z, ſays he, *à Græcis venit, licet etiam ipſi primo* G *Græcâ utebantur*. See G.

Z was alſo a Numeral Letter, ſignifying 2000; according to the Verſe:

Ultima Z *tenens finem bis mille tenebit.*

When a Daſh was added a-top, $\overline{Z}$, it ſignified two thouſand times two thouſand.

ZAIM, a Portion of Land, allotted for the Subſiſtence of a Horſe-man in the *Turkiſh* Militia; call'd alſo *Timar*. See TIMAR and TIMARIOT.

ZAIRAGIA, or ZAIRAGIAH, a kind of Divination, in uſe among the *Arabs*. See DIVINATION.

It is perform'd by means of divers Wheels, or Circles placed Concentric to one another, and noted with ſeveral Letters, which are brought to anſwer to each other by moving the Circles according to certain Rules.

'Tis alſo call'd *Zaraidh*, by reaſon the Circles of this Machine, which are *Mutaraziat*, *Leflak*, &c. correſpond to the Orbs of the Planets, and the Atmoſpheres of each Element.

ZEAL, ZELUS, ζηλος, the Exerciſe of a warm, vehement, animated Affection, or Paſſion for any thing. See PASSION, INCLINATION, &c.

Some will have *Zeal* to be properly a mix'd, or compound Senſation, where one Affection is rais'd or inflam'd by another——On theſe Principles, it may be defined an Affection ariſing from Love and Indignation, which cannot bear a thing to be given to another that a Perſon deſires for himſelf, or one whom he loves and favours——Others make it conſiſt in an eager Study or Deſire to keep any thing inviolate; or a Fervour of Mind ariſing from an Indignation againſt thoſe who abuſe or do evil to a Perſon beloved.

The *Greek* Philoſophers make three Species of *Zeal*—— The firſt, of Envy: The ſecond, of Emulation, or Imitation: The third, of Piety, or Devotion; which makes what the Divines call *Religious Zeal*. See EMULATION, &c.

Joſephus ſpeaks much of a Party or Faction call'd the *Zealous*, or *Zealots*; which aroſe among the *Jews* during the War with *Veſpaſian* and *Titus*. Lib. XIV. c. 6. Antiq. & Lib. IV. c. 12. *de Bello Judaico*.

ZEDOARIA, ZEDOARY, a Medicinal Root belonging to a Plant growing in the *Eaſt-Indies*, whoſe Leaves are like thoſe of Ginger, only longer and broader. See ROOT.

Zedoary is of an Aſh-colour, has an Aromatic, bitteriſh Taſte; and comes into the Claſs of Cephalics: But it is alſo reckon'd by many amongſt the Alexipharmics, whereupon it comes to have a Place in the Capitals; and is even ſaid to prevent Infections by holding it only in the Mouth. See ALEXIPHARMIC, &c.

On account of its agreeable Bitter, it alſo is preſcribed among Stomachics; and for its ſpicy Warmth is commended in Cholics, and Hyſterical Affections, for promoting the Menſes, &c. See AROMATICS.

ZENITH, in Aſtronomy, the Vertical Point; or a Point in the Heavens directly over our Head. See VERTEX and VERTICAL.

Or the *Zenith* is a Point, as Z (Tab. ASTRONOMY, *Fig.* 52) in the Surface of the Sphere, from which a right Line drawn through the Spectator's Head, paſſes through the Centre of the Earth. See VERTEX and VERTICAL.

Hence, there are as many *Zeniths* as there are different Places on the Earth where the Heavens may be ſeen; and upon the changing our Place, we alſo change our *Zenith*.

The *Zenith* is alſo call'd the *Pole of the Horizon*, becauſe 90 Degrees diſtant from each Point thereof. See HORIZON.

It is alſo the Pole of all the Almicantars, or Parallels of the Horizon, whereby the Altitude of the Stars is eſtimated. See ALMICANTAR.

Through the *Zenith* paſſeth the Vertical-Circles, or Azimuth. See VERTICAL *Circle*.

The Point diametrically oppoſite to the *Zenith*, is call'd the *Nadir*; which is the Point directly under our Feet. See NADIR.

The *Nadir* is the *Zenith* to our Antipodes; as our *Zenith* is the *Nadir* to them. See ANTIPODES.

ZENITH-*diſtance*, is the Complement of the Sun, or Stars Meridian Altitude; or what the Meridian Altitude wants of 90 Degrees. See COMPLEMENT and ALTITUDE.

ZENSUS, in Arithmetic, a Name which ſome Authors give to a ſquare Number; or the ſecond Power. See SQUARE *Number* and POWER.

The higher Powers they call *Zenſizenſus*, *Zenſicubus*, *Zenſizenzenſus*, *Zenſurdeſolidus*, &c. See POWER.

ZEPHYRUS, or ZEPHYR, the Weſt-wind; or a Wind blowing from that Cardinal Point of the Horizon oppoſite to the Eaſt. See WEST, WIND, and CARDINAL *Point*.

It is alſo call'd *Favonius*, and *Occidens*; and by many confounded with *Africus*.

The Word is *Greek* ζεφυρος.——The Poets perſonify it.

ZETETICE, ZETETIC *Method*, in Mathematics, the Method made uſe of to inveſtigate or find the Solution of a Problem. See RESOLUTION, INVESTIGATION, &c.

The Word is form'd from the *Greek* ζητεω, I ſeek.

The antient *Pyrrhonians* were ſometimes call'd *Zetetici, q. d.* Seekers. See PYRRHONIANS.

ZEST, the woody, thick Skin, quartering the Kernel of a Walnut.

The Word is alſo uſed for a Chip of Orange or Lemmon-Peel; ſuch as is uſually ſqueezed into Ale, Wine, &c. to give it a Flavour.

Hence, to *Zeſt an Orange* or *Lemmon*, among Confectioners, is to cut the Peel from Top to Bottom into ſmall Slips, as thin as poſſible.

ZETA, or ZETECULA, a little withdrawing Chamber, with Pipes running along the Walls to receive from below either the cool Air or the Heat of warm Water. See CALEDUCT, &c.

The Word is form'd either of τε ζειν, to be warm; or of τε ζην, *vivere*, to live.

ZEUGMA, a Figure in Grammar, whereby an Adjective or Verb which agrees with a nearer Word, is alſo, by way of Supplement, referr'd to another more remote. See FIGURE.

Thus, *Terence*——*Utinam aut hic ſurdus, aut hæc muta facta ſit*——So *Virgil*——*Hic illius Arma hic currus fuit*. In which Caſes, the Words *facta ſit* agreeing primarily with *hæc muta*, are alſo made to agree or extend to *hic ſurdus*: And the Verb *fuit* is not only refer'd to *hic currus*, which it properly reſpects, but further to *hic illius arma*.

The *Latins*, it may be here obſerved, take a liberty in Conſtruction, which ſome of the nicer Critics among the Moderns, particularly the *French*, will not allow in the modern Tongues. See CONSTRUCTION.

The word *Zeugma* is *Greek*, ζευγμα, which literally denotes a joining together.

ZIBETHUM, ζαπετον, in Natural Hiſtory, *Civet*; a Perfume like Musk, contain'd in a kernelly Bladder in the Groin of a Civet-Cat. See CIVET.

ZINDIKITES, a Sect among the *Mahometans*, denominated from their Leader *Zindik*, whom *Grotius* makes to be one of the *Magi*, and a Follower of *Zoroaſter*. See MAGI.

The *Zindikites* believe no Providence nor Reſurrection—— They own no other God but the four Elements; and in this ſenſe aſſert, that a Man being a Mixture of thoſe ſimple Bodies, returns to God when he dies.

ZINK, or ZAIM, a kind of Mineral, or Semi-metal, which ſome confound with *Biſmuth*, and others with Spelter. See BISMUTH, SPELTER, &c.

Others call it *Female-Antimony*. See ANTIMONY.

Zink is a kind of Mineral-Lead, very hard, white, and brillant; and which, tho' not ductile enough to denomi-

nate

nate it a Metal, yet ſtretches a little under the Hammer. See METAL, DUCTILITY, &c.

'Tis found in great Quantities in the Mines of *Goſſelaar* in *Saxony*——That commonly ſold is in large, thick, ſquare Cakes; which would make one ſuſpect it had been melted when taken out of the Mine, and caſt in Moulds of that Form.

Zink is uſed to purge and purify Tin; much as Lead is to purify Gold, Silver, and Copper. See LEAD.

Founders, Toy-men, &c. alſo uſe it with Turmeric to tinge Copper, &c. It gives a fine Gold Colour, tho' not a very laſting one. See COPPER, BRASS, &c.

M. *Homberg* conjectures, with a good deal of Probability, that *Zink* is no other than a natural Mixture of two real Metals, *viz.* Tin and Iron——What led him to the Opinion was, that *Zink* yields preciſely the ſame Fumes by the Burning-glaſs, as ſuch a Mixture does. Accordingly, he aſſures us, he often ſubſtituted the one for the other; and this always with the very ſame Effect.

ZINZIBER; ſee GINGER.

ZIZYPHUM, a Name ſometimes given to a kind of Fruit uſually call'd *Jujubes*. See JUJUBES.

ZOCCO, ZOCCOLO, ZOCLE, or SOCLE, in Architecture, a ſmall kind of Stand or Pedeſtal; being a low, ſquare Piece or Member, ſerving to ſupport a Buſto, Statue, or the like thing that needs to be rais'd. See SOCLE.

The Word is *Italian*, form'd from *Soccus*, a Sandal, or high Shoe. See SOCCUS.

ZOCCO, or *Zocle*, is alſo uſed for a low, ſquare Member ſerving to ſupport a Column, or other part of a Building, inſtead of a Pedeſtal, Baſe, or Plinth. See PEDESTAL, PLINTH, &c.

A *continued* ZOCLE is a kind of continued Pedeſtal whereon a Structure is raiſed; but having no Baſe or Cornice. See PEDESTAL.

ZODIAC, ZODIACUS, in Aſtronomy, a Faſcia, Belt, or broad Circle, whoſe Middle is the Ecliptic, and its Extremes, two Circles parallel thereto at ſuch diſtance from it as to bound, or comprehend the Excurſions of the Sun and Planets. See SUN and PLANET.

The Sun never deviates from the Middle of the *Zodiac*; *i.e.* from the Ecliptic; the Planets all do, more or leſs. See ECLIPTIC.

Their greateſt Deviations, call'd Latitudes, are the Meaſure of the Breadth of the *Zodiac*: which is broader or narrower as the greateſt Latitude of the Planets is made more or leſs——Accordingly, ſome make it 16, ſome 18, and ſome 20 Degrees broad. See LATITUDE.

The *Zodiac* cutting the Equator obliquely, makes an Angle therewith of 23 Degrees and an half; or more preciſely of 23°, 29′, which is what we call the *Obliquity of the Zodiac*, and is the Sun's greateſt Declination. See OBLIQUITY and DECLINATION.

The *Zodiac* is divided into twelve Portions, call'd *Signs*; and thoſe Diviſions or Signs are denominated from the Conſtellations which antiently poſſeſs'd each Part. See CONSTELLATION.——But, the *Zodiac* being immoveable, and the Stars having a Motion from Weſt to Eaſt, thoſe Conſtellations no longer correſpond to their proper Signs; whence ariſes what we call the *Preceſſion of the Equinoxes*. See PRECESSION.

When a Star, therefore, is ſaid to be in ſuch *a Sign of the Zodiac*, it is not to be underſtood of the Sign, or Conſtellation of the Firmament; but only of that twelfth Part of the *Zodiac*, or *Dodecatory* thereof. See SIGN, STAR, and DODECATORY.

The word *Zodiac* is form'd from the *Greek* ζῶον, an Animal; by reaſon of the Conſtellations therein: Others derive it from ζωὴ, Life; from an Opinion that the Planets have a great Influence on Animal Life.

Caſſini has alſo obſerv'd a Tract in the Heavens, within whoſe Bounds moſt of the Comets, tho' not all of them, are obſerved to keep; which, for this reaſon, he calls the *Zodiac of the Comets*. See COMET.

This he makes as broad as the other *Zodiac*, and marks it with Signs or Conſtellatinos like that; as, *Antinous*, *Pegaſus*, *Andromeda*, *Taurus*, *Orion*, the leſſer *Dog*, *Hydra*, the *Centaur*, *Scorpion*, and *Sagittary*.

ZONE, ZONA, in Geography and Aſtronomy, a Diviſion of the Terraqueous Globe with reſpect to the different Degree of Heat found in the different Parts thereof. See EARTH and HEAT.

A *Zone* is the fifth Part of the Surface of the Earth, contain'd between two Parallels. See PARALLEL.

The Word is *Greek* ζωνη, *q. d.* Belt, Girdle.

The *Zones* are denominated *Torrid*, *Frigid*, and *Temperate*.

The *Torrid Zone* is a Faſcia or Band ſurrounding the Terraqueous Globe, and terminated by the two Tropics. See TROPIC.——Its breadth, therefore, is 46°, 58′. The Equator running through the middle of it, divides it into two equal Parts, each containing 23°, 29′.

The Antients imagined the *Torrid Zone* uninhabitable. See TORRID.

The *Temperate Zones* are two Faſciæ, or Bands environing the Globe, and contain'd between the Tropics and the Antarctic Circles——The breadth of each is 43°, 2′. See TEMPERATE.

The *Frigid Zones* are Segments of the Surface of the Earth terminated, the one by the Antarctic, and the other by the Arctic Circle——The breadth of each is 46°, 58′. See ARCTIC, ANTARCTIC, &c.

The Difference of *Zone* is attended with a great diverſity of Phænomena.——1°. In the torrid *Zone*, the Sun paſſes through the Zenith twice a Year; and his receſs from the Equator toward the Pole which is above the Horizon, is twice a Year equal to the height of the Pole.

2°. In the temperate and frigid *Zones*, the leaſt height of the Pole exceeds the greateſt diſtance of the Sun from the Equator; and therefore to the Inhabitants thereof the Sun never paſſes thro' the Zenith; yet if on the ſame day the Sun riſes at the ſame time to a greater height, the height of the Pole is the leſs, in regard the Inclination of the Circles of diurnal Revolution to the Horizon is leſs.

3°. In the temperate and torrid *Zones* the Sun riſes and ſets every natural Day, by reaſon the diſtance of the Sun from the Pole always exceeds the height of the Pole; yet every where but under the Equator, the artificial Days are unequal, and the Inequality is the greater, as the Place is leſs diſtant from the frigid *Zone*. See DAY.

4°. Where the temperate *Zones* terminate on the frigid, the height of the Pole is equal to the Sun's diſtance from the Pole, when in the neighbouring Tropic; and, conſequently once a Year, the Sun in its diurnal Motion performs an entire Revolution, without going down under the Horizon.

5°. Every where in a frigid *Zone*, the height of the Pole is greater than the leaſt diſtance of the Sun from the Pole; and therefore during ſome Revolutions of the Earth, the Sun is at a diſtance from the Pole leſs than the Pole's height; and during all that time, does not ſet, nor ſo much as touch the Horizon——Where the diſtance from the Pole, as the Sun recedes from it, exceeds the height of the Pole, or Latitude of the Place; the Sun riſes or ſets every natural Day. See DAY, NIGHT, RISING, SETTING, &c.

ZONNAR, a Term corrupted from the vulgar *Greek* ζωνάριον, of ζωνὴ, a Girdle.

The *Zonnar* is a kind of Belt or Girdle of black Leather, which the Chriſtians and *Jews* of the *Levant*, particularly thoſe in *Aſia* and the Territories of the Grand Signor, are obliged to wear; to diſtinguiſh themſelves from the *Mahometans*.

It was *Motavakkel* Xth Kalif of the Houſe of the *Abaſſides* that firſt enjoined the Chriſtians, &c. to wear the *Zonnar*——The Ordonnance to this effect was publiſhed in the Year of the *Hegira* 235.

Hence, as moſt of the Chriſtians of *Syria*, *Meſopotamia*, &c. are either *Neſtorians*, or *Jacobites*; thoſe Sectaries, are often call'd *Chriſtians of the Girdle*. See GIRDLE.

ZOOLOGIA, ZOOLOGY, a Diſcourſe or Treatiſe upon Animals or living Creatures. See ANIMAL.

Zoology makes a conſiderable Article in Natural Hiſtory; comprehending what relates to the Form, Structure, Method of Living, Feeding, Propagating, &c. of the divers Species of Brute Creatures. See NATURAL *Hiſtory*.

The Word is compounded of ζωὴ, Life, and λογος, Speech, Diſcourſe.

ZOOPHORUS, or ZOPHORUS, in the antient Architecture, the ſame thing with the *Frieze* in the Modern. See FRIEZE.

It was thus call'd in *Greek*, becauſe antiently adorned with the Figures of Animals; from ζῶον, *Animal*, and φερω, I bear.

The *Greeks* ſometimes alſo call the Zodiac, *Zoophorus*, becauſe of the Signs or Conſtellations therein. See ZODIAC.

ZOOPHORIC *Column*, is a Statuary Column; or a Column that bears or ſupports the Figure of an Animal. See COLUMN.

ZOOPHYTA, ZOOPHYTES, ZOOPHYTE, in Natural Hiſtory, *q. d. Plant-Animal*; a kind of intermediate Body, partaking both of the Nature of a Senſitive and a Vegetable.

Such is the *Planta Pudica* commonly ſuppoſed to be; tho' with little foundation. See SENSITIVE *Plant*.

The Antients alſo reputed Sponges to be *Zoophytes*. See SPONGE.

The Word is compounded of ζῶον, *Animal*, and φυτὸν, *Plant*.

The *Fœtus* while in the Womb appears to be a real *Zoophyta*; growing to the Mother by the *Funiculus Umbilicalis*, as Plants do to the Earth by their Stem. See FOETUS, EMBRYO, &c.

Olearius mentions a very extraordinary ſort of *Zoophyte* grow-

growing near *Samara* on the *Volga*——'Tis a kind of Melon ſhaped like a Lamb, all the Parts whereof it has, and grows to the Earth by a Stem which ſerves it for a Navel-ſtring. As it grows, it changes Place, as much as its Stem will allow of; and it conſumes and dries up all the Graſs where it grows. When ripe, the Stem withers, and the Body or Fruit becomes cover'd with a downy Skin, which may be dreſs'd and uſed as a Fur.

He affirms to have ſeen of this Skin, and that it was cover'd with a ſoft curled Wool like that of a young Lamb.

Scaliger adds, that this Fruit lives, and grows, till ſuch time as it wants Graſs——In ſome Accounts it is call'd *Agnus Scythicus*, and *Borametz*.

ZOOTOMY, the Art or Act of Diſſecting Animals or living Creatures. See DISSECTION.

Zootomy amounts to the ſame with Anatomy. See ANATOMY.

The Word is compounded of ζωον, Animal, and τεμνω, *ſeco*, I cut.

ZOPATA, or *Sapata*, a kind of Feaſt or Ceremony held in *Italy*, in the Courts of certain Princes, on St. *Nicholas*'s Day, wherein People hide Preſents in the Shoes or Slippers of thoſe they would do honour to, in ſuch manner as may ſurprize 'em the Morrow when they come to dreſs.

It is done in Imitation of the Practice of St. *Nicholas*, who uſed in the Night-time to throw Purſes of Money in at Windows, to marry poor Maids withal.

F. *Meneſtrier* has deſcribed theſe *Sapates*, their Origin, and different Uſages, in his Treatiſe *des Ballets Anciens & Modernes*.

The Word *Zapata* is originally *Spaniſh*, and ſignifies Shoe.

ZOPISSA, a kind of Mixture of Pitch and Tar; ſcraped off Ships that have been a long time at Sea. See PITCH and TAR.

This Matter by being gradually penetrated by the Salt of the Sea, becomes partaker of its Qualities; and being apply'd to the Body, externally, is found Reſolutive and Deſiccative.

The Word is form'd from ξεειν, *bullire*, to boil, and πισσα, Pitch; *q. d. boil'd Pitch*.

ZUINGLIANS, a Branch of antient Reformers, or Proteſtants; denominated from their Author *Uldric* or *Huldric Zuinglius*. See REFORMATION.

This eminent Divine was born at *Wildehauſen*, in the County of *Toggenbourg* in *Switzerland*, in 1487.—After having finiſhed his Studies in Theology, and received the Doctor's Cap at *Baſil*, in 1505, he apply'd himſelf to preaching; and with good Succeſs.

Soon after *Luther* had taken up Arms againſt *Rome*, *Zuinglius*, being then Miniſter of the chief Church in *Zurich*, fell in with him; preach'd openly againſt Indulgences, then againſt the Interceſſion of the Saints, then againſt the Maſs, the Hierarchy, the Vows, and Celibate of the Clergy, Abſtinence from Fleſh, &c.

As to the Euchariſt, interpreting *hoc eſt Corpus meum* by *hoc ſignificat Corpus meum*; he maintain'd, that the Bread and Wine were only bare Significations, or Repreſentations of the Body and Blood of Jeſus Chriſt; in which he differ'd from *Luther*, who held a Conſubſtantiation. See LUTHERAN, EUCHARIST, CONSUBSTANTIATION, &c.

In a Conference held with the Deputies of the Biſhop of *Conſtans*, in 1523, he procured moſt of the external Ceremonies of Religion to be aboliſhed——As to Matters of Grace, *Zuinglius* ſeem'd inclined to *Pelagianiſm*; giving all to Free-will, conſider'd as acting by the mere ſtrength of Nature; in which he differ'd from *Calvin*. See CALVINISTS, GRACE, WILL, PELAGIAN, &c.

ZYGOMA, in Anatomy, a Bone, by ſome call'd *Os Jugale*. See JUGALE.

The *Zygoma* is no ſingle Bone, but an Union or Aſſemblage of two Proceſſes or Eminences of Bones; the one from the *Os temporis*, the other from the *Os malæ*. See BONE.

Theſe two Eminences, or *Apophyſes*, are joined together by a Suture thence call'd *Zygomaticus*. See ZYGOMATICUS.

The Word is form'd from ζευγνυμαι, *I join*; ſo that *Zygoma*, properly ſpeaking, is the Juncture of thoſe two Bones.

ZYGOMATICUS, an Epithet given to the Suture that binds the two Proceſſes of the *Zygoma* together. See ZYGOMA and SUTURE.

ZYGOMATICUS, in Anatomy, a Muſcle that has its Origin in the *Proceſſus Jugalis*, or *Zygoma*; and paſſing obliquely, is inſerted near the Angle of the Lips——It helps to draw the Lips obliquely upwards. See LIPS.

ZYMOSIMETER, an Inſtrument propoſed by *Swammerdam*, in his Book *de Reſpiratione*, wherewith to meaſure the degree of Fermentation occaſion'd by the Mixture of different Matters; and the Degree of Heat which thoſe Matters acquire in fermenting; as alſo the Heat or Temperament of the Blood of Animals. See FERMENTATION, HEAT, &c.

The Word is form'd from ζυμοσις, Fermentation, and μετρον, Meaſure.

ZYTHUM, or ZITHUM, a ſort of Malt-Liquor, in uſe among the antient *Germans*. See MALT-*Liquor*.

Matthiolus repreſents the antient *Zythum* and *Curmi* as the ſame with our Beer and Ale. See BEER and ALE.

FINIS.

To the First Edition of

CYCLOPÆDIA: Or, An UNIVERSAL DICTIONARY of Arts and Sciences, *&c.*

B.

BOG

BOG, a moiſt, rotten ſpot of earth, which ſinks, and gives way to the weight of the body, formed of graſs and plants putrified by ſome ſpring; frequent, eſpecially in Ireland.

In which ſenſe, *bog* amounts to much the ſame with what in other places are called *moſſes*, *marſhes*, *fens*, &c. See MORASSE and FEN.

Ireland is become infamous for *bogs:* they diſtinguiſh between a *turf-bog*, called alſo *red-bog*, out of which turf or peat is dug; and a *quaking-bog*, which will ſink under a man in the place where he ſtands to a conſiderable depth, and riſe before and behind proportionably: underneath, is frequently clear water, into which a perſon ſlips to the middle, upon breaking the ſurface.—*Quaking-bogs* frequently turn into *turf-bogs*.

Every red *bog* is incompaſſed with a deep marſhy ſloughy ground, called the *bounds of the bog*.—Horns and ſkeletons of mouſe-deer are ſometimes found in *bogs* fourteen foot deep.

The inconveniencies of *bogs* are, that a conſiderable part of the kingdom is rendered uſeleſs by them: they alſo keep people at a diſtance from each other, and thus hinder buſineſs from going forward. They occaſion the roads to be crooked and circuitous to avoid them: they are a great deſtruction to cattle, the chief commodity of Ireland; which are encouraged by the graſs growing on the edges of the *bogs* to venture in, where they are loſt: they are alſo a ſhelter to tories and thieves. The ſmell and vapour ariſing from them is accounted unwholſome, and the fogs putrid and ſtinking. Add, that they corrupt the water, both as to its colour and taſte.

Bogs have alſo their uſes: moſt of the people in Ireland have their firing from them; the wood being impolitickly deſtroyed, and little pit-coal yet diſcovered. The Iriſh could hardly do without ſome *bogs*.—The natives had anciently another advantage from *bogs*; *viz.* that by means of them they were preſerved from the conqueſt of the Engliſh: and it ſeems to be from the remembrance hereof that they ſtill chuſe to build near *bogs*.

For the origin and formation of BOGS, it is to be obſerved, that there are few places, in the northern world, but have formerly been as famous for them, as Ireland now is: every wild, ill-inhabited country has them: the *loca paluſtria*, or *paludes*, to which the antient Gauls, Germans, and Britons, retired when beaten, appear to be no other, than what we now call *bogs*. The like may even ſtill be found in the barren parts of Italy, as Liguria.

The true cauſe of *bogs*, then, ſeems to be the want of induſtry; at leaſt it is certain induſtry may remove, and much more prevent them. There are many *bogs* of late-ſtanding in Ireland, formed within our own memory, through the miſeries of the times, and the deſolations of civil war.—It is no wonder if a country famous for lazineſs ſhould abound with them.

To ſhew how want of induſtry cauſes *bogs*, it muſt be remembered that Ireland abounds with ſprings; that theſe ſprings are dry, or nearly ſo, in the ſummer-time, and that the graſs and weeds grow thick about the places where they burſt out. In the winter the ſame ſprings ſwell again, and run and ſoften and looſen the earth about them; and the ſwerd or ſcurf of the earth, which conſiſts of the roots of graſs, being lifted up and made fuzzy by the water, becomes dried again in the ſpring; and does not fall together, but withers in a tuft, and new graſs ſprings through it; which, the next winter is again lifted up: thus the ſpring is more and more ſtopt; and the ſcurf grows thicker and thicker, till it firſt make what we call a *quaking-bog:* and as it grows higher and dryer, and the graſs roots and other vegetables become more putrid, together with the mud and ſlime of the water, it acquires a blackneſs, and grows into what we call a *turf-bog*.

What confirms this account is, that *bogs* are generally found higher than the land about them, and higheſt in the middle: the chief ſprings which cauſe them being commonly about the middle; from whence they dilate themſelves by degrees, as one would blow a bladder; but not always equally, becauſe they ſometimes meet with greater obſtacles on one ſide, than on the other.—Add, that if a deep trench be cut through a *bog*, you will find the original ſpring, and vaſt quantities of water will run from it, and the *bog* ſubſide; ſometimes a dozen or 15, ſome even ſay, 30 foot.—Laſtly, thoſe hills which have no ſprings, have no *bogs*; and thoſe which have ſprings, and want culture, are never without them. In brief, wherever *bogs* are, there are great ſprings: the turf generally diſcovers a vegetable ſubſtance; it is light, and impervious to water, while the ground under it is very pervious.

True, there are ſome quaking *bogs* cauſed otherwiſe; as, when a ſtream or ſpring runs through a flat; if the paſſage be not tended, it fills with weeds in ſummer, trees fall acroſs it, and dam it up; then in winter, the water ſtagnates farther and farther every year, till the whole flat be covered; next, there riſes a coarſe kind of graſs peculiar to theſe *bogs*; it grows in tufts, and the roots conſolidate together, and yearly grow higher, in ſo much as ſometimes to reach the height of a Man: this graſs rots in winter, and falls on the tufts, and the ſeed with it, which ſprings up next year, and thus makes a new addition: ſometimes the tops of flags and graſs being interwoven on the ſurface of the water, and become by degrees thicker, till they lie like a cover on the water; other herbs take root in it, and by a plexus of thoſe roots it becomes ſtrong enough to bear the weight of a man.

Another cauſe of *bogs* is moſs, with which Ireland abounds extremely.—That which grows in *bogs* is remarkable; the light ſpongy turf above-mentioned being nothing but a congeries of the threads of this moſs, which is ſometimes in ſuch quantities, and ſo tough, that the turf-ſpades cannot cut it: in the north of Ireland they call it old wives tow; not being much unlike flax. The turf-holes in time grow up with it again, and all the little gutters in *bogs*, are generally filled with it. In reality, to this the *red* or *turf-bogs* ſeem to be chiefly owing.

For the draining of BOGS, to render them fit for paſture or arable, it is not impoſſible; the ſame having been performed in England, France, Germany, *&c.*—People commonly diſtinguiſh between *bogs* which have no fall to carry away the water from them, and thoſe which have; the laſt are reputed drainable, the former not. But Mr. King aſſures, he never obſerved one *bog* without a fall ſufficient to drain it, nor does he believe there is any. In reality, the great objection againſt draining, is the charge, which, it is commonly reckoned will amount to much more than would purchaſe an equal quantity of good ground: for an acre of this laſt in moſt parts of Ireland is not worth above 4*s. per annum*, and 14 or 15 years purchaſe; ſo that three pound will buy an acre of good land; and it is very doubtful with moſt, whether that ſum will reduce a *bog:* this reaſoning paſſes current, and is the great impediment of this work.

To this it is anſwered, that *quaking-bogs*, though land be never ſo cheap, never fail to be worth draining; one trench will drain many acres; and when dry, it is generally meadow, or the beſt grazing ground. Again, what is called the bounds of a *red-bog*, never fails to be worth the draining; being done by one deep trench drawn round the *bog*; by this cattle are kept out of the *bog*, and the bounds turned into meadow.—Add, that even *red-bogs* might be made fit for grazing at a much cheaper rate than has hitherto been done, by a proper conduct in the digging of trenches, particularly deſcribed by Mr. King.—See *Philoſ. Tranſact.* N° 170. *p.* 948. *ſeq.* & N° 330. *p.* 305. *Item* N° 314. *p.* 59. Plot. *Nat. Hiſt. Oxford. c.* 9. §. 81. *ſeq.* Mortim. *Huſband. T.* 1. *l.* 1. *c.* 2. *p.* 21.

BOO

BOOK *, a writing compoſed on ſome point of knowledge by a perſon intelligent therein, for the inſtruction or amuſement of the reader.

* The word is formed from the Saxon *boc*, which comes from

from the Northern *buech*, of *buecbaus*, a beech or ſervice-tree, on which our anceſtors uſed to write.—*Vid.* Rudbeck *Atlant. P.* 3. *Philoſ. Tranſact.* N° 301. *p.* 2061.

Book may be defined more preciſely, a compoſition of ſome man of wit or learning, deſigned to communicate ſomewhat he has invented, experienced, or collected, to the public, and thence to poſterity; being withal of a competent length to make a volume.—*Vid.* Saalbach *Sched. de Libr. Veter.* §. 8. Reimm. *Idea Syſt. Antiq. Liter. p.* 230. Trev. *D. Univ. T.* 3. *p.* 1506. *voc.* Livre. See alſo the article VOLUME.

In this ſenſe, *book* is diſtinguiſhed from *pamphlet*, or ſingle paper, by its greater length; and from *tome* or *volume* by its containing the whole writing.—Iſidore makes this diſtinction between *liber* and *codex*; that the former denotes a ſingle book, the latter, a collection of ſeveral [a]; though, according to Scipio Maffei, *codex* ſignifies a *book* in the ſquare form, *liber*, a *book* in the roll form [b].—[a] *Vid.* Iſid. *Orig. l.* 6. *c.* 13. [b] Maffei *Iſtor. Diplom. l.* 2. *Bibl. Ital. T.* 2. *p.* 244. See alſo Saalbach *Lib. cit.* §. 4. Reimm. *ubi ſupra.*

According to the ancients, a *book* differed from an *epiſtle*, or *letter*, not only in bulk, but in that the latter was folded up, the former only rolled [a]: not but that there are divers *books* now extant under the names of *epiſtles*.—[a] *Vid.* Pitiſc. *L. Ant. T.* 2. *p.* 84. *voc. Libri.* See alſo EPISTLE.

We ſay an old *book*, a new *book*; a Latin, a Greek *book:* to read, to write, to publiſh a *book*; the preface, the title, the dedication, the index of a *book*. See PREFACE, TITLE, INDEX, *&c.*—To *collate a book*, is to ſee that it be perfect, and that none of the ſheets be either wanting or tranſpoſed.—Book-binders ſpeak of *folding*, *ſewing*, *beating*, *preſſing*, *covering*, *gilding*, and *lettering* of *books*. See BOOK-BINDING.

A large collection of *books* for uſe is called a *library*. See LIBRARY.—An inventary of a library, in order for the readier finding any *book*, is called a *catalogue*. See CATALOGUE.—Cicero calls M. Cato, *helluo librorum*, a glutton, or devourer of *books* [a]. Gaza holds Plutarch [b], and Herm. Barbarus, Pliny, the beſt of all *books* [c];—Crenius [d] has a diſcourſe on the beſt or capital *books* of each author: Tertullian's beſt is held to be his *book De Pallio*; St. Auguſtin's maſter-piece is that *De Civitate Dei*; that of Hippocrates, the *Coacæ prænotiones*; of Cicero, *de Officiis*; of Ariſtotle, *de Animalibus*; of Galen, *de Uſu Partium*; of Virgil, the *ſixth Æneid*; of Horace, the *firſt and ſeventh Epiſtles*; of Catullus, the *coma Berenices*; of Juvenal, the *ſixth Satyr*; of Plautus, the *Epidicus*; of Theocritus, the *27th Idyl:* Paracelſus's beſt *book* is his *Chirurgia*; that of Severinus, *de Abſceſſibus*; of Budæus, *Commentarii Linguæ Græcæ*; of Joſ. Scaliger, *de Emendatione temporum*; of Eraſmus, the *Adagia*; of Petavius, the *Rationarium temporum*; of Bellarmin, *de Scriptorib. Eccleſiaſticis*; of Salmaſius, the *Exercitationes Plinianæ*; of Voſſius, *Inſtitut. Oratoriæ*; of Heinſius, *Ariſtarchus Sacer*; of Caſaubon, *Exercitationes in Baronium.*—[a] *Vid.* Cic. *de Finib. l.* 3. *n.* 1. [b] Gentzken. *Hiſt. Philoſ. p.* 130. [c] Harduin. *Præf. ad Plin.* [d] Cren. *de Libr. Script. Optim.* Act. Erud. Lipſ. *an.* 1704. *p.* 526. Barthol. *de Libr. Legend. diſſ.* 3. *p.* 66.

It would be of good uſe to know which is the beſt *book* on each ſubject; *e. gr.* the beſt logic, beſt dictionary and grammar, beſt phyſics, beſt commentary on the bible, or on the inſtitutes, or Geneſis, or the epiſtle to the Hebrews; the beſt harmony of the Evangeliſts; beſt defence of the truth of Chriſtianity, and the like: by which a library might be compoſed of none but the beſt *books* of each kind.

The *hiſtory* or *notitia of* BOOKS makes the chief part, according to ſome, the whole of the literary ſcience.—The principal points in the notitia of a *book*, are its *author*, *date*, *printer*, *editions*, *verſions*, *comments*, *epitomes*, *ſucceſs*, *eloges*, *cenſures*, *condemnation*, *ſuppreſſion*, *adverſaries*, *vindicators*, *continuators*, and the like.

The hiſtory of a *book*, is either of its *contents*, which is given by analyſing it, as is done by journaliſts; or of its *appendages* and *accidents*, which is the more immediate province of thoſe called *literators* and *bibliothecarians*. See JOURNAL.

The *contents* of a *book*, are the matters delivered in it; which make the province of the author.—Of theſe there is one principal matter, called the *ſubject*; in reſpect of which the reſt are only *incidents*.

The *appendages* of a *book*, are the *title*, *preface*, *epiſtle dedicatory*, *ſummaries*, *table of contents*, *index*, and the like, which are the proper province of the editor, unleſs perhaps the title-page, which is frequently uſurped by the book-ſeller. See TITLE, *&c.*

In the *compoſition* of a *book*, there occur *ſentiments*, which are alſo the materials of it; *method*, the order wherein theſe are diſpoſed; and *ſtyle*, or *expreſſion*, which is the language wherein they are clothed. See SENTIMENT, STYLE, *&c.*

The giving hiſtories, catalogues and bibliotheca's of *books*, is ſaid to have been firſt introduced by the Germans [a]: we may add, that it is they who have beſt ſucceeded in them; and to whom the chief works of this kind are owing.—J. Alb. Fabricius has given us the hiſtory of the Greek and Latin *books:* Wolfius that of the Hebrew *books* [b]: Boecler, of the principal *books* in each ſcience and faculty: Struvius of the *books* of hiſtory, law and philoſophy: the abbot Fabricius of the *books* in his own library: Lambecius of thoſe in the Vienna library: Le Long of the *books* of ſcripture: Mattaire of the *books* printed before the year 1550, *&c.*—[a] *Vid.* Reimm. *Bibl. Acroam. in præf.* §. 1. *p.* 3. [b] Boſ. *Introd. ad Not. Script. Eccleſ. c.* 4. §. 13. *p.* 124. *ſeq.*

Burning of BOOKS, was a kind of puniſhment much in uſe among the Romans, by legal ſentence: ſometimes the care of the execution was committed to triumviri appointed on purpoſe [a]; ſometimes to the prætors [b], and ſometimes to the ædiles [c]: Labienus, whom from his ſatirical ſpirit ſome called *Rabienus*, is ſaid to have been the firſt, who underwent the ſeverity of it. His enemies procured a ſenatuſconſultum, whereby all his *books*, publiſhed during ſeveral years, were ordered to be collected and burnt: "The thing, (ſays Seneca) then appeared new and ſtrange, to take revenge on "learning!" *Res nova & inſueta! Supplicium de ſtudiis ſumi* [d]. Caſſius Servius, a friend of Labienus, hearing the ſentence pronounced, cried aloud, "That they muſt burn him too, "ſince he had got all the books by heart:" *Nunc me vivum uri oportet, qui illos didici.* Labienus could not ſurvive his *books*, but ſhutting himſelf up in the tomb of his anceſtors, pined away and was buried alive [e].—[a] *Vid.* Tacit. *Agric. c.* 2. *n.* 1. [b] Valer. Max. *l.* 1. *c.* 1. *n.* 12. [c] Tacit. *Annal. l.* 4. *c.* 35. *n.* 4. [d] Senec. *Controv. in præf.* §. 5. [e] Rhodig. *Ant. Lect. c.* 13. *l.* 2. Salmuth. *ad Pancirol. P.* 1. *tit.* 22. *p.* 68. Pitiſc. *L. Ant. T.* 2. *p.* 84. Divers other ancient teſtimonies concerning the burning of *books* are given in *Reimm. Idea Syſt. Antiq. Liter. p.* 389. *ſeqq.*

For the *matter of* BOOKS.—They were at firſt written on ſtones, witneſs the Decalogue given to Moſes, (which is the oldeſt book we have any warranted account of) then, on the parts of plants, *e. gr.* the leaves, chiefly of the palm-tree; the rinds and barks, eſpecially of the tilia, or philyra, and the Egyptian papyrus *. By degrees, wax, then leather were introduced, eſpecially the ſkins of goats and ſheep, of which at length parchment was prepared: then lead came in uſe; alſo linen, ſilk, horn, and laſtly paper itſelf.—*Vid.* Calm. *Diſſ.* 1. *ſur Geneſ. Comment. T.* 1. ejuſd. *D. Bibl. T.* 1. *p.* 316. Du Pin *Bibl. Eccleſ. T.* 19. *p.* 381. Barthol. *de legend. libr. diſſ.* 4. *p.* 70. *ſeqq. Hiſt. Acad. R. Inſcr. T.* 3. *p.* 103. Schwartz *de Ornam. libror. diſſ.* 1. Reimm. *Idea Syſt. Antiq. liter. p.* 235. & 286. *ſeq.* Montfauc. *Palæogr. l.* 2. *c.* 8. *p.* 180. *ſeq.* Guiland *Papyr. Memb.* 3. See alſo the article PAPER.

