There is alſo *Foreign Plea*, whereby Matter is alledged in any Court, that ought to be tried by another.—As if one lay Baſtardy to another in a Court-Baron. See FOREIGN.

PLEAS *of the Sword*.—*Ranulph* Earl of *Cheſter*, 2° *Hen.* III. granted to his Barons of *Cheſhire*, an ample Charter of Liberties, *exceptis placitis ad gladium meum pertinentibus*.

The Reaſon of the Exception was, that *William the Conq.* gave the Earldom of *Cheſter* to his half-Brother *Hugh*, commonly called *Lupus*, Anceſtor of this *Ranulph*, *Tenere ita libere ad Gladium, ſicut ipſe Rex tenuit Angliam ad Coronam*.

Accordingly in all Indictments for Felony, Murther, *&c.* in the County Palatine, the Form was, *Contra pacem Domini Comitis, gladium & dignitatem ſuam*; or *contra dignitatem Gladii Ceſtriæ*.—Such were the Pleas of the Dignity of the Earl of *Cheſter*. See GLADIUS.

Court of Common PLEAS, call'd alſo *Common Bench*. See COMMON *Pleas*.

PLEADING, a Diſcourſe ſpoke at the Bar, in Defence of the Cauſe of a Party. See PLEA and BAR.

From the Time of the Conqueſt, all *Pleading* was perform'd in *French*, 'till the Time of *Edward* III. when it was appointed that the Pleas ſhould be *pleaded* in *Engliſh*, but to be enter'd, or recorded, in *Latin*. See LATIN.

At *Athens*, and even in *France* and *England*, it was prohibited to have any form'd or prepared Pleading, or to amuſe the Court with long artificial Harangues; only, in important Matters, 'twas the ſettled Cuſtom to begin the *Pleading* with a Paſſage in holy Scripture. See TEXT.

'Tis but of late Years that Eloquence was admitted to the Bar; and it may be ſaid there is ſcarce any Nation in *Europe* where it is leſs practiced or encouraged than among us.—The Elocution of the Bar, like that of the Pulpit, deſpiſes the Rules of Rhetoric. See ACTION, ELOQUENCE, ORATORY, *&c.*

PLEADINGS are properly the Allegations of the Parties to the Suits, made after the Count, or Declaration. See DECLARATION.

In this Senſe the *Pleadings* expreſs what is contained in the Bar, Replication, and Rejoinder; and not what is in the Declaration itſelf.—Hence Defaults in the Matter of Declaration, are not comprized within the *Miſpleading*, or inſufficient *Pleading*, which only extends to that committed in the Bar, Replication, or Rejoinder. See BAR, REPLICATION, and REJOINDER.

PLEASURE, the Effect of a Senſation or Perception agreeable to the Mind, or of the Gratification of ſome Appetite. See APPETITE, SENSATION, *&c.*

Pleaſures may be diſtinguiſhed into two Kinds.——The firſt, thoſe which anticipate, or go before, the Reaſon; ſuch are all agreeable Senſations.——Theſe are popularly called *Pleaſures of Senſe*, or *of the Body*. See SENSE.

The ſecond are thoſe which do not precede or anticipate either the Senſes or Reaſon.—Theſe we call *Pleaſures of the Mind*.—Such is the Joy ariſing from a clear Perception of

ſome future Good, or confuſed Senſation of a preſent one. See MIND.

For an inſtance of either.——A Man frequently finds *Pleaſure* in eating a Fruit he was before unacquainted withal: This is *anticipating Pleaſure*, which he feels e'er he knows the Fruit to be good.

On the other hand, a hungry Hunter expects, or perhaps actually finds, Victuals; where the Joy he conceives, is a *Pleaſure* that follows from the Knowledge of his preſent or future Good. See PAIN.

Pleaſure and *Pain* ſeem to be no other than Engines in Nature's Hand; whereby we are directed to conſult our own Preſervation, and avoid our Ruin.—To things that may contribute to the one, as Food, Venery, *&c.* ſhe has annexed *Pleaſure*; and to thoſe that may conduce to the other, as Hunger, Diſeaſes, *&c.* Pain: She durſt not leave it to our Diſcretion, whether we'd preſerve and propagate the Species or not; but, as it were, conſtrains us to both: Were there no *Pleaſure* in eating, nor Pain in Hunger, what Numbers would be ſtarved, thro' Negligence, Forgetfulneſs, or Slothfulneſs. What is it induces People to the Office of Generation, but *Pleaſure*? without this the World had ſcarce ſubſiſted to this Time.

Among the Multiplicity of things to be done, and to be avoided for the Preſervation of animal Life, *&c.* how ſhould we have diſtinguiſhed between the one and the other, but for the Senſations of *Pleaſure* and Pain? Theſe are not only Spurs, to urge us on, but alſo Guides to direct us whither we are to go. Wherever Nature has fix'd a *Pleaſure*, we may take it for granted, ſhe there enjoins a Duty; and ſomething is to be there done, either for the Individual or the Species.

Hence it is that our *Pleaſures* vary at different Stages of Life; the *Pleaſures*, *e. gr.* of a Child, a Youth, a grown Man, an old Man, *&c.* all tending to thoſe particular things required by Nature in that particular State of Life, either for the Preſervation, ſimply, or for that and Propagation, *&c.*

Hence, from the different Conſtitutions of the Body, at different Ages, it were very eaſy to account for all the particular Taſtes and Pleaſures thereof: Not by deducing the *Pleaſures* mechanically from the Diſpoſition of the Organs in that State; but by conſidering what is neceſſary for the Perfection, and well-being of the Individual in that State, and what it is to contribute to that of the Species.——In a Child, *e. gr.* mere Preſervation in the preſent State is not enough; it muſt likewiſe grow: to bring this to paſs, Nature has made the Returns of Hunger, *&c.* more frequent, as well as more acute; and the *Pleaſures* of feeding more exquiſite. And that the Exceſs of Aliment in Proportion to the Bulk of the Body may be diſpens'd withal, ſhe has made one of the great *Pleaſures* of that State, to conſiſt in a Series of ſportive Exerciſes, by means whereof the Parts of the Body come to be opened and expanded, and arrive at Maturity. This done, the *Pleaſures* that conduced thereto diſappear; and others ſuited to the new State, ſucceed. See NATURAL *Inclination*; ſee alſo PASSION.

For the Pleaſures of Beauty, Muſic, &c. See BEAUTY, MUSIC, *&c.*

PLEBEIAN, PLEBEIUS, a Perſon of the Rank of the Populace, or Common People. See POPULACE, and COMMON.

The Term is chiefly uſed in ſpeaking of the ancient *Romans*, who were divided into *Senators*, *Knights*, and *Plebeians*. See SENATOR, KNIGHT, *&c.*

PLEBANUS, was anciently the Title of a Rural Dean. See RURAL *Dean*.

The Denomination aroſe hence, that theſe Deaneries were then affixed to the *Plebania*, or chief Mother-Church within ſuch a Diſtrict, which at firſt was uſually ten Pariſhes.

The Term ſeems alſo to have been uſed for a Pariſh-Prieſt, of ſuch a large Mother-Church, as was exempt from the Juriſdiction of the Ordinary, ſo that he had the Authority of a Rural Dean committed to him by the Archbiſhop, to whom the Church was immediately ſubject.

PLEBISCITUM, among the *Romans*, a Law enacted by the Common People, at the Requeſt of the Tribune, or ſome other Plebeian Magiſtrate. See LAW.

The Word *Plebiſcitum* is particularly applied to the Law which the People made, when upon a Miſunderſtanding with the Senate, they retired to the *Aventine* Mount. See CIVIL *Law*.

PLEDGE, PLEGIUS, or PLEGGS, in Common-Law, a Surety, or Gage, either real or perſonal, which the Plaintiff finds to proſecute his Suit. See GAGE and SURETY.

The Word is ſometimes alſo uſed for *Frank Pledge*, which ſee. See alſo PLEDGERY.

To Pledge, in Drinking, denotes to warrant, or be Surety to one that he ſhall receive no harm while he is taking his Draught.

The Phraſe is referr'd by our Antiquaries, to the Practice of the *Danes*, heretofore in *England*, who frequently uſed to ſtab, or cut the Throats of the Natives while they were drinking.

PLEGERY, or PLEGGERY, Suretiſhip, or an Undertaking, or anſwering, for another. See SURETY and PLEDGE.

The Appellant ſhall require the Conſtable and Mareſchal to deliver his Pleggs, and to diſcharge them of their *Pleggery*; and the Conſtable and Mareſchal ſhall ask leave of the King to acquit his Pleggs, after that the Appellant is come into the Liſts to do his Devoir. *Orig. Jur. ex Vet. Cod. MS. in Bibl. Selden.*

PLEGIIS *acquietandis*, a Writ that lies for a Surety, againſt him for whom he is Surety, in caſe he pay not the Money at the Day. *Fitz. Nat. Brev.*

PLEDGET, in Chirurgery, a kind of flat Tent, made, not to enter a Wound, but to be laid upon it, to imbibe the ſuperfluous Humours, and keep it clean and dry. See TENT and WOUND.

PLEIADES, in Aſtronomy, an Aſſemblage of ſeven Stars, in the Neck of the Conſtellation *Taurus*. See STAR.

They are thus call'd from the *Greek* πλεῖν, *navigare*, to ſail; as being terrible to Mariners, by reaſon of the Rains and Storms that frequently riſe with them.

The *Latins* call them *Vergiliæ*, from *Ver*, Spring; becauſe of their riſing about the Vernal Equinox. See VERGILIÆ.

The largeſt is of the third Magnitude, and call'd *Lucida Pleiadum*. *See their ſeveral Longitudes, Latitudes, Magnitudes, &c. under the Article* TAURUS.

Poetical PLEIADES, is a Name which the *Greeks* gave to ſeven celebrated Poets, flouriſhing under the Reign of *Ptolomy Philadelphus*.

In Imitation of the *Greeks*, *Ronſard* form'd a *Pleiades* of the *French* Poets, under the Reign of *Henry* II.——It conſiſted of *Daurat*, *Ronſard*, *du Bellay*, *Belleau*, *Baif*, *Tyard*, and *Jodelle*.

On the ſame Model, ſome of their Authors are projecting a new *Pleiades* of the *Latin* Poets of the preſent time; But they are not yet agreed about the Names of thoſe that are to compoſe it; much leſs on him who ſhall be the *Lucida Pleiadum*.—M. *Baillet* has named *F. Rapin*, *F. Commire*, *F. de la Rue*, M. *de Santeuil*, M. *Menage*, M. *du Perier*, and M. *Petit*.

PLENARTY, in Law, a Term uſed in Matters of Benefices, in oppoſition to *Vacancy*. See VACANCY, VACATION, &c.

Inſtitution is a good *Plenarty* againſt a common Perſon, but not againſt the King, without Induction. See INSTITUTION. *Coke on Litt.*

PLENARY, ſomething compleat, or full.—Thus we ſay the Pope grants *Plenary Indulgences*, i. e. full and entire Remiſſions of the Penalties due to all Sins. See INDULGENCE.

The Word is form'd of the *Latin Plenarius*, of *plenus* full.

PLENILUNIUM, in Aſtronomy, that Phaſis or ſtate of the Moon popularly call'd the *Full-Moon*. See MOON.

The Word is a Compound of the *Latin plenus*, and *Luna*.

PLENIPOTENTIARY, a Perſon who has full Power and Commiſſion to do any thing.

The Word is chiefly underſtood of the Miniſters or Embaſſadors ſent from Princes or States, to treat of Peace, Marriages, and other important Matters. See MINISTER, EMBASSADOR, *&c.*

The firſt thing done in Conferences of Peace, is, to examine the Powers of the *Plenipotentiaries*. See TREATY.

The Word is compounded of *plenus* full, and *Potentia* Power.

PLENITUDE, the Quality of a thing that is full; or that fills another.

In Phyſic, it is chiefly uſed for a Redundancy of Blood and Humours. See REPLETION.

Phyſicians reckon two kinds of *Plenitude*.—The one call'd *ad Vires*, when the Abundance of the Blood oppreſſes the Patient's Strength.

The other *ad Vaſa*, when it fills the Veſſels too much; ſwelling to a Degree of burſting. See PLETHORA.

PLENUM, in Phyſics, a Term uſed to ſignify that ſtate of things, wherein every Part of Space, or Extenſion, is ſuppoſed to be full of Matter.——In oppoſition to a *Vacuum*, which is a Space ſuppoſed devoid of all Matter. See VACUUM.

The *Carteſians* adhere firmly to the Doctrine of an abſolute *Plenum*.——This they do on this Principle, that the Eſſence of Matter conſiſts in Extenſion; from whence, indeed, the Conſequence is very eaſy, that wherever there is Space or Extenſion, there is Matter. See EXTENSION.

But this Principle we have ſhewn to be falſe; and therefore the Conſequence drawn from it falls to the Ground. See MATTER.

But

But that there is a real Vacuum in the Nature of things, is likewiſe demonſtrated by Arguments *a poſteriori*, under the Article VACUUM.

PLEONASM, PLEONASMUS, in Rhetoric, a Figure of Speech, whereby we make uſe of Words ſeemingly needleſs and ſuperfluous, in order to expreſs a Thought with the greater Force and Energy. Such is, *I ſaw it with my own Eyes*, &c. See FIGURE.

The *Pleonaſm* is call'd by the *Latins*, *Redundancy*. See REDUNDANCY.

PLEONASM, in Grammar, is uſually defined a Fault in Diſcourſe, wherein we ſay more than needs,——As, *he heard it with his Ears*.

M. *Vaugelas* will not allow the Phraſe, *I ſaw it with my own Eyes*, to be a *Pleonaſm*; inaſmuch as there are no ſuperfluous Words in it; none but what are neceſſary to give a ſtronger Aſſurance of the thing affirmed.——'Tis ſufficient that one of the Phraſes ſay ſomewhat more than the other, to avoid the Imputation of a *Pleonaſm*.

In effect, tho' we give the Name *Pleonaſm* to any thing that is not neceſſary, or that enters the Diſcourſe independently of the Senſe, or Conſtruction; yet there are frequently Words which in that View would be impertinent yet are uſed to good purpoſe to give a greater Force, or Grace to Diſcourſe.

He ſpoke with his Mouth, is a *Pleonaſm* in *Engliſh*; 'tis none in *Latin*; *Virgil* ſays, *ſic ore locutus*.——Some *French* Authors deny *unir enſemble*, to unite together, to be a *Pleonaſm*.

The Word is form'd from the *Greek* πλεωνασμὸς, *Super-Abundancy*.

PLEROTICKS, in Medicine, a kind of Remedies, otherwiſe call'd *Incarnatives*. See INCARNATIVE.

The Word is form'd from the *Greek* πλεροω, I fill.

PLETHORA, in Medicine, ſuch an Abundance of any good and laudable Humour as proves hurtful to the animal Functions. See HUMOUR, *&c.*

Plethora is chiefly underſtood of the Blood; tho' ſometimes of the other Humours. See BLOOD.

The *Plethora* is the Conſequence of a good Chylification, Sanguification, *&c.* attended with a too ſparing Diſcharge by Perſpiration, *&c.*

It is uſually deſcribed as either *ad vires*, or *ad vaſa*. See PLENITUDE.

The *Plethora* is chiefly produced in a Body whoſe Organs of Digeſtion are ſtrong, Blood-Veſſels lax, Diet full of good Juice, Temperament ſanguine, Mind at eaſe and indolent, at a middle Age, and in a moiſt Air.——It renders Heat and Motion intolerable; ſtretches the great Veſſels, and compreſſes the ſmaller. And hence Stiffneſs, and Heavineſs, and on the leaſt occaſion, Ruptures in the Veſſels, Suffocations, *&c.* See DISEASE.

Dr. *Freind* makes the Catamenia, or Menſes, the mere Reſult of a *Plethora*; and will have them only an Evacuation for Relief againſt the Quantity of the Blood, which he ſuppoſes to be natural to Women, from the Humidity of their Temperature, the Smallneſs of their Veſſels, *&c.* Hence a Coacervation in the Blood-Veſſels, of a Superfluity of Aliment remaining over and above what is excreted by the common Ways. See MENSES.

PLEVIN, in Law, a Warrant, or Aſſurance. See REPLEVIN, WARRANT, *&c.*

PLEURA, in Anatomy, a Membrane which lines the Breaſt and encloſes all the Parts contained therein; being of the ſame Figure and Extent with the Thorax itſelf, and of the ſame Subſtance with the Peritonæum. See THORAX.

'Tis very fine and thin, yet manifeſtly double; thickeſt about the Back, where it is faſtened to the Ligaments of the Vertebræ.——In the middle of the Thorax it is doubled, which Duplicature forms what we call the *Mediaſtinum*, which divides the Thorax longitudinally into two Parts. See MEDIASTINUM.

The Uſe of the *Pleura* is to defend the Inſide of the Thorax, and render it ſmooth, that the Lungs may not be hurt in their Motion. See LUNGS.

The Word is derived from the *Greek* πλευρὰ, *Side*. The *Latins* call it *Succingens*.

PLEURITIS, PLEURISY, in Medicine, a violent Pain in the Side, attended with an acute Fever, a Cough, and a Difficulty of breathing.

The *Pleuriſy* ariſes from an Inflammation of ſome Part of the Pleura, to which is frequently joined that of the exterior and ſuperficial Part of the Lungs. See INFLAMMATION and PLEURA.

It uſually ariſes upon cooling too haſtily, after violent Heat; as by drinking cold Water, lying open to the Air, *&c.*

This Inflammation ſeizes any part of the Integuments of the Thorax, *viz.* either the Pleura or Mediaſtinum; and therefore the pricking Pain may be felt in any Part of the Thorax: but the place it moſt ordinarily infeſts is the Side; ſometimes the right, ſometimes the left, ſometimes higher, ſometimes lower.

This makes what we call the *Pleuritis vera*, or *true* or *internal Pleuriſy*; in oppoſition to the *Notha*, or *ſpurious* or *external Pleuriſy*, which is a Pain in the Side, without any Fever, and frequently without any Cough; and is ſuppoſed to ariſe from a ſharp Seroſity lodg'd on the Pleura, or higher among the intercoſtal Muſcles.

The great Remedy in the true *Pleuriſy* is copious and repeated Bleeding. In Adults, *Sydenham* obſerves, it is ſeldom cured with leſs than the Loſs of forty Ounces of Blood.——By omitting Phlebotomy the Patient is frequently ſuffocated.

The *Pleuriſy* ſometimes ſucceeds another Fever; occaſion'd by a Precipitation of the Febrile Matter upon the Pleura.

When it riſes to an Impoſthume, it is call'd *Empyema*. See EMPYEMA.

When it happens in the Mediaſtinum, or Diaphragma, it is called *Paraphrenitis*. See PARAPHRENITIS.

Etmuller recommends Sudorifics in the *Pleuriſy*; and obſerves, that much more Regard is to be had to the Sputum that attends the Cough than the Urine.——*Baglivi* notes, that *Pleuriſies* are frequently occult; and gives this Method of diſcovering them.—Make the Patient lie on his right or left Side, and bid him breath ſtrongly and Cough: If he feel any Pain or Heavineſs after it, he's certainly pleuritick.—The ſame Author adds, that a hard Pulſe is a certain Attendant of the *Pleuriſy*.

Riverius gives us Inſtances of notable Cures perform'd herein by Cupping and Scarrification.

PLEXUS, in Anatomy, a Name common to ſeveral Parts in the Body, conſiſting of little Veſſels interwove in form of Net-work. See VESSEL.

The Nerves, in their Progreſs, form ſeveral *Plexus's*; eſpecially the Par Vagum, or eight Pair, the Intercoſtals, and the fifth. See NERVE.

The Par Vagum, at its Interſection with the intercoſtal Nerve, forms the *Plexus Ganglioformis* ſuperior and inferior. See GANGLIOFORMIS.——A Branch of this Nerve joining near the Heart, with others from the Intercoſtals, form the *Plexus Cardiacus ſuperior*. See CARDIACUS.——A little further it ſends off ſeveral Branches, which reuniting, form the *Plexus Pneumonicus*. See PNEUMONICUS,——In each Trunk of the Intercoſtal, before it arrives at the Thorax, are two *Plexus Ganglioformes*, call'd *Plexus Cervicales*.——When arrived in the Thorax, it receives three or four Twigs from the Vertebral Nerves, together with which it conſtitutes the *Plexus Intercoſtalis*, whence deſcending into the Abdomen, it forms that famous Piece of Network, call'd on the Right Side *Plexus Hepaticus*, and on the Left *Plexus Splenicus*.—From the Hepatic *Plexus* ariſe a Number of Branches, proceeding ſome to the Liver, others to the Panchreas, others to the Capſula of *Gliſſon*, and other larger ones to the Right Kidney.—The Splenic *Plexus* ſends out Branches to the left Part of the Ventricle and Panchreas, the Spleen, the left Atrabilary Capſula and left Kidney.——Laſtly, ſeveral Branches both from the Hepatic and Splenic *Plexus* paſſing along the Meſenteric Arteries, eſpecially the upper to which they ſerve as a kind of Cover, form the *Meſenteric Plexus*, which bears ſome Reſemblance to a Sun, from the Circumference whereof proceed ſeveral little Branches or Threads in manner of Rays, continued thence to the Inteſtines; tho' ſtill accompanying the Arteries. See MESENTERIC, *&c.*

PLEXUS *Choroides* is a wonderful Contexture of ſmall Arteries and Veins, and, as ſome ſay, Lymphaticks, in the Brain, on each ſide of the Thalami Nervorum Opticorum, and juſt over the Pineal Gland. See CHOROIDES and BRAIN.

It is ſometimes alſo called *Plexus Reticularis*, from its net-like Structure. See RETICULARIS.

PLICA, in Medicine, a Diſeaſe of the Hair, peculiar to *Poland*, and hence denominated *Polonica*; tho' there are Inſtances of it in *Hungary*, *Alſatia*, *Switzerland*, &c. See HAIR.

The *Plica* is a ſevere, malignant, and dangerous Diſeaſe, wherein the Hair of the Head is matted and glu'd together beyond all Poſſibility of being extricated; attended with a grievous Diſorder of all the Limbs of the Body; and before the Hair become complicated, a violent Pain; a Sweat uſually attending it.

An unſeaſonable cutting off of the Hair in this Caſe is dangerous; nor is there any proper and adequate Remedy for the Diſeaſe yet diſcover'd.

PLIGHT, in our old Law-Books, a Term which ſignifies ſometimes, the Eſtate with the Habitude and Quality of the Land; tho' ſometimes it extends to the Rent-Charge, and a Poſſibility of a Dower. *Cokes Inſt. fol.* 221.

PLINTH, in Architecture, a flat ſquare Member, in form of a Brick; whence its Name.

The Word comes from the *Greek* πλινθος, *Brick*.

The *Plinth* is uſed as the Foot, or Foundation of Columns; being that flat ſquare Table, under the Mouldings of the Baſe and Pedeſtal, at the Bottom of the whole Order; ſeeming to have been originally intended to keep the

bottom

This is an ancient Piece of Husbandry, *Xenophon*, *Pindar*, and *Virgil* recommend it: witneſs thoſe Verſes of *Virgil*.

Alternis idem tonſas, ceſſare Novaleis,
Et ſegnem patiere ſitu dureſcere campum.
Georg. lib. 1.

PLOW, or PLOW, in Navigation, an ancient Mathematical Inſtrument, made of Box, or Pear-tree, uſed to take the Height of the Sun or Stars, in order to find the Latitude. See HEIGHT, LATITUDE, *&c.*

It admits of the Degrees to be very large, and is much eſteemed by many Artiſts; tho' now generally diſuſed among us. See ALTITUDE.

PLOW-*Land*, or PLOUGH-*Land*. See CARUCATA *Terræ*.

PLOW-*Alms*, a Duty anciently of a Penny, paid to the Church for every *Plough-Land*, or Hide of Land. See HIDE.

De qualibet Carucata juncta inter Paſcha & Pentechoſtem unum denarium, qui dicitur Plou-Almes. *Monaſt. Ang.*

PLUG, a large wooden Peg wherewith to ſtop the Bottom of a Ciſtern, Cask, Pipe, or the like.

PLUMAGE, the Feathers, or Covering of Birds; *For the Mechaniſm*, &c. whereof, ſee FEATHER.

In Falconry, *Plumage* is particularly underſtood of the Feathers under a Hawk's Wing. See HAWK and HAWKING.

The Falconers alſo give their Hawks Parcels of ſmall Feathers to make them caſt; and theſe they call *Plumage*. See CASTING.

PLUMB, in Matters of Spicery. See CURRANTS and RAISINS.

PLUMB-*Line*, a Term among Artificers for a *Perpendicular Line*. See PERPENDICULAR.

It is thus call'd becauſe uſually deſcribed by means of a Plummet. See PLUMMET.

PLUMBAGO, among the Ancients, was the Oar of the Black-Lead, uſed in making Pencils for deſigning, *&c.* See BLACK-LEAD.

Pomet adds, that *Plumbago* was the Sea-Lead of the Ancients; who, he notes, took that Drug for a Production of the Sea, not a Mineral, as it really is; but this is ſcarce credible.

PLUMBERY, the Art of caſting, preparing, and working Lead; and of uſing it in Buildings, *&c.* See LEAD.

The Word is form'd of the *Latin Plumbum*, Lead.

The Lead uſed in *Plumbery* is furniſh'd from the Lead-Works in large Ingots, or Blocks, call'd Pigs of Lead, ordinarily weighing about an hundred Pounds a-piece.

As this Lead melts very eaſily, 'tis eaſy to caſt Figures hereof, of any kind, by running it into Moulds of Braſs, Clay, Plaſter, *&c.* See FOUNDERY and STATUE.

But the chief Article in *Plumbery*, is the Sheets and Pipes of Lead.—'Tis theſe make the Baſis of the Plumbers Work in Building; the Proceſs of theſe, therefore, we ſhall give a Deſcription of:

Method of caſting large Sheets of Lead.

The Lead deſtined for this uſe is melted in a large Cauldron or Furnace, uſually built with free-Stone and Earth, fortified on the out-ſide with a Maſſive of Shards and Plaſter. At the bottom hereof is a Place ſunk lower than the reſt, wherein is diſpoſed an Iron Pot, or Peel, to receive what may remain of the Metal after the Sheet is run. The Furnace is ſo rais'd above the Area of the Floor as that the Iron Pot juſt reſts thereon.

To Uſe the Furnace they heat it with Wood laid within it; that done they throw in the Lead, pell-mell with the burning Coals, to melt.—Near the Furnace is the Table, or Mould, whereon the Lead is to be caſt.——It conſiſts of large pieces of Wood, well jointed, and bound with Bars of Iron at the ends. Around it runs a Frame, conſiſting of a Ledge or Border of Wood two or three Inches thick, and one or two high from the Table. The ordinary Width of the Tables is from three to four Foot; and their Length from 18 to 20 Foot.

The Table is cover'd with fine Sand; prepared, by moiſtening it with a Watering-Pot, then working it with a Stick; and at laſt, to render it ſmooth and even, beating it flat with a Mallet, and planing it with a Ruler or Slip of Braſs.

Over the Table is a kind of Rake of Wood, which bears and plays on the Edges of the Frame by means of a Notch cut in either End thereof; and ſo placed, as that between it and the Sand is a Space proportionable to the intended Thickneſs of the Sheet.——The Uſe of this Rake is to drive the Matter, while yet liquid, to the Extremity of the Mould.

A-top of the Table is an Iron Pan, Peel, or Shovel, bearing, before, on the Edge of the Table itſelf, and behind on a Treſtle ſomewhat lower than the Table.——Its Uſe is in conveying the Metal into the Mould; and the Deſign of its oblique Diſpoſition is, that it may by that means be able to retain the Metal, and keep it from running off at the fore-ſide, where it has no Ledge.——Some of theſe Peels are big enough to hold fifteen or ſixteen hundred Weight of Lead, and even more.

Things being thus diſpoſed, with a large Iron Ladle they take out the melted Lead, Coals and all, out of the Furnace; and with this, mix'd as it is, fill the Iron Peel.—When full, they take out the Coals, and clear the Lead with another Iron Spoon pierced after the manner of a Scummer.

This done, they hoiſt up the lower Part of the Peel by its Handle; upon which the liquid Matter running off and ſpreading it ſelf on the Mould, the Plumber conducts and drives it to the Extremity of the Table by means of the Rake, which the Workman paſſes along the Ledges, and thus renders the Sheet of an equal Thickneſs.—The Sheets thus caſt there remains nothing but to edge them, *i. e.* to take off the two Sides with a Plane, in order to render them ſmooth and ſtrait.

Method of caſting thin Sheets of Lead.

The Table or Mould here uſed is of a Length and Breadth at diſcretion, only ledg'd on one ſide.—Inſtead of Sand they cover it with a Piece of woolen Stuff, nailed down at the two Ends to keep it tight; and over this lay a very fine linnen Cloth.—The Feet of the Table are uneven, ſo that it does not ſtand horizontal, but moderately inclined.

Great Regard is had to the Lead while melting, that it have the juſt Degree of Heat, ſo as it may run well, yet not burn the Linnen.—This they judge of by a Piece of Paper; for if the Paper take fire in the liquid Lead, 'tis too hot, and if it be not ſhrunk and ſcorch'd a little, 'tis not hot enough.

Being then in its juſt degree, they have a Rake, but different from that deſcribed in the former Article; as ſerving both for Peel and Rake, to contain, and to conduct the liquid Lead.—'Tis in effect a wooden Box without any bottom, only cloſed on three Sides. It is pretty high behind, but the two ſides, like two acute Angles, ſtill diminiſh to the tip, from the Place where they are joined to the third or middle Piece where they are of the ſame Height therewith, *viz.* 7 or 8 Inches high.—The Width of the middle makes that of the Rake, which again makes that of the Sheet to be caſt.

The Rake is placed a-top of the Table, which is, before, cover'd in that Part, with a Paſte-board that ſerves as a bottom to the Box, and prevents the Linnen from being burnt while the liquid Lead is pouring in.—The Rake is ſo diſpoſed on the Table, as that the higheſt Part looks to the lower end of the Table, and the two ſloping Sides to the higher End.

The Rake is now fill'd with Lead according to the Quantity to be uſed; which done, two Men, one at each ſide the Table, let the Rake deſcend down the Table, or elſe draw it down with a Velocity greater or leſs, as the Sheet is to be more or leſs thick; the Thickneſs of the Sheet ſtill depending on the Promptitude wherewith the Rake ſlides down the Inclining Mold.

Theſe fine ſmooth Sheets of Lead are ſometimes uſed between the Joints of large Stones in great Buildings, *&c.*

Method of making Pipes without ſoldering.

To make theſe Pipes they have a kind of Furnace, conſiſting of a large Iron Furnace or Cauldron, ſupported on a pretty high Iron Stand. The Cauldron is encompaſſed with a Maſſive of Bricks and Loam; only leaving a Mouth or Paſſage for the Conveyance of Wood underneath, and lighting the Fire; and another little Aperture behind, to ſerve as a Vent-hole.

In this Furnace they melt the Lead, after firſt heating it with a Fire underneath: To forward the Fuſion they put in burning Faggots along with the Metal.—The Metal is ſkimmed and laden off with the Inſtruments mentioned above.

Near the Furnace is a Bench, furniſh'd at one End with a little Mill, with Arms or Levers to turn it withal.—A ſtrong Girt, arm'd with an Iron Hook at one Extremity, is faſtened by the other to the Axis of the Mill, around which it turns when in Motion. On this Bench the Moulds of the Pipes are placed horizontally; and the Mill and the Girt ſerve to draw out the Iron Core after the Pipe is caſt.

The Moulds of theſe Tubes are of Braſs, and conſiſt of two Pieces which open and ſhut by means of Hooks and Hinges their inner Calliber, or Diameter, is according to the Size of the Pipe to be made; their Length is uſually two Foot and a half.

In the middle is placed a Core, or round Piece of Braſs or Iron, ſomewhat longer than the Mould, and of the Thick-

neſs

The Method of *Plotting*, where the Angles are taken by the Theodolite, *i. e.* by *Back-ſight* and *Fore-ſight*, (as 'tis call'd, ſee BACKSIGHT, *&c.*) is ſomewhat different.—To prepare the Angles for *plotting*, the Quantity of each muſt firſt be found; by ſubtracting the Degrees of the Foreſight and Backſight from each other: The Remainder is the Angle to be protracted. See THEODOLITE.

The Uſe of parallel Lines is here excluded, and inſtead of laying the Protractor conſtantly on, or parallel to, Meridians; its Direction is varied at every Angle.——The Practice is thus: Suppoſe the former Incloſure to have been ſurvey'd with the Theodolite, after the manner of Backſight and Foreſight; and ſuppoſe the Quantity of each Angle to be found by Subtraction. An indefinite Line is drawn at random as A K *Fig.* 21; and on this the meaſured Diſtance, *e. gr.* 8 Chains, 22 Links, ſet off, as in the former Example If now the Quantity of the Angle A have been found 140°; the Diameter of the Protractor is to be laid on the Line A K, with the Center over A, and againſt the Number of Degrees, *viz.* 140, a Mark made, an indeterminate dry Line drawn thro' it, and the Diſtance of the Line A B laid down from the Scale thereupon.

Thus we gain the Point B; upon which laying the Center of the Protractor, the Diameter, along the Line A B; the Angle B is protracted, by making a Mark againſt its Number of Degrees, drawing a dry Line and ſetting off the Diſtance B C as before.

Then proceed to C; laying the Diameter of the Protractor on B C, the Center on C protracts the Angle C, and draw the Line C D: Thus proceeding, orderly, to all the Angles and Sides, you'll have the Plot of the whole Incloſure A B C, *&c.* as before.

PLOTTING *Scale*, a Mathematical Inſtrument uſually of Wood, ſometimes of Braſs, or other Matter; and either a Foot, or half a Foot long. See SCALE.

It is denominated from its Uſe in plotting of Grounds, *&c.* See PLOTTING.

On one ſide of the Inſtrument (repreſented *Tab. Surveying*, *Fig.* 32.) are ſeven ſeveral Scales, or Lines, divided into equal Parts.——The firſt Diviſion of the firſt Scale is ſubdivided into ten equal Parts, to which is prefix'd the Number 10, ſignifying that 10 of thoſe Subdiviſions make an Inch; or that the Diviſions of that Scale are Decimals of Inches.

The firſt Diviſion of the ſecond Scale is likewiſe ſubdivided into 10, to which is prefix'd the Number 16, denoting that 16 of thoſe Subdiviſions make an Inch.—The firſt Diviſion of the third Scale is ſubdivided in like manner into 10, to which are prefix'd the Number 20.———To that of the fourth Scale is prefix'd the Number 24; to that of the fifth 32; that of the ſixth 40; that of the ſeventh 48; denoting the Number of Subdiviſions equal to an Inch, in each, reſpectively.

The two laſt Scales are broke off before the end, to give room for two Lines of Chords mark'd by the Letters *c c.* See CHORD.

On the back ſide of the Inſtrument is a Diagonal Scale, the firſt of whoſe Diviſions, which is an Inch long if the Scale be a Foot, and half an Inch, if half a Foot, is ſubdivided, diagonally, into 100 equal Parts.——At the other end of the Scale is another Diagonal Subdiviſion, of half the length of the former, into the ſame Number of Parts, *viz.* 100. See DIAGONAL.

Next the Scales, is a Line divided into hundredth Parts of a Foot, number'd 10, 20, 30, *&c.* and a Line of Inches ſubdivided into tenth Parts mark'd 1, 2, 3, *&c.*

Uſe of the PLOTTING *Scale.*

1. *Any Diſtance being meaſured with the Chain, to lay it down on Paper.*——Suppoſe the Diſtance to be 6 Chains 50 Links. Draw an indefinite Line; ſet one foot of the Compaſſes at Figure 6 on the Scale, *e. g.* the Scale of 20 in an Inch, and extend the other to 5 of the Subdiviſions, for the 50 Links: This Diſtance being transferr'd to the Line, will exhibit the 6 Chains, 50 Links, required.

If 'tis deſired to have 6 Chains 50 Links take up more or leſs Space, take 'em off from a greater or leſſer Scale, *i. e.* from a Scale that has more or fewer Diviſions in an Inch.

To find the Chains and Links contain'd in a right Line, e. gr. *that juſt drawn, according to any Scale*, e. gr. that of 20 in an Inch.—Take the Length of the Line in the Compaſſes; and applying it to the given Scale, you'll find it extend from the Number 6 of the great Diviſions, to 5 of the ſmall ones: hence the given Line contains 6 Chains 50 Links.

PLOUGH, or PLOW, in Agriculture, a popular Machine for the breaking up of Ground; conſiſting of a Train or Carriage, with two large Irons; the one pointed the other edg'd; ſerving to cut and open the Ground, and draw Furrows therein. See AGRICULTURE, PLOUGHING, *&c.*

The Parts of the Plough are, the *Plough-Beam*, the *Handle*, *Tail*, *Stilts*, *Hales* or *Staves*, *Neck* or *Share-Beam*, *Earth-board*, *Mould-board*, *Breaſt-board*, *Furrow-board*, *Shield-board*, &c. The *Sheath*, *Share-Iron*, *Coulter*, *Plough-Pin* and *Collar-Links*, *Plough-Pillow* and *Bolſter*, and ſometimes *Wheels.*

The Structure and Contrivance of the *Plough* is various in various Kinds of Grounds: A particular Deſcription of all would be endleſs.—The moſt uſual are

1° The *double wheel'd Plough* uſed throughout *Hertfordſhire*, &c.——This is apparently one of the beſt, ſtrongeſt, and of eaſieſt Draught, of any; and ſuits all kinds of Lands except miry Clays in Winter; which are apt to clog the Wheels, which are about 18 or 20 Inches high, and the Furrow-Wheel ſometimes larger than the other.

2° The *Lincolnſhire Plough* is ſingular in its Shape, and very good for Marſh or Fenny Lands, ſubject to Weeds and Sedges, but free from Stones; by reaſon of its Coulter and the Largeneſs of its Share, which is often a Foot broad and very ſharp.

3° The *Suſſex ſingle Wheel Plough* is of a clumſy Make, very wide in the Breach; ſo that the Draught of it muſt be very hard.——It is chiefly remarkable for its Shape.

4° The *Caxton* or *Trenching Plough*, invented to cut Drains about *Caxton* in *Cambridgeſhire*, in ſtiff miry Clay-Grounds.——It is larger than ordinary, and has two Coulters one before the other; which bending inwards cut each Side of the Trench.—The Mould-board is three times the uſual Length, to caſt the Turf a great way off from the Trench.

It cuts a Trench a Foot wide at bottom, a Foot and half at top, and a Foot deep; and is drawn with twenty Horſes.

5° The *Dray-Plough* is the moſt common.——It is made without either Wheel or Foot; of an eaſy Draught; beſt in Winter, for miry Clays, where the Land is ſoft.

6° The *Spaniſh Plough* varies much in its make from our common *Ploughs*. 'Tis a kind of Semicircle, pitch'd on one End, with the convex Side turn'd to the Plowman, and the concave Side (a little inclined) to the Horſe. Its Tail is in a right Line with the Share.

With this *Plough* and one Horſe the *Spaniards* plough two or three Acres of their light Ground in a Day.

7° The *Colcheſter Plough* is a fine light Wheel *Plough*, with which two Horſes will cut up two Acres of their light Land in a Day.——It is peculiar for its Iron Earth-board made rounding, which turns the Turf better than any other *Plough* yet invented.

8° *One Wheel Plough* may be uſed in almoſt any kind of Ground; being lighter and nimbler than other Wheel-*Ploughs.*

9° The *Double Plough.* In this, there is one *Plough* fix'd to the ſide of another; ſo that by means of four Horſes and two Men a double Furrow is plough'd, the one by the ſide of the other.

10° Add to theſe another kind of *Double Plough*, whereby two Furrows are plough'd at once, one under another, by which the Earth is ſtirr'd up 12 or 14 Inches Depth, which is of great Benefit.

PLOUGH, among Bookbinders, is a Tool wherewith they cut the Leaves of Books ſmooth. See *Book*-BINDING.

PLOUGH-*Monday*, the next Monday after *Twelfth-day*, when the Plough-men in the North Country draw a *Plough* from Door to Door, and beg Plough-Money to drink.

PLOUGHING, one of the principal Operations in Agriculture, perform'd with the Plough. See PLOUGH.

Ploughing is principally either that of Layes, or of Fallows.——*Ploughing of Layes* is the firſt cutting up of Graſs-Ground for Corn; which is uſually done in *January*, when the Earth is wet and the Turf tough, ſo as to hold turning without breaking; in which the Perfection of this kind of ploughing conſiſts.

Ploughing of Fallows, call'd alſo *fallowing*, is a Preparing of Land by *ploughing*, long before it be *plough'd* for Seed.—This is a conſiderable Benefit to Lands, few of which will bear above two Crops ſucceſſively without ſuch Reſpite. Hence Landlords uſe to bind their Tenants to it once in 3 Years.

When this is done twice, 'tis call'd *twifallowing*, when thrice *trifallowing*, &c.

The firſt is as ſoon as the Husbandman has done ſowing his Corn; and this is to be very ſhallow, well turn'd, and clapp'd cloſe together.—The ſecond is in *June*; when they go the full Depth.—The third, about the beginning of *Auguſt*.—If it riſe full of Clods they harrow it down; but ſoon *ſtrick Size*, or plough it up again into Ridges.

In *Staffordſhire*, beſide the three Summer Fallowings, they uſually give their Land a Winter fallowing. *Pliny* commends the *ploughing* of Lands four times; and ſo does *Virgil:*

Illa demum ſeges votis reſpondet avari
Agricolæ bis quæ ſolem, bis frigora ſenſit.
Georg. lib. 1.

This

This is an ancient Piece of Husbandry, *Xenophon*, *Pindar*, and *Virgil* recommend it: witneſs thoſe Verſes of *Virgil*.

Alternis idem tonſas, ceſſare Novaleis,
Et ſegnem patiere ſitu dureſcere campum.
Georg. lib. 1.

PLOW, or PLOW, in Navigation, an ancient Mathematical Inſtrument, made of Box, or Pear-tree, uſed to take the Height of the Sun or Stars, in order to find the Latitude. See HEIGHT, LATITUDE, *&c.*

It admits of the Degrees to be very large, and is much eſteemed by many Artiſts; tho' now generally diſuſed among us. See ALTITUDE.

PLOW-*Land*, or PLOUGH-*Land*. See CARUCATA *Terræ*.

PLOW-*Alms*, a Duty anciently of a Penny, paid to the Church for every *Plough-Land*, or Hide of Land. See HIDE.

De qualibet Carucata junctа inter Paſcha & Pentechoſtem unum denarium, qui dicitur Plou-Almes. *Monaſt. Ang.*

PLUG, a large wooden Peg wherewith to ſtop the Bottom of a Ciſtern, Cask, Pipe, or the like.

PLUMAGE, the Feathers, or Covering of Birds; *For the Mechaniſm*, &c. whereof, ſee FEATHER.

In Falconry, *Plumage* is particularly underſtood of the Feathers under a Hawk's Wing. See HAWK and HAWKING.

The Falconers alſo give their Hawks Parcels of ſmall Feathers to make them caſt; and theſe they call *Plumage*. See CASTING.

PLUMB, in Matters of Spicery. See CURRANTS and RAISINS.

PLUMB-*Line*, a Term among Artificers for a *Perpendicular Line*. See PERPENDICULAR.

It is thus call'd becauſe uſually deſcribed by means of a Plummet. See PLUMMET.

PLUMBAGO, among the Ancients, was the Oar of the Black-Lead, uſed in making Pencils for deſigning, *&c.* See BLACK-LEAD.

Pomet adds, that *Plumbago* was the Sea-Lead of the Ancients; who, he notes, took that Drug for a Production of the Sea, not a Mineral, as it really is; but this is ſcarce credible.

PLUMBERY, the Art of caſting, preparing, and working Lead; and of uſing it in Buildings, *&c.* See LEAD.

The Word is form'd of the *Latin Plumbum*, Lead.

The Lead uſed in *Plumbery* is furniſh'd from the Lead-Works in large Ingots, or Blocks, call'd Pigs of Lead, ordinarily weighing about an hundred Pounds a-piece.

As this Lead melts very eaſily, 'tis eaſy to caſt Figures hereof, of any kind, by running it into Moulds of Braſs, Clay, Plaſter, *&c.* See FOUNDERY and STATUE.

But the chief Article in *Plumbery*, is the Sheets and Pipes of Lead.—'Tis theſe make the Baſis of the Plumbers Work in Building; the Proceſs of theſe, therefore, we ſhall give a Deſcription of:

Method of caſting large Sheets of Lead.

The Lead deſtined for this uſe is melted in a large Cauldron or Furnace, uſually built with free-Stone and Earth, fortified on the out-ſide with a Maſſive of Shards and Plaſter. At the bottom hereof is a Place ſunk lower than the reſt, wherein is diſpoſed an Iron Pot, or Peel, to receive what may remain of the Metal after the Sheet is run. The Furnace is ſo rais'd above the Area of the Floor as that the Iron Pot juſt reſts thereon.

To Uſe the Furnace they heat it with Wood laid within it; that done they throw in the Lead, pell-mell with the burning Coals, to melt.—Near the Furnace is the Table, or Mould, whereon the Lead is to be caſt.——It conſiſts of large pieces of Wood, well jointed, and bound with Bars of Iron at the ends. Around it runs a Frame, conſiſting of a Ledge or Border of Wood two or three Inches thick, and one or two high from the Table. The ordinary Width of the Tables is from three to four Foot; and their Length from 18 to 20 Foot.

The Table is cover'd with fine Sand; prepared, by moiſtening it with a Watering-Pot, then working it with a Stick; and at laſt, to render it ſmooth and even, beating it flat with a Mallet, and planing it with a Ruler or Slip of Braſs.

Over the Table is a kind of Rake of Wood, which bears and plays on the Edges of the Frame by means of a Notch cut in either End thereof; and ſo placed, as that between it and the Sand is a Space proportionable to the intended Thickneſs of the Sheet.——The Uſe of this Rake is to drive the Matter, while yet liquid, to the Extremity of the Mould.

A-top of the Table is an Iron Pan, Peel, or Shovel, bearing, before, on the Edge of the Table itſelf, and behind on a Treſtle ſomewhat lower than the Table.——Its Uſe is in conveying the Metal into the Mould; and the Deſign of its oblique Diſpoſition is, that it may by that means be able to retain the Metal, and keep it from running off at the fore-ſide, where it has no Ledge.——Some of theſe Peels are big enough to hold fifteen or ſixteen hundred Weight of Lead, and even more.

Things being thus diſpoſed, with a large Iron Ladle they take out the melted Lead, Coals and all, out of the Furnace; and with this, mix'd as it is, fill the Iron Peel.—When full, they take out the Coals, and clear the Lead with another Iron Spoon pierced after the manner of a Scummer.

This done, they hoiſt up the lower Part of the Peel by its Handle; upon which the liquid Matter running off and ſpreading it ſelf on the Mould, the Plumber conducts and drives it to the Extremity of the Table by means of the Rake, which the Workman paſſes along the Ledges, and thus renders the Sheet of an equal Thickneſs.—The Sheets thus caſt there remains nothing but to edge them, *i. e.* to take off the two Sides with a Plane, in order to render them ſmooth and ſtrait.

Method of caſting thin Sheets of Lead.

The Table or Mould here uſed is of a Length and Breadth at diſcretion, only ledg'd on one ſide.—Inſtead of Sand they cover it with a Piece of woolen Stuff, nailed down at the two Ends to keep it tight; and over this lay a very fine linnen Cloth.—The Feet of the Table are uneven, ſo that it does not ſtand horizontal, but moderately inclined.

Great Regard is had to the Lead while melting, that it have the juſt Degree of Heat, ſo as it may run well, yet not burn the Linnen.—This they judge of by a Piece of Paper; for if the Paper take fire in the liquid Lead, 'tis too hot, and if it be not ſhrunk and ſcorch'd a little, 'tis not hot enough.

Being then in its juſt degree, they have a Rake, but different from that deſcribed in the former Article; as ſerving both for Peel and Rake, to contain, and to conduct the liquid Lead.—'Tis in effect a wooden Box without any bottom, only cloſed on three Sides. It is pretty high behind, but the two ſides, like two acute Angles, ſtill diminiſh to the tip, from the Place where they are joined to the third or middle Piece where they are of the ſame Height therewith, *viz.* 7 or 8 Inches high.—The Width of the middle makes that of the Rake, which again makes that of the Sheet to be caſt.

The Rake is placed a-top of the Table, which is, before, cover'd in that Part, with a Paſte-board that ſerves as a bottom to the Box, and prevents the Linnen from being burnt while the liquid Lead is pouring in.—The Rake is ſo diſpoſed on the Table, as that the higheſt Part looks to the lower end of the Table, and the two ſloping Sides to the higher End.

The Rake is now fill'd with Lead according to the Quantity to be uſed; which done, two Men, one at each ſide the Table, let the Rake deſcend down the Table, or elſe draw it down with a Velocity greater or leſs, as the Sheet is to be more or leſs thick; the Thickneſs of the Sheet ſtill depending on the Promptitude wherewith the Rake ſlides down the Inclining Mold.

Theſe fine ſmooth Sheets of Lead are ſometimes uſed between the Joints of large Stones in great Buildings, *&c.*

Method of making Pipes without ſoldering.

To make theſe Pipes they have a kind of Furnace, conſiſting of a large Iron Furnace or Cauldron, ſupported on a pretty high Iron Stand. The Cauldron is encompaſſed with a Maſſive of Bricks and Loam; only leaving a Mouth or Paſſage for the Conveyance of Wood underneath, and lighting the Fire; and another little Aperture behind, to ſerve as a Vent-hole.

In this Furnace they melt the Lead, after firſt heating it with a Fire underneath: To forward the Fuſion they put in burning Faggots along with the Metal.—The Metal is ſkimmed and laden off with the Inſtruments mentioned above.

Near the Furnace is a Bench, furniſh'd at one End with a little Mill, with Arms or Levers to turn it withal.—A ſtrong Girt, arm'd with an Iron Hook at one Extremity, is faſtened by the other to the Axis of the Mill, around which it turns when in Motion. On this Bench the Moulds of the Pipes are placed horizontally; and the Mill and the Girt ſerve to draw out the Iron Core after the Pipe is caſt.

The Moulds of theſe Tubes are of Braſs, and conſiſt of two Pieces which open and ſhut by means of Hooks and Hinges their inner Calliber, or Diameter, is according to the Size of the Pipe to be made; their Length is uſually two Foot and a half.

In the middle is placed a Core, or round Piece of Braſs or Iron, ſomewhat longer than the Mould, and of the Thick-

neſs

neſs of the Inner Diameter of the Pipe.—This Core is paſs'd thro' two Copper Rundles, one at each end of the Mould, which they ſerve to cloſe, and to theſe Rundles is join'd a little Copper Tube about two Inches long, and of the Thickneſs the leaden Pipe is intended to be of.—By means of theſe Tubes the Core is retained In the middle of the Cavity of the Mould.

The Core being in the Mould, with the Rundles at its two Ends, and the Lead melted in the Furnace; they take it up in a Ladle and pour it into the Mould by a little Aperture at one End, made in form of a Funnel.

When the Mould is full, and the Metal cold, they paſs the Hook of the Girt into a Hole at the End of the Core, and turning the Mill with the Hand, draw out the Core.—They then open the Mould, and take out the Pipe.

If they deſire to have the Pipe lengthened; they put one End thereof in the lower End of the Mould, and paſs the End of the Core into it; then ſhut the Mould again and apply its Rundle and Tube as before, the Pipe juſt caſt ſerving for Rundles, *&c.* at the other End.

Things thus replaced, they pour in freſh Metal into the Mould; thus repeating the Operation till they have got a Pipe of the Length required.

Pipes made of Sheet-Lead ſoldered.

The *Plumbers* have wooden Cylinders, or Rollers, of the Length and Thickneſs required; and on theſe they form their Pipes, by wrapping the Sheet around 'em; ſoldering up the Edges all along, thus——After grating the Lead well with a Grater, they rub Roſin over the Part thus grated; then pour on it ſome Solder melted in a Ladle, or elſe melt it with a hot ſoldering Iron, ſmeering thoſe Parts where they would not have the Solder catch with Chalk, or the Soil of the Hand.

The Solder which the *Plumbers* uſe, is a Mixture of two Pounds of Lead with one of Tin. See SOLDER, ſee alſo TIN and TINNING.

PLUMBUM. See LEAD.

PLUMBUM-*uſtum*, among Chymiſts, a Compoſition made of two Parts of Lead, and one Part of Sulphur. See LEAD.

PLUME *Allum*, *Alumen Plumoſum*. See ALUM.

PLUMES, a Set or Bunch of Oſtrich-Feathers, pull'd out of the Tail and Wings, and made up to ſerve for Ornament in Funerals, *&c.*

PLUME, in Falconry, is the general Colour or Mixture of the Feathers of a Hawk; which ſhews her Conſtitution. See HAWK.

When a Hawk ſeizes her Prey and diſmantles it of its Feathers, ſhe is ſaid *to plume it*.

The Word is form'd of the Latin *Pluma*, Feather.

PLUME, or PLUMULE, in Botany, a little Member of the Grain, or Seed of a Plant; being that which in the Growth of the Plant becomes the Stem or Trunk thereof. See SEED and STEM.

The *Plume* is incloſed in a Cavity form'd in the Lobes on Purpoſe for its Reception.——'Tis almoſt of the ſame Colour with the *Radicle*, or little Root, on the Baſis whereof it is ſuſtain'd. See RADICLE.

The *Plume* is the firſt Part that appears out of the Earth; as, in effect, 'tis the Part that firſt appears out of the Membrane or Cover of the Seed; there being a Hole over againſt it in the Membrane, thro' which it makes its Eſcape.

'Tis the Appearance of the *Plume* without the Cavity of the Grain, that makes what we call the *Bud* or *Germ* of a Plant. See GERMINATION; ſee alſo PLANT.

The *Plume* is ſo call'd, becauſe conſiſting of ſeveral Pieces bound together in manner of a Feather.——In Corn, the *Plume* is that which after the Radicle is ſhot forth, ſhoots out towards the ſmaller End of the Seed; whence ſome call it the *Acroſpire*. See ACROSPIRE, MALT, *&c.*

PLUMMET, PLUME-*Rule*, or PLUMB-*Line*, an Inſtrument uſed by Maſons, Carpenters, *&c.* to draw Perpendiculars withal; in order to judge whether Walls, *&c.* be upright, Planes, horizontal, and the like.

It is thus call'd from a Piece of Lead, *Plumbum*, faſtened to the End of a Thread or Cord, which uſually conſtitutes this Inſtrument.

Sometimes the String deſcends along a Ruler of Wood or Metal rais'd perpendicularly on another; in which Caſe it becomes a Level. See LEVEL.

At Sea the *Plummet* is uſed by the Pilot to ſound the Depth of the Sea. See SOUNDING.

PLURAL, in Grammar, a particular Inflexion of Nouns, and Verbs, whereby they come to expreſs a Plurality or Number of things. See NUMBER.

The *Latins*, *Engliſh*, &c. have only two Numbers, *Singular* and *Plural*; the *Greeks* and *Hebrews* have three, *Singular*, *Dual*, and *Plural*. See DUAL.

In *Latin*, &c. both Nouns and Verbs have uſually diſtinct Terminations to their different Numbers; in *Engliſh*, Nouns Subſtantives uſually become *plural* by the Addition of an *s* or *es* to the Singular. See SINGULAR.

Nouns Adjectives are the ſame in both Numbers; and in Verbs, the Number is diſtinguiſh'd by that of the Pronouns. See NUMBER, ADJECTIVE, VERB, PRONOUN, *&c.*

PLURALITY, a diſcrete Quantity, conſiſting of two, or a greater Number.

A *Plurality of Worlds* is a thing which Mr. *Huygens* has endeavoured to prove in his *Coſmotheoros*.—The ſame is likewiſe contended for in a very pretty Treatiſe of M. *Fontenelle*, under that Title.

See the chief Arguments for a *Plurality* of Worlds, under the Articles MOON, PLANET, and EARTH.

The greateſt Abſurdity in the Pagan Theology, is, the *Plurality of Gods*. See GOD.

The *Plurality of Benefices* is a thing tolerated in the Church, but never approved of. See BENEFICE.

'Twas the Smallneſs of ſome Benefices that firſt gave occaſion to *Pluralities*; for an Eccleſiaſtic not being able to ſubſiſt on a ſingle one, was allowed to hold two: at length the Number increaſed without Bounds.

The Abuſe was endeavoured to be remedied at the Council of *Lateran* under *Alexander* III. and *Innocent* III. when the holding more than one Benefice was expreſsly forbid by a Canon; but the ſame Canon granting the Pope a Power to diſpenſe with it in Favour of Perſons of diſtinguiſh'd Merit, there were ſo many found a Title to this Merit, that the Prohibition became uſeleſs.

In *Germany*, the Pope grants Diſpenſations for poſſeſſing a *Plurality of Benefices*, on Pretence that the Eccleſiaſtic Princes there, need large Revenues to bear up againſt the Proteſtant Princes.

PLUS, in *Algebra*, a Term commonly uſed for *majus*, more.

Its Character is +. See CHARACTER.

Thus 4 + 10 = 14 is read, four, *plus*, or more, 10, is equal to 14. See QUANTITY; ſee alſo ADDITION, *&c.*

PLUSH, in Commerce, *&c.* a Kind of Stuff, having a Sort of Velvet Nap or Shag on one Side; compoſed of a Woof of a ſingle woolen Thread, and a double Warp, the one Wool, of two Threads twiſted, the other Goats-hair.

Pluſh is manufactured like Velvet, on a Loom with three three Steps or Treddles.——Two of theſe ſeparate and depreſs the woolen Warp, and the third raiſes the Hair-Warp; upon which the Workman throwing the Shuttle, paſſes the Woof between the woolen and Hair-Warp; and, afterwards, laying a braſs Broach under that of the Hair, he cuts it thereon with a Knife deſtined for that Uſe, conducting the Knife on the Broach which is made a little hollow, all its Length; and thus gives the Surface of the *Pluſh* an Appearance of Velvet. See VELVET.

Some aſcribe the Invention of *Pluſh* to the *Engliſh*; others ſay it was firſt made in *Holland*, and particularly at *Haerlem*.——Be this as it will; 'tis certain, the *French* are the People who make the moſt of it; there being ſeveral very conſiderable *Pluſh Manufactures* at *Amiens*, *Abbeville*, and *Compiegne*.

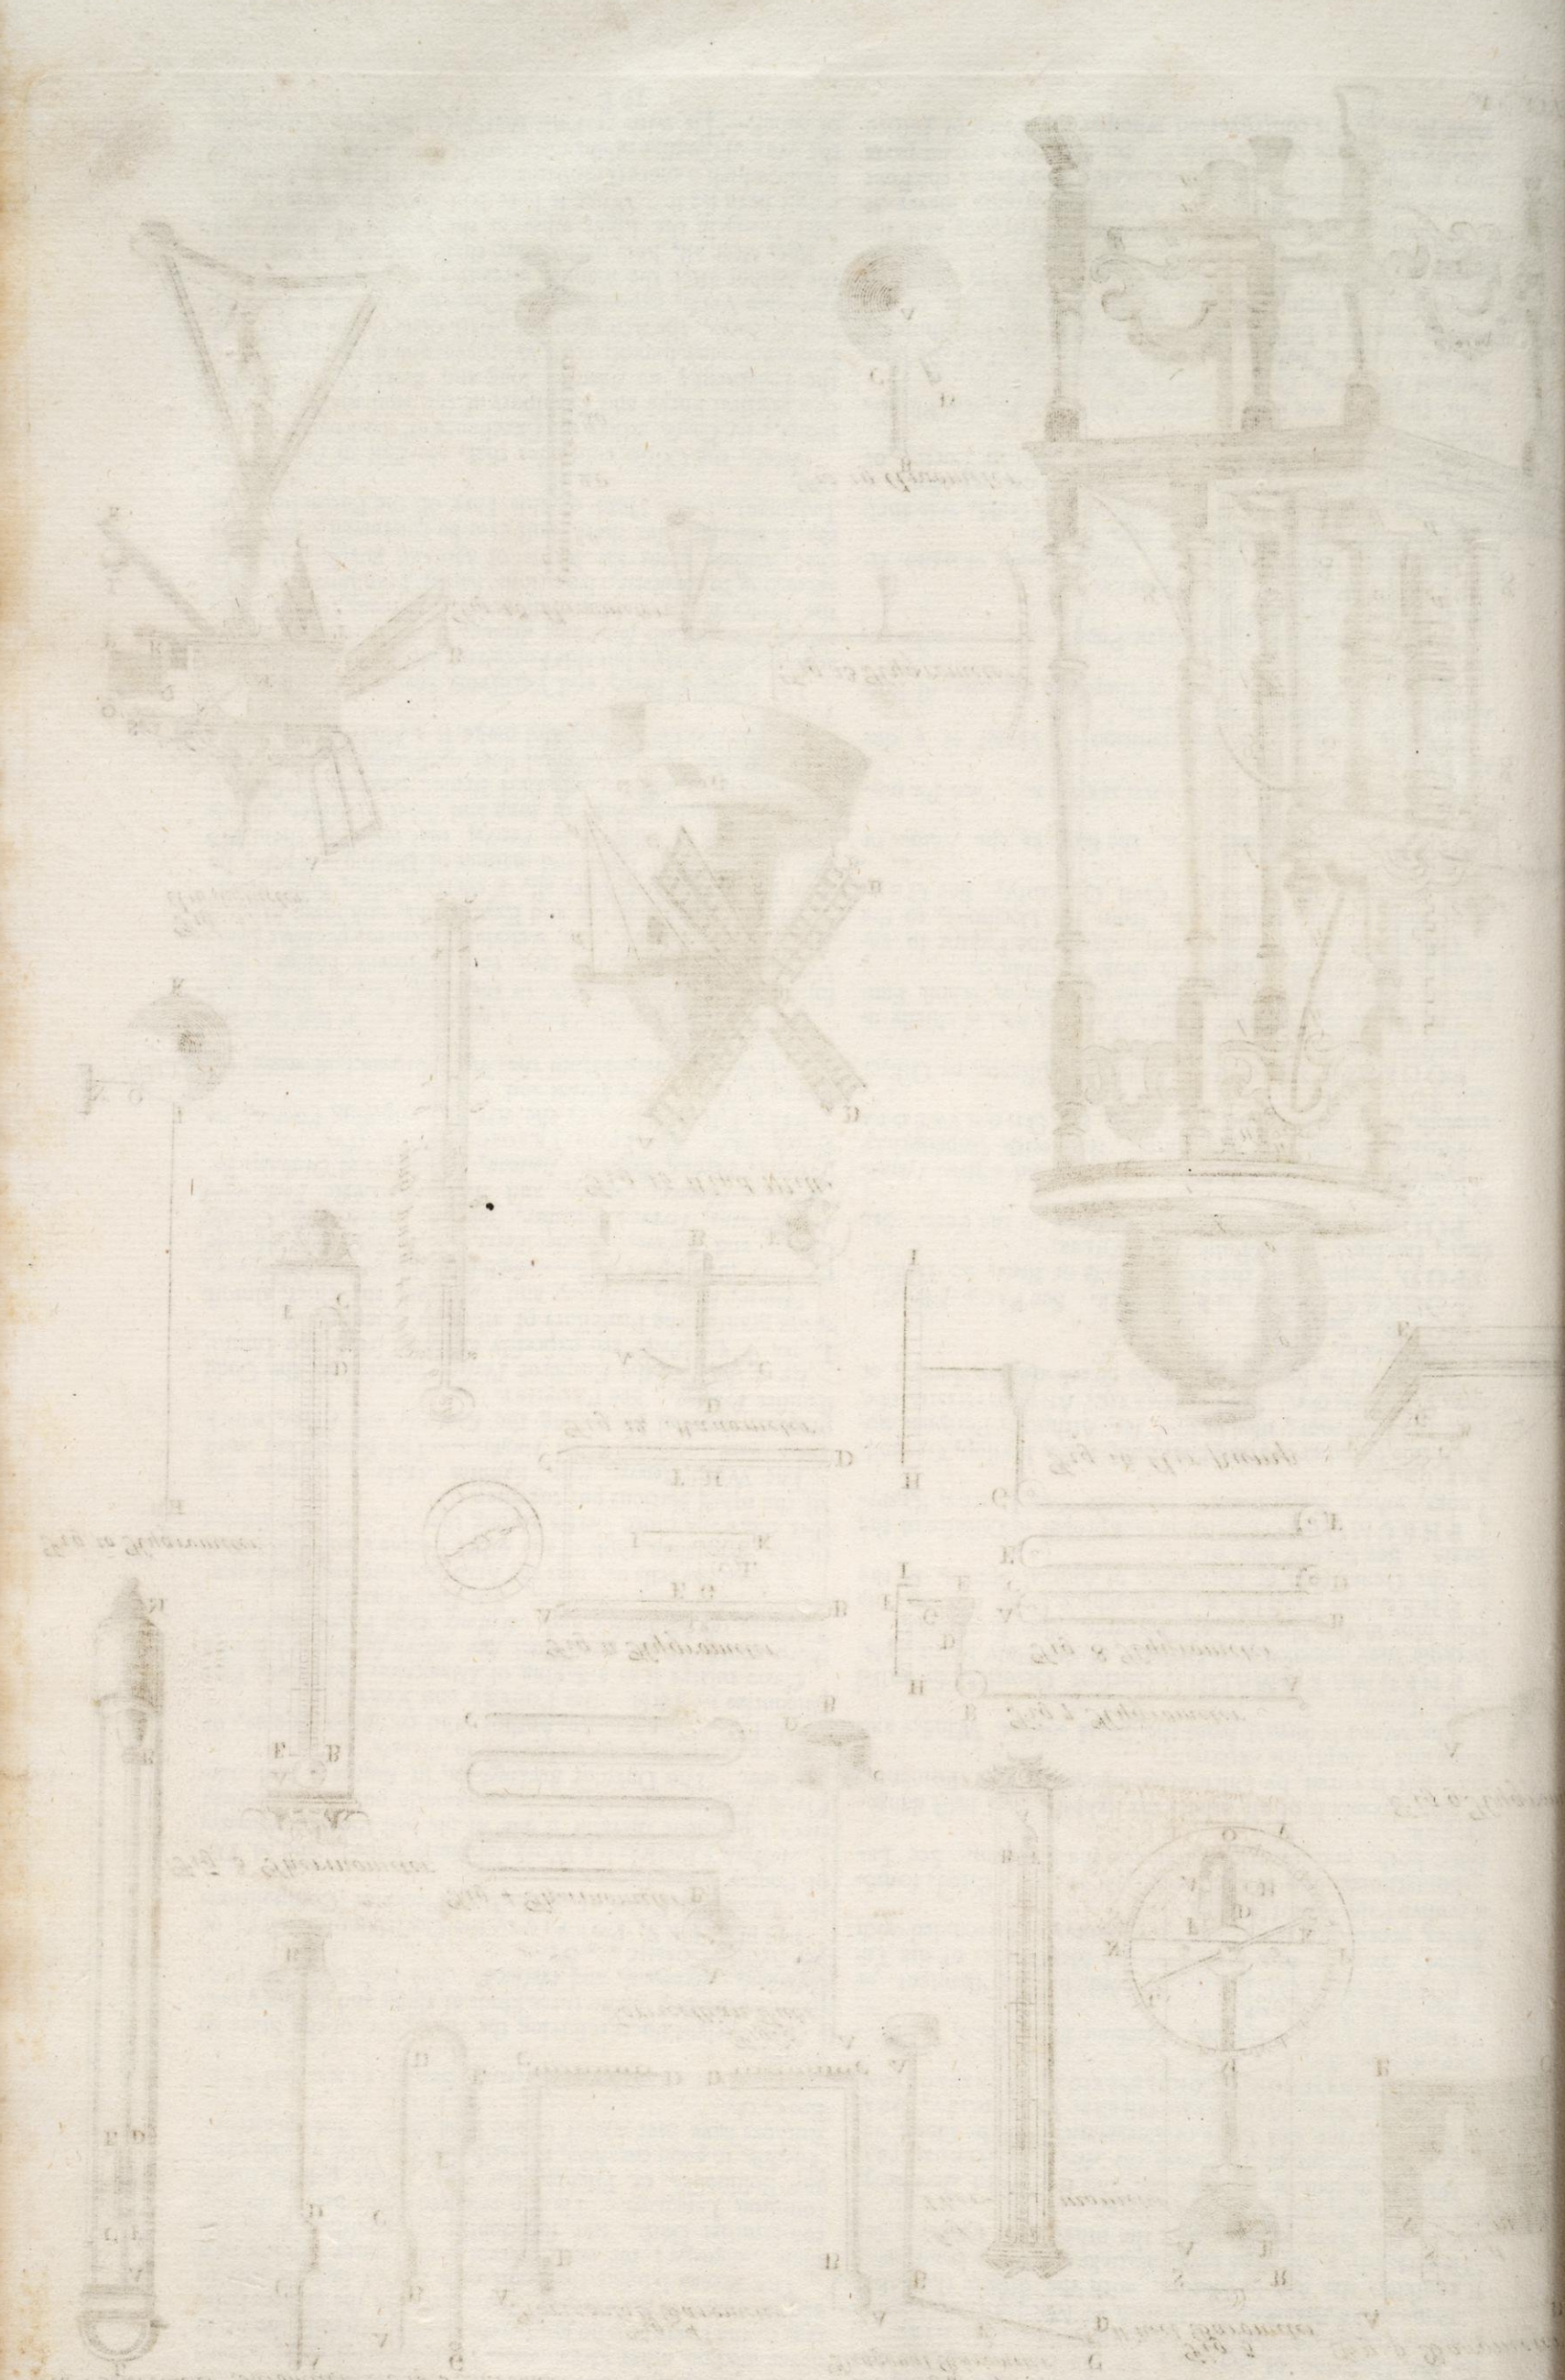
There are other Kinds of *Pluſh*, all of Silk; ſome of which have a pretty long Nap on one Side, ſome on both.

PLUSH, among Botaniſts, a Name given to the middle of Roſes, Anemonies, *&c.* call'd *Thrum*, or *Thrummy Heads*; by others, *hairy Heads*, *Buttons*, *Boſs*, *Tuft*, or *Wort*.

PLUVIAL, PLUVIALE, anciently ſignified a Hood, or Cloak, which Eccleſiaſticks, chiefly Religious, wore in the Country; to ſhelter themſelves from the Rain: by the *Latins* call'd *Pluvialis Lacuna*.

The Word is now uſed in the *Romiſh* Church, for a large Hood wore by the Chantor and Sub-Deacon, at Maſs and Veſpers, *&c.*——It covers the whole Man, and is fixed before with two Claſps.

PLUVIUS, in Antiquity, an Attribute of *Jupiter*; implying him the Author of Rain: *q. d.* he that ſends Rain. See RAIN.



Among the Baſſo Relievo's of the *Anthonine* Column, in the Place where the Miracle of the Thundering Legion is repreſented; we ſee a flying Man in the Air, his Arms ſpread out, and with a very long Beard, which ſeems to diſſolve into Rain.——The Learned take this to be a Repreſentation of *Jupiter Pluvius*. See FULMINATING *Legion*.

PNEUMATICKS, PNEUMATICE, call'd alſo PNEUMATOLOGY and PNEUMATOSOPHY, the Doctrine and Contemplation of Spirits and Spiritual Subſtances. See SPIRIT.

The Word is form'd of the *Greek* πνευμα, Spiritus, *Breath*; whence, from the different Acceptations of that Word, either as an incorporeal Subſtance, or as Air, there ariſe two ſorts of *Pneumaticks*.

PNEUMATICKS, in the Schools, is frequently uſed for the Doctrine of Spirits; as GOD, Angels, the human Mind. See SPIRIT, GOD, ANGEL, SOUL, *&c.*

Nº. XVI.

In this Senſe the Word coincides with what we otherwiſe call *Metaphyſicks*. See METAPHYSICKS.

PNEUMATICKS is more commonly uſed among us, for the Doctrine of the *Air*; or the Laws wherein that Fluid is condens'd, rarified, gravitates, *&c.* See AIR.

Some make *Pneumaticks* a Branch of Mechanicks; becauſe it conſiders the Air in Motion, with the Effects thereof.—'Tis certainly a Siſter of Hydroſtaticks; the one conſidering Air in the ſame manner that the other does Water. See MECHANICKS, and HYDROSTATICKS.

Wolfius, in lieu of *Pneumaticks*, uſes the Word *Aerometry*, *q. d.* the Doctrine of *Meaſuring the Air*. See AEROMETRY.

The Doctrine and Laws of *Pneumaticks* will be found under the Articles, AIR, ATMOSPHERE, ELASTICITY, GRAVITY, COMPRESSION, CONDENSATION, RAREFACTION, EXPANSION, *&c.*

PNEUMATICK Engine, *Machina Pneumatica*, the *Air-Pump*. See AIR-PUMP.

PNEUMATOCELE, in Medicine, a flatulent or Windy *Hernia*; or a Tumor of the Membranes of the Teſticles, proceeding from pent up Vapours; and attended with a tenſive Pain. See HERNIA.

Sometimes, one of the *Teſtes* only is thus inflated, ſometimes both, and ſometimes likewiſe the Scrotum. See TESTICLE.

This *Hernia* is of all others the lighteſt, and leaſt dangerous.—It is cured by Diſcutients internally, and Fomentations and Cataplaſms externally.

The Word is form'd from the *Greek* πνεῦμα, Wind, and κήλη, *Tumor*.

PNEUMATOMACHII, ancient Hereticks ſo call'd becauſe they oppoſed the Divinity of the Holy Spirit; placing him in the Number of Creatures. See *Epiphanius*.

PNEUMATOSIS, a Term which ſome Authors uſe for the Generation or Formation of Animal Spirits, in the Brain. See SPIRIT and BRAIN.

PNEUMONICKS, Medicines proper in Diſeaſes of the Lungs, where Reſpiration is affected. See LUNGS, RESPIRATION, *&c.*

Of this Number are Sulphur, Lung-wort, Hyſſop, Ground-Ivy, and Cats-foot; uſed in Phthiſes, Aſthma's, Peripneumonies, Pleuriſies, *&c.* See ASTHMATIC, ANTIPHTHISIC, *&c.*

The Word is form'd from the *Greek* πνεύμων, Lungs, or πνεῦμα, *Spiritus*, Breath.

POCK. See POX.

POCKET *of Wool*, is half a Sack. See PACK *of Wool*.

POD, probably of the *Dutch Boede* or *Bode*, an Habitation; the Huſk of any Pulſe. See PULSE.

PODAGRA, in Medicine, the Gout in the Feet. See GOUT.

It is thus called from the *Greek* πούς, *Foot*, and ἄγρα, *Iſeize*.

PODAGRA *dentium*, ſometimes, tho' with Impropriety enough, is uſed for the *Tooth-ach*. See ODONTALGIA and TOOTHACH.

PODESTATE, or PODEST, a Magiſtrate, or Officer of Juſtice and Policy, in a free City.

The Word is originally *Italian*, *Podeſta*; and is chiefly uſed for certain Magiſtrates of *Venice* and *Genoa*, whoſe Function is to adminiſter Juſtice in thoſe Republicks.

The *Podeſtate* in *Venice* correſponds to the Prætor in ancient *Rome*; tho' Appeals lie from his Deciſions, to the New Auditors, or the new Civil Quaranty. See QUARANTIA.

PODEX, in Anatomy, *&c.* the ſame as the Anus, or Fundament. See ANUS.

PODOMETER, or PEDOMETER. See PEDOMETER.

POEM, POEMA, a Compoſition in Verſe, of a due Length and Meaſure. See VERSE.

Poems are of as many kinds as there are Branches of Poetry. See POETRY.

We have Epic-Poems, Dramatic-Poems, *&c.* See EPIC, DRAMATIC, LYRIC, *&c.*

POESY, POESIS. See POETRY.

The Word is form'd from the *Greek* ποίησις, of ποιέω, facio, fabricor, fingo, *I make*, *I frame*, *I invent*.

Hence, Alchymy, or the Art of making Gold, was anciently call'd *Poeſy*, *Chryſopoeſy*, &c. See ALCHYMY, &c.

POETICAL, ſomething that relates to Poetry or Poets. See POETRY and POET.

In this ſenſe we ſay, a *Poetical* Genius, a *Poetical* Phraſe, *Poetical* Licence, *Poetical* Fury, *&c.*

POETICAL *Juſtice*, is chiefly uſed in reſpect of the Drama, to denote a Diſtribution of Rewards and Puniſhments to the ſeveral Perſons, at the Cataſtrophe or cloſe of the Piece, anſwerable to the ſeveral Characters they have appear'd in.

Whatever Difficulties and Diſtreſſes the Virtuous and Innocent may labour under, and how proſperouſly ſoever it may go with the wicked, in the Courſe of the Piece; the Poet uſually takes care to give each of 'em their due e'er he parts with them.—'Tis controverted whether this Piece of Juſtice be indiſpenſible; and whether it mayn't be allowed to have Virtue oppreſs'd and Vice flouriſhing? See TRAGEDY, *&c.*

Moſt Languages have their POETICAL *Words*, which are never uſed on other Occaſions.—Theſe prove of great Advantage to the Poets; who are hereby enabled to raiſe the Style and Diction into the *Poetical* Character, with the greater Eaſe.

The *French* lament the want of a Set of ſuch Words in their Language; for want hereof their Poetry appears in a too familiar Garb, not ſufficiently diſtinguiſhed from the common Language. 'Tis too reſerved; not being allowed any Boldneſſes, or Flights, but what might paſs in Proſe. To this, in good meaſure, is attributed the little Succeſs their Authors have met withal in the Epic Way. See FRENCH. EPIC, *&c.*

POETICAL *Riſing* and *Setting*. See RISING and SETTING.

The ancient Poets referring the riſing, *&c.* of the Stars to that of the Sun; make three kinds of riſing and ſetting; *viz. Coſmical*, *Acronycal*, and *Heliacal*. See each under its proper Article COSMICAL, *&c.*

POETICKS, POETICE, the Doctrine of Poetry; or the Laws and Rules of conducting Pieces or Compoſitions of Poetry. See POETRY.

Ariſtotle's *Poeticks* is a Work infinitely valued; and M. *Dacier*'s Comment thereon is one of his beſt Pieces.—*Horace*, *Vieta*, *Voſſius* and *Scaliger*, have likewiſe publiſhed *Poeticks* in *Latin*. The Duke of *Buckingham*, in *Engliſh*: And *Menardiere*, *Hedelin*, and *Deſpreaux* in *French*.

POET, POETA, an Author who compoſes Poems, or Diſcourſes in Verſe. See POETRY and VERSE.

Cicero relates it as a Saying of *Democritus* and *Plato*, that there could be no good Poet *ſine afflatu furoris*, without a Tincture of Madneſs; and *Ariſtotle* calls Poets expreſsly, *Maniaci*, Maniacs, Madmen. See ENTHUSIASM.

M. *Spanheim* tells us, that the Arab-Authors are more poetically given than thoſe of any other People; and adds, that that there are more Verſes among the *Arabians* than among all the other Nations put together.

The Word Ποιητὴς, *Poet*, ſignifies *Maker*; whence the *Poets* were anciently call'd *Fatiſts*.——The Name they were properly denoted by among the *Romans*, was *Vates*, which ſignifies *Prophet*. See PROPHET.

By a Law of the Emperor *Philip*, inſerted in the Code L. 10. T. 52. *Poets* are expreſsly excluded from the Immunities granted the Profeſſors of all other Sciences.

Homer, *Virgil*, *Milton*, and *Taſſo*, are the chief, almoſt the only juſt, Epic Poets.——*Sophocles*, *Euripides*, *Shakeſpear*, *Otway*, and *Racine*, Tragic *Poets*.——*Ariſtophanes*, *Menander*, *Plautus*, *Terence*, *Fletcher*, *Johnſon*, *Moliere*, &c. Comic *Poets*.——*Horace*, *Cowley*, and *Malherb*, Lyric *Poets*.——*Juvenal*, *Perſius*, *Regnier*, *Boileau*, *Dryden*, and *Oldham*, Satyrick *Poets*. See EPIC, TRAGIC, COMIC, *&c.*

POETRY, POESY, the Art of compoſing Poems, or Pieces in Verſe. See POEM and VERSE.

The Word is form'd from the *Greek* Ποιητικὴ; of ποιέω, facio. See POESY.

If a Verſe be conſider'd as a mere Series of juſt ſix Feet following one after another in the ſame Line; *Poetry* and Verſification will appear two very different Things: But *Boſſu*, in his Idea of Verſe, includes Cadences, peculiar Conſtructions Arrangements and Expreſſions, unknown in common Diſcourſe; and above all, a certain noble, bold, elevated, metaphorical Turn and manner of Diction.—Theſe, he obſerves, are ſo eſſential to *Poetry*, that without them the moſt exact Arrangement of long and ſhort Syllables, makes little elſe but a kind of meaſur'd Proſe: whereas theſe, in a Diſcourſe that has no poetical Feet or Meaſures, do yet give it the poetical Character, and make it a kind of *unmeaſured Poetry*.

The Rules of *Poetry* and Verſifying are taught by Art, and acquired by Study; but this Force and Elevation of Thought, which *Horace* calls *ſomething divine*, and which alone makes the *Poetry* of any Value, muſt be derived from Nature; or, according to *Ariſtotle*, from ſome happy Tranſports to which that Author gives the Name of Madneſs Εὐφυὴς ἡ Ποιητικὴ ὅτιν, ἢ Μανικὴ.—But there muſt ever be conceived a juſt ſolid Judgment at the Head of this Fury of the Poets Imagination.

Hence, the Critic concludes that, *the End* of *Poetry* is to pleaſe; *its Cauſe*, either the Excellence of the Poet's Genius, or a poetical Fury, and Tranſport of the Soul manageable by the Judgment; *its Matter*, long and ſhort Syllables, and Feet compoſed hereof, with Words furniſh'd by Grammar; and *its Form*, the Arrangement of all theſe things in juſt and agreeable Verſe, expreſſing the Thoughts and Sentiments of the Author after the manner already mentioned.

But, after all, how narrow are theſe Bounds, if we conſider *Poetry* in the Light wherein the Works of *Homer* and *Virgil* have ſet it? What is here laid down pretends to no Praiſe which a mere Tranſlator may not riſe to, and which the War of *Cataline* might not merit if turn'd out of the Proſe of *Saluſt*.—'Tis with reaſon, therefore, that we diſtinguiſh

the *low* and *ſimple*, from the *grand Poetry*; by giving the former the Title of *Verſification:* and that we make *Poetry* and *Verſification* two diſtinct Arts. In effect, there is not more difference between Grammar and Rhetoric, than between the Art of making Verſes and that of inventing Poems. See VERSIFICATION.

The *Grand Poetry*, then, conſiſts principally in Fiction, or the Inventions of Fable; in the expreſſing of things by Allegories and Metaphors; and in the inventing of Actions under which the Truths which the Poet has to teach, may be agreably diſguis'd. See FABLE.

In this view, ſcarce any Poems retain the Nature and Eſſence of the grand *Poetry*, but the *Epopea*, *Tragedy* and *Comedy*; the reſt, be they Elegies, Satires, Song, or what they will, come under *Verſification*.

The antient Eloquence, 'tis obſerv'd, was full of Myſteries and Allegories.——The Truth was by them uſually diſgus'd under thoſe ingenious Inventions call'd Fables, *q. d. Words*; as if there were as much difference between theſe fabulous Diſcourſes of the Learned, and the common Language; as between the Speech peculiar to Man, and the Voice of Brutes. See FABLE.

At firſt, Fables were chiefly uſed in treating of the Divine Nature, after the manner they then conceived of it: This occaſioned the firſt Poets to be called Divines, and *Poetry* the *Language of the Gods*.—The divine Attributes they ſeparated into a Number of Perſons; by reaſon the Weakneſs of the human Mind could not conceive ſo much Power, and ſo much Action, in a ſimplicity ſo ſtrict and indiviſible as that of God. See GOD.

Nor could they ſpeak of the Operation of this almighty Cauſe, without ſpeaking likewiſe of its Effects.—They therefore added Phyſicks to their Theology, handling both after the ſame Manner, without quitting their Veils or Allegories. See ALLEGORY.

Now, Man being the moſt conſiderable of all the Works of the Deity; and there being nothing ſo proper for Poets, or of ſuch general Uſe to Mankind, as ſuch a Subject; they therefore added Ethicks to the former, and treated the Doctrine of Manners in the ſame way as they had done Divinity and Phyſiology.—And hence aroſe the Epopea, or Epic Poem. See EPIC.

The Epic Poets have done, with regard to Morality, juſt the contrary of what the Divine Poets did for their Theology.—As the too great Diverſity of Divine Actions and Perfections, ſo little proportionate to our Underſtanding, occaſioned the latter to divide the ſingle Idea of the ſimple Eſſence of God into ſeveral Perſons under different Names; as *Jupiter*, *Juno*, *Neptune*, &c. So, on the contrary, the Nature of Moral Philoſophy, which never gives any Rules for particular things, occaſioned the Epic Poets to unite in one ſingle Idea, in the ſame Perſon, and even in a ſingle Action, whatever of the like kind occurs in different Perſons, and different Actions.

Thus, ſays *Ariſtotle*, *Poetry* teaches Moral Philoſophy, not by reciting hiſtorically what *Alcibiades* has done, or ſuffered; but by propoſing what ſuch a Perſon, whom the Poet calls by any Name he pleaſes, would neceſſarily or probably have done or ſaid on the like occaſion.—'Tis in this manner, it repreſents either the unhappy Conſequences of Deſigns ill concerted, of wicked Actions, *&c.* or the Reward of good Actions, and the Pleaſure reap'd from a Deſign laid in Virtue, and conducted by Prudence.

Thus, according to our Critic, the poetical Actions and Perſons are all feign'd, allegorical, and univerſal; not hiſtorical and ſingular.—This is likewiſe the Sentiment of *Horace*, who adds, that Poets teach Morality as well as Philoſophy; but the Preference herein he gives to *Homer*. See MANNERS.

This Advantage of the Poets over mere Philoſophers ariſes hence, that all *Poetry* is an Imitation.—Now Imitation is a thing extremely natural; and hence this manner of propoſing things becomes better fitted to engage the Auditors. Again, Imitation is an Inſtruction given by Examples; and Examples are the more proper to perſuade, in regard they prove the thing poſſible.——In effect, Imitation is ſo much the Nature of *Poetry*, that *Ariſtotle* tells us 'tis to this the Art owes its Riſe. See IMITATION.

But the Poets by becoming Philoſophers did not ceaſe to be Divines; on the contrary, the Morality they taught obliged them frequently to introduce the Deity in their Works; and the Share ſo auguſt a Being had in the Action, obliged the Poet to make it grand, important, and conducted by Perſons of Kings and Princes. See MACHINE.

Add to this, that it likewiſe obliged the Poets to think, and ſpeak after a manner elevated above the common Pitch of Men, and to equal, in ſome meaſure, the divine Perſons he introduced; and to this purpoſe ſerv'd the poetical, figurative Language, and the Majeſty of Heroic Verſe.

To convey their Truths to the beſt Advantage, and adapt them to the particular Purpoſes they were intended for; Poets found out various Forms.—Hence the Epopea and Drama.

Epic *Poetry* is more for the Manners and Habitudes, than the Paſſions; theſe laſt riſe all at once, and their Violence is but of a ſhort Duration; but the Habitudes are cooler and more gentle, and riſe and fall more ſlowly. See HABITUDE.

The Epic Action, therefore, could not be reſtrained to a Day, or two, as that of the Drama; a longer and a juſter Space was required for this, than for Tragedy, which is only for the Paſſions.—And hence aroſe a ſtill greater difference between Tragedy and the Epopea.

For the Tragic Violence required a ſtronger and more lively Repreſentation than the Epic; and accordingly it conſiſts wholly in the Action, the Poet never ſpeaking; as he does in the Epopea, where there are no Actors.

The Laws of Epic and Dramatic Poetry; See under EPIC, CHARACTER, INVOCATION, DRAMATIC, THEATRE, TRAGEDY, COMEDY, ACT, SCENE, CHARACTER, SENTIMENT. For the lower *Poetry*, ſee each under its proper Article, ODE, SONG, EPIGRAM, ELEGY, SATIRE, *&c.*

POINT, PUNCTUM, in Geometry, is defined by *Euclid* to be, that which has no Parts, or is indiviſible. See PART, INDIVISIBLE, *&c.*

Wolfius defines it, that which terminates itſelf on every ſide; or which has no Terms or Boundaries diſtinct from itſelf. See TERM.

This is what we otherwiſe call the *Mathematical Point*; and is only conceived by the Imagination; yet is it in this that all Quantity begins and ends; the Flux or Motion of the *Point* generating a Line, that of a Line a Surface, *&c.* See QUANTITY; ſee alſo LINE, *&c.*

Hence ſome define a *Point* to be Inceptive of Magnitude. See INCEPTIVE and MAGNITUDE.

A Line can only cut another in a *Point*. Any three *Points* being given, out of a right Line, a Circle, or part of a Circle, may be drawn that ſhall paſs thro' them all. See CIRCLE.

To *draw a parallel Line*, *a Perpendicular*, *a Tangent*, &c. *to a given Point*, are popular Problems in Geometry. See PERPENDICULAR, PARALLEL, *&c.*

Proportion of Mathematical Points.

'Tis a current Maxim, that all Infinites, whether infinitely great or infinitely ſmall, are equal; yet is the Maxim falſe in both Caſes.—Dr. *Halley* ſhews ſeveral infinite Quantities which are in a finite Proportion to one another; and ſome infinitely greater than others. See *Infinite* QUANTITY.——The like, the Honourable Mr. *Robartes* ſhews of infinitely ſmall Quantities, *viz. Mathematical Points*.

He demonſtrates, for inſtance, that the Points of Contact between Circles, and their Tangents, are in a ſubduplicate Proportion to the Diameters of the Circles. That the *Point* of Contact between a Sphere and a Plane is infinitely greater than that between a Circle and a Tangent; and that the *Points* of Contact in Spheres of different Magnitude are to one another as the Diameters of the Spheres. See CONTACT, *&c.*

POINT *of contrary Flexure*, in the higher Geometry, is a *Point* of a Curve, wherein it is bent, or inflected to a Part contrary to that it before tended to: ſo, *e. gr.* as to turn its Convexity towards its Axis, or any other fix'd Point which before it turn'd its Concavity towards. See CURVE.

If the Curve turn back again towards the Point whence it firſt ſet out, the *Point of the Flexure* is particularly call'd the *Point of Regreſſion*, or *Retrogradation*. See RETROGRADATION *of Curves*.

Wolfius illuſtrates the Uſe of the Calculus differentialis in finding the *Point* of *Contrary Flexion* in various kinds of Curves. See FLEXION.

POINT, *Punctum*, in Phyſicks, is the ſmalleſt, or leaſt ſenſible Object of Sight, mark'd with a Pen, Point of a Compaſs, or the like. See OBJECT.

This is what we popularly call a *Phyſical Point*; which in reality has Parts; tho' thoſe Parts are not here regarded.—Of ſuch *Points* does all Phyſical Magnitude conſiſt. See MAGNITUDE.

This *Phyſical Point* coincides with what Mr. *Locke* calls the *Point ſenſible*, and which he defines to be the leaſt Particle of Matter, or Space, we can diſcern.—He adds, that to the ſharpeſt Eye this is ſeldom leſs than 30 Seconds of a Circle, whereof the Eye is the Centre. See VISION.

POINT, in Grammar, is a Character uſed to mark the Diviſions of a Diſcourſe. See CHARACTER.

The *Point* proper, is what we otherwiſe call a *Full-Stop*, or Period, and ſerves to denote the Senſe compleat, and the Period ended. See PERIOD.

Two *Points* uſually mark the middle of a Period, and ſhew a Conſtruction compleat, and the Senſe to be perfect, yet

yet intimating ſomething to come after it;—this we call a *Colon*. See COLON.

A *Point* with a Virgula, call'd a *Semicolon*, marks a Senſe leſs compleat than the Colon; tho' Authors ſeem to uſe them indifferently; nor are Grammarians agreed about their preciſe Difference. See SEMICOLON.

The Virgula, call'd *Comma*, marks a Sub-diviſion of a Member of a Period. See COMMA.

A *Point of Interrogation*, as? marks ſomething to be pronounced in a higher Tone, as intimating a Queſtion ask'd. See INTERROGATION.

A *Point of Admiration!* marks a ſudden Surprize and Wonderment. See ADMIRATION.

Our *Points* and Accents were entirely unknown to the Ancients. And in the ancient *Greek* Manuſcripts, the whole ſeems wrote with the ſame ſtroke of the Pen; the Words and Letters being join'd throughout.

In after-times, *Points* were invented and added a-top of the Letters, to ſhew when the Senſe was finiſh'd; hence the Grammarians coming to retouch the old Manuſcripts thought fit to add the Points and Accents.——*Salmaſius* affirms, that he has even obſerved, plainly, where they have been added, by the difference of Hands. See ACCENT.

POINTS, in the *Hebrew* Learning, are certain Characters, which, in the Writings of that Language, ſerve to mark the Vowels; which, in effect, are only *Points*. See VOWEL.

The Antiquity of the *Points* in the *Hebrew* Tongue makes the Subject of a celebrated Controverſy among the Learned; ſome maintaining their Origin to be the ſame with that of the *Hebrew* Language; and others aſſerting them to have been firſt introduced by *Eſdras*, after the *Babyloniſh* Captivity, when he compiled the Canon, tranſcribed the Books into the preſent *Chaldee* Character, and reſtored the Purity of the *Hebrew* Text.

Others will have them invented by the Doctors of the School of *Tiberias*, uſually called the *Maſſoretes*, five or ſix hundred Years after Chriſt.——The Rabbin *Elias Levita* was the firſt who ſtarted this queſtion in the laſt Century; and maintain'd them to have been an Invention of the *Maſſoretes*, for the Eaſe of thoſe who were to learn the *Hebrew* Tongue. See MASSORETES.

This Sentiment was eſpous'd by *Capella*, to whom adher'd *Luther*, *Calvin*, *Caſaubon*, *Scaliger*, &c.—*Buxtorf* attack'd *Capella* violently on this Article, and gain'd a great Number of Divines on his Side, who took the Alarm; imagining it a grievous Wound to the holy Text, to allow the Vowel-Points to have been added by the *Maſſoretes*, and not to have been found inthe ancient Text; becauſe without theſe 'tis very difficult to fix the reading thereof.—Yet in the *Samaritan* Text there is no *Point* or Vowel, nor in many of the moſt ancient *Hebrew* Manuſcripts. See HEBREW, *&c.*

POINT, in Muſick, a Mark or Note anciently uſed to diſtinguiſh the Tones. See NOTE.

Hence we ſtill call it *Simple Counter-Point*, when a Note of the Baſs, anſwers preciſely to that of the Treble; and *Figurative Counter-Point*, when a Note is ſyncopeed, and one of the Parts makes ſeveral Inflexions of the Voice or Tone, while the other only makes one. See COUNTER-POINT,

We ſtill uſe a *Point* to raiſe the Value of a Note, and prolong its Time by one half, *e. gr*, a *Point* added to a Semibreve, inſtead of two Minims, makes it equal to three. See TIME, and CHARACTERS *in Muſick*.

POINT, in Aſtronomy, is a Term applied to certain Parts or Places mark'd in the Heavens; and diſtinguiſhed by proper Epithets.

The four Grand *Points* or Diviſions of the Horizon, *viz.* the *Eaſt*, *Weſt*, *North*, and *South*, are call'd *Cardinal Points*. See CARDINAL; ſee alſo EAST, WEST, *&c.* each under its proper Article.

The *Zenith* and *Nadir* are the *Vertical Points*. See VERTICAL, ZENITH and NADIR.

The *Points* wherein the Orbits of the Planets cut the Plane of the Ecliptic, are call'd the *Nodes*. See NODE.

The *Points* wherein the Equator and Ecliptic interſect, are call'd the Equinoctial *Points*. See EQUINOCTIAL.—— Particularly, that whence the Sun aſcends towards the North-Pole, the *Vernal Point*; ſee VERNAL: And that by which he deſcends to the South-Pole, the *Autumnal Point*. See AUTUMNAL.

The *Points* of the Ecliptic, where the Sun's Aſcent above the Equator, and Deſcent below it, terminate, are call'd the *Solſtitial Points*; ſee SOLSTITIAL.—Particularly, the former of them the *Eſtival* or *Summer Point*, ſee SUMMER; the Latter the *Brumal* or *Winter Point*, ſee WINTER, *&c.*

POINT, in Navigation and Geography.—*Points of the Horizon*, or *of the Compaſs*, are certain *Points* form'd by the Interſections of the Horizon, with Vertical Circles. See HORIZON.

The Number of theſe *Points*, therefore, is really the ſame with that of the *Points* conceiv'd in the Horizon, *i. e.* infinite: Tho' in Practice we only diſtinguiſh 32 of them. See COMPASS.

Some uſe *Point*, for the Interſection of a Vertical Circle, with a Circle parallel to the Horizon; and even ſome, for the Segment of a Vertical intercepted between the Meridian and Horizon, or a Circle parallel thereto.

The *Points* are ſhewn by right Lines drawn from a *Point* aſſumed in a horizontal Plane.

So that a *Point of the Compaſs*, is popularly taken for a 32d Part of the whole; or for an Arch of 11 Degrees 15 Minutes; half of which, *viz.* 5° 38′ is call'd a *half a Point*; and half of that, or 2° 49′ a *Quarter Point*. See COMPASS.

Theſe *Points of the Compaſs* are divided into Cardinal and Collateral.

Cardinal Points are the Interſections of the Horizon and Meridian, call'd the *North* and *South Points*; and the Interſections of the Horizon with the Prime Vertical, call'd the *Eaſt* and *Weſt*. See NORTH, SOUTH, *&c.*

Theſe coincide with what the *Latins* call *Cardines Mundi*; and are a Quadrant, or 90 Degrees, diſtant from each other. See CARDINAL.

Collateral or *Intermediate Points*, are thoſe lying between the Cardinal *Points*.—Which are either *Primary*, *viz.* thoſe equi-diſtant from the two Cardinals, as North-Eaſt, South-Weſt, *&c.*

Or *Secundary*, which are again, either of the *firſt Order*, *viz.* ſuch as are equidiſtant from a Cardinal and the next Primary, as North-North-Eaſt; or of the *ſecond Order*, *i. e.* equidiſtant between a Cardinal or Primary, and firſt Secundary, as North-Eaſt by North.

The *Primary Collateral Points*, therefore, are 45° diſtant from the Cardinals; the firſt Secundaries 22° 30′ from the Cardinal and next Primary Collateral; and the Secundaries of the *ſecond Order* 11° 15′ from a Cardinal, or firſt Collateral, and a Second. See COLLATERAL.

POINT, among Seamen, is alſo uſed for a Cape, or Head-Land, jetting out into the Sea. See CAPE.

They ſay, two *Points* of Land are one in another, when they are ſo in a right Line againſt each other, as that the innermoſt is hindered from being ſeen by the outermoſt.

POINT, in Perſpective, is a Term uſed for various Parts or Places, with regard to the Perſpective Plane. See PERSPECTIVE *Plane*.—Such are, the

POINT *of Sight*, or *View*, or *of the Eye*, is a *Point* on the Plane, as F, (*Tab. Perſpective Fig.* 12.) mark'd out by a right Line BF, drawn from the Eye, perpendicular to the Plane, call'd alſo the *Principal Point*. See VISION; ſee alſo PRINCIPAL.

This *Point* is in the Interſection of the Horizontal and Vertical Planes. See PLANE.

Some Authors call the *Point* wherein the Eye is actually placed, and where all the Rays terminate, as O, the *Point of Sight* or *Viſion*; and define the *Principal Point* to be that wherein all the Lines drawn from the horizontal Plane to the Line of View or Diſtance, terminate. See PRINCIPAL.

POINT *of Diſtance* is a *Point*, v. gr. P or Q, in the horizontal Line PQ, at the ſame Diſtance from the principal *Point* F, as the Eye O, is from the ſame. See DISTANCE.

Third POINT is a *Point* taken at Diſcretion in the Line of Diſtance, wherein all the Diagonals drawn from the Diviſions of the Geometrical Plane, concur.

Objective POINT, a *Point* on a Geometrical Plane, whoſe Repreſentation is required on the Perſpective Plane.

POINT, in Opticks—The POINT *of Concourſe*, or *Concurrence*, is that wherein converging Rays meet; more uſually call'd the Focus. See FOCUS.

POINT *of Diſperſion*, is that wherein the Rays begin to diverge; uſually call'd the *Virtual Focus*. See VIRTUAL.

POINT *of Incidence*, is a Point on the Surface of a Glaſs, or other Body, wherein a Ray falls. See INCIDENCE.

POINT *of View*, with regard to Building, Painting, *&c.* is a *Point* at a certain Diſtance from a Building, or other Object, wherein the Eye has the moſt advantageous View, or Proſpect of the ſame.

This *Point* is uſually at a Diſtance equal to the Height of the Building.—For an inſtance,—To conſider with Judgment, the whole of the famous Church of the *Invalides* at *Paris*; we muſt not ſtand at above 340 Foot diſtance from it, which is nearly its Height. To be able to judge of the Ordonnance of its Facade or Frontiſpiece, and the Regularity of its Order, the Eye ſhould be as far off as the Frontiſpiece is high, *viz.* 100 Foot.

But to examine the Correctneſs of its Profiles, and the Spirit of its Ornaments; the Eye ſhould only be diſtant the Height of the *Doric* Order, which is about 40 Foot; if it be nearer, the Parts too much ſhortened will appear out of Proportion.

A Vague or indeterminate *Point* has a different Effect from the *Point of View*; in that, in looking at a Building from an indeterminate *Point*, the Eye can only form an Idea of the Magnitude of its Maſs, by comparing it with other Buildings adjacent to it.

POINT *of Reflexion*, is a *Point* on the Surface of a Glaſs or other Body whence a Ray is reflected. See REFLEXION.

POINT *of Refraction*, is a *Point* in the Surface of a Glaſs or other refracting Surface, wherein the Refraction is effected. See REFRACTION.

POINTS, in Heraldry, Diviſions of the Eſcutcheon into ſeveral Squares, ſometimes to the Number of 9, ſometimes to 15; ſome whereof are of one Colour or Metal, the others of another; called alſo *Equipollent Points*.

There is alſo another Diviſion of the Eſcutcheon into *Points*, which have ſeveral Names and Values, according to their ſeveral Places.

There are nine Principal *Points* in an Eſcutcheon; as mark'd in the Figure adjoining— A repreſents the *dexter Chief Point*.—B the *middle Chief Point*.—C the *ſiniſter Chief*.—D the *Honour Point*.—E the *Feſs Point*, call'd alſo the Center.—F the *Nombril* or *Navel Point*.—G the *Dexter Baſe*. I the *Siniſter Baſe*.—H the preciſe middle Baſe. *See each further deſcribed in its Place.*

Colombiere makes the *Points* and their Situations ſymbolical.——As the ſeveral Bearings in an Eſcutcheon are ſo many Types repreſenting the commendable Actions of the Perſon they are given to; ſo the Eſcutcheon itſelf repreſents the Body of the Man that perform'd them, and the *Points*, or Parts, ſignified by theſe Letters, the principal Parts of his Body.—Thus, A, B, C repreſent the Head, in which the three great Faculties reſide: D, the Neck where Ornaments are chiefly bore: E, the Heart, *&c.* See ESCUTCHEON.

POINT is alſo an Ordinary, ſomething like the Pile, riſing from the bottom of the Eſcutcheon to the Top; very narrow, and only taking up two Thirds of the Point of the Eſcutcheon.—When it thus riſes from the Baſe, it is peculiarly call'd *Point-in-point*.

Point inverted, is when it deſcends from the Chief downwards; poſſeſſing two thirds of the Chief, but diminiſhing as it approaches the Point of the Eſcutcheon, tho' without touching it.

Point en Band, or *Point en Barre*, is when the *Point* is placed tranſverſe, in the Situation of a Bend or Bar.——When it comes from the Sides of the Eſcutcheon, it is alſo call'd a *Point Dexter* or *Siniſter*, according to its Situation.

The *Point Dexter* is commonly reputed an Abatement due to a Braggadocio.—*Point-Champion-Ten* due for killing a Priſoner after Quarter demanded.——*Point in Point*, a Diminution belonging to a Coward.——*Point plain*, an Abatement belonging to a Lyar, *&c.* See ABATEMENT, DIMINUTION, *&c.*

POINT is alſo uſed in Heraldry, for the lower part of the Eſcutcheon, which uſually terminates in a Point. See ESCUTCHEON.

In the *French* Arms the Flower de Lys's are two in Chief and one in *Point*.

POINT, is alſo an Iron or Steel Inſtrument, uſed with ſome Variety in ſeveral Arts.

Engravers, Etchers, Wooden Cutters, Stone Cutters, *&c.* uſe *Points* to trace their Deſigns on the Copper, Wood, Stone, *&c.* See ENGRAVING, ETCHING, *&c.*

Statuaries, *&c.* have likewiſe *Points* in manner of little Chiſſels, uſed in the firſt forming or sketching out their Works. See STATUE, FOUNDERY, *&c.*

Turners work or faſhion their common Works between two *Points* faſtened to the Puppets.——Lapidaries have Iron *Points*, to the Ends whereof are faſtened Pieces of Diamonds, ſerving to pierce the precious Stones withal. See TURNING, LAPIDARY, *&c.*

POINT, in the Manufactories, is a general Term uſed for all kinds of Laces wrought with the Needle;—Such are *Point de Venice*, *Point de France*, *Point de Genoa*, &c. which are diſtinguiſh'd by the particular OEconomy and Arrangement of their *Points*.

The Word is ſometimes alſo uſed for Lace wove with Bobbins; as, *Engliſh Point*, *Point de Malines*, *Point de Havre*, &c.

POINT, in Poetry, is a brisk lively Turn, or Conceit, uſually found or expected, at the Cloſe of an Epigram. See EPIGRAM.

POINT-*Blank*, in Gunnery, denotes a Shot or Bullet to go directly forward, in a ſtrait Line, to the Mark; and doth not move in a Curve, as Bombs and highly elevated random Shots do. See MORTAR, PROJECTILE, GUNNERY, *&c.*

POINTED—A Croſs *pointed*, is that which has the Extremities turn'd off into Points by ſtrait Lines. *Colombiere* calls it *aiguiſee* See CROSS.

POINTING *the Cable*, is a Sea-Term, denoting the untwiſting it at the End, and leſſening the Yarn, and twiſting them again, making all faſt with a Piece of Marline, to keep it from ravelling out. See CABLE.

POINTING, in Grammar, the Art of dividing a Diſcourſe, by Points, into Periods and Members of Periods; to facilitate the Pronunciation and Underſtanding thereof. See PUNCTUATION.

POINTING, among Seamen, the marking on the Chart in what Point or Place the Veſſel is. See CHART, RHUMB, *&c.*

All the Difficulty in *pointing* a Chart ariſes from our Ignorance of the Longitude.—The Pilot eaſily finds the Latitude by taking the Height of the Pole; but for the Longitude there is no coming at it but by Computation which is ever uncertain. See LONGITUDE, LATITUDE, SAILING, *&c.*

POINTING, in War, the levelling or directing of the Cannon or Mortar-Piece, ſo as to play againſt any certain Point. See LEVELLING, CANNON, ORDNANCE, MORTAR, PROJECTILE, *&c.*

This is done by means of a Quadrant with a Plummet. See GUNNERS QUADRANT.

POISON, in Medicine, a malignant Quality in ſome Animal, Vegetable or Mineral Body, which renders it hurtful, and even mortal to thoſe who take it.

Some define a *Poiſon* to be any thing taken inwardly, whoſe Properties are contrary to thoſe of a Food, or to what they ſhould be in order to Nutrition. See FOOD.

Poiſons are of various kinds; and operate in various manners: ſome by diſſolving the Blood, others by coagulating it; and others by corroding and deſtroying the ſolid Parts. See BLOOD, DISSOLUTION, COAGULATION, CORROSION, *&c.*

Some attack, equally, all the Parts; ſome only a particular one.——Thus the *Lepus Marinus* is an Enemy to the Lungs, *Cantharides* to the Bladder, *&c.*

Some again, which prove *Poiſon* to Man ſerve for Food to other Animals.——Thus *Mandragora* and *Juſquiamnus* feed Hogs, kill Man; and thus that deadly *Poiſon* Hemlock is wholeſome for Goats, Buſtards, and, as *Galen* ſays, for Starlings too. The *Caſſada* Plant, Sir *Hans Sloane* tells us, poiſons, unprepared; but prepared is the very Bread of the *Weſt Indies*; particularly *Jamaica* and the hotter Parts; and is uſed to victual Ships.

Nay, what is more, ſome *Poiſons* are not only Food, but even Phyſick to other Animals.——In the *Phil. Tranſact.* we have an Inſtance of a Horſe troubled with the Farcy, which could not be cured by the moſt famed Remedies, which yet cured himſelf in a ſhort time, by feeding greedily on Hemlock.—*Fontanus* tells us of a Woman who eat Hemlock for ſome time to procure Sleep; and with very good Effect; tho' repeated Doſes of Opium had no Operation.

Dr. *Tanc. Robinſon*, in a Letter to Mr. *Ray*, gives an Account of ſeveral poiſonous Plants, which if truly corrected, or exactly doſed, he ſays, may prove the moſt powerful Remedies known.——Thus the Hellebores incorporated with a Sapo, or Alkaly-Salts alone, are ſucceſsful in Epilepſies, Vertigo's, Palſies, Lethargies, and Mania's. Doſe from ℈j. to ʒſs. The Roots of *Cicuta*, *Aſſarum*, and *Napellus*, in Agues and periodical Pains: Doſe ℈j. to ʒſs. The *Hyoſcyamus* in Hæmorrhagies, violent Heats and Inflammations: Doſe ℈j. to ʒſs. The *Semen Stramoniæ* is a good Anodyne, uſeful in Vigilia's, Rheumatiſms, Hyſteric Caſes, *&c.* Doſe ℈j. to ʒſs. *Elaterium*, *Soldanella & Gratiola*, in Hydropic Caſes. Opium corrected loſes its Narcotic Quality, and is ſafely given in great Doſes in convulſive Caſes, Fluxes, Cartarrhs, *&c.*

The Word *Poiſon* is derived from the Latin *Potio*, Draught, and was antiently uſed in an innocent Senſe. See POTION.

Phyſicians diſtinguiſh three Kinds of *Poiſons*: *Animal Poiſons*; i. e. thoſe drawn from Animals; as the *Viper*, *Aſpic*, *Scorpion*, *Lepus Marinus*, &c. See VIPER.

Vegetable Poiſons, as *Aconite*, *Cicuta*, or *Hemlock*, *Hellebore*, *Napellus*, &c. See ACONITE, CICUTA, HELLEBORE, *&c.*

And *Mineral Poiſons*, as *Arſenic*, *Corroſive Sublimate*, *Ceruſſe*, *Orpiment*, *Realgal*, &c. See ARSENIC, *&c.*

The Theory of the Effects, Operations, *&c.* of *Animal Poiſons*, is very accurately and mechanically delivered by Dr. *Mead*; in thoſe remarkable Caſes, the Bites of a *Viper*, *Tarantula*, and a *mad Dog*. See his Doctrine under the reſpective Articles, TARANTULA, VIPER, and HYDROPHOBIA.

The Operation of *vegetable Poiſons*, ſee deliver'd under the Article OPIATES.

As to *Mineral Poiſons*, they all bear ſo much Analogy to that made of Quickſilver in the common Sublimate, that their Operation will eaſily be conceiv'd from what we have already laid down under the Heads, MERCURY and SUBLIMATE.

They are all more or leſs dangerous, as their Salts receive a greater or leſs Force from the metallick Particles; and hence, as the moſt virulent may be mitigated by breaking the Points of the ſaline Cryſtals; the moſt innocent Minerals may become corroſive by combining them with Salts, as is ſeen in the Preparations of Silver, Antimony, Iron, *&c.* See MEPHITES, GROTTO, *&c.*

The general Remedies againſt *Poiſons* are known by the Name of *Antidotes*, *Alexipharmicks*, *Alexiterials*, &c. See ANTIDOTE, ALEXIPHARMIC, *&c.*

Counter-POISON, See COUNTER-*Poiſon*.

To POISON *a Piece*, among Gunners, is the ſame as to clog and nail it up.

POISONING, in Law, the Crime of adminiſtring Poiſon to a Perſon.

This, by a Law of *Henry* VIII. was made High-Treaſon; but that Law was afterwards repealed; and the Puniſhment made for it was to be put alive into a Cauldron of Water, and boil'd to Death.——At preſent it is only Felony without Benefit of Clergy. See PUNISHMENT.

POLAR, ſomething belonging to the Poles of the World. See POLE.

In this Senſe we ſay, *Polar* Virtue, *Polar* Tendency, *&c.* See POLARITY.

POLAR *Circles*, are two Circles parallel to the Equator, at the Diſtance of 23 Deg. from each Pole; ſerving to mark the beginning of the Frigid Zone. See CIRCLE and ZONE.

The *Polar* Circles are particularly denominated from their reſpective neighbouring Poles, the *Arctic* and *Antarctic*. See ARCTIC and ANTARCTIC.

POLAR *Dials* are thoſe whoſe Planes are parallel to ſome great Circle paſſing through the Poles, or to ſome one of the Hour-Circles; ſo that the Pole is neither elevated above, nor depreſſed below the Plane.

Such Dial therefore can have no Center, and conſequently its Style, Subſtyle, and Hour-Lines are parallel. See PLANE.

This therefore will be an Horizontal Dial to thoſe who live under the Equator or Line.

To conſtruct a POLAR *Dial*. See DIAL.

POLAR *Projection* is a Repreſentation of the Earth or Heavens, projected on the Plane of one of the Polar Circles. See PROJECTION.

POLARITY, the Quality of a Thing conſidered as having Poles. See POLE.

By heating an Iron Bar, and letting it cool in a vertical Poſture, it acquires a *Polarity*.——The lower End becomes the North End; the upper the South. See IRON.

Iron Bars acquire a *Polarity*, by being kept a long time in an erect Poſture, even without Heating.——Thus the Bars of Windows, *&c.* are frequently found to have Poles. Nay a Rod of Iron acquires a *Polarity*, by the mere holding it erect; the lower End in that Caſe attracting the South End of a magnetic Needle; and the upper the North End.——But theſe Poles are mutable, and ſhift with the Situation of the Rod. See MAGNET and MAGNETISM.

POLE, POLUS, in Aſtronomy, the Extremity of the Axis whereon the Sphere revolves. See AXIS and SPHERE.

Theſe two Points are called, by way of Excellence, the *Poles of the World*. See WORLD.

The Word is form'd from the Greek πολεῖν, *vertere*, to turn.

Wolfius defines the *Poles*, thoſe *Points* on the Surface of the Sphere through which the Axis paſſes: ſuch are the Points P Q, (*Tab. Aſtronomy*, *Fig.* 52.)——whereof, that viſible to us, or rais'd above our Horizon P, is called the *Arctic* or *North Pole*; and its Oppoſite Q, the *Antarctic* or *South Pole*. See ARCTIC and ANTARCTIC.

POLE in Geography, is the Extremity of the Earth's Axis; or the Points on the Surface of our Globe, thro' which the Axis paſſes. See EARTH.

Such are the Points P Q, (*Tab. Geography*, *Fig.* 7.) whereof that Elevated above our Horizon P, is called the Arctic or North *Pole*; and its Oppoſite Q, the *Antarctic* or *South Pole*. See GLOBE.

Dr. *Halley* ſhews, that the ſoliſtitial Day, under the *Pole*, is as hot as under the Equinoctial, when the Sun is in the Zenith; in regard all the 24 Hours of that Day under the *Pole*, the Sun's Beams are inclined to the Horizon with an Angle of 23½ Degrees; whereas, under the Equinoctial, tho' he becomes vertical, yet he ſhines no more than 12 Hours, and is abſent 12 Hours.——beſides, that for 3 Hours 8 Minutes of that 12 Hours he is above the Horizon there, he is not ſo much elevated as under the *Pole*. See HEAT.

The *Altitude or Elevation of the Pole*, is an Arch of the Meridian, intercepted between the *Pole* and the Horizon. See ALTITUDE.

To find this Elevation is a very popular Problem in Aſtronomy, Geography, and Navigation; This and the Latitude of the Place being ever the ſame. See LATITUDE.

To obſerve the ALTITUDE *of the* POLE.

With a Quadrant, obſerve both the greateſt and leaſt Meridian Altitude of the *Pole*-Star. See MERIDIAN.

Subſtract the leaſt from the greateſt, and divide the Difference by two; the Quotient is the Star's Diſtance from the *Pole*; which added to the leſſer Altitude found, gives the Elevation of the *Pole* required.

Thus M. *Couplet* the younger, at *Uliſſippo*, in 1697, at the End of *September*, obſerv'd the greateſt Meridian Altitude 40° 5′ 40″, The ſmalleſt, 36° 28′ 0″. The Difference whereof is 4° 37′ 40″; one half whereof, 2° 18′ 50″, added to the leſs, gives 38° 46′ 50″, The Altitude of the *Pole* of *Ulyſſippo*. See ALTITUDE.

The Altitude of the *Pole*, together with the Meridian Line, being the Baſis of all Aſtronomical Obſervations; to determine it with the greater Accuracy, the Meridian Altitudes muſt be corrected from the Doctrine of Refractions, hereafter delivered. See REFRACTION, MERIDIAN, *&c.*

By Means hereof, M. *Couplet* ſubſtracting 1′ 25″ in the propoſed Example, leaves the corrected Altitude 38° 45′ 25″.

Hence 1. The Altitude of the Pole being ſubſtracted from 90°, leaves *the Altitude of the Equator*. See EQUATOR.

2. If the greateſt Meridian Altitude of this Star exceed the Altitude of the Equator, the latter ſubſtracted from the former, leaves the Declination of the Star Northward; If the Altitude of the Star be leſs than that of the Equator, the former ſubſtracted from the latter leaves the Star's Declination Southward. See DECLINATION.

Dr. *Hook*, and ſome others, imagined, the Height of the Pole, and the Poſition of the Circles of the Heavens, in reſpect of thoſe on the Earth, to be changed from what they anciently were: But M. *Caſſini* thinks there is no Ground for ſuch Surmiſe; but that all the Difference we now find in the Latitudes of Places, *&c.* in reſpect of the ancient Accounts, ariſes from the Inaccuracies of the ancient Obſervations.

Indeed 'tis no wonder they ſhould err in their Obſervations, conſidering what Inſtruments they uſed: He adds, 'tis probable there may be ſome Variation in the Height of the *Pole*; but thinks this never exceeds two Minutes; and that even this will vaniſh, after it is arrived to its higheſt Difference. See EQUATOR, *&c.*

POLE, in Sphericks, is a Point equally diſtant from every Part of the Circumference of a greater Circle of the Sphere; as the Center is in a plain Figure. See CENTER.

Or, *Pole* is a Point 90° diſtant from the Plane of a Circle, and in a Line paſſing perpendicularly thro' the Center, called the Axis. See CIRCLE.

The Zenith and Nadir are the *Poles* of the Horizon——The *Poles* of the Equator are the ſame, with thoſe of the Sphere or Globe. See ZENITH, NADIR, *&c.*

POLES of the Ecliptic are Points in the Solſtitial Colure 23° 30′ diſtant from the *Poles* of the World. See SPHERE, EQUATOR, HORIZON, *&c.*

POLES in Magneticks, are two Points in a Loadſtone, correſponding to the *Poles* of the World; the one pointing to the North, the other to the South. See MAGNET.

If the Stone be broke in ever ſo many Pieces, each Fragment will have its two *Poles*.——If a Magnet be biſſected by a Line perpendicular to the Axis; the two Points before join'd will become oppoſite *Poles*, one in each Segment.

To touch a Needle, *&c.* that Part intended for the North End is touch'd with the South *Pole* of the Magnet, and that intended for the South End with the North *Pole*. See NEEDLE.

A Piece of Iron acquires a Polarity, by only holding it upright, *&c.* See POLARITY. But its *Poles* are not fix'd; but ſhift, and are inverted as the Iron is.——A fix'd North *Pole* may be made all the Ways a fix'd South *Pole* is made; but not *vice verſa*; and whatever Way we get a fix'd South *Pole*, 'tis always weaker than a fix'd North *Pole* got the ſame Way.

Fire deſtroys all fix'd *Poles*; but ſtrengthens the mutable ones. See FIRE.

The End of a Rod being heated, and left to cool Northward, Dr. *Gilbert* ſays, becomes a fix'd North *Pole*; if Southward, a fix'd South *Pole*: yet this does not hold in all Caſes.——If the End be cool'd held downward or to the Nadir, it acquires ſomewhat more Magnetiſm, than if cool'd horizontally towards the North. But the beſt Way is to cool it a little inclined to the North. Repeated Ignitions don't avail more than a ſingle one.

Dr. *Power* ſays, that if we hold a Rod Northwards, and hammer the North End in that Poſition; it will become a fix'd North *Pole*; and, contrarily, if you hammer the South End.——What is ſaid of Hammering is to be likewiſe underſtood of Filing, Grinding, Sawing; nay, a gentle rubbing, provided it be continued long, will produce *Poles*. See FRICTION.

The more heavy the Blows are, *cæteris paribus*, the Magnetiſm is the ſtronger.——A few hard Blows do as much as many. Old Drills and Punches are fix'd North *Poles*, becauſe almoſt conſtantly uſed downwards. New Drills are either mutable *Poles* or weak North *Poles*. Drilling with ſuch a one Southward horizontally, 'tis a Chance if you produce a fix'd South *Pole*, much leſs if you drill South downwards; but if you drill South upwards, you make a fix'd South *Pole*.

A weak fix'd *Pole* may degenerate into a mutable one in a Day; nay in a few Minutes, by holding it in a Poſition contrary to its *Pole*. The Loadſtone itſelf will not make a

fix'd *Pole* in any Iron. 'Tis required the Iron have a length, if it be thick. Mr. *Ballard* tells us, that in ſix or ſeven Drills made before his Face, the Bit of each became a North *Pole*, merely by hardening.

POLE *of a Glaſs* in Opticks, is the thickeſt Part of a Convex, or the thinneſt of a Concave Glaſs. See CONVEX and CONCAVE.

If the Glaſs be truly ground, the *Pole* will be exactly in the Middle of its Surface. See OPTIC, GLASS, GRINDING, *&c.*

This is ſometimes alſo called the *Vertex* of the Glaſs. See VERTEX.

POLE in Surveying, is a Meaſure, containing 16 Foot and an half; called alſo *Perch*. See PERCH.

POLE-*Star*, or POLAR-*Star*, is a Star of the ſecond Magnitude; the laſt in the Tail of Urſa Minor, or Little Bear. See URSA MINOR.

Its Longitude Mr. *Flamſtead* makes 24° 14′ 41″, its Latitude, 66° 64′ 11″.

The Nearneſs of this Star to the *Pole*, whence it happens that it never ſets; renders it of vaſt Service in Navigation, *&c.* for determining the Meridian Line, the Elevation of the *Pole*, and conſequently the Latitude of the Place, *&c.* See POLE; ſee alſo MERIDIAN and LATITUDE.

POLEM, *Anno* 4. *Edw.* IV. *cap.* 7. was a ſharp or picked Top, ſet in the Fore-part of the Shoe or Boot. This Faſhion was firſt taken up in the Time of King *William Rufus*; the Picks being made ſo long, that they were tied up to the Knees with Silver or Golden Chains: They were forbidden by *Edw.* IV. *Tunc fluxus Crinium, tunc luxus Veſtium, tunc uſus Calceorum cum arcuatis aculeis inventus eſt.* Malmſ. in Will. II.

POLEMICAL, an Epithet applied to Books of Controverſy; eſpecially thoſe in Divinity.

Hence alſo we ſay *Polemical Divinity*, for Controverſial, *&c.* See DIVINITY.

The Word comes from the Greek πολεμος, War, Battle. ——*Scaliger*'s Exercitations againſt *Cardan* make a pure *polemical* Book.

POLEMOSCOPE, in Opticks, a kind of crooked or oblique Proſpective Glaſs, contrived for the ſeeing of Objects that don't lie directly before the Eye.

It was invented by *Hevelius*, in 1637, who gave it this Name from the Greek πολεμος, *pugna*, becauſe it may be of Uſe in War, in Engagements, Duels, *&c.*

Something of this Kind are thoſe now known among us under the Name of Ogling Glaſſes, or Opera-Glaſſes, thro' which one ſees a Perſon in appearing to look at another.

Conſtruction of the Polemoſcope.

Any Teleſcope will be a *Polemoſcope*, if the Tube be but crooked, like a rectangular Syphon A B D M (*Tab. Opticks*, *Fig.* 70.) And between the Object Glaſs, A B, and firſt Eye-Glaſs G H (if there be ſeveral) be placed a plain Mirror, in ſuch manner as that the Mirror is inclined to the Horizon, at an Angle of 45°, and its reflected Image found in the Focus of the Eye-Glaſs G H.

For, by this means, Objects ſituate over againſt the Lens A B will appear the ſame as if the Mirror K were away, and the Object-Glaſs with the Objects were directly oppoſite to the Eye-Glaſſes.

If 'tis deſired to look in at O, not at M, another plain Mirror, N muſt be added. See TELESCOPE.

POLETA, in our ancient Law-Books, ſignifies the Ball of the Foot.——*Tres ortilli ſcindantur de pede anteriori ſine Poleta.* Mat. Par. *Anno* 1215. See EXPEDITATE.

POLICY, or POLITY, the Laws, Orders, and Regulations preſcribed for the Conduct and Government of States and Communities. See GOVERNMENT.

In the general, *Policy* is uſed in oppoſition to Barbariſm. ——Different States have different Kinds of Policy; thus the Policy of *Athens* differ'd from that of *Sparta*.

Loyſeau obſerves, that *Policy* properly ſignifies the Courſe and Adminiſtration of Juſtice in a City.——The Direction of the Policy of *London* is in the Hands of the Lord-Mayor. See MAYOR.

At *Paris* they have a *Chamber of Policy*, where People are verbally accuſed for Contraventions of *Policy*.

Some divide *Policy* into two Parts, *Agaronomy*, that relating to the Affairs of Merchandiſe; and *Aſtinomy*, that concerning the Civil and Judiciary Government of the Citizens: Some add a third Branch, *viz.* what relates to the Eccleſiaſtical Government. See ECCLESIASTICAL.

Biſhop *Hooker* has a fine Treatiſe of the Laws of Eccleſiaſtical *Polity*.

The Word is of Greek Original; being derived from the Greek πολις, *Civitas*, City.

POLICY *of Aſſurance*, or *Inſurance* of Ships, is a Contract or Convention whereby a Perſon takes upon himſelf the Riſques of a Sea-Voyage; obliging himſelf to make good the Loſſes and Damages that may befal the Veſſel, its Equipage, Tackle, Victualling, Lading, *&c.* either from Tempeſts, Shipwrecks, Pirates, Fire, War, Reprizals, *&c.* in Part or in whole; in Conſideration of a certain Sum of Seven, Eight, or Ten *per Cent.* more or leſs, according to the Risk run; which Sum is paid down to the Aſſurer by the Aſſuree, upon his ſigning the Policy. See ASSURANCE.

There are ſome Aſſurances for the Going, ſome for the Returning, and ſome for both; or for a limited Time; though ſome maintain, that the Time ought never to be limited, in that the Contract thereby becomes Uſurary.

The *Policy* is to contain the Name and Dwelling of the Perſon aſſured; his Quality, whether as Proprietor or Agent; the Effects, Name of the Veſſel, and of the Maſter; thoſe of the Place where the Goods are to be loaden or unloaden; the Port whence and whither, the Time, the Riſques, and the Conditions.

If the Veſſel or Merchandizes aſſured be loſt, the Aſſuree muſt notify the ſame by an Act in form; declaring he ſurrenders the whole to the Aſſurer, on his paying the Sums aſſured in the Time expreſſed.

The Origin of theſe Aſſurances is aſcribed to the Jews, at the Time they were expelled *France*, in 1182; who are ſaid to have uſed this as a Means to facilitate the tranſporting of their Effects.

The Term *Policy* is *Spaniſh*, and comes from *Polica*, Schedule; but the Practice comes from the *Italians* and the *Lombards*, who, again, derived it originally from the Latin *Policitatio*, Promiſe.—Some ſay, the Merchants of *Marſeilles* were the firſt who ſet on Foot this Kind of Commerce.

Anciently, *Policies* were given by Word of Mouth, called *Policies of Credit*; it being ſuppoſed the Aſſurer would enter them in his Leidger: but of late that Honeſty is become leſs frequent among Traders, they have been conſtantly in Writing.

The Grand Mart for the Aſſurance of Ships is the City of *Amſterdam*. 'Tis here not only the *Dutch* Traders aſſure their Veſſels, but, what is infinitely more conſiderable, ſuch is the Riches, Reputation, *&c.* of the Inhabitants, as to engage the Generality of Merchants of other Countries to prefer them to their own Countrymen, and to aſſure with the *Dutch*, when it would be much eaſier for them to find Aſſurers at Home, or in the Ports where the Veſſels are laden.

The Number of Aſſurers at *Amſterdam* is not above Fifty or Sixty Perſons; yet is their Wealth and Character ſuch, that a Man never fails of an Aſſurer, be the Countries or Ports what they will, the Cargo ever ſo rich, or the Dangers ever ſo imminent.

POLICY *of Aſſurance*, or *Inſurance of Houſes*, is an Inſtrument form'd on the Model of that for Veſſels; whereby a Perſon, or Community of Perſons, take on themſelves the Riſques and Damages that may befal Houſes, their Furniture, in whole or in Part, *&c.* from Fire; on Conſideration of a certain Sum or Sums, to be paid by the Aſſurer, according to the Terms of the Agreement. See ASSURANCE.

The Aſſurance from Fire is now a popular Piece of Commerce; and we have a Number of Societies erected into Corporations, for that very Purpoſe. See FIRE-OFFICE.

POLICY *of Aſſurance of Lives*, is an Inſtrument whereby a Society of Perſons erected into a Corporation, *&c.* oblige themſelves to pay a certain Sum of Money, *e. g.* an Hundred Pounds upon the Death of a Perſon whoſe Life they aſſure; in Conſideration of a Sum of Money, *e. g.* one Guinea, paid Quarterly, to the Aſſurers during the Life of the ſaid Perſon aſſured.

The *Policy* is under the Seal of the Office, and entitles the Perſon, in whoſe Favour 'tis granted, to make good his Claim, according to the Tenor of the Articles, or By-Laws of the Society.

There have alſo been lately ſet on Foot, *Policies* of Aſſurance of Horſes, from Death, Damages in Travelling, Diſeaſes, being ſtolen, *&c.* In which Caſes the Aſſurers are to make them good to the Aſſurees, *&c.*

POLICY in Letter-Foundery, is ſometimes uſed, for a Rule that regulates the Number of Letters of each Kind in a compleat Font; *i. e.* to determine how many, in Proportion to the whole Set, there are to be of each particular Kind. See LETTER, *&c.*

For inſtance, in a Font of an hundred thouſand Characters, there are to be a thouſand for the *e*, five thouſand for *a*, three thouſand for the *m*, thirty only for *k*, as many or a little more for the *x*, the *y*, and *z*; and in Proportion for the other Letters, the great and little Capitals, the initial Letters, Points, Comma's, double Letters, *&c.* See *Letter*-FOUNDERY.

POLIOPTRUM, or POLYOPTRON, in Opicks. See POLYOPTRON.

POLISHER, an Inſtrument call'd alſo a *Burniſher*, uſed for poliſhing and burniſhing Gold, Silver, and other Metals, when gilt or ſilver'd; and Matters of other Kinds proper to take a Poliſh. See BURNISHER and POLISHING.

The *Poliſher* is different in the different Arts and Manufactories.——The Gilders uſe an Iron *Poliſher* to prepare their

their Metals before Gilding, and the Blood Stone to give them the bright Poliſh after Gilding. See GILDING.

The *Poliſher* uſed by the Makers of Spurs, Bits, *&c.* is part Iron, part Steel, and part Wood.——The Inſtrument conſiſts of an Iron Bar, with a wooden Handle at one End, and a Hook at the other, to faſten it to another Piece of Wood held in the Vice, while the Operator is at Work. In the Middle of the Bow, within ſide, is what they properly call the *Poliſher*, which is a triangular Piece of Steel with a Tail, whereby it is riveted to the Bow.

What the Cutlers call their *Poliſhers*, are a kind of wooden Grindſtones (if we may be allow'd the Word) made of Wallnut-tree, an Inch thick, and of a Diameter at Pleaſure. They are turn'd by the Great Wheel; and 'tis on theſe they poliſh and ſmooth their Works with Emery and Putty.

The *Poliſhers* uſed in the Manufactures of Glaſs are very different from all theſe.——They conſiſt of two Pieces of Wood, the one flat, cover'd with old Hat; the other long and half round, is faſten'd on the former, whoſe Edge it exceeds on both Sides by ſome Inches, which ſerve the Workman to take hold of, and to work it backwards and forwards by. See GLASS.

The Poliſhers uſed by Spectacle-Makers are Pieces of Wood a Foot long, ſeven or eight Inches broad, and an Inch and half thick, cover'd with old Caſtor-Hat, whereon they poliſh the Shell and Horn Frames their Spectacle Glaſſes are to be ſet in. See SPECTACLE.

POLISHING, the Art of giving a Gloſs, Luſtre, or Brillant to a thing, particularly a precious Stone, Marble, Glaſs, Mirror, or the like. See LUSTRE, *&c.*

POLISHING *of Glaſſes, Lens's, &c.* ſucceeds the Grinding thereof. See GRINDING; ſee alſo GLASS, LENS, *&c.*

The *Poliſhing* of a Mirror is the laſt Preparation given it, with Emery or Putty. See MIRROR.

For the *Poliſhing* of Diamonds, *&c.* ſee DIAMOND, *&c.*

POLITICAL, ſomething that relates to Policy or Civil Government. See POLICY and GOVERNMENT.

In this Senſe we ſay, *Political Intereſts, Political Views, Political Diſcourſes*, &c.

The Word is form'd from the Greek πολις, *Civitas*, City.

POLITICAL *Arithmetick* is the Application of arithmetical Calculations to *Political* Uſes; as, the publick Revenues, Number of People, Extent and Value of Lands, Taxes, Trade, Commerce, Manufactures, or whatever relates to the Power, Strength, Riches, *&c.* of any Nation, or Commonwealth. See ARITHMETICK.

The chief Authors who have attempted Calculations of this Kind, are Sir *William Petty*, Major *Grant*, Dr. *Halley*, Dr. *Davenant*, and Mr. *King*; and the principal Points ſettled by each hereof are as follows.

According to Sir *William Petty*'s Computations, tho' the Land of *Holland* and *Zealand* be not above 1000000 Acres, nor that of *France* leſs than 80,00000, yet the former are near a third Part as rich and ſtrong as the latter.—— That the Rents of Lands in *Holland* are to thoſe in *France*, as 7 or 8 to 1.——That the People of *Amſterdam* are $\frac{2}{3}$ of thoſe of *Paris* or *London*; which, according to him do not differ above a 20th Part from one another.—That the Value of the Shipping of *Europe* is about Two Millions of Tuns, whereof the *Engliſh* have 500000, the *Dutch* 900000, the *French* 100000; the *Hamburghers*, *Danes*, *Swedes*, and *Dantzickers* have 250000; and *Spain*, *Portugal*, *Italy*, &c. about as much.—That the Value of Goods exported yearly from *France* into all Parts, is quadruple of that exported into *England* alone, and conſequently in all about 5000000: What is exported out of *Holland* into *England* is worth 300000 *l.* and what is exported thence into all the World 18000000 *l.*—That the Money yearly raiſed by the *French* King, in Time of Peace, is about 6 $\frac{1}{2}$ Millions Sterling; And that the Monies raiſed in *Holland* and *Zealand* are about 2100000 *l.* And in all the Provinces together about 3000000 *l.*—That the People of *England* are about 6000000, and their Expences at 7 *l. per Annum* a Head, 42000000 *l.* or 800000 *l.* a Week.—That the Rent of the Lands is about 8 Millions, and the Intereſts and Profits of the perſonal Eſtates as much.—The Rent of Houſes in *England* 4000000 *l.* That the Profits of the Labour of all the People is 26000000 *l.* yearly—That in *Ireland* the People amount to about 1200000—That the Corn ſpent in *England*, at 5 *s.* the Buſhel for Wheat, and 2 *s.* 6 *d.* for Barley, amounts to Ten Millions *per Annum*.—That the Navy of *England* (then) required 36000 Men to man it, and other Trade and Shipping about 48000.—That in *France*, to manage the whole Shipping Trade, there are required 15000 Men. That the whole People of *France* are about Thirteen Millions and a half; and thoſe of *England*, *Scotland*, and *Ireland*, together, about Nine Millons and a half.—That in the three Kingdoms are about 20000 Churchmen; and in *France* above 270000.——That in the Dominions of *England* above are 40000 Seamen, and in *France* not above 10000.—That in *England*, *Scotland*, and *Ireland*, and all other Dominions depending thereon, there was then about 60000 Tun of Shipping; which is worth about Four Millions and a half in Money.——That the Sea-Line round *England*, *Scotland*, and *Ireland*, and the adjacent Iſles, is about 3800 Miles.—That in the whole World are about 300 Millions of People; whereof thoſe with whom the *Engliſh* and *Dutch* have any Commerce, are not above 80 Millions. ——That the Value of Commodities traded for in the whole is not above 45000000. That the Manufactures exported out of *England* amount to about 5000000 *l. per Annum*. Lead, Tin, and Coals to 500000 *l. per Ann.*——That the Value of the *French* Commodities (then) brought into *England* did not exceed 1200000 *l. per Ann.*—That the whole Caſh of *England*, in current Money, was then about 6000000 *l.* Ster.

Dr. *Davenant* gives ſome good Reaſons, why many of Sir *Wm. Petty*'s Numbers are not to be entirely depended upon; and therefore advances others of his own, founded on the Obſervations of Mr. *Greg. King*.

Some of the Particulars are,—That the Land of *England* is 39 Millions of Acres.—That the Number of People, according to his Account, is about 5545000 Souls, they increaſing about 9000 every Year, Allowances being made for Plagues, *&c.* Wars, Shipping, and the Plantations.— The People of *London* he reckons at 530000. Thoſe in the other Cities and Market-Towns in *England* 870000, and thoſe in the Villages and Hamlets at 4100000——The yearly Rent of the Land he accounts to be 10,000000 *l.*—That of the Houſes and Buildings 2,000000 *l. per Ann.*——The Produce of all Kinds of Grain he reckons to be worth 9,075000 *l.* in a Year moderately plenty.——The Rent of the Corn Lands annually, 2,000000 *l.* and the neat Produce above 9,000000 *l.*——The Rent of the Paſture, Meadows, Woods, Foreſts, Commons, Heaths, *&c.* 7,000000 *l.*—— The annual Produce by Cattle, in Butter, Cheeſe, and Milk, he thinks, is about 2,500000 *l.*——The Value of the Wool yearly ſhorn about 2,000000 *l.*—Of Horſes yearly bred about 250000 *l.*—Of the Fleſh yearly ſpent as Food, about 3,350000 *l.* —Of the Tallow and Hides about 600000 *l.*—Of the Hay yearly conſumed by Horſes about 1,300000 *l.* Of Hay conſumed by other Cattle 1,000000 *l.*—Of the Timber yearly fell'd for Building, 500000 *l.* Of the Wood yearly ſpent in Firing, *&c.* about 500000 *l.*—The Land of *England* to its Inhabitants is now about 7 $\frac{1}{4}$ Acres *per* Head.——The Value of the Wheat, Rye, and Barley, neceſſary for the Suſtenance of *England*, amounts to at leaſt 6,000000 *l. Sterl. per Annum.* —The Value of the Woollen Manufacture made here is about 8,000000 *l. per Annum*; and our Exports of all Kinds of the Woollen Manufacture amount to above 2,000000 *l. per Ann.*—The annual Income of *England*, on which the whole People live and ſubſiſt, and out of which Taxes of all Kinds are paid, is now about 43,000000 *l.*——that of *France* 81,000000 *l.* and that of *Holland* 18,250000 *l.*

Major *Grant*, in his Obſervations on the Bills of Mortality, computes that there are 39000 ſquare Miles of Land in *England*.—That in *England* and *Wales* there are 4,600000 Souls.—That the People of *London* are about 640000; one fourteenth Part of the People of *England*.——That in *England* and *Wales* are about 10,000 Pariſhes.—That there are 25 Millions of Acres in *England* and *Wales*; *viz.* about 4 Acres to every Head.—That but 64 out of 100 of the Children born, are living at 6 Years old.—That but 40 of 100, are alive at 16 Years End.—That but 25 of 100 at 26 Years End.—That but 16 at 36 Years End.—That but 10 out of 100 at 46 Years End.—That but 6 out of 100 at 56 Years End.—That but 3 out of 100 at 66 Years End. And that but 1 out of 100 at 76 Years End.—And that *London* doubles itſelf in about 64 Years.

Sir *William Petty*, in his Diſcourſe about Duplicate Proportion, further tells us, that it is found by Experience, that there are more Perſons living between 16 and 26 than of any other Age; and laying down that as a Suppoſition, he infers, That the ſquare Roots of every Number of Mens Ages under 16 (whoſe Root is 4) ſhews the Proportion of the Probability of ſuch Perſons reaching the Age of 70 Years.

Thus, It is 4 times more likely, that one of 16 Years Age lives to be 70, than a Child of one Year old.—It is thrice as probable, that one of 9 Years lives to be 70, as ſuch a new-born Child, *&c.*—That the Odds is 5 to 4, that one of 25 dies before one of 16 Years.—That it is 6 to 5, (ſtill as the ſquare Roots of the Ages) that one of 36 Years old dies before one but of 25 Years of Age. And ſo on according to any declining Age to 70, compared with 4. 6: which is nearly the Root of 21, the Law-Age.

Dr. *Halley* has made a very exact Eſtimate of the Degrees of the Mortality of Mankind, from curious Tables of the Births and Burials, at the City of *Breſlau*, the Capital of *Sileſia*; with an Attempt to aſcertain the Price of Annuities upon Lives.—From a Table which he has calculated thence, publiſh'd in the *Phil. Tranſ.* he derives the following Uſes.

1°. To find in any Multitude or Body of People, the Proportion of Men able to bear Arms; which he reckons from 18 to 56 Years old; and accounts about $\frac{1}{4}$ of the whole.—2°. To ſhew the

the different Degrees of Mortality, or rather Vitality, in all Ages; by which means he finds the Odds there is, that any Perſon of any Age doth not die in a Year's Time, or before he attains ſuch an Age.—3°. To ſhew of what Number of Years it is an even Lay that ſuch a Perſon ſhall die; and finds, for inſtance, that it is an even Lay, that a Man of thirty Years of Age lives between twenty ſeven and twenty eight Years.—4°. To regulate the Price of Inſurance upon Lives. 5°. And the Valuation of Annuities upon Lives. 6°. How to value two or three Lives after the ſame Manner. See ANNUITY.

From the whole, he makes two very good Obſervations. 1. How unjuſtly we uſe to complain of the Shortneſs of our Lives; for that it appears, that one half of thoſe that are born, do not live above ſeventeen Years.

2. That the Growth and Increaſe of Mankind is not ſo much ſtinted by any thing in the Nature of the Species, as it is from the curious Difficulty moſt People make of venturing on the State of Marriage: And therefore that Celibacy ought to be every way diſcouraged by all wiſe Governments; and thoſe who have numerous Families of Children to be countenanced and encouraged by good Laws; ſuch as the *Jus trium liberorum*, *&c.* among the *Romans*.

Farther Particulars relating to the Number of *Births*, and *Burials*, the *Proportion of Males and Females*, &c. *See under the Article* MARRIAGE, BIRTH, MALE, *&c.*

POLITICKS, POLITICE, the firſt Part of Oeconomy or Ethicks, conſiſting in the governing and regulating of States, for the Maintenance of the Publick Safety, Order, Tranquility, and good Morals. See ETHICKS, PHILOSOPHY, GOVERNMENT, *&c.*

My Lord *Bacon* divides *Politicks* into three Parts; with regard to the three grand Ends thereof, or the three Offices incumbent on thoſe who have the Adminiſtration; *viz.* the *Preſervation* of the State, the Happineſs and *Flouriſhing* of the State, and the *Enlargement* of its Bounds, *&c.*

The two firſt Parts he obſerves are well handled by ſeveral Authors; but about the third there is a deep Silence.—He ranks this therefore in the Number of the *Deſiderata*, and gives us a Specimen of an Eſſay to ſupply it.

We have ſeveral Syſtems of *Politicks* by *Ariſtotle*, *Machiavel*, *Lipſius*, *&c.* In which laſt we have nothing but Particles, and Conjunctions of the Author's own; the Body of the Book being all Quotations.

The Word is form'd from the Greek πολις, *Civitas*.

POLITY, or POLICY. See POLICY.

POLIUM, a medicinal Plant, which makes an Ingredient in the Treacle of Andromachus. See TREACLE.

It grows in mountainous Places, and is thence denominated *Montanum*.—The Tops of its Flowers are eſteem'd Cephalick, proper to promote Urine and the Menſes, and to prevent Corruption.

It has its Name from the *Greek* πολιὸς, *White*; in regard the Heads of the *Polium* of the Ancients, according to *Dioſcorides*, and the Leaves according to *Pliny*, were white.

POLL, a Term uſed in ancient Writings for the Head. See HEAD.

The Word is doubtleſs form'd from *Pole*; this Part being as it were the Pole of the Microcoſm. See POLE.

Hence, *to poll*, is to enter down the Names of Perſons, who give their Votes or Voices at an Election. See VOTE, VOICE, SUFFRAGE, ELECTION, *&c.*

POLLARD, among Hunters, a Stag or Male Deer, which has caſt its Head. See HEAD, HUNTING, *&c.*

POLLARD, or *Pollenger*, in Agriculture, an old Tree which has been often lopp'd. See TREE.

POLL-*Money*, or *Capitation*, a Tax impoſed by Authority of Parliament, on the Perſon or Head; either on all indifferently, or according to ſome known Mark of Diſtinction, as Quality, Calling, *&c.* See TAX and CAPITATION.

Thus, by the Statute 18 *Car.* II. every Subject in the Kingdom was aſſeſs'd by the *Head* or *Poll*, according to his Degree; every Duke 100 *l.* Marquis 80 *l.* Baronet 30 *l.* Knight 20 *l.* Eſquire 10 *l.* *&c.* and every ſingle private Perſon 12 *d.*

This was no new Tax; as appears by former Acts of Parliament, particularly that *Anno* 1380, where, *Qui libet tam conjugatus quam ſolutus, utriuſq; ſexus, pro Capite ſuo ſolvere cogebatur.* Walſingh.

Camden, in his Remains, *of Coins*, ſays there was anciently a perſonal Tribute, call'd *Captitatio*, *Poll*-Silver, impoſed on the *Poll*, or Perſon of every one; on Women from the Age of 12 Years, and on Men from 14.

POLLUTION, POLLUTIO, the Act of profaning a Temple or Holy Place. See PROFANATION.

The Romaniſts hold a Church to be polluted by the Effuſion of Blood, or of Seed therein; and require its being conſecrated a-new.

The Jews were held polluted by the touching of a dead Body, or of the Menſes of Women; and were to be purified in From. See the Laws hereof in *Leviticus*.

The *Indians* are ſo ſuperſtitious on the Head of *Pollution*, that they break all the Veſſels which thoſe of another Religion have drunk out of, or even touch'd; and drain all the Water out of a Pond a Stranger has bath'd in.

POLLUTION, or *Self*-POLLUTION, is alſo uſed for the abuſing or defiling of one's own Body, by Means of laſcivious Frictions and Titillations, rais'd by Art, to produce an Emiſſion. See EMISSION.

We read in Scripture, that *Err* and *Onan* were ſeverely puniſh'd for having polluted themſelves by ſpilling their Seed on the Ground; whence the Crime has been denominated by ſome Emperics, *Onania*. See ONANIA.

Of *Pollutions* ſome are *Voluntary*, others *Involuntary*, and *Nocturnal*.

Nocturnal-POLLUTION is an involuntary Emiſſion of Seed, from a too great Turgeſcency of the Seminal Veſſels, or from the Seed's being too ſharp and irritating, or from a Weakneſs of the Parts. See SEED.

The Romiſh Church puts up Prayers in the Cloſe of the Evening Office, to be preſerved from Nocturnal *Pollutions*.

POLLUX, in Aſtronomy, the Hind Twin; or Hind Part of the Conſtellation *Gemini*. See GEMINI.

POLLUX is alſo a Star of the 2d Magnitude in the Conſtellation *Gemini*, or the Twins. See GEMINI.

Its Place is in the Head of the Hind-Twin, named *Pollux*. ——Its Longitude 18° 56′ 09″. Its Latitude 6° 39′ 27″ N.

POLLUX is alſo uſed in Meteorology. See CASTOR.

POLTROON, or POLTRON, a *Coward*, or Daſtard; wanting Courage to perform any thing great, or noble. See COWARD.

The Word we borrow from the *French*, who, according to *Salmaſius*, derive it a *Pollice truncato*; becauſe antiently thoſe who would avoid going to the Wars, cut off their Thumbs. See THUMBS.

But *Menage*, with more Probability, derives it from the *Italian*, *Poltrone*, and *Poltro*, a Bed; becauſe timerous, puſillanimous People take Pleaſure in lying a Bed.—He adds, that the *Italian*, *Poltro*, is again derived from the *German*, *Polſter*, a Pillow or Cuſhion.

Others derive the Word from the *Italian*, *Poltro*, Colt; becauſe of that Creature's Readineſs to run away.

POLTRON, in Faulconry, is a Name given to a Bird of Prey, when the Nails and Talons of his Hind-Toes are cut off, wherein his chief Force and Armour lay; in order to intimidate him, and prevent his flying at great Game. See HAWK and HAWKING.

POLYACOUSTICKS, Inſtruments contrived to multiply Sounds; as multiplying Glaſſes, or Polyſcopes do Images of Objects. See PHONICKS, SOUND, *&c.*

The Word is compounded of the Greek πολυ, *much*, and ακκω, *audio*, I hear. See ACOUSTICKS.

POLYANTHEA, a famous Collection of Common-Places, in Alphabetical Order; of great Service to Orators, Preachers, *&c.* of the lower Claſs. See COMMON-PLACE.

Its firſt Author was *Dominic Nanni de Mirabella*.

The Word is form'd from the *Greek*, πολὺ, *much*, and ἄνθος, *Flower*.—And is of much the ſame Significancy with *Anthology*, *Florilege*, &c. See ANTHOLOGY.

POLYANTHUS, or *Polyanthium*, is alſo uſed to denote a Plant, which bears or produces ſeveral or many Flowers. See PLANT and FLOWER.

The Word is compounded of πολῦ, *multus*, much, and ἄνθος, *Flos*, Flower.

The Word is more particularly uſed for a Species of the Hyacinth.

POLYGAMY, a Plurality of Wives, or of Husbands, held by the ſame Man or Woman, at the ſame time. See WIFE and HUSBAND.

Polygamy is prohibited among Chriſtians, but was allow'd by divine Appointment among the Jews; as it ſtill is among the *Mahometans*.

Maj. *Grant* obſerves, that the Males and Females brought into the World are nearly on a Balance; only abating for a little Exceſs on the Side of the Males, to make up for the extraordinary Expence thereof in War, and at Sea: whence it follows, that Nature only intends one Wife, or one Husband for the ſame Perſon; ſince, if they have more, ſome others muſt go without any at all — Hence he concludes, that the Chriſtian Law, which prohibits, is more agreeable to the Law of Nature than the *Mahometan*, and we may add, than the *Jewiſh* Law, which tolerates, *Polygamy*. See MARRIAGE.

Yet *Selden* has proved, in his *Uxor Ebraica*, that Plurality of Wives was allow'd of, not only among the *Hebrews*, but almoſt among all other Nations, and in all Ages.—— 'Tis true, the ancient *Romans* were more ſevere in their Morals; and never practis'd it, tho' 'twas not forbid among them: And *Mark Anthony* is mentioned as the firſt who took the Liberty of two Wives. See CONCUBINE.

From that Time it became pretty frequent in the Empire, till the Reigns of *Theodoſius*, *Honorius*, and *Arcadius*, who firſt prohibited it by expreſs Law in 393.——After this the Emperor

Emperor *Valentinian*, by an Edict, permitted all the Subjects of the Empire to marry ſeveral Wives; nor does it appear from the Eccleſiaſtical Hiſtory of thoſe Times that the Biſhops made any Oppoſition to this Introduction of *Polygamy*.

In effect, there are ſome even among the Chriſtian Caſuiſts who don't look on *Polygamy* as in itſelf criminal.—*Jurieu* obſerves, that the Prohibition of *Polygamy* is a poſitive Law, from which a Man may be exempted by ſoveraign Neceſſity.—*Baillet* adds, that the Example of the Patriarchs is the moſt preſſing Argument in favour of *Polygamy*.

At *London* we had ſome Years ago an artful Treatiſe publiſh'd in behalf of a Plurality of Wives, under the Title of *Polygamia Triumphatrix*; the Author whereof aſſumes the Name of *Theophilus Aletheus*; but his true Name was *Lyſerus* a Native of *Saxony*.—It has been anſwered by ſeveral.

POLYGAMY is alſo uſed in the Canon Law, for a Plurality of Wives, tho' only had ſucceſſively, or one at a Time. See WIFE.

In the *Romiſh* Church this ſtill diſqualifies a Man for the Epiſcopate. See BIGAMY.

The Word is form'd from the *Greek* πολὺ, *multum*, and γαμη, *Uxor*, Wife.

POLYCHRESTON, POLYCHREST, in Pharmacy, a Medicine that ſerves for many Uſes, or cures many Diſeaſes. See PANACEA.

The Word is compounded of the *Greek* πολὺ, *multum*, much, and χρησὸς, *utilis*, *uſeful*.

Sal-POLYCHREST is a compound Salt, made of equal Parts of Salt-Petre and Sulphur, laid on a Crucible firſt heated red hot for the Purpoſe. See SALT.

POLYEDRON. See POLYHEDRON.

POLYGLOTT, or POLYGLOTTE, among Divines and Criticks, a Bible printed in ſeveral Languages. See BIBLE.

It is thus call'd from the *Greek* πολὺ, and γλῶττα, Tongue.

The firſt *Polyglott*-Bible is that of Cardinal *Ximenes*, printed in 1515, at *Alcala de Henares*; and commonly call'd the *Bible of Complutum*, or *Complutenſian Bible*.

It contains the *Hebrew* Text, the *Chaldee* Paraphraſe on the Pentateuch, the *Greek* Verſion of the LXX. and the ancient *Latin* Edition. See PENTATEUCH, PARAPHRASE, &c.

In this *Polyglott* there is no other *Latin* Verſion from the *Hebrew* beſide this laſt, but there is added another literal one from the *Greek* Septuagint.——The *Greek* Text of the New Teſtament is here printed without Accents, to bring it nearer to the Original of the Apoſtles, or at leaſt to the moſt ancient Copies, wherein there are no Accents found. See ACCENT.

At the End is added an Apparatus of Grammars, Dictionaries, and Indices or Tables.——The chief Author, *Ximenes de Cineros*, Cardinal and Archbiſhop of *Toledo*, in his Dedication to Pope *Leo* X. obſerves, that it was neceſſary to give the Holy Scriptures in their Originals; there being no Tranſlation, how perfect ſoever, that can render them perfectly.

The ſecond *Polyglott* is that of *Philip* II. printed by *Plantin* at *Antwerp*, in 1572. and the Care of the Edition impoſed on *Arias Montanus*.

In this, beſides every thing in the Bible of *Complutum*, are added the *Chaldee* Paraphraſes on the reſt of the Old Teſtament beſide the *Pentateuch*, with a *Latin* Tranſlation of thoſe Paraphraſes. In this *Polyglott* is likewiſe a very literal *Latin* Verſion of the *Hebrew* Text, for the Uſe of thoſe who have a mind to learn the *Hebrew* Language.

As to the New Teſtament, beſide the *Greek* and *Latin* of the Bible of *Alcala*, in this Edition is added an antient *Syriac* Verſion, both in *Syriac* and *Hebrew* Characters, with Points, to facilitate the reading thereof to thoſe accuſtomed to read *Hebrew*.—To the *Syriac* is likewiſe added a *Latin* one, compoſed by *Guy le Fevre*, who had the Care of the *Syriac* Verſion of the New Teſtament.

Laſtly, in the *Polyglott* of *Antwerp* is added a more copious Apparatus of Grammars, Dictionaries, *&c.* than in that of *Complutum*; with ſeveral little Treatiſes judg'd neceſſary for clearing up the more difficult Paſſages in the Text.

The third *Polyglott* is that of *M. Jay*, printed at *Paris* in 1645. which has this Advantage over that of *Philip* II. that it has the *Syriac* and *Arabic* Verſions of the Old Teſtament with *Latin* Interpretations.——In the *Pentateuch* it has likewiſe the *Hebrew* and *Samaritan* Text; and the *Samaritan* Verſion in *Samaritan* Characters.

As to the New Teſtament, beſide every thing in the *Polyglott* of *Antwerp*; here is added an *Arabic* Tranſlation, with a *Latin* Interpretation.—But here wants the Apparatus, and the Grammars and Dictionaries, which are in both the former *Polyglots*, which renders this great Work very imperfect.

The fourth *Polyglott* is that of *London*, printed in 1657, call'd *Walton's Polyglott*, from the Author of the Edition Dr. *Brian Walton* afterwards Biſhop of *Wincheſter*.

This is indeed leſs magnificent than that of M. *Jay*, with regard both to the Size of the Paper, and the Beauty of the Characters; but is in all other reſpects preferable; being both much more ample and more commodious.

In this, the Vulgate is printed according to the reviſed and corrected Edition of *Clement* VIII. which is not done in that of *Paris*, where the Vulgate is printed as it ſtands in that of *Antwerp* before the Correction. See VULGATE.

It likewiſe contains an interlineary *Latin* Verſion of the *Hebrew* Text; whereas the *Paris* Edition has no other *Latin* Verſion from the *Hebrew* beſide the common Vulgate: again, the *Greek Septuagint* printed in this *Polyglott* is not the ſame with that printed in the Bible of *Complutum*, which was retained in the Editions of *Antwerp* and *Paris*; but the *Greek* Text of the Edition of *Rome:* to which are added the various Readings of another very antient *Greek* Copy call'd the *Alexandrian*, becauſe brought from *Alexandria*. See SEPTUAGINT.

The *Latin* Verſion of the *Greek* of the Seventy is that publiſh'd by *Flaminius Nobilius*, by Authority of Pope *Sixtus* V. Add, that in this *Polyglott* are found ſome Parts of the Bible in *Ethiopian* and *Perſian*, nothing whereof appears in any of the reſt.

Laſtly, this Edition has the Advantage of Preliminary Diſcourſes call'd *Prolegomena*, on the Text both of the Originals, and Verſions; with a Volume of various Readings of all the different Editions.

To the Number of *Polyglotts* may likewiſe be added the two Pentateuch's printed by the *Jews* of *Conſtantinople*, in four Languages; but all in *Hebrew* Characters.

In one of theſe Pentateuch's, printed in 1551, is found the Hebrew Text in large Characters; on one ſide whereof is the *Chaldee* Paraphraſe of *Onkelos* in moderate Characters; and on the other ſide a Paraphraſe in the *Perſian*, compoſed by a Jew, one *Jacob de Tous*, ſo call'd from the City where he lived.——Beſide theſe three Columns, the *Arabic* Paraphraſe of *Saadias Gaon* is printed in ſmall Characters a-top of the Pages; and at bottom is added the Commentary of *Raſei*.

The other *Polyglott* is printed at *Conſtantinople* in 1547, in three Columns like the former.——The *Hebrew* Text of the Law is in the middle, a Tranſlation into the Vulgar *Greek* on one ſide, and a *Spaniſh* Tranſlation on the other. Theſe Verſions are both in *Hebrew* Characters, with Points to determine the Pronunciation. A-top of the Page is added the *Chaldee* Paraphraſe of *Onkelos*, and at the bottom the Commentaries of *Raſei*.

To theſe may be added as a ſeventh *Polyglott*, the Pſalter publiſhed by *Aug. Juſtinian*, a Dominican, and Biſhop of *Nebio*, at *Genoa* 1516; containing the *Hebrew*, *Greek*, *Arabic*, and *Chaldee*, with *Latin* Interpretations and Gloſſes. See PSALTER.

There are various other Editions of the Bible either in whole or in part, which might be rang'd under the Article of *Polyglotts*; tho' they are not ſo denominated—ſuch are the *Hexapla*, and *Octapla*, of *Origen*. See HEXAPLA and OCTAPLA.

And the Bible of *Hutter* printed at *Hambourg*, in *Hebrew*, *Chaldee*, *Greek*, *Latin*, *German*, *Saxon*, *Italian*, *French*, *Sclavonic*, *Daniſh*, &c. See BIBLE.

POLYGON, in Geometry, a multilateral Figure; or a Figure whoſe Permeter conſiſts of more than four Sides, and Angles. See FIGURE, PERIMETER, *&c.*

If the Sides and Angles be equal, the Figure is call'd a *Regular Polygon*. See REGULAR.

The Word is form'd from the *Greek* πολὺ and γόνυ, *Knee*, Angle.

Polygons are diſtinguiſh'd according to the Number of their Sides.——Thoſe of fives Sides are call'd *Pentagons*; thoſe of ſix, *Hexagons*; thoſe of ſeven, *Heptagons*; thoſe of eight, *Octagons*, &c. The particular Properties, *&c.* of each whereof, ſee under its proper Article, PENTAGON, HEXAGON, *&c.*

General Properties of POLYGONS.

Euclid demonſtrates theſe which follow.——1° That every *Polygon* may be divided into as many Triangles as it hath Sides. See TRIANGLE.

This is done by aſſaulting a Point as F, (*Tab. Geometry*, *Fig.* 29.) any where within the *Polygon*, and thence drawing Lines to every Angle F *a*, F *b*, F *c*, F *d*, *&c.*

2° The Angles of any *Polygon* taken together, make twice as many right ones, abating four, as the Figure hath Sides. See ANGLE.

Thus, if the *Polygon* have five Sides; the double of that is 10; whence ſubtracting 4 there remains 6 right ones.

3° Every *Polygon* circumſcribed about a Circle is equal to a rectangled Triangle, one of whoſe Legs is the Radius of the Circle, and the other the Perimeter or Sum of all the Sides of the *Polygon*.

Hence, every Regular *Polygon* is equal to a Rectangle Triangle, one of whoſe Legs is the Perimeter of the *Polygon*,

find the other a Perpendicular drawn from the Centre to one of the Sides of the *Polygon*. See TRIANGLE.

Hence alſo every *Polygon* circumſcribed about a Circle is bigger than it; and every *Polygon* inſcribed, leſs than the Circle.—The ſame likewiſe appears hence, that the thing containing is ever greater than the thing contain'd.

And hence again, the Perimeter of every *Polygon* circumſcribed about a Circle, is greater than the Circumference of that Circle; and the Perimeter of every *Polygon* inſcribed, leſs: whence it follows, that a Circle is equal to a Right Angle Triangle, whoſe Baſe is the Circumference of the Circle, and its Height the Radius; ſince this Triangle is leſs than any *Polygon* circumſcribed, and greater than any inſcribed. See CIRCUMSCRIBING.

Nothing therefore is wanted to the Quadrature of the Circle, but to find a right Line equal to the Circumference of a Circle. See CIRCLE, CIRCUMFERENCE, QUADRATURE, *&c.*

To find the Area of a Regular Polygon.——Multiply a Side of the *Polygon*, as A B, by half the Number of the Sides, *e. gr.* the Side of a Hexagon by 3. Again, multiply the Product by a Perpendicular let fall from the Centre of the circumſcribing Circle to the Side A B; the Product is the Area required. See AREA.

Thus, ſuppoſe A B, 54; and half the Number of Sides 2½; the Product or Semiperimeter is 135. Suppoſing then the Perpendicular F*g*, 29; the Product of theſe two, 3915, is the Area of the Pentagon required.

To find the Area of an irregular Polygon, or *Trapezium.*—— Reſolve it into Triangles; find the ſeveral Areas of the ſeveral Triangles, ſee TRIANGLE; the Sum of theſe is the Area of the *Polygon* required. See TRAPEZIUM.

To find the Sum of all the Angles in any Polygon.—Multiply the Number of Sides by 180°: From the Product ſubtract 360; the Remainder is the Sum required.

Thus in a Pentagon, 180 being multiplied by 5 gives 900; whence ſubtracting 360 there remains 540; the Sum of the Angles of a Pentagon.

Hence, if the Sum found be divided by the Number of Sides; the Quotient will be the Angle of a regular *Polygon.*

Or, the Sum of the Angles is more ſpeedily found thus: Multiply 180 by a Number leſs by two than the Number of Sides of the *Polygon*; the Product is the Quantity of the Angles required: thus 180 being multiplied by 3, a Number leſs by 2, than that of its Sides; the Product is 540, the Quantity of Angles as before.

The following Table exhibits the Sums of the Angles in all rectilinear Figures, from a Triangle to a Dodecagon; and is of good uſe both for the deſcribing of regular Figures, and for proving whether or no the Quantity of Angles have been truly taken with an Inſtrument. See REGULA, FIGURE, *&c.*

Numb. Sides.	*Sum. Ang.*	*Ang. of Reg. Fig*	*Numb. Sides*	*Numb Angl.*	*Ang. of Reg. Fig*
III	180°	60°	VIII	1080°	135
IV	360	90	IX	1260	140
V	540	108	X	1440	144
VI	720	120	XI	1620	147 3/11
VII	900	128 4/7	XII	1800	150

To inſcribe a regular Polygon in a Circle.——Divide 360 by the Number of Sides in the *Polygon* required, to find the Quantity of the Angle E F D. Set off the Angle at the Centre, and apply the Chord thereof E D, to the Periphery, as often as 'twill go.——Thus will the *Polygon* be inſcribed in the Circle.

The Reſolution of this Problem, tho' it be Mechanical; yet is not to be deſpis'd, becauſe both eaſy and univerſal.—*Euclid*, indeed, gives us the Conſtruction of the Pentagon, Decagon, and Quindecagon; and other Authors give us thoſe of the Heptagon, Enneagon, and Hendecagon; but they are far from Geometrical Strictneſs.

Renaldinus lays down a Catholic Rule for the deſcribing of all *Polygons*, which many other Geometricians have borrow'd from him; but *Wagnerus* and *Wolfius* have both demonſtrated the Falſity thereof.

On a Regular Polygon to circumſcribe a Circle: or to *circumſcribe a regular Polygonupon a Circle.*—Biſſect two of the Angles of the given *Polygon* A and E, by the right Lines A F and E F, concurring in F. And from the Point of Concourſe with the Radius E F deſcribe a Circle.

To circumſcribe a *Polygon*, &c. Divide 360 by the Number of Sides required, to find *e* F *d*; which ſet off from the Centre F, and draw the Line *e d*; on this Conſtruct the *Polygon* as in the following Problem:

On a given Line, E D, *to deſcribe any given regular Polygon.*——Find an Angle of the *Polygon* in the Table; and in E ſet off an Angle equal thereto, drawing E A = E D. Thro' the three Points A E D deſcribe a Circle. See CIRCLE. In this apply the given right Line as often as it will go.—Thus will the required Figure be deſcribed.

To inſcribe or circumſcribe a Regular Polygon, Trigonometrically.——Find the Sine of the Arch produced by dividing the Semi-Periphery 180 by the Number of Sides of the *Polygon*: the double of this is the Chord of the double Arch, and therefore the Side A E to be inſcribed in the Circle.——If then the Radius of a Circle wherein, *e. gr.* a Pentagon is to be inſcribed, be given in any certain Meaſure *e. gr.* 345. the Side of the Pentagon is found in the ſame Meaſure by the Rule of Three, Thus as Radius 10000 is to 1176:: ſo is 3450, to 4057. The Side of the Pentagon. —With the given Radius therefore deſcribe a Circle; and therein ſet off the Side of the *Polygon* as often as 'twill go; thus will a *Polygon* be inſcribed in the Circle.

To ſave the trouble of finding the Ratio of the Side of the *Polygon* to radius, by the Canon of Sines; we ſhall add a Table expreſſing the Sides of *Polygons* in ſuch Parts whereof Radius contains 100000000. In practice, as many Figures are cut off from the Right-Hand, as the Circumſtances of the Caſe render needleſs.

Numb. Sides	*Quantity Side*	*Numb. Sides*	*Quantity Side*
III	17320508	VIII	7653668
IV	14142135	IX	6840402
V	11755705	X	6180339
VI	10000000	XI	5634651
VII	8677674	XII	5176380

To deſcribe a Regular Polygon, on a given right Line, and to circumſcribe a Circle about a given Polygon, Trigonometrically.—Taking the Ratio of the Side to the Radius out of the Table; find the Radius in the ſame Meaſure wherein the Side is given. For the Side and Radius being had, a *Polygon* may be deſcribed by the laſt Problem. And if with the Interval of the Radius, Arches be ſtruck from the two Extremes of the given Line the Point of Interſection will be the Centre of the circumſcribing Circle.

POLYGON, in Fortification, is the Figure or Perimeter of a Fortreſs or fortified Place. See FORTIFICATION.

Exterior-POLYGON is a right Line drawn from the *Vertex* or Point of a Baſtion, to the *Vertex* or Point of the next adjacent Baſtion. See BASTION.

Such is the Line C F, *Fab. Fortification, Fig.* 1.

Interior-POLYGON is a right Line drawn from the Center of one Baſtion to the Centre of another, ſuch is the Line G H.

Line of POLYGONS, is a Line on the *French* Sectors, containing the homologous Sides of the firſt 9 regular *Polygons*, inſcribed in the ſame Circle, *i. e.* from an Equilateral Triangle to a Dodecagon. See SECTOR.

POLYGONAL *Numbers*, in Algebra, are the Sums of Arithmetical Progreſſions, beginning from Unity. See SERIES, NUMBER, PROGRESSION, *&c.*

Polygonal Numbers are divided, with reſpect to the Number of their Terms, into *Triangular*, which are thoſe whoſe difference of Terms is 1; *quadrangular* or *ſquare*, where 'tis 2; *Pentagonal*, where 3; *Hexagonal*, where 4; *Heptagonal*, where 5; *Octagonal*, where 6, *&c.*

They have their Names from the Geometrical Figures into which Points correſponding to their Units, may be diſpoſed *e, gr.* three Points correſponding to the three Units of a triangular Number may be diſpoſed into a Triangle; and ſo of the reſt. See TRIANGULAR, *&c.*

The Geneſis of the ſeveral kinds of *Polygonal* Numbers from the ſeveral Arithmetical Progreſſions, may be conceived from the following Examples.

Arithmetical Progreſſion	1, 2, 3, 4, 5, 6, 7, 8
Triangular Numbers	1, 3, 6, 10, 15, 21, 28, 36
Arithmetical Progreſſion	1, 3, 5, 7, 9, 11, 13, 15
Square Numbers	1, 4, 9, 16, 25, 36, 49, 64
Arithmetical Progreſſion	1, 4, 7, 10, 13, 16, 19, 21
Pentagonal Numbers	1, 5, 12, 22, 35, 51, 70, 92
Arithmetical Progreſſion	1, 5, 9, 13, 17, 21, 25, 29
Hexagonal Numbers	1, 6, 15, 28, 45, 66, 91, 120

The Side of a Polygonal Number is the Number of Terms of the Arithmetical Progreſſion that are ſumm'd up to conſtitute it: And the *Number of Angles* is that which ſhews how many Angles that Figure has whence the *Polygonal* Number takes its Name.

The Number of Angles, therefore, in Triangular Numbers is 3. In Tetragonal 4. In Pentagonal 5, *&c.* conſequently the Number of Angles exceeds the difference of Terms ſumm'd up, by two Units.

To find a Polygonal Number, the Side and Number of its Angles being given. The Canon is this.——The *Polygonal* Number

Number is the Semi-difference of the Factums of the Square of the Side into the Number of Angles, diminiſhed by two Units; and of the Side itſelf into the Number of Angles diminiſh'd by four Units.

The Sums of *Polygonal Numbers* collected in the ſame manner as the *Polygonal* Numbers themſelves are out of Arithmetical Progreſſions; are called *Pyramidal Numbers*. See PYRAMIDAL.

POLYGRAPHY, POLYGRAPHIA, POLYGRAPHICE, the Art of writing in various unuſual, Manners or Cyphers; as alſo of decyphering the ſame. See WRITING.

The Word is uſually confounded with *Steganography* and *Cryptography*. See STEGANOGRAPHY and CRYPTOGRAPHY.

The Antients ſeem to have been very little acquainted with this Art; nor is there any Mark of their having gone beyond the *Lacedemonian Scytala*. See SCYTALA.

Trithemius, *Porta*, *Vigenere*, and Father *Niceron*, have wrote on the ſubject of *Polygraphy* or Cyphers. See CYPHER.

The Word is form'd from the *Greek* πολυ, *multum*, and γραφη, ſcriptura, *writing*.

POLYHEDRON, POLYEDRON, in Geometry, a Body comprehended under ſeveral Faces or Sides. See BODY and SOLID.

Such are all the five regular Bodies; *viz.* the Tetrahedron, Octahedron, Cube or Exahedron, Dodecahedron, and Icoſihedron. *See each under its proper Article.*

If the Sides of the *Polyhedron* be regular Polygons, all ſimilar and equal; the *Polyhedron* becomes a *regular Body*, and may be inſcribed in a Circle. See REGULAR *Body*, &c.

Gnomonic POLYHEDRON, is a Stone with ſeveral Faces, whereon are projected various kinds of Dials. See DIAL.

Of this kind that in the *Privy-Garden*, *London*, now gone to ruin, was anciently the fineſt in the World.

The Word is form'd from the *Greek* πολυ, *much*, and εδρα, *Seat*.

POLYHEDRON, or POLYSCOPE, in Opticks, is a Glaſs or Lens conſiſting of ſeveral plain Surfaces, diſpoſed into a Convex Form; popularly call'd a *Multiplying-Glaſs*. See LENS and MULTIPLYING *Glaſs*.

The Phænomena of the *Polyhedron* are as follow.

Doctrine of the POLYHEDRON, *or Multiplying-Glaſs.*

If ſeveral Rays, as EF, AB, CD, (*Tab. Opticks*, *Fig.* 71.) fall parallel on the Surface of a *Polyhedron*; they will continue parallel after Refraction. See RAY and REFRACTION.

If then the *Polyhedron* be ſuppoſed regular; LH, HI, IM, will be as Tangents cutting the Spherical Convex *Lens* in F, B and D; conſequently Rays falling on the Points of Contact interſect the Axis.——Wherefore, ſince the reſt are parallel to theſe; they alſo will mutually interſect each other in G.

Hence, if the Eye be placed where the parallel Rays decuſſate; Rays of the ſame Object will be propagated to it ſtill parallel from the ſeveral Sides of the Glaſs. Wherefore ſince the Cryſtalline Humour, by its Convexity, unites parallel Rays; the Rays will be united in as many different Points of the Retina, *a*, *b*, *c*, as the Glaſs has Sides.

Conſequently, the Eye, thro' a *Polyhedron*, ſees the Object repeated as many times as there are Sides.—And hence, ſince Rays, coming from remote Objects, are parallel; a remote Object is ſeen as often repeated thro' a *Polyhedron* as that has Sides.

2. If Rays, AB, AC, AD, (*Fig.* 72.) proceeding from a Radiant Point A, fall on ſeveral Sides of a regular *Polyhedron*; after Refraction they will decuſſate in G; and proceed on a little diverging.

Hence, if the Eye be placed where the Rays coming from the ſeveral Planes, decuſſate; the Rays will be propagated to it from the ſeveral Planes a little diverging, *i. e.* as if they proceeded from different Points. But ſince the Cryſtalline Humour by its Convexity, collects Rays from ſeveral Points into the ſame Point; the Rays will be united in as many different Points of the Retina, *a*, *b*, *c*, as the Glaſs has Sides. Conſequently the Eye being placed in the Focus G, will ſee even a near Object repeated as often thro' the *Polyhedron* as that has Sides.

Thus may the Images of Objects be multiplied in a Camera obſcura; by placing a *Polydron* at its Aperture, and adding a Convex-Lens at a due Diſtance therefrom.——And it really makes a very pleaſant Appearance, if a Priſm be applied ſo as the colour'd Rays of the Sun refracted therefrom be received on the *Polyhedron*. Form by this means they will be thrown on a Paper, or Wall near at hand in little lucid Specks, much exceeding the brightneſs of any precious Stone; and in the Focus of the *Polyhedron*, where the Rays decuſſate, (for in this Experiment they are received on the convex Side) will be a Star of ſurprizing Luſtre.

If Images be painted in Water-Colours in the Areolæ or little Squares of a *Polyhedron*, and the Glaſs applied to the Aperture of a Camera obſcura; the Sun's Rays paſſing thro' it will carry with them the Images thereof, and project them on the oppoſite Wall.

This Artifice bears a Reſemblance to that other, whereby an Image on Paper is projected on the Camera, *viz.* by wetting the Paper with Oil, and ſtraining it tight on a Frame; then applying it to the Aperture of the Camera obſcura, ſo as the Rays of a Candle may paſs through it upon the *Polyhedron*. See CAMERA.

To make an Anamorphoſis or deform'd Image, which thro' a Polyhedron or Multiplying Glaſs ſhall appear regular and beautiful.

At one End of a Horizontal Table erect another at right Angles, whereon a Figure may be deſign'd; and on the other End erect another; to ſerve as a Fulcrum or Support, moveable on the horizontal one.——To the Fulcrum apply a Plano Convex *Polyhedron*, conſiſting *e. gr.* of 24 plain Triangles; let the *Polyhedron* be fitted in a Draw Tube, whereof that End towards the Eye to have only a very ſmall Aperture, and a little further off than the Focus.——Remove the Fulcrum from the other perpendicular Table, till it be out of the Diſtance of the Focus; and that more, as the Image is to be greater.—Before the little Aperture place a Lamp; and trace the Luminous Areolæ projected from the Sides of the *Polyhedron*, with a black Lead Pencil, on the vertical Plane, or a Paper apply'd thereon.

In theſe ſeveral Areolæ, deſign the ſeveral Parts of an Image, in ſuch manner as that when join'd together they may make one whole; lookinga-freſh, every now and then thro' the Tube, to guide, correct, *&c.* the Colours, and to ſee that the ſeveral Parts match aptly together.

The intermediate Space fill up with any Figures or Deſigns at Pleaſure; contriving it ſo as that to the naked Eye the whole may exhibit ſome Appearance very different from that intended to appear through the *Polyhedron*.

The Eye, now, looking thro' the little Aperture of the Tube, will ſee the ſeveral Parts and Members diſpers'd among the Areolæ to exhibit one continued Image; all the intermediate ones diſappearing. See ANAMORPHOSIS.

POLYHISTORES. See HISTORY, POLYMATHY, *&c.*

POLYMATHY, POLYMATHIA, the Knowledge of many Arts and Sciences; or an Acquaintance with a great Number of different Subjects. See ENCYCLOPÆDIA.

The Word comes from the *Greek* πολυ, *multum*, and μαθησις, Knowledge, Learning.

Lipſius, *Scaliger*, *Kircher*, *Petavius*, *Politian*, *Salmaſius*, *&c.* were famous for *Polymathy*.

Among the Ancients, ſuch as were eminent this Way were called Polyhiſtores. See HISTORY.

Polymathy is frequently little more than a confuſed Heap of uſeleſs Knowledge occaſionally detail'd, either pertinently or impertinently, for Parade.—The genuine *Polymathy* is an extenſive Erudition, or a Knowledge of a great Number of Things, well digeſted, and applied to the Purpoſe, and never but out of Neceſſity.

POLYMYTHY, POLYMYTHIA, in Poetry, a Multiplicity of Fables, in an Epic or Dramatic Poem; in lieu of an Unity, or a ſingle one. See FABLE, UNITY, *&c.*

Polymythia is a very great Fault.—It conſiſts in aſſembling a Number of diſtinct Actions or Fables into one complex Body. See ACTION.

Such a Work *Boſſu* compares to the Batrachomymachiao; or one of the Fables of *Eſop*: and ſuch would be the Idea of a Theſeid, an Heracleid, an Achilleid, or the like Poems, which ſhould comprehend all the Actions of thoſe Heroes; compared with the Iliad, or Æneid. See HERO, EPIC, *&c.*

POLYNOMIAL, or rather *Multinomial*, *Roots*, in Mathematicks. See MULTINOMIAL and ROOT.

POLYOPTRUM, in Opticks, a Glaſs through which Objects appear multiplied, but diminiſhed. See MULTIPLICATION.

The *Polyoptrum* differs both in Structure and Phænomena from the common Multiplying-Glaſſes, call'd *Polyhedra*. See POLYHEDRON.

The Word *Polyoptrum* is form'd from the *Greek* πολυ, *much*, *many*, and οπτομαι, *I ſee*.

Conſtruction of the Polyoptrum.

In a Glaſs, plain on both Sides, A B, (*Tab. Opt. Fig.* 73.) and about three Fingers thick, cut out ſpherical Segments, ſcarce a fifth Part of a Digit in Diameter.

If then the Glaſs be removed from the Eye, till you can take in all the Cavities at one View, you will ſee the ſame Object as if thro' ſo many ſeveral concave Glaſſes, as there are Cavities, and all exceedingly ſmall.

Fit this, as an Object Glaſs, in a Tube A B C D, whoſe Aperture A B is equal to the Diameter of the Glaſs, and the other C D equal to that of an Eye Glaſs; *e. gr.* about a Finger's Breadth. The Length of the Tube A C to be accommodated to the Object and Eye-Glaſs, by Trial.

In

In C D fit a Convex Eye-Glaſs, or in lieu thereof a Meniſcus, having the Diſtance of its principal Focus a little larger than the Length of the Tube; ſo that the Point, from which the Rays diverge after Refraction in the Object-Glaſs may be in the Focus.—If then the Eye be applied near to the Eye-Glaſs, a ſingle Object will be ſeen repeated as often as there are Cavities in the Object-Glaſs, but ſtill diminiſhed.

POLYPETALOUS, in Botany, a Flower conſiſting of ſeveral Petala or Leaves. See PETALA.

The Covers or Defences of Flowers conſiſt either of a ſingle continued Petalon, thence call'd *monopetalous*; or of ſeveral diſtinct Pieces, call'd *Polypetalous*. See FLOWER and MONOPETALOUS.

The Word comes from πολύ, *multum*, and πέταλον, *Petalum*.

Polypetalous Flowers are either *regular* or *irregular*.—The *Regular*, according to ſome Botaniſts, are either thoſe conſiſting of two Pieces, as the Cercea; or of four, thence called *Croſs-Flowers*, as the Clove Tree; or of five, called *Umbelliferous*, as Fennel; or of ſix, as the White *Lilly*, thence call'd the *Lilly-kind*. See UMBELLIFEROUS, *&c.*

Thoſe exceeding this Number, in any Quantity, equal or unequal, form a new Claſs of *polypetalous* Flowers, called the *Roſe* Kind; among which are rank'd all thoſe of three, four, five, or ſix Pieces, whoſe Fruits differ ſo from the reſt, that 'tis required they be diſtinguiſh'd from them.

Such is the Flower of the Water Plantane, which tho' it has only three Leaves, yet by the Relation of its Seed with that of the Ranuncula, is ranged in this laſt Claſs.—Such, alſo, is the Flower of Tormentille; which by Reaſon of the Difference of its Fruit from the Siliquæ or Siliculæ of the Croſs-Flowers, cannot be ranged among them.—Such alſo is the Pink, which tho' conſiſting of five Pieces, yet is excluded the Claſs of umbelliferous Plants, becauſe its Fruit is not divided into two Parts.—Such, laſtly, are the Flowers of ſome Ranuncula's, Houſe-leek, and Anemonies; which though they have ſix Petala, yet never produce Fruits divided into three Lodges, as thoſe of the Lilly Kind, and therefore cannot belong to their Claſs.

The *irregular polypetalous Flowers* are ſo called from the odd Figure and Diſpoſition of their Petala, what Number of them ſo ever they have.

Such are thoſe of two Pieces reſembling two Chaps, as in Fumitory; or thoſe of five Pieces reſembling Butterflies, common to all leguminous Plants.

POLYPODY, in Botany, a Plant of the paraſitaical Kind, popularly called Many-feet; of conſiderable Uſe in Medicine, *&c.* See PARASITE.

There are two Kinds.—*Common Polypody*, and *Polypody of the Oak*. The firſt uſually grows on old Walls in the Country, among Moſs, *&c.* the latter call'd alſo *Oak-fern* from the Reſemblance it bears to Fern, grows on the Branches of that Tree, in the Places where they ſhoot or ſpread out, feeding on a little Earth collected there from the Duſt blown about with the Wind, and water'd with the Rain.

Polypody of the Oak is much the better of the two.—It muſt be choſen new, well-fed, dry, brittle, of a Tan-red without, green within, of a ſweet Taſte reſembling Liquorice.

The Root is what is chiefly uſed in Medicine, being eſteem'd Cathartic; tho' Dr. *Quincy* ſays 'tis no more ſo than a common Detergent; in which Capacity it is much preſcribed; in Medicated Ales againſt the Jaundice, Scurvy, Obſtructions of the Viſcera, Hypochondriacks, *&c.*

The Word is form'd from the *Greek* πολύ, and πούς, *Foot*, in regard the Root of the Plant clings to Walls and Trees, by a great Number of little Fibres like Claws.

POLYPTOTON, in Rhetorick, a Figure wherein the ſame Word is repeated in different Caſes, Genders or Numbers, *i.e.* with different Terminations. See FIGURE.

Such is that of *Cicero*, *pro Arch. Sed pleni ſunt omnes libri, plenæ ſapientum voces, plena exemplorum vetuſtas.*

POLYPUS, in Medicine, a fleſhy Tumor or Excreſcence ariſing on the inſide of the Noſtrils, prejudicial to Reſpiration and Speech; call'd alſo, by way of Diſtinction, *Polypus Narium*. See NOSE, EXCRESCENCE, *&c.*

This *Polypus* ariſes by ſeveral Roots from the *Os Criboſum*, and hangs down, ſometimes, as low as the Lip; growing, likewiſe, backwards, ſo as to ſtop the Hole of the Palate, whereby the Air and Pituita deſcend out of the Noſe down into the Throat; and by this means ſtrangles the Patient.

It has it Name from the reſemblance it bears to the Fiſh *Polypus*, call'd in *Engliſh*, *Pourcontrel*, or many-feet.—Tho' ſome derive the Name from the Reſemblance its Subſtance bears to that of the *Polypus*; and others, from the reſemblance its many roots bear to the many feet of the Fiſh, *&c.*

If it have no Roots, or only one continued Root, it is call'd a *Sarcoma*; which is only a beginning *Polypus*. See SARCOMA.

Polypus's are chiefly found in ſcrophulous or cancerous Conſtitutions, along with Venereal Caſes, Ulcers, Ozænas, *&c.*—Cauſtics, Cauſticks, emollient Fomentations, Extirpation, and diſſective Powders and Lotions are the uſual Remedies.

POLYPUS, is alſo uſed for a morbid Excreſcence in the Heart; conſiſting of a tough Concretion of grumous Blood lodg'd therein. See HEART.

Malpighi gives a very accurate Deſcription of this *Polypus*. In the right Ventricle of the Heart, he obſerves, 'tis uſually larger, and of a paler Colour like Pituita, with rediſh or blackiſh Streaks; in the left Ventricle it is ſmaller, blacker and denſer.——He adds, that it ſeems to have a ſort of Organiſm, and appears like a Congeries of Pellicles ſtretch'd over one another, which form a kind of nervous Compages.

Polypus's are frequently found upon opening the Bodies of Perſons dying apoplectic; and are doubtleſs frequently the occaſion of ſudden Death.——They are ſeldom diſcover'd till they have diſpatch'd the Patient.

'Tis a diſpute among Phyſicians, whether *Polypus's* be produced any conſiderable time before, or always immediately after, Death.—Mr. *Gould* has an expreſs Diſcourſe in the *Philoſoph. Tranſact.* to evince the former.

POLYPUS *of the Lungs*.——In the *Philoſophical Tranſactions* Dr. *Rob. Clarke* gives us a very odd Inſtance of a Patient who cough'd up, at times, ſeveral hundred *Polypus's of the Lungs*.

They ſeem'd to have ſome Organization, and were all perfectly alike.—The Patient ſaid, tho' they had no Life, he had frequently preſs'd a ſlimy matter out of the Body.

Dr. *Liſter* obſerves, that ſuch *Polypus's* are form'd in the remoter and deeper Branches of the *Aſpera Arteria*, whence they are very difficult to get up.—The Patient abovemention'd never brought them up till after a continued coughing of half a Day and Night.

He adds, that they are nothing but viſcous Excretions of the ſmall Glands, hard bak'd in thoſe Glands whoſe Form they receive.—M. *Buſſiere* obſerves, they are frequently miſtaken for pieces of the Blood-Veſſels or Lungs.

POLYPYRENEOUS *Fruits*, in Botany, are ſuch as contain ſeveral Kernels, or Seeds. See FRUIT.

They are thus call'd from the *Greek* πολύ, *much*, and πυρὴν, *Nucleus*, Kernel. See POLYSPERMOUS.

POLYSCOPE, a Multiplying-Glaſs, *i. e.* a Glaſs which repreſents one Object to the Eye, as if it were many; call'd alſo *Polyhedron*. See MULTIPLYING *Glaſs* and POLYHEDRON.

POLYSPASTON, POLYSPAST, in Mechanicks, a Machine ſo denominated by *Vitruvius*; conſiſting of an Aſſemblage of ſeveral Pullies; uſed for raſing of huge Weights in a little time. See MACHINE.

The Word comes from the *Greek* πολυ, and πάσσω; q. d. *That may be turn'd many ways.*

The Multiplication of Pullies in the *Polyſpaſton* is to very good purpoſe; it being demonſtrated in Mechanicks, that the Force required to ſuſtain a Weight by means of a *Polyſpaſton*, is to the Weight itſelf, as Unity to the Number of Ropes, or of the Pullies; thoſe Ropes or Pullies being ſuppoſed parallel to each other. See PULLEY.

Hence, the Number of Pullies, and the Power being given; the Weight that will be ſuſtained thereby is eaſily found; *viz.* by multiplying the Power by the Weight.

E. gr. Suppoſe the Power 50 Pounds, and the Number of Pullies 5. The Weight they will balance is 250.

In like manner the Number of Pullies being given, together with the Weight ſuſtain'd; the Power is found by dividing the Weight by the number of Pullies; Thus, if the Weight be 900 Pounds, and the Number of Pullies 6, the Power will be 150.

Dechales obſerves, that 'tis found by experience, that a moderate Man ſtanding barely on the Ground will lift 150 Pound; whence the ſame Man by means of a *Polyſpaſton* conſiſting of 6 Pullies, will be able to ſuſtain 900 Pounds.

The Power of the Pullies will be ſtill exceedingly increas'd by joining ſeveral *Polyſpaſtons*.

To find the Number of Pullies a *Polypaſton* is to conſiſt of to raiſe a given Power.—Divide the Weight by the Power; the Quotient is the Number required.

Suppoſe, *e. gr.* the Weight 600 Pounds, and the Power 150; the Pullies will be 4, whoſe Diameters are to be all equal, ſuppoſing two of them upper and two lower, moveable on the ſame common Axes.

POLYSPERMOUS, in Botany, is applied to ſuch Plants as have more than four Seeds ſucceeding each Flower, without any certain Order or Number. See PLANT.

Theſe, Mr. *Ray* makes a diſtinct kind of Herbs; calling them *Herbæ ſemine nudo polyſpermæ*; where, by *Semine nudo*, is meant ſuch Seeds as do not put off ſpontaneouſly the Integuments or Coverings, which they either have, or appear to have, but fall off cover'd from the Mother-Plant. See SEED.

The Word is form'd from the *Greek* πολύ, *much*, and σπέρμα, *Seed*.

Polyſpermous Herbs are ſubdivided into 1° Such as have a Calyx or Perianthium, conſiſting either firſt of *three Leaves*, and the Flower Tripetalous, as the Plantago Aquatica, and the Sagittaria, both Water-Plants; or the Flower Polypetalous, and

the Calyx falling with it, as the Chelidonium minus; or remaining after the Flower is dropp'd, as in the Hepatica Mobilis. 2° Of *five Leaves*, in some deciduous with the Flower, as in the Ranunculus; in others Perennial, as in the Helleborus niger ferulaceus; or annual, as in the Flos Adonis. 3° Of *eight Leaves*, as the Malva and Alcea. 4° Of *ten Leaves* as the Carrophylla, Fragrarius, Pentaphyllum, Tormentilla, Argentina, Althea, and Pentaphylloides.

2° Such as have no Calyx, or Perianthium; as the Clematis, Filipendula, Ulmaria, Anemone Nemorum, Pulsatilla, *&c.*

POLYSYLLABICAL *Ecchoes*, those which repeat many Syllables, or Words. See ECCHO.

POLYSYLLABLE, in Grammar, a Word consisting of more than three Syllables. See WORD and SYLLABLE.

A Word of one Syllable is called a *Monosyllable*; one of two, *Disyllable*; one of three, *Trisyllable*; one of four or more, *Polysyllable*. See MONOSYLLABLE, *&c.*

The Word comes from the *Greek* πολυ, *multum*, and συλλαβη, *Syllable*.

POLYSYNDETON, in Rhetoric, a Figure consisting in an abundance of Conjunctions Copulative. See FIGURE and COPULATIVE.

Such is, *Me, præ ceteris & colit & observat & diligit.*—— In opposition to this stands *Asyndeton*. See ASYNDETON.

POLYTHEISM, the Doctrine or Belief of a Plurality of Gods. See GOD.

The Word comes from the *Greek* πολυ, *multum*, and θεος, *Deus*. See IDOLATRY, *&c.*

POMADA, an Exercise of vaulting the wooden Horse, by laying one Hand over the Pommel of the Saddle.

POMATUM, or POMADO, a Composition of Apples, with Lard and other fatty Substance; used by way of Unguent on many Occasions, particularly for Diseases of the Skin, Pimples, Scurfs, *&c.* to soften the Hands, render the Skin smooth, the Complexion fresh, *&c.* See UNGUENT.

Pomatums are occasionally made with Jessamines, Oranges, Jonquills, Tuberoses, *&c. i. e.* they are perfumed with the Odours of those Flowers.

The best is said to be that prepared of Kid's Grease, Pippins, an Orange slic'd, with a Glass of Rose-Water, and half a Glass of White-wine, boil'd and strain'd, and at last sprinkled with Oil of sweet Almonds.

The Unguentum *Pomatum* prescribed in the College Dispensary consists of Hog's Lard, Sheep's Suet, the Apple call'd Pomewater, Rose Water, and Orrice Root, boil'd till the Apples are soft, strain'd and perfumed with Oil of Rhodium.

Dr. *Quincy* observes, that the Apple is of no Significancy at all in the Recipe; and that the common *Pomatum* sold in the Shops is only Lard beat into a Cream, with Rose-Water, and scented with Lemons, Thyme, or the like.

POME, among Gardeners.——To *Pome* is to grow or knit into a round Head, somewhat like an Apple.

Thus, they say a *Cabbage begins to Pome*, &c.——They sometimes use the Term *to cabbage* in the same Sense.

POMEGRANATE, *Granatum*, a medicinal Fruit, in Form of an Apple or Quince; full of Seeds or Kernels, enclos'd within a reddish Pulp, sometimes sweet, sometimes acid. See FRUIT.

It is denominated from its Abundance of Grains or Kernels; *q. d. Pomum Granatum*, a *Kernel'd Apple*; or from the Country where it was anciently produced, *viz. Granada*.

The *Granada* Tree is of two Kinds, the one wild, which produces a Kind of Flowers used in Pharmacy, called *Balaustia*. See BALAUSTIA.

The other cultivated in Gardens; whereof there are again two Kinds; the one only bearing Flowers; the other, both Flowers and Fruit.——The Flowers of each are inclosed in an oblong purple Calyx, resembling a Bell.

The Trees never grow high; their Branches are a little prickly; their Leaves resemble those of the greater Myrtle, and their Fruit, which is composed of a great Number of red angular Grains, sometimes sweet, sometimes sour, and sometimes vinous, according to the Quality of the Tree, are all inclos'd in little distinct Cells, and cover'd, in common, with a thick browniſh Rind; over this grows a Kind of Crowning, of the same Nature with the Rind, form'd of a Production of the Calyx.

In the general, *Pomegranates* are not only agreeable to the Taste, but good for the Stomach; and of considerable Use in Medicine.

Of the Grains are made Syrups and Conserves; and the Rind, which is held very astringent, is an Ingredient in several Remedies and Ptisans, for Dysenteries, Diarrhea's, Lienteries, Hæmorrhagies, and Relaxations of the Gums. ——The Ancients used the Rind as the Moderns do Sumac, in the Preparation of Leather.

The Rind ought always to be dry'd, after the Grains are taken out; that dry'd without scouping always tasting musty, and more likely to increase the Distempers than cure them.

As to the Conserve, there is but little of the true sold; being very difficult to make.—That which ordinarily passes for it is only Sugar melted down; to which they give the Colour and sharp Taste, with Cochineal, Cream of Tartar, and Alumn.

POMEIS, in Heraldry, are green Roundles; so called by the *English* Heralds, who express different colour'd Roundles by distinct Names. The *French*, who content themselves to denote the different Colour of the Roundle, call them *Torteaux Vert*. See TORTEAUX.

POMIFEROUS, *q. d. Apple-bearing*, in Botany, a Name given to those Plants which have the largest Fruit, and are cover'd with a thick hard Rind; by which they are distinguish'd from the Bacciferous, which have only a thin Skin over the Fruit. See PLANT and BACCIFEROUS.

The *Pomiferous* Kind have a naked monopetalous Flower, divided into five Partitions, and growing on the Top of the succeeding Fruit.——They are divided into 1°. *Capreolate*, or those creeping along the Ground, *&c.* by means of Tendrils; as the Cucurbita, Melo Cucumis, Cepo, Belsamina, Anguria, and Colocynthis. See CAPREOLI.

And, 2°. without Capreoli, or Tendrils, as the Cucurbita Clypetea, or Melo-Cepo Clypeiformis.

The Word is form'd from *Pomum*, Apple, and *fero*, I bear.

POMMEE, or POMMETTE in Heraldry.—a *Cross-Pommee* or *Pommette*, call'd also a Trophee, is a Cross with a Ball or Knob at each End. See CROSS.

POMMEL, or PUMMEL in the Manage, a Piece of Brass or other Matter a-top and in the Middle of the Saddle-Bow, to which are fasten'd the Holsters, Stirrup Leathers, *&c.* See SADDLE.

POMMEL is also a round Ball of Silver, Steel, or the like, fix'd at the End of the Guard and Grasp of a Sword; to serve in some measure as a Counterpoise.

Balzac observes, that there are still extant Charters and Privileges granted by *Charlemaign*, and sealed with the *Pommel* of his Sword, which, ordinarily, he promises to defend with the same Sword. See SEAL, SIGNATURE, *&c.*

POMP. See CIRCUS, CAVALCADE, *&c.*

POMPHOLYX, or *white Calamine*, in Pharmacy, the Flowers of Brass; or a white, light and friable Substance, found adhering to the Lid or Covercle of the Crucibles or Furnaces, wherein Copper is melted with Calamine Stone, for the making of Brass. See BRASS, CALAMINE, *&c.*

It is esteem'd detersive and desiccative, tho' only apply'd externally; and much used in divers Kinds of Fevers: tho' its Violence requires its being used with great Precaution.

The Apothecaries sometimes call it *Nil* or *Nihili Album*, and sometimes *white Tutty*, in regard of its Resemblance thereto in Virtue. See TUTTY.

The Word is form'd from the *Greek* πομφολυξ, q. d. *Bubble arising on Water*.

POMUM *Adami*, in Anatomy, a Protuberance in the Fore-part of the Throat. See THROAT.

Some fancy it thus called upon a strange Conceit, that a Piece of the forbidden Apple, which *Adam* eat, stuck by the Way, and was the Occasion of it.

In reality, it is only the Convex Part of the first Cartilage of the Larynx, called *Scutiformis*. See LARYNX and SCUTIFORMIS.

POND, in Geography, a little Lake, which neither receives nor emits any River. See LAKE and RIVER.

PONDERARE, in our ancient Customs, a Method of curing sick Children.

The Practice was, *ponderare*, to weigh, the sick Child, at the Tomb of some Saint, counterpoising, or ballancing the Scale with Money, Wheat-Bread, or any other thing the Parents were willing to offer to God, his Saints, or the Church.—— But a Sum of Money was always to make Part of the Counter-balance. By this Means the Cure was effected.—— *Ad sepulchrum Sancti, Nummo se ponderabat.*——

PONDUS, *Weight*. See WEIGHT.

PONDUS, in ancient Records, is a Duty paid to the King according to the Weight of Merchandizes. See POUNDAGE.

PONDUS *Regis*, the Standard-Weight, anciently appointed by the King. See STANDARD.

PONE, a Writ, whereby a Cause depending in the County, or other inferior Court, is removed to the *Common Pleas*. See WRIT, *&c.* COURT, *&c.*

PONE *per Vadium*, is a Writ commanding the Sheriff to take Surety of one for his Appearance at a Day assign'd. See SURETY, VADIUM, *&c.*

PONIARD, a little pointed Dagger, very sharp-edg'd; bore in the Hand, or at the Girdle, or hid in the Pocket.

The *Poniard* was anciently in very great Use, but is now in good measure set aside, except among Assassins. See ASSASSIN.

Sword and *Poniard* were the ancient Arms of Duelists; and are said to continue still so among the *Spaniards*.—The Practice of Sword and *Poniard* still make a part of the Exercise tanght by the Masters of Defence.

The Word is form'd from the *French Poignard*, and that from *Poignee*, Handful.

PONS *Varoli*, or *Varolii*, or PONS *Cerebri*, in Anatomy, the upper Part of a Duct in the third Ventricle of the Brain; situate in the Cerebellum, and leading to the Infundibulum. See BRAIN, VENTRICLE, INFUNDIBULUM, *&c.*

It is thus called from its Discoverer *Varolius*, an *Italian* Physician, who flouriſh'd in the University of *Padua* about the Year 1572.

PONTAGE, a Contribution towards the Maintenance Repairing, and Rebuilding of Bridges. See BRIDGE.

This was, antiently, one of three general National Charges, whence no Perſon of any Degree whatever was exempted.

The three Things call'd *Trinoda Neceſſitas*, whence, *Ingulfus* tells us, *Nulli poſſunt laxari*, were, the Expedition to the Wars, the Building of Caſtles, and the Building and Repairing of Bridges. See TRINODA.

Mr. *Selden*, in his Notes on *Eadmerus*, obſerves, that *ne quidem Epiſcopi, Abbates, & Monachi immunes erant.*——And *Mat. Paris* adds, *Anno* 1244, that in all Grants of Privileges to the Monaſteries, thoſe three Things were always excepted, for the Publick Good, and that the People might be better able to reſiſt an Enemy.

PONTAGE is alſo a Due anciently belonging to the Lord of the Fee, for Perſons or Merchandizes, that paſs over Rivers, Bridges, *&c.* call'd in the later Latin *Pontagium*, or *Pontonagium*, Pontage.

PONTIBUS *reparandis*, a Writ directed to the Sheriff, willing him to charge one or more to repair a Bridge, to whom it belongs.

PONTIFICAL, PONTIFICALE, a Book of the Rites and Ceremonies belonging to Pontiffs, Biſhops, Popes, *&c.* See RITUAL and CEREMONIAL.

PONTIFICALIA, the Robes and Ornaments, wherein a Biſhop performs Divine Service. See EPISCOPAL.

PONTIFICAT, the State or Dignity of a Pontiff.

Cæſar reform'd the Calendar in the Time of his *Pontificate*. See CALENDAR.

The Concordat was paſs'd in the *Pontificate* of *Leo* X. See CONCORDAT.

There was a *Pontificate* that only laſted twenty four Hours.

PONTIFEX, PONTIFF, *High-Prieſt*; a Perſon who has the Intendence and Direction of divine Worſhip, as the offering Sacrifices and other Religious Solemnities. See PRIEST, SACRIFICE, *&c.*

The *Romans* had a College of *Pontiff*, and over thoſe a Soveraign *Pontiff*, or *Pontifex Maximus*, inſtituted by *Numa*; whoſe Function it was to preſcribe the Ceremonies each God was to be worſhipped withal, compoſe the Rituals, direct the Veſtals, and for a good while to preform the Buſineſs of Augury; till on ſome ſuperſtitious Occaſion he was prohibited intermeddling therewith. See AUGUR.

He conſecrated the Statues of the Gods, e're they were put up in Temples; bleſs'd the Figures of ſome of *Jove*'s Thunderbolts, to preſerve the People from Harms; and compiled their Statutes. See ANNALS.

The Jews too had their *Pontiff* or High-Prieſt; and among the *Romaniſts* the Pope is ſtill ſtiled the *Soveraign Pontiff*. See POPE.

Authors differ about the Etymology of this Word: Some derive it from *poſſe facere*, that is, from the Authority the *Pontiffs* had to ſacrifice; others, as *Varro*, from *Pons*, becauſe they built the *Sublicial* Bridge, that they might go and offer Sacrifice on the other ſide of the *Tiber*.

PONTON, or PONTOON in War, a little floating Bridge, made of Boats and Planks. See BRIDGE.

The *Ponton* is a Machine conſiſting of two Veſſels, at a little Diſtance, join'd by Beams; with Planks laid croſs for the Paſſage of the Cavalry, the Canon, Infantry, *&c.* over a River, an Arm of the Sea, *&c.*

The late invented *Ponton* is of Latten, furniſh'd with an Anchor, *&c.* to fix it.——To make a Bridge ſeveral of theſe are diſpoſed two Yards aſunder, with Beams a-croſs them, and over thoſe, Boards.

They are alſo link'd to each other, and faſten'd on each Side the River, by a Rope rung thro' a Ring in each of their Heads, and fix'd to a Tree or Stake on either Shore.——The whole makes one firm, uniform Bridge, over which a Train of Artillery may paſs.

Cæſar and *Aulus Gellius* both mention *Pontons*; but theirs were no more than a Kind of ſquare flat Veſſels, proper for the carrying over of Horſe, *&c.* Ours however take their Names from them; thoſe Authors call them *Pontones*, of *Ponto*.

PONT-*Volant*, q. d. *Flying Bridge*; a Kind of Bridge uſed in Sieges; made of two ſmall Bridges laid one over another, and ſo contrived by means of Cords and Pullies placed along the Sides of the under Bridge, that the upper may be puſh'd forwards, till it joins the Place where it is fix'd: the whole Length of both however not to be above five Fathom long, leaſt they ſhould break with the Weight of the Men. See BRIDGE.

POOL, is properly a Reſervoir of Water, ſupply'd with Springs, and diſcharging the Overplus by Sluices, Defenders, Wears, and other Cauſe-ways. See SLUICE, *&c.*

Mill-POOL is a Stock of Water, by whoſe Force, *&c.* the Motion of a Mill is effected. See MILL.

POOP, *Puppis*, the Stern or uppermoſt Part of a Ship's Hull. See PUPPIS and STERN.

POPE, PAPA, the Chief or Head of the Roman Catholick Church. See PAPA.

Father *le Cointe* in his Annals obſerves, from St. *Jerom*, St. *Cyprian*, St. *Gregory*, St. *Auguſtin*, and *Sidonius Apollinaris*; that the Title *Pope* was anciently given to all Biſhops. See BISHOP.

They were alſo addreſs'd under the Term *Holineſs*, and *Beatitude*; and their Churches call'd *Apoſtolical* Sees. See HOLINESS, APOSTOLICAL, *&c.*

He adds, that 'twas only in the Eleventh Century, that *Gregory* VII. firſt appointed, in a Synod held at *Rome*, that the Title *Pope* ſhould be reſtrain'd to the Biſhop of *Rome*, as a particular Diſtinction and Prerogative.

In the Council of the Lateran, held under *Innocent* III. the *Pope* was declared *Ordinary of Ordinaries*. See ORDINARY.

The *Pope* is choſe by the Cardinals, out of their own Body. See ELECTION, CARDINAL, *&c.*

His See is at *Rome*, whence he iſſues out his Orders, call'd *Briefs* and *Bulls*, throughout the Catholic World. See BULL, *&c.*

Hiſtory mentions a *Popeſs*, *Joan.*——The Reality hereof has been oppoſed and defended by many learned Men.——The Tradition might poſſibly take its Riſe from the Weakneſs of Pope *John* VIII. in reſtoring *Photius* to his Communion, and owning him as true Patriarch: For he hence got the Appellation of Woman; as that Prince call'd King *Mary* did, by leaving himſelf to be govern'd by Q. *Mary* his Wife. See KING and QUEEN.

M. *Spanheim*, Profeſſor of Theology at *Leiden*, has lately wrote very amply on the Subject; and ſhews it to be a Queſtion *de facto*, ſcarce determinable at this Time of Day.

POPE, *Papa*, among the *Romans*, was the Name of certain Inferior Officers, or Miniſters of Sacrifice. See SACRIFICE.

The Buſineſs of the *Papæ* was to whet the ſacrificing Knife, to bind the Victim, prepare the Water, and other Neceſſaries, to ſmite the Victim, *&c.*

They did their Office naked to the Girdle, and crowned with Laurel.

POPLES in Anatomy, that Part where the Thigh is joined to the Tibia. See THIGH and TIBIA.

POPLICANI, *Populicani*, or PUBLICANS, a Name given in the Weſt to the *Manichees*; or to a particular Branch thereof, called in the Eaſt *Paulicians*. See PAULICIAN.

POPLITEA, in Anatomy, is the third Vein of the Leg. See VEIN.

It ariſes from the Heel, where it is form'd out of ſeveral Branches, coming both from the Heel and Ankle.

It lyes pretty deep in the Fleſh; and aſcending up to the Ham, terminates in the Crural Vein. See CRURAL, *&c.*

POPLITÆUS, or *Sub*-POPLITÆUS, a Muſcle, which ariſes from the external and inferior Protuberance of the Thigh-Bone, and paſſing over the Joint obliquely, is inſerted into the ſuperior and internal Part of the Tibia.—It aſſiſts in bending of the Leg, and turns it inwards. See LEG.

POPPY, *Papaver*, a medicinal Plant, famed for its Narcotic Quality. See NARCOTIC.

There are divers Kinds; ſome wild, ſome cultivated, white, purple, ſcarlet; *&c.* But thoſe moſt uſed are the white, *Papaver Hortenſe ſemine albo*; and black, *Papaver Hortenſe ſemine nigro*.

The Heads of theſe Plants are of ſingular Virtue to promote Sleep, aſſwage Pain, *&c.* they ſtop Diarrhœa's, Hæmorrhages, *&c.*

Of the Juice of theſe is prepared the *Meconium* ſold in the Shops. See MECONIUM.

The Opium brought from *Turky* is an Extract of the Juice of *Turky* Poppies. See OPIUM.

POPULAR, POPULARIS, ſomething relating to the People.

The *Roman* Nobility was diſtinguiſh'd into two Factions; the *Optimates*, who adhered ſtrenuouſly to the Miniſtry, the Senate, *&c.* in oppoſition to the People.

And the *Populares*, who favour'd the Rights and Pretenſions of the People, in oppoſition to the *Nobleſſe*.

POPULAR *Diſeaſes*, are ſuch as become common, and run thro' the Body of the People, call'd alſo *Epidemic Diſeaſes*. See EPIDEMIC.

Hippocrates has wrote expreſsly *de Morbis Popularibus*. See DISEASE.

POPULAR *Errors*, are ſuch as People imbibe from one another, by Cuſtom, Education, and Tradition, without having conſider'd the Reaſons or Foundations thereof. See ERROR.

POPULEUM, or POPULNEUM, in Pharmacy, an Unguent prepared of the Buds of black Poplar, Violet Leaves, Navel-wort, and Lard, bruis'd and macerated; to which are added Bramble-tops, Leaves of black Poppies, Mandragora, Henbane, Nightſhade, Lettice, and Burdock, boil'd in Roſe-water, and ſtrain'd.

It is much uſed as a Cooler, in Burns, Scalds, and all Sorts of Inflammations; and to aſſuage arthritic Pains.

PORRACEOUS, in Medicine, a Term applied to the Bile, when its Colour is green, approaching that of a Leek. See BILE.

The Word is form'd from the Latin, *Porrum*, Leak.

POR-

PORCELAIN, or PURCELAIN, a delicate ſort of Earthen-Ware, chiefly manufactured in *China*, and thence, alſo, call'd *China*, or *China-Ware*; but brought into *Europe* from other Parts of the Eaſt, eſpecially *Japan*, *Siam*, *Surat*, and *Perſia*. See POTTERS-*Ware*.

Scaliger, and *Cardan*, tho' generally of contrary Sentiments, are yet agreed, that what the *Romans* call'd *Vaſa Myrrhina*, which were firſt ſeen at *Rome* in *Pompey*'s Triumph, and which afterwards became ſo very precious; were the ſame with the *Porcelain* of our Times. See MYRRHINE.

This may be true: But if the Opinion be only founded on *Pliny*'s Deſcription of theſe Veſſels, one would rather take 'em for a kind of precious Stones, of a whitiſh Colour, but variouſly vein'd and variegated; found in ſome Parts of *Perſia*.

Be this as it will, 'tis certain both thoſe Authors are miſtaken, when they tell us, that *Porcelain* is made of Egg and Oiſter-Shells beaten ſmall, and buried under ground for 80 or 100 Years. The Account we ſhall here give, will put that out of queſtion.

'Tis not known who was the Inventor of *Porcelain*; the *Chineſe* Annals, which uſe to contain every thing in any wiſe memorable, are perfectly ſilent about it; nor do we know much more of the Time of its Invention. Only, 'tis certain it muſt have been before the beginning of the fifth Century: The Annals of *Feouldam* relating, that from the ſecond Year of the Reign of the Emperor *Tam*, about the Year of Chriſt 442, the Workers in *Porcelain* of that Province had alone furniſh'd the Emperors therewith.

There is *Porcelain* made in ſeveral Provinces of *China*; particularly thoſe of *Fou-Kien*, *Canton*, and *Kimtetchim*; but that of the laſt is moſt eſteem'd.

The *Chineſe* call the *Porcelain*, *Thski*: The word *Porcelain* is but little known there, except among a few Workmen and Merchants; and ſeems derived from the *Portugueſe Porcellane*, a Cup, or Porringer.

Porcelain makes a very curious Article in Commerce, and even in Natural Hiſtory. Its Manufacture has hitherto paſs'd for a Myſtery in *Europe*: and that in ſpite of all the Endeavours of the Jeſuit-Miſſionaries to penetrate into the Secret. The Veil, however, is at length drawn; and in a Letter of F. *Entrecolles* to F. *Orry*, from *Jaotcheou*, dated *September* the 1ſt, 1712, and lately publiſhed in *French*, the whole Proceſs is deſcribed in all its Circumſtances; with an Extract whereof we ſhall here gratify the curious Reader.

The Art of making Porcelain, *or China-Ware; from a Letter of F.* d'Entrecolles, *a Jeſuit-Miſſionary in* China.

In the Manufacture of *Porcelain*, there are four eſſential things to be conſider'd; *viz.* The Matter it is made of. The Art of forming the Veſſels, and other Works. The Colours wherewith it is painted. And, laſtly, the Baking, or giving it the proper degree of Fire. Each of which will make the Subject of a ſeveral Article.

Matter, whereof Porcelain, *or China-Ware, is made.*

There are two kinds of Earths, and as many kinds of Oils or Varniſhes uſed in the Compoſition of *Porcelain*. The firſt Earth, call'd *Kaolin*, is beſet with glittering Corpuſcles; the ſecond, call'd *Petunſa*, is a plain white, but exceedingly fine, and ſoft to the Touch. They are both found in Quarries twenty or thirty Leagues from *Kimtetchim*, a City which produces the fineſt *Porcelain-Works* in all *China*; and hither theſe Earths, or rather Stones, are brought in an infinite Number of little Barks, inceſſantly paſſing up and down the River *Joatcheou* for that purpoſe. The *Petunſa's* are brought in form of Bricks; having been ſo cut out of the Quarries, where they are naturally Pieces of a very hard Rock. The white of the beſt *Petunſa* is to border a little on green.

The firſt Preparation of theſe Bricks, is to break and pound 'em, firſt into a coarſe Powder with Iron-Mallets; then in Mortars with Peſtles that have Stone-Heads, arm'd with Iron, and wrought either with the Hand, or with Mills.

When the Powder is almoſt render'd impalpable, they throw it in a large Urn full of Water, ſtirring it briskly about with an Iron Inſtrument. After the Water has reſted a little while, they skim off from the Top a white Subſtance form'd there, of the thickneſs of four or five Fingers; and diſpoſe of this Scum or Cream in another Veſſel of Water. They then ſtir again the Water of the firſt Urn, and again skim it, and thus alternately till there remain nothing but the Gravel of the *Petunſa's* at bottom; which they lay a-freſh under the Mill, for a new Powder.

As to the ſecond Urn, wherein are put the Skimmings of the firſt; when the Water is well ſettled, and become quite clear, they pour it off; and with the Sediment, collected at bottom in form of a Paſte, fill a kind of Moulds: whence, when almoſt dry, they take it out, and cut it into ſquare Pieces, which are what they properly call *Petunſa's*; reſerving 'em to be mix'd with the *Kaolin* in the Proportion hereafter aſſign'd.

Theſe Squares are ſold by the hundred, but 'tis very rare to meet with 'em un-falſify'd: The Workmen, who, like the reſt of the *Chineſe*, are errant Knaves in their Dealings, uſually mixing Refuſe along with 'em; ſo that they are uſually obliged to purify 'em e'er they can be employ'd.

The *Kaolin*, which is the ſecond Earth uſed in *Porcelain*, is much ſofter than the *Petunſa*, when dug out of the Quarry; yet is it this, which, by its mixture with the other, gives the Strength and Firmneſs to the Work. F. *Entrecolles* obſerves, that ſome *Engliſh* or *Dutch*, having procured ſome *Petunſa's* to be bought, privately; upon their attempting to make *Porcelain* at their Return into their own Country, could not ſucceed for want of taking *Kaolin* along with it. Which the *Chineſe* being appriſed of, ſaid, drolling, "That the *Europeans* were wonderful People to "go about to make a Body, whoſe Fleſh was to ſuſtain "itſelf without Bones."

The Mountains whence the *Kaolin* is dug, are cover'd without-ſide with a reddiſh Earth; the Mines are deep, and the Matter is found in Glebes, or Clods, like the Chalk in ours. The Author is of opinion, that the white Earth of *Malta* is not much different from the *Kaolin*, except that it wants the ſilver'd Particles. The Preparation of *Kaolin* is the ſame with that of the *Petunſa's*, except that the Matter being leſs hard, leſs Labour is required.

The *Oil* or *Varniſh*, which makes the third Ingredient in *Porcelain*, is a whitiſh, liquid Subſtance, drawn from the hard Stone whereof the *Petunſa's* are form'd; that which is whiteſt, and whoſe Stains are the greeneſt, being always choſen for this purpoſe.

The Manner of preparing the Oil, is thus: The *Petunſa's* being waſh'd, undergo the ſame Preparations as for making the Squares; excepting that the Matter of the ſecond Urn is not put in Moulds, but the fineſt Part of it taken to compoſe the Oil. To an hundred Pounds of this Matter they caſt a Mineral Stone call'd *Chekao*, reſembling our Alum: this Stone is firſt heated red-hot, and thus reduced in a Mortar into an impalpable Powder; and ſerves to give the Oil a Conſiſtence; which, however, is ſtill to be kept liquid.

The Oil of Lime makes the fourth Ingredient; the Preparation whereof is much more tedious and circumſtantial. They firſt diſſolve large Pieces of quick Lime, and reduce it to a Powder by ſprinkling Water on it; on this Powder they lay a Couch of dry Fern, and on the Fern another of the ſlack'd Lime, and thus alternately, till they have got a moderate Pile; which done, they ſet fire to the Fern: the whole being conſumed, they divide the Aſhes that remain on new Couches of dry Fern; ſetting 'em on fire as before. And this they repeat five or ſix times ſucceſſively, or even more; the Oil being ſtill the better as the Aſhes are oftner burnt.

In the Annals of *Feouldam* 'tis ſaid, inſtead of Fern they antiently uſed the Wood of a kind of Medlar-Tree; and that 'twas this gave the antient *Porcelains* that admirable Hue, which the Moderns cannot come up to for want of that Wood. 'Tis certain, however, the Quality of the Fern and Lime contribute very much to the goodneſs of the Oil.

A Quantity of theſe Aſhes of Fern and Lime are now thrown into an Urn full of Water; and to an hundred Pounds of Aſhes is added a Pound of *Chekao*, which diſſolves therein. The reſt being performed after the ſame manner as in preparing the Earth of the *Petunſa's*; the Sediment found at the bottom of the ſecond Urn, and which is to be kept liquid, is what they call the Oil of Lime; which the *Chineſe* eſteem as the Soul of the former Oil, and which gives the *Porcelain* all its Luſtre. This Oil is eaſily ſophiſticated by adding Water to increaſe the Quantity; adding at the ſame time proportionably of the ſame *Chekao* to maintain the Conſiſtence. Ten Meaſures of Oil of *Petunſa* uſually go to one of Lime. To have the Mixture juſt, the two Oils ſhould be equally thick.

Manner of forming the Veſſels, and other Works of Porcelain.

The firſt thing is to purify the *Petunſa* and *Kaolin*; which, for the firſt, is done after the manner already deſcribed in preparing the Squares. For the ſecond, as its ſoftneſs makes it diſſolve eaſily, 'tis ſufficient, without breaking it, to plunge it in an Urn full of Water in an open Basket. The

Dregs that remain are perfectly uſeleſs, and are emptied out of the Work-houſe when a quantity is got together.

Theſe Work-Houſes are properly vaſt Yards wall'd round, with Sheds, and other Conveniencies for the Workmen to work under; as well as other Buildings for 'em to live in: It is almoſt inconceivable what number of Perſons are employ'd in theſe Works; there being ſcarce a Piece of *Porcelain* but paſſes thro' above twenty hands, e'er it come to the Painter's Work-Houſe; and above ſixty e'er it be brought to Perfection.

To make a juſt Mixture of *Petunſa* and *Kaolin*, regard muſt be had to the Fineneſs of the *Porceldin* to be made: For the finer *Porcelains*, they uſe equal Quantities; four Parts of *Kaolin* to ſix of *Petunſa*, for moderate ones; and never leſs than one of *Kaolin* to three of *Petunſa*, for the coarſeſt.

The hardeſt Part of the Work is the Kneading and Tewing the two Earths together; which is done in a kind of large Baſons, or Pits, well paved and cemented, wherein the Workmen trample continually with their Feet, relieving one another, till the Maſs be well mixed, grow hard, and become of the Conſiſtence required to be uſed by the Potter.

The Earth, when taken out of the Baſons, is kneaded a ſecond time, but piece-meal, and with the Hands, on large Slates for the purpoſe; and on this Preparation, in effect, it is, that the Perfection of the Work depends; the leaſt heterogeneous Body remaining in the Matter, or the leaſt Vacuity that may be found in it, being enough to ſpoil the whole. The ſmalleſt Grain of Sand, nay, ſometimes a ſingle Hair, ſhall make the *Porcelain* crack, ſplinter, run, or warp.

The *Porcelain* is faſhion'd or form'd either with the Wheel, like Earthen-Ware; or in Moulds. See POTTERY. Smooth Pieces, as Cups, Urns, Diſhes, *&c.* are made with the Wheel. The reſt, *i. e.* ſuch as are in Relievo, as Figures of Men, Animals, *&c.* are form'd in Moulds, but finiſh'd with the Chiſſel.

The large Pieces are made at twice; one half of the Piece is raiſed on the Wheel by three or four Workmen, who hold it till it have acquired its Figure; which done, they apply it to the other half, which has been form'd in the ſame manner; uniting the two with *Porcelain-Earth*, made liquid by adding Water to it, and poliſhing the Juncture with a kind of Iron Spatula.

After the ſame Manner it is that they join the ſeveral Pieces of *Porcelain* formed in Moulds, or by the Hand; and after the ſame Manner they add Handles, *&c.* to the Cups and other Works form'd with the Wheel.

The Moulds are made after the Manner of thoſe of our Sculptors, *viz.* of divers Pieces which ſeverally give their reſpective Figure to the ſeveral Parts of the Model to be repreſented; and which are afterwards united to form a Mould for an entire Figure. The Earth they are made of is yellow and fat, dug out of its proper Quarries, whereof there are abundance about *Kimtetchim*. It is kneaded like glaz'd Earth, and when ſufficiently mellow, fine, and moderately dry, beating it ſtoutly, they form it into Moulds, according to the Works required, either by Hand, or on the Wheel. Theſe Moulds are ſold very dear, but laſt a long time. See MOULD.

All the Works made in Moulds are finiſh'd by the Hand, with ſeveral Inſtruments proper to dig, ſmooth, poliſh, and to touch up the Strokes that eſcape the Mould; ſo that 'tis rather a Work of Sculpture than of Pottery. There are ſome Works whereon Relievo's are added, ready made, as Dragons, Flowers, *&c.* Others that have Impreſſions in Creux; which laſt are engraven with a kind of Puncheons. In the general, all *Porcelain* Works are to be ſhelter'd from the Cold; their natural Humidity making 'em liable to break when they dry unequally.

To conceive the Number of Hands each Piece of *Porcelain* paſſes thro' e'er perfect; we ſhall cloſe this Article with what F. *Entrecolles* inſtances of a common Cup, e'er it be fit for the Painter: The Cup begins with the Potter, who has the Management of the Wheel, where it acquires its Form, Height, and Diameter. This Operator has not above a Farthing *Sterling* for a Plate furniſh'd with twenty ſix Cups; accordingly, they go out of his Hands exceedingly imperfect, eſpecially towards the Feet, which are only unform'd Lumps of Earth, to be afterwards cut with the Chiſſel when the Cup is dry. When it comes from the Wheel, the Cup is received by a ſecond Workman, who fits it on its Baſe. A third takes it immediately from him, and applies it on a Mould to bring it to its true Form. This Mould is on a kind of Lathe. A fourth Workman poliſhes the Cup with a Chiſſel, eſpecially about the Edges; and brings it to the thinneſs neceſſary to make it tranſparent; in doing which, he moiſtens it from time to time, leſt its dryneſs ſhould make it break. When of its proper thickneſs, another Workman turns it gently on a Mould, to ſmooth its inſide; taking a deal of Care it be done equably, leſt any Cavity be form'd, or it warp. Other Workmen add, ſome, Ornaments in Relievo; others, Impreſſions in Creux; others, only Handles, as the quality of the Cup requires. At laſt, they round and hollow the Foot on the inſide with a Chiſſel; which is the Function of a particular Artiſt, who does nothing elſe.

This Multiplicity of Workmen, ſo far is it from retarding the Work, that it is found, by Experience, to go on the faſter for it; as well as to be the better done; each Workman, by a continual Attention to the ſame thing, becoming very dextrous at it: beſides ſaving the time of changing Inſtruments, *&c.*

Painting of Porcelain, *and the Colours uſed therein.*

The *Chineſe* Painters, eſpecially thoſe that meddle with human Figures, our Author obſerves, are all ſorry Workmen: He adds, that the defect is ſcarce any where ſo ſenſible as in the *Hoapei*, or *Porcelain-Painters*, among whom, ſetting aſide Flowers and Landskips, which are ſometimes tolerable, the greateſt Maſters are not to be compared to ordinary Apprentices among the *Europeans*, for the Beauty and Juſtneſs of Deſign. But it is otherwiſe with the Colours theſe *Hoapei* uſe; which are ſo exceedingly lively and brillant, that there is but little hopes our Workmen ſhould ever come to vye with 'em.

The Painting Work is diſtributed among a great Number of Workmen, in the ſame Laboratory: To one it belongs to form the colour'd Circle about the Edges of the *Porcelain*; another traces out Flowers, which another paints: This is for Waters, and Mountains alone; that for Birds, and other Animals; and a third for human Figures.

There are *Porcelains* made of all Colours; both with regard to the Grounds, and to the Repreſentations thereon. As to the Colours of Landskips, *&c.* ſome are ſimple; ſuch are all Blues, which are thoſe moſt uſually ſeen in *Europe*; others are mixed up of ſeveral Teints; and others, again, heighten'd with Gold.

The *Blue* is made of *Lapis Lazuli*, prepared by burning it the ſpace of twenty four Hours, in a Furnace, where it is buried up in Gravel, to the height of half a foot; when burnt, they reduce it into an impalpable Powder in *Porcelain* Mortars, not varniſh'd, and with Peſtles of the ſame Matter.

For the *Red*, they uſe Copperas, which they call *Haoſan*; a Pound of this they put in a cover'd Crucible, in the Lid whereof is left a little Aperture, thro' which the Matter on occaſion may be ſeen. The Crucible is heated with a Reverberatory Fire, till the black Smoke ceaſe to aſcend, and a fine red one ſucceeds it. A Pound of Copperas yields four Ounces of red Liquor, which is found at the bottom of the Crucible, tho' the fineſt part is that uſually adhering to the Lid and the Sides of the Crucible.

Beſide the natural Whiteneſs of the *Porcelain*, which is ſtill improved by the Oil wherewith they cover it, they have an artificial White, ſerving for the Grounds of *Porcelains* of ſeveral Colours; and made of a tranſparent Flint calcined like the *Lapis Lazuli*, and mixed with pulverized Ceruſs: The Proportion is an Ounce of the latter to half an Ounce of the former.

This Powder of Flint is likewiſe an Ingredient in moſt of the other Colours; *e. gr.* for *Green*, to three Ounces of *Tomhoapien*, or Scoria of beaten Copper, they uſe half an Ounce of Powder of Flint, and an Ounce of Ceruſs. *Violet* is made by adding a Doſe of White to the Green already prepared; the more Green is added, the deeper is the Violet. For *Yellow*, they uſe ſeven Drachms of White, and three of the Copperas-Red.

Moſt of theſe Colours are mixed up with Gum-Water, for Application; a little Saltpetre, ſometimes Ceruſs or Copperas, but more uſually Copperas alone, being firſt diſſolved in the Water. Indeed for *Porcelains* that are to be quite red, the Colour is uſually applied with Oil; *i. e.* with the common Oil of the *Porcelain*, or another made of the white Flints.

There is alſo another Red, call'd *blown Red*, becauſe in reality applied by blowing with a Pipe, one of whoſe Orifices is cover'd with a very fine Gauze. The bottom of this Tube is lightly applied to the Colour wherewith the Gauze is ſmear'd; when, blowing againſt the *Porcelain*, it becomes all ſprinkled over with little Points. This *Porcelain* is very rare, and of great Price.

Black Porcelain, which they call *Oumian*, has likewiſe its beauty: This Colour has a leady Caſt, like our Metal-burning Mirrors; and is uſually heighten'd with Gold. It is made of three Ounces of *Lapis Lazuli*, with ſeven of the common Oil of Stone; tho' that Proportion is varied, as the Colour is deſigned to be more or leſs deep. The Black is not given the *Porcelain* till it be dry, nor muſt the Work be put to the Fire till the Colour be dry.

The

The *Gold* is not apply'd till after the baking, and is re-baked in a Furnace for the purpoſe: To apply the Gold, they break and diſſolve it in Water at the bottom of a *Porcelain*, till a thin gilded Cloud ariſe on the Surface; it is uſed with Gum-Water, and to give it a Body, they add three parts of Ceruſs to thirty of Gold.

There is likewiſe a kind of *marbled Porcelain*, which is not made by applying the Marblings with the Pencil; but for Oil to varniſh it withal, uſing that of white Flints, which hatches and cuts the Work with a thouſand humourous Strokes, in manner of *Moſaic* Work. The Colour this Oil gives, is a white, ſomewhat aſhy: The *Porcelain* is call'd *Tſoniki*.

There are ſeveral other kinds of *Porcelain*; but they are ſuch as are rather for Curioſity than Uſe: The prettieſt are the Magic *Porcelains*, whoſe Colours only appear when fill'd with ſome Liquor. Theſe are made double: The outſide is white, and all laid out in Compartiments; the inſide is a ſolid Cup, of colour'd *Porcelain*; tho' the Cup is ſometimes of Glaſs, which has a better Effect than *Porcelain*. The Secret of theſe Magic *Porcelains*, which the *Chineſe* call *Kiatſim*, is almoſt loſt; yet F. *Entrecolles* has furniſh'd us with the following Account.

The *Porcelain* to be painted thus, muſt be very thin; and the Colours, which in other *Porcelains* are apply'd on the Outſide, are here apply'd on the Inſide: When the Colour is dry, they lay over it a light Couch of a Size made of the *Porcelain* Earth; by which means the Colour is inclos'd between two earthen *Laminæ*. When the Size is dry, they throw Oil within the *Porcelain*; and when it has enough, they return it to the Mould, and the Wheel, to render it as thin and tranſparent as poſſible. When dry, 'tis baked in the Common Furnace. The Colours here uſed are always the fineſt, and the Figures painted are Fiſhes; as the moſt ſuitable to the Liquor put within them, and in which they ſeem to ſwim.

The ſeveral Kinds of *Porcelains* above-mention'd, being quite painted, with their ſeveral Colours, and all the Colours dry, are to be poliſh'd, to prepare them to receive the Oil or Varniſh; which is done with a Pencil of very fine Feathers, moiſten'd with Water, and paſs'd lightly over, to take off even the ſmalleſt Inequalities.

The Oiling or *Varniſhing*, is the laſt Preparation of the *Porcelain*, before it be carry'd to the Furnace: This is apply'd more or leſs thick, and ſeldomer or oftener repeated, according to the Quality of the Work. For thin, fine *Porcelains*, they give two very thin Couches; to others one; but that one equivalent to the other two. There is a deal of Art in applying the Varniſh; both that it be done equally, and not in too great quantity. The Couches on the Inſide are given by Aſperſion, *i. e.* by caſting in as much Varniſh as is neceſſary: Thoſe on the Outſide, by Immerſion, or by plunging the Pieces in a Veſſel of Oil.

It muſt be obſerv'd, that the Foot is not yet form'd, but continues in a mere Maſs, till the Work has been varniſh'd: 'Tis at length finiſh'd on the Wheel; and when hollow'd, a little Circle is painted in it, and ſometimes a *Chineſe* Letter. This Painting being dry, the Foot is varniſh'd, and the Work now carry'd to the Furnace to be baked.

Our curious Author omits nothing; not even the Dexterity of the People, who carry the *Porcelain* to the Bake-houſe: He has been frequently ſurpriz'd, he tells us, to ſee a Man paſs thro' ſeveral Streets full of People, with two very long, narrow Boards, rang'd with *Porcelains* on his Shoulders; ſtill preſerving the Equilibrium ſo accurately, as not to do any damage to ſo frail a Commodity.

Manner of Baking Porcelain.

There are two Kinds of Ovens uſed in baking of *Porcelain*: Large ones, for Works that are only to come to the Fire once, which is the common way; and ſmall ones, for ſuch as require a double baking. The large ones are two *Chineſe* Fathoms deep, and almoſt four wide. They are form'd of a Mixture of three Earths; one whereof, Yellow and Common, makes the Baſis; the two others are ſcarcer, and dug out of deep Mines, wherein People can only work in Winter. One of them, call'd *Laotou*, is a very ſtrong, ſtiff Earth; the other *Teoutou*, oily.

The Sides and Roof of the Ovens are ſo thick, that one may lay the Hand on them, when the Fire is at its height, without danger of burning. At the Top of the Vault, which is in form of a Tunnel, is a large Aperture to give vent to the Flames and Smoke, which mount up inceſſantly, as ſoon as Fire is once ſet to the Furnace. Beſide the principal Aperture, there are four or five ſmall ones around; which, by being open'd and ſhut, ſerve to augment or diminiſh the Heat: like the Holes in the Chymiſts Furnaces, call'd *Regiſters*. The Hearth, which takes up the whole Breadth of the Furnace, is placed in Front, preciſely againſt the opening of the Door, and is two or three Foot deep, and two broad; People paſſing over it on a Plank, to go into the Furnace to diſpoſe the *Porcelain*.

As ſoon as the Fire is lighted, the Door is wall'd up; only leaving an Aperture for the Conveyance of Wood. Laſtly, the Bottom of the Oven is cover'd with Sand, wherein part of the firſt *Porcelain* Caſes are buried. The Furnace itſelf is uſually placed at the Extremity of a long, narrow Veſtible, which ſerves in lieu of Bellows; the cold Air and Wind being thus driven directly in the face of each Furnace.

Each Piece of *Porcelain* of any Note, is diſpoſed, in the Furnace, in its ſeparate Caſe, or Coffin. Indeed, as to Tea-Diſhes, *&c.* the ſame Caſe ſerves for ſeveral. The Caſes are all of the ſame Matter with the Furnace: They have no Lids; but ſerve each other mutually, the Bottom of a ſecond Caſe fitting into the Aperture of the firſt; and thus ſucceſſively, to the Top of each Column. Each Coffin, which is uſually of a Cylindrical Form, that the Fire may communicate itſelf more equably to the *Porcelains* incloſed, has, at bottom, a little Lay of very fine Sand, cover'd over with Duſt of *Kaolin*, that the Sand may not ſtick to the Work; and care is taken that the *Porcelain* may not touch the Sides of the Caſe. In the larger Caſes, which hold the ſmall Pieces; they leave the Middle vacant; in regard *Porcelains* placed there would want the neceſſary Heat. Each of theſe little Pieces is mounted on a little Maſſive of Earth, the thickneſs of two Crowns, cover'd with Powder of *Kaolin*.

F. *Entrecolles* obſerves, that the *Porcelains* are put in Caſes, to prevent any Diminution of Luſtre from the too violent Effect of a naked Fire; adding, that 'tis owing to theſe thick Veils, that the Beauty, or, as he calls it, the Complection of the *Porcelains*, is not tann'd by the Heat of the Fire.

As faſt as the Caſes are fill'd, a Workman ranges them in the Cavity of the Furnace; forming them into Piles or Columns; whereof thoſe in the middle are at leaſt ſeven Foot high: The two Caſes at the bottom of each Column are left empty; becauſe being partly ſunk in the Sand, the Fire has the leſs effect on them; and for the ſame reaſon, the uppermoſt one is left empty. In this manner is the whole Cavity of the Furnace fill'd with Columns, excepting that part preciſely under the grand Aperture.

In ranging the Caſes, they obſerve always to place the fineſt Piles of *Porcelain* in the Centre; the coarſeſt at Bottom; and thoſe that are high-colour'd, and conſiſt of as much *Petunſa* as *Kaolin*, and wherein the worſt Oil is uſed, at the Mouth.

Theſe Piles are all placed very near one another, and are bound together at top, at bottom, and in the middle, by Pieces of Earth; in ſuch manner, as that the Flame may have a free Paſſage among them, and inſinuate equally on all ſides: in which a great part of the Workman's Art lies, and on which the Perfection of the *Porcelain* much depends. Another thing to be obſerv'd, is, that a Furnace muſt never be ſet altogether with new Coffins; but half one, half t'other: the old ones at the bottoms and tops of the Pile, and the new ones in the middle. Indeed 'twere better to have them all burnt in a Furnace a-part, e'er they come to be uſed for *Porcelain*; as was antiently done. The Caſes, our Author obſerves, are brought ready prepared from a large Village on the River, a League diſtant from *Kimtetchim*. E'er burnt, they are yellow; and afterwards of a dark red.

When the Furnace is fill'd, they wall up the Door; only leaving a little Aperture for the throwing in of little Pieces of Wood, a Foot long, but very ſlender, to keep up the Fire. 'Tis then heated, by degrees, for the ſpace of a Day and Night; after which two Men, who relieve one another, continue to throw in Wood without any interruption. To know when the *Porcelain* is baked enough, they open one of the leſſer Holes of the Furnace, and with a pair of Tongs take off the Lid of one of the Piles. If the Fire appear very briſk and clear, and the Piles equally inflam'd; and eſpecially if the Colours of the *Porcelains* that are uncover'd, dart forth a noble Luſtre; the Coction is ſufficient, they diſcontinue the Fire, and wall up what remain'd of the Door of the Furnace.

If the Furnace be only fill'd with ſmall *Porcelains*, they take them out twelve or fifteen Hours after the Fire is extinct: If it be fill'd with larger, they defer opening it for two or three Days. In this the modern Practice differs from the antient; wherein the Door was not open'd till after ten Days for the large Pieces, and five for the ſmall ones.

One thing very ſurprizing, and almoſt inconceivable, F. *Entrecolles* obſerves, is, that there are never found any Aſhes on the Hearth of the Furnace; what Quantity of Wood ſoever is conſum'd. He adds another thing, which with him paſſes for equally ſtrange, that the Workmen employ'd about the Furnaces, ſlake their Thirſt, by continually drinking hot Tea, with Salt diſſolv'd in it.

The

The *Chineſe* make another Kind of *Porcelain*, which they paint and bake twice; and for this ſecond Baking they have a kind of little Ovens on purpoſe. When very ſmall, they are made of Iron; otherwiſe, of a kind of Bricks an Inch thick, a Foot high, and half a Foot broad; made of the ſame Earth with the *Porcelain* Caſes. The biggeſt of theſe Furnaces does not exceed five Foot in Height, and three in Diameter; and being made much in form of Bee-Hives, the Bricks are arch'd a little, to form the Curvity the better. The Hearth is of Earth half a Foot high, form'd of two or three Ranges of Bricks; and on this Maſſive is the Furnace built. Around the Furnace, at the diſtance of about half a Foot, is rais'd a Shell of common Bricks, join'd to the Furnace itſelf, by a kind of Arcboutant of Earth, which ſerve to ſtrengthen it. They uſually build four or five of theſe Furnaces at equal Diſtances from each other. At the bottom of the Shell are Holes to give Air to the Fire when lighted: A-top is an Aperture, which they cover up with a piece of the baked Earth, when the *Porcelains* are laid in the Furnace.

The *Porcelains*, here, are not inclos'd in Coffins, as in the common Furnaces; the Furnace, itſelf, ſerving that purpoſe; and being ſo exactly clos'd, that they receive no other Impreſſion of the Fire, but that of the Heat of the Charcoal diſpos'd in the Hearth, at the bottom of the Furnace, as well as a-top of the Vault, and in the Interval between the Furnace and the Shell, or Brick-Wall.

To prepare the *Porcelains* for a ſecond Baking, they muſt have had their Varniſh in the common manner, and have paſs'd the great Furnace: In this State they are painted with various Colours, after which, without giving them any new Varniſh, they are rang'd in Piles in the little Furnace; ſetting the little ones over the larger, in form of Pyramids.

This ſecond Baking is ſometimes intended to preſerve the Luſtre of the Colours the better, and at the ſame time to give them a kind of *Relievo*. But more uſually, its Deſign is to hide defective Places, by covering them over with Colours: But the Artifice is eaſily found out, by paſſing the Hand over them.

When the Workman judges his *Porcelains* enough baked, he takes off the Piece that covers the Aperture; and if the Works appear glittering, and the Colours glowing, he takes out the Charcoal; and when the Furnace is cold, the *Porcelain* too.

How beautiful ſoever the modern *Porcelain* may be; the Taeſt for Antiquity, which reigns in *China*, as well as in *Europe*, gives the antient *Porcelain* a Value far above that of the modern: It muſt be own'd, the Antient ſeems finer as to the Matter, more perfect as to the Baking, and of a more pleaſant Caſt, both as to the White of the Ground, and the other Colours; yet 'tis certain the moſt able and diſcerning may be deceiv'd herein: And there are Workmen who make it their buſineſs to counterfeit the antient *Porcelain*, call'd *Koutom*, in the modern.

The Matter of theſe falſe *Koutoms* is a yellowiſh Earth, found near *Kimtetchim*: There is nothing particular in the firſt part of the Proceſs, except that they are made thicker, and that they are varniſh'd with an Oil drawn from the yellow Stone, mix'd with the common Oil, which gives them a kind of Sea-green Hue. When taken out of the Furnace, they throw it into a fatty Broth, made of Capons, *&c.* in which they boil it a ſecond time; they then bury it in the filthieſt Sink they can find for a Month or ſix Weeks, or more, according as they would give it the greater appearance of Antiquity. Beſides their Thickneſs and their Colour, theſe falſe Antiques reſemble the true ones in this; that they do not reſound when ſtruck, nor even give the leaſt buz, when held to the Ear.

Notwithſtanding the vaſt Quantity of *Porcelains* made in almoſt all the Provinces of the Empire of *China*; they ſtill continue very dear; tho' not near ſo dear, as antiently. The *Chineſe* Annals tell us of Times wherein a ſingle Urn coſt ninety or an hundred Crowns on the ſpot. What chiefly occaſions the extraordinary Price of this Commodity, eſpecially in *Europe*, is, beſide the great Profits of the Merchants in *Europe*, and their Factors in *China*; that it rarely happens a Furnace ſucceeds throughout; that it is frequently quite ſpoilt, ſo that upon opening it, in lieu of fine *Porcelains*, is found a hard unform'd Maſs, into which both the *Porcelains*, and their Coffins, are converted either by Exceſs of Heat, or ſome ill Qualities in the Matter.

Another reaſon of the Dearneſs of *Porcelain*, is, that the Ingredients it is made of, and the Wood wherewith it is burnt, grow more and more ſcarce: One may add a third reaſon for the exceſſive Price of *Porcelains* to the *Europeans*; and 'tis this, that moſt of thoſe ſent to *Europe* are form'd on new Models, frequently very odd, and difficult to ſucceed in; which, yet, for the ſmalleſt Defects, are turn'd on the Manufacturer's hands: and he not being able to diſpoſe of them to the *Chineſe*, becauſe not to their Taſte, nor for their Uſe, is forc'd to charge the *Porcelain* he delivers, the higher, to pay himſelf for thoſe refus'd.

The *French* have been theſe fifteen Years attempting to imitate *Porcelain*: The firſt Eſſays made at *Rouen*, are ſaid to have ſucceeded tolerably well; and M. *Savary* tells us, are now carry'd to ſuch a point in the Manufacturies of *Paſſi*, and *S. Cloud*, that the *French Porcelains* want nothing to make them of equal Value with the *Chineſe*, but to be brought five or ſix thouſand Leagues. In effect, for the Fineneſs of the Grain of the Matter, the Beauty and Form of the Veſſels, the Exactitude of the Deſign, and the Luſtre of the Colours, at leaſt the Blues; the *French* are not much behind the *Chineſe*. But their grand Defect is in the White of the Ground, which is uſually dingy and dull; and eaſily diſtinguiſhes itſelf from the pure ſprightly White of the *Chineſe*.

PORCELAIN, is alſo a kind of little white Sea-ſhell, found along with the Sponges; and current in ſeveral Parts of *Aſia*, *Africa*, and *America*, by way of Money. See COIN.

Authors have hitherto been of opinion, that theſe Shells were the Matter whereof the *Porcelain*, or *China*-Ware, was made. They are of ſome uſe in Medicine, and are preſcribed pounded or broken, in manner of Pearls. See PEARL.

PORCH, a kind of Veſtible ſupported by Columns; much uſed at the Entrance of the antient Churches, Temples, *&c.* See VESTIBLE.

In the antient Architecture, *Porch* was a Veſtible, or a Diſpoſition of inſulated Columns, uſually crown'd with a Pediment, forming a Covert Place before the principal Door of a Temple or Palace.

When it had four Columns in Front, it was call'd a *Teraſtyle*; when ſix, *Exaſtyle*; when eight, *Octoſtyle*; when ten, *Decaſtyle*, *&c.*

Vitruvius calls it *Pronaos* and *Prodomos*. When it has Iron Gates, it is call'd *Propylæum*.

PORE, a little Interſtice, between the Particles of Matter which conſtitute Bodies; either empty, or fill'd with ſome inſenſible Medium. See BODY and MATTER.

Condenſation, and Rarefaction, are only perform'd by cloſing and opening the *Pores*. See RAREFACTION and CONDENSATION.

The Tranſparency of Bodies is uſually ſuppos'd to ariſe from their *Pores* being directly oppoſite to one another. See TRANSPARENCY.

The Matter of inſenſible Perſpiration is convey'd thro' the *Pores* of the *Cutis*. See PERSPIRATION.

The Word *Pore* is form'd from the *Greek* πορος, *Aperture*, or *Duct*, thro' which a Thing paſſes.

Sir *Iſaac Newton* ſhews, that Bodies are much more rare, and *porous*, than is commonly believ'd: Water, *e.gr.* is 19 times lighter, and conſequently rarer than Gold; and Gold itſelf is ſo rare, as very readily, and without the leaſt oppoſition, to tranſmit Magnetic Effluvia, and eaſily to admit Quickſilver into its *Pores*, and to let Water paſs thro' it: for a concave Sphere of Gold hath, when fill'd with Water, and ſolder'd up, upon preſſing with a great Force, let the Water ſqueeze thro' it, and ſtand all over its outſide, in multitudes of ſmall Drops like Dew, without burſting or cracking the Gold: whence it may be concluded, that Gold hath more *Pores* than ſolid Parts; and by conſequence that Water hath above forty times more *Pores* than Parts. See GOLD.

The Magnet tranſmits its Virtues without any Diminution or Alteration, thro' all cold Bodies that are not magnetic; as Gold, Silver, Braſs, Glaſs, Water, *&c.* See MAGNET.

The Rays of Light, let them be either Bodies actually coming to us from the Sun, or only Motions or Impreſſions upon the Medium, move in right Lines, and are hardly ever, unleſs by great chance, reflected back again in the ſame right Line, after their Impingence upon Objects; and yet we ſee that Light is tranſmitted to the greateſt Diſtances thro' pellucid Bodies, and that in right Lines. See RAY, *&c.*

Now how Bodies ſhould have *Pores* ſufficient for theſe Effects, may be difficult to conceive, but not impoſſible: For Sir *Iſaac* ſhews, that the Colours of all Bodies ariſe from their Particles being of ſuch a determinate Size or Magnitude. Wherefore, if we conceive thoſe Particles to be ſo diſpos'd, as that there is as much *Poroſity*, as there is of Matter; and in like manner thoſe Particles to be compos'd of others much leſs, and that have as much interſpers'd Vacuity or Space, as their Quantity of Matter amounts to; and ſo on, till we come to ſolid Particles without *Pores*: then, if in any Body there be (for inſtance) three of theſe Sizes of Particles, and that the laſt be of the ſolid, or leaſt ſort; that Body will have ſeven times as much Vacuity as ſolid Matter. If four ſuch Degrees, and the laſt be leaſt, and ſolid, that Body will have fifteen

times

times as much Porosity as Solidity: If five such Degrees, it will have thirty-one times as much Space as Solidity: And if six Degrees, then it will have sixty-three times as much Vacuity, as solid Matter.

And perhaps in the wonderful Conformation and Fabrick of natural Bodies, there may be other Proportions of Space to Matter, to us wholly unknown; whence it is possible, there may be yet farther great Quantities of interspers'd Vacuity. See VACUUM.

PORES, in Anatomy, are certain permeable Spaces, between the Parts of the Skin; whereby we sweat, or perspire, &c. See CUTIS and PERSPIRATION.

The *Pores* are most remarkable in the Hands and Feet: By viewing the Palm of the Hand with a moderate Glass, after washing it well, we perceive innumerable little Ridges, of equal Size and Distance, running parallel to each other; especially on the Tips and Joints of the Fingers, &c. where they are regularly dispos'd into spherical Triangles and Ellipses.

On these Ridges stand the *Pores*, in even Rows, big enough to be seen by a good Eye without a Glass; but with one, every *Pore* looks like a little Fountain; and the Sweat may be seen to stand therein, clear as Rock-Water; and as often as it is wiped off, springs up again. See SWEAT.

The *Pores* are plac'd on the Ridges, not in the Furrows between them; that they might be less liable to be stopped by Compression: For the same reason, the *Pores* of the Hands and Feet are larger than the rest; those Parts being more used and press'd than the rest: and hence again, there are no Ridges on other Parts.

These Pores are a very convenient Out-let for the more noxious Parts of the Blood, which by the continual Use of the Hands, and Feet, are plentifully brought into them: Whence in Hypochondriac and Hysteric People, there is a continual Burning in the Palms and Soles.

In the Stoppage or Constriction of the *Pores* of the Skin, consists that Disease we popularly call a *Cold*. See COLD.

In the *Philosophical Transactions*, we have an Instance of a Student near *Leyden*, much addicted to Astronomy, who spending many Nights in Star-gazing, had by the nocturnal Wet, and Cold, so obstructed the *Pores* of his Skin, that little or nothing exhaled from his Body; as appear'd hence, that the Shirt he had wore five or six Weeks, was then as white as if it had only been wore one Day. In the mean while, a Water was collected under the Skin, whereof he was afterwards cured.

PORIMA, in Geometry, a Theorem, or Proposition, so easily demonstrated, that it is almost self-evident. See AXIOM.

Such, *e.gr.* is this, That a Chord is wholly within the Circle.

On the contrary, an *Aporima*, is a Proposition so difficult, as to be almost impossible to be demonstrated; as the Quadrature of the Circle is now, and as the Squaring of any assign'd Portion of *Hippocrates*'s *Lunes* formerly was.

The *Porima* coincides nearly with the *Lemma*, or Assumption. See LEMMA.

The Word is form'd from the *Greek* πορυμ, a Thing easy to conceive; and which opens the way to something more difficult.

PORISMA, in Mathematicks, a general Theorem, or Canon, deduc'd from a local Problem. See THEOREM.

Proclus derives it from the *Greek* πορισω, to establish, and conclude, from something already done and demonstrated; and accordingly defines *Porisma*, a Theorem drawn occasionally from some other Theorem already demonstrated.

PORISTICK *Method*, in Mathematicks, is that which determines when, by what means, and how many different ways, a Problem may be solved. See PROBLEM and RESOLUTION.

PORPHYRY, in Natural History, &c. a precious Kind of Marble, of a brownish red Colour; frequently interspers'd with white Stains; antiently brought from *Egypt*, and exceeding all others in Hardness. See MARBLE.

The Art of cutting *Porphyry*, practis'd among the Antients, is lost. In effect, 'tis hard to conceive what kind of Tools they must have used for the fashioning of these huge Columns, and other *Porphyry*-Works found in some of the antique Buildings in *Rome*.

One of the most considerable Pieces, now remaining entire, is a Tomb of *Constantia*, Daughter of the Emperor *Constantine*, in the Church of *St. Agnes* without the Walls; ordinarily call'd, *The Tomb of Bacchus*, because of several Boys represented herein, playing among the Vine-Leaves. Add to this *Apollo*'s, and the Busts of twelve Emperors, all in *Porphyry*, in the Palace of the *Tuilleries*.

Some of the antient Pieces appear to have been wrought with the Chissel, others with the Saw, others with Wheels, and others ground by degrees with Emery. Yet the modern Tools will scarce touch *Porphyry*: either the Antients, therefore, had the Secret of tempering Steel better than we; or, as some incline to think, they had the Art of softening the *Porphyry*: Tho', 'tis more probable, that Time and Air have contributed to increase its Hardness.

Mr. *Addison* tells us, he saw a Workman at *Rome* employ'd in the cutting of *Porphyry*; but his Advances were exceedingly slow, and almost insensible.

All the way the *Italian* Sculptors have to work the Pieces of old *Porphyry* Columns still remaining (for the *Porphyry* Quarries are long since lost) is with a Brass Saw without any Teeth. With this, together with Emery and Water, they rub and wear, with infinite patience. See EMERY.

Yet have many excellent Persons endeavour'd to retrieve the antient Art, particularly *Leon Baptista Alberti*; who searching for the necessary Temper, says, he found Goats Blood the best of any: yet even this avail'd but little; for in working with Chissels temper'd herein, Sparks of Fire came much more plentifully, than Pieces of the Stone. By means hereof, the Sculptors were able to make a flat or oval Form; but could never attain to any thing like a Figure. See TEMPER.

'Tis true; in 1555, *Cosmo de Medici* is said to have distill'd a Water from certain Herbs, wherewith his Sculptor *Francesco Tadda*, gave his Tools such an admirable Hardness and Temper, as that he perform'd some fine Works with them; particularly, our Saviour's Head in *Demi-relievo*, *Cosmo*'s Head, and his Dutchess's. Even the very Hair, and Beard, how difficult soever, are here well conducted; and there is nothing of the Kind, better in all the Works of the Antients: But the Secret seems to have died with him.

The *French* have lately found another Method of cutting *Porphyry*, *viz.* with an Iron Saw without Teeth, and *Grez*, or a kind of Free-Stone pulveriz'd, and Water. The Authors of this Invention pretend, they could form the whole Contour of a Column hereby; had they Matter to work on.

PORPHYRIANS, a Name given to the *Arians*, in the fourth Century; by Authority of *Constantine*. See ARIANS.

That Prince publishing an Edict against *Arius* and his Writings, declares, That as *Arius* has imitated *Porphyry* in composing Books against Religion, he deserves to be noted with his Infamy; and that as *Porphyry* is become the Reproach of Posterity, and his Writings suppress'd; so he wills, that *Arius* and his Followers be call'd *Porphyrians*, &c.

The Propriety of the Name seems to consist in this, that the *Arians* endeavour'd to restore Idolatry: For in saying that the Son, whom they call a begotten God, is a Creature; they put a Creature in the Rank of God: And only differ from the Heathens in this, that the one give the Quality of God to one Creature, the other to a great many.

PORPHYROGENETES, in Antiquity, a Name given the Children of the Eastern Emperors; implying, *born in the Purple*.

Cedrenus will have the Word to signify *born in the Palace of Porphyry*, a Palace so call'd in *Constantinople*.

PORRETANS, a Religious Sect, the Followers of *Gilbert de la Porree*, Bishop of *Poictiers*, condemn'd in the XIIth Century, for admitting a Physical Distinction between God and his Attributes; or, as *Marsham* says, for having wrote too curiously on the Subject of the Trinity: For his real Sentiments, we are not over well acquainted withal.

However, he gave occasion for those Suspicions, by maintaining that this Proposition, *Deus est bonitas*, is not true; unless reduc'd to this, *Deus est bonus*. And there are some Passages noted by St. *Bernard*, who wrote warmly against him, wherein he seems to admit a real Distinction between the Nature of God, and his Attributes.

The *Porretans* are set in opposition to the *Nominals*. See NOMINAL.

PORRIDGE, of *Porreau*, *French*, of *Porrum*, *Latin*, a Leek or Herb frequently put in Broth; a liquid Food of Herbs, Flesh, &c.

PORT, or *Haven*, a commodious Place situate on the Sea-Coast, or at the Mouth of a River, with depth of Water sufficient for Ships of Burthen, and convenient Bottom for Anchorage; where Vessels lie by, to load or unload; screen'd from the Wind, and safe from any Enterprize of Enemies; either by the disposition of the Place, or by means of a Mole, a Dike, or the like, with a Chain and Light-House.

Ports are either *Natural* or *Artificial*.

Natural are those which Providence seems to have form'd, for the Communication of Commerce.

Artificial Ports are those form'd with Moles or Projectures into the Sea. See MOLE.

The *English* Coasts are exceedingly thin of Ports. *France* has the Advantage of all other Countries in the Number

and Excellence of Ports; that of *Breſt* is the fineſt natural *Port* in the World, as that of *Dunkirk* was lately the ſtrongeſt artificial one.

PORTS *de Barre* are ſuch as can only be enter'd with the Tide; as that of *Goa*. *Cloſe Ports* are thoſe within the Body of a City; as thoſe of *Rhodes*, of *Venice*, *Amſterdam*, *Rochel*, *Bayonne*, and *St. John de Luz*.

Free PORT, in Commerce, a *Port* open and free for Merchants of all Nations to load and unload their Veſſels in, without paying any Duties or Cuſtoms. See FREE and DUTY.

Such is the *Port* of *Genoa*. The Emperor, ſince his being in poſſeſſion of the States in *Italy*, formerly belonging to *Spain*, has ſeem'd determined to eſtabliſh a *Free-Port* in ſome of the Cities he poſſeſſes on the *Adriatic Sea*.

Marſeilles was declared a *Free Port* by an Edict of *Louis* XIV. bearing Date 5 *March*, 1669.

Free Port is alſo uſed for a total Exemption, and Franchiſe, which any Sett of Merchants enjoy, for Goods imported into a State, or thoſe of the Growth of the Country, exported.

Such was the Privilege the *Engliſh* enjoy'd for ſeveral Years after their Diſcovery of the *Port of Archangel*; and which was taken from 'em on account of the Regicide in 1648.

PORT is alſo uſed for the Burthen of a Ship. See BURTHEN.

The Capacity of a Veſſel is eſtimated in Tuns; each whereof may contain about two thouſand Pounds Weight of Sea-Water. When, then, we ſay a Veſſel is of the *Port* or Burthen of a thouſand Tuns; it is not meant, as ſome imagine, that it bears ſo many Casks full of Merchandize; but that the Sea-Water, which would be contained in the Space which the Capacity of the Veſſel poſſeſſes in the Sea, weighs a thouſand Tuns fill'd therewith, which at the rate of 2000 Pounds each, is as much as to ſay, it bears a Burthen of two Millions Weight.

PORT is alſo uſed for the Court of the Grand Seignor, or Emperor of the *Turks*.

PORT is alſo uſed for a ſtrong Wine brought from *Oporto*, or *Port-a-port* in *Portugal*; whence its Name. See WINE.

PORT *of the Voice*, in Muſic, the Faculty and Habitude of making the Shakes, Paſſages, and Diminutions; wherein the Beauty of a Song, or piece of Muſic conſiſts, and which the *Italians* comprehend under the Terms *Trilli*, *Gioppi*, *Straſcini*.

Bacilli calls *Port of the Voice*, the tranſlating or paſſing of a lower to a higher Note. It conſiſts in three things: The lower Note, which is to be ſuſtain'd; the doubling made on the higher Note, and the ſuſtaining of that ſame Note after it has been doubled. Some call it *Anticipation*.

PORT, among Sailors, the Larboard, or left Side of the Ship. See LARBOARD.

To Port the Helm, is to put the Helm on the left Side the Ship. See HELM.

PORT-GREVE, was antiently the principal Magiſtrate in ſeveral Maritime Towns; thus called from the *Saxon*, *Port*, City; and *Greve*, a Collector of Rents in divers Lordſhips at this day.

Cambden obſerves, that the chief Magiſtrate of *London* was antiently call'd *Port-greve*; inſtead of whom, *Richard* I. ordained two Bailiffs; and ſoon afterwards King *John* granted them a Mayor for their yearly Magiſtrate. See MAYOR.

The Charter of *William the Conqueror* to the City of *London* run thus: "*William* King, grete *William* Biſhop, "and *Godfrey Port-greve*, and all the Burgeis within "*London*, *French* and *Engliſh*. I grant you that I will "that ye be all your Law-worth that ye were in *Edward*'s "day the King. And I will that each Child be his "Fader's Eyer, and I will not ſuffer that ony Man you any "wrongs breed, and God you keepe."

PORTA, in Anatomy, or *Vena* PORTA, a very conſiderable Vein, employ'd in bringing the Blood from ſeveral Parts, by an infinite number of Branches which it is divided into, to the Liver, thro' the whole Subſtance whereof it is diſſeminated. See VEIN and LIVER.

The *Vena Porta* is form'd of two large Veins; the *Meſenteric* and *Splenic*; which are again form'd of ſeveral other minuter Veins coming from the Stomach, Inteſtines, Spleen, Epiploon, &c. See MESENTERIC and SPLENIC.

The Antients gave it the Name *Porta*, as imagining it to bring the Chyle, by its Meſenteric Branch, from the Inteſtines to the Liver; but ſome of the Moderns have found another uſe for it.

It is remarkable of the *Porta*, that, after the manner of the Arteries, it ſhoots itſelf from a Trunk into Branches, and being at laſt loſt in Capillaries, it delivers the Blood into the Cava, by which it is immediately reconvey'd to the Heart. See CAVA.

The *Porta* is formed out of the concurrence of divers Veins, which, meeting together, make one of the moſt conſiderable Venous Trunks of the Body, as to its Bulk; tho', contrary to the Courſe of other Veins, it runs not far in a Trunk, but is, as before obſerved, ſoon diſtributed again, by Ramifications, into the Liver.

This Vein is vulgarly divided into *Branches without the Liver*, and *Branches within*, and a *Trunk intermediate*: But this Diviſion is not very clear, the Branches, as they are call'd, without the Liver, not being ſo properly Branches as Roots; which have, by Anatomiſts, been dignify'd with diſtinct Names from the Parts whence they come.

The Veins which conſpire towards the Formation of this Trunk, which having been deſcribed in their proper Places, or being to be deſcribed there, we ſhall not here enlarge upon; are, from the *Placenta Uterina*, in a Fœtus, the *Vena Umbilicalis*; from the Gall-Bladder the *Cyſticæ Gemellæ*; from the upper Part of the Stomach the *Pylorica*, or *Gaſtrica dextra*, which goes to the Trunk; the *Gaſtrica major*, and *minor Siniſtra* from the Stomach, (of which the major is formed out of the *Coronaria Ventriculi*;) the *Epiplois ſiniſtra*, and *Poſtica* from the Omentum; the *Vas*, or *Vaſa brevia* from the Stomach; the *Splenica* from the Spleen: All which join to form the *left*, or *Splenic Branch of the* Porta.

The *right*, or *Meſenteric Branch*, conſiſts of the *Gaſtrica* and *Epiploica dextra*, from the Stomach and Omentum; the *Duodena* from the Duodenum and Jejunum; the *Hæmorrhoidalis interna* from the Inteſtinum Rectum and Colon; the *Meſaraics* from the Meſentery.

By means of all theſe Veſſels, the *Porta* receives the Blood from moſt of the Viſcera of the Abdomen; and, after the coaleſcence of its Branches, enters the Liver in a Trunk; immediately under the Surface whereof, having firſt form'd a kind of a Sinus, it is divided into two principal Branches, and thoſe again into five, which ſcatter innumerable Ramifications thro' the whole Subſtance of the Liver.

The true Uſe of this Vein, hitherto unknown, Dr. *Keil* thinks he has diſcover'd. And 'tis this: The Bile, ſays he, being to be mix'd with the Chyle, as it comes out of the Stomach into the Duodenum, could no where be ſo conveniently ſecerned from the Blood as where the Liver is placed. But if all the Branches of the *Cœliac* Artery carried all the Blood to the Liver from which the Gall was to be ſeparated; 'tis evident, conſidering the Nearneſs of the Liver to the Heart, and the inteſtine Motion of the Blood, that ſo viſcid a Secretion as the Gall is, could never have been formed. See GALL.

Nature, therefore, is forced to alter her conſtant Method of ſending the Blood to all Parts of the Body by Arteries: She here forms a Vein, by which ſhe ſends the Blood from the Branches of the Meſenteric and Cœliac Arteries to the Liver.

By this means the Blood is brought a great way about e'er it arrive at the Liver; ſo that its Celerity being diminiſhed, all the Corpuſcles that are to form, may have time to attract one another, and unite e'er they come to their ſecerning Veſſel. *Keil's Anim. Secret.* p. 36, &c. See SECRETION.

PORTABLE, ſomething eaſy of Carriage.

Books in 12° are valued for their being *Portable*; eaſily put in the Pocket. This Machine is the better, as being *Portable*. Armies carry with 'em *Portable* Bridges, *Portable* Mills, Boats, Ovens, Forges, &c.

PORTABLE *Barometer*, a Barometer ſo contrived as that it may be carried from Place to Place without being diſordered. See BAROMETER.

A *Portable Barometer* was an extraordinary thing a little while ago: At preſent the common Barometers are *Portable*; being ſo made as that the Mercury may be ſcrew'd quite up to the ſeal'd end of the Tube; by which means it is ſecured from ſwagging, and ſo endangering the breaking of the Tube. A Contrivance for which we are indebted to Mr. *Patrick*.

PORTAL, in Architecture, a Term uſed for a little ſquare Corner of a Room, cut off from the reſt of the Room, by the Wainſcot; frequent in the antient Buildings, but now diſuſed.

The Word ſeems a Diminutive of the *French*, *Port*, Door, Gate; it being thro' this that they enter'd into the Room.

PORTAL is ſometimes alſo uſed for a little *Gate*, *Portella*; where there are two Gates of a different bigneſs. See GATE.

The Word ſometimes alſo ſtands for a kind of Arch of Joiner's Work, before a Door.

PORTAIL, in Architecture, the Face or Frontiſpiece of a Church, view'd on the ſide wherein is the great Door.

Portail is alſo uſed for the great Door itſelf of a Palace, Caſtle, &c.

PORTATE, in Heraldry, a *Croſs*-PORTATE is a Croſs which does not ſtand upright, as Croſſes generally do; but lies athwart the Eſcutcheon, in Bend, as if it were carry'd on a Man's Shoulder. See CROSS.

Colombiere tells us, it is by ſome call'd *Portée*, that is, carried; becauſe when our Saviour went to ſuffer Death, he was obliged to carry his Croſs, which is always thus repreſented ſloping, and inclin'd after this manner.

PORTCULLICE, *Herſe*, or *Sarazine*, in Fortification, an Aſſemblage of ſeveral great Pieces of Wood laid, or joined a-croſs one another, like an Harrow; and at the bottom pointed at the end of each Bar with Iron.

Theſe formerly uſed to hang over the Gate-ways of fortify'd Places, to be ready to let down in caſe of a Surprize, when the Enemy ſhould come ſo ſoon, as that there was not time to ſhut up the Gates.

But now a-days the Orgues are more generally uſed, as being found much better. See ORGUES.

PORT-*Dieu*, among the *French*, is a Pariſh-Prieſt, whoſe Buſineſs is to carry the Viaticum, or Sacrament, to ſick People. See VIATICUM.

PORT-*Royal*, a Term that makes a conſiderable Figure in the Republic of Learning. Its Origin is this:

Philip Auguſtus wandering from his Company in Hunting near *Chevreuſe*, Weſtwards of *Paris*, found a little Chappel, where he put up, expecting ſome of his Attendants might meet him. This happening accordingly, he gave the Place the Name of the *King's Port*, *Port du Roi*, or *Port Royal*; and to give thanks for his Deliverance, reſolved to erect a Monaſtery there.

Odo, Biſhop of *Paris*, apprized of his Intention, prevented him; and, with the concurrence of *Mathilda*, Wife of *Matth. Montmorenci*, firſt Lord of *Marly*, built a Nunnery in 1204, filling it with *Ciſtercians*, who continued under the Juriſdiction of the General of that Order till the Year 1627; when they were removed to a Houſe given 'em in the *Fauxbourg St. Jacques* at *Paris*.

In 1647, they quitted the Habit of *Ciſtercians*, and embraced the Inſtitution of the perpetual Adoration of the Sacrament. In 1647, the Archbiſhop of *Paris* allowed 'em to remand ſome of their Religious to their former Abbey, and to re-eſtabliſh the ſame.

Some time after, the Formulary of *Alexander* VII. being appointed to be ſubſcribed throughout the Kingdom; the Religious of *Port Royal* in the City ſign'd it; thoſe remitted to the former Abbey ſcrupled it extremely, and at laſt only ſign'd it with great Reſtrictions.

Still perſiſting in the ſame Sentiments, the King finding no way to reduce 'em but by diſperſing 'em; that was executed in 1709, and the Revenues given to the other Monaſtery.

Upon this Evacuation, ſeveral Eccleſiaſtics, and others, who had the like Sentiments with regard to the Subſcription, as the Religious; retir'd to *Port Royal*, and had Apartments there; and there publiſhed ſeveral Books both on the Subject of this Diſpute, and other Topics; whence all who adhered to that Party, took the Name of *Port Royaliſts*, and their Books, *Books of Port Royal*.

Hence we ſay the *Writers of Port Royal*, Meſſieurs *de Port Royal*, the Tranſlations of *Port Royal*, the *Greek* and *Latin* Methods of *Port Royal*, which are Grammars of that Language.

PORT-GLAIVE, q. d. *Sword Bearer*, an Order of Knights in *Poland*, call'd by the *Latins Enſiferi*. See KNIGHT.

It was confirm'd by Pope *Innocent* III. and by him ſent into *Livonia* to defend the Preachers of the Goſpels againſt the Infidels at the firſt Converſion of that Country. Being too weak to effect that Buſineſs, they united themſelves with the *Teutonic*, or *Marian* Knights, by the Pope's Authority; and inſtead of Knights of the Sword, were call'd Knights of the Croſs.

They ſeparated again in the time of *Univus*, their Great Maſter, *Anno* 1541.

The *Teutonic* Knights being then diſpoſſeſs'd of *Pruſſia*, and the *Port-glaives* going into *Luther*'s Opinions, ſoon dwindled away; for in the Year 1557, they fell out with the Biſhop of *Riga*, of the Houſe of *Brandenburgh*, becauſe he would not embrace their Notions; and he, to ſecure his own Eſtate, put *Riga* into the hands of the *Polanders*.

Afterwards, the Knights having moſt of *Livonia* taken from them by the *Muſcovites*, they put themſelves under the Protection of *Sigiſmond Auguſtus*, King of *Poland*, *An.* 1559; but *William* of *Furſtembourg*, their Great Maſter, being betray'd by his own Mercenaries into the hands of the *Muſcovites*, *Gothard* his Succeſſor, following the Example of *Albert*, the Great Maſter of *Pruſſia*, tranſacted with the aforeſaid *Sigiſmond* for the whole Eſtate, which he ſurrender'd to his own uſe in the Caſtle of *Riga*, together with his Croſs, the Seal of the Order, the Charters and Grants of the ſeveral Popes and Emperors, which concerned the ſame; as alſo the Keys of the City and Caſtle of *Riga*, the Office of Great Maſter, the Rights of Coinage, and all the Powers and Privileges appertaining to it; receiving back again from *Ratſivil*, the King's Commiſſioner, the Dukedom of *Courland* to him and his Heirs for ever.

PORT-FIRE, a Paper-Tube, about ten Inches long, fill'd with a Compoſition of Meal-Powder, Salphur, and Saltpetre, ramm'd moderately hard; uſed to fire Guns and Mortars inſtead of Match. See MATCH.

PORT-MANTEAU, a piece of Joiner's Work, faſten'd to the Wall, in a Wardrobe, Armory, &c. proper for the hanging on of Cloaks, Hats, &c.

Port-manteau is alſo uſed for a Cloak-Bag, of Cloth, Leather, or the like, wherein the Cloak and other Habiliments of Travellers are diſpoſed, and laid on the Horſe's Crupper.

Port-manteau is alſo an Officer under the King of *France*, whereof there are twelve: Their Buſineſs is to keep the King's Hat, Gloves, Cane, Sword, &c. to take 'em from him, and to bring 'em to him again when wanted.

The *Dauphin* has alſo his *Port-manteau*. Anſwerable to theſe are the Cardinal's *Cauditaries*, or Tail-Bearers.

The *Romiſh* Biſhops have their *Port Croix*, *Port Mitres*, &c.

PORT-VENT, in an Organ, is a wooden Pipe, well cloſed, which ſerves to convey the Wind from the Bellows to the Sound-Board of the Organ. See ORGAN.

PORT-CRAION, a *Pencil-Caſe*; an Inſtrument ſerving to incloſe a Pencil, and to ſerve both as a Handle for holding it, and a Cover to make it portable.

'Tis uſually four or five Inches long, and contrived ſo as the Pencil may be ſlid up and down it by means of a Spring and Button. Its outſide is filed into eight Sides or Faces, whereon are drawn the Sector-Lines: Its inſide, round; ſometimes it is made round or cylindrical both without-ſide and within, and has its length divided into Inches and parts of Inches.

PORT-LAST, in a Ship, the Gun-wale. Hence when a Yard is down on the Deck, they ſay, the Yard is down a *Port-laſt*.

PORTMANNIMOTE, in old Records, the Portmen's Court, held in any City or Town.

PORT-*Ropes*, in a Ship, thoſe which ſerve to haul up the *Ports* of the Ordnance.

PORT-*Sale*, *Ann.* 35 *Hen.* 8. *cap.* 7. is the Sale of Fiſh preſently upon its Arrival in the Port or Haven. See PORTMEN.

PORT-*Nails*, in a Ship, ſuch as are uſed to faſten the Hinges to the Ports. See NAIL.

PORT-*Holes*, in a Ship, are the Embraſures, or Holes in the ſides of the Veſſel, thro' which the Muzzles of the Cannons are put. Sea EMBRASURE.

Large Ships have three Rows of *Port-Holes*, or Batteries; each uſually conſiſting of fifteen *Port-Holes*.

In Storms, they uſe to ſhut up the *Port-Holes*, to prevent the Water's driving thro' them.

In *Engliſh*, *Dutch*, and *French* Ships, their Valves or Caſements are faſten'd a-top of the Aperture; in *Spaniſh* Veſſels a-ſide of 'em.

PORTER, in the Circuit of Juſtices, is an Officer that carries a Verge, or white Rod before the Juſtice in *Eyre*; ſo call'd *à portando Virgam*. See VERGER.

PORTER *of the Door of the Parliament Houſe*, is a neceſſary Officer belonging to that High Court; who enjoys the Privileges accordingly. *Cromp. Juriſd.*

PORTICO, in Architecture, a kind of Gallery built on the Ground; or a Piazza incompaſs'd with Arches, ſupported by Columns; where People walk under Covert. See PIAZZA.

The Roof is uſually vaulted, ſometimes flat. The Antients call'd it *Lacunar*. See LACUNAR.

Tho' the Word *Portico* be derived from *Porta*, Gate, Door; yet is it apply'd to any diſpoſition of Columns which form a Gallery; without any immediate relation to Doors, or Gates.

The moſt celebrated *Portico's* of Antiquity were thoſe of *Solomon*'s *Temple*, which form'd the *Atrium*, and encompaſs'd the Sanctuary: That of *Athens*, built for the People to divert themſelves in; and wherein the Philoſophers held their Diſputes and Converſations; which occaſion'd the Diſciples of *Zeno* to be call'd *Stoicks*, from the *Greek*, στοα, *Porticus*: And that of *Pompey* at *Rome*, raiſed merely for Magnificence; conſiſting of ſeveral Rows of Columns ſupporting a Plat-Form of vaſt Extent: a Deſign whereof, *Serlio* gives us in his Antique Buildings.

Among the modern *Portico's*, the moſt celebrated is the Piazza of St. *Peter* of the *Vatican*. That of *Covent-Garden*, *London*, the Work of *Inigo Jones*, is alſo much admired.

PORT-*Men*, the twelve Burgeſſes of *Ipſwich* are thus call'd in the Stat. 13 *Eliz.* *Cambden* adds, that the Name was common to the Inhabitants of all the Cinque-Ports. See QUINQUE *Portus*.

PORTMOTE, ſignifies a Court kept in Port or Haven-Towns; as *Swain-Mote* in the Foreſt. It is call'd the *Portmote Court*. See PORT and COURT.

Portmotes are alſo held in ſome Inland-Towns; as at *Knolſt* in *Cheſhire*.

The Word is form'd from the *Saxon*, *Porte*, Port, and *Gemot*, *Conventus*, Meeting.

PORT-SOKA, the Suburbs of a City, or a Place within the Liberties and Juriſdiction thereof.

The Word is form'd from the *Saxon*, *Port*, City; and *Soka*, Juriſdiction. *Conceſſi quod nullus de Civitate*, *vel* Port-Soka *ſua captus*, &c. *Somner's Gavelkind.*

PORTIO *Dura*, and *Mollis*, in Anatomy, a Partition of the fifth Pair of Nerves of the Brain; which, before its egreſs out of the *Dura Mater* is apparently divided into two Branches; the one pretty tough and firm, call'd *Portio Dura*; the other ſoft and lax, call'd *Portio Mollis*. See NERVE.

PORTIO, *Portion*, a Part, or Diviſion of any thing. See PART and DIVISION.

PORTION, in the Canon-Law, is that Allowance, or Proportion, which a Vicar ordinarily has out of a Rectory or Impropriation, be it certain, or uncertain. See VICAR and IMPROPRIATION.

PORTIONER. Where a Parſonage is ſerved ſometimes by two, ſometimes by three Miniſters, alternately; as *Bromyard*, *Burford*, &c. in *Shropſhire*; the Vicars or Incumbents are call'd *Portioners*; becauſe they have but their Portion, or Proportion of Tythes, or Profits of the Living.

PORTLAND-*Stone*, ſee STONE.

PORTRAIT, or PORTRAITURE, in Painting, the Repreſentation of a Perſon, and eſpecially a Face, done from the Life. See PAINTING.

In this ſenſe we ſay, *Portrait-Painting*, in oppoſition to Hiſtory-Painting, where all Reſemblance of Perſon is diſregarded.

Portraits are uſually painted in Oil-Colours, ſometimes in Water; ſometimes in Miniature, with Crayons, Pens, Paſtels, &c. See LIMNING, MINIATURE, &c.

It was ſaid of a great Painter, who never ſucceeded in the Likeneſs, (Sir *Peter Lely*, if we miſtake not) that he made a great many fine Pictures, but all poor *Portraits*.

PORUS *Bilarius*, *Bilary Pore*, or *Hepatic* Duct, in Anatomy, a Duct, which, with the Cyſtic, or Cholcidic, forms the common Canal of the Bile. See BILE.

Fallopius was miſtaken in imagining that the *Porus Bilarius* carried the Bile into the Gall-Bladder. Its Office is to convey it into the Inteſtines, by the *Ductus Communis*; for in blowing into it, that Inteſtine is found to ſwell. See BILARY and DUCTUS *Communis*.

POSE, in Heraldry, denotes a Lion, Horſe, or other Beaſt ſtanding ſtill, with all four Feet on the Ground; to denote thereby that it is not in a moving Poſture.

POSITION, in Phyſics, *Site*, or *Situation*; an Affection of Place, which expreſſes the Manner of any Body's being therein. See BODY, PLACE, &c.

POSITION, in Architecture, the Situation of a Building, with regard to the Points of the Horizon. See BUILDING.

Vitruvius directs the *Poſition* of a Building to be ſuch, as that the four Corners point directly to the four Winds.

POSITION, in Aſtronomy. The *Poſition* of the Sphere is either right, parallel, or oblique; whence ariſes the Inequality of our Days, Difference of Seaſons, &c. See SPHERE.

Circles of POSITION, are ſix great Circles paſſing thro' the Interſection of the Meridian and Horizon, and dividing the Equator into twelve equal Parts. See CIRCLE.

The Spaces included between theſe Circles, are what the Aſtrologers call the *twelve Houſes*; and which they refer to the twelve Triangles mark'd in their Themes. See THEME.

Theſe Circles are repreſented on the Globe by the Semicircle of *Poſition*. See GLOBE.

POSITION, in Dancing, the Manner of diſpoſing the Feet, with regard to each other.

There are four regular *Poſitions*: The firſt, when the Feet are join'd in a Line parallel to the Shoulders: The ſecond, when the Heels are perpendicularly under the Shoulders; and of conſequence, the width of the Shoulder a-part: The third, when one Foot is before the other, in ſuch manner, as that the Heel is in the Cavity form'd by the *Rotula* and *Carpus* of the Foot: The fourth, when one Foot is the width of the Shoulders a-part from the other; the Heel ſtill anſwering to the Cavity of the former: which is the only regular manner of Walking.

POSITION, in Arithmetic, a Rule ſo call'd, for *Suppoſition*.

Rule of *falſe Poſition*, or of *Falſhood*, conſiſts in the calculating on ſeveral falſe Numbers, taken at random, as if they were the true ones; and from the Differences found therein, determining the Number ſought.

Poſition is either *ſingle* or *double*.

Single POSITION is, when there happens in the Propoſition, ſome Partition of Numbers into Parts proportional; in which Caſe, the Queſtion may be reſolv'd at one Operation by this Rule:

Imagine a Number at pleaſure, and work therewith according to the Tenour of the Queſtion, as if it were the true Number; and what Proportion there is between the falſe Concluſion, and the falſe *Poſition*; ſuch Proportion the given Number, has to the Number ſought.

Therefore, the Number found by Argumentation, ſhall be the firſt Term of the Rule of Three; the Number ſuppos'd, the ſecond Term; and the given Number, the third. See GOLDEN *Rule*.

POSITION *Double*, is, when there can be no Partition in the Numbers to make a Proportion.

In this Caſe, therefore, you muſt make a Suppoſition twice; proceeding therein according to the Tenour of the Queſtion.

If neither of the ſuppos'd Numbers ſolve the Propoſition, obſerve the Errors, and whether they be greater or leſſer than the Reſolution requireth; and mark the Errors accordingly, with the Signs + and —.

Multiply, contrariwiſe, the one *Poſition* by the other Error; and if the Errors be both too great, or both too little, ſubſtract the one Product from the other, and divide the Difference of the Products by the Difference of the Errors.

If the Errors be unlike, as the one +, and the other —, add the Products, and divide the Sum thereof, by the Sum of the Errors added together. For the Proportion of the Errors, is the ſame with the Proportion of the Exceſſes or Defects of the Numbers ſuppos'd, to the Numbers ſought.

POSITION, in Geometry, &c. a Term uſed in contradiſtinction to *Magnitude*, &c. Thus, a Line is ſaid to be *given in Poſition*, *Poſitione data*, when its Situation, Bearing, or Direction, with regard to ſome other Line, is given: On the contrary, a Line is given in Magnitude, when its Length is given, but not its Situation.

Sir *Iſaac Newton* ſhews how to find a Point, from which three Lines, perpendicularly let fall to three other Lines *given in Poſition*, have any given Ratio, &c.

POSITION, is alſo uſed for a Theſis, or Propoſition, maintain'd in the Schools. See THESIS.

POSITIVE, a Term of Relation; ſometimes oppos'd to Negative.

Thus, we ſay, the Commandments are ſome of them *Poſitive*, others Negative. See NEGATIVE.

Poſitive is alſo uſed in oppoſition to *Relative*, or *Arbitrary*.

Thus, we ſay, Beauty is no *poſitive* Thing, but depends on the different Taſtes of the People. See RELATIVE.

Poſitive is alſo uſed in oppoſition to *Natural*: Thus we ſay, a Thing is of *poſitive* Right; meaning, it is founded on a Law, which depends abſolutely on the Authority of him who gave it.

Thus, *e. gr.* the Prohibition of eating certain Beaſts, under the Old Law, was of *Poſitive* Right; the Command to honour Father, and Mother, of Natural Right. See RIGHT.

POSITIVE *Quantity*, in Algebra, a real, or affirmative Quantity; or a Quantity greater than nothing: thus called, in oppoſition to a privative or negative Quantity, which is leſs than nothing. See QUANTITY.

Poſitive Quantities are deſign'd by the Character +, prefix'd to them, or ſuppos'd to be prefix'd. See CHARACTER.

POSITIVE *Degree*, in Grammar, is the Adjective in its ſimple Signification; without any Compariſon. See DEGREE.

Or, *Poſitive Degree*, is that Termination of an Adjective, which expreſſes its Subject ſimply, and abſolutely; without comparing it with any other. Thus, good, *bonus*, fair, *pulcher*, &c. are in the *poſitive Degree*; better, fairer, in the Comparative. See COMPARATIVE.

POSITIVE *Theology*, is that which conſiſts in the ſimple underſtanding, or expounding of the Dogma's, and Articles of Faith; as contain'd in the Holy Scriptures, or explain'd by the Fathers and Councils; clear of all Diſputes and Controverſies. See THEOLOGY.

In this ſenſe, *Poſitive* Theology ſtands oppos'd to *Scholaſtic*, and *Polemical* Theology. See SCHOLASTIC and POLEMICAL.

Positive, in Muſic, the little Organ uſually behind, or at the foot of the Organiſt, play'd with the ſame Wind, and the ſame Bellows, and conſiſting of the ſame Number of Pipes with the large one; tho, thoſe much ſmaller, and in a certain Proportion. See Organ.

In the Organs of the Jeſuits, the *Poſitive* is in the grand Body.

Positive *Levity*. See Levity.

Positive *Cold*. See Cold.

POSSE *Comitatus*, *Power of the County*, a Phraſe in Law, ſignifying the Aid, and Attendance of all Knights, Gentlemen, Yeomen, Labourers, Servants, Apprentices, Villains, and others, above the Age of fifteen Years, within the County; becauſe all above that Age are bound to have Harneſs by the Statute of *Wincheſter*: Only Women, Eccleſiaſtical Perſons, and ſuch as are decrepid, and infirm, are excus'd. For the Statute of 2 *Hen.* 5. ſays, That *Perſons able to travel, ſhall be aſſiſtant to this Service.* See Service.

It is uſed, where a Poſſeſſion is kept upon a forcible Entry, or any Force of Reſcue uſed, contrary to the Command of the King's Writ, or in oppoſition to the Execution of Juſtice.

POSSESSION, in Law, *quaſi pedis poſitio*; an Action whereby we hold, or occupy, any thing, either *de Jure*, or *de Facto*. See Occupancy.

Poſſeſſion de Facto, is when there is an actual, and effectual Enjoyment of the Thing. See De Facto.

Poſſeſſion de Jure, or in Law, is the Title a Man has to enjoy a thing, tho' it be ſometimes uſurp'd, and in the actual *Poſſeſſion* of another. See De Jure.

Unity of Poſſeſſion, is what the Civilians call *Conſolidation*. *E.gr.* If a Lord purchaſe a Tenancy, held of himſelf by Herriot-Service; the Service becomes extinct by *Unity of Poſſeſſion*, *i. e.* by the Seignory and Tenancy's coming to the ſame hand. See Consolidation.

A *Poſſeſſion* of three Years, in Matters perſonal, begets a Right; and in real Eſtates, a *Poſſeſſion* of ten Years, among Perſons living near the Premiſes, and twenty Years among thoſe that live elſewhere. See Prescription.

Possession, is ſometimes alſo uſed for the Act of taking *Poſſeſſion*; which is perform'd with certain Formalities, whereby a Perſon is juſtify'd to be in the Enjoyment of any thing.

Antiently, upon buying an Eſtate, *Poſſeſſion* was taken with a deal of Ceremony: In ſome places, by a Stick, a Branch, or a Straw, put in the hands of the Buyer by the Seller. See Investiture.

Poſſeſſion of a Benefice, in ſome Cuſtoms, is taken, by entring the Church, kneeling down, kiſſing the Altar, and ringing the Bell.

In ſome Caſes, *Poſſeſſion* is taken by the Sight of the Steeple.

The Emperors antiently put Prelates in *Poſſeſſion*, by giving them a Ring and a Staff.

Possession is alſo uſed for the Title, or Preſcription, that gives a Right to hold any thing: Annual *Poſſeſſion* is the *Uſucaptio*, which gives a Right to Moveables: A triennial and peaceable *Poſſeſſion* of a Benefice, is ſufficient to maintain it; provided it be founded on a plauſible Title.

A *Poſſeſſion* of an Eſtate for ten Years by a Perſon preſent, and of twenty Years by one abſent, with a Title; or of thirty Years, without any; gives a full Right. See Prescription.

Centenary *Poſſeſſion*, conſtitutes *Poſſeſſion* Immemorial; the beſt and moſt indiſputable of all Titles.

Possession, is alſo uſed for the State of a Perſon *poſſeſſed* by the Devil.

It differs from *Obſeſſion*; in that in the former, the Devil acts inwardly; and in the latter, outwardly. See Obsession.

POSSESSIVE, in Grammar, a Term apply'd to Pronouns, which denote the Enjoyment or Poſſeſſion of any thing, either in particular, or in common. See Pronoun.

Thus, *mine*, *thine*, *his*, *ours*, &c. are Pronouns *Poſſeſſive*.

POSSIBILITAS, in our old Law-Books, is uſed for a thing done wilfully, or wittingly; in oppoſition to *Impoſſibilitas*, a thing done againſt the will.——*Si autem Oculos aſnaſſet reddat weram ejus*, & Impoſſibilitatis *accuſetur in eo facto*. Leg. Alfred. Again, ——*Si quis agat* impoſſibiliter, *non eſt omnino ſimile ac ſi voluntarie faciat*. Leg. Sax. Ed. Senior.

POSSIBILITY, Possibilitas, a Non-Repugnance to Exiſting, in a thing that does not any way exiſt. See Possible.

This Non-Repugnance of Exiſting is no other than the Producibility of any thing; which conſiſts in this, that there are ſufficient Cauſes actually exiſting, or at leaſt poſſible, whereby the thing may be produc'd, or be brought to exiſt; principally as there is a God, or an Almighty Cauſe.

So that *Poſſibility* does not imply any thing in the thing poſſible, but is a mere extrinſic Denomination taken from the Power of the Cauſe, and principally of God.

In effect, if a creditable thing had any intrinſic *Poſſibility*, it would follow that ſuch thing muſt exiſt even without the Cauſe.

And yet we may allow an intrinſic *Poſſibility* of a thing; if by *Poſſibility*, we do not underſtand its Producibility, or its Non-Repugnance to exiſt; but only the Non-Repugnance of the Attributes contain'd in its Idea. But ſuch *Poſſibility* is merely Logical.

POSSIBLE, Possibile, is ſometimes oppos'd to real Exiſtence, and underſtood, in the Schools, of a Thing, which tho' it does not actually exiſt, yet may exiſt; as a new Star, another World, &c. which are particularly ſaid to be *phyſically poſſible*.

It is alſo oppos'd to *Impoſſible*; in which ſenſe it is applicable to any thing that does not contradict itſelf, or involve contradictory Predicates; whether it actually exiſt or not: As Man, Fire; theſe are alſo ſaid to be *Logically poſſible*.

'Tis a great Point of Controverſy among the School Philoſophers, whether, and how far Things may be ſaid to have any Entity, while only in a State of *Poſſibility*. See Possibility.

Poſſibles are ordinarily conceiv'd to be three-fold; *future*, *potential*, and *merely poſſible*.

Future, is that of a Thing, whoſe Production is decreed, and aſcertain'd: *V.gr.* the Futurition of all thoſe Events, fix'd by the Immutable Decree of the Immutable Will of the Almighty.

Potential, or *in potentia*, is that which is contain'd, or lies hid in its Cauſes; as the Tree in the Seed, the Fruit in the Tree, &c.

A *mere Poſſible*, is that which might exiſt, tho' it never ſhall.

Others diſtinguiſh *Poſſibles* into *Metaphyſical*, *Phyſical*, and *Poſſible*.

Metaphyſical, is that which may at leaſt be brought to Being by ſome ſupernatural and divine Power; as the Reſurrection of the Dead: In which ſenſe the Word is oppos'd to an Impoſſible even to God himſelf; as a crooked Straitneſs, a ſquare Circle, an infinitely perfect Creature, a mortal God.

Phyſical, or *Natural*, is that which may be effected by a natural Power; as to overturn the *Turkiſh* Empire. In oppoſition to ſuch Things as cannot be produc'd by any finite Power; as, to reſtore the Dead, &c.

Ethical, or *Moral*, is that which may be done by prudent Perſons; uſing all the proper means they have for the ſame: And again, it is uſed for any thing done according to right Reaſon, and conſiſtently with the Laws. In the firſt ſenſe, it is *poſſible* for the *Venetians* to beat the *Turks* at Sea: In the ſecond, whatever is right and juſt, is *poſſible*.

POST, in the Military Art, any Ground, or Place, fortify'd or not, where a Body of Men make a Stand, fortify themſelves, or remain in a Condition to fight an Enemy.

Hence they ſay, the *Poſt* was reliev'd, the *Poſt* was quitted, the *Poſt* was taken Sword in hand, &c.

A Spot of Ground ſeiz'd by a Party to ſecure the Front of an Army, and to cover the *Poſts*, that are behind, they call an *advanc'd Poſt*: And the Advance Guard, or the Right of the two Lines of an Army, &c. they call the *Poſt of Honour*.

The Word is form'd from the *Latin poſitus*, placed; ſome derive it from *Poteſtas*, Power.

Posts, in Building, pretty big Pieces of Timber, plac'd upright in Houſes, &c.

The corner *Poſts* are call'd the *principal Poſts*; and the *Poſts* framed into Breſſummers between principal *Poſts* for ſtrengthening the Carcaſs of the Houſe, are call'd the *Prick-Poſts*.

An excellent Method to preſerve *Poſts* from rotting, is to burn the Ends that are to be ſet in the Ground; the Outſide to a very Coal.

Post, the Diſpatch a Courier, or Letter-Carrier, makes, by changing Horſes from time to time. See Courier.

The Word is alſo apply'd to the Perſon himſelf; the Houſes where he takes up, and lays down his Charge; and the Stages or Diſtances between Houſe and Houſe.

The Name is borrow'd hence, that the Horſes are *poſiti*, placed, or diſpoſed from diſtance to diſtance.

We find mention made of *Poſt*-Horſes in the *Theodoſian Code*, *de Curſu publico*; but theſe were very different from the preſent Eſtabliſhment, and were only public Horſes, firſt appointed by *Trajan*; till whoſe Time, the Meſſengers ſeiz'd any Horſes that came in their way.

Louis Hornigk has an expreſs Treatiſe on *Poſts*, whereof he makes four kinds; *viz.* on *Horſeback*, in *Chariots*, in *Boats*, and on *Foot*; which laſt kind is in uſe in *Italy*, *Turkey*, and *Peru*.

Herodotus aſcribes the Origin of *Poſts* to *Cyrus* or *Xerxes*; but the *Poſts* inſtituted by thoſe Princes were no more than Couriers. See COURIER.

In effect, *Poſts* on the preſent footing are but a modern Invention; tho' ſome go back as high as *Charlemaign*.

'Tis certain it was the Policy, or rather the Diffidence of *Louis* XI. of *France*, that they owed their Riſe to; that uneaſy Prince firſt ſettling them by an Ordonnance of the 19th of *June*, 1464. to be the ſooner, and the more ſurely advertis'd of what paſs'd in his own Kingdom, and in the neighbouring States.

From *France*, the Inſtitution propagated itſelf, by degrees, thro' the ſeveral other Parts of *Europe*: In *Germany*, *Hornigk* obſerves, *Poſts* were firſt ſettled by the Count *de Taxis* at his own Expence; in acknowledgment whereof, the Emperor *Matthias* in 1616, gave him, in Fief, the Charge of *Poſt*-Maſter under him and his Succeſſors.

In *England*, *Poſts* were firſt eſtabliſh'd by Act of Parliament 12 *Car.* 2. which enabled the King to ſettle a *Poſt*-Office, and appoint a Governour.

The *Engliſh Poſt*-Office is now manag'd by two Commiſſioners, who have under them about forty other Officers, of their own appointing, who are all ſworn, and give Security for their faithful Diſcharge, *&c.* as the *Receiver*, *Comptroller*, *Accomptant*, ſix *Clerks* of the ſeveral Roads, a *Window-Man*, and ſixteen *Sorters*, for the Inland Office. For the Foreign Office, are a *Comptroller* and *Alphabet-keeper*, ſix *Clerks*, and a Foreign Officer. Beſides Sollicitor and Clerks, and ſixty-ſeven Letter-Carriers.

From this Office, Letters and Packets are diſpatch'd every *Monday*, to *France*, *Spain*, *Italy*, *Germany*, *Sweden*, *Kent*, and the *Downs*; every *Tueſday* to all Parts of *England*, *Scotland*, and *Ireland*; alſo to *Holland*, *Germany*, *Sweden*, *&c.* every *Wedneſday* to *Kent* only, and the *Downs*; every *Thurſday* to all Parts of *England* and *Scotland*; as alſo to *France*, *Spain*, and *Italy*; every *Friday* to *Flanders* and *Holland*, *Germany*, *Sweden*, *Kent*, and the *Downs*; and every *Saturday* to all Parts of *England*, *Scotland*, and *Ireland*.

Again, Letters are return'd to *London* from all Parts of *England* and *Scotland*, *Wales* only excepted, every *Monday*, *Wedneſday*, and *Friday*: From *Wales* every *Monday* and *Friday*; and from *Kent* and the *Downs*, every Day.

On this grand Office depend 182 *Poſt*-Maſters in *England* and *Scotland*, who keep regular Offices in their Stages, and Sub-Poſt-Maſters in their Branches.

Tho' the Number of Letters in *England* was antiently very inconſiderable; yet is it now ſo increaſed, that this Office, before the Addition of the *Penny-Poſt*, was farm'd at 50000 *l. per Ann.*

The Charge of a Letter of a Sheet of Paper 80 Miles, is 3 *d.* of two Sheets, 6 *d.* for above 80 Miles, a Sheet 4 *d.* two, 8 *d.* An Ounce of Letters for 80 Miles, 1 *s.* for above, 1 *s.* 6 *d.*

Note, The *Poſt* travels at the rate of 120 Miles in 24 Hours. For thoſe who chuſe to travel with the *Poſt*, Horſes are ready, at the Rate of 3 *d. per* Mile, and 4 *d.* to the Boy every Stage.

The Great Mogul performs part of his *Poſtage* by Pigeons, kept in ſeveral places, for the Conveyance of Letters on extraordinary Occaſions. They will carry them from one end of that vaſt Empire to another. The ſame Vehicles have been uſed by the *Dutch* in Sieges. And at this day, *Tavernier* obſerves, the Conſul of *Alexandretta* ſends News daily to *Aleppo*, in five Hours time, by means of Pigeons; tho' thoſe two Places are three Days Journey on horſeback a-part.

Penny-POST, a *Poſt* eſtabliſh'd for the Benefit of *London*, and the Parts adjacent; whereby, any Letter or Parcel, not exceeding one Pound Weight, or ten Pound Value, is ſpeedily and ſafely convey'd to and from all Parts within the Bills of Mortality, to moſt Towns and Villages within ten Miles of *London*.

This Office is managed by a Comptroller, under whom are an Accomptant, Collector, ſix Sorters, ſeven Sub-Sorters, and above an hundred Meſſengers.

POSTS, in Sculpture, *&c.* Ornaments form'd after the manner of Rolls, or Wreathings; thus call'd, becauſe they ſeem to run after one another.

Some are ſimple; others enrich'd, or flouriſh'd.

POST, *after*, is alſo a *Latin* Prepoſition, uſed, in Compoſition, with ſeveral *Engliſh* Words; and generally implying a Relation of *Poſteriority*.

POST-*Communion*, a Prayer which the Prieſt recites after the Communion. See COMMUNION.

POST *Diem*, a Fee, by way of Penalty, on a Sheriff, for his Neglect in returning a Writ after the Day aſſign'd. See RETURN.

For this the *Cuſtos Brevium* has four Pence; whereas he has nothing, if it be return'd at the Day. See Writ.

POST-*Nati*, in our Statutes, is particularly uſed for ſuch Perſons as were born in *Scotland*, after the Acceſſion of King *James* I. to the Crown of *England*.

7 *Jac.* 1. it was by all the Judges ſolemnly adjudg'd, That ſuch Perſons were no Aliens in *England*; as, on the contrary, the *Ante-Nati*, or thoſe born in *Scotland* before that Acceſſion, were Aliens here in reſpect to the Time of their Birth.

Poſt-Natus is alſo uſed by *Bracton*, *Fleta*, *Glanville*, *&c.* for the ſecond Son: Thus in *Brompton*, lib. 2. *Eſt conſuetudo in quibuſdam partibus quod* Poſt-Natus *præfertur primogenito.*

POST-*poning*, the putting any thing after, or behind another; with regard either to the Order of Time, or Place.

Sometimes it is taken in an ill part; as when we ſay, The Book-binder has *poſt-poned* a Sheet, *&c.* of a Book.

POST-*Script*, an After-Thought, or Article added to a Letter or Memoir; containing ſomething learnt, or recollected after the Subſcription, or Concluſion of the Piece.

It is uſually mark'd thus, *P. S.* The *Spectator* obſerves, that a Woman's Mind is ever better learnt from her *P. S.* than her Letter.

POST *Date*. See DATE.

POST *Diſſeiſin*, a Writ given by the Statute of *Weſtminſter*, for him who having recover'd Lands or Tenements, by *præcipe quod reddat*, upon Default or Reddition, is again diſſeiz'd by the former Diſſeizor. See DISSEISIN.

POST *Fine*, a Duty belonging to the King for a Fine formerly acknowledg'd before him, in his Court; paid by the Cognizee after the Fine is fully paſs'd, and all things touching the ſame accompliſh'd.

The Rate is ſo much, and half ſo much, as was paid to the King for the *Præ-Fine*; and is collected by the Sheriff of the County where the Land lies, and to be anſwer'd by him into the Exchequer. See FINE.

POST *Term*, a Fee, or Penalty, taken by the *Cuſtos Brevium* of the Court of Common-Pleas only, for the filing any Writ by an Attorney, after the Term or uſual Time in which ſuch Writs are returnable: for which the *Cuſtos Brevium* has twenty Pence. See WRIT.

POSTEA, in Law, a Return or Certificate of the Proceedings by *Niſi Prius* into the Court of Common-Pleas; after a Verdict; and there afterwards recorded.

POSTSCENIUM, in the antient Theatre. See PARASCENIUM.

POST *Prædicaments*, in Logic, are certain general Affections, or Properties, ariſing from a Compariſon of *Prædicaments* with each other; or, Modes following the *Prædicaments*, and often belonging to many.

Such, according to *Ariſtotle*, are *Oppoſite*, *prius*, *ſimul*, *motus*, and *habere*; the three firſt of which are in all *Prædicaments*.

POSTERIOR, a Term of Relation, implying ſomething behind, or that comes after another. In which ſenſe it is uſed in oppoſition to *Prior* and *Anterior*.

The Back and Hips are the *Poſterior Parts* of Man. *Ariſtotle* gives *Prior* and *Poſterior* Analytics. A Date is *Poſterior* to another, when it is later, or freſher. See DATE.

POSTERIORITY, in Law, a Term of Compariſon and Relation in Tenure, oppoſite to *Priority*.

A Man holding Lands, or Tenements of two Lords, holds of his antienter Lord by *Priority*; and of his later Lord by *Poſteriority*.

POSTERN, in Fortification, a *falſe Door*, uſually made in the Angle of the Flank, or of the Curtain, or near the Orillon; deſcending into the Ditch, for the Convenience of private Sallies.

The Word is alſo uſed in the general for any private or back Door. *Poteſtas habere poſternam in omni Curia penitus inhibeatur, ſed unicus ſi Ingreſſus*, &c. Fleta.

POSTHUMUS, or POSTHUMOUS, a Child born after the Death of his Father, or even of his Mother.

Among the *Romans*, *Poſthumus* was alſo uſed for a Child born after the making of a Teſtament, which occaſion'd the Teſtator to alter it.

The Word is compoſed of the *Latin*, *Poſt*, and *Humus*, ground. Hence the Word comes to be uſed figuratively for the Works of an Author that were not publiſhed till after his death.

POSTILLA, a Word antiently uſed for a Note, or Remark, wrote in the Margin of the Bible; and afterwards for a Note wrote in any other Book poſterior to the Text.

Trivet, in his Chronicle, ſpeaking of *S. Langton*, Archbiſhop of *Canterbury*, ſays, *Super Bibliam* Poſtillas *fecit*; *& eam per Capitula quibus nunc utuntur moderni diſtinxit*: And that *Alexander* Biſhop of *Cheſter*, *Super Pſalterium* Poſtillas *ſcripſit*. *Knighton*, another of our Hiſtorians, ſpeaking of one *Hugh*, Dominican and Cardinal, ſays, *Totam bibliam* poſtillavit.

POSTING, among Merchants, the putting an Account forward, from one Book to another. See BOOK-*Keeping*.

POS-

POSTIQUE, or Postic, in Architecture, &c. An Ornament of Sculpture is said to be *Postique*, when it is added after the Work itself is done.

A Table of Marble, or other Matter, is also said to be *Postique*, when it is incrustated in a Decoration of Architecture, &c.

The Word is form'd from the *Italian*, *Posticcio*, added.

POSTLIMINIUM, Postliminy, among the *Romans*, the Return of one who had gone to sojourn elsewhere, had been banish'd, or been taken by the Enemy; to his own Country, and State. Thus call'd, according to *Au. Gellius*, from *Post* and *limen*, *q. d.* a Return to the same *Limen*, *i. e.* the same Bounds or Threshold.

Some, from *Amm. Marcell.* will have it thus call'd, because Persons were restored to the House thro' a Hole in the Wall, *Post limen*, not by going over the Threshold, which was esteemed ominous.

Postliminium was also a Law whereby one recovered an Inheritance or other Matter that had been lost.

POSTULATE, in Mathematics, a clear, evident Proposition; wherein it is affirm'd or deny'd, that something may or may not be done. See Proposition.

A thing immediately deduced from the Consideration of one single Definition, if it express something to agree, or disagree to another, is call'd an *Axiom:* If it affirm that something may or may not be done, it is call'd a *Postulate.*

Thus, *e.gr.* from the Genesis of a Circle, 'tis evident that all right Lines drawn from the Centre to the Circumference, are equal; since they only represent one and the same Line, in a different Situation: This Proposition, therefore, is esteem'd an Axiom. See Axiom.

But, since it is evident from the same Definition, that a Circle may be described with any Interval, and from any Point; this is accounted a *Postulate.*

Axioms, and *Postulates*, therefore, seem to have nearly the same relation to each other, that Theorems and Problems have. See Theorem, &c.

POSTULATION, in the Canon-Law, the Nomination of a Person to a Dignity in the Church; to which, by the Canons, he cannot be elected; as, for want of Age, of Birth, because already possess'd of a Benefice incompatible therewith, or the like Impediment.

Thus the formal Election of such a Person being faulty, they are obliged to proceed by way of *Postulation*; that is, the Chapter beseeches the Person to whom the Confirmation of the Election belongs, to approve of it, tho' it be not Canonical.

The Person to whom the Supplication is made by the Protestants in *Germany*, is the Emperor; by the Papists, the Pope.

Wicquefort observes, that when a part of the Chapter elects, and another *Postulates*, the Number of *Postulants* must be twice as great as that of the Electors, to bring the Matter to a *Postulation.*

POSTURE, in Painting, Sculpture, &c. the Situation of a Figure, with regard to the Eye; and of the several principal Members thereof, with regard to one another; whereby its Action is express'd. See Attitude.

A good part of the Painter's Art consists in adjusting the *Postures*; in giving the most agreeable *Postures* to his Figures; in accommodating them to the Characters of the respective Figures, and the part each has in the Action; and in conducting them and pursuing them throughout.

Postures are either Natural, or Artificial. The former are such as Nature seems to have had a View to in the Mechanism of the Body; or rather such as the ordinary Actions and Occasions of Life lead us to exhibit, while young, and the Joints, Muscles, Ligaments, &c. flexible

Artificial are those which some extraordinary Views, or Occasions lead us to exhibit: Such, *e.gr.* are those of our *Posture-Masters.*

A Painter would be strangely puzzled with the Figure of *Clark*, (the late famous *Posture-Master* of *Pall-Mall*) in a History-piece. This Man, as we find in the *Philos. Transact.* had such an absolute Command of his Muscles, &c. that he could disjoint almost his whole Body; so that he impos'd on that great Surgeon, *Mullens*; who look'd on him in such a miserable Condition, he would not undertake his Cure. Tho' a well-made Man, he would appear with all the Deformities imaginable: Hunch-back'd, Pot-belly'd, Sharp-breasted, &c. He disjointed his Arms, Shoulders, Legs, and Thighs; and render'd himself such an Object of Pity, that he has frequently extorted Money, in quality of a Cripple, from the same Company he had the Minute before been in, in quality of a Comrade. He would make his Hips stand a considerable way out from his Loins; and so high as to invade the place of his Back. Yet his Face was the most changeable part about him; and shew'd more *Postures* than all the rest of himself; he could exhibit all the uncouth odd Faces of a Quaker's Meeting.

POT-*Ashes*, are properly the Ashes of certain Vegetables used in the making of Glass and Soap. See Ashes.

Such are the Ashes of the Herb *Kali*, call'd also Salt-Wort, Glass-Weed, &c. from its great use in Glass-making. See Glass.

Pot-Ashes are also call'd *Cineres clavellati*, and make the Basis of Salt of Tartar, and most of the lixivial Salts, as our Chymists of late manage 'em for Cheapness. See Kali, &c.

The *English* and *Dutch* make a considerable Commerce of *Pot-Ashes* which they bring from about the *Black Sea*; using great Quantities thereof in the Preparation of their Cloths, &c. those Ashes being found excellent to scour withal. See Fulling.

The Name *Pot-Ashes* is also popularly apply'd to all kinds of Ashes bought up and down the Country, and mixed together, for the making of green Glass: But the best of *English Pot-Ashes* are those made of the smaller common Highway-Thistle; tho' all Thistles are good. Fern also makes excellent *Pot-Ashes.*

POTABLE, something that may be taken, or swallow'd, by way of Drink. See Drink.

The Chymists talk much of *Potable Gold*, *Aurum Potabile.* See Aurum and Gold.

POTENT, or Potence, in Heraldry, a Term for a kind of a Cross in the Figure adjoining. See Cross.

He beareth Sable, a Cross *Potent*, *Or*, by the Name of *Aleyn.*

This Form represents the upper end of a Crutch; for antiently Crutches were call'd *Potents.*

POTENTIA, *Power*, or that whereby a thing is capable either of acting, or being acted on. See Power.

Hence, Power is of two kinds, *Active*, and *Passive.*

Active Power, call'd also by a barbarous, but significant School-Term, *Operativity*, is the Efficacy, or Faculty of any Being, in virtue whereof something arises, or is produced by it. Such is the Power of speaking, in Man.

Passive, or *Receptive Power*, is a Capacity of receiving some Act; *e.gr.* the Capacity of Knowing a Man.

This is also call'd *Subjectiva Potentia*, Subjective Power.

To exist in Potentia, is used among the School-Writers, to denote that Existence which a thing has in a Cause capable of producing it, but which has not actually produced it: In which it stands opposed to Existence *in actu.* See Possibility and Existence.

POTENTIAL, in the Schools, is used to denote, and distinguish a kind of Qualities, which are supposed to exist in the Body *in Potentia* only; by which they are capable, in some manner, of affecting and impressing on us the Ideas of such Qualities, tho' not actually inherent in themselves.

In this sense we say *Potential Heat*, *Potential Cold*, &c. Brandy and Pepper, tho' cold to the Touch, are *Potentially* hot.

Potential *Cold* is a relative Term, by which we mean that such a thing is not actually cold to the Touch, but in its Effects and Operations, if taken inwardly. See Cold.

This Quality is supposed to arise from the Size, Shape, &c. of its component Particles, which give some check or retardation to the Blood's Motion, whereby it is less agitated, and upon which the sensible parts of the Body are not so briskly struck by it; the perception of which diminution or change of Motion in the Organs of Feeling, is call'd *Cold.*

Hence every thing that lessens the Blood's Motion, with relation to the Sensation before made, is cold; and every thing which increases it, may be call'd *Potential Heat.* See Heat.

Potential, in Medicine, &c. Cauteries are either Actual, *viz.* a Button of red-hot Iron; or *Potential*, as Lime, and other Caustic Drugs. See Cautery.

Potential, in the Schools, is also used for something that has the Quality of a Genus. See Genus.

Grotius uses the Phrase *Potential Parts of a State*, in opposition to the *Subjective Parts.*

By *Potential*, he means those Parts which have the Sovereign Power: By Subjective, those subject thereto; which are that, with regard to the Sovereign Power, that several Species are with regard to the Genus, whereof they are the subjective Parts.

For in the Schools, a *Potential* Whole is that which has its Parts under it, as a Genus has its Species: to distinguish it from an Actual Whole, which has its Parts in itself; as a Body composed of Matter and Form.

Grotius maintains, that tho' the Sovereign Power be one and indivisible, yet it may have several *Potential* Parts: For, as in the *Roman* Empire, there have been two *Potential* Heads, the one ruling in the East, the other in the West; yet the Imperial Authority all the while single and in-

indiviſible: So is it poſſible the Subjective Parts combining to give away their Sovereignty, may not give it intire, but reſerve a part of it for certain Emergencies. In which Caſe the Subjective part becomes *Potential*. And thus there are two *Potential* parts, yet the Sovereignty ſingle.

POTENTIAL, in Grammar, gives the Denomination to one of the Moods. See MOOD.

The *Potential* Mood is the ſame in Form, with the Subjunctive; but differs from it in this, that it hath always implied in it, either *poſſum*, *volo*, or *debeo*; as *Roget*, that is *Rogare poteſt*, a Man may ask. See SUBJUNCTIVE.

It is ſometimes called the permiſſive Mood, becauſe it often implies a Permiſſion, or Conceſſion to do a thing; as, *Habeat*, *valeat*, *vivat*, *cum illa* Terent.

POTION, a liquid Medicine, in form of a *Draught*, to be taken at one time.

There are purging *Potions*, Emetic *Potions*, Diaphoretic, Pectoral, Cephalic, Cardiac, Stomachic, Hyſteric, Vulnerary, Carminative, &c. *Potions*.

POTTERY, the Art of making Earthen-Pots, and Veſſels; or, the Manufactory of Earthen-Ware. See EARTH.

The *Wheel* and *Lathe* are the Chief, almoſt the only Inſtruments, uſed in *Pottery*; the firſt for large Works, the ſecond for ſmall: Tho, in reality, they are much the ſame as to the manner of uſing them.

The *Potter's Wheel* conſiſts principally in its Nut, which is a Beam or Axis, whoſe Foot or Pivot plays perpendicularly on a Free-ſtone Sole or Bottom. From the four Corners a-top of this Beam, which does not exceed two foot in height, ariſe four Iron Bars, call'd the Spokes of the Wheel; which forming diagonal Lines with the Beam, deſcend, and are faſten'd at bottom to the Edges of a ſtrong wooden Circle, four foot in Diameter, perfectly like the Felloes of a Coach-Wheel, except that it has neither Axis nor Radii; and is only join'd to the Beam, which ſerves it as an Axis, by the Iron Bars. The Top of the Nut is flat, of a circular Figure, and a foot in diameter. On this is laid a piece of glaz'd Earth, to be turn'd and faſhion'd.

The Wheel thus diſpoſed, is encompaſſed with four Sides of four different pieces of Wood, ſuſtain'd on a wooden Frame: The hind-piece, which is that whereon the Workman ſits, is made a little inclining towards the Wheel: On the fore-piece are placed the pieces of prepared Earth. Laſtly, the ſide-pieces ſerve the Workman to reſt his Feet againſt; and are made inclining to give him more or leſs room, according to the Size of the Veſſel to be turn'd. By his ſide is a Trough of Water, wherewith from time to time he wets his Hands, to prevent the Earth's ſticking to 'em.

To uſe the Wheel. The Potter having prepared his Earth, and laid a piece of it ſuitable to the Work he intends, on the Top of the Beam; ſits down; his Thighs and Legs much expanded, and his Feet reſted on the ſide-pieces, as is moſt convenient.

In this Situation he turns the Wheel round, till it has got the proper Velocity; when, wetting his Hands in the Water, he bores the Cavity of the Veſſel, continuing to widen it from the middle; and thus turns it into Form: turning the Wheel a-freſh, and wetting his Hands, from time to time.

When the Veſſel is too thick, they uſe a flat piece of Iron with a Hole in the middle, and ſomewhat ſharp on one Edge, to pare off what is redundant. Laſtly, when the Veſſel is finiſh'd, they take it off from the circular Head by a Wire paſs'd underneath the Veſſel.

The *Potter's Lathe*, is alſo a kind of Wheel, but ſimpler and ſlighter than the former. Its three chief Members are an Iron-Beam or Axis, three foot and an half high, and two Inches in Diameter; a little wooden Wheel all of a piece, an Inch thick, and ſeven or eight in Diameter, placed horizontally a-top of the Beam, and ſerving to form the Veſſel on; and another larger wooden Wheel, all of a piece, three Inches thick, and two or three Foot broad, faſten'd to the ſame Beam at bottom, parallel to the Horizon. The Beam or Axis turns by a Pivot at bottom, in an Iron Stand.

The Workman gives the Motion to the Lathe with his Feet, by puſhing the great Wheel alternately with each Foot; ſtill giving it a greater or leſs degree of Motion, as his Work requires.

They work with the Lathe, with the ſame Inſtruments, and after the ſame manner, as the Wheel.

But neither the one nor the other ſerve for any more than the forming of the Body of the Veſſel, &c. The Feet, Handles, and Ornaments, if there be any, beſide the Mouldings, being to be made and ſet on by Hand; if there be any Sculpture in the Work, 'tis uſually done in Earthen or Wooden Moulds, prepared by a Sculptor, unleſs the Potter have Skill enough to do it himſelf, which is very rare.

As to the Glazing, or Varniſhing of the Work; 'tis uſually done with mineral Lead, *i. e.* Lead pulveriz'd by throwing Charcoal-Duſt into the melted Lead, and the Aſhes of Lead; which, in effect, are only its Scum and Scoria. See LEAD.

For the Chineſe POTTERY, ſee PORCELAIN.

POTTLE, an *Engliſh* Meaſure, containing two Quarts. See MEASURE.

Two of theſe *Pottles*, in the Liquids, make a Gallon; but in dry Meaſure three go to a Gallon. See GALLON.

POUDER, or POWDER, in Pharmacy, a dry Medicine pulveriz'd, or prepared by being broken and reduced into almoſt imperceptible Atoms, either in a Mortar, or by Chymical Operations, &c. See PULVERIZATION.

POUDER *of Viper*, Viperine Pouder, has of late days come much in requeſt. See VIPERINE.

Styptic *Pouder*, Sympathetic *Pouder*, &c. See STYPTIC, SYMPATHETIC, &c.

POUDER *for the Hair*, is Flower of Wheat, or Beans, well ſifted and prepared, to give it an agreeable Odour.

That wherein Starch Grounds is mixed, is the worſt. See STARCH.

Jeſuits POUDER, *Pulvis Patrum*. See CORTEX *Peruvianus*.

Gun-POUDER, ſee GUN-*Powder*.

POUDER *Cheſts*, in the Sea-Language, are Boards join'd in form of a Triangle, and fill'd with Gun-powder, Pebbles, &c. which they ſet fire to when the Ship is boarded by an Enemy, and ſoon make all clear before 'em.

POUDERINGS, in Building, a Term ſometimes uſed for Devices ſerving to fill up vacant Spaces, in carv'd Works: As alſo, in Eſcutcheons, Writings, &c.

POUDERINGS, in Heraldry, ſee FUR.

POULTICE, or POULTIS, a Form of Medicine call'd alſo *Cataplaſm*. See CATAPLASM.

POULTRY, ſee FOWL.

POUNCE, among Artificers, a little Heap of Charcoal-Duſt, incloſed in ſome open Stuff; to be paſs'd over Holes prick'd in a Work, in order to mark the Lines or Deſigns thereof on a Paper placed underneath; to be afterwards finiſh'd with a Pencil, a Needle, or the like.

Pounce is much uſed by Embroiderers, to transfer their Patterns upon their Stuffs; by Lace-Makers, and ſometimes alſo by Engravers, and Writing-Maſters.

The Word is form'd from the *French*, *Pounce*, Pumice-ſtone; in regard they antiently uſed Pumice-ſtone powder'd for this purpoſe.

POUNCES, in Falconry, the Talons, or Claws of a Bird of Prey.

POUND, a Weight, of a certain Proportion, much uſed as a Standard for determining the Gravities and Quantities of Bodies. See WEIGHT.

The Word is derived from the *Saxon*, *Pund*, *Pondus*, Weight.

We have two different *Pounds* in *England*; the *Pound Troy*, and the *Pound Averdupois*.

The *Pound Troy* conſiſts of 12 Ounces, each Ounce of 20 Penny-weights, and each Penny-weight of 24 Grains; ſo that 480 Grains make an Ounce, and 5760 Grains a *Pound*. See OUNCE, &c.

This *Pound* is uſed in the weighing of Silver, Gold, precious Stones, all kinds of Grains, &c.

It is alſo uſed by the Apothecaries, tho' differently divided: Among them 24 Grains make a Scruple, 3 Scruples a Drachm, 8 Drachms an Ounce, and 12 Ounces a Pound. See SCRUPLE, &c.

The *Pound Avoirdupois* conſiſts of 16 Ounces; but then the Avoirdupois Ounce is leſs by 42 Grains than the Troy Ounce, which amounts to nearly a 12th part of the whole; ſo that the Ounce Avoirdupois only contains 438 Grains, and the Troy Ounce 480.

The difference whereof is nearly as that of 73 to 80; *i. e.* 73 Ounces Troy make 80 Ounces Avoirdupois. 112 Avoirdupois *Pounds* make the Hundred Weight, or Quintal. See QUINTAL.

By this *Pound* are weigh'd all large and coarſe Commodities, Fleſh, Butter, Cheeſe, Iron, Hemp, Lead, Steel, &c.

An Avoirdupois *Pound* is equal to 14 Ounces $\frac{1}{2}$ of a *Paris Pound*. So that 100 of the former *Pounds* make 91 of the latter.

The *French Pound* contains 16 Ounces; but one *French Pound* is equal to one *Pound* one Ounce $\frac{1}{2}$ of an Avoirdupois *Pound*; ſo that 100 *Paris Pounds* make 109 *Engliſh* Avoirdupois *Pounds*.

The *Paris Pound* is divided in two manners; the firſt diviſion is into two Marcs, the Marc into eight Ounces, the Ounce into eight Groſs, the Groſs into three Deniers, the Denier into twenty four Grains, each weighing a Grain of Wheat.

The

The second Division of the *Pound* is into two half *Pounds*; the half *Pound* into two Quarters; the Quarter into two Demi-quarters; the Demi-quarter into two Ounces; the Ounce into two half Ounces, &c.

The first Division is usually follow'd in weighing Gold, Silver, and other precious Wares; and the latter in those of less value.

At *Lyons* the *Pound* is 14 Ounces. One hundred *Paris Pounds* make 116 *Lyon Pounds*.——At *Venice*, the *Pound* is equal to eight Ounces, three Quarters of the *French Pound*, &c.

For the several Pounds *of the several Cities and Countries, their Proportion, Reduction, Division*, &c. see WEIGHT.

POUND is also an imaginary Money, used in accounting; containing more or less, according to the several Names added to it, and the several Countries it is used in. See MONEY.

Thus in *England* we say a *Pound Sterling*; in *France*, a *Pound*, or *Livre Tournois* and *Parisis*; in *Holland* and *Flanders* a *Pound*, or *Livre de Gros*, &c.

The Term took its rise hence, that the antient *Pound Sterling*, tho' it only contain'd 240 Pence, as ours does, yet each Penny being equal to five of ours, the *Pound* of Silver weigh'd a *Pound Troy*. See PENNY.

The *Pound Sterling*, or *English Pound*, contains twenty Shillings, the Shilling twelve Pence, and the Penny four Farthings. See SHILLING, PENNY, &c. See also COIN.

Antiently there were three ways of paying a *Pound* of Money into the Exchequer. 1°. The payment of a *Pound de numero*, which was just twenty Shillings in Tale. 2°. *Ad scalam*, which was *6 d.* over and above the *20 s.* 3°. *Ad pensam*, which was giving the full Weight of twelve Ounces.

The *French Pound*, or *Livre Tournois*, contains twenty Sols or Shillings, and the Sol 12 Deniers or Pence *Tournois*; which was the Value of an antient *French* Coin call'd *Franc*, a Term still synonomous with Livre. See FRANC.

The *Pound*, or *Livre Tournois* contains, in like manner, 20 Sols or Shillings, and the Sol 12 Deniers or Pence *Parisis*. Each Sol *Parisis* is equal to 15 Deniers *Tournois*; so that a *Pound Parisis* is equal to 25 Sols *Tournois*. Thirteen one third Deniers *Tournois* is equal to a Penny *Sterling*; so that the *Pound Sterling* is equal to 13 *Pounds* or Livres, 6 Sols, and 8 Deniers of *French* Money; and the *Pound French* to 18 *d. English*; which is to be understood when the Exchange is on the foot of fifty four Pence *Sterling* for a *French* Crown, or *Ecu* of 60 Sols *Tournois*; which is the Par between *France* and *England*. See LIVRE and PAR.

The *Pound* or *Livre de Gros* of *Holland* is divided into 20 Shillings Gros, and the Shilling into 12 Pence Gros. It is equal to six Florins; the Florin valued at 24 Sols *Tournois*; supposing the Exchange on the footing of 100 Pence Gros for a *French* Crown of 3 Livres *Tournois*; so that the *Pound Gros* amounts to 10 Shillings and 11 Pence Farthing *Sterling*. The *Pound Gros* of *Flanders* and *Brabant* is divided like that of *Holland*; and like that too, is equal to three Florins: but the Florin is equal to 25 Sols *Tournois*; so that the *Flanders Pound* is equal to 7 Livres, 10 Sols *Tournois*, or 11 *s.* 3 *d.* Sterling.

Merchants, Factors, Bankers, &c. use Characters, or initial Letters to express the several kinds of *Pounds* of Account, as *L.* or *L. St. Pounds Sterling*. *L. G. Pounds Gros*; and *L.* or lb. *Pounds Tournois*.

POUND is also an Inclosure, or strong Place, where Cattle distrained, or caught in any Trespass, are put till they are replevied or redeemed. See TRESPASS, REPLEVY, &c.

The *Pound* is either *overt* or *close*.

POUND *Overt*, or *Open Pound*, is that built upon the Lord's Waste; and thence also call'd the *Lord's Pound*; because he provides it for the use of himself and his Tenants.

Pound Overt also includes Back-sides, Court-Yards, Pasture-Grounds, or any Place whatever.

To this *Pound* the Owner of the Beasts impounded may come to give them Meat and Drink, without Offence of their being there, or his coming thither.

POUND *Close*, on the contrary, is such an one as the Owner cannot come to for the said purpose without Offence; as some close House, Castle, Fortress, &c.

POUNDAGE, a Subsidy granted to the King upon all manner of Merchandize, and of all Merchants, Denizens, and Strangers; whether imported, or exported. See DUTY.

It is call'd *Poundage*, because fixed at the Rate of so much *per Pound*; *viz.* one Shilling in every *Pound*, or 20 *s.*

It was first granted to *Henry* VI. for Term of his Life; and afterwards to K. *Charles* II. *Anno* 12 *Car.* 2.

POUP, *Puppis*, in Navigation, the hind-part of a Vessel, or that where the Helm is fixed; call'd also *Stern*. See STERN.

The *French* frequently call it *Queue*, Tail; because the Helm, here apply'd, serves the same purposes in a Ship as the Tail does to Fishes. See HELM.

It is divided into three or four Stories. The lowest, at the bottom of the Keel, is the Bisant Room: The second in the first Deck is for the Gunnery; here the Helm is usually found; tho' the Person who guides it, is above, and turns it by a Bar pass'd thro' a Hole: over this is the Captain's Apartment, before which is the Armory, wherein is the Compass, the Hour-Glass, &c. over this is the Pilot's Cabbin, and that of some other Officers; over, is the Pharos or Lanthorn, with the Flag.

All these together form the *Poup-Castle*, or Hind-Castle; the outside whereof is richly adorned with Balconies, Galleries, Pilasters, Trophies, the Arms of the Prince, &c.

To have the Wind in *Poup*, is to have it behind, or favourable. See WIND.

Some Vessels have their *Poup* square, others round.

The Word is form'd from the *Latin*, *Puppis*.

In the Sea-Language, the *Poup* is strictly the Floor, or Deck over the Round-House, or Master's Cabbin; being the highest part of her Hull a-stern.

POUR-*Partie*, or *Pour-Party*, in Law, a Term used in opposition to *pro Indiviso*. See PRO *Indiviso*.

To make *Pour-partie*, is to divide and sever the Lands that fall to Parceners; which before Partition, they held jointly and *pro Indiviso*.

POUR-*Presture*, in Law, is defined by *Glanville* to be, when any thing is unjustly occupied, that properly belong'd to the King; as in encroaching on his Grounds, obstructing the King's High-ways, diverting publick Rivers from their proper Course, or building any thing over the High-Streets of a City; and in the general, where any thing is done to the prejudice of the King's Tenements, High-ways, or Cities.

Crompton in his *Jurisd.* says, *Pour-presture* is properly when a Man takes to himself, or encroaches any thing which he ought not; whether it be in Jurisdiction, in Land, or in Franchise; and, generally, where any thing is done to the Nuisance of the King's Tenants.

Some Authors divide *Pour-presture* into three kinds: The first against the King, the second against the Lord, the third against a Neighbour.

Pour-presture against the King, *lib. Nig. in Schac. fol.* 38. is that happening thro' the Negligence of the Sheriff, or the long Continuance of Wars, &c. when those that have Lands near the Crown-Lands, inclose part of them, or lay them to their own.

Pour-presture against the Lord, is when the Tenant neglects to perform what he is bound to do for the chief Lord, or deprives him of his Right.

Pour-presture against a Neighbour, is a Nuisance against a Neighbour, &c. mention'd in the *Monast. Tom.* 1.

POURSUIVANT, a Messenger, antiently attending the King, in his Wars, or at Council-Table, or in the Exchequer; to be dispatch'd upon any Occasion or Message: as for the Apprehension of a Person suspected, or accused, &c.

Many of the Nobility, too, had their *Poursuivants*: A Knight Banneret was allow'd a *Poursuivant*, with the Consent of a Herald.

The Word is form'd from the *French poursuivre*, to *pursue*. There were also *Poursuivants* particularly employ'd in Martial Causes, call'd

POURSUIVANTS at Arms; a Term antiently apply'd to Gentlemen, who attended the Heralds, and aspir'd to their Office; to which they could not rise, till after seven Years Apprenticeship pass'd in this Quality. See HERALD.

They were entirely dependant on the Heralds, and assisted at their Chapter; officiating for them in preparing and assigning Tournaments, and all other parts of their Ministry.

They were baptiz'd at solemn Feasts with some gallant Name; as *Jolicœur*, *Verluisant*, *Sansmentir*, &c.

Their Coats of Arms were different from those of the Heralds, and they bore plain Staffs without Ornament.

Of the great Number of *Poursuivants* antiently on foot, there are now only four remaining; *viz. Blue-Mantle*, *Rouge-Cross*, *Rouge-Dragon*, and *Portcullice*.

Their Business is to attend with the Heralds in marshalling and ordering public Solemnities, Funerals, Interviews, Cavalcades, &c. See COLLEGE *of Arms*.

Upton, *de Re Militari*, calls the *Poursuivants*, *Milites Linguares*; because, says he, their chief Honour was *in Custodia Linguæ*.

He divides them into Foot and Horse *Poursuivants*, *Cursores Equitantes & Prosecutores*. *Stow*, speaking of *Richard* the Third's End, has these Words: "His Body was "naked to the Skin; not so much as one Clout about him, "and was truss'd behind a *Poursuivant at Arms*, like a "Hog, or a Calf.

POURVEYANCE, the providing of Corn, Victuals, Fuel, and other Neceſſaries, for the King's Houſe.

By a Stat. 12 *Car.* 2. no Perſon under colour of *Pourveyance* ſhall take any Timber, Cattle, Corn, or other Matter from any Subject, without his free Conſent. See POURVEYOR.

POURVEYOR, an Officer of the Houſhold, who provides Corn and other Victuals, *&c.* for the King's Houſe; mention'd in *Magna Charta*, and ſeveral Statutes.

The Name of *Pourveyor* became ſo odious in times paſt, that by Stat. 36 *Edw.* 3. the heinous Name *Pourveyor* was chang'd into that of *Buyer*. The Office itſelf was much reſtrain'd by the Stat. 12 *Car.* 2. See POURVEYANCE and ACHAT.

POUZZOL, or POZZOLANE, a reddiſh Earth, uſed in *Italy* for Sand. See SAND.

The beſt is found about *Pouzzoli*, *Bayæ*, and *Cumæ*, in the Kingdom of *Naples*.

Mix'd with Lime, it makes the beſt Mortar in the World. See MORTAR.

It hardens and petrifies in Water: It penetrates black Flints, and whitens them. It is of particular ſervice in making Moles, and other Buildings, in Maritime Places. *Agricola* takes it to be of an aluminous and ſulphurous nature. See *Vitruvius*, *Pliny. de Lorm. &c.* who ſet a great Value on it.

POWER, *Potentia*, in Phyſics, a natural Faculty of doing or ſuffering any thing. See POTENTIA.

Mr. *Locke* explains the Origin of our Idea of *Power* to the following effect: The Mind being daily inform'd by the Senſes, of the Alteration of the ſimple Ideas of things without; and reflecting on what paſſes within itſelf; and obſerving a conſtant Change of its Ideas, ſometimes by the Impreſſions of outward Objects, upon the Senſes; and ſometimes by the Determinations of its own Choice: and concluding from what it has ſo conſtantly obſerv'd to have been, that the like Changes will for the future be made in the ſame Things, by the ſame Agents, and by the like Ways; conſiders, in one Thing, the poſſibility of having any of its ſimple Ideas chang'd; and in another, the poſſibility of making that Change: and ſo comes by that Idea, which we call *Power*.

Thus we ſay, Fire has a *Power* to melt Gold, and make it fluid; and Gold a *Power* to be melted.

Power thus conſider'd, is two-fold, *viz.* as able to *make*, or able to *receive* any Change: the one may be call'd *active*, the other *paſſive Power*.

Of *paſſive Power*, all ſenſible Things abundantly furniſh us with Ideas; nor have we of *active Power* fewer Inſtances: ſince whatever Change is obſerv'd, the Mind muſt ſuppoſe a *Power* ſomewhere able to make that Change.

But yet if we attentively conſider it, Bodies, by our Senſes, do not afford us ſo clear and diſtinct an Idea of active *Power*, as we have from Reflection on the Operations of our Minds. For all *Power* relating to Action; and there being but two ſorts of Action, *viz.* Thinking and Motion; it may be conſider'd whence we have the cleareſt Ideas of the *Powers*, which produce theſe Actions.

Of Thinking, Body affords us no Ideas at all; it is only from Reflection that we have that: neither have we from Body any Idea of the beginning of Motion. A Body, at reſt, affords us no Idea of any active *Power* to move; and when it is ſet in motion itſelf, that Motion is rather a Paſſion, than an Action in it. The Idea of the beginning of Motion, we have only by Reflection on what paſſes in ourſelves; where we find by Experience, that barely by willing it, we can move the parts of our Bodies, which before were at reſt.

We find in ourſelves a *Power* to begin or forbear, continue or end, ſeveral Actions of our Minds, and Motions of our Bodies, barely by a Thought or Preference of the Mind: This *Power*, which the Mind has, thus to order the Conſideration of any Idea, or the forbearing to conſider it; or to prefer the Motion of any part of the Body to its Reſt, and *vice verſa*, in any particular Inſtance, is what we call the *Will*. The actual Exerciſe of that *Power*, is that which we call *Volition*, or *Willing*. See WILL.

The Forbearance or Performance of that Action, conſequent to ſuch Order or Command of the Mind, is called *Voluntary*; and whatſoever Action is perform'd without ſuch a Thought of the Mind, is call *Involuntary*. See VOLUNTARY, *&c.*

The *Power* of Perception, is what we call the *Underſtanding*. See UNDERSTANDING.

Perception, which we make the Act of the Underſtanding, is of three ſorts; firſt, the Perception of Ideas in our Minds; the Perception of the Signification of Signs; and the Perception of the Agreement or Diſagreement of any diſtinct Ideas. See PERCEPTION.

Theſe *Powers of the Mind*, *viz.* of perceiving, and preferring, are uſually call'd by another Name; and the ordinary way of ſpeaking is, that the *Underſtanding* and *Will* are two Faculties or *Powers* of the Mind. A Word proper enough, if uſed ſo, as not to breed any Confuſion in Mens Thoughts, by being ſuppos'd (as there is room to ſuſpect it has been) for ſome real Beings in the Soul, that perform thoſe Actions of Underſtanding and Volition. See FACULTY.

From the Conſideration of the Extent of the *Power* of the Mind over the Actions of the Man, which every one finds in himſelf, ariſe the Ideas of Liberty and Neceſſity.

So far as a Man has a *Power* to think, or not to think; to move or not to move, according to the Preference or Direction of his own Mind; ſo far is a Man free. See LIBERTY.

Wherever any Performance or Forbearance are not equally in a Man's *Power*; wherever doing or not doing will not equally follow upon the preference of his Mind; there he is not Free, tho' perhaps the Action may be Voluntary. See NECESSITY.

So that the Idea of Liberty, is the Idea of a *Power* in any Agent, to do or forbear any Action according to the Determination or Thought of the Mind whereby either of them is preferred to the other: where either of them is not in the *Power* of the Agent to be produced by him according to his Volition, there he is not at Liberty; that Agent is under Neceſſity. So that Liberty cannot be where there is no Thought, no Volition, no Will: But there may be Thought, there may be Will, there may be Volition, where there is no Liberty. Thus a Tennis-Ball, whether in motion by the Stroke of a Racket, or lyingſtill at reſt, is not by any one taken to be a free Agent; becauſe we conceive not a Tennis-Ball to think, and conſequently not to have any Volition, or Preference of Motion to Reſt, or *vice verſa*. So a Man ſtriking himſelf or his Friend by a convulſive Motion of his Arm, which is not in his *Power* by Volition, or the Direction of his Mind, to ſtop or forbear; no body thinks, he has Liberty in this; every one pities him, as acting by Neceſſity and Conſtraint. Again, ſuppoſe a Man be carry'd, whilſt faſt aſleep, into a Room, where there is a Perſon he longs to ſee, and be there lock'd faſt in, beyond his *Power* to get out; he awakes, and is glad to ſee himſelf in ſo deſirable Company, which he ſtays willingly in; that is, he prefers his ſtaying to going away: Is not this Stay voluntary? No body will doubt it; and yet being lock'd faſt in, he is not at liberty to ſtay, he has not freedom to be gone.

Liberty, therefore, is not an Idea belonging to Volition, or Preferring; but to the Perſon having the *Power* of doing, or forbearing to do, according as the Mind ſhall chuſe or direct.

As it is in the Motions of the Body, ſo it is in the Thoughts of our Minds: Where any one is ſuch, that we have *Power* to take it up, or lay it by, according to the Preference of the Mind, there we are at liberty.

A waking Man is not at liberty to think, or not to think, no more than he is at liberty, whether his Body ſhall touch any other or no: but whether he will remove his Contemplation from one Idea to another, is many times in his choice; and then he is, in reſpect of his Ideas, as much at liberty, as he is in reſpect of Bodies he reſts on. He can at pleaſure remove himſelf from one to another.

Yet, ſome Ideas to the Mind, like ſome Motions to the Body, are ſuch, as in certain Circumſtances it cannot avoid nor obtain their abſence, by the utmoſt effort it can uſe: Thus a Man on the Rack is not at liberty to lay by the Idea of Pain, and entertain other Contemplations.

Wherever Thought is wholly wanting, or the *Power* to act or forbear according to the Direction of Thought, there Neceſſity takes place: This, in an Agent capable of Volition, when the Beginning or Continuation of any Action is contrary to the Preference of his Mind, is call'd *Compulſion*; when the hindering or ſtopping any Action is contrary to his Volition, it is call'd *Reſtraint*. Agents that have no Thought, no Volition at all, are in every thing neceſſary Agents.

POWER, in Mechanics, a Force, which being apply'd to a Machine, tends to produce Motion; whether it actually produce it or not. See MACHINE.

In the former Caſe, it is call'd a *moving Power*; in the latter, a *ſuſtaining Power*.

If the *Power* be a Man, or a Brute, it is call'd an *animate Power*; if the Air, Water, Fire, Gravity, or Elaſticity, and *inanimate Power*. See MECHANICS.

POWER is alſo uſed in Mechanics, for one of the ſix ſimple Machines; *viz.* the *Lever*, *Balance*, *Screw*, *Axis in Peritrochio*, *Wedge*, and *Pully*; which are particularly call'd the *Mechanic Powers*. See MECHANIC *Power*.

See alſo each *Power* under its proper Article, LEVER, BALANCE, *&c.*

POWERS, in Pharmacy, the Reſult of a Combination or Union of the eſſential Oils with the Spirit of a Plant; where-

wherein, it is ſuppoſed, are contained all the principal Virtues thereof: whence the Name.

POWER, in the Feodal Juriſprudence, a Right which the Lord has to re-unite to his Fief, a Dependant Fee held of him; when the Vaſſal has alienated it; upon reimburſing the Money given for it, with the Legal Coſts. See FEE.

The Lord is to exerciſe his *Power* over the Fee, within a Year after he has notice of the Fall; otherwiſe he loſes it.

The Word is alſo uſed for the Right a Lord has to ſeize a Dependant Fee, to compel the Payment of all Dues, Services, *&c.*

POWERS, in Theology, a Term uſed among the Fathers, *&c.* for the ſixth Order in the Hierarchy of Angels; commencing from Seraphim. See SERAPHIM.

Theſe they ſuppoſe to be the Spirits who bridle and reſtrain the *Power* of the Devils; preſide over inferior Cauſes; and prevent contrary Qualities from diſturbing the Oeconomy of the World. See HIERARCHY.

POWER, in Optics. The *Power* of a Glaſs, is the Diſtance of the Convexity, from its ſolar Focus. See FOCUS.

POWER, in Arithmetic, the Produce of a Number multiply'd into itſelf. See NUMBER.

Thus the Produce of the Number 3, multiply'd by itſelf, *viz.* 9, is the ſecond *Power* of 3; the Factum of 9, multiply'd by 3, *viz.* 27, is the third *Power*; and the Product of 27, again multiply'd by 3, *viz.* 81, is the fourth *Power*; and ſo on to Infinity. In reſpect hereof, the firſt Number, 3, is called the *Root*, or *firſt Power*. See ROOT.

The ſecond *Power* is call'd the *Square*; with reſpect to which, 3 is the Square-Root. See SQUARE.

The third *Power*, 27, is call'd the *Cube*; with reſpect to which, the 3 is the Cube-Root. See CUBE.

The fourth *Power*, 81, is call'd the *Biquadrate*, or *Quadrato-Quadratum*; with reſpect to which, 3 is the Biquadratic Root. See BIQUADRATIC.

The Number which ſhews how oft the Root is multiply'd into itſelf, to form the *Power*; or how oft the *Power* is to be divided by its Root, to come at the Root, is call'd the *Exponent of the Power*. See EXPONENT.

The Moderns, after *Des Cartes*, are contented to diſtinguiſh moſt of their *Powers* by the Exponents; as, *firſt*, *ſecond*, *third*, *&c.*

The particular Names of the ſeveral *Powers* were introduced by the *Arabs*; viz. *Square*, *Cube*, *Quadrato-Quadratum* or *Biquadrate*, *Surdeſolid*, *Square of the Cube*, *ſecond Surdeſolid*, *Quadrato-quadrato-quadratum*, *Cube of the Cube*, *Square of the Surdeſolid*, *third Surdeſolid*, &c.

The Names given by *Diophantus*, follow'd by *Vieta* and *Oughtred*, are, the *Side* or *Root*, *Square*, *Cube*, *Quadrato-quadratum*, *Quadrato-cubus*, *Cubo-cubus*, *Quadrato-quadrato-cubus*, *Quadrato-cubo-cubus*, *Cubo-cubo-cubus*, &c.

The Characters wherewith the ſeveral *Powers* are denoted, both in the *Arabic* and *Carteſian* Notation, are as follow.

	2	4	8	16	32	64	128	256	512	1024
Arab.	R	*q*	*c*	*bq*	*s*	*qc*	*ſſ*	*tq*	*bc*	*ſr*
Carteſ.	*a*	a^2	a^3	a^4	a^5	a^6	a^7	a^8	a^9	a^{10}

Hence, to raiſe a Quantity to a given *Power*, or Dignity, is the ſame as to find the Factum ariſing upon its being multiply'd a given Number of Times into itſelf: *E. gr.* to raiſe 2 to the 3d *Power*, is the ſame as to find the Factum 8; whoſe Factors are 2, 2, 2. See SQUARE, CUBE, *&c.*

Powers of the ſame Degree, are to one another in a Ratio of the Roots as manifold as their Exponent contains Units: Thus, Squares are in a duplicate Ratio; Cubes in a triplicate Ratio; Quadrato-quadrata, or fourth *Powers*, in a quadruple Ratio. See RATIO.

The *Powers* of proportional Quantities, are alſo proportional to one another. See PROPORTION.

From a given Power to extract the Root, or Side; is the ſame as to find a Number, *e. gr.* 2, which multiply'd any Number of times, *e. gr.* twice, produces the given *Power*, *e. gr.* the 3d *Power*, or 8. See ROOT.

To multiply or divide any Power by another of the ſame Root. 1°. For Multiplication, add the Exponents of the Factors; the Sum is the Exponent of the Factum. Thus:

Factors	x^3	y^m	y^m	a^m	x^n
	x^4	y^m	y^n	a^r	x^s
Prod.	x^7	y^{2m}	y^{m+n}	a^{m+r}	x^{n+s}.

2°. For Diviſion, ſubſtract the Exponent of the *Power* of the Diviſor, from the Exponent of the Dividend; the Remainder is the Exponent of the Quotient. Thus:

Divid.	x^7	$x^3 \mid\mid y^{m+n}$	y^m	$a^m x^n$	$a^{m-r} x^{n-s}$
Diviſ.	x^4	y^n		$a^r x^s$	x

M. *de la Hire* gives us a very odd Property common to all *Powers*: M. *Carre* had obſerv'd, with regard to the Number 6, that all the natural cubic Numbers, 8, 27, 64, 125, whoſe Root is leſs than 6, being divided by 6, the Remainder of the Diviſion is the Root itſelf: And if we go further, 216, the Cube of 6, being divided by 6, leaves no Remainder; but the Diviſor 6, is itſelf the Root. Again, 343, the Cube of 7, being divided by 6, leaves 1; which, added to the Diviſor 6, makes 7 the Root, *&c.*

M. *de la Hire*, on conſidering this, has found that all Numbers, rais'd to any *Power* whatever, have Diviſors, which have the ſame effect with regard thereto, that 6 has with regard to Cubic Numbers.

For the finding of theſe Diviſors, he diſcover'd the following general Rule:

If the Exponent of the *Power* of a Number be even, *i. e.* if the Number be rais'd to the 2d, 4th, 6th *Power*, *&c.* it muſt be divided by 2; the Remainder of the Diviſion, in caſe there be any, added to 2, or to a Multiple of 2, gives the Root of this Number, correſponding to its *Power*, *i. e.* the 2d, 6th, *&c.* Root.

If the Exponent of the *Power* be an uneven Number, *i. e.* if the Number be rais'd to the 3d, 5th, 7th, *&c.* *Power*; the Double of this Exponent will be the Diviſor, which has the Property mention'd.

Thus is it found in 6, double of 3, the Exponent of the *Power* of all the Cubes: Thus, alſo, 10 is the Diviſor of all Numbers rais'd to the 5th *Power*, *&c.*

POWER, of an Hyperbola, in Conics, is the Square of the right Line CI, or AB (Tab. CONICS, fig. 27.)

The *Power* of the Hyperbola, is the ſixteenth part of the Squares of the conjugate Semi-Axes; or the fourth part of the Squares of the conjugate Axes. See HYPERBOLA.

POWER *of the County*. See POSSE *Comitatus*.

POX, in Medicine, a Diſeaſe, whereof the Phyſicians admit ſeveral kinds; as the *Small Pox*, *French Pox*, *Chicken Pox*, and *Swine Pox*.

Small POX, *Variolæ*, is a contagious Diſeaſe appearing on the *Cutis*, which it covers with Puſtles or Ulcerous Eruptions, that leave Eſchars behind 'em. Or, it is a general Eruption of particular Puſtles tending to Suppuration. See PUSTLE and SUPPURATION.

The Origin of the Diſeaſe is uncertain: We find no mention of it before the *Arabic* Phyſicians. See DISEASE.

The *Small Pox* bear a great reſemblance to the Meaſles; ſo that for the two or three firſt days 'tis difficult to diſtinguiſh 'em: They both ariſe from an impure Blood, and corrupt Humours; with this difference, that in the *Small Pox*, the peccant Matter is more thick and viſcid; in the Meaſles more ſubtile, hot, and bilious; and neither of 'em are known to return after having paſs'd 'em once. See MEASLES.

Dolæus ſays, that the Cauſe of the *Small Pox* is brought into the World with us; and lies hid till it find an opportunity of burſting forth: He adds, that there is ſcarce one in many thouſands that eſcapes it all his Life.

Dr. *Drake* obſerves, that the *Small Pox* not being founded in any permanent habitual Diſpoſition, has its Period within a limited time neceſſary for the extruſion of the peccant Matter out of the Pores of the Skin. For the ſalt Serum of the Blood being in this Diſeaſe, by an accidental Fever, thrown out in great quantities on the Glands of the Skin, acts much after the manner of the *Lepra Arabum*; but when the Blood is deſpumated, the Scales dry, and fall off. So that he thinks it would be no great Impropriety to call the *Small Pox*, a temporary critical *Lepra*. See LEPRA.

The *Small Pox* are of two kinds; the *Diſtinct*, where the Puſtles ſtand a-part; and the *Confluent*, where they run into one continued Cake.

The *diſtinct*, or *regular Small* Pox, *Sydenham* obſerves, begin with a Shuddering and Chilline's, which is ſucceeded by an intenſe Heat, violent Pain of the Head and Back, Vomiting, Drowſineſs, eſpecially in Children, and ſometimes Epileptic Fits; which ſhew the *Pox* to be ready to burſt forth, and that they will be mild.

The Eruptions are uſually on the fourth day; upon which the feveriſh Symptoms vaniſh, except that Adults are prone to ſweat. The Puſtles firſt appear in the Face, then the Neck, *&c.* They are at firſt reddiſh, by degrees ſwell and grow whiter; on the eleventh day the Swelling and Inflammation of the Face vaniſh; and the Puſtles begin to wither. If ever this kind kill, 'tis on the fourteenth or fifteenth day.

The Symptoms of the *diſtinct Small Pox*, as enumerated by Dr. *Shaw*, are, 1. A Pain in the Head, Back, and *Scrobiculum Cordis*. 2. A Fever, which decreaſes as the Eruptions increaſe, with redneſs of the Eyes. 3. *Nauſea* and Retchings. 4. Little reddiſh Spots, or beginning Puſtules, appearing on the Neck, Face, Breaſt, *&c.* about the third or fourth day incluſive, from the beginning of the Illneſs. 5. Reſtleſſneſs. 6. About the ſeventh or eighth day, other little red Spots uſually appear between the growing Puſtules. 7. The Puſtules about the ninth day are at their State; being then generally as big as a large Pea, the Mat-

Matter in them well concocted, of a whitiſh Colour inclined to yellow; at which time, 8. The Patient is uſually light-headed and feveriſh. 9. About the tenth day the Puſtules begin to dry on the Face. 10. And about the fifteenth they appear ſhrunk, and begin to ſcale off; and now the danger is eſteem'd to be over.

The *diſtinct* kind is here conſider'd unattended with a Looſeneſs, and other Symptoms, which ſometimes happen in it, as well as in the other.

The Confluent, or *Flux Small* Pox have the ſame Symptoms with the *diſtinct*, only in a more violent degree: They uſually come out on the third day; not ſeparate, as in the *diſtinct* kind, but ſpread into one another; and at length appear all like one whitiſh Pellicle, over the whole Skin. After the eighth day, the Pellicle darkens. In Adults this kind is attended with a Salivation; in Children with a Diarrhæa. The Salivation frequently ſucceeds immediately after Eruption; the Diarrhæa later. The *Confluent* kind uſually kill on the eleventh day.

The Symptoms of the *Confluent* kind, according to Dr. *Shaw*, are, 1. Violent Pain in the Head, Back, and *Scrobiculum Cordis*. 2. Nauſea and Retching, with a Fever, which rather increaſes than decreaſes after the Eruption. 3. In Children a Diarrhæa, which uſually precedes the Eruption, and attends the Diſtemper throughout. 4. A *Ptyaliſmus* in Adults, and but ſeldom a Diarrhæa. 5. Deliria, Convulſions, Hoarſeneſs, Difficulty of Breathing, Fixedneſs of the Eyes, and Reſtleſſneſs; which may alſo in a leſſer degree attend the *diſtinct* ſort. 6. The Spots are here more red, thick, and cloſe than in the *diſtinct*; and the Spaces between them more inflamed and ſwell'd; purple or livid Spots alſo often appear in theſe Spaces; whence the *Small Pox with Purples*. At other times in theſe Spaces, or on the Heads of the Eruptions, appear Bladders full of clear Water, vulgarly call'd the *white Hives*. Laſtly, theſe Eruptions are frequently depreſs'd in the middle; and there turn black; whence the *black Small Pox*.

The Eruptions often riſe and ſink in the Progreſs of the Diſtemper. They uſually firſt appear about the fourth or fifth day, and come to their State about the fifteenth.

Morton divides the Diſeaſe into four Stages: The *Apparatus* or Preparation, from the time of the firſt Infection to the Eruption of the Puſtles. The *Eruption*, which comprehends three States: *Eruption*; *Maturation*; and *Declenſion*, wherein the Puſtles are firſt incruſtated with a Scab, then wither and dry off.

When the Eruptions are very round, diſtinct, encompaſs'd with a red Margin, &c. they are ſaid to be *benign*; otherwiſe *malignant*.

There are four degrees of Malignancy: *viz.* when they are univerſally confluent; particularly confluent; diſtinct, but very ſmall and coherent; and diſtinct, with Petechiæ and miliary Eruptions. See PETECHIÆ, &c.

Dr. *Friend*, Dr. *Cade*, &c. recommend Purging and Phlebotomy after an imperfect Criſis of the *Small Pox*; *i. e.* where the Fever remains after the Puſtles decline. Many oppoſe it: Indeed Reaſon ſeems on its ſide; but Preſcription is againſt it. *Alſaharavius*, in the firſt Stage of the *Small Pox*, preſcribes Phlebotomy, even to a Swooning, and great Quantities of cold Water to be drunk. In the malignant *Small Pox*, Dr. *Liſter* found the Blood, when cold, exceſſively tender and friable, ſo as the ſofteſt Feather would eaſily divide its Globules. *Etmuller* ſays there is nothing to be more regarded than the Breath and Voice; where theſe are good, 'tis an excellent Sign. He adds that Horſe-Dung is an admirable Medicine, in that it promotes Sweat, ſaves the Throat, &c.

A Method of managing the *Small Pox*, lately introduced from abroad, is by Inoculating them. *For the Reaſon, Proceſs, and Advantages whereof*, ſee INOCULATION.

Why the *Small Pox* ſcarce ever viſit a Perſon above once, is a famous Problem; long canvaſs'd, and with little ſucceſs. Dr. *Drake* accounts for it very plauſibly from the Alteration made in the Skin by that Diſeaſe. For the Diſtenſion the Glands and Pores of the Skin ſuffer therein is ſo great, that they ſcarce ever recover their Tone again, ſo as to be able any more to arreſt the Matter in its Courſe outwards long enough, or in quantity enough, to create thoſe Ulcerous Puſtles which are the Diagnoſtics of the Diſeaſe. For tho the ſame feveriſh Diſpoſition ſhould ariſe again in the Blood, yet the Paſſages thro' the Skin being more open, the Matter will never be ſtop'd, ſo as to exhibit the Appearance of the *Small Pox*.

Accordingly we find that in Perſons ſeverely handled with this Diſeaſe, the Face (which is uſually the fulleſt, from the extraordinary obſtruction the Matter meets with by the great Conſtipation of the Pores) ſeldom returns to its former Dimenſions; which Enlargement he accounts for from the Dilatation of the *Areolæ* of the Glands and Pores of the Skin, not from any Augmentation of the Subſtance itſelf.

What confirms this Hypotheſis, is, that Nurſes, &c. who attend Perſons ſick of the *Small Pox*, are frequently a little affected with it; and have now and then two or three Eruptions: That they have no more, ſeems to follow from the free Courſe of the Matter thro' the Skin. With this, too, agrees that conſtant Obſervation, That People of coarſe Skins, in whom the Pores are largeſt, are always more favourably treated by this Diſtemper than others; and that it conſtantly leaves fine Skins coarſer than it found 'em.

This Solution would ſeem more probable, were it not that ſome have ſo very few of theſe Eruptions, perhaps not above twenty or thirty; which cannot fairly be allow'd ſo far to enlarge the Pores of the Skin.

Others hold, That in a genuine Eruption, the Cauſe of the Diſtemper is ſo far evacuated, as ſcarce to leave a poſſibility of a Return; and that if part of the original Cauſe did remain behind, it might, when the Air favours it, or when by other Accidents 'tis ſecreted from the Blood, appear in the form of Eruptions, and ſo prove to be the Meaſles, Chicken-Pox, &c.

It may, indeed, be objected, that theſe laſt mention'd often happen before the *Small Pox*: But whatever be the Cauſe of the *Small Pox*, the ſeparating Power muſt be in ſuch a determined Proportion, or it will fail to cauſe a regular *Small Pox*; and ſo acting proportionably, may produce any of the other Diſtempers juſt mentioned.

The *occaſional Cauſes* of the *Small Pox* may be, 1. Some Alteration in the Air; ſince they happen moſt frequently about the Spring Seaſon; and both in *Europe*, and elſewhere, are more Epidemical and Mortal at particular times. 2. From Fear; which appears more evident than eaſy to explain. 3. From Surfeits, as by eating any thing too chilling to the Blood, as Cucumbers, Oranges, &c. in hot Seaſons, or when the Body is heated by Motion, the drinking of cold Liquors. 4. From too plentiful feeding. 5. From any over-heating the Blood, or too ſuddenly cooling it after it is heated, whereby a ſudden Check is given to Perſpiration; and this more eſpecially if the Air favours ſuch an Eruption.

As to the *prognoſtic Signs of the Small Pox*; 1. The ſooner they appear in the Spring, and the more the Air is diſpoſed to favour the Diſtemper, the more fatal they prove. 2. The confluent Species both in Adults and Children, is dangerous; and the more ſo, if attended with a ſuppreſſion of Urine, Nauſea, Retching, Delirium, purple Spots, Cryſtallines, bloody Urine, &c. after the Eruption; but the blackneſs of 'em is not dangerous before the Criſis. 3. Diarrhæa's in the confluent kind, are not ſo bad in Children as in Adults. 4. A *Ptyaliſmus* is a regular Attendant of the confluent kind in Adults from the ſixth or ſeventh day till after the Criſis; and is ſo neceſſary, that if it ſtop ſuddenly, and return not for twenty four Hours, the Patient is ſuppoſed to be in great danger. 5. A Quincy here is highly dangerous. 6. The Eruptions ſwelling, and ſinking ſuddenly, are bad Signs. 7. The danger is not over till about the twentieth day in the confluent Species. But if the Eruptions be diſtinct, few, round, plump, riſe full, and grow up ſharp at the top; if the Sickneſs, Vomiting, &c. go off, or remit upon the appearance of the Eruptions, and the Patient be under no dreadful Apprehenſions; the danger is uſually over about the tenth day in the diſtinct kind. Convulſions attending the firſt Symptoms of the *Small Pox* in Children, are ſaid to foreſhew the appearance of Eruptions within twelve Hours; which then generally prove diſtinct, and the Patient does well. The *Small Pox* ſucceeding a Debauch in Liquors, or happening upon an irregular Courſe of Life, is uſually mortal.

Chicken POX, a cutaneous Diſeaſe, frequent in Children, wherein the Skin is cover'd with Puſtles like thoſe of the Small Pox, as to Figure and Magnitude; and only diſtinguiſhable therefrom, in that thoſe of the Small Pox appear with a redneſs and inflammation; and thoſe of the *Chicken Pox* whiter, reſembling *Veſiculæ* full of a ſerous Humour; which in three days time burſt, and dry away, without any danger, and uſually without any Fever.

The *Chicken Pox* and *Swine Pox* ſeem to be the Small Pox in a leſs degree, tho' they ſometimes precede, and ſometimes ſucceed the Small Pox. The Puſtles appear to be of the ſame kind, only in the Swine Pox they are much larger, and in the *Chicken Pox* ſomewhat leſs than in the Small Pox. There commonly appear five or ſix, ſometimes twenty or thirty on the Face, and but very few on the Body.

The Patient is very little indiſpoſed, either before, at, or after their appearance; tho' the ſudden ſinking of them often cauſes ſome diſorder; but 'tis preſently relieved by a little Sack and Saffron, or a Doſe of Treacle-Water.

Grown Perſons ſeldom keep within Doors for either; and upon that account the Eruptions may continue the longer, becauſe the cold Air is ſuppoſed to hinder their ripening; ſo that 'tis ſometimes three Weeks or a Month before they totally diſappear.

French

French POX, a contagious Diſeaſe contracted by a poiſonous Humour, uſually in Coition; and manifeſting itſelf in Ulcers and Pains. See VENEREAL *Diſeaſe*.

The *French* call it *Mal de Naples*, the *Neapolitan* Diſeaſe, becauſe firſt obſerved among the Soldiery at the Siege of *Naples* under *Charles* VIII. The *Italians* call it *Mal Franceſe*, and we the *French Diſeaſe*, becauſe firſt caught by the *French*. The *Spaniards* call it *Sarva das Indias*, becauſe firſt brought from the *Weſt-Indies*.

POYNING's *Law*, an Act of Parliament made in *Ireland*, by *Henry* VII. whereby all the Statutes of force in *England* were made of force in *Ireland*; which before that time they were not.

Nor are any now in force there, made in *England* ſince that time.

The Law took its Name from Sir *Edward Poyning*, Lord Lieutenant at the time of its making.

PRACTICE, in Arithmetic, PRACTICA *Italica*, or *Italian Uſages*; certain compendious ways of working the Rule of Proportion, or Golden Rule. See GOLDEN *Rule*.

They were thus call'd from their expediting of *Practice*, and Buſineſs; and becauſe firſt introduced by the Merchants, and Negotiants of *Italy*. See RULE.

The moſt uſeful of theſe *Practices* are as follow:

1°. Since the Uſe of the Rule of Three is to find a fourth Proportional, to three given Numbers; divide the firſt and ſecond, or the firſt and third by ſome common Number, if that can be done exactly; and work with the Quotients in their ſtead: As in the following Example.

Price of 3 ℔ is 9 Shil. What's the Price of 7 ℔?

3) 1 3 3

Facit 21 Shil.

Price of 14 ℔ is 26 Shil. What's the Price of 7 ℔?

7) 2 2)— 1

Facit 13 Shil.

2°. If the firſt Term be 1, and the ſecond an aliquot part of a Pound, Shilling, or Penny; divide the third by the aliquot Part: The Quotient is the Anſwer. *Note*, To find the aliquot part; thoſe who cannot do it otherwiſe, may ſee the Table of aliquot parts of a Pound under the Article MULTIPLICATION.

E. gr. If 1 Ell coſt 10 Shil. What coſt 957 Ells.

Facit l. 478: 10 *s.*

3°. If the firſt or third Number be 1; the other not exceeding large; and the middle Term a Compound, *i. e.* conſiſt of ſeveral Denominations; it may be wrought without Reduction thus:

Price of 1 ℔ is 3 *s.* 8 *d.* 3 *q.* What's the price of 5 ℔?

5

Facit 18 *s.* 7 *d.* 3 *q.*

For 4 Farthings making a Penny, 5 times 3 Farthings make 3 *d.* 3 *q.* and 12 Pence making 1 Shilling, five times eight Pence make 3 *s.* 4 *d.* which with 3 *d.* from the place of Farthings, make 3 *s.* 7 *d.* Laſtly, five times 3 Shillings makes 15 Shillings, and with the 3 Shillings from the place of Pence, 18 *s.* The price required therefore is 18 *s.* 7 *d.* 3 *q.*

4°. If the middle Term be not an *aliquot*, but an *aliquant* part; reſolve the aliquant part into its aliquot parts; divide the middle Term by the ſeveral aliquots, the Sum of the Quotients is the Anſwer. To find the aliquot parts contain'd in an aliquant; ſee the Table of aliquant parts of a Pound under the Article MULTIPLICATION.

For an Inſtance of this Rule:

If 1 Ell coſt 15 Shil. What coſt 124 Ells?

½ 4)62

¼ 31

Facit 93 *l.*

5°. If the firſt, or ſecond Term be 1; and in the former caſe, the ſecond, or third, in the latter the firſt, be reſolvable into Factors; the whole Operation may be performed in the Mind without writing down any Figures: As in the following Example.

Price of 1 ℔ is 24 Shil. What is the price of 20 ℔?

4 4

6

80

6

Facit 48|0 *s.*—24 *l.*

6°. Where one of the given Numbers is 1; we have ſeveral compendious Uſages, to ſave Multiplication, and Diviſion. *E. gr.*

If 9 Pounds coſt 20 *s.* What does 1 Pound coſt?

'Tis obvious the Sum required is had by adding to the tenth part of 20 *s.* *viz.* 2 *s.* the ninth part of that tenth, *viz.* 3 *d.* ⅓, and ⅑ of a Penny: The Anſwer therefore is 2 *s.* 3 *d.* ⅓ and ⅑.

Again: If 5 ℔ coſt 54 Shillings, What coſts 1 ℔?

Since 5 is half of 10, the double of the tenth part of the given price, *viz.* 10 *s.* 9 *d.* ¾ *q.* is the Sum required.

Again: If 1 ℔ coſt 18 *d.* What will 19 ℔ coſt?

Since 19=20—1; from the given price doubled, and increaſed by a Cypher, *viz.* 360, ſubſtract the ſimple 18; the Remainder is 342 *d.* = 28 *s.* 6 *d.* the Sum required.

7°. If two Terms of the ſame Denomination differ by an Unit, we have a peculiar kind of Compend; which will be clear from the following Examples. *E. gr.* If 5 ℔ coſt 30 *s.* What will 4 ℔ coſt?

Since the price of 4 ℔ is one fifth part ſhort of that of 5 ℔. divide the given price 30 by 5; the Quotient 6 being ſubſtracted from the Dividend; the Remainder, *viz.* 24 *s.* is the Sum required.

Again: If 8 ℔ coſt 24 *s.* What coſt 9 ℔?

Since the price of 9 ℔ exceeds that of 8 by one eighth part; divide the given Price 24 by 8; and add the Quotient 3 to the Dividend; the Sum 27 is the Anſwer.

8°. Sometimes one may uſe ſeveral of theſe Compounds, or *Practices* in the ſame Queſtion. *E. gr.* If 100 ℔ coſt 30 *s.* 4 *d.* What coſts 50 ℔?

50) 2. 2

Facit 15 *s.* 2 *d.*

Again: 60 ℔ coſt 4 *s.* What coſts 2520?

6 42

24 6

7 7

168 *l.*

PRÆ, a *Latin* Prepoſition, literally ſignifying *before*; uſed in Compoſition, with ſeveral Words in our Language, to denote the relation of Priority. See PREPOSITION and COMPOSITION.

Of late, our Writers, in Words thoroughly anglicized, for *præ* uſually write *pre*, reſtraining the *Latin* Orthography to Words that are ſtill *Latin*. Hence, for

PRÆADAMITE,	See	PREADAMITE.
PRÆCESSION,		PRECESSION.
PRÆCIPE,		PRECIPE.
PRÆCONTRACT,		PRECONTRACT.
PRÆCEPTORY,		PRECEPTORY.
PRÆDECESSOR,		PREDECESSOR.
PRÆDETERMINATION,		PREDETERMINATION.
PRÆDESTINATION,		PREDESTINATION.
PRÆDICTION,		PREDICTION.
PRÆDOMINANT,		PREDOMINANT.
PRÆEXISTENCE,		PREEXISTENCE.
PRÆFECTUS,		PREFECT.
PRÆEMPTION,		PREEMPTION.
PRÆTOR,		PRETOR.
PRÆTORIAN,		PRETORIAN, &c.

PRÆCORDIA, the parts about the Heart; *e. gr.* the Pericardium, the Diaphragm, the Hypochondria, and even the Heart itſelf; with the Lungs, Spleen, &c. See HEART.

The Word is ordinarily uſed for the fore-part of the Region of the Thorax. See THORAX.

Pliny, and ſome other Authors, uſe it for all the Viſcera, or Entrails. *Præcordia vocamus uno nomine exta in Homine.* See VISCERA.

One of the principal Differences between Men and Brutes, conſiſts in this; that there is a greater Correſpondence and Communication between the Head and Heart of the former than the latter: Which Correſpondence is effected by means of a greater Number of Nerves, ſent from the Brain to the Heart and *Præcordia*; Brutes only receiving Nerves to the *Præcordia* by the Branches of the *Par Vagum*; and Man, likewiſe, by the Intercoſtal Pair.

The Reaſon, Dr. *Willis* well obſerves, is, that Brutes being void of Diſcretion, and but little ſubject to Paſſions, need not, like Man, a double Paſſage for the Spirits, the one for the Service of the vital Functions, the other for the reciprocal Impreſſion of the Affections. See NERVE, SPIRIT, BRAIN, &c.

PRÆMIUM, literally denotes a Reward, or Recompence.

Among Merchants, it is taken for that Sum of Money, *viz.* 8 or 10 *per Cent.* which is given to an Inſurer, for inſuring the ſafe Return of any Ship, or Merchandize. See POLICY *of Inſurance*.

The ſame Term is alſo uſed in the Money and Paper-Trade, for what is given for a thing above *Par*.

Thus, Lottery-Tickets, &c. are ſaid to bear ſo much, *e. gr.* 10 or 20 *s. Præm.* when they are ſold for ſo much beyond the prime Coſt at which the Government vended them.

PRÆNOMEN, among the *Romans*, a proper Name; or Name prefixed to the general Name of the Family; as, *Caius*, *Lucius*, *Marcus*, &c. See NAME.

The *Prænomen* anſwers to our Chriſtian Name, *Peter*, *Paul*, &c.

It was not introduced among the *Romans* till long time after the *Nomen*. See NOMEN.

The Name of the Family was given their Children the Day after their Birth; but the *Prænomen* was not given 'em till they took the Virile Habit. See VIRILE.

Varro reckons up thirty *Prænomina* among the *Romans*. The uſual ones may be reduced to eighteen.

The *Greeks* had no *Prænomina*; they had but one Name.

PRÆPARANTIA *Vaſa*, in Anatomy, the *Spermatic Veſſels*; or two Arteries, and as many Veins of the Teſticles; thus call'd by the Antients, from an Opinion that the Seed began to be prepared herein. See SPERMATIC *Veſſels*, SEED, and GENERATION.

PRÆPOSITUS, a Term frequently uſed in our Law-Books: *Præpoſitus Villæ* is ſometimes uſed for the Chief Officer of the King in a Town, Manor, Village, or Reeve. See PREFECT.

Præpoſitus Villæ is ſometimes alſo uſed for the Conſtable of a Town, or petty Conſtable. See CONSTABLE.

Præpoſitus Eccleſiæ, ſee CHURCH-*Reve*.

Quatuor homines PRÆPOSITI, *in Crompton*, &c. Four Men of each Town which are to appear before the Juſtices of the Foreſt, in their Circuit.

PRÆPUTIUM, PREPUCE, in Anatomy, the *Fore-Skin*; a prolongation of the *Cutis* of the *Penis*, covering the Balanus, Glans, or Extremity of the Yard. See PENIS and GLANS.

Dr. *Drake* obſerves, that Nature does not ſeem more various in any part of her Works than in the *Prepuce*; for the Figure and Proportion whereof, there does not ſeem any Standard.

Hence, probably, aroſe the neceſſity of Circumciſion, ſo generally practiſed throughout the Oriental parts; not out of a view to Religion, but to Cleanlineſs, and to prevent Diſeaſes which a detention of the Mucus of the *Sub-preputial* Glands might breed in thoſe hot Countries. For even here the ſame Author adds, he has known ſome, who, having large *Prepuces*, call'd *Filbert-Prepuces*, have been frighted at the appearance of a Mucus oozing out upon a mere plenitude, from between the *Prepuce* and Glans; which 'tis probable the great Legiſlator of the *Jews* might have a view to in the firſt Inſtitution of Circumciſion. See CIRCUMCISION.

The Skin of the *Prepuce* is double; at the connexion of the internal Skin, to the other part, are ſeveral oval and roundiſh Glandules placed irregularly about the joining of the Glans to the *Corpora Cavernoſa*, and on the Glans itſelf.

Their uſe is to ſeparate a Liquor to render the agitation of the *Præputium* on the Glans eaſy. When this Liquor becomes rancid, as upon old Age, or Venereal Contacts, it excoriates the Glans and *Præputium*; and even ſometimes contracts the latter, and renders it neceſſary to be divided to afford a paſſage to the Glans. See PHIMOSIS and PARAPHIMOSIS.

PRÆSEPE, in Aſtronomy, three Nebulous Stars, in the Sign *Cancer*, or the Crab; two of 'em of the 7th, the third of the 6th Magnitude. Their Longitudes, Latitudes, &c. ſee among thoſe of the other Stars in CANCER.

PRÆTER *Naturam*, in Medicine, ſee NATURE.

PRAGMATIC *Sanction*, in the Civil Law, is defined by *Hottoman*, a Reſcript, or Anſwer of the Prince, deliver'd by Advice of his Council, to ſome College, Order, or Body of People, upon their conſulting him on ſome Caſe of their Community.

Such an Anſwer to a particluar Perſon, is call'd ſimply *Reſcript*. See RESCRIPT.

The Word is form'd from the *Greek* πραγμα, *Negotium*, Buſineſs.

The Term *Pragmatic Sanction* is chiefly uſed among the Modern Writers, for that famous Ordonnance of *Charles* VII. of *France*, publiſhed in 1268; containing a Regulation of Eccleſiaſtical Diſcipline, conformable to the Canons of the Council of *Baſil*; and ſince uſed by the *Gallican* Church, as a Barrier againſt the Enterprizes and Encroachments of the Court of *Rome*.

The Scope of the *Pragmatic Sanction*, was to regulate the form of Elections made by the Clergy; to declare the Collations to belong to Ordinaries, the Prevention alone reſerv'd to the Pope; to eſtabliſh Prebends; to aſſign a Third of the Benefices to Graduates; to aboliſh Reſervations, Annates, and other like Charges.

Pope *Pius* II. obtain'd an abrogation of this *Sanction* of *Louis* XI. On which occaſion the Court of *Rome*, tranſported with Joy, dragg'd the *Pragmatic* thro' the Streets, whipping it all the way, as *Xerxes* antiently did the *Helleſpont*. But the Parliament oppoſed this Abrogation with a great deal of Vigour, and refuſed its Conſent to the laſt. So that maugre all the Efforts of *Rome*, the *Sanction* ſtill held in force; till the Concordat paſs'd between Pope *Leo* X. and *Francis* I. in 1515, when the *Pragmatic Sanction* was aboliſhed. See CONCORDAT.

The Parliament of *Paris* again oppoſed the Innovation, and refuſed to confirm the Concordat, and was not brought to give its Conſent till after repeated Orders of the King; together with a ſecret Reſolution taken always to judge conformably to the Tenor of the *Pragmatic Sanction*.

PRAGMATICAL, a Term ſometimes uſed in the ſame ſenſe as *Practical*, *Mechanical*, or *Problematical*.

Thus *Stevinus*, in his *Hydroſtatical Elements*, calls certain Mechanical, or Practical Experiments, which he undertakes to inſtruct his Reader how to make, by the Name of *Pragmatical* Examples; and in the ſame ſenſe it is ſometimes uſed by other Naturaliſts.

PRATIQUE, or PRATTICK, in Commerce, a Negotiation or Communication of Commerce, which a Merchant-Veſſel obtains in the Ports it arrives in, and the Countries it diſcovers.

Hence to obtain *Pratique*, is to obtain a Liberty to frequent a Port, to go a-ſhore, buy and ſell, &c. We could never have any *Pratique* with the Inhabitants of *Nova Zembla*.

The Word is *French*, and ſignifies, literally, Practice.

PRATIQUE is particularly uſed for a Licence to traffic, granted to the Maſter of a Ship in the Ports of *Italy*, upon a Bill of Health; that is, a Certificate that the Place whence he came is not annoy'd with any infectious Diſeaſe.

PRAXÆANS, a Sect of Heretics, ſo call'd from their Author *Praxeas*.

This Hereſiarch was of *Aſia*, and lived in the ſecond Century. He was at firſt a Diſciple of *Montanus*, but quitted him, and ſoon after ſet up a Sect of his own; teaching, that there was no Plurality of Perſons in the Godhead; and that it was the Father himſelf that ſuffer'd on the Croſs. Which Sentiment was afterwards adopted by the Monarchics, Sabellians, and Patripaſſians. See SABELLIAN, PATRIPASSIAN, &c.

PRAYER, in Theology, a Petition put up to God, either for the obtaining of ſome future Favour, or the returning of Thanks for a paſt one.

Divines diſtinguiſh three kinds of Prayer; *Vocal*, which is cloth'd in Words and Sounds to be utter'd with the Mouth; *Mental*, which is only form'd or conceiv'd in the Mind, and not deliver'd in Words; and *Ejaculatory*, which is a ſhort, ſudden flight without Study, Order, or Method. See VOCAL, MENTAL, &c.

The Myſtic Divines, again, diſtinguiſh *Prayer* into *Active* and *Paſſive* See ACTIVE and PASSIVE.

Among us, Prayer is frequently conſider'd under the diviſions of *Preconceiv'd* and *Extemporary*. Under the firſt come all ſet Forms, whether public or private, by which the Mind is directed in the Order, Manner, Expreſſion, &c. of its Petitions. The ſecond is that where the Mind is left to itſelf, its own Conduct, both as to Matter, Manner, Words, &c.

Common PRAYER, ſee LITURGY.

The *Romaniſts* alſo prefer *Prayers* to Saints, the Virgin, the Angel *Gabriel*, &c. See SAINT, OFFICE, AVE *Mary*, &c.

PREACHING, in Theology, the Declaration, or Promulgation of the Word of God, in public; by a Perſon authorized, and in a Place deſtined, for that purpoſe. See SERMON, PRIEST, GOSPEL, &c.

Antiently, none but Biſhops were allow'd to preach. Now, not only Prieſts, but Deacons are qualify'd. See BISHOP and DEACON.

Biſhop *Wilkins* has deliver'd the *Art of Preaching* in a Treatiſe call'd *Eccleſiaſtes*, or the Preacher. See ECCLESIASTES.

The Word is derived from the *Hebrew*, *Paraſch*, *expoſuit*, he expounded.

The Religious of the Order of St. *Dominic* aſſume the Quality of *Preaching-Brothers*, Friars-predicant or predicants. See DOMINICAN.

PREADAMITE, *Præadamita*, a Term given to the Inhabitants of the Earth conceived, by ſome People, to have lived before *Adam*.

Iſaac de la Pereyra in 1655, publiſhed a Book to evince the Reality of *Preadamites*, by which he gain'd a conſiderable number of Proſelytes to the Opinion; but the Anſwer of *Demarets*, Profeſſor of Theology at *Groninguen*, publiſhed the Year following, put a ſtop to its Progreſs; tho' *Pereyra* made a Reply.

His Syſtem was this: The *Jews* he calls *Adamites*, and ſuppoſes 'em to have iſſued from *Adam*; and gives the Title *Preadamites* to the *Gentiles*, whom he ſuppoſes to have been a long time before *Adam*.

But this being expreſly contrary to the firſt Words of *Geneſis*, *Pereyra* had recourſe to the fabulous Antiquities of the *Egyptians* and *Chaldeans*, and to ſome idle Rabbins, who imagined there had been another World before that deſcribed by *Moſes*.

He was apprehended by the Inquiſitors in *Flanders*, and very roughly uſed; tho' in the Service of the *Dauphin*. But he appealed from their Sentence to *Rome*; whither he went in the time of *Alexander* VII. and where he printed a Retractation of his Book of *Preadamites*.

PREAMBLE, in Law, the beginning of an Act of Parliament, *&c.* ſerving, as it were, for a Key, to open the Intent of the Makers of the Acts, and the Miſchiefs deſigned to be prevented or remedied thereby. See ACT.

PREBEND, *Præbenda*, the Portion a Prebendary receives out of the Eſtate of a Cathedral, or Collegiate Church. See PREBENDARY.

The Term *Prebend* is uſually confounded with *Canonicate*, *Canonate*, or *Canonica*; yet there is a real difference. A *Prebend* is properly a Right which an Eccleſiaſtic has in a Cathedral or Collegiate Church where he officiates, to receive certain Eccleſiaſtical Revenues, and to enjoy certain Dues, either in Money or in kind; (ſo call'd *à Præbendo*, q. d. *afforded*, or *allowed* him; not *à Præbendo Auxilium*, or *Concilium Epiſcopo*) whereas a Canonica is a mere Title, or ſpiritual Quality, which a Perſon enjoys independent of any *Præſtation*, or any temporal Revenue: So that the *Prebend* may ſubſiſt without the Canonicate; but the Canonicate is inſeparable from the *Prebend*.

For it is not to the *Prebend* that the Right of Suffrage, and other ſpiritual Rights are annexed, but to the Canonicate; and when the *Prebend* is join'd to the Canonicate, it becomes Spiritual by virtue of the Canonicate to which it is attach'd. See CANONICA.

Antiently the Pope created Canons with a Right of taking place in the Choir, a deliberative Voice in the Chapter, and an expectation of the firſt *Prebend* that ſhould become vacant: But this was prohibited by the Council of *Trent*. Yet the Pope ſtill confers the Canonicate without any *Prebend*, when he would confer a Dignity in a Church, for the obtaining whereof, 'tis required the Candidate be a Canon.

This they call a Canonate *ad effectum*, and ſometimes *jus ventoſum*, which is no more than an empty Title conferr'd purely to qualify a Man for a Dignity affected to the Capacity of Canon.

In ſome Churches there are *double Prebends*; and in others *Semi-Prebends*.

Originally the *Prebend* was only a Livery, or Portion of things neceſſary to Life, given daily; at preſent the Rents and Profits of the Church are divided into fixed Portions, call'd *Prebends*, which are enjoy'd independently. The nomination to *Prebends* is in the King. In *France* 'tis one of the honorary Rights of the King, on his joyful Acceſſion to the Crown, to nominate to the firſt *Prebends* vacant by death in the Cathedral and Collegiate Churches.

Prebends are either *Simple*, or with *Dignity*: The latter are ſuch, as, beſide their *Prebends*, have ſome Juriſdiction annexed to 'em.

Theological, or *Divinity Prebend*, is a *Prebend* affected to a Doctor in Divinity, in each Cathedral and Collegiate Church throughout *France*, for preaching on Sundays, and making a public Lecture thrice a Week.

Preceptorial Prebend, a *Prebend*, the Revenues whereof are deſtined for the Support of a Preceptor or Maſter, who is obliged to inſtruct the Youth of the Place *gratis*. The Canonate is not here neceſſary to the *Prebend*.

Panormus obſerves, that in the Cathedral-Church of *Chartres*, there are *Prebends* reſerv'd to Laymen, and for the Subſiſtence of ſome Perſons of Birth and Diſtinction.

PREBENDARY, an Eccleſiaſtic, who enjoys a Prebend. See PREBEND.

Prebendaries, and Canons of Cathedral and Collegiate Churches, have this in common, that they have each a Portion of the Revenues of the Church for their Subſiſtence; the one under the Title of *Præbenda*, *Prebend*; the other under the Title of *Canonica*, or *Canonicate*; and have each Places, and Voices in the Chapter: But they differ in this, that the former receives his Portion or Prebend in Conſideration of his officiating and ſerving in the Church; but the latter without any ſuch Conſideration, merely by his being received into the Cathedral or College, *per aſſignatum ſtallum in Choro, & locum in Capitulo*. See CANON, *&c.*

Golden PREBENDARY of *Hereford*, call'd alſo *Prebendarius Epiſcopi*, is one of the twenty-eight minor *Prebendaries*, who has, *ex officio*, the firſt Canon's Place that falls.

He was antiently Confeſſor of the Biſhop and Cathedral, and had the Altarages; on which account he was call'd the *Golden Prebendary*.

PRECARIÆ, or *Preces*, in our antient Law-Books, Day's-works, which the Tenants of certain Manors are bound to give their Lords, in Harveſt-time; and which, in ſome places, are corruptly call'd *Bind-days*, for *Biden-days*, from the *Saxon*, *Bidan*, to pray.

Baldwinus una bovata pro ii s. *& dimid. &* ii *Gallinas &* xx *ova &* iiii Precarias *in Autumno; uno cum homine, bis arare, &c.* Monaſt. Angl.

Magna Precaria, was a great or general Reaping-day. The Lord of the Manor of *Harrow* in *Middleſex* had, 21 *Rich.* 2. a Cuſtom, that by Summons of his Bailiff on a general Reap-day, then call'd *Magna Precaria*, the Tenants ſhould do one hundred ninety-nine days Work for him; every Tenant that had a Chimney ſending a Man.

PRECARIOUS, in Commerce, is properly a kind of Trade carried on between two Nations at War, by the Intervention of a third at Peace with 'em both.

Thus the *Engliſh* hold a *precarious* Commerce with the *Spaniards* by means of the *Portugueſe*; when the two former Nations being at War, the third lends its Veſſels, its Colours, and Name, to continue their Trade.

PRECARIOUS, in Juriſprudence, a Term uſed for a Fund or Stock, whereof a Perſon has not the full Propriety, whereof he cannot diſpoſe abſolutely, and which is moſt of it borrow'd.

PRECE *Partium*, in Law, the Continuance of a Suit by conſent of both Parties.

PRECEDENCE, PRECEDENCY, *Rank*, a Place of Honour, which a Perſon is entitled to in Companies; either for ſitting or walking.

Precedence is either of *Courteſy*, or of Right, *de jure*.

The former is that due to Age, to Eſtate, *&c.* which is regulated by Cuſtom and Civility; the latter is ſettled by Authority, and where broke in upon, gives an Action at Law. See NOBILTY.

The Point of *Precedency* is thus ordered by the Heralds.

After the King, the Princes of the Blood, *viz.* the Sons, Grandſons, Brothers, and Nephews of the King take place; then the Great Officers of the Church and Crown, *viz.* the ABp of *Canterbury*, then the Lord Chancellor, or Lord Keeper of the Great Seal; next the ABp of *York*; the Lord High Treaſurer; the Lord Preſident of the Privy Council; the Lord Privy-Seal: Next, Dukes, then Marqueſſes, Dukes eldeſt Sons, Earls, Marqueſſes eldeſt Sons, Dukes younger Sons, Viſcounts, Earls eldeſt Sons, Marqueſſes younger Sons, Biſhops, Barons, Viſcounts eldeſt Sons, Earls younger Sons, Barons eldeſt Sons, Privy-Counſellors, Judges, Maſters in Chancery, Viſcounts younger Sons, Barons younger Sons, Knights Bannerets, Baronets, Knights of the Bath, Knights Batchelors, Colonels, Serjeants at Law, Doctors, Eſquires, Lieutenant-Colonels, Majors, Captains, Batchelors of Divinity, Law, *&c.* Maſters of Arts, Gentlemen, Yeomen, Tradeſmen, Mechanicks.

Note, That great Officers of Court, of what degree ſoever they are, take place above all others of the ſame Degree or Order of Nobility; *viz.* the Maſter of the Horſe, Lord Great Chamberlain of *England*, Lord High Conſtable of *England*, Lord Marſhal of *England*, Lord Admiral of *England*, Lord Steward, and Lord Chamberlain of his Majeſty's Houſhold.

So the Secretaries of State, if Peers, take place of all of that Degree, except the Great Officers aforeſaid.

Dukes, Marqueſſes, Earls, Barons, *&c.* not having any of the ſaid Offices, take place according to the Seniority of their Creation.

The Ladies take place, or *Precedency*, according to the Degree of Quality of their Husbands.

PRECEDENT, in Law, an original, authentic Inſtrument, or Writing; ſerving as a Form to draw others by. See ORIGINAL, *&c.*

Hence *Precedent Books*, *&c.* full of Draughts of Deeds, Conveyances, *&c.* for Attorneys.

PRECENTOR, or PRÆCENTOR, a Dignitary in Cathedral Churches, popularly call'd the *Chanter*, or *Maſter of the Choir*. See CHANTER.

The *Præcentor* is ſo call'd, from the *Latin præ*, and *cano*; becauſe he is ſuppoſed to lead the Choir, and *ſing before* the reſt.

PRECEPT, in Law, a Command in Writing, ſent by a Chief Juſtice, Juſtice of Peace, or other like Officer, for the bringing of a Perſon, Records, or other Matters, before him.

PRECEPT is alſo uſed for the Command, or Incitement, whereby one Man ſtirs up another to commit Felony, Theft, *&c. Bracton, lib.* 3. *Tract.* 2. *cap.* 19. whence we may obſerve three Diverſities of offending in Murther; *Præception*, *Fortia*, *Concilium*.

Preception, is the Inſtigation uſed before-hand; *Fortia*, the Aſſiſtance in the Fact; *Concilium*, the Advice either before or after. See MURTHER.

PRECESSION, PRÆCESSIO, in Aſtronomy, a Term apply'd to the Equinoxes, which, by a very ſlow inſenſible Motion, change their place; going backwards, or weſtward, *i. e. in antecedentia* as the Aſtronomers call it, or contrary to the Order of the Signs. See EQUINOX.

It is ſhewn, in the new Aſtronomy, that the Pole, the Solſtices, the Equinoxes, and all the other Points of the Ecliptic, have a retrograde Motion; and are continually moving from Eaſt to Weſt, or from *Aries* towards *Piſces*, *&c.* by means whereof, the Equinoctial Points are carry'd

further and further back, among the preceding Signs of Stars; at the rate of about 50 Seconds each Year: which retrograde Motion is call'd the *Preceſſion*, *Receſſion*, or *Retroceſſion of the Equinoxes*.

Hence, as the fixed Stars remain immovable, and the Equinoxes go backward; the Stars will ſeem to move more and more Eaſtward with reſpect thereto; whence the Longitudes of the Stars, which are reckon'd from the firſt Point of *Aries*, or the Vernal Equinox, are continually increaſing. See LONGITUDE and STAR.

Hence it is that the Conſtellations have all chang'd the Places aſſign'd them by the antient Aſtronomers: In the Time of *Hipparchus* and the oldeſt Aſtronomers, the Equinoctial Points were fix'd to the firſt Stars of *Aries* and *Libra*; but the Signs are now no longer in the ſame Points; and the Stars which were then in Conjunction with the Sun when he was in the Equinox, are now a whole Sign, or 30 Degrees, to the Eaſt thereof: Thus the firſt Star of *Aries*, is now in the Portion of the Ecliptic call'd *Taurus*; and the firſt Star of *Taurus* now reſides in *Gemini*; and *Gemini* is advanced into *Cancer*, &c. See SIGN and CONSTELLATION.

The Equinoxes will have made their Revolution Weſtward, and will be return'd to *Aries* again; or the Conſtellations will have made theirs Eaſtward, and will again fall into their former places, with regard to the Equinoxes, in 25816 Years, according to *Tycho*; in 25920, according to *Ricciolus*; and in 24800, according to *Caſſini*.

The Antients, and even ſome among the Moderns, have taken the Equinoxes to be immoveable; and aſcribed that Change of Diſtance of the Stars here-from, to a real Motion of the Orb of the fixed Stars; which they ſuppoſe to have a ſlow Revolution about the Poles of the Ecliptic: ſo as that all the Stars perform their Circuits in the Ecliptic, or its Parallels, in the ſpace of 25920 Years; after which, they ſhould all return again to their former places.

This Period the Antients call'd the *Platonic*, or *great Year*; and imagin'd that at its Completion, every thing would begin again as at firſt: and all things come round in the ſame Order they have already done. See *Platonic* YEAR.

The Phyſical Cauſe of the *Preceſſion* of the Equinoxes, Sir *Iſaac Newton* demonſtrates, does ariſe from the broad ſpheroidal Figure of the Earth; which again ariſes from the Earth's Rotation a-round its Axis. See EARTH.

PRECIOUS, or PRETIOUS *Stone*, call'd alſo *Gem*, and *Jewel*, is a Stone extraordinarily hard, durable, tranſparent, and of a beautiful Colour, or Water. See STONE and GEM.

Of theſe we may diſtinguiſh three Kinds: 1°. Such as are entirely tranſparent; which again may be divided into ſuch as are either colour-leſs, as the *Diamond*; or colour'd, as the *Emerald*: Which Diviſion of colour'd Gems may be ſubdivided into thoſe of one Colour, as the *Ruby*; and thoſe with ſeveral, as the *Amethyſt*. 2°. Brilliant, or ſhining, as the *Bohemian Granate*. 3°. Semi-tranſparent, as *Opal*.

Biſhop *Wilkins* divides *precious* Stones into *more* and *leſs tranſparent*. The *leſs tranſparent* he diſtinguiſhes by their Colours: into red, as the Sardius and Cornelian; pale, fleſhy Colour, like that of a Man's Nail, as the Onyx; blueiſh, as the Turquois; pale purple, as the Chalcedony; and thoſe of various Colours, as Opal and Cat's Eye.

The *more tranſparent* he diſtinguiſhes into ſuch as are colourleſs, as the Diamond and white Saphir; and colour'd, which are either red, as the Ruby, Carbuncle, and Granate; yellow, as the Chryſolite, and Topaz; green, as the Emerald, Smaragd, and Beryl; blueiſh, as the Saphir; and purple or violaceous, as the Amethiſt and Hyacinth.

Dr. *Woodward* divides *precious* Stones ſomewhat more preciſely, into *opake*, *ſemi-opake*, and *tranſparent*. Again, 1ſt, the *opake* are either of one Colour, as the Turquois; or of various Colours, as Lazuli and Jaſper. 2d, *Semi-opake*, either have their *Colours permanent*, as the Agat, Chalcedony, Onyx, Sardonix, Cornelian, and Beryl; or their *Colours vary*, according to the Poſition of the Light, as the *Oculus Cati*, and Opal. 3d, *Tranſparent Stones* are either *with Colours*; as the Topaz and Jacinth, yellow, or partaking thereof; Granate, Ruby and Amethyſt, red; Saphire, Water Saphire, and Aquemarine, blue; and Emerald, or Cryſolite, green, or partaking thereof: or *without Colours*, as the Cryſtal, Pſeudo-Diamond, white Saphire, and Diamond.

The natural Hiſtory, Characters, Properties, &c. of each Stone; ſee under its proper Article: DIAMOND, CORNELIAN, RUBY, TURQUOIS, ONYX, EMERALD, CRYSOLITE, *&c.*

The Medicinal Virtues of precious Stones, or Gems, in the general; ſee under GEM.

The Origin and Formation of precious Stones, ſee under STONE.

For the Art of engraving on precious Stones, ſee ENGRAVING.

The Art of cutting them, ſee under LAPIDARY.

PRECIPE, or PRÆCIPE *quod reddat*, a Writ of great Diverſity, both as to Form and Uſe. See ENTRY and INGRESSUS.

It extends as well to a Writ of Right, as to other Writs of Entry and Poſſeſſion; and is ſometimes call'd a *Writ of Right, cloſe*, as when it iſſues out of the Court of Chancery, cloſe; ſometimes a *Writ of Right, patent*, as when it iſſues out of Chancery, patent or open, to any Lord's Court, for any of his Tenants deforced, againſt his Deforcer. See RIGHT.

PRECIPITANT, in Chymiſtry, a Term apply'd to any Liquor which, being pour'd on a Diſſolution, ſeparates what is there diſſolved, and makes it *precipitate*, *i. e.* fall to the bottom of the Veſſel. See DISSOLUTION.

Thus Oil of Tartar, and the Volatile Spirit of Sal Armoniac, are *Precipitants*, with regard to the Diſſolution of Gold in *Aqua Regalis*; and common Water is a *Precipitant*, with regard to the Diſſolution of Jalap in Spirit of Wine. See PRECIPITATION.

PRECIPITANT, is alſo uſed in Medicine, for a Remedy which ſeparates and precipitates any heterogeneous Matter contain'd in the Maſs of the Blood; and by this means abates any irregular Fermentations, Effervеſcences, or the like Diſorders, which that Matter had excited.

Among the Number of *Precipitants*, are rank'd Harts-Horn, Crabs-Eyes, Ivory, Bezoard, Barks of Oak, and Guaiacum, Iron, Quinquina, Chalk, *&c.*

PRECIPITATE, in Chymiſtry, a Subſtance which having been diſſolved in a proper Menſtruum, is again ſeparated from its Diſſolvent, and thrown down to the bottom of the Veſſel, by the pouring in of ſome other Liquor. See PRECIPITANT.

The Chymiſts make various *Precipitates* of Mercury, which are of various Colours, as the Precipitants vary; viz. *White*, *Red*, *Yellow*, *Green*, &c. See MERCURY.

The *white Precipitate*, is prepared of Mercury diſſolved in Spirit of Nitre, and precipitated with Salt-Water, or Spirit of Salt, into a white Powder.

If in lieu of the former Precipitants, hot Urine be pour'd on the Diſſolution, we have a *pale Roſe-Colour*.

To make the *red Precipitate*, they take the Diſſolution of Mercury made in Spirit of Nitre, evaporate all the Humidity over a gentle Fire, till nothing remains but a white Maſs; which by increaſing the Fire, they rubify or raiſe to a red Colour.——*Green Precipitate* is made with Mercury, Copper, and acid Spirits——*Yellow Precipitate* with Mercury, and Oil of Vitriol: But theſe three laſt are improperly call'd *Precipitates*; becauſe not procured by Precipitation. See PRECIPITATION.

PRECIPITATION, an Operation in Chymiſtry, being a kind of Separation, whereby a Body diſſolv'd in any Liquor, is detach'd there-from, and falls down to the bottom of the Veſſel. See OPERATION.

Precipitation is either *Spontaneous* or *Artificial*.

Spontaneous Precipitation, is when the Particles of the diſſolved Body, ſeparate of themſelves from their Diſſolvent.

Artificial Precipitation, is when ſome other Body, call'd a *Precipitant*, is added to procure this Separation. See PRECIPITANT.

There is alſo a *total Precipitation*, wherein the diſſolv'd Parts are all ſeparated, and ſunk to the bottom; and a *partial Precipitation*, wherein the Parts diſſolv'd are ſtill ſuſpended in the Fluid; and don't fall down.

Theory of PRECIPITATION.

To account for the Operation of *Precipitation*: It may be obſerv'd, that a fluid Menſtruum may be made to ſuſtain a Body ſpecifically heavier than itſelf, either by making the Reſiſtance, ariſing from the Coheſion of the Parts of the Fluid, equal to the Exceſs of ſpecific Gravity of thoſe Bodies above that of the Menſtruum. See MENSTRUUM.

Or, by the heavy Body's being join'd to ſome lighter one; ſo that the two together only make one whole, equal in weight to the Fluid.

In the firſt caſe, the Reſiſtance, we know, is ſtill proportional to the Surface of the Corpuſcles; ſo that the Surface being diminiſh'd, the Reſiſtance is weaken'd: the Proportion therefore of the Tenacity of the Menſtruum, to the Gravity of the Corpuſcles being thus deſtroy'd, a *Precipitation* muſt enſue.

Precipitation, then, may be effected two ways, on this Foundation; *viz.* either by the dropping in a Liquor ſpecifically lighter, or ſpecifically heavier; in the former Caſe, the Gravity of the Menſtruum, which is always proportional to the compound Gravities of both, will by this Mixture become lighter: Thus, the Menſtruum being diluted, the Force

of

of Coheſion is alſo weaken'd, ſo as to become unable any longer to ſuſtain the Bodies; ſo Hydrometers, which are eaſily ſuſtain'd in Water, upon pouring in a good deal of any burning Spirits ſink to the bottom of the Glaſs.

And this agrees not only with the Laws of Mechanics, but with Experiments: Thus Spirit of Sal Armoniac does very plentifully precipitate the Filings of Metals, diſſolved in acid Menſtruums; tho' it be abundantly lighter than any of them.

The ſame thing is done quicker by Spirit of Wine, whoſe Gravity is known to be almoſt the leaſt of any Liquor.

By this Spirit alſo, all Salts, which are ſuſpended in Water, are precipitated, and ſo unite into Cryſtals. So if you drop in diſtilled Vinegar, the Droſs of Antimony diffuſed in Water, it falls to the bottom, and affords the Golden Sulphur.

After the ſame manner, Water, Vinegar, *&c.* make a *Precipitation* from Acids, tho' more ſparingly: Nay, Acids themſelves being pour'd upon others which are heavier, will precipitate whatever is ſwimming in them. Thus Spirit of Salt precipitates either Lead, Copper, or Tin, diſſolv'd in Oil of Vitriol: ſo little need is there of Alkalies in this Buſineſs, tho' the Chymiſts have unanimouſly contended for them as abſolutely neceſſary.

In the 2d Caſe, *Precipitation* will ſucceed by the Addition of a heavier Liquor to the Menſtruum. For the Particles of this Liquor, what with their Weight, and what with the Impetus they acquire in their Deſcent, carry down and ſink all the ſolid Corpuſcles they meet with in their way; ſo that the Corpuſcles being thus forced down, and kept there by this adventitious Liquor, cannot mount up into their former Situation.

To try the Truth of this Reaſoning by Experiments; not only acid Spirits, but even mere Water, will be found to precipitate Tinctures of Vegetables extracted by Spirit of Wine: And the very ſame Tinctures, extracted with Water, or Wine, are precipitated very copiouſly by acid Spirits, which are heavier.

Metals, when diſſolved in Spirit of Sal Armoniac, are precipitated with Oil of Vitriol, or Spirit of Nitre. When ſuſpended in *Aqua Fortis*, they are precipitated with Oil of Vitriol, or Bezoartic Spirit of Nitre.

As to Bodies ſuſpended by means of their Union with other lighter ones: This is properly the Caſe of diſſolved Metals; and to this may the laſt Caſe of *Precipitation* be reduced. Here, the Particles of a Metal being ſeparated by a Diſſolvent, and rendred imperceptible by their extreme Littleneſs, only float, becauſe united to very light Particles of the acid Spirit, which keeps them ſuſpended: Tho' the great Surface they have, both on account of their Smallneſs, and of their Union with the Acids, frequently contribute to the Effect.

Now, as they are in a forced Equilibrium with the Fluid wherein they ſwim; and as the Cauſes that ſuſtain them, are only accidental; they muſt of courſe be precipitated to the bottom, when the Acid or Menſtruum abandons them; from whatever Cauſe it be: It is even ſometimes ſufficient, that the Quantity of the Fluid, wherein they are ſuſtain'd, be diminiſh'd. For then, ſeveral of the Metallic Particles, tho ſtill join'd to their Acid, coming to meet, and unite, aſſume a ſmaller Surface, with regard to their Maſs; thus, being no longer held up by the Largeneſs of their Surfaces, they ſubſide to the bottom.

When the Menſtruum abandons a diſſolved Body; if that Body be lighter than the Menſtruum, the contrary to a *Precipitation* will enſue, *i.e.* the Body will riſe: Thus Camphor being mixed in Oil of Olives, and the whole diſſolved, the Camphor riſes firſt, *&c.*

If it happen that the Particles, when abandon'd by the Diſſolvent, are equally heavy with the ſuſtaining Fluid; they will neither riſe nor fall; only ſeveral of them now re-uniting, form little Maſſes, ſufficient to ſpoil the Limpidneſs and Tranſparency of the Fluid; as is the Caſe in Reſins diſſolved in Spirit of Wine, and Water pour'd over them: where the Water uniting cloſely with the Spirit of Wine, makes it let go the greateſt part of the reſinous Particles.

Thus is effected what we call an *Imperfect Precipitation*; which, in reality, is no more than a Diſpoſition to precipitate.

If in this Caſe, the Aqueous Particles of the Fluid be hid, and as it were, abſorb'd among the groſs *Moleculæ* of the diſſolved Matter; it forms what they call a *Coagulum*. See COAGULATION.

Sometimes, when the Liquors are pour'd on one another, the Salts with which they abound, being put into Motion, by their attractive Force, they run mutually to embrace one another; and becauſe they don't recoil far back after the Congreſs, they are at length ſo united, as to become like a Solid, there being very little Phlegm remaining, as is very obſervable in *Tartarum Vitriolatum*.

In theſe Experiments there happens ſuch a Conflict and Efferveſcence, as evaporates almoſt all the Moiſture, with which the Salts are diluted. And upon this depends the Rationale of Chymical Coagulation, a thing of very great conſequence in the Buſineſs of *Precipitation*. Nor can we account for Oil of Tartar's precipitating Bodies diſſolv'd in Acids, any otherwiſe than from its making a kind of *Coagulum* with theſe Corpuſcles, and thereby becoming too heavy for, and exceeding the Tenacity of, the Menſtruum.

Such are the general Principles of *Precipitation*.

PRECEPTORY, PRÆCEPTORIA, or *Commandry*, a kind of Benefice held by the more Eminent among the antient Knights-Templars; who were created by the Grand-Maſter, with the Title of *Præceptores Templi*, i.e. *Maſters of the Temple*. See TEMPLAR.

Stephens de Juriſd. lib. 4. ſays, the *Præceptories* were only a kind of Cells, all ſubordinate to their principal Manſion, the *Temple* in *London*. See TEMPLE.

Of theſe *Præceptories*, *Dugdale* ſays, he finds ſixteen recorded, as antiently belonging to the Templars in *England*; viz. *Creſſing Temple*, *Balſhal*, *Shangey*, *Newland*, *Teveland*, *Witham*, *Temple-Bruere*, *Willington*, *Rotheley*, *Ovenington*, *Temple Comb*, *Trebigh*, *Ribſtane*, *Mount St. John*, *Temple-Newſum*, and *Temple Hurſt*. But there were more. See COMMANDRY.

PRECIPUT, in Juriſprudence, an Advantage belonging to any one, in a thing to be divided; or a Portion taken off, and ſet by, in his favour, e'er the Diviſion be made.

In noble Partition, the Eldeſt has always the principal Fief, or Mannor, for his *Preciput*.

The *Preciput* coincides with the Right of Primogeniture. See PRIMOGENITURE.

The Word is form'd from the *Latin Præcipuus*, Chief, Principal.

PRECISION, PRÆCISIO, in the Schools, the ſame with *Abſtraction*. See ABSTRACTION.

PRECONISATION, a Propoſition or Declaration, which the Cardinal Patron makes in the Conſiſtory at *Rome*, of a Perſon nominated by ſome Prince to a Prelature; by virtue of Letters, whereof he is the Bearer: which the Pope complying with, gives his Collation.

The Date of the Bulls is diſpatch'd on the ſame Day with the *Preconiſation*.

PRECONTRACT, a Contract made before, or prior to another; chiefly uſed in relation to Marriages. See CONTRACT.

PRECURSOR, PRÆCURSOR, *Fore-runner*, in Theology, a Perſon who goes before any one to notify his coming.

The Term is peculiarly apply'd to St. *John Baptiſt*, who is ſtiled the *Precurſor* of Jeſus Chriſt, from what is ſaid of him by St. *Luke*, *Thou, Child, ſhalt* go before *the face of the Lord, to prepare his way*.

PREDECESSOR, a Perſon who has preceded another in the ſame Office, or Employ.

PREDESTINARIAN, a Perſon who adheres to the Doctrine of abſolute Predeſtination. See PREDESTINATION.

St. *Auguſtin* is look'd on as the Founder of the Sect of *Predeſtinarians*; he being the firſt of the Fathers that ſeems to have aſſerted the Doctrine in ſuch expreſs Terms; tho' the Janſeniſts and Jeſuits are ſtill greatly divided about the real Doctrine of St. *Auguſtin*, in this Article; each interpreting him conſiſtently with their own Scheme. See JANSENIST, *&c.*

Father *Sirmond* contends for an antient Sect of *Predeſtinarians*, cotemporary with St. *Auguſtin* himſelf, and who had their Riſe in *Africa*, in the Monaſtery of *Aſdrumet*; from a Miſunderſtanding of St. *Auguſtine*'s Doctrine. 'Tis added, that the Opinion ſpread thence throughout the *Gauls*; where one of them, a Prieſt named *Lucidus*, was condemn'd by *Fauſtus* Biſhop of *Rhegio*; and his Sentence confirm'd by two Councils.

The Doctrine was again broach'd in the ninth Century by *Godeſchalchus* a *Benedictine*; who, as *Hincmar* in a Letter to Pope *Nicholas*, ſays, maintain'd with the antient *Predeſtinarians* who had been already anathematized, that God predeſtinated ſome to eternal Life, and others to eternal Death; that God did not will all People to be ſaved; that Jeſus Chriſt did not die for all, but only the Elect or thoſe that are ſaved, *&c.* See GRACE, *&c.*

This Doctrine was again condemn'd in a Synod held at *Mentz*: But the *Janſeniſts*, particularly the Friends of Meſſ. *de Port-Royal*, and among the reſt, the Preſident *Manquin*, have refuted F. *Sirmond*; and ſhewn, that the Hereſy of the *Predeſtinarians* is a mere Chimæra; adding, that S. *Fulgentius*, S. *Proſper*, and the other Diſciples of S. *Auguſtin*, only look'd on it as an imaginary Hereſy, invented by the Enemies of S. *Auguſtine*'s Doctrine, to traduce it. In effect, the chief Evidence Father *Sirmond* produces to the contrary, is the Prieſts of *Marſeilles*, who

are ſuſpected of *Semi-Pelagianiſm*. See SEMI-PELAGIAN.

PREDESTINATION, in Theology, a Judgment, or Decree of God, whereby he has reſolved, from all Eternity, to ſave a certain Number of Perſons, hence named *Elect*. See ELECT.

Other Divines define *Predeſtination*, a Decree to give Faith in Jeſus Chriſt, to a certain Number of Men; and to leave the reſt to their own Malice, and Hardneſs of Heart. See DECREE.

The Remonſtrants define it more laxly, and generally, the Decree of ſaving Believers, and damning Unbelievers. See REMONSTRANTS.

The Difficulties wherewith the modern Theology is clogg'd, turn on the Article of *Predeſtination*; both the *Romiſh* and Reformed Churches are divided about it: The *Lutherans* ſpeak of it with Horrour; the *Calviniſts* contend for it with the greateſt Zeal; the *Moliniſts* and *Jeſuits* preach it down as a moſt dangerous Doctrine; the *Janſeniſts* aſſert it as an Article of Faith: The *Arminians*, *Remonſtrants*, and *Pelagians*, are all avowed Enemies of *Predeſtination*. See ARMINIAN, JANSENIST, MOLINIST, JESUIT, PELAGIAN, *&c.*

Thoſe ſtrenuous Patrons of *Janſeniſm*, the *Port-Royaliſts*, teach, that God predeſtinates thoſe who he foreſees will co-operate with his Grace to the End. *Du Pin* adds, that Men don't fall into Sin, becauſe not predeſtinated; but they are not predeſtinated, becauſe God foreſaw their Sins. See ELECTION, REPROBATION, *&c.*

PREDESTINATION, is alſo uſed for a Concatenation of ſecond Cauſes, appointed by Providence; in virtue whereof, things are brought to paſs by a fatal Neceſſity; contrary to all appearances, and maugre all oppoſition. See FATE and DESTINY.

The *Turks* are great *Predeſtinarians*; they eſteem the lighteſt Accident predetermin'd; and on this account, are much more daring in Battel, and run greater riſques of their Lives, than they would otherwiſe do. See MAHOMETANS.

PREDETERMINATION, in Philoſophy and Theology. The Schoolmen call that Concurrence of God, which makes Men act, and determines them in all their Actions, both Good and Evil, *Phyſical Predetermination*, or *Premotion*. See PREMOTION.

Divines hold, that God has no part in Sin; inaſmuch as he only affords his Concurrence to the *phyſical* part of human Actions, not to the *moral* part. See LIBERTY and NECESSITY.

Phyſical Determination, or *Premotion*, if there be any ſuch thing, is that Action of God, whereby he excites a ſecond Cauſe to act; or by which, antecedently to all Operation of the Creature, or before it could operate in conſequence either of the Order of Nature or Reaſon, he really and effectually moves, and occaſions it to produce all its Actions: that is, whatever the Creature does, or acts, is really done, and acted, by the Agency of God on the Creature, who is all the time paſſive. So that without ſuch *Predetermination* of God, all Creatures muſt remain in an eternal State of Inactivity; and with ſuch *Predetermination*, it is impoſſible but they ſhould do what they are thus put upon doing.

'Tis ſtrongly controverted, whether or no ſuch a *Phyſical Predetermination* be neceſſary to the Action of Natural Cauſes. The *Scotiſts* maintain the Negative; urging, that all Natural Cauſes are, of their own Nature, determin'd to a certain Action; whence it ſhould ſeem needleſs to call in a new *Predetermination* of God, *e.gr.* to Fire, to make it warm the hand. For if an Object be, by the Courſe of Divine Providence, apply'd to Fire; what need a ſecond Application of the Fire, to make it warm the Object apply'd thereto? ſince Beings are not to be multiply'd unneceſſarily. See CAUSE.

And ſuch *Predetermination* ſome Philoſophers hold ſtill leſs requiſite to produce the Acts of the Will: At leaſt, ſay they, the human Mind muſt be allow'd the common Power and Privilege of a ſecond Cauſe; and therefore be entitled to produce its own Acts, as well as other ſtrictly natural Agents.

The *Thomiſts*, on the other hand, ſtand up ſtrenuouſly for the *Phyſical Predetermination*: One of their principal Arguments is drawn from the Subordination of ſecond Cauſes to the firſt. Where there are ſeveral ſubordinate Agents, ſay they, the lower Agents do not act, unleſs firſt moved and determined thereto by the firſt; this being the very Eſſence of Subordination.

Again, the like they argue from the Dominion of God over all his Creatures: 'Tis of the Eſſence of Dominion, ſay they, to apply and direct Things ſubject thereto, to its own Operations; and this, if the Dominion be only moral, morally; but if it be alſo phyſical, phyſically. And that this is the Caſe in reſpect of God, and his Creatures, is confeſs'd. See GOD.

PREDIAL *Tithes*, are Tithes paid of Things, which grow from the Ground only; as *Corn*, *Hay*, *Fruit*, *&c.* See TITHES.

PREDICABLE, PREDICABILE, in Logic, a general Quality, or an Epither which may be *predicated* of, or applied to ſeveral Subjects. Thus Animal is *predicable* both of Man and Beaſt: Man is *predicable* of *Peter*, and *James*: Triangle is *predicable* of an hundred different Kinds of Figures; as right Angles, Scalenes, Iſoſceles's, *&c.* See PREDICATE.

The Schoolmen reduce the *Predicables* to five *Claſſes*, viz. *Genus*, *Species*, *Proprium*, *Differentia*, and *Accidens*; under one or other of which, all that can be *predicated* of any Subject, is included. See GENUS, SPECIES, PROPRIUM, *&c.*

A *Predicable* is alſo call'd an *Univerſale Logicum*, as having reſpect to other particular, and inferior, or ſubject Things: Thus Animal is an *Univerſal*, with regard to Man and Beaſt.

'Tis call'd a *Logical Univerſal*, to diſtinguiſh it from a *Metaphyſical* one; which is a common Being, conſider'd in itſelf, and therefore denominated univerſal *in Eſſendo*; whereas the Logical one is only univerſal as to our Conception and Application. See UNIVERSAL.

Among the Schoolmen, *Predicable* is uſually defined *unum, aptum Prædicari de multis, univoce, & diviſim*; or, ſomewhat more clearly, a *Predicable* is a Nature which may be predicated univocally of all things to which it is common; and which, as it is dividually multiply'd in all its Subordinates, may be aptly predicated of them all.

Thus, when the Appellation of *Virtue* is attributed to Juſtice, Prudence, Temperance, Fortitude, Charity, *&c.* the ſame Reaſon may be given why each is diſtinguiſh'd by ſuch Name; as being all founded in a Mediocrity, and being agreeable to right Reaſon, which is the Character of Virtue.

Hence, if there be ſeveral things call'd by ſome common Name; but the Reaſon of ſuch Name is not the ſame in all, but different; theſe do not come under the Number of *Predicables*. As in the Inſtance, *Canis*, Dog, which is both apply'd to a Domeſtic Animal, diſtinguiſh'd by its barking; to a Conſtellation of the Heavens; and to a Sea-Fiſh.

The way by which the Mind comes to form ſuch *Predicables*, or Univerſals, is thus: Among thoſe things which fall under our Obſervation, we find ſome Characters and Properties common to ſeveral; and others peculiar to each: What we find common, we conſider a-part; and thus form an Univerſal equally applicable to all. See GENERAL.

PREDICABLY, PREDICABILITER, is uſed in the Schools in oppoſition to *predicamentally*. Thus, Matter is ſaid to be united to Form *predicably*, or *per accidens*; to exclude the Notion of a predicamental Accident.

PREDICAMENT, PRÆDICAMENTUM, in Logic, a Claſs, or Order of Beings, or Subſtances rang'd according to their Natures; call'd alſo *Category*, or rather *Categorema*. See CATEGORY.

The Word *Prædicamentum* was firſt introduced by *Boethius*, in lieu of the *Greek Categoria*; and is uſed among the School-Writers with a good deal of Latitude and Variety: For it either ſignifies the Act of *predicating*; or, a common *Predicate* itſelf; or, the Genus or Baſis of any Category; or, the Collection of ſeveral common Predicates diſpoſed in a certain Order. Which laſt is its moſt uſual Acceptation.

Hence ſome define it a Series of Predicates drawn from the Genus, or higheſt Term, thro' all the inferior Genera, and Species. Thus, a Series of *Subſtance* drawn from *Subſtance* thro' *Body*, *Living*, *Animal*, *Man*, to *Peter*, is called the *Predicament* of Subſtance.

But the uſual Definition of *Predicament* among Logicians, is, That it is a natural Order, or Scheme, of ſome moſt general or univerſal Thing, and all that is contain'd under the ſame, that is, all the ſubordinate Genera, Species, and Individuals.

The Properties of a *Predicament*, *ex parte vocis*, *i. e.* of the Term, or Word whereby the *Predicament* or *predicamental* Series is denoted, the Logicians hold, are, that it be *one*, *ſimple*, *preciſe*, and *concinnous*.

Vox una, & ſimplex, rebus concinna locandis.

The Conditions requiſite *ex parte rei*, or of the Thing to be ranged in a *Predicament*, are contain'd in the following Verſe:

Entia per ſeſe, Finita, Realia, tota.

i. e. it muſt be a *poſitive Being*, in excluſion of Non-Entities, Negations, Privations, Impoſſibilities, *&c.* and a Being *per ſe*, to exclude accidental Things, factitious Things, *&c.* And *finite*, that is, of a limited Nature and Extent, to exclude God and other Tranſcendentals: *Real*, ſince its In-

Intention is for the better and more commodious diſpoſing of Things in their places to be the more diſtinctly known and conceiv'd; and *whole*, or compleat, as not being in the relation of a component Part, or as only acceſſary to ſome other.

PREDICATE, Prædicatum, in Logic, that part of a Propoſition which affirms or denies ſomething of the Subject. See Proposition.

Thus, in God made the World; *made the World*, is the *Predicate*; *God*, the Subject. See Subject.

A *Predicate*, ſay the Schoolmen, is properly a Name *predicated*, or ſpoke, of another, as its Subject. As *Man*, in the Propoſition *Peter* is a Man.

It is a celebrated Rule or Law of *Predicates*, That nothing is eſteem'd to be abſolutely ſpoke or affirm'd of another, unleſs it be affirm'd thereof in ſuch manner, or by ſuch an Affirmation, as wants nothing either in the Subject, *Predicate*, or *Copula*, to make it true.

This alſo is a noted Property of a *Predicate*, That it contains, in ſome meaſure, its own Subject. Thus Metal contains Gold, Copper, Iron, &c. of which it is predicated.

The Word *Predicate* is ſometimes uſed indifferently with *Attribute*; but the more accurate Writers make a diſtinction. Every *Predicate* is indeed an Attribute, ſince whatever is predicated of a Thing, is attributed to it: So, if Animated be *predicated* of Man, it is alſo attributed to him. But every Attribute is not a *Predicate:* Thus Soul, Learning, &c. are attributed to Man, but not *predicated* of him. See Attribute.

Predicating, in Logic, is properly the Act of affirming or denying ſomewhat of ſomething: As, Man is not a Stone, Body is Subſtance. The Thing thus predicated, is call'd *Predicate*. See Predicate.

In the Doctrine of Univerſals, or Predicables, to *predicate* is to ſpeak or declare a Thing truly, directly, and affirmatively. Thus Man is *predicated* of ſeveral, *i. e.* it is truly, and directly affirm'd that theſe ſeveral are Men; as when I ſay, *Socrates* is Man, *Plato* is Man, *Ariſtotle* is Man, &c. See Predicable.

The Things *predicated* of others, are reducible to three Claſſes. *Genera*, as Animal, of Man, &c. *Forms*, as Whiteneſs, of a Swan, &c. and *Equals*, of Things of equal Extent, as Species, Difference, Proprium, &c.

The Schoolmen diſtinguiſh ſeveral ways of *Predicating*; as, 1°. *In quod tantum*, which is to *predicate* eſſentially, both as to the thing and the manner; as Juſtice is a Virtue. 2°. *In quale tantum*, which is to *predicate* accidentally, both as to the thing and the manner; as *Peter is Learned.* And, 3°. *In quale quid*, or *in quale poſt quid*, which is to *predicate* both eſſentially and accidentally; as *Man is rational.*

PREDICTION, Prædictio, Divination, Prophecy, or Foretelling of what is to come; either by divine Revelation, by Art and human Invention, or by Conjecture. See Divination, Revelation, &c.

Divines labour hard to make the *Predictions* in the Old Teſtament tally with the Events in the New. See Prophecy.

The *Predictions* of Oracles were all dark and ambiguous. See Oracle.

PREDOMINANT, *Reigning*, that which prevails, appears moſt, or has ſome Superiority, or Aſcendance over another thing.

Thus we ſay, Bitterneſs is the *predominant* Quality among Taſtes, or that which is moſt perceiv'd. 'Tis a Rule, that Sugar never *predominate* in Confections, nor Pepper in Ragouſts.

PRE-EXISTENCE, the State of a thing actually in being before another. See Existence.

The antient *Pythagoreans* and *Platoniſts* all aſſerted the *Pre-exiſtence* of human Souls, *i. e.* that they were in being before their being join'd to our Bodies. See Metempsychosis and Transmigration.

Origen held the eternal *Pre-exiſtence* of Souls. See Soul.

We believe that God created the World out of nothing; and not of *pre-exiſtent* Matter. See Creation.

Some Perſons have held Mankind *pre-exiſtent* to *Adam.* See Pre-adamite.

PREFACE, Præfatio, a Note, or Advertiſement in the beginning of a Book, to inform the Reader of the Order, Diſpoſition, &c. obſerved therein; of what is neceſſary to receive its full effect; and facilitate the underſtanding thereof.

The Word is form'd from the *Latin*, *præ* and *fari*, q. d. to ſpeak before.

There is no part of Writing that requires more Art, or that fewer Authors ſucceed in, than *Prefaces. Prefacing* is, in effect, a particular Species of Writing, and has its Character and Taſte to diſtinguiſh it from all others. It is neither Argumentation, Diſcourſe, Narration, nor Apology.

The *Romaniſts* call that part of their Maſs which precedes the Conſecration, and which is to be rehearſed in a peculiar Tone, *Preface.* See Mass.

The Uſe of *Prefaces* in the Church, they contend, is very antient; and conjecture, from ſome paſſages of St. *Cyrian*, &c. that it was in uſe in the times of the Apoſtles.

The *Preface* to the Maſs antiently had, and ſtill has, very different Names in different Churches. In the *Gothic*, or *Gallican* Rite, it is call'd *Immolation*; in the *Mozarambic* Rite, *Illation*; antiently among the *French*, it was call'd *Conteſtation*; in the *Roman* Church, alone, it is call'd *Preface.*

PREFECT, Præfectus, in antient *Rome*, one of their chief Magiſtrates, who govern'd in the Abſence of their Kings, Conſuls, and Emperors.

His Power was ſomewhat different at different times; but was always greateſt under the Emperors. His principal Care was the Government and Adminiſtration of the City of *Rome.*

He took cognizance of all Crimes committed in the City, or within an hundred Miles thereof. He judged capitally and finally, no Appeal lying from him; and even by the 62d Novel, he preſided in the Senate; taking place before all the *Patricii* and *Conſulares*, &c.

He had the Superintendance of the Proviſions, Policy, Buildings, and Navigation. There is ſtill a *Prefect* of *Rome*, who is a kind of Governour; differing little from the antient *Prefect*, except that his Authority only extends to 40 Miles without *Rome.*

PREFECT *of the Pretorium*, Præfectus *Prætorii*, was the Chief, or Leader of the *Pretorian* Bands or Cohorts, deſtined for the Emperor's Guard. See Pretorian.

The *Pretorian* Legion, according to *Dion*, conſiſted of ten thouſand Men. *Suetonius* refers the Inſtitution of *Præfectus Prætorii* to *Auguſtus.* 'Tis added, that he was uſually taken from among the *Roman* Knights.

By the Favour of the Emperors, his Authority grew very conſiderably; inſomuch that he became the Arbiter and ſupreme Judge of all Affairs.

To reduce this extravagant Authority, *Conſtantine* divided the *Prefecture* of the *Pretorium* into four *Prefectures*; and each of theſe he again ſubdivided into Civil and Military; tho' the Name was only reſerved to him who was inveſted with the Civil Authority; and that of *Comes Belli* given him who had the Command of the Cohorts. See Count.

Thus the Office of *Prefect of the Pretorium*, which, in its Origin, and till the time of *Conſtantine*, was Military, and ſucceeded to that of *Magiſter Equitum*; now commenced a purely Civil Magiſtrature; and at length became the prime Dignity of the Empire.

The ſucceeding Emperors following *Conſtantine's* Diviſion, divided the Empire into four *Prefectures Prætorii*, as into four Dioceſes; *viz.* the *Gauls*, *Illyria*, *Italy*, and the *Eaſt.* See Diocese.

The Provinces whereof theſe Dioceſes conſiſted, had their particular Governours; at the Head of whom was the *Prefect*, who, tho' he had not the Command of Arms, yet had the Power of the Sword; decided ultimately of all Affairs, and had all the Marks and Honours of Sovereignty.

Juſtinian created a fifth *Prefect of the Pretorium* for the Government of *Egypt*, which had been torn off from the Dioceſe of the Eaſt, by the Invaſion of the *Vandals*, during the Empire of that Prince.

Under *Auguſtus*, the Officer ſent to govern *Egypt* with a proconſular Authority, was call'd *Præfectus Auguſtalis.*

PRE EMPTION, a Privilege antiently allow'd the King's Purveyor, of having the Choice, and *firſt buying* of Corn, and other Proviſions for the King's Houſe; but taken away by the *Stat.* 19 *Car.* 2. See Purveyor.

PREENING, in Natural Hiſtory, the Action of Birds cleaning, compoſing, and dreſſing their Feathers, to enable 'em to glide more eaſily thro' the Air. See Feather.

For their uſe herein, Nature has given 'em an admirable piece of Furniture; *viz.* two peculiar Glands which ſecrete an unctuous Matter into an Oil-bag, perforated; out of which the Bird, on occaſion, draws it with its Bill. See Oil-*bag.*

PREGNANCY, the State of a Woman when ſhe has conceiv'd, or is with Child. See Conception.

The ſame State with a View to the bearing of the Child in the Womb, is call'd *Geſtation.* See Gestation.

Hence alſo the Act of *Impregnating.* See Generation, Flower, Seed, &c.

PREJUDICE, Prejudicium, a falſe Notion, or Opinion of any thing, conceiv'd without a due previous Examination thereof. See Falshood, Opinion, &c.

Prejudice, *q. d.* Pre-judgment, does not import a Judgment merely as prior to another in reſpect of Time, but as being

being prior thereto in reſpect of Knowledge, or of ſufficient Attention to the thing; the Prepoſition *præ* expreſſing an Anticipation, not ſo much of Time, as of Knowledge, and due Attention. See ERROR.

Hence *Prejudice* is alſo call'd among the Schoolmen *Anticipatio & præventa Cognitio*, a pre-conceiv'd Opinion, *&c.* See JUDGMENT, TRUTH, FALLACY, SENSE, *&c.*

PRELATE, an Eccleſiaſtical Superior, conſtituted in ſome eminent and ſuperior Dignity of the Church. See DIGNITARY.

Patriarchs, Primates, Archbiſhops, Biſhops, Generals of Religious Orders, certain Croſier'd and Mitred Abbots, and even Deans and Archdeacons are ranked among the Number of *Prelates*.

The Word comes from the *Latin*, *Prælatus*, of *præ* and *fero*.

PRELATE *of the Garter*, is the firſt Officer of that Noble Order, and antient as the Inſtitution itſelf. See GARTER.

William de Edynton, then Biſhop of *Wincheſter*, was the firſt *Prelate* at the erection of the Order; and it has been continued in that See ever ſince.

'Tis an Office of great Honour, but has neither Salary nor Fees; only a convenient Lodging allow'd in *Windſor*-Caſtle, and as oft as the *Prelate* comes thither (by the Sovereign's Command) he is to have Court-Livery allow'd for himſelf and Servants.

PRELIMINARY, ſomething to be examined, diſpatch'd, or determined, e'er an Affair can be decided, or treated of thoroughly, and to purpoſe.

Preliminaries of Peace take up the greateſt part of Treaties. They conſiſt in examining of Powers, Qualities of Princes, Ranks of Ambaſſadors, *&c.*

The Word is form'd from the *Latin*, *præ*, and *limen*, Threſhold.

PRELUDE, in Muſic, a *Flouriſh*, or an irregular Air which the Muſician plays off-hand, to ſee if his Inſtrument be in Tune; and to lead him into the piece to be play'd.

PREMISES, PREMISSES, PRÆMISSÆ, in Logic, the two firſt Propoſitions of a Syllogiſm. See SYLLOGISM.

When a Syllogiſm is in form; the two *Premiſes* being granted, the Concluſion cannot be deny'd. See CONCLUSION.

The *Premiſes*, ſays *Chauvin*, are properly the parts of the Antecedent of an Argument, when complex; and are call'd *Præmiſſæ*, becauſe premiſed to the Concluſion. See ANTECEDENT, *&c.*

Thus in the Argument, Every Man is an Animal, *Peter* is a Man, therefore *Peter* is an Animal; the Propoſitions, Every Man, *&c.* and *Peter*, &c. are the *Premiſes*. See PROPOSITION.

Premiſes are the Principles of our Reaſonings; as being clear, evident, and demonſtrative Propoſitions, from the relations whereof to one another, we draw or infer new Truths, Propoſitions, *&c.* See REASONING, PRINCIPLE, MAXIM, *&c.*

The *Premiſes* are either *equal*, where neither ſuffices alone for the drawing a Concluſion, as in the Inſtance above: or *unequal*, the one *major*, greater, from which alone the Concluſion is drawn; the other *minor*, or leſs, which only ſerves in applying the Antecedent to the Conſequent. See CONSEQUENT.

In the common Practice of the Schools, however, every Syllogiſm, or formal Argument, of what kind ſoever, is ſaid to have a Major and a Minor; how equal ſoever the *Premiſes* may be. See MAJOR and MINOR.

PREMISES, in Law, the Lands, *&c.* before mentioned in a Leaſe, Conveyance, or the like.

PREMONSTRANTES, or PREMONSTRATENSES, a Religious Order of Regular Canons inſtituted in 1120. by *S. Norbert*; and thence alſo call'd *Norbertines*.

The firſt Monaſtery of this Order was built by *Norbert* in the Iſle of *France*, three Leagues to the Weſt of *Laon*; and by him call'd *Premonſtre*, *Premonſtratum*, whence the Order itſelf was denominated; tho' as to the occaſion of that Name, the Writers of that Order are divided.

The Order was approved by *Honorius* II. in 1126. and again by ſeveral ſucceeding Popes. At firſt the Abſtinence from Fleſh was rigidly obſerved; in 1245, *Innocent* IV. complain'd of its being neglected, to a general Chapter; in 1288, their General, *William*, procured leave of Pope *Nicholas* IV. for thoſe of the Order to eat Fleſh on Journies. In 1460, *Pius* II. granted 'em a general Permiſſion to eat Meat, excepting from *Septuageſima* to Eaſter.

The Religious of this Order are clothed in white, with a Scapulary before the Caſſock. Out of Doors, they wear a white Cloak and white Hat; within, a little Camail, and at Church a Surplice, *&c.*

In the firſt Monaſteries built by *Norbert*, there were one for Men, and another for Women, only ſeparated by a Wall. In 1137, by a Decree of a General Chapter, this Practice was prohibited, and the Women removed out of thoſe already built, to a greater diſtance from thoſe of the Men.

PREMOTION, in the Schools, the Action of God co-operating with the Creature, and determining him to act. See PREDETERMINATION.

Phyſical Premotion, according to *Alvarez*, *Lemos*, &c. is a Complement of the active Power, whereby it paſſes from the firſt Act to the ſecond; *i. e.* from a compleat, and next Power, to the Action. 'Tis an Influence or participation of the Virtue of the firſt Cauſe which makes the ſecond Cauſe actually active. See CAUSE.

PREMUNIENTES, in Law, Writs diſpatch'd to each Biſhop to call 'em to Parliament, and warning them to bring with them the Deans, and Archdeacons, one Proctor for each Chapter, and two for the Clergy of his Dioceſs. See CONVOCATION.

PREMUNIRE, *Præmunire*, a Term uſed both for an Offence; for a Writ granted thereupon; and for the Puniſhment thereof.

Theſe will all be underſtood from one: Antiently, then, the Church of *Rome*, on pretence of her Supremacy and the Dignity of St. *Peter*'s Chair, took upon her the diſpoſal of moſt of the Biſhopricks, Abbies, and other Eccleſiaſtical Benefices of Worth, by Mandates, or Bulls call'd *Expectative Graces*, and *Proviſiones*, before they became void. See PROVISION and EXPECTATIVE.

Edward III. not brooking ſo intolerable an Incroachment, made ſeveral Statutes againſt thoſe who drew the King's People out of the Realm, to anſwer to things properly belonging to the King's Court; and another to reſtrain the Privilege of the Pope.

The Pontiff, however, ſtill perſiſted in his Preventions; and the flux of People from *England* to *Rome*, to ſue for them, was as great as ever.

This occaſion'd *Richard* II. to make ſeveral Statutes of the like Import with thoſe of *Edward* III. particularly one, where he aſſign'd their Puniſhment to be this; *That they ſhould be out of the King's Protection, attach'd by their Bodies*, i. e. *impriſon'd during Life; and loſe their Lands, Goods, and Chattels*; which is ſince call'd the *Penalty of a Premunire*.

Henry IV. made new Statutes againſt other Abuſes of this kind, not fully obviated in thoſe of his Predeceſſors; adding certain new Caſes, and laying on 'em the ſame Penalty.

By later Statutes, the ſame Penalty is laid on ſome other Offenders; as, *e. gr.* by that 1 *Eliz.* on him who denies the King's Supremacy a ſecond time. By 13 *Eliz.* on thoſe who aſſert the Pope's Authority, or refuſe the Oath of Supremacy; on ſeditious Talkers of the Inheritance of the Crown; and ſuch as affirm the King or Queen to be a Heretic. And by Statute 13 *Car* 2. on thoſe who affirm that the Parliament begun *November* 1640, is not yet diſſolved; or that there is any Obligation in an Oath or Covenant, *&c.* to endeavour a Change of Government either in Church or State; or that the Houſes of Parliament have a legiſlative Authority without the King.

The Word *Premunire* is now chiefly uſed for the Puniſhment appointed by the Statutes above-mentioned: Thus when 'tis ſaid, a Man for an Offence, *ſhall incur a Premunire*, 'tis meant he ſhall incur the Penalty appointed by the Statute 16 *Rich.* 2. commonly call'd the *Statute of Premunire*.

The Word is a Corruption of the *Latin*, *Præmonere*, q. d. to forewarn, or bid the Offender take care; of which a Reaſon may be drawn from the Words of the Statute 27 *Edw.* 3. and the Form of the Writ, *Præmunire facias præfatum præpoſitum, & J. R. procuratorem, &c. quod tunc ſint coram nobis.*

PRENDER, in Law, (from the *French*, *prendre*, to take) a Power or Right of taking a thing before it is offer'd. *It lies in* Render, *but not in* Prender. *Coke*'s *Rep.* 1 *part.* Sir *John Peter*'s Caſe.

PRENDER *de Baron* is an Exception to diſable a Woman from purſuing an Appeal of Murther againſt the Killer of her former Husband; taken from her having married a ſecond. See APPEAL.

PRENOTION, *Prænotio*, or *Præcognitio*, a Notice, or piece of Knowledge preceding ſome other, in reſpect of time. Such is the Knowledge of the Antecedent; which muſt precede that of the Concluſion. See NOTION, KNOWLEDGE, *&c.*

PREPARATION, *Præparatio*, or *Apparatus*, in Mathematics, one of the Parts or Branches of a Demonſtration. See DEMONSTRATION.

If it be a Propoſition in Geometry, the *Preparation* conſiſts in ſome Lines to be drawn in the Figure; if a Propoſition in Arithmetic, in ſome computation to be made to come the more eaſily at the Demonſtration.

PREPARATION, in Chymiſtry and Pharmacy, is uſed for the ſeveral Manners of managing the *Materia Medica*, and of diſpoſing it to ſerve the ſeveral purpoſes.

There

There are various *Preparations* of Mercury, Antimony, and other Drugs to purify 'em, ſublime, calcine, edulcorate 'em, &c. See MERCURY, &c.

Crude Antimony is uſed in ſudorific Decoctions; tho', when it has undergone a certain *Preparation*, it becomes a violent Vomitive. See ANTIMONY.

PREPOSITION, in Grammar, one of the parts of Speech, or Diſcourſe. See SPEECH.

The *Prepoſition* is an indeclinable Particle, which yet ſerves to govern the Nouns that follow it. Such are *per*, *pro*, *propter*, in, with, thro, from, by, &c.

They are call'd *Prepoſitions*, becauſe *præpoſitæ*, placed before the Nouns they govern.

F. *Buffier* does not allow the *Prepoſition* to be a Part of Speech; but merely a Modificative of a Part of Speech, *viz.* of the Noun, ſerving only to modify or circumſtantiate it. See MODIFICATIVE.

PREPENSED, in Law, *Fore-thought*. In this ſenſe we ſay *prepenſed Malice*.

If, when a Man is ſlain upon a ſudden Quarrel, there were Malice *prepenſed* formerly between them, it makes it Murder; and, as it is call'd in ſome Statutes, *prepenſed Murder*. See MURDER.

PREPUCE, *Præputium*, in Anatomy, the Fore-Skin; ſee PRÆPUTIUM.

PREROGATIVE, a Privilege, or Pre-eminence, which a Perſon has over another.

The Word is borrowed from the Name of a Century in antient *Rome*, which gave the firſt Vote, or Suffrage in the *Comitia*, or Aſſemblies, for the Election of Magiſtrates; *quaſi* Prærogati; becauſe firſt ask'd, or their Suffrage firſt required. See SUFFRAGE and CENTURY.

Their Vote was call'd *Omen Prærogativum*, becauſe the reſt uſually gave their Votes the ſame way. See OMEN.

PREROGATIVE *of the King*, is that Power and Privilege which the King hath over, not only other Perſons, but over the ordinary Courſe of the Common Law, in Right of his Crown.

Such are theſe, That the King may pardon a Perſon condemn'd to die: That the King's Perſon is ſubject to no Man's Suit: His Poſſeſſions cannot be taken from him by any Violence, or wrongful Diſſeiſin: His Goods and Chattels are ſubject to no Tribute, Toll, or Cuſtom, nor diſtrainable, &c. See KING.

PREROGATIVE *Court*, is a Court belonging to the Archbiſhop of *Canterbury*, wherein all Wills are proved, and all Adminiſtrations granted, that belong to the Archbiſhop by his *Prerogative*; that is, where the Party at his death had five Pounds or upwards in the Dioceſe, or ten Pounds out of the Dioceſe where he died. See COURT.

The Archbiſhop of *York* hath alſo the like Court call'd, his *Exchequer*.

All Citations and Decrees of this Court run in the Name of the Archbiſhop. See ARCHBISHOP.

This Court, for the Province of *Canterbury*, is kept in the common Hall in Doctor's Commons, in the Afternoon, next day after the Arches.

The Judge is attended by the Regiſter, who ſets down the Decrees and Acts of Court; and keeps, records, &c. all original Wills and Teſtaments of Parties dying, having *bona notabilia*.

The Place is uſually call'd the *Prerogative Office*, now kept in *Dean's Court*; where, for a moderate Fee, one may have a Copy of any ſuch Will. See WILL.

PRESAGE, PRÆSAGIUM, an Augury, or Sign of ſomething to come. See AUGURY.

The *Romans* judged of future Events by certain Signs, which their Superſtition, or the Artifice of their Prieſts had invented. Their moſt celebrated *Preſages* were founded on the Flight of Birds, or the Entrails of Victims: All Night-Birds paſs'd for Birds of ill *Preſage*. See VICTIM, &c.

'Tis a popular Error, that Comets *preſage* Misfortunes. See COMET.

Cloſe Weather, and a Southern Wind, *preſage* Rain. See WEATHER, &c.

PRESBYTER, a *Prieſt*; or a Perſon in Prieſts Orders. See PRIEST.

He is thus call'd from the *Greek* πρεσβυτερος, *Elder*, of πρεσβυς, *Old*; becauſe, antiently, none were ordained but ſuch as were advanced in Years.

The great Diſpute between the Retainers to the *Geneva*, and the *Roman* Diſcipline, is about the Sameneſs or Difference of *Presbyters* and Biſhops, in the Times of the Apoſtles. The *Presbyteral* Character is indelible.

PRESBYTERIANS, a Name aſſumed by the *Calviniſts* of *Great Britain*. See CALVINIST.

The *Presbyterians*, as to Doctrine agree with the Church of *England*: Their chief Difference lies in the Point of Diſcipline; *viz.* who ſhall appoint the Governours of the Church, and what Subordination there ſhall or ſhall not be between them. See DISCIPLINE.

The *Presbyterians* allow of no Hierarchy; no Subordination in the Perſons of their Miniſters: Biſhops and Prieſts, they maintain, in the Times of the Apoſtles were the ſame; and, therefore, tho' they allow Epiſcopacy as now ſettled in the Church of *England* to be very antient, yet they deny it to be *jure divino*. See BISHOP and EPISCOPACY.

In lieu of a Series of Miniſters one over another, in Quality of *Prieſts*, *Biſhops*, and *Archbiſhops*, their Polity conſiſts in a Series of Aſſemblies, or Synods: Thus every Miniſter is to be obedient to the *Claſs* under which he lives; and that Claſs to a *Synod*, *Provincial*, *Claſſical*, or *Oecumenical*. See CLASS, SYNOD, &c.

The Power of Ordination, with them, reſides in a Claſs; and none are admitted to adminiſter the Sacrament, but thoſe ordained by the Impoſition of Hands of other Miniſters.

They make uſe of Deacons to take Care of their Poor, and in the Government of the Church, call in Lay-Elders; whence their Name, from the *Greek* πρεσβυτερος, ſignifying Senior, *Elder*. See ELDER.

This is now the reigning Diſcipline in the Church of *Scotland*; as it was, during the Inter-regnum, in *England*.

PRESBYTERY, *Presbyterium*, an Aſſembly of the Order of Presbyters, or Prieſts, with Lay-Elders; for the Exerciſe of Church-Diſcipline.

The Kirk or Church of *Scotland* is divided into ſixty-nine *Presbyteries*, each conſiſting of a number of Pariſhes, not exceeding twenty-four, nor leſs than twelve.

The Miniſters of theſe Pariſhes, with one Ruling-Elder choſen half-yearly, conſtitute a *Presbytery*; who, meeting in their chief Town whence the *Presbytery* is denominated, chuſe a Moderator, or rather Prolocutor, half-yearly.

They determine all Appeals from Kirk-Seſſions, *i. e.* from the ſeveral Parochial-Aſſemblies; but can try nothing at the firſt Inſtance cognizable before a Kirk-Seſſion. See KIRK-*Seſſion*.

They compoſe all Differences between Miniſters and People; for which end they hold *Presbyterial* Viſitations in each Pariſh, where they examine the Regiſters of the Kirk-Seſſions, &c.

They enquire into Repairs of Churches, ſee that the Glebe, &c. ſuffer no Dilapidations; appoint Schools in the Pariſhes, and ſee that the Funds ben't miſapply'd.

'Tis they alone can exclude from the Communion, licenſe Probationers, ſuſpend, depoſe, and, in effect, determine all Eccleſiaſtical Matters within their Diſtrict. From the *Presbytery* there lies an Appeal in all Caſes to Provincial Synods. See SYNOD.

PRESBYTERY, *Presbyterium*, is ſometimes alſo uſed for the Choir of a Church, becauſe antiently appropriated to the Presbyters; in oppoſition to the Nave or Body of the Church, which was for the People. See CHOIR and CHURCH.

PRESBYTÆ, in Optics, a Term apply'd to Perſons in whom the Configuration of the Cryſtalline of the Eye is too flat, ſo that they ſee diſtant things clearly, but thoſe near at hand confuſedly. See VISION.

The Reaſon is, that, in near Objects, the viſual Rays paſſing the Retina before they unite, there can be no diſtinctneſs, ſince the diſtinct Baſe falls too far off beyond the Retina. See CRYSTALLINE and RETINA.

This defect is helped only with convex Glaſſes, or Spectacles; which will make the Rays converge ſooner, and if they are well fitted, fall exactly on the Retina. See CONVEX and SPECTACLE.

The Word is form'd from the *Greek* πρεσβυς, *Senex*; becauſe old People are naturally ſubject to this defect; Time and the Friction of the Eye-Lids, &c. gradually wearing the Ball flat.

Presbytæ are oppoſed to *Myopes*, in whom the Cryſtalline is too round. See MYOPES.

If the diſtance between the Retina and the Cryſtalline be too ſmall, the Perſon will likewiſe be a *Presbyta*. See CRYSTALLINE, &c.

PRESCIENCE, in Theology, *Previſion*, *Fore-knowledge*; the Knowledge which God has of things to come.

The Doctrine of Predeſtination is founded on the *Preſcience* of God, and on the ſuppoſition of all Futurity's being preſent to him. See PREDESTINATION.

Human Reaſon can ſcarce reconcile the *Preſcience* of God with the Free-Agency of Man. See LIBERTY and NECESSITY.

How are we to admire the depth of the *Preſcience* and Wiſdom of God; who, in giving the firſt Motion to Matter, fore-ſaw all the poſſible Combinations this firſt Impreſſion might undergo during infinite Ages? *Malebr.*

PRESCRIPTION, in Law, a Title introduced for aſſuring the Property of Effects in favour of Perſons who have poſſeſs'd them a certain time; and to keep off any who would diſquiet them, or recover the thing poſſeſs'd, after the Term fixed by the Laws. See POSSESSION.

Tournemil calls *Prescription* a Penalty imposed by the Laws upon Negligence; and adds, that Possessors who have no other Title to plead but *Prescription*, are only honest Usurpers.

In effect, however, the Law of *Prescription* does not punish the Indolence of Proprietors; but only interprets their Silence for their Consent; presuming that a Man who neglects to assert his Right for a long Series of Years, gives it up.

There are some of the Lawyers who doubt whether Time and unjust *Prescription* be any legitimate Means of acquiring; others, more favourable, call it the *Patron of Mankind*; as being a general Presumption, under which the Law will have Men live in peace.

In the Common Law, *Prescription* is usually understood of a Possession for Time immemorial; as when my Ancestors, or his, from whom I have an Estate, have enjoy'd and used it all the time whereof any Memory remains.

But in the Civil Law, and even in our Common Law, there are *Prescriptions* of a much shorter Date. *Prescription* of forty Years excludes all Actions whatever. *Reform. Leg. Eccles.*

The Custom of *Paris* allows of a *Prescription* of ten Years, if the Parties be present, and twenty if absent, in favour of peaceable Possessors of an Inheritance, if they have any Title, however controverted; and of thirty Years in favour of those who possess without any Title at all.

In *Normandy*, a *Prescription* of forty Years peaceable Possession is equivalent to a Title, to Immoveables; and for Moveables and personal Actions, a *Prescription* of thirty Years suffices.

In *Romish* Countries, *Prescription* does not avail against the Church, if less than a hundred Years. In *France*, *Prescription* of twenty Years is admitted against all Crimes, except Duelling, which was excluded by a Declaration of the Year 1679. In Matters of Adultery, five Years suffice, *i.e.* provided there have been a discontinuance of Prosecution all that time.

By our Statutes, a Judge or Clerk convicted of false entring Pleas, &c. may be fined within two Years; but those elapsed, he *prescribes* against the Punishment of the Statute.

The Crime of Maintenance or Embracery, whereby Perjury is committed by a Jury, must be prosecuted within six days; otherwise the Parties *prescribe*. See JURY.

There is no *Prescribing* against a Man's Lord; no *Prescription* avails to take off a Servitude or Tenure: A Title is always required there.

The Author of the History of the Inquisition observes, that no Time or *Prescription* avails in Matters of Heresy; even Death itself does not secure the suspected from the Researches of the Inquisition. See INQUISITION.

PRESCRIPTION, in Medicine, the Act, or Art of assigning a proper and adequate Remedy to a Disease; from an Examination of the Symptoms thereof, and an Acquaintance with the Virtues and Effects of the *Materia Medica*. See REMEDY and DISEASE.

The *Methodus prescribendi* is the last, finishing piece of Furniture of a Physician, and is the result of all the rest; join'd with a ready, present Thought. See MEDICINE and PHYSICIAN.

To *Prescribe* with Judgment, Elegance, &c. a moderate Acquaintance with Pharmacy, *i. e.* with the Forms and Preparations of Medicines, is required. See PHARMACY.

The Merits of a Bill or *Prescription* consist in its being concise, pertinent, efficacious, and agreeable; in the best and suitablest Materials being pitch'd on; those assembled in the most judicious Proportions, made up in the best and most convenient Form, and apply'd in the justest Dose; a due regard being still had to the Non-naturals, Regimen, Intervals of Application, &c. *Sydenham* excell'd in *Prescription*. See DOSE, DIET, &c.

Prescription is either *Officinal* or *Extemporaneous*; the former consists in the ordering of the Medicines which the Apothecaries keep by 'em ready prepared according to their Dispensatory. See OFFICINAL and DISPENSATORY.

Extemporaneous is that which the Physician frames of himself, *pro re nata*, according to the Circumstances of the Patient, to be made up by the Apothecary according to the Physician's Bill. See EXTEMPORANEOUS.

PRESENCE, *Præsentia*, a Term of relation, used in opposition to *Absence*; and signifying the Existence of a Person in a certain Place; or the State of a Person consider'd as co-existing with another. See CO-EXISTENCE.

In this sense an Obligation is said to be pass'd in *Presence* of a Notary and Witnesses: At the breaking open of a Seal of a Minor or an absent Person, the *Presence* of a Substitute is necessary.

The Schoolmen hold, that *Presence*, in speaking of Bodies, denotes not only a Co-existence, but a sort of Contact. They make two kinds of *Presence*; the one *virtual*, in which sense a Spirit, or Mind, is said to be *present* to a Body when it acts thereon; the other *corporeal*, which consists in a physical Contact.

The Treasurers, &c. of *France* have what they call a *Right of Presence*, a certain Sum due on their actual Attendance in their Offices; to oblige 'em to be the more assiduous in their Function. A Person absent in the Service of the King, or a Community, is reputed *present*.

The *Roman Catholicks* believe the real *Presence* of *Jesus Christ* in the Eucharist, both in Body and Soul. See TRANSUBSTANTIATION.

PRESENT, in Grammar, the first Tense, or Inflexion of Verbs; expressing the Time *present*, or that which now is. See TENSE.

'Tis a peculiar piece of Address in Eloquence to make use of the *present*, for a *past* Tense, in order to express a past Action with the more force and warmth: Thus; The Fleet *is* no sooner in full Sea, than the Heavens *begin* to lower, the Winds *rise*, the Waves *dash* against each other, Thunder *rolls*, and Lightning *glares* on all sides; the Ships *lose* their Masts and Rudders, and *are* driven impetuously against the Rocks.

PRESENTATION, in the Canon Law, the Act of a Patron, nominating and offering his Clerk to the Bishop, or Collator, to be instituted in a Benefice of his Gift. See PATRON, COLLATOR, &c.

The *Presentation* must be tender'd to the Bishop within an hundred eighty-two days after the living is vacant, else it lapses to the Bishop; and if the Bishop do not collate in half a Year more, it lapses to the Archbishop; and from him in a like time to the King, who may stay as long as he pleases; for *Nullum tempus occurrit Regi*.

By some Customs, a Lay-Patron has only four Months time to make his *Presentation* in; and if he have presented a Person incapable, he may vary it, and make a new *Presentation* within the four Months. See BENEFICE.

The Word is form'd from the antient Phrase *Presentare ad Ecclesiam*, which originally signify'd the Patron's sending, or placing a Person in a Church; and which itself is form'd from *Representare*, which, *Selden* observes, is used in the Council of the *Lateran* and elsewhere, for *Presentare*. See PARSON.

PRESENTATION, also, gives the Title to three Orders of Nuns. See RELIGIOUS.

The first, projected in 1618, by a Maid nam'd *Joan of Cambray*. The Habit of the Nuns, according to the Vision she pretended to have, was to be a grey Gown of natural Wool, &c. but this Project was never accomplished.

The second was established in *France* about the Year 1627, by *Nich. Sanguin*, Bishop of *Senlis*. It was approved by *Urban* VIII. This Order never made any great progress.

The third was established in 1664; when *Fred. Borrimeo*, being Apostolical Visitor in the *Valteline*, was intreated by some devout Maids at *Morbegnobourg* to allow 'em to live in Community in a retir'd place; which he granted, and erected 'em into a Congregation, under the Title of *Congregation of our Lady*. They live under the Rule of St. *Augustine*.

PRESENTATION *of the Virgin*, is a Feast of the *Romish* Church held on the 21st of *November*, in memory of the Virgin's being presented by her Parents in the Temple, to be there educated.

It is pretended, that there were young Women brought up in the Temple of *Jerusalem*; which some endeavour to prove from the second Book of *Maccabees*, *Sed & Virgines quæ conclusæ erant, procurrebant ad Oniam*; which is the Sentiment of *Eutochius* on this Passage. And *Lyranus* adds, that other more antient Authors observe, that young Women were educated till Marriage, either in the Temple, or at least in Buildings contiguous thereto.

Emanuel Comnenius, who began to reign in 1143, makes mention of this Feast in his Constitution. Some even imagine it to have been established in the XIth Century among the *Greeks*; and think they see evident Proofs of it in some Homilies of *George* of *Nicomedia*, who lived in the time of *Photius*; so that it seems a Mistake in some modern Criticks to refer its Institution to *Gregory* XI. in 1372.

Some take it to have been instituted in memory of the Ceremony practised among the *Jews* for their new-born Females; corresponding to the Circumcision on the eighth day for Males. See CIRCUMCISION.

PRESENTEE, in the Canon Law, a Clerk presented by a Patron to a Collator. See PRESENTATION.

PRESENTMENT, in Law, a mere Denunciation of the Jurors themselves, or some other Officer, as a Justice, Constable, Searcher, Surveyor, &c. of an Offence, inquirable in the Court whereto it is presented.

PRESENTS, PRÆSENTIA, *Free-gifts*, or *Gratuities*; especially those given by the Clergy, or the States of a Realm, to a King. See BENEVOLENCE.

They are so call'd because given into the Hands of a Person *present*; by which they are distinguished from *Munera*, Gifts which are sent to the Party, or delivered by the intervention of a third Person.

Thus

Thus the XVIIIth Law, *de Verb. ſignif. Abſentibus res donari dicantur, munera autem mitti*, & præſentia *offerri*.

There is no accoſting the Eaſtern Princes without making 'em fine *Preſents*. Kings uſually make rich *Preſents* to Embaſſadors ſent to their Courts.

PRESERVATIVE, in Medicine, a Remedy taken by way of precaution; or to ſecure a Man from a Diſeaſe that threatens him. See REMEDY.

The principal *Preſervatives*, according to *Boerhaave*, are Abſtinence, Eaſe, drinking of warm Water, and after this, a gentle and continued Motion till the firſt appearance of Sweat; then a profuſe ſleeping, the Body well cover'd.

By ſuch means, craſs Humours are diluted, the Veſſels are looſen'd, and noxious Matters excreted. He adds, that the beſt defence againſt the force of external Cold, is to leſſen the Winter's Clothing late in the Spring, and to increaſe the Summer's Clothing ſoon in Autumn.

In time of Plague, *Preſervatives* are very neceſſary againſt the Contagion of the Air, &c. See PLAGUE and CONTAGION.

Generous Wines, Cardiacs, and Sudorifics are *Preſervatives*. Dr. *Alprunus* tells us, he made Inciſions with a Lancet *in Inguine dextro* and *ſiniſtro*, and put in Setons, to give paſſage to the Venom; which proved an excellent *Preſervative* againſt the Plague that raged at *Prague* in 1680.

Dr. *Wenceſlaus Dobr. Zensky de Nigro Ponte* gives us an univerſal *Preſervative* againſt Infection in all Diſeaſes. Whoever, ſays he, in converſing with Patients of any kind, would *preſerve* himſelf from Infection, muſt, while he is within the Sphere of the Steams, never ſwallow his Spittle, but ſpit it out: For he conceives it to be the Spittle that firſt imbibes the Infection.

PRESIDENT, an Officer created, or elected, to *preſide* over a Company, or Aſſembly; ſo call'd in Contradiſtinction to the other Members, who are term'd *Reſidents*.

Lord PRESIDENT *of the Council*, is the fourth great Officer of the Crown; as antient as the Time of K. *John*; when he was ſtiled *Conciliarius Capitalis*. See COUNCIL.

His Buſineſs is to attend on the King, to propoſe Buſineſs at the Council-Table, and to report to the King the ſeveral Tranſactions there.

PRESIDIAL, a Tribunal, or Bench of Judges, eſtabliſh'd in the ſeveral conſiderable Cities of *France*, to judge, *en dernier reſſort*, or ultimately, of the ſeveral Caſes brought before them, by way of Appeal from the ſubaltern Judges.

The *Preſidials* make one Company with the Officers of the Bailliages and Seneſchauſſees, where they are eſtabliſhed.

The Edict of 1551, eſtabliſhes *Preſidials* under theſe two Conditions; firſt, that they may judge definitely, and without Appeal, to the Sum of 250 Livres, or 10 Livres *per Annum*. And, 2°. to the Sum of 1500 Livres by Proviſion.

When they judge in the former Caſe, they are obliged to pronounce it with theſe Words, *par Jugement dernier*; in the ſecond, *par Jugement Preſidial*.

When they judge finally of Appeals from inferior Judges, they may not pronounce the Sentence, or Appeal, *au neant*, void; that Form only belonging to the Sovereign Courts: But are to pronounce ſimply, that *it has been well or ill judged*. To judge *preſidially* and finally, they muſt be at leaſt ſeven in number.

PRESS, in the Mechanic Arts, a Machine made of Iron, or Wood; ſerving to ſqueeze, or compreſs any Body, very tightly. See MACHINE and COMPRESSION.

The *Ordinary Preſſes* conſiſt of ſix Members, or Pieces; *viz.* two flat, ſmooth Planks, between which the Things to be preſs'd are laid; two Screws, or Worms, faſten'd to the lower Plank, and paſſing thro' two Holes in the upper; and two Nuts in form of an S, ſerving to drive the upper Plank, which is moveable, againſt the lower, which is ſtable, and without Motion.

PRESSES *uſed for expreſſing of Liquors*, are of various Kinds; ſome, in moſt reſpects the ſame with the common *Preſſes*; excepting that the under Plank is perforated with a great number of Holes, to let the Juice expreſs'd, run thro' into a Tub, or Receiver, underneath.——Others have only one Screw, or Arbor, paſſing thro' the middle of the moveable Plank; which is made to deſcend into a kind of ſquare Box, full of Holes on all ſides, thro' which the Juices flow in proportion as the Arbor is turn'd, by means of a little Lever apply'd thereto.

The PRESS *uſed by Joiners*, to keep cloſe the Pieces they have glued; eſpecially Pannels, &c. of Wainſcot, is very ſimple; conſiſting of four Members, *viz.* two Screws and two Pieces of Wood, four or five Inches ſquare, and two or three Foot long, whereof the Holes at the two Ends ſerve for Nuts to the Screws.

The PRESS *uſed by Inlayers*, reſembles the Joiner's *Preſs*, except that the Pieces of Wood are thicker, and that only one of them is moveable; the other, which is in form of a Treſſel or Horſe, being ſuſtain'd by two Legs, or Pillars, jointed into it, at each end.

This *Preſs* ſerves them for the ſawing and cleaving the Pieces of Wood required in Marquetry, or Inlaid Work. See MARQUETRY.

Founders PRESS, is a ſtrong ſquare Frame, conſiſting of four Pieces of Wood, firmly join'd together with Tenons, &c. This *Preſs* is of various Sizes, according to the Sizes of the Moulds; two of them are required to each Mould, at the two Extremes whereof they are placed: ſo as that by driving wooden Wedges between the Mould and the Sides of the *Preſſes*, the two parts of the Mould, wherein the Metal is to be run, may be preſs'd cloſe together. See FOUNDERY.

Printing PRESS, is a very complex Machine, ſerving to *preſs* the Sheet of Paper upon the Forms, which the Workman has firſt ſmear'd or *beat* over with Ink; ſo, as that the Characters, or Types, whereof the Forms are compoſed, may leave their Marks or Impreſſions thereon.

The Parts of this *Preſs* are the two *Cheeks*, the four Planks, *viz.* the *Cap*, *Head*, *Shelves* and *Winter*, the *Back* of the *Preſs*, where the Ink is placed, the *Spindle* with its Nut, the *Hoſe* with its *Hooks*, the *Platten-Plate* and its *Plug*, the *Carriage*, the *Coffin*, *Gallows*, *Tympan* with its Joints, &c. Laſtly, the *Handle*, to bring the *Plank* on which the *Coffin* is fix'd backwards and forwards; and the *Bar* to work the Spindle, and *preſs* the Platten on the Forms.

See the Form and Uſe of theſe ſeveral Parts deſcribed under the Article PRINTING-*Preſs*.

Rolling-PRESS, is a Machine uſed for the taking off Prints from Copper-Plates. It is much leſs complex than that of the Letter-Printers: See its Deſcription and Uſe under the Article *Rolling-Preſs*-PRINTING.

PRESS, in Coining, is one of the Machines uſed in the ſtriking of Money; differing from the Balancier, in that it has only one Iron Bar to give it Motion, and preſs the Moulds or Coins; is not charg'd with Lead at its Extreme; nor drawn by Cordage. See COINING.

Binders-PRESS, or Cutting-*Preſs*, is a Machine uſed equally by Book-binders, Stationers, and Paſtboard-makers; conſiſting of two large Pieces of Wood, in form of Cheeks, join'd by two ſtrong wooden Screws, which being turn'd by an Iron Bar, draw together, or ſet aſunder the Cheeks, as much as is neceſſary for the putting in of the Books, or Papers, to be cut.

The Cheeks are placed flat on a wooden Stand, in form of a Cheſt, into which the Cuttings fall. A-ſide of the Cheeks are two pieces of Wood, of the ſame length with the Screws; ſerving to direct the Cheeks, and prevent their approaching or opening unequally upon turning the Screw.

Upon the Cheeks is the Shaft or Fuſt, to which the Cutting-Knife is faſten'd by a Screw, which has its Key to diſmount it on occaſion to be ſharpen'd.

The Shaft conſiſts of ſeveral Parts; among the reſt, a wooden Screw or Worm, which catching within the Nuts of the two Feet that ſuſtain it on the Cheeks, bring the Knife to the Book or Paper, which is faſten'd in the *Preſs* between two Boards. This Screw, which is pretty long, has two Directories or Pieces of Wood, which both as to their Form and Effect, reſemble thoſe of the Screws of the Cheeks. To make the Shaft ſlide ſquare and even on the Cheeks, ſo that the Knife, puſh'd along by the Workman, may make an equal paring; that Foot of the Shaft where the Knife is not fix'd, has a kind of Groove, directed by a Thread faſten'd along one of the Cheeks. Laſtly, the Knife is a piece of Steel, ſix or ſeven Inches long, flat, thin and ſharp; terminating at one end in a point like that of a Sword; and at the other in a ſquare form, which ſerves to faſten it to the Shaft. See BOOK-*Binding*.

PRESS, in the Woollen Manufactory, is a large wooden Machine, ſerving to *preſs* Cloths, Serges, Ratines, &c. thereby to render them ſmooth and even, and to give them a Gloſs. See CLOTH, &c.

This Machine conſiſts of ſeveral Members; the principal whereof are the *Cheeks*, the *Nut*, and the *Worm* or *Screw*, accompany'd with its Bar, which ſerves to turn it round, and make it deſcend perpendicularly on the middle of a thick wooden Plank, under which the Stuffs to be *preſs'd* are placed. See PRESSING.

The Calender is alſo a kind of *Preſs*, ſerving to *preſs* or calender Linens, Silks, &c. See CALENDER.

PRESSING, in the Manufactures, the Action of violently ſqueezing a Cloth, Stuff, Linnen, &c. in a *Preſs*, to render it even, ſmooth, poliſh'd, and gloſſy. See CLOTH, &c.

This, in the Silken and Linnen Manufactures, they properly call *Calendring*. See CALENDER.

There are two manners of *Preſſing*; the one *hot*, the other *cold*.

Method

Method of PRESSING, *Cold.*

After the Stuff has had all its Preparations, *i.e.* has been ſcour'd, full'd, and ſhorn (ſee SCOURING, FULLING, SHEERING:) it is folded ſquare, in equal Plaits; and a Skin of Velom, or fine, ſmooth Paſt-board, put between each Plait. Over the whole is laid a ſquare wooden Plank; and in this Condition it is put in the *Preſs*; which is driven tight down by means of the Screw turn'd full upon it, by the hands, aſſiſted with Levers.

After it has lain a ſufficient time under the *Preſs*, they take it out, remove the Paſt-boards or Veloms; and lay it up to keep. It may be obſerv'd, that ſome do not uſe a Preſs with a Screw in *preſſing cold*; but content themſelves with laying the Stuff on a firm Table, after plaiting and paſt-boarding it as before; covering the whole with a wooden Plank, and loading this with a Weight, greater or leſs, as is judg'd neceſſary.

Method of PRESSING, *Hot.*

The Stuff having receiv'd all its Preparations as before, it is ſprinkled a little with Water, ſometimes with Gum-Water, ſpurted over it with the Mouth; then plaited equally, and between each two Plaits are put Leaves of Paſt-board; and between every ſixth and ſeventh Plait, as well as over the whole, an Iron or Braſs Plate, well heated in a kind of Furnace for the purpoſe.

This done, it is laid under the Preſs; and a Screw brought forcibly down upon it, by means of a long Iron Bar.

Under this Preſs are laid five or ſix Pieces one over another, at the ſame time; all furniſh'd with their Paſt-board, and Iron Plates. When the Plates are well cold, they take the Stuffs from under the Preſs, remove the Paſt-boards and Plates, and ſtitch it a little together, to keep in the Plait.

This manner of *Preſſing* Woollen Stuffs, is very pernicious; and was only invented by the Manufacturers to cover the Defects of the Stuffs; and excuſe their not giving them all the Shearings, Dyes, and Preparations, that are neceſſary to render them perfect: Accordingly it has been frequently prohibited.

PRESSING *to death*; ſee PAINE *Fort & Dure.*

PRESSION, or PRESSURE, in the *Carteſian* Philoſophy, *Truſion*; an impulſive kind of Motion, or rather Endeavour to move, impreſſed on a fluid Medium, and propagated thro' it. See MOTION, FLUID, and CARTESIAN.

In ſuch a *Preſſion*, the *Carteſians* ſuppoſe the Action of Light to conſiſt; ſee LIGHT: And in the various Modifications of this *Preſſion* by the Surfaces of Bodies, whereon that Medium is thus preſs'd, they ſuppoſe the various Colours to conſiſt, *&c.* See COLOUR.

But Sir *Iſaac Newton* has taught us better: For if Light, *e. gr.* conſiſted only in a *Preſſure*, propagated without actual Motion, it could not agitate and warm ſuch Bodies as reflect, and refract it; as we actually find it does; and if it conſiſted in an inſtantaneous Motion, or one propagated to all Diſtances in an inſtant, as ſuch *Preſſion* ſuppoſes, there would be required an infinite Force to produce that Motion, every moment in every lucid Particle,

And if Light conſiſted either in *Preſſure*, or in Motion propagated in a fluid Medium, whether inſtantaneouſly, or in time, it muſt follow that it would inflect itſelf *ad umbram*; for *Preſſure* or Motion in a fluid Medium, cannot be propagated in right Lines beyond any Obſtacle, which ſhall hinder any part of the Motion; but will inflect and diffuſe itſelf every way into thoſe parts of the quieſcent Medium, which lie beyond the ſaid Obſtacle.

Thus the Force of Gravity tends downwards, but the *Preſſure*, which ariſes from that Force of Gravity, tends every way with an equable Force; and with equal Eaſe and Force, is propagated in crooked Lines, as in ſtraight. Waves on the Surface of Water, while they ſlide by the ſides of any large Obſtacle, do inflect, dilate and diffuſe themſelves by degrees into the quieſcent Water, lying beyond the Obſtacle. The Waves, Pulſes or Vibrations of our Air, in which Sounds conſiſt, do manifeſtly inflect themſelves, tho' not ſo much as the Waves of Water; for the Sound of a Bell, or of a Cannon, can be heard over a Hill, which intercepts the ſonorous Object from our ſight: and Sounds will be propagated as eaſily thro' crooked Tubes, as thro' ſtraight.

But Light is never obſerved to go in Curve Lines, nor to inflect itſelf *ad umbram*. For the fixed Stars do immediately diſappear on the Interpoſition of any of the Planets, as well as ſome parts of the Sun's Body, by the Interpoſition of the *Moon*, *Venus*, or *Mercury*.

PRESSURE *of the Air*. See AIR.

Moſt of the Effects antiently aſcribed to the *Fuga Vacui*, are now accounted for from the Weight and *Preſſure* of the Air. See VACUUM.

The *Preſſure of the Air* on the Surface of our Earth, is balanced by a Column of Water of the ſame Baſe, and about thirty-five Feet high; or one of *Mercury* of about twenty-nine Inches. See TORRICELLIAN *Experiment* and BAROMETER.

The *Preſſure* of the Air on every ſquare Inch on the Surface of the Earth, is computed to be about fifteen Pounds *Avoirdupois*. See BATHING.

PREST, a Duty in Money, to be paid by the Sheriff, upon his account, in the Exchequer; or for Money left or remaining in his hands.

PREST *Money*, from the *French* Word *Preſt*, ready, is a Sum of Money which binds thoſe who receive it, to be ready at command, at all times appointed; chiefly underſtood in the liſting of Soldiers.

PREST-*Sail*, in the Sea-Language, is when a Ship carries all the Sail ſhe can poſſibly croud; which is ſometimes done in giving Chaſe, *&c.* But 'tis a dangerous Experiment, leſt the Ship over-ſet, or bring her Maſts by the Board; in which latter Caſe ſhe becomes an eaſy Prey.

PRESTATION-*Money*, a Sum of Money paid yearly by Archdeacons, and other Dignitaries, to their Biſhop, *Pro exteriori Juriſdictione.*

Preſtation was alſo antiently uſed for other Payments: *& quieti ſint de* Preſtatione *Muragii*, Chart. *Hen.* 7. and ſometimes for *Purveyance.*

PRESTER, a Meteor, conſiſting of an Exhalation thrown from the Clouds downwards with ſuch Violence, as that by the Colliſion it is ſet on fire. See METEOR.

The *Preſter* differs from the Thunder-bolt in the manner of its Inflammation; and in its burning and breaking every thing it touches with greater Vehemence. See THUNDER-BOLT.

The Word is *Greek*, πρηςὴρ; ſo called from the reſemblance this Meteor has with a kind of Serpent call'd πρηςὴρ, and ſometimes δίψας.

PRESTER JOHN, or *Jean*, a Term given the Emperor of the *Abyſſinians*; becauſe antiently the Princes of this Country were really *Prieſts*, and the Word *Jean* in their Language ſignifies *King*.

'Twas the *French* who firſt made him known in *Europe* under this Title. His Empire was antiently of vaſt Extent; at preſent it is confined to ſix Kingdoms, each about the bigneſs of *Portugal*.

The Name *Preſter John* is altogether unknown in *Ethiopia*; and took its riſe hence, That the People of a Province where this Prince uſually reſides, when they requeſt any thing, ſay *Jean-Coi*, i. e. *my King*. His proper Title is, *The Grand Negus*.

There is alſo a *Preſter John* of *Aſia*, mention'd by M. *Paolo* the *Venetian*. His State is in the Country of *Cangingu*, between *China*, and *Sifan*, and *Thibet*; a Kingdom mightily valued by the *Chineſe* for its Policy, and the Number of its fortify'd Cities; tho' they have uſually the utmoſt Contempt for foreign Countries.

Some ſay he is ſo call'd from a *Neſtorian* Prieſt, mention'd by *Albericus*, towards the Year 1145, to have mounted the Throne. Others, that he takes his Name from a Croſs which he bears in his hand, as a Symbol of his Religion.

PRESTIMONY, PRÆSTIMONIA, in the Canon Law, a Term about which Authors are much divided; it is derived *à Præſtatione quotidiana*, and is defined a kind of Benefice ſerv'd by a ſingle Prieſt; in which ſenſe, *Preſtimony* is the ſame with a presbyterial Chappel. See BENEFICE.

Others will have *Preſtimony* to be the Incumbency of a Chappel, without any Title or Collation; ſuch as are moſt of thoſe in Caſtles, where Prayers, or Maſs are ſaid; and which are mere Oratories un-endow'd: Whence alſo the Term is given in the *Romiſh* Church to certain perpetual Offices beſtow'd on Canons, Religious, or others, for the ſaying of Maſſes, by way of Augmentation of their Livings.

Others, again, will have *Preſtimony* to be a Leaſe, or Conceſſion of any Eccleſiaſtical Fund, or Revenue belonging to a Monaſtery; to be enjoy'd during Life.

Du Moulin makes *Preſtimony* a prophane Benefice, which, however, has a perpetual Title, and an Eccleſiaſtical Office with certain Revenues attach'd to it; which the Incumbent is allow'd to ſell; and which may be poſſeſs'd without Tonſure: Such as the Lay-Church-Wardens of *Notre-Dame*. He adds, that in Propriety, the Canonrys of Chappels are Benefices of this nature.

Upon the whole, the ſureſt Opinion ſeems to be this, that *Preſtimony* is a Fund or Revenue affected by the Founder for the Subſiſtence of a Prieſt, without being erected into any Title of Benefice, Chappel, Prebend, or Priory; and which is not ſubject either to the Pope or to the Ordinary; but whereof the Patron, and thoſe who have a Right from him, are the Collators; and nominate and confer, *pleno jure.*

PRESUMPTION, in Law, a Suſpicion, or Conjecture founded on a Veriſimilitude.

Preſumption is of three ſorts, 1°. *Violent*, which many times is allow'd a full Proof; as if one be kill'd in an Houſe, and a Man is ſeen to come out of the Houſe with a bloody Sword, and no other Perſon was at that time in the Houſe; this, tho' but a *Preſumption*, is a Proof.

2°. *Probable*, which hath but a ſmall effect.

3°. *Levis*, or *Temeraria*, which is of no prevalency at all.

In Caſes of a Charter or Feoffment, if all the Witneſſes to the Deed be dead; the violent *Preſumption*, that ſtands for a Proof, gives continual and quiet Poſſeſſion: *Stabit* preſumptio *donec probetur in contrarium*. Coke on Lit.

PRESUMPTION was alſo antiently uſed for *Intruſion*. See INTRUSION.

PRESUMPTIVE *Heir*, the next Relation, or Heir at Law to a Perſon; who is to inherit from him *ab inteſtato*, and who 'tis *preſumed* will be Heir; nothing but a contrary diſpoſition of the Teſtator being able to prevent him. See HEIR.

PRETENCE, in Heraldry, ſee ESCUTCHEON *of Pretence*.

PRETENS'D, or PRETENDED *Right*, in Law, is where one is inpoſſeſſion of Lands and Tenements, which another who is out, claims and ſues for. Here, the *pretens'd Right* is in him who ſo claims or ſues.

PRETER *Naturam*, in Medicine, &c. ſee NATURE.

PRETER, or PRETERIT, PRÆTERITUS, *Paſt*, in Grammar, an Inflexion of Verbs, expreſſing the Tenſe, or Time paſs'd. See VERB.

Preter, or *Preterit*, is a general Name that comprehends the Inflexions correſponding to the ſeveral Tenſes, or ſeveral Circumſtances and Relations of the Time paſt; all which the *Latins*, &c. diſtinguiſh'd by particular Inflexions, or Terminations of the Verb; which make the proper Notion of Tenſes. See TENSE.

The modern Languages, particularly the *Engliſh*, in lieu of different Terminations of the Verbs themſelves, have frequently recourſe to thoſe of their Auxiliaries and Participles. See PARTICIPLE.

The *Preter*, or paſt Time, is ſubdivided by Grammarians into the *Preter-imperfect*, as, *e.gr. I had*, *I thought*, in the *Latin*, *habebam*, *cogitabam*, in the *French*, *J'avois*, *je penſois*: The *Preter-perfect*; *I have had*, *I have thought*, *habui*, *cogitavi*, *j'ai eu*, *j'ai penſé*: And *Pluſquam Preter-perfect*, *I had thought*, *I had had*, *habueram*, *cogitaveram*, *j'eus eu*, *j'eus penſe*.

The *Engliſh* have properly but two Caſes or Kinds of the *preter* Tenſe; viz. the *preter* Time of the imperfect Action; as, *I was at Supper then*, but had not yet done it. And the *preter* Time of the perfect Action; as, *I had then ſupp'd*, and it was then done.

The *preter* Tenſe is oftenest form'd of the preſent Tenſe by adding *ed*; as *I burned*.

The *French* have a particular Caſe of the *preterit-perfect*, which F. *Buffier* calls the *Preterit Simple*, in oppoſition to the former, call'd the *Preterit Compoſite*; others call it the *Preterit Indefinite*, becauſe expreſſing a thing done indeterminately, as *j'ecrivis hier*. This anſwers to the *Aoriſtus* of the *Greeks*; and in the diſtinction of this from the compound *Preterit* does one of the greateſt Niceties in the Practice of the *French* Language conſiſt. See AORISTUS.

In the paſſive Voice, the *Latins*, *French*, &c. have recourſe to Participles, and Auxiliaries, like the *Engliſh*, to form their *preter* Tenſes, *I was loved*, *amatus eram*, *j'etois aimée*, &c.

PRETERIT, PRÆTERITUS, in the *Roman* Juriſprudence. A *preterit Child*, *Infans præteritus*, is that of whom the Father has forgot to make mention in his Teſtament; which renders it entirely null. See TESTAMENT.

A Father may make Inſtitution, or Exheredation of his Son, but never *Preterition*.

PRETER-*Imperfect*,
PRETER-*Perfect*,
PRETER-*Pluperfect*,
} in Grammar, ſee PRETER.

PRETERITION, or PRETERMISSION, in Rhetoric, a Figure, whereby, in pretending to paſs over a thing untouch'd, we make a ſummary mention thereof.

I will not ſay he is valiant, *he is learned*, *he is juſt*, &c.

The moſt artful Praiſes are thoſe given by way of *Preterition*.

PRETEXT, *Pretence*, a Colour, Motive, or Cauſe, either real, or apparent. See COLOUR.

PRETEXTA, or PRÆTEXTA, among the *Romans*, was a long white Gown, or Toga, having a Band, or Border of Purple at bottom. See TOGA.

It was wore by Children of Quality till the Age of Puberty, *i. e.* by Boys till ſeventeen, at which time they laid it aſide, and aſſumed the Virile Gown. Girls wore it till Marriage. See VIRILE.

It took its Name *Pretexta*, according to *Goodwin*, *quod ei purpura Prætexta erat*, becauſe guarded about with purple Silk.

The *Pretexta* at firſt was a Robe of State, or Ceremony, wore only by the Chief Magiſtrates, and the Prieſts; nor was it lawful for ſuch who wore this Gown to be arraigned, or Sentence to paſs againſt 'em, till it was pull'd off.

In continuance of time, it was permitted to Noblemen's Children; and, at length, even to all *Roman* Children in general.

PRETIUM *Sepulchri*, in old Law-Books, &c. thoſe Goods accruing to the Church, wherein a Corps is buried.

In the *Iriſh* Canons, *lib.* 19. it is ordered, that along with every Body that is buried, there go his Cow, Horſe, Apparel, and the Furniture of his Bed; none of which may be diſpoſed of otherwiſe than for the payment of Debts, &c. as being Familiars and Domeſticks of the Deceaſed. See HERIOT, MORTUARY, &c.

PRETOR, *Prætor*, an eminent Magiſtrate in antient *Rome*.

In the firſt Ages of the Commonwealth, all the Magiſtrates were ſtiled *Pretors*; afterwards, the Title was beſtow'd on all the principal Officers of the Army: At laſt, *Pretor* became reſtrained to a particular Magiſtrate.

About the Year of *Rome* 388, the People ſolliciting to have one of the Conſuls always choſen from among the People; the Senators granted it, on condition that a new Magiſtracy ſhould be erected, to be fill'd wholly from among the Patricians: Such was the Origin of the *Preture*, *Prætura*; which, *Livy* obſerves, was firſt diſcharged by *Spurius Furcus*; and whoſe Office was to look to the adminiſtration of Juſtice and Equity between Man and Man; much in quality of a Lord Chief Juſtice, or Lord Chancellor, or rather both in one.

But Buſineſs increaſing in proportion as the Empire was enlarged, a ſecond *Pretor* was created, to take cognizance of the Affairs of Foreigners reſiding at *Rome*: upon which the former was diſtinguiſhed by the Title of *Prætor Urbanus*, or *major*; and the latter by that of *Prætor Peregrinus*, or *minor*.

The Number, in after-times, was much increaſed; under the Reign of *Auguſtus* there were twelve, and afterwards eighteen; two whereof were call'd *Prætores Cereales*, as being charged with the providing of Corn and Grain; and two others *Prætores Fidei Commiſſarii*. In the Code, *L.* 1. *T.* 39. we find a Law of the Emperors *Valentinian* and *Marcian*, which reduces the *Pretors* to three.

The Office of the *Pretor*, or *Prætor Urbanus*, was to render Juſtice in the City; he had a Power to interpret the Laws, to ſupply, and reform 'em; and even to make new ones, when the public Good required it.

In the Inſtitutes, the Edicts of the *Pretors* are call'd *Jus honorarium*; whence it ſhould ſeem, they had only the force of Laws out of reſpect to that eminent Magiſtrature; the Buſineſs of the *Pretor* being rather to look to the Obſervation of the old Laws, than to make new ones. See CIVIL *Law*.

Some are of Opinion he had not the Right of the Sword; the cognizance of Crimes being the ſpecial Province of the *Prefect* of *Rome*. See PREFECT.

But others are of another Sentiment. In the general, 'tis very difficult to fix preciſely how far his Power extended. When he walk'd, he was preceded by ſix Lictors; and was clothed with the Robe call'd *Trabea*. See LICTOR and TRABEA.

His Authority, like that of the other Magiſtrates, was very much weaken'd and reduced under the Emperors. In the Digeſt and Code, is a Title *de Officio Prætoris*.

PRETOR was alſo a Title among the *Romans* for the Governour of a Province, who had paſs'd the Office of *Pretor*.

Whence Provinces govern'd by *Pretors*, or reſtrained to thoſe who had diſcharged that Office, were call'd *Pretorian Provinces*. See PROVINCE.

PRETORIAN *Guards*, or *Cohorts*, were the Soldiers of the Emperor's Guard; ſo call'd, as ſome imagine, from their Place or Station in the Palace or Court call'd *Pretorium*. See PRETORIUM.

Their Inſtitution is owing to *Scipio Africanus*, who firſt eſtabliſhed a Company of the braveſt Men in his Army, pick'd out for the purpoſe, to be his Guard; and who never ſtirr'd from his ſide in Battel. See GUARD.

Their Number was at length increaſed, as *Dion* tells us, to ten thouſand. They were commanded by an Officer created by *Auguſtus*, call'd *Præfectus Prætorii*. See PREFECT.

PRETORIUM, among the *Romans*, the Place, Hall, or Court wherein the Pretor liv'd, and wherein that Magiſtrate ſat, to adminiſter Juſtice to the People. See PRETOR.

There were of theſe *Pretoriums* in all the Cities of the *Roman* Empire. See CURIA, COURT, &c.

The Scripture mentions that of *Jeruſalem*; and there are ſtill ſome remains of one at *Niſmes* in *Languedoc*.

PRETORIUM was also the Tent, or Pavillion of the General of the *Roman* Army; wherein Councils of War, &c. were held.

From the time of *Augustus*, the Emperor's Tent in the Camp was distinguish'd by the Titles of *Pretorium Augustale*.

PRETORIUM was also a Place in *Rome* where the *Pretorian* Guards were lodged. See PRETORIAN.

Some will have the *Pretorium* to be properly the Tribunal of the *Præfectus Pretorii*; or an Auditory destined for the rendring of Justice in the Emperor's Palace. See PREFECT.

This they argue from St. *Paul*'s Epistle to the *Philippians*; and from this place call'd *Prætorium*, they will have the Guards denominated *Prætoriani*, because assembled here for the Emperor's Guard.

Others will not allow the *Pretorium* to be any Tribunal, or Seat of Justice, but merely the Imperial Guard-house.

Perizonius has an express Dissertation to prove that the *Pretorium* was no Court of Justice in St. *Paul*'s time; but the Camp or Place where the *Pretorian Guards* were assembled. He adds, that the Name *Pretorium* was not given to Places where Justice was administred, till long time after; when the Office of the *Præfectus Pretorii* was converted into a Civil Function.

PREVARICATION, *Prævaricatio*, in the Civil Law, is where the Informer colludes with the Defendant, and so makes only a feign'd Prosecution.

Sylvius, in his Comments on *Cicero*, *pro Cluentio*, gives us the difference between the three Terms, *Calumniari*, *Prævaricari*, and *Tergiversari*. He who in his Accusation forges faults never committed, is said *Calumniari*. He who undertakes one's Suit, and either will not urge Reasons in behalf of his Client, or not answer the Objections of his Adversary, when he is able, is said *Prævaricari*. And he who desists in his Accusation, and lets the Suit drop, *Tergiversari*.

PREVARICATION, in our Law, is when a Man falsly and deceitfully seems to undertake a thing, *ea intentione*, that he might destroy it; *e.gr.* where a Lawyer pleads booty, or acts by collusion, &c.

PREVARICATION is also used for a secret Abuse committed in the Exercise of a public Office, or of a Commission given by a private Person.

PREVARICATOR, in the University of *Cambridge*, is a Master of Arts, chosen at a Commencement, to make an ingenious, satyrical Speech, reflecting on the Misdemeanours of the principal Members. See TERRÆ *Filius*.

PREVENTION, in the Canon, &c. Law, the Right a superior Person, or Officer has to lay hold of, claim, or transact an Affair before an inferior to whom it more immediately belongs.

The Word is chiefly used for the Pope's *Prevention* of ordinary Collators; and the Royal Judges of subaltern ones.

The *Romish* Canonists maintain, that the Pope, who is the Source of all Jurisdiction, has not transmitted it privatively to the ordinary Collators; but that he may still not only collate concurrently with them, but also *prevent* them by using his original Power as Head of the Church. See COLLATOR.

These *Preventions* are grown odious in several Countries, where they don't now obtain without a world of Modifications and Restrictions; and the Civil Power in *France*, always judges in favour of the ordinary Collators.

The Pope has no *Prevention* to the prejudice of Lay-Patrons; but by the *Concordat* he has reserved to himself the Right of conferring elective Benefices by *Prevention*, and even Cathedral and Collegiate Dignities. See CONCORDAT.

If the Provisions of the Pope, and Collations of the Ordinary bear Date of the same Day; the Ultramontane Canonists give the preference to the Pope; the *French* to the Ordinary.

The Cardinals have a particular Indulgence not to be *prevented* by the Pope within six Months.

PRIAPEIA, in Poetry, a Name given to certain obscene Epigrams, and other Pieces, composed on the God *Priapus*; whereof we have many Instances in the *Greek Catalecta*. See PRIAPUS.

PRIAPISMUS, PRIAPISM, in Medicine, a continual and painful Erection or Tension of the Yard. See ERECTION.

The immediate Cause of a *Priapism*, is the Heat, Pungency, or Acrimony of the Semen; accompanied with a Convulsion of the Muscles of that part, which compressing the Veins and cavernous Bodies, prevent the return of the Blood.

The more remote Causes are too hot, sharp, stimulating Foods; Cantharides are also found to perform the same effect, but with much more violence. There are Instances of People, especially old Men, who, making use of Cantharides to enable 'em to satisfy their Passions the better, have been seiz'd with a *Priapism*, which has been follow'd with universal Convulsions, and even Death. See CANTHARIDES.

The Term is derived from *Priapus*, a Heathen God, whom the Poets and Painters represent with a Yard always stiff and erect.

As Satyrs are usually painted after the same manner, the Disease is also call'd *Satyriasis*.

Some, however, distinguish between the *Satyriasis* and *Priapismus*; in that the latter is without any effusion or desire; but the former attended with both. See SATYRIASIS.

PRIAPUS, a Term sometimes apply'd to the genital Parts of Men, *viz.* the Penis and Testes. See GENITAL.

The Name took its rise from *Priapus*, a fabulous Deity, particularly adored at *Lampsachus*, the Place of his Birth; who, for the extraordinary Size of his Parts was exceedingly revered by the Women; insomuch that the Scripture tells us, King *Asa* dethroned his Mother *Maachah*, because she had consecrated a Grove to *Priapus*, and presided at his Sacrifices.

PRICE, *Pretium*, the Value of a thing. See VALUE.

PRICE-*Current*, in Commerce, a weekly Account of the current Value of most Commodities. See CURRENT.

PRICK-*Post*, in Building, see POST.

PRICKING, in the Sea-Language. To *prick the Plat*, or Chart, is to make a Point therein, near about where the Ship is to be at any time; in order to find the Course they are to steer. See COURSE, CHART, &c.

PRIEST, *Sacerdos*, a Person set a-part for the performance of Sacrifice, and other Offices, and Ceremonies of Religion. See SACRIFICE, RELIGION, &c.

Thus the false Gods and Goddesses of the Heathens had their *Priests*; *Priests* of *Mars*, of *Bacchus*, of *Hercules*, of *Isis*; and some of 'em their Priestesses. See PONTIFF, &c.

The *Jews* too had an Order of *Priests* and *Levites*, who serv'd in the Temple. See LEVITE, &c.

The *Mahometans* have their *Priests* call'd *Scheik* and *Muphti*; and the *Indians* and *Chinese* their *Bramans* and *Bonzes*. See SCHEIK, MUPHTI, BONZES, and BRAMAN.

PRIEST, *Presbyter*, in the Christian Church, is a Person invested with holy Orders; in virtue whereof, he has a Power to preach, pray, administer the Sacraments, &c. and, in the *Romish* Church, also, to bless, absolve, &c. See ORDERS.

By the Canons, a Man must be twenty-four Years of Age e'er he be admitted to the *Priesthood*; antiently thirty Years were required. See ORDINATION.

The Holy Scripture usually confounds the Title of *Priest*, Presbyter, with that of *Bishop*, Episcopos; and does not seem to give any Superiority to the one, over the other: and, yet, the absolute Equality among all the *Priests* in the Government of the Church has few Instances, but what are contested. See PRESBYTER.

Blondel and *Salmasius* maintain with a world of Reason, that in the primitive Church, the *Priests* govern'd with perfect Equality, and without any other pre-eminence beside that of Age; and yet to consult the Fathers, and Tradition, the *Presbyterian* Form of Government would scarce seem to have been known among the Antients. See PRESBYTERIAN.

In effect, the primitive Writers speak of nothing but Episcopacy; and of that too, frequently in such Terms, as if they esteem'd it of Apostolical Institution. See EPISCOPACY and BISHOP.

As, in the antient Church, the Deacons had the Management and Administration of the Revenues of the Church, their Authority grew apace, and in a little time they were got above the *Priests*; St. *Jerom* used his utmost Endeavours to prove that Deacons were originally inferior to *Priests*; and the Council of *Nice* decided the Question in favour of the latter. See DEACON.

Indeed, an Order of Deacons having been instituted without any other Function than to assist the *Priest* at the Altar; these have made no difficulty of owning the Superiority of the *Priests*: Add to this, that the Order of a Deacon being now become necessary to arrive at that of a *Priest*, there is no room to dispute the precedence: But the Deacons who had retain'd their Function, had the disposal of the Revenues, and paid the *Priests* their Pensions, still maintain'd the Superiority. Upon which, the sixth Council in *Trullo* pronounced once more on the Dispute, and gave the Pre-eminence to the *Priests*.

Cardinal PRIEST, see CARDINAL.

High PRIEST, see PONTIFEX.

PRIEST's *Cap*, in Fortification, see BONNET *a Petre*.

PRIMA *Naturalia*, in Physics, *Atoms*, or the first Particles, whereof natural Bodies are primarily composed; call'd also MINIMA *Naturalia*, which see: See also PARTICLE, ATOM, &c.

PRIMÆ *Viæ*, in Medicine, the first Passages of the Chyle;

Chyle; as the Stomach, Inteſtines, and their Appendices. See CHYLE, &c.

PRIMAGE, a Duty appointed by a Statute of *Henry* VIII. to be paid to the Mariners, and Sailors, for the loading of any Ship, at its ſetting forth from a Haven.

This is different, in different places; in ſome, a Penny *per* Pound; in others, Six-pence *per* Bale or Pack. See DUTY and CUSTOM.

PRIMARY *Planet*, a Planet which revolves round the Sun as a Centre. See PLANET.

Such are *Saturn*, *Jupiter*, *Mars*, the *Earth*, *Venus* and *Mercury*; thus call'd in oppoſition to ſecundary Planets, or Satellites. See SATURN, VENUS, &c.

Some Authors reſtrain the *primary Planets* to the ſuperior ones, *viz.* *Saturn*, *Jupiter* and *Mars*; but very impertinently.

PRIMATE, an Archbiſhop, inveſted with a Juriſdiction over ſeveral Archbiſhops, or Biſhops. See ARCHBISHOP.

Father *Sirmond* derives the Origin of *Primates* hence; That the large Provinces having been divided and ſubdivided by the Emperors; the firſt Diviſions were call'd *Firſts*, others *Seconds*, others *Thirds*, &c. and the Title *Primate* given to the Metropolitans, *i. e.* to the Biſhop of the City which was the Capital of the Province, e'er the Diviſion was made. See METROPOLIS and METROPOLITAN.

This Metropolitan *Primate* had ſome Juriſdiction over the Biſhops of the inferior Provinces; and was alſo call'd *Patriarch*. See PATRIARCH.

The Term *Primate* is *Latin*, and ſignifies the *Firſt* or *Preſident* of a Society: The *Greek* Word correſponding to it, is *Exarcha*. See EXARCHA.

Thoſe who hold for a ſtrict Eccleſiaſtical Hierarchy, maintain a *Primate* to be he who has ſeveral Metropolitans under him; as a Patriarch has ſeveral *Primates*: yet 'tis pretty evident from Hiſtory, that *Primates* were at firſt confounded with Patriarchs: Thus *Socrates* enumerating ten Patriarchs, does not make any diſtinction thereof from *Primates*.

In *Africa*, after the Diſtinction was made, the *Primates* were not at all ſubject to the Patriarch: Thus the Biſhop of *Carthage*, who was *Primate*, paid no Obedience to the Biſhop of *Alexandria*, who was Patriarch.

Nor, to be a *Primate*, was it neceſſary to have Metropolitans for Suffragans: Each Province of *Africa*, except thoſe which compoſed the Dioceſe of *Alexandria*, had its *Primate*; this Quality being given to Age.

In *France*, the Subdiviſion of Provinces gave occaſion to the Erection of *Primates*: Thus *Aquitain*, *e. gr.* being divided into two Provinces, the Archbiſhop of *Bourges* became *Primate* of the *Aquitains*, becauſe *Bourges* was the Capital of the firſt.

Thus alſo the Diviſion of *England* into two Provinces, *Canterbury* and *York*, in 1152, gave occaſion to the Introduction of *Primacies* among us; *Canterbury*, which was the Metropolis before, thence giving the Title of *Primate of all England*, to its *Prelate*; tho the Archbiſhop of *York* ſtill claims that of *Primate of England*. And accordingly, the firſt has ſome Juriſdiction over all *England*, relating to Adminiſtrations, &c. which the latter has only within his own Province. See PROVINCE.

PRIME, PRIMUS, the firſt in Order, Degree, or Dignity, among ſeveral Things of the ſame, or like kind.

Thus we ſay, *Prime Miniſter*, *Prime Mover*, *Prime Coſt*, &c. See MINISTER, MOBILE, &c.

PRIME, or PRIME *Minute*, in Geometry, the ſixtieth part of a Degree. See DEGREE.

Prime is ſometimes alſo uſed for the tenth part of an Unit. See DECIMAL.

In Weights it is uſed for the twenty-fourth part of a Grain. See GRAIN.

PRIME *Number*, in Arithmetic, a Number which can only be meaſur'd by Unity; or whereof 1 is the only aliquot part. See NUMBER.

Such are 5, 7, 11, 13, &c.

Prime Numbers, *inter ſe*, among themſelves, are thoſe which have no common Meaſure beſides Unity; thus 12 and 19 are *Prime Numbers inter ſe*.

PRIME *Figure*, in Geometry, is that which cannot be divided into any other Figures more ſimple than itſelf. See FIGURE.

Such is a Triangle among Planes; and the Pyramid in Solids: for all Planes are made of the firſt, and all Bodies or Solids compounded of the ſecond.

PRIME *Vertical*, is the Vertical Circle which paſſes thro' the Poles of the Meridian. See VERTICAL.

PRIME *Verticals*, in Dialling, or PRIME *Vertical Dials*, are thoſe projected on the Plane of the *Prime* Vertical Circle, or on Planes parallel thereto. See DIAL *Plane*.

Theſe are what we likewiſe call Direct, Erect, North or South Dials. But ſince every Plane hath that Pole raiſed or depreſſed thereon, which lies open to it; therefore this Plane, (if a direct South) hath the South Pole elevated, and conſequently the Style (whoſe Height muſt be the Complement of the Latitude of the Place) will point downwards. Wherefore to find the Hour's Diſtance from the Meridian upon this Plane, the Proportion is, As the Radius is to the Sine of the Style's Height, or Co-Latitude; ſo is the Tangent of the Hour, or Angle at the Pole: To the Tangent of the ſeveral Hours Diſtance from the Meridian. By this Canon, the Hours requiſite for the Plane, as alſo the Half-Hours, Quarters, &c. being calculated and ſet in a Table; the Dial is deſcribed after the ſame manner, as the Horizontal Dial. North Direct Erect Dials, are but the backſide of the South, becauſe lying in the ſame Azimuth with it; therefore it is no more but turning the South Dial upſide-down, and leaving out the ſuperfluous Hours between 5 and 7, and 4 and 8, and the North Dial is made. Only note, that the Style muſt point upwards to the North Pole. See DIALLING.

PRIME *of the Moon*, is the new Moon at her firſt Appearance, for about three Days after her Change. See NEW *Moon*.

PRIME is alſo uſed in the *Romiſh* Church, for the firſt of the Canonical Hours, ſucceeding to *Lauds*. See LAUD.

PRIME, in Fencing, is the firſt, and chief of the Guards, which is that the Body is in, immediately after drawing the Sword; being fitteſt to menace and terrify the Enemy, by reaſon the Point of the Sword is held higher up to the Eye, than in any of the other Guards. See GUARD.

PRIME, or PRIMING *of a Gun*, is the Gun-Powder put in the Pan, or Touch-hole of a Piece, to give it fire by.

The *Priming* is the laſt thing done in Charging. See CHARGE.

For Pieces of Ordnance, they have a pointed Iron Rod, to pierce the Cartridge thro the Touch-hole; call'd *Primer*, or *Priming Iron*.

PRIMING, among Painters, ſignifies the laying on of the firſt Colour. See COLOUR and PAINTING.

PRIMICERIUS, in Antiquity, the firſt, or chief Perſon in any Office, or Dignity.

In this ſenſe the Word occurs frequently in the Code, and even in our old *Engliſh* Laws; tho' it is there alſo occaſionally uſed for the Nobility, as *Primicerius totius Angliæ*: *Mon. Ang.*

The *Romans* had great Variety of *Primicerii*, both in Church, and the Emperor's Court; a *Primicerius of the Empreſs*, a *Primicerius Auguſtalis*, a *Primicerius of the Bardariotæ*, *of the Legions*, *of the Court*, *of the Chamber*, *of the Palace*, &c.

The *Eccleſiaſtical Primicerius*, *Du Cange* obſerves, was the ſame with the *Chanter* among us. See CHANTER.

In the Church of *Metz*, the *Primicerius* is the firſt Dignitary of the Dioceſe, and preſides at Aſſemblies of the Clergy, in prejudice of the Biſhop.

At *Venice*, the Dean of the Church of St. *Mark* is call'd *Primocirio*, or *Primicerius*: He is independent of the Patriarch of *Venice*, and enjoys Epiſcopal Privileges.

PRIMIER *Seiſin*, in Law, *q. d.* the *firſt Seiſin*; a Branch of the King's Prerogative, whereby he had the firſt poſſeſſion of all Lands, and Tenements held of him in chief, whereof his Tenant died ſeized in Fee; and conſequently the Rents and Profits thereof, till the Heir, if he were of Age, did homage; and if under Age, till he became of Age.

But all Charges ariſing by *Primier Seiſin*, are annulled by a Stat. 12 *Car.* 2. See SEISIN.

PRIMIPILARII, or PRIMOPULARII, in Antiquity, the Soldiers of the firſt Company, or Cohort of a Legion. See LEGION and COHORT.

The *Primipilarii* had conſiderable Advantages; one of the chief was, that moſt of the Soldiers who died in the Campaign, left them their Heirs.

PRIMIPILUS, or PRIMOPILUS, in Antiquity, the firſt Centurion, or Captain of a Cohort, who had charge of the *Roman* Banner. See CENTURION and COHORT.

PRIMITIÆ, the *Firſt-Fruits* gather'd of the Earth; whereof the Antients made Preſents to the Gods. See FRUITS.

In *Leviticus*, the *Primitiæ* of all Fruits are enjoin'd to be offer'd to God. See TITHE.

In our Law, the *Primitiæ* are one Year's Profits, after Avoidance, of every Spiritual Living, as rated in the King's Books. See FIRST-*Fruits*.

PRIMITIVE, in Grammar, a *Root*; or a Word in a Language, which is neither derived from any other Language, nor compounded from any other Words of the ſame. See ROOT.

Thus, *God* is a *Primitive*; *Godly*, a Derivative; *God-like*, a Compound. See DERIVATIVE.

PRIMITIVE, in Arithmetic. See PRIME *Number*.

PRIMO *Beneficio Eccleſiaſtico habendo*, in Law, a Writ directed from the King to the Lord Chancellor, appointing him to beſtow the Benefice that ſhall firſt fall in the King's Gift,

Gift, above or under ſuch a Value, upon this or that Clerk. See BENEFICE.

PRIMOGENITURE, *Birthright*; the Right of the Firſt-born, or eldeſt Child. See BIRTHRIGHT.

The *Right of Primogeniture* ſeems to be an unjuſt Prerogative, and contrary to natural Right: For ſince 'tis Birth alone gives Children a Title to the paternal Succeſſion, the Chance of *Primogeniture* ſhould not throw an Inequality among them.

Accordingly, the Right of *Primogeniture*, which calls the Elder-born to the Crown, preferably to the other, was not introduced into *France* till very late: 'Twas unknown to the firſt Race of Kings; and even to the ſecond.

The four Sons of *Clovis* ſhared the Kingdom equally among themſelves; and *Louis le Debonnaire* did the ſame: 'Twas not till the Race of *Hugh Capet*, that the Prerogative of Succeſſion to the Crown was affected to the Firſt-born.

By the antient Cuſtom of *Gavelkind*, ſtill preſerv'd in ſome parts of our Iſland, *Primogeniture* is of no account; the paternal Eſtate being equally ſhared by all the Sons. See GAVELKIND.

PRIMUM *Mobile*, in the *Ptolemaic* Aſtronomy, the ninth or higheſt Sphere of the Heavens, whoſe Centre is that of the World, and in compariſon of which, the Earth is but a Point. This they will have to contain all the other Spheres within it, and to give motion to them, turning it ſelf, and all them, quite round in twenty-four hours. See MOBILE.

PRINCE, PRINCEPS, in Politicks, a Perſon inveſted with the ſupreme Command of a State or Country; independent of any Superior. See MONARCH. See alſo KING.

PRINCE is alſo uſed for a Perſon who is Sovereign in his own Territory; yet holds of ſome other, as his Superior, or Lord, and pays Homage or Tribute to him.

Thus all the *Princes* of *Germany* are Feudataries of the Emperor; they are all as abſolute in their reſpective Principalities, as the Emperor himſelf; yet are all bound in certain Services to him. See EMPEROR. See alſo ELECTOR, and COLLEGE.

In many antient Titles, the Word *Prince* ſignifies no more than *Lord*; *Du Cange* gives a great many Inſtances of it. See LORD.

In effect, the Word *Princeps* in *Latin*, whence *Prince* in *Engliſh*, originally ſignifies the *Chief*, or *Firſt*; it is compounded of the *Latin primus*, and *Caput*; and is properly a Word of Dignity and Office, not of Property and Sovereignty.

Thus, in the Charter of King *Offa*, after the Biſhops had ſubſcribed their Names, we read, *Bordanus Patritius, Binnanus Princeps*; and afterwards the Dukes ſubſcribed their Names.

And in a Charter of King *Edgar*, *in Mon. Angl. tom.* 3. *p.* 301. *Ego Edgarus Rex rogatus ab Epiſcopo meo Deorwolfe, & Principe meo Aldredo, &c.* And in *Mat. Paris*, *p.* 155. *Ego Halden* Princeps *Regis pro viribus aſſenſum præbeo, & ego Turketillus Dux concedo.*

Among the antient *Romans*, it was the Cuſtom for the Emperor in his Life-time to nominate him whom he would have ſucceed in the Empire, under the Title of *Princeps Juventutis, & Cæſar*. See CÆSAR.

In the *Ludus Trojanus*, the Youth who was choſe Captain, was alſo call'd *Princeps Juventutis*. See TROJANUS.

PRINCE is alſo a Title given to the Iſſue of *Princes*, or thoſe of the Royal Family; in which ſenſe, they are called, particularly in *France*, *Princes of the Blood*; as partaking of the Blood to which the Sovereignty is affected: and not by any Hereditary Right, but as a Patrimony ſubſtituted to all the Royal Race. See BLOOD.

In *England*, the King's Children are call'd *Sons and Daughters of England:* The Eldeſt is created *Prince of Wales*. See PRINCE *of Wales*.

The Cadets, or Younger, are created Dukes, or Earls, with what Title the King pleaſes. See CADET.

They have no Appannages, as in *France*; but only what the good pleaſure of the King beſtows on them.

The Sons are all by Birth Counſellors of State: The Daughters are ſtiled *Princeſſes*; to violate the Eldeſt of which, unmarried, is at this day High Treaſon.

To all the King's Children belongs the Title of *Royal Highneſs:* All Subjects are to kneel, when admitted to kiſs their Hand; and at Table, out of the King's preſence, they are ſerv'd on the Knee.

The firſt *Prince* of the Blood in *France*, is call'd abſolutely, *Monſieur le Prince*. The Quality of *Prince of the Blood*, gives a Rank and Precedency, but does not include any Juriſdiction; they are *Princes* by Order, not by Office.

Wicquefort obſerves, that 'tis not fifty Years ſince the *Princes* of the Blood of *France* gave place to all Embaſſadors, even thoſe of Republicks; and it was at the King's requeſt, that they were ſince allow'd the Precedency.

The moment the Pope is elected, all his Relations become *Princes*.

PRINCE *of Wales*, the eldeſt Son of *England*. He is born Duke of *Cornwall*; and immediately entitled to all the Rights, Revenues, *&c.* belonging thereto; as being deemed, in Law, at full Age on his Birth-day.

He is afterwards created *Prince of Wales*; the Inveſtiture whereof is perform'd by Impoſition of a Cap of State, and a Coronet, a Verge of Gold, and a Ring. He holds the Principality by Patent, granted him and his Heirs, Kings of *England*.

The Title and Principality were firſt given by King *Edward* the firſt to his eldeſt Son: Till that time, the eldeſt Son of *England* was call'd *Lord Prince*. While *Normandy* remained to the King of *England*, the eldeſt Son was always ſtiled *Duke of Normandy*: Since the Union, his Title is *Magnæ Britanniæ Princeps*.

He is reputed, in Law, the ſame Perſon with the King: To imagine his Death, or to violate his Wife, is High-Treaſon. His Revenues, as Duke of *Cornwall*, are computed at 14000 *l. per Annum*. The Revenues of the Principality were eſtimated 300 Years ago at 4680 *l. per Ann.*

PRINCIPAL, the chief, moſt conſiderable, or neceſſary part of a thing.

Thus we ſay, the Mayor is the *principal* Magiſtrate of a City or Town: A Council of War conſiſts of the *principal* Officers. In a Peroration, the *principal* Points inſiſted on, are to be briefly ſumm'd up. The *Principal* of a College, or Hall, is the Maſter thereof. See COLLEGE, and HALL.

PRINCIPAL, in Commerce, is the Capital of a Sum due or lent; in which ſenſe the Word is uſed in oppoſition to *Intereſt*. See INTEREST.

PRINCIPAL is alſo uſed for the firſt Fund or Sum put by Partners into common Stock; by which it is diſtinguiſh'd from the Calls or Acceſſions ſometimes required, when the former proves inſufficient.

PRINCIPAL *Point*, in Perſpective, is a Point in the perſpective Plane; upon which a Line drawn from the Eye, perpendicular to the Plane, falls. See POINT.

This Point is in the Interſection of the horizontal and vertical Plane, and is alſo call'd *the Point of Sight*, and *Point of the Eye*. See SIGHT, *&c.*

PRINCIPAL *Ray*, in Perſpective, is that which paſſes perpendicularly from the Spectator's Eye to the perſpective Plane. See RAY.

Whence, the Point, where the Ray falls on the Plane, is called *the principal Point*, which ſome Writers call *the Centre of the Picture*, and *the Point of Concurrence*.

PRINCIPAL, *Principalium*, in old Law-Writers, is ſometimes uſed for a *Heir lome*; which ſee: and ſometimes for a *Mortuary*, or *Corſe preſent.*——*Item lego equum meum vocatum* le Bay Gelding, *ut offeratur ante Corpus meum in die ſepulturæ meæ, nomine* Principalii *Teſt. Joh. de Macclesfield, 9 Hen.* 5. In *Urchenfield Com. Hereford*, certain *Principals*; as the beſt Beaſt, beſt Bed, beſt Table, *&c.* paſs to the eldeſt Child, and are not ſubject to Partition.

PRINCIPLE, PRINCIPIUM, a Term frequently uſed for the Cauſe, Source, or Origin of any thing; in which ſenſe we ſay, the *Principle of Thinking, of Willing, &c.*

In Phyſics, we muſt ever have recourſe to a firſt *Principle*; which is God. See CAUSE.

The *Manichees* admit of two *Principles*, the one of Good, the other of Evil; which they eſtabliſh in quality of two contrary Deities, conſtantly oppoſing each other. See MANICHEE. See alſo GOOD and EVIL.

According to the Doctrine of *Pelagius*, our Wills are the *Principles* of our good Actions, and we ourſelves the *Principles* of our good Wills. See PELAGIANS.

PRINCIPLE is defined, among the School Philoſophers, to be that from which any thing is, is done, or known: *Unde aliquid eſt, fit, aut cognoſcitur*; which is a very extenſive Signification, and agrees to all kinds of *Principles*.

Thus, the Premiſes are *Principles*, in reſpect of the Concluſion; and thus Fire, and every other Agent, are the *Principles* of Things which they produce.

The *Thomiſts* define *Principle* to the like effect; *id à quo aliquod procedit aliquo modo.*

The Philoſophers uſually diſtinguiſh *Principles*, *Principia*, into thoſe of *Being*, *Eſſendi*; and thoſe of *Knowing*, *Cognoſcendi:* Or *Principia Rei* and *Cognitionis*.

Of the *firſt* they make two Kinds; *viz.* of *Origination*, which are thoſe from which ſomething proceeds really the ſame with the *Principle*; as in the Proceſſion of the Son and Spirit from the Father in the Trinity: And of *Dependency*; in which ſenſe, any Cauſe is a *Principle*, in reſpect of the Thing cauſed; or a Subject, in reſpect of the Accidents inherent in it.

The *second* is that from which we borrow, or derive our Knowledge of ſome other Thing; or, it is that which makes the Thing be known. Such are *Axioms*, *Definitions*, *Hypotheſes*; ſuch alſo are *Examples*, *Explanations*, *&c.* See KNOWLEDGE.

PRINCIPLE, in Phyſics, or PRINCIPLES *of a natural Body*, is ſomething that contributes to the Eſſence of a Body; or, whereof a natural Body is primarily conſtituted. See BODY.

Ariſtotle defines *Principles* to be thoſe things which are not made or conſtituted of themſelves, nor of other things, but all things of them: *Quæ non fiunt ex ſe invicem, nec ex aliis, ſed ex iis omnia.*

To give an Idea of natural *Principles*, conſider a Body in ſeveral States; a Coal, *e.gr.* that was juſt now a piece of Wood: 'tis evident there is ſomething in the Coal, which before exiſted in the Wood; this, whatever it is, is a *Principle*; and is what we call *Matter*. See MATTER.

Again, there muſt be ſomething join'd with this Matter, to make it Wood rather than Fire; or Fire, rather than Wood: This is another *Principle*; and is what we denominate *Form*. See FORM.

Matter, and Form, then, are univerſal *Principles* of natural Bodies.

The *Peripateticks* add a third *Principle*, viz. *Privation*; for tho', ſay they, a thing is not made from nothing; yet it muſt be made from its not being that thing before: This *Ariſtotle* calls *Privation*, and admits it as a third *Principle*.

But the Moderns reject it; for if Privation be a *Principle*, 'tis at leaſt ſo, in a very different ſenſe from Matter and Form. See PRIVATION.

Some late Philoſophers admit no *Principles* but *Acid* and *Alkali*. See ACID and ALKALI.

Ariſtotle makes two ſorts of natural *Principles*, as they concur in the Generation, or the Compoſition of Bodies.

The *Principles of Generation*, or of a Body *in fieri*, are thoſe without which a natural Generation can neither be, nor be conceiv'd. Such are the three *Principles* above mention'd; *Matter*, *Form*, and *Privation*.

The *Principles of Compoſition*, or of a Body *in facto eſſe*, already made, are thoſe whereof natural Bodies really conſiſt. Such, according to him, are *Matter* and *Form*; to which ſome add a third, *viz. Union*, to connect the two others together. But this is only neceſſary upon ſuppoſition of ſubſtantial Forms. See *Subſtantial* FORM.

Principles are uſually confounded with *Elements*; yet is there a real difference: Elements are properly the firſt and ſimpleſt Beings, ariſing from the firſt Determination or Aſſemblage of *Principles*. They are the ſimpleſt things in which Matter and Form are combined. Elements and *Principles*, therefore, differ in this, that a *Principle*, as Matter, is only a begun, not a compleat Nature; but an Element is perfect and compleat. See ELEMENT.

To this Head may likewiſe be referred what we call *Mechanical Principles of Bodies*, which explain the Mechaniſm or artificial Structure of Things, and all the Varieties and Differences of Bodies from Motion, Figure, and other common Affections. See MECHANICAL.

Theſe *Principles* are differently maintain'd by three or four different Sects of Philoſophers; *viz.* the antient *Epicureans*, or *Corpuſcularians*; to which may be added the modern *Gaſſendiſts*; the *Carteſians*; and the *Newtonians*. See EPICUREAN, CORPUSCULARIAN, CARTESIAN, and NEWTONIAN.

PRINCIPLES, in Chymiſtry, are the firſt and ſimpleſt parts whereof natural Bodies are compounded; and into which they are again reſolvable by Fire. Theſe are more properly, as well as more commonly, call'd *Elements*. See ELEMENT.

The Chymiſts make five *Principles*; three whereof are call'd *active Principles*, viz. *Salt*; *Sulphur*, or *Oil*; and *Mercury*, or *Spirit*. The Salt they ſuppoſe the Foundation of all Savours; ſee SALT. The Sulphur of Odours; ſee SULPHUR: and the Spirit, or Mercury, of Colours; ſee SPIRIT.

The two *paſſive Principles*, are *Phlegm*, and *Caput Mortuum*; which they alſo call *elementary Principles*. See PHLEGM, *&c.*

PRINCIPLES, in the *Hermetic* Philoſophy. According to theſe Gentlemen, the two *Univerſal Principles* of ſenſible Nature, are *ſubtile* and *ſolid*, which being join'd in a greater or leſs degree, generate all that beautiful Variety of Beings in the Univerſe.

The three *Natural Principles* are Salt, Sulphur, and Mercury. Theſe *Principles* generate the four Elements; and are, as it were, ſecundary Elements, inaſmuch as they are contain'd in all mix'd Bodies. Sulphur is the firſt, and ſtands in the place of Male; Mercury the ſecond, ſtanding in the place of Female; and Salt the third, which copulates the others together. *Dict. Hermet.*

PRINCIPLE is alſo apply'd to the Foundations of Arts and Sciences. See ART and SCIENCE.