* The parts of vegetables continued long the common matter of *books*; inſomuch that moſt of the names and terms belonging to *books*, in moſt languages, are taken thence: as the Greek *biblos*, the Latin *liber*, *codex*, *folium*, *tabulæ*, and the Engliſh *book* itſelf.—We may add that vegetable barks appear ſtill in ſome meaſure retained for *books* in certain of the Northern countries, as among the Calmuc Tartars, where a library was lately diſcovered by the Ruſſians, of an unuſual form as well as matter: the *books* were exceedingly long, but of no breadth; the leaves very thick, and made of barks of trees, ſmeered over with a double verniſh; the ink or writing being white, on a black ground.—*Vid. Hiſt. Acad. R. Inſcr. T.* 3. *p.* 6.

The firſt *books* were in form of blocks and tables, of which we find frequent mention in ſcripture, under the appellation *ſepher*, which the ſeptuagint render αξονες, q. d. *ſquare-tables:* of which form the *book* of the covenant, *book* of the law, *book* or bill of divorce, *book* of curſes, *&c.* appear to have been [a].—As flexible matters came to be wrote on, they found it more convenient to make their *books* in form of rolls [b], called by the Greeks κυλινδια, by the Latins *volumina* *, which appear to have been in uſe among the ancient Jews, as well as Grecians, Romans, Perſians. and even Indians. And of ſuch did the libraries chiefly conſiſt, till ſome centuries after Chriſt.—The form which obtains among us, is the ſquare, compoſed of ſeparate leaves; which was alſo known, though little uſed among the ancients, having been invented by Attalus, king of Pergamus, the ſame who alſo invented parchment [c]: but it has now been ſo long in poſſeſſion, that the oldeſt manuſcripts are found in it. Montfaucon aſſures us, that of all the ancient Greek MSS. he has ſeen, there are but two in the roll-form; the reſt being made up much after the manner of the modern books [d].—[a] *Vid.* Calm. *lib. cit.* [b] Du Pin *Bibl. Eccleſ. T.* 19. *p.* 382. [c] Barth. *de Libris legend. diſſ.* 4. *p.* 95. *ſeqq.* [d] Montfauc. *Palæogr. Græc. l.* 1. *c.* 4. *p.* 26. Reimm. *Idea Syſt. Antiq. liter. p.* 227. *item*, *p.* 242. Schwartz. *de Ornam. libror. diſſ.* 2. See alſo the article BOOK-BINDING.

* The rolls, or volumes were compoſed of ſeveral ſheets, faſtened to each other, and rolled upon a ſtick, or *umbilicus*; the whole making a kind of column, or cylinder, which was to be managed by the umbilicus, as a handle; it being reputed a kind of crime to take hold of the roll itſelf. The outſide of the volume, was called *frons*; the ends of the umbilicus *cornua*, horns; which were uſually carved and adorned likewiſe with bits of ſilver, ivory, or even gold and precious ſtones. The title Συλλαβος, was ſtuck on the outſide. The whole volume when extended might make a yard and half wide, and fifty long.—*Vid.* Salmuth. *ad Pancirol. P.* 1. *tit.* 42. *p.* 143. *ſeq.* Walc. *Parerg. Acad. p.* 72. Pitiſc.

tiſc. *L. Ant. T.* 2. *p.* 48. *voc.* libri.' Barth. *Adverſ. l.* 22. *c.* 18. Schwartz. *de Ornam. Libror. diſſ.* 2. Reimm. *Idea Syſt. Ant. Liter. p.* 242. *ſeqq. Item p.* 251. To which may be added divers other writers on the form and ornaments of the ancient books recited in Fabric. *Bibl. Antiq. c.* 19. §. 7. *p.* 607.

To the form of *books* belongs alſo the *œconomy of the inſide*, or the order and arrangement of points and letters into lines and pages [a], with margins and other appurtenances: this has undergone many varieties; at firſt, the letters were only divided into lines, then into ſeparate words; which by degrees were noted with accents, and diſtributed by points and ſtops into periods, paragraphs, chapters, and other diviſions. In ſome countries, as among the Orientals, the lines began from right, and run to the leftwards; in others, as the Northern and Weſtern nations, from left to the rightward: others, as the Grecians, followed both directions alternately, going in the one and returning in the other, called *bouſtrophedon*.—In moſt countries, the lines run from ſide to ſide of the page; in ſome, particularly the Chineſe, from top to bottom. Again, the page in ſome is entire, and uniform; in others, divided into columns; in others, diſtinguiſhed into text and notes, either marginal, or at the bottom: uſually it is furniſhed with ſignatures and catch-words; ſometimes alſo with a regiſter to diſcover whether the *book* be compleat.—To theſe are occaſionally added the apparatus of ſummaries, or ſide-notes; the embelliſhments of red, gold, or figured initial letters, head-pieces, tail-pieces, effigies, ſchemes, maps and the like.—The end of the *book* now denoted by *finis*, was anciently marked with a ⊀, called *coronis*; and the whole frequently waſhed with an oil drawn from cedar, or citron chips ſtrewed between the leaves to preſerve it from rotting [b].—There alſo occur certain formula's at the beginnings and ends of *books*: as, among the Jews, the word חזק, *eſto fortis*, which we find at the end of the *books* of Exodus, Leviticus, Numbers, Ezekiel, &c. to exhort the reader to be courageous, and proceed on to the following *book* [c].—The concluſions were alſo often guarded with imprecations againſt ſuch as ſhould falſify them [d]; of which we have an inſtance in the Apocalypſe [e] *.—The Mahometans for the like reaſon place the name of God, at the beginning of all their *books*, which cannot fail to procure them protection, on account of the infinite regard had among them to that name where-ever found [f].—For the like reaſon it is that divers of the laws of the ancient emperors begin with the formula, *In nomine Dei* [g].— [a] *Vid.* Barth. *de Libr. Legend. diſſ.* 5. *p.* 106. *ſeqq.* Montfauc. *Palæogr. l.* 1. *c.* 4. Reimm. *Idea Syſt. Antiq. Liter. p.* 227. Schwartz. *de Ornam. Libr. diſſ.* 1. Reimm. *Idea Syſt. Antiq. Liter. p.* 240. *ſeqq.* [b] Schwartz. *de Ornam. libror. diſſ.* 2. Reimm. *Idea Syſt. Ant. Liter. p.* 251. [c] Schwartz. *ubi ſupra diſſ.* 3. Reimm. *l. c. p.* 260. *ſeq.* [d] Fabric. *Bibl. Græc. l.* 1. *c.* 5. *p.* 74. [e] Revel. *c.* 22. *v.* 19. [f] Sale *Prelim. Diſc. to Koran ſect.* 3. *p.* 59. [g] Barthol. *lib. cit. p.* 117.

* At the end of each book the Jews alſo added the number of verſes contained in it, and at the end of the Pentateuch the number of ſections; that it might be tranſmitted to poſterity entire: the Maſſoretes and Mahometan doctors have gone further; ſo as to number the ſeveral words and letters in each *book*, chapter, verſe, &c. of the Old Teſtament, and the Alcoran. See MASSORA, ALCORAN, &c.

The kinds and denominations of BOOKS, are various: with regard to their uſe and authority, *books* may be divided into,—*human*, thoſe compoſed by mere men;—*divine*, thoſe ſent from heaven, or dictated by God himſelf, containing his word and will; which latter are alſo called *ſacred* and *inſpired books*. See REVELATION, INSPIRATION, &c.

The Mahometans reckon one hundred and four divine *books*, given by God to his prophets, *viz.* ten to Adam; fifty to Seth; thirty to Enoch; ten to Abraham; one to Moſes, the Pentateuch (ſuch as it was before the Jews and Chriſtians corrupted it) another to Jeſus, the Goſpel; another to David, the Pſalms; and another to Mahomet, the Alcoran. He that denies theſe, or any of them, or any part, verſe, or even word of them, is deemed an infidel [a]: and God preſerve us from infidels!—They make it a criterion of a divine *book*, that God himſelf ſpeak in it, not others concerning God, in the third perſon; as is done in our *books* of the Old and New Teſtament, which they therefore reject as compoſitions merely human [b].—[a] *Vid.* Reland. *de Relig. Mohamm. l.* 1. *c.* 4. *p.* 21. *ſeq.* [b] *Id. ibid. l.* 2. §. 26. *p.* 231.

Sibylline BOOKS, are thoſe compoſed by certain pretended propheteſſes, depoſited in the capitol, under the care of duumviri.—*Vid.* Lomei. *de Biblioth. c.* 13. *p.* 377. See alſo SIBYL.

Canonical BOOKS, are thoſe received and allowed by the church, as parts of holy ſcripture.—Such are the books of the Old and New Teſtament. See CANON, and BIBLE.

Apocryphal BOOKS, thoſe excluded out of the canon, yet received and read in churches. See APOCRYPHA.

Authentic BOOKS, thoſe which are deciſive, and of authority: ſuch, in the civil law, are the code, digeſt, &c. in our law, the ſtatutes, &c.—*Vid.* Bac. *de Augm. Scient. l.* 8. *c.* 3. Works *T.* 1. *p.* 257.

Auxiliary BOOKS, thoſe leſs eſſential, yet of uſe as ſubſervient to the others: as, in the ſtudy of the law, *books* of inſtitutes, formulæ, maxims, reports, &c.

Elementary BOOKS, thoſe which deliver the firſt principles of ſciences: ſuch are thoſe under the titles of *rudiments*, *methods*, *grammars*, &c. by which they ſtand contradiſtinguiſhed from *books of a ſuperior order*, which aim at making further advances in the ſciences.—*Vid Mem. de Trev. an.* 1734. *p.* 804.

Library BOOKS, ſuch as are not ordinarily read over, but turned to, and conſulted occaſionally: ſuch are dictionaries, comments, corpus's, theſaurus's, &c.

Exoteric BOOKS, thoſe intended for the uſe of popular and ordinary readers.

Acroamatic BOOKS, thoſe containing more ſecret and ſublime matters, calculated for adepts and proficients in the ſubject. —*Vid.* Reimm. *Idea Syſt. Antiq. Liter. p.* 136.

Prohibited BOOKS, thoſe condemned and forbidden by the ſuperiors of the church, as either containing matters of hereſy, or things contrary to good morals.—*Vid.* Bingh. *Orig. Eccleſ. l.* 16. *c.* 11. §. 11. Paſc. *de Var. Mod. Mor. Trad. c.* 3. *p.* 298, & 250. Trev. *D. Univ. T.* 3. *p.* 1507. Pfaff. *Introd. Hiſt. Theol. T.* 2. *p.* 65. Heuman *Via ad Hiſt. Lit. c.* 4. §. 63. *p.* 163. See alſo the article INDEX.

Public BOOKS, *libri publici*, the records of paſt times and tranſactions kept by public authority.—*Vid.* Calv. *L. Jur. p.* 534. *voc. Libri.* Trev. *D. Univ. T.* 1. *p.* 1509. See alſo ACTS, &c.

Church BOOKS, or *eccleſiaſtical* BOOKS, thoſe uſed in the publick offices of religion [a].—Such, in the Latin church, are the *ſacramentary*, *antiphonary*, *lectionary*, *pſalter*, *evangelary*, or *evangeliſtary*, *ordo*, *miſſal*, *pontifical*, *ritual*, *proceſſional*, *breviary*, *roſary* [b], &c.—In the Greek church, the *menologium*, *euchologium*, *tropologium*, &c.—Alſo, the *book of peace*, *liber pacis*, which is a book given to be kiſſed in the ceremony of the maſs.—The *muſic-book*, containing the pſalms, troparies, and other prayers of that kind, which are uſed to be ſung, with the notes marked to each.—*Book of liturgies*, *liber liturgiarum*, containing not all the liturgies of the Greek church, but only the four now in uſe; *viz.* the liturgy of St. Baſil, of St. Chryſoſtom, that of the preſanctified, προηγιασμενων, and that of St. James, which is only uſed in the church of Jeruſalem, and that but once a-year [c].— [a] *Vid.* Pfaff. *Introd. Hiſt. Theol. l.* 4. §. 8. *T.* 3. *p.* 287. [b] Trev. *D. Univ. T.* 3. *p.* 1507. [c] *Id. ibid.* See alſo LITURGY.

The Engliſh *church-books*, in uſe in the middle of the tenth century, as enumerated in Elfric's canons, were the *bible*, *pſalter*, *piſtol-book*, (*i. e.* epiſtles) *goſpel-book*, *maſs-book*, *ſong-book*, (elſewhere called *antiphonary*) *hand-book*, (or *manual*) *kalendar*, *paſſional*, (or *martyrology*) *penitential*, and the *leſſon-book*.—*Vid.* Johnſ. *Eccleſ. Laws. An.* 957. §. 21.

The Jewiſh *church-books*, were the *books* of the *law*, the *hagiographa*, the *prophets*, &c.—See PENTATEUCH, PROPHET, and HAGIOGRAPHA.—The firſt was alſo called the *book of Moſes*, becauſe compoſed by him; and the *book of the covenant*, becauſe the terms thereof were contained in it. In a more abſolute ſenſe, *book of the law* denotes Moſes's original or autograph, found in a hole in the temple in king Joſiah's time.

BOOKS, again, with regard to their ſcope and ſubject, may be divided into—*hiſtorical*, thoſe which relate facts, either of nature or mankind—*dogmatical*, thoſe which lay down doctrines, or general truths—*miſcellaneous*, thoſe of a neutral kind, containing both facts and doctrines—*hiſtorico-dogmatical*, thoſe which only rehearſe doctrines, or, at moſt indicate the arguments by which they are proved, as Mallet's *geometry*;—*Scientifico-dogmatical*, thoſe which not only recite the doctrines, but demonſtrate them, as Euclid's *Elements*. —*Vid.* Wolf. *Phil. Rat. ſect.* 3. *c.* 1. §. 744, 750, 751, &c.

Pontifical BOOKS, *libri pontificales*, ἱερατικα βιβλια, among the Romans, were thoſe appointed by Numa to be kept by the pontifex maximus; deſcribing all the ceremonies, ſacrifices, feaſts, prayers, and other religious matters, with the manner and circumſtances wherewith each was to be celebrated: theſe were alſo called, *indigitamenta*, as containing the names of all the gods, and the occaſions, and formula's of invoking each.—*Vid.* Liv. 1. *p.* 23. Lomei. *de Bibl. c.* 6. *p.* 107. Pitiſc. *L. Ant. T.* 2. *p.* 85. *voc. Libri.*

Ritual BOOKS, *libri rituales*, thoſe which directed the order and manner of founding, building, and conſecrating cities, temples, and altars; the ceremonies belonging to walls, gates, tribes, curiæ, camps, and the like.—*Vid.* Lomei. *lib. cit. c.* 6. *p.* 111. Pitiſc. *ubi ſupra.*

Augural BOOKS, *libri augurales*, called by Cicero [a], *reconditi*, were thoſe wherein the ſcience of foretelling futurity from the flight and chattering of birds were contained [b].—[a] *Vid.* Cic. *Orat. pro domo ſua ad pontif.* [b] Serv. *ad Æn. l.* 5. *v.* 738. Lomei. *lib. cit. c.* 6. *p.* 109. See alſo AUGUR, and AUGURY.

Aruſpicine BOOKS, *libri aruſpicini*, thoſe wherein the myſteries of divining from the entrails of victims were preſcribed.— *Vid.* Lomei. *ubi ſupra c.* 6. *p.* 111. See alſo ARUSPEX, &c.

Acherontic BOOKS, *libri Acherontici*, thoſe wherein the ceremonies and diſcipline of Acheron were contained; ſometimes alſo called *libri Etruſci*, as being ſuppoſed to have been compoſed by Tages the Hetrurian, though others pretend that

he

he had received them from Jupiter himſelf [a]: ſome ſuppoſe theſe to have been the ſame with the *libri fatales*; others, with the *libri aruſpicini* [b].—[a] *Vid.* Serv. *ad Æneid. l.* 8. *v.* 398. Lomei. *de Bibl. c.* 6. *p.* 112. Pitiſc. *l. c. p.* 84. [b] Lindenbrog. *ad Cenſorin. c.* 14.

Fulgural BOOKS, *libri fulgurales*, thoſe written touching thunder and lightening, and the interpretation thereof.—As that compoſed by the Tuſcan nymph Bigois, preſerved in the temple of Apollo.—*Vid.* Serv. *ad Æn.* 6. *v.* 72. Lomei. *de Bibl. c.* 6. *p.* 111.

Fatal BOOKS, *libri fatales*, thoſe wherein the ages, or terms of the life of men were written according to the Hetrurian diſcipline. Theſe were conſulted by the Romans in all publick calamities; and inſtructions taken from them, how to expiate the offended deities.—*Vid.* Cenſor. *de Die Natal. c.* 14. Lomei. *lib. cit. c.* 6. *p.* 112. Pitiſc. *ubi ſupra*, *p.* 85.

Black BOOKS, thoſe which treat of necromancy and witchcraft.

The ſame denomination is alſo given to ſome other *books*, on account of the colour of their backs, or the diſmalneſs of their contents; whence alſo *red book*, and *domeſday book*. See DOMESDAY, *&c.*

Good BOOKS, in the common uſage, are thoſe of devotion and piety; as ſoliloquies, meditations, prayers, *&c.*—*Vid.* Shafteſb. *Charact. T.* 1. *p.* 165. *Item T.* 3. *p.* 327.

A *good book*, in the bookſellers language, is a ſaleable one; in the language of the curious, a ſcarce one; in that of men of ſenſe, an uſeful and inſtructive one.

Among five principal things which Rabbi Akiba recommended to his ſon, one was, that if he ſtudied the law, he ſhould take care to do it in a *good book*, leſt he ſhould be obliged to unlearn all again.—*Vid.* Cren. *de Furib. Librar.*

Spiritual BOOKS, thoſe which treat more expreſsly of the ſpiritual, or chriſtian life, and the exerciſes thereof, as contemplation, *&c.*—Such are thoſe of St. John Climax, St. Francis de Sales, St. Thereſa, Thomas a Kempis, Granadenſis, Dr. Horneck, *&c.* See MYSTIC.

Profane BOOKS, ſuch as do not treat of matters of religion. See PROFANE.

BOOKS, with regard to their authors, may be divided into—*Anonymous*, thoſe without any author's name. See ANONYMOUS.—*Cryptonymous*, thoſe whoſe authors names are concealed in ſome anagram, or the like.—*Pſeudonymous*, thoſe which bear falſe names of authors [a].—*Poſthumous*, thoſe publiſhed after the author's death [b].—*Genuine*, thoſe really written by the perſons whom they pretend for their authors, and ſtill remaining in the ſtate wherein they were left by them.—*Spurious* or *ſuppoſititious*, thoſe pretending to be written by others than their real authors.—*Interpolated*, thoſe which ſince their compoſition have been corrupted by ſpurious additions or inſertions.—[a] *Vid.* Paſch. *de Var. Mod. Moral. Trad. c.* 3. *p.* 287. [b] Heuman. *Via ad Hiſtor. Liter. c.* 6. §. 40. *p.* 334.

BOOKS, with regard to their qualities, may be divided into—*Clear* or *perſpicuous*, which in the dogmatical kind, are thoſe, where the authors define all their terms accurately, and keep ſtrictly to thoſe definitions in the courſe of their works.—*Obſcure*, thoſe where words are uſed vaguely, and without defining.—*Prolix*, thoſe which contain more things than were neceſſary to the author's deſign: as, if in a *book* of ſurveying, a man ſhould give all Euclid.—*Uſeful*, thoſe which deliver things neceſſary to be known, either in other ſciences, or in the buſineſs of life.—*Compleat*, thoſe which contain all that is known concerning the ſubject.—*Relatively compleat*, thoſe which contain all that was known on the ſubject, at a certain time; or, if a *book* were written with any particular deſign or view, it may be ſaid to be *compleat*, if it contain neither more nor leſs than is neceſſary for the accompliſhing that end.—In the contrary caſes, *books* are ſaid to be *incompleat*.—*Vid.* Wolf. *Log.* §. 815. *p.* 818, 820, 825, *&c.*

BOOKS, with regard to the matter they conſiſt of, may be divided into—*Paper-books*, thoſe written either on linen and cotton paper, or on the papyrus, of which few are now remaining.—*Vid.* Montfauc. *Palæogr. Græc. l.* 1. *c.* 2. *p.* 14. *ſeq.* See alſo PAPER.

Parchment BOOKS, *libri in membrana*, thoſe written on ſkins or pelts, chiefly of ſheep. See PARCHMENT.

Linen BOOKS, *libri lintei*, among the Romans were thoſe wrote on blocks or tables covered with a linen cloth.—Such were the Sibylline *books*, and divers ancient laws, epiſtles of princes, leagues, annals, *&c.*—*Vid.* Plin. *Hiſt. Nat. l.* 13. *c.* 2. Dempſt. *ad Roſin. l.* 3. *c.* 24. Lomei. *de Bibl. c.* 6. *p.* 106.

Leathern BOOKS, *libri in corio*, mentioned by Ulpian [a], are by Guilandinus taken for ſuch as were written on barks, different from that uſually wrote on; which was the tilia [b]: by Scaliger, with more probability, for ſuch as were written on certain ſkins, or certain parts of ſkins, different from thoſe commonly uſed, which were the pelts or back-parts of ſheep [c].—[a] *Vid.* Ulp. *l.* 52. ff. *de Leg.* 3. [b] Guiland. *Papyr. membr.* 3. *n.* 50. Salmuth. *ad Pancirol. P.* 2. *tit.* 13. *p.* 253. [c] Scalig. *ad Guiland. p.* 17. Pitiſc. *L. Ant. T.* 2. *p.* 84. *voc. Libri.*

Block BOOKS, *libri in ſchedis*, thoſe written on wooden planks or tablets, ſmoothed for that purpoſe with an aſcia and plane.—Such were the ordinary *books* among the Romans.—*Vid.* Pitiſc. *loc. cit.*

Waxen BOOKS, *libri in ceris*, mentioned by Pliny, have occaſioned ſome diſpute. Herm. Barbarus ſuſpects the term to be a corruption, and inclines to read *in ſchedis* inſtead of it, on the authority of ſome ancient MSS. Others ſee no need of the emendation, ſince it is known the Romans ſometimes covered their planks, or ſchedæ, with a thin ſkin of wax, to make them ſuſceptible of eraſements and amendments, which the *libri in ſchedis* were not, and conſequently were leſs fit for works that required elegance and accuracy than the waxen ones, which are alſo called *ceræ*, or *libri cerei*.—*Vid.* Pitiſc. *ubi ſupra.*

Elephantine BOOKS, *libri elephantini*, according to Turnebus, were thoſe written on thin ſlices or leaves of ivory [a]; according to Scaliger, thoſe made of the guts of elephants [b]; according to others, thoſe wherein the acts of the ſenate relating to the emperors, were written [c]; according to others, certain huge or bulky *books*, conſiſting of 35 volumes, containing all the names of the 35 tribes [d].—[a] *Vid.* Salmuth. *ad Pancirol. P.* 2. *tit.* 13. *p.* 255. Guiland. *Papyr. membr.* 2. *n.* 48. [b] Scalig. *ad Guiland. p.* 16. [c] Calv. *L. Jur. p.* 534. *voc. Libri.* [d] Fabric. *Deſcript. Urb. c.* 6. Donat. *de Urb. Rom. l.* 2. *c.* 23. Pitiſc. *L. Ant. loc. cit. p.* 84. *ſeq.*

BOOKS, with regard to their manufacture and commerce, may be divided into—*Manuſcript*, thoſe written with the hand, whether originally by the authors, called *autographs*, or at ſecond hand by *librarii* or *copiſts*. See MANUSCRIPT, LIBRARIUS, *&c.*—*Printed*, thoſe wrought off from the preſs. See PRINTING.—*Books in quires* or *ſheets*, thoſe not bound or ſtitched.—*Books in folio*, thoſe wherein a ſheet is folded but once, or makes two leaves, or four pages: *Books in 4to.* where it makes four leaves; *in 8vo.* where eight; *in duodecimo*, where twelve; *in 16o.* where ſixteen; *in 24o.* where twenty-four.

BOOKS, with regard to circumſtances and accidents, may be divided into—*Loſt*, thoſe which have periſhed by the injuries of time, or the malice or zeal of enemies.—Such as are divers even of the ancient *books* of ſcripture, written by Solomon, and others of the prophets.—*Vid.* Fabric. *Cod. Pſeudepig. Vet. Teſt. T.* 2. *p.* 171. Joſeph. *Hypomn. l.* 5. *c.* 120. *ap.* Fabric. *lib. cit. p.* 247.

Promiſed BOOKS, thoſe which authors have given expectations of, which they have never accompliſhed.—Janſ. ab Almeloveen has given a bibliotheca of *books* promiſed, but ſtill latent, or not publiſhed.—*Vid.* Struv. *Introd. ad Notit. Rei Liter. c.* 8. §. 21. *p.* 754.

Fictitious BOOKS, thoſe which never exiſted.—Such is the *book de tribus Impoſtoribus*, ſo much talked of by ſome, ſuppoſed to be by others: to which may be added, divers feigned titles of *books* [a] in Baillet [b] and others. Loeſcher [c] has publiſhed a great number of plans or projects of *books*, many of them good and uſeful enough; if there were but books written to them. M. Dugono has a whole volume of *ſchemes or projects of books* [d], containing no leſs than 3000 [e].—[a] *Vid.* Paſch. *de Var. Mod. Mor. Trad. c.* 3. *p.* 282. [b] Baill. *des Satyr. Perſonel.* [c] Loeſch. *Arcan. Liter.* [d] *Projets Literaires.* [e] *Jour. Liter. T.* 1. *p.* 470.

BOOKS *in Ana*, *Anti*, &c. See the articles ANTI, ANA, *&c.*

The ſcope or deſign of BOOKS is various; of ſome, to trace the origins of things diſcovered; of others, to fix and eſtabliſh ſome truth, or raiſe ſome doctrine to a higher pitch of ſubtility; of others, to remove ſome ſcruple or prejudice which had before obtained, or fix more accurate and preciſe ideas of things; of others, to explain the names and words uſed in different nations, ages, and ſects; of others, to improve our knowledge of facts, and events, and ſhew the order and ways of providence: laſtly, others aim at divers, or all of theſe ends.—*Vid.* Loeſch. *de Cauſ. Ling. Hebr. in præf.*

The uſes of BOOKS are numerous: they make one of the chief inſtruments, or means of acquiring knowledge: they are the repoſitories of laws, and the vehicles of learning of every kind: our religion itſelf is founded on *books*: without them, ſays Bartholin, God is ſilent, juſtice dormant, phyſic at a ſtand, philoſophy lame, letters dumb, and all things involved in Cimmerian darkneſs.—*Vid.* Barth. *de Libr. Legend. Diſſ.* 1. *p.* 5. *Sine libris Deus jam ſilet, juſtitia quieſcit, torpet medicina, philoſophia manca eſt, literæ mutæ, omnia tenebris involuta Cimmeriis.*

The elogiums which have been beſtowed on *books* are infinite: they are repreſented, "as the refuge of truth, which "is baniſhed out of converſation; as ſtanding counſellors, "and preachers, always at hand, and always diſintereſted; "having this advantage over oral inſtructors, that they are "ready to repeat their leſſon, as oft as we pleaſe."—*Books* ſupply the want of maſters, and even in ſome meaſure the want of genius and invention; and can raiſe the dulleſt perſons, who have memory, above the level of the brighteſt, without.—An author, who wrote not inelegantly, though in a barbarous age, ſums up all their praiſes.—*Vid.* Lucas *de Penna ap.* Morhoff *Polyhiſt. l.* 1. *c.* 3. *p.* 27. *Liber eſt lumen cordis, ſpeculum corporis, virtutum magiſter, vitiorum depulſor, corona prudentum, comes itineris, domeſticus amicus, congerro tacentis, collega & conſiliarius præſidentis, myrothecium eloquentiæ, hortus*

hortus plenus fructibus, pratum floribus distinctum, memoriæ penus, vita recordationis; vocatus properat, jussus festinat, semper præsto est, nunquam non morigerus, rogatus confestim respondet: arcana revelat, obscura illustrat, ambigua certiorat, perplexa resolvit, contra adversam fortunam defensor, secundæ moderator, opes adauget, jacturam propulsat, &c.

Perhaps their greatest glory is, the affection borne them by many of the greatest men of all ages: M. Cato *, the elder Pliny [a], the emperor Julian, and others are on record for an excessive devotion to books. The last has perpetuated his passion by some Greek epigrams in their praise. Richard Bury, bishop of Durham, and lord chancellor of England, has a treatise express on the *love of books* [b].—[a] *Vid.* Plin. Epist. 7. *l.* 3. [b] *Philobiblion, sive de Amore Librorum.* Fabric. *Bibl. Lat. Med. Ævi. T.* 1. *p.* 842. *seq.* Morhoff *Polyhist. l.* 1. *c.* 17. *p.* 190. Salmuth. *ad Pancirol. l.* 1. *tit.* 22. *p.* 67. Barth. *de lib. legend. diss.* 1. *p.* 1. *seq.*

* *M. Catonem vidi in bibliotheca sedentem multis circumfusum Stoicorum libris. Erat enim, ut scis, in eo inexhausta aviditas legendi, nec satiari poterat: quippe qui, ne reprehensionem vulgi inanem reformidans, in ipsa curia soleret legere, sæpe dum senatus cogeretur, nihil operæ reipublicæ detrahens.*—*Vid.* Cic. *de Divin. l.* 3. *n.* 11.

The ill effects objected to Books are, that they employ too much of our time and attention; engage us in pursuits of no use to the common-wealth, and indispose us for the functions of civil life; that they render men lazy, and prevent their exerting their own talents, by furnishing them on every occasion with things of the growth of others; and that our natural lights become weakened and extinguished, by inuring ourselves to see only with foreign lights: besides, that ill men are hereby furnished with means of poisoning the people and propagating superstition, immorality, enthusiasm, or irreligion, which will always spread faster, and be received more greedily than lessons of truth and virtue.—Many other things are added concerning the emptiness of *books*, and the errors, fables and follies they are fraught with; which, together with the multitude and perplexity of them, is such, that it may seem easier to discover truth in the nature and reason of things, than in the uncertainty and confusion of *books*.—Add, that *books* have turned the other instruments of knowledge out of doors, as experiments, observations, furnaces, and the like, without which the natural sciences can never be cultivated to purpose [a]; and that in mathematics, *books* have so far superseded the exercise of invention, that the generality of mathematicians, are now contented to learn the solution of problems from others; which is to relinquish the chief end of their science: since what is contained in mathematical *books*, is properly the history only of mathematics, not the science, art or talent of solving questions; which is hardly to be had from *books*; but only from nature and meditation.—[a] *Vid.* Bac. *de Augm. Scient. l.* 2. *Works, T.* 1. *p.* 61.

For the art of writing or composing Books, we have much fewer helps and instructions than for the art of speaking; though the former be the more difficult of the two; as a reader is not so easy to be imposed upon, but has better opportunities of detecting faults than a hearer.—A great cardinal, indeed, reduces an author's business to a few heads; were they but as easily practised as prescribed: "Let him consider who it "is writes, what, how, why, and to whom:" *Quis scribat, quid scribatur, quomodo, cur & ad quos.*—*Vid.* August. Valer. *de caut. in edend. libr.*

To write a good *book*, an interesting subject must be chosen, which is to be long, and closely meditated on; and of the sentiments which offer themselves, those which are already commonly known, are to be rejected: few or no digressions from the main point are to be allowed; quotations rarely made, and then only to prove some important truth, or embellish the subject with some beautiful and uncommon observation; never bringing an ancient philosopher on the stage to say what the meanest lacquey could have said as well; nor making a sermon, unless where the business is to preach. —*Vid. Nouv. Rep. Lett. T.* 39. *p.* 427.

The conditions required in a book, are, according to Salden, "Solidity, perspicuity and brevity:" the *first* will be best attained, by keeping the piece long by us, often reviewing and correcting it by the advice of friends: the *second*, by disposing the sentiments in a due order, and delivering them under proper and usual expressions: the *third*, by throwing every thing aside that does not immediately concern the subject.

Were these rules observed, it would scarce be possible for any, except an angel from heaven, to write many *books: vix totidem quot Thebarum portæ vel divitis ostia Nili.*—We should hear no more of those volatile authors, who throw off yearly six or eight *books*, for ten or twelve years running *; of those voluminous authors, who number their *books* by scores and hundreds †; nor of those childish authors, who publish *books* by that time they are able to speak ‖.

* Severin. Lintrupius, professor at Copenhagen, has given a catalogue of seventy-two *books*, which he composed within the compass of twelve years; containing six volumes in theology, eleven in ecclesiastical history, three in philosophy, fourteen on miscellaneous subjects, and thirty-eight on literary subjects.—*Vid.* Lintrup. *Reliq. Incend. Berg. ap. Nov. Lit.* Lubec. *an.* 1704. *p.* 247.

† Fa. Macedo, a Franciscan Friar, wrote according to his own testimony, 44 volumes, 53 panegyricks, 60 Latin speeches, 105 epitaphs, 500 elegies, 110 odes, 212 epistles dedicatory, 500 familiar epistles, *poemata epica juxta bis mille sexcenta:* (it is to be supposed he means 2600 poems in heroics or hexameters) and in fine 150000 verses.—*Vid.* Noris *Miles Macedon. ap. Jour. des Scav. T.* 47. *p.* 179.

‖ The young duke de Maine's works were published at seven years old, under the title of, *Oeuvres diverses d'un auteur de sept Ans*, Paris, 4to. 1685.—*Vid. Jour. des Scav. T.* 13. *p.* 7.—Dan. Heinsius published his notes on Silius Italicus so young, that he entitled them, his Rattles, *Crepundia Siliana.* Lugd. Bat. 1600. 16°.—Caramuel is even said to have written a *book* on the sphere, before he was old enough to go to school; and what is pleasant, he took it chiefly from Sacro Bosco's treatise *de Sphæra*, before he had learnt a word of Latin.—*Vid.* Baillet *Enfans Celebres, n.* 81. *p.* 300.—We may add, that Placcius assures us, he began to make his collections, while under the tutorage of his nurse, and when he had nothing to collect out of, but his nurse's prayer-*books*.—Placc. *de Art. Excerpt. p.* 190.

M. Cornet D. de S. used to say, that to write *books*, a man must either be very foolish or very wise [a]: there are doubtless many of both sorts in the number of authors; yet the majority seems to consist of those, who are neither the one or the other. The custom is much altered since the times of the ancients, who carried their scrupulousness in what relates to the composition of *books* beyond all that has been above expressed: so august was the idea they formed of a *book*, that nothing would suffice less than its being a treasure: *thesauros oportet esse, non libros*; no labour, no assiduity and exactness was thought enough to fit a work for the public view: every sentiment and expression was to be maturely weighed, and turned on all its sides; and not suffered to pass, unless every word were a pearl, and every page beset with gems. So that they put the reader in possession in a single hour, of what had cost them perhaps ten years intense thought and application.—Such were those *books*, which were reputed *cedro digni*, to be smeared over with cedar-juice, and thus rendered incorruptible, for the instruction of all future ages [b].—With us, the case is otherwise: the ambition of being an author possesses every body, even those who have nothing to say, or at most, only one thing, and that perhaps a trifle, and already said by a hundred others [c]: to furnish out a *book*, we have recourse to various arts, and stratagems; a formal method is first chalked out, which like a drag-net gathers all before it, old and new, common and uncommon, good, bad and indifferent, which we adopt with little choice; the chief attention being, with Albutius the rhetor, to say all on the subject we can, not merely all we ought [d]. —[a] *Vid.* Vign. *de Marv. ap.* Trev. *D. Univ. T.* 3. *p.* 1509. *voc.* Livre. [b] Salmuth. *ad Pancirol. P.* 1. *tit.* 42. *p.* 144. Guiland. *de Papyr. membr.* 24. Reimm. *Idea Syst. Ant. Liter. p.* 296. [c] Bartoli *de l' Huomo di Liter. P.* 2. *p.* 318. [d] Barthol. *lib. cit. diss.* 5. *Cum Albutio rhetore de omni causa scribere, non quæ debeant, sed quæ poterant.*

A modern author, let his subject be what it will, generally takes occasion to retail his whole stock of knowledge, then on hand: if he write, for instance, on the gout, as M. Aignan, he will give you the nature of all diseases, and their cures, and perhaps a system of physics into the bargain, and over and above many important doctrines of theology, and rules of morality [a]: if, on the building of Solomon's temple, as Caramuel, he will not confine himself to architecture, but treat of numerous matters relating to theology, mathematics, geography, history, grammar, &c. Insomuch, that if we may believe the author of a piece inserted in Caramuel's work, if God should permit all the sciences in all the universities in the world to be lost, they might be restored by means of this *book* alone [b].—[a] *Vid.* Aignan *Trait. de la Goute*, Par. 1707. 12°. *Jour. des Scav. T.* 39. *p.* 421, *seq.* [b] *Architect. civil recta y obliqua consid. en el templ de Jerus.* 3 *vol. folio.* Vegev. 1678. *Jour. des Scav. T.* 10. *p.* 348, *seq. Nouv. Rep. Lett. T.* 1. *p.* 103.

He sets out with a tedious preamble, perhaps foreign to the question; and proceeds on to a digression, which gives rise to a second; which carries him such a length, that we lose sight of him: he oppresses us with proofs of things that needed none; makes objections no body would have thought of, and to answer them is sometimes forced to make a dissertation in form, to which he gives a particular title, and to lengthen it out, subjoins the plan of some future work, wherein he will treat the point more at large. Sometimes he argues in form, accumulates syllogism on syllogism, and induction on induction; being careful to note that they are so many geometrical demonstrations. At length you come to a string of consequences, which you never expected; and after twelve or fifteen corollaries, wherein contradictions are not spared, you are surprized for the conclusion to find a proposition which had never been mentioned, or at least had been utterly put out of your head, or perhaps another which has no relation to the subject.

The subject of the *book*, in all probability, is some trifle; perhaps the use of the particle, *and*, or the pronunciation of

the Greek *eta*, or the praiſe of an aſs or a louſe, or a ſhadow, or folly, or idleneſs, or the art of drinking, or loving, or dreſſing; or the uſe and abuſe of ſpurs, or ſhoes, or gloves, or the like.—Suppoſe, for inſtance, it be the laſt, and let us ſee how a modern writer of note proceeds to make his *book*.—For method he takes that of the Lulliſts, and begins with the name and etymology of *glove*; which he gives not only in the language he writes in, but in all the languages he underſtands, or of which he has dictionaries in his ſtudy, oriental or occidental, living or dead; accompanying each with its reſpective etymon, and ſometimes too with its compounds and derivatives, and referring for more thorough knowledge to the ſeveral dictionaries from whence he took them; always, moſt religiouſly quoting chapter and page. From the name he proceeds at length to the thing, and paſſes with great pains and exactneſs through all the common places of arguments, as the matter, form, uſe, abuſe, adjuncts, conjuncts, disjuncts, *&c.* of gloves. On each of which he does not confine himſelf to give us what is new, ſingular, or ſome way uncommon, but thinks himſelf obliged to exhauſt his ſubject, and give us all he can find. Thus gloves, he informs us, preſerve the hands from cold; and proves, that if we go much in the ſun without them, our hands will be tanned. He goes on next to ſhow, how chaps on the hands will enſue in winter, if we leave our gloves at home; and how painful as well as unſightly a thing chapped hands are [a].—Yet muſt this be allowed an author of merit, and far from being ſingular in his method of writing. In reality, we all do the ſame thing, ſome in a greater degree, and ſome in a leſs, with good Mr. Nicolai.—[a] *Vid.* Nicolai *Diſquiſ. de Chirothecarum Uſu & Abuſu. Gieſſ.* 1702. 12*mo. Nouv. Rep. Lett. Aout.* 1702. *p.* 158. *ſeqq.*

The form or method is the ſpirit or archeus that directs all: one writer ſuppoſes his *book* to be a *candle-ſtick*, and every chapter a ſocket [a]; another reduces his work to the form of a *pair of folding-doors*, which open into two parts, to admit the reader into a dichotomy [b]. M. Waltherus conſiders his *book*, *officina biblica*, as a *ſhop*, and divides or ranges the materials of it accordingly, on ſo many *ſhelves*, treating his reader throughout as a cuſtomer. Another turns his *book* into a *tree*, with its trunk, branches, flowers, and fruits; the twenty-four letters of the alphabet being the *branches*; the ſeveral words the *flowers*, and 120 ſermons the *fruit* [c].—[a] *Vid.* Wolf. *Bibl. Hebr. T.* 3. *p.* 987. [b] R. Schabtai *Labra Dormientium ap.* Wolf. *lib. cit. Item T.* 1. *in præf. p.* 12. [c] Caſſian. *a S. Elia, Arbor omnium opinionum moralium, quæ ex trunco pullulant, tot ramis quot ſunt literæ alphabeti, cujus flores ſunt verba, fructus ſunt* 120 *conciones*, &c. *Venet.* 1688. *fol. V. Giorn. de Parma, an.* 1688. *p.* 60.