In this ſenſe we ſay, *Principles* are not to be proved; they muſt be common Notions. See NOTION and AXIOM.

There is no diſputing againſt a Man that denies *Principles*. The worſt Reaſoning is that which includes a *Petitio Principii*, i. e. which ſuppoſes a *Principle* that ought to be proved.

The Word *Principle* is alſo uſed by extenſion for the firſt Rules, or Maxims of an Art. In this ſenſe we ſay, a Man is ignorant of the *Principles* of Geometry; meaning, he has not learnt *Euclid*'s Elements.

The *Principles* of all Arts and Sciences are found in this Dictionary, under their reſpective Heads.

PRINTER, a Perſon who compoſes, and takes Impreſſions from, moveable Characters, ranged in Order; or from Plates engraven: by means of Ink, a Preſs, *&c.* See PRINTING.

Fuſt, *Guttembourg*, *Schoeffer*, *Mantel*, and *Koſter* were the *firſt Printers*. The firſt that practiſed it in *England*, was *Fred. Corſeles*, brought over from *Haerlem*, under King *Henry* VI. In *France*, *Gering*; at *Rome*, *Conrad Sweynheim*, and *Arnold Pannarts*, both *Germans*; at *Naples*, *Sixtus Ruſinger*.

The *great Printers* were *Aldus*, and *Paul Manutius*; the two *Badii*; *William* and *Frederick Morel*; *Oporin*; *Froben*; *Rob. Hen.* and *Char. Stephens*; *Gryphæus*; *Turnebius*, *Torres*, *Commelin*, *Plantin*, *Rapheling*, *Vaſcoſan*, *Bleau*, *Criſpin*, and the two *Elzevirs*.

The *learned Printers* were the *Manutii*, the *Stephens's*, the *Badii*, *Turnebius*, *Wechel*, *Morel*, &c.

Plantin had the Title of *Arch-Printer* given him by the King of *Spain*, in conſideration of his printing the *Polyglot* of *Antwerp*.

The Names, Characters, and Eloges of all the famous *Printers* are found in the IId Book of the *Cenſura Authorum*.

The *Printers*, ſince the eſtabliſhment of that Art, are eſteemed a part of the Company of Stationers and Bookſellers: Before that eſtabliſhment, the Company conſiſted only of Bookſellers, Binders, Illuminers, and Parchment-makers.

The *Parchment-Makers* prepared the Skins, and made the Parchment or Velom; which were then almoſt the only Matters Books were wrote on. The Writers, or *Stationarii*, wrote and tranſcribed Books after Copies given 'em by the Bookſellers. The *Binders* were charged with the binding of thoſe days, which was very coarſe; only conſiſting of two ſlight Boards cover'd with ſome paltry Leather. The *Illuminers* painted in Miniature, and gilt initial Letters, Head-pieces, Tail-pieces, and other Compartiments. Laſtly, the *Bookſellers* ſet the Stationers to work, and ſold their Copies in Shops, and other Places, on the days allow'd 'em by the Statutes to expoſe the ſame.

PRINTING-*Houſe*, a Place deſtined for *Printing*, and fitted up for that purpoſe with Preſſes and other Furniture.

The moſt conſiderable *Printing Houſes* in the World are thoſe of the *Louvre* and *Vatican*.

The firſt began under *Francis* I. carried to its utmoſt Perfection under *Lewis* XIII, by the Care of the Cardinal *Richelieu*; and removed into the Galleries of the *Louvre* by *Louis* XIV. See LOUVRE.

The *Vatican Printing-Houſe*, call'd alſo the *Apoſtolical Printing Houſe*, becauſe the Pope's Bulls, Decrees, *&c.* are printed therein, was begun by *Pius* IV. and built with great Magnificence by *Sixtus* V. See VATICAN.

Out of both theſe *Printing-Houſes* have come forth very beautiful and ſplendid Editions of the antient Authors: The *Vatican* was the firſt that printed in *Arabic*.

The *Clarendon Printing-Houſe* at *Oxford*, ſo call'd becauſe open'd with an Edition of the Hiſtory of the Lord of that Name, promiſes well: It has already furniſhed us with a fine *Engliſh* Bible.

PRINTING, the Art of taking Impreſſions with Ink, from Characters and Figures moveable, or immoveable, upon Paper, Velom, or the like Matter. See CHARACTER, INK, PAPER, *&c.*

There are two kinds of *Printing*; the one for Books; the other from Copper-Plates, for Pictures: The firſt call'd *Common-Preſs-Printing*; the ſecond *Rolling-Preſs-Printing*.

The prime difference between the two conſiſts in this, that the Characters of the former are caſt in Relievo; and thoſe of the latter engraven in Creux. See RELIEVO, ENGRAVING, *&c.*

The Art of *Printing* is a modern Invention: 'Tis, indeed, of a very antient ſtanding among the *Chineſe*; but then their *Printing* is very different from ours. It muſt be own'd the *European Printing*, in its Original, was much the ſame with the *Chineſe*; yet, as there was at that time no Commerce or correſpondence between *Europe* and *China*, the paſſage into the Eaſt by the *Cape of good Hope* being as

yet undiſcover'd by the *Portugueſe*; there is no room to charge the *Europeans* with borrowing their Art from the *Chineſe*: But each muſt be own'd to have fall'n on the ſame thing, tho' at very different times.

Father *Couplet* aſſures us, that *Printing* has been in uſe in *China* from the Year 930. Father *le Compte* ſpeaks more largely; ſaying, that it has been there from, almoſt, all Ages: He adds, that there is this difference between theirs and ours, that, whereas we have but a very ſmall Number of Letters in our Alphabets, and by the various Arrangement of theſe, are able to form infinite Volumes; we have the Advantage, by making our Characters moveable, to print the largeſt Works with an inconſiderable Quantity of Letter; thoſe that ſerved for the firſt Sheets, ſerving over again for the ſucceeding ones: The *Chineſe*, on the contrary, by reaſon of the prodigious Number of their Letters, are precluded this reſource; and find it more eaſy and leſs expenſive to cut all their Letters on wooden Blocks; and thus to make as many Blocks as there are Pages in a Book, and theſe of no further uſe but for that ſingle Work.

Their Method of Printing *ſee hereafter.*

Origin and Invention of the European PRINTING.

Who the firſt Inventors of the *European Printing* were; in what City, and what Year 'twas firſt ſet on foot, is a famous Problem long diſputed among the Learned: In effect, as the *Grecian* Cities contended for the Birth of *Homer*; ſo do the *German* Cities for that of *Printing*.

Mentz, *Haerlem*, and *Strasbourg*, are the warmeſt on this Point of Honour: *Italy* alſo would have enter'd the Liſts; but the Suffrages being at firſt divided between the firſt three Pretenders, they are left in poſſeſſion of the Queſtion, which, in reality is not yet juſtly decided; tho' it muſt be own'd, *Mentz* has always had the Majority of Voices.

We ſhall not enter into a nice Diſquiſition of the Merits of the Cauſe, but only propoſe the Pretenſions of each.

John Mantel of *Strasbourg*, *John Guttembourg* and *John Fuſt* of *Mentz*, and *L. John Koſter* of *Haerlem*, are the Perſons to whom this Honour is ſeverally aſcribed, by their reſpective Countrymen; and have all their Advocates among the Learned.

Mantel, a Phyſician of *Paris*, enters the Liſts in behalf of his Name-ſake of *Strasbourg*; and contends that 'twas he firſt invented *Printing* in the Year 1442, and that in conſideration hereof, the Emperor *Frederic* III. gave him a Coat of Arms correſponding thereto: He adds, that *Guttembourg*, whom he had taken in as a Partner or Aſſociate, carry'd it to *Mentz*, where he took in *Fuſt* a Partner.

The *Haerlemers*, with *Boxhornius*, *Schrevelius*, &c. refer the firſt Invention to *Lawrenzs Janzs Koſter* of *Haerlem*, in the Year 1430. Adding, that his Aſſociate, *Guttembourg*, ſtole away his Tools while he was at Church; and carried 'em to *Mentz*, where he ſet up for the firſt Inventor; tho' others attribute this Theft, *&c.* to his Partner *Fuſt*.

Munſter, *Polydore Virgil*, *Paſquier*, &c. will have *Guttembourg*, or *Guttemburgh*, to have really been the Inventor of *Printing*; and add, that he took in *Fuſt* and *Schoeffer* for Aſſociates.

Naude, in his *Maſcurat*, eſpouſes the Cauſe of *Fuſt*, or *Fauſt*, or *Fauſtus*; and will have him to be the firſt *Printer* in *Europe*, and that he took in *Guttembourg* for a Partner. His reaſon for putting *Fuſt* in poſſeſſion of this Privilege, is, that the firſt Books that were printed, appear to have been all of his Impreſſion. 'Tis more than probable, had *Guttembourg* or *Koſter* had a greater or an equal Share in the Invention, they would not have allow'd him to attribute the whole to himſelf and his Son-in-law *Schoeffer*, as he has done, without ever offering to do the like, or in the leaſt contradicting him, and aſſerting their own Right.

Theſe Editions are, 1°. The *Catholicon Januenſis*, dated in 1460, and now in the King's Library. *Fuſt*'s Name, indeed, is not to this; but 'tis perfectly like the following ones, where it is. 2°. The *Latin Bible* of 1462, now in the *French* King's Library. 3°. *Tully*'s *Offices*, in *4to*; (the reſt being all *Folio's*) in the Year 1465 and 1466; for there are Copies in the *Bodleian*, and the Library of *C. C.* College, *Oxon*, of both thoſe Dates. 4°. Other Bibles of 1471. 5°. St. *Auguſtine de Civitate Dei*, 1473. 6°. *Mercurius Triſmegiſtus de Poteſtate & Sapientia Dei*, in 1503. 7°. *Titus Livius*, in 1518.

Add to this, that at the beginning of *Livy*, is a Privilege granted by the Emperor *Maximilian*, to *Schoeffer* for the ſole Power of *printing* that Author for ten Years; and for ſix Years to all the other Books he ſhould print thereafter, in conſideration of his Father-in-law, *Fuſt*'s having invented the Art of *Printing*. This Privilege is dated 1518, and ſigned *Jac. Spiegel*.

Eraſmus, however, in the Epiſtle after that Privilege, does not poſitively aver the Fact; he only obſerves, that the firſt, or the chief Inventor of that Art is held to be *J. Fuſt*. In the Advertiſement to the ſaid Book, *Nich. Carbachius* ſpeaks to the ſame effect as the Privilege, and *Eraſmus*.

As to *Guttembourg*, *Mantel*, and *Koſter*, *Naude* obſerves, the Perſon is not yet born that can ſay he has ever ſeen Books printed by any of 'em, before, or as early as thoſe of *Fuſt*. All that is urged on their behalf, is only founded on Reports, Conjectures, Probabilities, forged Authorities, and the Jealouſies of Cities againſt one another.

Yet *Salmuth*, in his Additions to *Pancirollus*, cites a public Act, whereby it appears that *Fuſt*, after having invented *Printing*, and ſuſtain'd it a long time on his own footing; at length took in *Guttembourg* as a Partner, to contribute to the Expence; which was very great, by reaſon the firſt Books were moſt of 'em printed on Vellum, or at leaſt Parchment, and after the *Chineſe* way.

But the Cauſe is not thus decided: The Advocates for *Koſter* urge divers things, to put him in the place here aſſigned to *Fuſt*. Mr. *Ellis*, in the *Philoſ. Tranſact.* fathers Books on him prior to any of thoſe above refer'd to *Fuſt*; and even ſome as early as 1430, and 1432. 'Tis certain, the *Haerlemers*, ſhew printed Books of that Date, which agreeing ſo well with the account given by *Theod. Schrevelius*, and others, leaves little room to doubt, whether the Honour of the Invention be his or the others due. All that belongs to *Fuſt*, according to this Writer, is the honour of eſtabliſhing the Art in greater Luſtre and Perfection at another place many Years after.

But the difficulty lies, either in ſhewing why the Practice ſhould be at a ſtand from 1432, to the reviving of it at *Mentz* by *Fuſt* and *Schoeffer*, in 1465; or elſe in giving ſome account of the Condition and Progreſs of this Invention during that Interval.

Now, *Boxhornius*, *Schrevelius*, and other Authors, expreſly affirm, that ſo large a Work as the *De Speigel*, *Speculum Salutis*, of *Koſter*, ſhewn at *Haerlem* for the firſt printed Book, could never be his firſt Eſſay: He muſt have had the Art in its rougher Rudiments before, and have made many Trials on looſe Sheets, which we may ſuppoſe were eaſily loſt. In effect, it muſt be allow'd no inconſiderable Argument in *Koſter*'s behalf, that the rudeſt and moſt artleſs Performances ſeem to be his: Mr. *Ellis* mentions ſome things of this kind without Date, which he had ſeen in the King's Library at St. *James's*, in that of *Bennet* College and the *Bodleian* at *Oxford*, with all the Marks of the utmoſt Simplicity, and which might fairly bid for firſt Eſſays: There is ſomething ſo aukward and coarſe in 'em, that any body almoſt might have done 'em; mere Nature being ſufficient, without any Art or Experience at all. The Ink was only common writing Ink, unartfully ſpread upon wooden Blocks, very clumſily cut, *&c.*

By this time we have traced up the Art to ſuch a State, that it may, perhaps, ſcarce ſeem worth the conteſting who it was invented it; and no doubt, *Printing* as it now ſtands, owes more to the Genius and Addreſs of ſome of the later Improvers, than it did to its Author.

The ſame Conſideration may make us more eaſy under our preſent Ignorance of the Inventors of moſt other Arts; many of which had ſuch ſimple un-meaning Originals, that you or I ſhould, perhaps, think it no mighty Credit to be eſteem'd the Authors of Inventions nothing leſs Artful and Ingenious.

Progreſs of PRINTING.

The firſt *Printers*, then, whoever they were, whether *Koſter*, *Fuſt*, *Schoeffer*, or *Guttembourg*, made their firſt Eſſays on wooden Blocks, or Forms, after the *Chineſe* manner.

'Tis not improbable, ſays Mr. *Bagford*, they might take the Hint from antient Medals and Seals; but others rather imagine it to have come from the Method of making playing Cards, which, 'tis certain, bears a near reſemblance to the primitive Proceſs of *Printing*; as appears from the firſt Specimens of that Art above-mentioned. See CARD.

The Book at *Haerlem*, the Vocabulary call'd *Catholicon*, and the Pieces in the *Bodleian* and *Bennet's* College, are all perform'd in this way; and the Impreſſion appears to have been only given on one ſide the Leaves; after which the two blank ſides were paſted together.

But they ſoon found the Inconveniencies of this Method; and therefore bethought themſelves of an Improvement; which was by making ſingle moveable Letters, diſtinct from one another.

Theſe being firſt done in Wood, gave room for a ſecond Improvement; which was the making of 'em, at length, of Metal; and, in order to that, forging Moulds, Matrices, *&c.* for caſting 'em.

From this ingenious Contrivance, we ought to date the Origin of the preſent Art of *Printing*, as practiſed in *Europe*; contra-diſtinguiſh'd from the Methods of the *Chineſe* abroad, and the Card-Makers at home, which were the ſame Art, only practiſed in a diffetent place, or with a different view.

And of this, *Schoeffer*, or *Scheffer*, firſt, Servant, and afterwards Partner, and Son-in-Law, of *Fuſt*, at *Mentz*, abovementioned; is pretty generally allow'd the Inventor. So that he was properly the firſt *Printer*; and, in ſtrictneſs, the Bible, which was printed with moveable Letters in 1450, was the firſt printed Book; the next was *Auguſtin de Civitate Dei*, then *Tully's Offices*, &c. about the Year 1461.

But the Art being yet in its Infancy, there were ſome Imperfections in the Books they printed; among the reſt was the want of Capital Letters: hence they left the places of the initial Letters blank, and gave 'em to the Illuminers to paint in Gold, or Azure: Tho', others ſay, this was done deſignedly, to enable 'em to paſs off their Books for Manuſcripts.

Some Authors tell us, that *Fuſt* carrying a parcel of his Bibles to *Paris*, and offering 'em to ſale as MSS. the *French*, upon conſidering the number of Books, and their exact Conformity with one another, even to a Point; and that the beſt Book-Writers could not be near ſo exact; concluded there was Witchcraft in the caſe; and, by either actually indicting him as a Conjurer, or threatning to do ſo, extorted the Secret. And hence the Origin of the popular Story of Dr. *Fauſtus*.

From *Mentz*, the Art of *Printing* ſoon ſpread itſelf throughout a good part of *Europe*; *Haerlem* and *Straſbourg* had it very early; which, as the current of Authors repreſent it, occaſion'd their pretending to the honour of the Invention.

From *Haerlem* it paſs'd to *Rome* in 1467; and into *England* in 1468, by means of *Tho. Bourchier*, Archbiſhop of *Canterbury*, who ſent *W. Turner*, Maſter of the Robes, and *W. Caxton*, Merchant; to *Haerlem*, to learn the Art: Theſe privately prevailing with *Corſeles*, an Under-workman, to come over, a Preſs was ſet up at *Oxford*; and an Edition of *Ruffinus* on the Creed printed the ſame Year in a broad Octavo on Paper.

From *Oxford*, *Caxton* brought it to *London* about the Year 1470. In the ſame Year it was carried to *Venice*, and to *Paris*, where *Gering*, *Grantz*, and *Friburger*, all *Germans*, invited thither by two Doctors of the *Sorbonne*; ſet up a Preſs in that learned Houſe.

Hitherto there had been nothing printed but in *Latin*, and the vulgar Tongues; firſt in *Roman* Characters, then in *Gothic*, and at laſt in *Italic*. But in 1480, and, as ſome ſay, in 1476, the *Italians* caſt a Set of *Greek* Types; and it was at *Venice*, or, as ſome ſay, at *Milan* or *Florence*, that the firſt Editions in that Language appeared.

The *Italians*, too, have the honour of the firſt *Hebrew* Editions, which were printed about the ſame time with the *Greek*, at *Soucino*, a little City in the Dutchy of *Milan*; under the direction of two *Jewiſh* Rabbins, *Joſhua* and *Moſes*, whoſe Works are dated in the Year of the World 5240, anſwering to the Year 1480 of the Chriſtian *Æra*.

Towards the end of the 16th Century, there appeared various Editions of Books in *Syriac*, *Arabic*, *Perſian*, *Armenian*, *Cophtic*, or *Egyptian* Characters; ſome out of the Curioſity of the Learned, and others for the Liturgic Uſes of the Chriſtians of the *Levant*, printed chiefly at *Paris*; whither Puncheons and Matrices were ſent from *Conſtantinople* by M. *Savary*, then Ambaſſador at the *Port*.

Out of *Europe*, the Art of *Printing* has been carried into the three other Quarters of the World: For *Aſia*, we ſee Impreſſions of Books at *Goa*, and in the *Philippines*; at *Lima*, *Boſton*, *Mexico*, &c. for *America*; and at *Morocco* for *Africa*.

The *Turks*, indeed, rigorouſly prohibit *Printing* throughout their Empire, as imagining that the too free Communication with Books, might occaſion ſome change in Religion or Government; yet the *Jews* have ſeveral Editions of their Books printed at *Conſtantinople*, *Theſſalonica*, &c.

Method of PRINTING.

The *Printing* Letters, Characters, or Types as they are ſometimes call'd, we have already ſpoke of, under the Articles LETTER and CHARACTER.

Of the Method of forming or caſting them, under the Article *Letter*-FOUNDERY.

And of the Art of Engraving the Puncheons, Matrices, &c. in order thereto, under the Articles ENGRAVING, PUNCHEON, MATRICE, &c.

There are Letters of ſeveral Sizes, or *Bodies*; each of which, again, are ſometimes caſt with the *Roman*, ſometimes an *Italick*, and ſometimes an *Engliſh Face*. There are alſo Bodies with *Greek*, *Hebrew*, and the *Muſic Face*.

The moſt uſual Sizes, or Bodies, with their Proportions, are ſhewn and exemplify'd in the following Table; where, it is to be obſerved, that the Verſe anſwering to each is compoſed in the reſpective Letter

Pearl.
Nonpareil.
Brevier.
Long Primer.
Small Pica.
Pica.
Engliſh.
Great Primer.
Double Pica.
Two lined Engliſh.
Great Canon.

Which when he knew, and felt our feeble Hearts,
Emboſt with Bale, and bitter biting Grief.
Which Love had launced with his deadly Darts;
With wounding Words, and Terms of foul Reprief,
He pluck'd from us all hope of due relief,
That erſt us held in love of lingering Life.
The Hopeleſs, heartleſs 'gan the cunning Thief
Perſuade to die to ſtint all further ſtrife:
To me he lent this Rope, to him a ruſty Knife:
With which ſad Inſtrument of haſty Death,
That woful Lover lothing--

A Set or *Fount* of any of theſe Sizes, includes current Letters, Capitals, numeral Figures, Points, Spaces, &c. See FOUNT.

The Workmen employ'd in *Printing* are of two kinds; *Compoſitors*, who range and diſpoſe the Letters into Words, Lines, Pages, &c. according to the Copy deliver'd them by the Author: And *Preſs-men*, who apply Ink upon the ſame, and take off the Impreſſion. See COMPOSITION, &c.

Office of the Compoſitor.

The Types being caſt, &c. are diſtributed, each kind by itſelf, among the Diviſions of two long wooden Frames, an upper, and under one, call'd *Caſes*; each of which is divided into little Cells, or *Boxes*, of different Sizes.

The Boxes of the upper Caſe are in Number 98; and in theſe are diſpoſed the Capitals, ſmall Capitals, accented Letters, &c.

In the Cells of the lower Caſe, which are fifty four, are diſpoſed the common running Letters, with the Points, Comma's, Spaces, Quadrates, &c.

Each Caſe is placed a little ſlope, like a reading Desk, that the Operator may reach the upper Boxes the better; and be in leſs danger of mixing the Letters by ſtretching his Arm over them. See CASE.

The Compoſitor's Poſt is againſt the middle of the Caſe, and he works ſtanding: holding an Inſtrument, call'd the *Compoſing-Stick*, in one Hand, with the other he takes out the Letters, Points, Comma's, &c. as he needs them, out of the Boxes; ranges them on his Compoſing-Stick; and, putting

ting a Space between each two Words, forms one Line after another; till the Stick being full, he empties it out upon another Inſtrument, call'd the *Galley*; ſeveral of which ranged in a Frame, call'd a *Chaſe*, are ready for the Preſs.

This ſhort View of Compoſing, we ſhall further illuſtrate and enlarge upon.

The *Compoſing-Stick*, then, (repreſented Tab. MISCELLANY, Fig. 7.) conſiſts of a Plate, or Slip of Braſs, Iron, or Wood, more or leſs broad, and contrived ſo as to be made more or leſs long according to the width of the Page, and the Number of Lines to be compoſed in it.

From the right Side of this Plate ariſes a Ledge *a a*, about half an Inch high, running the whole length of the Plate, and ſerving to ſuſtain the Letters, the ſides of which are to reſt againſt it; from the ſame Plate likewiſe ariſe two other leſſer pieces, *b* and *c*. one of which, *b*, is contrived to ſlide along it, that ſo the two pieces may be either approached or withdrawn at pleaſure, to adjuſt the length of the Line to the Meaſure intended. See COMPOSING-*Stick*.

Add, that where Marginal Notes, References, *&c.* are required in a Work; a ſecond ſliding Piece is added in the Compoſing-Stick, at the proper diſtance from the former: as at *e*.

E'er the Workman proceeds to compoſe, a *Rule*, or Slip of Braſs-Plate, cut to the length of the Line, and of the ſame height as the Letter, is placed in the Compoſing-Stick againſt the Ledge thereof; for the Letter to bear immediately againſt.

Things thus prepared, and having the Copy lying before him, and the Stick in his left Hand; with the right he picks up the Letters, Spaces, *&c.* and places 'em againſt the Rule; while with the Thumb of the left he preſſes them cloſe to the upper Screw, or *Check*; and thus keeps them tight and ſteady: while the other Hand is conſtantly employ'd in ſetting in more Letters: The whole performed with a degree of Expedition and Addreſs, not eaſy to be imagined.

A Line being thus compoſed, if it end with a Word or Syllable, and fill the Meaſure; there needs no further Care; otherwiſe more *Spaces* are to be put between the ſeveral Words to *juſtify* the Lines, *i. e.* to make the Meaſure pretty ſtiff; and thus he proceeds to another Line.

The *Spaces* here uſed are a ſort of blank Characters, of the like Dimenſions as the Letters, but leſs high; and whoſe Faces, therefore, when ſet, do not appear, nor give any Impreſſion. They are of ſeveral kinds according to the Dimenſions of the Blanks, or Intervals to be made by them, *viz. Quadrats*, to fill up a Break at the end of a Paragraph, or the like; *M quadrats*, which are ſquare, and of the thickneſs of an *m*, ſerving to make the diſtance after a Peroid, or between Sentence and Sentence; *N quadrats*, of the thickneſs of an *n*, to be placed after Colons, Semicolons, and Comma's; and *thick* or *thin Spaces*, to be uſed between the Words in juſtifying, as above.

For Marginal Notes, in the Spaces reſerved for them, between the two ſliding pieces of the Compoſing-Stick, are put little quadrated pieces of Metal, call'd *Quotations*; which are juſtified by other ſmaller pieces: a Slip of Scale-board being placed from the top of the Page to the bottom, to keep the Note and Text at a due diſtance.

The firſt Line thus compleatly juſtify'd, the Compoſitor advances to a freſh one; in order to which, he moves the braſs Rule from behind the former, and places it before it, and thus compoſes another Line againſt it, after the ſame manner as the former: and thus he goes on till his Stick be full, which he empties into the Galley, after the manner following.

Taking the Rule from behind the laſt Line, he places it before it; and with his two middle Fingers ſqueezes the Lines in the Stick cloſe; his two Fore-fingers at the ſame time being apply'd on the outſide of the Rule: thus he lifts them out of the Stick, and clapping his two Thumbs behind the firſt Line, lifts them into the Galley; taking care to diſengage his two Thumbs without breaking the Lines.

The Compoſitor having thus ſet the proper Number of Lines in his Stick, *viz.* four, ſix, or eight, and emptied them out into the Galley; he again fills, and empties as before, till a compleat Page be form'd: Remembring at the bottom of every Page to ſet a Line of Quadrats, and at the end thereof the firſt Word of the Page enſuing, for a *Catch-Word*; and, if it be the firſt Page of the Sheet, one of the Letters of the Alphabet for a *Signature*.

The *Galley* is a flat wooden Inſtrument, in form of a long Square; of a length and breadth proportionable to that of the Page: It conſiſts of two Parts, the Upper, call'd the *Slice*, whereby the Pages of large Volumes, when compoſed, are ſlidden upon the Stone; the other, which is the Body of the Galley, is ledged on three ſides, to contain the Slice; the inner Ledge not to exceed half an Inch in height, that the compoſed Page riſing above it by one half the height of the Letter, may be *tyed up*, or bound down, and removed without danger.

This Galley is placed at the Top of the Caſe, and detained by two wooden Pins from ſliding down the Boxes. See GALLEY.

The Page, then, compoſed and ranged in the Galley, he ties it up therein with a *Cord* or Pack-thread; and ſets it by; and proceeds to the next, till the Number of Pages of the Sheet be compleated: which done, he carries them to the *Impoſing* or *Correcting-Stone*, there to range them in Order, in a *Chaſe*; which they call *Impoſing*.

The *Chaſe* is a Rectangular Iron Frame of different Dimenſions, according to the Size of the Paper to be printed on; having two croſs pieces of the ſame Metal, call'd a *long* and *ſhort Croſs*, mortiſed, at each end, into the Frame, ſo as to be taken out occaſionally.

By the different Situations of theſe Croſſes, the Chaſe is fitted for different Volumes; for Quarto's and Octavo's, one traverſes the middle lengthwiſe, the other breadthwiſe, ſo as to interſect in the Centre; which is the moſt cuſtomary Situation: For Twelves and Twenty-fours, the ſhort Croſs is ſhifted nearer to one end of the Chaſe: For Folio's, the long Croſs is left entirely out, and the ſhort one placed in the Middle; and for Broadſides, or Sheets printed on one ſide only, both Croſſes are ſet aſide.

To *dreſs the Chaſe*, or range and fix the Pages therein, they make uſe of a Set of *Furniture*, conſiſting of *Riglets*, or ſlips of Wood of different Dimenſions, and about half an Inch high, that they may be lower than the Letters: Some of theſe are placed at the Top of the Pages, call'd *Head-ſticks*; others between them to form the inner Margin, call'd the *Gutter-ſticks*; others at the Sides, call'd *Side-ſticks*; and others at the Bottom, call'd *Foot-ſticks*.

The Pages, then, placed in order on the Stone, the Chaſe is put over 'em, and the Riglets apply'd between the Letter and the Chaſe, in the Poſition above-mentioned; the whole is lock'd up by means of other leſſer pieces, cut in the Wedge-form, call'd *Quoins*, which are driven with a *Mallet* and *Shooting-ſtick*, to a ſufficient Tightneſs.

Before the Form be quite lock'd up, they *dreſs down* the ſame, by paſſing a ſmooth piece of Wood, call'd the *Plainer*, over the Letters, to make their Surfaces ſtand flat and even; and when lock'd up, they ſhake it, to ſee that nothing ſtir.

In this condition the Work is call'd a *Form*, containing more or fewer Pages, according to the Volume. See FORM.

As there are two Forms required for every Sheet, when both ſides are to be printed, 'tis neceſſary they be exactly of the ſame length and breadth, *i. e.* the correſponding Riglets, Head-ſticks, *&c.* are to be equal in both Forms.

Here, then, properly ends the Compoſitor's Office; the Form, thus finiſh'd, being to be committed to the Preſs-Man.

Indeed, as it is impoſſible but there muſt be Miſtakes in the Work, either thro' the Overſight of the Compoſitor, or by the tranſpoſition of the Letters in the Caſes; after drawing off a Proof, it is deliver'd to the Corrector, who reading it over, and rectifying it by the Copy; it is remanded to the former Operator, to be *corrected* accordingly.

For the Characters uſed in correcting a Sheet for the Compoſitor, ſee CORRECTION.

The Compoſitor, then, unlocking the Form upon the correcting Stone, by knocking out or looſening the Quoins; and ſpreading his corrected Proof ſo, as that the Lines thereof range with the reſpective ones of the Metal; by running his Eye along both, he eaſily ſpies where Corrections are to be made: according to which, he proceeds to pick out the faulty Letters, Points, *&c.* with a ſharp-pointed Steel-Bodkin, and puts others in their places.

Where the Alterations are conſiderable, and particularly where Inſertions or Omiſſions are to be made, there uſually ariſes a neceſſity of *over-running*; in order to which, they muſt de-compoſe, or return the Lines back from the Chaſe into the Galley, and from the Galley again into the Compoſing-Stick, to be new modell'd and rectify'd accordingly.

If, *e.gr.* one or more Words to be inſerted in a Line, cannot be *got in* by changing the Spaces of the Line for leſſer ones; part of the Line muſt be put back into the cloſe of the preceding one, or forward into the beginning of the ſubſequent one, or both; till room is got. If the Inſertion be large, ſeveral Lines will need to be over-run, either backward or forward, till a Break is arrived at; when, if it be not *got in*, a Line is to be *driven out*; and to get in that Line, the next Pages, either backward or forward, muſt ſometimes be over-run e'er it can come in.

Where an Omiſſion is to be made, the contrary courſe muſt be taken. If it be but little, the Compoſitor takes it out, and *drives out* the Matter; by either enlarging his Spaces, or beſtowing the beginning of the following, or the cloſe of the preceding Line, therein. If it be conſiderable, he may be obliged to over-run ſeveral Pages e'er it can be driven out.

Office of the Preſſman, or PRINTING, *properly ſo call'd.*

To work off the Form thus prepared and corrected by the Compoſitor, there are three things required, *Paper*, *Ink*, and a *Preſs*.

To fit the Paper for uſe, it is to be firſt wet or moiſten'd, by dipping ſeveral Sheets together in Water; theſe are afterwards laid in a heap over one another; and to make 'em take the Water equally, are all preſs'd cloſe down with a Weight a-top. As to the degree of wetting, it muſt be according to the Quality of the Paper, and the Size of the Letter; ſmall Letters, and ſtiff Paper, requiring moſt wetting.

The *Printer's Ink* is of two kinds, black and red. The laſt occaſionally uſed in Title-Pages, Calendars, *&c.* the firſt for the Body of Books. The Compoſition of each, tho' now reckon'd no part of the Printer's Buſineſs, but uſually furniſh'd 'em by other hands, is as follows.

Method of making the PRINTING-*Inks.*

For black Ink: An hundred Pounds of Nut, or Linſeed-Oil being reduced, by boiling, to the Conſiſtence of a Syrup, is cleans'd and purify'd by throwing into it two Pounds of coarſe Bread, and about a dozen Onions. They then boil thirty or thirty-five Pounds of Turpentine, a-part, till ſuch time as they find, upon its cooling on Paper, that it breaks clean, like Glaſs, without pulverizing; for if it pulverize eaſily, 'tis a ſign it is burnt. The Oil and Turpentine thus prepared, the firſt is gently pour'd, half cold, into the latter; and the two ſtirr'd together with a Stick till they be well mixed; after which, the Compoſition, which is call'd the Varniſh, is ſet by, to be uſed occaſionally.

Now, to proceed to make Ink, they take a quantity of this Mixture, and add to it a certain quantity of Lamp-black; working it up with a kind of wooden Mullet, or *Brayer*, till the whole be incorporated and reduced into a kind of Pulp; which is the Ink for uſe.

Where, Note, that its Thickneſs or Strength are always to be proportion'd to that of the Paper and the Warmth of the Weather; ſtrong Paper and hot Weather requiring ſtrong Ink: and that the Strength or Weakneſs of the Ink depends on the greater or leſs degree of Coction of the Varniſh.

For red Ink: They uſe the ſame Materials as for black, excepting that inſtead of Lamp-black they add a proper Quantity of Vermillion. Some hold, that by mixing and incorporating the bigneſs of a Nut of Fiſh-glue, or Brandy, or the White of an Egg with the Ink; the Vermillion acquires a greater Luſtre.

The Ink is applied upon the Forms by *Balls*, which are a kind of wooden Funnels, the Cavities whereof are furniſh'd with Wool, cover'd with Leather nailed to the Wood. One of theſe the Preſs-man takes in each Hand, and applying them on the *Ink-block*, to charge 'em with Ink, he rubs one againſt t'other to diſtribute the Ink equally; and, at laſt, ſmears over the Form by *beating* or dabbing 'em ſeveral times over the whole Face thereof: This leaves the Form in a condition to be paſs'd under the Preſs, with the moiſten'd Paper laid thereon.

The PRINTING-*Preſs.*

The *Printing-Preſs* (repreſented Tab. MISCELLANY, fig. 8.) is a very complex Machine; its two principal Parts, each whereof conſiſts of ſeveral others, are the *Body* of the Preſs, which ſerves to give the Pinch or Stroke for the Impreſſion; and the *Carriage*, on which the Form is laid to undergo the ſame.

The *Body* conſiſts of two ſtrong *Cheeks b b*, placed perpendicularly, and join'd together by four croſs Pieces or Planks.

The firſt Plank *c c*, call'd the *Cap* of the Preſs, is fixed, and ſerves to keep the two Cheeks together at the due diſtance, at top: The ſecond *d d*, call'd the *Head*, is moveable; being ſuſtain'd by two Iron-Pins or *long Bolts*, that paſs the Cap: In this Plank is fix'd a Female-Screw or *Worm*, with a *braſs Nut*, ſuſtain'd by two *ſhort Bolts* which keep it up: The third Plank *e e*, call'd the *Shelves*, ſerves to keep ſteady a Part call'd the *Hoſe*, in which the *Spindle* (to be ſpoke of hereafter) is encloſed: The fourth Plank *f f*, call'd the *Winter*, is moveable; it bears the *Carriage*, and ſuſtains the Effort of the Preſs beneath, as the Head does above; each giving way a little, the one upwards, the other downwards, to make the Pull the eaſier.

The *Spindle g g*, is an upright piece of Iron pointed with Steel, of different Dimenſions; having a Male-Screw which goes into the Female of the *Head* about four Inches. Thro' the *Eye h*, of this Spindle, is rivetted the *Bar*, by which the Preſs-man works the Preſs.

The lower part of the *Spindle* paſſes thro' the *Shelves*, being incloſed in a ſquare wooden Frame *i*, call'd the *Hoſe*; and its Point works into the *Plug*, fix'd in a *braſs Pan* ſupply'd with Oil: which *Pan* is fix'd to an Iron Plate let into the top of the *Platten*. The Preſs-man, then, by *pulling* or turning the Bar fix'd in the *Eye* by an Iron Key, preſſes upon a ſquare ſmooth Piece of Wood call'd the *Platten*, and enables it to compreſs the Form cover'd with the Paper, Tympans, and its Blankets, which, in order hereto, are brought under the *Platten*.

At each Corner of the *Hoſe*, is an Iron-Hook faſten'd to thoſe at each Corner of the *Platten*, with Cords or Pack-thread very exactly.

The *Carriage l l l l*, which makes the ſecond principal Member of the Preſs, is placed a foot below the Platten, having its fore-part ſupported by a wooden Prop *m*, call'd the *Fore-ſtay*, while the other reſts on the Winter. On this Carriage, which ſuſtains the *Plank*, are nail'd two long Iron-Bars or *Ribs o o*, and on the *Plank* are nail'd ſhort pieces of Iron or Steel *p p*, call'd *Cramp-Irons*, equally tempered with the *Ribs*, and which ſlide upon 'em when the Preſs is turn'd in, or out.

Under the Carriage is fix'd a ſmall piece of Iron call'd the *Spit*, with a double Wheel in the middle, round which Leather *Girts* are faſten'd, nail'd to each end of the *Plank*. To the outſide of the *Spit* is fix'd a Handle, or *Rounce*, by which the Preſs-man turns the Plank in or out at pleaſure.

Upon the Plank is a ſquare wooden Frame, or *Coffin q q*, wherein is incloſed a Marble, or poliſh'd *Stone*, for the Form to be laid on: To this Coffin are faſten'd Leather *Stay Girts*, one on each ſide; which being again faſten'd to the Cheeks of the Preſs, prevent the Plank from running too far out, when drawn from under the Platten. On the fore-part of the Plank is a *Gallows r r*, which ſerves to ſuſtain the Tympans, when taken from off the Form.

On the Front of the Coffin are three Frames much alike, tho' ſerving for different purpoſes, *viz.* the two Tympans and Friſket: The *Tympans s s*, are ſquare, made of three Slips of very thin Wood, and a-top of a ſlip of Iron, ſtill thinner, call'd a *Head-Band*: That call'd the *outward Tympan* is faſten'd with *Iron Joints* to the Coffin. They are both cover'd with Parchment; and between the two are placed Blankets, which ſerve to make the Impreſſion of the Platten upon the Surface of the Letters more equable; as alſo to prevent the Letters from being broke by the Force of the Preſs. The *Friſket t t*, is all of Iron, very thin; faſten'd a-top to the great or *outward* Tympan; and ſuſtain'd by a ſlip of Wood hanging from the Cieling, when open'd, to take out the printed Sheets, and put in others. It is alſo cover'd with Parchment, or Paper, cut in the neceſſary places, that the Sheet, which is between the great Tympan and Friſket, may receive the Ink, and that nothing may hurt the Margins. On the Parchment of the great or *outward* Tympan it is, that the blank Sheet is laid to be printed.

To regulate the Margins, and make the Lines and Pages anſwer each other when printed on the other ſide; in the middle of the Wood in the ſides of this Tympan are two Iron Points which make two Holes in the Sheet, to be placed on the ſame Pins when the Sheet is return'd for an Impreſſion on the other ſide, call'd the *Reiteration*.

Every thing now about the Tympans being prepared for printing, and the Preſs-man having ink'd, or *beat* his Form now placed on the Stone; he brings the Tympans and Friſket down from the Gallows upon the Form; and advancing the Plank under the Platten by means of the *Spit*-Handle, or *Rounce*, gives two Strokes or *Pulls* with the Bar; and with the ſame Handle turn'd the contrary way, brings back the Plank, to take out the printed Sheet, and put in a freſh one; and this he repeats till he have taken off the full Number of Sheets the Edition is to conſiſt of.

One ſide of the Sheet thus printed, 'tis remanded to the Preſs for the other; and ſo diſpoſed as that the Iron Points paſs thro' the Holes already made in the Sheet.

Sometimes 'tis required to cut the Friſket a-freſh, where the ſecond ſide is to be more or leſs full of *Printing* than the firſt; as is frequently the caſe at the beginning and ending of Books, *&c.*

The Number of Sheets of the Edition being compleat, and the Form to be ſeparated, to reſtore the Letters into the Caſes; they firſt waſh it in a boiling Lye to take out the Remains of the Ink, ſcouring it with a Bruſh, and then with fair Water. This done, it is carry'd to a wooden Frame to be unlock'd, and the Furniture, *i. e.* the Sticks, *&c.* taken off to diſengage it from the Chaſe. Then the Compoſitor taking out ſeveral Lines at once upon a little wooden Ruler, he replaces each Letter in its proper Box, to be again uſed in the remainder of the Impreſſion; which laſt Operation they call *Diſtribution*.

Beſide the ſeveral kinds of Letters and Characters above-mentioned, uſed in *Printing*; they have likewiſe Rules for blank Lines, Borders, and Head and Tail-Pieces, accommodated to the ſeveral kinds of Letters.

The *Rules* for blank Lines are of Braſs, and made exactly the height of the Letter; otherwiſe they will either hinder the neighbouring Letters from *printing*, or will themſelves be hindred by 'em. Theſe the Compoſitor occaſionally cuts into proper Lengths, as his Work requires.

The *Borders* are a kind of Ornaments in form of long Bars, ſerving for the Diviſions of Books, Chapters, &c. Their Depth is proportion'd to the Letter, and their Length adjuſted to the Page; for being compoſed of ſeveral moveable Pieces, 'tis eaſy lengthening or ſhortening 'em.

The *Head* and *Tail Pieces*, cut either in Wood or Pewter, are Compartiments uſed at the beginnings and endings of Books.

The initial Letters are ſometimes cut in Wood, and figured; ſometimes caſt like the other Characters.

For the Conveniency of the Binding, the *Printers* had early recourſe to *Signatures*, *i. e.* Letters of the Alphabet placed at the bottom of the Sheet, which ſhew the Order they are to be bound in; as well as whether the Quires be compleat.

The *Catch-Words* ſerve nearly the ſame purpoſe; theſe are the firſt Words of each Page, which are repeated at the bottom of the preceding Pages. The Numbers of the Pages are equally ſerviceable to the Reader and the Binder, to guide to References, and to warrant the Book duly bound and collated: Some *Printers* formerly put 'em at the bottoms of the Pages; but Cuſtom has carried it for the Tops.

In the Infancy of *Printing*, they had likewiſe a *Regiſtrum Chartarum*, for the Convenience of the Binders: To draw this, at the end of each Volume, they collected the Signatures, and the firſt Words of the four firſt Sheets of each Alphabet. To abridge it, they afterwards contented themſelves to expreſs the Signatures, and how oft each Letter was repeated. But the *Regiſtrum* has been long diſuſed.

As to the Faults which eſcape the Corrector, and Compoſitor; they are uſually noted in what they call *Errata*. The antient Editions had no *Errata*; but in lieu thereof they corrected the Faults in each printed Copy with a Pen; which was eaſy enough in thoſe days, tho impracticable now. In effect, we have antiently had *Printers* who did not need an *Errata* of above five Articles in a Volume of five hundred Sheets: How different from ſome of the preſent Set, who might make an *Errata* of five hundred Articles in a Book of five Sheets?

The Chinese-Printing.

There are three Opinions as to the Antiquity of the *Chineſe-Printing*; one fixing it 300 Years before Chriſt; another 900 Years after him; and a third carrying it ſtill farther back, and making it co-eval with that mighty Empire: tho' it muſt be allow'd the laſt is much the leaſt probable of the three.

Their Manner of *Printing*, we have already hinted to be very different from that which now obtains among the *Europeans*: 'Tis true, it has ſome Advantages over ours in Correctneſs, and the Beauty of the Character; but in other Reſpects it comes far ſhort: The ſingle Advantage of moveable Characters making more than amends for all that is urged againſt us by ſome zealous Advocates for this *Oriental Printing*.

Books are printed in *China* from wooden Planks, or Blocks, cut like thoſe uſed in printing of Callico, Paper, Cards, &c. among us. See Card, &c.

Theſe Blocks are of a ſmooth, firm, cloſe Wood, and the Size of the Leaf required. On the Face-ſide they glue a Paper, upon which ſome able *Chineſe* Writer draws out the ſeveral Letters and Characters, with a *Chineſe* Pen, which is a kind of Pencil. This is the principal part of the Work, and that whereon the Succeſs of the reſt depends.

When finiſh'd, the Block is put into the Hands of a Sculptor, or Cutter in Wood; who, following the ſeveral Strokes of the Writer with his Gravers, and other ſharp little Inſtruments, makes 'em all appear in Relievo on the Wood. See Cutting *in Wood*.

When the Engraving is finiſh'd, they moiſten what remains of the Paper, and rub it gently off.

The Ink they uſe in *printing* is the ſame with the common *Chineſe* Ink; wherewith they alſo write; and is made of Lamp-black, mixed up with Oil.

Their Preſs reſembles our Rolling-Preſs, much more than the Letter-Preſs. See Rolling-*Preſs*.

As to their Paper, it is inferior to ours: It is made of the inner Bark or Rind of a kind of Ruſhes, beat up with Water into a Pulp or Paſte, and form'd in Moulds, much like ours. See Paper.

The Advantages of the *Chineſe-Printing* conſiſt in this, that they are not obliged to take off the whole Edition at once; but print their Books as they need 'em: That the Blocks are eaſily retouch'd, and made to ſerve a-freſh; and that there needs no Corrector of the Preſs.

Its Diſadvantages are, that a large Room will ſcarce hold all the Blocks of a moderate Volume; that the Colour of the Ink eaſily fades; and that the Paper is apt to tear, and is ſubject to Worms: whence it is that we ſee ſo few antient Books in *China*.

Rolling-Press-Printing.

Rolling-Preſs-Printing, is employ'd in taking off Prints, or Impreſſions from Copper-Plates engraven, or etch'd. See Engraving and Etching.

It differs, as we have before obſerv'd, from Letter-printing; in that the Marks and Characters, whoſe Impreſſions are to be taken, in the former Caſe, are indented, or cut inwards; and in the latter, are *in Relievo*, or ſtand out.

Origin and Progreſs of Rolling-Preſs-Printing.

This Art is ſaid to be as antient as the Year 1460; and to owe its Origin to *Finiguerra*, a *Florentine* Goldſmith, who caſting a piece of engraven Plate in melted Brimſtone, found the exact Print of the Engraving left in the cold Brimſtone, mark'd with Black licked out of the Strokes by the liquid Sulphur.

Upon this he attempted to do the ſame on ſilver Plates with wet Paper, by rolling it ſmoothly with a Roller; and this ſucceeded.

This Novelty tempted *Baccio Baldini*, a Goldſmith of the ſame City, to attempt the ſame; which he did with Succeſs; ingraving ſeveral Plates of *Sandro Boticello*'s Deſign, and *printing* them off this new way: in which he was follow'd by *Andrew Mantegna*, then at *Rome*.

This knowledge getting into *Flanders*, *Martin* of *Antwerp*, a famous Painter, graved abundance of Plates of his own Invention, and ſent ſeveral Prints into *Italy*, marked thus, *M. C.*

After him *Albert Durer* appear'd, and gave the World a vaſt number of Prints, both in Wood and Copper.

About this time one *Hugo de Carpi*, an *Italian* Painter, found out a way, by means of ſeveral Plates of Wood, to make Prints reſemble Deſigns of *Claro Obſcuro*; and ſome Years after, the Invention of *Etching* was diſcover'd, which was ſoon made uſe of by *Parmeggiano*.

The Art was not uſed in *England* till the Time of King *James* I. when it was brought from *Antwerp* by *Speed*.

The Structure of the *Rolling-Preſs*, and the Compoſition of the Ink uſed therein; with the Manner of applying both in taking off Prints, are as follow.

Structure of the Rolling-Preſs.

This Machine, like the common Preſs, may be divided into two parts; the *Body* and *Carriage*, analogous to thoſe in the other.

The Body conſiſts of two *Cheeks* of different Dimenſions; ordinarily about 4 ½ foot high, a foot thick, and 2 ½ apart; join'd a top and bottom by Croſs-pieces. The Cheeks are placed perpendicularly on a wooden Stand, or Foot, horizontally placed, and ſuſtaining the whole Preſs.

From the Foot likewiſe riſe four other perpendicular pieces, join'd by other croſs or horizontal ones; which may be conſider'd as the *Carriage* of the Preſs, as ſerving to ſuſtain a ſmooth, even *Plank*; which is about 4 ½ foot long, 2 ½ foot broad, and an inch ½ thick: upon which the engraven Plate is to be placed.

Into the Cheeks go two wooden Cylinders, or *Rollers*, about ſix Inches in diameter, bore up at each end by the Cheeks; thoſe Ends, which are leſſen'd to about 2 Inches diameter, and call'd *Trunnions*, turn in the Cheeks between two pieces of Wood, in form of *Half Moons*, and lined with poliſhed Iron, to facilitate the Motion.

The Space in the half Moons, left vacant by the Trunnion, is fill'd with Paper, Paſtboard, &c. that they may be rais'd and lower'd at diſcretion; ſo as only to leave the ſpace between them, neceſſary for the paſſage of the Plank, charg'd with the Plate, Paper, and Blankets.

Laſtly, to one of the Trunnions of the upper Roller, is faſten'd a *Croſs*, conſiſting of two Levers, or Pieces of Wood, traverſing each other. The Arms of this Croſs ſerve, in lieu of the Handle of the common Preſs; giving a Motion to the upper Roller, and that to the under; by which means the Plank is protruded, or paſs'd between them.

Preparation of the Ink.

The Ink uſed in Rolling-Preſs-Printing, is a Compoſition of Black, and Oil mix'd and boil'd together in a due Proportion.

The

The Black is a factitious Matter, made of the Stones of Peaches and Apricots, Bones of Sheeps-feet, and Ivory; all well burnt; beaten, ſifted, and mix'd together with Spirit of Wine, and ſometimes only with Water.

This Black is uſually brought hither ready prepared from *Francfort on the Main*; whence our Printers call it *Francfort-Black*. See BLACK.

The Oil wherewith they dilute this Black, is Nut-Oil; which is boil'd up differently, according to the different Works it is to be uſed in.

They uſually make three Kinds, *thin*, *thick*, and *ſtrong*; only differing in the degree of Coction: The Strong is that uſed in the fineſt Works, *&c.*

To make the Ink, they pulverize the black Stone very carefully, and paſs it thro' a fine Sieve; then mix it up on a Marble with the proper Oil, by means of a Mullet; after the ſame manner as the Painters do their Colours.

Method of PRINTING *from Copper-Plates.*

The Ink being prepared, they take a little Quantity of it on a *Rubber*, made of Linnen Rags, ſtrongly bound about one another; and therewith ſmear the whole Face of the Plate, as it lies on a Grate, over a Charcoal-fire.

The Plate ſufficiently inked, they firſt wipe it coarſely over with a foul Rag, then with the Palm of the left Hand, then of the right; and, to dry the Hand, and forward the wiping, rub it from time to time on Whiting.

In wiping the Plate perfectly clean, yet without taking the Ink out of the Engraving, conſiſts a good part of the Addreſs of the Workman. The *French* Printers uſe no Whiting, as being detrimental to the Colour of the Ink; nor do they lay the Plate on the Grate to warm, till after inking and wiping it.

The Plate thus prepared, is laid on a thick Paper, fitted upon the Plank of the Preſs: Over the Plate is laid the Paper, firſt moiſten'd, to receive the Impreſſion; and over the Paper, two or three Folds of Blanketing, or other Stuff.

Thus diſpoſed, the Arms of the Croſs are pull'd; and by that means, the Plate with its Furniture paſs'd thro between the Rollers; which pinching very ſtrongly, yet equably, preſſes the moiſten'd Paper into the Strokes of the Engraving, whence it licks out the Ink.

Some Works require being paſs'd twice thro' the Preſs, others only once, according as the Graving is more or leſs deep, or the greater or leſs degree of Blackneſs the Print is deſired to have.

It muſt be obſerv'd, that the ſtronger, and thicker the Ink is, the ſtronger muſt the Rollers pinch the Plate: This tempts many of the Workmen to uſe a thinner Oil, in order to ſave Labour; which proves prejudicial to the Impreſſion.

The wetting of the Paper ought to be done two or three days before *printing* it, to render it the more ſupple and mellow: As the Prints are drawn off, they are hung up to dry on Lines, *&c.*

Laſtly, after the Number of Prints deſired, have been wrought off from the Plate; they rub it over with Oil of Olives, to prevent its ruſting, and ſet it by againſt a new Impreſſion. If the Strokes of the Graving be perceived full of Ink harden'd therein, in the Courſe of the *Printing*; they boil it well in a Lye, e'er the Oil be apply'd.

PRIOR, *before*, ſomething that is nearer the beginning, than another to which it is referred. See PRIORITY.

PRIOR, is particularly uſed for a Superior of a Convent of Monks; or the ſecond Perſon, after the Abbot. See SUPERIOR and CONVENT.

Priors are either *Clauſtral*, or *Conventual*.

Conventual PRIORS are the ſame as Abbots; all the difference between them being in Name; both having the ſame Rights; and both, alike, Governours of Monaſteries. See ABBOT.

A *Clauſtral* PRIOR, is he who governs the Religious of an Abbey, or *Priory*, *in Commendam*; ſo called, becauſe he has Superiority in the Cloiſter, or Monaſtery. See COMMENDAM.

His Juriſdiction is wholly from the Abbot; and ends with the Abbot's Death, unleſs he has been elected by the whole Convent. See CLAUSTRAL.

Conventual Priors, are of two kinds, *viz. Regular Conventual Priors*, who govern Religious living in Community; and *Secular-commendatary-conventual Priors*.

Conventual *Priors*, are obliged to take up the Prieſthood within a Year, or at moſt two, from the Dates of their Proviſion; in default whereof, their Benefices are declared vacant.

Priors muſt be twenty-five Years old, e'er they can govern the Convent; and twenty, if the Convent be govern'd by another.

Grand PRIOR, is the Superior of a large Abbey, where ſeveral Superiors are required; as in the Abbeys of *Cluny* and *Fecamp*.

In the Monaſtery of *St. Dennis*, there were antiently five *Priors*; the firſt whereof was call'd the *Grand Prior*. In moſt Monaſteries, there is a *Sub-Prior*.

There are alſo *Grand Priors* in the Military Orders; as *Priors of Maltha*, or *of St. John of Jeruſalem*, &c.

PRIORITY, the Relation of ſomething, conſider'd as it is *before*, or *prior* to, another; *i. e.* nearer to the beginning, or the firſt. See POSTERIORITY.

The principal Modes of *Priority* are five, *viz.* in reſpect of *Time*; as when we ſay, that the *Grecian* Empire was *prior* to two; *Order*, *Dignity*, *Nature*, as when we ſay one is *prior* to two; *Order*, *Dignity*, and *Cauſality*. Which are ſummed up in the Technical Diſtich:

Tempore, Natura, prius Ordine, dic & Honore;
Effecto Cauſam dicimus eſſe prius.

PRIORITY, in Law, is an Antiquity of Tenure, in compariſon of another leſs antient. See TENURE.

To hold by Priority, is to hold of one Lord more antiently, than of another; in reſpect whereof, the Tenant is ſaid to *hold in Poſteriority*. See POSTERIORITY.

The Lord of the *Priority* ſhall have the Cuſtody of the Body. *Cromp. Juriſd.*

PRIORS *Aliens*, certain Religious, born in *France*, and *Normandy*; Superiours of Religious Houſes, erected for their Country-Folks here in *England*.

Theſe, *Henry* V. deeming no good Members for this Land, ſuppreſs'd; and their Livings were afterwards given by *Henry* VI. to other Monaſteries, and Houſes of Learning; but chiefly, as *Stow* obſerves, to the erecting of thoſe two famous Colleges, call'd *the King's Colleges* of *Cambridge*, and *Eaton*.

PRISAGE, that Share which belongs to the King or Admiral, out of ſuch Merchandizes as are taken at Sea, as lawful Prize; which is uſually a tenth part. See PRIZE.

Priſagium *eſt jus* Priſas *capiendi*; *vel ipſe actus*.

PRISAGE *of Wines*, *Butlerage*; a Cuſtom whereby the King challenges out of every Veſſel laden with Wine containing twenty Tuns, or upwards; two Tun of Wine, the one before, the other behind the Maſt, at his own price; which is twenty Shillings *per* Tun. See DUTY.

This Cuſtom varies a little, in various places: At *Boſton*, *e. gr.* every Bark laden with ten Tuns of Wine, pays *Priſage*.

The Term is now, almoſt grown into diſuſe; and in lieu of *Priſage*, the Cuſtom is popularly call'd *Butlerage*; becauſe 'tis the King's chief Butler that receives it. See BUTLERAGE.

PRISCILLIANISTS, antient Hereticks, who aroſe in *Spain* towards the end of the fourth Century.

The *Priſcillianiſts* were a Branch of the *Manichees* and *Gnoſticks*. See GNOSTICKS, *&c.*

We are at a loſs for their particular Tenets. St. *Leo* ſays, they attributed to Jeſus Chriſt only a fictitious or imaginary Body.

Priſcillian, their Leader, was a Lay-man: He was condemn'd with ſome Biſhops his Adherents, in a Council at *Saragoſſa*, and in another at *Bourdeaux*; but he appeal'd to the Emperor *Maximus*, and had a hearing at *Treves*, where being convicted of broaching Novelties, he was condemn'd to death, with ſeveral of his Followers.

PRISE, or PRIZE, in Navigation, a Veſſel taken at Sea from the Enemies of the State, or from Pirates; by a Man of War, or a Merchant-man, having Commiſſion from the Admiral.

Veſſels are look'd on as lawful *Priſe*, if they fight under any other Standard, than that of the State from whom they have their Commiſſion; if they have no Charter-Party, Invoice, or Bill of Lading a-board them; if they be loaden with Effects belonging to the King's Enemies, or with Contraband Goods.

Thoſe of the King's Subjects recover'd from the Enemy, after having remain'd twenty-four Hours in their hands, are deem'd *Priſe*.

Veſſels that refuſe to ſtrike their Sails, after having been ſummon'd thereto by the King's Ships; may be conſtrain'd to do it; and if they make reſiſtance, and fight, are lawful *Priſe*.

PRISE, in our Statutes, is uſed for Things taken of the Subjects by the King's Pourveyors. See POURVEYOR.

Spelman deſcribes *Priſes* to be Corn and other Proviſions taken from the Country People, at lower Rates than ordinary; for the Maintenance of the King's Houſhold, Garriſons, *&c.*

Roger de Montealto, who married the Siſter of *Hugo de Abeney*, claim'd the following Privileges; *viz.* his Caſtle of *Riſinge cum* Priſis 40 *Dierum*, with *Priſes* of 40 Days: Which Phraſe the ſame Author underſtands of the Liberty

of

of taking Proviſions for the Support of the Garriſon of his Caſtle, upon paying for them within 40 Days. See Stat. 12 *Car.* 2. *cap.* 34.

PRISM, in Geometry, an oblong Solid or Body, whoſe Planes are all rectilinear and regular, and the oppoſite ones equal. See SOLID, *&c.*

It is thus call'd from the *Greek* πρισμα, ſomething *ſawn*, or *cut off*.

The *Priſm* is generated by the Motion of a rectilinear Figure, as A C B (Tab. GEOMETRY, fig. 16.) deſcending always parallel to itſelf, along the right Line A E.

If the Deſcribent be a Triangle, the Body is ſaid to be a *triangular Priſm*; if ſquare, a *quadrangular* one, *&c.*

From the Geneſis of the *Priſm*, 'tis evident it has two equal and oppoſite Baſes; that it is terminated by as many Parallelograms as the Baſe conſiſts of Sides; and that all the Sections of a *Priſm* parallel to its Baſe, are equal.

Every triangular *Priſm* may be divided into three equal Pyramids. See PYRAMID.

To meaſure the Surface and Solidity of a PRISM.

Find the Area of the Baſe, *e.gr.* A B C (ſee TRIANGLE) and multiply it by E; find the Areas of the Planes or Parallelograms, that include or circumſcribe it, and add their Sum to the former Product. The Sum is the whole Surface of the *Priſm*.

Multiply then, the Baſe B A C, by the Altitude C D; the Product is the Solidity of the Cube A B C D E F. See CENTRO-BARIC.

All *Priſms* are in a Ratio compounded of their Baſes and Altitudes: If then their Baſes be equal, they are to each other as their Heights; and *vice verſâ*. Similar *Priſms*, *&c.* are in a triplicate Ratio of their homologous Sides, as alſo of their Altitudes.

PRISM, in Dioptricks, is a Glaſs in form of a triangular *Priſm*, much uſed in Experiments about the Nature of Light and Colours. See LIGHT, *&c.*

The Phænomena and Uſe of the *Priſm*, ariſe from its ſeparating the Rays of Light in their Paſſage thro' it. See RAY.

The more general of theſe Phænomena are as follow: For, to enumerate all, would be endleſs; and even theſe are ſufficient to demonſtrate, that Colours don't either conſiſt in the Contorſion of the Globules of Light, as *Des Cartes* imagined; nor in the Obliquity of the Pulſes of the Ætherial Matter, as *Hook* fancied; nor in the Conſtipation of Light, and its greater or leſs Concitation, as Dr. *Barrow* conjectured: but that they are original and unchangeable Properties of Light itſelf.

Phænomena of the PRISM.

1°. The Sun's Rays tranſmitted thro' a *Priſm* to an oppoſite Wall, project an Image like the Rainbow, of various vivid Colours; the chief whereof are red, yellow, green, blue, and violet. See RAINBOW.

The reaſon is, that the various colour'd Rays, which were before mixed and blended together, are now, in virtue of their different Refrangibilities, ſeparated by Refraction, in paſſing thro' the *Priſm*, and thrown, each Colour, by itſelf. See REFRANGIBILITY.

For the blue Rays, *e. gr.* repreſented by the dotted Lines, (Tab. OPTICKS, fig. 50.) beginning to be ſeparated from the reſt in the Side *c a*, of the *Priſm a b c*, by the firſt Refraction in *d d*; are again ſeparated further in the other face of the *Priſm b c*, by a ſecond Refraction, the ſame way, in *e e*. Whereas in a plain Glaſs, or even in a *Priſm*, in a different Poſition; the blue Rays ſeparated by the firſt Refraction in the firſt Surface, are again mixed by the ſecond Refraction at the other Surface, which is made a contrary way. See REFRACTION.

2°. The Image thus projected, is not round; but when the Angle of the *Priſm* is 60 or 65 Deg. about five times as long as broad.

Becauſe ſome of the Rays are refracted more than others, and therefore exhibit ſeveral Images of the Sun, ſtretch'd out in length, as if it were but one.

3°. Thoſe Rays which exhibit the yellow Colour, ſwerve more from the rectilinear Courſe, than thoſe which exhibit the Red; and the Green more than the Yellow; and the Violet moſt of all.

4°. If the *Priſm* thro' which the Rays are tranſmitted, be turn'd about its Axis; ſo as the red, yellow, green, *&c.* Rays be receiv'd in order, on another *Priſm*, about twelve Foot diſtant from the former, thro a little hole, and thence projected further; the yellow, red, *&c.* Rays, tho' they fall in the ſame manner on the ſecond *Priſm*, yet will not be projected on the ſame place as the red, but will be deflected further, that way towards which the Refraction is.

And if in lieu of the ſecond *Priſm*, they be receiv'd on a Lens a little gibbous; the yellow, green, *&c.* Rays, will be collected, each in its order, into a nearer Focus than the red ones: The reaſon of which two laſt Phænomena is, that the yellow Rays are refracted more than the red ones, the green ones more than the yellow ones, and the violet ones moſt of all.

5°. The Colours of colour'd Rays well ſeparated, can neither be deſtroy'd, nor in any manner alter'd by repeated Refractions thro' a number of *Priſms*; nor by paſſing thro' an illumined Space, nor by their mutual Decuſſations, nor by the Neighbourhood of the Shade, nor by being reflected from any natural Bodies.

Becauſe their Colours are not Modifications ariſing from Refraction, but original and immutable Properties thereof. See COLOUR.

6°. All colour'd Rays collected together in any manner, either by ſeveral *Priſms*, or a convex Lens, or concave Speculum, form Whiteneſs; but being again ſeparated after Decuſſation, each exhibits its proper Colour. See WHITENESS.

Becauſe, as the Ray was white e'er its parts were ſeparated by Refraction; ſo thoſe parts being re-mix'd, it recovers its Whiteneſs; and the colour'd Rays when they meet, don't deſtroy one another, but only intermix.

Hence Duſts, or Pouders, red, yellow, green, blue, violet, *&c.* mix'd in a certain proportion, become grey; or of the Colour ariſing from a Mixture of black and white; and would be perfectly white, but that ſome of the Rays are abſorb'd.

Thus if a Circle of Paper be ſmear'd with all theſe Colours a-part, in a certain proportion, and turn'd ſwiftly about its Centre, ſo that the Species of the ſeveral Colours may be confounded in the Eye by the Velocity of the Motion; the ſeveral Colours will diſappear, and the whole be ſeen of one uniform Colour, between black and white.

7°. If the Sun's Rays ſtrike very obliquely on the inner Superficies of a *Priſm*; the Rays reflected will be violet; thoſe tranſmitted, red.

8°. If there be two *Priſms*, the one full of a red Liquor, the other of a blue one; the two join'd together will be opake: tho' if both be fill'd either with a blue or a red Liquor, they will, together, be tranſparent. For the one tranſmitting none but blue, the other none but red Rays; the two together will tranſmit none at all. See BLUE.

9°. All natural Bodies, eſpecially white ones, view'd thro a *Priſm* held to the Eye; ſeem fringed or hemmed, on one ſide with red and yellow, on the other with blue and violet.

10°. If two *Priſms* be ſo placed, that the red of the one, and the purple of the other, meet in a proper Paper encompaſs'd with Darkneſs; the Image will be pale: but view'd thro' a third *Priſm* held to the Eye at a due diſtance, will appear double, red and purple.

And if two kinds of Duſts, the one perfectly red, the other blue, be mixed; a little Body being cover'd thick with the Mixture, will exhibit a double Image, the one red, the other blue, thro' a *Priſm* apply'd to the Eye.

11°. If the Rays tranſmitted thro' a convex Lens, be receiv'd on a Paper before they meet in the Focus, the Confine of Light and Shadow will ſeem tinged with a red Colour; if beyond the Focus, with a blue.

12°. If the Rays about to be tranſmitted thro' one part of the Pupil, be intercepted by the Interpoſition of ſome opake Body near the Eye; the Extremes of Bodies lying beyond it, will ſeem ting'd with Colours, as if ſeen thro' a *Priſm*; tho' leſs vivid.

Becauſe the Rays tranſmitted thro' the reſt of the Pupil, are ſeparated by Refraction into Colours; and the intercepted Rays, which would be refracted a contrary way, are prevented from mixing and diluting them: Whence alſo it is, that a Body viewed with both Eyes thro' two little Holes made in a Paper, does not only appear double, but tinged with Colours too.

PRISMOID, PRISMOIDES, in Geometry, a ſolid Figure, bounded by ſeveral Planes, whoſe Baſes are right-angled Parallelograms, parallel and alike ſituated. See PRISM.

PRISON. See GOAL.

PRISONER, in Law, one that is reſtrain'd of his Liberty upon any Action, Civil or Criminal; or upon Commandment.

A Man, again, may be *Priſoner* either upon Matter of Fact, or of Record.

Priſoner upon Matter of Record, is he who being preſent in Court, is by the Court committed to Priſon, only upon an Arreſt, be it by the Sheriff, Conſtable, or other.

PRIVATION, the Abſence, Want, or Defect, of ſomething needed.

In the Canon Law, Privation is uſed for an Interdiction, or Suſpenſion. See DEPRIVATION.

The Myſtic Divines call *Privation of God*, the Dryneſſes a Soul experiences, to whom God does not make himſelf felt.

The Church of *Rome* teaches, that Children dying without Baptiſm, go into a *Limbus*, where they undergo a *Privation* of the Sight of God.

PRIVATION, in Phyſics, is a Negative Principle, which, with Matter and Form, the *Peripaticks* ſuppoſe, conſpires to conſtitute natural Bodies. See MATTER and FORM.

Privation ſignifies no more than the abſence of the future Form: Thus every thing, according to *Ariſtotle*, is form'd of this, that it was not that thing before, *e.gr.* a Chick ariſes hence, that it was not a Chick before it was generated; which is what that Philoſopher calls *Privation*. See PRINCIPLE.

Ariſtotle is very angry with the Antients, for not admitting *Privation* as a Principle; and imputes it to their Ignorance thereof. But it is an Injuſtice to reproach them with Ignorance, of what it is impoſſible to be ignorant of; and 'tis an Illuſion to produce this poor Principle of *Privation* as ſuch a mighty Myſtery; there being no body but ſuppoſes it a thing known, that a thing *is not* before *it is made*. See PERIPATETIC, *&c.*

PRIVATIVE, in Grammar, a Particle, which prefix'd to a Word, changes it into a contrary Senſe. See PARTICLE.

Thus, among the *Greeks*, the α is uſed as a *Privative*; as in α-θεος, *Atheiſt*, *Acephales*, *&c.*

The *Latins* have their *Privative in*; as, *incorrigibilis*, *indeclinabilis*, *&c.*

The *Engliſh*, *French*, *&c.* on occaſion, borrow both the *Latin* and *Greek Privatives*.

PRIVATIVE *Quantity*, in Algebra, is a Quantity leſs than nothing; call'd alſo a *Negative Quantity*: in oppoſition to Affirmative or Poſitive Quantities. See QUANTITY, NEGATIVE, *&c.*

Privative Quantities, are denoted by the Character of Subſtraction, —, prefix'd to them. See CHARACTER.

PRIVILEGE, in the general, any kind of Right, Prerogative, or Advantage, attach'd to a certain Perſon, Condition, or Employment; excluſive of others.

The Word is form'd from the *Latin privata lex*.

PRIVILEGE, in Law, is a particular Right granted to a ſingle Perſon, Place, Community, or the like; whereby they are exempted from the Rigour of the common Laws.

Privilege is either *Perſonal* or *Real*: A *Perſonal Privilege* is that which is granted to any Perſon, either againſt or beyond the Courſe of the Common Law; ſuch, *e.gr.* is that of a Member of Parliament, who may not be arreſted, nor any of his Servants, during the ſitting of Parliament, nor for a certain time before and after. See PARLIAMENT.

Privilege Real, is a Franchiſe granted to a Place. See FRANCHISE.

Such is that granted to our Univerſities; by which none, tho' Members thereof, may be call'd to *Weſtminſter-Hall*, upon any Contract made within their own Precincts.

So alſo, a Perſon belonging to the Court of Chancery, cannot be ſued in any other Court; certain Caſes excepted; and if he be, he may remove it by *Writ of Privilege*.

'Tis an antient *Privilege*, for Men to be exempted from Arreſts within the Verge of the Court; *i.e.* in or near the Palace, where the King is reſident: Becauſe, in ſuch Caſes, Quarrels frequently happen; and the Peace ought to be ſtrictly kept there. See VERGE.

In the Laws of *Hen.* I. 'tis expreſs'd, that Peace ought to be maintain'd religiouſly and reverently within four Miles of the King's Doors towards the four Quarters; and forty nine Acres, nine Foot, nine Palms, and nine Barley-Corns around. See PEACE.

PRIVILEGE, in Commerce, is a Permiſſion from a Prince, or Magiſtrate, to make and ſell a certain Merchandize; or to engage in a certain Commerce; either excluſively of others, or concurrently with them.

The firſt is call'd an *excluſive Privilege*; the latter, ſimply, *Privilege*.

Excluſive Privileges are to be granted rarely; by reaſon of the hindrance they are of to Trade: yet they are ſometimes very juſt and reaſonable, by way of Reward for the Invention of uſeful Machines, Manufactures, *&c.*

Excluſive Privileges for foreign Commerce, are uſually granted on the following Conditions: That the Commodities be brought from remote parts, where there is no going without running great riſques: That the *Privilege* be only for a limited Time: That the *Privilegees* be not allowed to monopolize, *i. e.* to raiſe and lower their Commodities at pleaſure; but that the Sale and Price be always proportionable to the Expence, Intereſts, *&c.* And, That the *Privilegees* aſſiſt the State, on occaſion, with part of their Gains.

PRIVILEGE *for the Impreſſion of Books*. This *Privilege* is properly excluſive; being a Permiſſion which an Author or Bookſeller obtains under the Great Seal, to have alone the Impreſſion of a Book; with a Prohibition of all others to print, ſell, or diſtribute the ſame, within a certain Term of Years, uſually 14; under the Clauſes and Penalties expreſs'd therein.

Theſe *Privileges* were unknown till the Beginning of the 16th Century; when they were introduc'd in *France*: The oldeſt is ſaid to bear Date in the Year 1507. and to have been occaſion'd by ſome Printers counterfeiting the Works of others, as ſoon as they appear'd.

But People were yet at liberty to take or let them alone at pleaſure; till the Intereſts of Religion, and the State, occaſion'd the reſtraining of this Liberty.

In 1563, *Charles* IX. publiſh'd a celebrated Ordonnance, forbidding any Perſon, on pain of Confiſcation of Body and Goods, to print any Letter, Speech, *&c.* without permiſſion.

The like has been ſince done in *England*: tho at preſent, *Privileges* are not only, not requir'd; but by the late Act for ſecuring the Properties of Books, ſeem needleſs.

PRIVITIES, the natural Parts, of either Sex; or thoſe immediately miniſtring to the Buſineſs of Generation. See GENERATION, PUDENDUM, *&c.*

PRIVITY, an intimate Freedom, or private Familiarity, between two Perſons. See PRIVY.

The Lawyers ſay, if there be Lord and Tenant, and the Tenant hold of the Lord by certain Services; there is a *Privity* between them in reſpect of the Tenure.

PRIVY, in Law, a Perſon who is Partaker, or has an Intereſt, in an Action or Thing.

In this ſenſe they ſay, *Privies in Blood*: Every Heir in Tail, is *privy* to recover the Land intail'd.

In old Law-Books, *Merchants Privy* are oppos'd to Merchants Strangers.

Coke mentions four kinds of *Privies*: *Privies in Blood*, as the Heir to his Father: *Privies in Repreſentation*, as Executors and Adminiſtrators to the Deceaſed: *Privies in Eſtate*, as he in Reverſion, and he in Remainder, when Land is given to one for Life, and to another in Fee; the reaſon is, that their Eſtates are both created at the ſame time. The fourth is, *Privy in Tenure*, as the Lord by Eſcheat, *i.e.* when Land eſcheats to the Lord for want of Heirs.

PRIVY *Council*, a Council of State, held by the King, to concert Matters for the public Service, the Honour and Safety of the Realm, *&c.* See COUNCIL.

The *Privy Council* is the *Primum Mobile* of the State, and that which gives the Motion and Direction to all the inferior Parts. It is likewiſe a Court of Juſtice of great Antiquity; the primitive and ordinary way of Government in *England* being by the King and *Privy* Council.

It has been frequently uſed by all our Kings, for determining Controverſies of great Importance: The ordinary Judges have ſometimes declined giving Judgment, till they had conſulted the King and *Privy* Council; and the Parliament have frequently referr'd Matters of high moment to the ſame; as being by long Experience better able to judge of, and by their Secrecy and Expedition, to tranſact ſome State-Affairs, than the Lords and Commons.

At preſent, the *Privy* Council takes Cognizance of few or no Matters, except ſuch as may not be well determin'd by the known Laws and ordinary Courts; ſuch as Matters of Complaint, and ſudden Emergencies.

The Oath of a *Privy* Counſellor is to the utmoſt of his power and diſcretion, truly and juſtly to counſel the King, and to keep ſecret the King's Counſels.

Antiently, to ſtrike in the Houſe of a *Privy* Counſellor, or elſewhere in his preſence, was grievouſly puniſh'd: To conſpire his Death, is Felony; and to effect it, High-Treaſon.

With the Advice of this Council, the King iſſues Proclamations that bind the Subject, provided they be not contrary to Law. See PROCLAMATION.

In Debates, the loweſt delivers his Opinion firſt, the King laſt; and thereby determines the Matter.

A Council is never held without the preſence of a Secretary of State. See SECRETARY.

The Members of the *Privy* Council in the Year 1710, were in Number 57. Their Officers; four Clerks of the Council, three Clerks extraordinary, three Clerks in the Council-Office, a Keeper of the Records, and two Keepers of the Council-Chamber.

Lord Preſident of the Privy Council. See PRESIDENT.

PRIVY *Seal*, a Seal which the King uſes, previouſly, to ſuch Grants, *&c.* as are afterwards to paſs the Great Seal.

Yet the *Privy* Seal is ſometimes uſed in Matters of leſs conſequence, which don't require the Great Seal. See SEAL.

Lord PRIVY *Seal*, is the fifth great Officer of the Crown; thro' whoſe hands paſs Charters and Grants of the King, and all Pardons ſign'd by him, before they come to the Great Seal: alſo Matters of leſs moment, which don't paſs the Great Seal, *v.gr.* for Payments of Money, *&c.*

He is a Lord by Office, and a Member of the *Privy* Council; he was antiently chief Judge of the Court of Requeſts. See PRIVY *Seal*.

PRIVY *Chamber*. See CHAMBER.

PRO *Confeſſo*, in Law: when, upon a Bill exhibited in Chancery, the Defendant appears, and is in Contempt for not anſwering, and in Cuſtody; upon a *Habeas Corpus*, (which is granted by Order) to bring him to the Bar, the Court aſſigns him a Day to anſwer; which being expir'd, and no Anſwer put in, a ſecond *Habeas Corpus* is granted, and a farther Day aſſign'd: by which Day, if he anſwer not, the Bill, upon the Plaintiff's Motion, ſhall be taken *pro confeſſo*, unleſs Cauſe be ſhew'd by a Day, which the Court uſually gives; and for want of ſuch Cauſe ſhew'd, upon Motion, the Subſtance of the Plaintiff's Bill ſhall be decreed, as if it had been confeſs'd by the Defendant's Anſwer: or, after a fourth inſufficient Anſwer made to the Bill, the Matter of Fact not ſufficiently anſwer'd unto, ſhall be taken *pro confeſſo*.

PRO *Indiviſo*, in Law, a Poſſeſſion, or Occupation of Lands, or Tenements, belonging to two or more Perſons; whereof none can ſay which is his ſeveral Portion; each having the whole, *&c.* as Co-parceners before Partition. See POUR-*Party* and PARTITION.

PROBABILISTS, a Sect, or Diviſion, among the *Romaniſts*, who adhere to the Doctrine of *probable Opinions*; holding, that a Man is not always obliged to take the more probable ſide, but may take the leſs probable, if it be but barely probable. See PROBABLE.

The *Jeſuits* and *Moliniſts* are ſtrenuous *Probabiliſts*. See JESUIT, *&c.*

Thoſe who oppoſe this Doctrine, and aſſert, That we are obliged, on pain of Sinning, always to take the more probable ſide, are call'd *Probabilioriſts*.

The *Janſeniſts*, and particularly the *Port-Royaliſts*, are *Probabilioriſts*. See JANSENIST, *&c.*

PROBABILITY, in Reaſoning, a *Veriſimilitude*; or an Appearance of Truth. See TRUTH.

To define it Philoſophically, *Probability* is the appearance of the Agreement or Diſagreement of two things by the Intervention of Proofs, whoſe connection is not fixed or immutable, or is not perceived to be ſo; but is, or appears, for the moſt part, to be ſo; ſo as to ſuffice to induce the Mind to judge the Propoſition to be true or falſe, rather than the contrary. See EVIDENCE.

That Propoſition, then, is *probable*, for which there are Arguments and Proofs to make it paſs, or be received for true. See PROBABLE.

The entertainment the Mind gives to this ſort of Propoſitions, is call'd *Belief*, *Aſſent*, or *Opinion*. See FAITH.

Probability, then, being to ſupply the defect of our Knowledge, is always converſant about Propoſitions, whereof we have no certainty, but only ſome Inducements to receive them for true. See OPINION.

According to *Ariſtotle*, a Propoſition is *probable*, if it ſeems true to all, or moſt People, and thoſe the wiſer, and more reputable Sort. But by *ſeems*, he means, what, after a cloſe Inquiry, ſhall ſeem to be true.

Of *Probability* there are various Degrees, from the Confines of Certainty and Demonſtration, down thro' Improbability and Unlikelineſs, to the Confines of Impoſſibility; and alſo Degrees of Aſſent from certain Knowledge, and, what is next to it, full Aſſurance and Confidence, quite down to Conjecture, Doubt, Diſtruſt, and Diſbelief.

The grounds of *Probability*, are, in ſhort, theſe two following, *viz.* the Conformity of any thing with our own Knowledge, Experience, or Obſervation, call'd *internal Probability*; and the Teſtimony of others, vouching their Obſervation or Experience, call'd *external Probability*. See CREDIBILITY.

PROBABILITY, in Poetry, the appearance of Truth in the Fable, or Action, of a Poem. See ACTION and FABLE.

There are four Kinds of Actions: For a thing may be either only true, or only probable; or true and probable at the ſame time; or neither the one nor the other. See ACTION.

Theſe four Kinds of Actions are ſhared between four Arts: Hiſtory takes the firſt, ſtill keeping to Truth, without regard to *Probability*. See HISTORY.

Epic and Dramatic Poetry have the ſecond; and ſtill prefer *Probability*, tho' falſe, to an *Improbability*, tho' true: Thus the death of *Dido*, who kills herſelf on her being deſerted by *Æneas*, tho' falſe in itſelf, is a fitter Subject for a Poem, than the Action of *Sampſon*, or the Maid of *Orleans*.

Moral Philoſophy takes the third; and the Fabuliſts, as *Æſop*, &c. the fourth. See FABLE.

Boſſu adds, that the *Epopea* in its Nature and Eſſence, uſes Truth and *Probability* like Morality; yet in its Circumſtances and Expreſſions takes a liberty like that of *Æſop*: Inſtances of each we have in the *Æneid*.

Poetical Probability may be ſo either in reſpect of the Rules of Theology, of Morality, Nature, Reaſon, Experience, or Opinion.

As to the Theology, there is ſcarce any thing but is probable, in reſpect hereof; becauſe nothing is impoſſible to God. This is an Expedient they have frequent recourſe to, in order to bring things feign'd contrary to the Order of Nature, within the bounds of *Probability*. See this conſider'd under the Article MACHINE.

As to *Morality*, we have obſerved, it requires both Truth and Veriſimilitude: An antient Poet was condemn'd on the Theatre for a ſlip herein; *viz.* for making a Perſon, whom he repreſented as an honeſt Man, ſay, that *tho' his Tongue ſwore, his Mind did not.*

Seneca accuſes *Virgil* of an Offence againſt *Natural Probability*, in ſaying, that the Winds were pent up in Caves; for, ſays that Philoſopher, Wind being only Air in Motion, to ſuppoſe it at Reſt, is to deſtroy its Nature. To which *Voſſius* anſwers, that the Poet only ſpeaks of the natural Origin of Winds; which are produced in Mountains by Vapours, *&c.* pent there: Juſt as we ſhould ſay, the Winds are encloſed in an *Æolipile*.

Virgil, likewiſe, committed an Offence againſt *Natural Probability*, by making *Æneas* find Deer in *Africa*; becauſe that Country produces none.

Indeed theſe Faults are excuſable, becauſe, as *Ariſtotle* finely obſerves, they are not Faults in the Poet's Art, but ariſe from his Ignorance of ſomething taught in the other Arts.

However, care muſt be taken they ben't too groſs; there being ſome *Probabilities* of this kind, which *Æſop* himſelf could not diſpenſe withal: He would never be forgiven, were he to repreſent a Lion fearful, a Hare daring, a Fox ſtupid, *&c.*

Probability, in reſpect of *Reaſon*, is frequently broke in upon by thoſe who affect nothing but the *Merveilleux*: Here *Statius* is a notorious Criminal: *Tideus* being ſurpriz'd in an Ambuſcade by fifty Bravoes, who had vow'd his death; kills forty-nine of 'em, and pardons the laſt.

Again, two young Kings, whereof this ſame *Tideus* was one, the other *Polynices*, upon a Quarrel, go together by the ears; and box it out; their Swords all the while by their ſides. *Scrutatur & intima Vultus, unca manus, penituſq; oculis cedentibus inſtat.*

Scaliger accuſes *Homer* of an Offence againſt *Experience*; in ſaying, that *Jupiter thunder'd and ſnow'd at the ſame time.* This, ſays the Critic, was never known; and yet have there been Inſtances hereof even in our time.

But the principal and moſt important Kind of *Probability*, is that in reſpect of *common Opinion.* A thing is probable when it looks like Truth: But, ſometimes, it ſhall appear true to the People, and falſe to the Learned; and *vice verſa.* When, then, the Learned and the People are divided, to which ſide muſt the Poet adhere? Suppoſe, for inſtance, the Adventure of *Penelope*, the Hiſtory of *Medea*, *Helena*, or the like: What *Virgil* and *Homer* have wrote of 'em ſhall appear probable to the Populace; yet the Learned read the contrary in Hiſtory; ſome Authors having wrote that *Dido* was chaſte, and *Medea* innocent; that *Penelope* was divorced and baniſhed by *Ulyſſes* for abuſing his Abſence; and that *Helena* never ſaw *Troy*.

This Point is ſoon decided: *Homer* and *Virgil* make no ſcruple of leaving Hiſtory, to improve their Fables: *Horace* does not ſend the Poets to the Truths of Hiſtory; but either to Fables already invented, or to common Fame.

All which is confirmed by *Ariſtotle*; where he ſays, that a Poet does not tell, like an Hiſtorian, what kind of Perſon *Alcibiades* was, nor what he really did or ſaid on this or that Occaſion; but what he probably might have done or ſaid. Add to this, that *Ariſtotle* approves of the Fable of *Oedipus*, and *Iphigenia*; tho' it can never be imagined the truth of thoſe Stories was believed by the Learned in thoſe days.

In effect, every one finds his Account in this Conduct: The People think they ſee Truth; and the Learned do really ſee Truths, and more ſolid ones too, than thoſe the People look for; and more ſure than thoſe of the Hiſtory which the Poet neglects. The more underſtanding they are, the leſs will they deſire theſe hiſtorical Truths in a Poem, which is intended for other and deeper Ends. The Truths they require, are Moral and Allegorical Truths. The *Æneid* was not wrote to teach us the Hiſtory of *Dido*, but to ſhew, under that Name, the Genius and Conduct of the Republic founded by her, and the Source and Series of its differences with *Rome*. This we ſee with pleaſure; and theſe Truths are more agreeable, more conſtant and notorious than any the Poet could take from a Hiſtory, ſo little known in his time.

To theſe kinds of *Probability*, may be added another; which we call an *Accidental Probability:* It conſiſts, not in the uſing of ſeveral Incidents, each probable a-part; but in diſpoſing 'em ſo as to hang probably together.

A Man, *e.gr.* may probably die of an Apoplexy; but that this ſhould happen juſt in the nick, when the Poet wanted it for an unravelling, is highly *improbable.*

'Tis

'Tis an Offence againſt this kind of *Probability* to produce an Incident all at once, and without any preparation, which yet needed one. *Virgil* is wonderfully exact in this Point: *Juno* prepares the Tempeſt rais'd in the firſt Book; *Venus* in the ſame Book prepares the Amours of the fourth. The Death of *Dido* in the end of the fourth is prepared on the firſt day of Marriage; *Helenus* in the third diſpoſes the whole Matter of the ſixth; and in the ſixth, the *Sybil* predicts all the Wars that follow.

PROBABLE *Opinion*, a Term long time controverted among the *Romiſh* Caſuiſts.

It is uſually defined an Opinion founded on a grave Motive, or an apparently good Foundation; and which has Authority enough on its ſide to perſuade a wiſe, diſintereſted Perſon. See PROBABILITY.

Others define a *probable Opinion* to be that, which, being compared to the contrary Opinion, becomes Problematic, by a perfect Equality of the Reaſons on each ſide; ſo that there is nothing in Reaſon or Nature to determine a Man to this rather than that.

But the Jeſuits go ſtill farther, and maintain, that to render an *Opinion probable*, it ſuffices that it be either built on a Reaſon of ſome Conſequence, or on the Authority of ſome one grave Doctor. With theſe Qualifications it is allowable to follow it, even tho it be leſs *probable* and leſs ſure than the contrary Opinion. Here it is the Venom of *Probability* lies.

The Doctrine of *probable Opinions* is attack'd with infinite Addreſs by M. *Paſchal* in the *Provincial* Letters.

One of the twenty-four Patriarchs of the Jeſuits, *Caſtro Palaio*, aſſerts, that a Judge, in a Queſtion of Right, may give Sentence according to a *probable Opinion*, againſt a more *probable* one; and this, contrary to the Judgment and Perſuaſion of his own Mind; *imo contra propriam Opinionem*. Eſcobar, Tr. 6. ex. 6. n. 45.

So *Vaſquez* maintains, that it is lawful to follow the leſs *probable* and leſs ſecure *Opinion*, diſcarding the more *probable* and more ſecure one.

Leſſius and *Eſcobar* treating of the Queſtion, Whether a Man may kill another for giving him a Box on the Ear; decide it to be a *probable Opinion*, and ſpeculatively true; tho' there may be ſome inconveniencies in the practice, for which it would be as well to let it alone. *In praxi tutam & probabilem, judicarunt—ſed non facile admittendam.* Let. Provinciales, p. 307, 308.

PROBATE, of a *Will* or *Teſtament*, in Law, is the exhibiting and proving a Will and Teſtament, before the Eccleſiaſtical Judges delegated by the Biſhop who is Ordinary of the Place where the Party dies. See WILL and TESTAMENT.

The Ordinary is known by the Quantity of Goods the Deceaſed hath out of the Dioceſe wherein he departed; for if all his Goods be in the ſame Dioceſe, then the Biſhop of the Dioceſe, or the Archdeacon, according as their Compoſition leads, has the *Probate* of the Teſtament. If the Goods be diſperſed in ſeveral Dioceſes, ſo that there be any Sum of Note, as five Pounds, out of the Dioceſe where the Party liv'd; then is the Archbiſhop of *Canterbury* the Ordinary by *Prerogative*. See PREROGATIVE.

This *Probate* may be made two ways; either in common Form, or *per Teſtes*.

The Proof in common Form is only by the Oath of the Executor, or Party exhibiting the Will, who ſwears upon his Belief, that the Will exhibited by him, is the laſt Will and Teſtament of the Deceaſed. See EXECUTOR.

The Proof *per Teſtes, by Witneſſes*, is, when over and beſides his own Oath, he alſo produceth Witneſſes, or makes other Proof to confirm the ſame; and that in the Preſence of ſuch as may pretend ſome Intereſt in the Goods of the Deceaſed; or at leaſt in their Abſence, after they have been lawfully ſummoned to ſee ſuch a Will proved, if they think fit.

The latter Courſe is commonly taken when there is fear of Striſe or Diſpute about the Deceaſed's Goods: For ſome hold, that a Will proved in common Form only, may be call'd in queſtion any time within thirty Years after.

Where a Will diſpoſeth of Lands, and Tenements of Freehold, it is now frequently proved by Witneſſes in Chancery.

PROBATION, in a Monaſtic Senſe, a Time of Trial; or the Year of Noviciate, which a Religious muſt paſs in a Convent to prove his Virtue, and Vocation, and whether he can bear the Severities of the Rule. See NOVICIATE.

The Year of *Probation* commences from the Day of Novices taking the Habit.

PROBATION, in the Univerſities, is the Examination and Trial of a Student who is about to take his Degrees. See DEGREE.

PROBATIONER, in the Presbyterian Diſcipline, a Perſon licenſed by a Presbytery to preach; which is uſually done a Year before he be ordain'd. See PRESBYTERY.

A Student in Divinity is not admitted *Probationer* till after ſeveral Trials: The firſt, private, before a Presbytery; the ſecond public, before a Congregation; the Preſbytery being preſent.

The private Trials are a Homily and Exegeſis; *i.e.* a Theological Subject is given into the Presbytery in Theſes, and the Candidate anſwers any Objections ſtarted againſt it.

The public Trials are a popular Sermon, and an Exerciſe and Addition; *i.e.* a Text is handled, half an Hour, Logically and Critically; and half an Hour more, Practically.

If he acquit himſelf to the Satisfaction of the Presbytery, he ſigns the Confeſſion of Faith, owns the Presbyterian Government, *&c.* Upon which he receives a Licence to preach.

PROBATOR, in Law, an Accuſer, or one who undertakes to prove a Crime charged upon another; properly an Accomplice in the Crime.

PROBATUM EST, *q. d.* it is approved; a Term frequently ſubjoin'd to a Receipt, for the Cure of ſome Diſeaſe. See RECIPE.

PROBE, a Surgeon's Inſtrument, to ſound and examine the Circumſtances of Wounds, Ulcers, and other Cavities. See SPECULUM.

PROBLEM, PROBLEMA, in Logic, a doubtful Queſtion; or a Propoſition that neither appears abſolutely true, nor falſe, but which is probable on both ſides, and may be aſſerted either in the Negative or Affirmative, with equal Evidence.

Thus, that the Moon and the Planets are inhabited by Animals in ſome reſpect like us, is a *Problem*: That the fixed Stars are all Suns, and each the Centre of a ſeveral Syſtem of Planets and Comets, is a *Problem*. See PLANET, STAR, *&c.*

The Word is originally *Greek*, πρόβλημα, ſignifying the ſame thing.

PROBLEM is alſo a Propoſition expreſſing ſome natural Effect, propoſed in order to a diſcovery of its apparent Cauſe. Such are the *Problems* of *Ariſtotle*.

A Logical or Dialectical *Problem*, ſay the Schoolmen, conſiſts of two Parts; a Subject, or Subject Matter about which the Doubt is raiſed; and a Predicate or Attribute, which is the thing doubted whether it be true of the Subject or not. See SUBJECT and PREDICATE.

There are four Topical Predicates, *viz. Genus, Definitio, Proprium*, and *Accidens*; whence ariſe four different kinds of dialectical *Problems*.

The firſt, when the thing attributed to the Subject is in the relation of a Genus: As, whether Fire be an Element or not. See GENUS.

The ſecond, when the thing attributed has the Effect of a Definition: As, when it is ask'd, Whether or no Rhetoric be the Art of Speaking? See DEFINITION.

The third, when the Attribute imports a Propriety: As, Whether it belong to Juſtice to give every one their Due? See PROPER.

The laſt is when the thing attributed is adventitious: As, Whether Juſtice is to be deſired? See ACCIDENT.

Problems, again, may be divided into thoſe relating to things to be done, or avoided, call'd *Ethical*; thoſe relating to the Knowledge of Nature, call'd *Phyſical*; thoſe relating to Spirits, call'd *Metaphyſical Problems*, &c.

PROBLEM, in Geometry, a Propoſition wherein ſome Operation, or Conſtruction is required; as, to divide a Line, to conſtruct an Angle, to draw a Circle thro' three Points not in a right Line, *&c.* See PROPOSITION.

Meſſieurs of the *Port-Royal* define a *Geometrical Problem*, a Propoſition given to be demonſtrated, wherein ſomething is required to be done; and what is done, to be proved to be the thing required.

A *Problem*, according to *Wolfius*, conſiſts of three Parts. The Propoſition, which expreſſes what is to be done. See PROPOSITION.

The Reſolution, or Solution, wherein the ſeveral Steps whereby the thing required is to be effected, are orderly rehearſed. See RESOLUTION.

The Demonſtration, wherein is ſhewn that by doing the ſeveral things preſcribed in the Reſolution, the thing required is obtain'd.

Accordingly, the general Tenor of all *Problems* is this: The things preſcribed in the Reſolution being done; the thing required, is done. See DEMONSTRATION.

PROBLEM, in Algebra, is a Queſtion, or Propoſition which requires ſome unknown Truth to be inveſtigated, or diſcovered; and the Truth of the Diſcovery demonſtrated.

In this ſenſe 'tis a *Problem* to find a Theorem. See THEOREM. See alſo INVESTIGATION.

Algebra is defined to be the Art of Reſolving all *Problems* that are reſolvable. See ALGEBRA.

Kepler's PROBLEM, in Aſtronomy, is the determining of a Planet's Place from the Time. See PLANET.

It took its Name from *Kepler*, who firſt propos'd it.

The *Problem*, ſtated in form, ſtands thus: To find the Poſition of a right Line, which paſſing thro one of the Foci of an Ellipſis, ſhall cut off an Area deſcrib'd by its Motion which ſhall be in any given Proportion to the whole Area of the Ellipſis.

The Propoſer knew no way of ſolving the *Problem* directly, and geometrically; and therefore had recourſe to an indirect Method; for which he was tax'd with an ἀγεωμετρησία, or want of Geometry; and his Aſtronomy charged with not being Geometrical. But the *Problem* has ſince been ſolved directly and geometrically ſeveral ways, by ſeveral Authors; particularly Sir *Iſ. Newton*, Dr. *Keill*, &c. See PLANET, PLACE, &c.

Deliac PROBLEM, in Geometry, is the doubling of a Cube. See CUBE, &c.

This *Problem* was ſo call'd from the People of *Delos*, who, upon conſulting the Oracle for a Remedy againſt a Plague they were then infeſted with, were anſwer'd, that the Plague ſhould ceaſe, when *Apollo*'s Altar, which was in form of a Cube, ſhould be doubled. See DUPLICATURE.

This *Problem* coincides with that for finding two mean Proportionals between two given Lines; whence that, alſo, is call'd the *Deliac Problem*. See PROPORTIONAL.

PROBLEMATICAL *Reſolution*, in Algebra, a Method of ſolving difficult Queſtions by certain Rules, call'd *Canons*. See SOLUTION and CANON.

PROBOSCIS, in Natural Hiſtory, the *Trunk*, or Snout of an Elephant; and ſome other Animals. See TRUNK.

The *Proboſcis* is a Member iſſuing out of the middle of the Forehead, ſerving inſtead of a Hand; and having a little Appendix faſten'd to the end thereof, in form of a Finger.

By the *Proboſcis*, the She-Elephant ſucks herſelf; and by the ſame, conveys the Milk to her Young.

The *Proboſcis*, Mr. *Derham* obſerves, is a Member ſo admirably contrived, ſo curiouſly wrought, and with ſo great agility apply'd by that unwieldy Animal; that it may paſs as an Inſtance of the Creator's Skill, &c.

All Quadrupeds have the length of their Neck equal to that of their Feet; the Elephant alone excepted; in whom the Shortneſs of the Neck is compenſated by the Length of the *Proboſcis*.

The Cameleon has alſo a kind of Trunk or *Proboſcis*, which is its Tongue; and which it darts nimbly out of its Throat, as if it ſpat it; and draws it in again inſtantaneouſly. It ſerves like the Elephant's Trunk, to lay hold on, and take in its Food. See CAMELEON.

The Microſcope ſhews us a little Trunk in Flies, and Gnats; by means whereof, they ſuck the Blood of Animals, or Liquors, for their Food.

The Word is *Greek*, προβοσκις, where it has the ſame Signification.

PROCATARCTIC *Cauſe*, the original or pre-exiſtent Cauſe of an Effect. See CAUSE.

Such, *e. gr.* is a Diſeaſe which co-operates with ſome other Diſeaſe, ſubſequent thereto.

Thus, Anger, or Heat of Climate, bring on ſuch a Diſpoſition of the Juices, as occaſions a Fever; where the ill Diſpoſition is the immediate Cauſe, and the Heat or Anger, the *Procatarctic* Cauſe.

The Word is form'd from the *Greek* προκατάρχω, *antigredior*, I go before.

PROCEDENDO, in Law, a Writ whereby a Plea or Cauſe, formerly call'd from a baſe Court to the Chancery, King's Bench, or Common Pleas, by Writ of Privilege or *Certiorari*, is releas'd, and return'd to the other Court to be *proceeded* in; upon its appearing that the Defendant has no Cauſe of Privilege, or that the Matter comprized in the Party's Allegation is not well proved.

PROCEDURE, in Law, the Courſe of the ſeveral Acts, Expeditions, and Inſtructions of a Proceſs, or Law-Suit. See PROCESS.

A *Procedure* is either Civil or Criminal: *Civil Procedure*, is that where the Eſtate alone is concern'd: *Criminal* or *extraordinary Procedure*, is that where the Perſon is proſecuted.

PROCEED, among Merchants, that which ariſes from a Thing. In this ſenſe they ſay, the *neat Proceed*.

PROCELEUSMATICUS, in the antient Poetry, a Foot conſiſting of four Syllables; as *Honorius*. See FOOT.

PROCESS, in Law, in its general Senſe, is uſed for all the Proceedings in any Cauſe, or Action real or perſonal, civil or criminal, from the original Writ, to the end. See ACTION.

In *France*, they carry on a formal *Proceſs* againſt the Memory of People kill'd in Duels; or that have murder'd themſelves.

Pyrates, when taken in the Fact, are hang'd without any *Proceſs*; as are ſometimes alſo Robbers.

PROCESS, is alſo uſed in a more reſtrain'd ſenſe, for that by which a Man is firſt call'd into Court; this being the beginning or principal part, and that by which the reſt of the Buſineſs is directed.

The Difference between this *Proceſs*, and a *Precept* or *Warrant* of the Juſtices, is this; the Precept or Warrant is only to attach or convene the Party, before any Indictment or Conviction, and may be made either in the Name of the King, or the Juſtice: But the *Proceſs* is always in the King's Name, and uſually after an Indictment. See PRECEPT.

PROCESS, in Chymiſtry, the whole Courſe of an Operation or Experiment. See OPERATION and EXPERIMENT.

PROCESS, PROCESSUS, in Anatomy, is a Term of equal Import with *Apophyſis*, *Prominence*, *Protuberance*, and *Production*; which ſee.

Proceſs is particularly apply'd to certain Eminences of the Bones, and other Parts; diſtinguiſh'd by peculiar Names, expreſſing their Place, Form, or the like: As, *Proceſſus Peritonæi*, *Proceſſus Vermiformes*, *Proceſſus Papillares*, *Ciliares*, &c. See BONE, VERMIFORMES, PAPILLARES, CILIARES, PERITONÆUM, &c.

PROCESSION, in Theology, a Term uſed for the manner wherein the Holy Spirit is conceiv'd to iſſue from the Father and the Son, in the Myſtery of the Trinity. See SPIRIT, TRINITY, PERSON, &c.

The *Greeks* and *Latins* are not agreed about the *Proceſſion* of the Holy Spirit. See GREEK.

PROCESSION, is alſo a Ceremony in the *Romiſh* Church, conſiſting in a formal March of the Clergy in their Robes, and the People after them, putting up Prayers, ſinging Hymns, &c. and in this manner, making a Viſit to ſome Church, or other holy Place.

There are general *Proceſſions* of all the People in Jubilees, and in publick Neceſſities. See JUBILEE.

The *Proceſſions* of the Holy Sacrament are very ſolemn.

They have alſo *Proceſſions*, frequently, a-round the Church, at the Salutations, &c. in the Maſs.

Antiently, among us, there were, in each Pariſh, cuſtomary *Proceſſions* of the Pariſh-Prieſt, and the Patron of the Church, with the chief Flag, or holy Banner, attended by the other Pariſhioners, each Aſcenſion-Week; to take a Circuit round the Limits of the Pariſh, and pray for a Bleſſing on the Fruits of the Earth. Of which Cuſtom there ſtill remains a Shadow in that annual Perambulation, ſtill call'd *Proceſſioning*; tho' the Order, and Devotion of the antient *Proceſſions*, be almoſt loſt.

PROCESSUM *Continuendo*, a Writ for the Continuance of a *Proceſs*, after the Death of the Chief Juſtice, or other Juſtices in the Writ or Commiſſion of Oyer and Terminer. *Regiſter of Writs*.

PROCHEIN *Amy*, in Law, the Perſon next a-kin to a Child in Nonage; and who, in that reſpect, is allow'd in Law to deal and negotiate for him, to manage his Affairs, to ſee him redreſs'd of any Wrong, and to be his Guardian, if he hold in Socage.

By Statute of *Weſtminſter*, the proſecution of any Action at Law, is by the Guardian, if the Plaintiff be an Infant; and by the *Prochein Amy*, *Proximum Amicum*, if the Infant be Defendant. See GUARDIAN.

PROCIDENTIA, or PROLAPSUS *Ani*, in Medicine, is when upon a Diſcharge by Stool, the *Inteſtinum Rectum* is protruded ſo far, as that it cannot be drawn back again into the Body; or when drawn back, falls again. See RECTUM.

This is ſometimes a Chronic Diſeaſe, eſpecially when it ariſes from a Palſy: Its Cauſes are a Relaxation of the Fibres of the Rectum, either from the Adſtriction of the Alvus, a Diarrhæa, Dyſentery, or Teneſmus.

'Tis very difficultly cured, when attended with Hæmorrhoids: The principal Cure is by Aſtringents.

External Aſſiſtance is requir'd to reduce the fallen Gut; which, if it be not ſoon had, is apt to tumefy and mortify, by the Contact of the Air.

'Tis ſubject to relapſe after Reduction in Children, eſpecially, upon violent Crying; and is difficult to keep up, in caſe of a Diarrhæa.

PROCIDENTIA *Uteri*, the Deſcent, or falling down of the Womb; from a Relaxation of the Ligaments, which hold it in its place. See UTERUS.

If the Uterus fall into the Vagina, ſo that its Orifice may be either perceiv'd with the Finger within, or by the Eye juſt without, the *Labia Vulvæ*; it is call'd a *bearing down* of the Womb.——If it fall quite down, ſo as to hang pendulous without the *Labia*, but ſo as that no more of the Inſide than the Orifice is ſeen, it is call'd a *Prolapſus*, or *Procidentia*.——If, falling thus low, it be turn'd inſide out, and hang like a fleſhy Bag, with a rugged unequal Surface, it is call'd a *Perverſio Uteri*.

Theſe Diſorders may proceed from violent Motions, vehement Coughing, Sneezing, *Fluor Albus*. They appear moſt frequent in Women with Child, from the Weight preſſing

preſſing and bearing hard upon the Uterus; but eſpecially if the Fœtus be dead, lie in a wrong poſture, or be violently extracted.

After replacing the part, Reſtringents both inwardly, and by Injection, are here uſed; ſuch as obtain in Diarrhæas, Hæmorrhoids, the Gonorrhæa Simplex, &c.

PROCIDENTIA, or PROLAPSUS, *Uvulæ*; the Deſcent or Relaxation of the Uvula, or Almonds of the Ears. See UVULA.

PROCLAMATION, an Inſtrument diſpatch'd by the King, with the Advice of his Privy Council; whereby the People are advertis'd of ſomething, which his Majeſty thinks fit for them to know; and whereby they are ſometimes requir'd to do, or not to do certain Things. See KING and PRIVY *Council*.

Proclamations have the Force of Laws; but then they are ſuppos'd to be conſiſtent with the Laws already in being; otherwiſe they are ſuperſeded: *Proclamare eſt palam & alte clamare.*

PROCLAMATION is alſo uſed for a ſolemn Denunciation, or Declaration of War or Peace. See WAR, &c.

PROCLAMATION is alſo the Act of notifying to the People the Acceſſion of a Prince to the Crown. See ACCESSION.

The *Proclamation* does not inveſt the Prince with the Regal Authority; it ſuppoſes him already inveſted therewith; and only gives notice thereof to the People.

PROCLAMATION *of a Fine*, is a Notice openly and ſolemnly given thereof at all the Aſſizes held in the County within one Year after the Ingroſſing it. See FINE.

Theſe *Proclamations* are made on Tranſcripts of the Fine, ſent by Juſtices of the Common Pleas, to the Juſtices of Aſſize, and of the Peace.

PROCLAMATION, in the Monaſtic Senſe, is the Accuſation of a Friar or Brother, by another Brother, in open Chapter, and in preſence of the Superior and Community, for ſome external Crime he has ſeen him commit.

PROCONDYLI, among Anatomiſts, the Bones of the Fingers next the Back of the Hand. See FINGER.

PROCONSUL, a *Roman* Magiſtrate; ſent to govern a Province with a Conſular Authority. See CONSUL and PROVINCE.

The *Proconſuls* were appointed out of the Body of the Senate; and ordinarily, as the Year of any one's Conſulate expir'd, he was ſent *Proconſul* into ſome Province.

The *Proconſuls* had the ſame Honours, &c. with the Conſuls themſelves; except that they had only ſix Lictors, and Faſces before them.

The *Proconſuls* did not ordinarily hear and determine Proceſſes in perſon, but had that Office perform'd by their Aſſeſſors, or other Judges, conſtituted or delegated by them.

As the *Proconſuls* had the Direction both of Juſtice, of War, and of the Revenues; they had their ſeveral Lieutenants in each Capacity: Theſe were call'd *Legati*, and were ordinarily nominated by the Senate.

The *Proconſular* Function only held a Year: The Charges of their Journey backwards and forwards, was bore by the Publick; and was call'd *Viaticum*. See VIATICUM.

After the Partition of the Provinces between *Auguſtus* and the People; thoſe who preſided over the Provinces of the People, were call'd ſpecially *Proconſuls*.

In our antient Law-Books, *Proconſul* is uſed for a *Juſtice in Eyre*, or *Juſtice Errant*. See JUSTICE.

PROCREATION, the Action of begetting, and bringing forth Children. See GENERATION.

PROCTOR, PROCURATOR, a Perſon commiſſion'd to act as Proxy, or Delegate, in behalf of another. See PROCURATOR.

PROCTOR, *Procurator*, in the Civil Law, is an Officer appointed to appear in Court, and manage the Cauſes of Parties, who will make uſe of his Procuration. See CIVIL *Law*.

Antiently, every body was oblig'd to appear in perſon; and when the Affair happen'd to be drawn out to a great length, was allow'd to create a *Proctor*, or Proxy, in his Cauſe.

But this was a Favour only granted for a certain Time; till towards the middle of the 16th Century, when it was decreed, that all Procuration ſhould hold till revoked.

PROCTORS *of the Commons*, are Perſons ſkill'd in the Civil Law, and the Practice of Doctors Commons; who exhibit their Proxies, and make themſelves Parties for their Clients, to draw up Acts and Pleadings, produce Witneſſes, prepare Cauſes for Sentences, and attend the Advocates with the Proceedings.

They are 34 in Number; are admitted by the Archbiſhop's *Fiat*; and wear black Robes, and Hoods lined with white Furs. See DOCTORS *Commons*.

PROCTORS *of the Clergy*, are Deputies, or Repreſentatives, choſe by the Clergy of each Dioceſs, two for each; and by the Cathedral and Collegiate Churches, one for each, to ſit in the Lower Houſe of Convocation. See CONVOCATION.

PROCTORS *in the Univerſity*, are two Officers, choſe from among the Students, to ſee good Orders, and Exerciſes daily perform'd there. See UNIVERSITY.

PROCUMBENT *Leaves*, in Botany, ſuch Leaves of Plants as lie flat, or trailing on the Ground. See LEAVES.

PROCURACY. See PROCURATOR.

PROCURATION, an Act whereby a Perſon is impowered to act, treat, receive, &c. in a Perſon's Name, as if he himſelf were actually preſent. See PROCURATOR.

When a Man treats in behalf of another, the firſt thing is to examine his *Procuration*.

The Word is now little uſed in this ſenſe, except in the Caſe of a Perſon who collects the Fruits of a Benefice for another.

PROCURATION, or *Proxy*, in the Canon Law, is uſed for the Repaſt or Entertainment antiently given to Church-Officers or Ordinaries, who came to viſit in Churches or Monaſteries; whether they were Biſhops, Arch-deacons, or Viſitors.

Procuration was due to the Pope's Legates, and even to Popes themſelves, when they came into *France*; and the Charge was comprized in the Bulls then granted.

Complaints were frequently made to the Pope, of the exceſſive Charges of the *Procurations* of Biſhops and Arch-deacons; upon which they were prohibited by ſeveral Councils and Bulls.

That of *Clement* IV. mention'd in the *Monaſticon*, is very expreſs; wherein that Pope tells us, Complaint had been made, that the Arch-deacon of *Richmond*, viſiting the Dioceſe, travel'd with one hundred and three Horſes, twenty one Dogs, and three Hawks; and did ſo grievouſly oppreſs a Religious Houſe with that vaſt Equipage, that he caus'd the Monks to ſpend in an hour, as much as would have maintain'd them a long time. See INDEMNITIES.

PROCURATION, or PRAXYS, is now uſed for a Sum of Money, paid yearly by Pariſh-Prieſts to the Biſhop or Arch-deacon, in lieu of this Entertainment.

PROCURATOR, PROCTOR, PROXY, a Perſon who has a Charge or Office committed to him by another. See PROCURATION.

Thus the *Proxies* of the Lords in Parliament, in our Law-Books, are call'd *Procurators*. See PROXY.

The Word is alſo uſed for a Vicar or Lieutenant; thus, in *Petrus Bleſſenſis*, we read of a *Procurator Regni*.

Thoſe who manage Cauſes in Doctors Commons, are alſo call'd *Procurators*, or *Proctors*. See PROCTOR.

The Biſhops are ſometimes call'd *Procuratores Eccleſiarum*; and the Repreſentatives ſent by the Clergy to Convocation, *Procuratores Cleri*. See CONVOCATION.

In our Statutes, a Perſon who gathers the Fruits of a Benefice for another, is particularly call'd *Procurator*; and the Inſtrument impowering him to receive the ſame, *Procuracy*.

PROCURATOR, is alſo a kind of Magiſtrate in ſeveral Cities of *Italy*, who takes care of the publick Intereſts.

There are *Procurators* of St. *Mark*, *Procurators* at *Venice*, at *Genoa*, &c.

Originally there was but one *Procurator* of St. *Mark* at *Venice*: In 1442, the Number was augmented to Nine; when, the Senate made a Decree, appointing, that for the future, none ſhould be admitted to the Dignity, but after the Death of ſome of the Nine. But in the Occaſions of the Republick, the Number was afterwards enlarged to Forty; tho' of theſe, there are only Nine that bear the Title of *Procurators*, and whoſe place is regularly fill'd. They are Adminiſtrators of the Church of St. *Mark*, and of the Revenues attach'd thereto; the Patrons of Orphans, and Executors of Teſtaments.

This Office receives more Luſtre from the Merit of thoſe who diſcharge it, than from its Authority. They are cloathed in Black or Violet, with Ducal Sleeves.

PROCURATOR *Monaſterii*, antiently, was the Advocate of a Religious Houſe, who was to ſollicit the Intereſt, and plead the Cauſes of the Society. See ADVOCATE.

PROCURATORES *Eccleſiæ Parochialis*, are the Church-Wardens, whoſe Office is to act as Proxies and Repreſentatives of the Church. See CHURCH-*Warden*.

PROCURORS. See MALVEIS *Procurors*.

PROCYON, in Aſtronomy, a fixed Star of the ſecond Magnitude, *in Canis Minor*. See CANIS.

PRODES *Homes*, *q. d.* Wiſe Men, in our antient Cuſtoms, a Title given to the Barons, and other military Tenants, who were call'd to the King's Council, and were to give advice according to the beſt of their prudence and knowledge. See THANE, BARON, &c.

PRO-DICTATOR, among the *Romans*, a Magiſtrate who had the Power, and did the Office, of a Dictator. See DICTATOR.

The *Romans* ſometimes created a *Prodictator*, in Caſes where they could not have a Dictator. *Fabius Maximus* was *Prodictator*.

PRODROMUS, προδρομος, literally denotes a Forerunner, a Harbinger: Hence, *Prodromus Morbus*, among

Phyſicians, is uſed for a Diſeaſe which foreruns a greater. Thus a Straitneſs of the Breaſt is a *Prodromus* of a Conſumption, &c. See PHTHISIS.

PRODUCING, in Geometry, denotes the continuing a right Line; or drawing it out farther, till it have any aſſign'd Length. See LINE.

PRODUCT, in Arithmetick and Geometry, the Factum of two Numbers; or the Quantity ariſing from, or produced by, the Multiplication of two or more Numbers, Lines, &c. into one another. See FACTUM.

Thus, if 6 be multiply'd by 8, the *Product* is 48. See MULTIPLICATION.

In Lines it is always (and ſometimes in Numbers) call'd the *Rectangle* between the two Lines, multiply'd by one another. See RECTANGLE.

PRODUCTION, in Anatomy, a Continuation, or Proceſſus. See PROCESS.

PROEDRUS, in Antiquity. See EPISTATES.

PROEM, PROÆMIUM, a Term antiently uſed for *Preface*. See PREFACE.

PROEMPTOSIS, in Aſtronomy, that which makes the New Moons appear a Day later, by means of the Lunar Equation, than they would do without that Equation. See MOON and EQUATION.

PROFANATION, in Religion, the doing of ſomething diſreſpectful to Holy, or Sacred Things. See PROFANE.

PROFANE, a Term uſed in oppoſition to *Holy*, *Sacred*. See SACRED, &c.

Except Churches, and Church-yards, all places are eſteem'd *Profane*.

By the Canon Law, a Sacred Chalice or Cup becomes *Profane*, by giving it a Blow with an Hammer.

PROFANE is alſo apply'd in the general to all Perſons who have not the Sacred Character, and all Things that don't belong to the Service of Religion. In this ſenſe we ſay, *Zenophon*, *Seneca*, &c. are *Profane* Authors. All the Heathen Prieſts, Pontiffs, &c. paſs with us for *Profane*.

PROFER, in Law, the Time appointed for the Accounts of Sheriffs, and other Officers, to be given into the Exchequer; which by Stat. 51 *Hen.* 3. is to be twice in the Year. See SHERIFF and EXCHEQUER.

The Word is form'd of the *French proferer*, to *produce*.

We alſo read of *Profers*, *Anno* 32 *Hen.* 8. in another Acceptation: *Trinity-Term ſhall begin the Monday next after Trinity-Sunday, whenever it ſhall happen to fall, for the keeping of the Eſſoins*, Profers, *Returns, and other Ceremonies heretofore in uſe*. In which place, *Profer* ſignifies the Offer and Endeavour to proceed in an Action, by any Man concern'd ſo to do.

PROFER *the Half Mark*. See HALF *Mark*.

PROFESSED *Monk*, or *Nun*, one who having made the Vow, is admitted of a Religious Order. See VOW, MONK, and RELIGIOUS.

In this ſenſe the Word is uſed in oppoſition to Novice. See NOVICE and PROBATION.

PROFESSION, in the Monaſtic Senſe, the entering into a religious Order; or an Action whereby a Perſon offers himſelf to God, by a Vow of obſerving three things, viz. *Obedience*, *Chaſtity*, and *Poverty*, which he promiſes inviolably to maintain. See VOW, ORDER, &c.

This is call'd *Sanctæ Religionis profeſſio*, and the Perſon a *Religious profeſſed*.

Perſons are not admitted to make *Profeſſion* till after a Year of *Probation*. See PROBATION.

PROFESSOR, in the Univerſities, a Doctor, or Regent, who teaches, or lectures publickly, ſome Art, or Science, in a Chair eſtabliſh'd for that purpoſe. See CHAIR.

The *Profeſſors* in Foreign Univerſities, teach the Arts, and have their Claſſes of Pupils; thoſe in our Univerſities only read publick Lectures in Term-Time. See TERM.

Of *Profeſſors*, we have a great Number; ſome denominated from the Arts they profeſs; as *Caſuiſtical Profeſſor*, *Hebrew Profeſſor*, *Phyſick Profeſſor*, *Divinity Profeſſor*, &c.

Others from thoſe who founded the *Profeſſorſhip*, or aſſign'd a Revenue for the Support of the *Profeſſor*; as the *Savilian Profeſſors* of Aſtronomy and Geometry, the *Lucaſian Profeſſor* of Mathematicks, *Margaret Profeſſor* of Divinity, &c.

PROFILE, in Architecture, the Figure, or Draught of a Building, Fortification, or the like; wherein are expreſs'd the ſeveral Heights, Widths, and Thickneſſes, ſuch as they would appear were the Building cut down, perpendicularly from the Roof to the Foundation; whence the *Profile* is alſo call'd the *Section*, and by *Vitruvius*, *Sciagraphy*. See SECTION, &c.

PROFILE, is ſometimes alſo uſed for a Deſign, or Deſcription; in oppoſition to a Plan, or *Ichnography*.

In which Senſe, *Profiles* coincide with what we popularly call *Proſpects*.

PROFILE is alſo uſed for the Contour, or Out-Line of a Building, or a Member of Architecture; as a Baſe, a Corniche, &c.

Hence *Profiling* is ſometimes uſed for Deſigning, or deſcribing the Member with Rule, Compaſs, &c.

PROFILE, in Sculpture, and Painting. A Head, a Portrait, &c. are ſaid to be in *Profile* when they are repreſented ſide-ways, or in a ſide-view. As, when in a Portrait, there is but one ſide of the Face, one Eye, one Cheek, &c. ſhewn, and nothing of the other.

In almoſt all Medals the Faces are in *Profile*. See MEDAL.

PROFLUVIUM, in Medicine, any kind of Flux, or liquid Evacuation; whence *Profluvium Ventris*, a Flux of the Belly, is a *Diarrhœa*, or *Dyſentery*. See FLUX.

PROFUNDITY, ſee DEPTH.

PROFUNDUS, in Anatomy, a Muſcle, call'd alſo *Perforans*. See PERFORANS.

PROGNOSTIC, PROGNOSIS, in Medicine, a conjectural Judgment of the Event of a Diſeaſe; as, *e. gr.* whether it ſhall end in Life or Death, be long or ſhort, mild or malignant, &c. taken from certain Symptoms thereof. See SIGN and SYMPTOM.

In all continued Fevers, *Morton* tells us, a ſtrong equable Pulſe is a *good Prognoſtic*, and always preſages well, whatever other threatning Symptoms attend it; on the contrary, a quick, feeble, intermitting Pulſe is a *Prognoſtic* of Death, how much ſoever the other Symptoms may flatter. See PULSE.

Hippocrates obſerves, that all Predictions and *Prognoſtics* of acute Diſeaſes are very fallacious; *Diemerbroek*, however adds, that in the Plague of *Nimmeguen*, ſixth day Criſes were conſtantly found fatal *Prognoſtics*; alſo to be infected about the new, or full Moon; Faintings in the beginning of the Diſeaſe, and Palpitations of the Heart, were found deadly *Prognoſtics*; on the contrary, a Pleuriſy, and Suppreſſion of Stool, were good *Prognoſtics*.

The Word comes from the *Greek* προγνοστικον.

PROGNOSTIC of the Weather, ſee WEATHER.

PROGRAMMA, a Letter ſealed with the King's Seal. See SEAL.

PROGRAMMA is alſo a College Term, ſignifying a Billet, or Advertiſement poſted up, or given into the Hand, by way of Invitation to an Oration, or other College Ceremony; containing the Argument, or ſo much as is neceſſary for the underſtanding thereof.

Programma's are ſent to invite People to aſſiſt at Declamations, Dramatic Performances, &c.

PROGRESSION, an orderly advancing, or going forward, in the ſame Manner, Courſe, Tenor, &c.

PROGRESSION, in Mathematics, is either *Arithmetical*, or *Geometrical*.

Arithmetical PROGRESSION, call'd alſo *Arithmetical Proportion*, is a Series of Quantities equidiſtant from each other; *i. e.* either increaſing, or decreaſing by one common Interval or Difference. See SERIES.

Thus 3, 6, 9, 12, 15, 18, &c. make an *Arithmetical Progreſſion*; becauſe increaſing, or differing equally, by 3: Thus alſo 25, 20, 15, 10, and 5, are in *Arithmetical Progreſſion*, decreaſing by a common difference, 5.

In every *Arithmetical Progreſſion*, whether increaſing, or decreaſing, the Sum of the firſt and laſt Term, is equal to the Sum of any two intermediate Terms equidiſtant from the Extremes; as, alſo, if the Number of Terms be uneven to the double of the middle Term.

For Inſtance;

3, 6, 9, 12, 15, 18, 21
12, 9, 6, 3

24, 24, 24, 24

Hence, 1°, we find the Sum of any *Arithmetical Progreſſion* by Multiplying the Sum of the firſt and laſt Term by half the Number of Terms.

2°. Having, therefore, the firſt Term, the Difference, and the Number of Terms given; the Sum of the *Progreſſion* is had by Multiplying the firſt Term by the Number of Terms, and to the Product adding the Product ariſing from the difference multiply'd into the Semi-difference of the Number of Terms from the Square of that ſame Number.

Thus, ſuppoſe the firſt Term 3, the Number of Terms 7, and the difference 3; the Product of 3 and 7 = 21 being added to the Product 63, of the difference 3 multiply'd into the Semi-difference of the Number of Terms 7, from the Square thereof 49, = 21; gives 84, the Sum of the *Progreſſion*.

3°. The Number of Terms leſſen'd by one, being multiply'd by the common Difference, and the firſt Term added to the Product; the Sum is the laſt Term. Thus in a *Progreſſion*

greſſion of 52 Places, where the difference is 3, and the firſt Term 5; 51 being multiply'd by 3, produces 153, to which adding 5, the Sum 158 is the laſt Term required.

4°. If the *Progreſſion* begin with 0, the Sum of all the Terms is equal to half the Product of the laſt Term multiply'd by the Number of Terms.

Whence it follows, that the Sum of a *Progreſſion* beginning from 0, is ſubduple the Sum of ſo many Terms, all equal to the greateſt.

5°. In an *Arithmetical Progreſſion*, as the difference of the Sum of the firſt and laſt Term from double the Sum of the *Progreſſion*, is to the difference of the firſt Term from the laſt; ſo is the Sum of the firſt and laſt Terms to the *Progreſſional* difference.

Geometrical PROGRESSION, is a Series of Quantities increaſing or decreaſing in the ſame Ratio, or Proportion; or a Series of Quantities continually proportional. See PROPORTION.

Thus 1, 2, 4, 8, 16, 32, 64, &c. make a *Geometrical Progreſſion*; or 729, 243, 81, 27, 9, 3, 1.

1°. In every *Geometrical Progreſſion*, the Product of the extreme Terms is equal to the Product of two intermediate Terms equidiſtant from the Extremes; as alſo, if the Number of Terms be uneven, to the Square of the middle Term.

For Example;

3, 6, 12, 24, 48, 96
12, 6, 3

288, 288, 288

2°. If the difference of the firſt and laſt Term of a *Geometrical Progreſſion* be divided by a Number leſs than the Denominator of the Ratio, *i. e.* than the Quotient of a greater Term divided by a leſs; the Quotient will be the Sum of all the Terms except the greateſt: Hence, by adding the greateſt Term, we have the Sum of the whole *Progreſſion*.

Thus, in a *Progreſſion* of 5 Terms, beginning with 3; and the Denominator being likewiſe 3, the greateſt Term will be 243. If then the difference of the firſt and laſt Term 240, be divided by 2, a number leſs by 1 than the Denominator; the Quotient 120 added to 243, gives 363, the Sum of the *Progreſſion*.

Hence, 3°, the firſt, or leaſt term of a *Progreſſion*, is to the Sum of the *Progreſſion*, as the Denominator leſſen'd by 1, to its Power likewiſe leſſen'd by 1; the Exponent of which Power is equal to the number of Terms.

Thus, ſuppoſing the firſt Term 1, the Denominator 2, and the Number of Terms 8; the Sum will be 255.

4°. Hence, alſo, the difference between the laſt Term and the Sum is to the difference between the firſt Term and the Sum, as Unity to the Denominator: Wherefore, if the difference between the firſt Term and the Sum, be divided by the difference between the Sum and the laſt Term, the Quotient is the Denominator.

PROHIBITED *Goods*, in Commerce, ſuch Commodities as are not allow'd to be either imported or exported. See CONTRABAND.

PROHIBITIO *de vaſto directa Parti*, is a Writ judicial, directed to the Tenant, *prohibiting* him from making Waſte upon the Land in controverſy, during the Suit. It is ſometimes directed to the Sheriff.

PROHIBITION, the Act of forbidding, or inhibiting any thing. 'Tis the *Prohibition* of the Law that makes the Sin. A Teſtator frequently bequeaths things with a *Prohibition* to alienate.

PROHIBITION, in Law, is a Writ iſſued to forbid any Court, either Spiritual or Secular, to proceed in a Cauſe there depending; upon ſuggeſtion, that the Cognizance thereof belongeth not to that Court.

It is now uſually taken for that Writ which lieth for one, who is impleaded in the Court Chriſtian for a Cauſe belonging to the Temporal Juriſdiction, or the Cognizance of the King's Court; whereby, as well the Party and his Council, as the Judge himſelf, and the Regiſter, are forbid to proceed any farther in that Cauſe.

PROJECTILE, or PROJECT, in Mechanics, a heavy Body put in Motion by an external Force impreſs'd thereon; or, more fully, a *Projectile* is a heavy Body, which being put into a violent Motion, is diſmiſs'd from the Agent, and left to purſue its Courſe. See MOTION.

Such, *e. gr.* is a Stone thrown out of the Hand or a Sling, an Arrow from a Bow, a Bullet from a Gun, &c. See PROJECTION.

The Cauſe of the Continuation of the Motion of Projectiles, or what it is determines 'em to perſiſt in Motion after the firſt Cauſe ceaſes to act, has puzzled the Philoſophers. See MOTION.

The *Peripatetics* account for it from the Air, which being violently agitated by the Motion of the *projecting* Cauſe, *e. gr.* the Hand and Sling, and forced to follow the *Projectile* while accelerated therein, does, upon the diſmiſſion of the *Projectile*, preſs after it, and protrude it forward; to prevent a Vacuum. See VACUUM.

The Moderns account for the Motion of *Projectiles* on a much more rational and eaſy Principle; it being, in effect, a natural Conſequence from one of the great Laws of Nature, *viz.* That all Bodies being indifferent as to Motion or Reſt, will neceſſarily continue the State they are put into, except ſo far as they are hindred, and forced to change it by ſome new Cauſe. See NATURE.

Thus a *Project* put in Motion, muſt continue to move eternally on in the ſame right Line, and with the ſame Velocity; were it to meet with no Reſiſtance from the Medium, nor had any force of Gravity to encounter.

The Doctrine of the Motion of *Projectiles* is the Foundation of all Gunnery. See GUNNERY.

The Laws thereof are as follow.

Laws of the Motion of PROJECTILES.

1°. If a heavy Body be *projected* perpendicularly, it will continue to aſcend or deſcend perpendicularly: Becauſe, both the *Projecting*, and the Gravitating Force are found in the ſame Line of Direction.

2°. If a heavy Body be *projected* horizontally, it will, in its Motion, deſcribe a Parabola; the Medium being ſuppoſed void of Reſiſtance.

For, the Body is equably impell'd by the impreſſed Force, according to the right Line A R, (Tab. MECHANICS, *Fig.* 46.) and by the Force of Gravity according to the right Line A C, perpendicular thereto. While, then, the Body by the Action of the impreſſed Force is arrived in Q; by the Force of Gravity it will be arrived in Q M; and, therefore will be found in M. But the Motion in the direction A R will ſtill be uniform; (ſee MOTION) and, therefore, the Spaces Q A and *q* A are as the Times; and the Spaces Q M and *q m*, are likewiſe as the Squares of the Times. Therefore, $A Q^2 : A q^2 :: Q M : qm$. That is, P M : *p m* :: A P : *a p*.

The Courſe, or Path, therefore, of a heavy Body *projected* horizontally A M *m*, is a Parabola. See PARABOLA.

Two hundred Years ago, the Philoſophers took the Line deſcribed by a Body *projected* horizontally, *e. gr.* a Bullet out of a Cannon, while the force of the Powder exceeded the Weight of the Bullet conſiderably, to be a right Line; after which it became a Curve.

N. Tartaglia was the firſt who perceiv'd the Miſtake, and maintain'd the Path of the Bullet to be a crooked Line, throughout its whole Extent; but it was *Galileo* who firſt determined the preciſe Curve the Bullet deſcribed; and ſhew'd the Path of the Bullet, *projected* horizontally from an Eminence, to be a Parabola; the Vertex whereof is the Point where the Bullet quits the Cannon.

3°. If a heavy Body be *projected* obliquely, either upwards, or downwards, in a Medium void of Reſiſtance; it will likewiſe deſcribe a Parabola, in a Medium uniformly reſiſting.

Cor. Hence, 1. the Parameter of the Diameter of the Parabola A S (*Fig.* 47.) is a third Proportional to the Space thro' which the Body deſcends in any given Time, and the Celerity, which is defined by the Space paſs'd over in the ſame time; *i. e.* to A P and A Q. 2. Since the Space deſcribed by a Body falling perpendicularly in one Minute, is 15 $\frac{1}{12}$ *Paris* feet in a Second; the Parameter of the Diameter of the Parabola to be deſcribed is found, if the Square of the Space paſs'd over by the *Projectile* with the impreſs'd Force in a Second, be divided by 15 $\frac{1}{12}$. 3. If, then, the Velocity of the *Projectiles* be the ſame, the Spaces deſcribed in the ſame time by the Force impreſs'd, are equal; conſequently the Parameter of the Parabola's paſs'd over by the compound Motion, is the ſame. 4. If from the Parameter of the Diameter be ſubſtracted quadruple the Altitude of A P, the Remainder is the Parameter of the Axis; the fourth part whereof is the diſtance of the Vertex of the Axis from the Focus of the Parabola. Hence the Celerity of the *Projectile* being given, the Parabola deſcribed by the *Projectile* may be laid down on Paper. 5. The Line of Direction of the *Projectile* A R is a Tangent to the Parabola in A.

Sir *Iſ. Newton* ſhews, in his *Principia*, that the Line a *Projectile* deſcribes, approaches nearer to an Hyperbola than a Parabola.

4°. A *Projectile* in equal times deſcribes Portions of its parabolic Path, as A M, A*m*, which are ſubtended by equal Spaces of the Horizon A T, T *t*. *i. e.* in equal times it paſſes over equal horizontal Spaces.

5°. The Quantity, or Amplitude of the Path A B, *i. e.* the Range of the *Projectile* is to the Parameter of the Diameter A S, as the Sine of the Angle of Elevation R A B to its Secant.

Hence, 1. the Semiparameter is to the Amplitude of the Path A B, as the whole Sine to the Sine of double the

Angl

Angle of Elevation. 2. If then the Celerity of two *Projectiles* be the ſame, the Parameter is the ſame. Wherefore, ſince the Semiparameter of the Path, in the one Caſe, is to the Amplitude, as the whole Sine, to the Sine of double the Angle of Elevation; and the Semiparameter of the Path in the other Caſe is to the Amplitude as the whole Sine to the Sine of double the Angle of Elevation: We may ſay farther, as the Amplitude is to the Sine of the Angle of double the Elevation in the one Caſe, ſo is the Amplitude to the Sine of the Angle of double the Elevation in the other Caſe. The Amplitudes, therefore, or Magnitudes of the Paths, are as the Sines of double the Angles of Elevation; the Velocity of the *Projectile* remaining the ſame.

6°. The Celerity of the *Projectile* being the ſame, the Amplitude A B is greateſt, *i. e.* the Range of the *Projectile* is greateſt, at an Angle of Elevation of 45°; and the Amplitudes or Ranges, at Angles of Elevation equally diſtant from 45°, are equal.

This is found by Experiment; and is likewiſe demonſtrable thus: Since the Ratio of the Sine of double the Angle of Elevation to the Amplitude is always the ſame, while the Celerity of the *Projectile* remains the ſame; as the Sine of double the Angle of Elevation increaſes, the Amplitude will increaſe. Wherefore, ſince the Sine of double the Angle of Elevation of 45° is Radius, or the largeſt Sine; the Amplitude, or Range in that Elevation muſt be the greateſt. Again, ſince the Sines of Angles equidiſtant from right Angles; *e.gr.* 80° and 100° are the ſame; and the double Angles muſt be equi-diſtant from a right Angle, if the ſimple ones be ſo: The Amplitudes or Ranges at Elevations equi-diſtant from 45°, muſt be equal.

Hence, ſince as the whole Sine is to the Sine of double the Angle of Elevation; ſo is the Semi-parameter to the Amplitude; and the whole Sine is equal to double the Sine of the Angle of Elevation, if that be 45°: Under the Angle of Elevation 45°, the Amplitude is equal to the Semi-parameter.

7°. *The greateſt Range or Amplitude being given; to determine the Amplitude or Range under any other given Angle of Elevation; the Celerity remaining the ſame.* Say thus; As the whole Sine is to the Sine of double the Angle of any other Elevation; ſo is the greateſt Amplitude or Range, to the Amplitude required.

Thus, ſuppoſe the greateſt Range of a Mortar at 45°, to be 6000 Paces, and the length of the Range at 30°, required; it will be found 5196 Paces.

8°. *The Velocity of a* Projectile *being given, to find its greateſt Range or Amplitude.* Since the Celerity of the *Projectile* is given in the Space it will paſs over by the impreſſed Force; *e.gr.* in one Second; there is nothing required but to find the Parameter of the Path, (by *Corol.* 2. of the 3d Law.) for half of this is the Amplitude or Range required.

Suppoſe, *e.gr.* the Celerity of the *Projectile* ſuch as that in one Second it will run over 1000 Feet, or 12000 Inches: If then 144000000 be divided by 181, the Quotient will give the Parameter of the Path 795589 Inches, or 66298 Feet. The Range or Amplitude required, therefore, is 33149. Any Object, therefore, found within this Extent may be ſtruck by the *Projectile*.

9°. *The greateſt Range or Amplitude being given; to find the Velocity of the* Projectile, *or the Horizontal Space it will paſs over in a Second.* Since double the greateſt Amplitude is the Parameter of the Path; between double the greateſt Amplitude and the Space paſs'd over in a Second by a Body falling perpendicularly, *viz.* 181 *Paris* Inches, find a mean Proportional; for this will be the Space deſcribed by the *Projectile* in the given Second.

Thus, if the greateſt Amplitude be 1000 Feet, or 12000 Inches, the Space required will be $=\sqrt{(12000.181)}=120$ Feet and 4 Inches.

10. *To determine the greateſt Altitude to which a Body obliquely* projected *will riſe.* The Rule is; Biſſect the Amplitude A B in *t*, and from the Point *t* erect a perpendicular *t m*; this *t m* will be the greateſt Altitude to which the Body *projected*, according to the Direction A R, will ariſe.

11. *The Range or Amplitude* A B, *and the Angle of Elevation* B A R, *being given; to determine the greateſt Altitude of the* Projectile. If A R be taken for the whole Sine, B R will be the Sine, and A B the Co-ſine of the Angle of Elevation B A R: Wherefore, ſay, as the Co-ſine of the Angle of Elevation is to the Sine of the ſame; ſo is the Amplitude A B to a fourth Number; which will be B R; the fourth part whereof is the greateſt Altitude required.

Hence, ſince from the given Velocity of a *Projectile*, its greateſt Range or Amplitude, and thence its Range under any other Angle, is found; the Velocity being given, the greateſt Altitude of the *Projectile* is likewiſe found.

12. The Altitude of the Range *t m* is to the eighth part of the Parameter, as the verſed Sine of double the Angle of Elevation to the whole Sine.

Hence, 1. ſince, as the whole Sine is to the verſed Sine of double the Angle of Elevation in one Caſe; ſo is the eighth part of the Parameter to the Altitude of the Range: And as the whole Sine is to the verſed Sine of double the Angle of Elevation in any other Caſe; ſo is the eighth part of the Parameter to the Altitude: but the Velocity remaining the ſame, the Parameter, in different Angles of Elevation, will likewiſe be the ſame: The Altitudes of the Ranges under different Angles of Elevations are as the verſed Sines of double their Angles. 2. Hence, alſo, the Velocities remaining the ſame, the Altitudes of the Ranges are in a duplicate Ratio of the Sines of double the Angles of Elevation.

13. *The Horizontal Diſtance of any Mark or Object, together with its Height above, or Depth beneath the Horizon, being given; to find the Angle of Elevation required to hit the ſaid Object.*

Wolfius gives us the following Theorem, the Reſult of a regular Inveſtigation: Suppoſe the Parameter $=a$; I $n=b$, A I $=c$, the whole Sine $=t$. Then, as c is to $\frac{1}{2}a+\sqrt{(\frac{1}{4}a^2-ab-c^2:)}$ So is the whole Sine t; to the Angle of Elevation required R A B.

Dr. *Halley* gives the following eaſy, and compendious Geometrical Conſtruction of the Problem; which he likewiſe deduces from an analytical Inveſtigation.

Having the right Angle L D A (*fig.* 48.) make D A, D F, the greateſt Range, D G the horizontal Diſtance, and D B, D C, the perpendicular Height of the Object; and draw G B, and make D E equal thereto. Then with the Radius A C, and Centre E, ſweep an Arch, which, if the thing be poſſible, will interſect the Line A D in H; and the Line D H being laid both ways from F, will give the Points K and L; to which draw the Lines G L, G K.

Here, the Angles L G D, K G D, are the Elevations required for hitting the Object B.

But note, that if B be below the Horizon, its Deſcent D C = D B, muſt be laid upon A, ſo as to have A C = to A D + D C. Note, likewiſe, that if in Deſcents, D H be greater than F D, and ſo K fall below D; the Angle K G D, ſhall be the Depreſſion below the Horizon.

It may be here obſerved, that the Elevation ſought conſtantly biſſects the Angle between the Perpendicular and the Object. This, the Author was not aware of, when he gave the firſt Solution of the Problem; but upon diſcovering it, obſerves, that nothing can be more compendious, or bid fairer for the perfection of the Art of Gunnery; ſince 'tis here, as eaſy to ſhoot with a Mortar at any Object in any ſituation, as if it were on the Level; nothing more being required but to lay the Piece, ſo as to paſs in the middle Line between the Zenith and the Object, and giving it the due Charge. See MORTAR.

14. The Times of the *Projections*, or Caſts under different Angles of Elevation, the Velocity remaining the ſame, are as the Sines of the Angles of Elevation.

15. *The Velocity of a* Projectile, *together with the Angle of Elevation* R A B *being given* (fig. 47.); *to find the Range, or Amplitude* A B, *and the Altitude of the Range* t m, *and deſcribe the Path* A m B. To the horizontal Line A B erect a Perpendicular A D, which is to be the Altitude whence the *Projectile* falling, might acquire the given Velocity: On A D deſcribe a Semi-circle A Q D, cutting the Line of Direction A R in Q: Thro' Q draw C *m* parallel to A B, and make C Q = Q *m*. From the Point *m* let fall a Perpendicular *m t* to A B: Laſtly, thro' the Vertex M deſcribe the Parabola A *m* B.

Here, A *m* B is the Path ſought, 4 C Q its Amplitude or Range, *t m* the Altitude of the Range, and 4 C D the Parameter.

Hence, 1. The Velocity of a *Projectile* being given, the Amplitudes and Altitudes of all the poſſible Ranges are given at the ſame time. For, drawing E A, we have under the Angle of Elevation E A B, the Altitude A I, and the Amplitude 4 I E: Under the Angle of Elevation F A B, the Altitude A H, the Amplitude 4 H F. 2. Since A B is perpendicular to A D, it is a Tangent to the Circle in A: Hence the Angle A D Q is equal to the Angle of Elevation R A B; conſequently A I M is double the Angle of Elevation, and therefore C Q, the fourth part of the Amplitude, is the right Sine; A C the Altitude of the Range, the verſed Sine of double the Angle of Elevation.

16. The Altitude *t m* of a Caſt *t m*, or its Amplitude A B, together with the Angle of Elevation R A B, being given; to find the Velocity wherewith the *Projectile* firſt moved, that is, the Altitude A D, in falling from whence it would acquire the like Velocity: Since A C = *t m* is the verſed Sine, C Q = $\frac{1}{4}$ A B, the right Sine of double the Angle of Elevation A I Q: To the verſed Sine of double the Angle of Elevation, find the whole Sine, and the height of the

Caſt.

Caſt. Or to the right Sine of double the Angle of Elevation, the whole Sine and the fourth part of the Amplitude, find a fourth Proportional. This will be the Radius I Q or I, the double whereof A D is the Altitude required.

PROJECTION, in Mechanics, the Action of giving a Projectile its Motion. See PROJECTILE.

If the Direction of the Force whereby the Projectile is put in motion, be perpendicular to the Horizon; the *Projection* is ſaid to be *Perpendicular*: If parallel to the apparent Horizon, it is ſaid to be a *horizontal Projection*: If it make an oblique Angle with the Horizon, the *Projection* is oblique. See OBLIQUE.

The Angle A R B, (Tab. MECHANICS, *fig.* 47.) which the Line of Direction A R makes with the horizontal Line A B, is call'd the *Angle of Elevation of the Projectile.*

PROJECTION, in Perſpective, the Appearance or Repreſentation of an Object on the perſpective Plane. See PLANE.

The *Projection*, *e.gr.* of a Point, as A, (Tab. PERSPECTIVE, *fig.* 1.) is a Point *a* thro which the Optic Ray O A paſſes from the objective Point, thro' the Plane, to the Eye; or the Point *a* wherein the Plane cuts the optic Ray.

And hence is eaſily conceiv'd what is meant by the *Projection* of a Line, a Plane, or a Solid. See PERSPECTIVE.

PROJECTION *of the Sphere in Plano*, is a Repreſentation of the ſeveral Points or Places of the Surface of the Sphere, and of the Circles deſcribed thereon, or of any aſſign'd parts thereof, ſuch as they appear to the Eye ſituate at a given diſtance, upon a tranſparent Plane placed between the Eye and the Sphere. See SPHERE.

For the Laws of this *Projection*, ſee PERSPECTIVE; the *Projection of the Sphere* being only a particular Caſe of Perſpective.

The principal Uſe of the *Projection of the Sphere* is in the Conſtruction of Planiſpheres, and particularly Maps and Charts; which are ſaid to be of this or that *Projection*, according to the ſeveral Situations of the Eye, and the perſpective Plane with regard to the Meridians, Parallels, and other Points and Places to be repreſented. See PLANISPHERE, *&c.*

The moſt uſual *Projection* of Maps of the World is that on *the Plane of the Meridian*, which exhibits a right Sphere; the firſt Meridian being the Horizon. The next is that on *the Plane of the Equator*, wherein the Pole is in the Centre, and the Meridians the Radii of a Circle, *&c.* This repreſents a parallel Sphere.

See the Application of the Doctrine of the Projection of the Sphere, *in the Conſtruction of the various kinds of Maps, under the Article* MAP.

The Projection of the Sphere is uſually divided into *Orthographic* and *Stereographic*; to which may be added *Gnomonic*.

Orthographic PROJECTION, is that wherein the Superficies of the Sphere is drawn on a Plane, cutting it in the Middle; the Eye being placed at an infinite diſtance vertically to one of the Hemiſpheres. See ORTHOGRAPHIC.

Laws and Properties of the Orthographic PROJECTION.

1. The Rays by which the Eye at an infinite diſtance perceives any Object, are parallel.

2. A right Line perpendicular to the Plane of the *Projection* is projected into a Point, where that right Line cuts the Plane of the *Projection*.

3. A right Line, as A B, or C D, (fig. 17.) not perpendicular, but either parallel or oblique to the Plane of the *Projection*, is projected into a right Line, as E F, or G H, and is always comprehended between the extreme Perpendiculars A F, and B E.

4. The *Projection* of the right Line A B, is the greateſt when A B is parallel to the Plane of the *Projection*.

5. Hence it is evident, that a Line parallel to the Plane of the *Projection*, is projected into a right Line equal to itſelf; but if it be oblique to the Plane of the *Projection*, 'tis projected into one which is leſs.

6. A plane Surface as A B C D, (fig. 18.) at right Angles to the Plane of the *Projection*, is projected into that right Line; *e.gr.* A B, in which it cuts the Plane of the *Projection*.

Hence it is evident, that the Circle B C A D, ſtanding at right Angles to the Plane of the *Projection*, which paſſes thro' its Centre, is projected into that Diameter A B, in which it cuts the Plane of the *Projection*.

It is likewiſe evident, that any Arch, as *c c*, is projected into *o o* equal to C *a*, C *b*, which is the right Sine of that Arch; and the complimental Arch *c* A is projected into *o* A, the verſed Sine of the ſame Arch C C.

7. A Circle parallel to the Plane of the *Projection*, is projected into a Circle equal to itſelf; and a Circle oblique to the Plane of the *Projection*, is projected into an Ellipſis.

Stereographic PROJECTION, is that wherein the Surface and Circles of the Sphere are drawn upon the Plane of a great Circle, the Eye being in the Pole of that Circle. See STEREOGRAPHIC.

Properties of the Stereographic PROJECTION.

1. In this *Projection*, a right Circle is projected into a Line of half Tangents.

2. The Repreſentation of a right Circle, perpendicularly oppoſed to the Eye, will be a Circle in the Plane of the *Projection*.

3. The Repreſentation of a Circle placed oblique to the Eye, will be a Circle in the Plane of the *Projection*.

4. If a great Circle be to be projected upon the Plane of another great Circle, its Centre will lie in the Line of Meaſures, diſtant from the Centre of the primitive by the Tangent of its Elevation above the Plane of the primitive.

5. If a leſſer Circle, whoſe Poles lie in the Plane of the *Projection*, were to be projected; the Centre of its Repreſentation would be in the Line of Meaſures, diſtant from the Centre of the primitive, by the Secant of the leſſer Circles diſtance from its Pole, and its Semi-diameter or Radius, be equal to the Tangent of that diſtance.

6. If a leſſer Circle were to be projected, whoſe Poles lie not in the Plane of the *Projection*, its Diameter in the *Projection*, if it falls on each ſide of the Pole of the Primitive, will be equal to the Sum of the half Tangents of its greateſt and neareſt Diſtance from the Pole of the Primitive, ſet each way from the Centre of the Primitive in the Line of Meaſures.

7. If a leſſer Circle to be *projected*, fall entirely on one ſide of the Pole of the *Projection*, and do not encompaſs it; then will its Diameter be equal to the difference of the half Tangents of its greateſt and neareſt diſtance from the Pole of the Primitive, ſet off from the Centre of the Primitive one and the ſame way in the Line of Meaſures.

8. In the *Stereographic Projection*, the Angles made by the Circles of the Surface of the Sphere, are equal to the Angles made by their Repreſentatives in the Plane of their *Projection*.

Gnomonic PROJECTION *of the Sphere*, ſee GNOMONIC *Projection*.

PROJECTION *of Globes*, *&c.* ſee GLOBE, *&c.*

PROJECTION, in Alchymy, the caſting of a certain, imaginary Powder, call'd *Powder of Projection*, into a Crucible, or other Veſſel full of prepared Metal, or other Matter, which is to be hereby tranſmuted into Gold. See *Powder of* PROJECTION.

Powder of PROJECTION, or of the Philoſopher's Stone, is a *Powder* ſuppoſed to have the Virtue of changing any quantity of an imperfect Metal, as Copper, or Lead, into a more perfect one, as Silver or Gold; by the admixture of a little quantity thereof. See TRANSMUTATION.

The Mark to which the Alchymiſts direct all their Endeavours, is to find the *Powder of Projection*; which every one of 'em has been within an Ace of, an hundred times. See ALCHYMY.

For the Characters, Properties, Virtues, &c. *of this Powder*, ſee PHILOSOPHER'S *Stone*.

PROJECTION *in Building*, ſee PROJECTURE.

PROJECTIVE *Dialling*, a Method of Drawing, by a Method of Projection, the true Hour-Lines, Furniture of Dials, *&c.* on any kind of Surface whatſoever, without any regard had to the Situation of thoſe Surfaces, either as to Declination, Reclination, or Inclination. See DIALLING.

PROJECTURE, in Architecture, the Out-jetting, or Prominency, which the Mouldings and Members have, beyond the Naked of the Wall, Column, *&c.* See NAKED, COLUMN, *&c.*

Theſe the *Greeks* call *Ecphoræ*, the *Italians Sporti*, the *French Sailles*, our Workmen frequently *Sailings over*, and the *Latins Projecta*, from *projicio*, I caſt forward; whence the *Engliſh*, *Projecture*.

Vitruvius gives it as a general Rule, that all the *projecting* Members in Buildings have their *Projectures* equal to their Heights: But this is not to be underſtood of the particular Members, or Mouldings, as Dentils, Corona's, the Faſciæ of Architraves, the Abacus of the *Tuſcan* and *Doric* Capital, *&c.* but only of the *Projectures* of entire Cornices, *&c.* See CORNICE, *&c.*

The great Point of Building, according to ſome modern Architects, conſiſts in knowing how to vary the Proportions of *Projectures*, &c. agreeably to the Circumſtances of the Building: Thus, ſay they, the nearneſs and remoteneſs making a difference in the View, requires different *Projectures*; but 'tis evident the Antients had no ſuch Intention. See PROPORTION.

The *Projecture* of the Baſe and Cornice of Pedeſtals, M. *Perrault* obſerves, is greater in the antique than the modern Buildings by one third; which ſeems to follow, in good meaſure, from the Antients proportioning this *Projecture* to the height of the Pedeſtals; whereas the Moderns make the *Projecture* the ſame in all the Orders, tho' the height of the Pedeſtal be very different.

The reaſon of this Change which the Moderns have made of the antique, the ſame Author refers to a View to the Appearance of Solidity. See PEDESTAL.

PROLABIA, *Fore-Lips*; a Term in Anatomy for that part of the Labia which jets out. See LABIA.

PROLATE, in Geometry, an Epithet apply'd to a Spheroid produced by the Revolution of a Semi-Ellipſis about its longer Diameter. See SPHEROID.

If the Solid be formed by the Revolution of a Semi-Ellipſis about its ſhorter Diameter, it is call'd an *Oblate Spheroid*, of which Figure is the Earth we inhabit, and, perhaps, all the Planets too; having their Equatorial Diameter longer than their Polar. See OBLATE.

PROLATION, in Muſic, the Act of Shaking, or making ſeveral Inflections of the Voice, on the ſame Syllable.

PROLEPSIS, a Figure in Rhetoric, by which we anticipate, or prevent what might be objected by the Adverſary. See FIGURE.

Thus; *It may perhaps be objected*, &c.

The Word in the original *Greek*, προλημψις, ſignifies Preoccupation.

PROLEPTIC *Diſeaſe*, a Diſtemper which ſtill anticipates, or whoſe Paroxyſm returns ſooner, and ſooner, every day; as is frequently the Caſe in Agues, &c.

PROLIFIC, in Medicine, ſomething that has the Qualities neceſſary for generating. See FECUNDITY.

Some Phyſicians pretend to diſtinguiſh whether or no the Seed be *Prolific*. See SEED.

PROLIXITY, in Diſcourſe, the Fault of entering into too minute a Detail; of being too long, preciſe, and circumſtantial to a degree of Tediouſneſs. See STYLE.

Prolixity is the Vice oppoſite to Conciſeneſs and Laconiſm. See LACONICAL.

Prolixity is a Fault commonly charged on *Guiccardin*, *Gaſſendus*, &c. F. *Rapin* obſerves, that formal Harangues, at the Head of an Army, and Deliberations, of nauſeous *Prolixity*, formerly ſo frequent, are now diſuſed in all the better Hiſtories.

PROLEGOMENA, in Philology, preparatory Obſervations, or Diſcourſes prefixed to a Book, &c. containing ſomething neceſſary for the Reader to be apprized of, to enable him the better to underſtand the Book, to enter deeper into a Science, &c.

The generality of Arts and Sciences require ſome previous Inſtructions, ſome *Prolegomena*.

The Word is *Greek* προλεγομενον, form'd of προλεγομαι, to *Preface*. See PREFACE.

PROLOCUTOR, of the Convocation, the Speaker, or Chairman of that Aſſembly. See CONVOCATION.

The Archbiſhop of *Canterbury* is, by his Office, Preſident, or Chairman of the Upper Houſe of Convocation.

The *Prolocutor* of the Lower Houſe is an Officer choſen by the Members the firſt day of their meeting; and to be approved of by the Higher.

'Tis by the *Prolocutor* their Affairs, Debates, &c. are to be directed; and their Reſolutions, Meſſages, &c. deliver'd to the higher Houſe: By him all things propounded to the Houſe are read, Suffrages collected, &c.

PROLOGUE, PROLOGUS, in Dramatic Poetry, a Diſcourſe addreſs'd to the Audience before the Drama or Play begin. See DRAMA.

The original Intention of the *Prologue* was to advertiſe the Audience of the Subject of the Piece, and to prepare them to enter more eaſily into the Action; and ſometimes to make an Apology for the Poet.

This laſt Article ſeems to have almoſt excluded the two former, in the *Engliſh* Drama; and to be in ſole poſſeſſion of the *Prologue*.

The *Prologue* is of a much more antient Standing than the Epilogue. See EPILOGUE.

The *French* have left off the Uſe of *Prologues*; thoſe few they now and then make, have nothing in them of the genuine *Prologue*; as bearing no relation to the Subject, but being mere Flouriſhes or Harangues in praiſe of the King, &c.

In the antient Theatre, the *Prologus* was properly the Actor, who rehears'd the *Prologue*: The *Prologus* was eſteem'd one of the *Dramatis Perſonæ*, and never appear'd in the Piece in any other Character; ſo that the Learned are ſurprized to find *Mercury* in *Plautus*'s *Amphitryo*, ſpeaking the *Prologue*, and yet acting a conſiderable part in the Play afterwards.

The *Prologue*, therefore, among them was a part of the Piece; indeed, not an eſſential, but an acceſſary part.

With us the *Prologue* is no part at all; but ſomething intirely diſtinct and a-part: With them the Drama was open'd with the appearance of the *Prologue*; with us 'tis not open'd till after the *Prologus* is retir'd: with us therefore the Curtain is kept cloſe till after the *Prologue*, with them it muſt have been withdrawn before.

Hence proceeds a ſtill more conſiderable Difference, in the practice of the *Prologue*: For with us the *Prologus* ſpeaks in his real or perſonal Character; 'tis Mr. *Booth* or Mrs. *Oldfield* ſpeaks, not *Cato* or *Andromache*: With them the *Prologue* ſpoke in his Dramatic Character, not as *Turpius* or *Attilius*, but as *Prologus*.

With us, he directs his Speech to the Audience, conſider'd as in a Play-houſe; to Pit, Box, and Gallery: With them, he ought, in propriety, to have ſpoke as to a Chorus of By-ſtanders, or Perſons to be preſent at the real Action: But this being in good meaſure inconſiſtent with the Deſign of the *Prologue*; their Perſons ſpoke in their Dramatic Capacity to the Audience in its perſonal Capacity; which was an Irregularity that either the good Fortune, or the good Senſe of the Moderns, have freed them from.

They had three Kinds of *Prologues*; the firſt υποθητικὸς, wherein the Poet deliver'd the Argument of the Piece; the ſecond συναπτικὸς, wherein the Poet recommended himſelf or his Piece to the People; the third αναφορικὸς, wherein Objections were obviated, &c.

The Word *Prologue* is form'd from the *Greek* προλογος, *Præloquium*, *Fore-Speech*.

PROLUSION, PROLUSIO, in Literature, a Term apply'd to certain Pieces or Compoſitions, made previouſly to others; by way of Prelude, or Exerciſe.

Diomede calls the *Culex* of *Virgil*, and his other *Opuſcula*, *Proluſions*; becauſe wrote before the great ones.

The *Proluſions* of *Strada* are very ingenious pieces: The famous M. *Huet*, Biſhop of *Avranches*, has all *Strada*'s *Proluſions* by heart.

PROMETHEUS, in the antient Aſtronomy, was the Name of a Conſtellation of the Northern Hemiſphere; now call'd *Hercules*, or *Engonaſis*. See HERCULES.

PROMISE, in Law, is when a Man binds himſelf by his Word to perform ſuch an Act as is agreed on and concluded with another, upon a valuable Conſideration. See CONTRACT, PACT, COVENANT, &c.

PROMONTORY, in Geography, a Point of Land, or a Rock, projecting out into the Sea; the Extremity of which to the Sea-ward, is uſually call'd a *Cape*, or an *Headland*. See CAPE.

PROMOTERS, in Law, thoſe Perſons, who in popular and penal Actions, do proſecute Offenders in their Name, and the King's; and are entitled to part of the Fines and Penalties for their pains.

Theſe, among the *Romans*, were call'd *Quadruplatores*, or *Delatores*.

Sir *Tho. Smith* obſerves, that *Promoters* belong chiefly to the Exchequer and King's-Bench. My Lord *Coke* calls them, *turbidum Hominum Genus*, 3 Inſt.

PROMPT *Payment*, ready Money, ſee PAYMENT.

In many Caſes there is a Diſcount for *Prompt Payment*. See DISCOUNT, REBATE, &c.

PROMPTER, in the Drama, an Officer poſted behind the Scenes, whoſe Buſineſs is to watch attentively the Actors ſpeaking on the Stage, in order to ſuggeſt and put them forward, when at a ſtand; to correct them when amiſs, &c. in their parts.

PROMULGATED, PROMULGED, *Promulgatus*, ſomething publiſh'd or proclaim'd.

In this ſenſe we ſay, the *Jewiſh* Law was *promulgated* by *Moſes*: The *Promulgation* of the New Law was chiefly effected by the Apoſtles and Diſciples.

PRONAOS, in the antient Architecture, a Porch to a Church, Palace, or other ſpacious Building. See PORCH.

PRONATION, among Anatomiſts. The Radius of the Arm has two kinds of Motions; the one call'd *Pronation*, the other Supination. See RADIUS.

Pronation, is when the Palm of the Hand is turn'd downwards; *Supination*, when the back of the Hand is downwards.

There are two Muſcles, whereby the *Pronation* is effected, call'd

PRONATORS, PRONATORES, in Anatomy, two Muſcles of the Radius, which ſerve to turn the Palm of the Hand downwards. See PRONATION.

They are diſtinguiſh'd by the Names of *Rotundus* and *Quadratus*.

The Word is form'd from the *Latin Pronus*, *that which lies on the Fore-ſide*.

The Radius has two other Muſcles, call'd *Supinators*, which have an oppoſite Effect. See SUPINATORS.

PRONATOR *Radii Quadratus*, or *Brevis*, riſes broad and fleſhy, from the lower and inner part of the Ulna; and paſſing tranſverſely over the Ligament that joins the Radius to the Ulna, is inſerted into the ſuperior and external part of the Radius: which it helps to pull inwardly; together with the

PRONATOR *Radii Rotundus*, or *Teres*, a Muſcle which riſes fleſhy, from the internal Extuberance of the *Os Humeri*, where thoſe bending the *Carpus* and Fingers do ariſe; and firmly adhering to the *Flexor Carpi Radialis*, de-

deſcends obliquely downwards to its fleſhy Inſertion a little above the Radius, in the middle externally: Its Uſe is to move the Radius and Palm inwards.

PRONOUN, Pronomen, in Grammar, a part of Speech uſed in lieu of a Noun, or Name; whence the Denomination; from *pro* and *nomen*, q.d. *For-Noun*, or *-Name*. See Noun.

As it would have been diſagreeable to have been always repeating the ſame Name; there are Words invented in all Languages, to ſave the Neceſſity thereof, and to perſonate Names: as, *I*, *thou*, *he*, &c.

As Nouns are the Marks, or Signs, of Things; *Pronouns* are of Nouns.

Father *Buffier* ſhews, that *Pronouns* are real Nouns or Names; and that all the difference between what the Grammarians call Nouns, and *Pronouns*, is, that the former are more particular, and the latter more general.

They are call'd *Pronouns*, becauſe uſed in the place of particular Nouns: Indeed, ſometimes they don't fill the place of Nouns entirely, but need other Words to aſſiſt them, to expreſs the Object ſpoke of: Such, *e. gr.* are *who*, *whoever*, &c. which don't expreſs any determinate Object whereof a Thing may be affirm'd, unleſs accompany'd with another Word, eſpecially a Verb: As, *Whoever labours, deſerves a Reward.*

Theſe, Father *Buffier* calls *Incompleat Pronouns*, to diſtinguiſh them from thoſe which expreſs an Object compleatly; as, *I*, *thou*, *he*, &c.

The Grammarians ordinarily diſtinguiſh *Pronouns* into four Claſſes, with regard to their different Signification, Formation, &c. *viz. Pronouns Perſonal*, *Relative*, *Poſſeſſive*, and *Demonſtrative*; to which may be added, *Indeterminate Pronouns*.

Perſonal Pronouns, are thoſe uſed in lieu of Names of particular Perſons: Such are, *I*, *thou*, *he*, *we*, *ye*, *they*. See Person and Personal.

Pronouns Relative, which *Buffier* calls *Modificative*, or *Determinative*, are thoſe placed after Nouns, with which they have ſuch Affinity, that without them they ſignify nothing: Such are, *qui*, *who*, *that*, &c. See Relative.

Pronouns Poſſeſſive, are thoſe which expreſs what each poſſeſſes, or what belongs to him; as, *mine*, *thine*, *his*, &c. See Relative.

Theſe are pure Adjectives; and only differ from the reſt, by the relation they bear to *Pronouns* whence they are deriv'd, and by ſome particular Inflections which they have in ſome Languages. See Adjective.

Pronouns Demonſtrative, thoſe which ſerve to indicate, or point out the Subject ſpoke of; as, *this*, *thoſe*, &c. See Demonstrative.

Laſtly, *Pronouns Indefinite*, are thoſe which expreſs their Object indeterminately; as *whoever*, *any*, &c. Theſe coincide with what F. *Buffier* calls *Incompleat Pronouns*.

Pronouns are likewiſe divided into *Subſtantive* and *Adjective*.

To the firſt belong, *I*, *thou*, *ye*: To the ſecond, *he*, *ſhe*, *they*, *it*, *my*, *mine*, *who*, *what*, &c.

Pronouns may be conſider'd in two States; the firſt, or foregoing State; as *I*, *we*: The ſecond, or following one; as *me*, *us*.

PRONOUNCING, Pronunciation, in Painting, the marking, and expreſſing the parts of all kinds of Bodies with that degree of Force, neceſſary to make them more, or leſs diſtinct, and conſpicuous.

Thus the Painters, in ſpeaking of a Piece, ſay, theſe or theſe parts are well *pronounc'd*; which is a metaphorical way of ſpeaking; as when we ſay, that a Man who talks well, has a fine *Pronunciation*. See Expression.

PRONUNCIATION, in Grammar, the Manner of articulating or ſounding the Words of a Language repreſented to the Eye by Writing and Orthography. See Word, Language, Sound, &c.

From the Definition it would ſeem, that the *Pronunciation* were only the Image of the Orthography. But as we pronounce before we write, and only write to expreſs what we pronounce; 'tis more juſt to lay down the *Pronunciation* as the Rule, and Model of Orthograghy. See Orthography.

Pronunciation makes much the moſt difficult Article of a written Grammar: In effect, a Book only expreſſing it ſelf to the Eyes, in a Matter that concerns the Ears; the Caſe ſeems next a-kin to that of teaching the Blind to diſtinguiſh Colours. See Grammar.

Hence it is, that there is no part ſo defective in the Grammars, as the *Pronunciation*; for the Writer has frequently no Term, whereby to give the Reader an Idea of the Sound he would expreſs; for want of a proper Term, therefore, he frequently ſubſtitutes a vitious or precarious one.

Thus the *French* Grammarians ordinarily tell us, that the Vowels *a*, *e*, *i*, &c. are pronounced in *French* the ſame as in *Latin*; never conſidering, that there is not any known and determinate *Pronunciation* of the *Latin*; but each Nation, now, Pronounces the *Roman* Characters in the *Latin*, the ſame as it pronounces thoſe ſame Characters in its own Language. Thus the *Latin cœcus*, is pronounc'd by the *Engliſh*, *ſekus*; and by the *Italians*, *tchekous*, &c.

Hence it appears, that the Relation between Sounds and Characters, as well as between Things and Words, is purely arbitrary and national.

Indeed, *Plato* ſeems of a contrary Sentiment, and will have a natural Relation between Words and the Things they expreſs; as there is a natural Relation between the Signs made by Mutes, and the things they would intimate. So that according to *Plato*, to every ſeveral Word there muſt be a ſeveral Motion of the Mouth relative to the Action expreſs'd by the Word.

Whether or no there might be ſuch a thing in the primitive Language, we dare not undertake; but 'tis certain ſuch a relation would require a Facility of Contorſions in the Mouth, to which we are Strangers.

To give a juſt and preciſe Idea of the *Pronunciation* of a Language, it ſeems neceſſary to fix, as nearly as poſſible, all the ſeveral Sounds employ'd in the *Pronunciation* of that Language: This Mr. *Lodwick* has done in his Attempt towards an univerſal Alphabet; where he enumerates forty-three ſeveral ſimple Sounds; (ſome of 'em, indeed, ſtrangers to the *Engliſh* Language) and F. *Buffier*, who gives thirty-three ſeveral Sounds in the *French* Tongue, twenty-nine in the *Italian*, thirty in the *German*, twenty-two in the *Spaniſh*, and twenty-four in the *Engliſh*. See Alphabet.

The *French* Language is clogg'd with a difficulty in *Pronunciation*, from which moſt others are free; and it conſiſts in this, that moſt of their Words have two different *Pronunciations*; the one in common Proſe, the other in Verſe.

In Proſe, *e. gr.* they omit the *Pronunciation* of the final *s* in the Plural of Nouns, and of the *t* in the third Perſon of the Plural of Verbs, and of ſeveral other final Conſonants; but in Verſe they *pronounce* all.

Thus, in *a quoi bon reveiller mes Muſes endormies*? the final *s* of *Muſes* is *pronounced*; and in *Mille & mille douceurs y ſemblent attachées*; the *t* of *ſemblent* is to be *pronounced*.

Add to this, that in Proſe, they ſoften the Sound of a great many Words, *prononcing*, *craire* for *croire*; but in Poetry the genuine *Pronunciation* is retain'd. See English, French, &c.

Pronunciation is alſo uſed for the fifth and laſt part of Rhetoric, which conſiſts in regulating and varying the Voice and Geſture agreeably to the Matter and Words; ſo, as more effectually to perſuade, and touch the Hearers. See Rhetoric.

The *Pronunciation* is of ſuch Importance, that *Demoſthenes* call'd it the firſt, the ſecond, and the third Part of Eloquence.

Quintilian defines the *Pronunciation*, *Vocis & Vultus & Corporis moderatio cum venuſtate*; a decent, agreeable manner of managing the Voice, Geſture, and Action of the whole Body.

Cicero, ſomewhere, calls it *quædam Corporis Eloquentia*, a certain Eloquence of the Body; and in another Place, *Sermo Corporis*, the Language, or Speech of the Body.

Pronunciation is the ſame with what we otherwiſe call *Action*. See Action.

Some Writers, particularly Mr. *Henley*, confound it with *Elocution*, which is a very different thing. That Author, when he ſtyles himſelf *Reſtorer of the antient Elocution*, means of the antient *Pronunciation*. See Elocution.

There are three Things which come under the *Pronunciation*; the Memory, Voice, and Geſture. See each under its proper Article.

Auguſtus, to avoid being balk'd by his Memory, and at the ſame time ſave the trouble of getting off by Heart, uſed to harangue from a Writing; as we are told by *Dio* and *Suetonius*.

Pronunciation, in Painting; ſee Pronouncing.

PROOF, in Arithmetic, an Operation whereby the Truth and Juſtneſs of a Calculation is examin'd and aſcertain'd. See Calculation.

The proper *Proof* is always by the contrary Rule: Thus Subſtraction is the *Proof* of Addition, and Multiplication of Diviſion; and *vice verſa*. See Addition, Substraction, &c.

The *Proof* of Multiplication by 9 or by 7, are precarious. See Multiplication.

There would need no *Proofs* in Arithmetic, were it not that a Man is liable to make Miſtakes; for all the Rules and Operations being built on Demonſtration, 'tis thence we are aſſured of their Truth and Certitude. See Demonstration.

The *Proof*, then, does not confirm the Rule, but only ſhews us whether or no we have apply'd it right. See Rule.

Proof, in Law, Logic, &c. the Mediums, or Arguments uſed to evince the Truth of any thing. See Truth.

In

In Law, a *literal Proof*, or *Proof in writing*, is preferable to a Teſtimonial. The *Ordonnance de Moulins* excludes all *Proof* by Witneſſes for Loans of above 1000 Livres. See EVIDENCE, WITNESS, TESTIMONY, &c.

The *Proof* of Crimes was antiently effected among our Anceſtors, divers ways; *viz.* by Duel or Combat, Fire, Water, &c. See PURGATION, DUEL, FIRE, WATER, &c.

The *Proof* by red-hot Iron was very frequent: The Accuſed, to purge himſelf, was here obliged to make an Oath as he touch'd the Iron. The Formula, Ceremonies, Prayers, &c. made on this Occaſion, are ſtill extant in the Notes at the end of the *Capitularies* of *Charlemaign*. See ORDEAL.

This Cuſtom was abrogated by the Emperor *Frederic*; but ſtill obtains in *Mingrelia*; as we are told by *Lamberti*, in his Relation inſerted in *Thevenot's Voyages*.

If they cannot have *Proof* of a Crime, a Croſs is laid at the bottom of a Caldron full of boiling Water; out of which the Accuſed is obliged to fetch it with his naked Hand and Arm: This done, the Arm is put up in a Bag, tied, and ſeal'd; and three days after open'd; when, if there be no Marks of the Burn or Scald, the Accuſed is declared Innocent.

In the Kingdom of *Siam*, to have *Proof* of a Crime, the Party is obliged to waſh his Hands in boiling Oil, or to walk on burning Coals; from either of which he muſt come out untouch'd to be reputed Innocent.

Sometimes they oblige the two contending Parties to plunge under Water; and he who ſtays there longeſt, gains the Cauſe: And ſometimes to ſwallow a Grain of Rice, prepar'd and charm'd by their Doctors; he who is able to ſwallow it, is declared Innocent, and carried home in Triumph; and the Accuſer puniſh'd.

This looks like an Imitation of what was done among the *Jews*; to have *Proof* of Adultery.

The *Proof* by Combat is likewiſe ſaid to ſubſiſt among the *Mingrelians*. See COMBAT.

PROPAGATION, the Act of Multiplying the Kind; or of producing the like in the way of natural Generation. See GENERATION.

Some Plants are only propagated by *Sowing*; as Wheat, Poppies, &c. The Reaſon is, that the Stem in theſe Plants withers and dies away, and conſequently is incapable of being planted: And as to the Root, the whole Force and Effect thereof paſſes into the Ear, or Spica, which being the uſeful part of the Plant, exhauſts the whole. See SEED and SOWING.

Sometimes Plants are *propagated* by the Roots, as the Anemonies, &c. In which Caſe, there is a conſiderable Stock of Seminal or Spermatick Virtue ſtill reſerv'd in the Root, ſo as to be in a condition for ſhooting new Fibres upon any favourable occaſion. See ROOT.

Sometimes, a Branch lopp'd off, and ſet in the Ground, ſhall ſhoot into a new Plant; as we ſee in the Willow, Vine, Poplar, &c. And ſometimes a Truncheon ſhall do the ſame. In this Caſe, the Plants being of a very porous Texture, readily imbibe Nouriſhment, and take Root. This Method of *Propagation* is particularly remarkable in the Vine, any part of which put any how in the Ground, will become a Plant. The little Chips of Elm are ſaid to do the ſame. See BRANCH and PLANTING.

When a Branch or Arm of a Vine ſhoots too great a length, or withers towards the Extreme, or grows too ſmall to feed its Grapes, 'tis uſual to cut pieces of it off, and put 'em in the Ground; which readily grow into thriving Plants.

Nay, ſometimes, to bring up young Plants, and make 'em grow and advance the faſter, eſpecially Lemon, Orange, and Citron Trees; they paſs a Branch or Shoot of an old Tree, without cutting it off, thro' an Aperture of a Veſſel fill'd with good Earth; upon which, the Pores opening by the Moiſture and Warmth, Roots preſently burſt forth, which being furniſh'd with Food both from the Earth and the parent Plant, grow at a great rate, and are ſoon in a Condition to be ſeparated from the Parent, and ſhift for themſelves. See STOCK, DWARF, &c.

Laſtly, Plants are ſometimes, alſo, *propagated* by Bulbs. See BULB.

PROPER, ſomething naturally, and eſſentially belonging to any Being.

The School-Philoſophers, after *Porphyry*, diſtinguiſh four kinds of *Propers*, or Modes of *Propriety*; which are expreſs'd in the following Verſe:

Eſt Medicus, Bipes, Caneſcens, Riſibiliſque.

The firſt, call'd PROPRIUM *primo modo*, is what agrees to a ſingle Species, but not to all the Individuals: This they call *ſoli ſed non omni*. As, to be a Geometrician, a Phyſician, a Divine, &c. which are things *proper* to Man; but not to all Men.

The ſecond, PROPRIUM *ſecundo modo*, is what agrees to the whole Species, but agrees likewiſe to another: which they call *omni ſed non ſoli*.

Thus to have two Feet is *proper* to a Man, but is likewiſe *proper* to a Bird.

The third PROPRIUM *tertio modo*, is that which agrees to a ſingle Species, but not at all times; *omni & ſoli, ſed non ſemper*: As, to grow grey, according to *Porphyry*, is *proper* to a Man, but 'tis to an old Man.

The laſt, and higheſt, PROPRIUM *quarto modo*, is that which alone agrees to one Kind, to all the Individuals thereof, and at all times; *omni, ſoli, & ſemper*. Thus, the Faculty of Laughing is *proper* to Man; of Neighing to Horſes, &c. And 'tis this that *Porphyry* calls the *true Proper*. See ESSENCE, &c.

The firſt three Species are only Accidents of the fifth vulgar Predicable, to which they directly belong. See PREDICABLE.

The fourth is an Univerſal agreeing to every Individual, or Subject of Predication of any Species, in ſuch Manner, as to be always found abſolutely in the Species alone, but not at every determinate time: Thus Man alone is naturally riſible; not that he is always Laughing, but has the Faculty of Laughing at all times. See DEFINITION.

PROPER, in reſpect of Words, is underſtood of their immediate and particular Signification; or that directly and peculiarly attach'd to 'em.

In this Senſe the Word ſtands oppoſed to Figurative and Metaphorical. See FIGURATIVE, &c.

PROPER is alſo laxly uſed in a Moral Senſe, to denote ſomething that is uſually found in Things; as their particular or ſpecific Virtues, &c.

In this ſenſe we ſay, Magnanimity is the *proper* Virtue of Heroes. See HERO.

The Word is alſo uſed for the natural Qualities neceſſary to ſucceed in a thing. In this ſenſe we ſay, People of a hot, vigorous Temperament are *proper* for the Army; the cold and phlegmatic are *proper* for Study. The *Romans* became leſs *proper* for War, in proportion as they grew more learned and polite.

PROPER, in Grammar, is a Term apply'd to Nouns, or Names, which are diſtinguiſh'd into *Proper*, and Appellative. See NOUN.

Man is the Appellative, *Peter* the *proper* Name. See APPELLATIVE.

The *proper* Name among Chriſtians is that impoſed at Baptiſm. See NAME.

PROPER *Fraction*, is ſuch a one as hath its Numerator leſs than the Denominator.

Such is $\frac{3}{4}$, or $\frac{5}{7}$, which is really leſs than Unity; and, therefore, *properly* ſpeaking, a Fraction. See FRACTION.

PROPER, in the Civil Juriſ-prudence, is apply'd in oppoſition to acquired; for an Inheritance derived by direct or collateral Succeſſion. See GOODS.

By the *French* Laws, a Teſtator can only diſpoſe of one fifth of his *proper* Effects; the paternal Relations inherit the paternal *Propria*, and the Maternal the Maternal ones: So that *Propria* always return to the Line whence they proceed.

The Origin of the Law which fixes this difference between *Propers*, and Acqueſts, is not known; neither the *Greeks* nor *Romans* having ever made any ſuch diſtinction.

Indeed, it ſeems founded on this Principle of natural Equity, that Men are uſually deſirous to preſerve and attach to their Family, the Goods they have received from their Fore-fathers; and to tranſmit them to thoſe deſcending from the ſame Stock.

PROPER ſometimes, alſo, ſtands as a Reduplicative, ſerving to mark or deſign a thing more expreſly, and formally.

In this ſenſe we ſay, Jeſus Chriſt came to redeem the World in his *proper* Perſon. The King did ſuch and ſuch a thing of his own *proper* Motion.

PROPERTY, or PROPRIETY, that which conſtitutes or denominates a thing *proper*; or, it is a particular Virtue, or Quality which Nature has beſtow'd on ſomething. See PROPER.

Thus, Colour is a *Property* of Light; Extenſion, Figure, Diviſibility, and Impenetrability, are *Properties* of Body. See COLOUR, BODY, &c.

Every Day diſcovers new *Properties* in the Load-ſtone. See MAGNET.

PROPERTY, or PROPRIETY, in Law, ſtrictly ſpeaking, is the higheſt Right a Man can have to a thing; and ſuch as no ways depends on any other Man's Courteſy. See RIGHT.

In this Senſe, none in our Kingdom have the *Property* of any Lands or Tenements, except the King, in Right of his Crown; all other Lands being of the nature of Fee, and held of the King either mediately or immediately. See FEE, KING, &c.

Propriety, however, is uſed for that Right in Lands and Tenements which common Perſons have; importing as much as *Utile Dominium*, tho' not *Directum*.

There are three Manners of Right or *Property*; viz. *Property* abſolute, *Property* qualified, and *Property* poſſeſſory. See PROPRIETOR and FEE.

Incumbents have not the *Propriety* of Benefices, they have only the Enjoyment thereof. See BENEFICE.

The Monks have a long time diſputed whether they had the *Propriety* of the Bread they eat, or only the Uſe.

One may give the *Propriety* of an Eſtate, yet reſerve the Uſufruit; by the Death of the Uſufructuary the Uſufruit is conſolidated to the *Propriety*. See CONSOLIDATION.

PROPHECY, a Prediction, made by Divine Inſpiration. See PROPHET and INSPIRATION.

A late Author obſerves, that the Chriſtians have this in common with the Pagans, that they equally build their Religions on *Prophecy* and *Divination*. See DIVINATION and AUGURY.

He adds, That Divination was an Art learnt by the *Romans* in Schools, or under Diſcipline; as the *Jews* did *Propheſying* in the Schools and Colleges of the Prophets.

In theſe Schools, as the learned *Dodwell* obſerves, the Candidates for *Prophecy* were taught the Rules of Divination, practiſed by the Heathens; who were in poſſeſſion of the Art long before 'em. 'Tis added, that the Gift of *Prophecy* was not an occaſional thing, but a conſtant and ſtanding Matter of Fact; and ſome think they have diſcover'd an Eſtabliſhment of an Order of Prophets in the Old Teſtament, in analogy to the Heathen Diviners.

This is certain, from many Paſſages of Scripture, that there were great Numbers of Prophets among 'em, who not only exerciſed their Talent in Matters of Government and Religion, but even in the diſcovery of loſt Goods, and in telling of Fortunes. See AUGURY, ORACLE, &c.

One of the greateſt Difficulties in Chriſtianity, turns upon the Completion of the Scripture *Prophecies*: In the Prophets of the Old Teſtament are frequent Predictions of the Meſſiah; which, the Writers of the New, frequently urge to the *Jews* and Heathens as fulfill'd in *Jeſus Chriſt*; and on this Principle evince the Truth of his Miſſion: But theſe Truths thus urged from the Old, in the New Teſtament; are ſometimes not to be now found in the Old; and at other times, not urged in the New in the literal and obvious Senſe which they ſeem to bear in the Old; whence moſt of the Chriſtian Commentators, Divines, and Critics, Antient and Modern, judge 'em to be apply'd in a ſecondary, typical, allegorical, or myſtical Senſe.

Thus, *e. gr.* St. *Matthew*, after an Account of the Conception of the Virgin, and the Birth of *Jeſus*, ſays, "All this was done, that it might be fulfilled which was "ſpoken by the Prophet, ſaying, Behold a Virgin ſhall be "with Child, and ſhall bring forth a Son, and they ſhall "call his Name *Emanuel*." But the Words, as they ſtand in *Iſaiah*, whence they are ſuppoſed to be taken, do, in their obvious and literal Senſe, relate to a young Woman who was to bring forth a Child in the Days of *Ahaz*; as appears from the Context, and as is own'd by *Grotius*, *Huetius*, *Caſtalio*, *Curcellæus*, *Epiſcopius*, *Hammond*, *Simon*, *le Clerc*, *Lamy*, &c.

This *Prophecy*, then, not being fulfill'd in *Jeſus*, in the primary, literal, or obvious Senſe of the Words, is ſuppoſed, like the other *Prophecies* cited by the Apoſtles, to be fulfill'd in a ſecondary, typical, or allegorical Senſe; *i. e.* this *Prophecy*, which was firſt literally fulfill'd by the Birth of the Prophet's Son in the Time of *Ahaz*, was again fulfill'd by the Birth of *Jeſus*; as being an Event of the ſame kind, and intended to be ſignified either by the Prophet, or by God who directed the Prophet's Speech.

Grotius obſerves this to be the Caſe in moſt, if not all the *Prophecies* and Citations quoted from the Old in the New Teſtament; and *Dodwell*, with Sir *John Marſham*, refer even the famous *Prophecy* in *Daniel* about the Seventy Weeks to the Times of *Antiochus Epiphanes*; ſhewing, that the Expreſſions taken thence by Chriſt, and urged by him as predicting the Deſtruction of *Jeruſalem* by the *Romans*, have only in a ſecondary Senſe, a reſpect to that Deſtruction.

And even that famous *Prophecy* in the *Pentateuch*, "A "Prophet will the Lord God raiſe up unto thee like "unto me, to him ſhall ye hearken"; which St. *Luke* refers to as ſpoken of *Jeſus Chriſt*, is, by *Simon*, *Grotius*, *Stillingfleet*, &c. underſtood to ſignify, in its immediate Senſe, a Promiſe of a Succeſſion of Prophets.

'Tis allow'd then, the Apoſtles apply'd the *Prophecies* they quote from the Old Teſtament, in a typical Senſe; but, unhappily, the Rules whereby they quoted, are loſt. Dr. *Stanhope* laments the loſs of the *Jewiſh* Traditions or Rules for interpreting Scripture receiv'd among the Rabbins, and follow'd by the Apoſtles. But this Loſs, *Surenhuſius*, *Hebrew* Profeſſor at *Amſterdam*, thinks he has retrieved from the *Jewiſh Talmud*, and the antient *Jewiſh* Commentaries; and has accordingly publiſhed to the World, the Rules whereby the Apoſtles quoted the Old Teſtament.

But the truth is, theſe Rules are too precarious, ſtrain'd, and un-natural, to gain much Credit. See QUOTATION.

Mr. *Whiſton* condemns all allegorical Explanation of the *Prophecies* of the Old Teſtament cited in the New, as weak, enthuſiaſtic, &c. And adds, that if a double Senſe of the *Prophecies* be allow'd, and there be no other Method of ſhewing their Completion, than by applying them ſecondarily and typically to our Lord, after having been in their firſt and primary Intention long ago fulfill'd in the Times of the Old Teſtament; we loſe all the real Advantages of the antient *Prophecies*, as to the Proofs of Chriſtianity.

He therefore ſets up a new Scheme in oppoſition thereto: He owns, that taking the preſent Text of the Old Teſtament for Genuine, it is impoſſible to expound the Apoſtles Citations of the *Prophecies* of the Old Teſtament, on any other than the allegorical Foundation; and, therefore, to ſolve the Difficulty, is forced to have recourſe to a Suppoſition contrary to the Senſe of all Chriſtian Writers before him; *viz.* that the Text of the Old Teſtament has been greatly corrupted ſince the Apoſtolical Age by the *Jews*, See BIBLE.

His Hypotheſis is, that the Apoſtles made their Quotations out of the Old Teſtament rightly and truly from the Septuagint Verſion, which in their Time was in vulgar Uſe, and exactly agreed with the *Hebrew* Original; and that as they made exact Quotations, ſo they argued juſtly and logically from the obvious and literal Senſe of the ſaid Quotations, as they then ſtood in the Old Teſtament: But, that ſince their Times, both the *Hebrew* and Septuagint Copies of the Old Teſtament have been ſo greatly corrupted, and ſo many apparent Diſorders and Diſlocations introduced therein, as to occaſion many remarkable Differences and Inconſiſtencies between the Old and New Teſtament in reſpect to the Words and Senſe of thoſe Quotations. See SEPTUAGINT, &c.

As to the Manner wherein theſe Corruptions were introduced, he ſays, the *Jews* in the ſecond Century greatly corrupted and alter'd both the *Hebrew* and Septuagint, eſpecially in the *Prophecies* cited by the Apoſtles, to make their Reaſoning appear inconcluſive; that in the third Century, they put into *Origen*'s hand one of theſe corrupted Copies of the Septuagint, which *Origen* miſtaking for genuine, inſerted in his *Hexapla*; and thus brought into the Church a corrupted Copy of the Septuagint: And that in the end of the fourth Century, the *Jews* put into the hands of the Chriſtians, who, till then, had been almoſt univerſally ignorant of the *Hebrew*, a corrupted Copy of the *Hebrew Old-Teſtament*.

The Diſagreement, then, between the Old and New Teſtament in reſpect to the ſaid Quotations, he contends, has no place between the genuine Text of the Old Teſtament (now no where exiſting) but only between the preſent corrupted Text of the Old and New Teſtament: And, therefore, to juſtify the Reaſonings of the Apoſtles, he propoſes to reſtore the Text of the Old Teſtament, as it ſtood before the Days of *Origen*, and as it ſtood in the Days of the Apoſtles. From which Text thus reſtored, he doubts not, it will appear, that the Apoſtles cited exactly, and argued juſtly and logically from the Old Teſtament.

But this Scheme of accompliſhing *Prophecies*, labours under Difficulties at leaſt as great as the Allegorical Scheme. Its Foundation is incredible, and its Superſtructure, from firſt to laſt, precarious: In effect, 'tis inconceivable the Old Teſtament ſhould be ſo corrupted; and it is even made appear, that the *Hebrew* and Septuagint diſagreed in the Times of the Apoſtles: Add to this, that the Means whereby he propoſes to reſtore the true Text, will never anſwer that end; nor has he, himſelf, from all the Means he is yet poſſeſs'd of, been able to reſtore one prophetical Citation, ſo as to make that ſeem literally, which before only ſeem'd allegorically, apply'd. See PENTATEUCH, &c.

PROPHET, a Perſon inſpired by God with the Knowledge of future Events; and commiſſion'd to declare his Laws, his Will, &c. to the World. See PROPHECY and DIVINATION.

Among the Canonical Books are thoſe of ſixteen *Prophets*; four of which are denominated the *greater Prophets*, viz. *Iſaiah*, *Jeremiah*, *Ezekiel*, and *Daniel*; ſo call'd from the length or extent of their Writings, which exceed thoſe of the others, *viz.* *Hoſea*, *Joel*, *Amos*, *Obadiah*, *Jonas*, *Micha*, *Nahum*, *Habbakuc*, *Haggai*, *Zachariah*, and *Malachi*; who are call'd the *leſſer Prophets*, from the ſhortneſs of their Writings.

The *Jews* only reckon three greater *Prophets*; *Daniel* they exclude, as no more to be rank'd among the *Prophets* than *David*: Not but that both the one and the other foretold many important things; but becauſe their manner of Life differ'd from that of the other *Prophets*, *David* being a King, and *Daniel* a Peer.

In the *Greek* Church, the leſſer *Prophets* are placed in order before the great ones; apparently becauſe many of the leſſer *Prophets* are more antient than the greater.

Among the *Greeks* too, *Daniel* is rank'd among the leſſer *Prophets*.

In the 48th Chapter of *Eccleſiaſticus*, *Iſaiah* is particularly call'd the *great Prophet*; both on account of the great things he foretold, and the magnificent Manner wherein he did it.

Spinoza ſays, the ſeveral *Prophets* propheſied according to their reſpective Humours; *Jeremiah*, *e. gr.* melancholy, and dejected with the Miſeries of Life, propheſied nothing but Misfortunes.

Dacier obſerves, that among the Antients the Name *Poet* is ſometimes given to *Prophets*; as that of *Prophet* is at other times given to *Poets*. See POET.

The Word is derived from the *Greek* φα'τος, ſaid; whence the *Latins* derive their *fatus*, ſpoken. See VATES.

PROPHYLACTICE, προφυλακτικη, that part of the Art of Medicine which directs the preventing or preſerving from Diſeaſes. See MEDICINE, PRESERVATIVE, &c.

PROPITIATION, in Religion, a Sacrifice offer'd to God to aſſuage his Wrath, and render him propitious. See SACRIFICE.

Among the *Jews* there were both ordinary and public Sacrifices, as Holocauſts, &c. offer'd by way of Thankſgiving; and extraordinary ones offer'd by particular Perſons guilty of any Crime, by way of *Propitiation*.

If it were a Crime of Ignorance, they offer'd a Lamb or a Kid; if done wittingly, they offer'd a Sheep: For the Poor, a pair of Turtles was enjoin'd as a *Propitiation*.

The *Romiſh* Church believe the Maſs to be a Sacrifice of *Propitiation* for the Living and the Dead. The Reform'd Churches allow of no *Propitiation* but that one offer'd by Jeſus Chriſt on the Croſs.

PROPITIATION is alſo a ſolemn Feaſt among the *Jews*, celebrated on the tenth of the Month *Tiſri*, which is their ſeventh Month, and anſwers to our *September*.

It was inſtituted to preſerve the Memory of the Pardon proclaim'd to their Fore-fathers by *Moſes* on the part of God; who thereby remitted the Puniſhment due for their Worſhip of the golden Calf.

PROPITIATORY, among the *Jews*, was the Cover or Lid of the Ark; which was lined both within and without-ſide, with Plates of Gold; inſomuch that there was no Wood to be ſeen. See ARK.

Some even take it to have been one piece of maſſive Gold. The Cherubim ſpread their Wings over the *Propitiatory*.

This *Propitiatory* was the Type or Figure of Chriſt, whom St. *Paul* calls the *Propitiatory* ordain'd from all Ages.

PROPLASM, *Proplaſma*, προπλασμα, is uſed for a Mould, wherein any Metal or ſoft Matter, which will afterwards grow hard, is caſt. See MOULD.

PROPLASTICE, προπλαστικη, the Art of making Moulds, for caſting things in. See MOULD, FOUNDERY, &c.

PROPOLIS, a Virgin-Wax, of a reddiſh or yellowiſh Colour, wherewith the Bees ſtop up the Holes and Crannies of their Hives, to keep out the cold Air, &c. See WAX.

The *Propolis* is a friable Matter, eſteem'd ſovereign in Diſeaſes of the Nerves. It is alſo uſed to make Holes in Abſceſſes; and being heated on the Fire, its Vapour is received for inveterate Coughs.

PROPORTION, in Arithmetic, the Identity or Similitude of two Ratios. See RATIO.

Hence, Quantities that have the ſame Ratio between 'em, are ſaid to be *Proportional*: *e. gr.* If A, be to B; as C, to D: or 8, be to 4; as 30, to 15; A, B, C, D, and 8, 4, 30, and 15, are ſaid to be in *Proportion*, or are ſimply call'd *Proportionals*. See PROPORTIONAL.

Proportion is frequently confounded with *Ratio*; yet have the two, in reality, very different Ideas; which ought by all means to be diſtinguiſh'd.

Ratio is, properly, that Relation or Habitude of two things which determines the Quantity of one from the Quantity of another without the Intervention of any third: Thus we ſay, the Ratio of 5 and 10 is 5; the Ratio of 12 and 24 is 12.

Proportion is the Sameneſs or Likeneſs of two ſuch Relations: Thus, the Relations between 5 and 10, and 12 and 24 being the ſame, or equal; the four Terms are ſaid to be in *Proportion*. Hence, Ratio exiſts between two Numbers; but *Proportion* requires at leaſt three.

Proportion, in fine, is the Habitude or Relation of two Ratios, when compared together; as Ratio is of two Quantities. See QUANTITY.

Proportion, again, is frequently confounded with *Progreſſion*. In effect, the two often coincide; the difference between 'em only conſiſting in this, that Progreſſion is a particular Species of *Proportion*, wherein the ſecond of three Terms is a mean *Proportional* between the other two, or has the ſame Ratio to the third which the firſt has to the ſecond.

Add to this, that *Proportion* is confin'd to three Terms; but Progreſſion goes on to infinity; (ſo that Progreſſion is a Series or Continuation of *Proportions*:) And that in four Terms 3, 6, 12, 24, *Proportion* is only between the two Couples 3 and 6, and 12 and 24; but Progreſſion is between all the four Terms. See PROGRESSION.

Proportion is ſaid to be *continual*, when the Conſequent of the firſt Ratio is the ſame with the Antecedent of the ſecond; as, if 3 be to 6, as 6 to 12. See CONTINUAL.

The *Proportion* is ſaid to be *Diſcrete*, or Interrupted; when the Conſequent of the firſt Ratio differs from the Antecedent of the ſecond; as, if 3 be to 6, as 4 to 8.

Proportion, again, is either ſaid to be *Arithmetical*, or *Geometrical*; as the Ratios are.

Arithmetical PROPORTION, is the Equality of two or more Arithmetical Ratios; or the Equality of difference between three ſeveral Quantities.

Thus, 1, 2, 3; and 2, 5, 8, are in *Arithmetical Proportion*; becauſe there is the ſame difference betwixt the Numbers compared, which are 1 to 2, and 2 to 3; or 2 to 5, and 5 to 8.

If every Term have the ſame Ratio to the next as the firſt has to the ſecond; the Terms are ſaid to be in *continual Arithmetical Proportion*; as 5, 7, 9, 12, 15.

If the Ratio between any two Terms differ from that of any others; the Terms are ſaid to be in *Arithmetical Proportion diſcrete*, or *interrupted*; as where 2 : 5 : 6 : 9, the Ratios of 5 and 6 being different from that of 2 and 5.

A Series of more than four Terms in *Arithmetical Proportion*, form an Arithmetical Progreſſion. See PROGRESSION.

Properties of Arithmetical PROPORTION.

1°. If three Numbers be in *Arithmetical Proportion*, the Sum of the Extremes is equal to double the middle Term. Thus, in 3, 7, 11; the Sum of 3 and 11 is equal to twice 7; *viz.* 14.

Hence we have a Rule for finding a mean Proportional Arithmetical between two given Numbers; half the Sum of the two being the Mean required: Thus half the Sum of 11 and 3, *viz.* 14, is 7.

2°. If four Numbers be in *Arithmetical Proportion*, the Sum of the Extremes is equal to the Sum of the middle Terms. Thus, in 2 : 3 : 4 : 5; the Sum of 5 and 2 is equal to the Sum of 3 and 4, *viz.* 7.

Hence, four Terms in *Arithmetical Proportion*, are ſtill proportional if taken inverſely 5 : 4 : 3 : 2; or alternately, thus, 2 : 4 : 3 : 5; or, inverſely, and alternately; thus, 5 : 3 : 4 : 2.

3°. If two Numbers in *Arithmetical Proportion* be added to other two; the leſs to the leſs, &c. their difference is in a duplicate Ratio, *i. e.* double that of the reſpective parts added: Thus, if to 3 : 5 be added 7 : 9, the Sums are 10 : 14; whoſe difference 4 is double the difference of 3 : 5, or 7 : 9. And if to this Sum you add other two, the difference of the laſt Sum will be triple the difference of the firſt two, and ſo on.

If two *Arithmetical Proportionals* be ſubſtracted from two others in the ſame Ratio, the leſs from the leſs, &c. the Arithmetical Ratio of the Remainder is 0. Thus from 9 : 7 taking 3 : 5, the Remainders are 4, 4.

Hence, if *Arithmetical Proportionals* be multiply'd by the ſame Number, the difference of their Products will contain the firſt difference as oft as the Multiplier contains Unity. Thus 3 : 5 multiply'd by 4, produce 12, 20, whoſe difference 8 is equal to 4 times 2, the difference of 3 and 5.

4°. If two Numbers in *Arithmetical Proportion* be added to, or multiply'd by, other two, in another Ratio of the ſame kind, leſs by leſs, &c. the Sums are in a Ratio which is the Sum of the Ratios added or multiply'd. Thus, 2 : 4 and 3 : 9 being added; the Sums are 5 : 13, whoſe difference is 8, the Sum of 2 and 6, the differences of the Numbers given.

Geometrical PROPORTION, is the Equality of two Geometrical Ratios, or Compariſons of two Couples of Quantities. See GEOMETRICAL *Proportion*.

Thus 4 : 8 : : 12 : 24, are in *Geometrical Proportion*; the Ratio of 4 and 8 being equal to that of 12 and 24; *i. e.* 4 being contain'd as often in 8, as 12 is in 24. Again, 9, 3, 1 are in *Geometrical Proportion*, 9 being triple of 3, as 3 is of 1.

If in a Series of Terms, there be the ſame Ratio between every two Terms that there is between the firſt and ſecond; they are ſaid to be *Continual Geometrical Proportionals*: As 1 : 2 : 4 : 8.

If any two Terms have a different Ratio from that of the firſt and ſecond, they are ſaid to be in *Diſjunct*, or *Interrupted*

rupted Geometrical Proportion; as are 2 : 4 : 3 : 6; where 2 is to 4 as 3 to 6; but not ſo as 4 to 3.

A Series or Progreſſion of more than four *Geometrical Proportionals*, is call'd a *Geometrical Progreſſion*. See PROGRESSION.

Properties of Geometrical PROPORTION.

1°. If three Quantities be in continual *Geometrical Proportion*, the Product of the two Extremes is equal to the Square of the middle Term. Thus, in 6 : 12 : : 12 : 24, the Product of 6 and 24 is equal to the Square of 12, *viz.* 144. Hence we have a Rule,

2°. To find a *mean Geometrical Proportional* between two Numbers, *e. gr.* 8 and 72.

Multiply one of the Numbers by the other, and from the Product 576, extract the Square Root 24. This will be the Mean required.

3°. To find a fourth Proportional to three given Numbers, *e. gr.* 3, 12, 5; or a third Proportional to two given Numbers.

Multiply the ſecond 12 into the third 5, in the firſt Caſe; and in the latter, multiply the ſecond into itſelf. Divide the Product by the firſt 3, the Quotient 20 is the fourth *Proportional* ſought in the one, or the third in the other.

The Solution of this Problem is what we popularly call the *Rule of Proportion*, or the Golden Rule, or Rule of Three. See RULE.

4°. If four Numbers be in *Geometrical Proportion*, the Product of the Extremes is equal to the Product of the two middle Terms. Thus in 2 : 5 : : 4 : 10, the Product of 10 and 12 is equal to that of 5 and 4, *viz.* 20. Hence,

5°. If four Numbers repreſented $a : b : : c : d$ be either in *Arithmetical*, or *Geometrical Proportion*; they will alſo be in the ſame, if taken inverſely, *viz.* $d : c : : b : a$; or alternately, as $a : c : : b : d$; or alternately and inverſely, as $d : c : : b : a$.

6°. If the two Terms of a Geometrical Ratio be added to, or ſubſtracted from, other two in the ſame Ratio, the leſs to or from the leſs, &c. the Sums, or Differences, are in the ſame Ratio. Thus, in 6 : 3 : 10 : 5, where the common Ratio is 2; 6 added to 10, makes 16, as 3 to 5 makes 8; and 16 : 8 are in the ſame Ratio as 6 : 3, or 10 : 5. Again, 16 being to 8 as 6 to 3, their Differences 10 and 5 are in the ſame Ratio.

The Reverſe of which Propoſition is likewiſe true; *viz.* if to or from any two Numbers be added or ſubſtracted other two, if their Sums, or the Differences, be in the ſame Geometrical Ratio as the firſt two, the Numbers added or ſubſtracted are in the ſame Ratio. Hence,

7°. If the Antecedents, or the Conſequents of two equal Geometrical Ratios 3 : 6 and 12 : 24 be divided by the ſame 3; in the former Caſe, the Quotients 1 and 4 will have the ſame Ratios to the Conſequents; *viz.* 1 : 6 : : 4 : 24; and in the latter, the Antecedents the ſame Ratio to the Quotients, *viz.* 3 : 1 : : 12 : 4.

8°. If the Antecedents, or Conſequents of ſimilar Ratios 2 : 6 and 3 : 9 be multiply'd by the ſame Quantity 6; in the former Caſe the Facta 12 and 18 have the ſame Ratio to the Conſequents, *viz.* 12 : 6 : : 18 : 9; and in the latter, the Antecedents have the ſame Ratio to the Products, *viz.* 2 : 6 : : 3 : 9.

9°. If in a *Geometrical Proportion* 3 : 6 : : 12 : 24, the Antecedents be multiply'd or divided by the ſame Number 2; or divided by the ſame Number 3; in the former Caſe, the Facta; in the latter, the Quotients will be in the ſame *Proportion*, *viz.* 6 : 18 : : 24 : 72, and 1 : 3 : : 4 : 12.

10°. If, in a *Proportion* 4 : 2 : : 10 : 5, the Antecedent of the firſt Ratio be to its Conſequent as the Antecedent of the ſecond to its Conſequent; then, by *Compoſition*, as the Sum of the Antecedent and Conſequent of the firſt Ratio, is to the Antecedent or Conſequent of the firſt; ſo is the Sum of the Antecedent and Conſequent of the ſecond, to the Antecedent or Conſequent of the ſecond; *viz.* 6 : 2 : : 15 : 5, or 6 : 4 : : 15 : 10.

11°. If, in a *Proportion* 6 : 4 : : 15 : 10, as the Antecedent of the firſt Ratio is to its Conſequent; ſo is the Antecedent of the other to its Conſequent; then, by *Diviſion*, as the difference of the Terms of the firſt Ratio is to its Antecedent, or Conſequent, ſo is the difference of the Terms of the ſecond Ratio to its Antecedent or Conſequent; *viz.* 2 : 4 : : 5 : 10; or, 2 : 6 : : 5 : 15.

12°. If, in a *Proportion* 4 : 2 : : 6 : 3, as the Antecedent of the firſt Ratio is to its Conſequent, ſo is the Antecedent of the ſecond to its Conſequent: And as the Conſequent of the firſt is to another Number 8, ſo is the Conſequent of the ſecond to another Number 12; *viz.* 2 : 8 : : 3 : 12; then will the Antecedent of the firſt be to 8, as the Antecedent of the ſecond to 12; *viz.* 4 : 8 : : 6 : 12.

13°. If, in a *Proportion* 8 : 4 : : 12 : 6, as the Antecedent of the firſt Ratio is to its Conſequent; ſo is the Antecedent of the ſecond to its Conſequent; and as the Conſequent of the firſt is to another Number 16; ſo is another Number 3, to the Antecedent of the ſecond, *viz.* 4 : 16 : : 3 : 12. Then, will the Antecedent of the firſt be to 16, as 3 to the Conſequent of the ſecond, *viz.* 8 : 16 : : 3 : 6.

14°. Suppoſe any four proportional Quantities, *viz.* 3 : 6 : : 12 : 24, and any other four proportional Quantities 1 : 3 : : 9 : 27; if you multiply the ſeveral Terms of the latter into thoſe of the former, the Products will likewiſe be *Proportional*, *viz.* 3 : 18 : : 108 : 648.

15°. If there be ſeveral Quantities continually *Proportional*, A, B, C, D, &c. the firſt, A, is to the third, C, in a duplicate Ratio; to the fourth, D, in a triplicate Ratio, &c. of the firſt A to the ſecond B.

16°. If there be three Numbers in continual *Proportion*, the difference of the firſt and ſecond will be a mean *Proportional* between the difference of the firſt and ſecond Term, and the difference of the ſecond and third, and the firſt Term.

Harmonical, or *Muſical* PROPORTION, is a third kind of *Proportion*, form'd out of the other two; thus: Of three Numbers, if the firſt be to the third, as the difference of the firſt and ſecond to the difference of the ſecond and third; the three Numbers are in *Harmonical Proportion*.

Thus, 2 : 3 : 6 are *Harmonical*, becauſe 2 : 6 : : 1 : 3. And four Numbers are *Harmonical*, when the firſt is to the fourth as the difference of the firſt and ſecond to the difference of the third and fourth.

Thus 24 : 16 : : 12 : 9 are *Harmonical*, becauſe 24 : 9 : : 8 : 3.

By continuing the *Proportional* Terms in the firſt Caſe, there ariſes an *Harmonical* Progreſſion, or Series. See SERIES.

Properties of Harmonical or Muſical PROPORTION.

1°. If three or four Numbers in *Harmonical Proportion* be multiply'd or divided by the ſame Number; the Products, or Quotients, will alſo be in *Harmonical Proportion*. Thus, if 6, 8, 12, which are Harmonical, be divided by 2; the Quotients 3, 4, 6, are alſo Harmonical; and reciprocally their Products by 2, *viz.* 6, 8, 12.

2°. To find an harmonical Mean between two Numbers given.

Divide double the Product of the two Numbers by their Sum, the Quotient is the Mean required. Thus, ſuppoſe 3 and 6 the Extremes; the Product of theſe is 18, which doubled gives 36; this divided by 9 (the Sum of 3 and 6) gives the Quotient 4. Whence, 3 : 4 : 6 are Harmonical.

3°. To find a third *Harmonical Proportional* to two Numbers given.

Call one of them the firſt Term, and the other the ſecond; multiply 'em together, and divide the Product by the Number remaining after the ſecond is ſubſtracted, from double the firſt; the Quotient is a third *Harmonical Proportional*. Thus ſuppoſe the given Terms 3 : 4, their Product 12 divided by 2 (the Remainder after 4 is taken from 6, the double of the firſt) the Quotient is 6; the *Harmonical* third ſought.

4°. To find a fourth *Harmonical Proportional* to three Terms given.

Multiply the firſt into the third, and divide the Product by the Number remaining after the middle or ſecond is ſubſtracted from double the firſt; the Quotient is a fourth Term in *Harmonical Proportion*. Thus, ſuppoſing the Numbers given 9 : 12 : 16; a fourth will be found by the Rule to be 24.

5°. If there be four Numbers diſpoſed in Order; whereof one Extreme and the two middle Terms are in Arithmetical *Proportion*; and the ſame middle Terms with the other Extreme, are in *Harmonical Proportion*; the four are in Geometrical *Proportion*: As here, 2 : 3 : : 4 : 6, which are Geometrical; whereof 2 : 3 : 4 are Arithmetical, and 3 : 4 : 6.

6°. If betwixt any two Numbers you put an Arithmetical Mean, and alſo a Harmonical one; the four will be in Geometrical *Proportion*. Thus, betwixt 2 and 6, an Arithmetical Mean is 4, and an Harmonical one 3; and the four 2 : 3 : : 4 : 6 are Geometrical.

We have this notable difference between the three kinds of *Proportion*; That from any given Number we can raiſe a continued Arithmetical Series increaſing *in infinitum*, but not decreaſing; the Harmonical is decreaſable *in infinitum*, but not increaſable; the Geometrical is both.

Contra-harmonical PROPORTION, is that Relation of three Terms, wherein the Difference of the firſt and ſecond, is to the Difference of the ſecond and third, as the third to the firſt.

Thus, 3, 5, 6, are Numbers in *contra-harmonical Proportion*, becauſe 2 : 1 : : 6 : 3.

To find a Mean in Contra-harmonical *Proportion* between two Numbers: Divide the Sum of two Squares by the Sum of the Roots, the Quotient is the Mean requir'd. Thus

the

the Sum of the Squares of 3 and 6, *viz.* 45, divided by 9, the Sum of the Roots, gives 5.

PROPORTION is alſo uſed for the Relation between unequal Things of the ſame kind, whereby their ſeveral Parts correſpond to each other with an equal Augmentation, or Diminution.

Thus, in reducing a Figure into little, or in inlarging it, Care is taken to obſerve an equal Diminution, or Enlargement, thro' all its parts; ſo that if one Line, *e. gr.* be contracted by one third of its Length; all the reſt ſhall be contracted in the ſame *Proportion*.

The making of Reductions of this kind, is the great uſe of the proportional Compaſſes. See COMPASSES. See alſo REDUCTION, and DRAUGHT.

PROPORTION, in Law. See DEONERANDO *pro rata portionis*.

PROPORTION, in Architecture, the juſt Magnitude of the Members of each part of a Building, and the Relation of the ſeveral Parts to the Whole; *e.gr.* of the Dimenſions of a Column, *&c.* with regard to the Ordonnance of the Building. See SYMMETRY. See alſo BUILDING.

One of the greateſt Differences among Architects, M. *Perrault* obſerves, is in the *Proportions* of the Heights of Entablatures with reſpect to the Thickneſs of the Columns, to which they are always to be accommodated. See ENTABLATURE.

In effect, there is ſcarce any Work, either of the Antients or Moderns, wherein this *Proportion* is not different; ſome Entablatures are even near twice as high as others—Yet 'tis certain, this *Proportion* ought of all others to be moſt regulated; none being of greater Importance, as there is none wherein a Defect is ſooner ſpied, nor any wherein it is more ſhocking. See COLUMN.

PROPORTION is likewiſe underſtood of the Magnitudes of the Members of Architecture, Statues, or the like, with regard to the Diſtance whence they are to be view'd.

The moſt celebrated Architects are much divided in their Opinions on this Subject: Some will have it, that the parts ought to be enlarg'd in *proportion* to their Elevation; and others, that they ought to remain in their natural Dimenſions. See STATUE.

PROPORTION, in Painting, is the juſt Magnitude of the ſeveral Members of a Figure, a Group, *&c.* with regard to one another, to the Figure, the Group, and the whole Piece. See PAINTING.

Proportion makes one of the moſt important Articles in the Art of Painting, the principal Subject it is employ'd in, being the human Body; for which reaſon, the Curious in that Art will thank us for the following Scheme of the Rules and Laws thereof.

By the way, let it be obſerv'd, 1°. That to meaſure and ſet off *Proportions*, we either divide the Module into twelve Parts, and ſubdivide each of thoſe into four; or divide the Face into three Lengths of the Noſe; ſubdividing each Length into twelve: Or laſtly, divide the whole Face into three, and ſubdivide each of thoſe into four: which laſt Method is what we ſhall here follow.

2°. That the Multiplicity of little Meaſures are to be ſtudiouſly avoided, becauſe they confound; and becauſe they require great Skill in Oſteology, to hit juſtly.

3°. That in Meaſuring, there be a regard had to the Relievo, or Juttings out of Figures.

The Rules of Proportion *in Painting.*

In the *Proportions* of a human Figure, regard is had to the *Age*, *Sex*, and *Quality*.

As to *Age*; we conſider three Stages thereof; Infancy, Youth and Manhood. For the firſt; at three Years of Age, we count five Lengths of the Face, from Top to Toe; *viz.* from the Tip of the Head to the Bottom of the Belly, three; thence to the Foot, two; Breadth about the Shoulders, one Face, one eighth: and in the place of the Hips, one Face.

At four Years, the Height is ſix Faces $\frac{1}{2}$. *viz.* from the Top of the Head to the Bottom of the Belly, three Faces $\frac{1}{2}$. thence to the Sole of the Foot, three Faces. The Breadth about the Shoulders one Face $\frac{2}{3}$. about the Haunches, one Face $\frac{1}{3}$.

At five Years, the Height is ſix Faces $\frac{1}{2}$. $\frac{1}{3}$ abated, the lower being ſhorter.

In Youth at twelve Years, we have two *Proportions*; the one from Nature, which gives nine Faces for the Height; the Breadth about the Shoulders, two Faces; about the Haunches, 1 Face $\frac{1}{3}$. The other from the antique Statues, as that of *Laocoon*, *&c.* which give the Height, ten Faces $\frac{1}{2}$. the Breadth from one Shoulder to another, one Face $\frac{2}{3}$. at the Haunches, 1 $\frac{2}{3}$. at the place of the Muſcle, call'd *Vaſtus Externus*, 2. The Thigh 1, the Knee $\frac{2}{3}$ and $\frac{1}{2}$ a Subdiviſion, and at the Ankles $\frac{1}{3}$.

In the State of Manhood, when the Meaſures are arriv'd at perfection; we reckon the Height ten Faces: the 1ſt, from the Top of the Head to the Noſtril; the 2d, to the Hole in the Neck between the Clavicles; the 3d, to the Pit of the Stomach, call'd *Cartilago Enſiformis*; the 4th, to the Navel; the 5th, to the pyramidal Muſcles; thence to the Knee 2 $\frac{1}{2}$, and as much to the Sole of the Foot.——The Extent of the Arms is the ſame with the Height; *viz.* from the Tip of the long Finger to the Joints of the Wriſts, one Face; thence to the Elbow 1 $\frac{1}{2}$; thence to the Jonćture of the Shoulders, 1 $\frac{1}{3}$; thence to the Hole in the Neck, 1 $\frac{1}{3}$; in all five Heads, which with the five of the other Arm gives ten: The Thickneſs of the Arms to be adjuſted by the Quality or Character.

As to the Breadth of the Figure ſeen Front-wiſe; the Width of the Shoulders a-croſs the *Deltoides*, is 2 Faces $\frac{2}{3}$; Breadth of the pectoral Muſcle, to the Jonćture of the Arm, 2. About the Haunches, where the *Obliqui externi* are, 1 $\frac{2}{3}$, and three Subdiviſions. The Thighs, at the biggeſt place, 1: The Knee $\frac{1}{2}$, three Subdiviſions $\frac{1}{2}$. The Leg at the thickeſt, 2 and 1 Subdiviſion. The Extreme of the Ankle, $\frac{1}{3}$, 1 Subdiviſion $\frac{1}{2}$. The Feet, $\frac{1}{3}$, and $\frac{1}{2}$ a Subdiviſion. Their Length, 1 Face $\frac{1}{3}$, 1 Subdiviſion.

Others, meaſuring by the Length of the whole Head, make only eight Heads, in Height and Breadth; thus: The Head, one; thence to the bottom of the Breaſts, one; thence to the Navel, one; thence to the Yard, one; thence to the middle of the Thigh, one; thence to the lower parts of the Knee, one; thence to the ſmall of the Leg, one; thence to the bottom of the Foot, one.

The Breadth, thus: From the End of the long Finger to the Wriſt, one; thence to the Bend of the Arm, one; thence to the bottom of the Shoulder, one; thence over to the other Shoulder, two; thence to the End of the other long Finger, three.

To theſe general *Proportions*, may be added others, which uſually obtain; as, that the Hand is the Length of the Face; the Thumb the Length of the Noſe; and the great Toe the ſame: The two Nipples, and the Hole in the Neck, make a juſt equilateral Triangle: The Space between the Eyes, is the breadth of an Eye: The breadth of the Thigh, at the thickeſt, is double that of the thickeſt part of the Leg, and treble that of the ſmalleſt: From the top of the Head to the Noſe, the ſame as from the top of the Noſe to the Chin. The diſtance from the Chin to the Throat-pit, is the breadth of the Throat; the diſtance of the Centre of the Eye from the Eye-brow, the ſame as the Prominency of the Noſtrils; and the Space between them and the upper Lip. The Length of the Fore-Finger, the ſame as the Space thence to the Wriſt; the Space from the tip of the Fore-Finger to the Wriſt, the Length of the Face.

For the *Sex*: The *Proportions* of Man and Woman differ in height; in that the Woman has a longer Neck; the parts at the Breaſts, and the lower parts of the Belly, bigger by half a part; which makes the ſpace from the Breaſt to the Navel, leſs by one part; and the Thigh ſhorter by a third part.

As to breadth, a Woman has her Breaſts and Shoulders narrower, and Haunches larger; and Thighs, at the place of their Articulation, larger; Arms and Legs thicker, Feet ſtreighter; and becauſe Women are more fat and fleſhy, their Muſcles are leſs ſeen, and therefore the Contours more ſmooth and even.

Young Maids have little Heads, long Necks, low or down Shoulders, ſlender Bodies, Haunches big, Legs and Thighs long, Feet little.

Young Men have the Neck thicker than Women, the Shoulders and Breaſts larger, the Belly and Haunches narrower, Legs and Thighs ſlenderer, and Feet larger.

As to the *Quality* of Subjects, we are either to follow ſimple Nature, or fine and agreeable Nature, or to chuſe Nature, or exceed it. In following ſimple Nature, in common and Country Subjects, Men of dull Wit, and a moiſt Temperament to be of an heavier and rougher *Proportion*, the Muſcles appearing but little diſtinguiſh'd; the Head big, Neck ſhort, Shoulders high, Stomach little, Knees and Thighs thick, and Feet large.

In Nature, as fine and agreeable, for ſerious Hiſtories, *&c.* the Figures of the Heroes to be well ſhaped, the Haunches high and upright, the Joints well knit, little and compact, free from Fleſh and Fat.

Military Men, to have the Head little, Neck thick and nervous, Shoulders large and high, Body and Paps elevated, Haunches and Belly little, Thighs muſcly, principal Muſcles rais'd up and knit together at the Heads; the Legs ſmooth, Feet ſlender, Soles hollow.

Nature is ſometimes to be ſelected, *i.e.* made up of parts from various good Originals, to form extraordinary and perfect Figures for great and heroic Subjects, as in *Roman* Hiſtories; giving, thus, a Character of Force ſufficient to execute Actions agreeable to the Deſcriptions the Poets, *&c.* make.

Laſtly, ſometimes Nature is to be exceeded, as in Repreſentations of fabulous Deities, of Heroes and Giants:

In

In these the great Pieces, which serve to form the Body, are to be set out in Measures agreeable to the Height; only diversifying them by their Bigness.

In the Rule of *Proportions*, it is to be observ'd, that there is a difference in the Contours of some parts, when put in different Postures. Thus when the Arm is bent, 'tis larger than when straight; the same is true of the Foot and Knee, as is shewn by *Leonardo da Vinci*.

Rule of PROPORTION, in Arithmetic, a Rule whereby we find a fourth Proportional to three Numbers given.

This is popularly call'd, *The Golden Rule*, and sometimes, *The Rule of Three*. See RULE.

Compass of PROPORTION, a Name by which the *French*, and after them some *English* Authors, call the *Sector*.

See its Construction and Use, under the Article SECTOR.

PROPORTIONAL, a Quantity, either Linear or Numeral; which bears the same Ratio, or Relation to a third, that the first does to the second. See PROPORTION.

1. *To find a fourth* PROPORTIONAL *to three given Lines*, AB, AC, and BD. (Tab. GEOMETRY, fig. 62.)

Draw an Angle FAG at pleasure; from A set off the first of the Lines to B; from A, the second to C; and from B, to D, the third: draw BC; and in D make an Angle, equal to ABC: then is CE the fourth *Proportional* sought; and AB : AC : : BD : CE.

2. If a third *Proportional* be requir'd to two given Lines, AB, and AC; make BD equal to AC, *i. e.* let AC be repeated twice: then AB : AC : : AC : CE.

3. *To find a mean Proportional between two given Lines*, AB and BE (fig. 63.) join the two given Lines, into one continu'd right Line, and bisect it in C. From C, with the Interval of AC, describe a Semi-circle ADE; and from B erect a Perpendicular BD; this is the mean *Proportional* sought; and AB : BD : : BD : BE.

The Geometricians have been these two thousand Years in search of a Method, for finding *two mean Proportionals*. See MEAN.

The Antients perform'd it mechanically, by the Mesolabe, describ'd by *Eutochius*; and many of them attempted to give the Demonstration; some by the solid *Loci*, as *Menechmus*; others by the plain *Loci*, as *Nicomedes*, *Diocles*, and in our Times, *Vieta*; and others by implicit Motions, as *Plato*, *Architas*, *Pappus*, and *Sporus*; others tentatively, by the Description of Circles, as *Hero* and *Apollonius*, &c. But all in vain. See PROBLEM and QUADRATURE.

4. *To find a mean Proportional between two Numbers*: Half the Sum of the two given Numbers is an arithmetical mean *Proportional*; and the square Root of their Product, a Geometrical mean *Proportional*. See PROPORTION *Arithmetical* and *Geometrical*.

To find a mean harmonical Proportional. See PROPORTION *Harmonical*.

PROPORTIONAL *Compasses*, an Instrument for the ready drawing of Lines, and Figures, in any given Ratio to other Lines, or Figures.

See their Construction and Use, under the Article COMPASSES.

PROPORTIONAL *Scales*, call'd also *Logarithmical Scales*, are the Artificial Numbers or Logarithms, placed on Lines, for the Ease and Advantage of Multiplying, Dividing, &c. by means of Compasses, or of Sliding-Rules. See LOGARITHM and SCALE.

They are, in effect, only so many Lines of Numbers, as they are call'd by *Gunter*; but made single, double, triple, or quadruple; beyond which they seldom go. See NUMBERS, GUNTER's *Scale*, &c.

PROPORTIONALITY, a Term used by *Gregory à St. Vincent* for the Proportion that is between the Exponents of four Ratios. See EXPONENT and RATIO.

PROPORTUM, PROPORT, or PURPORT, in our Law-Books, the Intention or Meaning of any thing. *Secundum* Proportum *dicti Chirographi inter eos confecti*.

PROPOSITION, PROPOSITIO, call'd also ENUNCIATION, in Logic, part of an Argument, wherein some Quality, either Negative or Positive, is attributed to a Subject. See ENUNCIATION, ATTRIBUTE, &c.

Chauvin defines a *Proposition*, a compleat, consistent Sentence, indicating or expressing something either true or false, without ambiguity: ——As, Xantippe *is a bad Wife*; —*If an Ass fly, he has Wings*.

Others, more Philosophically, define it a Speech utter'd, or produced to signify some Judgment of the Mind. See JUDGMENT.

A *Proposition* consists of two Terms; the one, that, whereof we affirm or deny; call'd the *Subject*: The other the thing affirmed or denied, call'd the *Attribute* or *Predicate*. See SUBJECT and PREDICATE.

These two are either join'd, or separated, by the Intervention of some Copula or Disjunctive. See COPULA.

Thus in the *Proposition*, *God is just*; the Subject, *God*, is joined with the Attribute *just*, by the Verb substantive *is*.

The Schoolmen call the two Terms the *Matter*, and the Copula the *Form* of the *Proposition*. See FORM, &c

Now, as Terms may be either singular; or common, and universal; if the Subject of a *Proposition* be a common Term, taken in all its extent; the *Proposition* is call'd *Universal*: As, *Every Atheist is blind*. See UNIVERSAL.

If the common Term be only taken in an indeterminate part of its Extent, the *Proposition* is call'd *particular*: As, *Some Atheists are wicked*. See PARTICULAR.

If the Subject of the *Proposition* be singular, the *Proposition* is call'd *singular*: As, George *is King of* England. See SINGULAR.

Those *Propositions* which have only one Subject, and one Attribute, are call'd *simple*; those that have several Subjects, or Attributes, are call'd *compound*. See COMPOUND.

A Syllogism consists of three *Propositions*, Major, Minor, and Conclusion. See SYLLOGISM.

An Enthymeme, of two. See ENTHYMEME.

The Schoolmen make several other Species and Divisions of *Propositions*; as,

A PROPOSITION *de primo adjacente*, where the Subject and Predicate are both included under the Verb; such are, *Veni*, *Vidi*, *Vici*.

A PROPOSITION *de secundo adjacente*, is, where either the Subject or Predicate is included in the Verb; as, *I love——I write*.

A PROPOSITION *de tertio adjacente*, is, where both the Subject and Predicate are express, and stand distinct from the Verb; as, *The King is just*.

This *Proposition* is the Rule or Standard of all the other; so that whatever *Proposition* can be reduced thereto, is legitimate; and what cannot, is not.

Propositions, again, are divided into three Classes: The first, regarding the *Matter*; the second, the *Form*; the third, the *Thought*.

Those of the first Class are subdivided into, finite and infinite; direct and indirect; single and manifold.

A *finite* or *definite* PROPOSITION, is that which declares something determinate on a Subject; as, *Man is a Bipede*. —*The Wind is not visible*.

An *infinite* or *indefinite* PROPOSITION, is that where either one or both of the Terms are infinite, or have a Negative prefixed to 'em; as, *Non homo est albus——Homo est non albus*.

A *direct* PROPOSITION, is that wherein a higher or more general is predicated of a lower and more particular; as, *Man is an Animal*. Others will have it, that wherein the Subject stands as a Matter, receiving, and the Predicate, as a Form, received; as, Peter *is learned*.

An *indirect* PROPOSITION, according to some, is that wherein an inferior is predicated of a higher; as, *An Animal is Man*. According to others, it is that wherein the Subject stands as the Form, and the Predicate as the Matter; as, *Every Rational is Man*.

A *single* PROPOSITION is such, either Simply, or by Conjunction: *Simply*, when it affirms or denies one thing of one other thing; as, *The Sun shines*: By *Conjunction*, when several *Propositions* are join'd and coupled together; thus, *The Sun shines*, and *it is Day*; are two *Propositions*, which conjoin'd make this one, *If the Sun shines, it is Day*.

Of such *conjunct Propositions* there are divers kinds, *viz.* Hypothetical, Disjunctive, Copulative, &c.

Hypothetical Proposition, is that consisting of several simple ones, affected with some conditional one; as, *If the Sun be set, it is Night*.

Disjunctive Proposition, is that consisting of several, affected with a disjunctive Conjunction; as, *It is either Day or Night*.

A *copulative Proposition*, is that consisting of several affected with a Conjunction Copulative; as, Peter *does not stand, and sit*.

Some add, *Discrete* or *Adversative Propositions*; as, *He is rich, but covetous*.

A *compound* PROPOSITION, is that where one or both the Terms excite several Ideas in the Mind; as, *A Man is Body and Soul, and both together*: Or, *a Foundation, Walls, and Roof, are a House*.

A *manifold* PROPOSITION, is that consisting of several Subjects; as, Peter *and* Paul *preach'd*: Or, several Predicates; as, Simon *reads and walks*: Or both; as, Peter *and* Paul *preach and pray*.

In respect of *Form*, *Propositions* are divided into Affirmative, and Negative; True, and False; Pure, and Modal.

An *Affirmative* PROPOSITION, is that whose Attribute is join'd to the Subject; as, *God is a Spirit*.

A *Negative* PROPOSITION, is that whose Attribute is separated from the Subject; as, *Man is not a Stone*,

A *True* PROPOSITION, is that which declares a thing to be what it really is; or not to be what it is not. See TRUTH.

A *False* PROPOSITION, is that which ſignifies a thing to be what it is not; or not to be what it is. See FALSHOOD.

The Truth of a *Propoſition*, therefore, depends on the connecting of the Subject with the Attribute, which is done by the Act of the Mind, call'd Judgment. See JUDGMENT, ERROR, *&c.*

A PROPOSITION is ſaid to be *pure*, when it implies or involves nothing beſides its Matter and Form; as, *Man is rational.*

A *Modal* PROPOSITION, is that which beſide the pure Matter and Form, involves ſome Mode or Manner of Diſpoſition; as, *It is neceſſary Man be rational.*

Hence, ſuch *Propoſition* is ſaid to conſiſt of a Mode and a Diction; the Mode denotes ſome Circumſtance which diſpoſes the *Propoſition*; as, *It is neceſſary:* The Diction is the reſt of the *Propoſition*; *that Man be rational.*

There are four of theſe Modes very famous, *viz. Neceſſary*, *Poſſible*, *Impoſſible*, and *Contingent*. See NECESSARY, POSSIBLE, *&c.*

Others produce other Modes, as *true*, *falſe*, *certain*, *uncertain*, *probable*, &c.

To modal *Propoſitions*, the Philoſophers refer *excluſive*, *exceptive*, and *reſtrictive Propoſitions*; all which are denoted by a common Name, *Exponible Propoſitions*, becauſe requiring ſome Explanation to make 'em clearly underſtood.

An *Excluſive* PROPOSITION, is that denoted by a Sign, or Character of Excluſion; as, *only*, *ſolely*, *alone*: as, *God alone is eternal*; which is expounded thus, *God is eternal, and no other Being beſide him is ſo:* Peter *only plays*; which we expound, Peter *plays, and does nothing elſe.*

Every *Excluſive Propoſition* is expounded by two *Propoſitions*, one of which is affirmed, and the other denied.

Exceptive PROPOSITION, is that denoted by an exceptive Sign; as, *beſide*, *unleſs*, &c. Thus, *Every Animal, beſide Man, is irrational.*

Every *Exceptive Propoſition* is to be reſolved, or expounded by three *Propoſitions*; as that, *e. gr.* abovementioned, by theſe: *Every Animal that is not Man is irrational: Every Man is an Animal: No Man is irrational.*

Reſtrictive, or *Limitative* PROPOSITION, is that affected with a reſtrictive Sign; as, *according to*, *ſo far as*, *conſider'd as*, quatenus, *&c.* Thus, *Man* quatenus *an Animal, perceives.*

PROPOSITION, in Mathematics, is ſome Truth advanced, and ſhewn to be ſuch by Demonſtration: or ſome Operation propoſed, and its Solution ſhewn.

If the *Propoſitions* be deduced from ſeveral theoretical Definitions compared together; as this, A Parallelogram is double of a Triangle, ſtanding on the ſame Baſe and of the ſame Altitude; it is call'd a *Theorem*. See THEOREM.

If from a Praxis or Series of Operations, *a Problem*; as, To find a third Proportional to two given Quantities. See PROBLEM.

Indeed, in ſtrictneſs, the *Propoſition* is only part of a Theorem, *viz.* that which ſhews what agrees to ſuch a thing under ſuch Conditions, and what not: In which ſenſe it is diſtinguiſh'd from the *Demonſtration*, which ſhews the reaſons why the Underſtanding conceives that to agree to it. See DEMONSTRATION.

Again, ſtrictly ſpeaking, the *Propoſition* is only a Member of a Problem, *viz.* that which ſhews what is required to be done: In which ſenſe, it is diſtinguiſh'd from the *Solution*, which rehearſes the ſeveral things to be done in order to effect what is required; and from the Demonſtration, which proves, that by doing the things enjoin'd in the Solution, the thing requir'd in the *Propoſition* is truly done. See RESOLUTION.

PROPOSITION, in Poetry, the firſt part of an Epic Poem, wherein the Author propoſes, or lays down, briefly and in general, what he has to ſay in the Courſe of his Work. See POEM, EPIC, *&c.*

The *Propoſition*, Pere *Boſſu* obſerves, is to contain the bare Matter of the Poem, *i. e.* the Action, and the Perſons that are to execute it, both human and divine.

This is what we have both in the *Iliad*, the *Odyſſee*, and the *Æneid*. The Action propoſed in the *Iliad*, is the Wrath of *Achilles*; that of the *Odyſſee*, the Return of *Ulyſſes*; and that of the *Æneid*, the Tranſlation of the *Trojan* Empire into *Italy*.

The ſame Author obſerves, that the divine Perſons are nam'd in all the three *Propoſitions*. *Homer*, *e. gr.* declares, that what happens in the *Iliad*, is by the Will of *Jupiter*; and that *Apollo* was the Cauſe of the Quarrel between *Agamemnon* and *Achilles*: The ſame Poet ſays, 'twas *Apollo* prevented the Return of *Ulyſſes*'s Companions; and *Virgil* mentions the Deſtinies, the Will of the Gods, and the Anger of *Juno*.—But they all three dwell, chiefly, on the Perſon of the Hero, as if he were the Matter of the Poem. See HERO.

Yet there is ſome difference, in this reſpect, in the three Poems; in that *Achilles* is named in the *Iliad*; but *Ulyſſes*, and *Æneas* are not: They are only pointed at, and that in ſuch general Terms, as if it were ſuppoſed they were known before.

This practice ſeems to fall in with the firſt Intention of the Poet; who is to feign an Action without Names, and who, as *Ariſtotle* ſays, does not relate the Action of *Achilles* nor *Ulyſſes*, nor *Æneas*, nor any particular Perſon, but of an univerſal, general, and allegorical Perſon. See FABLE and ACTION.

Add to this, that the Character which the Poet is to give his Hero, and his whole Work, is expreſs'd in the *Propoſition*; both by *Homer* and *Virgil*. See CHARACTER.

The whole *Iliad* is Anger and Violence; 'tis *Achilles*'s Character, and 'tis what the Poem commences with, Μῆνιν ἄειδε. The *Odyſſee* preſents us in the firſt Verſe with the Prudence, Diſſimulation, and Addreſs which makes the Character of *Ulyſſes*, and the Buſineſs of the Poem: Ἄνδρα πολύτροπον. And we ſee the Piety and Mildneſs of *Æneas* in the beginning of the *Latin* Poem: *Inſignem Pietate Virum.*

As to the manner of the *Propoſition*; *Horace* contents himſelf to preſcribe Modeſty and Simplicity; not to promiſe much, nor raiſe great Expectations in the Reader. *Don't begin*, ſays he, *like that wretched Poet who ſet out with*, Fortunam Priami cantabo & nobile Bellum. *How much better is that of* Homer, Dic mihi, Muſa, Virum, &c. *He does not ſpend all his Fire at once, and leave nothing but Smoke: From this feeble beginning, you ſhall ſoon ſee him riſe to the Wonders of* Antiphates, Scylla, Charybdis, *and* Polypheme.

The ſame Modeſty we find in the *Propoſition* of the *Æneid*: If that of the *Iliad* be a little more furious, 'tis, perhaps, in conformity to the Character of the Poem, which is a Series of Violences and Extravagancies.

Add, that if the Poet be to ſpeak with Modeſty of his Hero; much more is he to do ſo of himſelf: Thus *Virgil* only ſays, *I ſing the Action of* Æneas. *Homer* begs his Muſe to *ſay* or *ſing*. How far does *Claudian* ſwerve from theſe Examples?

——— Audaci premere Cantu,
Mens congeſta jubet, greſſus removete profani:
Jam furor humanos noſtro de pectore ſenſus
Expulit, & totum ſpirant præcordia Phœbum.

A ſhort Poem, *e. gr.* an Ode, *&c.* wherein the violent Strain might be purſued to the end; might admit of ſuch a pompous beginning: Thus we find *Horace* begin an Ode much after the Manner of *Claudian*:

Odi profanum vulgus, & arceo———
Carmina non prius audita Muſarum
Sacerdos, Virginibus puerisque canto.

But the length of an Epic Poem quite excludes all pompous *Propoſitions.*

There is ſcarce any Fault we have yet obſerv'd a *Propoſition* liable to, but there is an Inſtance of in the *Propoſition* of *Statius*'s *Achilleid*: He bids his *Muſe* rehearſe *the Deeds of the Magnanimous Son of* Æacus, *who was formidable even to the Thunderer.* He adds, *That he has worthily diſcharg'd a former Undertaking, and that* Thebes *eſteems him a ſecond* Amphion.

Magnanimum Æacidem *formidatamque Tonanti*
Progeniem, & patrio vetitam ſuccedere Cœlo
Diva refer.———
Tu modo, ſi veteres digno deplevimus hauſtu,
Da fontes mihi, Phœbe, novos, &c.

PRO-PRETOR, or PRO-PRÆTOR, a *Roman* Magiſtrate, who having diſcharged the Office of Pretor at home, was ſent into a Province to command there with his former pretorial Authority. See PRETOR.

The Name *Pro-pretor* was alſo given to thoſe, who, without having been Pretors at *Rome*, were ſent extraordinarily into the Provinces, to adminiſter Juſtice with the Authority of Pretors.

Some alſo give the Name *Pro-pretors* to thoſe ſent by the Emperors into the Provinces, which, upon partition in *Auguſtus*'s time, fell to their Lot; as the Name Proconſul was given to thoſe ſent into the Provinces that fell to the People's ſhare. See PROCONSUL.

PRO-PREFECT, PRO PRÆFECTUS, among the *Romans*, the Prefect's Lieutenant; or an Officer whom the Prefect of the *Prætorium* commiſſion'd to do any part of his Office in his place. See PREFECT.

In *Gruter*, p. CCCLXX, the third Inſcription mentions

Pro-

Pro prefects of the *Prætorium* under *Gratian*, in the City of *Rome* and the neighbouring parts. See PRÆTORIUM.

PROPRIETOR, or PROPRIETARY, he who has the Property or Propriety of any thing. See PROPERTY.

PROPRIETOR, in Law, is ſtrictly, ſuch a one as has, or poſſeſſes any thing in the utmoſt degree: *Quæ nullius arbitrio eſt obnoxia.*

The Term was formerly apply'd in a particular manner to him who had the Fruits of a Benefice to himſelf, and his Heirs and Succeſſors; as in antient time Abbots and Priors had.

PROPRIETARY-*Monks*, were ſuch as had reſerved Goods and Effects to themſelves, notwithſtanding their formal Renunciation of all at the Time of their Profeſſion.

They are frequently mentioned in the *Monaſt. Anglic.* &c. and were to be very ſeverely dealt withal; to be Excommunicated, deprived of Burial, &c.—Monachi Proprietarii *excommunicentur ab Abbatibus, & ſi in morte* Proprietarius *inventus fuerit, Eccleſiaſtica careat Sepultura*, &c. Addit. ad Matt. Par.

PROPRIETATE *Probanda*, is a Writ that lies for him that would prove a Propriety before the Sheriff.

For where a Property is alledged, a Replegiare properly lies not. See REPLEGIARE.

PROPRIETY, in Grammar, is, where the direct and immediate Signification of a Word agrees to the thing it is apply'd to.

In which ſenſe *Propriety* is uſed in oppoſition to a figurative, or remote Signification.

PROPYLÆUM, the Porch of a Temple, or Great Hall. See PORCH.

Hence the Word is uſed figuratively in Matters of Learning for an Introduction, Apparatus, or Prodromus to ſome greater Work.—In this ſenſe we ſay, the *Propylæum* of the Jeſuits at *Antwerp*, &c.

The Word is *Greek* προπυλαιον, ſignifying the ſame thing.

PRO-QUESTOR, PRO-QUÆSTOR, the Queſtor's Lieutenant, or a Perſon who diſcharged the Office of Queſtor in his ſtead. See QUESTOR.

The Word is chiefly apply'd to an Officer appointed by the Governour of a Province to diſcharge the Queſture after the deceaſe of the Queſtor, till the Senate and People ſhould ſend a new one.

PRO-RATA, in Commerce, a Term ſometimes uſed among Merchants, for *Proportion*. See PROPORTION.

Thus, when in ſpeaking of any Undertaking they ſay, Each Perſon muſt reap the Profit or ſuſtain the Loſs in *Pro-rata* to his Intereſt; 'tis meant, each ſhall gain or loſe in proportion to the Sum he put in Stock.

PRO-RATA *Portionis*, in Law, ſee ONERANDO *pro rata portionis*.

PRORÆ *Os*, in Anatomy, a Bone of the Cranium, call'd alſo *Os Occipitis*. See *Os* OCCIPITIS.

PROROGATION, the Act of prolonging, adjourning, or putting off to another Time.

The difference between a *Prorogation* and an Adjournment of Parliament, is, that by the *Prorogation* in open Court the Seſſion is ended; and ſuch Bills as paſſed in either Houſe, or both Houſes, and had not the Royal Aſſent, muſt at the next Aſſembly begin again: For every Seſſion of Parliament, is in Law a ſeveral Parliament. See SESSION.

If it be only adjourn'd, then there is no Seſſion; and, conſequently, all things continue in the ſame State they were in before the Adjournment. See ADJOURNMENT.

This difference between *Prorogation* and Adjournment is of no long ſtanding; antiently they were uſed as Synonimous——Prorogetur *Curia de Hora in Horam, quouſque placitum terminetur, MS de L L.*

To *Prorogue* the Parliament the King goes in Perſon, with his Crown on his Head; and ſends the *Black Rod* for the Houſe of Commons to attend him at the Bar of the Houſe of Lords; where, after giving an Anſwer to each Bill ſignified to him, he makes a Speech; and the Lord Chancellor, by command, ſignifies the Parliament to be *Prorogued*. See PARLIAMENT.

PROSCENIUM, in the antient Theatre, the *Pulpitum*, or Eminence whereon the *Roman* Actors exhibited. See THEATRE.

The *Proſcenium* anſwer'd to our *Stage*.

It conſiſted of two Parts among the *Greeks*; one particularly ſo call'd, where the Actors perform'd. The other was the *Logeion*, where the Singers and the Mimicks acted their Parts.

Among the *Romans*, the *Proſcenium* and *Pulpitum* were the ſame thing. See PULPITUM.

PROSCRIPTION, a Publication made in the Name of the Chief or Leader of a Party, whereby he promiſes a Reward to any who ſhall bring him the Head of one of his Enemies.

Scylla and *Marius* by turns *proſcribed* each other's Adherents.—Under the Triumvirate a great part of the beſt and braveſt of the *Romans* fell by *Proſcription*.

The Term took its Riſe from the Practice of writing down a Liſt of the Perſons Names, and poſting it in publick; from *pro*, and *ſcribo*, I write.

PROSE, the natural Language of Mankind, looſe, and unconfin'd by poetical Meaſures, Rhimes, &c.

The Word is uſed in oppoſition to *Verſe*. See VERSE.

Tho' *Proſe* have its Connections, which ſuſtain it; and a Structure, which renders it numerous; it ought ſtill to appear free: its Character conſiſts in running eaſy, and unreſtrain'd. See STYLE.

Poets very rarely have the Talent of *Proſe*: The Habit of wearing Chains ſits faſt upon 'em, even when the Chains are off.

S. Evremond compares *Proſe*-Writers to Foot-Travellers, who walk with leſs Noiſe, but more Security than the Cavaliers.

The Word comes from the *Latin Proſa*, which ſome will have derived from the *Hebrew Poras, expendit.*

PROSECUTOR, in Law, is he that purſues a Cauſe in another's Name. See PROMOTER.

PROSELYTE, a new Convert to the Faith. See CONVERT.

The Term was much uſed in the Primitive Church—— The *Jews*, too, had their *Proſelytes*; who from *Gentiles* embrac'd *Judaiſm*.

The Word is pure *Greek* προσηλυτος; which in *Latin* ſignifies *Advena*; in *Engliſh*, *Stranger*, or one arriv'd out of another Country.

PROSODY, PROSODIA, that part of Grammar which teaches and directs the Pronunciation, and manner of Rehearſal; marks the Accents, and diſtinguiſhes the long and ſhort Syllables. See GRAMMAR, PRONUNCIATION, &c.

The Word is form'd from the *Greek* προσωδω, *accino*; of προς and ωδη, *Cantus*, Singing.

Proſody is properly that Branch of Grammar which relates to Syllables; treating of their true Pronunciation in reſpect of Accent and Time. See SYLLABLE: See alſo ACCENT, &c.

The *Engliſh Proſody* turns chiefly on two Things; *Numbers*, that is, a certain number of Feet or Syllables. See NUMBERS.

And, *Rhime*, or a Similitude of Sound between the laſt Syllables of Verbs. See RHIME.

The *Greek* and *Roman Proſodies* were unacquainted with Rhime; but in lieu thereof, had ſomething to make their Verſe harmonious, without, *viz. Quantity*. See QUANTITY.

PROSONOMASIA, προσωνομασια, a Figure in Rhetoric, whereby alluſion is made to the Likeneſs of a Sound in ſeveral Names, or Words. See FIGURE.

PROSOPOPOEIA, in Rhetoric, a Figure, whereby we make Perſons that are abſent, or dead, or even Things which are inanimate, as Cities, &c. to ſpeak. See FIGURE.

The Poets, in their Fictions, make frequent uſe of the *Proſopopœia*; as alſo do the Orators, in their painting of violent Paſſions, which ſeem to tranſport, and make them forget themſelves.

There are two kinds of *Proſopopœia's*, the one direct; the other indirect.

For an inſtance of the latter: *Juſt Gods, Protectors of the Innocent, permit the Order of Nature to be interrupted for one moment, and let this Carcaſe reſume the uſe of Speech*, &c.

Inſtances of the former are found every where, among the Orators and Poets; that which follows, is a very beautiful one, found by way of Epitaph on a Tomb-ſtone: The dead Wife addreſſes her ſurviving Husband, thus:

Immatura peri: ſed tu felicior, annos
Vive tuos, conjux optime, vive meos.

The Word is form'd from the *Greek* προσωπον, *Perſon*, and ποιεω, *I make*, or *feign*.

PROSPECT. } See { PERSPECTIVE.
PROSPECTIVE *Glaſs*. } See { PERSPECTIVE *Glaſs*.

PROSTAPHÆRESIS, in Aſtronomy, the Difference between the true, and mean Motion, or true and mean Place, of a Planet; call'd alſo *Equation of the Orbit*, or *of the Centre*, and ſimply *the Equation*. See EQUATION.

Or, which amounts to the ſame, *Proſtaphæreſis* is the difference between the mean, and equated Anomaly. See ANOMALY.

Thus, ſuppoſe the Circle ALMPN (Tab. ASTRONOMY, fig. 51.) the or Orbit of the Earth, ſurrounded by the Ecliptic ♈, ♋, ♎, &c. and ſuppoſe S, the Sun; and the Earth in R: the mean Anomaly will be the Arch APR, or, caſting away the Semicircle, the Arch PR, or the Angle PCR; and the true Anomaly, rejecting the Semicircle, will be PSR, which is equal to PCR and CRS. If then to the mean Anomaly, we add the Angle CRS, we ſhall have the true Anomaly PSR, and the Earth's Place, in the Ecliptic. See PLACE, &c.

And

And here, the Angle CLS, or CRS, is call'd the *Proſ-thaphæreſis*; by reaſon it is ſometimes to be added, and ſometimes to be ſubſtracted from the mean Motion, that we may have the true Motion or Place of the Earth. See EARTH.

The Word is form'd from the *Greek* πρόσθε, *ante ſuperans*; and ἀφαίρησις, *ademptio*.

PROSTATES, or PROSTATA, in Anatomy, a white, ſpongy, glandulous Body ſituate at the Root of the Penis; or juſt below the Neck of the Bladder; and about the Size of a Walnut. See GLAND and PENIS.

Authors aſcribe two kinds of Subſtance to the *Proſtata*, the one glandulous, the other ſpongeous, or porous; which laſt ſeems nothing but a Congeries of minute Veſſels and Cells; thro the middle of which paſſes the *Veſiculæ Seminales*, without any Communication therewith.

It has excretory Ducts of its own, pretty numerous: *De Graaf* does not remember to have known them fewer than ten in the *Proſtata* of a Man; in Dogs, they are ſometimes an hundred; each of which diſcharges itſelf into the Urethra; ſome above, ſome below the *Caput Gallinaceum*: Each having its proper Caruncle. See EXCRETORY.

Out of theſe iſſues a whitiſh, ſlimy Humour, ſecreted in the glandular part of the *Proſtata*, and convey'd into the Cavity of the Urethra.

The Uſe of this Humour is to line and lubricate the Capacity of the Urethra, and prevent it from being annoy'd with the Acrimony of the Urine in its Paſſage thro' it; and to ſerve as a Vehicle to the Seed, in the time of Ejaculation. See URINE, URETHRA, &c.

Some take it for a third kind of Seed; but without much reaſon. See SEED.

Boerhaave thinks it may ſerve to nouriſh the Animalcule during the firſt moments after Coition.—This Humour, he adds, remains after Caſtration; but is not prolific.

The ſame Author, from the Memoirs of the *French* Academy, makes the *Proſtata* to conſiſt of an Aggregate of twelve Glands, each of which terminates by its excretory Duct in a little Bag, into which it diſcharges its Humour. Theſe twelve Bags open by as many excretory Ducts into the Cavity of the Urethra; ſo as to encompaſs the Exit of the *Veſiculæ*; whence the Seed and the Humour of the *Proſtata* are the more accurately mix'd.

PROSTYLE, in the antient *Greek* Architecture, a Range of Columns in the Front of a Temple. See TEMPLE.

The Word is form'd from the *Greek* πρὸ, *before*, and στύλος, *Column*.

PROSYLLOGISM, PROSYLLOGISMUS, is uſed by ſome School-Writers, for a Reaſon or Argument produc'd to ſtrengthen, or confirm one of the Premiſes of a Syllogiſm. See PREMISE.

Others define the *Proſyllogiſm*, an Argument compos'd of two Syllogiſms ſo diſpos'd, as that the Concluſion of the former is the *major*, or *minor* of the latter.

As here, *e.gr.* every Rational is riſible: but every Man is rational, therefore every Man is riſible; but no Aſs is riſible, therefore no Aſs is a Man.

The *Major* of the ſecond Syllogiſm may be omitted or underſtood; and ſome even contend that it ought to be ſo: ſo that on their Principle, a *Proſyllogiſm*, or redundant Syllogiſm, is when two Syllogiſms are ſo contain'd in five Propoſitions, as that the Concluſion of the former, is the *Major* or *Minor* of the latter. See SYLLOGISM.

PROTASIS, in the antient Drama, the firſt part of a Comic, or Tragic Piece; wherein the ſeveral Perſons of the Play are ſhewn, their Characters and Manners intimated, and the Action, which is to make the Subject of the Piece, propos'd, and enter'd upon. See DRAMA, TRAGEDY, &c.

The antient *Protaſis* might go about as far as our two firſt Acts. See ACT.

Where the *Protaſis* ended, the Epitaſis commenc'd. See EPITASIS.

The Word is form'd from the *Greek* πρότασις, *Protenſio*.

PROTATICUS, in the antient Drama, was a Perſon who never appear'd but in the *Protaſis*, or firſt part of the Play; as *Socia* in *Terence*'s *Andria*, &c.

PROTECTION, the Shelter, Defence, Authority, and Aid, employ'd by any one in behalf of the helpleſs, or unhappy. See PROTECTOR.

Active Protection ſuppoſes Power, Intereſt, Favour, &c. in the Perſon that protects: *Paſſive Protection*, on the contrary, implies Neceſſity, Weakneſs, and Dependance in the Perſon protected. See SAFEGUARD.

PROTECTION is alſo uſed for a Privilege belonging to Embaſſadors, Members of Parliament, &c. whereby they and their Domeſticks are ſecur'd from Arreſts, &c. See PRIVILEGE, &c.

PROTECTION is ſometimes alſo underſtood of the Perſon of the Protector. Such a Cardinal has the *Protection* of *France*—The *Protection* of *Spain* is become vacant by the Death of ſuch a Cardinal. See PROTECTOR.

PROTECTION, in Law, has both a general, and a ſpecial Signification.

In the general, it is uſed for that Benefit, and Safety, which every Subject, Denizen or Alien, ſpecially ſecur'd, hath by the Laws. See LAW.

In the ſpecial Signification, it is uſed for an Exemption, or Immunity, given by the King to a Perſon, to ſecure him againſt Suits in Law, or other Vexations, upon reaſonable Cauſes moving him thereunto.

Of this, *Fitzherbert* makes two kinds; the firſt he calls a *Protection*, *cum clauſula volumus*; whereof he mentions four Particulars.

1°. A *Protection*, *quia proſecturus*, for him that is to paſs over Sea in the King's Service.

2°. A *Protection*, *quia moraturus*, for him who is abroad in the King's Service.

3°. A *Protection* for the King's Debtor, that he be not ſued or attach'd, till the King be paid his Debt.

4°. A *Protection* for a Perſon in the King's Service beyond Sea, or in the Marches of *Scotland*.

The ſecond Form of *Protection*, is *cum clauſula nolumus*, which is moſt commonly granted to a ſpiritual Company, for their Immunity, from taking their Cattle by the King's Miniſters; but it may be alſo granted to a ſingle Perſon, either ſpiritual or temporal.

Protection extends not to Pleas of Dower, *Quare impedit*, Aſſize of novel Diſſeiſin, Darrein Preſentment, Attaints, nor Pleas before Juſtices in Eyre.

PROTECTOR, a Perſon who undertakes to ſhelter and defend the weak, helpleſs, or diſtreſs'd. See PROTECTOR and PATRON.

God, and the Magiſtrate, are the *Protectors* of the Widow and Orphan——Among the Heathens, *Minerva* was eſteem'd the *Protectreſs* of Arts.

Every Catholic Nation, and every Religious Order, has a *Protector* reſiding at the Court of *Rome*, who is a Cardinal, and call'd the *Cardinal Protector*. See CARDINAL.

The Name is ſometimes alſo uſed for a Regent of a Kingdom, made choice of to govern it during the Minority of a Prince.

Cromwell aſſum'd the Title and Quality of *Lord Protector of the Commonwealth of* England.

PROTEST, in Law, is uſed for a Caution, or Call of Witneſs, or an open Affirmation that a Perſon does either not at all, or but conditionally, yield his Conſent to any Act; or to the Proceeding of any Judge in a Court, wherein his Juriſdiction is doubtful; or to anſwer upon his Oath farther than by Law he is bound.

Any of the Lords in Parliament have a Right to *proteſt* their Diſſent to any Bill paſs'd by a Majority; which *Proteſt* is enter'd in form. See PARLIAMENT.

This Privilege is ſaid not to be very antient: The Commons have no Right to *proteſt*.

PROTEST, in Commerce, is a Summons made by a Notary Publick to a Merchant, Banker, or the like, to diſcharge a Bill of Exchange, drawn on him; after his having refus'd either to accept or pay the ſame. See BILL *of Exchange*.

It is call'd *Proteſt*, becauſe containing a Proteſtation, that the Party will return the Bill, and even take up Money at Intereſt; and charge all Coſts, Damages, Carriage and Recarriage, on the Refuſer.

There are two kinds of *Proteſts*; the one for want of Acceptance; the other for want of Payment. See ACCEPTANCE, &c.

The firſt to be made by the Bearer of the Bill at the time of preſenting it, in caſe the Perſon, on whom it is drawn, refuſe to accept it for the time, or the Sum there expreſs'd——The latter is made as the Bill falls due, whether it have been accepted or not. See ACCEPTANCE.

The Bearers of Bills of Exchange, that have been accepted, or which become payable at a certain Day, are oblig'd to have them either paid or *proteſted* within three Days after Due, on the Penalty of anſwering for the Omiſſion; and it muſt be obſerv'd, that if the third Day happen to be a Holy-Day, the *Proteſt* is to be made on the Eve thereof.

At *Paris* and *Hambourg*, the *Proteſt* is to be made within ten Days: At *Venice*, where all Bills are paid *in Banco*, the *Proteſt* for want of Payment is to be made within ſix days; but then the Bank is ſuppos'd open, otherwiſe no *Proteſt* to be made: At *Rome*, *Proteſts* for want of Payment are to be made within fifteen Days: At *Leghorn*, *Milan*, and *Boulogne*, there is no time fix'd: At *Amſterdam*, they are to be made within five Days: At *Venice*, the third Day.

The Negotiants of ſome Places, as thoſe of *Rome*, Mr. *Savary* obſerves, don't look on themſelves as oblig'd to *proteſt* in default of Payment; but this Opinion is contrary to univerſal Cuſtom and natural Reaſon: ſince, till after *Proteſtation*, they have no Remedy or Reſourſe againſt the Drawer, or Endorſer; nor any Title to be reimburs'd.

M.

M. *Ricard* adds, that Bills of Exchange drawn from *Amſterdam*, or *Antwerp*, or *Spain*, are to be *proteſted*, in default of Payment, within fourteen Days after they fall due; after which time, the Bearer ſtands the riſque and chance of the *non-proteſted* Bill, not the Drawer, or Endorſer; in caſe the Party happens to fail after the ſaid fourteenth Day.

PROTESTANT, a Name firſt given in *Germany* to thoſe who adher'd to the Doctrine of *Luther*; becauſe, in 1529, they *proteſted* againſt a Decree of the Emperor *Charles* V. and the Diet of *Spires*; and declar'd, that they appeal'd to a General Council.

The Name has been ſince alſo given to thoſe who adhere to the Sentiments of *Calvin*; and is now become a common Name for all thoſe of the Reform'd Churches. See LUTHERAN, CALVINIST, &c.

Great Endeavours have been made to unite the *Lutheran Proteſtants* with the *Calviniſts*, but in vain.

PROTESTATION, a ſolemn Declaration made by ſome Judiciary Act or Proceeding againſt an Oppreſſion, Violence, or Injuſtice; or againſt the Legality of a Sentence, Judgment, Decree, or other Procedure; importing that the Party is determin'd to oppoſe it at the proper time, &c. See PROTEST.

Proteſtation, in Law, is defin'd by Juſtice *Walſh*, a Defence or Safeguard to the Party that makes it, from being concluded by the Act he is about to do; ſo that Iſſue cannot be join'd upon it.

Proteſtation is a Form of pleading, when one does not directly either affirm or deny any thing alledg'd by another, or which he himſelf alledges. *Plowd.* fol. 276.

PROTHESIS, or PROSTHESIS, in Grammar, in the general is uſed for a Metaplaſm. See METAPLASM.

But it alſo more particularly denotes a prefixing of ſomething at the beginning of a Word; as in *gnavus, pro navus.*

This is alſo call'd *Appoſition.* See APPOSITION.

PROTHESIS, or PROSTHESIS, among Surgeons, is the filling up of what was before wanting: Such, *e. gr.* is the filling up of fiſtulous Ulcers with new Fleſh. See FISTULOUS, &c.