For the origin of BOOKS, we have nothing that is clear: the *books* of Moſes are doubtleſs the oldeſt of all that are extant [a]; but there were *books* before thoſe of Moſes, who cites ſeveral [b]: Scipio Sgambati, and others [c] even talk of *books* before the deluge, written by the patriarchs Adam, Seth, Enos, Cainan, Enoch *, Methuſalem, Lamech, Noah and his wife, alſo by Ham, and Japhet his wife; beſides others by the dæmons or angels; of all which ſome moderns have found enough to fill an antediluvian library: but they appear all, either the dreams of idle writers, or the impoſtures of fraudulent ones.—[a] *Vide Mem. Acad. R. Inſcr. T.* 6. *p.* 32. [b] *Id. ibid. T.* 8. *p.* 18. [c] Sgambat. *Archiv. Vet. Teſt.* Fabric. *Cod. Pſeudep. V. Teſt. paſſim.* Heuman. *Via ad Hiſt. Liter. c.* 3. §. 3. *p.* 29.

* A *book* of Enoch is even cited in the epiſtle of Jude, *v.* 14, and 15: from which ſome endeavour to prove the reality of antediluvian writings; but the *book* cited by that apoſtle is generally allowed both by ancient and modern writers to be ſpurious.—*Vid.* Saalbach. *Sched. de Libr. Vet.* §. 42. Reimm. *Idea Syſt. Ant. Liter. p.* 233.

Of profane *books*, the oldeſt extant are Homer's poems, which were even ſo in the time of Sextus Empiricus [a]; though we find mention in Greek writers of about ſeventy others prior to Homer, as Hermes, Orpheus, Daphne, Horus, Linus, Muſæus, Palamedes, Zoroaſter, *&c.* but of the greater part of theſe, there is not the leaſt fragment remaining, and of the others the pieces which go under their names, are generally held by the learned ſuppoſititious.—F. Hardouin goes farther; charging all the ancient *books*, both Greek and Latin, except Cicero, Pliny, Virgil's georgics, Horace's ſatires and epiſtles, Herodotus, and Homer, as ſpurious, and forged in the thirteenth century, by a club of perſons under the direction of one Severus Archontius [b].—[a] *Vid.* Fabric. *Bibl. Græc. l.* 1. *c.* 1. §. 1. *T.* 1. *p.* 1. [b] *Id. ibid.* §. 6 *p.* 4. Hardouin. *de Numm. Herodiad. in Proluſ. Act. Erud. Lipſ. an.* 1710. *p.* 70.

Among the Greeks, it is to be obſerved, the oldeſt *books* were in verſe, which was prior to proſe [a]: Herodotus's hiſtory is the oldeſt book extant of the proſaic kind [b].—[a] *Vid.* Strab. *Geogr. l.* 1. Heuman. *lib. cit.* §. 20. *p.* 50. [b] *Id. ibid.* §. 21. *p.* 52. See POETRY, *&c.*

The multitude of BOOKS has been long complained of: they are grown too numerous, not only to procure and read, but to ſee, learn the names of, or even number. Solomon, three thouſand years ago complained, that "of writing *books* there "was no end." But modern writers cannot keep within terms of ſo much moderation: "You may ſooner empty the "ſea, ſays one, than exhauſt the immenſe ocean of *books*, "or number the ſands on the ſhore than the volumes ex- "tant. They are not to be told, ſays another, though like "an inhabitant of Mahomet's paradiſe, a man had ſeventy "thouſand heads, and to each head ſeventy thouſand mouths, "and to each mouth ſeventy thouſand tongues, which each "ſpoke ſeventy thouſand languages."—Yet how is the number continually increaſing! When we conſider the multitude of hands employed in writing, of copiſts throughout the eaſt in tranſcribing, and of preſſes in the weſt continually pouring in freſh quantities, it ſeems a kind of miracle the world ſhould be able to contain them [a]! England has more to fear on this ſcore than other countries; ſince beſides our own produce, we have for ſome years paſt, drained our neighbours. The Italians and French make great complaints that their beſt *books* are carried out of the country by foreigners: "It ſeems, ſay they, to be the fate of the provinces which "compoſed the ancient Roman empire, to be plundered by "the northern nations: anciently they conquered and took "poſſeſſion of the country; of late, they leave the inhabi- "tants their lands, and only take their learning." *Commigrant ad nos quotidie* (cries Sig. Facciolati) *callidi homines pecunia inſtructiſſimi & præclaram illam muſarum ſupellectilem, optima volumina, nobis abripiunt. Artes etiam, ac diſciplinas paulatim abducturi alio, niſi ſtudio & diligentia reſiſtatis* [b].—[a] *Vid.* Barth. *de Libr. legend. diſſ.* 1. *p.* 7. Heuman. *Via ad Hiſt. Liter. c.* 6. §. 43. *p.* 338. *ſeqq.* [b] Facciolat. *Orat.* 1. *Mem. de Trev. an.* 1730. *p.* 1793.

Elementary *books* ſeem the leaſt to need to be multiplied; ſince a good grammar, or dictionary, or inſtitutions of any kind, ſeems hardly to admit of a ſecond in one age, or even many ages. Yet it has been obſerved, that in France alone, within the compaſs of thirty years, there have appeared no leſs than fifty new elements of geometry, as many treatiſes of algebra, as many of arithmetic, and as many of ſurveying and meaſuring; it is added, that within the ſpace of fifteen years, there have been above a hundred French and Latin grammars publiſhed in the ſame country; and of dictionaries, abridgments, methods, *&c.* in proportion: all which are but an eternal round of the ſame things, the ſame ideas, ſame diſcoveries, ſame truths, ſame falſehoods.—*Vid. Mem. de Trev. an.* 1734. *p.* 804.

The beſt of it is, we are not obliged to read them all: Thanks to providence, the good biſhop Caramuel's ſcheme miſcarried, which was, to write about an hundred volumes in folio, and then prevail on the civil and ſpiritual powers to oblige all their ſubjects to read them. Ringelberg had laid the ſchemes of no leſs than a thouſand ſeveral *books*, which he alone was to have compoſed, had he lived long enough [a]: and apparently would not have been leſs eager in obtruding them on the public. Had the ſame thought entred Hermes Triſmegiſtus, who according to the account given by Jamblichus, wrote 36525 *books*, people would have had much more reaſon to complain of the multitude of *books* than they now have.—[a] *Vid.* Baill. *Enfans Celebr. ſec.* 12. *Jugem. des Scav. T.* 5. *P.* 1. *p.* 373.

In reality, there are few of the immenſe number of *books* which deſerve ſeriouſly to be ſtudied: for the reſt, part of them are only to be occaſionally conſulted, and the reſt read for amuſement. A mathematician, for inſtance, ought not to be entirely ignorant of what is contained in the mathematical *books*; but then a general knowledge is ſufficient, which may eaſily be had by running over the chief authors; out of whom references may be made, directing to the places where they may be found, when wanted. For there are many things which are much better preſerved in *books* than in the memory; as aſtronomical obſervations, tables, rules, theorems, proportions, and in fine whatever does not ſpontaneouſly adhere to the memory, when once known. For the leſs we croud that faculty, the readier and freer will the wit remain for inventing.—*Vid.* Cartes *Epiſt. ad Hoghel. ap. Hook Phil. Collect.* N° 5. *p.* 144. *ſeq.*

Thus, a few *books* well-choſen and thoroughly ſtudied, may ſuffice: many have held the bible alone ſufficient for all the purpoſes of knowledge; others, the alcoran: Cardan requires but three *books* for any perſon, who does not make a profeſſion of learning; one, to contain the lives and acts of the ſaints and other virtuous men; another to amuſe the mind with pleaſing verſes; and a third to teach the rules of civil life.—Some have only propoſed two *books* for our ſtudy, *viz.* that of ſcripture, which diſcovers the will of God; and that of the creation, which ſhews his power; the latter of which is the key of the former [a].—But this, under pretence of retrenching ſuperfluities, ſeems to be running into the oppoſite extreme. The buſineſs is, rather to make a due choice among the multitude, of a number of good ones. —It may be added, that as knowledge is naturally advantageous, and as every man ought to be in the way of information, even a ſuperfluity of *books* is not without its uſe, ſince hereby they are brought to obtrude themſelves on us, and engage us when we had leaſt deſign.—This advantage, an ancient father obſerves, we owe to the multiplicity of

books

books on the same subject, that one falls in the way of one man, and another best suits the level, or the apprehension of another.—"Every thing that is written, says he, does "not come into the hands of all persons: perhaps some "may meet with my *books*, who may hear nothing of others "which have treated better of the same subject. It is of "service therefore, that the same questions be handled by "several persons and after different methods, though all on "the same principles, that the explications of difficulties, "and arguments for the truth, may come to the know-"ledge of every one, by one way or other [b]."—Add, that the multitude is the only security against the total loss, or destruction of *books:* it is this has preserved them against the injuries of time, the rage of tyrants, the zeal of persecutors, and the ravages of barbarians; and handed them down, through long intervals of darkness, and ignorance, safe to our days [c].—*Solaque non norunt hæc monumenta mori.*—[a] *Vid.* Bac. *de Augment. Scient. l.* 1. *Works T.* 1. *p.* 49. [b] August. *de Trin. l.* 1. *c.* 3. [c] Barth. *lib. cit. Diff.* 1. *p.* 8. *seq.*

Chusing and judging of BOOKS.—Authors are not well agreed on the conditions necessary to denominate a *book*, *good.* Some require only good sense in the writer, and an acquaintance with the subject; others with Salden demand solidity, perspicuity, and brevity: others think intelligence and exactness enough: the generality of critics seem to hold, that none of the perfections, which the human mind is capable of, ought to be wanting: but on this footing there is scarce any such thing as a good *book*; at least none which they themselves will all agree to be such [a]. The more reasonable allow a *book* to be very good, which has but few faults; *optimus ille, qui minimis urgetur:* at least where the good things in it exceed the bad and indifferent. Nor is a *book* to be called *bad*, where the indifferent is the prevailing part, and the good and bad are proportioned equally [b].—[a] *Vid.* Baillet. *Jugem. des Scav. T.* 1. *P.* 1. *c.* 6. *p.* 19. *seq.* [b] Honor. *Reflex. sur les Regl. de Crit. diff.* 1.

Since the fall of the Latin tongue, authors do not seem so much to aim at the glory of writing well, as of writing good things: so that a *book* is commonly allowed for good, if it be happily conducted to the end which the author aimed at; whatever other faults it may have: thus a *book* which is not written on account of style, may be good, though the style be naught [a]. Thus an historian, who is well informed, faithful, and judicious; a philosopher, who reasons justly, and on sound principles; a divine who is orthodox, and departs not from scripture and antiquity; will be allowed good in their kinds, though they be faulty in the less material things.—[a] *Vid.* Baillet. *lib. cit. c.* 7. *p.* 24. *seq.*

And thus most *books*, in one respect or other, will be found good and useful; so that the choice seems difficult; not so much what to take, as what to reject [a]. The elder Pliny used to say, there was no *book* so bad, but some good might be had from it: *Nullum librum tam malum esse, qui non aliqua ex parte prosit* [b]. But there are degrees of goodness [c]; and in many *books*, the good is so thin sown, that it is hardly worth the gathering [d]; or hid so deep, or so beset with thorns, that it will not quit the cost of digging. Virgil could gather gold out of Ennius's dunghil; but every body has not the zeal, or the skill and attention necessary to do the like.—[a] *Vid.* Hook. *Collect.* N° 5. *p.* 127, & 135, *seq.* [b] Plin. *Epist.* 5. *l.* 3. [c] Reimman. *Bibl. Acroam. in Præf.* §. 7. *p.* 8. *seq.* [d] Sacchin. *de Rat. Libr. Legend. c.* 3. *p.* 10. *seq.*

It is better judged in those who recommend a small number of the best *books*; advising us to read much, but not many: *multum legendum esse, non multa* [a]. But how is the choice to be made?—[a] *Vid.* Plin. *Epist.* 9. *l.* 7.

To *judge of a book*, those who have treated of the subject, direct us to observe the title, the author's or editor's name, the number of the edition, the place where, and year when it was printed (which in old *books* is frequently marked at the end,) and the printer's name, especially if he be a celebrated one [a]: proceed thence to the preface, and look for the author's design, and the occasion of his writing: consider also his country, (each nation having its peculiar genius [b]) and the person by whose order he wrote, which may sometimes be learned from the dedication: if his life be annexed, run it over, and note his profession, what rank he was of, and any thing remarkable that attended his education, studies, conversation, or correspondences with learned men: not forgetting the elogies which have been given the author, which often occur at the beginning, or even any critique or censure, especially if made by a man of judgment. If the preface do not give an account of the method of the work, run briefly over the order and disposition of it, and note what points the author has handled, observe whether the things and sentiments he produces be trite and vulgar, or solid and fetched from greater depths. Note, whether he go in the common road, or make any innovation, and introduce any new principle. Observe also his method, whether it be a dichotomy, or according to the four causes, or any other more peculiarly adapted to the subject [c].—[a] *Vide* Barth. *Diff.* 4. *p.* 93. *seq.* [b] Baill. *c.* 7. *p.* 228. *seq.* [c] Struv. *Introd. ad Notit. Rei Liter. c.* 5. §. 2. *p.* 338. *seq.*

But it is a small number of *books*, we have opportunity of thus judging of by perusing them; beside, that when we have read a *book* over, the judgment comes too late for many purposes: it seems necessary therefore to have other indications, whereby to prevent our being at the charge of procuring, or the pains of perusing a worthless *book:* divers rules of this kind are given by Baillet [a], Struvius [b], Stollius [c], and others; which though, in reality, no more than presumptions, and frequently liable to be falsified [d], are not without their use. The journalists de Trevoux object to them all: "The shortest way, say they, to judge of a *book* "is to read it, if you be qualified in the subject, otherwise "to refer yourself to those who are so [e]." Heuman is somewhat more explicit; "making it a mark that a *book* is "good, when it is esteemed by persons intelligent in the "subject it treats of; and when those who commend it re-"ceive no advantage from the applause they bestow on it, "nor are leagued with the author in any cabal, for espou-"sing any particular principle, system, or party in religion "or learning [f]."—[a] *Vid.* Baillet. *Jugem. des Scav. T.* 1. *P.* 2. *p.* 121. *seq.* [b] Struv. *lib. cit. c.* 5. §. 3. *p.* 390. [c] Stoll. *Introd. Hist. Liter. P.* 1. §. 11. *p.* 9. [d] Budd. *de Criteriis boni Libri passim.* Walc. *Hist. Crit. Ling. Lat. c.* 7. §. 6. *p.* 320. [e] *Mem. de Trev. an.* 1712. *art.* 17. [f] Heuman. *Consp. Reipubl. Liter. c.* 6. §. 11. *p.* 280. *seq.*

But more particularly, it is an indication that a *book* is good, 1°. If the author be known to excel in that talent more immediately necessary for such a subject; or have already published any thing on the same that is esteemed. Thus we may conclude, that Julius Cæsar will teach us the art of war better than Peter Ramus; Cato, Palladius, and Columella, agriculture better than Aristotle; and Cicero oratory better than M. Varro [a]: add, that it is not enough the author be skilled in the faculty, but that he be so in the particular branch of it he treats of; some, for instance, excel in the civil law, yet not in the public law: Salmasius proved himself an excellent critic in his *Exercitat. Plinian.* but came much inferior to Milton in his *Defensio Regia* [b]. 2°. If the *book* be on a subject that requires great reading, it may be presumed good, if the author have a copious library, or can have access to one; or lived in a place where books were not wanting: though here is a danger too of running into excess of quotations, especially, says Struvius, if the author be a lawyer [c]. 3°. A *book* which took up a long time in composing, cannot often fail of being good: Thus Villalpandus's commentary on Ezekiel was a work of forty years: Baronius's annals of thirty; Gousset's Hebrew commentaries of thirty; Paulus Æmilius employed the same time in his history; and Vaugelas in his translation of Q. Curtius. Lamy was thirty years in his treatise of the temple: Em. Tesauro forty years in his *Idea Argutæ dictionis:* and the jesuit Carra forty years in his poem called *Columbus:*—It is true, they who are so long on the same subject, rarely bring it out uniform and methodical; besides, that they are apt to flag and grow cold in so long a pursuit: men cannot attend to the same thing for so many years without being tired; which will be apt to shew itself in the composition: and hence it has been observed that in those large *books* so long about, the beginnings glow, the middle-parts are lukewarm, the latter ends frigid, *apud vastorum voluminum auctores, principia fervent, medium tepet, ultima frigent* [d]. But then they must excel in the materials, which have been gathering for so long a tract of time: this is particularly observed of the Spanish writers; and is at least more commendable, than the levity and precipitancy of some of their neighbours. Not but the public are sometimes disappointed in their expectations, from writers who are so long in labour; as was the case in Chapelain's poem *la Pucelle*, in the finishing of which he spent thirty years: and concerning which we have that epigram of Monmor:

Illa Capellani dudum expectata puella,
Post tanta in lucem tempora prodit anus.

Some, it is certain, have carried their scrupulousness to an excess, as Paulus Manutius, who often spent three or four months in writing a single epistle; and Isocrates, who was three olympiads in writing one panegyric [e]. 4°. *Books* on points of doctrine by eclectic writers, are to be presumed better than those writ by the retainers to particular sects. 5°. The age of a writer may give us some indication: *books*, which require labour, are usually better performed by younger persons, than those who are far advanced in years: thus there is more life in Luther's former pieces, than in those he wrote a little before his death: strength decays, business encreases, we trust too much to our judgment, and are not scrupulous enough in making enquiries [f]. 6°. Another indication may be taken from the author's state and condition: Thus history written by a person who was an eye-witness of what he relates, or is concerned in public affairs, or has access to the public records, or other monuments, from whence intelligence may be drawn; or who is not byassed by party, or hired by any great man, will be supposed to be good. Thus Sallust and Cicero were well able to write the history of Catiline's conspiracy, as having some concerns in it; d'Avila, de Comines, Guicciardin [g], Clarendon, &c. were

present

preſent in the civil wars they deſcribe: Xenophon having an employment in the Spartan ſtate, has treated excellently of that commonwealth: and Amelot de la Houſſaye by living long at Venice, was enabled to explain the ſecrets of their policy: Camden wrote annals of the affairs of his own time; Thuanus had correſpondences with the beſt writers in every country; and Puffendorf had acceſs to the public archives. So, in practical divinity, more regard is due to thoſe who have actually diſcharged the office of paſtors than to others; and in literary matters, we give credit to thoſe who have the direction of libraries. 7°. The time or age wherein the author lived may give ſome light; every age having, according to Barclay, its peculiar genius and excellency [h].—[a] *Vid.* Barth. *de lib. legend. Diſſ.* 2. *p.* 45. [b] Struv. *lib. cit. c.* 5. §. 3. *p.* 390. Budd. *Diſſ. de criter. boni libri*, §. 7. *p.* 7. Heuman. *Conſp. Reipub. Liter. p.* 152. [c] Struv. *lib. cit.* §. 4. *p.* 393. [d] Miſc. *Lipſ. T.* 3. *p.* 287. [e] Struv. *lib. cit.* §. 5. *p.* 396. *ſeq.* Baill. *c.* 10. *p.* 396. [f] Baill. *c.* 9. *p.* 378. Barth. *Diſſ.* 2. *p.* 43. *ſeq.* Struv. §. 6. [g] *Id. ibid. p.* 45. [h] Struv. *lib. cit.* §. 15. *p.* 430. *ſeq.* & 404. *ſeq.* Baill. *c.* 1. *p.* 121. *ſeq.* Heuman. *Via ad Hiſt. Liter. c.* 7. §. 7. *p.* 356.

Some judge by the bulk or ſize of *books*; following the grammarian Callimachus's rule, that every great *book* is of courſe an ill one, μεγα βιβλιον, μεγα κακον [a]: a ſingle leaf of the Sibyl, was doubtleſs preferable to the vaſt annals of Voluſius: yet Pliny's obſervation will nevertheleſs hold true, that "a "good *book* is ſo much the better by how much it is bigger." *Bonus liber melior eſt quiſque quo major* [b]. Martial gives us a remedy againſt the largeneſs of a *book*, where that is the only complaint: read but a little of it.

Si nimius videar, ſeraque coronide longus
Eſſe liber, legita pauca, libellus ero.

Yet is the ſmallneſs of a *book*, a real preſumption in its favour: he muſt be a poor author who cannot furniſh a pamphlet, or looſe ſheet with things curious, and written with ſpirit: but to ſupport the ſame through a volume in folio, requires other-guiſe funds. In reality, in large *books* it is allowed a man to be ſometimes dull: a heavy preamble is expected, and a ſeries of words of courſe, ere you come to the buſineſs; in the proſecution of which many nodding places are likewiſe allowed; but ſmaller pieces are indulged none of theſe privileges: they muſt immediately fall into their ſubject, and treat every part of it in a lively manner: the matter muſt be thrown cloſe together, and either be new in itſelf, or in the turn which is given it.—Were the beſt authors of volumes in form retailed to the public piecemeal, we ſhould complain of many flat expreſſions, trivial obſervations, beaten topics, and common thoughts, which paſs well enough off in the lump [c].—[a] *Vid.* Barth *lib. cit. diſſ.* 3. *p.* 62. *ſeqq.* [b] Plin. *Epiſt.* 20. *l.* 1. [c] Addiſ. *in Spectat.* N° 124.

See further concerning *books*, in the writers on literary hiſtory, libraries, ſtudies, learning, arts and ſciences; more eſpecially in Salden [a], Bartholin [b], Hodanus [c], Sacchinus [d], Baillet [e], Buddeus [f], Saalbach [g], Putherbeus [h], Raynaud [i], Schufner [k], Lauffer [l], Schwartzius [m], Crenius [n], and others, who have written treatiſes expreſs concerning *books*.—[a] Chriſt. Liberius, *i. e.* Gul. Saldenus, βιβλιοφιλια, *ſive de libris ſcribendis & legendis*. Ultraj. 1681. 12°. & Amſtel. 1688. 8°. Struv. *Introd. ad Hiſt. Liter. c.* 5. §. 21. *p.* 454. [b] Th. Cenſors of BOOKS. *Privileges of* BOOKS. } See the article { CENSOR. PRIVILEGE.

Common place BOOK. *Text* BOOK. } See the article { COMMON PLACE. TEXT.

BOOK, is alſo uſed for a part or diviſion of a volume, or large work. See SECTION, &c.

In this ſenſe we ſay the *book* of Geneſis, the firſt *book* of Kings, the five *books* of Moſes, &c.—The Digeſt is contained in fifty *books*, the Code in twelve *books*.

Books are uſually ſub-divided into chapters, ſometimes into ſections, or paragraphs: accurate writers quote chapter and *book*. See CHAPTER, &c.

BOOK, is alſo uſed for a liſt or catalogue of perſons names.—Such among the ancients were the cenſorial *books*, *libri cenſorii*; being tables or regiſters containing the names of all thoſe who were cenſed or taxed under Auguſtus. Tertullian aſſures us, that our Saviour's name was found in the cenſorial *books* of Auguſtus.—*Vid.* Tertul. *adv. Marcion. l.* 4. *c.* 7. *De cenſu Auguſti quem teſtem fideliſſimum Dominicæ nativitatis Romana archiva cuſtodiant. Vid.* Lomei *de Biblioth. p.* 104. Pitiſc. *L. Ant. T.* 2. *p.* 84. See alſo CENSUS.

BOOK-SELLER, a profeſſed trader in books; whether he print them himſelf, or procure them to be printed by others, for ſale. See BOOK.

Bookſellers, among us, are the ſame with *bibliopolæ*, among the ancients, whoſe office was diſtinct from that of *librarii*. See LIBRARII. Petty dealers, or venders of ſmall ware, like our publiſhers, were more particularly denominated *libelliones*; whence Statius,—*de capſa miſeri libellionis.—Vid.* Stat. *Sylv. l.* 4. *Carm.* 9. *v.* 21. *Fabr. Theſ. p.* 1395.

Authors frequently complain of the arts of *bookſellers* [a]: lord Shafteſbury gives the proceſs of a literary controverſy blown up by *bookſellers* [b]. The publication of books depends much on the taſte and diſpoſition of *bookſellers*: among the German writers we find perpetual complaints of the difficulty of procuring *bookſellers*; many are forced to travel to the book-fairs at Francfort, or Leipſic, to find *bookſellers* to undertake the impreſſion of their works: at Rome, the Argiletum was the mart of books, as Paul's Church-yard, or Fleetſtreet among us: whence that of Martial [c],

Argiletanas mavis habitare tabernas,
Cum tibi, parve liber, ſcrinia noſtra vacent.

[a] *Vid.* Schoettg. *diſſ. de librar. & biblioph.* Saleng. *mem. de liter. T.* 1. *p.* 174. [b] *Charact. T.* 3. *p.* 10. *ſeqq. Item p.* 15. *ſeqq. Item p.* 27. [c] *Vid.* Martial. *Epig. l.* 1. *ep.* 4. *v.* 1.

The fairs of Francfort and Leipſic are famous for the reſort of *bookſellers*, not only from all parts of the empire, but Holland, Flanders, &c. They have each their ſhop or warehouſe, over which is inſcribed the name of ſome celebrated *bookſeller* of former times; *officina Elzeviriana*, *Frobeniana*, *Morelliana*, *Janſoniana*, &c. A like conceit has taken ſome London *bookſellers*, to inſcribe over their door, *bibliopolium*, as if people could not know a ſhop to be a *bookſeller*'s without a Latin name. Even ſtall-men dignify their ſtand with *bibliopolium*; and Moorfields may probably, ere long, be ſurrounded with *bibliopolia*.

Formerly, the offices of *bookſellers* and printers were united in the ſame perſons [a]. See PRINTER.—Labbe [b] gives a liſt of learned *bookſellers*; moſt of whom were alſo authors.—Of late days, *bookſellers* have drawn their buſineſs into leſs compaſs, and leaving the labour of compoſing books to one ſet of perſons, and that of printing them to another, content themſelves with the gainful part; thus miniſtring to the republic of letters not with the head, or the hand, but the purſe only. In which reſpect, not to mention ſome of our own *bookſellers*, the Vander Aa's at Leyden, Gleditſch's and Fritſch's at Leipſic, Mortier's and Wetſtein's at Amſterdam, and Halma's at Utrecht [c], though much below the Stephens's, Aldus's, Vaſcoſan's, Frobenius's, and Morel's, have nevertheleſs acquired a juſt fame.—[a] *Vid.* Struv. *Introd. in notit. Rei Literar. c.* 11. §. 15. *p.* 930. Thurman. *Bibl. Acad. p.* 56. *ſeq.* [b] Labbe *Biblioth. Biblioth. p.* 233. [c] Struv. *lib. cit.* §. 38. *p.* 953.

The chief ſcience of *bookſellers*, is the βιβλιογνωσια, or knowledge of books; we mean of the titles, different editions, prices and ſcarcity of books, without regard to their contents, or qualities, otherwiſe than as theſe affect the ſale of them.—*Vid.* Struv. *Introd. in notit. Rei Literar. c.* 1. §. 1. *p.* 1. *ſeq.* Lang. *Inſt. Stud. Theol. c.* 1. *memb.* 2. *p.* 98. *ſeq.* See alſo the article BOOK.

An acquaintance with the *bookſellers* marks or ſigns, frequently expreſſed on the title-pages of their books, is of ſome uſe; by reaſon many books, eſpecially in the laſt century, have no other deſignation either of printer, *bookſeller*, or even city.—The *anchor* then, is the mark of Raphelengius at Leyden, and the ſame with a *dolphin* twiſted round it, of the Manutii at Venice and Rome; the *Arion* denotes a book printed by Oporinus at Baſil; the *caduceus*, or *pegaſus*, by the Wechelius's at Paris and Francfort; the *cranes*, by Cramoiſy; the *compaſs*, by Plantin at Antwerp: the *fountain*, by Vaſcoſan at Paris; the *ſphere* in a balance, by Janſon or Blaew, at Amſterdam; the *lilly*, by the Junta's at Venice, Florence, Lyons and Rome; the *mulberry-tree*, by Morel at Paris; the *olive-tree*, by the Stephens's at Paris and Geneva, and the Elzevirs at Amſterdam and Leyden; the *bird between two ſerpents*, by the Frobenius's at Baſil; the *truth*, by the Commelins at Heidelberg and Paris; the *Saturn*, by Colinæus; the *printing-preſs*, by Badius Aſcenſius, &c.—*Vid.* Baill. *Jugem. des Scav. T.* 1. *P.* 2. *p.* 91. *ſeqq.*

Bookſellers are a kind of agents, or curators in the republic letters: in many places, they are ranked among the members of univerſities, and entitled to the privileges of ſtudents; as at Tubingen, Saliſburg, and Paris [a], where they have always been diſtinguiſhed from the vulgar and mechanical traders, and exempted from divers taxes and impoſitions laid on other companies [b].—[a] *Vid.* Fritſch. *diſſ. de bibliop. c.* 7. §. 1. *ſeqq.* [b] Savar. *D. com. T.* 2. *p.* 535. *ſeq. voc.* Libraire.

The

The traffic of books was anciently very inconſiderable; inſomuch that the book-merchants both in England, France, Spain, and other countries were diſtinguiſhed by the appellation *ſtationers*, as having no ſhops, but only ſtands or ſtalls in the ſtreets, where they expoſed their wares to ſale.—*Vid.* Du Cang. *Gloſſ. Lat. T.* 4. *p.* 951. *voc.* Stationarii.

During this ſtate, the civil magiſtrate took little notice of the *bookſellers*; leaving the government of them to the univerſities, to whom they were ſuppoſed more immediately retainers: who accordingly gave them laws and regulations, fixed prices on their books, examined their correctneſs, and puniſhed them at diſcretion.—But when by the invention of printing, books and *bookſellers* began to multiply; it became a matter of more conſequence; and the ſovereigns took the direction of them into their own hands; giving them new ſtatutes, appointed officers to fix prices [a], and grant licences, privileges [b], &c.—[a] *Vid.* Fritſch. *diſſ. de bibliop. c.* 4. [b] *Id. ibid. c.* 5. Thurman. *bibl. acad. p.* 10.

Chevillier ſhews, that the univerſity of Paris had formerly the ſole power of creating and appointing *bookſellers*, who were to take an oath to the univerſity; and were reputed part of the academical body, and as ſuch entitled to the exemptions of the other members thereof. They were to give ſecurity to the univerſity for their behaviour, and produce atteſtations of their capacity for the diſcharge of their office: the univerſity alſo depoſed and expelled them at diſcretion: they were obliged to appear at all aſſemblies of the univerſity, when ſummoned, and aſſiſt at the public proceſſions thereof: they were obliged to lend their books to be read, or even copied by ſuch as were diſpoſed to borrow, on certain conditions preſcribed by the univerſity. If they kept any books by them which were not correct, the univerſity puniſhed them: they were not allowed to buy any book of a ſtudent without leave of the rector: nor were they allowed to gain above four deniers in a livre, by any copies ſold to the members of the univerſity. Every *bookſeller* was obliged to have a catalogue of all his books hung up in the ſhop, with the prices, as rated by the univerſity: no *bookſeller*, who had not taken the oaths to the univerſity, might ſell a book of above ten ſols value.—*Vid.* Chevill. *diſſ. de l'orig. de l'imprim. l.* 4. *Jour. des Scav. T.* 23. *p.* 240. Savar. *D. Com. T.* 2. *p.* 530. *ſeq. voc.* Libraire.

This ſtate laſted from the thirteenth century till the invention of printing, and even till the end of the fifteenth century; during which time there were only allowed twenty-four *bookſellers*, two binders, two illuminers, and two ſworn book-writers, or copiſts.—But from that time the kings of France began to take cognizance of them: Lewis XI. thought fit to preſcribe ſome new regulations in 1467: under Francis I. the *bookſellers* were brought wholly under the royal authority, and received ſtatutes from the king.—*Vid.* Savar. *lib. cit. p.* 531.

Ahaſ. Fritſch, chancellor of Jena, has a diſſertation expreſs concerning *bookſellers*, *de bibliopolis*, but it is a jejune piece, and beſides, half-filled with paſſages in High Dutch untranſlated: what we find in it any way curious, is ſome queſtions and caſes, between *bookſellers* and authors, which he diſcuſſes on the principles of the Imperial and Saxon laws; as,—whether any copy-money be due to an author, who has not been able to finiſh his book by reaſon of the difficulty of it?—whether a *bookſeller*, who printed the firſt edition, be entitled to the refuſal of the ſecond?—Whether new copy-money be due from the *bookſeller* to an author on a new edition of a book?—Whether a *bookſeller* may reprint a book without the knowledge and conſent of the author?—Whether a number of copies be due to the author over and above the copy-money? which he reſolves in the affirmative.—And whether a *bookſeller* may ſeize his books unpaid for, in a ſtudent's cloſet? which he ſolves in the affirmative [a].—See further concerning *bookſellers*, in the writers on BOOKS and PRINTERS.—More eſpecially in Schoettgenius [b], de la Caille [c], Chevillier [d], and others [e], who have written expreſsly on the ſubject.—[a] *Vid.* Fritſch. *tract. de Typogr. & Bibliopolis*, &c. Jen. 1675. 4°. *diſſ.* 2. *c.* 6. [b] Chriſt. Schoettgenii *diſſ. de Librariis & Bibliopolis antiquorum.* Lipſ. 1710. 4°. A notitia of it is given in Reimm. *Idea ſyſt. antiq. liter. p.* 60. [c] Jean de la Caille, *Hiſtoire de l'imprimerie & de la libraire, juſque en* 1689. Par. 1689. 4°. An extract of which is given in *Journ. des Scav. T.* 17. *p.* 467. *ſeqq.* [d] And. Chevillier *l'Origine de l'Imprimerie.* Par. 1695. 4°. An extract of it is given in *Jour. des Scav. T.* 23. *p.* 223. *ſeqq. Item p.* 235. *ſeqq.* [e] Fabric. *Bibl. Antiq. c.* 19. §. 7. *p.* 607. & Thurm. *Bibl. Acad. p.* 10. *Item p.* 56.

BRIDGE, an edifice either of ſtone or timber, conſiſting of one, or more arches erected over a river, canal, or the like, for the conveniency of croſſing, or paſſing over from one ſide to the other. See RIVER, ARCH, &c.

A *bridge* may be conſidered as a road over water. See ROAD.

Janus is made, by ſome learned men, the firſt inventor of *bridges*, as well as of ſhips, and crowns: their reaſon is, that in ſeveral ancient Greek, Sicilian, and Italian coins, there are repreſented on one ſide a Janus, with two faces, and on the other, a *bridge*, or a crown, or a ſhip.

The parts of a *bridge* are the *peers*, or legs, *pilæ*; the *arches*; the *pavement*, or way over for cattle and carriages; the *foot-banks* on each ſide for foot-paſſengers; the *rail* or parapet, which incloſes the whole; and the *butments*, or ends of the *bridge* on the banks. See PEER, BUTMENT, &c.

Bridges are a ſort of edifices very difficult to execute, on account of the inconvenience of laying foundations, and walling under water. The earlieſt rules and inſtructions relating to the building of *bridges*, are given by Leon Baptiſta Alberti, *Archit. l.* 8. Others were afterwards laid down by Palladio, *l.* 3. Serlio, *l.* 3. *c.* 4. and Scammozi, *l.* 5. all of which are collected by M. Blondel, *Cours d'Archit. P.* 5. *l.* 1. *p.* 629. *ſeq.* The beſt of them are alſo given by Goldman, *Baukunſt. l.* 4. *c.* 4. *p.* 134. and Hawkſmoor, *Hiſt. Lond. Bridg. p.* 26. *ſeq.* M. Gautier has a piece expreſs on *bridges*, ancient and modern. *Trait. des Ponts.* Paris 1716. 12°.

The conditions required in *bridges* are, that they be well-deſigned, commodious, durable, and ſuitably decorated.—The peers of ſtone-*bridges* are to be equal in number, that there may be one arch in the middle, where commonly the current is ſtrongeſt. Their thickneſs is not to be leſs than a ſixth part of the ſpan of the arch, nor more than a fourth. They are commonly guarded in front with an angular ſtarling or ſpur, to break the force of the current; though this defence is ſometimes alſo turned ſemicircularly: in the ancient *bridges*, it is always a right angle; which has the advantage of being ſtronger and more durable than acute ones. The ſtrongeſt arches are thoſe whoſe ſweep is a whole ſemicircle.—For the rails, the height, ornaments, and the like, they are left to diſcretion.—It is even complained, that no demonſtrative reaſons are given of the ſeveral proportions of the moſt eſſential parts of *bridges:* much of which is ſtill left to the diſcretion of the builder, to be regulated according to the circumſtances, deſign, place, magnitude, &c. of the deſigned edifice. M. Gautier wiſhes, that mathematical perſons would take the ſtructure and proportions of *bridges* into their conſideration, in order to bring things to more certainty, and preciſion, founded on unvariable geometrical truth. Something of which kind has been attempted by M. de la Hire, in *Mem. Acad. R. Scienc. an.* 1712. *p.* 70. and the Marquis de l'Hopital, in *Act. Erud. Lipſ.* 1695. *p.* 56.

The breadth of a *bridge*, according to Baptiſta Alberti, ought to be the ſame as that of the highway which abuts on it: the breadth of the peers is to be one third of the aperture of the arches; the ſtarlings to be one half the breadth of the peers, and to riſe above the greateſt height to which the water ever mounts.

In the *bridges* of Avignon, St. Eſprit, and Lyons, there is this remarkable, that they are not ſtreight, eſpecially the two former, but bent, having an angle, whoſe convexity is turned towards the ſtream, to break the force thereof: the pont St. Eſprit, Dr. Robinſon obſerves, is bowed in many places, making unequal angles, eſpecially in thoſe parts where the ſtream is ſtrongeſt. The great peer in the middle of London-*bridge*, as we are told, was intended to ſerve for a ſteadying to the whole machine, inſtead of making an angle, as in the above-mentioned *bridges*.

The famous *bridge* of Venice, called the *Rialto*, conſiſts but of a ſingle arch, and that a flat or low one; paſſing for a maſter-piece of art; being built in 1591, on the deſign of Michael Angelo: the ſpan of the arch is ninety-eight feet one half, and its height above the water only twenty-three feet.—Poulet alſo mentions a *bridge*, of a ſingle arch, in the city Munſter in Bothnia, much bolder than that of the Rialto at Venice. But thoſe are nothing to a *bridge* in China, built from one mountain to another, conſiſting of one ſingle arch 400 cubits long, and 500 cubits high, whence it is called the *flying-bridge:* a figure of it is given in the *Philoſophical Tranſactions.* Kircher alſo ſpeaks of a *bridge* in the ſame country, 360 perches long without any arch; ſupported only by 300 pillars.

To ſecure the peers of *bridges*, they ſometimes diminiſh the current of the river, either by lengthening its courſe, by making it more winding (a method ſometimes uſed by the ancients in rendering their rivers navigable) or by ſtopping the bottom of a rapid river, with rows of banks, ſtakes, or piles, which break the current.

The peers of a *bridge* always diminiſh the bed of a river: ſuppoſe this diminution one fifth, it will follow, that in caſe of inundations, the bed muſt be ſunk or hollowed one fifth more than before, ſince the waters gain in depth what they have loſt in breadth. Add, that as the quantity of the water remains ſtill the ſame, it will paſs with greater velocity by one fifth in the place where ſuch contraction is: all which conduces to waſh away the foundation. The ſtream thus augmented in velocity, will carry away flints and ſtones, which before it could not ſtir. See RIVER.

The foundations of *bridges* are to be laid at the ſeaſon of the year when the waters are loweſt, as in autumn; and if the ground be rocky, hard gravel, or ſtony, the firſt ſtones of the foundation may be laid on the ſurface, without digging deeper; but if the ſoil be ſoft ſand, or gravel, it will be neceſſary to turn off the water, and dig till you come at a firm bottom; at leaſt, if this cannot be done, part of the

water muſt be carried off, and the reſt kept dry and piled: that ſide of the river where you are to work is to be incloſed with coffer-dams, and the current to have its liberty on the other ſide. See FOUNDATION. Palladio's directions are, firſt, to make choice of that place in a river which has the leaſt depth of water, and where the ground is even and firm, eſpecially rock or gravel ſtone; ſecondly, to avoid thoſe places where there are voragos, or whirlpools, and where the bottom is ſoft ſand or gravel, in regard ſuch matters are eaſily carried away by the violence of water, which in time alters the bed of a river, and ſaps the foundation of the peers; thirdly, to pitch on a ſtreight part of a river, ſince otherwiſe the turns and windings being worn away in time, the *bridge* is in danger of being left inſulate; beſides being liable to be choaked up with the filth, and other matters commonly gathered in the turns of rivers.

BRIDGES are either built of ſtone or timber, according as there is a conveniency, or plenty of the one material or the other in the place.

Stone-BRIDGES, are compoſed of peers, arches, and butments, made of hewn ſtone, ſometimes alſo intermixed with brick; as, the *bridge* of Tholouſe, the plinths whereof are of ſtone, as alſo the quoins of the arches, and ſome bonding courſes, and copings; but the reſt, as the arches, walls, and butments, of brick.

Wooden-BRIDGES, called by the Latins, *pontes ſublicii*, conſiſt of beams and joiſts ſuſtained by punchions, well cramped and bound together.

Sturmius has a diſſertation expreſs on the ſtructure of a wooden-*bridge*: *Diſp. de Ponte Sublicio.* Francof. 1709.

Ruſhen-BRIDGE, *pont de jonc*, is made of large ſheaves of ruſhes growing in marſhy grounds, which they cover over with boards or planks. They ſerve for croſſing ground that is boggy, miry, or rotten.

The Romans had alſo a ſort of ſubitaneous *bridges*, made by the ſoldiers, of boats, or ſometimes of caſks, leathern bottles or bags, or even of bullocks bladders blown up, and faſtened together, called *aſcogefri*. Pitiſc. *L. Ant. T.* 2. *p.* 464. *ſeq. voc. Pontes.* Du Cange *Gloſſ. Lat. T.* 1. *p.* 350. M. Couplet gives the ſtructure of a portable *bridge*, 200 foot long, eaſily taken aſunder and put together again, and which forty men may carry.—*Vid.* Du Hamel *Hiſt. Reg. Acad. Scien. l.* 3. *ſect.* 5. *c.* 4. *p.* 273.

Frezier ſpeaks of a wonderful kind of *bridge* at Apurima in Lima, made of ropes, formed of the bark of a tree.—*Vid.* Frez. *Voyag. South-Sea*, *p.* 184.

Pendent, or *Hanging*, called alſo *Philoſophical* BRIDGES, are thoſe not ſupported either by poſts or pillars, but hung at large in the air, only ſuſtained at the two ends, or butments.—Inſtances of ſuch *bridges* are given by Palladio, and others.—*Vid.* Vogels *Modern. Bau-Kunſt. Tab.* 26. *ſeq.* Wolf. L. Math. *p.* 277. *voc.* Brucke. Kirch. *Mund. Subterr. l.* 1. *c.* 3. *T.* 1. *p.* 14.

Dr. Wallis gives the deſign of a timber-*bridge*, ſeventy foot long, without any pillars, which may be uſeful in ſome places where pillars cannot conveniently be erected. *Philoſ. Tranſ.* N° 163. *p.* 714. Dr. Plot aſſures us, that there was formerly a large *bridge* over the caſtle-ditch at Tutbury in Staffordſhire, made of pieces of Timber none much above a yard long, and yet not ſupported underneath, either with pillars, or arch-work, or any other ſort of prop whatever.—*Vid.* Plot *Nat. Hiſt. Stafford. c.* 9. §. 88. *p.* 383.

Draw-BRIDGE, *Pons ſubductarius*, is ſuch a one as is made faſt only at one end, with hinges; ſo that the other end may be lifted up; in which caſe the *bridge* ſtands upright, to hinder the paſſage of a moat, or the like.

There are others made to draw back, to hinder the paſſage, and to thruſt over again to afford a paſſage. And others, which open in the middle; half of which turns away to one ſide, and the other to the other; being joined again at pleaſure: but theſe have this inconvenience, that one half of them remains on the enemy's ſide.

The Marquis de l'Hopital has given the conſtruction of a curve, in which a weight will always be a counter-balance to a *draw-bridge*; which the younger Bernoulli has ſhewn to be no other than the cycloid.—*Vid. Act. Erud. Lipſ. an.* 1695. *p.* 56. *ſeq.*

Flying-BRIDGE, *Pont volant*, or *Pons ductarius*, an appellation given to a *bridge* made of pontoons, leathern boats, hollow beams, caſks, or the like, laid on a river, and covered with planks for the paſſage of an army.

Flying-BRIDGE, *Pont volant*, more particularly denotes a *bridge* compoſed of one or two boats joined together, by a ſort of flooring, and ſurrounded with a rail or balluſtrade; having alſo one or more maſts, to which is faſtened a cable, ſupported at proper diſtances by boats, and extended to an anchor, to which the other end is faſtened, in the middle of the water. By which contrivance, the *bridge* becomes moveable, like a pendulum, from one ſide of the river to the other, without other help than the rudder.—Such *bridges* ſometimes alſo conſiſt of two ſtories, for the quicker paſſage of a great number of men; or that both infantry and cavalry may paſs at the ſame time.—Davil.

Flying or *Floating*-BRIDGE, is ordinarily made of two ſmall *bridges*, laid one over the other, in ſuch manner, as that the uppermoſt ſtretches and runs out, by the help of certain cords running through pullies placed along the ſides of the under-*bridge*, which puſh it forwards till the end of it joins the place it is deſigned to be fixt on.

When theſe two *bridges* are ſtretched out at their full length, ſo that the two middle ends meet, they are not to be above four or five fathom long, becauſe if longer they will break. Their chief uſe is for ſurprizing out-works, or poſts that have but narrow moats.

In the memoirs of the royal academy of ſciences, we find a new contrivance of a *floating-bridge*, which lays itſelf on the other ſide of the river.—*Vid. Hiſt. Acad. R. Scienc. an.* 1713. *p.* 104.

BRIDGE *of communication*, is a bridge made over a river; by which two armies or forts, ſeparated by the river, have a free communication with one another.

BRIDGES *of boats*, are either made of copper, or wooden boats faſtened with ſtakes, or anchors; and laid over with planks. See BOAT.

One of the moſt notable exploits of Julius Cæſar, was the expeditious making a *bridge* of boats over the Rhine: modern armies carry copper boats, called *pontoons*, to be in readineſs for the making *bridges*: ſeveral of theſe being joined ſide by ſide, till they reach acroſs the river, and planks laid over them, make all plain for the men to march on. See PONTOON.

There are fine *bridges* of boats at Beaucaire, and Rouen, which riſe and fall with the water; yet that at Seville is ſaid to exceed them both.

The *bridge* of boats at Rouen, built in lieu of the ſtately ſtone-*bridge* erected there by the Romans, is repreſented by a modern writer, as the wonder of the preſent age; it always floats; and riſes, and falls with the tide, or as land-waters fill the river; it is near 300 yards long, and is paved with ſtone juſt as the ſtreets are: carriages with the greateſt burdens go over it with eaſe, and men and horſes with ſafety, though there are no rails on either hand. The boats are very firm, and well moored with ſtrong chains; and the whole well looked to, and conſtantly repaired, though now very old.

D.

DEGREE, in geometry, a diviſion of a circle, including a three hundred and ſixtieth part thereof. See CIRCLE.

Every circle, great and ſmall, is ſuppoſed to be divided into 360 parts, called *degrees*: the *degree* is ſubdivided into 60 leſſer parts, called *minutes*: the minute into 60 others, called *ſeconds*: the ſecond into 60 *thirds*, &c.—It follows, that the *degrees*, minutes, *&c.* of greater circles, are greater than thoſe of leſs. See MINUTE, SECOND, *&c.*

The ſubdiviſions of *degrees* are fractions, whoſe denominators proceed in a ſexagecuple ratio; that is, a firſt minute is $= \frac{1}{60}$, a ſecond $= \frac{1}{3600}$, a third $= \frac{1}{216000}$, *&c.* But theſe denominators being troubleſome, their logarithms are ſubſtituted in common uſe, as indices thereof. See LOGARITHM.

Thus, a *degree*, as being the integer or unite, is denoted by 0, a firſt minute or prime by 1, a ſecond by 2 or ″, a third by 3 or ‴, *&c.* Accordingly 3 *degrees*, 25 minutes, 16 thirds, are wrote, 3°. 25′, 16″. See SEXAGESIMAL.

But though the ancient Egyptians, to whom this diviſion is uſually aſcribed, did, by means hereof, free aſtronomical calculations from fractions; ſince ſexageſimal fractions may be handled as integers; and were very happy in the choice of ſuch a number of *degrees* in the circle, as admitted of a juſt diviſion by 2, 3, 4, 5, 6, 8 and 9. Yet Stevinus, Oughtred, Wallis, *&c.* with good reaſon, wiſh the ſexageſimal fractions ſet aſide, and decimals taken in their room.

For in decimals there is no occaſion for reducing leſſer fractions into greater, or greater into leſſer; which is a tedious article in ſexageſimals. Stevinus even holds, that this diviſion of the circle which he contends for, obtained in the wiſe age, in *Seculo Sapienti*. Stevin. *Coſmog. Lib.* 1. *Def.* 6. See DECIMAL.

The magnitude or quantity of angles is accounted in *degrees*. Thus, we ſay, an angle of 90 *degrees*; of 70 *degrees*, 50 minutes; of 25 *degrees*, 15 minutes, 45 ſeconds. See ANGLE.

Such a ſtar is mounted ſo many *degrees* above the horizon, declines ſo many *degrees* from the equator. See ALTITUDE.

Such a town is ſituate in ſo many *degrees* of longitude and latitude. See LONGITUDE and LATITUDE.

A ſign includes 30 *degrees* of the ecliptic. See SIGN.

DEGREE *of latitude*, is the ſpace of 365184 Engliſh feet included between two parallels of latitude. See LATITUDE.

DEGREE *of longitude*, is the ſpace between two meridians; the quantity of which is variable according to the latitude. See LONGITUDE.

Theſe expreſſions are borrowed from the ancients, who were acquainted with a very large extent of earth from eaſt to weſt,

weſt, which they accounted the length, and a much leſs from north to ſouth, which paſſed with them for the breadth of the earth. See EARTH.

The quantity of a DEGREE of a meridian, or other great circle on the ſurface of the earth, is variouſly determined by various obſervers: the methods too made uſe of are various. See EARTH.—Ptolemy fixes the *degree* at 68 Arabic miles $\frac{2}{3}$ accounting $7\frac{1}{2}$ ſtadia to a mile. The Arabs themſelves, who made an exact computation of the diameter of the earth, by meaſuring the diſtance of two places under the ſame meridian, in the plains of Seniar, by order of Almamom, only make 56 miles. Kepler determining the ſemidiameter of the earth by the diſtance of two mountains, makes a *degree* 13 German miles: but his method is far from being accurate. Snellius ſeeking the diameter of the earth, from the diſtance of two parallels of the equator, finds the quantity of a *degree* by one method to be 57064 Paris toiſes, or 342384 feet; and by another method, 57057 toiſes, or 342342 feet. The mean between which two numbers M. Picart found by menſuration in 1669, from Amiens to Malvoiſin, the moſt ſure, and makes the quantity of a *degree* 57060 toiſes, or 342360 feet, which reduced to other meaſures, gives the quantity of a *degree* of a great circle in

Engliſh miles of 5000 feet each	——	$73\frac{200}{7}$
Florentine miles of 3000 braccios	——	$63\frac{7}{80}$
Common French leagues of 220 toiſes	—	25
Rhinland perches of 12 feet	— —	29556.

However, M. Caſſini, at the command of the king of France in the year 1700, repeated the ſame labour, and meaſuring the ſpace of 6 *degrees*, 18 minutes, from the obſervatory at Paris, along the meridian to the city of Colioure in Rouſſillon, that the greatneſs of the interval might diminiſh the error, found the quantity of a *degree* to be 57292 toiſes, or 343742 Paris feet, amounting to 365184 Engliſh feet.—On which footing, the quantity of a minute of a *degree* of a great circle of the earth is 5710 Paris feet, and that of a ſecond, 95 feet.

With which account pretty nearly agrees that of our countryman Mr. Norwood, who about the year 1635, meaſured the diſtance between London and York, and found it 905751 Engliſh feet; and finding the difference of latitudes 2°, 28′, determined the quantity of one *degree* to be 367196 Engliſh feet, or 57300 Paris toiſes, or 69 Engliſh miles, 288 yards. See Newt. *Princ. Phil. Nat. Math.* prop. 19. p. 378. and *Hiſt. Acad. R. Scienc. An.* 1700, p. 153.

The quantity of a *degree* of great circle, with the diſtance of any other parallel from the equator being given, the quantity of a *degree* in that parallel is found by this canon: as the whole ſine is to the coſine of the diſtance of the parallel from the equator; ſo is the quantity of a *degree* of the equator to the quantity of a *degree* of the parallel.

Suppoſe, *e. gr.* the latitude of the parallel 51°, and ſuppoſe a *degree* of the equator 69 miles.

Log. of whole ſine	100000000.
Coſine of 51°	97988718.
Log. 69°	18388491.
Log. required ——	16377201.

The number correſponding to which in the tables is $43\frac{42}{100}$ miles, nearly; which being multiplied by 5280, the number of feet in a mile, gives the number of Engliſh feet in a *degree* in that parallel.—On which foundation (ſuppoſing M. Caſſini's proportion of 365184 Engliſh feet, or 69 miles, 864 feet to 1 *degree* of a great circle) is built the following table, exhibiting the quantity of a *degree* of longitude in each parallel of latitude.

Deg. of Lat.	Engliſh Stat. Miles of 5280 Feet.		Deg. of Lat.	Engliſh Stat. Miles of 5280 Feet.

DEGREE, in civil and canon law, denotes an interval in cognation or kinſhip, whereby proximity and remoteneſs of blood are computed.

Degrees are the intervals whereby it is known what perſons are neareſt to the ſtock or root.—Or they are the diſtances of one perſon from another in the line of conſanguinity or affinity, reckoned from ſome common parent or anceſtor. See CONSANGUINITY and AFFINITY.

We ſay, the ſecond *degree*, the third *degree*; Gregory the great was the firſt who prohibited marriage to the ſeventh *degree*; which reſtriction was long obſerved: the ſecond council of Lateran, under Innocent III. reſtrained the prohibition to the fourth *degree* incluſive, that is, to couſin Germans children. See MARRIAGE.

In the civil law, the *degrees* of kindred or cognation are differently computed from what they are in the canon law.—The firſt reckons by the number of perſons iſſued from the ſame ſtock; each perſon ſprung therefrom making one *degree:* but with this difference, that in the direct line the order begins with the firſt *degree*; and thus the father and ſon are in the firſt *degree:* but in the collateral line there is no firſt *degree* reckoned: two brothers being only related in the ſecond *degree*, by reaſon the father, who is the common ſtock, makes the firſt *degree*.

The canon law obſerves the ſame rule as to the direct line; but in the collateral line, a generation only makes a *degree:* thus brothers are in the firſt *degree*, and couſin Germans in the ſecond. Whereas, the civil law puts brothers in the ſecond, and couſins German in the fourth.—So that two *degrees* in the civil law only make one in the canon law.

DEGREE, in medicine, denotes a certain pitch or intenſeneſs of the elementary qualities. See QUALITY.

The *degrees* uſually allowed are four, anſwering to the number of the peripatetic elements. See ELEMENTS.

In the ſchool philoſophy, the ſame qualities are divided into eight: the laſt or higheſt *degree* of intenſion is called *ut octo*.

We ſay, a thing is cold in the ſecond *degree*, pepper is hot in the third *degree*. See HEAT and COLD.

Fire is held hot in the eighth *degree*, and dry in the fourth *degree*. See FIRE.

DEGREE, in chymiſtry, is underſtood of the ſtate or intenſeneſs of the fire, or heat. See FIRE.

Chymiſts diſtinguiſh four *degrees* of fire, or heat: the *firſt*, is two or three coals.

The *ſecond*, that of four or five coals, or rather ſo much as is ſufficient to warm a veſſel ſenſibly; yet ſo, as that the hand may be held on it a conſiderable time.

The *third degree*, is when there is a fire capable of boiling a veſſel of five or ſix pints of water.

The *fourth*, is when there is fire enough for a furnace.

Theſe *degrees*, however, are all varied according to the different circumſtances of operations, furnaces, veſſels, ſubjects, *&c.*

DEGREES, in muſick, are the little intervals whereof the concords, or harmonical intervals, are compoſed. See INTERVAL and CONCORD.

The

The muſical *degrees* are three; the greater tone, the leſſer tone, and ſemi-tone. See TONE and SEMI-TONE.

The primary cauſe of the invention of *degrees*, or intervals leſs than concords, and whereby the concords are divided, and as it were graduated, des Cartes judges to have been this, that if the voice were always to proceed by harmonical intervals, there would be too great a diſproportion or inequality in the intenſeneſs thereof, which would weary both ſinger and hearer.

Thus, ſuppoſing A and B the diſtance of a greater third; if the voice were immediately to aſcend from A to B, then becauſe B being acuter, ſtrikes the ear with more force than A, leſt that diſproportion ſhould prove uneaſy, another ſound, C, is put between them; by which, as by a ſtep or *degree*, we may aſcend more eaſily, and with leſs unequal force in raiſing the voice.

Hence it appears, ſays that author, that the *degrees* are only certain mediums contrived to be put betwixt the extremes of the concords, for moderating their inequality, but which of themſelves have not ſweetneſs enough to ſatisfy the ear, and are of uſe only with regard to the concords. So that when the voice has moved one *degree*, the ear is not yet ſatisfied till we come to another, which therefore muſt be concord with the firſt ſound.

The ſubſtance of what is here alledged amounts to this, that by a fit diviſion of the concording intervals into leſſer ones, the voice will paſs ſmoothly from one note to another; and the hearer be prepared for a more exquiſite reliſh of the perfect intervals, whoſe extremes are the proper points in which the ear finds the expected reſt and pleaſure.

Such is the end and office of the *degrees* or leſſer intervals.—Now there are only three, that experience recommends as agreeable; whoſe ratios are 8 : 9, called the *greater tone*; 9 : 10, called the *leſſer tone*; and 15 : 16, called the *ſemi-tone*. By theſe alone a ſound can move upwards or downwards ſucceſſively, from one extreme of a concord to another, and produce true melody: and by means of theſe, ſeveral voices are alſo capable of the neceſſary variety in paſſing from concord to concord.

As to the original of theſe *degrees*, they ariſe out of the ſimple concords, and are equal to their differences. Thus, 8 : 9, is the difference of a fifth and fourth; 9 : 10, is the difference of a leſſer third and fourth, or of a fifth and greater ſixth; and 15 : 16, the difference of a greater third and fourth, or of a fifth and leſſer ſixth.

For the uſe of DEGREES, in the conſtruction of the ſcale of muſic. See SCALE and GAMMUT.

DEGREE, in univerſities, denotes a quality conferred on the ſtudents or members thereof, as a teſtimony of their proficiency in the arts or faculties; and entitling them to certain privileges, precedencies, *&c.* See UNIVERSITY, FACULTY, *&c.*

The *degrees* are much the ſame in the ſeveral univerſities: but the laws thereof, and the diſcipline or exerciſe previous thereto differ.—The *degrees* are *batchelor*, *maſter* and *doctor*; inſtead of which laſt, in ſome foreign univerſities, they have *licentiate*. See LICENTIATE.

In each faculty there are but two *degrees*, viz. *batchelor* and *doctor*, which were anciently called *batchelor* and *maſter:* nor do the arts admit of more than two, which ſtill retain the denomination of the ancient *degrees*, viz. *batchelor* and *maſter*. At Oxford, *degrees* of maſter and doctor are only conferred once a year, *viz.* on the Monday after the ſeventh of July; when a ſolemn act is held for the purpoſe. See ACT.

The expences of a *degree* of doctor in any of the faculties, in treats and ſet fees, uſually amounts to about 100*l.* and that of a maſter of arts, 20 or 30*l.*—There proceed yearly about 150 doctors and maſters. See DOCTOR and MASTER.

The *degree* of batchelor is only conferred in Lent; and there proceed uſually about 200 yearly.

To take the *degree* of batchelor in arts, four years are required, and three more for maſter of arts. See BATCHELOR.

At Cambridge, matters are nearly on the ſame footing, only the diſcipline is ſomewhat more ſevere, and the exerciſes more difficult. The commencement which anſwers to the act of Oxford, is the Monday before the firſt Tueſday in July.—The *degrees* of batchelor are taken up in Lent, beginning on Aſh-Wedneſday.

To the *degree* of batchelor of arts, it is required, that the perſon have reſided in the univerſity near four years; and in his laſt year have kept philoſophy acts, *i. e.* have defended three queſtions in natural philoſophy, mathematics or ethics, and anſwered the objections of three ſeveral opponents at two ſeveral times; as alſo, that he have oppoſed three times. After which, being examined by the maſters and fellows of the college, he is referred to ſeek his *degree* in the ſchools, where he is to ſit three days, and be examined by two maſters of arts appointed for the purpoſe.

The *degree* of maſter of arts is not given till above three years after that of batchelor; during which time, the candidate is obliged three ſeveral times to maintain two philoſophical queſtions in the public ſchools, and to anſwer the objections raiſed againſt him by a maſter of arts.—He muſt alſo keep two acts in the batchelors ſchool, and declaim one.

To paſs batchelor of divinity, the candidate muſt have been ſeven years maſter of arts; muſt have oppoſed a batchelor of divinity twice; kept one divinity act; and preached before the univerſity, once in Latin, and once in Engliſh.

For the DEGREE of doctor. See the article DOCTOR.

DYING, the art, or act of tinging cloth, ſtuff, or other matter with a permanent colour, which penetrates the ſubſtance thereof. See CLOTH, *&c.*

Dying differs from bleaching, or whitening, which is not the giving a new colour, but the brightening of an old one: it alſo differs from painting, gilding, marbling, and printing, or ſtamping, in that the colours in theſe only reach the ſurface. See BLEACHING, PAINTING, GILDING, *&c.*

Dying may be defined the art of colouring wool, linen, cotton, ſilk, hair, feathers, horn, leather, and the threads and webs thereof, with woods, roots, herbs, ſeeds and leaves, by means of ſalts, limes, lixiviums, waters, heats, fermentations, macerations, and other proceſſes.

Dying with regard to the manner of applying the colours, is divided into *hot*, and *cold*.

DYING *hot*, Θερμοβαφη, is that wherein the liquors and ingredients are boiled, before the cloth be dipped therein; or even where the cloths themſelves are boiled in the *dye*.

DYING *cold*, Ψυχροβαφη, is where the ingredients are diſſolved cold; or at leaſt are ſuffered to grow cold, ere the ſtuffs be put in them.—V. *Savar. D. Comm.* T. 2. p. 1697. *voc. Teinture. Salmaſ. Exerc. ad Solin.* T. 2. p. 1167.

Origin of DYING.—The *dying* art is of great antiquity; as appears from the traces of it in the oldeſt ſacred, as well as profane writers. The honour of the invention is attributed to the Tyrians *; though what leſſens the merit of it, is that it is ſaid to have owed its riſe to chance. The juices of certain fruits, leaves, *&c.* accidentally cruſhed, are ſuppoſed to have furniſhed the firſt hint: Pliny aſſures us, that even in his time the Gauls made uſe of no other *dyes* [a]: it is added, that coloured earths, and minerals waſhed and ſoaked with rain, gave the next *dying* materials [b].—But purple, an animal juice, found in a ſhell-fiſh called *Murex*, *Conchylium*, and *Purpura*, ſeems from hiſtory to have been prior to any of them. This indeed was reſerved for the uſe of kings, and princes; private perſons were forbidden by law to wear the leaſt ſcrap of it [c]. The diſcovery of its tinging quality is ſaid to have been taken from a dog, which having caught one of the purple fiſhes among the rocks, and eaten it up, ſtained his mouth and beard with the precious liquor; which ſtruck the fancy of a Tyrian nymph ſo ſtrongly, that ſhe refuſed her lover Hercules any favours till he had brought her a mantle of the ſame colour [d] †.—[a] V. Plin. *Nat. Hiſt.* Lib. XXII. c. 2. [b] Savar. Lib. cit. p. 1689. [c] Leg. I. C. *Quæ res ven. non poſſ.* Salmuth. *ad Panciroll.* Lib. I. Tit. 1. p. 8. *ſeq.* [d] Poll. Lib. I. *de verb. Idon. ad Commod. Polyd. Virg. de Invent. Rer.* Lib. III. c. 7. See alſo the article PURPLE.

* Pliny ſeems to aſcribe the invention of the art of *dying* wools to the Lydians of Sardis: *Inficere lanas Sardibus Lydi* [a]; where the word *incepére* muſt be underſtood [b]. But a modern critic ſuſpects a falſe reading here; and not without reaſon, for *Lydi*, ſubſtitutes *Lydda*, the name of a city on the coaſt of Phœnicia, where the chief mart of the *purple-dye* was [c].—[a] V. Plin. *Hiſt. Nat.* Lib. VII. c. 56. [b] Hardou. not. ad loc. [c] Nurra, *in Bibl. Chois.* T. 20. p. 193. *ſeq.*

† After the Phœnicians, the Sardinians ſeem to have arrived at the greateſt perfection in the *dying* art; inſomuch that βαμμα Σαρδινιακον, *Sardinian dye* paſſed into a proverb among the Greeks. Ariſtophanes in two places, to expreſs a thing red as ſcarlet, compares it to the βαμμα Σαρδινιακον [d]. Salmaſius, Palmerius and Spanheim indeed for Σαρδινιακον ſubſtitute Σαρδιανικον, which they ſuppoſe a poſſeſſive of Sardis, and to denote *Sardian dye:* but Nurra in a diſſertation expreſsly on the ſubject has ſtrenuouſly ſupported the pretenſions of his country againſt this innovation [e].—[d] Ariſtoph. *in Acharnan.* v. 112. *item Pax.* v. 11, 74. [e] I. Paul Nurra *Diſſ. de Varia Lectione Adagii* BAMMA ΣΑΡΔΙΝΙΑΚΟΝ, *tinctura Sardiniaca. Flor.* 1709. 4°. le Clerc. *Bibl. Chois.* T. 20. p. 187. *ſeqq.*

Till the time of Alexander we find no other ſort of *dye* in uſe but purple and ſcarlet.—It was under the ſucceſſors of that monarch, that the Greeks applied themſelves to the other colours, and invented, or at leaſt perfected, blue, yellow, green, *&c.* [f].—For the ancient purple it has been long loſt, but the perfection to which the moderns have carried the other colours, abundantly indemnifies them of the loſs. In this the French under the auſpices of that excellent miniſter M. Colbert, ſeem to have outſtripped moſt of their neighbours [g]. See GOBELINS.—[f] V. Pitiſc. *L. Ant.* T. 1. p. 249. *voc.* Baphia. [g] Savar. lib. cit.

Among the Romans, *dye-houſes*, *baphia*, were all under the direction of the comes ſacrarum largitionum [h]; though they had each their peculiar præpoſitus, as at Alexandria, Tyre, *&c.* [i].—The *dyers* of London make the 13th company of the city, incorporated under Hen. VI. conſiſting of a maſter, warden, and livery [k].—At Paris, and in moſt of the great cities in France, the *dyers* are divided into three companies, *viz.* thoſe *of the great dye*, *du grand & bon teint*, who are only to uſe the beſt ingredients, and ſuch as ſtrike the

ſureſt and moſt laſting colours.—*Dyers of the leſſer dye, du petit teint*, who are allowed to uſe the inferior ſorts of drugs, which only yield falſe and fading colours.—And ſilk, wool and thread *dyers*.—All the higher prized cloths and ſtuffs are reſerved to the *dyers* of the firſt ſort: thoſe of leſs value, particularly ſuch as are not rated at above 40 ſols the ell in white are committed to the maſters of the *petit teint*. Blue, red, and yellow, are reſerved more peculiarly to thoſe of the *grand teint*; browns, fallows and blacks are common to both ſorts. As to black, it is begun by the *dyers* of the *grand teint*, and finiſhed by thoſe of the *leſſer* [l].—It ſeems there is a tradition among *dyers*, that Jeſus Chriſt was of their profeſſion; which we alſo find delivered in the *goſpel of the infancy of Jeſus*, though on what grounded we know not. But it is hence the Perſian *dyers*, notwithſtanding all their Mahometaniſm, have choſen Jeſus for the patron of their art; inſomuch that among them a *dye-houſe* is called *Chriſt's ſhop* [m].—[h] V. Notit. Imper. Hoffm. L. T. 1. p. 469. [i] Pitiſc. loc. cit. [k] *New View of Lond.* T. 2. p. 601, *ſeqq.* [l] Savar. *D. Comm.* T. 2. p. 1688. voc. *Teint.* [m] Sike *Not. ad Evang. Infant.* p. 55. Hilſcher *de Stud. Chriſt. in Miſc. Lipſ. Obſ.* 96. §. 10. T. 5. p. 34.

Requiſites in DYING.—There are three things demanded by the Greek chymiſts to a good *dye*; viz.—Αραιωσις, opening or rarefying of the body to be *dyed*, to diſpoſe it to imbibe the colour.—Βαφη, the tincture or *dye* itſelf.—Κατοχη, or Στυψις, by the Romans called *alligatio*, the binding or fixing the colour, to prevent its fading or being diſcharged.—Some add a fourth condition, *viz.* Στιλψις, by the Latins called *lumen*, by us *luſtre* or *brightneſs*.

Among ſome, theſe three were done ſeverally at three different operations, in different liquors, or decoctions: by the firſt, the ſtuff was prepared to receive the *dye*; this was called προβαφιον and ὑποχυφη; by the ſecond, the deſired colour was given it; and by the third, the colour was fixed on it.—But others did all three at once, with one decoction, and one dip.—V. Salmaſ. *Exerc. ad Solin*, T. 2. p. 1146, *ſeq.*

Advancement of DYING. The baſis of a juſt hiſtory of *dying*, muſt be a theory of light and colours. See LIGHT, COLOUR and RAINBOW.—Two things, it may be obſerved, are chiefly aimed at in the enquiry of colours, the firſt to increaſe the *materia tinctoria*; the ſecond, to fix thoſe colours we have.

In order to theſe it may be remembered, that ſome colours are *apparent*, as thoſe of flowers, the juices of fruits, and the ſanies of animals.—Others *latent*, and only diſcovered by the effects which the ſeveral ſpecies of ſalts and other things have on them.

Concerning the *apparent* colours of vegetables and animals, and the effects of different ſalts in changing them from one colour to another, we have many inſtances in Mr. Boyle, collected and ranged in a new order by Dr. Liſter, as,—1*ſt*, That acid ſalts advance the colours of flowers, and berries: thus they make the infuſions of balauſtia or pomegranate flowers, red-roſes, clove-july flowers, mezerion, peaſe-bloom, violets, and cyanus flowers, of a fairer red; and the juices of the berries of liguſtrum, of black-cherries, and buckthorn berries, of a much fairer red. To the ſame purpoſe it is obſerved, that acid ſalts make no great alterations upon the white flowers of jaſmin and ſnow-drops.

2*dly*, Urinous ſalts and alcaly's, on the contrary, quite alter the colours of the flowers laſt named, as well as the juices of the berries abovementioned, from red to green.

3*dly*, Urinous ſalts and alcaly's advance, at leaſt do not hurt the colours of the juices of vegetable leaves, woods and roots.—Thus urinous ſpirits and alkaly's make the yellow infuſions of madder roots, red; of brazil wood purpliſh; of lignum nephriticum, blue; the red infuſion of log-wood, purple; and of the leaves of ſena, red.

4*thly*, Acid ſalts quite alter the ſaid infuſions from red or blue to yellow.

5*thly*, Cochineel, which of itſelf is red, upon the affuſion of oil of vitriol, an acid ſalt, ſtrikes the moſt vivid crimſon that can be imagined; and with urinous ſalts and alcaly's, will be again changed into an obſcure colour betwixt a violet and a purple.

6*thly*, All red, blue and white flowers are immediately, upon the affuſion of an alcaly, changed to a green colour; and thence, in no long proceſs of time, turn yellow.

7*thly*, All the parts of vegetables which are green, will in like manner ſtrike a yellow with an alcaly.

8*thly*, What flowers are already yellow, are not much changed, if at all, by an alcaly, or urinous ſpirit.

9*thly*, The blue ſeed-huſks of glaſtum ſylveſtre old gathered and dry, diluted with water, ſtain a blue, which upon the affuſion of lye ſtrikes a green; which ſaid green or blue being touched with oil of vitriol *dyes* a purple: and all theſe three colours ſtand.

10*thly*, On the tops of the fungus tubuloſus are certain red knots, which upon the affuſion of lye, will ſtrike a purple, and ſtand.

For the *latent* colours in animals and vegetables, diſcovered to us by the affuſion of ſalts; they likewiſe are very numerous. We will only mention a few;—1*ſt*, The milky juice of lactuca ſylveſtris, coſta ſpinoſa, & ſonchus aſper & lævis, upon the affuſion of lye, will ſtrike a vivid flame-colour or crimſon, and after ſome time quite degenerate into a dirty yellow.

2*dly*, The milk of cataputia major, upon the affuſion of lye, eſpecially if it be drawn with a knife, and have any time ſtood upon the blade thereof, will ſtrike a purple or blood red colour, and by and by change into an ignoble yellow.

3*dly*, The common hawthorn-caterpillar will ſtrike a purple or carnation with lye, and ſtand.

4*thly*, The heads of beetles, piſmires, *&c.* will with lye ſtrike the ſame carnation colour, and ſtand.

5*thly*, The amber coloured ſcolopendra will give with lye a moſt beautiful and pleaſant azure, or amethyſtine, and ſtand. It remains to be obſerved,—1*ſt*, That in all the inſtances abovementioned, whether vegetable or animal, there is not one colour truly fixed; though there may be ſome uſe made of them, as they are.—By *not truly fixed*, we mean, not proof againſt ſalt and fire; for, what ſeem to ſtand, and be lye-proof, are either wholly deſtroyed by a different ſalt, or changed into a much different colour; which muſt needs prove a ſtain and blemiſh, when it ſhall happen in the uſe of any of them.

2*dly*, That both the apparent and latent colours of vegetables are fixable: an inſtance whereof we may obſerve in the ſeed huſks of glaſtum, and the uſe *dyers* make of the leaves of that plant after due preparation.

3*dly*, It is probable from the ſame inſtance, that we may learn from the colour of ſome part of the fruit or ſeed, what colour the leaves of any vegetable, and the whole plant, might be made to yield for our uſe.

4*thly*, That the latent colours of vegetables are pre-exiſtent, and not produced; from the ſame inſtance of wood; and likewiſe from this, that the milky juice of lactuca ſylveſtris affords of itſelf a red ſerum.

5*thly*, That the change of colours in flowers is gradual and conſtant.

6*thly*, That the colours of flowers, which will not ſtand with lye, ſeem to be wholly deſtroyed by it, and irrecoverable.—Thus one part of a violet leaf, upon the affuſion of lye, is changed very ſoon into yellow, and will never be revived into a red by an acid ſalt; but if another part of the ſame leaf be ſtill green, it will be revived.

7*thly*, That dryneſs ſeems to be a means, if not of fixing, yet of bringing the vegetable colour into a condition of not wholly and ſuddenly periſhing by the otherwiſe deſtroying alcaly.

8*thly*, That thoſe plants or animals which will ſtrike different yet vivid colours, upon the affuſion of different ſalts, and ſtand, as the cochineel, and glaſtum, are of all others to be reckoned the beſt.—V. Liſt. in *Phil. Tranſ.* N° 70. p. 2132, *ſeqq.* See alſo Boerh. *Elem. Chem.* P. 3. T. 2. p. 467, *ſeqq.* Edit. Lipſ.

DYING *ingredients*, or the *materia tinctoria*, are beſt reduced under two heads:—*Colorata*, or thoſe which properly give the colour.—And *non-colorata*, uſed to prepare the ſtuffs for better taking the *dye*, and to heighten the luſtre of the colours.

The *colouring* ingredients are of three ſorts, blue, yellow and red.—To the firſt ſort, belong indigo, woad, weld, wood-wax, and log-wood; to the ſecond, fuſtic; to the third, madder, brazil, cochineel, kermes, ſafflower and ſanders.—To which may be added annotto, and young fuſtic, for orange-colours: laſtly, wood ſoot.

The *non-colouring* ingredients are,—Certain *reſtringent* or *binding materials*, as galls, ſumac, alder bark, pomegranate peel, walnut rinds and roots, ſapling bark and crab-tree bark.—Certain *ſalts*, as alum, argol, ſalt-petre, ſal armoniac, pot-aſhes, lime and urine.—*Liquors*, as well water, river water, aqua vitæ, vinegar, lemon juice, aqua fortis, honey and molaſſes.—*Gums*, as tragacanth, arabic, maſtic, and ſanguis draconis.—*Smecticks*, or *abſterſives*, as ſoap, fullers earth, linſeed oil, ox gall, *&c.*—*Metals*, as ſteel filings, ſlippe and pewter, to which add copperas, verdegreaſe, antimony, litharge and arſenic.—Laſtly, bran, wheat flower, yolks of eggs, leaven, cumin ſeed, fenugreek ſeed, agaric and ſenna.

Of moſt of theſe ingredients ſome account may be found under their reſpective articles in the courſe of this book; but with regard to their uſe and effect in *dying*, it will be neceſſary to conſider them more particularly, and to bring together in one view.

Among the *non-colouring drugs*, then, from the mineral kingdom come;—1*ſt*, Copperas, ſteel filings, and ſlipp (the ſtuff found in the troughs of old grind-ſtones whereon edge-tools have been ground) which are uſed for all true or Spaniſh blacks; though not for the Flanders blacks.—2*dly*, Pewter diſſolved in aqua fortis, uſed for the new ſcarlet or bowdye.—3*dly*, Litharge, though not owned or allowed, is uſed to add weight to dyed ſilks.—4*thly*, Antimony uſed chiefly for the ſame purpoſe, though it alſo contain a tingent ſulphur, which by precipitation, *&c.* affords a great variety of colours.—5*thly*, Arſenic uſed in dying crimſon, on pretence of

giving a luſtre.—6*thly*, Verdegreaſe, uſed by linen dyers, in their yellow and green colours.—7*thly*, Alum, much uſed, though with what intent is not agreed on; whether to render water a proper menſtruum to extract the tingent particles of certain hard drugs? or to ſcower the ſordes, which may interpoſe between the ſtuff and the dye, and hinder their due adheſion? or to intenerate the hairs of wool, and hair ſtuffs, that they may better imbibe their colours? or to contribute to the colour itſelf, as copperas does to galls in making black, or juice of lemons to cochineel in carnations, or aqua fortis impregnated with pewter in the bowdye? or, which ſeems moſt probable, to ſerve as a vinculum between the cloth and the colour, as clammy oils, and gum waters, do in painting; alum being a ſubſtance whoſe aculeated particles, diſſolved with hot liquors, will enter the pores of ſtuffs, and on which the particles of dying drugs will catch; though it may alſo ſerve another uſe, *viz.* to dry up certain particles which diſagreed with the colour to be ſuperinduced: to which add, that it may alſo ſerve to brighten a colour, by incruſtating the ſtuff to be dyed with its cryſtals, on which the dye coming to be applied, has a finer effect, than if it were applied on a ſcabrous matter, ſuch as un-alumed cloth is.—8*thly*, Bran, and bran water, whoſe flower entering the pores of the ſtuff, levigates its ſurface, and thus renders the colour laid on it more beautiful; much as woods to be gilded, are firſt ſmoothened over with white colours.—9*thly*, Saltpetre, uſed chiefly in aqua fortis, in the bowdye, to brighten colours by back boiling; for which purpoſe,—10*thly*, Argol is more commonly uſed—11*thly*, Lime, or calke, uſed in the working of blue fats.