PROTHESIS is alſo a little Altar in the *Greek* Churches, whereon a Ceremony is perform'd, call'd by the ſame Name, προθεσις.

On this Altar the Prieſt, with the other Miniſters, prepares every thing neceſſary to the Celebration of Maſs; *viz.* the Bread, Wine, &c. After which, they go in proceſſion from this to the great Altar, to begin Maſs; carrying with them the Species thus prepar'd. See ALTAR.

PROTHONOTARY, PROTONOTARY, or PRONOTARY, a Term properly ſignifying *firſt Notary*; and which was antiently the Title of the principal Notaries of the Emperor of *Conſtantinople*. See NOTARY.

With us, *Prothonotary* is now uſed for Officers in the Courts of King's Bench, and Common Pleas; the latter whereof has three; the former, one. See COURT, &c.

PROTHONOTARY *of the King's Bench*, records all Actions Civil, ſued in that Court; as the Clerk of the Crown-Office doth all Criminal Cauſes. See KING's *Bench*, RECORD, &c.

PROTHONOTARIES *of the Common Pleas*, enter and enroll all Declarations, Pleadings, Aſſizes, Judgments, and Actions: they alſo make out all Judicial Writs; as the *Venire facias*, after Iſſue join'd; *Habeas Corpus*, for bringing in of the Jury; *Diſtringas Jurator.* Writs of Execution, and Seiſin, of *Superſedeas*, of Privilege, &c. They inroll all Recognizances acknowledg'd in that Court, all common Recoveries; make Exemplifications of Records, &c.

PROTHONOTARY, or PROTONOTARY, is alſo an Officer in the Court of *Rome*, who has a degree of Pre-eminence over the other Notaries.

There is a College of twelve *Prothonotaries*, call'd *Participantes*, becauſe partaking in the Fees of the Expeditions in Chancery.

They are rank'd among the Number of Prelates, wear the Violet Rochet, the Hat, &c. They aſſiſt at all grand Ceremonies, and have a place in the Pope's Chappel.

Their Office is to diſpatch the Acts in grand Cauſes, which the ſimple Apoſtolical Notaries diſpatch in leſſer Cauſes: they may create Apoſtolical Notaries, and Doctors, to officiate out of the City.

Thoſe out of the College have none of the Privileges of the others, except the Habit.

The *Prothonotaries* were firſt eſtabliſh'd at *Rome* by Pope *Clement* I. with deſign to write the Lives of the Martyrs. See NOTARY.

PROTHYRUM, προθυρον, a Porch at the outward Door of a Houſe, or Portal. See PORCH.

PROTHYRIS, PROTHYRIDE, is alſo uſed by *Vignola* for a particular ſort of a Key of an Arch, an Inſtance of which we have in his *Ionic* Order; conſiſting of a Roll of Water-Leaves, between two Reglets and two Fillets, crown'd with a *Doric Cymatium*; its Figure being much like that of a Modillion.

PROTHYRIS, in the antient Architecture, is ſometimes alſo uſed for a Quoin, or Corner of a Wall; and ſometimes for a croſs Beam, or over-thwart Rafter.

PROTO, a Word uſed in Compoſition with divers Terms in our Language; affecting them with a relation of Priority: as in *Proto-Martyr*, *Proto-Type*, &c.

It is form'd of the *Greek* πρωτος, *primus*, firſt.

PROTOCOLLUM, PROTOCOL, a Term uſed in the antient Juriſprudence, for the firſt Leaf of a Book; wherein was the Mark of the Paper and Parchment.

It was even ſometimes uſed for the Mark itſelf; which was uſually in the Margin, but ſometimes at the top of the Page.

The XLIVth Novel of *Juſtinian*, forbids the cutting of the *Protocollum* of Charters which ſhew'd the Year, wherein the Paper or Parchment were made, and the Officer commiſſion'd for the Delivery of them; by means whereof, Frauds were frequently detected.

Others will have *Protocollum* to have been the firſt Minute, or Draught, or Summary, of an Act to be paſs'd: which the Notary drew firſt up, in ſhort, in little Table-Books, to be afterwards enlarg'd at leiſure. See NOTARY.

PROTO-FORESTARIUS, was he whom our antient Kings made Chief of *Windſor-Foreſt*, to take Cognizance of all Cauſes of Death, or Mayhem there. See FOREST and FORESTER.

PROTO-MARTYR, the *firſt Martyr*, or Witneſs, who ſuffer'd Death in Teſtimony of the Truth; as *Abel* in the Old Teſtament; and St. *Stephen* in the New. See MARTYR.

The Word is compounded of πρωτος, *firſt*, and μαρτυς, *Witneſs.*

PROTONOTARY. See PROTHONOTARY.

PROTOPLAST, PROTOPLASTUS, a Title ſometimes given to our Firſt-father, *Adam*; from the *Greek* πρωτοπλαστος, *q. d.* firſt form'd. See PLASTIC.

PROTOTYPE, the Original, or Model whereon a thing is to be form'd. See TYPE.

It is chiefly uſed for the Patterns of things to be Engraven, Moulded, or Caſt. See MODEL, MOULD, &c.

PROTOTYPON, in Grammar, is ſometimes uſed for a primitive or original Word. See PRIMITIVE.

PROTRACTING, or PROTRACTION, in Surveying, the plotting, or laying down of the Dimenſions taken in the Field; by means of a *Protractor*, &c. See PROTRACTOR and PLOTTING.

Protracting makes one half of Surveying. See SURVEYING.

PROTRACTING-*Pin*, a Mathematical Inſtrument; or rather, an Appendage of an Inſtrument call'd a *Protractor.*

The *Protracting-Pin* is a fine Needle, fitted into a Handle; uſed to prick off Degrees and Minutes from the Limb of the *Protractor.* See PROTRACTOR.

PROTRACTOR, an Inſtrument uſed in Surgery, to draw out any foreign or diſagreeable Bodies from a Wound, or Ulcer, in like manner as the Forceps. See FORCEPS.

PROTRACTOR, is alſo an Inſtrument uſed in Surveying; whereby, the Angles taken in the Field with a *Theodolite*, *Circumferentor*, or the like, are plotted or laid down on Paper. See PLOTTING.

The *Protractor* conſiſts of a Semi-circular Limb B A G (Tab. SURVEYING, Fig. 29.) of Braſs, Silver, Horn, or the like, divided into 180°, and ſubtended by a Diameter B A; in the middle whereof is a little Notch or Lip, *o*, call'd the *Centre of the Protractor.*

On the Limb of the *Protractor* are, ſometimes, alſo placed Numbers, denoting the Angles at the Centers of regular Polygons: Thus, againſt the Number 5, denoting the Sides of a Pentagon is found 72, the Angle at the Centre of a Pentagon. See POLYGON.

Uſe of the PROTRACTOR.

1. *To lay down an Angle of any given Quantity, or Number of Degrees.* Suppoſe, *e. gr.* an Angle of 50° with the Line A *o* B, required on the Point *o*. Lay the Centre of the *Protractor* on the given Point, and the Diameter of the *Protractor* on the given Line. Make a Mark againſt the given Degree 50, on the Limb of the *Protractor*; thro' which, from the given Point draw a Line *o p*: This gives the Angle required.

2. *To find the Quantity of a given Angle: E. gr.* the Angle *p o* A; lay the Centre of the *Protractor* on the Point of the Angle, *o*, and the Diameter on the Line. The Degree of the Limb cut by the other Line *o p*, *viz.* 50, is the Number of Degrees of the Angle requir'd.

3. *To inſcribe any given regular Polygon*, e. gr. *a Pentagon in a Circle.* Lay the Centre and Diameter of the *Protractor* on the Centre and Diameter of the Circle; and

make a Dot againſt the Number of Degrees of the Angle at the Centre, *viz.* 72. Thro' this Dot, and the Centre of the Circle, draw a Line cutting the Circumference of the Circle. To the Point of Interſection, from the Point where the Diameter cuts the Circumference, draw a right Line: This Line will be a Side of the Pentagon, which being taken in the Compaſſes, and ſet off as often as it will go, in the Circumference, will give Points, which being connected by Lines, will form the Pentagon requir'd. See POLYGON.

4. *To deſcribe any regular Polygon*, e. gr. *an Octagon* on a given Line. Subtract the Angle at the Centre, which the *Protractor* gives, 45° from 180°, the Remainder 135° Degrees, is the Angle included between two Sides of the Octagon; one half whereof is 67 ½. Applying then the Diameter of the *Protractor* over the given Line, with the Centre over one Extreme; make a Dot againſt 67 ½, to which from the Centre draw a Line. Apply the *Protractor* to the other end of the Line, ſo as the Centre be over the Extreme, and there ſet off another Angle of 67° ½. From the Point where the two Lines thus drawn interſect, as a Centre, deſcribe a Circle, with the interval of the given Line. The given Line will be one Side of the Octagon, which being ſet off as often as it will go in the Circumference thus drawn, will give Points, which being connected, will form the Octagon required.

PROTRACTOR *Improved*, is a Machine like the former, only furniſh'd with a little more Apparatus, whereby we are enabled to ſet off an Angle to a Minute; which is impracticable in the other.

The chief Addition is an Index fitted on the Centre, and movable thereon; ſo as to play freely and ſteadily over the Limb. Beyond the Limb the Index is divided, on both Edges, into 60 equal parts of the Portions of Circles, intercepted by two other right Lines drawn from the Centre, ſo as each makes an Angle of one Degree with Lines drawn to the aſſumed Points from the Centre.—Now to ſet off an Angle of any Number of Degrees and Minutes with this *Protractor*; move the Index ſo, that one of the Lines drawn on the Limb, from one of the forementioned Points, may be upon the Number of Degrees given: And prick off as many of the equal parts on the proper Edge of the Index, as there are Minutes given: thus, drawing a Line from the Centre to that Point ſo prick'd off, you have an Angle with the Diameter of the *Protractor*, of the propoſed Number of Degrees and Minutes.

Indeed, it may be of good Uſe to lay down an Angle to a Minute, when we are able to take it to a Minute: But till we have other-guiſe Needles, and juſter Theodolites, than are yet made, the old *Protractor* may ſerve very well. See THEODOLITE.

PROTUBERANCE, in Anatomy, an Eminence, or Tumour that projects, or advances out beyond the reſt.

The *Orbicular Protuberances* of the third Ventricle of the Brain are call'd *Nates*; and the Apophyſes of the *Orbicular Protuberances*, *Teſtes*. See NATES and TESTES.

The *Annular Protuberance* is a proceſs of the *Medulla Oblongata*, in form of a Ring; whence its Name, firſt given it by *Willis*. See MEDULLA *Oblongata*.

PROVEDITOR, PROVEDITOUR, or PROVEDITORE, an Officer in ſeveral parts of *Italy*, particularly at *Venice*.

There are various kinds of *Proveditors* in *Venice*: as *Proveditor of the Commons*; who is nearly the ſame with the *Ædiles* among the *Romans*; the Conſuls in *Languedoc*; and the Sheriffs in other Cities. Of theſe *Proveditors* there are three.

Proveditor General of the Sea, is an Officer whoſe Authority extends over the whole Fleet, when the Captain-General is abſent. He has, particularly, the Diſpoſal of the Caſh, and pays the Seamen and Soldiers. The Captain-General, and *Proveditor*, are mutually Spies over one another. Tho' the *Proveditor* be inferior to the General; yet is the Power ſo divided, that one has Authority without Strength, the other Strength without Authority.

The *Proveditore alle Ragione vecchie*, *alla Biave*, *alla Giuſtitia*, have the Direction of Matters relating to Policy throughout the Signory.

PROVEND, or PROVENDER, is properly a ſort of Buſhel, or Veſſel containing the Meaſure of Grains daily given to a Horſe or other Beaſt of Labour, for his ordinary Subſiſtence.

Hence *Provender* is become a general Name for all Food of Cattel.

In Monaſteries, when the Religious go to Meals; they are ſaid to go to *Provend*.

Some derive the Word from the *Latin Præbendo*, Prebend. See PREBEND.

PROVER, in Law, *Probator*, an Approver; or a Perſon who, confeſſing Felony, appeals, or accuſes another of the ſame.

He is thus call'd, becauſe he muſt prove what he alledges in his Appeal; which Proof is either by Battel, or by the Country, at his election who is appealed. See TRYAL, COMBAT, &c.

39 *Edw.* 3. *coram Rege*, *Rot.* 97. *Suff.* A Man became an *Approver*, and appealed five, who all join'd Battel with him, and he overcame 'em all: four of 'em were accordingly hang'd, and the fifth pleaded he was a Clerk. The *Prover* was pardon'd.

PROVERB, is defined by *Cambden* a conciſe, witty, and wiſe Speech; grounded upon long Experience, and containing, for the moſt part, ſome good Caveat.

We are furniſh'd with Inſtances out of his own Collection: Such are, *A cloſe Mouth catches no flies.—A high Building, a low Foundation.—A carrion Kite will never be a good Hawk.—A ſhort Horſe is ſoon curried.—A Man may love his Houſe well, tho' he ride not on the Ridge.—A falſe Knave needs no Broker.—Better to ſpare at Brim than at Bottom*, &c.

PROVIDENCE, PROVIDENTIA, the Conduct and Direction of the ſeveral Parts of the Univerſe, by a ſuperior, intelligent Being. See UNIVERSE.

The Notion of a *Providence* is very antient, even in the Heathen Theology; we find *Thales* mentions it.

It is founded on this Suppoſition, That the Creator has not ſo fixed, and aſcertained the Laws of Nature, nor ſo connected the Chain of ſecond Cauſes, as to leave the World to itſelf; but that he ſtill preſerves the Reins in his own hands, and occaſionally intervenes, alters, reſtrains, inforces, ſuſpends, &c. thoſe Laws by a *particular Providence*. See MIRACLE.

Indeed, ſome uſe the Word *Providence* in a more general Senſe; ſignifying by it, that Power, or Action whereby the ſeveral parts of the Creation are ordinarily directed.

Thus *Damaſcenus* defines *Providence* to be the Divine Will, whereby all things are order'd, and directed to the proper End: Which Notion of *Providence*, ſuppoſes no Laws at all fixed by the Author of Nature at the Creation; but that he reſerved it at large to be govern'd by himſelf occaſionally. See NATURE.

The Antients call'd *Providence* by the Names of *Fate*, *Fortune*, *Nature*, *Deſtiny*, *Neceſſity*, &c. See FATE, FORTUNE, &c.

The antient *Egyptians* ſeem to have been the firſt who had the Notion of a Divine *Providence*: *Arnobius* obſerves they reaſon'd thus,— "*Providence* is ſo eſſential to "a Prince, that without it he cannot be, nor even be call'd, "a Prince; and the more Auguſt a Prince is, the more "perfect ought his *Providence* to be. Since, then, God is "the Greateſt and moſt auguſt of all Princes, to him muſt "belong the moſt perfect *Providence*."

The *Epicureans* deny any Divine *Providence*; as thinking it inconſiſtent with the Eaſe and Repoſe of the Divine Nature to meddle with human Affairs. See EPICUREAN.

Others deny the Exiſtence of a *Providence*, from the ſeemingly unjuſt Diſtribution of Good and Evil, which ſeem to fall indiſcriminately on the Juſt and Unjuſt.

Simplicius argues thus for a *Providence*: If God don't look to the Affairs of the World, 'tis either becauſe he cannot, or will not: But the firſt is abſurd; ſince to govern can't be difficult, where to create was eaſy: The latter is both abſurd and blaſphemous. See GOD.

PROVIDENTIÆ, in old Law-Books, were Proviſions of Eating and Drinking. See POURVEYANCE.

Providentia Vini ante adventum ſuum in Cellaria erat Centum Doliorum. Knighton, *Anno* 1354.

PROVINCE, PROVINCIA, among the *Romans*, was a Country conquer'd by them, without the Bounds of *Italy*; govern'd by a Deputy, or Lieutenant; and having peculiar Laws and Privileges.

Of theſe Countries, that part of *France* next the *Alps* was one, and ſtill retains the Name *Provence*.

Nicod derives the Word, *à procul vivendo*, living a-far off.

Among us, PROVINCE is uſed for the Extent of an Archbiſhop's Juriſdiction; in which ſenſe, *England* is divided into two *Provinces*, thoſe of *Canterbury* and *York*.

PROVINCE is now chiefly uſed for a Canton or Diviſion of a Kingdom, or Common-wealth comprehending ſeveral Cities, Towns, &c. all under the ſame Government, and uſually diſtinguiſh'd by the Extent of a Civil or Eccleſiaſtic Juriſdiction.

The *Provinces* were antiently *Dutchies*, *Counties*,, &c. which have been ſince all reunited under the ſame Chief. See DUKE, COUNT, &c.

The Church diſtinguiſhes its *Provinces* by Archbiſhopricks; each containing a certain Number of Biſhopricks. See ARCHBISHOP.

The Monks make particular Diviſions of their *Provinces*, according to the Antiquity and Number of Convents in each. See PROVINCIAL, ORDER, &c.

The *United Provinces* are the ſeven Northern *Provinces* of the *Low-Countries*, who, revolting from the *Spaniſh* Dominion, made a firm and perpetual Alliance, Offenſive and Defenſive, at *Utrecht* in the Year 1579. See STATES *General*.

PRO-

PROVINCIAL, Provincialis, ſomething relating to a *Province*. See Province.

Thus we ſay, a *Provincial Council*, or *Synod*, &c. See Synod and Council.

Provincial, in the Monaſtic ſenſe, is a Perſon who has the Direction and Superintendancy of the ſeveral Convents of a *Province*; according to the Diviſion eſtabliſhed in that Order. See Order, Convent, &c.

The *General* of the Order has ſeveral *Provinces* under him; the *Provincial* ſeveral Priors, Abbots, &c. See General, Abbot, &c.

PROVINE, of the *French Provigner*, ſignifies to lay a Vine-Stock, or Branch, in the Ground, to take Root. See Vine, Propagation, &c.

PROVISION, any thing got, or procured as neceſſary for the Subſiſtence of Life.

Provision, in Traffick, is uſed for the Wages due to a Factor. See Factorage.

PROVISION, in the Canon-Law, the Title, or Inſtrument, by virtue whereof an Incumbent holds, or is *provided* of a Benefice, Biſhoprick, or the like. See Title, Benefice, &c.

Ordinary Collators give *Proviſions* in Caſe of Vacancy by Death, pure and ſimple Demiſſion and Permutation. See Collator.

The Court of *Rome* grants *Proviſions* by Reſignation, Devolution, Prevention.

Proviſions by Prevention, are call'd *Gratiæ Expectativæ*, or *Mandata de Providendo*; of the great Abuſe whereof throughout *England*, frequent Complaint was made in our antient Statutes, and a Remedy provided for the ſame by the Statute of *Præmunire*. See Prevention, Præmunire, &c.

Proviſions of ſmall Benefices, in the Court of *Rome*, are only ſimple Signatures, which are, as it were, Minutes of the Bull; becauſe the Bulls themſelves diſpatch'd on Parchment would be too expenſive. The Signature is no more than the Requeſt of the Impetrant anſwer'd by the Pope in theſe Words; *Conceſſum uti petitur in præſentia D. N. Papæ*, wrote in the Hand of the Prelate who preſides over the Signature. See Bull.

Extraordinary *Proviſions* are ſign'd by the Pope himſelf, in theſe Words, *Fiat ut petitur*, with the firſt Letter of his Name. See Signature.

PROVISO, in Law, a Condition inſerted in a Deed, upon the Obſervance whereof the Validity of the Deed depends. See Condition, &c.

Sometimes the Word imports a Covenant. See Covenant.

Proviso hath alſo another ſignification, in Judicial Matters; as, if the Plaintiff deſiſt from proſecuting an Action, by bringing it to a Trial; the Defendant or Tenant may take out a *Venire facias* to the Sheriff, having in it theſe Words, *Proviſo quod*, &c. to the end, that if the Plaintiff take out any Writ to that purpoſe, the Sheriff ſhall ſummon but one Jury upon them both: In which Caſe it is call'd, going to Trial *by Proviſo*.

Proviso is alſo a Sea-Term. A Ship is ſaid to moor a *Proviſo*, when ſhe has an Anchor out, and alſo a Hawſer a-ſhore; and ſo is moor'd with her Head to the Shore with two Cables. See Mooring.

PROVISOR, is generally taken for him that hath the Care of providing things neceſſary; in which ſenſe it coincides with *Purveyor*. See Purveyor.

Provisor *Monaſterii*, is uſed for the Steward, or Treaſurer of a Religious Houſe.

Provisor, in our Statutes, is a Perſon who ſued to the Court of *Rome* for a *Proviſion*. See Provision.

Theſe were prohibited by Proclamation 42 *Hen.* 3. *Ann.* 1258. Proviſores *dicuntur qui vel Epiſcopatum, vel Eccleſiaſticam aliam dignitatem in Romana Curia ſibi ambiebant de futuro, quod ex Gratia expectativa nuncuparunt, quia uſque dum vacaret expectandum eſſet.* Spelm.

PROVOCATIVE, in Phyſic, a Medicine which ſtrengthens Nature, and ſtimulates or incites to Venery.

Such are Cantharides, &c. See Cantharides.

PROVOST, *Præpoſitus*, an Officer, whereof there are divers Kinds; Civil, Military, &c.

Provost *of the City, or of the Merchants*, is the Chief Municipal Magiſtrate in ſeveral conſiderable trading Cities, particularly *Edinborough*, *Paris*, and *Lyons*; much the ſame with the Mayors in other Places. See Mayor.

The *Provoſt* preſides at the City-Courts, and, together with the Sheriffs, decides all Differences relating to Trade and Merchandize; takes cognizance of the Affairs of Officers of Policy of the City with regard to their Functions; of the Delinquencies of Merchants, Commiſſioners, and Factors; inſpects the Ports, Rivers, the Duties, Impoſts, &c.

Authors attribute the Inſtitution of *Provoſt of the Merchants of Paris* to *Philip Auguſte*. *Du Haillan* refers its Epocha to the Year 1190.

The Lord *Provoſt of Edinborough* is principal Sheriff; the Bailiffs are his Deputies; he calls Conventions of the Boroughs by his own Miſſives.

Provost, or Prevot *Royal*, is a ſort of inferior Judge eſtabliſhed throughout *France*; for the taking cognizance of all Civil, Perſonal, Real, and Mixed Cauſes, among the People; but without any Juriſdiction in the Cauſes of Nobles.

Theſe in the *Bourbonnois*, *Auvergne*, &c. are call'd *Chatelains*; in *Normandy*, *Vicomtes*; in *Languedoc* and *Provence*, *Viguiers*.

Grand Provost *of France*, or of the Houſhold, is a Judge of the Sword; who has Juriſdiction in the King's Houſe, and over the Officers therein; looks to the Policy and Regulation thereof; the Rates of Proviſions following the Court, &c. He was antiently call'd *Roi des Ribauds*.

Grand Provost *of the Conſtable*, a Judge of the Sword, who manages the Proceſſes againſt the Soldiers in the Army who have committed any Crime. He has four Lieutenants diſtributed throughout the Armies, call'd *Provoſts of the Army*; and particular *Provoſts* in the ſeveral Regiments.

Provost *General of the Marine*, an Officer who manages the Proceſſes againſt the Marines when guilty of any Crime; and makes report thereof to the Council of War. There is alſo a Marine *Provoſt* in every Veſſel, who is a kind of Goaler, and takes the Priſoners into his Care; and keeps the Veſſel clean.

Provosts *of the Marſhals*, are a kind of Lieutenants of the Marſhals of *France*, eſtabliſhed for the Security of the Country againſt Rogues, Vagabonds, and Deſerters. They take cognizance of Royal Caſes; which, for this Reaſon are call'd *prevotal Caſes*; ſuch are all Crimes committed by Strollers, or People without any fixed Abode; Robberies on the High-way, Infraction of Safe-guard, Burnings, &c. They pronounce *en dernier reſſort*.

There are 180 Seats of theſe *Provoſts* in *France*. Their chief Juriſdiction regards High-way-men, Foot-pads, Houſe-breakers, &c. and correſpond to the Officers eſtabliſh'd by *Auguſtus* and *Tiberius*, call'd, as *Cujas* tells us, *Latrunculatores*; to ſhew, that their Office was to purſue Thieves.

Provost *of the Mint*, is a particular Judge inſtituted for the apprehending and proſecuting of falſe Coiners. See Mint.

Provost *Marſhal* of an Army, is one appointed to ſecure Deſerters, and all other Criminals. See Marshal.

He is to go often abroad round the Army to hinder the Soldiers from pillaging: It is his Office to indict Offenders, and to execute the Sentence paſs'd upon them. He likewiſe regulates the Weights and Meaſures, and the Price of all Proviſions, &c. in the Army.

There is alſo a *Provoſt Marſhal* in the Navy, who hath Charge of the Priſoners taken at Sea.

Provost *of an Univerſity*; ſee University.

PROW, in Navigation, the Head, or Fore-part of a Ship. See Ship.

In the Front hereof is the Beak, that cuts the Water to make way for the Veſſel.

The *Prow* is lower than the Poop, and contains fewer Stories or Decks. On the Beak is uſually ſome Hieroglyphic, which often gives Name to the Veſſel.

In ſtrictneſs, however, the *Prow* is ſaid to be only that part of the Fore-Caſtle which is aloof, and not in the Hold; particularly that between the Chaſe and the Looſ.

The Antients repreſented Beaks of Birds in the *Prows* of their Ships, whence they were call'd *Roſtra*.

The Word *Prow* is form'd from the *Latin Prora*, which ſignifies the ſame thing.

PROXIMITY, of the *Latin Proximitas*, denotes the Relation of Nearneſs, either in reſpect of Place, or Blood, or Alliance. See Vicinage, Consanguinity, &c.

PROXINETA, or Proxinetes, a Broker, or Manager between two Perſons. See Broker.

The Word is chiefly uſed for thoſe who negociate Offices, Marriages, &c.

The *Roman* Law grants the *Proxinetes* an Action for recovery of their Salaries. The Word is *Greek* προξενετης, *Broker*.

The *Latins* give 'em a more honourable Appellation, calling 'em *Interpreters*. See Interpreter.

Theſe made a kind of Office, or College in *Rome*: To them the Fathers addreſs'd themſelves, to ſound and examine the Inclinations of the young Men they intended for their Daughters.

A Commentator on the Digeſt, accounts it a great Defect in the modern Policy, that there are not now any of theſe *Proxinetes* or Match-Makers eſtabliſhed by public Authority.

PROXY, *Procurator*; a Deputy, or Perſon who officiates in the room of another. See Procurator.

Princes are uſually married by *Proxies*.

Proxy, *Procuracy*, among Civilians, is alſo a Commiſſion given

given to a Proctor by a Client to manage a Cauſe in his behalf. See PROCTOR.

PRUINA, in Phyſiology, *Hoar-Froſt*; a Concretion of the Dew, made by the violence of the external Cold. See DEW and FREEZING.

PRUNELLA, in Medicine, a dryneſs of the Tongue, and Throat, happening in continued Fevers, eſpecially acute ones; accompanied with a heat and redneſs of the Throat, and a Scurf covering the Tongue; ſometimes whitiſh, and ſometimes blackiſh. See FEVER.

Some give the Name *Prunella* to the Quinzy. See SQUINANCY.

PRUNELLÆ *Sal*, in Pharmacy, is a Preparation of purify'd Salt-Petre; call'd alſo *Lapis Prunellæ*, and *Cryſtal Mineral*. See SALT *Petre*, CRYSTAL, *&c.*

It is prepared, by ſeparating and abſorbing ſome of the more volatile parts of the Salt-Petre; which is done by burning upon it, when melted in a Crucible over the Fire, about a thirtieth part of its Weight of Flower of Brimſtone.

'Tis given to cool, and provoke Urine in Fevers, and Quinzies; tho ſome think that Salt-Petre, purify'd three or four times, would be a better Medicine.

The *Sal Prunellæ* is frequently adulterated with Alum; the Deceit is known by its Whiteneſs and Glittering.

PRUNES, are Plumbs dried, and baked in an Oven, or in the Sun.

The *Prunes* chiefly uſed among us, are black, and large; brought from *Bourdeaux:* Great Quantities are uſed by the *Engliſh* and *Dutch*.

The Word comes from the *Latin Pruna*, Plumb. The Juice of *Prunes* is eſteem'd laxative.

PRUNIFEROUS *Trees*, or *Shrubs*, the *Plumb-bearing kind*; are thoſe whoſe Fruit is pretty large, and ſoft, with a Stone in the middle. See TREE and FRUIT.

In this kind, the Flower adheres to the bottom of the Baſe of the Fruit.

PRUNING, in Gardening, and Agriculture, the Operation of lopping, or cutting off the ſuperfluous Branches of Trees; either to diſpoſe them to bear better, to grow higher, or appear more regular. See TREE, *&c.*

Pruning is one of the moſt important Branches of the Gardeners Province; and that whereon the Weal, or Woe of his Fruit-Trees, as well as the Air and Regularity of his Garden, in great meaſure depends. See GARDEN.

'Tis ſometimes practis'd, purely, for the trimming or adjuſting of Trees to the Eye, by taking away irregular Branches; as in Box, Holly, Yew, *&c.*

Sometimes to make the Stem grow fairer, and riſe higher; by taking off all the large Branches ariſing out of it; and thus ſending the Sap, which would otherwiſe be expended by them, to the Top of the Tree, to nouriſh, and prolong the ſame.

But its more ordinary uſe is to render the Tree more fertile, and to mend its Fruit; by retrenching ſuch uſeleſs Branches as might impoveriſh the Trunk, and conſume the Juice neceſſary to nouriſh the Branches that bear. See VEGETATION.

Pruning is an annual Operation; the Amputation is ſloping; ſometimes ſtump-wiſe. Its beſt Seaſon is about the end of *February*; tho' it may be begun as ſoon as the Leaves are off, *viz.* in *November*; and continu'd to the time freſh Leaves come on, *viz.* in *April*.

As the Gardener has uſually three kinds of Trees to manage, *viz.* ſome too weak, others too ſtrong, and others in a juſt plight; he will find *Pruning Work* thro' all that ſpace; it being proper to *prune* ſome ſooner, and ſome later. The weaker and more languiſhing a Tree is, the ſooner it ought to be *pruned*, to eaſe it of its offenſive Branches: and the more vigorous the Tree is, the longer may the *Pruning* be defer'd. See PINCHING and BRANCH.

Practice of PRUNING *Fruit-Trees.*

For Pruning a Tree of the firſt Year; *i.e.* a Tree planted the Year before: If it have only ſhot one fine Branch from the middle of the Stem, it muſt be cut to that Branch; and the Branch ſhorten'd to four or five *Eyes*, or Buds: the effect of which is, that the next year, there will be at leaſt two fine Branches oppoſite to each other.

If the Tree produce two fine Branches, well plac'd with weak ones among them; all requir'd is to ſhorten them equally, to the Compaſs of five or ſix Inches in length: Care, however, being taken, that the two laſt Eyes, or Buds, of the Extremes of the Branches thus ſhorten'd, look on the right, and left, on the two bare ſides; that each may bring forth at leaſt two new ones, and the four be ſo well plac'd, that they may be all preſerv'd. If one of the two Branches be much lower than the other; or both on one ſide, or the like; only one is to be preſerv'd, and that the fitteſt to begin a fine Figure: The other to be cut off ſo cloſe, as that it may never be able to produce thick ones in the ſame place.——If a Tree have put forth three or four Branches, all in the Extremity, or a little beneath; they muſt be all *pruned* by the ſame Laws as the two abovemention'd: If they be equally thick, they are to be uſed alike; if ſome of them be ſmaller than the reſt, they muſt only be *pruned* with a proſpect of getting a ſingle Branch each; taking care to have it on that ſide which ſhall be found empty: in order to which, they ſhould be ſhorten'd to an Eye, or Bud, that looks on that ſide; and the ſame care to be taken in the larger, in order to begin to fill up the better. If theſe fine Branches ſhoot a little below the Extremity, 'tis but ſhortening the Stem to 'em: On the contrary, if the Branches be moſt of them ill ones; two, at leaſt, if poſſible, are to be preſerv'd, and *pruned* in the ſame manner as the two fine ones, above. Good, weak Branches, are to be carefully preſerv'd for Fruit; only cutting them a little at the Extremity, when they appear too weak for their length: Not failing to take away all the ſapleſs Branches.——If the Tree has produc'd five, ſix, or ſeven Branches; 'tis ſufficient to preſerve three or four of the beſt: the reſt to be cut quite off, at leaſt if they be thick; for if they be weak, *i. e.* fit for Fruit-Branches, they ſhould be kept till they have perform'd what they are capable of doing. And if among the great ones, there happen to be many ſmall ones; two or three of the beſt, only, to be preſerv'd; pinching off the Ends of the longeſt.

Pruning of a Tree of the ſecond Year: If, having put out two fine Wood-Branches, and one or two ſmall ones for Fruit, the firſt Year; the Sap have alter'd its Courſe in the ſecond Year, from the thick Branches to the ſmall ones; ſo that the ſmall become Wood; and the large, Fruit-Branches: The Productions of the former muſt be quite cut off into the Mother-Branch, and thoſe of the latter uſed as Fruit-Branches.——If a Tree, from the firſt Year's *Pruning*, have produc'd four or five Branches, or more; it muſt needs be very vigorous: for which reaſon it may be ſometimes adviſeable to preſerve thoſe Branches, even tho' they be not neceſſary to the Figure of the Tree; but only to conſume part of the Sap, which might otherwiſe be prejudicial to the Fruit-Branches: Theſe ſuperfluous Branches may be left long, without much ill conſequence; but thoſe eſſential to the Beauty of the Tree, muſt be all *pruned* a little longer than thoſe of the preceding Year; *i. e.* about two, or at moſt three Eyes, or a good Foot. This is making an advantage of the Vigour of the Tree; which, without this, would not yield Fruit in a long time: the redundant Sap converting all the Eyes into Wood-Branches; which, with a more ſpare Diet, would have been Fruit-Branches. In theſe vigorous Trees, ſome Branches cut ſtump-wiſe, are to be left on, and even ſome thick ones, tho' of falſe Wood, eſpecially where there are any neceſſary to the Form of the Tree; to employ the Exceſs of Sap, and prevent its doing miſchief. Still more to aſſuage its Violence, it may be neceſſary to preſerve many long, good, weak Branches, when plac'd ſo as to occaſion no Confuſion; and even on the thick Branches, a good number of Outlets for the Sap to range in.——Be it a general Rule, rather to ſpare the lower Branches, and cut off the higher; than the contrary: By this means, the Tree ſpreads more eaſily to the bottom of the Wall.

Pruning of a Tree the third Year: In a Tree that has been planted four Years, and *pruned* twice; if it be vigorous, as many old Branches as poſſible are to be preſerv'd, eſpecially for Fruit: If it be weak, it muſt be eaſed of the Burden of old Branches, as well thoſe for Fruit, as Wood. It muſt likewiſe be cut ſhort, to enable it to ſhoot out new ones; which, if it cannot do with Vigour, let it be pull'd up; and a new one, with freſh Earth, planted in its place.

In all *Pruning*, Proviſion to be made for Branches to proceed from thoſe now under the *Pruning-Knife*; to prepare ſuch as may be proper for the Form: with this aſſurance, that when the high Branch is taken down from over the lower; this latter being reinforc'd with the Sap that would have gone to the former, will certainly produce more Branches, than it would have done without ſuch Reinforcement.

General Laws, or Rules, of PRUNING *Fruit-Trees.*

1. The more the Branches ſhoot horizontally, the apter and better diſpos'd the Tree is to bear Fruit; conſequently, the more upright the Branches, the more inclin'd is the Tree to increaſe in Wood; and the leſs in Fruit.

Hence, ever take care to keep the middle of a Tree from great Wood, or thick Branches; and as thoſe increaſe, and grow upon you, cut them out entirely; for there is no danger but the place will be ſoon fill'd with better and more fruitful Wood.

In Dwarfs, you are to prune all open, and clear of Wood, leaving none but horizontal Branches; and in Wall-Trees, if you do but furniſh your Walls with horizontal Branches,

Nature

Nature will provide for the middle. Chuſe therefore ſuch Shoots as are not over-vigorous, to furniſh bearing Branches.

2. Take care the Tree be not left over full of Wood; not even of bearing Branches: as is frequently ſeen in the Management of Peaches, Nectarines, and Cherries.

Nature cannot ſupply them all with Juice enough; whence, none will be ſupply'd well: the conſequence of which is, that either the Bloſſoms will fall off, or the Fruit dwindle. 'Tis certain, a multitude of Branches crowding on one another, produces neither ſo good, nor ſo much Fruit, as where there is a convenient Space; beſide the diſagreeable Effect of croſſing one another.

3. All ſtrong and vigorous Branches are to be left longer on the ſame Tree, than weak and feeble ones: conſequently, the Branches of a ſickly Tree muſt be *pruned* ſhorter, and fewer in number, than thoſe of a ſtrong healthful Tree.

4. All Branches ſhooting directly forward from Trees that grow againſt a Wall, are to be *pruned* cloſe to the Branch whence they ſpring, *&c.*

5. When a Branch well plac'd, either againſt a Wall, or in a Dwarf, has ſhot ſome falſe Wood, neither fit for the Figure, nor the Fruit; *prune* it off within the Thickneſs of a Crown piece, or ſlopingly; tho' this is beſt *pinched* off in the beginning of Summer.

6. Cut off all Branches ariſing from hard Knobs, whereon Pear-ſtalks grew; or from ſhort ſtrait Branches, like Spurs.

7. If a Tree, in its Years, have produc'd Branches of moderate Vigour, and afterwards puts forth ſtrong ones, well plac'd, tho of falſe Wood; the latter may be uſed as the Foundation of the Figure, and the other kept a time for bearing Fruit.

8. When an old Tree ſhoots ſtronger Branches towards the bottom than the top, and the top is in ill Caſe, cut it off, and form a new Figure from the lower ones. If the top be vigorous, cut off the lower ones, unleſs well plac'd.

9. The Order of Nature in the Production of Roots and Branches, is, that a Branch is always leſs than that out of which it ſhoots: If this Order be inverted, uſe them as falſe Wood.

10. Regard to be always had to the Effects of former *Pruning*; in order to correct its Defects, or continue its Beauties.

11. In vigorous Trees, the weaker Branches are the Fruit-bearers. In weak Trees, the ſtronger, chiefly; therefore in the latter, *prune* off the feeble and ſmall.

12. In vigorous Trees, three good Branches may put forth at one Eye, or Bud: In which caſe, the two Side-Branches are generally to be preſerv'd, and the middle-moſt cut off in *May* or *June*.

13. It is difficult to ſtrengthen a weak Branch, without cutting off others above it: Sometimes it can ſcarce be done, without cutting off the End of the Branch it ſhoots out of.

14. The *Pruning* of vigorous Peach-Trees to be defer'd till they are ready to bloſſom, the better to know which are likely to bear Fruit.

15. Fruit-buds next the Ends of Branches, are commonly thicker, and better fed, than others. In weak Trees, therefore, it may be beſt to *prune* them early, that the Sap may not waſte itſelf in ſuch parts as are to be retrench'd.

16. The farther a weak Branch is from the Trunk, the leſs Nouriſhment it receives; and therefore the more it is to be ſhorten'd: but thick Branches, the more diſtant they are from the Heart, the more they receive; and are therefore to be remov'd, that the Vigour may extend itſelf to the middle, or lower part.

17. A Branch for Wood muſt never be *pruned* without eſpecial occaſion; as where they annoy others.

18. If an old well-liking Tree be diſorder'd with falſe Wood, thro' ill *Pruning*, or want of *Pruning*; take it lower, by cutting off a Branch or two, yearly; till it is ſufficiently reduc'd. Some Trees put forth ſo vigorouſly, that they cannot be reduc'd to compaſs in one year, but muſt be allow'd to extend themſelves, otherwiſe they will produce falſe Wood.

19. All Trees have a predominant Branch or two, if not more; yet the more equably the Vigour is divided, the better: Where it runs much on one ſide, it is faulty.

20. The Buds of all Stone-Fruit frequently form themſelves the ſame year in which the Branch they grow on, is form'd: the ſame holds of Pears and Apples; tho 'tis generally, at leaſt, two or three Years, e'er the latter come to perfection.

21. All Shoots put forth in Autumn, are to be *pruned* off, as naught: The ſame may be ſaid of all ſapleſs Branches.

22. When a Tree puts forth much ſtronger Shoots on one ſide, than the other; a great part of the ſtrong ones muſt be cut off cloſe to the Body, or ſome of them ſtump-wiſe.

23. In all Trees, leſs Length to be allow'd the weak, than ſtrong Branches.

24. Upper Branches to be cut off, cloſe to others, that they may heal over: Lower Branches to be cut ſloping, or at a little diſtance, that new ones may grow out of them.

25. If a young crooked Tree produce a fine Branch beneath the Crook; cut the Head off cloſe to the Branch.

26. Tho' five, ſix, or ſeven Inches, be the ordinary Lengths Wood-branches are left at; yet muſt this be vary'd, on occaſion of the Vigour or Weakneſs of the Tree, Thickneſs or Smallneſs of the Branch, the Fullneſs or Vacuity of the Place, *&c.*

27. Be careful not to *prune* many thick Branches, ſtanding over weak ones; leſt the Sap, which fed the larger, flow ſo plentifully into the leſs, as to occaſion them to put forth much ill Wood and Suckers.

28. Branches ſhot from the Ends of others, are uſually good Wood; ſometimes it happens otherwiſe, and then they muſt be *pruned*.

As to the grand *yearly Prunings*——Fruit-Branches being of ſhort continuance, and periſhing the firſt year wherein they produce Fruit, are to be cut off, unleſs they put forth Shoots for Bloſſoms the ſucceeding Year. In the ſecond *Pruning*, about the middle of *May*, where the Fruit ſo is cloſe, as to be like to obſtruct each other, ſome of them and their Branches to be taken off; as muſt alſo the multitude of young Shoots that cauſe Confuſion. Branches more luxurious than others, to be cut clear off. To preſerve old Trees, they muſt be diſburden'd, by leaving few Branches for Wood on them; and thoſe to be ſhorten'd to five or ſix Inches; and very few weak ones, and none dry, and nigh waſted.

Pruning *of Foreſt or Timber-Trees.*

For large Trees, 'tis beſt not to *prune* them at all; yet if there be an abſolute Neceſſity for it, avoid taking off large Boughs as much as poſſible; and obſerve the following Rules.

1. If the Bough be ſmall, cut it ſmooth and cloſe, that the Bark may ſoon cover it; and ſloping, that the Water may run off.

2. If the Branch be large, and the Tree old, cut it off at three or four Foot from the Stem, or where any young Shoots are found iſſuing out of it.

3. Boughs growing upright, not to be cut croſs over, but ſloping upwards. In Boughs leaning from the Head, the Slope to be on the lower ſide.

4. If the Tree grow crooked, cut it off at the Crook, ſloping upwards; and nurſe up one of the moſt promiſing Shoots for a new Stem. Indeed, in Trees that have great Piths, as the Aſh, Walnut, *&c.* we muſt be cautious of cutting off the Heads.

5. If the Tree grow top-heavy, its Head muſt be lighten'd; and that rather by thinning the Boughs that grow out of the main Branches, than by cutting off the main Branches themſelves. But if you would have them ſpring, 'tis beſt done by rubbing off the Buds, as they put out in the Spring, and ſhredding up the Side-Shoots.

6. If the Side-boughs ſtill break out, and the Top be able to ſuſtain itſelf, give the Boughs that put forth in Spring, a *Pruning* after *Midſummer*; cutting them very cloſe. This will cauſe the Bark to cover and kill them, ſo as never to ſhoot out again; and is the only Method to make a Tree grow with a fine, ſtrait, handſome Body.

Pruning *of Vines.* See Vine.

PRURITUS, a Senſation of the Skin, popularly call'd *Itching*; which is ſuppoſed to ariſe hence, that the Extremities of the Capillary-Veins being obſtructed, cannot take up the redundant Blood of the Members, to carry it back again to the Heart; whence, as there is a freſh Stock of Blood continually ſent into the part by the inceſſant Pulſation of the Heart, the Fibres become preter-naturally ſtretch'd or diſtended: And hence the uneaſy, titillating Senſe of Itching.

PRYTANEUM, in Antiquity, a conſiderable Building in *Athens*, where the Council of *Prytanei* aſſembled, and where thoſe who had render'd any ſignal Services to the Commonwealth, were maintain'd at the publick Expence. See Prytaneus.

PRYTANEUS, in Antiquity, the firſt Magiſtrate in moſt of the Cities of *Greece*.

At *Athens*, there were fifty *Prytanei*: at *Corinth*, there was but one; who was, there, the ſame what the *Archon* was at *Athens*. See Archon.

The *Prytanei* of *Athens* were the Senators who compoſed the grand Council that governed the State; and correſponded to what we now call, *The States General of the United Provinces*.

Fifty of these were chose each Year out of each Tribe; and to these were nominated fifty more, to supply the places of the former, in case of Death or Male-administration.

The Tribes took the Government by turns; each after other, for the space of thirty-five Days.

All the fifty *Prytanei* of the Tribe did not govern together during those five Weeks; but in Companies, ten at a time, chosen by Lot; seven Days each Company: After which, another Tribe came into play; and had its five Weeks after the same manner.

This was an Establishment of *Solon*. *Scaliger* is mistaken, when he says the Tribes took their Turns every day. See TRIBE.

PSALM, a Divine Song, or Hymn. See SONG, and HYMN.

The Word is now appropriated to the CL *Psalms* of *David*; and the Name *Canticle*, or *Song*, given to other pieces of the same kind, composed by other Prophets and Patriarchs.

The Antients, as is observ'd by St. *Augustin*, made this difference between a *Canticle* or Song, and a *Psalm*; that the former was sung solitarily, or by the Voice alone; but the latter accompany'd with a Musical Instrument.

The *Psalms*, in the antient Editions, are divided into five Books; nor is *David*'s Name found at the Head of more than seventy-three of them; tho' some, and among the rest, St. *Augustin*, and St. *Chrysostom*, attribute all the hundred and fifty to him without exception.

The *Jews*, however, were always of another Sentiment; and 'tis certain there are some few, at least, that are not his——St. *Jerom* observes, among the Number, several that were composed long time after *David*. *Du Pin* adds, that 'tis difficult to ascertain the Authors; all we know of the Book, is, that 'tis a Collection of Songs, made by *Esdras*.

The *Gradual Psalms*, were those antiently sung on the Steps of the Temple. See GRADUAL.

The *Penitentiary Psalms*, were not formerly the same with those now call'd by that Name. See PENITENTIARY.

The Word is form'd of the *Latin Psalmus*; and that from the *Greek* ψάλλω, *I sing*.

PSALMODY, the Art of singing Psalms. See PSALM and SINGING.

PSALTER, the Book, or Collection of Psalms, ascrib'd to *David*. See PSALM.

There are an Infinity of Editions of the *Psalter*—*Augustin Justinian*, a Dominican, and Bishop of *Nebo*, publish'd a *Polyglot Psalter* at *Genoa*, in 1516; *Contarinus* publish'd the *Psalter* in *Hebrew*, *Greek*, *Chaldee*, and *Arabic*, with *Latin* Notes and Glosses. See POLYGLOT.

PSALTER is also used among Religious for a large Chaplet, or Rosary; consisting of 150 Beads; the Number of Psalms in the *Psalter*——St. *Dominic* is said to have been the Inventor. See ROSARY.

PSALTERY, PSALTERION, a Musical Instrument, much in use among the antient *Hebrews*; who call'd it *Nebel*.

We know but little of the precise Form of the antient *Psaltery*: That now in use, is a flat Instrument, in form of a *Trapezium*; or a Triangle truncated a-top.

It is strung with thirteen Wire Chords, set to Unison or Octave; and mounted on two Bridges on the two sides—— It is struck with a *Plectrum*, or little Iron Rod; or sometimes a crooked Stick; whence it is usually ranked among the Instruments of Percussion.

Its Chest, or Body, is like that of a Spinet. It has its Name *à Psallendo*; some also call it *Nablum*, or *Nablium*.

Papias gives the Name *Psaltery* to a kind of Flute used in Churches, to accompany the Singing; in *Latin*, *Sambucum*.

PSAMISMUS, in Medicine, a Term sometimes used for a Bath of dry and warm Sand, to dry the Feet of dropsical Persons upon. See BATH, &c.

The Word is form'd from the *Greek* ψάμμος, *Sand*, or *Gravel*.

PSATYRIANS, PSATYRIANI, a Sect of *Arians*, who in the Council of *Antioch*, held in the Year 360, maintain'd that the Son was not like the Father, as to Will; that he was taken from nothing, or made of nothing; and that in God, Generation was not to be distinguish'd from Creation. See ARIAN.

PSEUDO, a Term, or Particle, used in the Composition of divers *Latin* and *English* Words; in the Sense of *false*, or *lying*.

Thus we say a *Pseudo Martyr*, *q. d.* a false Witness; *Pseudo-Prophet*, *Pseudo Apostle*, *Pseudo Christ*, &c.

The Word is form'd from the *Greek* ψεύδω, *decipio*, *fallo*, I deceive.

PSEUDONYMUS, PSEUDONYMOUS, a Name given by the Criticks, to those Authors who publish Books under false, or feigned Names.

Much as the Name *Cryptonymus* is given to those who publish under secret and disguised Names; and *Anonymus*, to those who publish without any Names at all. See ANONYMOUS.

The Apostolical Constitutions, the greater Epistles of St. *Ignatius*, &c. are usually supposed to be *Pseudonymous*. See CONSTITUTIONS..

The Word is form'd from the *Greek* ψεῦδος, *Lye*; and ὄνομα, *Name*.

PSEUDO-DIPTERE, in the antient Architecture, a Temple with eight Columns in Front; and a single Row of Columns all around. See TEMPLE.

The Word signifies *false* or *imperfect Diptere*; and is used to distinguish this, from the *Diptere*; which had two Rows of Columns all around. See DIPTERE.

PSEUDO-STELLA, in Astronomy, any kind of Meteor or Phænomenon, newly appearing in the Heavens, and resembling a Star. See METEOR, &c.

PSILOTHRIX, in Medicine, *Depilatory*; or something proper to make the Hair fall. See DEPILATORY.

Such are strong Lixiviums, Quick-Lime, Ants Eggs, Sandarac, Orpiment, and Arsenic.

The Word is form'd from the *Greek* ψιλῶ, *deglabro*, I flea, or take off the Bark; and θρὶξ, *Hair*.

PSOAS *Magnus*, or *Lumbaris*, in Anatomy, a round, hard, fleshy Muscle, which arises from the internal Side of the transverse Processes of the Vertebræ of the Loins, within the Abdomen; and descending upon part of the internal Side of the Ilium, is inserted into the lower part of the little Trochanter——It is the first of the Flexors of the Thigh. See FLEXOR and THIGH.

PSOAS *Parvus*, arises fleshy from the Inside of the upper Vertebræ of the Loins, and hath a thin, and broad Tendon, which embraces the *Psoas Magnus*; and which is inserted into the *Os Innominatum*, where the *Os Pubis* and *Ilium* join together.

This, tho' ordinarily reckon'd among the Muscles of the Thigh, properly belongs to the lower Venter.

PSORA, in Medicine, a cutaneous Disease, called by the *Latins*, *Scabies*; by the *English*, *Itch*. See ITCH.

The *Psora* is described by *Celsus*, as a reddish Hardness and Roughness of the Skin, from an Eruption of Pustles thereon; some dryer, others moister; and oozing out a sanious Matter, that occasions a continual *Pruritus*.

These Eruptions are most frequent about the Junctures of the Limbs, and between the Fingers; in some they spread over the whole Body; in others they soon cease; and in some return at certain Seasons of the Year.

In Youth, this Disease frequently prevents others, or cures them——It sometimes degenerates into a Leprosy.

The dry is much more difficultly cured than the moist, which arises from a Disorder in the Humours, or Viscera. *Willis* derives the Disease from a sharp, saline Humour, occasioning an Itching.

Some of the later Physicians will have it to consist in a number of little Animals preying on the Skin: And hence it is, that it becomes so very contagious.

Willis observes, that in this respect it is second to no other Disease, but the Plague; which many conjecture to arise in like manner, from Animalcules.

For the Cure, *Borelli* recommends a Lotion of black Soap, for poor People, &c. But the Soap to be soon wash'd off, lest it excoriate the Skin. Where the Disease is inveterate, recourse is had to Salivation. See SALIVATION.

The Word is *Greek*, ψώρα, *Itch*.

Hence, PSORICA are Medicines good against Scabs, and other cutaneous Eruptions.

PSOROPHTHALMIA, is a kind of *Ophthalmia*, accompany'd with a *Pruritus*, or Itching. See OPTHALMIA.

The Word is form'd from ψώρα, *Itch*; and ὀφθαλμὸς, *Eye*.

PSYCHOLOGY, a Discourse concerning the Soul. See SOUL.

Anthropology, or the Science which considers Man, consists of two parts: The first treating of the Body, and the parts belonging thereto; call'd *Anatomy*: And the second of the Soul, call'd *Psychology*.

The Word is form'd from the *Greek* ψυχὴ, *Soul*; and λογος, *Discourse*.

PSYCHOMANCY, a kind of Magick, or Divination, perform'd by raising the Souls of Persons deceas'd. See DIVINATION.

The Word comes from ψυχὴ, and μαντεία, *Divination*.

PSYCHROMETER, an Instrument for measuring the Degree of Moisture or Humidity of the Air; more usually call'd *Hygrometer*. See HYGROMETER.

The Word is form'd from the *Greek* ψυχρὸς, *humid*, and μέτρον, *Measure*.

PTAR-

PTARMICA, Medicines proper to promote Sneezing; more usually call'd *Sternutatories*. See STERNUTATORY.

The Word is form'd of the *Greek* πταρμὸς, *Sternutamentum*, Sneezing.

PTERIGIUM, or PTERYGIUM, in Medicine, a Disease of the Eye, by the *Latins* call'd *Unguis*, Nail; and sometimes *Pannus*, Web. See UNGUIS and PANNUS.

The Cure is much the same as of the *Ophthalmia*. See OPHTHALMIA.

The Word is form'd from the *Greek* πτέρον, *Ala*, Wing.

PTERIGOIDES, or PTERYGOIDES, in Anatomy, two Apophyses of the *Os Sphenoides*; so call'd from their resembling the Wings of a Bat. See SPHENOIDES.

From the *Greek* πτέρυξ, πτερυγ-, Wing, and εἶδος, Form.

PTERIGOIDEUS, or PTERYGOIDEUS *Internus*, is a Muscle of the Jaw, which arises from the internal part of the *Pterigoides* Process, and descends to be inserted into the inferior part of the internal side of the lower Jaw, near its Angle.

When it acteth, it draws the Jaw to one side.

PTERIGOIDEUS *Externus*, is a Muscle which arises from the external part of the same Process, and goes backward to be inserted between the *Condiloid* Process, and the *Corone*, on the inside of the lower Jaw.

This pulls the lower Jaw forwards, and makes it shoot beyond the upper.

PTERIGOSTAPHILINUS, or PTERYGOSTAPHILINUS, in Anatomy, the internal Muscle of the *Uvula*; call'd by *Valsalva*, *Novus Tubæ Musculus*; as being unknown to the antient Anatomists.

It arises fleshy, near the *Sphenostaphilinus*, from the *Os Petrosum*, where the Tube from the Palate enters that, near an acute Process of the *Sphenoides*: and ascending to the *Processus Pterygoides*, becomes a broad, flat Tendon, which expands itself on the fore-part of the *Uvula*.

Some of the tendinous Fibres ascend to the lower Edge of the *Os Palati*, others descend down the sides of the *Fauces*; the middle Series either unites with those of the other side, or is lost in two fleshy Bodies that compose the *Uvula*.

This Muscle, with its partner, draw the *Uvula* upwards, and forwards; and also raise the *Amygdalæ*.

The Word is form'd from the *Greek* πτερὸν, Wing, and σταφύλη, *Uvula*.

PTERIGOPHARYNGÆUS, or PTERYGOPHARYNGÆUS, a pair of Muscles arising from the *Processus Pterygoides*, where the Tendon of the *Pterygostaphilinus* is reflected.—Some fleshy Fibres of it do likewise arise from the upper Jaw-Bone, behind the farthest Grinder, and some from the sides of the Tongue, and *Os Hyoides*.

From all these places its fleshy Fibres pass semi-circularly; and meet with those of the opposite side in a middle Line on the back side of the *Pharynx* externally.

In the inner Surface of the *Fauces* is another Order of fleshy Fibres, decussating each other at acute Angles.—They arise both from the sides of the *Uvula*, and from the Root of the Cartilage; and descend obliquely to their Insertions in the glandulous Membrane of the *Pharynx*.

This Muscle serves both to constringe the *Pharynx*, and to compress the Tonsils, and force out the Mucus; whence its Use in Hawking.

The various Originations of the several parts of this Muscle has caused its being generally divided into several Muscles.—Thus *Valsalva* calls that part springing from the Tongue, the *Glossopharyngæus*; that immediately below it, the *Hyopharyngæus*.

Hence, in like manner, come the *Cephalopharyngæus*, *Sphænopharyngæus*, &c.

PTEROPHORI, in Antiquity, a Name given to such of the *Roman* Couriers as brought Tidings of any Declaration of War, a Battel lost, or any Mishap befallen the *Roman* Armies.

They were so call'd because they bore Wings on the Points of their Pikes; from the *Greek* πτερὸν, Wing, and φέρω, I bear.

PTISAN, PTISANA, in Medicine, a cooling Potion, made of Barley boil'd in Water, and usually sweeten'd with Liquorice, &c.

To these are sometimes added the Herb Dog's-grass, and Senna to render it laxative.—Most of the Decoctions of Physicians are in *Ptisans*. See DECOCTION.

Feverish Patients are prohibited Wine, &c. and reduced to *Ptisans*.

The Word is form'd from the *Greek* πτισάνη, which signifies the same thing.

PTOLEMAITES, a Branch of the antient *Gnostics*; so call'd from their Leader *Ptolemy*.

This Heresiarch is represented as a Man of considerable Learning, who improved considerably on the System of the *Gnostics*, his Predecessors, and enlarged it with a number of Notions and Visions of his own. See GNOSTICS.

S. *Epiphanius* is very ample on the Subject of the *Ptolemaites*; and produces a Letter of *Ptolemy* to *Flora*, wherein that Heretic lays down his Doctrine.—He maintain'd, that in the Law of *Moses* there were three things to be consider'd, inasmuch as it did not all come from the same hand; but part of it, said he, from God, part of it from *Moses*, and part of it which came from neither of 'em, but consisted altogether in the pure Traditions of the antient Doctors; on which part it was that he founded his Dreams.

PTOLEMAIC *System*, or *Hypothesis*, the Order, or Disposition of the Heavens and Heavenly Bodies, wherein the Earth is supposed to be at rest, in the Centre; and the Heavens to revolve round it, from East to West; carrying with 'em the Sun, Planets, and fixed Stars, each in their respective Spheres. See SUN, EARTH, PLANET, &c.

This Hypothesis took its Name from *Ptolemy*, the great *Alexandrian* Astronomer; because maintain'd and illustrated by him: Not that it was his Invention; for it was much older, as having been held by *Aristotle*, *Hipparchus*, &c. See it further illustrated under the Article SYSTEM.

PTYALISM, PTYALISMUS, in Medicine, a *Spitting*; or a discharge of Saliva by the Glands of the Mouth; whether it amount to an absolute Salivation, or not. See SALIVATION.

The Word is form'd from the *Greek* πτύω, *Spuo*, to ooze out.

PUBERTY, PUBERTAS, in the Civil Law, a natural Majority; or the Age wherein a Person is allow'd to contract Marriage. See MAJORITY, &c.

Boys arrive at *Puberty* at fourteen Years of Age; Maids at twelve. *Full Puberty* is accounted at eighteen. See AGE.

PUBES, a Term used for the external parts of the *Pudenda*, or parts of Generation in both Sexes. See PUDENDUM, &c.

This, from the Age of *Puberty*, is supposed to be cover'd, more or less, with Hair; whence the Name. See HAIR.

PUBIS *Os*, or *Os Pectinis*, in Anatomy, a Bone of the Hip, situate in the fore and middle part of the Trunk; and making the lower and inner part of the *Os Innominatum*. See INNOMINATUM *Os*.

It is join'd to the other part by a Cartilage, thicker, but looser in Women than Men; in the former whereof, the *Os Pubis* recedes, or gives a little in time of Travel, to give way for the *Fœtus*. See DELIVERY.

It has a large *Foramen*, which makes room for the Passage of two Muscles of the Thigh; besides a Sinus, whereby the Crural Veins and Arteries pass to the Thighs. See PECTINIS *Os*.

PUBLIC *Notary*, see NOTARY *Public*.

PUBLICAN, PUBLICANUS, among the *Romans*, a Person who farmed the Imposts, Taxes, and public Revenues.

The Name appears to have been odious to the *Jews*, &c. apparently because of the Exactions of this sort of People.

PUBLICATION, the Act of *Promulgating*, or making a thing known to the World. See PROMULGATION.

By the Canons, *Publication* is to be made of the Bans of Marriage three times, e'er the Ceremony can be solemnized; without especial Licence to the contrary. See MARRIAGE.

PUCELLAGE, see VIRGINITY.

PUDICA *Planta*, see SENSITIVE *Plant*.

PUERILITY, in Discourse. *Longinus* defines it to be a Thought, which, by being too far fetch'd, becomes flat and insipid.—*Puerility*, he adds, is the common Fault of those who affect to say nothing but what is Brillant and Extraordinary. See SUBLIME.

PUGIL, among Physicians, &c. a Measure of Flowers, Seeds, or the like Matters, containing so much as may be taken up between the Thumb and two Fore-Fingers. See MEASURE.

The *Pugil* is esteem'd the eighth part of the Handful. See MANIPULUS.

The Word comes from the *Latin*, *Pugillus*, little Hand. The *French* frequently call it *Pincée*, Pinch.—Some confound *Pugil* with *Manipulus*; and use it for a Handful.

PUISNE, PUNY, in Law, a Younger-born; or a Child born after another. See MULIER.

The Word is not only apply'd to the second, third, fourth, &c. with regard to the first; but to the third with regard to the second, &c.

The last of all is call'd absolutely *Cadet*. See CADET.

The Word is pure *French*; in which Language it bears the same Signification.

In the like sense we say a *Puisne Judge*, a *Puisne Counsellor*. See JUDGE and JUSTICE.

PUKING, a cant Word for a Nausea, or Disposition to Vomit. See NAUSEA and VOMITING.

PUL, in Commerce, a general Name which the *Persians* give to all the Copper-Moneys current in the Empire; particularly the *Kabesqui* and *Demi-kabesqui*. See MONEY and COIN.

Olearius,

Olearius, who was at *Iſpahan* in 1637, in the Retinue of the Ambaſſador of *Holſtein*, aſſures us, That each City in *Perſia* has its ſeveral Copper-Money, mark'd with its particular Badge, which is only current in that Diſtrict, and changed every Year.—At the beginning of each Year, which is at the Vernal Equinox, all the old Money is cried down, and the new appears in its place.

Both the Emperor and the State find their Intereſt in this frequent change: The firſt, in that he only gives at the Rate of 17 *d.* Sterling *per* Pound for Copper; yet delivers it out coin'd in *Kabeſqui* and *Demi-kabeſqui* at above 2 *s. per* Pound: The ſecond, in that the Copper-Money is by this Means leſs abundant, being reduced each Year to nearly the ſame Quantity.

The ſame Author adds, that at the Time when he was in *Perſia*, the *Kabeſqui* at *Iſpahan* were ſtruck with the Image of a Lion, at *Scamachia* with a Devil, at *Kaſchan* with a Cock, and at *Kilan* with a Fiſh.

PULLEY, *Trochlea*, in Mechanics, one of the five Mechanical Powers; conſiſting of a little Wheel, or Rundle, having a Channel around it, and turning on an Axis; ſerving, by means of a Rope which ſlides in its Channel, for the raiſing of Weights. See MECHANICAL *Power*.

The *Latins* call it *Trochlea*; and the Seamen, when fitted with a Rope, a *Tackle*.—An Aſſemblage of ſeveral *Pulleys* is call'd a *Polyſpaſton*.

Doctrine of the PULLEY.

1°. If a Power P, (Tab. MECHANICS, fig. 49.) ſuſtain a Weight Q, by means of a ſingle *Pulley* A B; in ſuch manner as that the Line of Direction of each is a Tangent to the Periphery of the Rundle; the Weight and the Power are equal.

Hence, a ſingle *Pulley*, if the Lines of Direction of the Power and the Weight be Tangents to the Periphery, neither aſſiſts nor impedes the Power; but only changes its Direction.

The Uſe of the *Pulley*, therefore, is when the vertical Direction of a Power is to be changed into an horizontal one; or an aſcending Direction into a deſcending one; and on the contrary.

This is found a good Proviſion for the ſafety of the Workmen employ'd in drawing with the *Pulley*.—For ſuppoſe a large Weight E Fg requir'd to be raiſed to a great Height by Workmen pulling a Rope A B: If now the Rope ſhould chance to break, the Workmen's Heads underneath would be in immediate Danger; but if by means of the *Pulley* B, the vertical Direction A B be changed into a horizontal one B C, there is no danger from a breaking of the Rope.

This Change of Direction by means of a *Pulley* has this further Advantage; that if any Power can exert more Force in one Direction than another; we are here able to employ it in its greateſt force.

Thus, *e. gr.* a Horſe cannot draw in a vertical Direction; but draws with all its Advantage in a horizontal one. By changing the Vertical Draught, therefore, into a horizontal one, a Horſe becomes qualify'd to raiſe a Weight.

2°. If a Power apply'd in E, (*Fig.* 50.) according to the Line of Direction B E, which is a Tangent to the *Pulley* in E and parallel to the Rope A D, ſuſtain the Weight F ſuſpended from the Centre of the *Pulley* C; the Power is ſubduple of the Weight.

But the grand Uſe of the *Pulley*, is where ſeveral of 'em are combined; thus forming what *Vitruvius*, and others after him, call *Polyſpaſta*; the Advantages whereof are, that the Machine takes up but little room, is eaſily removed, and raiſes a very great Weight with a very moderate Force.

The effect of *Polyſpaſta* is founded on the following Theorem.

3°. If a Power apply'd in B, (*Fig.* 51.) ſuſtain (by means of a *Polyſpaſton*) a Weight F, ſo as all the Ropes A B, H I, G F, E L, C D, are parallel to each other: The Power will be to the Weight as Unity to the Number of Ropes, H I, G F, E L, C D, drawn by the Weight F; and therefore as Unity to the Number of *Pulleys*, higher and lower, taken together.

Hence, the Number of *Pulleys* and the Power being given, 'tis eaſy to find the Weight that will be ſuſtain'd thereby: Or, the Number of *Pulleys* and Weight to be ſuſtain'd, being given, the Power is found: Or, the Weight and Power being given, the Number of *Pulleys* the *Polyſpaſton* is to conſiſt of, is found. See POLYSPASTON.

4°. If a Power move a Weight by means of ſeveral *Pulleys*; the Space paſs'd over by the Power will be to the Space paſs'd over by the Weight, as the Weight to the Power.

Hence, the ſmaller the Force that ſuſtains a Weight by means of *Pulleys*, is; the ſlower is the Weight raiſed: So that what is ſaved in Force, is ſpent in Time.

PULMO, in Anatomy, ſee LUNGS.

PULMO *Marinus*, *Sea-Lungs*, among Naturaliſts, a light ſpongeous Body, of a ſhining Colour, like Cryſtal, intermixed with blue, and uſually of a Figure reſembling the human Lungs; whence its Name.

It ſwims a-top of the Water; and is popularly ſuppoſed to preſage a Storm.—It is in effect no more than a viſcous Excrement of the Sea, hardned by the Sun.

It ſhines in the Night-time, and communicates its luminous Property to a Stick rubb'd therewith. Being apply'd to the Skin, it raiſes an Itching, and takes off the Hair.

PULMONARY *Veſſels*, in Anatomy, are thoſe which carry the Blood from the Heart to the Lungs, and back again from the Lungs to the Heart.

Theſe are two in Number; *viz.* the *Pulmonary Artery* and *Vein*.

The *Pulmonary Artery*, which the Antients call'd *Vena Arterioſa*, the *Arterial Vein*, is, in reality, an Artery, and compoſed, like the reſt, of ſeveral Tunics.—It ariſes from the right Ventricle of the Heart, and divides into two large Branches, which ſub-dividing into ſeveral ſmaller, diffuſes itſelf throughout the whole Subſtance of the Lungs. See LUNGS.

The *Pulmonary Vein*, which the Antients call'd *Arteria Venoſa*, the *Venous Artery*, conſiſts of four Membranes like the other Veins. It ariſes in the Lungs from an infinity of little Branches, which uniting in one Trunk, opens into the left Ventricle of the Heart. See HEART.

For the Office of theſe Veſſels, ſee CIRCULATION. See alſo RESPIRATION, *&c.*

Mr. *Cowper* gives us an Inſtance of a *Polypus* in the *Pulmonary Vein*. See POLYPUS.

PULMONARY *Conſumption*, or Conſumption of the Lungs, is what we properly call a *Phthiſis*. See PHTHISIS.

PULP, in Fruits, the *Fleſh*; or that part between the Skin, and the Core, or Seed. See FRUIT.

The *Pulp* of a Tree, or Plant, is the *Parenchyma*, which grows and ſwells by means of a Juice, at firſt very coarſe and diſagreeable; at length ſweeter and more delicate. See PARENCHYMA; ſee alſo VEGETABLE, PLANT, *&c.*

PULP, in Medicine, the fatteſt, fulleſt, and moſt ſolid part of the Fleſh. See FLESH.

Phyſicians apply the Word particularly to the upper part of the Belly; becauſe fleſhy, and becauſe 'tis here that they feel Animals, to examine whether they be fat.

This part the *Latins* call *Pulpa*, from *palpare*, to feel, handle.

PULP, in Pharmacy, is the ſoft part of Fruits, Roots, or other Bodies, extracted by infuſion, or boiling, and paſſed thro' a Sieve.

PULPIT, PULPITUM, a Term now reſtrain'd to an Elevation, or Apartment in a Church, whence Sermons are deliver'd.

Among the *Romans*, the *Pulpit* was a part of the Theatre, call'd alſo *Proſcenium*; or what we now call the *Stage*, whereon the Actors trod; tho' ſome ſay it was properly an Eminence thereon for the Muſic, or a *Suggeſtum* whence Declamations, *&c.* were ſpoke.

The *French* uſe the Word *Pulpit*, *Pupitre*, for a Reading-Desk in a Church, Library, or the like: Thoſe large ones in Churches, they properly call *Lutrins*.

Some Authors derive the Word from *Publicum*, becauſe People are there expoſed to open view.

PULSATION, in Medicine, the Motion of the Pulſe; or the Beating of the Artery. See PULSE.

PULSE, in the Animal Oeconomy, the beating, or throbbing of the Arteries. See ARTERY.

The *Pulſe* is that reciprocal Motion of the Heart and Arteries, whereby the warm Blood thrown out of the left Ventricle of the Heart, is ſo impell'd into the Arteries to be by them diſtributed throughout the Body, as to be perceivable by the Finger. See BLOOD.

The Pulſation of the Arteries ariſes from that of the Heart; and has, like it, a Syſtole and Diaſtole; the Syſtole of the one correſponding to the Diaſtole of the other. See HEART, SYSTOLE, *&c.*

Galen tells us, that *Hippocrates* was the firſt who obſerved the Motion of the *Pulſe*. M. *Homberg* mentions the Caſe of a Woman in *Paris* who had a *Pulſe* in the Veins, perfectly like that we commonly obſerve in the Arteries. He adds, that he is the firſt Author that ever mention'd ſuch a thing. See VEIN.

The *Pulſe* is thus accounted for.—When the left Ventricle of the Heart contracts, and throws its Blood into the great Artery; the Blood in that Artery, is not only thruſt forward towards the Extremities, but the Channel of the Artery is likewiſe dilated; becauſe Fluids, when they are preſs'd, preſs again towards all ſides, and their preſſure is always perpendicular to the ſides of the containing Veſſels: but the Coats of the Artery by any ſmall Impetus may be diſtended; therefore, upon the Contraction of the Heart, the Blood from the left Ventricle will not only preſs the Blood in the Artery forwards, but both together will di-

ſtend the ſides of the Artery; and thus is a Motion of Dilatation effected.

And when the Impetus of the Blood againſt the ſides of the Artery ceaſes, that is, when the left Ventricle ceaſes to contract, then the ſpiral Fibres of the Artery, by their natural Elaſticity, return again to their former State, and contract the Channel of the Artery, till it is again dilated by the Syſtole of the Heart; ſo that here is a Motion of Reſtitution effected.

This Diaſtole of the Artery is call'd its *Pulſe*, and the time of the ſpiral Fibres returning to their natural ſtate, is the diſtance between two *Pulſes*.

This *Pulſe* is in all the Arteries of the Body at the ſame time: for while the Blood is thruſt out of the Heart into the Artery; the Artery being full, the Blood muſt be propell'd in all the Arteries at the ſame time; and becauſe the Arteries are conical, and the Blood moves from the Baſis of the Cone to the Apex, therefore the Blood is continually preſſing againſt the Sides of the Veſſels, and conſequently every Point of the Artery muſt be dilated at the ſame time that the Blood is thrown out of the left Ventricle of the Heart; and as ſoon as the Elaſticity of the ſpiral Fibres can overcome the Impetus of the Blood, the Arteries are again contracted.

Thus, two Cauſes operating alternately; the Heart, and Fibres of the Arteries, keep the Blood in a continual Motion. See CIRCULATION.

The Obſervation of the *Pulſe* is of the laſt Importance to a Phyſician; both as it diſcovers the State of the Heart, the firſt Mover in the Animal Frame; and as it ſhews the Nature, Quantity, and Motion of the Blood, that univerſal Humour whereon all the reſt depend; and as it indicates the condition of the Artery, the primary Veſſel of the whole Body.

A *ſtrong Pulſe*, then, denotes, 1. A great Muſcular Force of the contracting Heart; and, conſequently, the ſtrength of the contracting Cauſe; *i. e.* 2. A brisk and copious Influx of the nervous Juice into the Villi of the Heart. 3. Plenty of Blood. 4. A laudable Secretion and Circulation of Humours.

A ſtrong *Pulſe*, therefore, is a good Preſage, if it be alike throughout the whole Body. Indeed it is frequently fallacious in Apoplectic, and ſome other Diſeaſes; where the Paſſage between the Heart and the Brain is free; and in other parts, eſpecially the Viſcera, obſtructed.

A *weak Pulſe* denotes the contrary of the former; tho this ſometimes deceives, particularly in fat People.

A *hard Pulſe* ſignifies, 1. That the Membrane of the Artery is dryer than ordinary: And, therefore, 2. Obſtructions in the minute Veſicles whereof the Membranes of the Artery are wove. 3. That the Arteries are full; but, 4. That their Capillary Extremities are obſtructed with an inflammatory Viſcidity. 5. That the Blood is very denſe and compact: Hence, 6. That the Circulations, Secretions, and Excretions are depraved.

A *ſoft Pulſe* denotes the contrary to all theſe; yet is very fallacious in an acute *Peripneumonia*.

A *ſlow Pulſe* denotes, 1. That the Contractions of the Heart are ſlow; and, therefore, 2. A Slowneſs of the Influxes of the nervous Juice from the Brain into the *Villi* of the Heart. 3. That the Blood has circulated a great number of Times. 4. That all the Humours circulate eaſily thro' their Veſſels. Indeed if the Pulſe be thus from Weakneſs, 'tis an ill ſign.

A *quick Pulſe* denotes the contrary to all theſe; as Acrimonies, Spirits agitated, Fevers, Phrenzy.

An *equable Pulſe* denotes a conſtant Tenor of the vital Functions; an uneven one the contrary.

An *intermitting Pulſe* ſhews Life in a ſlippery Situation.

An intermitting *Pulſe* is either owing to a fault in the nervous Juice, which flows unequally into the Heart; or in the Veſſel which tranſmits the Blood and Humours; or to the Humours themſelves.

The Cauſe of this Diſorder is various, as Convulſions, Polypus's, Cacochymias, Inflammations, want of Blood, bony or cartilaginous Arteries, &c.

A ſtrong, equable, and, at the ſame time, ſlow *Pulſe*, is of all others the beſt. A ſtrong and great; or ſtrong and ſlow *Pulſe*, together, are good. A weak, ſmall, hard, unequal, intermitting, quick *Pulſe*, is of all others the worſt.

Yet in all theſe things, regard muſt be had to the nature of the particular Artery, the Age, Sex, Temperament, Affections of the Mind, the ſix Non-naturals, Habit of Body, Seaſon, Country, &c. All which have an influence on the *Pulſe*.

A Diminution or total Suſpenſion of the *Pulſe*, is reducible, either to a *Leipothymia*, where it fails to ſuch degree, as that there is ſcarce ſtrength left to ſuſtain the Body. See LEIPOTHYMIA.

Or to a *Leipopſychia*, when it ariſes to a ſenſible Diminution of the natural Heat.

Or to a *Syncope*, when the Heart fails, ſo as the Heat, Motion, Senſes and all are almoſt deſtroy'd.

Or, laſtly, to an *Aſphyxia*, where thoſe are all abſolutely deſtroy'd as to Senſe, and Death itſelf ſeems in poſſeſſion. See SYNCOPE, &c.

PULSE is alſo uſed for the Stroke, with which any Medium is affected by the Motion of Light, Sound, &c. through it. See LIGHT and SOUND.

Sir *Iſaac Newton* demonſtrates, *lib.* 2. *Prop.* 48. *Princip.* That the Velocities of the *Pulſes* in an Elaſtic Fluid Medium, (whoſe Elaſticity is proportionable to its Denſity) are in a Ratio compounded of half the Ratio of the Elaſtic Force directly, and half the Ratio of the Denſity inverſely: So that in a Medium whoſe Elaſticity is equal to its Denſity, all *Pulſes* will be equally ſwift. See MEDIUM, FLUID, &c.

PULSE, *Legumen*, in Botany, a Term uſed for thoſe Grains or Seeds which are gather'd with the Hand; in contradiſtinction to Corns, &c. which are reap'd, or mow'd.

Pulſe is the Seed of the leguminous Species of Plants. See LEGUMINOUS.

The Word is primarily underſtood of Grains that grow in Pods; as Beans, Peas, Vetches, &c. but is alſo uſed, by Extenſion, for Artichoaks, Aſparagus, and other Kitchin-Roots and Herbs.

PULSION, or *Truſion*, the Act of driving, or impelling a thing forwards. See TRUSION.

The Word comes from *pello*, I drive. See ATTRACTION and ELECTRICITY.

PULTURA, in our old Law-Books, denotes a previous *Examination*; from *puſare*, to ask, or demand, thus call'd on account of the Monks, who, e'er they were admitted into the Monaſteries *pulſabant ad fores*, for ſeveral days.——*Et volo ut ſint quieti de omnibus Cauſis & Querelis, & placitis Ballivorum & Præpoſitorum Hundredi, & a* Pultura *Serjanorum*; *i. e.* from the Examination of Serjeants; *& de rewardo Foreſtarum, i. e.* the Viſitation of the Foreſt.

PULVERIZATION, the Act of *Pulverizing*, or reducing a Body into a fine Powder. See POWDER.

This is performed, in friable Bodies, by pounding or beating in a Mortar; but to *pulverize* malleable ones, other Methods muſt be taken. See FRIABLE and MALLEABLE.

To *pulverize* Lead, or Tin, the Method is thus: Rub a round wooden Box, all over the inſide, with Chalk; pour a little of the melted Metal nimbly into the Box, when, ſhutting the Lid, and ſhaking the Box briskly, the Metal will be reduced into Powder. See TRITURATION.

PULVINATA, PULVINATED, in the antient Architecture, a Term apply'd to a Freeze which ſwells, or bulges out, in manner of a Pillow; whence the Name. See FREEZE.

PULVIS *Fulminans*, or the thundering Powder; ſee FULMINANS *Pulvis*.

PULVIS *Patrum*, the Jeſuits Powder; ſee CORTEX and QUINAQUINA.

PUMICE *Stone*, PUMEX, a kind of ſpongeous Stone, very porous and friable. See STONE.

Naturaliſts are not agreed about the Nature and Origin of *Pumice*—Some look on it as pieces of Rock half-burnt and calcined, caſt up in Eruptions of Volcano's, particularly *Ætna* and *Veſuvius*, into the Sea; and which, by being there waſh'd in the Salt-water, lays aſide the black Colour that the Impreſſion of the ſubterranean Fires had given it, and becomes whitiſh, or ſometimes only greyiſh, according as it has floated more or leſs in the Sea.

Other Authors will have the *Pumice* to riſe from the bottom of the Sea; whence they ſuppoſe it detach'd by ſubterranean Fires, and hence account both for its lightneſs and poroſity, and its ſaline Taſte. Alledging, in confirmation hereof, that *Pumice* is frequently found in parts of the Sea far remote from all Volcano's; and adding, that ſeveral parts of the *Archipelago* are frequently found cover'd with it, all at once, after a few inward ſhakes and heavings of the bottom of the Sea.

Pumice makes a very conſiderable Article in Commerce, and is much uſed in the Arts and Manufactures to poliſh and ſmooth ſeveral Works. See POLISHING, &c.

Its pieces are of ſeveral Sizes: The Parchment-Makers and Marblers uſe the largeſt and lighteſt.—The Curriers the heavieſt and flatteſt.—Pewterers the ſmalleſt.

Pliny obſerves, that the Antients made conſiderable uſe of *Pumice* in Medicine; but it is out of the preſent Practice.

PUMP, *Antlia*, in Hydraulics, a Machine form'd on the Model of the Syringe, for the raiſing of Water. See SYRINGE.

Vitruvius aſcribes the firſt Invention of *Pumps* to *Cteſebes* the *Athenian*, whence the *Latins* call it *Machina Cteſebiana*, or *Organum Cteſebicum*.

Pumps are diſtinguiſh'd into ſeveral Kinds, with regard to the ſeveral Manners of their acting—As the *Common*, ſometimes call'd the *Sucking-Pump*, which acts by the preſſure of the Air, and whereby Water is raiſed out of a lower into a higher Place not exceeding thirty-two Feet:

The *Forcing-Pump*, which acts by mere impulse or protrusion, and raises Water to any Height at pleasure :—And *Cteſebes's Pump*, the first and finest of 'em all, which acts both by Suction and Expulsion.—The Structure of each is as follows.

Structure and Action of the Common or Sucking PUMP.

1. A hollow Cylinder or Barrel A B C D, (Tab. HYDROSTATICS, fig. 27.) is provided, of any solid Matter, usually Wood ; and erected perpendicularly in a Spring, or other Source of Water : The lower Base of the Cylinder being first fitted with a Valve I, which opens upwards.

2. A Piston or Embolus, call'd the Sucker, E K, furnish'd with a Valve L, which likewise opens upwards, is let down the Cylinder ; and for the more easy working upwards and downwards, furnish'd with a Lever, as G H. See EMBOLUS and VALVE.

Now, the Embolus E L, being drawn up from I to L, will leave the Space L I void of Air, at least in a great measure so : The pressure, therefore, of the Air on the Surface of the stagnant Water prevailing, will, by the Laws of Hydrostatics, lift up the Valve I, and raise it to fill the Cavity L I. See AIR and SIPHON.

If, then, the Embolus be again let down ; the lower Valve being now fast closed with the Weight of the incumbent Water, upon pressing the Piston, the Water must open the upper Valve, and get into the Embolus, by which it is raised up and discharged out at the Spout H.

Thus is the Embolus alternately raised and depressed, *&c. See the Theory of the* Pump *more accurately laid down under the Article* SYRINGE.

Structure and Action of a Forcing PUMP.

1. In a Cylinder A B, (*Fig.* 28.) is divided by a Diaphragm, or transverse piece, C D, fitted with a Valve E, opening upwards; and thus immerged in Water.

2. An Embolus F, furnish'd with a Valve G, is so fitted to an Iron Rod I H, moveable on a Hinge at H, as that it may be conveniently raised and depressed by the Hand apply'd in K.

Now, upon depressing the Embolus F, the Water will open the Valve G, and thus ascend into the Cavity of the Cylinder B C : But upon raising it again, the Valve G is shut ; so that there is no Passage for it that way : The Valve E, therefore, becomes open'd, and the Water mounts thro' it ; and by repeating the Agitation of the Embolus, 'tis at length driven out through the Spout M.

The great difficulty of rectifying this *Pump* when it happens to be out of Order, on account of the chief Seat of Action's being under Water, makes People decline the Use of it, when they can do well without it ; notwithstanding its Advantage of raising the Water to any given Height.

Structure and Action of Cteſebes PUMP.

1. A brass Cylinder A B C D, (*Fig.* 29.) furnish'd with a Valve in L, is placed in the Water. 2. In this is fitted the Embolus M K, made of green Wood which will not swell in the Water, and adjusted to the Aperture of the Cylinder with a covering of Leather ; but without any Valve. In H is fitted on another Tube N H, with a Valve that opens upwards in I.

Now, the Embolus E K being raised, the Water opens the Valve in L, and rises into the Cavity of the Cylinder.—And when the same Embolus is again depress'd, the Valve I is open'd, and the Water driven up thro the Tube H N.

This is the Pump used among the Antients ; and that from which both the others are deduced.—Sir *S. Morland* has endeavour'd to increase its Force, by lessening the Friction ; which he has done to good effect : Insomuch as to make it work without, almost, any Friction at all.

PUMPS, used in Ships, are of several Kinds : As, the *Chain-Pump*, used in large Vessels. This yielding a great Quantity of Water, works easily, and is easily mended.

Bare-Pumps are small ones made of Cane, or a piece of Wood bored thro', used in lieu of Cocks, *&c.* to *pump* Beer or Water out of the Casks.

Bur-Pumps, call'd also *Bildge-Pumps*, are chiefly used by the *Dutch*, who have 'em by their Ships-sides. In these is a long Staff with a Bur at the End like a Gunner's Spunge, to *pump* up the Bildge-Water. See BUR-*Pump*.

Air-PUMP, in Pneumatics, is a Machine by means whereof the Air is emptied out of Vessels, and a sort of Vacuum produced therein. See AIR and VACUUM.

For the Invention, Structure, and Use of this Pump ; see AIR-*Pump*.

PUN, or PUNN, a *Lusus Verborum*, or *Point*, the Wit whereof depends on a resemblance between the Sounds or Syllables of two Words, which have different, and, perhaps, contrary Significations. See POINT and WIT.

Such are——*Cane Decane Cane*—*Far Mole*, *Mole*, *Molæ*. —*Lex Dei*, *Lux Diei*.——All-houses are Ale-houses.—— The holy State of Matrimony, is become Matter of Money. ——Some Men's Paradise is a pair of Dice.——Was it so in the time of *Noah*? Ah no.——*L'Ordre tire du Disordre, ou Disordre Ordonne*, is the Title of a *French* Book.

Puns, when they come easily, and are very ingenious, poignant, and appositе, are allow'd of in Conversation, Letters, Epigrams, Madrigals, and the like Compositions ; but are absolutely banish'd out of the grave, serious, and sublime, by reason they weaken its Force and diminish its Beauty which consists in something great and elevated. The *Greeks* and *Romans*, 'tis true, sometimes indulged themselves the Practice, and used them as Ornaments in the most serious Discourses. But the more severe and philosophical Genius of our Age, is by no means satisfy'd with such an outside of Wit.—Devises, Symbols, Rebus's, Motto's, *&c.* are their proper Sphere, where they shine to most avantage. See DEVISE, REBUS, *&c.*

PUNCH, an Instrument of Iron or Steel, used in several Arts, for the piercing or stamping Holes in Plates of Metals, *&c.* being so contrived, as not only to perforate, but to cut out and take away the Piece ; whence the *French* call it *Emporte-piece*, *q. d.* take-off-piece.

The *Punch* is a principal Instrument of the Metal-Button-Makers, Wafer-Makers, Patch-Makers, Shoe-Makers, *&c.*

The *Punch* of the Makers of Plate-Buttons serves to cut and parcel out the Plates of Gold and Silver wherewith they cover their Moulds.—'Tis large, round, four, or five Inches high, the bottom hollow for about half an Inch, well steel'd, and the Edge very sharp.

To use it, they extend the Plate of Metal on a leaden Table or Block, and with a pretty heavy Hammer, strike the Head of the *Punch*, *&c.* See BUTTON-*Making*.

In the Manage, a PUNCH *Horse*, is a well-set, well-knit Horse ; short-back'd, and thick-shoulder'd, with a broad Neck, and well lined with Flesh.

PUNCH, is also a sort of compound Drink, frequent in *England*, and particularly about the Maritime Parts thereof ; tho' little known elsewhere. See DRINK.

Its Basis is Spring-Water, which being render'd cooler, brisker, and more acid with Lemon-Juice, and sweeten'd again to the Palate with fine Sugar, makes what they call *Sherbet* ; to which a proper Quantity of a spirituous Liquor, as Brandy, Rum, or Arrac being super-added ; the Liquor commences *Punch*.

Several Authors condemn the Use of *Punch* as prejudicial to the Brain, and nervous System.—Dr. *Cheyne* insists that there is but one wholesome Ingredient in it, which some now begin to leave out, *viz.* the mere Element. See WATER, BRANDY, RUM, ARRAC, SUGAR, *&c.*

The proportions of the Ingredients are various ; usually the Brandy and Water are in equal Quantities.

Some, instead of Lemon-Juice, use Lime-Juice, which makes what they call *Punch Royal* ; found less liable to affect the Head, as well as more grateful to the Stomach.

Some also make *Milk-Punch*, by adding near as much Milk to the Sherbet as there is Water ; which tempers the Acrimony of the Lemon.——Others prefer *Tea-Punch*, made of green Tea instead of Water, and drank hot.

Lastly, What they call *Punch for Chamber-Maids* is made without any Water ; of Lime-Juice, sharpen'd with a little Orange and Lemon-Juice ; twice as much white Wine as Lime-Juice, and four times as much Brandy, with Sugar.

PUNCHIN, or PUNCHION, in Building. See PUNCHION.

PUNCHION, a little Block, or Piece of Steel, on one End whereof is some Figure, Letter, or Mark engraven either *in Creux*, or *in Relievo* ; Impressions whereof are taken on Metal, or some other Matter, by striking it with a Hammer, on the End not engraved. See ENGRAVING, *&c.*

There are various Kinds of these *Punchions* used in the Mechanical Arts——Such, for instance, are those of the Goldsmiths, Cutlers, Pewterers, *&c.* See MARK.

PUNCHION, in Coining, is a piece of Iron steel'd, whereon the Engraver has cut, *in Relievo*, the several Figures, Arms, Effigy, Inscription, *&c.* that are to be in the Matrices, wherewith the Species are to be mark'd. See MATRIX, *&c.*

Coiners distinguish three Kinds of *Punchions*, according to the three Kinds of Matrices to be made : that of the Effigy, that of the Cross or Arms, and that of the Legend or Inscription.

The first includes the whole Portrait, *in Relievo*.—The second are small, each only containing a piece of the Cross or Arms, *v. gr.* a Flower-de-Lys, a Harp, a Coronet, *&c.* by the Assemblage of all which, the entire Matrix is form'd.—The *Punchions* of the Legend only contain each a Letter, and serve equally for the Legend on the Effigy-side, and the Cross-side. See COINING.

For the Manner of Engraving, Tempering, and Stamping theſe Punchions, *to form the Matrices; ſee* ENGRAVING *on Steel*, MATRIX, *&c.*

PUNCHIONS, in Printing, are thoſe uſed in ſtamping the Matrices, wherein the Types, or Printing-Characters, are caſt. See *Letter*-FOUNDERY.

PUNCHION is alſo uſed for ſeveral Iron Tools of various Sizes, and Figures uſed by the Engravers *in Creux*, on Metals—Seal-Gravers, particularly, uſe a great number; for the ſeveral pieces of Arms, *&c.* to be engraven——— And many ſtamp the whole Seal from a ſingle *Punchion*. See ENGRAVING.

PUNCHION is alſo a common Name for all the Iron Inſtruments uſed by Stone-Cutters, Sculptors, Lock-Smiths, *&c.* for the cutting, inciding, or piercing their ſeveral Matters.

Thoſe of Sculptors and Statuaries, ſerve for the repairing Statues, when taken out of the Moulds. See STATUE, FOUNDERY, *&c.*

The Lock-Smiths uſe the greateſt Variety of *Punchions*; ſome for piercing hot, others for piercing cold; ſome flat, ſome ſquare, ſome round, others oval; each to pierce Holes of its reſpective Figure, in the ſeveral parts of Locks.

PUNCHION, or PUNCHIN, or NEEDLE, in Carpentry, is a piece of Timber placed upright between two Poſts whoſe bearing is too great; ſerving, together with them, to ſuſtain ſome large Weight. See BEARING, *&c.*

The *Punchion* is uſually lower and ſlighter than the Poſts, and is join'd by a Brace, or the like, of Iron. See POST.

Punchion is alſo a piece of Timber raiſed upright under the Ridge of a Building, wherein the little Forces, *&c.* are jointed ——*Vitruvius* calls the *Punchion*, *Columen*.

Punchion is alſo uſed for the Arbour, or principal Part, of a Machine, whereon it turns vertically; as that of a Crane, *&c.* See CRANE.

PUNCHION, is alſo a Meaſure for Liquids, containing $1\frac{1}{3}$ of a Hogſhead; or 48 Gallons, or $\frac{1}{2}$ of a Tun. See MEASURE.

The *Paris Punchion* is the ſame with their Demi-queue: At *Rouen*, it is three Buſhels, *&c.*

PUNCTATED *Hyperbola*, in the higher Geometry, an Hyperbola, whoſe oval Conjugate is infinitely ſmall, *i. e.* a Point. See CURVE and HYPERBOLA.

PUNCTION, or PUNCTURE, in Chirurgery, an Aperture made in the lower Belly, in Dropſical Perſons; to diſcharge the Water: call'd alſo PARACENTÆSIS; which ſee. See alſo TAPPING, and DROPSY.

PUNCTUATION, in Grammar, the Art of *Pointing*; or of dividing a Diſcourſe into Periods, and Members of Periods; by Points, expreſſing the Pauſes to be made in the reading thereof. See SENTENCE, PERIOD, *&c.*

The Points uſed herein are four; *viz.* the *Period*, *Colon*, *Semi-colon*, and *Comma*: See the particular Uſe of each under its proper Article; COMMA, COLON, PERIOD, and SEMI-COLON.

Punctuation is a modern Art—the Antients were entirely unacquainted with the Uſe of our Commas, Colons, *&c.* and wrote not only without any Diſtinction of Members, and Periods, but alſo without Diſtinction of Words: which Cuſtom, *Lipſius* obſerves, continued till the hundred and fourth Olympiad; during which time, the Senſe alone divided the Diſcourſe. See POINT.

There is much more difficulty in *Pointing*, than People are generally aware of———In effect, there is ſcarce any thing in the Province of the Grammarians ſo little fix'd and aſcertain'd as this. The Rules uſually laid down, are impertinent, dark, and deficient; and the Practice, at preſent, perfectly capricious; Authors varying not only from one another, but from themſelves too.

Indeed, F. *Buffier*, and ſince him, Mr. *Ward*, have done ſomething towards a fix'd and preciſe Syſtem of *Pointing*, from the Reaſon and Analogy of Things: Their Doctrine the Reader will find under the Articles, *Comma*, *Colon*, *&c.*

In the general, we ſhall only here obſerve, that the Comma is to diſtinguiſh Nouns from Nouns, Verbs from Verbs, and ſuch other parts of a Period as are not neceſſarily join'd together——The Semi-colon ſerves to ſuſpend and ſuſtain the Period, when too long——The Colon, to add ſome new, ſupernumerary Reaſon, or Conſequence, to what is already ſaid——And the Period, to cloſe the Senſe, and Conſtruction; and releaſe the Voice.

PUNCTUM, in Geometry, *&c.* See POINT.

In the Schools, they have their *Punctum Terminans*, which is the indiviſible Extreme of a Line, beyond which no part of the Line extends. See LINE.

Punctum continuans, which is an indiviſible Magnitude between contiguous Points of a Line, whereby they are connected, and from whence ariſes a Continuity. See CONTINUITY.

And *Punctum Initians*, which is an Indiviſible, from which the Line begins.

PUNCTUM *Formatum*, or *Generatum*, in Conics, is a Point determin'd by the Interſection of a Right Line drawn thro' the Vertex of a Cone to a Point in the Plane of the Baſe that conſtitutes the Conic Section. See CONE and CONIC.

PUNCTUM *ex Comparatione*, is either Focus of an Ellipſis and Hyperbola; thus call'd by *Apollonius*, becauſe the Rectangles under the Segment of the tranſverſe Diameter in the Ellipſis; and under that and the Diſtance between the Vertex and the Focus, in the Hyperbola; are equal to one fourth part of what he calls the Figure thereof. See ELLIPSIS and HYPERBOLA.

PUNCTUM *Lineans*, in Geometry, is a Term uſed by ſome Authors for that Point of the generating Circle of a Cycloid, or Epicycloid, which, in the Geneſis produces any part of the Cycloidal Line. See CYCLOID, *&c.*

PUNCTUM *Saliens*, in Anatomy, the firſt Mark of Conception of an Embryo, which is in the place where the Heart is form'd. See CONCEPTION, HEART, and EMBRYO.

This is eaſily obſerv'd with a Microſcope, in a Brood-Egg, wherein, after Conception, we ſee a little Speck or Cloud; in the middle whereof is a Spot that appears to beat, or leap a conſiderable time, e'er the *Fœtus* be form'd ready for hatching. See EGG: See alſo GENERATION, and EMBRYO.

PUNCTUM *Lachrymale*, in Anatomy, a little Hole in the Edge of each Eye-lid; opening into a Bag, call'd the *Glandula Lachrymalis*. See LACHRYMAL.

PUNCTURE, in Chirurgery, *&c.* any Wound made by a pointed Inſtrument. See WOUND.

In Phlebotomy, People are ſometimes brought in danger of the Loſs of a Limb, and even of Life, by the *Puncture of a Tendon*——The Patient, here, does not immediately feel any pain; but twelve Hours after the Operation, complains thereof; not in the *Puncture* itſelf, but in the parts tending towards the Armpits——The wounded part ſwells to the ſize of a Filberd, and diſtils an aqueous Humour, or Ichor, which is the chief Diagnoſtic of the *Punctura Tendinis*. See TENDON.

PUND-BRECH, from the *Saxon Pund*, *Parcus*, Pound; and *Brech*, *Fractura*, Breaking, denotes the illegal taking of Cattel out of the Pound; either by breaking the Pound, picking the Lock, or otherwiſe. See POUND.

——*Si* Pund-brech *fiat in curia Regis plena* Wyta *ſit: alibi quinque Mancæ*. Leg. Hen. 1.

PUNISHMENT, a Penalty impos'd upon the Commiſſion of ſome Crime. See CRIME.

'Tis eſſential to the Nature of a Law, that it import or decree a *Puniſhment* to the Tranſgreſſors thereof. See LAW.

The Forms and Manners of *Puniſhment* are various in various Countries, and Ages, and for various Crimes; as *Treaſon*, *Felony*, *Adultery*, *Parricide*, *&c.* See ADULTERY, *&c.*

Among the *Romans*, the *Pecuniary Puniſhments* were the *Mulcta* and *Confiſcatio*——The *Corporal Puniſhments* were *Capitis Diminutio*, *Aqua & Igni Interdictio*, *Proſcriptio*, *Deportatio*, *Relegatio*, *Furca*, *Crux*, *Carcer*, *Culeus*, *Equuleus*, *Scalæ Gemoniæ*, *Damnatio ad Gladium*, *ad Metallum*, *Flagellatio*, *Talio*, *&c.* moſt of which ſee deſcrib'd under their reſpective Articles.

Among us, the principal *Civil Puniſhments*, are *Fines*, *Impriſonments*, the *Stocks*, *Pillory*, *Burning in the Hand*, *Whipping*, *Cucking-ſtool*, *Hanging*, *Beheading*, *Quartering*, *Burning*, *Tranſportation*, *&c.* See FINE, PILLORY, CUCKING-STOOL, GALLOWS, GIBBET, *&c.*

The *Eccleſiaſtical Puniſhments*, are *Cenſures*, *Suſpenſions*, *Deprivations*, *Degradations*, *Excommunications*, *Anathema's*, *Penances*, *&c.* See CENSURE, SUSPENSION, DEPRIVATION, DEGRADATION, EXCOMMUNICATION, ANATHEMA, PENANCE, *&c.*

The *Military Puniſhments*, are, being *Shot*, *Running the Gantelope*, *Riding the wooden Horſe*, *Bilboes*, *&c.*

Among the *Turks*, *&c.* *Impaling*, *Baſtinado's* on the Soles of the Feet, *&c.* obtain. See IMPALING.

PUNITORY *Intereſt*, in the Civil Law, ſuch Intereſt of Money as is due for Delay of Payment, Breach of Promiſe, *&c.*

PUPIL, in the Civil Law, a Boy or Girl, not yet arriv'd at the State of Puberty; *i.e.* under fourteen Years of Age the Boy; and twelve the Girl. See PUBERTY.

While a Minor remain'd under the Direction of a Tutor, he was call'd *Pupil*; after Puberty, a Curator being aſſign'd him, he ceaſed to be call'd a *Pupil*. See TUTOR and CURATOR.

A Tutor is obliged to pay Intereſt for what Monies of his *Pupil* lie idle and unemploy'd—A Tutor is allow'd to do any thing for his *Pupil*, but nothing againſt him.

PUPILLA, Pupil, in Anatomy, a little Aperture, in the middle of the Uvea, and Iris of the Eye; thro' which the Rays of Light paſs to the Cryſtalline, in order to be painted on the Retina, and cauſe Vision. See Eye and Vision.

'Tis obſerved, that as we are forced to uſe various Apertures to our Optic Glaſſes; ſo Nature has made a like Proviſion in the Eyes of Animals, whereby to ſhut out too much, and admit ſufficient Light; by the Changes in the Aperture of the *Pupil*. See Telescope.

The Structure of the Uvea and Iris is ſuch, as that by their Aperture, the *Pupil*, is contractable and dilatable at pleaſure; ſo as to accommodate itſelf to Objects, and to admit more or fewer Rays, as the Object being more vivid and near, or more obſcure and remote, requires more or leſs Light——It being a conſtant Law, that the more luminous the Object, the ſmaller the *Pupil*; and again, the nearer the Object, the ſmaller the *Pupil*; and *vice verſâ*. See Uvea and Ray.

This Alteration of the *Pupil* is effected by certain Muſcular Fibres on the Outſide of the Uvea; which are form'd of Nerves detach'd hither from the Sclerotica—Theſe Fibres proceeding, ſtraight, from their Origin towards the Centre, terminate in the Orbicular Limb or Verge of the *Pupil*, which conſiſts of Orbicular Muſcles; whereby the Figure and Space of the *Pupil* are defined.—The firſt, or longitudinal Fibres, dilate the Aperture of the *Pupilla*; the latter, or orbicular ones, conſtringe it.

Some Authors, however, attribute the Motions of the *Pupilla* to the *Ligamentum Ciliare*; and others think, that both this, and the Fibres of the Uvea, concur herein—— Mr. *Derham* adds, that while the *Pupil* opens, and ſhuts; the *Ligamentum Ciliare* dilates, or compreſſes the Cryſtalline, and brings it nigher to, or further from the Retina, as the Object is more or leſs remote. See Ciliare, &c.

The Figure of the *Pupil* in various Animals, is wonderfully adapted to their various Circumſtances and Occaſions. In ſome, *e. gr.* in Man, 'tis round; that Form being fitteſt, for the poſition of our Eyes, and the various uſe we make of them in all Directions.

In others, 'tis elliptic or oblong; in ſome of which, *e.gr.* the Horſe, Sheep, Ox, &c. the Ellipſis is tranſverſe, and the Fiſſure large, to enable them to ſee laterally and even with a little Light; and thereby both to gather their Food the better in the Night, and to avoid Dangers on either ſide—In others, *e.gr.* the Cat, the Ellipſis is erect; and alſo capable of opening very wide and ſhutting very cloſe; by means of the latter of which, that Animal can exclude all, but, as it were, a ſingle Ray of Light, and ſo avoid all the Inconveniencies of the bright Sun; and by the former can take in all the faineſt Rays, and thus avoid the Inconveniencies of the Night. An incomparable Proviſion for theſe Animals, which are to watch and way-lay their Prey both by Day and Night; to ſee upwards and downwards; to climb, &c. See Eye.

PUPILLARITY, the State of a Pupil; in oppoſition to *Puberty*. See Puberty.

Hence, alſo, Pupil comes to be uſed, by way of Extenſion, in Univerſities, &c. in the ſenſe of *Alumnus*, for a Youth under the Education, or Diſcipline of any one.

PUREECK *Stone*, ſee Stone.

PURCHASE, in Law, the Acquiſition of Goods, *viz.* Lands, Tenements, &c. by means of Money; in contradiſtinction to thoſe deſcending from Anceſtors. See Goods.

Purchase, in the Sea-Language, has the ſame Signification with *draw*, at Land.——Thus, they ſay the *Capſtan purchaſes a-pace*, *i. e.* draws in the Cable a-pace: And when they cannot draw or hale any thing in with the Tackle, they ſay, *the Tackle will not* purchaſe.

PURE, ſomething free of any admixture of foreign or heterogeneous Matters. See Purification.

Hence *Pura Eleemoſyna*, *Pure Alms*, a Tenure whereby the Churchmen hold Lands in *Scotland*, ſomewhat on the footing of the primitive Clergy. See Tithes.

Pure *Hyperbola*, in Geometry, is an Hyperbola without any Oval, Node, Spike, or Conjugate Point. See Curve.

Pure *Mathematics*, ſee Mathematics.

PURFLEW, a Term in Heraldry, expreſſing Ermines, Peans, or any of the Furs, when they compoſe a Bordure round a Coat of Arms. See Pean, Bordure, &c.

Thus they ſay, He beareth Gules, a Bordure *Purflew*, Verry: meaning, that the Bordure is Verry.

PURGATION, the Act of *purging*, ſcowering, or purifying a thing, by ſeparating and carrying off any Impurities found therein. See Purification.

Purgation, in Pharmacy, is a cleanſing of a Medicine, by retrenching its Superfluities; as the Wood and Seeds out of Caſſia, Stones out of Dates Tamarinds and other Fruits.

Purgation is alſo uſed in Chymiſtry for ſeveral Preparations of Metals, and Minerals; to clear 'em of their Impurities: more uſually call'd *Purification*. See Purification.

The *Purgation* of Mercury is performed by paſſing it thro' a Chamois Skin. See Mercury.

Gold is *purged* by the Coppel, Cementation, &c. See Gold, Coppel, &c.

The *Purgations* of other Metals are perform'd by repeated Fuſions, &c. See Metal, &c.

Purgation, *Catharſis*, in Medicine, is an excretory Motion, ariſing from a quick and orderly Contraction of the fleſhy Fibres of the Stomach, and Inteſtines; whereby the Chyle, corrupted Humours, and Excrements lodg'd therein, are protruded further and further; and at length quite excluded the Body. See Excretion, Stomach, Intestines, &c.

Purgation is one of the principal Species of *Evacuation*. See Evacuation.

For the Means and Manner wherein it is effected, ſee Purgative.

Purgation, in Law, is the clearing one's ſelf of a Crime, whereof he is accuſed before a Judge. See Tryal.

Of theſe *Purgations* there was antiently much uſe in *England*; eſpecially touching Matters of Felony charged on Clerks; and they are ſtill retained in the Eccleſiaſtical Court, in ſuſpicion of Incontinency, &c.

Purgation is either Canonical, or Vulgar.

Canonical is that preſcribed in the Canon-Law; the Form whereof, now obtaining, is, that the Party ſhall take his Oath he is clear of the Fact objected; and bring ſo many of his honeſt Neighbours, not above twelve, as the Court ſhall aſſign him, to ſwear, on their Conſciences, they believe he ſwears truly.

The *Vulgar*, and moſt antient Manner, was by Fire, or Water, or Combat; uſed by Infidels, and by Chriſtians too, till aboliſhed by the Canon Law. See Ordeal, Water, Combat, &c.

Combat, tho' now diſuſed, may yet be ſtill practiſed by the Laws of the Realm, in Caſes where Evidence is wanting, and the Defendant rather chuſes Combat than any other Trial. See Suthdure, Duel, Champion, &c.

Purgation, in Tragedy, a Term which *Ariſtotle* uſes for the Effect of Tragedy on the Mind.

That Philoſopher obſerves, that Tragedy, by means of the Terror and Compaſſion which it excites, *purges* thoſe Paſſions out of the Soul.

Indeed, *Corneille* adds, that Tragedy frequently makes thoſe Paſſions, inſtead of *purging* 'em; ſo that he takes *Ariſtotle*'s *Purgation* to be no more than a Chimæra. See Tragedy.

Menſtrual Purgations, the *Catamenia* or *Menſes* of Women. See Menses.

PURGATIVE, or Purging *Medicine*, a Medicament which evacuates the Impurities of the Body by Stool; call'd alſo a *Cathartic*. See Stool, Purgation, and Cathartic.

Purgatives are divided, with regard to their Effect, into *Gentle*, *Moderate*, *and Violent*.

Gentle Purgatives are ſuch as operate very mildly; as *Tamarinds*, *Caſſia*, *Manna*, *Rhubarb*, *Senna*, and moſt of the Mineral Waters. See Cassia, Manna, Rhubarb, &c.

The *Moderate* purge ſomewhat more briskly, as *Jalap*, *Scammony*, &c. See Jalap and Scammony.

The *Violent* operate exceſſively; as *Coloquintida*, *Hellebore*, *Laureola*, &c. See Coloquintida, Hellebore, &c.

Purgatives are, again, divided with regard to the Humour they evacuate, into *Phlegmagogues*, *Cholagogues*, *Melanogogues*, and *Hydrogogues*; each whereof ſee under its proper Article Phlegmagogue, Cholagogue, &c.

The modern Phyſicians reject this Diviſion; and ſhew the Operations of all *Purgatives* to be alike.

Theory of the Operation of Purgatives.

Purgatives make one of the moſt important Articles in Medicine——Their Effect is produced by vellicating and irritating the nervous Fibres of the Stomach and Inteſtines; and thereby urging 'em to an Expulſion. See Stomach and Intestine.

An Idea of the Manner of their Operation is thus given us by Dr. *Cheyne*.

A *Purgative* Medicine being received into the Stomach, by the Mouth; its Particles do there vellicate or ſtimulate the Fibres of the Stomach, and thereby increaſe the digeſtive Faculty, *i. e.* bring the muſcular Fibres of the Stomach and the Muſcles of the Abdomen and Diaphragma into more frequent Contractions than ordinary; till the Medicine is admitted into the Inteſtines, the Fibres and Glands whereof being more ſenſible than thoſe of the Stomach, (whoſe Parts by the frequent, rough Contacts of one againſt another, and of the groſs Bodies often thrown into it, are, as it were, deadned) it eaſily moves and brings 'em into frequent, forcible Contractions, whereby theſe Glands are

ſqueez'd,

ſqueez'd, and ſo emit a fluid Matter, which lubricates the Paſſages; and which mixing with the feculent Matter of the Inteſtines, (which is render'd fluid by the ſame active and ſtimulating Quality of the *Purgative* Medicine) renders it more fluid; by which, and by the uncommon Contractions of the Inteſtines, it paſſes more eaſily and plentifully into the *Inteſtinum rectum*, and is thence ejected by Stool.

Thus do gentle *Purges* act; and only cleanſe the Inteſtines; few of their Particles entering in by the Lacteal Veins ſo as to affect the Blood.——But in violent *Purgatives*, the ſtimulating Particles are mixed with the Blood, and produce there, many times, very great Effects, by occaſioning unnatural Fermentations, by ſeparating the natural Cohesions of the Fluids of the Body; and do alſo, by vellicating the ſpiral Fibres of the Veins and Arteries, bring thoſe into more forcible Contractions, and thereby accelerate the Motion of the Blood——All which may have ſometimes a good, ſometimes a bad Effect.

As to the Effects of *Purgatives*, on animal Bodies, Dr. *Quincy* adds, that every Irritation of the Inteſtines, either quickens the periſtaltic Motion in its natural Direction, or occaſions ſome little Inverſions of it—Now, in both Caſes, any Matters that but ſlightly adhere to the Coats, or inner Membranes, will be looſen'd, and ſhook off, and carried forward with the other Contents; and they will alſo be more agitated, and thus render'd more fluid.

Hence is manifeſt, how a *purging* Medicine haſtens and increaſes the Diſcharges by Stool; but the ſame manner of Operation alſo carries its Effects much farther, in proportion to the Force of the Stimulus: For where it is great, all the Appendices of the Bowels, and even all the Viſcera in the Abdomen, will, by a conſent of parts, be pull'd or twitch'd, ſo as to affect their reſpective Juices in the ſame manner, as the Inteſtines themſelves do their Contents.—The Conſequence of which muſt be, that a great deal will be drained back into the Inteſtines, and made a part of what they diſcharge. And when we conſider the vaſt Number of Glands in the Inteſtines, with the Outlets of thoſe Viſcera opening thereunto, and particularly of the Liver and Pancreas; it will be no wonder that vaſt Quantities, eſpecially in full Conſtitutions, may be carried off by one *Purge*.

As to thoſe *Purgatives* diſtinguiſh'd by the Names of *Chologogues*, *Hydragogues*, *Phlegmagogues*, on a Suppoſition of an elective Quality therein; they may be accounted for upon more intelligible Principles.——For when the Diſcharges by Stool diſcover an Over-proportion of any particular Humours, it is to be ſuppoſed there was a Redundance of ſuch an Humour, whoſe diſcharge any Irritation would occaſion. Thus in proportion to the Proximity of ſome Humours in the Inteſtinal Tube, and the Diſpoſition of the Paſſages to convey them that way, do they require greater or leſſer Vibrations, or Shakes of the Fibres to fetch them out.

For this Reaſon, the briſker Cathartics, which vellicate the Membranes moſt of all, pump out, as it were, from all the Meſenteric Glands, and neighbouring Parts, their Contents, which becauſe they abound ſo much with Lymphatics, and viſcid watry Humours, make the Diſcharges thin and watry.

Thoſe which act in ſomewhat a lower degree, yet irritate enough to deterge and draw out a great deal of mucous and viſcid Matter, which ſometimes by lodgment and want of due Motion, changing into various Colours, occaſions the different Names of *Phlegm* or *Choler*. As the former therefore paſs for Hydragogues, ſo do the latter for Purgers of Phlegm and Choler. See PHLEGM, CHOLER, *&c.*

But there is another Principle beſides that of a Stimulus, whereby a purging Medicine is enabled to anſwer its Intention; *viz.* by fuſing the Humours, and rendring them more fluid than before, whereby they are better fitted to paſs off by their proper Emunctories.—Thoſe which conſiſt of very ſubtile and active Parts, are not ſo ſenſible in the larger Paſſages, becauſe of the great Quantities of Matter which lays too great a Load upon them, and makes them unheeded; but when they are got into the Blood in any conſiderable number, they divide and fuſe thoſe Cohesions, which obſtruct, or move heavily along the Capillaries, and ſcour the Glands, inſomuch that every Pulſation throws ſomething through the inteſtinal Glands, which goes away by Stool, that the refluent Blood had waſh'd away and brought back from all parts of the Body.

Of this kind are all thoſe Cathartics, which are ſaid to *purge* the Joints, and are preſcribed in Rheumatiſms, and Arthritic Pains, as the *Radix Turpethi*, and all the Aloetics.—And this is the Reaſon, why purging Medicines of this ſort, are ſo eaſily changed into the moſt efficacious Alteratives; for an Alterative is a Cathartic in a lower degree, or of a more remiſs Operation. Whatſoever brings ſuch Particles to a Secretory Orifice, which are fitted for its Paſſage, oftener, either by accelerating the Blood's Motion, or breaking it into more Particles of that particular Size and Inclination, will increaſe the Secretion. According, therefore, to the difference of the Parts, where ſuch Secretions are enlarged, as the Glands of the Inteſtines, Kidneys, or Skin; are the Medicines, which are the Inſtruments therein, call'd either *Cathartics*, *Diuretics*, or *Diaphoretics*. See ALTERATIVE, SECRETION, *&c.*

Dr. *Quincy* has made ſome Improvements in the Doctrine of purging Medicines, their Nature, Manner of Action, Effects, and Analogy with other Medicines; with the Circumſtances of their Preparation, Management, *&c.* in a Diſcourſe inſerted in the *Philoſoph. Tranſact.* The Subſtance of which we cannot do better than here ſubjoin.

In order hereto, it is to be premiſed, 1°. That all thoſe parts of an animal Body which are vaſcular, or thro' which any Fluid paſſeth, from the Inteſtines to the minuteſt Fibre, are the Seat of the Operation of Medicines. See MEDICINES.

2°. That this whole Courſe of Circulation, or animal Motion, is naturally diſtinguiſh'd into three different Stages, by the different Capacities of the Veſſels, and Motions of their Contents, each having its proper Out-let; and that theſe are the Seat of the three Concoctions, ſo often mention'd by phyſical Writers: the firſt being the Stomach and Bowels, and having the Anus for its Emunctory; the ſecond all that Space within the Blood's Motion, ſo far as it retains its red Colour, having the Kidneys; and the third, all beyond that Circuit, having the Skin for an excretory Organ. See CONCOCTION, EMUNCTORY, *&c.*

3°. That every Medicine which cauſeth Evacuation is, in ſome ſenſe, a *Purge*. See EVACUATION.

4°. That every *Purge* operates as a Diſſolvent, by fuſing the Juices, and increaſing the Quantity fit for Expulſion; or as a *Stimulus*, by accelerating their Motions, ſo as to bring the Matter fit for Expulſion, oftener to the ſecretory Out-let; or both.

Theſe *Poſtulata* are only premiſed in order to prove this grand Propoſition, That a Change in the Bulks, Figures, and Motions of the component Particles of a purging Medicine, will change the Seat of its Operation, and fit it for exertion in the larger or ſmaller Veſſels, as thoſe mechanical Affections are intended, or remitted.

For Illuſtration hereof, it may be convenient to attend to the common way of making a *Purge* operate, more or leſs, than it otherwiſe would do.

Subſtances, then, which are groſs and heavy, as thoſe conſiſting chiefly of ſaline and earthy Particles; ſuch as Tartar, Manna, and the like, when reduced ſmaller by Triture, or repeated Solutions, operate more gently; but when acuated by Acids, or any way made to expoſe their Angles more plentifully to the Membranes, they become rougher, and ſooner take effect.

Reſinous Medicines, as Scammony, Gamboge, Jalap, and moſt of vegetable Production, are more violent, and operate ſooner, when they are more tenacious, and adheſive, as in their Extracts; but gentler, when divided by hard, brittle Subſtances, ſuch as Salt of Tartar, Sugar, *&c.*

Medicines which have in their Compoſition, Sulphur and Salt, are more or leſs rough, and ſpeedy in their Operation, in proportion to their greater or leſſer participation of the ſaline Ingredient, and the aſperity of its Angles.——Of this kind are moſt Minerals, and their Preparations: It may be ſufficient to inſtance in the management of Antimony, and Mercury; the firſt of theſe is by chymical Analyſis known to be a Compoſition of a ſubtile Sulphur and Salt; and the more the ſaline Part is ſet looſe by Preparation, and opening the Sulphur, as it is commonly term'd, the ſpeedier, and with the greater vehemence will it operate; whereas in its more imperfect Preparations, when the Salts are cloſely wrap'd up in their native Sulphur, it will hardly work at all till it reaches the fartheſt ſtages of Circulation. See ANTIMONY.

Mercury *per ſe* is little known as a Medicine, and its firſt Preparation which makes it into Sublimate, ſo loads it with ſaline *Spiculæ*, that it amounts even to a Poiſon; but the more thoſe *Spiculæ* are broken by Triture, Sublimation, *&c.* the milder doth it operate; and if to the comminution of its Points be added a Sulphur ſubtile enough to join it, it may be reduced to ſo mild a Medicine, as not to be felt, but in the laſt Stage of Operation. See MERCURY, SALIVATION, *&c.*

This ſhort View may be ſufficient to ſhew, 1°. That it is the too great Aſperity, and Motion in a Medicine, that will not ſuffer it to paſs the Stomach, without irritating it into ſuch Convulſions, as will throw it up again by *Vomit*. See EMETIC and VOMITING.

2°. That a farther Comminution, and ſmoothing its Figure, will gain it admittance into the Bowels, and cauſe it to operate, as a proper *Purgative*, by Stool.

3°. That a yet farther Remiſſion of theſe Properties will convey it into the Blood, and allow it there to promote Evacuation by Urine. See URINE and DIURETIC.

And, laſtly, that a ſtill farther Comminution will paſs it into the minuteſt Canals, where by the ſame Properties, only in a lower degree, it will cauſe Sweat, or increaſe Perſpiration. See PERSPIRATION, SWEAT, DIAPHORETIC, &c.

Hence it appears, that the more ſubtile Medicines operate in the Capillaries, and ſmalleſt Fibres by the ſame Mechaniſm, that the more groſs ones do in the common Stream of the Blood, when they go off by Urine; or as the groſſeſt of all do in the greater Paſſages, when they promote Evacuation by Stool.

Hence it is evident, that the Skill of preparing and adminiſtring of Medicines conſiſts in proportioning their manifeſt, and known Properties to the Capacity, and Circumſtances of the Part they are to operate in; and to intend, or remit their mechanical Affections, as they are ſooner or later to take place in the greater or ſmaller Veſſels.

Of the firſt Claſs there are few to be reduced ſmall enough to go beyond the larger Paſſages, and none of them are worth the pains they require, to fit them farther than for Diuretics: Beſides, their natural Diſpoſition to attract, and join with the ſerous Part of the Blood, whenever they get into that ſtage of Motion, runs them off by the Kidneys, before they can undergo Comminution enough to get farther; but if by frequent Repetitions of ſuch Medicines, and an uncommon Laxity of the Paſſages, any thing is paſſed into the Habit, their Groſſneſs fouls the delicate Strainers, which are deſtin'd for their Expulſion; and they lodge upon the Glands and Capillaries in ſuch manner, as to induce Intermittents, which is obſervable in many Perſons, after a long uſe of Cream of Tartar, the common cathartic Salts, and the purging Waters, eſpecially at the latter end of the Summer, when the heat of the preceding Seaſon has debilitated the Solids, and left 'em under too great a Relaxation.

Among the reſinous Purges, there are many very powerful ones, but where their Operation is deſir'd in the Viſcera, Blood, and remoter parts, they muſt be extremely divided; and this we find ſpirituous Menſtruums will do, by taking up the moſt ſubtile parts only, and carrying them into the very ſmall Paſſages, where they operate chiefly by fuſion; becauſe the ſoftneſs of ſuch Subſtances cannot enable them, hardly in any degree, to act as *Stimuli*, farther, at leaſt, than as ordinary Detergents. And thus we find that Aloes, the chief of this Tribe, goes fartheſt into the Habit, and continues longeſt e'er it operates, when managed with a ſpirituous Menſtruum, as in the *Tinctura Sacra*. The *Rad. Turpethi*, and *Colocynth* likewiſe, with all of the vegetable Kind, that will yield to a ſpirituous Liquor, are, by that means, to be carry'd into the fartheſt Scenes of animal Action; where they will prove efficacious Medicines in Caſes, which, with other management, they would never be able to reach: And on this account it muſt undoubtedly have been, that we frequently meet, in practical Writers, with many Materials of this ſort mention'd as Alterants; the Colocynth particularly by *Helmont*: for all Medicines which operated in the fartheſt Paſſages, they commonly include under that general Appellation.

But the moſt efficacious Purges, and thoſe which require the moſt Skill, are procured from the Mineral Kingdom; theſe abound in Solidity beyond any other Materials, and therefore wherever they are brought into Action, neceſſarily excel in quantity of Impulſe: Many of theſe therefore want not only the utmoſt Comminution to carry them into the farther Scenes of Operation, but alſo ſome reſtraint of their Aſperities, and Motions, to fit them for many Intentions.——Thus Sublimate is not only to be much ſweeten'd, that is, ſmooth'd in its Points, to make it a ſafe Purge in the larger Veſſels; but if it be intended to go farther than the Blood, and thoſe Glands, which, in that Circuit it is moſt apt to be lodged upon when it ſalivates, it muſt not only be render'd very fine, but alſo be cover'd with ſuch Subſtances as weaken its Points, and make it ſtrain into the laſt Subdiviſions of the Conſtitution. To this purpoſe, the common Practice wiſely contrives in Diſtempers, which, according to the Courſe of Circulation, lie moſt remote, to wrap up the Baſis of this Medicine, in Sulphurs, and ſuch like Subſtances, as follow it into its laſt Diviſion, without giving it any Aſperities to make it act as a *Stimulus*. Thus, for all cutaneous Foulneſſes, and habitual Taints, the Cinnabar, the Æthiops, and all of that Sortment, are in readineſs; and that ordinary Sulphurs will cover and deaden the efficacies of Mercurial Preparations, ſo that they ſhall not operate, but in ſuch Parts only and in certain Circumſtances, is demonſtrable in ordinary Salivations, which are to be lower'd by Sulphureous Medicines.

Medicines from ſuch Minerals, where a Salt and Sulphur are united by Nature, as they are in ſome Mercurials by Art, as in Antimony, the native Cinnabar, Steel, &c. are manageable only upon the ſame Principles; and the more they are deſign'd to be carried into the Habit, the more are they to be reſtrained by their natural, or adventitious Sulphurs: Steel, when opened by, and joined with, the Points of acid Liquors, operates the ſooner, and will ſometimes prove even Emetic; but when it is cover'd with an additional Sulphur, it will go farther, and anſwer Intentions much more remote; as is manifeſt in the common Preparations of Steel, with Tartar, or Vinegar, and with Sulphur.

This way of reaſoning on theſe Occaſions, ſeems the more juſt, from conſidering the Texture of thoſe Subſtances which by a natural Preparation are fitted for Operation in the minuteſt part of an animal Body; ſuch as thoſe of the Aromatic Kind, all which, more or leſs, according to their greater or leſſer Degree of Subtility and Smoothneſs, promote a Diaphoreſis: For theſe conſiſt of exquiſitely fine Salts, cover'd with a moſt ſubtile Sulphur, as is demonſtrable by Chymical Analyſis; and the common *Sal Volatile Oleoſum* is an admirable Contrivance upon the ſame Foundation, where a very volatile animal Salt is cover'd with a moſt exalted vegetable Oil, whereby it is fitted to paſs into the minuteſt Fibres, and make, as it were, a part of the animal Spirits themſelves,

And here it may not be amiſs to obſerve, that all animal Salts are very Volatile, or eaſily render'd ſo; but when bare and naked, juſt as the Fire draws them out, with a Mixture alſo of its own Particles in their Compoſition, they are too pungent to be felt without painful Senſations; and when ſoften'd with a fine Portion of ſomewhat of an oppoſite Texture, which is ſmooth and yielding, they become moſt efficacious, and ſafe Sudorifics.

On theſe Conſiderations it likewiſe ceaſes to be a wonder why the ſubtile Salts of Cantharides are more ſenſibly injurious to the Bladder, than any other Parts, and why Camphire prevents thoſe Injuries; for the exquiſite Smallneſs of thoſe *Spiculæ* makes them imperceptible, but in the moſt minute Canals, into which the Fibres compoſing the Membranes of the Bladder are known to be divided; and Camphire blunts their Irritations, becauſe its exquiſite Subtility enables it to follow them into thoſe Meanders, and ſheath their Aſperities.

To this purpoſe is very remarkable, what many now commonly practiſe in guarding even Mercurials againſt their ſtimulating Properties, and ſending them into the fineſt Paſſages to operate by Fuſion, and the bare force of Impulſe: For not only *Calomel* and the *Mercurius Dulcis* may be reſtrained from manifeſt Operation in the wider Paſſages, and the Glands about the Mouth; but even the mineral Turbith, which of itſelf, in a ſmall Doſe, will operate powerfully by Vomit and Stool, will not, when mixed with Camphire, be ſo much felt in thoſe reſpects, but go into the fartheſt Circuit of Motion, and promote the cutaneous Diſcharge in a more efficacious manner, than any Medicine of leſs ſpecific Gravity.——In this Management the Camphire is to be mixed but a very little while before taking, otherwiſe it hath not the effect; which appears to proceed from its great Volatility, which makes it in a great meaſure exhale while it ſtands mixed in a Medicine.

As to the Doſes of *Purgatives*, Dr. *Cockburn* attempts to determine 'em on the following Suppoſitions—1°. That no part of 'em operate but in the Blood. 2°. That they operate there, by changing the Blood and other circulating Fluids derived from it.

From which *Poſtulata* he concludes, that in the ſame Conſtitution of Blood, the Doſe requir'd to produce the like Effects, muſt be proportionable to the Blood's Quantity; ſo that where a certain Doſe is requir'd to alter one Pound of Blood, for inſtance, to a certain degree, there will be requir'd a double Doſe to alter two Pounds to the ſame degree, and a triple Doſe to three Pounds, &c. And univerſally if the Quantity of Blood b, require the Doſe d, the Quantity $m\,b$ requires the Doſe $m\,d$. For as $b : d :: m\,b : m\,d$. See DOSE.

PURGATORY, in the *Romiſh* Church, a Place where the Juſt are ſuppoſed to ſuffer the Pains due to their Sins for which they have not ſatisfy'd in this World. See MERITS, ABSOLUTION, &c.

'Tis by the Mercy of God, the Indulgences of the Church, and the Prayers of the Faithful, that People are ſuppoſed to be deliver'd out of *Purgatory*. See INDULGENCE, &c.

In *Ireland* is a Place call'd St. *Patrick's Purgatory*; where, as the Legend has it, at the Prayers of St. *Patrick* Biſhop of the Place, there was made a viſible Repreſentation of the Pains which the Wicked undergo after Death, in order to deter Sinners, &c.

PURGE, in Medicine, a Term frequently uſed for a purgative Medicine; as Caſſia, Senna, Rhubarb, &c. See PURGATION and PURGATIVE.

PURIFICATION, in Chymiſtry, &c. the Act of *Purifying*, or Refining Natural Bodies; or of ſeparating the Fæces

Fæces and Impurities therefrom. See PURGATION, REFINING, &c.

For the Methods of *Purifying* Metals, Gold, Silver, Iron, Copper, Tin, &c. See METAL, GOLD, SILVER, &c.

For the *Purification* of Semi-metals, Minerals, and other Matters, as Antimony, Sulphur, Camphor, Saltpetre, &c. See ANTIMONY, SULPHUR, CAMPHOR, &c.

PURIFICATION, in Matters of Religion, is an Offering made the Prieſt by Women riſing out of Childbed, e'er they be re-admitted into the Church.

By the Law of *Moſes*, a Woman after bringing forth a Male-Child, was unclean forty Days; after a Female, eighty Days. During which time, ſhe was not to touch any thing Holy, nor to go near the Temple; but to continue within Doors, ſeparate from all Company and Commerce of others.

This Term expir'd, ſhe was to preſent herſelf at the Temple, and at the Door of the Tabernacle to offer a Lamb, as a Holocauſt, and a Pidgeon or Turtle, which the Prieſt taking, offer'd to God, and pray'd for her that ſhe might be *purify'd*.

This Ceremony, which conſiſted of two things, a Holocauſt, and a Sacrifice of Expiation, was call'd *Purification*, שחרת שחר, *Purificatio*, *Purgatio*.

The holy Virgin, tho', according to the Fathers, exempt from the Terms of the Law, yet comply'd therewith; and at the Time preſcribed went to the Temple and accompliſh'd the Law: In Commemoration whereof the Church yearly ſolemnizes the *Feaſt of the Purification of the Virgin*, on the ſecond of *February*; call'd alſo the *Feaſt of Candlemas*. See CANDLEMAS.

The Feaſt of the PURIFICATION ſeems to be very antient. 'Tis ordinarily ſaid to have been inſtituted in the Time of *Juſtinian*, in the Year 542; and this, on occaſion of a Mortality which that Year diſpeopled almoſt the whole City of *Conſtantinople*. Yet are there ſome who imagine it to have been held before, tho' in another manner and on a different Day from that fix'd by *Juſtinian*, *viz.* between the *Circumciſion* and *Epiphany*.

The ſame Day is the *Preſentation of our Saviour* in the Temple. See PRESENTATION.

PURIM, a ſolemn Feaſt held among the *Jews* on the 14th of *March*, in Memory of their Deliverance from the Conſpiracy of *Haman* by *Eſther*. See ESTHER.

The Word is *Hebrew*, פוּרִים, *q. d.* Lots.

PURITAN, a Term antiently uſed for the *Calviniſts* of *Great Britain*, from their Profeſſion to follow the *Pure* Word of God; in oppoſition to all Traditions, Human Conſtitutions, and other Authorities. See CALVINIST, PRESBYTERIAN, NON-CONFORMIST, TORY, WHIG, &c.

PURLINS, in Building, thoſe Pieces of Timber that lie a-croſs the Rafters, on the inſide; to keep them from ſinking in the Middle of their Length. See RAFTER.

By the Act of Parliament for Rebuilding *London*, it is provided, That all *Purlins* from fifteen Foot ſix Inches to eighteen Foot ſix Inches long, be, in their Square nine Inches and eight Inches——And all in length from eighteen Foot ſix Inches to twenty-one Foot ſix Inches, be in their Square twelve Inches and nine Inches.

PURLUE, or PURLIEU, or POURALLEE, is all that Ground near any Foreſt, which being made Foreſt by our antient Kings; was, by Perambulation granted by ſome of their Succeſſors, ſever'd again from the ſame, and made *Purlieu*, *i. e.* pure and free from the Laws and Obedience of the Foreſt. See FOREST.

The Word is form'd from the *French pur*, pure; and *lieu*, place.

A *Pourlieu*, or *Pourallee*, is defined a Circuit of Ground, adjoining to the Foreſt, and circumſcribed with immoveable Boundaries, known only by Matter of Record; which Compaſs of Ground was once Foreſt, and afterwards diſafforeſted by the Perambulations made for the ſevering the new Foreſt from the old.

Purlieus or *Pourallees* commenc'd after the manner following——King *Henry* II. at his Acceſſion to the Crown in 1154, took ſo much delight in the Foreſts of this Kingdom, that, not being contented with thoſe he found here, tho' many and large, he began to enlarge divers of them; and to afforeſt the Lands of his Subjects near adjoining to the ſame. See AFFORESTING.

His Succeſſors, *Richard* I. and *Henry* II. far from retrenching or reſtoring any thing; made ſtill further Incroachments: and thus did the Lands continue till the 17th Year of King *John*; at which time, the Grievance being grown notorious, and generally felt by all degrees of People; divers Noblemen and Gentlemen beſought the King to grant, that they might have all thoſe new Afforeſtations, made by his Predeceſſors aforeſaid, and himſelf, diſafforeſted again; and the King, after much Sollicitation, was at length prevail'd on to ſubſcribe, and ſeal ſuch Articles concerning the Liberties of the Foreſt, as they then demanded, being for the moſt part ſuch as are now contain'd in the Charter of the Foreſt. See CHARTA *de Foreſta*.

Hereupon choice was made of divers Noblemen, &c. to the Number of twenty-five, who were ſworn, with others their Aſſiſtants, to ſee the ſaid Liberties, ſo granted and confirm'd by the King, to be in every point obſerv'd.

But e'er any thing was done to the purpoſe, King *John* died, and King *Henry* III. ſucceeding, freſh Sollicitations were made to him; who, for the better accompliſhing of the ſaid Diſafforeſtation, order'd Inquiſitions to be taken by ſubſtantial Juries for ſevering all the new Foreſts from the old: upon which, two Commiſſioners were ſent to take thoſe Inquiſitions; in virtue whereof, many great Woods and Lands were not only diſafforeſted, but improved to arable Land by the Owners thereof. See DISAFFORESTING.

After this Charter was made and confirm'd, ſome of theſe new Afforeſtations were perambulated, and proper Inquiſitions taken, and the Certainty determin'd by Matter of Record, which were the old, and which the new: Tho' it appears that the greateſt part of the new Afforeſtations were ſtill remaining during the Life of King *Henry* III.

Under *Edward* I. freſh Petitions and Sollicitations being ſet on foot; three Biſhops, three Earls, and three Barons, were at length appointed to ſee thoſe Perambulations perform'd and continu'd; who cauſed them to be made accordingly, and Inquiſitions to be taken thereupon, and return'd into the Court of Chancery; and all thoſe, that were antient Foreſt, to be meered, and bounded with irremoveable Boundaries, to be known by Matter of Record for ever.

Thoſe Woods and Lands, that had been newly afforeſted, the King likewiſe cauſed to be ſeparated from the old, and to be return'd into the Chancery by Marks, Meres, and Bounds to be known, in like manner, by Matter of Record for ever.

Thus it appears, how the *Purlieus*, or *Pourallees*, had their firſt beginning; for all ſuch Woods and Lands as were afforeſted by *Henry* II. *Richard* I. or King *John*, and by Perambulations ſever'd from the antient Foreſts, were, and yet are call'd *Pourallees*, q. d. Woods and Lands ſever'd from the old Foreſts, and diſafforeſted by Perambulation; *Pourallee* being the ſame as *Perambulatio* in *Latin*. See PERAMBULATION.

But notwithſtanding ſuch new Afforeſtations were diſafforeſted by Perambulation, whereby the ſame became *Pourallee*, or *Purlieu*; yet they were not thereby ſo diſafforeſted as to every Man, but that they do in ſome ſenſe continue Foreſt ſtill, as to others—For by the Words of *Charta de Foreſta*, if the King has afforeſted any Woods or Lands of his Subjects, to the damage of the Proprietors, they ſhould forthwith be diſafforeſted again; that is, only as to thoſe Perſons whoſe Woods and Lands they were; who, as the proper Owners thereof, might fell and cut down their Woods at their own pleaſure, without any Licence from the King; as alſo convert their Meadows and Paſtures into Tillage, or otherwiſe improve their Ground to the beſt advantage. So alſo they might hunt and chaſe the wild Beaſts of the Foreſt towards the ſame, &c. But no other Perſon might claim ſuch Benefit of hunting in the *Pourallee*, beſide the proper Owner of the Soil thereof; who is left at liberty to ſuffer the *Pourallee* to remain Foreſt ſtill; as ſome, in effect, have thought moſt expedient, becauſe hereby entitled to the Benefit of the Common within the Foreſt, which otherwiſe they were excluded from. Hence, if the Beaſts chance to wander out of the Foreſt into the *Pourallee*, the King hath a Property in them ſtill, againſt every Man, but the Owner of the Ground wherein they are, who hath a ſpecial Property in them, *ratione ſoli*; yet ſo as he may only take them by hunting, or chaſing with his Grey-hounds, or Dogs, without any Foreſtalling or Foreſetting them in their Courſe again towards the Foreſt. See HUNTING, FORESTALLING, &c.

Beſide what has been hitherto ſaid of the Difference between Foreſt and *Purlieu*, or *Pourallee*, there is this farther Diverſity, that all the Woods and Lands within the Regard of the Foreſt, are abſolutely within the Bondage and Charge of the Foreſt, as well in reſpect of the Owners thereof, as of any other Perſon; for no one may cut down his own Woods, or improve his own Lands, within the Regard of the Foreſt, without Licence from the King, or his Chief Juſtice in Eyre of the Foreſt.——Neither ſhall any Perſon hunt, chaſe, or moleſt the wild Beaſts of the Foreſt in his own Ground, within the Regard of the Foreſt, without Licence, or Warrant from the King, or his Chief Juſtice of the Foreſt, ſo to do. See REGARD.

But thoſe, whoſe Grounds are within the *Pourallees*, are not ſubject to theſe Reſtrictions.

Yet are not the Woods and Lands in the *Pourallees*, abſolutely freed from the Bondage of the Foreſt in reſpect of the wild Beaſts having their Haunts therein, when they happen to ſtray out of the Foreſt; but as they were once abſolutely Foreſt, ſo they are ſtill conditionally ſo.

PURLUE-*Man*, or PURLIEU-*Man*, or POURALLEE-*Man*, is one who has Land within the *Purlue*; and is allow'd or qualify'd to hunt or courſe within the ſame, tho' under certain Reſtrictions.

By Stat. 13 *Rich.* 2. he who may lawfully hunt in any *Pourallee*, ought to have Woods or Lands of Freehold within the *Pourallee*, to the yearly Value of 40 *s.*——By Stat. *Jac.* 1. he ought to have Lands of Inheritance of the yearly Value of 10 *l.* or Lands of Freehold of the yearly Value of 30 *l.* or have Goods worth 200 *l.* or be the Son of a Knight, or Baron, or Perſon of a higher Degree, or Son and Heir apparent of an Eſquire——But by a later Act, *Car.* 2. no Man may keep Grey-hounds within the *Pourallee*, or elſewhere within *England* or *Wales*, unleſs he have a free Warrant, or be Lord of a Mannor, or ſuch a Freeholder, as is ſeized in his own Right, or in Right of his Wife, of Lands, Tenements, or Hereditaments, of the clear yearly Value of 40 *l.* over and above all Charges, and Repriſes, of ſuch Eſtate of Inheritance; or of Lands, Tenements, or Hereditaments, in his own Right, or in Right of his Wife, for Term of Life or Lives, of the yearly Value of 80 *l.* over and above all Charges, and Repriſes, or that is worth in Goods, or Chattels, 400 *l.* See GAME.

The *Pourallee*, or *Purlieu*, then, is ſaid to be for him that is ſo qualify'd: Others, not qualify'd, and therefore not *Purlieu-Men*, yet having Land in the *Pourallee*, may, if they find any wild Beaſts of the Foreſt in their own Grounds within the *Pourallee*, chaſe them thereout with little Dogs, but not with Grey-hounds, or other Dogs.

Nor is the *Purlieu-Man* left at large to hunt at his own Diſcretion; but tied down to ſeveral Rules: As,

1. That he always begin his Chaſe in his own Ground; and that tho' he find ſuch wild Beaſts in his own *Pourallee*, and in reſpect thereof, hath a Property in them, *ratione ſoli*, againſt all Perſons but the King; yet ſuch his Property is only on this Condition, that he can ſlay them with his Dogs in Chaſe, without *Foreſtalling*, before they can recover the Foreſt——Tho' they be but within the Liſt of the Foreſt, before the Dogs faſten on them; they are the King's, or other Owner of the Foreſt.

But if the *Pourallee-Man* firſt make his Chaſe in his own Freehold, he may purſue the ſame thro' every Man's Ground within the *Pourallee*, provided he enter not into the Foreſt.

2. If a *Purlieu-Man* begin his Courſe in another Man's Ground, within the *Pourallee*; and his Dogs faſten on a wild Beaſt, before it can get within the Bounds of the Foreſt, and the Beaſt draws the Dogs into the Foreſt, and is there ſlain by them; here the *Pourallee-Man* ſhall not enter into the Foreſt, nor take the Beaſt ſo kill'd, becauſe his Courſe was irregular from the beginning, as he could claim no Property in the Beaſt, *ratione ſoli*.

3. A *Pourallee-Man* may hunt in his own *Pourallee*, with no more Company than his own Servants; neither may he appoint, licenſe, or warrant any other Perſon, except his Servants, to hunt by his Commandment in his *Pourallee*.

4. Every *Pourallee-Man* is forbidden by the Laws of the Foreſt, to hunt in his own Grounds within the *Pourallee*, every day, or oftner than three days in any one Week, Sunday excepted.

5. Nor is any Man to diſturb, or make a Courſe after any Deer found in his *Pourallee*, within forty days after the King hath made a general Hunting in the Foreſt adjoining thereunto; becauſe then the wild Beaſts of the Foreſt come not into the *Pourallees* of their own accord; but as they are forced into the ſame by the Hunters, with Clamours and Blowing of Horns; ſo that they fly thither for Refuge.

6. No Man ſhall hunt within ſeven Miles of the Borders of the Foreſt, or in his own *Pourallee*, within forty days next before the King hath iſſued out his Proclamation, declaring his Royal Will and Pleaſure to make a general Hunting in that Foreſt.

Inaſmuch as the *Pourallees* were once, and in ſome ſenſe ſtill are, Foreſt, it was neceſſary to have Officers to attend, and take on them the Charge of the Preſervation of the Game that may happen to wander out of the Foreſt, into the *Pourallees*; ſince otherwiſe the Laws of the *Pourallees* could not be executed, but the Foreſt would ſoon be deſtroy'd by the *Pourallee-Men*.

For this reaſon, *Rangers* were firſt appointed; who, tho' not Officers in the Foreſt, yet appertain thereto; for all Officers in the Foreſt have Charge of the Vert, and Veniſon of the Foreſt; but a Ranger hath no Charge of Vert, but only of Veniſon coming out of the Foreſt into the *Pourallees*, his place of Charge; from whence his Office is to conduct the ſame back again into the Foreſt. See RANGER.

This Officer is appointed by the King, or his Chief Juſtice in Eyre, and made by Patent, with a Fee commonly of 20, 30, or 40 *l.* or more, by the Year, payable out of the Exchequer, as alſo certain Fee-Deer, both Red and Fallow, to be taken annually at proper Seaſons, out of the Foreſt.

The Subſtance of his Oath is, to rechaſe, and with his Hounds drive back, the wild Beaſts of the Foreſt, as often as they range out of the ſame into his *Pourallee*; to preſent all unlawful Hunting and Hunters, of wild Beaſts of Venary and Chaſe, as well within the *Pourallees*, as within the Foreſt; and to preſent thoſe, and other Offences, at the next Court of Attachments, or Swainmote, which ſhall firſt happen.

Rangers, it is to be obſerv'd, belong only to ſuch *Pourallees*, as were once the Woods and Lands of the Subject, and were afterwards diſafforeſted again, and ſo became *Pourallees*: Hence, as there are ſome Foreſts in *England*, which never had any Enlargement by new Afforeſtations, and therefore have no *Pourallees* at this day; there can be no Rangers belonging to them.

PURPLE, PURPURA, a red Colour, bordering on Violet; made chiefly with Cochineal, or Scarlet in Grain. See COLOUR; ſee alſo RED, SCARLET, COCHINEAL, *&c.*

Purple was much eſteem'd among the Antients; eſpecially the *Tyrian Purple*, which underwent more Dyes than the reſt, and which was almoſt peculiar to Emperors and Kings. Yet this *Purple* did not exceed that now in uſe; the chief Reaſons why the former has been diſuſed, are, that the latter is both cheaper and finer.

The antient *Purple* was tinged or given with the Blood of a teſtaceous Sea-fiſh, call'd by the *Greeks* πορφύρα, and by the *Latins Purpura*; whereof we have Deſcriptions in ſeveral Authors, and Shells in moſt of the Cabinets of the Curious.

In the Seas of the *Spaniſh Weſt-Indies* about *Nicoya*, is found a Shell-fiſh which perfectly reſembles the antient *Purpura*, and in all probability is the very ſame: This Fiſh, *Gage* tells us, uſually lives ſeven Years; it hides itſelf a little before the Dog-days, and continues to diſappear for 300 Days running.

They are gather'd plentifully in the Spring, and by rubbing one againſt another, yield a kind of Saliva, or thick Glair, reſembling ſoft Wax: But the *Purple* Dye is in the Throat of the Fiſh; and the fineſt part in a little white Vein——The reſt of the Body is of no uſe.——He adds, that the chief Riches of *Nicoya* conſiſt in this Fiſh. Cloth of *Segovia* dyed with it is ſold for twenty Crowns the Ell; and none but the greateſt *Spaniſh* Lords uſe it.

Beſides the *Indian Purple Fiſhes*, we have others much nearer home: In the *Philoſoph. Tranſact.* we have an Account of a *Purple-Fiſh* diſcover'd in 1686. by Mr. *W. Cole*, on the Coaſts of *Somerſetſhire*, *South-Wales*, &c. where it is found in great abundance.

The Fiſh, M. *Reaumur* obſerves, is a kind of *Buccinum*; a Name given by the Antients to all Fiſhes whoſe Shell bears any reſemblance to a Hunting-Horn; and it appears from *Pliny*, that part of the antient *Purple* was taken from this kind of Shell-Fiſh.——So that this may be eſteem'd a recovery of what had been ſuppoſed entirely loſt.

The Method of obtaining the Colour, the Author deſcribes thus——The Shell, which is very hard, being broke, (with the Mouth of the Fiſh downwards, ſo as not to cruſh the Body) and the broken pieces being pick'd off, there appears a white Vein lying tranſverſely in a little Furrow or Cleft next the Head of the Fiſh.

In this Vein is the *Purple* Matter lodged; ſome of which being laid on Linnen, appears at firſt of a light green Colour, and if expoſed to the Sun, ſoon changes into a deep green, and in a few Minutes into a Sea-green, and in a few more into a blue; thence it ſoon becomes of a *purpliſh* red, and in an Hour more of a deep *Purple* red.

And here the Sun's Action expires; but by waſhing in ſcalding Water and Soap, and drying it, it becomes of a moſt bright, beautiful Crimſon; which will bear waſhing admirably without any Styptic. See CRIMSON.

The Fiſh, he obſerves, is good Food; and adds, that there are ſeveral Kinds, differing in Size, and Shell, and alſo in the Colour of the tinging Liquor——There are ſome found on the Coaſts of *Poictou*.

M. *Reaumur* has diſcover'd another very different Kind of *Purple*——It is produced in oval Grains, about a quarter of an Inch long, and about one thick, full of a white Liquor bordering on yellow, which cover certain Stones or Sands, about which the *Buccina* of *Poictou* uſually aſſemble.

By the Experiments M. *Reaumur* has made, it appears that theſe Grains are neither the Eggs of the *Buccinum*, nor the Seeds of any Sea-Plants, nor any riſing Plants, but the Eggs of ſome unknown Fiſh.

Theſe Grains being bruiſed on a white Linnen, at firſt only tinge it yellow, and that inſenſibly; but in three or four Minutes give it a very beautiful *purple* red, provided the Linnen be expoſed to the open Air; for the Air of a Room,

even

even if the Windows be open, will not do.—This Colour fades a little by repeated Washings.

M. *Reaumur* concludes, from some Experiments he made, that the Effect of the Air on the Liquor, does not consist in its taking away any Particles thereof, nor in giving it any new ones; but only in its agitating it, and changing the Arrangement of the Parts that compose it.—He adds, that the Liquor of the *Buccinum*, and that of the Grains, seem to be nearly of the same nature; except that the latter is more watry, and only saline; whereas the other is hot, and pungent.

The *Caribbee* Islands have likewise their *Purple-Fish*——It is call'd *Burgan*; being of the Size of the End of the Finger, and resembling our Perriwinkles: Its Shell is of a browniſh azure, its Flesh white, its Intestines of a very bright red, the Colour whereof appears thro' the Body: and 'tis this dyes the Froth, which it casts when taken, and which is at first of a violet hue, bordering on blue.

To oblige them to yield the greater Quantity of Froth, they lay them on a Plate, shake and beat them against one another; upon which the Plate is immediately cover'd with the Froth, which is receiv'd on a Linnen Cloth, and becomes *Purple* in proportion as it dries.

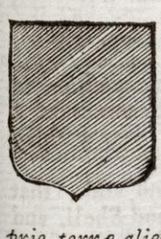
P. Labat observes, that if this be the real *Tyrian Purple*, the Secret of preparing and fixing it is lost; this Colour being found to dwindle and dissipate, in proportion as the Linnen dy'd with it is wash'd.

The same Author gives us the Description of another *Purple* Dye produced by a Plant growing in the *Antilles*—The Juice of this Tree, when cut standing, is of a blood-red, and communicates the same Colour to Cloths; tho', like the former, it loses much in washing.

PURPLE, in Medicine.—The *Purple Fever* is a kind of Plague, or a Malignant-Fever, discovering itself in Eruptions on the Skin like the Bites of Bugs, or Fleas, or like Grains of Millet or the Small-Pox; whence it is sometimes also call'd the *Spotted Fever*. See FEVER.

The Eruptions are red, orange, violet, azure, livid, or black; and when they rise in great quantity, 'tis esteem'd a good Sign.

Sometimes they spread to a great extent, like *Erysipela's*, according to the Quality of the Poison. See PLAGUE.



PURPURE, or POURPLE, or PURPLE, in Heraldry, according to some, is one of the five Colours of Armories, mix'd or compounded of Gules and Azure bordering on Violet; according to others, of a little black and much red or mallow Colour. See COLOUR.

It is supposed a Symbol of *Temperance*, *Liberality*, *Dignity*, *Authority*, *Faith*, and *Piety*.

Most of the Authors in Heraldry, as *Favin*, *Geliot*, *Monet*, and *Menestrier*, don't allow *Purple* for a Colour; in regard it is not simple, but composed of an equal Mixture of four other Colours.——They rather esteem it a kind of mean Metal; sometimes Metal, and sometimes Colour. Hence the *Spaniards* call it *una mistion*; so that one cannot lay it on Metal and Colour without falsifying the Arms.

Add, that many take the *Purple*, as it is accounted, on many antient Bearings, by which some of the Moderns would evince the regularity and legitimacy of this Colour in Armory to be no other than Silver tarnish'd.

Spelman, however, in his *Aspilogia*, allows *Purple* the preference before all other Colours, as having been an Ensign of Royalty for many Ages; yet he allows it to have been excluded by the antient Heralds, as only an imperfect Colour.

It is represented in Engraving by transverse Strokes drawn from the dexter Point of the Chief.

In the Coats of Noblemen it is call'd *Amethyst*, and in those of Princes *Mercury*.

PURPRESTURE, in our antient Law-Books, from the *French Pourpris*, and *Pourpreſt*, q. d. *Integre arreptum, est proprie terræ alienæ clandestina subtractio, ejusdemque vicinæ ascriptio*. See POURPRESTURE.

PURPRISUM, of the *French Pourpris*, a Close, or Enclosure——Also the whole Compass or Extent of a Manor or Place.

——*Donavi eis meum* Purprisum *de Kirkeham & Domos meas & Molendinum & Prata, &c.* Charta Walteri Espec. Priorat. de Kirkeham.

PURPURATI, *i. e.* the Sons of Emperors and Kings. *Neubrigensis*, lib. 3. cap. 4. *Malmsbury*, lib. 3.

PURREL, *Anno* 35 *Eliz.* cap. 10. A List ordained to be made at the end of Kerseys, to prevent deceit in diminishing their length.

PURSE, a manner of Accounting; or, as some call it, a Species of Money of Account, much used in the *Levant*; particularly at *Constantinople*. See MONEY *of Account*.

The *Purse* consists of about 112 Pounds *Sterling*——'Tis so call'd, because all the Grand Signor's Treasure in the Seraglio is kept in Leather Bags of this Value.

This Method of Accounting, the *Turks* derive from the *Greeks*, and they from the *Romans*; the Emperors whereof brought it to *Constantinople*, as appears from a Letter of *Constantine* to *Cecilian* Bishop of *Carthage*, quoted by *Eusebius* and *Nicephorus*, wherein is this Passage——"Being "resolved to give something for the support of the Ministers "of the Catholic Religion throughout the Provinces of "*Africa*, *Numidia*, and *Mauritania*; I have wrote to "*Vestus*, Treasurer-General of *Africa*, and given him or-"ders to pay you three thousand *Folles*," i. e. *Purses*: For, as M. *Fleury* observes, we may call that *Purse* which the *Latins* call'd *Follis*, which was a Sum of two hundred and fifty silver *Denarii*, amounting to about seven Pounds sixteen Shillings, our Money.

PURSER, an Officer aboard a King's Ship, who receives her Victuals from the Victualler, and is to take care that it be in good Condition, and well laid up, and stow'd.

His Office is also to keep a List of the Men and Boys belonging to the Ship; and to set down exactly the Day of each Man's admittance into pay, that so the Pay-Master or Treasurer of the Navy may issue out his Disbursements, and pay off the Men according to the *Purser*'s Books.

PURSIVENESS, among Farriers, *Broken Wind*; a Name common to all those Diseases in Horses, whose principal Seat is in the Lungs; proceeding from an Ulcer, or some inward wasting thereof, wherein the small Vessels are worn or abraded by the Sharpness or Acrimony of the common Discharges. See PHTHISIS.

The like Disorder may also arise from a Stagnation, hindering the Air from penetrating so as to lift up the Lungs in the Act of Respiration; or from tough and mucilaginous Matter separated in the Branches of the Wind-Pipe.

The usual Occasions are Cold, Surfeits, and other Diseases not thoroughly carried off——*Pursive* Disorders may also arise from unwholesome Food, bad Air, hard Riding when a Horse is full.

The Signs are commonly a heaving and beating of the Flanks; a wheezing and rattling. Sometimes the Kernels about the Throat will swell, and there will be a glandulous Running at the Nose, which is the utmost Stage of the Disease, and usually reputed desperate. See GLANDERS.

PURSUIVANT, see POURSUIVANT.

PURVEYANCE, see POURVEYANCE.

PURVIEW, a Term frequently used by Sir *Edw. Coke* for the Body of an Act of Parliament; or that part which begins with *Be it Enacted*, &c. contradistinguish'd from the Preamble. See STATUTE.

The Statute of 3 *Hen.* 7. stands upon a *Preamble* and a *Purview*. 12 Rep.

The Word comes from the *French Pourveu*, a Gift, Grant, Provision, *&c.*

PURULENT, in Medicine, something mix'd with, or partaking of *Pus*. See PUS.

Phthisical People frequently spit a *purulent* Matter. See PHTHISIS.

In a Dysentery, the Stools are *Purulent*; when there is an Ulcer in the Reins or Bladder, the Urine is *Purulent*.

PUS, in Medicine, a putrid Matter, white and thick, form'd of corrupted Blood, and issuing out of the Lips of a Wound when open'd, or an Imposthume when burst. See WOUND and ULCER.

Wounds are always to be kept open while they suppurate, *i. e.* while they generate *Pus*; for fear of shutting up the Wolf in the Sheep-fold. See SUPPURATION.

The Word is *Latin*, *Pus*, literally denoting Snot, *&c.* form'd of the *Greek* πυον, which signifies the same thing.

PUSTULE, a little Pimple, or Eruption, on the Skin, full of *Pus*; especially arising in the small and great Pox. See POX.

PUTAGE, PUTAGIUM, in our old Law-Books, PUTANISM; or *Fornicatio ex parte fœminæ: quasi* putam *agere*; *à Gall.* Putte, i. e. *Meretrix*. See PUTANISM.

Quod autem generaliter solet dici Putagium, *hæreditatem non admit*; *illud intelligendum est de* putagio *Matris*; *quia filius hæres legitimus est, quem Nuptiæ demonstrant*. Glanv. lib. 7. cap. 12.

PUTANISM, PUTANISMO, an *Italian* Term, naturaliz'd by some *English* Writers, signifying *Whoredom*, or the Life or Condition of a Courtezan.

The Word we borrow immediately from the *French*, *Putanisme*, and they from the *Italians*, *Puttana*, Whore; of *Putta*, Girl.

PUTATIVE, *Suppositivus*; or something reputed to be what it really is not.

The Word is seldom used but in the Phrase *Putative-Father*.——Thus we say *Joseph* was the *Putative-Father* of Jesus Christ.

PUTLOGS, in Building, short pieces of Timber, about seven Foot long, used in building Scaffolds——They lie at right Angles to the Wall with one of their ends resting upon

the Ledgers or Poles, which lie parallel to the ſide of the Wall of the Building.

PUTREFACTION, or PUTRIFACTION, in Phyſics, a ſlow ſort of Corruption produced in natural Bodies, generally by the Moiſture of the Air, or ſome other ambient Fluid, which penetrating the Pores, and being agitated therein, diſſolves and ſets at liberty ſome of the more ſubtile Parts, particularly the Salts and Oils; and thus looſen and diſlocate the Compages, quite change the Texture, and ſometimes the Figure of the Mixt. See CORRUPTION.

How much the Air contributes to *Putrefaction*, is evident hence, that Bodies buried deep under Earth or in Water out of any reach of Air, ſhall remain for Ages entire; which yet being expoſed to the open Air, ſhall ſoon rot and moulder away. See SUBTERRANEOUS.

The like appears from ſucculent Fruits and other vegetable Matters, which, for all their aptneſs to *putrefy*, will remain a long time unchang'd *in vacuo*. See VACUUM.

The perpetual Oſcillations of ſo elaſtic a Fluid contain'd or ſhut up in the Pores of a Body, may be conceived ſufficient to induce this Alteration in their Form and Texture; yet ſhould it rather ſeem that the Water or vapoury Matter wherewith the proper Air is impregnated, is the more immediate Agent. Hence *Acoſta* obſerves, that in *Peru*, and others have obſerv'd the ſame in *Egypt*, where it very rarely rains, every thing will continue a long time uncorrupted: unleſs we will rather aſcribe the Effect to the abundance of nitrous Salt in the Air of thoſe Places, which is known to reſiſt *Putrefaction*. See AIR, WATER, SALT, &c.

In effect, all *Putrefactions*, both of Animal and Vegetable Bodies, are affirmed by the learned *Boerhaave* to be perform'd by means of Water alone: Take (ſays he) a Pound of freſh Fleſh, and keep it in a heat like that of our Body, and in few days the *Putrefaction* will be compleated; but if you firſt drain out or exhale all the watry Part from the ſame in ſome chymical Veſſel; tho' the Salt and Oil remain, the Fleſh will harden like a Stone, and may be kept for Ages without *Putrefaction*——Tho' when thus harden'd, Water pour'd on it, or even the common Dew, will ſoon ſet it a *putrefying*.

By ſuch means, Bread, Fleſh, or the like Foods, may be preſerv'd for Ages; provided regard be had to the Place: Hence it is, that in dry Countries, as *Egypt*, dead Carcaſſes never *putrefy*, but dry and harden uncorrupted; as we ſee in the Mummies found buried under the Sand. See MUMMY.

Even human Blood, which naturally is ſo prone to *Putrefaction*, if you deprive it of its watry Part, may be kept for fifty Years. Goat's Blood we actually find kept ſo long in the Shops, without corrupting; tho', if you diſſolve it in Water, and expoſe it to a gentle Warmth, it *putrefies* immediately.

PUTREFACTION, in Chymiſtry, is a ſpontaneous Operation whereby vegetable Subſtances, in virtue of their own Heat and Moiſture, are diſſolved, and turn'd into an animal Nature. See ANIMAL and VEGETABLE.

The Proceſs of PUTREFACTION *is as follows:*

Throw together any of the tender, green, and ſucculent Parts of recent Vegetables, whether Acid or Alkaline, in a large Heap, in the warm open Air, and preſs them down with an additional Weight, if their own be inconſiderable, and the middle part of the Heap will in a little time, ſpontaneouſly conceive a ſmall degree of Heat, and paſs ſucceſſively through the other degrees, till it arrive at a ſtate of Ebullition, and be perfectly *putrefy'd*.

In the ſpace of three days, from the firſt putting them together, they will yield a Heat, perceivable by the Hand, equal to that of a human Body in a healthy State; by the fifth it will be too great for the Hand to bear without pain; and, laſtly, by the ſixth, ſeventh, or eighth day, the Juices will generally appear ready to boil, and ſometimes the Matter will even flame and burn away.

By this ſpontaneous Operation, the Vegetable acquires an abominably *putrid*, ſtercoraceous, or cadaverous Taſte, and Odour; and turns intirely into one ſoft, ſimilar, pappy Maſs, or Craſſamentum, greatly reſembling fetid human Excrement in the Scent, and *putrefy'd* Fleſh in the Taſte. See EXCREMENT.

If now this fetid Matter thus obtain'd, be directly, whilſt it remains in its fetid ſtate, committed to a Glaſs-Retort, and diſtill'd with proper degrees of Fire, there will come over, 1. A Water impregnated with an urinous Spirit, perfectly like that obtainable from animal Subjects, and ſeparable by a freſh Diſtillation ſlowly made in a tall Glaſs, into Elementary Water; and a large quantity of pure, white, volatile, dry, alkaline Salt, not to be diſtinguiſh'd from animal Salts. 2. A volatile, alkaline, oily Salt, that ſhoots in the Glebes. 3. An exceedingly volatile and a thick fetid Oil, both which are ſo entirely like thoſe of Animals. And, laſtly, the remainder being calcin'd in an open Fire, affords not the leaſt Particle of fixed Salt, juſt as if the Subject had really been of the Animal, and not of the Vegetable Kingdom.

This Proceſs is truly univerſal, and holds equally in all kinds of Vegetables, tho' ever ſo different in their Nature and Virtue. Experiments have been made in the coldeſt and moſt ſucculent or watry Plants, ſuch as Purſlain, Sorrel, &c. as well as with the hotteſt or moſt acrimonious, ſuch as the Spurges, &c. and it was always found to ſucceed; but the ſooner, as the Vegetable employ'd contain'd the greater quantity of Oil; tho' with the ſame Phænomena.

It will likewiſe ſucceed with dry Vegetables; provided they be moiſten'd with Water before they are thrown into heaps: And thus we ſometimes ſee that Stacks of Hay will ſpontaneouſly take fire and blaze away; eſpecially if it was not well dried in the making.

It is ſurprizing to conſider, that by this means the difference betwixt Vegetables may be entirely taken away, and the whole Kingdom thereof reduced to the ſame common Nature; ſo that Wormwood and Tanſey, for inſtance, or Sorrel and Scurvygraſs, ſhall appear as one and the ſame thing; and this thing appear no otherwiſe than *putrefy'd* Fleſh.

Tho' Sorrel be famed for its power of preſerving the animal Fluids uncorrupted whilſt they are circulating in the Body, and Scordium for its embalming Virtue, as continuing it in a ſtate of Incorruption after Death; yet even theſe Plants are themſelves thus eaſily corrupted and changed into ſuch a kind of *putrefy'd* Fleſh as it is their Virtue to prevent.

This, *Boerhaave* conſiders as a general Law of Nature, wiſely eſtabliſhed to produce wonderful Changes in the World, and prevent the Inaction and Decreaſe of Matter on our Globe; this active Principle or Medium giving an eaſy and reciprocal Tranſition of Vegetable into Animal Subſtances, and Animal into Vegetable.

Hence we are given to underſtand the Nature and Uſes of *Putrefaction*, with its difference from Fermentation, both in regard of the Subject, Cauſe, and Effect——Vegetables alone are the Subject of Fermentation; but both Vegetables and Animals of *Putrefaction*. Fermentation alſo requires that its Subject be firſt reduced to the form of a Liquid, or at leaſt made capable of floating in one, before it can obtain; whereas *Putrefaction* only ſucceeds when its Subject is half dry, or juſt barely moiſt: which is the reaſon why Muſt put up in a wooden Veſſel does not *putrefy*; whilſt the Grapes from which it was expreſſed, being thrown in heaps, would preſently conceive heat, and run into a ſtate of *Putrefaction*.

We ſee alſo that Vegetable *Putrefaction* is begun and promoted with Heat, and finiſh'd with Coction, which requires a degree of Heat much greater than that excited by Fermentation, as being capable of cauſing an Ebullition in the Plant, and even of turning it into a Flame: As, indeed, the immediate Cauſe of Fermentation is the Motion of the Air intercepted between the Fluid and viſcous Parts of the fermenting Liquor; but the Cauſe of *Putrefaction* is Fire itſelf, collected or included within the *putrefying* Subject.

Again, the Effects of Fermentation are the Production of Flowers or Yeaſt, the converſion of the ſaline part of the fermenting Body into Tartar, or an acrimonious Acid and fixed kind of Salt, and of Oils into inflammable Spirit, retaining ſomething of the nature of the Vegetable; but *Putrefaction* makes all the acid Salts volatile and alkaline, renders the Oils not ſpirituous, but abominably fetid, utterly deſtroys what ſets the ſpecific difference between one Subject and another, and converts them wholly into a ſoft pulpy Maſs, of an animal Nature, without the leaſt Signs of any fixed Salt, tho' the recent Vegetable would, by Calcination, at the firſt have afforded a large Proportion: Or, in ſhort, making nearly the ſame kind of Alteration in the whole Subject, as it would undergo by paſſing through a ſound animal Body, ſuffering all the Actions thereof, and being at length turned into the form of Excrement. See FERMENTATION.

This Operation may let us a little into the nature of animal Digeſtion, or the Change which the Aliment ſuffers in the human Body——For the Change our vegetable Foods undergo in the Body, being ſuch as brings 'em to be of the ſame Nature, and afford the ſame Principles with the Change induced by *Putrefaction*, is a preſumption that Digeſtion is nothing elſe; at leaſt it apparently comes nearer thereto than to Fermentation. See DIGESTION.

PUTRID, PUTRIDUS, ſomething rotten, or putrify'd. See PUTREFACTION.

Thus we ſay *putrid* Fleſh——A *putrid* Humour——*Putrid* Limbs, *i. e.* mortify'd ones, are to be cut off. See MORTIFICATION.

PUTRID *Fever*, is that kind of Fever, where the Humours, or part of 'em, have ſo little circulatory Motion, that they fall into an inteſtine one, and putrify. See FEVER.

This is commonly the caſe after great Evacuation, or exceſſive Heat; where there is ſuch a Scarcity of Spirits, that

that the Solids do not vibrate ſufficiently to keep the Fluids in their due Velocity.

In theſe Caſes the Pulſe is low, and the Fleſh cooler than natural at firſt.

PUTTY, a Term uſed for Powder of calcined Tin. See TIN.

PUTURA, a Cuſtom claim'd by the Keepers of Foreſts, and ſometimes Bailiffs of Hundreds, to take Man's Meat, Horſe's Meat, and Dog's Meat, of the Tenants and Inhabitants *gratis*, within the Perambulation of the Foreſt, Hundred, *&c.* See PURLIEU, PERAMBULATION, *&c.*

This Cuſtom within the Liberty of *Knaresburg* was long ſince turned into the Payment of four Pence *pro Putura.*

The Land ſubject to this Service, is call'd *Terra Puturata.* The learned *Somner* erred in his Expoſition of this Word——*Johannes clamat unam* Puturam *in prioratu de Penevoſtham, qui eſt quædam Cella Abbatiæ de Eveſham pro ſe & Miniſtris, Equis & Garcionibus ſuis per unum diem & duas noctes de tribus Septimanis in tres Septimanas, viz. de victualibus, ut in eſculentis & poculentis, ad Coſtas prioratus prædicti indebite*———Placit. apud Preſton. 17 Edv. 3.

PYANEPSIA, in Antiquity, a Feaſt celebrated by the *Athenians* in the Month *Pyanepſion*; which, according to the generality of the Critics, was their fourth Month, and correſponded to our *September.* See FEAST.

Plutarch refers the Inſtitution of this Feaſt to *Theſeus*; who, at his Arrival from *Crete*, made a kind of Sacrifice to *Apollo* of all the Proviſions remaining in his Veſſel; putting 'em all into a Kettle, boiling 'em together, and eating 'em with his ſix Companions; which Cuſtom was afterwards continued.

The Scholiaſt of *Ariſtophanes* ſays, it was to acquit himſelf of a Vow he made to *Apollo* in a Tempeſt.

M. *Baudelot* writes *Puanepſia*; and takes it to be a Feaſt inſtituted in memory of *Theſeus*'s Return after killing the *Minotaur.* See MINOTAUR.

The *Greeks* vary as to the Origin and Signification of the the word *Pyanepſion*, whence the Feaſt is denominated.—*Harpocratian* calls it *Pæanopſia*; he adds, that others call it *Panopſia*, becauſe then the Fruits all appear to the Eye. *Heſychius* writes *Pyanepſia*; and derives it from πυαμος, Bean, and εφθω, I gather: becauſe in this Feaſt the *Athenians* gather'd their Beans, and made a kind of Broth of 'em.

PYCNOSTYLE, or PYCHNOSTYLE, in the antient Architecture, a Building where the Columns ſtand very cloſe to one another; one Diameter and a half of the Column being only allow'd for the Intercolumination. See INTERCOLUMINATION.

The *Pycnoſtyle* is the ſmalleſt of all the Intercolumnations mention'd by *Vitruvius.*

The Word is form'd from the *Greek* πυκνος, *cloſe*, and στυλος, *Column.*

Some make the *Pycnoſtyle* the ſame with the *Syſtyle*; others diſtinguiſh the latter, by its allowing half a Module more in the *Corinthian* Intercolumination. See SYSTYLE.

The *Pycnoſtyle*, Mr. *Evelyn* obſerves, chiefly belong'd to the *Compoſite* Order; and was uſed before the moſt magnificent Buildings, as at preſent in the *Periſtyle* of St. *Peter*'s at *Rome*, conſiſting of near 300 Columns; and ſuch as yet remain of the Antients among the late diſcover'd Ruins of *Palmyra.*

PYCNOTICS, Medicines of an aqueous Nature, and which have the Faculty of cooling and condenſing, or thickening the Humours.

Such are Purſlain, the Nenuphar, or Water-Lilly, Solanum, *&c.*

The Word in its original *Greek*, πυκνοτικον, ſignifies ſomething that has the power of thickening.

PYGMY, or PIGMY, or PIGMÆUS, a *Dwarf*, or Perſon of exceedingly ſmall Stature, not exceeding a Cubit in height. See DWARF and GIANT.

The Appellation is given among the Antients to a fabulous Nation, ſaid to have inhabited *Thrace*, who generated and brought forth Young at five Years of Age, and were Old at eight; famous for the bloody War they waged with the Cranes.

The Word is form'd of the *Greek* πυγμη, *Cubit.* See CUBIT.

PYLING *the Ground*, for Foundations. See FOUNDATION.

PYLORUS, in Anatomy, the lower Orifice of the Stomach, whereby it diſcharges itſelf into the Inteſtines. See STOMACH and INTESTINES.

The *Pylorus* is ſituate on the right ſide of the Stomach, and paſſes by an oblique Aſcent to the *Duodenum*; to prevent the too precipitate Paſſage of the Aliment out of the Stomach. See DUODENUM.

For this end, it is likewiſe furniſh'd with an extraordinary Series of Fibres, to conſtringe it more than any other part: Theſe running round it, ſerve as a kind of Sphincter, which is open'd by the Contraction of the Stomach, and the Appulſe of the Chyle. See DIGESTION, CHYLIFICATION, *&c.*

At the bottom of the *Pylorus*, is a large Cavity, which *Willis* calls the *Antrum Pylori*, and conceives its Uſe to be, to keep the Food firſt digeſted, till the latter taken into the Stomach be digeſted; tho', if what *Wharton* obſerves be true, *viz.* that there are Lacteals in the bottom of the Stomach, ſuch a Proviſion ſhould ſeem unneceſſary. See LACTEAL.

The Word is derived from the *Greek* πυλωρος, *Janitor*, Door-keeper.

PYRAMID, in Geometry, a Solid ſtanding on a ſquare Baſis, and terminating, a-top, in a Point: Or a Body whoſe Baſe is a Polygon, and whoſe Sides are plain Triangles; their ſeveral Tops meeting together in one Point. See SOLID.

Euclid defines it a ſolid Figure, conſiſting of ſeveral Triangles, whoſe Baſes are all in the ſame Plane, and have one common Vertex. See TRIANGLE and VERTEX.

Wolfius defines it a Solid, bounded by as many Triangles, A D C, D C B, and A D B, terminating in one Point, D; as the Baſe A B C, has Sides. (Tab. GEOMETRY, fig. 78.)

The *Pyramid* is ſaid to be *Triangular*, *Quadrangular*, *Quinquangular*, *&c.* as the Baſe is triangular, quadrangular, *&c.*—The *Pyramid* may be call'd a ſquare, triangular, *&c.* Cone; or the Cone, a round *Pyramid.* See CONE.

Properties of the PYRAMID.

1. All *Pyramids* and Cones ſtanding on the ſame Baſe, and having the ſame Altitude, are demonſtrated to be equal.

2. A triangular *Pyramid* is the third part of a Priſm, ſtanding on the ſame Baſe, and of the ſame Altitude. See PRISM.

3. Hence, ſince every Multangular may be divided into Triangulars; every *Pyramid* is the third part of a Priſm, ſtanding on the ſame Baſis, and of the ſame Altitude.

4. If a *Pyramid* be cut by a Plane *a b c*, parallel to its Baſe A B C; the former Plane, or Baſe, will be ſimilar to the latter.

5. All *Pyramids*, Priſms, Cylinders, *&c.* are in a Ratio compounded of their Baſes and Altitudes: The Baſes, therefore, being equal, they are in proportion to their Altitudes; and the Altitudes being equal, in proportion to their Baſes.

6. *Pyramids*, Priſms, Cylinders, Cones, and other ſimilar Bodies, are in a triplicate Ratio of their homologous Sides.

7. Equal *Pyramids*, *&c.* reciprocate their Baſes and Altitudes; *i. e.* the Altitude of the one is to that of the other, as the Baſe of the one to that of the other, *&c.*

A Sphere is equal to a *Pyramid*, whoſe Baſe is equal to the Surface, and its Height to the Radius of the Sphere.

8. A *Pyramid* is one third of the perpendicular Altitude, multiply'd by the Baſe.

To meaſure the Surface and Solidity of a Pyramid——Find the Solidity of a Priſm that has the ſame Baſe with the given *Pyramid*: See PRISM.——And divide this by three; the Quotient will be the Solidity of the *Pyramid.*

Suppoſe, *v. gr.* the Solidity of the Priſm be found 67010328; the Solidity of the *Pyramid* will be thus found 22336770.

The Surface of a *Pyramid* is had, by finding the Areas both of the Baſe A B C, and of the lateral Triangles A C D, C B D, B D A. See TRIANGLE. The Sum of theſe is the Area of the *Pyramid.*

The external Surface of a right *Pyramid*, ſtanding on a regular Polygon Baſe, is equal to the Altitude of one of the Triangles which compoſe it, multiply'd by the whole Circumference of the Baſe of the *Pyramid.*

To deſcribe a Pyramid on a Plane.——1. Draw the Baſe, *v. gr.* the Triangle A B C; (if the *Pyramid* requir'd be triangular) ſo as that the Side A B, ſuppoſed to be turned behind, be not expreſs'd. 2. On A C and C B, conſtruct the Triangles A D C, and C D B, meeting in any aſſumed or determined Point, *v. gr.* D; and draw A D, C D, B D: Then will A D B C, be a triangular *Pyramid.*

To conſtruct a Pyramid of Paſt-board, &c.——Suppoſe, *v. gr.* a triangular *Pyramid* required. 1. With the Radius A B, deſcribe an Arch B E; (fig. 79.) and thereto apply three equal Chords, B C, C D, and D F. 2. On D C conſtruct an equilateral Triangle D F C; and draw the right Lines A D and A C. This Paſt-board, *&c.* being cut off by the Contour of the Figure, what remains within, will turn up into a *Pyramid.*

PYRAMID, in Architecture, is a ſolid maſſive Edifice; which from a ſquare, triangular, or other Baſe, riſes diminiſhing, to a Point, or Vertex.

Pyramids are ſometimes uſed to preſerve the Memory of ſingular Events; and ſometimes to tranſmit to Poſterity the

the Glory and Magnificence of Princes: but as they are the Symbol of Immortality, they are more commonly uſed as funeral Monuments. See MONUMENT.

Such is that of *Ceſtius* at *Rome*; and thoſe other celebrated ones of *Egypt*, as famous for the Hugeneſs of their Size, as their Antiquity.

Theſe laſt are all ſquare in their Baſes; and 'tis a thing has been frequently propoſed, to eſtabliſh a fixed Meaſure from them; to be thereby tranſmitted to Poſterity.——See their Deſcriptions, Meaſures, &c. in *Thevenot*, *Pietro della Valle*, &c.

Among the *Egyptians*, the *Pyramid* is ſaid to have been a Symbol of human Life; the Beginning whereof is repreſented by the Baſe, and the End by the Apex: On which account it was, they uſed to erect them on Sepulchres. HERODOTUS.

Some derive the Word from πύρις, *Wheat*, and ἀμάω, *colligo*; pretending that the firſt *Pyramids* were built by the Patriarch *Joſeph* for Granaries.——But *Villalpandus*, with much better reaſon, derives the Word from πῦρ, *Fire*; becauſe ending in a Point like Flame.

When they are very narrow at bottom, *i. e.* their Baſe very ſmall; they are call'd *Obelisks* and *Needles*. See OBELISK.

Scenography of a PYRAMID. See SCENOGRAPHY.

Optic PYRAMID. See OPTIC *Pyramid*.

PYRAMIDAL *Mirrors*. See MIRROR.

PYRAMIDAL *Numbers*, are the Sums of *Polygonal* Numbers, collected after the ſame manner as the *Polygon* Numbers themſelves are extracted from Arithmetical Progreſſions. See POLYGONAL *Number*, &c.

Theſe are particularly call'd *prime Pyramidals*——The Sums of firſt *Pyramidals* are call'd *ſecond Pyramidals*——The Sums of thoſe *third Pyramidals*, &c. ad infinitum.

Particularly thoſe ariſing from triangular Numbers are call'd *prime triangular Pyramidals*; thoſe ariſing from Pentagonal Numbers are call'd *prime pentagonal Pyramidals*, &c.

From the manner of ſumming up polygonal Numbers it appears evidently how the prime *Pyramidal* Numbers are found; *viz.* $\frac{(a-2)n^3+3n^2-(a-5)n}{6}$ expreſſes all the prime *Pyramidals*.

PYRAMIDALE *Corpus*, in Anatomy, a Plexus of Blood-Veſſels on the back of the Teſticles; thus call'd from its Form: and from its Structure alſo call'd *Corpus Varicoſum*, and *Pampini-forme*. See CORPUS and VARICOSUM.

It conſiſts of innumerable little Veins, communicating with each other; and forming a kind of Net-Work; which, at length, uniting, terminate in one Vein; by which the Blood is convey'd into them all.

The Origin of this Plexus is from the ſpermatic Veins, which, a little above the Teſticles, ſplit into ſeveral Branches; which again uniting, ſeveral times, form the *Corpus Pyramidale*. See TESTICLE and SPERMATIC *Veins*.

PYRAMIDALES *Papillæ*, ſee PAPILLÆ *Pyramidales*.

PYRAMIDALIS, in Anatomy, a ſmall Muſcle of the Abdomen, lying on the lower part of the *Rectus*—It has its Name from its Figure; and its Origin from the Margin of the *Os Pubis*, with a pretty broad fleſhy Head, whence it grows gradually narrower till it end in a ſmall round Tendon in the *Linea alba*; ſometimes almoſt at the Navel.

This Muſcle is ſometimes ſingle, ſometimes it has its fellow; and ſometimes they are both wanting.

PYRAMIDOID, call'd alſo *Parabolic Spindle*, a ſolid Figure form'd by the Revolution of a Parabola round its Baſe, or greateſt Ordinate.

Thus, if you conſider it according to the Method of Indiviſibles, you may conceive its Solidity to conſiſt of an infinite Series of Circles, whoſe Diameters are all parallel to the Axis of the revolving Parabola. See PARABOLIC *Spindle*.

PYRATE, ſee PIRATE.

PYRENOIDES *Proceſſus*, in Anatomy, a Proceſs of the ſecond Vertebra; thus call'd from its pear-like ſhape; as alſo for the like reaſon, *Dentiformis*, or Tooth-like Proceſs. See PROCESS and VERTEBRA.

The Word is compounded of *Pyrum*, Pear, and εἶδος, Figure.

PYRETICS, Medicines good againſt Fevers. See FEVER.

The Word is form'd from the *Greek* πυρετός, *Fever*, of πῦρ, *Fire*.

PYRIFORMIS, in Anatomy, a Muſcle of the Thigh, receiving its Name from its Figure, which reſembles that of a Pear.—It is alſo call'd *Iliacus externus*, from its Situation. See ILIACUS.

Its beginning is round and fleſhy, from the inferior and internal part of the *Os Sacrum*, where it reſpects the *Pelvis* of the Abdomen; and deſcending obliquely in the great Sinus of the *Os Ilium*, above the acute Proceſs of the *Iſchium*, and joining with the *Glutæus medius*, it inſerted by a round Tendon into the ſuperior part of the Root of the great Trochanter.

This moves the *Os Femoris* ſomewhat upwards, and turns it outwards.

PYRITES, in Natural Hiſtory, a Semi-metal, ſuppoſed to be the Marcaſite of Copper; or the Matrix or Ore wherein that Metal is formed. See MARCASITE, ORE, COPPER, &c.

From this Marcaſite it is that the *Roman Vitriol* is procured. See VITRIOL.

The Word is form'd from the *Greek* πῦρ, in regard it takes fire more readily than any other Stone——It is alſo call'd *Quis*.

Antiently it was uſed in lieu of the Flints in Fire-Locks.——Dr. *Slare* tells us of a Heap of *Pyrites* conſiſting of two or three hundred Tons; which being cover'd up from the Air five or ſix Months, took fire, and burnt for a Week. Some of it look'd like melted Metal, others like red-hot Stones. He adds, it emitted a moſt noiſome Smoke.

Dr. *Liſter* attributes Thunder, Earthquakes, &c. to the ſulphureous and inflammable Breath of the *Pyrites*. See THUNDER, EARTHQUAKE, EXHALATION, &c.

PYRITES, in a more general ſenſe, is uſed for the Marcaſites of all Metals; the Names whereof are varied according to the Metals they partake of. See MARCASITE.

Thus *Chryſites* is that of Gold; *Argyrites* that of Silver; *Siderites* that of Iron; *Chalcites* that of Copper; *Molybdites* that of Lead, &c. See ARGYRITES, CHRYSITES, SIDERITES, &c.

PYROBOLOGY, ſee PYROTECHNIA.

PYROENUS, from πῦρ, *Ignis*, Fire, and οἶνος, *Vinum*, Wine; is a Term ſometimes uſed for rectify'd Spirit of Wine; thus call'd becauſe made by Fire, or rather becauſe render'd of a fiery nature. See SPIRIT and RECTIFICATION.

PYROET, or PIROUET, or PYROUET, in the Manage. See PIROUET.

PYROMANCY, a kind of Divination, perform'd by means of Fire. See DIVINATION.

The Antients imagined they could foretel Futurity by inſpecting Fire and Flame: To this end, they conſider'd its Direction, or which way it turn'd.—Sometimes they added other Matters to the Fire; *e. gr.* a Veſſel full of Urine, with its Neck bound about with Wool; watching narrowly on which ſide it burſt, and thence taking their Augury.

Sometimes they threw Pitch on it; and if it took fire immediately, eſteem'd it a good Augury.

PYROTECHNY, PYROTECHNIA, the Art of *Fire*; or a Science which teaches the Management and Application of Fire in ſeveral Operations. See FIRE.

The Word is form'd from the *Greek* πῦρ, Fire, and τέχνη, Art.

Pyrotechny is of two kinds, *Military*, and *Chymical*.

Military PYROTECHNY is the Doctrine of Artificial Fire-Works and Fire-Arms; teaching the Structure and Uſe both of thoſe uſed in War for the Attacking of Fortifications, &c. as *Gun Powder*, *Cannons*, *Bombs*, *Granadoes*, *Carcaſſes*, *Mines*, *Fuſees*, &c. and thoſe made for Amuſement-ſake, as *Rockets*, *Stars*, *Serpents*, &c. See FIRE-*Arm*, ORDNANCE, &c.

Some call *Pyrotechny* by the name *Artillery*; tho' that Word ſeems confined to the Inſtruments uſed in War. See ARTILLERY.

Others chuſe to call it *Pyrobology*, *q. d.* the Art of Miſſile Fires; from the *Greek* πῦρ, Fire, and βάλλειν, to caſt, throw. See GUNNERY, PROJECTILE, &c.

Wolfius has reduced *Pyrotechnia* into a kind of mixt Mathematical Art: Indeed, it won't allow of Geometrical Demonſtrations; but he brings it to tolerable Rules and Reaſons; whereas, before, it had uſed to be treated by Authors at Random and without any Reaſon at all. See MATHEMATICS.

See the Elements of *Military Pyrotechny* under the ſeveral Inſtruments and Operations; CANNON, BOMB, ROCKET, GUN-POWDER, &c.

Chymical PYROTECHNIA, is the Art of managing and applying Fire, in Diſtillations, Calcinations, and other Operations of Chymiſtry. See CHYMISTRY and OPERATION.

Some reckon a third kind of *Pyrotechnia*, *viz.* the Art of fuſing, refining, and preparing Metals. See METAL, FUSION, REFINING, &c.

PYROTICS, in Medicine, Remedies either actually, or potentially hot; and which, accordingly, will burn the Fleſh, and raiſe an Eſchar. See CAUSTIC and ESCHAROTIC.

The Word is form'd from the *Greek* πῦρ, Fire.

PYRRHIC, PYRRHICA, in Antiquity, a kind of Exerciſe on Horſe-back; or a feign'd Combat, for the Exerciſe of the Cavalry. See EXERCISE.

It was thus call'd from its Inventor *Pyrrhicus*, or *Pyrrhus* of *Cydonia*, who firſt taught the *Cretans* to march in Meaſure and Cadence to Battel; and to obſerve the pace of the *Pyrrhic* Foot.

Others derive the Name from *Pyrrhus* Son of *Achilles*, who inſtituted this Exerciſe at the Obſequies of his Father. *Ariſtotle* ſays, 'twas *Achilles* himſelf that invented it.

The *Romans*, alſo, call'd it *Ludus Trojanus*, the *Trojan* Game; and *Aulus Gellius*, *Decurſus*.

'Tis doubtleſs this Exerciſe that we ſee repreſented on Medals by two Cavaliers in Front running with Launces, and the Word *Decurſio* in the Exergue.

PYRRHIC, in the *Greek* and *Latin* Poetry, a Foot conſiſting of two Syllables both ſhort See FOOT.

PYRRHONIANS, a Sect of antient Philoſophers, ſo call'd from their Founder *Pyrrho*. See PHILOSOPHER.

The diſtinguiſhing Character of this Philoſopher was, that he profeſs'd to doubt of every thing; maintaining, that Men only judge of Truth and Falſhood from Appearances. See DOUBTING.

On this Principle he kept himſelf in continual ſuſpenſion of Mind, never determining on any thing; to avoid the Inconveniencies of Error and falſe Judgments. See ERROR, FALSHOOD, *&c.*

Thoſe now diſtinguiſh'd by the Name of *Pyrrhonians*, or Sceptics, are Perſons who, from the great Number of things that are dark and obſcure, and from the Averſion they bear to popular Credulity, maintain that there is nothing certain in the World. See SCEPTICS.

The truth is, *Pyrrhoniſm* has ſome foundation in Nature: We don't judge of things from their real Eſſences, but from their Relations to ourſelves. Moſt of our Ideas we receive by means of our Senſes; but our Senſes are not given us to judge of the Eſſences, but the Relations of things to ourſelves, *i.e.* how they may affect us, ſo as to do us good or harm. See SENSATION, RELATION, SENSE, *&c.*

Thus, *e.gr.* our Eyes don't give us the real Magnitudes of Objects, but their relative ones only. See VISION. See alſo BODY and MATTER.

The Academicks differ'd from the *Pyrrhonians*, in that they own'd there were ſome things more like, or a-kin to Truth than others; which the *Pyrrhonians* peremptorily denied. See ACADEMICS.

Le Clerc obſerves, that the *Pyrrhonians*, in affirming that there is nothing certain, were the moſt aſſuming and deciſive of all Philoſophers; ſince they muſt have firſt examin'd all things, to be able to determine preciſely that all things are uncertain.

It may be added, that the very Principle of the *Pyrrhonians* deſtroys itſelf: For if there be nothing certain, then muſt that Dogma itſelf be precarious; and if no one thing be more probable or liker to Truth than another, why ſhall the Principle of the *Pyrrhonians* be believed preferably to the oppoſite one; ſince itſelf is come at in the ſame way as our other Knowledge.

PYTHAGOREANS, a Sect of antient Philoſophers, who retain'd to the Doctrines of *Pythagoras*. See PHILOSOPHER.

The Founder of this Sect was of *Samos*, the Son of a Lapidary, and Pupil of *Pherycides*; who flouriſh'd about the ſeventh Olympiad, *i.e.* about 500 Years before Chriſt.

This Sect was alſo call'd the *Italic Sect*, or *Italic School*, becauſe *Pythagoras*, after travelling into *Egypt*, *Chaldea*, and even into the *Indies*, to inform his Underſtanding; returning home to his own Country, and there unable to bear the Tyranny of *Polycrates*, or *Soliſon*, retir'd into the Eaſtern Part of *Italy*, then call'd the *Greater Greece*, and there taught and form'd his Sect. See IONIC.

He is held to have excell'd in every part of Science: *Laertius* ſays, among the *Chaldees* and *Hebrews* he learnt Divination, and the Interpreting of Dreams; in *Egypt* he learnt all the Myſteries of the Prieſts, and the whole Syſtem of Symbolical Knowledge, with all their Theology—— *Porphyry* adds, that he learnt the Mathematical Sciences in his Travels; Geometry from the *Egyptians*, the Doctrine of Numbers and Proportions from the *Phœnicians*, and Aſtronomy from the *Chaldeans*; Morality, and Theology he learnt chiefly from the *Magi*.

He was the firſt who aſſum'd the Title *Philoſopher*; the Sages till his time having bore the arrogant Title σοφοί. See PHILOSOPHER.

Jamblicus obſerves, that in *Phœnicia* he converſed with the Prophets and Philoſophers, the Succeſſors of *Mochus* the Phyſiologiſt; which *Mochus*, *Selden* and ſome others will have to be *Moſes*.

His School in *Italy* was at *Crotona*; where he is ſaid to have been attended by no leſs than 600 Scholars—His Houſe was call'd the Temple of *Ceres*, and the Street where it ſtood the *Muſæum*. See MUSÆUM.

Out of his School proceeded the greateſt Philoſophers and Legiſlators, *Zaleucus*, *Charonidas*, *Archytas*——*Porphyry* ſays, as ſoon as he arriv'd in *Italy* he had an Auditory of two thouſand People; to whom he explain'd the Laws of Nature, Reaſon, and Juſtice.

He endeavour'd to aſſuage the Paſſions of the Mind with Verſes, and Numbers; and made a Practice of compoſing his Mind every Morning by his Harp; frequently ſinging the *Pœans* of *Thales*. See MUSIC.

Exerciſes of the Body made a conſiderable part of his Diſcipline. See GYMNASTIC *Exerciſe*.

His School became ſo popular, that Cities and People committed their Republics to the Government of his Scholars——At length, *Porphyry* adds, Envy ſtirring up Sedition againſt 'em, they were oppreſs'd; and in time, their Learning, which they ever kept ſecret, was loſt; except ſome difficult things learnt by Rote by the Crowd of Hearers. For *Pythagoras* never committed any thing to Writing.

Beſide his public School, *Pythagoras* had a College in his own Houſe, which he call'd κοινόβιον, *Cœnobium*: In this were two Orders or Claſſes of Scholars, ἐξωτερικοὶ, *Exoterici*, call'd alſo *Auſcultantes*; and ἐσωτερικοὶ, *Intrinſeci*. ——The former were Novices and Probationers, who were kept under a long Examen, and even impoſed a Quinquennial Silence, to teach them Modeſty and Attention, according to *Apuleius*; or, according to *Clemens Alexandrinus*, to teach them to abſtract their Minds from ſenſible Objects, and enure them to the pure Contemplation of the Deity.

The latter were call'd *Genuini*, *Perfecti*, *Mathematici*, and *Pythagoreans*, by way of Eminence———Theſe alone were let into the *Arcana* and Depths of the real *Pythagoric* Diſcipline.

Clemens obſerves, that theſe Orders correſponded very exactly to thoſe among the *Hebrews*: For in the Schools of the Prophets were two Orders, *viz.* the Sons of the Prophets, who were the Scholars; and the Doctors or Maſters, who were alſo call'd *Perfecti*. And among the Levites, the Novices or Tyro's, who had their Quinquennial Exerciſes, by way of Preparation. Laſtly, even among the Proſelytes there were two Orders; *Exoterici*, or Proſelytes of the Gate; and *Intrinſeci* or *Perfecti*, or Proſelytes of the Covenant. He adds, 'tis highly probable that *Pythagoras* himſelf had been a Proſelyte of the Gate, if not of the Covenant. See PROPHECY.

Gale endeavours to prove, that *Pythagoras* borrow'd his Philoſophy from that of the *Jews*; to this end producing the Authorities of many of the Fathers, and antient Authors; and even pointing out the Tracks and Footſteps of *Moſes* in ſeveral parts of *Pythagoras*'s Doctrine.

Pythagoras taught, 1. That God is one; that he is a moſt ſimple, incorruptible, and inviſible Being; and therefore only to be worſhipped with a pure Mind, with the ſimpleſt Rites, and thoſe preſcribed by himſelf.

Laertius obſerves, that he made Unity the Principle of all things; hence aroſe Duality, *&c.* See UNITY, *&c.*

In his Converſation with the *Egyptians*, he learnt abundance of Secrets about Numbers; to which he attributed ſo much, that he even attempted to explain all things in Nature by Numbers——In effect, it was a common Opinion of the antient Philoſophers, that the Species of Things have to each other the Nature and Relation of Numbers; and that the Univerſe, and all Things therein, were produced according to certain Numbers, inherent in the Creator's Mind. See CREATOR.

Hence *Porphyry* obſerves, the *Pythagoreans* ſtudied the Doctrine of Numbers with great Attention: Since the incorporeal Forms, and firſt Principles of Things, *i. e.* the Divine Ideas, could not be deliver'd in Words, they had recourſe to Demonſtration by Numbers; and thus call'd the common Reaſon and Cauſe of Unity, Identity, and Equality, by the Name *One*.

2. *Pythagoras* further taught, that there is a Relation or Kin-ſhip between the Gods and Man; and therefore the Gods take care of Man——Which, *Clemens Alexandrinus* ſays, is apparently borrow'd from the Chriſtian Doctrine of Providence. See PROVIDENCE.

Pythagoras alſo aſſerted a *Metempſychoſis*, or Tranſmigration of Souls; and therefore the Immortality of the Soul. See METEMPSYCHOSIS.

3. He taught, that Virtue is Harmony, Health, and every good thing; and that God, and therefore every thing, conſiſts of Harmony. See HARMONY.

PYTHAGOREAN, or PYTHAGORIC *Syſtem*, among the Antients, was the ſame with the *Copernican Syſtem* among the Moderns. See SYSTEM.

It was thus call'd, as having been maintained and cultivated by *Pythagoras*, and his Followers; not that it was invented by him, for it was much older. See COPERNICAN *Syſtem*.

PYTHAGORIC *Theorem*, or *Propoſition*, is the 47th of the firſt Book of *Euclid*. See TRIANGLE and HYPOTHENUSE.

PYTHAGORIC *Tetractys*. See TETRACTYS.

PYTHIA, or PYTHIAN, in Antiquity, the Prieſteſs of *Apollo*; by whom he deliver'd Oracles. See ORACLE.

She was thus call'd from the God himſelf, who was entitled *Apollo Pythius*, from his ſlaying the Serpent *Python*; or, as others will have it, ἀπὸ τῦ πύθεσθαι, becauſe *Apollo*, the Sun, is the cauſe of Rottenneſs; or, according to others, from πυνθανομαι, *I hear*, becauſe People went to hear and conſult his Oracles.

The Prieſteſs was to be a pure Virgin—She ſat on the Covercle, or Lid, of a brazen Veſſel, mounted on a Tripod; and thence, after a violent Enthuſiaſm, deliver'd her Oracles, or rather explain'd thoſe of the God; *i. e.* rehearſed a few ambiguous and obſcure Verſes, which were taken for Oracles.

All the *Pythiæ* did not ſeem to have had the ſame Talent at Poetry, or Memory enough to retain their Leſſon—*Plutarch* and *Strabo* make mention of Poets, who were kept in pay, as Interpreters of *Jupiter*, &c.

PYTHIAN *Games*, PYTHICI *Ludi*, were ſolemn Games inſtituted in honour of *Apollo*, and in memory of his killing the Serpent *Python* with his Arrows. See GAMES.

The *Pythici* were celebrated in *Macedonia*, in a place call'd *Pythium*——They were the next in Fame after the *Olympic* Games; but were more antient than they: for 'tis pretended they were inſtituted immediately after the Defeat of the Serpent.

They were held every two Years, towards the Month *Elaphebolion*, which anſwer'd to our *February*.

The *Pythia* were alſo celebrated at *Delphos*; and 'twas theſe were the moſt renown'd—A part of *Pindar*'s Poems are compoſed in praiſe of the Victors in the *Pythian* Games. See PINDARIC.

The Critics are divided on the Subject of the Serpent *Python*——The Poets ſay, that *Juno* made uſe of it to perſecute *Latona*, and prevent her bringing into the World *Apollo* and *Diana*, whom ſhe had conceiv'd of *Jupiter*; and that 'twas for this reaſon *Apollo* kill'd it.

Strabo ſays, 'twas no other than a famous Villain, one *Draco*, that *Apollo* ridded the World of.

Dickinſon, in his *Delphi Phenicizantes*, maintains the *Python* of the *Greeks* to be the *Typhon* of the *Phœnicians*; and the *Typhon* of the *Phœnicians* to be the *Og* of Scripture; and *Apollo* who ſlew it, he will have to be *Joſhua*.

PYXIS *Nautica*, in Navigation, the *Seaman's Compaſs*. See COMPASS.

The Word *Pyxis* is *Latin*, and literally ſignifies a little *Box*.

Among Anatomiſts, *Pyxis* is alſo uſed for the Cavity of the Hip-bone. See ACETABULUM.

Q.

Q, A Conſonant, and the ſixteenth Letter of the Alphabet. See LETTER and ALPHABET.

The *Q* has this peculiar to it, that 'tis always follow'd by an *U*. See U.

The *Q* is form'd from the *Hebrew* ק, *Koph*; which moſt other Languages have borrow'd; tho' ſome of them have rejected it again, particularly the *Greeks*, who now only retain it as a Numeral Character.

In effect, there is that reſemblance between the *Q* and *C*, in ſome Languages, and *K* in others; that many Grammarians, in imitation of the *Greeks*, baniſh the *Q* as a ſuperfluous Letter.

Papias even affirms, that all the *Latin* Words now wrote with a *Q*, were wrote among the antient *Romans* with a *C*: But we want better Authorities. For tho' that may hold in many caſes, inſomuch that we ſtill write indifferently *quur* or *cur*, *cum* or *quum*, *quotidie* or *cotidie*, &c. Yet does it not thence thence follow, that they wrote *cis*, *cæ*, *cid*; for *quis*, *quæ*, *quid*——What Inſcriptions authorize ſuch a reading?

Far from this the Antients ſometimes ſubſtituted *Q* for *C*; and wrote *quojus*, *quos*, for *cujus*, *cus*, &c.

Varro, however, and ſome other Grammarians, as we are told by *Cenſorinus*, &c. would never uſe the *Q*. The truth is, its Uſe or Diſuſe ſeems to have been ſo little ſettled and agreed on, that the Poets uſed the *Q* or *C* indifferently, as beſt ſuited their Meaſures; it being a Rule, that the *Q* joined the two following Vowels into one Syllable; and that the *C* imported them to be divided.

Hence it is, that *Lucretius* uſes *cuiret* for three Syllables, in lieu of *quiret*; *acua* for *aqua*; and that *Plautus* uſes *relicuum* for *reliquum*; as in *quod dedi datum non vellem relicuum non*; where the *cuum* muſt be two Syllables, otherwiſe the *Trochaic* Verſe will be lame of a Foot.

In the *French*, the Sound of the *Q* and *K* are ſo near akin, that ſome of their niceſt Authors think the former might be ſpared——*Ramus* adds, that till the Eſtabliſhment of Royal Profeſſors in the Univerſity of *Paris* under *Francis* I. they always uſed *Q* in the *Latin* the ſame as in the *French*; pronouncing *kis*, *kalis*, *kantus*, &c. for *quis*, *qualis*, *quantus*, &c.

Some very learned Men make *Q* a double Letter, as well as *K* and *X*——According to them, *Q* is evidently a *C* and *U* joined together——'Tis not enough that the Sound is the ſame; but they ſee the Traces of the *CU* in the Figure of the *Q*; the *V* being only laid obliquely ◁, ſo as to come within the Cavity of the *C*.

To confirm this, they ſay the Antients wrote *qi*, *qæ*, *qid*. Tho' *Joſ. Scaliger*, *Littleton*, &c. think this no Proof of the Point; for in *Gruter*'s Inſcriptions, we find not only the *Q*, but alſo the *C*, put for *QU*; as *Cintus*, *Quintus*, *ſicis* for *ſiquis*, &c. Yet no body ever imagin'd the *C* a double Letter.

Q among the Antients, was a Numeral Letter, ſignifying 500; as in the Verſe,

Q velut A cum D quingentos vult numerare.

A Daſh over it, as $\bar{Q}$, denoted it to ſignify five hundred thouſand. See A.

Q is alſo uſed as an Abbreviature in ſeveral Arts——In Phyſician's Bills, *Q. Pl.* ſtands for *quantum placet*, or *quantum vis*, as much as you pleaſe of a thing; *q. ſ.* for *quantum ſufficit*, or as much as is neceſſary.

Among Mathematicians, *Q. E. D.* ſignifies *quod erat demonſtrandum*, which was to be demonſtrated——*Q. E. F.* *quod erat faciendum*, which was to be done.

Q. D. is alſo frequently uſed among Grammarians, &c. for *quaſi dictum*, as if it were ſaid, &c.

QUACK, in Medicine. See EMPIRIC.

QUADRA, in Building, any ſquare Border, or Frame, incompaſſing a Baſſo-Relievo, Pannel, Painter's or other Work.

The Word is alſo uſed abuſively for a Frame or Border of another Form; as Round, Oval, or the like.

QUADRAGESIMA, a Term ſometimes uſed for the Time of Lent; becauſe conſiſting of forty Days. See LENT.

Hence, ſome Monks are ſaid to lead a *Quadrageſimal* Life; or to live on *Quadrageſimal* Food all the Year.

QUADRAGESIMA *Sunday*, is the firſt Sunday in *Lent*; ſo call'd, becauſe it is about the fortieth Day before *Eaſter*. See EASTER.

On the ſame account, the three preceding Sundays, are call'd *Quinquageſima*, *Sexageſima*, and *Septuageſima*. See QUINQUAGESIMA, &c.

QUADRAGESIMALS, denote *Mid-Lent* Contributions, or Offerings. See OFFERING, OBLATION, &c.

It was an antient Cuſtom for People to viſit their Mother-Church on *Mid-Lent* Sunday, and to make their Offerings at the High Altar: and the like was alſo done in *Whitſun*-Week——But as theſe latter Oblations, &c. were ſometimes commuted for by a Payment of *Penticoſtals*, or *Whitſun-Farthings:* See PENTICOSTALS——So were the former alſo changed into a cuſtomary Payment, called *Quadrageſimals*; *Denarii Quadrageſimales*; and ſometimes *Lætare Jeruſalem*, from a Hymn ſo call'd, ſung on that day; beginning, *Jeruſalem Mater omnium*, &c.

QUADRANGLE, in Geometry, a Quadrangular, or Quadrilateral Figure; or a Figure which has four Sides, or four Angles. See FIGURE and QUADRILATERAL.

To the Claſs of *Quadrangles*, or *Quadrangular Figures*, belong the *Square*, *Parallelogram*, *Trapezium*, *Rhombus*, and *Rhomboides*. See SQUARE, PARALLELOGRAM, RHOMBUS, &c.

A Square, &c. is a regular *Quadrangle*——a Trapezium an irregular one.

Quadrangular Figures are not proper for Fortification; the Flanks and flank'd Angles being too ſmall. See BASTION.

QUADRANS, in Antiquity. See AS.

QUADRANS, in our Cuſtoms, is the fourth part of a Penny; or a *Farthing*. See PENNY and FARTHING.

QUADRANT, QUADRANS, in Geometry, an Arch of a Circle, containing 90 Degrees, or one fourth of the entire Periphery. See ARCH and CIRCLE: See alſo DEGREE.

Sometimes, alſo, the Space or Area included between this Arch and two Radii, drawn from the Center to each Extremity thereof, is call'd a *Quadrant*, or more properly *Quadrantal Space*; as being a quarter of the entire Circle. See SECTOR.

QUADRANT, is alſo a Mathematical Inſtrument, of great uſe in Navigation and Aſtronomy; for the taking of Altitudes, &c. See ALTITUDE.

The *Quadrant* is variouſly contrived, and furniſhed with various Apparatus, according to the various Uſes it is intended for; but they all have this in common, that they conſiſt of a *Quadrant*, or quarter of a Circle, whoſe Limb is divided into 90 Degrees; that they have a Plummet ſuſpended from the Centre, and are furniſh'd with *Pinnulæ*, or Sights.

The principal, moſt uſual, and moſt uſeful *Quadrants*, are, the *Common* or *Surveying Quadrant*, the *Aſtronomical Quadrant*, the *Horodictical Quadrant*, *Gunter*'s *Quadrant*, *Sutton*'s or *Collins*'s *Quadrant*, and the *Sinecal Quadrant*.

The Common or Surveying Quadrant (repreſented Tab. SURVEYING, fig. 30.) is made of Braſs, Wood, or other Matter; uſually 12 or 15 Inches Radius——Its Circular Limb is divided into 90°, and each of thoſe ſubdivided into as many equal Parts as the Space will allow; either diagonally, or otherwiſe——On one Edge, or Semidiameter, are fixed two immoveable Sights; and in the Angle, or Centre, is hung a Thread with a Plummet.

To the Centre is likewiſe, ſometimes, fixed a Label or moveable Index, bearing two other Sights like the Index of a Teleſcope——And in lieu of the immoveable Sights, is ſometimes fitted a Teleſcope; tho' this more properly belongs to the Aſtronomical *Quadrant*.

On the under ſide, or face of the Inſtrument, is fitted a Ball, and Socket; by means whereof, it may be put in any poſition for uſe.

Beſides the Eſſentials of the *Quadrant*, there is frequently added on the face near the Centre, a kind of Compartiment, call'd the *Quadrat*, or *Geometrical Square*; as in the Figure——This, in ſome meaſure, making a diſtinct Inſtrument of itſelf; ſee its Deſcription and Uſe under the Article QUADRAT.

The *Quadrant* is to be uſed in different Situations, according to the Dimenſions to be taken——To obſerve Heights and Depths, its Plane is diſpoſed at right Angles to the Horizon: To take horizontal Diſtances, the Plane is diſpoſed parallel thereto.

Heights and Diſtances, again, may be taken two ways; *viz.* by means of the fixed Sights and Plummet, and by the Label.

Uſe

Use of the Common, or Surveying QUADRANT.

1. *To take the Height, or Depth of an Object*, with the fixed Sights and Plummet——Place the *Quadrant* vertically, and the Eye under the Sight next the Arch of the *Quadrant*: Thus direct the Instrument to the Object, *v. gr.* the Top of a Tower, till the visual Rays thereof strike thro' the Sights upon the Eye.

This done, the Portion of the Arch intercepted between the Thread and the Semidiameter, whereon the Sights are fasten'd, shew the Complement of the Object's Height above the Horizon, or its Distance from the Zenith; and the other Portion of the Arch intercepted between the Thread and the other Semidiameter, shews the Height itself of the Object above the Horizon.

The same Arch likewise gives the Quantity of the Angle made by the visual Ray, and a horizontal Line parallel to the Base of the Tower.

Note, to observe Depths, the Eye must be placed over that Sight next the Centre of the *Quadrant*.

From the Height, or Depth of the Object, in Degrees thus found, which suppose 35°, 35′, and the Distance of the foot of the Object from the place of Observation carefully measur'd, which suppose 47 Foot; its Height or Depth in Feet, Yards, *&c.* is easily determin'd by the most common Case in Trigonometry. See TRIANGLE.

For we have here, in a Triangle, one Side given, *viz.* the Line measured; and we have all the Angles: for that of the Tower is always supposed a right Angle, the other two therefore are equal to another right Angle; but the Angle observed is 35°, 35′; therefore the other is 54°, 25′. See ANGLE.

The Case then will be reduced to this; as the Sine of 54°, 25′, is to 47 Feet; so is the Sine of 35°, 35′, to a 4th Term, *viz.* 33½ Feet: to which add the Height of the Observer's Eye, supposed 5 Foot, the Sum 38½ Feet, is the Height of the Tower required.

2. *The further Use of the* Quadrant *in taking of Altitudes of Objects, both accessible and inaccessible*; see under the Article ALTITUDE.

3. *Use of the* Quadrant *in taking Heights and Distances by the Index and Sights.*——To take, *e. gr.* a Height, as that of a Tower, whose Base is accessible——Place the Plane of the Instrument at right Angles to the Plane of the Horizon, and one of its Edges parallel thereto, by means of the Plummet, which in that case will hang down along the other——In this Situation turn the Index, till thro' the Sight you see the top of the Tower; and the Arch of the Limb of the *Quadrant* between that side thereof parallel to the Horizon, and the Index, will be the Height of the Tower in degrees: whence, and from the Distance measured as before, its Height in Feet, *&c.* may be found by Calculation, as in the former Case; or without Calculation, by drawing, from the Data, on Paper, a Triangle similar to the great one, whose Base is the Distance, and its Perpendicular measured on the Scale, the Height of the Tower. See SCALE.

4. *Use of the* Quadrant *in measuring horizontal Distances*——Tho the *Quadrant* be a less proper Instrument for this purpose than a Theodolite, Semicircle, or the like, by reason Angles greater than *Quadrants* cannot be taken hereby; yet Necessity sometimes obliges Persons to have recourse to it.

The Manner of its Application herein is the same with that of the Semicircle; all the difference between the two Instruments consisting in this, that the one is an Arch of 180°, and can therefore take an Angle of any Quantity; and the other only an Arch of 90°, and therefore confined to Angles of that Quantity. See, therefore, SEMI-CIRCLE.

Astronomical QUADRANT, is a large *Quadrant*, usually made of Brass, sometimes of wooden Bars, only faced with Plates of Iron, or the like; having its Limb curiously divided, diagonally or otherwise, into Degrees and Minutes, and even Seconds, if possible; with plain Sights fixed to one side of it, or instead thereof, a Telescope; and an Index moving about the Centre, carrying either plain Sights, or a Telescope.

These *Quadrants* are of principal use in taking Observations of the Sun, Planets, or fixed Stars. See OBSERVATION.

The Antients used only plain Sights, but the Moderns have found it of great benefit to use Telescopes instead of them. See SIGHT and TELESCOPE.

Add, that the Contrivance of moving the Index, by the help of a Screw on the Edge of the Limb, and of readily and easily directing it, and the *Quadrant* upon its Pedestal, to any desired Phænomenon, by means of the Screws and dented Wheels, is a still greater Improvement of the Instrument.

The Particulars of the Mechanism whereby this is effected, would afford a very dry and intricate, as well as useless Detail; which we shall omit, as being sufficiently known among the Instrument-Makers: And in lieu thereof, content ourselves with giving a Figure or Representation, (Tab. ASTRONOMY, fig. 53.)

The Use of this Instrument is obvious——Being adjusted as above, and turned horizontally round on its Axis, till thro' the moveable Telescope the Object be seen to fall in with the Point of Intersection of the cross Bars, the Degrees cut by the Index give the Altitude requir'd. See TELESCOPE.

The *Horodictical* QUADRANT, is a pretty, commodious Instrument, thus call'd from its Use in telling the Hour of the Day; which is its only Use.

Its Construction is so simple and easy, and its Application so ready, that we shall describe both, for the Use of some who may want other Conveniencies.

Construction and Use of the Horodictical QUADRANT.

From the Centre of the *Quadrant* C, (Tab. ASTRONOMY, *Fig.* 54.) whose Limb A B is divided into 90°; describe seven concentric Circles at Intervals at pleasure; and to these add the Signs of the Zodiac in the Order they are represented in the Scheme. 2. Applying a Ruler to the Centre C, and the Limb A B, mark upon the several Parallels the Degrees corresponding to the Altitude of the Sun when therein, for the given Hours; connect the Points belonging to the same Hour with a curve Line, to which add the Number of the Hour——To the Radius C A, fit a couple of Sights, and to the Centre of the *Quadrant* C, tie a Thread with a Plummet, and upon the Thread a Bead to slide.

If now the Bead be brought to the Parallel wherein the Sun is, and the *Quadrant* directed to the Sun till a visual Ray pass thro' the Sights, the Bead will shew the Hour.

For the Plummet in this situation cuts all the Parallels in the Degrees corresponding to the Sun's Altitude: Since, then, the Bead is in the Parallel which the Sun then describes, and thro' the Degrees of Altitude to which the Sun is elevated every Hour, there pass Hour-Lines; the Bead must shew the present Hour——Some Persons who are not mighty nice, represent the Hour-Lines by Arches of Circles, or even by straight Lines; and that without any sensible Error.

Gunter's QUADRANT, is a kind of *Quadrant* (represented Tab. ASTRONOMY, *Fig.* 55.) invented by our Countryman *Edm. Gunter*.

This, beside the graduated Limb, fixed Sights, and a Plummet, as the other *Quadrants*; has, likewise, a Stereographical Projection of the Sphere on the Plane of the Meridian, with the Eye placed in one of the Poles; by which, besides the common Uses of other *Quadrants*, several useful Questions in Astronomy, *&c.* are easily solved.

Use of Gunter's QUADRANT.

1. *To find the Sun's Meridian Altitude for any given Day; or the Day of the Month for any given Meridian Altitude*——Lay the Thread to the Day of the Month in the Scale next the Limb; the Degree it cuts in the Limb is the Sun's Meridian Altitude.

Thus, the Thread being laid on the 15th of *May*, cuts 59° 30′, the Altitude sought——And contrarily, the Thread being set to the Meridian Altitude, will shew the Day of the Month.

2. *To find the Hour of the Day*——Having put the Bead (which slides on the Thread) to the Sun's Place in the Ecliptic, observe the Sun's Altitude by the *Quadrant*; then, if the Thread be laid over the same in the Limb, the Bead will fall upon the Hour requir'd.

Thus, suppose on the 10th of *April*, the Sun being then in the beginning of *Taurus*, I observe the Sun's Altitude, by the *Quadrant*, to be 36°. I place the Bead to the beginning of *Taurus* in the Ecliptic, and lay the Thread over 36° of the Limb; and find the Bead to fall upon the Hour-Line mark'd 3 and 9; accordingly the Hour is either 9 in the Morning, or 3 in the Afternoon——Again, laying the Bead on the Hour given, (having first rectify'd or put it to the Sun's Place) the Degree cut by the Thread or the Limb, gives the Altitude.

Note, the Bead may be rectify'd otherwise, *viz.* by bringing the Thread to the Day of the Month, and the Bead to the Hour-Line of 12.

3. *To find the Sun's Declination from his Place given; and contrariwise*——Set the Bead to the Sun's Place in the Ecliptic; move the Thread to the Line of Declination E T, and the Bead will cut the Degree of Declination requir'd—Contrarily, the Bead being adjusted to a given Declination, and the Thread moved to the Ecliptic, the Bead will cut the Sun's Place.

4. *The Sun's Place being given, to find his right Aſcenſion; or contrarily* —— Lay the Thread on the Sun's Place in the Ecliptic, and the Degree it cuts on the Limb is the right Aſcenſion ſought——Contrarily, laying the Thread on the right Aſcenſion, it cuts the Sun's Place in the Ecliptic.

5. *The Sun's Altitude being given, to find his Azimuth; and contrariwiſe*—Rectify the Bead for the Time (as in the ſecond Article) and obſerve the Sun's Altitude: bring the Thread to the Compliment of that Altitude; thus the Bead will give the Azimuth ſought, among the Azimuth Lines.

6. *To find the Hour of the Night from ſome of the five Stars laid down on the Quadrant*——1. Put the Bead to the Star you intend to obſerve, and find how many Hours he is off the Meridian, (by Article 2.) then from the right Aſcenſion of the Star, ſubſtract the Sun's right Aſcenſion converted into Hours; and mark the difference: Which difference added to the obſerv'd Hour of the Star from the Meridian, ſhews how many Hours the Sun is gone from the Meridian, which is the Hour of the Night.

Suppoſe, *e. gr.* on the 15th of *May*, the Sun being in the fourth Degree of *Gemini*, I ſet the Bead to *Arcturus*; and obſerving his Altitude, find him to be in the Weſt about 52° high, and the Bead to fall on the Hour-Line of two after Noon: then will the Hour be 11 Hours 50 Minutes paſt Noon, or 10 Minutes ſhort of Midnight.

For, 62°, the Sun's right Aſcenſion converted into Time, makes 4 Hours 8 Minutes, which ſubſtracted from 13 Hours 58 Minutes, the right Aſcenſion of *Arcturus*, the Remainder will be 9 Hours 50 Minutes; which added to 2 Hours, the obſerv'd diſtance of *Arcturus* from the Meridian, ſhews the Hour of the Night to be 11 Hours 50 Minutes.

Sutton's QUADRANT, ſometimes, alſo, call'd *Collins's Pocket* QUADRANT——One of the beſt of Mr. *Sutton's Quadrants*, (repreſented Tab. ASTRONOMY, *Fig.* 56.) is a Stereographic Projection of that Quarter of the Sphere between the Tropics, upon the Plane of the Equinoctial, the Eye being in the North Pole.

'Tis fitted to the Latitude of *London*——The Lines running from the right Hand to the left are Parallels of Altitude, and thoſe croſſing them are Azimuths: The leſs of the two Circles bounding the Projection is $\frac{3}{4}$ of the Tropic of *Capricorn*, the greater $\frac{1}{4}$ of that of *Cancer*—The two Ecliptics are drawn from a Point on the left Edge of the *Quadrant*, with the Characters of the Signs upon 'em; and the two Horizons are drawn from the ſame Point——The Limb is divided both into Degrees, and Time; and by having the Sun's Altitude, the Hour of the Day may be here found to a Minute.

The quadrantal Arches next the Centre contain the Calendar of Months; and under them, in another Arch, is the Sun's Declination.

On the Projection are placed ſeveral of the moſt noted fixed Stars between the Tropics, and next below the Projection is the *Quadrat*, and Line of Shadows. See QUADRAT.

Uſe of Sutton's *or* Collins's QUADRANT.

To find the Time of Sun-riſing or ſetting, his Amplitude, Azimuth, Hour of the Day, &c.—— Lay the Thread over the Day and the Month, and bring the Bead to the proper Ecliptic, either that of Summer or Winter, according to the Seaſon; (which is call'd rectifying) then, moving the Thread, bring the Bead to the Horizon; in which Caſe the Thread will cut the Limb in the time of the Sun's riſing or ſetting, before, or after ſix; and at the ſame time the Bead will cut the Horizon in the Degrees of the Sun's Amplitude.

Again, obſerving the Sun's Altitude with the *Quadrant*, and ſuppoſing it found 45° on the 24th of *April*; lay the Thread over the 24th of *April*; bring the Bead to the Summer Ecliptic, and carry it to the Parallel of Altitude 45°. In which Caſe the Thread will cut the Limb at 55° 15′, and the Hour will be ſeen among the Hour-lines to be either 41′ paſt nine in the Morning, or 19′ paſt two in the Afternoon.

Laſtly, the Bead among the Azimuths ſhews the Sun's diſtance from the South, *viz.* 50° 41′.

But note, that if the Sun's Altitude be leſs than what it is at ſix a-clock, the Operation muſt be perform'd among thoſe Parallels above the Winter Horizon; the Bead being rectify'd to the Winter Ecliptic.

Sinecal QUADRANT, is an Inſtrument of Uſe in Navigation——(It is repreſented Tab. NAVIGATION, *Fig.* .) and conſiſts of ſeveral concentric *quadrantal* Arches; divided into eight equal parts by Radii with parallel right Lines croſſing each other at right Angles.

Now, any of the Arches, *e. gr.* B C may be accounted a *Quadrant* of any of the great Circles of the Sphere, chiefly of the Horizon, and Meridian: If, then, B C be taken for a *Quadrant*, *e. gr.* of the Horizon; either of the Sides, *e. gr.* A B, may repreſent the Meridian; and the other, A C will repreſent a Parallel, or Line of Eaſt and Weſt; and all the other Lines parallel to A B will alſo be Meridians; and all thoſe parallel to A C, Eaſt and Weſt Parallels, or Eaſt and Weſt Lines.

Again, the eight Spaces into which the Arches are divided by the Radii, repreſent the eight Points of the Compaſs in a quarter of the Horizon; each containing 11° 15′.

The Arch B C is likewiſe divided into 90°, and each Degree ſubdivided into 12′ Diagonal-wiſe.

To the Center is fixed a Thread, as A L; which being laid over any Degree of the *Quadrant*, ſerves to divide the Horizon.

If the *Sinecal Quadrant* be taken for a fourth part of the Meridian; one ſide thereof, A B, may be taken for the common Radius of the Meridian and the Equator; and then the other ſide A C, will be half the Axis of the World—The Degrees of the Circumference B C will repreſent Degrees of Latitude, and the Parallels to the ſide A B, aſſumed from every Point of Latitude to the Axis A C, will be Radii of the Parallels of Latitude, as likewiſe the Sine-Complements of thoſe Latitudes.

Suppoſe, then, it be requir'd to find the Degrees of Longitude contain'd in 83 of the leſſer Leagues, in the Parallel of 48°—Lay the Thread over 48° of Latitude on the Circumference, and count thence the 83 Leagues, or A B, beginning at A: This will terminate in H, allowing every ſmall Interval, four Leagues. Then tracing out the Parallel H G, from the Point H to the Thread; the part A G of the Thread ſhews that 125 greater, or Equinoctial Leagues, make 6° 15′; and therefore that the 83 leſſer Leagues A H which make the difference of Longitude of the Courſe, and are equal to the Radius of the Parallel G I, make 6° 15′ of the ſaid Parallel.

If the Ship ſail an oblique Courſe, ſuch Courſe, beſides the North and South greater Leagues, gives leſſer Leagues Eaſterly and Weſterly; to be reduced to Degrees of Longitude of the Equator——But theſe Leagues being made neither on the Parallel of Departure, nor on that of Arrival, but in all the intermediate ones; we muſt find a mean proportional Parallel between 'em.

To find this, we have on the Inſtrument *a Scale of croſs Latitudes*. Suppoſe, then, it were requir'd to find a mean Parallel between the Parallels of 40° and 60°. With your Compaſſes take the middle between the 40th and 60th Degree on the Scale: This middle Point will terminate againſt the 51ſt Degree, which is the mean Parallel requir'd.

Uſe of the Sinecal QUADRANT.

The Uſe of this Inſtrument is to form Triangles upon, ſimilar to thoſe made by a Ship's way, with the Meridians and Parallels; the ſides of which Triangles are meaſur'd by the equal Intervals between the concentric *Quadrants*, and the Lines N. and S. E. and W.

The Lines and Arches are diſtinguiſh'd, every fifth, by a broader Line; ſo that if each Interval be taken for one League, there will be five between one broad Line and another.

Now, ſuppoſe, a Ship to have ſail'd 150 Leagues North-Eaſt, one fourth North; which is the third Point, and makes an Angle of 35° 45′, with the North part of the Meridian——Here are given two things; *viz.* the Courſe and Diſtance ſail'd, by which a Triangle may be form'd on the Inſtrument, ſimilar to that made by the Ship's Courſe, and her Longitude and Latitude; and hence may the unknown parts of the Triangle be found. See TRIANGLE.

Thus, ſuppoſing the Centre A to repreſent the place of Departure; count, by means of the concentric Arches, along the Point the Ship ſail'd in, as A D, 150 Leagues from A to D: Then is the Point D the place the Ship is arriv'd at; which note.———This done, let D E be parallel to the ſide; and then there will be form'd a right-angled Triangle A E D, ſimilar to that of the Ship's Courſe, difference of Longitude and Latitude: The ſide A E gives 125 Leagues for the difference of Latitude Northwards, which makes 6° 15′, and the ſide D E gives 83 leſſer Leagues anſwering to the Parallels, which being reduced, as ſhewn above, gives the difference of Longitude——And thus is the whole Triangle found.

QUADRANT, in Gunnery, call'd alſo the *Gunner's Square*, is an Inſtrument ſerving to elevate or lower Cannons, Mortars, *&c.* according to the Places they are to be levell'd or directed to. See MORTAR, LEVEL, *&c.*

It conſiſts of two Branches, made of Braſs; one about a Foot long, 8 Lines broad, and one Line in thickneſs; the other four Inches long, and the ſame length and breadth as the former—Between theſe Branches is a *Quadrant* divided into 90 Degrees, beginning from the ſhorteſt Branch, furniſh'd with Thread and Plummet. *See its Figure repreſented* Tab. FORTIFICATION, *Fig.* 11.

The Uſe of this Inſtrument is eaſy; nothing more being

requir'd but to place the longeſt Branch in the Mouth of the Cannon or Mortar, and elevate or lower it, till the Thread cuts the Degree neceſſary to hit a propoſed Object.

Sometimes, alſo, on one of the Surfaces of the long Branch is noted the diviſion of Diameters, and weights of Iron Bullets; as alſo the Bores of Pieces. See ORDNANCE, CALLIPER, &c.

QUADRANT *of Altitude*, is an Appendage of the Artificial Globe; conſiſting of a Lamina, or Slip of Braſs, the length of a *Quadrant* of one of the great Circles of the Globe; and divided into 90 Degrees.

At the end where the Diviſions terminate, is a Nut rivetted on and furniſh'd with a Screw, by means whereof the Inſtrument is fitted on to the Meridian; and moveable round upon the Rivet, to all Points of the Horizon.

Its Uſe is to ſerve as a Scale in meaſuring of Altitudes, Amplitudes, Azimuths, &c. See the manner of its Application under the Uſe of the GLOBE.

QUADRANTAL *Space*, in Geometry, ſee QUADRANT.

QUADRANTAL *Triangle*, is a ſpherical Triangle, one of whoſe Sides is a Quadrant of a Circle; and one of its Angles, a right Angle. See SPHERICAL *Triangle*.

QUADRANTAL, in Antiquity, a Veſſel in uſe among the *Romans* for the meaſuring of Liquids. See MEASURE.

It was, at firſt, call'd *Amphora*; afterwards *Quadrantal*, from its Form, which was Square every way, like a Die. See AMPHORA.

Its Capacity was 80 *Libræ*, or Pounds of Water, which made 48 *Sextaries*, or 6 *Congii*. See CONGIUS.

QUADRANTATA *Terræ*, in our antient Law-Books, is uſed for a quarter of an Acre; now call'd a Rood. See ACRE and ROOD. See alſo FARTHINGDEAL.

QUADRAT, call'd alſo *Geometrical Square* and *Line of Shadows*, is an additional Member on the Face of the common *Gunter*'s and *Sutton*'s Quadrants; of ſome uſe in taking Altitudes, &c. See QUADRANT.

The *Quadrat*, K L H, (Tab. ASTRONOMY, *Fig.* 55.) has each of its ſides divided into 100 equal Parts commencing from the Extremes, ſo as the Number 100 falls on the Angles; and repreſenting Tangents to the Arch of the Limb.

The Diviſions are diſtinguiſh'd by little Lines from 5 to 5, and by Numbers from 10 to 10; and the Diviſions being occaſionally produced a-croſs, form a kind of Lattice, conſiſting of 10000 little Squares.

The Proportion here, is, as Radius is to the Tangent of the Altitude at the place of Obſervation (*i. e.* to the parts of the *Quadrat* cut by the Thread) ſo is the diſtance between the Station and foot of the Object, to its height above the Eye. See ALTITUDE

Uſe of the QUADRAT, *Geometrical Square, or Line of Shadows.*

1. The *Quadrat* being vertically placed, and the Sights directed to the Top of a Tower, or other Object, whoſe Height is required; if the Thread cut the ſide of the *Quadrat* mark'd *right Shadows*, the diſtance from the Baſe of the Tower to the Point of Station is leſs than the Tower's Height——If the Thread fall on the Diagonal of the Square, the Diſtance is juſt equal to the Height——If it fall on that ſide mark'd *verſed Shadows*, the Diſtance exceeds the Height.

Hence, meaſuring the Diſtance, the Height is found by the *Rule of Three*; inaſmuch as there are three Terms given——Indeed, their diſpoſition is not always the ſame; for when the Thread cuts the ſide of *verſed Shadows*, the firſt Term in the *Rule of Three* ought to be that part of the ſide cut by the Thread, the ſecond the ſide of the Square, and the third the Diſtance meaſur'd——If the Thread cut the other ſide, the firſt Term is the whole ſide of the Square, the ſecond the parts of the ſide cut by the Thread, and the third the Diſtance.

For an Inſtance of each——Suppoſe, *e.gr.* in looking at the Top of a Steeple the Thread cut the ſide of *right Shadows* in the Point 40, and that the Diſtance meaſures 20 Poles; the Caſe then will ſtand thus: As 40 is to 100, ſo is 20 to a fourth Term, which I find to be 50; the Height of the Steeple in Poles.

Again, ſuppoſing the Thread to fall on the other ſide, in the Point 50, and the Diſtance to meaſure 35 Poles; the Terms are to be diſpoſed thus: As 100 is to 60; ſo is 35 to a fourth Term, *viz.* 21, the Height required.

Uſe of the QUADRAT *without Calculation.*

The preceding Caſes may be perform'd without Calculation where the Diviſions of the Square are produced both ways, ſo as to form the Area into little Squares.

Thus, ſuppoſe, 1. The Thread to fall on 40 in the ſide of *right Shadows*, and the Diſtance be meaſur'd 20 Poles; ſeek among the little Squares for that Perpendicular to the ſide which is 20 parts from the Thread; this Perpendicular will cut the ſide of the Square next the Centre, in the Point 50, which is the Height requir'd in Poles.

2. If the Thread cut the ſide of *verſed Lines* in the Point 60, and the Diſtance be 35 Poles; count 35 parts on the ſide of the *Quadrat* from the Centre; count alſo the Diviſions of the Perpendicular from the Point 35 to the Thread, which will be 21, the Height of the Tower in Poles.

Note, In all Caſes, the Height of the Centre of the Inſtrument is to be added. See farther under SHADOW.

QUADRAT, in Aſtrology, call'd alſo QUARTILE, an Aſpect of the heavenly Bodies, wherein they are diſtant from each other, a Quadrant, or ninety Degrees. See ASPECT.

This is held a malignant Aſpect. See QUARTILE.

QUADRAT, in Printing, is a ſort of *Space*; that is, a piece of Metal, caſt like the Letters, to be uſed occaſionally in Compoſing, to make the Intervals between Words, at the ends of Lines, &c. See PRINTING.

There are *Quadrats* of divers Sizes, as *m Quadrats*, *n Quadrats*, &c. which are reſpectively of the Dimenſions of ſuch Letters.

QUADRATA *Legio*, among the *Romans*, was a Legion conſiſting of 4000 Men. See LEGION.

QUADRATIC *Equation*, is an *Equation* wherein the unknown Quantity is of two Dimenſions, *i. e.* is the Square of the Root or Number ſought——As in $x^2 = a + b^2$. See EQUATION.

Quadratic Equations are of two Kinds; *ſimple*, or *pure*; and *adfected*.

Simple, or *Pure* QUADRATICS, are thoſe where the Square of the unknown Root is equal to the abſolute Number given: As in $aa = 36$; $ee = 146$; $yy = 133225$.

The Reſolution of theſe is eaſy; it being apparent that nothing more is requir'd than to extract the Square-Root out of the Number or known Quantity. See EXTRACTION.

Thus the Value of a in the firſt Equation is equal to 6; in the ſecond $e = 12$, and a little more, as being a ſurd Root; and in the third Example $y = 365$. See ROOT.

Adfected QUADRATICS, are thoſe which between the higheſt Power of the unknown Number, and the abſolute Number given, have ſome intermediate Power of the unknown Number: As $aa + 2ba = 100$. See ADFECTED.

All Equations of this Rank are in one or other of the following Forms; *viz.* $aa + ad = R$. $aa - ad = R$. $ad - aa = R$.

There are ſeveral Methods of ſolving *adfected Equations*, or of extracting their Roots; the moſt convenient is that of *Harriot*——Here, x being aſſumed as a part of the Root; a, the known Quantity of the ſecond Term, will be double the other part; and therefore half of a is the other part——The Square, thereof, will be compleated by adding one fourth of aa; which done, the Root of the Square may be extracted thus:

$$x^2 + ax = b$$
$$\tfrac{1}{4}aa \quad \tfrac{1}{4}aa \quad add.$$
$$x^2 \quad ax. \quad \tfrac{1}{4}a^2 = \tfrac{1}{4}a^2 \quad b^2$$
$$x^2 \therefore \tfrac{1}{2}a = \surd\left(\tfrac{1}{4}a^2 \therefore b^2\right)$$
$$x = \tfrac{1}{2}a \surd\left(\tfrac{1}{4}a^2 \therefore b^2\right)$$

In lieu of the Characters + and —, we here uſe two Points; to avoid the neceſſity of diſtinguiſhing ſeveral Caſes. See RESOLUTION.

Conſtruction of QUADRATIC *Equations*; ſee CONSTRUCTION.

QUADRATING *of a Piece*, among Gunners, is the ſeeing that a Piece of Ordnance be duly placed, and poiz'd in its Carriages; that its Wheels be of an equal Height, &c. See CARRIAGE, ORDNANCE, CANNON, &c.

QUADRATO-*quadratum*, or *Biquadratum*, the fourth Power of Numbers: or the Product of the Cube multiply'd by the Root. See POWER.

QUADRATO-*Cubus*, QUADRATO-QUADRATO-*Cubus*, and QUADRATO-*Cubo-Cubus*, are Names uſed by *Diophantus*, *Vieta*, *Oughtred*, and others, for the 5th, 7th, and 8th Powers of Numbers. See POWERS.

QUADRATRIX, in Geometry, a mechanical Line, by means whereof we can find right Lines equal to the Circumference of a Circle, or other Curve, and the ſeveral Parts thereof. See CIRCLE, &c.

Or, more accurately, the *Quadratrix of a Curve*, is a tranſcendental Curve, deſcribed on the ſame Axis, the Semiordinates whereof being given, the Quadrature of the correſpondent Parts in the other Curve, are likewiſe given. See CURVE.

Thus, *e. gr.* the Curve A N D (Tab. ANALYSIS, *Fig.* 21.) may be call'd the *Quadratrix* of the *Parabola* A M C, ſince 'tis demonſtrated that A P M A is = P N², or A P M A = A P. P N, or A P M A = P N *a*, &c.

The,

The moſt eminent of theſe *Quadratrices* are that of *Dinoſtrates* and that of Mr. *Tſchirnhauſen* for the Circle, and that of Mr. *Perks* for the Hyperbola.

QUADRATRIX *of Dinoſtrates*, is a Curve, A M *m m*, (Tab. ANALYSIS, *Fig.* 22.) whereby the Quadrature of the Circle is effected, tho' not Geometrically, but Mechanically; thus call'd from its Inventor *Dinoſtrates*.

Its Geneſis is thus,—Divide the *Quadrantal* Arch A N B into any Number of equal Parts; in N *n*, &c. by a continual Biſſection——divide the Radius A C into the ſame Number of Parts in the Points P *p*, &c. Draw Radii C N, *c n*, &c.——Laſtly, on the Points P *p*, &c. erect Perpendiculars P M, *p m*, &c. the Curve form'd by connecting theſe Lines is the *Quadratrix* of *Dinoſtrates*.

Here, from the Conſtruction, A B : A N :: A C : A P; and therefore, if A B = *a*, A C = *b*, A N = *x*, A P = *y*; *a x* = *b y*. See QUADRATURE.

QUADRATRIX *Tſchirnhauſiana*, is a tranſcendental Curve A M *m m* B, (*Fig.* 23.) whereby the Quadrature of the Circle is likewiſe effected; invented by M. *Tſchirnhauſen*, in imitation of that of *Dinoſtrates*.

Its Geneſis is thus conceived——Divide the Quadrant A N B, and its Radius A C into equal Parts, as in the former; and from the Points P *p*, &c. draw the right Lines P M, *p m*, &c. parallel to C B; and from the Points N, *n*, &c. the right Lines N M, *n m*, &c. parallel to AC—The Points A M *m*, &c. being connected, the *Quadratrix* is form'd; wherein A B : A N :: A C : A P.

Here again, ſince A B : A N :: A C : A P; if A B = *a*, and A C = *b*, A N = *x*, and A P = *y*; *a x* = *b y*. See QUADRATURE.

QUADRATUM *Cubi*, QUADRATO-QUADRATO-QUADRATUM, and QUADRATUM *Surdeſolidi*, &c. are Names uſed by the *Arabs* for the 6th, 8th, and 9th Powers of Numbers. See POWERS.

QUADRATURE, QUADRATURA, in Geometry, the ſquaring, or reduction of a Figure to a Square; or the finding a Square equal to a Figure propoſed. See FIGURE and SQUARE.

Thus, the finding of a Square containing juſt as much Surface, or Area as a Circle, an Ellipſis, a Triangle, or other Figure, is call'd the *Quadrature* of a Circle, an Ellipſis, a Triangle, or the like. See CIRCLE, &c.

The *Quadrature* of Rectilinear Figures comes under the common Geometry; as amounting to no more than the finding their Areas, or Superficies; which are in effect their Squares. See AREA.

Squares of equal Areas are here eaſily had, by only extracting the Roots of the Areas thus found; and on ſuch Root as a ſide conſtructing a Square. See SQUARE. See alſo the particular Methods of finding the Areas or Squares, under each particular Figure, as TRIANGLE, PARALLELOGRAM, TRAPEZIUM, &c.

The *Quadrature of Curves*, that is, the meaſuring of their Area, or the finding of a rectilinear Space equal to a curvilinear Space, is a Matter of much deeper Speculation; and makes a part of the higher Geometry. See GEOMETRY.

Tho' the *Quadrature*, eſpecially of the Circle, bee a thing many of the firſt-rate Mathematicians among the Antients were very ſollicitous about, (ſee QUADRATURE *of the Circle*) yet nothing in this kind has been done ſo conſiderable, as in and ſince the middle of the laſt Century; when, *viz.* in the Year 1657, Mr. *Neil* and my Lord *Brounker*, and afterwards, in the ſame Year, Sir *Chriſtopher Wren*, Geometrically demonſtrated the Equality of ſome Curves to a ſtraight Line.

Soon after this, others at home and abroad, did the like in other Curves; and not long afterwards the thing was brought under an analytical Calculus, the firſt Specimen whereof ever publiſhed was given by *Mercator* in 1688. in a Demonſtration of my Lord *Brounker*'s *Quadrature* of the Hyperbola by Dr. *Wallis*'s reduction of a Fraction into an infinite Series by Diviſion. See QUADRATURE *of the Parabola*.

Tho' it appears by the way that Sir *Iſaac Newton* had before diſcover'd a Method of attaining the Quantity of all quadrable Curves analytically by his Method of Fluxions, before the Year 1668. See FLUXIONS.

'Tis conteſted between Sir *Chriſtopher Wren* and Mr. *Huygens* which of the two firſt found the *Quadrature* of any determinate Cycloidal Space——Mr. *Leibnitz* afterwards found that of another Space; and M. *Bernoulli* in 1699, diſcover'd the *Quadrature* of an infinity of Cycloidal Spaces, not only Segments, but alſo Sectors, &c. See QUADRATURE *of the Cycloid*, QUADRATURE *of the Lune*, &c.

QUADRATURE *of the Circle*, is a Problem that has employ'd the Mathematicians of all Ages; but ſtill in vain. See CIRCLE.

It depends on the Ratio of the Diameter to the Periphery, which was never yet determined in preciſe Numbers. See DIAMETER, &c.

Were this Ratio known, (which would imply the Circumference's being expreſs'd by ſome Affection of the Diameter; and, of conſequence, that it were equal to a right Line) the *Quadrature of the Circle* were effected: it being demonſtrated, that the Area of a Circle is equal to a rectangular Triangle, whoſe two Sides comprehending the right Angle, are the Radius, and a right Line equal to the Circumference——So that to ſquare the Circle, all that is required is to rectify it. See CIRCUMFERENCE and RECTIFICATION.

Many have approach'd very near this Ratio——*Archimedes* ſeems to have been one of the firſt who attempted it; which he did by means of regular Polygons inſcribed and circumſcribed; and by uſing Polygons of 96 ſides, fixed the Ratio as 7 to 22. See POLYGON.

Some of the Moderns have come nearer, particularly *Lud. a Ceulen*, who with infinite Induſtry found, at length, that ſuppoſing the Diameter 1, the Circumference is leſs than 3.14159265358979323846264338387950; but yet greater than the ſame Number, if the laſt Cypher be turn'd into an Unit.

Strict Geometry here failing, Authors have had recourſe to other Means; and particularly, to a ſort of Curves, call'd *Quadratrices*: But theſe being Mechanical Curves, inſtead of Geometrical ones, or rather Tranſcendental inſtead of Algebraical ones, the Problem is not fairly ſolved thereby. See TRANSCENDENTAL, MECHANICAL, &c. QUADRATRIX.

Hence, recourſe has been had, by others, to Analytics—and the Problem attempted by three ſorts of Algebraic Calculations——The 1*ſt* gives a kind of tranſcendental *Quadratures*, by Equations of indefinite Degrees: as if $x^x + x$ be equal to 30, and x be ſought, it will be found to be 3; becauſe $3^3 + 3$, is $27 + 3$, or 30.——The 2*d* by vulgar Numbers, tho' irrationally ſuch; or by the Roots of common Equations, which for the general *Quadrature*, or its Sectors, is impoſſible——The 3*d* by means of certain Series, exhibiting the Quantity of a Circle by a Progreſſion of Terms.

Arithmetic, in effect, affords us very accurate and intelligible Expreſſions for all rational Numbers; but it is defective as to Irrationals, which are infinitely more numerous than the former: there being, *e.gr.* an Infinity of 'em between 1 and 2. The Root of 2, which is a mean Proportional between 1 and 2, is a very obſcure Idea; and its Magnitude is ſuch, as that if you would expreſs it in rational Numbers, which alone are clearly intelligible, you may ſtill approach nearer and nearer its exact Value, but never arrive preciſely at it.

Thus, if for the Value of the Root of 2, you firſt put 1, 'tis viſibly too little; if, then, you add $\frac{1}{2}$, 'tis too much; for the Square of $1 + \frac{1}{2}$, or of $\frac{3}{2}$, exceeds 2. If, again, you take away $\frac{1}{3}$, you'll find you have taken too much; and if you'll return $\frac{1}{12}$, the Sum will be too great—Thus, may you proceed to Infinity, without ever finding a Numberto ſtop at.

Now theſe Numbers, thus found, being diſpoſed in their proper Order, make what we call an *Infinite Series*. See SERIES.

Further, of infinite Series's, there are ſome which only yield a finite Sum, as $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, &c. and in general all ſuch as decreaſe in Geometrical Progreſſion—And there are others, on the contrary, which make an infinite Sum; as the Harmonical Progreſſion, $\frac{1}{2}$, $\frac{1}{3}$ $\frac{1}{4}$, &c. See PROGRESSION.

But, here, we have only to do with the former, as expreſſing a finite Magnitude; yet cannot even the Sum of theſe be always found———Thus, we are certain, that 'tis impoſſible to find the Sum of the Series expreſſing the Root of 2.

Geometry, however, is free from the Impoſſibility Arithmetic labours under, of expreſſing irrational Numbers. ———Thus, the Diagonal of a Square, whoſe Side is 1, expreſſes the Root of 2. See DIAGONAL.

Yet in other Magnitudes, Geometry, itſelf, may fall under the ſame Difficulty with Arithmetic———For it is poſſible, there may be right Lines which cannot be expreſs'd but by an infinite Series of ſimilar Lines, whoſe Sum it may be impoſſible to find.

In effect, the right Lines, which ſhould be equal to Curves, are frequently of this kind——In ſearching, *e.gr.* for a right Line equal to the Circumference of a Circle, we find that the Diameter being put 1, the Circumference will be $\frac{4}{1}$ leſs, $\frac{4}{3}$ more, $\frac{4}{5}$ leſs, $\frac{4}{7}$ more, $\frac{4}{9}$, &c. making an infinite Series of Fractions, whoſe Numerator is always 4, and the Denominators in the natural Series of the uneven Numbers; and all theſe Terms, alternately, too great and too little.

Could the Sum of this Series be found, it would give the *Quadrature of the Circle*; but this is not yet done; nor is it at all probable it ever will be done———That, however, is not yet demonſtrated; nor, of conſequence, is the *Quadrature of the Circle* yet demonſtrated impoſſible.

To this it may be added, that as the ſame Magnitude may be expreſs'd by ſeveral different Series, 'tis poſſible the Circumference of the Circle may be expreſs'd in ſome other Series, whoſe

whose Sum may be found——We have two infinite Series, expressing the Ratio of the Circumference to the Diameter, tho' indefinitely, as above——The first discover'd by Sir *Isaac Newton*; where the Diameter being put 1, the Circumference is $4-\frac{4}{3}-\frac{4}{40}-\frac{4}{112}$, &c.——The second, discover'd by M. *Leibnitz*; where the Diameter being 1, the Circumference is $4-\frac{4}{3}+\frac{4}{5}+\frac{4}{7}-\frac{4}{9}$, &c. The Investigation of each of which Series, by the *Calculus Integralis*, is as follows.

Sir Isaac Newton's *Quadrature of the Circle*; or the Investigation of his Series, for squaring the Circle.

If the Radius of the Circle, AC = 1 (Tab. ANALYSIS, fig. 24.) CP = x, $y = \sqrt{(1-x^2)}$ and $\sqrt{(1-x^2)} = 1-\frac{1}{2}x^2-\frac{1}{8}x^4-\frac{1}{16}x^6-\frac{5}{128}x^8-\frac{7}{256}-x^{10}$, &c. to Infinity. Then will

$y\,dx = dx-\frac{1}{2}x^2\,dx-\frac{1}{8}x^4\,dx-\frac{1}{16}x^6\,dx-\frac{5}{128}-x^8\,dx-\frac{7}{256}-x^{10}\,dx$, &c. to Infinity.

$\int y\,dx = x-\frac{1}{6}x^3-\frac{1}{40}x^5-\frac{1}{112}x^7-\frac{5}{1152}x^9-\frac{7}{2816}x^{11}$, &c. to Infinity.

When x becomes equal to the Radius CA, the Space DCPM degenerates into a Quadrant. Substituting, therefore, 1 for x, the Quadrant will be $1-\frac{1}{6}-\frac{1}{40}-\frac{1}{112}-\frac{5}{1152}-\frac{7}{2816}$, &c. *in infinitum*.—Which same Series will measure the entire Area of the Circle, the Diameter being 1.

M. Leibnitz's *Quadrature of the Circle.*

Let the Tangent KB (Tab. ANALYSIS, fig. 25.) = x, BC = 1; and the Secant AC, infinitely near another CK, and the little Arch KL be drawn with the Radius CK; then will AK = dx, KC = $\sqrt{(1+x^2)}$. Now since the Angles at B and L, are right Angles; and by reason of the infinitely small Angle KCL, the Angle BKC = KAC; we shall have

$$KC : BC :: KA : KL$$

$$\sqrt{(1+x^2)} : 1 :: dx : \frac{dx}{\sqrt{(1+x^2)}}$$

Further $CK : KL :: CM : mM$

$$\sqrt{(1+x^2)} : \frac{dx}{\sqrt{(1+x^2)}} :: 1 : \frac{dx}{1+x^2}.$$

Therefore the Sector CMm = $\frac{1}{2}dx : (1+x^2) = \frac{1}{2}(dx - x^2dx+x^4\,dx-x^6\,dx+x^8\,dx-x^{10}\,dx$, &c. whence by the Summary Calculus, we find the Sector BCM, whose Tangent KB = x, $\frac{1}{2}x-\frac{1}{6}x^3+\frac{1}{10}x^5-\frac{1}{14}x^7+\frac{1}{18}x^9-\frac{1}{22}x^{11}$, &c. *in infinitum*. And therefore if BM be the Octant of the Circle, or an Arch of 45°, the Sector will be $\frac{1}{2}-\frac{1}{6}+\frac{1}{10}-\frac{1}{22}$, &c. *in infinitum*. The Double, therefore, of this Series $1-\frac{1}{3}+\frac{1}{5}-\frac{1}{7}+\frac{1}{9}-\frac{1}{11}$, &c. *in infinitum*, is the Quadrant of the Circle; or if the Diameter be = 1, the entire Area of the Circle.

QUADRATURE *of the Lunes*——Tho' a definite *Quadrature* of the entire Circle, was never yet given; yet there have been various Portions of it squar'd——The first partial *Quadrature* was given by *Hippocrates* of *Chio*; who squared a Portion call'd, from its Figure, the *Lune*, or *Lunula*. See LUNE, where the *Quadrature* is shewn.

This *Quadrature* has no dependance on that of the Circle; but then it only extends to the entire Lune, or its half: If you would square any Portion thereof, at pleasure, the *Quadrature* of the Circle comes in the way.

Yet some of the modern Geometers have found the *Quadrature* of any Portion of the Lune at pleasure, independently of the *Quadrature* of the Circle; tho' still subject to a certain restriction which prevents the *Quadrature* from being perfect, and, as the Geometricians call it, absolute and indefinite.

In 1701, the Marquis *de l'Hopital* publish'd a new manner of squaring the Parts of the Lune taken different ways, and under different Conditions——tho' this, too, is imperfect in the same manner as the others.

QUADRATURE *of the Ellipsis*——The *Ellipsis*, too, is a Circle whose precise *Quadrature* in definite Terms is not yet effected. We have here therefore, as before, recourse to a Series.

To find the QUADRATURE *of the Ellipsis.*

Let AC (Tab. ANALYSIS, *Fig.* 26.) = a GC = c PC = x. Then will

$$y^2 = c^2 = (a^2-x^2) : a^2$$

$$y = c\sqrt{(a^2-x^2)} : a$$

But $\sqrt{[a^2-x^2]} = a-\frac{x^2}{2a}-\frac{x^4}{8a^3}-\frac{x^6}{16a^5}-\frac{5x^8}{128a^7}-\frac{7x^{10}}{256a^9}$ &c. *in infinitum*. Therefore, $y\,dx = c\,dx\,\frac{cx^2\,dx}{2a^2}-\frac{cx^4\,dx}{8a}-\frac{c^6\,dx}{16a^5}-\frac{5cx^8\,dx}{128a^7}-\frac{7cx^{10}\,dx}{256a^9}$ &c. *in infinitum*.

If then for x be put a; the Quadrant of the Ellipsis will be $ac-\frac{1}{6}ac-\frac{1}{40}ac-\frac{1}{112}ac-\frac{5}{1152}ac-\frac{7}{2816}a\,c$, &c. *in infinitum*. Which same Series exhibits the entire Area of the Ellipsis, if a denote the entire Axis.

Hence, 1. If $\sqrt{ac}=1$; the Area of the Ellipsis = $1-\frac{1}{6}-\frac{1}{40}-\frac{1}{112}-\frac{5}{1152}-\frac{7}{2816}$, &c. *in infinitum*: Whence it is evident that an Ellipsis is equal to a Circle whose Diameter is a mean Proportional between the conjugate Axes of the Ellipsis. 2. Hence, also, an Ellipsis is to a Circle whose Diameter is equal to the greater Axis, as ac to a^2; that is, as c to a, or as the less Axis to the greater. Hence, lastly, having the *Quadrature* of the Circle, we shall likewise have that of the Ellipsis, and on the contrary.

QUADRATURE *of the Parabola*——For the Parabola, we have a *Quadratrix* or transcendent Curve, which gives its Square. See QUADRATRIX.

But it may be likewise had thus:

$$ax = y^2$$ See PARABOLA.

$$a^1 : 2x^1 : 2 = y$$

$$y\,dx = a^1 : 2x^1 : 2\,dx$$

$$\int y\,dx = \tfrac{2}{3}a^1 : 2x^3 : 2 = \tfrac{2}{3}\sqrt{ax} = \tfrac{2}{3}\sqrt{x}\;y^2 = \tfrac{2}{3}xy.$$

Hence, the Parabolic Space is to the Rectangle of the Semiordinate into the Abscissæ as $\frac{2}{3}xy$ to xy; that is, as 2 to 3.

QUADRATURE *of the Hyperbola*——For this, too, we have a *Quadratrix*, invented by Mr. *Perks*. See QUADRATRIX.

The analytical *Quadrature* was first given by *N. Mercator* of *Holstein*, the first Inventor of infinite Series. But *Mercator* finding his Series by Division; Sir *Isaac Newton* and M. *Leibnitz* improv'd upon his Method; the one seeking 'em by the Extraction of Roots, the other by a Series presupposed. See SERIES.

Mercator's Quadrature of the Hyperbola between its Asymptotes.

Since in an Hyperbola within the Asymptotes, $a^2 = by + xy$; or, if $a = b = 1$, (which may be supposed, since the determination of b is arbitrary.)

Then will $1 = y + xy$

$$1 : (1+x) = y$$

That is (the Division being actually performed)

$$y = 1-x+x^2-x^3+x^4-x^5+x^6, \text{ &c.}$$

$$y\,dx = dx-x\,dx+x^2\,dx-x^3\,dx+x^4\,dx-x^5-dx+x^6\,dx, \text{ &c.}$$

$$\int y\,dx = x-\tfrac{1}{2}x^2+\tfrac{1}{3}x^3-\tfrac{1}{4}x^4+\tfrac{1}{5}x^5-\tfrac{1}{6}x^6+\tfrac{1}{7}x^7, \text{ &c. } \textit{in infinitum.}$$

QUADRATURE *of the Cycloid*——Since TP (Tab. ANALYSIS, *Fig.* 27.) = PM; in the Triangle PMT, the Angles M and T will be equal; and consequently, TPQ = 2M. But the Measure of the Angle APQ is the half Arch AP; which likewise measures the Angle TPA. Therefore APQ = TMP = MmS, by reason MP and mq are parallel.

Wherefore, since the Angles at S and Q are right Angles, we have

$$AQ : QP :: MS : mS.$$

Let, then, AQ = x, AB = 1; then will $PQ = \sqrt{(x-xx)}$ and $mS = dx\sqrt{(x-xx)} : x$. But it is shewn, that $\sqrt{(x-xx)} = x^{1:2}-\frac{1}{2}x^{3:2}-\frac{1}{8}x^{5:2}\,dx-\frac{1}{2}x^{1:2}\,dx$, &c. *in infinitum*. Therefore, $dx\sqrt{(x-xx)} : x =$ (the Numerators of the Exponents being diminish'd by two Units in the Division by x) $x^{-1:2}\,dx-x^{1:2}\,dx-\frac{1}{8}x^{3:2}\,dx-\frac{1}{16}x^{5:2}\,dx$, &c. *in infinitum*. Whose Sum $2x^{1:2} = -\frac{1}{3}x^{3:2}-\frac{1}{20}x^{5:2}-\frac{1}{56}x^{7:2}$, &c. *in infinitum*. is the Semiordinate of the Cycloid QM refer'd to the Axis AP. Hence, QMdx, or the Element QMSq of the Cycloidical Space AMQ = $2x^{1:2}\,dx-\frac{1}{3}x^{3:2}\,dx-\frac{1}{20}x^{5:2}\,dx-\frac{1}{50}x^{7:2}\,dx$, &c. *in infinitum*. Whose Sum = $\frac{4}{3}x^{3:2}-\frac{2}{15}x^{5:2}-\frac{1}{70}x^{7:2}-\frac{1}{252}x^{9:2}$, &c. *in infinitum*, expresses the Segment of the Cycloid AMQ.

If then $mS = g$, $G = dx\sqrt{(x-xx)} : x$ be multiply'd into GM = AQ = x; we shall find the Element GMHG of the Area AMG = $dx\sqrt{(x-xx)}$. Which being the same with the Element of the Segment of the Circle APQ, the Space AMG will be equal to the Segment of the Circle APQ; and consequently, the Area ADC equal to the Semicircle APB.

Hence, Since CB is equal to the Semiperiphery of the Circle; if that = p and AB = a; the Rectangle BCDA = ap; and the Semicircle APB; and, consequently, the external Cycloidical Space ADC = $\frac{1}{4}ap$. Therefore the Area of the Semicycloid ACB = $\frac{3}{4}ap$, and AMCBPA = $\frac{1}{2}ap$. Consequently, the Area of the Cycloid is triple of the generating Circle.

QUADRATURE *of the Logistic, or Logarithmic Curve*——Let the Subtangent PT (Tab. ANALYSIS, *Fig.* 28.) = a, PM = x Pp = dx; then will

$$ydx : dy = a$$

$$ydx = ady$$

$$\int ydx = ay$$

Wherefore the indeterminate Space HPMI, is equal to the Rectangle of PM into PT.

Hence, 1. Let QS = z; then will the indeterminate Space ISQH = az; and, consequently, SMPQ = $ay-az = a(y-z)$; that is, the Space intercepted between the two Logistic Semiordinates is equal to the Rectangle of the

the Subtangent into the difference of the Semiordinates.

2. Therefore the Space BAP M, is to the Space P M S Q as the difference of the Semiordinates A B and P M to the difference of the Semiordinates P M and S Q.