Non-colouring ingredients of the animal kind, are,—1*ſt*, Honey.—2*dly*, Yolks of eggs.—3*dly*, Ox-gall: though this, and the two laſt, are only uſed by a few particular dyers, to ſcower, promote fermentation, and increaſe weight.—4*thly*, Stale urine, uſed as a lixivium to ſcower, alſo to help the fermenting, and heating of woad; though it is alſo uſed in the blue fats inſtead of lime: in reality, as it diſcharges the yellow, wherewith blue, and moſt greens, are compounded, it is uſed to ſpend weld withal: yet it is known, that the urine, or old mud of piſſing places, will dye a well ſcowered piece of ſilver of a golden colour; it being with this (not Bath water, as imagined) that the Bath ſixpences, *&c.* are prepared.

To the claſs of non-colouring ingredients may alſo be added water, by dyers called *white liquor*, which is of two ſorts.—1*ſt*, Well water, uſed in reds, and in other colours wanting reſtringency, as well as in dying ſtuffs of a looſe contexture, as callico, fuſtian, and the ſeveral ſpecies of cottons: but naught for blues, and making yellows and greens look ruſty.—2*dly*, River water, ſofter and ſweeter than the former, and diſſolving ſoap better, uſed in moſt caſes by the dyers, for waſhing, rinſing, *&c.* their cloths after dying.—3*dly*, Liquor abſolutely ſo called, which is bran liquor made of one part bran, and five river water, boiled an hour, and put in a leaden ciſtern to ſettle: four or five days in ſummer turn it too ſower, and unfit for uſe: its office is to contribute to the holding of the colour: it is known that ſtarch, which is only the flower of bran, makes a clinging paſte, which will conglutinate paper, though not wood or metals. Accordingly, bran liquors are uſed to mealy dying ſtuffs, as to madder, which is rendred clammy and glutinous by being boiled in bran water; and thus made to ſtick better to the villi of the ſtuff dyed.—4*thly*, Gums, tragacanth, arabic, maſtic, and ſanguis draconis, are uſed in dying ſilk, chiefly to give it a gloſſineſs, which may make it ſeem finer, as well as ſtiffer, and to encreaſe its weight.

For the *colouring ingredients*, *colorantia colorata*, we have,—1°. Iron and ſteel, or what is made from them, which, we have obſerved, are uſed in dying blacks; though how they contribute thereto is not ſo obvious: we know that green oaken boards become black by the affriction of a ſaw; a green ſour apple cut with a knife turns of the ſame colour; the white greaſe wherewith the wheels of coaches are anointed becomes likewiſe black by means of the iron boxes wherewith the nave is lined, and the friction between the nave and the axle-tree; and that an oaken ſtick becomes black by a violent friction againſt other wood in a turning lath; and the black colour on earthen ware is given with ſcalings of iron vitrified. From all which it ſeems to follow, that the buſineſs of blacking lies in the iron, and particularly in its uſtulation or affriction. See BLACK, and BLACKNESS.

Be this as it will, copperas, the moſt uſual ingredient for dying black, is the ſalt of the pyrites wherewith old iron is incorporated. And, where-ever this is uſed, ſome of the aſtringents are to accompany it. See COPPERAS.—2°. Redwood chopped, and ground in a mill, is uſed for dying cloth, rugs, *&c.* of the coarſer ſort. Its tincture, which is a ſort of brick-colour, is got out by long boiling it with galls, and the cloth along with it. It ſtands better than brazil.—3°. Brazil, chopped alſo, and ground, dyes a pink-colour, or carnation neareſt approaching cochineel: it is uſed with alum: with pot-aſhes it alſo ſerves for purples. It eaſily ſtains. See BRAZIL.—4°. Madder gives a colour near approaching the bowe-dye, or new-ſcarlet: thoſe called baſtard-ſcarlets are dyed with it. It endures much boiling, and is uſed both with alum and argol; and holds well: the brighteſt dyes with madder are made by over-dying the ſtuff, and then diſcharging part of it by back-boiling in argol. It is uſed with bran water inſtead of white liquor. See MADDER.—5°. Cochineel, uſed with bran liquor in a pewter furnace, with aqua fortis, gives the dye called among us, though improperly, *ſcarlet in grain*. Any acid takes off the intenſe redneſs of this colour, turns it towards an orange, or flame colour. With this colour the Spaniſh leather and wool uſed by ladies, are dyed. See COCHINEEL.—6°. Annotto gives an orange colour, eſpecially to ſilks, linens and cottons; for it does not penetrate cloth: it is uſed with pot-aſhes.—7°. Weld, by the help of pot-aſhes, yields a deep lemon-colour; though it is uſed to give all ſorts of yellows. See WELD.—8°. Wood-wax, or green-wood, called alſo *geniſta tinctoria*, and the *dyer's weed*, has the like effect as weld, though its uſe is chiefly confined to coarſe cloths. It is ſet with pot-aſhes, or urine.—9°. Fuſtic is of two ſorts, young and old.—The former chopped and ground, yields a kind of reddiſh orange colour: the latter, a hair colour diſtant ſeveral degrees of yellow from the former. It ſpends with or without ſalts, works either hot or cold, and holds firm. See FUSTIC.—10°. Wood-ſoot, containing not only a colour, but a ſalt, needs nothing to extract its dye, or make it ſtrike on the ſtuff. The natural colour it yields is that of honey, but it is the foundation of many other colours on wool, and cloth, only. See SOOT.—11°. Woad ground, or chopped with a mill for the purpoſe, is made up into balls, which being broken, and ſtrewed on lime or urine, is uſed with pot-aſhes, or ſea-weed, and gives a laſting-blue. The lime, or calk, accelerates the fermentation of the woad, which in three or four days will work like a guile of beer, and be covered with a greeniſh froth or flower. An intenſe woad colour is almoſt black, that is, is of a damſon colour. It is the foundation of ſo many colours, in its different degrees or ſhades, that the dyers have a ſcale whereby to compute the lightneſs and depth of this colour.—See WOAD. 12°. Indigo is of the like nature, and uſed for the ſame purpoſe as woad, only that it is ſtronger. See INDIGO.—13°. Logwood, chopped and ground, yields a purpliſh blue: it may be uſed with alum: formerly it was of *ill* repute, as a moſt falſe and fading flower; but, ſince it has been uſed with galls, it is leſs complained of.—V. Petty's *Apparat.* to *Hiſt. of dying*, in Sprat's *Hiſt. Roy. Societ.* P. 2. p. 288, *ſeqq.* Merr. *Not. on Neri*, c. 110. p. 335, *ſeqq.*

The *dying* materials are generally applied in decoctions made in water, more or leſs ſtrong, according to the occaſion; ſometimes by only dipping the ſtuff in the vat of dye; ſometimes by boiling it therein; and ſometimes by leaving it a day or more to ſteep.—For the alum, in dying ſilks, it is always applied cold, in which ſtate alone it contributes to the brightneſs of the dye.

The art of DYING may be divided into as many branches as there are different colours to be communicated, and ſorts of different ſtuffs to be the ſubjects of it.

DYING *of cloths, ſerges, druggets, and other woollen manufactures.*—For *black*, in cloths and ſtuffs of price, it is begun with a ſtrong decoction of wood and indigo, which give a deep blue; after which, the ſtuffs being boiled with alum and tartar, or pot-aſhes, are to be maddered with common madder; then dyed black with Aleppo galls, copperas and ſumac; and finiſhed by back-boiling in weld. See BLACK.—*Scarlet* is dyed with kermes and cochineel, with which may alſo be uſed agaric, and arſenic.—*Crimſon ſcarlet* is given with cochineel meſtich, aqua fortis, ſal armoniac, ſublimate, and ſpirit of wine.—*Violet-ſcarlet*, *purple*, *amaranth*, and *panſy-ſcarlets*, are given with woad, cochineel, indigo, braziletto, brazil, and orchal. For common *reds*, pure madder is uſed, without other ingredients.—*Crimſon-reds*, *carnations*, *flame and peach-colours*, are dyed according to their ſeveral hues, with cochineel meſtich, without madder, or the like.—*Crimſon-red* is prepared with Roman alum, and finiſhed with cochineel.—*Peach-colour* muſt be back-boiled a little with galls and copperas, or the like.—*Orange-aurora*, or *golden-yellow*, *brick-colour*, and *onion-peel colour*, are given with woad and madder, tempered according to their reſpective ſhades.—For *blues*, the *dark* are given with a ſtrong tincture of woad: the *brighter*, with the ſame liquor, as it weakens in working.—*Dark-browns*, *minims*, and *tan-colours*, are given with woad, weaker in decoction than for black, with alum and pot-aſhes; after which, they are maddered higher than black: for tan-colours, a little cochineel is added.—*Pearl-colours* are given with galls and copperas; ſome are begun with walnut-tree roots, and finiſhed with the former; though to make them more ſerviceable they dip them in a weak tincture of cochineel.—*Greens* are begun with woad, and finiſhed with weld.—*Pale-yellows*, *lemon-colour*, and *ſulphur-colour*, are given with weld only.—*Olive-colours* of all degrees are firſt put in green, and taken down again with ſoot, more or leſs, according to the ſhade required.—*Feulemort*, *hair-colour*, *muſk*, and *cinnamon-colour*, are given with weld and madder.—*Nacarat*, or *bright orange-red*, is given with weld, and goats hair, boiled with pot-aſhes.

aſhes. Fuſtic here is forbid, as a falſe colour.—V. Savar. *D. de Comm.* T. 2. p. 1690, *ſeqq.* See alſo *le Teinturier Parfait*, *Leid.* 1708, 12°. Salm. *Polygraph.* l. 3. c. 37.

DYING *of wools for tapeſtry*, is performed after the ſame manner as cloths, excepting blacks, which are only to be woaded, and then put in black, as above.

Black wools for cloths and ſerges may be begun with walnut-tree root, and walnut rinds, and finiſhed by dipping in a vat of black.

DYING *of ſilks*, is begun by boiling them with ſoap, *&c.* then ſcowring and waſhing them out in the river, and ſteeping them in alum water cold.—For crimſon they ſcower them a ſecond time before putting them in the cochineel vat.

Red crimſon is dyed with pure cochineel meſtich, adding galls, turmeric, arſenic, and tartar, all put together in a copper of fair water almoſt boiling: with theſe the ſilk is to be boiled an hour and a half; after which, it is ſuffered to ſtand in the liquor till next day.—*Violet crimſon* is alſo given with pure cochineel, arſenic, tartar, and galls; but the galls in leſs proportion than in the former. When taken out it is to be well waſhed, and put in a vat of indigo.—*Cinnamon crimſon* is begun like the violet, but finiſhed by back boiling, if too bright, with copperas; if dark, with a dip in indigo.—*Light blues* are given in a back of indigo.—*Sky blues* are begun with orchal, and finiſhed with indigo.—For *citron colours*, the ſilk is firſt alumed, then welded, with a little indigo.—*Pale yellows*, after aluming, are dyed in weld alone.—*Pale* and *brown aurora's*, after aluming, are welded ſtrongly, then taken down with rocou diſſolved with pot-aſhes.—*Flame colour* is begun with rocou, then alumed, and dipped in a vat or two of brazil.—*Carnation*, and *roſe-colours*, are firſt alumed, then dipped in brazil. *Cinnamon colour*, after aluming, is dipped in brazil, and braziletto.—*Lead colour* is given with fuſtic, or with weld, braziletto, galls, and copperas. But the galls, on theſe and other occaſions, are not to be over-doſed, which encreaſes the weight to the damage of the purchaſer; for which reaſon, it is puniſhed in France as a fraud: in reality few but black ſilks need galls.

Black ſilks, of the *coarſer* ſort, are begun by ſcowring them with ſoap, as for other colours; which done, they are waſhed out, wrung, and boiled an hour in old galls, where they are left to ſtand a day or two; after which, they are waſhed again with fair water, wrung, and put in another vat of new and fine galls; then waſhed and wrung again, and finiſhed in a vat of black.—*Fine black* ſilks are only put once into galls, *viz.* the new and fine ſort, which has only boiled an hour; then they are waſhed, and wrung out, and dipped thrice in black, to be afterwards brought down by back-boiling with ſoap.—V. Savar. *lib. cit.* p. 1693, *ſeqq.*

DYING *of thread* is begun by ſcowring it in a lye of good aſhes; after which, it is wrung, rinſed out in river water, and wrung again.—For a *bright blue*, it is given with braziletto, and indigo.—*Bright green* is firſt dyed blue, then back-boiled with braziletto, and verdeter, and laſtly woaded.—For a *dark green* it is given like the former, only darkening more before woading.—*Lemon*, or *pale yellow*, is given with weld, mixt with rocou.—*Orange* and *iſabella*, with fuſtic, weld, and rocou.—*Red*, both *bright* and *dark*, with *flame colour*, &c. are given with brazil, either alone, or with a mixture of rocou.—*Violet*, *dry roſe*, and *amaranth*, are given with brazil, taken down with indigo.—*Feulemort*, and *olive colour*, are given with galls and copperas, taken down with weld, rocou, or fuſtic.—*Black* is given with galls and copperas, taken down and finiſhed with braziletto wood.

DYING *of hats* is done with braziletto, galls, copperas, verde-greaſe, diſſolved and boiled in a copper capable of receiving, beſides the liquor, twelve dozen of hats on their blocks, or moulds. Here the hats are ſuffered to boil ſome time; after which, they are taken out, and ſuffered to ſtand and cool; then dipped again; and thus alternately, oftener or ſeldomer, as the ſtuff is of a nature to take the dye with more or leſs difficulty. Savar. *lib. cit.* p. 1697. See alſo the article HAT.

Proof of DYES.—There are divers ways of proving the truth of *dyes*, or examining the juſtneſs and legitimacy of their compoſition.—To diſcover whether a cloth have been duly treated by the dyer, and the proper foundations laid, a white ſpot, by the French called *roſette*, of the bigneſs of a ſhilling, ought to be left; beſides a white ſtripe between the cloth and the liſt.

Farther proof is had by boiling the dyed ſtuff in water with other ingredients different according to the quality of the dye to be proved. If the colour ſuſtain the teſt, *i. e.* do not diſcharge at all, or very little, ſo that the water is not tinctured by it, the dye is pronounced good: otherwiſe, falſe.

Proof of the DYES *of ſilks*.—For red crimſon, the proof is made by boiling the ſilk with an equal weight of alum.—For ſcarlet crimſon, it is boiled with ſoap almoſt of the weight of the ſilk.—For violet crimſon, with alum of equal weight with the ſilk, or with citron juice, about a pint to a pound of ſilk.—Theſe ingredients are to be mixed, and put in fair water when it begins to boil; after which, the ſilks are alſo to be put in; and after boiling the whole for half a quarter of an hour, if the dye be falſe, the liquor of the red crimſon will be violet, in caſe it have been dyed with orchal, or very red, if with brazil.—That of crimſon ſcarlet, if rocou have been uſed, will become of an aurora colour, or, if brazil have been uſed, red.—And that of violet crimſon, if brazil, or orchal have been uſed, will be of a colour bordering on red.—On the contrary, if the three ſorts of crimſon be truly dyed, their liquors will diſcover very little alteration.

A ſtill ſurer way to diſcover whether crimſon ſilks have been rightly dyed, is by boiling a piece of ſtandard dyed crimſon ſilk, kept for that purpoſe at Dyers-hall, after the ſame manner, and then comparing the tinctures of the two liquors.

To diſcover whether other colours have been dyed with galls, the ſilk is put in fair boiling water, with pot-aſhes, or ſoap, nearly of the weight of the ſilk; after ſome time, it is taken out; upon which, if it have been dyed with galls, the colour will be all vaniſhed, and nothing but that of the galls left, which is a ſort of feulemort, or wood colour.

The *dying* of ſilk with galls may alſo be detected by putting it in boiling water, with a gallon of citron juice; being taken out, and waſhed in cold water, and then dipped in a black dye, if galls have been uſed, it will turn black; if not, it will be of a brown-bread colour.

To diſcover whether black ſilk have been overdoſed with galls, ſteel filings, or ſlipp, it is boiled in fair water, with twice its weight of ſoap: if it be loaden with galls, it will turn reddiſh, otherwiſe, it will keep its colour.

To diſcover whether black cloth have been firſt woaded, and maddered; a ſample of it, and at the ſame time, a ſample of ſtandard black, kept for that purpoſe by the dyers company, is to be taken; and then as much Roman alum as is equal in weight to both, together with a like weight of pot-aſhes, is to be put over the fire in a pan of bran water: when it begins to boil, the two ſamples to be put in; and after half an hour to be taken out, and compared.—The piece which has only been woaded will be found bluiſh, with ſomewhat of a dull green; if it have been both woaded and maddered, it will be of a tan, or minim colour; and, if it have been neither woaded, nor maddered, its colour will be dunniſh, between yellow and fallow.

For cloths dyed of a minim colour, the proof is to be made after the ſame manner as that of blacks.

To know whether ſcarlet, or crimſon cloth, have been dyed with pure cochineel, they are to be boiled with an ounce of alum to a pound of cloth.

For cloths of other colours, the proof is to be made in the ſame manner as that of blacks and minims.—V. Savar. *lib. cit.* T. 1. p. 1665, *ſeqq.* voc. Debouilli.

Theory of DYING.—This article we cannot better cloſe, than with ſome general deductions which may let a little neceſſary light into the theory of *dying*. As,

1°. That all the materials, which of themſelves give colour, are either red, yellow, or blue; ſo that out of them, and the primitive fundamental colour, white, all that great variety, which we ſee in dyed ſtuffs, ariſes.—2°. That few of the colouring materials, (as cochineel, ſoot, wood-wax, or woad) are in their outward and firſt appearance, of the ſame colour, which by the ſlighteſt diſtempers and ſolutions in the weakeſt menſtrua, they dye upon cloth, ſilk, *&c.*—3°. That many of the colouring materials will not yield their colours without much grinding, ſteeping, boiling, fermenting, or corroſion by powerful menſtrua; as red-wood, weld, woad, annotto, *&c.*—4°. That many of the ſaid colouring materials will of themſelves give no colouring at all, as copperas, or galls, or with much diſadvantage, unleſs the cloth, or other ſtuff to be dyed, be firſt covered or incruſtated, as it were, with ſome other matter, though colourleſs, aforehand; as madder, weld, and brazil, with alum.—5°. That ſome of the colouring materials, by the help of other colourleſs ones, do ſtrike different colours from what they would alone, and of themſelves; as cochineel, and brazil.—6°. That ſome colours, as madder, indigo, and woad, by reiterated tinctures, will at laſt become black.—7°. That though green be the moſt frequent and common of natural colours, yet there is no ſimple ingredient, which is now uſed alone, to dye green with upon any material; ſap-green, the condenſed juice of the ramnus berry, being the neareſt; and this only uſed by country people.—8°. There is no black thing in uſe which dyes black; though both the coal and ſoot of moſt things burnt, or ſcorched, be of that colour; and the blacker, by how much the matter, before it was burnt, was whiter, as in the famous inſtance of ivory black.—9°. The tincture of ſome dying ſtuffs will fade even with lying, or with the air, or will ſtain even with water; but very much with wine, vinegar, urine, *&c.*—10°. Some of the dyers materials are uſed to bind and ſtrengthen a colour; ſome to brighten it; ſome to give luſtre to the ſtuff, ſome to diſcharge and take off the colour, either in whole, or in part; and ſome out of fraud, to make the material dyed, if coſtly, to be heavier.—11°. Some dying ingredients, or drugs, by the coarſeneſs of their bodies, make the thread of the dyed ſtuff ſeem coarſer; and ſome by ſhrinking them, ſmaller; and ſome by levigating their aſperities, finer.—12°.

Many

Many of the ſame colours are dyed upon different ſtuffs with different materials; as red-wood uſed in cloth, not in ſilks; annotto in ſilks, not in cloth; ſo that they may be dyed at ſeveral prices.—13°. Scowring, and waſhing of ſtuffs to be dyed, is to be done with appropriate materials; as ſometimes with ox-galls, ſometimes with fullers earth, ſometimes with ſoap: this latter being pernicious in ſome caſes, where pot-aſhes will ſtain or alter the colour.—14°. Where great quantities of ſtuffs are to be dyed together, or where they are to be done with great ſpeed, and where the pieces are very long, broad, thick, &c. they are to be differently handled, both in reſpect to the veſſels and ingredients,—15°. In ſome colours and ſtuffs the tingent liquor muſt be boiling; in other caſes blood-warm, in ſome it may be cold.—16°. Some tingent liquors are fitted for uſe by long keeping; and in ſome the virtue wears away by the ſame.—17°. Some colours, or ſtuffs, are beſt dyed by reiterated dippings ever into the ſame liquor at ſeveral intervals of time; and ſome by continuing longer, and others leſſer whiles therein.—18°. In ſome caſes, the matter of the veſſel wherein the liquors are heated, and the tinctures prepared, muſt be regarded; as that the kettles be pewter for bowe-dye.—19°. Little regard is had how much liquor is uſed in proportion to the dying drugs; the liquor being rather adjuſted to the bulk of the ſtuff, as the veſſels are to the breadth of the ſame; the quantity of dying drugs being proportioned to the colour higher or lower, and to the ſtuffs both; as likewiſe the ſalts are to the dying drugs.

Concerning the weight which colours give to ſilks, for in them it is moſt taken notice of, as being ſold by weight, and being a commodity of great price; it is obſerved, that one pound of raw ſilk loſes four ounces by waſhing out the gums, and natural ſordes.—That the ſame ſcoured ſilk may be raiſed to above thirty ounces from the remaining twelve, if it be dyed black, with certain materials.—That the reaſon why black colour may be dyed the heavieſt is, that all ponderous drugs may be dyed black, being all of colours lighter than it; whereas, perhaps, there ſeem to be few or no materials wherewith to encreaſe the weight of ſilk, which will conſiſt with fair light colours; ſuch as will having been uſed, as white arſenic to carnations.

Of things uſeful in *dying*, eſpecially black, nothing encreaſes weight ſo much as galls; by means whereof black ſilks recover the weight which they loſt by waſhing out their gum: Nor is it counted extraordinary, that blacks ſhould gain about four or ſix ounces in the *dying* upon each pound.—Next to galls, old fuſtic encreaſes the weight, about 1½ in 12.—Madder about one ounce.—Weld half an ounce.—The blue fat, in deep blues of the fifth ſtall, adds no conſiderable weight.—Neither do logwood, cochineel, or annotto; nor even copperas of itſelf, where galls are not.—Slipp adds much to the weight, and gives a deeper black than copperas, which affords a good excuſe for the dyers that uſe it.—Petty's *Appar. to Hiſt. of Dying*, ap. Sprat. Lib. cit. p. 302, *ſeqq.*

DYING, in a more extenſive ſenſe, is applied to all kinds of colourings given to bodies of any ſort. See COLOUR.

In which ſenſe, *dying* amounts to the ſame with *coloration*; and includes ſtaining, painting, gilding, marbling, printing, &c. See PAINTING, GILDING, &c.—The Chineſe are ſaid to practiſe the *dying* of tea with catechu, which gives the green-tea leaf the colour, and its infuſion the tincture of bohea.—V. Short. *Diſſ. on Tea*, pref. p. 15. See alſo the articles TEA and CATECHU.

The ſorts of *dying*, or coloration, now commonly uſed in vulgar trades, are, 1. Whitening of wax, and ſeveral ſorts of linen and cotton clothes, by the ſun, air, and reciprocal effuſions of water. See BLEACHING, WAX, &c.—2°. Staining of wood and leather by lime, ſalt, and liquors, as in ſtaves, canes, marble leathers, marquetry, &c. See MARQUETRY.—3°. Marbling of paper, by diſtempering the colours with ox-gall, and applying them upon a ſtiff gummed liquor. See PAPER.—4°. Colouring, or rather diſcolouring ſilks, tiffanies, &c. by brimſtone.—5°. Colouring ſeveral iron and copper works into black with oil.—6°. Giving leather a gold colour, or rather *dying* ſilver-leaves like gold, by varniſhes; and in other caſes, by urine and ſulphur.—7°. Staining of marble and alabaſter, with heat and coloured oils. See MARBLE, &c.—8°. Tinging ſilver into braſs with brimſtone or urine.—9°. Colouring the barrels and locks of guns blue and purple with the temper of ſmall-coal heat.—10°. Colouring glaſs *, cryſtals, and earthen ware, with the ruſts, and ſolutions of metals. See POTTERY, &c.—11°. Colouring live hair, as in Poland, both horſe and man's hair; and alſo of furs †.—12°. Enamelling and annealing. See ENAMELLING.—13°. Application of colours, as in the printing of books, and pictures, and the making of playing cards, japanning, &c. See PRINTING, CARDS, JAPANNING, &c.—14°. Gilding, and tinning with mercury, block-tin, and ſal armoniac. See GILDING and TINNING.—15°. Colouring metals, as copper with calamine into braſs, and with zink or ſpelter into gold, or into ſilver with arſenic: and of iron into copper with Hungarian vitriol. See CALAMIN, BRASS, ZINK, ARSENIC, &c.—16°. Making painters colours, by preparing of earth, chalk and ſlates, as in umber, oker, cullens-earth, &c. out of the calces of lead, as ceruſs and minium; by ſublimates of mercury and brimſtone, as in vermilion; by tinging of white earths variouſly, as in verdeter, and ſome of the lakes; by concrete juices or fæculæ, as indigo, pinks, ſap-green, and lakes; and by ruſts, as in verdegreaſe, &c. See CERUSS, MINIUM, VERMILION, INDIGO, &c.—17°. The applying of theſe colours by the adheſion of ox-gall, as in the marbled paper aforeſaid; or by gum-water, as in limning; or by clammy drying oils, as the oils of linſeed, nuts, ſpike, turpentine, &c. See PAINTING, LIMNING, &c.—18°. Watering of tabbies. See WATERING, CALENDER, TABBY, &c.—V. Petty *Appar. Hiſt. of Dying*, ap. Sprat. *Hiſt. Roy. Societ.* p. 285, *ſeqq.*

* Glaſs *dyed* is the common matter of artificial jewels: the tinctures are given with zaffer, manganeſe, feretto, crocus martis, &c. The proceſſes are deſcribed at large in Antonio Neri, *de Re Vitraria*, Lib. I. c. 12, 13, 14, *ſeqq.*—See alſo GLASS, GEM, &c.

† The Peruvian women, when grown old, *dye* their grey hair black by a very untoward operation; *viz.* holding the head ſome hours with the hair ſopped in a boiling tincture of the root of a tree called *cuchau*, by the Spaniards *maquey* [n].—Thoſe brooks and ſprings mentioned by Strabo, Pliny, and others, were much more commodious, which would change the colour of the hair as well as of the coats of animals, with only drinking their waters [o]. For the uſe of angling, white hair is *dyed* green by boiling it in ale with alum, then ſteeping it in a decoction of copperas with wax and water.—It is *dyed* yellow by boiling in alum and ale with walnut-tree leaves ſtamped in it.—Brown, by ſteeping in ſalt and ale [p].—[n] V. *Mem, de Trev.* Sept. 1707. p. 1606, *ſeqq.* [o] Ariſt. *Hiſt. Anim. de Gener.* Lib. IV. and V. Probl. §. 9. Conring. *de Habit. Germ. Corp. Cauſ.* p. 126. [p] Gent. Angl. p. 9, *ſeqq.*

DYING *of leather, ſkins*, &c.—*Blue* is given by ſteeping the ſubject a day in urine and indigo, then boiling it with alum: or it may be given by tempering the indigo with red wine, and waſhing the ſkins therewith.—*Red* is given by waſhing the ſkins, and laying them two hours in galls; then wringing them out; dipping them in a liquor made with liguſtrum, alum and verdegreaſe in water; and laſtly, in a *dye* made of brazil wood boiled with lye.—*Purple* is given by wetting the ſkins with a ſolution of roche alum in warm water, and when dry again, rubbing them with the hand with a decoction of log-wood in water cold.—*Green* is given by ſmeering the ſkin with ſap-green and alum-water boiled: to darken the colour, a little more indigo may be added.—*Dark green* is alſo given with ſteel filings and ſal armoniac ſteeped in urine till ſoft, then ſmeered over the ſkin; which is to be dried in the ſhade.—*Sky-colour* is given with indigo ſteeped in boiling water, and the next morning warmed and ſmeered over the ſkin.—*Yellow*, by ſmeering the ſkin over with aloes and linſeed oil diſſolved and ſtrained: or by infuſing it in weld.—*Orange-colour* is given by ſmeering with fuſtic berries boiled in alum-water: or for a deep orange, with turmeric.—V. Salm. *Polygr.* Lib. III. c. 34. p. 272, *ſeq.*

DYING *or ſtaining of wood, for inlaying, veneering*, &c.—*Red*, is done by boiling the wood in water and alum; then taking it out, adding brazil to the liquor, and giving the wood another boil in it.—*Black*, by bruſhing it over with log-wood boiled in vinegar, hot; then waſhing it over with a decoction of galls, and copperas, till it be of the hue required.—*Any other* colour may be given by ſqueezing out the moiſture of horſe-dung through a ſieve, mixing it with diſſolved roche alum and gum arabic; and to the whole adding green, blue, or any other colour deſigned: after ſtanding two or three days, pear-tree or other wood cut to the thickneſs of half a crown, is put into the liquor boiling hot, and ſuffered to remain till it be ſufficiently coloured.—V. Park. *Treat. of Japann.* c. 27. p. 82, *ſeq.*

DYING *of bone, horn or ivory.*—*Black* is performed by ſteeping braſs in aqua fortis till it be turned green: with this the bone, &c. is to be waſhed once, or twice; then put in a decoction of log-wood and water, warm.—*Green* is begun by boiling the bone, &c. in alum-water; then with verdegreaſe, ſal armoniac and white wine vinegar; keeping it hot therein till ſufficiently green.—*Red* * is begun by boiling it in alum-water, and finiſhed by decoction in a liquor compounded of quick-lime ſteeped in rain-water, ſtrained, and to every pint an ounce of brazil wood added: the bone, &c. to be boiled herein till ſufficiently red [a].—Other methods are given by Salmon [b].—And from him by Houghton [c].—[a] V. Park. Lib. cit. p. 83, *ſeqq.* [b] Salm. *Polygraph.* l. 3. c. 35. p. 275, *ſeqq.* [c] Hought. *Collect.* N° 138. T. 1. p. 361.

* The refuſe of the bow-dye given hogs to feed on, is ſaid to tinge their very bones red. This is a ſpontaneous kind of *dying*, not unlike that in Virgil; who ſpeaks of *dying* wool on the ſheeps backs, by their feeding on properly coloured vegetables:

Nec varios diſcet mentiri lana colores:
Ipſe ſed in pratis aries jam ſuave rubenti
Murice, jam croceo mutabit vellera luto:
Sponte ſua ſandyx paſcentes veſtiet agnos.
Ecl. 4. v. 42, *ſeqq.*

The difficulty is to conceive how lambs ſhould feed on the ſandyx,

ſandyx, which is a mineral ſubſtance; the ſame with what is otherwiſe called *ſandaracha*. It is certain the poet takes it for a plant, as was long ago obſerved by Pliny: *Animadverto Virgilium exiſtimaſſe herbam id eſſe.* Hiſt. Nat. *l.* 35. *c.* 6. This inference is chiefly drawn from the word *paſcentes*, which can mean nothing elſe, but that the lambs browſing on the ſandyx, ſhould receive the *dye* in their fleeces from the aliment. Dr. B— here gives us a correction which ſets all to rights: for *paſcentes* he reads *naſcentes*. On which footing the tenor of the paſſage is this: from that time there will be no need of *dying* wool with beautiful colours; but the ſheep ſhall have their fleeces *dyed* naturally, and ſpontaneouſly; ſome with the *murex*, or purple colour; others with the *luteus*, or yellow; others with *ſandyx*, or red. Thoſe that were already in being, and had white fleeces, ſhall change them *in pratis*, in the meadows; but all the lambs ſhall be *dyed* beautifully *naſcentes*, at their birth. V. *Mem. of Liter.* T. 2. art. 2. p. 7, *ſeqq.*

G.

GYMNASIUM*, a place fitted for performing exerciſes of the body. See GYMNASTICKS.

* The word is Greek, γυμνασιον, formed of γυμνος, naked; by reaſon they anciently put off their clothes, to practiſe with the more freedom.

Among the ancients, *gymnaſium*, was a public edifice deſtined for exerciſe, and where people were taught, and regularly diſciplined therein, under proper maſters.

If we may credit Solon in Lucian's *Anacharſis*, and Cicero *de Orat.* lib. 2. the Greeks were the firſt who had *gymnaſia*; and among the Greeks, the Lacedæmonians: after them the Athenians; from whom the Romans borrowed them.

There were three principal *gymnaſiums* at Athens; the *academy*, where Plato taught; the *lyceum*, noted for Ariſtotle's lectures; and the *cynoſarges*, allotted for the populace. See ACADEMY, and LYCEUM.

Vitruvius deſcribes the ſtructure and form of the ancient *gymnaſiums*, lib. 5. c. 11.—They were called *gymnaſia*, becauſe the champions performed *naked*; and *palæſtræ*, from *wreſtling*, which was one of the moſt uſual exerciſes there: the Romans ſometimes alſo called them *thermæ*, becauſe the baths and bagnio's made a principal part thereof. See PALÆSTRA, BATH, *&c.*

It appears that they did not perform their exerciſes quite naked ſo early as the time of Homer, but always in drawers; which they did not lay aſide before the thirty ſecond olympiad. One Orſippus is ſaid to have been the firſt that introduced the practice; for having been worſted by means of his drawers undoing, and entangling him, he threw them quite aſide; and the reſt afterwards imitated him.

The *gymnaſia* conſiſted of ſeveral members or apartments. M. Burette, after Vitruvius, recites no leſs than twelve, *viz.* 1°. The exterior *portico's* where the philoſophers, rhetoricians, mathematicians, phyſicians, and other virtuoſi, read public lectures, diſputed, and rehearſed their performances. 2°. The *ephebeum*, where the youth aſſembled very early to learn their exerciſes in private, without any ſpectators. 3°. The *coryceum*, *apodyterion*, or *gymnaſterion*, a kind of wardrobe where they ſtript, either to bathe or exerciſe. 4°. The *elæotheſium*, *alipterion*, or *unctuarium*, appointed for the unctions which either preceded or followed the uſe of the bath, wreſtling, pancratia, *&c.* 5°. The *coniſterium*, or *coniſtra*, in which they covered themſelves with ſand or duſt to dry up the oil, or ſweat. 6°. The *palæſtra* properly ſo called, where they practiſed wreſtling, the pugilate, pancratia, and divers other exerciſes. 7°. The *ſphæriſterium*, or tennis court, reſerved for exerciſes wherein they uſed balls. 8°. Large unpaved alleys, which comprehended the ſpace between the portico's, and the walls wherewith the edifice was ſurrounded. 9°. The *xyſti*, which were portico's for the wreſtlers in winter or bad weather. 10°. Other *xyſti's*, or open alleys, allotted for ſummer and fine weather; ſome of which were quite open, and others planted with trees. 11°. The *baths*, conſiſting of ſeveral different apartments. See BATH. 12°. The *ſtadium*, a large ſpace, of a ſemicircular form, covered with ſand, and ſurrounded with ſeats for the ſpectators. See STADIUM.

For the adminiſtration of the *gymnaſia*, there were divers officers; the principal were, 1°. The *gymnaſiarcha*, who was the director and ſuperintendant of the whole. 2°. The *xyſtarcha*, who preſided in the xyſtus or ſtadium. 3°. The *gymnaſta*, or maſter of the exerciſes, who underſtood their different effects, and could accommodate them to the different complexions of the athletæ. 4°. The *pædotriba*, whoſe buſineſs was mechanically to teach the exerciſes, without underſtanding their theory or uſe. Under theſe four officers were a number of ſubalterns, whoſe names diſtinguiſhed their different functions.

For the kinds of exerciſes practiſed in the *gymnaſia*, they may be reduced to two claſſes, as they depend either on the action of the body alone, or as they require external agents, or inſtruments. The former are chiefly of two kinds; *orcheſtice*, and *palæſtrice*.

The *orcheſtice* comprehended, 1°. *Dancing*. 2°. *Cubiſtice*, or the art of tumbling. 3°. *Sphæriſtice*, or tennis, including all the exerciſes with pilæ, or balls.

The *palæſtrice* compriſed all exerciſes under the denomination *palæſtra*; as, *wreſtling*, *boxing*, *pancratia*, *hoplomachia*, *running*, *leaping*, *throwing the diſcus*, the *exerciſe of the javelin*, and that of the *hoop*, denominated by the Greeks τροχος, which conſiſted in rolling an iron hoop, five or ſix foot in diameter, beſet with iron rings, the noiſe of which appriſing the people to give way, afforded them alſo an amuſement. Both ſtrength and ſkill were requiſite in directing this hoop, which was to be driven with an iron rod.

To theſe muſt alſo be added, the exerciſes belonging to the medicinal gymnaſticks: as, 1°. *Walking*. 2°. *Vociferation*, or ſhouting. 3°. *Holding one's breath*.

The bodily exerciſes which depend on external agents, may be reduced to *mounting* the horſe, *riding* in a chaiſe, litter, or other wheeled vehicle, *rocking* in beds, or cradles, and ſometimes *ſwinging*: to which may be added, the art of *ſwimming*.—Hoffman enumerates no leſs than fifty five ſorts of gymnaſtic exerciſes.

GYMNASTICKS, GYMNASTICE, or the GYMNASTIC *art*, denotes the art of performing exerciſes of the body, whether for defence, health, or diverſion. See GYMNASIUM.

The *gymnaſtic* art is divided into three ſpecies, or branches; *military*, *medicinal*, and *athletic*, or *ſportive*.

Several modern writers have treated of this art, as Mercurialis, *de arte Gymnaſtica*; Faber, in *Agoniſtic*. Joubert *de Gymnaſiis*; Cagnatus *de Sanit. tuend.* Voſſius *de Quatuor Artib. Popular.* Meurſius *de Orcheſtra*; Fuller in *Medicina Gymnaſtica*; and M. Burette in ſeveral diſſertations on the *ancient Dancing*, *Spheriſtics*, *Athletics*, *Wreſtling*, *Pugillate*, *Diſcus*, &c.

M. Burette has given the hiſtory of *gymnaſtics* in the *Memoirs of the Royal Academy of Inſcriptions*.—According to him, this art is coeval with the world. In reality, we can hardly ſuppoſe mankind to have ever been without exerciſes of the body; which the defence of their perſons, the preſervation of health, and even recreation, and mirth, would neceſſarily lead them to. See EXERCISE.

On the firſt eſtabliſhment of ſociety, men, being apprized of the neceſſity of military exerciſes for repelling the inſults of their neighbours, inſtituted games, and propoſed prizes, to animate their youth to combats of divers kinds. See GAME. And, as running, leaping, ſtrength and dexterity of arm, in throwing the javelin, driving a ball, or a quoit, together with wreſtling, *&c.* were exerciſes ſuited to the manner of fighting in thoſe days; ſo the youth vied to excel in them in the preſence of the aged, who ſat their judges, and diſpenſed prizes to the conquerors: till what was originally only amuſement, became at length a matter of ſuch importance, as to intereſt famous cities, and entire nations in its practice.