Note, If a Curve be not ſuppoſed; deſcribe but only an Equation to it given, ſo as it don't appear; *e. gr.* where the Origin of x is to be fixed, we are to put $x=o$ in the Integral, and expunging what are multiply'd by x, add to it the Remainder, if there be any, under the contrary Sign; to have the *Quadrature* ſought.

QUADRATURE *of Des Cartes's Curve*, which is defined by the Equation, $b^2 : x^2 = b - x : y$.

Since, $by = bx^2 - x^3$

$y = (bx^2 - x^3) : b^2$

$ydx = (bx^2 dx - x^3 dx) : b^2$

$\int ydx = x^3 : 3b - x^4 : 4b^2$

QUADRATURE *of all Curves comprehended under the general Equation* $y = x\sqrt[m]{(x+a)}$

Since $y = x(x+a)^{\frac{1}{m}}$

$ydx = dx(x+a)^{\frac{1}{m}}$.

To render the Element integrable; ſuppoſe, $(x+a)^{\frac{1}{m}} = v$

Then will $x + a = v^m$

$dx = mv^{m-1}dv$

$ydx = mv^m dv$

$\int ydx = \frac{mv^{m+1}}{m+1} = \frac{m(x+a)\sqrt[m]{(x+a)}}{m+1}$. Let $x = o$: The Remainder $\frac{m}{m+1} a\sqrt[m]{a}$. Whence, the Area of the Curve is $\frac{m}{m+1}(x+a)\sqrt[m]{(x+a)} - ma\sqrt[m]{a}$.

QUADRATURE, in Aſtronomy, that Aſpect, or Situation of the Moon, when ſhe is 90° diſtant from the Sun. See MOON.

Or, the *Quadrature* is when ſhe is in the middle Points of her Orbit, between the Points of Conjunction and Oppoſition, which happens twice in each Revolution, *viz.* in the firſt and third Quarter. See ORBIT, OPPOSITION and CONJUNCTION.

When the Moon is in her *Quadrature*, ſhe exhibits that Phaſis which we call the *Half Moon*, *i. e.* ſhe ſhines with juſt half her Face; and is ſaid to be biſſected, or *Dichotomiz'd*. See PHASIS and DICHOTOMY.

In the Moon's Progreſs from the Syzygies to her *Quadrature*, her Gravity towards the Earth is continually increaſing by the Action of the Sun; and her Motion retarded for the ſame Reaſon——Her Motion, then, in her Orbit is ſloweſt as her Gravity to the Earth is greateſt when in the *Quadrature*. See GRAVITY.

In her receſs from the *Quadratures* to the Syzygies, the Gravity continually decreaſes, and the Velocity increaſes.

The Ratio is thus: As Radius is to the Sum, or Difference of one and a half the Co-ſine of double the diſtance of the Moon from the Syzygy, and half the Radius; ſo is the addition of Gravity in the *Quadratures* to the Diminution or Increaſe thereof in any other Situation. See SYZYGY.

Hence the Moon's Orbit is more Convex in the *Quadratures*, than in the Syzygies; and hence the Circular Figure of the Moon's Orbit is changed into an Oval, whoſe greater Axis goes through the *Quadratures*; and hence, alſo, the Moon is leſs diſtant from the Earth at the Syzygies, and more at the *Quadratures*. See ORBIT.

'Tis no wonder, therefore, that the Moon approach nearer the Earth when her Gravity is diminiſhed; that Acceſs not being the immediate effect of this Diminution, but of the Inflexion of the Orbit towards the *Quadratures*.

In the *Quadratures*, and within 35 Degrees thereof, the Apſides of the Moon go backwards, or move *in antecedentia*; but forwards in the Syzygies. See APSIDES.

The Moon's Orbit undergoes various Alterations in each Revolution——Its Excentricity is the greateſt when the Line of the Apſides is in the Syzygies; leaſt, when in the *Quadratures*. See EXCENTRICITY.

Conſidering one entire Revolution, the Nodes move ſlower and ſlower as the Moon approaches the *Quadratures*, and reſt when ſhe is therein: But conſidering ſeveral Revolutions, the Nodes go back faſteſt in the *Quadratures*. See NODE.

The Inclination of the Plane of the Moon's Orbit increaſes as the Nodes go from the Syzygies, and is greateſt when the Nodes are in the *Quadratures*. See INCLINATION.

QUADRATURE-*Lines*, or *Lines of* QUADRATURE, are two Lines frequently placed on *Gunter's* Sector.

They are mark'd with the Letter Q, and the Figures 5, 6, 7, 8, 9, 10; of which Q ſignifies the ſide of a Square, and the other Figures the ſides of Polygons of 5, 6, 7, &c. ſides——S there ſtands for the Semi-diameter of a Circle, and 90 for a Line equal to 90 Degrees in the Circumference. See SECTOR.

QUADRATUS, in Anatomy, a Name apply'd to ſeveral Muſcles, in reſpect of their ſquare Figure. See MUSCLE.

QUADRATUS *Femoris*, a Member of the Muſcle *Quadrigeminus*, ariſing from the Apophyſis of the *Iſchium*, and maintaining an equal breadth and bulk to its inſertion juſt below the great Trochanter.

This aſſiſts with the other Muſcles of the *Quadrigeminus*, to turn the Thigh outwards. See QUADRIGEMINUS.

QUADRATUS *Genæ*, or *Maxillæ inferioris*, call'd alſo *Montanus*, is a broad ſquare Muſcle lying immediately under the Skin of the Neck——It ariſes thin and membranous from the upper part of the Spines of the *Vertebræ* of the Neck and the Skin of the ſuperior parts of the *Cucullaris* and pectoral Muſcle; whence, ſpreading over the Neck, it becomes fleſhy, and is inſerted partly into the *Os Hyoides*, and partly into the under Edge of the lower Jaw——It ſerves to pull the lower Jaw downward. See SUBCUTANEUS.

QUADRELS, in Building, a kind of Artificial Stones, perfectly ſquare, whence their Name; made of a chalky, or whitiſh and pliable Earth, &c. dried in the Shade for two Years.

They were formerly in great requeſt among the *Italian* Architects.

QUADRIGA, in Antiquity, a Car, or Chariot drawn by four Horſes. See CAR and CHARIOT.

On the Reverſe of Medals we frequently ſee Victory, or the Emperor, in a *Quadriga*, holding the Reins of the Horſes; whence theſe Coins are call'd among the Curious, *Quadrigates*, or *Victoriates*. See MEDAL.

Various are the Accounts we have of the Author of the *Quadriga*——*Cicero* makes it the Invention of *Minerva*. *Hyginus* attributes it to *Erichtonius* IV. King of the *Athenians*; which Sentiment *Virgil* follows in his *Georgics*, lib. iii. v. 113.——*Eſchylus* gives *Prometheus* the Honour thereof——*Tertullian*, *de Spectac.* l. 9. ſays it was invented among the *Argians*, by *Trochilus*, in honour of *Juno*; and at *Rome*, by *Romulus* in honour of *Mars*, or *Quirinus*. *Adon* of *Vienna*, *Chronic.* Act 3. will have it to have been invented by one *Procidus*, about the time of the eſtabliſhment of the Kingdom of *Athens*. *Laziardels*, *Hiſt. Univerſ. Epitom.* l. 24. ſays the ſame of *Triptolemus*. ——Laſtly, if there be not Opinions enough already, *Herodotus* gives us another; and ſays the *Greeks* borrow'd it from the *Lybians*——*Pliny* tells us that his Seal was a *Quadriga*, lib. xvi. See SEAL.

The Word is form'd from the *Latin*, *quatuor*, four, and *jugum*, yoak. See BIGA.

QUADRIGEMINUS, in Anatomy, a Muſcle, or rather an Aſſemblage of four Muſcles; ſerving to turn the Thigh outward. See THIGH.

The firſt of the conſtituent Muſcles of the *Quadrigeminus*, is the *Pyriformis*; the ſecond and third the *Gemini*; and the fourth *Quadratus Femoris*. See each deſcribed under its proper Article, PYRIFORMIS, GEMINUS, &c.

QUADRILATERAL, in Geometry, a Figure whoſe Perimeter conſiſts of four right Lines, making four Angles; whence it is alſo call'd a *Quadrangular* Figure. See QUADRANGULAR.

If the ſeveral Angles be right, the Figure is a *rectangular Quadrilateral*——If oblique, an *oblique-angular Quadrilateral*. See RECTANGULAR, &c.

If the Sides of a *Quadrilateral* be equal, and the Angles right, the Figure is a *Square*. See SQUARE.

If the Sides be equal, but the Angles unequal, the Figure is a *Rhombus*. See RHOMBUS.

If the Angles be equal, and the Sides unequal, the Figure is a *Rectangle*. See RECTANGLE.

If only the oppoſite Angles and Sides be equal, the *Quadrilateral* is a *Rhomboides*. See RHOMBOIDES.

If the oppoſite Angles and Sides be unequal, the *Quadrilateral* is a *Trapezium*. See TRAPEZIUM.

The two oppoſite Angles of any *Quadrilateral* Figure inſcribed in a Circle, always make two right Angles. See INSCRIBED.

QUADRILL, QUADRILLA, a little Troop or Company of Cavaliers, pompouſly dreſs'd and mounted; for the performance of Carrouſels, Jouſts, Tournaments, Runnings at the Ring, and other gallant Divertiſements. See JOUST, TOURNAMENT, &c.

A regular Carrouſel is to have at leaſt four, and at moſt twelve *Quadrills*.. See CARROUSEL.

Of theſe *Quadrills*, each is to conſiſt of at leaſt three Cavaliers, and at moſt of twelve.

The *Quadrills* are diſtinguiſh'd by the Form of their Habits, or the Diverſity of their Colours. See COLOUR, LIVERY, &c.

The Word is borrow'd from the *Italian*, being a Diminutive of *Squadra*, a Company of Soldiers rang'd in a Square: For *Squadrare* is, properly, to diſpoſe any thing ſquare; whence their *Quadriglia*, the *French Squadrille* and *Quadrilla*, and our *Quadrill*———'Tis not fifty Years ſince they wrote *Squadrilla*.

QUADRIPARTITION, the dividing by four; or a taking of the fourth part of any Number or Quantity. See DIVISION, PARTITION, &c.

Hence *Quadripartite*, &c. ſomething divided into four. See INDENTURE.

QUADRIREME, QUADRIREMIS, a Galley or Veſſel with four Oars on a ſide. See GALLEY.

QUADRUGATA *Terræ*, in old Law Records, is a *Team-Land*; or ſo much as can be till'd by four Horſes. See CARUCATA.

QUADRUPED, in Natural Hiſtory, a four-footed Beaſt.

Mr. *Ray* defines *Quadruped*, a perfect, hairy, viviparous Animal, having but four Feet. See ANIMAL.

There is a great Analogy between the Structure of *Quadrupeds*, and that of Man——The principal differences reſult from their different Poſture; and are ſeen in the *Legs*, *Heads*, *Necks*, *Stomachs*, *Hearts*, and the *Nerves*. See LEG, HEAD, NECK, STOMACH, &c.

Mr. *Ray* gives us the following Scheme or Diviſion of *Quadrupeds*.

Quadrupeds are either hoof'd, (*ungulata*); or claw'd, or digitate, (*unguiculata.*)

Hoofed-QUADRUPEDS, are either, 1. Whole-hoofed, *Solidipeda*, Μονόχηλα, Μόνυχα, *Solidungula*: As the Horſe, Aſs, the Onager or wild Aſs; the Mule, and the Zebra of *Africa*, or the fine ſtriped *Indian*, or *African* Aſs, almoſt like a Mule in Form and Stature. See HOOF.

Of this whole-hoofed Kind, *Ariſtotle* has obſerved, that no one hath two Horns——(he might have ſaid any Horns) no one hath the *Talus*, or *Aſtragalus*, nor have the Males any appearance of Breaſts. See HORN.

2. *Cloven-Footed*, and that either into two diviſions only; as the Δίχηχα, or Biſulcate Kind, which are again ſubdivided into ſuch as are, firſt,

Ruminant, Μηρυκάζοντα, that is, ſuch as chew the Cud; and theſe either have hollow and perpetual Horns, as the Bull, Sheep, and Goat-kind; or *Deciduous*, as the Hart and Deer-kind, which uſually ſhed their Horns annually. See HEAD.

Of the *Bull-kind* are reckon'd theſe; the common *Bos*, of which the Male is *Taurus*, the Female *Vacca*. (2.) The *German Urus*, *Urochs*, or *Aurochs*. (3.) The *Biſon*. (4.) The *Bonaſus*. (5.) The *Bubalus*, or *Buſalo*. (6.) The *Bos Africanus* of *Bellonius*; *Obſ.* l. 2. c. 50. which he takes to be the *Bubalus* of the Antients.

Of the *Sheep-kind*, beſides the common ſort, are reckon'd the *Arabian Ovis Laticauda*, whoſe Tail is ſometimes of 30 *l.* weight; the *Ovis Strepſiceros Cretica Bellonii*; the *Ovis Africana*, with ſhort Hairs inſtead of Wool; the *Ovis Guineenſis*, or *Angolenſis* of *Marcgrave*, (Hiſt. *Braſil.* l. 6. c. 10.)

Of the *Goat kind*, are, beſides the common *Capra Domeſtica*; the *Ibex*, or *German Steinbock*, found in the Tops of the *Alps*; the *Rupicapra*, *French Chamois*, *German Goms*; the *Gazella Africana*, or *Antelope*; the *Gazella Indica*; the *Capra Sylveſtris Africana Grimmii*; the *Capra Mambrina*, or *Syriaca* of *Geſner*; the *Buſelaphus*, or *Moſchelaphus Caii* in *Geſner*; the *Tragelaphus Caii* in *Geſner*.

Of the *Hart* or *Deer-kind*, are reckon'd, the *Cervus*, Ἔλαφος, the red Deer; the *Cervus Platyceros* or *Palmatus*, the fallow Deer; Alce or the Elk; *Rangifer*, the Rain-Deer; the *Axis Plinii*, according to *Bellonius*; the *Caprea Plinii*, the *Cuguacu-eſe*, and *Cuguacu-zapara* of *Marcgrave*; the *Caprea Groenlandica*.

2. Of *Cloven-Footed* Animals into two parts only, and which do not chew the Cud, there is only the Hog and Swine-kind; and under this head, beſides the common Swine, are reckon'd the wild Boar, or Swine; the *Porcus Guineenſis Marcgravii*; the *Porcus Indicus* call'd *Babyrouſſa*; the *Tajaca* or *Aper Mexicanus Moſchiferus* of Dr. *Tyſon*, call'd by *Marcgrave*, *Tajaca Cunigoara*, by others *Quauhtla Coymalt*, and *Quapizolt*, and by *Acoſta* and ſome others *Zaino*.

3. There are ſome four-footed Animals, whoſe Hoof is cloven into four Diviſions; and theſe ſeem to be not Ruminant: As the Rhinoceros, the Hippopotamus, the Tapijerete of *Braſil*, the Capy-Bara of *Braſil*, the Animal *Moſchiferum*.

Clawed or *Digitate* QUADRUPEDS: Of this Kind, there is, (1.) a ſort whoſe Claws are not divided or ſeparated, but adhering to one another, cover'd with one common Skin, but with obtuſe Nails, ſticking out round the Margin of the Foot; as the Elephant, which is Anomalous, and not clearly referable to this Kind or that of Cloven-footed *Quadrupeds*.

(2.) There is another Species of this *Digitate-kind* of *Quadrupeds*, which hath only two Claws, as that of Camels; and tho' theſe have no Horns, they do both ruminate, and have alſo the four Stomachs of horned ruminant Animals. Of the Camel or Dromedary there are two ſorts; one having but one Bunch on the Back, the other two. To this kind belongs the *Peruvian Glama*, which ſome have reckon'd among the Sheep-kind; as alſo the *Pacos*, the *Ovis Indica*, or *Peruviana Vulgo*, much leſs than the *Glama*.

3. A third Species of this *Unguiculate* kind, includes ſuch Animals, as the *Greeks* call'd Πλατυόνυχα, and Ἀνθρωπόμορφα, which have the Foot divided into many Claws, with broad Nails on them; as the Ape and Monkey kind: Of theſe, ſome have no Tails, and are call'd *Simiæ*, or Apes. Others have Tails, and are call'd Monkeys, *Cercopitheci*; and ſuch as have either long or ſhort Tails, if they are of a larger Size, are call'd *Papiones*, or Baboons. There are great Numbers and Varieties of this Species of *Quadrupeds*; of which Naturaliſts have deſcribed theſe: *viz.* the *Ourang*, *Outang*, or *Homo Sylveſtris* of Dr. *Tyſon*, deſcribed by him in a particular Diſcourſe. The *Guarita* of *Braſil*, *Marcgravii*; the *Cagui* of *Braſil*, greater and leſſer; the *Cay* of the ſame Region, deſcribed by *Lerius*; the *Caitaia* of the ſame Country; the *Cercopithecus Barbatus Guineenſis*, two or three ſorts of it; the *Cercopithecus Angolenſis major*; the *Cercopithecus non barbatus Cluſii*; the *Cercopithecus Clus.* call'd *Sagouin*; and if Apes and Monkeys have their Snouts very prominent like Dogs, they are call'd *Cynocephali*.

4. A fourth Species of this *Unguiculate kind*, is, when tho' the Claws are many, yet they are not cover'd at the end with broad flat Nails, like Monkeys or Apes; but are rather like the Talons of Hawks, &c. crooked, and ſharp-pointed: And theſe, in reſpect of their Teeth, may be divided into ſuch as have many *Dentes Primores*, or *Inciſores*, (that is, cutting Teeth) in each Jaw, of which there are two ſorts; a great er, which either have a ſhort, round Head, as the Cat-kind; or a leſſer ſort, having a long ſlender Body, with very ſhort Legs, as the Weaſel or Vermin-kind. There are ſome of this Species of *Quadrupeds*, which have only two large remarkable Teeth in each Jaw; and theſe are of the Hare-kind, and live only upon Herbs, Graſs, &c.

Of the *Cat-kind* of *Quadrupeds* are reckon'd to be the Lion, the Tyger, the *Pardalis*, whoſe Male is *Pardus*, and Female *Panthera*, the Leopard; the *Lupus Cervarius*, or Lynx; the *Catus Pardus*, or Cat-a-mountain, the common Cat, and the Bear.

Of the *Dog-kind* are reckon'd the Wolf, the *Lupus Aureus*, the Jackall; the common Dog, of which kind they enumerate, the Maſtive; the *Canis Venaticus Graius*, or *Græcus*, or, according to ſome, *Scoticus*, the Greyhound; the *Graius Hibernicus*, or *Iriſh* Greyhound; the *Canis Venaticus Sagax*, *Indagator*, *Sectator ferarum*, &c. the Hound; the *Canis Venaticus Hiſpanicus* or *Aviarius*, the Spaniel for Land or Water; the *Vertagus* or Tumbler; the *Canis* Οἰκεῖος, *Domeſticus*, the Houſe-dog; the *Canis Melitæus*, or the Lap-dog; the *Canis Getulus*, or *Iſlandicus*, the Shock; and of all theſe ſorts there are many Varieties of Mongrels, and *Hebridous* Breeds.——Another ſort of the Dog-kind is, the Fox; the Animal *Zibethicum*; the Civet-Cat, as it is corruptly call'd, but by its Teeth and Snout, is plainly of the Dog-tribe; the *American Coati*, or *Rackoon* or *Rattoon*; the *Tzquiepate*; the *Carigueya*, *Maritucaca*, *Carigoy*, *Ropoza* or *Poſſum*; the *Taxus* or *Meles*; the Badger, Grey, or Pate; the *Lutra*, or Otter; the *Phoca*, or Sea-Calf, or Seal; the *Equus Marinus*, or *Morſe*, or Sea-Horſe, miſtaken by ſome for the *Hippopotamus*; the *Dutch* call him *Walras*, the *Danes* and *Iſlanders*, *Roſmarus*; the *Manati*, or *Vacca Marina*, the Sea-Cow.

Of the *Vermin*, or *Weaſel-kind* of *Quadrupeds*, is, firſt, the *Muſtela vulgaris*, the common Weaſel, in *Yorkſhire*, call'd Foumart or Fitcher, (γαλέη) the *Viverra Indica*, call'd *Quel* and *Quirpele*; and another ſort call'd *Mungo*, and *Mungathia*, of a reddiſh grey. The *Muſtela*, the *Ermine* or *Stoat*, if white, and the *Muſtela Sylveſtris*, the Ferret; the *Putorius*, the Pole-Cat; the *Martes*, *Foyna*; the Marten or Martlet; the *Muſtela Zibellina* the Sable; the *Genetta*, and the *Ichneumon Bellonii*.

Of the *Hare-kind* of *Quadrupeds*, are firſt, the *Lepus*, or common Hare; the *Cuniculus*, the Rabbet or Coney; the *Tapeti*, or *Braſil*-Coney, and the *Aperea* of *Braſil*; the *Hyſtrix*, or Porcupine; and the *Hyſtrix Americanus*, or *Cuanda* of *Braſil*; the Caſtor, Fiber, or the Beaver; the *Sciurus vulg.* or Squirrel; the *Virginian*, *Zeylandic*, the *Barbary*, and the *American* flying Squirrel, &c. The *Mus Domeſticus*, major and minor, the common Rat and Mouſe; *Mus major Aquaticus*, the Water-Rat; the Muſk-Rat; *Mus Avellanarum*, major and minor; the Dormouſe or Sleeper, *Mus Noricus*, *Cricetus*, *Alpinus ſeu Marmotta*; the *Cavia Cobaya*, or *Cuniculus Americanus*; the Guinea-Pig; the *Agati*, and *Paca* of *Braſil*; the *Mus Norwegicus*, or *Leming*; the *Glis Geſneri*, or the *Rell*; the *Mus Indicus*, &c.

Ano-

Animalous QUADRUPEDS. To theſe ſeveral Kinds of *Quadrupeds*, the following Anomalous ones muſt alſo be added.

(1.) Such four-footed *Viviparous Animals*, as have a longiſh Snout, with their Feet divided into many Claws, and Toes, and having Teeth; as the *Echinus Terreſtris*, or common Urchin, or Hedge-Hog; the *Erinaceus Indicus albus*; the *Tatu* or *Armadillo prima* of *Marcgrave*; the *Tatuete* of *Braſil*, or the ſecond Species of the *Armadillo*, according to *Marcgrave*; the *Tatu Apara*, his third Species of the *Armadillo*; the *Tatu Muſtelinus*, *Soc. Reg. Mus.* the Weaſel-headed *Armadillo*; the *Talpa*, the Mole, Want, or Mold-warp; the *Mus Araneus*, Shrew, Hardy-Shrew, Shrew-Mouſe.

(2.) *Quadrupedous* and *Viviparous Animals* with a longiſh Snout, having their Feet divided into many Claws or Toes, but without Teeth; as the *Tamandua-guacu* of *Braſil*, *Marcgrave*; the *Urſus Formicarius Cardani*; the great Ant-Bear; the *Tamanduais* of *Braſil*, or *Marcgrave*'s leſſer Ant-Bear.

(3.) *Anomalous flying Quadrupeds*, with a ſhorter Snout, and their Feet divided as above; being of the Bat-kind, or Flitter-Mice; of which there are ſeveral Sizes and different Forms.

(4.) There is one very anomalous Animal which has but three Claws on each Foot; and that is the Aſs, or *Ignavus* of *Marcgrave*, the Sloth, or Sluggard.

(5.) *Viviparous* and *Sanguineous Quadrupeds*, breathing with Lungs, but having only one Ventricle in the Heart; as the *Rana aquatica*, the Frog or Froch; the *Rana arborea*, *ſeu Ranunculus Viridis*, the ſmall Tree or green Frog; the *Bufo*, *ſive Rubeta*, the Toad; the *Teſtudo*, the Tortoiſe, *Greek* χελωνη; of theſe there are Land and Water ones, and many different Species in foreign Parts.

(6.) *Oviparous Quadrupeds*, with a long Tail ſtretched out horizontally, of the Lizard-kind; as the *Lacertus omnium maximus*, the Crocodile; the *Cordylus*, *ſive Caudiverbera*, *Uromaſtix Græcis*, larger than the green Lizard; the *Tapayaxin Novæ Hiſpaniæ*; the *Lacertus orbicularis* of *Hernandez*, the *Lacertus vulgaris*, the common Eft, Swift, or Newt; the *Lacertus viridis*, the green Lizard; the *Lacertus Fucetanus Aldrovand.* at *Rome* and *Naples* call'd the Tarantula; the *Lacertus Indicus*, call'd *Senembi* and *Inguana*; the *Lacertus Braſilienſis*, call'd *Tejuguacu*, and *Temapara* by *Marcgrave*; the *Taraguira*, *Ameira*, *Taraguico Aycuraba*, *Americima*, *Curapopepa*, *Teiunham*, &c. of *Marcgrave*; the *Lacertus Indicus*; the *Scincus*, or *Crocodilus terreſtris*; the *Seps*, or *Lacerta Chocidica*, a kind of footed Serpent; the *Stellio*, the Swift, or ſpotted Lizard; the *Salamandra terreſtris*, *Salamandra aquatica*, the Water Eft; the *Lacerta volans Indica*; and the *Chamæleo*, the Chamelion.

QUADRUPLE, a Sum or Number multiply'd by four, or taken four times.

Quadruple is particularly uſed for Gold Coin worth four times as much as that whereof it is the *Quadruple*. The *Quadruple* of the *Spaniſh* Piſtole is a Piece of four Piſtoles, worth about three Pounds ſix Shillings *Sterling*. See PISTOLE.

The *Quadruple* of the *Louis d'Or* is only equal to two *Louis d'Ors* or *French* Piſtoles, or one Pound thirteen Shillings *Sterling*.

QUÆ *Plura*, a Writ that antiently lay where Inquiſition had been made by an Eſcheator, of ſuch Lands or Tenements as any Man died ſeized of, and all was ſuppoſed not to be found by the Office. See ESCHEATOR.

This Writ was to enquire what more Lands or Tenements the Party died ſeized of. But it is now made uſeleſs by taking away the Court of Wards and Offices.

QUÆ *Servitia*, a Writ. See PER *quæ ſervitia*.

QUÆSTA, in our antient Writers, an Indulgence, or Remiſſion of Penance; expoſed to ſale by the Popes. See INDULGENCE.

QUÆSTUS, or QUESTUS, in Law, is that Eſtate, or thoſe Effects which a Man hath by Acquiſition or Purchaſe; in contradiſtinction to *Hæreditas*, which is what he hath by Deſcent. See GOODS, ESTATE, *&c.*

So in *Glanvile*, lib. 7. *aut habet hæreditatem tantum, vel* quæſtum *tantum, aut hæreditatem &* quæſtum.

QUÆSTIONARII, in our antient Law-Books, were People who went about with Indulgences from Door to Door, deſiring Charity either for themſelves or others. See INDULGENCE.

Matt. Weſt obſerves, 1240, that the King, *Terram ſuam per Papales* Quæſtionarios, *depauperari, &c. permiſit.*

QUAKERS, a Religious Sect, who made their Appearance in *England*, during the Time of the Inter-regnum. See SECT.

They took their Origin from *George Fox*, an illiterate Perſon, born at *Draiton* in *Leiceſterſhire*; and by Profeſſion a Shoe-maker.

The Accounts of thoſe Times tell us, that as he wrought at his Trade, he uſed to meditate much on the Scriptures; which, with his ſolitary Courſe of Life, improving his natural Melancholy, he began at length to have Viſions; and, in conſequence thereof, ſet up for a Preacher.

The new Prophet propoſed but few Articles of Faith; dwelt moſtly on Morality; preach'd mutual Charity, the Love of God, and a deep Attention to the inner Motions and ſecret Workings of the Spirit——He would have a ſimple Worſhip, and Religion without any Ceremonies; making it a principal Point to wait in profound Silence, the Motion and Direction of the Holy Spirit.

The Genius of the Times, the Novelty of the Doctrine, and the great Appearance of Devotion in the Man, ſoon gain'd him Diſciples; and ſome unuſual Shakings and Convulſions which they were ſeiz'd withal at their firſt Meetings, procur'd 'em the Appellation *Quakers*.

They profeſs a great Auſterity of Behaviour; a ſingular Probity and Uprightneſs in their Dealings; a Demureneſs, and Gravity of Countenance; a Coldneſs and Sparingneſs of Diſcourſe, to have time to weigh what they ſay; a great deal of Frugality in their Tables, and of Plainneſs in their Dreſs.

They declaim much againſt the intereſted Views of the *Engliſh* Miniſters; blame all War, and ſet aſide all uſe of Oaths, as prohibited under the Goſpel. See AFFIRMATION.

According to the Genius of riſing Sects, an eager Zeal at firſt led 'em to ſome Extravagancies: They would run about the Streets naked; and were frequently in Priſon for interrupting the Miniſters in Service-time.

One of their Company, *Naylor*, is ſaid to have had the Impiety to allow his Followers to call him Son of God, Son of Juſtice, and King of *Iſrael*; to ſtrew Garments before him, and Hail him at his Entry into *Briſtol*, with *Hoſanna Son of David*. He had his Trial for the ſame, was whip'd for Blaſphemy, and excommunicated by the reſt.

Beſide other Penalties inflicted on 'em, they were laugh'd at, and rally'd in Writing, and expoſed on the Theatre: But they deſpiſed alike both the Preſs and the Priſon, and form'd their Sect, maugre all Oppoſition of both; and under the Direction of *Fox*, *Dewsbury*, and others, grew from a looſe, undiſciplin'd Multitude, into a regular Body, with ſtated Laws and Polity; which they retain with great Oeconomy to this day.

The modern *Quakers* retain nothing of the Extravagancies charged on their Leaders; having approved themſelves a ſober, quiet People, of exemplary Morals, and remarkably charitable and friendly to each other.

Their Doctrines are not eaſily collected; at leaſt, not eaſily repreſented out of their own Terms, which appear ſomewhat ambiguous.

They hold Chriſt to be a Light which hath lighted every Man; and that whoever will ſoberly and ſeriouſly turn into himſelf with a ſincere deſire to know and practiſe his Duty, will not fail to find there a ſufficient Director; a Ray from the Fountain of Light illuminating the Underſtanding, and aſſiſting to diſtinguiſh Good from Evil.

They add, That ſuch as follow the Directions and Convictions of this Light, ſhall be Holy and Acceptable to God; and that this was the End of Chriſt's coming into the World——That ſo far as they follow this Light, they ſhall be infallible; and that it is not Opinions, or Speculations, or Notions of what is true, or Subſcription of Articles or Formula's of Faith, how ſoundly ſoever worded, that make a Man a true Believer or Chriſtian; but a conformity of Mind and Practice to the Will of God, according to the Manifeſtation and Dictates of this divine Principle of Light within 'em.

Our Saviour's Injunction about Baptiſm they underſtand, in a figurative Senſe, of a Converſion and Change of the Heart; and wholly neglect the outward Sign——Water-Baptiſm they hold was only *John*'s; that it was no more than a Type or Figure, fitted for the Infant-ſtate of the Goſpel; and therefore now uſeleſs, in a Diſpenſation, which is ſpiritual and inward.

The ſame they hold of the Supper; alledging, That both allude to old *Jewiſh* Practices, and were uſed as Types or Significations of a near and accompliſhing Work——They add, that the Communion of Saints conſiſts only in a participation of the ſame divine Principle, ſhewing itſelf in an Unity of Spirit.

As to Miniſtry and Ordinances, they deny that any are to be uſed of Man's Wit, or Will, or carnal Invention, or Imitation; or other than what the inward Principle directs 'em to——Accordingly, they have no Perſons ſet apart for the Miniſtry; but without diſtinction of Quality or Sex, every one who is of ſober Life, and approved Converſation, and believes him or herſelf called or moved thereto, is permitted to ſpeak and propheſy in their Aſſemblies.

They

They own the Scriptures to be given by divine Inſpiration, and allow 'em the Appellation of the Form of ſound Words; but refuſe to call 'em the Word of God, as being a Denomination properly attributed to Chriſt alone—They add, that what makes 'em more ſcrupulous in this reſpect, is, that People are apt to be hereby led to think that if they have the Scriptures, they have all; and ſo look for no further Word or Light.

They acknowledge the Holy Three that bear Record in Heaven, Father, Word, and Spirit; but reject the School-Terms, Trinity, diſtinct, Perſons, Hypoſtaſes, &c. as not Scriptural, and as apt to convey too groſs Ideas.

They have been even charg'd with denying the Incarnation, our Saviour's Humanity, Divinity, plenary Satisfaction, and the Reſurrection of the Dead: But this is injurious to 'em; and all that can be juſtly ſaid, is, that they don't allow of 'em in the ſame Senſe, or ſpeak of 'em in the ſame Terms, as is commonly done among others.—They allow the Incarnation, and that the *Godhead* dwelt bodily in Jeſus; and yet many of 'em ſay, there is no Chriſt but what is within 'em: Whence it ſhould ſeem their Notion of the Incarnation only imply'd this, that the Light, which they call the Chriſt within, dwelt in the Man Jeſus Chriſt fully—Their Reaſoning, here, is, that Chriſt, as God, not being diviſible, the Meaſure or Manifeſtation of the Spirit of Chriſt in us, is a Manifeſtation of the *ſame Chriſt* which dwelt bodily and fully in the Man Jeſus Chriſt.

They are ſilent as to the Hypoſtatical Union; and ſome of 'em are charged with allegorizing away the whole Hiſtory of the Crucifixion, the Reſurrection, and Aſcenſion; tho' their beſt and moſt approved Writers have been very explicit in their Acknowledgment of the Reality of the Hiſtory.

They decline the Uſe of Modes or Forms of Civility; expreſſing their Reſpect to their Superiors no other way but by obeying all juſt Laws under their Government.

The Syſtem of *Quakeriſm* is laid down in fifteen Theſes, by *Robert Barclay*, in a well writ Apology addreſs'd to King *Charles* II. Their Hiſtory, writ in *Low Dutch* by *William Sewel*, and ſince tranſlated into *Engliſh*, traces 'em from the beginning to the Year 1717—A Hiſtory of this People was alſo publiſhed *An.* 1695, by *Gerard Croeſe*; but the Author is by them accuſed as having miſrepreſented Facts, and in many reſpects done them injuſtice.

As to Diſcipline and Polity; the Affairs of the Community are all managed under a Democratical Government, by Rules eſtabliſhed by common Conſent; and this principally at their Meetings, whereof they have many kinds; *viz.* Monthly, Quarterly, Yearly, Second Day's Meetings, Meetings of Sufferings, &c.

Their *Monthly* and *Quarterly Meetings* are held in their reſpective Counties—To theſe Deputies are ſent from the ſeveral particular Meetings—Here Enquiry is made into the State of each Meeting; who ſtand faſt to the Rules and Orders, and who backſlide; who pay Tythes, and Church Rates, and who ſuffer for non-payment of either; who are married by Prieſts, &c. and accordingly they proceed to Cenſure, or Encourage—Here too they Excommunicate, and here receive again into Communion; of all which things exact Regiſters are kept.

From theſe Meetings Appeals lie to their *Yearly* ones, which are always held in *London*, and conſiſt of three Orders or Claſſes; *viz.* Repreſentatives ſent from the Quarterly Meetings; Correſpondents for the ſeveral Counties, and foreign Countries; and Miniſters, or Preachers.—Hither are tranſmitted Accounts of what has been tranſacted in all the Monthly and Quarterly Meetings over the World—Here are Meaſures concerted, and Directions given as to Behaviour about Tithes, and Rates, providing for the Poor, compoſing differences, &c.—Here public Accounts are audited, and proper Inſtructions given to the Deputies to be obſerved at their Return, and a yearly Epiſtle of Admonitions diſpatch'd to be read in all the Monthly and Quarterly Meetings throughout the World.

The *Second Day's Meeting*, is a ſtanding Committee conſiſting of the principal Preachers in and about the City, who meet every Monday, to concert particular Caſes, and Exigencies relating to the Body happening between the yearly Meetings; particularly to examine, approve, licenſe, &c. all Books printed in their behalf.

The *Meeting of Sufferings* is held every Week, and conſiſts of the Correſpondents for each County:—Its buſineſs is to receive Complaints from ſuch as have ſuffer'd for non-payment of Tithes and Rates, and to procure 'em Relief, either by ſending 'em Money, for which they have a ſettled Fund, or by ſolliciting their Cauſes above, or both.

QUALI *Jus*, was an antient Writ Judicial, that lay where a religious Perſon had Judgment to recover Land; before Execution was made of the Judgment.

This Writ was iſſued forth to the Eſcheator between Judgment and Execution, to enquire whether the religious Perſon had Right to recover, or whether the Judgment were obtained by colluſion between the Demandant and Tenant to the intent that the true Lord were not defrauded.

QUALIFICATOR, in the Canon-Law, a Divine appointed to *qualify*, or declare the Quality of a Propoſition brought before an Eccleſiaſtical Tribunal; chiefly before the Inquiſition.

The *Qualificators* of the Office are not Judges; they only give their Sentiments on the Propoſitions preſented to 'em—'Tis the Inquiſitors that judge. See INQUISITION.

QUALITY, QUALITAS, that Affection of a thing whence it is denominated *Such*; or that which occaſions a thing to affect our Senſes, in this or that manner, and gives it this or that Denomination.

Thus, that Virtue in Fire, whatever it be, whereby it excites in us the Senſation of Heat, ſince it is that whence the Fire is denominated hot, is the call'd *Quality* of Fire.

The word *Quality*, *Qualitas*, is ſaid to have been firſt introduced into the *Latin* by *Cicero*. Till his time the *Romans* ſtudiouſly avoided the uſing a Term which denoted an Abſtraction; and in lieu thereof, only conſider'd the Concrete, ſignify'd by *Quale*—The like is obſerved of the antient *Greeks*, who did not uſe ποιοτης, but ποιον. See ABSTRACTION.

The Term *Quality*, it is to be obſerved, is very ambiguous; and has been apply'd to ſome things, which ought rather to have been look'd upon as *States* of Matter, or Complexions of ſeveral *Qualities*; as Life, Health, Beauty, &c.

There are, alſo, other Attributes, as Size, Shape, Motion, and the reſt, uſually reckon'd among *Qualities*, which might more conveniently be eſteem'd the primary Modes of the Parts of Matter; ſince from theſe ſimple Attributes, all the *Qualities* are derived. See MODE.

The antient School Philoſophers diſtinguiſh *Quality* in the general, which they call *Metaphyſical* and *Prædicamental Quality*; into *Eſſential*, and *Accidental*—The Moderns, more uſually, into *Spiritual*, and *Corporeal*.

Spiritual QUALITIES, or QUALITIES *of the Soul*, are Affections of the Mind, conſider'd as it is in this, or that Habitude or Diſpoſition—Of theſe, they make two Kinds; the one belonging to the Underſtanding, the other to the Will: Of the former kind are Knowledge, Opinion, Certainty, Doubting, &c. Of the latter, are all the Moral Virtues and Vices. See UNDERSTANDING, WILL, KNOWLEDGE, IGNORANCE, OPINION, &c. See alſo VIRTUE, &c.

Corporeal or Phyſical QUALITIES, are what we chiefly conſider under this Denomination, and to which the Definition above laid down is accommodated.

Philoſophers are divided as to the Nature of theſe *Qualities*, or what they are in the Body—The general Language of the *Peripatetic* School, is, that they are things diſtinct from the Bodies themſelves; are ſuperadded to 'em, or flow from their ſubſtantial Forms: On which Principle, they hold *Qualities* to be real, and denominate 'em Accidents; ſuppoſing 'em to be inherent in Subſtances, tho' not in the relation of Parts, but to be ſuſtain'd thereby as in a Subject, and incapable of ſubſiſting without 'em—In effect, the *Thomiſts* define *Qualities* to be Accidents following or ariſing from the Form; in the ſame Manner as Quantity is an Accident following or ariſing from the Subſtance. See FORM, ACCIDENT, QUANTITY.

The Moderns abſolutely explode the Notion of *Qualities* diſtinct from the Body; and inſiſt, that the Powers whereby Bodies excite in us the Ideas of ſuch *Qualities* are no other than the mechanical Affections of the Bodies themſelves, *viz.* the Figure, Magnitude, Motion, &c. of the Parts whereof they conſiſt. See MECHANICAL.

The principal Conſiderations inſiſted on by the Retainers to real *Qualities*, are, That theſe Powers may be actually ſeparated from the Subſtances they inhere in; as we ſee in Light, Heat, &c. That from theſe very *Qualities* conſider'd as ſo many Determinations, ariſes a very great diverſity in Bodies: And that Bodies, according to the diverſity of their *Qualities*, affect our Senſes differently.

The Adherents to the Experimental way, on the contrary, account for all the *Qualities* of Bodies from mechanical Cauſes.

Thus all the Phænomena of a Clock, the Motion of its Wheels, its Hands, &c. whereby it ſtrikes the Hour, points the Minute, Day, Moon's Age, &c. do all evidently ariſe from the ſingle Spring; which we never imagine to have any particular Powers whereby it ſhould be enabled to make ſuch Diſcoveries; nor any other Principle but that one of Elaſticity—Again, when the Smith who firſt invented Locks and Keys, had made his firſt Lock, it was only a piece of Iron, contrived into a particular Shape; and when, afterwards, he made a Key to it, that alſo, conſider'd in itſelf, was nothing but a piece of Iron of a determinate Figure; but as theſe two pieces of Iron might now be apply'd to one another, after a certain manner, and, as there was a congruity betwixt the Wards of the Lock, and

thoſe of the Key, they now each obtain'd a new Capacity; and it became a principal part of the Notion and Definition of a Lock, that it was capable of being made to open or ſhut, by that other piece of Iron call'd a Key; and it was look'd on as a peculiar Faculty and Power in the Key to be fit to open and ſhut the Lock——And yet by theſe new Attributes there was not added any real or phyſical Entity, either to the Lock or the Key; each of them remaining the ſame piece of Iron, juſt ſo ſhaped, as it was before. And, again, when the Smith made other Keys of different Sizes, or with differing Wards; tho' the firſt Lock could not be open'd with any of thoſe Keys, yet, that Indiſpoſition was nothing new in the Lock, or diſtinct from the Figure it had before thoſe Keys were made.

Why, then, may we not conceive, that ſenſible *Qualities*, tho', by virtue of a certain congruity or incongruity in point of Figure, Texture, or other mechanical Properties, the Portions of Matter they modify are enabled to produce various Effects, on account whereof the Bodies are ſaid to be endowed with *Qualities*; yet, that they are not in the Bodies endowed with them, any real or diſtinct Entities, or differing from the Matter itſelf, of ſuch a determinate Bigneſs, Shape, or other mechanical Modifications?

Thus, tho' the modern Goldſmiths and Refiners reckon it among the moſt diſtinguiſhing *Qualities* of Gold, that it is diſſoluble in *Aqua Regia*, whilſt *Aqua Fortis* will not work upon it; yet theſe Attributes are not in the Gold any thing diſtinct from its peculiar Texture; nor is the Gold we have now of any other nature than it was in *Pliny*'s time, when *Aqua Fortis* and *Aqua Regia* were unknown.

If another *Menſtruum*, of which Mr. *Boyle* ſuggeſts he was poſſeſs'd, ſhould be invented to diſſolve pure Gold in part, and change it into a different metalline Body, there would then ariſe another new Property, whereby to diſtinguiſh this from other Metals; yet the nature of Gold is not at all different now from what it was before the diſcovery of this laſt *Menſtruum*.

There are Bodies neither Cathartic nor Sudorific, with ſome of which Gold being joined, acquires a purgative Virtue, and with others a Power to procure Sweat.——Nature herſelf ſometimes produces things, that have no relations to others: And Art, eſpecially if aſſiſted by Chymiſtry, may cauſe ſo many new Productions, that no Man can tell, but the moſt familiar Bodies may have multitudes of *Qualities* he dreams not of, which will hardly be imagined real phyſical Entities.

We all know that the Sun hath a Power to harden Clay, ſoften Wax, melt Butter, thaw Ice, turn Water into Vapour, make Air expand itſelf in Weather-Glaſſes, contribute to blanch Linnen, render the white Skin of the Face ſwarthy, and mowed Graſs yellow, ripen Fruit, hatch the Eggs of Silk-Worms, Caterpillers, *&c.* and perform many other things, ſome of which ſeem contrary to others; yet theſe are not diſtinct Powers or Faculties in the Sun, but only the Productions of its Heat, diverſify'd by the different Textures of the Body it chances to work on, and the condition of the other Subſtances concern'd in the Operation—And, therefore, whether or no the Sun, in ſome Caſes, has any influence at all diſtinct from its Light and Heat, we ſee that all the Phænomena mentioned, are producible by the Heat of common Fire, duly apply'd and regulated. *Boyle of Forms and Qualities.*

Some of the Antients, and particularly the *Peripatetics*, diſtinguiſh'd *Qualities* into *ſenſible* and *occult*.

Senſible, or *Manifeſt* QUALITIES, are thoſe ariſing from certain Modifications of the Matter, and which become immediately Objects of our Senſes——Such are all thoſe above mentioned.

Tho', in ſtrictneſs, thoſe only are ſaid to be *ſenſible Qualities* which affect ſome one Senſe alone; as Colour does the Eye, Sound the Ear, *&c.*

Theſe are ſometimes, alſo, call'd *Tactile*, or *Tangible Qualities*, by reaſon they only produce their Effect, *i. e.* excite their Ideas in us when contiguous, or in contact with the Organ.

Occult QUALITIES, are certain latent Powers ariſing from the ſpecific Forms of things, whereof no rational Solution can be given on any Principles of Phyſics. See OCCULT.

Senſible Qualities are uſually divided into Primary and Secondary.

Primary, or *general* QUALITIES are ſuch as are found in all Bodies; or which agree to all Matter, conſider'd as Matter, and therefore to the Elements themſelves—Such are Extenſion, Figure, Motion, Reſt, Solidity, Impenetrability, and Number. See BODY, FIGURE, SOLIDITY, *&c.*

Secondary, or *Particular* QUALITIES are ſuch as reſult from a Compoſition or Mixture of Elements, and do not agree to Body as Body, but as a Mixt——Such are Light, Heat, Cold, Colour, Sound, Taſte, Smell, Hardneſs, Softneſs, Fluidity, Firmneſs, Roughneſs, Smoothneſs, Opacity, Tranſparency, *&c.*

According to *Ariſtotle* and the *Peripatetics*, the Primary, or Elementary *Qualities* are thoſe of the four Elements themſelves; *viz.* Heat, Cold, Moiſture, and Dryneſs. See ELEMENT.

The ſecondary *Qualities*, according to the ſame, are all the reſt; which are Combinations or Aſſemblages of the former Elementary ones; as Colour, Odour, Taſte, *&c.*

To give an Idea of *Ariſtotle*'s Method of accounting for theſe ſecondary *Qualities* from his primary ones, we ſhall inſtance in his account of Colour——All Colours, then, ſays he, are generated of a Mixture of the four Elementary *Qualities*: White, *e. gr.* is produced when the Humidity ſurmounts the Heat, as in old Men, who grow grey: Black is produced when the Humidity dries off, as in Walls, Ciſterns, *&c.* Red, *&c.*

Among the School-Philoſophers we meet with other Diviſions of *Qualities*; as *Active*, and *Paſſive*; *Real*, and *Intentional*.

Active QUALITIES, were ſuch by Virtue whereof Effects and Operations were actually produced on other Bodies duly diſpoſed with reſpect thereto——Such were the Heat of Fire, the Moiſture of Water, *&c.*

Paſſive QUALITIES were thoſe whereby Bodies were diſpoſed to receive the Action of others——Such are Inflammability in Oil, *&c.*

Real QUALITIES are thoſe which remain in the Subject; and only act on things adjacent thereto——As Fire in a piece of Iron not ignited, *&c.*

Intentional QUALITIES are thoſe which iſſue from the Subject, and operate at a diſtance——Such is the Light emitted from the Sun, *&c.*

But the Moderns are agreed that either all *Qualities* are real, or all alike intentional.——So that the diſtinction is impertinent.

However ignorant we may be of the Nature of *Qualities*, or the Manner of their Operation; yet we know the Laws of their Intention and Remiſſion——Dr. *Keil* demonſtrates that every *Quality* which is propagated *in Orbem*, ſuch as Light, Heat, Cold, Odour, *&c.* has its Efficacy increaſed or abated in a duplicate Ratio of the Diſtances from the Centre of Radiation, or Exertion of the *Quality*.

Thus, let A (Tab. GEOMETRY, *Fig.* 80.) be a Centre from whence any *Quality* exerts itſelf round about, according to the right Lines A *e*, A *f*, *&c.* The Efficacy of the *Quality*, be it Heat, Cold, Odour, *&c.* will be (at equal diſtances from A) as the Spiſſitude or Thickneſs of the Rays A *b*, A *e*, A *f*. But the Rays within the inner Circle, or rather ſpherical Superficies, *b c d* H, when they come to be extended to the other ſpherical Surface, *e f g* K, will be much leſs cloſe than before, and that in the reciprocal Proportion of the Spaces they take up; that is, if the outer Surface be double of the inner, the Rays there will be but half as thick: But ſince ſpherical Superficies are as the Squares of the Radii, therefore the Efficacy of the *Quality* in the inner Surface will be to that of the outer, as A *e* Square, to A *b* Square. *Q. E. D.*

Sir *Iſaac Newton* lays it down as one of the Rules of Philoſophizing, that thoſe *Qualities* of Bodies which are incapable of being intended and remitted, and which are found to obtain in all Bodies wherein the Experiment could ever be tried, are to be eſteem'd univerſal *Qualities* of all Bodies. See PHILOSOPHIZING.

Chymical QUALITIES——One may diſtinguiſh phyſical *Qualities*, with Mr. *Boyle*, into the firſt, ſecond, and third; to the two laſt of which may be refer'd ſeveral *Qualities* not treated of by the Writers of Phyſical Syſtems; and theſe, for diſtinction ſake, may, ſome of them, be ſtyled the *Chymical Qualities of Things*; becauſe *Ariſtotle* and the Schoolmen, being unacquainted with them, they have been principally introduced by means of Chymical Operations and Experiments: As Fumigation, Amalgamation, Cupellation, Volatilization, Precipitation, *&c.*

By theſe Operations, among other Means, corporeal things come to appear *volatile* or fixed, *ſoluble* or *inſoluble* in ſome Menſtrua, *amalgamable* or *unamalgamable*, &c. which as well deſerve the Name of *Quality*, as ſeveral other Attributes, to which it is allow'd.

To theſe chymical *Qualities* ſome others might be added, which, becauſe of the Uſe that Phyſicians principally make of them, may be call'd *Medical Qualities*, whereby ſome Subſtances received into the human Body, are reſolving, diſcuſſing, ſuppurating, abſterſive, *&c.* For tho' ſome Faculties of Medicines, as thoſe of heating, cooling, drying, attenuating, purging, *&c.* may be conveniently referr'd to the firſt, ſecond, or third *Qualities*, mention'd by Naturaliſts, whilſt others are reckon'd occult; yet as ſeveral of them ought not to be referr'd to the *Qualities* whereto they are often aſcribed; ſo the handling of them may be look'd upon as a *Deſideratum*, and deſerves a diſtinct Place in Natural Philoſophy. See MEDICINE; ſee alſo PURGATIVE, *&c.*

Cosmical QUALITIES, see COSMICAL *Quality*.

QUALITY is also used for a kind of Title given to certain Persons in regard of their Territories, Signories, or other Pretensions. See TITLE.

Thus the King of *Great Britain* takes the *Quality* of King of *France*: The King of *Poland* that of King of *Sweden*: The King of *Sardinia* that of King of *Cyprus* and *Jerusalem*: The Czars of *Russia* and Kings of *Spain*, have whole Pages of *Qualities*——The Emperor of *China* assumes the *Quality* of Son of the Sun.

QUAM *diu se bene gesserit*, a Clause frequent in Letters Patents, or Grants of Offices, to secure them so long as the Person they are granted to, shall not be guilty of abusing the same.

Thus, *e.gr.* we find it in those given to the Barons of the Exchequer; where it intimates that they shall hold the same as long as they shall behave themselves well: which is to be restrain'd to the Matters of their Offices; and signifies no more than the Law would have imply'd, had the Office been granted expresly for Life.

A Grant, therefore, with this Clause, is equivalent to a Grant for Life. See BARON, JUDGE, JUSTICE, *&c.*

QUANTITY, QUANTITAS, any thing capable of Estimation, or Mensuration; or, which being compared with another thing of the same kind, may be said to be greater, or less, than; equal, or unequal to, it.

Mathematics is the Science or Doctrine of *Quantity*. See MATHEMATICS.

Quantity is a general Attribute, apply'd in a very different Manner to things of very different Nature; whence it is impossible to give any universal Definition thereof.

Quantity is apply'd both to Things, and to Modes; and this, either singularly, and to one; or plurally, and to several——In the first Case it is call'd *Magnitude*, in the latter *Multitude*. See MAGNITUDE, *&c.*

Quantity may be reduced to four Classes, *viz.*

Physical, or *Natural Quantity*, which is of two kinds; *viz.* 1. That which Nature furnishes us with, in Matter, and its Extensions. See BODY and EXTENSION——And, 2. In the Powers, and Forces of Natural Bodies; as Gravity, Motion, Light, Heat, Cold, Rarity, Density, *&c.* See FORCE, GRAVITY, *&c.*

Moral Quantity, which depends on the Manners of Men, and the free Determination of their Wills——As the Prices and Values of Things; Degrees of Dignity and Power, Good and Evil, Merit and Demerit, Rewards and Punishments, *&c.*

Notional Quantity, arising from the Operation of the Understanding only——Such as the largeness or narrowness of the Capacity of the Mind, and its Conceptions——In Logic, Universals, Prædicaments, *&c.*——In Grammar, the *Quantity* and Measure of Syllables, Accents, Tones, *&c.*

Transcendental Quantity, as Duration, the Continuation of any Being, Existence, Time, *&c.* See DURATION, TIME, *&c.*

Quantity is also popularly distinguish'd into *Discrete* and *Continued*.

Discrete QUANTITY, is when the Parts whereof it consists, exist distinctly and unconnected together; which makes what we call *Number*. See DISCRETE.

The Antients distinguish'd this into two kinds, *viz.* Permanent, as *Numerus Numerans*; and Successive, as Speech.

Continued QUANTITY, is when the Parts are connected together——This, again, is of two kinds; either *successive* and *improper*, as Time. See TIME.

Or *permanent* and *proper*, as Space. See SPACE.

Permanent Quantity is further distinguishable into length, breadth, and depth. See LINE, SURFACE, and SOLID.

Wolfius gives us a more precise Notion of Mathematical *Quantity*, and its two Species of Discrete and Continued—Whatever is referr'd to Unity in the same manner as one right Line to another, is what we call *Quantity*, or Number in general. See NUMBER.

If, now, the thing be referr'd to a given Unit, as 3, it is call'd a *determinate Number*: if to Unity in the general, or at large, it is call'd a *Quantity*; which, on this Principle, is the same with *indeterminate Number*.

Thus, *e.gr.* the breadth of a River is accounted a *Quantity*: If, then, it be enquir'd how great it is? To conceive its *Quantity* we take some Unit at pleasure, and seek the Relation of the breadth hereto; and according to the different Unit assumed, expres the breadth of the River in a different determinate Number.

The breadth of the River, therefore, is a *Quantity* consider'd as referr'd to a vague Unit, or to Unity at large; but the Unit being determined, the thing is understood by a determinate Number.

In this sense, Algebra is the Arithmetic of *Quantities*. See ALGEBRA.

QUANTITY *of Motion*, in Mechanics, is of two kinds, *viz.* of *momentary Motion*, and of *entire Motion*.

Quantity of entire Motion——The *Cartesians* define the entire Motion as the momentary one, by the Factum of the Mass, or *Quantity* of Matter, into the Velocity; but since Motion is a successive Being, and has no parts co-existing together, its *Quantity* ought to be estimated by the Aggregate of the several Parts existing successively; and is therefore equal to the Factum of the Momenta into the Time.

QUANTITY *of momentary Motion*, is the Factum of the Velocity into the Mass; or a Measure arising from the joint Consideration of the *Quantity* of Matter, and the Velocity of the Motion of the Body; the Motion of any Whole being the Sum or Aggregate of the Motion in all the several Parts. See MOTION.

Hence, in a Body twice as great as another, moved with an equal Velocity, the *Quantity* of Motion is double; if the Velocity be double also, the *Quantity* of the Motion will be quadruple. Hence the *Quantity* of momentary Motion coincides with what we call *Momentum*, or Impetus of a moving Body. See MOMENTUM.

In the Collision of Bodies, the *Quantity* of momentary Motion, which is found by taking the Sum of Motions tending the same way, or their difference if they tend towards contrary Parts; is not at all changed by any Actions of the Bodies on one another. See PERCUSSION.

QUANTITY *of Matter* in any Body, is the Product of the Density into the Bulk; or a *Quantity* arising from the joint Consideration of its Magnitude and Density. See BULK.

As, if a Body be twice as dense, and take up twice as much Space as another, it will be four times as great.

This *Quantity* of Matter is the best discoverable by the absolute weight of Bodies. See MASS, WEIGHT, *&c.*

QUANTITY *Infinite*——Tho' the Idea of Magnitude infinitely great, or such as exceeds any assignable *Quantity*, does include a negation of Limits; yet are not all such Magnitudes equal amongst themselves; but besides *infinite Length*, and infinite Area, there are no less than three several sorts of *infinite Solidity*; all of which are *Quantitates sui generis*; and those of each Species are in given Proportions.

Infinite Length, or a Line infinitely long, is to be consider'd, either as beginning at a Point, and so infinitely extended one way; or else both ways from the same Point: in which Case the one, which is a beginning Infinity, is one half of the Whole, which is the Sum of the beginning and ceasing Infinity, or Infinity *à parte ante*, and *à parte post*, which is analogous to Eternity in Time or Duration, in which there is always as much to follow as is past, any Point or Moment of Time. See ETERNITY.

Nor does the Addition or Substraction of Time, Length or Space of Time, alter the Case, either as to Infinity or Eternity; since neither the one or the other can be any Part of the Whole.

As to infinite Surface or Area, any right Line infinitely extended both ways on an infinite Plane, divides that Plane into equal Parts, the one to the Right, and the other to the Left of the said Line; but if from any Point in such a Plane, two right Lines be infinitely extended, so as to make an Angle; the infinite Area, intercepted between these infinite right Lines, is to the whole infinite Plane, as the Arch of a Circle drawn on the Point of Concourse of those Lines as a Centre, intercepted between the said Lines, is to the Circumference of the Circle; or as the Degrees of the Angle to the 360 Degrees of a Circle.

For an Example——Two infinite right Lines meeting at a right Angle on an infinite Plane, do include a quarter Part of the whole infinite Area of such a Plane: If two parallel infinite Lines be supposed drawn on such an infinite Plane, the Area intercepted between them will be likewise infinite; but at the same time will be infinitely less than the Space intercepted between two infinite Lines, that are inclined, tho' with never so small an Angle, for that in the one Case the given finite Distance of the parallel Lines diminishes the Infinity in one Degree of Dimension; whereas in a Sector, there is Infinity in both Dimensions; and consequently the *Quantities* are one infinitely greater than the other, and there is no Proportion between them.

From the same Consideration arise three several Species of infinite Space or Solidity; for a Parallelepiped, or a Cylinder infinitely long, is greater than any finite Magnitude, how great soever; and all such Solids supposed to be form'd on a given Basis, are in proportion to one another, as those Bases. But if two of those three Dimensions are wanting, as in the Space intercepted between two parallel Planes infinitely extended, and at a finite distance; or with infinite length and breadth, with a finite thickness; all such Solids shall be as the given finite Distances one to another.

But these *Quantities*, tho' infinitely greater than the other, are yet infinitely less than any of those wherein all the three Dimensions are infinite——Such are the Spaces intercepted between two inclined Planes infinitely extended; the Space intercepted by the Surface of a Cone, or the Sides of a Pyramid, likewise infinitely continued, *&c.* of

all

all which, notwithſtanding the Proportions one to another, and to the τὸ πᾶν, or vaſt Abyſs of infinite Space (wherein is the Locus of all things that are, or can be; or to the Solid of infinite Length, Breadth, and Thickneſs taken all manner of ways) are eaſily aſſignable——For the Space between two Planes is to the Whole, as the Angle of thoſe Planes to the 360 Degrees of the Circle. As for Cones and Pyramids, they are as the ſpherical Surface intercepted by them, is to the Surface of the Sphere; and therefore Cones are as the verſed Sines of half their Angles, to the Diameter of the Circle: Theſe three ſorts of infinite *Quantity* are analogous to a Line, Surface, and Solid; and, like them, cannot be compoſed, or have any Proportion one to another.

QUANTITIES, in Algebra, are indeterminate Numbers, or things referr'd to Unity in the general.

Quantities are properly the Subject of Algebra; which is wholly converſant in the Computation of ſuch *Quantities*. See ALGEBRA.

The *given Quantities* are uſed to be noted by the firſt Letters of the Alphabet *a*, *b*, *c*, *d*, &c. the *Quantities ſought* by the laſt *z*, *y*, *x*, &c. See CHARACTERS.

Algebraical Quantities are of two kinds; *Poſitive*, and *Negative*.

Poſitive, or *Affirmative* QUANTITIES are thoſe which are greater than nothing; and which are affected with the Sign + prefix'd; or ſuppoſed to be ſo. See POSITIVE.

Negative, or *Privative* QUANTITIES are thoſe leſs than nothing; which are affected with the Sign — prefix'd. See NEGATIVE.

Hence, 1. Since + is the Sign of Addition, and — the Sign of Subſtraction; a poſitive *Quantity* is produced by adding any real *Quantity* to nothing; *e. gr.* $0 + 3 = 3$; and $0 + a = +a$. And a privative *Quantity* is produced by ſubſtracting any real *Quantity* out of nothing; *e. gr.* $0 - 3 = -3$; and $0 - a = -a$.

For an Illuſtration——Suppoſe when you are quite deſtitute of Money, ſomebody gives you an hundred Pieces; you have then an hundred Pieces more than nothing; which Pieces conſtitute a *poſitive Quantity*.

On the contrary, ſuppoſe you have no Money, yet owe an hundred Pieces; you have then an hundred Pieces leſs than nothing; for you muſt pay an hundred Pieces to have juſt nothing. This Debt is a *negative Quantity*.

Thus in local Motion, Progreſs may be call'd a *poſitive Quantity*, and Regreſs a *negative* one; becauſe the firſt increaſes, and the ſecond diminiſhes the Space paſs'd over.

And in Geometry, if a Line drawn towards any Part be accounted an *affirmative Quantity*; another the contrary way will be a *negative* one.

2. *Privative Quantities*, therefore, are the Defects of the *poſitive Quantities* whereby they are underſtood; and, conſequently are no real *Quantities*: For we meaſure the Defect by the *Quantity* defective; and thus it becomes intelligible.

Since one Defect may exceed another, (*e. gr.* if ſeven be wanting, the Defect is greater than if only three be wanting) and ſince *privative Quantities* are the Defect of *real Quantities*; one *privative Quantity* being taken a certain Number of times, may exceed another. Wherefore *privative Quantities* are homogeneous to one another.

4. But ſince the Defects of a *poſitive Quantity* taken any number of times can never exceed the *poſitive Quantity*, but grows ſtill the more deficient; *privative Quantities* are heterogeneous to *poſitive* ones.

5. Since, then, *privative Quantities* are heterogeneous to *poſitive* ones, homogeneous to *privative* ones; there can be no Ratio between a *privative* and a *poſitive Quantity*, but there is a Ratio between *privative* ones. *E. gr.* $-3^a : -5^a :: 3 : 5$. The Ratio, here, is the ſame as if the *Quantities* were poſitive. But it may be noted, that between 1 and —1, and between —1 and 1, the Ratio is very different.

Addition of QUANTITIES. 1. If the *Quantities* denoted by the ſame Letter be affected with the ſame Sign, the Numbers prefix'd to 'em are added as in common Arithmetic. 2. If they be affected with different Signs, the Addition is changed into Subſtraction; and to the Remainder is prefix'd the Sign of the greater. 3. *Quantities* denoted by different Letters, are added by means of the Sign +; as in the following Example.

$$\begin{array}{r} 4a + 2b - 2c - 5d - g \\ 5a - 2b + bc + 2d - 3g \\ \hline 9a + 4c - 3d - 4g \end{array} \qquad \begin{array}{r} a - b \\ c \\ \hline a - b + c \end{array}$$

Subſtraction of QUANTITIES; ſee SUBSTRACTION.

Multiplication and Diviſion of QUANTITIES; ſee MULTIPLICATION and DIVISION.

Combination of QUANTITIES; ſee COMBINATION.

If a poſitive *Quantity* be multiply'd, or divided by another poſitive *Quantity*, the Reſult is a poſitive *Quantity*.

2. If a negative *Quantity* be multiply'd, or divided by a poſitive, the Reſult is a negative.

3. If a negative *Quantity* be multiply'd, or divided by another negative, the Reſult is a poſitive.

4. If a poſitive *Quantity* be multiply'd, or divided by a negative, the Reſult is a negative *Quantity*.

QUANTITY, in Grammar, is the Meaſure, or Magnitude of the Syllables; or that which determines them to be call'd long, or ſhort. See GRAMMAR, PROSODY.

This *Quantity* is the Object of Proſody; and it is the regard to this that diſtinguiſhes Verſe from Proſe. See VERSE.

The Oeconomy and Arrangement of the *Quantities*, *i. e.* the diſtribution of long and ſhort Syllables, make what we call the Numbers. See NUMBERS.

The *Quantities* are uſed to be diſtinguiſh'd among the Grammarians by the Characters ⏑ *ſhort*, and ⎓ *long*. See CHARACTER.

The Proportion betwixt the long and ſhort Syllables may be generally fix'd the ſame as between the Crochet and Quaver in Muſic; *viz.* as 2 to 1. See TIME.

In moſt Languages there are ſome Syllables whoſe *Quantities* vary, as the Meaſure requires; as in the *Engliſh* *Rĕcŏrd* and *Rĕcōrd*.

Some Authors confound the *Quantities* with the Accent: But the difference is glaring; the former being the length or ſhortneſs of a Syllable, the latter the raiſing or falling of the Voice. See ACCENT.

From two *Quantities*, *viz.* long and ſhort Syllables, ariſe all the Varieties of Poetic Feet, which are very great. *Horace* alone uſes no leſs than twenty-eight. Yet the *Greeks* went vaſtly beyond the *Romans* in this reſpect—— In effect, as many ways as two *Quantities* may be varied by compoſition, and tranſpoſition from two to ſix Syllables, ſo many different Feet have the *Greek* Poets contrived, and that under diſtinct Names, to the Number of 124. Tho' it is the Opinion of ſome of the Learned, that Poetical Numbers may be ſufficiently explain'd from the Feet of two or three Syllables, into which the reſt are to be reſolved.

The Feet form'd by the Antients of the long and ſhort Syllables immediately; are the *Spondee*, conſiſting of two long Syllables; the *Pyrrhic*, of two ſhort ones; the *Trochee*, of a long and ſhort Syllable; and the *Iambic*, of a long and ſhort Syllable. See SPONDEE, TROCHEE, IAMBIC, &c.

Thoſe of three Syllables are the *Moloſs*, conſiſting of three long Syllables; the *Tribrach* of three ſhort ones; the *Dactyl* of one long and two ſhort Syllables; and the *Anapeſt* of two ſhort and one long Syllable. See DACTYL, ANAPEST, TRIBRACH, &c.

The *Engliſh* Tongue admits of no Feet above two Syllables, tho' both the *Latin* and *Greek* allow of ſix.

Our Heroic Verſes conſiſt of five long and five ſhort Syllables intermix'd alternately; tho' not ſo ſtrictly but that the Order may be diſpenſed withall. *Dryden* varies them with admirable Beauty; ſometimes his Heroic Verſe begins with a long Syllable follow'd by two ſhort ones.

The truth is, the *Quantity* of the Syllables is but little fix'd in the modern Tongues; and there is ſtill leſs regard had to it in the Compoſition of modern Verſes——The want of Feet, or rather the ſhortneſs and uniformity of our Feet, makes a world of difference between the Numbers of the antient and modern Verſe. Our Poets are fetter'd, and their Fetters are ſo ſhort, but two poor Links, that it's no wonder they can make no extraordinary Motions.

The Antients ſubſiſted by their *Quantities* alone; ſo well were they diſtinguiſh'd, and ſuch a Variety and Harmony did they afford. Our *Quantities* make ſuch poor Muſic, that we are forced to call in the *Gothic* Aids of Rhime to diſtinguiſh our Verſe from Proſe. See ODE.

Yet have Attempts been made to ſettle our Verſe on the antient and natural footing of *Quantities*, in excluſion of Rhime, and with ſuch ſucceſs too, (witneſs the Immortal *Paradiſe Loſt*) as ſeems to leave the practice of Rhiming inexcuſable——The *French* have likewiſe attempted the ſame in their Tongue, particularly *Jodelet*, and after him *Paſquier*, *Paſſerat*, and *Rapin*; but they have all fail'd. See RHIME.

QUANTUM *meruit*, an Action upon the Caſe, grounded upon a Promiſe to pay a Man for doing ſo much as he ſhould deſerve or merit.

QUARANTAIN, in old Law-Books wrote QUARENTENE, or QUARANTENA, denotes the Space of forty Days.

The Term is borrow'd from the *French*; and is ſometimes uſed for the time of Lent. See LENT.

Quarantain of the King, is a Truce of forty Days appointed by S. *Louis*; during which it was expreſsly forbid to take any Revenge of the Relation or Friends of People, who had fought, wounded, or affronted each other in words.

QUARANTAIN is particularly uſed for the Term of forty Days, which Veſſels, coming from Places ſuſpected of Contagion, are obliged to wait in certain Places appointed, to air themſelves e'er they come into Port.

QUARANTAIN, QUARANTENE, or QUARENTENA, in Law, is a Benefit allow'd by the Laws of *England* to the Widow of a Man dying ſeized of Land; whereby ſhe may challenge to continue in his Capital Meſſuage, or Chief Manſion-Houſe (ſo it be not a Caſtle) for the ſpace of forty Days after his deceaſe——If the Heir, or any other Perſon attempt to eject her, ſhe may have the Writ *de Quarantina habenda*; which lies for a Widow to enjoy her *Quarantine*.

Quarantene is alſo uſed for a quantity of Ground containing forty Perches.——*Quatuor Carucatas terræ arabilis, continentes in Longitudine* 8 Quarentenas, & 8 Quarentenas *in Latitudine*. Chart. Withlafii Reg. Merc. apud Ingulf.

Quarantena *in London ponetur pro reſpectu habend. per* 40 *Dies poſt Summonitionem per breve Regis ut conſulant, &c. ſi ſibi viderint expedire*. MS. de temp. *Ed.* 3.

QUARANTIA, in the *Venetian* Polity, a Court of Judicature compoſed of forty Judges.

The *Venetians* have an *old Civil Quarantia*, *new Civil Quarantia*, and *Criminal Quarantia*.

The *Criminal Quarantia* takes Cognizance of all Crimes except thoſe againſt the State; which belongs to the Council of Ten——The *new Civil Quarantia* judges of Appeals made from Sentences paſs'd by Judges out of the City——The *old Civil Quarantia* takes Cognizance of Appeals from Sentences of ſubaltern Judges in the City.

QUARE *ejecit infra Terminum*, a Writ which lies for a Leſſee in Caſe he be caſt out of his Farm before his Term be expir'd; againſt the Leſſor or Feoffee that ejects him. See LEASE.

It differs from the *Ejectione firmæ*, in that the former lies where the Leſſor, after the Leaſe made, enfeoffs another who ejects the Leſſee; whereas the *Ejectione firmæ* lies againſt any other Stranger that ejects him. See EJECTION.

The Effect is the ſame in both, *viz.* the Recovery of the Reſidue of the Term. See EJECTIONE *Firmæ*.

QUARE *Impedit*, a Writ which lies for him who has purchaſed an Advowſon, againſt him that diſturbs him in the Right thereof, by preſenting a Clerk thereto, when the Church is void. See ADVOWSON.

It differs from the Writ *Aſſiſa ultima præſentationis*, which lies where a Man or his Anceſtors formerly preſented; this other lying for him who is the Purchaſer himſelf—— Where a Man may have the *Aſſiſa*, he may have this Writ; but not contrariwiſe. See ASSISA.

QUARE *Incumbravit*, a Writ which lies againſt the Biſhop, who, within ſix Months after the Vacation of a Benefice, confers it on his Clerk, while two others are contending at Law for the Right of Preſenting. See PRESENTATION, &c.

QUARE *non admiſit*, a Writ which lies againſt the Biſhop for refuſing to admit his Clerk who has recover'd in a Plea of Advowſon.

QUARE *non permittit*, is a Writ that lies for one who has a Right to preſent for a turn againſt the Proprietary.

QUARE *obſtruxit*, a Writ that lies for him who having Right to paſs thro' his Neighbour's Grounds, cannot enjoy the ſame by reaſon the Owner has fenced it up.

QUAREL, QUERELA, in Law, properly relates to perſonal Actions, or at moſt to mixed, wherein the Plaintiff is call'd *Querens*, and in all Declarations of Treſpaſs it is ſaid, *Queritur*. See ACTION, PLAINTIFF, &c.

Yet if a Man releaſe all *Quarels*, or *Querels* (a Man's own Deed being taken moſt ſtrongly againſt himſelf) *Quarel* includes all Actions; and accordingly all Actions, both Real and Perſonal, are hereby releaſed. See RELEASE.

QUARERA, or QUARATIA; ſee QUARRY.

QUARREL, in Law, ſee QUAREL.

QUARREL *of Glaſs*; ſee QUARRY.

The Word is form'd by diminution from the *Latin quadratum*, or the *French quarre*, ſquare; or, perhaps, immediately from the *Italian quadrello*, little ſquare.

QUARRY, in our antient Writers call'd QUARERA, QUADRATA, QUARATIA, a Place under Ground, out of which are dug Marble, Free-Stone, Slate, Lime-Stone, or other Matters proper for Building. See STONE.

See the ſeveral Kinds of *Quarries*, under the ſeveral Articles, MARBLE, SLATE, &c.

For *Quarries of Free Stone*, they firſt open a Hole in manner of a Well, twelve or fourteen Foot in Diameter; and the Rubbiſh drawn out with a Windlaſs in large Oſier Baskets, they heap up all around; placing their Wheel, which is to draw up the Stones, thereupon.

As the Hole advances, and their common Ladder becomes too ſhort, they apply a particular Ladder for the purpoſe—— When they have got through the Earth, and are arrived at the firſt Bank, or Stratum; they begin to apply their Wheel and Baskets to diſcharge the Stones as faſt as they dig through 'em. See WHEEL.

They uſually find ſeven of theſe different Strata, or Beds of Stones, of different Heights, and ſerving for different Purpoſes; tho' the Number as well as Order wherein they follow is various. See STRATA.

As to the *drawing* of the Stone, *i. e.* the freeing it from the Bed; they find that common Stones, at leaſt the ſofter kinds, as they lie, have two Grains; a cleaving Grain running parallel with the Horizon, and a breaking Grain perpendicular thereto——After *uncoping*, then, *i. e.* clearing the Earth from off it, they obſerve by the Grain where the Stone will cleave, and there drive in a good Number of Wedges till they have thus cleft it from the reſt of the Rock.

This done, they proceed to break it: In order to which, applying the Ruler to it at both ends, (ten, *e.gr.* or twelve Inches a-part, according to the Uſes the Stone is intended for) they ſtrike a Line, and by this cut a little Channel with their Stone-Ax; and in the Channel ſet five or ſix Wedges (ſuppoſing the Stone three or four Foot) driving 'em in very carefully, with gentle blows, and ſtill keeping 'em equally forward.

Having thus broke 'em in length, (which they are able to do to half an Inch of any ſize) applying a Square to the ſtraight Side, they ſtrike a Line, and proceed as before to break it in breadth.

This Method of drawing is found vaſtly preferable to that where the Stones are broken at random——One Load of the former is found to do the Buſineſs of a Load and a half of the latter.

But it may be obſerv'd, that this cleaving Grain being generally wanting in the harder Stones; to break up theſe in the *Quarries*, they have great heavy Stone-Axes wherewith they work down a deep Channel into the Stone, and into this Channel, a-top, lay two Iron Bars, driving their Iron Wedges between theſe Bars.

Some, in drawing of Stone, eſpecially the very hard kind, make uſe of Gun-Powder, and with very good effect——In order to which, making a ſmall Perforation pretty deep into the Body of the Rock, ſo as to have that thickneſs of Rock over it judg'd proper to be blown up at once; at the further end of the Perforation they diſpoſe a convenient quantity of Gun-Powder, filling up all the reſt with Stones and Rubbiſh ſtrongly ramm'd in, except a little Space for the Train——By this means is the Rock blown into ſeveral Pieces, moſt of 'em not too unwieldy for a Workman to manage. See GUN-POWDER.

QUARRY, QUARREL, in Glaziery, a Pane, or Piece of Glaſs cut in a Diamond Form. See GLASS.

Quarries, or *Quarrels* of Glaſs are of two Kinds, *viz. Square*, and *Long*; each whereof is of different Sizes, expreſs'd by the Number of 'em which makes a Foot of Glaſs, *viz.* 8ths, 10ths, 12ths, 15ths, 18ths, and 20ths; but all the Sizes are cut to the ſame Angles, the acute Angle being 77° 19′ in the Square *Quarries*, and 67° 22′ in the long ones. See GLAZIERY.

The word *Quarry* ſeems form'd by Corruption from *Quarrel*, (which ſee;) unleſs we'll ſuppoſe it to come immediately from the *French quarre*, ſquare.

QUARRY, in Falconry, is the Game or Fowl which the Hawk is in purſuit of, or has kill'd. See HAWK and HAWKING.

Among Hunters, the *Quarry* is ſometimes uſed for part of the Viſcera of the Beaſt taken; given by way of Reward to the Hounds. See HUNTING.

QUART, q. d. *Fourth*, in Muſic, Fencing, Gaming, &c. See FOURTH, GUARD, PICQUET, &c.

QUART, is particularly uſed for a diminutive Meaſure, containing one fourth or a quarter of ſome other Meaſure. See MEASURE.

Thus the *Engliſh Quart* is a fourth of a Gallon, or two Pints; the *Roman Quart*, or *Quartarius*, was the fourth part of a *Congius*. See GALLON, PINT, CONGIUS, &c.

The *French*, from whom we borrow the Word, beſides their *Quart*, or *Pot* of two Pints, have various other *Quarts*, diſtinguiſh'd by the whole whereof they are quarters; as *Quart de Muid*, *Quart de Boiſſeau*. See MUID and BUSHEL.

They have alſo their *Quart* of a Yard, &c. See QUARTER.

QUARTAN, in Medicine, an intermitting Fever, or Ague, where the Fit returns every third day. See FEVER, &c.

It is call'd *Quartan*, q. d. *fourth*, by reaſon the two ſick days are reckon'd, which, with the two intermitting ones, make four. See TERTIAN.

QUARTATION, among Refiners, a Method of purifying Gold, by melting three parts of Silver with one of Gold; and then caſting the Mixture into *Aqua fortis*; which

which diſſolving the Silver, leaves the Gold at bottom, in form of a black Powder. See REFINING.

Quartation is what we more uſually call *Parting*, or the *Depart*. See DEPART; ſee alſo GOLD, &c.

QUARTELOIS, CARTELOIS, or *Cotuca*, Surtouts, or upper Garments with Coats of Arms quarter'd on 'em, wore by the antient Knights in their Military Expeditions. See SURTOUT, COAT *of Arms*, &c.

QUARTER, the fourth part of a Whole, or Integer divided into four equal Portions. See FOURTH.

In working of Fractions the *Quarter* is expreſs'd by $\frac{1}{4}$, three *Quarters* by $\frac{3}{4}$. See FRACTIONS.

QUARTER, in Weights, is a fourth part of the Quintal, or Hundred Weight. See QUINTAL.

The *Quarter* is 28 Pounds *Avoirdupois*. See HUNDRED *Weight*, POUND, AVOIRDUPOIS, &c.

QUARTER is alſo a dry Meaſure containing 8 Buſhels ſtriked; or the fourth part of a Chaldron. See MEASURE, &c.

Quarterium frumenti conſtat ex octo Buſſellis. Fleta. l. 2. See BUSHEL, CHALDRON, &c.

QUARTER, in Law, *Quarterium Anni*, is the fourth Part of a Year. See YEAR.

Hence the Days whereon thoſe *Quarters* ſtatedly commence, are call'd *Quarter-days*. See DAY.

Quarter-days are the 25th of *March* call'd *Lady-day*; the 24th of *June*, call'd *Midſummer-day*; the 29th of *September*, call'd *Michaelmas-day*; and the 25th of *December*, or *Chriſtmas-day*.

QUARTER *Seſſions*, a Court held Quarterly, by the Juſtices of Peace of each County, alternately, in the chief Towns thereof, appointed by the *Cuſtos Rotulorum*. See SESSIONS, JUSTICE, &c.

Hither the Grand Inqueſt, or Jury of the County is ſummoned to appear, who upon Oath are to enquire of all Traytors, Heretics, Thieves, Murderers, Coiners, Rioters, &c. See INQUEST.

Thoſe who appear to be guilty are by the ſaid Juſtices committed to Priſon, to be tried at the next Aſſizes, when the Judges go their Circuits. See JUDGE, ASSIZE, &c.

QUARTER, in Navigation——A *Quarter of a Point*, *Wind*, or *Rhumb*, is the fourth part of a Cardinal Point, Wind, or Rhumb; or of the diſtance between two Cardinal Points, Winds, &c. See POINT, WIND, and RHUMB.

The *Quarter* contains an Arch of 11° 15'.

The *Quarter* is what *Wolfius*, with regard to the other Diviſions, calls a ſecondary Point of the ſecond Order. See CARDINAL *Point*, &c.

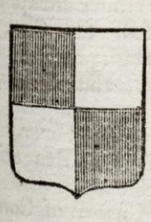
QUARTER *Wind*, at Sea, is a lateral, or ſide Wind; or a Wind which does not blow in Stern, but a little a-ſide of it. See WIND.

Properly, the *Quarter Wind* is that which comes in abaft the Main-Maſt Shrowds, even with the Quarter of the Ship.

The *Quarter Wind* is the beſt of all Winds, as bearing into all the Sails; whereas a Wind blowing full in Stern, is kept off by the Sails of the Mizzen. See SAILING.

QUARTER *of a Ship*, is that part of the Ship's Hull, which lieth from the Steerage-Room to the Tranſom. See SHIP.

QUARTER *Deck*, of a Ship, is that aloft the Steerage, reaching to the Round-houſe. See DECK.



QUARTER, in Aſtronomy——The Moon's Period, or Lunation, is divided into four Stages, or *Quarters*; containing each from ſeven to eight Days. See MOON and LUNATION.

The firſt *Quarter* is from the new Moon to the Quadrature; the ſecond thence to the full Moon, &c. See QUADRATURE, &c.

QUARTER, in Heraldry, is a Term uſed for a Scutcheon, or Coat of Arms. See ESCUTCHEON.

In this ſenſe there are ſixteen *Quarters* required to prove Nobility, in Companies or Orders where none but Nobles are admitted. See NOBILITY.

The Word *Quarters*, requir'd as a Proof of Nobility, is derived hence; that they uſed antiently to put the Coats of Arms of the Father, Mother, Grand-father, and Grand-mother on the four Corners of the Tomb of the Deceaſed—In *Flanders* and *Germany* we frequently ſee Tombs that have eight, ſixteen, and even thirty-two *Quarters*. See TOMB.

QUARTER is alſo apply'd to the Parts, or Members of the firſt Diviſion of a Coat that is *quartered*, or divided into four *Quarters*; as in the Figure adjoining. See QUARTERING.

The King of *Great Britain* in the firſt *Quarter* bears Gules three Lions paſſant Or, &c.—In the ſecond *Quarter* he bears Azure three Flowers de Lys, &c.

Franc QUARTER, is a *Quarter* ſingle, or alone; as that hereto adjoining.

This makes one of the honourable Parts of a Coat. See ORDINARY.

QUARTER *pierced*, in Heraldry, is uſed when there is a Hole or ſquare Figure made in the middle of a Croſs. See PIERCED.

QUARTER *Bullet*, a Bullet *quarter'd* into four or eight Parts. See BULLET, SHOT, &c.

QUARTER is alſo uſed for a Canton, or Diviſion of a City; conſiſting of ſeveral Iſles, &c. ſeparated from ſome other *Quarter* by a River, a great Street, or other Boundary.

Such are the twenty *Quarters* of the City of *Paris*——Antient *Rome* was divided ſeveral times, under its ſeveral Augmentations, into *Quarters*, call'd *Regions*; as may be obſerv'd in the Topographies of *Aurelius Victor*, *Onuphrius Panvinius*, *Marillan*, *Pyrro Ligorio*, *Boiſſard*, and other Antiquaries. See REGION.

In many Cities there are *Commiſſaries of the Quarter* appointed to look to the Polity thereof——The Prior of the *Caporions* accounts himſelf the Chief, and Colonel of the fourten *Regions*, or *Quarters of Rome*. Maſcurat, p. 134.

QUARTER, in War, the Place allotted to certain Forces to live, lodge, and incamp upon, during a Siege or the like. See INCAMPMENT.

The *General's Quarter* is that where the General lodges and incamps in Perſon——They uſe to make Lines of Communication, to join the ſeveral *Quarters* together. See LINE.

The *Quarters* of a Siege are the principal Incampments, ſerving to ſtop the Avenues of a Place. See SIEGE.

QUARTER *Maſter*, an Officer in the Army, whereof there are ſeveral kinds; *viz.*——The

Quarter-Maſter General, whoſe Buſineſs is to provide good *Quarters* for the whole Army. See QUARTERS.

Quarter-Maſter of a Regiment of Foot, who is to provide *Quarters* for his Regiment. See REGIMENT.

Quarter-Maſter of a Troop of Horſe, who is to provide *Quarters* for his reſpective Troop. See TROOP.

QUARTER-*Maſter* is alſo an Officer aboard a Ship, of which there are more or fewer according to her Burthen.—Their Buſineſs is to rummage in the Hold on all Occaſions, to overlook the Steward in his delivery of Victuals to the Cook, and in his pumping and drawing out the Beer; and in general, to take care there be no waſte.

He is alſo to mind the Ship's Loading, which is the Buſineſs he is chiefly employ'd about. See LOADING, &c.

QUARTER is alſo uſed for any Lodgment made in the Field or Campaign out of a Siege——Thus, they ſay, the General has extended his *Quarters* a good way——The Enemy coming made him contract his *Quarters*.

Winter QUARTERS, is the Place allotted Troops to paſs the Winter Seaſon in.——Wherein theſe differ from Garriſon, ſee GARRISON.

The Term is alſo uſed for the Time they continue in this Lodgment; and for the Advantages the Captains make thereof——Thus they ſay, ſuch a Regiment was put to *Winter-Quarters* in ſuch a Village——The *Winter-Quarters* only held three Months——Each Captain will make at leaſt a thouſand Crowns of his *Winter-Quarters*.

In *Spain* they have alſo *Summer-Quarters*.

QUARTERS *of Refreſhment*, is ſome well-provided fertile Spot, to which Troops that have been much fatigu'd and haraſs'd, are ſent to recover their Strength, or Health; even during the Seaſon of the Campaign. See REFRESHMENT.

QUARTER *of Aſſembly*, is the Place of Rendezvous, where the Troops are to meet and draw up, for a March. See PARADE.

There are alſo *Quarters* aſſign'd for the Huckſters, and their Equipage.

QUARTER is alſo the Safety, and good Treatment promiſed to Perſons, or Troops that ſurrender, and lay down their Arms——Thus they ſay the Enemy begg'd *Quarter*.

The Phraſe took its riſe from an Agreement antiently made between the *Dutch* and *Spaniards*, that the Ranſom of an Officer, or Soldier, ſhould be a *quarter* of his Pay——Hence, to beg *Quarter* was to offer a *quarter* of their Pay for their Safety; and to refuſe *Quarter* was not to accept of that Compoſition for their Ranſom. See RANSOM.

QUARTER *Round*, in Architecture, is a Term uſed by the Workmen for any Moulding, in general, whoſe Contour is either a perfect Quadrant, or *quarter* of a Circle, or approaches near that Figure. See MOULDING.

The Architects uſually call it *Ovolo*; *Vitruvius* the *Echinus*. See OVOLO and ECHINUS.

QUARTER *Staff*, a long Staff or Pole, bore by Foreſters, Park-keepers, &c. as a Badge of their Office; and occaſionally uſed as a Weapon.

QUARTER *Wheeling*, or QUARTER *of Converſion*, in the Military Art, is a Motion whereby the Front of a Body of Men is turn'd round to where the Flank was; thus making a *quarter* of a Circle. See CONVERSION, WHEELING, &c.

If it be done to the Right, the Man in the right Angle keeps his Ground, and faces about, while the reſt wheel; if to the Left, the left-hand Man keeps his Place, &c. See EVOLUTION.

QUARTERS, in a Clock, are little Bells which ſound the *Quarters* of an Hour. See CLOCK, HOUR, &c.

QUARTERS, in Building, thoſe ſlight upright Pieces of Timber, placed between the Punchions and Poſts; uſed to lath upon.

They are of two kinds, *ſingle* and *double*——The *ſingle Quarters* are ſawn to two Inches thick and four Inches broad; the *double* four Inches ſquare.

QUARTERIDGE, Money paid quarterly, or by the Quarter.

QUARTERING, in the Sea-Language——When a Ship under ſail goes at large, neither by a Wind nor before a Wind, but as it were betwixt both; ſhe is ſaid to go *Quartering*. See SAILING.

The Term is alſo uſed when a Ship ſails with quarter Winds. See QUARTER *Wind*.

QUARTERING, in Gunnery, is when a Piece of Ordnance is ſo traverſed, that it will ſhoot on the ſame Line, or on the ſame Point of the Compaſs as the Ship's Quarter bears.

QUARTERING, in Heraldry, the dividing a Coat into four or more Quarters, or *Quarterings*; by parting and couping. See QUARTER and QUARTERINGS.

The King of *Great Britain* quarters with *Great Britain*, *France*, *Ireland*, *Brunſwick*, &c. See QUARTERLY.

Counter QUARTERING *a Coat*, is when the Quarters are quarter'd over again, or ſubdivided each into four.

There are *Counter-quarter'd Coats* which have twenty or twenty-five Quarters.

QUARTERINGS, call'd alſo *Partitions* and *Compartiments* are the ſeveral Coats born on an Eſcutcheon; or the ſeveral Diviſions made in it, when the Arms of ſeveral Families are to be placed on the ſame Shield, on account of Intermarriages, or the like. See ESCUTCHEON, SHIELD, &c.

Colombiere reckons twelve ſorts of *Quarterings*; but other Authors give us more.——*viz.* Party per Pale, dividing the Eſcutcheon from top to bottom. See PALE.——Party per Croſs, dividing it from ſide to ſide. See CROSS.——Party of ſix Pieces, when the Eſcutcheon is divided into ſix Parts or Quarters——Party of ten; of twelve; of ſixteen; of twenty; and of thirty-two, when there are ſo many Partitions reſpectively.

Others give the Diviſions in another manner: As——Party per Croſs—per Pale—per Chief—per Pale Inclave—per Bend dexter—per Bend ſiniſter—per Chevron—Barry Bendy of eight Pieces—Paleways of ſix Pieces—Barry of ſix Pieces—Barry of eight Pieces—Bendy of ſix—Checky—Fuſilly, or Lozengy—Paly Bendy, or Bendy Lozengy—Barry Bendy Lozengy, or Bend Lozengy—Gyronny—Barry Lozengy counterchanged—Waved of ſix Pieces—Barry Nebule of ſix Pieces—Party per Saltier—Party per Pale in Point. *See further under the reſpective Articles.*

Colombiere obſerves, that thirty two is the greateſt Number uſed in *France*, but that the *Engliſh* and *Germans* ſometimes extend to forty; as a Teſtimony of the Truth whereof, he ſays, he ſaw the Eſcutcheon of the Earl of *Leiceſter*, Embaſſador Extraordinary in *France* in the Year 1639, divided into the Number of forty; and ſome, he affirms, do go on to ſixty-four ſeveral Coats.

But a Multitude of Quarters makes a Confuſion; and accordingly all the Writers of Armoury cry out againſt it as an Abuſe——The firſt Inſtance of *Quartering* whereof we have any Account, is ſaid to be in the Arms of *Renate* King of *Sicily*, &c. in the Year 1435, who quarter'd the Arms of *Sicily*, *Arragon*, *Jeruſalem*, &c.

William Wickley obſerves, that ſuch *Quarterings* are much properer for a Pedigree to be lock'd up in a Cheſt, and occaſionally produced as an Evidence for the clearing or aſcertaining of Alliances of Families, or Titles to Lands, &c. than to be borne as a Cognizance.

In Blazoning, when the *Quartering* is perform'd *per Croſs*, the two Quarters a-top are number'd the firſt and ſecond; and thoſe at bottom the third and fourth; beginning to tell on the right ſide——When the *Quartering* is by a *Saltier*, &c. the Chief and Point are the firſt and ſecond Quarters, the right ſide the third, the left the fourth.

QUARTERING is ſometimes alſo uſed for the diſtinguiſhing of younger Brothers from Elder. See DIFFERENCE.

QUARTERIZATION, QUARTERING, part of the Puniſhment of a Traytor, by dividing his Body into four Parts. *Walſingham in Ric.* 2. *Auditum & Confeſſum turpiſſima ſcelera tractationi, Suſpendio, Decollationi, Exenterationi & Quarterizationi adjudicavit.*

QUARTERLY, in Heraldry, a Perſon is ſaid to bear *Quarterly*, when he bears Arms *quarter'd*. See QUARTERING.

The King of *Great Britain* bears *Quarterly* of four; in the firſt quarter, Gules, &c. *Great Britain*: In the ſecond, Azure, &c. *Ireland*, &c.

QUARTERN, or QUARTERON, a Diminutive of *Quart*; ſignifying a quarter of a Pint; as a Quart does a quarter of a Gallon. See QUART.

QUARTILE, an Aſpect of the Planets when they are three Signs, or 90 Degrees diſtant from each other. See ASPECT.

The *Quartile* Aſpect is mark'd thus, □. See CHARACTER.

QUARTO, or 4^to^, a Book, whereof four Leaves, or eight Pages, make a Sheet. See VOLUME, BOOK-*Binding*, &c.

QUARTO *Decimans*, QUARTO *Decimani*, an antient Sect in the Church, who maintain'd that *Eaſter* was always to be celebrated conformably to the Cuſtom of the *Jews*, on the 14th day of the Moon in the Month of *March*, whenſoever that Day fell out. See EASTER.

And hence their Name *Quarto decimani*, *q. d.* Fourteenthers. See PASSOVER.

The *Aſiatics* were mightily attach'd to this Opinion, pretending it was built on the Authority of St. *John*, who was their Apoſtle; and Pope *Victor* could never bring 'em to Obedience in this Point, tho' he was upon the point of Excommunicating them——Some are of opinion he actually did Excommunicate them, but it is more probable he contented himſelf with Menaces.

Polycrates, Biſhop of *Epheſus*, wrote a long and warm Letter, in the Name of all the Biſhops of *Aſia*, to *Victor* and the Church of *Rome*, wherein he explain'd at large the Uſage of thoſe Churches with regard to the Celebration of Eaſter; and maintain'd, that herein they only follow'd a conſtant Tradition that had obtain'd immutably among 'em from the Time of the Apoſtle St. *John*, who died at *Epheſus*——But the Pope not ſatisfy'd with this Anſwer of *Polycrates*, had proceeded to Excommunication, but that ſome of the moſt eminent Biſhops, among the reſt *Irenæus*, interpoſed, and diſſuaded him from diſturbing the Peace of the Church by excommunicating a People for adhering to what they accounted a Tradition.

QUASHING, in Law, the overthrowing and annulling a thing. See ANNULLING.——An Array return'd by one that has no Franchiſe, ſhall be *Quaſh'd*. *Coke on Littl.* fol. 156.

QUASI *Contract*, in the Civil-Law, an Act which has not the ſtrict Form of a Contract, but yet has the force thereof. See CONTRACT.

In a Contract there muſt be the mutual Conſent of both Parties; whereas in a *Quaſi Contract*, one Party may be bound or obligated to the other without having given his Conſent to the Act whereby he is obliged.

For an Example——I have done your Buſineſs, in your Abſence, without your Procuration; and it has ſucceeded to your Advantage: I have then an Action againſt you for the recovery of what I have diſburſed, and you an Action againſt me to make me give an account of my Adminiſtration: Which amounts to a *Quaſi Contract*.

QUASI *Crime*, or QUASI *Delict*, in the Civil-Law, the Action of a Perſon who does Damage, or Evil involuntarily.

The Reparation of *Quaſi Crimes*, conſiſts in making good the Damages with Intereſt.

QUASI-*modo Sunday*, *Low Eaſter-Sunday*, or the next Sunday after Eaſter; thus call'd from the initial Words of the Introit of the Maſs for the Day, *Quaſi modo geniti Infantes*. See SUNDAY.

In antient Deeds theſe Words were ſignified by *q.m.g.*

QUATER-*Couſins*, *quatre Couſins*; fourth Couſins, or the laſt Degree of Kindred. See COUSIN, CONSANGUINITY, &c.

Hence, when Perſons are at variance, 'tis ſaid they are not *quater*, or *cater Couſins*.

QUATRE *Nations*, q. d. *Four Nations*, a College founded in 1661, by Cardinal *Mazarin*; for the Education and Maintenance of ſixty Children, Natives of the four Countreys conquer'd by the King, *viz.* fifteen for *Pignerol* and *Italy*, fifteen for *Alſatia*, twenty for *Flanders*, and ten for *Rouſſillon*. See COLLEGE.

QUATUOR *Vir*, in Antiquity, frequently wrote IIII.VIR, a *Roman* Magiſtrate who had three Colleagues join'd with him in the ſame Adminiſtration.

To the *Quatuor-viri* was committed the Charge of Conducting and Settling the Colonies ſent into the Provinces. See COLONY.

Upon

Upon unlucky Accidents, and other dangerous Affairs, it was uſual to create *Quatuor-virs* with Commiſſion to take Care *ne quid detrimenti Reſpublica caperet*, that the Republic were not prejudiced.

There were alſo *Quatuor-viri* appointed to inſpect and take Care of Repairs, &c.

QUAVER, in Muſic, a Meaſure of Time, equal to one half of the Crochet, or one eighth of the Semibreve. See TIME.

The *Quaver* is mark'd by the Character 𝅘𝅥𝅯. See CHARACTER.

The *Engliſh Quaver* makes what the *French* call their *Crochue*, Crochet; becauſe of the Hook at bottom. See CROCHET.

The *Quaver* is divided into two Semiquavers noted 𝅘𝅥𝅯𝅘𝅥𝅯, and four Demiſemiquavers mark'd 𝅘𝅥𝅯𝅘𝅥𝅯𝅘𝅥𝅯𝅘𝅥𝅯.

QUAVERING, in Muſic, the Act of trilling, or ſhaking; or the running of a Diviſion with the Voice. See DIVISION.

QUAY, *Kay*, a ſpace of Ground paved on the Shore of a River, or Port; deſtined for the loading and unloading of Merchandize. See WHARF.

QUEEN, *Regina*, a Woman who holds the Crown of a Realm, ſingly, and by Right of Blood. See CROWN.

The Name is alſo given by way of Courteſy to her that is married to the King; call'd, by way of diſtinction, *Queen Conſort*.

The Widow of a King is call'd *Queen Dowager*. See DOWAGER.

The firſt is in all Conſtruction the ſame with a King, and has the ſame Power and Prerogative in all reſpects that the King has. See KING.

The *Queen Conſort* is inferior, and a Perſon diſtinct from the King——Tho' ſhe be a *Feme covert*, yet may ſhe ſue, and be ſued in her own Name, may make Leaſes, and Grants, &c. as a *Feme ſole*. See WIFE and FEME.

She has ſeveral other Prerogatives——Tho' an Alien, ſhe may purchaſe Lands in Fee-ſimple, without either Naturalization, or Denization; ſhe may preſent to a Benefice; nor is Plenarty a Bar againſt her more than againſt the King——She ſhall not be amerced if ſhe be non-ſuited in any Action; may not be impleaded till firſt petitioned.

To conſpire her Death, or violate her Chaſtity, is High-Treaſon. She had antiently a Revenue of *Queen-gold*; which ſee.

At preſent ſhe hath a very large Dower, with a Royal Court and Officers apart.

The *Queen Dowager* has this particular, that ſhe loſes not her Dignity tho' ſhe marries a private Gentleman——Thus, *Queen Katherine*, Widow of *Henry* V. being married to *Owen ap Theodore* Eſq; maintained her Action as *Queen* of *England*——Much leſs does the *Queen* by Inheritance, follow her Husband's Condition, or is ſubject as other *Queens*, but is Sovereign to her own Husband, as *Queen Mary* was to King *Philip*; unleſs it be otherwiſe appointed by Parliament.

The Word *Queen* is deriv'd from the *Saxon* Cpen, *Cwen*, *Uxor*, the Wife of any one, but apply'd by way of Excellency to the Wife of the King only; whence ſhe was antiently call'd the *King's Queen*; the *Weſt-Saxons* having no other Name for a *Queen*, but the King's Wife. *Aſſer. de Ælfred. Rebus*, &c.

She was alſo call'd *Lady*, in *Saxon*, Hlæfdia; juſt as *Madame*, or *Madamoiſelle*, are ſtill uſed for the Wife, and Daughter of the Duke of *Orleans*——

QUEEN *Gold*, *Aurum Reginæ*; a Royal Revenue, belonging to the *Queen* of *England*, during her Marriage to the King, both by Law, Cuſtom, and Preſcription; and payable by divers Perſons (upon ſeveral Grants of the King) by way of Oblation out of Fines; amounting to Ten Marks or upwards, *viz.* one full tenth part above the entire Fine; *e.gr.* ten Pounds on every hundred Pounds Fine, &c. See FINE.

This becomes a real Debt to the *Queen*, by the Name of *Aurum Reginæ*, upon the Party's bare Agreement with the King for a Fine, and recording it; without any further Promiſe or Contract for this tenth part extraordinary.

QUEEN's *Bench*. See KING's *Bench*, &c.

QUE *Eſtate*, in Law, a Plea whereby a Man entituling another to Land, &c. ſaith, that the ſame Eſtate which himſelf had, he now has from him.

Thus, *e.gr.* the Plaintiff alledges, that ſuch four Perſons were ſeiz'd of Lands, whereunto the Advowſon in queſtion belong'd in Fee; and who did preſent to it, and that afterwards the Church was vacant, *que Eſtate*——i.e. *which Eſtate* he now has, and by virtue thereof preſents, &c.

QUE *eſt meme*, in Law, a Term uſed in Actions of Treſpaſs, &c. for a direct Juſtification of the very Act complain'd of by the Plaintiff as a Wrong. See TRESPASS.

Thus in an Action upon the Caſe, the Plaintiff ſaying the Lord threaten'd his Tenants at Will in ſuch ſort, as he forced them to give up their Lands; the Lord in his Defence pleads, that he ſaid to them, if they would not depart, he would ſue them at Law——*Que eſt meme*, *i.e.* this being the ſame Threatning that he uſed, the Defence is good.

QUERELA, *Quarel*, in Law—In an Action where the Plaintiff is *Querent*, *i.e.* Complainant, his Brief, Complaint, or Declaration, was call'd *Querela*. See QUARREL.

QUERELA *coram Rege & Concilio*, a Writ whereby one is call'd to juſtify a Complaint of a Treſpaſs againſt the King himſelf; before the King and his Council.

QUERPO. See CUERPO.

QUERRIES, or EQUERRIES, the Grooms of the King's Stables. See EQUERRY.

Gentleman of the Querry, is an Officer appointed to hold the King's Stirrup when he mounts on horſeback. See GENTLEMAN.

QUEST, or INQUEST, an *Inquiſition*; or Inquiry made upon Oath of an Impannel'd Jury. See INQUEST.

QUEST-*Men*, Perſons choſe yearly in each Ward, to enquire into Abuſes, and Miſdemeanors, eſpecially ſuch as relate to Weights and Meaſures.

QUEST, in Hunting, the ſeeking out of Hounds; or the venting and winding of Spaniels. See SCENT, HOUND, HUNTING, &c.

The Word is form'd of the *French quête*, Search, of the *Latin quæſitum*, a thing ſought.

QUESTION, QUÆSTIO, in Logic, &c. a Propoſition, whoſe Truth a Perſon being inquiſitive about, propoſes it, by way of Interrogation, to another. See INTERROGATION.

Logical Queſtions are variouſly diſtributed; the ordinary Diviſion is into *firſt* or *primary Queſtions*; as, *Quid eſt*, What is ſuch a Thing?——And *ſecondary*, which ariſe out of the former; as, How is it?

QUESTION, in Law——The *Queſtion de Jure* muſt always be diſtinguiſh'd from the *Queſtion de Facto*. See FACTO and JURE.

The firſt is decided by the Law, as explain'd and declared by the Judge; the ſecond is decided by the Proof of a Truth in diſpute. See TRIAL, JURY, &c.

QUESTOR, QUÆSTOR, an Officer in antient *Rome*, who had the Care of the publick Treaſure. See TREASURE.

The *Queſtor-ſhip* is very antient, as having been eſtabliſh'd under the Kings——In the Time of the Republick, the Senate appointed *Queſtors* in each Province, to aſſiſt the Proconſuls, as Lieutenants, or Treaſurers, in the Adminiſtration of the Revenues: But under the Emperors, there was but one *Queſtor*, or Treaſurer General of the Empire. ——Thoſe interior, or ſubordinate *Queſtors* were call'd Commiſſioners of the *Queſtor*, *Adjutores Quæſtoris*.

The *Queſtor*'s Office was originally confined to the Army. —They paid the Soldiery, took charge of Moneys coming by Spoil and Plunder, &c.

At length there were new ones erected to reſide in the City, and to receive the public Money, Taxes, Tribute, &c. ——Their Number was increaſed, as the Empire increaſed: *Sylla* augmented it to twenty.

There was alſo another kind of *Queſtors* whoſe Office was to enquire into, and take Cognizance of Capital Crimes.

The Word is form'd *à quærendo*, ſeeking, ſearching.

QUESTOR *Sacri Palatii*, or of the *Sacred Palace*, was one of the firſt Dignities under the Emperors of *Conſtantinople*——'Twas the *Queſtor* that ſubſcribed the Reſcripts of the Emperor, and the Anſwers to the Requeſts and Supplications preſented him——He drew up and ſign'd the Laws and Conſtitutions which the Emperor thought fit to publiſh; and took care of the Adminiſtration of Juſtice.

Some compare his Function to that of our Lord High Chancellor——'Twas uſually one of the *Juris Conſulti* that was charged with this Office; it being required that he ſhould know the Laws of the Empire, be able to dictate them, ſee them executed, and judge of Cauſes brought by way of Appeal before the Emperor.

Conſtantine was the firſt who erected *Queſtors* of the Sacred Palace. See PALACE.

QUESTUS *eſt nobis*, a Writ of Nuſance, which by Stat. 15 *Edw.* I. lies againſt him to whom the Houſe, or other thing that breeds the Nuſance is deſcended, or alienated; whereas before that Statute, the Action lay only againſt him who firſt levied, or cauſed the Nuſance to the Damage of his Neighbour. See NUSANCE.

QUESTUS, or QUÆSTUS; ſee QUÆSTUS.

QUEUE *de Aronde*, q. d. *Swallow's Tail*, in Fortification, a Term apply'd to Horn-Works, when narrower at the Gorge than the Face; *i.e.* when the Sides open towards the Campaign, or contract towards the Gorge. See HORN-WORK.

The

The Name is occaſion'd by their Reſemblance in Figure to a Swallow's Tail, which the *French* call *queue d'aronde*.

Of this kind are ſingle and double Tenailles; and ſome Horn-Works whoſe Sides are not parallel. See TENAILLE.

On the contrary, when the Sides are leſs than the Gorge, the Work is call'd *Contre queue d'aronde*.

QUEUE *d'aronde*, in Carpentry, a Method of Jointing. See DOVE-*Tail*.

QUEUE, in Heraldry, the Tail of a Beaſt. See TAIL.

If a Lion have a forked Tail, he is blazon'd by *double-queued*.

QUIA, in Logic; ſee REASON.

QUIA *Improvide*, a Superſedeas granted in many Caſes where a Writ is erroneouſly ſued out, or miſ-awarded. See WRIT.

Thus it is granted in behalf of a Clerk of the Chancery ſued againſt the Privilege of the Court, in the Common-Pleas, and purſued to the Exigent.

QUICK-*Lime*; ſee LIME.

QUICK-*Silver*, a very ponderous fluid Mineral, properly call'd *Mercury*.

For the Method of gaining *Quickſilver*, of preparing it, &c. with its Properties, Uſes, &c. ſee MERCURY.

QUID, *What*, in the Schools, is uſed for the Definition of a thing. See DEFINITION.

It is thus call'd by reaſon the Definition anſwers to the Queſtion, *Quid eſt*, What is it? See QUESTION.

Hence we have two kinds of *Quids*; *Nominal*, *Quid nominis*; and *Real*, *Quid rei*.

QUID *pro quo*, in Law, a Latin Phraſe, importing as much as the *Greek* αναλλαγμα, among the Civilians; *viz.* a mutual Performance of both Parties to a Contract; or a giving of one thing for another—As ten Pounds for a Horſe. *Kitchin*.

QUID *pro quo*, or QUI *pro quo*, is alſo uſed in Phyſic to expreſs a Miſtake of an Apothecary, in adminiſtring one Medicine for another; or in uſing an Ingredient in a Compoſition different from that preſcribed. See SUCCEDANEUM.

In Propriety, the *Quid pro quo* is a Miſtake in the Phyſician's Bill, where *quid* is wrote for *quo*, one thing for another; or of the Apothecary in reading *quid* for *quo*, and giving the Patient the wrong Medicine. See PRESCRIPTION.

Hence the Term is in the general extended to all Miſtakes committed in Medicine, either in the Preſcription, the Preparation, or Application of Remedies.

A Northern Phyſician in a printed Theſis on *quid pro quo's* owns ingenuouſly, that they are very frequent——He diſtinguiſhes very accurately a great Variety of Kinds of *quid pro quo's*; ſome with regard to the Operation, others with regard to the Subject, and others with regard to their Form, or their Effects.

The firſt comprehends the *quid pro quo's* of the Phyſician, the ſecond thoſe of the Patient, the third thoſe of the Apothecary.

He adds *quid pro quo's* of the Chirurgeon, and of the Cook; *quid pro quo's* of the Nurſe, &c. Nor does he omit that there are ſalutary *quid pro quo's*, dangerous *quid pro quo's*, indifferent, &c.——God preſerve us from *quid pro quo*.

QUIDDANY, or QUIDDENY, of the *Latin Cydonium*, or *Cydoniatum*, a Conſerve of Quinces. See MARMELADE.

QUIDDITY, QUIDDITAS, in the Schools, a Word of the ſame Signification with *Eſſence*. See ESSENCE.

The Name is derived hence, that it is by the Eſſence of a thing that it is *talc quid*, ſuch a *quid*, or very thing; and not another——When upon ſeeing, or hearing the Name of a thing whoſe Nature, &c. we are unacquainted withal, we ask *Quid eſt*, What is it? we mean no more by the Interrogation, but that we deſire to have its Nature and Eſſence explain'd by a Definition——Whence *Quiddity* is uſually defined the Eſſence known or expreſs'd in a Definition. See DEFINITION.

And hence what is eſſential to a thing is ſaid to be *Quiddative*——As *Quiddative* Knowledge, &c.

QUIESCENT, ſomething at Reſt; ſee REST.

QUIETISM, the Sentiments of the *Quietiſts*, a Religious Sect which made a great noiſe towards the Cloſe of the laſt Century.

Molinos, a *Spaniſh* Prieſt, who died at *Rome* in the Priſon of the Inquiſition, paſſes for the Author of *Quietiſm*; and yet the *Illuminati* in *Spain* had taught ſomething like it before. See ILLUMINED.

The Name is taken from a ſort of abſolute Reſt, and Inaction, which the Soul is ſuppos'd to be in, when arriv'd at the State of Perfection, which in their Language is call'd *the unitive Life*——To arrive at this, a Man is firſt to paſs thro' the purgative way; that is, thro a Courſe of Obedience, inſpir'd by the Fear of Hell: Hence he is to proceed into the illuminative way, e'er he arrives at Perfection; to go thro' cruel Combats, and violent Pains; *i.e.* not only the uſual Dryneſſes of the Soul, and the common Privations of Grace, but infernal Pains: He believes himſelf damn'd; and the Perſuaſion that he is ſo, continues upon him very ſtrongly ſeveral Years: St. *Francis de Sales*, ſay the *Quietiſts*, was ſo fully convinc'd thereof, that he would not allow any body to contradict him therein——But the Man is, at length, ſufficiently paid for all this; by the Embraces of God, and his own Deification.

The Sentiments of the Quietiſts, with regard to God, are wonderfully pure, and diſintereſted——They love him for himſelf, on account of his own Perfections, independently of any Rewards or Puniſhments: The Soul acquieſces in the Will of God, even at the time when he precipitates it into Hell; inſomuch that inſtead of ſtopping him on this occaſion, *B. Angele de Foligny* cry'd out, *Haſte, Lord, to caſt me into Hell: Don't delay, if thou haſt abandon'd me, but finiſh my Deſtruction, and plunge me into the Abyſs.*

At length, the Soul, after long Travail, enters into Reſt, into a perfect *Quietude*——Here 'tis wholly employ'd in contemplating its God; it acts no more, thinks no more, deſires no more; but lies perfectly open, and at large, to receive the Grace of God, who by means thereof drives it where it will, and as he will.

In this State, it no longer needs Prayers, or Hymns, or Vows; Prayers where the Spirit labours, and the Mouth opens, are the Lot of the Weak, and the Imperfect: The Soul of the Saint is, as it were, laid in the Boſom, and between the Arms of its God, where, without making any Motion, or exerting any Action, it waits, and receives the divine Graces——It, then, becomes happy: quitting the Exiſtence it before had, it is now chang'd, it is tranſform'd, and, as it were, ſunk and ſwallow'd up in the Divine Being, inſomuch as not to know or perceive its being diſtinguiſh'd from God himſelf. *Fenel. Max. des Saints.*

QUIETISTS, the Diſciples of *Mic. de Molinos*; or the Adherents to the Opinions deliver'd in the Article QUIETISM.

QUIETUS, q. d. *freed*, or *acquitted*; a Term uſed by the Clerk of the Pipe, and the Auditors in the Exchequer, in their Acquittances or Diſcharges given to Accomptants; which uſually conclude with the Words *Abinde recepit Quietus*; which is call'd a *Quietus eſt*.

A *Quietus eſt* granted to a Sheriff diſcharges him of all Accounts due to the King. See SHERIFF.

QUINARIUS, QUINARY, in Antiquity, a little *Roman* Coin, equal to half the *Denarius*. See COIN.

The *Quinarius* was properly the *Roman* Half-Penny. See DENARIUS.

The Medaliſts indeed uſe the Term *Quinarius* in the general for a Medal of any Matter, not exceeding the Size of our Six-Pence; but F. *Chamillart*, in an expreſs Diſſertation, ſhews this to be an Abuſe——The Silver Coins, current under the Republic, he ſhews, were two: the one weighing a Drachm, and call'd *Denarius*, as containing ten As's; the other weighing half a Drachm, and call'd *Quinarius*, as containing five As's: which Coins continu'd on the ſame footing under the Emperors. See AS.

Hence the Origin of the Word *Quinarius*; and hence, in propriety, 'tis only the Silver Medal of the Weight of half a Drachm that the Name belongs to; the *Romans* having never given it to any other Species of the ſame Size therewith——'Tis only by way of Analogy, therefore, that the Moderns apply it to Medals of Gold, or Copper, of the ſame Size with the Silver *Quinarius*; thoſe of Gold being fix'd at a Value much above, and thoſe of Braſs much below five As's.

The only Relation between theſe *Quinarii*, is, that the gold *Quinary* is the half of a gold Medal as to Weight and Value, and the braſs *Quinary* half a braſs Medal, as the ſilver *Quinary* is half a ſilver Medal.

Hence a Series of *Quinaries* ſhould ſeem at leaſt as neceſſary in the Cabinets of the Curious, as the Series of great Medals; they being all equally different Species of Money, which teach us how many kinds of Pieces there were of any Metal current in Commerce. See SERIES.

Add to this, ſays our Author, that the *Quinaries* were of a finer and more finiſh'd Coin than the other Medals, being wrought by the Hands of the Maſters; which ſeems owing to the Nicety requir'd in Engraving whole Figures in ſo ſmall Compaſs. He adds, that tho' *Quinaries* are very ſcarce, yet *M.* the Duke of *Maine* has almoſt a compleat Set of 'em.

QUINCUNX, q. d. *quinque unciæ*; a *Chequer*, or ſomething that has five Inches, Ounces, or Parts.

The Term is chiefly uſed in Gardening for a Plantation of Trees, diſpoſed originally in a Square, conſiſting of five Trees, one at each Corner, and a fifth in the Middle; which diſpoſition repeated again and again, forms a regular Grove, Wood, or Wilderneſs, and when view'd by an

Angle

Angle of the Square, or Parallelogram, preſents equal and parallel Alleys. See WILDERNESS.

Or the *Quincunx* is the Figure of a Plantation of Trees, diſpoſed in ſeveral Rows, both length and breadthwiſe; in ſuch manner as that the firſt Tree of the ſecond Row commences in the Centre of the Square form'd by the two firſt Trees of the firſt Row, and the two firſt of the third; reſembling the Figure of a five at Cards.—The fineſt manner of planting Trees to form a Grove, is in the *Quincunx*. See GROVE.

'Tis of this kind of *Quincunx* that *Cicero* ſpeaks in his *Cato major*; and *Quintilian*, lib. 8. cap. 3.

The modern *Quincunxes*, *Daviler* obſerves, are made like thoſe of the Antients, except for the fifth Tree, which is now generally diſuſed; ſo that being, as it were, netted, and their Alleys view'd by the Side of the Rectangle, they form a perfect Chequer.

QUINCUNX, in Aſtronomy, *&c.* a Poſition, or Aſpect of the Planets when diſtant from each other 150 Degrees, or five Signs. See ASPECT.

QUINDECAGON, in Geometry, a plain Figure which has fifteen Sides and fifteen Angles. See FIGURE.

If the Sides be all equal, 'tis a *Regular Quindecagon*. See REGULAR.

Euclid ſhews how to Inſcribe it in a Circle, *Prop.* 16. *c.* 4. And the Side of a regular *Quindecagon* ſo deſcribed, is equal in Power to the half-difference between the Side of the Equilateral Triangle, and the Side of the Pentagon; and alſo to the difference of the Perpendiculars let fall on both Sides, taken together.

The Word is form'd ſomewhat irregularly from the *Latin*, *quinque*, five; and the *Greek* γωνια, Angle.

Pentedecagon would be more regular.

QUINDECIM VIR, XV-*Vir*, a *Roman* Magiſtrate, who had fourteen Collegues join'd with him in the ſame Function.

Under *Tarquin the Proud*, there were firſt two Magiſtrates erected to take care of the Sacrifices to be perform'd; theſe were call'd *Duumvirs*. See DUUMVIR.——Their Number, at length, grew to ten, and then they were call'd *Decemvirs*. See DECEMVIR.——In the time of *Cicero* it had reach'd fifteen, when they aſſum'd the Name of *Quindecim virs*; and tho' their Number grew to ſixty afterwards, yet *Servius* obſerves, on the VIth of the *Æneid*, that their Name never changed, but they ſtill continued to be call'd *Quindecim viri*.

'Twas they examin'd the Sibyls Books, and were the Interpreters thereof; yet they never did this but by expreſs Order of the Senate, declared by a *Senatus-Conſultum*.——They alſo preſided at the Sacrifices, and other extraordinary Ceremonies of Religion. See SACRIFICE.

On Medals, a Dolphin join'd with a Tripod marks the Prieſthood of the *Quindecim viri*; who, to publiſh their ſolemn Sacrifices, uſed, the Eve thereof, to carry a Dolphin at the end of a Pole, throughout the City; this Fiſh being eſteem'd ſacred to *Apollo*, as the Crow was among Birds.

QUINI-SEXTA, in Eccleſiaſtical Hiſtory, a Council held at *Conſtantinople* in the Year 692; call'd alſo the Council in *Trullo*, and by the *Greeks Penthecte*, *q. d.* fifth-ſixth; as intimating that it was only a Supplement of the two preceding Councils. Tho', in Propriety, *Fleury* obſerves, it was a Council itſelf. See COUNCIL.

Marſhall obſerves, that the fifth and ſixth General Councils having made no Canons, the Orientals judg'd it neceſſary to ſupply that defect by this; ſo that the 102 Canons falſly attributed to thoſe, were, in reality, made here. See TRULLO.

QUINQUAGENARIUS, among the *Romans*, was an Officer in the Army who had command of a Company of fifty Men.

Quinquagenarius was alſo an Officer of Policy, who had the inſpection of fifty Houſes, or Families.

Laſtly, in the antient Monaſteries, the *Quinquagenarius* was a Superior who had fifty Monks under his Guidance.

QUINQUAGESIMA-SUNDAY, *Shrove Sunday*; thus call'd as being about the fiftieth Day before Eaſter. See SHROVE-*Sunday*.

Antiently, they uſed *Quinquageſima* for *Whit-Sunday*, and for the fifty Days between Eaſter and Whit-Sunday; but to diſtinguiſh this *Quinquageſima* from that before Eaſter, it was call'd the *Paſchal Quinquageſima*.

QUINQUANNION, QUINQUENNIUM, in Antient Cuſtoms, a reſpite of five Years which inſolvent Debtors formerly obtain'd by virtue of the King's Letters, to have time for the payment of their Debts. See RESPITE.

When the thing intended was only to prevent the Sale of their Effects at an under Value; the Term of one Year was ordinarily granted, call'd the Benefit of *Annion*. See ANNION.

But when the Debtor would avoid the ſurrendring of his Effects, upon proving that he was reduced by Poverty, Loſſes, *&c.* to make uſe of this Expedient, the Term of five Years was granted, call'd the *Benefit of Quinquannion*.

QUINQUATRIA, in Antiquity, a Name given the Feaſts of *Minerva*, otherwiſe call'd *Panathenæa*. See PANATHENÆA.

Some think they were term'd *Quinquatria*, becauſe they laſted five Days; but others with more reaſon, becauſe they fell out five days after the Ides of the Month.

QUINQUENNALIA, in Antiquity, Games, or Feaſts celebrated every fifth Year, in honour of the deified Emperors. See GAME, *&c.*

The *Quinquennalia* began to be expreſs'd on Medals about the middle of the third Century——F. *Pagi* produces a Medal wherein are engraven thoſe of the Emperor *Poſthumus*; which is not found in any Medals of his Predeceſſors.

QUINQUENNALIS, in Antiquity, a Magiſtrate in the Colonies, and municipal Cities of the *Roman* Commonwealth. See COLONY, *&c.*

The *Quinquennales* were much the ſame with the *Ediles* at *Rome*. See EDILE.

They were not thus call'd from their continuing in their Office five Years; but becauſe they were elected every fifth Year, to preſide at the Cenſus, and to receive the Declaration each Citizen made of his Effects. See CENSUS.

QUINQUE *Portus*, the five Cinque Ports. See CINQUE *Port*.

The five are *Haſtings*, *Romney*, *Hythe*, *Dover*, and *Sandwich*——To the firſt thereof belong *Winchelſea* and *Rye*, which are eſteem'd Members of the Cinque Ports.

Servitium quod Barones Quinque Portuum *præſcriptorum recognoſcunt facere ad ſummonitionem Regis per annum, ſi contigerit per* 15 *dies ad cuſtum eorum proprium, ita quod primus dies computatur a die quo vela navium erexerunt, uſque partes ad quas tendere debent, vel ulterius quam diu Rex voluerat ad cuſtum ejus.*

QUINQUE-VIR, frequently wrote V-*Vir*, a *Roman* Magiſtrate, who had four Collegues join'd with him in the ſame Function.

There were various kinds of Officers thus denominated—*Pomponius* the Lawyer mentions *Quinque-viri* on this, and on that ſide the *Tiber*, eſtabliſhed for the Adminiſtration of Juſtice in the Night-time, in lieu of the ordinary Magiſtrates, who were not judged proper to run up and down the Streets in the dark.

Roſinus tells us, that it was ſometimes the *Quinque-viri* who conducted the Colonies, and divided the Lands aſſign'd them, among the ſeveral Families. See COLONY.

Sometimes the *Epulones* were five in Number; in which caſe they were call'd *Quinque-viri*. See EPULONES.

The *Quinque-viri monetarii* were Officers firſt erected under the Conſulate of *Valerius Poplicola*, to moderate the exceſſive Uſury, or Intereſt, which Creditors or Bankers uſed to exact upon the People. See USURY.

QUINQUINA, QUINAQUINA, call'd alſo *China China*, and *Kin-Kina*, a Medicinal Bark brought from the *Weſt-Indies*; call'd alſo, by way of Eminency, the *Bark*; and *Cortex Peruvianus*, the *Peruvian Bark*, from the Country whence it is brought; and popularly the *Jeſuits Bark*, becauſe at its firſt Introduction chiefly ſold and adminiſtred by the Jeſuits. See CORTEX.

The Tree which yields this Bark grows in a Province of *Peru* call'd *Quito*, on the Mountains near the City of *Loxa*——The Natives call it *Ganaperide*, and the *Spaniards Palo de Calenturas*, *i. e.* Fever-Wood.

There are two kinds——the one wild, the other cultivated; whereof the latter is much the beſt.

The *Quinquina* was but little known in *Europe* till the Year 1640——The Jeſuits of *Rome* firſt brought it in vogue in *Spain*, and *Italy* in 1649; and in 1650, the Cardinal *de Lugo*, of that Order, brought it into *France*.

It was at firſt ſold for its Weight in Gold: when reduced into Powder, it is by Foreigners call'd the *Cardinals Powder*; among us uſually, the *Jeſuits Powder*, *Pulvis Patrum*.

It met with a world of Oppoſition at firſt——*Chiflet* and *Plempius* diſtinguiſh'd themſelves againſt it. But is now almoſt univerſally allow'd one of the greateſt and beſt Remedies within the whole Province of Medicine.

Some call the Gentian-Root the *European Quinquina*, becauſe good againſt intermitting Fevers. See GENTIAN.

QUINSEY, or QUINZY, or QUINCY, in Medicine, the *Squinancy*, or *Angina*. See ANGINA and SQUINANCY.

QUINSIEME, or QUINZIEME, in our old Law-Books, a Tax antiently levied at the Rate of one *Fifteenth* Part of the Value of all moveable Goods. See TAX and FIFTEENTH.

It is a Miſtake committed by ſeveral Authors to make this a Tax of the fifteenth Part of all Lands; it being of the Goods only.——It was firſt granted by Parliament, 18 *Edw.* 1. viz. *Computus* quintæ decimæ *Regi*, *An.* 18. *per Archiepiſcopos*, *Epiſcopos*, *Abbates*, *Priores*, *Comites*, *Barones*,

rones, & omnes alios de Regno, de omnibus bonis mobilibus conceſſæ.——The City of *London* paid this Year for the Fifteenth 2860 *l.* 13 *s.* 8 *d.* and the Abbot of St. *Edmund's* 666 *l.* 13 *s.* 4 *d.* which was by compoſition; and thereupon had all the temporal Goods of their Diſtrict diſcharged of the Fifteenth.

The way of Collecting it was by two Aſſeſſors appointed in every County by the King, who appointed twelve more in every Hundred to make a true Valuation of every Man's perſonal Eſtate upon which the fifteenth Part was levied.

QUINT, a Sequence of five Cards of the ſame Colour. See SEQUENCE, PICQUET, *&c.*

QUINTA ESSENTIA; ſee QUINTESSENCE.

QUINTAIN, QUINTENA, in antient Cuſtom, a Poſt driven into the Ground, with a Buckler fix'd to it, for the Performance of Military Exerciſes on Horſeback, throwing of Darts, Breaking of Lances, *&c.*

Borel, Matth. Paris, &c. deſcribe the *Quintain* as a kind of Mark, form'd like a Man from the Navel upwards, holding a Shield in his left Hand, and in his right a Sword or Stick; the whole ſo fitted as to turn round on its Foot, and ſo as that a Cavalier running a-tilt againſt it with a Lance, if he hit it in the Breaſt, it whisk'd round, and, unleſs he were very dextrous, ſtruck him with the Sword held in the other Hand.

In other Places, a-top of a Poſt was erected a ſlender Beam fitted to turn round a Spindle; at one of whoſe Ends was a ſloap or flat Board, and at the other a Bag of Sand, or Dirt——The Sport was, with a long Staff, or wooden Lance, to ride a-tilt at the Board, and to be either ſo skilful or lucky to eſcape the Blow of the Sand-Bag.

This ſome take to be the ſame with the *Arietum Levatio*, frequently prohibited in our old Synods and Epiſcopal Conſtitutions.

The Cuſtom is ſtill retain'd in *Shropſhire*, and ſome other Counties, among the Nuptial Solemnities——He that breaks the moſt Poles againſt the *Quintain* has the Prize, which was antiently a Peacock, now a Garland.

Some derive the Word from an antient Game call'd *Quintus*; others from a Man call'd *Quintus*.

The *Vallus* and *Paſſus* mention'd in *Cæſar*, are taken, by *Vigenere*, for a kind of *Quintain*, or Wooden Man fix'd up as an Adverſary, or Man of Straw, to prove one's Dexterity againſt.

Mention is made of this Exerciſe in the Code *de Aleatoribus*, and in the *Paratitles* of *Cujas* on the ſame—— *Juvenal* mentions Women engaging therein;

Aut quis non vidit vulnera Pali?

QUINTAIN was alſo a Right which the Lord had to oblige all the Millers, Watermen, and other young People unmarried, to come before his Caſtle every three Years, and break ſeveral Lances, or Poles, againſt a Poſt, or wooden Man for his Diverſion.

QUINTAL, in Commerce, the Weight of an hundred Pounds. See HUNDRED *Weight*.

The *Quintal* admits of ſome difference in different Places, according as the Pound conſiſts of more or fewer Ounces, and as the Ounce is lighter or heavier. See POUND and OUNCE.

Thus, *e. gr.* the *Paris Quintal*, or Hundred, yields 123 Pounds at *Montpelier*; and the *Montpelier* Hundred only 81 Pounds at *Paris*.——The *Quintal* of *Conſtantinople* is eſteem'd the heavieſt of all thoſe uſed in the *Levant*. It contains 45 Ocquas, the Ocquas weighing two *Dutch* Pounds $\frac{9}{16}$; ſo that the *Quintal* is equal to 112 Pounds $\frac{3}{4}$ of *Amſterdam*, 124 Pounds of *Venice*, and 160 of *Leghorn*.

The *Engliſh Quintal* uſually conſiſts of 112 Pounds Avoirdupois, and is divided into four Quarters. See QUARTER.

QUINTAL was alſo formerly uſed for a Weight of Lead, Iron, and other common Metals, uſually equal to an hundred Pounds, at ſixſcore to the Hundred.

QUINTESSENCE, QUINTA-ESSENTIA, in Chymiſtry, a Preparation conſiſting of the Eſſential Oil of ſome Vegetable Subſtance, mix'd and incorporated with Spirit of Wine. See OIL, *&c.*

Thus, on a proper quantity, *e. gr.* of Eſſential Oil of Fennel, pouring twelve times the quantity of pure Alcohol prepared *per ſe*; they inſtantly unite into one ſimilar Liquor, which is the *Quinteſſence* thereof.

The Antients were perfectly unacquainted with the Method of diſſolving Oil in Spirit of Wine; and even ſome of the Moderns have queſtion'd its Reality: But the Certainty of the thing is eaſily proved from the Inſtance above.

If ſuch *Quinteſſence* be ſeveral times digeſted, cohobated, *&c.* the Oil will at length be broke ſo fine, as, like the Spirit itſelf, perfectly to mix with Water; which is one of the moſt extraordinary Effects in all Chymiſtry. See SPIRIT, SULPHUR, *&c.*

After the like manner is made a *Quinteſſence* of Camphor, by only reducing it into a Powder, and pouring on Spirit of Wine. See CAMPHOR.

Quinteſſences thus prepared are of great Medicinal Virtue; as may appear from the pure and potent Ingredients uſed in the Compoſition, which retain, in a great degree, all the Virtues of the Plants they are procured from: And hence their Denomination. See ESSENCE.

Boerhaave thinks they might properly be call'd Vegetable Sulphurs made potable, and rais'd to their utmoſt degree of Power and Efficacy. See SULPHUR.

Dry *Quinteſſences* may be made from the Liquid ones, by adding to 'em ſome Eſſential Oil of the ſame Vegetable from whence the liquid *Quinteſſence* was procured, with a little Sugar; all mix'd together, and diſtill'd by a gentle Heat till all the Moiſture is come over: The Matter remaining is a dry *Quinteſſence*.

This Form is principally uſeful to Travellers, Sailors, *&c.* inaſmuch as it renders the *Quinteſſence* portable; ſo that the quantity, *e. gr.* of a Pin's Point, ſhall be an efficacious Medicine.

QUINTESSENCE, in Alchymy, is a myſterious Term ſignifying the fifth, or laſt and higheſt Eſſence, or Power of a natural Body.

This is ſuppoſed to be, as it were, the Soul drawn from the groſs Body and its four Elements, by a moſt perfect Diſtillation; and by means hereof, the thing is ſaid to be ſpiritualiz'd, *i. e.* render'd exceeding pure, ſpirituous, and, as it were, incorruptible. *Dict. Hermetique.*

The Antients, who allow'd of nothing real but what has a Body; would have the Soul of Man to be a fifth Element, a kind of *Quinteſſence* without a Name, unknown here below, indiviſible, immovable, all cœleſtial, and divine. *Fenelon.*

QUINTESSENCE *of the Elements*, is the *Hermetical Mercury*. See MERCURY.

QUINT-EXACT, in old Law-Books, the laſt Call of the Defendant ſued to an Outlawry.

If he appears not to it, he is by the Judgment of the Coroners return'd Outlaw'd; if a Feme, waved. See EXIGENT, OUTLAWRY, WAIF, *&c.*

QUINTILE, QUINTILIS, in Aſtronomy, an Aſpect of the Planets, when they are 72 Degrees diſtant from one another, or a fifth Part of the Zodiac. See ASPECT and CHARACTER.

QUINTILIANS, QUINTILIANI, a Sect of antient Heretics, the ſame with the *Pepuzians*; thus call'd from their Propheteſs *Quintilia*. See PEPUZIAN.

In this Sect the Women were admitted to perform the Sacerdotal and Epiſcopal Functions; grounding their Practice on that Paſſage of St. *Paul* to the *Galatians*, where he ſays, *That in Chriſt there is no diſtinction of Males and Females.*

They attribute extraordinary Gifts to *Eve*, for having firſt eaten of the Tree of Knowledge; tell mighty things of *Mary* the Siſter of *Moſes*, as having been a Propheteſs, *&c.* *Philip*, the Deacon, add they, had four Daughters, who were all Propheteſſes.

In their Aſſemblies, it was uſual to ſee the Virgins enter in white Robes perſonating Propheteſſes——The *Quintilians* bore a good deal of reſemblance to the modern Quakers. See QUAKER.

QUIRE of Paper, of the *French Caher*; the quantity of 24 or 25 Sheets. See PAPER.

QUIRISTER, or CHORISTER, *Choriſta*, a Perſon appointed to ſing in the Quire or Choir of a Cathedral. See CHORISTER.

QUIRINALIA, in Antiquity, Feaſts celebrated among the *Romans* in honour of *Romulus*, who was call'd *Quirinus*. See QUIRITES.

The *Quirinalia* were held on the 13th of the Kalends of *March*, *i. e.* on our 17th of *February*.

QUIRITES, in Antiquity, an Appellation given to the People of *Rome*.

It took its Riſe from the *Curetes*, the Inhabitants of the *Sabin* Town *Cures*; on this occaſion——*Romulus*, and *Tatius* King of the *Sabins*, having united their two People, and their two States into one; upon *Romulus*'s Death and Deification, the *Sabins*, out-doing the *Romans* in number, became Maſters of the Councils; and accordingly appointed that *Romulus* ſhould be denominated *Quirinus*, from *Cures* a City of the *Sabins*, or rather from *Quirinus*, the Name of a God worſhip'd in that City.

From the new *Quirinus*, all the People came afterwards to be call'd *Quirites*; unleſs we'll ſuppoſe that the ſame Authority which denominated *Romulus*, *Quirinus*, from *Cures*, did alſo denominate the People *Quirites*, immediately from the *Curetes*.

Some Authors derive the Word *Quirinus* from *Curis*, which in the *Sabin* Tongue ſignify'd a Pike or Halberd—— *Struvius* adds, that *Romulus* was always painted with Pike in Hand.

QUIRK, in Building, a Piece of Ground taken out of any regular Ground-Plat, or Floor——Thus, if the Ground-Plat were Square, or Oblong; and a Piece be taken out of

of a Corner, to make a Court, or Yard, &c. the Piece is call'd a *Quirk*.

QUIS, in Natural Hiſtory, a kind of Marcaſite of Copper, from which the *Roman Vitriol* is drawn. See MARCASITE and VITRIOL.

It is alſo call'd *Pyrites*. See PYRITES.

QUIT-CLAIM, *Quieta clamantia*, a Releaſe or Acquitting of a Man of any Action, that he hath or may have on ſome certain occaſion; or a quitting one's Claim or Title. See CLAIM.

QUIT-RENT, q. d. *Quiet-Rent*, a certain ſmall Rent, payable yearly, by the Tenants of moſt Manors in token of Subjection; upon the Payment whereof they are quit or free till it becomes due again. See MANOR, &c.

In ſome antient Records it is written *White-Rent*; becauſe paid in Silver, to diſtinguiſh it from Rent-Corn, Rent-Pepper, &c. See RENT.

QUITTER-BONE, among Farriers, a hard, round Swelling, upon the Coronet of a Horſe's Foot; or between the Heel and the Quarter. See HOOF.

Or it is an Impoſthume breeding between the Hoof and Coffin-bone, on the upper Part; and ſhewing itſelf by a Swelling on the Coronet.

Sometimes it is occaſion'd by a Gravel under the Shoe, or by a Bruiſe, Stab, Prick of a Nail; or from peccant Humours deſcending to that Place; or a Blow, Strain, or Over-reach, &c.

It occaſions the Horſe to halt much, and the Swelling grows viſible, and comes to a head in four or five days, and breaks out with Matter at a little deep Hole, like a Fiſtula.

QUOD *Clerici non eligantur in Officio Balivi*, &c. is a Writ that lies for a Clerk, who by reaſon of ſome Land he hath, is made, or like to be made, a Bailiff, Beadle, or Reeve, or ſuch-like Officer. See CLERICO *infra ſacros*, &c.

QUOD *non permittat*. See CONSUETUDINIBUS & *Servitiis*.

QUOD *perſona nec prebendarii*, &c. a Writ that lies for Spiritual Perſons, when diſtrained in their Spiritual Poſſeſſions, for the Payment of a Fifteenth, with the reſt of the Pariſh. See QUINZIEME.

QUODLIBETICAL *Queſtion*, or *Quæſtio* QUODLIBETICA, a College Term for a Theſis, or Problem, antiently propoſed to be debated in the Schools out of Curioſity and Entertainment, rather than for the ſettling of any uſeful Point.

The Term is form'd from the *Latin Quodlibet*, any thing, what you pleaſe; and ſo well ſatisfy'd were the Public with the Impertinences of theſe Queſtions, that the Term *Quodlibet* has been ſince retained to ſignify any little, ridiculous Quibble.

QUO JURE, a Writ that lies for him who has Land, wherein another challengeth Common of Paſture time out of mind.

The deſign hereof is to compel the Party to ſhew by what Right or Title he challengeth it.

QUO MINUS, a Writ that lies for him who has a Grant of Houſe-bote in another Man's Wood, againſt the Grantor making ſuch Waſte, as that the Grantee cannot enjoy his Grant. See HOUSE-*bote*.

The Writ *Quo minus* alſo lies for the King's Farmer in the Exchequer, againſt him to whom he ſelleth any thing by way of Bargain, touching his Farm; or againſt whom he hath any Cauſe of perſonal Action.——For by the Vendee's detaining any Due from him, the Farmer is made leſs able to pay the King's Rent.

Under this Pretence, any one who pays the King a Fee-Farm Rent, may have this Writ againſt any other for Debt or Damage, and bring the Cauſe to trial in the Exchequer. See EXCHEQUER.

QUO WARRANTO, a Writ that lies againſt him who uſurps any Franchiſe, or Liberty againſt the King; as to have Waife, Straw, Fair, Market, Court Baron, Leet, or ſuch like, without good Title.

It alſo lies againſt him that intrudeth himſelf as Heir into Land. See INTRUSION.

QUOIN, or COIN, a-board a Ship, is a Wedge faſten'd on the Deck, cloſe to the Breech of the Carriage of a Gun, to keep it firm up to the Ship's Side.

The Word is form'd from the *Latin Cuneus*, Wedge. See WEDGE.

QUOINS, in Architecture, the Corners of Walls. See WALL.

The Word is particularly uſed for the Stones in the Corners of Brick-Buildings——When theſe ſtand out beyond the Brick-work (their Edges being chamfer'd off) they are call'd *Ruſtic Quoins*. See RUSTIC *Work*.

Cantic QUOINS are ſhort, three-legged *Quoins*, put between Casks to keep 'em ſteady.

QUOITS, a Kind of Exerciſe or Game, known among the Antients under the Name of *Diſcus*. See DISCUS; ſee alſo EXERCISE and GAME.

QUORUM, a Term frequently mention'd in our Statutes, and often uſed in Commiſſions, both of Peace, and others. See COMMISSION, PEACE, &c.

It is thus call'd from the Words in the Commiſſion, *Quorum* A. B. *unum eſſe volumus*.

For an Example——Where a Commiſſion is directed to ſeven Perſons, or to any three of them, whereof A. B. and C. D. to be two; there A. B. and C. D. are ſaid to be of the *Quorum*, becauſe the reſt cannot proceed without them.

So a Juſtice of the Peace and *Quorum*, is one, without whom the reſt of the Juſtices in ſome Caſes cannot proceed. See JUSTICE.

QUOTATION, in Literature, a *Citation*; or a Paſſage rehearſed expreſly in one Author from another. See CITATION.

Quotations are uſed to be diſtinguiſh'd by inverted Comma's, thus; " Half an Age ago *Quotations* were won-" derfully common; and *Ovid* and *Catullus* came every " day with the Pandects to the aſſiſtance of the Widow and " the Orphan."——*La Bruyere*.

The *Quotations from the Old Teſtament*, found in the New, have occaſion'd infinite Doubt, Diſpute, and Criticiſm——The Apoſtles are frequently referring to the Old Teſtament, and *quoting* Paſſages and Prophecies thence as fulfill'd in our Saviour; yet theſe Paſſages, thus *quoted*, are frequently either not found in the Old Teſtament, or are not urged in the New according to the literal and obvious Senſe they ſeem to bear in the Old.

A late ingenious Author, in an Eſſay upon the Truth of the Chriſtian Religion, frankly owns, that the Evangeliſts ſometimes apply to the Meſſiah Paſſages of the Old Teſtament, which, as they lie in our preſent Copies, plainly relate to ſome other Perſon, or Thing.—This is evident, *e.gr.* in the Paſſage, Matth. ii. 15. *Out of* Egypt *have I call'd my Son*; which are *quoted* from *Hoſea* xi. where it is plainly underſtood of the coming of the *Iſraelites* out of *Egypt*. See PROPHECY.

This proves a heavy Obſtacle in the way of Chriſtianity, which the Divines, Commentators, Critics, &c. have long labour'd to remove, tho' by very different means.

Some have recourſe to a double Completion; and imagine, that tho' the Prophecies were primarily accompliſh'd in other Events, yet they might have a ſecondary one in the Meſſiah: But others ſet aſide a double Completion, except where the Prophet himſelf declares as much, as making all Prophecy uſeleſs.

The generality chuſe therefore to have recourſe to an Allegorical, or Typical, or Spiritual Meaning in the Prophecies, &c. and ſuppoſe 'em to have been thus underſtood among the antient *Jews*, thus fulfill'd in our Saviour, and thus apply'd by the Apoſtles. See TYPE.

In effect, the *Jewiſh* Rabbins, 'tis allow'd, took a world of liberty in *quoting* and interpreting Scripture; and 'tis ſuppoſed the Apoſtles might follow thoſe Rules in their *Quotations*. See RABBIN.

Accordingly M. *Surenhuſius*, *Hebrew* Profeſſor at *Amſterdam*, has endeavour'd to retrieve thoſe Rules, long ſince loſt, in an expreſs Treatiſe on this Subject, publiſhed in 1713.

This Author obſerves a great deal of difference imply'd in the different Forms of *Quotings* uſed by the Sacred Writings: As, *It has been ſaid*; *It is written*; *That it might be fulfill'd which was ſpoken by the Prophets*; *The Scripture ſays*; *See what is ſaid*; *The Scripture foreſeeing*; *Is it not written*, &c.——He adds, that the Books of the Old Teſtament having been diſpoſed in a different Order at different Times, and having had different Names; 'tis thence that a Book or Writer is ſometimes confounded with another.

For the Rules of *Quoting* and Interpreting practiſed among the Rabbins, he gives us ten; recover'd with much Study from the *Thalmud* and the antient *Jewiſh* Doctors: Inſtances whereof he gives us in the Writings of the Apoſtles; and by thoſe Rules he endeavours to explain and juſtify all the *Quotations* made from the Old Teſtament in the New.

The Rules are, 1. Reading the Words not according to the Points placed under them, but according to others ſubſtituted in their ſtead; as is done by St. *Peter*, *Acts* xxxiii. by *Stephen*, *Acts* vii. 43. and by *Paul*, 1 *Cor.* xv. 54. 2 *Cor.* viii. 15. &c.

The ſecond is by changing the Letters; as is done by *Paul*, *Rom.* ix. 33. 1 *Cor.* xi. 9. *Heb.* viii. 9. and x. 5. and by *Stephen*, *Acts* vii. 43.

The third is by changing both Letters and Points, as is done by *Paul*, *Acts* xiii. 41. and 2 *Cor.* viii. 15.——The fourth is adding ſome Letters, and taking away others.

The fifth, tranſpoſing Words and Letters.——The ſixth is dividing one Word into two.——The ſeventh, adding other Words to make the Senſe more clear.——The eighth, changing the Order of the Words.——The ninth, changing the

the Order of the Words, and adding other Words. Both of which are done by the Apoſtles.——Laſtly, changing the Order of Words, adding Words and retrenching Words; which is a Method often uſed by St. *Paul*.

Other Authors, as Biſhop *Kidder*, M. *le Clerc*, Mr. *Sykes*, *&c.* ſolve the difficulty another way.——That uſual Form of *Quotation* among the Evangeliſts, "That it might be ful- "filled which was ſpoken by the Prophets," according to theſe Authors, means no more than an Accommodation of the Prophets Words to the Caſe in hand.

The Word πληρωθῇ, *fulfilled*, does not neceſſarily determine us to ſuch a Senſe, as if the Evangeliſts deſign'd to ſpeak of a Prediction of future Events *accompliſhed*; but may barely expreſs an Accommodation of borrow'd Words. ——In effect, ſays Biſhop *Kidder*, a Scripture may be ſaid to be *fulfilled* two ways; *Properly*, as when that which was foretold comes to paſs; and *Improperly*, by way of Accommodation, as when an Event happens to any Place or People like to what fell out ſome time before.——— And thus it is that St. *Matthew* ſays, on occaſion of the Murder of the Innocents, that "then was fulfill'd what was "ſpoke by the Prophet *Jeremy*, *In Rama was a Voice* "*heard*, *&c.*

This Interpretation is confirm'd by M. *Le Clerc*, who obſerves that the *Jews*, in their Language uſed to ſay, that a Paſſage of Scripture was *fulfill'd* as often as any thing happen'd which it might be apply'd to: So that the Evangeliſt *Matthew*, who was a *Hebrew*, and wrote, as 'tis commonly ſuppoſed, in that Language, intended no more in the Paſſage juſt cited, but that a thing happen'd to which one might apply what *Jeremy* had formerly ſaid on another Occaſion.

Accordingly, ſays Mr. *Sykes*, the Evangeliſts in citing that Paſſage of *Iſaiah*, *Behold a Virgin ſhall be with Child*, *&c.* only uſe it as words of that Prophet remarkably agreeable to the miraculous Birth of Jeſus, and not as a Prophecy of his Birth.

It may be added, that this way of ſpeaking was not unknown among the Heathen Writers——Thus in *Ælian*, *Diogenes Sinopenſis* uſed continually to ſay of himſelf, that he fulfill'd and underwent all the Curſes of Tragedy.

QUOTIDIAN, in Medicine, an intermitting Fever, or Ague, the Acceſs whereof returns every day. See FEVER and AGUE.

QUOTIENT, in Arithmetic, the Number reſulting from the diviſion of a greater Number by a ſmaller; and which ſhews how often the ſmaller is contain'd in the greater, or how oft the Diviſor is contain'd in the Dividend. See DIVISION.

In Diviſion, as the Diviſor is to the Dividend; ſo is Unity to the *Quotient*.———Thus the *Quotient* of 12 divided by 3 is 4; which is thus diſpoſed, 3) 12 (4 *Quotient*.

The Word is form'd from the *Latin*, *quoties*, *q. d.* How often is ſuch a Number contain'd in ſuch another?

QUOYL, or QUOILE, or COYLE, in the Sea-Language, a Cable is ſaid to be *Quoyled*, when it is laid round in a Ring on the Deck of a Ship. See CABLE.

In the middle of ſuch Ring, or *Quoyle*, is a good Place to lay Shot in, more ſafe there than in Lockers along the ſide, where the Enemy's Shot may fall into it.

R.

R.

R, A liquid Conſonant, and the ſeventeenth Letter of the Alphabet. See LETTER and ALPHABET.

The Grammarians hold it a Semi-vowel; eſpecially in the *Greek*, where, in common with the other Vowels, it admits an Aſpirate, *&c.* tho' whether the Aſpirate ſhould come before or after it is ſome doubt. We find Inſtances of each.

Thus ῥεδή the *Latins* wrote *Rheda*; and ῥόδον the *Æolians* wrote βρόδον. The Antient *Goths*, and *Teutones*, *Littleton* obſerves, prefix'd *h* to *r*.

The *Hebrews* allow'd it the Privilege of a *Guttural*, that is, they never double it, which yet is done by the *Arabs*, *Greeks*, and *Latins*, &c. See GUTTURAL.

Perſius calls it *littera canina*, becauſe the Dogs ſeem to pronounce it in ſnarling: Yet it ſhould ſeem to have had a ſofter Sound among the *Romans*, than among us, by its being frequently interpos'd to prevent the Claſhing of Vowels: As in *rarus* from, ἀραιὸς, *nurus* from νυὸς, *murex* from μύαξ, *mus muris* from μῦς μυὸς; and this Softneſs was ſuch as frequently occaſioned its being dropt as uſeleſs in Writing.

Thus for *Hetruſci* they frequently wrote *Thuſci*, and even *Tuſci*; and for *ſurſum*, *rurſus*, *prorſus*; *ſuſum ruſus*, *proſus*.

In effect there was that Agreement between the Sound of the *s* and *r*, that as the *Romans* avoided the doubling of their Conſonants, 'twas no wonder they here drop'd the *r*; the *s* ſupplying the place of both. Hence too it came to paſs, that what they at firſt pronounced, *Aſa*, *Aſena*, *Caſmen*; was afterwards, *Ara*, *Arena*, *Carmen*; and thoſe firſt named *Fuſii* and *Valeſii* were afterwards call'd *Furii* and *Valerii*; and *Cicero* tells us, the *papirii* were firſt called *papiſii*; and even fixes the time when the Change was made, *viz.* in the Year of *Rome* 415. *Feſtus* adds, that *olera*, *pignora*, *plurima*, were antiently *oleſa*, *pignoſa*, *pluſima*.

From the ſame ſoftneſs of the Sound of the *r*, it came to be uſed indifferently with the *l* in many Words, *e. gr. Latiaris* and *Latialis*, *palilia* and *parilia*, &c.

Tho' the *r* more frequently degenerated into *l*; thus *Remures* became changed into *Lemures*, *interlego*, *perluceo* into *Intelligo* and *pelluceo*, *frater* into *fratellus*, &c. and the ſame is ſometimes done between *n* and *r*, as *æreus* and *æneus*, &c.

R, was antiently a Numeral Letter, ſignifying 80, according to the Verſe,

Octoginta dabit tibi R, *ſiquis numerabit.*

When a Daſh was added a-top as $\overline{R}$, it ſignified 80 thouſand. The *Greek*, *r*, ρ, ſignified an hundred.

R or ℞ in Medicinal Preſcription, ſtands for *Recipe*, take. See RECIPE. See alſo CHARACTER.

RABATE in Faulconry. A Hawk is ſaid to *rabate*, when by the Motion of the Hand of the Bearer, the Lure, Call, *&c.* ſhe leaves purſuing her Prey, or Quarry; and recovers the Fiſt.

RABATE in Commerce. See REBATE.

RABBI, or RABBIN, a Doctor of the *Jewiſh* Law. See DOCTOR.

The Words *Rabbi*, and *Rabbin*, have the ſame ſignification; yet is there ſome Difference in their Uſe. When we ſpeak abſolutely, and without applying the Term to any proper Name, we ſay *Rabbin*, not *Rabbi*. Thus, it would be unjuſt to attribute to the antient *Rabbins* all the Notions of the Modern ones.

On the other Hand, when we prefix the Term to the proper Name of ſome *Jewiſh* Doctor, we ſay *Rabbi*, not *Rabbin*; as *Rabbi Salomon Jarrhi* is of this Opinion.

Yet *Rabbi* having no Plural, we ſay the *Rabbins*. *Jehuda Chijug*, and *Jehuda ben Chabin*, are the Authors of two antient *Hebrew* Grammars.

The Word in its Original רבי, ſignifies *Maſter*.

The modern *Rabbins* are entitled to a good deal of reſpect among the *Jews*: They have the firſt Places in the Synagogues; they determine all Matters and Controverſies of Religion, and very frequently pronounce upon Civil Affairs. They have even a Power to excommunicate the Diſobedient.

They retain a vaſt number of ſuperſtitious Traditions, from the Writings of their Predeceſſors; which they obſerve as ſcrupulouſly as the Law of *Moſes*. See TRADITION. See alſo TALMUD.

The antient *Rabbins* were infinite dealers in Allegories: Their Writings are almoſt wholly Allegorical, particularly their Comments and Interpretations of the Scripture; See CABBALA. They had a great number of Rules, and Forms of Interpreting and Quoting, which ſome modern Writers ſuppoſe to have been follow'd by the Apoſtles, in their Interpretation, and Quotation of the Propheſies of the Old Teſtament, in the New. See PROPHECY.

The loſs of theſe Rules Dr. *Stanhope*, Dr. *Jenkins*, &c. lament, as what in all probability would reconcile the jarring Paſſages in the Old and New Teſtament. *Surenhuſius*, *Hebrew* Profeſſor at *Amſterdam*, imagines he has retrieved thoſe Rules from the antient Jewiſh Writers.

The *Rabbins*, he obſerves, interpreted Scripture in ſuch a manner as to change the litteral Senſe into a more noble and ſpiritual Senſe. To this End, he ſays they uſed ten ways of quoting and explaining the Old Teſtament; inſtances of each whereof he gives in the Writings of the Apoſtles.

They conſiſt in changing the Points; the Letters; both Letters and Points; adding and taking away Letters; tranſpoſing Words and Letters; dividing one Word into two; adding Words; changing the Order, *&c.* See QUOTATION.

RABBETING, in Carpentry, the planing or cutting of Channels, or Grooves, in Boards. See PLANE.

In Ship-Carpentry it ſignifies the letting in of the Planks of the Ship into the Keel.

RABBINIST, a Follower of the Doctrine of the Rabbins; in contradiſtinction to *Caraite*. See CARAITE.

Pere Simon contends for *Rabbaniſt* or *Rabbanite*, inſtead of *Rabbiniſt*; in effect, the former are apparently preferable to the latter; the Word being derived from the *Hebrew Rabbanim*, which is the Name of the Sect, and which the *Jews* uſe to diſtinguiſh their Doctors from thoſe of the *Caraite Jews*.

Rabbiniſt, then, ſignifies a *Jewiſh* Doctor, who adheres to the Traditions of his Fathers; not ſimply a Rabbin or Doctor; for the *Caraites* who oppoſe thoſe Traditions, have their Rabbins as well as the other *Jews*. See TRADITION.

RABDOIDES, RABDOLOGY, RABDOMANCY, } See { RHABDOIDES. RHABDOLOGY. RHABDOMANCY.

RABINET, a ſmall piece of Ordnance, between a Falconet and a Baſe. Its Dimenſions, *&c.* See under CANNON.

RACA, or RACHA, a *Syriac* Term, found in the Goſpel of St. *Matthew*, Ch. v. 22. and preſerv'd in moſt Tranſlations.

F. Simon obſerves that the *Greek* Tranſlator of St. *Matthews* Goſpel retain'd the *Syriac Raca* which he found in the Original, by reaſon it was very common among the *Jews*. And St. *Jerom*, *Luther*, the *Engliſh* Tranſlators, thoſe of *Geneva*, *Louvain*, *Port Royal*, &c. ſtill preſerve it in their reſpective Languages.

F. Bouhours chuſes rather to expreſs the Senſe thereof in a ſort of Paraphraſe, thus: He that ſays to his Brother, *Homme de peu de ſens*, *Man of little underſtanding*, ſhall deſerve to be condemned by the Tribunal of the Council, *&c.*

Moſt Tranſlators, except the *Engliſh*, and *F. Simon*, for *Raca* write *Racha*: But the latter ſeems the beſt founded; all the *Latin* Copies having *Raca*; and all the *Greek* ones ῥακὰ, or, with *Heſychius*, ῥακκα, which is the ſame: All, we mean, but St. *Irenæus*, and *Beza's* Copy, now at *Cambridge*. In effect, the Origin of the Word ſhews it ſhould be *Raca*; as coming from the *Syriac* רקא, *Raca*, of the *Hebrew* רק. *rek*, empty, ſhallow.

RACCOURCY, in Heraldry, ſignifies the ſame as *Coupee*, that is, cut off, or ſhortned; and denotes a Croſs or other ordinary, when it does not extend to the Edges of the Eſcutcheon, as they do when abſolutely named, without ſuch Diſtinction. See COUPEE.

RACE, in Genealogy, a Lineage, or Extraction continued from Father to Son. See LINE.

The Word is formed from the *Latin*, *radix*, *root*; as intimating the root of the Genealogical Tree.

In ſeveral Orders of Knighthood, as in that of *Malta*, &c. the Candidates muſt prove a Nobility of four *Races* or Deſcents. See DESCENT.

In ſome Republicks the Magiſtrates are to prove themſelves of *Plebeian Race*, to be qualified.

The *French* reckon their Kings by *Races*; as the firſt *Race*, the ſecond *Race*, the third *Race*. We alſo ſay the *Race* of the *Ottomans*, the *Arſacides*, the *Ptolomys*, &c. See DYNASTY.

Hervieux obſerves that 'tis uſual to put the Female Canary-Bird to the Male Goldfinch, Linnet, or the like, to breed; but,

for his part, he ſhould chuſe to put the Male Canary-Bird to the Female Goldfinch, Linnet, *&c.* becauſe the Male uſually *Races* more than the Female, *i. e.* the young ones take more after the Male than after the Female.

RACHITIS, or RHACHITIS, in Medicine, a Diſeaſe affecting the Bones of Children, more uſually called the *Rickets*. See RICKETS.

RACK, an Engine furniſhed with Cords, *&c.* for extorting Confeſſion from Delinquents. See TORTURE.

The Duke of *Exeter*, Conſtable of the Tower under *Henry* VI. with the Duke of *Suffolk*, and others, having a deſign to introduce the Civil Law into *England*; for a Beginning, the *Rack*, or *Brake* allowed in many Caſes by the Civil Law, was firſt brought to the Tower, where it is ſtill preſerv'd.

In thoſe Days the *Rack* was call'd the Duke of *Exeter's Daughter*.

RACK, in the Manage, a Pace wherein a Horſe neither Trots nor Ambles, but ſhuffles, as it were between both. See PACE.

The *Racking Pace* is much the ſame as the Amble; only that it is a ſwifter Time and a ſhorter Tread. See AMBLE.

RACKET, a kind of Bat, to ſtrike the Ball withal at Tennis. See TENNIS.

It conſiſts of a kind of Lattice, or Net-work of Cat-gut, ſtrain'd very tight over a Circle of Wood with a Handle or Shaft of a moderate length.

Paſquier obſerves, that antiently they uſed no *Rackets* at Tennis, but play'd with the Palm of the Hand; and hence, he conjectures it is, that the *French* call Tennis-Play, *Jeu de Paume*.

He adds, that *Rackets* were not introduced till a little before his Time. The *Engliſh* Word *Racket* is formed from the *French*, *Raquette*, which *Menage* derives from the *Latin*, *Reſiquetta*, a diminutive of *Retis*, *Reticus*, and *Reticulum*.

RACKET, is alſo a Machine, which the Savages of *Canada* bind to their Feet, to walk more commodiouſly over the Snow; made much in the manner of a Tennis-Racket.

Its Figure is a Lozange, whereof the two obtuſe Angles are rounded off. It is bound about with very fine Thongs of Leather, the Maſhes whereof are much ſmaller and cloſer than thoſe of our *Rackets*.

In the middle is fitted a kind of Shoe, lined with Wool, or Hair; and tied on to prevent its ſinking in the Snow.

They oblige the Perſon to take very long Steps, and as we ſay, to walk a great pace, to keep them from knocking againſt each other.

To *Rack Wines*, &c. is to draw them from off their Lees, after having ſtood long enough to clear and ſettle. See WINE.

Hence RACK-*Vintage* is frequently uſed for the ſecond Voyage our Wine Merchants uſed to make into *France* for rack'd Wines; whence they uſed to return about the End of *December*.

RADIAL *Curves*, is a Term uſed by ſome Authors for Curves of the Spiral Kind, whoſe Ordinates, if they may be ſo call'd, do all terminate in the Center of the including Circle, and appear like ſo many *Radii* of that Circle; whence the Name. See CURVE. See alſo SPIREL.

RADIALIS, or RADIÆUS *Extenſor*, in Anatomy. See EXTENSOR *Carpi*.

RADIALIS, or RADIÆUS *flexor*. See FLEXOR *Carpi*.

RADIATED, in Botany, an Epithet applied to round flat Flowers, conſiſting of a Disk, and a ſingle row of longiſh pointed Leaves, ranged all around it in manner of Rays, or Spokes. See FLOWER.

The Word is alſo uſed in ſpeaking of Medals, and in Heraldry; where the antient Crowns are called *radiated Crowns*, *Coronæ Radiatæ*. See CROWN and CORONET.

RADIANT-*Point*, or RADIATING-*Point*, is any Point of a viſible Object, whence Rays proceed. See RAY.

Every *Radiant-Point* diffuſes innumerable Rays all around: But only thoſe *Radiants* are viſible from which right Lines may be drawn to the Pupil; becauſe the Rays are all right Lines.

All the Rays proceeding from the ſame *Radiant* continually diverge; the Cryſtallin collects or reunites 'em again. See DIVERGING. See alſo CRYSTALLIN.

Every Ray carries with it the Species, or Image of the *Radiant*. See SPECIES.

RADIATION, in Phyſick, the Action of a Body diffuſing Rays of Light. See RAY.

Every viſible Body is a radiating Body; it being purely by means of its Rays that it affects the Eye. See VISION.

Yet no Body can *radiate*, unleſs it be either luminous or illuminated; ſince the Rays it diffuſes muſt either be its own, or it muſt receive them from another Body. Therefore no Body is Viſible unleſs it be either luminous or illuminated. See BODY, LIGHT, COLOUR, *&c.*

The Surface of a radiating Body may be conceived as conſiſting of Radiant-Points. See RADIANT-*Point*.

Place of RADIATION is that Space in a tranſparent Body, or Medium, through which a viſible Body *Radiates*. See MEDIUM, *&c.*

RADIATION, or IRRADIATION, is alſo uſed by ſome Authors to expreſs the manner of the Motion of the Animal Spirits; on a Suppoſition that they are diffuſed from the Brain towards all Parts of the Body, through the little Canals of the Nerves, as Light is from a lucid Body. See SPIRIT.

But in lieu of a *Radiation*, many of the Moderns rather incline to the Opinion of the Circulation of the Spirits. See CIRCULATION.

RADICAL, RADICALIS, in Phyſicks, *&c.* ſomething ſerving as a Baſis or Foundation; or which, like a *Root*, is the Source, or Principle whence any thing ariſes. See ROOT.

The Schools talk much of a *Radical Moiſture* in all Animals, which nouriſhes and preſerves the vital Heat or Flame, as Oyl does a Lamp; and which when exhauſted, Life is extinguiſhed.

Dr. *Quincy* obſerves that this *radical Moiſture* is a mere Chimera; unleſs we thereby mean the Maſs of Blood which is the promptuary whence all the other Juices and Humours are derived; and which, while it circulates, ſuſtains Life, *&c.* See CALIDUM. See alſo FLAMMA, BLOOD, *&c.*

In Grammar we uſe the Term *Radical Words* for Roots and Primitives; in oppoſition to Compounds or Derivatives. See ROOT and PRIMITIVE.

RADICAL *Sign*, in *Algebra*, the Sign or Character of the Root of a Quantity. See ROOT.

$\surd$ is the Character of Radicality, and expreſſes the Square Root; $\sqrt[3]{}$, the Cube Root, *&c.* See CHARACTER.

RADICATION, in Phyſick, the Action whereby Plants take Root, or ſhoot out Roots. See ROOT.

The *French* Royal Academy of Sciences have made a good number of curious Obſervations on the Germination and *Radication* of Plants. See VEGETATION, SEED, PLANTING, PERPENDICULARITY, *&c.*

RADICLE, RADICULA, *little Root*; in Botany, is a a little Point diſcovered by the Microſcope in all Seeds, which in the growth of the Plant becomes the Root. See ROOT. See alſo SEED.

When, in ſowing, the *Radicle* happens to light loweſt; 'tis no wonder the Root ſhould ſpread it ſelf under Ground, and the Stem of the Plant riſe up perpendicularly: But when the *Radicle* falls uppermoſt, by what means it is, that it changes its Poſition to favour the Aſcent of the Stem, is one of the Wonders of Vegetation. A more particular Account whereof ſee under the Article PERPENDICULARITY.

RADIOMETER, a Name ſome Writers give to the *Radius Aſtronomicus*, or *Jacob's Staff*. See JACOB's *Staff*.

RADIUS, RAY, in Geometry, the Semidiameter of a Circle; or a right Line drawn from the Centre to the Circumference. See SEMI-DIAMETER, *&c.*

The *Radius* is alſo called, eſpecially in Trigonometry, *ſinus totus*, *whole ſine*. See SINE.

'Tis implied in the definition of a Circle, and 'tis apparent from its Conſtruction, that all the *Radii* of the ſame Circle are equal. See CIRCLE.

The Word is derived from the *Greek* ῥάβδος, *rod*. *Fleta* uſes the Word *Radius* for a *Furrow*.

RADIUS, in the higher Geometry. *The* RADIUS *of the Evoluta*. RADIUS *Curvedinis*, or RADIUS *Oſculi*, is the right Line CM, *Tab. Analyſis Fig.* 12. repreſenting a Thread, by whoſe Evolution from off the Curve BC, whereon it was wound, the Curve A M *m* is form'd, See EVOLUTA and OSCULUM.

RADIUS *Aſtronomicus*, an Inſtrument properly called *Jacob's Staff*, or *Croſs Staff*. See CROSS *Staff*.

RADIUS, in Opticks. See RAY.

RADIUS, in Mechanicks, is uſed for the Spokes, or Fellows of a Wheel; becauſe iſſuing like Rays, from the Centre thereof. See WHEEL.

RADIUS, in Anatomy, is a long ſlender Bone of the Arm, deſcending along with the *Ulna* from the Elbow to the Wriſt; called alſo, *focile minus*, the *leſſer focile*. See FOCILE.

The *Radius* only touches the *Ulna* at its Extremities; at the upper whereof it is both received by, and alſo receives it; making, by both Articulations, an imperfect Kind of Ginglymus. See ULNA.

The upper End, rolling upon the *Ulna*, is cover'd with a Cartilage; and has a-top, a ſmall round *Sinus*, which receives the outer Proceſs of the *Humerus*: The lower-end is thicker than the upper, and has beſides the lateral *Sinus*, two other *Sinus* at its Extremity which receive the Bones of the Wriſt.

The *Radius* and *Ulna* are both a little crooked; by which means they are kept a-part, excepting at their Extremities; and are tyed together by a ſtrong membranous Ligament. See ARM.

The *Radius* has four proper Muſcles, beſides the *Biceps* common to it and the *Ulna*: The proper are two *Pronators*, and two *Supinators*. See PRONATOR and SUPINATOR. See alſo BICEPS.

RADIX. See ROOT.

RADIX is uſed among ſome Anatomiſts, for the Sole of the Foot. See FOOT.

RADIX, among Grammarians. See RADICAL.

RAD-*Knights*. See ROD-*Knights*.

RAFTERS, in Building, are pieces of Timber, which ſtand by Pairs upon the Reaſon, meet in an Angle at the Top, and help to compoſe the Roof of a Building. See ROOF.

'Tis a Rule in Architecture, that no Rafters ſhou'd ſtand farther than twelve Inches from one another.

For the Sizes or Scantlings of *Rafters*, tis provided by Act of Parliament, that *principal Rafters* from 12 Foot 6 Inches, to 14 Foot 6 Inches long, be 5 Inches broad a-top, and 8 at the bottom, and 6 Inches thick.

Thoſe from 14, 6 to 18, 6 long, to be 9 Inches broad at the Foot and 7 a-top, and 7 thick.

And thoſe from 18, 6, to 21, 6, to be 10 Inches broad at the Foot, 8 a-top, and 8 Inches broad.

Single Rafters, 6 Foot 6 Inches long, to be 4 and 3 Inches in their Square. Thoſe 8 Foot long muſt be 4 ½ and 3 ¾ Inches ſquare.

RAFFLING, a Game with three Dice, wherein he who throws the greateſt Pair, or Pair-Royal, in three Caſts, wins. See GAME and GAMING.

The *Raffle* is properly the double or triplet. A *Raffle* of Aces, or Duces, carries it againſt meer Points.

Raffling is alſo uſed when a Company of Perſons club to the Purchaſe of a Commodity; and he that throws the higheſt on the Dice takes it.

The Word probably comes from the baſe *Latin*, *riſflare*, to *riſle*, plunder, take all away.

RAG, or RAKE, among Hunters, is a Company, or Herd of young Colts.

RAGGED *Hawk*, in Faulconry, is an Hawk that hath its Feathers broken. See HAWK.

RAGGULED, or RAGULED, or RAGGED, in Heraldry, is applied to an Ordinary, *Ex. gr.* a Croſs, whoſe Out-Lines are jagged or knotted, as in the Figure adjoining. He beareth Sable, a Croſs *Ragguled*, Or, by the Name of *Sloway*.

Ragged differs from indented, in that the latter is regular, and this former not.

The Bearing is very Antient: *Julius Cæſar* gave for his Badge, a Boar's Head, on a ragged Staff.

RAGGULED is ſometimes alſo uſed in the Senſe of *Truncated*, or *Couped*, and applied to a Branch that is ſaw'd from the Tree; or a Stock ſaw'd from its Root.

RAGMAN's-*Roll*, or rather RAGIMUND's-*Roll*, a Roll or Liſt denominated from its Author *Ragimund*, a Legat in *Scotland*, who calling before him all the beneficed Perſons in that Kingdom, cauſed them, upon Oath, to give in the true Value of their Benefices; according to which they were taxed in the Court of *Rome*.

This Roll, among other Records, being taken from the *Scots* by our King *Edward* I. was re-delivered to them in the Beginning of *Edward* IIId's time.

RAGOÛT, or RAGOO, a Sauce, or Seaſoning, to rouſe or recover the Appetite when languiſhing or loſt.

The Term is *French*, but naturaliz'd.

The Term is alſo uſed for a high-ſeaſon'd Diſh, prepared of Fleſh, Fiſh, Greens, or the like, by ſtewing them with the Addition of Bacon, Salt, Pepper, Cloves, and the like.

We have *Ragoos* of Beef, of Cray-Fiſh, of Giblets, of Aſparagus, of Endive, of Cocks-Combs, of Gammon, of Celery, *&c.*

The Ancients had a *Ragoût* call'd *Garum*, made of the Putrefied Guts of a certain Fiſh, which they kept till it diſſolved by meer Force of Corruption, into a Sanies: This was held ſuch a valuable Dainty among them, that *Pliny* obſerves, its Price equall'd that of the richeſt Perfumes.

RAJA, an *Indian* Term, uſed for a Kind of Idolatrous Princes, the remains of thoſe who ruled there before the Conqueſt of the *Moguls*.

There are ſome *Rajas* who ſtill retain a Kind of Sovereignty in the Mountains: The *Indians* call them *Rai*; the *Perſians*, plurally, *Raijan*; our Travellers, *Rajas*, or *Ragias*.

The chief Lords of the *Moguls*, *viz.* the Vice-Roys, Governours of Provinces, and Chief Miniſters of State, F. *Catrou* obſerves, are call'd *Omhras*; and the Idolatrous *Rajas*, or *Indian* Lords, who governed petty States before the Conqueſt of their Country, hold the ſame Rank at Court with the *Omhras*.

All the difference is, that the Children of the *Rajas* ſucceed their Fathers in the ſhew of the Sovereignty left them; whereas the Children of the Mahometan Lords loſe all in loſing their Fathers.

The *Indians* account four Ages from the Beginning of the World; and in the ſecond, which laſted 1296000 Years, they hold the *Rajas* or *Kchatrys* had their Riſe; chaſte, noble, *&c.* though inferiour to the *Bramans*. See BRAMAN.

Vice then began to creep into the World; Men only lived to 300 Years, and their Stature was reduced, *&c. Lett. Edit. & Cur.*

RAIL, in Architecture, is applied variouſly; particularly, to thoſe pieces of Timber, *&c.* which lie Horizontally between the Pannels of Wainſcot; to thoſe that lie over and under Balluſters in Balconies, Stair-Caſes, *&c.* and to the pieces of Timber that lie horizontally from Poſt to Poſt, in Fences with Pales or without.

RAIN, a very frequent and uſeful Meteor; deſcending from above in form of Drops of Water. See METEOR and DROP.

Rain is, apparently, a precipitated Cloud; as Clouds are nothing but Vapours rais'd from Moiſture, Waters, *&c.* See CLOUD.

And Vapours are demonſtratively nothing elſe but little Bubbles or *Veſiculæ* detach'd from the Waters, by the Power of the ſolar, or ſubterraneous Heat, or both. See VAPOUR.

Theſe *Veſiculæ* being ſpecifically lighter than the Atmoſphere, are buoyed up thereby, till they arrive at a Region where the Air is a juſt Balance with them; and here they float, till by ſome new Agent they are converted into Clouds, and thence either into Rain, Snow, Hail, Miſt, or the like. See SNOW, HAIL, *&c.*

But the Agent in this Formation of the Clouds into *Rain*, &c. is a little controverted; the generality will have it the Cold, which conſtantly occupying the ſuperiour Regions of the Air, chills and condenſes the *Veſiculæ*, at their Arrival from a warmer Quarter; congregates them together, and occaſions ſeveral of them to coaleſce into little Maſſes: By this Means their Quantity of Matter increaſing in a greater Proportion than their Surface, they become an overload to the light Air, and accordingly deſcend in Rain.

Mr. *Derham* accounts for the Precipitation, hence; that the *Veſiculæ* being full of Air, when they meet with a colder Air than that they contain, their Air is contracted into a leſs Space, and conſequently the watery Shell or Caſe render'd thicker, ſo as to become heavier than the Air, *&c.* See COLD.

Others only allow the Cold a Part in the Action, and bring in the Winds as Sharers with it; indeed 'tis clear, that a Wind blowing againſt a Cloud will drive its *Veſiculæ* upon one another; by which means ſeveral of them coaleſcing as before, will be enabled to deſcend; and the effect will be ſtill more conſiderable if two oppoſite Winds blow towards the ſame Place. Add to this, that Clouds already form'd, happening to be aggravated by freſh Acceſſions of Vapour continually aſcending, may thence be enabled to deſcend. See WIND.

Yet the grand Cauſe, according to *Rohault*, is ſtill behind: That Author conceives it to be the Heat of the Air, which after continuiug for ſome time near the Earth, is at length carried up on high by a Wind, and there thawing the ſnowy *Villi*, or Flocks of the half-frozen *Veſiculæ*, reduces them into Drops; which coaleſcing, deſcend and have their Diſſolution perfected in their Progreſs through the lower and warmer Stages of the Atmoſphere.

Others, as Dr. *Clark*, &c. aſcribe this Deſcent of the Clouds rather to an Alteration of the Atmoſphere, than of the *Veſiculæ*; and ſuppoſe it to ariſe from a Diminution of the Spring or elaſtic Force of the Air. See ELASTICITY.

This Elaſticity which depends chiefly or wholly on the dry terrene Exhalations, being weaken'd; the Atmoſphere ſinks under its Burthen; and the Clouds fall, on the common Principle of Precipitation. See PRECIPITATION.

Now, the little *Veſiculæ* by any, or all, of theſe Means, being once upon the Deſcent, will perſiſt therein, notwithſtanding the Increaſe of Reſiſtence they every Moment meet withal in their Progreſs through ſtill denſer and denſer Parts of the Atmoſphere.

For, as they all tend towards the ſame Point, *viz.* the Centre of the Earth, the further they fall the more Coalitions will they make; and the more Colalitions, the more Matter will there be under the ſame Surface, the Surface only increaſing as the Squares, but the Solidity as the Cubes; and the more Matter under the ſame Surface, the leſs Friction or Reſiſtence there will be to the ſame Matter. See BAROMETER.

Thus if the Cold, the Wind, *&c.* happen to act early enough to precipitate the *Veſiculæ*, e're they are arrived at any conſiderable Height; the Coalitions being few in ſo ſhort a Deſcent, the Drops will be proportionably ſmall; and thus is form'd what we call *Dew*. See DEW.

If the Vapours prove more copious, and riſe a little higher, we have a *Miſt* or *Fog*. See FOG.

A little higher ſtill, and they produce a *ſmall Rain*, &c.

If they neither meet with Cold nor Wind enough to condenſe or diſſipate them; they form a heavy, thick, *dark Sky*; which laſt, ſometimes ſeveral Weeks. See WEATHER.

Hence we may account for many of the Phænomena of the Weather; *e. gr.* why a cold, is always a wet Summer; and a warm a dry one? Becauſe the Principle of Precipitation is had in the one Caſe, and wanting in the other.

Why we have ordinarily moſt *Rain* about the Equinoxes? Becauſe the Vapours ariſe more plentifully than ordinary in the Spring, as the Earth becomes looſen'd from the brumal Conſtipations; and becauſe as the Sun recedes from us in Autumn, the Cold increaſing, the Vapours that had linger'd above during the Summer Heats, are now diſpatch'd down, *&c.*

Why a ſettled, thick, cloſe Sky ſcarce ever *Rains* till it have been firſt clear? Becauſe the equably diffuſed Vapours muſt firſt be condens'd, and congregated into ſeparate Clouds, to lay the Foundations of *Rain*; by which means the reſt of the Face of Heaven is left open, and pervious to the Rays of the Sun, *&c.* See WEATHER.

For other Phænomena of *Rain*, as they relate to the Weather-Glaſs, ſee BAROMETER.

As to the *Quantity of Rain* that falls; its *Proportion* in ſeveral Places at the ſame Time, and in the ſame Place at ſeveral Times; we have Store of Obſervations, Journals, *&c.* in the Memoirs of the *French* Academy, the *Philoſ. Tranſact.* &c. an

Idea

Idea whereof will not be unacceptable.

Upon measuring, then, the *Rain* falling yearly; its Depth, at a Medium, is found as in the following Table.

Depth of RAIN *falling yearly, and its Proportion in several Places.*

	Inches.
At *Townley* in *Lancashire*, observ'd by Mr. *Townley*,	42 1/2
Upminster in *Essex*, by Mr. *Derham*,	19 1/4
Zurich in *Switzerland*, by Dr. *Scheutcher*,	32 1/4
Pisa in *Italy*, by Dr. *Mich. Ang. Tilli*,	43 1/4
Paris in *France*, by M. *de la Hire*,	19
Lisle in *Flanders*, by M. *de Vauban*.	24

Præternatural-RAINS, as *of Blood*, &c. are very frequent in our Annals; and even Natural-Histories, yet; if strictly pried into, will be all found other things than *Rain*.

Bloody Rains, Dr. *Merret* observes, are, certainly, nothing else but the Excrements of Insects.

Accordingly, *Gassendus* gives an Instance of a bloody Rain in *France*, which terrified the People; but which *Peirisc* found to be only red Drops coming from a sort of Butterfly that flew about in great Numbers, as he concluded from seeing such red Drops come from them; from the Drops not being laid on Buildings, or the outer Surfaces of Stones, *&c.* but in Cavities and Holes; and from those Walls only being tinged therewith that were next the Fields, not those in the Streets; and the first only to a little Height, such as Butterflies are used to fly to.

The same Dr. *Merret* adds, that 'tis most evident the *Rains of Wheat* are nothing but *Ivy-Berries*, swallowed by the Starlings, and again cast forth by Stool.

An Instance of such a *Rain* we have in the *Philosoph. Transf.* from the Country about *Bristol*, by Mr. *W. Cole*; who, upon examining the Drops, found them to be the Seeds of Ivy-Berries, blown down by fierce Winds from Towers, Churches, Chimneys, Walls, *&c.* where they had been left by Birds, chiefly Starlings and Choughs.

The *French* have a Tradition of a *Rain of Stones*, in a Plain six or seven Leagues long between *Arles* and *Marseilles*, call'd *la Crau*, which is now quite cover'd therewith.

The Fable has it, that *Hercules* in his Engagement with *Albion* and *Bregion*, in Favour of *Neptune*; wanting Darts, was assisted by *Jupiter* with a Shower of these Stones, seen to this Day. Another Account of their Origin, see under the Article STONE.

RAINS, in the Sea Language, is all that Tract of Sea to the Northward of the Equator, between 4 and 10 Degrees of Latitude; and lying between the Meridian of *Cape Verde*, and that of the Eastermost Islands of the same Name.

It takes its Name from the almost continual Calms, constant *Rains*, and Thunder and Lightning to a great Degree, found there. The Winds, when they do blow, are only small uncertain Gusts, and shift about all round the Compass; so that Ships are sometimes here detain'd a long while, and can make but little way.

RAIN-BOW, IRIS, or simply, the Bow, a Meteor in form of a party-coloured Arch or Semicircle, exhibited in a rainy Skie, opposite to the Sun; by the refraction of his Rays in the Drops of falling Rain. See METEOR, RAIN, and REFRACTION.

There is also a *secondary* or fainter *Bow*, usually seen investing the former, at some Distance; and among Naturalists we read of *Lunar Rainbows*, *Marine Rainbows*, &c.

The *Rainbow*, Sir *Isaac Newton* observes, never appears but where it rains in the Sun-shine; and may be represented artificially, by contriving Water to fall in little Drops like Rain; thro' which the Sun shining, exhibits a *Bow* to a Spectator placed between the Sun and the Drops; especially if a dark Body, *e. gr.* a black Cloath be disposed beyond the Drops.

Anton. de Dominis first accounted for the *Rainbow*, in 1611: He explain'd at large how it was form'd, by refraction and reflection of the Sun-beams in spherical Drops of Water; and confirm'd his Explications by Experiments made with Glass Globes, *&c.* full of Water. Wherein he was follow'd by *Des Cartes*, who mended and improved on his Account: But as they were both in the Dark as to the true Origin of Colours, their Explications are Defective, and in some things erroneous; which 'tis one of the Glories of the *Newtonian* Doctrine of Colours, to supply and correct.

Theory of the Formation of the RAIN-BOW.

To conceive the Origin of the *Rainbow*, let us consider what will befal Rays of Light coming from a very remote Body, *e. gr.* the Sun; and falling on a Globe of Water, such as we know a Drop of Rain to be.

Suppose then ADKN (*Tab. Opticks, Fig.* 45.) to be a Drop of Rain, and the Lines EF, BA, ON, to be Rays of Light coming from the Centre of the Sun; which, by reason of the immense Distance of the Sun, we conceive to be Parallel. See *Parallel* RAY.

Now the Ray BA being the only one that falls perpendicularly on the Surface of the Water; and all the rest obliquely; 'tis easily inferr'd that all the other Rays will be refracted towards the Perpendicular. See REFRACTION.

Thus the Ray EF, and others accompanying it, won't go on strait to G; but as they arrive at HI, deflect from F to K, where some of them, probably, escaping into the Air, the rest are reflected upon the Line KN, so as to make the Angles of Incidence and Reflexion equal. See REFLEXION.

Further, as the Ray KN, and those accompanying it, fall obliquely upon the Surface of the Globule; they cannot pass out into the Air, without being refracted, so as to recede from the Perpendicular LM; and therefore will not proceed straight to Y, but deflect to P.

It may be here observ'd, that some of the Rays arriving at P, do not pass out into the Air, but are again reflected to Q; where being refracted like the rest, they do not proceed right to Z, but declining from the Perpendicular TV, are carried to R: But since we here only regard the Rays as they may affect the Eye placed a little below the Drop, *e. gr.* at P, those which deflect from N to Q, we set aside as useless, because they never come at the Eye. On the contrary, it is to be observ'd, that there are other Rays, as 2, 3, and the like, which being reflected from 3 to 4, thence to 5, and from 5 to 6 may at length arrive at the Eye placed beneath the Drop.

Thus much is obvious: But to determine precisely the Quantities of Refraction of each Ray, there must be a Calculation: By such Calculation it appears that the Rays which fall on the Quadrant AD, are continued in Lines, like those here drawn in the Drop AD KN; wherein there are three things very considerable: *First*, That the two Refractions of the Rays in their Ingress and Egress are both the same Way, so that the latter does not destroy the effect of the former. *Secondly*, That of all the Rays passing out of AN; NP, and those adjoining to it, are the only ones capable of affecting the Sense; as being sufficiently close or contiguous; and because coming out parallel; whereas the rest are divaricated, and dispers'd too far to have any sensible Effect, at least to produce any thing so vivid as the Colours of the *Bow*. *Thirdly*, That the Ray NP has *Shade* or Darkness under it: For since there is no Ray comes out of the Surface NA, 'tis the same thing as if the Part were cover'd with an Opake Body. We might add, that the same Ray NP has Darkness above it; since the Rays that are above it are ineffectual; and signify no more than if there were none at all.

Add to these, that all the effectual Rays have the same Point of Reflection, *i. e.* the parallel and contiguous Rays; which alone are effectual after Refraction, will all meet in the same Point of the Circumference; and be reflected thence to the Eye.

Further it appears by Calculation, that the Angle ONP, included between the Ray NP, and the Line ON drawn from the Centre of the Sun, which is the Angle whereby the *Rainbow* is distant from the opposite Point of the Sun, and which makes the *Semidiameter of the Bow*; contains 41° 30′. The Method of determining it see hereafter.

But since beside those Rays coming from the Centre of the Sun to the Drop of Water, there are many more from the several Points of its Surface; there are a great many other effectual Rays to be considered; especially that from the uppermost, and that from the lowest Part of the Sun's Body.

Since then, the apparent Diameter of the Sun is about 16 Seconds, it follows that an effectual Ray from the upper Part of the Sun will fall higher than the Ray EF, by 16 Seconds: This does the Ray GH, (*Fig.* 46.) which being refracted as much as EF; deflects to I, thence to L; and at length emerging equally refracted with the Ray NP, proceeds to M; and makes an Angle ONM, of 41° 14′ with the Line ON.

In like Manner the effectual Ray QR coming from the lowest Part of the Sun, falls on the Point R, 16 Minutes lower than the Point F, on which the Ray EF falls; and being refracted declines to S; whence it is reflected to T; where emerging into the Air, it proceeds to V; so, as the Line TV, and the Ray OT contain an Angle of 41° and 46′.

Again,

Again, upon computing the Deflexions of the Rays, which, like the 23 (*Fig.* 45.) coming from the Centre of the Sun, and being received into the lower Part of the Drop, we have ſuppoſed to be twice reflected, and twice refracted, and to enter the Eye by Lines like that 67 (*Fig.* 47.); we find that which may be accounted effectual, as 67, with the Line 86 drawn from the Centre of the Sun, contains an Angle 867, of about 52 Degrees: Whence it follows that the effectual Ray from the higheſt Part of the Sun, with the ſame Line 86 includes an Angle leſs by 16 Minutes; and that from the loweſt Part of the Sun, an Angle greater by 16 Minutes.

Thus, ſince ABCDEF is the Path of the efficacious Ray from the higheſt Part of the Sun to the Eye in F; the Angle 86 F becomes of about fifty one Degrees, and forty four Minutes. In like manner, ſince GHIKLM is the Way of an effectual Ray from the loweſt Part of the Sun, to the Eye, the Angle 86 M becomes nearly of fifty two Degrees, and ſixteen Minutes.

Since then we admit ſeveral Rays to be effectual, beſide thoſe from the Centre of the Sun; what we have ſaid of the *Shade* will need ſome Alteration: For, of the three Rays deſcribed (*Fig.* 45 & 46.) only the two extreme ones will have a Shadow joining to them, and that only on the outer Side. Hence it is evident that theſe Rays are perfectly diſpoſed to exhibit all the Colours of the *Priſm*.

For the great Quantity of denſe or intenſe Light, *i. e.* the Bundle of Rays collected together in a certain Point, *v. gr.* in the Point of Reflection of the effectual Rays, may be accounted as a lucid or radiant Body, terminated all around by *Shade*. But the ſeveral Rays thus emitted to the Eye are both of different Colours; that is, fitted to excite in us the Ideas of different Colours; and are differently refracted out of the Water into Air, notwithſtanding their falling alike upon the refracting Surface. See COLOUR, *&c.*

Hence it follows that the different or heterogeneous Rays will be ſeparated from one another, and will tend ſeparate ways; and the homogeneous Rays be collected, and tend the ſame way: And therefore this lucid Point of the Drop, wherein the Refraction is effected, will appear fringed, or border'd with ſeveral Colours; that is, *red, green*, and *blue* Colours will ariſe from the extremes of the red, green, and blue Rays of the Sun tranſmitted to the Eye from ſeveral Drops one higher than another; after the ſame manner as is done in viewing lucid, or other Bodies through a *Priſm*. See PRISM.

Thus, adds Sir *Iſaac Newton*, the Rays that differ in refrangibility, will emerge at different Angles; and conſequently, according to their different Degrees of Refrangibility, emerging moſt copiouſly at different Angles, will exhibit different Colours in different Places. See REFRANGIBILITY.

A great number then of theſe little Globules being diffuſed in the Air, will fill the whole Space with theſe different Colours; provided they be *ſo diſpoſed* as that effectual Rays may come from them to the Eye; and thus will the *Rainbow*, at length, ariſe.

Now to determine what the *Diſpoſition* muſt be; ſuppoſe a right Line drawn, from the Centre of the Sun through the Eye of the Spectator, as the Line VX, (*Fig.* 46.) call'd the *Line of Aſpect*: Being drawn from ſo remote a Point, it may be eſteem'd parallel to all other Lines drawn from the ſame Point: But a right Line falling on two Parallels makes the alternate Angles equal. See ALTERNATE.

If, then, an indefinite Number of Lines be imagin'd drawn from the Spectator's Eye to a part oppoſite to the Sun where it rains; which Lines make different Angles with the Line of Aſpect, equal to the Angles of Refraction of the differently refractible Rays, *e. gr.* Angles of 42°, 1′, and of 40°, 16′. Theſe Lines falling on Drops of Rain illumined by the Sun, will makes Angles of the ſame Magnitude with Rays drawn from the Centre of the Sun to the ſame Drops. And therefore the Lines thus drawn from the Eye will repreſent the effectual Rays that occaſion the Senſation of any Colour.

That, *e. gr.* making an Angle of 42° 1′ repreſenting the leaſt refrangible or red Rays of the ſeveral Drops, and of 40° 16′, the moſt refrangible or violet Rays: The intermediate Colours, and refrangibilities will be found in the intermediate Space Ee. See RED, VIOLET, *&c.*

Now, 'tis known that the Eye being placed in the Vertex of a Cone, ſees Objects upon its Surface as if they were in a Circle; and the Eye of our Spectator is here in the common Vertex of ſeveral Cones, form'd by the ſeveral Kinds of efficacious Rays, with the Line of Aſpect. And in the Surface of that whoſe Angle at the Vertex or Eye is the greateſt, and wherein the others are included, are thoſe Drops or Parts of Drops which appear red; and in the Surface of that Cone whoſe Angle is leaſt, are the purple Drops: And in the intermediate Cones are the green, blue, *&c.* Drops. Hence then ſeveral Kinds of the Drops muſt appear as if diſpoſed into ſo many circular colour'd *Faſciæ* or Arches, as we ſee in the *Rainbow*.

This part of the Solution Sir *Iſaac Newton* expreſſes more artfully thus: Suppoſe O (*Fig.* 48.) the Eye, and OP a Line Parallel to the Sun's Rays, and let POE, POF be Angles of 40° 17′, and 42° 2′. And ſuppoſe the Angles to turn about their common Side OP, with their other Sides OE and OF, they will deſcribe the Bounds or Verges of the *Rainbow*.

For, if EF be Drops placed any where in the conical Surface deſcribed by OE OF; and be illuminated by the Sun's Rays SE, SF, the Angle SEO being equal to the Angle POE or 40° 17′ ſhall be the greateſt Angle in which the moſt refrangible Rays can, after Reflection, be refracted to the Eye; and therefore all the Drops in the Line OE ſhall ſend the moſt refrangible Rays moſt copiouſly to the Eye, and thereby ſtrike the Senſes with the deepeſt *Violet Colour* in that Region.

And in like Manner the Angle SFO being = to the Angle POF=42° 2′, ſhall be the greateſt, in which the leaſt refrangible Rays after one Reflection can emerge out of the Drops; and theſe Rays ſhall come moſt copiouſly to the Eye, from the Drops in the Line OF, and ſtrike the Senſes with the deepeſt *red Colour* in that Region.

And by the ſame Argument the Rays, which have intermediate Degrees of Refrangibility, ſhall come moſt copiouſly from Drops between E and F, and ſo ſtrike the Senſes with the intermediate Colours, in the Order which their Degrees of Refrangibility require; that is, in the Progreſs from E to F, or from the inſide of the Bow to the outſide, in this Order, *Violet, Indigo, Blue, Green, Yellow, Orange, Red:* Though the Violet, by the mixture of the white Light of the Clouds, will appear faint, and incline to a *purple*.

And ſince the Lines OE OF may be ſituated any where in the abovemention'd conical Surface; what is ſaid of the Drops and Colours in theſe Lines is to be underſtood of the Drops and Colours throughout the whole Superficies. Thus is the *primary*, or *inner Bow* form'd.

Secundary, or outer RAIN-BOW.

As to the ſecundary or fainter *Bow*, uſually ſurrounding the former; in aſſigning what Drops would appear coloured, we excluded ſuch as Lines drawn from the Eye, making Angles a little greater than 42° 2′ ſhould fall upon; but not ſuch as ſhou'd contain Angles much greater.

For, if an indefinite Number of ſuch Lines be drawn from the Spectator's Eye, ſome whereof make Angles of 50° 57′, with the Line of Aſpect; *e. gr.* OG; other Angles of 54° 9′, *e. gr.* OH; thoſe Drops whereon theſe Lines fall, muſt of neceſſity exhibit Colours. Particularly thoſe of 50° 57′.

E. gr. the Drop G will appear red; the Line GO being the ſame with an effectual Ray, which after two Reflections and two Refractions, exhibits a red Colour. Again, thoſe Drops which receive Lines of 54° 9′, *e. gr.* the Drop H will appear Purple, the Line OH being the ſame with an effectual Ray which after two Reflections, and two Refractions, exhibits Purple.

Now, there being a ſufficient Number of theſe Drops, 'tis evident there muſt be a *ſecond Rainbow*, form'd after the like manner as the firſt.

Thus, Sir *Iſaac Newton:* In the leaſt refrangible Rays, the leaſt Angle at which a Drop can ſend effectual Rays after two Reflexions, is found by computation to be 50° 57′, and in the moſt refrangible the leaſt Angle is found 54° 7′.

Suppoſe, then, O the Place of the Eye, as before, and POG, POH to be Angles of 50° 57′, and 54° 7′. And theſe Angles to be turn'd about their common Side OP; with their other Sides OG, OH, they will deſcribe the Verges or Borders of the *Rainbow* CHDG.

For, if GH be Drops placed any where in the conical Superficies deſcribed by OG OH, and be illumined by the Sun's Rays; the Angle SGO being equal to the Angle POG or 50° 57′, ſhall be the leaſt Angle, in which the then leaſt refrangible Rays, can, after two Reflections, emerge out of the Drops; and therefore the leaſt refrangible Rays ſhall come moſt copiouſly to the Eye from the Drops in the Line OG, and ſtrike the Senſe with the deepeſt *Red* in that Region.

And the Angle SHO being equal to POH, 54° 7′, ſhall be the leaſt Angle in which the moſt refrangible Rays, after two Reflections, can emerge out of the Drops; and therefore thoſe Rays ſhall come moſt copiouſly to the Eye from the Drops in the Line OH, and ſo ſtrike the Senſes with the deepeſt *Violet* in that Region.

And by the ſame Argument, the Drops in the Region between G and H, ſhall ſtrike the Senſes with the intermedate Colours, in the Order which their Degrees of Refrangibility require; that is, in the Progreſs from G to H, or from the inſide of the Bow to the outer, in this Order: *Red, Orange, Yellow, Green, Blue, Indico, Violet.*

And ſince the Lines OG, OH, may be ſituated any where in the conical Surface; what is ſaid of the Drops and Colours in theſe Lines, is to be underſtood of the Drops and Colours every where in theſe Superficies.

Thus are form'd two Bows, an *interior*, and ſtronger, by one Reflection; and an *exterior* and fainter by two; the Light becoming weaker and weaker by every Reflexion.

Their Colours will lie in a contrary Order to one another; the firſt having the Red without, and the Purple within; and the ſecond the Purple without and Red within; and ſo of the reſt.

Artificial RAIN-BOW.

This Doctrine of the *Rainbow* is confirm'd by an eaſy Experiment: For upon hanging up a Glaſs Globe full of Water in the

Sun-ſhine, and viewing it in ſuch a Poſture as that the Rays which come from the Globe to the Eye, may, with the Sun's Rays include an Angle either of 42°, or 50°; if, *e. gr.* the Angle be about 42°; the Spectator, ſuppoſed at O, will ſee a full red Colour in that Side of the Globe oppoſite to the Sun, as at F. And if that Angle be made a little leſs, ſuppoſe by depreſſing the Globule to E, the other Colours, Yellow, Blue, and Green, will appear ſucceſſively, in the ſame Side of the Globe, alſo exceedingly bright.

But if the Angle be made about 50°, ſuppoſe by raiſing the Globule G, there will appear a red Colour in that Side of the Globe towards the Sun; though that ſomewhat faint; and if the Angle be made greater, ſuppoſe by raiſing the Globe to H; the Red will change ſucceſſively to the other Colours, Yellow, Green, and Blue.

The ſame thing is obſerv'd in letting the Globe reſt, and raiſing, or depreſſing the Eye to make the Angle of a juſt Magnitude.

Dimenſions of the RAIN-BOW.

Des Cartes firſt determin'd its Diameter by a tentative, and indirect Method; laying it down that the Magnitude of the Bow depends on the Degree of Refraction of the Fluid; and aſſuming the Ratio of the Sine of Incidence to that of Refraction, to be in Water as 250 to 157. See REFRACTION.

But, Dr. *Halley* has ſince, in the *Philoſoph. Tranſact.* given us a ſimple, direct Method of determining the Diameter of the *Rainbow* from the Ratio of Refraction of the Fluid being given; or *vice verſa*, the *Rainbow* being given, to determine the refractive Power of the Fluid. The *Praxis* is as follows.

Firſt, *The Ratio of Refraction being given; to find the Angles of Incidence, and Refraction of a Ray which becomes effectual after any given Number of Reflections.* Suppoſe any given Line as AC (*Tab. Opticks, Fig.* 49.) which divide in D; ſo, as that AC be to AD in the Ratio of Refraction; and again divide it in E, ſo as AC be to AE as the given Number of Reflexions increaſed by Unity, is to Unity; with the Diameter CE deſcribe a Semicircle CBE, and from the Centre A with the Radius AD deſcribe an Arch DB interſecting the Semicircle in B. Then drawing AB, CB; ABC or its Complement to two right Angles, will be the Angle of Incidence; and ACB the Angle of Refraction required.

Secondly, *The Ratio of Refraction, and any Angle of Incidence being given to find the Angle which a Ray of Light emerging out of a refracting Sphere, after a given Number of Reflections, makes with the Line of Aſpect, or an incident Ray; and conſequently to find the Diameter of the Rainbow.* The Angle of Incidence, and the Ratio of Refraction being given, the Angle of Refraction is given; which Angle being multiplied by double the Number of Reflexions increaſed by 2, and double the Angle of Incidence ſubſtracted from the Product, the Angle remaining is the Angle ſought.

Thus ſuppoſing, the Ratio of Refraction to be, as Sir *Iſaac Newton* has determined it, *viz.* as 108 to 81, in the red Rays, as 109 to 81 for the blue Rays, *&c.* the preceding Problem will give the Diſtances of the Colours in the

I. RAIN-BOW,	Red	41°	12	The Spectator's Back being turned to the Sun.
	Blue	40	16	
II. RAIN-BOW,	Red	50	58	
	Blue	54	9	

If the Angle made by a Ray after three or four Reflections, were required, and therefore the Diameters of the third and fourth *Rainbow*, (which are ſcarce ever ſeen, by reaſon of the great Diminution of the Rays, by ſo many repeated Reflexions) they will be found.

III. Rainbow,	Red	41°	37	The Spectator being turned towards the Sun.
	Blue	37	9	
IV. Rainbow,	Red	43	52	
	Blue	49	34	

Hence, the *Breadth of the Rainbows* is eaſily found: For the greateſt Semidiameter of the firſt Bow, *i. e.* from Red to Red being 42° 1′, and the leaſt, *viz.* from Purple to Purple 40° 16; the Breadth of the *Faſcia* or *Bow*, meaſured a-croſs from Red to Purple will be 1° 45′, and the greateſt Diameter of the ſecond Bow being 54° 9′, and the leaſt 50° 58′, the Breadth of the *Faſcia* will be 3° 10′. And hence the Diſtance between the two will be found 8° 15′.

In theſe Meaſures the Sun is only eſteem'd a Point; wherefore as his Diameter is really about 30′ ſo much muſt be added to the Breadth of each *Faſcia* or *Bow*, from Red to Purple, and ſo much be ſubſtracted from the Diſtance between them.

This will leave the Breadth of the *primary Bow*, 2° 15′, that of the *ſecondary Bow* 3° 40′, and the interval between the Bows 8° 25′; which Dimenſions deduced by Calculation, Sir *Iſaac Newton* aſſures us from his own Obſervations, agree very exactly with thoſe found by actual Menſuration in the Heavens.

Particular Phænomena of the RAIN-BOW, *with the Cauſes thereof.*

From this Theory of the *Rainbow*, all the particular Phænomena are eaſily deduced: Hence we ſee why the *Iris* is always of the ſame Breadth; by reaſon the intermediate Degrees of refrangibility of the Rays between Red and Violet, which are its extreme Colours, are always the ſame.

Secondly, Why it is more diſtinctly terminated on the Side of the Red, than on that of the Violet? There being no efficacious Rays in the Space adjoining to the red Drops, *i. e.* to the Space between the Bows; whence it terminates abruptly; whereas in the Space on the Side of the Violet ones there are ſome Rays emitted to the Eye, which though too feeble to affect it ſtrongly, yet have this effect, that they ſoften the Violet Edge inſenſibly, ſo that 'tis difficult to determine preciſely where it terminates.

Thirdly, Why the *Bow* ſhifts its Situation as the Eye does; and, as the popular Phraſe has it, *flies thoſe who follow it, and follows thoſe that fly it*? The colour'd Drops being diſpoſed under a certain Angle about the Line of Aſpect, which is different in different Places: Whence, alſo, it follows that every different Spectator ſees a different Bow.

Fourthly, Why the Bow is ſometimes a larger Portion of a Circle, ſometimes a leſs? Its Magnitude depending on the greater, or leſs Part of the Surface of the Cone, above the Surface of the Earth at the Time of its appearance; and that Part being greater or leſs as the Line of Aſpect is more inclined or oblique to the Surface of the Earth; which inclination, or obliquity, is greater as the Sun is higher: Whence, alſo, the higher the Sun, the leſs the *Rainbow*.

Fifthly, Why the *Bow* never appears when the Sun is above a certain Altitude? The Surface of the Cone wherein it ſhould be ſeen, being loſt in the Ground, at a little Diſtance from the Eye, when the Sun is above 42° high.

Sixthly, Why the *Bow* never appears greater than a Semicircle, on a Plane? Since be the Sun never ſo low, and even in the Horizon; the Centre of the Bow is ſtill in the Line of Aſpect; which, in this Caſe, runs along the Earth, and is not all rais'd above the Surface.

Indeed, if the Spectator be placed on a very conſiderable Eminence, and the Sun in the Horizon; the Line of Aſpect wherein the Centre of the Bow is, will be notably rais'd above the Horizon, (conſidering the Magnitude of the Circle whereof the Bow uſes to be a Part.) Nay, if the Eminence be very high, and the Rain near, 'tis poſſible the Bow may be an entire Circle.

Seventhly, How the *Bow* may chance to appear inverted, *i. e.* the Concave Side be turn'd upwards? To wit, a Cloud happening to intercept the Rays, and prevent their ſhining on the upper Part of the Arch: In which Caſe only the lower Part appearing, the Bow will ſeem as if turn'd upſide down: Which probably has been the Caſe in ſeveral Prodigies of this Kind, related by Authors.

Indeed the Bow may appear inverted from another Cauſe: For, if, when the Sun is 41° 46′ high, his Rays fall upon the ſmooth Surface of ſome ſpacious Lake, in the middle whereof a Spectator is plac'd; and if, at the ſame time there be Rain falling to which the Rays may be reflected from the Lake: 'Twill be the ſame as if the Sun ſhou'd ſhine below the Horizon, and the Line of View be extended upwards: Thus the Surface of the Cone wherein the coloured Drops are to be placed, will be wholly above the Surface of the Earth.

But ſince the upper Part will fall among the unbroken Clouds; and only the lower Part be found among the Drops of Rain, the Arch will appear inverted.

Eighthly, Why the *Bow* ſometimes appears inclined? The accurate roundneſs of the Bow depending on its great Diſtance, which prevents us from judging of it exactly; if the Rain which exhibits it, chance to be much nearer, we ſhall ſee its irregularities; and if the Wind in that Caſe drive the Rain ſo as the higher Part be further from the Eye than the lower, the Bow will appear inclined.

Ninthly, Why the Legs of the *Rainbow* ſometimes appear unequally diſtant? If the Rain terminate on the Side of the Spectator, in a Plane ſo inclined to the Line of Aſpect as to make an acute Angle on the left Hand, and an obtuſe Angle on the right; the Surface of the Cone which determines what Drops will appear, will fall upon them in ſuch manner as that thoſe on the left Hand, will appear further from the Eye than thoſe on the Right. For the Line of Aſpect being Perpendicular to the Plane of the Bow, if you ſuppoſe two rectangular Triangles a Right and Left, the Cathetus of each to be Line of View, and the Baſe the Semidiameter of the Bow, inclined as above: 'Tis evident, ſince thoſe Angles of the Triangles, next the Eye, muſt always be the ſame, (*viz.* 43° in the inner Bow) the Baſis of the Right-hand Triangle will appear much longer than that of the Left.

Lunar RAIN-BOW.

The Moon, ſometimes, alſo, exhibits the Phænomenon of an *Iris* or *Bow*; by the Refraction of her Rays in the Drops of Rain in the Night-time. See MOON.

Ariſtotle ſays, he was the firſt that ever obſerved it; and adds, that it never happens, *i. e.* is never viſible, but at the Time of the Full-Moon; her Light at other times being too faint to affect the Sight, after two Refractions, and one Reflection.

The

The *Lunar Iris* has all the Colours of the *Solar*, very diſtinct and pleaſant; only faint, in Compariſon of the other; both from the different intenſity of the Rays, and the different Diſpoſition of the Medium.

In that mention'd *Philoſoph. Tranſact.* N°. 331. Mr. *Thoresby* obſerves, the largeneſs of the Arch was not ſo much leſs than that of the Sun, as the different Dimenſions of their Bodies, and their Diſtances from the Earth ſhould ſeem to require: But, as to its intireneſs and the Beauty of its Colour, it was admirable. It continued about 10 Minutes e're the interpoſition of a Cloud hinder'd its Obſervation.

Marine RAIN-BOW.

The *Marine* or *Sea-Bow*, is a Phænomenon ſometimes obſerv'd in a much agitated Sea; when the Wind ſweeping Part of the Tops of the Waves, carries them aloft; ſo that the Sun's Ray falling upon them, are refracted, *&c.* as in a common Shower; and Paint the Colours of the Bow.

F. Bourzes, in the *Philoſoph. Tranſact.* obſerves, that the Colours of the *Marine Rainbow* are leſs lively, diſtinct, and of leſs duration than thoſe of the common *Bow*; that there are ſcarce above two Colours diſtinguiſhable, a dark Yellow on the Side next the Sun, and a pale Green on the oppoſite Side.

But theſe Bows exceed as to Number, there being ſometimes 20 or 30 ſeen together: They appear at Noon-Day, and in a Poſition oppoſite to that of the common Bow, *i. e.* the Concave Side is turn'd upwards, as, indeed, it's neceſſary it ſhould be, from what we have ſhewn in accounting for the Phænomena of the *Solar Bow*.

To this Claſs of *Bows* may be referr'd a Kind of *white, colourleſs Rainbows*, which *Mentzolius*, and others, affirm to have ſeen at Noon-Day. M. *Mariotte* in his IVth *Eſſai de Phyſique*, ſays, theſe *Bows* are form'd in *Miſts*, as the others are in Showers, and adds, that he has ſeen ſeveral both after Sun-riſing, and in the Night.

The want of Colours he attributes to the Smallneſs of the Vapours which compoſe the Miſt: We ſhould rather Account for it from the exceeding Tenuity of the little *Veſiculæ* of the Vapour; which being in effect only little watery Pellicles bloated with Air, the Rays of Light undergo but little Refraction in paſſing out of Air into them; too little to ſeparate the differently coloured Rays, *&c.*

Hence the Rays are reflected from them, compounded as they came, that is, White. See REFRACTION.

Rohault mentions colour'd *Rainbows* on the Graſs; form'd by the Refractions of the Sun's Rays in the Morning Dew. *Trait. de Phyſ.*

RAISER, in Building, a Board ſet on-edge under the fore-ſide of a Step, Stair, *&c.* See STAIR, *&c.*

RAISING, in the Manage, one of the three Actions of a Horſe's Legs; the other two being the *Stay* and the *Tread*; which ſee.

The *Raiſing*, or lifting up of his Leg in Caprioles, Curvets, *&c.* is eſteemed good, if he preform it hardily and with eaſe; not croſſing his Legs, nor carrying his Feet too much out or in; yet bending his Knees as much as is needful.

RAISING-*Pieces*, in Architecture, are Pieces that lie under the Beams, on Brick or Timber, by the Side of the Houſe.

RAISINS, Grapes prepared by drying them in the Sun, or in Ovens; to fit them for keeping, and for ſome medicinal Purpoſes. See CURRANTS.

Of theſe there are various Kinds: As *Raiſins of Damaſcus*; thus call'd from the capital City of *Syria*, in the Neighbourhood whereof they are cultivated. They are much uſed in the Compoſition of Ptiſans, together with Jujubes and Dates; are brought flat and ſeeded, of the Size of the Thumb; whence 'tis eaſy judging of the extraordinary Bulk of the Grape, when freſh. Travellers tell us of Bunches weighing 25 Pounds. Their Taſte is faintiſh and diſagreeable.

Raiſins of the Sun, a kind of Raiſins brought from *Spain*, of a reddiſh or blueiſh Colour, ſeeded, very agreeable to eat.

There are various other Kinds, denominated from the Place where they grow, or the Kind of Grape, *&c.* as *Raiſins of Calabria*, *Muſcade Raiſins*, &c.

RAITING, or RATING, the laying of Hemp, Flax, Timber, *&c.* when green, in a Pond or running Water, to ſeaſon and diſpoſe for future uſe. See SEASONING.

RAKE, of a Ship, is ſo much of her Hull as over-hangs at both Ends of her Keel.

That Part of it which is before, is called the *Rake forward on*; and that Part which is at the ſetting on of the Stern-Poſt, is call'd her *Rake aft-ward on*: When a Ship hath but a ſmall *Rake* forward on, but is built with her Stern too ſtreight up, ſhe is called *Bluffle-headed*.

Rake of the Rudder, is the hindermoſt Part of it. See RUDDER.

RAKING, of a Horſe, is the drawing his Ordure with the Hand out of the Fundament, when he is Coſtive and cannot Dung. In order to this the Hand muſt be anointed with Sallet-Oyl or Butter.

RAKING-*Table*, among Architects, a Member hollowed in the Square of a Pedeſtal, or elſewhere. See CAVETTO, SCOTIA.

RALLYING, in War, the re-aſſembling, or calling together of Troops broken, routed, and put to flight.—A Horſe is ſaid to *Rake* when being *Shoulder-Splaid*, or having ſtrain'd his Fore-Quarters, he goes ſo Lame as to drag one of his Fore-Legs in a Circle.

RAM, in Aſtronomy. } See ARIES.
Battering RAM. }

RAMADAN, a ſort of *Lent*, obſerv'd by the *Mahometans*; during which they faſt the whole Day, with ſuch extreme Superſtition, that they dare not waſh their Mouth, nor even ſwallow their Spittle. See LENT and FASTING.

The Men indeed are allow'd to Bath themſelves; but 'tis on Condition they don't plunge the Head under Water, leſt ſome Drops enter by the Mouth or Ears, *&c.* But for the Women they are ſtrictly forbid Bathing, for fear of taking in Water below.

To make amends, they Feaſt all the Night; and uſually ſpend more this Month than in ſix others.

RAMAGE, a Term uſed for the Boughs or Branches of Trees. Hence,

Ramage Hawk, or *Falcon*, is one that is wild and coy, as having been long amidſt the Boughs, preying for it ſelf.

A Faulcon retains this Name till he has left the *Eyrie*, being ſo called in *May*, *June*, *July*, and *Auguſt*. Theſe are very rarely reclaimed.

RAMMER, an Inſtrument for driving down Stones or Piles into the Ground; or for the beating the Earth, and making it more ſolid for a Foundation. See FOUNDATION.

RAMMER, *of a Gun*, or *Gun-Stick*, a Rod or Staff uſed in charging a Gun; to drive home the Powder to the Breech, as alſo the Shot, and the Wad, which keeps the Shot from rolling out. See CHARGE.

The *Rammer* of a great Gun has a round Piece of Wood at one End; the other is uſually rolled in a Piece of Sheep-Skin, fitted to the Bore of the Piece, in order to clear her after ſhe has been diſcharged: Which they call *ſponging the Piece*. See SPUNGE.

RAMIFICATION, the Production of Boughs or Branches; or of Figures reſembling Branches. See BRANCH.

RAMIFICATIONS, in Anatomy, are the Diviſions of the Arteries, Veins, and Nerves, ariſing from ſome common Trunk. See ARTERY, VEIN, and NERVE.

RAMPANT, in Heraldry, is applied to a Lion, Bear, Leopard, or other Beaſt, in a Poſture of Climbing, or ſtanding upright on his Hind-Legs, and rearing up his Fore-Feet.

It is different from *Saliant*, which is a Poſture leſs erect. See SALIANT.

This Poſture is to be ſpecified in blazoning in all Animals, except the Lion and Griffin; it being their natural Situation.

The Term is *French*, and ſignifies literally, *creeping*.

RAMPART, in Fortification, a Mount or Maſs of Earth, rais'd about the Body of a Place, to cover it from the great Shot; and form'd into Baſtions, Curtains, *&c.* See FORTRESS, WALL, BASTION, *&c.*

Upon the *Rampart* the Soldiers continually keep Guard, and Pieces of Artillery are planted for the Defence of the Place.

Hence, to Shelter the Guard from the Enemies Shot, the out-ſide of the *Rampart* is built higher than the inſide, *i. e.* a Parapet is rais'd upon it with a Platform. See PARAPET and PLATFORM.

Hence, alſo, Earth not being capable to be rais'd perpendicularly, like Stone; the *Rampart* is built with a *Talus* or Slope, both on the inner and outer-ſide. See TALUS.

The *Rampart* is ſometime *lined*, i. e. fortified with a Stone Wall within-ſide; otherwiſe it has a *Berme*. See BERME.

'Tis incompaſſed with a Moat or Ditch, out of which the Earth that forms the *Rampart* is dug. See DITCH.

The Height of the *Rampart* muſt not exceed three Fathom; this being ſufficient to cover the Houſes from the Battery of the Cannon: Neither ought its Thickneſs to be above 10 or 12, unleſs more Earth be taken out of the Ditch, than can be otherways beſtowed.

The *Ramparts* of Half-Moons are the better for being low; that the ſmall Fire of the Defendants may the better reach the Bottom of the Ditch: but yet it muſt be ſo high, as not to be commanded by the Covert-Way.

The Word is form'd from the *Spaniſh Amparo*, Defence, Covering.

RAMPART is alſo uſed in Civil Architecture, for the Space left void between the Wall of a City and the next Houſes.

This is what the *Romans* call'd *Pomærium*, wherein it was forbid to build; and where they planted Rows of Trees, for the People to walk and amuſe themſelves under.

RAMUS, in Anatomy, *&c.* a Branch of a greater Veſſel. See VESSEL.

Ramus Anterior is particulariy uſed for a Branch of the ſubcutaneous Vein paſſing under the Muſcles of the *Ulna*. *Ramus poſterior*, a Branch of the ſame Vein running near the Elbow. See SUBCUTANEOUS.

RANCID, ſomething mouldy, or muſty; or that has contracted an ill Smell, by being kept cloſe. See MOULDINDSS.

The Word is particularly underſtood of old ruſty Bacon. It comes from the *Latin Rancidus*, of *rancco*, to be rank.

RANDOM-

RANDOM-*Shot*, a Shot made when the Muzzle of a Gun is raiſed above the Horizontal Line, and is not deſign'd to ſhoot directly, or Point-blank. See GUNNERY.

The utmoſt *Random* of any Piece is about ten times as far as the Bullet will go Point-blank; and the Bullet will go fartheſt when the Piece is mounted to about 45 Degrees above the Level-Range. See RANGE.

The Diſtance of the *Random* is reckoned from the Platform to the Place where the Ball firſt grazes.

RAN-FORCE-RING, of a Gun, that which is next before the Touch-Hole. See ORDNANCE.

RANGE, in Gunnery, the Path of a Bullet, or the Line it deſcribes from the Mouth of the Piece, to the Point where it lodges. See GUN, BULLET, *&c.*

If the Piece be laid in a Line Parallel to the Horizon, it is called the *Right or Level Range*. If it be mounted to 45 Degrees, the Ball is ſaid to have the *utmoſt Range*; and ſo proportionably; all others between 00 Degrees, and 45°, being called the *intermediate Ranges*. See GUNNERY, PROJECTILE, *&c.*

RANGER, a ſworn Officer of a Foreſt, or Park, whoſe Buſineſs it is to walk daily through his Charge, to drive back the wild Beaſts out of the *Purlieus* or diſforeſted Places, into the foreſt Lands; and to preſent all Treſpaſſes done in his Bailiwick, at the next Court held for the Foreſt. See FOREST and PURLIEU.

The *Ranger* is made by the King's Letters, and has a Fee paid yearly out of the Exchequer, and certain Fee-Deer.

In the Charter *de Foreſta*, mention is made of twelve Kind of *Rangers*.

RANGES, in a Ship, are two Pieces of Timber, going a-croſs from Side to Side; one aloft, on the Fore-Caſtle, a little abaft the Fore-Maſt; and the other in the Beak-head before the Wouldings of the Bow-ſprit.

RANGING, in War, the diſpoſing of Troops in a Condition proper for Engagement, or for Marching. The Army was *ranged* in Form of Battle to receive the Enemy; *ranged* in three Columns, for a March, *&c.*

In Building, the Side of a Work that runs ſtraight, without breaking into Angles, is ſaid to *range*, or *run range*.

RANK, a due Order; or a Place allotted a thing ſuitably to its Nature, Quality, or Merit. See ORDER.

Kings are Perſons of the firſt *Rank* on Earth: In Cavalcades, Proceſſions, *&c.* every Perſon is to obſerve his *Rank*. See PRECEDENCE.

RANK, in military Diſcipline, a Series or Row of Soldiers, placed Side by Side; a Number of which *Ranks* forms the Depth of the Squadron or Battallion, as a Number of *Files* does the Width. See FILE.

To *Cloſe the Ranks*, is to bring the Men nearer; to *open*, to ſet them further a-part: To *double the Ranks*, is to throw two into the Space of one.

RANK, in reſpect of Ships. See RATE.

RANT, in the Drama, an extravagant Flight of Paſſion; overſhooting Nature and Probability. See PROBABILITY.

Lee's Tragedies abound with *Rants*. The rankeſt, 'tis obſerv'd, frequently meet with Applauſe on the Stage.

We find Inſtances of *Rants*, even in our ſevereſt Poets. Such, *e. gr.* is that in the Beginning of *Ben. Johnſon*'s *Cataline*, where the Parricide ſpeaking to *Rome*, ſays, *I'd plough up Rocks, ſteep as the Alps, in Duſt; and lave the Tyrrhene Waters into Clouds; but I wou'd reach thy Head.*

RANSOM, a Sum of Money, paid for the Redemption of a Perſon out of Slavery; or for the Liberty of a Priſoner of War. See REDEMPTION.

In our Law-Books, *Ranſom* is alſo uſed for a Sum paid for the pardoning of ſome notorious Crime. *Horn* makes this difference between *Ranſom* and *Amerciament*, that *Ranſom* is the Redemption of a Corporal Puniſhment. See AMERCIAMENT.

When one is to make a Fine, and *Ranſom*, the *Ranſom* ſhall be treble the Fine. *Cromp. Juſt.*

RANULA, in Medicine, a Tumour under the Tongue, which like a Ligament hinders a Child from ſpeaking or ſucking.

The *Ranula ſub Lingua* is the ſame with what we otherwiſe call being *Tongue-tied*. See TONGUE.

The *Ranula* is uſually cauſed by a ſhort *Frænum* not permiting the Tongue to perform its proper Motions: At other Times, though rarely, there is a ſtrong Concretion in that Part. Sometimes it is *œdematous*, at others *melicerous*, *ſcirrhous*, *black*, *livid*; in which Caſes the Operation of Cutting is dangerous; and it grows to the Magnitude of a Bean or Cheſtnut.

If a ſhort *vinculum* be the Cauſe, it is to be cut aſunder with a Scalpar, and the Part gently touched with *Mell. Roſat.* and *Tinct. Myrrh*; being very careful not to cut the Arteries, Nerves, or Salival Glands in the Operation. See RANULARES.

RANULARES, or RANINÆ VENÆ, in Anatomy, two Veins under the Tongue, ariſing from the external Jugular, and running on either Side the *linea Mediana*. See TONGUE.

Theſe Veins are opened with good Succeſs in Quinzies.

They take their Denomination from a reſemblance of their State to that of *little Frogs*, call'd in *Latin*, *Ranulæ*, becauſe never out of Water.

RAPACIOUS *Animals*, in the general, are ſuch as live upon Prey. See ANIMAL.

Naturaliſts divide Birds into *Rapacious*, *Carnivorous*, and *Frugivorous*. See BIRD.

The Characteriſtic Notes of Birds of Prey are; that they have a great Head, and a ſhort Neck; hooked, ſtrong, and ſharp-pointed Beak and Talons, fitted for tearing of Fleſh; ſtrong and brawny Thighs, for ſtriking down their Prey; a broad thick fleſhy Tongue like that of a Human Creatures; 12 Feathers in their Train; and 24 Flag Feathers in each Wing. The two Appendices, or blind Guts, are always very ſhort. See EAGLE, FALCON, HAWK, *&c.*

They have a membranous Stomach; and not a muſculous one, or a Gizzard, ſuch as Birds have, that live on Grain.

They are very ſharp-ſighted; and gather not in Flocks, but generally ſpeaking, are ſolitary; though Vultures will fly 50 or 60 in a Company.

RAPE, in Law, a *Raviſhing*; or the having Carnal Knowledge of a Woman by Force, and againſt her Will.

If the Woman conceive the Law eſteems it no *Rape*; from an Opinion that ſhe cannot conceive unleſs ſhe conſent. *Coke on Litt.* lib. 2. cap. 11.

This Offence is Felony in the Principal and his Aiders, by ſeveral Statutes; and the Criminal is excluded from the Benefit of his Clergy. See FELONY.

By the Civil Law, *C. de Raptu Virginum*, Raviſhing is decreed Capital, unleſs the Woman, being a Maid, or Widow, may be married to the Raviſher. In *France* the Civil Conſtitution ſtill obtains, and allows the Man to marry the Woman with her Conſent.

By an Ordonnance 1639, the *Rape* of a Girl or a Boy are put on the ſame footing. *Fleta* obſerves, that by our Laws the Complaint muſt be made within forty Days, elſe the Woman may not be heard. *Lib.* 3. *Chap.* 5.

All Carnal Knowledge of a Maid before ten Years of Age, is deem'd by the Law Felony; *Stat. An.* 8 *Eliz. cap.* 6.

In *Bracton*'s Time, the *Raptor* or *Raviſher*, was puniſhed with the loſs of his Eyes and Teſticles, *Quia Colorem ſtupri Induxerunt.* 3 Inſt. Fol. 60.

The Civilians make another Kind of *Rape*, call'd *Subornatio*, or *Rape of Subornation*, or *Seduction*; which is when a Perſon ſeduces, or entices a Maid to uncleanneſs, or even Marriage, and that by gentle Means; provided there be a conſiderable Diſparity in Age or Condition between the Parties.

In this Caſe, the Father and Mother Intent their Action reciprocally for the *Crimen Raptus*, or *Subornationis*.

The *French* Laws make no difference between the *Rape* of Violence, and that of Sollicitation, or Subornation; they make both Capital.

This Kind of *Rape* our Laws call Raviſhment. See RAVISHMENT.

RAPE, of the Foreſt, is a Treſpaſs committed in the Foreſt by Violence. See FOREST.

This is mentioned in the Laws of *Henry* I. as one of the Crimes cognizable alone by the King.

RAPE, is alſo a Name given the Wood or Stalks of the Cluſters of Grapes, when dried and freed from the Fruit.

The *Rape* is uſed in making Vinegar, ſerving to heat and ſour the Wine: But 'tis firſt put into a Place to ſour itſelf, before it is caſt into the Vinegar Veſſel; to which End, preſently after the Vintage, it is carefully put up in Barrels, leſt it take Air, otherwiſe it would heat it ſelf, and be ſpotted: There is no other way of keeping *Rape*, hitherto diſcovered, but to fill the Veſſel, wherein it is contain'd, with Wine or Vinegar. See VINEGAR.

RAPE, is alſo uſed for Part of a County, ſignifying as much as a *Hundred*. See HUNDRED.

Though, ſometimes *Rape* is taken for a Diviſion containing ſeveral Hundreds; thus *Suſſex* is divided into ſix *Rapes*, *viz.* thoſe of *Chicheſter*, *Arundel*, *Bramber*, *Lewis*, *Pevency*, and *Haſtings*; every one of which beſides its Hundreds, has a Caſtle, River, and Foreſt belonging to it.

Theſe Parts in other Counties, are called *Tithings*, *Lathes*, or *Wapentakes*. See TITHING, LATHE, *&c.*

RAPIER, a long, ordinary, old faſhion'd cutting Sword, ſuch as thoſe wore by the common Soldiers. See SWORD.

Hence, to *take the Rapier*, is to enter in the Army.

The Word is form'd from the *Greek* ῥάπτειν, *cedere*, to ſmite, ſtrike.

RAPINE, in Law. To take a thing in private againſt the Owner's Will, is properly *Theft*; but to take it openly, or by Violence, is *Rapine*. See ABACTIO.

RAPSODIST, RAPSODY, See RHAPSODIST, RHAPSODY,

RAPTU *hæredis*, a Writ laying for the taking away an Heir, holding in Socage; of which there are two Sorts; one when the Heir is married, the other when not. See RAPE.

RAPTURE, RAPTURA, an Ecſtacy, or Tranſport of Mind. See EXTASY, ENTHUSIASM, RHAPSODY, *&c.*

RARE, in Phyſicks, a Body that is very porous, whoſe Parts are at great Diſtance from one another, and which contains but little Matter under a great deal of Bulk. See RAREFACTION, BODY, PORE.

In this Senſe *Rare* ſtands oppoſed to *Denſe*. See DENSITY.

The Corpuſcular Philoſophers, *viz.* the *Epicureans*, *Gaſſendiſts*, *Newtonians*, &c. aſſert that Bodies are *rarer*, ſome than others, in virtue of a greater Quantity of Vacuity included between their Pores. The *Carteſians* hold, that a greater *rarity* only conſiſts in a greater Quantity of *Materia Subtilis*, included in the Pores. Laſtly, the *Peripateticks* contend, that *Rarity* is a new Quality ſuperinduced upon a Body, without any Dependance, either on Vacuity, or ſubtle Matter. See CARTESIAN, *&c.*

RAREFACTION, in Phyſicks, the Action whereby a Body is render'd *Rare*; that is, whereby it comes to poſſeſs more room, or appear under a larger Bulk, without any Acceſſion of new Matter. See RARE.

Rarefaction is oppoſed to *Condenſation*. See CONDENSATION.

In ſtrictneſs, however, our more accurate Writers reſtrain *Rarefaction* to that Expanſion of a Maſs into a larger Bulk, which is effected by Means of Heat: All Expanſion from other Cauſes they call *Dilatation*. See HEAT and DILATATION.

The *Carteſians* deny any ſuch thing as abſolute *Rarefaction*: *Extenſion*, with them, conſtituting the Eſſence of Matter, they are obliged to hold all Extenſion equally *full*. See EXTENSION and PLENUM.

Hence, they make *Rarefaction* to be no other than an Acceſſion of freſh, ſubtle, and inſenſible Matter, which entering the Parts of a Body, ſenſibly diſtends them. See this diſproved under VACUUM.

'Tis by *Rarefaction* that Gunpowder has its effects; and to the ſame Principle we owe our *Æolipiles*, *Thermometers*, &c. See GUNPOWDER, THERMOMETER, ÆOLIPILE, *&c.*

The Degree to which the Air is *rarefyable* exceeds all Imagination: *Merſennus*, long ago, by means of an intenſe Heat, found that Air might be rarified, ſo as to poſſeſs more than 70 times its former Space.

Mr. *Boyle* afterwards found, that Air, by its own Elaſticity, and without the help of any Heat, would dilate is ſelf ſo as to take up 9 times its former Space; then 31 times; then 60; then 150: at length, by many Degrees he found it would reach to 8000 times, then 10000, then 13679. See ELASTICITY.

Such is the *Rarefaction* of common Air, from its own Principle of Elaſticity, and without any previous Condenſation; but if it be compreſs'd, the ſame Author found its greateſt Space when moſt rarified, is to its leaſt when moſt condens'd, as 550000 to 1. See COMPRESSION.

Such an immenſe *Rarefaction*, Sir *Iſaac Newton* ſhews, is inconceivable on any other Principle than that of a repelling Force inherent therein, whereby its Particles mutually fly from one another. See ATTRACTION, *&c.*

This repelling Force he obſerves is much more conſiderable in Air than in other Bodies, as being generated from the moſt fix'd Bodies, and that with much Difficulty, and ſcarce without Fermentation: Thoſe Particles being always found to fly each other with the moſt Force, which when in Contact, cohere the moſt firmly. See REPELLING-*Power*.

The Members of the *French* Royal Acadamy have beſtowed a world of Attention on the different *Rarefactions*, or rather the different *Rarities* of the Air at different Heights. M. *Mariotte* eſtabliſhed this as a Principle, from Experiments, that the different *Rarefactions* or Condenſations of the Air follow the Proportion of the Weights wherewith 'tis preſs'd.

Hence, ſuppoſing the Mercury in the level of the Sea ſuſpended to 28 Inches, which is the Weight of the whole Atmoſphere; and that 60 Foot Height of Air are equivalent to a Line, or $\frac{1}{12}$ of an Inch of Mercury; ſo that the Barometer at the Height of 60 Foot from the Sea, would fall a *Line*; 'tis eaſy finding what Height of Air would be equal to a Second, or any other Line of Mercury: For as 28 Inches of Mercury, $\frac{1}{12}$ are to 28 Inches, ſo is the Height of 60 Foot of Air, to a fourth Term; which is the Height of Air correſponding to a ſecond Line of Mercury.

And after the ſame manner may the Heights of Air correſponding to each Line be found; which will make a Geometrical Progreſſion, the Sum whereof will be the whole Height of the Atmoſphere. Of conſequence a certain Part of that Sum will be the Height of a Mountain; at whoſe Top the Barometer ſhall have ſunk a certain Quantity. See MOUNTAIN.

Meſſ. *Caſſini* and *Maraldi*, upon meaſuring the Heights of ſeveral Mountains, found that this Progreſſion of M. *Mariotte*, was defective; that it always gave the Height of the Mountains, and conſequently the *Rarefactions*, leſs than they really were; and from ſome new Experiments M. *Amontons* found that the Principle will only hold in the mean *Rarefactions*, not in the Extremes. See AIR.

RAREFACTIVES, or RAREFACIENTIA, in Medicine, Remedies which open and enlarge the Pores of the Skin, to give an eaſy Vent to the Matter of Perſpiration. See PERSPIRATION.

Such are Aniſe, Mallows, Pellitory, Camomile-Flowers, Line-Seed, *&c.*

RASANT, in Fortification. *Raſant Flank*, or *Line*, is that Part of the Curtain, or Flank, whence the Shot exploded raze or glance along the Face of the oppoſite Baſtion. See FLANK.

The Defence of the Baſtion is *Raſant*. See DEFENCE.

RASH, in Medicine, an Erruption or Efflorescence upon the Skin, thrown out in Fevers or Surfeits. See SURFEIT, *&c.*

RASP, a ſort of File. See FILE.

RASPHUYS, or RASP-*Houſe*, a celebrated Work-houſe or Houſe of Correction, at *Amſterdam*. See WORK-*Houſe*.

RASPATORY, a Chirurgeons Inſtruments wherewith they ſcrape foul, carious, or fractured Bones.

RASURE, RASEMENT. See ERASURE.

RATAFIA, a fine ſpirituous Liquor, prepared from the Kernels, *&c.* of ſeveral Kinds of Fruits, particularly Cherries and Apricocks.

Ratafia of Cherries is prepared by bruiſing the Cherries, and putting them into a Veſſel wherein Brandy has been kept; then adding to them the Kernels of the Cherries, with Strawberries, Sugar, Cinnamon, white Pepper, Nutmegs, Cloves; and to 20 Pound of Cherries, 10 Quarts of Brandy.

The Veſſel is left open 10 or 12 Days, then ſtopp'd cloſe, for two Months e're it be tapp'd.

Ratafia of Apricocks is prepared two ways; *viz.* either by boiling the Apricocks in white Wine, adding to the Liquor an equal Quantity of Brandy, with Sugar, Cinnamon, Mace, and the Kernels of the Apricocks; infuſing the whole for 8 or 10 Days; then ſtraining the Liquor, and putting it up for Uſe: Or, by infuſing the Apricocks, cut in Pieces, in Brandy, for a Day or two; paſſing it through a ſtraining Bag, and putting in the uſual Ingredients.

RATCH, in Clock-Work, a ſort of Wheel, which ſerves to lift up the Detents every Hour, and to make the Clock ſtrike. See CLOCK.

RATCHETS, in a Watch, are the ſmall Teeth at the Bottom of the Barrel, which ſtop it in winding up. See WATCH.

RATE, a Standard, or Proportion by which the Quantity or Value of a thing is adjuſted. See STANDARD.

The *Rates* of Bread, *&c.* in *London*, are fix'd by Authority. See ASSISE.

The *Rate* of Intereſt, as now eſtabliſhed by Law in *England*, is 4 *per Cent.* The *Rate* of Intereſt in *Italy* is 3 *per Cent.* In *Sweden* 6. In *France* 7. In *Spain* 10. In *Scotland* 10. In *Barbadoes* 10. In *Ireland* 12. In *Turky* 20. See INTEREST.

Low *Rates* of Intereſt advance the Prices of Land.

The *Rates* or *Fares* of Hackney-Coachmen, Chairmen, and Watermen, are fix'd by Act of Parliament, 14 *Car.* II. See HACKNEY-COACH, *&c.*

The *Rates* of Exchange, Factorſhip, *&c.* are different. See EXCHANGE, FACTORAGE, *&c.*

RATE-*Tythe*. When Sheep, or other Cattle, are kept in a Pariſh for leſs time than a Year; the Owner muſt pay Tythe for them, *pro rato*, according to the Cuſtom of the Place. See TYTHE.

RATE, of a Ship of War, is its Order, Degree, or Diſtinction, as to Magnitude, Burthen, *&c.* See SHIP, *&c.*

The *Rate* is uſually accounted by the Length and Breadth of the Gun-Deck, the Number of Tuns, and the Number of Men and Guns the Veſſel carries.

A *Firſt Rate* Man of War has its Gun-Deck from 159 to 174 Feet in Length, and from 44 to 50 Foot Broad; contains from 1313, to 1882 Tuns; has from 706 to 800 Men; and carries from 96 to 110 Guns. See NAVY.

Second Rate Ships have their Gun-Decks from 153 to 165 Foot long; and from 41 to 46 broad; they contain from 1086 to 1482 Tuns; and carry from 524 to 640 Men; and from 84 to 90 Guns.

Third Rates have their Gun-Decks from 142 to 158 Foot in Length; from 37 to 42 Foot broad; they contain from 871 to 1262 Tuns; carry from 389 to 476 Men; and from 64 to 80 Guns.

Fourth Rates are in Length on the Gun-Deck, from 118 to 146 Foot; and from 29 to 38 broad; they contain from 448 to 915 Tuns; carry from 226 to 346 Men; and from 48 to 60 Guns.

Fifth Rates have their Gun-Decks from 100 to 120 Foot long; and from 29 to 31 broad; they contain from 259 to 542 Tuns; carry from 145 to 190 Men; and from 26 to 44 Guns.

Sixth Rates have their Gun-Decks from 87 to 95 Foot long; and from 22 to 25 Foot broad; they contain from 152 to 256 Tuns; carry from 50 to 110 Men; and from 16 to 24 Guns.

Note, The new-built Ships are much larger, as well as better than the old ones of the ſame *Rate*; whence the double Numbers all along; the larger of which expreſs the Proportions of the new-built Ships, as the leſs thoſe of the old ones.

For the Number of Veſſels of each *Rate* in the *Engliſh* Fleet, ſee NAVY.

RATEEN, or RATINE, in Commerce, a thick woollen Stuff, croſs'd; wove on a Loom with four Treddles, like Serges and other Stuffs that have the Croſſing.

There are ſome *Ratines* dreſs'd and prepar'd like Cloths; others left ſimply in the Hair; and others where the Hair or Nap is frized.

Ratines are chiefly manufactured in *France*, *Holland*, and *Italy*; and are moſtly uſed in Linings.

The Frize is a coarſe *Ratine*; the Drugget a *Ratine* half Thread, half Wool.

RATIFICATION, an Act, approving of, and confirming ſomething done by another, in our Name.

A Treaty of Peace is never ſure till the Princes have *ratified* it. See TREATY.

All Procuration imports a promiſe of *Ratifying* and approving what is done by the Proxy or Procurator. After treating with a Procurator, Agent, Factor, *&c.* A *Ratification* is frequently neceſſary on the Part of his Principal.

RATIFICATION is particularly uſed in our Laws for the Confirmation of a Clerk in a Benefice, Prebend, *&c.* formerly given him by the Biſhop, *&c.* where the right of Patronage is doubted to be in the King.

RATIFICATION is alſo uſed for an Act confirming ſomething we our ſelves have done in our own Name. An Execution, by a Major, of an Act paſs'd in his Minority, is equivalent to a *Ratification.*

RATIO, REASON, in Arithmetick and Geometry, that Relation of homogeneous things which determines the Quantity of one from the Quantity of another, without the intervention of any third. See RELATION.

The homogeneous things thus compared, we call *the Terms of the Ratio*; particularly, that referr'd to the other, we call the *Antecedent*; and that to which the other is referr'd, the *Conſequent.* See TERM, *&c.*

Thus, when we conſider one Quantity, by comparing it with another, to ſee what Magnitude it has in Compariſon of that other; the Magnitude this Quantity is found to have in Compariſon thereof is call'd the *Ratio, Reaſon,* of this Quantity to that; which ſome think would be better expreſs'd by the Word *Compariſon.* See COMPARISON.

Euclid defines *Ratio* by *the Habitude or Relation of Magnitudes of the ſame Kind in reſpect of Quantity.*—But this Definition is found defective; there being other Relations of Magnitudes which are conſtant, yet are not included in the Number of *Ratio's*; ſuch as that of the Right Sine, to the Sine of the Complement in Trigonometry.

Hobbs endeavour'd to amend *Euclid's* Definition of *Ratio*, but unhappily; for in defining it, as he does, by *the Relation of Magnitude to Magnitude*; his Definition has not only the ſame Defect with *Euclid's*, in not determining the particular Kind of Relation; but has this further, that it does not expreſs the Kind of Magnitudes, which may have a *Ratio* to one another.

Ratio is frequently confounded with *Proportion*; yet ought they by all means to be diſtinguiſhed, as very different things. Proportion, in effect, is an Identity, or Similitude of two *Ratio's.* See PROPORTION.

Thus, if the Quantity A be triple the Quantity B; the Relation of A to B, *i. e.* of 3 to 1, is call'd the *Ratio* of A to B. If two other Quantities, C,D, have the ſame *Ratio* to one another that A and B have, *i. e.* be triple one another; this ſameneſs of *Ratio* conſtitutes *Proportion*: and the four Quantities A : B : : C : D, are in Proportion, or Proportional to one another.

So that *Ratio* exiſts between two Terms, Proportion requres more.

There is a twofold *Compariſon* of Numbers: By the firſt, we find how much they differ, *i. e.* by how many Units the Antecedent exceeds, or comes ſhort of, the Conſequent.

This Difference is call'd, the *Arithmetical Ratio*, or *Exponent* of the Arithmetical Relation or Habitude of the two Numbers. Thus if 5 and 7 be compared, their *Arithmetical Ratio* is 2.

By the ſecond Compariſon, we find how oft the Antecedent contains, or is contain'd in the Conſequent; *i. e.* as before, what Part of the greater is equal to the leſs.

This *Ratio*, being common to all Quantity, may be call'd *Ratio* in the General, or, by way of Eminence. But it is uſually called *Geometrical Ratio*; becauſe expreſs'd, in Geometry, by a Line, though it cannot be expreſs'd by any Number.

Wolfius, better diſtinguiſhes *Ratio*, with regard to Quantity in the general, into *Rational*, and *Irrational.*

Rational Ratio, is that which is as one rational Number to another. *e. gr.* as 3 to 4. See NUMBER.

Irrational Ratio, is that which cannot be expreſs'd by Rational Numbers.

Suppoſe, for an Illuſtration, two Quantities A and B; and let A be leſs than B. If A be ſubſtracted as often as it can be, from B, *e. gr.* five times, there will either be left nothing or ſomething. In the former Caſe A will be to B, as 1 to 5; that is, A is contain'd in B five times; or $A=\frac{1}{5}$ B. The *Ratio*, here, therefore, is *rational.*

In the latter Caſe, either there is ſome Part, which being ſubtracted certain times from A, *e. gr.* three times, and likewiſe from B, *e. gr.* 7 times leaves nothing; or there is no ſuch Part, if the former: A will be to B, as 3 to 7, or $A=\frac{3}{7}B$, and therefore the *Ratio*, *Rational.* If the latter, the *Ratio* of A to B, *i. e.* what Part A is of B, cannot be expreſs'd by rational Numbers; nor any other way than either by Lines, or by infinite approaching Series. See SERIES.

The *Exponent of a Geometrical Ratio* is the Quotient ariſing from the Diviſion of the Antecedent by the Conſequent: Thus the Exponent of the *Ratio* of 3 to 2, is $1\frac{1}{2}$; that of the *Ratio* of 2 to 3, is $\frac{2}{3}$; for when the leſs Term is the Antecedent, the *Ratio*, or rather the *Exponent*, is an improper Fraction. Hence the Fraction $\frac{3}{4}=3:4$. If the Conſequent be Unity, the Antecedent itſelf is the Exponent of the *Ratio:* Thus the Exponent of 4 to 1 is 4, See EXPONENT.

If two Quantities be compared without the Intervention of a third; either the one is equal to the other, or unequal: Hence, the *Ratio* is either of *Equality* or *Inequality.*

If the Terms of the *Ratio* be *unequal*, either the leſs is referr'd to the greater, or the greater to the leſs: That is, either the leſs to the greater, as a Part to the Whole; or the greater to the leſs as the Whole to a Part: The *Ratio* therefore determines how often the leſs is contain'd in the greater, or how often the greater contains the leſs, *i. e.* to what Part of the greater, the leſs is equal.

The *Ratio* the greater Term has to the leſs, *e. gr.* 6 to 3, is called the *Ratio of the greater Inequality.* The *Ratio* the leſs Term has to the greater, *e. gr.* 3 to 6, is called the *Ratio of the leſs Inequality.*

This *Ratio* correſponds to Quantity in the General, or is admitted of by all Kinds of Quantities, diſcrete or continued, Commenſurable, or Incommenſurable. Diſcrete Quantity, or Number does likewiſe admit of another *Ratio.*

If the leſs Term of a *Ratio* be an aliquot Part of the greater, the *Ratio* of the greater Inequality is ſaid to be *Multiplex, Multiple:* And the *Ratio* of the leſs Inequality, *Submultiple.* See MULTIPLE.

Particularly, in the firſt Caſe, if the Exponent be 2, the *Ratio* is call'd *duple*; if 3, *triple*, &c. In the ſecond Caſe, if the Exponent be $\frac{1}{2}$, the *Ratio* is call'd *Subduple*; if $\frac{1}{3}$, *Subtriple*, &c.

E. gr. 6 to 2 is in a *triple Ratio*; becauſe 6 contains two thrice. On the contrary, 2 to 6 is in a *Subtriple Ratio*, becauſe 2 is the third Part of 6. See DUPLE, SUBDUPLE, *&c.*

If the greater Term contain the leſs once; and over and above, an aliquot Part of the ſame; the *Ratio* of the greater Inequality is call'd *Superparticularis*; and the *Ratio* of the leſs *Subſuperparticularis.*

Particularly, in the firſt Caſe, if the Exponent be $1\frac{1}{2}$, it is call'd *Seſquialterate*; if $3\frac{1}{3}$, *Seſquitertia*, &c. In the other, if the Exponent be $\frac{2}{3}$, the *Ratio* is call'd *Subſeſquialtera*; if $\frac{3}{4}$, *Subſeſquitertia*, &c.

E. gr. 3 to 2 is in a *Seſquialterate Ratio*; 2 to 3 in a *Subſeſquialterate.*

If the greater Term contain the leſs once, and over and above ſeveral aliquot Parts; the *Ratio* of the greater Inequality is call'd *Superpartiens*; that of the leſs Inequality, *Subſuperpartiens.*

Particularly, in the former Caſe, if the Exponent be $1\frac{2}{3}$, the *Ratio* is call'd *Superbipartiens tertias*; if the Exponent be $1\frac{3}{4}$, *Supertripartiens quartas*; if $1\frac{4}{7}$, *Superquadripartiens ſeptimas*, &c. In the latter Caſe, if the Exponent be $\frac{3}{5}$, the *Ratio* is call'd *Subſuperbipartiens tertias*; if $\frac{4}{7}$, *Subſupertripartiens quartas*; if $\frac{7}{11}$, *Subſuperquadripartiens ſeptimas.*

E. gr. the *Ratio* of 5 to 3 is *Superbipartiens tertias*; that of 3 to 5, *Subſuperbipartiens tertias.*

If the greater Term contain the leſs ſeveral times; and, beſides, ſome quota Part of the ſame; the *Ratio* of the greater Inequality is call'd *Multiplex Superparticularis*; and the *Ratio* of the leſs Inequality, *Submultiplex ſubſuperparticularis.*

Particularly, in the former Caſe, if the Exponent be $2\frac{1}{2}$, the *Ratio* is call'd, *Dupla ſeſquialtera*; if $3\frac{1}{4}$, *triple Seſquiquarta*, &c. In the latter Caſe, if the Exponent be $\frac{2}{5}$, the *Ratio* is call'd *Subdupla ſubſeſquialtera*; if $\frac{4}{13}$, *Subtriple ſubſeſquiquarta*, &c.

E. gr. the *Ratio* of 16 to 5 is *triple Seſquiquinta*; that of 4 to 9, *Subdupla ſubſeſquiqarta.*

Laſtly, if the greater Term contain the leſs ſeveral times, and ſeveral aliquot Parts thereof beſides; the *Ratio* of the greater Inequality is call'd *Multiplex ſuperpartiens*; that of the leſs Inequality, *Submultiplex Subſuperpartiens.*

Particularly, in the former Caſe, if the Exponent be $2\frac{3}{5}$, the *Ratio* is call'd, *dupla Superbipartiens tertias*; if $3\frac{4}{7}$, *tripla Superbiquadripartiens ſeptimas*, &c. In the latter Caſe, if the Exponent be $\frac{3}{5}$, the *Ratio* is call'd *Subdupla ſubſuperbipartiens tertias*; if $\frac{7}{25}$, *Subtripla ſubſuperquadripartiens ſeptimas*, &c.

E. gr. the *Ratio* of 25 to 7 is *tripla ſuperquadripartiens ſeptimas*; that of 3 to 8, *ſubdupla Subſuperbipartiens tertias.*

Theſe are the various Kinds of *Rational Ratio's*; the Names whereof, though they occur but rarely among the modern Writers, (for in lieu thereof they uſe the ſmalleſt Terms of the *Ratio's*, *e. gr.* for *duple*, 2 : 1, for *ſeſquialterate*, 3 : 2) yet are they abſolutely neceſſary to ſuch as converſe with the antient Authors.

Clavius obſerves, that the Exponents denominate the *Ratio's* of the greater Inequality, both in Deed and Name; but the *Ratio's* of the leſs Inequality, only in Deed, not in Name. But 'tis eaſy finding the Name in theſe; if you divide the Denominator of the Exponent, by the Numerator.

E. gr.

E. gr. if the Exponent be $\frac{5}{8}$, then $5 : 8 = 1\frac{3}{5}$; whence it appears the *Ratio* is call'd *Subſupertripartiens quintas*.

As to Names of *Irrational Ratio's*, no-body ever attempted them.

Same, or *Identic Ratio's*, are thoſe whoſe Antecedents have an equal reſpect to their Conſequents, *i. e.* whoſe Antecedents divided by their Conſequents, give equal Exponents. See IDENTITY.

And hence may the Identity of Irrational *Ratio's* be conceived.

Hence, *Firſt*, as oft as the Antecedent of one *Ratio* contains its Conſequent, or what ever Part it contains of its Conſequent, ſo oft, or ſuch Part of the other Conſequent does the Antecedent of the other *Ratio* contain: Or, as oft as the Antecedent of the one is contain'd in its Conſequent, ſo oft is the Antecedent of the other contain'd in its Conſequent.

Secondly, If A be to B as C to D, then will A : B :: C : D; or A : B = C : D. The former of which is the uſual Manner of repreſenting the Identity of *Ratio's*; the latter is that of the excellent *Wolfius*; which has the Advantage of the former, in that the middle Character =, which denotes the ſameneſs, is ſcientifical, *i. e.* expreſſes the Relation of the thing repreſented, which the other : : does not. See CHARACTER.

Two *equal Ratio's*, *e. gr.* B : C = D : E, we have already obſerved, do conſtitute a *Proportion:* Of two *unequal Ratio's*, *e. gr.* A : B and C D we call A : B the *Greater*; if A : B > C : D; on the contrary we call C : D the *leſſer*, if C : D < A : B.

Hence, we expreſs a greater and leſs *Ratio* thus. *E. gr.* 6 to 13 has a *greater Ratio*, than 5 to 4; for, $6 : 3 \ (=2) > 5 : 4 \ (= 1\frac{1}{4})$. But 3 to 6 has a *leſs Ratio* than 4 to 5, for $\frac{3}{6} = \frac{1}{2} < \frac{4}{5}$.

The *Ratio* is ſaid to be *compounded* of two or more other *Ratio's*, which the Factum of the Antecedents of two or more *Ratio's* has to the Factum of their Conſequents. Thus 6 to 7 is in a *Ratio compounded* of 2 to 6, and 3 to 12.

Particularly, if it be compounded of two, it is call'd a *Duplicate Ratio*; if of three, a *Triplicate*; if of four, *Quadruplicate*; and in the general *Multiplicate*, if it be compoſed of ſeveral ſimilar *Ratio's*. Thus 48 : 3 is a *duplicate Ratio* of 4 : 1 and 12 : 3.

Properties of Ratio's *of Quantities.*

Firſt, *Ratio's* ſimilar to the ſame third, are alſo ſimilar to one another; and thoſe ſimilar to Similar, are alſo ſimilar to one another.

Secondly, If A : B = C : D; then, inverſely, B : A = D : C.

Thirdly, Similar Parts P and p have the ſame *Ratio* to Wholes T and t; and if the Wholes have the ſame *Ratio*, the Parts are ſimilar.

Fourthly, If A : B = C : D; then, alternately, A : C = B : D. And hence, A = C; hence, alſo, if A : B = C : D; and A : F = C : G; we ſhall have B : F = D : G. Hence, again, if A : B = C : D; and F : A = G : C; we ſhall have F : B = G : D.

Fifthly, Thoſe things which have the ſame *Ratio* to the ſame, or equal things, are equal: *& vice verſa*.

Sixthly, If you multiply any Quantities, as A and B, by the ſame or equal Quantities; their Products D and E will be to each other as A and B.

Seventhly, If you divide any Quantities as A and B, by the ſame or equal Quantities, the Quotients F and G will be to each other as A and B.

Eighthly, The Exponent of a compound *Ratio* is equal to the Factum of the Exponents of the ſimple *Ratio*. See EXPONENT.

Ninthly, If you divide either the Antecedents, or the Conſequents of ſimilar *Ratio's*, A : B and C : D by the ſame E; in the former Caſe, the Quotients F and G will have the ſame *Ratio* to the Conſequents B and D; in the latter, the Antecedents A and B will have the ſame *Ratio* to the Quotients H and K.

Tenthly, If there be ſeveral Quantities in the ſame continued *Ratio* A, B, C, D, E, *&c.* the firſt, A is to the third, C, in a *duplicate Ratio*, to the fourth, D, in a *Triplicate*, to the fifth E, in a *Quadruplicate*, &c. *Ratio* of the *Ratio* of the firſt, A, to cond, B.

Eleventhly, If there be any Series of Quantities in the ſame *Ratio*, A, B, C, D, E, F, *&c.* the *Ratio* of the firſt, A, to the laſt, F, is compounded of the intermediate *Ratio's*, A : B, B : C, C : D, D : E, E : F, *&c.*

Twelfthly, *Ratio's* compounded of *Ratio's*, whereof each is equal to another, are equal among themſelves. Thus the *Ratio's* 90 : 3 = 960 : 32 are compounded of 6 : 3 = 4 : 2, and 3 : 1 = 12 : 4; and 5 : 1 = 20 : 4.

For other Properties of ſimilar or equal *Ratio's*, ſee PROPORTION.

RATIO, in our Law Writers, is uſed for a Reaſon, or Judgment given in a Cauſe. Hence, *ponere ad rationem*, is to Cite one to appear in Judgment, *Walſingh.* 88.

RATIO-*ſtatus*, RAGIONE *de ſtato*. See REASON *of State*.

RATIOCINATION, the Action of REASONING. See REASONING.

RATION, in the Forces, a Pittance, or Proportion of Ammunition, Bread, Drink, or Forrage, diſtributed to each Soldier and Seaman for his daily Subſiſtence. See AMMUNITION, *&c.*

The *Rations* of Bread are regulated by Weight.—The Officers have ſeveral *Rations* according to their Quality, and the Number of Attendants they are obliged to keep.

The Horſe have *Rations* of Hay and Oats, when they cannot go out to Forrage.—The Ship's Crews have their *Rations* of Bisket, Pulſe, and Water, proportion'd according to their Stock.

When the *Ration* is augmented on Occaſions of Rejoycing, it is call'd *double Ration*.

The uſual *Ration* at Sea, particularly among the *Portugeze*, &c. is a Pound and half of Bisket, a Pint of Wine, and a Quart of freſh Water *per* Day, And each Month an Arrobe or 31 Pound of Salt Meat, with ſome dried Fiſh and Onions.

Some write *Racion*, and borrow the Word from the *Spaniſh Racion*. But they both come from the *Latin Ratio*; and in ſome Parts of the Sea they call it *Reaſon*.

RATIONABILI *parte bonorum*, a Writ which lies for the Wife, againſt the Executors of her Husband denying her the third Part of her Husband's Goods, after Debts and Funeral Expences paid. See GOODS.

Fitzherbert quotes *Magna Charta* and *Glanville*, to prove that by the Common Law of *England*, the Goods of the deceaſed, his Debts firſt paid, ſhould be divided into three Parts; whereof his Wife to have one, his Children a ſecond, and the Executors a third. Adding, that this Writ lies as well for the Children, *&c.* as the Wife. But it ſeems only to obtain where the Cuſtom of the Country makes for it.

RATIONABILES *Expenſæ*, *Reaſonable Expences*; the Commons in Parliament, as well as the Proctors of the Clergy in Convocation, were antiently allow'd *Rationabiles Expenſas*; that is, ſuch Allowance as the King, conſidering the Prices of all things, ſhall judge meet to impoſe on the People, to pay for the Subſiſtance of their Repreſentatives. See REPRESENTATIVE, *&c.*

This in the 17th of *Edward* II. was 10 Groats *per* Day for Knights, and 5 for Burgeſſes. Afterwards, 4 Shillings a Day for Knights, and 2 Shillings for Burgeſſes; which was then deem'd an ample Retribution both for Expences, for Labour, Attendance, Neglect of their own Affairs, *&c.* See PARLIAMENT.

RATIONABILIBUS *diviſis*, is a Writ that lies where two Lords have the Seigneuries joining together, for him that finds his Waſte encroached upon, within the Memory of Man, againſt the Encroacher; thereby to rectify the Bounds of the Seigneuries: in which Reſpect *Fitzherbert* calls it, in its own Nature, a Writ of Right.

RATIONAL, *Reaſonable*. See REASON.

RATIONAL, or *true Horizon*, is that whoſe Plane is conceived to paſs through the Centre of the Earth; and which therefore dividesthe Globe into two equal Portions, or Hemiſpheres. See HORIZON.

'Tis call'd the *Rational Horizon*, becauſe only conceived by the Underſtanding; in oppoſition to the *ſenſible* or *apparent Horizon*, which is viſible to the Eye. See SENSIBLE.

RATIONAL *Quantity* or *Number*, a Quantity or Number Commenſurable to Unity. See NUMBER and UNITY.

Suppoſing any Quantity to be 1, there are infinite other Quantities, ſome whereof are Commenſurable to it either ſimply, or in Power; theſe *Euclid* calls, *Rational Quantities*. See QUANTITY.

The reſt, that are Incommenſurable to 1, he calls, *Irrational Quantities*, or *Surds*. See SURD.

RATIONAL *Integer*, or *whole Number*, is that whereof Unity is an aliquot Part. See NUMBER *and* ALIQUOT *Part*.

RATIONAL *fraction*, or *broken Number*, is that equal to ſome aliquot Part or Parts of Unity. See FRACTION.