Hence an emulation and eagerneſs to excel, in hopes one day of being proclaimed and crowned conquerors in the public games, which was the higheſt honour a mortal could arrive at. Nay, they went ſo far as to imagine, that even gods and demi-gods were not inſenſible of what men were ſo captivated withal; and in conſequence hereof, to introduce the greateſt part of theſe exerciſes into their religious ceremonies, the worſhip of their gods, and the funeral honours done the manes of the dead. See FUNERAL, *&c.*

Though it be hard to determine the preciſe epocha of the *gymnaſtic* art, yet it appears from ſeveral paſſages in Homer, and particularly the 23d book of the *Iliad*, where he deſcribes the games celebrated at the funeral of Patroclus, that it was not unknown at the time of the Trojan war.—From that deſcription, which is the earlieſt monument now extant of the Grecian *gymnaſtics*, it appears that they had chariot races, boxing, wreſtling, foot races, gladiators, throwing the diſcus, drawing the bow, and hurling the javelin; and it ſhould ſeem from the particular account Homer gives of theſe exerciſes, that even then the *gymnaſtic* art wanted little of perfection: ſo that when Galen ſays, there was no *gymnaſtic* art in Homer's days, and that it begun to appear no earlier than Plato, he is to be underſtood of the medicinal *gymnaſtics* only. This laſt, indeed, had its riſe later; becauſe, while men continued ſober and laborious, they had no occaſion for it. But when luxury and idleneſs had reduced them to the ſad neceſſity of applying to phyſicians; theſe who had found that nothing contributed ſo much to the preſervation and re-eſtabliſhment of health, as exerciſes proportioned to the different complexions, ages, and ſexes, did not fail to remit them to the practice of *gymnaſtics*.

According to Plato, one Herodicus, prior a little to Hippocrates, was the firſt who introduced this art into phyſic; and his ſucceſſors, convinced by experience of its uſefulneſs, applied themſelves in earneſt to improve it.

Hippocrates, in his book of *Regimen*, has given inſtances of it, where he treats of exerciſe in general, and of the particular effects of walking, with regard to health; alſo of the different ſorts of races, either on foot or horſeback, leaping, wreſtling, the exerciſe of the ſuſpended ball called *corycus*, chironomy, unctions, frictions, rolling in the ſand, *&c.* See FRICTION, *&c.*

But as phyſicians did not adopt all the exerciſes of the *gymnaſtic* art into their practice, it became divided between them and the maſters of martial and athletic exerciſes, who kept ſchools, the number of which was greatly encreaſed in Greece. See ATHLETA, &c.

At length the Romans alſo caught the ſame taſte, and adopting the military and athletic exerciſes of the Greeks; improved and advanced them to the utmoſt pitch of magnificence, not to ſay extravagance. But the declenſion of the empire involved the arts in its ruin; and, among others, *gymnaſtics* and medicine; which laſt unhappily then relinquiſhed the title it had to the former, and has neglected to reſume it ever ſince. See MEDICINE.

L.

LUSTRATION, *Expiation*; ſacrifices, or ceremonies, by which the Romans purified their cities, fields, armies, or people defiled by any crime, or impurity. See LUSTRUM, EXPIATION, PURIFICATION, &c.

Some of their *luſtrations* were public, others private.

There were three ſpecies, or manners of performing *luſtration*; *viz.* by fire and ſulphur; by water; and by air; which laſt was done by fanning and agitating the air, round the thing to be purified. See ABLUTION.

There was alſo a peculiar kind of *luſtration* for young children. See LUSTRAL *day*.

Lomeier has a volume expreſs on the *luſtrations* of the antients: Joh. Lomeieri Zutphanenſis *Epimenides, ſive de veterum gentilium Luſtrationibus*; firſt printed at Utrecht in 1681, and ſince, with additions, in 1702. 4°.

All perſons, ſlaves only excepted, he ſhews, were miniſters of ſome ſort of *luſtration*.—When any one died, the houſe was to be ſwept after a particular manner, by way of purification: the prieſts threw water on new married people, with the like intention.—TO purify themſelves, people would even ſometimes run naked through the ſtreets; ſuch was their extravagance. And, as if fancy were not fertile enough in inventing modes of *luſtration*, they even uſed enchantments to raiſe the dead, in order to get inſtructions what they muſt do to purge themſelves of their ſins. Add, that they frequently raiſed the opinion of the ſanctity of their expiations by fictitious miracles.

The birds, ſay they, practiſe *luſtration*, both by waſhing themſelves, and throwing water on their neſt. The hen takes ſtraw, and uſes it to purify her chickens.—There was ſcarce any action, at the beginning and end of which the Gentiles did not perform ſome ceremony to cleanſe themſelves, and appeaſe the gods. When they had no animals to ſacrifice, they made the figure of the beaſt they would offer in dough, metal, or other matter; and thus ſacrificed in effigy.

Some expiations were performed in the water; for which reaſon, certain fountains and rivers were in great reputation: others were performed in the air.—A certain heathen cauſed himſelf to be ſeriouſly ſifted in a ſieve, as we now ſift corn: another hung himſelf by a cord, and was toſſed backwards and forwards: another ſhut his eyes, and ſet himſelf blindfold to find out a noſegay tied to a cord: others played at ſee-ſaw, as a more efficacious way of appeaſing the gods.

Fire was much uſed for expiation: ſometimes the penitents were caſt into the fire; at others, only brought to the flame, or ſmoke.

It was common, on theſe occaſions, to ſhed human blood: The prieſts of Cybele, Bellona, and Baal, made cruel inciſions on themſelves.—Erectheus, king of Attica, ſacrificed his daughter to Proſerpina. Several had their throats cut at Rome, to obtain the emperors health from the gods. Thoſe who commanded armies, offered one of their ſoldiers to appeaſe the anger of the gods; that he alone might ſuffer all the wrath the army deſerved.

All ſorts of perfumes, and odoriferous herbs, had place in *luſtration*.—The egg was much uſed among them, as being the ſymbol of the four elements: its ſhell, they ſay, repreſents the earth; the yolk, a globe of fire; the white reſembles the water, and beſides, it has a ſpirit, which repreſents the air. For this reaſon it is, that the bonza's, or Indian prieſts, believe to this day that the world came out of an egg.—There is ſcarce any pot-herb, pulſe, tree, mineral, or metal, which they did not offer the gods by way of expiation: nor did they forget milk, bread, wine, or honey: what is more, they made uſe of the very ſpittle, and urine.

The poets had feigned that the gods purified themſelves, and they did not omit to purify their ſtatues.—They made a *luſtration* for children, the eighth day after their birth.—When a man who had been falſly reputed dead, returned home, he was not to enter his houſe by the door.—It was a ſettled cuſtom to offer no expiation for thoſe who were hanged by order of juſtice; or that were killed by thunder. Neither did they offer any for thoſe who were drowned in the ſea; it being the common opinion, that their ſouls periſhed with their bodies. And hence it was, that perſons in danger of ſhipwreck ſometimes thruſt their ſwords through their bodies, that they might not die in the ſea; where they thought their ſoul, which they ſuppoſed to be a flame, would be totally extinguiſhed.

The moſt celebrated expiatory ſacrifice was the hecatomb, when they offered an hundred beaſts; though they commonly did not offer ſo many, but contented themſelves with killing twenty-five; but thoſe being quadrupeds, their feet came to an hundred. See HECATOMB.

Luſtrations, and luſtratory ſacrifices were not only performed for men, but alſo for temples, altars, theaters, trees, fountains, rivers, ſheep, fields and villages. When the Arval brothers offered a victim for the fields, their ſacrifice was called *ambarvalia*. See AMBARVALIA.

Cities were all to be purified, from time to time: ſome walked the victim round their walls, and then ſlew him.—The Athenians ſacrificed two men, one for the men of their city, and the other for the women. The Corinthians ſacrificed the children of Medea ſo; though the poets ſay, Medea killed them herſelf. The Romans performed the ceremony of purifying their city every fifth year; whence the name of *luſtrum*, given to the ſpace of five years. See LUSTRUM.

Divers of the expiations were auſtere: ſome faſted; others abſtained from all ſenſual pleaſures: ſome, as the prieſts of Cybele, caſtrated themſelves; others, that they might live chaſte, eat rue, or lay under the branches of a ſhrub called *agnus caſtus*. See AGNUS *Caſtus*.

The poſtures of the penitents were different, according to the different ſacrifices: they ſometimes joined prayers to the ſolemnity: at other times, a publick confeſſion of ſins was made.—The Indians, when they ſacrifice to Hercules, call him a thouſand reproachful names; and think they incur his anger, if any reſpectful term come out of their mouth.

The prieſts changed their habits, according to the ceremonies to be performed: white, purple, and black, were the moſt uſual colours. They had their heads always covered, and long hair, except in the ſacrifices of Saturn, Hercules, Honour, and a few others: only the prieſts of Iſis were ſhaven, becauſe that goddeſs underwent the ſame operation, after the death of her huſband Oſiris.—In ſome ceremonies the prieſts were ſhod, in others bare-foot: the poets expreſs the former by the word *vincula*. They had no girdles; nay, they durſt not pronounce the word *ivy*, becauſe ivy cleaves to every thing.—In the ſacrifices of Venus, and the Moon, every one took the habit of the contrary ſex.—Every thing was to be done by odd numbers; becauſe they looked on an even number, which may be equally divided, as the ſymbol of mortality and deſtruction. The odd number was with them holy: hence, Neptune's trident, Cerberus's three heads, and Jupiter's thunder-dart, with three points.

They caſt into the river, or at leaſt out of the city, the animals, or other things that had ſerved for a *luſtration*, or ſacrifice of atonement; and thought themſelves threatned with ſome great misfortune, when by chance they trod upon them.—At Marſeilles, they took care to feed a poor man for ſome time; after which, they charged him with all the ſins of the country, and drove him away: thoſe of Leucade faſtened a number of birds to a man charged with their ſins, and in that condition caſt him headlong from a high tower; and if the birds hindered his being killed, they drove him out of the country.

Part of theſe ceremonies were aboliſhed by the emperor Conſtantine, and his ſucceſſors; the reſt ſubſiſted till the Gothic kings were maſters of Rome, under whom they expired; except that ſeveral of them were adopted by the popes, and brought into the church, where they make a figure to this day: witneſs the numerous conſecrations, benedictions, exorciſms, ablutions, ſprinklings, proceſſions, feaſts, &c. ſtill in uſe in the Roman church. See CONSECRATION, &c.

LUXATION*, LUXATIO, in medicine and ſurgery, the ſlipping of the head of a bone from its proper receptacle into another place; whereby the natural motion of the joint is deſtroyed. See BONE, and ARTICULATION.

* The word is Latin, formed from *luxare*, to looſen.

Luxation is the ſame with what is otherwiſe called *diſlocation*; being the diſplacing of a bone, or rather the disjointing of two bones articulated together for the motion of the part.

Luxations are either *violent*, proceeding from ſome external cauſe; as falls, ſtrains, blows, leaps, extenſions, &c.—Or *gentle*, ariſing from internal cauſes; as a natural laxity of the ligaments, a fluxion of humours, or gradual collection thereof between the joints, &c.

Luxation, properly, has place only amongſt bones whoſe ſtructure determines them to a manifeſt motion, as are all thoſe united by diarthroſis; thoſe articulated by ſynarthroſis, where there is no manifeſt motion, are indeed ſubject to fracture, caries, exoſtoſis, &c. but not to *luxation*. See DIARTHROSIS, &c.

Luxations, again, are either *perfect*, or *imperfect*.

Perfect, or *compleat* LUXATION, ΕΞΑΡΘΡΗΜΑ, is that where the head of a bone is actually ſtarted out of the cavity of another.—It is known by a tumour, or protuberance, formed by the head of the ſeparated bone, which raiſes up the ſkin, and muſcular fleſh above its natural level in the part not de-

ſtined to receive it; and a hollowneſs or ſinking in the place from whence it is ſtarted, perceivable by the touch.—It is alſo attended with great pain, a total abolition of motion, and a ſhortening of the limb.

Imperfect, or *partial* LUXATION, ΠΑΡΑΦΟΡΗΜΑ, called alſo *ſubluxation*, is where the motion is only much impaired, the joint weaked, and a deformity perceivable in it, when compared with the oppoſite part, which is ſound.—This is otherwiſe called a *ſtrain*, when it proceeds from an external cauſe; or, ſimply, a *relaxation*, when from an internal one.

A *luxation* is ſaid to be *ſimple*, when it has no other accident or injury accompanying it—*complicated*, when it is attended with a wound, inflammation, fracture, or the like.

The cure of a *luxation* is by a ſpeedy reduction of the diſlocated member to its natural place.—To this are neceſſary, 1°. *Extenſion*, ανατασις, which a luxated as well as fractured member requires; as well on account of the contraction of the tendons, as that the head of the bone may more directly be intruded into its ſeat.—This extenſion is made either by the hands alone, which is called *modus palæſtricus*, becauſe, among wreſtlers, diſlocated members uſe to be reduced after this manner; or by ligatures, or towels; or by inſtruments, or great machines, when the *luxation* is difficult, and inveterate.

2°. After extenſion, follows the intruding of the joint into the natural cavity; which, likewiſe, may either be effected by the hands only, or by the heel, (as when the head of the os humeri is fallen into the arm-pit) or by means of ladders, doors, peſtles, or Hippocrates's inſtrument, called *ambe*.—This way is termed *methodical*, by way of diſtinction from the third, which is called *organical*, becauſe performed by large inſtruments, and machines, but now altogether out of uſe.

Gourmelinus to theſe adds, αποθεσις, the very act of reducing the member into its own place, which is to be known by the ſound uſually heard, and from the uſe and motion of the reduced joint.

Laſtly, becauſe on account of the laxity of the tendons, &c. the reduced bone cannot remain in its natural poſition, it is neceſſary yet further to apply compreſſes and bandage; by whoſe means the articulation is preſerved ſafe, till the ligaments may acquire their uſual ſtrength of elaſticity and aſtriction.

LYRE.—Mr. Barnes, in the prolegomena to his edition of *Anacreon*, has an enquiry into the antiquity and ſtructure of the *lyre*; of which he makes Jubal the firſt inventor. For the ſeveral changes this inſtrument underwent, by the addition of new ſtrings, he obſerves that, according to Diodorus, it had originally only three; whence it was called τριχορδον. Afterwards, it had ſeven ſtrings; as appears from Homer, Pindar, Horace, Virgil, &c. Feſtus Avienus gives the *lyre* of Orpheus nine ſtrings. David mentions an inſtrument of that ſort ſtrung with ten, *in pſalterio decachordo*. Timotheus of Miletus added four to the old ſeven, which made eleven. Joſephus, in his *Jewiſh Antiquities*, makes mention of one with twelve ſtrings; to which were afterwards added ſix others, which made eighteen in all.—Anacreon himſelf ſays, p. 253. of Mr. Barnes's edition, *canto viginti totis chordis*.—For the modern *lyre*, or Welſh harp, conſiſting of forty ſtrings, it is ſufficiently known.

LYRIC.—This ſpecies of poetry was originally employed in celebrating the praiſes of gods and heroes; though it was afterwards introduced into feaſts, and public diverſions: it is a miſtake to imagine Anacreon, as the Greeks do, the author of it; ſince it appears from ſcripture to have been in uſe above a thouſand years before that poet.—Mr. Barnes ſhows how unjuſt it is to exclude heroic ſubjects and actions from this ſort of verſe, *lyric poetry* being capable of all the elevation and ſublimity ſuch ſubjects require; which he confirms by the example of Alcæus, Steſichorus, Anacreon, and Horace, and by his own eſſay, *A Triumphal Ode, inſcribed to the duke of Marlborough*, at the head of this edition: he concludes with the hiſtory of *lyric poeſy*, and of thoſe ancients who excelled in it.

P.

PAPER *, a thin flexible leaf, uſually white, artificially prepared of ſome vegetable ſubſtance, chiefly to write upon, with ink. See WRITING, INK, &c.

* The word is formed from the Greek παπυρος, *papyrus*, the name of an Egyptian plant, called alſo βιβλος, *biblus*, whereon the ancients uſed to write.

Various are the materials, on which mankind in different ages and countries have contrived to write their ſentiments; as on ſtones, bricks, the leaves of flowers, and trees, and their rinds or barks; alſo tables of wood, wax, and ivory; to which may be added plates of lead, linen rolls, &c. At length the Egyptian *papyrus* was invented; then parchment, cotton *paper*, and laſtly the common or linen *paper* [a].

[a] *Vid.* Maffei *Iſtor. Diplom.* l. 2. §. 3—10. *Bibl. Ital.* T. 2. p. 242. Leo Allat. *Antiq. Hetruſc.* p. 127. ſeq. Hug. *de Scrib. Orig.* Alex. ab Alexand. l. 2. c. 30. Barthol. *Diſſ.* 4. *de Libr. Legend.* p. 90, ſeq.

In ſome places and ages they have even written on the ſkins of fiſhes; in others, on the inteſtines of ſerpents; and in others, on the backs of tortoiſes.—Not to mention what Epiphanius relates, that Moſes received the law written on tables of ſapphire; nor what the Cabbaliſts dream, that the ſame was written on a globe of fire; nor laſtly, thoſe military teſtaments ſpoken of by civilians, which were written in the duſt or ſand [b].

[b] *Vid.* Mabill. *de Re diplomat.* l. 1. c. 8. Fabric. *Bibl. Ant.* c. 21. §. 9. p. 610, ſeq. Reimm. *Idea Syſtem. Antiq. Liter.* p. 309. See alſo the articles BOOK, PARCHMENT, &c.

There are few parts of plants but have been uſed for *paper*, and books: and hence the ſeveral terms, *biblos*, *codex*, *liber*, *folium*, *tabula*, *tilia*, *philura*, *ſcheda*, &c. which expreſs the ſeveral parts on which they were written: and though in Europe all diſappeared upon the introduction of *papyrus* and parchment, yet in ſome other countries the uſe of divers of them obtain to this day.—In Ceylon, for inſtance, they write on the leaves of the Talipot: [a] The Bramin MSS. in the Tulinga language, ſent to Oxford from Fort St. George, are written on leaves of the Ampana or Palma Malabarica: [b] Hermannus gives an account of a monſtrous palm-tree called *Codda panna*, or *Palma Montana Malabarica*, which about the 35th year of its age, riſes to be 60 or 70 foot high, with plicated leaves nearly round, 20 foot broad; wherewith they commonly cover their houſes; and on which they alſo write; part of one leave ſufficing to make a moderate book. They write between the folds, making the characters through the outer cuticle [c].

[a] Knox. *Hiſt. Ceyl.* l. 3. Le Clerc, *Bibl. Univ.* T. 23. p. 242. [b] *Phil. Tranſ.* No. 246. p. 422, ſeq. [c] *Vid. Hort. Ind. Malab.* P. 3. *Phil. Tranſ.* No. 145. p. 108.

In the Maldivee iſlands, the natives are ſaid to write on the leaves of a tree called *macarequean*, which are a fathom and a half long and a foot broad. And in divers parts of the Eaſt-Indies, the leaves of the muſa arbor or plantain tree dried in the ſun, ſerved the ſame uſe, till of late that the French have taught them the uſe of European *paper*.—[d] Ray, in fine, enumerates divers kinds of Indian and American trees which bear *paper*; particularly one called *xagua*, which has ſomething in it extraordinary: its leaves are ſo large, and of ſo cloſe a texture, that they cover a man from top to toe, and ſhelter him from the rain, and other inclemencies of the air, like a cloak; from the innermoſt ſubſtance of which leaves, a *paper* is taken; being a white and fine membrane like the ſkin of an egg, as large as a ſkin of our vellum or parchment, and nothing inferior for beauty and goodneſs to the beſt of our *papers* [e].

[d] *Vid.* Savar. D. *de Comm.* T. 2. p. 967, [e] *Vid.* Ray *Hiſt. Plantar.* T. 2. l. 32. *Nouv. Rep. Let.* T. 12. p. 361.

Paper is chiefly made among us of linen or hempen rags, beaten to a pulp in water, and moulded into ſquare ſheets, of the thickneſs required.—But it may alſo be made of nettles, hay, turnips, parſnips, colewort leaves, earth-flax, or any thing that is fibrous; nay it may be made of white woollen rags; though this would not ſerve for writing, becauſe of the hairineſs [f].—The Chineſe *paper* is ſo fine, that many Europeans have thought it was made of ſilk; not conſidering, ſays du Halde, that ſilk cannot be beat into ſuch a paſte, as is neceſſary to make *paper* [g]: though the ſame author afterwards ſpeaks of a *paper* or parchment made of the balls of ſilk-worms; and the like we are aſſured by others is done at Cathay [h].

[f] Hought. *Collect.* No. 360. T. 2. p. 418, ſeq. [g] *Deſcript. of Chin.* p. 360, ſeq. [h] *Vid.* Buſbeq. *Legat. Turc. Epiſt.* 4. p. 329.

PAPER with regard to the manner of making it, and the materials employed therein, is reducible to divers kinds: *Egyptian*, *European* and *Chineſe paper*; we alſo find mention of *cotton paper*, *bark paper*, and *asbeſtine* or *incombuſtible paper*.

Egyptian PAPER, is that which was principally uſed among the ancients; made of a ruſh called *papyrus*, or *biblus*, growing chiefly in Egypt about the banks of the Nile; though it was alſo found in India; and Guilandinus aſſures us, he ſaw in Chaldæa, at the confluence of the Tygris and Euphrates, large fens, wherein with his own hands he plucked a *papyrus* differing in nothing from that of the Nile. Strabo likewiſe ſpeaks of a ſort of *papyrus* growing in Italy; but we do not find it was ever uſed for making *paper*.

The deſcription given by Pliny [i] of the *papyrus* or *paper-ruſh*, is ſomewhat obſcure. Its root, according to him, is of the thickneſs of a man's arm, and ten cubits long: from this ariſe a great number of triangular ſtalks 6 or 7 cubits high, each thick enough to be eaſily ſpanned. Its leaves are long like thoſe of the bull-ruſh; its flowers ſtamineous, ranged in cluſters at the extremities of the ſtalks; its roots woody and knotted like thoſe of ruſhes, and its taſte and ſmell near akin to thoſe of the Cyperus [k].

Plant.* l. 4. c. 9. and Dalecamp. who gives us a figure of it, *Hiſt.* l. 18. p. 1883.—See alſo Bauhin. l. 18. c. 186. who with Geſner makes it a ſpecies of Cyperus. Grew, *Muſ. Reg. Societ.* P. 2. ſect. 2. p. 225, ſeq. Maffei, *Iſtor. Diplom. Bibl. Ital.* T. 2. p. 246.

Beſides

Beſides *paper*, they make ſails, ropes, and other naval rigging; as alſo mats, blankets, clothes, and even ſhips, of the ſtalk of the *papyrus*. Moſes, we are told, when a child, was expoſed on the banks of the Nile, εν βιβλῳ παπυρου, *i. e.* in a baſket of *papyrus*. Add, that the Egyptian prieſts wore ſhoes of *papyrus*. Guilandinus, a Pruſſian phyſician, has a celebrated work expreſsly on the ancient *papyrus*, by way of commentary on three chapters of Pliny *, wherein is amply, and with great learning, explained all that relates to this ſubject; yet Scaliger has written a ſevere critique on it, in which ſome inaccuracies of Guilandinus are pointed out **, which has not hindered Kirchmayer from adopting almoſt Guilandinus's whole book in a diſſertation on the *papyrus* ***. Add, that the moſt ingenious and learned count Scipio Maffei has lately vindicated Guilandinus againſt the exceptions of Scaliger, as well as of Voſſius and Hardouin.—*Vid. Iſtor. Diplomat.* l. 2. *Bibl. Ital.* T. 2. p. 248.

* *Melch. Guilandini Papyrus*, h. e. *Commentarius in tria C. Plinii Majoris de papyro capita*, ſc. lib. XIII. c. 11, 12, 13. firſt publiſhed at Venice in 1572, and afterwards at Amberg in 1613, by Salmuth.—It ſeems Guilandinus intended a commentary on the whole of Pliny's *Natural Hiſtory*; but this ſmall part, not exceeding a moderate page, taking him up full ſix months, it is no wonder he was diſcouraged from proceeding with the reſt. In theſe three chapters he has reſtored above twenty paſſages in the text of Pliny, not merely from his own conjecture, or the help of MSS. but from the nature of the things deſcribed, and the teſtimonies of authors of the firſt rank: beſides that, he had been upon the ſpot where formerly the *papyrus* was manufactured, and had carefully examined all the ancient Greek and Latin authors who ſpeak of it.

** *Joſ. Juſt. Scaligeri Animadverſiones in Melchioris Guilandini Commentarium in tria C. Plinii capita*, lib. XIII. *Hiſtoriæ Mundi ſive Naturalis, quibus agit de papyro*, firſt publiſhed in the *Lectiones bibliothecariæ memorabiles*, of Rudolphus Capellus, at Hamburgh in 1682.—Where he follows Guilandinus ſtep by ſtep, finds as many faults in him as his father had done in Cardan, and uſes him altogether as coarſely; every where pointing out his literary miſtakes, and labouring to ſhow, that inſtead of reſtoring Pliny, he has often miſtaken and corrupted him.

*** *M. Seb. Kirchmaieri Uffenhaimenſis Franci Diſſertatio Philologica de papyro veterum. Wittebergæ*, 1666. 4to.—He had done better ſervice, if beſides Guilandinus he had conſulted others, and particularly Scaliger. But as he choſe to follow one rather than many, and that too as the blind follow their guides, his fate has been much the ſame.

The origin of the art of making *paper* of the *papyrus* is very obſcure: no doubt it was firſt diſcovered in Egypt. Iſidore fixes it more particularly to the city Memphis.—Orig. l. 6. c. 10. In which he ſeems to be countenanced by Lucan, where he ſays,

Nondum flumineas Memphis contexere Biblos
Noverat ——————— Pharſal. l. 3. v. 222.

The æra of this invention is warmly diſputed: Varro the moſt learned of the Romans, fixed it to the time of Alexander the Great, after the building the city Alexandria by that conqueror; but ſeveral objections of no ſmall weight are brought againſt this deciſion. Pliny recites a paſſage out of a very ancient annaliſt, one Caſſius Hemina, wherein mention is made of *paper* books found in Numa's tomb 535 years after his death, which had been buried with him [a]: now Numa was prior to Alexander by above 300 years. Guilandinus in effect, maintains with great erudition, that the name and uſe of the *papyrus* were known to the Greeks long before Alexander conquered Egypt; and that the words βιβλος and βιβλιον occur in their received ſignification in authors prior to, or at leaſt older than Alexander, particularly Anacreon, Alcæus, Plato the comedian, Ariſtomenes, Cratinus, Antiphanes, Plato the philoſopher, Æſchylus and Ariſtotle. And whereas ſome ſpeak of I know not what *pſeudobiblus*, known before the diſcovery of the true ſort, he argues on the contrary, that the *biblus* mentioned by thoſe authors prior to the conqueſt of Alexander, appears from Herodotus, Theophraſtus, and others, to be the very ſame plant with the *biblus* or *papyrus*, of which *paper* was made. Even Homer and Heſiod, the moſt ancient Greek poets, and who, by Herodotus's teſtimony, lived about 400 years before himſelf, appear to have been no ſtrangers to the *papyrus*, ſince they make expreſs mention of it [b].

[a] *Vid.* Plin. l. 13. c. 13. [b] Guiland. *Papyr. Membr.* 2. Reimm. *Idea Syſt. Antiq. Liter.* p. 285, ſeq. Kirchmai. *Diſſ. de Papyr. Art.* 11. §. 2.

To this it may be anſwered, that ſuppoſing the plant *papyrus* known in Greece long before Alexander's conqueſt of Egypt, it no more follows, that they had then the uſe of *paper*, than it follows that men had wine immediately on the diſcovery of the vine: this laſt it is certain was known among them long before they made wine; and to this day, a part of the new world called *Florida* is ſaid to abound with vines, though no uſe have been yet made of them either by the inhabitants or the Spaniards. As it was with the vine, which muſt have been known before wine could be made from it, ſo it is with *papyrus*, which among the Greeks was long uſed for tying up things, before it came to be written on. In reality, Guilandinus produces teſtimonies from Anacreon and Alcæus, in which the *papyrus* is employed for binding and not for *paper*: add, that he ill tranſlates τυφηρὲς λυχνον, ellychnium, ſince λυχνος here is the torch itſelf. Nor does the poet ſay it was made of *papyrus*, but tyed up with it.—*Vid.* Scalig. *lib. cit.* Reimm. *ubi ſupra*, p. 305, ſeq.

Some have even doubted whether the art of manufacturing the *papyrus* was ſo ancient as Alexander's time; chiefly on this ground, that for 200 years after Alexander, men wrote on ſkins, and barks of trees: but this is no-wiſe concluſive. The ſcarcity of the new manufacture may account for it: ſome ages afterwards, even as low as Tiberius, we read of ſuch a ſcarcity of *paper*, that its uſe even in contracts was diſpenſed with by a decree of the ſenate, and the opinion of the judges. The ſame conſideration may be carried further: *paper* might have been known in Egypt, Judæa, Syria, and Aſia on this ſide Taurus, long before the birth of Alexander, though not in common uſe: but it was later ere the Europeans received it; and probably it was by means of Alexander's conqueſt that it firſt became publickly known there.

When the manufacture of the Egyptian *paper* ceaſed, is another queſtion; for at preſent the *Papyrotechnia Ægyptiaca* may be reckoned among thoſe arts that are loſt. Euſtathius, the learned commentator on Homer, teſtifies, that even in his time, *viz.* in 1170. it was diſuſed [c]; Mabillon indeed maintains that it continued till the XIth century after Chriſt, and cites one Fridegod, a monkiſh poet of the Xth century, as ſpeaking of it as ſubſiſting in the age before his, that is in the IXth; but that it continued longer, the ſame Mabillon endeavours to evince from ſeveral papal bulls wrote on it as low as the XIth century [d].

[c] *Vid.* Euſtath. *ad* Homer. *Odyſſ.* φ. *Voſſ. de Art. Gramm.* l. 1. c. 37. [d] *Vid.* Mabill. *de Re diplomat.* l. 1. c. 8. §. 6, ſeq. Reimm. *Idea Syſt. Antiq. Liter.* p. 311.

Maffei, on the other hand, maintains with more probability, that the *papyrus* was generally diſuſed before the Vth century; for we find no authentic records written on it dated ſince that time; thoſe bulls of popes, cited by Mabillon, appearing rather to be written on cotton *paper* [e]. But this we may obſerve, relates only to the general and legal uſe of the *papyrus*.—For that it ſhould have continued to be made by particular perſons ſeveral hundred years after it firſt began to give way, is not to be wondered at.

[e] *Vid.* Maffei *Iſtor. Diplomat. loc. cit. Bibl. Ital.* T. 2. p. 251.

In reality, a more commodious ſort of *paper*, made of cotton, having been invented ſome ages before in the eaſt, and coming to be introduced into Europe, ſeems to have turned the *papyrus* out of doors.—To which the continual wars with the Saracens, by which the traffick to Alexandria was rendered precarious, might poſſibly contribute.

Yet ſeveral books written on leaves of the *papyrus* have even continued to our days: Mabillon ſays, he had one of them, and adds, that there is another in the Petavian library, being a volume in ſmall folio, containing ſeveral ſermons of St. Auguſtin; he alſo mentions a third, containing that father's epiſtles, formerly belonging to the church of Narbonne, and now in the cuſtody of Madame de Phirmacon. Beſides the homilies of Avitus biſhop of Vienne, and divers diploma's or charters all written on the *papyrus*, which appear not to be leſs than 1100 years old [f].—But the deciſions of this learned father concerning MSS. notwithſtanding all his diplomatic ſkill ſo highly boaſted of, are not always infallible: witneſs his taking the MS. of St. Mark's goſpel at Venice to be written on Egyptian *papyrus*, and that of Joſephus at Milan not to be ſo.—Maffei ſhews on the contrary, that the former is cotton *paper*, and that the latter appears at firſt ſight to be Egyptian: not but the Venetian MS. is very old; but it has been ſo much uſed, that its leaves are as it were transformed into the original paſte from whence they were made [g].

[f] *Vid.* Mabill. *Suppl. ad Libr. de Re diplomat. Journ. des Scav.* T. 32. P. 2. p. 992. [g] *Vid.* Maffei *lib. cit. Bibl. Ital.* T. 2. p. 252.

Manner of making the Egyptian PAPER.—They began with lopping off the two extremes of the *papyrus*, *viz.* the head and root, as of no uſe in this manufacture: the remaining ſtem they ſlit length-wiſe into two equal parts, and from each of theſe they ſtripped the thin ſcaly coats or pellicles *, whereof it was compoſed, with the point of a penknife **. The innermoſt of thoſe pellicles were looked on as the beſt; and thoſe neareſt the rind or bark the worſt: they were kept apart accordingly, and conſtituted different ſorts of *paper*.

* Theſe pellicles are called in Pliny by twelve different names, viz. *philura*, *ramentum*, *ſcheda*, *cutis*, *plagula*, *corium*, *tænia*, *ſubtegmen*, *ſtatumen*, *pagina*, *tabula* and *papyrus*.

** The generality of criticks, in lieu of a penknife, employ a needle to ſeparate the pellicles; in which they are warranted by the common text of Pliny: *Præparantur ex eo chartæ, diviſo acu in prætenues, ſed quam latiſſimas philuras.* But Guilandinus makes a correction here: he had found by experiment, that the pellicles of *papyrus* cannot be ſeparated by a needle; but that a very ſharp knife is required: for which reaſon inſtead of *diviſo acu*, he reads *diviſo ſcapo* [a]. In which he is followed by Maffei; though Hardouin, Voſſius, Pitiſcus, and others, retain the ancient reading [b].

[a] *Vid.* Guiland. *Papyr. Membr.* 10. §. 3 & 5. Maffei, *Iſtor. Diplom.*

Diplom. ap. Bibl. Ital. T. 2. p. 247, ſeq. [b] Voſſ. *de Art. Grammat.* l. 1. c. 37. Pitiſc. *L. Ant.* T. 1. p. 413. *voc. Charta.* Hardou. *ad* Plin. l. 13. c. 12.

As the pellicles were taken off, they extended them on a table: then two or more of them were laid over each other tranſverſely, ſo as that their fibres made right angles; in this ſtate they were glued together by the muddy waters of the Nilus *. Theſe being next preſſed to get out the water, then dried, and laſtly flatted and ſmoothed by beating them with a mallet; conſtituted *paper:* which they ſometimes poliſhed further by rubbing it with a hemiſphere of glaſs, or the like.—*Vid.* Plin. Guiland. & Maffei *locc. citt.*

* In other countries, where the waters of the Nile were not to be had, the pellicles were faſtened together with a paſte made of the fineſt wheat-flower, mixed with hot water, and a ſprinkling of vinegar.

There were *paper* manufactures in divers cities of Egypt: but the greateſt and moſt celebrated, was that at Alexandria, where, according to Varro's account, *paper* was firſt made. It is certain at leaſt it was from hence that Greece and Italy were furniſhed, on account of the convenient ſituation of that port: and it is more than probable it was this gave the Romans occaſion to conclude the art had been invented there. It was not till late, when Egypt was reduced into a Roman province, that they had much intercourſe or even knowledge of the inland cities of Egypt, where *paper* was alſo made.—The trade and conſumption of this commodity were in reality incredible. Vopiſcus relates, that the tyrant Firmus who rebelled in Egypt, publickly declared he could maintain an army only with *paper* and glue, *papyro & glutine.* This, Caſaubon underſtands as ſpoken of the produce, and revenue of *paper*; though Salmaſius takes it to be meant of the *papyrus* itſelf, which could ſupply moſt of the neceſſaries of life.—*Vid.* Montfauc. *Palæogr. Græc.* l. 1. c. 2. p. 14.

We find divers ſpecies of Egyptian *paper* mentioned in ancient writers: ſome denominated from the places where they were manufactured; as, 1°. the *Amphitheatrica*, ſuppoſed to have been made in ſome building belonging to an amphitheatre at Alexandria. Though Guilandinus, with more probability, reads it *Arthribitica*, from *Arthribis*, a city in the middle of the Delta, which was the place of its manufacture. What countenances the correction, is, that we find mention of this *paper* before there was ſo much as an amphitheatre at Rome, much leſs at Alexandria.—2°. *Saitica*, made in the city Sai.—3°. *Tæniotica*, or according to others *Taitica*, whoſe place authors are not agreed on.

There were other ſorts denominated from the makers; as, 1°. the *Fanniana*, from the grammarian Rhem. Fannius Palæmon, who kept a *paper* work. It was ſmall, but finer than the amphitheatrical *paper*; being firſt wrought at Alexandria, and afterwards finiſhed at Rome.—2°. *Claudia*, firſt made by order of the emperor Claudius. This was reputed the beſt of all, in that beſides the two pellicles, in common with the reſt, it had a third.

Others were denominated from the uſes they were intended for; as, 1°. *Hieratica*, the firſt or oldeſt ſort, which was appropriated to religious uſes; this was afterwards denominated *Auguſta* and *Liviana*, in complement to the emperor of that name, and his wife; who, according to ſome, improved and made it whiter than before.—2°. *Emporetica*, or *Emporica*, a ſmall and coarſe ſort, ſerving ſhop-keepers uſes to tie up goods, *&c.*

The qualities for which the ancient *papers* were prized, were their thinneſs, cloſeneſs, whiteneſs and ſmoothneſs: though their breadth alſo conſiderably enhanced their value.—That ſort called *Charta Claudia* was thirteen inches wide; the *Hieratica*, eleven; the *Fanniana*, ten; *Amphitheatrica*, nine: for the *Saitica*, it exceeded not the diameter of the mallet it was beaten with [a].

[a] See further concerning the ancient *paper* in Nigriſoli *Diſſ. de Charta ejuſque uſu apud antiquos Ext. in Galler. de Minerv.* T. 3. p. 249, ſeq. Other authors are enumerated in Fabric. *Bibl. Antiq.* c. 21. §. 9. p. 609. Pitiſc. *L. Ant. locc. citt.*

Bark PAPER, if it may be ſo called, was only the *liber*, or inner whitiſh rind incloſed between the *bark* and the wood of divers trees, as the maple, plane, beech and elm, but eſpecially the tilia, φιλυρα, or linden tree, which was that moſtly uſed for this purpoſe.—On this, ſtripped off, flatted, and dried, the ancients wrote books; ſeveral of which are ſaid to be ſtill extant [b].

[b] *Vid.* Plin. *Hiſt. Nat.* l. 13. c. 11. Hardou. *Not. ad Eund.* Suid. *Lex. in Voc.* φιλυρα. Iſid. *Orig.* l. 6. c. 13. Alexand. ab Alexand. l. 2. c. 30. Salmuth. *ad Pancirol.* l. 2. tit. 13. p. 252, ſeq.

Mabillon and Montfaucon ſpeak frequently of manuſcripts and diploma's on *bark*, and are very expreſs in diſtinguiſhing between the *papyrus* uſed by the Egyptians, and the *liber* or *bark* in uſe in other countries. The two are alledged to differ in this, that the *bark paper* was thicker and brittler than the *papyrus*, as well as more apt to cleave or ſhiver, by which the writing was ſometimes loſt; as is the caſe in a *bark* manuſcript in the abbey of St. Germains, where the bottom of the *paper* remains, but the outer ſurface, on which the letters had been drawn, is in many places peeled off [c].

[c] *Vid.* Montfauc. *Palæogr. Græc.* l. 1. c. 2. p. 15. Mabill. *de Re Diplom.* l. 1. c. 8. Reimm. *Idea Syſt. Antiq. Liter.* p. 311.

But Maffei, it muſt not be forgot, combats the whole ſyſtem of *bark* manuſcripts, and charters, as a popular error; and maintains that the ancients never wrote diploma's on *bark*; that the diſtinction between the *papers* made of the *papyrus* and of *cortex* is without foundation; that the only uſe of the *tilia* or linden, was for making thin boards or tablets for diptycha or pocket-books, wherein they wrote on both ſides, as is done among us: an advantage which they could not have in the Egyptian *paper* by reaſon of its thinneſs.

A late French writer on the rules of criticiſm wanders further out of the way; when he ſpeaks of a ſort of *paper* in Egypt made of the pith of the cyperus: he deſcribes the manner of preparation, which was by reducing this pith to a pulp, and then ſpreading it out in leaves.—*Vid.* Hon. St. Marie *Reflex. ſur les Regl. de la crit.* T. 2. Diſſ. 4. p. 77. not.—But this we ſuſpect for a chimera hatched only in the critick's brain.

Not but there occur divers anomalous ſorts of *paper*, which antiquaries are not a little puzzled with, what ſpecies to refer them to: ſuch is that of two bulls in the archives of the church of Gironne iſſued by the antipopes Romanus and Formoſus, between the years 891 and 895. They are two ells long, and one broad, conſiſt of two leaves or pellicles glued together tranſverſly, and are ſtill legible in moſt places. The conjectures of the French Sçavans are numerous: the abbot Hieraut de Bellmont has a diſcourſe expreſs on the occaſion. Some will have them made of the leaves of the *alga*, or ſeawreck—others of the leaves of a ruſh called *la boga*, growing in the marſhes of Rouſſillon—others of *papyrus*—others of *cotton*—and others of *bark*. So little certainty there is in theſe things, on which the critics nevertheleſs often lay a great ſtreſs.—*Vid. Mem. de* Trev. *Sept.* 1711. p. 1559, ſeq.

Cotton PAPER, *Charta Bombycina*, Βομβυκινη, (thus called from Βομβυξ, a word which anciently ſignified ſilk, though in after times, Βομβυξ and Βαμβαξ came to denote *cotton*) is a ſort which has been in uſe upwards of 600 years, as is ſhewn by Montfaucon from ſeveral authorities: what is more, *cotton paper* appears to have been very common at that time, and conſequently muſt have been invented long before. In the French king's library, are MSS. on this *paper*, which by the character, and other circumſtances, appear to be of the Xth century. Be this as it will, from the XIIth century, *cotton* MSS. are more frequent than parchment ones [d].

[d] *Vid.* Montfauc. *Palæogr. Græc.* l. 1. c. 2. p. 17, ſeq. item l. 4. c. 6. p. 209. Maffei, *lib. cit. Bibl. Ital.* T. 2. p. 252.

Incombuſtible PAPER is made of the *lapis aſbeſtos*, or *linum vivum*, which will bear burning without being injured. See ASBESTOS.

Dr. Bruckmann, profeſſor at Brunſwick, has publiſhed a natural hiſtory of the *aſbeſtos* or *incombuſtible paper*; and what is moſt remarkable, has printed four copies of his book on this *paper:* they are depoſited in the library of Wolfenbuttel.—*Vid. Bibl. Germ.* T. 14. p. 190.

The manner of making this extraordinary *paper* is deſcribed by Mr. Lloyd from an eſſay made by himſelf.—He pounded a quantity of the aſbeſtos in a ſtone mortar, till it became a downy ſubſtance; then ſifted it through a fine ſearce, and by this means purged it indifferent well from its terrene parts; for that what earth or ſtones he could not pick out of it before, or at the pounding, being reduced to a powder, came through the ſearce, the linum remaining. This done, he brought it to the paper-mill; and putting it in water in a veſſel juſt big enough to make a ſheet with ſuch a quantity, he ſtirred it pretty much, and deſired the workmen to proceed with it in the uſual method, with their writing-*paper* mould; only to ſtir it about always before they put their mould in; conſidering it as a far more ponderous ſubſtance than what they uſed, and that frequently, if not immediately taken up after it was agitated, it would ſubſide.

The *paper* made of it proved but coarſe, and too apt to tear: but this being the firſt trial, there is reaſon to believe it might be much improved; nor did the workmen doubt, but in caſe it were pounded in one of their mortars for twenty hours ſpace, it would make good writing-*paper*.—*Vid. Phil. Tranſ.* N° 166. p. 824.

Linen or European PAPER, is chiefly made of linen rags beaten to a pulp with huge hammers, and the ſoil carried off by a continual ſupply of freſh water conveyed among the pulp in little troughs, till it be rendered perfectly white.

Beſides the chief uſe of this *paper*, which is for writing and printing on, there is a great conſumption of it in packing up goods, and on other occaſions.

The Turks, Buſbequius tells us, have a veneration for *paper* which approaches to ſuperſtition: they will not profane or proſtitute the leaſt bit to vile uſes; but fold it very neatly, and lay it up ſafe, becauſe the name of God, or ſome text, forſooth, of the Alcoran may be written on it.—*Vid.* Buſbeq. *Epiſt.* 1. *Legat. Turc.* p. 50.

Books in *large paper*, are thoſe which have wider margins than thoſe on ſmall *paper*, though otherwiſe of the ſame impreſſion. See BOOK, IMPRESSION, &c.

The manufacture of *paper*, has got footing in moſt countries; though France, Holland, and Genoa, are the places where it ſucceeds beſt. In the general, it depends much on the quality of the linen worn in the country where it is made: where that is fine, or coarſe, and brown, &c. the rags, and conſequently the *paper* made thereof, muſt be ſo too. Hence the whiteneſs of the Dutch and Flemiſh *papers*, beyond the Italian and French, and much more the German *papers*. The Engliſh manufacture hitherto has been in no great reputation; but it is every day improving; inſomuch that we now import little of the ordinary ſorts, which were formerly all brought from abroad. Yet *paper*-mills are of ſome ſtanding among us. We find one erected at Dartford as early as the year 1588, which we believe was the firſt, and which is celebrated by a noted poet of that age, Tho. Churchyard, in a work in verſe, intitled, *A deſcription and diſcourſe of* paper, *and the benefits it brings; with the ſetting forth of a* paper-mill *built near Dartford, by a High-German, called Mr. Spilman, jeweller to the queen*, Lond. 1588, 4°.

In reality, the deficiency of the Engliſh *paper-manufacture*, does not ſeem owing ſo much to the quality of our rags, as the want of ſkill and attention in the makers. The encouragement given it by the legiſlature, in the high duty laid on foreign *paper* imported, we hope it will in time deſerve. How conſiderable this is, will appear from the following ſtate.—Genoa royal fine *paper*, pays *per* ream, 7*s*. 7*d*. ½.—Genoa royal ſecond, 6*s*. 10*d*. ½.—Fine Holland royal 7*s*. 7*d*. ½.—Fine Holland ſecond, 5*s*.—Ordinary royal, 2*s*. 6*d*.—Genoa demy fine, 3*s*. 10*d*. ½.—Genoa demy ſecond, 3*s*. 1*d*. ½.—Dutch printing demy, 3*s*. 4*d*. ½.—Genoa crown fine, 3*s*. 1*d*. ½.—Genoa crown ſecond, 2*s*. 4*d*. ½.—Dutch crown fine, 2*s*. 4*d*. ½.—Dutch crown ſecond, 2*s*.—Genoa fool's cap fine, 3*s*. 1*d*. ½.—Genoa fool's cap ſecond, 2*s*. 4*d*. ½.—Dutch printing fool's cap, 2*s*.—Atlas fine, 28*s*. 10*d*.

When and by whom *linen paper* was invented, is a ſecret, which Polydore Virgil owns he could never trace [a]. Scaliger will have it to have been found out by the Germans [b]: Maffei affirms it certain, that the invention is owing to the Italians [c]. Others aſcribe it to ſome refugee Greeks at Baſil, who took the hint from the manner of making *cotton paper* in their own country [d]. Conringius takes the Arabs to have firſt brought it among us [e]. Perhaps the Chineſe have the beſt title to the invention; who for many ages have made *paper* much after the ſame manner [f], and even in ſome provinces of the ſame materials, *viz.* hemp, &c. [g].

[a] *Vid.* Polyd. Virg. *de Inventor. Rer.* l. 2. c. 8.—[b] *Vid. Secund.* Scaliger. p. 7. Fabric. *Bibl. Antiq.* c. 9. §. 21.—[c] *Iſtor. Diplom.* l. 2. *Bibl. Ital.* T. 2. p. 253.—[d] *Vid. Phil. Tranſ.* N° 288. p. 1515.—[e] *Vid.* Conringian. *Epiſt. ap. Act. Erud. Lipſ. An.* 1720, p. 94.—[f] Savar. *D. Comm.* T. 2. p. 963.—[g] Du Hald. *Deſcr. Chin.* T. 1. p. 367.

Linen paper appears to have been firſt introduced among us towards the beginning of the XIVth century.—The learned Conringius denies that there are many manuſcripts of this *paper* above 400 years old [h]; with whom agrees the count Maffei, who finds no marks of its uſe before the year 1300 [i].

[h] *Vid.* Conring. *Epiſt. ap. Act. Erud. Lipſ. An.* 1720, p. 94.—[i] Maffei *Iſtor. Diplom.* l. 2. *Bibl. Ital.* T. 2. p. 253.

Some indeed go much further back; and take the *libri lintei* mentioned by Livy, and other Roman writers, to have been written on *linen paper* [k]: but Guilandinus, and after him Allatius and others, have ſufficiently refuted this notion; and ſhewn, that the *libri lintei* were written on actual pieces of linen cloth, or canvas, prepared for this purpoſe, ſuch as painters ſtill uſe; and not on *paper* made of linen rags [l].

[k] *Vid.* Liv. *Dec.* 1. l. 4. Plin. *Hiſt. Nat.* l. 13. c. 11. Pitiſc. *L. Ant.* T. 2. p. 85.—[l] Guiland. *Papyr. Memb.* 25. Salmuth *ad Pancirol.* l. 2. tit. 13. p. 253.

Others run into the contrary extreme, and make *paper* the invention but of yeſterday. The jeſuit Inchofer, dates its origin about 250 years ago [m]; with whom agrees Milius in his *Hortus Philoſophicus*, who maintains, that the art of making *paper* was not invented till about the year 1470 [n]. In effect, if the invention be owing to the refugee Greeks at Baſil, who fled thither after the ſacking of Conſtantinople, it muſt at leaſt be poſterior to the year 1452, when that city was taken [o]. Some add a further argument for the novelty of *paper*, drawn from the novelty of hempen cloth, which Rabelais, who died in 1553, mentions as firſt found out about an hundred years before him; and which was ſo ſcarce in the time of Charles VII. of France, who died in 1461, that the queen his wife, was the only woman in France that had a couple of ſhifts of it [p].

[m] *Vid.* Mabill. *de Re Diplom.* l. 1. c. 8. Reimm. *Idea Syſt. Antiq. Liter.* p. 313, ſeq.—[n] Balbin. *Miſcell. Hiſt. Bohem.* c. 22. *Act. Erud. Lipſ.* 1682. p. 243.—[o] *Phil. Tranſ.* N° 288. p. 1515—[p] Naudæan. p. 82. *Nouv. Rep. Let.* T. 26. p. 571.

But theſe ſuggeſtions are refuted by Mabillon, from the teſtimonies of writers prior to the time here ſpoken of, and from many manuſcripts about 400 years old, which are written on *Linen paper* [p]. The jeſuit Balbinus produces divers Inſtances of *paper* MSS. written before the year 1340 [o]. An ingenious writer of our own country aſſures us, he had a piece of *paper* which agreed well with a charter dated in 1358, in the 32d year of Edward III. He adds, that in the archives of the library belonging to the dean and chapter of Canterbury, is an inventory of the goods of Henry, prior of Chriſt Church, who died in 1340, written on *paper*; and that in the Cotton Library there are ſeveral writings on our *paper* in the times of moſt of our kings and queens as high as the 15th of Edward III. which coincides with the year 1335 [r].

[p] Mabill. *loc. cit.* —[q] Balbin. *lib. cit.* —[r] *Phil. Tranſ.* N° 288. p. 1515.

Add, that the invention of *paper* may appear more modern than it is, by reaſon records were not uſed to be wrote on it, but it was a conſiderable time confined to letters, and other fugacious compoſitions; which is ſo true, that to this day, few inſtruments of any conſequence are written on it, though it have been ſo long in uſe.—It is even alledged, that Peter, the venerable abbot of Cluny, who died in 1157, has a paſſage in his book againſt the Jews, which plainly indicates *paper* books to have been then known; on the authority whereof Valeſius, in his notes on the panegyrick of Berengarius Auguſtus, ſcruples not to make *paper* upwards of 500 years old.—*Vid.* Mabill. *ubi ſup.* Reimm. *loc. cit.*

Father Hardouin even aſſures us, he had ſeen records or diploma's on it prior to the XIIIth century.—But this will hardly be credited. Count Maffei aſſures us, that in all his reſearches he could never meet with one more ancient than the year 1367. It is highly probable the learned jeſuit miſtook a cotton manuſcript for a linen one: a miſtake eaſily made, as the chief difference between the two conſiſts in the greater thinneſs of the linen *paper*. But it is known we have linen *papers* of very different degrees of thickneſs; and the like may be ſaid of thoſe of cotton.—*Vid.* Maffei *Iſtor. Diplom.* l. 2. *Bibl. Ital.* T. 2. p. 253, ſeq.

Method of making Linen PAPER.—The proceſs begins with preparing the rags.—Theſe when brought to the paper-mills are firſt to be ſorted into what they call the *grobin fine*, *grobin ſecond*, and *grobin tres*: for among the reſt will be ſome linſey-woolſey, which the dirt makes indiſcoverable till they are once waſhed.—The way of waſhing, is by putting them in a puncheon with many holes in the bottom, and grates on the ſide made of ſtrong wires. Here are the rags to be often ſtirred, that the dirt may run from them.

When ſufficiently waſhed, they are laid in ſquare heaps, and covered cloſe with pieces of clean ſacking, till they truly ſweat and rot, which is called *fermenting*, and is uſually performed in four or five days; if they be not taken in the due time, they are apt to mildew, diſcolour, and take fire. When duly fermented, they twiſt them in handfuls, then cut them with a ſharp hook ſet faſt in a frame, with the point upwards, and edge from the workman; ſtill drawing them upwards, and cutting them piece by piece about half inch long, or as the fingers will allow.

With the rags thus prepared, they prime or feed the mortars, which are made oval, about half a yard deep, of heart of oak right ſeaſon'd. At the bottom of each is an iron plate an inch thick, eight inches broad, and thirty long; ſhaped inward like a mould for a ſalmon with head and tail rounded. In the middle is a waſhing block grooved with five holes in it, and a piece of hair ſieve faſtened on the inſide. This keeps the hammers from touching it, and prevents any thing going out except filthy water.

The mortars are ſupplied with water night and day by little troughs, from a ciſtern fed by buckets fixed to the ſeveral floats of a wheel, ſo long as the wheel goes.

In theſe mortars the rags being beaten fit for a remove to the preſſes juſt by, they take them out with little iron hooped pails, out of any of the mortars, whoſe hammer they can ſtop whilſt the others work.—This makes what they call the *firſt ſtuff*.

From the mortars, this firſt ſtuff is lodged in boxes of five foot high, made like the corn-chandlers bins, with the bottom board a-ſlant, and a little ſeparation on the front for the water to drain away.—The pulp of rags being in, they take away as many of the front boards as are needful, and preſs the maſs down hard with their hands: the next day they put on another board and more pulp, till the box is full. And here it remains mellowing a week, more or leſs, according to the weather.

In the whole proceſs, there muſt be no iron work where it may be liable to grow ruſty, which would ironmould the ſtuff, and ſpoil the *paper*.

After this, the ſtuff is again put into clean mortars, beaten afreſh, and removed into boxes as before; in which ſtate it is called the *ſecond ſtuff*.

The like underſtand of the third time, which fits it for the pit mortar, when it is again beaten, till ſome of it being mixed with fair water, and brewed to and fro, appears like flower and water without any lumps in it.

Thus prepared, it is fit for the pit mortar which has flat hammers without nails. Into this, by a trough, runs water continually whilſt they work at the fat; and here the beating and water diſſolves it perfectly: after which it is carried into the fat, and more is brought from the Boxes.—And thus they do ſucceſſively.

The

The fat is primed according to art, when the liquor has ſuch a proportion of the pulp, as that a mould dipped in it, will take up as much as will make the ſheet of *paper* of the thickneſs deſired.

A mould is a ſquare ſieve about an inch deep, bottomed with braſs-wire-cloth, ſupported with ſticks to prevent the wire from bagging down, and keep it perfectly horizontal; for that if it any ways bags, one part of the ſheet of *Paper* will be thicker than the other.

This mould the maker dips, with a deckle on, into the fat, and takes it out again ſhaking, that the water may run clear from the pulp in the ſieve, and thus delivers it to the coucher, who couches it upon a felt laid on a plank, and lays another felt on it; and ſo ſucceſſively, a ſheet and a felt, a ſheet and a felt, till a poſt, *i. e.* one preſſing, containing ſix quire, be made.—Of poſt *paper*, they may make twenty poſts or more *per* day.—The coucher having done his office, returns the mould to the maker, and the maker to the coucher ſucceſſively.

A poſt being made, either the maker, or coucher whiſtles; upon which four or five men advance, one whereof draws the poſt under the preſs with two little hooks; and the reſt preſs it with great force till no water is left, which is quickly done with two or three pulls.

This being done, the poſt is pulled from the preſs, and ſet on the right ſide by the laying ſtool; then the layer takes off the firſt felt, returns it to the coucher, and lays the firſt ſheet on the laying ſtool, over which he lays the ſecond, then the third very regularly; and thus ſucceſſively till the whole poſt be laid out.—Which done, it is ſet by till toward the end of the day; and then the whole day's work is preſſed again, and ſet exactly one on another, ſo that it looks like one ſolid paſte board.

This, after two or three pulls, as before, is taken out again by the dry workman, and carried up into the loft, and hung ſix or ſeven ſheets together upon lines faſtened to a thing called a *tribble*, each tribble containing thirty lines ten or twelve foot long.

When dried it is taken down, laid on a three footed ſtool, and there rubbed ſmooth with the hands; and afterwards placed in heaps, ſeven or eight foot high, in a very dry place; where it ſtands till ſizing, which is the next operation.

Chuſing a fine, dry, temperate day, they put into a copper two barrels of water; and into this, when juſt warm, ſixty pounds weight of clean parchment or vellum ſhavings; which they boil till it be reduced to a perfect ſize; then ſtrain it through a fine cloth, on which is ſtrewed a due proportion of white vitriol and roch-allum finely powdered, into a tub a foot deep.

Near to this tub are brought four or five reams of the *paper*; and a full gage, or ſo much as can be taken up with the hands at a time, is dipped into the ſize, being as hot as the hands can well bear it; and by a certain gentle quick management, it is ſo ordered that every ſheet ſhall be ſized: after which, it is put regularly into the preſs, preſſed, moved thence into the drying loft, and hung uſually ſheet by ſheet till dry. But care is taken, that the direct rays of the ſun come not nigh it till it be dry, which would otherwiſe endanger the evaporation of the ſize.

When thoroughly dry it is taken down, ſmoothed with the hands as before, heaped, preſſed hard, and ſo it ſtands all night. Next morning it is taken out, and carried into the ſtorehouſe, where it is ſorted; what is fit for inſide quires, are laid by themſelves, and the outſide by themſelves; and then it is preſſed again, and ſo commonly ſtands all night.

In the morning it is carried into the ſtorehouſe again, where it is told into quires of 24 or 25 Sheets each, folded, laid by in heaps; and when there is a preſs full, it is preſſed again, double for a while, and then made into reams of 20 quires each [a], and bales of 10 reams to a bale [b].

[a] *Vid.* Hought. *Collect.* T. 2. p. 412, ſeq. [b] Moor's *Matthem. Comp.* p. 16.

The broken ſheets are commonly put together, and two of the worſt quires placed on the outſide of the ream, called the *out-ſide* quires; thus being tied up in wrappers made of the ſettlings of the fat, it is fit for ſale.

With ſome of the aforeſaid pulp, is alſo made paſteboard, after the ſame manner as *paper*, only that it is thicker. See PASTEBOARD.

With a fine ſort of this paſteboard, they alſo make playing cards. See CARDS.

Paper is ſold by the ream, every where we think, except in the paper-works of Auvergne, where it is ſold by weight, at the rate of 14 ounces to the pound; each ream according to its kind, being to weigh a certain number of Pounds, preſcribed by authority.—Savar. *loc. cit.*

PAPERS are of various kinds.—With regard to colours, they may be divided into *white*, *brown*, *blue*, &c.—With regard to quality into *fine*, *ſecond*, *baſtard*, *ſuperfine*, &c.—With regard to uſe, into *writing*, *printing*, *preſſing*, *cap*, *cartridge*, *copy*, *chancery*, *poſt*, &c.—With regard to dimenſions, into *demy*, *medium*, *crown*, *fool's-cap*, *pot*, *royal*, *ſuper-royal*, *imperial*, *elephant*, *atlas*, &c.—With regard to country, into *Germany*, *Lombard*, *Rochel*, *Genoa*, *Holland*, &c.

French *papers* are divided into *large*, *middle* and *ſmall*.—To the ſmall belong theſe called, *petit Romaine*, *petit Raiſin*, or *Bâton royal*, *petit nom de Jeſus*, and *petit a la main*, all thus denominated from the marks impreſſed on them in making. Alſo the *Cartier* for the backs of playing cards; *Pot* for the figure ſide; *Couronne*, which has commonly the arms of the comptroller general of the finances; *Telliere*, with the arms of the late chancellor *Telliere*, and a double T; and *Champy*, or a *Chaſſis la Serpente*, ſo called from its mark, the ſerpent, which being extremely fine and thin, is uſed by fan-makers.

To the *middling* ſort belong the *grand Raiſin ſimple*, *Carré ſimple*, *Cavalier*, and *Lombart*, the three laſt of which are for printing; *l'Ecu* or *de compte ſimple*, *carré double*, *l'Ecu double*, *grand Raiſin double*, and *Couronne double*, which three laſt are denominated *double* on account of their ſtrength and thickneſs. Add to theſe the *Pantalon*, or *paper* with the Dutch arms, and grand *cornet*, ſo denominated from the impreſſion on it.

To the *large*, belong the *grand Jeſus*, *petite & grande fleur-de-lis*, *Chapelet*, *Colombier*, *grand Aigle*, *Dauphin*, *Soleil*, and *l' Etoile*, which are thus called from the figures they bear, being all proper for printing either at the letter-preſs, or rolling-preſs; alſo for merchants books, and for drawing on. The *grand Monde* is the largeſt of all.—*Vid.* Savar. *D. de Comm.* T. 2. p. 965, ſeq.

We have alſo *Printed*-PAPER, to hang rooms withal.—*Stamp'd paper*, to write obligations, deeds and contracts upon.—*Ruled paper* for books of accounts, *&c.*—To which may be added *cut-paper*, and *gilt-paper* for letters, *&c.*

Blue PAPER, is a ſort uſed by tradeſmen to wrap up goods; as ſugar-loaves, pieces of linen, *&c.*

Blotting PAPER, is *paper* not ſized, and in which therefore ink readily ſinks or ſpreads. It is uſed in books of account, *&c.* in lieu of ſand, to prevent blotting and diſfiguring the oppoſite pages. The ſame is likewiſe uſed by apothecaries in filtrating juices and other matters, for which the *Manica Hippocratis* is not ſo proper.

Teint or *Demi-teint* PAPER, for deſigning on, is either *brown*, *blue*, or *biſterd*.

Biſterd PAPER, is white *paper* waſhed over with a ſponge dipped in ſoot-water. Its uſe, is to ſave the labour of the crayon in places which are to be ſhadowed the ſame depth with the teint of this *paper*.—For light places, they are made thereon with white chalk.—*Vid.* Corneil. *Elem. de la Peint. Prat.* c. 15. p. 34, ſeq.

Marbled PAPER, is a ſort variouſly ſtained, or painted as it were with divers colours; made by applying a ſheet on the ſurface of a liquor wherein colours diluted with oil or ox's gall are ſuſpended. See DYING.

The manner of making it is thus.—A trough is provided of the ſhape and dimenſions of a ſheet of the *paper* to be marbled, and about four fingers deep, made of lead or wood well joined, and pitched or primed to contain the liquor.—For the liquor, a quarter of a pound of gum tragacanth is macerated four or five days in fair water, to which they add ten or twelve quarts of water, till it be of a conſiſtency ſomewhat thinner than oil; then they ſtrain it into the trough.

The colours to be applied thereon, for blue, are indigo ground up with white lead.—For green, indigo and orpiment, the one ground, and the other tempered; mixed and boiled together with common water.—For yellow, orpiment bruiſed and tempered. For red, the fineſt lake, ground with raſpings of braſil wood, which has been prepared by boiling half a day. Into all theſe colours they put a little ox-gall, which is two or three days old; and if the colours dilate not of themſelves ſufficiently, they add more gall.—On the contrary, if they ſpread too much, the gall is over-doſed, and muſt be corrected by adding more of the colour without gall.

For the operation of marbling: when the gum is well ſettled in the trough, they extend a ſheet of *paper*, and plunge it very ſhallow into the liquor, ſuddenly lifting it out again, in order to ſtir up, and raiſe the ſubſiding gum towards the ſurface, and for the more univerſally impregnating of the liquor.

This done, and all the colours ranged in gallipots on the table, where alſo the trough is placed, they begin by dipping a bruſh of hog's hair into any colour, commonly the blue firſt, and ſprinkle it on the ſurface of the liquor: If the colour were rightly prepared, it will dilate itſelf duly therein.—This done, the red is applied in the like manner, but with another pencil.—After this the yellow; laſtly the green: for white, it is made by only ſprinkling fair water, mixed with ox's gall, over the liquor.

When all the colours are thus floating on the liquor, to give them that agreeable cambleting which we admire in *marble paper*, they uſe a pointed ſtick, which being applied by drawing it from one ſide of the trough to the other with addreſs, ſtirs up the liquor and fluctuating colours; then with a comb taken by the head with both hands, they comb the ſurface of the liquor in the trough from one extreme to another, permitting only the teeth to enter:

this being performed with a gentle and uniform motion, makes thoſe clouds and undulations whereon much of the beauty of the *paper* depends.

If it be further deſired to have the colours lie in any other fantaſtical poſture, repreſenting ſerpents or the like, it is effected with the pointed ſtick abovementioned, by drawing it over what has been already combed; but this muſt be done with a dexterous hand, and with a ſhallow dip into the liquor, circling as if you would draw ſome flouriſh, or figured letter.

Laſtly, the colours being in this poſture, the operator diſplays, and applys on them a ſheet of white *paper*; to do which, artiſt-like, requires a ſleight to be obtained only by practice; for that the ſurfaces of the liquor and the *paper* are to meet equally in all parts: which done, before the colours have time to ſoak through, which, unleſs the *paper* be very thick, will be in the ſpace of two or three pulſes, he lifts up the *paper* nimbly, and with an even hand; and then ſpreading it a while on a board, hangs it on a line to dry; which when ſufficiently done, they poliſh it with a marble ſtone, or ivory knob.—It muſt be obſerved, that the ſprinkling of the colours is to be renewed, and all the other ceremonies performed with the ſtick and comb at every application of a freſh *paper*, by reaſon every *paper* takes off all the colour from the liquor [a].

[a] *Vid.* Kirch. *de Luce & Umbra.* l. 10. Par. 2. c. 4. Merr. *Obſerv. on Neri de art. Vitr.* c. 42. p. 312. Hought. *Collect.* T. 2. p. 419, ſeqq.

Some eſſays have been made to inrich the marbling by mixing gold and ſilver with the colours, which ſucceeded well, eſpecially for the French King's Library, though the expence has hindered the practice from obtaining—Savar. *ubi ſupra.*

Chineſe PAPER is of various ſorts; ſome made of the rinds, or barks of trees, eſpecially thoſe aboundiug in ſap, as the mulberry-tree, and elm, but chiefly of the bambû and cotton-tree. In reality, almoſt each province has its ſeveral *paper:* that of Se-chwen is made of hemp; that of Fokyen, of ſoft bambû; that uſed in the northern provinces, of the bark of the mulberry-tree: that of the province of Che-kyang, of wheat or rice ſtraw; that of the province of Kyang-nan, of the ſkin found in the ſilkworms balls. In fine, in the province of Hu-quang, the tree chu, or kochu, furniſhes the principal material for *paper.*

For PAPERS *made of the barks of trees*; the manner of their preparation may be exemplified in the inſtance of that of the bambû, a tree of the cane, or reed-kind, being hollow, and divided into joints; but much larger, ſmoother, harder and ſtronger than any other ſort of reed.

For *paper* they ordinarily only uſe the ſecond coat or ſkin of the bark, which is ſoft and white; this they beat in fair water to a pulp, which they take up in very large moulds or frames, ſo that they have ſheets ten or twelve foot long, and ſometimes more. They are compleated by dipping them ſheet by ſheet in allom-water, which ſerves inſtead of the ſize uſed among us, and not only hinders the *paper* from imbibing the ink, but gives it that luſtre, which at firſt ſight makes it look ſilvered, or at leaſt varniſhed over.

The *paper* thus made, is white, ſoft and cloſe, without the leaſt roughneſs to arreſt the motion of the pencil, or occaſion the riſing of any of its fibres. Though, being made of the bark of a tree, it cracks more eaſily than the European *paper:* add, that it is more apt to take moiſture, that the duſt ſticks to it, and that the worms ſoon get into it; to prevent which laſt inconveniency, they are obliged often to beat their books, and expoſe them to the ſun. Add, that its thinneſs making it liable to be ſoon worn out, the Chineſe are under a frequent neceſſity of renewing their books, by freſh impreſſions taken from their blocks [b].

[b] *Vid le* Compt. *Nouv, Mem. ſur Chine. Lett.* 7. Kuſt. *Bibl. nov. Libr. An.* 1697. p. 67. ſeq. *Lett. Edif. & Cur.* T. 19. p. 479.

But the *paper* of the bambû, it is to be obſerved, is neither the beſt, nor that moſt uſed in China. In the former of theſe reſpects, it yields the priority to the *paper* made of the cotton ſhrub, which is the whiteſt and fineſt, and at the ſame time leaſt ſubject to the inconveniencies above mentioned; for that it keeps as well, and is as durable as the European *paper.*—Dr. Grew thinks we have many plants in England, which contain a down that in all probability would make as fine a *paper* as that made by the Chineſe from their cotton ſhrub.—By which it appears he miſtakenly imagined that the Chineſe *paper* was made not from the rind of the cotton ſhrub, but from the down or cotton itſelf.—*Vid.* Grew *Muſ. Reg. Soc.* P. 2. §. 1. c. 5. p. 215.

But the *paper* in moſt common uſe in China, is that made of the tree called *Chu-Ku*, or *Ku-Chu*, which du Halde compares, firſt to a mulberry-tree, then to a fig-tree, then to a ſycamore-tree, and laſtly, to increaſe the embarraſs, to a ſtrawberry-tree.—By all which, we know leſs of it than if he had ſaid nothing about it. But this is a way of deſcribing very familiar to that author, who is often ſtrangely jejune in the midſt of the utmoſt prolixity, and is never more confuſed and incoherent, than when he aims moſt at order and exactneſs. But to return to the Ku-Chu.

The method of preparing it for *paper*, is by firſt ſcraping off lightly the thin outſide bark of the tree, which is greeniſh: then they take off the inner rind in long thin ſlips, which they blanch in water and the ſun; and afterwards prepare them in the ſame manner as the bambû.

It muſt not be forgot, that in the other trees it is only the inward bark that ſerves for making *paper*; but the bambû, as well as the cotton ſhrub, have this peculiarity, that not only their bark, but their whole ſubſtance may be employed, by means of the following preparations.

Out of a wood of the largeſt bambû's, they ſelect ſhoots of a year's growth, which are about the thickneſs of the calf of a man's leg: theſe they ſtrip of their firſt green rind, and ſplit them into ſtrait pieces of ſix or ſeven foot long: the pieces thus cleft, they ſteep in a pond of muddy water, till they rot and grow ſoft by the maceration. In a fortnight, they take them out, waſh them in clean water, ſpread them in a large dry ditch, and cover them with lime for a few days; then take them out again, and having waſhed them a ſecond time, ſlip them into filaments, which they expoſe in the ſun to dry and whiten; then throw them into large coppers, where they are thoroughly boiled: and laſtly reduce them by the ſtrokes of large hammers to a thin paſte, or pulp.

Then they take ſome ſhoots of a plant called *Ko-teng*, ſoak them four or five days in water, till there come out an unctuous ſizy ſort of juice; this they mix with the pulp of which the *paper* is to be made, ſomewhat in the ſame manner as painters temper their colours; care being taken not to put in too much, nor too little of it, on which the goodneſs of the *paper* much depends.

When they have mixed the juice of Ko-teng with the cleft bambû, and beaten the whole till it reſembles a thick clammy water; they pour it into a large deep reſervoir, conſiſting of four walls raiſed breaſt high, and the ſides and bottom ſo cemented, that the liquor cannot run out, nor ſoak in.

This being done, and the workmen placed at the ſides of the reſervoir, they dip in their moulds, and take up the ſurface of the liquor, which almoſt inſtantly becomes *paper*; the mucilaginous and glewy juice of the Ko-teng binding the parts, and rendering the *paper* compact, ſoft, and gloſſy, qualities which the European *paper* is a ſtranger to when firſt made.

To harden the ſheets, and make them bear ink, they dip them in allom-water: this operation is called *faning* from the Chineſe word *fan*, which ſignifies allom. The manner is this.—Six ounces of fiſh-glue, cut very ſmall, are put in divers porringers of water, which they afterwards boil up, ſtiring it all the time to prevent lumps: when the whole is reduced to a liquid ſubſtance, they throw into it three quarters of a pound of calcined allom, which they melt and incorporate with it. This mixture is next poured into a wide baſon, acroſs which is laid a ſmall round ſtick: then they ſhut the edge of each ſheet in another ſtick cleft from end to end, and in this manner dip the ſheet, gently drawing it out as ſoon as it is wetted, by ſliding it over the round ſtick. When the whole ſheet has paſſed nimbly through this liquor, which makes it whiter and more compact, the long ſtick that holds the ſheet by the edge, is ſtuck in a hole in the wall, and the ſheet hung up to dry.—For the mould wherewith they take up the ſheet, its frame is ſo contrived that it may be raiſed or lowered at pleaſure; and its bottom is not made with wire as ours, but with little ſlender ſlips of bambû drawn ſeveral times through holes made in a ſteel plate, whereby they are rendered as fine as wire: they are then boiled in oil till thoroughly ſoaked, that the mould may enter lightly into the water, and not ſink deeper than is requiſite to take up matter enough for a ſheet.

To make ſheets of any extraordinary ſize, care is taken to have a reſervoir and mould large in proportion. This mould is ſuſtained by ſtrings which paſs over a pulley; the moment theſe pull up the frame, the workmen placed aſide the reſervoir, aſſiſt to take the ſheet off; working together in a regular manner.

For drying the ſheets when taken off, they have a hollow wall, whoſe ſides are well whitened: at one end hereof is an aperture, through which, by means of a pipe, they convey the heat of a neighbouring furnace: and at the oppoſite end is a ſmall vent to let out the ſmoke. By help of this ſort of ſtove, they dry the *paper* almoſt as faſt as it is made.

Silvering of *paper* is another ſecret among the Chineſe, practiſed at a very ſmall charge, and without uſing any ſilver.—In order to this, they take two ſcruples of glue made of neats leather, one of allom, and half a pint of clean water; theſe they ſimmer over a ſlow fire, till the water is conſumed, that is, till no more ſteam ariſes; then on a ſmooth table they ſpread ſome ſheets of *paper*, and on this, with a pencil, apply two or three layers of the glue: then they take a powder made of talc boiled, and mixed with ⅓ the quantity of allom: the two are ground together, ſifted, and the powder boiled again in water, then dried in the ſun, and laſtly punded.—This powder they ſift through a fine ſieve, ſpreading it uniformly on the ſheets prepared as above: after which they hang them in the ſhade to dry;

and this effected, lay them again on the table, and rub them gently with clean cotton to take off the ſuperfluous talc, which ſerves a ſecond time for the ſame Purpoſe. With this powder diluted in water mixed with glue and allom, they draw any figures at fancy on the *paper*.—*Vid.* du Hald. *Deſcr. Chin.* T. 1. p. 368, ſeq.

PAPER-CLOTHES became a mode a few years ago in France. M. Flachs has a diſſertation expreſs on the ſubject, wherein he tells us this faſhion ſcarce outlived half a day; and undertakes to ſhew that it is no new thing, but to have been practiſed among the ancients. But then it ſhould be conſidered that the old Egyptian *paper* was a very different thing from ours; as being likewiſe uſed for ſails, ropes, &c.—*Bibl. Germ.* T. 1. p. 260.

PAPER-MILLS. See the article MILL.

PAPER-OFFICE, is the name of an ancient office in the palace of Whitehall, wherein all the publick writings, matters of ſtate and council, proclamations, letters, intelligences, negotiations of the king's miniſters abroad, and generally all the papers and diſpatches that paſs through the offices of the ſecretaries of ſtate, are lodged, and diſpoſed in the way of library.—It was chiefly from this noble repoſitory that Biſhop Burnet had the materials for his *Hiſtory of the Reformation*.—*Vid.* Nicholſ. *Eng. Hiſt. Libr.* P. 3. c. 1. p. 180.

There is alſo an office belonging to the court of King's-bench, called by the ſame denomination.—Jac. *Law D. in voc.*

PAPER-PORTRAITS, *and Pictures*.—One Elizabeth Pyberg, who lived at the Hague in 1699, cut in *paper* not only towns, as Loo and Hounſlerdyke, but faces to an extreme likeneſs. Mr. Ellys aſſures, ſhe did king William and queen Mary better than any limner he had ever ſeen, and refuſed 1000 guilders for the pieces: which were ſo curious, that he could not believe the queen's drapery not to be point till he had moſt exquiſitely inquired into it.—*Vid. Phil. Tranſ.* N° 286. p. 1418.

For the *Moving Paper-Work*, or High German *paper* engine, contrived by Mrs. Vandenhurk, and now expoſed to publick ſhow in London, we can give no particular account of it.

PAPERS is alſo uſed for writings, eſpecially thoſe relating to a man's eſtate, property, dealings, or the like. See WRITING.

In which ſenſe, *papers* include books of accounts, invoices, orders, alſo deeds, bonds, charters, and the like. See ACT, INSTRUMENT, ACCOUNT, BOOKS, RECORD, ARCHIVE, REGISTER, &c.

PAPERS is alſo ſometimes uſed for manuſcript-books. See BOOK and MANUSCRIPT.

Such an author left his *papers* to *** college. Several of Sir Iſaac Newton's *papers* have been publiſhed ſince his death.—Tournefort aſſures us, that the heirs of M. de Peireſk warmed themſelves a whole winter with the *papers* he left in his cabinet. It had been cheaper, adds M. Tournefort, if they had burnt cedar, or aloes wood.—*Vid. Journ. Liter.* T. 12. p. 64.

PAPERS is more particularly uſed of late days for gazettes, journals, and other public news-writings. See GAZETTE, JOURNAL, &c.

In this ſenſe we ſay, to read the *papers*; the *papers* abound with falſhoods: the multitude of *papers* is become a burthen on coffee-houſes, but an advantage to the revenue.—We have daily *papers*, weekly *papers*, morning *papers*, evening *papers*, occaſional *papers*, political *papers*, literary *papers*, *papers* of entertainment, &c.

PAPER, among bankers and other negociants, is alſo uſed for bills of exchange, bank, and promiſſory notes, &c. See BILL, &c.

I have no money to give you, but only *paper*; *paper* indeed as good as ready money. In the year 1720 multitudes were ruined by changing their money and lands for *paper*. It is the uſe and effect of credit to repreſent money by *paper*. See MONEY, &c.

Subſtituting *paper* for money, and giving the *paper* an arbitrary value, was the way of paying debts introduced in France by Mr. Law.—A royal bank was eſtabliſhed, to which people were to carry their money, and receive the value of it in bills, which were to paſs current in trade as ſo much money.—*Vid.* Chevign. *Scienc. des Pers. de la Cour.* T. 2. p. 292, ſeqq.—It was made confiſcation of goods, and the gallies, for any man to keep above 40 livres by him of any but *paper money*. When the regent was told what a rage was ſpirited up againſt him about the arrets for making *paper* current, and how openly the people threatened him, he anſwered cooly, the French were like watch dogs, they would bark but not bite, *les Francois reſemblent aux chiens a garde, ils aboyent, mais ne mordent pas*. Miſt *Miſc. Lett.* T. 4. p. 16.