RATIONAL *mixt Number*, is that conſiſting of an Integer and a Fraction, or of Unity, and a broken Number.

Commenſurable Quantities are defined by being to one another, as one *Rational* Number to another.

For Unity is an aliquot Part of Unity; and a Fraction has ſome aliquot Part common with Unity: In things, therefore, that are as a *Rational* to a *Rational* Number, either the one is an aliquot Part of the other, or there is ſome common aliquot Part of both: Therefore they are Commenſurable. See COMMENSURABLE.

Hence, if a *Rational* Number be divided by a *Rational*, the Quotient is a *Rational*.

RATIONAL *Ratio*, is a Ratio whoſe Terms are *Rational* Quantities; or a Ratio which is as one *Rational* Number to another, *e. gr.* as 3 to 6. See RATIO.

The Exponent of a *Rational* Ratio is a *Rational* Quantity. See EXPONENT.

RATIONALE, an Account, or Solution of ſome Opinion, Action, Hypotheſis, Phænomenon, or the like, on Principles of Reaſon.

Hence *Rationale* has become the Title of ſeveral Books; the moſt conſiderable is the *Rationale of the Divine Office*, by *Guill. Durandus*, a celebrated School Divine, Biſhop of *Mende*; finiſh'd in 1286, as he himſelf tells us.

RATIONALE, is alſo an antient ſacerdotal Veſtment, wore by the High-Prieſt under the old Law; and call'd by the *Hebrews* חשן *hhoſchen*;

hhoſcken; by the *Greeks* λογιον; by the *Latins Rationale* and *Pectorale*; and by the *Engliſh* Tranſlators, *Breaſt-Plate*. See PECTORALE.

The *Rationale* was a Piece of embroider'd Stuff wore on the Breaſt, about a Span-ſquare.

Du Cange deſcribes it as a double Square of Thread of four Colours, interwove with Gold, and ſet with twelve precious Stones in four Rows, whereon were engraven the Names of the twelve Tribes; and faſten'd to the Shoulder by two Chains and two Hooks of Gold.

The Form of the *Rationale* was preſcribed by God himſelf, *Exod.* 28.

The *Rationale* appears to have been alſo antiently wore by the Biſhops under the new Law. But Authors are in doubt about its Form; ſome will have it reſemble that of the *Jews*; others take it to be only the *Pallium*. See PALLIUM.

RATIONALIS, an Officer mentioned in ſeveral antient Inſcriptions

Lampridius, in the Life of *Alex. Severus*, uſes *Rationalis* as ſynonimous with *Procurator*. See PROCURATOR.

The *Rationales* were Intendants, or Surveyors under the Emperors; and though *Lampridius* pretends they were firſt eſtabliſhed by *Severus*; 'tis evident there were ſome under *Auguſtus*.

RATIONIS *Os*, in Anatomy, the Bone of the Fore-head, otherwiſe call'd *Os Frontis*. See FRONTIS.

RATTLE, among the Antients, was accounted a Muſical Inſtrument, of the pulſatile Kind; call'd by the *Romans*, *Crepitaculum*. See MUSICK.

Mr. *Malcolm* takes the *Tintinnabulum*, *Crotalum*, and *Siſtrum*, to have been only ſo many different Kinds of Rattles. See CROTALUM, SISTRUM, *&c.*

The Invention of the *Rattle* is aſcribed to *Archytas*; whence *Ariſtotle* calls it, αρχυτα κλαυτηγη, *Archytas's Rattle*.

Diogenianus adds the Occaſion of the Invention; *viz.* that having Children, he contriv'd this Inſtrument to prevent their tumbling other things about the Houſe. So that how much ſoever ſome Inſtruments have chang'd their uſes, the *Rattle* we are ſure has preſerv'd its.

RATLINES, or as the Seamen call them, RATLINGS; thoſe Lines which make the Ladder Steps, to get up the Shrouds and Puttocks: Hence call'd the *Ratlings of the Shrouds*.

RAVELIN, in Fortification, was antiently a flat Baſtion, placed in the middle of a Curtain. See BASTION and CURTAIN.

'Tis ſince made a detach'd Piece, compoſed only of two Faces, which make a Salient Angle, without any Flanks; and raiſed before the Curtains or Counterſcarp, and commonly call'd an *Half-Moon*.

A *Ravelin* is a Triangular Work reſembling the Point of a Baſtion, with the Flanks cut off.

Its uſe before a Curtain, is to cover the oppoſite Flanks of the two next Baſtions. 'Tis uſed alſo to cover a Bridge or a Gate; and is always placed without the Moat.

What the Engineers call a *Ravelin*, the Soldiers generally call a *Demi-Lune*, or *Half-Moon*. See DEMI-LUNE, *&c.*

There are alſo double *Ravelins*, which ſerve to defend each other. They are ſaid to be *double* when they are join'd by a Curtain.

RAVISHMENT *de Gard*, is a Writ which lies for him who took from the Guardian, the Body of his Ward. See GARD, GUARDIAN, WARD, *&c.*

RAVISHMENT, in Law, an unlawful taking either a Woman, or an Heir in Ward.

Sometimes it is alſo uſed in the ſame Senſe as *Rape*. See RAPE.

RAY, RADIUS, in Opticks, a Line of Light, propagated from a *radiant* Point, through an unreſiſting Medium. See LIGHT, RADIANT, *&c.*

Sir *Iſaac Newton* defines *Rays* to be the leaſt Parts of Light, whether ſucceſſive in the ſame Line, or Cotemporary, in ſeveral Lines.

For, that Light conſiſts of Parts of both Kinds, appears hence, that one may ſtop what comes this Moment in any Point, and let paſs that which comes the next; and again, may ſtop what comes in this Point, and let paſs that in the next. Now, the leaſt Light, or Part of Light which may be thus ſtopp'd alone, he calls a *Ray of Light*.

If the Parts of a *Ray* of Light do all lie ſtraight between the Radiant and the Eye, the *Ray* is ſaid to be *direct*: The Laws and Properties whereof make the Subject of *Opticks*. See OPTICKS.

If any of them be turned out of the Direction, or bent in their Paſſage, the *Ray* is ſaid to be *refracted*. See REFRACTION.

If it ſtrike on the Surface of any Body, and be driven back, it is ſaid to be *reflected*. See REFLECTION.

In each Caſe, the *Ray*, as it falls either directly on the Eye, or on the Point of Reflection, or of Refraction, is ſaid to be *Incident*. See INCIDENCE.

Again, if ſeveral *Rays* be propagated from the Radiant Equidiſtantly from one another, they are call'd *Parallel Rays*. See PARALLEL.

If they come inclining towards each other, they are call'd *Converging Rays*. See CONVERGING.

And if they go continually receding from each other, they are call'd *diverging Rays*. See DIVERGING.

'Tis from the Circumſtances of *Rays*, that the ſeveral Kinds of Bodies are diſtinguiſhed in Opticks. A Body, *e. gr.* that diffuſes its own Light, or emits *Rays* of its own, is call'd a *Lucid*, or *Luminous* Body. See LUMINARY.

If it only reflect *Rays* it receives from another, it is call'd an *illuminated* Body.

If it only tranſmit *Rays*, it is call'd a *tranſparent* Body. See TRANSPARENCY.

If it intercept the *Rays*, or refuſe them Paſſage, it is call'd an *Opake* Body. See OPACITY.

Hence, no Body Radiates, *i. e.* emits *Rays*, unleſs it be either luminous, or *illumined*. See RADIATION.

'Tis by means of *Rays* reflected from the ſeveral Points of illumined Objects to the Eye, that they become *viſible*, and that Viſion is perform'd; whence ſuch *Rays* are call'd *viſual Rays*. See VISUAL.

In effect we find that any Point of an Object is ſeen in all Places to which a right Line may be drawn from that Point: But it is allow'd, nothing can be ſeen without Light, therefore every Point of an Object diffuſes innumerable *Rays* every way.

Again, from other Experiments it appears that the Images of all Objects, whence right Lines may be drawn to the Eye, are painted in the Eye, behind the Cryſtallin, very ſmall, but very diſtinct.

And laſtly, from other Experiments, that each *Ray* carries with it the Species, or Image of the radiating Point: And that the ſeveral Rays emitted from the ſame Point are again united in one Point, by the Cryſtallin, and thus thrown on the *Retina*. See VISION.

'Tis the Spiſſitude, or cloſeneſs of the *Rays* emitted from a luminous Body, that conſtitutes the *Intenſeneſs of the Light*. Yet the Direction wherein the *Rays* ſtrike the Eye, have a good Sway. In effect, a Perpendicular *Ray*, ſtriking with more force than an Oblique one, in the Ratio of the whole Sine to the Sine of the Angle of Obliquity, (as follows from the Laws of *Percuſſion*) a Perpendicular *Ray* will affect the Eye more vividly than an Oblique one in that Ratio.

If then the Spiſſitude of the *Rays* be equal, the Intenſity will be as the Direction; if the Direction be the ſame, the Intenſeneſs will be as the Spiſſitude. If both differ, the Intenſeneſs will be in a Ratio compounded of the Direction and the Spiſſitude.

Hence, *Firſt*, If Light be propagated in Parallel *Rays* thro' an unreſiſting Medium, its Intenſity will not be varied by Diſtance.

Secondly, If Light be propagated in *diverging Rays*, thro' an unreſiſting Medium, its Intenſity will decreaſe in a duplicate Ratio of the Diſtances from the radiant Point, reciprocally. See QUALITY.

Thirdly, If Light be propagated in *converging Rays* through an unreſiſting Medium; its Intenſity will increaſe in a duplicate Ratio of the Diſtances from the Point of Concourſe, reciprocally.

Fourthly, If the Breadth of an illuminated Plane be to the Diſtance of the radiant Point, as 1 to 2000000, 'tis the ſame thing as if the *Rays* ſtruck upon it Parallel: And hence, ſince the Diameter of the Pupil of the Eye, when largeſt, ſcarce exceeds $\frac{1}{5}$ of an Inch; the *Rays* will fall upon it Parallel, as to Senſe, at the Diſtance of 3860 *Engliſh* Feet, which is nearly 6 Furlongs. See LIGHT.

The effect of Concave Lenſes, and Convex Mirrors, is to make Parallel *Rays* diverge; converging *Rays*, become Parallel; and diverging *Rays* to become more divergent. See MIRROUR.

The effect of Convex Lenſes, and Concave Mirrours, is to make Diverging *Rays* become Parallel; Parallel *Rays* become Convergent, and Converging *Rays* to Converge the more. See LENS.

The *Rays* of Light are not Homogeneous, or Similar, but differ in all the Properties we know of, *viz.* Refrangibility, Reflexibility, and Colour. See REFRANGIBILITY, *&c.*

'Tis probable from the different Refrangibility, that the other Differences have their Riſe; at leaſt it appears, that thoſe *Rays* which agree or differ in this, do ſo in all the reſt.

Thus from the different Senſations the differently diſpoſed *Rays* excite in us, we call them, *red Rays*, *yellow Rays*, &c. See COLOUR.

The effect of the *Priſm* is to ſeparate and ſort the different Kinds of *Rays*, which come blended promiſcuouſly from the Sun; and to throw each Kind by it ſelf, according to its Degree of Refrangibility and Colour, Red to Red, Blue to Blue, *&c.* See PRISM.

Beſides, Refrangibility, and the other Properties of the *Rays* of Light already aſcertain'd by Obſervation and Experiment, Sir *Iſaac Newton* ſuſpects they may have many more; particularly, a Power of being inflected, or bent by the Action of diſtant Bodies; and thoſe *Rays* which differ in Refrangibility, he conceives likewiſe to differ in this *Flexibility*.

In paſſing by the Edges and Sides of Bodies, he conceives that the *Rays* may be bent ſeveral times backwards and forwards, with a Motion like that of an Eel; and that thoſe *Rays* which falling

on

on Bodies are reflected or refracted e're they arrive at the Bodies. And adds, that they may be refracted, reflected, and inflected, all on the ſame Principle, acting in different Circumſtances. See INFLECTION, *&c.*

Again, Do not the *Rays* falling on the Bottom of the Eye excite Vibrations in the Retina; which being propagated along the Fibres of the Optic Nerve into the Brain cauſe Viſion? And don't ſeveral ſorts of *Rays* make Vibrations of ſeveral Bigneſſes, which excite Senſations of ſeveral Colours, much after the manner as the Vibrations of the Air, according to their ſeveral Bigneſſes, excite Senſations of ſeveral Sounds? See SOUND.

Particularly, don't the moſt refrangible *Rays* excite the ſhorteſt Vibrations to make a Senſation of a deep Violet; and the leaſt Refrangibles, the largeſt, to make a Senſation of a deep Red? And the ſeveral intermediate Kinds of *Rays*, Vibrations of intermediate Bigneſſes, to make Senſations of the intermediate Colours?

And may not the Harmony and Diſcord of Colours ariſe from the Proportion of theſe Vibrations; as thoſe of Sound depend on the Vibrations of the Air: For ſome Colours, if viewed together, are agreeable, as Gold and Indigo; others Diſagreeable? See CONCORD and HARMONY.

Again, Have not the *Rays* of Light ſeveral Sides endued with ſeveral Original Properties?

Every *Ray* of Light has two oppoſite Sides, originally endued with a Property whereon the unuſual Refraction of Iſland Cryſtal depends; and other two oppoſite Sides not endued with that Property. See CRYSTAL.

Laſtly, Are not the *Rays* of Light very ſmall Bodies emitted from ſhining Subſtances?

Such Bodies may have all the Conditions of Light: And there is that Action and re-action between tranſparent Bodies and Light, which very much reſembles the attractive Force between other Bodies. Nothing more is required for the Production of all the various Colours, and all the Degrees of Refrangibility, but that the *Rays* of Light be Bodies of different Sizes; the leaſt of which may make Violet, the weakeſt and darkeſt of the Colours, and be the moſt eaſily diverted by refracting Surfaces from its rectilinear Courſe; and the reſt as they are bigger and bigger, may make the ſtronger and more lucid Colours, Blue, Green, Yellow, and Red. See VIOLET, RED, *&c.*

Nor is any thing more requiſite for the putting of the *Rays* into Fits of eaſy Reflexion, and eaſy Tranſmiſſion, than that they be ſmall Bodies, which by Attraction, or ſome other Force, excite Vibration in the Bodies they act upon; which Vibrations being ſwifter than the *Rays*, overtake them ſucceſſively, and agitate them ſo as by Degrees to increaſe and decreaſe their Velocity, and thereby put them into thoſe Fits. See TRANSMISSION.

Laſtly, The unuſual Refraction of Iſland Cryſtal looks very much as if it were perform'd by ſome attractive Virtue lodg'd in certain Sides both of the *Rays* and the Cryſtal.

Common RAY, in Opticks, is ſometimes uſed for a right Line drawn from the Point of the Concourſe of the two Optical Axes, through the middle of the right Line which paſſes by the Centre of the Pupil of the Eye. See AXIS.

Principal RAY, in Perſpective, is the Perpendicular Diſtance between the Eye, and the Vertical Plane, or Table, as ſome call it. See PERSPECTIVE.

Pyramid of RAYS. See PYRAMID.

Pencil of RAYS. See PENCIL.

RE, in Grammar, *&c.* an inſeparable Particle, or Præpoſition, added at the beginning of Words, to vary, double, or otherwiſe modify and circumſtance their Meaning.

The modificative *Re* was firſt introduced by the *Latins*, from whom it is borrow'd into moſt of the modern Tongues. *Priſcian* derives it from *retro*, backwards; others rather derive *retro* from *re*; others derive *re* from the *Greek* ῥέα, eaſy, or from ῥέω, I flow.

The effect of the *Re* is various: uſually it ſignifies *again*, *rurſum*, πάλιν; as in *re*-joyn, *re*-ſign, *re*-ſume, *re*-courſe, *re*-bound, *re*-cite, *re*-hear, *re*-cognize, *re*-compare, *re*-double, *re*-linquiſh, *&c.*

Sometimes it ſtands for *contra*, ἀντι, *againſt*; as in *re*-luctance, *re*-cumbent, *re*-cline, *&c.*

Sometimes for ὑπὲρ, *ſuper*, over, as in *re*-dundant; ſometimes for πόῤῥω, *longe*, *far* as in *re*-moving, *&c.*

RE, in Muſick. See NOTE.

REACH, in the Sea Language, the Diſtance between any two Points of Land that lie in a right Line one from another.

RE-ACTION, in Phyſicks, the Action whereby a Body acted upon, returns the Action, by a Reciprocal one, upon the Agent: See ACTION.

The *Peripateticks* define *Reaction* to be that which a paſſive Body returns upon the Agent, by means of ſome Quality contrary to that receiv'd therefrom; in the ſame Part wherewith the Agent acted; and at the ſame time: As if Water, while it is heating by the Fire, does, at the ſame time, cool the ſame Fire.

It was known, even in the Schools, that there is no Action in Nature, without *Reaction*; and it was a Maxim among them, *Omne Agens*, *Agendo repatitur*.

But the Equality of the Actions was not known: Sir *I. Newton* eſtabliſh'd it as one of the Laws of Nature, that *Action and Reaction are equal and contrary*; or that the mutual Actions of two Bodies ſtriking one againſt another, are exactly equal, but in contrary Directions; or in other Words, that by the Action and *Reaction* of Bodies one on another, there are produced equal Changes in each; and thoſe Changes are impreſs'd towards directly contrary Parts or Ways. See *Law of* NATURE.

Thus, whatever Body preſſes or draws another, is equally preſs'd or drawn by it again: If any one preſs a Stone with his Finger, his Finger is much preſs'd by the Stone.

If a Horſe by a Rope, *&c.* draw a Stone, the Horſe will be equally drawn by the Stone; for the Rope being ſtretch'd both ways alike, endeavours to relax itſelf again, and by that means draws the Horſe towards the Stone, and hinders the Progreſſion of the Horſe, as much as it forwards that of the Stone.

If any Body ſtriking againſt another, doth by its Force any way change its Motion, it ſelf will undergo the ſame Change in its own proper Motion, but towards a contrary Part; from the *Reaction* of that Body, and the Equality of its mutual Preſſion.

By theſe Actions are produced equal Changes, not indeed of the Velocities, but of the Motions of Bodies; (that is, of ſuch Bodies as have no impediment any other way) for the Changes of their Velocities being made towards contrary Parts, (becauſe the Motions are equally *changed*) are reciprocally Proportional to the Bodies themſelves. See MOTION.

Some of the School Philoſophers deny any ſuch thing as *Reaction*, properly ſo call'd, at all; urging that Action ariſes only from the Ratio of the greater Inequality; that is, we are only to account for Action the Exceſs of the Action, or what the Agent does more than is returned by the Patient. But the Equality between Action and *Reaction*, ſets aſide the Exception.

READINGS, in Criticiſm. *Various Readings*, *Variæ Lectiones*, are the different Manners of reading the Text of Authors in antient Manuſcripts: A Diverſity ariſing from the Corruption of Time, or the Ignorance of Copiſts. See TEXT.

A great Part of the Buſineſs of the Criticks lies in ſettling the *Readings*, by confronting the various *Readings* of the ſeveral Manuſcripts, and conſidering the Agreement of the Words and Senſe.

The various *Readings* in the Bible and Claſſic Authors, are almoſt innumerable.

READINGS are alſo uſed for a ſort of Commentary or Gloſs on a Law, Text, Paſſage, or the like; to ſhew the Senſe an Author takes it in, and the Application he conceives to be made of it.

RE-AFFORESTED, is where a Foreſt having been diſafforeſted, is again made a Foreſt; as the Foreſt of *Dean* was by an Act of Parliament in the 20th of King *Charles* II. See FOREST, AFFOREST, DISAFFOREST, *&c.*

RE-AGGRAVATION, in the *Romiſh* Eccleſiaſtical Law, the laſt Monitory, publiſhed after three Admonitions, and before the laſt Excommunication. See MONITORY.

E're they proceed to fulminate the laſt Excommunication, they publiſh an Aggravation, and *Reaggravation*. *Fevret* obſerves, that in *France* the Miniſter is not allow'd to come to *Reaggravation*, without the Permiſſion of the Biſhop or Official, as well as that of the Lay Judge. See EXCOMMUNICATION.

REAL, REALE, is applied to a Being that actually exiſts; in which Senſe it coincides with *Actual*. See ACTUAL. See alſo REALITY.

Real, in Law, is oppoſed to *Perſonal*.

Real Eſtate, is that conſiſting in Lands, Tenements, *&c.* See PERSONAL.

Real Action, that whereby the Plaintiff lays Title to Land, *&c.* See ACTION.

Cuſtoms are ſaid to be *real*; that is, they determine all Inheritances within their Extent; and none may diſpoſe of them, but according to the Conditions allow'd by the Cuſtoms where they are ſituate.

REAL *Horizon*. See HORIZON.

REAL, or RIAL, or RYAL, a *Spaniſh* Silver Coin; being the eighth Part of the Piaſtter or Piece of Eight. See PIASTER.

The *Real* is equal to about Six-pence ¼ Sterling. See COIN.

The Silver *Real* is equal to 34 Silver Maravedis; the Copper *Real* to 34 Copper Maravedis, which only amount to 18 Silver Maravedis. See MARAVEDIS.

There are alſo *Reals* of Eight, *Reals* of four, *Reals* of two, and half *Reals*.

The *Reals* of eight are the Piaſters; thoſe of four, half Piaſters, *&c.*

Great Quantities of *Reals*, or *Reals* of Eight, are carried into the *Eaſt-Indies*, where they are divided into three Claſſes, and received on different Footings, *viz.* the *Old Real*, known by the Chapelet around, whereof 100 are Current for 215 Roupias; the *ſecond*, known by the largeneſs of its Beads, Current at 212¼ Roupias for 100; and the *new* at 208¼ Roupias for 100 *Reals*. See ROUPIA.

The Word in the Original *Spaniſh*, *Reale*, ſignifies *Royal*.

REALGAL, or RISALGAL, a Mineral; a kind of red Arſenic, differing from the common Arſenic, which is white; and

from Orpiment, which is yellow. See ARSENIC and ORPIMENT.

There are two Kinds of *Realgal*, the one *natural*, and the other *factitious*: The Natural is calcined in the Mine by the ſubterraneous Fires: The Factitious, which is the more common, is calcined by a common Fire.

Some able Druggiſts doubt whether there be any ſuch thing as a native *Realgal*.

The *Realgal* is a violent Poiſon; yet leſs Cauſtic than the common Arſenic. 'Tis of ſome uſe in Chirurgery. See ARSENIC.

In the Hiſtory of the *French* Academy, we have an account of a Cup brought to *Paris* by the Embaſſadors of *Siam*, and preſented there, as a Remedy uſed by that People againſt all Diſeaſes. Upon an Examination, which had like to have coſt M. *Homberg* dear, he found it to be a kind of *Realgal*, or red Arſenic, more Cauſtic than ours.

Its uſe, among the *Siameſe*, he takes to have been the ſame with that of *Regulus* of Antimony; *viz.* to give an emetic Quality to the Wine drunk out of it.

As the Doſe of Medicines is much ſtronger in the torrid Zone than among us, (the Quantity of Ipecacuanha, *e. gr.* ordinarily taken by the *Indians*, being twenty times as great as that among us) 'tis very poſſible a Cup of *Realgal*, though enough to Poiſon an *European*, may prove a gentle Medicine to a *Siameſe*.

REALISE, in Commerce, a Term little known in Trade before the Year 1719, when thoſe immenſe Fortunes began to be made in *France* and *England*, by the Buſineſs of Actions or Stock.

By *Realiſing*, is meant the Precaution many of thoſe who had gain'd moſt, took, to convert their Paper into real Effects, as Lands, Houſes, rich Moveables, Jewels, Plate; but above all into Current Species.

A Precaution, capable of ruining the State; but which the *French* Regency had the Wiſdom to fruſtrate, by taking proper Meaſures to have the Money, thus ready to be hoarded up, returned to the Publick.

REALISTS, a Sect of School Philoſophers, form'd in oppoſition to the *Nominaliſts*. See NOMINALIST.

Under the *Realiſts* are included the *Scotiſts*, *Thomiſts*, and all, excepting the Followers of *Ocham*. See SCOTIST, THOMIST, *&c.*

Their diſtinguiſhing Tenet is, that Univerſals are *Realities*, and have an actual Exiſtence, out of Idea and Imagination; or, as they expreſs it in the School Language, *a parte rei*: Whereas the *Nominaliſts* contend that they exiſt only in the Mind; are only Ideas, or Manners of conceiving things. See UNIVERSAL.

Doc. Odon, or *Oudart*, a Native of *Orleans*, afterwards Abbot of St. *Martin de Tournay*, was the chief of the Sect of the *Realiſts*: He wrote three Books of Dialecticks; where, on the Principles of *Boethius*, and the Antients, he maintain'd that the Object of that Art is *Things*, not Words: Whence the Sect took its Riſe and Name.

REALITY, REALITAS, in the Schools, a diminitive of *res*, *thing*; firſt uſed by the *Scotiſts* to denote a thing which may exiſt of it ſelf, or which has a full and abſolute Being of it ſelf, and is not conſidered as a Part of any other: Yet a *Reality* is conceived as ſomething leſs than *Res*; and accordingly every *Res* is ſuppoſed to contain a Number of *Realities*, which they otherwiſe call *Formalities*.

Thus, *e. gr.* in a Man, according to the Doctrine of the *Scotiſts*, are a Number of *Realities*, *viz.* a Subſtance, Life, Animal, and Reaſon.

Some diſtinguiſh *Reality* into Subjective and Objective.

REALM, a *Kingdom*; or a Country which gives its Head or Governour the Denomination of King. See KING, MONARCHY, GOVERNMENT, *&c.*

The Word is form'd of the *French*, *Royaume*, which denotes the ſame thing.

REAR, a Term frequently uſed in Compoſition, to denote ſomething *behind* or *backwards* in reſpect of another; in oppoſition to *Van*, or *Vaunt*, before.

It is form'd by Corruption of the *French*, *Arriere*, ſignifying the ſame thing.

REAR, in a military Senſe, is uſed for the Hind-part of an Army, *&c.* in oppoſition to the Front, or Face thereof. See FRONT.

REAR-*Guard*, is that Part of an Army which marches laſt; following the main Body, to hinder or ſtop Deſerters. See GUARD.

REAR-*Half-Files*, are the three hindermoſt Ranks of a Battallion, when it is drawn up ſix Deep. See FILE.

REAR-*Line*, of an Army encamped, is the ſecond Line; it lies about four or five hundred Yards Diſtant from the firſt Line, which is call'd the Reſerve Line. See LINE.

REAR-*Rank*, is the laſt Rank of a Battallion, or Squadron, when drawn up. See RANK.

REAR-*Admiral*, is the Admiral of the third and laſt Squadron of the Royal Fleet. See ADMIRAL, SQUADRON, and FLEET.

REASON, RATIO, a Faculty, or Power of the Soul, whereby it diſtinguiſhes Good from Evil, Truth from Falſhood. See SOUL and FACULTY.

Reaſon is, properly defined, that Principle, whereby, comparing ſeveral Ideas together, we draw Conſequences from the Relations they are found to have. See IDEA and RELATION.

Some of the later School Philoſophers define Reaſon the Comprehenſion of many Principles which the Mind ſucceſſively can conceive, and from which Concluſions may be drawn.

Others conceive *Reaſon* as no other than the Underſtanding it ſelf, conſidered as it diſcourſes. See UNDERSTANDING and DISCOURSE.

Chauvin thinks it is better defined, a very diffuſive, innate Notion or Idea, ariſing from a continued Attention.

Reaſon, Mr. *Lock* obſerves, comprehends two diſtinct Faculties of the Mind, *viz. Sagacity*, whereby it finds intermediate Ideas; and *Illation*, whereby it ſo orders and diſpoſes of them as to diſcover what Connection there is in each link of the Chain whereby the Extremes are held together, and thereby, as it were, draws into view the Truth ſought for.

Illation, or Inference, conſiſts in nothing but the Perception of the Connection there is between the Ideas in each Step of the Deduction, whereby the Mind comes to ſee either the certain Agreement or Diſagreement of any two Ideas; as in Demonſtration, in which it arrives at Knowledge: Or their probable Connection, on which it gives or withholds its Aſſent; as in Opinion. See KNOWLEDGE and OPINION.

Senſe and Intuition reach but a little way: the greateſt Part of our Knowledge depends upon Deductions and intermediate Ideas. In thoſe Caſes, where we muſt take Propoſitions for true, without being certain of their being ſo, we have need to find out, examine, and compare the Grounds of their Probability: In both Caſes, the Faculty which finds out the Means, and rightly applies them to diſcover Certainty in the one, and Probability in the other, is that which we call *Reaſon*.

In *Reaſon*, therefore, we may conſider four Degrees: *Firſt*, The diſcovering and finding out of Proofs. See INVENTION.

Secondly, The regular and methodical Diſpoſition of them, and laying them in ſuch Order, as their Connection may be plainly perceived. See METHOD.

Thirdly, The perceiving of their Connection; and,

Fourthly, The making a right Concluſion. See CONCLUSION.

Reaſon fails us in ſeveral Inſtances: As, *Firſt*, Where our Ideas fail. See IGNORANCE.

Secondly, It is often at a loſs becauſe of the Obſcurity, Confuſion, or Imperfection of the Ideas it is employed about: Thus, having no perfect Idea of the leaſt Extenſion of Matter, nor of Infinity, we are at a loſs about the Diviſibility of Matter.

Thirdly, Our *Reaſon* is often at a ſtand becauſe it perceives not thoſe Ideas which would ſerve to ſhew the certain or probable Agreement or Diſagreement of any two other Ideas.

Fourthly, Our *Reaſon* is often engaged in Abſurdities and Difficulties, by proceeding upon falſe Principles, which being followed, lead Men into Contradictions to themſelves, and Inconſiſtency in their own Thoughts.

Fifthly, Dubious Words, and uncertain Signs, often puzzle Men's *Reaſon*, and bring them to a Non-plus.

Though the deducing one Propoſition from another, be a great Part of *Reaſon*, and that about which it is uſually employed; yet the principal Act of Ratiocination is the finding the Agreement or Diſagreement of two Ideas one with another, by the Intervention of a third. As a Man, by a Yard, finds two Houſes to be of the ſame Length, which could not be brought together to meaſure their Equality by Juxta-Poſition.

Words have their Conſequences as the Signs of ſuch Ideas and Things agree, or diſagree, with what they really are; but we obſerve it only by our Ideas. See REASONING.

Hence we may be able to form an Idea of that ordinary Diſtinction of things, into ſuch as are *according* to, thoſe that are *above*, and thoſe *contrary* to *Reaſon*.

According to *Reaſon*, are ſuch Propoſitions, whoſe Truth we can diſcover by examining and tracing thoſe Ideas we have from Senſation and Reflection, and by natural Deduction find to be true or probable.

Above *Reaſon* are ſuch Propoſitions, whoſe Truth or Probability we cannot by *Reaſon* derive from thoſe Principles.

Contrary to *Reaſon*, are ſuch Propoſitions as are inconſiſtent with, or irreconcileable to, our clear and diſtinct Ideas.

Thus the Exiſtence of one God, is according to *Reaſon*: The Exiſtence of more than one God, contrary to Reaſon: The Reſurrection of the Body after Death, above *Reaſon*. Above *Reaſon* may be alſo taken in a double Senſe; *viz.* above Probability, or above Certainty.

They who Diſpute moſt againſt the Power and Priviledges of Human *Reaſon*, do it becauſe their own *Reaſon* perſuades them to that Belief; and ſo, whether the Victory be on their or our Side, are equally defeated.

They ſeek to terrify us with the Example of many great Wits, who by following this *Ignis fatuus*, (ſo they call the only Pole Star God has given us to direct our Courſe by) have fallen into wild and ridiculous Opinions, and increas'd the Catalogues of Hereſies to ſo great a Number: But theſe Men either followed not their *Reaſon*, but made it follow their Will; or firſt hood-wink'd it by Intereſt and Prejudice, and then bad it ſhew them the way; or were wanting in thoſe neceſſary Diligences required for ſo

doubtful

doubtful a Paſſage: Or, if, without any of theſe, the Weakneſs of their Underſtanding had deceived them, the Error is neither hurtful to themſelves, nor would be to others, if this Doctrine of governing ourſelves by our own *Reaſon*, and not by Authority and Example, were eſtabliſhed. *Diſc. concern. Hum. Reaſ.*

'Tit not the uſe of ſuch Liberty, but the appropriating it to ourſelves, that is the Cauſe of all the Diſorders charged thereon: For thoſe who lay a Reſtraint on other Men's *Reaſon*, have firſt made uſe of their own to ſettle them, and do make uſe of it in this very reſtraining of others. *Ibid.*

REASON, in Matters of Religion, it uſed in oppoſition to Faith. See FAITH.

This uſe of the Word, Mr. *Lock* takes to be in it ſelf very improper: For Faith is nothing but a firm aſſent of the Mind; which if it be regulated, as it is our Duty, cannot be afforded to any thing but upon good *Reaſon*, and ſo cannot be oppoſite to it.

He that believes without having any *Reaſon* for believing, may be in love with his own Fancies, but neither ſeeks Truth, as he ought, nor pays the Obedience due to his Maker, who would have him uſe thoſe diſcerning Faculties he has given him, to keep him out of Miſtake and Error.—But ſince *Reaſon* and Faith are by ſome Men oppoſed, it may be neceſſary to conſider them together.

Reaſon, as contradiſtinguiſhed to Faith, is the Diſcovery of the Certainty or Probability of ſuch Propoſitions, or Truths, which the Mind arrives at by Deductions made from ſuch Ideas which it has got by the uſe of its natural Faculties, *viz.* by Senſation or Reflection.

Faith, on the other Hand, is the Aſſent to any Propoſition upon the Credit of the Propoſer, as coming immediately from God; which we call Revelation. See REVELATION.

REASON, in Logic, *&c.* a neceſſary or probable Argument; or an Anſwer to the Queſtion, *cur eſt?* Why is it?

As, if it be enquired, Why do the Subject and Predicate agree? And it is anſwer'd, Becauſe they are ſpoke of the ſame thing: This laſt Enunciation is a *Reaſon*.

Hence, ſay the Schoolmen, Becauſe, *quia*, is the Sign or Character of a *Reaſon*, as *non*, no, of a *Negation*, and *eſt*, is, of an *Affirmation*.

They make three Kinds of *Reaſons*, *Rationes*; *viz. Ratio ut*, that; *ne*, leaſt; and *quia*, becauſe. For, anſwering to a Queſtion, *cur*, Why; we begin with becauſe, *quia*; as, Why do you ſtudy? that I may become learned; which is the *Ratio ut*. Again, Why do you ſtudy? Leaſt I ſhould be ignorant; which is the *Ratio ne*. Laſtly, Why is a Body tangible? Becauſe Matter is impenetrable; which is the *Ratio quia*.

The *Reaſon ut*, properly denotes the End, or final Cauſe; the *Reaſon ne*, the Beginning; and accordingly the one is called the Beginning, the other the End; and the *Reaſon quia*, left, the only *Reaſon*, properly ſo called.

Among Metaphyſicians, REASON is uſed in the ſame Senſe with Eſſence; or that whereby any thing is what it is. See ESSENCE.

This is ſometimes alſo call'd *formal Reaſon*, as repreſenting the thing under that Form or Nature under which it is conceived.

REASON, in Mathematicks. See RATIO.

REASON *of State*, *Ratio Status*, in Matters of Policy, a Rule or Maxim, whether it be Good, or Evil, which may be of Service to the State.

Reaſon of State, is properly underſtood of ſomething that is neceſſary and expedient for the Intereſt of the Government, but contrary to moral Honeſty or Juſtice.

The Politicians have a long time diſputed about the *Ratio ſtatus*: Whether States and Governments are tied down to the ſame Laws of Morality with individual Perſons; or whether things, otherwiſe Immoral and Unlawful, may not be practic'd on urgent Occaſions, by way of *Reaſon of State*.

The Queſtion is, Whether any thing be Unlawful, or prohibited a State, that is neceſſary to that State; or whether it be allow'd to preſerve it ſelf on any Terms.

The Phraſe is borrowed from the *Italians*, who firſt uſed *Ragione di ſtato* in this Senſe.

REASONABLE *Aid*, a Duty which the Lord of the Fee antiently claimed of his Tenants holding in Knight's Service, or in Socage; towards the marrying his Daughter, or the making his eldeſt Son Knight. See SERVICE, SOCAGE, *&c.*

It is taken away by the *Stat.* 2. *Car.* II.

REASONING, RATIOCINATION, the exerciſe of that Faculty of the Mind call'd *Reaſon*; or Reaſon deduced into Diſcourſe. See REASON.

The Agreement or Diſagreement of two Ideas, does not appear from the bare Conſideration of the Ideas themſelves; unleſs ſome third be called in, and compared, either ſeparately or conjointly therewith: The Act, then, whereby from Ideas thus diſpoſed and compared, we judge this or that to be ſo or not ſo, is call'd *Reaſoning*.

Rohault defines a *Reaſoning* to be a Judgment depending on ſome Antecedent Judgment: Thus; having judged that no even Number can be compoſed of five uneven Numbers; and that ten is an even Number; to conclude that ten cannot be divided into five uneven Parts, is a *Ratiociniation*, or *Reaſoning*.

This agrees with Father *Mallebranche*'s Doctrine, one of the great Points whereof is, that *Reaſoning*, on the Part of the Underſtanding, is only a meer *Perceiving*. See PERCEPTION.

That excellent Author endeavours to ſhew, that as to the Underſtanding, there is no Difference between a ſimple *Perception*, a *Judgment*, and a *Reaſoning*, except in this, that the Underſtanding perceives a ſimple thing without any Relation to any thing elſe, by a ſimple *Perception*.

That it perceives the Relations between two or more things in a *Judgment*.

And, laſtly, that it perceives the Relations that are between the Relations of things in a *Reaſoning*. So that all the Operations of the Underſtanding are no more than meer Perceptions. See JUDGMENT.

Thus, *e. gr.* when we conclude, that 4 being leſs than 6; twice 2 being equal to 4, are of Conſequence leſs than 6; we do no more than perceive the Relation of the Inequality between the Relation of twice two and four, and the Relation of 4 and 6. See UNDERSTANDING.

The manner of proceeding juſtly in *Reaſoning*, ſo as to arrive with the greater ſafety at the Knowledge of Truth, makes what we call *Method*. See METHOD.

For the real Benefit of Logic to *Reaſoning*, ſee LOGIC and SYLLOGISM.

RE-ATTACHMENT, in Law, a ſecond *Attachment* of him who was formerly attach'd, and diſmiſs'd the Court without Day; as by the not coming of the Juſtices, or the like Caſualty. See ATTACHMENT.

Brook makes *Reattachment* either *General* or *Special*.

General is where a Man is *reattached* for his Appearance on all Writs of Aſſize lying againſt him: *Special*, for one or more certain Writs.

RE-BAPTISANTS, a Sect in Religion, who maintain that People irregularly baptized, are to be baptized a-freſh. See BAPTISM.

The Anabaptiſts are *Rebaptiſants*; baptizing thoſe at Maturity who had been before baptized in Childhood. See ANABAPTIST.

St. *Cyprian*, and Pope *Stephen*, had mighty Differences about the Rebaptiſation of converted Hereticks.

Donatus was condemn'd at *Rome* in a Council, for having rebaptized ſome Perſons who had fallen into Idolatry after their firſt Baptiſm. See DONATIST.

REBATE, REBATEMENT, Prompt Payment, in Commerce, a Term much uſed at *Amſterdam*, for a Diſcount or Abatement in the Price of certain Commodities, when the Buyer advances the Sum in hand for which he might have taken time. See DISCOUNT.

The *Rebate* is eſtimated by Months; and is only allowed for certain Kinds of Merchandizes, which, according to the Cuſtom of *Amſterdam*, are,

German Wools, Aſhes, and Pot-Aſhes, *Italian* Silks, Sugars of *Braſil*, *Spaniſh* Wools,	which are ſold at	15, 18, 33, 18, 21	Months *Rebate*.

That is, theſe Commodities are ſold for ready Money; only deducting or *rebating* the Intereſt of the Money, which ought not to be paid till the End of 15, 18, *&c.* Months.

This Intereſt, call'd *Rebate*, is uſually regulated on the Footing of 8 *per Cent. per Annum*.

The Reaſon of this Expedient is, that the Merchants having not always wherewithal to pay for their Goods in hand, by means of the *Rebatement*, ſuch as have, will find their Account in it; and ſuch as have not, will be engaged to diſcharge themſelves as ſoon as poſſible, in hopes of the Diſcount.

REBATEMENT, in Heraldry, a Diminution or Abatement of the Dignity of the Figures or Bearings in a Coat of Arms. See ABATEMENT.

REBELLION, originally ſignified a ſecond Reſiſtance, or Riſing of ſuch as had been formerly overcome in Battle by the *Romans* and had yielded themſelves to their Subjection.

'Tis now generally uſed for a traiterous taking up of Arms againſt the King, either by his own natural Subjects, or by thoſe formerly ſubdued.

Rebel is ſometimes alſo uſed in our antient Statutes, for a Perſon who wilfully breaks a Law; and ſometimes for a Villain diſobeying his Lord.

Commiſſion of REBELLION. See COMMISSION.

REBELLIOUS *Aſſembly*, a gathering of twelve Perſons, or more, intending or going about, practiſing, *&c.* unlawfully, and of their own Authority, to change any Laws of the Realm; or to deſtroy the Encloſure of any Park or Ground encloſed, Banks of Fiſh-Ponds, Pools, Conduits, *&c.* to the intent the ſame ſhall remain void, or to the Intent to have way in any of the ſaid Grounds; or to deſtroy the Deer in any Park, Fiſh in Ponds, Coneys in any Warren, Dove-Houſes, *&c.* or to burn Stacks of Corn, or to abate Rents, or Prices of Victuals. See RIOT, *&c.*

REBOUND. See RECOIL.

REBUS,

REBUS, a *Name-Device*, as *Cambden* engliſhes it; or an enigmatical Repreſentation of ſome Name, *&c.* by uſing a Figure, or Picture, inſtead of a Word, or Part of a Word. See DEVISE.

Such is that of the Gallant, mentioned by *Cambden*, who expreſs'd his love to *Roſe Hill*, by painting in the Border of his Gown, a *Roſe*, a *Hill*, an *Eye*, a *Loaf*, and a *Wall*; which in the *Rebus*-Stile, reads, *Roſe Hill I love well.*

The *Picards* have the Honour of the Invention of this notable Kind of Wit; whence the *French*, to this Day, call it, *Rebus de Picardie*. *Cambden* adds, that the *Engliſh* firſt learnt it of them in the Reign of our *Henry* III. by means of the Garriſons we then had in *Calais*, *Guiſnes*, and other Places bordering on *Picardy*.

Its Origin is by *Menage*, *&c.* aſcribed to the Prieſts of *Picardy*, who, it ſeems, antiently, in Carnaval-Time, uſed every Year to make certain Libels entitled, *de Rebus quæ geruntur*, being Railleries on what Intrigues and Tranſactions had paſſed about the City; wherein they made great uſe of ſuch ſort of Equivoques and Alluſions, breaking and joining Words, and ſupplying them with Paintings.

Thus in the *Rebus* of *Picardy*, ſays *Morat*, a Horſe-comb, *Etrille*; a Scythe, *faux*; and a Calf, *veau*, make *Etrille Fauveau*. But the Practice has been ſince prohibited, by reaſon of the Scandal.

Cambden tells us, the *Rebus* was in wonderful Eſteem among our Forefathers; and that he was no-body who could not Hammer out of his Name an Invention by this Wit-craft, and Picture it accordingly.

The Sieur *Des Accords*, has made an ample Collection of the moſt famous *Rebus de Picardie*. And Mr. *Cambden* has done ſomething of the ſame Kind in his Remains.—The Abbot of *Ramſey*, he tells us, engraved in his Seal a *Ram* in the *Sea*, with this Verſe, to ſhew he was a right Ram, *Cujus ſigna gero, dux Gregis eſt ut ego.*—Sir *Thomas Caval*, (*Caval* ſignifying a Horſe) engraved a galloping Horſe in his Seal, with this limping Verſe, *Thomæ Creditis, cum cernitis ejus Equum.*—So *John Eagleſhead* bore in his Seal an Eagle's Head with this Motto around it, *Hoc Aquilæ Caput eſt, ſignumq; figura Johannis.*

Bolton, Prior of St. *Bartholomew*'s, ſignified his Name by a *Bolt* thruſt through a *Tun*.—*Iſlip*, Abbot of *Weſtminſter*, a Man highly in favour with *Henry* VII. had a quadruple *Rebus* for his ſingle Name; ſometimes he ſet up in his Windows an *Eye* with a *Slip* of a Tree; and ſometimes an *I* with the ſaid *Slip*; in other Places one ſlipping Boughs in a Tree; and in others, one *ſlipping* from a Tree; with the Word, *I-ſlip*.

Thomas, Earl of *Arundel*, ſignified his Name by a Capital *A* in a *Rundle*. *Morton*, the great Archbiſhop of *Canterbury*, was contented to uſe *Mor* upon a *Tun*; and ſometimes a Mulberry call'd *Morus*, out of a *Tun*. So *Luton*, *Thornton*, *Aſhton*, &c. ſignified their Names with a *Lute*, a *Thorn*, an *Aſh*, upon a *Tun*. So a *Hare* on a *Bottle* was the Device of *Harebottle*; a *Mag-pye* on a *Goat*, of *Pigot*; a *Hare* by a Sheaf of *Rye* in the *Sun*, of *Harriſon*: *Lionel Ducket* uſed a *Lion* with an *L* on its Head, whereas it ſhould have been on its Tail: Had the *Lion* been eating a *Duck*, ſays *Cambden*, it had been a rare Device, worth a Duckat or a Duck-egg. *Garret Dews* ſignified his Name on his Sign by two Men in a *Garret* caſting *Dews* at Dice.

Abel Drugger's Device in *Ben. Johnſon*'s *Alchimiſt*, and *Jack* of *Newberry* in the Spectator, are known to every Body.—But the *Rebus* being once rais'd to the Signs, grew out of Faſhion at Court, and has been left to hang there ever ſince: Indeed Attempts have been lately made for its Reſcue by a Reverend Divine, in his *Tunbridge-Love-Letters*, &c.

Yet has the *Rebus* Antiquity on its Side, as having been in uſe in the pure *Auguſtan* Age: *Cicero*, in a Dedication to the Gods, inſcribed *Marcus Tullius*, with a little Peaſe, call'd by the *Latins* *Cicer*; by us, *Chich-Peaſe*. And *Julius Cæſar*, in ſome of his Coins, uſed an *Elephant*, call'd *Cæſar* in the *Mauritanian* Tongue. Add to theſe, that the two Mint Maſters in that Age, *L. Aquilius Florus*, and *Voconius Vitulus*, uſed, the firſt a *Flower*, the ſecond a *Calf*, on the Reverſe of their Coins.

REBUTTER, in Law, when a Man grants Land ſecured to the uſe of himſelf and the Iſſue of his Body, to another in Fee, with Warranty; and the Donee leaſing out the Land to a third Perſon for Years: The Heir of the Donor impleads the Tenant; alledging the Land was in Tail to him; and the Donee comes in, and by virtue of the Warranty made by the Donor, repells, or *rebutts*, the Heir: Becauſe, though the Land was intailed to him, yet he is Heir to the Warrantor likewiſe.

This is call'd a *Rebutter*, from *Re*, and the *French*, *bouter*, to repel, or bar.

Again, if I grant to the Tenant to hold *Sine Impetitione Vaſti*, and afterwards implead him for Waſte; he may debar me of the Action, by ſhewing my Grant, which is likewiſe a *Rebutter*.

RECANTATION. See PALINODY.

RECAPITULATION, in Oratory, *&c.* a Part of the Peroration; call'd alſo, *Anacephaleoſis*. See PERORATION, *&c.*

Recapitulation is a ſummary of the preceding Diſcourſe; or a conciſe, tranſient Enumeration of the principal things inſiſted on at large therein; whereby the Force of the whole is collected into one View.

An Inſtance of this may be given in the Peroration of *Cicero's Manilian*: *Quare cum Bellum ita Neceſſarium ſit ut negligi non poſſit: Ita Magnum ut Accuratiſſime ſit Adminiſtrandum; & cum ei Imperatorem præficere poſſitis, in quo ſit eximia belli ſcientia, ſingularis Virtus, Clariſſima auctoritas, egregia fortuna: Dubitabitis, Quirites, quin.*

RECAPTION, in Law, a ſecond Diſtreſs of one formerly diſtrain'd for the ſame Cauſe, and alſo during the Plea grounded on the former Diſtreſs. See DISTRESS.

It is alſo a Writ lying for the Party thus diſtrained.

RECEIPT, or RECEIT, in Commerce, an Acquittance or Diſcharge; or an Act whereby it appears a thing has been paid off, or acquitted.

Where the *Receit* is on the back of a Bill, *&c.* 'tis uſually call'd an *Indorſement*. See INDORSEMENT.

Among Mechanicks, *&c.* *Receit* uſually makes the ſecond of the three Articles of an Account: The *Receit* contains the Moneys received; the two others the Expence, and the Return or Ballance.

RECEIPT, or RESCEIT, in Law, is an Admiſſion, or receiving of any Perſon to plead his Right, in a Cauſe formerly commenc'd between two other Perſons.

As if a Tenant for Life, or Years, brings an Action; he in the Reverſion comes in, and prays to be *received*, to defend the Land, and to plead with the Demandant.

Reſceit is alſo applied to an Admittance of Plea, though the Controverſy be only between two.

Reſceit of Homage is the Lord's receiving Homage of his Tenant, at his admiſſion to the Land. See HOMAGE.

RECEIPT of the Exchequer, } See { EXCHEQUER.
RECEIPT, in Medicine, } See { RECIPE.

RECEIVER, a Veſſel uſed in Chymiſtry, Pneumaticks, *&c.* See RECIPIENT.

RECEIVER, is alſo an Officer; whereof there are various Kinds, denominated from the particular Matters they Receive, the Places where, or the Perſons for whom, *&c.*

As, *Receiver of Rents*: *Receiver* General of the Cuſtoms. See CUSTOMS.

Receiver of the Fines, upon Original Writs in Chancery.

Receiver General of the Dutchy of *Lancaſter*, who gathers all the Revenues and Fines of the Lands of the ſaid Dutchy, all Forfeitures, Aſſeſſments, *&c.* See DUTCHY, *&c.*

RECEIVER, RECEPTOR, and RECEPTATOR, in Law, is uſed commonly in the Evil Part, for ſuch as knowingly receive ſtollen Goods from Thieves, and conceal them.

The Crime is Felony, and the Puniſhment Tranſportation.

RECEPTACULUM *Chyli*, or *Ciſterna Chyli*, or RECEPTACULUM *Commune*, in Anatomy, a Reſervoir or Cavity near the left Kidney, into which the lacteal Veſſels do all Diſcharge their Contents. See LACTEAL.

This Receiver, call'd from its Inventor *Ductus Pecqueticus*, lies under the Emulgent and great Arteries, between the two Origins of the Diaphragma. Hither do the lacteal Veſſels of the ſecond Order, bring the Chyle after its being diluted, and render'd thinner by the Lympha in the Glands of the Meſentery. See CHYLE and MESENTERY.

In a Preparation of this Part, by filling it with Mercury, Mr. *Cowper* found it to conſiſt of three ſeveral large Trunks; two of them more than a Quarter of an Inch in Diameter.

This Diviſion is only obſerved in human Bodies, in whom Dr. *Drake* thinks its erect Poſition makes it neceſſary, in order to take off the Reſiſtance which would ariſe from the Preſſure of the Chyle and Lympha, were it contained in a ſingle Receiver. In Quadrupeds, its Horizontal Poſition may make one Trunk ſufficient.

Its *Oſculi* or Exit is upwards in the Thorax, and thence call'd the *Thoraic Duct*. See THORAIC DUCT.

RECEPTION, RECEPTIO, Receiving, in Philoſophy, the ſame with *Paſſion*, conſidered as oppoſed to *Action*.

The Schoolmen, however, make ſome Difference: The Recpetive Paſſion, ſay they, does not tend to the deſtruction of the Being, as Paſſion does; but to the Perfection thereof: It is conceived as the Acquiſition of ſome new Reality or Modification, by means of the Action of another.

RECEPTION is alſo popularly uſed for the manner of treating or entertaining a Perſon; and of the Solemnities and Ceremonies practiced on that Occaſion.

The Queen of *Sweden*'s *Reception* into *Paris* was one of the moſt Magnificent theſe Ages have ſeen. The *Reception* of Embaſſadors is uſually done with a great deal of Pomp.

RECEPTION, is ſometimes alſo uſed for the act of approving, accepting, and admitting a thing.

The Canon Law only binds where it is receiv'd: The Civil Law is received in ſome Countries.

The *French* would never receive the Council of *Trent*, the *Spaniſh* Inquiſition, nor the Dogmata of the Ultramoulane Caniſts.

RECEPTION, in Aſtrology, is a Dignity befalling two Planets when they exchange Houſes; *e. gr.* when the Sun arrives in Cancer, the Houſe of the Moon; and the Moon, in her turn, arrives in the Sun's Houſe.

The

The Term is alſo uſed when two Planets exchange Exaltation.

RECESSION *of the Equinoxes.* See PRECESSION.

RECESSUS *Imperii, Receſs of the Empire,* a Phraſe uſed in ſpeaking of the Affairs of *Germany*; ſignifying a Collection of the Votes or Determinations of a Dyet. See DYET.

At the end of each Dyet, e're it breaks up, they gather together all their Reſolutions, and reduce them into Writing; the Act which contains them they call *Receſſus Imperii,* becauſe made when on the Point of retiring.

There being, now, no Articles of Succours for the War againſt the Turks, which uſed to make the greateſt Part of the *Receſſus Imperii*; they are at a loſs for Matter to fill them withall, as well as for the Manner of drawing them up. *Mozambano.*

The Diſorders in the Imperial Camber of *Spires* were ſo great, that in 1654, they made ſeveral Regulations therein; inſerted in the *Receſſus Imperii. Id.* See CHAMBER.

RECHABITES, a Kind of Religious Order among the antient *Jews,* inſtituted by *Jonathan* the Son of *Rechab*; comprehending his Family and Poſterity.

Their Founder preſcribed them three things; *Firſt,* Not to drink any Wine. *Secondly,* Not to build any Houſes, but to dwell under Tents. *Thirdly,* Not to ſow any Corn, or Plant any Vines.

The *Rechabites* obſerv'd theſe Rules with a great deal of ſtrictneſs, as appears from *Jeremy* xxxv. 6, *&c.*

Whence, St. *Jerom* in his xiii Epiſtle to *Paulinus,* calls them *Monachi, Monks.*

This *Jonathan* lived under *Joſias* King of *Judah*; his Father *Rechab,* from whom his Poſterity were denominated, deſcended from *Raguel* or *Jethro,* Father-in-law to *Moſes,* who was a *Cinean,* or of the Race of *Cin*; whence *Cinean* and *Rechabite,* are uſed as ſynonimous in Scripture.

RECHANGE, or RE-EXCHANGE, in Commerce, a ſecond Payment of the Price of Exchange; or rather the Price of a New Exchange, due upon a Bill of Excahnge that comes to be proteſted; and to be refunded the Bearer, by the Drawer, or Endorſer. See EXCHANGE.

The Occaſion of *Rechange* is, when the Bearer of a Bill of Exchange, after proteſting it for want either of Acceptance, or of Payment, borrows Money on his own Promiſe, Bond, or the like; or draws a Bill of Exchange in the Place where the Payment was to be made, on the Perſon who furniſhed the firſt; for which he pays a ſecond Exchange, which being added to the firſt already paid, the Drawer of the firſt Bill makes two Exchanges, properly call'd *Exchange* and *Re-exchange.* See BILL and PROTEST.

The Bearer of a proteſted Bill has a right to recover both the one and the other on the Drawer. Yet the ſimple Proteſtation the Bearer makes in the Act of *Proteſt,* that he will take up a like Sum at *Re-exchange,* for want of his Bill being accepted or paid; is not ſufficient to entitle him to demand the Reimburſement of his *Rechange*; unleſs he make it appear he has actually taken up Money in the Place whereon the Bill was drawn.

Otherwiſe, the *Rechange* will only amount to the Reſtitution of the firſt Exchange, with Intereſt, the Expences of Proteſting, and of the Journey, if there have been any.

If a Bill of Exchange, payable to the Bearer, or Order, come to be proteſted, the *Rechange* is only due upon the Drawer for the Place where the Remittance was made; not for thoſe Places where it may have been negotiated; at leaſt, the Drawer has a Right to be refunded his *Rechange* for thoſe Places, by the Endorſer.

Indeed the *Rechange* is due from the Drawer upon all Places where a Power of Negotiating is given by the Bill, and upon all others, if the Power of Negotiating be Indefinite.

Laſtly, The Intereſt of the *Rechange,* of the Expences of the Proteſt, and the Journey, are only due from the Day of the Demand.

'Tis ſuppoſed to be the *Gibelins* driven out of *Italy* by the Faction of the *Guelphs,* and ſhelter'd at *Amſterdam,* who firſt eſtabliſhed the Cuſtom of *Rechange,* on pretence of the Intereſts, Damages, and Expences they underwent, when the Bills given them for the Effects they had been obliged to abandon, were not accepted, but came to be proteſted. See BILL *of Exchange.*

RECHANGE is alſo uſed at Sea for ſuch Tackle as is kept in Reſerve aboard the Ship, to ſerve in Caſe of failure of that already in Uſe. See TACKLE.

The *Levantines* uſe the Word *Reſpect,* or *Reſpit* in the ſame Senſe.

RECHARGE, of a Fire-Arm, is a ſecond loading or Charge. See CHARGE.

The *Recharge* ſhould never be ſo deep as the firſt Charge, leaſt the Piece being over-heated ſhould burſt.

RECHAÇING, in Hunting, the driving back of the Deer, or other Beaſts, into the Foreſts, Chaces, *&c.* which had ſtragled out into the Copſes, or Thickets, *&c.* See FOREST, *&c.*

Antiently there were Offices of *Rechacers* of the Deer, beſtowed by the King on Gentlemen, or old Hunters, with Salaries for the keeping of running Dogs, to *rechace* the Deer into the Foreſts, and then to beat them off, without purſuing any farther. See PURLIEU.

RECHEAT, in Hunting, a Leſſon which the Huntſman winds on the Horn, when the Hounds have loſt their Game; to call them back from purſuing a Counter-ſcent.

RECIPE, in Medicine, a Preſcription, or *Formula* of a Remedy, appointed to be adminiſtred to a Patient. See PRESCRIPTION.

'Tis thus call'd, becauſe always beginning with the Word *Recipe,* Take; ordinarily expreſs'd by ℞.

RECIPIANGLE, or RECIPIENT-ANGLE, a Mathematical Inſtrument, ſerving to take the Quantity of Angles, eſpecially in the making of Plans of Fortifications.

The *Recipiangle* is a popular Inſtrument among the *French,* but little known among us: 'Tis uſually very ſimple; in Form of a Square, or rather a Bevel; conſiſting of two Arms or Branches, riveted together, and yet moveable, like a Sector on the Centre or Rivet.

To take an Angle with it, they lay the Centre of the Protractor to the Joint, and the Degrees cut by the Edge ſhew the Quantity of the Angle: Otherwiſe the Angle made by the two Rulers is drawn on Paper, and then meaſured with a Protractor.

Sometimes there is a Circle divided into Degrees, added over the Centre or Rivet, with an Index to ſhew the Degrees without a Protractor: At other times the under Branch is divided.

To meaſure a Saliant Angle with any of the *Recipiangles,* apply the Inſides to the Lines that form the Angle; for a re-entering Angle, apply the outſides, *&c.*

RECIPIENT, RECEIVER, in Chymiſtry, an Appendage of an Alembic, Retort, *&c.* being a Veſſel luted to the Beak thereof, to receive the Liquor rais'd in Diſtillation, *&c.* See ALEMBIC, RETORT, DISTILLATION, *&c.*

RECIPIENT is alſo Part of the Apparatus of an Air Pump; being a Glaſs Veſſel placed a-top of the Plate, for the Air to be exhauſted from. See AIR-PUMP.

To an Air-Pump belong various *Recipients,* of various Forms and Sizes, and ſerving for various Purpoſes. See VACUUM.

RECIPROCAL, ſomething that is Mutual, or which is return'd equally on both Sides, or affects both Parties alike. See MUTUAL.

Thus, we ſay, the end of Human Society is to afford each other *reciprocal* Aid.—There are *reciprocal* Duties between the Prince and his Subjects, the Husband and Wife, *&c.*

The *Lex Talionis* eſtabliſhes a kind of *Reciprocation* of Juſtice.

There is a *Reciprocal* Action between the Agent and Patient. See REACTION.

If two ſimilar Triangles be cut by Parallel Lines, the Sections of the Lines will be Proportional; and *Reciprocally,* if the Sides be cut Proportionably, the Sides are ſimilar. See TRIANGLE.

RECIPROCAL, in Logick, is applied to Terms which have the ſame Signification, or are convertible; as *Reaſonable Animal,* and *Man.* See CONVERTIBLE and TERM.

The Schoolmen define *Reciprocation,* a Converſion of the ſeveral Terms in an Enunciation. And Terms are ſaid to be converted in an Enunciation, when the Predicate is put in the Place of the Subject, and *reciprocally,* the Subject in that of the Predicate.

Thus Rationality and Riſibility are ſaid to *reciproacte*; for we ſay, equal a Rational is Riſible; and a Riſible is Rational.

RECIPROCAL, in Grammar, is applied to certain Verbs and Pronouns, in ſome of the Modern Languages; in regard of their turning or reflecting the Noun, or Perſon upon himſelf.

Thus the Pronoun-relative *himſelf,* refers *Cato* to *Cato*'s ſelf. See PRONOUN.

The *Abbe de Dangeau,* defines *Reciprocal Verbs* to be thoſe whoſe Nominative is Plural, and denotes Perſons acting mutually on one another: As, *Ces quatre hommes s' entrebattoient*; Theſe four Men fought together. *Pierre & toi vous vous louez*; *Peter* and you Praiſe one another, *&c.*

Reciprocal Verbs are a Species of thoſe which that Author calls *Pronominals,* and which he diſtinguiſhes into *Reciprocal* and *Identical.* See VERB.

RECIPROCAL, in Poetry, is applied to Verſes which run the ſame both backwards and forwards; call'd alſo *Recurrents.* See RECURRENTS.

RECIPROCAL *Figures,* in Geometry, are ſuch as have the Antecedents and Conſequents of the ſame Ratio in both Figures; as *Tab. Geometry Fig.* 22. Here,

A : B : : C : D, Or,

12 : 4 : : 9 : 3

That is, as much longer as the Side A, in the firſt Rectangle, is than B; ſo much deeper is the Side C in the ſecond Rectangle, than the Side D in the firſt: and conſequently, the Length of one is compenſated by the Depth of the other.

Alſo as the Side A is $\frac{1}{4}$ longer than the Side C, ſo the Side B is $\frac{1}{4}$ longer than D: Wherefore the Rectangles muſt needs be equal. See RECTANGLE.

This is the Foundation of that Catholick Theorem; that the Rectangle of the Extremes muſt always be equal to that of the Means: And conſequently, the Reaſon of the Rule of Three, or Golden Rule. See RULE.

For, ſuppoſe there was given any three Numbers, or Quantities, Geometrically Proportional, as A, B, and C; and that it were required to find a fourth, D, Proportional to them: Since A : B : : C : D, therefore AD=BC, and conſequently, $D=\frac{BC}{A}$, that is, the fourth Term is equal to the Quotient of the ſecond, multiplied by the third Term, divided by the firſt.

Or thus, in Numbers: Suppoſe given 12, 4, and 9; required a fourth Proportional. Now as 12 : 4 : : 9 : Q. But $12Q=4\times 9=36$. Therefore $Q=\frac{4\times 9}{12}$ (: 3. by dividing both Sides by 12.

And hence it follows, that if any two Triangles, Parallelograms, Priſms, Parallelopipeds, Pyramids, Cones, or Cylinders, have their Baſes and Altitudes *reciprocally* Proportional, thoſe two Figures or Solids are equal to one another; and *vice verſa*, if they are equal, their Baſes and Altitudes are *reciprocally* proportionable. See TRIANGLE, PARALLELOPIPED, PRISM, CONE, CYLINDER, *&c.*

RECIPROCAL *Proportion*, is when in four Numbers, the fourth is leſſer than the ſecond, by ſo much as the third is greater than the firſt; and *vice verſa*.

This is the Foundation of the Inverſe, or indirect Rule of Three, thus; 4 : 10 : 8 : 5 : See RULE.

There is great Uſe made of this *Reciprocal Proportion*, by Sir *Iſaac Newton*, and others, in demonſtrating the Laws of Motion. See PROPORTION.

RECITATION, the Act of *reciting*, or delivering a Diſcourſe, either in the way of Narration, Rehearſal, Declamation, or Reading.

RECITATIVE *Muſic*, a Kind of Singing, that differs but little from ordinary Pronunciation; ſuch as that wherein ſeveral Parts of the Liturgy are rehears'd in Cathedrals; or that wherein the Actors ordinarily deliver themſelves on the Theatre, at the Opera, *&c.* See SINGING and OPERA.

The *Italians* value themſelves on their Performance in the *Recitative* Way. The *Recitatives*, or *Recitativo's*, in our Opera's, uſually tire the Audience, by reaſon they don't underſtand the Language; the Songs make them amends. See SONG.

RECITATIVE *Style*, is the Way of Writing accommodated to this Sort of Muſic. See STYLE.

RECKONING, in Navigation, the eſtimating of the Quantity of the Ship's Way; or of the run between one Place and another. See SAILING and DISTANCE.

This is beſt perform'd by means of the *Log-Line*; the manner of applying which ſee under its proper Article, LOG-LINE.

Yet is this liable to great Irregularities.—*Vitruvius* adviſes an Axis to be paſs'd through the Sides of the Ship, with two large Heads propending out of the Ship; wherein are to be included Wheels touching the Water, by whoſe Revolution the Space paſs'd over in any given time, may be meaſured. The ſame has been lately recommended by *Snellius*: But there are few who have wrote of Navigation, but have ſhewn the inſufficiency of this Method.

RECLAMING, or RECLAIMING, in our antient Cuſtoms, the Action of a Lord purſuing, proſecuting, and recalling his Vaſſal, who had gone to live in another Place, without his Permiſſion. See LORD and VASSAL.

RECLAIMING is alſo uſed in a ſimilar Senſe, for the demanding of a Perſon or thing to be delivered up, or ſurrender'd, to the Prince or State it properly belongs to; when, by any irregular Means it has come into the Poſſeſſion of another. See CLAIM.

An Officer was ſent to reclaim the Veſſel ſeiz'd by the *Algerines*, contrary to the Terms of the Treaty of Peace. The Miniſtry reclaim'd the late Caſhier of the *South-Sea* Company, who had refuged himſelf in *Flanders*, but in vain.

RECLAIMING, in Falconry, is the Calling of a Hawk, or Bird of Prey back to the Fiſt.

The Sparrow-Hawk, Goſſe-Hawk, *&c.* are *reclaimed* with the Voice: The Falcon only by ſhaking the Lure.

So that Luring, with regard to the Falcon, is more proper than *Reclaiming*. See LURE.

The Partridge is alſo ſaid to *relaim* her Young ones, when ſhe calls them together upon their ſcattering too much.

RECLINATION, of a Plane in Dialling, the Number of Degrees which a Dial-Plane leans backwards, from an exactly upright or vertical Plane, *i. e.* from the Zenith. See PLANE.

The *Reclination* is eaſily found, by means of a Ruler and a Quadrant; for having drawn an Horizontal Line on the Plane, by a Level or Quadrant, and to it another Line at Right Angles; apply a Ruler, ſo that one End of it may hang over, or reach beyond the Plane: Then will a Quadrant, applied to the under Edge of the Ruler, ſhew the Degrees and Minutes of the Plane's *Reclination*; accounting from that Side of the Quadrant that is contiguous to the Edge of the Ruler. See DIAL, QUADRANT, *&c.*

RECLINER, in Dialling, or RECLINING *Dial*, is a Dial whoſe Plane *reclines* from the Perpendicular; *i. e.* leans from you when you ſtand before it. See RECLINATION.

When this Reclination is equal to the Height of the Pole, the Dial is ſaid to be *Equinoctial*.

A *Declining* RECLINER, or *Declining* RECLINING *Dial*, is a Dial which neither ſtands perpendicularly, nor oppoſite to one of the Cardinal Points. See DECLINER.

RECLUSE, among Religious, a Perſon cloſe ſhut up in a very narrow Cell of a Hermitage, or other Religious Houſe; and cut off, not only from all Converſation of the World, but even of the Houſe. See HERMIT, *&c.*

The Word is chiefly uſed for ſuch as thus impriſon themſelves out of Devotion, to do Penance. It is ſometimes alſo applied to incontinent Wives, whom their Husbands procure to be thus kept in a perpetual Priſon in ſome Convent. See CONVENT, *&c.*

Recluſes were antiently very numerous: They were, then, a kind of Solitaries who ſhut themſelves up in ſome little Cell, with a Vow never to ſtir out of it. See SOLITARY.

None were admitted to this Oath 'till they had given ſufficient Proofs of their Abſtinence, and had leave from the Biſhop, or the Abbot of the Monaſtery where they were ſhut up; for the Cells of the *Recluſes* were always to join to ſome Monaſtery.

The Prelates Permiſſion being obtain'd, they were tried for a Year in the Monaſtery; out of which, during that time, they never ſtirr'd. See PROBATION.

They were then admitted to their Vow of Stability, in the Church before the Biſhop; which done, and the *Recluſe* enter'd his little Cell, the Biſhop ſet his Seal on the Door.

The Cell was to be very ſmall, and very exactly cloſed. See CELL.

The *Recluſe* was to have every thing within it neceſſary to life; and, even, if he were a Prieſt, an Oratory conſecrated by the Biſhop, with a Window which look'd into the Church, through which he might make his Offerings at the Maſs, hear the Singing, ſing himſelf with the Communicants, and anſwer thoſe who talk'd to him. But this Window was to have Curtains before it, both within-ſide and without; ſo that the *Recluſe* might neither ſee nor be ſeen.

Indeed he was allow'd a little Garden in his *Recluſion*, to Plant a few Herbs, and take freſh Air: Adjoining to his Cell was that of his Diſciples, which he was very rarely without, with a Window, through which they ſerv'd him with Neceſſaries, and received his Inſtructions.

When it was judg'd proper to have two or three *Recluſes* together, their Cells were made Contiguous to each other, with Windows of Communication: If any Women would conſult them, or confeſs to them, it was to be in the Church, and in the Face of all the World.

Where there were two or three *Recluſes* together, they were never to hold any Conference, but on ſpiritual Matters; and to confeſs to each other: Where there was but one, he was to confeſs and examine himſelf.

If the *Recluſe* fell ſick, his Door was opened for People to come in and aſſiſt him; but he was not allowed to ſtir out on any Pretence whatever.

Theſe Articles are extracted from a Rule, compiled for the *Recluſes*, by *Grimlaic*, a Prieſt in the IXth Century.

There were alſo Women *Recluſes*, who led the ſame Life, in Proportion. St. *Viborarde* lived a *Recluſe* at St. *Gall*, and was there martyriz'd by the *Hungarians* in 825. See RECLUSION.

RECLUSION, the State of a Recluſe; or the Cell and other Appurtenances thereof. See RECLUSE.

F. *Helyot* gives a particular Account of the Ceremonies practiced at the *Recluſion* of a Woman, in that of the Mother of *Cambray*, Inſtitutrix of the Order of the Preſentation of *Notre Dame*.

A Cell being built for her in 1625, adjoining to the Church of St. *Andrew* in *Tournay*: The Biſhop waited for her early in the Morning at the Church Door. Upon her Arrival, proſtrating her ſelf at the Feet of that Prelate, he gave her his Benediction, conducted her to the Grand Altar; and, there bleſſing a Mantle, Veil, and Scapulary, put them on her, and gave her a new Name.

Having here made her Vow, and the Biſhop having harangued the People in Praiſe of the new *Recluſe*; he conducted her Proceſſionally to her *Recluſion*, the Clergy all the way ſinging, *Veni Sponſa Chriſti*, &c.

Here the Biſhop bleſſing her a-freſh, conſecrated the *Recluſion*, and ſhut her up in perpetual Confinement.

RECOGNITION, an Acknowledgement.

The Word is particularly uſed in our Law Books, for the Title of the firſt Chapter of the *Stat.* 1 *Jacob.* I. whereby the Parliament acknowledged the Crown of *England*, after the Death of Queen *Elizabeth*, to have rightfully deſcended to King *James*.

RECOGNITION, in the Drama. See DISCOVERY.

RECOGNITIONE *adnullanda per vim & duritiem facta*, is a Writ to the Juſtices of the Common-Bench, for ſending a Record touching a Recognizance, which the Recognizor ſuggeſts to have been acknowledged by Force and hard dealing; that if it ſo appear it may beadiſannulled. See RECOGNIZANCE.

RECOGNIZANCE, or RECOGNISANCE, in Law, a Bond, or Obligation of Record, teſtifying the *Recogniſor* to owe to the *Recogniſee*, a certain Sum of Money. See BOND.

It is *recognized*, or acknowledged in ſome Court of Record, or before ſome Judge, Maſter in Chancery, or Juſtice of the Peace.

Mere *Recognizances* are not ſealed, but enrolled; and Execution, by force thereof, is of all the Recogniſor's Goods or Chattels, (except draught Beaſts, or Implements of Husbandry) and the Moiety of his Lands.

RECOGNIZANCE is alſo uſed in our antient Statutes, for the Verdict of the twelve Jurors impanelled upon an Aſſize; hence called *Recognitors*. See JURY and VERDICT.

RECOGNISEE, is he to whom one is bound in a Recognizance.

RECOIL, or REBOUND, the Reſilition of a Body, chiefly a Fire-Arm; or the Motion whereby, upon Exploſion, it ſtarts backwards. See GUN, MORTAR, *&c.*

The greater the Charge, *cæteris paribus*, the greater the Rebound.—By an Experiment made by the Royal Society, and related in the *Philoſoph. Tranſact.* it was found that Cannons charg'd to a certain Degree, throw the Ball from right to left of their own Direction; but that the Cannons themſelves *Recoil* from left to right.

Some of the Gentlemen of the *French* Academy, doubting the Juſtneſs of the Obſervation, M. *Caſſini*, the younger, undertook to repeat the Experiment; which he did by means of a Machine, as like that of *England* as he could; and that tried over, and over again.

The Reſult was, that the Ball, when the Gun had liberty to *recoil*, was always thrown to the right of the Point to which it was thrown when the Gun was fix'd without a poſſibility of rebounding; but then the *Recoil* was always made the ſame way, *viz.* to the right; and he never found that contrariety of Directions between the Ball and the Rebound, obſerv'd in the *Engliſh* Experiment.

RECOLLECTION, a Mode of Thinking, whereby thoſe Ideas ſought after by the Mind, are with Pain and Endeavour found, and brought again to view. See MEMORY and REMINISCENCE. See alſo MODE, THINKING, *&c.*

RECOLLECTS, a Congregation of reform'd *Franciſcans*, call'd alſo *Friars Minor of St. Francis, of the ſtrict Obſervance.* See FRANCISCAN.

They were eſtabliſhed about the Year 1530; when, ſome Religious of the Order of St. *Francis*, willing to keep his Rule to the Letter; *Clement* VII. gave them Houſes, particularly *Tulles* in the *Limoſin*, and *Murat* in *Auvergne*, whether they might retire, and receive ſuch as were diſpoſed to follow them.

The ſame Year he approved the Reform; and in 1584 it was carried into *Italy*. See REFORM.

RECONCILIARI, in our old Law-Books, *&c.* A Church is ſaid *reconciliarii*, to be *reconciled*, when 'tis conſecrated a-freſh, after having been polluted or profaned; as by the Poſſeſſion of Pagans or Hereticks, *&c.* See CHURCH, CONSECRATION, PROFANATION.

RECONNOITRE, in War, to go view and examine the State of things, in order to make a report thereof.

Thus we ſay, a Body of Horſe were ſent to *Reconnoitre* the Enemy's Army, to *Reconnoitre* their Camp, the Ground, the Condition of the Roads, Rivers, *&c.*

To *Reconnoitre* the Coaſts, to *Reconnoitre* a Port, *&c.*

A General is to go *Reconnoitre* in Perſon, the Place to be beſieged, in order to learn its Situation, Avenues, its Strengths and Weakneſſes.

The Word is pure *French*, ſignifying litterally, to *know*, recollect.

RECONNOITRE is alſo uſed at Sea: thus, to *Reconnoitre* a Veſſel, a Fleet, *&c.* is to approach near enough to examine the Rate and Burthen of a Veſſel, *&c.* the Force it may have a-board, what Nation it is of, *&c.*

To *Reconnoitre* a Land or Shore, is to obſerve its Situation, in order to find what Land it is.

RECORD, in Law, an authentick and uncontroulable Teſtimony of any thing in Writing, contain'd in Rolls of Parchment, and preſerv'd in Courts; thence call'd Courts of *Record*. See COURT, ROLL, *&c.*

Records are ſaid to be *vetuſtatis & veritatis, Veſtigia.*

An Act committed to Writing in any of the King's Courts, during the Term wherein it is written, is alterable; being no *Record*; but that Term once ended, and the Act enrolled, it is a *Record*, and of that Credit, that admits no Alteration or Proof to the contrary.

Lawyers reckon three ſorts of *Records*; *viz.* a Judicial *Record*, as Attainder, *&c.* a Miniſterial *Record* upon Oath, as an Office of Inquiſition found; and a *Record* made by Conveyance and Conſent, as a Fine, or Deed enrolled, and the like.

RECORD, among Fowlers: a Bird is ſaid to *record*, when it begins to tune or ſing within itſelf; to form its Notes, and diſpoſe its Organs for ſinging.

The Cock Thruſh is diſtinguiſhed from the Hen in *recording*; the firſt being more loud and frequent than the ſecond.

RECORDARE *facias*, a Writ directed to the Sheriff to remove a Cauſe depending in an inferiour Court, as Hundred-Court, County-Court, Court of antient Demeſne, *&c.* to the King's-Bench, or Common-Pleas.

'Tis thus call'd becauſe it commands the Sheriff to make a Record of the Proceedings either by himſelf or others; and then to ſend up the Cauſe.

RECORDER, a Perſon whom the Mayor, or other Magiſtrate of any City or Town Corporate having Juriſdiction or a Court of *Record* within their Precincts, does aſſociate with him, for his better Direction in Matters of Juſtice, and Proceedings according to Law. See MAYOR, *&c.*

He is uſually a Man verſed and experienced in the Common Law.—In ſome Towns which have their particular Aſſizes within themſelves, and no Mayor, the *Recorder* is the Judge.

RECORDO *& proceſſu mittendis*, is a Writ to call a Record, together with the whole Proceedings in the Cauſe, out of an inferiour Court into the King's Court.

RECOVERY, in a Legal Senſe, an obtaining of any thing by Judgment, or Trial at Law; anſwering to the *Evictio* of the Civilians.

There is a *true*, and a *feigned Recovery*.

True Recovery is an actual or real *Recovery* of any thing, or the value thereof, by Judgment; as if a Man ſue for any Land, or other thing, and have a Verdict and Judgment for him.

A *feigned*, or *common Recovery*, call'd by the Civilians, *quædam fictio Juris*, is a certain Form or Courſe preſcribed by Law to be obſerved for the better aſſuring of Lands and Tenements to us; the end and effect whereof is to diſcontinue and deſtroy Eſtates Tail, Remainders, and Reverſions, and to bar the Intails thereof. See TAIL, REMAINDER, REVERSION, *&c.*

This *Recovery* is either with a *ſingle*, or a *double Voucher*.

In the firſt there are three Parties required, the *Demandant*, the *Tenant*, and the *Vouchee*.

The Demandant is he who brings the Writ of Entry, and may be term'd the *Recoverer*: The Tenant is he againſt whom the Writ is brought, and may be call'd the *Recoveree*.

The Vouchee is he whom the Tenant Voucheth, or calls to Warrant for the Land in Demand. See VOUCHEE.

A *Recovery* with double Voucher, is where the Tenant voucheth one, who voucheth another, or the common Vouchee.

The Point is a little quaint and perplex'd: To explain it; Suppoſe a Man deſirous to cut off an Eſtate Tail in Lands or Tenements, to the End that he may ſell, give, or bequeath them; the firſt thing he does, is to cauſe a feign'd Writ of Entry, *ſur Deſſeiſin in le poſt*, to be brought, of the Lands of which he intends to dock the Entail; and in a feign'd Declaration thereupon made, pretends he was deſſeis'd by him, who by a feign'd Fine, or Deed of Bargain and Sale, is named and ſuppoſed to be Tenant of the Lands.

This feign'd Tenant, if it be a ſingle *Recovery*, is made to appear and vouch a poor Fellow, the Bag-bearer of Writs of the *Cuſtos brevium* of the Common-Pleas; (where alone theſe common *Recoveries* are allowed) who makes Default: Upon which a Judgment is by this Fiction enter'd, that the Demandant ſhall recover, and have a Writ of Seiſin for the Poſſeſſion of the Lands in Queſtion; and that the Tenant ſhall recover the Value of the Lands againſt the Lands of the Vouchee Bag-bearer, (who has not a Foot) which is an imaginary Satisfaction for the Heir in Tail, though he is to be never the better for it.

By this means one *Edward Howes*, a Bag-bearer, and common Vouchee, in the ſpace of 20 Years, paſs'd, or ſuffer'd to be recover'd againſt him, a great Part of the Lands of *England*; obliging his own Lands to anſwer the Value of thoſe recover'd againſt the Tenants or Remainders in Tail.

RECOUPE, in Law, to Rebate or Diſcount. See REBATE and DISCOUNT.

Thus, if a Man have ten Pounds iſſuing out of certain Lands, and he Diſſeiſes the Tenant of the Land; in an Aſſize brought by the Diſſeiſee the Diſſeiſor ſhall *recoupe* the Rent in the Damages.

The Word is pure *French*, form'd of *re* and *Couper*, to cut again.

A RECOUPE is alſo a quick, ſharp Reply to a peremptory Demand. See REPARTEE.

RECREANT, in our old Law-Books, implies Cowardly, Faint-hearted. See CHAMPION, COMBAT and DUEL.

Hence, *Recreantiſe*. See CRAVEN.

Recreant was ſo reproachful a Word, that *Glanville* would not deſcribe it.

Recreantes Equi is uſed by *Fleta*, lib. 2. cap. 2. for dull, jaded Horſes.

RECREMENT, *Fæces*, in Medicine, *&c.* ſome ſuperfluous Matter mixed with other that is uſeful. See FÆCES.

Sometimes it alſo ſignifies ſuch ſecreted Juices in the Body, as are afterwards of uſe to the OEconomy; as the Lympha, Gall, *&c.* which are thus called in contradiſtinction to *Excrements*, which are expell'd out of the Body, as of no further uſe. See EXCREMENT.

RECRIMINATION, a Poſterior Accuſation brought by the accuſed againſt his Accuſer, upon the ſame Fact.

When

When two Parties have made their mutual Complaint at the ſame time; the Buſineſs is firſt, to determine who ſhall be the Accuſer, and who the Accuſed; *i. e.* on whom ſhall fall the *Recrimination*.

Recrimination is of no force till the Criminal have been purged legally.

RECRUDESENCE, in Medicine, is when a Diſeaſe that was gone off returns again. See RELAPSE.

RECTANGLE, in Geometry, call'd alſo *Oblong*, and *long Square*, a Quadrilateral rectangular Figure, (MLIK, *Tab. Geometry, Fig.* 60.) whoſe oppoſite Sides (OP and NQ, as alſo ON and PQ) are equal. See QUADRILATERAL.

Or, a *Rectangle* is a Parallelogram, whoſe Sides are unequal, but Angles right. See PARALLELOGRAM.

To find the Area of a Rectangle; Meaſure the length of the Sides ML and MI; and multiply them by one another: The Product is the Area of the *Rectangle*.

Thus ML being 345 Foot, and MI = 123 Foot; the Area will be found 42435 Square Feet.

Hence, 1°, *Rectangles* are in a Ratio compounded of that of their Sides ML and IK; and therefore *Rectangles* which have the ſame Height, are to each other as their Baſes; and thoſe which have the ſame Baſe are to each other as their Heights.

2°, If therefore there be three Lines in continual Proportion, the Square of the middle one is equal to the *Rectangle* of the two Extremes. See PROPORTION.

3°, If there be four right Lines in continual Proportion; the *Rectangle* under the Extremes is equal to the *Rectangle* under the middle Terms.

4°, If from the ſame Point A *Fig.* 41. be drawn two Lines; one whereof, AD, is a Tangent to a Circle, the other a Secant AB: the Square of the Tangent AD, will be equal to the *Rectangle* under the Secant AB; and that Part of it without the Circle, AC.

5°, If two or more Secants A*a*, AB, *&c.* be drawn from the ſame Point A; the *Rectangles* under their Wholes and their Parts without the Circle, will be equal. See SECANT.

6°, If two Chords interſect each other, the *Rectangles* under their Segments will be equal. See CHORD.

RECTANGLE, in Arithmetick, is the ſame with *Product* or *Factum*. See PRODUCT and MULTIPLICATION.

RECTANGLED, RIGHT-ANGLED, *Triangle*, is a Triangle, one of whoſe Angles is right, or equal to 90°.

There can be but one right Angle in a plain Triangle; therefore a *rectangled* Triangle, cannot be equilateral. See TRIANGLE.

RECTANGLAR, in Geometry, is applied to Figures, and Solids which have one or more Angles, Right. See ANGLE, *&c.*

Such are Squares, Rectangles, and rectangled Triangles among plain Figures; Cubes, Parallelipipeds, *&c.* among Solids. See FIGURE, SOLID, *&c.*

Solids are alſo ſaid to be *Rectangular* with reſpect to their Situation: Thus, if a Cone, Cylinder, *&c.* be Perpendicular to the Plane of the Horizon, 'tis called a *Rectangular* or *Right Cone*; a *Rectangular*, &c. Cylinder. See CONE and CYLINDER.

The Antients uſed the Phraſe *Rectangular Section of a Cone*, to denote a *Parabola*; that Conic Section, before *Apollonius*, being only conſidered in a Cone whoſe Section by the Axis would be a Triangle, Right-angled at the Vertex.

Hence it was that *Archimedes* entitled his Book of the Quadrature of the Parabola, by the Name of *Rectanguli Coni Sectio*.

RECTIFICATION, the Act of *Rectifying*, i. e. of correcting, remedying, or redreſſing ſome Defect or Error, in reſpect either of Nature, Art, or Morality. See RIGHT, RECTITUDE, *&c.*

The Word is compound of *rectus*, right, direct, and *fio*, I become.

RECTIFICATION, in Chymiſtry, is the repeating of a Diſtillation or Sublimation ſeveral times; in order to render the Subſtance purer, finer, and freer from Aqueous, or Earthy Parts. See DISTILLATION.

Rectification is a reiterated Depuration of a diſtill'd Matter, *e. gr.* Brandy, Spirits, or Oils; by paſſing them again over their Fæces, or Marc, to render them more ſubtile, and exalt their Virtues. See SPIRIT, *&c.*

Fix'd Salts are rectified by Calcination, Diſſolution, or Philtration. See SALT, DISSOLUTION, *&c.*

Metals are *rectified*, i. e. *refined*, by the *Couppel*; Regulus's, by repeated Fuſions, *&c.* See METAL, REFINING, *&c.*

RECTIFICATION, in Geometry, is the finding of a right Line equal to a Curve. See CURVE.

All we need to find the Quadrature of the Circle, is the *Rectification* of its Circumference; it being demonſtrated, that the Area of a Circle is equal to a Rectangled Triangle, whoſe two Sides comprehending the right Angle, would be the Radius, and the right Line equal to the Circumference. See CIRCLE and CIRCUMFERENCE.

To *rectify* the Circle, therefore, is to *Square* it: Or rather, both the one and the other are impoſſible.

For the various Attempts to rectify the Circle, in order to the Quadrature, *&c.* See QUADRATURE *of the Circle*.

The *Rectification of Curves* is a Branch of the higher Geometry; wherein the uſe of the new-invented Integral Calculus, or Inverſe Method of Fluxions, is very conſpicuous.—For, ſince a Curve Line may be conceived to conſiſt of innumerable right Lines, infinitely ſmall; if the Quantity of one of them be found, by the differential Calculus; their Sum, found by the Integral Calculus, gives the length of the Curve.

Thus, ſince MR = dx, mR = dy; and therefore Mm, or the Element of the Curve will be $\sqrt{dx^2+dy^2}$.

If then, from the differential Equation, we ſubſtitute the Value either of dx^2, or of dy^2, to the particular Curve, we ſhall have the particular Element, which being integrated, gives the length of the Curve. See CALCULUS, *Integralis* and FLUXIONS.

Indeed, the Element of the Curve is ſometimes more commodiouſly determined from ſome particular Circumſtances; Inſtances whereof we ſhall give in the *Rectification of the Parabola* and *Cycloid*.

To rectify the Parabola.

For, the Parabola, we have $adx = 2ydy$

$$a^2ax^2 = 4y^2ay^2$$

$$dx^2 = 4y^2dy^2 : a^2$$

$$\sqrt{(dx^2+dy^2)} = \sqrt{(dy^2+4y^2dy^2 : a^2)} = ay\sqrt{(aa+4yy : a}$$

To render this Element of the Curve Integrable; let it be reſolv'd into an Infinite Series; (See SERIES.) Then in a general Theorem,

$n=2$ $m=1$ $P=a^2$ $Q=4y^2 : a^2$ $Pm : n = a = A$

$\frac{m}{n}$ AQ $= \frac{1}{2}a.\ 4y^2 : a^2 = -2y^2 : a = B$

$\frac{m-n}{2n}$ BQ $= -\frac{1}{4}.\ \frac{2y^2}{a}\ \frac{4y^2}{a^2} = -\frac{2y^4}{a^3} = C$

$\frac{m-2n}{3n}$ CQ $= -\frac{3}{6} - \frac{2y^4}{a^3}\ \frac{4y^2}{a^2} = \frac{4y^6}{a^5} = D$

$\frac{m-3n}{4n}$ DQ $= -\frac{5}{8}\ \frac{4y^6}{a^5}\ \frac{4y^2}{a^2} = -\frac{10y^8}{a^7}$, *&c.* in Infinitum.

Wherefore, $dy\sqrt{(aa+4yy : a} = dy + \frac{2y^2dy}{a^2} - \frac{2y^4dy}{a^4} + \frac{4y^5dy}{a^6} - \frac{10y^8dy}{a^8}$, *&c.* Whoſe Integral $y + \frac{2y^3}{3a^2} - \frac{2y^5}{5a^4} + \frac{4y^7}{7a^6} - \frac{10y^9}{9a^8}$, *&c.* Whoſe Infinite expreſſes the Parabolic Arch AM. *Tab. Analyſis, Fig.* 18.

Hence, *Firſt*, Let AC, and DC (*Tab. Analyſis, Fig.* 19.) be the Conjugate Axes of an Equilateral Hyperbola; then will AC = DC = a. Suppoſe MP = $2y$, QM = x; then will AP = $x - a$; conſequently, by reaſon PB. AP = PM^2 $xx = aa = 4yy$, and hence $xx = 4yy + aa$; conſequently, $x = \sqrt{(4yy+aa)}$. If then qm be ſuppoſed Infinitely near QM, we ſhall have $Qq = dy$; and therefore the Element of the Area CQMA = $dy\sqrt{(aa+4yy.)}$ The *Rectification* of the Parabola therefore depends on the Quadrature of the Hyperbolic Space.

It is to be here noted that all Integrations or Summations, are reduced to the Quadratures of Curves; in what Caſes ſoever they be uſed, ſo that to have them perfect, the Rule laid down under *Quadrature of the Logiſtic Curve*, muſt be obſerved throughout.

To Rectify the Cycloid.

Let AQ = x AB = 1, then will Qq = MS = dx, PQ = $\sqrt{(x-xx)}$. And hence: AP = $\sqrt{x} = x1 : 2$; conſequently by reaſon of the Similitude of the Triangles APQ and MmS,

AQ : AP : : MS : Mm

$x : x1 : 2 : : dx : x-1 : 2dx$.

Therefore *Mm* is the differential of the Cycloidical Arch AM = $x2 - : 2dx$. Wherefore $\dot{x} - 1 : 2dx = 2x^1 : 2 = 2$AP is the Arch AM.

The *Rectification* of Curves Mr. *de Moivre* ſhews may be obtain'd by conſidering the Fluxion of the Curve as an Hypothenuſe of a Rectangular Triangle, whoſe Sides are the Fluxions of the Ordinate and Abſciſſa: Care being taken in the Expreſſion of this Hypothenuſe, that only one of the Fluxions be remaining, as alſo only one of the indeterminate Quantities, *viz.* that whoſe Fluxion is retained: an Example will render this clear.

The Right Sine CB (*Fig.* 20.) *being given, to find the Arch AC.* —Let AB = x. CB = y. OA = r. CE the Fluxion of the Abſciſſe, ED the Fluxion of the Ordinate, CD the Fluxion of the Arch CA. From the Property of the Circle $2rx - xx = yy$, whence $2r\dot{x} - 2x\dot{x} = 2y\dot{y}$, and therefore $\dot{x} = \frac{y\dot{y}}{r-x}$. But $\dot{CD}^2 = \dot{y}\dot{y} + \dot{x}\dot{x} = \dot{y}\dot{y} + \frac{y^2\dot{y}\dot{y}}{rr-2rx+xx} = \dot{y}\dot{y} + \frac{y^2\dot{y}\dot{y}}{rr-yy} = \frac{rr\dot{y}\dot{y}}{rr-yy}$; therefore CD $= \frac{r\dot{y}}{\sqrt{rr-yy}} = \frac{1}{\sqrt{rr-yy}} + r\dot{y} = r\dot{y} + \frac{r\dot{y}}{\sqrt{rr-yy}}$.

And conſequently, if $rr-yy$ be thrown into an infinite Series, and the ſeveral Members of it be multiplied into $r\dot{y}$, and then the

flowing

lowing Quantity of each be taken, we ſhall have the Length of the Arch AC.

RECTIFIED *Spirits*, &c. are ſuch as have undergone the Operation of *Rectification*, or have been diſtill'd over and over, to ſeperate from them any heterogeneous Matter, which might have ariſen with them in the former Diſtillations. See RECTIFICATION.

Hence we ſay, *Spirit of Wine twice rectified, thrice rectified*, &c. See SPIRIT.

'Tis the Rectification that makes the Difference between Brandy and *rectified* Spirits of Wine. See BRANDY.

RECTIFIER, in Navigation, is an Inſtrument uſed for determing the Variation of the Compaſs, in order to *rectify* the Ship's Courſe, *&c.* See VARIATION and COURSE.

It conſiſts of two Circles, either laid upon, or let into one another, and ſo faſtened together in their Centres that they repreſent two Compaſſes, the one fixed, the other moveable; each divided into 32 Points of the Compaſs, and 360 Degrees, and numbered both ways, from the North and the South, ending at the Eaſt and Weſt in 90 Degrees.

The fixed Compaſs repreſents the Horizon, in which the North, and all the other Points are liable to Variation.

In the Centre of the moveable Compaſs is faſtened a Silk Thread, long enough to reach the outſide of the fixed Compaſs. But if the Inſtrument be made of Wood, an Index is uſed inſtead of the Thread. See COMPASS.

RECTIFYING *of Curves*, &c. See RECTIFICATION.

RECTIFYING *of the Globe*, or *Sphere*, is a previous adjuſting and preparing of the Globe or Sphere, for the Solution of Problems, *&c.*

'Tis done by bringing the Sun's Place in the Ecliptic on the Globe, to the Graduated Side of the Braſs Meridian; elevating the Pole above the Horizon, as much as is the Latitude of the Place; fitting the Hour Index exactly to twelve at Noon; and ſcrewing the Quadrant of Altitude, (if there be Occaſion) to the Zenith.

All this is comprehended under the Term, *Rectify the Globe*.

When this is done, the Celeſtial Globe repreſents the true Poſture of the Heavens, for the Noon of that Day it is rectified for. See GLOBE and SPHERE.

RECTILINEAR, *right-lined*, in Geometry, is applied to Figures whoſe Perimeter conſiſts of right Lines. See FIGURE, PERIMETER LINE, *&c.*

RECTITUDE, RECTITUDO, RECTUM, in Matters of Philoſophy, refers either to the act of judging, or of willing; and therefore whatever comes under the Denomination of *Rectitude*, is either what is true, or what is good: Theſe being the only Objects about which the Mind exerciſes its two Faculties of Judging and Willing. See TRUTH and GOOD.

The *Rectitude of the Mind*, conſidered as it *Judges*, *i. e.* of the Faculty of Judgment, conſiſts in its Agreement and Conformity to the Nature and Reaſon of things; in its determining and deciding about them, according to what their Conſtitutions, Properties, Uſes, *&c.* really are. See JUDGMENT. See alſo LOGIC, *&c.*

The *Rectitude of the Mind*, conſidered as it *wills*, call'd alſo *Moral Rectitude*, or *Uprightneſs*, conſiſts in the chooſing and purſuing of thoſe things which the Mind, upon due Inquiry and Attention, clearly perceives to be Good; and avoiding thoſe that are Evil. See WILL.

RECTITUDINES, in Law, Rights or legal Dues, belonging either to God or Man.

RECTO, in Law, a Writ uſually call'd a *Writ of Right*; of ſuch a Nature, as that whereas other Writs in real Actions are only to recover the Poſſeſſion of the Lands, *&c.* in Queſtion, loſt by the Plaintiff or his Anceſtor; This Aims to recover both the Seiſin thus loſt, and the Property of the thing; ſo that both Rights are here pleaded together; that of Property, and that of Poſſeſſion. See PROPERTY and POSSESSION.

If a Man loſe his Cauſe upon this Writ, he is without all Remedy. See RIGHT.

There are two Kinds of this Writ: *Rectum patens*, a Writ of right Patent; and *Rectum clauſum*, a Writ of Right Cloſe.

The firſt is ſo called, becauſe ſent open.—It lies only for him that hath Fee-ſimple in the Lands ſued for.

The Writ of Right Cloſe, is directed to the Lord of antient Demeſn, and lies for thoſe who hold their Lands and Tenements by Charter, in Fee-ſimple, or in Fee-Tail, or for Term of Life, or in Dower, if they be ejected out of ſuch Lands or diſſeis'd.

In ſuch Caſe a Man or his Heirs may ſue out the Writ of Right Cloſe, directed to the Lord of antient Demeſn, commanding him to do him Right in his Court.

This is alſo call'd *breve parvum de Recto*.

Indeed, the Writ of Right Patent is extended in Practice beyond its original Intention: For a Writ of Right of Dower, which lies for the Tenant in Dower, is Patent; and ſo in ſeveral other Caſes. *Fitzherb.*

RECTO *de Dote*, a Writ of Right of Dower, which lies for a Woman that has received Part of her Dower, and proceeds to demand the Remnant in the ſame Place, againſt the Heir. See DOWER.

RECTO *de Dote unde nihil habet*, is a Writ of Right which lies in Caſe where the Husband having divers Lands and Tenements, has aſſured no Dower to his Wife; and ſhe is thereby driven to ſue for her Thirds againſt the Heir, or his Guardian.

RECTO *de rationabili parte*, a Writ that lies between Privies of Blood, as Brothers in Gavel-Kind, or Siſters, or other Coparceners, as Nephews and Nieces; and for Land in Fee-ſimple.

Thus, if a Man leaſe his Land for Life, and afterwards dye, leaving Iſſue two Daughters, and after, the Tenant for Life likewiſe dies; the one Siſter entering on all the Land, and ſo deforcing the other, the Siſter ſo deforced ſhall have this Writ to recover her Part.

RECTO *quando Dominus remiſit*, a Writ of Right, which lies in Caſe where Lands or Tenements in the Seigniory of any Lord, are in Demand by a Writ of Right.

If the Lord hold no Court; or at the Prayer of the Demandant or Tenant, ſend his Writ to the King's Court, to put the Cauſe thither for that time; this Writ iſſues for the other Party, and has its Name from the Words compriſed, which is the true Occaſion thereof.

RECTO *de advocatione Eccleſiæ*, a Writ of Right, lying where a Man has Right of Advowſon, and the Incumbent dying, a Stranger preſents his Clerk to the Church; and he not having brought his Action of *quare Impedit nor darrein Preſentment* within ſix Months, has ſuffered the Stranger to uſurp upon him.

RECTO *de Cuſtodia Terræ & Heredis*, a Writ which as to Lands holden in *Capite*, or by Knights Service, is become uſeleſs by the Stat. 12 *Car.* II. But not where there is a Guardian in Socage, or appointed by the laſt Will of the Anceſtor.

RECTO *ſur Diſclaimer*, a Writ which lies where the Lord, in the Court of Common-Pleas does avow upon his Tenant, and the Tenant diſclaims to hold of him; upon which Diſclaimer he ſhall have this Writ.

RECTOR, of a Pariſh, the *Parſon*; or he who has the Charge or Cure of a Pariſh Church. See PARSON.

If the prædial Tythes of the Pariſh be Impropriated, *i. e.* in Lay Hands, inſtead of *Rector*, the Parſon is call'd *Vicar*. See VICAR.

In *England* are reckoned 3845 Rectories. See PARISH.

The Name *Rector* denotes him Governour, or Ruler, *quia tantum Jus in Eccleſia Parochiali habet, quantum Prælatus in Eccleſia Collegiata*. See PARSONAGE.

RECTOR, is alſo the chief Elective Officer in ſeveral Foreign Univerſities; particularly that of *Paris*. See UNIVERSITY.

The *Rector* is choſen a-freſh every three Months: Antiently he was choſe every ſix Weeks. The Alteration was made by the Legate of Pope *Nicholas* III. in 1278. He is choſe out of the Faculty of Arts.

While that Faculty, and the Faculty of Theology were united, one Officer had the Inſpection of both, under the Title of *Chancellor*: Upon their Diviſion, a *Rector* was created. He makes a ſolemn Proceſſion four times a Year, attended by the Doctors, Batchellors, *&c.* in their Formalities.

RECTOR is alſo uſed in ſeveral Convents for the Superior, or Officer who governs the Houſe. See SUPERIOR.

The Jeſuits uſe it for the Superiors in ſuch of their Houſes, as are either Seminaries, or Colleges. See JESUIT, COLLEGE, SEMINARY, *&c.*

RECTORY, RECTORATE, a Pariſh-Church, Parſonage, or Spiritual Living, with all its Rights, Glebes, and Tithes. See CHURCH, PARISH, PARSON, RECTOR, *&c.*

RECTUM. See RIGHT and RECTITUDE.

RECTUM, in our old Law-Writers, is alſo uſed for a Trial or Accuſation.

Commune Rectum, for a Trial at Law, or in the common Courſe of Law.—*Stare ad Rectum*, denotes to ſtand a Trial.—*Rectum rogare*, to petition the Judge to do right.

RECTUM, in Anatomy, is the laſt of the large Inteſtines. See INTESTINE.

It is thus call'd, becauſe it paſſes ſtraight from the *Os Sacrum* to the *Anus*; without making any turns or Circumvolutions, as all the other Guts do.

Its length is uſually about a Hands-breadth; and its Capacity, the thickneſs of three Fingers.

Its upper Part is tied faſt to the *Oſſa Sacrum*, and *Coccygis*, by means of the *Peritonæum*; and in Men to the Neck of the Bladder, in Women to the *Vagina Uteri*: Its lower end, the *Anus*, is furniſhed with three Muſcles. See ANUS.

The firſt, the *Sphincter Ani* ſerving to ſhut it, and prevent the Excrements from paſſing out Involuntarily. See SPHINCTER, *&c.*

The other two, the *Levatores Ani*, which ſerve to raiſe or pull back the *Rectum* after the Expulſion of the Excrements; which eſpecially after hard Stools, is apt to be too far protruded. See LEVATOR ANI.

RECTUS, in Anatomy, a Name common to ſeveral Muſcles; on account of the ſtraightneſs of their Courſe from their Origin to their Inſertion; having particular Denominations from the Parts to which they miniſter: As the *Rectus Abdominis*, *Rectus Femoris*, *Rectus Capitis Lateralis*, *Major Externus*,—*Minor Externus*,—

Major Internus,—*Minor Internus*, and *Rectus Palpebræ*.

RECTUS *Abdominis*, is a Muſcle of the lower Belly, which ariſes from the *Sternum*, and the Extremity of the laſt two Ribs; and goes ſtraight down to the fore-part of the *Abdomen*, to be inſerted in the *Os Pubis*. See ABDOMEN.

It hath three or four Innervations, or rather tendinous Coarctations of its fleſhy Fibres, which divide the Belly of it, as it were, into ſo many diſtinct Muſcles.

It has Veins and Arteries, which creep on its Inſide from the Mamillary and Epigaſtrick Veſſels, which communicate together, that the Blood may return by the Mamillary Veins, when the Paſſage is ſtopped by the Epigaſtrick which are compreſs'd in Women with Child.

RECTUS *Femoris*, is a Muſcle of the Leg, which ariſing from the lower Part of the Spine of the *Ilium*, and deſcending between the two *Vaſti*, is inſerted into the *Patella*. See FEMUR.

RECTUS *Palpebræ*, is a Muſcle that lifts up the Eye-lid: It ariſeth from the Bottom of the Orbit of the Eye, where the Optic Nerves pierce the Cranium, and paſſing above the *Superbus*, is inſerted by a large Tendon to the Border of the Eye-lid. See PALPEBRÆ.

RECTUS *Capitis Lateralis*, a pair of ſhort thick fleſhy Muſcles, riſing from the ſuperior Part of the Tranſverſe Proceſſes of the firſt Vertebra of the Neck, whence it aſcends, and is inſerted into the *Os Occipitis*. See HEAD.

Its uſe is to move the Head laterally towards either Shoulder: When they act together, being Antagoniſts, they keep it ſteady.

RECTUS *Externus Capitis Major*, the third pair of Muſcles of the Head, ariſing fleſhy and tendinous from the upper Part of the double Spine of the ſecond Vertebra of the Neck, and ſpreading in its Aſcent, is inſerted into the Poſterior Part of the *Os Occipitis*.—It ſerves to draw the Head directly back upon the firſt Vertebra.

RECTUS *Externus Minor*, a Pair of Muſcles ariſing from the Hind-part of the firſt Vertebra of the Neck; and inſerted into the middle of the *Os Occipitis*.

It ſerves likewiſe to draw the Head directly backwards.

Theſe two Muſcles are alſo call'd *Renuentes*.

RECTUS *Internus Capitis Major*, a Pair of Muſcles ariſing from the Fore-part of the five Interior Tranſverſe Proceſſes of the firſt Vertebra of the Back, near its great Hole.

RECTUS *Internus Minor*, lies on the Fore-part of the firſt Vertebra, like the *Rectus Minor*, on the Back-part; and is inſerted into the Anterior Appendix of the *Os Occipitis*, immediately under the former.

Theſe ſerve to nod the Head forwards, being Antagoniſts to the *Rectus Externus*, or *Renuens*, on the back of the Head; and are hence alſo called *Annuentes*.

RECTUS *in Curia*, in Law, is one that ſtands at the Bar, and no Man objects any thing againſt him.

When a Man hath reverſed the Outlawry, and can participate of the Benefit of the Law, he is *Rectus in Curia*. See OUTLAWRY.

RECURRENT, in Anatomy, a Nerve ariſing from the *Par Vagum*, and diſtributing ſeveral Branches to the Larynx, to aſſiſt in the formation and modulation of the Voice; thence alſo call'd the *Vocal Nerve*. See NERVE. VOICE, *&c.*

It has its Name *Recurrent* from its reaſcending or running back again from the Thorax, to the Larynx.

Theſe are really two *Recurrents*, *right* and *left*; the left ariſes from the Trunk of the *Vagum*; the right from a *Plexus* thereof, immediately under the *Clavicle*.—They both run up along the *Trachea*, to which they impart ſome Twigs, and end at laſt in the Muſcles of the Larynx.

Their Office appears partly hence, that a Dog is not able to bark after they are cut. See LARYNX.

RECUSANTS, Perſons who refuſe to acknowledge the King's Supremacy. See SUPREMACY.

Such are the Roman Catholicks, who hold the Pope to be over him; hence called *Popiſh Recuſants*. See POPE and KING.

The Romaniſts are not charged with double Taxes, *&c.* meerly as Romaniſts, but as *Recuſants*.

RECUSATION, an Act whereby a Judge is deſired to refrain from judging ſome certain Cauſe, on account of his Relation to one of the Parties; of ſome Capital Enmity, or the like.

A Relation within the fourth Degree, is deem'd a legal Cauſe of *Recuſation*, as alſo the Judge's being God-father, *&c.* of one of the Parties.

RED, in Phyſicks, one of the ſimple or primary Colours of natural Bodies, or rather of the Rays of Light. See BODY, RAY, and COLOUR.

The *Red* Rays are thoſe of all others the leaſt refrangible: Hence, as Sir *Iſaac Newton* ſuppoſes the different Degrees of Refrangibility to ariſe from the different Magnitudes of the luminous Particles whereof the Rays conſiſt; the *red* Rays, or *red* Light, is concluded to be that which conſiſts of the largeſt Particles. See REFRANGIBILITY.

Authors diſtinguiſh three general Kinds of *Red*: One bordering on the *Blue*, as *Columbine*, or Dove Colour, Purple, and Crimſon. See PURPLE, *&c.*

Another bordering on *Yellow*, as Flame-Colour and Orange. See ORANGE, *&c.*

Between theſe Extremes is a Medium partaking neither of the one nor the other; which is what we properly call *Red*.

Acids turn Black, Blue, and Violet, into *Red*; and *Red* into Yellow; and Yellow into a very pale Yellow.—Alcali's change *Red* into Violet, or Purple and Yellow into feuillemort, or dead Leaf Colour. See ACID and ALCALI.

Terreſtrial and Sulphureous Matters become *Red* by extreme Heat; and ſome, at length, Black; as we ſee in Brick, *red* Bole, *red* Chalk, Slate, Pumice, *&c.* which when vitrified by a burning Glaſs, become Black.

Lobſters become *Red* by a moderate Fire; and by a violent one, Black. Mercury and Sulphur mix'd and heated over a moderate Fire, make a beautiful *Red* call'd *Artificial Cinnabar*. See CINNABAR.

An acid Spirit, as Lemon Juice, being poured on a blue Solution of Turnſol, turns it into a beautiful *Red*.—Alkali reſtores it to its original Blue. Filtrating of the *reddeſt* Wine takes from it all its *red* Colour.

M. *De la Hire* obſerves, that a very luminous Body view'd through a Black one, always appears *Red*: As when the Sun is ſeen ſhining through a black Cloud. He adds, that many People who ſee all the other Colours perfectly well, yet have no Idea of *Red*, and only ſee it as *Black*. See BLUE.

RED, in Dying, is one of the five Simple or Mother Colours of the Dyers. See DYING.

Some reckon ſeven Kinds or Caſts of *Red*: *viz.* *Scarlet Red*, *Crimſon Red*, *Madder Red*, *Half-Grain Red*, *Lively Orange Red*, and *Scarlet of Cocheneel*. But they may be all reduced to three; according to the three principal Drugs which give the Colours; which are Vermillion, Cochineel, and Madder.

The fine Scarlet, call'd *Scarlet of the Gobelins*, is made of Agaric, Water prepared with Bran and turn'd a little ſouriſh, Woad and Scarlet Grain, or Vermillion. Some Dyers add Cochineel, and others Fennigreek; brightening it with ſour Water, Agaric, Tartar, and Turmeric. See SCARLET.

Crimſon Red is made with ſour Water, Tartar, and Cochineel Meſtique. See CRIMSON.

Madder Red is made with Madder; to which ſome add Realgal, or Arſenic; others common Salt, or other Salts, with Wheat Flower; or Agaric with Spirit of Wine, with Galls or Turmeric. See MADDER.

The *Half-Grain* is made with Agaric and ſour Water, half Scarlet-Grain, half Madder, and ſometimes Turmeric.

The *Half Crimſon* is made of half Madder, half Cochineel.

As to the *lively Orange Red*, the Stuff muſt be firſt laid in Yellow, then in a Liquor made of Goat's Hair, (which has been boiled ſeveral times with Madder, and now) diſſolved over the Fire with certain Acids, as Urine, Tartar, *&c.*

The *Scarlet of Cochineel*, or *Dutch Scarlet*, is made with Starch, Tartar, and Cochineel; after firſt boiling it with Alumn, Tartar, Sal-Gemma, and Aqua-Fortis wherein Tin has been diſſolved. See COCHINEEL.

Beſides theſe ſeven *Reds*, which are good and allow'd Colours, there is alſo a *Braſil Red*; which is diſcouraged, as fading eaſily. See BRASIL.

Of the ſeven good *Reds*, only four have particular Caſts or Shades: The *Madder Red*, *Crimſon Red*, the *lively Orange Red*, and the *Scarlet of Cochineel*.

The Caſts or Shades of Crimſon, are the Fleſh-Colour, Peach-Colour, Carnation-Roſe-Colour, and Apple-Tree-Flower-Colour.—Thoſe of Madder, are Fleſh-Colour, Onion-Peel-Colour, and Flame-Colour.—Thoſe of the Orange are the ſame with thoſe of the Crimſon. Scarlet, beſides the Shades of all the reſt has ſome peculiar to it ſelf, as Cherry-Colour, Fire-Colour, *&c.*

RED, in Painting.—For Painting in Oil Colours they uſe a *Red* call'd *Cinnabar* or Vermillion; and another call'd *Lacca*. See each in its Place, CINNABAR, VERMILLION, and LACCA.

In Limning, and Freſco, for a *Violet Red*, inſtead of Lacca they uſe a natural Earth found in *England*; for a *Brown Red* they uſe *Oker*. See REDDLE, OKER, *&c.*

RED, in Heraldry. See GULES.

RED, in Coſmeticks, a Fucus or Paint wherewith the Ladies enliven their Cheeks and Lips.

There are two Kinds of *Reds*; the one in Leaves, call'd *Spaniſh Red*; the other a Liquor, which is an Extract of Scarlet Dye.

RED *Arſenic*. See ARSENIC.

REDDENDUM, in Law, a Clauſe in a Leaſe, *&c.* whereby the Rent is reſerv'd to the Leſſor.

REDDITARIUM, an antient Law Term, for a Terrier, Roll, or Rental, in which the Rents and Services a of Manour are ſet down. See ROLL and RENT, TERRIER, *&c.*

REDDITION, in Law, is a Judicial Acknowledgement that a thing in Queſtion belongs to the Demandant.

REDDLE, RUDDLE, or *Red Chalk*, a Red Foſſile Stone, which has its particular Mine or Quarry; and is uſed by Painters, *&c.* to make Red-Pencils, or Craions for deſigning. The beſt is the Produce of *England*; is moderately hard; eaſy to cut or Saw into long Slips. The Goldſmiths and Gilders alſo uſe it to burn the Gold-Leaf they uſe.—Some call *Reddle*, *Lapis Hæmatites*; ſuppoſing it to have a particular Faculty of ſtopping Blood: But

others

others will have the real *Hæmatites* to be another Stone. See HÆMATITES.

REDEEMABLES, are Lands, Funds, *&c.* ſold with a Reſervation of the Equity of Redemption. See REDEMPTION.

Crown Lands are *redeemable* for ever; others only for a certain time. See FUND.

REDEMPTION, in Law, a Faculty or Right of re-entering upon Lands, *&c.* that have been ſold, and aſſign'd; upon reimburſing the Purchaſe-Money, with legal Coſts.

Bargains wherein the *Faculty*, or as ſome call it, the *Equity of Redemption*, is reſerved; are only a Kind of Pignorative Contracts.

A certain time is limited, within which the Faculty of Redemption ſhall be exerciſed; and beyond which it ſhall not extend.

REDEMPTIONS, in our old Law-Writers, denotegrievous Mulcts impoſed by way of Commutation for the Head or Life of the Delinquent. See RANSOM and MISERICORDIA.

REDENS, or REDANT, or REDAN, in Fortification, a Kind of Work indented in Form of the Teeth of a Saw, with Salient and Re-entering Angles, to the end that one Part may defend another. See WORK, DEFENCE, *&c.*

It is alſo call'd Saw-work: The Faces Flank one another.

Redans are frequently uſed in the fortifying of Walls, where it is not neceſſary to be at the Expence of building Baſtions; as when they ſtand on the Side of a River, a Marſh, the Sea, *&c.*

The Parapet of the Corridor is frequently *redented*. See PARAPET and COUNTERSCARP.

REDINTEGRATION, in the Civil Law, the Action of reſtoring a Perſon to the Enjoyment of a thing. whereof he had been illegally diſpoſſeſſed.

In *France*, where a Perſon is deſpoiled of his Property, he claims it again by a *Redintegrand*, or Action of Reſtitution.

The *Redintegrand* muſt be demanded within a Year and a Day, otherwiſe it is precluded.

REDINTEGRATION, in Chymiſtry, the reſtoring of any mixt Body, or Matter, whoſe Form has been deſtroyed by Calcination, Corroſion, Sublimation, or the like; into its former Nature and Conſtitution.

The *Redintegration* of Mercury is properly call'd *Revification*. See REVIFICATION.

Mr. *Boyle* has an expreſs Treatiſe on the *Redintegration* of Salt-Petre; where he ſhews that after reducing it by Fluxion into fix'd Nitre, which is next of-kin to Salt of Tartar in all its Properties; he could preſently *Redintegrate* it by pouring a ſufficient Quantity of Spirit of Nitre to it; *i. e.* he could re-produce true Cryſtals of the uſual Form and Virtue. See SALT-PETRE.

'Tis a ſtrong Objection againſt the Chymical Principles, that you cannot *redintegrate* the Body they were procured from, by re-mixing them. See PRINCIPLE and ELEMENT.

This ſeems to argue that the Body did not properly conſiſt of ſuch Elements. Or that they were not originally contain'd in it, but were rather produced by the Fire. See FIRE, *&c.*

REDHIBITION, in the Civil Law, an Action in a Court whereby to annul the Sale of ſome Moveable, and to oblige the Seller to take it back again, upon the Buyer's finding it damag'd, or that there was ſome perſonal Cheat, *&c.*

The *Redhibition* has Place in ſeveral Caſes, in the Body of the Civil Law.—If a Horſe was ſold that had the Glanders, were broken-winded, or founder'd, 'twas a *redhibitory Caſe*; and the Buyer might be obliged to take him again within nine Days.

REDISSEISIN, in Law, a Diſſeiſin made by him who once before was found and adjudg'd to have diſſeis'd the ſame Man of his Lands or Tenements; for which there lies a ſpecial Writ, call'd a *Writ of Rediſſeiſin*.

RED-MANS, or RADMANS, in Domeſday, and other antient Books, are probably the ſame with *Rod*, or *Rad-Knights*; *viz.* Men who by the Tenure or Cuſtom of their Lands were to ride with or for the Lord of the Manour about his Buſineſs.

REDOUBT, REDUCT, in Fortification, a ſmall ſquare Fort, without any Defence but in Front; uſed in Trenches, Lines of Circumvallation, Contravallation, and Approach; as alſo for the lodging of *Corps de Garde*, and to defend Paſſages. See FORT.

In marſhy Grounds, *Redoubts* are often made of Maſon's Work, for the Security of the Neighbourhood: Their Face conſiſts of from ten to fifteen Fathom; the Ditch round them from eight to nine Foot broad and deep; and their Parapets have the ſame thickneſs.

The Word is form'd from the *Latin*, *reductus*.

REDRESSING, the rectifying or ſetting of any thing ſtraight again. See RECTIFICATION.

Trees and other Plants have a natural Faculty of *redreſſing* themſelves, when by any external Cauſe they are forced out of the Perpendicular. See PERPENDICULARITY.

To *redreſs* Grievances, is to reform or remove them.

To *redreſs* a Stag, among Hunters, is to put him off his Changes.

REDSEAR. See IRON.

REDUBBORS, thoſe who buy ſtollen Cloaths, *&c.* and to the End they may not be known, turn them into ſome other Colour or Faſhion, *&c.*

REDUCING *Scale*, is a thin broad piece of Box, with ſeveral different Scales of equal Parts, and Lines thereon; for turning Chains and Links into Acres and Rods, by Inſpection. See REDUCTION, *&c.*

It is uſed by Surveyors to reduce Maps or Draughts from one Dimenſion into another: It is ſometimes call'd the *Surveying Scale*. See SCALE.

REDUCT, is a military Term, ſignifying an advantageous Piece of Ground, entrench'd and ſeparated from the reſt of the Place, Camp, *&c.* for an Army, Garriſon, *&c.* to retire to in caſe of Surprize.

REDUCT, in Building, a Quirk, or little Place, taken out of a larger, to make it more uniform and regular; or for ſome other Convenience, as for little Cabinets aſide of Chimneys, Alcoves, *&c.*

REDUCT, among Chymiſts, is a Powder by which calcin'd Metals and Minerals are reduced again to their *Regulus*, or pure Subſtance. See REGULUS, CALX, *&c.*

REDUCTION, REDUCTIO, in the Schools, a manner of bringing a Term or Propoſition, which before was oppoſite to ſome other, to be equivalent thereto.

Reduction is effected by the Addition or Retrenchment of a Negative Particle. Thus to reduce this Propoſition: *No Man is an Animal*, to be equivalent to its oppoſite, *Every Man is an Animal*; I drop the Negative, and ſay, *Man is an Animal.*—After the like manner might the Term, *every Man*, be reduced, by adding the Negative, and ſaying, *there is no Man.*

REDUCTION *of Propoſitions*, is uſed in a more general Senſe, for any Expreſſion of a Propoſition, by another Propoſition equivalent thereto. See PROPOSITION.

To a *Reduction*, therefore, there are two Propoſitions requir'd; the *reduced* and *reducing*; which are conſidered as the Extremes thereof; and to be connected in the *Reduction*, by means of the Particle *that is*, which here has the effect of a Copula.

As here, *Only Animals think; that is, Animals think, and nothing beſide Animals think.*—Where the Propoſition preceeding the Particle, is *reduced*, and the Subject of the *Reduction*; that following the Particle, *reduces*, and has the Effect of the Predicate of the *Reduction*: And the Particle *that is*, acts as a Copula, importing, not barely that the Propoſition is expreſs'd by another, but by another equivalent one, or as it were the ſame.

REDUCTION *of Syllogiſms*, is a regular changing or transforming of an imperfect Syllogiſm into a perfect one: Or it is a change of a Syllogiſm in reſpect of form, whereby the Neceſſity of the Illation or Inference is made more evident. See SYLLOGISM.

Reduction obtains in Syllogiſms of the ſecond and third Figure; as alſo in the indirect Modes of the firſt.—By it theſe are all brought to the firſt. See MOOD and FIGURE.

There are two Kinds of this *Reduction*, the one *Direct* or *Oſtenſive*, perform'd meerly by a Converſion of one or both the Premiſſes, or by a Tranſpoſition thereof; as when CAMESTRES is reduced to CELARENT.

The other *Indirect*, call'd *per Impoſſibile*, or *ad Abſurdum*, whereby the Perſon who denies the Goodneſs and Legitimacy of an imperfect Syllogiſm, is reduced to aſſert or grant ſomething abſurd and impoſſible; or contradictory to ſome other thing maintained by him.

Suppoſe *E. gr.* a Perſon granting the Premiſſes of the following Syllogiſm, denies the Concluſion.—*All Fraud is prohibited, but ſome Trading is not prohibited, therefore ſome Trading is not Fraud.*—We thus proceed againſt him: If the Syllogiſm be not good, the Antecedent is juſt, but the Conſequent falſe; and therefore the contrary of the Concluſion muſt be true: Now, I take the contrary of the Concluſion which you thus give, *viz.* all Trading is Fraud; and of that with the other Premiſe of the former Syllogiſm, *viz.* the Major, which you likewiſe grant, make a new Syllogiſm; thus, *All Fraud is prohibited*; *all Trading is Fraud*; *therefore all Trading is prohibited.* But this Propoſition, *all Trading is prohibited*; and the other, *ſome Trading is prohibited*, which you granted me in the firſt Syllogiſm, are Contradictories.

REDUCTION, in Arithmetick, is the converting of Monies, Weights and Meaſures into the ſame Value in other Denominations; *e. gr.* Pounds into Shillings and Pence; or Shillings and Pence into Pounds.

The *Reductions* of the principal Moneys, Coins, Weights, and Meaſures, Antient and Modern, Foreign and Domeſtick, are found under the reſpective Articles, MONEY, COIN, WEIGHT, MEASURE, POUND, FOOT, *&c.*

Reduction is of two Kinds: 1°. *Deſcending*; when a Quantity is to be brought from a higher Denomination to a lower.

This is done by conſidering how many of the next leſs Denomination are contained in the next greater before, and by that Number multiplying the greater. See MULTIPLICATION.

Thus Pounds are reduced into Shillings by multiplying by 20; Shillings, into Pence, by multiplying by 12; and Pence into Farthings, by multiplying by 4. See POUND, *&c.*

Troy Pounds are reduced into Grains, by multiplying by 12, 20, and 24. And *Averdupois* Hundreds into Ounces, by 4, 28, and 16. See OUNCE, *&c.*

The 2°. *Aſcending*; when a lower Denomination be to be reduced to an higher.

In

In order to this, divide the leaſt by ſo many of its Denominations as are contained in the next greater: Thus 24720 Pence, divided by 12, and the Quotient by 20, give 103 Pounds. See DIVISION.

If there remain any thing in each Diviſion, 'tis reſpectively either odd Pence, or Shillings: Thus 6713 Pence reduced, gives 27*l.* 19*s.* 5*d.* cut off the laſt, the reſt is the Pounds required.

To expedite the Practice, ſeveral compendious Ways of *Reduction* have been invented. See PRACTICE.

Thus Ells are turn'd into Yards, by adding a fourth to the Number of Yards; and into Ells *Flemiſh* by adding a fifth.—Ells *Flemiſh* are reduced into Yards, by ſubſtracting a Quarter.—Ells *Flemiſh* reduced to Ells *Engliſh* by multiplying by ſix, and cutting off the right hand Figure. See ELL, *&c.*

Great Pounds of Silk of 24 Ounces, are reduced to Pounds of 16 Ounces, by adding one Half. Pounds of 16 Ounces into Pounds of 24, by ſubſtracting three Quarters.

REDUCTION *of Fractions.* See FRACTION.

REDUCTION *of Equations,* in Algebra, is the clearing them from all ſuperfluous Quantities, bringing down the Quantities to their loweſt Terms, and ſeparating the known Quantities from the unknown; 'till, at length, only the unknown Quantity is found on one Side, and unknown ones on the other. See EQUATION.

The *Reduction* of an Equation is the laſt Part of the Reſolution of the Problem. See RESOLUTION.

The end of all Algebraical Operations, is to have the unknown Letter alone in one Member of the Equation; and in the other, all the known Letters, without any mixture of unknown; for, in this Caſe, 'tis evident the Value of the unknown Quantity is found.

This *Reduction* is effected by adding the Quantities ſubſtracted, ſubſtracting thoſe added; multiplying thoſe divided, and dividing thoſe multiplied; extracting the Roots out of Powers, and raiſing Roots to Powers; ſo as ſtill to preſerve an Equality. See EQUALITY.

This ſuffices for the *Reduction* of ſimple Equations; but for higher Equations, the Proceſs is leſs obvious.

From the manner wherein Powers are form'd, 'tis evident, that as the unknown Letter is rais'd to a higher Power, it will be found, in its lower Powers, mix'd and combined ſo many more times with known Quantities, and of conſequence will be ſo much the more difficult to be diſengaged therefrom. And the difficulty is the ſame, where there are ſeveral unknown Letters multiplied ſingly one againſt another, and again multiplied by known Letters. See PROBLEM.

The *Reduction* of the Equation being made; from the laſt Quantity thus gain'd, the Geometrical Conſtruction is to be deduced. See CONSTRUCTION.

REDUCTION *of a Figure,* a *Deſign,* or *Draught,* is the making a Copy thereof either larger or ſmaller than the Original; ſtill preſerving the Form and Proportion. See FIGURE.

The grand uſe of the proportional Compaſſes is in the *Reduction* of Figures, *&c.* whence they are alſo called *Compaſſes of Reduction.* See COMPASSES.

There are various Methods of reducing Figures, *&c.* The moſt eaſy is by means of the Pentagraph or Parallelogram; but this has its Defects. See PENTAGRAPH.

The beſt and moſt uſual Methods of *Reduction,* are as follow.

To reduce a Figure: As ABCDE, *Tab. Geometry, Fig.* 64. into a leſs Compaſs: about the middle of the Figure, as *z*; pitch on a Point; and from this Point draw Lines to its ſeveral Angles A, B, C, *&c.* Then drawing the Line *ab* Parallel to AB, *bc* Parallel to BC, *&c.* you will have the Figure *abcde* ſimilar to ABCDE.

If the Figure *abcde* had been required to be enlarged, there needed nothing but to produce the Lines from the Point beyond the Angles, as *z*D, *z*C, *&c.* and to draw Lines, *viz.* DC, DB, *&c.* Parallel to the Sides *ac*, *ab*, &c.

To reduce a Figure by the Angle of Proportion.

Suppoſe the Figure ABCDE (*Fig.* 65.) required to be diminiſhed in the Proportion of the Line AB, to *ab* (*Fig.* 66.) draw the indefinite Line GH, (*Fig.* 67.) and from G to H ſet off the Line AB: On G deſcribe the Arch HI. Set off the Line *ab* as a Chord on HI, and draw GI. Then with the Angle IGH, you have all the Meaſures of the Figure to be drawn.

Thus, to lay down the Point *c*, take the Interval BC, and upon the Point G deſcribe the Arch KL; alſo, on the Point G deſcribe MN; and upon A with the Diſtance MN deſcribe an Arch cutting the preceeding one in *c*, which will determine the Side *bc*. And after the ſame manner are all the other Sides and Angles to be deſcribed.—The ſame Proceſs will ſerve to enlarge the Figure.

To reduce a Figure by a Scale.

Meaſure all the Sides of the Figure, *e. gr.* ABCDE, by a Scale; and lay down the ſame Meaſures, reſpectively, from a ſmaller Scale in the Proportion required. See SCALE.

To reduce a Map, Deſign, or Figure, by Squares.

Divide the Original into little Squares, and divide a freſh Paper of the Dimenſions required, into the ſame Number of Squares; which will be larger, or leſs than the former, as the Map is to be inlarged or diminiſhed.

This done in every Square of the ſecond Figure, draw what you find in its Correſpondent one in the firſt. See MAP, *&c.*

REDUCTION *to the Ecliptic,* in Aſtronomy, is the difference between the Argument of Latitude, as NP, (*Tab. Aſtronomy, Fig.* 26.) and an Arch of the Ecliptic NR, intercepted between the Plane of a Planet, and the Node N. See ECLIPTIC.

To find the Reduction: The Angle of Inclination PNR, and the Argument of Latitude NP being given; find, by the Doctrine of Sphericks, the Arch NR: Subſtract NR and NP from each other, the Remainder is the *Reduction.*

REDUCTION *into the firſt Matter,* a Term which the Alchymiſts uſe when they find their Subſtances putrify, and grow black.

Or rather *Reduction* is the converting of a dry Matter into a Liquid, particularly Water; which they hold the Principle of all things. See WATER, PRINCIPLE, *&c.*

The *Reduction* of Metals into their firſt Matter or Principles, they teach, can only be effected by Mercury; nothing elſe being able to looſen the fix'd Sulphur of metallic Bodies, which binds them together. See METAL and MERCURY.

REDUCTION, in Chirurgery, is an Operation whereby a diſlocated, luxated, or fractured Bone, is reſtored to its former Place. See BONE, LUXATION, DISLOCATION, FRACTURE.

The *Reduction* is always performed e're any Remedy be applied.

REDUNDANCE, or REDUNDANCY, a fault in Diſcourſe, ariſing from a ſuperfluity of Words. See PLEONASM.

Words, perfectly ſynonimous, are *Redundant,* and ought to be retrench'd.—*Redundancy* makes the Style weak and languid.

REDUNDANT *Hyperbola,* is a Curve of the higher Kind, thus called becauſe it exceeds the Conic Section of that Name in the Number of its Hyperbolical Legs; being a Triple Hyperbola, with ſix Hyperbolical Legs. See CURVE and HYPERBOLA.

REDUPLICATION, in Rhetoric, a Figure wherein a Verſe begins with the ſame Word as the preceeding one ends. See VERSE.

REDUPLICATION, in Logick, is a Kind of Condition expreſs'd in a Propoſition, indicating or aſſigning the Manner wherein the Predicate is attributed to the Subject.

The uſual *Reduplicating* Words are *quatenus, as, ſo far as, conſider'd as, inaſmuch as, &c.* Hence,

REDUPLICATIVE *Proportions,* are ſuch wherein the Subject is repeated, with ſome Circumſtance or Condition: Thus, Men, as Men, are Rational: Kings, as Kings, are ſubject to none but God.

REE, a *Portugueze* Coin. See COIN and MILLREE.

REED, an antient *Jewiſh* Meaſure. See MEASURE.

Anſwerable to this is the *Canna* or *Cane* of ſome modern Nations. See CANE.

REEF, a Term in Navigation—When there is a great Gale of Wind, they commonly roll up Part of the Sail below, that by this means it may become the narrower, and not draw ſo much Wind; which contracting or taking up of the Sail, they call a *Reef,* or *Reefing the Sail.*

So alſo when a Top-Maſt is ſprung, as they call it, that is, crack'd, or almoſt broken in the Cap; they cut off the lower Piece that was near broken off, and ſetting the other Part, now much ſhorter, in the Step again, call it a *Reef'd Top-Maſt.*

REEL, in the Manufactures, a Machine ſerving for the Office of *Reeling.* See REELING.

There are various Kinds of *Reels*; ſome very ſimple, others very complex; of the former Kind, thoſe moſt in uſe are,

1°. A little *Reel* held in the Hand, conſiſting of three Pieces of Wood; the biggeſt and longeſt whereof (which does not exceed a Foot and a half in length, and $\frac{1}{4}$ of an Inch in Diameter) is traverſed by two other Pieces diſpoſed different Ways.

2°. The *Common Reel,* or *Windlaſs,* which turns upon a Pivot, and has four Wings, travers'd by long Pins or Sticks, whereon the Skain to be *reel'd* is put, and which are drawn cloſer, or open'd wider, according to the Skain.

Other *Reels* uſed in particular Arts, are explain'd under their particular Articles; as the *Reel* uſed in the milling of Silk, under the Article MILLING: And that in the *Reeling* or Winding of Silks, under the Article SILK, *&c.*

REELING, in the Manufactories, the winding of Thread, Silk, Cotton, or the like, into a Skain, or upon a Bottom; to prevent its intangling. See SILK, *&c.*

'Tis alſo uſed for the charging or diſcharging of Bobins or Quills, to uſe them in the Manufacture of different Stuffs, as Thread, Silk, Cotton, *&c.*

Reeling is perform'd different Ways, and by different Engines. See REEL.

RE-ENTERING *Angle,* in Fortification. See ANGLE.

RE-ENTRY, in Law, the reſuming or retaking that Poſſeſſion which we had lately fore-gone. See ENTRY.

As, if I make a Leaſe of Land, or Tenement, I do therefore forego the Poſſeſſion; and if I do condition with the Leſſee, That for Non-payment of the Rent at the Day, it ſhall be lawful for me to *Re-enter;* this is as much as if I conditioned to take

again

again the Lands, *&c.* into my own Hands, and to recover the Poſſeſſion by my own act, without the Aſſiſtance of Judge, or other Proceſs.

RE-EXTENT, in Law, a ſecond Extent made upon Lands or Tenements, on Complaint made, that the former Extent was partially executed. See EXTENT.

REEVE *of a Church*, is the Guardian of it; or the Church-Warden. See CHURCH-WARDEN.

So, *Shire-Reeve* is the Sheriff, or Guardian of a County. See SHERIFF.

And *Port-Reeve*, the Warden of a Port or Haven. See PORT.

REEVING, in the Sea Language, is the putting a Rope through a Block.—Hence, to pull a Rope out of a Block, is call'd *unreeving* it.

REFECTION, among Monks and Eccleſiaſticks, a Repaſt or ſpare Meal; meerly ſufficing for the ſupport of Life. See MEAL and REPAST.

Refection is alſo uſed in antient Authors for a Duty or Service incumbent on any Perſon to provide Meals, for Eccleſiaſticks, or even Princes. See PROCURATION.

REFECTORY, or REFECTUARY, a ſpacious Hall in Convents, and other Communities, where the Monks, Nuns, *&c.* take their Refections or Meals in common.

The *Refectory* of the *Benedictines* of St. *George* at *Venice*, deſigned by *Palladio*, is one of the fineſt in the World. *Daviler.*

REFERENDARIUS, in antient Cuſtoms, an Officer who exhibited the Petitions of the People to the King; and acquainted the Judges with his Commands.

An Officer of this Kind, *Spelman* obſerves, we had in *England*, in the time of the *Saxons.*

REFERENCE, in Writing, *&c.* a Mark, relative to another ſimilar one in the Margin, or at the Bottom of the Page; where ſomething omitted in the Text, is added; and which is to be inſerted either in Reading or Copying. See CHARACTER.

A Copiſt muſt be very expert at taking *References.*—*References* are alſo uſed in Books; where, things being but imperfectly handled, the Reader is directed to ſome other Part or Place where they are more amply explained.

Dictionaries are full of References; denoted by *See*, or *Vide.*—By means of theſe *References*, the Dictionariſt ſettles a Correſpondence between the ſeveral Parts of his Work; and gives his Dictionary moſt of the Advantages of a regular continued Treatiſe. See DICTIONARY.

Indices or Tables are only *References* to the ſeveral Parts of the Work, where the ſeveral Matters are handled. See INDEX.

REFINING, the Art or Act of purifying a thing; or of rendering it finer, cleaner, and purer. See PURIFYING, and CLARIFYING.

Refining is chiefly underſtood of Metals, Sugar, and Salts. See METAL, *&c.*

REFINING *of Gold.*

The *Refining* of Gold is perform'd three Ways: Either with Antimony, with Sublimate, or with Aqua-Fortis; which laſt Method, much the moſt uſual and leaſt dangerous of the three, is call'd *Depart*, or *parting*; the Proceſs whereof ſee under the Article GOLD and DEPART.

Method of Refining Gold with Antimony.

They here uſe a Wind-Furnace; (a Deſcription whereof may be ſeen under the Article FURNACE,) with an ordinary Crucible, of a Size anſwerable to the Quantity of Gold to be refined; obſerving that the Gold and Antimony together don't above half fill it.

The Gold being melted in the Crucible, the Antimony is thrown in, in Powder.—The Proportion of the Mineral to the Metals, is eight Ounces to a Pound, if the Gold be between 22 and 16 Carrats fine: If it be beneath 16 Carrats, they uſe about five Quarters of a Pound to eight Ounces: The coarſer the Gold, ſtill the more Antimony is required.

As ſoon as the Antimony is in the Crucible, 'tis cover'd up; and after charging the Furnace with Charcoal, they put on its Capital; which ſtands till ſuch time as the Crucible be left quite bare; then, the Capital being taken off, and the Crucible ſet to cool in the Furnace it ſelf, till ſuch time as it may be taken out by the Hand, they break it, to get out the *Button* or *Culot*, which is a Maſs of fine Gold remaining at the Bottom with the Fæces of the Antimony the Silver and Copper alloy and ſometimes little Particles of Gold it ſelf over it.

Though the Gold thus prepared be very pure, yet the Antimony gives it ſuch a harſh brittle Quality, that it ceaſes to be Ductile; and muſt be ſoften'd by the Fire with Salt-petre and Borax, to bring it to itſelf.

For this Operation they prepare what they call a *Dry-Coppel*; that is, a Cuppel made of Crucible Earth, which does not imbibe like the Cuppels made of Aſhes See COPPEL.

The Coppel being ſufficiently heated in the *refining* Furnace, they put the Gold in it, and cover it up with Charcoal.

As ſoon as the Gold is diſſolved, which is very ſoon, by reaſon of the remains of the Antimony, they blow it with the Bellows to drive the Mineral entirely away, which now goes off in Smoak; adding to it, as ſoon as the Fumes ceaſe, a little Salt-petre and Borax, in Powder; which collect the Impurities remaining upon the Diſſolution, and fix the Gold in the Coppel, in form of a Plate.

The Gold being taken out of the Coppel, and melted a-freſh in a Crucible, with an Addition of two Ounces of Salt-petre and as much Borax, in Powder to each eight Ounces of Gold, as ſoon as it ceaſes to fume, they caſt it into an Ingot; which upon trial is found 23 Carrats, 26 thirty ſeconds finer.

As to the Particles of Gold which may have been left behind with the Alloy in the Fæces of the Antimony, they get them out by a dry Coppel, with the ſame Meltings and Ingredients as are uſed in ſoftening the former.—And when they are aſſured, by the Eſſay, of the Share of Gold that Matter contains, they refine it to ſeparate the Copper; and afterwards make the Depart.

As to the Gold which may be left ſticking to the dry Coppels, they get it out by breaking, and pulverizing the Crucibles, and by repeated Lotions of the Powder thereof in ſeveral Waters; much after the manner of the *Lavadero*'s. See LAVADERO.

Refining of Gold by means of Sublimate.

The Proceſs is begun like that with Antimony; *i. e.* in the ſame Furnace, with the ſame Coal, the ſame Fire, and the ſame Crucibles.

The Gold being melted in the Crucible, they caſt in the Sublimate, not pulveriz'd, but only broke in Pieces.—As to the Proportion; to 8 Ounces of Gold to be refined, they put an Ounce, or Ounce and a half, or even two Ounces, if the Gold be of 22 Carats; three Ounces, if 20 Carats; and 5 or 6 Ounces, if it only be from 18 to 12 Carats. In which laſt Caſe they part the Sublimate into two; putting half at a time, with the Gold, into a new Crucible; which, when the Operation is over, leaves the Gold of 18 or 20 Carats, according to its fineneſs before.—After this, they raiſe it by the Fire, as follows;

The broken Sublimate being put into the Crucible with the melted Gold, the Crucible is immediately cover'd up, to ſmother the Mineral: Which done, the Furnace is fill'd with Charcoal, and the Capital put on.—A quarter of an Hour afterwards they take off the Capital, lay the Crucible bare, and give the Gold Air, *i. e.* blow off all the Aſhes and other Impurities that may be floating on the liquid Gold, with a Pair of Bellows, the Noſſle whereof is crooked.

This they repeat again and again, till all the Impurities of the Gold being carried off, by virtue of the Sublimate, it be found of a bright glittering Colour: After which 'tis taken out of the Crucible, and the Gold caſt into an Ingot.

The Method of *Refining* by Sublimate is both more complete and cheaper than that by Antimony; but they are both exceedingly dangerous, by reaſon of their ſulphurous and arſenical Exhalations: The only difference in their Malignity conſiſting in this, that the Poiſon of the Antimony is ſlower than that of the Sublimate. See SUBLIMATE, *&c.*

Gold may alſo be *refined* with Lead and Aſhes; but this is a Method ſeldom uſed, excepting in Eſſays. See ESSAY.

REFINING *of Silver.*

There are two Ways of *refining* Silver: The one with Lead; the other with Salt-petre. The beſt and cheapeſt is that with Lead; though that with Salt-petre ſtill obtains in many Places, for want of Workmen who underſtand the Proceſs of the latter.

We ſhall here only give that with Salt-petre; referring for the other to the Article SILVER.

Refining with Salt-petre is perform'd in a Wind-Furnace.—The Silver to be *refined* having been reduced into Grains, of the Size of a little Pea, by pouring it, when melted, into a Tub of common Water; 'tis heated over again in a Boiler. After this they put it in a Crucible, and along with it, to every eight Ounces of Metal, two of Salt-petre.

The Crucible is now covered up with an Earthen lid, in form of a Dome, exactly luted; which lid, however, is to have a little Aperture in the middle.

The Crucible being put in the Furnace, and cover'd with Charcoal, which is only to be lighted by Degrees, at length, they give it the full force of the Fire to put the Metal into a perfect Fuſion. Thus they repeat three times ſucceſſively, at an Interval of a Quarter of an Hour.

After the third Fire they uncover the Furnace, and let the Crucible cool; and at length break it, to get out the Silver, which is found in a Button or *Culot*; the Bottom whereof is very fine Silver; and the top mix'd with the Fæces of the Salt-petre, and the Alloy of the Silver, and even ſome Particles of fine Silver.

The *Culot* being ſeparated from the Impurities, is melted in a new Crucible, and into the Diſſolution is thrown Charcoal Duſt, and the whole briskly work'd together. Then, the Crucible being cover'd up again, and the Furnace charged with Coal, a ſecond Fire is given it.

This done, the Aſhes and other Impurities are blown from off the Top of the Metal, till it appear as clear as a Looking-Glaſs; and then an Ounce of Borax broke in Pieces is thrown in.

Laſtly, the Crucible being cover'd up again, they give it the laſt Fire; after which 'tis caſt into Ingots; which are found eleven Penny-Weights, and ſixteen Grains fine.

To recover the Silver that may be left in the Fæces, or Scoria, they pound them, and give them repeated Lotions in freſh Waters. See LAVADERO.

REFINING *of Copper*, is only perform'd by giving the mineral Matter ſeveral Lotions before the melting it; and then giving it ſeveral repeated Fuſions. See COPPER.

REFINING *of Tin* is perform'd much after the ſame Manner as that of Copper. See TIN.

Though, we may diſtinguiſh two Kinds of fineneſs of this Metal: The one ariſing from its Fuſion; that Tin taken firſt out of the Coppers wherein it is melted, being always purer than that towards the Bottom.

The other Kind of fineneſs is that given the Tin by adding ſome other Metal or Mineral to it, to render it more ſounding, as well as more bright: Such is Tin of Antimony, Pewter, *&c.* See PEWTER, *&c.*

REFINING *of Iron*, begins likewiſe by the melting it. See IRON and IRON-WORKS.

The greater Degree of Fuſion the Mineral has, the more the Metal is purified: But this firſt Fuſion is not ſufficient.—To render the Iron malleable, and fit it to endure the File, it muſt be melted a ſecond time; then forged or beaten a long time with huge heavy Hammers, wrought by the Water; then heated in the Fire, and at laſt reduced on the Anvil, into Bars of ſeveral Thickneſſes. See FORGING.

The more the Iron is heated in the Fire; and the more 'tis beaten, whether hot or cold, the finer it becomes. See IRON.

Steel is only Iron *refined* to a great Degree by heating it, with ſome other Ingredients which cloſe up the Pores, and ſoften the Grain thereof. See STEEL.

REFINING *of Lead*, is perform'd like that of moſt other imperfect Metals, by frequent Meltings, ſtill ſcumming it e're it be cold, and caſting in Tallow, and other Kinds of Fat.

They alſo make Aſſays of Lead; not to refine it, but to ſee if it be pure, and without Mixture of any other Metal. See LEAD.

REFINING *of Sugar*.—The Operation is begun by ſeveral ſtrong Lixiviums or Lyes of Lime-Water and Eggs, Shells and all, mix'd and beaten together.

This firſt *Refining* is perform'd in the *Caribees* and other Places where the Sugar-Canes are cultivated; and only ſerves for the brown or coarſer Sugars.

When theſe are imported into *Europe*, the Sugar-Bakers take them up, and refine them further, by a ſecond Operation, or rather a Repetition of the firſt.

To render the Sugar very fine, fit for Confections, they uſually give it a third *Refining*; wherein they only uſe the Whites of Eggs, and their Shells beaten together, and thrown into the melted Sugar; which is call'd *clarifying the Sugar*. See SUGAR.

REFINING *of Salt-petre*.—The Salt being put in an Earthen or Iron Veſſel, as much Spring-Water is pour'd on it as ſuffices to diſſolve it. The Veſſel is then put over a gentle Fire; and as ſoon as the Water begins to boil, Alumn-Powder is thrown into it: The Proportion is, one Pound of Alumn to 128 Pound of Salt-petre; and a little Vinegar is added. As it boils, the Scum is to be taken off; and thus is it *refined*. See SALT-PETRE.

For the REFINING *of other Matters*, as *Camphor*, *Vermillion*, *Sulphur*, *Lapis*, *Salt*, *Borax*, &c. See CAMPHOR, VERMILLION, SULPHUR, SALT, *&c.*

REFLECTING *Teleſcope*, } See { TELESCOPE.
REFLECTING *Microſcope*, } See { MICROSCOPE.
REFLECTING *Dial*, } See { DIAL.

REFLECTION, or REFLEXION, in Mechanicks, the return, or regreſſive Motion of a Moveable occaſioned by the Reſiſtance of a Body, which hindered its purſuing its former Direction. See MOTION, RESISTENCE, *&c.*

'Tis controverted, whether there be any, Moments Reſt or Interval between the Incidence and the *Reflection*? For the Affirmative, ſtand the *Peripateticks*, and all who conceive the *reflected* Motion to be different from the Incident one of the ſame Body.—The Motion of Incidence, according to theſe Authors, is wholly loſt and deſtroyed by the Reſiſtence of the Obſtacle ſtruck againſt; and the moveable is thus render'd abſolutely quieſcent in the Point of Contact; till a new Motion of *Reflexion* is produced therein, from a contrary Cauſe.

The *Carteſians* aſſert the Negative; abſolutely denying any Reſt at all between the Incidence and *Reflection*: Urging, that if the Motion were once deſtroyed, though but for a Moment, there would be nothing to excite it again; but the Body would perſevere in that new State, as much as if it had been at Reſt a thouſand Years. See REST and *Law of* NATURE.

Accordingly, *Rohault*, and others, define *Reflection* to be no other than a Change of Determination; or a Continuation of the former Motion in a new Direction. See DETERMINATION, *&c.*

As, ſay they, a Pendulum, when arrived at its greateſt Sweep, does not ſtop; ſo a hard Body, ſtriking on another hard one, does not reſt, but purſues its Motion the contrary Way, according to the eſtabliſhed Law of Nature; and this from the immediate Influence or Impulſe of the Cauſe that firſt moved it.—But this Doctrine is now generally ſet aſide.

Reflection is conceiv'd by the lateſt and beſt Authors, as a Motion peculiar to elaſtic Bodies, whereby, after ſtriking on others which they cannot remove, they recede, or turn back, by their elaſtic Power. See ELASTIC *Bodies*.

On this Principle it is aſſerted, that there may be, and is a Period of Reſt between the Incidence and *Reflection*; ſince the *reflected* Motion is not a Continuation of the other, but a new Motion, ariſing from a new Cauſe or Principle, *viz.* the Power of Elaſticity. See ELASTICITY.

'Tis one of the great Laws of *Reflection*, that the Angle a *reflected* Body makes with the Plane of the *reflecting* Obſtacle, is equal to that wherein it ſtruck on that Obſtacle. See ANGLE and INCIDENCE.

For the ſeveral Laws of Motion obſerved in the REFLECTION *of Bodies*, ſee the Article PERCUSSION.

REFLECTION *of the Rays of Light*, in Opticks, is a Motion of the Rays, whereby, after impinging on the ſolid Parts of Bodies, or rather, after a very near approach thereto, they recede or are driven therefrom. See REFLEXIBILITY.

The *Reflection* of the Rays of Light from the Surfaces of Bodies, is the means whereby they become Viſible. See VISION.

And the Diſpoſition of Bodies to reflect this or that Kind of Rays moſt copiouſly, is the Cauſe of their being of this or that Colour. See COLOUR.

The *Reflection* of Light from the Surfaces of Mirrors, makes the Subject of Catoptricks. See CATOPTRICKS.

The *Reflection* of Light, Sir *Iſaac* has ſhewn, is not effected by the Rays ſtriking on the very Parts of the Bodies; but by ſome Power of the Body equally diffuſed throughout its whole Surface, whereby it acts upon the Ray, by attracting or repelling it without any immediate Contact. See RAY.

This Power he ſhews to be the ſame whereby, in other Circumſtances, the Rays are refracted; and whereby they are at firſt emitted from the lucid Body. See LIGHT.

The Arguments he produces to this Purpoſe are as follow.

1°. Becauſe the Surfaces of poliſhed Glaſſes, which to the Eye appear ſmooth, are yet in reality very rugged and uneven; (poliſhing being nothing but the grating, ſcratching, and breaking of the coarſer Protuberances, by means of Sand, Glaſs, Putty, or Tripoly). If the Rays of Light, therefore, were reflected by ſtriking on the ſolid Parts of the Glaſs, the *Reflections* would never be ſo accurate as we find they are; but the Rays would even be as much ſcatter'd by the moſt poliſh'd Glaſs, as by the roughеſt.—It remains, therefore, a Problem, how Glaſs poliſhed by fretting Subſtances, can reflect Light ſo regularly as it does; which Problem is ſcarce otherwiſe to be ſolved than by ſaying, that the *Reflexion* of a Ray is effected, not by a ſingle Point of the *reflecting* Body, but by ſome Power of the whole Body, evenly diffuſed all over its Surface, and by which it acts on a Ray without immediate Contact: For that the Parts of Bodies do act upon Light at a Diſtance, is already ſhewn under the Article INFLECTION.

2°. If the Colours ſeparated by a Priſm placed at the Entrance of a Beam of Light into a darkened Room, be ſucceſſively caſt on a ſecond Priſm placed at a greater Diſtance from the former, in ſuch manner as that they all fall alike, or with an equal obliquity upon it; the ſecond Priſm may be ſo inclined to the incident Rays, that thoſe which are of a blue Colour ſhall be all *reflected* by it, and yet thoſe of a red Colour pretty copiouſly tranſmitted.—Now, if the *Reflexion* were cauſed by the Parts of the Air or Glaſs, we would ask, why, at the ſame Obliquity of Incidence, the blue ſhould wholly impinge on thoſe Parts ſo as to be all *reflected*, and yet the red find Pores enough to be in a great Meaſure tranſmitted?

3°. Where two Glaſſes touch one another, there is no ſenſible *Reflexion*, and yet we ſee no Reaſon why the Rays ſhould not impinge on the Parts of the Glaſs, as much when contiguous to other Glaſs, as when contiguous to Air.

4°. When the top of a Water-Bubble, by the continual ſubſiding and exhaling of the Water, grows very thin, there is ſuch a little, and almoſt inſenſible Quantity of Light *reflected* from it, that it appears intenſely black; whereas round about that black Spot, where the Water is thicker, the *Reflexion* is ſo ſtrong as to make the Water ſeem very white.—Nor is it only at the leaſt thickneſs of thin Plates or Bubbles, that there is no manifeſt *Reflection*, but at many other thickneſſes, gradually greater and greater. For in one of our Author's Obſervations the Rays of the ſame Colour were by turns tranſmitted at one thickneſs, and *reflected* at another thickneſs, for an indeterminate Number of Succeſſions: And yet in the Superficies of the thinned Body, where it is of one thickneſs, there are as many other Parts for Rays to impinge one, as where it is of any other thickneſs.

5°. If red and and blue Rays, ſeparated by a Priſm, fall ſucceſſively on a thin Plate of any pellucid Matter, whoſe thickneſs increaſes in continual Proportion, (ſuch as a Plate of Air between two Glaſſes, the one Plane and the other a little Convex) the

ſame

ſame Plate will, in the ſame Part, *reflect* all the Rays of one Colour, and tranſmit all thoſe of the other; but in different Parts, will *reflect* the Rays of one and the ſame Colour, at one thickneſs, and tranſmit them at another; and thus alternately, and in *infinitum*.—Now it can never be imagined that at one Place the Rays which, for Inſtance, exhibit a blue Colour, ſhould have the Fortune to ſtrike on the ſolid Parts, and thoſe which exhibit a Red to hit on the void Parts of the Body; and at another Place, where the Body is either a little thicker, or a little thinner, that on the contrary the Blue ſhould hit on the Pores, and the Red upon the ſolid Parts.

6°. In the Paſſage of Light out of Glaſs into Air, there is a *Reflexion* as ſtrong as in its Paſſage out of Air into Glaſs, or rather a little ſtronger, and by many Degrees ſtronger than in its Paſſage out of Glaſs into Water.

Now it ſeems improbable that Air ſhould have more *reflecting* Parts than Water or Glaſs: But if that ſhould be ſuppoſed, yet it will avail nothing; for the *Reflexion* is as ſtrong or ſtronger when the Air is drawn from the Glaſs by the Air-Pump, as when it is adjacent to it.—If any ſhould here object, on *Des Cartes*'s Hypotheſis, that though the Air be drawn out, there is a ſubtle Matter remaining to ſupply its Place, which being of a denſer Kind, is better fitted for the *Reflexion* of Light than any other Body: Beſide that we have elſewhere ſhewn ſuch ſubtle Matter to be fictitious; and that ſuppoſing its Exiſtence, and its *reflecting* Power, no Light could ever have been propagated, but muſt have been all *reflected* back to the lucid Body, immediately after it was firſt emitted; The following Experiment does evidently convict it of falſity.

7°. If Light in its Paſſage out of Glaſs into Air ſtrike more obliquely than at an Angle of 40 or 41 Degrees, it is wholly *reflected*, if leſs obliquely it is in great Meaſure tranſmitted.—Now it is not to be imagined, that Light at one Degree of obliquity ſhould meet with Pores enough in the Air to tranſmit the greater Part of it, and at another Degree ſhould meet with nothing but Parts to *reflect* it wholly; eſpecially conſidering that in its Paſſage out of Air into Glaſs, how oblique ſoever be its Incidence, it finds Pores enough in the Glaſs to tranſmit a great Part of it.—If any ſuppoſe that it is not *reflected* by the Air, but by the outmoſt ſuperficial Parts of the Glaſs, there is ſtill the ſame Difficulty: Beſides, that ſuch a Suppoſition is unintelligible, and will alſo appear to be falſe by applying Water behind ſome Part of the Glaſs inſtead of Air: For ſo, in a convenient obliquity of the Rays, ſuppoſe of 45 or 46 Degrees, at which they are all *reflected* where the Air is adjacent to the Glaſs; they ſhall be in great Meaſure tranſmitted where the Water is adjacent to it: Which argues, that their *Reflexion* or Tranſmiſſion depends on the Conſtitution of the Air and Water behind the Glaſs, and not on the ſtriking of the Rays upon the Parts of the Glaſs; the Rays not being *reflected* 'till they have reached the laſt Part of the Surface, and are begun to go out. For if in going out they fall upon the Surface of Oil or Water, they proceed; the Attraction of the Glaſs being balanced by an equal Force the contrary Way; and prevented from having its effect by the Attraction of the Liquor adhering to it: But if the Rays in paſſing out of this laſt Surface fall into a Vacuum which has no Attraction, or into Air which has but little, not enough to counter-balance the effect of the Glaſs; in this Caſe the Attraction of the Glaſs draws them back, and *reflects* them.

This will appear ſtill more evident, by laying two Glaſs Priſms, or the object Glaſſes of two Teleſcopes, the one Plane and the other a little Convex, upon each other, ſo as they may neither touch, nor yet be too far a-part. For that Light which falls on the hind Surface of the firſt Glaſs, where the Glaſſes are not above $\frac{1}{178000}$ Part of an Inch a-part, will be tranſmitted through the Surface, and through the Air or Vacuum between the Glaſſes, and paſs into the ſecond Glaſs: But if the ſecond Glaſs be taken away, then the Light paſſing out of the ſecond Surface of the firſt Glaſs into the Air or Vacuum, will not proceed but return into the firſt Glaſs, and be *reflected*.

Whence it follows, that the Rays are drawn back again by ſome Force in the firſt Glaſs; there being nothing elſe to occaſion their return.—And hence too, it follows, that the *Reflection* is not effected by means of any ſubtle Matter, contiguous to the hind Surface, according to the Principles of *Des Cartes*; ſince that Matter ought to *reflect* them when the Glaſſes were nearly contiguous, as well as when the ſecond Glaſs is quite removed.

Laſtly, If it be ask'd how ſome of the Rays come to be *reflected*, and others tranſmitted: And why they are not all alike *reflected*; ſuppoſing the *Reflection* owing to the Action of the whole Surface? The ſame great Author ſhews, that there are both in the Rays of Light, and in the Bodies themſelves, certain Vibrations, (or ſome ſuch Property) impreſs'd on the Rays, by the Action either of the Luminary that emits them, or of the Bodies that *reflect* them; by means whereof it happens that thoſe Rays in that Part of their Vibration which conſpires with the Motion of the Parts of the Body, enter the Body, are refracted and tranſmitted; but thoſe in a contrary Part of their Vibration reflected. See VIBRATION and MEDIUM. See alſo REFRACTION and TRANSMISSION.

Add, that every Ray of Light, in its Paſſage through any refracting Surface, is put into a certain tranſient Conſtitution or State, which in the Progreſs of the Ray returns at equal Intervals, and diſpoſes the Ray at each return to be eaſily tranſmitted through the next *refracting* Surface; and between each Return to be eaſily *reflected* by it.

Theſe alternate Diſpoſitions, which Sir *Iſaac Newton* calls *fits of eaſy Reflexion*, and of *eaſy Tranſmiſſion*, he accounts for by ſuppoſing that the Rays of Light, in impinging on Bodies, excite Vibrations therein, which happening to move faſter than the Rays, when a Ray is in that Part of the Vibration which conſpires with its Motion, it paſſes through; but when in the contrary Part of the Vibration, is beat back again: Whence every Ray is ſucceſſively diſpoſed to be eaſily *reflected*, or eaſily tranſmitted, by every Vibration which overtakes it. See TRANSMISSION.

REELECTION, in Catoptricks, is the return of a Ray of Light from the poliſh'd Surface of a Speculum or Mirrour, driven thence by ſome Power reſiding therein. See MIRROUR and CATOPTRICKS.

The Ray thus returned is called a *Reflex*, or *reflected Ray*, or *Ray of Reflexion*; and the Point of the Speculum whence the return commences, the *Point of Reflexion*.

Thus the Ray AB (*Tab. Opticks, Fig.* 26.) proceeding from the Radiant A, and ſtriking on the Point of the Speculum B; being returned thence to C; BC repreſents the *reflected Ray*, and B the *Point of Reflexion*: In reſpect whereof AB repreſents the *Incident Ray*, or *Ray of Incidence*, and B the *Point of Incidence*. See POINT and RAY.

Again, a Line as CG drawn from any Point as C of the *reflected* Ray BC, perpendicular to the Speculum, is call'd the *Cathetus of Reflexion*, or *Cathetus of the Eye*: As a Line AF, drawn from the Radiant Perpendicular to the Speculum, is call'd the *Cathetus of Incidence*. See CATHETUS.

Of the two Angles which the *reflected Ray* BC makes with the Mirrour, the ſmalleſt, CBE, is called the *Angle of Reflexion*: As, of the two Angles the incident Ray makes with the Speculum, the ſmalleſt ABD is called the *Angle of Incidence*. See ANGLE.

If the Mirrour be either Concave, or Convex, the ſmalleſt Angles the Ray makes with a Tangent to the Point of *Reflexion* and Incidence, are the *Angles of Reflexion* and Incidence.

The Angle CBH which the *reflected* Ray makes with a Perpendicular to the Point of *Reflection*, is call'd the *Inclination of the reflected Rays*; as the Angle ABH is called the *Inclination* of the *Incident* Ray.

The General Laws of REFLECTION.

1°. *If a Ray of Light be reflected from a Speculum of any form; the Angle of Incidence is ever equal to the Angle of Reflection.*—This Law obtains in Percuſſions of all Kinds of Bodies, and conſequently muſt do ſo in thoſe of Light. See *Laws of* PERCUSSION.

It might therefore be here aſſumed as an Axiom: But 'tis of that Importance, and its Demonſtration ſo beautiful, that we cannot omit it.—Suppoſe, then, DC (*Fig.* 54.) an incident Ray, propagated from the Radiant A: Here, though the Motion of the Ray be ſimple, yet its Determination in the Line DC being oblique with reſpect to the Obſtacle, is really compounded of two Determinations; the one along DE, the other along DG. See COMPOUND *Motion*.

The Force along DC, therefore is equal to the two Forces along DG and DH. But the Obſtacle GF only oppoſes one of the Determinations; *viz.* that along DG, (for it cannot oppoſe a Determination Parallel to it ſelf, as DE;) therefore only the Force along DG will be loſt by the ſtroke; that along DH or GC remaining entire.—But a Body perfectly Elaſtic, (ſuch as we ſuppoſe the Ray of Light) will recover by its Elaſticity, the force it loſt by the Shock. See ELASTICITY.

The Ray, therefore, will recover the Force DG or CH. Thus, retaining both its Forces, and both its former Determinations HC and CF; after Percuſſion; it will be impell'd along CF and CH, by the ſame Forces as before along DH and DG. By its compound Motion, therefore, it will deſcribe the right Line CE, and that in the ſame time as DC; and HE and DH will be equal, as being deſcribed by the ſame Force. Now, the two Triangles DCH and CHE are equal, and conſequently their ſimilar Angles equal. Since then, HCA=HCF; DCA the Angle of Incidence, is equal to ECF the Angle of *Reflection*. Q. E. D.

This Law is confirmed in Light by an eaſy Experiment. For a Ray of the Sun falling on a Mirror, in a dark Room, through a little Hole; you'll have the Pleaſure to ſee it rebound, ſo as to make the Angle of *Reflexion* equal to that of Incidence. See CAMERA *Obſcura*.

The ſame may be ſhewn various other Ways: Thus, *e. gr.* Placing a Semicircle FIG (*Tab. Opticks, Fig.* 26.) on a Mirror DE, its Centre on B, and its Limb Perpendicular to the Speculum; and aſſuming equal Arches, Fa and Gc; place an Object in A, and the Eye in C: Then will the Object be ſeen by a Ray *reflected* from the Point B. And if B be cover'd, the Object will ceaſe to be ſeen.

Hence, 1°. If a Ray of Light, as HB, fall Perpendicularly on the Surface of a Speculum DE, it will be *reflected* back upon it ſelf.

2°. From

2°. From the ſame Point of a Speculum, ſeveral Rays cannot be *reflected* to the ſame Point; for in that Caſe all the ſeveral Angles of *Reflection* would be equal to the ſame Angle of Incidence; which is abſurd.

3°. One Ray as AB cannot be *reflected* to two or more Points; for in that Caſe all its Angles of *Reflection* would be equal to the ſame Angle of Incidence; which is as abſurd as before. See RADIANT.

II. *Each Point of a Speculum reflects Rays falling on it, from each Part of an Object.*

Hence, ſince ſeveral Rays coming from ſeveral Parts of a radiant Object, cannot be *reflected* from the ſame Point of a Speculum to the ſame Point; the Rays that flow from different Points of the Object, are ſeparate after *Reflection:* And hence each Ray ſhews the Point whence it proceeded. See VISION.

On this Principle it is that the Rays *reflected* from Mirrours or Looking-Glaſſes, exhibit the Appearances of Objects placed before them. See LOOKING-GLASS.

And hence we eaſily conceive why rough Bodies exhibit no Images; in regard they reflect the Light in ſuch Manner as to confound Rays which proceed from different Points, by means of their Eminences and Cavities, their alternate Riſings and Fallings.—But for this, all hard Bodies would be Mirrors.

III. *If the Eye* C, *and the radiant Point* A *change Places; the Point will continue to radiate upon the Eye, in the ſame Courſe or Path as before.*

For if the Object be removed from A to C, it will ſtill radiate on its former Point of *Reflexion* B; but there can be but one right Line drawn between the two Points G and D; and the Rays are right Lines. Therefore that which was before the Ray of *Reflexion*, will now be the Ray of Incidence; and ſince it will be *reflected* under the ſame Angle as that under which it fell, that which was before the Ray of Incidence, will, now be the Ray of *Reflexion*. So that the Object removed to C, will radiate on the Eye placed in A, by the right Lines CB and BA. *Q. e. d.*

Hence, an Object is ſeen by the *reflected* Ray AB, with the Eye placed in A, the ſame, as if the Eye were in AC, and the Object in A.

The Truth of this Theorem is ſo eaſily confirm'd by Experiment, that ſome, with *Euclid*, aſſume it as a Principle; and demonſtrate the great Law of *Reflection* therefrom.—Thus: Suppoſe the Angle of Incidence a little greater than the Angle of *Reflection*; then will the Angle ABF be greater than that CBE. Wherefore, changing the Places of the Eye and the Object, the Angle CBE will become the Angle of Incidence; and therefore CBE greater than ABF, by the Suppoſition. So that the ſame Angle ABF will be both greater and ſmaller than the other CBE; which being abſurd, ABE cannot be greater than CBE.—The ſame Abſurdity will follow, if you ſuppoſe the Angle of Incidence leſs than the Angle of *Reflection*.—Since then the Angle of Incidence can neither be greater nor leſs than that of *Reflection*, it muſt be equal to it.

IV. *The Plane of Reflection*, that is, the Plane wherein the Incident and reflected Ray are found, *is perpendicular to the Surface of the Speculum; and in ſpherical Specula paſſes through the Centre.*

Hence the Cathetus both of Incidence and *Reflexion* is in the Plane of *Reflection*.

That the *Plane of Reflection is perpendicular to the Speculum*, is aſſum'd by *Euclid*, *Alhazen*, and others, as a Principle, without any Demonſtration; as being evident from all Obſervation and Experiment.

IV. *The Image of an Object ſeen in a Mirror, is in the Cathetus of Incidence.*

This the Antients aſſumed as a Principle: And, hence, ſince the Image is certainly in the *reflected* Ray, they infer'd it muſt appear in the Point of Concourſe of the *reflected* Ray with the Cathetus of Incidence; which indeed holds univerſally in plane and ſpherical Mirrors, and uſually in concave ones; a few Caſes only excepted, as is ſhewn by *Kepler*.

For the particular Laws of REFLECTION, *ariſing from the Circumſtances of the ſeveral Kinds of Specula, or Mirrors, Plane, Concave, Convex*, &c. *ſee them laid down under the Article* MIRROR.

REFLECTION *of the Moon*, is a Term uſed by ſome Authors, for what we otherwiſe call her *Variation*; being the third Inequality in her Motion, whereby her true Place out of the Quadratures, differs from her Place twice equated. See MOON.

REFLECTION is alſo uſed in the *Copernican* Syſtem, for the Diſtance of the Pole from the Horizon of the Diſk; which is the ſame thing as the Sun's Declination in the *Ptolemaick* Syſtem. See DECLINATION.

REFLECTION is alſo figuratively uſed for an Operation of the Mind, whereby, turning as it were back upon it ſelf, it makes it ſelf and its own Operations its Object; and conſiders or contemplates the Manner, Order, and Laws, which it obſerves in Perceiving, Reaſoning, Willing, Judging, Doubting, Believing, *&c.* and frames it ſelf new Ideas of the Relations diſcover'd therein. See SOUL, FACULTY, PERCEPTION, IDEA, *&c.*

REFLEX, REFLECT, in Painting, is underſtood of thoſe Places in a Picture which are ſuppoſed to be illumined by a Light *reflected* from ſome other Body repreſented in the ſame Piece. See LIGHT.

Or *Reflexes* may be defined thoſe Places which beſide the general Light that illumines the whole Piece, receive ſome particular Light, from their Situation with reſpect to ſome more illumined poliſhed Body that reflects Part of the Rays it receives upon them. See COLOUR.

Reflexes are ſcarce ſenſible except in the ſhadowed Parts.—The Management of the *Reflexes* requires a world of Accuracy and Skill.—All reflected Light is ſuppoſed to carry with it Part of the Colour of the Body which reflects it; ſo that thoſe Places which receive this Light, muſt have their Colours mix'd or tinged with that Colour. But the ſame Place may receive *Reflexes* from different Objects, differently colour'd, and thoſe again receive *Reflexes* from others.—The Painter therefore muſt have a View to every Circumſtance of the Colour, Light and Poſition of each Figure; muſt conſider what effect each has on other, and purſue Nature through all the Variety of Mixtures. See CLAIR-*Obſcure*.

REFLEX *Viſion*, or REFLECTED *Viſion*, is that performed by means of Rays reflected from the poliſh'd Surfaces of Objects to the Eye. See VISION and REFLECTION.

Reflex Viſion is the Subject of Catoptricks. See CATOPTRICKS.

Under *Reflex Viſion* come all the Phænomena of Specula or Mirrors of all Kinds. See MIRROR.

REFLEXIBILITY *of the Rays of Light*, is that Property whereby they are diſpoſed to be *reflected*. See REFLECTION.

Or it is their Diſpoſition to be turned back in the ſame Medium, from any other Medium on whoſe Surface they fall.—Hence thoſe Rays are ſaid to be *more* or *leſs Reflexible*, which are returned back more or leſs eaſily under the ſame Incidence. See RAY.

Thus if Light paſs out of Glaſs into Air, and by being inclined more and more to the common Surface of the Glaſs into Air, begins at length to be totally reflected by that Surface; thoſe Sorts of Rays which at like Incidences are reflected moſt copiouſly; or the Rays which by inclining begin ſooneſt to be totally reflected, are moſt *Reflexible*.

That the Rays of Light are endued with different Degrees of *Reflexibility*, was firſt diſcovered by Sir *Iſaac Newton*; and is ſhewn by the following Experiment.—Applying a Priſm DFE, (*Tab. Opticks, Fig.* 55.) whoſe Angles are each 45°. to the Aperture C of a darkened Room, in ſuch manner as that the Light is reflected from the Baſe in G: The Violet Rays are ſeen firſt reflected in HG; the other Ray continuing ſtill refracted in IK.—After the Violet, the Blue are all refracted, then the Green, *&c.* See PRISM.

Hence it appears, that the differently colour'd Rays, differ in Degree of *Reflexibility*. See COLOUR.

From other Experiments it appears, that thoſe Rays which are moſt *reflexible*, are alſo moſt *refrangible*. See REFRANGIBILITY.

REFLUX *of the Sea*, the Ebbing of the Water; or its return from the Shore. See EBB.

It is thus call'd, as being the oppoſite Motion to the Flood, or Flux. See FLUX and TIDE.

REFORM, a Re-eſtabliſhment or Revival of a former neglected Diſcipline; or a Correction of reigning Abuſes. See REFORMATION.

The Term is much uſed in a Monaſtic Senſe, for the reducing an Order or Congregation of Religious to the antient Severity of the Rule, from which it had gradually ſwerved; or even for the improving on the antient Rule and Inſtitution it ſelf, and voluntarily making it more ſevere. See ORDER and RELIGIOUS.

In the like Senſe the Order of St. *Bernard* is ſaid to be only a *Reform* of that of St. *Benedict*. See BERNARDINE and BENEDICTIN.

To REFORM, in a military Senſe, is to reduce a Company, Regiment, or other Body of Men, either by disbanding the whole, or only breaking a Part, and retaining the reſt; or ſometimes by incorporating them in other Regiments.

Hence REFORMADO, a *Reformed Officer*, or one whoſe Troop or Company is ſuppreſs'd in a *Reform*, and he continued either in whole or half Pay, doing Duty in the Regiment.

A *Reformed* Captain on Foot follows the Company, and aſſiſts the ſtanding Officer as a ſecond; but ſtill maintains his Degree and Precedence. See CAPTAIN.

REFORMATION, the Act of *Reforming*, or Correcting an Error, or Abuſe in Religion, Diſcipline, *&c.*

The *Reformation* of the *Roman Calendar* by Pope *Gregory*, was effected in the Year 1582. chiefly by the Advice of *Aloyſius Lilius*, and *Clavius*, See CALENDAR.

The *Reformation of Religion*, called by Way of Eminence, *the Reformation*, was begun by the Elector of *Saxony*, at the Solliciation of *Luther*, about the middle of the ſixteenth Century. See LUTHERANISM.

King *Henry* VIII. of *England*, happening to have then a Pique againſt Pope *Clement* VII. by reaſon of his perſiſting in not allowing of his Divorce from Queen *Catherine* of *Auſtria*, fell in with the Torrent, aboliſhed the Pope's Supremacy, ſeiz'd the Monaſteries, and other Religious Houſes; and divided their Lands among the Nobility and Gentry.

In

In every thing elſe he perſevered a Papiſt.—So that the *Reformation* went on but lamely in his time.—Under his Son *Edward* VI. it went much further; but was all undone again by his Succeſſor Queen *Mary*, who re-eſtabliſhed the antient Superſtitions.

But the Executions of above 500 People, who were burnt for the Proteſtant Faith in the five Years of her Reign, ſo alienated the People from Popery, that Queen *Elizabeth*, her Siſter, found it no hard Matter to carry the *Reformation* to its full Length; and to ſettle it on the Foot whereon it now ſtands among us. See PROTESTANT, CALVINIST, *&c.*

Right of REFORMATION, *Jus Reformationis*, is a Right which the Princes of *Germany* claim to *reform* the Church in their reſpective Territories; as being inveſted with the ſpiritual as well as the temporal Power.

The *Jus Reformationis* is annex'd to the Principality; by this they have the Power of Conſcience, the Diſpoſition of Eccleſiaſtical Revenues, *&c.* as they enjoy'd the ſame at the Treaty of *Munſter* in 1624.

REFRACTED *Ray*, or *Ray of* REFRACTION. See RAY and REFRACTION.

REFRACTED *Dials*, are ſuch as ſhew the Hour by means of ſome *refracting* tranſparent Fluid. See DIAL.

If a Pin or Stick be ſet up, or any Point be aſſign'd in a concave Bowl or Diſh, for the Centre of the Dial; and a horizontal Dial be applied over the ſame; aſſigning the meridian Line on the Edges of the Bowl; and marking out the reſt of the Hour Lines alſo on the Edges of the Bowl: Then taking away the horizontal Dial, and elevating a String or Thread from the End of the ſaid Pin over the meridian Line, as much as is the Latitude or Elevation of the Pole of the Place.—Then, by bringing the Thread to caſt a Shadow on any Hour-Point formerly mark'd out on the Edges of the Bowl, by a Candle or the like; that Shade in the Bowl is the true Hour-Line: And if the Bowl be full of Water, *&c.* when this is done; it will never ſhew the true Hour by the Shadow of the Top of the Pin, but when filled again with the ſame Liquor.

REFRACTION, in Mechanicks, the Deviation of a moving Body from its direct Courſe, by reaſon of the different Denſity of the Medium it moves in; or a Flexion and Change of Determination, occaſioned by a Body's falling obliquely out of one Medium into another of a different Denſity. See MEDIUM.

Thus a Ball A, (*Tab. Mechanicks, Fig.* 52.) moving in the Air in the Line AB, and falling obliquely on the Surface of the Water CD, does not proceed ſtraight to E, but deviates or is inflected to B.—Again, if the Ball moving in Water in the ſame Line AB ſhould fall obliquely on a Surface of Air CD; it will not proceed ſtraight to E, nor yet deflect to F, but to G.

Now the Deflection in each Caſe is call'd the *Refraction*; and the two Caſes are diſtinguiſhed by means of the Perpendicular MI; that, BG being called *Refraction towards the Perpendicular*, or to the *Axis of Refraction*; and the other BF, *Refraction from the Perpendicular*, or *from the Axis of Refraction*.

Theſe *Refractions* are ſuppoſed to ariſe hence, that the Ball arriving at B, in the firſt Caſe, finds more Reſiſtance from the Side O, *i. e.* from the Side of the Water, than from the Side P, or that of the Air; and in the latter more Reſiſtance from the Side P, which is now the Side of the Water, than the Side O which is that of the Air.

In effect the *great Law of Refraction* which holds in all Bodies, and all Mediums, is, That a Body paſſing obliquely out of a *leſs* into a *more* reſiſting Medium, is refracted from the Perpendicular; and in paſſing out of a *more* into a *leſs* reſiſting Medium, is refracted towards the Perpendicular.

Hence the Rays of Light falling out of Air into Water are refracted towards the Perpendicular; whereas a Ball thrown into the Water is refracted from it; by reaſon Water, which reſiſts the Motion of Light leſs than Air, reſiſts that of the Ball more: Or, to ſpeak more juſtly, by reaſon Water, by its greater Attraction, accelerates the Motion of the Rays of Light more than Air does: For that this is the true Cauſe of *Refraction*, at leaſt in Light, ſhall be ſhewn under REFRACTION *of Light*.

To have a Body *refracted*, 'tis neceſſary it fall obliquely on the ſecond Medium.—In perpendicular Incidences there is no *Refraction*.

Voſſius, indeed, and *Snellius* imagined they had obſerved a perpendicular Ray of Light undergo a *Refraction*; a perpendicular Object appearing in the Water nearer than in reality it was: But this was to attribute that to a *Refraction* of the perpendicular Rays, which was owing to the divergency of the oblique Rays after *Refraction*, from a nearer Point.

Yet is there a manifeſt *Refraction* even of perpendicular Rays found in *Iſland Cryſtal*. See *Iſland* CRYSTAL.

Rohault adds, that though an oblique Incidence be neceſſary in all other Mediums we know of; yet the Obliquity muſt not exceed a certain Degree.—If it do, the Body will not penetrate the Medium, but be *reflected*, inſtead of *refracted*.—Thus Cannon Balls in Sea Engagements, falling very obliquely on the Surface of the Water, are obſerved to mount a-loft again, and frequently to ſweep the Men from off the oppoſite Decks: And the like happens to the little Stones wherewith Children make their Ducks and Drakes.

The Antients confounded *Refraction* with *Reflexion*; and 'twas Sir *Iſaac Newton*, who firſt taught us the Difference between them.—He ſhews withall, that there is a good deal of Analogy between them; and particularly in the Caſe of Light. See REFLECTION and REFRACTION *of Light*.

The Laws of *Refraction* of the Rays of Light in Mediums differently terminated, *i. e.* whoſe Surfaces are Plain, Concave, Convex, *&c.* make the Subject of Dioptricks. See DIOPTRICKS.

By *Refraction* it is that Convex Glaſſes, or Lens's collect the Rays, magnify Objects, Burn, *&c.* and that concave Lens's diſperſe the Rays, diminiſh Objects, *&c.* See LENS's, CONVEX, and CONCAVE.

Hence the Foundation of Microſcopes, Teleſcopes, *&c.* See MICROSCOPE and TELESCOPE, *&c.*

By *Refraction* it is, that all remote Objects are ſeen out of their real Places; particularly, that the heavenly Bodies are apparently higher than they are in reality, *&c.* See APPARENT and PLACE. See alſo REFRACTION *Aſtronomical*.

REFRACTION *of Light*, in Opticks, is an inflexion or deviation of the Rays from their rectilinear Courſe upon falling obliquely out of one Medium into another, of a different Denſity. See RAY.

The *Refraction* of Light Sir *Iſaac Newton* ſhews is not perform'd by the Rays falling on the very Surface of Bodies; but *without any Contact*, by the Action of ſome Power of the Bodies equally diffuſed throughout their Surfaces; by which ſame Power acting in other Circumſtances, they are alſo emitted and reflected. See LIGHT.

The ſame Arguments whereby we have proved that *Reflection* is perform'd without immediate Contact, go a great way towards demonſtrating the ſame of *Refraction*: To which may be added the following ones.

1°. Becauſe if when Light falls out of Glaſs into Air, with the utmoſt Obliquity it will be tranſmitted at, it be then made to fall a little more obliquely, it becomes wholly reflected.—For, the Power of the Glaſs after it have refracted Light emerging as obliquely as poſſible, ſuppoſing the Rays to fall ſtill more obliquely, will be too ſtrong to let any of the Rays paſs; conſequently, inſtead of being *refracted* they will be all reflected.

2°. Becauſe in thin *Lamellæ*, or Plates of Glaſs, Light is reflected and *refracted* ſeveral times alternately, as the thickneſs of the *Lamellæ* increaſes in arithmetical Progreſſion.—For here it depends on the thickneſs of the Lamina which of the two it ſhall do; whether reflect it, or let it be tranſmitted.

3°. Becauſe whereas the Powers of other Bodies both to reflect and refract Light are very nearly Proportional to their Denſities; yet unctuous and ſulphurous Bodies are found to reflect more ſtrongly than according to their Denſities.—For as the Rays act more ſtrongly on thoſe Bodies to kindle them, than on others; ſo do they, again, by their mutual Attraction, act more ſtrongly on the Rays to *refract* them.

Laſtly, Becauſe not only thoſe Rays tranſmitted through Glaſs are found to be *refracted*, but alſo thoſe paſſing in the Air, or in a Vacuum near its Extremities, or even near the Extremes of many Opake Bodies, *e. gr.* the Edge of a Knife, undergo a ſimilar Inflexion, from the Attraction of the Body. See INFLECTION.

The manner wherein *Refraction* is perform'd by meer Attraction, without Contact, may be thus accounted for.—Suppoſe HI (*Tab. Opticks, Fig.* 56.) the Boundary of two Mediums, N and O; the firſt the Rarer, *e. gr.* Air; the ſecond the Denſer, *e. gr.* Glaſs; the Attraction of the Medium here will be as their Denſities.—Suppoſe PS to be the Diſtance to which the attracting Force of the denſer Medium exerts itſelf within the Rarer.

Let now a Ray of Light A*a* fall obliquely on the Surface which ſeparates the Mediums; or rather, on the Surface PS, where the Action of the ſecond and more reſiſting Medium commences. All Attraction being perform'd in Lines perpendicular to the attractive Body, as the Ray arrives at *a*, it will begin to be turned out of its rectilinear Courſe, by a ſuperior Force wherewith it is attracted by the Medium O, more than by the Medium N, *i. e.* by a Force wherewith it is driven towards it in a Direction perpendicular to its Surface.—Hence the Ray is bent out of its right Line, in every Point of its Paſſage between PS and RT, within which the Attraction acts. Between thoſe Lines, therefore it deſcribes a Curve *aBb*. But beyond RT, being out of the Sphere of Attraction of the Medium N, it will proceed uniformly in a right Line, according to the Direction of the Curve in the Point *b*.

Again, ſuppoſe N the denſer and more reſiſting Medium, O the Rarer; and HI the Boundary, as before; and let RT be the Diſtance to which the denſer Medium exerts its attractive Force within the Rarer: Even when the Ray has paſs'd the Point B, it will be within the Sphere of ſuperior Attraction of the denſer Medium; but that Attraction acting in Lines perpendicular to its Surface, the Ray will be continually drawn from its ſtraight Courſe BM perpendicularly towards HI: Thus having two Forces or Directions, it will have a compound Motion, whereby inſtead of BM it will deſcribe *Bm*, which *Bm*, will in ſtrictneſs be a Curve.

Laſtly, After it has arrived in *m*, being out of the Influence of the Medium N, it will perſiſt uniformly in a right Line, in the Direction wherein the Extreme of the Curve leaves it.

Thus we ſee how *Refraction* is performed, both toward the Perpendicular, and from it.

But Note, the Attraction of the denſer Medium, *e. gr.* N, is continually diminiſhing as the Ray proceeds from B, towards the limit of Attraction RT; in regard fewer and fewer Parts ſtill come to act: at IH, *e. gr.* all the Parts between that and PS attract, but at RT, none but thoſe in the Line HI.—Note alſo, that the Diſtance between PS and RT being ſmall, when we conſider *Refractions*, no Notice is taken of the Curve Part of the Ray; but we conſider it as conſiſting of two ſtraight Lines, CB, AB, or *m* B, AB.

REFRACTION, in Dioptricks, is the Inflection or bending of the Rays of Light, in paſſing the Surfaces of Glaſſes, Lenſes, and other tranſparent Bodies of different Denſities.

Thus a Ray, as AB, (*Tab. Opticks, Fig.* 56.) falling obliquely from the Radiant A, upon a Point B, in a diaphanous Surface, HI rarer or denſer than the Medium along which it was propagated from the Radiant; it has its Direction there alter'd by the Action of the new Medium, and inſtead of proceeding to M deviates, *e. gr.* to C.

This Deviation is called the *Refraction of the Ray:* BC the *Refracted Ray,* or *Line of Refraction*; and B the *Point of Refraction.* See RAY, LINE, and POINT.

The Line AB is call'd the *Line of Incidence*, or *Ray of Incidence*; and in reſpect hereof B is alſo called the *Point of Incidence.* See INCIDENCE.

The Plane wherein both the incident and *reflected* Rays are found, is called the *Plane of Refraction*; a right Line BE drawn in the *refracting* Medium perpendicular to the *refracting* Surface in the Point of *Refraction* B, is call'd the *Axis of Refraction*—And a right Line DB drawn perpendicular to the *refracting* Surface, in the Point of Incidence B, along the Medium through which the Ray fell, is called the *Axis of Incidence.* See PLANE, AXIS, *&c.*

The Angle ABI included between the incident Ray, and the *refracting* Surface, is called the *Angle of Incidence*; and the Angle ABD included between the incident Ray, and the Axis of Incidence, is call'd the *Angle of Inclination*—The Angle MDC which the *refracted* Ray makes with the Incident, is call'd the *Angle of Refraction*; and the Angle CBE which the *refracted* Ray makes with the Axis of *Refraction*, is call'd the *refracted Angle.* See ANGLE.

General Laws of REFRACTION.

I. *A Ray of Light in its Paſſage out of a rarer, into a denſer Medium,* e. gr. *out of Air into Glaſs, is refracted towards the Perpendicular,* i. e. *towards the Axis of Refraction.*

Hence, the *refracted* Angle is leſs than the Angle of Inclination; and the Angle of *Refraction* leſs than that of Incidence; as they would be equal, were the Ray to proceed ſtraight from A to M.

Hence, alſo a Ray perpendicular to the *refracting* Surface, will paſs through without being *refracted*; as it cannot be *refracted* to the Perpendicular. The phyſical Cauſe thereof is, that the Attraction of the denſer Medium, which in Incidences oblique to its Surface acting perpendicular to that Surface, draws the Ray out of its Courſe: This Attraction, we ſay, in a perpendicular Incidence, acts in the Direction of the Ray.

II. *The Ratio of the Sine of the Angle of Inclination, to the Sine of the refracted Angle, is fix'd and conſtant*; viz. If the *Refraction* be out of Air into Glaſs, it is found greater than as 114 to 76; but leſs than 115 to 76; that is, nearly as 3 to 2.

This Ratio, aſſign'd by *Huygens*, agrees with another of Sir *Iſaac Newton*, who makes the Sine of the Angle of Inclination to the Sine of the *refracted* Angle, as 31 to 20; which is, likewiſe, nearly as 3 to 2.—Indeed there is ſome Difference in the Quantity of *Refraction*, in different Kinds of Glaſs; but in phyſical Matters, Preciſeneſs is not neceſſary.—In Rain Water, *Des Cartes* found, the Ratio of the Sine of the Angle of Inclination, to the Sine of the *refracted* Angle, as 250 to 187, that is, nearly as 4 to 3; which agrees with Sir *Iſaac Newton*'s Obſervation, who makes it as 529 to 396.—In Spirit of Wine, the ſame great Author makes the Ratio as 100 to 73; which is not far from the ſeſquitertian Ratio.—In Air he makes it as 3851 to 3850.

Whence the different *refractive* Power in different Fluids ariſes, is not determined.—Clear Water, of all others, *refracts* the leaſt; and if impregnated with Salts, its *Refraction* is increaſed in Proportion to the Quantity of Salt. Sir *Iſaac Newton* ſhews, that in many Bodies, *e. gr.* Glaſs, Cryſtal, a Selenites, Pſeudo-Topaz, *&c.* the *refractive* Power is proportionable to their Denſities; only in ſulphurous Bodies, as Camphire, Oil Olive, Amber, Spirit of Turpentine, *&c.* the Power is two or three times greater than in other Bodies of equal Denſity; yet they have the *Refractive* Power with reſpect to each other, nearly as their Denſities.—As to Air, he ſhews that a Ray of Light in traverſing quite thro' the Atmoſphere, is *refracted* the ſame it would be were it to paſs with the ſame Obliquity out of a Vacuum into Air of equal Denſity with that in the loweſt Part of the Atmoſphere. See AIR.

From the Law juſt laid down, it follows that one Angle of Inclination, and its correſponding *refracted* Angle being found by Obſervation; the *refracted* Angles correſponding to the ſeveral other Angles of Inclination, are eaſily computed.—Now, *Zahnius* and *Kircher* have found, that if the Angle of Inclination be 70°. the *refracted* Angle will be 38° 50'; on which Principle *Zahnius* has conſtructed a Table of *Refractions* out of Air into Glaſs, for the ſeveral Degrees of the Angle of Inclination; a Specimen whereof follows.

Ang. of Inclin.	Refracted Angle.	Angle of Refraction.	Ang. of Inclin.	Refracted Angle.	Angle of Refraction.
1°	0° 40' 5"	0° 19' 55"	10°	6° 39 10"	3° 20 44"
2	1 20 6	0 13 54	20	13 11 35	6 48 25
3	2 0 3	0 59 56	30	19 29 29	10 30 31
4	2 40 5	1 19 55	45	28 9 19	16 50 41
5	3 20 3	1 39 57	90	41 51 40	48 8 20

Hence it appears that at an Angle of Inclination leſs than 20° the Angle of *Refraction* out of Air into Glaſs, is almoſt ⅓ of the Angle of Inclination: And therefore a Ray is *refracted* to the Axis of *Refraction*, by almoſt a third Part of the Quantity of its Angle of Inclination —And on this Principle it is that *Kepler* and moſt other dioptrical Writers, demonſtrate the *Refractions* in Glaſſes.

The conſtant *Ratio* of the Sines of the Angles of Inclination, and the *refracted* Angles was firſt diſcovered by *Willeb. Snellius.*—'Tis vulgarly attributed to *Des Cartes*; who having ſeen it in *Snellius*'s MS, firſt publiſhed it in his Dioptricks, without naming *Snellius*; as we are inform'd by *Huygens.*

Indeed, as the Rays of Light are not all of the ſame Degree of *Refrangibility*; this conſtant Ratio muſt be different in different Kinds.—The Ratio therefore obſerved by Authors is to be underſtood of Rays of the mean *Refrangibility*, i. e. of green Rays. The Difference of *Refraction* between the leaſt and moſt *refrangible* Rays, that is between Violet and red Rays, Sir *Iſaac Newton* ſhews is about $\frac{1}{27}$ Part of the whole *Refraction* of the mean *Refrangible*; which Difference he owns is ſo ſmall, that there ſeldom needs to be any regard had to it. See REFRANGIBILITY.

III. *When a Ray paſſes out of a denſer into a rarer Medium,* e. gr. *out of Glaſs into Air, it is refracted from the Perpendicular, or from the Axis of Refraction.*—And hence the Angle of *Refraction* is greater than the Angle of Inclination.

Hence, alſo, if the Angle of Inclination be leſs than 30°; MBC is nearly equal to ⅓ of MBE.—Therefore MBC is one half of CBE: Conſequently, if the *Refraction* be out of Glaſs into Air; and the Angle of Inclination leſs than 30°; the Ray is *refracted* from the Axis of *Refraction* by almoſt one half Part of the Angle of Inclination.—And thus is the other dioptrical Principle uſed by moſt Authors after *Kepler*, to demonſtrate the *Refractions* of Glaſſes.

If the *Refraction* be out of Air into Glaſs, the Ratio of the Sine of Inclination to the Sine of the *refracted* Angle is as 2 to 3; if out of Air into Water, as 4 to 3: Therefore, if the *Refraction* be the contrary way, *viz.* out of Glaſs or Water into Air; the Ratio of the Sines in the former Caſe, will be as 2 to 3, in the latter as 4 to 3.

IV. *A Ray falling on a Curve Surface, whether Concave or Convex; is refracted after the ſame Manner as if it fell on a Plane which is a Tangent to the Curve in the Point of Incidence.*

For the Curve and plain Surface touching it, have an infinitely ſmall Part common to them both, (each being originally generated by the Flux of a Point). But a Ray is *refracted* in ſuch a little Part; therefore 'tis the ſame as if it were *refracted* in ſuch a Plane.

V. *If* A *right Line* EF (*Fig.* 57. and 58.) *cut a refracting Surface* GH *at right Angles; and if from any Point in the denſer Medium as* D *be drawn* DC *Parallel to the incident Ray* AB: *This will meet the refracted Ray in* C; *and will be to it as the Sine of the refracted Angle to the Sine of the Angle of Inclination.*

Hence, if BC paſs out of Glaſs into Air, it is in a ſubſeſquialterate Ratio to CD; if out of Air into Glaſs, in a ſeſquialterate Ratio to CD.

Hence, alſo, if Light paſs out of Water into Air; CB is in a ſubſeſquitertian Ratio to CD; if out of Air into Water in a Seſquiquartan.

Laws of REFRACTION *in Plane Surfaces.*

1°. If parallel Rays be *refracted* out of one tranſparent Body into another of different Denſity, they will continue Parallel after *Refraction.*

The phyſical Reaſon is, that being parallel, their Obliquity, or Angle of Incidence is the ſame: But at equal Obliquities we have ſhewn the *Refraction* is equal; conſequently the Parallelism which they had before the *Refraction*, will be retain'd after it.

But this may be alſo demonſtrated Geometrically, thus: If the Rays be perpendicular to the *refracting* Surface, they will paſs without any *Refraction*; conſequently being parallel before their Paſſage, they will be ſo after it. If they fell Obliquely, as AB and DC; the Angles of Incidence *o* and *u*; and conſequently, alſo the Angles of Inclination *x* and *y*, will be equal. But the Sines of the Angles of Inclination *x* and *y*, have the ſame Ratio to the Sines of the *refracted* Angles *m* and *n*; therefore the *refracted* Angles *m* and *n* are alſo equal; conſequently the *refracted* Rays parallel.

Hence a Glaſs, plain on both Sides, being turn'd directly to the Sun; the Light paſſing through it will be propagated after the

ſame manner as if the Glaſs were away: For the Rays being Perpendicular will paſs without *Refraction*.—If the Glaſs be turn'd obliquely to the Sun, the Light after *Refraction* will be of the ſame Intenſity as before; the Intenſity depending on the Spiſſitude or Cloſeneſs of the Rays, and on the Angle wherein they ſtrike the Object, or the Eye, both which are here unvaried. See RAY.

2. If two Rays CD and CP, (*Fig.* 59.) proceeding from the ſame Radiant C, and falling on a Plane Surface of a different Denſity, ſo as the Points of *Refraction* D and P are equally diſtant from the Cathetus of Incidence GK; the *refracted* Rays DF and PQ have the ſame virtual Focus, or Point of Diſperſion G. See VIRTUAL.

Hence, 1°. Since in Rays very near each other, the Diſtance from the Cathetus is the ſame as to Senſe; very near Rays will diverge from the ſame Point G, *i. e.* have the ſame virtual Focus G.—And hence, 2°. When *refracted* Rays falling on the Eye placed out of the Cathetus of Incidence, are either equally diſtant from the Cathetus, or very near each other; they will flow upon the Eye, as if they came to it from the Point G; conſequently the Point C will be ſeen by the *refracted* Rays as in G.

3. If a Ray CD fall obliquely out of a a thinner into a cloſer Medium, having a plane Surface; the Diſtance of the Radiant Point CK has a leſs Ratio to the Point of Diſperſion, or virtual Focus KG, than the Sine of the *refracted* Angle to the Sine of the Angle of Inclination.—But if the Diſtance of the Point of *Refraction* from the Cathetus of Incidence KD be leſs than the eleventh or nineteenth Part of the Diſtance of the radiant Point CK; and if in the former Caſe the tenth, in the latter the hundredth Part thereof be ſo ſmall that it can't be aſſign'd or need not be minded, then will CK be to KG, as to Senſe: in the Ratio of the Sine of the *refracted* Angle, to the Sine of the Angle of Inclination.

Hence, 1°. If the *Refraction* be out of Air into Glaſs, the Diſtance of the Point of Diſperſion of Rays near the Cathetus, is Seſquialterate, of the radiant Point; of more remote Rays, greater than Seſquialterate.

Hence, 2°. If the Eye be placed in a denſe Medium, Objects in a Rarer will appear more remote than they are; and the Place of the Image in any given Caſe, may be determined from the Ratio of the *Refraction*.—*Thus to Fiſhes ſwimming under Water, Objects out of the Water muſt appear further diſtant than in reality they are.*

4. If a Ray GD fall obliquely out of a denſer, into a rarer Medium AB; the Diſtance of the radiant Point GK, has a greater Ratio to the Diſtance of the Point of Diſperſion KC, than the Sine of the *refracted* Angle has to the Sine of the Angle of Inclination.—In the other Caſe of the preceding Theorem, KG will be to KC, as to Senſe, in the Ratio of the Sine of *refracted* Angle, to the Sine of the Angle of Inclination.

Hence, 1°. If the *Refraction* be out of Glaſs into Air, the Diſtance of the Point of Diſperſion of Rays near the Cathetus of Incidence, is Subſeſquialterate of the Diſtance of the radiant Point. That of the more remote Rays is leſs than the Subſeſquialterate.

But, 2°. if the *Refraction* be out of Water into Air; the Diſtance of the Point of Diſperſion of Rays near the Cathetus, is Subſeſquitertian; of thoſe more remote, leſs than Subſeſquitertian.

And 3°. The Eye therefore being in a rarer Medium, Objects placed in a Denſer appear nearer than they are; and the Place of the Image may be determined in any given Caſe by the Ratio of *Refraction*.—Hence the Bottom of a Veſſel full of Water, is rais'd by *Refraction*, to a third Part of its Height, with reſpect to an Eye perpendicularly over the *refracting* Surface; and hence *Fiſhes, and other Bodies under Water, appear nearer than they really are.*

5. If the Eye be placed in a rarer Medium, an Object ſeen in a denſer Medium, by a Ray *refracted* in a plane Surface, will appear larger than it really is—If the Object be in a rarer, and the Eye in a denſer Medium, the Object will appear leſs than it is.—And in each Caſe the apparent Magnitude is to the real one in a Ratio compounded of the Diſtance of the Point to which the Rays tend before *Refraction*, from the *refracting* Surface FL (*Fig.* 60) to the Diſtance of the Eye GL, from the ſame, and of the Diſtance of the Object from the Eye GM, to its Diſtance from a Point to which the Rays FL tend before *Refraction*.

Hence, 1°. If the Object AB be very remote; FM will be phyſically equal to GM; and therefore the real Magnitude MB to its apparent one MH, as GL to FL, or the Diſtance of the Eye G from the *refracting* Plane to the Diſtance of the Point of Convergence F from the ſame Plane.

Hence, 2°. *Objects under Water, to an Eye in the Air, appear larger than they are; and to Fiſhes under Water, Objects in the Air appear leſs than they are.*

Laws of REFRACTION *in Spherical Surfaces, both Concave and Convex.*

1. A Ray of Light DE (*Fig.* 61) Parallel to the Axis of a denſer Sphere, after a ſingle *Refraction* in E, falls in with the Axis in the Point F, beyond the Centre C.

For the Semidiameter CE drawn to the Point of *Refraction* E, is perpendicular to the Surface KL, and is therefore the Axis of *Refraction*; but a Ray out of a rarer into a denſer Medium, we have ſhewn, is *refracted* towards the Perpendicular, or the Axis of *Refraction*; therefore the Ray DE will converge to the Axis of the Sphere AF; and will, therefore at length concur with it; and that beyond the Centre C, in F; becauſe the Angle of *Refraction* FEH is leſs than the Angle of Inclination CEH.

2. If a Ray DE fall on a ſpherically Convex Surface of a denſer Medium, parallel to its Axis AF; the Semidiameter CE will be to the *refracted* Ray EF in the Ratio of the Sine of the *refracted* Angle to the Sine of the Angle of Inclination: But the Diſtance of the Focus or Point of Concurrence to the *refracted* Ray FE is in the Ratio of the Sine of the *refracted* Angle to the Sine of the Angle of Inclination.

3. If a Ray DE fall on a denſer ſpherically Convex Surface KL, Parallel to the Axis AF; the Diſtance of the Focus from the *refracting* Surface FB, is to its Diſtance from the Centre FC; in a Ratio greater than that of the Sine of the Angle of Inclination to the Sine of the *refracted* Angle.—But if the Rays be very near the Axis, and the Angle of Inclination BCE of a few Degrees; the Diſtances of the Focus from the Surface, and the Centre FB and FC, will be, nearly, in the Ratio of the Sine of the Angle of Inclination, to the Sine of the *refracted* Angle.

Hence, 1°. If the *Refraction* be out of Air into Glaſs; in the Caſe of Rays near the Axis, BF : FC : : 3 : 2. And in the Caſe of the Rays remoter from the Axis, BF : FC > 3 : 2. Conſequently in the former Caſe, BC : BF : : 1 : 3; and in the latter BC : BF < 1 : 3.

And 2°. If the *Refraction* be out of Air into Water; in the former Caſe, BF : FC : : 4 : 3; and in the latter, BF : FC > 4 : 3. Conſequently in the former BC : BF : : 1 : 4, and on the latter BC : BF < 1 : 4.

Hence, 3°. Since the Sun's Rays are Parallel, as to Senſe; if they fall on the Surface of a ſolid Glaſs Sphere, or of a Sphere full of Water, they will not concur with the Axis within the Sphere. So that *Vitellio* was miſtaken when he imagined that the Sun's Rays falling on the Surface of a Cryſtallin Sphere, were *refracted* to the Centre. See FOCUS.

4. If a Ray DE (*Fig.* 62) fall out of a denſer into a rarer ſpherical Medium; after *Refraction* it will diverge from the Axis; and the Diſtance of the Point of Diſperſion, or the virtual Focus from the Centre of the Sphere, FC, will be to its Semidiameter CE in the Ratio of the Sine of the *refracted* Angle to the Angle of *Refraction*; but to the Portion of the *refracted* Ray drawn back, FE, in the Ratio of the Sine of the *refracted* Angle to the Sine of the Angle of Inclination.

5. If a Ray ED fall Parallel to the Axis AF on the ſpherically Convex Surface KL, of a rarer Medium, out of a denſer; the Diſtance of the Point of Diſperſion from the Centre, FC, is to its Diſtance from the Surface FB: In a Ratio greater than that of the Sine of the *refracted* Angle to the Sine of the Angle of Inclination.—But if the Rays DE be very near the Axis FA, the Ratio will be very nearly the ſame with that of the *refracted* Angle to the Sine of the Angle of Inclination.

Hence, 1°. If the *Refraction* be out of Glaſs into Air; in the Caſe of Rays near the Axis, FC : FB : : 3 : 2. Conſequently BC : FB : : 1 : 2. Therefore in the Caſe of Rays more remote from the Axis, BC : FB < 1 : 2.

2°. If the *Refraction* be out of Water into Air; in the former Caſe FC : FB : : 4 : 3. Conſequently BC : FB : : 1 : 3; in the latter Caſe, therefore, BC : FB 1 < 1 : 3.

3°. Since then the Point of Diſperſion F is more remote from the *refracting* Surface KL, if the Rays proceed out of Water, than out of Glaſs, into Air; Parallel Rays are leſs diſpers'd in the former Caſe than in the latter.

6. If a Ray HE (*Fig.* 61) fall parallel to the Axis FA, out of a rarer, on the Surface of a ſpherically concave denſer Medium; the *refracted* Ray EN will be made to recede from the Point of the Axis F; ſo as FE will be to FC, in the Ratio of the Sine of the Angle of Inclination, to the Sine of the *refracted* Angle.

7. If a Ray EH fall parallel to the Axis FB on the Concave Surface KL of a ſpherical denſer Medium, from a rarer; the Diſtance of the Point of Diſperſion from the *refracting* Surface FB; is to Diſtance from the Centre, FC, in a Ratio greater than that of the Sine of the Angle of Inclination, to the Sine of the *refracted* Angle. But if the Rays be very near the Axis, and the Angle BCE very ſmall; BH will be to BC very nearly in the Ratio of the Sine of the Angle of Inclination; to the Sine of the *refracted* Angle.

Hence, 1°. If the *Refraction* be out of Air into Glaſs; in the Caſe of the Rays near the Axis, FB : FC : : 3 : 2; in the Caſe of Rays more remote from the Axis FB : FC : : > 3 : conſequently in the former, BC : FC : : 1 : 2: And hence, in the latter, BC : FC < 1 : 2.

Hence alſo 2°. If the *Refraction* be out of Air into Water; in Caſe of the Rays near the Axis; FB : FC : : 4 : 3. In the Caſe of Rays more remote from the Axis FB : FC > 4 : 3. Conſequently in the firſt Caſe BC : FC : : 1 : 3. And hence, in the latter, BC : FC > 1 : 3.

And hence, 3°. Since the Point of Diſperſion F, is further from the Centre C, if the *Refraction* be in Water than in Air; the Rays will be leſs diſpers'd in the latter Caſe than in the former.

8. If the Ray HE (*Fig.* 62.) fall parallel to the Axis AF, from a denſer, upon the Surface of a ſpherically Concave rarer Medium; the *refracted* Ray will concur with the Axis AF, in the Point F; ſo as the Diſtance of the Point of Concourſe from the Centre CF, may be to the *refracted* Ray FE in the Ratio of the Sine of the *refracted* Angle, to the Sine of the Angle of Inclination.

Doctrine of REFRACTION *in Glaſſes, Lens's,* &c.

1°. *Refraction in a Glaſs Priſm.*—If a Ray of Light DE (*Fig.* 62.) fall obliquely out of Air on a Priſm ABC; being *refracted* towards the Perpendicular, inſtead of proceeding to F it will decline to G, *i. e.* towards a Line HI, drawn Perpendicular to the Surface AB in the Point of *Refraction* E.—Again, ſince the Ray EG paſſing out of the Glaſs into Air falls obliquely on CB; it will be *refracted* to M: ſo as to recede from the Perpendicular NGO. *And hence the various Phænomena of the Priſm.* See PRISM.

2°. *Refraction in a Convex Lens.*—If Parallel Rays AB, CD, and EF, (*Fig.* 63.) fall on the Surface of a Lens 2B 3K; the perpendicular Ray AB will paſs unrefracted to K, where emerging into Air perpendicular, as before, it will proceed ſtraight to G. But the Rays CD and EF falling obliquely out of Air into Glaſs, in D and F, will be *refracted* towards the Axis of *Refraction*, (*i. e.* towards Lines HI and LM drawn perpendicular to the *refracting* Surface in the Points of *Refraction* F and D;) and decline to R and Q.—Again, emerging obliquely out of the Glaſs into the Surface of the Air, they will be *refracted* from the Perpendicular; and therefore DQ will not proceed to X but to G; and FP, not to V but to G: Thus likewiſe might all the other Rays falling on the Surface of the Glaſs, be ſhewn to be *refracted* ſo as to meet the others about the Point G. See FOCUS.

Hence the great Property of Convex Glaſſes; *viz. That they collect Parallel Rays, or make them converge into a Point.* See CONVEXITY.

3°. *Refraction in a Concave Lens.*—Parallel Rays AB, CD, EF, (*Fig.* 64.) falling on a Concave Lens GBHIMK; the Ray AB falling perpendicular on the Glaſs at B, will paſs *unrefracted* to M; where being ſtill perpendicular, it will paſs into the Air, without *Refraction* to L. But the Ray CD falling obliquely on the Surface of the Glaſs, will be *refracted* towards the Perpendicular NDO, and proceed to Q; and the Ray DQ, again, falling obliquely out of the Glaſs upon the Surface of Air, will be *refracted* from the Perpendicular RQS, and proceed to V. After the ſame manner might the Ray EF be ſhewn to be *refracted* to Y, and thence to G.

Hence the great Property of Concave Glaſſes, *viz. That they diſperſe Parallel Rays, or make them diverge.* See CONCAVITY.

4°. *Refraction in a plain Glaſs.*—If Parallel Rays EF, GH, IL, (*Fig.* 65.) fall obliquely on a plain Glaſs ABCD; the Obliquity being the ſame in all, by reaſon of their Paralleliſm, they will be all equally *refracted* towards the Perpendicular; and accordingly being ſtill parallel at M, O, and Q, will paſs out into the Air equally *refracted*, again, from the Perpendicular, and ſtill Parallel. See PARALLEL, and LOOKING-*Glaſs*.

Thus will the Rays EF, GH, and IL, at their entering the Glaſs, be inflected towards the right; and in their going out as much inflected to the left; ſo that the firſt *Refraction* is here undone by the ſecond: Indeed, not ſo as that the Object is ſeen in its true Place.—For the Ray BQ being produced back again, will not coincide with the Ray LI; but will fall to the right thereof; and this the more as the Glaſs is thicker: However, as to the Point of Colour, the ſecond *Refraction* does really undo the firſt. See COLOUR.

5°. *Refraction in Iſland Cryſtal.*—The Laws of *Refraction* in Iſland Cryſtal differ very much from thoſe laid down in other Subſtances; for here is a double *Refraction*, contrary ways, whereby not only oblique Rays are ſplit or divided into two, and *refracted* to oppoſite Parts, but even perpendicular Rays are alſo ſplit, and one half of them *refracted*.

For the Theory hereof, ſee *Iſland* CRYSTAL.

The particular Laws of Refraction in the ſeveral Kinds of Lens's, ſee under the Article LENS.

REFRACTION, in Aſtronomy, or REFRACTION *of the Stars*, is an Inflection of the Rays of thoſe Luminaries, in paſſing through our Atmoſphere; whereby the Altitudes of the heavenly Bodies are apparently increas'd. See STAR and ALTITUDE, *&c.*

This *Refraction* ariſes hence, that the Atmoſphere is unequally denſe in different Stages or Regions; rareſt of all a-top, and denſeſt at bottom; which Inequality in the ſame Medium, makes it equivalent to ſeveral unequal Mediums. See AIR and ATMOSPHERE.

Sir *Iſaac Newton* has ſhewn that a Ray of Light in paſſing from the higheſt and rareſt Part of the Atmoſphere, down to the loweſt and denſeſt, undergoes the ſame *Refraction* it would do in paſſing immediately, at the ſame Obliquity, out of a Vacuum into Air of equal Denſity with that in the loweſt Part of the Atmoſphere.

The effect of this *Refraction* may be thus conceived. Suppoſe ZV (*Tab. Aſtronomy, Fig.* 57.) a Quadrant of a vertical Circle, deſcribed from the Centre of the Earth T, under which is AB; a Quadrant of the Circumference of the Earth; and GH a Quadrant of the Surface of the Atmoſphere: And ſuppoſe SE a Ray of Light emitted by a Star at S, and falling on the Atmoſphere at E.—This Ray coming out of the Ætherial Medium, which is much rarer than our Air, or perhaps out of a perfect Vacuum, and falling on the Surface of the Atmoſphere, will be *refracted* towards the Perpendicular: And ſince the upper Air, again, is rarer than that near the Earth, and grows ſtill denſer as it approaches us: The Ray, in its Progreſs will be continually *refracted*, ſo as to arrive at the Eye in the Curve Line EA.

Suppoſing, then the right Line AF to be a Tangent to the Arch in A, the Ray will enter the Eye A, according to the Direction of AF.—And ſince Objects are always ſeen in that Line, according to the Direction whereof the Rays enter the Eye, the Star will appear in AF; that is, in the Heavens at Q, which is nearer the Zenith than the Star really is.

Hence ariſe the Phænomena of the *Crepuſculum*, or *Twilight*. See CREPUSCULUM.

And hence alſo it is that the Moon is ſometimes ſeen eclipſed, when ſhe is below the Horizon, and the Sun above it. See ECLIPSE.

That there is a real *Refraction* of the Stars, *&c.* is deduced not only from phyſical Conſiderations, and from Arguments *a priori*, and a *Similitudine*; but alſo from preciſe Aſtronomical Obſervations: Thus,

The Diſtance of the two Stars, *Spica Virginis*, and the *Lyon's-Tail*, when near the Meridian, or even near the Weſt, is conſtantly found 35° 2'. But when the *Lion's-Tail* is riſen in the Eaſt 34° 30' high, *Spica Virginis* is obſerv'd to be in almoſt the ſame vertical Circle.—Add to this, an Obſervation of the *Dutch*, who winter'd at *Nova Zembla* in 1597, from whom the Sun totally diſappeared on the 14th of *November*; and again began to appear on the 24th of *January*, which was ſix Days ſooner than he ſhould have return'd, according to Aſtronomical Calculations; as is obſerved in the *Acta Eruditorum*, A. 1697.—Nor muſt it be omitted that *Charles* XI. King of *Sweden*, being in 1694, at *Tornou*, in *Weſt-Bothnia*, in the Latitude of 65° 33', obſerv'd that the Sun never ſet between the 14th and 15th Day of *June*; but was viſible in the middle of the Night: The following Year he appointed two Mathematicians, *Bilembergius* and *Spolius*, to obſerve the ſame more accurately; who accordingly found that at *Tornou* in the middle of the Night, between the 10th and 11th of *June*, the Sun was ¾ of his Diameter above the Horizon; and on the 14th of *June* at *Kangis*, in the Latitude of 66° 15', they found the Sun at Midnight, two Diameters above the Horizon.

Hence 'tis argued, That as all Light is propagated in right Lines, no Rays could reach the Eye from a Luminary below the Horizon, unleſs they were deflected out of their Courſe at their Entrance into the Atmoſphere: 'Tis evident, therefore, the Rays are *refracted* in paſſing through the Atmoſphere.

Hence, the Stars appear higher by *Refraction* than they really are; ſo that to bring the obſerv'd or apparent Altitudes to the true ones, the Quantity of *Refraction* muſt be ſubſtracted. See ALTITUDE.

And hence, as the Antients were unacquainted with the *Refraction*; reckoning upon too great Altitudes, 'tis no Wonder they ſometimes committed conſiderable Errors.

From the Doctrine of *Refractions* it appears that we never ſee the real Sun riſing or ſetting, but only a Phantom, or Image thereof; the Sun himſelf being at that time hid below the Horizon.

And from the Obſervations juſt mentioned, it follows, that the *Refractions* are greater near the Pole, than at a leſs Latitude; doubtleſs from the greater Denſity of the Atmoſphere, and the greater Obliquity of the Incidence.

M. *de la Hire*, aſſures us, he could never find any Differences in the Meridian Altitudes of the Stars; ſo that the *Refractions* remain always the ſame.—Though he owns, near the Horizon the different Conſtitution of the Air, *&c.* may occaſion ſome Variations in the *Refractions*.

Stars in the Zenith are not ſubject to any *Refraction*.—Thoſe in the Horizon have the greateſt.—From the Horizon the *Refraction* continually decreaſes to the Zenith: All which follows hence, that in the firſt Caſe the Rays are perpendicular; in the ſecond their Obliquity is greateſt; in the third, 'tis continually increaſing.

At the ſame Altitudes the Sun and Stars all undergo the ſame *Refraction*; for at equal Altitudes the incident Rays have the ſame Inclinations: but the Sines of the *refracted* Angles are as the Sines of the Angles of Inclination, *&c.*

Indeed *Tycho Brahe*, who firſt deduced the *Refractions* of the Sun, Moon, and fix'd Stars from Obſervation; makes the Solar *Refractions* greater than thoſe of the fix'd Stars; and the Lunar *Refractions* ſometimes greater than thoſe of the Stars, ſometimes leſs.—But the Theory of *Refractions* (which we have obſerved is owing to *Snellius*) was not fully underſtood in his Age.—*De la Hire* and *Caſſini*, find the *Refraction* the ſame in all.

M. *de la Hire* gives us a Table of the *Refractions* of the Stars, in their ſeveral Degrees of Altitude; deduced from the ſureſt and moſt accurate Obſervations; as follows.

Table

Table of REFRACTIONS *of the Heavenly Bodies, at the ſeveral Degrees of Altitude.*

Alt.	Refract.		Alt.	Refract.		Alt.	Refract.		Alt.	Refract.		Alt.	Refract.		Alt.	Refract.	
0	32′	0″	16	3′	26″	30	1′	51″	46	1′	9″	61	0′	40″	77	0′	17″
1	26	35	17	3	23	31	1	47	47	1	7	62		39	78		15
2	20	43	18	3	12	32	1	43	48	1	6	63		37	79		14
3	15	44	19	3	1	33	1	40	49	1	4	64		35	80		12
4	12	26	20	2	51	34	1	36	50	1	2	65		33	81		11
5	10	26	21	2	44	35	1	33	51	1	0	66		32	82		10
6	9	8	22	2	38	36	1	30	52	0	58	67		31	83		8
7	8	8	23	2	31	37	1	27	53		56	68		30	84		7
8	7	1	24	2	24	38	1	24	54		54	69		28	85		6
9	6	17	25	2	18	39	1	22	55		52	70		26	86		4
10	5	41	26	2	12	40	1	19	56		50	71		25	87		3
11	5	11	27	2	7	41	1	17	57		48	72		24	88		2
12	4	46	28	2	3	42	1	15	58		46	73		23	89		1
13	4	25	29	1	59	43	1	13	59		44	74		21	90		0
14	4	7	30	1	55	44	1	11	60		42	75		20			
15	3	51				45	1					76		18			

Tycho Brahe will have the *Refractions* of the Sun to vaniſh at the Altitude of 46°; thoſe of the Moon at 45°, and thoſe of the fix'd Stars at 20°: But *Caſſini* has found that they reach even to the Zenith.—Indeed *Tycho* repreſented all the *Refractions* leſs than they are; except the horizontal one, which he made too big: For he makes the horizontal *Refraction* in the Sun 34′; in the Moon 33′; in the fix'd Stars 30′. *De la Hire* and *Caſſini* make it 32′ in all the heavenly Bodies. *Tycho*, again, makes the *Refraction* of the Sun at 33° Altitude, to be 55″; but *Caſſini* 1′, 43″.

Fa. *Laval* in 1710, 22° *Jan.* obſerv'd the meridian Altitude of the Sun to be 70° 25′ 50″; and on the 23 of *June*, obſerv'd the ſame to be 70° 26′ 0″, which is 10″ more, that ſhould be leſs.—Having met with ſome like Obſervations before, he takes occaſion to ſuſpect the *Refraction* to be varied according to the different Winds which blow from the different Quarters.—When the North-Weſt Wind blows, he thinks the *Refraction* is the greateſt; and adds, from Obſervations made at St. *Baume*, and St. *Pilon*, that the *Refraction* at 24 Fathoms above the Surface of the Sea, is double that at 600 Fathoms. See HORIZON.—*Huygens* long ago obſerv'd the *Refraction* to be chang'd every Hour; tho' his Experiments were made at very little Altitudes, and in Terreſtrial Objects.

The *Refraction* diminiſhes the right and oblique Aſcenſions of a Star; and increaſes the Deſcenſions: It increaſes the Northern Declination; diminiſhes the Southern. See ASCENSION, DESCENSION, *&c.*

Refraction, in the Eaſtern Part of the Heavens, diminiſhes the Longitude of a Star; but increaſes the ſame in the Weſtern Part of the Heavens: It diminiſhes the Southern Latitude, and increaſes the Northern. See LONGITUDE and LATITUDE.

The *Refraction* therefore, is by no means to be over-look'd in Aſtronomy.—'Tis abſolutely neceſſary to the determining of the Phænomena of the heavenly Motions, to a Degree of Accuracy; ſo that the antient Aſtronomy, where no regard was had to it, muſt of neceſſity have been exceedingly defective on this very account. See ASTRONOMY.

To obſerve the REFRACTION *of a Star*, &c.

1°. Obſerve the meridian Altitude of a Star near the Zenith; whence the Latitude of the Place being known, the true Declination of the Star is eaſily had, the Star being now void of any ſenſible *Refraction*. See DECLINATION.

2°. Obſerve the Altitude of the ſame Star in any other Degree, and note the Time by a Pendulum. 3°. For the given Time of Obſervation, from the Declination of the Star, compute its true Altitude. See ALTITUDE.

This being thus found leſs than the Altitude obſerv'd; ſubſtract the one from the other; the Remainder is the *Refraction* for that Moment, in that Degree.

REFRACTION *of Altitude*, is an Arch of a vertical Circle, as *Sſ*, (*Tab. Aſtronomy, Fig.* 28.) whereby the Altitude of a Star SE, is increas'd by the *Refraction*. See ALTITUDE.

REFRACTION *of Declination*, is an Arch of a Circle of Declination, as *ſI*, whereby the Declination of a Star *ſ* DS is increas'd or diminiſh'd by the *Refraction*. See DECLINATION.

REFRACTION *of Aſcenſion and Deſcenſion*, is an Arch of the Equator, *Dd*, whereby the Aſcenſion and Deſcenſion of a Star, whether right or oblique, is increaſed or diminiſhed; by means of the *Refraction*. See ASCENSION, *&c.*

REFRACTION *of Longitude*, is an Arch of the Ecliptic, *Tt*, whereby the Longitude of a Star is increas'd or diminiſhed by means of the *Refraction*. See LONGITUDE, *&c.*

REFRACTION *of Latitude*, is an Arch of a Circle of Latitude *ſI*, whereby the Latitude of a Star, *Tſ*, is increaſed or diminiſhed by means of *Refraction*. See LATITUDE.

REFRANGIBILITY *of Light*, the Diſpoſition of the Rays to be refracted. See REFRACTION.

A *greater* or *leſs Refrangibility* is a Diſpoſition to be *more* or *leſs* refracted, in paſſing at equal Angles of Incidence, into the ſame Medium. See LIGHT, MEDIUM, *&c.*

That the Rays of Light are differently *refrangible*, is the Foundation of Sir *Iſaac Newton's* whole Theory of Light and Colours.—The Truth of the Principle will appear from the following Experiments.

1°. A Ray of Light being received through a little round Hole into a dark Room, upon a Glaſs Priſm, ABC, (*Tab. Opticks. Fig.* 55.) in ſuch manner as to paſs through it near the Angle C; the various Colours of the Rainbow will be ſeen painted in all their Splendor on a white Paper, EF; *viz.* the Red in E, then the Yellow, then Green, Blue, and at laſt Purple, or Violet; and on whatever Body you receive the Light, ſtill the Colours will be the ſame.

Yet this colour'd Light is ſtill propagated, like other Light, in right Lines; 'tis reflected, too, like other Light, from a Mirror, and refracted through a Lens; yet retains its Colours both after Refraction and Reflection.—When collected into a Focus, the Rays degenerate into a very bright White; but upon diverging again from the Focus, reſume their former Colours.

Hence, 1°. Since nothing here happens to the Rays in paſſing the Priſm, but that they are refracted, both in entering, and in quitting it: (See PRISM.) Light is converted into thoſe Colours by mere Refraction.

2°. Since the colour'd Rays are ſtill propagated in right Lines, if reflected from Mirrors, or refracted in Lens's; they ſtill retain all the Properties of Light, and therefore are ſtill Light.

3°. Since the ſeveral colour'd Rays decuſſated and mix'd together in the Focus, appear White; but after Separation, beyond the Focus, recover their former Colours; therefore Red, Yellow, Green, Blue, and Purple Rays mix'd together in a convenient Proportion, conſtitute a Reſplendent white. See WHITE.

Note, The Experiment will ſucceed if the Room be not dark, only the Colours will be the leſs vivid.

2. A Priſm DEF (*Fig.* 66.) being ſo diſpoſed as that the Refractions of the Rays both at their Entrance and Exit, are equal; (which is obtain'd, by turning it ſlowly round its Axis, till the colour'd Light, which now riſes, and now falls, appear ſtationary between the two.) In the middle Space between the Priſm and the colour'd Light painted on the Wall, place another Priſm GH to receive the colour'd Light LM. After a ſecond Refraction in this ſecond Priſm the colour'd Light painted on the Wall, IK, will be inclined to a like Light NO, ſeen there, even when the Priſm GH is removed; ſo as the blue Extremities N and I will be further a-part than the red ones K and O.

Hence, 1°. The blue Rays muſt of Neceſſity be more refracted than the red ones; and there is, likewiſe, an unequal Refraction in the intermediate Rays.

Hence, therefore, the Sun's Rays are not all of the ſame *Refrangibility*; conſequently, not of the ſame Nature. See RAY.

3. Thoſe Rays are moſt *Refrangible*, which are moſt Reflexible. See this proved under REFLEXIBILITY.

The Difference between *Refrangibility* and Reflexibility was firſt diſcover'd and publiſh'd by Sir *Iſaac Newton* in 1675, in the *Phil. Tranſact.* and from that time vindicated by him, from the Objections of ſeveral Authors; particularly F. *Pardies*, M. *Mariotte*, *Fr. Linus*, or *Lin*, and other Gentlemen of the *Engliſh* College at *Liege*: At length it was more fully laid down, illuſtrated, and confirm'd by great variety of Experiments in his immortal *Opticks*.

But, further, as not only thoſe Colours of Light produced by Refraction in a Priſm, but alſo thoſe reflected from Opake Bodies have their different Degrees of Refrangibility and Reflexibility; and as a white Light ariſes from a Mixture of the ſeveral colour'd Rays; the ſame great Author concluded all homogeneous Light to have its proper Colour, correſponding to its Degree of Refrangibility, and not capable of being chang'd by any Reflexions, or any Refractions; that the Sun's Light is compoſed of all the primary Colours; that all compound Colours ariſe from a mixture of the primary ones, *&c.* See COLOUR.

The different Degrees of *Refrangibility*, he conjectures to ariſe from the different Magnitude of the Particles whereof the diffe-

rent Rays conſiſt.—Thus the moſt refrangible Rays, *i. e.* the red ones, he ſuppoſes to conſiſt of the largeſt Particles; the leaſt Refrangible, *i. e.* the Violet Rays, of the ſmalleſt Particles; and the intermediate Rays, Yellow, Green, and Blue, of Particles, of intermediate Sizes. See RED, GREEN, VIOLET, *&c.*

REFRACTION, in Commerce, a Term ſometimes uſed by Merchants, where there has been an overſight in an Account, to the Prejudice of a Perſon, who thereupon demands Reſtitution of ſo much, added or omitted by Miſtake.

You muſt make me a *Refraction* of five Pound forgot in your Account.—I'll Deduct or make you *Refraction* of 30*s.* charged inadvertently in my Bill.

REFRET, in Muſick. See RITORNELO.

REFRIGERATIVE, in Medicine, a Remedy or Diet which refreſhes the inner Parts by cooling them.

Such, uſually, are Ptiſans, Clyſters, Potions, *&c.* See PTISANS, *&c.*

REFRIGERATORY, in Chymiſtry, a *Cooler*; or a Veſſel, filled with cold Water, placed about the Head of an Alembic, to cool and condenſe the Vapours rais'd thither by the Fire, and to convert them into a Liquor, to be diſcharged thence through the Beak. See DISTILLATION, ALEMBIC, SPIRIT, WATER, *&c.*

The Water in the *Refrigeratory* is to be changed from time to time, as it begins to grow warm.

Sometimes they content themſelves with wrapping a wet Cloth about the Head of the Alembic, inſtead of a *Refrigeratory:* But the more uſual Method now uſed to ſupply the Place of the *Refrigeratory*, is by a Worm, or ſpiral Pipe running through a Tub of cold Water.—Diſtillation is perform'd by Evaporation and *Refrigeration.* See EVAPORARION, *&c.*

REFUGE, REFUGIUM, in our old Cuſtoms, a Sanctuary or Aſylum. See SANCTUARY and ASYLUM.

At *Paris* is a Hoſpital called the *Refuge*, wherein diſſolute Women are ſhut up. See MAGDALEN.

REFUGEES, *French-Calviniſts*, who by the Revocation of the Edict of *Nants*, in 1685, have been conſtrain'd to quit their Country, and retire for *Refuge* into *Holland*, *Germany*, *England*, &c. to ſave themſelves from the neceſſity of abandoning their Religion. See EDICT.

REGAL, ſomething belonging to a King. See KING.

Regal is of the ſame import with *Royal*; the former being form'd of the Latin *Rex*; the other of the *French*, *Roy*, King. See ROYAL.

REGAL *Fiſhes.* See ROYAL *Fiſhes.*

REGALE, in the *French*, *Juriſprudence*, is a Right belonging to the King over all Benefices. See BENEFICE.

The *Regale* conſiſts in enjoying the Revenues of Biſhopricks during the vacancy of their Sees; and of preſenting to the Benefices dependant thereon, which become vacant during that time, and 'till a Succeſſor have taken the Oath of Fidelity, and have procured Letters Patents, to ſecure him from the *Regale.*

The Enjoyment of the Fruits of the See is called the *Temporal Regale*; that of preſenting to Benefices the *ſpiritual Regale.*

Some refer the Origin of the *Regale* to the time of *Clouis*, and ſay the Clergy granted this Priviledge to the King, upon his defeating the *Viſigoths*; others ſay, Pope *Adrian* gratified *Charlemaign* with it, in a Council held at *Rome.*—'Tis obſerv'd by others, that the *Regale* was originally no more than a Ward, or Adminiſtration; and that the Kings were only Depoſitaries of the Fruits of the vacant Biſhopricks, and appointed *Oeconomi* to look to them during the Vacancy. See OECONOMIES.

'Tis added, that the Kings of the firſt and ſecond Race never enjoy'd any ſuch Priviledge, and that it was only introduced in the twelfth Century, in favour of Inveſtitures. See INVESTITURE.

REGALE, REGALIO, a magnificent Treat or Entertainment, given Embaſſadors, or other Perſons of Diſtinction, to divert or do them Honour.

In *Italy* 'tis uſual at the Arrival of any Traveller of Eminence, to ſend him a *Regale*; that is, a Preſent of Fruits, Sweet-Meats, *&c.* by way of Refreſhment.

REGALIA, in Law, the Rights or Prerogatives of a King. See KING.

Theſe are reckoned by Civilians to be ſix; 1°. Power of Judicature. 2°. Power of Life and Death. 3°. Power of War and Peace. 4°. Maſterleſs Goods. 5°. Aſſeſsments. 6°. Minting of Money. See ROYALTIES.

REGALIA is alſo uſed for the ſeveral Parts of the Apparatus of a Coronation; as the *Sceptre* with the *Croſs*; *Sceptre* with the *Dove*; St. *Edward's Staff*; four ſeveral *Swords*; the *Globe*; the *Orb* with the *Croſs*, &c. uſed at the Coronation of our Kings. See CORONATION.

REGALIA, *of the Church*, are thoſe Rights and Priviledges which Cathedrals, *&c.* enjoy by Grants, and other Conceſſions of Kings. See CHURCH, CATHEDRAL, *&c.*

Sometimes the Term is uſed for the Patrimony of the Church; as *Regalia Sancti Petri*, &c. and particularly for ſuch Lands and Hereditaments as have been given by King's to the Church.—*Cepimus in Manum noſtram Baroniam &* Regalia *quæ Archiepiſcopus Eborum de nobis tenet.* Pryn. Lib. Ang.

Theſe *Regalia* while in Poſſeſſion of the Church, were ſubject to the ſame Services as all other temporal Inheritances; and after the Death of the Biſhop reverted to the King, 'till he inveſted another with them; which in the Reigns of *William the Conqueror*, and ſome of his immediate Succeſſors, was frequently delay'd, and as oft did the Biſhops make Complaint thereof, as appears from *Malmesbury*, *Neubrigenſis*, &c. See BISHOP.

This laſt Author ſays, that great Complaint was made againſt *Henry* II. *Quod Epiſcopatus Vacantes, & provenientia perciperet commoda, diu vacare voluit, & Eccleſiaſticis potius uſibus applicanda in fiſcum redegit.* See TEMPORALITY, BENEFICE, *&c.*

REGALIA *facere*, is uſed for a Biſhop's doing Homage or Fealty to the King, when he is inveſted with the *Regalia.*

Thus *Malmsbury*, in *Anſelm.* Regalia *pro more iſtius temporis faciens principi 7 Kalend. Octobris, Cantuariæ aſſedit.*

REGALIS *Aqua*, or *Aqua* REGIA, an Acid corroſive Spirit or Water, ſerving, as a Menſtruum, to diſſolve Gold. See DISSOLUTION.

The Baſis or eſſential Ingredient of *Aqua Regia*, is common or Sea Salt; which is the only Salt in Nature that will operate on Gold. See GOLD and SALT.

There are divers Ways of preparing it; for, in effect, the Salt will not fail of its End, in what form ſoever applied.—The common Way is by mixing common Salt, or Sal Armoniac, with Spirit of Nitre; or with common Aqua Fortis, which is made of Nitre and Vitriol. See AQUA *Fortis.*

It has its Name from its diſſolving Gold, reputed among Chymiſts, the *King* of Metals.

Aqua Regalis diſſolves Gold, but not Silver; *Aqua Fortis* Silver, but not Gold.—For the reaſon hereof ſee MENSTRUUM.

REGARD, of the Foreſt, the over-ſight or inſpection thereof; or the Office or Province of the *Regarder*; which is to go through the whole Foreſt, and every Bailiwick thereof, before the holding of the Seſſions of the Foreſt, or Juſtice Seat; to ſee and enquire of the Treſpaſſes therein. See FOREST.

Ad videndum, ad Inquirendum, ad Imbreviandum, ad certificandum, &c. See REGARDER.

REGARD is alſo uſed for the Extent of the *Regarder's* Charge, *i e.* for the whole Foreſt; or all the Ground that is Parcel thereof. See PURLIEU.

REGARDANT, in Heraldry, is underſtood of a Lion, or other Beaſt of Prey, bore in a Poſture of looking behind him, with his Face towards his Tail.

Others apply it to a Beaſt which only ſhews the Head, and ſome Part of the Neck, as moving from out of ſome Diviſion of the Coat into another.—He bears *Azure*, three Bends, *Or*, in a chief Argent, charg'd with a Lion *regardant* Gules.

Villain REGARDANT, or *Regardant to the Manour*, is an antient Officer, or Retainer to the Lord; thus called becauſe charged to do all baſe Services within the Manour, to ſee the ſame freed of all filthy and loathſome things that might annoy it. *Coke* on *Littleton*, Fol. 120.

REGARDER, REGARDATOR *Foreſtæ*, an antient Officer of the King's Foreſt, whoſe Buſineſs was every Year, upon Oath, to make a *Regard*, *i. e.* take a View of the Foreſt Limits; alſo to enquire of all Offences and Defaults committed by the Foreſters within the Foreſt, and of all the Concealments of them, and whether all the other Officers did execute their reſpective Duties or not. See FOREST.

Manwood refers this Inſtitution to King *Henry* II. but *Spelman* thinks the Name, at leaſt, was given ſince, and that they were the ſame with thoſe Officers called *Cuſtodes Venationis.* See REGARD.

REGEL, or RIGEL, a fix'd Star of the firſt Magnitude, in *Orions* Left Foot.—Its Longitude, Latitude, *&c.* ſee among the reſt of the Conſtellation ORION.

REGENERATION, in Theology, the Act of being born again by a ſpiritual Birth, or of becoming a Child of God. See CONVERSION.

Regeneration is perform'd by the waſhing of the Holy Spirit, whereof Baptiſm is the Sign. See BAPTISM.

When an Infidel is converted, Baptiſm is adminiſtred as a Sign of *Regeneration.*

REGENT, a Perſon who governs a Kingdom during the Minority, or the Abſence of the King. See VICE ROY.

In *France*, the Queen Mother has the Regency of the Kingdom, under the Title of *Queen Regent*, while the King is a Minor.—Some have urged that Women being incapable of ſucceeding to that Crown, were incapable of the *Regency*; but Cuſtom has declared in their favour. See SALIC.

REGENT is alſo uſed for a Profeſſor of Arts or Sciences, who holds a Claſs, or ſet of Pupils, in a Colledge. See COLLEGE.

The Foreign Univerſities are generally compoſed of Doctors, Profeſſors and *Regents*. *Regent* and Scholar are Relative Terms. See TUTOR.

Regent is generally reſtrain'd to the lower Claſſes, as *Regent* of Rhetoric, *Regent* of Logic, *&c.* thoſe of Philoſophy are rather call'd Profeſſors. See PROFESSOR.

REGIFUGE, REGIFUGIUM, a Feaſt held in antient *Rome* on the ſixth of the Calends of *March*, *i. e.* on our 24th of *February*, in Memory of the Expulſion of their Kings, particularly of *Tarquin's* flying out of *Rome* on that Day. See FEAST.

Some will have this Feaſt to bear the Name from the *Rex Sacrorum*, King of the Sacrifices, flying out of the Comitia, or the

Place

Place of Assembly, as soon as the Sacrifice was over; in Imitation of the Flight of *Tarquin the Proud.*

Some Criticks and Antiquaries will have *Regifugium*, the same with *Fugalia*; others hold them to be different. See FUGALIA.

REGICIDE, a *King-killer.*—The Term is also used for the Act itself of murdering of a King; of *Rex* and *Cædo*, I slay.

Regicide is chiefly used in speaking of the Persons concern'd in the Trial, Condemnation, and Execution of King *Charles* the First.

REGIMEN, in Medicine, a Rule or Course of living, with regard to eating, drinking, cloathing, and the like; accommodated to some Disease, and to the particular Course of Medicine the Patient is under. See DIET.

'Tis doubted whether the hot or cold *Regimen* be most convenient in Fevers.—The hot *Regimen* which antiently obtained in the Small-Pox, begins to be disused.—The *Regimen* is very different in different Countries: *Bartholin* says, a Slice of Bacon, in *Denmark*, is an usual Dish for a Person in a high Fever. The Word is pure *Latin*, and signifies Government and Rule.

REGIMEN, in Chymistry and Alchymy, is the Method of ordering and conducting any thing, that it may answer its Intention.

Thus, *Regimen of the Fire*, is the manner of making and ordering a Fire, and the Degrees thereof. See FIRE and DEGREE.

Regimen of the Work, that is, *of the Philosopher's Stone*, call'd *the Work of Patience*, is the Rule and Conduct to be observ'd to attain Projection. See PHILOSOPHERS *Stone*, and PROJECTION.

There are three things to be chiefly regarded in the *Regimen of the Work*—The first to administer a gentle, easy Heat, at the beginning of the Coction.

The second to continue this external Heat according to the Season of the Work; always observing four Seasons, as in the common and astronomical Year: The beginning being the Winter, the Progress the Spring, then Summer, and lastly Autumn, which is the time of Maturity and Perfection of the Stone: In all which the Heat is to be augmented in Proportion to the Augmentation observ'd in Nature.

It is to be added, that the Work may not be begun in any Season, but regard is to be had to the Seasons of Nature; least the Winter of the Work be found in the Summer of the Year, *&c.* Which, however, is to be understood of the Day wherein the Mercury is put in the *Ovum Philosophicum*; not of that when it is begun to be set at Liberty from the Prisons Nature had inclosed it in.

The third is that in augmenting the Fire, the Augmentation be not of a whole Degree at once; the Spirits being unable to bear such Violence; but a Degree is to be divided into four Parts, and one Part to be taken at a time. See DEGREE.

All the Operations of the first *Regimen*, are occult and invisible: In the second *Regimen* comes Putrifaction, which is the first sensible Change; shewing it self by its black Colour. See PUTRIFACTION, *&c.*

REGIMEN, or GOVERNMENT, in Grammar, is that Part of Syntax or Construction which regulates the Dependancy of Words; and the Alterations which one occasions in another. See SYNTAX and CONSTRUCTION.

Thus we say, the *Regimen* of a Verb active, is an Accusative, *i. e.* a Verb active governs an Accusative; or requires that the Noun which receives its Action be in the Accusative Case. See VERB, ACCUSATIVE, *&c.*

Prepositions have some *Regimen*, *i. e.* they require certain Cases in the Nouns they are prefix'd to; by which they are distinguished from Adverbs which have none. See PREPOSITION and ADVERB.

The *Regimen*, or Construction of Government, is entirely arbitrary; and differs in all Languages; one Language forming its *Regimen* by Cases, as the *Latins* and *Greeks*; others by Particles, in lieu thereof, as the *English*, by *of*, *to*, &c. the *French*, *Spaniards*, and *Italians*, by *de*, *a*, *da*, &c. See CASE.

There are, however, some general Maxims which hold in all Languages—as 1°. That there is no Nominative Case in any Sentence but has a Reference to some Verb either express'd or understood. See NOMINATIVE.

2°. That there is no Verb but has its Nominative Case, either express'd or understood.—Indeed in Languages which have proper Accusatives, as the *Latin*, before Infinitives there is an Accusative, not a Nominative Case: as *Scio petrum esse doctum.*

3°. There is no Adjective but has a Relation to some Substantive. See ADJECTIVE, *&c.*

4°. That there is no Genitive Case but is govern'd by some other Noun; inasmuch as that Case always expresses the Possessor, which must be governed by the possess'd.—This Rule does not hold so apparently in the modern as the antient Languages; in regard the Particles *of*, *de*, &c. which are the proper Signs of the Genitive Cases, are frequently used as Prepositions. See GENITIVE.

5°. That the *Regimen* of Verbs is frequently laid on different Kinds of Relations, according to Custom or Usage; which yet does not change the specific Relation of each Case, but only shews that Custom has made Choice of this or that, according to Fancy.—Thus the *Latins* say, *Juvare aliquem, & opitulari alicui*, to help one.—Thus the *French* say, *servir quelqu' un & servir a quelqu' un*, to serve one.—Thus the *English* say, *Fight one*, or *Fight with one.*—And thus in *Spanish* most of the Verbs active govern indifferently either a Dative or an Accusative. Sometimes, also, the Verb admits of several *Regimens*; as, *præstare aliquem*, or *alicui*, *Eripere morti aliquem*, or *aliquem a morte.*

Indeed the different *Regimen* sometimes makes an Alteration in the Sense; in which, particular regard is to be had to the usage of the Language.—Thus the *Latin*, *cavere alicui*, signifies to watch, or be careful of the preservation of any one: *Cavere aliquem*, to beware of him.

There is one very common Fault in *Regimen*, which our accurate Writers should be careful to avoid; *viz.* the using of two Verbs that require different Cases, together, as only governing one Case: As in this Example; after *embracing* and giving his Blessing to his Son; where, *embracing* requiring an Accusative, and *giving* a Dative Case, the *Regimen*, or Construction of the first Verb with the Noun is irregular: *embrace to a Son.*

The same may be observ'd in Nouns; as I conjured him by the Memory and the Friendship he bore my Father; where *Memory* does not agree with the Verb *he bore.*

REGIMENT, in War, a Body of Troops of Horse, or Companies of Foot, commanded by a Colonel. See COLONEL.

The Number of Men in a *Regiment* is as undetermined as that of the Men in a Troop or Company. See TROOP and COMPANY.

There are *Regiments* of Horse, that are not above 300 Men; and there are some in *Germany* of 2000; and the *Regiment* of *Picardy* in *France* consists of 120 Companies, or 6000 Men.

The *French Regiments* of Horse are not commanded by a Colonel, as the Foot are, but by a *Mestre de Camp.* See MESTRE *de Camp.*

Some observe, that there were no *Regiments* of Horse before the Year 1637. 'Till then the Troops were loose, and independent of each other, not incorporated into a Body or *Regiment.* See GUARD.

REGIO *Assensu*, is a Writ whereby the King gives his Royal Assent to the Election of a Bishop. See BISHOP.

REGION, REGIO, in Geography, a *Country*; or a particular Division of the Earth; or a Tract of Land inhabited by People of the same Nation. See EARTH, NATION, *&c.*

The modern Astronomers divide the Moon into several *Regions* or Provinces, to each whereof they give its Name. See MOON.

REGION in Physiolgy.—Authors divide the Atmosphere into three Stages, call'd the *upper*, *middle*, and *lower Regions.* See ATMOSPHERE.

The lowest is that wherein we breath; and is bounded by the Reflexion of the Sun's Rays; that is, by the Height to which they rebound from the Earth. See RAY.

The *middle* is that wherein the Clouds reside, Meteors are form'd, *&c.* extending from the Extremity of the *lowest*, to the tops of the highest Mountains. See METEOR, CLOUD, MOUNTAIN, *&c.*

The *upper* commences from the Tops of the Mountains, and reaches to the utmost Limits of the Atmosphere.—In this reigns a perpetual, equable Calmness, Clearness, and Serenity. See AIR.

Some Authors use the Term *Elementary Region*, for the Space of the whole Atmosphere, from the Earth to the Sphere or Heaven of the Moon; because within this are contained the four Elements, and all Elementary Bodies. See ELEMENT and ELEMENTARY.

Etherial Region is used for the whole extent of the Universe, including the Orb of the fix'd Stars, *&c.* See UNIVERSE.

REGION, in Anatomy, is a Division of the human Body. See BODY.

Anatomists divide the Body into three *Regions*, or *Venters.* See VENTER.

The *upper Region* is that of the Head; reaching as low as the first *Vertebra*; and comprehending the animal Organs, the Brain, *&c.* See HEAD, *&c.*

The *middle Region* is that of the Thorax or Breast, which *Hippocrates* calls the upper Venter, and which reaches from the Clavicles to the Diaphragm; wherein are contained the vital Parts, as the Heart, Lungs, *&c.* See HEART, LUNGS, *&c.*

The third or *lower Region* is the Abdomen or Belly, *&c.* containing the natural Parts, destin'd for Digestion, Purgation, and Generation. See ABDOMEN.

REGIONARY, REGIONARIUS, in Ecclesiastical History, a Title given from the fifth Century, to Persons who had the Charge and Administration of the Church Affairs within a certain District or *Region.*

At *Rome* there were antiently seven *Regionary Deacons*, who presided over a kind of Hospitals, and look'd to the Distribution of Alms. See DEACON.

There were also *Regionary Subdeacons*, and *Regionary Notaries*, *Regionary Bishops*, &c. See NOTARY.

A *Regionary Bishop* was properly a Missionary invested with an Episcopal Character, but without being attach'd to any particular See; that he might be at Liberty to go preach, and perform other Functions of his Ministry, whither soever the Spirit of God, and the Wants of the People should call him. See MISSIONARY.

RE-

REGISTER, Registrum, a publick Book, ſerving to enter and record Memoirs, Acts, and Minutes, to be had recourſe to, occaſionally, for the juſtifying of Matters of Fact, &c. See Record.

Menage derives the Word, by Corruption, from *Regeſtum*, a Book containing Extracts of ſeveral Books, &c. collected together: *Dicitur regiſtrum quaſi iterum geſtum.*—Others derive it from the old *French*, *giſter*, to lie down in a Bed, &c.

The Law of *Scotland* is render'd very eaſy and regular, by means of the great Number of publick *Regiſters*, for the recording of the Conveyances of Lands, &c. of private Perſons.—Of theſe there are two Kinds: The one *General*, fix'd at *Edinburgh*, under the Direction of the *Lord Regiſter*, who before the Union was the fifth Officer of State, and beſides the Regiſtry, was Clerk of the Parliament, Treaſury, Exchequer, and Seſſion.

The other is particularly kept in the ſeveral Shires, Stewarties, and Regalities.—The Clerks hereof are obliged to tranſmit the *Regiſters* of their reſpective Courts, to the general *Regiſter*; and the Notaries their Protocols: And here they are ſo diſpoſed, that on demand the Lieges can have a view of any Writs which the Law requires to be *regiſter'd*, or which Parties for their Security have thought fit to record.

The *Regiſters* were firſt ſet on Foot by Act of Parliament under King *James* VI. to the unſpeakable Advantage of the Subject.

No Man can have a right to any Eſtate, but it muſt be *regiſtred* within forty Days of his becoming ſeiz'd of it, otherwiſe 'tis null: By this means all ſecret Conveyances are cut off.

Register is alſo uſed for the Clerk or Keeper of a *Regiſter*, or *Regiſtry*. See Clerk.

Of theſe we have ſeveral, denominated from the *Regiſters* they keep—as *Regiſter of the High Court of Delegates*; *Regiſter of the Arches Court of Canterbury*; *Regiſter of the Court of Admiralty*; *Regiſter of the Prerogative Court*; *Regiſter of the Garter*, who is always Dean of *Windſor*. See Delegate, Arches, Admiralty, Prerogative, Garter, &c.

Register *of a Pariſh-Church*, is a Book wherein the yearly Baptiſms, Marriages, and Burials of each Pariſh, are orderly *regiſtered*. See Parish, &c.

This Practice was laudably inſtituted by that great, but unfortunate Perſon, *Thomas Cromwell*, Earl of *Eſſex*, Anno 1538. while he was Vicar-General to King *Henry* VIII. See Bill *of Mortality*.

Register is alſo the Title of a Book, containing the Forms of moſt of the Writs uſed in Common Law; call'd the *Regiſter of Writs*. See Writ.

This *Regiſter*, *Coke* on *Littleton* obſerves, is one of the moſt antient Books of the Common Law.

Register-*Ships*, or *Ships of* Register, in Commerce, are Veſſels to which the King of *Spain*, or the Council of the *Indies*, grant Permiſſions to go and traffick in the Parts of the *Spaniſh Weſt-Indies*. See Commerce.

They are thus called becauſe the Ships are to be *regiſtered* before they ſet ſail from *Cadix*, which is the Place where they uſually load for *Buenos Ayres*.

Theſe Veſſels, by the Tenor of the Permit, are not to exceed three hundred Tuns: But there is that good underſtanding between the Merchants and the Council of the *Indies*, that Ships of five or ſix hundred Tun frequently paſs un-noted.

The Permiſſions coſt thirty thouſand Pieces of Eight, each: But were they to coſt an hundred thouſand the Merchants would be Gainers, and the King of *Spain* a Loſer.—For though the Quantity and Quality of the Merchandices on-board, be always expreſs'd; yet, by Force of Preſents, the Officers here and in the *Indies*, allow them to load and unload vaſtly more than the Permiſſion expreſſes.—Veſſels whoſe Certificate only mentions twelve thouſand Skins, and an hundred thouſand Pieces of Eight, have been known to have on-board above four Millions in Gold and Silver; twenty ſix thouſand Skins, &c. So that the King of *Spain*'s Fifth, and his other Dues, were almoſt nothing to what they ſhould be.

Add to this, that in the Years 1702, 1703, &c. theſe *Regiſter* Veſſels, countenancing and backing each other, ſold their Commodities for above three hundred *per Cent.* Profit.—A Hat was ſold for 18 Pieces of Eight; an Ell of ordinary Cloth for 12 Pieces of Eight, &c.

Among the *Regiſter* Veſſels may be reckoned a Ship of five hundred Tuns, which the King of *Spain* allows the *Engliſh South-Sea Company* to ſend each Year to the Fairs held at *Porto Bello*, *Carthagena*, &c. See Company.

Register, among Letter-Founders, is one of the inner Parts of the Mould wherein the Printing-Types are caſt. See Letter.

Its uſe is to direct the joining them juſtly together again, after opening them to take out the new-caſt Letter. See *Letter*-Foundery.

Registers, in Chymiſtry, are Holes, or Chinks, with Stopples to them, contrived in the Sides of Furnaces, to regulate the Fire, *i. e.* to make the Heat immediately more intenſe, or remiſs, by opening them to let in the Air, or keeping them cloſe, to exclude it. See Furnace, Fire, Heat, Degree, &c.

REGISTRING, in Printing, the diſpoſing of the Preſs ſo as that the Lines and Pages printed on one Side of the Sheet, meet exactly againſt thoſe on the other; which is done by means of two Points in the greater or outward Tympan. See Printing.

REGISTRY, comprehends the Office, Books, and Rolls wherein the Proceedings of Chancery, or any ſpiritual Court, are *regiſter'd* or recorded. See Register, Record, Roll, &c.

REGIUS-*Profeſſors*.—King *Henry* VIII. founded five Lectures in each of our Univerſities; *viz.* of Divinity, Hebrew, Greek, Law, and Phyſick; the Readers of which Lectures are in the Univerſity Statutes, called *Regii Profeſſores*. See Professor.

Regius *Morbus*. See Jaundice.

REGLET, or Riglet, in Architecture, a little flat narrow Moulding, uſed chiefly in Compartiments, and Pannels, to ſeparate the Parts or Members from one another, and to form Knots, Frets, and other Ornaments. See Moulding, Fret, &c.

The *Riglet*, according to *Daviler*, differs from the Fillet and Liſtel, in that it projects equally, like a Ruler. See Fillet and List.

The Word is a diminutive of the *French*, *Regle*, Rule.

Reglets, or Riglets, in Printing, are thin Rulers, or ſlips of Wood of different Dimenſions, placed in the Chaſe, between the Pages, and at the extremes thereof, to keep them aſunder, and hold them tight. See Printing.

The *Reglets* make the chief Part of what they call the *Furniture of the Chaſe*. See Chase.

They are particularly denominated from the Place they are in, in reſpect of the Pages, *Head-Sticks*, *Foot-Sticks*, *Gutter-Sticks*, &c.

The Term is alſo uſed abroad for a Ruler of Metal, $\frac{1}{4}$ of an Inch long, but which may be lengthened out by joining ſeveral together; uſed to ſeparate the Columns, in Books that have ſeveral in the ſame Page; as alſo for Lines to Place the Notes on in Printing of Muſick.

Laſtly, *Reglet*, is alſo a little thin ſlip of Wood uſed by ſome Compoſitors to take off the Lines from the Compoſing-ſtick, and Place them on the Gally, as faſt as compoſed. See Compositor, Galley, &c.

REGRATOR, a Law Word, formerly uſed for one that bought Wholeſale, or by the Great, and ſold again by Retail.

The Term is now chiefly uſed to denote one that Buys and Sells again any Wares, or Victuals in the ſame Market or Fair, or within five Miles of it.

Regrator is alſo uſed for a Perſon who furbiſhes up old Moveables, to make them paſs for new. See Furbisher.

Among Maſons, &c. to *regrate a Stone*, is to take off the outer Surface of an old Hewn Stone, with the Hammer and Ripe, in order to whiten and make it look freſh again. See Stone and Masonry.

REGRESSION, or *Retrogradation* of Curves, &c. See Retrogradation, &c.

REGULA. See Rule.

Regula, in Architecture. See Orlo.

REGULAR denotes the Relation of any thing that is agreeable or conformable to the Rules of Art. See Rule.

Thus we ſay, a *Regular* Proceeding.—A *Regular* Building.—A *Regular* Poem, &c. *Regular* Verb, &c. See Verb, Poem, &c.

In this Senſe the Word ſtands oppoſed to Irregular, or Anomalous. See Anomalous, &c.

Regular *Figure*, in Geometry, is a Figure which is both equilateral, and equiangular; *i. e.* whoſe Sides, and conſequently, Angles, are all equal. See Figure.

The Equilateral Triangle and Square are *regular Figures*. See Square and Triangle.

All other *regular* Figures conſiſting of more than four Sides, are called *Regular Polygons*. See Polygon.

Every *regular* Figure may be inſcribed in a Circle. See Circle.

For the Dimenſions, Properties, &c. *of Regular Figures*, ſee Polygon.

Regular *Body*, call'd alſo *Platonic Body*, is a Solid terminated on all Sides by *regular* and equal Planes, and whoſe ſolid Angles are all equal. See Body and Plane.

The *Regular* Bodies are five in Number; *viz.*—The *Cube*, which conſiſts of ſix equal Squares; the *Pyramid* or *Tetrahedron* of four equal Triangles; the *Octahedron* of Eight; the *Dodecahedron* of 12; and the *Icoſihedron* of twenty; ſee each under its proper Article, Cube, Tetrahedron, Ochahedron, &c.

Beſide theſe five there can be no other *Regular* Bodies in Nature.

To meaſure the Surface and Solidity of the five regular Bodies.

The Solidity, &c. of the Cube is ſhewn under the Article Cube.

The *Tetrahedron* being a Pyramid, and the *Octahedron* a double Pyramid; and the *Icoſihedron* conſiſting of twenty triangular Pyramids; and the *Dodecaedron* of twelve Quinquangular ones, whoſe Baſes are in the Surface of the *Icoſihedron* and *Dodecahedron*, and their Vertices meeting in a Centre: The Solidities of theſe Bodies are all found from what we have ſhewn under the Article Pyramid.

Their Surface is had by finding the Area of one of the Planes, from the Lines that bounds it; (ſee Triangle); and multiplying the Area thus found by the Number from which the Body is denominated; *e. gr.* for the *Tetraedron* by 4; for the *Hexahedron* or Cube, by ſix; for the *Octahedron* by 8; for the *Dodecahedron* by 12;

12; and for the *Icosihedron* by 20.—The Product is the superficial Area. See AREA and SUPERFICIES.

Proportions of the Sphere, and of the five Regular Bodies *inscribed therein: The Diameter of the Sphere being* 2.

The Circumference of a great Circle is,	6.	28318
Surface of a great Circle,	3.	14159
Surface of the Sphere,	12.	56637
Solidity of the Sphere,	4.	18859
Side of the Tetrahedron,	1.	62299
Surface of a Tetrahedron,	4.	6188
Solidity of a Tetrahedron,	0.	15132
Side of a Cube or Hexahedron,	1.	1547
Surface of the Hexahedron,	8.	
Solidity of the Hexahedron,	1.	5396
Side of an Octahedron,	1.	41421
Surface of the Octahedron,	6.	9282
Solidity of the Octahedron,	1.	33333
Side of the Dodecahedron,	0.	71364
Surface of the Dodecahedron,	10.	51462
Solidity of the Dodecahedron,	2.	78516
Side of the Icosihedron,	1.	05146
Surface of the Icosihedron,	9.	57454
Solidity of the Icosihedron,	2.	53616

If one of these Bodies be required to be cut out of the Sphere of any other Diameter; say, as the Diameter of the Sphere 2, is to the Side of any one Solid, inscribed in the same, (suppose the Cube 1. 1547.) so is the Diameter of any other Sphere (suppose 8.) to 9. 2376, the Side of the Cube inscrib'd in this latter Sphere.