PAPER, among fan-painters. See the article FAN.

PLANETARY *days*.—Among the ancients, the week was ſhared among the ſeven planets; each planet having its day. This we learn from Dion Caſſius and Plutarch, *Sympos. l.* 4. *q.* 7. Herodotus adds, that it was the Egyptians who firſt diſcovered what God, that is, what planet preſides over each day, for that among this people the planets were directors. And hence it is, that in moſt European languages, the days of the week are ſtill denominated from the planets; Sunday, Monday, &c. See WEEK.

PLANETARY *years*, the periods of time wherein the ſeveral planets make their revolutions round the ſun, or the earth. See YEAR, REVOLUTION, &c.

As from the proper revolution of the ſun, the ſolar year takes its original; ſo from the proper revolutions of the reſt of the planets about the earth, ſo many ſorts of years do ariſe, *viz.* the ſaturnian year, which is defined by 29 Egyptian years, 174 hours 58 minutes, equivalent in a round number to 30 ſolar years.—The jovial year, containing 317 days, 14 hours, 59 minutes.—The martial year containing 321 days, 23 hours, 31 minutes.—For Venus and Mercury, as their years, when judged of with regard to the earth, are almoſt equal to the ſolar year; they are more uſually eſtimated from the ſun, the true center of their motions: in which caſe, the former is equal to 224 days, 16 hours, 40 minutes, the latter to 87 days, 23 hours, 14 minutes. See SATURN, JUPITER, MARS, &c.

PLANETARY *ſquares*, the ſquares of the ſeven numbers from 3 to 9 diſpoſed magically. See MAGIC *ſquare*.

Corn. Agrippa, in his famous book of magic, has given the conſtruction of the ſeven *planetary* ſquares: M. Poignard, canon of Bruſſels, in his treatiſe of ſublime ſquares, gives new, eaſy, and general methods for making the ſeven *planetary* ſquares, and all others to infinity, by numbers in all ſorts of progreſſions.

S.

SATYR*, SATYRA, or SATIRA, in a literary ſenſe, ſignifies all manner of diſcourſe wherein any perſon is reprehended; but more particularly a poem, wherein mens follies, and vices are wittily expoſed, in order to their reformation.

* The origin of the word has been the occaſion of a notable diſpute among criticks. The common opinion, ſupported by Scaliger, Heinſius and Voſſius, deduces it from the Greek Σατυροι, *ſatyrs*, a ſort of Sylvan deities, by the Romans called *Fauni*, to whoſe petulancy and wantonneſs this ſort of compoſition is ſuppoſed to bear ſome reſemblance.—On which footing *ſatyr* is conſidered as a poem of a wanton, and licentious nature, which like the *ſatyrs*, turns things upſide down to find occaſion for cenſure, and ridicule.—Caſaubon, on the contrary, followed by Spanheim and Dacier, derives the Roman *ſatyr* not from the Grecian divinities called *ſatyrs*, to which they aſſert it bears no relation, but from the Latin *ſatur*, uſed for *plenum* full, a thing to which nothing is wanting.—Thus it is *ſatur color*[a], denotes wool which has ſufficiently imbibed the colour, ſo that its dye cannot be further heightened: ſo *ſatur meſſis* denoted a plentiful harveſt[b]; and *ſatur geſtus*, a various one[c].—From this ſatur came *ſatura*, which was alſo written *ſatira* with an *i*, as *maximus* for *maxumus*; and *optimus* for *optumus*. But *ſatura*, it is to be obſerved, is an adjective, referring to a ſubſtantive underſtood, which here is *lanx*; *ſatura lanx* being the name of a baſon filled with all manner of fruits, which the Romans offered yearly to Ceres and Bacchus, as their firſt fruits. Thus the grammarian Diomedes: *Lanx referta variis multiſque primitiis, ſacris Cereris inferebatur, & a copia & ſaturitate rei, ſatura vocabatur*. Thence alſo the word *ſatura* was applied to other mixtures; particularly to a diſh conſiſting of ſeveral ſorts of meats: *Quoddam genus farciminis multis rebus refertum ſaturam dicit Varro vocitari*[d]. And the ſame term was alſo tranſlated to works of genius: thus, *leges ſaturæ* denoted laws conſiſting of many heads or titles, as in Feſtus: *ſatura eſt lex multis aliis legibus conferta*.—And the ancient Gloſſ. *ſatura* Νομος πολλα περιεχων. Such, *e. gr.* is this, *Vultiſne, jubetiſne cum Jugurtha bellum componatur, & fœdus feriatur: elephantos tradat, item omnes tranſfugas*, &c.—Hence alſo a thing was ſaid *per ſaturam fieri*, when it was done haſtily and confuſedly: thus *per ſaturam legem ferre*, was to paſs a law confuſedly and in the lump, without collecting the votes.—Laſtly, *ſatura* alſo became the title of ſeveral books, as of that of Peſcennius Feſtus, who wrote *hiſtorias ſaturas*, or *per ſaturam*.—From the whole it is inferred, that the *ſatyrical* pieces of the poets were ſo called, as being various, and miſcellaneous compoſitions; or as Porphyrion expreſſes it, *quod multis & variis rebus hoc carmen refertum eſt*.—On this principle it is urged, the word ſhould be written in Latin with an *u* or *i*, *ſatura* or *ſatira*, and in Engliſh only with an *i*. They who write it with a *y*, do it as ſuppoſing with Scaliger, and others, that the Sylvan *ſatyri* gave name to this compoſition, and that from *ſatyrus* came *ſatyra*, which Caſaubon labours hard to diſprove, by ſhowing, that from *ſatyrus* could never be formed *ſatyra*, but *ſatyrica*, and by explaining the great difference between the Greek *ſatyric* poems and the Roman *ſatire*.—Scaliger nevertheleſs defends the ancient etymon from the Greek Σατυρος, which he makes the origin of the Latin *ſatur*, *ſatura lanx*, &c. which according to him were appellations firſt uſed in the ſacrifices and ceremonies of Bacchus, where *ſatyrs* were rehearſed: *Non a ſatura vel lege vel lance dicta eſt, ut fruſtra ac temere ſatagunt grammatici; quin has a ſatyris dictas puto: cum lancibus enim prodibant, & caniſtellis pomorum omni genere plenis, quibus nymphas al-*

licerent [e].—In effect, *ſatyrical* poetry, according to this critick, may be naturally enough deduced from the wantonneſs of the *ſatyrs:* and what confirms it, is that Σατυρικης is rendered in ancient gloſſes by *ludio*; and *ſatyrical*, by *ludicrous*, *ſportive*, &c. Thus Seneca's *ſatyr* is called *ludus*, and Horace and Perſius uſe *ludere* for *ſcribere ſatyras* [f].—[a] V. Plin. *Hiſt. Nat.* l. 30. c. 10. [b] Sever. *in Ætna.* v. 12. [c] Manil. l. 5. v. 480. [d] Diomed. l. 3. [e] Scal. *Poet.* l. 1. c. 12. [f] V. Dan. Heinſ. *de ſatyr. Horatian.* l. 2. Lugd. 1628. 12°. Fab. *Theſ.* p. 2248.

Satyr bears a near affinity to raillery, ridicule, lampoon, libel, *&c.* and ſtands oppoſed to panegyrick. See LIBEL, PANEGYRICK, *&c.*—The reaſon why *ſatyrs* generally pleaſe, and panegyricks tire the readers, ſeems to be, becauſe the former are commonly true, and the latter falſe.—*V. Journ. des Scav.* T. 81. p. 294.

Horace calls his two books of *ſatyrs*, indifferently either *Sermones*, or *Satyræ*, two words which at firſt ſight preſent very different ideas. See SERMONES.

The chief *ſatyriſts* among the ancients are, Horace, Juvenal and Perſius; among the moderns, Regnier and Boileau in French; and Dryden, Oldham, Rocheſter, Buckingham, Pope, Young, *&c.* among the Engliſh.

A *ſatyr* ought to be lively, pleaſant, moral, and full of variety, wherein Juvenal and Horace excelled, though their *ſatyrs* ought not to be read without caution.—Among the qualifications requiſite in a *ſatyriſt*, one of the moſt eſſential is good-nature: all the ſentiments which are beautiful in this way of writing muſt proceed from that quality in the author. It is good-nature produces that diſdain of all baſeneſs, vice and folly, which prompts the poet to expreſs himſelf with ſmartneſs againſt the errors of men, but without bitterneſs towards their perſons. It is this quality keeps the mind in equanimity, and never lets an offence unſeaſonably throw a man out of his character. When Virgil ſaid, he that did not hate Bavius might love Mævius, he was in perfect good humour, and was not ſo much moved at their abſurdities, as paſſionately to call them ſots, or blockheads in a direct invective, but laughed at them with a delicacy of ſcorn, without any mixture of anger.—The beſt good man with the worſt-natured muſe, was the character among us of a gentleman as famous for his humanity, as his wit. In reality, the ordinary ſubjects for *ſatyr* are ſuch as incite the greateſt indignation in the beſt tempers, and conſequently men of ſuch a make are beſt qualified for ſpeaking of them: ſuch men can behold vice and folly, when they injure perſons with whom they are wholly unacquainted, with the ſame ſeverity as others reſent the ills they feel themſelves.—In all the writings of Horace and Juvenal, there is not one ill-natured expreſſion; not one ſentence of ſeverity which does not apparently proceed from the contrary diſpoſition.—*V. Tatl.* N° 242. T. 4. p. 219. *ſeq.*

Satyr may be divided with regard to the meaſure, and kind of verſe, as well as the manner of the poem, and the character, into *narrative*, *dramatick*, *mixed*, &c.

Narrative, is a ſimple narration or recital of abuſes in the poet's own perſon.—Such is the firſt of Juvenal.

Dramatick, is that wherein ſeveral perſons diſcourſe together; whether they be nameleſs, as in the firſt of Perſius; or have names, as of Catius and Damaſippus.

Mixt, is compounded of both the former; as that fine one of Horace, *Ibam forte via ſacra.*

Grave, and animated, which inveigh with warmth and earneſtneſs againſt corruption, and vice in every ſhape.—As thoſe of Juvenal and Perſius.

Sportive, and lighter, which ſeem to play with mens follies, but in playing omit no opportunity of making them feel the laſh.—Such are thoſe of Horace, hence ſaid to be *ſermoni propiora.*

The *grave* ſort brandiſhes a naked ſword, the *ſportive* preſents a thyrſus, like that of the ancient *ſatyrs* ſurrounded with vine leaves, with which it ſtabs unawares.—The heat of the former ſometimes degenerates into fury, and indignation; and the calmneſs of the latter ſometimes ſinks to mere raillery. But between the two extremes are a great number of intermediate ſpecies and degrees. The former, eſpecially when dictated by paſſion, is much eaſieſt: nothing is more difficult than to make people of taſte laugh, even at the expence of others. The attaining of this muſt be the fruit of genius and talents, rather than rules: perhaps it may be unneceſſary to explain either; ſince vanity, ſelf-love, and even malice are maſters more than ſufficient for a poet who wants not wit, and judgment. Thus Juvenal: *Si natura negat, facit indignatio verſum*; and Boileau: *La colere ſuffit & vaut un Apollon.*—V. Mourg. *Trait de la poeſ. Franc.* c. 4. *Mem. de Trev.* Nov. 1723. p. 2150.

In peruſing the writings of the two leaders of the two ſorts of *ſatyr* laſt mentioned, it may not be unneceſſary to conſider, that they lived in very different times: Horace was intimate with a prince of the greateſt goodneſs, and humanity; and his court was formed after his example: therefore the faults that poet falls upon were little inconſiſtencies in behaviour, falſe pretences to politeneſs, or impertinent affectations of what men were not fit for. Vices of a coarſer ſort could not come under his conſideration, or enter the palace of Auguſtus.—Juvenal, on the other hand, lived under Domitian, in whoſe reign every thing great and noble was baniſhed the habitations of the men in power. Therefore he attacks vice as it paſſes by in triumph, not as it breaks into converſation. The fall of empire, contempt of glory, and a general degeneracy of manners, are before his eyes in all his writings.—In the days of Auguſtus, to have talked like Juvenal had been madneſs, or in thoſe of Domitian, like Horace. Morality and virtue are every where recommended in Horace, as became a man in a polite court, from the beauty, propriety, and convenience of purſuing them: vice and corruption are attacked by Juvenal in a ſtyle which denotes, he fears he ſhall not be heard unleſs he calls to them in their own language, with a bare-faced mention of the villanies and obſcenities of his contemporaries.—*V. Tatl.* T. 4. N° 242. p. 219. *ſeqq.*

The Italians divide *ſatyr* into *ſerious*, as that in common uſe; and *jocoſe*, *giocoſa*, which they alſo call *berneſca*, and we *burleſque.* See BURLESQUE.

Their chief *ſatyriſts* in the *ſerious* way are, Dante (whom they particularly call *principe ſatirico*) Arioſto, Aretine, Ercole Bentivoglio, Luigi Alamanni, Jacobo Soldani, Lorenzo Azzolino, Salvator Roſa, Lud. Adimari, and Benedetto Menzini [a].—Thoſe who have excelled in the *jocoſe* kind are Franceſco Berni (the inventor of it) Mauro, Firenzuola, Caſa, Coppetta Varchi Laſca, Caporali [b], *&c.*—[a] V. Bianchin *della ſatira Italiana*, P. I. p. 9. Giorn. *de Letter d'Ital.* T. 20. p. 306. [b] Id. ibid. P. II. p. 25. Giorn. p. 310. *ſeqq.*

Satyr is divided into *general*, which is levelled at common abuſes wherein numbers are equally intereſted: and *perſonal*, which points out and expoſes particular characters.—Which laſt, as it affects mens reputation, on which their intereſt greatly depends, is ſcarce diſtinguiſhable from defamation, and ſcandal. See INFAMOUS and SCANDAL.

To this laſt claſs belong moſt of thoſe which bear the title of *Anti:* as the Anti-Baillet of Menage, with which M. Baillet was ſo ſtung, that he compoſed a treatiſe expreſs on *perſonal ſatyrs which bear the title Anti*; to ſhew the immorality, and unlawfulneſs of them, and their contrariety to the precepts of the goſpel. See ANTI.

It is further objected to this kind of *ſatyr*, that a publick detection, far from producing the effect it is deſigned for, reformation, is apt to drive men to deſperation, and harden them in their courſe. The excellent author of the treatiſe of the *Government of the Tongue*, ſpeaking of uncharitable truths, ſays, a diſcovery of this kind ſerves not to reclaim, but enrage the offender, and precipitate him into farther degrees of ill. Modeſty and fear of ſhame is one of thoſe natural reſtraints which the wiſdom of heaven has put on mankind: and he who once ſtumbles, may yet by a check of that bridle recover himſelf again. But when by a publick detection he is fallen under that infamy he feared, he will be then apt to diſcard all caution, and to think he owes himſelf the utmoſt pleaſures of vice at the price of his reputation.—Nay, perhaps he advances farther, and ſets up for a reverſed ſort of fame, by being eminently wicked: thus he who before was but a clandeſtine diſciple, becomes a doctor of impiety.—Doubtleſs it was this ſort of reaſoning that induced our wiſe legiſlators lately to repeal the law which put the brand of infamy in the face of felons.—In effect, where crimes are enormous, the delinquent deſerves little pity, yet the reporter may deſerve leſs.—*V. Tatl.* N° 74. T. 2. p. 154. *ſeq.* See alſo N° 76. p. 166. *ſeq.*

Greek SATYR.—Caſaubon makes a diſtinction between the *ſatyrical* poetry of the Greeks, and the *ſatyr* of the Romans, which he maintains was peculiar to themſelves; in which alſo he ſeems to be juſtified by Quintilian. *Satyra quidem tota noſtra eſt, in qua primus inſignem laudem adeptus Lucilius* [a]. Which ſame Lucilius is alſo expreſly ſaid by Horace to have been the firſt *ſatyrical* poet [b].

——————*Eſt Lucilius auſus*
Primus in hunc operis componere carmina morem.

For a like reaſon Horace calls *ſatyr*, *Græcis intactum carmen*, a ſort of poetry unknown to the Greeks [c]. Spanheim in his fine preface to the Cæſars of the emperor Julian, has ſhown five or ſix eſſential differences between thoſe two poems. The Greeks chiefly reprehended vice, *&c.* in their drama's though they had alſo a ſort of narrative poems called *Silli*, like the Roman and our *ſatyrs.* Theſe *Silli* were cutting, or ſarcaſtick poems, as may be eaſily ſeen by the fragments of Timon's *Silli*; with this difference, that the Greek *Silli* were parodies from one end to the other, which cannot be ſaid of the Roman *ſatyr.* Or if we find ſometimes a parody, it is what the poet did not deſign, and conſequently the parody does not make the eſſence of *ſatyr*, as it does that of the *Silli* [d].—[a] V. Quint. *Inſt. Orat.* l. 10. c. 1. [b] Hor. *Sat.* 1. l. 2. v. 62. [c] I. Caſaub. *de ſatyrica Græcor. Poeſi & Romanor. ſatyra.* l. 2. Par. 1605.—[d] See Maſcov. *Exerc. Prior. in Horat. ſatyr.* §. 10. Langheinrich *Diſſ. de Timon. Sillograph. Lipſ.* 1720 & 1721. Stoll. *Introd. ad Hiſt. Liter.* P. I. c. 5. §. 38. Scaliger, notwithſtanding all this, followed by ſome of the lateſt and beſt criticks, ſcruples not to derive the *ſatyrical* poetry of the Latins from that of the Greeks. According to theſe authors, *ſatyr* in its origin was a ſort of interlude in tragedy, wherein goat-footed *ſatyrs* were introduced to alle-

alleviate the diſtreſs, and with their jeers and humour diverſify the ſolemnity of the tragick ſcene: much like the mimes in comedy, and the feſcennines in the Atellan ſports. See SATYRICAL.

At firſt it was only in the tragedies exhibited in the feaſts of Bacchus, that *ſatyrs*, the ſuppoſed companions and prieſts of that god, were introduced: but afterwards they made a part in the ſolemnities of the other deities. So that *ſatyr*, in its firſt inſtitution, was wholly dramatick.—V. Scalig. *Poet.* l. 1. c. 11 & 12. See alſo the article SATYRICAL.

Roman SATYR.—Dacier, after Caſaubon, traces the inſtitution of the Roman *ſatyr* very minutely; and diſtinguiſhes three ſpecies or ſtates of it: the firſt *dramatick*, the ſecond *narrative*, the third that called the *Varronian* or *Menippean ſatyr*. The ancient Romans had been without any ſcenical entertainments for almoſt four hundred years; till chance and merriment in one of their feſtivals gave riſe to the ſaturnine and feſcennine verſes, which for ſome years ſupplied the place of theatrical performances. Theſe verſes were rude, and without any meaſure, being extemporary, and the productions of a ſavage people, who had no other inſtructors than the fumes of wine. Accordingly they were ſtuffed with groſs railleries, and accompanied with geſticulations and dances. An idea of them may be formed by conceiving a knot of country fellows, dancing in a hobbling manner, toſſing about their home-ſpun jokes, and expoſing each other's failings. Thus Horace, *Epiſt.* 1. *lib.* 2.

Feſcennina per hunc inventa licentia morem
Verſibus alternis opprobria ruſtica fudit.

The ancient Roman *ſatyrs* then were a ſort of innocent farces, where ſpectators and actors were indifferently rallied.—And thus they continued till the time of Livius Andronicus, who firſt attempted to write plays in imitation of the Greeks. This new entertainment appearing more noble and perfect, drew crowds of ſpectators, which occaſioned the *ſatyrs* to be neglected for ſome time; but they were afterwards reſumed, and tacked to the ends of comedies, much like the modern farces. They were annexed more peculiarly to the Atellane pieces, and on this occaſion changed their name *ſatyrs* for that of *exodia*, which they ever after retained. See EXODIUM.

After Livius Andronicus, Ennius having obſerved the eagerneſs of the Romans for *ſatyr*, imagined that poems not accommodated to the theatre, but retaining the gall, raillery and pleaſantry of the theatrical *ſatyr*, would not fail of ſucceſs. Accordingly, he wrote diſcourſes under the title of *ſatyrs*, in which he took the liberty of mixing ſeveral ſorts of verſe together, as hexameters with iambick trimeters, and trochaic tetrameters. In theſe pieces were found the ſame variety, raillery, alluſions, fables, and even dialogue, in a word every thing that conſtituted the character and beauty of the firſt *ſatyrs*, except the dancing and muſick. Pacuvius ſucceeded, who alſo writ *ſatyrs* in imitation of his uncle, or according to others, his grandfather Ennius. When Pacuvius was in his prime, Lucilius was born, who alſo compoſed *ſatyrs*, ſomewhat of a new turn, endeavouring to imitate the character of the ancient Greek comedy, of which the Romans had but an imperfect image in their own *ſatyrs*. This ſeems to be what Horace meant when he ſaid, *ſatyr* 1. lib. 2.

———*Quid, cum eſt Lucilius auſus*
Primus in hunc operis componere carmina morem.

He could not mean, that the Romans had no *ſatyrs* before Lucilius, ſince that poet was preceded by Ennius and Pacuvius, whom he imitated. Horace's deſign was only to hint that Lucilius's manner and turn was new, that he had embelliſhed this poem, inſomuch that he might be looked upon as its firſt author. But in fact, Lucilius only added to it a little more politeneſs and ſalt, without other alteration. And though like Ennius he did not mix together ſeveral ſorts of verſe in the ſame piece, yet he compoſed different poems, ſome of which were entirely hexameter, others iambic, and others trochaic, as appears from his fragments.

The third kind of *ſatyr* was the *Varronian* or *Menippean*, ſo called from its author *Varro*, the moſt learned of the Romans, and becauſe in this he imitated the manner of Menippus the Gadarenian, a cynic philoſopher.

This *ſatyr* was not only a miſcellany of different ſorts of verſe, but was alſo interlarded with proſe, and Greek, and Latin.—Seneca's poem on the death of Claudius, Petronius's Satyricon, Lucian's Dialogues, the Golden aſs of Apuleius, and the Cæſars of the emperor Julian, are ſo many *ſatyrs* in the *Varronian* taſte[a].—To the ſame head may alſo be referred the Catholicon of Spain, the Moriæ Encomium of Eraſmus, the Don Quixot of Cervantes[b], the advertiſements from Parnaſſus of Boccalini, the Tale of a Tub by Dr. S. *&c.*—[a] V. Dacier *Diſcours ſur la Satire, in Mem. de Liter. de l'Acad. R. des Inſcr.* T. 3. p. 246. *ſeqq.* And in the preface to his verſion of Horace's *ſatyrs*. [b] V. Rapin *Reflex. ſur la poet. en Partic.* §. 28. *Oeuv. Diverſ.* T. 2. p. 205. *ſeqq.*

SATYRICAL, ſomething relating to, or that partakes of the nature of *ſatyr*. See SATYR.

We have *ſatyrical* poets; *ſatyrical* preachers, as South; *ſatyrical* hiſtorians, as Burnet and Mezeray; *ſatyrical* philoſophers, as Apuleius and Montaign.—In the heathen theology, we find a *ſatyrical* god, *viz.* Momus: Homer in his Therſites gives the character of a *ſatyrical* courtier. The Dutch have been charged with *ſatyrical* prints, and medals; which have ſometimes coſt them dear.

Satyrical poetry had its origin at Athens; though its perfection be owing to the Romans. According to father Mourgues, and Bianchini[a], it was at firſt a ſort of tragedy acted at the feaſts of Bacchus, whein ſatyrs were introduced converſing with heroes[b]. Burette rather takes it for a ſort of paſtoral farce tacked to the ends of tragedies[c]. One of the chief ornaments of it was a wild, groteſque ſort of dance performed by ſatyrs, and called *Sicinnis*[d]. See DANCING.—[a] Mourg. *Trait. de la Poeſ. Franc.* c. 4. *Mem. de Trev.* Nov. 1723. p. 2149. [b] Bianchin *Della Satira Italiana*, P. I. p. 5. *ſeqq.* Giorn. *de Letter d'Ital.* T. 20. p. 203. [c] Buret. *Mem.* 2. *ſur la Danſe, in Mem. Acad. R. Inſcript.* T. 2. p. 163. [d] *Buret.* l. c. Averan. *Prælect.* ap. *Bibl. Choiſ.* T. 22. p. 34. The *ſatyrical* ſhews of the Greeks were thorough maſquerades: the actors herein were diſguiſed variouſly, ſome in the habits of ſatyrs, Sileni, Centaurs, Mænades, and other of Bacchus's crew; while others perſonated giants, cyclopes, monſters, and even beaſts: the whole making a medley more romantick and extravagant than any thing on the modern ſtage, unleſs perhaps ſome of our late groteſque pantomime entertainments[a]. The only piece of the kind now extant is the ΚΥΚΛΩΨ of Euripides[b].—[a] V. Boind. *ſur les Maſq. & Habits de Theatr. des Anc.* in Mem. Acad. R. Inſcr. T. 5. p. 176, & 188. [b] V. Fabric. *Bibl. Græc.* l. 2. c. 18. §. 2. p. 645.

SATYRIC *Fountain*. See the article FOUNTAIN.

SPINOZISM, or SPINOSISM, the doctrine of *Spinoza*; or, atheiſm and pantheiſm propoſed after the manner of *Spinoza*. See ATHEIST.

The great principle of *Spinoziſm* is, that there is nothing properly and abſolutely exiſting, but matter, and the modifications of matter; among which are even comprehended, thoughts, abſtract and general ideas, compariſons, relations, combinations of relations, *&c.* See MATTER, SUBSTANCE, *&c.*

Benedict *Spinoza*, or *Eſpinoza*, was a man well known in Holland. He was born a Jew, at Amſterdam; but did not make profeſſion of any religion, either the Jewiſh or Chriſtian.—He compoſed ſeveral books in Latin; the moſt celebrated whereof, is his *Tractatus Theologico-Politicus*, wherein he overturns the foundation of all religion: the book, accordingly, was condemned by a publick decree of the ſtates; though it has ſince been ſold publickly, and even reprinted, both in Latin and French, in that country, and lately in Engliſh at London.

Spinoza, here, inſinuates, that all religions are only political engines, calculated for the publick good; to render the people obedient to magiſtrates, and to make them practiſe virtue and morality.

He does not here lay down his notion of the Deity openly; but contents himſelf with ſuggeſting it.—In his *Ethicks*, publiſhed among his poſthumous works, he is more open and expreſs; maintaining, that God is not, as we imagine him, an infinite, intelligent, happy and perfect Being; nor any thing, but that natural virtue, or faculty, which is diffuſed throughout all creatures. See NATURE.

Numbers have undertaken to refute *Spinoza*'s doctrine; but all very weakly, except what we have in Dr. Clarke's ſermons at Boyle's lecture.—Witſius in Holland, Majus in Germany, and de la Mothe in England, wrote againſt his *Tractatus:* but Bredenbourg, according to M. Bayle, ſucceeded beſt on the ſubject; who, however, is ſaid to have afterwards been a convert to *Spinoziſm*, and to have written a demonſtration of the truth of it.—The writers againſt *Spinoza*'s *Ethicks*, are Velthuyſius, in his *Tractatus de cultu naturali & origine moralitatis:* de Verſe, in *l'Impie convaincu, ou diſſertation contre Spinoza:* Poiret in *Fundamenta atheiſmi everſa:* Wittichius in *Anti-Spinoza*; Lami in *Nouvel Atheiſme renverſé*; Jaquelot in *Diſſertations ſur l'exiſtence de Dieu:* Jens in *Examen Philoſophicum ſextæ definitionis partis primæ Ethicæ Bened. Spinozæ.* Beſides many others enumerated in Colerus's life of *Spinoza*, p. 132. Jenichen's *Hiſtor. Spinoziſmi Leenhofian*, p. 58. ſeqq. Buddeus's *Theſes de Atheiſmo & Superſtitione*, cap. 1. §. 26. and Fabricius's *Syllab. Script. de veritate religionis Chriſtianæ*, p. 357. ſeqq.

Spinoza, in his *Tractatus* above-mentioned, is very full on the ſubject of the authors of the ſcriptures; and endeavours to ſhew, that the Pentateuch is not the work of Moſes; contrary to the common opinion, both of the Jews, and Chriſtians. He has alſo his particular ſentiments, as to the authors of the other books.—This part of the work has been anſwered by M. Huet, in his *Demonſtratio Evangelica*; and by M. Simon, in his *Hiſt. Crit. du vieux Teſt.* See PENTATEUCH.

Spinoziſm is a ſpecies of naturaliſm, or pantheiſm, or hylotheiſm, as it is ſometimes called, *i. e.* of the dogma which allows of no other God but nature, or the univerſe; and, therefore, makes matter to be God.—Accordingly, Buddeus, in a diſſertation *de Spinoziſmo ante Spinozam*, proves at large, that *Spinoza*'s doctrine of God and the world, is far from being his own invention, but that it had been held by many

many philoſophers of different ſects, both among the Chaldeans and Greeks.—It is certain, the opinion of the Stoicks, and thoſe who held an *anima mundi*, was not far from it. See ANIMA *mundi*. Lucan introduces Cato diſcourſing thus:

Eſtne Dei ſedes niſi terra, & pontus, & aër,
Et cœlum, & virtus? ſuperos quid quærimus ultra!
Jupiter eſt quodcunq; vides, quocunq; moveris.
Luc. Pharſ. l. 9. v. 578.

Strato likewiſe, and others among the Peripateticks, maintained ſomething very like it; and what is more, though no ancient ſect ſeems farther removed from *Spinoziſm* than the Platonic, as they attributed the greateſt freedom to God, and carefully diſtinguiſhed him from matter; yet Gundlingius has proved at large, that Plato gave matter much the ſame origin with *Spinoza*.—But the ſect that approached neareſt to *Spinoziſm*, was that which taught that all things were one, as Xenophanes the Colophonian, Parmenides Meliſſus, and eſpecially Zeno Eleates, whence it obtained the name of the *Eleatic ſyſtem of atheiſm*.—To the ſame may alſo be reduced the opinion of thoſe, who held the firſt matter for God, as Almaricus and David of Dinantum. Add, that the ſect of Foe in China and Japan, that of the Soufi in Perſia, and that of the Zindikites in Turky, are found to philoſophize much after the manner of *Spinoza*.

The chief articles in *Spinoza*'s ſyſtem are reducible to theſe.—That there is but one ſubſtance in nature; and that this only ſubſtance is endued with an infinite number of attributes, among which are extenſion and cogitation.—That all the bodies in the univerſe are modifications of this ſubſtance conſidered as it is extended; and that all the ſouls of men are modifications of the ſame ſubſtance conſidered as cogitative.—That God is a neceſſary and infinitely perfect being, and is the cauſe of all things that exiſt, but is not a different being from them.—That there is but one being and one nature; and that this nature produces within itſelf, by an immanent act, all thoſe which we call creatures.—And that this being is at the ſame time both agent and patient, efficient cauſe and ſubject; but that he produces nothing but modifications of himſelf.

Thus is the Deity made the ſole agent as well as patient in all evil, both phyſical and moral, that called *malum pœnæ*, as well as *malum culpæ*: a doctrine fraught with more impieties than all the heathen poets have publiſhed concerning their Jupiter, Venus, Bacchus, &c.—What ſeems to have led *Spinoza* to frame this ſyſtem, was the difficulty of conceiving, either that matter is eternal, and different from God, or that it could be produced from nothing, or that an infinite and free being could have made a world ſuch as this is.—A matter that exiſts neceſſarily, and which nevertheleſs is void of activity, and ſubject to the power of another principle, is an object that ſtartles our underſtanding; as there ſeems no agreement between the three conditions.—A matter created out of nothing is no leſs inconceivable, whatever efforts we make to form an idea of an act of the will that can change what before was nothing, into real ſubſtance. Beſides its being contrary to that known maxim of philoſophers, *ex nihilo nihil fit*.—In fine, that an infinitely good, holy, free being, who could have made his creatures good, and happy, ſhould rather chuſe to have them wicked, and eternally miſerable, is no leſs incomprehenſible; and the rather as it ſeems difficult to reconcile the freedom of man with the quality of a being made out of nothing.

Theſe appear to have been the difficulties which led *Spinoza* to ſearch for a new ſyſtem, wherein God ſhould not be diſtinct from matter, and wherein he ſhould act neceſſarily, and to the extent of all his power, not out of himſelf [*ad extra*] but within himſelf.—But it is certain, if the new ſyſtem reſcue us from ſome difficulties, it involves us in others much greater.—For,

1°. It is impoſſible the univerſe ſhould be but one ſubſtance; ſince every thing that is extended muſt neceſſarily have parts; and what has parts muſt be compounded. And as the parts of extenſion do not ſubſiſt in each other, it follows, either that extenſion in the general is not ſubſtance, or that every part of extenſion is a different ſubſtance. Now, according to *Spinoza*, extenſion in general is an attribute of ſubſtance. And he allows, with other philoſophers, that the attributes of ſubſtance do not differ really from the ſubſtance itſelf. He muſt therefore allow, that extenſion in general is ſubſtance: whence it will follow, that every part of extenſion is a particular ſubſtance: which overturns the whole ſyſtem. If it be objected, that *Spinoza* does not conſider different bodies, as different parts of extenſion, but as different modifications of it; the diſtinction between *part* and *modification*, we doubt will hardly ſave him. For let him avoid the word *part* as much as he pleaſe, and ſubſtitute that of *modality* or *modification* for it, the doctrine will amount to much the ſame: the characters of diverſity are not leſs real and evident, when matter is divided into modifications, than when it is divided into parts. The idea of the univerſe will ſtill be that of a compound being, or an aggregate of ſeveral ſubſtances. For proof of this, it may be obſerved, that modalities are beings which cannot exiſt without the ſubſtance which modifies them; whence it follows, that the ſubſtance muſt be found where-ever its modalities are found; and even that the ſubſtance muſt be multiplied in proportion as the number of incompatible modifications is multiplied: ſo that wherever there are five or ſix of theſe modifications, there muſt be five or ſix ſubſtances. It is evident, that a ſquare figure, and a circular figure are incompatible in the ſame piece of wax. Whence it follows, that the ſubſtance modified by the ſquare figure cannot be the ſame ſubſtance with that modified by the round figure. So when I ſee a round and a ſquare table in a room, I may ſafely aſſert, that the extenſion which makes the ſubject of the round table is a diſtinct ſubſtance from the extenſion which is the ſubject of the ſquare table: ſince otherwiſe it would follow, that the ſquare and round figures might be found in the ſame ſubject at the ſame time.—The ſubject, therefore, that is modified by two figures, muſt be two ſubſtances.

2°. If it be abſurd to make God extended, as this robs him of his ſimplicity, and makes him be compoſed of parts; it is ſtill worſe to reduce him to the condition of matter, the loweſt of all beings, and that which moſt of the ancient philoſophers ranked immediately above nothing: matter! the theatre of all ſorts of changes, the field of battle of contrary cauſes, the ſubject of all corruptions and generations; in a word, the being moſt incompatible with the immutability of the Deity!

The *Spinoziſts*, indeed, maintain, that it is not ſuſceptible of any diviſion; but the argument they alledge in proof of it, we have elſewhere ſhewn to be falſe: it is, that for matter to be divided, it is neceſſary that one of the parts be ſeparated from the other by a void ſpace, which is impoſſible: ſince there is no vacuum in nature. See VACUUM.

3. If *Spinoziſm* appear extravagant when we conſider God as the ſubject of all the mutations, corruptions and generations in bodies; it will be found ſtill worſe, when we conſider him as the ſubject of all the modifications of thinking, It is no ſmall difficulty, to unite extenſion and thinking in the ſame ſubſtance; ſince it is not an union like that of two metals, or of water and wine, that will ſerve the purpoſe: theſe laſt require only juxtapoſition; whereas to combine thinking and extenſion requires an identity: thinking and extended are two attributes identified with the ſubſtance; and conſequently are identified with each other, by the fundamental rule of all logic.

Again, when we ſay, that a man *denies this, affirms that, likes that*, &c. we make all thoſe attributes fall on the ſubſtance of his mind, not on his thoughts, which are only accidents or modifications of it. If therefore what *Spinoza* advances be true, that men are modalities of God; it would be falſe to ſay, *Peter denies, likes, wills*, &c. ſince in reality, on this ſyſtem, it is God that denies, wills, &c. and conſequently all the denominations which ariſe from the thoughts, deſires, &c. of men, fall properly and phyſically on the ſubſtance of God. From whence it alſo follows, that God affirms and denies, loves and hates, wills and nills the ſame thing, at the ſame time, and under the ſame conditions: contrary to the great principle of reaſoning: *oppoſita ſunt quæ & neq; de ſe invicem, neq; de eodem tertio ſecundum idem, ad idem, eodem modo atq; tempore verè affirmari poſſunt*; which muſt be falſe, if *Spinoziſm* be true: ſince it cannot be denied but ſome men love and affirm what others hate and deny, under all the conditions expreſſed in the rule.

4°. But if it be phyſically abſurd, to ſay the ſame ſubject is modified at the ſame time with all the different thoughts of all men; it is horrible when we conſider it in a moral light. Since it will follow, that the infinite, the all-perfect Being is not conſtant, is not the ſame one moment, but is eternally poſſeſſed even with contrary paſſions; all the uniformity in him in this reſpect, will be, that for one good and wiſe thought he will have twenty fooliſh and wicked ones. He will not only be the efficient cauſe of all the errors, iniquities and impurities of men, but alſo the paſſive ſubject of them, the *ſubjectum inhæſionis*. He muſt be united with them in the cloſeſt manner that can be conceived, even by a penetrative union, or rather an identity, ſince the mode is not really diſtinct from the ſubſtance modified.

T.

TRAVERSE, in law, denotes the denial of ſome matter of fact, alledged to be done in a declaration, or pleadings; upon which the other ſide coming and maintaining that it was done, iſſue is joined for the cauſe to proceed to trial. See ISSUE, and TRIAL.

The formal words of a *traverſe* are in the law French, *ſans ceo*, in Latin, *abſque hoc*, and in Engliſh, *without that*, &c.

An anſwer, ſays Weſt (ſpeaking of bills in chancery) is that which the defendant pleadeth or faith in bar to avoid the plaintiff's bill or action, either by confeſſion and avoiding, or by denying and *traverſing* the material parts thereof. A replication is the plaintiff's reply to the defendant's anſwer, which muſt affirm and purſue his bill, and confeſs and avoid, deny or *traverſe* the defendant's anſwer.

A plea is naught which neither *traverſes* nor confeſſeth the plaintiff's title, &c. Every matter in fact alledged by the plaintiff, may be *traverſed* by the defendant, but not matter of law, or what is part matter of law, and part matter of fact; nor may a record be *traverſed*, as this is not to be tried by a jury.

If a matter be expreſly pleaded in the affirmative, which is expreſly anſwered in the negative, no *traverſe* is neceſſary, there being a ſufficient iſſue joined: alſo where the defendant hath given a particular anſwer in his plea, to all the material points contained in the declaration, he need not take a *traverſe*; for that when the thing is anſwered, there needs no further denial.

TRAVERSE *of an indictment or preſentment*, is the contradicting or denying ſome chief point of it, and taking iſſue thereon. See INDICTMENT, and PRESENTMENT.—Thus, in a preſentment againſt a perſon for a highway overflowed with water, for default of ſcouring a ditch, &c. he may either *traverſe the matter*, by alledging that there is no highway, or that the ditch is ſufficiently ſcoured; or he may *traverſe the cauſe*, *viz.* by alledging that he hath not the land, or that he and they whoſe eſtate &c. have not uſed cleanſe the ditch.

TRAVERSE *of an office*, is the proving that an inquiſition made of lands or goods is defective, and untruly made. See OFFICE, and INQUISITION.

No perſon ſhall *traverſe* an office, unleſs he can make to himſelf a good right and title: and if one be admitted to *traverſe* an office, this admiſſion of the party to the *traverſe*, ſuppoſes the title to be in him, or elſe he had no cauſe of *traverſe*.

FINIS.