Let *dr*, then, (*Tab. Geometry, Fig.* 81.) be the Diameter of any Sphere, and *da* $\frac{1}{3}$ of it. $= ab = br$. Erect the Perpendiculars *ae, ef,* and *bg*; and draw *de, df, er, fr,* and *gr*; then will (1.) *re* be as the Side of the Tetrahedron: (2.) *df* is the Side of the Hexahedron: (3.) *de* is the Side of the Octahedron. (4.) And cutting *de* in extreme and mean Proportion in *h*, *dh* will be the Side of the Dodecahedron. (5.) Setting the Diameter *dr* up perpendicularly at *r*; from the Centre *c*, to its Top, draw the Line *cg*, cutting the Circle in *g*.—Let fall the Perpendicular *gb*; so is *br* the Side of the Icosihedron.

REGULAR *Curves*, are such whose Curvity proceeds continually in the same uniform Geometrical Manner.—Such are the Perimeters of the Conic Sections. See CURVE, CONIC *Section*, &c.

Such as have a Point of Inflection, or Regression; and which being continued to a certain Point, turn themselves a contrary Way, are call'd *Irregular Curves*.—Such are the Conchoid, and the solid Parabola, which has a Square for its Parameter. See FLEXION and RETROGRESSION.

REGULAR *Architecture, Fortification*, &c. See ARCHITECTURE and FORTIFICATION.

REGULAR, in the Monastic Sense, is a Person who has made the Vows in some Religious House. See RELIGIOUS and VOW.

Under *Regulars* are comprehended the whole Body of Monks. See MONK.

The Denominations of *Regular*, in this Case, arises hence, that they are bound to observe the Rule of the Order they are enter'd into. See RULE and ORDER.

Hence, *Regular Priest* is used for a Priest who is in some Religious Order; in opposition to a Secular Priest, who lives in the World, or at large. See SECULAR.

A Cardinal is reputed both *Regular* and Secular, and is entitled to the Rights of both. See CARDINAL.

Regulars may be promoted to Bishopricks and Archbishopricks, as well as Seculars; but their Promotion secularizes them; the Episcopal Dignity dispensing them from the Observation of the Rule whereof they have made Profession. See SECULARISATION.

REGULAR *Canons*. See CANON.

REGULAR *Benefices*, are such as can only be held by Monks or Religious; or at least, *per cupientem profiteri*, a Person desirous to embrace the Monastic Life. See BENEFICE.

'Tis a Maxim in the *Romish* Canon Law.—*Regularia Regularibus*, i. e. *Regular* Benefices are to be confer'd on *Regular* Priests.—The Abbies that are Chiefs of their respective Orders are all *Regular*, and can only be served by Monks or Cardinals. See ABBY.

All Benefices are presumed Secular, unless they be proved *Regular*.

Antiently, the *Regular* Benefices were almost all confer'd by way of Administrations or Curacies; the Religious Incumbents being always *ad Manum* of their Superiours, who displaced them at Pleasure.—Hence the common Maxim among the Canonists, *omne Beneficium regulare manuale*.

The Benefices affected to *Regulars* are Abbies, Conventual Priories, Simple Priories, and Claustral Offices.—They may be confer'd on Seculars in *Commendam*. See COMMENDAM.

REGULAR *Places*, are those within the Boundary or Inclosure of the Convent; as the Cloister, Dormitory, Chapter, and Refectory.—In opposition to those destined for Guests, and for the Necessaries of the House, which are reputed without the Inclosure.

REGULATION, a Rule or Order prescribed by a Superior, for the uniform and orderly Management of some Branch of Policy, Justice, or the like. See LAW and STATUTE, ORDINANCE, *&c.*

REGULATOR, *of a Watch*, is a small Spring belonging to the Balance; serving to adjust the going, and make it either proceed faster or slower. See WATCH, *&c.*

REGULO, a Title given to the Sons of the Emperors of *China*.

The Emperor's eldest Son, whom we call the *first Regulo*, was the only one of all his Children in favour; 'till, of a sudden, Matters took a new Face. From some new Intelligences, the Emperor learnt the Innocence of the hereditary Prince whom he had deposed, and the Artifices that had been used to ruin him: Particularly, that the *Regulo*, to succeed therein, had had recourse to Magick, and at the Instigation of certain *Lamæ*, or *Tartar* Priests, had procured a Statue to be buried in *Tartary*; accompanying the Ceremony with several Magical Operations. Upon this, Orders were instantly sent to seize the *Lamæ*, and to dig up the Statue: The *Regulo* had his Palace assign'd him for a Prison. *Let. Edif. & Cur.*

REGULUS, *petty King*, in our antient Customs, a Term frequent in the *Saxon* Councils, signifying a *Comes* or *Count*. See COUNT and EARL.

Hence, *Subregulus*, was used for a *Vice-comes*, or *Vicount*: Tho' in many Places the two seem used indifferently for the same Dignitary.

Thus in the Archives of the Cathedral of *Worcester*, *Uthredus*, sometimes stiles himself *Regulus*, and sometimes *Sub-regulus* of the City of *Worcester*.

But in other Places we find *Offa*, *Rex* Merciorum; *Uthredus*, Regulus; Aldredus, *Subregulus*, &c.

REGULUS, in Chymistry, is the finest and purest Part of a Metal or Mineral, which sinks or precipitates to the bottom of the Crucible or Furnace, in melting a Mineral, or metallic Ore. See METAL, MINERAL, FUSION, *&c.*

To procure the *Regulus*'s of Metals, *&c.* Flux Powders are commonly used; as Nitre, Tartar, *&c.* which purge the sulphurous Part adhering to the Metal, by attracting and absorbing it to themselves. See FLUX *Powder*.

Regulus is principally used for that of Antimony, which is a ponderous metallic Powder, that upon fusing some of that Mineral in its crude State, sinks to the bottom, leaving the Scoria or Impurities a-top. See ANTIMONY.

The Alchymists will have this Matter called *Regulus*, i. e. little King, as being the first born of the Royal metallic Blood; which is really a Son, but not a perfect Man, *i. e.* not yet a perfect Metal for want of Time and proper Nourishment.

Antimony purified by simple Fusion, is call'd *Regulus of Antimony*; or *Regulus Antimonii stellatus Philosophorum*.

But the more common way of reducing it into a *Regulus* is with the Addition of Flux Powders, as Tartar and Nitre. See FLUX *Powder*.

The Scoria found at the top of this *Regulus* is violently emetic, as well as the *Regulus* itself, whereof if Cups or drinking Vessels be cast, the Wine put into them will become vomitive.

Of this *Regulus* cast in Moulds are made those commonly called the *Antimonial Pills*, weighing about eight or ten Grains each, one of which being swallowed, will operate considerably both by Vomit and Stool.

These Pills having thus performed their Office, and being discharged the Body, will serve the same Purpose again and again; whence they have obtained the Name of *perpetual Pills*.—The Virtue of this *Regulus* is not however inexhaustible, as has been imagined; for by repeated Infusions in Wine, though the Liquor be made violently Emetic at first, yet by Degrees it loses its Force, and at length ceases to be Vomitive.

Martial REGULUS *of Antimony* is a Mixture of the Nails of Horse's Shoes, melted with the *Regulus*.

In this Operation the Iron dissolving and absorbing the sulphurous Parts of the Antimony, more strongly than the Fluxes in the former Case; and turning it into a Crocus; the Antimony is hereby brought to a greater Degree of Purity, and render'd more efficacious than in the common *Regulus*. See IRON, SULPHUR, *&c.*

This *Regulus* is sometimes further purified by repeated Fusions and Detonations, with the Addition of fresh Antimony, and more Nitre, alternately.

REGULUS, in Astronomy, is a Star of the first Magnitude, in the Constellation *Leo*; call'd also from its Situation, *Cor Leonis*, or the Lion's Heart; and by the *Chaldeans*, *Kalbeleced*, or *Kalbeleceid*, from an Opinion of its influencing the Affairs of the Heavens: as is observed by *Theon*. See STAR.

The Longitude of *Regulus*, as fix'd by Mr. *Flamsteed*, is 25° 31′ 20″; and its Latitude 0°. 26′: 38″ North. See LEO.

REHABILITATION, in the Civil and Canon Law, an Action whereby a Prince or Pope, by Dispensations or Letters Patents, restore a Delinquent to the Condition he was in before his Delinquency. See DEGRADATION, *&c.*

The King alone can *Rehabilitate* an Officer noted, condemned and degraded; or a Gentleman who has derogated from his Degreee. See NOBILITY.

The Pope alone pretends to *Rehabilitate*, i. e. to render capable of Benefices, and Orders, ſuch as had fallen into Hereſy, or other Irregularities.

In *Romiſh* Countries, an Eccleſiaſtick who aſſiſts at the Execution of a Sentence of Death, is to be *rehabilitated*, by an Abſolution call'd a *Sævis* See ABSOLUTION.

REHEARSAL, in Muſick and the Drama, an Eſſay or Experiment of ſome Compoſition, made in private, previous to the Repreſentation or Performance thereof in publick; to habituate the Actors or Performers, and make them more ready and perfect in their Parts.

There is a new Tragedy in *Rehearſal*.—The *Rehearſal* of the Anthem, *&c.*

REIMBURSEMENT, in Commerce, the Action of repaying, or returning what Monies a Perſon had received, by way of advance, *&c.* or what another has diſburſed or paid for us.

A Perſon who gives a Bill of Exchange in Payment, is to *reimburſe* it; if it come to be proteſted, for want of being accepted or paid. See BILL, PROTEST, *&c.*

REIMBURSING is alſo uſed for the paying the Price a Commodity coſts its Owner.—Thus he has ſurrendred to me the Lot of Merchandice adjudged to him at the Sale at *London*, by the Directors of the *Eaſt-India Company*; on Condition of *reimburſing* the Price of the Purchaſe, with the Expences of Carriage, and a Profit of 5 *per Cent.*

REINFORCED *Ring*, of a Canon, is that next after the Trunnions, betwixt them and the Vent. See ORDNANCE.

REINFORCEMENT, in War, a ſupply, or new Proviſion of Men, Arms, Ammunition, *&c.*

REINS, in Anatomy, the *Kidneys*; or that Part of an Animal whereby the Urine is ſeparated from the Blood. See KIDNEYS. See alſo URINE.

The Word, according to *Varro*, is form'd from the *Greek*, ἀπὸ τῦ ῥεῖν, *Quaſi Rivi obſceni humoris ab iis oriantur*.—The *Greeks* call the *Rein*, νεφρὸς, from the Verb, νέφειν, to Snow, Rain. See NEPHRITIC.

In the Manage, we ſay, a Horſe ſhould have *double Reins*; which is when he has them a little more elevated on each Side of the Back-bone, than upon it; ſo that paſſing your Hand along it, you find it large, well furniſhed and double, by the Hollow that goes all along the Back-bone.—The Back ſhould be firm, and not Hollow, or bending from the Withers to the Croup, but ſtraight. See HORSE.

The REINS of Horſes, are alſo two ſtraps of Leather meeting in the Bridle-Hand of the Horſeman, in order to make the Bit bear, and keep the Horſe under Subjection. See BRIDLE.

A *Falſe Rein* is a Lath of Leather, paſſed ſometimes through the Arch of the Banquet, to bend the *Horſe's Neck*.

REINSTATING, the reſtoring of a Perſon or Thing to its former State or Condition, from whence it had been diſturbed or diſplaced.

REINTEGRATION. See REDINTEGRATION.

REIS, or RE, or RES, a little *Portugueze* Copper Coin, nearly equal to the *French Denier tournois*, or to a third Part of the *Engliſh* Farthing. See COIN.

The *Reis* is both a Current and an imaginary Money; the *Portugueze* uſually reckoning by *Reis*, as the *Spaniards* by *Maravedis*. See MARAVEDIS.

Strangers in treating with them, are frequently ſurprized with Demands of ſeveral thouſand *Reis*, when the Matter betwixt them is only of a few Pieces of Eight; the *Millreis*, or thouſand *Reis*, only making 6 *s.* 3 *d. Sterl.*—750 of them are equal to the Piece of Eight. See MILLREIS.

REITTERS, an antient Title given the *German* Cavalry.—The Word is originally *German*, and ſignifies a Horſeman, or Cavalier.

REJOYNDER, in Law, an Anſwer or Exception to a Replication. See REPLICATION.

The Order in the Court of Chancery is thus.—Firſt, the Defendant puts in an Anſwer to the Plaintiff's Bill, which is ſometimes call'd an *Exception:* The Plaintiff's Anſwer to this is call'd a *Replication*; and the Defendant's Anſwer to that, a *Rejoynder*. See BILL and CHANCERY.

The Civilians call it *Duplicatio*. See DUPLICATION.

REJOYNTING, in Architecture, the filling up the Joints of the Stones in old Buildings, *&c.* when wore Hollow by Courſe of Time, or Water.

Rejoynting is perform'd with the beſt Mortar; as that of Lime, and Ciment; ſometimes, alſo with Plaiſter, as in the Joints of Vaults, *&c.* See MORTAR, *&c.*

REITERATION, the Act of repeating a thing, or doing it a ſecond time. See REPETITION.

The Church does not allow of the *Reiteration* of Baptiſm. See BAPTISM.

St. *Gregory* obſerves, that 'tis no *Reiteration*, when there are wanting Proofs of the thing's being regularly done before. See REBAPTIZANTS.

In Pleuriſies, the Phyſicians order the bleeding to be *reiterated* ſix or ſeven times. See PLEURISY.

REITERATING, in Printing. See PRINTING.

RELAPSE, a return or back-ſliding into a Danger, or Evil; out of which a Perſon had eſcaped.

Fevers, Dropſies, *&c.* are Diſeaſes into which *Relapſes* are very frequent and dangerous.—Such a Perſon is *relapſed* into a Hereſy he had abjured.

RELATION, in Philoſophy, the mutual *Reſpect* of two things; or what each is, with regard to the other.

The Word *Relation* is form'd *a referendo*; as conſiſting in this, that one thing is *refer'd* to another: Whence it is alſo call'd *Reſpect*, *Habitude*, *Compariſon*, &c. See COMPARION and HABITUDE.

The Idea of *Relation* we acquire, when the Mind ſo conſiders any thing, that it doth, as it were, bring it to, and ſet it by, another; and carry its view from the one to the other.—Hence the Denominations given to things intimating this Reſpect, are called *Relatives*; and the things ſo brought together, are ſaid to be *Related*.

Thus when I call *Caius*, *Husband*; or this Wall *whiter*; I intimate ſome other Perſon or Thing in both Caſes, with which I compare *him* or *it*.—Hence, the Wall is call'd by the Schoolmen, the *Subject*; the thing it exceeds in whiteneſs, the *Term*; and the whiteneſs the *Foundation* of the Relation.

Relation may be conſidered two Ways; either on the Part of the Mind referring one thing to another; in which Senſe *Relation* is only a Mode or Affection of the Mind, whereby we make ſuch Compariſon: Or on the Part of the things refer'd, which being no other than Ideas, *Relation*, in this Senſe, is only a new Idea reſulting or ariſing in the Mind, upon conſidering of two other Ideas.—So that *Relation*, take it which way you will, is only the Mind; and has nothing to do with the things themſelves. See IDEA.

Any of our Ideas, Mr. *Lock* obſerves, may be the Foundation of *Relation*.—Though where Languages have failed to give correlative Names, the *Relation* is not ſo eaſily taken Notice of: As in Concubine, which is a *Relative* Name, as well as Wife.

There is, in effect, no Idea but is capable of an infinite Number of *Relations:* Thus one ſingle Man may at once ſuſtain the *Relations* of Father, Brother, Son, Husband, Friend, Subject, General, *European*, *Engliſhman*, Iſlander, Maſter, Servant, Bigger, Leſs, *&c.* to an almoſt infinite Number; he being capable of as many *Relations*, as there can be occaſions of comparing him to other things, in any manner of Agreement or Diſagreement, or any reſpect whatſoever.

The Ideas of *Relations* are much clearer and more diſtinct, than of the things *related*; becauſe the Knowledge of one ſimple Idea is oftentimes ſufficient to give the Notion of a *Relation:* But to the knowing of any ſubſtantial Being, an accurate Collection of ſundry Ideas is neceſſary. See SUBSTANCE.

The Perceptions we have of the *Relations* between various Ideas wherein the Mind acquieſces, makes what we call *Judgment*.—Thus, when I judge 2 times 2 make 4. or does not make 5; I only perceive the Equality between 2 times 2 and 4; and the inequality between 2 times 2 and 5. See JUDGMENT.

The Perceptions we have of the *Relations* between the *Relations* of various things, conſtitutes what we call *Reaſoning*.—Thus when from this, that 4 is a ſmaller Number than 6; and that twice 2 is equal to 4; I gather that twice 2 is a leſs Number than 6; I only perceive the *Relation* of the Numbers twice 2 and 4, and the *Relation* of 4 and 6. See REASONING.

The Ideas of Cauſe and Effect, we get from our Obſervation of the Viciſſitude of Things, while we perceive ſome Qualities or Subſtances begin to exiſt, and that they receive their Exiſtence from the due Application and Operation of other Beings.—That which produceth, is the Cauſe; that which is produced, the Effect. See CAUSE and EFFECT.

Thus Fluidity in Wax is the Effect of a certain Degree of Heat, which we obſerve to be conſtantly produced by the Application of ſuch Heat.

The Denomination of Things taken from time, are for the moſt part only *Relations*.—Thus when it is ſaid, that Queen *Elizabeth* lived ſixty-nine, and reigned forty-five Years, no more is meant, than that the Duration of her Exiſtence was equal to ſixty-nine, and of her Government to forty-five annual Revolutions of the Sun: And ſo are all Words anſwering to how long.

Young and Old, and other Words of Time, that are thought to ſtand for poſitive Ideas, are indeed *Relative*; and intimate a *Relation* to a certain length of Duration, whereof we have the Idea in our Minds.—Thus we call a Man young or old, that hath lived little or much of that Time, which Men uſually attain to: And thus a Man is called young at twenty, but an Horſe old, *&c.*

There are other Ideas, that are truly *Relative*, which we ſignify by Names that are thought poſitive and abſolute; ſuch as great and little, ſtrong and weak.—The things thus denominated, are referred to ſome Standards with which we compare them: Thus we call an Apple Great, which is bigger than the ordinary Sort of thoſe we have been uſed to; and a Man weak, that has not ſo much Strength or Power to move, as Men uſually have, or thoſe of his own Size.

Authors give various Diviſions of *Relations*.—The School Philoſophers commonly divide them into thoſe of *Origination*, under which are comprehended the *Relations* of Cauſe and Effect: Thoſe

of

of *Negation*, which are between oppoſite things: And thoſe of *Affirmation*, which are *Relations* of Agreement between Whole and Part, the Sign and Thing ſignified, the Adjunct and Subject.—This Diviſion is founded upon this, that the Mind can only compare things three Ways, *viz.* by inferring, denying, and affirming.

Others divide *Relations* into thoſe of *Origination*; thoſe of *Agreement*, e. gr. Similitude, Parity, *&c.* thoſe of *Diverſity*; and thoſe of *Order*, as Priority, Poſteriority, *&c.*

Others divide them into *Prædicamental*, *Tranſcendental*, and *Prædicamental*.—Under the firſt come thoſe *Relations* between things that belong to the ſame Prædicament; *e. gr.* between Father and Son. To the latter belong thoſe which are more general than the Prædicaments, or are of different Prædicaments; as the *Relations* of Subſtance and Accident; of Cauſe and Effect; of Creator, *e. gr.* and Creature. See TRANSCENDENTAL, *&c.*

Mr. *Lock* gives us a Diſtribution of *Relations* on a different Bottom.—All ſimple Ideas, he obſerves, wherein are Parts or Degrees, afford an occaſion of comparing the Subjects wherein they are, to one another, in reſpect of thoſe ſimple Ideas: As, whiter, ſweeter, more, leſs, *&c.*—Theſe, depending on the Equality and Exceſs of the ſame ſimple Idea, in ſeveral Subjects, may be call'd *proportional Relations*.

Another occaſion of comparing things being taken from the Circumſtances of their Origin, as Father, Son, Brother, *&c.* Theſe may be called *natural Relations*.

Sometimes, the Foundation of conſidering things, is ſome Act whereby any one comes by a moral Right, Power, or Obligation to do ſomething: Such are General, Captain, Burgher; theſe are inſtituted and *voluntary Relations*, and may be diſtinguiſhed from the natural, in that they are alterable and ſeparable from the Perſons to whom they ſometimes belonged, though neither of the Subſtances ſo related be deſtroyed. But natural *Relations* are not alterable, but are as laſting as their Subjects.

Another *Relation* is the Conformity or Diſagreement of Men's voluntary Actions to a Rule, to which they are referr'd, and by which they are judged of: Theſe may be called *Moral Relations*.

It is this Conformity or Diſagreement of our Actions to ſome Law (whereby Good or Evil is drawn on us from the Will and Power of the Law-maker, and is what we call *Reward* or *Puniſhment*) that renders our Actions morally Good or Evil. See GOOD and EVIL.

Of theſe moral Rules or Laws, there ſeem to be three ſorts, with their different Enforcements. Firſt, the Divine Law: Secondly, Civil Law: Thirdly, the Law of Opinion or Reputation. By their *Relation* to the firſt, our Actions are either Sins or Duties. To the ſecond, Criminal or Innocent; to the third, Virtues or Vices. See SIN, VIRTUE, VICE, *&c.*

RELATION, in Logic, is an Accident of Subſtance: accounted one of the ten Categories or Predicaments. See PREDICAMENT and CATEGORY.

Each Subſtance admits of an Infinity of *Relations*.—Thus the ſame *Peter*, conſidered with regard to *Henry*, is in the *Relation* of a Maſter with regard to *John*, in that of a Tenant; with regard to *Mary*, in that of a Husband, *&c.* Again, with regard to one Perſon, he is *rich*, with regard to another poor; with regard to another, he is far, near, tall, ſhort, a Neighbour, Stranger, learned, unlearned, good, bad, equal, *&c.*

'Tis diſputed among the School Philoſophers, whether or no the *Relation* be a thing formally and really diſtinct from the Foundation of the Subſtance. See SUBSTANCE.

RELATION, is alſo uſed in the School Theology, to denote certain of the divine Perfections, call'd *perſonal* ones; in regard by theſe one Divine Perſon is referr'd to another, and diſtinguiſhed from it. See PERSON.

Hence they teach, that in God there is one Nature, two Proceſſions, three Perſons, and four *Relations*. See TRINITY.

Theſe *Relations* are Paternity, Filiation, active Spiration, and paſſive Spiration. See PATERNITY, *&c.* See alſo FATHER, SON, SPIRIT, *&c.*

RELATION, in Geometry, Arithmetic, *&c.* is the Habitude, or Reſpect of two Quantities to one another, with regard to their Magnitude.—This we more uſually call *Ratio*, *Reaſon*. See RATIO.

The Equality or Sameneſs of two ſuch *Relations*, we call *Proportion*. See PROPORTION.

RELATION, in Grammar, is the Correſpondence which Words have to one another in Conſtruction. See CONSTRUCTION.

Faulty and irregular *Relations* are the things chiefly to be guarded againſt, in writing correctly; they make the Senſe obſcure, frequently equivocal.—Thus: The Orator was attended to with a Coldneſs, which was the more remarkable, as the Audience were under ſome Emotion ere he began,—Here, *Coldneſs* being put indeterminately, the Relative *which*, can have no juſt and regular *Relation* thereto. See RELATIVE.

RELATION is alſo frequently uſed for *Analogy*, or what ſeveral things have in common. See ANALOGY.

In Painting, Architecture, *&c.* a certain *Relation* of the ſeveral Parts and Members of the Building or Picture, conſtitutes what we call *Symmetry*. See SYMMETRY.

RELATION *Inharmonical*, is a Term in muſical Compoſition, ſignifying a harſh Reflection of Flat againſt Sharp, in a croſs Form; *viz.* When ſome harſh and diſpleaſing Diſcord is produced, in comparing the preſent Note of another Part.—*Harris*.

RELATION, in Law, is where two things, as Times, *&c.* are conſidered, as if they were one, the thing ſubſequent being conſidered as taking effect, by *Relation*, at the time preceding.

As if *A* deliver a Writing to *B*, to be delivered to *C*, as the Deed of *A*; the Writing ſhall be deem'd to be deliver'd to *C*, at the time when it was given to *B*.

So Bills in Parliament to which the King aſſents on the laſt Day of Parliament, ſhall *relate*, and be of Force from the firſt Day thereof. *Coke* calls it *fictio Juris*. See DAY, TIME, *&c.*

RELATIVE *Propoſitions*, are ſuch as include ſome Relation and Compariſon. See PROPOSITION.

Thus, where the Treaſure is, there will the Heart be.—As much as thou haſt, ſo much thou art worth, *&c.* are *Relative Propoſitions*.

RELATIVE *Place*,
RELATIVE *Time*,
RELATIVE *Gravity*,
RELATIVE *Levity*, &c. } See { PLACE. TIME. GRAVITY. LEVITY, *&c.*

RELATIVE *Terms*, in Logic, are Words which imply a *Relation*, or a thing conſidered as compared to another. See RELATION.

Relative Terms include a Kind of Oppoſition between them; yet ſo, as that the one cannot be without the other.

Such are *Father* and *Son*, Husband and Wife, King and Subjects, *&c.*

RELATIVE, in Grammar, is a Word or Term which in the Conſtruction anſwers to ſome Word fore-going, called the *Antecedent*. See ANTECEDENT.

Pronoun RELATIVE, which *Buffier* chuſes rather to call *Modificative* or *Determinative*, is a Particle added after a Noun, or perſonal Pronoun, with which it has an Affinity, ſo that without them it ſignifies nothing; its only uſe being to expreſs in what view they are conſidered. See PRONOUN.

Of this Kind, in the *Latin*, are *qui*, *quæ*, *quod*, &c. in the *Engliſh*, who, which, whom, *&c.* as in the Book *which* you are reading; the Man *whom* you ſeek; he *who* told it, *&c.*—Where *which*, *whom*, and *who* only follow the Noun or Pronoun, to refer or determine them to ſome particular thing; as to ſeeking, reading, *&c.*

Frequently, the Noun or Pronoun wherewith the *Relative* or Pronoun is join'd, is underſtood: As, *I know who* did that. Where 'tis evident I mean, I know the Perſon who did, *&c.*

RELAY, a freſh Equipage, Horſe, *&c.* ſent before, or appointed to be ready, for a Traveller to change; to make the greater Expedition; as in riding Poſt.

The Term is borrow'd from the *French Relais*, which ſignifies the ſame thing.—In *France*, the General of the Poſts entitles himſelf, Superintendant of the *Relays*.

RELAYS, in Hunting, are freſh Sets of Dogs, or Horſes, or both, diſpoſed here and there, for readineſs, in Caſe the Game come that way, to be caſt off, or to mount the Hunters; in lieu of the former, which are ſuppoſed to want reſpite. See HUNTING.

RELAY, in Tapiſtry, is an opening left in a Piece of Tapiſtry, where the Colours or Figures are to be chang'd; becauſe on thoſe Occaſions the Workmen are changed; or elſe, the Places are left to be filled up 'till the reſt of the Work is done. See TAPISTRY.

RELAXATION, in Medicine, *&c.* the looſening or ſlackening of the Tone or Tenſion of the Fibres, Nerves, Muſcles, *&c.* See TENSION, TONE, *&c.* See alſo FIBRE.

The *Relaxation* of a Muſcle is ſuppoſed to be effected, either by the Perſpiration of the nervous Spirits, or the Regreſs of the Spirits, Blood, *&c.* which inflated its Fibres; or by the contraction of the Air, in the Globules of Blood before expanded by the ſudden influx and admixture of the Spirits, *&c.* See MUSCLE, and MUSCULAR *Motion*.

RELAXATION, in Chirurgery, is a preternatural Extenſion, or ſtraining of a Nerve, Tendon, Muſcle, or the like; either thro' Violence or Weakneſs.

Hernias are Deſcents or *Relaxations* of the Inteſtines, *&c.* See HERNIA.

From the ſame Cauſe ariſe Deſcents or Prolapſions of the Anus, *&c.* See PROCIDENTIA and PROLAPSUS.

RELAXATION, in Law, is uſed for a *Releaſing*. See RELEASE.

In this Senſe we ſay the *Relaxation* of an Attachment, in the Court of Admiralty,

The Tenor of Indulgences is a *Relaxation*, or Diminution of the Pains of Purgatory. See INDULGENCE.

RELEASE, in Law, an Inſtrument, whereby Eſtates, Rights, Titles, Entries, Actions, and other things are ſometimes extinguiſhed and annull'd, ſometimes transferr'd, ſometimes abridg'd, and ſometimes enlarged.

A *Releaſe* is either in *Fact*, or in *Law*.—A *Releaſe* in Fact, is that which the very Words expreſſly declare.—A *Releaſe* in Law, is that which doth acquit by way of Conſequence, or Intendment of Law.

RELE-

RELEGATION, a kind of Exile, or Baniſhment, wherein the obnoxious Perſon is commanded to retire to a certain Place preſcribed, and to continue there 'till he be recalled. See EXILE.

My Lord *Coke* calls *Relegation* a Baniſhment for a time only: *Courtin* more adequately defines *Relegation* a Baniſhment to a certain Place for a certain Term.

In *Rome Relegation* was a leſs ſevere Puniſhment than *Deportation*, in that the *relagated* Perſon did not thereby loſe the Rights of a *Roman* Citizen, nor thoſe of his Family, as the Authority of a Father over his Children, *&c.* See BANISHMENT.

RELICKS, RELIQUIÆ, in the *Romiſh* Church, certain Remains of the Bodies or Cloaths of ſome Saint or Martyr, devoutly preſerved in Honour to his Memory, carried at Proceſſions, kiſs'd, rever'd, *&c.* See SAINT, MARTYR, PROCESSION, *&c.*

The Abuſes in Points of *Relicks* are moſt flagrant: F. *Mabillon*, a Benedictine, complains of the great Number of ſuſpected *Relicks* expoſed on Altars: He owns that were there to be a ſtrict Inquiſition into the *Relicks*, vaſt Numbers of ſpurious ones would be found offer'd every where to the Piety and Devotion of the Faithful: And adds, that Bones are frequently conſecrated, ſo far from belonging to Saints, that in all probability they don't belong to Chriſtians.

The *Catacombs* are an inexhauſtible Fund of *Relicks*; yet 'tis ſtill diſputed who were the Perſons interr'd here. See CATACOMB.

In the eleventh Century a Method was introduced of trying ſuppoſed *Relicks* by Fire.—Thoſe which did not conſume in the Fire were reputed genuine; the reſt not. See PURGATION, *&c.*

'Tis an antient Cuſtom, which ſtill obtains, to preſerve the *Relicks* in the Altars whereon Maſs is celebrated.—To this purpoſe, a ſquare Hole is made in the middle of the Altar, big enough to receive the Hand; and herein is the *Relick* depoſited, wrapp'd in red Silk, and incloſed in a leaden Box. See ALTAR.

The *Romaniſts* alledge a good deal of Antiquity in behalf of their *Relicks*.—The *Manichees*, it ſeems out of hatred to the Fleſh, which they held an evil Principle, are recorded as refuſing to honour the *Relicks* of Saints; which is eſteemed a kind of Proof that the Catholicks did it in the firſt Ages. See MANICHEE.

Indeed Folly and Superſtition got into Religion but too early. —Even the touching of Linnen Cloaths on *Relicks*, from an Opinion of ſome extraordinary Virtue derived therefrom, appears to be as antient as the firſt Ages; there being a Hole made in the Coffins of the forty Martyrs at *Conſtantinople*, expreſly for this Purpoſe.

RELICTA *Verificatione*, in Law, is when a Defendant relinquiſhes his Proof or Plea; and thereupon Judgement is entered for the Plaintiff.

RELICT. See WIDOW.

RELIEF, RELIEVIUM, *Levamen*, in Law, a Fine paid to the chief Lord, by a Perſon at his coming to the Inheritance of Land held in Capite, or Military Service. See FINE, LORD, TENURE, *&c.*

Relief is uſually to the value of a Years Rent or Revenue.

The Origin of the Cuſtom is thus.—A Feudatory or beneficiary Eſtate in Lands, being at firſt only granted for Life; after the Death of the Vaſſal it return'd to the Chief Lord, and was hence call'd *Feudum Caducum*, q. d. fallen to the Lord by the Death of the Tenant. See FEE.

In Courſe of Time theſe feudatory Eſtates being converted into Inheritances by the Connivance and Conſent of the Lord; when the Poſſeſſor of ſuch Eſtate died it was call'd *Hereditas Caduca*, q. d. an Inheritance fallen to the Lord; from whom it was to be recover'd, by the Heirs paying a certain Sum of Money.

This was ſaid *Relevare hæreditatem caducam*, and the Money thus paid was call'd *Relevamen*, *Relevium*, or *Relief*.

This *Relief* was eſtabliſhed after the Conqueſt.—For 'till that time *Heriots* were paid the Lord, at the Death of his Tenant; conſiſting of Horſes, Arms, *&c.* See HERIOT.

But upon the Conqueſt, the poor People being deprived of all ſuch things by the *Normans*, a Sum of Money was ſubſtituted in lieu thereof, which was call'd a *Relief*; and continues in ſome Places to this Day.—However, 'tis true, *Relief* and *Heriot* are frequently confounded in antient Writers.

RELIEF *Reaſonable*, call'd alſo *Lawful*, and *antient Relief*, is that enjoined by ſome Law, or fix'd by antient Cuſtom; and which does not depend on the Will of the Lord.—Thus in a Charter of King *John*, mentioned by *Matt. Paris*.—*Si quis Comitum vel Baronum Noſtrorum ſive aliorum tenentium de nobis in Capite per ſervitium militare, mortuus fuerit & cum deceſſerit hæres ſuus plenæ ætatis fuerit, &* relevium *debeat, habeat hæreditatem ſuam per* Antiquum Relevium.

What this was may be ſeen in the Laws of *William the Conqueror*, &c. *Bracton* ſays, this Fine was call'd a *Relief quia hereditas quæ jaciens fuit per Anteceſſoris deceſſum* relevatur *in manus hæredum*, &c.

A *Relief* is alſo paid in Soccage Tenure, or petit Serjeanty; where a Rent or other thing is paid by rendering as much as the Rent or Payment reſerved.

By the Cuſtom of *Normandy*, *Relief* is due for Lands held in Villenage, as well as in Fee.—By the Cuſtom of *Paris*, *Relief* is not due upon Succeſſions in the direct Line.

The Quantity of the *Relief* is very different: There are *ſingle Reliefs*, *double Reliefs*, &c. The Quality, too, is diverſe: There are *Reliefs of Property*, paid by the Heir: *Reliefs of Bail*, or *Tutorage*, paid by a Guardian for his Minor, or by the Husband for the Fiefs of his Wife, *&c.* *Relief of Horſe and Arms*, &c.

By the Laws of King *Canutus*, the *Relief* of an Earl, paid the King, was eight War-Horſes with their Bridles and Saddles, four Loricas, four Helmets, four Swords, four Hunting-Horſes, and a Palfrey.—The *Relief* of a Baron or Thane was four Horſes, *&c.*

RELIEF, in Chancery, is an Order ſued out for the diſſolving of Contracts and other Acts, on account of their being unreaſonable, prejudicial, grievous, or from ſome other Nullity, either *de Jure*, or *de Facto*. See CHANCERY and EQUITY.

Minors obtain *Relief* againſt Acts paſs'd in their Minority.—Majors have *Relief* in caſes of enormous Damage, Deceit, Violence, over-reaching, extravagant Bargains, *&c.*

Among the *Romaniſts* 'tis a Rule, that the Church obtains *Relief* any time, and againſt all Acts paſs'd in its Prejudice: No Preſcription prevailing againſt it. See PRESCRIPTION.

RELIEF, of a Hare, among Hunters, is the Place where ſhe goes to feed in the Evening. See HUNTING.

RELIEF, in Sculpture. See RELIEVO.

RELIEVE, in the Military Senſe.—To *Relieve* is to take the Poſt of another Body.

Hence, to *Relieve* the Guard, to *Relieve* the Trenches, *&c.* is to bring freſh Men upon the Guard, or the Trenches, and to ſend thoſe to reſt who have been upon Duty before. See GUARD, TRENCH, *&c.*

They alſo ſay, *Relieve a* Sentinell, *Relieve* the Steers-Man, &c.

RELIEVO, or RELIEF, *Imboſſment*, in Sculpture, is applied to a Figure which projects, or ſtands out, prominent, from the Ground or Plain whereon it is form'd; whether that Figure be cut with the Chiſſel, moulded, or caſt. There are three Kinds of *Relievo*; viz. *Alto*, *Baſſo*, and *Demi-Relievo*.

The *Alto Relievo*, *Haut Relief*, or, *high Relievo*, is when the Figure is form'd after Nature, and projects as much as the Life.

Baſſo-Relievo, *Baſs-Relief*, or *low Relievo*, is when the Work is but rais'd a little from its Ground; as we ſee in Medals, and in the Frontiſpieces of Buildings; particularly the Hiſtories, Feſtoons, Foliages, and other Ornaments in Friezes.

Demi-Relievo is when one half of the Figure riſes from the Plan, *i. e.* when the Body of the Figure ſeems cut in two, and one half is clapp'd on a Ground.—When in a *Baſſo Relievo* there are ſome Parts that ſtand clear out, detach'd from the reſt, the Work is call'd a *Demi-Boſſe*.

RELIEVO, in Architecture, is the Projecture of any Ornament. See PROJECTURE.

This, *Daviler* obſerves, is always to be proportioned to the Magnitude of the Building it adorns; and the Diſtance at which it is to be viewed. If the Work be inſolated and terminated on all Sides, it is call'd a *Figure in Relievo*, or a *round Imboſſment*. Such are Statues, Acroters, *&c.*

RELIEVO, in Painting, is the Degree of Force or Boldneſs wherewith the Figures ſeem, at a due Diſtance, to ſtand out from the Ground of the Painting, as if really imboſs'd.

The *Relievo* depends much on the Depth of the Shadow, and the Strength of the Light; or on the Heighth of the different Colours bordering on one another; particularly on the difference of the Colour of the Figure from that of the Ground. See SHADOW, COLOURING, *&c.*

When the Light is well choſen, to make the neareſt Parts or Figures advance; and well diffuſed on the Maſſes, ſtill diminiſhing inſenſibly, and terminating in a large ſpacious Shadow, brought off inſenſibly, the *Relievo* is ſaid to be *bold*, and the *Clair-obſcure*, *well underſtood*. See CLAIR-OBSCURE.

They alſo ſay *Embroderies in Relievo*; in oppoſition to thoſe that are flat.

RELIGION, that Worſhip or Homage due to God, conſidered as Creator, Preſerver, Redeemer, *&c.* See GOD, THEOLOGY, *&c.*

The Foundation of all *Religion* is, that there is a God, and that he requires ſome Service at the Hands of his Creatures.—From the different Manners wherein we arrive at the Knowledge of this Service; *Religion* is divided into *natural* and *revealed*.

Natural Religion is whatever we deſcry to be due and meet by the meer Dictates of natural Reaſon; as, to love, and honour God, not to abuſe his Creatures, *&c.* See NATURAL, REASON, *&c.*

Revealed Religion is what we learn to be due from ſome ſupernatural Means; as by an expreſs Declaration of God himſelf, by the Mouths of Prophets, *&c.* See PROPHECY.

The firſt flows immediately from the Relation between the Creature and the Creator: The latter does not follow from ſuch a Re-

a Relation, but is ſuper-added from the mere Will and Pleaſure of the Creator.

The firſt we ordinarily call *Morality*, or Ethicks; becauſe immediately converſant about the Manners and Duties of Men towards one another; and towards themſelves, conſidered as Creatures of that Being. See MORALITY, ETHICKS, *&c.*

The latter we call, by way of Eminence, *Religion*, as being the Rule of our Duty immediately to God himſelf. See REVELATION.

The firſt ſuppoſes a God, a Providence, a future State, Rewards and Puniſhments; the latter likewiſe ſuppoſes an immediate Miſſion from God himſelf, atteſted by Miracles, *&c.* See MIRACLE.

RELIGION is particularly uſed for the ſpecial Syſtem of Faith and Worſhip, which obtains in this or that Country; in this or that Sect; this or that Age, *&c.*

In this Senſe we ſay the *Romiſh Religion*, the *Reform'd Religion*, the *Religion of the Greeks*, the *Mahometan Religion*, *Jewiſh Religion*, &c. See JEWS, MAHOMETANS, *&c.* under their proper Heads.

The *Siameſe* hold the Diverſity of *Religious*, i. e. the different Manners of honouring God, to be pleaſing to him; inaſmuch as they have all the ſame Object, all tend to the ſame End, though by different Means. *Claude.*

The Sentiment of theſe Idolaters is doubtleſs more juſt than that of our Zealots, who hold all but thoſe of their own Religion odious to God.

The ſeveral Sects in *Religion*, ſee under their proper Articles: See alſo SECT.

RELIGION, again, is applied to a military Order, conſiſting of Knights who live under ſome certain Rule, *&c.* See KNIGHT, MILITARY, ORDER, *&c.*

In this Senſe we ſay the *Religion of Malta*, *&c.* See MALTA.

The Term is ſometimes alſo uſed for a Convent.—Thus we ſay, there are *Religions* of Men, *i. e.* Monks; *Religions* of Women, *i. e.* Nuns.—There are new *Religions* eſtabliſhed every Day, *i. e.* new Monaſteries built. See MONK, *&c.*

The Religion is uſed abſolutely for the reform'd in *France*; thus we ſay, *d' Ablancourt*, and *Dacier*, were of the *Religion.*

RELIGIOUS, a Perſon engaged by a ſolemn Vow to the monaſtic Life; or a Perſon ſhut up in a Monaſtery, to lead a Life of Devotion and Auſterity; under ſome Rule or Inſtitution. See VOW and RELIGIOUS *Order.*

The Male *Religious* we popularly call *Monks*; the Females, *Nuns.* See MONK, *&c.*

M. *Nicole* obſerves, that ſome Domeſtick Chagrins, and a certain Pride, which leads People to abſcond when they cannot make a Figure to their Mind, makes as many *Religious* as real Piety.—He adds, that a Girl muſt be made *Religious* for no other reaſon, but becauſe ſhe can't be married anſwerable to her Condition.

A *Religious* can't make any Will.—By the Council of *Trent*, a *Religious* may reclaim his Vows within five Years. See RECLAIM.

Antiently the *Religious* were all Laymen, and it was even prohibited them to take up Orders.—In 1557 the Parliament of *Paris* made a difficulty of receiving a Biſhop of *Laon* to the Oath of a Duke and Peer, by reaſon of his being a *Religious:* Yet a *Religious* being promoted to a Biſhoprick, is thenceforth ſecularized or diſpenſed from the Obſervation of his Rule. See REGULAR.

In antient Deeds and Conveyances of Lands, we often find the Seller reſtrain'd from giving or alienating it, *Viris Religioſis vel Judæis*, to *Religious*, or to *Jews*; to the end the Land might not fall into Mortmain. See JUDAISM and MORTMAIN.

In a Memorial directed by King *John* to his Viſcounts, they are order'd to proclaim through their reſpective Counties, that no Body, as they love their Bodies and Cattel, injure the *Religious* or Clerks, either in Word or Deed; on Penalty of being hang'd up on the next Oak.—*Nulli ſicut deligunt Corpora & Catalla ſua malum faciant vel dicant* viris Religioſis vel Clericis.—*Si quem inde attingere poſſimus ad proximum Quercum eum ſuſpendi faciemus.*

RELIGIOUS *Order.* See ORDER.

Moſt military Orders pretend, likewiſe, to be *Religious*; as thoſe of *Malta*, who make Vows, *&c.* See MALTA.

RELIQUA, the Remainder or Debet, which a Perſon finds himſelf a Debtor in, upon the balancing and liquidating an Account.

Hence, *Reliquitary*, the Debtor of a *Reliqua*; as alſo a Perſon who only pays piece-meal.—The Term *Reliqua* is pure *Latin.*

RELIQUARY, a Shrine or Casket, in which the Relicks of a dead Saint are kept. See SHRINE, RELICK, *&c.*

RELIQUIÆ, RELICKS, in Antiquity, the Aſhes and Bones of the Dead, that remained after the burning of their Bodies; and which they very religiouſly kept in Urns, and afterwards laid them up in Tombs. See FUNERAL.

REMAINDER, in Law, an Eſtate in Lands, Tenements, or Rents, given to a Perſon at ſecond Hand, to be enjoy'd after the Deceaſe of another, to whom the ſame is given immediately, or at firſt Hand.

A Man grants Lands to one for Term of Life, the *Remainder* to another for the Term of his Life; which *Remainder* may be either for a certain Time, or in Fee Simple, or Fee Tail.

Spelman makes the difference between a *Remainder* and Reverſion to conſiſt in this; that by a Reverſion, after the appointed Term, the Eſtate returns to the Donor, or his Heirs, as the proper Fountain; whereas by *Remainder* it goes to ſome third Perſon, or Stranger. See REVERSION.

Glanville obſerves, that Biſhops and Abbots, in regard their Baronies are the King's Alms, cannot give any Part thereof by way of *Remainder.* See BISHOP.

REMAINDER, in Mathematicks, is the difference; or that which is left after the taking of a leſſer Number, or Quantity, from a greater. See SUBSTRACTION.

REMARRYING, the repeating of a Marriage; or the going through the Solemnities of a ſecond Marriage. See MARRIAGE.

Clandeſtine and uncanonical Marriages are deem'd null; and the Parties are to be *re-married* in form; at leaſt to avoid Diſputes.

It was antiently expreſly forbid to *re-marry* in the firſt Year of Viduity.—M. *Bayle* obſerves, that a Perſon who does not *re-marry* is anſwerable to the Publick for all the Time loſt in his Viduity, or Widdower-hood. See WIDOW, VIDUITY, *&c.*

REMEDY, REMEDIUM, in Phyſick, a Medicine, or Preparation applied either internally or externally, for the Cure of a Diſeaſe. See MEDICINE.

Emplaſters, Unguents, Cataplaſms, *&c.* are *Topical Remedies.* See TOPICAL.

Mercury and the Bark are Specific Remedies. See SPECIFIC.

Mineral Waters, and Aſſe's Milk, and Country-Air, are uſually the *laſt Remedies.*

Salivation is ſometimes call'd by way of Eminence, *the Remedy.* See SALIVATION.

When *Remedies* are ſtuff'd with too many Ingredients, they load the Stomach with a ſlimy Mucilage, which ſwelling does more hurt than good.

REMEMBRANCE, is when the Idea of ſomething formerly known, recurs again into the Mind, without the Operation of the like Object, on the external Senſory. See MEMORY and REMINISCENCE.

REMEMBRANCERS *of the Exchequer*, are three Officers, or Clerks therein. See EXCHEQUER.

Theſe are the *King's Remembrancer*; the *Lord Treaſurer's Remembrancer*; and the *Remembrancer of the Firſt-Fruits.*

The *King's Remembrancer* enters into his Office all Recognizances taken before the Barons, for any of the King's Debts, for Appearance, or for obſerving Orders; and makes out Proceſs againſt the Collectors of Cuſtoms, Subſidies, and Fifteenths, for their Accounts.—All Informations upon penal Statutes are entered in this Office, and there all Matters upon *Engliſh* Bills in the Exchequer-Chamber remain.—He makes the Bills of Compoſition upon penal Laws, takes the Stalment of Debts; has delivered into his Office all manner of Indentures, Fines, and other Evidences whatſoever that concern the aſſuring of any Lands to the Crown: He every Year, *in craſtino animarum*, reads, in open Court, the Statute for Election of Sheriffs, and gives them their Oath, and reads the Oath of all the Officers of the ſame, when they are admitted.

The *Lord Treaſurer's Remembrancer*, is charged to put the Treaſurer and the reſt of the Judges of that Court, in *remembrance* of ſuch things as are to be called on, and dealt in for the King's Behoof.—He makes Proceſs againſt all Sheriffs, Eſcheators, Receivers, and Bailiffs, for their Account: Proceſs of *Fieri facias*, &c. Extent for any Debts due to the King, either in the Pipe, or with the Auditors, makes Proceſs for all ſuch Revenues as are due to the King, by reaſon of its Tenures.—He alſo makes Record, whereby it appears whether Sheriffs, or other Accomptants, pay their Profers due at *Eaſter* and *Michaelmas.*—He makes another Record, whether Sheriffs or other Accomptants keep their Days of Prefixion: All Eſtreats of Fines, Iſſues, and Amerciaments, ſet in any of the Courts of *Weſtminſter*, or at the Aſſizes or Seſſions, are certified into this Office, and are by him delivered to the Clerk of the Eſtreats to write Proceſs upon them, *&c.*

The *Remembrancer of the Firſt-Fruits*, takes all Compoſitions and Bonds for Firſt-Fruits and Tenths; and makes Proceſs againſt ſuch as do not pay the ſame. See FIRST-FRUITS.

REMINISCENCE, is that Power of the Humane Mind, whereby it recollects itſelf, or calls again to its Remembrance ſuch Ideas or Notions as it had really forgot: In which it differs from Memory, which is a treaſuring up of things in the Mind, and keeping them there, without forgetting them. See MEMORY.

Hence Memory may be conſidered as a continual *Remembrance*; and *Remembrance*, as an interrupted Memory. See MEMORY.

How near ſa-kin ſoever the two Faculties may ſeem, yet they are generally found ſeparated; ſo that they who excell in the one, are defective in the other. See RECOLLECTION, RETENTION, *&c.*

The antient *Platoniſts* were of Opinion, that all Learning and Knowledge conſiſted in the *Reminiſcence* or Recollection of Notices which had been in the Soul before its Union with the Body. See PLATONISM.

REMINISCERERE, the ſecond Sunday in *Lent*; antiently thus called from the firſt Word of the *Introit* of the Maſs ſaid for that Day, *Reminiſcere Miſerationum tuarum.*

REMISSION, in Phyſicks, the Abatement of the Power or Efficacy of any Quality; in oppoſition to the Increaſe of the ſame, which is call'd its *Intenſion*. See INTENSION.

In all Qualities capable of Intenſion and *Remiſſion*, the Intenſion decreaſes as the Squares of the Diſtance from the Centre of Action reciprocally. See QUALITY.

REMISSION, in Medicine, is when a Diſtemper abates, but does not go quite off, before it returns again; as it is common in Fevers which do not quite intermit. See FEVER.

REMISSION, in Law, *&c.* the Pardon of a Crime, or the giving up the Puniſhment due thereto. See PARDON.

REMIT, in Commerce.—To *remit* a Sum of Money, Bill, or the like, is to ſend a Sum of Money, *&c.* See REMITTANCE.

To *remit* is alſo uſed among Bankers for what is accuſtomed to be given a Banker, or as it were, diſcounted with him, for his giving a Bill of Exchange. See EXCHANGE.

To *remit* is alſo to give up Part of his Due to a Debtor; as, I would *remit* you a fourth of what you owe on Condition of paying me the reſt in Hand.

REMITTANCE, in Commerce, the Traffic or Return of Money from one Place to another, in Bills of Exchange, Orders, or the like. See COMMERCE, EXCHANGE, *&c.*

The *Remittance* is properly a Bill of Exchange, or the like, ſent to a Correſpondent, and the Content thereof to be receiv'd by him, of ſome other Perſon on whom it is drawn.

Such a Merchant has *remitted*, or made a *Remittance* of five thouſand Pounds in Bank Notes, to his Correſpondent at *London*.—I will *remit* you, or make you a *Remittance* of five hundred Crowns in three Bills of Exchange, drawn on *N.* Banker in your City, and payable at Sight.

By means of theſe *Remittances*, large Sums of Money are return'd from one City to another, without Danger, without Carriage, *&c.*

In *London* 'tis eaſy getting *Remittances* upon any City in the World: In the Country 'tis more difficult. *Remittances* are not eaſily had upon *Copenhagen*. See BILL *of Exchange*.

REMITTANCE, is alſo uſed in ſpeaking of the Payment of a Bill of Exchange.—Thus, I have receiv'd an hundred Piſtoles on your *Remittance*.—Mr. *N.* Banker in your City, ſhould have paid you two hundred Crowns on my *Remittance*.

REMITTANCE, is alſo the Due or Fee allow'd the Banker, both for his Wages, the Tare of Money, and the different Value of the Species, in the Place where you pay the Money, and where he *remits* it.

The *Remittance* at *London* is very high.—This *Remittance* is more uſually call'd CHANGE and RECHANGE, which ſee.

REMITTER, in Law.—Where a Man has two Titles to Land, and is ſeized by the latter; and that proving Defective, he is *remitted* or reſtored to the former more antient Title: This is call'd a *Remitter*, from the *Latin*, *remittere*, to ſend back.

If Land deſcend to him that had Right to it before, he ſhall be *remitted* to his better Title if he pleaſe. *Doctor* and *Student*.

REMONSTRANCE, an Expoſtulation or humble Supplication addreſs'd to a King, or other Superior; to beſeech him to reflect on the Inconveniences, or ill Conſequences of ſome Order, Edict, *&c.*

The Parliament is gone in a Body to make humble *Remonſtrances* to the King, on the ſubject of ſuch a Declaration.

REMONSTRANCE, is alſo uſed for an expoſtulatory Council or Advice; or a gentle, handſome Reproof, made either in general or particular, to apprize or to correct ſome Fault.—A Mother makes *Remonſtrances* to her Daughter, *&c.*

REMONSTRANTS, REMONSRANTES, was a Title given the *Arminians*, by reaſon of the *Remonſtrances* they made in 1610, againſt the Synod of *Dort*, wherein they were condemn'd. See ARMINIAN.

Epiſcopius and *Grotius* were at the Head of the *Remonſtrants*. See CONTRA-REMONSTRANTS.

REMORA, in Natural Hiſtory, a little Fiſh, reſembling a Herring, with Creſt and Fins; call'd by the *Greeks*, *Echeneis*.

'Tis much talk'd of by the Antients; who, as we find from *Pliny*, lib. 32. unanimouſly believ'd it had the force to ſtop a Veſſel in full Sail; and hence call'd it *Remora*, a *remorando*.—But the Moderns hold it a Fiction; inaſmuch as in all their Navigations, which are much more conſiderable than thoſe of the Antients, they have never met with any thing like it.

REMORA, among Surgeons, is alſo an Inſtrument to ſet broken Bones withal. See FRACTURE.

REMOUNT, in War.—To *remount the Cavalry*, is to furniſh Troopers or Dragoons with freſh Horſes, in lieu of ſuch as have been kill'd or diſabled in the Service.

REMPLY, in Heraldry, ſomething *filled up*. The Term is chiefly uſed to denote that the Chief is quite filled up with a ſquare Piece of another Colour, leaving only Border for the proper Colour of the Chief about the ſaid Piece.

RENAL, ſomething belonging to the Reins, or Kidneys. See REIN and KIDNEY.

RENALES *Glandulæ*, in Anatomy, are Glands thus call'd, becauſe ſituate near the Reins or Kidneys; firſt diſcovered by *Bar. Euſtachio*, Native of *San Severino*, in *Italy*. See GLAND.

They are alſo call'd *Capſulæ Atrabilares*; in regard the Cavity is always found full of a blackiſh Liquor; and by others, *Renes Succenturiati*, becauſe reſembling the Reins in form. See RENES *Succenturiati*.

RENCOUNTER, the Encounter of two little Bodies or Parties of Forces: In which Senſe it is uſed in oppoſition to *Battel*.—'Twas no Battel; 'twas only a *Rencounter*.

In ſingle Combats, *Rencounter* is uſed in oppoſition to *Duel*.—When two Perſons fall out, and fight on the Spot, without having premeditated the Combat, 'tis call'd a *Rencounter*.—'Tis no *Duel*, 'tis a *Rencounter*. See DUEL.

The Word is form'd from the *French*, *Rencontre*, meeting.

RENCOUNTER, or RENCONTRE, in Heraldry, is applied to Animals when they ſhew the Head in Front, with both Eyes, *&c.* or the Face ſtands right forward; as if they came to meet the Perſon before them.

Indeed in the Deer, this is call'd *Maſſacre*, and in the Leopard 'tis the natural Situation.—He bears Sable, in *Rencounter*, a Golden Fleece.

RENDER, in Law, a Term uſed in levying a Fine. A Fine is either ſingle, whereby nothing is granted; or with *Render*, whereby ſomething is *render'd back* again, by the Cogniſee to the Cogniſor; or double, which containeth a Grant, or *render back again* of ſome Rent, Common, or other thing out of the Land it ſelf, to the Cogniſor. See FINE.

We alſo ſay, there are certain things in a Manor which lie in *Prender*, i. e. may be taken by the Lord or his Officers when they pleaſe, without the Tenants leave: And others which lie in *Render*, that is, muſt be *render'd* or anſwer'd by the Tenant; as Rents, Reliefs, Heriots, and other Services. See PRENDER.

Some Service conſiſts in Seiſance; ſome in *Render*. *Perkins*.

RENDERING, in Building. See PARGETTING.

RENDEZ-*vous*, a Place appointed to meet in at a certain Day and Hour.

The Word is *French*; and is found ſo handy, that moſt Nations uſe it in its Purity, for want of a Word of equal import in their reſpective Languages.

A general *Rendezvous* of the Army.—The Regiments have their particular *Rendezvous*, call'd *Quarters of Aſſembly*. See QUARTER.

The Virtue of a Woman is already ſhaken when ſhe gives a *Rendezvous*. St. *Evremond*.

RENEGATE, RENEGADO, a Perſon who has apoſtatized or renounced the Chriſtian Faith, to embrace ſome other Religion; particularly Mahometaniſm. See APOSTATE.

'Tis the *Renegado*'s who prove the moſt barbarous to the Chriſtians when they fall into their Hands.

The *Renegate* is thus called, *quaſi re-negat-Chriſtum*.—*Hoveden* mentions it in the Year 1192, under the Name of *Reneer*, from the *French*, *re-nier*, to deny again.

RENES *Succenturiati*, in Anatomy, are Glands thus called as reſembling the Figure of the Reins; and hence accounted a kind of *ſecondary Reins*; *Succenturiatus* ſignifying ſomething in the Place of another. See SUCCENTURIATI.

They are alſo called *Capſulæ Renales*, and *Glandulæ Renales*. See RENALES.

RENEWING of Leaſes and Lives. See REVERSION, ANNUITY, POLITICAL *Arithmetick*, &c.

RENITENCY, RENITENTIA, among Philoſophers, that Force in ſolid Bodies, whereby they reſiſt the Impulſe of other Bodies; or react as much as they are acted on. See REACTION. See alſo RESISTANCE.

RENT, in Law, a Sum of Money, or other Conſideration iſſuing yearly out of Lands and Tenements, alienated on that Condition. See REVENUE.

It is thus called from the corrupt *Latin*, *Rendita*, for *reddita* of *redditus*; becauſe, as *Fleta* tells us, *retroit & quotannis redit*.

The *Rents* of all the Lands of *England* and *Wales* appear by the Computations of Dr. *Davenant*, and Mr. *King*, from the late Land-Tax, to be nearly 10 Millions *per Annum*; thoſe of the Houſes not let with the Lands, to be two Millions more; and thoſe of all other Hereditaments, to be two Millions more; in all 14 Millions. See REVENUE.

The Lawyers ordinarily reckon three ſorts of *Rent*; viz. *Rent-Service*, *Rent-charge*, and *Rent-ſeck*.

Rent-Service, is where a Man holds his Lands of his Lord by Fealty, and certain Rent; or by Fealty-Service, and certain Rent; or that which a Man making a *Leaſe to* another for Term of Years, reſerveth yearly to be paid for them. See SERVICE FEALTY, RESERVE, *&c.*

Rent-Charge, is where a Man makes over his Eſtate to another by Deed indented, either in Fee, or Fee-tail, or for Term of Life; yet reſerves to himſelf, by the ſame Indenture, a Sum of Money *yearly to be paid* to him, with Cauſe of Diſtreſs for Non-payment.

Rent-ſeck, or *Dry-Rent*, is that which a Man making over his Eſtate by Deed indented, reſerveth yearly to be paid to him, without Cauſe of Diſtreſs mentioned in the Indenture. See METEGAVEL.

RENTS *of Aſſize*, are the certain Rents of Freeholders, and antient Copyholders; thus called becauſe aſſized and certain: In oppoſition to *redditus mobiles*.

RENTS *Reſolute*, are reckoned among the Farm *Rents* to be ſold by the *Stat.* 22 *Car.* II. and are ſuch *Rents* or Tenths as were antiently payable to the Crown from the Lands of Abbies and other Religious Houſes: Which Lands, upon the Diſſolution of Abbies, being demiſed to others, the ſaid *Rents* were ſtill reſerved and made payable to the Crown.

RENTER-*Warden*, an Officer in moſt of the Companies of *London*; whoſe Buſineſs is to receive the *Rents* or Profit belonging to the Company. See TREASURER.

RENTERING, in the Manufactories, the ſewing of two Pieces of Cloth, edge to edge, without doubling them; ſo as that the Seam ſcarce appears at all; hence alſo called *Fine-drawing*.

Serges, *&c.* are ſewed; Cloths *renter'd*.—To *renter* in Tapiſtry, is to work new Warp into a piece of Tapiſtry damaged, eaten by the Rats, *&c.* and on this Warp to reſtore the antient Pattern, or Deſign.—The Warp is to be of Woollen, not Linnen.—Among the Titles of the Tapiſtry-makers, is included that of *Renterers*.

The Author of one of the *Lett. Edif. & Cur.* ſpeaking of the great Dexterity of the *Renterers* in the *Eaſt Indies*, aſſures us, that if you tear a Piece of fine Muſlin, and give it one of them to mend, it ſhall be impoſſible for you to diſcover the Place where 'tis rejoined, even though you had make a Mark to know it.

The Dexterity of our own *Renterers* is ſuch, as puts them in a Condition to defraud the King, by ſowing a Head or Slip of *Engliſh* Cloath, on a Piece of *Dutch*, *Spaniſh*, or other Foreign Cloath; or a Slip of Foreign Cloath on a Piece of *Engliſh*, ſo as to paſs the whole, as of a Piece; and by that means avoid the Duties, Penalties, *&c.*

The Trick was firſt diſcovered in *France*, by M. *Savary*, Author of *Diction. de Commerce*.

The Word is form'd from the *French*, *rentraire*, which ſignifies the ſame thing; and which *Menage* after *Salmaſius*, derives from the *Latin*, *textura*; as if it were making a Tiſſue or Web, inſtead of a *Seam*.

RENTERING is particularly uſed for a Rent, or Hole, happening in the dreſſing or preparing of a Piece of Cloath, artfully ſew'd up or mended with Silk.

All *Renterings* are reputed Defects or Blemiſhes; and ought to be allow'd for in the Price of the Piece.—Hence, M. *Savary* eſtabliſhes it as a Rule, which is certainly founded on natural Equity, that every Manufacterer mark the *Renterings* of his Cloaths with a Piece of Packthread tied to the Liſt; to direct the Draper to the Spot: And that the Draper apprize the Taylor or other Perſon, to whom he ſells it, of the ſame; that he mayn't come to Damage in the cutting; there being Inſtances of Drapers condemned to take back their Cloath, when cut to Pieces, for omitting to mention the *Renterings*, and other Flaws.

On this occaſion M. *Savary* extolls the Procedure of an *Engliſh* Merchant, who ſending a Piece of Cloath damaged in one Spot, to his Correſpondent at *Paris*, put a Piece of Gold in the damaged Place, to make up the Damage.—But as this Example is perhaps the only one of its Kind, that Author recommends it to the Merchant or Draper to unfold all the Pieces entirely, as they come to him; to diſcover the *Renterings* and other Flaws, in order to make the Clothier accountable for them.

RENUENTES, in Anatomy, a pair of Muſcles of the Head, thus called as being Antagoniſts to the *Annuentes*; and ſerving to throw the Head backwards, with an Air of Refuſal. See HEAD.

From their Situation they are alſo called *Rectus Capitis Minor*. See RECTUS *Capitis*.

RENUNCIATION, the Act of renouncing, abdicating, or relinquiſhing any Right, real or pretended. See ABDICATION, *&c.*

Renunciations are ſometimes *expreſs*; as by Contracts, *&c.* ſometimes *tacit*, as by contrary Acts.

To *renounce* a Succeſſion, a Community, *&c.* is to paſs a ſolemn Act before a Notary, or other publick Officer, whereby a Perſon declares he will not intermeddle in a Succeſſion, or Profit in a Company; but ſurrenders his Part, and quits all Pretenſions.

Diocletian renounced the Empire to live as a Philoſopher.—The late King *Philip* of *Spain*, by the Treaty of *Utrecht*, was obliged to *renounce* the Succeſſion of the Crown of *France*; to which he was Heir Preſumptive: And has ſince by a voluntary Act *renounced* his own Crown, in favour of his Son.—*Renunciations* of Kings are always ſuſpected. See RESIGNATION.

RENVERSE, *inverted*, in Heraldry, is when any thing is ſet with the Head downwards, or contrary to its natural Way of Being.—Thus a Chevron *renverſé* is a Chevron with the Point downwards.—The ſame Term we uſe when a Beaſt is laid on its Back.

REORDINATION, the Act of conferring Orders a ſecond time. See ORDINATION.

The Ceremony of Ordination impreſſes what the Divines call an indelible Character; and cannot, therefore, be repeated: Yet is *Reordination* practiced in *England*, with regard to the Diſſenting Miniſters, who conform to the Church; The Biſhops pretending that they alone have Right to confer Holy Orders, and that every Prieſt or Miniſter who does not receive them at their Hands, has no lawful, regular Vocation.

This proves a great Obſtacle to the Re-union of thoſe Miniſters to the Church of *England*; many of whom, otherwiſe diſpoſed to conform, have ſcrupled to be *Re-ordain'd*; inaſmuch as *Re-ordination* implies their former Vocation to be null; that they had adminiſter'd the Sacraments without any Right thereto; and that all their miniſterial Acts were invalid. See PRESBYTERIAN.

In the eleventh Century, the Crime of Simony having been very flagrant; many People fell into the Error to believe that the Simoniacal Biſhops could not Ordain validly; and that thoſe who had received Orders at their Hands ſhould be *re-ordain'd*.

The People of this Sentiment made a Party of themſelves; and were diſtinguiſhed by the Title of *Re-ordinantes*.

REPSILVER, was Money antiently paid by Servile Tenants to their Lords; to be eaſed of the Service of reaping his Corn. See SERVICE.

REPAIRING, in Building, *&c.* See REPARATION.

The *Repairing* of large Walls, Doors, Ceilings, Coverings, *&c.* belongs to the Proprietor or Landlord.

The Locatory or Tenant is only charged with *ſmall Repairs*, as Glaſs-Windows, Locks, *&c.* call'd LOCATIVE *Repairs*.

To *repair* a Statue, or other Piece of Sculpture, is to touch up a Statue, *&c.* (caſt in a Mould) with a Chiſſel, Graver, or other Inſtrument; to finiſh the Places which have not come well off.

To *repair* a caſt Figure or Statue, they clear off the Barb, and what is redundant in the Joints and Projectures. See STATUE. See alſo FOUNDERY.

To repair a Medal, is to retouch it; ſo as ruſty and defaced as it was, to render it clean, neat, and perfect.—In order to this, they take off the Ruſt with a Graver, touch up the Letters, poliſh the Ground, and raiſe and reſtore the Figures which before were ſcarce ſeen.

When the Figures are gnaw'd or broke, they fit a Piece of Maſtic, or Cement on the Spot; and on this cut with a Graver ſo dextrouſly that the Figures appear entire and well kept.—Yet nothing ſpoils Medals ſo much as *repairing* them. See MEDAL.

REPAIRS, in Hunting, are the Haunts or Places that the Hare runs to. See HUNTING.

REPAIRERS, Artificers who chaſe Figures, and beautify Sword-Hilts, *&c.* See CHASING.

REPARATION, the Act of repairing, re-eſtabliſhing, retrieving, or mending a Building, or other Work, damaged or gone to decay. See REPAIRING.

The Enemy *repair'a* the Breach as ſoon as 'twas made.—The Eſtabliſhment of Turn-pikes is for *repairing* of the Roads.

An Eccleſiaſtical Patron is by antient Cuſtoms obliged to repair the Choir or *Chancel* of a Church, and the Pariſhioners the *Nave*. See RESTAURATION.

REPARATIONE *facienda*, is a Writ which lies in divers Caſes; *e. gr.* where three are Tenants in Common, or joint Tenants *pro indiviſo*, of an Houſe, *&c.* fallen to decay, and the one being willing to *repair* it, the other two will not; in this Caſe the Party willing ſhall have this Writ againſt the other two.

REPARTITION, a dividing or ſharing a thing a ſecond time. See PARTITION.

There are ſo many Deficiencies found this Year in the Taxes of this Pariſh, that there muſt be a *Repartition* on the Inhabitants; or a new Impoſition.

REPARTY, a ready, ſmart Reply; eſpecially in Matters of Wit, Humour, or Raillery.—'Tis dangerous attacking this Lady, her *Reparties* are ſo keen.

Wicquefort obſerves a World of difference between a free ſprightly *Reparty*; and an offenſive Sarcaſm. See SARCASM.

The Word, in the Original *French*, *Repartie*, has the ſame Signification.

REPAST, REPASTUM, a Meal, or Refection, taken at a ſtated Hour. See REFECTION.

In old Law Books, *Repaſt* is particularly uſed for a Meals-meat given to ſervile Tenants, while at Work for their Lord.

The *French* call their Meal, *Repaſt*; the *Latins*, *Paſtus*; the *Italians* and *Spaniards*, *Paſto*. See MEAL.

The *Repaſts* whereof the Scripture has preſerved the Memory, ſhew that the antient *Hebrews* were not very delicate in their Eating.—*Abraham*, a Man of Wealth and Eminence, entertaining the Angels, ſerves them with Cakes baked under the Aſhes, a fatted Calf haſtily dreſs'd, and Milk and Butter.—But the Quantity makes amends for the Quality: Three Meaſures of Flower, and a whole Calf, for three Perſons.

Joſeph to ſhew his reſpect to his Brother *Benjamin*, order'd him a Portion of Meat five times as big as that of his other Brothers.

In Antiquity the *Repaſts* were frequently Sacrifices; for which Reaſon we find them often prepared by Kings themſelves. See SACRIFICE.

REPEALING, in Law, the revoking or annulling of a Statute by Authority of Parliament See PARLIAMENT.

No Act of Parliament ſhall be *repealed* in the ſame Seſſion it was made in. See SESSION.

Brook uſes the Word *Repellance* in the ſame Senſe.

REPEAT,

REPEAT, in Muſick, a Character ſhewing that what was laſt play'd or ſung, muſt be *repeated*, or gone over again. See REPETITION.

The *Repeat* ſerves inſtead of writing the ſame thing twice over.—There are two Kinds of *Repeats*; the *great* and the *ſmall*.

The firſt is only a *double Bar*, dotted on each Side; or two parallel Lines drawn perpendicular a-croſs the Staff; with Dotts on either Hand: See its Form under CHARACTERS *of Muſick*.

This Mark ſhews that the preceding Strain is to be *repeated*; that is, if it be near the Beginning of the Piece, all hitherto ſung, or play'd, is to be *repeated*; or if towards the End of a Piece, all from ſuch another Mark.

In Gavots, we uſually find the *Repeat*, at about the third Part of the Piece.—In Minuets, Borees, Courants, *&c.* towards the End.

Some make this a Rule, that if there be Dotts on each Side the Bar, they direct to a *Repetition* both of the preceding and the following Strain; if there be only Dotts on one Side then, only the Strain on that Side to be *repeated*.

The *ſmall Repeat* is where only ſome of the laſt Meaſures of a Strain are to be repeated.—This is denoted by a Character ſet over the Place where the *Repetition* begins, (ſee CHARACTERS *in Muſick*) and continues to the End of the Strain.

When the Song ends with a *Repetition* of the firſt Strain, or Part of it, inſtead of a *Repeat*, they uſe the Words *da Capo*, i. e. from the beginning.

REPELLENT, REPELLENS, in Medicine, a Remedy which *repels* or drives back a morbid Humour into the Maſs of Blood, from which it was unduly ſecreted. See HUMOR and MEDICINE.

Or, *Repellents* are Medicines which prevent ſuch an afflux of the Fluids to any particular Part, as will raiſe it into a Tumour; or drive them back when they are collected. See TUMOR.

To form an Idea of the Manner of their Operation, it may be obſerv'd, that all Tumors ariſe either from an increaſe in the Velocity or Quantity of the Fluids, or a Weakneſs in ſome particular Part; though ſometimes both concur.—Now an increaſe in the Velocity of the Fluids makes them more forcibly puſh againſt, and diſtend all the Parts in their Circuit; if therefore any Part be unequally preſſed or relaxed by external Injuries, that will be more elevated than any other; and for want of equal Reſiſtance with the reſt of the Body, will at length receive ſuch a Quantity of Fluid, as will raiſe it into a Tumor, eſpecially if any of its Veſſels be obſtructed: Becauſe the Protruſion of freſh Matter, *a tergo*, will continue to add thereunto, till the Part is on the utmoſt ſtretch, and can hold no more. See BLOOD.

In this Caſe, all thoſe Means are ſaid to be *repellent*, which check the growth of the Tumor, and aſſiſt the refluent Blood in taking up the obſtructed Matter, and waſhing it again into the common Stream.

This Intention is chiefly favoured by Evacuation and Revulſion; for whatſoever leſſens the Quantity of the Fluid, will diminiſh the force upon the tumefied Part.—But it concerns us moſt to know how external Application to the Part itſelf, helps this Affair.

Herein a Medicine comes to be *repellent*, by conſiſting of ſuch ſubtile Parts, as may tranſmit ſome of them through the Pores, and help to render the obſtructed Matter more fluid, ſo that it comes the more eaſy to be looſened, and fall again into the circulating Current.—But in this Caſe there is a Hazard of ſuch things likewiſe putting the obſtructed Humour into a Ferment, whereby it ſooner turns into Pus, and then they come under the Denomination of Suppuratives or Ripeners. See SUPPURATIVE.

What, therefore, in the moſt ſtrict Senſe, is to be reputed a *Repeller*, is that which aſtringes and ſtrengthens the Part, ſo as to make it reſiſt any ſuch Lodgment. See ASTRINGENT and STRENGTHENER.

Theſe are ſuch whoſe Qualities are moſt manifeſt in their Coldneſs, and drying Properties: But there are ſo few Inſtances wherein Bandage is not better than ſuch Application, that very little comes to be uſed for that purpoſe. In Hemorrhages, and Ouzings out of Serum, ſo as to deform the Skin; Simples of this Nature moſtly take place; which anſwer their Ends in aſtringing the Fibres, whereby thoſe Apertures are ſo cloſed, as not to admit through them afterwards any ſuch fluid.

Some things alſo anſwer this End only by ſtimulating the Fibres of the tumefied Part, ſo as to give them ſudden and forcible Twitches, whereby the obſtruction is ſometimes looſened and ſhook away, as it were, into the refluent Current.—Such a ſort of Motion will be occaſioned by the ſudden Applicatinn of any thing extreamly cold, as common Water; but the Practice is ſeldom ſafe, becauſe if the firſt Efforts which the Fibres are put upon by thoſe means, do not ſucceed in breaking away the incloſed Matter, they will be ſtrained, and not able afterwards to repeat their natural Vibrations: The Conſequence of which is weakening the Part, which will render the Tumor more obſtinate.

REPELLING *Power*, Vis REPELLENS, in Phyſicks, is a certain Power or Faculty reſiding in the minute Particles of natural Bodies, whereby they mutually fly from each other. See POWER and PARTICLE.

This Power is the reverſe of the *Attractive Power*. See ATTRACTIVE.

Sir *Iſaac Newton* having eſtabliſhed the attractive Power of Matter from Obſervation and Experiment; argues, that as in Algebra, where poſitive Quantities ceaſe, there Negative ones commence; ſo in Phyſicks, where the attractive Force ceaſes, there a *repelling* Force muſt begin.

But that there is ſuch a Force does likewiſe appear from Obſervation. See REPULSION.

As the *repelling* Power ſeems to ariſe from the ſame Principle as the attractive, only exerciſed in different Circumſtances; 'tis govern'd by the ſame Laws: Now the attractive we find is ſtronger in ſmall Bodies than in great ones, in Proportion to the Maſſes.—Therefore the *repelling* is ſo too. But the Rays of Light are of all others the moſt minute Bodies we know of; therefore of all others their *repelling* Force muſt be the greateſt. See RAY.

Sir *Iſaac Newton* computes that the attractive Force of the Rays of Light is above 1000000000000000 times as ſtrong as the Force of Gravity on the Surface of the Earth: Hence ariſes that inconceivable Velocity wherewith Light muſt move, to reach from the Sun to our Earth in ſeven Minutes. For the Rays emitted from the Body of the Sun by the vibrating Motion of its Parts, are no ſooner got without the Sphere of Attraction of the Sun, than they come within the Action of the *repelling* Power. See LIGHT.

The Elaſticity, or ſpringineſs of Bodies, or that Property whereby after having their Figure alter'd by any external Force, they return to their former Figure, follows from the *repelling* Power. See ELASTICITY, AIR, *&c.*

REPERCUSSION, in Mechanicks. See REFLECTION.

REPERCUSSION, in Muſick, a frequent Repetition of the ſame Sounds. See REPETITION.

This frequently happens in the Modulation; where the eſſential Chords of each Mode, or of the harmonical Triad, are to beat oftener than the reſt; and of theſe three Chords the two Extremes, *i. e.* the final and the predominant one, (which are properly the *Repercuſſion* of each Mode) oftener than the middle one.

REPERTORY, REPERTORIUM, a Place wherein things are orderly diſpoſed, ſo as to be eaſily found when wanted.

The Indices of Books are *Repertories*, ſhewing where the Matters ſought for are handled. See INDEX.

Common Places are a kind of *Repertories*, very uſeful to the learned. See COMMON *Place*.

Repertorium Anatomicum, is a large Hall near an Amphitheatre of Diſſections, where Skeletons both human and brutal, are orderly preſerved.—Such is the *Repertory* of the *French* King's Garden at *Paris*.

REPETITION, REPITITIO, the re-iterating of an Action. See REITERATION.

Habitudes are acquired by the frequent *Repetition* of Actions. See HABIT.

Muſicians and Comedians make ſeveral *Repetitions* of their Conſorts and Comedies, e'er they perform for good. See REHEARSAL.

The School Philoſophers call the *Repetition* of the ſame numerical Effect in another Place, the *Replication* of that Effect. See REPLICATION.

REPETITION, in Muſick, a re-iterating or playing over again of the ſame Part of a Compoſition; whether it be a whole Strain, a Part of a Strain, or a double Strain.

The *Repetition* is denoted by a Character, called a *Repeat*, which is varied ſo as to expreſs the various Circumſtances of the *Repetition*. See REPEAT.

When the Song *ends* with a *Repetition* of the laſt Strain, or a part of it; the *Repetition* is denoted by *da Capo*; that is, from the Beginning.

REPETITION, *Reply*, is alſo uſed in Muſick, when after a little Silence, one Part *repeats* or runs over the ſame Notes, the ſame Intervals, the ſame Motions, in a word, the ſame Song, which a firſt Part had already gone over during the Silence of this.

REPETITION, *Reply* is alſo a doubling, or trebling, *&c.* of an Interval; or a Reiteration of ſome Conſonance or Diſſonance: Thus a fifteenth is a *Repetition* of the Octave, *i. e.* a double Octave or ſecond Octave. See OCTAVE.

REPETITION, in Rhetorick, a Figure whereby the Orator rehearſes the ſame Word or Phraſe over again.

Of this there are two Kinds.—In the *firſt*, the Word is repeated preciſely in the ſame Senſe: As, Oh, *Jeruſalem, Jeruſalem*, who killeſt the Prophets, *&c. my God, my God*, why haſt thou forſaken me.

Such *Repetitions* have the ſame effect in Diſcourſe, with ſecond ſtroaks of the Pencil in Painting; they render the Colours more ſtrong and lively.

Sometimes the Orator begins again and again with the ſame Word; of which we have an Inſtance in the beginning of *Cicero*'s firſt Oration againſt *Cataline*: Nihil *ne te Nocturnum præſidium palatii*, nihil *urbis Vigiliæ*, nihil *timor populi*, nihil *Conſenſus bonorum omnium*, nihil *hic Munitiſſimus habendi Senatus locus*, nihil *horum ora vultuſq; moverunt!* Where the Word *nihil* ſo often re-iterated gives an admirable Force and Vehemence to the Diſcourſe.—

Again,

Again, the ſame Author: Quem *ſenatus damnarit*, quem *Populus R. damnarit*, quem *omnium exiſtimatio damnarit*, *eum vos ſententiis veſtris abſolvetis?* Again, Non *feram*, non *patiar*, non *ſinam*.

The ſecond Kind of *Repetition*, call'd πλοκὴ, *Ploce*, is a *Repetition* of the ſame Word, in the ſame Phraſe; but in ſuch manner as that ſome new Idea or Character is added to the Word, in the ſecond, which it had not in the firſt: As *Corydon* is allways *Corydon*: *Ex illo Corydon, Corydon eſt tempore nobis*; by which we ſignify that *Corydon* is no ordinary Perſon; and that nothing can diſtinguiſh him but the *Repetition* of his own Name: As if we ſhould ſay, *He is Corydon*; *that is enough*.—By the ſame Figure our Saviour ſpeaks, when he ſays, *Let your Language be Yea, yea, and Nay, nay*.

RE-PLANTING, in Gardening, the Action of planting a ſecond time. See PLANTING.

The Gardeners uſe to diſplant their Tulips every Year, and *replant* them.—Lettices muſt be diſplanted and *replanted* yearly, to make them head and knit.—If Strawberries, *&c.* be not deplanted, and *replanted* once in a few Years, they degenerate.

The Gardeners have a Proverb, that if the Devil were to *replant* his Wife, he'd cut off her Head.

REPLEADER, in Law, is to plead over again what was once pleaded before. See PLEA and PLEADING.

REPLEGIARE *De Averiis*, a Writ brought by one whoſe Cattel are diſtrain'd, and put in the Pound by another, upon Security given the Sheriff to purſue, or anſwer the Action at Law againſt the Diſtrainer. See REPLEVY.

REPLETION, in Medicine, a *Plenitude*, or *Plethora*. See PLENITUDE and PLETHORA.

Repletion is more dangerous than Inanition.—Bleeding and Diet are the great Reſourſes when a Perſon is incommoded with a *Repletion*. See DIET, *&c.*

Repletion is ſometimes alſo uſed where the Stomach is over loaden, with too much eating or drinking.—The Phyſicians hold all *Repletion* prejudicial; but that of Bread the worſt. See BREAD and SURFEIT.

REPLETION, in the Canon Law, is where the Revenue of a Benefice or Benefices is ſufficient to fill or occupy the whole Right or Title of the Graduate who holds them. See BENEFICE, GRADUATE, *&c.*

When there is a *Repletion*, the Party can demand no more by Virtue of his Degrees.—In *England*, where Benefices are not affected to Degrees, *Repletion*, ſtrictly ſpeaking, has no Place. See PLURALITY.

In *France*, 600 Livres, or 45 *l.* Sterl. *per Annum*, make a *Repletion*, when the Benefice is obtain'd otherwiſe than by his Degree; and 30 *l. per Annum*, when it is obtain'd by virtue of a Degree.

REPLEVY, REPLEVIE, or REPLEVIN, in Law, from the *Latin replegiare*, to re-deliver to the Owner upon Pledges of Surety; is the bringing of a Writ called *Replegiari facias*, by him whoſe Cattel or Goods are diſtrained by another upon any Cauſe; and giving Security to the Sheriff, that on delivery of the thing diſtrain'd, he will proſecute the Action againſt the Perſon who made the Diſtreſs. See DISTRESS.

In the Stat. 24 of *Henry* III. we read of *Canes replegiati*, Hounds *replevied*, in a Caſe between the Abbot of St. *Albans*, and *Geoffery Childwic*.

Goods may be *replevied* two ways; *viz.* by *Writ*, which is that uſed by the common Law.—And by *Plaint*; which is that by Statute Law, for the more ſpeedy having again the Cattel and Goods.

REPLEVISH, in Law, is to let one to Mainpriſe, upon Surety. See MAINPRISE.

REPLICATION, REPLICATIO, in Logic, the aſſuming or uſing the ſame Term twice in the ſame Propoſition.

In the like Senſe they ſay *Reduplication*.

Some Philoſophers uſe the Phraſe *Replicatio Mundi*, *Replication* of the World for its Converſion, or turning round.

The human Soul is alſo ſaid to be in a Place *replicatively*, *replicative*, when conceived to be all in the whole, and all in every Part thereof. See SOUL.

REPLICATION, in Law, is an Exception of the ſecond Degree, made by the Plaintiff to the firſt Anſwer of the Defendant. See REJOYNDER.

The *Replication* is particularly that which the Plaintiff replies to the Defendant's Anſwer in Chancery, and which is either *general* or *ſpecial*. The *ſpecial* is grounded upon Matter ariſing out of the Defendant's Anſwer, *&c.* The *general* is ſo called from the general Words therein uſed.

REPORT, the Relation made upon Oath, by Officers or Perſons appointed to viſit, examine, ſtate, or eſtimate, any thing.

Damages, Repairs, *&c.* are judged from the Reports of experienced Perſons.—Proviſions for Perſons wounded are only granted on the *Reports* of Chirurgeons, *&c.* In Caſes of Rapes a *Report* of Matrons is had. See JURY.

REPORT, in Law, is a publick Relation of Caſes judiciouſly argued, debated, reſolved, or adjudged in any of the King's Courts of Juſtice, with the Cauſe and Reaſon of the ſame, delivered by the Judges.

When the Chancery, or any other Court, refers the ſtating of ſome Caſe, or comparing an Account, *&c.* to a Maſter in Chancery, or other Referee, his Certificate therein is call'd a *Report*.

REPOSITORY, REPOSITORIUM, a Store-houſe or Place where things are laid up and kept.—In this Senſe we ſay the *Repoſitory* of the Royal Society, *&c.* See MUSÆUM.

REPOSE, in Poetry, *&c.* See REST.

REPOSE, in Painting, is uſed for certain Maſſes or large Syſtems, or Aſſemblages of Light and Shade; which being well conducted, prevent the Confuſion of Objects and Figures; by engaging and taking up the Eye ſo as it can't attend to the other Parts of the Painting, for ſome time: And thus leading it to conſider the ſeveral Groups gradually, and as it were to proceed from Stage to Stage.—See LIGHT, SHADOW, CLAIR-*obſcure*, &c.

REPOSITION *of the Foreſt*, an Act whereby certain Grounds made *purlieu*, upon a ſecond view are laid to the Foreſt again. See FOREST, and PURLIEU.

The Word is form'd from the *Latin re* and *ponere*, to lay again.

REPRESENTATION, in the Drama, the Exhibition or Action of a theatrical Piece; including the Scenes, Machines, the Recitation, *&c.* See SCENE, MACHINE, RECITATION, *&c.*

Sir *Richard Steel*'s Principle is, that the Deſign of a Play is not to be *read* but *repreſented*; ſo that 'tis on the Stage, not in the Preſs it is to be judged of: And the Pit, not the Publick, are the Judges. See THEATRE.

REPRESENTATIVE, one that perſonates, or ſupplies the Place of another; and is inveſted with his Right and Authority.

The Word *Repreſentative* is equivalent to a *Procurator* or *Proxy*. See PROCURATOR and PROXY.

Thus we ſay the King is the *Repreſentative* of God on Earth: Magiſtrates, *Repreſentatives* of the King. See KING, MAGISTRATE, *&c.*

The Commons are the People's *Repreſentatives* in Parliament. See COMMONS, PARLIAMENT, *&c.*

There is this defect in the Conſtitution of our Parliament; that whereas all *Engliſhmen* who have conſiderable Eſtates, ought not to be tax'd without their own Conſent, in Parliament by themſelves, or their *Repreſentatives*: Copy-holders, whereof ſome have a thouſand Pounds a Year, have no Voice in the Election of Knights of the Shire. *Chamberl.*

REPRIEVE, in Law, a ſuſpending or deferring the Progreſs and Execution of the Law upon a Priſoner, for the preſent time.

A *Reprieve* is properly a Warrant from the King, for ſuſpending the Execution of a Perſon condemn'd.—The King cannot pardon a condemn'd Perſon without the Concurrence of Parliament, but he frequently *reprieves* him for 99 Years.

REPRIMAND, a ſharp authoritative Reproof. Such a Perſon was *reprimanded* in Court, by the Bench, *&c.*

REP-SILVER, Money antiently paid by ſervile Tenants to their Lord, to be quitted of the Duty of reaping his Corn. See SILVER.

RERE-WARD, *arrieregarde*, the Rear of an Army. See REAR.

REPRIZALS, REPRISALIA, in the Civil Law, a Right which Princes have to retake from their Enemies, ſuch things as they unjuſtly detain from them; or things equivalent thereto.

When a Place is taken or held from a Prince, he ſeizes another by way of *Repriſal*.—Sometimes he takes Men of the oppoſite Party, by Right of *Repriſals*.—The *Romans* call'd it *Clarigatio*. See CLARIGATIO.

REPRISALS is alſo uſed for a Letter or Permiſſion which a Prince ſometimes gives a Subject, upon a full Cognizance of the Cauſe; authorizing him to retake from the firſt Perſons he meets withal of the oppoſite Party, as many Effects as make an Equivalent to what have been violently forced from him; and for which the oppoſite Prince has refuſed to do him Juſtice.

Theſe Permiſſions are alſo called *Letters of Mark*, and in the Stat. 27 *Edw.* III. *Law of Marquiere*; in regard, a Perſon denied Juſtice in another Man's Territory; redreſſes himſelf by Goods belonging to Men in that Territory. This Merchant has ſeiz'd the Effects of the *Spaniard* Don ——— becauſe the *Spaniards* had ſeiz'd his; and no redreſs could be had at the Court of *Madrid*.

The Word is form'd from the *Italian*, *Repreſaglia*, which ſignifies the ſame thing.

REPRISE, or REPRIZE, in the Commerce by Sea, a Merchant Ship which having been taken by a Corſair, Privateer, or other Enemy; is retook or recover'd by a Veſſel of the contrary Party.

When a Veſſel thus retaken has been 24 Hours in the Hands of the Enemy, 'tis deem'd a lawful Prize. See PRIZE.

If the *Repriſe* have been made within the 24 Hours; the Veſſel is to be reſtored to the Proprietor, with every thing therein, upon his allowing one third to the Veſſel who made the *Reprize*.

If the *Repriſe* have been abandon'd by the Enemy, either in a Tempeſt, or from any other Cauſe, before it have been led into any Port, it is to be reſtored to the Proprietor.

The Word is *French*, and ſignifies a *re-ſumption* or *re-taking*.

REPRISES, in Law, are Deductions, Draw-backs, or Duties paid yearly out of a Manor, or Lands.—Such are Rent-charges, Penſions, Fees of Stewards or Bailiffs, *&c.*

Thus we ſay, the Manor of *Doll* yields 40 *l. per Annum, ultra Reprizas*, beſides all *Repriſes*.

REPROBATION, in Theology, a Decree or Reſolve which God has taken from all Eternity, to puniſh Sinners, who ſhall dye in Impenitence. See DECREE.

Reprobation ſtands in Polemical Divinity in direct oppoſition to *Predeſtination*. See PREDESTINATION.

The Divines hold it a Symptom of *Reprobation*, when a Sinner is harden'd ſo as not to feel any further Remorſe or Miſgivings of Conſcience. See CONSCIENCE, REMORSE, *&c.*

The Caſuiſts diſtinguiſh *poſitive* and *negative Reprobation*.

Poſitive Reprobation is that whereby God is ſuppoſed to create Men with a poſitive and abſolute Decree to damn them eternally.

This Opinion of *Reprobation*, is countenanc'd by St. *Auguſtin*, and others of the Fathers, and ſtrongly maintained by *Calvin*, and moſt of his Followers.—Something like it is alſo found in the 39 Articles of the Church of *England*, but 'tis now generally exploded as injurious to God. See CALVINIST, *&c.*

Negative, or *Conditional Reprobation*, is that whereby God, though he create all Men with a ſincere deſire to ſave them, and furniſhes them with the neceſſary Means thereto, ſo as all may be ſaved if they will; yet, ſees, there are ſeveral who will not do it, with the Aids he ſhall afford them, how powerful ſoever: And ſees, at the ſame time, they would do it with certain other Aids, which he ſees, but will not give them.—O *Altitudo!* &c. See GRACE.

REPRODUCTION, the Action whereby a thing is produced a-new, or grows a ſecond time. See PRODUCTION.

When the Stock of an Oak, Fruit-Tree, *&c.* is cut off ſhort, it *reproduces* an infinity of young Shoots. See STOCK.

By *Reproduction* is uſually underſtood the Reſtauration of a thing before exiſting, and ſince deſtroyed. See RESTAURATION.

The *Reproduction* of ſeveral Parts of Lobſters, Crabs, *&c.* makes one of the great Curioſities of natural Hiſtory.—That in lieu of an organical Part of an Animal cut off, another ſhould ariſe perfectly like it, may ſeem inconſiſtent with the modern Syſtem of Generation; where the Animal is ſuppoſed to be wholly form'd in the Egg. See GENERATION and EGG.

Yet has the matter of Fact been well atteſted by the Fiſhermen, and even by ſeveral Virtuoſo's who have taken the Point into Examination.—The Legs of Lobſters, *&c.* conſiſt each of five Articulations; now when any of the Legs happen to break by any Accident, as in walking, *&c.* which frequently happens, the Fracture is always found to be at a Suture near the fourth Articulation; and what they thus loſe is preciſely *reproduced* in ſome time afterwards: That is, a part of a Leg ſhoots out, conſiſting of four Articulations; the firſt whereof has two Claws as before; ſo that the loſs is entirely repaired.

If a Lobſter's Leg be broke off by deſign at the fourth or fifth Arriculation, what is thus broke off always comes again.—But 'tis not ſo if the Fracture be made in the firſt, ſecond, or third Articulation. In thoſe Caſes the *Reproduction* is very rare, if things continue as they are.—But what is exceedingly ſurprizing, is, that they don't: For upon viſiting the Lobſter maim'd in theſe barren and unhappy Articulations, at the end of two or three Days, all the other Articulations are found broke off, to the fourth; and 'tis ſuſpected they have performed the Operation on themſelves, to make the *Reproduction* of a Leg certain.

The Part *reproduced* is not only perfectly like that retrench'd, but alſo in a certain ſpace of time equal to it.—Hence it is, that we frequently ſee Lobſters, which have their two big Legs unequal; and that in all Proportions.—This ſhews the Youth of the leſs.

A Part thus *reproduced* being broke, there is a ſecond *Reproduction*.—The Summer, which is the only Seaſon of the Year when the Lobſters eat, is the moſt favourable time to the *Reproduction*. 'Tis then perform'd in four or five Weeks: whereas it takes up eight or nine Months in any other Seaſon.

The ſmall Legs are *reproduced*, but more rarely, as well as more ſlowly than the great ones: The Horns do the ſame. See CRAB's-EYES.

REPTILES, in natural Hiſtory, a kind of Animals, denominated from their *creeping* or advancing on the Belly; or a Genus of Animals and Inſects which inſtead of Feet, reſt on one Part of the Body, while they advance forward with the reſt. See ANIMAL, INSECT, *&c.*

Such are Earth-Worms, Snakes, Catterpillars. *&c.*

Indeed, moſt of the Claſs of *Reptiles* have Feet; only thoſe very ſmall, and the Legs ſhort in Proportion to the Bulk of the Body. See FEET and LEGS.

The Naturaliſts obſerve a World of artful Contrivance for the Motion of *Reptiles*.—Thus, particularly, in the Earth-worm, Dr. *Willis* tells us, the whole Body is only a Chain of annular Muſcles; or, as Mr. *Derham* ſays, 'tis only one continued ſpiral Muſcle, the orbicular Fibres whereof by being contracted, render each Ring narrower and longer than before: By which means it is enabled, like the Worm of an Augre, to bore its Paſſage into the Earth.—Its *reptile* Motion may alſo be explained by a Wier wound on a Cylinder, which when ſlip'd off, and one end extended and held faſt, will bring the other nearer it. So the Earth-worm having ſhot out or extended its Body, (which is with a wreathing) it takes hold by thoſe ſmall Feet it hath, and ſo contracts the hinder Part of its Body.—Dr. *Tyſon* adds, that when the fore-part of the Body is ſtretch'd out, and applied to a Plane at a Diſtance, the Hind-part relaxing and ſhortening, is eaſily drawn towards it as a Centre.

Its Feet are diſpoſed in a quadruple Row, the whole length of the Worm; with which, as with ſo many Hooks, it faſtens down ſometimes this, and ſometimes that Part of the Body to the Plane, and at the ſame ſtretches out, or drags after it another.

The creeping of Serpents is effected after a ſomewhat different Manner; there being a difference in their Structure; in that theſe laſt have a Compages of Bones articulated together. The Body here is not drawn together, but as it were complicated; Part of it being applied on the rough Ground, and the reſt ejaculated and ſhot from it; which being ſet to the Ground in its turn, brings the other after it.—The Spine of the Back, variouſly wreath'd, has the ſame effect in leaping, as the Joints of the Feet in other Animals; they making their Leaps by means of Muſcles that extend the Plicæ or Folds.

The Word REPTILE is likewiſe uſed, abuſively, for Plants and Fruits which creep on the Earth, or on other Plants, as wanting Strength of Stalk to ſuſtain themſelves.

Such are Cucumbers, Melons, *&c.* ſuch alſo are Ivy, the Vine, *&c.*

The Word is form'd from the *Latin, repo*, I creep.

REPUBLIC, RES PUBLICA, *Commonwealth*, a popular State or Government; or a Nation governed by a Democracy. See DEMOCRACY.

The celebrated *Republics* of Antiquity, are thoſe of *Athens, Sparta, Rome*, and *Carthage*.

At preſent there is ſcarce any ſuch thing as a real *Republic*, i. e. as a ſtrictly popular State.—Indeed the *Venetians* and *Genoeſe* call their States *Republics*, but their Government is apparently *oligarchic*. See OLIGARCHY.

The *Dutch* come the neareſt to the Character of a *Republic*; yet are they very defective, at leaſt in the Senſe and Severity wherewith *Rome, Carthage*, &c. were *Republics*. See STATES-*General*, PENSIONARY, *&c.*

'Tis a Remark of M. St. *Evremond*, that if the *Dutch* love the *Republican* Form, 'tis more for the ſake of their Trade, than of their being free.

REPUBLIC *of Letters*, or of *Learning*, is a Phraſe uſed in ſpeaking collectively of the whole Body of the People of Study.

There is a Journal begun in *Holland* by M. *Bayle*, and continued by M. *Bernard*, conſiſting of Extracts of Books printed in the Courſe of the Year; called, *Nouvelles de la Republique des Lettres*; News from the *Republick* of Letters. See JOURNAL.

REPUDIATION, in the Civil Law, the Act of Divorcing. See DIVORCE.

REPULSION, REPULSIO, in Phyſicks, the Action of a repelling Power, whereby natural Bodies, under certain Circumſtances, mutually fly each other. See REPELLING-*Power*.

Repulſion is the Counter-Part to Attraction.—Attraction only reaches to a little Diſtance; where that terminates there *Repulſion* commences. See ATTRACTION.

Indeed we meet with many obvious Inſtances of *Repulſion* among Bodies, as between Water and Oil; and in general between Water and all unctuous Bodies: Between Mercury and Iron; as alſo between the Particles of Duſts, *&c.*

Thus, if a fat Body lighter than Water, be laid on the Surface thereof, or if a Piece of Iron be laid on Mercury; the Surface of the Fluid will be depreſs'd about the Bodies laid on it: A plain Indication of *Repulſion*; as the riſing up of the Fluid about the Surfaces of other incumbent Bodies is of Attraction.

In the latter Caſe the Fluid is ſuſpended by an attractive Power, above the Level, and kept from falling by its Gravity: In the former a Depreſſion is made by the repelling Power, which the Liquor, notwithſtanding its Gravity, cannot run down into and fill up.

Upon this depend all the Phænomena of very light Glaſs Bubbles floating on Water; about which, when clean, the Water riſes; but when greas'd, the Water ſinks into a Channel all around them.—Hence alſo it is that in a Glaſs Veſſel of Water the Fluid ſtands higher all about the Edges near the Glaſs, than towards the Middle: But when the Glaſs is filled till the Water run down on all Sides, then, it ſtands higher at the middle than at the Sides.—Hence, alſo in a Glaſs not full of Water, a clean Glaſs Bubble always runs to the Side, by reaſon the Preſſure which is upon it towards the Middle, is partly taken off by the attractive Force wherewith the Water is rais'd near the Edge. If the Glaſs be ſo full as to be ready to run over, the Bubble returns from the Side towards the Middle; the Force wherewith the Water is rais'd in the Middle, taking off Part of the Preſſure.

Juſt the reverſe happens, if the Bubble be greaſy; in regard, there, the Force whereby the Water and the Bubble repel each other, is greateſt where the Water is higheſt. Two clean Bubbles,

bles, and two greasy ones always run towards each other; as being attracted: A greasy and a clean one always fly each other, as being repell'd.

REQUEST, in Law, a Supplication, or Petition preferr'd to a Prince, or a Court of Justice; begging Relief in some Conscionable Cases where the Common Law granted no immediate Redress. See EQUITY.

The Term *Request* is now, since the Institution of Chancery, much disused; together with the Court of *Requests*, where *Requests* were cognizable.

The *Court of* REQUESTS, was an antient Court of Equity, instituted about the 9th *Henry* VII. of like Nature, though inferiour Authority, to the Court of Chancery; being appointed chiefly for the Relief of Petitioners who in conscionable Cases should address themselves by way of *Request* to his Majesty.

The Chief Judge of this Court was the Lord Privy Seal, assisted by the *Masters of Requests*, who corresponded to our Masters of Chancery. See MASTER.

40 and 41 *Eliz.* it was adjudged, upon solemn Argument in the Court of Common-Pleas, that the Court of *Requests* was then no Court of Equity. See COURT, CHANCERY, *&c.*

In *France* the *Requetes Civiles*, Civil Requests, still obtain for the annulling of Contracts, *&c.* made by Surprize. See PLAINET.

They have eighty *Masters of Requests*, to take Cognizance of Causes between the Officers of the Crown, the Servants of the Houshold, *&c.*

REQUEST, in Hunting, is when the Dogs have lost the Quest or Track of the Beast, and must *Request*, or *Quest* it again. See QUEST.

Thus they say, to *call to the Request*, *come to the Request*. See HUNTING.

To Request the Game, is chiefly used when after having run it down the Night before, they seek it again the next Morning with the Blood-Hound, or the like. See BLOOD-HOUND.

REQUIEM, a Mass sung in the *Romish* Church for the rest of the Soul of a Person deceas'd. See MASS.

It is thus called, because the *Introit* begins with, *Requiem æternam dona eis Domine*, &c.

RES, *thing*. See REALITY, ENS, ESSE, SUBSTANCE, *&c.*

RES *Naturales*, RES *Non Naturales*, RES *Præter Naturales*, } See { NATURALS. NON *Naturals*. PRÆTER *Naturals*.

RESCEIT, RECEPTIO, an Admission or Receiving of a third Person to plead his Right, in a Cause formerly commenced between other two.

As, if a Tenant for Life or Years, brings an Action, he in the Reversion comes in and prays to be received, to defend the Land, and to plead with the Demandant.

RESCEIT is also applied to an admittance of Plea, though the Controversy be only between two.

RESCEIT *of Homage*, *Receptio Homagii*, denotes the Lord's receiving Homage of his Tenant at his Admission to the Lands. See HOMAGE.

RESCISION, RESCISSIO, in the Civil Law, an Action intented for the annulling or setting aside of an Act, Contract, or the like.

A Thing's being found damag'd or sold at above double the just Value, is a good Cause of *Rescission*. See REDHIBITION.

An Act or Contract thus annull'd, or *rescinded*, is call'd a *Rescissory*.

The Word is form'd from the *Latin*, *re* and *scindo*, q. d. I cut or divide again.

RESCOUS, or RESCUE, in Law, an illegal taking away and setting at Liberty of a Distress taken or a Person arrested, by Process or Course of Law.

This is properly a *Rescous in Fact*.—If one Distrain Beasts for Damage feasant in his Ground, and as he drives them in the Highway towards the Pound, they enter into the Owner's House, and he witholds them there, and will not deliver them upon Demand; this Detainer is a *Rescous* in Law.

Rescous, in Matters relating to *Treason*, is deem'd Treason; and in Matters concerning Felony, is Felony. See TREASON, *&c.*

He that commits such a *Rescue* or *Rescous*, is call'd *Rescussor*.

RESCOUS is also used for a Writ which lies for this Fact; called *Breve de Rescussu*.

RESCRIBENDARY, an Officer in the Court of *Rome*, who sets a Value upon Indulgences and Supplications. See INDULGENCE.

RESCRIPT, an Answer delivered by an Emperor, or a Pope, when consulted by particular Persons, on some difficult Question or Point of Law; to serve as a Decision thereof.

The Civil and Canon Laws are full of such *Rescripts*.—When the *Rescript* was made in Answer to the Inquiry of a Community, it was call'd a *pragmatic Sanction*. See PRAGMATIC.

The Papal *Rescripts* are a kind of of Bulls or Monitories, beginning with these Words, *Significavit nobis dilectus filius*, &c. They never obtained either in *England* or *France*, when contrary to the Liberties of the *English* and *Gallican* Churches; but were declared abusive. See BULL.

Among the *Romans* the contending Parties, and even the Magistrates themselves, frequently consulted the Emperor on the Measures they were to take in certain nice and difficult Cases; and the Answer returned by the Emperors on such Consultations, were called *Rescripts*.—These had not, indeed, the full force of Laws, but were deem'd a strong Prejudice or Presumption.

Justinian has inserted a great Number of them in the Code; and by that means given them the Authority they before wanted. See CODE.

The Author of the Life of the Emperor *Macrinus* observes of that Prince that he would have his Officers judge by Laws, not by *Rescripts*; as esteeming it absurd to admit the Wills of ignorant Men, such as *Commodus*, and *Caracalla*, for Rules of Judging; and because *Trajan* never gave any *Rescripts* at all, as being loth to countenance a Custom, where what is frequently granted as a favour, in particular Cases, might be afterwards pleaded as a Precedent.—'Tis added, that *Macrinus* had a Design to strip the *Rescripts* of all their Authority.

M. *Schulting*, in his Dissertations, does not at all approve of this Design; and to the Emperor's Reasons Answers, that indeed all *Rescripts* are not to be admitted; that those which appear dictated out of favour, are to be thrown aside; but those which appear founded in Reason, and natural Equity are, with *Justinian*, to be allowed.—He adds, that it can't be denied but the worst Emperors have frequently made good Laws, and useful *Rescripts*.

As to what is urged of the Emperor *Trajan*'s never giving any *Rescripts*; it appears but ill supported.—For what is it but a *Rescript* that he delivers to *Pliny* on the Subject of the Christians, *Lib.* 2. *Epist.* 28? Or that on the *Iselastici*, Lib. 10. Epist. 120? The *Digest*, and *Pliny*'s Epistle, need only to be opened and compared, to find *Rescripts* of *Trajan*.

RESEANTISSA, in Law. See ESSOIN.

RESEARCH, a diligent Search or Inquiry into any thing.—The Word is form'd of the *French*, *Recherche*, and litterally denotes a *second Search*.

RESEARCH, in Musick, is a Kind of Prelude or Voluntary, play'd on the Organ, Harpsichord, Theorbo, *&c.* Wherein the Composer seems to *Search*, or look out for the Strains, and Touches of Harmony, which he is to use in the regular Piece to be play'd afterwards. See PRELUDE.

This is usually done off-hand, and consequently requires a Master's Skill.—When in a Motet the Composer takes the Liberty to use any thing that comes in his Head, without applying any Words to it, or subjecting himself to express the Sense or Passion thereof; the *Italians* call it *Fantasia Ricercata*; the *French*, *Recherche*; and our Musicians, *Research*.

RESEARCHING, in Sculpture, the Repairing of a cast Figure, *&c.* with proper Tools; or the finishing it with Art and Exactness, so as the minutest Parts may be well defined. See FIGURE, STATUE, FOUNDERY, *&c.*

RESEISER, in Law, a taking again of Lands into the King's Hands, whereof a general Livery, or *Ouster le Main*, was formerly misused; contrary to Order of Law. See RESUMPTION.

RESEMBLANCE. See SIMILITUDE.

RESERVATION, in Law, an Action or Clause whereby something is reserv'd, *i. e.* retain'd, kept, or secured to one's self. See RESERVE.

Thus, when a Man lets his Land, he *reserves* a Rent to be paid to himself for his Maintenance, *&c.* See LEASE, TENANT, RENT, *&c.*

William the Conqueror getting all the Lands of *England*, except those belonging to the Church and Religious Houses, into his Hands by Right of Conquest; bestowed a great Part thereof among his Followers, *reserving* some Retribution of Rents and Services to him and his Heirs; which *Reservation* is now, as it was before the Conquest, called the Tenure of the Lands. See TENURE, SERVICE, *&c.*

Sometimes *Reservation* signifies as much as an *Exception*; as when a Man lets an House, and *reserves* to himself one Room, that Room is excepted out of the Demise. See EXCEPTION.

Mental RESERVATION is a Proposition, which strictly taken, and according to the natural Import of the Terms, is false; but if qualified with something *reserved* in the Mind, becomes true. Mental *Reservations* are the great Refuge of Religious Hypocrites; who use them to accommodate their Consciences with their Interests: The Jesuits are zealous Advocates for mental *Reservations*; yet are they real Lyes, as including an Intention to deceive.

RESERVE, in Law, the same with *Reservation*. See RESERVATION.

He has settled the whole Estate on his Son, and has not made any *Reserve*.—Benefices are sometimes resign'd with *Reserve* of a Pension.—By the Canon Law, no Person may *reserve* to himself a Pension out of a Benefice, unless he have served it ten Years. See RESIGNATION.

In the *Romish* Church, the ordinary Priests have only a Power to absolve, *in reserve of certain Cases*; hence called *reserved Cases*, as being *reserved* to the Bishop. See ABSOLUTION and CASE.

The Court *reserves* the Cognizance of such an Affair to it self.—The Lawyers say, that no Prince ever grants such a Power by his Letters or Patents, but he *reserves* to himself a greater.

Body of RESERVE, or *Corps de* RESERVE, in War, the Forces diſpoſed in the third or laſt Line of an Army drawn up for Battle. See LINE and BATTLE.

They are thus called becauſe *reſerv'd*, or deſtined to ſuſtain the reſt as occaſion requires; and not to engage but in Caſe of Neceſſity.

RESERVOIR, RECEPTACLE, a Place where Water is collected and *reſerv'd*, to be convey'd occaſionally, through Pipes, *&c.* or to be ſpouted up, *&c.* See WATER, FLUID, *&c.*

The *Reſervoir* in a Building is a large Baſon, uſually of Wood, lined with Lead, where Water is kept to ſupply the Occaſions of the Houſe.—At *Canons*, the noble Seat of the Duke of *Chandos*, is a very large *Reſervoir* a-top of the Houſe; to which the Water is rais'd by a very curious Engine contrived for the Purpoſe.—This *Reſervoir* is of ſuch Capacity, as that beſides ſupplying all Parts of the Houſe by means of Pipes and Cocks, it likewiſe turns a Mill.

The *Reſervoir* is ſometimes alſo a large Baſon of ſtrong Maſonry, glazed or paved at the Bottom; where the Water is *reſerved* to feed *Jets d' Eau*, or ſpouting Fountains. See FOUNTAIN, *&c.*

Such is that huge one on the top of *Marly*, call'd *Trou d' Enfer*, Hell-Mouth, whoſe Surface, *Daviler* tells us, contains fifty Acres, and its Depth ſuch, as under that Superficies to contain a hundred thouſand Cubick Fathom of Water.

RESERVOIR, in Anatomy. See RECEPTACLE

RESET, in Law, the receiving or harbouring an outlawed Perſon. See OUTLAW.

Hence a Receiver of an Out-lawed Perſon, is call'd a *Reſetter*.

RESIANCE, in Law, a Man's Abode or Continuance in a Place.—The Word has the ſame Signification with regard to Lay-Men, as *Reſidence* with regard to Eccleſiaſticks. See RESIDENCE.

Glanville obſerves, that in the antient Law, *Reſiance* properly ſignified a Diſeaſe, whereby the Perſon was diſabled from ſtirring out of Doors.—Whence their *Eſſoin de Reſiantiſſa*, was the ſame as our *Eſſoin de Malo Lecto*. See ESSOIN.

RESIDENCE, in Canon and Common Law, the Abode of a Parſon or Incumbent upon his Benefice; and his Aſſiduity in attending on the ſame. See PARSON, BENEFICE, *&c.*

The Default of *Reſidence*, call'd *Non-Reſidence*, unleſs where the Party have a Diſpenſation for the ſame, with us, is the Forfeiture of ten Pounds for each Month. See NON-*Reſidence*.

By the Canon Law, Beneficiaries are obliged to *Reſidence*, under Pain of Deprivation of their Benefices.—The Original Reaſon is, that in the primitive Church none were promoted to holy Orders, but ſuch as had a Benefice in *promptu*; which they were obliged to ſerve; ſo that this Service was neceſſarily attach'd to the Order; and whoever was honoured therewith, at the ſame time was obliged to perſonal Service. See ORDER and ORDINATION.

But this ſtrict Diſcipline was not obſerved long.—The Beneficiaries by Degrees got Diſpenſations from ſerving their Benefices themſelves; and thus Pluralities got footing. See PLURALITY.

France, of all other Countries, ſeems to be that where *Reſidence* is the moſt ſtrictly regarded.—All their *Curez*, or Miniſters who have Cures of Souls, are obliged to actual *Reſidence*; and the Parliaments have declared all the Diſpenſations granted by Popes, *&c.* abuſive; as eſteeming the Obligation of *Reſidence* to be *Jure Divino*.

Under *Charles* IX. there was even a Deſign to re-eſtabliſh the primitive Diſcipline in all its Severity; and in 1561, a Declaration was regiſtered, appointing all Biſhops to *reſide*, conformably to the antient Canons, in their Biſhopricks.—The ſame Parliament alſo forbad the Biſhops to aſſume the Quality of Councellors of the King; in regard ſuch a Quality was deem'd inconſiſtent with the indiſpenſible Obligation they were under to reſide in their Biſhropricks.

Du Pin adds, that the *Procureur General*, Attorney General *Bourdin*, even ſeiz'd the Temporalities of ſuch Biſhops as continued in *Paris* fifteen Days after this Declaration; having firſt certified them, that if they had any Buſineſs there, he'd undertake the Management thereof.

RESIDENCE, in Chymiſtry, *&c.* the ſettling; or what remains of a Liquor, or other Subſtance in the Veſſel, after Part of it has been pour'd or taken out; to change the Manner of the Operation on what is left.

RESIDENT, a publick Miniſter, who manages the Affairs of a King in the Court of a Prince, or petty State; or the Affairs of a Prince, or petty State, in the Court of a Prince. See MINISTER.

Thus the King of *England* has *Reſidents* in the Courts of the Electors, and other Princes of *Germany* and *Italy*; at the Republicks of *Genoa* and *Lucca*; and they reciprocally have *Reſidents* in the Court of *Great-Britain*.

Reſidents are a Claſs of publick Miniſters inferiour to Embaſſadors and Envoys; but like them are under the Protection of the Law of Nations. See EMBASSADOR and ENVOY.

RESIDENT, in our antient Cuſtoms, was a Tenant who was obliged to *reſide* on his Lord's Land, and not to depart from the ſame; called alſo, *Homme levant aud Couchant*; and in *Normandy*, *Reſſeant du Fief*.

Quantumcunq; de aliis teneat ei magis obnoxius eſt, & ejus reſidens eſſe debet cujus legius eſt Leg. H. 1.

RESIDENTIARY, a Canon inſtalled to the Privileges and Profits of Reſidence. See CANON.

RESIDUAL *Figure*, in Geometry, the Figure remaining after Subſtraction of a leſſer from a greater. See FIGURE.

RESIDUAL *Root*, is a Root compoſed of two Parts or Members, only connected together with the Sign —.

Thus, *a—b*, or 5—3, is a *Reſidual* Root; and is ſo called, becauſe its true value is no more than its *Reſidue*, or Difference between the Parts *a* and *b*, or 5 and 3. See ROOT.

RESIDUE, the Remainder or Reliqua of an Account, Debt, or Obligation. See REMAINDER and RELIQUA.

St. *Paul*, in his Epiſtle to the *Romans*, ſpeaks of a *Reſidue* according to the Election of Grace; meaning a Remnant or little Number of People preſerved from Idolatry by an effect of the Grace of God.

RESIGNATION, or RENUNCIATION, in the Canon Law, the Surrender, or giving up of a Benefice into the Hands of the Collator. See BENEFICE and COLLATOR.

Reſignation is of equal Import with *Surrender*; only the former is reſtrained to ſpiritual Benefices, and the latter to temporal Offices or Employments. See SURRENDER.

Reſignations are either Simple or Conditional.

Simple, or *pure Reſignations*, are thoſe whereby the Incumbent ſtrips himſelf of all his Right, abſolutely, and without any Conditions or Reſerve of Penſion.—Theſe are made to the Biſhop, or Collator.

Reſignations in favour, or Conditional Reſignations, are ſuch as are only made on Condition that ſuch other Perſons ſhall be inveſted therewith; ſo that the *Reſignations* are null, unleſs the Conditions be punctually executed.

Theſe *Reſignations* in *favorem* are not of above 200 Years ſtanding.—Strong Oppoſition was at firſt made to them; they being eſteemed a kind of Succeſſion or tranſmiſſion of Benefices, as of Patrimonies belonging to a Family. Accordingly, theſe *Reſignations* are not made into the Hands of the Ordinary, or Collator, as pure *Reſignations* are; but to the Collator paramount, who in the *Romiſh* Church is the Pope: There being a ſuſpicion of Simony, or other unlawful Paction therein; where admitted of in Prejudice to the Lay-Patron.

RESIGNEE, in Law, the Party to whom a thing is reſigned. See RESIGNATION.

RESIN, RESINA, a fat, viſcid, ſulphurous Juice, oozing either ſpontaneouſly, or by Inciſion, from ſeveral kinds of Trees, particularly the Pine, Fir, *&c.* See JUICE, PLANT, *&c.*

Maſtic is the *Reſin* of the Lentisk. See MASTIC.

Camphor is alſo a kind of *Reſin*. See CAMPHOR.

The beſt of all the Claſs of *Reſins* is Turpentine. See TURPENTINE.

The *Coarſeſt* is what we commonly call *Roſin*. See ROSIN.

Reſin is properly a Juice of the Bark only. See BARK.

Boerhaave will have it to be the Oil of the Bark further inſpiſſated by the Heat of the Sun, *&c.* ſo as to become friable. He adds, that it may be produced from any vegetable Oil, by boiling it much and long. See OIL.

If Turpentine be ſet over a gentle Fire, it firſt diſſolves and becomes an Oil, then a Balſam, then Pitch, and then *Roſin*; in which State it is friable in the Cold, fuſible by Fire, and withal inflamable and combuſtible, and diſſoluble in Spirit of Wine, but not in Water, which are the Characters of a *Reſin*. See WATER, *&c.*

There are two kinds of *Reſins*, the one *liquid*, the other *dry* and hard.

The firſt is the natural *Reſin* as it flows from the Tree.—The ſecond only differs from the firſt in that it is condenſed by the Heat of the Sun, or by that of a culinary Fire.

Reſins will incorporate with Oil, or rectified Spirits, but not with an aqueous Menſtruum. See PRECIPITATION.

The Difference between *Reſins* and Gums, conſiſts in this, that *Reſins* are more ſulphurous, and Gums more aqueous; ſo that the firſt diſſolve in Spirit of Wine, and the laſt in Water. See GUM.

M. *Tournefort* makes a kind of intermediate Claſs of vegetable Juices which he calls *Gum-Reſins*; which diſſolve partly in Spirit of Wine, partly in Water. See GUM-*Reſin*.

Such are *Galbanum*, *Bdellium*, *Oppoponax*, *Sagapenum*, &c.

The *Reſin* of ſeveral Vegetables which abound with *Reſinous Particles*, but not ſo as to yield any by Inciſion, as Jalap, Benjamin, Scammony, Turbith, *&c.* is thus obtained.—The Vegetable being groſly powder'd, is put into a Matraſs, and rectified Spirit of Wine poured on it, to the height of four Fingers above the Matter. Then the Neck of another Matraſs being luted into the former to make a double Veſſel, the Matter is digeſted 3 or four Days in a Sand Heat, till it have given a good Tincture to the Spirit of Wine. Then the Diſſolution is filtrated, and two thirds of the clear Liquor evaporated off, and the remainder pour'd into a large Veſſel of Water, where it turns into a kind of Milk; whence, the *Reſin*, in Time precipitates to the Bottom in a white Powder. This when waſh'd and dried in the Sun, grows into the ordinary Conſiſtence of a *Reſin*.

RESISTENCE, or RESISTING-*Force*, in Phyſicks, any Force which acts contrarily to another, ſo as to deſtroy or diminiſh its Effect. See FORCE.

Of *Reſiſtence*, there are various Kinds, ariſing from the various Natures and Properties of the *reſiſting* Bodies; and govern'd by various Laws: As the *Reſiſtence of Solids*, the *Reſiſtence of Fluids*, the *Reſiſtence of the Air*, &c. The Doctrine of each whereof will be ſeen under the following Articles.

RESISTENCE *of Solids*, in Mechanicks, is the force wherewith the quieſcent Parts of ſolid Bodies oppoſe the Motion of others contiguous therewith. See SOLIDITY, *&c.*

Of this there are two Kinds.—The firſt, where the *reſiſting* and *reſiſted* Parts, *i. e.* the moving and quieſcent Parts, are only contiguous, and don't cohere; *i. e.* where they conſtitute ſeparate Bodies or Maſſes.

This *Reſiſtence* is what M. *Leibnitz* calls *Reſiſtence of the Surface*; and we, properly, *Friction*; the Conſideration whereof, being of the laſt Importance in the Doctrine of Machines, ſee its Laws under the Article FRACTION.

The ſecond Caſe of *Reſiſtence* is where the *reſiſting* and *reſiſted* Parts are not only contiguous but cohere, *i. e.* are Parts of the ſame continued Body or Maſs.—This *Reſiſtence* is what we may properly call *Renitency*; and was firſt conſidered by *Galileo*.

Theory of the RESISTENCE *or* RENITENCY *of the Fibres of ſolid Bodies.*

To conceive an Idea of this *Reſiſtence* or Renitency of the Parts, ſuppoſe a cylindrical Body ſuſpended vertically by one End.—Here, all its Parts being heavy, draw downwards; and tend to ſeparate the two contiguous Planes, where the Body is the weakeſt: But all the Planes *reſiſt* this Separation by the Force wherewith they *cohere*, or are bound together: Here then are two oppoſite Powers, the Weight of the Cylinder which tends to break it, and the Force of Cohæſion of the Parts which *reſiſts* the Fracture.

If the Baſe of the Cylinder be increas'd, without increaſing its Length; 'tis evident the Fracture will be increas'd in the ſame Ratio as the Baſe: but the Weight alſo increaſes in the ſame Ratio; whence it is evident that all Cylinders of the ſame Matter and Length, whatever their Baſes be, have an equal *Reſiſtence*, when vertically ſuſpended.

If the Length of the Cylinder be increas'd without increaſing the Baſe, its Weight is increaſed without increaſing its *Reſiſtence*; conſequently the lengthening it weakens it.—To find the greateſt Length a Cylinder of any Matter may have without breaking, there needs nothing but to take any Cylinder of the ſame Matter, and faſten to it the greateſt Weight it will ſuſtain e're it break; and then ſee how much it muſt be lengthened by the Addition of its Weight, 'till it equals its former Weight with the Addition of the foreign Weight.—By this means *Galileo* found a Copper-Wiar, and of conſequence any other Cylinder of Copper, might be lengthened to 4801 Braccios, or Fathoms of ſix Foot each.

If one end of the Cylinder were fix'd horizontally into a Wall, and the reſt ſuſpended thence, its Weight and *Reſiſtence* would then act in a different Manner; and if it broke by the Action of its Weight, the Rupture would be at the End fix'd into the Wall. A Circle or Plane contiguous to the Wall, and parallel to the Baſe, and conſequently vertical, would be detach'd from the contiguous Circle within the Plane of the Wall, and would deſcend. All the Motion is made on the loweſt extremity of the Diameter, which remains immoveable, while the upper extremity deſcribes a quadrant of a Circle, and till the Circle which before was vertical is now horizontal; *i. e.* till the Cylinder be entirely broken.

In this Fracture of the Cylinder 'tis viſible two Forces have acted, and the one has overcome the other: The Weight of the Cylinder, which aroſe from its whole Maſs, has overcome the *Reſiſtence* which aroſe from the largeneſs of the Baſe; and as the Centres of Gravity are Points wherein all the Forces ariſing from the Weights of the ſeveral Parts of the ſame Bodies, are conceiv'd to be united, one may conceive the Weight of the whole Cylinder applied in the Centre of Gravity of its Maſs, *i. e.* in a Point in the Middle of its Axis; and the *Reſiſtence* of the Cylinder applied in the Centre of Gravity of its Baſe, *i. e.* in the Centre of the Baſe: It being the Baſe which *reſiſts* the Fracture.

When the Cylinder breaks by its own Weight, all the Motion is on an immoveable Extremity of a Diameter of the Baſe.—This Extremity, therefore is the fix'd Point of a Lever, whoſe two Arms are the Radius of the Baſe, and half the Axis; and of conſequence the two oppoſite Forces don't only act of themſelves, and by their abſolute Force, but alſo by the relative Force they derive from their Diſtance with regard to the fixed Point of the Lever.

Hence it evidently follows, that a Cylinder, *e. gr.* of Copper, which, vertically ſuſpended, will not break by its own Weight if leſs than 480 Fathom long, will break with a leſs Length in a horizontal Situation; in regard the Length in this latter Caſe contributes two Ways to the Fracture; both as it makes it of ſuch a Weight, and as it is an Arm of a Lever to which the Weight is applied.—Hence, alſo, the ſmaller the Baſe is, the leſs Length or Weight will ſuffice to break it; both becauſe the *Reſiſtence* is really leſs, and becauſe it acts by a leſs Arm of a Lever.

If two Cylinders of the ſame Matter, having their Baſes and Lengths in the ſame Proportion, be ſuſpended horizontally; 'tis evident that the greater has more Weight than the leſſer, both on Account of its Length, and of its Baſe. But it has leſs *Reſiſtence* on Account of its Length, conſidered as a longer Arm of a Lever, and has only more *Reſiſtence* on Account of its Baſe.—Therefore it exceeds the leſſer in its Bulk and Weight, more than in *Reſiſtence*; and conſequently muſt break more eaſily.

Hence, we ſee why upon making Models of Machines in ſmall, People are apt to be miſtaken as to the *Reſiſtence* and Strength of certain horizontal Pieces, when they come to execute their Deſigns in large; by obſerving the ſame Proportion as in the ſmall.—*Galileus*'s Doctrine of *Reſiſtence* therefore is no idle Speculation, but becomes applicable in Architecture and other Arts.

The Weight required to break a Body placed horizontally, being always leſs than that required to break it in a vertical Situation; and this Weight being to be greater or leſs according to the Ratio of the two Arms of the Lever: The whole Theory is always reducible to this; *viz.* to find what Part of the abſolute Weight the relative Weight is to be, ſuppoſing the Figure of the Body known; which indeed is neceſſary, becauſe 'tis the Figure that determines the two Centres of Gravity, or the two Arms of the Lever.—For if the Body, *e. gr.* were a Cone, its Centre of Gravity would not be in the Middle of its Axis, as in the Cylinder; and if it were a Semi-parabolical Solid, neither its Centre of Gravity would be in the Middle of its Length or Axis; nor the Centre of Gravity of its Baſe in the Middle of the Axis of its Baſe. But ſtill, whereſoever theſe Centres fall in the ſeveral Figures, 'tis theſe that regulate the two Arms of the Lever.

It may be here obſerved, that if the Baſe whereby the Body is faſtened into the Wall be not circular, but, *e. gr.* parabolical, and the Vertex of the Parabola a-top, the Motion of the Fracture will not be on an immoveable Point, but on a whole immoveable Line; which may be call'd the Axis of Equilibrium, and 'tis with regard to this, that the Diſtances of the Centres of Gravity are to be determined.

Now a Body horizontally ſuſpended, being ſuppoſed ſuch, as that the ſmalleſt addition of Weight would break it; there is an Equilibrium between its poſitive and relative Weight; and of Conſequence thoſe two oppoſite Powers are to each other reciprocally as the Arms of the Lever to which they are applied.—On the other Hand, the *Reſiſtence* of a Body is always equal to the greateſt Weight which it will ſuſtain in a vertical Situation, without breaking, *i. e.* is equal to its abſolute Weight. Therefore, ſubſtituting the abſolute Weight for the *Reſiſtence*, it appears that the abſolute Weight of a Body ſuſpended horizontally, is to its relative Weight as the Diſtance of its Centre of Gravity from the Axis of Equilibrium, is to the Diſtance of the Centre of Gravity of its Baſe from the ſame Axis.

The Diſcovery of this important Truth, at leaſt of an equivalent hereto, and to which this is reducible, we owe to *Galileo*.—From this fundamental Propoſition are eaſily deduced ſeveral Conſequences.—As, for Inſtance, that if the Diſtance of the Centre of Gravity of the Baſe from the Axis of Equilibrium, be half the Diſtance of the Centre of Gravity of the Body; the relative Weight will only be half the abſolute Weight: And that a Cylinder of Copper horizontally ſuſpended, whoſe Length is double the Diameter, will break, provided it weigh half what a Cylinder of the ſame Baſe, 4801 Fathoms long, weighs. See WEIGHT.

On this Syſtem of *Reſiſtence* of *Galileo*, M. *Mariotte* made a very ſubtile Remark, which gave Birth to a new Syſtem.—*Galileo* ſuppoſes that where the Body breaks, all the Fibres break at once; ſo that the Body always *reſiſts* with its whole abſolute Force; *i. e.* with the whole Force all its Fibres have in the Place where it is to be broke.—But M. *Mariotte* finding that all Bodies, even Glaſs it ſelf, bends before it breaks, ſhews that Fibres are to be conſidered as ſo many little bent Springs, which never exert their whole Force till ſtretch'd to a certain Point; and never break till entirely unbent. Hence, thoſe neareſt the Axis of Equilibrium, which is an immoveable Line, are ſtretch'd leſs than thoſe further off; and of Conſequence employ a leſs Part of their Force.

This Conſideration only takes Place in the horizontal Situation of the Body: In the vertical the Fibres of the Baſe all break at once; ſo that the abſolute Weight of the Body muſt exceed the united *Reſiſtence* of all its Fibres: A greater Weight is therefore required here, than in the horizontal Situation; *i. e.* a greater Weight is required to overcome their united *Reſiſtence*, than to overcome their ſeveral *Reſiſtences* one after another.—The Difference between the two Situations ariſes hence, that in the Horizontal there is an immoveable Point or Line, a Centre of Motion, which is not in the Horizontal.

M. *Varignon* has improved on the Syſtem of M. *Mariotte*, and ſhewn that to *Galileo*'s Syſtem, it adds the Conſideration of the Centre of Percuſſion.—The Compariſon of the Centres of

Gravity, with the Centres of Percuſſion, afford a fine view; and ſet the whole Doctrine in the moſt agreeable Light. See CENTRE.

In each Syſtem, the Baſe whereby the Body breaks, moves on the Axis of Equilibrium, which is an immoveable Line in the ſame Baſe; but in the ſecond, the Fibres of this Baſe are continually ſtretching more and more; and that in the ſame Ratio as they recede farther and farther from the Axis of Equilibrium, and of Conſequence are ſtill exerting a greater and greater Part of their whole Force.

Theſe unequal Extentions, like all other Forces, muſt have ſome common Centre where they all meet; and with regard to which they make equal Efforts on each Side: And as they are preciſely in the ſame Proportion as the Velocities which the ſeveral Points of a Rod moved circularly would have to one another; the Centre of Extention of the Baſe whereby the Body breaks, or tends to break, muſt be the ſame with its Centre of Percuſſion.—*Galileo*'s Hypotheſis, where Fibres ſtretch equally, and break all at once, correſponds to the Caſe of a Rod moving parallel to it ſelf; where the Centre of Extenſion or Percuſſion does not appear, as being confounded with the Centre of Gravity.

The Baſe of Fraction being a Surface whoſe particular Nature determines its Centre of Percuſſion; 'tis neceſſary it be firſt known to find on what Point of the vertical Axis of that Baſe it is placed; and how far it is from the Axis of Equilibrium.—Indeed, we know, in the general, that it always acts with ſo much more Advantage as it is further from it, in regard it acts by a longer Arm of a Lever; and of Conſequence 'tis the unequal *Reſiſtence* of the Fibres in M. *Mariotte*'s Hypotheſis, which produces that Centre of Percuſſion; but this unequal *Reſiſtence* is greater or leſs, according as the Centre of Percuſſion is plac'd more or leſs high on the vertical Axis of the Baſe, in the different Surfaces of the Baſe of the Fracture.

To expreſs this unequal *Reſiſtence*, accompanied with all the Variations it is capable of, regard muſt be had to the Ratio between the Diſtance of the Centre of Percuſſion from the Axis of Equilibrium, and the Length of the vertical Axis of the Baſe. —In which Ratio, the firſt Term, or the Numerator, is always leſs than the ſecond or the Denominator: So that the Ratio is always a Fraction leſs than Unity; and the unequal *Reſiſtence* of the Fibres in M. *Mariotte*'s Hypotheſis is ſo much the greater, or which amounts to the ſame, approaches ſo much nearer to the equal *Reſiſtence* in *Galileo*'s Hypotheſis, as the two Terms of the Ratio are nearer to an Equality.

Hence it follows, that the *Reſiſtence* of Bodies, in M. *Mariotte*'s Syſtem is to that in *Galileo*'s, as the leaſt of the Terms in the Ratio is to the greateſt.—Hence, alſo, the *Reſiſtence* being leſs than what *Galileo* imagined, the relative Weight muſt alſo be leſs; ſo that the Proportion already mentioned between the abſolute and relative Weight, cannot ſubſiſt in the new Syſtem, without an Augmentation of the relative Weight, or a Diminution of the abſolute Weight: Which Diminution is had by multiplying the Weight by the Ratio, which is always leſs than Unity. This done, we find that the abſolute Weight multiplied by the Ratio, is to the relative Weight, as the Diſtance of the Centre of Gravity of the Body from the Axis of Equilibrium, is to the Diſtance of the Centre of Gravity of the Baſe of Fracture, from the ſame Axis. Which is preciſely the ſame thing with the general Formula given by M. *Varignon*, for the Syſtem of M. *Mariotte*. In effect, after conceiving the relative Weight of a Body, and its *Reſiſtence* equal to its abſolute Weight, as the two contrary Forces applied to the two Arms of a Lever, in the Hypotheſis of *Galileo*; there needs nothing to convert it into that of M. *Mariotte*, but to imagine that the *Reſiſtence*, or the abſolute Weight is become leſs; every thing elſe remaining the ſame.

We have here only conſidered Bodies as to be broke by their own Weight.—It will amount to the ſame, if we ſuppoſe them void of Weight themſelves, and to be broken by a Weight applied to their Extremities: Only it is to be obſerved, that a foreign Weight acts by an Arm of a Lever equal to the whole Length of the Body; whereas their own Weight being all united in their Centre of Gravity, is only the Diſtance of that Centre from the Axis of Equilibrium.

One of the moſt curious, and perhaps the moſt uſeful Queſtions in this Reſearch, is to find what Figure a Body muſt have, that its *Reſiſtence* may be equal in all its Parts; whether it be conceived as charg'd with a foreign Weight; or as only ſuſtaining its own Weight.—We ſhall, here, only conſider the latter Caſe, from which the former will be eaſily determined.

For a Body, then, ſuſpended horizontally, to reſiſt equally in all its Parts; 'tis neceſſary ſome Part of it being conceived as cut off in a Plane parallel to the Baſe of Fracture of the Body; the Weight of the Part retrench'd be to its *Reſiſtence*, in the ſame Ratio, as the Weight of the whole to its *Reſiſtence*; theſe four Powers acting by Arms of Levers proper to themſelves.—Now the Weight of any Body thus conceived, is its whole Weight multiplied by the Diſtance of the Centre of Gravity of the Body, from the Axis of Equilibrium; and the *Reſiſtence* is the Plane of the Baſe of Fracture multiplied by the Diſtance of the Centre of Gravity of the Baſe from the ſame Axis: Conſequently theſe four Quantities are to be proportional in the whole, and in each Part of a Solid of equal *Reſiſtence*.

From this Proportion M. *Varignon* eaſily deduces two Solids, which ſhall *reſiſt* equally in all their Parts. *Galileo* had found one before: That diſcovered by M. *Varignon*, is in form of a Trumpet, and is to be fix'd into the Wall at its greater End; ſo that its Bigneſs and Weight is always diminiſh'd in Proportion as its Length, or the Arm of the Lever whereby its Weight acts, increaſes. 'Tis added, (which ſeems very remarkable) that howſoever different the two Syſtems may be, the Solids of equal *Reſiſtence* are the ſame in both.

For the RESISTENCE *of a Solid ſupported at each Extreme; as, of a Beam between two Walls.* See BEAM.

RESISTENCE *of Fluids*, in Hydroſtaticks, is the Force wherewith Bodies moving in fluid Mediums, are impeded and retarded in their Motions. See FLUID and MEDIUM.

Laws of the RESISTENCE *of fluid Mediums.*

A Body moving in a Fluid, is *reſiſted* from two Cauſes; the firſt, the Coheſion of the Parts of the Fluid.—For a Body in its Motion ſeparating the Parts of a Liquid, muſt overcome the Force with which thoſe Parts cohere. See COHESION.

The ſecond is the *Inertia*, or inactivity of Matter, whereby a certain Force is required to move the Particles from their Places, in order to let the Body paſs. See VIS INERTIÆ.

The Retardation from the firſt Cauſe, is always the ſame in the ſame Space, the ſame Body remaining; be the Velocity what it will.—Hence, the *Reſiſtence* increaſes as the Space run through; in which Ratio, the Velocity alſo increaſes; therefore the *Reſiſtence* is as the Velocity it ſelf. See VELOCITY.

The *Reſiſtence* from the ſecond Cauſe, when the ſame Body moves through different Liquids, with the ſame Velocity, follows the Proportion of Matter to be removed in the ſame time; which is as the Denſity of the Liquid. See DENSITY.

When the ſame Body moves through the ſame Liquid with different Velocities, this *Reſiſtence* increaſes in Proportion to the Number of Particles ſtruck in an equal Time; which Number is as the Space run through in that Line, that is, as the Velocity. But farther it increaſes in Proportion to the Force with which the Body ſtrikes againſt every Part; which Force is alſo as the Velocity of the Body. And therefore if the Velocity be Triple, the *Reſiſtence* is Triple, from a triple Number of Parts to be removed.—It is alſo triple from a ſtroke three times ſtronger againſt every Particle; therefore the whole *Reſiſtence* is ninefold, that is, as the Square of the Velocity. Hence a Body moved in a Liquid, is *reſiſted* partly in a Ratio of the Velocity, and partly in a duplicate Ratio of it.

The *Reſiſtence* from the Coheſion of Parts in Liquids, except glutinous ones, is not very ſenſible in reſpect of the other *Reſiſtence*; which, increaſes in a Ratio of the Square of the Velocities, but the firſt in a Ratio of the Velocity itſelf. By how much the Velocity increaſes, by ſo much more do theſe *Reſiſtences* differ; wherefore in ſwifter Motions the *Reſiſtence* alone is to be conſidered, which is as the Square of the Velocity.

If a Liquid be included in a Veſſel of a priſmatical Figure, and there be moved along in it with equal Velocity, and in a Direction parallel to the Sides of the Priſm, two Bodies, the one ſpherical, the other cylindric; ſo that the Diameter of the Baſe of the latter be equal to the Diameter of the Sphere; and the Cylinder be moved in the Direction of its Axis; theſe Bodies will ſuffer the ſame *Reſiſtence*.

To demonſtrate this, ſuppoſe the Bodies at reſt, and that the Liquid moves in the Veſſel, with the ſame Velocity that the Bodies had; by this the relative Motion of the Bodies, and the Liquid is not changed: Conſequently the Actions of the Bodies on the Liquid, and of the Liquid on the Bodies, are not changed.—The Retardation which the Liquor ſuffers in paſſing by the Body, ariſes only from this, that in that Place it is reduced to a narrower Space; but the Capacity of the Veſſel is equally diminiſhed by each Body; therefore each Body produces an equal Retardation. And becauſe Action and Re-action are equal to one another, the Liquid acts equally upon each Body; wherefore alſo each Body will be equally retarded, when the Bodies are moved, and the Liquid is at reſt.

Reſiſtence and *Retardation* are uſed indifferently for each other, as being both in the ſame Proportion; and the ſame *Reſiſtence* always generating the ſame Retardation.—But with regard to different Bodies, the ſame *Reſiſtence* frequently generates different Retardations; the *Reſiſtence* being the Quantity of Motion, and the Retardation the Celerity.—*For the Difference and Meaſure of the two*, ſee RETARDATION.

The Retardations from this *Reſiſtence* may be compared together, by comparing the *Reſiſtence* with the Gravity.—It is demonſtrated that the *Reſiſtence* of a Cylinder, which moves in the Direction of its Axis, (to which the *Reſiſtence* of a Sphere of the ſame Diameter is equal) is equal to the Weight of a Cylinder of that Liquid through which the Body moves, having its Baſe equal to the Body's Baſe, and its Height equal to half the Height, from which a Body falling in *vacuo*, may acquire the Velocity with which the Cylinder is moved through the Liquid.

From

From the given Celerity of the Body moved, the Height of the Liquid Cylinder is found, as alſo the Weight of it from the known ſpecific Gravity of the Liquid, and Diameter of the Body.—Let a Ball, for Inſtance, of three Inches Diameter be moved in Water with a Celerity wherewith it would go ſixteen Foot in a Second: From Experiments on falling Bodies, and others made on Pendulums, it has been found that this is the Celerity which a Body acquires in falling from a Height of four Foot; therefore the Weight of a Cylinder of Water, of three Inches Diameter, and two Foot high, that is, a Weight of about ſix Pound and three Ounces, is equal to the *Reſiſtence* of the aforeſaid Ball. See DESCENT.

Let the *Reſiſtence* ſo diſcovered be divided by the Weight of the Body, which determines its Quantity of Matter, and you will have the Retardation.

RESISTENCE *of fluid Mediums to the Motion of Pendulums.*

The Arch deſcribed by a Pendulum oſcillating in *vacuo*, with the Celerity it has acquir'd in deſcending, is equal to the Arch deſcribed by the Deſcent; but the ſame does not happen in a Fluid, and there is a greater Difference between thoſe Arches the greater the *Reſiſtence* is; that is, the greater the Arch is which is deſcrib'd in the Deſcent.

Let the *Reſiſtence* of the Liquid be in Proportion to the Velocity; and let two Pendulums, entirely alike, oſcillating in a Cycloid, perform unequal Vibrations, and begin to fall the ſame Moment; they here begin to move by Forces that are as the Arches to be deſcribed. If thoſe Impreſſions alone, which are made the firſt Moment, be conſidered; after a given Time the Celerities will be in the ſame Ratio, as in the Beginning; for the Retardations which are as the Velocities themſelves, cannot change their Proportions, the Ratio between Quantities not being changed by the Addition and Subſtraction of Quantities in the ſame Ratio. Therefore in equal Times, however the Celerities of Bodies are changed in their Motion by the *Reſiſtence*, the Spaces gone through, are as the Forces in the Beginning; that is, as the Arches to be deſcribed by the Deſcent; therefore after any time the Bodies are in the correſpondent Point of thoſe Arches. But in theſe Points the Forces generated are in the ſame Ratio as in the Beginning, and the Proportion of the Celerities, which is not varied by the *Reſiſtence*, ſuffers no Change from the Gravity. In the Aſcent, Gravity retards the Motion of the Body; but in correſpondent Points, its Actions are in the ſame Ratio as in Deſcents. And therefore every where in correſpondent Points, the Celerities are in the ſame Ratio. But as in the ſame Moments the Bodies are in their correſpondent Points, it follows that the Motion of both is deſtroy'd in the ſame Moment, that is, they finiſh their Vibrations in the ſame Time. The Spaces run through in the Time of one Vibration, are as the Forces by which they are run thro'; that is, the Arches of the whole Vibrations are as the Arches deſcribed by the Deſcent, the doubles whereof are the Arches to be deſcribed in Vacuo. The Defects of the Arches to be deſcribed in Liquids from the Arches to be deſcribed in Vacuo, are the Differences of Quantities in the ſame Ratio, and are as the Arches deſcrib'd by the Deſcent. See PENDULUM.

RESISTENCE *of Fluid Mediums to the Motion of falling Bodies.*

The *Reſiſtences* are as the Squares of the Celerities, and therefore every where in correſpondent Points, as the Squares of the Arches deſcribed by the Deſcent, in which Ratio alſo, the Retardations are; but as each of them keep the ſame Proportion in correſponding Points, the Sums of them all will be in the ſame Proportion; that is, the whole Retardations, which are the Defects of the Arches deſcribed in the Liquid, from the Arches to be deſcribed in Vacuo, or which is the ſame, the Difference between the Arches deſcribed in the Deſcent, and the next Aſcent. Therefore theſe Differences, if the Vibrations are not very unequal, are nearly as the Squares of the Arches deſcribed by the Deſcent: Which is alſo confirm'd by Experiments in greater Vibrations; for in theſe the Proportion of *Reſiſtence*, here conſidered, obtains.

A Body freely deſcending in a Fluid is accelerated by the reſpective Gravity of the Body, which continually acts upon it, yet not equably, as in a Vacuum: the *Reſiſtence* of the Liquid occaſions a Retardation, that is, a Diminution of Acceleration, which Diminution increaſes with the Velocity of the Body. Now there is a certain Velocity, which is the greateſt a Body can acquire by falling; for if its Velocity be ſuch that the *Reſiſtence* ariſing from it becomes equal to the reſpective Weight of the Body, its Motion can be no longer accelerated; for the Motion here continually generated by the reſpective Gravity, will be deſtroy'd by the *Reſiſtence*, and the Body forced to go on equably. A Body continually comes nearer and nearer to this greateſt Celerity, but can never attain to it.

When the Denſities of a Liquid Body are given, the reſpective Weight of the Body may be known; and by knowing the Diameter of the Body, it may be found from what Height a Body falling in Vacuo, can acquire ſuch a Velocity, as that the *Reſiſtence* in a Liquid ſhall be equal to that reſpective Weight, which will be that greateſt Velocity above mentioned.—If the Body be a Sphere, it is known that a Sphere is equal to a Cylinder of the ſame Diameter, whoſe Height is two third Parts of that Diameter; which Height is to be increaſed in the Ratio wherein the reſpective weight of the Body exceeds the weight of the Liquid, in order to have the Height of a Cylinder of the Liquid, whoſe weight is equal to the reſpective weight of the Body; but if you double this Height, you will have a Height from which a Body falling in Vacuo, acquires ſuch a Velocity as generates a *Reſiſtence* equal to this reſpective weight, and which therefore is the greateſt Velocity which a Body can acquire falling in a Liquid from an infinite Height. Lead is eleven times heavier than Water, wherefore its reſpective weight is as to the weight of Water as 10 to 1; therefore a leaden Ball, as it appears from what has been ſaid, cannot acquire a greater Velocity in falling in Water, than it would acquire in falling in Vacuo, from an Height of $13\frac{1}{3}$ of its Diameters.

A Body lighter than a Liquid, and aſcending in it by the Action of the Liquid, is moved exactly by the ſame Laws as an heavier Body falling in the Liquid. Wherever you place the Body, it is ſuſtained by the Liquid, and carried up with a Force equal to the Difference of the weight of the Quantity of the Liquid, of the ſame Bulk as the Body, from the weight of the Body. Therefore you have a Force that continually acts equably upon the Body, by which not only the Action of the Gravity of the Body is deſtroyed ſo as that it is not to be conſidered in this Caſe, but the Body is alſo carried upwards by a Motion equably accelerated, in the ſame manner as a Body heavier than a Liquid deſcends by its reſpective Gravity; but the equability of the Acceleration is deſtroyed in the ſame Manner by the *Reſiſtence*, in the Aſcent of a Body lighter than the Liquid, as it is deſtroyed in the Deſcent of a Body heavier.

When a Body ſpecifically heavier than a Fluid is thrown up in it, it is retarded upon a double Account; on Account of the Gravity of the Body, and on Account of the *Reſiſtence* of the Liquid; conſequently, a Body riſes to a leſs Height than it would riſe in Vacuo with the ſame Celerity. But the Defects of the Height in a Liquid from the Heights to which a Body would riſe in Vacuo with the ſame Celerities, have a greater Proportion to each other than the Heights themſelves; and in leſs Heights the Defects are nearly as the Squares of the Heights in Vacuo.

RESISTENCE *of the Air*, in Pneumaticks, is the Force wherewith the Motion of Bodies, particularly Projectiles, is retarded by the *Reſiſtence* of the Air or Atmoſphere. See AIR and PROJECTILE.

The Air being a Fluid, the general Laws of the *Reſiſtence* of Fluids obtain therein; only the different Degrees of Denſity in the different Stages or Regions of the Atmoſphere, occaſion ſome irregularity. See ATMOSPHERE.

The different RESISTENCE *of the ſame Mediums to Bodies of different Figures.*

Sir *Iſaac Newton* ſhews, That if a Globe and a Cylinder of equal Diameters, be moved with equal Velocity in a thin Medium, conſiſting of equal Particles, diſpoſed at equal Diſtances, according to the Direction of the Axis of the Cylinder; the *Reſiſtence* of the Globe will be leſs by half than that of the Cylinder.

Solid of the leaſt RESISTENCE.—From the laſt Propoſition the ſame Author deduces the Figure of a *Solid*, which ſhall have the *leaſt Reſiſtence* of any containing the ſame Quantity of Matter and Surface. See SOLID.

The Figure is this.—Suppoſe DNFB (*Tab. Mechanicks, Fig.* 57.) to be ſuch a Curve, as, that if from any Point N, be let fall a Perpendicular NM, to the Axis AB; and from a given Point G, be drawn a right Line GR, parallel to a Tangent to the Figure in N, and cut the Axis when continued, in R: A Solid deſcribed by the Revolution of this Figure about its Axis AB, moving in a Medium from A towards B, is leſs *reſiſted* than in any other circular Solid of the ſame Area, *&c. Newt. Princ.* p. 327.

The Reſiſtence of a Globe, perfectly hard and in a Medium, whoſe Particles are ſo too; is to the Force wherewith the whole Motion may be either deſtroy'd or generated which it has when at the time, when it has deſcribed four thirds of its Diameter; as the Denſity of the Medium to the Denſity of the Globe.—Hence alſo, the ſame Author infers that the *Reſiſtence* of a Globe, is, *cæteris paribus*, in a duplicate Ratio of its Velocity. Or its *Reſiſtence* is *cæteris paribus*, in a duplicate Ratio of its Diameter. Or, *cæteris paribus*, as the Denſity of the Medium. Laſtly, that the actual *Reſiſtence* of a Globe is in a Ratio compounded of the duplicate Ratio of the Velocity, and of the duplicate Ratio of the Diameter, and of the Ratio of the Denſity of the Medium.

In theſe Articles the Medium is ſuppoſed to be diſcontinuous, as Air probably is: If the Medium be continuous, as Water, Mercury, *&c.* where the Globe does not ſtrike immediately on all the Particles of the Fluid generating the *Reſiſtence*, but only on thoſe next it, and thoſe again on others, *&c.* the *Reſiſtence* will be leſs by half. And a Globe in ſuch a Medium undergoes a *Reſiſtence* which is to the Force where-

wherewith the whole Motion it has after deſcribing eight thirds of its Diameter might be generated or taken away, as the Denſity of the Medium to the Denſity of the Globe.

The Reſiſtence of a Cylinder moving in the Direction of its Axis is not alter'd by any Augmentation or Diminution of its Length: And therefore is the ſame with that of a Circle of the ſame Diameter moving with the ſame Velocity in a right Line perpendicular to its Plane.

The *Reſiſtence* of a Cylinder moving in an infinite unelaſtic Fluid, ariſing from the Magnitude of a tranſverſe Section; is to the Force wherewith its whole Motion while it deſcribes four times its Length may be taken away or generated; as the Denſity of the Medium to that of the Cylinder, very nearly.

Hence, the *Reſiſtences* of Cylinders moving Length-wiſe, in infinitely continued Mediums, are in a Ratio compounded of the duplicate Ratio of their Diameters, and the duplicate Ratio of their Velocities; and the Ratio of the Denſity of the Mediums.

The *Reſiſtence* of a Globe in an infinite unelaſtic Medium is to the Force whereby its whole Motion while it deſcribes eight thirds of its Diameter, might be either generated or taken away; as the Denſity of the Fluid to the Denſity of the Globe, *quam proxime*.

Mr. *James Bernoulli* demonſtrates the following Theorems.

Reſiſtence of a Triangle.—If an Iſoſceles Triangle be moved in a Fluid according to the Direction of a Line perpendicular to its Baſe; firſt, with the Vertex foremoſt, and then with its Baſe; the *Reſiſtences* will be as the Legs, and as the Square of the Baſe, and as the Sum of the Legs.

The Reſiſtence of a Square moved according to the Direction of its Side, and of its Diagonal, is as the Diagonal to the Side.

The Reſiſtence of a Circular Segment, leſs than a Semicircle carried in a Direction perpendicular to its Baſis, when it goes with the Baſe foremoſt, and when with its Vertex foremoſt, (the ſame Direction and Celerity continuing;) is as the Square of the Diameter, to the ſame, leſs $\frac{1}{4}$ of the Square of the Baſe of the Segment. Hence the *Reſiſtences* of a Semicircle when its Baſe and when its Vertex go foremoſt, are to one another in a ſeſquialterate Ratio.

Reſiſtence of a Parabola.—A Parabola moving in the Direction of its Axis firſt with its Baſis, and then its Vertex foremoſt, has its *Reſiſtences* as the Tangent to an Arch of a Circle, whoſe Diameter is equal to the Parameter, and the Tangent equal to half the Baſis of the Parabola.

The *Reſiſtence* if Vertex goes foremoſt, may be thus computed: Say, as the Sum (or Difference) of the Tranſverſe Axis, and *Latus Rectum*, is to the tranſverſe Axis; ſo is the Square of the *Latus Rectum* to the Square of the Diameter of a certain Circle, in which Circle apply a Tangent equal to half the Baſis of the Hyperbola or Ellipſis.—Then ſay again, as the Sum and Difference of the Axis and Parameter, is to the Parameter; ſo is the aforeſaid Tangent to another right Line. And farther as the Sum (or Difference) of the Axis and Parameter, is to the Axis: So is the circular Arch correſponding to the aforeſaid Tangent, to another Arch. This done, the *Reſiſtences* will be as the Tangent to the Sum (or Difference) of the right Line thus found, and that Arch laſt mentioned.

In the general, the *Reſiſtences* of any Figure whatever going now with its Baſe foremoſt, and then with its Vertex, are as the Figures of the Baſe to the Sum of all the Cubes of the Elements of the Baſe divided by the Squares of the Element of the Curve Line.

All which Rules may be of uſe in the Conſtruction of Ships, and in perfecting the Art of Navigation univerſally: As alſo for determining the Figures of the Bobs of Pendulums for Clocks, *&c.* See SHIP, NAVIGATION, PENDULUM, *&c.*

RESOLUTION, RESOLUTIO, SOLUTIO, in Phyſicks, the Reduction of a Body into its original or natural State, by a Diſſolution or Separation of its aggregated Parts. See DISSOLUTION.

Thus, Snow and Ice are ſaid to be reſolved into Water; a compound is *reſolved* into its Ingredients, *&c.* See SNOW, COMPOUND, *&c.*

Water *reſolves* into Vapour by Heat; and Vapour is again *reſolved* into Water by Cold. See VAPOUR, HEAT, *&c.*

Some of the modern Philoſophers, particularly, Mr. *Boyle*, M. *Mariotte*, *Boerhaave*, &c. maintain that the natural State of Water is to be congeal'd, or be in Ice; inaſmuch as a certain Degree of Heat, which is a foreign and violent Agent, is required to make it Fluid; ſo that near the Pole, where this foreign Force is wanting, it conſtantly retains its fix'd or Icy-State. See WATER.

On this Principle, the *Reſolution of Ice into Water*, muſt be an improper Phraſe. See FREEZING.

RESOLUTION, in Chymiſtry, is the Reduction of a Maſs or mix'd Body into its component Parts, or firſt Principles; by a proper Analyſis. See PRINCIPLE, ANALYSIS, *&c.*

The *Reſolution* of Bodies is perform'd variouſly; by *Diſtillation*, *Sublimation*, *Diſſolution*, *Fermentation*, &c. See each Operation under its proper Article, DISTILLATION, *&c.*

RESOLUTION, in Logic, is a Branch of Method, call'd alſo *Analyſis*. See METHOD and ANALYSIS.

The Buſineſs of the *Reſolution* is to inveſtigate or examine the Truth or Falſhood of a Propoſition, by aſcending from ſome particular known Truth, as a Principle, by a Chain of Conſequences, to another more general one, in Queſtion. See PROPOSITION, TRUTH, *&c.*

Reſolution, or the analytic Method, ſtands in direct oppoſition to *Compoſition*, or the *ſynthetic Method*; in which laſt we deſcend from ſome general known Truths, to a particular one in Queſtion. See COMPOSITION.

For an Inſtance of the Method of *Reſolution*.—Suppoſe the Queſtion this: Whether on the Suppoſition of Man's Exiſtence, we can prove that God exiſts?

To *reſolve* this, our Method is thus.—"Mankind did not always exiſt: 'Tis evident from a thouſand Conſiderations, the "Species had a Beginning; and that, according to all Hiſtory, not "6000 Years ago: But if it had a Beginning, there muſt be "ſome Cauſe of its Beginning; ſomething to induce it to exiſt "then more than it did before; in effect there muſt be a Cauſe "or Author of its Exiſtence, for from nothing, nothing ariſes: "This Cauſe, whatever it is, muſt at leaſt have all the Faculties "we find in ourſelves; for none can give more than he has: "Nay, he muſt have others which we have not, ſince he cou'd "do what we cannot do, *i. e.* Create, make Man exiſt, *&c.*— "Now, this Cauſe either exiſts ſtill, or has ceas'd to do ſo: If "the former, he did not exiſt from Eternity; for what is from "Eternity is neceſſary, and can neither by it ſelf nor any other "Cauſe be reduced to nothing: If the latter, it muſt have been "produced from ſome other; and then the ſame Queſtion will "return upon the Producer.—There is then ſome firſt Cauſe; "and this Cauſe has all the Properties and Faculties we have; "nay more, exiſted from Eternity, *&c.* Therefore, from the "Suppoſition of Man's Exiſtence, it follows there is a God, "*&c.*

RESOLUTION, or SOLUTION, in Mathematicks, is an orderly Enumeration of the ſeveral things to be done, to obtain what is required by a Problem. See PROBLEM.

Wolfius makes a Problem to conſiſt of three Parts.—The *Propoſition*, (which is what we properly call the *Problem*) the *Reſolution*, and the *Demonſtration*. See PROPOSITION, *&c.*

The general Tenor of all Problems is, Thoſe things being done which are enjoyn'd by the *Reſolution*; the thing is done which was to be done.

As ſoon as a Problem is demonſtrated, it is converted into a Theorem; whereof the *Reſolution* is the Hypotheſis; and the Propoſition the Theſis. See THEOREM, THESIS, *&c.*

For an Idea of the Proceſs of a Mathematical *Reſolution*, ſee RESOLUTION *Algebraical.*

RESOLUTION, in Algebra, or Algebraical, is of two Kinds; the one practiced in numerical Problems, the other in Geometrical ones. See ALGEBRA.

To reſolve a given numerical Problem algebraically, the Method is thus: 1°. Diſtinguiſh the given Quantities from the Quantities ſought; and Note the former with the firſt Letters of the Alphabet, and the latter with the laſt. See QUANTITY.

2°. Find as many Equations as there are unknown Quantities; if that can't be, the Problem is indeterminate; and one or more of the ſought Quantities may be aſſumed at Pleaſure.—The Equations, unleſs they be contain'd in the Problem it ſelf, are found by Theorems relating to the Equality of Quantities. See EQUATION and EQUALITY.

3°. Since in an Equation the unknown Quantities are mix'd with the known; it muſt be reduced in ſuch manner as that only one unknown Quantity be found on one Side, and none but known Quantities on the other.—This Reduction is perform'd by adding the ſubtracted Quantities, dividing the multiplied Quantities, and multiplying the divided ones, extracting the Roots out of Powers, raiſing Roots to their Powers, *&c.* ſo as that the Equality may be ſtill preſerved. See REDUCTION.

To reſolve a Geometrical Problem Algebraically.

The Proceſs in the former Article is to be obſerved throughout: But as it rarely happens we come at an Equation in geometrical Problems by the ſame means as in numerical ones; there are ſome further things to be noted: Firſt then, Suppoſe the thing done which was propoſed to be done.—2°. Examine the Relations of all the Lines in the Diagram, without any regard to known or unknown; in order to find which depend on which; and from which being had, what others are had, whether by ſimilar Triangles, or Rectangles, *&c.*—3°. To obtain the ſimilar Triangles or Rectangles, the Lines are to be frequently produced, 'till they become either directly or indirectly equal to given ones, or interſect others, *&c.* Parallels and Perpendiculars to be frequently drawn: Points to be frequently connected; and Angles to be made equal to others.

If thus you don't arrive at a neat Equation; examine the Relations of the Lines in another Manner.—Sometimes 'tis not enough to ſeek the thing directly, but another thing muſt be ſought, whence the firſt may be found.

The Equation being reduced, the Geometrical Conſtruction to be deduced there-from, which is done in various Manners, in the

the various Kinds of Equations. See CONSTUCTION *of Equations.*

RESOLUTION, in Medicine, the Coction or Alteration of the Crude peccant Matter of any Diſeaſe, either by the natural Strength of the Patient, or of its one accord, or by the Application of Remedies; whereby its Bulk, Figure, Cohæſion, *&c.* are ſo far chang'd as that it ceaſes to be Morbid, and becomes laudable. See COCTION, DISEASE, *&c.*

This, the learned *Boerhaave* obſerves, is of all others the moſt perfect Cure, where 'tis effected without any Evacuation; as ſuppoſing the Matter favourable, the Conſtitution excellent, and the Medicines good. See CRISIS, *&c.*

RESOLUTION, in Muſick, is when a Canon, or perpetual Fugue is not wrote all on the ſame Line, or in one Part; but all the Voices that are to follow the *Guida*, or firſt Voice, are wrote ſeparately, either in *Score*, *i. e.* in ſeparate Lines, or in ſeparate Parts, with the Pauſes each is to obſerve, in the Beginning, and in the Tone proper to each.

RESOLUTION, in Grammar. See REDUCTION.

RESONANCE, RESOUNDING, in Muſick, *&c.* a ſound return'd by the Air incloſed in the Bodies of String-Muſical-Inſtruments; as Lutes, *&c.* or even in the Bodies of Wind-Inſtruments, as Flutes, *&c.* See SOUND, MUSICK, INSTRUMENT, *&c.*

We alſo ſay, Elliptic, and parabolic Vaults, *reſound* ſtrongly, *i. e.* reflect or return the Sound. See ECCHO.

The Mouth, and the Parts thereof, as the Palate, Tongue, Teeth, Noſe, and Lips, Monſ. *Dodart* obſerves, contribute nothing to the Tone of the Voice; but their effect is very great as to the *Reſonance*. See VOICE.

Of this we have a very ſenſible Inſtance in that vulgar Inſtrument called the *Jews-Harp*, or *Trompe de Bearn:* For, if you hold it in your Hand, and ſtrike the Tongue or Spring thereof, which makes all the Sound of the Inſtrument, it ſcarce yields any Noiſe at all. But, holding the Body of the Inſtrument between the Teeth, and ſtriking the Spring as before, it makes a muſical Buzz, which is heard to a good Diſtance, and eſpecially the lower Notes.

So alſo in the Haut-bois, the Tone of the Reed is always the ſame; being a ſort of a Drone: The Chief variety is in the Tone of the *Reſonance*, produced in the Mouth by the greater or leſs Aperture, and the divers Motions of the Lips. See HAUTBOY.

RESOLVENTS, RESOLVENTIA, in Medicine, Remedies proper to *reſolve* and diſſipate Tumors and Gatherings; to ſoften Hardneſſes; and by their Tenuity and Warmth, evacuate redundant or peccant Humours through the Pores. See RESOLUTION.

Under this Claſs come various Unguents, Emplaſters, *&c.* See DISCUTIENT.

RESPECTU *computi vice comitis habendo*, a Writ for the reſpiting a Sheriff's Accompt, upon juſt Occaſion. See SHERIFF.

It is directed to the Treaſurer and Barons of the Exchequer.

RESPIRATION, RESPIRATIO, the Act of *Reſpiring*, or Breathing. See AIR and BREATH.

Reſpiration is an involuntary Motion of the Breaſt, whereby the Air is alternately taken in and thrown out: It therefore includes two contrary Motions; the one call'd *Inſpiration*, whereby the Fluid is received into the Cavity of the Lungs. See INSPIRATION.

And the other *Expiration*, whereby it is again expell'd. See EXPIRATION.

The principal Organs of *Reſpiration* are the *Lungs*, *Trachea*, *Larynx*, &c. the Deſcription whereof ſee under their proper Articles, LUNGS, TRACHEA, LARYNX, *&c.*

For the manner wherein Reſpiration is performed.—'Tis to be obſerved, that the Lungs, when ſuſpended in the open Air, by the contractive Power of the muſcular Fibres which tye together the ſquamous Parts of the Bronchia, are reduced to leſs Space than that they poſſeſs'd while in the Cavity of the Thorax: And when thus contracted, if a Quantity of new Air be injected through the Glottis, they again become diſtended, ſo as to poſſeſs an equal, nay a greater Space than that aſſign'd them in the Thorax. See MUSCLE.

Hence it appears, that the Lungs, by their proper Force, are always endeavouring to contract themſelves into leſs Compaſs than they poſſeſs when incloſed in the Thorax, and that therefore they are always in a State of violent Dilatation while the Man lives.—For the Air that encompaſſes them in the Thorax, ſhut up between their external Membrane and the Pleura, is not of equal Denſity with common Air.

In effect, the ingreſs of the Air through the Glottis into the Lungs, is always free, but that on the out-ſide wherewith they are compreſs'd, is impeded by the Diaphragm, ſo as it cannot enter the Thorax in Quantity ſufficient to make an Equilibrium.

Since then, in Inſpiration, the Air enters the Lungs in greater Quantity than it was before; it will dilate them more, and will overcome their natural Force.—The Lungs therefore are wholly Paſſive in the Matter: What it is that acts muſt be learnt from the Phænomena.

1°. Then, it is obſerv'd, that in Inſpiration, the nine upper Ribs articulated to the Vertebræ and the Sternum, riſe Archwiſe towards the Clavicles; and the three lower are turn'd downwards, and the eighth, ninth, and tenth, are drawn inwards. 2°. that the Abdomen is dilated; and 3°. the Thorax enlarged. 4°. the Diaphragm is brought from its convex and ſinuous Poſition to a flat Figure.

Now, as theſe are the only viſible Actions in Inſpiration, the Cauſe thereof muſt be refer'd to them; or rather to the Muſcles of theſe Parts, which are the Intercoſtals, the Subclavian, *&c.*

The Capacity of the Thorax being enlarged by the Action of theſe Muſcles on the Ribs, *&c.* a Space is left between the Pleura and the Surface of the Lungs; ſo that the Air entering the Glottis inflates them till ſuch time as they become contiguous to the Pleura and Diaphragm.—In this Caſe, now, the Air preſſes the Lungs as much as the Thorax reſiſts them. And hence, the Lungs become at reſt; the Blood paſſes leſs freely, and is forced in leſs Quantity into the left Ventricle of the Heart, and ſo leſs comes into the Cerebellum, and its Nerves, and the arterial Blood acts leſs on the intercoſtal Muſcles and Diaphragm.

The Cauſes, therefore, which at firſt dilated the Thorax, grow weaker, conſequently the Ribs become depreſs'd; the diſtended Fibres of the Muſcles of the Abdomen reſtore themſelves; the Viſcera thruſt the Diaphragm up again into the Thorax, the Space whereof being thus contracted, the Air is drove out of the Lungs; and thus is *Expiration* perform'd.

Immediately, the Blood being quickened in its Motion, begins to flow ſtronger and more plentifully to the Cerebellum and Muſcles; and thus the Cauſes of the Contraction of the Intercoſtals and Diaphragm, being renewed, *Inſpiration* is repeated.

Such is the true, immediate, adequate Manner of vital *Reſpiration*. See HEART.

For the uſes and effects of *Reſpiration*, they are greatly diſputed among Anatomiſts.—The learned *Boerhaave* takes the principal uſes thereof to be the further Preparation of the Chyle, its more accurate Mixture with the Blood, and its Converſion into a nutritious Juice proper to repair the Decays of the Body. See NUTRITION.

Borelli takes the great uſe of *Reſpiration* to be the admiſſion and mixture of Air, with the Blood, in the Lungs, in order to form thoſe elaſtic Globules it conſiſts of; to give it its red florid Colour; and to prepare it for many of the uſes of the OEconomy: but how ſuch Admiſſion ſhould be effected is hard to ſay.—'Tis impoſſible it ſhould be done in the pulmonary Arteries; nor can it be proved in the pulmonary Veins.—In effect, ſuch a Communication muſt be hindered and obſtructed by the Airs diſtending the Veſiculæ, and compreſſing the Veins, in Inſpiration; by the ſlimy Humor that lubricates the Membrane lining the inſide of the *Trachea*. Add to this, the difficult Paſſage of Air through ſuch ſmall Pores as will admit Water; and the ill Effect Air ordinarily has when admitted into the Blood. See PORE and WATER.

As to the Arguments for ſuch Communication, *viz.* the florid Colour the Blood here firſt aſſumes, and the abſolute Neceſſity of *Reſpiration* to Life; they are both well accounted for otherwiſe. See BLOOD.

Other Authors, as *Sylvius*, *Etmuller*, &c. take a great uſe of *Reſpiration* to be, by the Neighbourhood of the cold nitrous Air, to cool the Blood coming reeking hot out of the right Ventricle of the Heart, through the Lungs; and to act as a Refrigeratory. See REFRIGERATORY.

Mayow, and others, aſſert one grand uſe of Expiration to be to throw off the fuliginous Vapours of the Blood along with the expell'd Air; and for Inſpiration, he aſſerts that it conveys a nitro-aerial Ferment to the Blood, to which the animal Spirits and all muſcular Motion are owing.

But Dr. *Thurſton* rejects all theſe from being principal uſes of *Reſpiration*, which he ſhews to be to move or paſs the Blood from the right to the left Ventricle of the Heart, and ſo to effect the Circulation. See CIRCULATION.

Whence it is that Perſons hang'd, drown'd, or ſtrangled, ſo ſuddenly dye, *viz.* becauſe the Circulation of the Blood is ſtop'd; and for the ſame Reaſon it is that Animals dye ſo ſpeedily in the Air-Pump. See DROWNING, VACUUM, *&c.*

He Inſtances an Experiment by Dr. *Croon*, before the Royal Society, who, by ſtrangling a Pullet, ſo as not the leaſt Sign of Life appeared; yet by blowing into the Lungs through the Trachea, and ſo ſetting the Lungs a playing, he brought the Bird to Life again.—Another Experiment of the ſame Kind is that of Dr. *Hook*, who after hanging a Dog, cut away the Ribs, Diaphragm, and Pericardium, as alſo the Top of the Wind-Pipe, that he might tye it on to the Noſe of a pair of Bellows; and thus by blowing into the Lungs he reſtored the Dog to Life, and then ceaſing to blow, the Dog would ſoon fall into dying Fits, but recover again by blowing; and thus alternately as long as he pleaſed.

This uſe of *Reſpiration* Dr. *Drake* not only confirms, but carries farther; making it the true Cauſe of the Diaſtole of the Heart; which neither *Borelli*, Dr. *Lower*, nor Mr. *Cowper* had well accounted for. See DIASTOLE.

The Weight of the incumbent Atmoſphere he ſhews to be the true Antagoniſt to all the Muſcles, ſerving both for ordinary Inſpiration, and the Contraction of the Heart.—As in the Elevation of the Ribs, that Author obſerves, the Blood by the Paſſage opened for it, is in a Manner ſollicited into the Lungs; ſo in the Depreſſion thereof by the Subſidence of the Lungs, and the contraction of the Blood Veſſels, conſequent thereon, the Blood is

forcibly driven through the pulmonary Vein into the left Ventricle of the Heart. And this, together with the general Compreſſion of the Body by the Weight of the Atmoſphere, is that Power which cauſes the Blood to mount in the Veins, after the Force impreſs'd on it by the Heart, is ſpent; and which forces the Heart itſelf, from its natural State of Contraction, to that of Dilatation. See HEART.

The reciprocal Dilatation and Contraction of the ſuperficial Dimenſions of the Body conſequent on *Reſpiration*, are ſo neceſſary to animal Life, that there is no Animal how imperfect ſoever as to want it.

Though moſt Kinds of Fiſhes and Inſects want both Lungs and moveable Ribs, and conſequently have no dilatable Thorax, yet that Want is made up to them by an analogous Mechaniſm. Fiſhes, for Inſtance, have Gills which do the Office of Lungs, receiving and expelling alternately the Water, whereby the Blood Veſſels ſuffer the ſame Alteration of Dimenſions as they do in the Lungs of more perfect Animals. See GILLS.

Inſects having no Thorax, or ſeparate Cavity for the Heart and Lungs or Air-Veſſels, have the latter diſtributed through the whole Trunk of their Bodies; by which they communicate with the external Air through ſeveral Spiracles or Vent-Holes, to which are faſtened ſo many little Trachæ or Wind-Pipes, which ſend their Branches to all the Muſcles and Viſcera, and ſeem to accompany the Blood-Veſſels all over the Body, as they do in the Lungs only, of the more perfect Animals.—By this Diſpoſition, in every Inſpiration, the whole Body of theſe little Animals is inflated, and in every Expiration compreſs'd; conſequently the Blood-Veſſels muſt ſuffer a Viciſſitude of Extention and Compreſſion.

The only Animal exempted from this neceſſity of Breathing, is a Fœtus: But this, while included in the Womb, ſeems to have little more than a vegetative Life, and ought ſcarce to be reckoned among the Number of Animals: 'Tis rather a Graft on, or Branch of the Mother. See FOETUS.

The Laws of Reſpiration, are of the laſt Importance to a right underſtanding of the animal OEconomy; for which reaſon a Computation of the Force of the *reſpiring Organs*, and of the ſtreſs and preſſure of the Air upon the ſame, will not be unacceptable.—It may therefore be obſerved, that by blowing into a Bladder, a conſiderable Weight will be raiſed by the mere Force of the Breath: For with a Bladder that is oblong, nearly of a cylindrical Figure, and tied at both Ends, if a Pipe be fixed at one End, and a Weight at the other, and the Pipe faſtened at ſuch a Diſtance from the Ground, as juſt allows the Weight to reſt upon the Ground; the Bladder by an eaſy Inſpiration will raiſe ſeven Pound Weight, and by the greateſt Inſpiration of a pretty ſtrong Man, twenty eight Pound Weight.

Now, the Force by which the Air enters this Pipe, is that Force by which it is driven out of the Lungs; if therefore the Force by which the Air enters the Pipe can be determined, we ſhall have the Force by which the Air is drove into the Trachea.—But the Preſſure of Air upon the Bladder is equal to twice the Weight it can raiſe; becauſe the upper Part of the Bladder being fixed, it reſiſts the Force of the Air, juſt as much as the Weight at the other End. And again, ſince the Air preſſes every way equally, the whole Preſſure will be to that Part of it which preſſes on the Orifice of the Pipe, as the whole Surface of the Bladder is to the Orifice of the Pipe; that is, as the Surface of a Cylinder, whoſe Diameter, for inſtance, is four Inches, and Axis ſeven, is to the Orifice of the Pipe.

Thus, if the Diameter of the Pipe be 0. 28, and its Orifice 0. 616; the Surface of the Cylinder will be 88. Therefore, as 88 : 0. 616 : : 14. double the leaſt Weight raiſed, to 0. 098, which is almoſt 2 Ounces; and in raiſing the greateſt Weight it is near 7 Ounces.

Theſe therefore are the Forces by which the Air is drove through the Trachea, in an eaſy and a ſtrong Expiration.—Now if we conſider the Lungs as a Bladder, and the Larynx as a Pipe; the Preſſure upon the Orifice of the Trachea, when the Air is drove out, will be to the Preſſure upon the Lungs, as the whole Surface of the Lungs to the Orifice of the Trachea.

Suppoſe, *e. gr.* the Diameter of the Larynx to be 5; the Orifice of the Larynx will be 0. 19. And ſuppoſe the two Lobes of the Lungs to be two Bladders, or Spheres, whoſe Diameters are each ſix Inches; their Surfaces are each 113 Inches, and the Preſſure on the Larynx will be to the Preſſure upon the whole external Surface, as 0. 19 to 226, which is as 1 Pound 1189; and therefore if the Preſſure upon the Larynx in an ordinary Breathing be two Ounces, the Preſſure upon the whole external Surface of the Lungs will be 148 Pounds; and the utmoſt Force, when the Preſſure upon the Larynx is ſeven Ounces, will be equal to 520 Pound.—But the Lungs are not like an empty Bladder, where the Air preſſes only upon the Surface; for they are full of Veſicles, upon the Surface of each of which the Air preſſes as it would upon the Surface of an empty Bladder; and therefore to know the whole Preſſure of the Air, we muſt determine the internal Surfaces of the Lungs.

To do this, ſuppoſe that $\frac{1}{3}$ Part of the Lungs is taken up with the Branches of the Trachea, that another third Part the Blood-Veſſels fill, and the remainder is Veſicles, where we ſuppoſe the chief Preſſure upon the Blood-Veſſels to be made: Now, both Lobes of the Lungs contain 226 ſolid Inches, of which one third, or 75 Inches, are full of Veſicles.—Let the Diameter of each Veſicle be $\frac{1}{100}$ Part of an Inch, the Surface of a Veſicle will be .001256, and the Solidity 0000043, by which Sum if we divide 75 (the Space filled by the Veſicles) the Quotient gives us 17441860 for the Number of Veſicles in both Lobes of the Lungs.—This Number multiplied by .001256, the Surface of a Veſicle gives the Sum of the Surfaces of all the Veſicles, to wit, 21906.976 Inches. And therefore the Preſſure upon the Larynx will be to the Preſſure upon the whole Surface of the Lungs, as 0. 19 to 21906.976; and conſequently, when in an ordinary Expiration the Preſſure upon the Larynx is two Ounces, the Preſſure on the whole internal Surfaces of the Lungs will be 14412 Pound Weight; and the utmoſt Force of the Air in Breathing, when the Preſſure upon the Larynx is ſeven Ounces, will be 50443 Pound Weight.

Though theſe ſeem to be prodigious Weights, yet it muſt ſtill be underſtood, that the Preſſure upon each Part of the Surface of the Lungs equal to the Orifice of the Larynx, is not greater than it is at the Larynx; and that theſe vaſt Weights ariſe from the vaſt Extent of the Surfaces of the Veſicles upon which it was neceſſary that the Blood ſhould be ſpread in the ſmalleſt capillary Veſſels, that each Globule of Blood might, as it were, immediately receive the whole Force and Energy of the Air, and by that be broke into ſmaller Parts fit for Secretion and Circulation.

And hence we may learn the mechanical Reaſon of the Structure of the Lungs: For, being the whole Blood of the Body was to paſs through them in order to receive the Effect of the Air, and that this could not be unleſs the Blood were diffuſed in ſmall capillary Veſſels; it was neceſſary that the Surfaces upon which they were to be ſpread, ſhould be proportioned to their Number: Which is admirably well provided for by the wonderful Fabrick of the Lungs.

If the Gravity of the Air was always the ſame, and if the Diameter of the Trachea, and the time of every Expiration were equal in all; this Weight upon the Lungs would be always the ſame. But ſince we find by the Barometer, that there is three Inches difference between the greateſt and the leaſt Gravity of the Air, which is a tenth Part of its greateſt Gravity; there muſt be likewiſe the Difference of a tenth Part of its Preſſure upon the Lungs at one time and another: For the Momenta of all Bodies, moved with the ſame Velocity, are as their Gravities. See BAROMETER.

This is a Difference which ſuch as are aſthmatic muſt be very ſenſible of; eſpecially if we conſider that they likewiſe breathe thicker, that is, every Expiration is performed in leſs time; if in half the time, and the ſame Quantity of Air drawn be in, then the Weight of the Air upon the Lungs muſt be 57648 Pounds, of which a tenth Part is 5764 Pounds: And conſequently aſthmatick People upon the greateſt riſe or fall of the Barometer, feel a difference of the Air, equal to above one third of its Preſſure in ordinary Breathing. See ASTHMA, WEATHER, *&c.*

Again, if the Trachea be ſmall, and its Aperture narrow, the Preſſure of the Air increaſes in the ſame Proportion as if the times of Expiration were ſhorter; and therefore a ſhrill Voice is always reckoned amongſt the prognoſtick Signs of a Conſumption, inaſmuch as that proceeds from the narrowneſs of the Larynx or Trachea; and conſequently increaſes the Preſſure of the Air upon the Lungs, which upon every Expiration beats the Veſſels ſo thin, that at laſt they break, and a ſpitting of Blood comes on apace. See PHTHISIS.

RESPITE, RESPECTUS, in Law, *&c.* a Delay, Forbearance, or Prolongation of Time, granted any one for the Payment of a Debt, or the like.

Menage derives the Word *Reſpite* from the *Latin*, *reſpectus*; as *deſpite* from *deſpectus*.—*Du Cange* will rather have it come from *reſpirare*, to Breathe; *Reſpite* being, in effect, a breathing-while, granted a Debtor, *&c.*

Letters of RESPITE, or CREDIT, are Inſtruments antiently granted by Sovereign Princes to honeſt, but unfortunate Debtors, to ſcreen them from their too rigorous Creditors.

Theſe ſtill obtain in *France*.—They were firſt introduced by Pope *Urban* II. in favour of the *Croiſes*, i. e. of Perſons who went to the Holy War. See CROISES.

S. *Louis* granted three Years *Reſpite* to all who made the Voyage of the Holy Land with him.—In the Cuſtomary of *Normandy*, *Reſpite* is a judicial Delay, or Demur, given to Procedures.

RESPITE *of Homage*, is a forbearance of the Homage due from the Vaſſal or Tenant holding by Homage, or by Knight-Service to his Lord. See HOMAGE, *&c.*

Antiently thoſe who held by theſe Tenures, paid a ſmall Sum every fifth Year into the Exchequer, to be *reſpited* doing their Homage or Service.

By Stat. 12 *Car.* II. this *Reſpite* of Homage is taken away, as a Charge ariſing from Knight-Service; which is thereby likewiſe annull'd. See TENURE, *&c.*

RESPONDEAT *Superior*, a Law Phraſe.—Where the Sheriffs are removeable, as in *London*, for Inſufficiency; *Reſpondeat Superior*, that is, the Mayor and Aldermen are to anſwer for them. See SHERIFF, *&c.*

For

For the Inſufficiency of a Bailiff of a Franchiſe, *Reſpondeat Superior*, that is, the Lord of the Franchiſe is to anſwer.

RESPONSALIS, in Law, he who appears for another in Court at a Day aſſign'd.

Fleta makes this Difference between *Reſponſalis*, *Eſſoniator*, and *Attornatus*: That the *Eſſoniator* came only to alledge the Cauſe of the Parties Abſence, be he Demandant or Tenant; and *Reſponſalis* come for the Tenant, not only to excuſe his Abſence, but to ſignify what Trial he meant to undergo, the Combat or the Country. See ATTOURNEY.

RESPONDENT, in the Schools, a Perſon who maintains a Theſis in any Art or Science. See THESIS.

He is thus call'd as being to *anſwer* all Objections propoſed by the Opponent or Impugner, *&c.* See OPPONENT.

The *Reſpondents* Buſineſs is to ſee whether the Oppoſition made by the contrary Party be Juſt and Legitimate; or whether ſome of the Laws and Conditions of Oppoſition be not broke, which is call'd *Ignoratio Elenchi.*—He is alſo to examine the Moods and Figures of the Syllogiſms, to ſee whether the Premiſſes be juſt, *&c.* And through the whole to anſwer rather by Diſtinguo's than by direct Negation. See SYLLOGISM, MOOD, FIGURE, DISTINCTION, *&c.*

RESPONDENT, in Law, a Perſon who undertakes to anſwer for another; or binds himſelf as Security for the good Behaviour of one another. See SURETY.

The *Reſpondent* is to anſwer for the Damages done by the Perſon for whom he *reſponds.*—There are four Ordonnances of the Kings of *France*, whereby the Citizens are expreſly forbid to take Servants without *Reſpondents*, bound in Writing.

The Word is form'd from the *Latin*, *reſpondere*, to anſwer; q. d. *pro alio Spondere*, to promiſe for another.

RESPONSARY *Song*, an Anthem in which the Quiriſters ſing by turns. See ANTHEM.

RESPONSE, RESPONSAL, RESPONSATIO, an Anſwer, Reply, or Reparty.

The Word is but little uſed, except for the Anſwers made to the Prieſt, by the People, in the Litany, the Pſalms, and other Parts of the Office.

It has its uſe too in ſpeaking of the Opinions or Anſwers of the antient *Juriſconſulti*; when conſulted on Points of Law. See CIVIL *Law* and JURISCONSULTI.

The fifty Books of the *Digeſt* are compoſed of *Reſponſa prudentum*, the *Reſponſes* of *Papinian*, *Ulpian*, *Scevola*, &c. collected by *Juſtinian*, who afterwards gave them the Force of Laws. See DIGEST.

The *Reſponſes* of the Emperors were properly call'd *Reſcripts*. See RESCRIPT.

RESPONSIONS, RESPONSIONES, a Term uſed in the military Orders, for certain Penſions or Charges which the Knights, or the Commanderies they held, paid to the Order.

Such a Knight-Templer paid a *Reſponſion* of fifty Pounds *per Annum* to his Order, on Account of ſuch a Commandery. See COMMANDERY and CONVENTUAL.—In *Rot. Parl.* 9 *Richard* II. it is written *Reſponcies*.

RESSAUT, in Architecture, the effect of a Body which either Projects or Sinks; *i. e.* ſtands either more out, or in, than another; ſo as to be out of the Line or Level therewith.

Such is a Socle, an Intablature, a Cornice, *&c.* upon an Avant Corps, arriere Corps, or the like.

The Term is *French*; and but little uſed in *Engliſh*; though the want of a Word of equal Import, pleads for its Naturalization.

RESSORT, a Term purely *French*; yet frequently uſed by our late Writers.

The Word in its popular meaning ſignifies *Spring*, or the Force of Elaſticity.—Hence it is alſo uſed for a Juriſdiction, and the Extent or Diſtrict thereof; as, when we ſay ſuch a thing belongs to his *Reſſort*; a Judge out of his *Reſſort* has no Authority.

But its chief uſe among us is for a Court or Tribunal, where Appeals are judged; or for a Court or Perſon who judges finally and ultimately, and whence there is no Appeal. See COURT, APPEAL, *&c.*

The Houſe of Lords judge *en dernier Reſſort*, i. e. in the laſt *Reſſort*.—Preſidials judge in the laſt *Reſſort*, of all Criminals proſecuted by the Provoſts of the Marſhals.

RESSORT, is alſo uſed in a Writ of Tayle or Couſenage, in the ſame Senſe as *Deſcent* in a Writ of Right. See DESCENT, TAYLE, COUSENAGE, RIGHT, *&c.*

RESSOURCE, a Term purely *French*, yet uſed by our *Engliſh* Writers.

It ſignifies a Means or Foundation of Man's recovering himſelf from his Fall or Ruin; or an after-Game for the repairing his Damages.

This Merchant has Credit and Friends ſtill left; he has great *Reſſources*.—His *laſt Reſſource* was to throw himſelf into a Convent.—The Jargon of a Diſtinction, is the ordinary *Reſſource* of a Divine at a Pinch.

Skinner derives the Word from the *French*, *reſoudre*, to reſolve: A *Reſſource* ſtrictly and litterally, expreſſes a Means which preſents it ſelf a-freſh.

REST, QUIES, in Phyſicks, the Continuance of a Body in the ſame Place: Or its continual Application or Contiguity to the ſame Parts of the ambient and contiguous Bodies. See SPACE.

Reſt is either *abſolute* or *relative*; as Place is. See PLACE.

Some define *Reſt* by the State of a thing without Motion; and hence, again, *Reſt* becomes either *abſolute* or *relative*, as Motion is. See MOTION.

Sir *Iſaac Newton* defines *true* or *abſolute Reſt* to be the Continuance of a Body in the ſame Part of abſolute and immoveable Space: And *relative Reſt* to be the Continuance of a Body in the ſame Part of relative Space.

Thus, in a Ship under Sail, *relative Reſt* is the Continuance of a Body in the ſame Region of the Ship, or the ſame Part of its Cavity.—*True*, or *abſolute Reſt* is its Continuance in the ſame Part of univerſal Space, wherein the Ship with its Cavity and Contents are all contain'd.

Hence, if the Earth be really and abſolutely at *reſt*, the Body *relatively at reſt* in the Ship, will *really* and *abſolutely* move; and that with that Velocity wherewith the Veſſel moves.—But if the Earth do likewiſe move, there will then ariſe a real and abſolute Motion of the Body at *reſt*, partly from the real Motion of the Earth in abſolute Space; and partly from the relative Motion of the Ship on the Sea.—Laſtly, if the Body be likewiſe relatively moved in the Ship, its real Motion will ariſe partly from the real Motion of the Earth in immoveable Space, and partly from the relative Motions of the Ship on the Sea, and of the Body in the Ship.

Thus, if that Part of the Earth where the Ship is, move Eaſtward with a Velocity of 10010 Parts; and the Veſſel be carried by the Winds Weſtward 10 Parts; and at the ſame time a Seaman aboard walk with a Velocity 1 Part: The Seaman will be moved really and abſolutely in immoveable Space Eaſtwards, with 10001 Parts of Velocity; and relatively on the Earth, with nine Parts of Velocity Weſtwards. See EARTH.

'Tis an Axiom in Philoſophy, that Matter is indifferent as to *Reſt*, or Motion. See MATTER and BODY.

Hence, Sir *Iſaac Newton* lays it down as a Law of Nature, that every Body perſeveres in its State either of *Reſt* or uniform Motion; except ſo far as it is diſturbed by external Cauſes. See NATURE.

The Carteſians will have Firmneſs, Hardneſs, or Solidity of Bodies to conſiſt in this, that their Parts are at *Reſt*, with regard to each other: And this *Reſt* they eſtabliſh as the great Nexus, or Principle of Cohæſion, whereby the Parts are connected together. See FIRMNESS, HARDNESS, *&c.*

Fluidity, they add, conſiſts in a perpetual Motion of the Parts, *&c.*—But the *Newtonian* Philoſophy furniſhes us with much better Solutions. See SOLIDITY, FLUIDITY, and COHÆSION.

REST, REPOSE, in Poetry, is uſed for the *Cæſura*, which, in *Alexandrian* Verſes, falls on the ſixth Syllable; and in Verſes of ten or eleven Syllables, on the fourth. See CÆSURA.

This Verſe is naught, there wants a *Reſt* in it.—The *Reſt* ſhou'd never fall on a Monoſyllable, whereon the Voice may not dwell: 'Tis call'd *Reſt* becauſe the Ear, and the Pronunciation have both a repoſe or reſpite.

REST, in Muſick, is a Pauſe or Interval of Time, during which there is an Intermiſſion of the Voice or Sound. See PAUSE and TIME.

Reſts are ſometimes uſed in *Melody*, that is in Muſick of a ſingle Part, to expreſs ſome ſimple Paſſion, or even for Variety ſake; but more uſually in *Harmony*, or in Compoſitions of ſeveral Parts, for the ſake of the Pleaſure of hearing one Part move on while another *reſts*; and this interchangeably. See MELODY and HARMONY.

Reſts are either for a whole Bar, or more than a Bar, or but for the Part of a Bar.—When the *Reſt* is for a part, it is expreſs'd by certain Signs correſponding to the Quantity of certain Notes of Time; as Minim, Crotchet, *&c.* and is accordingly call'd *Minim-reſt*, *Crotchet-reſt*, &c.

The Characters or Figures whereof, ſee under CHARACTERS *of Muſick*; where the Note and correſponding *Reſt* are found together.

When any of thoſe Characters occur either on Line or Space; that Part is always ſilent for the Time of a Minim, or Crotchet, *&c.*—Sometimes a *Reſt* is for a Crotchet and Quaver together; or for other Quantities of Time, for which there is no particular Note: In which Caſe the Signs of Silence are not multiplied; but ſuch Silence is expreſs'd by placing together as many *Reſts* of different Time, as make up the deſigned *Reſt*.

When the *Reſt* is for a whole Bar, the Semibreve *Reſt* is always uſed.—If the *Reſt* be for two Meaſures, 'tis mark'd by a Line drawn a-croſs a whole Space.—For three Meaſures 'tis drawn a-croſs a Space and a half; and for four Meaſures a-croſs two Spaces. But to prevent Ambiguity, the Number of Bars is uſually writ over the Sign.

Some of the more antient Writers in Muſick, make theſe *Reſts* of different Value in different Species of Time.—*E. gr.* The Character of a Minim-*Reſt*, in common Time, ſay they, expreſſes the *Reſt* of three Crotchets in triple Time; in that the Triples $\frac{6}{8}$, $\frac{6}{16}$, $\frac{12}{8}$, $\frac{12}{16}$, it always marks an half Meaſure, how different ſoever theſe may be among themſelves.

They add that the *Reſt* of a Crotchet in common Time is a *Reſt* of three Quavers in the Triple $\frac{3}{4}$; and that the *Quaver Reſt* of

of common Time is to equal to three Semi-quavers in the Triple $\frac{3}{8}$. But this variety in the Uſe of the ſame Characters, is now laid aſide.

RESTAUR, RESTOR, in antient Cuſtoms, the Remedy or Recourſe which Aſſurers have againſt each other, according to the Date of their Aſſurances; or againſt the Maſters, if the Average ariſe through his Default, as through ill loading, want of caulking, or want of having the Veſſel tight. See ASSURANCE.

The Word is alſo uſed for the Remedy or Recourſe a Perſon has againſt his Guarantee or other Perſon, who is to indemnify him from any Damage ſuſtain'd.—Hence *Reſtaurant* and *Reſtauration*.—In the lower *Latin* they alſo uſe the Words, *Reſtor* and *Reſtour*.

RESTAURATION, RESTORATION, the Act of re-eſtabliſhing, or ſettling a thing in its former good Eſtate.

Thus we ſay, the *Reſtauration* of a Minor to the Poſſeſſion of his Effects, alienated in the Time of his Minority. In the *French* Laws is an antient *Formula*, uſed for the *reſtoring* a Perſon to his good Name, after he has been wrongfully accuſed and condemned.

Sour and decay'd Beer and Ale are *reſtored* various Ways.—By a handful of Wheat thrown into the Veſſel, or by Salt made of the Aſhes of Barly-Straw, put into the Veſſel and ſtirr'd.

Glauber commends three or four handfuls of Beech Aſhes applied in the ſame manner.—Chalk ſcraped into it, renders it drinkable immediately. The ſame effect is produced by calcined Oyſter-Shells, burnt Egg-Shells, Sea-Shells, or Crab's Eyes. See BEER, ALE, BREWING, *&c.*

In *England* we ſay, *the Reſtauration*, by way of Eminence, for the return of King *Charles* II. in 1660; after the Interregnum. See INTERREGNUM.

The 29th of *May* is an Anniverſary Feſtival held in Commemoration of the *Reſtoration*: The *Reſtauration* of Regal and Epiſcopal Government. See CIVIL-*War*.

RESTAURATION, in Architecture, the Repairing of all the Parts of a Building gone to decay, either through the Courſe of Time, or other Injuries; in ſuch manner as that it is not only re-eſtabliſhed in its firſt Form, but conſiderably augmented. See REPAIR and REPARATION.

'Tis evident from the Plinths of the Corinthian Columns of the Pantheon, which are almoſt wholly under Ground, that the Pavement of this Temple is only a *Reſtauration* made in the Time of *Septimius Severus*. *Daviler*.

The Temple of Concord, behind the Capitol at *Rome*, having been burnt long after it was built, and having angular Baſes different from the reſt; ſeems to have been *reſtored* from the Ruins of ſeveral antient Buildings. *Id.*

RESTAURATION, in Sculpture, is the repairing of a mutilated Statue, *&c.* See MUTILATION, *&c.*

Moſt of the Antique Statues have undergone the *Reſtauration*; as the *Farneſe Hercules*, the *Faunus* in the *Villa Borgheſe* at *Rome*, The Wreſtlers in the Gallery of the Great Duke of *Florence*; the *Venus* of *Arles* in the Gallery at *Verſailles*.—But theſe *Reſtaurations* have only been made by the ableſt Sculptors. *Daviler*.

RESTINCTION, in Chymiſtry, the quenching of a Metal or Mineral in ſome Lquor; in order either to correct, or give it ſome new Quality, Power, *&c.* See EXTINGUISHING, *&c.*

RESTITUTION, in Phyſicks, the returning of elaſtick Bodies forcibly bent, to their natural State; properly call'd, the *Motion of Reſtitution*. See ELASTICITY.

Contraction being the proper and natural Action of muſcular Fibres, ſome Authors aſcribe Dilatation to a Motion of *Reſtitution*; but the Expreſſion, as well as the Idea, are very faulty. See FIBRE, MUSCULAR, *&c.* See alſo HEART, *&c.*

RESTITUTION, in a moral and legal Senſe, is the Act of reſtoring a Perſon to his Right; or of returning ſomething unjuſtly taken or detain'd from him. See RESTAURATION.

Reſtitution is reducible to commutative Juſtice; and till it be made, the Caſuiſts determine the Party all the while guilty of Theft. See JUSTICE, INJURY, *&c.*

The illegal Incumbents of Benefices are condemn'd to a *Reſtitution* of the Fruits of the Benefices.—In the *Romiſh* Church Aſſurers, *&c.* are obliged to a *Reſtitution* of their ill-gotten Goods, otherwiſe the Prieſt has no Authority to give him Abſolution. See USURY.

Reſtitution in Integrum, is uſed for what is otherwiſe called *Reſciſſion*. See RESCISSION.

Religious obtain *Reſtitution* againſt their Vows, *i. e.* are freed from their Obligation, when they proteſt againſt them within five Years of their Profeſſion. See VOW, *&c.*

In the Hiſtory of *Germany* for the XVIIth Century, the firſt Day of *January* 1624, is call'd the *Term of Reſtitution:* Becauſe by the Peace of *Munſter*, then concluded, the *Lutheran* and *Calviniſt* Princes were obliged to *reſtitute*, reſtore what they had taken from the *Roman* Catholick Churches in their Territories, till that Day.

RESTITUTIONS *of Medals*, or RESTITUTED *Medals*, is a Phraſe uſed by Antiquaries, for ſuch Medals as were ſtruck by the Emperors, to renew or retrieve the Memory of their Predeceſſors. See MEDAL.

Hence it is that in ſeveral Medals we find the Letters R E S T. —*Claudius* was the firſt who begun this Practice, by ſtriking afreſh ſeveral Medals of *Auguſtus*. *Nero* did the ſame; and *Titus*, after the Example of his Father, ſtruck *Reſtitutions* of moſt of his Predeceſſors

Gallian ſtruck a general *Reſtitution* of all the preceding Emperors in two Medals, the one bearing an Altar, the other an Eagle, without the REST. F. *Jobert* chuſes rather to call them *Conſervations* than *Reſtitutions*; as being done quite a-new.

RESTITUTIONE *Temporalium*, a Writ which lies where a Man is elected and confirmed Biſhop of a Dioceſs; for the Recovery of the Temporalities or Barony of the ſaid Biſhoprick. See BISHOP, TEMPORALITIES, *&c.*

It is directed from the King to the Eſcheator of the County.

RESTITUTIONE *extracti ab Eccleſia*, a Writ antiently granted for the reſtoring a Man to the Church or Sanctuary from which he had been forced away. See SANCTUARY.

RESTIVE, a Term applied to a Horſe, *&c.* that ſtops, or runs back, inſtead of advancing forwards.

In the Manage, a *reſtive* Horſe is a rebellious, refractory, ill broken Horſe; which only goes where it will, and when it will. —The Word is form'd from the *Latin*, *reſtivus*, which ſignifies the ſame thing.

RESTORATIVE, in Medicine, a Remedy proper for the reſtoring and retrieving of Strength and Vigour. See REMEDY.

Reſtoratives belong to the Claſs of Balſamicks. See BALSAMICK.

The Medicines that come under this Denomination are of an emollient, ſoftening Nature, but nutritive withal; and are rather adminiſtred to repair the Waſtes of the Conſtitution, than to alter and rectify its Diſorders. See NUTRITION.

Such are the Leaves of white Maiden-hair, Adianthum Nigrum; black Hellebore; Rocket, Eruca; Scabious; Tuſilago; Colts-Foot; Bohea-Tea; Chich-peas; Hops; Chocolate; Piſtach-Nuts; Balſom of *Tolu*; Bdellium; Benzoin; Storax; Eryngo; Iris; Satyrion, *&c.* See HELLEBORE, TEA, PISTACH, CHOCOLATE, BALSOM, BDELLUM, STORAX, *&c.*

RESTRAINT, is when an Action is hindered or ſtop'd, contrary to Volition, or the Preference of the Mind. See LIBERTY, NECESSITY, WILL, VOLITION, VOLUNTARY, *&c.*

RESTRICTION, the Act of modifying, limiting, or reſtraining a thing to narrower Bounds.

General Laws always bear ſome *Reſtriction*.—In Contracts 'tis uſual to have *reſtrictive Clauſes*, which bind the Diſpoſitions down to certain Bounds. See CLAUSE, CONDITION, *&c.*

Mental RESTRICTION. See RESERVATION.

Among Logicians, *Reſtriction* is underſtood of the limiting a Term, ſo as to make it ſignify leſs than it uſually does.—In this Senſe the Name *Philoſopher* is reſtrain'd to *Ariſtotle*; *Great* to *Alexander*; *City* to *Rome*, &c.

'Tis obſerved to be good arguing affirmatively from a non-reſtrain'd to a reſtrain'd Term, but not contrarily: And negatively, from reſtrain'd to a non-reſtrain'd Term; but not contrarily.

RESTRINGENT, in Medicine. See ASTRINGENT.

RESULT, what is gathered from a Conference, an Examen, Meditation, Diſcourſe, or the like; or the Concluſion and Effect thereof.

The Aſſembly was ſo tumultuous that there was no knowing the *Reſult*.—The uſual *Reſult* of Diſputes, Mr. *Bayle* obſerves, is that each Perſon remains more attach'd to his own Opinion.

RESUMMONS, a ſecond Summons; or calling a Man to anſwer an Action where the firſt Summons is defeated, or ſuſpended by any Occaſion; as the Death of a Party, *&c.* See SUMMONS.

RESUMPTION, in a large Senſe, ſignifies the taking again into the King's Hands ſuch Lands or Tenements as before, upon falſe Suggeſtion, or other Error, he had delivered to the Heir, or granted by Letters Patent to any Man.

RESUMPTION, in the Schools, a ſummary Repetition, or running over of an Argument; or of the Subſtance thereof, in order to refute it.

The Reſpondent *reſumed* all the Points of the Objection, and anſwers them one by one. See RECAPITULATION, *&c.*

RESUMPTION is alſo uſed by Logicians for the reduction of ſome figurative or quaint Propoſition, to a more intelligible and ſignificant one.—As, *Peter* is half-ſeas over; that is, he is half fuddled.—The Meadows ſmile; that is, look pleaſant.

RESUMPTIVE, in Pharmacy, an Epithet given to a kind of Unguent, uſed to recruit and reſtore arid languiſhing Conſtitutions, and to diſpoſe the dry Body to receive Nouriſhment.—'Tis called in *Latin*, *Unguentum reſumptivum*. See RESTORATIVE and UNGUENT.

RESURRECTION, RESUSCITATION, the Act of returning to a new, or ſecond Life, after having been dead. See LIFE and DEATH.

The great Argument for the Truth of Chriſtianity, and that urged with the moſt Force and Conviction for the ſame; is drawn from the *Reſurrection* of our Saviour.—The Circumſtances thereof are ſuch as almoſt admit of a Demonſtration; which has accordingly been attempted on the ſtrict Principles of the Geometricians. See *Ditton on the Reſurrection*.

The Chriſtians generally believe the *Reſurrection* of the ſame identic Body, the very ſame Fleſh and Bones at the Day of Judgment.—The two principal philoſophical Objects againſt it are theſe.

1°. The

1°. The ſame Piece of Matter or Subſtance may happen to be a Part of two or more Bodies.—Thus a Fiſh feeding on a Man, and a Man afterwards feeding on the Fiſh; Part of the Body of the firſt Man becomes firſt incorporated with the Fiſh, and afterwards in the Fiſh, with the laſt Man. Again, Inſtances have been known of one Man's feeding immediately on another; and among the Cannibals of the *Weſt Indies* the Practice is frequent.

Now, where the Subſtance of one is thus converted into the Subſtance of another, each can't ariſe with his whole Body; and to which ſhall the common Part be allotted?

To this Objection ſome anſwer, that as all Matter is not fit or diſpoſed to be aſſimilated to the Body, and incorporated with it: Human Fleſh may very probably be of this Kind, and therefore what is thus eaten, may be again excreted and carried off.—But Mr. *Leibnitz*'s Anſwer ſeems the more ſolid.—All that is eſſential to the Body, he urges, is the original Stamen, which exiſted in the Semen of the Father; nay, and on the footing of the modern Theory of Generation, which exiſted in the Semen of the firſt Man. This we may conceive as the moſt minute Speck or Point imaginable, and therefore not to be ſeparated, or tore aſunder, and any Part of it united with the Stamen of any other Man. All this Bulk we ſee in the Body, is only an Accretion to this original Stamen; an Addition of foreign Matter, of new Juices to the primary, ſolid Stamen. There is therefore no reciprocation of the proper Matter of the human Body. See STAMEN, SOLID, *&c.*

The ſecond Objection is this.—The human Body, we know by the late Diſcoveries in the Animal OEconomy, is continually changing: A Man has not entirely the ſame Body to Day as he had Yeſterday; and it is even computed, that in leſs than ſeven Years time, his whole Body undergoes a change, and not a Particle of the ſame Body remains.—Which of theſe many Bodies, then, which the ſame Perſon has in the Courſe of his Life, is it that ſhall riſe? Or does all the Matter that has ever belong'd to him, riſe again? Or does only ſome particular Syſtem thereof? The Body, *e. gr.* he had at 20, at 30, or at 60 Years old? If only this or that Body ariſe, how ſhall it be rewarded or puniſhed for what was done by the other? With what Juſtice does one Perſon ſuffer, *&c.* for another?

To this it may be anſwered, on Mr. *Lock*'s Principles, that perſonal Identity, or the ſameneſs of a rational Being, conſiſts in Self-conſciouſneſs; in the Power of conſidering it ſelf the ſame thing in different Times and Places.—By this every one is to himſelf what he calls *ſelf*; without conſidering whether that ſelf be continued in the ſame or divers Subſtances. So far reaches the Identity of that Perſon. 'Tis the ſame ſelf now it was then; and 'twas by the ſame ſelf which now reflects on an Action, that Action was performed.

Now, 'tis this perſonal Identity is the Object of Rewards and Puniſhments, which we have obſerved may exiſt in different Succeſſions of Matter; ſo that to render the Rewards and Puniſhments juſt and pertinent, nothing needs but that we riſe again with ſuch a Body as that we retain the Conſciouſneſs of our paſt Actions. See IDENTITY.

RESUSCITATION. See RESURRECTION and REVIVIFICATION.

RETAINER, or RETEINER, in Law. See RETEINER.

To RETAIN, ſpoken of Mares, ſignifies to hold, *i. e.* to Conceive after Covering.

RETAINING-*Fee*, is the firſt Fee given to a Serjeant or Counſellor at Law, whereby to make him ſure, that he ſhall not be on the contrary Side. See FEE.

RETAIL, in Commerce, *&c.* the buying of Goods in the Great, or by Wholeſale, and ſelling them out again in ſmall Parcels.—*Qui rem integram ementes, per minutiores eam partes diſtrahebant.* See COMMERCE.

RETALIATION, the Act of returning like for like. See TALIONIS *Lex*.

RETARDATION, in Phyſicks, the Act of *retarding*, that is, of delaying the Motion or Progreſs of a Body, or of diminiſhing its Velocity. See MOTION.

The *Retardation* of moving Bodies ariſes from two great Cauſes: The *Reſiſtence of the Medium*, and the *Force of Gravity*.

The *Retardation from the Reſiſtence* is frequently confounded with the Reſiſtence it ſelf; becauſe with reſpect to the ſame moving Body, they are in the ſame Proportion. See RESISTANCE.

With reſpect to different Bodies, however, the ſame Reſiſtence often generates different Retardations.—For if Bodies of equal Bulk, but different Denſities, be moved through the ſame Fluid, with equal Velocity, the Fluid will act equally on each; ſo that they will have equal *Reſiſtences*, but different *Retardations*. And the *Retardations* will be to each other as the Velocities which might be generated by the ſame Forces in the Bodies propoſed: That is, they are inverſely as the Quantities of Matter in the Bodies, or inverſely as the Denſities.

Suppoſe, then, Bodies of equal Denſity, but of unequal Bulk, to move equally faſt through the ſame Fluid; the Reſiſtences increaſe according to their Superficies, that is, as the Squares of their Diameters; but the Quantities are increaſed in Proportion to the Cubes of the Diameters: the Reſiſtences are the Quantities of Motion, the *Retardations* are the Celerities ariſing from them; and dividing the Quantities of Motion, by the Quantities of Matter, you will have the Celerities; therefore the *Retardations* are directly as the Squares of the Diameters, and inverſely as the Cubes of the Diameters, that is, inverſely, as the Diameters themſelves.

If the Bodies be equal, move equally ſwift, and are of the ſame Denſity, but moved through different Liquids; their *Retardations* are as the Denſities of thoſe Fluids. See FLUID.

When Bodies equally denſe, and of Bulk equal, are carried through the ſame Liquid with different Velocities, the *Retardations* are as the Squares of the Velocities. See DENSITY, *&c.*

The *Retardation from Gravity* is peculiar to Bodies projected upwards.—A Body thrown upwards is *retarded* after the ſame Manner as a falling Body is *accelerated*; only in the one Caſe the Force of Gravity conſpires with the Motion acquired; and in the others acts contrary to it. See ACCELERATION.

As the Force of Gravity is uniform, the *Retardation* from that Cauſe will be equal in equal times. See GRAVITY.

Hence, as 'tis the ſame Force which generates Motion in the falling, and diminiſhes it in the riſing Body, a Body riſes till it has loſt all its Motion; which it does in the ſame time wherein a Body falling would have acquired a Velocity equal to that wherewith the Body was thrown up. See PROJECTILE.

Thus alſo, a Body thrown up will riſe to the ſame Height from which falling it would acquire the Velocity wherewith it is thrown up: Therefore the Heights which Bodies thrown up with different Velocities can riſe to, are to each other as the Squares of the Velocities. See PROJECTILE and DESCENT.

Hence the *Retardations* of Motions may be compared together: For they are firſt, as the Squares of the Velocities; ſecondly, as the Denſities of the Liquids, through which the Bodies are moved; thirdly, inverſely as the Diameters of thoſe Bodies; laſtly, inverſely, as the Denſities of the Bodies themſelves.

The Numbers in the Ratio compounded of thoſe Ratio's, expreſs the Proportion of the *Retardations*; multiplying the Square of the Velocity by the Denſity of the Liquid, and dividing the Product by the Product of the Diameter of the Body, multiplied into its Denſity, and working thus for ſeveral Motions; the Quotients of the Diviſions will have the ſame compound Ratio to one another.

General Laws of RETARDATION *of Motion.*

1°. If the Motion of a Body be *uniformly retarded*; that is, if its Celerity be diminiſhed equally in equal Times, the Space it paſſes over is one half of that it would paſs over in the ſame time by an uniform Motion.

2°. The Spaces deſcribed in equal times by an uniformly *retarded* Motion; decreaſe according to the uneven Number, 9, 7, 5, 3, *&c.*—See farther under ACCELERATION.

RETCHING, or REACHING, the Effort or Endeavour to Vomit. See NAUSEA and VOMITING.

RETE *Mirabile*, in Anatomy, a ſmall Plexus, or Net-work of Veſſels in the Brain. See PLEXUS and BRAIN.

It ſurrounds the *Glandula Pituitaria*, and is very conſpicuous in Brutes, but either not exiſtent in Man, or ſo very minute that its Exiſtence is fairly doubted.

Willis will have it to conſiſt of Arteries, Veins, and Nerves; *Vieuſſens* of Arteries only; and others, of Arteries and ſmall Veins.—*Vieuſſens* aſſerts, with many other Anatomiſts, that there is no *Rete Mirabile* in Man, in the Horſe, Dog, *&c.* 'Tis found in the Calf, Sheep, Goat, *&c.*

It was firſt obſerved, and deſcribed by *Galen*; who upon finding it in ſome Brutes, concluded it to be likewiſe in Man: but all we ſee like it in Man, is, that on the Sides of the Pituitary Gland, where its Place ſhould be, the Carotid Arteries make a double Flexure, in Form of ∽, before they penetrate the *Dura Mater*.

The uſe of the *Rete Mirabile*, *Galen* takes to be for concocting and elaborating the animal Spirits; as that of the *Epididymides* is for elaborating the Seed. See SPIRIT and SEED.

Dr. *Willis* thinks, with more probability, it may ſerve to bridle the too rapid Incurſions of the Blood into the Brain of thoſe Creatures whoſe Head hangs down much; to ſeparate ſome of the ſuperfluous ſerous Parts of the Blood, and ſend them to the Salival Glands as the Blood enters the Brain; and to obviate Obſtructions which may happen in the Arteries.

RETE *Penny*, in antient Records, a cuſtomary Due of one Penny for every Perſon, to the Pariſh-Prieſt.

RETEINER, or RETAINER, in Law, a Servant not menial nor Domeſtic; that is, not continually dwelling in the Houſe of his Lord or Maſter; but only wearing his Livery, and attending on ſpecial Occaſions. See SERVANT.

This Livery was antiently given by great Men, and frequently for the Maintenance of Quarrels; whence it was juſtly prohibited by ſeveral Statutes; as, 1 *Richard* II. on Pain of Impriſonment, and grievous Forfeiture to the King. See LIVERY, YEOMAN, *&c.*

It was further prohibited by other Statutes of the ſucceeding Kings, whereby the Delinquents were ſubjected to make Ranſom at the King's Pleaſure; and Knights and Eſquires hereof du-

ly attainted, were to loſe their ſaid Liveries, and forfeit their Fees for ever.

Edward IV. added a ſpecial Penalty of five Pounds *per* Month on every Man that gave ſuch Livery, and as much on every Perſon ſo *retain'd*, either by Writing, Word, or Oath.—But moſt of the Statutes are repealed by a Statute 3 *Car.* I.

RETENTIO, RETINENTIA, in our Law Books, is ſometimes uſed to ſignify *Retinue*. See RETINUE.

RETENTION, RETENTIO, a Faculty of the human Mind, whereby in order to a farther Progreſs in Knowledge, it keeps or *retains* thoſe ſimple Ideas which it before received by Senſatiſation or Reflection. See FACULTY, IDEA, *&c.*

This is done two ways.—Firſt, by keeping the Idea which is brought into the Mind for ſome time actually in view; called *Contemplation*. See CONTEMPLATION.

Secondly, By reviving thoſe Ideas in our Minds, which have diſappeared, and have been, as it were, laid out of ſight: this is *Memory*, which is, as it were the Repoſitory of our Ideas. See MEMORY.

Our Ideas being nothing but actual Perceptions in the Mind, which ceaſe to be any thing, when there is no Perception of them; this laying up of our Ideas in the Repoſitory of the Memory, amounts to no more than this, that the Mind has a Power in many Caſes to revive Perceptions it once had; with this additional Perception annexed to them, that it has had them before. See PERCEPTION.

It is by the Aſſiſtance of this Faculty, that we are ſaid to have all thoſe Ideas in our Underſtanding which we can bring in ſight, and make the Objects of our Thoughts, without the help of thoſe ſenſible Qualities, which firſt imprinted them there. See UNDERSTANDING.

Attention and Repetition help much to the fixing Ideas in our Memories; but thoſe which make the deepeſt and moſt laſting Impreſſions, are ſuch as come accompanied with Pleaſure and Pain.—Ideas but once taken in, and never again repeated, are ſoon loſt; as thoſe of Colours, in ſuch as loſe their Sight when very young.

The Memory in ſome Men is tenacious, even to a Miracle; but yet there ſeems to be a conſtant Decay of all our Ideas, even of thoſe which are ſtruck deepeſt; and in Minds the moſt *Retentive*: So that if they be not ſometimes renew'd, the Print wears out, and at laſt there remains nothing to be ſeen. See TRACE.

Thoſe Ideas which are often renewed by a frequent Return of the Objects or Actions that produce them, fix themſelves beſt in the Memory, and remain longeſt there: Such are the original Qualities of Bodies; *viz.* Solidity, Extenſion, Figure, Motion, *&c.* and thoſe that almoſt conſtantly affect us, as Heat and Cold; and thoſe that are the Affections of all kinds of Beings, as Exiſtence, Duration, Number; which are ſeldom quite loſt, while the Mind retains any Ideas at all. See QUALITY, HABITUDE, *&c.*

RETENTION, is alſo uſed in Medicine, *&c.* for that State of Contraction in the Solids, or vaſcular Parts of the Body, which makes them hold faſt their proper Contents. See SOLID, VESSEL, *&c.*

In this Senſe *Retention* ſtands oppoſed to *Evacuation*, or *Excretion*. See EVACUATION and EXCRETION.

Retention and Excretion make one of the ſix Non-Naturals. See NON-NATURAL.

RETENTION is frequently conſidered as a Diſorder; and defined the Act of retaining the Excrements, Humours, *&c.* ſo as they cannot be voided out of the Body. See EXCREMENT.

A *Retention* of Urine is very painful and dangerous. See URINE.

'Tis a *Retention* of peccant Humours which cauſes ſuch a Diſeaſe.

RETIARII, in Antiquity, a kind of Gladiators. See GLADIATOR.

The *Retiarii* were denominated from *Rete*, a Net which they made uſe of againſt their Antagoniſt, who was call'd *Secutor*, Follower. See SECUTORES.

This Net they carried under their Buckler, and when opportunity ſerv'd, caſt it on the Head of their Antagoniſt, and in this condition kill'd him with a Trident which they bore in the other Hand.

Lipſius, &c. obſerve that they fought in Tunics, and were furniſhed with Spunges to wipe off the Sweat, Blood, *&c.* and to ſtop their Wounds.—The Word is form'd from the *Latin*, *Rete*, *net*; or, perhaps from *Retejaculum*, for they call'd their Net, *Jaculum*, and ſometimes in one Word, *Retejaculum*.

RETICENCY, RETICENCE, RETICENTIA, a Figure in Rhetoric, whereby we make oblique mention of a thing, in pretending to paſs it over unmentioned. See FIGURE.

Thus: To ſay nothing of the Nobility of his Anceſtors: I forbear to ſpeak of his Courage, and paſs over the Severity of his Morals. See PRETERITION.

RETICULA, RETICULE, in Aſtronomy, a Contrivance for the exact meaſuring of the Quantity of Eclipſes; introduced about fifty Years ago by the Royal Academy of *Paris*. See ECLIPSE.

The *Reticule* is a little Frame, conſiſting of thirteen fine ſilken Threads, equidiſtant from each other, and Parallel; placed in the Focus of object Glaſſes of Teleſcopes; that is, in the Place where the Image of the Luminary is painted, in its full Extent.—Of Conſequence, therefore, the Diameter of the Sun or Moon is hereby ſeen divided into twelve equal Parts or Digits; ſo that to find the Quantity of the Eclipſe, there is nothing to do but to Number the luminous and the dark Parts. See DIGIT.

As a Square *Reticle* is only proper for the Diameter, not for the Circumference of the Luminary. 'Tis ſometimes made Circular, by drawing ſix concentrick equi-diſtant Circles, which repreſent the Phaſes of the Eclipſe perfectly.

But 'tis viſible that the *Reticule*, whether ſquare or circular, ought to be perfectly equal to the Diameter or Circumference of the Star, ſuch as it appears in the Focus of the Glaſs; otherwiſe the Diviſion cannot be juſt.

Now this is no eaſy Matter to effect, by reaſon the apparent Diameter of the Sun and Moon differ in each Eclipſe; nay that of the Moon differs from it ſelf in the Progreſs of the ſame Eclipſe.

Another Imperfection in the *Reticule* is, that its Bigneſs is determined by that of the Image in the Focus; and of conſequence will only fit one certain Magnitude.

But M. *de la Hire* has found a Remedy for all theſe Inconveniences; and contrived that the ſame *Reticule* ſhall ſerve for all Teleſcopes, and all Altitudes of the Luminary in the ſame Eclipſe.—The Principle whereon his Invention ſtands, is, that two Object-Glaſſes applied againſt each other, having a common Focus, and there forming an Image of a certain Magnitude; this Image will increaſe in Proportion as the Diſtance between the two Glaſſes is increas'd, as far as a certain Limit.

If then a *Reticule* be taken of ſuch Magnitude as juſt to comprehend the greateſt Diameter the Sun or Moon can ever have in the common Focus of two Object-Glaſſes applied to each other; there needs nothing but to remove them from each other, as the Star comes to have a leſs Diameter, to have the Image ſtill exactly comprehended in the ſame *Reticule*.

Another Improvement is, that whereas the ſilken Threads are ſubject to ſwerve from the Parallelifm, *&c.* by the different temperature of the Air; a *Reticule* may be made of a thin Looking-Glaſs, by drawing Lines or Circles thereon, with the fine Point of a Diamond; which ſhall be ſafe from any Alteration of the Air.

RETICULAR *Body*, *Corpus* RETICULARE, in Anatomy, a Body of Veſſels lying immediately under the Cuticle or Scarf-Skin. See CUTICLE, *&c.*

Theſe Veſſels contain a mucous Liquor, from the Tincture whereof *Malpighi* imagines the Colour of the Skin to be derived; founding his Conjecture on this, that the Cutis as well as Cuticle of Blacks, is white; and that they differ in no other Circumſtance from thoſe of *Europeans*, but in this particular. See NEGRO. See alſo CUTIS and PAPILLA.

RETICULARIS *Plexus*, in Anatomy, the Choroides. See CHOROIDES.

'Tis thus call'd becauſe the Fibres are interwoven like a Net.

RETICULUM, the Caul, or *Omentum*; a Name ſometimes given from its Net-like Structure. See OMENTUM.

RETIFORMIS *Lacis*, in Anatomy, the ſame with *Rete Mirabile*. See RETE.

RETINA, in Anatomy, and Opticks, one of the Tunics of the Eye; call'd alſo *Amphibleſtroides*, *retiformis*, and *reticularis*, as being wove in manner of a Net. See TUNIC and EYE.

The *Retina* is the laſt or innermoſt of the Coats of the Eye, lying immediately under the Choroides. See CHOROIDES.

'Tis form'd of an Expanſion of the medullary Part of the Optic Nerve; whence, it is found very thin, ſoft, white, *&c.* reſembling the Subſtance of the Brain, with the tranſparency of the Horn of a Lanthorn. See OPTIC *Nerve*.—When ſeperated from the Choroides, it runs into a mucous Maſs, or Lump.

The *Retina* is uſually ſuppoſed to be the great Organ of Viſion, which is effected by means of the Rays of Light reflected from each Point of Objects, refracted in their Paſſage through the aqueous vitreous and cryſtallin Humours, and thus thrown on the *Retina*; where they paint the Image of the Object; and where they make an Impreſſion, which is continued thence, by the fine Capillaries of the Optic Nerves, to the Senſory. See VISION.

Indeed, whether the *Retina* or the Choroides be the principal Organ of Viſion, and that whereon the Images of Objects are repreſented; has been much controverted between ſeveral Members of the *French* Academy, particularly Meſſ. *Mariotte*, *Pecquet*, *Perrault*, *Mery*, and *de la Hire*.

Mariotte firſt ſtood up for the Choroides, and was ſeconded by *Mery*; the reſt aſſerted the Rights of the *Retina*.

The *Retina* was always judg'd to have all the Characters of the principal Organ.—'Tis ſituate in the Focus of the Refractions of the Humours of the Eye; and of Conſequence receives the Vertices of the Cones of Rays, proceeding from the ſeveral Points of Objects. It is very thin, and conſequently very ſenſible. It has its Origin from the Optic Nerve; and is it ſelf wholly nervous, and 'tis the common Opinion that the Nerves are the Vehicles of all Senſations. Laſtly, It communicates with the Subſtance of the Brain, where all Senſations terminate. See BRAIN, SENSATION, *&c.*

As to the Choroides, its uſe was ſuppoſed to be to ſtop the Rays, which the extreme tenuity of the *Retina* ſhould let paſs;

and

and to do the ſame Office to the *Retina* which the Quickſilver does to a Looking-Glaſs; eſpecially in Animals wherein it is black. See CHOROIDES.

But from an Experiment of a Cat plunged in Water, M. *Mery* conceiv'd a different Opinion.—He obſerv'd the *Retina* to diſabſolutely appear on that Occaſion, as well as all the other Humours of the Eye; but the Choroides ſtill to appear diſtinctly, and even with all the lively Colours it has in that Animal.—Hence he concluded, that the *Retina* was as tranſparent as the Humors, but the Choroides, opake: Conſequently the *Retina* was not a proper Inſtrument to terminate and ſtop the Cones of Rays, or to receive the Images of Objects; but that the Light muſt paſs through it, and could only be ſtop'd on the Choroides; which therefore would become the principal Organ of Viſion.

The black Colour of the Choroides in Man is extremely favourable to this Sentiment: The principal Organ ſhould ſeem to require that the Action of the Light ſhould terminate on it, as it arrives; which 'tis certain it here does in the black that abſorbs all the Rays, and reflects none; and it ſhould alſo ſeem neceſſary that the Action of the Light ſhould be ſtronger on the Organ of Sight than any where elſe: Now, 'tis certain that the Light being received and abſorbed in a black Body, muſt excite a greater Vibration there than any where elſe; and hence it is that black Bodies are inflamed by a burning Glaſs much ſooner than white ones. See BLACKNESS, *&c.*

The Situation of the Choroides behind the *Retina* is another Circumſtance on its Side; M. *Mery* having obſerved the ſame Poſition of the principal Organ behind a mediate Organ in the other Senſes; which makes a happy Analogy.—Thus the Cuticle extended over the Skin, is the mean Organ of feeling; but the Cutis underneath is the principal Organ. The like is obſerved in the Ear, Noſe, *&c.*

The *Retina*, therefore, ſhould ſeem, a kind of mediate or ſecondary Organ, ſerving to break the too ſtrong Impreſſion of the Light on the Choroides, or to preſerve it; which is the uſe aſcribed to the Cuticle.—Add to all this, that the *Retina* is inſenſible, as having its Origin from the medullary Subſtance of the Brain, which is ſo too; and the Choroides, on the contrary, very ſenſible, as ariſing from the *Pia Mater*, which is certainly ſo in a great Degree. See NERVE, MEDULLA, MENINX.

This laſt Argument being doubted of, M. *Mery* was engaged to prove it; which he did before the Royal Academy, where he ſhew'd that the Optic Nerve is not compoſed like the other Nerves, of Fibres; that 'tis only a Train of the Medulla incloſed in a Canal, out of which it is eaſily ſeparable. See OPTIC *Nerve*.

This Structure of the Optic Nerve, hitherto unknown, ſhews that the *Retina* can be no Membrane; 'tis only a Dilatation of the Medulla, incloſed under two Membranes, and a Medulla is no proper Subſtance to be the Seat of a Senſation.—It can ſcarce ſerve for any thing but to filtrate the Spirits neceſſary for the Action of Viſion.—The Vibration whereby the Senſation it ſelf is effected, muſt be made on a Part more ſolid, more firm, and more ſuſceptible of a briſk Impreſſion.

RETINUE, the Attendants or Followers of a Prince, or Perſon of Quality; chiefly in a Journey.

In Law, thoſe Perſons are ſaid to be of a Nobleman's *Retinue* who belong to him in Quality either of Servants or *Retainers*. See RETAINER.

RETIRADE, in Fortification, a kind of Retrenchment made in the Body of a Baſtion, or other Work, which is to be diſputed Inch by Inch, after the firſt Defences are diſmantled. See RETRENCHMENT, *&c.*

It uſually conſiſts of two Faces, which make a re-entering Angle. See RE-ENTERING.

When a Breach is made in a Baſtion, the Enemy may alſo make a *Retirade*, or a new Fortification behind it. See BASTION.

RETIRED *Flank*, in Fortification. See FLANK.

RETORT, in Chymiſtry, a kind of crooked Matraſs, or a round, bellied Veſſel, either of Earth or Glaſs, with a ſlender crooked Beak, or Noſe, to which the Recipient is to be faſtened. See MATRASS.

When the *Retort* is of Glaſs, 'tis uſually lin'd with a Lute or Paſt an Inch thick; to enable it to bear the Fire the better. See FIRE and HEAT.

The *Retort* ſerves to draw Spirits and Oils from Woods, Gums, Minerals, Earths, and other Matters which require a ſtrong Fire. See SPIRIT, *&c.*

The *Retort* is a kind of Compendium or Improvement of the Cucurbit and Bolt-head; anſwering all the Purpoſes of both, without the Aſſiſtance of a Capital or Head, which the other frequently require. See DISTILLATION, *&c.*

RETRACTATION, the Act of unſaying what a Perſon had ſaid, or wrote. See RECANTATION.

Gallileo made a public *Retractation* of his *Doctrine of the World, de Mundo*, after its being cenſured and condemned by the Popes.

Among St. *Auguſtin's* Works is a Book of *Retractations*; where, however, the Word is to be underſtood in a new Senſe; not as if he *recanted* or unſaid any thing he had taught, but only treated of the ſame Matter, or handled the ſame Subject a ſecond Time. This Senſe the Word will very well bear; being a compound of *re* and *tracto*, I handle, treat of.

RETRACTION, in Anatomy, the Contraction or ſhortening of a Part. See CONTRACTION.

The *Retraction* of the Nerves takes away the Uſe of the Limbs. See NERVE.

The Word is form'd from the *Latin*, *retrahere*, to draw back.

RETRACTS, among Horſemen, pricks in the Horſe's Feet, ariſing from the Fault of the Farrier in driving Nails that are weak, ill-pointed, or are driven amiſs. See SHOE.

Theſe, unleſs timely prevented, feſter, and prove very dangerous.—When the Farrier, in ſhooing, perceives the Horſe to ſhrink at every blow on the Nail; 'tis a ſign of a *Retract*, and the Nail is to be pull'd out again, which is done without any harm.

When the Horſe halts immediately after he is ſhod, 'tis concluded ſome of the Nails preſs the Veins, or touch him in the Quick.

To find where the Grievance lies, they knock the Nails round with a Hammer, till the Horſe's ſhrinking upon hitting a particular Nail, diſcovers the Place.

Some Farriers give this as a Rule, that throwing Water on the Hoof, the Place where he is hurt will be dry ſooner than any of the reſt. The Places where the Horſes are moſt uſually *prick'd*, are the Heel in the Fore-foot, and the Toe in the Hind-foot. See HOOF.

RETRACTOR, *Alæ Naſi*, in Anatomy, a pair of Muſcles, call'd alſo *Elevator Labii ſuperioris*. See ELEVATOR.

RETRAHENS *Auriculam*, in Anatomy, a pair of Muſcles of the external Ear; conſiſting of a Parcel of fleſhy Fibres, which in ſome Bodies are divided into three diſtinct Muſcles, ariſing from the *Os Temporale*, and fix'd to the hind Part of the *Concha*. See AURICLE.

But theſe Muſcles are ſo ſmall in Men, that the Auricle is ſeldom moveable at all. See EAR.

RETRAXIT, in Law, is where the Plaintiff comes into Court in Perſon, alone, or with the Defendant; and declares he will proceed no further.

A *Retraxit* is peremptory, and a perpetual Bar; and may be pleaded as ſuch to the Plaintiff in the ſame Action for ever.

RETREAT, in War, a retiring or moving back again of an Army, or Part thereof.

What they call a *Retreat* in the Armies is really a Flight; only a Flight made by Deſign, and with Conduct.

The Skill and Ability of the General, is known by his *Retreats*, more than his Engagements.—The *Retreat* of ten thouſand *Greeks* under the Command of *Xenophon*, has been admired in all Antiquity.

To ſound a *Retreat*, ſecure a *Retreat*, &c.

RETREAT, or RELAY, in Maſonry, a little Receſs or Diminution of the thickneſs of a Wall, Rampart, *&c.* in Proportion as 'tis rais'd. See WALL, *&c.*

The *Retreat* is properly the Diminution of a Wall, without Side; or the Contraction of its upper Courſes more than the Foundation.—Where the Foundation is very large, they uſually make two or three *Retreats*.—Parapets are always built with *Retreats*.

RETRENCHMENT, litterally ſignifies ſomething cut off a thing, and taken from it; in which Senſe it coincides with Subſtraction, Diminution, *&c.*—The Word is *French*, *Retranchement*, form'd of *re* and *trancher*, to cut.

RETRENCHMENT, in Architecture, Carpentry, *&c.* is uſed not only for what is cut off from a Piece when too large, in order to a better proportioning it, or ſome other Convenience; but alſo for the Projectures taken out of Streets, publick Ways, *&c.* to render them more even, and in a Line.

By a gradual *Retrenchment* of the ordinary Quantity of Food, a Man may bring himſelf to a great Degree of Abſtinence. See ABSTINENCE, FASTING, FOOD, *&c.*

The Reformation of the Calendar in 1582, occaſioned a *Retrenchment* of ten Days which had crept into the Account more than there ſhould have been. See CALENDAR.

The Frugality ſo much boaſted of among the antient *Romans*, St. *Everemond* obſerves, did not ſo much conſiſt in a voluntary Abſtinence or *Retrenchment* of things ſuperfluous, as a coarſe and ſordid Way of employing or uſing them.

RETRENCHMENT, in War, the Fortification of a Camp; or any Kind of Work caſt up to ſtrengthen or defend a Poſt againſt the Enemy. See FORTIFICATION, DEFENCE, WORK.

Such are Ditches, with Parapets, Gabions, Faſcines, *&c.* for a covering, *&c.* See DITCH, *&c.*

The Enemy came with Deſign to oblige them to raiſe the Siege, but could not force the *Retrenchments*.

RETRENCHMENT is particularly uſed for a ſimple Retirade made on a Horn-work or Baſtion; when 'tis intended to Diſpute the Ground Inch by Inch.

'Tis uſually a re-entering Angle, whoſe Faces Flank each other; and fortified with Ditches, Parapets, Gabions, *&c.* See RETIRADE.

RETRIBUTION, a handſome Preſent, Gratuity, or Acknowledgment, given in lieu of a formal Salary or Hire, to Perſons imploy'd in Affairs that do not ſo immediately fall under Eſtimation, nor within the common Commerce of Money.

Thoſe

Thoſe who miniſter'd at the Altar antiently lived of *Retributions*, which they received for the Services they did the Church. But theſe *Retributions* were afterwards judg'd proper to be fix'd to preciſe Sums. See TITH.

RETRIEVE, RETROUVER, to recover, get again, or repair a thing loſt or damaged. See RECOVERY, REPARATION, *&c.*

To RETRIEVE, in Falconry, ſignifies to ſpring or find Partridges again, which have been once ſprung before. See HAWKING.

RETROACTIVE, in Law.—New Laws and Statutes, we ſay, have no *retroactive* Effect; that is, they have no Force or Effect as to what is already paſs'd; nor can be alledg'd as Rules for any thing done before their Promulgation.—Their Authority is wholly as to what is to come.

Indeed we have ſome Inſtances of Laws that have a Retroſpect, or *Retroaction*, i. e. were made with expreſs Deſign to extend to things already paſs'd.—Theſe we uſually call Laws *ex poſt facto*. See LAW, *&c.*

The Word is compounded of the *Latin*, *retro*, backwards; and *ago*, I act.

RETROCESSION, the Act of going backwards; more uſually expreſs'd by *Retrogreſſion* or *Retrogradation*. See RETROGRADATION, *&c.*

RETROCESSION of the Equinox. See PRÆCESSION.

RETROCESSION of Curves, *&c.* See RETROGRADATION, *Contrary* FLEXURE, *&c.*

RETROGRADE, RETROGRADUS, ſomething that goes backwards, or in a Direction contrary to its natural one.

Such is the Motion of the Lobſter, the Crab, *&c.*

The Word is form'd from the *Latin*, *retro*, backwards; and *gradior*, I go.

If the Eye and the Object move both the ſame way, but the Eye much faſter than the Object; the Object will appear to be *Retrograde*, i. e. to go back, or to advance the contrary Way from what it really does. See VISION *of Motion*.

Hence, the Planets in ſome Parts of their Orbits appear to be *Retrograde*. See PLANET and RETROGRADATION.

RETROGRADE *Order*, in Matters of Numeration, is when in lieu of accounting 1, 2, 3, 4, we count 4, 3, 2, 1. See PROGRESSION, SERIES, NUMBER, *&c.*

RETROGRADE *Verſes* are ſuch as give the ſame Words, whether read backwards or forwards; call'd alſo *reciprocal Verſes*, and *Recurrents*; ſuch is,

Signa te Signa temerè me tangis et Angis.

RETROGRADATION, or RETROGRESSION, the Act or Effect of a thing moving backwards. See RETROGRADE.

RETROGRADATION, in Aſtronomy, is an apparent Motion of the Planets, wherein they ſeem to go backwards in the Ecliptic, and to move contrary to the Order or Succeſſion of the Signs. See PLANET, ECLIPTIC, *&c.*

When a Planet moves in *conſequentia*, i. e. towards the following Signs, or according to the Order of the Signs, as from Aries to Taurus, from Taurus to Gemini, *&c.* that is, from Weſt to Eaſt, it is ſaid to be *direct*. See DIRECT.

When it appears for ſome Days in the ſame Point of the Heavens, it is ſaid to be *Stationary*. See STATIONARY.

And when it goes in *Antecedentia*, i. e. towards the antecedent Signs, or contrary to the Order of the Signs, *viz.* from Eaſt to Weſt, it is ſaid to be *Retrograde*. See ANTECEDENTIA, SIGN, *&c.*

The Sun and Moon always appear direct.—*Saturn*, *Jupiter*, *Mars*, *Venus*, and *Mercury*, ſometimes direct, ſometimes Stationary, and ſometimes *Retrograde*. See SATURN, JUPITER, VENUS, *&c.*

The ſuperior Planets are *Retrograde* about their Oppoſition with the Sun; the inferior ones about their Conjunction. See OPPOSITION and CONJUNCTION.

The Intervals of Time between two *Retrogradations* of the ſeveral Planets, are unequal.—In *Saturn* 'tis a Year and 13 Days; in *Jupiter* a Year and 43 Days; in *Mars* two Years 50 Days; in *Venus* one Year 220 Days; in *Mercury* 115 Days.

Again, *Saturn* continues *Retrograde* 140 Days, *Jupiter* 120, *Mars* 73, *Venus* 42, *Mercury* 22: Yet are not the ſeveral *Retrogradations* of the ſame Planet conſtantly equal.

Theſe Changes of the Courſes and Motions of the Planets are not real: but apparent, when view'd from the Centre of the Syſtem, *i. e.* from the Sun, they appear always uniform and regular.—The Inequalities ariſe from the Motion and Poſition of the Earth whence they are view'd, and are thus accounted for.

Suppoſe PQO (*Tab. Aſtronomy*, *Fig.* 58.) a Portion of the Zodiac ABCD the Earths Orbit, and EMGHZ the Orbit of a ſuperior Planet, *c. gr.* Saturn. And ſuppoſe the Earth in A, and *Saturn* in E; in which Caſe he will be ſeen in the Zodiac at the Point O.—If now *Saturn* remain'd without any Motion, when the Earth arrives at B, he would be ſeen in the Point of the Zodial L, and would appear to have deſcribed the Arch OL, and to have moved according to the Order of the Signs from Weſt to Eaſt. But becauſe while the Earth is paſſing from A to B, *Saturn* likewiſe moves from E to M, where he is ſeen in Conjunction with the Sun, he will appear to have deſcribed the Arch OQ greater than that OL.

In this State, now, the Planet is direct, and its Motion, from Weſt to Eaſt, or according to the Order of the Signs. And its Motion, now that it is in Conjunction with the Sun and moſt remote from us, is quicker than at any other time. See DIRECTION.

The Earth arriving at C, while *Saturn* deſcribes the Arch MG, he will be obſerved in the Zodiac at R. But the Earth being advanced to K, and Saturn to H, ſo as the Line KH joining the Earth and Saturn, be for ſome time Parallel to it ſelf, or nearly ſo; *Saturn* will be ſeen all that time in the ſame Point of the Zodiac at P, and with the ſame fix'd Stars, and is therefore *Stationary*. See STATION.

But the Earth being come to D, and Saturn arrived in oppoſition to the Sun in X, he will appear in the Zodiac in V, and will ſeem to have been *Retrograde*, or to have gone backwards through the Arch PV.—Thus the ſuperior Planets, on Optical Conſiderations, are always *Retrograde*, when in Oppoſition to the Sun. See SUN, OPPOSITION, *&c.*

The Arch which the Planet deſcribes while thus *Retrograde*, is call'd the *Arch of Retrogradation*. See ARCH.

The Arches of *Retrogradation* of the ſeveral Planets are not equal.—That of *Saturn* is greater than that of *Jupiter*; that of *Jupiter* than that of *Mars*, &c.

RETROGRADATION *of the Nodes*, is a Motion of the Line of the Nodes, whereby it continually ſhifts its Situation from Eaſt to Weſt, contrary to the Order of the Signs; compleating its *Retrograde* Circulation in the Compaſs of about 19 Years: After which Time either of the Nodes having receded from any Point of the Ecliptic returns to the ſame again. See NODE.

RETROGRADATION *of the Sun.*—When the Sun is in the torrid Zone, and has his Declination, AN, (*Tab. Aſtronomy*, *Fig.* 9.) greater than the Latitude of the Place AZ, but either Northern or Southern as that is; the Sun will appear to go backwards, or to be *Retrograde* both before and after Noon. See SUN and ZONE.

For, draw the vertical Circle ZGN to be a Tangent to the Sun's Diurnal Circle in G, and another ZON, through the Sun in O.—'Tis evident all the intermediate vertical Circles cut the Sun's diurnal Circle twice: Firſt, in the Arch GO, and the ſecond time in the Arch GI.—Wherefore, as the Sun aſcends thro' the Arch GO, it continually arrives at further and further Verticals. But as it continues its Aſcent through the Arch GI, it returns to its former Verticals; and therefore is ſeen *Retrograde* for ſome time before Noon.

The ſame, it may be ſhewn after the ſame manner, it does for ſome time after Noon.

Hence, as the Shadow always tends the oppoſite Way to that of the Sun, the Shadow will be *Retrograde* twice every Day in all Places of the Torrid Zone, where the Sun's Declination exceeds the Latitude. See SHADOW.

RETROGRADATION, or RETROGRESSION, in the higher Geometry, is the ſame with what we otherwiſe call *contrary Flexion*. See *Contrary* FLEXION.

The *Retrogreſſion* of Curves may be thus conceived.—Suppoſe a Curve Line AFK, (*Tab. Geometry*, *Fig.* 82.) to be partly Concave, partly Convex, in reſpect of the Right Line AB, or in reſpect of the determinate Point B; the Point F which ſeparates the Concave Part of the Curve from the Convex, or which makes the end of one, and the beginning of the other, is call'd the *Point of contrary Flexion*, when the Curve is continued from F towards the ſame Side as before.—When the Curve is continued backwards towards A, then is F the Point of *Retrogreſſion*. See POINT and CURVE.

RETROGRESSION, or RETROCESSION, the ſame with *Retrogradation*. See RETROGRADATION.

RETROMINGENTS, in natural Hiſtory, a Claſs or Diviſion of Animals, whoſe Characteriſtic is, that they ſtale or piſs backwards; as Cows, *&c.* See ANIMAL.

The Word is compounded of the *Latin*, *retro*, backwards, and *mingo*, I make Water.

RETROPANNAGIUM, RETROPANNAGE, in our antient Law-Books, *Afterpannage*; or what is left when the Beaſts have done. See PANNAGE.

Et debent habere Retropannagium *à Feſto Sancti Martini uſque ad Feſtum Pur. Beatæ Mariæ. Petitio in Parl. temp. Edw.* III.

RETROSPECT, a look or view backwards. See RETROACTIVE.

RETURN, in Law, hath two ſeveral Acceptations.

The one in *the Return of Writs* by Sheriffs and Bailiffs; which is only a Certificate made to the Court by the Sheriff, Bailiff, *&c.* of what is done with regard to the Execution of the Writ directed to them. See WRIT.

Such alſo is the *Return of a Commiſſion*, which is a Certificate, or Anſwer of what is done by the Commiſſioners, to whom ſuch Commiſſions, Precepts, Mandates, or the like, are directed.

The other Application of the Word *return*, is in Caſe of a Replevin; for if a Man diſtrain Cattle for Rent, *&c.* and afterwards juſtify or avow his Act, ſo as it is found lawful, the Cattle before

fore delivered unto him that was diſtrain'd, upon Security given to proſecute the Action, ſhall now be *returned* to him that diſtrained them. See DISTRESS, REPLEVY, *&c.*

RETURNS are alſo certain Days in each Term, peculiarly ſet a-part for the ſeveral Kinds of Proceedings, in any Cauſe to be determined. See TERM, *&c.*

They are alſo call'd *Days in Bank*. See DAY.

Hillary Term has four ſuch *Returns*.—viz. *Octabis Hillarii*, eight Days after *Hillary* Day; 2. *Undena Hillarii*, fifteen Days; *Craſtina Purificationis*, the Day after the Purification; and *Octabis Purificationis*, eight Days after, incluſive.

Eaſter Term has five *Returns*; viz. *Quindena Paſchæ*, fifteen Days after *Eaſter*; *Tres Paſchæ*, three Weeks after; *Menſe Paſchæ*, the Day-Month after *Eaſter*; *Quinque Paſchæ*, the Day five Weeks from *Eaſter*; and *Craſtino Aſcenſionis Domini*, the Day after *Aſcenſion-Day*.

Trinity Term has four *Returns*; viz. *Craſtino Trinitatis*, the Day after *Trinity*; *Octabis Trinitatis*, eight Days after, incluſive; *Quindena Trinitatis*, fifteen Days after; and *Tres Trinitatis*, three Weeks after.

Michaelmas Term has ſix *Returns*; viz. *Tres Michaelis*, three Weeks after *Michaelmas*; *Menſe Michaelis*, the Day-Month after *Michaelmas*; *Craſtino Animarum*, the Day after *All-Souls*; *Craſtino Martini*, the Day after *Martinmas* Day; *Octabis Martini*, eight Days after, incluſive; and *Quindena Martini*, fifteen Days. See TERM.

RETURN, in Building. A Side or Part that falls away from the Foreſide of any ſtraight Work, is call'd the *Return*.

RETURNS of a Trench, in Fortification, are the turnings and windings which run from the Lines of a Trench. See TRENCH.

RETURNO *habendo*, or RETURNUM *Averiorum*, a Writ which lies for him who has avow'd a Diſtreſs made of Cattle, and proved his Diſtreſs to be lawfully taken; for the *Return* of the Cattle diſtrain'd unto him, which before were replevied by the Party diſtrain'd, upon Surety given to purſue the Action. See DISTRESS, *&c.*

The ſame Writ is granted when the Plaint or Action is removed by *Recordare*, or *Accedas ad Curiam*, into the Court of Common-Pleas; and he whoſe Cattle were diſtrain'd, makes Default, and does not proſecute his Action. See

RETURNUM *Irreplegiabile*, a Writ Judicial, ſent out of the Common-Pleas to the Sheriff, for the final Reſtitution or Return of Cattle to the Owner, unjuſtly diſtrain'd as Damage-feazant, and ſo found by the Jury before Juſtices of Aſſize in the County, or otherwiſe, through Default of Proſecution. See RETURN, DISTRESS, REPLEVY, *&c.*

REVE, or GREVE, in antient Cuſtoms, the Bailiff of a Franchiſe or Manor; thus call'd, eſpecially in the Weſtern Parts. See GREVE.

Hence *Shir-reve*, Sheriff; *Port-greve*, *Church-reve*, &c. See SHERIFF, PORTGREVE, *&c.*

REVE is alſo uſed in antient Cuſtoms for a Duty or Impoſition on Merchandices imported or exported. See DUTY and CUSTOM.

M. *du Cange* derives the Word from the *Latin*, *rogare*, to ask; as being a Tribute antiently granted Princes at their Requeſt, as a Free-Gift.

REVEILLE, a Beat of the Drum, intended to give Notice that it is Day-break; and that the Soldiers are to riſe, and the Centries forbear challenging. See DRUM.

The Word is *French*, form'd of the Verb *reveiller*, to awake.

REVELATION, the Act of revealing, or making a thing publick which before was a ſecret, or unknown.

The *Revelation* of a Confeſſion made by the Confeſſor, is adjudg'd in the *Romiſh* Church, to deſerve the moſt exemplary Puniſhment. See CONFESSION.

The Word *Revelation* is uſed, by way of Eminence, for the Diſcoveries made by God to his Prophets, *&c.* and by them to the World. See PROPHECY.

The *Romaniſts* have two huge Volumes of the *Revelations* of St. *Bridget*. See LEGEND, VISION, *&c.*

The Word is form'd from the *Latin*, *revelo*, of *re* and *velum*, q. d. unvail.

REVELATION, in Religion, is the Diſcovery which God has made to the World by the Mouths of his Prophets; of certain Points of Faith and Duty, which they could not learn from natural Reaſon See NATURE, REASON, FAITH, *&c.*

Religion is divided into natural Religion; and *Revelation*, or *revealed Religion*. See RELIGION.

The Chriſtian *Revelation* is that made by Chriſt, and his Apoſtles, in the New Teſtament. See TESTAMENT.

The *Jewiſh Revelation* is that made by *Moſes* and the Prophets, in the Old Teſtament. See BIBLE, PROPHET, *&c.*

A late Author obſerves, ſomewhat invidiouſly, that 'tis the common Method of all new *Revelations*, to be built on Precedent ones.—Thus, the Miſſion of *Moſes* to the *Iſraelites*, ſuppoſes a former *Revelation* to *Abraham*, &c. The Miſſion of Chriſt ſuppoſes that of *Moſes*; and the pretended Miſſion of *Mahomet*, ſuppoſes the Miſſion of Chriſt. The Miſſion of *Zoroaſter* to the *Perſians*, ſuppoſes the Religion of the *Magi*, &c.

The general Foundation of all *Revelation* is this, That God is pleaſed Man ſhould know ſomething relating to himſelf, his own Nature, Diſpenſation, *&c.* which the natural Faculties he was pleaſed to create him withal, could not attain to; and that he requires ſome Duty or Service at our Hands, more than what neceſſarily follows from the Relation we are under to him as our Creator, Preſerver, *&c.*

Particular or occaſional *Revelations* have their particular Genius's, Characteriſticks, and Deſigns.—That made by *Moſes* and the Prophets, chiefly related to the Nation of the *Jews*, conſidered as the Deſcendants of *Abraham*: Its Deſign ſeems to have been to reſcue that People from their Slavery; to ſettle them n a new Plantation; to give them a ſet of Laws; to new form their Manners; to ſupport them under Difficulties and Dangers of their Enemies, from an Opinion of their being under the immediate Direction and Appointment of God; to keep them from intermixing again with their Neighbours, from an Opinion of their being a *choſen People*, and of a Meſſiah to be born among them; and to lay a Foundation of a Reſtoration, in caſe of their being oppreſs'd, from the Opinion of a Deliverer.—To ſome or other of theſe Ends do all the Old Teſtament Propheſies ſeem to tend.

The Chriſtian *Revelation* is founded on a Part of the *Jewiſh*.—The Meſſiah promis'd in the one, is *reveal'd* in the other. All the reſt of the *Jewiſh Revelation*, which related peculiarly to the *Jewiſh* People, is here ſet a-ſide; and only that Part of it which was to affect the World in general, we mean that relating to the coming of the Meſſiah, is here built upon. See MESSIAH.

Indeed it muſt be own'd the *Jews* ever look'd on this Part as peculiar to themſelves, as any of the reſt: The Meſſiah was promiſed to *them*; he was to be *their* Deliverer, *their* Reſtorer, *&c.*—But upon the taking Place of this new *Revelation*, a new Scene was opened—This Part of the old *Revelation*, it was ſhewn, was all Typical, or Allegorical; and the Propheſies relating hereto, not to be underſtood in their primary or litteral Senſe. The Meſſiah was not to be the Reſtorer of the *Jewiſh* Sovereignty and Liberties, which were now fallen into the Hands of the *Romans*, but to reſtore and re-eſtabliſh the World, who had loſt their original Righteouſneſs, and were become Slaves of Sin; to preach Repentance and Remiſſion, and at laſt to ſuffer Death, that all who believ'd in him, might not die, but have everlaſting Life.

Such is the Tenor and Deſign of the Chriſtian *Revelation*, which in the Event, was ſo far from being what it had been apprehended to be, by the People to whom it was firſt promis'd; that it proved the very Reverſe; and inſtead of re-eſtabliſhing and confirming the other Branches of their *Revelation*, ſuperſeded, and ſet them all aſide.—The Pale was now broken down, and the being of the Seed of *Abraham*, ceas'd to be a Privilege; all the World being invited on the ſame Terms with the *Jews*.

The Conſequence was, that the *Jews* denying this to be the Meſſiah that had been promiſed to them, as not able to ſee the Prophecies fulfilled in him, for want of the typical Meanings thereof, were generally excluded from the Priviledges of that Miſſion which had been ſuppoſed wholly intended for them; And had their Ruin compleated from the very means whence they expected their Redemption. See TYPE, PROPHESY, *&c.*

REVELS, Entertainments of Dancing, Maſking, Gaming, Acting of Comedies, Farces, *&c.* antiently very frequent in Inns of Courts, at certain Seaſons, and in Noblemen's, *&c.* but now much diſuſed.

The Officer who has the Direction or ordering hereof, was called the *Maſter of the Revels*.

The Word is form'd from the *French*, *reveiller*, to awake.

REVENUE, the yearly Rent or Profits ariſing to a Man from his Lands, Poſſeſſions, *&c.* See RENT.

The *Revenue* of this Manor conſiſts in Tiths, Rents, &c. See MANOR, *&c.*

The *Revenues* of the *Engliſh* Clergy were firſt fix'd by King *Ethelwolf*, Anno 855; who granted them for ever, the Tith of all Goods, and the tenth Part of all the Lands of *England*, free from all Secular Service, Taxes, Impoſitions, *&c.* See TITH and CLERGY.

The certain *Revenues* of the King of *England* were antiently greater than thoſe of any King in *Europe*; and 'till the time of the Civil Wars they enjoy'd in Domains and Fee-Farm Rents almoſt enough to Diſcharge all the ordinary Expences of the Crown, without any Tax or Impoſition on the Subject.

Upon the Reſtauration, the Crown *Revenues* being found much alienated, and the Crown Charges increas'd; the Parliament ſettled a yearly Revenue of 1,200000 *l.* upon the King; ſo much as the former Crown *Revenues* fell ſhort of that Sum, to be rais'd on Goods exported and imported, upon Liquors, and Fire-Hearths. See DUTY, *&c.*

At the Death of King *Charles* II. the *Revenue* amounted to 1,800,200 *l. per Ann.*—In King *James* IIds. Time, it was rais'd to 2,000,000 *l.* which was computed to be one tenth of the *Revenues* of the whole Kingdom.

At the ſame time the *Revenues* of the King of *France* were computed at ſeven Millions Sterling; and thoſe of the States of

Holland, at three Millions.—*For more Particulars of this Kind*, ſee POLITICAL *Arithmetic*.

REVENUE, in Hunting, a Meſs of Fleſh, formed chiefly of a Cluſter of whitiſh Worms on the Heads of Deer, and occaſioning them to caſt their Horns, by gnawing the Roots thereof. See HEAD, HORN, *&c.*

The *Revenue* diſtill'd, is ſaid to help Women in Travel.

REVENUE is alſo uſed for a new Tail of a Partridge, growing out after the loſs of a former.—The *Revenue* is meaſured by Fingers. Thus we ſay, a Partridge of two, three, four Fingers *Revenue*.

The Word *Revenue* is *French*, form'd from *revenir*, to return.—Whence *Revenue* is ſometimes uſed in antient Authors for a Return: As the *Revenue* of *Eaſter*. See RETURN.

REVERBERATION, in Phyſicks, the Act of a Body repelling or reflecting another, after its unpinging thereon. See REFLECTION.

In the Glaſs-Men's Furnaces, the Flame *reverberates*, or bends back again, to ſcorch the Matter on all Sides.

Echo's are occaſioned by the *Reverberation* of Sounds from arch'd Obſtacles. See ECHO.

The Word is form'd from the *Latin*, *re* and *verbero*, I beat again.

Reverberation and *Reſilition* refer to the ſame Action; only the one to the Agent, the other to the Patient.—A poliſhed Body *reverberates* the Rays all around: The *Reſilition* of the Rays does not ariſe from their ſtriking againſt the ſolid Parts of Bodies. See RESILITION and REFLECTION.

REVERBERATION, in Chymiſtry, a kind of Circulation of the Flame, by means of a *Reverberatory*; or the return of the Flame from the top of the Furnace, back to the Bottom. See REVERBERATORY.

Reverberation is of two Kinds.—The firſt with a cloſe Fire; that is, in a *Reverberatory* Furnace, where the Flame has no Vent a-top; being cover'd with a Dome, or Capital, which repels its Action back on the Matter, or the Veſſel that contains it, with increaſed Vehemence.

After this Manner are Refining, the Diſtillation of acid Spirits, *&c.* perform'd. See DISTILLATION and REFINING.

Reverberation with an open Fire, is that performed in a Furnace or *Reverberatory* whoſe Regiſters are all open; chiefly uſed in Calcination. See CALCINATION, AIR, *&c.*

REVERBERATORY, or REVERBERATING *Furnace*, is a Chymical Furnace built cloſe all around, and cover'd a-top with a Capital of Bricks or Tiles, ſo as not to give any Vent to the Heat or Flame, but to determine it to *Reverberate* or turn back from the Brick Work with new Force, upon the Matters placed at Bottom. See REVERBERATION.

When the Fire has no Vent or Paſſage a-top, 'tis a *whole Reverberatory*; when the middle of the Capital is open, and only the Sides cloſe, ſo that there is only a half Circulation of the Flame, 'tis call'd a *half Reverberatory*.

The *reverberating* Furnace is chiefly uſed for the Fuſion of Metals, and Minerals, and other Occaſions where the moſt intenſe Heat is required, as in Aſſaying, *&c.* Whence it is alſo called the *Melting Furnace*, and *Aſſaying Furnace*. See FURNACE, FIRE, FUSION, ASSAY, *&c.*

REVEREND, a Title of Reſpect given to Eccleſiaſticks. See TITLE and QUALITY.

The Religious Abroad are call'd *Reverend Fathers*; Abbeſſes, Prioreſſes, *&c.* are call'd *Reverend Mothers*. See ABBOT, RELIGIOUS, *&c.*

With us, Biſhops are *Right Reverend*, and Archbiſhops *Moſt Reverend*.—In *France* their Biſhops, Archbiſhops, and Abbots, are all alike *Reverendiſſimo's*, *moſt Reverends*. See BISHOP, *&c.*

REVERIE, a Term purely *French*, yet now frequently uſed in *Engliſh*.

It ſignifies, litterally, a Delirium, Raving, or Diſtraction. See DELIRIUM.

Thus we ſay, 'tis an ill Sign when the Patient falls into a *Reverie*.

Hence it comes, likewiſe, to be uſed for a ridiculous, extravagant Imagination, Action, or Propoſition; a Chimera or Viſion.—Thus we ſay, Authors obtrude abundance of their *Reveries* upon us for ſolid Truths.

But its moſt ordinary uſe among *Engliſh* Writers is for a deep, diſorderly Muſing, or Meditation; equivalent to what we popularly call a *Brown-ſtudy*.—Thus: A little Diſtraction I would allow; but for that continued Series of *Reveries* ſome People are guilty of, who are ever abſent from the Place where you ſee them, and are never preſent any where, 'tis inexcuſable.

REVERSE, in Law, *&c.*—To *Reverſe*, *reverſer*, ſignifies to undo, repeal, or make void. See REPEAL, ANNUL, *&c.*

The Word is formed of the *Latin*, *re*, again, and *verſus*, turn'd.

REVERSE, of a Medal, Coin, *&c.* is the ſecond, or back-ſide; in Oppoſition to the Head or principal Figure. See COIN, MEDAL, *&c.*

F. *Chamillart*, a Jeſuit, has an expreſs Diſſertation on this Point, whether or no the *Reverſes* of Medals have always a Regard to the Emperor's or Empereſs's whoſe Heads are repreſented on the Front Side of the Medal? He ſays, that till of late the Antiquaries have made no doubt of it; but that there are now ſeveral Authors of another Opinion.

REVERSE, in Fencing, a Back-ſtroke. See GUARD, FENCING, *&c.*

REVERSED, in Heraldry, a thing turned backwards, or up-ſide-down.

REVERSED *Talon*, in Architecture. See TALON.

REVERSING, or RENVERSING, in Muſic, the inverting of the Order of the Parts; that is, the placing of the higher Part or Treble, in the room of the lower Part or Baſs. See PART, BASS, TREBLE, *&c.*

Reverſing is frequently practiced in figurative Counterpoint, where the Baſs ſerves as Treble; and the Treble, at the ſame time, as Baſs; and all this, in ſuch manner, as that the Harmony, though very different, is yet as correct as before the *reverſing*, when the Parts were in their natural Order.

To know how to diſpoſe the Parts, ſo as the *reverſing* mayn't do any Damage, is a ſecret, whereon M. *Broſſard* has promis'd a Treatiſe expreſs.

A *revers'd Figure*, or *Counterfugue*, call'd by the *Italians*, *per contrarii movementi*, is when the Guida falls; and the other inſtead of imitating in falling, imitates in riſing; or a Figure *per Arſin* and *Theſin*. See ARSIN.

REVERSION, in Law, is defined by *Coke*, a returning of Lands, *&c.* into the Poſſeſſion of the Donor, or his Heirs; after the Expiration of the Term for which they were given or granted. See DONATION, *&c.*

The Word has a double Acceptation.—The firſt is, *Jus revertendi cum ſtatus Poſſeſſionis defecerit*, which is no more than an Intereſt in the Land, when the Occupation or Poſſeſſion of it ſhall fall.

The ſecond is, when the Poſſeſſion and Eſtate, which was parted with for a time, ceaſeth, and is determined in the Perſons of the Alienees, Aſſignees, Grantees, or their Heirs; or effectually returns to the Donor, his Heirs or Aſſigns, whence it was derived.

This is the moſt proper Signification of the Word, which is derived from *Revertor: Et apte dici non poteſt Reverſio Antequam revertatur in facto*. Littlet.

The Difference between a *Reverſion* and a Remainder conſiſts in this, that a Remainder is general, and may remain or belong to any Man but him that granteth or conveyeth the Land, *&c.* See REMAINDER.

Whereby a *Reverſion* is to himſelf, from whom the Conveyance of the Land, *&c.* proceeded, and is commonly perpetual, as to his Heirs alſo.—And yet ſometimes *Reverſion* is confounded with Remainder.

For the Values of *Reverſions*, or Eſtates in *Reverſion*, the little Book of Tables for renewing and purchaſing College, and Church Leaſes, printed at *Cambridge* in 1700, and recommended by Sir *Iſaac Newton*, furniſhes us with a very uſeful Table, which ſhews what one Pound due at the end of any Number of Years to come, not exceeding 40, is worth in ready Money, at 5, 6, 7, 8, 10, and 12 *per Cent. per. Ann.*

Suppoſe, it required, what 1 *l.* due a Year hence, is worth in ready Money: To find this by the common Operations, the Method is this.—Let 100 *l.* with the Intereſt of a Year added to it, be the firſt Term in the Rule of Three; 100 *l.* the ſecond, and 1 *l.* the third; (for as 100 *l.* with its Intereſt going on to the end of the Year, is to a bare 100 *l.* then due: So muſt 1 *l.* with its growing Intereſt, be to the Decreaſe of 1 *l.* at the Years end) then, at 6 *l. e. gr.* and 10 *l. per Cent.* the Work will ſtand thus:

As, 106 . 100 : : 1 . . 94339, or 18 *s.* 10 *d.* $\frac{1}{4}$.
110 . 100 : : 1 . . 90909, or 18 *s.* 2 *d.*

Whence it appears, that 1 *l.* due a Year hence, at 6 *l. per Cent.* is worth 18 *s.* 10 *d.* $\frac{1}{4}$; and at 10 *per Cent.* to 18 *s.* 2 *d.* So that 18 *s.* 10 *d.* $\frac{1}{4}$. ready Money, is worth 20 *s.* to be paid a Year hence at 6 *per Cent.*; and 18 *s.* 2 *d.* ready Money, is worth 20 *s.* to be paid a Year hence at 10 *per Cent.* See INTEREST.

But this Table ſhortens the Work.—To find by it how to renew a Leaſe of 21 Years, that hath but one Year lapſed, at the Rate of 10 *per Cent*; look into the ſame, and under the Rate of Intereſt mentioned, and right againſt 21 Years, in the common Angle of meeting, you have 2 *s.* 8 *d.* $\frac{1}{2}$. which is the Fine to be paid to renew one Year lapſed in the ſaid Leaſe; ſuppoſing the Rent to be 1 *l. per Annum*. For it is 21 Years e're the Leaſe is compleated, in which time the Fine of 2 *s.* 8 *d.* $\frac{1}{2}$. will amount to 20 *s.* and therefore by paying that Fine, the Leaſe may fairly be made up again.

Suppoſe again, an Eſtate in Fee-ſimple, whoſe real Value is 100 *l.* but mortgaged, or Leaſed out for 20 Years; what is the *Reverſion* of it now worth at 6 *l. per Cent.* Intereſt?—By the Table you find, that 1 *l.* to be paid 20 Years hence, is worth but 6 *s.* 2 *d.* $\frac{3}{4}$. and multiplying that by 100, you'l find 100 times 6 *s.* is 30 *l.* 00 *s.* 00 *d.* 100 times 2 *d.* or 200 *d.* makes 00 *l.* 16 *s.* 8 *d.* and 100 times $\frac{3}{4}$, or 30 makes 00 *l.* 6 *s.* 3 *d.* the Sum is 31 *l.* 2 *s.* 11 *d.* which is the preſent Value of 100 *l.* to be paid 20 Years hence.

A TABLE of *Reverſions* ſhewing what 1 *l.* due any Number of Years hence, under 41, is worth in ready Money at 5, 6, 7, 8, 10, and 12 *l. per Cent.*

Years.	5 *per Cent.* s. d. q.	6 *per Cent.* s. d. q.	7 *per Cent.* s. d. q.	8 *per Cent.* s. d. q.	10 *p. Cent.* s. d. q.	12 *p. Cent.* s. d. q.

REVERSION *of Series*, in Algebra, is a Method finding of a natural Number from its Logarithm given; or the Sine from its Ark; or the ordinate of an Ellipſis from an Area given to be cut off from any Point in the Axis. See SERIES. See alſo LOGARITHM, SINE, ORDINATE, *&c.*

REVERT, in Law; a thing is ſaid to *revert* when it returns or falls back to its firſt Owner. See REVERSION.

All Honours, and Royal Fees, alienated, *revert* to the Crown; or are *revertible*.—Apanages, or Portions of younger Sons of Kings, are granted on Condition of *Reverſion*. See APANNAGE.

REVESTIARY, or REVESTRY. See VESTRY.

REVIEW, in War, the ſhew or Appearance of a Body of Soldiers ranged in form of Battle; and afterwards made to file off; to ſee if the Companies be compleat, or to receive their Pay, *&c.*

The General always *Reviews* his Troops before they go into Winter-Quarters, *&c.* See QUARTER.

REVIEW, in Chancery.—A *Bill of* REVIEW is, where the Cauſe has been heard, and the Decree ſign'd and enroll'd; but ſome Error in Law appers in the Body of the Decree; or ſome new Matter diſcovered in Time after the Decree made. See DECREE.

This Bill is not exhibited but by Leave of the Court. See BILL, CHANCERY, *&c.*

REVIVOR, in Law.—A *Bill of* REVIVOR is where a Bill has been exhibited in Chancery againſt one who anſwers; but before the Cauſe is heard, or at leaſt before the Decree is enrolled, one of the Parties dies.

In this Caſe, a Bill of *Revivor* muſt be brought, to the End the former Proceedings may ſtand *revived*; and the Cauſe be finally determined. See BILL.

REVISE, among Printers, a ſecond Proof of a printed Sheet. See PRINTING.

REVIVIFICATION, or RESUSCITATION, in Chymiſtry, the Art of reſtoring a mix'd Body to its firſt State, after it had been alter'd and diſguis'd by Diſſolution, Calcination, or the like.

Thus Cinnabar and other Preparations of Mercury, are *revived*, or *reviviſied* into fluid Mercury.—*Olaus Borrichius* aſſures us, that having tormented Mercury with ſeveral Fires, for the Space of a whole Year; having reduced it into Water, Turbith, into Aſhes, *&c.* it *revivified*, and reſumed its firſt Form in the middle of the Flames, by the Attraction of Salt of Tartar. See MERCURY.

Gold, and other Metals, 'tis ſaid, may be recovered or *revivified* into running Mercury, by the uſe of certain Salts, which penetrating the Subſtance of the Metals, abſorb the fixing Sulpher or Cement by which the Mercury was before bound into a malleable Maſs. See METAL, GOLD, *&c.*

REVIVING, in Law, a renewing of Rents and Actions, after they had been extinguiſhed. See RENT, EXTINGUISHMENT, *&c.*

REVOCATION, in Law, the Act of *revoking*, calling back, or annulling a Power, Grant, *&c.* made before.

The

The *Revocation* of an Offer after it is accepted of, is invalid.—All preceding Wills or Teſtaments are *revoked* by the laſt.—A Prior Clauſtral is *revocable* at Pleaſure.—The *Revocation* of the Edict of *Nants* was fatal to the *French* Proteſtants. See EDICT.

REVOLT. See REBELLION.

REVOLUTION, in Politicks, is a grand Turn or Change of Government.

There are no States in the World but have undergone frequent *Revolutions.*—The Abbot *de Vertot* has furniſh'd us with two or three good Hiſtories, of the *Revolutions of Sweden*, the *Revolutions of Rome*, &c.

The Revolution, is uſed by Way of Eminence, for the great Turn of Affairs in *England* in 1688; when King *James* II. abdicating, the Prince and Princeſs of *Orange* were declared King and Queen of *England*, &c. See ABDICATION.

The Word is form'd from the *Latin*, *re-volvo*, to roll backwards.

REVOLUTION, in Geometry. The Motion of any Figure quite round a fix'd Line, as an Axis, is called the *Revolution* of that Figure; and the Figure ſo moving is ſaid to *Revolve*. See AXIS.

Thus a right angled Triangle revolving round one of its Legs, as an Axis, generates by that *Revolution*, a Cone. See CONE.

REVOLUTION, in Aſtronomy, is the Period of a Star, Planet, Comet, or other Phænomenon; or its Courſe from any Point of its Orbit, till it return to the ſame. See PLANET, PERIOD, *&c.*

The Planets have a twofold *Revolution*; the one about their own Axis, uſually called their *Diurnal Rotation*, which conſtitutes what we call their *Day*. See DIURNAL and DAY.

The other about the Sun, called their *Annual Revolution*, or *Period*; conſtituting their *Year*. See ANNUAL and YEAR.

Saturn, according to *Kepler*, makes his *annual Revolution* in the Space of 29 Years, 174 Days, 4 Hours, 58′ 25″ 30‴. *Jupiter* in 11 Years, 317 Days, 14 Hours, 49′ 31″ 56‴. *Mars* 1 Year, 321 Days, 23 Hours, 31′ 56″ 49‴. *Venus* in 224 Days, 17 Hours, 41′ 55″ 14‴. *Mercury* in 87 Days, 23 Hours, 14′ 24″. See SATURN, JUPITER, MARS, *&c.*

REVULSION, in Medicine, the turning of a violent Flux of Humours, from one Part of the Body to another, either neighbouring or oppoſite, Part. See HUMOUR, DERIVATION, *&c.*

In very dangerous Wounds, where the loſs of Blood is great, and the ſtopping it ſpeedily enough, impracticable; 'tis uſual to open a Vein in ſome remote Part, to cauſe a *Revulſion*; that is, to turn the Courſe of the Blood from the former Part. See PHLEBOTOMY.

Revulſions are alſo cauſed by Cupping, Friction, *&c.* See CUPPING and FRICTION.

The Term *Revulſion* is alſo uſed for a great Turn or Revulſion of Humours in the Body.—Sudden Diſeaſes are occaſioned by great *Revulſions* of Humours, which fall all at once on certain Parts.

RHABDOIDES, in Anatomy, a Name given the ſecond true Suture of the Skull; call'd alſo the *Sagittal Suture*. See SUTURE.

The Word is form'd from the *Greek*, ῥάβδος, Rod, or Staff, and εἶδος, form.

RHABDOLOGY, in Arithmetick, a Name ſometimes given to the Method of performing the two moſt difficult and operoſe Rules, *viz.* Multiplication and Diviſion, by the two eaſieſt, *viz.* Addition and Subſtraction; by means of two little Rods or Laminæ, whereon are inſcribed the ſimple Numbers, and which are to be ſhifted according to certain Rules.

Theſe Rods are what we popularly call *Neper Bones*, from their Inventor, a *Scotiſh* Baron, who likewiſe invented Logarithms.

For their Deſcription and Uſe, ſee NEPAIRS-*Bones*.

RHABDOMANCY, an antient Method of Divination, perform'd by means of Rods, or Staves; whence its Name, from the *Greek* ῥάβδος, Rod, and μάντεια, Divination. See DIVINATION.

St. *Jerom* makes mention of this Kind of Divination, in his Commentary on *Hoſeah*, Chap. iv. 12. where the Prophet ſays in the Name of God, *My People ask Council at their Stocks; and their Staff declareth unto them:* Which Paſſage that Father underſtands of the *Grecian Rhabdomancy*.

The ſame he finds over again in *Ezekiel* xxi. 21, 22. where the Prophet ſays, *For the King of Babylon ſtood at the parting of the Way, at the Head of the two Ways, to uſe Divination; he made his Arrows bright:* Or as St. *Jerom* renders it, *he mix'd his Arrows, he conſulted with Images, he look'd in the Liver.*

If it be the ſame Kind of Divination that is mentioned in the two Paſſages; *Rhabdomancy* muſt have been the ſame Superſtition with *Belomancy*. See BELOMANCY.

In effect the two are ordinarily confounded.—The Seventy themſelves Tranſlate the חִצִּים of *Ezekiel* by ῥάβδον, a Rod; though in ſtrictneſs it ſignify Arrows.

This, however, is certain, the Inſtruments of Divination mentioned by *Hoſeah*, are different from thoſe of *Ezekiel*. In the former, 'tis עֵצָה, *etſo*, מַקְלוֹ, *maklo*, his Wood, his Staff: In the latter חִצִּים, *khitſin*, Arrows. Though 'tis poſſible they might uſe Rods or Arrows indifferently; the military Men Arrows, and the reſt Rods.

It appears by the Laws of the *Friſones*, that the antient Inhabitants of *Germany* practiced *Rhabdomancy*.—The *Scythians* were likewiſe acquainted with the uſe hereof; and *Herodotus* obſerves, *lib.* iv. That the Women among the *Alani* ſought and gathered together fine ſtraight Rods or Wands, and uſed them in the like Superſtition.

RHAGADES, in Medicine, a *Greek* Term uſed for the Chaps or Clefts in the Lips. See LIPS.

RHAGADES, are alſo a ſort of little chap'd Ulcers of the Oedematous Kind; form'd of a ſharp, ſaline Humour, and occaſioning a great Contraction, and ſtreightening of the Part, which is by this means ſhrivell'd up like a wet Parchment when held to the Fire. See OEDEMATOUS.

They ariſe chiefly on the Fundament, the Neck of the Womb, the Preputium, and even the Mouth; in which laſt Caſe the Patient is not able to ſpeak, chew, or the like.

They are ſometimes moiſt, and of a cancerous Nature, eating deep, and difficult of Cure; but are more commonly of a leſs malignant tendency, being the Conſequences of a Diarrhæa, Dyſentery, or the like. See TUMOR, ULCER, *&c.*

RHAGOIDES, in Anatomy, the ſecond Coat, or Tunic of the Eye; more uſually call'd the *Uvea*. See UVEA.

It has its Name *Rhagoides* as reſembling a Grape-ſtone.

In this is the Hole call'd the *Pupil*. See PUPIL.

RHAPONTICUM, a medicinal Root, in form reſembling Rhubarb; and nearly of the ſame Virtues.—'Tis frequently mix'd with Rhubarb by thoſe who ſend that Drug into *Europe*: They are diſtinguiſh'd by this, that the Rhubarb is uſually in roundiſh Pieces, the internal Streaks or Lines whereof run tranſverſe: And *Rhaponticum* in longiſh Pieces, having its Streaks running length-wiſe.—Beſides, that *Rhaponticum* chew'd in the Mouth, leaves a Viſcidity behind it, which Rhubarb does not. See RHUBARB.

The ſcarcity of the *Rhaponticum* of the *Levaut*, occaſions the *Mountain Rhaponticum*, or *Monk's Rhubarb*, to be frequently ſubſtituted for it, which is a wild *Hypolapathum*.—They are diſtinguiſh'd by this, that the former is yellow without, and reddiſh within; but the latter blackiſh without and yellow within.

Dr. *Quincy*, however, confounds the two, when he ſays, the *Rhaponticum* grows plentifully in *England*; and that 'tis only uſed as an Alterative, and does not come up to a Cathartic.

'Tis certain, what now obtains in the Shops, under the Name of *Rhaponticum*, is no other than the Mountain *Rhapontic*, or Monk's Rhubarb; and is much inferior in Virtue to the *Rhaponticum Verum*.

The *Rhaponticum* was thus call'd, *q. d.* Root of *Pontus*; becauſe chiefly produced in the Country of *Pontus*, in *Aſia*.

RHAPSODI, RHAPSODISTS, in Antiquity, Perſons who made a Buſineſs of ſinging Pieces of *Homer*'s Poems.

Cuper informs us, that the *Rhapſodi* were cloath'd in red when they ſung the Iliad; and in blue when they ſung the Odyſſee.

They perform'd on the Theatres; and ſometimes for Prizes, in Conteſts of Poetry, Singing, *&c.*

After the two Antagoniſts had finiſhed their Parts, the two Pieces, or Papers they were wrote in, were joined together again; whence the Name, *viz.* from ῥαπτω, *ſuo*, I join together; and ᾠδὴ, Ode, Song.

But there muſt have been other *Rhapſodi* of more Antiquity than theſe; People who compoſed Heroic Poems, or Pieces in Praiſe of Heroes and Great Men, and ſung their own Compoſitions from Town to Town for a Livelihood: Of which Profeſſion was *Homer* himſelf.

Hence, ſome Criticks inſtead of the former Derivation, fetch *Rhapſodiſt* from ῥάβδῳ ᾄδειν, *to ſing with a Lawrel Rod in the Hand*, which it ſeems was the Badge of the Primitive *Rhapſodi*.

Philochorus, again, derives the Word from ῥάπτων ᾠδὴν, *to procure Pieces of Poetry to be compoſed*, as if they were not the Authors of the Poems they ſung. This Opinion, to which *Scaliger* inclines, reduces theſe *Rhapſodi* to the firſt Kind.—In effect, 'tis probable that they were all of the ſame Claſs, whatever Diſtinction ſome Authors may Imagine; and that their Buſineſs was to ſing or rehearſe Poems, either of their own, or other People's Compoſition, as might beſt ſerve their Purpoſe, the getting of a Penny. So that we don't apprehend it any Injury to them, to ſet them on the Foot of our Ballad-ſingers; many of whom, no doubt, Pen their own Ditties. After *Homer*'s Time, 'tis no wonder they confined themſelves altogether to his Pieces, for which the People had the utmoſt Veneration: Nor is it ſurprizing they ſhould erect Stages, *&c.* and Diſpute the Point of Recitation in Fairs and Markets.

RHAPSODOMANCY, an antient Kind of Divination performed by pitching on a Paſſage of a Poet at hazard, and reckoning on it as a Prediction of what was to befall. See DIVINATION and CHANCE.

There were various Methods of practicing *Rhapſodomancy*.—Sometimes they wrote ſeveral Verſes or Sentences of a Poet, on ſo many Pieces of Wood, Paper, or the like; ſhook them together in an Urn, and drew out one, which was accounted the Lot.

Sometimes

Sometimes they caſt Dice on a Table, whereon Verſes were wrote; and that whereon the Dye lodg'd, contain'd the Prediction.

A third Manner was by opening a Book, and pitching on ſome Verſe, at firſt Sight. This Method they particularly called the *Sortes Præneſtinæ*; and, afterwards, according to the Poet thus made uſe of, *Sortes Homericæ*, *Sortes Virgilianæ*, &c. See SORTES.

RHAPSODY, in Antiquity, a Diſcourſe in Verſe, ſung or rehearſed by a *Rhapſodiſt*. See RHAPSODI.

Others will have *Rhapſody* properly to ſignify a Collection of Verſes, eſpecially thoſe of *Homer*; which having been a long time diſperſed in Pieces and Fragments, were at length by *Piſiſtratus*'s Order, digeſted into Books, call'd *Rhapſodies*: From the *Greek* ῥάπτω, *ſuo*, I ſew; and ᾠδή, Verſe, Song.

Hence, among the Moderns, *Rhapſody* is uſed for an Aſſemblage of Paſſages, Thoughts, and Authorities, raked together from divers Authors, to compoſe ſome new Piece.—*Lipſius*'s Politicks make ſuch a *Rhapſody*, wherein there is nothing of the Author's own, but Conjunctions and Particles.

RHETORICIANS, a Sect of Hereticks in *Egypt*, denominated from their Leader *Rhetorius*.

The diſtinguiſhing Doctrine of this Hereſiarch, as repreſented by *Philaſtrius*, was, that he approved of all the Hereſies before him; and taught that they were all in the right. What *Philaſtrius* mentions of him appears ſo abſurd and ridiculous that St. *Auguſtin*, *Hæres.* 7. could not perſuade himſelf it was true.

RHETORIC, RHETORICA, the Art of ſpeaking copiouſly on any Subject, with all the Advantages of Beauty and Force. See SPEAKING.

My Lord *Bacon* defines *Rhetoric*, very Philoſophically, the Art of applying and addreſſing the Dictates of Reaſon to the Fancy, and of recommending them there, ſo as to affect the Will and Deſires.—The End of *Rhetoric*, the ſame Author obſerves, is to fil the Imagination with Ideas and Images which may aſſiſt Nature, without oppreſſing it.

Voſſius defines *Rhetoric* the Faculty of diſcovering what every Subject affords of uſe for Perſuaſion.—Hence, as every Author muſt *invent* Arguments to make his Subject prevail; *diſpoſe* thoſe Arguments thus found out in their proper Places; and give them the Embelliſhments of Language proper to the Subject; and, if his Diſcourſe be to be delivered in Publick, utter them with that Decency and Force which may ſtrike the Reader: *Rhetoric* becomes divided into four Parts, *Invention*, *Diſpoſition*, *Elocution*, and *Pronunciation*; each whereof ſee under its proper Head, INVENTION, DISPOSITION, ELOCUTION, and PRONUNTIATION.

The Word is form'd from the *Greek* ῥῆω, *dico*, I ſpeak; whence ῥήτωρ, Speaker, Orator, and ῥητορική.

Rhetoric and *Oratory* differ from each other as the Theory from the Practice; the *Rhetorician* being he who preſcribes the Rules of Eloquence; and the Orator he who uſes them to Advantage; and ſpeaks Elegantly, *&c.*—Ordinarily, however, the two are uſed indifferently for each other. See ORATORY.

RHEUM, a thin ſerous Humour, occaſionally oozing out of the Glands about the Mouth and Throat. See HUMOUR.

A Fluxion of *Rheum*, uſually happening after taking Cold, occaſions Excoriations and Inflamations of the Fauces, Lungs, *&c.* See FLUXION and DEFLUXION.

RHEUM is alſo uſed for a *Catarrh*, or a Defluxion of ſuch Humours on the Trachea, and the neighbouring Parts; occaſioning a Coughing, Spitting, Hoarſeneſs, Running at the Noſe. See CATARRH, COUGH, HOARSENESS, *&c.*

The *Rheum* is not caus'd by a Pituita falling from the Brain on theſe Parts, as the Antients imagined, there being no Paſſage from the Brain thither; but from a thin, ſharp, ſerous Humour, oozing out of the Extremities of the Glands of theſe Parts.

The moſt ordinary Occaſion of *Rheums*, is external Cold; eſpecially the being expoſed to it when the Body is much heated.—And hence the Diſorder it ſelf is popularly call'd a *Cold*. See COLD.

Rheums falling on the Breaſt, Lungs, *&c.* are dangerous; others, not very violent, ſerve to clear the Head, *&c.* The uſual Remedies are Aſtringents, Agglutinants, and Abſorbents. See ASTRINGENT, *&c.*

The Word is form'd from the *Greek*, ῥέω, *fluo*, I flow.

RHEUMATISM, in Medicine, a painful Diſorder felt in various Parts of the external Body, accompanied with Heavineſs, Difficulty of Motion, and frequently a Fever.

Or, a *Rheumatiſm* is a Pain uſually wandering, but ſometimes fix'd in the muſcular and membranous Parts of the Body; happening chiefly in Autumn.

The proper Seat of the *Rheumatiſm* is ſuppoſed to be in the Membrana Communis of the Muſcles; which it renders rigid and unfit for Motion without great Pain. See MEMBRANE.

This Diſeaſe is either univerſal or particular.—*Univerſal Rheumatiſm* is that which attacks all the Parts of the Body, even the internal ones.

Particular Rheumatiſm is that which is confined to particular Parts: In which Caſe the Pains are uſually eratic, paſſing from one Side to another; but ſometimes fix'd, call'd alſo a *windy* and *ſcorbutic Rheumatiſm*.

The *Rheumatiſm* bears a great Analogy to the Gout; whence ſome call it the *univerſal Gout*.—The Difference between them conſiſts in this, that the *Rheumatiſm* attacks not only the Joints, as the Gout does, but alſo the Muſcles and Membranes between the Joints. See GOUT.

A Fit of the *Rheumatiſm* is frequently preceded by a Fever of two or three Days; and ſometimes by a Shivering.—The Attack happens in various Parts of the Body, as the Hands, Arms, Thighs, Legs, Feet, *&c.* a Redneſs, Swelling, and Lameneſs often ſucceeding.

The Pain ſometimes fixing on the Loins, and reaching as far as the *Os Sacrum*; the Diſorder is call'd *Lumbago*; and bears a near reſemblance to the *Nephritis*; being only diſtinguiſhable therefrom by this, that the latter is attended with a Vomiting, which the former is not.

The *Rheumatiſm* is ſuppoſed to ariſe from a ſharp ſerous Humour thrown on the ſenſible Parts, and occaſioning a Pain by its Veſication.—Dr. *Quincy* ſays, it proceeds from the ſame Cauſe, as that whereby the mucilaginous Glands become ſtiff and gritty in the Gout. See GOUT.

Dr. *Muſgrave* takes it to be occaſioned by a ſharp alcaline Salt, rather than an acid one; from this Conſideration, that the Urine of *Rheumatic* People does not afford above a thirtieth Part of the Alcaline Salt found in that of healthful People.

Hence, he conjectures, that the Salt is retain'd in the Blood, implicated and embarraſs'd in the Pituita; by which means it forms a Viſcidity which occaſions all the Pains and Tumours of the *Rheumatiſm*.

The expoſing of the Body too ſuddenly to the cold Air, after having heated it to a great Degree; is the moſt uſual remote Cauſe.—The Cure is by Evacuation, chiefly, according to *Sydenham*, by repeated Phlebotomy, with a plentiful Uſe of Volatiles and Diluters.

Schmitzius recommends Sudorificks; and *Muſgrave*, Catharticks, and Emeticks.

It uſually proves a tedious, laſting Diſeaſe; holding for ſeveral Months, ſometimes Years; not continually but by Paroxiſms.

In aged Perſons, and thoſe of weak Conſtitutions, and decay'd Viſcera, it ſometimes ſeizes the Head.

RHEXIS, or RHEGMA, among Occuliſts, a Rupture of the Cornea of the Eye. See CORNEA.

The Word is form'd from the *Greek* ῥῆξις, rupture, of ῥήγνυμι, *frango*, I break.

RHIME, RIME, or RHYME, in Poetry. See RHYME.

RHINE-*Land-Rod*, in Fortification, *&c.* a Meaſure of ten Foot, call'd alſo *Decempeda*, &c. See MEASURE, FOOT, and DECEMPEDA.

RHINE-*Grave*, in *Germany*, a Count Palatine of the *Rhine*. See GRAVE and PALATINE.

RHODIUM *Lignum*, Rhodian-Wood. See ASPALATHUM.

RHODON, in Pharmacy, from ῥόδον, *Roſa*; a Name given to ſome Compoſitions wherein the Roſe is the chief Ingredient; as *Diarrhodon*. See DIARRHODON, *&c.*

Hence alſo *Rhodoſeccharum*, q. d. *Sugar of Roſes*, &c. See ROSE.

RHOMBOIDES, in Geometry, a quadrilateral Figure, whoſe Sides and Angles are unequal; but the oppoſite ones equal. See FIGURE.

Or, *Rhomboides* is a quadrilateral Figure, whoſe oppoſite Sides and Angles are equal; but is neither equilateral nor equiangular.

Such is the Figure NOPQ, (*Tab. Geometry, Fig.* 24.)

For the Method of finding the Area of a *Rhomboides*, ſee RHOMBUS.

RHOMBOIDES, in Anatomy, a Muſcle, thus called from its Figure. See MUSCLE.

It lies under the *Cucullaris*, and ariſes from the two inferior Spines of the Neck, and four ſuperior of the Back; and is inſerted fleſhy into the whole Brain of the Scapula, which it draws backwards, and a little upwards.

RHOMBUS, in Geometry, an obliquangular Parallelogram; or a quadrilateral Figure, whoſe Sides are equal and parallel; but the Angles unequal, two of the oppoſite ones being obtuſe, the other two acute. See FIGURE.

Such is the Figure ABCD, *Tab. Geometry, Fig.* 83.

To find the Area of a Rhombus, or Rhomboides.—Upon CD, which is here aſſumed as a Baſe, let fall a perpendicular AE; which will be the Altitude of the Parallelogram: Multiply the Baſe by the Altitude, the Product is the Area.

Thus, if CD be = 456, and ADE = 234; the Area will be found 106704.

For it is demonſtrated that an oblique angular Parallelogram is equal to a Rectangle upon the ſame Baſe CD, and of the ſame Altitude CE. (See PARALLELOGRAM.) But the Area of a Rectangle is equal to the Factum of the Baſe into the Altitude. Therefore the Area of an obliquangular Triangle is equal to the ſame. See RECTANGLE.

The Word is form'd of the *Greek* ῥόμβος, of ῥομβεῖν, to incompaſs.

RHOMBUS, among Surgeons, is a ſort of Bandage of a *Rhomboidal* Figure. See BANDAGE.

RHOPALIC *Verſes*, among the Antients, a kind of Verſes

which began with Monoſyllables, and were continued in Words growing gradually longer and longer to the laſt, which was the longeſt of all. See VERSE.

They had their Name from the *Greek* ῥοπαλὸν, a Club, which, like them begins with a ſlender tip, and grows bigger and bigger to the Head.—Such is that Verſe of *Homer*,

Ὼ μάκαρ' Ατρείδη μοιρηγενὲς, ὀλβιοδαίμων.

And this *Latin* one,

Spes Deus æternæ eſt ſtationis Conciliator.

RHOPOGRAPHI, in Antiquity, a Name given to certain Painters, who confined themſelves to low Subjects; ſuch as Animals, Plants, Landskips, *&c.*

The Title was alſo given to ſuch as cut Figures of Men, *&c.* in Box, Phileria, Yew, *&c.* in Gardens.

The Word is form'd from the *Greek* ῥοπος, Toys, or odd Ware, and γραφω, I write, I paint.

RHUBARB, a medicinal Root, large, compact, and heavy; yellow without, of a Nutmeg Colour within; an aſtringent, bitteriſh Taſte; and an agreeable, aromatic Smell: Of great uſe in Medicine, as a Purgative. See ROOT and PURGATIVE.

Conſidering the mighty Uſe of this Drug, 'tis ſurprizing we ſhould know ſo little of the Place where the Plant grows that produces it.—Some ſay it comes from the Kingdom of *Boutan*, in the Extremities of *India*; others, that 'tis found in the Provinces of *Xenſi* and *Suchen* in *China*. Others will have it only grow in *Perſia*; and others on the Confines of *Muſcovy*; deriving its Name from *Rha*, the River among us call'd *Volga*, and *Barbarum*, q. d. Root found by the Barbarians on the River *Rha*.

Rhubarb, in *Latin*, *Rhabarbarum Officinarum*, was not known of the Antients; and their *Rhaponticum*, which indeed reſembles it, is not the real *Rhubarb*. See RHAPONTICUM.

Good *Rhubarb* ſteep'd in Water gives it a Saffron Colour; and when broke, looks bright, with ſomewhat of a Vermillion Caſt.—Some Druggiſts have the Art of renewing their old Roots, by giving them a yellow hue; but the Cheat is eaſily known by handling them; the Powder wherewith they colour them ſticking to the Fingers.

Rhubarb is eſteemed an excellent Cathartic; proper for a Diarrhæa, to fortify the Stomach, and to create an Appetite.

M. *Boulduc* informs us, in the Memoirs of the *French* Academy, that he drew Extracts from *Rhubarb* both with Water and Spirit of Wine; but the purgative Virtue, he ſays, was much more viſible in the former than the latter; which ſhews that it conſiſts more in a Salt than an Oil.—He obſerves, however, that *Rhubarb* taken in Subſtance, has a ſtill better effect; and adds, that of all the Operations he could make with it, none gave any Credit to the common Opinion, which aſcribes an aſtringent Quality to it.

Monks RHUBARB. See RHAPONTICUM.

White RHUBARB. See MECHOACAN.

RHUMB, or RUMB, or RUM, RHOMBUS, in Navigation, a vertical Circle, of any given Place; or the Interſection of a Part of ſuch a Circle with the Horizon. See VERTICAL.

Rhumbs therefore coincide with *Points* of the World, or of the Horizon. See POINT and HORIZON.

And hence the Mariners diſtinguiſh the *Rhumbs* by the ſame Names as the Points, and Winds. See WIND.

They uſually reckon 32 *Rhumbs*; which are repreſented by the 32 Lines in the Roſe, or Card of the Compaſs. See COMPASS.

Aubin defines a *Rhumb* by a Line on the terreſtrial Globe, Sea-Compaſs, or Sea-Chart, repreſenting one of the 32 Winds which ſerve to conduct a Veſſel.—So that the *Rhumb* a Veſſel purſues is conceiv'd as its *Route* or *Courſe*. See COURSE.

Rhumbs are divided, and ſubdivided like Points.—Thus, the *whole Rhumb* anſwers to the Cardinal Point.—The *half Rhumb*, to a collateral Point, or makes an Angle of 45° Degrees with the former.—The *Quarter Rhumb* makes an Angle of 22° 30′ therewith.—And the *half-quarter Rhumb* makes an Angle of 11° 15′. See CARDINAL, COLLATERAL, QUARTER, *&c.*

A Table of the *Rhumbs*, or Points, and their Diſtances from the Meridian, ſee under the Article WIND.

RHUMB-LINE, or LOXODROMIA, in Navigation, is the Line which a Ship keeping in the ſame collateral Point or *Rhumb*, deſcribes, throughout its whole Courſe. See LOXODROMIA.

The great Property of the *Rhumb Line*, or *Loxodromia*, and that from which ſome Authors define it, is, that it cuts all the Meridians under the ſame Angle. See MERIDIAN.

This Angle is call'd the *Angle of the Rhumb, or Loxodromic* Angle. See ANGLE.

The Angle which the *Rhumb Line* makes with any Parallel to the Equator is call'd the *Complement of the Rhumb*. See COMPLEMENT.

Nature and Origin of the RHUMB-LINES.

An Idea of the Origin and Properties of the *Rhumb-Line*, the great Foundation of Navigation, may be conceived thus.—A Veſſel beginning its Courſe, the Wind wherewith it is driven makes a certain Angle with the Meridian of the Place; and as 'tis ſuppoſed the Veſſel runs exactly in the Direction of the Wind, it makes the ſame Angle with the Meridian which the Wind makes.

Suppoſing, then, the Wind to continue the ſame, as each Point or Inſtant of the Progreſs, may be eſteem'd the Beginning; the Veſſel always makes the ſame Angle with the Meridian of the Place where it is each Moment, or in each Point of its Courſe, which the Wind makes.

Now, a Wind, *e. gr.* that is North-Eaſt, and which of Conſequence makes an Angle of 45°, with the Meridian, is equally North-Eaſt wherever it blows; and makes the ſame Angle of 45° with all the Meridians it meets.—A Veſſel therefore driven by the ſame Wind, always makes the ſame Angle with all the Meridians it meets withal on the Surface of the Earth.

If the Veſſel ſail North and South, it makes an Angle infinitely acute with the Meridian, *i. e.* 'tis parallel to it, or rather ſails in it.—If it run Eaſt and Weſt, it cuts all the Meridians at right Angles.

In the firſt Caſe it deſcribes a great Circle; in the ſecond, either a great Circle, *viz.* the Equator, or a Parallel to it.—If its Courſe be between the two, it does not then deſcribe a Circle; ſince a Circle drawn in ſuch a manner would cut all the Meridians at unequal Angles, which the Veſſel cannot do.

It deſcribes, therefore, another Curve, the eſſential Property whereof is, that it cuts all the Meridians under the ſame Angle.—This Curve is what we call the *Loxodromic Curve*, *Rhumb-Line*, or *Loxodromy*. See CURVE.

'Tis a kind of Spiral, which, like the Logarithmic Spiral, makes an Infinity of Circumvolutions without ever arriving at a certain Point to which it ſtill tends, and towards which it approaches every ſtep. See SPIRAL.

This aſymptotic Point of the *Rhumb-Line* is the Pole; to which were it poſſible for it to arrive, it would find all the Meridians conjoin'd, and be loſt in them. See POLE.

The Courſe of a Veſſel, then, except in the two firſt Caſes, is always a *Rhumb-Line*; which Line is the Hypothenuſe of a Rectangle-Triangle, whoſe two other Sides are the Ships Way or Diſtance run in Longitude and Latitude. Now the Latitude is uſually had by Obſervation, (See LATITUDE); and the Angle of the *Rhumb*, with one or other of the two Sides, by the Compaſs. See COMPASS.

All therefore that is required by Calculation in Sailing, is the Value of the length of the *Rhumb-Line*, or Ships Courſe. See COURSE.

But as ſuch Curve Line would prove very perplexing in the Calculation; it was neceſſary to have the Ships Way in a right Line; which right Line however muſt have the eſſential Property of the Curve Line, *viz.* to cut all the Meridians at right Angles.—*The Method of effecting which ſee under the Article* CHART and MERCATOR.

If PA, PF, PG, *&c.* (*Tab. Navigation, Fig.* 19.) be ſuppoſed Meridians, AI the Equator, and AE another great Circle of the Sphere: AO will repreſent a *Rhumb-Line*, the Angles whereof with the ſeveral Meridians, being leſs than thoſe of the great Circle; it follows, that the *Rhumb* is not a great Circle of the Sphere.—If a Ship therefore be at firſt directed towards E, and conſtantly perſiſt in the ſame *Rhumb*, it will never arrive at the Place E, but at the Place O which is further from the Equator.

Hence, as on the Surface of a Sphere, the ſhorteſt Way between A and O is an Arch of a great Circle between A and O; the *Rhumb-Line* is not the ſhorteſt Way, or leaſt Diſtance from one Place to another. See CIRCLE, SPHERE, DISTANCE, *&c.*

Application of RHUMB-LINES *in Navigation.*

1°. If the Meridians PA, PC, PD, *&c.* be not very far apart, the *Rhumb-Line* AIHG is divided by the equidiſtant Parallels BI, KH, FG, *&c.* into equal Parts.

Hence, 1°. the Parts of the *Rhumb* AI, and AG, are as the Latitudes AL and AN of the Places I and G.—2°. Since the Arches AB, IK, HF, are equal in Magnitude, and therefore unequal in Number of Degrees; the Sum of the Arches, call'd the *Latus Mecodynamicum*, or *Miles of Longitude*, is not equal to the Difference of Longitude AB of the Places A and G. See MECODYNAMICUM.

2°. The Length of the *Rhumb-Line* AG is to the Change or Difference of Latitude GD, in the ſame Ratio, as the whole Sine to the Co-ſine of the Angle of the *Rhumb*.

Hence, 1°. the *Rhumb* ſail'd on being given, together with the Difference or Change of Latitude, turn'd into Miles; the length of the *Rhumb-Line*, or the Diſtance from the Place A to the Place G upon the ſame *Rhumb*, is had by the Rule of Three.—2°. The *Rhumb* being given, together with the Quantity of the Ship's Way on the ſame *Rhumb*, i. e. the length of the *Rhumb* AG; the Difference of Latitude DG, is had by the Rule of Three, in Miles to be converted into Degrees of a great Circle.—3°. The Difference of Latitude DG being given in Miles; as alſo the Length of the *Rhumb-Line* AG; the Angle of the *Rhumb*, and

conſe-

conſequently the *Rhumb* ſail'd on is had by the Rule of Three.—4°. Since the Coſine is to the whole Sine as the whole Sine to the Secant; the Difference of Latitude GD, is to the Length of the *Rhumb-Line* AG, as the whole Sine to the Secant of the Angle of the *Rhumb*.

3°. The Length of the *Rhumb-Line*, or of the Ship's Way in the ſame *Rhumb* AG, is to the *Latus Mecodynamicum*, or *Mecodinamic* Side AB+IK+HF, as the whole Sine to the Sine of the *Loxodromic* Angle GAP.

Hence, 1°. The *Rhumb*, or Angle of the *Rhumb*, being given, as alſo the Ship's Way in the ſame *Rhumb-Line* AG; the *Mecodynamic* Side is had by the Rule of Three, in Miles; *i. e.* in the ſame Meaſure wherein the Length of the *Rhumb* is given.—2°. In like manner, the *Mecodynamic* Side AB+IK+HF being given; as alſo the *Rhumb-Line*, or Ships Way AG; the *Rhumb* ſail'd in is found by the Rule of Three.

4°. The Change of Latitude GD, is to the *Mecodynamic* Side AB+IK+HF; as the whole Sine, to the Tangent of the *Loxodromic* Angle PAG or AIB.

Hence, the *Rhumb*, or *Loxodromic* Angle PAG, and the change of Latitude CD, being given; the *Mecodynamic* Side is found by the Rule of Three.

5°. The *Mecodynamic* Side AB+IK+HF is a mean Proportional between the Aggregate of the *Rhumb* AG, and the Change of Latitude GD and their Difference.

Hence, the Change of Latitude GD, and the *Rhumb-Line* AG, being given in Miles; the *Mecodynamic* Side is found in the ſame Meaſure.

6°. *The Mecodynamic Side* AB+IK+HF *being given; to find the Longitude* AD.

Multiply the Change or Difference of Latitude GD by ſix, which reduces it into Parts, of ten Minutes each: Divide the Product by the *Mecodynamic* Side; the Quotient gives the Miles of Longitude anſwering to the Difference of Latitude in ten Minutes. Reduce theſe Miles of Longitude in each Parallel into Differences of Longitude, from a *Loxodromic* Table. The Sum of theſe is the Longitude required. See LONGITUDE.

7°. If a Ship ſail on a North or South *Rhumb*, it deſcribes a Meridian; if on an Eaſt or Weſt *Rhumb*, it deſcribes either the Equinoctial, or a Parallel thereto. See SAILING.

8° *To find the Rhumb between two Places, by Calculation, or Geometrically.* We have two Canons, or Proportions: The firſt,—As the Radius, is to the Co-ſine of the middle Latitude; ſo is the Difference of Longitude to the whole Departure from the Meridian, in the Courſe between the two Places propoſed.

The ſecond,—As the Radius is to the half Sum of the Co-ſines of both Latitudes; or (rather for Geometrical Schemes) as the Diameter, is to the Sum of the Co-ſines of both Latitudes; ſo is the Difference of Longitude, to the Departure from the Meridian.

For an Example of the former Proportion.—Let the *Rhumb* be required between *Cape Finiſter*, Latitude 43°, Longitude 7° 20′; and St. *Nicholas Iſle*, Latitude 38°, Longitude 352°. The middle Latitude is 40° 30′, the Complement 49° Degrees 30′; and the Difference of Longitude 15° 20′. Out of theſe leſſer equal Parts, prick down 15° from C to L, (*Fig.* 20.) and deſcribe the Arch BD with 60° of the Chords, and make it equal to 49° 30′, and draw CD continued farther to A.—From L take the neareſt Diſtance to AC which is equal to LM, and make it one Leg of a Right-angled Triangle; make the other Leg the Difference of Latitude 5°, which prick from the equal Parts from L to F.—Then, the extent MF meaſured on the ſaid Parts, ſhews the Diſtance to be 13° 24′; which, allowing 20 Leagues to a Degree, is almoſt 268 Leagues.—Then, with the Radius CB ſetting one Foot at M, croſs the *Rhumb* Triangle at GH; which extent meaſured on the greater Chord is almoſt 22°, the Complement whereof is 68°; and ſo much is the *Rhumb* from the Meridian between the two Places, amounting to 6 Points, and upwards of 80 Minutes.

For an Inſtance of the latter Proportion.—Let it be required to find the *Rhumb* and Diſtance between the *Lizard* and *Bermudas*. The Latitude of the *Lizard* being 56°, and that of *Bermudas* 32°, 20′, or 32°, 41 Centeſms, and their Difference of Longitude, 55° Degrees; draw the Lines AC and CD (*Fig.* 21.) at Right Angles, and with 60° of the leſſer Chords deſcribe the Quadrant HI, and prick the Radius from I to D; ſo is CD the Diameter; then count both Latitudes from H to F and G, the neareſt Diſtance from F to CI, is the Co-ſine of *Bermudas* Latitude, which prick from C to E: Again, the neareſt Diſtance from G to CI, is the Co-ſine of the *Lizard's* Latitude, which place from C to S, ſo is CS the Sum of both Co-ſines; draw DS, and prick down 55 Degrees, the Difference of Longitude from C to V, out of the greateſt equal Parts, and draw VB Parallel to DS, ſo is CB the Departure from the Meridian in the Courſe between both Places.—Making that, therefore, one Leg of a Right-angled Triangle, prick down 17°, 59 Centeſms, the Difference of Latitude between thoſe Places, out of the ſame equal Parts from C to L, and draw BL.—This repreſents the Courſe and Diſtance between the *Lizard* and *Bermudas*; and the extent LB meaſured on the ſame equal Parts, ſhews the Diſtance to be 44°, 31 Centeſms, which allowing 20 Leagues to a Degree, is 886 Leagues.

Then, to find the Courſe.—With 60° of the Chords, ſetting one Foot in L, with the other make Marks at Y and Z; then the Extent ZY, meaſured on the Chords, ſhews the *Rhumb* to be 66°, 37′ Minutes from the Meridian. This Proportion in the preſent Example, holds very juſt, according to *Mercator's* Chart; whereas the former Proportion, by the middle Latitude, would have given the *Rhumb* 67°, 2′, from the Meridian, and the Diſtance 902 Leagues.

Again, making CA equal to CV, a Line joining LA would be the Courſe and Diſtance according to the ſame Longitudes and Latitudes laid down on the Plain Chart; whereby the Courſe ſhould be 72 Degrees 17 Minutes from the Meridian, and the Diſtance 1155 Leagues. See SAILING, CHART, *&c.*

RHYAS, in Medicine, a Diminution or Conſumption of the *Caruncula Lachrymalis*, ſituate in the great Canthus or Angle of the Eye. See CARUNCULA.

The *Rhyas* is uſed in oppoſition to the *Encanthis*, which is an exceſſive Augmentation of the ſame Caruncle. See ENCANTHIS.

The Cauſe of the *Rhyas* is a ſharp Humour falling on this Part; and gnawing and conſuming it by Degrees; though it is ſometimes alſo produced by the too great Uſe of Cathereticks in the *Fiſtula Lachrymalis*.—It is cured by Incarnatives.

The Word is form'd from the *Greek* ῥέω, to flow.

RHYME, RHIME, RYME, or RIME, in Poetry, *&c.* the ſimilar Sound, or Cadence and Termination of two Words which end two Verſes, *&c.* See VERSE.

Or *Rhyme* is a Similitude of Sound between the laſt Syllable or Syllables of one Verſe, and the laſt Syllable or Syllables of a Verſe ſucceeding either immediately or at the Diſtance of two or three Lines.

Rhyme is a modern Invention, the Product of a *Gothick* Age: *Milton* calls it the *Modern Bondage*. Yet ſome Authors will have it, the *Engliſh*, *French*, &c. borrow their *Rhyme* from the *Greeks* and *Latins*.—The *Greek* Orators, ſay they, who endeavour'd to tickle the Ears of the People, affected a certain Cadence of Periods, ending in a Conſonance, and call'd them ὁμοιοτέλευτα. The *Latins*, who imitated them, call'd theſe meaſur'd Phraſes, *ſimiliter deſinentia*.

This Affectation increas'd as the *Latin* Tongue declin'd; ſo that in the later *Latin* Writers, ſcarce any thing is more common than *rhyming* Periods.

The *French*, and from them the *Engliſh*, &c. retain'd this Cadence of *Rhyme*, which ſeem'd to them more pretty, and even more agreeable than the meaſured Verſes of the *Greek* and *Roman* Poets.—This kind of *Latin* Poetry in *Rhyme* was much in Vogue in the XIIth Century; and the Verſes thus running were call'd *Leonine Verſes*; for what Reaſon *Cambden* owns he does not know; (for a Lion's-Tail, ſays he, does not anſwer to the middle Parts as theſe Verſes do) but doubtleſs they had their Name from a Canon call'd *Leoninus*, who firſt compoſed them with Succeſs, and of whom we have ſeveral Pieces remaining, addreſs'd to Pope *Adrian* IV. and *Alexander* III. See LEONINE *Verſes*.

Cambden has given us a Collection of *Latin Rhymes* of our antient *Engliſh* Writers; among whom *Walter de Mapes* Archdeacon of *Oxford*, in the Time of King *Henry* II. makes a principal Figure: Eſpecially for two Pieces, the one in Praiſe of Wine, beginning,

Mihi eſt propoſitum in Taberna mori,
Vinum ſit appoſitum morientis ori;
Ut dicant, cum Venerint, Angelorum Chori,
Deus ſit propitius huic potatori.

The other againſt the Pope, for forbidding the Clergy their Wives; beginning,

Priſciani Regula penitus caſſatur,
Sacerdos per hic *&* hæc *olim declinatur;*
Sed per hic *ſolummodo, nunc articulatur,*
Cum per Noſtrum præſulem hæc *amoveatur.*

Since the Reſtoration of Learning in the 16th Century, Attempts have made to baniſh *Rhyme* out of the modern Poetry, and to ſettle the *Engliſh* and *French* Verſes on the footing of the antient *Greek* and *Latin* ones; by fixing the Quantities of the Syllables, and truſting wholly to thoſe, and the Numbers or Meaſure. See QUANTITY, NUMBERS, *&c.*

This, *Milton* has done with great Succeſs, in his *Paradiſe Loſt*, and other Pieces; and after him *Philips*, *Addiſon*, and ſome others.—Verſes of this Kind we call *Blank Verſes*. See BLANK.

The *French* have attempted the ſame, but not with the ſame Succeſs.—*Jodelet* made the firſt Eſſay; and after him *Paſquier*; but they fail'd. *Paſſerat* and *Rapin* follow'd them, and fail'd like them. Their Hexameter and Sapphic Verſes were neither imitated nor approved; and the Cadence of *Rhyme* was prefer'd to Quantity, or to long and ſhort Syllables. *Des Portes* likewiſe made ſome Eſſays of Verſes conſtructed of long and ſhort Verſes without *Rhyme*, but the Attempt only ſerv'd to convince the World that this Kind of Meaſure is inconſiſtent with the Genius of the *French* Tongue.

To

To ſucceed in ſuch kind of Verſes there muſt be a Liberty of varying the Arrangement of the Words, or of changing their Situation as may beſt ſuit the Occaſions of the Poet; of making the Subſtantive either go before, or follow after the Verb, as the Verſe requires, *&c.* Now none of the modern Tongues admit of ſuch an arbitrary Situation of the Words, equally with the Antient; yet none more than the *Engliſh*, nor leſs than the *French*. See CONSTRUCTION.

Rhymes are either *ſingle*, or *double*, or *treble*; but the two laſt are now diſuſed.

Single Rhymes are divided into perfect or whole *Rhymes*; and imperfect or half *Rhymes*.

A *whole* or *perfect Rhyme* is where there is a Similitude of Sound, without any Difference; or where a thorough Identity of Sound appears in the Pronunciation of the two Syllables, notwithſtanding that there may be ſome Difference in the Orthography.

An *imperfect* or *half Rhyme* is where there is a Similitude with a Difference, either in reſpect of the Pronunciation or the Orthography; but chiefly the former.

In the time of S. *Louis*, the *French* began to be more exact in their Verſification; and to diſtinguiſh their *Rhymes* into *Maſculine* and *Feminine*; and to obſerve a regular Mixture of the two, in their Verſes.

The Invention of this Mixture is uſually attributed to *Marot*; however 'twas *Ronſard* who firſt practiced it with Succeſs.—The Feminine *Rhyme* is that where the laſt Syllable of the *Rhyme* ends with an *e* Mute or Quieſcent: As in *Dove*, *Belle*, &c.—*Maſculine Rhymes* are thoſe of all other Words. *Menage* obſerves that Maſculine *Rhymes* cloſe the Periods better: But that Feminines, being the ſofter and more languiſhing, end more agreeably, eſpecially in mournful Subjects.

They alſo diſtinguiſh further between *rich Rhymes*, which are thoſe where the two Words terminate alike, through the whole two laſt Syllables, as *ſquabble* and *rabble*, &c.—*Plain Rhymes* are thoſe where the two *rhyming* Verſes ſucceed immediately to each other.—*Croſs Rhymes*, thoſe where the Verſes are ſo diſpoſed as that the firſt *rhymes* with the third, and the ſecond with the fourth, *&c.*

They alſo diſtinguiſh Normand *Rhymes*, Pariſian *Rhymes*, Equivocal *Rhymes*, &c.

RHYPTICKS, or RYPTICKS, RHYPTICA, in Medicine. See RYPTICKS.

RHYTHM, RHYTHMUS, in Muſick, the Variety in the Movements, as to the quickneſs or ſlowneſs, length and ſhortneſs of the Notes. See NOTE.

Or, the *Rhythmus* may be defined more generally, the Proportion which the Parts of a Motion have to each other. See RHYTHMICA.

Ariſtides among the antient Muſicians, applies the Word *Rhythmus* three Ways; *viz.* either to immoveable Bodies, when their Parts are rightly proportioned to each other; as a well-made Statue, *&c.* or to things that move regularly, as in handſome Walking, in Dancing, in the dumb Shews of the Phantomimes, *&c.* or thirdly, to the Motion of Sound, or the Voice; in which, the *Rythmus* conſiſts of long and ſhort Syllables or Notes, join'd together in Succeſſion in ſome kind of order, ſo as their Cadence on the Ear may be agreeable.

This, in Oratory conſtitutes what we call a *numerous Style*, and when the Tones of the Voice are well choſen, a harmonious Stile. See STYLE and NUMBERS.

In effect, *Rythmus* in the general is perceiv'd either by the Eye or Ear; and may either be with or without Metre: But the ſtrict muſical *Rythm* is only perceiv'd by the Ear, and cannot exiſt without it.—The firſt exiſts without Sound, as in Dancing; in which Caſe it may be either without any Difference of Acute and Grave, as in a *Drum*, or with a Variety of theſe as in a *Song*.

The *Rythmus* of the Antients, Mr. *Malolm* obſerves, was very different from the Moderns.—The former was only that of the long and ſhort Syllables of the Words and Verſes: It depended altogether on the Poetry, and had no other Forms or Varieties than what the metrical Art afforded. The Changes therein are none but thoſe made from one Kind of Metrum to another, as from Jambic to Choraic *&c.*

In the modern Muſick, the Conſtitution of the *Rythmus* differs from that of the Verſe, ſo far, that in ſetting Muſick to Words, the thing chiefly regarded is to accommodate the long and ſhort Notes to the Syllables in ſuch manner, as that the Words be well ſeparated; and the accented Syllable of each Word ſo conſpicuous, that what is ſung may be diſtinctly underſtood. See MELODY.

Voſſius in his Book *de Pœmatum Cantu & viribus Rythmi*, extols the antient *Rythmus*.—Though he owns 'twas confined to the metrical Feet; yet, ſo well did they cultivate their Language, eſpecially in what relates to the *Rythmus*; that the whole effect of the Muſick was aſcribed to it, as appears, ſays he, by that ſaying of theirs, το πᾶν ὠνόμασε μουσικοῖς ὁ ῥυθμός. See MUSIC, PANTOMIME, *&c.* See alſo ODE, *&c.*

RHYTHM, RHYMUS, or RHYME, in the antient Poetry, was the Meaſure of the Feet, or the Number and Combination of long and ſhort Syllables; call'd alſo *Quantity*. See QUANTITY.

Voſſius attributes the whole Force of the antient Muſick to their happy *Rythmus*. But this is ſomewhat inconceivable: Mr. *Malcolm* rather takes it that the Words and Senſe of what was ſung had the chief effect: Hence it was that in all the antient Muſick the greateſt Care was taken that not a Syllable of the Words ſhould be loſt, leſt the Muſick ſhould be ſpoil'd.

Pancirollus ſeems of this Opinion; and the Reaſon he gives why the modern Muſick is leſs perfect than the Antient, is, that we hear Sounds without Words. See MUSICK.

Voſſius ſays, that *Rhythm* which does not expreſs the very Forms and Figures of things, can have no effect; and that the antient poetical Numbers alone are juſtly contrived for this End.—He adds, that the modern Languages and Verſe is altogether unfit for Muſick; and that we ſhall never have any right Vocal Muſick till our Poets learn to make Verſes capable to be ſung, *i. e.* till we new model our Languages, reſtore the antient Quantities and Metrical-feet, and baniſh our barbarous Rhimes.

Our Verſes, ſays he, run all as it were on one Foot; ſo that we have not any real *Rythmus* at all in our Poetry: He adds, that we mind nothing further than to have ſuch a Number of Syllables in a Verſe, of whatever Nature, and in whatever Order. But this is an unjuſt Exaggeration. See VERSE.

RHYTHMICA, RYTHMICE, in the antient Muſick, that Branch of Muſick which regulated the *Rhythmus*. See RHYTHMUS.

The *Rhythmica* conſider'd the Motions; regulated their Meaſure, Order, Mixture, *&c.* ſo as to excite the Paſſions, keep them up, augment, diminiſh, or allay them.

Ariſtides and other antient Muſical Writers, divided artificial Muſick into *Harmonica*, *Rhythmica*, and *Metrica*. See MUSICK.

But the *Rhythmica* with them likewiſe comprehends dumb Motions, and, in effect, all *Rhythmical*, i. e. regular, Motion.

Porphyry divides Muſick into *Harmonica*, *Rythmica*, *Metrica*, *Organica*, *Poetica*, and *Hypocritica*. See each under its proper Article.

The Antients ſeem to have had no *Rhythm* in their Muſick beſide the long and ſhort Syllables of their Words and Verſes, which were ſung, and always made a Part of their Muſick; ſo that the *Rhythmica* with them was only the Application of the Metrical-Feet, and the various kinds of Verſes uſed by them.—The Modern goes much further. See RHYTHM.

RYTHMOPÆIA one of the Muſical Faculties, as they are call'd; which preſcribes Rules for the Motions, or *Rhythm*.

The antient *Rhythmopœia* is very defective.—We find nothing of it in the Books of the Antients but ſome general Hints; which can ſcarce be call'd Rules. In their Explications there appears nothing but what belongs to the Words and Verſes of their Songs, which is a ſtrong Preſumption they had no other. See RHYTHM.

RIAL, or RYAL, or REAL, a Coin ſtruck, and Current in *Spain*. See REAL and COIN.

RIAL is alſo a Piece of Gold, antiently Current among us for ten Shillings.

In 1 *Henry* VI. by Indenture of the Mint, a Pound Weight of Gold of the old Standard was coined into 45 *Rials*, going for ten Shillings a-piece, or a proportionable Number of *half Rials*, going at five Shillings a-piece: Or *Rial Farthings*, which went at 2 *s.* and 6 *d.*

In 1 *Henry* VIII. the Gold *Rial* was ordered to go at 11 *s.* 3 *d.*—In 2 *Eliz.* Golden *Rials* were coined at 15 *s.* a-piece, when a Pound Weight of old Standard Gold was to be coined into 48 *Rials*.—In 3 *Jac.* I. the *Roſe Rials* of Gold were coined at 30 *s.* a-piece, and the *Spurr-Rials* at 15 *s.* See MONEY.

RIBBAND, or RIBBOND, a narrow ſort of Silk, chiefly uſed for Head Ornaments, Badges of Chivalry, *&c.* See SILK.

The Knights of the Garter wear a Blue *Ribbond*, thoſe of the Thiſtle, a Green *Ribbond*. See COLLAR, GARTER, *&c.*

RIBBON, in Heraldry, is the eighth Part of a Bend. See BEND.

It is born a little cut off from the out-lines of the Eſcutcheon; thus; He beareth Or, a *Ribbon* Gules.

RIBS, COSTÆ, in Anatomy, long, arch'd Bones; ſerving to form, or ſuſtain the inner-ſides of the Thorax, or Breaſt. See BONE and THORAX.

The *Ribs* are in Number 24; twelve on each Side.—Their Figure is an imperfect Segment of a Circle, harder, rounder, and more incurvated towards their Articulation with the *Vertebræ*, than at the other Extremity towards the *Sternum*, which is thinner, broader, and more ſpungy.

The *Ribs* are divided into *true*, or genuine, and *ſpurious*.

The *true* are the ſeven upper Pair, which are thus diſtinguiſhed, as forming the moſt perfect Arches, and as having a ſtrong Articulation with the *Sternum*. See STERNUM.

The five lower are call'd *Nothæ*, or *Spurious*, as being ſmaller, ſhorter, and more cartilaginous than the reſt, and not reaching ſo far as the *Sternum*, which makes their Articulation very lax; in regard they terminate in long, ſoft Cartilages, which bending upwards are join'd to the upper Ribs.

On the inſide of the true *Ribs*, except the loweſt, and ſometimes the next to it, runs a pretty deep *Sinus*, reaching from the end towards the Spine, almoſt to its Juncture with the Cartilage.

All

All the *Ribs*, together with the *Sternum*, are rais'd by the respiratory Muſcles, in the Action of Inſpiration; by which means, and the Deſcent of the Diaphragm in that Action, the Cavity of the Thorax is enlarged for the more commodious Expanſion of the Lungs. See RESPIRATION.

RIBS *of a Ship*, are the Timbers of the Puttocks, when the Planks are off; ſo called becauſe they are bent like the *Ribs* of a Carcaſe or Skeleton.

RICE, a Grain or Seed of a leguminous Plant of the ſame Name; frequent in the *Eaſt-Indies*, in *Greece*, and *Italy*. See LEGUMINOUS.

The Grains, which grow in Cluſters each terminated with a Spica or Beard, are incloſed ſeverally in yellow rough Capſulæ, or Caſes. When ſtript off its Skin the Grain is almoſt oval; of a ſhining white Colour, and as it were tranſparent. It grows in moiſt marſhy Places.

Throughout the *Eaſt*, and a great Part of the *Levant*, *Rice* is the principal Food, and ſerves for Bread. See BREAD.

In the *Indies*, the Women thraſh and dreſs all the *Rice*, which is a very painful Office, that the Men leave them either out of Idleneſs, or Diſreſpect.

Rice is a great Food in the *Roman Catholick* Countries in time of *Lent*.—The ordinary Preparation is by firſt ſteeping it in Water, then boiling it in Milk.—Some make it into a ſort of Farina, or Flower, by pounding it in a Mortar, after having firſt put it in hot Water, and again waſh'd it out in cold.

Rice is of ſome uſe in Medicine, being eſteem'd proper to ſoften and thicken ſharp Humours, to moderate the Flux of the Belly.—The Northern Nations eat their Fowls and other Meats with *Rice* and Saffron.—The *Chineſe* make a Wine of *Rice*, which is of an Amber Colour, taſtes like *Spaniſh* Wine, and ſerves them for their common Drink.

In ſome Parts of *Europe* they alſo draw a very ſtrong Brandy or Spirit from *Rice*. See BRANDY and SPIRIT.

RICKETS, RHACHITIS, in Medicine, a Diſorder affecting the Bones of Children, and cauſing a conſiderable Protuberance, Incurvation, or Diſtortion thereof. See CHILDREN, BONE, *&c.*

It ſometimes ariſes from a fault in ſwathing the Child; rolling him too tight in ſome Places, and too looſe in others; placing him in an inconvenient, or too often in the ſame Poſture, or ſuffering him to be long wet.—'Tis likewiſe attributed to the want of proper Motion, and the uſing of the Child to one Arm only; whence the Legs and Knees remain too long in the ſame incurvated Situation.

Or it may be occaſioned by ſome Fault in the Digeſtion occaſioning the Aliment to be unequally apply'd to the Body, by which ſome Parts of the Bones increaſe in Bulk more than the reſt.

The *Rickets* uſually appear between the firſt eight Months, and the ſixth Year of the Child's Age: The Part it affects grows lax, flaccid, and weak; and if it be the Legs, they become unable to ſupport the Body.—All the Parts ſubſervient to voluntary Motion are likewiſe debilitated and enfeebled; and the Child grows pale, ſickly, ſlothful, and cannot ſit erect.

His Head generally becomes too large for the Trunk, and cannot be ſupported or managed by the Muſcles of the Neck, which gradually wear away. Swellings, and knotty Excreſcencies appear in the Wriſts, Ancles, and Tops of the Ribs; and the Bones of the Legs and Thighs grow bowed or crooked.—The like Diſorder ſometimes ſeizes the Bones of the Arms.

If the Symptoms continue long, the Thorax becomes ſtrait, a difficulty of Reſpiration comes on, as alſo a Cough, and a hectick Fever; the Abdomen ſwells, the Pulſe grows weak and ſmall, and the Symptoms increaſing, at length prove mortal.

When the Child is able to talk before he can make uſe of his Legs, he is ſuppoſed to have the *Rickets*.

When the Diſorder is taken early, it may be remedied by proper Bolſters and Bandages, ſuited to the Parts affected: But when the Bones are grown rigid and inflexible, other mechanical Contrivances, as Padding, ſtrait Boots, and ſeveral ſorts of Machines or Engines, made of Paſtboard, Whalebone, Tin, *&c.* are made uſe of; to reſtore the diſtorted Bones to their natural ſtraitneſs.

Cold Bathing is alſo found of Service in the *Rickets*, before the Diſtemper comes to be confirmed, during *May* and *June*; continuing him in the Water two or three Seconds at each Plunge.

Others chuſe a Liniment of Rum and Palm Oil; and others a Plaiſter of Deminium and Oxycroceum, applied along the Back, to cover the whole Spine.—Dry Frictions over the whole Body, with a warm Linnen Cloth before the Fire, eſpecially on the Parts affected, are found of Service. The Oil of Snails is famous for the ſame Intention, being what Drops from them, after bruiſing and ſuſpending them in a Flannel Bag. With this the Limbs and ſpinal Bone, are anointed.

RIDDLE. See ENIGMA.

RIDDLE, or RUDDLE, is alſo a mineral Stone. See RUDDLE.

RIDE, of *Hazle*, or other Wood, is a Group or Plump of Sprigs ſhooting out of the ſame Root, or Foot.

RIDE, in the Manage.—To *ride* ſignifies to learn to *ride*.—Thus, He *rides* under a good Maſter. See HORSE.

RIDE, in the Sea Language, is a Term variouſly applied.—Thus, a Ship is ſaid to *Ride* when her Anchors hold her faſt, ſo that ſhe drives not away by the Force of the Wind or Tide.

A Ship is ſaid to *Ride well*, when ſhe is built ſo as not to over-beat herſelf into an Head Sea, as that the Waves overtake her (that is, overwaſh her) from Stem to Stern.

A Ship *Rides a-croſs*, when ſhe *rides* with her Main-Yards and Fore-Yards hoiſted up to the Hounds; and both Yards and Arms topped alike.

She is ſaid to *Ride a Peek* when one End of the Yard is peeked up, and the other hangs down: This is alſo ſaid of a Ship when in weighing, ſhe is brought directly over her Anchor.

She is ſaid to *Ride athwart*, when her Side is to the Tide.—And to *Ride betwixt Wind and Tide*, when the Wind hath equal force over her one Way and the Tide another.—If the Wind have more Power over her than the Tide, ſhe is ſaid to *Ride Wind Rode*.—She is ſaid to *Ride Hawſeful*, when in a Streſs of Weather ſhe falls ſo deep, that Water runs in at her Hawſes.—She is ſaid to *Ride Portoiſe*, when her Yards are ſtruck upon the Deck, or when they are down Aportlaſt.

RIDEAU, in Fortification, a ſmall Elevation of Earth, extending itſelf lengthways on a Plain; ſerving to cover a Camp, or give an Advantage to a Poſt.—It is alſo convenient for thoſe who would beſiege a Place at a near Diſtance, and to ſecure the Workmen in their Approaches to the Foot of a Fortreſs.

RIDEAU, is ſometimes alſo uſed for a Ditch, the Earth whereof is thrown upon its Side. See DITCH.

The Word in its original *French* ſignifies a Curtain or Cover; form'd from the *Latin*, *Ridellum*.—*Borel* derives it from *ridere*.

RIDERS, in a Ship, are great Timbers both in the Hold and Aloft, which are bolted on to other Timbers to ſtrengthen them, when the Ship is diſcovered to be too weakly built.

The Word RIDER is alſo uſed for after-Clauſes, added to Bills, whilſt they are depending in Parliament. See BILL.

RIDGE, in Building, the higheſt Part of the Roof or Covering of a Houſe. See ROOF.

Ridge is particularly uſed for the Piece of Wood wherein the Rafters meet. See RAFTER.

RIDGE-TYLE. See TYLE.

RIDGES *of a Horſe's Mouth*, are Wrinkles or Riſings of the Fleſh in the Roof of the Mouth, running a-croſs from one Side of the Jaw to the other, with interjacent Furrows. See HORSE.

It is commonly in the third or fourth Ridge that the Farriers ſtrike, in order to bleed a Horſe whoſe Mouth is over heated.

RIDGLING, or RIDGEL, among Farriers, *&c.* the Male of any Beaſt that has been but half Gelt. See GELDING.

RIDICULE. See LAUGHTER, RISIBILITY, *&c.*

RIDING, a Diviſion of *Yorkſhire*, whereof there are three, *viz.* the *Eaſt-Riding*, *Weſt-Riding*, and *North-Riding*.

In Indictments in that County, 'tis neceſſary the Town and *Riding* be expreſs'd.

RIDING-*Clerk*, one of the ſix Clerks in Chancery, who, in his turn, for one Year, keeps the Controllment Books of all Grants that paſs the Great Seal that Year. See CLERK, GRANT, *&c.*

RIENS *Arrear*, in Law, a kind of Plea uſed to an Action of Debt, upon Arrearages of Account, whereby the Defendant alledges that there is *nothing in Arrear*.

Riens paſſe par le fait, nothing paſſes by the Deed, is the Form of an Exception taken in ſome Caſes to an Action. See EXCEPTION, and DEED.

Riens par Deſcent, nothing by Deſcent, is the Plea of an Heir, where ſued for his Anceſtor's Debt; though he had no Lands from him by Deſcent. See DESCENT.

RIER, or REER-*County*, *Retro Comitatus*, is uſed in our Law Books in oppoſition to open County.

This appears to be ſome publick Place, which the Sheriff appoints for the Receipt of the King's Money, after the end of his County. See SHERIFF, *&c.*—*Fleta* ſays it is *Dies Craſtinus*, *poſt comitatum*.

RIGADOON, a kind of Dance, borrowed originally from *Provence*; perform'd in Figure, by a Man and a Woman.—The *Rigadoon* is gay, pleaſant, *&c.* The Word is form'd from the *French Rigodon*, which ſignifies the ſame thing.

RIGGING, *of a Ship*, includes her whole Cordage; or all the Ropes belonging to her Maſts, and Yards, *&c.* See CORDAGE, ROPE, *&c.*

A Ship is ſaid to be *well-rigg'd* when all her Ropes are of their fit Size, in Proportion to her Burden.—She is *over-rigg'd*, when her Ropes are too big for her; which wrongs her much in her Sailing, and is apt to make her Heel. See SHIP.

RIGHT, in Geometry, ſomething that lies evenly, and without inclining or bending one way or another.

Thus, a *Right Line* is that whoſe ſeveral Points all tend the ſame way. See LINE.

In this Senſe *Right* ſignifies as much as *ſtraight*, and ſtands oppoſed to *curved* or crooked. See CURVE.

RIGHT *Angle* is that form'd by two Lines falling perpendicularly on one another. See PERPENDICULAR.

The Quantity or Measure of a *Right Angle* is a Quadrant of a Circle, or 90°.—All *Right Angles* therefore are equal. See ANGLE.

In this Sense the Word *Right* stands opposed to *Oblique*. See OBLIQUE.

RIGHT-*Angled*, is understood of a Figure when its Sides are at Right Angles, or stand perpendicularly one upon another. See FIGURE.

This sometimes holds in all the Angles of the Figure, as in Squares and Rectangles: Sometimes, only in Part, as in *Right-angled* Triangles.

RIGHT *Sine*. See SINE.

The Word here stands contradistinguished to *versed*. See VERSED.

RIGHT *Sphere*, is that where the Equator cuts the Horizon at *Right* Angles. See SPHERE.

Or, *Right*, or *Direct Sphere*, is that wherein the Poles are in the Horizon, and the Equator in the Zenith. See SPHERE.

Such is the Position of the Sphere with regard to those who live directly under the Equator.—The Consequences hereof are, that they have no Latitude nor Elevation of the Pole.—They can see nearly both Poles of the World; all the Stars rise, culminate, and set with them, and the Sun always rises and descends at *right* Angles to their Horizon, and makes their Days and Nights equal. See LATITUDE, STAR, RISING, DAY, NIGHT, *&c.*

In a *Right Sphere* the Horizon is a Meridian; and if the Sphere be supposed to revolve, all the Meridians successively become Horizons, one after another. See HORIZON, *&c.*

RIGHT *Ascension*, of the Sun, or a Star, is that Degree of the Equinoctial, accounted from the beginning of Aries, which rises with it in a *Right* Sphere. See ASCENSION.

Or, *Right Ascension*, is that Degree and Minute of the Equinoctial, counted as before, which comes to the Meridian with the Sun or Star, or other Point of the Heavens. See SUN, STAR.

The Reason of thus referring it to to the Meridian, is, because that is always at *Right* Angles to the Equinoctial, whereas the Horizon is only so in a *Right* or direct Sphere. See SPHERE.

Two fix'd Stars which have the same *Right Ascension*, i. e. are at the same Distance from the first Point of Aries in a *Right* Sphere; or, which amounts to the same, are in the same Meridian, rise at the same time: If they be not in the same Meridian, the Difference between the time when they rise is the precise Difference of their *Right Ascension*.—In an oblique Sphere, where the Horizon cuts all the Meridians obliquely, different Points of the Meridian never rise or set together; so that two Stars on the same Meridian never rise or set at the same time; and the more Oblique this Sphere, the greater is the interval of time between them. See RISING, SETTING, HEIGHT, *&c.*

RIGHT *Sailing*, is when a Voyage is perform'd on some one of the four Cardinal Points. See SAILING and CARDINAL *Point*.

If a Ship sail under the Meridian; that is, on the North or South Points, she varies not in Longitude at all; but only changes the Latitude, and that just so much as the Number of Degrees she hath run. See LATITUDE.

If a Ship sail under the Equinoctial, upon the very East or West Points, she alters not her Latitude at all, but only changes the Longitude, and that just so much as the Number of Degrees she hath run. See LONGITUDE.

If she Sail directly East or West, under any Parallel, she there also altereth not her Latitude, but only the Longitude; yet not according to the Number of Degrees of the great Circle she hath sailed in, as under the Equinoctial, but more according as the Parallel is remoter from the Equinoctial towards the Pole. For the less any Parallel is, the greater is the Difference of Longitude. See RHUMB.

RIGHT *Circle*, in the Stereographical Projection of the Sphere, is a Circle at *Right* Angles, to the Plane of Projection, or that which passed through the Eye. See CIRCLE, PROJECTION and STEREOGRAPHIC.

RIGHT, *Rectum*, in Logicks, Ethicks, *&c.* See RECTITUDE.

In this Sense the Word stands opposed to *Wrong*, *Erroneous*, *False*, &c. See ERROR, FALSHOOD, *&c.*

RIGHT, *Jus*, in Law, signifies not only a Property, for which a Writ of *Right* lies; but also any Title or Claim, either by Virtue of a Condition, Mortgage, or the like, for which no Action is given by Law, but only an Entry. See PROPERTY.

Thus is *Jus Proprietatis*, a Right of Propriety: *Jus Possessionis*, a Right of Possession: And *Jus Proprietatis & Possessionis*, a Right both of Property and Possession. See POSSESSION, *&c.*

This was formerly called *Jus duplicatum*.—As, if a Man be disseised of an Acre of Land, the Disseisee hath *Jus Proprietatis*; the Disseisor hath *Jus Possessionis*, and if the Disseisee release to the Disseisor, he hath *Jus Proprietatis & Possessionis*.

Writ of RIGHT. See RECTUM.

RIGHT *in Court*. See RECTUS *in Curia*.

RIGHT *the Helm*, a Sea Phrase, ordering to keep the Helm even with the middle of the Ship. See HELM.

RIGIDITY, among Philosophers, a brittle-hardness; or that kind of hardness supposed to arise from the mutual Indentation of the component Particles within one another. See HARDNESS.

Rigidity is opposed to Ductility, Malleability, *&c.* See DUCTILITY.

RIGOL, a kind of musical Instrument, consisting of several Sticks bound together, only separated by Beads.—It makes a tolerable Harmony, being well struck with a Ball at the End of a Stick.

RIGOR, in Medicine, a convulsive Shuddering, from Cold, or an Ague Fit. See HORROR, FEVER, AGUE, *&c.*

RILL, or RIVULET. See RIVER.

RIM, in a Watch or Clock, the Circumference, or circular Part of a Wheel. See WHEEL, WATCH, CLOCK, *&c.*

RIMA, litterally denotes a Fissure or Chink.—Hence it is applyed to several Parts of the Body, that bear a Resemblance thereto; as the *Rima Pudendi*, or *Fissura Magna*, the same with the *Vulva*; *Rima Laryngis*, is the Aperture of the *Larynx*, call'd the *Glottis*. See GLOTTIS, *&c.*

RIMA, is also used for a narrow Aperture of a small Cavity under the *Fornix*, opening into the *Infundibulum*; call'd also the third Ventricle of the Brain. See BRAIN and VENTRICLE.

RIME, RHIME, or RHYME. See RHYME.

RIND, the Skin of any Fruit that may be cut off, or pared. See SKIN, FRUIT, *&c.*

The outer Coat of the Chesnut, set with prickles, is particularly called the *Urchin-like Rind*.

RIND, is also us'd for the Ble, or inner Bark of Trees; or that soft, whitish, juicy Substance, adhering immediately to the Wood. See TREE and WOOD.

Through this it is that the Sap, in the modern Theory of Vegetation, is supposed to return from the Extremities of the Branches to the Root; the Vessels hereof being supposed to do the Office of Arteries; whence Mr. *Bradley* calls them *Arterial* Vessels. See BARK. See also PLANT and VEGETATION.

RING, *Annulus*, a little moveable, put on the Finger, either by way of Ceremony, or of Ornament.

The Bishops *Ring* makes a Part of the Pontifical Apparatus; and is esteemed a Pledge of the spiritual Marriage between the Bishop and his Church. See BISHOP.

The Episcopal *Ring* is of very antient standing.—The fourth Council of *Toledo*, held in 633, appoints, that a Bishop condemned by one Council, and found afterwards innocent by a second, shall be restored, by giving him the *Ring*, Staff, *&c.*

From Bishops, the Custom of the *Ring* has pass'd to Cardinals, who are to pay, I know not what Sum, *pro Jure annuli Cardinalitii*. See CARDINAL.

As to the Origin of Rings.—*Pliny*, lib. xxxviii. *Chap.* 1. observes, that we are in the dark as to the Person who first invented, or wore the *Ring*; for that what is said of *Prometheus*, as also of *Midas*'s Ring, are Fables. The first among whom we find the *Ring* in use, are the *Hebrews*, *Gen.* xxxviii. where *Judah*, *Jacob*'s Son, gives *Thamar* his *Ring* or Signet, as a Pledge of his Promise: But the *Ring* appears to have been in use at the same time among the *Egyptians*, from *Gen.* xli. where *Pharoah* puts his *Ring* upon *Joseph*'s Hand as a Mark of the Power he gave him. And in the third Book of *Kings*, Chap. xxi. *Jezebel* seals the Warrant she sent for the killing of *Naboth*, with the King's *Ring*.

The antient *Caldeans*, *Babylonians*, *Persians* and *Greeks*, had likewise the use of the *Ring*; as appears from several Passages in Scripture, and from *Quintus Curtius*, who tells us, that *Alexander* seal'd the Letters he wrote into *Europe*, with his own Seal; and those into *Asia* with *Darius*'s *Ring*.

The *Persians* will have *Guiamschild* the fourth King of their first Race, to have first introduced the *Ring*, to seal his Letters and other Acts withal.—The *Greeks*, *Pliny* thinks, knew nothing of the *Ring* in the time of the *Trojan* War: The Reason he gives is, that we find no mention thereof in *Homer*, but that when Letters, *&c.* were to be sent away, they were tied up, and the Strings knotted.

The *Sabins* had *Rings* in *Romulus*'s time; and 'tis to them, probably, the Practice first came from the *Greeks*; and from them pass'd to the *Romans*; though 'twas some time e're it got footing there.—*Pliny* cannot learn which of the Kings of *Rome* first adopted it; but there are no Signs of it in any of their Statues, before those of *Numa*, and *Servius Tullius*. He adds, that it was in use among the antient *Gauls* and *Britons*. See SEAL.

As to the Matter of Rings.—There were some of one single Metal, and others of a Mixture, or of two. For the Iron and Silver were frequently gilt; or at least the Gold was inclosed within the Iron, as appears from *Artimidorus*, lib. ii. cap. 5.—The *Romans* were contented with Iron *Rings* a long time; and *Pliny* assures us, that *Marius* first wore a Gold one in his third Consulate, which was in the Year of *Rome* 650. Sometimes the *Ring* was Iron, and the Seal Gold; sometimes 'twas hollow, and sometimes solid; sometimes the Stone was engraven, and sometimes plain; and the Graving sometimes in *Relievo*, and sometimes in *Creux*: The last call'd *Gemmæ Ectypæ*; the first, *Gemmæ Sculptura prominente*.

As to the Manner of wearing the Ring.—It has been various: From *Jeremy*, Chap. xxii. it appears that the *Hebrews* wore it on the

right

Right-Hand. Among the *Romans*, e're they came to be adorned with Stones, and while the Graving was yet on the Metal, every body wore them at Pleaſure, on what Hand and Finger he liſted.—When Stones came to be added, they wore them altogether on the Left-Hand; and it would have been held an exceſſive Foppery to have put them on the Right.

Pliny ſays, they were at firſt wore on the fourth Finger, then on the ſecond, or Index; then on the little Finger; and at laſt on all the Fingers, excepting the middle one.—The *Greeks* wore it altogether on the fourth Finger of the Left-Hand, as we are inform'd by *Aul. Gellius*, lib. x. and the Reaſon he gives for it is, that having found from Anatomy, that this Finger had a little Nerve that went ſtraight to the Heart, they eſteem'd it the moſt honourable, by reaſon of this Communication with that noble Part.—*Pliny* ſays, the *Gauls* and antient *Britons* wore it on the middle Finger.

At firſt they only wore a ſingle *Ring*; then one on each Finger; and at length ſeveral on each Finger, *Martial*, lib. xi. Epig. 60. At laſt one on each Joint of each Finger, *Ariſtoph. in Nub.* &c.—Their Delicacy, at length went to that pitch, that they had their Weekly *Rings*. *Juvenal Sat.* VII. ſpeaks of *Annuli Semeſtres*; as alſo of Winter and Summer *Rings*. But of all others *Lampridius*, cap. 32. obſerves, *Heliogabalus* carried the Point furtheſt, who never wore the ſame *Ring*, or the ſame Shoe, twice.

Rings have been alſo wore in the Noſe, as Pendants in the Ears—*Bartholin* has an expreſs Treatiſe, *de Annulis Narium*, of *Rings* of the Noſtrils. St. *Auguſtin* aſſures us, 'twas the Faſhion of the *Moors*; and *Pedro delle Valle* obſerves the ſame of the modern *Orientals*.

In effect, there is no Part of the Body where it has not been wore.—Several *Eaſt-India* Travellers affirm, that the Natives commonly wear them in their Noſe, Lips, Cheeks, and Chin. *Ramuſio* tells us, that the Ladies of *Narſingua* in the *Levant*, and *Diodorus Siculus*, lib. 3. that thoſe of *Ethiopia*, uſed to adorn their Lips with Iron *Rings*.

As to the Ears, the Cuſtom ſtill obtains of wearing *Rings* therein, both for Men and Women, all over the World. See PENDANT.

The *Indians*, particularly the *Guzzerattes*, have wore *Rings* on their Feet.—And when *Peter Alvarez* had his firſt Audience of the King of *Calicut*, he found him all covered with Stones ſet in *Rings*; Bracelets and *Rings* both on the Hands and Fingers, and even the Feet and Toes. *Louis Bartome* repreſents a King of *Pegu*, as ſtill more extravagant, having *Rings* ſet with precious Stones on every Toe.

With regard to the Uſe of Rings.—The Antients had three different Kinds: The firſt ſerv'd to diſtinguiſh Conditions or Qualities. *Pliny* aſſures us, that the Senators at firſt were not allowed to wear the Gold *Ring*, unleſs they had been Ambaſſadors at ſome foreign Court. Nor was it even allowed them to wear the Gold *Ring* which was given them, in Publick; except on publick Occaſions. At other times they wore an Iron one. And thoſe who had had a Triumph, obſerved the ſame Rules.

At length the Senators and Knights were allow'd the common Uſe of the Gold *Ring*; but *Acron* on *Horace*, Lib. 2. Sat. VII obſerves, they cou'd not do it unleſs it were given them by the Prætor.

In after Days the Gold *Ring* became the Badge of the Knights; the People wearing Silver *Rings*, and the Slaves Iron ones. Tho' the Gold *Ring* was ſometimes allow'd the People, and *Severus* granted it his common Soldiers. *Auguſtus* allow'd it the *Liberti*, or Freedmen; and though *Nero* made a Regulation to the contrary, yet it was ſoon ſet aſide.

A ſecond Kind of *Rings* were the *Annuli Sponſalitii*, *Wedding Rings*. Some carry the Origin of this Cuſtom as far back as the *Hebrews*, on the Authority of a Text in *Exodus* xxxv. 22.—*Leon de Modena*, however, maintains that the antient *Hebrews* did not uſe any Nuptial *Ring*. *Selden*, in his *Uxor Ebraica*, Lib. II. Chap. 14. owns, that they gave a *Ring* in the Marriage, but that it was only in lieu of a Piece of Money of the ſame Value, which had uſed to have been given before.—The *Greeks* and *Romans* did the ſame; and from them the Chriſtians took it up very early, as appears from *Tertullian*; and in ſome antient Liturgies, where we find the Form of Bleſſing the Nuptial *Ring*. See MARRIAGE.

The third Kind of *Rings* were thoſe uſed as Seals, call'd *Cerographi*, or *Cirographi*, an Account whereof ſee under the Article SEAL.

Richard Biſhop of *Salisbury*, in his Conſtitutions, *Anno* 1217, forbids the putting of *Ruſh-rings*, or any the like Matter, on Women's Fingers; in order to the debauching of them more readily: And he inſinuates the Reaſon of his Prohibition, that there were ſome People weak enough to believe, that what was thus done in jeſt was a real Marriage.

De Bzevil in his Antiquities of *Paris*, ſays, 'twas an antient Cuſtom to uſe a *Ruſh-ring* in the Marriage of ſuch as had had an Affair together before Marriage. See CONCUBINE, *&c.*

RING, in Aſtronomy.—The *Ring* of *Saturn* is a thin, luminous Circle, incompaſſing the Body of that Planet, but without touching the ſame. See SATURN.

The Diſcovery hereof is owing to M. *Huygens*, who after frequent Obſervation of *Saturn*, perceiv'd two lucid Points, or *Anſæ*, ariſing out from the Body, in a right Line. See ANSÆ.

Hence, as in ſubſequent Obſervations, he always found the ſame Appearance, he concluded that *Saturn* was incompaſs'd with a permanent *Ring*; and accordingly produced his new Syſtem in 1659.

The Plane of the *Ring* is inclined to the Plane of the Ecliptic in an Angle of 23° 30'.—It ſometimes appears Oval; and according to *Campani*, its greateſt Diameter is double its leaſt. See PLANET.

RING, is alſo an Inſtrument uſed in Navigation, for taking the Altitudes of the Sun, *&c.* See ALTITUDE.

'Tis uſually of Braſs, about 9 Inches Diameter, ſuſpended by a little Swivel, 45° from the Point whereof is a Perforation; which is the Centre of a Quadrant of 90° divided in the inner Concave Surface.

To uſe it, they hold it up by the Swivel, and turn it to the Sun, till the Sun-Beams falling through the Hole, make a Spot among the Degrees, which is the Altitude required.

This Inſtrument is prefer'd to the *Aſtrolable* by reaſon the Diviſions are here larger than on the Aſtrolabe. See ASTROLABE.

RING-*Dial*, is a kind of Dial, uſually ſmall, and portable; conſiſting of a Braſs *Ring*, or Rim, ſeldom exceeding two Inches in Diameter, and one third of an Inch in Breadth. See DIAL.

In a Point of this Rim, is a Hole, through which the Sun-Beams being received, make a lucid Speck on the Concavity of the oppoſite Semicircle, which gives the Hour of the Day in the Diviſions mark'd therein.

But it only holds good about the Times of the Equinox.—To have the Dial perform throughout the whole Year, the Hole is made moveable; and the Signs of the Zodiac, or the Days of the Month are mark'd on the Convex Side of the *Ring*; by means whereof the Dial is rectified for the Time.

To uſe it, put the moveable Hole to the Day of the Month, or the Degree of the Zodiac the Sun is in; then ſuſpending it by the little Ring, turn it towards the Sun, till his Rays, as before, point out the Hour among the Diviſions on the Inſide.

Univerſal, or *Aſtronomical* RING-*Dial*, is a *Ring-Dial* which ſerves to find the Hour of the Day in any Part of the Earth; whereas the former is confined to a certain Latitude. See DIAL.

Its Figure ſee repreſented in *Table*, *Dialling*, *Fig.* 7.

It conſiſts of two *Rings*, or flat Circles, from two to ſix Inches in Diameter; and its Breadth, *&c.* proportionable.—The outward Ring A repreſents the Meridian of any Place you are at; and contains two Diviſions of 90° each, diametrically oppoſite to one another; ſerving, the one from the Equator to the North, the other to the South Pole.—The inner *Ring* repreſents the Equator, and turns exactly within the outer, by means of two Points in each *Ring* at the Hour of 12.

A-croſs the two Circles goes a thin Reglet or Bridge, with a Curſor C, that Slides along the middle of the Bridge. In the Curſor is a little Hole for the Sun to ſhine through.

The middle of this Bridge is conceiv'd as the Axis of the World, and the Extremities as the Poles; and on the one Side are drawn the Signs of the Zodiack, and on the other the Days of the Month. On the Edge of the Meridian ſlides a Piece, to which is fitted a Ring to ſuſpend the Inſtrument by.

Uſe of the univerſal RING-*Dial.*

Place the Line *a* (on the middle of the ſliding Piece) over the Degree of Latitude of the Place (*e. gr.* 51° for *London*) put the Line which croſſes the Hole of the Curſor to the Degree of the Sign, or Day of the Month. Open the Inſtrument ſo as the two *Rings* be at right Angles to each other, and ſuſpend it by the Ring H, that the Axis of the Dial, repreſented by the middle of the Bridge, be Parallel to the Axis of the World. Then turn the flat Side of the Bridge towards the Sun, ſo as his Rays ſtriking through the little Hole in the middle of the Curſor, fall exactly on a Line drawn round the middle of the Concave Surface of the inner *Ring*; in which Caſe the bright Spot ſhews the Hour of the Day in the ſaid Concave Surface of the *Ring*.

Note, The Hour of 12 is not ſhewn by this Dial; by reaſon the outer Circle, being then in the Plane of the Meridian, hinders the Sun's Rays from falling on the inner: Nor will this Dial ſhew the Hour when the Sun is in the Equinoctial, by reaſon his Rays, then, fall Parallel to the Plane of the inner Circle.

RING is alſo uſed for the Sound or Tone of a Bell. See BELL, SOUND, *&c.*

RING-*Bone*, among Farriers, *&c.* a hard callous Subſtance, growing in the hollow Circle of the little Paſtern of a Horſe, above the Coronet. See HORSE.

It ſometimes goes quite round, like a *Ring*; whence its Name.

It is ſometimes hereditary, derived from the Stallion, or Mare, but oftener comes by Accident, as a Strain, blow of a Horſe, *&c.*

RING-*Walk*, among Hunters, a round Walk. See HUNTING.

RING-*Worm*, in Medicine, *&c.* See TETTER.

RIOT, in Law, the forcible doing of an unlawful thing, by three or more Perſons aſſembled together for that Purpoſe.

The Word is form'd from the *Latin, riota*, of *arietare*, to run at each other as Rams do. Though, from an antient *Gauliſh* Verſion of the Bible, quoted by *Skinner*, *Riot* ſhou'd rather ſeem originally to ſignify Luxury and Exceſs; whence our *Riot* might proceed; in regard theſe are frequently attended with Quarrels.

For the Difference between a *Riot*, Rout, and unlawful Aſſembly, ſee ROUT, and UNLAWFUL *Aſſembly*.

Kitchen gives us the following Caſes of *Riots*.—*viz.* The Breach of Incloſures, Banks, Conduits, Parks, Pounds, Barns, the burning of Stacks of Corn, *&c.* *Lambard* adds, the beating a Man, and entering on a Poſſeſſion forcibly.

By a late Act of Parliament, made on occaſion of the frequent pulling down of Meeting-Houſes, *&c.* by Mobs, or Riotous Aſſemblies, about the time of the laſt Rebellion; a *Riot* was made Felony, if the *Rioters* did not diſperſe after reading a Proclamation made for that Purpoſe.

RIPENERS, in Medicine, a ſort of topical Remedies, call'd *Digeſtives, Maturantia*, &c. See DRAWERS, DIGESTIVES, MATURANTIA, *&c.*

RIPENING. See MATURATION and DIGESTION.

RISING, in Aſtronomy, the appearance of the Sun, a Star, or other Luminary above the Horizon, which before was hid beneath it. See HORIZON, SUN, STAR, *&c.*

By reaſon of the Refraction of the Atmoſphere, the heavenly Bodies always *riſe* before their time, *i. e.* are ſeen above the Horizon, while they really are below it. See REFRACTION.

There are three *Poetical* Kinds of *Riſing* of the Stars.—The *Coſmical Riſing*, when a Star riſes at the ſame time with the Sun. See COSMICAL.

Acronycal Riſing is when the Star riſes at the ſame time that the Sun ſets. See ACRONYCAL.

Heliacal, Solar, or *Apparent Riſing*, is when the Star emerges out of the Sun's Rays near the Horizon, and is no longer hid in his Brightneſs; which happens about 20 Days after the Conjunction of ſuch Star with the Sun; more or leſs, according to the Magnitude of the Star, its Diſtance, *&c.*

Heſiod long ago obſerv'd, that *Sirius* was hid 40 Days; *viz.* 20 Days before his *Coſmical Riſing*, and 20 after.—Some Nations of *America*, and among others the Savages of *Cayenna*, regulate their Civil Year by the Courſe of *Sirius*; beginning it with the *heliacal Riſing* of that Star.

To find the Riſing, &c. of the Sun and Stars by the Globe. See GLOBE.

RISIBILITY, the Faculty of Laughing. See LAUGHING.

Riſibility is commonly ſuppoſed an Attribute peculiar to Man; as being the only Creature capable of judging of what is ridiculous.—Some Philoſophers go ſo far as to aſſert, that the Degree of Judgment is always ſeen in that of Laughter; Fools either have too little or too much.

Authors do not agree as to the peculiar Mechaniſm in Man, whereby Laughter is rais'd,—'Tis uſually attributed to the Communication between the *Plexus Nervoſus*, and the *Diaphragmatic Nerves*. See CONSENT *of Parts*.

RISK, RISQUE, the Hazard or Chance of a Loſs, Damage, *&c.* See CHANCE.

There is a great *Risk* run in letting Goods go upon Credit to great Lords, Wives not authorized by their Husbands, and young People not yet arrived at the Age of Majority.

Skinner derives the Word from the *Spaniſh, Riſco*, ſteep: *Covarruvias*, from *rigeo*. In the barbarous *Greek*, they ſay, ῥιζικευω, for *Periclitor*, I hazard; and ῥιζικον, for Lot, Chance; which Words, as well as *Riſque*, *Skinner* thinks, may be deduced from ῥιπτω, for ἀναῤῥιπτω τον κυβον, to caſt the Dice.

To prevent any *Risk* in Invoices of Merchandizes by Sea, 'tis uſual to inſure them. See POLICY *of Inſurance*.

The *Risk* of Merchandizes commences from the Time they are carried aboard.—In Matters of Inſurance, 'tis a Maxim, that all is never to be *risk'd* on one Bottom, or in the ſame Veſſel; to denote, that Aſſurers muſt act with Diſcretion in the ſigning of Policies, and not hazard too much on each Veſſel; there being more to be expected from ſeveral than from one.

RISUS. See LAUGHTER.

Riſus ſardonius, ſardonian Laughter is a forced, ſpightful Laughter; or a Laughter that does not go beyond the Teeth.—The Phraſe is founded on this, that in *Sardinia* there is a venomous Plant, which occaſions ſuch a Contraction of the Muſcles of the Face in Perſons it kills, that they ſeem to dye Laughing.

Riſus Caninus is a kind of Laughter wherein the Lips are contracted, ſo as to ſhow all the Teeth.

RITE, in the School Divinity, the particular Manner or Form of celebrating or performing the Religious Ceremonies, which obtains in this or that Place. See CEREMONY.

The *Eaſtern* People, *Armenians*, &c. celebrate Divine Service according to the *Greek Rite*.—The *Weſtern* World follow the *Latin Rite*; or that of the *Roman* Church.

The *Engliſh* obſerve the *Rite* of the Church of *England*, preſcribed in the Book of Common-Prayer, *&c.* See RITUAL.

RITORNELLO, or REFRECT, in Muſick, the Burthen of a Song, or a Repetition of the firſt Verſes of the Song, at the end of each Stanza or Couplet. See REPETITION.

The Word is *Italian*, and ſignifies properly a *little Return*, or a ſhort Repetition, ſuch as that of an Eccho; or of the laſt Words of a Song; eſpecially when the Repetition is made after a Voice by one or more Inſtruments.

But Cuſtom has extended the uſe of the Word to all Symphonies, play'd before the Voices begin, and which ſerve by way of Prelude or Introduction to what follows.

In the Partitions or Score of the *Italian* Muſick, we frequently find the *Ritornello*'s ſignified by the Words *ſi ſuona*; to ſhew that the Organ, Spinet, or the like, are to repeat what the Voice has been ſinging. See REPEAT.

RITUAL, a Church-Book, directing the Order and Manner of the Ceremonies to be obſerv'd in celebrating Divine Service, in a particular Church, Dioceſe, Religious Order, or the like. See RITE.

The antient Heathens had, likewiſe, their *Rituals*; call'd *Rituales Libri*; whereof thoſe of the *Hetrurians* were famed.

Theſe Books contain'd the Rites and Ceremonies to be obſerv'd in the building a City, in the conſecrating a Temple or an Altar, in Sacrificing, Deifying, in dividing the *Curiæ*, Tribes, Centuries, and in general, all their Religious Ceremonies. See SACRIFICE, APOTHEOSIS, ALTAR, *&c.*

There are ſeveral Paſſages in *Cato*'s Books, *De re ruſtica*, which may give us ſome Idea of the *Rituals* of the Antients.

RIVAL, RIVALIS, a Term of Relation, applied to two Perſons who have the ſame Pretenſions. See CORRIVAL.

'Tis properly uſed for a Competitor in Love; and figuratively for an Antagoniſt in any other Purſuit.—The Intriegues of Comedies and Romances uſually turn on the Jealouſies of *Rivals*, who diſpute for the ſame Miſtreſs.

The Lawyers derive the Word from the *Latin, Rivus*, Stream, *quod ab eodem rivo aquam hauriant*. *Donatus* ſuppoſes it to have taken its Name hence, that Beaſts coming to drink at the ſame Brook, or Fountain, frequently quarrel.

Cælius ſays, that *Rivales* were originally ſuch whoſe Fields were parted by a Brook or Rivulet; the Courſe whereof being liable to be varied ſeveral Ways, occaſions frequent Diſputes and Law-Suits.

RIVAGE, a Toll antiently paid to the King in ſome Rivers, for the Paſſage of Boats therein. See FERRY.

RIVER, FLUVIUS, FLUMEN, in Geography, a Stream or Current of freſh Water, flowing in a Bed or Channel, from a Source or Spring, into the Sea. See WATER, *&c.*

If the Stream be not large enough to bear Boats, or ſmall Veſſels, loaden; it is properly call'd in *Engliſh*, by the Diminutive, *Rivulet*, or *Brook*; by the *Latins, Rivus*; and the *French, Riviere*.—If it will only bear ſuch Veſſels, the *Latins* call it *Amnis*.—If it be conſiderable enough to carry larger Veſſels, 'tis call'd by the general Name *River*; by the *Latins, Fluvius*, and *Flumen*; and by the *French, Fleuve*.—In all which, the Difference is only as to greater and leſs.

Some will have none to be properly *Rivers*, except thoſe which bear the ſame Name from their Source to their Mouth.—Others, none but thoſe which empty themſelves immediately into the Sea; and not into any other River. See SEA.

Rivulets have their Riſe, ſometimes, from great Rains, or great Quantities of thaw'd Snow; eſpecially in mountainous Places; as in the long Ridges in *Africa, India, Sumatra*, &c. But the generality of *Rivulets* ariſe from *Springs*. See SPRING.

Rivers themſelves all ariſe either from the Confluence of ſeveral *Rivulets*, or from Lakes: Nor is there any great *River*, ſuch as the *Rhine, Elbe*, &c. known to flow from a ſingle Spring.—The *Volga, e. gr.* conſiſts of above two hundred *Rivulets*, all flowing into it, before it reach the *Caſpian*: And the *Danube* receives as many. *Pliny*, indeed, and *Cardan*, ſay, that the *Nile* receives none; but the later Travellers into *Abaſſia* aſſure us of the contrary.

The *Rhine, Rhoan, Danube, Boryſthenis*, &c. ariſe originally from Springs in the Mountains; the *Nile, Volga*, the great *River* of St. *Laurence*, &c. from Lakes. See LAKE.

Phænomena and Kinds of RIVERS.

Rivers are found ſubject to great Alterations, at different Seaſons of the Year, Day, *&c.* from frequent Rains, and melted Snow.—Thus in *Peru* and *Chili* many of the *Rivers* are almoſt inſenſible in the Night-time; and only flow by Day; as being then augmented by the Reſolution of the Snow on the Mountains, *Andes*.—Thus the *Volga* abounds in Water in *May* and *June*; ſo as to cover the Sand-Banks, *&c.* which all the reſt of the Year lie bare, ſo as ſcarce to allow a Paſſage to the loaden Ships.—Thus alſo the *Nile, Ganges, Indus*, &c. are frequently ſo increas'd as to overflow; and that either in the Winter, from Rain, or in the Summer, from the melting of the Snow.

Some *Rivers* bury themſelves under Ground in the middle of their Courſe, and break out again in other Places, like new *Rivers*.—Thus the *Niger*, which ſome Coſmographers derive by a ſubterraneous Channel from the *Nile*, becauſe it ſwells at the ſame time with the *Nile* without any other apparent Cauſe of its

its ſwelling: The *Niger* it ſelf meeting the Mountains of *Nubia*, is hid under them, and riſes again on the Weſtern Side of the Mountains. Thus alſo the *Tygris* is loſt in the Mountain *Taurus*, &c.

Ariſtotle, and the Poets, mention ſeveral ſuch *Rivers* about *Arcadia*: *Alpheus*, a *River* of *Arcadia*, is particularly famed.—This, being ſwallowed up in the Ground, is ſuppoſed by the *Greek* Authors to continue its Progreſs under Earth and Sea, into *Sicily*; where breaking up near *Syracuſe*, it forms the *River Arethuſa*. The great Reaſon of this Opinion is, that every fifth Summer the *River Arethuſa* in *Sicily*, caſts up the Dung of Cattel about the time of the Celebration of the Olympic Games, in *Achaia*, when the Dung of Victims was uſed to be caſt into the *Alpheus*.

Some *Rivers* empty themſelves into the Sea by one Mouth, ſome by ſeveral,—Thus the *Danube* opens into the *Euxine* Sea by ſeven Mouths, the *Nile* by ſeven, and the *Volga* by at leaſt ſeventy. The Cauſe of this variety of Mouths *Varenius* attributes principally to Banks of Sand, *&c.* form'd therein; which gradually increaſing, form Iſlands, whereby the Channel is divided into ſeveral Branches.—Indeed, the Antients tell us that the *Nile* formerly only emptied it ſelf at one Mouth, call'd the *Oſtium Canobicum*; and add, that the other ſix are Artificial.

The Channels of *Rivers*, except ſuch as were form'd at the Creation, *Varenius* endeavours to prove to be all Artificial, and dug by Men.—His Reaſons are, that when a new Spring breaks forth, the Water does not make it ſelf a Channel, but ſpreads over the adjacent Land; ſo that the People have been neceſſitated to cut it a Channel to ſecure their Grounds; and that a great Number of Channels of *Rivers* are certainly known, from Hiſtory, to have been dug by Men, *&c.*

As to the Queſtion, whether thoſe *Rivers* which run into others, have made themſelves that way by their own Motion, or have been turn'd thither in Canals cut by Men? He takes the latter to be the more probable; and concludes the ſame of the Arms or Branches of *Rivers*; and of the Turns whereby Iſlands are form'd in the *Tanais*, *Volga*, &c.

To the Queſtion, why we have no *Salt-Rivers*, when as there are many Salt Springs? He anſwers, that 'tis becauſe Men having no Occaſion for Salt Water, have not dug Channels to conduct the Water of Salt Springs; Salt being procurable at leſs expence. See SALT.

The Water of moſt *Rivers* flows impregnated with Particles of Metals, Minerals, Sands, oily and fat Bodies, *&c.*—Thus ſome *Rivers* bring Sands intermix'd with Grains of Gold; of which Kind is, 1°. a *River* in *Japon*; a ſecond in the Iſlands *Lequeo*, near *Japon*; 3°. a *Rivulet* in *Africa*, call'd *Arroe*, breaking out of the Roots of the Mountains of the Moon, wherein are Gold Mines: 4°. a *River* in *Guinea*, where the Negroes ſeparate the Gold Duſt from the Sand, and ſell it to the *Europeans*, who Traffick hither for that very purpoſe. 5°. In ſome *Rivulets* near the City of *Mexico*, are Grains of Gold taken up: eſpecially after Rain; which is to be underſtood of all the other *Rivers*; none of which yield any thing conſiderable, except in rainy Seaſons. 6°. In *Peru*, *Sumatra*, *Cuba*, *Hiſpaniola*, and *Guiana*. Laſtly, there are ſeveral Brooks in the Countries about the *Alps*, eſpecially *Tirol*, out of whoſe Waters Gold is drawn, though there be no Grains conſpicuous therein. Add to this, that the *Rhine* in many Places brings a Golden Mud. See GOLD.

As to *Rivers* that bring Grains of Silver, Iron, Copper, Lead, *&c.* we find no mention of them in Authors; though doubtleſs there are great Numbers of each; and many of the medicinal Effects of mineral Waters are doubtleſs owing thereto.

We muſt not here omit a *River* in *Germany*, which is ordinarily ſuppoſed to change Iron into Copper.—The Truth is, there is no real Converſion of the Metal; all that is done is, that the Copper, and Vitriolic Particles in the Water, corrode the Iron, and detaching Parts thereof, by means of the Motion of the Water ſucceed in their room.

From this variety in the Mixture of the *River Water*, reſult various Qualities, different ſpecific Gravities, different Colours, *&c.* See *Mineral*-WATER.

Some *Rivers*, at certain Seaſons of the Year, ſwell, ſo as to overflow their Banks, and drown the neighbouring Lands.—Of theſe the moſt eminent is the *Nile*, which riſes ſo as to cover all *Egypt*, except the Hills. The Inundation begins about the 17th Day of *June*, and increaſes for the ſpace of forty Days; and decreaſes for as many: During which Period the Cities of *Egypt*, which are all built on Hills, appear as ſo many Iſlands.

To theſe Inundations *Egypt* owes all its Fertility; the Heavens there affording no Rain, or at leaſt none in any reſpect conſiderable.—Hence as the Inundation is great or ſmall, *Egypt*, for that Year is fruitful or barren.

The Antient *Greeks*, &c. were miſtaken as to the Cauſe of this Inundation; no body in thoſe Days having travelled up to its Source: But the modern *Engliſh* and *Portugueze* Traders into *Congo*, *Angola*, *Monomotapa*, &c. have let us into the Secret.—From them we learn that the Spring or Source of the *Nile* is in a large Lake call'd *Zaire*, round which are a great Number of huge Mountains, call'd the Mountains of the Moon. Now as theſe lie in the Southern Hemiſphere, their Winter will be at the time of our Summer: But by reaſon of their nearneſs to the Equator, (being only 10° diſtant from it) they never feel any notable Cold: Hence it is, that inſtead of Snow in the Winter, they have Rain every Day, at leaſt two Hours before, and two after Noon. In effect, the Tops of theſe Mountains are always cover'd with Clouds, and the Rains almoſt continual. Hence Torrents are conſtantly guſhing down from the Mountains; all ending in the Lake of *Zaire*; whence they flow into the Channel of the *Nile*, and other *Rivers* ariſing from the ſame Lake, as the *Cuama*, *Zaire*, &c. Hence the Inundation of the *Nile*.

The other *Rivers*, which have any notable ſtated Inundations, are; the *Niger*, which overflows at the ſame Time with the *Nile*. *Leo Africanus* ſays, it begins on the 15th Day of *June*, increaſes for 40 Days, and decreaſes as long.—The *Zaire*, a *River* of *Congo*, proceeding from the ſame Lake with the *Nile*, and therefore affected in the ſame Manner: The *Rio de la Plata* of *Braſil*, which *Maffeus* obſerves, overflows at the ſame time with the *Nile*: The *Ganges*: The *Indus*; both which laſt overflow in *June*, *July*, and *Auguſt*; at which Times the Natives ſave great Quantities of the Water in Ponds, to ſerve them the reſt of the Year: Several *Rivers* flowing out of the Lake *Chiamay*, into the Bay of *Bengal*, which overflow in *September*, *October*, and *November*. Theſe all bring a very great Fertility with them to the Ground: The *River Macoa* in *Camboia*: The *River Parana*, or *Paranaguaſa*, which ſome will have to be the ſame with the Silver *River*: Several *Rivers* in *Coromandelia*, a Part of *India*, overflowing in the rainy Months from the great Quantity of Water iſſuing off the Mountain *Gatis*: The *Euphrates*, which overflows *Meſopotamia*, certain Days in the Year. Laſtly, the *River Sus* in *Numidia*.

The *Rivers* moſt celebrated for their Length, Breadth, Swiftneſs of Current, *&c.* are,—The *Nile*, which runs almoſt in a ſtraight Courſe 2520 Geographical Miles. The *Niger*, which runs 2400 Miles. The *Ganges*, 1200 Miles. The *Ob*, 1600 Miles. The *Jeniſcea* in *Aſia*, about the ſame Length with the *Ob*. The *River Orellana* in *America*, 60 Miles broad at its Mouth, and 5000 Miles long. The *Rio de la Plata*, 80 Miles broad at the Mouth. The *Omarranan*, another *River* of *Braſil*: And the great *River* of St. *Laurence*, near 2500 Miles long.

RIVER, in Phyſicks, a Water running by its own Gravity, in a Channel open above.—Such is AE *Tab. Hydroſtaticks*, *Fig.* 34.

Laws of the Motion of RIVERS.

The modern Philoſophers endeavour to bring the Motion and Flux of *Rivers* to preciſe Laws; and with this View have applied Geometry and Mechanicks thereto: So that the Doctrine of *Rivers* is become a Part of the new Philoſophy.

The *Italian* Authors have diſtinguiſhed themſelves herein, and 'tis chiefly to them we are indebted for the Improvement; particularly S. *Guglielmini*, who in his Treatiſe, *Della Natura de' Fiumi*, has abundance of new Obſervations and Diſcoveries relating thereto.

Rivers, he obſerves, uſually have their Sources in Mountains or Elevations of Ground; and 'tis in their Deſcent from theſe, that they acquire the Velocity or Acceleration which maintains their future Current.—In Proportion as they advance further, this Velocity diminiſhes; by reaſon of the continual Friction of the Water againſt the Bottom and Sides of the Channel, of the various Obſtacles they meet withal in their Progreſs; and of their arriving at length in Plains, where the Deſcent is leſs, and their Inclination to the Horizon, of conſequence, greater.—Thus the *Reno*, a *River* of *Italy*, which gave Occaſion in ſome Meaſure to theſe Speculations, is found near its Mouth, to have ſcarce a Deſcent of 52 Seconds.

If the acquired Velocity be quite ſpent through the many Obſtacles; ſo that the Current becomes horizontal; there will then nothing remain to propagate the Motion, and continue the Stream, but the Height, or the perpendicular Preſſure of the Water which is always Proportional to the Heighth.—And, happily for us, this Reſource increaſes as the Occaſion for it increaſes: For in Proportion as the Water loſes of the Velocity acquired by the Deſcent, it riſes and augments in Depth.

The upper Parts of the Water of a *River*, and thoſe at a Diſtance from the Banks, may continue to flow from the ſingle Cauſe or Principle of Declivity, how ſmall ſoever it be; for not being detain'd by any Obſtacle, the minuteſt Difference of Level will have its Effect: But the lower Parts, which roll along the Bottom, will ſcarce be ſenſible of ſo ſmall a Declivity, and will only have what Motion they receive from the Preſſion of the ſuperincumbent Waters.

The natural Viſcidity and Coheſion of the Particles of Water, and that Implication, as it were, which they ſeem to have with one another, makes the lower, which are moved by means of the Depth, carry along with them the upper, which in a horizontal Channel wou'd have no Motion at all, or in a Channel very little inclined, next to none. So that the lower, in this Caſe, communicate to the upper, a Part of the Motion they have receiv'd from it. Hence it frequently happens that the greateſt Velocity of a *River* is about the middle of its Depth; ſuch middle

Parts having the Advantage of being preſs'd with half the Depth of the *River*, and of being free, at the ſame Time, from the Friction of the Bottom.

To find whether the Water of a *River* almoſt Horizontal, flows by means of the Velocity acquired in it Deſcent, or by the Preſſure of its Depth; ſet up an Obſtacle Perpendicular thereto; and if the Water riſe and ſwell immediately againſt ſuch Obſtacle, it runs in Virtue of its fall; or if it ſtop a little while, in Virtue of its Preſſion.

Rivers, according to this Author, almoſt always make their own Beds.—If the Bottom have originally been a large Declivity; the Water in Conſequence hereof falling with a great deal of Force, will have ſwept away the moſt elevated Parts of the Soil, and carrying them lower down, will gradually make the Bottom horizontal; where the Stream is ſwifteſt, there will the Earth be moſt dug up, and conſequently there the greateſt Cavity will be made.

The Water having made its Bed horizontal, becomes ſo it ſelf, and conſequently rakes with the leſs Force againſt the Bottom; till at length that Force is only equal to the Reſiſtance of the Bottom. The Bottom is now arrived at a State of Permanency, at leaſt for a conſiderable Time; and the longer, according to the Quality of the Soil; Clay and Chalk reſiſting longer than Sand or Mud.

On the other Hand, the Water is continually gnawing and eating off the Brims of its Channel; and this with the more Force as by the Direction of its Stream it ſtrikes more perpendicularly againſt them. By this means it has a continual Tendency to render them parallel to its own Courſe; and when it has arrived as near that as poſſible, it ceaſes to have any Effect in that Way. At the ſame time that it has thus rectified its Edges, it has inlarged its own Bed; that is, has loſt of its Heigth, and conſequently of its Force and Preſſure: This it continues to do till there is an Equilibrium between the Force of the Water and the Reſiſtance of its Banks, upon which they will remain fix'd.—And it is evident from Experience, that theſe Equilibriums are all real; inaſmuch as we find that *Rivers* only dig and widen to a certain Pitch.

The very reverſe of all theſe things does alſo happen.—*Rivers* whoſe Waters are thick and muddy, raiſe their Bed by letting Part of the heterogeneous Matters contain'd in them fall to the Bottom: They alſo contract their Banks by a continual Appoſition of the ſame Matter in bruſhing over them. This Matter being thrown aſide far from the Stream of Water, might even ſerve, by reaſon of the obſcureneſs of the Motion, to form new Banks.

Now, theſe oppoſite Effects almoſt always ſeem to meet together, and are differently combined, according to the Circumſtances; whence 'tis very difficult judging of the Reſult. Yet muſt this Combination be known very accurately, e're any Meaſures can be taken about *Rivers*, eſpecially as to the diverting their Courſes.—The *Lamona*, which emptied it ſelf into the *Po*, being turn'd another Way to make it diſcharge it ſelf into the *Adriatic*, was ſo alter'd, and its Force ſo far diminiſh'd, now that its Waters were left to themſelves, that it rais'd its Bed a great Heighth, by continual Depoſitions of Mud; 'till it became much higher than the *Po*, in its utmoſt Accretions, and needed very high Banks or Dykes to keep it from overflowing. See ALLUVION.

A little *River* may be receiv'd into a large one, without either augmenting its Width or Depth.—This ſeeming Paradox ariſes hence, that the Addition of the little *River* may only go to move the Waters before at reſt near the Banks of the large one, and thus augment the Velocity of the Stream, in the ſame Proportion as it does that of the Quantity of Water.—Thus the *Venetian* Branch of the *Po* ſwallowed up the *Ferrareſe* Branch, and that of *Panaro*, without any inlargement of its own Dimenſions. And the ſame may be concluded proportionably of all other Acceſſions to *Rivers*; and in the general, of all new Augmentations of Water.

A *River* offering to enter into another, either perpendicularly, or in an oppoſite Direction, will be diverted by Degrees from that Direction, and obliged to make it ſelf a new and more favourable Bed next the Mouth.

The Union of two *Rivers* into one, makes it flow the ſwifter, by reaſon in lieu of the Friction of four Shores, they have only two to ſurmount; and that the Stream being further diſtant from the Banks, goes on with the leſs Interruption; beſide that a greater Quantity of Water moving with a greater Velocity digs deeper in the Bed, and of Courſe retrenches of its former Width.—Hence alſo it is that *Rivers*, by being united, take up leſs Space on the Surface of the Earth are more advantageous to low Grounds; which diſcharge their ſuperfluous Moiſture into them, and have leſs Occaſion for Dykes to prevent their overflowing.

Theſe Advantages are ſo conſiderable, that S. *Guglielmini* thinks them worthy of Nature's having had a View to them in her contriving to make the Confluence of *Rivers* ſo frequent as we find it.

To determine more preciſely the general Laws of the Motion of *Rivers*, it may be obſerved that a *River* is ſaid to remain in the *ſame State*, or to be in a *permanent State*, when it flows uniformly, ſo as to be always at the ſame Heighth in the ſame Place. 2°. That a Plane, which cutting a *River* is perpendicular to the Bottom, as *p o n g*, is call'd the *Section of a River*.

Hence, when a *River* is terminated by flat Sides, parallel to each other, and perpendicular to the Horizon, and the Bottom alſo is a Plane, either horizontal, or inclined, the Section of the *River* with theſe three Planes makes Right Angles, and is a Parallelogram.

Now in every *River* that is in a permanent State, the ſame Quantity of Water flows in the ſame Time through every Section; for unleſs there be in every Place as great a Supply of Water, as what runs from it, the *River* will not remain in the ſame State. This will hold good, whatever be the Irregularity of the Bed, or Channel, from which in another reſpect ſeveral Changes in the Motion of the *River* may ariſe: For Example, a greater Friction, in Proportion to the Inequality of the Channel.

The Irregularities in the Motion of a *River* may be infinitely varied, nor can any Rules be given to ſettle them. All Irregularities muſt be ſet aſide; and only the general Tenor or Flux be conſidered to examine the general Courſe of *Rivers*.

Suppoſe, then, the Water to run in a regular Channel, without any ſenſible Friction, and that the Channel is terminated with Plane Sides, parallel to one another, and Vertical; and alſo that the Bottom is a Plane, and inclined to the Horizon.—Let AE be the Channel, into which the Water runs from a greater Receptacle or Head; and let the Water always remain in the ſame Heighth at the Head, ſo that the *River* may be in a permanent State: The Water here deſcends along an inclined Plane, and is accelerated; whereby, becauſe the ſame Quantity of Water flows through every Section, the Heighth of the Water, as you recede from the Head of the *River*, is continually diminiſhed, and its Surface will acquire the Figure, *i q v*.

To determine the Velocity of the Water in different Places; ſuppoſe the hollow of the Channel ADCB to be ſhut up with a Plane; if there be an Hole made in the Plane, the Water will ſpout the faſter through the Hole, as the Hole is more diſtant from the Surface of the Water HI; and the Water will have the ſame Celerity that a Body falling from the Surface of the Water to the Depth of the Hole below it, would acquire: All which ariſes from the Preſſure of the ſuperincumbent Water.—There is the ſame Preſſure, that is, the ſame moving Force, when the Obſtacle at AC is taken away, upon which every Particle of Water enters into the Channel with the Celerity a Body would acquire in falling from the Surface of the Water to the Depth of that Particle. This Particle is moved along in an inclined Plane in the Channel, with an accelerated Motion; and that in the ſame manner, as if in falling vertically, it had continued its Motion to the ſame Depth below the Surface of the Water in the Head of the *River*.

So, if you draw the horizontal Line *i t*, the Particle at *r* will have the ſame Celerity as a Body falling the length *i* C, and running down C*r*, can acquire; which is the Celerity acquired by the Body in falling down *t r*. Therefore the Celerity of a Particle may be every where meaſured, by drawing from it a Perpendicular to the horizontal Plane, which is conceived to run along the Surface of the Water in the Head of the *River*; and the Velocity which a Body acquires in falling down that Perpendicular, will be the Celerity of the Particle; which is greater, the longer the Perpendicular is. From any Point, as *r*, draw RS perpendicular to the Bottom of the *River*, this will meaſure the Heighth or Depth of the *River*. Since *r s* is inclined to the Horizon, if from the ſeveral Points of that Line, you draw Perpendiculars to *i t*, they will be ſhorter, the more diſtant they are from *r*, and the ſhorteſt of them alſo will be *ſ v*: Therefore the Celerities of the Particles in the Line *r s*, are ſo much the leſs, the nearer they are to the Surface of the *River*, and the lower Water is moved faſter than the upper Water.

Yet the Celerities of thoſe Waters, as the *River* runs on, continually approach nearer and nearer to an Equality: For the Squares of thoſe Celerities are as *r t* to *s v*, the Difference of which Lines, as you recede from the Head of the *River* is continually leſſened, becauſe of the Heighth *r s*, which is alſo continually diminiſhed as the Lines themſelves are lengthened. Now as this obtains in the Squares, it will much more obtain in the Celerities themſelves, whoſe Difference therefore is diminiſhed as they increaſe.

If the Inclination of the Bottom be changed up to the Head of the *River*, ſo as to become *y z*, and a greater Quantity of Water flow into the Channel, it will be higher every where in the *River*, but the Celerity of the Water will not be changed.—For this Celerity does not depend on the Heighth of the Water in the *River*, but, on the Diſtance of the moved Particle from the horizontal Plane of the Surface at the Head continued over the ſaid Particle; which Diſtance is meaſured by the Perpendicular *r t*, or *ſ v*; but theſe Lines, are not changed by the Afflux of Water, provided the Water remain at the ſame Heighth in the Baſon or Head.

Suppoſe the upper Part of the Channel ſtop'd by an Obſtacle, as X, which deſcends a little way below the Surface of the Water; here, the whole Water which comes cannot run through, therefore it muſt riſe: But the Celerity of the Water below this Cataract is not increaſed; and the Water that comes on, is continually

nually heaped up, ſo that at laſt it muſt riſe ſo as to flow over the Obſtacle, or the Banks of the *River*. If the Banks be raiſed, and the Obſtacle be continued; the Heighth of the Water would riſe above the Line *i t*; but before that, the Celerity of the Water cannot be increaſed: In which Caſe the Heighth of all the Water in the Head will be increaſed; for, as we ſuppoſe the *River* in a permanent State, there muſt continually be as great a a Supply of Water to the Head, as there runs from it down the Channel; but if leſs Water runs down, the Heighth muſt neceſſarily be increaſed in the Head, till the Celerity of the Water flowing under the Obſtacle be increaſed to ſuch Degree, that the ſame Quantity of Water ſhall run under the Obſtacle, as uſed to run in the open Channel before.

RIVULET, a Diminutive of *River*. See RIVER.

RIXDOLLAR, a Silver Coin, ſtruck in ſeveral States and free Cities of *Germany*; as alſo in *Flanders*, *Poland*, *Denmark*, *Sweden*, &c. See COIN.

There is but very little Difference between the *Rixdollar* and the *Doller*, another Silver Coin ſtruck in *Germany*; each being equal to the *French* Crown of three Livres, the *Spaniſh* Piece of Eight, or 4*s*. 6*d*. *Sterling*. See CROWN, *&c.*

The *Rixdollar* is one of the moſt Currant and univerſal Coins in the World.—'Tis uſed equally in the Commerce of the *Levant*, the *North*, *Muſcovy*, and the *Eaſt-Indies*.

ROAD, VIA, an open Way or Paſſage, which makes a commodious Communication between one Place and another. See WAY.

The *Romans*, of all other People, took the moſt pains in their *Roads*: The Labour and Expences they were at to render them ſpacious, ſtraight, ſmooth, and agreeable to the very Extremities of their Empire, are incredible. See *Bergier*'s Hiſtory of the great *Roads* of the *Roman* Empire.

Uſually, they ſtrengthened the Ground by ramming it, laying it with Flints, Pebbles, or Sand; ſometimes by a Lining of Maſonry, Rubbiſh, Bricks, Potſherds, *&c.* bound together with Lime.

F. *Meneſtriers* obſerves, that in ſome Places in the *Lyonnois* he has found huge Cluſters of Flints cemented with Lime, reaching 10 or 12 Foot deep, and making a Maſs as hard and compact as Marble it ſelf; and which, after reſiſting the Injuries of Time for 1600 Years, is ſtill ſcarce penetrable by all the Force of Hammers, Mattocks, *&c.* and yet the Flints it conſiſts of don't exceed the bigneſs of an Egg.

Sometimes they even paved their *Roads* regularly, with large, ſquare Free-Stones; ſuch is the *Appian* and *Flaminian Way*, &c. See PAVING.

The *Roads* paved of very hard Stones they uſually call'd *Viæ Ferreæ*, either becauſe they reſembled Iron, or becauſe they reſiſted the Iron of the Horſe's Feet, Chariots, *&c.*

Roads are either *Natural*, or *Artificial*; *Terreſtrial*, or *Aquatic*, *Publick*, or *Private*.

A *natural Road* is that which has been frequented for a long ſucceſſion of Time, and ſubſiſts with little Expence, by reaſon of its Diſpoſition, *&c.*

Artificial Road is that made by Labour of the Hand, either of Earth, or Maſonry; and wherein there were ſeveral Difficulties to be ſurmounted: Such are moſt of thoſe along the Banks of Rivers, through Marſhes, Lakes, *&c.*

Terreſtrial, or *Land Roads*, are not only thoſe made upon the Ground, but alſo thoſe form'd of Earth heaped up in Manner of a Bank, and ſuſtained by Spurs, Buttreſſes, and Counter-Forts.

Aquatic Road, is a *Road* made in the Waters, whether Currant, as over Rivers, *&c.* or Stagnant, as Banks and Cauſeways over Moraſſes, Ponds, *&c.* See CAUSEWAY.

Under this Denomination are alſo comprehended navigable Rivers, and artificial Canals; as thoſe in *Italy*, *Holland*, &c.

Publick Road, or *Grand Road*, is any common *Road*, whether ſtraight, or a-croſs, Military or Royal, *&c.*—*Private Road* is that made for the Convenience of ſome particular Houſe, *&c.*

Military ROADS, ſo call'd among the *Romans*, were grand *Roads* appointed for the marching of their Armies into the Provinces of the Empire, or for the Aſſiſtance of their Allies. See MILITARY.

The principal of theſe *Roads* in *England*, are *Watling-ſtreet*, *Ikenild-ſtreet*, *Foſs-way*, and *Erminage-ſtreet*; which ſee under the Article WAY.

Double-ROADS, among the *Romans*, were *Roads* for Chariots, *&c.* having two Pavements, or Cauſeways; the one for thoſe going one way, the other for thoſe returning the other; to prevent claſhing, ſtopping, and confuſion.

Theſe two Ways were ſeparated from each other by a Bank raiſed in the Middle, paved with Bricks, for the Convenience of Foot-People, with Borders, mounting Stones from Space to Space, and military Columns to mark the Diſtance.—Such was the *Road* from *Rome* to *Oſtia*; call'd *Via Portuentis*. See MILIARY.

Subterraneous-ROAD, is that dug in a Rock, with the Chiſſel, *&c.* and left vaulted.—Such is that of *Puzzuoli* near *Naples*, which is near half a League long, fifteen Foot broad, and as many high. See SUBTERRANEOUS.

Strabo ſays it was made by one *Cocceius*, a Relation, probably, of *Nerva*'s; but it has ſince been widened by *Alphonſus* King of *Arragon* and *Naples*, and made ſtraight by the Viceroys.—There is another of the ſame Kind in the ſame Kingdom, between *Baiæ* and *Cumæ*, call'd the *Grotto of Virgil*, becauſe mentioned by the Poet in the ſixth Book of his *Æneid*. See GROTTO.

ROAD, in Navigation, a Place of Anchorage, at ſome Diſtance from Shore, and ſhelter'd from the Winds; where Veſſels uſually moor, to wait for a Wind or Tide proper to carry them into Harbour, or to ſet Sail. See HARBOUR, MOORING, ANCHOR, *&c.*

When the Bottom is clear of Rocks, and the Hold firm, and the Place well cover'd from a certain Wind; the *Road* is ſaid to be good.

A wild ROAD, among Sailors, is one which has but a little Land on any Side.

The *Roads* within his Majeſty's Dominions are free to all Merchant Veſſels, either of his Subjects or Allies.—Captains and Maſters of Ships who are forced by Storms, *&c.* to cut their Cables, and leave their Anchors in the *Roads*, are obliged to fix up Marks or Buoys, on Pain of a Forfeiture of their Anchors, *&c.* See BUOY.

The Maſters of Ships coming to Moor in a *Road*, muſt caſt Anchor at ſuch Diſtance as that the Cables, *&c.* mayn't mix, on Pain of anſwering the Damages: When there are ſeveral Veſſels in the ſame *Road*, the outermoſt to the Sea-ward, is obliged to keep a Light in his Lanthorn in the Night-time, to apprize Veſſels coming in from Sea.

ROADER, among Sailors, a Ship that Rides at Anchor in a Road. See ROAD and ANCHOR.

ROB, in Pharmacy, a Preparation antiently much uſed, conſiſting of the Juices of Fruits, purified, and boil'd to a Conſumption of two thirds of their Moiſture. See MEDICINE, *&c.*

There are *Robs* made of Quinces, Mulberries, Elderberries, Aloes, Acacia, Liquorice, Barberries, Gooſeberries, and other Fruits, for variour Diſeaſes.—The Juice of Grapes thus prepared, is particularly call'd *Sapa*; which *Sapa* is almoſt of the Conſiſtence of a Syrup. See SAPA.

When only one third of the Humidity is boil'd away, 'tis call'd *Defrutum*; and when only boil'd to the Conſiſtence of a ſoft Electuary, a *Reſin*. See DEFRUTUM and RESIN.

The Word *Rob* is pure *Arabick*; and ſignifies, originally, a Juice dried in the Sun, or over the Fire; that it may keep the longer without Damage.

Sometimes it alſo denotes a Compoſition of ſome Juice made up with Honey or Sugar; in which Senſe it is confounded with *Loche* or *Lohoc*. See LOHOC.

The *Rob* is a Form now much out of uſe; though there are ſeveral directed in the College Diſpenſatory; as *Robs* of black Cherries, of Sloes, of Quinces, *&c.*

ROBBERY, in Law, a felonious taking away another Man's Goods, from his Perſon, Preſence, or Eſtate, againſt his Will; putting him in Fear, *&c.*—This is ſometimes call'd *violent Theft*. See THEFT.

The Word is ſaid to have taken its riſe hence, that antiently *Robbers* only took away the Robes or Cloaths from Travellers. Though my Lord *Coke* in the third of his *Inſtitutes*, takes the Name to have had its riſe from *Robin Hood*, who lived under *Richard* I. in the Borders of *England* and *Scotland*, by *Robbery*, burning Houſes, Rape, and Spoil.

Hence alſo *Robers-Men*, or *Roberds-Men*, mentioned in ſeveral Statues for mighty Thieves.

ROBE, a Gown or Garment wore by Lawyers, Divines, and other Graduates; who are hence call'd *Gentlemen of the long Robe*. See GOWN.

The *Robe* is an ample Garment bore over the ordinary Cloaths, hanging down to the Feet.—'Tis faſhion'd differently for Eccleſiaſticks, and for Laymen.

At *Rome*, they gave the Name *Virile Robe*, *Toga Virilis*, to a plain kind of Gown which their Youth aſſumed when arrived at Puberty. This, they particularly denominated, *Prætexta*. See TOGA, PRÆTEXTA, VIRILE, PUBERTY, *&c.*

In ſome Univerſities, Phyſicians wear the red *Robe*.—In the *Sorbonne* the Doctors are always in *Robes* and Caps. Beadles, *&c.* wear *Robes* of two Colours.

Among the *French* Officers, *&c.* they diſtinguiſh thoſe of the *ſhort Robe*; which are ſuch as have not been regularly examined. —They have alſo Barbers of the *ſhort Robe*, who are ſuch as are obliged to Practice in an inferiour Way to thoſe of the long *Robe*.

ROBE, is alſo taken in the general for, Civil Magiſtrature, or the Profeſſion oppoſite to that of Arms. See MAGISTRATE.

In this Senſe it was that *Cicero* ſaid, *Cedant Arma Togæ*.

Maſter of the ROBES, is an Officer of the Houſhold, who has the ordering of all his Majeſty's *Robes*; as thoſe of the Coronation, thoſe of St. *George*'s Feaſt, of Parliament, *&c.* as alſo of his wearing Apparel, Collar of SS's, *&c.*

He has ſeveral Officers under him, as a *Clerk of the Robes*, a Yeoman, three Grooms, a Page, a Bruſher, Sempſtreſs, Laundreſs, Starcher; a Keeper of the Wardrobe at *Whitehall*, &c. See WARDROBE.

ROBERVALLIAN *Lines*, a Name given to certain Lines, uſed for the Tranſformation of Figures; thus call'd from their Inventor M. *de Roberval*. See TRANSFORMATION, *&c.*

The

The Abbot *Galloys*, in the Memoirs of the *French* Academy, *An.* 1693. obſerves, that the Method of transforming Figures, explain'd at the latter end of M. *de Roberval's Treatiſe of Indiviſibles*, is the ſame with that ſince publiſhed by Mr. *James Gregory*, in his *Univerſal Geometry*; and that, by a Letter of *Torricelli's*, it appears that *Roberval* had invented this manner of transforming Figures, by means of certain Lines which *Torricelli* called *Robervallian Lines*.

He adds, that 'tis highly probable that *J. Gregory* firſt learned the Method in the Journey he made to *Padua* in 1668; the Method it ſelf having been known in *Italy* from the Year 1646; though the Book was not publiſhed till the Year 1692.

This Account Dr. *David Gregory* has endeavour'd to refute, in Vindication of his Brother.—His Anſwer is inſerted in the *Phil. Tranſact. An.* 1694. and the Abbot has rejoin'd in the *French* Memoirs of the Academy, *An.* 1703.

ROBIGALIA, or RUBIGALIA, in Antiquity. See RUBIGALIA.

ROBORANTIA, in Medicine, *Strengtheners*; or ſuch Medicines as ſtrengthen the Parts, and give new Vigour to the Conſtitution. See STRENGTHENER.

ROCAMBOLES, a mild, pleaſing Sort of Garlick, by ſome call'd *Spaniſh* Garlick; being much of the Nature of Shalot; and well known in Cookery, in Quality of a Sauce.

ROCHET, a Lawn Garment, wore by Biſhops and Abbots; reſembling a Surplice, except in this, that the Sleeves are gathered at the Wriſt; whereas the Surplice is quite open. See SURPLICE.

The Regular Canons of St. *Auguſtin* do alſo wear *Rochets* under their Copes.—*Menage* derives the Word from the *Latin Rochettus*, a Diminutive of *Rocchus*, uſed in the Writers of the lower *Latin* for *Tunica*, and formed originally from the *German*, *Rock*.

ROCHETS are alſo the Mantles wore on Days of Ceremony, by the Peers ſitting in the *Engliſh* Parliament. See PEER and PARLIAMENT.

Thoſe of Viſcounts have two Bands or Borders and a half; thoſe of Earls three; thoſe of Marquiſſes three and a half; and thoſe of Dukes four. *Larrey*.

ROCK, RUPES, a large Maſs or Block of hard Stone, rooted in the Ground. See STONE.

There are various Ways of breaking *Rocks* with Wood, Gunpowder, *&c.* See QUARRY, WOOD, *&c.*

We have Roads, Grotto's, Labyrinths, *&c.* dug through *Rocks*. See ROAD, GROTTO, LABYRINTH, *&c.*

The Word is form'd of the *Greek* ῥῶξ, *Rima*, Cleft, Chink; and ῥῶξ from ῥηγνυμι, I break; whence ῥαχια, a ſtony River.

ROCK-*Work*, ROCAILLE. See SHELL-*Work*.

ROCK-*Cryſtal*, or *Cryſtal of the Rock*, is that form'd by a Congelation of the lapidific Juices which trickle down in *Rocks* and Caverns. See CRYSTAL.

ROCK-*Alumn*, ROCK-*Salt*, } See { ALUMN. SALT.

ROCKET, in Pyrotechnia, an artificial Fire-work, conſiſting of a cylindrical Caſe of Paper, filled with a Compoſition of certain combuſtible Ingredients; which being tied to a Stick, mounts in the Air to a conſiderable Heighth, and there burſts. See PYROTECHNIA and FIRE-WORKS.

The *Rocket* has a great Part in all Fire-Works of Entertainment, being not only uſed ſingly, but ſometimes, alſo, as an Ingredient in others.

Beſides the *Rocket* here defined, which is properly call'd the *Sky-Rocket*, there is another, which from the Sphere it moves in, the Water, is denominated *Water-Rocket*.—The Mechaniſm, Preparation, *&c.* of each whereof, we ſhall here deſcribe.

*Method of making a Sky-*ROCKET.

1°. A Concave cylindrical Mould, or Frame, AB, *Tab. Miſcellany, Fig.* 7. is turn'd, of hard Wood, with a Baſe BD, and a Capital HC, uſually adorned with architectonical Mouldings.—The Cylinder is to be open at both Ends, and its Dimenſions, for *Rockets* of various Sizes, as in the following Article.—When large, they are ſometimes alſo made of Braſs or Tin; and when ſmall, of Bone.

2°. Of the ſame Matter with the Cylinder, is prepared a Quadra, or Foot E; in the middle whereof is turn'd a Hemiſphere G, conſiderably leſs than that of the Cavity of the Frame; making the Cap or Head of another Cylinder IK, and reaching up within the Caſe; where 'tis kept ſteady by a Pin LM.

Authors don't agree about the Proportions.—*Semionowitz* preſcribes thoſe that follow. If the Diameter of the Aperture HN be equal to that of a Leaden-Ball of a Pound, or at moſt two Pound Weight; the Heighth of the Cylinder, with the Baſe and Capital HC, are to be ſeven Diameters of the Heighth of the Quadra FE $1\frac{1}{3}$. The Altitude of the Cylinder KI, 1. The Diameter IN $\frac{2}{3}$. The Diameter of the Hemiſphere G, $\frac{2}{3}$. The Heighth of the Capital AC, 1.—The ſame Author adds, that he finds by abundant Experience, that if the Diameter of the Aperture be divided into 100 Parts, according to the different Weight of the Leaden-Balls to whoſe Diameter 'tis equal, the following Numbers being multiplied by 7 give the Heighth HE.

Weight of Leaden-Ball.	Subſeptuple of Altitude HE.	Weight of Leaden-Ball.	Subſeptuple of Altitude HE.
1	100	20	86
2	98	30	82
4	26	40	78
6	94	50	75
10	91	70	67
15	88	100	57

The Frame being ready, a wooden Cylinder or Mould AB (*Fig.* 8.) is provided, whoſe Diameter is $\frac{3}{4}$ of the Aperture of the Frame, and its Length equal to the Heighth of the ſame; to which is a-fix'd a Haft or Hilt AD. About this Mould is a thick ſtrong Paper roll'd, 'till ſuch time as it fill the Cavity of the Frame. This done, where the Haft is join'd to the Cylinder, as at A, 'tis *choak'd*, i. e. firmly bound round with fine Pack-thread, ſo as to conſtringe or ſtraighten the Cavity thereof.—The Part thus *choak'd* or bound up FG, (*Fig.* 9.) to be equal to the Hemiſphere G.

The Caſe is now taken off the Mould, and put into the Cavity of the Frame, *Fig.* 7. the *Choak* GP upon the Hemiſphere; and in this Diſpoſition is fill'd with a Compoſition deſcribed in the following Article, ramm'd ſtrongly in by means of a wooden Cylinder or Rammer fitting the Cavity, and a Mallet.

When fill'd, a Paper Cap of a conical Form is glued over the End of the Caſe fill'd laſt; and the Space left a-top fill'd with whole Gun-powder, to the Heighth of about one Diameter; then the *Rocket* bound, or choak'd in E, as before in G.

Laſtly, the *Rocket* is bored, as is repreſented in *a*L *Fig.* 9. care being taken to do it in the middle.—Some, indeed, bore the *Rocket* as they fill it, by thruſting a long, ſharp Spike through the lower Baſis, and drawing it out again when the *Rocket* is full: But 'tis beſt not to bore till the *Rocket* be to be uſed.

The boring is to go two thirds of the Heighth of the *Rocket*, abating one Diameter of the Cavity. The Diameter of the Bore in G is to be $\frac{1}{4}$ of the Diameter of the Cylinder; and in L $\frac{1}{3}$ of the lower Diameter.

To make the *Rocket* mount ſtraight up, it is tied faſt to the End of a long ſlender Stick, MN, eight times as long as the *Rocket*; in ſuch manner as that when poiz'd on the Finger near the Touch-hole F, the Stick (which is uſually made biggeſt at this End, and ſloping gently to the other) may preponderate, tho' very little.—The *Rocket* thus equip'd, is hung at freedom, and lighted with Port-Fire.

Note, Some inſtead of a Stick to make the *Rocket* mount, furniſh it with two Wings, as MN, (*Fig.* 10.) which have the ſame Effect: And inſtead of Paper ſome make the Caſes of Wood, cover'd with Leather; others of a thin Iron Plate. And ſome, inſtead of a wooden Stick uſe an Iron Wire, with a Plummet at the end of it.

The Compoſition wherewith *Rockets* are fill'd, conſiſts of the three following Ingredients, *viz.* Salt-petre, Charcoal, and Sulphur; all well ground: But the Proportions of theſe are various for *Rockets* of various Sizes; as in the following Table. Noting, that in ſmall *Rockets* Gun-powder Duſt is added.

Compoſitions for ROCKETS *of various Sizes.*

Weight of Rocket.	Salt-pet.	Sul-phur.	Char-coal.	Gun-powder Duſt.
lb	lb	lb	lb	
100, or 60	30	10	20	
50 30	30	7	18

3	2	$\frac{1}{2}$	$1\frac{1}{2}$	12
1			2	15

Note, ſeveral *Rockets* being diſpoſed round the Circumference of a Wheel, whether Circular or Polygonous, the Head of the one applied to the Tail of another, and the Wheel put in Motion; as one *Rocket* is ſpent another will take Fire: And the Wheel be continued in its Rotation.

As an additional Ornament to *Rockets*, 'tis uſual to furniſh them either with Stars or with Serpents, or Sparks, which take Fire when the *Rocket* burſts: And ſometimes little *Rockets* are incloſed

in

in great ones, to take Fire when the great one is at its greateſt Heighth.

To make Stars for ROCKETS.

Mix 3 Pound of Salt-petre, with 11 Ounces of Sulphur, 3 Ounces of beaten Gun-powder, and 10 of Antimony. Moiſten the Maſs with Gum-Water, and form it into little Balls of the Size of Filberds; drying them well, either in the Sun or an Oven. When dry incloſe a Number of them in the Conical Cap of the *Rocket*.

*Method of making a Water-*ROCKET.

Make a *Rocket* AB after the uſual Manner, excepting in the Number of *Chooks*, expreſs'd in *Fig.* 11.—Let its Diameter be equal to that of a Leaden-Ball of two or three Inches Diameter, and let it be bored to a third Part of its Heighth. Incloſe the *Rocket* in a hollow Paper Cylinder; which ſmear over with melted Pitch or Wax, that it may reſiſt the Moiſture.

Note, The Weight of the *Rocket* is to be ſo proportioned to that of the Water, that the whole Cylinder may be immerg'd.—Some inſtead of a Cylinder uſe a truncated Cone, or even a Spheroid; and ſome hang a Weight to the End at which 'tis lighted.

*Theory of the Flight of Sky-*ROCKETS.

Mariotte takes the riſe of *Rockets* to be owing to the Impulſe or Reſiſtance of the Air againſt the Flame: Dr. *Deſaguliers* accounts for it otherwiſe.

Conceive the *Rocket* to have no vent at the Choak, and to be ſet on Fire in the conical Bore; the conſequence wou'd be, either that the *Rocket* wou'd burſt in the weakeſt Place, or that, if all its Parts were equally ſtrong and able to ſuſtain the Impulſe of the Flame, the *Rocket* would burn out immoveable.—Now, as the Force of the Flame is equable, ſuppoſe its Action downwards, or that upwards ſufficient to lift 40 Pounds. As theſe Forces are equal, but their Directions contrary, they will deſtroy each other's Action. See ACTION and REACTION.

Imagine, then, the *Rocket* open'd at the Choak; by this means the Action of the Flame downwards is taken away, and there remains a Force equal to 40 Pounds acting upwards, to carry up the *Rocket*, and the Stick it is tied to.—Accordingly, we find that if the Compoſition of the *Rocket* be very weak, ſo as not to give an Impulſe greater than the Weight of the *Rocket* and Stick, it does not riſe at all: Or if the Compoſition be ſlow, ſo that a ſmall Part of it only kindles at firſt, the *Rocket* will not riſe.

The Stick ſerves to keep it perpendicular: For if the *Rocket* ſhould begin to tumble, moving round a Point in the Choak, as being the common Centre of Gravity of *Rocket* and Stick, there wou'd be ſo much Friction againſt the Air, by the Stick between the Centre and the Point, and the Point wou'd beat againſt the Air with ſo much Velocity, that the Reaction of the Medium wou'd reſtore it to its perpendicularity.

When the Compoſition is burnt out, and the Impulſe upwards is ceas'd, the common Centre of Gravity is brought lower, towards the middle of the Stick; by which means the Velocity of the Point of the Stick is decreaſed, and that of the Point of the *Rocket* increas'd: So that the whole will tumble down, with the *Rocket*-end foremoſt.

All the while a *Rocket* burns, the common Centre of Gravity is ſhifting and getting downwards, and ſtill the faſter and the lower as the Stick is the lighter: So that it ſometimes begins to tumble, e're it be burn'd out: But, when the Stick being a little too heavy, the Weight of the *Rocket* bears a leſs Proportion to that of the Stick, the common Centre of Gravity will not get ſo low, but that the *Rocket* will riſe ſtrait, though not ſo faſt.

ROD, VIRGA, VERGE, a Wand, or long ſlender Stick or Staff. See VERGE, STAFF, *&c.*

ROD, is alſo a Land-Meaſure of 16 Foot ½, the ſame with *Perch* and *Pole*. See PERCH and POLE.

ROD, in Gauging. See GAUGING-*Rod.*

ROD-*Knights*, in antient Cuſtoms. See REDMANS.

*Black-*ROD. See BLACK-*Rod.*

ROE, of a Fiſh, is that Part which contains the Sperm or Seed thereof. See FISH, SEED, *&c.*

That of Male-Fiſhes is uſually diſtinguiſhed by *ſoft Roe*, or *Milt*; that of the Female by *hard Roe*.

The ſoft *Roe* when ſqueez'd, yields a Liquor reſembling *Milk*; whence its Name *Milt*: The *French* call it expreſly *Milk*, *laite*. See MILT.

That of Carps is eſteemed an excellent Food.—M. *Leewenhoeck* upon examining the Milt of a Cod-Fiſh with a Microſcope, found it contain'd more living *Animalcules* than there are Men in the whole Earth. See EGG, ANIMALCULE, MICROSCOPE, *&c.*

ROE, one of the Beaſts of Chaſe. See BEAST and GAME.

ROE-*Buck*. See HUNTING.

ROE-*Buck*, a Beaſt of Chace or Foreſt. See BEAST, GAME, *&c.*

The *Roe-Buck* is called an *Hind* the firſt Year; *Gyrle* the ſecond; *Henuſe* the third; *Roe-Buck* of the *firſt Head* the fourth; and a *fair Roe-Buck* the fifth.

The *Roe-Buck* is a Deer well known in *Germany*; and ſeems to have alſo been formerly known in *England*, though now the Race be extinct. See HUNTING.

ROGA, in Antiquity, Donatives, or Preſents which the *Auguſti* or Emperors made to the Senators, Magiſtrates, and even the People; and the Popes or Patriarchs to their Clergy. See DONATIVE.

The Emperors uſed to diſtribute theſe *Roga* on the firſt Day of the Year, or on their Birth Day; or on the *Natalis Dies* of the Cities.—The Popes and Patriarchs in Paſſion Week.

This Cuſtom of *Roga*, or Largeſſes, was firſt introduced by the Tribunes of the People, to gain the Populace more effectually over to their Intereſt. The Emperors at length took it up, and made ſuch Diſtributions to the People, and even the Soldiery, call'd by the *Greek* Writers in the middle Age ΡΟΓΑΤΟΡΕΣ.

Rogum is alſo found uſed for the ordinary Pay of the Soldiery.

The Word is derived by ſome from the *Latin erogare*, to give, diſtribute; according to others from *rogo*, I ask; hence, ſay they, it is that St. *Gregory* the Great calls ſuch Diſtributions *Precaria*; as being to be demanded, in order to be had. See PRECARIÆ.

Others, again, derive it from the *Greek* ρογος, Corn; becauſe it antiently conſiſted in Corn diſtributed among the Populace, the Soldiery, *&c.*

ROGATIO, in the *Roman* Juriſprudence, a Demand made by the Conſuls, or the Tribunes, of the *Roman* People, when a Law was propoſed to be paſs'd. See LAW.

The Demand was made in theſe Terms; *Do you will and appoint that* (for Inſtance) *War be declared againſt* Philip? This was the *Rogatio*; and what the People return'd in anſwer, as, *The* Roman *People do appoint War to be made againſt* Philip, was the *Decretum*, *Decree*.

However, the Word *Rogatio* is frequently uſed for the Decree it ſelf; to diſtinguiſh it from a Decree of the Senate. See DECREE.

Frequently, alſo, *Rogation* is uſed in the ſame Senſe with *Law*; becauſe there never was any Law eſtabliſhed among the *Romans*, but what was done by this kind of *Rogation*.—Otherwiſe it had been null. See LAW.

ROGATION-*Week*, the Week immediately preceding *Whitſunday*; thus call'd from three Faſts therein, *viz.* on the *Monday*, *Tueſday*, and *Wedneſday*, call'd *Rogations*, or *Rogation Days*, becauſe of the extraordinary Prayers and Proceſſions then made for the Fruits of the Earth. See PROCESSION.

The firſt who appointed theſe *Rogations* was St. *Mammercus*, Biſhop of *Vienna*, who in 474 aſſembled ſeveral Biſhops, to implore the Mercy of God by a Faſt of three Days; on occaſion of an Incurſion then made upon the Country by a great Number of wild Beaſts.—Others ſay, 'twas firſt ſet on Foot by *Mammercus* in 468, on occaſion of ſome publick Calamities.

ROGUE, in Law, an idle and ſturdy Beggar; who for the firſt Offence is called *a Rogue of the firſt Degree*; and puniſh'd by whipping, and boring through the Griſtle of the Right Ear with a hot Iron, an Inch in Compaſs: And for the ſecond Offence is call'd a *Rogue of the ſecond Degree*, and put to Death as a Felon, if he be above eighteen Years of Age. See FELON, *&c.*

ROLL, in the Manufactories, ſomething wound or folded in a Circle. See ROLLING.

Few Stuffs are made up in *Rolls*, but Satins, Gawſes, and Crapes, which are apt to break, and take Plaits not eaſy to be got out if folded otherwiſe.—Ribbonds, however, and Laces, Galloons, and Padua's of all Kinds, are thus *roll'd*.

To Roll hot.—By an Arret of Council in 1698, Fullers, Shearmen, *&c.* in *Poictou*, are prohibited to *Roll* any Stuff *hot*, either by having Fire over or under it, or by heating the *Rollers*, or otherwiſe, on Forfeiture of 100 Livres for the firſt Offence; or of being degraded from the Privileges of Maſterſhip in Caſe of a Relapſe.

The Antients made all their Books up in Form of *Rolls*, or little Columns; and in *Cicero's* Time, the Libraries conſiſted wholly of ſuch *Rolls*.—The dearneſs of Parchment, and the cheapneſs of Paper, whereof the *Rolls* were made, were the Reaſon that ſcarce any but Paper *Rolls* were uſed. See PAPER, PARCHMENT, *&c.*

Voſſius ſays, they paſted ſeveral Sheets end to end, when fill'd on one Side, and *roll'd* them up together; beginning with the laſt, which they call'd *Umbilicus*, and to which they faſtened an Ivory or boxen Stick, to ſuſtain the *Roll*.—To the other Extremity they paſted a Piece of Parchment, to cover and preſerve it. See VOLUME, UMBILICUS, *&c.*

Theſe *Rolls* were placed in the Libraries, perpendicularly, to the Horizon.—The *Jews* ſtill preſerve the antient uſage of *Rolls* for the Books they read in their Synagogues. See BOOK-BINDING.

ROLL *of Tobacco*, is Tobacco in the Leaf, twiſted on the Mill, and wound Twiſt over Twiſt, about a Stick or *Roller*.

The generality of Tobacco in *America* is there ſold in *Rolls*, of various Weights: And 'tis not till after its Arrival in *England*, *Spain*,

Spain, *France*, and *Holland*, that it is cut.—*Roll* Tobacco is what is uſed both for chewing and raſping. See TOBACCO.

ROLL, *in Law*, a Schedule of Paper or Parchment, which may be wound up by the Hand into the faſhion of a Pipe. See SCHEDULE, *&c.*

Of theſe there are in the Exchequer ſeveral Kinds, *viz.* the great *Wardrobe-Roll*, the *Cofferer's-Roll*, the *Subſidy-Roll*, &c. See PIPE, *&c.*

The Word is form'd from the *Latin Ratulus*, or *Rotulus*, becauſe moſt Inſtruments and Expeditions in Law were antiently wrote on Papers, or Parchments ſew'd or glued together: Whence the Words *enroll*, *controll*. See ENROLL, CONTROLL, *&c.*

ROLLS *of Parliament*, are the Manuſcript Regiſters or *Rolls* of the Proceedings of our antient Parliaments. See PARLIAMENT, REGISTER, *&c.*

Before the uſe of Printing, and till the Reign of *Henry* VII. our Statutes were all engroſſed in Parchment, (and by virtue of the King's Writ for that purpoſe) proclaimed openly in every County. See ACT.

In theſe *Rolls* we have a great many Deciſions of difficult Points of Law, which were frequently in former Times referr'd to the Deciſion of that high Court. See STATUTE, COMMON-LAW, *&c.*

Rider-ROLL, a Schedule, or ſmall Piece of Parchment, frequently ſew'd or added to ſome Part of a *Roll*, or Record.

Noy obſerves that the Court *ex officio*, may award a *certiorari ad Informandam Conſcientiam*; and that which is certified ſhall be annex'd to the Record, and call'd a *Rider-Roll*.

ROLL, in the Cuſtoms, is a Liſt of the Names of ſeveral Perſons of the ſame Condition, or enter'd in the ſame Engagement.—Thus,

Court Roll, in a Mannor, is that wherein the Names, Rents, and Services of each Tenant are copied and enrolled. See COURT, MANOR, TENANT, RENT, SERVICE, *&c.*

Muſter-Roll, that wherein are enter'd the Soldiers of every Troop, Company, Regiment, *&c.* See MUSTER.

As ſoon as a Soldier's Name is wrote down on the *Roll*, 'tis Death for him to deſert. See DESERTION.

Calves-Head-ROLL, is a *Roll* in the two Temples, wherein every Bencher is tax'd yearly at 2*s.* every Barriſter at 1*s.* 6*d.* and every Gentleman under the Bar, at 1*s.* to the Cook, and other Officers of the Houſe, in Conſideration of a Dinner of Calves-Heads, provided in *Eaſter* Term. See TEMPLE.

Ragman's-ROLL, or *Ragimund's*-ROLL, is a *Roll* denominated from *Ragimund* a Legate in *Scotland*, who calling before him all the People who held Benefices in that Kingdom, cauſed them upon Oath to give in the Value of their Eſtates; according to which they were afterwards tax'd in the Court of *Rome*.

ROLLS, or *Office of the Rolls*, in *Chancery-Lane*, *London*, is an Office appointed for the Cuſtody of the *Rolls* and Records in Chancery. See CHANCERY, RECORD, *&c.*

The *Maſter* of this Office is the ſecond Perſon in that Court; and in the Abſence of the Lord Chancellor, ſits as Judge. See MASTER *of the Rolls*.

This Houſe or Office was antiently call'd *Domus Converſorum*; as being appointed by King *Henry* III. for the uſe of converted *Jews*; but their Irregularities occaſioned King *Edward* III. to expell them thence; upon which the Place was deputed for the Cuſtody of the *Rolls*. See CONVERSORUM.

A ROLL *of Parchment*, is the Quantity of ſixty Skins. See PARCHMENT.

ROLL, in Antiquity.—From the Time of *Anaſtaſius*, we find in the Hands of the Emperors, on Medals, a kind of narrow long *Roll*, or Sachell, the meaning whereof has puzled the Antiquaries.

Some imagine it to be a *Roll* or Bundle of Papers, Memoirs, Petitions, *&c.* preſented occaſionally to Princes and Conſuls.—Others take it to be a plaited Handkerchief, which the Perſons who preſided at the Games, caſt forth as a Signal for their beginning.—Others will have it a Bag of Duſt and Aſhes, preſented the Emperor at the Ceremony of his Coronation, and call'd AKAKIA, *q. d.* a Means of preſerving Innocence, by the remembrance of Duſt, *&c.* See ACACIA.

ROLL, or ROLLER, is alſo a Piece of Wood, of a cylindrical Form, uſed in the Conſtruction of ſeveral Machines, and in ſeveral Works and Manufactures; though ſometimes under other Names. See ROLLING, CYLINDER, *&c.*

'Tis on ſuch *Rolls* that the Woollen, Silken, and other Threads are wound, whereof the Weaver's Works conſiſt.—For which end each Loom has uſually two, that of the Gawſe-Weavers, three. See LOOM.

In the Glaſs Manufacture they have a *running Roll*, being a thick Cylinder of caſt Braſs, ſerving to conduct the melted Glaſs to the end of the Table whereon large Looking-Glaſſes, *&c.* are to be caſt. See GLASS-WORK.

The Founders uſe a *Roller* to work the Sand which they uſe in making their Moulds. See FOUNDERY.

The Preſſes call'd Calenders, as ſerving to Calender Stuffs withal, conſiſt, among other eſſential Parts, of two *Rollers*. See CALENDER.

'Tis alſo between two *Rollers* that the Waves are given to Silks, Mohairs, and other Stuffs proper to be tabied. See TABBY.

Prints, or Impreſſions from Copper-Plates, are alſo taken by paſſing the Plate and the Paper between two *Rollers*. See PRINT, and ROLLING-*Preſs-Printing*.

ROLLS, in Coining, are two Iron Inſtruments of a cylindrical Figure, which ſerve to draw or ſtretch out the Plates of Gold, Silver, and other Metal; whereof the Planks or Pieces are to be form'd for the Species. See COINING.

ROLLS, in Printing, are two large Cylinders or Barrels of Wood, faſtened in the middle of what they call the Cradle or Gallows of the Preſs; and which by means of a Cord, or Girt, paſſing over each, and a Handle, which gives Motion to one of them, draws the Carriage of the Preſs backwards and forwards. See PRINTING.

ROLLS, in the Sugar-Works, are two large Iron Barrels which ſerve to bruiſe the Canes, and expreſs the Juice.

They are caſt hollow, and their Cavities fill'd up with Wood; the Cylinders of which are properly the *Rollers*. See SUGAR-*Works*.

ROLLS, or ROLLERS, among Carpenters, Maſons, *&c.* are plain Cylinders of Wood, ſeven or eight Inches in Diameter, and three or four Foot long; uſed for the removing of Beams, huge Stones, and other like Burthens, which are cumberſome, but not exceeding heavy.

Theſe *Rollers* are placed ſucceſſively under the Fore-part of the Maſſives to be removed; which, at the ſame time, are puſh'd forwards by Levers, *&c.* applied behind. See LEVER.

Endleſs-ROLLS.—When Blocks of Marble, or other exceſſive heavy Loads are to be removed; they uſe what they call *Endleſs-Rolls*.

Theſe, to give them the greater Force, and prevent their burſting, are made of Wood jointed together by Croſs-Quarters, are about double the length and thickneſs of the common *Roller*; and beſides, are girt with ſeveral large Iron Hoops at each end. —At a Foot's Diſtance from the Ends are four Mortaiſes, or rather only two, but pierced through and through; into which are put the Ends of long Levers, which the Workmen draw by Ropes faſtened to the Ends; ſtill changing the Mortaiſe, as the *Roll* has made, a Quarter of a Turn.

ROLL-*Rich-Stones*, in Antiquity, a Series of huge Stones, ranged in a Circle, near *Morton in-Marſh*, in *Oxfordſhire*.

There are a World of fabulous Traditions about them.—Among the Antiquaries, ſome take them to be a Monument of a Victory; others a Burying-Place; and others a Place for the Coronation of the *Daniſh* Kings.

ROLLER. See ROLL.

ROLLING, REVOLVING, in Mechanicks, a kind of circular Motion, wherein the Moveable turns round its own Axis, or Centre, and continually applies new Parts of its Surface to the Body it moves upon. See MOTION, REVOLUTION, AXIS, *&c.*

Such is that of a Wheel, a Sphere, or the like.—Such, particularly, are the Motions of the Earth, the Planets, *&c.* See WHEEL, PLANET, EARTH, *&c.*

The Motion of *Rolling* is oppoſed to that of *Sliding*, wherein the ſame Surface is continually applied to the Plane it moves along. See SLIDING.

It muſt be noted, that in a Wheel, 'tis only the Circumference that properly *Rolls*; the reſt proceeds in a compound, angular Kind of Motion, and partly *Rolls*, partly Slides.—The not diſtinguiſhing between which two, occaſioned the difficulty of that celebrated Problem the *Rota Ariſtotelica*, *Ariſtotle's* Wheel. See ROTA *Ariſtotelica*, and ANGULAR-*Motion*.

The Friction of a Body in *rolling*, or the Reſiſtance made to it by the roughneſs of the Plane it moves on, is found to be much leſs than the Friction in Sliding. See FRICTION.

Hence the great uſe of Wheels, *Rolls*, &c. in Machines; as much of the Action as poſſible being laid thereon, to make the Reſiſtance the leſſer. See WHEEL, MACHINE, *&c.*

For the Laws of Bodies rolling *on inclined Planes*, ſee *Inclined*-PLANE, DESCENT, *&c.*

ROLLING-*Preſs-Printing*. See PRINTING.

ROMAN, ſomething belonging to the City of *Rome*.

The *Roman Commonwealth* laſted from the Expulſion of the *Tarquins*, to the Battle of *Pharſalia*, 460 Years.—The *Roman Empire*, from *Julius Cæſar* and the Battle of *Pharſalia*, to *Conſtantine*, and the taking of *Conſtantinople* by the *Turks* in 330. laſted 378 Years. See COMMONWEALTH, EMPIRE, *&c.*

A *Roman Citizen*, at firſt, was only a Citizen of *Rome*; at length the Right of Citizenſhip was given to other Cities and People, both in *Italy* and the Provinces.—'Twas thus St. *Paul* was a *Roman* Citizen, *Acts* xvi. 21. 37, 38. xxii. 25, 26, 27. xxxiii. 27. the City of *Tarſus* in *Cilicia*, a Native of which he was, having the Right of *Roman* Citizens. See CITIZEN.

For the *Roman Senate*, their *Magiſtracy*, *Conſuls*, *Soldiery*, *Tribes*, *Courts*, *Names*, *Weights*, *Meaſures*, *Coins*, and other Matters relating to the Antiquities of that People, their *Policy*, *Religion*, *Law*, *Cuſtoms*, &c. ſee the reſpective Articles in this Work.

The *Roman Purple* is the Dignity of a Cardinal. See CARDINAL.

The *Roman*, or *Romiſh Church*, that whereof the Pope is Head; in oppoſition to the reformed Churches. See CHURCH, POPE, *&c.*

The

The *Roman Law* is the Civil Law, or the written Law, as compiled by the Emperor *Juſtinian*. See CIVIL *Law*.

A *Roman Charity*, among Painters, is a Picture of a Woman ſuckling an old Man.—*Roman Knight*, &c. See KNIGHT, *&c.*

King of the Romans, in our Age, is a Prince elected, and deſign'd Succeſſor to the *German* Empire. See KING, EMPIRE, and ELECTOR.

ROMAN *Games*, *Ludi Romani*, were ſolemn Games held in antient *Rome*. See GAME.

They were thus call'd by way of Eminence, and on Account of their Antiquity; as having been inſtituted by *Romulus*.—They were alſo call'd, ſometimes, *Magni Ludi*, from the great Pomp and Expence thereof; ſometimes *Conſualia*, becauſe perform'd in Honour of the God *Neptune*, who was alſo call'd *Conſus*, in his Quality of God of ſecret Councils. See CONSUALIA.

They alſo bore the Denomination of *Ludi Circenſes*, becauſe held in the *Circus*. See CIRCENSES *Ludi*, &c.

This Solemnity, *Halicarnaſſæus* obſerves, was originally inſtituted by *Evander*, in Honour of *Neptune* under the Name of ἵππιος; whence the Feſtival it ſelf was call'd ἱππιοκρατία; and was afterwards renew'd by *Romulus* in Honour of the ſame Deity, only under another Name.

For *Romulus* needing the Advice of a God to council him in the Deſign he had to furniſh his new Citizens with Wives, applied to the God of ſecret Council himſelf, *Conſus*; proclaimed the *Conſualia*, and invited his Neighbours all a-round to the firſt Celebration thereof.—The Conſequence was, the Rape of the *Sabine* Women, who came to be Spectators thereof.

The great Ceremony in theſe Games conſiſted in the Cavalcade of Horſes and Aſſes, adorn'd with Garlands; *Neptune* being reputed the firſt Author of Horſe-riding.

Their Horſes, here, were of two Kinds, *viz.* πομπικοι, or ſuch as were merely led up and down for State; and δρομικοι, which were for Race and Exerciſe.

The other Diverſions were Fencing, and that 'till one of the Combatants were kill'd on the Spot; fighting with Beaſts, and at *Ceſtus*, or Whirlbats; Wreſtling, Running, Leaping, Sea-Fights, Horſe-Races, Chariot-Races, *&c.* See CIRCUS, GLADIATOR, *&c.*

Theſe Games, *Livy* tells us, were improved, and render'd much more magnificent by *Tarquinius Priſcus*.—*Manutius* ſays, they were held on the Eve of the Nones of *September*, i. e. on the 14th Day of the Month.

ROMAN *Order*, in Architecture, is the more uſually called the *Compoſite*. See COMPOSITE.

ROMAN *Balance*, or *Statera* ROMANA, the *Steel-Yard*. See BALANCE and STEEL-YARD.

ROMAN *Indiction*, ROMAN *Year*, &c. ROMAN *Language*, &c. } See { INDICTION. YEAR, *&c.* LATIN, *&c.*

ROMANCE, antiently ROMAUNT, and ROMANT, a fabulous Relation of certain Intriegues and Adventures in the Way of Love and Gallantry; invented to entertain and inſtruct the Readers. See FABLE, NOVEL, *&c.*

M. *Fontenelle*, calls *Romances*, Poems in Proſe; and the great *Boſſu* is not averſe to their being admitted as poetical Pieces. See POEM and POETRY.

Setting aſide the Verſification, 'tis certain an Epic Poem, and a *Romance* are almoſt the ſame thing.—The juſt Notion, therefore, of a *Romance*, is, that it is a Diſcourſe invented with Art to pleaſe and improve the Mind and to form or mend the Manners, by Inſtructions diſguis'd under the Allegory of an Action or Series of Actions, related in Proſe, in a delightful probable, yet ſurprizing Manner. See EPIC.

A juſt *Romance* conſiſts of two Parts, *viz.* a Moral, as its Foundation and End; and a Fable, or Action, as the Superſtructure and Means. See ACTION, *&c.*

It muſt have the *Manners*; that is, the Characters muſt be diſtinguiſhed, and the Manners muſt be neceſſary, and have all the other Qualities of Poetical Manners. See MANNERS.

The Incidents muſt be delightful, and to that end rightly diſpoſed and ſurprizing.—The Sentiments fall under the ſame Rules as in the Drama, See SENTIMENT.

But the Diction is allow'd to be more lofty and figurative; as being a Narration; and not having Terror or Pity, but Admiration for its End. See NARRATION, PASSION, *&c.*

As theſe Kinds of Compoſitions have a long Time been little elſe but Hiſtories of amorous Adventures, and Feats of Knight-Errantry: The Origin of *Romances* is refer'd to that of Love-Hiſtories: And accordingly *Dearchus*, a Diſciple of *Ariſtotle*, who firſt wrote of thoſe Matters, is uſually eſteemed the Author of theſe.—Though *Photius* is of Opinion that *Anthonius Diogenes*'s Book on the Errors and Amours of *Dinias* and *Deocyllis*, gave Birth to moſt of the Works of this Kind.

Be this as it will, 'tis certain the Antients have had their *Romances* as well as we.—Such are the Amours of *Rhodanis* and *Sinonides*, deſcribed in *Jambics*: Such is the *Romance* of *Leucippe* and *Clitophon*, compoſed by *Achilles Tatius*, a *Greek* Writer, afterwards a Biſhop: Such are the four Books of incredible things, wrote by *Damaſcius*: Such are the *Ethiopicks* of *Heliodorus*, wherein he relates the Amours of *Theagenes* and *Chariclea*.—Laſtly, under the ſame Claſs may be rank'd the Fables of *Parthenius*, *Nicenus*, of *Athenagoras*, *Theodorus Prodromus*, *Euſtathius*, and *Longus*.

Indeed Antiquity cou'd ſcarce be reconciled to ſuch Pieces; and always look'd on them as abuſes.—*Photius*, in his *Bibliotheca Cod.* LXXXVII. gives a frightful Account of that of *Tatius*; and the *Ethiopicks* of *Heliodorus*, though one of the modeſteſt and moſt reſerved Pieces of the Kind, met with very ſevere Treatment.—That Author was Biſhop of *Tricca* in the fourth Century. *Nicephorus* tells us, that a Synod, conſidering the Danger which might accrue to Youth from reading of his *Romance*, authoriz'd as it was by the Dignity of its Author, propoſed it to him, either to ſuppreſs his Book, or renounce his Biſhoprick; and that he choſe the latter.—But this Hiſtory is a little doubtful.

Be this as it will, *Heliodorus* has ſerv'd as a Model to all the *Romances* wrote ſince; the Marriage of *Theagenes* and *Chariclea* has produced a very numerous Iſſue; even all the *Romances* now extant in the World.

In Imitation of the Archbiſhop *Turpinus*, who paſs'd for Author of the *Romance* of the Feats of *Charlemaign* and *Orlando*, a great Number of Hiſtories of the like Kind were wrote in *France*, in the Time of *Philip the Fair*; the Authors whereof ſeem'd to improve on each other, contending who ſhould go furtheſt in the *Merveilleux*.—Theſe Books, being intended for the polite People, were wrote in the Court Language of that Age; which was call'd the *Romans*, *Romant*, or *Roman*; whence the Books themſelves were call'd by thoſe Names: And thus by Degrees *Romans*, &c. became the general Name of all Books of this Kind; whence at length our *Romance*. See ROMANS.

Others derive the Word from the *Spaniſh Romanſero*, I invent, as intimating *Romances* to be mere Fictions.—And hence it is that the antient Poets of *Provence*, who were the firſt great Dealers in *Romances*, are call'd *Troubadours*, q. d. Finders or Inventors. See TROUBADOUR.

The *French*, above all other Nations, have applied themſelves to this kind of Writing; whether it be from the natural Taſte and Genius of the People, or from the freedom, *&c.* wherewith they Converſe with the Women.—They begun chiefly with *Romances* of Chivalry; hence their *Amadis*, in 24 Volumes; *Palmerin de Oliva* of *England*, King *Arthur*, &c. whereof we have an agreeable Critique in *Don Quixot*. See CHIVALRY, *&c.*

The later are much more polite; the beſt of which are the *Aſtrea* of *D'Urfe*; the *Cyrus* and *Clelie* of Madamoiſelle *de Scuderi*; the *Caſſandra* and *Cleopatra* of *la Calprenede*; *Ariane*, *Francion*; and the Adventures of *Telemachus*, of the late Archbiſhop of *Cambray*, a Work never enough to be applauded.

The *Germans*, too, have their *Romances*; eſpecially *Hercules* and *Herculiſcus*; the *Syriaca Armena*, *Aramena*, and *Thuſnelda*, *Otbert*, &c.

The *Italians* have their *Eromena*, by *Biondi*; the Works of *Loredano*, *Marino*, &c.—The *Spaniards*, their *Diana*, and *Don Quixot*.—The *Engliſh* their *Arcadia*, &c. The *Argenis* of *Barclay* is rather a Satyr than a *Romance*. See NOVEL.

ROMAN-*Catholick-Church*. See PAPIST, RECUSANT, *&c.*

ROMANS, or ROMANT, the polite Language formerly ſpoke at the Court of *France*; in contradiſtinction to the *Walloon* ſpoke by the common People. See LANGUAGE.

The *Romans* having ſubdued the *Gauls*, inſinuated Part of their Language among them; a mixture then of half *Latin*, half *Gauliſh*, conſtituted the *Romans*; whereof the modern *French* is only an Improvement. See FRENCH.

The vulgar Language was the *Walloon*, which was the original *Gauliſh*. See GAULISH.

Hence, to *Euromance*, was to write in *Romans*, &c. See ROMANCE.

ROME-*Scot*, ROME-*Penny*, } See { PETER-*Pence*.

ROMPEE, or ROMPU, in Heraldry, is applied to Arms, or other Ordinaries, that are repreſented broken; and to Chevrons whoſe upper Points are cut: As in the adjoining Figure.—He beareth a Chevron *rompee*, between three Mullets, Or, by the Name of Sault.

RONDEL, in Fortification, a round Tower, ſometimes erected at the Foot of a Baſtion. See TOWER, BASTION, *&c.*

ROOD, a Quantity of Land, equal to the fourth Part of an Acre; and containing 40 ſquare Perches or Poles. See ACRE, PERCH, *&c.*

ROOF, in Architecture, the uppermoſt Part of a Building. See BUILDING.

The *Roof* contains the Timber-Work, and its Furniture of Slate or Tile, wherewith a Houſe is cover'd, or that which ſerves it as a Cover.—Though Carpenters uſually reſtrain *Roof* to the Timber-Work only. See COVERING and RIDGE.

The Form of the *Roof* is various; ſometimes 'tis *pointed*, in which Caſe the moſt beautiful Proportion is to have its Profile an equilateral Triangle.

Sometimes

Sometimes *Square*, that is, the Angle of the Ridge, is a Right Angle; which, therefore, is a mean Proportional between the *pointed* and

Flat-Roof, which is in the ſame Proportion as a triangular Pediment. See PEDIMENT.—This is chiefly practiced in *Italy*, and the hot Countries, where little Snow falls.

Sometimes the *Roof* is in the *Pinnacle Form*. See PINNACLE.

Sometimes it has a *double Ridge*.—Sometimes 'tis *cut*, or *mutilated*, that is, conſiſts of a *true* and a *falſe Roof*, which is laid over the former: This laſt is particularly call'd a *Manſard*, from its Inventor M. *Manſard*, a famous *French* Architect.

Sometimes 'tis in Form of a *Platform*; as in moſt of the Eaſtern Building. See PLATFORM.

Sometimes 'tis *truncated*; that is, inſtead of terminating in a Ridge or Angle, 'tis cut ſquare off at a certain Heighth, and cover'd with a Terraſs, and ſometimes incompaſſed with Balluſtrade. See TERRASS.

Sometimes 'tis in Manner of a *Dome*, that is, its Plan Square, and the Contour Circular. See DOME, CUPOLA, *&c.*

Sometimes it is *round*, that is, the Plan is Round or Oval, and the Profile a direct Deſcent.—Sometimes the Baſe being very large, 'tis cut off to diminiſh its Heighth, and cover'd with a Terraſs of Lead, rais'd a little in the middle, with Sky-Lights from Space to Space, to give Light to ſome Corridor, or other intermediate Pieces, which without ſuch an Expedient would be too dark. See HOUSE, *&c.*

ROOF-*Trees*, or RUFF-*Trees*, are the Timbers in a Ship which go from the Half-Deck to the Fore Caſtle.

The Term is alſo uſed for the upper Timbers of any Building; whence in the Northern Counties, it is common to ſignify a whole Family, by ſaying, all under ſuch a one's *Roof-Tree*.

ROOM, in Building.—See BUILDING, HOUSE, PARTITION, APARTMENT, DISTRIBUTION, CHAMBER, *&c.*

ROOMER, in the Sea Language, a Ship is ſaid to be a *Roomer*, when ſhe is larger than ordinary. See SHIP, VESSEL, *&c.*

ROOT, RADIX, in Botany, that Part of a Plant which immediately imbibes the Juices of the Earth, aud tranſmits them to the other Parts, for their Nutrition. See NUTRITION, PLANT, VEGETABLE, *&c.*

The *Root* conſiſts of woody Fibres, cover'd with a Bark, more or leſs thick.—It ariſes from a little Point in the Seed, call'd the *Radicle*. See RADICLE.

'Tis no ſmall difficulty to conceive how the *Root* ſhould always get downwards, and turn up the Stem perpendicularly; conſidering that in the ſowing of Plants the *Radicle* muſt frequently happen to be upwards, and the Plumule downwards. See SEED, SEMINATION, PERPENDICULARITY, *&c.*

'Tis always found in the Ground in terreſtrial Plants, except in a very few Caſes: The Ivy and Cuſcuta, being perhaps the only Plants where Part of the *Root* lies bare.

The *Root* in Plants has been obſerv'd to do the Office of the Stomach in Animals; that is, to make the firſt and principal Preparation of the nutritious Matter.—M. *Reneame* ſhews that the *Root* does the Office of all the Parts in the Belly of Animals deſtined for Nutrition; it being the *Root* that receives the Nouriſhment, that prepares it, digeſts it, alters and changes it into Sap, to be afterwards diſtributed to all the Parts. See SAP.

The ſmall Colour, and even Taſte, ſhew how conſiderable an Alteration the Juices undergo in the *Root*; ſo that the *Root* may be laid down as the Principle of Vegetation. See VEGETATION.

Plants growing at the Bottom of the Sea have this peculiar to them, that they have no *Roots*; at leaſt the Parts which do the Office of *Roots* have nothing of the uſual Figure thereof.—Theſe Plants are uſually faſtened to ſome ſolid Body; adhering to it by a very ſmooth poliſh'd Lamina, which does not ſend forth any Fibre. Add to this, that the Body to which they adhere, being frequently a Rock or Flint, appears very unfit to feed them, in Caſe they had *Roots*. M. *Tournefort*, therefore, conjectures that they are fed by a Juice afforded them by the thick oily Mud at the Bottom of the Sea, which they receive by the Pores of the exterior Surface of the *Lamina*.

Boerhaave obſerves, that the *Root* may have any Situation at Pleaſure, with reſpect to the Body of the Plant, nor needs to be either loweſt or higheſt.—Accordingly in Aloes, Coral, Moſſes, Fungus's, *&c.* the *Root* is frequently uppermoſt, and its Growth downwards. See CORAL, MOSS, FUNGUS, *&c.*

Roots are divided by Botaniſts into 1°. *Fibrous*, which ſend out only ſmall Strings from the Bottom of the Plant, diſtinct from each other.

2°. More *thick and groſs*, which have a Body Thick and Groſs, either branched out into Subdiviſion or Arms; or elſe ſending out Fibres from it all along.

Theſe laſt are either *Carnous*, which again are either,

1. *Broad* and Swelling, or
2. *Long* and Slender, which are commonly harder and more woody.

The Broad and Swelling are,

1. *Bulbous*, which conſiſt but of one Globe or Head, and ſend out Fibres from the Bottom, and are either,
   - *Squammoſe*, or Scaly, as *Lillies* or *Martagon*,
   - *Coated*, which are involved in Skins or Coats, as *Cepa*, *Hyacinthus*, *Allium*, &c.
2. *Tuberous*, which are of a carnous, ſolid, and continued Conſiſtence, and theſe either,
   - 1°. *Simple*, with but one Globe or Head, as *Rapa*, *Crocus*, &c.
   - 2°. *Manifold*, as *Aſphodelus*, *Pæonia*, &c.

Long *Roots* are either,

(1.) *Sarmentous*, i. e. twiggy, or branching, which ſhoot or creep out Tranſverſe or in Breadth: Of theſe ſome are *Geniculatæ*, knotty or jointy; as *Couch-Graſs*, *Mints*, &c.

(2.) *Cauliformes*, i. e. *Stemmy* or *Stalky*, which ſhoot down deep directly, though often ſending out Fibres and Strings from the great Stem; which alſo it ſelf is ſometimes divided or branching.

ROOTS, in Medicine.—The principal *Roots* uſed in the Practice of Medicine, are, *Rhubarb*, *Rhaponticum*, *Sarſaparilla*, *Ipecacuanha*, *Jalap*, *Zedoary*, *Galangal*, *Caſſumenar*, *Gentian*, *Turmeric*, *Liquorice*, *Madder*, &c. See each deſcribed under its proper Article RHUBARB, RHAPONTIC, SARSAPARILLA, IPECACUANHA, *&c.*

ROOT, in Mathematicks, a Quantity which is multiplied by it ſelf; or a Quantity conſider'd as the Baſis or Foundation of a higher Power. See QUANTITY, POWER, *&c.*

Thus if any Number, as 2, be multiplied by it ſelf, the Product 4 is called the *Square*, or *ſecond Power* of 2; and 2 it ſelf, with regard to that Power, is called the *Root*; or particularly the *ſquare Root* of 4. See SQUARE-*Root*.

Since, as Unity is to the *ſquare Root*, ſo is the *Root* to the Square; the *Root* is a mean Proportional between Unity and the Square.—Thus 1 : 2 : 4.

If a ſquare Number, as 4, be multiplied by its *Root* 2, the Product 8 is call'd the *Cube*, or third Power of 2; and with reſpect to this Cubic Number 8, the Number 2 is call'd *Root*; or particularly the *Cube-Root*. See CUBE-*Root*.

Since as Unity is to the *Root*, ſo is the *Root* to the Square; and as Unity is to the *Root*, ſo is the Square to the Cube; the *Root* will be to the Square, as the Square to the Cube, *i. e.* Unity, the Root, the Square, and the Cube, are in continual Proportion: Thus: 1 : 2 : : 4 : 8. And the *Cube-Root* is the firſt of the two mean Proportionals between Unity and the Cube.

To *extract the Root* out of a given Number, or Power, as 8, is the ſame thing as to find a Number, as 2, which being multiplied into it ſelf a certain Number of Times, *v. g.* twice, produces the given Number, as 8.

To *extract the Square* ROOT, / To *extract the Cube* ROOT, } See { EXTRACTION.

A *Root*, whether Square or Cubic, or of any higher Power; if it conſiſt of two Parts, is call'd a *Binomial Root*, or ſimply *Binomial*; as 24, or 20+4. See BINOMIAL.

If it conſiſt of three, a *Trinomial*; as 245, or 240+5: Or 200+140+5.—If of more than three, a *Multinomial*; as 2456, or 2450+6, or 2400+56, or 2000+456, or 2000+400+50+6. See MULTINOMIAL.

ROOT *of an Equation*, in Algebra, is the Value of an unknown Quantity in an Equation. See EQUATION.

Thus, if the Equation be $a^2+b^2=x^2$, the *Root* of the Equation is the Square *Root* of a, and that of b; expreſs'd thus, $\sqrt{a+b}$.

Real ROOT.—If the Value of x be *poſitive*, i. e. if x be a poſitive Quantity; *e. gr.* $x=r$. the *Root* is call'd a *real* or *true Root*. See POSITIVE.

Falſe Root.—If the Value of x be Negative, *e. gr.* $x=-5$. The *Root* is ſaid to be *falſe*. See NEGATIVE.

Imaginary Root.—If the Value of x be the *Root* of a negative Quantity, *e. gr.* $\sqrt{-5}$; 'tis ſaid to be *imaginary*.

The great uſe of Algebra is to bring Problems to Equations; then to reduce thoſe Equations, or to exhibit them in the moſt ſimple Terms. See REDUCTION.

What remains after this to the Solution of the Problems, is to extract the *Roots* of the Equations thus reduced, be they Lines or Numbers. See RESOLUTION.

Extraction of the ROOTS *of Equations*. See EXTRACTION.

ROOTS, RADICES, in Grammar, are the primitive Words of a Language, whence others are compounded or derived. See PRIMITIVE, COMPOUND, and DERIVATIVE.

Thus, the *Latin Fluo* is the *Root* of *fluctus*, *fluxio*, *flumen*, *fluſtrum*, *influxus*, *refluens*, *fluctifer*, *fluctiſonus*, *fluctivagus*, &c.—Thus alſo the *Greek* Θέω, is the *Root* of Θεος, αθεος ἐνθουσιασμὸς, &c.

And thus alſo, though in a leſs proper Senſe, the *Daniſh Iroed* is the *Root* of the *Engliſh Root*: The *Latin Radix* the *Root* of the

the *French Racine*, as *rado* is the *Root* of *Radix*; and perhaps ῥάδω the *Root* of *rado*.

The *Greek* and *Hebrew* Tongues are learnt by *Roots*.—Of Dictionaries, ſome are in Alphabetical Order, others are diſpoſed by *Roots*; as *Scapula*, and the firſt Edition of the Dictionary of the *French* Academy: In the Edition 1718, it is thrown into the uſual Alphabetical Order. See DICTIONARY.

ROPE, an Aſſemblage of ſeveral Twiſts or Strings of Hemp, twiſted together by means of a Wheel: Of various uſes, as in binding, ſtaying, drawing, ſuſpending, &c. See HEMP and CORDAGE.

When the *Rope* is made very thick, 'tis call'd a *Cable*, and when very ſmall, a *Cord*. See CABLE and CORD.

The greateſt Conſumption of *Ropes* is in Navigation, for the tackling of Ships; where, though *Ropes* include the whole Cordage. See TACKLE and SHIP.

Yet there are ſeveral *Ropes* particularly ſo denominated: As, the *entering Rope*, hung at the Ladder to help People up.—The *Top-Rope*.—A *Bolt-Rope*, wherein the Sail is ſowed.—*Buoy-Rope*, to which the Buoy of the Anchor hangs.—*Gueſt-Rope*, to tow the Long-Boat.—The *Keel-Rope*.—The *Bucket-Rope*.—*Rudder-Rope*, to ſave the Rudder if it ſhou'd chance to be beat off.—*Preventer-Rope*, to ſave the Yard in Caſe any Part of the Tyes ſhou'd be broke.—*Breaſt-Rope*, to laſh the Panels to the Maſts.—*Guy-Rope*, to keep the Foremaſt forwards, directly over the Hatchway. And *Boat-Rope*, by which the *Rope* hangs, or is faſtened a-ſtern of the Ship.

ROPE, CORD, or STRAP, in the Manage, is any of theſe tied round a Pillar to which the Horſe is faſtned when they begin to quicken and ſupple and teach him to flee from the Shambner, and not gallop faſtly or incompactly. See PILLAR.

In thoſe Manages where there is no Pillar, a Man ſtands in the Centre of the Ground, and holds the end of the *Rope*.

ROPES *of two Pillars*, are the *Ropes* or Reins of a Cavazon, uſed to a Horſe that works between two Pillars. See PILLAR.

ROPE-*Yarn*, is the Yarn of any *Rope* untwiſted. See YARN.

It commonly conſiſts of Cable-Ends, which are worn out; and are called *Junks of the Cables*.—It ſerves for many Purpoſes among the Sailors.

RORIFEROUS-*Duct*, q. d. Dew-dropping Pipe; a Name given the Thoracick Duct, from its ſlow Manner of conveying, and as it were, inſtilling, the Chyle into the common Stream of Blood. See THORACIC-*Duct*, &c.

ROS, *Dew*. See DEW.

ROS *Vitrioli*, among Chymiſts, is ſometimes uſed for the firſt Phlegm diſtill'd from Vitriol in *Balneo Mariæ*. See VITRIOL.

ROSADE, a kind of Liquor, prepared of pounded Almonds and Milk, mix'd with clarified Sugar.

ROSARY, in the *Romiſh* Church, a Chaplet, conſiſting of five or fifteen Decads or Tens of Beads, to direct the Recitation of ſo many *Ave Maria*'s, in Honour of the Virgin. See CHAPLET.

ROSARY, is alſo a particular Maſs or Form of Devotion addreſs'd to the Virgin, to which the Chaplet of that Name is accommodated. See VIRGIN.

Some attribute the Inſtitution of the *Roſary* to St. *Dominick*; but F. *d' Achery* ſhews it was in uſe in the Year 1100; ſo that St. *Dominick* cou'd only make it more celebrated.—Others attribute it to *Paulus Libycus*, and others to St. *Benedict*; others to the *Chartreux*; others to venerable *Bede*; and others to *Peter* the Hermit.

Thoſe who attribute it to St. *Dominick*, differ as to the particular Time of its Inſtitution; ſome referring it to the Year 1208, when he preach'd againſt the *Albigenſes*; others will have him to have ſet it on foot in the Courſe of his Miſſions in *Spain*, e're he paſs'd into *France*.

Order of the ROSARY, or of *our Lady of the* ROSARY, is an Order of Knights, ſuppoſed by *Schoonebeck*, and the Jeſuit *Bonanni*, to have been inſtituted by St. *Dominick*; but by Miſtake; for that Saint never inſtituted any Order under this Name; and theſe Authors apparently make a military Order of an Army of Croiſees, who under the Command of the Count *de Montfort*, fought againſt the *Albigenſes*. See CROISADE and ALBIGENSES.

The Abbot *Juſtiniani*, and M. *Hermant*, will have this Order to have been eſtabliſhed by an Archbiſhop of *Toledo*, named *Frederick*, after St. *Dominick*'s Death; and to have bore for a Badge, a black and white Croſs, in the middle whereof was repreſented our Lady, holding her little Son in one Hand, and in the other a *Roſary*.—F. *Mendo* adds, that they were obliged to rehearſe the *Roſary* on certain Days.

After all, F. *Helyot* doubts whether or no ſuch an Order ever exiſted. See ORDER.

ROSE, ROSA, a medicinal Flower, produced by a Shrub of the ſame Name; which gives the Denomination to ſeveral Preparations in Pharmacy. See FLOWER.

The Kinds of *Roſes* are various: Thoſe uſed in Medicine are the Red and Damask *Roſes*.—The *Damask* are a good and ſafe purgative, adminiſtered in infuſion, or by way of Syrup.—The *Red* are aſtringent; and the Conſerve thereof uſed with ſucceſs againſt Diſtempers of the Breaſt and Lungs, and Diſorders of the Eyes. See CONSERVE.

Sugar of ROSES, is made of Red-*Roſe* Leaves, dried in an Oven, pulverized, and put into a proper Quantity of Sugar diſſolv'd with a little Water in a Chafing-diſh, over the Fire.

'Tis a Tradition among the Antients, that the God of Love made a preſent to *Hippocrates* the God of Silence, of a beautiful *Roſe*, the firſt that had been known; to engage him not to diſcover any of the private Practices of his Mother *Venus*.—And hence it became a Cuſtom to have a *Roſe* planted in their Rooms of Mirth and Entertainment, that under the Aſſurance thereof they might be induced to lay aſide all Conſtraint, and ſpeak what they pleaſed.—Thus did the *Roſe* become a Symbol of Silence; ſo that to be *ſub roſa*, under the *Roſe*, denotes as much as to be out of danger of having any Converſation divulged.

ROSE-*Water*, a Water drawn by Diſtillation from Red or Damask-*Roſes*. See WATER.

It is a good Cordial, and was formerly highly eſteemed; but is ſince fallen from its Reputation, and is little uſed but in Diſeaſes of the Eyes, and in Perfumes and Waſhes.

'Tis, however, in great eſteem in the *Eaſt*, particularly in *China* and *Perſia*, where the Trade thereof is very conſiderable. The *Roſe* Leaves remaining at the Bottom of the Still, have the natural cathartic Quality; and are alſo kept for a Perfume.

Golden-ROSE, is a *Roſe* which the Pope bleſſes at Maſs on the firſt Sunday in *Lent*, while they ſing *Lætare Jeruſalem*; and which, after Maſs, he carries in Proceſſion; and then ſends it as a Preſent to ſome Sovereign Prince.

The *Factions of the red and white* ROSE, are famous in our *Engliſh* Hiſtories.—They had their Riſe in 1454, under *Henry* VI. between the Houſes of *York* and *Lancaſter*, and ended in *Henry* VII. who united the two Branches.—The Houſe of *Lancaſter* had for its Badge a *white Roſe*; that of *York* a *red* one. See FACTION.

ROSE-*Wood*, *Lignum Rhodium*, or *Aſpalathum*. See ASPALATHUM.

ROSE, in Architecture and Sculpture, an Ornament cut in reſemblance of a *Roſe*. See ORNAMENT.

It is chiefly uſed in Frizes, Corniches, Vaults of Churches; and particularly in the Middle of each Face of the Corinthian Abacus. See ABACUS.

And in the Spaces between the Modillions; under the Plafonds of Corniches. See MODILLION.

ROSE-*Noble*, an antient *Engliſh* Gold Coin, firſt ſtruck in the Reign of *Edward* III. and then call'd the *Penny of Gold*; ſince call'd *Roſe-Noble*, becauſe ſtamp'd with a *Roſe*. See MONEY.

It was Current at 6*s*. 8*d*. See NOBLE and COIN.

ROSEMARY, ROSMARINUS, a medicinal Plant, whoſe Flowers are of conſiderable uſe in the preſent Practice.

They are eſteem'd the principal Aromatick of our Growth.—Dr. *Quincy* ſpeaks of them as good in moſt nervous Complaints, eſpecially ſuch as ariſe from too great Moiſture and Cold, as they are hot and drying.—In Epilepſies, Apoplexies, Palſies, &c. they are rarely omitted in Preſcription, under one Form or other. See AROMATICK.

They abound with a ſubtle detergent Oil, which makes them deobſtruent and opening, whence their uſe in uterine Obſtructions, the Jaundice, &c.

They are the Baſis of the celebrated *Hungary* Water; with a ſmall Quantity of which, diluted in common Water, the Confectioners make Conſerve of *Roſemary* Flowers, Eſſence of *Roſemary*, *Roſemary*-Water, &c. See HUNGARY-*Water*.

ROSICRUCIANS. See ROSYCRUCIANS.

ROSIN, RESINA, in Pharmacy. See RESINA.

ROSIN, is particularly uſed for a reſinous Matter, prepared from the Juice of the Pine-Tree; in ordinary uſe for the making of Wax, &c.

Mr. *Bent* in the *Phil. Tranſ.* gives us the Preparation of this coarſe Drug, in the Southern Parts of *France*; thus.—The Bark being pared off the Pine, to make the Sap run down into a Hole made at Bottom to receive it; as the Juice runs it leaves a Cream or Cruſt a-top; which being temper'd with Water, is ſold, by a Cheat, for white Bee's-Wax. See WAX.

When they have got a Quantity of the Juice they ſtrain it through a Basket, and what runs through it is the common *Turpentine*. See TURPENTINE.

What ſtays behind, they mix with Water, and diſtilling it in an Alembic, the Matter that riſes is the *Oil of Turpentine*; and the Calk that remains is the common *Roſin*.

ROSOLIS, popularly, ROSA-*ſolis*, *Sun-Dew*, an agreeable ſpirituous Liquor, chiefly taken after Meals, by way of Dram, to aid Digeſtion.

'Tis compoſed of burnt Brandy, Sugar, Cinnamon, and Milk-Water, and is ſometimes perfumed with a little Musk.

It had its Name becauſe antiently prepared wholly of the Juice of the Plant *Ros ſolis*; but that Plant is no longer any Ingredient therein.

The beſt is that of *Turin*.—The *French* have a particular Kind not called *Ros ſolis*, but *du Roy*; becauſe uſed with good Effect by the late King *Lewis* XIV.—'Tis compoſed of *Spaniſh* Wine, wherein are infuſed Anis, Fennel, Aneth, Coriander, &c. for three Weeks.

ROSTING. See DRESSING, FOOD, &c.

ROSTRA, in Antiquity, a Part of the *Roman Forum*, wherein Orations, Pleadings, Funeral Harangues, &c. were deliver'd. See FORUM.

The *Roſtrum* was a Kind of Chapel, taken out of the *Forum*, and furniſhed with a Suggeſtum, or Eminence, call'd alſo the *Roſtra*, where the Orators ſpoke.

It was adorn'd, or, as *Livy* ſays, built, with the Beaks of Ships taken from the People of *Antium*, in a Naval Engagement; whence the Name. See ROSTRUM.

ROSTRALIS *Corona*, ROSTRAL *Crown*, in Antiquity. See CROWN.

ROSTRALIS *Columna*, ROSTRAL *Column*. See COLUMN.

ROSTRI-FORMIS *Proceſſus*, in Anatomy, the ſame as *Coracoides*. See CORACOIDES.

ROSTRUM, in Chymiſtry, ſignifies the Noſe, or Beak which conveys the Liquor diſtill'd, into its Receiver; in the common Alembicks. See ALEMBICK, RECEIVER, DISTILLATION, *&c.*

ROSTRUM, is alſo a crooked Sciſſars, which the Surgeons in ſome Caſes make uſe of for the Dilatation of Wounds.

ROSTRUM litterally denotes the Beak or Bill of a Bird. See BILL.

Hence the Word is alſo figuratively underſtood of the Beak, or Fore-part of the Head of a Ship. See HEAD, SHIP, *&c.* See alſo ROSTRA.

ROSYCRUCIANS, ROSICRUCIANS, or, *Brothers of the* ROSY-CROSS, a Name aſſumed by a Sect or Cabal of hermetical Philoſophers; who aroſe, or at leaſt became firſt taken Notice of in *Germany*, in the Beginning of the laſt Century. See HERMETICAL.

They bound themſelves together by a ſolemn Secret, which they ſwore inviolably to preſerve; and obliged themſelves at their admiſſion into the Order, to a ſtrict Obſervance of certain eſtabliſh'd Rules.

They pretended to know all Sciences, and chiefly Medicine; whereof they publiſhed themſelves the *Reſtorers*.—They pretended to be Maſters of abundance of important Secrets; and among others, that of the Philoſopher's Stone; all which they affirm'd to have received by Tradition from the antient *Egyptians*, *Chaldeans*, the *Magi*, and *Gymnoſophiſts*. See PHILOSOPHER'S-*Stone*.

Their Chief was a *German* Gentleman, educated in a Monaſtery, where he learnt the Languages.—In 1378 he went to the Holy-Land, where falling Sick at *Damaſcus*, he conſulted the *Arabs*, and other *Eaſtern* Philoſophers, by whom he was ſuppoſed to be initiated into this wonderful Art.—At his return into *Germany*, he form'd a Society, to whom he communicated the Secrets he had brought with him out of the *Eaſt*, and died in 1484.

They have been diſtinguiſhed by ſeveral Names, accommodated to the ſeveral Branches of their Doctrine.—Becauſe they pretended to protract the Period of human Life, by means of certain *Noſtrums*, and even to reſtore Youth; they were call'd *Immortales*.

As they pretended to know all things, they have been call'd *Illuminati*; and becauſe they have made no appearance for ſeveral Years, but have kept altogether *incog.* they have been call'd the *Inviſible Brothers*.

Their Society is frequently ſignified by the Letters F. R. C. which ſome among them interpret *Fratres roris cocti*, it being pretended that the Matter of the Philoſopher's Stone is Dew concocted, exalted, *&c.*

Some, who are no Friends to Free-Maſonry, make the preſent flouriſhing Society of Free-Maſons a Branch of *Roſicrucians*; or rather the *Roſicrucians* themſelves under a new Name, or Relation; *viz.* as Retainers to Building.—And 'tis certain, there are ſome Free-Maſons who have all the Characters of *Roſicrucians*; but how the Æra and Original of Maſonry, as traced by Mr. *Anderſon*, and that of *Roſicrucianiſm*, here fix'd from *Naudæus*, who has wrote expreſly on the Subject, conſiſt, we leave others to judge. See MASONRY.

ROT, a Diſeaſe, which in moiſt Years is incident to Sheep, in the ſame Ground, where in drier Years they are free from it; which, yet, ariſes, not only from the Moiſture, but from a certain Principle of Putrefaction, both in the Air and the Graſs. See ROTTENNESS.

ROTA, in Mechanicks. See WHEEL.

ROTA *Ariſtotelica*, *Ariſtotle's Wheel*, is a celebrated Problem in Mechanicks, founded on the Motion of a Wheel about its Axis; thus called, becauſe firſt, that we know of, taken Notice of by *Ariſtotle*.

The Difficulty is this.—While a Circle makes a Revolution on its Centre, advancing at the ſame time in a Right Line along a Plane; it deſcribes, on that Plane, a Right Line equal to its Circumference. Now if this Circle, which we may call the *deferent*, carry with it another ſmaller Circle concentric with it, and which has no Motion but what it receives from the deferent; which is the Caſe of the Nave of a Coach-Wheel carried along by the Wheel; this little Circle, or Nave, will deſcribe a Line in the time of the Revolution, equal, not to its own Circumference, but to that of the Wheel: For that its Centre advances in a Right Line, as faſt as that of the Wheel does; as being in reality the ſame therewith.

The Matter of Fact is certain.—But how it ſhould be ſeems a Myſtery.—'Tis obvious, that the Wheel advancing during the Revolution, muſt deſcribe a Right Line equal to its Circumference; but how ſhould the Nave, which revolves like the Wheel, deſcribe a Right Line ſo much greater than its Circumference?

The Solution *Ariſtotle* gives is no more than a good Explication of the Difficulty.

Galileo, who attempted it, has recourſe to an Infinity of infinitely little Vacuities in the Right Line deſcribed by the two Circles; and imagines that the little Circle never applies its Circumference to theſe Vacuities; but in reality only applies it to a Line equal to its own Circumference; though it appears to have applied it to a much larger.

But 'tis evident this is all *gratis dictum*.—The Vacuities are imaginary; and why does not the great Circle apply its Circumference to them? Laſtly, the Magnitude of theſe Vacuities muſt be augmented or diminiſhed according to the different Proportion of the two Circles.

F. *Tacquet* will have it that the little Circle making its *Rotation* more ſlowly than the great one, does on that Account deſcribe a Line longer than its Circumference; yet without applying any Point of its Circumference to more than one Point of its Baſe.—But this is no more allowable than the former.

The Attempts of ſo many great Men proving vain; M. *d'Ortous de Meyram*, a *French* Gentleman, had the good Fortune to hit on a Solution, which he ſent to the Royal Academy of Sciences; where being examined by Meſſ *de Louville* and *Saulmon*, appointed for that purpoſe, they made their Report that it was Satisfactory.—The Solution is to this effect.

The Wheel of a Coach is only acted on, or drawn in a Right Line: Its circular Motion, or Rotation, ariſes purely from the Reſiſtance of the Ground whereon it is applied. Now this Reſiſtence is equal to the Force wherewith the Wheel is drawn in the Right Line; inaſmuch as it defeats that Direction: Of conſequence the Cauſes of the two Motions, the one Right, the other Circular, are equal, and therefore their Effects, *i. e.* the Motions are equal. And hence, the Wheel deſcribes a Right Line on the Ground, equal to its Circumference.

For the Nave of the Wheel, the Caſe is otherwiſe.—'Tis drawn in a Right Line by the ſame Force as the Wheel, but it only turns round becauſe the Wheel turns, and can only turn with it, and at the ſame time therewith. Hence it follows that its Circular Velocity is leſs than that of the Wheel, in the Ratio of the two Circumferences; and therefore its circular Motion is leſs than its Rectilinear one.

Since then it neceſſarily deſcribes a Right Line equal to that of the Wheel, it can only do it by *ſliding*, or what they call the Motion of *Raſion*.—That is, a Part of the circular Nave cannot be applied to a Part of a Right Line greater than it ſelf, but by ſliding along that Part; and that more or leſs, as the Part of the Nave is leſs than that of the Circle. See ROLLING and SLIDING.

ROTA, is alſo uſed for a particular Court or Juriſdiction in *Rome*, eſtabliſhed for taking Cognizance of Beneficiary Matters, *&c.* See BENEFICE, *&c.*

The *Rota* conſiſts of twelve Doctors, choſen out of the four Nations of *Italy*, *France*, *Spain*, and *Germany*; three of them being *Romans*, one a *Florentine*, one a *Milaneze*, one of *Boulogne*, one of *Ferrara*, one a *Venetian*, one a *Frenchman*, two *Spaniards*, and one a *German*; each having four Clerks or Notaries under him.

Their Office is to judge of all Beneficiary Cauſes, both in *Rome*, and the State of the Church, in Caſe of Appeal; and of all Civil Proceſſes, of above 500 Crowns.

They are alſo called Chaplains of the Pope, as ſucceeding the antient Judges of the Sacred Palace, who held their Court in his Chapel.

The Name *Rota*, *Wheel*, ſome will have derived hence, that they officiate each in his Turn; others, becauſe the moſt important Affairs of the Chriſtian World turn upon them.—*Du Cange* derives it from *Rota Porphyretica*, becauſe the Pavement of the Chamber where they formerly ſat was of Porphyry; and faſhioned like a Wheel.

ROTATION, ROLLING, in Mechanicks. See ROLLING, ROTA, *&c.*

ROTATION, in Geometry, the Circumvolution of a Surface round an immoveable Line, call'd the *Axis of Rotation*. See AXIS.

By ſuch *Rotation* of Planes, Solids are form'd or generated. See GENESIS, SOLID, *&c.*

The Method of cubing Solids, generated by ſuch *Rotation*, is well laid down by M. *de Moyvre*, in his Specimens of the uſe of the Doctrine of Fluxions.—For the Fluxions of ſuch Solids take the Product of the Fluxion of the Abſciſſa, multiplied by the circular Baſe; and ſuppoſe the Ratio of a Square to the Circle inſcribed, be as $\frac{n}{1}$: The Equation expreſſing the Nature or Property of any Circle, whoſe Diameter is d; is $yy = dx - xx$. Therefore $\frac{4dxx - x^2x}{n}$ is the Fluxion of a Portion of the Sphere, and conſequently, the Portion it ſelf $4\frac{1}{3}xdx - \frac{1}{3}x^3$, and the circumſcribed Cylinder is $\frac{4dxx - x^3}{n}$ therefore the Portion of the

Sphere

Sphere is to the circumſcribed Cylinder, as $\frac{1}{2}d - \frac{1}{3}x$ to $d - x$. *Philoſoph. Tranſact.*

ROTATION, REVOLUTION, in Aſtronomy. See REVOLUTION.

Diurnal ROTATION. See DIURNAL *Rotation* and EARTH.

ROTATION, in Anatomy, the Action of the *Muſculi Rotatores*; or the Motion they give to the Parts they are fix'd to. See ROTATOR.

There are two Muſcles, the great and the little *Obliquus*, to perform the *Rotation* of the Eye.—The *Obturator Internus* and *Externus*, effect the *Rotation* of the Thighs. See EYE, *&c.*

ROTATOR, in Anatomy, a Name given the oblique Muſcles of the Eye; call'd alſo *Circulares* and *Amatorii*. See OBLIQUI and EYE.

ROTHER-*Beaſts*, a Word uſed in the old Statutes, and ſtill in the Northern Parts of *England*, for horned Beaſts, as Oxen, Cows, Steers, Heifers, *&c.*

Whence, *Rother-Soil*, in *Herefordſhire*, is taken for the Dung or Soil of ſuch Cattle. See MANURE.

ROTHER-*Nails*, are ſuch as have a very full Head, and are uſed to faſten the Rudder Irons in Ships. See NAIL.

ROTONDO, ROTUNDO, in Architecture, a popular Term for any Building that is round both within and without-ſide; whether it be a Church, a Salon, a Veſtible, or the like. See BUILDING, *&c.*

The moſt celebrated *Rotondo* of Antiquity is the Pantheon at *Rome*, dedicated to *Cybele*, and all the Gods, by *Agrippa*, Son-in-law of *Auguſtus*; but ſince conſecrated by Pope *Boniface* IV. to the Virgin, and all the Saints, under the Title of *Sta. Maria della Rotondo*. See PANTHEON.

The Chapel of the *Eſcurial*, which is the Burying-Place of the Kings of *Spain*, is alſo a *Rotondo*; and in Imitation of that at *Rome*, is alſo call'd *Pantheon*. See ESCURIAL.

ROTTENNESS, PUTREDO, See PUTRIFACTION, *&c.*

ROTULA, in Anatomy. See PATELLA.

ROTULUS, a Roll. See ROLL.

ROTULUS *contrarientium*.—The Earl of *Lancaſter* taking Part with the Barons againſt King *Edward* II. it was not thought fit, in reſpect of their Power, to call them Rebels or Traytors, but only *Contrarients*: Accordingly, we have a Record of thoſe Times call'd *Rotulus-Contrarientium*.

ROTULUS *Wintoniæ*, an exact Survey of all *England*, by Counties, Hundreds, and Tithings; made by King *Alfred*; not unlike that of *Domes-Day*. See DOMES-DAY.

It was thus call'd becauſe antiently kept at *Wincheſter*, among other Records of the Kingdom.

ROTUNDUS, in Anatomy, a Name given to ſeveral Muſcles, from the roundneſs of their Body. See MUSCLE.

Such are the *Rotundus Major*, call'd alſo *Teres Major*; and the *Rotundus Minor*, call'd alſo *Teres Minor*, and *Tranſverſalis*; which ſee under their proper Articles.

ROUGE-*Croſs*, q. d. *Red Croſs*, ROUGE-*Dragon*, q. d. *Red Dragon*, } See } POURSUIVANTS.

ROUGH, ROUGHNESS, in Mechanicks. See FRICTION and RESISTENCE.

ROUGH-*Taſte*. See TASTE.

ROUGH-*Caſting*. See PLAISTERING.

ROUL, or ROLL, in the military Term.—Officers of equal Quality, who mount the ſame Guards, and take Their turns in relieving one another, are ſaid to *Roul*. See GUARD, *&c.*

ROULADE, in Muſick, a trilling or quavering. See QUAVERING.

ROUND, ROTUNDUS, in Geometry. See CIRCLE, GLOBE, SPHERE, *&c.*

ROUND, in Anatomy. See ROTUNDUS.

ROUND, in Muſick.—The *Italians* call b *round*, what we call b *flat*, and the *French* b *Mol*; and b *Square*, what we call b *ſharp*. See FLAT and SHARP, *&c.*

ROUND, is alſo a military Term, ſignifying a Walk or Turn which an Officer, attended with ſome Soldiers, takes in a Garriſon or fortified Place, *around* the Ramparts, in the Night-time; to liſten if any thing be ſtirring without the Works, and to ſee that the Centries are Watchful, and do their Duty, and all things in good Order.

In ſtrict Garriſon, the *Rounds* go every Quarter of an Hour, that the Rampart may be furniſhed.—The Centries are to Challenge at a Diſtance; and to Reſt their Arms as the *Rounds* paſs, and let no one come near them.

When the *Round* is near the *Corps de Garde*, the Centry calls aloud, *Who comes there?* And when the Anſwer is, *the Rounds*, he ſays, *ſtand*; then calls for the Corporal of the Guard, who draws his Sword, and calls alſo, *Who comes there?* And when it is anſwered, *the Rounds*, he that has the Word advances and delivers it to the Corporal, who receives it with his Sword pointed at the Giver's Breaſt. See WORD.

Among Maſons, *Rounds* are the broken Pieces of Statues.

ROUND-*Houſe*, in a Ship, is the uppermoſt Room or Cabin on the Stern of a Ship, where the Maſter lies. See SHIP and STERN.

ROUND-*Houſe* is alſo a kind of Priſon, for the Nightly-Watch to ſecure Perſons in, 'till they can be carried befor ea Magiſtrate. See WATCH.

ROUND-*Heads*. See WHIG and TORY.

A ROUND, in the Academies, is a circular Piſte or Tread. See PISTE.

To ROUND *a Horſe*, is a general Term for all ſorts of Manages upon a *Round*.—Hence, to *round* a Horſe upon a Trot, Gallop, *&c.* is to make him carry his Shoulders and Haunches roundly or compactly, upon a larger or ſmaller Circle, without traverſing or bearing to a Side.

ROUNDELAY, or ROUNDO, a kind of antient Poem, thus call'd, according to *Menage*, from its form; and becauſe it ſtill turns back again to the firſt Verſe, and thus goes round.

The common *Roundelay* conſiſts of thirteen Verſes, eight whereof are in one Rhime, and five in another.—'Tis divided into Couplets; at the end of the ſecond and third whereof, the beginning of the *Roundelay* is repeated; if poſſible, in an equivocal or punning Senſe.

The *Roundelay* is a popular Poem among the *French*, but little known among us.—*Marot* and *Voiture* have ſucceeded the beſt in it.

Rapin obſerves, that if the *Roundelay* be not very exquiſite, 'tis ſtark nought.—In all the antient *Roundelays*, *Menage* obſerves, the Verſe preceding has a finiſh'd Senſe; and yet joins agreeably with that of the Cloſe; without depending neceſſarily thereon. This Rule well obſerv'd makes the *Roundelay* more ingenious; and is one of the Fineſſes of the Poem.

The Word is form'd from *Round* and *Lay*. See LAY.—The *French* call it *Rondeau*. The *Spaniards Gloſes*.

ROUNDLET. See RUNLET.

ROUNDNESS, ROTUNDITY, in Phyſicks. See SPHÆRICITY.

ROUNDO, or ROUNDELAY, in Muſick, a kind of Burthen or Ritornello; where the beginning of each Couplet is repeated at the end thereof. See RITORNELLO.

ROUPIA, or ROUPIAS, or RUPEE, a Coin very current in the Territories of the *Great Mogul*, and ſeveral other Parts of the *Eaſt-Indies*. See COIN.

Roupia's are ſtruck both of Gold and Silver; and both the one and the other have their Diminutions; as *Half-Roupias*, *Quarter-Roupias*, &c.

The Gold *Roupia* is worth 1 *s.* 6 *d.* Sterl. The value of the Silver *Roupia* is various, according to its Quality, and the Place where 'tis coin'd. A general Obſervation is, that the *Roupias* are always Current for more at the Place where they are ſtruck, than elſe-where; and the new *Roupias* for more than the old ones.—The reaſon of this laſt difference is, that the *Indians* being very fond of Silver, to ſave it, uſe, as ſoon as they have got a few *Roupias* together, to hide them under Ground. To prevent which Inconvenience, tending to drain the State of Current Monies, the Princes and Rajas ſtrike new *Roupias* every Year, ſtill augmenting the Value thereof without any augmentation of the Weight.

Beſides this difference of new and old *Roupias*, the *Indians* make three other Claſſes.—The firſt call'd *Roupias Siceas*, which at *Bengal* are worth 2 *s.* 11 *d.* Sterl.—The ſecond, *Roupias of Surat*, worth 2 *s.* 6 *d.* Sterl.—The third *Roupias of Madderas*, worth 2 *s.* 5 *d.* Sterl. All which is to be underſtood of the new *Roupias*.

As to the old ones, thoſe of *Madderas* are only Current at 1 *s.* 11 *d.* Sterl. Thoſe of *Surat* at 2 *s.* and the *Siceas* at 2 *s.* 4 *d.* Yet at other Places, the Order and Prices vary: At *Surat*, thoſe ſtruck there have the firſt Place; the *Siceas* the ſecond; and thoſe of *Madderas* the third. Along the Coaſt of *Coromandel*, the *Maderas* have the firſt Place, and the *Siceas* the ſecond, *&c.*

ROUSE *up a Hart*, among Hunters. See HUNTING.

To ROUSE, among Falconers, is when a Hawk lifts up and ſhakes himſelf. See HAWK and HAWKING.

To ROUSE *a Hawſer*, or *Cable*, in the Sea Phraſe, ſignifies to hale in Part of the Hawſer or Cable, which lies ſlack in the Water. See CABLE, *&c.*

ROUT, a publick Road, Highway, or Courſe; eſpecially that which military Forces take. See ROAD.

Sanſon and *Ogilby* have made Maps of the *Routs* and Poſt-Roads of *France* and *England*: Soldiers are prohibited going out of their *Routs*.—*Routs* are frequently cut in Parks, Foreſts, *&c.* both for Ornament and the Conveniencies of Hunting. See HUNTING.

Some uſe *Rout* for a Path cut a-croſs a Wood; in oppoſition to *Way*, which is a great Road. See WAY.

ROUT, in Navigation. See COURSE.

ROUT is alſo uſed for the Defeat and Flight of an Army. See DEFEAT.

The Serjeants endeavour to rally the Soldiers in a *Rout*. See RALLY.

The Word is form'd from the *Latin*, *rupta*, or *ruta*; or the *French*, *roux*, an old Word for Horſe; or rather from the old *Celtic*, *Rout*, Road; figuratively uſed to ſignify Example.—*Menage* has a learned Diſſertation on the Word.

ROUT, in Law, is an Aſſembly or Combination of three, or more Perſons, going forcibly to commit an unlawful Act; tho' they do not perform it. See ASSEMBLY.

If they go, ride, or move forwards, after their Meeting, 'tis a *Rout*, though they don't put their Purpoſe in Execution; if they do, 'tis a *Riot*. See RIOT.

A *Rout*

A *Rout*, therefore, ſeems to be an unlawful Aſſembly; and a Riot the diſorderly Fact committed thereby. See RIOT.

Two things, however, there are in common to *Rout Riot*, and *unlawful Aſſembly*: The one, that there be at leaſt three Perſons together; the other, that, being together, they diſturb the Peace, either by Words, ſhew of Arms, turbulent Geſture, or actual Violence. See UNLAWFUL-*Aſſembly*.

ROUT *of Wolves*, among Hunters, a Herd of theſe wild Beaſts. See HUNTING.

ROUTIER, in Navigation. See RUTTIER.

ROWEL, among Farriers, a kind of Iſſue, made by drawing a Skain of Silk, Thread, Hair, or the like, through the Nape of the Neck, or other Part of an Horſe; anſwering to what in Chirurgery is call'd a *Seton*. See SETON.

The ROWELLING *of Horſes* is a Method of Cure frequently had recourſe to in inward Strains; eſpecially about the Shoulders or Hips, as alſo for hard Swellings not eaſy to be reſolved.

The Operation is thus.—A little ſlit being made through the Skin, about a handful below the Part aggrieved, big enough to put a Swan's Quill in; the Skin is rais'd from the Fleſh, the end of the Quill put in, and the Skin blow'd from the Fleſh upwards, and all over the Shoulder.—Then the Hole being ſtop'd with the Finger, the Place blown is beaten with a Hazel-ſtick, and the Wind ſpread with the Hand all over; then let go.

This done, Horſe-hair, or red Sarſenet, half the thickneſs of the little Finger, is put in a *Rowelling Needle* ſeven or eight Inches long; the Needle is put into the Hole, and drawn through again ſix or ſeven Inches higher; then the Needle is drawn off, and the two ends of the *Rowel* tied together: Anointing it every Day, as well as before the putting it, with ſweet Butter and Hog's Greaſe, and drawing it backwards and forwards in the Skin, to make the putried Matter diſcharge it ſelf more plentifully.

Others, diſliking theſe *Rowels*, as making too great a Sore and Scar, uſe the *French Rowel*, which is a round Piece of ſtiff Leather, with a Hole in the midſt; laying it flat between the Fleſh and Skin, the Hole of the *Rowel* juſt againſt that in the Skin; ſowing it in with a Needle and Thread; drawn through the Hole and the Skin; cleaning it once in two or three Days, and anointing it freſh.

ROWING. See OAR, BOAT, *&c.*

ROWING *of Cloaths*, is the ſmoothing of them with a Roller, *&c.* See ROLL.

ROYAL *Fort*. See FORT.

ROYAL *Antler*, among Hunters, expreſſes the third Branch of the Horn of a Hart or Buck, that ſhoots out from the rear or main Horn above the Bayantler. See ANTLER, HEAD, HUNTING.

ROYAL, REGAL, ſomething relating to a King. See KING.

In this Senſe we ſay, the *Royal Family*, the *Royal Blood*, &c. See BLOOD, *&c.*

In *England*, the Prince and Princeſs of *Wales*, the King's Brother, *&c.* are addreſs'd under the Title of *Royal Highneſs*. See PRINCE and HIGHNESS.

The Dutcheſs of *Savoy* is called *Madame Royal*.

The Word is form'd from the *Latin*, *Regalis*, of *Rex*, King. See REGAL.

ROYAL *Crown*, is that worn by Kings. See CROWN.

This they alſo call *Imperial Crown*, being cloſed a-top. See IMPERIAL.

The *Engliſh* Crown is cloſed by Semicircles of Gold meeting at the Monde or Globe, on which the Croſs ſtands; and thoſe Semicircles adorned with Croſſes and Fleur-de-liſes: The whole embelliſhed with precious Stones.

A *Royal Abby* is an Abby founded by a King, or by a Prince who is ſucceeded by a King. See ABBY.

ROYAL *Army* is an Army marching with heavy Canon, capable of beſieging a ſtrong, well fortified City.—'Tis uſual to hang up a Governor who has the aſſurance to hold out a petty Place againſt a *Royal Army*.

The *Royal Oak* is a fair ſpreading Tree at *Boſcobel* in the Pariſh of *Donnington* in *Staffordſhire*, the Boughs whereof were all cover'd with Ivy; in the thick of which King *Charles* II. ſat in the Day time with Colonel *Careleſs*, and in the Night lodg'd in *Boſcobel-Houſe*: So that they are miſtaken who ſpeak of it as an old hollow Oak; it being then a gay flouriſhing Tree, ſurrounded with many more.—The poor remains hereof are now fenced in with a handſome Wall, with this Inſcription over the Gate in Gold Letters.—*Fæliciſſimam Arborem quam in Aſylum potentiſſimi Regis* Caroli II. *Deus op. max. per quem Reges regnant, hic creſcere voluit*, &c. Philoſoph. Tranſact. N°. 310.

ROYAL-*Aſſent*, is that Aſſent which the King gives to a thing formerly done by others; as, the Election of a Biſhop by Dean and Chapter; or a Bill paſs'd in both Houſes of Parliament. See BISHOP, *&c.*

The *Royal* Aſſent in Parliament being given, the Bill is endors'd with theſe Words, *Le Roy le veult*; that is, it pleaſes the King.—If he refuſes it, thus; *Le Roy S'aviſera*, q. d. the King will adviſe upon it. See BILL, PARLIAMENT, *&c.*

ROYAL *Fiſhes*, are Whales and Sturgeons, and, ſome add, Porpoiſes too, which the King, by his Prerogative, is to have whenever caſt on Shore, or wreck'd, in all Places of the Realm, unleſs granted to Subjects by expreſs Words. See FISHES.

The King to have the Head and Body of the Whale to make Oil, *&c.* and the Queen the Tail to make Whalebone for her Garments. Stat. 1 *Edw.* I.

ROYAL-*Exchange*, the Burſe or Meeting-place of the Merchants in *London*. See EXCHANGE.

It was firſt built in 1566, at the Charge of Sir *Thomas Greſham*; and in a ſolemn Manner, by Herald with ſound of Trumpet, in Preſence of Queen *Elizabeth*, proclaimed the *Royal Exchange*.—'Till that time the Merchants met in *Lombard-ſtreet*.

'Twas built of Brick; yet then eſteem'd the moſt ſplendid Burſe in *Europe*.—An hundred Years after its Building, at the great Fire, it was burnt down; but ſoon rais'd again, in a ſtill more magnificent Manner; the Expence thereof amounting to 50000 *l.*

One half of this Sum was diſburſed by the Chamber of *London*, the other by the Company of *Mercers*; who, to reimburſe themſelves, let to Hire 190 Shops above Stairs, at 20 *l.* each; which with other Shops, *&c.* on the Ground, yield a yearly Rent of above 4000 *l.* yet the Ground it ſtands on does not exceed ¾ of an Acre: Whence 'tis obſerv'd to be much the richeſt Spot of Ground in the World.

'Tis built Quadrangular, with Walks a-round, wherein the Merchants of the reſpective Countries aſſociate themſelves. In the middle of the Area or Court, is a fine marble Statue of King *Charles* II. in the Habit of a *Roman Cæſar*; erected by the Society of Merchant Adventurers; the Workmanſhip of *Grinlin Gibbons*. Around are the Statues of the ſeveral Kings ſince the *Norman* Conqueſt, ranged.

ROYAL *Society*, is an Academy, or Body of Perſons of eminent Learning; inſtituted by King *Charles* II. for the promoting of Natural Knowledge. See ACADEMY.

This illuſtrious Body had its original in an Aſſembly of ingenious Men, who before the Reſtauration met weekly in *Wadham-College*, in *Oxford*; at the Lodgings of Dr. *Wilkins*.

Afterwards, from about the Year 1658, many of them living in *London*, held Meetings at *Greſham-College*; till they were at length taken Notice of by the King, who was pleas'd to grant them an ample Charter, dated 22d of *April*, 1663; whereby they were erected into a *Corporation, conſiſting of a Preſident, Council, and Fellows, for promoting the Knowledge of Natural Things, and uſeful Experiments*.

Their Manner of electing Fellows is by Balloting. Their Council are in Number 21, eleven of which are continued for the next Year, and ten more added to them, all choſen on St. *Andrew's* Day.

Each Member at his Admiſſion ſubſcribes an Engagement, that he will endeavour to promote the Good of the Society; from which he may be freed at any Time, by ſignifying to the Preſident, that he deſires to withdraw.

The Charges are 40*s.* paid to the Treaſurer at admiſſion; and 13*s.* *per* Quarter, ſo long as the Perſon continues a Member.

Their Deſign is to " make faithful Records of all the Works " of Nature or Art, which come within their reach; ſo that the " preſent as well as after Ages may be enabled to put a Mark " on Errors which have been ſtrengthened by long Preſcription, " to reſtore Truths that have been neglected; to puſh thoſe al- " ready known to more various uſes; to make the Way more " paſſable to what remains unrevealed, *&c.*

To this purpoſe they have made a great Number of Experiments and Obſervations, in moſt of the Works of Nature; Eclipſes, Comets, Meteors, Mines, Plants, Earthquakes, Inundations, Springs, Damps, Subterraneous Fires, Tides, Currents, the Magnet, *&c.*

Numbers of ſhort Hiſtories of Nature, Arts, Manufactures, uſeful Engines, Contrivances.

The Services they have been of to the Publick are very great.—They have improved Naval, Civil, and Military Architecture; advanced the Security and Perfection of Navigation; improved Agriculture; and put not only this Kingdom, but alſo *Ireland*, the Plantations, *&c.* upon Planting.

They have regiſter'd Experiments, Hiſtories, Relations, Obſervations, *&c.* reduced them into one common Stock; have from time to time publiſhed ſome of the moſt immediate Uſe, under the Title of *Philoſophical Tranſactions*, &c. and laid the reſt up in publick Regiſters, to be nakedly tranſmitted to Poſterity, as a ſolid Ground-work for future Syſtems. See TRANSACTIONS.

They have a Library adapted to their Inſtitution; towards which the late Earl Marſhal contributed the *Norfolcian* Library; and a Muſæum, or Repoſitory of natural and artificial Rarities, given them by *Daniel Colwal*, Eſq—Their Motto, *Nullius in Verba*.

ROYAL *Academy of Sciences*, &c. See ACADEMY, *&c.*

ROYAL *Parapet*, or *Parapet of the Rampart*, in Fortification, is a Bank about three Fathoms broad, and ſix Foot high, placed upon the Brink of the Rampart, towards the Country; to cover thoſe who defend the Rampart. See RAMPIRE and PARAPET.

ROYALTIES, REGALTIES, the Rights of the King; otherwiſe call'd the *King's-Prerogative*, and the *Regalia*. See PREROGATIVE and REGALIA.

Of theſe, ſome the King may grant to common Perſons; others

others are inſeparable from the Crown. See KING, CROWN, GRANT, *&c.*

RUBARB, RHABARBARUM, in Medicine. See RHUBARB.

RUBBING. See FRICTION.

RUBIA *Tinctorum*, a Root or Drug popularly call'd *Madder*. See MADDER.

RUBIFYING, in Chymiſtry, *&c.* the act of turning a thing Red by Force of Fire, *&c.* See RED. See alſo RUBY.

Red Arſenic is ſuppoſed to be no more than the common yellow Arſenick *rubified* by Fire, with the Addition of Nut or Olive-Oil. See ARSENIC.

The Word is form'd of the *Latin*, *rubens*, ruddy, and *fio*, I become.

RUBIGALIA, or ROBIGALIA, in Antiquity, a Feaſt celebrated by the *Romans* in Honour of the God *Rubigus*, or the Goddeſs *Rubigo*; and to engage thoſe Deities to preſerve the Corn from blaſting. See FEAST.

The *Rubigalia* were inſtituted by *Numa* in the eleventh Year of his Reign; and were held on the 7th of the Calends of *May*, which is our 15th of *April*; being the Time when the blight or Mildew, call'd by the *Latins Rubigo*, uſes to attack the Corn. See RUBIGO.

Varro fixes it to the Time when the Sun enters the 16th Degree of *Taurus*.—Indeed the true Time ſeems rather to have been on the 18th Day before the Equinox; *viz.* the 28th of *April*; and the true Reaſon, becauſe then Canicula, or the little Dog, ſets; which is eſteem'd a malific Conſtellation.

Hence they ſacrificed a Dog to *Rubigo*: *Ovid* ſays, the Entrails of a Dog, and thoſe of a Sheep: *Columella*, only a ſucking Puppy. *Feſtus* inſinuates, that the Victim muſt be red.

RUBIGO, a Diſeaſe incident to Corn, popularly call'd the *Smut*, and ſometimes *Mildew*. See SMUT and MILDEW.

The *Rubigo* is a Species of *Blight*. See BLIGHT.

RUBRICK, the Rules and Directions given at the Beginning, and in the Courſe of the Liturgy; for the Order and Manner wherein the ſeveral Parts of the Office are to be perform'd. See LITURGY.

There are *General Rubricks*, and *ſpecial Rubricks*, a *Rubrick for the Communion*, &c.—In the *Romiſh* Miſſal and Breviary are *Rubricks* for Matins, for Lauds, for Tranſlations, Beatifications, Commemorations, *&c.*

They are call'd *Rubricks* from the *Latin*, *ruber*, *red*; becauſe formerly printed in *Red-Ink*, to diſtinguiſh them from the reſt of the Office, which was in black; as they ſtill are in the *Romiſh* Miſſal, &c.

The great *Rubrick* for the Celebration of *Eaſter*, preſcribed by the *Nicene* Council, is to this Purpoſe.—*Eaſter-Day* to be the *Sunday* which falls upon, or next after, the firſt full Moon which immediately ſucceeds the Vernal Equinox. See EASTER.—Dr *Wallis* has a particular Diſcourſe on the antient *Rubricks* for the Seat of *Eaſter*; in the *Philoſoph. Tranſactions*.

RUBRICK, in the Canon Law, is a Title or Article in certain antient Law-Books; thus call'd, becauſe wrote, as the Titles of the Chapters in our antient Bibles are, in red Letters. See TITLE.—You'll find ſuch a Law under ſuch a *Rubrick*.

RUBY, a red, ſparkling Gem of the firſt Rank among precious Stones. See GEM and STONE.

There are but two Places in the *Eaſt* where the *Ruby* is found: The Kingdom of *Pegu*, and the Iſle of *Ceylon*.

The Mine in *Pegu*, where 'tis found in greateſt Plenty, is in the Mountain *Capelan*, 12 Days Journey from *Siren*, the Reſidence of that Prince.—The fineſt *Rubies* brought hence don't exceed three or four Carats; the King reſerving all the larger to himſelf.

In *Ceylon*, the *Rubies* are found in a River which deſcends from the Mountains towards the middle of the Iſland: Some few are alſo found in the Ground.—The *Rubies* of *Ceylon* are uſually brighter and more beautiful than thoſe of *Pegu*; but they are rare; the King of *Ceylon* prohibiting his People to gather them, or Traffick with them.

There are *Rubies* alſo found in *Europe*, particularly *Bohemia* and *Hungary*; eſpecially the former, wherein is a Mine of Flints of divers Sizes, which upon breaking, are ſometimes found to contain *Rubies* as fine and hard as any of the *Eaſtern* ones.

Salmaſius will have the *Ruby* to be the Hyacinth of the Antients See HYACINTH.

The *Grecks* call it ἀπυρώτοι, q. d. Reſiſting of the Fire. The Antients out of their Credulity and Superſtition have attributed many Virtues to the *Ruby*; as, that it expels Poiſons, cures the Plague, abates Luxury and Incontinence, baniſhes Sorrow, *&c.* See GEM.

They uſually only diſtinguiſh two Kinds of *Rubies*; the *Balaſs* and *Spinelle*. Some Authors, however, make four Kinds; the *Ruby*, *Rubacelle*, *Balaſs* and *Spinelle*.

'Tis the different Degree of Colour which makes their different Value and Beauty.—The *Balaſs-Ruby* is of a Vermeil-Roſe Colour; the *Spinelle* of a Flame Colour. 'Tis ſaid the Inhabitants of *Pegu* have the Art of heightening the redneſs and brilliant of *Rubies*, by laying them in the Fire, and giving them a proper Degree of Heat.

The *Ruby* is form'd in a ſtony Subſtance or Marcaſite of a Roſe-Colour, call'd *Mother of Ruby*; it has not all its Colour and Luſtre at once; but comes to it by Degrees.—At firſt it grows whitiſh, and as it approaches to Maturity, becomes red. Hence we have white *Rubies*; others, half white, half red; and others blue and red, call'd *Saphir-Rubies*.

When a *Ruby* exceeds twenty Carats, it may be call'd a *Carbuncle*, the Name of an imaginary Stone, whereof the Antients and Moderns have given us ſo many Deſcriptions. See CARBUNCLE.—They have ſeveral manners of counterfeiting *Rubies*; and have carried the Imitation to that length, that the moſt able Lapidaries are ſometimes over-ſeen.

Furetiere aſſures us, though the thing ſurpaſſes all belief, that there have been *Rubies* in *France* of 240 Carats.—*Tavernier* tells us, he ſaw one in the *Indies* of fifty Carats, which he had a Mind to have bought. He adds, that the King of *France* has finer and larger *Rubies* than any of the Great *Mogul*.

The Value of *Rubies* from one Carat, or four Grains, to ten Carats, is given us in the *Dictionnaire de Commerce*, by a good Hand.

	l.	*s.*	*d.*
A *Ruby* of one Carat, is worth,	1	15	0
Of two C.	9	00	0
Of three C.	22	10	0
Of four C.	33	15	0
Of five C.	45	00	0
Of ſix C.	67	10	0
Of ſeven C.	84	00	0
Of eight C.	106	00	0
Of nine C.	150	00	0
Of ten C.	216	00	0

RUBY, in Chymiſtry, is a Name given to ſeveral Preparations of natural Bodies, becauſe of their red Colour; as, *Ruby of Arſenick*, &c. See RUBIFYING.

RUBY, in Heraldry, is the red Colour wherewith the Arms of Noblemen are blazon'd; being the ſame which in the Arms of others not Noble, is call'd *Gules*. See COLOUR, GULES, *&c.*

RUCTATION, BELCHING, a Ventoſity ariſing from Indigeſtion, and diſcharging it ſelf at the Mouth with a diſagreeable Noiſe. See FLATULENCY.

There are Belches owing to Repletion, and others to Inanition, or Emptineſs.

Dr. *Quincy* ſays, Hypochondriac and Hyſteric People are particularly liable to this Diſorder.—They are rather to be cured with proper Stomachicks, than Carminatives and hot Liquors.—*Burnet* recommends the Iliac Pills of *Rhaſis* againſt *Ructation*.

RUDENTURE, in Architecture, the Figure of a Rope or Staff, ſometimes plain ſometimes carv'd, wherewith a third Part of the Flutings of Columns are frequently filled up. See FLUTING.

It is thus call'd from the *Latin*, *rudens*, *Cable*; whence ſome call it a *Cabling*; and the Colums whoſe Flutings are thus fill'd, *rudented*, or *cabled Columns*. See COLUMN, CABLING, *&c.*

There are alſo *Rudentures* in *Relievo*, laid on the naked of Pilaſters not fluted; an Inſtance of which we have in the Church of St. *Sapienza* at *Rome*.

RUDERATION, in Building, a Term uſed by *Vitruvius* for the laying of a Pavement with Pebbles or little Stones. See PAVEMENT.

To perform the *Ruderation*, 'tis neceſſary the Ground be firſt well beaten, to make it firm, and prevent its cracking.—Then a Stratum of little Stones are laid, to be afterwards bound together with Mortar made of Lime and Sand, call'd by *Vitruvius*, *Statumen*.

If the Sand be new, its Proportion to the Lime may be as 3 to 1; if dug out of old Pavements or Walls, as 5 to 2. See MORTAR, *&c.*

RUDERATION, *Daviler* obſerves, is alſo uſed by *Vitruvius*, Lib. 7. Cap. 1. for the coarſeſt and moſt artleſs Kind of Maſonry; where a Wall is, as it were, cobled up. See MASONRY.

RUDDER, in Navigation, a Piece of Timber turning on Hinges in the Stern of a Ship, and which oppoſing ſometimes one Side to the Water, and ſometimes another, turns or directs the Veſſel this Way or that. See SHIP.

The *Rudder* of a Ship is a Piece of Timber hung on the Stern-Poſts, by four or five Iron Hooks call'd *Pintles*; ſerving, as it were, for the Bridle of a Ship; to turn her about at the Pleaſure of the Steers-man. See STEERING.

The *Rudder* being perpendicular, and without-ſide the Ship, another Piece of Timber is fitted into it at Right Angles, which comes into the Ship; by which the *Rudder* is managed and directed.—This latter is properly call'd the *Helm*, though the two are ſometimes confounded together. See HELM.

The Power of the *Rudder* is reducible to that of the Lever. See LEVER.

As to the Angle the *Rudder* ſhould make with the Keel; the Author of a late Book on the Working of Ships, ſhews, that in order to ſtay or bear up the ſooneſt poſſible, the Tiller of the *Rudder* ought to make an Angle of near 55° with the Keel. See SAILING.

A narrow *Rudder* is beſt for a Ship's ſailing, provided ſhe can feel it, that is, be guided and turned by it; for a broad *Rudder* will hold much Water when the Helm is put over to any Side: Yet if a Ship have a fat Quarter, ſo that the Water cannot come quick and ſtrong to her *Rudder*, ſhe will require a broad *Rudder*. The aftermoſt Part of the *Rudder* is call'd, the *Rake* of the *Rudder*.

RUDDLE, or REDDLE, a ſort of red Chalk, found in divers Parts of *England*. See CHALK.

This ſome take for the *Lapis Hæmatites*. See HÆMATITES.

RUDIARIUS, in Antiquity, a Veteran Gladiator, who had got a Diſcharge from the Service. See GLADIATOR.

He was thus called, becauſe, as a Mark of Diſmiſſion a Rod was put into his Hand call'd *Rudis*. See RUDIS.

The *Rudiarii* were alſo call'd *Spectatores*. See SPECTATOR.

RUDIMENTS, RUDIMENTA, the first Principles or Grounds of any Art or Science; call'd also the *Elements* thereof. See ELEMENTS.

RUDIS, a knotty rough Stick, which the Prætor among the *Romans*, gave the Gladiators, as a Mark of their Freedom and Dismission. See GLADIATOR.

Hence the *Latin* Phrase, *Rude donare*, to make a Gladiator free, to discharge him from fighting any more.—They were hence called *Rudiarii*. See RUDIARII.

RUE, RUTA, a medicinal Plant, much used in the present Practice.—*Schroder* commends it as an Alexipharmic, and Cephalic; says it resists Poisons and Malignities, and is therefore to be used in Fevers; and that it is good in all convulsive Cases.

It is replete with a fat viscous Juice, and by that means yields little to any Purpose in Distillation, unless where first digested in a spirituous Menstruum.—Hence its simple Water in the Shops, according to Dr. *Quincy*, is nothing worth. It ought to be raised with a spirituous Liquor, or used in Conserve; or, which is best of all, eat alone fresh gathered, with Bread and Butter. It is of Service in nervous Cases, particularly such as arise from the Womb, as it deterges the Glands, and by its Viscidity, bridles those inordinate Motions, which frequently begin there, and affect the whole Constitution. See HYSTERIC, UTERINE, *&c.*

RUELLE, a *French* Term, lately introduced into our Language.—*Ruelle* is a diminutive of *Rue*, Street; and signifies, literally, a *little Street*.

Its use among us, for an Alcove, or other genteel Apartment, where the Ladies receive Visits either in Bed or up.—The Poets go reading their Works from *Ruelle* to *Ruelle*, to bespeak the Approbation and Interest of the Ladies.

RUFTER-*Hood*, among Falconers, a plain Leather-Hood, large and open behind, to be worn by an Hawk, when she is first drawn. See HOOD, HAWK, HAWKING, *&c.*

RUINS, a Term particularly used for magnificent Buildings fallen to decay by length of Time; and whereof there only remains a confused Heap of Materials.

Such are the *Ruins* of the Tower of *Babel*, or Tower of *Belus*, two Days Journey from *Bagdat*, in *Syria*, on the Banks of the *Euphrates*; which are now no more than a Heap of Bricks, cemented with Bitumen; and whereof we only perceive the Plan to have been Square.

Such, also, are the *Ruins* of a famous Temple or Palace near *Schiras* in *Persia*; which the Antiquaries will have to have been built by *Ahassuerus*; and which the *Persians* now call *Tchelminar*, or *Chelminar*, q. d. the forty Columns; because there are so many Colums remaining pretty entire, with the Traces of others; a great Quantity of *Basso Relievo's*, and unknown Characters, sufficient to shew the Magnificence of the Antique Architecture. See CHELMINAR.

RULE, REGULA, or RULER, a very simple Instrument, ordinarily of hard Wood, thin, narrow, and straight; serving to draw right Lines withal. See LINE.

The *Rule* is of principal use in all the mechanical Arts.—To prove whether or no it be just; draw a Line by it on a Paper; then turn the *Rule* about, the Right end to the Left; and apply the same Edge this way to the Line: If the Edge now agree exactly with the Line, the *Ruler* is true.

Desmarets has a fine Poem on the Amours of the *Rule* and Compass.—The *Stone-Cutters-Rule* is usually four Foot long; and divided into Feet and Inches.

The *Mason's-Rule* is 12 or 15 Foot long, and is applied under the Level, to regulate the Courses, to make the Piedroits equal, *&c.*

RULE is also used for certain Instruments which have other considerable Uses beside that of drawing Lines.—Such are the Carpenters *Joint-Rule*, *Everard's*, and *Coggeshal's Sliding-Rules*, &c.

Carpenters-Joint-RULE, is an Instrument usually of Box, 24 Inches long, and one and a half broad; each Inch being subdivided into eight Parts.—On the same Side with these Divisions, is usually added *Gunter's* Line of Numbers.

On the other Side are the Lines of *Timber* and *Board-Measure*; the first beginning at 82, and continued to 36, near the other End: The latter is numbered from 7 to 36, four Inches from the other End.

Use of the Carpenter's Joint-RULE.

The Application of the Inches in measuring Lengths, Breadths, *&c.* is obvious.—That of the *Gunter's* Line, see under *Line of* NUMBERS.—The use of the other Side is all we need here meddle with.

1. *The Breadth of any Surface, as Board, Glass,* &c. *being given; to find how much in Length makes a Square Foot.*—Find the Number of Inches the Surface is broad, in the Line of Board Measure; and right against it is the Number of Inches required.

Thus if the Surface were 8 Inches broad, 18 Inches will be found to make a superficial Foot.

Or, more readily thus:—Apply the *Rule* to the Breadth of the Board or Glass; that End mark'd 36 being even with the Edge; the other Edge of the Surface will shew the Inches and Quarters of Inches which go to a square Foot.

2. *Use of the Table at the end of the Board Measure.*—If a Surface be one Inch broad, how many Inches long will make a superficial Foot? Look in the upper Row of Figures for 1 Inch, and under it in the second Row is 12 Inches, the answer to the Question.

3. *Use of the Line of Timber Measure.*—This resembles the former; for having learnt how much the Piece is Square, look for that Number on the Line of Timber-Measure: The Space thence to the End of the *Rule* is the Length, which at that Breadth makes a Foot of Timber.—Thus, if the Piece be 9 Inches Square, the Length necessary to make a solid Foot of Timber, is 21 $\frac{1}{5}$ Inches.—If the Timber be small, and under 9 Inches Square, seek the Square in the upper Rank of the Table; and immediately under it is the Feet and Inches that make a solid Foot.—Thus, if it be 7 Inches Square, 2 Foot 11 Inches will be found to make a solid Foot.

If the Piece be not exactly Square, but broader at one End than another; the Method is to add the two together, and take half the Sum for the Side of the Square.—For round Timber, the Method is to girt it round with a String, and to allow the fourth Part for the Side of the Square.—But this Method is erroneous; for hereby you lose above $\frac{1}{5}$ of the true Solidity. See TIMBER-*Measure*.

Everard's Sliding-RULE, *Coggeshal's Sliding*-RULE, } See { SLIDING-*Rule*.

RULE, REGULA, is also a certain Maxim, Canon, or Precept, to be observed in any Art or Science. See CANON, MAXIM, *&c.*—Thus we say, the *Rules* of Grammar, of Logic, of Philosophizing, *&c.* See GRAMMAR, LOGIC, PHILOSOPHIZING, *&c.*

The School Philosophers distinguish two Kinds of *Rules*; viz. *Theoretical*, which relate to the Understanding; being of use in the Discovery of Truth. See UNDERSTANDING, CRITERION, and TRUTH.—And *Practical*, which relate to the Will, and serve to direct it to what is good and right. See GOOD and RECTITUDE.

For the Management and Application of these two *Rules*, there are two distinct Arts; *viz. Logick*, and *Ethicks*. See LOGICK and ETHICKS.

The *Rules of Knowing*, *Regulæ sciendi*, are such as direct and assist the Mind, in perceiving, judging, and reasoning. See PERCEPTION, JUDGEMENT, and REASONING.

Rules of Acting, *Regulæ agendi*, are those whereby the Mind is guided in her Desires, Pursuits, *&c.* See WILL.

Authors are extremely divided about the regard to be had to the *Rules of Poetry* fix'd by the Antients *Aristotle*, *Horace*, *Longinus*, &c. and admitted by the modern Criticks, as *Bossu*, &c. some contending that they be inviolably observ'd; others pleading for Liberty to set them aside on occasion.—*Rules*, 'tis complain'd, are Fetters; rank Enemies to Genius; and never religiously observ'd by any, but those who have nothing of themselves to depend on. *Voiture* frequently neglected all the *Rules* of Poetry; as a Master who scorn'd to be confined by them. See POETRY.

The Theatre has its particular *Rules*; the *Rule* of 24 Hours; the Unities of Action, Time, and Place, *&c.* See UNITY. See also THEATRE.

If it be true, says *Moliere*, that Plays conducted according to the *Rules*, don't please; but those which are not, do: The *Rules* must be nought.—For my self, when a thing hits and diverts me, I don't enquire if I have done amiss; nor whether *Aristotle's Rules* forbid me to laugh. See LAW.

RULE, in Arithmetick, is a certain Operation with Figures, to find Sums or Numbers unknown. See ARITHMETICK, OPERATION, *&c.*

Each *Rule* in Arithmetick has its particular Name, according to the use for which it is intended.—The four first, which serve as the Foundation of the whole Art, are call'd *Addition*, *Substraction*, *Multiplication*, and *Division*; each whereof see under its proper Article.

From these arise several other *Rules*; as the *Rule of Three*, or of *Proportion*; call'd also, the *Golden Rule*; and distinguished into *direct*, and *inverse*, *simple*, and *compound*, *Rule of five Numbers*.—*Rule* of Fellowship, *simple*, and *with Time*.—*Rule* of Alligation, *medial* and *alternate*.—*Rule* of *Exchange*.—*Rule* of *false Position*, *single* and *double*. See FELLOWSHIP, ALLIGATION, EXCHANGE, and POSITION.

RULE *of Three* or of *Proportion*, commonly call'd the *Golden* RULE, is a *Rule* which teaches how to find a fourth proportional Number, to three others given. See PROPORTION.

As if 3 Degrees of the Equator contain 70 Leagues, how many do 360 Degrees, the Circumference of the Earth, contain?

The *Rule* is this.—*Multiply the second Term* 70, *by the third* 360; *divide the Product* 25200, *by the first Term* 3: the *Quotient* 8400 *is the fourth Term required.*

The use of this *Rule* is of vast extent, both in common Life, and the Sciences; but has no Place, except where the Proportion of the given Numbers is known.—Suppose, *e. gr.* a large Vessel full of Water to empty it self by a little Aperture; and suppose 3 Gallons to flow out in 2 Minutes; and it were required to know in what time 100 Gallons would be thus evacuated?—Here indeed are three Terms given, and a fourth required: But as 'tis evident from Experience, that Water flows faster at first than afterwards, the Quantity of flowing Water is not proportional to the Time; and therefore the Question does not come under the *Rule of Three*.

The things which come under Commerce are proportionable to their Prices; Twice as much of any Commodity costing twice as much Money, *&c.* The Price, therefore, of any Quantity of a Commodity being given, the Price of any other Quantity of the same, or the Quantity of the Commodity answering to any other given Sum, is found by the *Rule of Three*.—*E. gr.* If 3 Pounds cost 17 *s.* what will 30 Pounds cost? Since, as 3 Pounds are to 30 Pounds, so is the Value of the former 17 *s.* to the Value of the latter. The Question stands thus:

3 ℔ —— 30 ℔ —— 17 *s.*

17

3) 510 (170 *s.* 8 ℔. 10 *s.*

Again; if 3 Pounds be bought for 17*s.* how many will 170*s.* buy? Since as 17*s.* is to 170*s.* ſo are 3 Pounds to the Pounds required. The Number will be found thus:

17*s.* —— 170*s.* —— 3 ℔.

3

17) 510 (30 ℔
51

00

If the given Terms be heterogeneous, *i.e.* have broken Numbers among them, they don't bear the ſame Proportion to each other, which the things they expreſs, bear.—They muſt therefore be reduced to homogeneous ones; or to the ſame Denomination as Pounds into Shillings, Shillings into Pence, *&c.* Hours into Minutes, *&c.* See REDUCTION.

E. gr. If 3 Pounds and 4 Ounces coſt 2*s.* 4*d.* what will 2 Pounds coſt? The Operation will be thus:

3 ℔ 4 ℥ —— 2 ℔ —— 2 *s.* 4*d.*
16 16 12

52 32 28
28

256
64

52) 896 (17 *d.* ½ of a Penny.
52

376
364

12

In many Caſes of Commerce and Accounts, we have more compendious Ways of working Queſtions that come under the *Rule of Three*, than by the *Rule* it ſelf; which, by reaſon of their expediting Practice, are call'd *Practice*; and conſtitute a particular *Rule* of themſelves. See PRACTICE.

RULE *of Three inverſe*, is where the natural Order of the Terms is inverted.—As, if 100 Workmen build a Houſe in 2 Years, in how long time will 200 Workmen build the ſame?

This is uſually conſider'd by the Writers of Arithmetick, and taught in the Schools, as a particular *Rule:* Being wrought by multiplying the firſt Term 100 by the ſecond 2, and dividing the Product 200 by the third Term 200; the Quotient 1 is the Number required.

But there is no neceſſity for making a particular *Rule* for the Matter; this coming naturally enough under the former, by only ranging the Terms as the Nature of the Queſtion requires.

Thus 'tis evident, that as the Number of Men 200, is to 100, ſo is the Space 2 Years, wherein 100 build the Houſe, to the Space wherein 200 will build the ſame.—For the leſs Time, the more Hands are required. The Queſtion then will ſtand thus:

200 M. —— 100 M. —— 2 Y.

2

200) 200 (1 Year.

RULE *of five Numbers*, or *Compound* RULE *of Three*, is where two *Rules* of three are required to be wrought, e're the Number ſought be found.—As if 300 *l.* in 2 Years yield 30 *l.* Intereſt, how much will 1000 *l.* yield in 10 Years?

Here the firſt thing to be done is to find by the *Rule of Three*, what Intereſt 1000 *l.* will give in 2 Years; and then by the ſame *Rule* what it will give in 10 Years.

This is conſider'd by the Writers, *&c.* of Arithmetick, as a particular *Rule*, but without any Neceſſity; a double Operation ſolving it better, as in this Example:

300 *l.* —— 1000 *l.* —— 30 Int.

30

3|00) 300|00 (100 Int.

2 Y. —— 12 —— 100 *l.*

12

2) 12000 (600 Int.

But in Queſtions of this Kind a ſingle *Rule of Three* may do the Buſineſs: For 300 *l.* give the ſame Intereſt in two Years, which twice 300 give in one Year; and twelve times 1000 *l.* give the ſame Intereſt in one Year that 1000 gives in 12: Omitting therefore the Circumſtances of Time, ſay, if twice 300 (that is, 600) give 36 *l.* Intereſt, (in one Year) what will 12 times 1000 (that is, 12000) give (in one Year)?

600 —— 12000 —— 36

36

72000
36000

6|00) 4320|00 (720 *l.* Int.

RULE, in a monaſtic Senſe, is a Syſtem of Laws or Conſtitutions, whereby Religious Houſes are eſtabliſhed and regulated; and which the Religious make a Vow to obſerve at their Entrance. See RELIGIOUS, MONASTERY, VOW, *&c.*

The monaſtic *Rules* are all to be approved of by the Pope, to make them valid.—The *Rule* of St. *Benedict*, is by ſome Authors call'd the *Holy Rule*. See BENEDICTIN.

Thoſe of St. *Bruno*, and St. *Francis*, are of all others the moſt auſtere. See CARTHUSIAN and FRANCISCAN.

When a Religious cannot ſupport the Auſterities of his *Rule*, he ſues for a Diſpenſation. See DISPENSATION.

RULE, in the Canon Law.—The *Rule*, *de veriſſimili Notitia*, of *probable Notice*, renders all Proviſions to a Benefice Vacant by Death, to be null; if it appear that from the Day of the Deceaſe, to the Day of the Date of the Proviſions, or to the Day when the Courier arrives from *Rome*, there has not been Time ſufficient for regular Notice of the Perſon's Deceaſe to be convey'd to the Pope. See PROVISION.

The Proviſions are even null if it be proved the Courier ſet out e're the Perſon was deceas'd.—This *Rule* is ſtrictly obſerv'd in *France*; in other Countries the Pope finds frequent Occaſions to diſpenſe with it.

Rule of twenty Days, *Regula viginti dierum*. By this *Rule*, if an Eccleſiaſtick reſign his Benefice; to make the Reſignation valid, the Reſigner muſt ſurvive its Admiſſion in the Court of *Rome* twenty Days.—If he dye before the Expiration of the twenty Days, the Reſignation is void; and the Benefice becomes Vacant by Death.

This *Rule* does not hold of the Proviſions of ordinary Collators, nor of ſimple and pure Reſignations into the Hands of the Ordinary; but only in Caſe of Proviſions of the Pope, diſpatch'd on Reſignations *in Favorem*. See RESIGNATION.

This *Rule* antiently extended to ſuch as reſign'd in Health as well as Sickneſs.—Pope *Boniface* reſtrain'd it to the latter; whence it is commonly call'd, *Regula de Infirmis reſignantibus*.

Regula de publicandis. By this *Rule* the Reſignee of a Benefice, if he have a Proviſion from the Court of *Rome*, is obliged to publiſh the Reſignation and take Poſſeſſion within ſix Months; or if he have it from the ordinary Collator, within one Month. Otherwiſe, if the Reſigner dye, the Reſignation becomes null.

RUM, a Species of Brandy, or Spirit, drawn by Diſtillation, from Sugar Canes. See SUGAR, SPIRIT, DISTILLATION, *&c.*

Rum is very hot and inflamable; and is in the ſame uſe among the Natives of the Sugar Countries, as Brandy among us. See BRANDY.

The Word *Rum* is the Name it bears among the Barbarians.

RUMB, RUMB, or RHUMB, in Navigation. See RHUMB.

RUMB-*Line*, or *Loxodromia*. See RHUMB-*Line*.

RUMEN, the firſt Stomach of Animals which Chew the Cud; hence call'd *Ruminants*. See STOMACH and RUMINANT.

The Food is tranſmitted into the *Rumen* without any other Alteration in the Mouth, than being a little rowl'd and wrap'd up together. See FOOD.

The *Rumen* is of all others much the largeſt Stomach; as being to contain both the Drink, and the whole crude Maſs of Aliment, which there lie and macerate together; to be thence remitted to the Mouth, to be chewed and comminuted, in order to their farther Digeſtion in the other Ventricles. See DIGESTION.
